WASHINGTON

Alphabetical Directory of Coal Mines, Giving Complete Detailed Information Covering Each Mine

For List of Abbreviations See Page 13.

AMERICAN SMELTING & REFINING CO.
General Office, 120 Broadway, New York, N. Y.
PR—Simon Guggenheim, New York, N. Y.
TR—F. W. Hills, New York, N. Y.
GM—H. Y. Walker, Tacoma Smelter, Tacoma, Wash.
PA—E. S. Pierce Tacoma Smelter, Tacoma, Wash.

Fairfax Mine; Drift; No. 4 Fairfax Seam, 39 in. thick.

PO—Fairfax, Wash.; SP—Same; CTY—Pierce, RR—N. P.

MS—Charles Hollister, Fairfax, Wash. S of H—2 trolley pole type locos. Track gage 26 in.

S of M—Hand and marbs.

PP—2 fire tube boilers, 300 H. P., 2—225 A. M. P. gen. units, 500 volts D. C., 2 pumps.

EMP—75. Last years tonnage 33,973. Note—Successors to Fairfax Mine, Inc.

BELLINGHAM COAL MINES

General Office, Bellingham, Wash.

PR—J. C. Eden, 613 Seaboard Bldg., Seattle, Wash.

TR—J. C. Earles, Box 366, Bellingham, Wash.

GM—J. C. Eden, 613 Seaboard Bldg., Seattle, Wash.

GS—J. H. Pascoe, Box 366, Bellingham, Wash.

PA—J. C. Earles, Box 366, Bellingham, Wash.

EM—E. C. Lyle, Bellingham, Wash.

SA—E. P. Lucas, Bellingham, Wash.

Bellingham Mine; Slope; No. 1 Seam, 156 to 168 in. thick.

PO—Bellingham, Wash.; SP—Same; CTY—Whatcom; RR—C. M. & St. P.

G. N. N. P.

S of H—Mules and rope. Track gage 36 in.

S of M—1 shortwall mach.

PP—Power purchased Transformer 2200-440 volts A. C., 3 fire tube boilers, 250 H. P., 5 pumps.

EMP—200. Daily tonnage 90.

SIZES SHIPT—Slack, Pea, Nut, Lump.

PREP. EQUIPT—Gravity and Revolving Screens, Washeries, Picking Tables.

CARBON COAL & CLAY CO

General Office, Bayne, Wash.

PR—D. S. Hanley, Seattle, Wash.

VP—John W. Roberts, Seattle, Wash.

TR—C. M. Burger, Seattle, Wash.

GM—D. S. Hanley, Seattle, Wash.

EM—H. L. Handley, Bayne, Wash.

MM—H. L. Handley, Bayne, Wash.

PA—D. S. Hanley, Seattle, Wash.

SCO—Address the Company, Buyer, Byron Isanhart, Bayne, Wash.

Carbon Mine; Drift; Carbon Seam, 54 in. thick.

PO—Bayne, Wash.; SP—Same; CTY—Pac; RR—Northern Pacific O. M.

S of H—3 trolley pole type loco. Track gage, 36 in.

S of M—Hand.

PP—3 fire tube boilers, 345 H. P., 1 100 K. W., 400 volts D. C., 1 gen. unit, 1 60 K. W., 240 volts D. C., 4 pumps.

EMP—125. Daily tonnage 300.

SIZES SHIPT—Run of Mine.

PREP. EQUIPT—Shaker Screens, Picking Tables, Washeries.

CARBON HILL COAL COMPANY

General Office, Carbonado, Wash.

PR—W. H. Crocker, Crocker Bldg., San Francisco, Cal.

VP—Leon Sloss, Crocker Bldg., San Francisco, Cal.

TR—S. F. B. Morse, Crocker Bldg., San Francisco, Cal.

GM—S. F. B. Morse, Crocker Bldg., San Francisco, Cal.

GS—R. J. Wulzen, Carbonado, Wash.

EM—John Harvey, Carbonado, Wash.

EE—E. Hinrichs, Carbonado, Wash.

SCO—Carbon Hill Coal Co., Store Dept., Buyer, Clarence Whaley, Carbonado, Wash.

SA—W. E. Pearce, 167 Conn. St., Seattle, Wash.

Wingate Mine; Slope; No. 11 Seam; Miller Mine; Slope; No. 12 Seam; Carbon No. 6 Mine; Drift No. 6 Seam; Carbon No. 10 Mine; Slope; No. 10 Seam; Dooty Nos. 8 and 9 Mines; Drifts; Nos. 2 and 9 Seams; 56, 48, 84, 54, 60 and 101 in. thick.

PO—Carbonado, Wash.; SP—Same; CTY—Pierce; RR—N. P.

MS—D. E. Roberts and Edwin Husband, Carbonado, Wash.

S of H—Mules, 7 trolley pole type and 1 storage battery locos. Track gage 36 in.

S of M—Hand and comp. air punchers.

PP—Power purchased. Transformer 60,000 to 2,300 volts A. C., 750 K. W. gen. set, 575 volts D. C., 8—60 H. P. fire tube boilers, 10 pumps.

EMP—350. Last years tonnage 190,000.

SIZES SHIPT—Run of Mine, Slack, Nut, Lump.

PREP. EQUIPT—Screens and Washers.

CENTRAL COAL COMPANY

General Office, 707 Security Bldg., Seattle, Wash.

PR—C. J. Smith, Seattle, Wash.

VP—A. S. Kerry, Seattle, Wash.

TR—J. O. Hannah, Seattle, Wash.

GM—J. O. Hannah, Seattle, Wash.

GS—L. Harris, Seattle, Wash.

PA—J. O. Hannah, Seattle, Wash.

EM—Chas. Simonstad, Seattle, Wash.

Grand Ridge Mine; Slope; Nos. 1, 3, 7 and 9 Seams, 72 in. thick.

PO—Issaquah, Wash.; SP—Same; CTY—King; RR—Northern Pacific.

S of H—Mules and 2 trolley pole type locos. Track gage 36 in.

S of M—5 comp. air punchers.

PP—Power purchased. Transformer 2,200 to 500 volts D. C., M. G. set, 250 volts D. C.

EMP—125. Last years tonnage 80,151.

SIZES SHIPT—Pea, Nut, Lump.

PREP. EQUIPT—Shaker and Revolving Screens, Picking Tables, Washeries.

Raven Mine; Drift; Nos. 1 and 4 Seams, 60 in. thick.

PO—Ravensdale, Wash.; SP—Same; CTY—King; RR—Northern Pacific.

S of H—1 trolley pole type loco. Track gage 36 in.

S of M—Hand.

PP—1 75 H. P. fire tube boiler, 100 K. W. gen. unit, 250 volts D. C., 1 pump.

EMP—65. Last years tonnage 8,656.

SIZES SHIPT—Run of Mine, Pea, Nut, Lump.

PREP. EQUIPT—Shaker Screens, Picking Tables, Loading Booms.

Note—Formerly operated by Raven Coal Company.

CENTRALIA COAL MINING COMPANY

PR—M. L. McGraw, Portland, Ore.

TR—W. Patterson, Portland, Ore.

GM—M. L. McGraw, Portland, Ore.

EM—T. H. Martin, Centralia, Wash.

MM—Geo. Farrell, Centralia, Wash.

Sales Agent—M. L. McGraw, E. 2d and Market Sts., Portland, Ore.

Empress Mine; Shaft; Lignite Seam, 102 in. thick.

PO—Centralia, Wash.; SP—Same; CTY—Lewis; RR—N. P., O. W., G. N.

S of H—Mules. Track gage 36 in.

S of M—Hand.

PP—2 pumps.

FMP—50.

SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.

PREP. EQUIPT—Shaker Screens.

COKEDEALE COAL COMPANY

General Office, Sedro, Woolley, Wash.

PR—A. F. Coats, Seattle, Wash.

VP—F. R. Bates, Seattle, Wash.

TR—J. J. Swallow, Seattle, Wash.

GM—F. C. Ferree, Seattle, Wash.

GS—Frank Good, Sedro Woolley, Wash.

PA—Frank Good, Sedro Woolley, Wash.

SA—Arrow Coal Co., 809 White Bldg., Seattle, Wash.

Cokedale Mine; Drift; Klondike Seam, 360 in. thick.

PO—Sedro Woolley, Wash.; SP—Cokedale, Wash.; CTY—Skagit; RR—Great Northern.

S of H—Mules. Track gage, 36 in.

S of M—Hand.

PP—Power purchased. Transformer 60,000 to 220-440 volts A. C., 1 pump.

EMP—40. Last years tonnage 12,000.

SIZES SHIPT—Run of Mine, Egg.

PREP. EQUIPT—Shaker Screens, Picking Tables, Washeries.

Old information.

DENNY-RENTON CLAY & COAL CO.

General Office, 632 Pioneer Bldg., Seattle, Wash.

PR—E. J. Mathews, Seattle, Wash.

TR—Chas. M. Thomsen, Seattle, Wash.

GM—K. A. Swain, Seattle, Wash.

GS—W. E. Junley, Taylor, Wash.

PA—Silas Rich, Seattle, Wash.

SCO—Address the Company, Buyer, Robt. Woods, Seattle, Wash.

SA—G. Lingren, Pioneer Bldg., Seattle, Wash.

Denny-Renton Mine; Drift and Shaft; Taylor Syncline Seam, 60 in. thick.

PO—Taylor, Wash.; SP—Same; CTY—King; RR—Pacific Coast.

S of H—2 trolley pole type locos. Track gage 36 in.

S of M—Hand.

PP—3 water tube boilers, total 600 H. P., 2—500 K. W. gen. units, 250 volts D. C., 4 pumps.

EMP—150. Last years tonnage 60,000.

SIZES SHIPT—Run of Mine, Pea, Nut.

PREP. EQUIPT—Picking Tables, Washeries.

DURHAM COLLIERY COMPANY.

General Office, 621 Tacoma Bldg., Tacoma, Wash.

PR—Chas. A. Foster, Tacoma, Wash.

TR—Chas. A. Foster, Tacoma, Wash.

GM—Chas. A. Foster, Tacoma, Wash.

PA—D. R. Wing, Tacoma, Wash.

EM—F. E. Black, Durham, Wash.

Durham Nos. 1 and 2 Mines; Drifts; Durham Seam, 96 in. thick.

PO—Durham, Wash.; SP—Same; CTY—King.

MS—Geo. Marshall, Durham, Wash.

S of H—Storage battery locos. Track gage, 36 in.

S of M—Hand.

PP—Power purchased, transformer 2200-440 volts A. C., M. G. sets, 2 water tube boilers, 75 H. P.

EMP—100. Last fiscal year output, 51,443 tons.

SIZES SHIPT—Run of Mine, Slack, Lump.

PREP. EQUIPT—Shaker Screens, Picking Tables, Loading Booms, Washeries.

Old information.

FAIRFAX MINE, INC.

Now American Smelting and Refining Co.

FORD'S PRAIRIE COAL CO.

General Office, Centralia, Wash.

PR—A. D. Foron, Centralia, Wash.

TR—Henry Foron, " "

GM—A. D. Foron, " "

SA—W. J. Pineard, Tacoma, Wash.

Ford's Prairie Mine; Slope; No. 1 Seam, 86 in. thick.

PO—Centralia, Wash.; SP—Same; CTY—Lewis; RR—N. P., C. M. & St. P.

MS—A. D. Foron, Centralia, Wash.

S of H—Mules and main rope, comp. air loco. Track gage 30 in.

S of M—Hand and comp. air mach.

PP—2 fire tube boilers, total 200 H. P., 4 pumps.

EMP—30. Last years tonnage 15,356.

SIZES SHIPT—Run of Mine, Pea, Nut, Egg, Lump.

PREP. EQUIPT—Revolving and Shaker Screens, Washery.

HUTCHINSON COAL COMPANY.

General Office, 507 Equitable Bldg., Tacoma, Wash.

PR—E. Hutchinson, Tacoma, Wash.

VP—Dr. W. Spencer, Tacoma, Wash.

TR—H. A. Miller, Tacoma, Wash.

GM—E. Hutchinson, Tacoma, Wash.

GS—J. Andrus, Tacoma, Wash.

PA—E. Hutchinson, Tacoma, Wash.

EM—W. J. Wood, Tacoma, Wash.

Brier Hill Mine; Slope; Seam, 72-96-124 in. thick.

PO—Littell, Wash.; SP—Same; CTY—Lewis; RR—N. P.

S of H—Mules, rope and steam locos.

S of M—Hand.

PP—3—200 H. P. fire tube boilers.

EMP—40.

SIZES SHIPT—Run of Mine, Slack, Nut, Lump.

PREP. EQUIPT—Shaker Screens, Picking Tables, Washeries.

HYDE COAL COMPANY.

General Office, 618 L. C. Smith Bldg., Seattle, Wash.

PR—E. C. Ward, Seattle, Wash.

VP—N. D. Moore, Seattle, Wash.

SECY—H. M. Watkins, Seattle, Wash.

TR—H. M. Watkins, Seattle, Wash.

GM—S. H. Green, Seattle, Wash.

GS—R. Simpson, Cumberland, Wash.

PA—M. McPhee, Seattle, Wash.

EM—R. W. Smith, Seattle, Wash.

GEN. SALES MGR—W. Hemphill, 563 R. R. So., Seattle, Wash.

Hyde Mine; Slope; McKay and Fulton Seams, 48 to 84 in. thick. Operate washery.

PO—Cumberland, Wash.; SP—Same; CTY—King; RR—N. P., Palmer Er.

S of H—Mules and rope. Track gage 36 in.

S of M—Hand.

PP—2 return tubular boilers, total 250 H. P., 3 gen. units, 240 volts A. C., 2 phase, 60 cycles, 3 pumps.

EMP—116.

SIZES SHIPT—Run of Mine, Slack, Nut, Lump.

PREP. EQUIPT—Shaking Screen Picking Table.

INDEPENDENT COAL & COKE COMPANY.

General Office, 818 White Bldg., Seattle, Wash.

PR—Prescott Oakes, Seattle, Wash.

VP—D. F. Buckingham, Seattle, Wash.

TR—Prescott Oakes, Seattle, Wash.

GM—D. F. Buckingham, Seattle, Wash.

GS—Wm. Shaw, Cle Elum, Wash.

PA—A. G. Clark, Seattle, Wash.

EM—W. H. Simons, Seattle, Wash.

Queen Mine; Slope; Roslyn Seam, 54 in. thick.

PO—Cle Elum, Wash.; SP—Same; CTY—Kittitas; RR—Northern Pacific.

MS—Robert Scobie, Jr., Cle Elum, Wash.

S of H—Mules, rope, 2 storage battery locos. Track gage, 36 in.

S of M—Hand.

PP—1 fire tube boiler, 150 H. P., 3 water tube boilers, 750 H. P., 2 250 K. W. gen. units, 440 volts A. C., 7 pumps.

EMP—110. Last years tonnage 143,259.

SIZES SHIPT—Run of Mine, Slack, Egg, Lump.

PREP. EQUIPT—Shaker Screens.

LINCOLN COAL MINING CO.

General Office, Box 127, Centralia, Wash.

GM—T. E. Martin, Galvin, Wash.

EM—T. E.

MONARCH COAL MINING COMPANY

General Office, Centralia, Wash.
GM—Jay Agnew, Centralia, Wash.
Monarch Mine; Slope; Seam 84 in. thick.
PO—Centralia, Wash.; SP—Same; CTY—Lewis; RR—E. Ry. & Lbr. Co.
MS—Geo. C. Clark, Centralia, Wash.
S of H—Rope, comp. air locos. Track gage 30 in.
S of M—Comp. air punchers.
PP—2 water tube boilers, gen. units, 5 pumps.
EMP—42. Daily tonnage 350.
SIZES SHIPT—Run of Mine, Slack, Lump, Nut.
PREP. EQUIPT—Shaker Screens, Washeries.

MOUNTAIN COAL COMPANY

General Office, Mineral, Wash.
PR—J. W. Eddy, Seattle, Wash.
PO—T. H. Ellis, Mineral, Wash.
EM—T. H. Ellis, Mineral, Wash.
Ladd Mines; Slope and Drift; No. 2 Vein, 54 in. thick.
PO—Mineral, Wash.; SP—Same; CTY—Lewis; RR—C. M. & St. P.
S of H—1 elec. and 2 steam locos. Track gage 36 in.
S of M—1 comp. air mach.
PP—1 return tubular boiler, 200 H. P., 1 gen. unit, 110 volts D. C.
EMP—25.
SIZES SHIPT—Run of Mine, Nut, Egg, Lump.
PREP. EQUIPT—Installing Forrester Washers.
Note—Successors to Phoenix Coal, Co.

NORTHWESTERN IMPROVEMENT CO.

General Office, Tacoma, Wash.
PR—Howard Elliott, New York, N. Y.
VP—Charles Donnelly, St. Paul, Minn.
PA—F. G. Prest, St. Paul, Minn.
PA Asst.—D. S. Kinney, Tacoma, Wash.
GM—F. C. Andersen.
EM—D. H. Swam, Tacoma, Wash.
ASST. CONTROLLER—J. L. Taggard, Tacoma, Wash.
Roslyn Nos. 3, 5, 6, 7 and 8 Mines; Incline and Slope; Roslyn No. 5 Seam, 54 in. thick.
PO—Roslyn, Wash.; SP—Same; CTY—Kittitas; RR—N. P.
MS—Peter Bagley, Roslyn, Wash.
S of H—Mules, trolley pole type and storage battery locos. Track gage 36 in.
S of M—Hand.
PP—Purchase and generate power.
EMP—1,360. Last years tonnage 1,369,546.
SIZES SHIPT—Run of Mine.
All coal mined used by Northern Pacific Railway.

OLYMPIC COAL & MINING CO.

General Office, P. O. Box 121, Centralia, Wash.
PR—D. P. Damascus, Centralia, Wash.
GM—D. P. Damascus, Centralia, Wash.
GS—J. J. Jones, Centralia, Wash.
PA—D. P. Damascus, Centralia, Wash.
CF—R. B. Ober, Tono, Wash.
Olympic Mine; Slope; Seam, 18 feet thick.
PO—Box 121, Centralia, Wash.; SP—Olympic Spur; CTY—Lewis; RR—Northern Pacific.
S of H—Mules, main and tail rope, storage battery loco. Track gage 30½ in.
S of M—Comp. air punchers.
PP—125 H. P. fire tube boiler, 1 pump.
EMP—18. Last years tonnage 17,000.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Shaker Screens.

OSARK COAL MINING COMPANY

General Office, 229-30 Tacoma Bldg., Tacoma, Wash.
PR—Dr. W. T. Bobo, Battle Creek, Mich.
TR—E. D. Strain, Battle Creek, Mich.
GM—Geo. W. Sheatsley, Cumberland, Wash.
GS—Jas. D. Davies, Cumberland, Wash.
PA—Geo. W. Sheatsley, Cumberland, Wash.
EM—John Williams, Cumberland, Wash.
Sales Agent—F. M. Love, Tacoma, Wash.
Navy Mine; Slope; Navy Seam, 48 in. thick.
PO—Cumberland, Wash.; SP—Same; CTY—King; RR—N. P., Buckley Br.
S of H—Mules, 1 comp. air and 1 gasoline locos. Track gage 36 in.
S of M—Hand.
PP—Purchase power, transformer 2300 to 440 volts A. C., 1 30 H. P. fire tube boiler, 2 pumps.
EMP—65. Last years tonnage 58,000.
SIZES SHIPT—Run of Mine, Pea, Nut.
PREP. EQUIPT—Revolving Screens, Picking Tables, Washeries.

PACIFIC COAST COAL COMPANY

General Office, Seattle, Wash.
PR—E. C. Ward, Seattle, Wash.
TR—H. M. Watkins, "

Dist. Mgr.—J. F. Torrence, Tacoma, Wash.

Coal Creek Mine; Slope; Muldoon Seam, 46 to 72 in. thick. Operate washery.
PO—New Castle, Wash.; SP—Same; CTY—King; RR—C. & P. S., New Castle Branch.
MS—S. H. Ash, New Castle, Wash.
SM—L. C. McLean, New Castle, Wash.
S of H—9 elec. locos. Track gage 36 in.
S of M—36 comp. air mach.
PP—8 return tubular boilers, total 1,200 H. P., 2 compressors, 5 pumps.
EMP—350. Last years tonnage 168,147.
SIZES SHIPT—Slack, Pea, Lump.
PREP. EQUIPT—Revolving and Shaker Screens, Picking Tables, Loading Booms.

Black Diamond Mine; Slope; McKay Seam, 42 to 66 in. thick. Operate washery.
PO—Black Diamond, Wash.; SP—Same; CTY—King; RR—C. & P. S.
MS—M. A. Morgan, Black Diamond, Wash.
SM—H. McDowell, Black Diamond, Wash.
S of H—10 elec. locos. and rope. Track gage 36 in.
PP—13 Return tubular boilers, total 1900 H. P., 4 gen. units, 500 volts D. C., 21 pumps.
EMP—129. Last fiscal year output 326,705 tons.
SIZES SHIPT—Slack, Nut, Lump.
PREP. EQUIPT—Revolving and Shaker Screens, Loading Booms.

Burnett Mine; Slope, Nos. 1, 2 and 3 Seam, 40 to 60 in. thick. Operate washery.
PO—Burnett, Wash.; SP—Same; CTY—Pierce; RR—N. P.
SM—McGinnis Burnett, Burnett, Wash.
S of H—6 elec. and 1 steam locos. Track gage 36 in.
S of M—4 Comp. air mach.
PP—8 Return tubular boilers, total 1000 H. P., 4 gen. units, 500 volts D. C., 4 compressors, 8 pumps, also purchase power.
EMP—230. Last fiscal year output, 130,499 tons.
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Revolving and Shaker Screens, Picking Tables.

Caenon Mine; Slope; McKay Seam, 48 to 72 in. thick.
PO—Pacoeon, Wash.; SP—Same; CTY—King; RR—C. & P. C.
MS—Geo. Stonebridge, Pacoeon, Wash.
SM—C. U. Stevens, "
S of H—3 elec. locos. Track gage 36 in.
S of M—Hand.
PP—4 boilers, total 700 H. P., gen. units, 500 volts D. C., 10 pumps.
EMP—110. Last fiscal year output, 36,246 tons (10 months).
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Picking Tables and Loading Booms.

Issaquah Mine; Drift; Alvo Seam, 84 in. thick.
PO—Issaquah, Wash.; SP—Same; CTY—King; RR—Northern Pacific.
S of H—2 trolley pole type locos. Track gage 36 in.
S of M—15 comp. air machs.
PP—1 air compressor, gen. units, 250 volts D. C., 1 pump. Purchase power.
EMP—115. Ten months' output 66,039 tons.
SIZES SHIPT—Slack, Nut, Lump.
PREP. EQUIPT—Saker Screens, Picking Tables, Loading Booms, Washeries.

PHOENIX COAL COMPANY

Now Mountain Coal Co.

PIERCE COUNTY COAL COMPANY

Operations exhausted.

POCANTONAS COAL & COKE CO.

General Office, Palmer, Wash.
PR—J. R. Miller, 7536 Wilson Ave., Seattle, Wash.

WEST VIRGINIA *

General Description of the Geology of the State With the Ranks of Coal Produced;
Treats of the Mining Districts, With a Map Showing Their Location, All
Seams Lying Within the Territory, and the Railroads Serving Same,
Description of the Producing Seams Showing Their Geological
Order, Kinds of Coal, General Analysis, Etc.

West Virginia has a total of 102 coal seams, 52 of which are of sufficient thickness to be classified as minable. Geographically it lies in the widest portion of the Appalachian field and contains some of the purest fuels known to the world. Owing to the proximity of Western Pennsylvania and Ohio coal, which for many years controlled the markets of the west and northwest, the development of the coal resources of the state has come within comparatively recent years. The present rapid growth of the industry is largely due to the excellence of the product, enabling these coals to enter into competition with those produced in the middle west, and also to successfully invade the eastern markets. In tonnage produced West Virginia ranks second to Pennsylvania.

According to the West Virginia Geological Survey the coal area of West Virginia includes 9500 square miles, and the estimated original coal supply, including coal that is easily accessible, and also what can be won with difficulty, is 60,800,000,000 short tons. About 2 per cent. of this has been mined to date. The coals in the northern part of the state are classed as bituminous, while those in the eastern, central and southern parts are either bituminous or semibituminous. A small amount of canal is found in the central and southwestern parts.

Because of the generally prevailing use of natural gas for domestic purposes and the scarcity of industries, only about 8 per cent. of the coal produced is used within the state. The railroads serving as carriers to points outside the state are the Monongahela Railroad in the northern part; the Baltimore and Ohio and Western Maryland in the northern and eastern parts; the Chesapeake and Ohio in the central and southeastern part; the Kanawha and Michigan in the central part; the Virginian in the southeastern part, and the Norfolk and Western running closely parallel to the southern boundary.

There are at present 16 different mining districts in West Virginia. Some of these are named because of railroad connections while others are in accordance with the time of development. There is however, much overlapping and distinct geographic lines cannot be given.

MINING DISTRICTS OF WEST VIRGINIA

1. Elk Garden. Includes all of Mineral county. Seams mined are the Pittsburgh, Upper Freeport, Lower Kittanning and Bakers-town. These produce steam, bunker, export, railway and domestic coals. Railroads serving are Baltimore & Ohio and Western Maryland.
2. Upper Potomac. Includes Tucker, Grant and Randolph counties. Seams mined are the Upper Freeport, Lower Freeport and Lower Kittanning. These produce steam, bunker, coking, railway, export and domestic coals. Railroads serving are Baltimore & Ohio and Western Maryland.
3. Randolph-Barbour. Includes Randolph, Barbour, and northern Upshur counties. Seams mined are the Upper Freeport, Lower Freeport, Lower Kittanning and Redstone. These produce coking, smithing, steam, railway and domestic coals. Railroad serving is Baltimore & Ohio.
4. Panhandle. Includes Brooke, Ohio and Marshall counties. Seams mined are the Pittsburgh and Lower Freeport. These produce steam, railroad and domestic coals. Railroads serving are the Baltimore & Ohio and the P. C. C. & St. L.
5. Fairmont. Includes Harrison, Marion, Monongalia, Wetzel, Preston and western Taylor counties. Seams mined are the Pittsburgh, Redstone, Sewickley, Upper Freeport and Waynesburg. These produce steam, gas, railroad, export, domestic and coking coals.
6. New River. Includes eastern Fayette, southern Greenbrier, southern Raleigh, Summers and Wyoming counties. Seams mined are the Beckley, Sewell and Fire Creek. These produce steam, bunker, export, railroad and domestic coals. Railroads serving are Virginian and Chesapeake & Ohio.
7. Kanawha. Includes northern Boone, northern Fayette, eastern Lincoln, northern Raleigh and all of Kanawha counties. Seams mined are Alma, Coalburg, Stockton-Lewiston, Winifrede, No. 2 Gas, No. 5 Block, Eagle, Cedar Grove, Chilton and Powellton. These produce steam, domestic, export, gas, railroad and by-product coking coals. Railroads serving are Chesapeake & Ohio and Kanawha & Michigan.
8. Pocahontas. Includes McDowell, Wyoming and Mercer counties. Seams mined are Pocahontas Nos. 3, 4 and 6. These produce steam, railroad, export, bunker, domestic and by-product coking coals. Railroads serving are the Norfolk & Western and Virginian.
9. Tug River. Includes western McDowell county. Seams mined are Iaeger, Sewell, Welch and Beckley. These produce steam, railroad,

*For much of the information on West Virginia coals we are indebted to West Virginia State Geological Reports; J. S. Burrows in Coal Age, Vol. 7, pg. 670; F. R. Wadleigh in Coal Age, Vol. 7, pgs. 165, 331, 375; H. H. Stock in Mines and Minerals, Vol. 20.

- export, domestic and by-product coking coals. Railroad serving is the Norfolk & Western.
10. **Thacker.** Includes eastern Mingo county. Seams mined are the Thacker (Cedar Grove), Alma, Freeburn, Warfield, Upper War Eagle, Coalburg and Winifrede. These produce steam, railroad, export, gas, domestic and by-product coking coals. Railroad serving is the Norfolk & Western.
 11. **Kenova.** Includes western Mingo county. Seams mined are the Coalburg, Winifrede and No. 5 Block. These produce steam, railroad, export, gas, domestic and by-product coking coals. Railroad serving is the Norfolk & Western.
 12. **Logan.** Includes all of Logan county. Seams mined are the Alma, Chilton, Eagle, Island Creek, No. 2 Gas and Winifrede. These produce steam, railroad, export, gas, domestic and by-product coking coals. Railroad serving is the Chesapeake & Ohio.
 13. **Coal River.** Includes southwestern portion of Boone county. Seams mined are Cedar Grove, Chilton, Eagle, No. 5 Block, No. 2 Gas and Winifrede seams. These produce steam, railroad, gas, domestic and by-product coking coals. Railroad serving is the Chesapeake and Ohio.
 14. **Coal and Coke.** Includes Gilmer, Braxton, Clay and southern part of Upshur counties. Seams mined are the Upper Freeport, Pittsburgh, Coalburg, Winifrede and Stockton-Lewiston. These produce steam, railroad, export and domestic coals. Railroad serving is the Baltimore & Ohio (Coal and Coke Division).
 15. **Gauley.** Includes Nicholas, Webster and northern Greenbrier counties. Seams mined are Cedar Grove, Eagle, Coalburg, Stockton-Lewiston and Sewell. These produce steam, railroad, export and domestic coals. Railroads serving are the Chesapeake & Ohio and Baltimore & Ohio.
 16. **Mason.** Includes Mason county. Pittsburgh seam is mined, producing a steam, railroad and domestic coal. Railroad serving is the Baltimore & Ohio.
- As shown by the coal column, workable seams are found in each of the five series, but at the present time none of the seams in the upper, or Dunkard, series has any commercial value and discussion on the coals of this series will, therefore be omitted.

MONONGAHELA SERIES

The Monongahela Series is that division of the rock column which begins at the base with the bottom of the Pittsburgh coal bed and extends to the top of the Waynesburg coal. In West Virginia the thickness of this group of rocks ranges from 260 feet along the western borders of Ohio and Marshall counties to over 435 feet in southeastern Doddridge and southwestern Harrison counties. Four seams of coal are being worked in this formation, the principal of these being the Pittsburgh bed. All coals produced are splendid steam coals, and, as a rule, characterized by a higher sulphur content than coals of the older formations.

Waynesburg Seam. (Mined in Fairmont District.)

This seam occupies the topmost formation of the Monongahela series. Its best development is found in Monongalia and Marion counties, in the former of which it is being mined for shipment on a small scale. It is always multiple bedded and is generally separated into two benches, upper and lower, by a shale parting 1 to 36 inches thick. The whole sometimes attains a thickness of 10 to 12 feet. Owing to its occurrence in a region abounding with better coals, the development of this seam has been unattractive. It is found generally in small patches and carries a large amount of ash. Local use has demonstrated that it is satisfactory as a domestic fuel, giving fine results when burned in an open grate. The following may be considered a general analysis:

Moisture	1.75
Volatile Matter	34.70
Fixed Carbon	49.40
Ash	14.15
Sulphur	3.45
B. t. u.	12,265

Sewickley Seam. (Also known as Mapletown Seam.) (Mined in the Fairmont District.)

Many new openings have been made in this seam during the past few years in the counties of Marion and Monongalia. It attains a fine development on Scotts Run in the latter county but thins down and disappears southwestward from Marion county. The coal is usually interlaminated by thin layers of mineral charcoal. This structure causes it to burn with a bright flame, leaving a fine ash

with little clinker. It has a fine reputation as a steam and domestic coal and is in demand for railroad fuel. It mines and stands shipment as well as the Pittsburgh seam, about 95 feet beneath. The roof conditions are excellent and the coal can be cleanly mined. A general analysis of the coal along Scotts Run is about as follows:

Moisture	1.25
Volatile Matter	36.15
Fixed Carbon	53.75
Ash	8.85
Sulphur	2.50
B. t. u.	13,930

Redstone Seam. (Mined in the Fairmont and Randolph-Barbour Districts.)

This seam lies from 30 to 50 feet above the Pittsburgh. In the Fairmont district it is of commercial importance in a small part of Monongalia county drained by Scotts Run and Robinson Run. Here it attains a thickness of four feet and mines in large lumps or blocks. The coal thins out as it passes both north and south from here. It reappears and is mined south of Clarksburg with some difficulty owing to the large number of clay veins. Going farther south it becomes an important bed in southern Harrison, and adjoining regions of Barbour, Upshur and Lewis counties. It is here usually free from slate or slate partings and has a thickness varying from four to six feet. An excellent roof is everywhere characteristic of the seam. It mines in cubical blocks and stands shipment well, entering the market as a steam and domestic coal.

GENERAL ANALYSIS	
Moisture	0.65
Volatile Matter	36.55
Fixed Carbon	54.90
Ash	7.90
Sulphur	2.65
B. t. u.	13,800

Pittsburgh Seam. (Mined in Fairmont, Panhandle and Elk Garden Districts.)

This is by far the most important seam in northern West Virginia and carries one of the most valuable coals in the United States. It covers the counties of Brooke, Ohio, Marshall, Wetzel, Marion and Harrison; the eastern portions of Monongalia, Tyler and Doddridge; and smaller portions of Lewis, Barbour, Taylor, Upshur, Braxton, Gilmer, Roane, Kanawha and Putnam counties. It is a notably persistent seam and aggregates more than a million acres in one almost solid block.

The fame of the Fairmont region, which for more than 30 years has been one of the great producing regions of the country, rests entirely upon the excellence of the Pittsburgh coal. The seam here averages from 7 to 9 feet, mines in large, hard, rectangular lumps and stands transportation well. While the seam is very regular and free from

disturbances, it nevertheless varies quite considerably in the sulphur content, and this largely defines the use to which it is put. Proceeding westward from the Monongahela river it appears to carry more sulphur, reaching as high as 4 per cent. in the Wheeling region. On the other hand, it seems to lose this element as it approaches the mountain system to the east, reducing to 0.88 per cent. at Elk Garden. A like variation in sulphur is noted in traveling to the south. While the analyses show around 4 per cent. in the vicinity of Morgantown, it becomes less than 1 per cent. in large areas about Fairmont and again ascends to about 4 per cent. as it reaches Clarksburg. Coals from the low sulphur areas are used for the manufacture of gas and the production of bee-hive and by-product coke; that from the high sulphur sections is favored for steam, railroad and domestic purposes.

	General Analysis Steam Coal Fairmont Region	General Analysis Gas Coal Fairmont Region

Sulphur	2.20	0.95
B. t. u.	14,250	14,300

CONEMAUGH SERIES

The Conemaugh Series extends from the Upper Freeport at the base up to the Pittsburgh coal at the top. Its thickness ranges from 550 feet in western Monongalia county to 600 feet along the Monongahela river in the same county. The Ames limestone, which owing to the marine fossils contained serves as a marker, occurs about midway in the Series and thus affords a ready means of identifying the Pittsburgh and Upper Freeport coal beds. None of the seams in this formation have sufficient thickness to become of great commercial importance, and it is only at scattered points that any one seam is thick enough to invite operation. In a small way, the Elk Lick, Bakerstown and Mahoning beds are worked at several points.

Bakerstown Seam. (Mined in Elk Garden District.)

This is one of the thinner seams, seldom reaching more than 4 feet in thickness. It is the only productive measure of the Conemaugh Series. For many years it was mined at Colliers on the Ohio river and used as a railroad fuel. At Masontown and Reedsville in Preston county it attains a thickness of from 2 to 4 feet. It is mined for commercial purposes only in the Elk Garden District,

and that in a restricted area of Mineral county. It is a good steam producer and valued as a domestic fuel.

ALLEGHENY SERIES

The coals of the Allegheny Series are found in the eastern counties of the State, being enclosed within the great folds of the Alleghany Mountain range along the North Potomac basin of Mineral, Grant and Tucker counties. Due to having been subjected to considerable metamorphic change, they are much lower in volatile content than the coals lying farther west. Practically all of these coals are shipped to eastern markets, and because of their nearness to tidewater, they have an advantage in freight rates over those coals lying west from the Alleghany Mountains. They are much prized for steam and general fuel purposes, as well as for such special purposes as for smithing use and beehive coking.

Upper Freeport Seam. (Mined in Elk Garden, Upper Potomac and Fairmont Districts.)

This coal is found in the northern counties, Monongalia, Preston, Tucker, Grant and Mineral. At several places in Upshur county it averages 3 feet in thickness and is mined for local use. It thins out as it passes into Marion and Taylor counties. A good portion of the production from the Preston county mines is shipped to by-product coke ovens at eastern steel mills, while some of it is used for coking in beehive ovens at the mines. The tendency of this coal to contract in coking instead of expanding, as is the case with many coals, is a very

valuable asset in preventing injury to by-product ovens. The seam in Preston county measures 9 feet 6 inches, but this includes 12 inches of slate parting lying toward the bottom and 12 inches of bone near the top. Only the 4 foot section between the big slate and the top bone is recovered. The coal from this seam in Tucker, Grant and Mineral Counties is semibituminous in character. It is harder than the Lower Kittanning beneath, breaks with a cubical fracture and stands transportation well. Run-of-mine from the Upper Freeport seam ranks high as a steam coal; lump coal is used as a domestic fuel; slack is well adapted for coking purposes.

	General Analysis (Preston Co.)	General Analysis (Upper Potomac District)
Moisture	2.10	0.95
Volatile Matter	28.40	14.65
Fixed Carbon	61.40	75.35

Sulphur	1.20	1.55
B. t. u.	13,950	14,670

Lower Freeport Seam. (Mined in Upper Potomac, Panhandle and Randolph-Barbour Districts.)

This seam is found in the northern counties in the eastern section of the State, and also in the Panhandle district in the western part, but nowhere does it attain much commercial value. It is a multiple bed reaching a thickness of nearly 12 feet, more than half of which is worthless slate and bony material. The workable portion ranges from 3 to 4 feet and provides a low ash coal of good quality for steam and domestic purposes.

GENERAL ANALYSIS		Workable Portion
Moisture		1.70
Volatile Matter		32.75
Fixed Carbon		62.25
Ash		3.30
Sulphur		1.58

Upper Kittanning Seam. (Mined in the Randolph-Barbour District.)

This coal, like the other coals of the Allegheny Series, is of a soft nature. It is found in minable thicknesses in Barbour, Upshur and Randolph counties. The best development in Barbour county is along the Tygart Valley River, between the Taylor county line and Tygart Junction. The only place it is workable in Randolph county is in the northern part of the Roaring Creek region. The coal in this vicinity varies in thickness from 2 to 5 feet and usually has a parting of slate or bone about one foot from the bottom.

GENERAL ANALYSIS

Sulphur	3.00
B. t. u.	13,500

Lower Kittanning Seam. (Known as No. 5 Block in Kanawha District.) (Mined in Elk Garden, Upper Potomac and Randolph-Barbour Districts.)

This is one of the major seams of the state. It is widely persistent and is the only seam in the Allegheny series that extends continuously across the state in commercial thickness and value. It is extensively mined, yielding a large tonnage of semibituminous coal in the Upper Potomac region and vicinity, and high volatile coal in the Roaring Creek region and vicinity. A thickness of 14 feet is reached at times, but only 5 to 7 feet is usually mined. It is frequently divided into two distinct seams by a shale parting which sometimes reaches a thickness of several feet. The coal shows a columnar structure, typical of all good coking coals. Physically it is soft and easily broken by hand. This seam furnishes a valuable railroad, steam, smithing and domestic coal. A great deal of that used for steam purposes is shipped as run-of-mine.

B. t. u.	13,730	13,800

No. 5 Block Seam. (Mined in the Kanawha and Kenova Districts.)

As the Lower Kittanning passes southward to the Kanawha River it gradually becomes harder and changes to a type known as "block" coal from the large and hard blocks into which it breaks when mined. This characteristic is preserved as the seam passes on southwestward through Boone, Lincoln, Wayne and Mingo counties to the Kentucky line. In the Kanawha region this seam is about 7½ feet thick, and unlike the coal in the northern part of the State, is high in volatile matter and contains layers of soft coal. It is highly valued for steam and domestic purposes, and is well adapted for export, being low in both sulphur and ash.

POTTSVILLE SERIES—Kanawha Group—Upper Division

Next below the Allegheny Series in the geological column comes the Kanawha group of the Pottsville Series. This group of strata has a great thickness, more than 1,000 feet, along the Kanawha River in the vicinity of Montgomery. It holds 7 or more seams of commercial importance, of which the principal ones in descending order are: Stockton-Lewiston, Coalburg, Winifrede, Chilton, Cedar Grove, No. 2 Gas and Eagle. The first three named represent the hard or blocky coal which many years ago was given the name "Kanawha Splint" and under which name it won a great reputation, especially in the Middle West, as a steam and domestic fuel. By splint coal is meant that in mining the coal is broken into solid oblong blocks, about 70 to 75 per cent. of the production being in lumps. These splint coals are quite hard and are distinguished by an almost metallic ring. They ignite readily, make a beautiful fire, and have no injurious effect on grates and heating surfaces. The ash of the splint coals is practically non-fusible and makes little or no clinker. There is very little deterioration in handling, and being low in both ash and sulphur, the splint coals are especially fitted for export.

Stockton-Lewiston Seam. (Known also as Belmont Seam.) (Mined in Kanawha, Coal and Coke, Gauley and Thacker Districts.)

This bed covers a wide territory at a horizon of from 50 to 80 feet above the Coalburg seam. The thickness ranges from 4 to 12 feet with partings. It is always multiple bedded and in 2 to 4

divisions separated by shales. The upper portion of the seam sometimes turns into cannel. Coal from this seam is free burning, leaves little ash, and stands severe handling well, being considered one of the standard domestic coals. It is one of the three seams of the Upper Kanawha Series whose coal is splinty in character. These coals are

prized for the manufacture of illuminating gas, for gas producers, railroad, domestic, metallurgical, export and steam purposes.

Sulphur	0.85
B. t. u.	13,530

Coalburg Seam. (Also known as Buffalo Creek Seam.) (Mined in Kanawha, Thacker, Coal and Coke, Gauley and Kenova Districts.)

This is a multiple bedded seam, being a mixture of pure splint coal and alternating layers of softer, or gas, coals. It varies from 4 to 8 feet in thickness and has the greatest development of any of the splint coals. It holds a place as one of the earliest mined seams in the Kanawha district, in fact to this seam is due the credit for establishing the reputation of Kanawha splint coals. It lies at a variable interval above the Winifrede—also a splint coal—but it is interesting to note that the Coalburg and Winifrede never occur as workable seams in the same vicinity. Coal from this seam in Mingo county is shipped extensively for steam and domestic fuel. Being a splint coal, the uses already enumerated apply equally to the Coalburg.

GENERAL ANALYSIS

Moisture	1.65
Volatile Matter	32.90
Fixed Carbon	57.65
Ash	7.80
Sulphur	0.80
B. t. u.	13,800

Winifrede Seam. (Known also as Black Band Seam, Dorothy Seam in Raleigh county.) (Mined in Kanawha, Thacker, Coal and Coke and Kenova Districts.)

This seam has been mined for many years in the Kanawha region and is now being extensively developed in the Thacker region. It varies from 4 to 12 feet in thickness, and, like the Coalburg, is a mixture of gas and splint coals, the latter, however, largely predominating and making it an excellent fuel for practically every purpose. The seam lying north of the Kanawha river does not maintain the standard of purity, while that lying to the southwest gives promise of even exceeding the standard of that found along the river. The general remarks on splint coal adequately describe the commercial uses of this seam.

The DOROTHY SEAM is a multiple-bedded splint coal which received its name from the town of Dorothy in Raleigh county where this bed reaches its greatest development. The section in which it is mined includes Seng Creek, Clear Fork as far south as Sycamore Creek, and Marsh Fork as far south as Hazy Creek, all of these streams being tributaries of Big Coal River.

At Dorothy it appears to be a double seam ranging from eight to fourteen feet in thickness. In going to the north of Dorothy the seam is split and the lower portion disappears so that mines in this section are working in the upper portion of the bed.

The Dorothy Seam has few impurities and there is sufficient gas and block coal in its structure to make it a superior steam and domestic fuel.

GENERAL ANALYSIS

	Winifrede	Dorothy
Moisture	1.55	1.05

Ash	7.05	5.65
Sulphur	0.75	0.50
B. t. u.	14,100	14,570

POTTSVILLE SERIES—Kanawha Group—Lower Division

The coals in the Lower Division of the Kanawha Group are of a softer type than the coals of the Upper Division and contain fewer layers of "splinty" coals. They are excellent for general steam and domestic purposes and are also well adapted for by-product coking and the manufacture of illuminating and producer gas. Most of the Kanawha coals are shipped to western points, including western Kentucky, portions of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin and to Lake cities. A small amount of coal shipped from the Kanawha district to the East is used for locomotive and domestic purposes.

Chilton Seam. (Mined in the Logan District.)

This bed occurs from 70 to 150 feet under the Winifrede coal. It attains its greatest development in southern Boone and eastern Logan counties, where it attains a thickness of from four to five feet and is mined on a commercial scale, particularly on Dingess Run, Rum and Buffalo Creeks in Logan county and on Spruce Fork of Coal River in Boone and Logan counties. Cannel coal is sometimes found in the top portions of the bed. Chilton seam coal is highly regarded as a gas and by-product coal and is also much used for domestic and general steam purposes.

GENERAL ANALYSIS

Moisture	1.90
Volatile Matter	36.20
Fixed Carbon	56.05
Ash	5.85
Sulphur	0.75
B. T. U.	14,260

Cedar Grove Seam. (Known as the Island Creek Seam in Logan county; as the Red Jacket, Thacker and Upper Thacker in Mingo county.) (Mined in the Kanawha, Logan, Gauley, Kenova and Thacker districts.)

The Cedar Grove coal in the Kanawha region is a thin seam, averaging about 2 feet 8 inches and seldom exceeding 3 feet. It is a high volatile coal and is locally the source of high grade cannel coal.

This coal in the Logan field is known as the ISLAND CREEK SEAM. It is nearly always multiple bedded, containing gas and splint coals in about equal proportions. It reaches a fine development in this district, with a thickness varying from 6 to 9½ feet. The coal mines in large rectangular blocks or prisms which are very hard and stand handling and transportation with very little deterioration. Island Creek coal is in great demand for fine domestic trade, and because of its purity is also much used for the manufacture of gas. This bed has a noticeable tendency to develop local de-

posits of cannel coal in amounts sufficient to warrant separation, as at Switzer, Micco, mines on the waters of Island Creek and in the Peytonia region of Boone county. The Island Creek coal occurs geologically about midway between the Chilton and No. 2 Gas coals, and, according to the State Geological Survey ranks next to the No. 2 Gas as the most valuable deposit in Logan and Mingo counties.

As the THACKER SEAM this is the most important coal of the Thacker district. It is also referred to as the UPPER THACKER and the RED JACKET Seam. It is mined commercially at Matewan and on the waters of Mate, Sulphur, Thacker and Grapevine Creeks. Here it is a thick multiple bed, the greater portion consisting of hard coal in the form of splinty layers interspersed with some soft ones. It stands transportation well and deteriorates little in storage; ignites readily and burns with a long bright flame with considerable smoke; has a high ash fusing point and usually a white ash. It ranks high as a locomotive fuel, as a steam coal for general use, and for gas producers and furnaces. Several of the mines on the Kentucky side of Tug river have their tipples in West Virginia, the river being the boundary line.

Sulphur	0.95	1.20	1.20
B. t. u.	14,220	13,560	14,290

Alma Seam. (Also known as Peerless Seam.)
(Mined in Kanawha and Thacker Districts.)

This is a thin seam, varying from 2 to 5 feet in thickness and is somewhat softer than the Cedar Grove. It is a comparatively unimportant bed in the Kanawha district but wherever mined provides an excellent gas coal. As the Alma coal of the Thacker district it has considerable value, being used for locomotive fuel, gas producers, furnaces and general steam purposes.

GENERAL ANALYSIS

Moisture	1.30
Volatile Matter	39.55
Fixed Carbon	53.80
Ash	5.35
Sulphur	1.30
B. t. u.	14,120

No. 2 Gas Seam. (Known as Campbell Creek; Upper War Eagle, Freeburn, Burnwell, Rawl, and Warfield in Thacker Districts.)
(Mined in Kanawha, Kenova, Logan and Thacker Districts.)

The No. 2 Gas Seam is in reality the lower split of the Campbells Creek coal, the upper member being the Peerless bed.

It is the most persistent and valuable bed of the Kanawha series and varies from 5 to 10 feet in thickness. In point of production it holds first place, and as an all-around fuel is excelled by few in the country. It is a good coking coal and is now extensively used in the by-product industry, being mixed with the lower-volatile New River or Pocahontas coals, in such proportions as to produce a coal of about 27 per cent volatile matter. There is considerable variation in the structure and hardness of the coal in this bed.

The No. 2 Gas coal is the most valuable and most widely persistent seam in Logan and Mingo counties. In the Logan district there are large operations in the vicinity of Earling and Manbar and on Buffalo Creek between Man and Amherstdale. In Mingo county this seam is mined at Kermit, Warfield and up Tug Fork under various local names.

No. 2 Gas coal, from whichever district produced, is an excellent steam coal, has a wide use as a locomotive fuel and answers well for gas producer plants and for the manufacture of illuminating gas.

GENERAL ANALYSIS

Moisture	1.20
Volatile Matter	33.50
Fixed Carbon	59.80

B. t. u.	14,280

Powellton Seam. (Mined in Kanawha District.)

In the Kanawha district, at points along the Kanawha River and up Armstrong Creek, the Powellton seam shows a fine development. While of comparatively limited extent, it is widely persistent in Fayette county where it ranges from 5 to 7 feet in thickness. It mines in columnar form, is soft and friable and yields a large per cent of fine coal in mining. It is low in ash and ranks high as a steam coal. Owing to the low sulphur content and the total absence of phosphorus it is better adapted for coke making and by-product purposes than most of the Kanawha coals.

GENERAL ANALYSIS

Moisture	1.15
Volatile Matter	32.25
Fixed Carbon	60.75
Ash	5.85
Sulphur	0.95
B. t. u.	14,335

Eagle Seam. (Known also as No. 1 Gas; Middle War Eagle in Mingo county; Mohawk seam in western McDowell county.) (Mined in Kanawha, Gauley, Logan, Thacker and Tug River Districts.)

The Eagle seam is somewhat lower in volatile matter than the coals of the Kanawha group and is also correspondingly higher in fixed carbon and calorific value. As a medium-volatile coal it appears to occupy an intermediate stage between the "gas" and "splint" types of the upper two-thirds of the Kanawha group and the exceptionally low volatile beds of the underlying New River group.

In Fayette county the Eagle coal is soft and columnar, its bed structure being in marked contrast to that prevailing in the same region for the coal beds in the upper portion of the Kanawha group. A considerable portion of the northwestern part of Raleigh county is underlaid with this seam. The Eagle coal, as a minable bed in Logan and Mingo counties, is confined to a narrow belt extending northeast and southwest along the southeast borders of both counties. As in the Kanawha and Fayette regions it is a soft coal of the "gas" type and in physical appearance resembles the New River coals. In the Tug River region, where it is known as the Mohawk seam, splinty layers are common. Its thickness in the areas under discussion varies from 3 to 7 feet.

This seam has a wide reputation for the uniform character of output, and is one of the premier coals for by-product purposes, being mixed with some of the lower volatile coals of the New River and Pocahontas group before charging into the ovens. It also enjoys a well established reputation as a smithing coal. For steam purposes it ranks especially high.

GENERAL ANALYSIS

Moisture	0.80

POTTSVILLE SERIES—New River Group

The New River Group of the Pottsville Series varies from 900 to 1,300 feet in thickness and contains 20 seams of coal, 10 of which may be classified as beds of commercial thickness and purity. The fame of the New River coals rests upon the excellence of the fuel from the three principal seams in the Group, viz., Sewell, Beckley and Fire Creek. These coals are known the world over as first-class steam producing fuels. This distinction rests equally with all three beds, as the coal from each seam is of about the same composition, structure and appearance. They outcrop on the New River canon high in the hills, but gradually dip westward and go below water level a short distance west of Gauley Bridge. They are semibituminous in character and because of their comparative freedom from smoke are known as "Smokeless" coals. The amount of ash in burning is small and drops from the coal as it burns, providing a fresh surface for combustion and leaving a small amount of clinker. Their sootless qualities make them desirable for domestic purposes, and, owing to their great heat content, they are in great demand for naval vessels. There is little depreciation in storage and little or no danger of spontaneous combustion. Conclusions drawn from tests on New River coal, under severe conditions of outdoor exposure to the weather, are that it deteriorates in heating value approximately 1 per cent. in the first year of storage, 2 per cent. in the first two years, and not over 3 per cent. in five years. Storage under water prevents practically all deterioration during one year, and no more than 0.5 per cent. has been found in any test for two years or less.

Two railroads traverse this field; the Chesapeake & Ohio, over which coal is shipped both to the East and the West, and the Virginian, over which coal is shipped to Virginia tidewater points. Usually about one-fourth of the tonnage produced in the New River field has been shipped to the West and to lake docks. Of the remainder, outside of that converted into coke, shipment has been to the southeastern states and to New England and foreign markets by way of Hampton Roads. There is a large tonnage shipped to the Canal Zone. The navy has been and still is a large buyer of these coals.

Iaeger Seam. (Mined in Tug River District.)

This seam varies from 2 to 5 feet in thickness and is usually so much charged with impurities as to be unworkable. It is, however, mined to a limited extent in the vicinity of Iaeger, McDowell county, the coal being used chiefly for steam, railroad and domestic purposes.

Sewell Seam. (Known as Davy Seam in Tug River District.) (Mined in New River and Tug River District.)

This seam is the most important of the three great producing beds of the New River series, holding first place in production for many years. It is more regular in formation and extends over a greater area than either the Beckley or Fire Creek, which are the other members of this celebrated group. The finest developments are found along New River and the small streams tributary thereto. Here at places it attains a thickness of 6 feet, thinning down as it leaves the river until it reaches 2½ feet at the northwestern edge of the field. The average thickness as shown by measurements made at 50 mines by Bureau of Mines engineers is 5.01 feet.

Sewell coal produces an excellent quality of coke, the Davy seam in the Tug River district being used largely at by-product ovens. It burns with a short white flame and intense heat.

The Sewell seam is found in minable thickness, from 2 to 5 feet, in Randolph county. It is here of good quality, having the typically soft columnar appearance of the New River coal. Tests have shown it to be an excellent coking coal.

GENERAL ANALYSIS

	New River	Randolph County
Moisture	0.75	0.95

Welch Seam. (Known also as Tug River Seam.) (Mined in Tug River District.)

This seam is mined in McDowell county. It varies in thickness, ranging as mined from 3 to 7 feet. The coal is free from partings, except for a characteristic gray and impure splint which occurs at varying distances from the top and which is discarded in the mining. It is sold as a steam and domestic coal and for mixture with other by-product coals.

B. t. u.	14,500

Beckley Seam. (Known as War Creek in Tug River District.) (Mined in New River and Tug River Districts.)

Most of the more recent developments along the Virginian and Chesapeake and Ohio railroads

are in this seam and it is gradually passing into first place in the production of New River coals. It is not found in workable thickness along the New river but it increases in thickness to the south and west, attaining commercial importance about Beckley, the county seat of Raleigh county. It is noted for irregularities in section, showing great local differences in thickness, owing to rolls in the sandstone roof and the variation in its bone or slate partings. Frequently it is split in two, and while the quality of the coal is consistently good its mining value is diminished. It varies in thickness from 4 feet 6 inches to 11 feet, with an average of 5 feet 3 inches.

GENERAL ANALYSIS

Moisture	0.65
Volatile Matter	17.20
Fixed Carbon	78.25
Ash	3.90
Sulphur	0.65
B. t. u.	15,120

Fire Creek Seam. (Known also as Quinnimont Seam.) (Mined in New River District.)

This seam was the earliest mined of the New River group, and, due to partial exhaustion, now ranks third in point of production. It varies in thickness from 3 feet 6 inches at the east to 7 feet in the vicinity of Thurmond, the average being a little over 4 feet. It thins out toward the northwest and beyond Sewell is not of workable thickness. In this connection it is interesting to note that all three of the New River coal beds are never found in workable thicknesses in the same vertical section, since one seam usually thins out as the other increases.

POTTSVILLE SERIES—Pocahontas Group

The Pocahontas Group of the Pottsville Series has a thickness of from 600 to 700 feet. The celebrated Pocahontas coals are found in this Group. These are characterized by being low in volatile matter and high in heat content, so that when burned there is very little smoke given off, hence, like the coals of the New River Group lying higher up, they are everywhere known to the trade as "Smokeless" coals. The main difference between the New River and Pocahontas coals is that the latter contain 4 to 7 per cent. less of volatile matter. In fuel value they are about the same. Both are of the soft and coking type. Pocahontas coal is used for mixing with coals containing higher volatile matter in the by-product oven.

Coal from the three Pocahontas seams mined in this Group is moved westward over the Norfolk & Western, and eastward over the same railroad and the Virginian. Exporting is done largely from Norfolk and Newport News.

Pocahontas No. 6 Seam. (Mined in Pocahontas District.)

This seam ranges from 3 to 5 feet in thickness and produces only a small amount of the coal shipped from the Pocahontas district. It is semi-bituminous in character and similar in composition and uses to the Pocahontas No. 3 seam. It is mined on a small scale at a few places in McDowell county.

GENERAL ANALYSIS

Moisture	0.70
Volatile Matter	19.65
Fixed Carbon	76.55
Ash	3.10
Sulphur	0.60
B. t. u.	15,190

Pocahontas No. 4 Seam. (Mined in Pocahontas and Tug River Districts.)

This seam is second in importance to the No. 3 seam. In thickness it varies from 4 to 7 feet, and averages about 6 feet. The quality of coal produced is quite equal to that from the No. 3 seam. Only about 10 per cent. of the regional production comes from this bed, nearly all of this being from the western end of the district. This is because the No. 4 seam is thin, as compared with the No. 3, and its location for development is not so advantageous.

GENERAL ANALYSIS

Pocahontas No. 3 Seam. (Known also as Pocahontas Thick Vein.) (Mined in Pocahontas District.)

This seam produces 90 per cent of the tonnage shipped from the Pocahontas region and is the main source of the celebrated Pocahontas steaming and coking coal, one of the purest coals in the United States. Its excellence is such that it is used as a standard by which all other steam coals are graded. Most of the seam lies above water level, ranges from 5 to 12 feet in thickness, with an average of 6½ feet, and covers a territory of 300 square miles. Geologically, it lies just above the Mauch Chunk red shales and is therefore one of our oldest bituminous beds. The dip of the seam is toward the northwest, in which direction it shows a tendency to thin out and also to decrease in volatile matter. There are two partings varying in thickness from a fraction of an inch to 3 inches—one a bony coal of some fuel value, and the other a hard slate. Both bands are cast out either by the miners or by pickers.

Pocahontas coal has a columnar structure and being soft produces a large amount of small coal in mining. It ignites readily, cokes strongly, and burns with a short white flame. The combustion

is slow and comparatively little smoke is given off, hence it is known to the trade as a smokeless coal. The amount of ash is small with a fusing temperature ranging from 2150 deg. F. to 2600 deg. F.

With a fuel of this wonderful purity the uses are many. Because of its high calorific value it is the standard for naval and merchant vessels. It has been used for many years as a locomotive fuel, although the tendency of late amongst railroads has been to use a higher volatile and cheaper coal. It produces an excellent coke, but as with all low volatile coals, coking is done at the expense of some of the fixed carbon. For mixture with higher volatile coals used in the by-product industry, it is unexcelled. As a steam producer for stationary plants it holds first rank. Further usage is as a domestic coal and for kilns or furnaces.

Thin Vein Pocahontas Seams. (Mined mostly in Tug River District.)

The term "Thin Vein Pocahontas" is applied to those coals above the Pocahontas Nos. 3 and 4 seams which are mined principally in the Tug River district. They comprise the Sewell-Davy, Welch, Bradshaw, and other seams of minor importance, all having similar physical characteristics and chemical analyses as the Pocahontas Nos. 3 and 4 Seams.

PREPARATION OF COAL

During the past few years much attention has been given in West Virginia to this subject. Practically all the newer mines are being provided with the latest tipple devices, and many of the older operations have discarded the old-time bar screen and chute, and in place thereof have complete in-

stallations of mechanical appliances to assist in the cleaning of the coal and in the maintenance of uniform sizes. The central and southern districts especially have been alert in this matter, and fine examples of modern tipple installations may be found.

From the Fairmont region the following sizes are shipped:

- (a) Lump—Four inches, 3 inches, $2\frac{1}{2}$ inches, 2 inches, $1\frac{1}{2}$ inches, $1\frac{1}{4}$ inches, and $\frac{3}{4}$ inch.
- (b) Egg and Nut—The sizes depend upon the size of lump.
- (c) Pea—Through $\frac{3}{4}$ -inch and over $\frac{1}{2}$ -inch.
- (d) Slack—Through $\frac{1}{2}$ -inch.

The recent tendency is towards a simplification in the number of sizes.

In the Kanawha, New River and Pocahontas districts of West Virginia the designation of sizes is as follows:

- Run-of-mine..standard 35% to 40% lump.
- Lump..all over 3-inch screens.
- Egg..all through 3-inch and over $1\frac{1}{2}$ -inch screens.
- Nut..all through $1\frac{1}{2}$ -inch and over $\frac{3}{4}$ -inch screens.
- Nut and Slack..all through $1\frac{1}{2}$ -inch screen.
- Slack..all through 1-inch or $\frac{3}{4}$ -inch screen.

For additional information on uses and analyses of West Virginia coals, see descriptive advertisements on coal mines following the Supplementary Analyses.

COAL CATALOG

BIG BOTTOM COAL COMPANY

Charleston National Bank Building
CHARLESTON. W. VA.

Miners of

KANAWHA COAL

BIG BOTTOM COAL COMPANY

CHARLESTON, WEST VIRGINIA

Seam Mined and Location

The Big Bottom mine is located at Tad, Kanawha county, W. Va., the opening being in the widely known Stockton-Lewiston or Belmont seam.

This seam is one of the earliest mined in the Kanawha field and did much to establish the splint coals in the Middle West, where they soon built up a reputation as fine steam and domestic coals.

Coal from the Big Bottom mine is in every way qualified to sustain the high regard for Belmont coal. With an output of 200 tons daily we are prepared to supply all demands along the following commercial lines:

STEAM COAL

Big Bottom run-of-mine coal is excellent for steam purposes, being high in heat value and low in ash. The ash is non-fusible and makes little or no clinker. It is mined clean and shipped clean and will give satisfaction at all times whether used for hand firing or with stokers.

PRODUCER GAS

No coal surpasses good Belmont coal for producer gas purposes, one reason being that it is not as strongly caking as many other bituminous coals. Our coal will satisfy the most exacting requirements.

DOMESTIC COAL

Big Bottom coal mines in solid oblong blocks, about 70 per cent. of the production being lump coal. The coal deteriorates but slightly in shipping, stands handling in yards, burns freely and leaves but little ash. It is especially desirable as a combination steam and domestic coal susceptible to separation in the coal yard and being made into two grades of prepared coal at a nominal expense.

EXPORT COAL

Big Bottom mine is in Pool No. 6, by many coal experts regarded as the pool which supplies the best steam coal for export use.

METALLURGICAL COAL

Where coal is used in its raw state for metallurgical purposes, Big Bottom coal, with a high heat value and low sulphur content, will be found well fitted for use.

BOTTOM CREEK COAL & COKE CO

VIVIAN, McDOWELL CO., WEST VIRGINIA, U. S. A.

Miners of

"BOTTOM CREEK" POCAHONTAS COAL

BOTTOM CREEK coal is a Low Volatile Smokeless coal mined from the celebrated Pocahontas No. 3 seam at VIVIAN, West Virginia, on the main line of the Norfolk & Western Railway.

Pocahontas Coal is recognized the world over as having no superior as a steam coal.

BOTTOM CREEK coal is recognized as being of the highest grade of Pocahontas coal by reason of SUPERIOR PREPARATION in a large modern steel tippie. It is in POOL 1, U. S. Navy Acceptable List.

BOTTOM CREEK "Run of Mine" coal is screened over shaker screens, separated into sizes, hand picked, and reassembled.

It is used for steam purposes, for smithing, for general domestic use, for heating homes, apartment houses and hotels especially in cities requiring the use of a smokeless coal.

BOTTOM CREEK "Prepared Sizes" are used for general domestic use in competition with anthracite coal.

BOTTOM CREEK Stoker and Slack is used for steam, for making high grade coke in bee hive and by-product coke ovens.

Steel Tippie at Bottom Creek Mine. Note Overhead Power Lines of Norfolk and Western Railroad.

Osage Fairmont High Volatile Coal

Osage Fairmont Gas and Steam Coal is produced at Osage Mine No. 1 and Osage Mine No. 2 located at Osage, Monongalia County, West Virginia, on the Morgantown and Wheeling Railway. Osage Mine No. 1 operates in the Pittsburgh seam of coal. Osage Mine No. 2 operates in the Sewickley seam of coal.

Osage Mines are counted among the best equipped in the Fairmont region and have ample facilities for screening and preparing their output for market. Their capacity is 2,000 tons daily.

Particular attention is paid by the Osage Coal Company to the comfort of its employees and housing and living conditions are as good as can be found anywhere.

Shipments from Osage Mines take the Fairmont rate of freight.

Monon Fairmont High Volatile Coal

Monon Fairmont Gas and Steam Coal is produced at Monon Mine No. 1 and Monon Mine No. 2 located at Monon, Monongalia County, West Virginia, on the Monongahela Railway. Monon Mine No. 1 operates in the Pittsburgh seam of coal. Monon No. 2 operates in the Sewickley seam of coal.

The capacity of Monon Mines is 2,000 tons daily and they are equipped to furnish the trade regularly with any size coal desired. Particular attention is paid to preparation and the Company is proud of its reputation for furnishing clean coal to the trade.

Shipments from Monon Mines take the Fairmont rate of freight.

Abrams Creek Low Volatile Coal

Abrams Creek Low Volatile Smokeless Coal is produced at Abrams Creek Mine No. 1, located on the Elk Garden branch of the Western Maryland Railway at Oakmont, Mineral County, West Virginia. This mine operates in the Upper Freeport vein, producing a high grade "Smokeless" coal. The coal is machine mined, well prepared and contains a large percentage of lumps.

The capacity of Abrams Creek Mine is 1,000 tons per day.

Shipments from Abrams Creek Mine take the Piedmont freight rate.

BUFFALO-THACKER COAL CO.

HUNTINGTON, W. VA.

Miners of
Buffalo White Ash and Big Eagle Gas Coal

BUFFALO COAL AND EXPORT COMPANY, Eastern Sales Agents
 Huntington, W. Va. 32 Broadway, New York

The retail coal dealer is today, more than ever before, interested in handling a good domestic coal.

One reason for this interest is that customers are insisting on a fuel that is free burning, one that gives a high heat without the production of an excessive amount of ash or the formation of troublesome clinker.

But there are other reasons. The retailer is obliged to carry coal in storage in order to take care of excessive demands during the cold spells. Storage with some coals means rapid disintegration, and the fine coal so produced has a lesser value than the lump coal from which it came, hence all fines produced during stocking mean just so much loss to the dealer. Even in the ordinary unloading at the yards and the reloading into trucks, the matter of breakage is an important one.

BUFFALO WHITE ASH Coal solves all the dealer's problems and removes all difficulties with the household trade. It is a coal that makes and retains a favorable impression with everybody. Its hard texture insures that it will be delivered almost free from slack and that it will stock like iron. The readiness with which it may be burned and its cleanliness invariably please the customer. Its excellent quality and its careful preparation make for continuous satisfaction between producer and retailer and retailer and consumer. And more than that, it insures a constant demand and a **steady profit to the retailer.**

BUFFALO WHITE ASH Coal is mined at Chattaroy, Mingo county, from the Winifrede seam, which yields one of the premier steam and domestic coals of the country. The mine is moderately equipped throughout and has all of the necessary devices on the tippie, such as shaker screens, revolving screens, picking tables and loading booms, for the preparation and sizing of its product.

With a daily capacity close to 800 tons, we stand ready to meet your requirements.

Shipments on Norfolk and Western Railway.

Could a Coal Like This Fail to Please Either the Steam or Domestic User?

Tippie at Ottawa No. 2 Mine

Picking Table and Loading Boom

BIG EAGLE GAS COAL

The Eagle seam is one of West Virginia's best known gas coals. In accordance with the general characteristic of the West Virginia gas coals, it is a softer coal than the Winifrede, referred to on the opposite page, and in this respect bears some resemblance to the New River coals.

The Buffalo-Thacker Coal Company has three mines working in this seam, all located at Ottawa, Boone county, in the Coal River field. Each mine has its own tippie so that any interruption to output due to mishaps with tippie machinery, lack of cars, etc., is confined to one operation.

Beaded flight picking tables are features of the tippie installations. Before reaching these, the coal is passed over gravity screens so that the fine coal is separated from the egg and lump, thus enabling the pickers to locate at once any impurities on the table. At the end of the picking table the lump and nut and slack are united as formerly, constituting hand-picked mine run coal, or it may be loaded as lump, or nut and slack, as desired.

The three Big Eagle Gas mines have tributary to them 3,000 acres of Eagle coal. Mining conditions are excellent. The seam measures from five and one-half to six feet of absolutely clean coal and has a sandstone roof, with little or no irregularities. The best types of electrical machinery are installed throughout. Annual capacity of these mines is 600,000 tons.

BIG EAGLE GAS Coal is low in sulphur and ash, and high in heat units. It is one of the best by-product coals in the world and is also well suited for the manufacture of illuminating gas, for metallurgical purposes, for the burning of fancy porcelain or tile and general steam purposes.

EASTERN KENTUCKY AND VIRGINIA COALS

Location of Mines and Shipping Facilities

The Pocahontas Mines of Carter Coal Company are located in McDowell county, West Virginia, on a 16,000-acre fee property, one of the largest Pocahontas properties owned in fee by any operating company. Mines are served by the Norfolk & Western Railroad.

The Virginia Mines are on a 10,000-acre property owned in fee by Carter Coal Company and located in Tazewell county, Virginia, and served by the Norfolk & Western Railroad.

The Kentucky Mines are on a 12,000-acre property, largely owned in fee by Carter Coal Company and lying in Knox and Bell counties, and served by the Cumberland Railroad, connecting with the Louisville & Nashville Railroad.

Capacity of Mines

Our 10 mines (5 in Pocahontas field) ship about 1,000,000 tons per year.

Sizes Produced and Preparation

All commercial sizes of our different varieties of coal are produced: Run-of-Mine, Lump, Egg, Nut, Slack, and Nut and Slack. The tipples at the mines are equipped with shaking screens, picking tables and loading booms for loading the larger sizes of prepared coal in railroad cars.

Usages

We furnish from our own mines coals for bunkering and export both at lake and tidewater piers. United States Navy has been a large user of coal from our mines for a number of years.

We furnish coals suitable and desirable for bee-hive and by-product coking, cement burning, steam plants, locomotive fuel, metallurgical uses, smithing, and domestic trade.

Analyses

An average of 23 analyses made by the United States Government of coal taken from the Pocahontas Mines of Carter Coal Company from cargoes and barges furnished the Navy is as follows:

THE CENTRAL FUEL COMPANY

President:
B. Lee Hutchinson

DETROIT OFFICE:
Penobscot Building.

Cable Address
"CENTFUELCO"
All Codes

Main Office

Union Central Bldg., CINCINNATI, OHIO

The Central Fuel Company are distributors of over a millions tons of coal yearly.

This tonnage comes from two classes of mines, first, those which are owned and controlled by us, and, second, from mines for which we are the Sales Agents.

This arrangement gives us the advantage of large reserve quantities on which we can draw in all cases of need, thereby enabling us to serve our customers to their advantage. The fact that we have a number of mines, producing a variety of coals, has the further advantage of permitting us to select the coal best fitted to the usage intended.

Our specialty is WEST VIRGINIA HIGH VOLATILE COALS.

Hugheston Coal

The Empire Fuel Company, operating the Hugheston mine at Hugheston, W. Va., is one of the allied interests of the Central Fuel Company. This mine is in the Kanawha district and makes shipments on the Kanawha & Michigan Railroad and the Kanawha River.

The Hugheston mine has a capacity of 1,000 tons daily, all of this being mined from the No. 2 Gas seam. It is an excellent steam and locomotive fuel coal.

Analysis Hugheston No. 2 Gas Coal*

Glen Ferris Steam

Glen Ferris steam coal is produced by the Oakland Coal Company from their Nos. 1 and 2 mines at Smithers, W. Va. The entire output of these mines, amounting to about 500 tons daily, is disposed of through the Central Fuel Company, who control the sales through property ownership.

The No. 2 Gas is the seam mined at both openings and is a splendid steam coal, running very low in impurities and high in heat value.

Analysis Glen Ferris Steam Coal*

Island Creek Coal

For steam and fine domestic trade we offer coal from the Island Creek seam in Logan County by the Man Mining Company. This mine is presently in the process of development and will shortly have reached a 600-ton daily output. It mines in large blocky pieces and stands weathering and transportation without excessive breakage.

Other Tonnages

The Central Fuel Company is sales agent for a number of West Virginia mines, four of these being in the Logan field. We will be glad to receive your inquiries for coals for any and all purposes.

Miners, Shippers, Exporters and Bunker Suppliers of

Number Three Seam Navy Accepted Pocahontas and Crystal Block Coals

Pocahontas Mines

This company owns and operates five fully equipped and up-to-date mines in the heart of the Pocahontas Coal Fields, operating in the famous No. 3 seam. No expense has been spared to provide the latest and most efficient types of conveying apparatus, rotary dumps, shaker screens and loading booms, thereby insuring a uniform preparation and a faultless product. As it will take more than seventy-five years to mine all the coal from these properties, an investment in the above proportions can well be afforded.

Crystal Coals

Are mined by the Crystal Block Coal & Coke Company and the Crystal Block Mining Company, associate companies of the Central Pocahontas Coal Company. The Crystal mines operate in the Winifrede seam of Mingo county, West Virginia, from which is produced the unrivalled CRYSTAL BLOCK, GENUINE WHITE ASH, SPLINT COALS, which have for years enjoyed such an undisputed reputation throughout Ohio, Indiana, Michigan, Illinois, Virginia, North Carolina and as far west as Minnesota and Iowa. As with the Central Pocahontas Coal Company, no expense has

been spared to make CRYSTAL BLOCK preparation unquestionably the best in the United States. As an illustration, they have gone to considerable expense installing the longest, single rope, disc conveyor in the world, which brings CRYSTAL BLOCK down hill a distance of 900 feet in practically the same shape as when mined. They have also the latest and most up-to-date conveying apparatus, rotary dumps, shaker screens and loading booms. CRYSTAL BLOCK 4" and up moves exclusively to the domestic household trade, the CRYSTAL 2½"x4" EGG is used almost exclusively in the ceramic industries, while CRYSTAL 1½"x2½" STOVE is an exceptional coal for cook stoves and annealing. The following analysis made by the West Virginia Geological Survey shows the high quality of CRYSTAL COALS:

Moisture	1.76
Volatile Matter	38.92
Fixed Carbon	55.22
Ash	4.10
	<hr/>

View of Tipple at Crystal Block No. 1 Mine

Rawl By-Product Gas Coal

Is mined by the Crystal Block Coal & Coke Company at their Nos. 2 and 3 mines, located at Sprigg and Rawl, Mingo county, West Virginia. This coal, although primarily a by-product gas coal, also makes an exceptional fuel for furnace and steam plants. The detailed analysis following, which was made by the Pittsburgh Testing Laboratory from samples collected by their field representatives, shows its exceptional qualities:

THE CLEVELAND-CLIFFS IRON CO.

Ethel Coal Mines

Ethel, Logan County, West Virginia

MINING THE CHILTON SEAM COAL

Sales Office: Kirby Building, Cleveland, Ohio

A. D. Carlton, Coal Sales Agent

Village of Ethel, W. Va., one of the most attractive spots in the Logan field. The houses are modern, comfortable and of pleasing design.

Location of Mines

The three West Virginia coal operations of The Cleveland-Cliffs Iron Company are located at Ethel, Logan County, in the heart of the celebrated Logan mining district. Their combined capacity is 3,000 tons daily. The seam worked at each of the three mines is the Chilton, with a thickness ranging from five to six feet.

The Chilton Seam

Of all the excellent coals mined in West Virginia, none surpass the Chilton for general all-around utility. The purity of the coal is one of its remarkable features. Ethel-Chilton coal, as will be seen from the analysis, carries less than four per cent ash and two per cent of moisture. Approximately 95 per cent of every ton is combustible, and this insures the purchaser a maximum of heat

Six feet of clean Chilton seam coal, with almost ideal conditions for mining.

An interior view showing lump condition of the coal after shooting.

units and a minimum of non-combustibles for every dollar expended for fuel. A third noteworthy feature of this coal is the low percentage of sulphur, thus fitting it for all usages where an excess of this element is objectionable.

The Cleveland-Cliffs Iron Company has 4,000 acres of superior Chilton coal tributary to its three Ethel mines.

Analysis

The following analysis* is typical of the quality of our coal:

Moisture	1.60
Volatile Matter	32.92
Fixed Carbon	64.40
Ash	3.68
Sulphur	0.49
B.t.u.	14,584
Fusion point of ash.....	2815 deg. F.

*Analysis made by Crowell & Murray, Cleveland, O.

Usages of ETHEL-CHILTON Coal

Coal from our mines at the present time is partly used to fill the exacting requirements of the By-product and Illuminating Gas Industries. The egg size, 2" x 4", which usually consists of the softer portion of the seam and runs high in by-products and gas, enjoys a wide reputation among coking and gas producing interests. The yield of by-products and gases is high, and the resulting coke has proved entirely satisfactory for every requirement.

Ethel-Chilton coal is in demand among dealers who cater to a fine domestic trade. We recommend two sizes for household use, our 4" lump coal, which receives particular care and attention in the course of preparation, and the 2" x 4" egg coal, all of which passes over shaker screens and picking tables preliminary to loading. Either size is free burning and because of the high fusion point of the ash there is a total absence of clinkers. A trial order of Ethel coal in a household always results in a confirmed user.

A considerable portion of our yearly output is used for steam purposes, this because of the high thermal value of the coal, its low ash, and the fact that Ethel-Chilton coal will not clinker in ordinary steam usage. The high fusion point of ash, 2815 deg. F., is an outstanding guarantee of freedom from cinder formations. The nut and slack sizes are especially adapted for stoker use. A combination of the egg mixed with the nut and slack has proved to be very desirable for hand-fired steam plants.

Ethel coal, because of its composition and purity, is also particularly qualified for use in metallurgical processes, and in the burning of tile, pottery and fine ceramic ware.

Preparation

The equipment for coal preparation at our three plants is identically the same and consists of shaker screens, picking tables and loading booms. Every facility is provided to insure thorough sizing and cleaning. The sizes of coal shipped are 2" Nut and Slack, 2" x 4" Egg, and 4" Lump. Each of these sizes are well known throughout the territories which they serve, under the trade name of ETHEL Coal.

Miners and Shippers of Celebrated "COPEN" Splint Coal

Location of Mines

The Vanwith mine of the Copen Gas Coal Mines, Inc., operates in the Pittsburgh No. 8 seam at a point between Bower and Gilmer stations in Braxton county, W. Va., on the Baltimore & Ohio Railroad, Charleston Division. Coal from this mine takes the usual Fairmont rate.

Coal Mined

The Pittsburgh No. 8 seam at Vanwith mine has a splendid development with an average thickness of 84 inches. Throughout this entire field there is a total absence of partings, so that the coal, as it comes to the tipple, is naturally in a very clean condition.

Analysis

The following analysis of Copen Splint Coal was made at West Virginia University, Morgantown, W. Va.:

Moisture	1.76
Volatile Matter	40.22
Fixed Carbon	52.25
Ash	5.77
	<hr/>
	100.00
Sulphur	2.09
Phosphorus004
B. t. u.	13,896
Fusion Point of Ash.....	2354° F.

Mining Methods

Coal at the Vanwith mine is undercut by electric chain machines and is shot down in coarse sizes, making it especially fitted for domestic and producer gas purposes. It is also an excellent fuel to export and for cement manufacture.

Sizes of Coal

Most of this coal is shipped west, to Ohio, Indiana, Illinois, and Michigan, and has found high favor wherever used. The following sizes can be made: $\frac{3}{4}$ ", 2" and 3" Lump, Egg, Nut, Slack and Run of Mine.

Plant of Copen Gas Coal Mines, Inc., Bower, W. Va.

R. M. DAVIS COAL COMPANY

General Office
Monongahela Building, Morgantown, W. Va.

Philadelphia Branch
525 Widener Building

Miners and Shippers of

Morgantown Gas and West Virginia Steam Coals

Shipping Facilities 5,000 Tons Daily

Scope of Activities

The R. M. Davis Coal Company is actively engaged in the mining and shipping circles of the Morgantown section of the Fairmont field, handling coal from six different seams.

The region in which this Company operates is one of the most promising in the State of West Virginia. Lying north and west of Morgantown is the famous Pittsburgh Seam of coal, which here reaches a fine development, having a thickness of from 10 to 12 feet.

The Scott's Run mines are but five miles distant. On starting up the run, the Pittsburgh Seam is noted high in the hills, with the Redstone lying about 40 feet and the Sewickley about 90 feet above.

All three seams pass below water level in a distance of not over three miles up the Run. At a point where the Sewickley passes under the stream, the Waynesburg Seam can be noted high in the hill. Thus, it happens that in a short space of travel up this stream, one encounters four fine seams of coal, all of which are available to the consumer, through the R. M. Davis Coal Company.

The Upper Freeport, Lower Freeport and Bakerstown Seams, representing the Allegheny Series, are found to the east of Morgantown along the Morgantown & Kingwood branch of the B. & O. Railroad. These coals are noted for their fine domestic and steam properties, while the Upper Freeport has earned a wide reputation as a by-product coal.

Davis Block Coal

This coal comes from the Sewickley Seam in Scott's Run, and although it has only been on the market for three years, it has made a wonderful reputation as a steam coal, and in particular, for railroad service.

A Car of Davis Block Coal

WE PRIDE OURSELVES ON BEING ABLE TO GIVE YOU SPLENDID COALS AND
SPLENDID SERVICE

Most of the output of this splendid bed of coal goes to the New England States and has proved itself satisfactory in all respects as a dependable steamer.

Davis Block Coal is now selling to brick manufacturers, cement mills, steel mills, and other industries, where a quick steaming coal of high heating value is desirable.

The W. E. Deegans Interests operate mines in the Logan County, Coal River, Pocahontas, Winding Gulf and Greenbrier fields. These mines are working in both the high volatile and the low volatile seams and produce a variety of coals adapted for every commercial usage.

Our total yearly output is around 2,000,000 tons, exclusive of mines now being opened. Shipment for this quantity of coal is provided by the Chesapeake & Ohio Railroad, Norfolk & Western Railroad and the Virginian Railway. Every car of coal leaving the mines is under the supervision of our traffic department, which makes it a point to see that customers receive good delivery service. Our mines being located on three of the best coal carrying railroads in the country assures a good car supply and enables us to take care of all contracts.

Coal mining with us is a business. We know the wants of the trade and we stand ready to supply them. One of the things wanted, we know, is clean coal. Deegan coals are prepared to satisfy the user, whether it be for the home, the mill or the factory. In order that some idea may be had of the kinds of coal mined by the W. E. Deegans Interests, location of mines, etc., the following summary of operations is given:

LOGAN COUNTY FIELD

Cub Fork Coal Company

Mine No. 1, located at Yolyn, Logan county, in the Chilton seam, has a daily capacity of 600 tons

of coal suitable for by-product, steam, illuminating gas, domestic and malleable uses. Tipple has all the equipment required for the loading of a clean product.

Paragon Collieries Company, Mines No. 1 and 2

Both mines are located at Yolyn, operate in the Chilton seam, and have a combined capacity of 1,400 tons daily. The uses of this coal are similar to those given above for the Cub Fork mine. The tipples at each mine are supplied with shaker screens, picking tables and loading booms, making it possible to load 1", 2" and 4" lump, 2x4 egg, and run-of-mine. A large storage bin, shown in the panoramic view at the bottom of this page, provides storage for 30 cars of coal. Analysis of this coal is:

	As Received	Dry
Moisture	0.93
Volatile Matter	34.95	35.28
Fixed Carbon	58.65	59.20
Ash	5.47	5.52
Sulphur	0.47	0.47
B.t.u.	14,229	14,363

Orrville Coal Company

This mine is also located at Yolyn, but is working in the Island Creek seam and produces a fine grade of domestic, steam and gas coal. The analysis of this coal is:

	As Received	Dry
Moisture	1.05
Volatile Matter	36.82	37.21
Fixed Carbon	56.20	56.80
Ash	5.93	5.99
Sulphur	0.41	0.42
B.t.u.	14,302	14,454

Storage Bin at Yolyn, With Capacity for 30 Railroad Cars.

Guyan Valley Coal Company

Mine is located at Crown, Logan county, with opening in the Eagle seam. The analysis of this coal will be found given under the Deegans Eagle Coal Company which follows, and its low moisture, ash and sulphur content will be noted. This coal ranks as one of the best by-product coals in the United States.

Deegans Eagle Coal Company, Mines No. 1 and 2

These mines are situated at Accoville, Logan county, and mine the Eagle and the Island Creek seams. Their combined capacity is 900 tons daily. Both tipples are modernly equipped and prepare 2", 3", 4" and 6" lump sizes. This coal is in constant demand for the finer uses, such as by-product, gas and malleable purposes. It also has an established trade among steam and domestic users. Its analysis is:

	As Received	Dry
Moisture	1.95
Volatile Matter	31.86	32.49
Fixed Carbon	60.08	61.28
Ash	6.11	6.23
Sulphur	0.61	0.62
B.t.u.	14,162	14,444

Faulkner Coal Company

This company operates in the Island Creek seam at Mallory, Logan county. Because of the high fusion point of ash, 2720° F., it is a favorite steam coal.

COAL RIVER FIELD**Royal Block Coal Company**

The mine, at Dodson, Boone county, is opened in the No. 5 Block coal. This is a superior domestic coal and mines in large blocky pieces. It stands both shipping and storage and is a profitable coal for the dealer. Shipments can be made in 1", 2", 4" and 6" lump sizes.

The control of a large tonnage in a wide variety of coals, mined on the principal coal carrying roads, enables us to serve all customers with satisfactory grades of coal at all times—and especially during temporary traffic difficulties.

POCAHONTAS FIELD**Miller Pocahontas Coal Company, Mines No. 1 and 2**

These mines are working in the Pocahontas No. 3 seam at Corinne, Wyoming county, on the main line of the Virginian Railway, thus giving quick access to tidewater, as well as to points inland, East and South. This coal shares in all the good qualities for which Pocahontas coal is noted. Its analysis is:

	As Received	Dry
Moisture	0.58
Volatile Matter	16.85	16.95
Fixed Carbon	76.77	77.22
Ash	5.80	5.83
Sulphur	0.40	0.40
B.t.u.	14,638	14,723

New Pocahontas Coal Company

This mine is located at Deegans, McDowell county, on the main line of the Norfolk & Western Railroad, and is in the Pocahontas No. 6 seam. Coal from this mine is unexcelled for smithing purposes and is sold under the name of Pando Smithing coal. Its analysis is:

	As Received	Dry
Moisture	0.55*
Volatile Matter	18.75	18.88
Fixed Carbon	73.71	74.12
Ash	6.99	7.03
Sulphur	0.62	0.62
B.t.u.	14,508	14,586

Other Properties

The Margaretta Coal Company is opening up two mines on a 2,600-acre tract of Sewell coal at Rainelle, Greenbrier county. These operations will produce a considerable quantity of coal during 1922, all of it a superior New River steam coal.

The Marietta Coal Company has a productive capacity of 400 tons daily mined from the Pond Creek seam at Pinson Fork, Ky. It is a splendid coal for by-product, gas and domestic purposes.

Complete analysis showing Gas and By-Product yields will be furnished upon request.

*All analyses on these pages made by Commercial Testing & Eng. Co.

Present annual capacity is 3,750,000 tons. Developed annual capacity 4,500,000.

West Virginia Mines

The West Virginia mines whose output is distributed by the Eastern Fuel Company are located in the Fairmont region. They are high in volatile matter and heat value and partake of all the superior qualities which have made Fairmont coal so highly regarded in the industrial centers of the East for brick manufacturing, cement burning, locomotive fuel, producer gas, domestic and general steam purposes.

New River Coal

Location and Acreage

The property consists of approximately seven thousand acres in one tract, located in Fayette County, West Virginia. It is in the New River District of the smokeless fields, long and well known as producing the highest grade coal procurable of this character.

It is located on the main line of the Chesapeake & Ohio R. R., conveniently and favorably situated for shipments to Tidewater and inland markets both East and West.

More Than 15,000 B. t. u. in Every Pound

Quality

This Company mines the Fire Creek Seam which is noted for its cleanliness, thus eliminating artificial methods of preparation.

An idea of the uniformity of this coal may be gained from the fact that, as a result of investigation by The U. S. Government, it has for a number of years been on the U. S. Navy Acceptable List and is rated as Pool No. 1 in Tidewater Classification.

ORGANIZED 1913

E. A. RUSSELL, Secretary

High Volatile Fairmont Steam Coal

The operations of the Fairmont and Cleveland Coal Company are confined to the Sewickley seam. The Parker Run mine, located on the Monongahela River a few miles north of Fairmont, lies in the heart of a 1,500-acre tract of superior Sewickley coal, all of which is particularly adapted for general steam purposes.

The Sewickley coal, geologically, occurs above the Pittsburgh seam, and, in general, is quite similar to the latter. One point of difference is that there is present in Sewickley coal thin layers of charcoal which make it quick burning, a feature especially appreciated by its domestic users. It is a hard blocky coal, stands shipment and stocking, and when properly fired is non-clinkering.

The annual output of our Parker Run mine has been about 300,000 tons, but improvements and extensions have been made this year which have raised the daily mine capacity to 3,500 tons. Principal of these is a new steel tipple completely equipped with shaker screens, picking tables and loading booms, thereby enabling us to give our coal unexcelled preparation. Fifty new houses have been erected to care for an increased number of employees; the capacity of our sub-station has been doubled to provide ample power for the increased mechanical equipment; gathering motors have replaced animals; the total number of mine cars has been increased to 700, all of the roller-bearing type; and other necessary equipment has been installed to bring the capacity of all branches up to the daily capacity of 3,500 tons.

Parker Run coal is well suited to any use where a high volatile steam coal is applicable, but its chief fame rests upon its splendid record amongst railroads for locomotive use. It is a rapid burning high heat fuel and is, therefore, a favorite for engine use; moreover, it has sufficient body or weight to keep from wasting through the stack. Cement works, canneries and brick burners will find our coal equal to all requirements, as it gives a long flame in burning. For all-around steam purposes Parker Run will give general satisfaction.

As already stated, our tipple facilities are modern in every respect and all coal leaving our tracks moves away with the assurance of having received careful preparation. The following sizes are shipped: $1\frac{1}{4}$ " lump; $\frac{3}{4}$ " lump; run-of-mine; nut; nut, pea and slack; and slack. We have recently constructed $1\frac{1}{4}$ miles of railroad side tracks, which enables us to take care of a large car supply.

Shipments are made over the Baltimore & Ohio, Pennsylvania Lines and New York Central Lines, with the Fairmont freight rate to all points.

PARKER RUN SEWICKLEY COAL WILL PLEASE YOU

FORT CLARK COAL COMPANY

CLARKSBURG, W. VA.

Miners and Shippers of

PITTSBURGH COAL

The Fort Clark Coal Company owns and operates two mines located in Harrison county, West Virginia. Coal from both mines take the Fairmont freight rate. A brief description of each mine and its output is given below.

CARPER MINE

Carper Mine is located near Byron, W. Va., on the West Virginia & Pittsburgh branch of the Baltimore & Ohio Railroad, and produces coal from the Pittsburgh No. 8 seam. This is a high-grade High-Volatile coal and is especially adapted for LOCOMOTIVE FUEL and CEMENT BURNING.

This seam has an average thickness of 66 inches and the quality is consistent throughout the mine, the output being on an average of 300 net tons per day.

Mining is by the hand method and the haulage by Gasoline Locomotives, and the gathering by mules.

Sizes

Run of Mine only is shipped from this mine.

Analysis*

Coal from the CARPER mine shows the following analysis:

Moisture74
Volatile Matter	39.80
Fixed Carbon	53.79
Ash	5.67

100.00

Sulphur	3.43
B. t. u. per pound.....	14067
Fusion point of ash.....	2534° F.

*Analysis made by Pittsburgh Testing Laboratory, Pittsburgh, Pa.

Carper Mine of Fort Clark Coal Company.

WILSONBURG MINE

The Wilsonburg Mine is located at Wilsonburg, W. Va., on the Parkersburg branch, or Main Line, of the Baltimore & Ohio Railroad, and produces coal from the Pittsburgh No. 8 seam. This is a high-grade, High-Volatile coal and is also especially adapted for LOCOMOTIVE FUEL and CEMENT BURNING.

This seam has an average thickness of 72 inches and the quality is very good and uniform throughout. The coal is extremely clean and requires very little preparation. The Wilsonburg mine has an average output of 400 net tons per day.

Mining is by Electric Chain Machines of the Breast type. Haulage is by Electric Locomotives.

Sizes Made

This mine makes Run of Mine, Slack and Lump.

Analysis*

Coal from the Wilsonburg mine shows the following analysis:

Moisture90
Volatile Matter	38.98
Fixed Carbon	52.20
Ash	7.92

100.00

Sulphur	3.01
B. t. u. per pound.....	13,680
Fusion point of ash.....	2426° F.

*Analysis made by Pittsburgh Testing Laboratory, Pittsburgh, Pa.

Wilsonburg Mine of Fort Clark Coal Company.

Usages

Coal from either the Carper or Wilsonburg mine is High-Volatile and of high heating value. It is in particular favor as a Steam coal and is in constant use on the railroads for firing locomotives. It ranks high, also, with the Cement industry, our coal being used for years in the burning of the clinker.

GREEN VALLEY STANDARD POCAHONTAS COALS

Produced by the Following Mines With an Annual Capacity of ONE MILLION TONS

YUKON POCAHONTAS COAL COMPANY—Mine No. 1 and No. 2 at Yukon, McDowell County, West Virginia—mining the famous Beckley seam of Standard Pocahontas coal. The coal from this mine and district is lower in volatile than any other Pocahontas or New River Smokeless coal. It is extremely free from Sulphur and other foreign matters; therefore it will absolutely not clinker. The coal in this particular group of mines is harder and a better stocker than most of the Pocahontas-New River Smokeless coals; hence when prepared over the most modern shaker screens and conveyed to the car by boom loaders the preparation of the Lump, Egg and Nut coal is without exception the very best on the market. It goes without saying that this is the best business-builder and the most profitable prepared Pocahontas coal for the dealer trade.

SAYERS POCAHONTAS COAL COMPANY—Mine in McDowell County, near Yukon, West Virginia—produces Mine Run only from the NO. 3 VEIN Pocahontas coal. Coal from this mine is especially high in heat units and is a splendid coal for the home and steam plant where a low volatile, splendid coking, high-grade Pocahontas coal is necessary. It is extremely pure and free from sulphur and other impurities, making a splendid hot and lasting fire; consequently this coal is not only very efficient but the greenish cast and coarse preparation make it very attractive.

BUCHANAN COAL COMPANY—Mine at McDowell County, Buchanan, West Virginia—is the same coal as Sayers. This is a twin mine and puts us in position to make prompt and heavy shipments regularly of this particular grade of coal.

JOHN'S BRANCH COAL COMPANY—Mine near Yukon, McDowell County, West Virginia—produces the famous Beckley seam, suitable for Domestic, Steam, Producer Gas and Smithing uses. This coal is very pure and at the same time extremely firm. It runs like coal from the Yukon mines. It is extremely low in volatile and very free from sulphur and other impurities, making it therefore a very coarse, clean and extremely hot coal, especially suitable for the steam plant or home use where a coarser coal is desired. It burns to a fluffy red ash, also makes a very firm coke. Mine Run only is produced at this mine at the present time. Once used, this coal gains very rapidly in favor with the consumer.

WAR CREEK COAL CO.—Mine near Yukon, McDowell County, West Virginia—producing the same Beckley coal as is being produced at the Yukon group of mines. This mine promises to be a twin producer of high-grade Pocahontas coal to the John's Branch mine. It is also very coarse and of good appearance and the splendid results obtained and subsequent demand will soon make this mine one of the largest in the field.

We are Exclusive Sales Agents for the output
of the following mines

AMERICAN EAGLE COLLIERY, Ameagle, Raleigh County, West Virginia, on the Chesapeake & Ohio Railway, mining the Eagle seam. The coal with the requiremens for By-Product, Smithing, Domestic, and Steam purposes, sold under the trade name of "AMEAGLE SEMI-SMOKELESS." The best substitute for Smokeless coal obtainable—prepared over Marcus Shaker Screens with picking tables and loading booms.

LEEVALE COAL COMPANY, Leevale, Raleigh County, West Virginia, on the Chesapeake & Ohio Railway, mining the Dorothy seam. The highest quality of Splint coal, which is particularly suitable for Domestic, Malleable, Brick, Tile and other industries requiring a long flame, free burning, low sulphur coal. Prepared over Shaker Screens and picking tables and boom loaded. Heat is the Soul of Leevale coal.

HOPKINS FORK COAL COMPANY, Walburn, Boone County, West Virginia, on the Chesapeake & Ohio Railway. Developing the Cedar Grove seam, which averages forty-eight inches of commercially clean coal. The qualities for steaming and a fuel coal are exceptionally high, as well as the qualities for furnaces and gas producers. No deterioration in storage, ready ignition, carrying a long flame. Equipped to prepare the coal over a bar screen.

WOOD COAL COMPANY, Ethel, Logan County, West Virginia, on the Chesapeake & Ohio Railway, mining the Chilton seam from three different openings. Prepared in Lump and Egg sizes over the most modern shaker screens, picking tables, and loading booms. The management of the mines exercises great care in the preparation of this coal, and with the quality of the different elements contained therein, it is one of the most efficient products for the purposes most adaptable, such as Domestic, Gas Producers, By-Products, Malleable, Pottery and Tile, and cannot be excelled for Steam.

Miners and Shippers of

Gauley Mountain Gas Coal

Mines Located on the Chesapeake & Ohio Railroad in Fayette County, West Virginia

For Coastwise and Export movement this coal carries the New River rate of freight to the loading piers at Newport News, Virginia—the minimum freight rate of coal to the East.

For thirty years The Gauley Mountain Coal Company has mined and marketed this low Sulphur, low Ash coal. This fuel is being successfully used for the following purposes:

The manufacture of Illuminating Gas
In Bee-Hive Coke Ovens
Manufacture of Producer Gas
Manufacture of White Cement
For High Pressure Steaming
As Powdered Fuel

- In Railroad Locomotives
- In By-Product Coking
- Kiln Firing
- Tile and Pottery Burning
- Melting
- Domestic Use and Threshing

This coal is mined from the No. 2 Gas, or Ansted Seam, as it is locally known. The Company's holdings consist of 12,000 acres owned in fee simple. Six modernly equipped mines are located in this property, whose developed capacity aggregates 500,000 tons annually.

This coal is carefully prepared over modern equipment into Lump, Nut, Run-of-Mine and Slack grades.

The character of Gauley Mountain Coal can be accurately determined from the following representative analyses:

Composite Sample of Channel Samples Collected from the Various Working Faces.		Car Sample Taken and Analysis Made by a Customer.		Typical Ultimate Analysis.

A. P. KILBURN, Sec.-Treas.

GROSVENOR COAL SALES COMPANY

Miners and Shippers of High Grade

West Virginia Coals

Union Building, CHARLESTON, W. VA.

The Grosvenor Coal Sales Company is an organization whose purpose it is to supply good coal to the consuming public. A good coal for one purpose is not necessarily a good coal for another purpose. The best results and the highest economy are always obtained when the coal is well adapted, both chemically and physically, to the work at hand.

With operating control of three properties, plus sales connections with other mines, we are constantly in position to supply a coal fitted to your needs, however varied they may be. Our three operations are located in different mining fields and are working different high volatile seams, all of them of the highest grade, so that we are enabled to supply an excellent coal for every purpose for which a high volatile coal is required. These three operations are as follows:

Jones-Winifrede Coal Company

This company operates two mines on a 500-acre tract at Hartland, Clay County, West Virginia, on the B. & O. R. R. One of these mines is in the No. 5 Block seam, and the other in the Coalburg seam. The analyses of each coal are:

No. 5 Block

ANALYSIS*

	Dry Basis
Volatile Matter	37.80
Fixed Carbon	55.68
Ash	6.52
Sulphur	0.61
B. t. u.	13,900
Fusion point of Ash.....	2660° F.

Coalburg

ANALYSIS*

Moisture	1.29
Volatile Matter	33.78
Fixed Carbon	56.56
Ash	8.37
Sulphur	0.75
B. t. u.	13,839

The coal from these mines is highly regarded for domestic purposes, being clean, large and blocky. It invariably pleases the retailer, because it is well prepared in sizes running from 1-inch to 6-inch lump and stands transportation without excessive breakage.

Jones Coal & Land Company

Isabel No. 1 and No. 2 mines belonging to this company are located at Stollings, Logan County, West Virginia, and make shipments on the C. & O.

R. R. The property consists of 2,200 acres of Chilton seam coal, than which there is none superior in the state. An analysis of this coal is here given:

ANALYSIS*

Moisture	0.98
Volatile Matter	35.90
Fixed Carbon	59.36
Ash	4.76
Sulphur	0.77
B. t. u.	14,780
Fusion point of Ash.....	2890° F.

This coal is just as good as its analysis indicates. There is none better for by-product, illuminating gas, fine ceramic uses, and it will meet every requirement for metallurgical, domestic and steam purposes.

Brush Creek Coal Company

This property, consisting of 2,300 acres of No. 2 Gas, coal, is located in the Coal River field on the C. & O. R. R. The mine has a capacity of 1,000 tons per day, which may be graded in sizes from 1-inch to 6-inch lump. The analysis of this coal is:

ANALYSIS†

Moisture	0.90
Volatile Matter	35.30
Fixed Carbon	59.62
Ash	4.18
Sulphur	0.73
B. t. u.	14,780

The No. 2 Gas coal is credited with being the most valuable seam in this field. As a by-product coal it holds front rank and is in constant demand. It is also unsurpassed for gas, tile and pottery burning, and malleable purposes. In the larger size it makes a fine domestic product.

Smokeless Coals

Through trade connections we are at all times able to supply low volatile steam and smithing coals from mines in the New River and Pocahontas districts.

Export Coals

The tonnage from our own mines, in addition to that procurable through our various connections, enables us to assemble cargo shipments quickly.

GORDON LUMP
FRANKLIN GAS
HARRISON
WEST FORK

STAUFFER No. 1 and No. 3
CAMBRIA No. 1 and No. 2
PURO
LILLY SMITHING

Also Pocahontas, New River and Kanawha Gas

GORDON LUMP is mined at Meadowbrook, W. Va., by the Lauretta Coal Mining Company. This Company has 9 to 13 ft. of pure Pittsburgh Seam coal—no binder—and at this point sulphur content is very low—making the coal well adapted to any purpose for which a high volatile and low sulphur coal is needed. The coal will run over 14,000 B. t. u.

FRANKLIN GAS — HARRISON — WEST FORK. These mines are located at Byron and Rosemont, W. Va., and are mining the Pittsburgh Seam, which shows 8 to 9 ft. in height. These mines have modern tipples and are shipping well prepared coal suitable for steel, cement, and brick plants; also locomotive use; in fact, for all purposes where a strong long flame gas coal is desired.

STAUFFER Nos. 1 and 3 are mined at Listie, Pa., on the B. & O. R. R., and are mining the Upper

and Lower Freeport Seams, respectively. The coal is carefully prepared by modern methods, having installed picking table for the purpose, and is shipped exceptionally free from impurities. Coal is well adapted for bunkering or any other purpose where a high grade, low ash and low sulphur steam coal is used.

CAMBRIA Nos. 1 and 2 are located at Hope-well, Pa., on the H. B. & T. M. R. R., taking favorable Clearfield rate of freight east and into New England. The coal runs 60% to 70% lump, is carefully prepared and a splendid domestic as well as steam fuel.

PURO mine is located at Rockwood, Pa., on the W. Md. R. R., is very low in sulphur and ash—does not contain much lump, but well adapted for automatic stoking where a high grade low volatile coal is used.

HALL BROS. & CO., INC., is one of the pioneer coal firms of the Atlantic Seaboard. Founded in 1868, it naturally has been through various periods of depression and good times in the coal trade, and today ranks among the leading shippers of the East. The large tonnage handled by this concern has been built up by good business methods, in fair dealing with both the operators and consumers. In addition to handling a large tonnage of Bituminous coals, they are also Sales Agents for several leading independent Anthracite operators shipping domestic and steam sizes.

Manbar Coal Company

•McConnell Coal Company
Southern States Coal Company
Sterling Block Coal Company

New River Export Smokeless Coal Company

SOUTHERN STATES COAL COMPANY

The mine belonging to this company is located at Orange, Boone County, West Virginia, on the Chesapeake & Ohio Railroad. The seam worked is the Cedar Grove bed, lying between a sandstone roof and a hard slate bottom.

Coal from this operation partakes of all the superior qualities for which the Cedar Grove seam is noted. In addition to being an excellent steam, domestic and malleable fuel, it is particularly well adapted for use in by-product ovens. The percentages of ash and sulphur are low with a correspondingly high B. t. u. value.

The fusion temperature of 2750° F. shows this coal to be excellent for all usages where a high heat is required, and that the coal will withstand considerable poking and stirring where it must be forced in order to maintain high efficiency in the furnace.

A test on this coal made by the Commercial Testing & Eng. Co. gave the following results:

Prominate Analysis	Ultimate Analysis
Moisture 1.47	Moisture 1.47
Volatile Matter 36.31	Carbon 78.91
Fixed Carbon 55.71	Hydrogen 4.94
Ash 6.51	Nitrogen 1.55
	Oxygen 5.86
Sulphur 0.76	Sulphur 0.76
B. t. u. 14,120	Ash 6.51
Fusion Temp. of Ash, 2750° F.	

BY-PRODUCT INVESTIGATION

Maximum Temperature in Retort: 2120° F.
Coke Yield = 62.5% of coal charged = 1250 lbs. per ton of coal.
Gas Yield = 10,620 cu. ft. at 60° F. and 30" mercury, and saturated with water vapor per ton of coal = 5.31 cu. ft. per lb.
Ammonia Yield = 5.95 lbs. ammonia (NH₃) per ton of coal.
Tar Yield = 219.5 lbs. per ton = 24.1 gallons per ton.
Calc. heat value of gas = 543.1 B. t. u. per cu. ft.

From the above it will be seen that the coke, gas, ammonia and tar yields are very fair. The B. t. u. value of the gas is higher than found in some cities. The percentage of illuminants is favorable, quality of coke good, and distillation of tar fair in every respect.

HAZY EAGLE COLLIERIES COMPANY

The mines of this company are located at Edwight, Raleigh County, West Virginia, on the Chesapeake & Ohio Railroad.

Two seams are worked, the Eagle and the No. 2 Gas, the former being slightly the lower in volatile matter, though both seams may be classed as medium volatile coals.

The mines working in these two seams are of recent opening, but conditions have been found so favorable and development work carried along so

successfully that they already have a capacity of about 150,000 tons yearly. The equipment used is of the most modern design and electrically driven. The tippie is supplied with screens and picking tables, which, together with care in underground loading, assures a clean product.

Eagle Seam

The Eagle seam has a wide reputation for excellence as a by-product coal, sometimes for use by itself and sometimes for mixing with other high volatile coals. Tests made on this coal show that the coke, gas and ammonia yields are very fair. The amount of tar, as would be expected in a medium volatile coal, is lower than with the high volatile coals, but its other qualities are of such a high order as to make it well adapted for use in mixing with other bituminous coals in order to act as a strengthener to the coke structure. In this respect it might well be used to replace Pocahontas coal.

Eagle coal is also much used for smithing, having been adopted as a standard for this use by some of the largest industries in the country. It is also in high standing as a steam coal.

No. 2 Gas Coal

The No. 2 Gas coal on this property has also been tested for its by-product values, and has given a very good account of itself. In comparison with the Eagle coal, it shows almost the same results in coke, gas and ammonia yields, but the yield of tar is about 20% higher. This coal could be used profitably for mixing with higher volatile coals previous to placing in retorts.

As will be seen by referring to its analysis, the No. 2 Gas coal is low in impurities and high in heat value. It is, in fact, a splendid steam or domestic coal and gives satisfaction wherever tried.

Analyses of these coals are as follows:*

Eagle	No. 2 Gas
Moisture 1.05	Moisture 1.44
Volatile Matter 29.19	Volatile Matter 31.08
Fixed Carbon 62.62	Fixed Carbon 63.69
Ash 7.14	Ash 3.79
Sulphur 0.96	Sulphur 0.68
B. t. u. 14,268	B. t. u. 14,481

BY-PRODUCT INVESTIGATION

Eagle	No. 2 Gas
Coke yield = 69.14%	Coke yield = 66.41%
Gas yield = 11,888 cu.ft.	Gas yield = 11,384 cu.ft.

BUFFALO EAGLE COLLIERY CO.

HOOPER-MANKIN FUEL COMPANY, Sales Agents

The mines of the Buffalo Eagle Colliery Company, three in number, are located at Braeholm, Logan County, West Virginia, on the Chesapeake & Ohio Railroad.

No. 1 mine operates in the Eagle seam; No. 2 mine in the Island Creek seam; No. 3 mine in the Chilton seam. The combined tonnage of these openings is in the neighborhood of 500,000 tons annually. The mines are electrically equipped and have their own power plant. Shaker screens, picking tables and loading booms are provided for the preparation of coal.

Braeholm is a delightful type of miners' village and the entire community enjoys living conditions which are unexcelled. Most of the miners' houses are provided with hot and cold water and baths, and labor conditions are as pleasant as they can be made.

One of the features of the equipment used underground is a coal loading machine shown in the illustration. This machine is the invention of Mr. P. J. Riley, President of the Buffalo Eagle Colliery Company, and during the several months during which it has been in service, has demonstrated that it is a practical and successful device for the purpose intended.

The three seams mined by this company may, as a result of extended investigation and tests made, be classified as by-product, illuminating gas and producer gas coals. As steam, domestic and metallurgical fuel their value is widely known, having been in use for these purposes for many years. The Chilton and the Eagle coals, in particular, are splendid gas and by-product coals, and when bought in the prepared sizes are equally attractive as domestic coals. The fusion points of ash for all three coals is high and indicates that for steam purposes this coal will stand considerable abuse without clinkering when fired under a boiler where it has to be forced.

American Loading Machine at Work in Mine of Buffalo-Eagle Collieries Company

Tipple at Braeholm, W. Va.

New River Export Smokeless Coal Company

HOOVER-MANKIN FUEL COMPANY, Sales Agents

New River Export Smokeless Coal Company

The Lookout and Blume mines belonging to the New River Export Smokeless Coal Company are located at Lookout, Fayette County, West Virginia, on Keeney's Creek branch of the Chesapeake & Ohio Railroad. The village of Lookout is appropriately named, as it is situated 2,160 feet above sea level.

Both mines are working in the Sewell seam, a fine clean coal running from 36 to 40 inches in thickness. The excellence of this coal for steam purposes and for all uses in cities where ordinances require a smokeless coal, is too well known to require extended description. The analysis is as follows:

Moisture	0.59
Volatile Matter	22.25
Fixed Carbon	75.44
Ash	1.72
	<hr/>
	100.00

Sulphur	0.42
---------------	------

Coal Storage Bin at Blume Mine

These mines are electrically equipped throughout and generate their own power. The tipples are modern in every respect and use shaker screens and loading booms in the sizing and loading of run-of-mine, lump, egg, and slack and nut coal.

Labor Conditions

Labor conditions have so great an influence on the ability of a company to fulfill its contracts that they must be given due consideration. The mines of the New River Export Smokeless Coal Company, although located in the New River Union field, are nevertheless not operated by Union labor. While we are situated in the midst of a Union community, our employees have no desire to become affiliated with the Union. Our relations with all our workmen are amicable and pleasant, as will be apparent from the statement that the Blume mine has been running for a period of 25 years and has never had a strike, nor has the Lookout mine, which has been in operation 15 years. Living conditions are made attractive. The large three-story "Mountain View" hotel, shown on this page, is used largely by the miners. It is a modern building in every respect, with provisions made for reading, and pool rooms and gymnasium in the basement.

Rex Colliery Company

Locations of Mines

Both of above mines are located about 27 miles up Elk River from Charleston, West Virginia, on the Coal and Coke Division of the Baltimore and Ohio Railway in Kanawha and Clay Counties. Through rates East, West and North.

Coal Mined

Both mines are operating in the Upper Kittanning, known locally as the Queen seam. This coal will average about four feet in thickness and is almost a clean strip from top to bottom. It is an excellent fuel for steam, domestic, malleable iron and by-product purposes. The Nut and Slack is clean and of unusual quality for steam purposes.

ANALYSIS

Moisture	1.09

WENTZ COMPANY - SALES AGENTS

General Office

1727 Land Title Bldg., PHILADELPHIA, PA.

Dime Bank Building, Detroit, Mich.

90 West Street, New York City

(See Page 1243)

Location and Holdings

The Lewis Mine is, without doubt, the most up-to-date operation in Northern West Virginia. The property at Wolf Summit, West Virginia, consists of 1,030 acres of eight-foot Pittsburgh Seam. The seam is particularly free from slate partings and other impurities, and is noted for the blocky fracture in which it mines. It stands transportation well and is particularly desirable for domestic fuel, steam coal and gas producing.

Preparation

The preparation at the Lewis Mine is excellent. The coal passes over screens to the circular picking table, thence to the adjustable loading boom, and is delivered to the car with minimum breakage. The modern Heyl & Patterson Tipple can deliver 2" Lump, $\frac{3}{4}$ " Lump, 2"x $\frac{3}{4}$ " Nut, and Run of Mine.

Output

The present output is 1,500 tons per day. However, the mine and tipple have a maximum capacity of 3,000 tons per day.

Shaker Screen and Circular Picking Table with Loading Boom in Background

Run of Mine Passing from Circular Picking Table to Loading Boom

Circular Picking Table in Operation

Shipping Facilities

The Lewis Mine is on the Main Line of the Baltimore & Ohio Railroad, with direct connections East and West.

HUTCHINSON COAL COMPANY

The Hutchinson Coal Company has been for many years, one of the largest producers of coal in West Virginia. At the present time this company operates twenty-one mines, the location and railroad connections of each mine being shown in the table below. The mines in the Logan field are operated by the Logan Mining Company and the Rich Creek Coal Company.

Fairmont Field

Operations in the Fairmont field are conducted under the name of the Hutchinson Coal Company.

The coal mined is all from the celebrated Pittsburgh seam, which on the various properties of this company ranges from 6½ ft to 8½ ft. in thickness. It mines in large, hard lumps which stand transportation well. The coarse grades are especially well adapted for general steam, lake, tide-water and railroad purposes, while the fine grade is the best-known coal for cement burning in rotary kilns, being high in volatile matter, flashy and free burning. Fairmont slack is also especially recommended for use with stokers.

Tipple and Power House Rossmore Mine, Logan Mining Co.

HUTCHINSON COAL COMPANY

Analysis Fairmont Coal*

Moisture	1.30
Volatile matter.....	37.92
Fixed carbon.....	54.80
Ash	5.98
Sulphur	2.30
B. t. u.....	14,233

*Analysis by Smith, Rudy & Co.

The tonnage from the mines in the Fairmont districts about 1,500,000 annually. The Baltimore & Ohio railroad affords a direct route to all markets East and West.

Belmont-Pittsburgh No. 8 Field

The Hutchinson Coal Company operates the Kirkwood mine in the No. 8 district of Ohio. The Pittsburgh seam, with a thickness of 5½ feet, is worked.

This seam in Ohio ranks high as a steam, domestic and railroad fuel. It is also suitable for cement burning and for the manufacture of producer gas.

This mine is served by the Baltimore & Ohio Railroad, giving it excellent shipping facilities.

Sales Service

Coal from all of the operations enumerated and described on the four pages here grouped is sold through the Hutchinson Coal Company, whose general and sales offices are given at the top of the opposite page. The Philadelphia office is in charge of Lindsay McCandlish, Vice-President, the Cincinnati office is in the keeping of B. Lee Hutchinson, Manager; while the Cleveland office is in charge of J. G. Wolfe, Western Manager. Tide-water shipments are handled from the Philadelphia office and Lake shipments through the Cleveland office.

The Hutchinson Coal Company distributes annually, to the general markets of the world, approximately 2,500,000 tons of coal. All coal is carefully prepared before leaving the tipple and the number of mines available guarantee regularity of shipments. In fact, the reputation of this company is firmly established in the coal trade, due to its promptness and ability to look after the interests of coal users.

SHIPMENTS VIA ALL-RAIL, LAKE AND TIDEWATER

Typical View of Equipment Used for Preparing Hutchinson Coal.

LOGAN MINING COMPANY RICH CREEK COAL COMPANY

Under the name of the Logan Mining Company and Rich Creek Coal Company, the Hutchinson interests operate seven mines in the Logan field of West Virginia. Although operations were begun here in 1910, both companies incorporated two years later and during the past decade have greatly extended their developments.

Logan Field

The Logan field, from the standpoint of high quality coal, is one of Nature's most favored producing centers. All of its coals are widely known for their remarkable purity and high heat value. The Logan Mining Company has operations in the Island Creek, Chilton and No. 2 Gas seams and the Rich Creek Coal Company in the Eagle seam. They are, therefore, at all times in position to supply a fuel adaptable to every requirement in so far as high volatile coals are concerned.

Island Creek Seam

Two mines, Mona and Rossmore, on Main Island Creek, in the very best section of the famous Island Creek seam, produce the coal we sell under the name of "Mona" Main Island Creek Coal. This coal is hard, mines in large blocky pieces and will stand transportation and stocking exceedingly well.

The Block, Lump and Egg grades are especially adapted to Domestic and Gas Producing purposes, while the other sizes are unexcelled for steam and pottery burning purposes. All sizes are given a most careful preparation over shaker screens, picking tables and adjustable loading booms.

Analysis—Island Creek Seam*

Mona and Rossmore Mines

Volatile matter.....	37.42
Fixed carbon.....	57.78
Ash	4.11
Sulphur	0.81
B. t. u.....	14,540

*Analysis by Smith, Rudy & Co.

Chilton Seam

Wanda and Manitoba mines are the sources of an excellent splint coal which mines in large chunks, is hard and a good stocker. We recommend "Wanda" 4-inch Block and Egg sizes for the domestic trade. It is a free burning coal, clean, and throws a long flame. "Manitoba" is a strong steam coal, low in sulphur, with an unusually long flame with intense heat, making it particularly well adapted to malleable iron purposes. It is also much used for gas producing and makes an ideal railroad fuel.

Tipple at Rossmore Mine, Logan Mining Company.

LOGAN MINING COMPANY RICH CREEK COAL COMPANY

No. 2 Gas Seam

"Earling" No. 2 Gas coal is the equal of any for By-Product purposes, making a superior metallurgical, as well as a high-grade domestic coke, with a rich yield of by-products. Coke made from "Earling" coal is of a strong structure, low in sulphur, ash and phosphorus, and high in carbon.

Its high fusion point of ash (2875 deg. F.) makes it an exceptionally good coal for steam purposes, owing to its standing high temperatures without clinkering. Its low ash and low oxygen content make it a strong high-heat-unit coal.

Produced in all sizes from 6-inch Lump down—for any purpose.

Analysis "Earling" Coal*

Moisture	0.88
Volatile matter.....	33.04
Fixed carbon.....	61.53
Ash	4.55

Sulphur	0.74
B. t. u.....	14,650

*Analysis by Smith, Rudy & Co.

Eagle Seam

Two mines, the Wilburn and Lyburn, are operated in this seam by the Rich Creek Coal Company, with the production of an excellent coal for gas and by-product purposes. The Eagle seam, in fact, is the premier gas coal of the district and is one of the big factors in establishing the Logan field reputation as a producer of high-grade gas coal for illuminating gas plants, by-product plants and malleable iron works.

At both mines will be found the most modern facilities for preparing and sizing coal. The picking tables are three-compartment affairs, in which the lump, egg, and nut and slack are run separately, a methods by which the run-of-mine grade can be properly cleaned and reassembled for loading.

On these four pages we have given a brief description of the various operations whose coal is sold through the Hutchinson Coal Company. These coals have exception qualifications for every purpose for which high-volatile coals are fitted. Our sales office, nearest to you, will be glad to supply any additional information on our products.

Vice-President

J. M. HALL
Secretary-Treasurer

MINE OPERATIONS

The Huntington Coal & Mining Company operates mines in the Coalburg and Cedar Grove seams near Belle, in Kanawha county, about one mile up Reynolds Branch on the Kanawha & Michigan Railroad. In addition to the Coalburg and Cedar Grove seams, there are present the Winifrede, Lewiston, No. 5 Block and the No. 2 Gas, the six seams having a combined area of over 800 acres, with 4,000,000 available tons of coal.

Analysis

The analysis of the Coalburg coal on this property is as follows:

Moisture	1.58
Volatile Matter	38.01
Fixed Carbon	55.54
Ash	4.87
	<hr/> 100.00
Sulphur	0.84
B.t.u.	14,080

*Sampled and analyzed by Clark & Krebs.

Mining Features

Our mines are modernly equipped and operated. A new three-track tippie has just been contracted for with three shaker screens, so that we are able to meet all the demands of steam and domestic users. In addition to railroad shipments, we make shipments by river. This gives us a considerable advantage over mines less fortunately situated, as we can operate our mines steadily the whole year around, and this enables us to hold a better than average grade of labor. Another favorable circumstance is our nearness to Charleston (16 miles) and the ready means of travel either by steam or electric roads. Employees at our mines may live at Charleston or along the transportation lines and thus enjoy all the advantages of city schools and churches.

FUTURE DEVELOPMENTS

The Huntington Coal & Mining Company owns and controls other coal properties, development of which will be started in the near future.

Wayne County, West Virginia

At Ferguson this company owns in fee 760 acres carrying two good workable seams. A sample taken thirty feet in from the outcrop shows total combustibles equal to 92.88 per cent., and a heat value of 13,657 B.t.u., both of these being computed on the moisture free basis. There is a splendid opportunity for a fine plant here and it is the purpose of this company to begin opening the property and constructing a tippie with a daily capacity of 1,500 tons.

Floyd County, Kentucky

Six miles east of Prestonburg we hold by lease a tract of 1,035 acres of Elkhorn coal. This tract contains six workable beds ranging in thickness from 36 to 102 inches, and having a yield of over 17,000,000 tons, or the equivalent of a single seam having an area of 4,500 acres. A sample taken about 300 feet in from the outcrop shows total combustibles equal to about 93 per cent. and a B. t. u. value of 13,640, both of these being computed on the moisture-free basis. It is planned to develop this property during the present year, using a modern tippie having a capacity of 2,000 tons daily.

JAMISON COAL & COKE COMPANY

Suite 1504-1510 Oliver Bldg., Pittsburgh, Pa.

Producers of

Jamison Standard Coke Greensburg Steam and Domestic Coal Jamison Farmington Gas Coal

Mines and Ovens in Westmoreland County, Pa., and Marion County, W. Va.

The Jamison Coal & Coke Company is one of the pioneer operating companies in the Greensburg Basin, Westmoreland County, Pennsylvania, where it has 6 mines operating in the Pittsburgh seam of coal, and a reserve of 4,500 acres of unmined coal.

This coal produces the standard Connellsville Coke, recognized as the premier metallurgical fuel of America.

Mines Operating

Three of the mines—Jamison Nos. 1, 2 and 4—have a total of 1,400 coke ovens, while Jamison Nos. 3, 5 and 6 ship all coal mined. These 6 mines produce annually about 2,500,000 tons of coal.

Greensburg Steam and Domestic Coal

Pittsburgh coal from the Greensburg Basin has been in constant use by industries throughout the East as a steam coal through a long period of time. From the very beginning of its mining history it has been used as a locomotive fuel and is regarded as one of the standard coals for this purpose. Because of its high heat value and blocky nature it is also much sought after as a domestic coal.

Jamison Standard Coke

Is produced from 1,400 coke ovens, assuring the trade a continual supply. Jamison furnace and foundry coke is low in Sulphur and has that hard structure required in the furnace or cupola.

Before the coal goes to the ovens, it is passed through washeries containing modern equipment, and where the percentage of both Sulphur and Ash are brought down to and below the limits required for furnace use.

*Analysis made by Bureau of Mines of coke from Jamison No. 2 Mine.

†Analysis made by Pennsylvania Railroad.

Properties

The Jamison Coal & Coke Company operates mines in both Pennsylvania and West Virginia.

The West Virginia properties are in the Fairmont region, and consist of 8,000 acres of unmined Pittsburgh coal, the major portion of which lies in the low-sulphur basin, which has supplied the eastern markets with gas coal for many years.

Mines in Operation

A total of 3 mines are in operation. Jamison Nos. 8 and 9 mines are on the Wheeling division of the Baltimore & Ohio Railroad, while Jamison No. 11 is on the Monongahela Railroad. The combined annual capacity of these mines is 1,000,000 tons.

Jamison Farmington Gas Coal

This well known coal is produced by the Jamison Nos. 8 and 9 mines. The coal here averages from 7 to 9 feet in thickness, is hard and comes down in large and blocky pieces.

Working faces are first undercut with modern types of undercutters and the coal is carefully shot and loaded.

All Jamison tipples are provided with shaker screens, picking tables and loading booms, so that the coal as it reaches its destination is not only clean, but is also well sized and free from fines.

Jamison Farmington Gas Coal is low in Sulphur, and for many years has been coked at No. 8 Mine, where there is a battery of 115 bee-hive ovens. It has been in continual use in Eastern cities as a gas coal for many years, and, in fact, is adapted to any purpose for which a high volatile and low sulphur coal is needed.

Analysis

The analysis of this coal is as follows:*

Moisture	1.27
Volatile Matter	35.55
Fixed Carbon	57.68
Ash	5.50
Sulphur	100.00
B.t.u. per pound	13,960

*Analysis made by West Virginia Geological Survey.

Equipment

Special attention has been given to providing each mine with attractive surroundings. All construction work is of a durable nature, consisting of stone, brick, cement and steel.

Modern machinery is found in the power house, engine house and in all departments.

IMPERIAL SMOKELESS COAL COMPANY

THE IMPERIAL COAL SALES COMPANY, THROUGH THE SALE OF THE COAL FROM THE MINES DESCRIBED BELOW, IS IN POSITION TO SUPPLY YOUR REQUIREMENTS WITH COAL OF THE BEST QUALITY THAT CAN BE PRODUCED

IMPERIAL COLLIERY COMPANY

Location

The mines of this Company are located at Burnwell, Kanawha County, West Virginia, on the Paint Creek Branch of the Chesapeake & Ohio Railroad, the Post Office being located at the same point.

Coal Mined and Capacity of Mines

The coal mined is from the Eagle seam and the No. 2 Gas seam, the mines having a daily output of 1,100 tons of Eagle coal and 600 tons of No. 2 Gas coal.

Preparation and Quality of Coal Mined

The Eagle coal is handled by retarding conveyors from the mine to the tippie, thence over picking tables and loading booms into the railroad cars. This care reduces the amount of slack to a minimum.

The quality and preparation of Imperial Eagle Coals enables us to make as specials "Imperial Smithing" and "Semi-Smokeless Domestic" coals, which are explained in our page in the display section.

Analysis

The following analysis was made by the Milwaukee Coke & Gas Company from samples taken from cars by their representatives:

Volatile Matter	30.98
Fixed Carbon	63.40
Ash	5.62
	100.00
Sulphur78
B. t. u. per pound.....	14,575
Fusing Point of Ash.....	2,950° F.

Living Conditions for Labor

As an inducement to labor we have built and maintain a modern Y. M. C. A., equipped with baths,

Y. M. C. A. Building at Imperial Colliery, Burnwell, W. Va

pool room, bowling alley and refreshment counter, together with a barber shop and moving picture theatre.

The morale of the mining camp is supported by a modern school, which is conveniently located, and the advantages afforded by a general welfare worker supported by the Company. There are also churches of all denominations.

Store and Portion of Village, Imperial Colliery, Burnwell, W. Va.

IVY WHITE ASH COAL COMPANY

IMPERIAL COAL SALES COMPANY, Exclusive Sales Agents

Location

The property is located at Ivaton, in Lincoln County, West Virginia, on the Coal River Branch of the Chesapeake & Ohio Railway.

Seam Mined—Preparation and Quality

The Company has two mines operating a 1,350-acre lease of the celebrated NUMBER FIVE BLOCK COAL. These mines have a capacity of 1,500 tons per day and are modernly equipped throughout.

The coal, as its name implies, is very large and blocky, hard in structure and will not disintegrate in shipping. It is also an excellent fuel for stocking purposes. It is prepared and cleaned over shaker screens and picking tables, and makes an ideal domestic fuel. It is also suitable for steam, brick burning, etc.

Analysis

IMPERIAL SMOKELESS COAL COMPANY

IMPERIAL COAL SALES COMPANY, Exclusive Inland Eastern Agents

Location

This operation is located near Quinwood, Greenbrier County, West Virginia, on the Sewell Valley Railroad, connecting with the Chesapeake & Ohio Railway main line at Meadow Creek, which is just west of Hinton, W. Va.

Seam Mined

This lease of over 1,000 acres contains two seams of the best NEW RIVER SMOKELESS COAL. At the present time operations are confined to development of the Sewell seam, an analysis of which is given below, which shows the excellent quality of this coal. The mine has been equipped with most modern equipment for a large production.

INDIAN RUN COLLIERIES COMPANY

INDIAN RUN COAL CO., Sales Agents

CHARLESTON, W. VA.

Location

Mines are located on Armstrong Creek, Powellton Branch of the Chesapeake & Ohio Ry.—Operating Office Kimberly, Fayette County, West Virginia.

Operations and Capacity

Five mines operating with a combined capacity of approximately 2,500 tons daily, with capacity increasing.

Coal Mined

From three of our mines we produce the famous POWELLTON Coal; from another the No. 2 GAS and from the other our INDIAN RUN BLOCK, an exceptionally high grade splint coal.

"Indian Run" Block

Indian Run Block

A premium splint coal from our Columbia Mine; mines larger than any competitor we know of; a domestic coal with little competition because of its exceptional quality and firmness—mines equipped with modern type shaker screens, equipped to make Lump, Egg, Nut and Slack—see photograph below:

Powellton Coal

This seam on these properties averages from 5 to 6½ feet in thickness; for By-Product, Coking, Gas or Steam it is the most valuable coal found in the Kanawha Series. It may be used 100% in by-product work; that is, the usual mixture of low volatile may be avoided with almost identical results; the coke resulting is exceptionally high grade and may be used for metallurgical purposes as well as domestic. The gas yield is very rich as the analysis indicates. The ash and sulphur are exceptionally low and the B. t. u. extraordinarily high, averaging from Car Samples, as follows:

Moisture99
Ash	4.97
Sulphur60
B. t. u.	14,494
Fusion of Ash.....	2700 Deg. F.

Analysis—Powellton Seam, 6' 2"

Much may be said on the subject of analysis of coal. Analyses from face samples taken inside the mine from a strip of the seam mean nothing to the buyer who pays for the coal plus the freight bill. The analyses quoted below are car samples, containing such impurities as pass our inspectors under the tipples; in other words, these analyses represent the coal as you place it under your boilers.

Car Samples taken and analyzed by the Commercial Testing & Engineering Co., Chicago, Ill.

Twenty-seven Bituminous Coal Mines in West Virginia and Kentucky Fields—Annual Capacity 3,400,000 Tons

A Surprising Record

Lake & Export Coal Corporation, in its comparatively brief history, has set a record for achievements which few believed could be maintained or expanded. Yet Lecco continues to grow and achieve.

Originally organized to specialize in exporting, Lecco soon expanded its efforts to inland shipments.

Now it includes a complete inland, as well as exporting organization. A few Lecco achievements, recited on this page, give an idea of the resourcefulness and SPIRIT of this company.

The Man-Power Behind

Men of wide coal experience, both in the mining and distribution of coal, compose the Lecco man-power. Mining and shipping coal on a basis of efficiency and service, briefly, is the Lecco policy.

The Lecco-Ideal

Coal is a vital, basic commodity. Lecco likes to feel that it helps run railroads, turn the wheels of great industries, heat the homes of multitudes, light cities, help create the most delicate musical instruments and the most alluring perfumes; aids in preparing inviting cereals and preserving foodstuffs—for Lecco coal has a part in doing all these things.

To do its work most efficiently and most economically is the aim of Lecco.

A Few Lecco Facts

There are 27 Lecco mines in the preferred fields of West Virginia and Kentucky. These mines are advantageously located as to railroads and labor conditions. They produce high and low volatile coals adapted to a wide variety of industrial uses as well as domestic.

High volatile mines are in Logan, Boone and Fayette counties, West Virginia, operating the

Island Creek (Cedar Grove), Eagle, No. 2 Gas, Chilton and Draper seams.

Low volatile (smokeless) mines are in Fayette and Raleigh counties, West Virginia, and operate the No. 3 Pocahontas, Sewell, Beckley and Fire Creek seams.

In Eastern Kentucky, Lecco mines are in the Big Sandy district, and operate the Elkhorn seam. Other mines are in the Hazard field.

On the next page is a summarized list of the leading Lecco operations.

These mines are modernly equipped to prepare the various sizes of coal and thoroughly clean and carefully handle them.

Consumer Protected

Lecco's tremendous tonnage capacity from mines it controls, with tonnage from groups of operations with which it has direct distribution connections, assures the consumer a constant source of supply—and uniform quality coal of known origin. This is a factor much appreciated by the consumer—both industrial and domestic dealer.

Aracoma Mines Nos. 1, 2, 4 and 5

Aracoma mines are among the best known in the famous Logan county field. They are on the C. & O. Railroad; shipping point, Logan, W. Va.

They operate the Island Creek, the Eagle and the Draper seams. Much of the tonnage of these operations go to the C. & O. Railroad and to the Virginian Power Company for fuel, a tribute to Aracoma's product.

Modernly equipped, Aracoma mines load perfectly prepared 4-inch lump; 1¾-inch lump; egg and mine run.

Important glass plants, potteries, brick and tile plants, cement mills, open hearth steel plants, gas plants, as well as steam coal users, are finding Aracoma coals efficient and economical.

Stirring Achievements

LECCO, through its aggressive spirit and resourcefulness has helped make coal history:

Lecco sent trainloads of coal into Ohio and Michigan during the switchmen's strike—when it "couldn't be done."

Lecco saved cities like Boston, Cincinnati, Detroit and Milwaukee from distress.

Lecco kept war industries moving—like Detroit-Edison, Steel & Tube of America, Westinghouse and others.

Lecco, on government appeal, put the first cargo of American coal into Germany after the war.

Lecco aided Netherlands with nearly 1,000,000 tons of American coal.

And Lecco has grown; has increased its power to serve.

EASTERN KENTUCKY

Standard Elkhorn	Floyd County, Ky.	C. & O.	Elkhorn	135,000
Huntington By-Product	Letcher County, Ky.	C. & O.	Elkhorn	80,000

Sunbeam Mine

Sunbeam Mine is located in Logan county, on the C. & O. Railroad; shipping point, Fort Branch, W. Va. It is thoroughly equipped to produce various preparations of coal. It operates in the Chilton seam. This low sulphur, free-burning, long-flame and high heat unit coal is favored by leading malleable plants, as well as for general steam, gas and domestic uses.

These mines are typical of other Lecco mines in the high volatile fields of West Virginia. The coals of each mine have been widely tested and classified as to their adaptability to various uses and under various conditions.

Low Volatile (Smokeless) Mines

Lecco's group of low volatile operations produce coals classified in Pools 1 and 2, Navy Standard, the first quality classification.

Sugar Creek Mine, Fayette county, shipping point Mt. Hope, is on the C. & O. and Virginian Railroads. It operates the Sewell seam. Nature has favored Sugar Creek—its coal is far above the average smokeless mine run in percentage of lump. This makes it a preferred smokeless mine run coal for domestic dealers. This also applies to DeWitt Mine, another Sewell seam operation.

Beckley (Besoco) Mine

This is another widely known low volatile mine, operating the Beckley seam at Besoco, Raleigh county, West Virginia. It has the advantage of joint connection with the C. & O. and the Virginian Railroads.

Clyde Mine, operating No. 3 Pocahontas seam; Dorkent Mine, operating Sewell seam, and other mines are included in the Lecco "smokeless" group.

Kentucky Mines

The Standard Elkhorn mine, Garrett, Ky., on the C. & O. Railroad, produces one of the most popular steam and by-product coals—Elkhorn mine run. This coal is in successful use by some of the largest glass plants, brick and tile burners, by-product plants and for general steam use.

A peculiar gift of nature enriches this coal, increasing its gas yield and intensifying its heat properties. A long list of careful consumers, who analyze the cost of each pound of steam or foot of gas, laud Lecco-Elkhorn. One of the largest steel plants in the country is securing 11½ pounds of evaporation per pound of this Lecco-Elkhorn.

Several other mines operating the Elkhorn seam in the Big Sandy district are included in the Lecco group.

Black Velvet Cannel

Lecco's cannel mine at Garrett, Ky., produces the popular Black Velvet Cannel. A stratum of 18 to 24 inches of pure cannel makes possible a large blocky, impressive coal which appeals to domestic dealers.

Exporting Facilities

Lecco maintains a complete exporting and bunkering division.

Export headquarters are at 32 Broadway, New York City. Tidewater branches are at Norfolk, Newport News and Charleston, S. C. Foreign offices at 21 Cullum Street, London, England, and at 19 Av. del' Opera, Paris, France.

Lecco can place 75,000 tons of Pool 1 and 2 coal at tidewater monthly; and can ship for export as much as 250,000 tons monthly from the various pools. A constant, large tonnage is always to Lecco's credit at the pools for immediate demand.

No tonnage requirement is beyond Lecco's facilities or resources.

Expert bunkerers and steamship agents handle all details of ships in Atlantic ports.

Special Lecco Service

Without obligation to the recipient, Lecco places its experience and facilities at the command of coal consumers. Engineering advice, freight rate and other traffic information, advertising help to dealers and other details possible to a complete mining and shipping organization are offered cheerfully.

Leckie Pocahontas Coal

Our Pocahontas coal is mined from the celebrated No. 3 seam at Leckie, in McDowell County, West Virginia. It is a naturally clean coal, loaded in run-of-mine size only, and is the equal of any Pocahontas coal for steam, domestic or by-product purposes. Shipments on N. & W. Railroad.

Leckie New River Coal

"Leckie New River" coal comes from the mines of the Douglas Coal Company and Leckie Fire Creek Coal Company at Fireco, Raleigh County, West Virginia. The total acreage tributary to both openings is 3,200 acres underlaid with the Fire Creek and Sewall seams. Particular care is taken in the preparation of the run-of-mine coal loaded at both tipples and all equipment provided is of the latest and best design. Analyses made by the U. S. Navy are as follows:

Douglas Coal Company	
Moisture	1.70
Volatile Matter	16.70
Fixed Carbon	76.50
Ash	5.10

Sulphur	0.83
B. t. u.	14,461

Leckie Fire Creek Coal Company	
Moisture	2.90
Volatile Matter	17.20
Fixed Carbon	75.40
Ash	4.50

Sulphur	0.72
B. t. u.	14,647

Daily capacity of mines 2,000 tons. Shipments on Virginian Ry.

Panther Domestic

This well known brand of fuel is mined by the Lathrop Coal Company and the Panther Coal Company at Panther, McDowell County, West Virginia, where a fine tract of 2,100 acres of coal is under development. These mines are on the Norfolk & Western Railroad, and produce daily 1,500 tons of highest grade coal for steam and domestic uses. Coal from both mines has nearly the same analyses, a composite analysis being as follows:

Moisture	0.93
Volatile Matter	30.38
Fixed Carbon	63.29
Ash	5.40

Sulphur	0.80
B. t. u.	14,527

Tipple of Lathrop Coal Company

No. 1 Thacker Tipple of Leckie Coal Company

Loading Pond Creek Coal at Tipple of Leckie Coal Company

Leckie Thacker

The Leckie Collieries Company, with mines at Aflex, Pike County, Kentucky, is the producer of Leckie Thacker coal. This is a superior steam and domestic coal which comes into the market via the N. & W. Railroad in lump, egg, nut and slack sizes, after first having gone through a process of sizing on shaker screens and of preparation on picking tables. Loading booms insure a minimum of breakage in dropping the coal into the car. With an acreage of 2,100 acres to draw upon and a daily capacity of 1,200 tons, we are in position to supply the trade with their requirements. A channel sample analysis made by the Norfolk Testing Laboratory shows the following:

Moisture	1.48
Volatile Matter	35.72
Fixed Carbon	57.92
Ash	4.88
Sulphur	0.87
B. t. u.	14,324

Leckie White Ash

This coal is produced by the same company as produces "Leckie Thacker," the distinction being that the "Leckie White Ash" is mined from the Winifrede seam. It is a domestic coal of wonderful purity, is hard and blocky, stands rough handling and is a prime favorite with the retail coal trade. It is a free-and-easy-burning coal, makes a cheery fire and burns to a fine white ash with no clinkers. Sizes produced—Lump, Egg, Nut, Slack and Run of Mine.

Leckie Gas

"Leckie Gas" coal is supplied by the Leckie Collieries Company, mining the Pond Creek seam at Aflex, Ky., and by the Logan-Chilton Coal Company, mining the Alma and Chilton seams at Henlawson, Logan County, West Virginia. The coal from both operations is low in sulphur and ash and, in addition to its exceptional fitness for gas making, is also unsurpassed for use as a by-product, malleable and pottery burning coal. "Leckie Gas" coal is well prepared and loaded in various lump sizes. It is a splendid coal for household use and also for general steam purposes. Shipments on the Norfolk & Western and Chesapeake & Ohio Railroads.

Leckie Service

From the foregoing descriptions and analyses it will be seen that the Leckie Coal Company, Inc., is able to supply coal of the highest quality from operations whose output it commands. Any coal sold you through our organization is selected to meet your needs. A trial of Leckie coal with Leckie service will dispel all your fuel troubles.

THE LORAIN COAL & DOCK CO.

Huntington Bank Building, Columbus Ohio

Producers of

"LORADO" COAL

The holdings of The Lorain Coal & Dock Company in the Cedar Grove Seam, sometimes called the Island Creek Seam, are about nineteen miles southeast of Logan in Logan County, W. Va., on the Guyan Division of the Chesapeake and Ohio Railroad. Locally, the seam is known as the "LORADO" Seam, the name being taken from the town where the two mines of the Company are located.

The coal in the LORADO Seam averages from six to seven feet in thickness and at some places reaches the extreme thickness of eight feet. The structure of the coal is clean, the partings being very small and easily removed from the coal; the roof and bottom conditions are of the best.

The Lorain Coal & Dock Company is operating at Lorado two large mines.

View of Tipple at Lorado No. 2 Mine

Equipment and Preparation

The tipples at both mines are of permanent steel construction and of size to permit the greatest possible development. Both tipples have ample picking tables.

The screens are shaker screens of the "Marcus" and "Webster" types.

Loading booms which may be lowered to the bottom of the car, let the coal down into the car with a minimum of breakage.

The equipment of the tipples at both mines is such that clean, well prepared and carefully sized coal is delivered to the customer.

Uses of Lorado Coal

LORADO coal is a most efficient steam and domestic coal. It is especially suited for by-product, gas and malleable purposes. In the manufacture of clay products, such as brick, tile and all grades of porcelain, it is now demonstrating that it is without a peer.

Sizes Prepared

At both mines the prepared sizes are rescreened over shaker screens and the following sizes are made:

4" Lump	2" Nut and Slack
2" Lump	1" Slack
2x4" Egg	Straight Mine Run
1x2" Nut	4" Mine Run

LOST CREEK COAL COMPANY, Inc.

Goff Building
CLARKSBURG, WEST VIRGINIA

Miners and Shippers of
Pittsburgh Seam High Volatile Coal

The Lost Creek Coal Company are producers of high-grade high-volatile coal, especially suited to such industrial uses as for Locomotive Fuel, Steam Plants, Cement Burning, Pulverized Fuel and Brick Burning.

It is also uniformly satisfactory as a Domestic Coal.

Our coal mines clean and requires very little preparation. While loading, however, men are stationed at the tipple whose duty it is to remove any slate or other impurity that may have found its way into the coal.

Analysis

An analysis made by the Pittsburgh Testing Laboratory on a sample taken by their representative at our mine on August 11, 1920, shows the following:

Moisture	1.43
Volatile Matter	37.17
Fixed Carbon	53.95
Ash	7.45
	<hr/>
	100.00
 Sulphur	 3.11
B.t.u.	13,973
 Fusion Point of Ash	 2426 deg. F.

The present output of 250 tons run-of-mine coal will be gradually increased to 500 tons as development proceeds. All shipments take the Fairmont-Clarksburg freight rate.

LUNDALE COAL COMPANY 3--FORKS COAL COMPANY

LUNDALE, LOGAN COUNTY, WEST VIRGINIA

Producers of

QUALITY COALS

Resources and Location

The holdings of these companies comprise about twelve thousand acres, situated in Logan County, West Virginia, on the Guyan Valley Division of the Chesapeake & Ohio Railroad.

Coal Seams Mined

Cedar Grove—Averaging about seven feet in thickness.

Winifrede—Running from five feet six inches to six feet in thickness.

Mining Equipment

Cutting—Arcwall and Shortwall machines.

Haulage—Electric trolley pole type locomotives.

Preparation—Steel tipples, equipped with retarding conveyors, shaker screens, picking tables, loading booms and box car loaders.

Labor Conditions

These mines are operated on the "American Open Shop Plan." The Logan County Field has never had any labor disturbances of any kind in its twenty years' history, and our mines have never lost a single day's time on account of labor trouble. These conditions assure constant and uninterrupted production.

Classification of Coals

The coals mined by these companies are especially adapted to the following uses:

By-Product-Coking, Gas, Steam and Metallurgical purposes.

Representative Analyses

Moisture	1.20
Volatile Matter	34.05

Lundale, W. Va.

C. H. MEAD COAL COMPANY

Executive and Sales Offices
BECKLEY, WEST VIRGINIA

Miners and Shippers of
Winding Gulf Smokeless Coal

The C. H. Mead Coal Company property is located at East Gulf, Raleigh county, on the Stone Coal division of the Winding Gulf district.

This property is divided naturally into two splendid tracts for mining purposes. Tract No. 1 was originally opened by the East Gulf Coal Company in 1916, and it is from this tract that we are now getting our present output, operating in the Beckley Seam only.

Tract No. 2 is at the present time being developed, with workings also in the Beckley Seam, and the construction work on tipple, mine opening, side tracks, shops, houses, etc., is being rushed to completion.

When the development work on Tract No. 2 is finished, this property will be easily capable of producing 20,000 to 25,000 tons per month.

There are 800 acres of Beckley Seam coal on this lease, averaging about $4\frac{3}{4}$ feet in thickness, and 2,250 acres of No. 3 Pocahontas Seam, averaging 4 feet of clean coal. The Beckley coal lies 350 feet above water level, coal being brought down the mountain by monitors on an incline 700 feet in length. The Pocahontas coal is about 20 feet below water level and may easily be reached by a short slope.

The Beckley coal is so well known and so highly regarded for steam, smithing and all purposes where a smokeless coal is desired that it does not need description. Coal from our mine is classified as Pool No. 1, Navy Standard, and analyses as follows:

	Dry Basis
Volatile Matter	17.87
Fixed Carbon	79.93
Ash	2.20
	<hr/>
	100.00
B.t.u.	15,254

Labor and living conditions are made as attractive as possible. The town consists of 94 thoroughly modern miners' houses, equipped with electric lights, a water system over all streets, town well lighted, and a large and permanent store building. The comforts provided enable us to enjoy the very best class of labor.

Our mines have a joint track connection with both the Chesapeake & Ohio and the Virginian railroads, thus giving our operation the services of two roads.

General Interest

History of the Company

The Main Island Creek Coal Company, one of the largest and most progressive coal companies in the development of the coal measures of the Logan Field of West Virginia, has been operating for less than seven years. Commencing development in 1913, it inaugurated shipments in 1914, and within four years had directed its development so energetically and successfully, that for the year 1918, out of a total production in the Logan Field of 10,211,390 tons, over one-tenth, or 1,145,178 tons, came from the collieries of this company.

From the very beginning of this enterprise all expenditures, whether for acreage, buildings or equipment have been made with a view to creating an institution rather than a coal company. Located, as Omar is, in a section bountifully provided by Nature with both scenic and natural resources, the Main Island Creek Coal Company has labored to preserve, and even to increase, the attractiveness of its mining camps. It shall be our purpose on the pages which follow to briefly relate the story of this institution and the coal which it mines.

Location of the Mines

The Main Island Creek Group of mines is located in Logan County, West Virginia, on the lines of the Chesapeake and Ohio Railroad, and embraces those of the Main Island Creek Coal Company, on Island Creek, with a total acreage of 30,000; Omar Coal Company, with 85 acres; Middle Fork Mining Company of 341 acres, the latter property having been acquired by purchase in October, 1919, as it adjoins and is practically surrounded by the balance of the 30,000 acre lease.

On Buffalo Creek, the group embraces the property of the Proctor Coal Company, 2,980 acres; Proctor Eagle Coal Company with 1,424 acres in its lease, and the Madne Coal Company of 70 acres.

Others of the Main Island Creek group of mines are located on Coal River and comprise the Madison Coal Company with 245 acres; Superior Eagle Coal Company, 115 acres; No. 5 Block Coal Company with 330 acres, making a grand total of 35,590 acres of coal land, on which the company has twenty-eight mines dumping over twenty-five tipples.

View of Company Office, Post Office Building and Club House Lawn

Developed Capacity of 5,000,000 Tons

These operations with the present machinery and development have a potential capacity of 5,000,000 tons annually and it is the intention of the management to increase this to at least 6,000,000 tons with the improvements already planned or under way. To attain this result, Nature has assisted in many ways and few districts are more favored in geological and topographical features than this portion of West Virginia, known as the Logan Field.

The famous Main Island coal outcrops throughout the company's extensive holdings at tippie height or a slight elevation above that, in which case it is lowered over the hill in mine cars, by monitors, or by retarding conveyors. Since its inception, it has been the policy of the Main Island Creek Coal Company to equip its plants with the best type of mining machinery and no expense has been spared to make its collieries amongst the best equipped in a field that is noted for the highest class of installations.

Business Administration

Officials of the Company

The organizer and president of the Main Island Creek Coal Company, A. J. Dalton, has been an active factor in the West Virginia mining fields for over a quarter of a century. Like his associate, John A. Kelly, secretary and treasurer, he was formerly identified with the Pocahontas fields. Henry D. Hatfield, formerly Governor of the State, is vice-president; G. M. Angell is general sales manager, and C. C. Campbell is chief accountant. All of these officials have their headquarters at Huntington. The operating end of the business is in charge of W. T. Jones, general superintendent, with headquarters at Omar.

Sales Organization

The general sales offices, in charge of G. M. Angell, are maintained in the Robson-Pritchard Building at Huntington. This city has in the past five years grown into the strategical coal center of West Virginia, and practically all shipments made from the central and southern parts of the state to western cities either pass through or by its door. A second advantage which Huntington possesses is its closeness to the Logan field. By having its general offices at this point the sales department is enabled to keep in close and constant touch with the operating department and at the same time remains in easy communication with the trade.

The company's branch offices are well located to cover the vast territory to which the major portion of its output is shipped.

Branch Sales Offices

The branch offices are established as follows:

DETROIT:

2235 Dime Bank Building,
In charge of
E. S. Van Hart, Resident Manager.

INDIANAPOLIS:

1510 Merchants Bank Building,
In charge of
E. E. Longstreth, Resident Manager.

CINCINNATI:

907 Union Central Building,
In charge of
G. W. Swain, Representative.

Traffic Department

The Traffic Department, with headquarters at Huntington, is closely allied with the Sales Department and is prepared to handle all traffic difficulties. When advised by a customer that shipment has not been received, immediate action is taken to have the cars rushed by the railroads. In addition to this service, the Cincinnati office keeps a close check on all cars passing through the Cincinnati Gateway, and is in a position at all times to render efficient and valuable service in facilitating deliveries.

Micco No. 2 Mine

Mechanical Equipment of Mines

Main Haulage Motors and Gathering Motors

The motors utilized on the main haulage tracks at the company's 28 mines vary from a Goodman 13 ton to a Mancha storage battery motor for gathering. In all, the management has a total of more than 100 haulage motors ranging from 5 to 15 tons; all of the latest type and of proven efficiency. The majority of the motors in use are of the Jeffrey make.

Making Ready a Middle Cut

Other Electrical Equipment

The 44 electrically driven fans installed provide adequate and systematic ventilation at every working place, and no expense has been spared to insure the installation of a ventilation system that makes the mining of Main Island Creek coal so attractive that the labor problem has been reduced to a minimum. Miners appreciate the advantages and safety of working in collieries so well provided with every mechanical device that is calculated to further their comfort and safety.

The balance of the electrical equipment consists of 22 pumps, 40 drilling machines and 15 substations. In the installation of these substations the management foresaw the necessity and advisability of connecting each mine with two stations, and it is through this double connection that the loss of electrical power is provided for at any and all of the mines.

Fifty-one Electrically Operated Cutting Machines

In accordance with its long established policy of providing every facility for the economical and efficient operation of its collieries, the management has installed a total of 51 electrical mining machines with an average cutting capacity of 3 tons per minute to the machine, or a total daily capacity of more than 40,000 tons.

Turret Mounted Coal Cutter

Labor Supply

In the lower mountainous part of Logan county on the enormous Main Island Creek lease, there are thousands of local inhabitants who have become expert in mining. In addition to these, large Greek and other foreign colonies have sprung up.

Proctor Mine

Preparation of Coal

System of Inspection of Main Island Coal

Careful preparation of coal at the collieries of the Main Island Creek Coal Company is one of the necessary requisites for holding one's job on the payroll. An inspector makes daily rounds of the various mines, visiting the working face and checking up on the methods employed by the loaders. The one unpardonable sin at Omar is loading dirty coal.

So close is the system of inspection that the reputation the management has established for its careful preparation is zealously maintained.

Tippie at No. 4 Mine

Best Type of Tippie Equipment

The latest type of tippie equipment has been installed by the Main Island Creek Coal Company and special attention is paid to careful preparation of "Main Island" coal.

The equipment at Mines Nos. 2, 3, 4, 5, 6, 7, 16, 17, 21 and 22, Proctor and No. 5 Block is such as enables the shipment of a carefully prepared and closely sized coal for steam and domestic use. The tippies are electrically equipped with conveyors, shaker screens, and picking tables with adjustable loading booms that can be dropped close to the bottom of the railroad cars and thus reduce breakage to a minimum.

Main Island Mine No. 4

It was over the fine, modern steel tippie of

Mine No. 4 that the Main Island Creek Coal Company made its first shipment of coal on the 5th of May, 1913, and it is this tippie that made the district record, and the West Virginia record for that matter, for loading 3,500 tons of coal in one day's run, every car coming direct from the working face of the tippie.

Scheme of Operation at No. 5 and No. 6 Tippie

The double tippie that serves mines No. 5 and No. 6 is of steel construction and is one of the finest equipped in the district, having a guaranteed capacity of 5,000 tons daily.

As may be seen from the accompanying illustration, it is provided with four loading tracks and enjoys the distinction of having the highest car allotment of any tippie on the C. & O. system.

Run of mine coal is dumped from the mine cars into a steel and concrete receiving hopper, from which it is fed by an apron feeder over a short section of bar screen onto the 75 foot apron conveyors, which carry it to the picking tables. The slack coal passes through the bars to the conveyor, while the lump coal, passing over the bars, loads on top of the slack coal as it moves along the picking tables, which are formed by a section 30 feet in length of the discharge end of each conveyor. Excellent light is provided for the men at the picking tables and the most careful inspection is given for all impurities.

The coal is discharged from the conveyor to a set of tippie shaker screens, electrically operated, which separates the coal into slack, nut, egg and lump. Special adjustable loading booms are installed for loading the lump and egg onto the railroad cars, and three men are stationed on each car of egg to finally inspect and clean the coal and trim the cars. The nut and slack is usually combined at this tippie, making a high grade steam coal for mechanical stokers that is eagerly sought.

A refuse conveyor is installed for handling the impurities removed at the picking tables, while, if the occasion requires, this conveyor can be utilized for conveying egg coal to the bins from which the company's wagons supply the miners' homes and local demands.

Double Tippie at Mines Nos. 5 and 6

The apron conveyors move at a speed of 45 feet per minute, and at that speed can handle 150 tons of coal per hour, the two conveyors giving the plant ample equipment to handle the entire output of the mines as developed. Each conveyor is driven by a 20 H. P. motor through one belt and two spur gear transmissions, and drives being duplicates. The motors are controlled by automatic elevator control and provision is made for either stopping or start-

ing each conveyor separately from the picking floor or the car tender's platform.

Shaker Screens Installed

The shaker screens at the No. 5 and No. 6 tipple consist of two chute sections, each section being 6 feet wide and 24 feet long, provided with lower decks. The upper deck of the first chute is provided with a $\frac{3}{8}$ inch stepped screen plate having $1\frac{1}{4}$ inch and $1\frac{1}{2}$ inch holes, while the lower deck is plain with flys for passing the slack to the hopper. The second chute is provided with $\frac{3}{8}$ inch stepped screen plate having 3 inch and $3\frac{1}{4}$ inch holes, and a lower deck for egg coal. Special ends are provided for passing lump and egg to the loading booms.

The two chutes are counterbalanced and the reciprocating motion is imparted by 20 H. P. motors through one belt transmission to an eccentric shaft, and thence by eccentric rods and eccentrics to the screen chutes. The motor is a duplicate of the two which drive the apron conveyors, and is controlled by the automatic elevator control, provision being made for stopping or starting the screens from either the picking table or the car tender's platform.

Six electric motors are installed for supplying the power necessary to operate this modernly equipped and electrically operated double tipple; they comprise three 20 H. P. motors; two $3\frac{1}{2}$ H. P. and one $7\frac{1}{2}$ H. P. Westinghouse Type S. K. motors wound for 250 volts D. C. This furnishes a combined horse power equal to 74 H. P. for the operation of the tipple, although the requirements of the machinery actually demand but 56 H. P. for its successful operation.

Capacity Loads—Careful Trimming.

Tipple foremen at the 25 tipples owned and operated by the Main Island Creek Coal Company take more than customary pride in loading railroad cars to capacity and trimming them so that a "Main Island" car is easily distinguishable in a coal train from its less carefully loaded and trimmed associates. When one gets a 50 ton steel car from this colliery company one gets 50 tons of clean coal.

Block Coal Passing Over Picking Table

Lump Coal Passing Over Shaker Screen

Uses and Analysis of Main Island Coal

Seam Mined and Its Usages

The coal mined by the Main Island Creek Coal Company is from the Cedar Grove bed, known in the Logan field as the Island Creek seam. Coal from our mines is known to the trade as "Main Island Coal." It is a hard coal of excellent quality, as will be seen from its analysis.

The seam averages seven feet in thickness. This seam is practically free of slate and all kinds of impurities and foreign matter. Therefore, the run of mine coal is clean and pure, and is used extensively for steam and domestic purposes. The four-inch lump is unsurpassed as a domestic coal and enjoys a wide market in many states. The lumps are large and of strong structure, and do not break in handling. This grade is also well adapted to use in malleable foundries. The egg size is used especially by illuminating gas plants. Splendid results are obtained, because the coal is low in sulphur and ash, permitting a good yield of both gas and coke. The Egg coal, as well as the Run of Mine, is particularly adapted to use in glass plants, and a strong and growing demand in this respect is especially noticeable. The Nut and Slack coal, likewise, is free of impurities, and has a high B.t.u., and for these reasons excels as a stoker coal for manufacturing and other steam plants. The Cannel coal from the No. 3 mine is a fancy domestic coal especially pleasing to the fastidious. The Eagle coal, from the Proctor Eagle and Superior Eagle mines, is one of the best by-

product coals obtainable, and is eagerly sought by plants developing the by-products of coal.

Most of the company's large production goes to markets in Ohio, Indiana, Michigan, and up the lakes. A considerable and increasing demand is had, however, in Virginia and the Carolinas, where the domestic grades are used. During the past year a great deal of this coal has been sold abroad, either through number five pool at Newport News, which calls for a high-volatile gas and by-product coal, or through pool number six, which calls for high-volatile steam coal. In addition to these pools, Main Island has a private pool at Newport News in which MAIN ISLAND coal can be assembled and loaded on vessels without losing its identity or being mixed with other coal.

Analysis of Main Island Coal

The average of nine analyses of Main Island Coal, as made by Froehling & Robertson, chemists, of Richmond, Va., is as follows:

	Per Cent.
Moisture99
Volatile Matter	36.88
Fixed Carbon	57.06
Ash	5.07
	100.00
Sulphur	1.009
B.t.u. (per pound of dry coal)	14,524
B.t.u. (per pound of coal as received) ..	14,384

Village at No. 7 Mine

Omar—A Model Mining Community

Houses of Pleasing Design and Substantial Construction

Contrary to the prevailing belief, miners' homes in the Logan Field, and especially at the properties of the Main Island Creek Coal Company, are not mere cabins, which one reads of in the yellow journals, but, on the contrary, are substantial, well painted, plastered houses of attractive designs and pleasing appearance. All are electrically lighted and a number are near enough to the central heating plant to be provided with steam heat. Open fireplaces are in every house and more than 100 have baths, hot and cold water, and modern sanitary plumbing. Sixty new dwellings have recently been completed, all having a stucco-exterior finish and modern conveniences throughout.

The houses vary from the two and three-room cottage to the more commodious four and six-room structures, all renting for \$2.00 a room per month, so the average monthly rental comes to \$8.00. Coal is furnished all residences at \$1.00 per month, with a charge of 50 cents a load for delivery. The water supply at each community is absolutely pure filtered, the company having the chemical analysis of each well and sinking many to a depth of 60 to 90 feet through the solid rock.

At Omar a 100,000 gallon steel tank is located at an elevation of 150 feet on the hillside, providing water to the entire community, as well as affording ample pressure for fire protection.

Omar, Its Location and Facilities

Omar, headquarters of the Main Island Creek Coal Company, is beautifully located among the heavily wooded hills of southern West Virginia, and gives one more the impression of an attractive mountain resort rather than a hustling coal mining camp. The officials of the Company have made generous expenditures in building a community that will cater to the comfort and contentment of its many employees, and Omar now boasts a population in excess of 5,000.

A well arranged club house with accommodations for single employees and transient guests is another desirable feature of Omar, while a Y. M. C. A. building is completely furnished with pool and billiard tables, refreshment stands, a well conducted restaurant open at practically all hours, barber shops, reading and writing rooms and other attractions.

Incidentally, the facilities for the entertainment of colored employees and their families are equal to those provided for the white employees.

Part of Omar Public School System

Among the many unusual and pleasing features of this progressive community is a spacious auditorium and motion picture theatre, with seating arrangements for 600. Nightly motion picture shows are given at 6:45 and 8:30 o'clock, and it is interesting to note that the best films and film-land's greatest stars appear here.

Resident Physicians and Trained Nurses in Attendance

Dr. K. J. Heatherman, the Resident Physician at Omar, has two assistants, as well as four trained graduate nurses, and his duties include a general supervision over the health of the community and its sanitation.

Omar, W. Va., Showing Store, Auditorium, Church and Y. M. C. A. Building

Five Churches. All Well Attended

Omar boasts of three church buildings, one Catholic, one Protestant and one colored, while Micco and Stirrett also have colored churches. The ministers are engaged by the United Community Welfare Organization, the purpose of which is to take care of the spiritual, as well as the charitable, work of the different communities established by the Company.

To properly house the 1,800 employees and their families required the erection of 676 dwellings, which make up the five different mining towns of Omar, Barnabas, Stirrett, Micco and Chauncey, covering a distance of six miles or more along the banks of Main Island Creek.

Micco House for Miners

Well Stocked Stores of General Merchandise

To cater to the wants of the 5,000 residents of its various communities the Main Island Creek Coal Company maintains handsomely appointed and well stocked stores in each of its towns, the newest of which is that located at Barnabas, one mile from Omar. This spacious building houses, not only the store, but the recreation department, as well, and in appointments and fixtures ranks with the best in West Virginia.

The stores are conducted for the convenience and protection of the employees and goods are sold at a price that compares favorably with those prevailing in the metropolitan cities of the country. The management has no desire to make these money making enterprises, merely requiring them to pay their way.

"MARYLAND NEW RIVER" COAL

Exclusive Sales Agents

MARYLAND COAL & COKE COMPANY, PHILADELPHIA, PA.

Mines

The properties of this Company are located in Fayette County, West Virginia, on the Keeney's Creek Branch of the Chesapeake & Ohio Railroad, and comprise four mines, with a present capacity of 1,500 tons per day. The operations are in the Sewell seam, which has no superior in quality in the New River field. The four mines, known as Smokeless, Boone, Dubree and Rosedale, operate in adjacent territories, and are all located at Winona, West Virginia, and under the management and supervision of Mr. M. L. Garvey, General Manager, with headquarters at Winona, Fayette County, West Virginia. The plants are modern in every respect—are all electrically equipped.

Loading Boom in Operation

Quality

The Sewell seam in this section is unique for its purity and high grade quality, and is coal of strong structure that mines lumpy and carries well. The following figures show the analyses of the coal from these different mines as reported to us by the Engineering Bureau of the Navy Department, whose representatives personally visited these mines in July, 1921, and took channel samples at all four mines, with the following results:

Car of Maryland New River Lump Coal

Smokeless Mine

Ash	2.1 %
Sulphur48%
B. t. u.'s.....	15,117

Dubree Mine

Ash	1.6 %
Sulphur52%
B. t. u.'s.....	15,335

Boone Mine

Ash	1.6 %
Sulphur45%
B. t. u.'s.....	15,230

Rosedale Mine

Ash	2.4 %
Sulphur59%
B. t. u.'s.....	15,175

The original reports are dated July 15, 1921, and are on file in the Company's office at Philadelphia.

Preparation

All four of the plants are equipped with modern and efficient screening apparatus, consisting of shaker screens and loading booms. The coal is loaded in four sizes. The Lump coal passes over 4" mesh shaker screen, and the Egg coal passing through 4" and over a 1½" mesh shaker screen, the Nut coal passing through a 1½" and over a 7/8" mesh screen, and the Slack representing the coal that passes through the 7/8" mesh.

The prepared coal is handled over a loading boom let down into the body of the railroad car, thus insuring very careful handling and minimum breakage. The Company further maintains a rigid inspection department in charge of competent inspectors, who supervise the preparation and loading of every car that leaves the operations, and are thus able to guarantee a very high standard of preparation.

Smokeless Mine Tiptle

The fine coal, passing through the fine mesh screen, makes a most excellent fuel for smithing purposes. A considerable tonnage is loaded in box

Motor With Trip From Boone Mine, Winona, W. Va.

Rosedale Mine Tiptle, Winona, W. Va.

sulphur—in addition to which it has a considerable reputation as a high class steaming coal in many Eastern plants that are equipped with automatic stokers, and can thereby use the fine coal to advantage.

This coal takes the regular New River rates of freight East and West.

Correspondence and inquiries for "Maryland New River" Lump, Egg and Stoker coal should be addressed to the exclusive selling agents: Maryland Coal & Coke Company, Stephen Girard Building, Philadelphia, Pa.

Tidewater Office: Powell Building, Newport News, Va.

"WE CAN'T SELL IT ALL, SO WE SELL THE BEST"

Birdseye View of Winona, W. Va., Showing Commissary and Company Houses

E. C. MINTER COAL COMPANY

BECKLEY, W. VA.

Miners of

Pocahontas No. 3 Seam is one of the standard American steam coals, and, in comparison with foreign coals, takes equal rank with the best Welsh fuels. It is a seam of remarkable purity, running low in both moisture and ash and standing in the first rank with respect to its heat value. The percentage of volatile matter in Pocahontas coal has been found through practical use to be just about the proper amount to assure its complete combustion, which accounts for its greater heating powers than with high volatile coals where much of the volatile gases escape unconsumed.

Francis mine of the E. C. Minter Coal Company in Raleigh County is working in the Pocahontas No. 3 seam, and produces a coal which for high quality measures up to every standard for which this seam is so widely known. An analysis of car sample taken at the instance of the Sewalls Point Coal Exchange shows the following results:

ANALYSIS MINTER COAL

Moisture	1.65
Volatile matter	16.20
Fixed carbon	75.71
Ash	6.44
Sulphur	0.73
B. t. u.....	14,660

The Francis mine is electrically equipped. The coal is brought by electric locomotives to a dump at the foot of an eight degree slope, and from here conveyed to compartment picking tables on the tippie where the coal is thoroughly cleaned and prepared for entering the market as an excellent steam and domestic coal.

SALES AGENCY

Francis mine is located on the Virginian and Chesapeake & Ohio Railroads, shipments taking the Winding Gulf and New River rates.

The MINTER FUEL COMPANY, Beckley, W. Va., are distributors of coal from this mine and will be pleased to quote prices and answer all inquiries relating thereto.

MOHAWK COAL & COKE COMPANY

POWHATAN, WEST VIRGINIA

Miners and Shippers of

The Celebrated Mohawk Seam

SALES AGENTS

LAURENCE E. TIERNEY FUEL COMPANY
Powhatan, West Virginia

Location of Mines

The mines of the Mohawk Coal and Coke Company are located at Mohawk, McDowell County, W. Va., and are served by the Norfolk & Western Railroad, affording a direct shipping route to tide-water and all distributing points for the western and southern markets.

Officials of the Company

The officials of the Mohawk Coal and Coke Company are Laurence E. Tierney, President, and J. J. Tierney, Vice-President, both of whom are so well known in the coal industry of West Virginia as to need no further introduction here.

Capacity of Mine

The Mohawk mine now has an annual capacity of 200,000 tons. A new and strictly modern tippie and conveyor line was last year completed, and with other improvements these new features give Mohawk Coal and Coke Co. unsurpassed mining and shipping facilities.

Coal Mined

The coal mined at the Mohawk mine is from the Mohawk (Eagle) bed, a very important bed from an economic standpoint. This bed averages from 5 to 7 feet in thickness and yields a high grade fuel for both steam and domestic purposes. It is low in sulphur and ash, making it a splendid coal for by-product purposes. Its high heating value makes it excellent for locomotive fuel, general steam purposes and as a domestic fuel.

As evidence of its value as a locomotive fuel, Mohawk coal has been used for 17 years by one railroad continuously.

In addition to being an excellent fuel for the purposes mentioned above, Mohawk coal is recommended for smithing and by-product coking.

Analysis*

From the following analysis of Mohawk coal, its excellent qualities will be readily seen:

Moisture74
Volatile Matter	29.76
Fixed Carbon	66.20
Ash	3.30
	<hr/>
	100.00
Sulphur84
B. T. U. per pound dry coal..	14,731

*Analysis made by Pittsburgh Testing Laboratory, Pittsburgh, Pa.

Mohawk Little Seam

The Mohawk Coal and Coke Company also mines the Mohawk Little Seam, a bed of the celebrated "smokeless" variety of coal lying considerably below the Mohawk Big Seam. Coal from this seam is held in the highest regard by general steam users, as the sulphur and ash contents are low and the heating value high, making it very desirable for general steam purposes.

Analysis*

The following is an analysis of coal from the Mohawk Little Seam:

Moisture.....	.62
Volatile Matter	20.62
Fixed Carbon	73.36
Ash	5.40
	<hr/>
	100.00
Sulphur87
B. T. U. per pound dry coal..	14,521

*Analysis made by Pittsburgh Testing Laboratory, Pittsburgh, Pa.

Preparation and Grade of Coal

The new tippie equipment consists of picking tables and shaker screens, which enables the Company to ship a well prepared coal, free from slate and other impurities. The prepared sizes are loaded into railroad cars by separate loading booms, which insure minimum breakage.

MOORE & HETZEL

Union Trust Building, CHARLESTON, W. VA.

Producers

Dana Coal Company
Pen-Mar Coal Company

March Coal Company

Wholesalers of

**New River and Pocahontas; Kanawha By-Product, Gas,
Domestic, Malleable, Producer Gas and Cannel Coals**

SHIPMENTS BY RAIL OR BY RIVER

Dana Coal—A Domestic Wonder

This coal is mined at Dana, Kanawha county, West Virginia, on the Campbells Creek Railway. Connections are now being made for direct loading on the Kanawha & Michigan Railway, and also for shipping by barges on the Kanawha River.

The seam from which DANA COAL is mined is composed of three distinct strata; the bottom stratum is hard, very bright, and has a mottled fracture; the middle stratum is a gaseous coal with an even fracture; the top stratum is an even fractured splint, and the combined characteristics of its three sections make it a coal that is a DOMESTIC WONDER; in fact there are only three coals in West Virginia that equal it in quality for domestic use.

DANA COAL is mined from a 1,500-acre tract of land which is underlaid by the well known Campbell's Creek Seam. The following analysis was made by the Pittsburgh Testing Laboratory on coal previous to its being cleaned:

Moisture	1.73
Volatile Matter	36.75
Fixed Carbon	55.50
Ash	6.02
Sulphur	0.72
Phosphorus008
B.t.u.	13,936
Fusion Point of Ash.....	3110° F.

Gas Yield.....5.22 cu. ft. per lb.

Fusion Point

Special attention is called to the extremely high fusion point of the ash, which stands as a guarantee against the formation of clinkers, and makes DANA COAL worth a premium for malleable, producer gas and steam purposes.

In addition to our own tonnage, we have close connections with mines producing the better grades of New River and Pocahontas coals. We solicit your inquiries, pledging ourselves in advance to furnish dependable coals, and an efficient service.

Sizes Shipped

DANA COAL is prepared in sizes as follows: 4" block, 2" block, 4" steam, nut and slack, and straight mine run.

Those responsible for the successful operation of BY-PRODUCT, ILLUMINATING and PRODUCER GAS plants need only glance at the analysis to realize the value of DANA COAL for their use.

Pen-Mar Coal (Coalburg Seam)

Pen-Mar coal is mined at Bream, Kanawha county, West Virginia, on the Charleston division of the B. & O. Railroad. This coal is splendid for steam, domestic, malleable and producer gas purposes. Its high volatile and low ash content also fit it for fine ceramic uses. Its analysis is as follows:

*Moisture	1.09
Volatile Matter	38.14
Fixed Carbon	54.88
Ash	5.89
Sulphur	0.93
B.t.u.	14,100

*From West Virginia Geological Survey report; sampled by C. E. Krebs.

March Coal Company

Coal from the operation of this company, which is in the Stockton-Lewiston seam, is a high grade splint and well adapted for steam and domestic purposes.

H. M. J. Coal Company

This company is developing mines at Hansford, W. Va., in the Stockton-Lewiston seam, 9 feet thick, and the Coalburg seam, 4 feet thick. Both seams show exceptionally clean coal. Both Dana and Pen-Mar Mines are electrically equipped and have modernly equipped tipples.

The Althea Mine of the Mt. Clare Colliery Company operates in the Pittsburgh Seam at Byron, Harrison County, West Virginia, on the Baltimore & Ohio Railroad, West Virginia and Pittsburgh Branch. Coal from this mine takes the usual Fairmont freight rate.

Coal Mined

The Pittsburgh Seam at the Althea mine has a splendid development with an average thickness of 84 inches. Throughout the entire field there is a

Loading Coal at Althea Mine

total absence of partings, so that the coal, as it comes to the tipple, is naturally in a very clean condition. Most of the sulphur, peculiar to the Pittsburgh Seam, is found in the form of large balls or lenses, which are easily distinguished and eliminated by the miner, and in the process of loading.

Althea Gas Coal is high in volatile matter, as will be seen from the analysis listed herein. The long flame produced in burning gives it high favor as a coal suited to cement and brick burning. The ash content being very low makes it a coal which is particularly well adapted for producer gas purposes, and much of the output of the Althea mine

is at the present time sold for this purpose. Because of our splendid tipple facilities, whereby the coal can be well cleaned and perfectly sized, Althea Gas Coal has been fulfilling all the requirements of a critical producer gas trade.

Analysis

The following analysis of Althea Gas Coal was made by The Manufacturers' Equipment Co., Engineers, Founders and Machinists, Dayton, Ohio, the sample being dried before analysis.

Volatile Matter	35.80
Fixed Carbon	60.00
Ash	4.20
	<hr/>
	100.00
Sulphur	1.97
B. T. U. per pound	15,128

Mining Methods

Coal at the Althea Mine is undercut by electric chain machines and shot down in coarse sizes, making it especially desirable for domestic and producer gas purposes.

Sizes of Coal

As will be seen from the above analysis Althea Gas Coal is splendidly fitted for general steam and domestic purposes, because of its high heat content. Much of this coal has been recently exported and has found high favor wherever used. The following sizes can be made: $\frac{3}{4}$ " Lump, 1" Lump, $1\frac{1}{2}$ " Lump, 2" Lump, 3" Lump, Nut, Pea, Slack and Run of Mine.

Export Business

In addition to our own tonnage, the Mt. Clare Colliery Company is prepared to secure large tonnages of coal similar to Althea Gas Coal, so that large shipments can be made in short order to Inland and Export Trade.

Labor Conditions

The Althea Mine is favorably located with respect to the retention of a high grade of labor. An interurban trolley line connects it with Clarksburg, W. Va., on a twenty-minute service. At present at the Althea mining camp there are two churches and a graded school. These advantages operate in a way that cause a small amount of labor turnover, and this, in turn, insures a high grade product with uninterrupted service.

THOS. HAGGERTY, Gen. Mgr.

J. G. FRASER, Supt.

W. S. JOHNSON, Sec.-Treas.

THE NEW EXPORT COAL CO.

General Office
CHARLESTON, W. VA.

Shipping Point: Dana, W. Va., K. & M. R. R., Campbell's Creek R. R.
Mines at Perryville, W. Va.

HIGH GRADE BITUMINOUS Steam, Gas, Domestic, and By-Product Coals

Location

The mines of The New Export Coal Company are located at Perryville, Kanawha County, West Virginia, on the Campbell's Creek Railroad, which connects with the Kanawha & Michigan Railroad at Dana.

The company has been operating since the fall of 1916 on a property of 811 acres, 600 acres of which are owned in fee and 211 acres under lease.

No. 2 Gas Coal

The celebrated No. 2 Gas seam is being worked, and on this property ranges from 4½ to 8½ feet in thickness. It is a clean coal with no partings, and is widely noted for its freedom from impurities of all sorts.

The unusually high quality of our No. 2 Gas coal is shown by the low percentage of sulphur and ash in the analysis.

Although the No. 2 Gas seam is the only one now working, there are present on this property the Lewiston seam, averaging 8 feet in thickness; the Kanawha No. 5 Block seam, averaging from 4 to 5 feet in thickness; and the Coalburgh seam, averaging from 3 to 4 feet of clean coal. These

four seams are all capable of commercial development and give an estimated holding of 2,500 acres of high grade coal.

Production

The average monthly production of No. 2 Gas coal is 12,000 tons, but with the completion of improvements now under way this will be increased to 15,000 tons.

Quality of Coal

The quality of No. 2 Gas coal is too well known to need any extended comment, but for the information of industries, by-product plants, sales agencies and retail dealers, we cite an analysis made by the Whittaker-Glessner Steel Company on coal shipped to their Portsmouth, O., plant. The sample was taken by Clark & Krebs, Mining Engineers, Charleston, W. Va.

Analysis

Moisture	1.40
Volatile Matter	39.20

Mines

The Federal Mines are located in West Virginia, one group at Grant Town, Marion county, on the Baltimore & Ohio Railroad, and the other at Everettville, Monongalia county, on the Monongahela Railroad (New York Central and Pennsylvania Lines).

Both mines produce coal from the celebrated Pittsburgh Seam, having an output at this time of about 1,500,000 tons annually. New properties have recently been opened up, which will result in an annual production of 2,000,000 tons in the near future.

Shipments

Federal Coal may be shipped via all-rail to both Inland Eastern and Western markets, also to the Tidewater loading piers at Baltimore, Philadelphia and New York, under what is known as the Fairmont or Westmoreland rate.

Preparation

Modern Screens enable the Company to furnish screened $\frac{3}{4}$ size or slack to suit the requirements of the trade, as well as Run-of-Mine.

Analysis

The analysis of Federal Coal from the three-quarter grade will show approximately as follows:

Ash	7.50
Fixed Carbon	54.50
Volatile Matter	38.00
Total	100.00
Sulphur	1.25
B. t. u.'s	14,300

Federal Coal is suitable for the manufacture of illuminating gas, for use in by-product ovens, steel, cement, and brick plants, and for locomotive use; in fact, for all purposes where a strong long flame gas coal is desired.

THE NEW RIVER COLLIERIES CO.

General Offices: 120 Broadway, New York

Miners of

"Admiralty" New River Smokeless Coal

Mines at

SUN, WEST VA.

ECCLES, WEST VA.

Tonnage Produced

The New River Collieries Company is the producer of approximately 1,000,000 tons annually of the celebrated "Admiralty" New River Smokeless coal at its 4 mines located at Sun and Eccles, West Virginia, in the heart of the famous New River coal field.

Seams Mined

Sun and Eccles No. 6 mines of this company are operating in the Sewell seam, and Eccles Nos. 3 and 5 in the Beckley seam, full particulars and description of which may be found elsewhere in this publication.

Car Supply

All of the mines of this company are served jointly by the Chesapeake & Ohio and the Virginian railroads, the coal moving via these roads to Newport News and Norfolk, Virginia, where it is dumped over modern steel loading piers operated by the railroad companies and where prompt despatch is given vessels.

Analysis

The following dry analysis is an average of samples from 17 consecutive dumpings for

account of the United States Navy at Hampton Roads during October, 1918, taken by their Inspectors from actual shipments and not hand picked at the mines:

Moisture (as received).....	1.7%
Volatile Matter (Dry).....	19.1
Fixed Carbon	76.6
Ash	4.3
	<hr/>
	100.00
Sulphur76
British Thermal Units.....	15,053

Marketing of Coal

The entire output of these mines is marketed through The Chesapeake & Ohio Coal & Coke Company (see their page), which has introduced this coal in the export and bunker trade through its various foreign agencies throughout the world, and in which trades it has met with general approval, successfully competing with the best grades of Welsh coal.

The coal is also sold in the domestic trade inland in the South and Middle West, where it is in great favor as a steam producer.

MINERS AND SHIPPERS

LONE STAR COAL

Mines in Logan County, West Virginia.

Coal River Division C. & O. R. R.

Guaranteed for By-Product, Gas and Producer Gas Plants.

Low Sulphur, High Volatile, Low Ash.

Reduce your costs by buying pure coal. Don't pay the prevailing freight rates on the high ash, less efficient grades.

Hard Structure, No Clinkers, High B. t. u.

Unequalled for general steam purposes, and for brick or tile burning, 20 to 25% more efficient than ordinary Bituminous.

We ship 4", 2" and 3/4" Lump, 4"x2" Egg, Mine Run, N P & S and Slack.

BLUE STAR COAL

Mines in Raleigh and Boone Counties, West Virginia.

Cabin Creek Branch C. & O. R. R.

Holds fire like Anthracite. Clean, hard structure. Stocks like wood—no slacking. Better than Pocahontas, and much cleaner. After ignition, only a very light brown smoke.

No Soot, No Clinkers, Intense Heat.

Ignites quickly, requires good draught only at start, then shut off draught and there remains a hot bed of coals—pure carbon—making almost no smoke. It will hold fire and heat for a long period. To replenish fire use coal very sparingly.

A Hard Variety of Soft Coal.

Free Burning, Little Ash, Economical.

Requires less attention in firing than anything except Pennsylvania Anthracite.

We ship 4" Block and 4"x2" Egg.

PRESTON COUNTY COKE COMPANY

MORGANTOWN, W. VA.

Mines in Preston, Monongalia
and Barbour Counties, W. Va.

Phone: Morgantown 791

COAL AND COKE

The Preston County Coke Corporation is one of the pioneer organizations of the Morgantown district, having for many years operated the Cascade mine and coke ovens, located at Cascade, Preston county, on the Morgantown & Kingwood (now Baltimore & Ohio) Railroad. During the past few years new mines have been opened, controlling interests have been obtained in other properties and a Sales Department has been instituted whose purpose it is to offer the trade a service and a quality of fuel that shall be uniformly satisfactory.

COAL—UPPER FREEPORT

Our Cascade, Murphy and Hawley mines are all located at Cascade and operate in the Upper Freeport seam. Coal from the first mentioned mine is practically all converted into coke, but the other two properties are sufficiently developed at this time to produce about 800 tons of coal daily. The Upper Freeport coal, as mined here, is especially adapted for steam purposes where automatic stokers are used. It can be shipped either as run-of-mine or as crushed coal, crushers being provided on each tippie for this purpose.

In addition to the above tonnage we control the output of the Green Ridge Coal Company, also operating in the Upper Freeport seam. This mine produces a straight run-of-mine coal of the same high quality as the Murphy and Hawley mines. Shipments originate on B. & O. R. R.

COAL—PITTSBURGH AND SEWICKLEY (MORGANTOWN GAS)

Through sales arrangements we offer the output of the Shriver Coal Company, whose mine has a capacity of 600 tons daily, produced from the Pittsburgh and Sewickley seams. This coal runs higher in volatile matter than the Upper Freeport and is known to the trade as Morgantown Gas coal. It is a good steam coal and is especially adapted for domestic use and cement manufacture. The tippie is well equipped and shipments can be made in lump, run-of-mine or slack sizes. Shipments originate on Pennsylvania Railroad.

PRESTON COUNTY COKE

At the Cascade mine, already referred to, are located 194 beehive ovens which for a long period of years have supplied Eastern trade with an exceptional quality of coke. It is made in both Foundry and Furnace grade and is equal to that made in the Connellsville district. In fact, due to its hard cellular structure, it has been reported as being able to carry the burden in the furnace or cupola better than most of the Connellsville coke. Preston County Coke is also very low in sulphur.

FREIGHT RATES

For coke shipments we have the advantage of a 20-cent freight differential to Eastern points as compared with the Connellsville district, with the same rate to Western points.

On coal shipments Fairmont and Cumberland-Piedmont rates prevail.

Through sales arrangements we offer the output of the Marteny Coal Company with mines at Boulder, W. Va., with an output of 300 tons daily produced from the Kittanning seam. This coal runs high in Volatile and low in Sulphur and Ash and is an excellent coal for by-product coking.

ROSEDALE COAL COMPANY

General Office: MORGANTOWN, W. VA.

Miners of

"Rosedale" High Volatile Coals

BLUE FLAME FUEL COMPANY, Morgantown, W. Va., Exclusive Agents

New York Office, 143 Liberty Street

Organization

The Rosedale Coal Company was organized in 1917 and at once began the development of a large acreage of Pittsburgh coal at a point on the Monongahela River, a few miles below Morgantown. In addition to the Pittsburgh seam, there are also available on this property the Sewickley and Redstone beds, the three seams making one of the finest tracts of steam coal possible to find.

Following close after this original enterprise, Rosedale No. 2 mine was opened. This mine is located at Poland, Greene County, Pennsylvania, just across the West Virginia state line, and is working in the Sewickley seam, with a thickness of 59 inches.

"Rosedale" Coal

"Rosedale" coal is a free-burning high volatile product and from the very beginning has been readily accepted by the trade as a steam coal of exceptional quality. This coal is particularly adapted for locomotive fuel use, as will be attested by the statement that the demand from railroads during the past four years has been so steady that we have been able to operate our mines without stoppage. Being a high-volatile high-heat coal, it may also be used to advantage by cement mills, canneries and for stokers. In a pulverized form it is well fitted for steam generation by means of atomized fuel.

Analyses

Two analyses are here given, one made by the Commercial Testing & Engineering Company on a car sample taken at the mine by their representative, and the other by a customer on a car sample taken at destination.

Car Sample at Mine

Moisture90
Volatile Matter	34.65
Fixed Carbon	59.35
Ash	5.10
	<hr/>
	100.00
Sulphur	2.10
B. t. u.	14,100
Fusion point of Ash.....	2300 to 2400° F.

Car Sample at Destination

Moisture92
Volatile Matter	34.75
Fixed Carbon	58.83
Ash	5.50
	<hr/>
	100.00
Sulphur	2.30
B. t. u.	14,240

Sizes and Preparation

Run-of-mine, $\frac{3}{4}$ " lump and slack are the three sizes of coal shipped. Clean coal is the rule at all times and our cars are subject to the most rigid inspection.

Sales Connections

The daily capacity of the Rosedale mines, amounting to 1,500 tons, is sold through the Blue Flame Fuel Company, Morgantown, W. Va. With one union and one non-union mine, we can always supply the trade in times of peace or strike. Shipments made promptly. Both mines are located on the Monongahela Railroad and shipments are made by way of the Pennsylvania Lines and the New York Central Railroad.

"MILTRENA" COALS

Probably the best known mines in the original Pocahontas field are the Greenbrier and Louisville Collieries, located at McDowell and Goodwill—these operations producing a very considerable annual tonnage, from the genuine No. 3 Vein, strictly Navy Standard, Pool No. 1 Coal. Equipped with modern tipples, washeries, shaker screens, picking tables and loading booms, the prepared sizes of Lump, Egg and Nut command a large following in the Domestic market, and seldom does the supply equal the demand.

Our Superior Pocahontas Collieries Nos. 1, 2 and 4 at Davy, W. Va., also produce Navy Standard Coal, moving largely to the U. S. and foreign Governments through Hampton Roads, and to by-product plants in the West, where only the purest coal, showing the lowest Volatile, Ash and Sulphur content, will be used for the mixture in the by-product ovens of the large steel, gas and chemical plants.

At Winding Gulf, W. Va., we ship coal on two railroads, the Virginian and C. & O., to the extent of half a million tons annually. Here the Beckley seam is mined, and all mines are known as Navy Standard operations. These mines are right at the top of the list in point of production, being among the largest in the Winding Gulf district. At No. 2 mine, on the C. & O., all sizes are produced, and every facility is had for properly preparing the coal for Domestic trade.

While this company is known primarily as miners and shippers of "Miltrena" Smokeless coals from the Pocahontas and New River fields, it acts as exclusive Sales Agents for selected mines in the Kanawha and Logan County High Volatile district, providing ample tonnage of gas, by-product, steam and domestic coal for Inland and Export markets.

We are also exclusive agents for "Delparen" Anthracite and "Delparen" Briquets, produced at Parrott, Pulaski county, Virginia. The Anthracite sizes are in large demand throughout the Southern Atlantic States, and the Briquets, being manufactured from pure, fresh mined coal, have been favorably received East, South and West, where there is now a ready market for this high-class product.

The Virginia & Pittsburgh Coal & Coke Co.

General Office, FAIRMONT, W. VA.

Producers and Shippers of

"LINCOLN COAL AND COKE"

Mines Operated

The Virginia & Pittsburgh Coal & Coke Company operates the Kingmont and Morgan mines, both operations being in the Pittsburgh seam of coal and in the Fairmont region of West Virginia.

Kingmont Mine

The Kingmont mine, located on the Baltimore & Ohio Railroad, produces the widely known "Lincoln" coal and coke. This mine was opened in 1891, and although in continuous operation for almost 30 years, there remains sufficient coal to insure another score of years to the life of the property.

"Lincoln" coal gained its prominence in coal circles by virtue of its high volatile and low sulphur contents. As a gas coal, it has been long used in large Eastern cities and by its uniformity in quality has more than held its own against all competition.

Because of its purity, it is also recommended for use in metallurgical processes, for by-product coking, and in the burning of fine pottery ware.

"Lincoln" coal makes a fine brand of coke, suited for blast furnaces and general purposes. There are 67 bee-hive coke ovens at the plant, which produce a high grade of coke, well up to the standard of the Connellsville district of Pennsylvania.

Preparation of Coal

Careful preparation at all times assists in maintaining the reputation of "Lincoln" coal. Shipments are made of the following sizes:

Run of Mine; 1½" Lump; ¾" Lump; Slack and Nut.

Analysis

The analysis of "Lincoln" coal, as given in Bulletin No. 22 of the Bureau of Mines, is:

Moisture	1.75
Volatile Matter	36.77
Fixed Carbon	55.14
Ash	6.34

Sulphur	100.00
B. T. U. per pound90
	14,197

Morgan Mine

The Morgan mine is located on both the Baltimore & Ohio and the Monongahela Railroads. It taps a fine field of approximately 1,000 acres of 8 foot Pittsburgh coal. This coal is known under the trade name of "Morgan Gas Coal" (Pools 63 and 64), and is an excellent coal for steam, domestic, potteries, brick burning, cement works, gas and by-product uses. The mine is equipped with electric haulage and mining machines and has a daily capacity of 1,500 tons.

Analysis

The following is an analysis of coal from the Morgan mine, as reported by the West Virginia Geological Survey, Report of 1913:

Moisture	1.91
Volatile Matter	36.68
Fixed Carbon	55.81
Ash	5.60

Sulphur	100.00
B. T. U. per pound	1.54
	14,190

Sizes Shipped

The Morgan mine produces Run of Mine, 2" Lump, 3" Lump, ¾" Lump, Slack or Nut, and Slack mixed.

VIRGINIA FUEL COMPANY

INCORPORATED

Miners and Shippers

Mine Offices:

D. H. Pritchard,
Manager of Sales

Gas, Steam and Domestic Coals

Huntington, W. Va.
Bramwell, W. Va.

Union Central Bldg., CINCINNATI, OHIO

The Virginia Fuel Company, Inc., was organized by the Pritchard Companies of Huntington, W. Va., to serve as the distributing agency for their various operations in West Virginia and Kentucky.

The advantages to the consumer, who contracts or buys according to his current needs, from a Sales Agency having connections through ownership in coal properties, is apparent in that there is but a single responsibility. When, as in our case, the output of a number of mines is at our disposal an additional advantage appears in that there is a certainty to promised deliveries of coal—an assurance that is appreciated by both large and small consumers.

In order to make possible quick shipments of large tonnages, and for the further and all-important reason of providing regularity of employment, we have at several of our mines storage bins with large capacities. These reserve supplies not only permit us better to serve the industries and railroads, but are of particular value in enabling us to assemble coal from our properties for shipment to various tide-water points, as Hampton Roads, Charleston and Jacksonville, and also for Lake points.

Our West Virginia mines are located on the Norfolk & Western and Chesapeake & Ohio Railroads, and our Kentucky mines on the Louisville & Nashville Railroad. Opportunities for car service and shipments afforded by three of the leading carriers of the country have been of much assistance in our satisfactory dealings with the trade.

WEST VIRGINIA MINES

Burnwell Coal & Coke Company

Although the Burnwell mine is located in Pike County, Kentucky, all coal is brought to the West Virginia side over the covered bridge shown in the illustration on opposite page. The Pond Creek and Alma seams are mined and produce an excellent By-Product and Steam coal. As a By-Product coal it has stood the test for over 7 years, being used by the Semet-Solvay and Milwaukee Coke & Gas companies. Its high fusion point of ash, 2775° F., stands as a guarantee against clinkering under all ordinary conditions. Classified in Pools 5 and 7 for Export.

Analysis "Burnwell" Coal*

Moisture	1.29

TRADE "WINIFREDE COAL" MARK

Organization

The Winifrede Coal Company was organized in 1882 for the purchase and operation of a tract of coal and timber land, consisting of 15,000 acres in Kanawha and Boone counties and lying in the heart of the high volatile Splint Coal District of West Virginia.

Underlying the property are five seams of coal, ranging from three to six feet in height, and with an estimated recovery of 150,000,000 tons of coal of exceptional quality. In a period of almost 40 years, during which shipments have been made from this property, "Winifrede Coal" has demonstrated its utility in a variety of usages, and has become the acknowledged standard of all West Virginia splint coals, both in quality and in preparation.

Preparation of Coal

Every attention is given to producing a clean and well sized quality of coal, ranging in size from washed pea to the largest lump.

Inspection of coal begins inside the mine, and follows it through the successive stages of dumping, screening and picking. Shaker screens are used for sizing, and picking tables make possible a separation of such refuse as may have escaped the vigilance of the loader inside the mine. Loading booms are a part of the equipment and serve to lay the coal in the cars with a minimum of breakage.

The screenings are carried to the washeries, located on the banks of the Kanawha river, where a final separation of impurities is made, and the coal sized into Egg, Nut and Pea.

The New Steel, Three Track, Double Tippel of the Winifrede Coal Company. This Tippel Serves Two Mines and Its Mechanical Equipment is Complete. Capacity 300 Tons Per Hour.

Mines Operated

Six mines are operated at Winifrede as well as a thoroughly equipped new modern all-steel Washery Plant, erected at a cost of over \$100,000. In addition to this we own and control the operations of the Belmont Coal Company, at Crown Hill, W. Va., producing the well known Coalburg, and Lewiston Coals. Combined capacity of mines, 600,000 tons annually.

As evidence of the superior quality of Winifrede Coal, we quote from the report of Mr. I. C. White, State Geologist of West Virginia:

"The coal mined from the Winifrede Seam has won for itself a reputation for purity and effectiveness as a steam producer as well as a good domestic fuel that is second to none in the country. The mixture of pure Splint and richly bituminous coal in this bed is such that it furnishes an ideal fuel."

Domestic Coal

Winifrede coal was originally marketed as a domestic fuel and still retains its high reputation in circles where a hard blocky coal is wanted. In general characteristics it resembles anthracite, in that in addition to its hardness, it holds fire over night and stocks with a minimum amount of degradation.

WINIFREDE LUMP is big and blocky and stocks like cannel.

WINIFREDE WASHED EGG is shaker screened, washed and sprayed. It is an ideal fuel for cook stoves and ranges.

BELMONT LUMP is especially prepared, hard and chunky, stocks well and holds fire over night.

Steam Coal

Winifrede coal contains over 93 per cent. and Belmont coal over 95 per cent. of combustible matter, and the heat value ranges from 14,500 to 15,000 B. T. U.'s per pound of coal.

Moreover, it burns to a fine ash and does not form clinker, or in any wise obstruct the flow of air through the grate bars. The fusion point, as will be noted from the analyses, is safely beyond the temperature at which slagging of ash takes place.

WINIFREDE WASHED PEA is unequalled for the generation of steam, and is particularly well adapted for underfeed furnaces and automatic stokers.

BELMONT MINE RUN, containing less than 1 per cent of Sulphur, is a good steam producer.

Analyses of Winifrede and Belmont Coal*

	Winifrede	Belmont
Moisture	0.97	1.02
Volatile Matter...	38.96	40.70
Fixed Carbon.....	54.35	54.64
Ash	5.72	3.64
	100.00	100.00
Sulphur	0.48	0.57
B. T. U.	14,571	14,879
Fus. Point of Ash	2714° F.	2894° F.

*Analyses made by Pierce & Tolman, Charleston, W. Va.

Gas Coal

Winifrede gas coal, from the Winifrede and the Peerless seams, has long been recognized as having exceptional quality, due to its high thermal value and the low percentage of Sulphur and Ash.

One long ton of Winifrede coal should produce the following: 10,750 feet of coal gas, having a thermal value of 699 B. T. U.'s per cubic foot of gas, or 15,032 B. T. U.'s per pound of coal.

As a by-product coal, the indicated recoveries are 1,412 pounds of coke, 218 pounds of coal tar, and 147 pounds of Ammoniacal Liquor per ton.

Coal from the Arbuckle mine, operating in the Winifrede and Peerless seams, shows the following analysis:*

Moisture	1.63
Volatile Matter	42.24
Fixed Carbon	54.29
Ash	1.84
	100.00
Sulphur	0.85
B. T. U.	15,032

One ton of Arbuckle coal should produce: Coke, 1,412 lbs.; Coal Tar, 218 lbs.; Ammoniacal Liquor, 147 lbs.; Coal Gas, 10,750 cubic feet.

B. T. U.'s per cubic foot of gas, 699.

Producer Gas Coal

For the manufacture of producer gas, we recommend our WINIFREDE WASHED EGG and BELMONT Mine Run. Mine and Winifrede No. 2 as well adapted for all kinds of forging.

Smithing Coal

Because of its high heat value, low sulphur and its moderate coking tendency, we specify coal from our No. 5 Block Shipments

Shipments from the mines of the Winifrede Coal Company are made by rail on the Chesapeake & Ohio Railroad, and by water on the Kanawha River.

For this latter purpose, we maintain a fleet of coal barges, as well as pump boats, dry docks and other miscellaneous equipment incident to the operation of the river business. For the building and repairing of barges and other river equipment, there is an elaborate construction and maintenance plant.

The River Tipple of the Winifrede Coal Company, on the Kanawha River, a Few Miles Above Charleston. The Company Operates Its Own River Fleet of Barges and Towboats and Reaches All the River Markets From Charleston to New Orleans.

WINCHESTER COAL COMPANY

Elk Bridge Building,
CLARKSBURG, WEST VIRGINIA

Miners of

High Volatile Pittsburgh Seam Coal
Medium Volatile Freeport Seam Coal

The Winchester Coal Company markets the output of its own mines operating in two of the best-known seams in northern West Virginia.

WINCHESTER MINE

The Winchester mine is located at Enterprise in Harrison County with openings in the Pittsburgh seam, which at this point has a thickness of from 7 to 9 feet. The mine is electrically equipped and all coal undercut by machines. This, in conjunction with the great thickness of the bed, assures a maximum of lump in every car shipped.

The output of this mine is a high-grade high-volatile coal that is especially adapted for all steam purposes. Because of its volatile content being above the average, it is in high favor for railroad fuel, canneries, brick burning and all usages where a quick-burning high-heat coal is required.

VIRGINIA MINE

Virginia mine operates in the Upper Freeport seam at Arden in Barbour county. The coal, which is of medium volatile rank, ranges from 4½ to 6 feet in thickness and partakes of all the good qualities for which this seam is noted. All shipments are made over the Baltimore & Ohio Railroad.

Winchester-Freeport coal is an excellent fuel for railroad and general steam purposes. With a volatile content slightly less than 30 per cent, it makes a fuel which is easy to handle and has a reputation for giving full satisfaction wherever tried.

When in the market, write our Clarksburg office and we will be glad to make you our best prices.

WHITE OAK COAL COMPANY

General Offices, Macdonald, West Virginia

Exclusive Miners and Shippers of

"White Oak" New River
Smokeless Coal

15 MINES—PRODUCING 3,000,000 TONS ANNUALLY

SHIPMENTS VIA BOTH CHESAPEAKE & OHIO AND VIRGINIAN RAILWAYS

Location of Mines

The smokeless coal fields of West Virginia cover a very restricted area in the southwestern part of the state and the mines of this Company are located in the heart of the famous New River Smokeless Coal Field, being situated in Fayette and Raleigh counties. All mines produce coal from the

General Office Building at MacDonald, W. Va.

famous "Sewell" Seam, which coal has been recognized for forty years as being the premier high carbon, low ash, low volatile fuel of the United States as measured by efficiency and quality. Eleven of the mines are served jointly by the Chesapeake & Ohio and Virginian Railways, four are served by the Chesapeake & Ohio alone. The Company has 25,000 acres of this coal developed, producing 3,000,000 tons annually and has 30,000 acres of undeveloped coal land in reserve in this district. The favorable location of these mines permits tidewater shipments to be made either to Sewalls Point Piers on the Virginian Railway or Newport News Piers on the Chesapeake & Ohio, and also assures a better car supply to these mines.

Quality of Coal

The United States Government in Bulletin 76, Department of the Interior, says: "Some of the New River coals show heating values of 15,000 b. t.

u. and 3.5 ash, but that the average grade is about as follows:

Moisture	2.50
(Dry Basis)	
Volatile Matter	19.00
Fixed Carbon	76.00
Ash	5.00
	100.00
Sulphur55
B. T. U.	14,900

During the war the trade learned and realized the superiority of New River coal over all other kinds of fuel, and a great many dealers and consumers handling "White Oak" have established a feeling of reliability in their trade due to the superiority of White Oak over other New River coals on the market. Being superior to any other smokeless coal it naturally commands the preference in the steam and domestic markets. The excellent quality of this coal is due to the careful supervision and inspection given the mining and preparing of this coal for market. This supervision

Inspecting Coal as it Comes From Loading Rooms

begins with the actual mining of the coal—selecting the proper type of cutters, selecting the most suitable explosives, the employment of shot firers, and continues until the coal has been screened, properly sized and passed by the inspector who sees that all impurities are removed, and the car reported to the Shipping Department for billing.

Preparation

"White Oak" coal has an established reputation for uniform preparation and quality won only through the inauguration and maintenance of a system of inspection that begins at the working face and ends with the billing of the car to the customer. A chief inspector in addition to an inspector at each mine takes care of the preparation and renders a report covering the loading of each and every car shipped. This system of inspection, together with the installation of the most modern type tippie machinery, such as reciprocating feeders; shaker screens for screening and sizing the coal; loading booms and adjustable chutes for placing the coal in the cars with a minimum of breakage insures the customer of a perfectly prepared grade of coal.

Service

The White Oak Coal Company mines and sells its own coal exclusively; the general operating sales and executive offices are located in a splendid office building at the mines and are connected by private exchange and telephone lines with all the mines. This feature permits them to exercise a very close supervision over the output; take care of the demands of the trade, and render prompt and efficient service. The volume of its production, in addition to the joint service of the two railroads, enables the White Oak Coal Company to take care of the largest contracts and make regular shipments. The trade name "White Oak" is known all over the Western Hemisphere. This coal has been shipped to Mexico, East and West Indies, both east and

Care Taken in Preparation and Loading of Lump and Egg Coal

"White Oak" coal is prepared as Mine Run and Lump or Egg for the domestic market; Mine Run or Nut and Slack for the steam or by-product trade, and a very superior grade of smithing coal is specially prepared and loaded in box cars for the general blacksmithing trade. All cars are carefully cleaned before loading and the inspector in addition to removing all impurities has charge of the loading and trimming of the cars. Each car is fully and evenly loaded to its utmost capacity and carefully trimmed so as to prevent loss in transit. This feature is so noticeable that "White Oak" coal can be easily recognized in trains on the Chesapeake & Ohio or Virginian Railways.

west coast of South America; Africa and practically all Mediterranean ports. This Company takes a very keen interest in the export and bunker trade and has maintained an office in London, England, for a number of years. The high standard of quality together with judicious advertising has made the trade mark well known throughout the entire territory where this coal is available.

It has established itself a wide and varied market for steam ship bunkering and railroad fuel both at home and in foreign countries; power plants in the New England States and in the cotton mill district of the South. It is used in all domestic markets

reached on competitive freight rates, and is extensively used by the U. S. Navy. White Oak is equally well known in the great Northwest, being shipped to the docks via the Great Lakes from the Toledo

piers of the Hocking Valley or Baltimore & Ohio. The large production of the White Oak Coal Company enables it to assemble lake or export cargoes on short notice.

WEST VIRGINIA

Alphabetical Directory of Coal Mines. Giving Complete Detailed
Information Covering Each Mine

For List of Abbreviations See Page 13.

ABCO COAL & COKE COMPANY

General Office, 909 Union Arcade, Pittsburgh, Pa.
PR—J. L. Aronson, Pittsburgh, Pa.
TR—Harvey M. Aronson, Pittsburgh, Pa.
GM—J. W. Dennison, Little Falls, W. Va.
GS—J. W. Dennison, Little Falls, W. Va.
PA—J. W. Dennison, Little Falls, W. Va.
SA—J. W. Dennison, Little Falls, W. Va.; and Southern Fuel Co., Morgantown, W. Va.
SA—Davis & Gilbert, Morgantown, W. Va.

Dennison No. 1 Mine; Slope; Freeport Seam; 44 inches thick.
PO—Little Falls, W. Va.; SP—Same; CTY—Monongalia; RR—B. & O.
S of H—Mules. Track gage 42 inches.
S of M—Hand.
EMP—18. Last years tonnage 10,280.
SIZES SHIPT.—Run of Mine.
NOTE—Formerly operated by the Little Falls Fuel Co.

ABRAMS CREEK COAL AND COKE CO.

New part of Brady Coal Corp.

ADELAIDE COAL COMPANY.

General Office, Grafton, W. Va.
PR—N. P. Kendall, Grafton, W. Va.
VP—Adelaide Samples, Grafton, W. Va.
TR—W. P. Samples, Grafton, W. Va.
GM—W. P. Samples, Grafton, W. Va.
CE—Horner Bros., Clarksburg, W. Va.

Barthelt Mine; Drift; Pittsburgh Seam, 96 in. thick.
PO—Grafton, W. Va.; SP—Flemington, W. Va.; CTY—Taylor; RR—B. & O.
SIZES SHIPT.—Run of Mine.

ADRIAN HAMPTON COAL CO.

Sago, W. Va.
Mossr No. 1 Mine; CTY—Upshur.
NB report.

AERIAL COAL COMPANY

General Office, Lynchburg, Va.
PR—H. P. Adams, Lynchburg, Va.
VP—B. E. Adams, Lynchburg, Va.
TR—F. E. Turner, Jr., Lynchburg, Va.
GM—H. P. Adams, Iatton, W. Va.
GS—H. P. Adams, Iatton, W. Va.
PA—H. P. Adams, Iatton, W. Va.
EM—H. M. Eaton, Charleston, W. Va.
ET—H. A. Jones, Iatton, W. Va.
SA—Imperial Coal Sales Co., Lynchburg, Va.

Aerial Mine; Drift; No. 5 Block Seam, 58 inches thick.
PO—Charleston, W. Va.; SP—Same; CTY—Kanawha; RR—C. & O.
S of H—Mules, main and tail rope. Track gage 44 inches.
S of M—1 shortwall mach.
PP—Power purchased, 2200-275 volts A. C., M. G. Sets, 250 volts D. C., 6 pumps.
EMP—160. Last years tonnage 114,600.
SIZES SHIPT.—Run of Mine.

AILEEN COAL CO.

Keeney's Creek Mine; CTY—Fayette.
No report.

AJAX COAL CO.

General Office, Pittsburgh, Pa.
PR—S. M. Dunbar, Pittsburgh, Pa.
VP—J. G. Farquhar, Pittsburgh, Pa.
TR—S. M. Dunbar, Pittsburgh, Pa.
GM—J. G. Farquhar, Pittsburgh, Pa.
GS—Adron Carter, Fayette, W. Va.
PA—J. G. Farquhar, Pittsburgh, Pa.
EM—B. M. Owen, Charleston, W. Va.
EE—O. L. Kitchin, Lansing, W. Va.
SCD—Address the Company, Buyer, R. O. Kent, Fayette, W. Va.
SA—Bob Lo Coal & Sales Corp., Pittsburgh, Pa.

Ajax Mine; Drift; Sewell Seam, 36 in. thick.
PO—Fayette, W. Va.; SP—Same; CTY—Fayette; RR—C. & O.
S of H—Trolley pole type locos. Track gage, 40 in.
S of M—20 overhead cutter machs.
PP—2 fire tube boilers, 150 H. P., 160 K. W. gen. units, 250 volts D. C., 4 pumps.
EMP—70. Last years tonnage 33,000.
SIZES SHIPT.—Run of Mine.

AKER COAL COMPANY

Out of Business.

ALBRIGHT SMOKELESS COAL CO.

General Office, Bethlehem, Pa.
PR—F. R. Ormsby, Akron, O.
VP—T. M. Dodson, Bethlehem, Pa.
TR—G. R. Radford, Bethlehem, Pa.
GM—W. H. Gibson, Dodson, Md.
PA—J. B. Connell, Bethlehem, Pa.
EE—W. A. Thomas, Scranton, Pa.
SCD—Sterling Store Co., Tunnelton, W. Va.; Buyer, J. B. Connell, Bethlehem, Pa.
Sales Agency, Weston Dodson & Co., Inc., Bethlehem, Pa.

Baker Mine; Drift; Upper Freeport Seam, 64 in. thick.
PO—Tunnelton, W. Va.; SP—Same; CTY—Preston; RR—W. V. N.
MS—C. N. Morgan, Tunnelton, W. Va.
SM—Robert E. Hunt, Tunnelton, W. Va.
S of H—Mules and 2 trolley pole locos. Track gage 42 inches.
S of M—2 chain breast type and 1 shortwall machs.
PP—2 return tubular boilers total 300 H. P., 1-150 K. W. gen. unit, 250 volts D. C., 2 pumps.
EMP—52. Daily tonnage 300.
SIZES SHIPT.—Run of Mine.

ALDREDGE COAL CO.

Aeneid, W. Va.
Aldredge Mine; CTY—Logan.
No report.

ALEMMA COAL COMPANY

Switzer, W. Va.
Alemma Mine.
PO—Switzer, W. Va.; CTY—Logan; RR—C. & O.
No report.

ALEXANDER BY-PRODUCT COAL CO.

General Office, Charleston, W. Va.
GS—W. A. Alexander, Charleston, W. Va.
Jefferson Mine; Drift.
PO—Heatherman, W. Va.; SP—Turner; CTY—Kanawha; RR—B. & O.
S of H—Mules.
S of M—Hand.
EMP—20. Daily output, 50 tons.
NOTE—Formerly operated by McEwen Coal Co.
Old information.

ALEXANDER COAL CO.

General Office, Belva, W. Va.
Alexander Mine.
PO—Belva, W. Va.; CTY—Nicholas; RR—C. & O.
No report.

ALEXANDER, E. A.

Hughes, W. Va.
Alexander Mine; CTY—Kanawha.
No report.

ALCOMA COAL & COKE CO.

General Office, Algoma, W. Va.
PR—Wm J. Beury, 1604 Alleghany Ave., Philadelphia, Pa.
VP—C. C. Beury, Charleston, W. Va.
TR—Jas. P. Beury, 3427 N. 17th St., Philadelphia, Pa.
GM—Wm J. Beury, Philadelphia, Pa.
CS—J. J. Huddleston, Algoma, W. Va.
PA—S. G. Wygal, Algoma, W. Va.
EM—C. H. Wilcox, Kyle, W. Va.
EE—S. C. Greene, Algoma, W. Va.
SCD—Address the Company; Buyer, A. F. Thornton, Algoma, W. Va.
SA—Castner, Curran & Bullitt, Bluefield, W. Va.

Algoma Mine; Drift; Pocahontas Seam No. 3; 62 to 84 in. thick.
PO—Algoma, W. Va.; SP—Northfork, W. Va.; CTY—McDowell; RR—N. & W.
MS—J. F. Logan, Algoma, W. Va.
S of H—Mules and trolley pole type locos.
S of M—3 shortwall machs.
PP—Power purchased, rotary converters, 250 volts D. C., 2 pumps.
EMP—165. Coke ovens, 28 Bee Hive.
SIZES SHIPT.—Run of Mine, Slack, Nut, Egg, Lump.
PREP. EQUIPT.—Shaker Screens.

ALCONQUIN COAL COMPANY.

General Office, Matoaka, W. Va.
PR—Robert T. Woodruff, New York, N. Y.
VP—M. E. Kinsley, New York, N. Y.
TR—A. Holmes, New York, N. Y.
GM—Roy T. Wright, Matoaka, W. Va.

GS—C. B. Wright, Alconquin, W. Va.
EM—W. P. Farrow, Alconquin, W. Va.
SCD—Address the Company, Buyer, W. C. Hale, Alconquin, W. Va.
SA—Kingsley Steamship Lines, Inc., 17 Battery Place, New York, N. Y.

Alconquin Mine; Drift; No. 3 Pocahontas Seam, 48 to 72 in. thick.
PO—Alconquin, W. Va.; SP—Same; CTY—Mercer; RR—N. & W.
MS—J. H. Fanguharson, Alconquin, W. Va.
S of H—Mules and 4 elec. locos. Track gage 48 in.
S of M—3 elec. machs.
PP—250 volts D. C., 3 pumps. Purchase Power, Appalachian Power Co.
EMP—60. Last fiscal year output 89,000 tons.
PREP. EQUIPT.—Loading Room, Bar Screen.

ALLIED COAL CO.

General Office, Fairmont, W. Va.
Allied No. 1 Mine.
PO—Willard, W. Va.; CTY—Harrison; RR—B. & O.
No report.

ALPHA-POCAHONTAS COAL CO.

General Office, Alpoca, W. Va.
PR—F. M. Lee, Alpoca, W. Va.
VP—S. P. Halsey, Lynchburg, Va.
GM—F. M. Lee, Alpoca, W. Va.
TR—G. H. Wilkins, Lynchburg, Va.
PA—F. M. Lee, Alpoca, W. Va.
EM—E. M. Merrill, Beckley, W. Va.
SCD—Address the Company, Buyer, C. R. Thrasher, Alpoca, W. Va.
SA—Jewett, Bigelow & Brooks Company, Norfolk, Va.

Alpha Mine; Drift; Beckley Seam, 51 to 72 in. thick.
PO—Alpoca, W. Va.; SP—Same; CTY—W. Va.; RR—Virginian.
MS—E. J. Miller, Alpoca, W. Va.
S of H—Trolley pole type locos. Track gage 44 in.
S of M—3 arcwall machs.
PP—Power purchased, Transformer 2200-275 volts A. C., M. G. Sets, 250 volts D. C., 6 pumps.
EMP—160. Last years tonnage 114,600.
SIZES SHIPT.—Run of Mine.

ALPHA PORTLAND CEMENT COMPANY

General Office, First Natl. Bank Bldg., Easton, Pa.
PR—G. S. Brown, Easton, Pa.
VP—F. G. McKelvey, Easton, Pa.
TR—J. J. Matthews, Easton, Pa.
GM—F. G. McKelvey, Easton, Pa.
GS—N. D. Colburn, Easton, Pa.
PA—H. T. Wetzel, Easton, Pa.
EM—J. P. Magee, Easton, Pa.
EE—J. F. Siegfried, Easton, Pa.

Phoenix Mine; Slope; Pittsburgh Seam, 72 to 84 in. thick.
PO—Wolf Summit, W. Va.; SP—Same; CTY—Harrison; RR—B. & O.
MS—E. P. McOlvin, Reynoldsville, W. Va.
S of H—Mules, main and tail rope and 2 trolley pole type locos.
S of M—2 shortwall machs.
PP—Power purchased, 11,000-220 volts A. C., rotary converters, 250 volts D. C., 4 pumps.
SIZES SHIPT.—Run of Mine.

ALTMAN COAL CO.

General Office, Altman, W. Va.
Altman Mine.
PO—Altman, W. Va.; CTY—Boone; RR—C. & O.
No report.

AMERICAN COAL CO. OF ALLEGANY CO.

General Office, No. 1 Broadway, New York.
PR—Wm. C. Atwater, New York, N. Y.
VP—Chas. F. Hutchins, Boston, Mass.
TR—James A. McQuail, McComas, W. Va.
GM—E. J. McQuail, McComas, W. Va.
GS—H. D. Smith, McComas, W. Va.

MAP OF MINING FIELDS—WYOMING

WYOMING

With Cross Sections Showing Arrangement of Coal Seams*

*From Bulletins 341 and 381 of the U. S. G. S.

WYOMING*

General Description of the Coal Resources of the State, With the Ranks of Coal Produced; Treats of the Counties In Which the Producing Beds Occur:
Map of the State Showing Mining Fields; Sectional Views of Formations; Analyses, Etc.

The coal bearing rocks underlie a larger proportion of Wyoming than of any other Rocky Mountain state. Most of this area, however, is included within the plains region, while the fields of Colorado are adjacent to the main mountain ranges. The same is to a large extent true of the fields of Montana, hence, with a few exceptions, the coals of the various fields of this state are of a lower grade than those of Colorado and Montana.

There is no field in the state where mining operations are now conducted in which the coal will produce a good grade of coke, nor has any marketable anthracite been discovered within its limits. There are extensive areas through the southern and eastern portions of the state underlain by the Laramie formation, which contain beds of lignitic coal, and a large area in the southwestern portion containing coal of subbituminous rank.

It is estimated that approximately 19,000,000 acres of land in Wyoming are coal bearing and that there is a total of 1,078,620,100,000 short tons of workable coal consisting mainly of subbituminous and bituminous rank. The heat value of Wyoming coal averages fairly high, ranging from 9,500 British thermal units in the lignites to 13,500 in the bituminous coals. The Newcastle bituminous coking coal and the coals from southwestern Wyoming show the highest values.

The annual production ranges between seven and nine million tons. The producing counties, named in the order of tonnage, are: Sweetwater, Lincoln, Sheridan, Carbon, Hot Springs, Weston, Freemont, Uinta and Converse. The product from the mines of this state find a ready market along the line of the Union Pacific railroad and its immediate connections from the Missouri River westward to San Francisco and Portland. Other railroads traversing the coal fields of the state are: Chicago, Burlington & Quincy; Chicago & Northwestern; and Oregon Short Line.

The coal producing sections of Wyoming will be discussed by counties.

SWEETWATER COUNTY

The coals of Sweetwater county belong to four formations. Of most importance is the Lower Mesaverde, or Rock Springs, coals which are bituminous in rank, and of minor importance the Upper Mesaverde, or Almond, coals which contain more moisture and are lighter in weight than those of the lower group and slack considerably on exposure to the air. The Knobs-Cherokee and the Black Butte coal groups are of lesser importance in this coal field. These coals fall in the subbituminous class. Most of the production of the county comes from the Lower Mesaverde or Rock Springs group. This group contains at least twelve coal beds ranging from two to ten feet in thickness and many other beds less than three feet thick. The total aggregate of coal beds over two feet thick in the Rock Springs coal group in the vicinity of Superior is more than 80 feet, and in the vicinity of Rock Springs it is more than 90 feet. These beds occur somewhat irregularly throughout the group, but are fairly persistent along the strike. Mines are in operation on upper beds of this group at Sweetwater, Rock Springs and Superior.

The Rock Springs coal is jet black as it comes from the mine, has a bright or even glassy luster, and in places shows iridescent colors. The structure of the bedding planes is as a rule well preserved, but jointing is not strongly developed. The coal is dense in texture and somewhat brittle. Many slickensided surfaces are present in this coal, as well as numerous faults. Considerable deposits of salts occur on the faces of the coal and on the sandstone along the entries in the mines. The coal on exposure to the air remains firm and compact

and stands shipping without breaking down. On burning it produces no clinker and leaves a small bulk of red-white or reddish ash. Samples taken from surface prospects and placed in airtight cans soon lose their bright luster and the surface becomes covered with a velvety-brown coating, which is probably due to the alteration of the weathered coal. The chief impurities of the coal are sulphur balls and small lenses of pyrite that are scattered somewhat irregularly through the bed.

The coals of the Almond group are also distinctly black, with a bright luster as they come from the mine. They show more traces of iron stain than the Rock Springs coal and contain considerable gypsum and salt flakes in the joints or bedding planes. On exposure to the air they alter more readily than the lower coals, lose their bright luster and become a dull black. As they break down cracks form along and perpendicular to the bedding planes, producing somewhat regular blocks instead of the irregular pieces resulting from conchoidal fracture. These coals somewhat resemble the Adaville coal of Lincoln county, but they seem to be affected less on exposure to the air and their fractures and joints are more regular and quite different from the conchoidal fracture of the Adaville coal. These coals fall in the lowest grade of bituminous or the highest grade of subbituminous coals. The coal beds in both groups give comparatively clean coal having a low content of ash, averaging less than 6 per cent.

*The information here presented on Wyoming coals has been gathered largely from U. S. G. S. Bulletins Nos. 316, 341, 381, 471; and the 22nd Annual Report, Part 3.

The lower coals of the Rock Springs coal group stand shipment well and do not slack on exposure to the air. They belong in the bituminous non-coking class of coals. The Rock Springs coal as a locomotive fuel or steam coal has few superiors in the west. It operates under a forced draft without heavy spark, leaving but little ash.

GENERAL ANALYSIS

	Rock Springs
Moisture	13.00
Volatile Matter	34.00
Fixed Carbon	48.00
Ash	5.00
Sulphur	0.80
B. t. u.	11,300

LINCOLN COUNTY

The activity in mining operations in this county is centered about Diamondville, Frontier and Kemmerer. The principal coal, known as the main Kemmerer bed, lies in the Lazear syncline and has a thickness ranging from 5 to 20 feet. At Frontier three seams have been opened, one of which, known as the A seam, lies 35 feet vertically below the Kemmerer bed with a thickness of six feet and a thin parting about one foot from the top.

The Willow Creek coal is about 550 feet below the main Kemmerer coal and has a thickness varying from 3 to 6 feet. Tests show that the Willow Creek coal produces a coke of fair quality.

The coal formations of Lincoln county belong to the Hams Fork field, which occupies a varying synclinal trough about 60 miles in length. The field is about 10 miles wide at the northern end, gradually decreasing to the south owing to the encroachment of the overlying Tertiary system.

The operations in this county are confined almost entirely to large corporate interests, the Union Pacific Company operating the southernmost extension of the workable coal, the Diamond Coal & Coke Company controlling the central district, and the Kemmerer Coal Company the northern. Most of the output of the Diamond Coal & Coke Company is used at the mines and smelters at Butte and Anaconda. There are a large number of lignite seams of enormous thickness lying to the west of Kemmerer, but all are of a rather low grade.

The coals worked in this field form two distinct classes. The best coals are comprised in the first class, which include all the coals of the Frontier formation, of Benton (Cretaceous) age. It is these coals which are being worked in the Kemmerer

district. The second and inferior class includes all the coals of the Adaville formation, of uppermost Montana and lower Laramie age, and those of the Evanston formation, of Tertiary or upper Laramie age.

The coals of the first class, which rank as high-grade bituminous, have much the same physical characteristics throughout the field and are remarkably uniform in their properties. They are black, moderately hard, and usually compact, and for the most part have a bright luster. As a rule they contain small partings of clay and shale and some irregular nodules of pyrite (sulphur balls). The coal as a rule is not so clean as the Adaville coal, but contains much less moisture. Generally the coal does not slack to any appreciable extent on exposure to the weather. In two localities the coking properties of these coals have been tested with fairly good results.

The coals of the Adaville formation rank as high-grade bituminous. They are black and fairly hard, have a bright luster, and break with a conchoidal fracture. When scratched the streak is a dark brown. The coal comes from the mines in fair-sized blocks, but slacks readily on exposure to the air, breaking into small irregular pieces. When a large block of coal is exposed to the air for a few hours small cracks appear over the entire surface owing to the large percentage of moisture given off.

GENERAL ANALYSIS

Moisture	5.50
Volatile Matter	38.50
Fixed Carbon	51.00
Ash	5.00
Sulphur	1.00
B. t. u.	12,750

SHERIDAN COUNTY

The coals of Sheridan county belong to the Sheridan coal field. The rocks containing the coal consist of comparatively soft shale and sandstone, alternately stratified and in apparently conformable succession. The coal bearing rocks are divisible in two parts, which may be called the Lower and Upper Members. The dividing line is near the middle of the rock section exposed in the Sheridan field and is marked approximately by the Carney coal bed, as it is known at Tongue River.

There are seven workable beds of coal in the Upper Member. These occur throughout the lower 800 feet of rock measured from the base upward. This formation is known as the Tongue River coal group. The lowest workable bed of this group is known as the Carney bed, and occurs in two benches in the Tongue River valley, separated by a thin parting of slate. The upper bench is 4 feet 6 inches thick and the lower between 10 and 11 feet.

The next workable bed occurs about 86 feet higher in the section of Tongue River, and it is known as the Monarch bed. This bed also is divided into two benches. The upper division is nearly 10 feet thick, while the lower is from 18 to 22 feet thick. The upper bench contains partings of shale.

Immediately above the Monarch coal bed are the No. 3, No. 2 and No. 1 Dietz coals. No. 3 bed is reported to be from 12 to 14 feet thick, the No. 2 from 8 to 9 feet with a local thickness of 14 feet, and the No. 1 bed is 8½ feet thick near Dietz.

The sixth coal bed in the Tongue River group, exposed about 210 feet above the Dietz bed No. 1, is nearly 5 feet thick. The uppermost bed of this group is known as the Roland coal, and attains a thickness at places reaching as high as 15 feet. It is questionable, however, whether the Roland coal is of sufficient purity to be regarded as workable.

The Ulm coal group is the highest group in the Upper Member formation, and contains two workable beds of coal of considerable areal extent. They are separated by about a hundred feet of shale and soft sandstone beds similar to the sandstone and shale lying below. These beds vary both in section and thickness and are broken by shale partings usually in two or more benches, but the total coal in each is ample for mining.

The coal beds in the Tongue River group are so nearly uniform in physical character that select specimens from one bed can scarcely be distinguished from like specimens from other beds. All these coals are distinctly black and have a shiny luster when fresh. On exposure in dry air the blackness is intensified by a partial loss of the shiny luster and the coal assumes a dull, dead blackness. At the same time it undergoes a rapid change by the loss of free moisture, which causes it to check or crack in various directions. Though weakened by shrinkage through a partial loss of water, the coal will adhere together as mined for an indefinite time if protected from the weather. When it is subjected to alternate wetting and drying, however, it breaks into small lumps and finally is reduced to a powder-like dust. For these reasons the coals are marketed more successfully by shipment in box cars. The streak of fine dust produced by abrading the coal is distinctly brown. The coals in the thicker beds especially are not as a rule distinctly laminated, but are for the most part massive. In mining they break into angular or subcubical blocks that present hackly and con-

choidal surfaces. The coal in this district is not regularly or distinctly jointed and in mining is undercut by pick or machine and shot from the solid.

Though the coals of the Tongue River group contain a comparatively high percentage of water and disintegrate on exposure, like the lignites, they do not show woody structure. Some of the coal beds in the upper part of the intermediate group and in the Ulm group show the texture or fiber of certain plants that took part in forming the coal. These coals are homogenous, however, and black like the coal beds lower in the section, but their water content is a little greater than that of the coals of Tongue River. Their fuel value also is a little lower, as indicated by the calorific determinations.

The coal from all the beds now mined in this county is used extensively in locomotives and stationary engines. A large part of the production is used by the Burlington Railroad. It is marketed in Wyoming and Nebraska as far west as Omaha, in the Black Hills region at Billings, Dubuque and other points in Montana and as far west as Idaho and Washington.

GENERAL ANALYSIS

Moisture	24.00
Volatile Matter	35.00
Fixed Carbon	36.00
Ash	5.00
Sulphur	1.00
B. t. u.	9,000

CARBON COUNTY

Although there are extensive coal fields throughout Carbon county, the production at the present time comes from what is known as the Hanna field. The coals of this field are both bituminous and subbituminous in rank. The coal bearing rocks occur in two basins, the first of which is known as the Kindt basin and the second is known as the Hanna basin. This latter basin is a broad trough 40 miles long and 25 miles wide. It shows minor folds and faults in the center and near its edges a somewhat marked irregularly plunging anticline.

The coals of this field range from poor to high-grade bituminous. They are as a rule bright, brittle and noncoking. The best coals in the area are found in the Mesaverde formation, which contains the high-grade coals of the Routt county, Colo. field. These Mesaverde coals are not so good as the Benton coals of Lincoln county, mined at Cumberland, Diamondville and Frontier, and are perhaps inferior to the coal at Rock Springs. The coals of the "Upper Laramie," extensively mined at

Carbon and Dana, are distinctly inferior to the Cumberland and Rock Springs coal, though superior to much of the coal of Laramie age in northeastern Wyoming and eastern Montana. The coal mined at Carbon was rather dirty, and the much cleaner coal at Dana proved so light that in the forced draft of the railroad locomotive it nearly all went out of the smokestack, covering the cars with showers of sparks. After several years, in which it suffered many disastrous car fires, the railroad was forced to abandon the use of coal from this mine. The Hanna coal is now extensively and satisfactorily used in the locomotives of the Union Pacific Railroad.

GENERAL ANALYSIS

	Hanna	Rawlins
Moisture	11.50	14.00
Volatile Matter	41.50	33.00
Fixed Carbon	41.50	47.00
Ash	5.50	6.00
Sulphur	0.45	0.45
B. t. u.	11,200	10,200

HOT SPRINGS COUNTY

The coal production of Hot Springs county is from what is known as the Gebo coal field, which extends from Bighorn River near Kirby westward between Meeyero and Owl Creeks and along the Cottonwood Creek to the foothills of the mountains. The most extensive coal beds are in the eastern part of the field. The coal locally attains a thickness of 11 feet, with dips running as high as 22

degrees. The production of the mines is used largely by the railroads.

GENERAL ANALYSIS

Moisture	17.00
Volatile Matter	33.00
Fixed Carbon	45.00
Ash	5.00
Sulphur	0.55
B. t. u.	10,900

WESTON COUNTY

All the coals of Weston county are subbituminous and have a high moisture and ash content. By reason of the rapid disintegration of the coal on exposure to the air, the chief value of the output in this county lies in the limitless supply of fuel which it offers for the settlers of this treeless Plains Region.

The beds vary from 6 to 20 feet in thickness and are generally rather free from partings.

GENERAL ANALYSIS

Moisture	10.00
Volatile Matter	39.00
Fixed Carbon	35.00
Ash	16.00
Sulphur	4.85
B. t. u.	10,400

FREMONT COUNTY

Very little mining is being done in Fremont county, although there are extensive coal deposits varying in thickness from 2 inches up to 10 feet. The coal from this county is best adapted for domestic fuel, but it has been employed satisfactorily in stationary boilers, in lime kilns and similar places where a forced draft is not required. Under forced draft, however, it breaks up before burning and part of the coal is blown from the fire box and out through the stack before it is consumed. Owing to the rapidity with which it disintegrates the coal must be shipped in box cars and can be held in

storage bins only a short time after it is mined. In spite of these objectionable features, it is regarded a good domestic fuel and will be in constant demand in markets which are easily reached.

GENERAL ANALYSIS

Moisture	21.00
Volatile Matter	32.50
Fixed Carbon	41.00
Ash	5.50
Sulphur	0.50
B. t. u.	9,500

UINTA COUNTY

The coal from Uinta county comes from the Almy field, which lies 7 miles west of the southern end of the Hams Fork field. The outcrop of the coal bearing rocks forms an area of 12 miles in length north and south, by 6 miles in width. There is one seam worked which has an average thickness of 22 feet of clean coal which is a low grade subbituminous. It contains a much lower percentage

of moisture than the same class of coals of the Plains Region.

GENERAL ANALYSIS

Moisture	14.25
Volatile Matter	36.00
Fixed Carbon	38.50
Ash	11.25
Sulphur	0.30
B. t. u.	10,400

CONVERSE COUNTY

There are two producing fields in Converse county, known as the Lost Spring coal field in the easterly part and the Glenrock field in the extreme western part. All the coal which is exposed in the Lost Spring field belongs to the Fort Union formation, and is classed as subbituminous. A fresh sample of the coal is bright, black, hard and usually very homogenous. On being exposed to a dry atmosphere for a short time the surface cracks and the coal generally breaks up in small angular, irregular fragments. This characteristic of breaking down by weathering has a serious affect upon the marketing of the coal and serves to distinguish it from bituminous coal. It makes a very good domestic fuel if used soon after mining, but the major portion of the output is used for locomotive purposes.

The coals found between Casper and Douglas are all classed as subbituminous, but some are

almost good enough to be called bituminous. They are placed in the lower class because all yield rapidly to weathering. The coal is black, but when it is exposed to the air it cracks and the surface becomes slightly brown. At the mines piles of slack sometimes take fire spontaneously. Considerable of the output of this fuel is disposed of in Nebraska, where it is used as a steam and domestic fuel, while a considerable portion finds usage with the railroads.

GENERAL ANALYSIS

Moisture	27.00
Volatile Matter	31.50
Fixed Carbon	34.00
Ash	7.50
Sulphur	0.90
B. t. u.	8,000

PREPARATION OF COAL

Much of the coal of Wyoming deteriorates so rapidly on exposure to air that storage either at the mine or at the point of usage is not practicable. For this reason mines supplying a domestic trade only are worked principally during the winter months. Box cars are used much more for shipment than in the eastern states, as the coal is

thereby protected from the weather. For the purpose of loading in box cars, machinery is in common use. There are very few installations of picking tables, but a separation of impurities is made at the working places and to a lesser extent by hand picking on the tipple and on the cars.

See descriptions of coal mines, following Supplementary Analyses, for additional information on uses and analyses of Wyoming coals.

BRANCHES

OMAHA, NEBRASKA
KANSAS CITY, MISSOURI
MINNEAPOLIS, MINNESOTA
DEADWOOD, SOUTH DAKOTA
SPOKANE, WASHINGTON

General Office

332 South Michigan Avenue

CHICAGO, ILL.

Sales Agent for Sheridan-Wyoming Coal Co., Inc.

The Sheridan Field

There are six large mines in Sheridan County, Northern Wyoming, owned by the Sheridan-Wyoming Coal Co., Inc. These mines are operated by Peabody Coal Company who also are Sales Agent for the output.

All six of these mines operate in the Carney and Monarch seams, both of which are remarkable for their unusual thickness, at places reaching as high as 34 feet.

The six *KLEENBURN* mines are located within a radius of seven miles and there is very little, if any, difference in the quality of the coal produced at the different operations.

Quality

Coal from these properties is sold under the trade name of *KLEENBURN*, this name having been selected on account of the clean-burning properties of the coal.

KLEENBURN coal is remarkably free from dirt. It is absolutely sootless, makes very little smoke, does not clinker and holds fire well over night. Repeated analyses show that the ash content is approximately 3%.

On account of a relatively high moisture content, *KLEENBURN* coal is subject to considerable degradation if exposed to the weather. To offset this tendency, all domestic sizes are shipped in sealed box cars which not only provide protection from the weather but also prevent pilferage and loss in transit.

Modern Haulage Methods Are Used in All *KLEENBURN* Mines

PEABODY COAL COMPANY

SHERIDAN, WYOMING

BRANCHES
OMAHA, NEBRASKA
KANSAS CITY, MISSOURI
MINNEAPOLIS, MINNESOTA
DEADWOOD, SOUTH DAKOTA
SPOKANE, WASHINGTON

General Office
332 South Michigan Avenue
CHICAGO, ILL.

Sales Agent for Sheridan-Wyoming Coal Co., Inc.

Preparation

Each of the *KLEENBURN* Mines is equipped with mining machines, shaker screens, loading booms and box car loaders. No picking tables are necessary as the coal contains no rock, slate or other impurities. Every care is taken to screen the coal into evenly graded sizes and to prevent breakage in loading.

For this purpose the Manniere box car loaders are particularly well adapted, as it is possible to

so adjust them that coal passing into the cars does not drop more than one to two feet, the conveyor being gradually raised as the car is filled.

Sizes Produced

KLEENBURN coal is prepared in the following sizes:
Lump—Over 6" Screen.
Egg—Through 6", over 2½" Screen.
Nut—Through 2½", over 1½" Screen.
Screenings—Through 1½" Screen.

Manniere Box Car Loader in Operation at *KLEENBURN* No. 41

Capacity

Owing to the thickness of the vein and the modern methods and machinery employed, the *KLEENBURN* mines are capable of an enormous production, the total capacity of the six mines being approximately 20,000 tons a day. This tremendous potential production gives assurance of our ability to fill orders promptly at all times.

Territory Supplied

KLEENBURN coal moves on favorable rates to points in the following states:

Washington	South Dakota
Idaho	Nebraska
Montana	Kansas
Wyoming	Missouri
North Dakota	Iowa
	Minnesota

Freight rates to any points in these states will be quoted upon request.

WYOMING

Alphabetical Directory of Coal Mines, Giving Complete Detailed Information Covering Each Mine

For List of Abbreviations See Page 13.

ACME COAL CO.

New Peabody Coal Co.

AMALGAMATED DEVELOPMENT CORP.

New Peabody Coal Co.

BEAR RIVER COAL COMPANY

PR—Geo. E. Pexton, Evanston, Wyo.
VP—J. H. Martin, Evanston, Wyo.
TR—O. E. Bradburg, Evanston, Wyo.
GM—J. H. Martin, Evanston, Wyo.
GS—J. H. Martin, Evanston, Wyo.
PA—O. E. Bradburg, Evanston, Wyo.
EM—O. E. Bradburg, Evanston, Wyo.

Bear River No. 1 Mine; Slope; Evanston Seam, 219 inches thick.
PO—Evanston, Wyo.; SP—Same; CTY—Union; RR—Union Pacific.
S of H—Mules, rope, comp. air and steam locos. Track gage 30 inches.
S of M—Hand and comp. air punchers.
PP—1 100 H. P. fire tube boiler and 2—150 H. P. water tube boilers.
EMP—50. Last years tonnage 50,000.
SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
PREP. EQUIPT—Shaker Screens.

BIG HORN COLLIERIES CO.

General Office, Denver, Colo.
PR—Jas. R. Thorpe, Denver, Colo.
VP—Herbert Addison, Denver, Colo.
TR—Herbert Addison, Denver, Colo.
GS—Frank Anderson, Jr., Crosby, Wyo.
PA—Herbert Addison, Denver, Colo.
EE—Cleve Fugua, Crosby, Wyo.
SCO—Big Horn Trading Co.; Buyer, Colin Anderson, Crosby, Wyo.
SA—Herbert Addison, Denver, Colo.

Big Horn Mine; Slope; Big Horn Seam, 48-168 in. thick.
PO—Crosby, Wyo.; SP—Kirkby, Wyo.; CTY—Hot Spring; RR—C. B. & O.
S of H—Mules, rope and 2 trolley pole type locos. Track gage, 36 in.
S of M—4 comp. air punchers and 6 showwall machs.
PP—5 water tube boilers, total 750 H. P. 2—375 K. W. gen. units, transformer, 2,300-440 volts A. C. M. G. Sets, 250 volts D. C. 12 pumps.
EMP—250. Last years tonnage 245,000.
SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
PREP. EQUIPT—Revolving and Shaker Screens, Picking Tables.

BLAZON COAL COMPANY

General Office, Salt Lake City, Utah.
PR—L. F. Rains, Salt Lake City, Utah.
VP—A. H. Jenkinson, Salt Lake City, Utah.
TR—L. F. Rains, Salt Lake City, Utah.
PA—J. K. Rans, Salt Lake City, Utah.
CE—A. H. Jenkinson, Salt Lake City, Utah.
SCO—Rains Mercantile Co. No. 2, Buyer, J. M. Scott.
SA—Carbon Coal & Sales Co.

Blazon No. 1 Mine; Slope; Lignite Seam; 84 inches thick.
PO—Point of Rocks, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
MS—R. E. Montgomery, Point of Rocks, Wyo.
S of H—Mules, rope and 1 gasoline engine. Track gage 36 in.
S of M—Hand.
EMP—80. Last fiscal year output, 50 116 tons.
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Bar Screens.

BUFFALO-WYOMING COAL COMPANY

General Office, Cedar Rapids, Ia.
PR—Isaac B. Smith, Cedar Rapids, Iowa.
VP—Geo. W. Munkres, Buffalo, Wyo.
TR—Geo. G. Belt, Buffalo, Wyo.
GM—Geo. G. Belt, Buffalo, N. Y.
PA—Geo. G. Belt, Buffalo, Wyo.
CE—J. W. Wardle, Cedar Rapids, Ia.
SCO—Address the Company, Buyer, Geo. G. Belt, Buffalo, Wyo.

Buffalo Mine; Shaft; Seam, 108 in. thick.
PO—Buffalo, Wyo.; SP—Same; CTY—Johnson; RR—Wyoming.
S of H—Mules. Track gage, 30 in.
S of M—6 chain breast type machs.
PP—Power purchased, transformer 2100-220 volts A. C. 2 fire tube boilers, 25 H. P. 1 pump.
EMP—10. Daily tonnage 100.
SIZES SHIPT—Run of Mine, Slack.
PREP. EQUIPT—Bar Screens.

CAMBRIA FUEL COMPANY (THE)

General Office, Cambria, Wyo.
PR—Lewis T. Wolfe, Akron, O.
GM—Lewis T. Wolfe, New York, N. Y.
VP—Wm. Morris Imbrie, 61 Broadway, New York, N. Y.
TR—Walter Schoonmaker, Cambria, Wyo.
GS—Phas. V. Westover, Cambria, Wyo.
PA—Walter Schoonmaker, Cambria, Wyo.
SCO—Cambria Commercial Co., Cambria, Wyo.

Cambria Mines; Drift; An Orphan Seam, 36 to 141 in. thick.
PO—Cambria, Wyo.; SP—Same; CTY—Weston; RR—C. B. & O.
SM—H. H. DeVolt, Cambria, Wyo.
S of H—Mules, 4 comp. air and 2 trolley pole type locos. Track gage, 42 inches.
S of M—Comp. air punchers.
PP—4 water tube boilers, 1750 H. P. 1 750 K. W. gen. unit, 220 volts D. C. 9 pumps.
EMP—210. Last years tonnage 244,359.
SIZES SHIPT—Slack, Lump, Crushed.
PREP. EQUIPT—Shaker Screens, Picking Tables.

CARNEY COAL COMPANY.

New Peabody Coal Co.

CENTRAL COAL & COKE COMPANY

General Office, Kansas City, Mo.
Operations in Arkansas, Kansas, Missouri, Oklahoma and Wyoming.
PR—C. S. Keith, Kansas City, Mo.
VP—H. N. Taylor, Kansas City, Mo.
TR—E. E. Riley, Kansas City, Mo.
GS—Wm. Harkins, Kansas City, Mo.
PA—Thomas Mackie, Kansas City, Mo.
EM—L. S. O'Flaherty, Kansas City, Mo.
SCO—Address the Company, Buyer, P. W. Dooley, Bevier, Mo.

No. 2 Mine; Slope; A-1 and No. 7 Seams, 84 in. thick.
PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—U. P.
MS—Arthur Vall, Rock Springs, Wyo.
S of H—Mules, rope, trolley pole type loco. Track gage 36 in.
S of M—10 shortwall machs.
PP—3 fire tube boilers, 999 H. P. gen. units, 1000 K. W., 250 volts A. C. 9 pumps.
EMP—220. Last years tonnage 349,186.
SIZES SHIPT—Run of Mine; Slack, Nut, Egg, Lump.
PREP. EQUIPT—Shaker Screens, Picking

COLONY COAL COMPANY

General Office, Denver, Colo.
PR—G. W. Harris, Denver, Colo.
VP—J. W. Gilchrist, Davenport, Ia.
TR—R. A. Harris, Mt. Harris, Colo.
GM—B. A. Harris, Mt. Harris, Colo.
Asst. Gen. Mgr.—G. C. Davis, Dines, Colo.
Chief Engr.—G. T. Haldeman, Denver, Colo.
PA—H. L. Settergren 1st Ntl. Bk. Bldg., Denver, Colo.
EM—Park Allison, Dines, Wyo.
EE—R. C. Grout, Dines, Wyo.
SCO—Address the Company, Buyer, H. L. Settergren, Denver, Colo.
SA—J. F. Emmert, Denver, Colo.

Dines Nos. 6, 8, 9 and 10 Mines; No. 8, 9, 10, Drift, No. 6, Slope; Nos. 6 1/2, 8, 9, 10 Seams, 78-96-108-120 in. thick.
PO—Dines, Wyo.; SP—Hay, Wyo.; CTY—Sweetwater; RR—Union Pacific.
MS—G. C. Davis, Dines, Wyo.
SM—J. H. Kelley, Dines, Wyo.
S of H—Mules, 1 trolley pole type loco. Track gage 36 in.
S of M—11 shortwall machs.
PP—Power purchased, Transformer 33000 to 2300 volts A. C. 2 M. G. sets, 275 volts D. C.
EMP—375. Last years tonnage 261,942.
SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
PREP. EQUIPT—Marcus Shaker Screen, Loading Booms.

DIAMOND COAL & COKE CO.

General Office, Butte, Mont.
PR—John D. Ryan, New York, N. Y.
GM—F. W. C. Whyte, Anaconda, Mont.
PA—D. A. Welch, Butte, Mont.
GS—T. C. Russell, Diamondville, Wyo.
EM—R. R. Vall.

MM—A. Swanson, Diamondville, Wyo.
EE—C. Seethess, Diamondville, Wyo.

Diamondville No. 1 Mine; Slope; Kemmerer Seam, 7 to 14 ft. thick.
PO—Diamondville, Wyo.; SP—Same; CTY—Lincoln; RR—O. S. L.
MS—Jas. Hunter, Diamondville, Wyo.
S of H—Mules and rope; track gauge 3 ft S of M—H and 5 Comp. air mach.
PP—11 Return tubular boilers, 1 gen. unit, 440 volts A. C., 3 phases, 1 comp., 2 pumps.
EMP—160. Last fiscal year output 174,938 tons.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.

Oakley No. 2 Mine, Slope, Kemmerer Seam 7 to 14 ft. thick.
PO—Oakley Wyo.; SP—Diamondville, CTY—Lincoln; RR—O. S. L.
MS—Wm. Armstrong, Diamondville, Wyo.
S of H—Mules and rope; track gauge 3 ft S of M—Hand and 3 Comp. air mach.
PP—8 Return tubular boilers, 1 Air comp., 1 pump.
EMP—160. Last fiscal year output 247,981 tons.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.

Glencoe No. 4 Mine, Slope, Kemmerer Seam 7 to 14 ft. thick.
PO—Glencoe, Wyo.; SP—Same; CTY—Lincoln; RR—O. S. L.; Cumberland R.
MS—R. T. Sneddon, Diamondville, Wyo.
S of H—Mules and rope; track gauge 3 ft S of M—Hand and 10 Comp. air mach.
PP—7 Return tubular boilers, 1 compressor and 1 pump.
EMP—150. Last fiscal year output 196,338 tons.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
(Old Information)

GUNN-QUEALEY COAL COMPANY

General Office, Gunn, Wyo.
PR—P. J. Quealey, Kemmerer, Wyo.
VP—W. B. Thompson, Gunn, Wyo.
TR—Wm. E. Decker, New York, N. Y.
GS—G. A. Knox, Gunn, Wyo.
PA—G. A. Knox, Gunn, Wyo.
EM—B. C. Roberts, Gunn, Wyo.
EE—James Coals, Gunn, Wyo.
SCO—Desert Trading Co. Buyer, C. W. Peterson, Gunn, Wyo.
Sales Agent—T. J. O'Brien, Salt Lake City, Utah.

"E" Mine; Slope; Seam 84 in. thick.
PO—Gunn, Wyo.; SP—Rock Springs, Wyo.; CTY—Sweetwater; RR—Union Pacific.
MS—G. A. Knox, Gunn, Wyo.
S of H—Mules and trolley pole type loco. Track gage 42 in.
S of M—8 shortwall machs.
PP—Purchase power.
EMP—250. Daily tonnage 1,200.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
PREP. EQUIPT—Shaker Screens.

"C" Mine; Slope; Seam 84 in. thick.
PO—Gunn, Wyo.; SP—Rock Springs, Wyo.; CTY—Sweetwater; RR—Union Pacific.
MS—G. A. Knox, Gunn, Wyo.
S of H—Mules and trolley pole type loco. Track gage 42 in.
S of M—8 shortwall machs.
PP—Power purchased.
EMP—250. Daily tonnage 1,200.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
PREP. EQUIPT—Shaker Screens.

Sweetwater Mine; Slope; Seam 72 inches thick.
PO—Gunn, Wyo.; SP—Rock Springs, Wyo.; CTY—Sweetwater; RR—Union Pacific.
SM—J. A. Peterson, Sweetwater, Wyo.
S of H—Mules, 2 trolley pole 5-ton locos.
S of M—7 shortwall machs.
EMP—125. Daily tonnage 800.
SIZES SHIPT—Run of Mine, Lump, Nut, Slack.
PREP. EQUIPT—Shaker Screens.

KEMMERER COAL COMPANY

General Office, Frontier, Wyo.
PR—M. S. Kemmerer, 143 Liberty St., New York, N. Y.
VP—P. J. Quealey, Frontier, Wyo.

TR—J. L. Kemmerer, 143 Liberty St., New York, N. Y.
SECY—J. L. Kemmerer, 113 Liberty St., New York, N. Y.
GM—P. J. Quealey, Frontier, Wyo.
GS—Gomer Reese, Frontier, Wyo.
PA—P. J. Quealey, Frontier, Wyo.
EM—C. S. Beach, Frontier, Wyo.
EE—B. L. Betcher, Frontier, Wyo.
SCO—Frontier Supply Co.; Buyer, R. M. Turner, Frontier, Wyo.
SA—T. J. O'Brien, Salt Lake City, Utah.

No. 5 Mine; Slope; Laramie or Cretaceous Seam, 60 in. thick.
PO—Sublet, Wyo.; SP—Kemmerer, Wyo.; CTY—Lincoln; RR—O. S. L.
MS—John Oakley, Sublet, Wyo.
SM—Tom Holland, Sublet, Wyo.
S of H—Mules and 4 5-ton P. C. trolley pole locos. Track gage 42 in.
S of M—Hand.
PP—Power purchased, Transformer 13,000 to 2,300 volts A. C. M. G. sets, 220 volts A. C. and D. C., 1 fire tube boiler, 150 H. P., 2 pumps.
EMP—118. Last years tonnage 160,451.
PREP. EQUIPT—Shaker Screens.

No. 6 Mine; Slope; Crataceous Seam, 60 in. thick.
PO—Sublet, Wyo.; SP—Kemmerer, Wyo.; CTY—Lincoln; RR—O. S. L.
MS—John Mates, Sublet, Wyo.
SM—Frank Toni, Sublet, Wyo.
S of H—Mules and 3 trolley pole type locos. Track gage, 42 in.
S of M—Hand.
PP—Power purchased, Transformer 13,000 to 2,300 volts A. C. M. G. sets, 220 volts A. C. and D. C., 4 fire tube boilers, total 600 H. P., 3 pumps.
EMP—98. Last years tonnage 142,381.
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Shaker Screens.

No. 1 Mine; Slope; Crataceous Seam, 84 in. thick.
PO—Frontier, Wyo.; SP—Kemmerer, Wyo.; CTY—Lincoln; RR—O. S. L.
MS—Joe Inama, Frontier, Wyo.
SM—R. M. Turner, Frontier, Wyo.
S of H—Mules, main rope and steam locos. Track gage 42 in.
S of M—Hand.
PP—Power purchased, Transformer 13,000 to 2,300 volts A. C. M. G. sets, 220 volts A. C. and D. C., 6 fire tube boilers, total 900 H. P., 5 pumps.
EMP—175. Last years tonnage 171,668.
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Shaker Screens.

Elkol No. 1 Mine; Slope; Cretaceous Seam, 40 in. thick.
PO—Elkol, Wyo.; SP—Kemmerer, Wyo.; CTY—Lincoln; RR—O. S. L.
MS—John Kataari, Elkol, Wyo.
SM—M. L. Thomas, Elkol, Wyo.
S of H—Mules, track gage, 42 in.
S of M—Hand.
PP—Power purchased, Transformer 13,000 to 2,300 volts A. C. M. G. sets, 220 volts A. C. and D. C., 4 fire tube boilers, total 600 H. P., 2 pumps.
EMP—42. Last years tonnage 121,952.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
PREP. EQUIPT—Shaker Screens.

Note—No. 3 Mine Idle.

No. 4 Mine; Slope; Cretaceous Seam, 48 to 60 in. thick.
PO—Susie, Wyo.; SP—Kemmerer, Wyo.; CTY—Lincoln; RR—O. S. L.
MS—Samuel Daniels, Susie, Wyo.
S of H—Mules, main rope, steam and elec. locos. Track gage 42 in.
S of M—Hand.
PP—Power purchased, Transformer 13,000 to 2,300 volts A. C. M. G. sets, 220 volts A. C. and D. C., 2 fire tube boilers, total 300 H. P., 1 pump.
EMP—25. Last years tonnage 25,149.
SIZES SHIPT—Run of Mine.
PREP. EQUIPT—Shaker Screens.

KIRBY CREEK COAL COMPANY

Out of business.

KOOL, PETER.

New Peabody Coal Co.

LINCOLN-KEMMERER COAL COMPANY

General Office, 2009 Wash. Ave., Ogden, Utah.
 PR—W. H. Draney, Frontier, Wyo.
 VP—T. D. Ryan, Frontier, Wyo.

 SA—F. H. Kollapp Co., Box 14, Salt Lake City, Utah.

Lincoln-Kemmerer Mine; Slope; Cretaceous Seam, 66 to 120 in. thick.
 PO—Frontier, Wyo.; SP—K-mm rer, Wyo.; CTY—Lincoln; RR—O. S. L.
 S of H—Rope. Track gage, 36 in.
 S of M—Hand.
 PP—4 fire tube boilers, 100 H. P., 1 water tube boiler, 35 H. P., 1 150 K. W. gen. unit, 250 volts D. C., 3 pumps.
 EMP—40. Last years tonnage 27,000.
 SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
 PREP. EQUIPT—Gravity Screens.

LION COAL COMPANY.

General Office, Ogden, Utah.
 PR—Joseph Scowcroft, Ogden, Utah.
 VP—Adam Peterson, Ogden, Utah.
 TR—Royal Eccles, Ogden, Utah.
 GM—D. H. Pape, Ogden, Utah.
 GS—F. H. Burnell, Ogden, Utah.
 LOCAL SUPT.—John Carr, Lionok, Wyo.
 PA—L. K. Adams, Ogden, Utah.
 EE—E. E. Brown, Rock Springs, Wyo.
 SCO—Lion Trading Co. Buyer, John Correlletti, Lionok, Wyo.
 SA—James T. Hill, Ogden, Utah.

Lion No. 1 Mine; Shaft; Laramie-Cretaceous Seam, 96 in. thick.
 PO—Lionok, Wyo.; SP—Rock Springs, Wyo.; CTY—Sweetwater; RR—Union Pacific.
 MS—F. G. Cundy, Lionok, Wyo.
 S of H—Mules and rope. Track gage, 42 in.
 S of M—10 shortwall machs.
 PP—Generate power, 440 volts A. C., 3 pumps.
 EMP—70. Daily tonnage 1,200.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens, Picking Tables.

Lion No. 3 Mine; Slope; Laramie-Cretaceous Seam, 60 in. thick.
 PO—Lionok, Wyo.; SP—Rock Springs, Wyo.; CTY—Sweetwater; RR—Union Pacific.
 MS—Matt Marshall, Lionok, Wyo.
 S of H—Mules and rope. Track gage 42 in.
 S of M—4 shortwall machs.
 PP—Power purchased, 440 volts A. C., 2 pumps.
 EMP—40. Daily output, 250 tons.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens

Wyo. No. 1 Mine; Slope and Shaft.
 PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—U. P.
 MS—J. D. Carr, Rock Springs, Wyo.
 S of H—Mules and main and tail rope. Track gage 36 inches.
 S of M—Elec. mach.
 PP—Power purchased. Transformer 2200 to 440 volts A. C., 2—500 K. W. gen. units, 110 volts D. C., 4 water tube boilers, total 1,000 H. P., 8 pumps.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens, Picking Tables.

Wyo. No. 7 Mine; Slope and Shaft.
 PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—U. P.
 MS—J. D. Carr, Rock Springs, Wyo.
 S of H—Mules and main and tail rope. Track gage 36 inches.
 PP—Get power from Wyo. No. 1 (Central Station).
 EMP—50. Last years tonnage 79,000.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PBEP. EQUIPT—Shaker Screens, Picking Tables.

Wyo. No. 4 Mine; Slope.
 PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—U. P.
 MS—J. D. Carr, Rock Springs, Wyo.
 S of H—Mules, main and tail rope. Track gage 36 inches.
 S of M—3 shortwall machs.
 PP—Get power from Wyo. No. 1 Mine (Central Plant).
 EMP—85. Last years tonnage 26,000.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens, Picking Tables.

NOTE—Lion No. 3 Mine closed down at present.
 NOTE—Wyo. No. 1 and No. 7 formerly operated by the Wyoming Coal Co.

MEGEATH COAL COMPANY.

General Office, Omaha, Neb.
 PR—W. F. Megeath, Omaha, Neb.
 VP—J. E. Megeath, Omaha, Neb.
 TR—G. A. Rehm, Omaha, Neb.
 GM—J. E. Megeath, Omaha, Neb.
 GS—R. S. Robbins, Megeath, Wyo.
 PA—M. L. Garvey, Omaha, Neb.
 SA—G. A. Davis, Cheyenne, Wyo.

No. 3 Mine; Slope; No. 1 Seam.
 PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
 S of H—Mules and rope. Track gage, 30 in.
 S of M—2 shortwall machs.
 PP—Power purchased, 250 volts D. C.
 EMP—35. Daily output, 300 tons.
 SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
 PREP. EQUIPT—Shaker Screens, Picking Tables.

MONARCH COAL MINING COMPANY

New Peabody Coal Co.

OWL CREEK COAL CO.

General Office, Gebu, Wyo.
 PR—R. J. Ireland, Amityville, N. Y.
 VP—S. P. Hildreth, Amityville, N. Y.
 TR—M. P. Myton, " "
 GS—James C. Rae, Gebu, Wyo.
 PA—R. J. Ireland, Jr., Gebu, Wyo.
 CE—James O'Neal, Gebu, Wyo.
 EM—John Merton, Gebu, Wyo.
 EE—Walter Wright, Gebu, Wyo.
 FE—James C. Rae, " "
 SCO—The Owl Creek Mercantile Co.
 Buyer, J. E. Patterson, Gebu, Wyo.
 SA—M. E. Congdon, Gebu, Wyo.

Gebu Mine; Slope; Gebu Seam, 96 to 144 in. thick.
 PO—Gebu, Wyo.; SP—Kirby; CTY—Hot Springs; RR—C. R. & Q., Billings, Denver Br.
 MS—John R. Kirby, Gebu, Wyo.
 S of H—Mules and 4 6-ton elec. locos. Track gage 42 inches.
 S of M—4 chain breast type and 8 shortwall machs.
 PP—5—250 H. P. and 3—200 H. P. water tube boilers, 2—200 K. V. A. gen. units, 2300 volts, 3 phase 60 cycles, 1—200 K. W., 1—37½ K. W. and 1—25 K. W., 250 volts D. C., 11 pumps.
 EMP—300. Last years tonnage 348,000.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

PEABODY COAL COMPANY

Operating and Sales Agent for Sheridan-Wyoming Coal Co., Inc.
 General Office, 332 S. Michigan Ave., Chicago, Ill.
 Chairman of Board—Francis S. Peabody, Chicago, Ill.
 PR—Stuyvesant Peabody, Chicago, Ill.
 VP—Clarence J. Gray, Chicago, Ill.
 VP—Moses F. Peltier, Chicago, Ill.
 VP—(In charge of Operations), Hiram M. Young, Chicago, Ill.
 VP—(In charge of Sales and Traffic), George W. Reed, Chicago, Ill.
 VP—(In charge of Finance), Chas. E. Schrage, Chicago, Ill.
 VP—(In charge of Accounts), Charles S. Ellis, Chicago, Ill.
 ASST to VP—(In charge of Sales)—J. L. Pierson, Chicago, Ill.
 TR—Chas. E. Schrage, Chicago, Ill.
 Secy.—Joseph Solar, Chicago, Ill.
 Asst. Secy.—Treas.—Walter A. Fisher, Chicago, Ill.
 Mgr. of Traffic—James B. Duggan, Chicago, Ill.
 Asst. to VP in charge of Operations—George C. McFadden, Chicago, Ill.
 PA—Harry E. Campbell, Chicago, Ill.

Additional Information on Pages 1164, 1165

No. 40 Mine abandoned.

No. 41 Mine; Shaft; Monarch Seam; 408 inches thick.
 PO—Sheridan, Wyo.; SP—Dietz, Wyo.; CTY—Sheridan; RR—C. R. & Q.
 S of H—Horses, trolley locomotive.
 S of M—Machine and hand.
 PP—Power purchased.
 SIZES SHIPT—Lump Egg, Nut, Run of Mine, Slack.

No. 42 Mine; Drift; Monarch Seam; 408 inches thick.
 PO—Acme, Wyo.; SP—Dietz, Wyo.
 S of H—4 trolley pole type locos. Track gage 42 inches.
 S of M—Machine and hand.
 PP—Power purchased, 2 gen. units, 2,200 volts A. C., 3 fire tube boilers, total 333 H. P., 6 pumps.
 EMP—275.
 SIZES SHIPT—Lump, Egg, Nut, Slack, Run of Mine.
 PREP. EQUIPT—Crusher and Shaker Screens.

No. 43 Mine; Shaft; Carney Seam, 146 in. thick.
 PO—Carneyville, Wyo.; SP—Dietz, Wyo.; CTY—Sheridan; RR—C. R. & Q.

S of H—Mules, trolley pole type locos. Track gage 42 inches.
 S of M—2 chain breast type machs.
 PP—Power purchased, 1 pump.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

No. 44 Mine; Drift; Carney Seam; 146 inches thick.
 PO—Carneyville, Wyo.; SP—Kleenburn, Wyo.; CTY—Sheridan; RR—C. R. & Q.
 S of H—Main and tail rope, 8 trolley pole type locos. Track gage 42 inches.
 S of M—11 chain breast machs.
 PP—4 fire tube boilers, total 600 H. P., 2 gen. units, 250 volts D. C., 3 pumps.
 EMP—425.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Revolving and Shaker Screens.

No. 45 Mine; Drift; Monarch Seam; 408 inches thick.
 PO—Monarch, Wyo.; SP—Kleenburn, Wyo.; CTY—Sheridan; RR—C. B. & Q.
 S of H—Mules, 6 trolley pole type and 3 storage battery locos. Track gage 42 inches.
 S of M—8 chain breast type machs.
 PP—Power purchased, 5 pumps.
 EMP—400.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

No. 46 Mine; Drift; Monarch Seam; 408 inches thick.
 PO—Koon, Wyo.; SP—Kleenburn, Wyo.; CTY—Sheridan; RR—C. B. & Q.
 S of H—Mules, 5 trolley pole type locos. Track gage 42 inches.
 S of M—5 shortwall machs.
 PP—Power purchased, 2 gen. units, 250 volts D. C., 2 fire tube boilers, total 300 H. P., 1 pump.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

NOTE—Sale of output of mines 41, 42, 43, 44, 45 and 46 handled by Peabody Coal Co., Sheridan, Wyo.

POPOSLA COAL COMPANY.

General Office, Lander, Wyo.
 PR—H. O. Barber, Lander, Wyo.
 VP—Carey Barber, Lander, Wyo.
 TR—J. O. Connor, Casper, Wyo.
 GM—Guy Robertson, Poposla, Wyo.
 GS—Guy Robertson, Poposla, Wyo.
 PA—Guy Robertson, Poposla, Wyo.
 EM—Guy W. Higby, Lander, Wyo.
 EE—Richard Bevington, Hudson, Wyo.
 SCO—Address the Company, Buyer, Walker Mitchell, Hudson, Wyo.
 SA—Guy F. Collins, Chadron, Neb.

Poposla No. 1 Mine; Slope; Washakie Seam, 120 in. thick.
 PO—Poposla, Wyo.; SP—Hudson, Wyo.; CTY—Fremont; RR—Wyo. & N. W.
 MS—Geo. W. Race, Poposla, Wyo.
 S of H—Mules and hoist.
 S of M—Hand.
 PP—4—100 H. P. and 3—125 H. P. boilers, gen. unit, 250 volts D. C., 4 pumps.
 EMP—250. Last years tonnage for both mines 300,000.
 SIZES SHIPT—Run of Mine, Slack, Nut, Pea, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

Poposla No. 2 Mine; Slope; Washakie Seam, 120 in. thick.
 PO—Dunne, Wyo.; SP—Hudson, Wyo.; CTY—Fremont; RR—C. & N. W.
 MS—Van Wilson, Dunne, Wyo.
 S of H—Mules and hoist.
 S of M—Hand.
 PP—2—125 H. P. and 2—100 H. P. boilers, gen. unit 250 volts D. C., 3 pumps.
 EMP—100.
 PREP. EQUIPT—Shaker Screens.

PREMIER COAL COMPANY

General Office, 528 Eccles Bldg., Ogden, Utah.
 PR—H. C. Day, Ogden, Utah.
 VP—C. A. Day, Ogden, Utah.
 TR—F. N. Bletcher, Ogden, Utah.
 GM—F. N. Bletcher, Ogden, Utah.
 GS—Thomas Whalen, Superior, Wyo.
 PA—F. N. Bletcher, Ogden, Utah.
 Gen. Sales Mgr.—N. R. Erickson, Salt Lake City, Utah.
 SALES MGR.—N. R. Erickson, Ogden, Utah.

Premier Mine; Slope; No. 1 Seam; 108 inches thick.
 PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
 S of H—Horses and elec. hoists. Track gage 36 in.
 S of M—Shortwall machs.
 PP—Purchase power, 440 volts A. C.
 EMP—100. Last years tonnage 175,000.
 SIZES SHIPT—Run of Mine, Slack, Pea, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

ROCK SPRINGS FUEL CO.

General Office, Rock Springs, Wyo.
 PR—P. C. Running, Rock Springs, Wyo.
 VP—Aug. Martello, Rock Springs, Wyo.
 TR—V. J. Facinelli, Rock Springs, Wyo.
 GM—P. C. Running, Rock Springs, Wyo.

Rock Springs Mine; Slope; Rock Springs Seam, 96 inches thick.
 PO—South Superior, Wyo.; SP—Superior, Wyo.; CTY—Sweetwater; RR—U. P.
 S of H—Mules, rope and elec. loco. Track gage 36 inches.
 S of M—Hand and shortwall mach.
 PP—Power purchased. Transformer 2300-440 volts A. C.
 EMP—140. Last years tonnage 182,000.
 SIZES SHIPT—Run of Mine, Slack, Nut, PREP. EQUIPT—Shaker Screens.

SHERIDAN COAL COMPANY, THE

New Peabody Coal Co.

SUPERIOR ROCK SPRINGS COAL CO.

General Office, 425 Eccles Bldg., Ogden, Utah.
 PR—M. S. Browning, Ogden, Utah.
 VP—L. T. Dee and W. H. Wattis, Ogden, Utah.
 TR—E. A. Bowen, Ogden, Utah.
 GM—H. C. Marchant, Ogden, Utah.
 GS—L. A. Hay, Superior, Wyo.
 PA—L. T. Dee, Ogden, Utah.
 EM—E. E. Grimes, Ogden, Utah.

Superior No. 1 Mine; Slope; No. 1 Seam, 108 in. thick.
 PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
 S of H—Mules. Track gage, 36 in.
 S of M—3 shortwall machs.
 PP—Power purchased. Transformers 2300-440 volts A. C.
 EMP—120. Last years tonnage 165,700.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

UNION PACIFIC COAL COMPANY, THE.

General Office, Rock Springs, Wyo.
 PR—E. S. Brooks, Rock Springs, Wyo.
 TR—E. G. Smith, New York, N. Y.
 ASST TR—A. H. Doane, Cheyenne, Wyo.
 GM—E. E. Calvin, Omaha, Neb.
 GM—E. S. Brooks, Rock Springs, Wyo.
 GS—G. B. Pryde, Rock Springs, Wyo.

 PA—W. K. Lee, Rock Springs, Wyo.
 EE—D. C. McKeenan, Rock Springs, Wyo.
 SCO—U. P. Store, Boyer, E. B. Treat, Rock Springs, Wyo.

No. 2 Mine; Slope; Lower Hanna Seam, 432 in. thick.
 PO—Hanna, Wyo.; SP—Same; CTY—Carbon; RR—Union Pacific.
 MS—T. H. Butler, Hanna, Wyo.
 SM—S. D. Briggs, Hanna, Wyo.
 S of H—Mules and trolley pole type locos. Track gage, 42 in.
 S of M—4 shortwall machs.
 PP—3 fire tube boilers, 450 H. P., gen. units, 250 volts D. C., 7 pumps.
 Last years tonnage 236,668.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Gravity Screens.

No. 3 Mine abandoned.

No. 3½ Mine; Slope; Upper Hanna Seam, 288 in. thick.
 PO—Hanna, Wyo.; SP—Same; CTY—Carbon; RR—Union Pacific.
 MS—R. Bober, Hanna, Wyo.
 S of H—Mules. Track gage, 42 in.
 S of M—1 shortwall mach.
 PP—Gen. units, 220 volts.
 Last years tonnage 64,860.
 SIZES SHIPT—Run of Mine.

No. 4-A Mine; Slope; Lower Hanna Seam.
 PO—Hanna, Wyo.; SP—Same; CTY—Carbon; RR—Union Pacific.
 MS—T. H. Butler, Hanna, Wyo.
 SM—S. D. Briggs, Hanna, Wyo.
 S of H—Trolley pole type locos. Track gage, 42 in.
 S of M—6 shortwall machs.
 PP—1 500 K. W. 1—1,000 K. W. gen. units, 230 volts A. C., 10 pumps.
 Last years tonnage 343,217.
 SIZES SHIPT—Run of Mine, Slack, Nut, Egg, Lump.
 PREP. EQUIPT—Shaker Screens.

No. 4 Mine; Slope; Rock Springs No. 1 Seam, 60-84 in. thick.
 PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
 MS—Frank L. McCarty, Rock Springs, Wyo.
 SM—Harry D. Clark, Rock Springs, Wyo.
 S of H—Trolley pole type locos. Track S of M—2 chain breast and 5 shortwall machs.
 PP—3 pumps.
 Last years tonnage 331,462.
 SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
 PREP. EQUIPT—Shaker Screens.

(Continued on Next Page)

Union Pacific Coal Company, The—Contl.

No. 7 Mine; Drift; Rock Springs Seam, 40-84 in. thick.
PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
MS—Frank L. McCarty, Rock Springs, Wyo.
SM—Harry D. Clark, Rock Springs, Wyo.
S of H—Trolley pole type locos. Track gage, 30 in.
S of M—2 chain breast type and 6 short-wall machs.
Last years tonnage 194,999.
SIZES SHIPT—Run of Mine.

No. 8 Mine; Shaft; No. 7 Rock Springs Seam, 84-96 in. thick.
PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
MS—Frank L. McCarty, Rock Springs, Wyo.
SM—Harry D. Clark, Rock Springs, Wyo.
S of H—Mules and trolley pole type locos. Track gage, 30 in.
S of M—2 chain breast type and 6 short-wall machs.
PP—1 pump.
Last years tonnage 233,214.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Gravity Screens.

No. 10 Mine; Slope; No. 7 Rock Springs Seam, 72-84 in. thick.
PO—Rock Springs, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pac.
MS—Frank L. McCarty, Rock Springs, Wyo.
SM—Harry D. Clark, Rock Springs, Wyo.
S of H—Mules and trolley pole type locos. Track gage, 30 in.
S of M—2 chain breast type and 5 short-wall machs.
PP—12 water tube boilers, 3,600 H. P., 2—2,500 K. W. turbines and 1—1,000 K. W. turbines, gen. units, 9 pumps.
Last years tonnage 213,213.
SIZES SHIPT—Run of Mine, Slack, Nut, Lump.
PREP. EQUIPT—Shaker Screens.

A Mine; Slope; Nos. 1 and 1 Seams, 84 in. thick.
PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific
MS—John O. Holen, Superior, Wyo.
SM—Jas. Syme, Superior, Wyo.
S of H—Mules, rope and trolley pole type locos. Track gage, 30 in.
S of M—4 chain breast type and 4 short-wall machs.
PP—Power purchased, transformer 3300-2300 volts, M. G. sets, 250 volts D. C., 2 pumps.
Last years tonnage 17,518.
SIZES SHIPT—Run of Mine, Nut, Lump.
PREP. EQUIPT—Shaker Screens.

R Mine; Slope; Van Dyke Seam, 72-84 in. thick.
PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
MS—John O. Holen, Superior, Wyo.
SM—Jas. Syme, Superior, Wyo.
S of H—Mules, rope and trolley pole type locos. Track gage, 30 in.
S of M—1 chain breast type and 1 short-wall machs.
PP—2 pumps.
Last years tonnage 110,129.
SIZES SHIPT—Run of Mine.

C Mine; Slope; No. 1 Seam, 84-96 in. thick.
PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
MS—John O. Holen, Superior, Wyo.
SM—Jas. Syme, Superior, Wyo.
S of H—Mules, rope and trolley pole type locos. Track gage, 30 in.
S of M—2 chain breast type and 4 short-wall machs.
PP—6 pumps.
Last years tonnage 256,996.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Gravity Screens.

D Mine; Drift and Slope; No. 1 Seam, 96 in. thick.
PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
MS—John O. Holen, Superior, Wyo.

SM—Jas. Syme, Superior, Wyo.
S of H—Mules.
S of M—3 chain breast type and 6 short-wall machs.
PP—2 pumps.
Last years tonnage 170,594.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Shaker Screens.

E Mine; Shaft; No. 7 Seam, 84 in. thick.
PO—Superior, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
MS—John O. Holen, Superior, Wyo.
SM—Jas. Syme, Superior, Wyo.
S of H—4 shortwall machs.
S of M—2 chain breast type and 4 short-wall machs.
PP—1 pumps.
Last years tonnage 91,451.
SIZES SHIPT—Run of Mine, Slack, Nut, Pea, Egg, Lump.
PREP. EQUIPT—Gravity and Shaker Screens.

Reliance No. 1 Mine; Seam, 144 in. thick.
PO—Reliance, Wyo.; SP—Same; CTY—Sweetwater; RR—Union Pacific.
MS—Thomas Foster, Reliance, Wyo.
SM—J. E. Griffith, Reliance, Wyo.
S of H—Mules and trolley pole type locos. Track gage, 30 in.
S of M—10 shortwall machs.
PP—Power from Rock Springs power plant, transformer 13,200-2300, M. G. sets, 250 volts D. C., 2 pumps.
Last years tonnage 434,265.
SIZES SHIPT—Run of Mine, Slack, Nut, Pea, Egg, Lump.
PREP. EQUIPT—Gravity Screens.

Cumberland No. 1 Mine; Slope; Seam, 60-180 in. thick.
PO—Cumberland, Wyo.; SP—Same; CTY—Lincoln; RR—Oregon Short Line.
MS—Geo. A. Brown, Cumberland, Wyo.
SM—W. E. Williams, Cumberland, Wyo.
S of H—Mules. Track gage, 42 in.
S of M—Hand.

PP—4 water tube boilers, 1,200 H. P., 1—150 K. W. and 1—300 K. W. gen. units, 220 volts A. C., 8 pumps.

Last years tonnage 18,568.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Gravity Screens.

Cumberland No. 2 Mine; Slope; Kemmerer Seam, 60-180 in. thick.
PO—Cumberland, Wyo.; SP—Same; CTY—Lincoln; RR—Oregon Short Line.
MS—Geo. A. Brown, Cumberland, Wyo.
S of H—Mules. Track gage, 42 in.
S of M—Hand.
PP—6 fire tube boilers, 2200 H. P., 1 150 K. W. gen. units 220 volts D. C., 5 pumps.
Last years tonnage 202,952.
SIZES SHIPT—Run of Mine, Slack, Lump.
PREP. EQUIPT—Gravity Screens.

Cumberland No. 2 South Mine; Slope; Seam, 144 in. thick.
PO—Cumberland, Wyo.; SP—Same; CTY—Lincoln; RR—Oregon Short Line.
MS—Geo. A. Brown, Cumberland, Wyo.
SM—W. E. Williams, Cumberland, Wyo.
S of H—Mules. Track gage, 42 in.
S of M—Hand.
PP—1 100 H. P. fire tube boiler, 220 volts A. C., 1 pump.
Last years tonnage 104,297.
SIZES SHIPT—Run of Mine.

Megarth Mines; Slopes; Seam, 84 in. thick.
PO—Winton, Wyo.; SP—Hay, Wyo.; CTY—Sweetwater; RR—U. P.
MS—Wm. Redshaw, Winton, Wyo.
S of H—Mules, hoist and motors.
S of M—Hand and elev. machs.
PP—Power purchased from Rock Springs.
SIZES SHIPT—Run of Mine, Lump, Slack.

WYOMING COAL COMPANY
Now operated by the Lion Coal Co.

PART FOUR

LIST OF NATIONAL AND LOCAL ORGANIZATIONS

Of Interest To

Coal Mine Operators, Mining Officials, Wholesalers and Retailers of Coal

Name of Organization, Headquarters, and Officers as of December 1st, 1921

EDUCATIONAL ASSOCIATIONS

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

29 West 39th St., New York, N. Y.

Officers and Directors for the Year Ending February, 1922.

Edwin Ludlow, Pres., New York, N. Y.
George D. Barron, Treas., New York, N. Y.
Frederick P. Sharples, Secy., New York, N. Y.
Percy E. Harbourn, Asst. Secy., New York, N. Y.

Vice Presidents

Arthur S. Dwight, 1st V. P., New York, N. Y.
A. R. Ledoux, New York, N. Y.
Frederick Laist, Anaconda, Mont.
Seeley W. Mudd, Los Angeles, Cal.
E. L. Degolyer, New York, N. Y.
Albert Burch, San Francisco, Cal.

Past Presidents

Horace V. Winchell, Minneapolis, Minn.
Herbert Hoover, Washington, D. C.
Sidney J. Jennings, New York, N. Y.

Directors

J. V. W. Reynders, New York, N. Y.
George D. Barron, New York, N. Y.
Charles F. Rand, New York, N. Y.
Louis S. Cates, Ray, Ariz.
Stanley A. Easton, Kellogg, Ida.
William M. Corse, Bayonne, N. J.
W. H. Aldridge, New York, N. Y.
R. M. Catlin, Franklin, N. J.
G. H. Clevenger, Boston, Mass.
W. A. Carlyle, Ottawa, Canada.
R. V. Norris, Wilkes-Barre, Pa.
W. G. Mather, Cleveland, Ohio.
George Otis Smith, Washington, D. C.
W. E. Wrather, Dallas, Tex.
J. C. Greenway, Warren, Ariz.

THE AMERICAN MINING CONGRESS

Munsey Building, Washington, D. C.

W. J. Loring, President.
Col. Daniel B. Wentz, 1st V. P.
E. L. Doheny, 2nd V. P.
Thomas T. Brewster, 3rd V. P.
J. F. Callbreath, Secy.
George H. Bailey, Counsel.
H. N. Lawrie, Economist.
Herbert Wilson Smith, War Minerals.
Robert G. Wilson, Taxation.

Directors

W. J. Loring, San Francisco, Cal.
Bulkeley Wells, Denver, Colo.
Hugh Shirkie, Terre Haute, Ind.
John C. Howard, Salt Lake City, Utah.
Thomas T. Brewster, St. Louis, Mo.
Harry L. Day, Wallace, Idaho.
E. P. Mathewson, New York, N. Y.
Robert Linton, New York, N. Y.
James S. Douglas, Douglas, Ariz.

E. L. Doheny, Los Angeles, Cal.
Carl Scholz, Charleston, W. Va.
Col. Daniel B. Wentz, Philadelphia, Pa.

Executive Committee

W. J. Loring, San Francisco, Cal.
Robert Linton, New York, N. Y.
E. P. Mathewson, New York, N. Y.

THE CANADIAN INSTITUTE OF MINING AND METALLURGY

Montreal, Quebec, Canada.

O. E. S. Whiteside, Pres., Coleman, Alta.
G. C. Mackenzie, Secy.-Treas., 503 Drummond Bldg., Montreal, Quebec.

Vice Presidents

E. E. Campbell, Anyox, B. C.
W. J. Dick, Winnipeg, Man.
G. D. Macdougall, New Glasgow, N. S.
B. Neilly, Toronto, Ont.
H. Y. Russell, Montreal, Que.
J. T. Stirling, Edmonton, Alta.

COAL MINING INSTITUTE OF AMERICA

Rush N. Osler, Pres., Harrisburg, Pa.
T. A. Mather, 1st V. P., Tyrone, Pa.
W. E. Fohl, 2nd V. P., Pittsburgh, Pa.
A. R. Pollock, 3rd V. P., Curtisville, Pa.
H. D. Mason, Secy.-Treas., Pittsburgh, Pa.

Executive Board

J. B. Handford, Morgantown, W. Va.
Fred Crabtree, Pittsburgh, Pa.
M. D. Cooper, Brownsville, Pa.
Nicholas Evans, Johnstown, Pa.

ILLINOIS MINING INSTITUTE

1690 College St., Springfield, Ill.

Frank P. Tirre, Pres.
Prof. H. H. Stock, V. P.
John G. Millhouse, V. P.
Martin Bolt, Secy.-Treas., Springfield, Illinois.

Chas. Karral, Westville, Ill.
James Taylor, Peoria, Ill.
Thomas P. Back, Canton, Ill.
Harry Fishwick, Springfield, Ill.
Samuel T. Jenkins, St. Louis, Mo.

KENTUCKY MINING INSTITUTE

A. G. Spillman, Pres., Earlington, Ky.
T. E. Jenkins, V. P., Sturgis, Ky.
W. G. Duncan, Jr., V. P., Greenville, Ky.
C. S. Nunn, V. P., Marion, Ky.
Lawson Blenkinsopp, V. P., Lexington, Ky.
C. W. Connor, V. P., Esco, Ky.

D. A. McWhirter, V. P., Pineville, Ky.
Jos. Cain, V. P., Stearns, Ky.
Wm S. Leckie, V. P., Alex, Ky.
H. S. Carpenter, V. P., Jenkins, Ky.
R. A. Hamilton, V. P., Mansfield, O.
H. A. Bullock, V. P., Lexington, Ky.
J. E. Jones, V. P., Beattyville, Ky.
Mrs. Elizabeth C. Rogers, Secy.-Treas., Lexington, Ky.

MINE INSPECTORS' INSTITUTE OF AMERICA

New England States

NEW ENGLAND consumes annually about 30,000,000 tons of bituminous and 10,000,000 tons of anthracite coal. Of the bituminous coal, between 8,000,000 and 10,000,000 tons come in all-rail and the balance by water, transshipments being made from the ports of New York, Philadelphia, Baltimore, Hampton Roads and Charleston.

The first three named ports provide low volatile coals from the Central Pennsylvania, Meyersdale, Somerset and Georges Creek regions, and high volatile coals from the Pittsburgh, Youghiogeny and Fairmont regions. The three Hampton Roads terminals ship low volatile coals from the New River, Pocahontas and Tug River districts, and high volatile coal from the Kanawha, Elkhorn, Clinch Valley and Southwestern Virginia districts. Charleston sends a small amount of coal from the last named district.

None of the bituminous coal shipped into New England is used for domestic purposes.

Anthracite coal is brought in both by rail and by water. It is used largely for domestic purposes, the smaller sizes serving for the generation of steam.

Distributing Agencies and Wholesale Coal Dealers, with offices in the cities below mentioned, will be found represented on the pages which follow.

Pennsylvania (Eastern)

Virginia

THE Atlantic states are heavy users of both anthracite and bituminous coal. Anthracite is in general use for household purposes as far south as Washington, D. C., and as far west as the Allegheny mountains. About 60 per cent. of the entire production of the mines is used by this group, this including the smaller sizes used in power plants.

In addition to the vast amount of coal consumed by local industries, much of that sent to Philadelphia and New York is used for bunkers, for export and for coastwise trade. The Central Pennsylvania fields provide most of the coal transshipped from New York.

Other districts furnishing coal for this group of states are the Northern Pennsylvania, Pittsburgh, Connellsville, Greensburg, Clearfield, Somerset, Georges Creek, Randolph-Barbour, Upper Potomac and Fairmont. Fairmont steam coal enjoys a high standing among the industries of Eastern Pennsylvania and New Jersey. Coal from the smokeless fields of West Virginia is much used in the District of Columbia and Virginia.

Distributing Agencies and Wholesale Coal Dealers, with offices in the cities below mentioned, will be found represented on the pages which follow.

RELIABILITY AND SERVICE

Only a handful of people, relatively speaking, can in memory recall Lincoln's first call for volunteers, yet at that time our house had been in existence twenty-five years.

Founded in 1836, and with a trail of 85 years behind us, we have learned thoroughly the parts which RELIABILITY and SERVICE play in business success. In our pioneering days there was far less opportunity for sales agencies to discriminate in the selection of fuels than there is today, nevertheless from the day of our founding our name has always been synonymous with high quality and dependability.

Four-score years have demonstrated to us the value of good will. They have shown us that public esteem is based on keeping faith and that keeping faith is based on good goods and an unfailing service. We glory in our years only for what they have taught us. We are not resting on our laurels. We are as keen to serve you as yearlings, whether it be to advise with you on your fuel requirements, or to supply your needs. The opportunity of conferring with you is solicited.

POTTS RUN COAL COMPANY

CLEARFIELD, PA.

Miners of

BOARDMAN MILLER VEIN COAL

PRODUCTIVE CAPACITY ABOUT 1200 TONS DAILY

Location of Mines

The mines of the Potts Run Coal Company are located in Clearfield County, Pennsylvania, on the Beech Creek Division of the New York Central Railroad. The low or Clearfield rate of freight applies to all Eastern points.

Quality

Boardman is a low sulphur coal with a high fusing point of ash and excellent evaporating powers. It runs low in ash content because Boardman coal is mined by the most modern devices and receives the best of preparation under the supervision of experienced engineers.

MINE OWNERS AND SHIPPERS

WITH a capacity of 1,000,000 tons per annum, the ERIE COAL AND COKE CORPORATION can offer a sure and continuous supply of high-grade fuel.

In the last five years, there has never been a day lost through the failure of the shipment of a single ton of coal due to strikes, lockouts or labor troubles of any nature whatsoever, from the mines of this Company or its parent or associated corporations.

The Locomotive Coal of the ERIE COAL AND COKE CORPORATION is particularly high in cohesive strength—among the highest of the bituminous coals mined in this country. Shipments of lump coal have shown an unusually small break-up due to the wear-and-tear of ordinary handling, or working in shipment.

MARSHALL QUALITY COAL has earned an enviable reputation on the market, in that the principle of SERVICE is employed in every transaction made.

MARSHALL QUALITY COAL, high and low volatile, mined under excellent conditions and passing over modern picking tables, together with experienced Buyers well placed in the various mining regions carefully selecting the best qualities of coal, assures customers of the best coals from the Quemahoning, South Fork, Nanty Glo and Westmoreland fields of Pennsylvania; Upper Potomac, Morgantown and Fairmont Districts of West Virginia, for Domestic and Export use.

Inspectors and chemists constantly protect the quality from all mines under the SHALLMAR COAL CLASSIFICATION system.

A competent Traffic Department follows shipments to final destination, assuring prompt deliveries.

OFFERS

To the Consumer:

The products of six mines in Central Pennsylvania, owned and operated by it, as described on page 746.

*The established record of punctuality and faithfully fulfilling contracts
REGARDLESS OF MARKET CONDITIONS.*

Extensive facilities to supplement its own production by securing tonnage from other operations by maintaining a personnel at all three of its offices having a thorough knowledge of the products of individual mines, and knowing by experience the coal best suited to a particular plant condition.

TELL US YOUR PLANT CONDITIONS AND OUR SERVICE
WILL DO THE REST

To the Operator:

The services of a Sales Department in constant touch with consumers' requirements.

INTELLIGENT DISTRIBUTION of your coal by a young, aggressive sales organization over a wide territory from Maine to Maryland, and able at all times to find the plants where your particular coal is best adapted.

"The Pioneers of the Coal Business"

ANTHRACITE

BITUMINOUS

"OVER EIGHTY YEARS OF FAITHFUL SERVICE"

THE HISTORY OF THE COMPANY SPEAKS FOR ITSELF

This well known company is one of the pioneer coal firms of Pennsylvania, having been established originally in 1838, under the name of Roberts, Walton & Co., the firm being composed of Asa Packer, Joseph B. Van Dusen, Joseph Walton and William H. Roberts. Mr. Walton and Mr. Roberts retired from the firm about 1843, and in the year 1846 Asa Packer retired at the time the Lehigh Valley Railroad was incorporated, and became its first President.

Mr. Van Dusen associated Mr. Chas. F. Norton with him in 1848, under the firm name of Van Dusen, Norton & Co., and continued until 1860, when Mr. Van Dusen retired and Mr. Audenried, father of the present Judge of the Common Pleas Court of Philadelphia County, joined with Mr. Norton under the title of Audenried, Norton & Co. Some years later, after the death of both Mr. Audenried and Mr. Norton, the business was continued by Charles D. Norton, son of Chas. F. Norton, under the firm name of Gorrell, Norton & Co., and later was changed to Chas. D. Norton & Co.

In 1903 the company was incorporated as the Chas. D. Norton Company, and continued until the death of Mr. Norton in July, 1916.

The present corporation, Chas. D. Norton Coal Company, was then formed from the organization of the old company, and has for its officers Walter P. Brown, as President, a brother-in-law of the late Charles D. Norton, and Joseph B. Givin, as Secretary and Treasurer, both of whom were associated with the Chas. D. Norton Co. for many years. Mr. George M. Chew formerly connected with the old company, is Sales Manager of the Chas. D. Norton Coal Company.

The Company is sole mine agents and shippers of Anthracite and Bituminous into all regions of the United States and Canada, specializing on Anthracite from mines located on the Philadelphia & Reading, Pennsylvania, and Delaware & Hudson Railroads, and Bituminous coal from the Pennsylvania, West Virginia, Western Maryland and Georges Creek fields.

Steam and Smithing Coals

COAL is being sold more and more by its trade name or trade mark. The custom originated a good many years ago, possibly in the anthracite region, but Illinois was the state that put life into it.

Considering the 7,000 coal mines in the United States, the number of well known brands is comparatively small. Geographical location, plentitude of coal deposits and prohibitive freight rates will always act as a deterrent to nation-wide usage of any particular coal, no matter how well and favorably it may be known.

Within reasonable limits, however, any good coal may aspire to leadership and fame. If it be a steam coal, it should, like flour, be used "Eventually, Why Not Now?" If its qualifications are, like soap, chiefly domestic, it may be pertinent to inquire, "Have you a bin full of Black Beauties in your home?" Short, snappy and expressive trade names are as effective in establishing a brand of coal in the public mind as with any other commodity. May their use increase.

IMPERIAL SEMI-SMOKELESS COAL

One pound of coal evaporates eleven pounds of water. This plant is fully equipped with the most modern equipment in the way of shaker screens, boom loaders, picking tables, etc., enabling us to give you the most desirable preparation for your particular use. The high carbon content of IMPERIAL SEMI-SMOKELESS COAL gives it a heating power greater than any West Virginia coal of similar character. It is low in ash and sulphur, and is particularly adaptable for BY-PRODUCT, STEAM, ILLUMINATING GAS purposes, and for use in ANNEALING OVENS.

The LUMP and EGG sizes are carefully prepared, being shaker screened and boom loaded, and are especially suited for furnace use.

IMPERIAL SMITHING COAL

Low in sulphur, high fusing temperature. This coal has been successfully used by large railroads and manufacturing plants for a number of years. A trial car will convince you of its economical value.

NO. FIVE BLOCK COAL

IVY WHITE ASH BLOCK, mined at Ivy White Ash Coal Company, a free burning, non-clinkering, ideal domestic splint coal. This coal is big and blocky and being very hard in structure does not disintegrate in transit. It is also excellent for stocking. The mines are fully equipped with modern shaker screens and boom loaders.

IMPERIAL SMOKELESS COAL

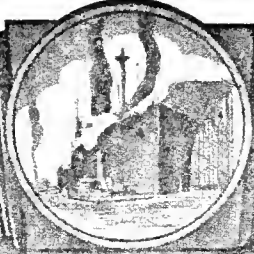

NEW RIVER SMOKELESS COAL of the highest quality, very low in ash and high in carbon. It is unexcelled as a steam producer. Excellent for all uses to which the best Smokeless coal is adapted.

We respectfully solicit your inquiries on any and all grades of coal for which we are agents, referring you to pages 1016 and 1017 for further description as to origin and producers.

Western New York and Canada

ANTHRACITE coal is the standard for domestic use in Western New York, the small sizes being used for making steam. Owing to its proximity to the Eastern Pennsylvania coal fields, the bulk of the anthracite shipped to Lake points is loaded at Buffalo. Bituminous coal is supplied by the Northern Pennsylvania, Central Pennsylvania, Pittsburgh, Panhandle and Belmont districts.

Canada imports from the United States each year from four to five million tons of anthracite and from twelve to sixteen million tons of bituminous coal. Shipments are made by rail through the gateways at Buffalo, Detroit and New England points, and by water across Lakes Superior, Huron, Erie, Ontario and the St. Lawrence River. The bituminous coal used in Canada is drawn largely from the Central Pennsylvania, Northern Pennsylvania, Pittsburgh and Panhandle districts, with lesser amounts from the Greensburg, Youghiogeny, Connellsville, Fairmont, Southern Ohio, Kanawha and Pocahontas districts.

Distributing Agencies and Wholesale Coal Dealers, with offices in the cities below mentioned, will be found represented on the pages which follow.

THE publishers of the COAL CATALOG will be pleased at all times to receive criticisms and suggestions on the improvement of the book.

A work of this nature must reflect the needs of the user. While the growth in size of the COAL CATALOG must always be kept within the bounds of convenience, a consideration which must account for our failure to include material of benefit to the few instead of the masses, we, nevertheless, welcome suggestions of all kinds as a means of gauging the needs of the user and the extent of the demands.

Western Pennsylvania and Northern West Virginia

COAL mined within limits of these sections supplies almost all of the local demands, with a considerable surplus remaining. Natural gas is abundant in West Virginia, and this, along with the fact that there are relatively few industries, forces the great bulk of the coal produced to seek outlets in both the East and West.

Much of the coal mined in Western Pennsylvania is used locally in beehive and by-product ovens, for railroad fuel, and for general steam purposes. The balance goes to the East and West, where Western Pennsylvania coals have always been held in high regard.

Both sections supply great quantities of coal for Lake trade during the warm-weather months and a considerable portion goes to Canada.

Distributing Agencies and Wholesale Coal Dealers, with offices in the cities and towns below mentioned, will be found represented on the pages which follow.

CONTINENTAL COALS

"All that you can expect of coal at all
that is fair in price"

CONTINENTAL No. 1—Accepted Substitute for Pocahontas
CONTINENTAL No. 2—High Grade Low Volatile
CONTINENTAL No. 3—Good Low Volatile
CONTINENTAL No. 4—Medium Grade Low Volatile
CONTINENTAL No. 5—High Grade Medium Volatile
CONTINENTAL No. 6—High Grade High Volatile
CONTINENTAL No. 7—High Grade Gas Coal

CONTINENTAL COALS depend absolutely upon their merits. They are sold on an analysis basis and win their favor through price, and the satisfaction and service given the consumer.

CONTINENTAL COALS are economical. Their low sulphur and ash count much for savings in the boiler room. Their high heating value gives maximum return per dollar.

CONTINENTAL No. 1 COAL has been extensively accepted in New England and the East in place of West Virginia Pocahontas, because of its almost equal quality, and much lower price. We recommend trial shipments to firms seeking greater coal value.

CONTINENTAL COALS are mined in Central Pennsylvania and take the Clearfield freight rate, the lowest bituminous freight rate East.

CONTINENTAL COAL has never been refused. It is further backed by responsibility in guaranteed satisfaction.

Full information, analysis, and price will be supplied.

Write for "COAL ECONOMY", a Monthly Publication of Interest to Coal Users. It will be sent free upon request.

To the Consumer:

THIS COMMUNICATION is addressed to the consumer who appreciates the VALUE of using HIGH GRADE COAL.

Our ORGANIZATION does not have an EMPLOYEE who has not spent his ENTIRE LIFE working at the COAL MINES and training at the different MANUFACTURING INDUSTRIES where our FUEL is used, consequently we feel that we know what GOOD COAL and COKE looks like and can SELECT the BEST GRADE of FUEL SUITABLE for the CONSUMER'S PARTICULAR USE.

We have a large tonnage of our own coal and are selling agents for a number of other operators. WE FULFILL OUR CONTRACT OBLIGATIONS AND CAN SUPPLY YOU WITH EXACTLY THE COAL YOU WISH.

YOUR INQUIRIES ARE SOLICITED.

To the Operator:

WE ARE IN THE MARKET AT ALL TIMES FOR ALL OF THE BEST GRADES OF COAL AND COKE AND REQUEST THAT YOU COMMUNICATE WITH US FOR PRICES.

We have a number of operations owned and controlled by the various parties composing this selling agency and YOU will receive the same PRICES and CAREFUL CONSIDERATION as we give to our own COAL.

We have tried since the organization of this company to conduct all transactions on a SQUARE business BASIS. In other words, when we buy coal or coke, WE PAY for it in accordance with standard dates of settlement and the OPERATOR is THROUGH with the TRANSACTION. If acting as the operator's agent on commission, WE FIGHT his BATTLES for HIM and relieve him of the trouble and expense.

We have SALESMEN and agents permanently situated in all parts of the EAST and as far WEST as Chicago, and will be glad at any time to give you references and full reports of our financial standing.

DO YOU NOT THINK IT WILL PAY TO AT LEAST COMMUNICATE WITH US?

Philadelphia

General Offices
Morgantown, W. Va.

The Morgantown Coal Company has headquarters in the heart of the most rapidly growing coal fields of America. Its history is one of continuous expansion.

There's a reason, yes, three of them

QUALITY SERVICE
SATISFACTION

No reputable physician will prescribe the same medicine for all ailments—neither will a reliable coal sales agency recommend the same coal for all usages. This is the reason why the Morgantown Coal Company sells coal from mines located in Pennsylvania, West Virginia, Ohio and Maryland, all expertly chosen and closely inspected. From the wide range of mines with output at our disposal we are enabled to supply a coal entirely suited to your needs, whatever they may be.

COAL

STEAM — Bunker coal, locomotive fuel, industrial and power plant use.

GAS — Illuminating, producer and water.

CEMENT BURNING.

TILE AND POTTERY BURNING.

SMITHING.

BY-PRODUCT.

EXPORT.

COKE

BY-PRODUCT — An excellent low-sulphur coke prepared in run-of-oven, stove and nut sizes. Takes West Virginia freight rate to all points.

BEEHIVE — We distribute one of the best produced.

“STOP, LOOK AND LISTEN” has become so familiar a notice to tourists that its warning is frequently disregarded, the penalty in many instances being the loss of life and property.

“Kindly Mention Our Publication When Writing Advertisers” is a standing request of all publishers, but has been urged so often as to become trite and ineffective as a means of connecting the inquirer and the medium.

Both are capital pieces of advice—addressed chiefly in behalf of him who reads. Our interest right now is in the latter. It is our belief that each time a letter of inquiry states the publication which initiated it, there is a direct benefit to the writer. The advertiser is always alert for direct evidence of results. This evidence can come only from the reader. The more evidence, the more support; the more support, the better the medium.

For our mutual interest, therefore—MENTION THE COAL CATALOG.

A. P. OXTOBY COMPANY

Open Hearth and Blast Furnace Limestone

Refractories, Iron, Steel, Rails

Satisfied Customers are our biggest Asset. Every order, whether large or small, is given earnest and prompt attention, and this, in conjunction with the high quality of the fuels we handle, invariably results in pleasant relationships.

TRY OXTOBY SERVICE ONCE—AND YOU'LL TRY, TRY AGAIN

SOUTHERN WEST VIRGINIA and OHIO

HUNTINGTON, Charleston and Bluefield are the only local industrial centers drawing upon the coal resources of Southern West Virginia, and, in fact, many of the industries in these cities use natural gas. Other than this relatively small amount, plus that used by the railroads, the balance is shipped to the East, finding a ready outlet through tidewater, and to the West to supply steam, domestic and by-product demands.

The location of Ohio with respect to freight rates precludes Eastern shipments, but much of the Ohio output, not used locally, supplies states to the West. Anthracite coal is but sparingly used for domestic purposes.

A considerable portion of the coal mined in these sections is shipped by boat on the Lakes to Canada and the Northwestern states. This coal comes mainly from the Belmont, Cambridge and Hocking Valley districts of Ohio and the Coal River, Logan, Kanawha, Kenova, Pocahontas and Tug River districts of West Virginia.

Distributing Agencies and Wholesale Coal Dealers, with offices in the cities and towns below mentioned, will be found represented on the pages which follow.

WHOLESALE COAL

"COAL & PERSONNEL"

Of course you want your Coal to fill definite requirements—of course you have your requirements analyzed and adequately known—of course this means, generally speaking, the best returns on the money you are investing in your Coal, BUT—have you ever stopped to think that probably the most valuable thing about your Coal is the person or persons back of it.

Have you realized that it is the HUMAN ELEMENT back of your Coal that makes it a good investment, a satisfactory business transaction, or one which is possibly not to your taste for several reasons.

For FIFTY-THREE YEARS this organization has been mining the best Coals from Ohio, Pennsylvania, West Virginia and Kentucky, and from Mine to Market has gone with these Coals the keenest kind of Personal Interest, Co-operation and Desire for the best interests of those to whom the Coal went. We have been and are producers of only the BEST COALS in the various fields in which we operate and believe we can make good investments from whatever responsibilities are placed upon us.

COALS OF CHARACTER

THE publishers of the COAL CATALOG will be pleased at all times to receive criticisms and suggestions on the improvement of the book.

A work of this nature must reflect the needs of the user. While the growth in size of the COAL CATALOG must always be kept within the bounds of convenience, a consideration which must account for our failure to include material of benefit to the few instead of the masses, we, nevertheless, welcome suggestions of all kinds as a means of gauging the needs of the user and the extent of the demands.

"Coalroslin"

COAL is being sold more and more by its trade name or trade mark. The custom originated a good many years ago, possibly in the anthracite region, but Illinois was the state that put life into it.

Considering the 7,000 coal mines in the United States, the number of well known brands is comparatively small. Geographical location, plentitude of coal deposits and prohibitive freight rates will always act as a deterrent to nation-wide usage of any particular coal, no matter how well and favorably it may be known.

Within reasonable limits, however, any good coal may aspire to leadership and fame. If it be a steam coal, it should, like flour, be used "Eventually, Why Not Now?" If its qualifications are, like soap, chiefly domestic, it may be pertinent to inquire, "Have you a bin full of Black Beauties in your home?" Short, snappy and expressive trade names are as effective in establishing a brand of coal in the public mind as with any other commodity. May their use increase.

"White Oak"

New River Smokeless Coal

There

is as much difference between

WHITE OAK

and other smokeless coals as
there is between day and night

You say they are all Smokeless Coals. Yes, but there is a big difference in Smokeless Coals.

For instance, "WHITE OAK" Smokeless Coal contains more heat units and less impurities than any other Smokeless Coal produced. Then again, WHITE OAK is more uniform in quality and is cleaner and better prepared.

There must be some difference, and it is a big difference too, or why should there be so many more dealers handling this coal to the exclusion of all other Smokeless Coals?

This is why this coal is the most popular Smokeless Coal on the market today.

To demonstrate there is a difference just try a car or two and they will show just how large the difference is.

It is mined in the heart of the New River District in West Virginia and is prepared in the following sizes—Lump, Egg, Mine Run, Stoker or Nut and Slack and Smithing.

For Description of White Oak Coal See Pages 1057, 1058 and 1059

SOUTHERN STATES

Eastern Kentucky Tennessee Alabama

PRACTICALLY all of the coal produced in Eastern Kentucky is shipped outside the state, most of it going to the Middle West states. During the Lake season heavy shipments are made to the ports on Lake Erie for consumption in Canada and the Northwestern states.

About 35 per cent. of Tennessee's yearly output is used locally, and a slightly greater amount is delivered to the railroads. A considerable quantity is shipped to the states lying to the South, Georgia, North Carolina, South Carolina and Alabama being the largest consumers. Tennessee coal for domestic purposes has a growing market in the Middle West states. Comparatively little is sent to the Great Lakes or to Tidewater.

More than half the coal produced in Alabama is used locally, the steel plants being heavy consumers, as well as the beehive and by-product ovens connected therewith. More than one-quarter is used by the railroads, the balance being shipped to adjoining states, and exported through the ports of Pensacola and Mobile.

Middle West States

*Indiana**Illinois**Michigan**Wisconsin*

MORE than 40 per cent of Indiana's coal production is used within the borders of the state, and about 30 per cent is used by the railroads. To take care of the difference between production and requirements, coal is supplied in the largest quantities by West Virginia, Illinois and Kentucky.

About 80 per cent of the Illinois output is used in approximately equal quantities by the railroads and industries within the state. Much coal is supplied to Illinois by Indiana, West Virginia and Kentucky, and also a considerable amount through the Lake docks.

The yearly coal production of Michigan is small and all of it is used by the railroads and local industries. Owing to the size and importance of its manufacturing enterprises, Michigan is a heavy consumer of coal, most of this being supplied by the states of West Virginia, Ohio, Kentucky, Indiana, Illinois and Pennsylvania. About one-seventh of its yearly requirements is met by Lake shipments.

Over half of Wisconsin's fuel needs are supplied through the Lake docks, with Illinois and West Virginia and Indiana furnishing most of the balance required.

ATWILL-MAKEMSON COKE AND COAL CO.

BY-PRODUCT COKE BEEHIVE COKE
DOMESTIC COKE

The Atwill-Makemson Coke & Coal Company was organized in 1912 by F. C. Atwill and J. L. Makemson, both of whom have specialized in the distribution of coke for a period of over twenty years.

The entire sales force is composed of men trained in the knowledge and sale of coke, and who, in the majority of cases, have been in the employ of this organization since its inception.

This company specializes in coke and handle same exclusively, representing coke producing concerns whose output is respectively By-Product, Beehive and Gas Cokes.

Rendering best service and fair treatment both to PRINCIPALS and CUSTOMERS is the desire of

"All the wild ideas of unbalanced radical agitators the world over, in their ignorant and pitiable quest for happiness through revolution, confiscation of property, and crime, cannot overthrow the eternal truth that the one route to happiness through property or government is over the broad and open highway of service. And service always means industry, thrift, respect for authority, and recognition of the rights of others."

During this period of unrest the above words of W. G. Sibley appeal to us with striking force, and we offer them to you as a sort of personal introduction. For more than ten years we have served an increasing number of discriminating and representative coal users, both in our own home cities and farther afield. We have found them not only to be institutions whose success has been founded on fair dealing and efficient service, but they also have a full appreciation of the proper effort on the part of others to serve them. In most cases we have taken care of their coal requirements continuously year after year. We cannot help feeling a certain pride in the quality of the concerns we serve. We have earnestly tried to give them the service they have a right to expect from the firm to whom they entrust the important duty of supplying them with a basic necessity.

ROWLAND-POWER CONSOLIDATED COLLIERIES CO.

INDIANA BITUMINOUS COAL

We operate ten mines on five railroads in five counties in Indiana, working four different seams. These mines have a combined capacity of 12,000 tons per day.

We mine Block and No. 4 Vein coals on the Monon, Big Four and Chicago, Milwaukee & St. Paul Railways; No. 3 Vein coal on the Pennsylvania Lines, and No. 6 Vein coal on the Illinois Central and Monon.

The output of these mines is especially suited to a variety of needs, such as for steam plants, domestic purposes, metallurgical works, tile and terra cotta plants.

We give our coal the most careful preparation, using shaker screens and picking tables and giving it a final picking as it goes into the car.

Because of the number of our mines, their location and their capacity, we can give the very best service to users of steam coal in large quantities.

Jewett, Bigelow and Brooks, Inc., has served the public with high grade coals for 25 years. At the present time we control through ownership the output of 15 mines in Eastern Kentucky and 7 in West Virginia. These mines are so located as to give us a kind of coal suited to every industrial requirement. Orders, when received, are filled with the coal that through years of usage has demonstrated its ability to serve the purpose. The wide range of coals at our command, the location of our mines on various railroads, the services of our various branch offices, added to the experience of a quarter century in playing fair and square with the trade is our best guarantee of satisfaction.

“STOP, LOOK AND LISTEN” has become so familiar a notice to tourists that its warning is frequently disregarded, the penalty in many instances being the loss of life and property.

“Kindly Mention Our Publication When Writing Advertisers” is a standing request of all publishers, but has been urged so often as to become trite and ineffective as a means of connecting the inquirer and the medium.

Both are capital pieces of advice—addressed chiefly in behalf of him who reads. Our interest right now is in the latter. It is our belief that each time a letter of inquiry states the publication which initiated it, there is a direct benefit to the writer. The advertiser is always alert for direct evidence of results. This evidence can come only from the reader. The more evidence, the more support; the more support, the better the medium.

For our mutual interest, therefore—MENTION THE COAL CATALOG.

Coal Trade Mercantile Agency

Publishers of the

Coal Dealers Blue Book

The COAL DEALERS BLUE BOOK issued by this agency contains a complete list of the Coal Dealers, Miners and Shippers and Car Lot buyers of Coal and Coke in the United States and Canada, with their capital and pay ratings. This reference book is issued in March and September of each year. Weekly sheets show changes in the trade, delinquent trade reports, etc., and is the most complete list of this character issued by any agency. Supplements issued monthly, each supplement superseding previous issues.

Over one thousand of the large shippers of Coal and Coke are subscribers to this service, and their continued use of the same is our recommendation to you. We would be pleased to receive your advance order, as these advance subscriptions greatly aid us in determining the size of the editions.

SIZE OF BOOK IS 10½"x8"x3"
AND CONTAINS 1700 PAGES

Sample pages with prices for the service can be had on application to the home office.

Collections handled throughout United States and Canada at current rates. Representatives in all principal cities.

POCKET EDITIONS OF ALL STATES ARE FURNISHED
