Chinese history, which is incomparably older and more precise than Korea, is by no means silent about Japan. Long notices occur in the later Han and Wei records (25 to 265). The Japanese are spoken of as dwarfs (Wa), and their islands, frequently called the queen country, are said to be mountainous, with soil suitable for growing grain, hemp, and the silk-worm mulberry. The climate is so mild that vegetables can be grown in winter and summer; there are neither oxen, horses, tigers, nor leopards; the people understand the art of weaving; the men tattoo their faces and bodies in patterns indicating differences of rank; individuals dress in a single piece of cloth; females wear a gown passed over the head, and tie their hair in a braid; soldiers are armed with spears and shields, and also with bows, from which they discharge arrows tipped with bone or iron; the sovereign resides in Yato; there are stockaded forts and houses; food is taken with the fingers but is served on bamboo trays and wooden trencheders; foot-gear is not worn; when men of the lower classes meet a man of rank, they leave the road and retire to the grass, squatting or kneeling with both hands on the ground when they address him; intoxicating liquor is much used; the people are long-lived, many reaching the age of 100 years; there is no theft, and litigation is infrequent; the women are faithful and not jealous; all men of high rank have four or five wives, others two or three; wives and children of law-breakers are confiscated, and for grave crimes the offender's family is extirpated; divination is practised by burning bones; mourning lasts for some ten days and the rites are performed by a "mourning-keeper"; after a funeral the whole family perform ablutions; fishing is much practised, and the fishermen are skilled divers; there are distinctions of rank and some are vassals to others; each province has a market where salt and salted fish are sold; in this country is divided into about 100 provinces, and among its products are white pearls, green jade and sinnabar. These annals go on to say that between 147 and 190 civil war prevailed for several years, and order was finally restored by a female sovereign, who is described as having been old and unmarried; much addicted to magic arts; attended by a thousand females; dwelling in a palace with lofty pavilions surrounded by a stockade and guarded by soldiers; but leading such a secluded life that few saw her face except one man who served her meals and acted as a medium of communication. There can be little question that this queen was the empress Jingo who, according to Japanese annals, came to the throne in the year A.D. 200, and whose every public act had its inception or promotion in some alleged divine interposition. In one point, however, the Chinese historians are certainly incorrect. They represent tattooing as universal in ancient Japan, whereas it was confined to criminals, in whose case it played the part that branding does elsewhere. Centuries later, in feudal days, the habit came to be practised by men of the lower orders whose engagements involved baring the body, but it never acquired vogue among educated people. In other respects these ancient Chinese annals must be credited with remarkable accuracy in their description of Japan and the Japanese. Their account may be advantageously compared with Professor Chamberlain's analysis of the manners and customs of the early Japanese, in the preface to his translation of the Kojiki.

"The Japanese of the mythical period, as pictured in the legends preserved in the Records of Ancient Matters, were a race who had long emerged from the savage stage and had attained to a high level of barbaric skill. The Stone Age was forgotten by them—or nearly so—and the evidence points to their never having arrived at much—a race such as a single piece of bronze was at a later period introduced from the neighbouring continent. They used iron for manufacturing spears, swords and various sharp-edged tools; and have contrivances of making hooks wherewith to angle or to fasten the doors of their huts. Their other warlike and hunting implements (besides traps and gins, which appear to have been used equally for catching birds and mammals and for destroying the gems in courts at the river) were the bow, arrows, spears and elbow-pads—the latter seemingly of skin, while special allusion is made to the fact that the arrows were feathered. Perhaps clubs should be added to the list. Of the bows and arrows, knives, and other small metal objects, some at least, the use of, and use of the tools with which they were manufactured, and there is the same remarkable silence regarding such widely spread domestic implements as the saw and the axe. We hear, however, of the potter and mortar, of the fire-drill, of the wedge, of the sickle, and of the shuttle used in weaving. Navigation seems to have been in a very elementary state. Indeed the art of sailing was but little practised in Japan for the purpose of being delivered smooth. Castles are not subsequent to the general diffusion of Chinese civilization, though rowing and punting are often mentioned by the early poets. To what we should call towns or villages very little reference is made. In the Records of Ancient Matters there is no mention of the account of the so-called Divine Age. But from what we learn incidentally it would seem that the scanty population was composed of small tribes which passed on their land and houses; and the course of the larger streams. Of house-building there is frequent mention. Fences were in use. Rugs of skins and rush-matting were occasionally brought in to sit on, and we even hear that a couple of times not being understood of the noble and wealthy. The habits of personal cleanliness which so pleasantly distinguish the modern Japanese from their neighbours, in continental Asia, though less fully developed than at present would seem to have had a germination at least as early as the coast and up the course of the larger streams. and the <i>Chronicles</i> in one place mention the straw rain-coat and broad-brimmed hat, which still form the Japanese peasant's effectual protection against the inclemencies of the weather. The tendrils of creeping plants served the purposes of strings, and bound the warrior's sword round his waist. The marriages of both men and women were mentioned, and it is evident that much attention was devoted to the dressing of the hair. The men seem to have bound up their hair in two bunches, one on each side of the head, while the young boys tied theirs in a top-knot. The women wore heavy locks fastened over their ears, and the married women dressed theirs after a fashion which apparently combined the two last-mentioned methods. There is no mention in any of the old books of the various ornaments for the head, neck and hands, and we know from the specimens which have rewarded the labours of archaeological research in Japan that agate, crystal, glass, jasper, serpentine, and stone were the most used materials, and carved and pierced cylindrical shapes the commonest forms. The horse—which was ridden, but not driven—the barn-door fowl and the cormorant used for fishing, are the only domesticated creatures mentioned in the earlier traditions, with the doubtful exception of the silkworm. In the later portions of the <i>Records</i> and <i>Chronicles</i> dogs and cattle are alluded to, but sheep, swine and even cats were apparently not yet introduced.1

A comparison of the evidence drawn to its end the above analyses of Japanese civilization have to be modified. Thus, towards the close of the 3rd century, ship-building made great progress; and instead of the small boats hitherto in use, a vessel 100 ft. long was constructed. Notable above all is the fact that Japan's turbulent relations with Korea were replaced by friendly intercourse, so that she began to receive from her neighbour instruction in the art of writing. The date assigned by the <i>Chronicles</i> for this important event is A.D. 285, but it has been proved almost conclusively that Japanese annals relating to this period are in error to the extent of 125 years, and that the inscriptions of this period are, with the exception of the 405 Chinese shows history, that between 57 and 247 Japan sent four embassies to the courts of the Han and the Wei, and this intercourse cannot have failed to disclose the ideograph. But the knowledge appears to have been confined to a few interpreters, and not until the year 405 were steps taken to extend it, with the aid of a learned Korean, Wang-in. Korea herself began to study Chinese learning only a few years before she undertook to impart it to Japan. We now find a numerous colony of Koreans passing to Japan and settling there; a large number are also carried over as prisoners of war, and the Japanese obtained some specimens from them, during their numerous visits. The custom of writing the names of likenesses of the Emperor and Imperial family, and the practice of keeping the imperial sword in the palace, is also in the men of the most advanced conditions; an ice-house is described, and we read that from 374 (? 404) it became the fashion to store ice in this manner for use in the hot months by placing it in water or sake. The emperor, Nintoku, to whose time this innovation is attributed, is one of the most important figures of Japanese history. He commenced his career by refusing to accept the sovereignty from his younger brother, who pressed him earnestly to do so on the ground that the proper order of succession had been disturbed by their father's partiality—though the rights attaching to primogeniture did not receive imperative recognition in early Japan. After three years of this mutual self-effacement, during which the throne remained vacant, the younger brother committed suicide, and Nintoku reluctantly became sovereign. He chose Naniwa (the modern Osaka) for his capital, but he would not take the farmers from their work to finish the building of a palace, and subsequently, inferring from the absence of smoke over the houses of the people that the country was impoverished, he remitted all taxes and suspended forced labour for a term of three years, during which time the palace fell into a state of dereliction that he himself fared in the coarsest manner. Digging canals, damming rivers, constructing roads and bridges, and establishing granaries occupied his attention when love did not distract it. But in affairs of the heart he was most unhappy. He figures as the sole wearer of the Japanese crown who was defied by his consort; for when he took a concubine in despite of the empress, her jealousy was so bitter that, refusing to be placated by any of his majesty's verses or other odes, she left the palace altogether; and when he sought to introduce another beauty into the inner chamber, his own half-brother, who carried his proposals, won the girl for himself. One other fact deserves to be remembered in connexion with Nintoku's reign: Ki-no-tsuno, representative of a great family which had filled the highest administrative and military posts under several sovereigns, is mentioned as "the first to commit to writing in detail the productions of the soil in each locality." This was in 333 (probably 473). We shall err little if we date the commencement of Japanese written annals from this time, though no compilation earlier than the <i>Kojiki</i> has survived.

Early Historical Period.—With the emperor Richū, who came to the throne in A.D. 400, the historical period may be said to commence; for though the chronology of the records is still questionable, the facts are generally accepted as credible. Conspicuous loyalty towards the sovereign was not an attribute of the Japanese Imperial family in early times. Attempts to usurp the throne were not uncommon, though there are very few instances of such essays on the part of a subject. Love or lust played no insignificant part in the drama, and a common method of placating an irate sovereign was to present a beautiful damsel for his delectation. The veto of despotism did not receive very strict observance in these early centuries. Children of the same father might intermarry, but not those of the same mother; a canon which becomes explicable on observing that as wives usually lived apart from their husbands and had the sole custody of their offspring, two or more families often remained to the end unconscious of the fact that they had a common sire. There was a remarkable tendency to organize the nation into groups of persons following the same pursuit or charged with the same functions. A group thus composed was called be. The heads of the great families had titles as oni, mura-yi, miakko, sake, &c.—and affairs of state were administered by the most renowned of these nobles, wholly subject to the sovereign's ultimate will. The provincial districts were ruled by scions of the Imperial family, who appear to have been, on the whole, entirely subservient to the Throne. There were no tribunals of justice: the ordeal of boiling water or heated metal was the sole test of guilt or innocence, apart, of course, from confession, which was often exacted under menace of torture. A celebrated instance of the ordeal of boiling water is recorded in 475, when this device was employed to correct the genealogies of the nobles. The new ascendant of the house kept on compelling descent from emperors or divine beings. The test proved efficacious, for men conscious of forgery refused to undergo the ordeal. Deprivation of rank was the lightest form of punishment; death the commonest, and occasionally the whole family of an offender became serfs of the house against which the offence had been committed or which had been instrumental in disclosing a crime. There are, however, frequent examples of wrong-doing expiated by the voluntary surrender of lands or other property. We find several instances of that extreme type of loyalty which became habitual in later ages—suicide in preference to surviving a degraded lord. On the whole the successive sovereigns of these early times appear to have ruled with clemency and consideration for the people's welfare. But there were two notable exceptions—Yuriaku (457-479) and Muretsu (499-506). The former slew men ruthlessly in fits of passion or resentment, and the latter was the Nero of Japanese history, a man who loved to witness the agony of his fel lows and knew no sentiment of mercy or remorse. Yet even Yuriaku did not fail to promote industrial pursuits. Skilled artisans were obtained from Korea, and it is related that, in 482, this monarch induced the empress and the ladies of the palace to plant mulberry trees with their own hands in order to encourage sericulture. Throughout the 5th and 6th centuries many instances are recorded of the acquisition of landed estates by the Throne, and their occasional bestowal upon princes or Imperial consorts, such gifts being frequently accompanied by the assignment of bodies of agriculturists who seem to have accepted the position of serfs. Meanwhile Chinese civilization was gradually becoming known, either by direct contact or through Korea. Several immigrations of Chinese
or Korean settlers are on record. No less than 7953 households of Chinese subjects came, through Korea, in 549, and one of their number received high rank together with the post of assistant of the Buddhist scholars and priests. From these facts, and from a national register showing the derivation of all the principal families in Japan, it is clearly established that a considerable strain of Chinese and Korean blood runs in the veins of many Japanese subjects.

The most signal and far-reaching event of this epoch was the importation of the Buddhist creed, which took place in 522.

Introduc- tion of Buddhism.

A Korean monarch acted as propagandist, sending a special envoy with a bronze image of the Buddha and with several volumes of the Sutras. 승려 about the coming of the foreign faith happened to synchronize with an epidemic of plague, and conservatives in the Imperial court were easily able to attribute this visitation to resentment on the part of the ancestral deities against the invasion of Japan by an alien creed. Thus the spread of Buddhism was checked; but only for a time. Thirty-five years after the coming of the Sutras, the first temple was erected to enshrine a wooden image of the Buddha 16 ft. high. It has often been alleged that the question between the imported and the indigenous cults had to be decided by the sword. The statement is misleading. That the final adoption of Buddhism was a continuous process, and not a warfare or rejection, did not constitute the motive of the combat. A contest for the succession to the throne at the opening of Suion's reign (588-592) found the partisans of the Indian faith ranged on one side, its opponents on the other, and in a moment of stress the leaders of the former, Soma and Prince Umayado, vowed to erect Buddhist temples should victory rest on their arms. From that time the future of Buddhism was assured. In 588 Korea sent Buddhist relics, Buddhist priests, Buddhist ascetics, architects of Buddhist temples, and casters of Buddhist images. She had already sent men learned in divination, in literature, and in the shape and decoration of buildings of edifices, to be adapted to the Japanese taste, and to the needs of the Japanese calendar. The building of temples began to be fashionable in the closing years of the 6th century, as did also abication of the world by people of both sexes; and a census taken in 623, during the reign of the empress Suiko (583-628), showed that there were then 46 temples, 816 priests and 560 nuns in the empire. This rapid growth of the alien faith was due mainly to two causes: first, that the empress Suiko, being of the Soga family, naturally favourable a creed which had found its earliest Japanese patron in the great statesman and general, Soga no Umakiano; secondly, that one of the most illustrious converts was the philosopher Jomoi, who, under the protection of his master, Prince Shotoku, devoted all his powers to fostering Buddhism.

The adoption of Buddhism meant to the Japanese much more than the acquisition of a practical religion with a code of clearly defined morality in place of the amorphous and jejunie cult of Shintō. It meant the introduction of Chinese civilization. Priests and scholars crossed in numbers from China, and men passed over from Japan to study the Sutras at what was then regarded as the fountain-head of Buddhism. There was also a constant stream of immigrants from China and Korea, and the result may be gathered from the fact that a census taken of the Japanese nobility in 814 indicated 382 Korean and Chinese families against only 796 of pure Japanese origin. The records show that in costume and customs a signal advance was made towards refinement. Hair-ornaments of gold or silver chiselled in the form of flowers; caps of scarlet in twelve special tints, each indicating a different grade; garments of brocade and embroidery with figured thin silks of various colours—all these were worn on ceremonial occasions; the art of painting was introduced; a recorder's office was established; perfumes were largely employed; court picnics to gather mushrooms, a well-established institution, and princely and princesses attending in brilliant raiment; Chinese music and dancing were introduced; cross bows and catapults were added to the weapons of war; domestic architecture made signal strides in obedience to the examples of Buddhist sacred edifices, which, from the first, showed magnificence of dimension and decoration hitherto unconceived in Japan; the arts of metal-casting and sculpture underwent great improve-

ment; Prince Shotoku compiled a code, commonly spoken of as the first written laws of Japan, but in reality a collection of maxims evincing a moral spirit of the highest type. In some respects, however, there was no improvement. The succession to the throne still tended to provoke disputes among the Imperial princes; the sword constituted the principal weapon of punishment, and torture the chief judicial device. Now, too, for the first time, a noble family is found seeking to usurp the Imperial authority. The head of the Soga house, Umakiano, having compassed the murder of the emperor Suion and placed on the throne his own nephew (Suiko), swept away all opposition to the latter's successor, Jomai, and controlled the administration of state affairs. From henceforward, according to all this history, was immediately succeeded by his son, Iruka, who even surpassed him in contumelious assumption of power and parade of dignity. Iruka was slain in the presence of the empress Kogyoku by Prince Naka with the assistance of the minister of the interior, Kamako, and it is not surprising to find the empress (Kogyoku) abdicating immediately afterwards in favour of Kamako's protege, Prince Karu, who is known in history as Kōtoku. This Kamako, planner and leader of the conspiracy which overthrow the Soga, is remembered by posterity under the name of Kamarari and as the founder of the most illustrious of the imperial dynasties, the Fujiwara. At this time (643), a habit which afterwards contributed materially to the effacement of the Throne's practical authority was inaugurated. Prince Furuibito, pressed by his brother, Prince Karu, to assume the sceptre in accordance with his right of primogeniture, made his refusal peremptory by abandoning the world and taking the tonsure. This retirement to a monastery was afterwards dictated to several sovereigns by ministers who found that an active occupant of the throne impeded their own exercise of administrative autocracy. Furuibito's recourse to the tonsure proved, however, to be merely a cloak for ambitious designs; before a year had passed he aspired to usurp the throne and was put to death with his children, his consorts strangling themselves. Suicide to escape the disgrace of defeat had now become a common practice. Another prominent feature of this epoch was the prevalence of superstition. The smallest incidents—the growing of two lotus flowers on one stem; a popular ballad; the reputed song of a sleeping monkey; the condition of the water in a pond; rain without clouds—all these and cognate trifles were regarded as omens; wizards and witches deluded the common people; a strange form of case-farmer was worshipped as the god of the everlasting world, and the peasants imprisoned themselves by making sacrifices to it.

An interesting epoch is now reached, the first legislative era of early Japanese history. It commenced with the reign of the emperor Kōtoku (645), of whom the Chronicles say First that he "honoured the religion of Buddha and de- spised Shintō"; that he "was of gentle disposition; loved men of learning; made no distinction of noble and mean, and continually dispensed beneficent edicts." The customs calling most loudly for reform in his time were abuse of the system of forced labour; corrupt administration of justice; spoliation of the peasant class; assumption of spurious titles to justify oppression; indiscriminate distribution of the families of slaves and serfs; diversion of taxes to the pockets of collectors; formation of great estates, and a general lack of administrative centralization. The first step of reform consisted in ordering the governors of provinces to prepare registers showing the numbers of freemen and serfs within their jurisdiction as well as the area of cultivated land. It was further ordained that the advantages of irrigation should be shared equally with the common people; that no local governor might try and decide criminal cases while in his province; that any one convicted of accepting bribes should be liable to a fine of double the amount as well as to other punishment; that in the Imperial court a box should be placed for receiving petitions and a bell hung to be sounded in the event of delay in answering them or unfairness in dealing with them; that all absorption of land into great estates should cease: that barriers, outposts, guards and post-horses should be
provided; that high officials should be dowered with hereditary estates by way of emolument, the largest of such grants being 5000 homestands; that men of unblemished character and proved capacity should be appointed judges for trying criminal matters; that there should be chosen as clerks for governors and vice-governors of provinces men of solid competence ‘skilled in writing and arithmetic’; that the land should be parcelled out in fixed proportions to every adult unit of the population with right of tenure for a term of six years; that forced labour should be commuted for taxes of silk and cloth; and that for fiscal and administrative purposes households should be organized in groups of five, each group under an elder, and ten groups forming a township, which, again, should be governed by a chief. In this way the existence of the hereditary magnates was obliterated, some. More-magnates for governor by stored regions criminals were 3000 DOMESTIC employed the was skilled their armour forming day.

of another emperor was built there on the throne, an emperor of the dynasty was himself an emperor, and his family name of Fujiwara was bestowed on him by the emperor Tenchi.

Kamakura himself deserved all the honour he received, but his descendants abused the high trust reposed in them, reduced the sovereign to a mere puppet, and exercised Imperial authority without openly usurping it. Much of this was due to the adoption of Chinese administrative systems, a process which may be said to have commenced during the reign of Kōtoku (645–654) and to have continued almost uninteruptedly until the 11th century. Under these systems the emperor ceased directly to exercise supreme civil or military power: he became merely the source of authority, not its wielder, the civil functions being delegated to a bureaucracy and the military to a soldier class. Possibly had the custom held of transferring the capital to a new site on each change of sovereign, and had the growth of luxurious habits been thus checked, the comparatively simple life of early times might have held the throne and the people in closer contact. But from the beginning of the 8th century a strong tendency to avoid these costly migrations developed itself. In 790 the court took up its residence at Nara, remaining there until 784; ten years after the latter date Kōtoku became the genuine metropolis. The capital at Nara—established during the reign of the emperor Gemmyō (708–715)—was built on the plan of the Chinese metropolis. It had nine gates and nine avenues, the palace being situated in the northern section and approached by a broad, straight avenue, which divided the city into two perfectly equal halves, all the other streets running parallel to this main
avenue or at right angles to it. Seven sovereigns reigned at
Kiotō (castles of peace), as Nara is historically called, and,
during this period of 75 years, seven of the grandest temples
ever seen in Japan were erected: a multitude of idols were cast,
among them a colossal bronze Daibutsu 53 ft. high; large
temple-bells were founded, and all the best artists and artisans
of the era devoted their services to these works. This religious
mania reached its acme in the reign of the emperor Shōmu (724-
749), a man equally superstitious and addicted to display.
In T'emme's time the custom had been introduced of compelling
large numbers of persons to enter the Buddhist priesthood with
the object of propitiating heaven's aid to heal the illness of an
illustrious person. In Shōmu's day every national calamity or
abnormal phenomenon was regarded as calling for religious
services on a large scale, and the great expense involved in all
these buildings and ceremonials, supplemented by lavish outlays
on court pageants, was severely felt by the nation. The con-
dition of the agricultural class, who were the chief tax-payers,
was further aggravated by the operation of the emperor's land
system, which rendered tenure so uncertain as to deter
improvements. Therefore, in the Nara epoch, the principle of
private ownership of land began to be recognized. Attention
was now beginning to prevail in the capital. The festivals of various
house construction, a special feature of this last being the use of
tiles for roofing purposes in place of the shingles or thatch
hitherto employed. In all these steps of progress Buddhist
priests took an active part. Costumes were now governed by
purely Chinese fashions. This change had been gradually intro-
duced from the time of Kōtoku's legislative measures—generally
called the Talkwa reforms after the name of the era (645-650)
of their adoption—and was rendered more thorough by supplemen-
tary enactments in the period 707-703 while Mommu occupied
the throne. Ladies seem by this time to have abandoned the
drawings of beads worn in early years round the neck, wrists and
ankles. They used ornaments of gold, silver or jade in their
hair, but in other respects their habiliments closely resembled
those of men, and to make the difference still less conspicuous
they straddled their horses when riding. Attempts were made
to facilitate travel by establishing stores of grain along the
principal highways, but as yet there were no hostels, and if
a wayfarer did not find shelter in the house of a friend, he had to
bivouac as best he could. Such a state of affairs in the provinces
offered a marked contrast to the luxurious indulgence which had
now become prevalent in the capital. The festivals of various
types, dancing, verse-composing, flower pickings, archery, polo,
football—of a very refined nature—hawking, hunting and gam-
bling absorbed the attention of the aristocracy. Nothing dis-
turbed the serenity of the epoch except a revolt of the northern
Yemishi, which was temporarily subdued by a Fujiwara general,
for the Fujiwara had not yet laid aside the marital habits of
their ancestors. In 794 the Imperial capital was transferred
from Nara to Kiotō by order of the emperor Kwammu, one of
the greatest of Japanese sovereigns. Education, the organiza-
tion of the civil service, Riparian works, irrigation improvements,
the separation of religion from politics, the abolition of sinecure
offices, devices for encouraging and assisting agriculture, all
received attention from him. But a twenty-two years' campaign
against the northern Yemishi; the building of numerous temples;
the indulgence of such a passionate love of the chase that he
organized 1,400 hunting excursions during his reign of 25 years;
profuse extravagance on the part of the aristocracy in Kiotō
and the exactions of provincial nobles, conspired to sink the
working classes into greater depths of hardship than ever.
Farmers had to borrow money and seed-rice from local officials
or Buddhist temples, hypostating their land as security; thus
the temples and the nobles extended their already great estates,
whilst the agricultural population gradually fell into a position
of practical servitude.

Meanwhile the Fujiwara family were steadily developing their
influence in Kiotō. Their methods were simple but
thoroughly effective. "By progressive exercises of
arbitrariness they gradually contrived that the choice of a
consort for the sovereign should be legally limited to
a daughter of their family, five branches of which were
specially designated to that honour through all ages. When a
son was born to an emperor, the Fujiwara took the child into
one of their palaces, and on his accession to the throne, the
particular Fujiwara noble that happened to be his maternal
grandfather became regent of the empire. This office of regent,
created towards the close of the 8th century, was part of the
scheme; for the Fujiwara did not allow the purple to be worn by
a sovereign after he had attained his majority, or, if they suffered
him to wield the sceptre during a few years of manhood, they
compelled him to abdicate so soon as any independent aspira-
ations began to impair his docility; and since for the purposes of
administration in these constantly recurring minorities an office
more powerful than that of prime minister (dajo daijin) was
needed, they created that of regent (kwambaku), making it
hereditary in their own family. In fact the history of Japan
from the 9th to the 10th century may be described as the history
of four families, the Fujiwara, the Taira, the Minamoto and
the Tokugawa. The Fujiwara governed through the emperor;
the Taira, the Minamoto and the Tokugawa governed in spite of
the emperor. The Fujiwara based their power on matrimonial alli-
nations, the Taira and the Minamoto on warlike prowess; the
Tokugawa based theirs on the possession of armed strength which the
throne had no competence to control. There another broad line of cleav-
age is seen. Throughout the Fujiwara era the centre of political
glory remained always in the court. Throughout the era of the
Taira, the Minamoto and the Tokugawa the centre of political
glory was transferred to a point outside the court, the head-
quartes of a military feudalism." The process of transfer was
of course gradual. It commenced with the granting of large
tracts of tax-free lands to noblemen who had wrested them from
the aborigines (Yemishi) or had reclaimed them by means of serf-
labour. The first attempts had been by the Taira to wrest land
from the northern and eastern parts of the main island, at such a distance from the
capital that the writ of the central government did not run there;
and since such lands could be rented at rates considerably less
than the tax levied on farms belonging to the state, the peasants
by degrees abandoned the latter and settled on the former,
with the result that the revenues of the Throne steadily dimin-
ished, while those of the provincial magnates correspondingly
increased. Moreover, in the 7th century, at the time of the
adoption of Chinese models of administration and organization,
the court attempted to rely for military protection on the samurais
guards temporarily drafted from the provincial troops, and,
during the protracted struggle against the Yemishi in the north
and east in the 8th century, the fact that the power of the sword
lay with the provinces began to be noted.

Kiotō remained the source of authority. But with the growth
of luxury and effeminacy in the capital the Fujiwara became
more and more averse from the hardships of campaign-
ing, and in the 9th and 10th centuries, respectively,
the Taira and the Minamoto families came into promi-
nence as military leaders, the field of the Taira operations being
the south and west of the Minamoto the north and east.

Rise of the
Fujiwara.

The Taira
and the
Minamoto.

The Taira and the Minamoto both traced their descent from
imperial princes; the Tokugawa were a branch of the Minamoto.
could not be averted or success insured without recourse to Buddhist priests. Thus, during a reign of only 13 years at the close of the 11th century, the emperor Shirakawa caused 5,240 religious pictures to be painted, ordered the casting of 1,717 statues of Buddha, each 11 ft. high, of 3150 life-sized images and of 2,980 smaller idols of the tunic grew so large that many escaped by a 44,663 religious edifices of various kinds. Side by side with this faith in the supernatural, sexual immorality prevailed widely, never accompanied, however, by immodesty. Literary proficiency ranked as the be-all and end-all of existence. "A man estimated the conjugal qualities of a young lady by her skill in finding scholarly similes and by her perception of the cadence of words. If a woman was so fortunate as to acquire a reputation for learning, she possessed a certificate of universal virtue and amiability." All the pastimes of the Nara epoch were pursued with increased fervour and elaboration in the Heian (Kioto) era. The building of fine dwelling-houses and the laying out of landscape gardens took place on a considerable scale, though in these respects the ideals of later ages were not yet reached. As to costume, the close-fitting, business-like and comparatively simple dress of the 8th century was exchanged for a much more elaborate style. During the Nara epoch the many-hued hats of China had been abandoned for a sober headgear of silk gauze covered with black lacquer, but in the Heian era this was replaced by an imposing structure glistening with jewels; the sleeves of the tunic grew so long that they hung to the knees when a man's arms were crossed, and the trousers made so full and baggy that they resembled a divided skirt. From this era may be said to have commenced the manufacture of the tasteful and gorgeous textile fabrics for which Japan afterwards became famous. "A pop's ideal was to wear several suits, one above the other, disposing them so that their various colours showed in harmoniously contrasting lines at the folds on the bosom and at the edges of the long sleeves. A successful costume created a sensation in court circles. Its wearer became the hero of the hour, and under the pernicious influence of such ambition men wore gorgets and carried sword cases and their heads of hair; and women wore their hair in masses above their shoulders. As for the fair sex, their costume reached the acme of unpracticality and extravagance in this epoch. Long flowing hair was essential, and what with developing the volume and multiplying the number of her robes, and wearing above her trousers a many-plied train, a grand lady of the time always seemed to be struggling to emerge from a cataract of habiliments."

It was fortunate for Japan that circumstances favoured the growth of a military class in this age of her career, for had the conditions existing in Kioto during the Heian epoch spread throughout the whole country, the poetess may have expressed these demands in so impassioned a manner that the middleman must have overthrown her. But by the middle of the 12th century the pernicious influence of the Fujiwara had paled before that of the Taira and the Minamoto, and a question of succession to the throne marshalled the latter two families in opposite camps, thus inaugurating an era of civil war which held the country in the throes of almost continuous battle for 450 years, placed it under the administration of a military feudalism, and educated a nation of warriors. At first the Minamoto were vanquished and driven from the capital, Kiyonori, the Taira chief, being left complete master of the situation. He established his headquarters at Ryoan and in Kyoto he erected the residence of 30 out of the 66 provinces forming the empire, and filled all the high offices of state with his own relatives or connexions. But he made no radical change in the administrative system, preferring to follow the example of the Fujiwara by keeping the throne in the hands of minors. And he committed the blunder of sparing the lives of two youthful sons of his defeated rival, the Minamoto chief. They were Yoritomo and Yoshitsune; the latter the greatest strategist Japan ever produced, with perhaps one exception; the former, one of her three greatest statesmen, the founder of military feudalism. At the age of 29 the two men the Taira were to be completely overthrown that they never raised their heads again, a sea-fight at Dan-no-ura (1155) giving them the coup de grâce. Their supremacy had lasted 22 years. 

The Feudal Era.—Yoritomo, acting largely under the advice of an astute counsellor, Oye no Hiromot, established his seat of power at Kamakura, 300 m. from Kioto. He saw that, effectively to utilize the strength of the military class, propinquity to the military centres in the provinces was essential. At Kamakura his vassal's two sons and his nephew, the modernism to that of the metropolitan government but studiously differentiated in the matter of nomenclature. As to the country at large, he brought it effectively under the sway of Kamakura by placing the provinces under the direct control of military governors, chosen and appointed by himself. No attempt was made, however, to interfere in any way with the polity in Kioto: it was left intact, and the nobles about the throne—kuge (courty houses), as they came to be called in contradistinction to the buke (military houses)—were placated by renewal of their property titles. The Buddhist priests, also, who had treated most harshly during the Taira tenure of power, found their fortunes restored under Kamakura's sway. Subsequently Yoritomo obtained for himself the title of sei-i-tai-shogun (barbarian-subduing generalissimo), and just as the office of regent (kwambaku) had long been hereditary in the Fujiwara family, so the office of shogun became thenceforth hereditary in that of the Minamoto. These changes were radical. They signified a complete shifting of the centre of power. During eighteen centuries from the time of Jimmu's invasion—as Japanese historians reckon—the country had been ruled from Kioto; now the whole of the military administration was purely military was substituted. But there was no contumely towards the court in Kioto. Kamakura made a show of seeking Imperial sanction for every one of its acts, and the whole of the military administration was carried on in the name of the emperor by a shōgun who called himself the Imperial deputy. In this respect things changed materially after the death of Yoritomo (1198). Kamakura then became the scene of a drama analogous to that acted in Kioto from the 10th century onwards.

The Hōjō family, to which belonged Masa, Yoritomo's consort, assumed towards the Kamakura shōgun an attitude similar to that previously assumed by the Fujiwara family towards the emperor in Kioto. A child, who on state occasions was carried to the council chamber in Massa's arms, served as the nominal repository of the shōgun's power, the functions of administration being discharged in reality by the Hōjō family, whose successive heads took the name of shikken (constable). At first care was taken to have the shōgun's office filled by a near relative of Yoritomo; but after the death of Masa, the puppet shōguns were taken from the ranks of the Fujiwara or imperial princes, and were deposed so soon as they attempted to assert themselves. What this meant becomes apparent when we note that in the interval of 83 years between 1220 and 1308, there were six shōguns whose ages at the time of appointment ranged from 3 to 16. Whether, if events had not forced their hands; the Hōjō constables would have maintained towards the throne the reverent demeanour adopted by Yoritomo must remain a matter of conjecture. What actually happened was that the ex-emperor, Go-Toba, made an ill-judged attempt (1232) to break the power of Kamakura; the puppet shōgun issued a call to arms which was responded to by some thousands of censobites and as many soldiers of Taira extraction. In the brief struggle that ensued the Imperial partisans were wholly shattered, and the direct consequences were the dethronement and exile of the reigning emperor, the banishment of his predecessor together with two princes of the blood, and the compulsory adoption of the tonsure by Go-Toba; while the indirect consequence was that the succession to the throne and the tenure of Imperial power fell under the dictate of the Hōjō as they had formerly fallen under the direction of the Fujiwara. Yoshitsune, the head of the Hōjō family, installed his brother, Tokifusa, as military governor of Kioto, and confiscating about 3000 estates, the property of those who had espoused the Imperial cause, distributed these lands among the adherents of his own family, thus
greatly strengthening the basis of the feudal system. "It fared
with the Hôjô as it had fared with all the great families that
preceded them: their own miracle ultimately wrought their
ruin. Their order is aptly named the "flame." The ogre, the and un-
right administrators. They took justice, simplicity and truth
for guiding principles; they despised luxury and pomp; they
never aspired to high official rank; they were content with two
provinces for estates, and they sternly repelled the effeminate,
depraved customs of Kiôto." Thus the greater part of the 13th
century was, on the whole, a golden era for Japan, and the lower
orders learned to welcome feudalism. Nevertheless no century
furnished more conspicuous illustrations of the peculiarly
Japanese system of vicarious government. Children occupied
the senior and junior shikken in Kamakura, and they were
sent from children on the throne in Kiôto; and members of the Hôjô
family as shikken administered affairs at the mandate of the
child shôgun. Through all three stages in the dignities of
mikado, shôgun and shikken, the strictly regulated principle of
heredity was maintained, according to which no Hôjô shikken
could ever become shôgun; no Minamoto or Fujiwara could
occupy the throne. At the beginning of the 14th century, how-
ever, several causes combined to shake the supremacy of the
Hôjô. Under the sway of the ninth shikken (Takatoki), the austere
simplicity of life and earnest discharge of executive duties which
had characterized the Hôjô had been exchanged for luxury,
debauchery and perfidious government. Thus the management of
fiscal affairs fell into the hands of Takasuke, a man of usurious
instincts. It had been the wise custom of the Hôjô constables to
store grain in seasons of plenty, and distribute it at low prices in
times of dearth. There occurred at this epoch a succession of bad harvests, but instead of opening
the state granaries with benevolent liberality, Takasuke sold
their contents at the highest obtainable rates; and, by way of
contrast to the prevailing indigence, the people saw the constant
inflation of the prices of luxury goods, and the gallows were
waiting upon 37 mistresses, supporting a band of 2000 dancers,
and keeping a pack of 5000 fighting dogs. The throne happened to be then occupied (1319–1338) by an emperor, Go-Daigo, who
had reached full maturity before his accession, and was cor-
respondingly averse from acting the puppet part assigned to
the sovereigns of his time. Female influence contributed to his
impatience. One of his concubines bore a son for whom he
sought to obtain nomination as prince imperial, in defiance of an
arrangement made by the Hôjô that the succession should pass
along the senior line. The Hôjô, now in power, had arisen from
the ashes of the Taira, and had no disposition to lose the
Scly family. Kamakura refused to entertain Go-Daigo's project,
and thenceforth the child's mother importuned her sovereign and
lover to overthrow the Hôjô. The entourage of the throne in
Kiôto at this time was a counterpart of former eras. The
Fujiwara, indeed, wielded nothing of their ancient influence.
They were divided by the Hôjô into five branches, each endowed
with an equal right to the office of regent, and their strength
was thus dissipated in struggling among themselves for
the possession of the prize. But what the Fujiwara had done
in their days of greatness, what the Taira had done during their
brief tenure of power, the Hôjô were now doing, namely, aspiring
to furnish prime ministers and empresses from their own
family solely. They had already given consorts to five emperors
in succession, and jealous rivals were watching keenly to attack
this clan which threatened to usurp the place long held by the
most illustrious family in the land. A petty incident disturbed
this state of very tender equilibrium before the plan of the Hôjô's
enemies had fully matured, and the emperor presently found
himself an exile on the island of Oki. But there now appeared
upon the scene three men of great prowess: Kusunoki Masashige,
Nitta Yoshisada and Ashikaga Takauji. The first espoused the
cause of the exiled emperor, and committed the city to the flames.
Ashikaga Takauji occupied Kiôto, and with the suicide of Takatoki the Hôjô fell finally from
rule after 115 years of supremacy (1219–1334). The emperor
now returned from exile, and his son, Prince Moriyoshi, having
been appointed to the office of shôgun at Kamakura, the
restoration of the administrative power to the Throne seemed
an accomplished fact.
Go-Daigo, however, was not in any sense a wise sovereign.
The extermination of the Hôjô placed wide estates at his disposal,
but he might as well have been born on a desert isle. His
Mikado, child and successor, was a weakling; and Ashikaga, a
second-rate statesman, was not a fit instrument to maintain his
favourites, the companions of his dissipation. Ashikaga Takauji sought just such an opportunity. The follow-
ing year (1335) saw him proclaiming himself shôgun at Ka-
makura, and after a complicated pageant of incidents, the emperor
Go-Daigo was obliged once more to fly from Kiôto. He carried
the regalia with him, refused to submit to Takauji, and declined
to recognize his usurped title of shôgun. The Ashikaga chief
solved the situation by deposing Go-Daigo and placing upon
the throne another scion of the imperial family who is known
in history as the Kamakura shôgun. This was the emperor
Kômyô and his descendants reigning in Yoshino as the southern court (nanbô), and the
emperor Kômyô and his descendants reigning in Kiôto as the
northern court (hôkô). It was by the efforts of the shôgun
Yoshimitsu, one of the greatest of the Ashikaga potentates, that
this quarrel was finally composed, but during its progress the
country had fallen into a deplorable condition. The constitu-
tional powers of the shôgun were kept, then and there, as it were,
by the Gardener of Japan and China a renewal of cordial intercourse
which, upon the part of the shôgun, developed phases plain-
lly suggesting an admission of Chinese suzerainty.
For a brief moment during the sway of Yoshimitsu the country
had rested from internece war, but immediately after his death
(1394) the struggle began afresh. Many of the great territorial
lords had now grown too puissant to concern themselves about
either mikado or shôgun. Each fought for his own hand, think-
ing only of extending his sway and his territories. By the middle
of the 16th century Kiôto was in ruins, and little vitality re-
cained in any trade or industry except those that ministered
in the wants of the warrior. Again in the case of the Ashikaga
shôguns the political tendency to exercise power vicariously
was shown, as it had been shown in the case of the mikados in
Kiôto and in the case of the Minamoto in Kamakura. What
the regents had been to the emperors and the constables to the
Minamoto shôguns, that the wardens (kwanryô) were to the
Ashikaga shôguns. Therefore, for possession of this office
cwanryô vehement conflicts were waged, and at one time five
rival shôguns were used as figure-heads by contending factions.
Yoshiteru, as Kamakura (1396–1442), and who, of course, the
support of the Imperial court, but in the continuous warfare following
his death the estates charged with the duty of paying this
allowance ceased to return any revenue; the court nobles
had to seek shelter and sustenance with one or other of the feudal
chiefs in the provinces, and the court itself was reduced to such
a state of indigence that when the emperor Go-Tsuchi died (1500),
his corpse lay for forty days awaiting burial, no funds being available for purposes of sepulture. Alone among the vicissitudes of these troublous times the strength and influence of Buddhism grew steadily. The great monasteries were military strongholds as well as places of worship. When the emperor Kwammu chose Kioto for his capital, he established on the hill of Hiyei-zan, which lay north-east of the city, a magnificent temple to ward off the evil influences which tended to emanate from that quarter. Twenty years later, Kōbō, the most famous of all Japanese Buddhist saints, founded on Koya-san in Yamato a monastery not less important than that of Hiyei-zan. These and many other temples had large tax-free estates, and for the protection of their property they found it expedient to train and arm the cenobites as soldiers. From that time taking active part in the political struggles of the time was but a short step, especially as the great temples often became refuges of sovereigns and princes who, though nominally forsaking the world, retained all their interest, and even continued to take an active part, in its vicissitudes. It is recorded of the emperor Shirakawa (1073–1086) that the three things which he declared his total inability to control were the waters of the river Kamo, the fall of the dice, and the monks of Buddha. His successors might have confessed equal inability. Kiyōmōri, the puissant chief of the Taira family, had fruitlessly essayed to dethrone the Buddhas; Yoritomo, in the hour of his most signal triumph, thought it wise to placate them. Where these representatives of centralized power found themselves impotent, it may well be supposed that they were more or less actively supported each for his own hand in the 15th and 16th centuries were incapable of accomplishing anything. In fact, the task of centralizing the administrative power, and thus restoring peace and order to the distracted empire, seemed, at the middle of the 16th century, a task beyond achievement by human capacity. But if ever events create the men to deal with them, such was the case in the second half of that century. Three of the greatest captains and statesmen in Japanese history appeared upon the stage simultaneously, and moreover, worked in union, an event altogether inconceivable with the natures of the age. They were Oda Nobunaga, Hideyoshi (the tasō), and Tokugawa Ieyasu. Nobunaga belonged to the Taira family and was originally ruler of a small fief in the province of Owari. Ieyasu, a sub-feudatory of Nobunaga’s enemy, the powerful daimyō of Mikawa and two other provinces, was a scion of the Minamoto and therefore eligible for the shōgunate. Hideyoshi was a peasant’s son, equally lacking in patrons and in personal attractions. No chance seemed more remote than that such men, above all Hideyoshi, could possibly rise to supreme power. On the other hand, one outcome of the disintegration of petty chieftains who fought for each of his own hand in the 15th and 16th centuries was to give special effect to the principle of natural selection. The fittest alone surviving, the qualities that made for fitness came to take precedence of rank or station, and those qualities were prowess in the battle-field and wisdom in the statesman’s closet. “Any plebeian that would prove himself a first-class fighting man was willingly received into the armed comitatus which every feudal potentate was eager to attach to himself and his flag.” It was thus that Hideyoshi was originally enrolled in the ranks of Nobunaga’s retainers.

Nobunaga, succeeding to his small fief in Owari in 1542, added to it six whole provinces within 25 years of continuous endeavour. Being finally invited by the emperor to undertake the pacification of the country, and appealed to by Yoshisaki, the last of the Ashikaga chiefs, to secure for him the shōgunate, he marched into Kioto at the head of a powerful army (1568), and, having accomplished the latter purpose, was preparing to complete the former when he fell under the sword of a traitor. Throughout his brilliant career he had the invaluable assistance of Hideyoshi, who would have attained immortal fame on any stage in any era. Hideyoshi entered Nobunaga’s service as a groom, surmounted by administering the whole empire. When he accompanied

1 Daimyō (“great name”) was the title given to a feudal chief.

Nobunaga to Kioto in obedience to the invitation of the mikado, Okimachi, order and tranquillity were quickly restored in the capital and its vicinity. But to extend this blessing to the whole country, four powerful daimyōs as well as the militant monks had still to be dealt with. The monks had from the outset sheltered and succoured Nobunaga’s enemies, and one great prelate, Ken’yō, hierarch of the Momotsu sect, whose headquarters were at Mount Fuji, was believed to command the throne itself. In 1567 Nobunaga attacked and gave to the flames the celebrated monastery of Hiyei-zan, established nearly eight centuries previously; and in 1580 he would have similarly served the splendid temple Hongwan-ji in Osaka, had not the mikado sought and obtained grace for it. The task then remained of subduing four powerful daimyōs, three in the south and one in the north-east, who continued to follow the bent of their own warlike ambitions without paying the least attention to either sovereign or shogun. The task was commenced by sending an army under Hideyoshi against Mōri Chōsabō, whose fief lay on the northern shore of the Shimonoseki strait. This proved to be the last enterprise planned by Nobunaga. On a morning in June 1582 one of the corps intended to reinforce Hideyoshi’s army marched out of Kameyama under the command of Akechi Mitsuhide, who either harboured a personal grudge against Nobunaga or was swayed by blind ambition. Mitsuhide suddenly changed the route of his troops, led them to Kioto, and attacked the temple Hongō-ji where Nobunaga was sojourning all unsuspecting of treachery. Rescue and resistance being alike hopeless, the great soldier committed suicide. Thirteen days later, Hideyoshi, having concluded peace with Mōri of Chōsabō, fell upon Mitsuhide’s forces and shattered them, Mitsuhide himself being killed by a peasant as he fled from the field.

Nobunaga’s removal at once made Hideyoshi the most conspicuous figure in the empire, the only man with any claim to dispute that title being Tokugawa Ieyasu. These two had hitherto worked in concert. But the question of the succession to Nobunaga’s estates threw the country once more into tumult. He left two grown-up sons and a baby grandson, whose father, Nobunaga’s first-born, had perished in the cause. Nobunaga’s second-born, Ieyasu, was simply a prince, “the backbone of the family,” and had not the bearing or the weight of authority. His brothers were younger and less ambitious; but even if he had been the first-born of a family of Mōri, who had been the family of Chōsabō, and who had been the family of Tokugawa, and had been the family of Akechi Mitsuhide, and had been the family of the whole of Japan, he would not have been the man to take advantage of his father’s death. Ieyasu had been, all his life, a retainer of Nobunaga; he was a very different kind of man from the great captains. Never was there a more unassuming, more peace-loving man. When Hideyoshi sat on the right of the throne, and all the nobles did obeisance to the sovereign. Prior to this event Hideyoshi had conducted against the still defiant daimyōs of Kii-shū, especially Shimazu, and Tsutsusa, the greatest fief of Kii, and had reduced the island of the nine provinces, not by weight of armament only, but also by a signal exercise of the wise clemency which distinguished him from all the statesmen of his era.

The whole of Japan was now under Hideyoshi’s sway except the fiefs in the extreme north and those in the region known as the Kwantō, namely, the eight provinces forming the eastern elbow of the main island. Seven of these provinces were virtually under the sway of Hōjō Ujimasa, fourth representative of a family established in 1476 by a brilliant adventurer of ise, not the daimyō, but the military head of Kamo-feudal Kamsa-kura Hōjos. The daimyōs in the north were comparatively powerless to resist Hideyoshi, but to reach them the Kwantō had
to be reduced, and not only was its chief, Ujimasa, a formidable foe, but also the topographical features of the district represented fortifications of immense strength. After various unsuccessful overtures, having for their purpose to induce Ujimasa to visit the capital and pay homage to the emperor, Hideyoshi marched from Kiotō in the spring of 1590 at the head of 100,000 men. His colleagues Nobuo and Ieyasu having under their orders 80,000 more. The campaign ended as did all Hideyoshi’s enterprises, except that he treated his vanquished enemies with unusual severity. During the three months spent investing Odawara, the northern daimyōs surrendered, and thus the autumn of 1590 saw Hideyoshi master of Japan from end to end, and saw Tokugawa Ieyasu established at Yedo as recognized ruler of the eight provinces of the Kwanō. These two facts should be bracketed together, because Japan’s emergence from the deep gloom of long-continued civil strife was due not more to the brilliant qualities of Hideyoshi and Ieyasu individually than to the fortunate synchronism of their careers, so that the one was able to carry the other’s work to completion and permanence. The last eight years of Hideyoshi’s life—he died in 1598—were chiefly remarkable for his attempt to invade China through Korea, and for his attitude towards Christianity (see § VIII.: Foreign intercourse).

The Tokugawa Era.—When Hideyoshi died he left a son, Hideyori, then only six years of age, and the problem of this child’s future had naturally caused supreme solicitude to the peasantry. The army of Ieyasu had finally in the boy, and the management of state affairs to five regents, five ministers, and three intermediary councillors. But he placed chief reliance upon Ieyasu, whom he appointed president of the board of regents. Among the latter was one, Ishida Mitsunari, who to insatiable ambition added an extraordinary faculty for intrigue and great personal magnetism. These qualities he utilized with such success that the dissensions among the daimyōs, which had been temporarily composed by Hideyoshi, broke out again, and the year 1600 saw Japan divided into two camps, one composed of Tokugawa Ieyasu and his allies, the other of Ishida Mitsunari and his partisans.

The situation of Ieyasu was eminently perilous. From his position in the east of the country, he found himself menaced by two powerful enemies on the north and on the south, respectively, the former barely contained by a greatly weaker force of his friends, and the latter moving up in seemingly overwhelming strength from Kiotō. He decided to hurl himself upon the southern army without awaiting the result of the conflict in the north. The encounter took place at Sekigahara in the province of Mino on the 21st of October 1600, in which Hideyori had to move to the attack in the boyish manner that its left flank and its left rear were threatened by divisions of the enemy posted on commanding eminences. But with the leaders of these divisions Ieyasu had come to an understanding by which they could be trusted to abide so long as victory did not declare against him. Such incidents were naturally common in an era when every man fought for his own hand. The southerners suffered a crushing defeat. The survivors fled pell-mell to Osaka, where in a colossal fortress, built by Hideyoshi, his son, Hideyori, and the latter’s mother, Yodo, were sheltered behind ramparts held 80,000 men. Hideyori’s cause had been openly put forward by Ishida Mitsunari and his partisans, but Ieyasu made no immediate attempt to visit the sin upon the head of his deceased benefactor’s child. On the contrary, he sent word to the lady Yodo and her little boy that he absolved them of all complicity. The battle of Sekigahara is commonly spoken of as having terminated the civil war which had devastated Japan, with brief intervals, from the latter half of the 12th century to the beginning of the 17th. That is incorrect in view of the fact that Sekigahara was followed by other fighting, especially by the terrible conflict at Osaka in 1615 when Yodo and her son perished. But Sekigahara’s importance cannot be over-rated. For had Ieyasu been finally crushed there, the wave of internee strife must have rolled again over the empire until providence provided another Hideyoshi and another Ieyasu to stem it. Sekigahara, therefore, may be truly described as a turning-point in Japan’s career and as one of the decisive battles of the world. As for the fact that the Tokugawa leader did not at once proceed to extremities in the case of the boy Hideyori, though the events of the Sekigahara campaign had made it quite plain that such a course would ultimately be inevitable, we have to remember that only two years had elapsed since Hideyoshi was laid in his grave. His memory was still green and the glory of his achievements still enveloped his family. Ieyasu foresaw that to carry the tragedy to its bitter end at once must have forced into Hideyori’s camp many puissant daimyōs whose sense of allegiance would grow less cogent with the lapse of time. When he did lay siege to the Osaka castle in 1615, the power of the Tokugawa was wellnigh shattered against its ramparts; had not the onset been aided by treachery, the stronghold would probably have proved impregnable.

But signal as were the triumphs of the Tokugawa chieftain in the field, what distinguishes him from all his predecessors is the ability he displayed in consolidating his conquests. The immense estates that fell into his hands he parcelled out in such a manner that all important strategic positions were held by daimyōs whose fidelity could be confidently trusted, and every feudal of doubtful loyalty found his sie proved within touch of a Tokugawa partisan. This arrangement, supplemented by a system which required all the great daimyōs to have mansions in the capital and left them in the care of trusted lieutenants and to reside there themselves in alternate years, proved so potent a check to disaffection that from 1615, when the castle of Osaka fell, until 1684, when the Chōshū rōnin attacked Kiotō, Japan remained entirely free from civil war.

It is possible to form a clear idea of the ethical and administrative principles by which Ieyasu and the early Tokugawa chiefs were guided in elaborating the system which gave to Japan an unprecedented era of peace and prosperity. Evidence is furnished not only by the system itself but also by the contents of a document generally called the Testament of Ieyasu, though probably it was not fully compiled until the time of his grandson, Iemitsu (1623–1650). The great Tokugawa chief, though he munificently patronized Buddhism and though he carried constantly in his bosom a miniature Buddhist image to which he ascribed all his success in the field and his safety in battle, took his ethical code from Confucius. He held that the basis of all legislation and administration should be the five relations of sovereign and subject, parent and child, husband and wife, brother and sister, friend and friends. The family was, in his eyes, the essential foundation of society, to be maintained at all costs. Beyond these broad qualities of moral duty it was not deemed necessary to instruct the people. Therefore out of the hundred chapters forming the Testament only 22 contain what can be called legal enactments, while 55 relate to administration and politics; 16 set forth moral maxims and reflections, and the remainder record illustrative episodes in the career of the author. "No distinct line is drawn between law and morals, between the duty of a citizen and the virtues of a member of a family. Substantive law is entirely wanting, just as it was wanting in the so-called constitution of Prince Shōtoku. Custom, as sanctioned by public observance, must be compiled with in the civil affairs of life. What required minute exposition was criminal law, the relations of social classes, etiquette, rank, precedence, administration and government.

Society under feudalism had been moulded into three sharply defined groups, namely, first, the Throne and the court nobles (kuge); secondly, the military class (buke or samurai); thirdly, the common people (heimin). These lines of demarcation were emphasized as much as possible by the Tokugawa rulers. The divine origin of the mikado was held to separate him from contact with mundane affairs, and he was therefore strictly secluded in the palace at Kiotō, his main function being to mediate between his heavenly ancestors and his subjects, entrusting to the shōgun and the samurai the duty of transcending all worldly business on behalf

JAPAN 263

of the state. In obedience to this principle the mikado became a kind of sacrosanct abstraction. No one except his consorts and his chief ministers ever saw his face. In the rare cases when he gave audience to a privileged subject, he sat behind a curtain, and when he went abroad, he rode in a closed chariot drawn by oxen. A revenue of ten thousand koku of rice—the equivalent of about as many guineas—was apportioned for his support, and the right was reserved to him of conferring empty titles upon the living and rank upon the dead. His majesty had one wife, the empress (kōgō), necessarily taken from one of the five chosen families (go-sekke) of the Fujiwara, but he might also have twelve consorts, and if direct issue failed, the succession passed to one of the two princely families of Arisugawa and Fujiwara, adoption, however, being possible in the last resort. The kuge constituted the council of state, consisting of 15 families all of whom traced their lineage to ancient mikados; they ranked far above the feudal chiefs, not excepting even the shōgun; filled by right of heredity nearly all the offices at the court, the emoluments attached being, however, a mere pittance; were entirely without the great estates which had belonged to them in ante-feudal times, and lived lives of proud poverty, occupying themselves with the study of literature and the practice of music and art. After the kuge and at a long distance below them in theoretical rank came the military families, who, as a class, were called buke or samurai. They had hereditary revenues, and they filled the administrative posts, these, too, being often hereditary. The third, and by far the most numerous, section of the nation were the commoners (keimin). They had no social status; were not allowed to carry swords, and possessed no income except what they could earn with their hands. About 55 in every 1000 units of the nation were samurai, the latter's wives and children being included in this estimate.

Under the Hōjō and the Ashikaga shōguns the holders of the great estates changed frequently according to the vicissitudes of those troublesome times, but under the Tokugawa, who bore the title of shōgun of the Tokugawa house, they had hereditary revenues, and they filled the administrative posts, these, too, being often hereditary. JAPAN

DOMESTIC HISTORY

The samurai lady claimed no privilege of timidity on account of her sex. She knew how to die in the cause of honour just as readily as her husband, her father or her brother died, and conjugal fidelity did not rank as a virtue in her eyes, being regarded as a simple duty. But her husband held marital faith in small esteem and ranked his wife far below his sword. It has to be remembered that when we speak of a samurai’s suicide, there is no question of poison, the bullet, drowning or any comparatively painless manner of exit from the world. The invariable method was to cut open the abdomen (kara-ki or seppuku) and afterwards, if strength remained, the sword was turned against the throat. So to such endurance had the samurai trained himself that he went through this cruel ordeal without flinching in the smallest degree.

The heimin or commoners were divided into three classes—husbandmen, artisans and traders. The farmer, as the nation Helmin lived by his labour, was counted the most respectable among the bread-winners, and a cultivator of his own estate might even carry one sword but never two, that privilege being strictly reserved to a samurai. The artisan, too, received much consideration, as is easily understood when we remember that included in his ranks were artists, sword-smiths, lacquerers, and retired samurai, artisans or tradesmen. Many artisans were in the permanent service of feudal chiefs from whom they received fixed salaries.

Tradesmen, however, were regarded with disdain and stood lowest of all in the social organization. Too much despised to be even included in that organization were the eta (defiled folks) and the hinin (outcasts). The exact origin of these latter pariahs is uncertain, but the ancestors of the eta would seem to have been prisoners of war or the enslaved families of criminals. To such people were assigned the defiling duties of tending tombs, disposing of the dead, slaughtering animals or tending hides. The hinin were mercenaries. On them devolved the task of removing and burying the corpses of executed criminals. Living in segregated hamlets, forbidden to marry with heimin, still less with samurai, not allowed to eat, drink or associate with persons above their own class, the eta remained under the ban of ostracism from generation to generation, though many of them contrived to amass much wealth. They were governed by their own headmen, and they had three chiefs, one residing in each of the cities of Yedo, Osaka and Kioto. All these members of the submerged classes were resigned from prescription and admitted to the ranks of the commoners under the enlightened system of Meiji. The 12th of October 1871 saw their enfranchisement, and at that date the census showed 287,111 eta and 695,689 hinin.

Naturally, as the unbroken peace of the Tokugawa régime became habitual, the mood of the nation underwent a change. Decline of The samurai, no longer required to lead the frugal life of camp or barracks, began to live beyond their Shōguns, incomes. They found difficulty in meeting the pecuniary engagements of everyday existence, so that money acquired new importance in their eyes, and they gradually forfeited the respect which their traditional disinterestedness had won for them in the past.” At the same time the abuses of feudalism were thrown into increased salience. A large body of hereditary soldiers became an anomaly when fighting has passed even out of memory. On the other hand, the agricultural and commercial classes acquired new importance. The enormous sums disbursed every year in Yedo, for the maintenance of the great establishments which the feudal chiefs vied with each other in keeping there, enriched the merchants and traders so greatly that their scale of living underwent radical change. Buddhism was a potent influence, but its ethical restraints were weakened by the conduct of its priests, who themselves often yielded to the temptation of the time. The aristocracy adhered to its refined pastimes—performances of the Nō; tea reunions; poem composing; polo; football; equestrian archery; fencing and gambling—but the commoner, being excluded from all this realm and, at the same time, emerging rapidly from his old position of penury and degradation, began to develop luxurious proclivities and to demand corresponding amusements. Thus the theatre came into existence; the dancing girl and the jester found lucrative employment; a popular school of art was founded and quickly carried to perfection; the tōpan or assumed unprecedented dimensions; rich and costly costumes acquired wide vogue in despite of sumptuary laws enacted from time to time; wrestling became an important institution, and plutocracy asserted itself in the face of caste distinctions.

Simultaneously with the change of social conditions thus taking place, history repeated itself at the shōgun’s court. The sub-plate of administrative power passed into the hands of a minister, its shadow alone remaining to the abōgun. During only two generations were the successors of Ieyasu able to resist this traditional tendency. The representative of the third—Itetsuna (1661–1680)—succumbed to the machinations of an ambitious minister, Sakai Takakiyo, and it may be said that from that time the nominal repository of administrative authority in Yedo was generally a species of magnificent recluse, secluded from contact with the outer world and seeing and hearing only through the eyes and ears of the ladies of his household. In this respect the descendants of the great Tokugawa statesmen fared no better than their predecessors, who were as well disposed to the endowment of the shōgun as to the continuance of the empire in Kioto. Sovereign and shōgun were alike mere abstractions so far as the practical work of government was concerned. With the great mass of the feudal chiefs things fared similarly. These men who, in the days of Nobunaga, Hideyoshi and Ieyasu, had directed the policies of their fiefs and led their armies in the field, were gradually transformed, during the long peace of the Tokugawa era, into voluptuous feintanus or, at best, thoughtless dilettanti, willing to abandon the direction of their affairs to senechals and mayors, who, while on the whole their administration was able and loyal, found their own interest in contriving and perpetuating the efacement of their chiefs. Thus, in effect, the government of the country, taken out of the hands of the shōgun and the feudatories, fell into those of their vassals. There were exceptions, of course, but so rare as to be merely accidental.

Another important factor has to be noted. It has been shown above that Ieyasu bestowed upon his three sons the rich fiefs of Owari, Kii (Kishū) and Mito, and that these three families exclusively enjoyed the privilege of furnishing an heir to the shōgun should the latter be without direct issue. Mito sought therefore to have been a most unlikely place for the conception and propagation of principles subversive of the shōgun’s administrative autocracy. Nevertheless, in the days of the second of the Mito chiefs at the close of the 17th century, there arose in that province a school of thinkers who, revolting against the ascendency of Chinese literature and of Buddhism, devoted themselves to compiling a history such as should recall the attention of the nation to its own annals and revive its allegiance to Shintō. It would seem that in patronizing the compilation of this great work the Mito chief was swayed by the spirit of pure patriotism and studentism, and that he discerned nothing of the goal to which the new researches must lead the litterati of his fief. “He and they, for the sake of history and without any thought of politics, undertook a retrospect of their country’s annals, and their frank analysis furnished conclusive proof that the emperor was the prime source of administrative authority and that its independent exercise by a shōgun must be regarded as a usurpation. They did not attempt to give practical effect to their discoveries; the era was essentially academical. But this galaxy of scholars projected into the future a light which burned with growing force in each succeeding generation and ultimately burst into a flame which consumed feudalism and the shōgunate,” fused the nation into one, and restored the governing authority to the emperor. Of course the Mito men were not alone in this matter: many students subsequently trod in their footsteps and many others sought to stem the tendency; but the net result was fatal to faith in the dual system of government. Possibly nothing occurred to furnish signal proof of the system’s practical defects,
it might have long survived this theoretical disapprobation. But the crisis caused by the advent of foreign ships and by the forceful renewal of foreign intercourse in the 19th century afforded convincing evidence of the shogunate's incapacity to protect the state's supposed interests and to enforce the traditional policy of isolation which the nation had learned to consider essential to the empire's integrity.

Another important factor made for the fall of the shogunate. That factor was the traditional disaffection of the two great southern fiefs, Satsuma and Chōshū. When Ieyasu parcellled out the empire, he deemed it the wisest policy to leave these chieftains in full possession of their large estates. But this measure, construed as an evidence of weakness rather than a token of liberality, neither won the allegiance of the big feudatories nor cooled their ambition. Thus no sooner did the nation divide into two camps over the question of renewed foreign intercourse than men of the above clans, in concert with representatives of certain of the old court nobles, placed themselves at the head of a movement animated by two loudly proclaimed purposes: restoration of the administration to the emperor, and expulsion of aliens. This latter aspiration underwent a radical change when the bombardment of the Satsuma capital, Kagoshima, and the destruction of the Chōshū forts and ships at Shimonoseki proved conclusively to the Satsuma and Chōshū leaders that Japan in her un-equipped and backward condition could not hope to stand against the Occident in arms. But the unwelcome discovery was accompanied by a conviction that only a thoroughly united nation might aspire to preserve its independence, and thus the abolition of the dual form of government became more than ever an article of public faith. It is unnecessary to recount the successive incidents which conspired to undermine the shōgun's authority, and to destroy the prestige of the Yedo administration. Both had been reduced to vanishing quantities by the year 1866 when Keiki succeeded to the shōgunate.

Keiki and his cousin, Chōshū's last man of matured intellect and high capacities. He had been put forward by the anti-feudal Conservatives for the succession to the shōgunate in 1857 when the complications of foreign intercourse were in their first stage of acuteness. But, like many other intelligent Japanese, he had learned, in the interval between 1857 and 1866, that to keep her doors closed was an impossible task for Japan, and very quickly after taking the reins of office he recognized that national union could never be achieved while power was divided between Kōto and Yedo. At this juncture there was addressed to him by Yedo's united vassals an appeal to the state's great 'Tosei', a memorial to stand as the Occident in arms. But the unwelcome discovery was accompanied by a conviction that only a thoroughly united nation might aspire to preserve its independence, and thus the abolition of the dual form of government became more than ever an article of public faith. But, like many other intelligent Japanese, he had learned, in the interval between 1857 and 1866, that to keep her doors closed was an impossible task for Japan, and very quickly after taking the reins of office he recognized that national union could never be achieved while power was divided between Kōto and Yedo. At this juncture there was addressed to him by Yedo's united vassals an appeal to the state's great 'Tosei', a memorial to stand as the Occident in arms.

At the same time all officials connected with the Tokugawa or suspected of sympathy with them were expelled from office in Kōto, and the shōgun's troops were deprived of the custody of the palace gates by methods which verged upon the use of armed force. In the face of such provocation Keiki's earnest efforts to restrain the indignation of his vassals and adherents failed. They marched against Kōto and were defeated, whereupon Keiki left his castle at Osaka and retired to Yedo, where he subsequently made unconditional surrender to the Imperial army. There is little more to be set down on this page of the history. The Yedo court consented to lay aside its dignities and be stripped of its administrative authority, but all the Tokugawa vassals and adherents did not prove equally placable. There was resistance in the northern provinces in late that, Aizu feudalists refused to abandon the Tokugawa cause; there was an attempt to set up a rival candidate for the throne in the person of an Imperial prince who presided over the Uyeno Monastery in Yedo; and there was a wild essay on the part of the admiral of the shōgun's fleet to establish a republic in the island of Yezo. But these were mere ripples on the surface of the broad stream which set towards the peaceful-overthrow of the dual system of government and ultimately towards the fall of feudalism itself. That this system, the outcome of five centuries of nearly continuous warfare, was swept away in almost as many years, was due to little less of the destruction of property constitutesthe, perhaps, the most striking incident, certainly the most momentous, in the history of the Japanese nation.

The Meiji Era.—It must be remembered that when reference is made to the Japanese nation in connexion with these radical changes, only the nobles and the samurai are indicated—in other words, a section of the population representing about one-sixteenth of the whole. The bulk of the people—the agricultural, the industrial and the mercantile classes—remained outside the sphere of politics, not sharing the anti-feudal prejudices of the rank and file of the new régime. The foreign influences, and the visible attempts of the government to 'modernize' and 'Westernize' Japan, were not strong, and were not approved by the mass of the people. The transformation of the nation was not accomplished in a day, and the effects were felt in the political, social, and economic life of the people. The politics of the Meiji period were directed to the government, and the government was not the state. The main political objective was the abolition of the shōgunate, and this was accomplished by the Meiji government. The Meiji government was a new government, and it was not the old government. The Meiji government was directed by the new politicians, and it was not directed by the old politicians. The Meiji government was not a continuation of the Tokugawa government, and it was not a continuation of the shōgunate. The Meiji government was a new government, and it was not a continuation of the Tokugawa government or the shōgunate. The Meiji government was a new government, and it was not a continuation of the Tokugawa government or the shōgunate.
to a clear understanding of the issue. Fifty-five individuals may be said to have planned and carried out the overthrow of the Yedo administration, and only five of them were territorial nobles. Eight, belonging to the court nobility, laboured under the traditional disadvantages of their class, poverty and political insignificance; and the remaining forty-two, the hearts and hands of the movement, may be described as ambitious youths, who sought to make a career for themselves in the first place, and for their country in the second. The average age of the whole did not exceed thirty. There was another element for which any student of Japanese history might have been prepared: the Satsuma samurai aimed originally not merely at overthrowing the Tokugawa but also at obtaining the shōgunate for their own chief. Possibly it would be unjust to say that all the leaders of the great southern clan harboured that idea. But some of them certainly did, and not until they had consented to abandon the project did their union with Chōshū, the other great southern clan, become possible—a union without which the revolution could scarcely have been accomplished. This ambition of the Satsuma clansmen deserves special mention, because it bore remarkable fruit; it may be said to have laid the foundation of constitutional government in Japan. For, in consequence of the distrust engendered by such aspirations, the authors of the Restoration agreed that when the emperor assumed the reins of power, he should solemnly pledge himself to convene a deliberative assembly with the consent of his subjects, and to decide all measures in accordance with public opinion. This promise, referred to frequently in later times as the Imperial oath at the Restoration, came to be accounted the basis of representative institutions, though in reality it was intended solely as a guarantee against the political ascendancy of any one clan.

At the outset the necessity of abolishing feudalism did not present itself clearly to the leaders of the revolution. Their sole idea was the unification of the nation. But the more closely they thought of the side of the problem, the more they understood how far it would lead them. Evidently that one homogeneous system of law should replace the more or less heterogeneous systems operative in the various fiefs was essential, and such a substitution meant that the feudalities must be deprived of their local autonomy and, incidentally, of their control of local finances. That was a stupendous change. Hitherto each feudal chief had collected the revenues of his fief and had employed them at will, subject to the sole condition of maintaining a body of troops proportionate to his income. He had been, and was still, an independent, self-reliant, loyal, capable, and enterprising man, and it is difficult to say how far in the future the active authors of the revolution were a small band of men mainly without prestige or territorial influence. It was impossible that they should dictate any measure sensibly impairing the local and fiscal autonomy of the feudalities. No power capable of enforcing such a measure existed at the time. All the great political changes in Japan had formerly been preceded by wars culminating in the accession of some strong clan to supreme authority, whereas in this case there had been a displacement without a substitution—the Tokugawa had been overthrown, but the administration of the country was not yet taken over by any one clan to constitute itself executor of the sovereign's mandates who would have the other clans to vehement resistance. In short, the leaders of the revolution found themselves pledged to a new theory of government without any machinery for carrying it into effect, or any means of abolishing the old practice. An ingenious exit from this curious dilemma was devised by the young reformers. They induced the feudal chiefs of Satsuma, Chōshū, Tosa and Hizen, the four most powerful clans, to publicly surrender their fiefs to the emperor, praying his majesty to reorganize them and to bring them all under the same system of law. In the case of Shimazu, chief of Satsuma, and Yōdō, chief of Tosa, this act must stand to their credit as a noble sacrifice. To them the exercise of power had been a reality and the effort of surrendering it must have been correspondingly costly. But the chiefs of Chōshū and Hizen obeyed the suggestions of their principal vassals with little, if any, sense of the probable cost of obedience. The same remark applies to all the other feudatories, with exceptions so rare as to emphasize the rule. They had long accustomed to abandon the management of their affairs to their leading clansmen, and they allowed themselves to follow the same guidance at this crisis. Out of more than 250 feudatories, only 17 hesitated to imitate the example of the four southern fiefs.

An explanation of this remarkable incident has been sought by supposing that the samurai of the various clans, when they advised a course so inconsistent with fidelity to Motives the interests of their feudal chiefs, were influenced by pressures of the of the inner curiosities, or by motives of personal ambition, imagining that they themselves might in the near future be elevated to the new régime. Some hope of that kind may fairly be assumed, and was certainly realized, in the case of the leading samurai of the four southern clans which headed the movement. But it is plain that no such expectations can have been generally entertained. The simplest explanation seems to be the true one: a certain course, indicated by the action of the four southern clans, was conceived to be in accord with the spirit of the Restoration, and not to adopt it would have been to shrink publicly from a sacrifice dictated by the principle of loyalty to the Throne—a principle which had acquired supreme sanctity in the eyes of the men of the Restoration. Each new governor received some assurance about an initial step; but so soon as that was taken by the southern clans their example acquired compelling force. History shows that in political crises the Japanese samurai is generally ready to pay deference to certain canons of almost romantic morality. There was a fear of loyalty and of patriotism in the air of the year 1869. Any one hesitating, for obviously selfish reasons, to adopt a precedent such as that offered by the procedure of the great southern clans, would have seemed to forfeit the right of calling himself a samurai. But although the leaders of this remarkable movement knew that they must contrive the total abolition of feudalism and build up a new administrative edifice on foundations of constitutional monarchy, they appreciated the necessity of advancing slowly towards a goal which still lay beyond the range of their followers' vision. Thus the first steps taken after the surrender of the fiefs were to appoint the feudatories to the position of governors in the districts over which they had previously ruled; to confirm the samurai in the possession of their incomes and official positions; to put an end to the distinction between court nobles and territorial nobles, and to organize in Kiōto a cabinet consisting of the leaders of the restoration. Each new governor was some uncertain about their income of the fief by way of emoluments; the pay of the officials and the samurai, as well as the administrative expenses of the district, was defrayed from the same source, and the residue, if any, was to pass into the treasury of the central government.

The defects of this system from a monarchial point of view soon became evident. It did not give the power of either the purse or the sword to the sovereign. The revenues of the administrative districts continued to be collected and disbursed by the former feudalities, which proved to the revolution that they must contrive the total abolition of feudalism and build up a new administrative edifice on foundations of constitutional monarchy, they appreciated the necessity of advancing slowly towards a goal which still lay beyond the range of their followers' vision. The Anti-feudal Idea.

Defects of the First Measures.
great clans had now three representatives in the ministry. These clans were further persuaded to send to Tōkyō—whither the emperor had moved his court—contingents of troops to form the nucleus of a national army. Importance attaches to these details because the principle of clan representation, illustrated in the organization of the cabinet of 1871, continued to be approximately observed for many years in forming ministries, and ultimately became a target for the attacks of party politicians.

On the 29th of August 1871, an Imperial decree announced the abolition of the system of local autocracy, and the removal of all the territorial nobles from the posts of governor. The taxes of the former fiefs were to be paid henceforth into the central treasury; all officials were to be appointed by the Imperial government, and the feudalists, retaining permanently an income of one-tenth of their original revenues, were to make Tōkyō their place of residence. As for the samurai, they remained for the moment in possession of their hereditary pensions. Radical as these changes seem, the disturbance caused by them was not great, since they left the incomes of the military classes undivided. As individuals, they did not find their income for life only, but the majority were hereditary, and all had been granted in consideration of their holders devoting themselves to military service. Four hundred thousand men approximately were in receipt of such emoluments, and the total amount annually taken from the taxpayers for this purpose was about £3,000,000. Plainly the nation would have to be relieved of this burden sooner or later. The samurai were essentially an element of the feudal system, and that they should survive the latter's fall would have been incongruous. On the other hand, suddenly and wholly to deprive these men and their families—a total of some two million persons—of the means of subsistence on which they had hitherto relied with absolute confidence, and in return for which they and their forefathers had rendered faithful service, would have been an act of inhumanity. It may easily be conceived that this problem caused extreme perplexity to the administrators of the new Japan. They left it unsolved for the moment, trusting that time and the loyalty of the samurai themselves would suggest some solution. As for the feudal chiefs, who had now been deprived of all official status and reduced to the position of private gentlemen, without even a patent of nobility to distinguish them from the common people, they did not find anything specially irksome or regrettable in their altered position. No scrutiny had been made into the contents of their treasures. They were allowed to retain unquestioned possession of all the accumulated funds of their former fiefs, and they also became public creditors for annual allowances equal to one-tenth of their feudal revenues. They had never previously been so pleasantly circumstanced. It is true that they were entirely stripped of all administrative and military authority; but since their possession of such authority had been in most cases merely nominal, they only felt the change as a relief from responsibility.

By degrees public opinion began to declare itself with regard to the samurai. If they were to be absorbed into the bulk of the people and to lose their fixed incomes, some capital must be placed at their disposal to begin the world again. The samurai themselves showed a noble faculty of resignation. They had been a privileged class, but they had purchased their privileges with their blood and by serving as patterns of all the qualities most prized among Japanese national characteristics. The record of their acts and the recognition of the people entitled them to look for munificent treatment from the first of the government which they had been the means of setting up. Yet none of these considerations blinded them to the painful fact that the time had passed them by; that no place existed for them in the new polity. Many of them voluntarily stepped down into the company of the peasant or the tradesman, and many others signified their willingness to join the ranks of common bread-winners if some aid was given to equip them for such a career. After two years' consideration the government took action. A decree announced, in 1873, that the treasury was prepared to commute the pensions of the samurai at the rate of six years' purchase for hereditary pensions and four years for life pensions—one-half of the commutation to be paid in cash, and one-half in bonds bearing interest at the rate of 8%. It will be seen that a perpetual pension of £10 would be exchanged for a payment of £30 in cash, together with securities giving an income of £2, 8s.; and that a 50 life pensioner received £20 in cash and securities yielding £1, 12s. annually. It is scarcely credible that the samurai should have accepted such an arrangement. Something, perhaps, must be ascribed to their want of business knowledge, but the general impression is that they were ready to make a large sacrifice in the interests of their country. Nothing in all their career as soldiers became them better than their manner of abandoning it. They were told that they might lay aside their swords, and many of them did so, though from time immemorial they had cherished the sword as the mark of a gentleman, the most precious possession of a warrior, and the one outward evidence that distinguished men of their order from common toilers after gain. They saw themselves deprived of their military employment, were invited to surrender more than one-half of the income it brought, and solved problems of foreign intercourse and administrative reform with the tradition to earn bread in any calling save that of arms. Yet, at the invitation of a government which they had helped to establish, many of them bowed their heads quietly to this sharp reverse of fortune. It was certainly a striking instance of the fortitude and resignation which the creed of the samurai required him to display in the presence of adversity. As yet, however, the government's measures with regard to the samurai were not compulsory. Men laid aside their swords and commuted their pensions at their own option.

Meanwhile differences of opinion began to occur among the leaders of progress themselves. Coalition formed for destructive purposes are often found unable to endure the strain of constructive efforts. Such lack of cohesion might easily have been foreseen in the case of the Japanese reformers. Young men without experience of public affairs, or special education to fit them for responsible posts, found the duty suddenly imposed on them not only of devising administrative and fiscal systems universally applicable to a nation hitherto divided into a congeries of semi-independent principalities, but also of shaping the country's demeanour towards novel problems of foreign intercourse and civilisation. By long as the heat of their assault upon the shōgunate fused them into a homogeneous party they worked together successfully. But when they had to build a brand-new edifice on the ruins of a still vivid past, it was inevitable that their opinions should vary as to the nature of the materials to be employed. In this divergence of views many of the capital incidents of Japan's modern history had their origin. Of the fifty-five men whose united efforts had compassed the fall of the shōgunate, five stood conspicuous above their colleagues. They were Iwakura and Sanjō, court nobles; Saigō and Okubo, samurais of Satsuma, and Kido, samurai of Chōshū. In the second rank came many men of great gifts, whose youth alone disqualified them for prominence—Itō, the constructive statesman of the Meiji era, who inspired nearly all the important measures of the time, though he did not openly figure as their originator; Inouye, who never lacked a resource or swerved from the dictates of loyalty; Okuma, a politician of subtle, versatile and vigorous intellect; Itagaki, the Rousseau of his era; and a score of others created by the extraordinary circumstances with which they had to deal. But the five first mentioned were the captains, the rest of the fleet. Among the five, four were shōgun reformers—none of course, from selfish motives, but truthfully bent upon promoting the interests of their country before all other aims. The fifth, Saigō Takamori, was a man in whom boundless ambition lay concealed under qualities of the noblest and most enduring type. His absolute freedom from every trace of sordidness gave currency to a belief that his aims were of the simplest; the story of his career satisfied the highest canons of the samurai; his massive physique, commanding presence and sunny aspect impressed and attracted even those who had no
opportunity of admiring his life of self-sacrificing effort or appreciating the remarkable military talent he possessed. In the first part of his career, the elevation of his clan to supreme power seems to have been his sole motive, but subsequently personal ambition appears to have swayed him. To the consummation of either object the preservation of the military class was essential. By the swords of the samurai alone could a new imperium sit imperio be carved out. On the other hand, Saigō's colleagues in the movement were clearly not only that the samurai were an unwarrantable burden on the nation, but also that their continued existence after the fall of feudalism would be a menace to public peace as well as an anomaly. Therefore they took the steps already described, and followed them by a conscription law, making every adult male liable for military service without regard to his social standing. It is easy to conceive how painfully unwelcome this conscription law proved to the samurai. Many of them were not unwilling to commute their pensions, since their creed had always forbidden them to care for money. Many of them were not unwilling to abandon the habit of carrying swords, since the adoption of foreign costume rendered such a custom incongruous and inconvenient. But very few of them could readily consent to step down from their cherished position as the military class, and relinquish their traditional title to bear the whole responsibility and enjoy the whole honour of fighting their country's battles. They had supposed, not unreasonably, that service in the army and navy would be reserved exclusively for them and their sons, whereas now the commonest rustic, mechanic or tradesman would be equally eligible.

While the pain of this blow was still fresh there occurred a trouble with Korea. The little state had behaved with insulting contumely, and when Japan's course came to be among the debated in Tokyō, a disruption resulted in the ranks of the reformers. Saigō saw in a foreign war the sole remaining chance of achieving his ambition by lawful means. The government's conscription scheme, yet in its infancy, had not produced even the skeleton of an army. If Korea had to be conquered, the samurai must be employed; and their employment would mean, if not their rehabilitation, at least their organization into a force who, under Saigō's leadership, might dictate a new policy. Other members of the cabinet believed that the nation would be disgraced if it tamely endured Korea's insults. Thus several influential voices swelled the clamour for war. But a peace party offered strenuous opposition. Its members saw the collateral issues of the problem, and declared that the country must not think of taking up arms during a period of radical transition. The final discussion took place in the emperor's presence. The advocates of peace under stood the national significance of the issue and perceived that there was danger in pointing to the moral weakening of the country, but whether the country should halt or advance on its newly adopted path of progress. They prevailed, and four members of the cabinet, including Saigō, resigned. This rupture was destined to have far-reaching consequences. One of the seceders immediately raised the standard of revolt. Among the devices employed by him to win adherents was an attempt to fan into flame the dying embers of the anti-foreign sentiment. The government easily crushed the insurrection. Another seceder was Itagiaki Taisuke. The third and most prominent was Saigō, who seems to have concluded from that moment that he must abandon his aims or achieve them by force. He retired to his native province of Satsuma, and applied his whole resources, his great reputation and the devoted loyalty of a number of able followers to organizing and equipping a strong body of samurai. Matters were facilitated for him by the conservatism of the celebrated Shimazu Saburō, former chief of Satsuma, who, though not opposed to foreign intercourse, had been revolted by the wholesale iconoclasm of the time, and by the indiscriminate rejection of Japanese customs in favour of foreign. He protested vehemently against what seemed to him a slavish abandonment of the nation's individuality, and finding his protest fruitless, he set himself to preserve in his own distant province, where the writ of the Yedo government had never run, the fashions, institutions and customs which his former colleagues in the administration were ruthlessly rejecting. Satsuma thus became a centre of conservative influences, among which Saigō and his constantly augmenting band of samurai found a congenial environment. During four years this clash grew constantly.

In the meanwhile (1876) two extreme measures were adopted by the government: a veto on the wearing of swords, and an edict ordering the compulsory commutation of the pensions and allowances received by the nobles and the samurai. Three years previously the discarding of swords had been declared optional, and a scheme of voluntary commutation had been announced. Many had bowed quietly to the spirit of these enactments. But many still retained their swords and drew their pensions as of old, obstructing the government's projects for the reorganization of society, and imposing, in the latter, an intolerable burden on the resources of the treasury. The government thought that the time had come, and that its own strength sufficed, to substitute compulsion for persuasion. The financial measure—which was contrived so as to affect the smallest pension-holders least injuriously—evoked no complaint. The samurai remained faithful to the creed which forbade them to be concerned about money. But the veto against sword-wearing overtaxed the patience of the extreme Conservatives. It seemed to them that all the most honoured traditions of their ancestors were being ruthlessly sacrificed on the altar of alien innovations. Armed protests ensued. A few score of samurai, equipping themselves with the hauberk and weapons of old times, fell upon the garrison of a castle, killed or wounded some 300, and then, retiring to an adjacent mountain, died by their own hands. Their example found imitators in two other places, and finally the Satsuma samurai rose in arms under Saigō.

This was an insurrection very different in dimensions and motives from the outbreaks that had preceded it. During four years the preparations of the Satsuma men had been unremitting. They were equipped with rifles and cannon; they numbered some 30,000; they were all of the military class, and in addition to high training in western tactics and in the use of modern arms of precision, they knew how to wield that formidable weapon, the Japanese sword, of which their opponents were for the most part ignorant. Ostensibly their object was to restore the samurai to their old supremacy, and to secure for them all the posts in the army, the navy and the administration. But although they doubtless entertained that intention, it was put forward mainly with the hope of winning the co-operation of the military class throughout the empire. The real purpose of the revolt was to gain the governing power for Satsuma. A bitter struggle ensued. Beginning on the 29th of January 1877, it was brought to a close on the 24th of September by the death, voluntary or in battle, of all the rebel leaders. During that period the number of men engaged on the government's side had been 66,000 and the number on the side of the rebels 40,000, out of which the killed and wounded aggregated 35,000, or 53% of the whole. Had the government's troops been finally defeated, there can be no doubt that the samurai's exclusive title to man and direct the army and navy would have been re-established, and Japan would have found herself permanently saddled with a military class, heavily burdening her finances, seriously impeding her progress towards constitutional government, and perpetuating all the abuses incidental to a policy in which the power of the sword rests entirely in the hands of one section of the people. The nation scarcely appreciated the great issues that were at stake. It found more interest in the struggle as furnishing a conclusive test of the efficiency of the new military system compared with the old. The army sent to quell the insurrection consisted of recruits drawn indiscriminately from every class of the people. Viewed in the light of history, it was an army of commoners, deficient in the fighting instinct, and traditionally
demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidental civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The government’s reforms seemed to outstrip the nation’s readiness for them, and the results were an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the instruction of lighthouses and the organization of navies. To Frenchmen was left the task of casting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? These questions did not trouble the Japanese nearly so much as they troubled strangers. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the queue irrevocably. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he carried on as in olden days, and in their thousands Handsome houses were built and furnished according to Western models. Each had an annex where aloes, verandas, mattel ceilings and paper sliding doors continued to do traditional duty. Beefsteaks, beer, “grape-wine,” knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and serviceable attribute of foreign civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation’s doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unre ERRINGLY in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan’s domestic politics except an attempt on the part of some of her people to force the growth of parliamentary government. It is evident that the united effort made by the fiends to overthrow the system of dual government and wrest the administrative power from the shōgun could have only one logical result: the concentration of governmental power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their considerations the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassment, and the more so because the deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him had there been any machinery for appealing to it, gave fresh impetus to his faith in constitutional government. Resigning office on account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the workings of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country’s polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki’s guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substitute a Satsuma clique for the oligarchy already in power. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the doctrine of the unreality of education had been admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They chafed against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen
equally on the whole military class, the official prizes under the new system were monopolized by a small coterie of men belonging to the four principal classes. It is on record that Itagaki would have been content originally with an assembly consisting half of officials, half of non-official samurai, and not including any popular element whatever.

But the government did not believe that the time had come even for a measure such as the Tosa Liberals advocated. The statesmen in power conceived that the nation must be educated up to constitutional standards, and that the first step should be to provide an official model. Accordingly, in 1874, arrangements were made for periodically convening an assembly of prefectoral governors, in order that they might act as channels of communication between the central authorities and the provincial population, and mutually exchange ideas as to the safest and most effective methods of encouraging progress within the limits of their jurisdictions. This was intended to be the embryo of representative institutions. But the governors, being officials appointed by the cabinet, did not bear in any sense the character of popular nominees, nor could it even be said that they reflected the public feeling of the districts they administered. They were and remained, in essence, the personal agency which, by means of heroic object lessons, to win the people's allegiance to the government's progressive policy, rather than to convince the government of the danger of overstepping the people's capacities.

These conventions of local officials had no legislative power whatever. The foundations of a body for discharging that function were laid in 1875, when a senate (genro-in) was organized. It consisted of official nominees, and its duty was to discuss and revise all laws and ordinances prior to their promulgation. It is to be noted, however, that this expediency not less than a spirit of progress presided at the creation of the senate. Into its ranks were drafted a number of men for whom no places could be found in the executive, and who, without some official employment, would have been drawn into the current of disaffection. From that point of view the senate soon came to be regarded as a kind of hospital for administrative invalids, but undoubtedly its discharge of quasi-legislative functions proved suggestive, useful and instructive.

The second meeting of the provincial governors had just been prorogued when, in the spring of 1875, the great minister, Okubo, was assassinated. Okubo, uniformly ready to bear the heaviest burden of responsibility in every political complication, had stood prominently before the nation as Saigō's opponent. He fell under the swords of Saigō's sympathizers. They immediately surrendered themselves to justice, having taken previous care to circulate a statement of motives, which showed that they ranked the government's failure to establish representative institutions as a sin scarcely less heinous than its alleged abuses of power. Well-informed followers of Saigō could never have been sincere believers in representative institutions. These men belonged to a province far removed from the scene of Saigō's desperate struggle. But the broad fact that they had sealed with their life-blood an appeal for a political change indicated the existence of a strong public conviction which would derive further strength from their act. The Japanese are essentially a brave people. Throughout the troublesome events that preceded and followed the Restoration, it is not possible to point to one man whose obduracy to duty or conviction was visibly weakened by prospects of personal peril. Okubo's assassination did not alarm any of his colleagues; but they understood its suggestive- ness, and hastened to give effect to a previously formed resolve.

Two months after Okubo's death, an edict announced that elective assemblies should forthwith be established in various prefectures and cities. These assemblies were to consist of members having a high property qualification, elected by voters having one-half of that qualification; the voting to be by signed ballot, and the session to last for one month in the spring of each year. As to their functions, they were to determine the method of levying and spending local taxes, subject to approval by the minister of state for home affairs; to scrutinize the accounts for the previous year, and, if necessary, to present petitions to the central government. Thus the foundations of genuine representative institutions were laid. It is true that legislative power was not vested in the local assemblies, but in all other important respects they discharged parliamentary duties. Their history need not be related at any length. Sometimes they came into violent collision with the governor of the prefecture, and unsightly struggles resulted. The governors were disposed to advocate public works which the Liberal politicians regarded as extravagant; and further, acts to be done by, and as political organizations grew stronger, there was found in each assembly a group of men ready to oppose the governor simply because of his official status. But on the whole the system worked well. The local assemblies served as training schools for the future parliament, and their members showed devotion to public duty as well as considerable aptitude for debate.

This was not what Itagaki and his followers wanted. Their purpose was to overthrow the clique of clannish men who, holding the reins of administrative power, monopolized the The Liberal principal office, and officialdom who, in fact, formed the monopoly of such an aim the local assemblies helped little. Itagaki redoubled his agitation. He organized his fellow-thinkers into an association called jiyūtō (Liberals), the first political party in Japan, to whose ranks there very soon gravitated several men who had been in office and resented the loss of it; many that had never been in office and desired to be; and a still greater number who sincerely believed in the principles of political liberty, but had not yet considered the possibility of immediately adapting such principles to Japan's case. It was in the nature of things that an association of this kind, professing such doctrines, should present a picturesque aspect to the public, and that its collisions with the authorities should invite popular sympathy. Nor were collisions infrequent. For the government, arguing that if the nation was not ready for representative institutions, neither was it ready for full freedom of speech or of public meeting, legislated consistently with that theory, and entrusted to the police large powers of control over the press and the platform. The exercise of these powers often created situations in which the Liberals were able to pose as victims of official tyranny, so that they grew in popularity and the contagion of political agitation spread.

Three years later (1881) another split occurred in the ranks of the ruling oligarchy. Okuma Shigenobu (afterwards Count Okuma) seceded from the administration, and was followed by a number of able men who had owed their appointments to his patronage, or who, during his tenure of office as minister of finance, had passed under the influence of his powerful personality. If Itagaki be called the Rousseau of Japan, Okuma may be regarded as the Peel. To remarkable financial ability and a lucid, vigorous judgment he added the faculty of placing himself on the crest of any wave which a genuine aura popularis had begun to swell. He, too, inscribed on his banner of revolt against the oligarchy the motto "constitutional government," and it might have been expected that his followers would join hands with those of Itagaki, since the avowed political purpose of both was identical. They did nothing of the kind. Okuma organized an independent party, calling themselves Progressivists (shimpōdō), who not only stood aloof from the Liberals but even assumed an attitude hostile to them. This fact is eloquent. It shows that Japan's first political party was grouped, not about principles, but about person. Hence an inevitable lack of cohesion among their elements and a constant tendency to break up into caves and coteries. These are the characteristics that render the story of political evolution in Japan so perplexing to a foreign student. He looks for differences of platform and finds none. Just as a true Liberal must be a Progresist, and a true Progresist a Liberal, so, though each may cast his profession of faith in a mould of different phrases, the ultimate shape must be the same. The mainsprings of early political agitation in Japan were personal
grievances and a desire to wrest the administrative power from the hands of the statesmen who had held it so long as to overtax the patience of their rivals. He that searches for profound moral or ethical bases will be disappointed. There were no Conservatives. Society was permeated with the spirit of progress. In a comparative sense the epithet "Conservative" might have been applied to the statesmen who proposed to defer parliamentary institutions until the people, as distinguished from the former samurai, had been in some measure prepared for such an innovation. But since these very statesmen were the guiding spirits of the Meiji revolution, it was plain that their convictions must be radical, and that, unless they did violence to their record, they must finally lead the country to representative institutions, the logical sequel of their own reforms.

Okubo's assassination had been followed, in 1878, by an edict announcing the establishment of local assemblies. Okuma's succession in 1881 was followed by an edict announcing that a national assembly would be convened in 1891.

The political parties, having now virtually attained their object, might have been expected to desist from further agitation. But they had another task to perform—inight that of disseminating and spreading among the future electors. They worked diligently, and they had an undisputed field, for no one was put forward to champion the government's cause. The campaign was not always conducted on lawful lines. There were plots to assassinate ministers; there was an attempt to employ dynamite, and there was a scheme to foment an insurrection in Korea. On the other hand, dispersals of political meetings by order of police inspectors, and suspension or suppression of newspapers by the unchallengeable verdict of a minister for home affairs, were carried on with great thoroughness and without any regard to the future electors. They worked diligently, and they had an undisputed field, for no one was put forward to champion the government's cause. The campaign was not always conducted on lawful lines. These are the broad outlines of the contest that began in the first session of the Diet and continued for several years. It is unnecessary to speak of the special points of controversy.

Just as the political parties had been formed on the lines of persons, not principles, so the opposition in the Diet was directed against men, not measures. The struggle presented varying aspects at different times, but the fundamental question at issue never changed. Obstruction was the weapon of the political parties. They sought to render legislation and finance impossible for any ministry that refused to take its mandate from the majority in the lower house, and they proclaimed even patriotism to their destructive campaign by making "anti-clannism" their war-cry, and indistinctly fostering the idea that the struggle lay between administration guided by public opinion and administration controlled by a clique of clansmen who separated the throne from the nation. Had not the House of Peers stood stanchly by the government throughout this contest, it is possible that the nation might have suffered severely from the rashness of the political parties.

There was something melancholy in the spectacle. The Restoration statesmen were the men who had made Modern Japan; the man who had raised her, in the face of immense obstacles, from the position of an insignificant Oriental state to that of a formidable unit in the comity of nations; the men, finally, who had given to her a constitution and representative institutions. Yet these same men were now fiercely attacked by the arms which they had themselves served; were held up to public obloquy as self-seeking usurpers, and were declared to be impeding the people's constitutional route to administrative privileges, when in reality they were only holding the breach until the people should be able to march into the citadel with some show of orderly and competent organization. That there was no corruption, no abuse of position, is not to be presumed; but on the whole the conservatism of the clansmen had only one object—to provide that the newly constructed representative machine should not be set working until its parts were duly adjusted and brought into proper gear. On both sides the leaders understood the situation accurately. The heads of the parties, while publicly clamouring for parliamentary cabinets, privately confessed that they were not yet prepared to assume administrative responsibilities; and the so-called "clan statesmen," while refusing to believe the world would accept the Diet's mandate, admitted in official circles that the question was one of time only. The situation did not undergo any marked change until, the country becoming engaged in war with China (1894–95), domestic squabbles were forgotten in the presence of foreign danger. From that time an era of cooperation commenced. Both the political parties joined hands to vote funds for the prosecution of the campaign, and one of them, the Liberals, subsequently gave support to a cabinet under the presidency of Marquis Itō, the purpose of the union being to carry through the diet an extensive scheme of enlarged armaments and public works planned in the sequel of the war. The Progressives, however, ever remained implacable, continuing their opposition to the thing called bureaucracy quite irrespective of its measures.

The next phase (1898) was a fusion of the two parties into one large organization which adopted the name "Constitutional Fusion of the Two Parties" (kensei-tō). By this union the chief obstacles to parliamentary cabinets were removed. Not only did the Constitutionalists command a large majority in the lower house, but also they possessed a sufficiency of men who, although lacking ministerial experience, might still advance a reasonable title to be entrusted with portfolios. Immediately the emperor, acting on the advice of Marquis Itō, invited Counts Okuma and Itagaki to form a cabinet. It was essentially a trial. The party politicians were required to demonstrate in practice the justice of the claim they had been so long asserting in theory. They had worked in combination for the destructive purpose of pulling down the so-called "clan statesmen"; they had now to show whether they could work in combination for the constructive purposes of administration. Their heads, Counts Okuma and Itagaki, accepted the Imperial mandate, and the nation watched the result. There was no need to wait long. In less than six months these new links snapped under the tension of old enmities, and the coalition split up once more into its original elements. It had demonstrated that the sweets of power, which the "clan statesmen" had so vehemently affirmed of coveting, possessed even greater attractions for their accusers. The issue of the experiment was such a palpable fiasco as it effectually rehabilitated the "clan statesmen," and finally proved, what had indeed been long evident to every close observer, that without the assistance of those statesmen no political party could hold office successfully.

Thenceforth it became the unique aim of Liberals and Progressists alike to join hands permanently with the men towards whom they had once displayed such implacable hostility. Prince Itō, the leader of the so-called "elder statesmen," received special solicitations, for it was said that he would bring to any political party an overwhelming access of strength alike in his own person and in the number of friends and disciples certain to follow him. But Prince Itō declined to be absorbed into any existing party, or to adopt the principle of parliamentary cabinets. He would consent to form a new association, but it must consist of men sufficiently disciplined to obey him implicitly, and sufficiently docile to accept their programme from his hand. The Liberals agreed to these terms. They dissolved their party (August 1900) and enrolled themselves as the ranks of a new organization, which did not even call itself a party, its designation being rikken seiyū-kai (association of friends of the constitution), and which had for the cardinal plank in its platform a declaration of ministerial irresponsibility to the Diet. A singular page was thus added to the story of Japanese political development; for not merely did the Liberals enlist under the banner of the statesmen whom for twenty years they had fought to overthrow, but they also tacitly consented to erase from their profession of faith its essential article, parliamentary cabinets, and, by resigning that article to the Progressists, created for the first time an opposition with a solid and intelligible basis. It grew steadily in strength whereas the number of its opponents declined correspondingly. At the general elections in May 1908 the former secured 195 seats, the four sections of the opposition winning only 184. Thus for the first time in Japanese parliamentary history a majority of the lower chamber found themselves marching under the same banner. Moreover, the four sections of the opposition were independently organized and differed nearly as much from one another as they all differed from the seiyū-kai. Their impotence to make head against the solid phalanx of the latter was thus conspicuous, especially during the 1908–1909 session of the Diet. Much talk then began about the necessity of coalition, and that this talk will materialize eventually cannot be doubted. Reduction of armaments, abolition of taxes specially imposed for belligerent purposes, and the substitution of a strictly constitutional system for the existing bureaucracy—these objects constitute a sufficiently solid platform, and nothing is wanted except that a body of proved administrators should join the opposition in occupying it. There were in 1909 no signs, however, that any such derivation from the ranks of officialdom would take place. Preference is paid to public opinions inasmuch as even a seiyū-kai ministry will not remain in office after its popularity has begun to show signs of waning. But no deference is paid to the doctrine of party cabinets. Prince Itō did not continue to lead the seiyū-kai for more than three years. In July 1903 he delegated that function to Marquis Saionji, representative of one of the very oldest families of the court nobility and a personal friend of the emperor, as also was Prince Itō. The Imperial stamp is thus vicariously set upon the principle of...
political combinations for the better practical conduct of parliamentary business, but that the selyō-kai, founded by Prince Itō and led by Marquis Saiso-jii, should ever hold office in defiance of the sovereign's mandate is unthinkable. Constitutional institutions in Japan are therefore developing along lines entirely without precedent. The storm and stress of early parliamentary days have given place to comparative calm. During the first twelve sessions of the Diet, extending over 8 years, there were five dissolutions of the lower house. During the next thirteen sessions, extending over 11 years, there were two dissolutions. During the first 8 years of the Diet's existence there were six changes of cabinet; during the next 11 years there were five changes. Another healthy sign was that men of affairs were beginning to realize the importance of parliamentary representation. At first the constituencies were contested almost entirely by professional politicians, barristers and journalists. In 1909 there was a solid body (the boshin club) of business men commanding nearly 50 votes in the lower house; and as the upper chamber included 45 representatives of the highest tax-payers, the interests of commerce and industry were intelligently debated. (F. By.)

X.—THE CLAIM OF JAPAN: BY A JAPANESE STATESMAN

It has been said that it is impossible for an Occidental to understand the Oriental, and vice versa; but, admitting that the mutual understanding of two different races or peoples is a difficult matter, why should Occidentals and Orientals be thus set in opposition? No doubt, different peoples of Europe understand each other better than they do the Asiatic; but can Asiatic peoples understand each other better than they can Europeans or than the Europeans can understand any of them? Do Japanese understand Persians or even Indians better than English or French? It is true perhaps that Japanese can and do understand the Chinese better than Europeans; but that is due not only to centuries of mutual intercourse, but to the careful and particular fact that they have adopted the old classical Chinese literature as their own, somewhat in the way, but in a much greater degree, in which the European nations have adopted the old Greek and Latin literatures. What is here contended for is that the mutual understanding of two peoples is not so much a matter of race, but of the knowledge of each other's history, traditions, literature, &c.

The Japanese have, they think, suffered much from the misunderstanding of their motives, feelings and ideas; what they want is to be understood fully and to be known for what they really are, but generally are not. They, for instance, above all, not to be lumped as Oriental, but to be known and judged on their own account. In the latter half of the 19th century, in fact up to the Chinese War, it irritated Japanese travelling abroad more than anything else to be taken for Chinese. Then, with the Chinese War, the alarm about Japan leading Eastern Asia to make a general attack upon Europe—the so-called Yellow Peril—seemed so ridiculous to the Japanese that the bad effects of such wild talk were not quite appreciated by them. The aim of the Japanese nation, ever since, at the time of the Restoration (1868), they laid aside definitively all ideas of seclusion and closedness; but of nations on earth that would rise above the level of the Eastern peoples to an equality with the Western and should be in the foremost rank of the brotherhood of nations; it was not their ambition at all to be the champion of the East against the West, but rather to beat down the barriers between themselves and the West.

The intense pride of the Japanese in their nationality, their patriotism and loyalty, arise from their history, for what other nation can point to an Imperial family of one unbroken lineage reigning over the land for twenty-five centuries? Is it not a glorious tradition for a nation, that its emperor should be descended directly from that grandson of the great heaven-illuminating goddess," to whom she said, "This land (Japan) is the region over which my descendants shall be the lords. Do thou, my August Child, proceed thither and govern it. Go! The prosperity of thy dynasty shall be crowned with heaven and earth." Thus they call their country the land of kami (ancient gods of tradition).

With this spirit, in the old days when China held the hegemony of the East, and all neighbouring peoples were regarded as its tributaries, Japan alone, largely no doubt on account of its insular position, held itself quite aloof; it set at defiance the power of Kublai and routed utterly the combined Chinese and Korean fleets with vast forces sent by him to conquer Japan, this being the only occasion that Japan was threatened with a foreign invasion.

With this spirit, as soon as they perceived the superiority of the Western civilization, they set to work to introduce it into their country, just as in the 7th and 8th centuries they had adopted and adapted the Chinese civilization. In 1868, the first year of the era of Meiji, the emperor swore solemnly the memorable oath of five articles, setting forth the policy that was to be and has been followed thereafter by the government. These five articles were:—

1. Deliberative assemblies shall be established and all measures of government shall be decided by public opinion.

2. All classes, high and low, shall unite in vigorously carrying out the plan of government.

3. Officials, civil and military, and all common people shall as far as possible be accorded their just desires so that they may not be any discontent among them.

4. Uncivilized customs of former times shall be broken through, and everything shall be based upon just and equitable principles of heaven, earth (Japanese), and man.

5. Knowledge shall be sought for throughout the world, so that the welfare of the empire may be promoted.

(Translation due to Prof. N. Hozumi of Tōkyō Imp. Univ.)

It is interesting, as showing the continuity of the policy of the empire, to place side by side with these articles the words of the Imperial rescript issued in 1908, which are as follows:—

We are convinced that with the rapid and unceasing advance of civilization, the East and West, mutually dependent and helping each other, are bound by common interests. It is our sincere wish to continue to enjoy for ever its benefits in common with other powers by entering into closer and closer relations and strengthening our friendship with them. Now in order to be able to move onward along with the constant progress of the world and to share in the blessings of civilization, it is obvious that we must develop our internal resources; our nation, but recently emerged from an age of isolation, must grow strong and increase its activities in every branch of administration. It therefore behoves our people to endeavour with one mind, from the highest to the lowest, to pursue their calling with unflagging zeal and to strive for the establishment of that society, which it is the duty of the Japanese to uphold, that is, to abide in faith and righteousness, to be simple and warm-hearted, to put away ostentation and vanity and strive after the useful and solid, to avoid idleness and indigence, and to apply themselves industriously to the strengthening of the nation.

The ambition of the Japanese people has been, as already stated, to be recognized as an equal by the Great Powers. With this object in view, they have spared no efforts to introduce what they considered superior in the Western civilization, although it may perhaps be doubted whether in their eagerness they have always been wise. They have always resisted any discrimination against them as an Asiatic people, not merely protesting against it, knowing that such would not avail much, but making every endeavour to remove reasons or excuses for it. Formerly there were troops stationed to guard several legations; foreign postal service was not entirely in the hands of the Japanese government for a long time; the native and other indigents against the sovereign of the nation were gradually removed by proving that they were not necessary. Then there was the question of the extra-territorial jurisdiction; an embassy was sent to Europe and America as early as 1871 with a view to the revision of treaties in order to do away with this imperium in imperio, that being the date originally fixed for the revision; the embassy, however, failed in its object but was not altogether fruitless, for it was then clearly seen that it would be necessary to revise thoroughly the system of laws and entirely to reorganize the law courts before Occidental nations could be induced to forgo...
this privilege. These measures were necessary in any case as a consequence of the introduction of the Western methods and ideas, but they were hastened by the fact of their being a necessary preliminary to the revision of treaties. When the new code of laws was brought before the Diet at its first session, and there was a great opposition against it in the House of Peers on account of its many defects and especially of its ignoring many established usages, the chief argument in its favour, or at least one that had a great influence with many who were unacquainted with technical points, was that it was necessary for the revision of treaties and that the defects, if any, could be afterwards amended at leisure. These preparations on the part of the government, however, failed to move the Diet, and it was left to the action of the home ministry, or at least the more intelligent part of it, was charging impatiently under what was considered a national indignity. The States, by being the first to agree to its abandonment, although this agreement was rendered nugatory by a conditional clause, added to the stock of goodwill with which the Japanese have always regarded the Americans on account of their attitude towards them. When at last the consummation so long and ardently desired was attained, great was the joy with which it was greeted, for now it was felt that Japan was indeed on terms of equality with the most powerful and influential of the nations, and first to conclude the revised treaty—an act due to the remarkable foresight of her statesmen in spite of the opposition of their countrymen in Japan—did much to bring about the cordial feeling of the Japanese towards the British, which made them welcome with such enthusiasm the Anglo-Japanese alliance. The importance of this last as a powerful instrument for the preservation of peace in the extreme East has been, and always will be, appreciated at its full value by the more intelligent and thoughtful among the Japanese; but by the mass of the people it was received with great acclamation, owing partly to the already existing good feeling towards the British, but also in a large measure because it was felt that the fact that Great Britain should leave its "splendid isolation" to enter into this alliance proclaimed in the clearest possible way that Japan had entered on terms of full equality among the brotherhood of nations, and that thenceforth there could be no ground for that discrimination against them as an Asiatic nation which had been so galling to the Japanese people.

There have been, and there still are being made, many charges against the Japanese government and people. While admitting that some of them may be founded on fact, it is important to point out that traits and acts of a few individuals have often been generalized to be the national characteristic or the result of a fixed policy, while in many cases such charges are due to misunderstandings arising from want of thorough knowledge of each other's language, customs, usages, ideas, &c. Take the principle of "the open door," for instance; the Japanese government has been charged in several instances with acting contrary to it. It is natural that where (as in China) competition is very keen between men of different nationalities, individuals should sometimes feel aggrieved and make complaints of unfairness against the government or their competitors; it is also natural that a large number of usages at home should listen to and believe in those charges made against the Japanese by their countrymen in the East, while unfortunately the Japanese, being so far away and often unaware of them, have not a ready means of vindicating themselves; but subsequent investigations have always shown those charges to be either groundless or due to misunderstandings, and it may be asserted that in no case has the charge been substantiated that the Japanese government has knowingly, deliberately, of malice prepense been guilty of breach of faith in violating the principle of "the open door" to which it has solemnly pledged itself. That it has often been accused by the Japanese subjects of weakness vis-à-vis foreign powers to the detriment of their interests, is perhaps a good proof of its fairness.

The Japanese have often been charged with looseness of commercial morality. This charge is harder to answer than the last, for it cannot be denied that there have been many instances of dishonesty on the part of Japanese tradesmen or employees; in
people towards Japan and Japanese, and they look upon the idea of war between Japan and the United States as ridiculous.

Restrictions upon Japanese emigrants to the United States and to Australia are irritating to the Japanese, because it is a discrimination against them as belonging to the "yellow" race, whereas it has been their ambition to raise themselves above the level of the Eastern nations to an equality with the Western nations, although they cannot change the colour of their skin. With the Japanese even of the highest rank and standing has to obtain a permit from an American Immigrant officer before he can enter American territory, is it not natural that he and his countrymen should resent this discrimination as an indignity? But they have too much good sense to think or even dream of going to war upon such a matter; on the contrary, the Japanese government agreed in 1908 to limit the number of emigrants in order to avoid complications.

It may be repeated that it has ever been the ambition of the Japanese people to take rank with the Great Powers of the world, and to have a voice in the council of nations; they demand that they shall not be discriminated against because of the colour of their skin, but that they shall rather be judged by their deeds. With this aim, they have made great efforts: where charges brought against them have any foundation in fact, they have endeavoured to make reforms; where they are false or due to misunderstandings they have tried to live them down, trusting to time for their vindication. They are willing to be judged by the intelligent and impartial world: a fair field and no favour is what they claim, and think they have a right to claim, from the world.

BIBLIOGRAPHY.—The latest edition of von Wemmckern's Bibliography of the Japanese Empire contains the names of all important books and publications relating to Japan, which have now become very numerous. A general reference must suffice here to Captains B. H. Chamberlain, Things Japanese (5th ed., 1905, &c.); W. G. Aston, Hist. of Jap. Literature, &c., and Laladico Hearn, Japan: an Interpretation (1904), &c., as the European authors with intimate knowledge of the country who have done most to give accurate and illuminating expression to its development. See also Fifty Years of New Japan, an encyclopaedic account of the national development in all its aspects, compiled by Count Shigenobu Okuma (2 vols., 1907, 1908; Eng. ed. by Marcus B. Huish, 1909).

JAPPANYING—JARGON

JAPANNING, the art of coating surfaces of metal, wood, &c., with a variety of varnishes, which are dried and hardened on in stoves or hot chambers. These drying processes constitute the main distinguishing features of the art. The trade owes its name to the fact that it is an imitation of the famous lacquering of Japan (see JAPAN: Art), which, however, is prepared with entirely different materials and processes, and is in all respects much more brilliant, durable and beautiful than any Japanese work. Japanning is done in clear transparent varnishes, in black and in body colours; but black japan is the most characteristic and common style of work. The varnish for black japan consists essentially of pure natural asphaltum with a proportion of gum animal dissolved in linsseed oil and thinned with turpentine. In thin layers such a japan has a rich dark brown colour; it only shows a brilliant black in thicker coatings. For fine work, which has to be smoothed and polished, several coats of black are applied in succession, each being separately dried in the stove at a heat which may rise to about 300° F. Body colours consist of a basis of transparent varnish mixed with the special tintins of the desired colours or with bronze powders. The transparent varnish used by Japanners is a copal varnish which contains less drying oil and more turpentine than is contained in ordinary painters' oil varnish. Japanning produces a brilliant polished surface which is much more durable and less easily affected by heat, moisture or other influences than any ordinary painted and varnished work. It may be regarded as a process intermediate between ordinary painting and enamelling. It is very extensively applied in the finishing of ordinary homongy goods and domestic iron-work, deed boxes, clock dials and paper-mâché articles. The process is also applied to blocks of slate for making imitation of black and other marbles for chimmeypieces, &c., and in a modified form is employed for preparing enamelled, japan or patent leather.

JAPETH (9q.), in the Bible, the youngest son of Noah 1 according to the Priestly Code (c. 450 B.C.); but in the earlier tradition 2 the second son, also the "father" of one of the three groups into which the nations of the world are divided. 3 In Gen. ix. 27, Noah pronounces the following blessing on Japheth—

"God enlarge (Heb. yaphah) Japheth (Heb. yapheth), and let him dwell in the tents of Shem; and let Canaan be his servant."

This is probably an ancient oracle independent alike of the flood story and the genealogical scheme in Gen. x. Shem is probably Israel; Canaan, of course, the Canaanites; by analogy, Japheth should be some third element of the population of Palestine—the Philistines or the Phenicians have been suggested. The sense of the second line is doubtful, it may be "let God dwell" or "let Japheth dwell"; on the latter view Japheth appears to be in friendly alliance with Shem. The words might mean that Japheth was an intruding invader, but this is not consonant with the tone of the oracle. Possibly Japheth is only present in Gen. ix. 20-27 through corruption of the text. Japheth may be an accidental repetition of yaphah "may he enlarge," as a proper name.

In Gen. x. Japheth is the northern and western division of the nations; being perhaps used as a convenient title under which to group the more remote peoples who were not thought of as standing in ethnic or political connexion with Israel or Egypt. Thus of his descendants, Gomer, Magog, 4 Tubal, Meshech, Ashkenaz, Riphath and Togarmah are peoples who are located with more or less certainty in N.E. Asia Minor, Armenia and the lands to the N.E. of the Black Sea; Javan is the Ionians, used loosely for the seafaring peoples of the West, including Tarshish (Tarctessus in Spain), Kittim (Cyprus), Rodanim 5 (Rhodes). There is no certain identification of Tiras and Elisah.

The similarity of the name Japheth to the Titan Iapetos of Greek mythology is probably a mere accident. A place Japheth is mentioned in Judith ii. 25, but it is quite unknown.

In addition to commentaries and dictionary articles, see E. Meyer, Die Israelischen und ihre Nachbarstämme, pp. 219 sqq. (W. H. Br.)

JAR—vessel of simple form, made of earthenware, glass, &c., with a spoutless mouth, and usually without handles. The word came into English through Fr. jarre or Span. jarra, from Arab. jarrah, the earthenware vessel of Eastern countries, used to contain water, oil, wine, &c. The simple electrical condenser known as a Leyden Jar (q.v.) was so called because of the early experiments made in the science of electricity at Leiden. In the sense of a harsh vibrating sound, a sudden shock or vibrating movement, hence dissonance, quarrel or petty strife, jar is onomatopoeic in origin; it is also seen in the name of the bird night-jar (also known as the goat-sucker) In the expression "on the jar" or "ajar," of a door or window partly open, the word is another form of chare or char, meaning turn or turning, which survives in charwoman, one who works at a turn, a job and chare, a job, spell of work.

JARGON, in its earliest use a term applied to the chirping and twittering of birds, but since the 15th century mainly confined to any language, spoken or written, which is either unintelligible to the user or to the hearer. It is particularly applied by un instructed hearers or readers to the language full of technical terminology used by scientific, philosophical and other writers. The word is O. Fr. and Colgrave defines it as "gibridge (gibberish), fustian language." It is cognate with Span. gerrina, and Ital. gergo, gergone, and probably related to the onomatopoeic O. Fr. jargouiller, to chatter. The root is probably seen in Lat. garrire, to chatter.

1 Gene. v. 32, vi. 10, vii. 13, x. 1; cf. 1 Chron. i. 4.
2 Gen. ix. 27, x. 1; c. 460-750 B.C.
3 In ix. 18 Ham is an editorial addition.
4 Gen. x. 1-5; cf. 1 Chron. i. 5-7. For the significance of the genealogies in Gen. x. see Ham.
6 So we should read with 1 Chron. i. 7 (LXX) for Dodananim.
indistinct crystals with a yellowish-brown colour and brilliant lustre. Hardness 3; sp. gr. 3.15. The best specimens, consisting of crystalline crusts on limonite, are from the Jaroso raviné in the Sierra Almargena, province of Almeria, Spain, from which locality the mineral receives its name. It has been also found, often in association with iron ores, at a few other localities. A variety occurring as concretionary or mullbery-like forms is known as mormolite (from Gr. μόρμω, “mullbery”) and Xido, “stone”); it is found at Monroe in Orange county, New York.

The recently discovered species natrojarosite and plumbojarosite occur as yellowish-brown glintening powders consisting wholly of minute crystals, and are from Nevada and New Mexico respectively.

**Jarrah Wood** (an adaptation of the native name Jerryd), the product of a large tree (*Eucalyptus marginata*) found in south-western Australia, where it is said to cover an area of 14,000 sq m. The trees grow straight in the stem to a great size, and yield squared timber up to 40 ft. length and 24 in. diameter. Lloyds for ship-building purposes in line three, table A, of the registry rules.

**Jarro, a port and municipal borough in the Jarrow parliamentary division of Durham, England, on the right bank of the Tyne, 63 m. below Newcastle, and on a branch of the North-Eastern railway. Pop. (1901), 34,295. The parish church of St Paul was founded in 685, and retains portions of pre-Norman work. The central tower is Norman, and there are good Decorated and Perpendicular details in the body of the church. Close by are the scattered ruins of the monastery which, by the piens Bishop of Ripon, in 685, and consecrated with the church by Ceolfrid in 685. Within the walls of this monastery the Venerable Bede spent his life from childhood; and his body was at first buried within the church, whither, until it was removed under Edward the Confessor to Durham, it attracted many pilgrims. The town is wholly industrial, devoted to ship-building, chemical works, paper mills and the neighbouring collieries. It owes its development from a mere pit village very largely to the enterprise of Sir Charles Mark Palmer (q.v.).

Jarrow Slake, a river bay, 1 m. long by 3 m. broad, contains the Tyne docks of the North-Eastern railway company. A great quantity of coal is shipped. Jarrow was incorporated in 1875, and the corporation consists of a mayor, 6 aldermen and 18 councillors. Area, 783 acres.

**Jarry, Nicolas**, one of the best-known 17th century French calligraphers. He was born at Paris about 1620, and was officially employed by Louis XIV. His most famous work is the *Guirlande de Julie* (1641). He died some time before 1674.

**Jarvis, John Wesley** (1780–1840), American artist, nephew of the great John Wesley, was born at South Shields, England, and was taken to the United States at the age of five. He was one of the earliest American painters to give...
serious attention to the study of anatomy. He lived at first in Philadelphia, afterwards establishing himself in New York, where he enjoyed great popularity, though his conviviality and eccentric mode of life affected his work. He visited Baltimore, Charleston and New Orleans, entertaining much and painting portraits of prominent people, particularly in New Orleans, where General Andrew Jackson was one of his sitters. He had four marriages and different times both Sully and Inman. He affected singularity in dress and manners, and his motto were the talk of the day. But his work deteriorated, and he died in great poverty in New York City. Examples of his painting are in the collection of the New York Historical Society.

JASHAR, BOOK OF, in Hebrew Sepher ha-yashar, a Hebrew composition mentioned as though well-known in Josh. x. 13 and 2 Sam. i. 18. From these two passages it seems to have been a book of songs relating to important events, but no early collection of the kind is now extant, nor is anything known of it. Various speculations have been put forward as to the name: (1) that it means the book of the upright, i.e. Israel or distinguished Israelites, the root being the same as in Jeshurun; (2) that Jashar (יָשָׁר) is a transposition of shir (شير), song; (3) that it should be pointed Yashir (יְשָׁר, sing; cf. Exod. xv. 1) and was so called after its first word. None of these is very convincing, though support may be found for them all in the versions. The Septuagint favours (1) by its rendering ἔρρη βεβολον τοῦ εἰδολ. in Samuel (it omits the words in Joshua); the Vulgate has in libro justorum in both places; the Syriac in Samuel has ἁσίρ, which suggests a Hebrew reading ha-shir (the song), and in Joshua has ἀσίρ, in the book of Numbers (xxi. 14), and has ἀσίρ passages has "book of the law," an explanation which is followed by the chief Jewish commentators, making the incidents the fulfilment of passages in the Pentateuch. Since it contained the lament of David (2 Sam. i. 18) it cannot have been completed till after his time. If Wellhausen's restoration of 1 Kings viii. 12 be accepted (from Septuagint 1 Kings viii. 53, ἡ βεβολε ἡς ἡ καθίδευσεν) where the reference is to the building of the Temple, the book must have been growing in the time of Solomon. The attempt of Donaldson to reconstruct it is largely subjective and uncritical.

In later times when it became customary to compose midrashic works under well-known names, a book of Jashar naturally made its appearance. It need hardly be remarked that this has nothing whatever to do with the older book. It is an anonymous elaboration in Hebrew of the early part of the biblical narrative, probably composed soon after the time of Zerubbabel. The fact that its legendary elements are drawn from Arabic sources, as well as from Talmud, Midrash and later Jewish works, would seem to show that the writer lived in Spain, or, according to others, in south Italy. The first edition appeared at Venice in 1595, and it has been frequently printed since. It was translated into English by [or for] M. M. Noah (New York, 1849). A work called The Book of . . . Jashar, translated . . . by Akin (1756), and . . . by Akin, 'The Blind Girl,' "Francisetto, "Martha the Simple," and "The Twin Brothers." With the exception of "The Charivari," these are all touching pictures of humble life—in most cases real episodes—carefully elaborated by the poet till the graphic descriptions, full of light and colour, and the admirably varied and melodious verse, seem too spontaneous and easy to have cost an effort. Jashin was not a prolific writer, and, in spite of his impetuous nature, would work a long time at one poem, striving to realize every feeling he wished to describe, and give it its most lucid and natural expression. A verse from his spirited poem, "The Third of May," written in honour of Henry IV., and published in the first volume of Papilotos, is engraved on the base of the statue erected to that king at Nérac. In 1852 Jashin's works were crowned by the Académie Française, and a pension was awarded him. The medal struck on the occasion bore the inscription: Au poète moral et populaire. His title of "Maître és Jeux" is a distinction only conferred by the academy of Toulouse on illustrious writers. Puis IX. sent him the insignia of a knight of St Gregory the Great, and he was made chevalier of the Legion of Honour. He died two years after his 70th birthday. The last poem that he wrote seems to be "Papilotos," which he describes in Ma Bigne ("My Vine"). Though invited to represent his native city, he refused to do so, preferring the pleasures and leisure of a country life, and wisely judging that he was not really eligible candidate for electoral honours. He died on the 4th of October 1864. His last poem, an answer to Renan, was placed between his folded hands in his coffin.

JASMINUM, or Jessamine, botanically Jasminum, a genus of shrubs or climbers constituting the principal part of the tribe Jasminae of the natural order Oleaceae, and comprising about 150 species, of which 40 or more occur in the gardens of Britain. The plants of the genus are mostly natives of the warmer regions of the Old World; there is one South American species. The leaves are pinnate or ternate, or sometimes apparently simple, consisting of one leaflet, articulated to the petiole. The flowers, usually white or yellow, are arranged in terminal or axillary panicles, and have a tubular 5- or 6-cleft calyx, a cylindrical corolla-tube, with a spreading limb, two included stamens and a two-celled ovary.

The name is derived from the Persian yasmin. Linnaeus obtained a fancied etymology from la, violets, and ἄνθος, smell, but the odour of its flowers bears no resemblance to that of the violet. The common white jasmine, Jasminum officinale, one
of the best known and most highly esteemed of British hardy ligneous climbers, is a native of northern India and Persia, introduced about the middle of the 16th century. In the centre and south of Europe it is thoroughly acclimated. Although it grows to the height of 12 and sometimes 20 ft., its stem is feebly and requires support; its leaves are opposite, pinnate and dark green, the leaflets are in three pairs, with an odd one, and are pointed, the terminal one larger and with a tapering point. The fragrant white flowers bloom from June to October; and, as they are found chiefly on the young shoots, the plant should only be pruned in the autumn. Varieties with golden and silver-edged leaves and one with double flowers are known.

The zambok or Arabian jasmine, J. Sambac, is an evergreen white-flowered climber, 6 or 8 ft. high, introduced into Britain in the latter part of the 17th century. Two varieties introduced somewhat later are respectively 3-leaved and double-flowered, and these, as well as that with normal flowers, bloom throughout the greater part of the year. On account of their exquisite fragrance the flowers are highly esteemed in the East, and are frequently referred to by the Persian and Arabian poets. An oil obtained by boiling the leaves is used to anoint the head for complaints of the eye, and an oil obtained from the roots is used medicinally to arrest the secretion of milk. The flowers of one of the double varieties are held sacred to Vishnu, and used as votive offerings in Hindu religious ceremonies. The Spanish, or Catalanian jasmine, J. Grandiflorum, a native of the north-west Himalaya, and cultivated both in the old and new world, is very like J. officinale, but differs in the size of the leaflets; the branches are shorter and stouter, and the flowers much larger, and reddish underneath. By grafting it on two-year-old plants of J. officinale, an erect bush about 3 ft. high is obtained, requiring no supports. In this way it is very extensively cultivated at Cannes and Grasse, in the south of France; the plants are set in rows, fully exposed to the sun; they come into full bearing the second year after grafting; the blossoms, which are very large and intensely fragrant, are produced from July till the end of October, but those of August and September are the most odoriferous.

The aroma is extracted by the process known as enfeuage, i.e. absorption by a fatty body, such as purified lard or olive oil. Square glass trays framed with wood about 3 in. deep are spread over with grease about half an inch thick, in which ridges are made to facilitate absorption, and sprinkled with freshly gathered flowers, which are renewed every morning during the whole time the plant remains in blossom; the trays are piled up in stacks to prevent the evaporation of the aroma; and finally the pomade is scraped off the glass, melted at as low a temperature as possible, and strained. When oil is employed as the absorbent, coarse cotton cloths prevails are saturated with the finest oil are laid on the trays, and repeatedly covered in the same manner with fresh flowers; they are then squeezed under a press, yielding what is termed huile antique ou jasmin. Three pounds of flowers will perfume 1 lb. of grease—this is exhausted in 11/2 pints, and the oil is pressed to form the "extrenched." An essential oil is distilled from jasmine in Tunis and Algeria, but its high price prevents its being used to any extent. The East Indian oil of Jasmine is a compound largely contaminated with sandalwood-oil.

The distinguishing characters of J. odoratissimum, a native of the Canary Islands and Madeira, consist principally in the alternate, oblanceolate, 5-lobed leaves, the 3-flowered terminal peduncle, and the 5-cleft yellow corolla with obsolete segments. The flowers have the advantage of retaining when dry their natural perfume, which is suggestive of a mixture of jasmine, jonquil and orange-blossom. They are obtained in China in the form of a paste known as "siew-hing-loow;" it is valued for its flowers, which are used with those of J. Sambac, in the proportion of 10 lb. of the former to 30 lb. of the latter, for scenting teas—40 lb. of the mixture being required for 100 lb. of tea. J. augustifolium is a beautiful evergreen climber 10 to 12 ft. high, found in the Coromandel forests, and introduced into Britain during the present century. Its leaves are of a bright shining green; its large terminal flowers are white with a faint tinge of red, fragrant and blooming throughout the year.

In Cochin China a decoction of the leaves and branches of J. nervosum is taken as a blood-purifier; and the bitter leaves of J. floribundum (called in Abyssinia habbes-silm) mixed with ginger is considered a powerful anthelmintic, especially for tapeworm; the leaves and branches are added to some fermented liquors to increase their intoxicating quality. In Catalonia and in Turkey the wood of the jasmine is, highly prized, slender pipe-stems, highly prized, by the Moors and Turks. Syrup of jasmine is made by placing in a jar alternate layers of the flowers and sugar, covering the whole with wet cloths and standing it in a cool place; the perfume is absorbed by the sugar, which is converted into a very palatable syrup. The important medicinal plant known in America as the "Carolina jasmine" is not a true jasmine (see GELEMISIUM).

Other hardy species commonly cultivated in gardens are the low or Italian yellow-flowered jasmine, J. humile, an East Indian species introduced and now found wild in the south of Europe, an erect shrub 3 or 4 ft. high, with angular branches, alternate and mostly terminal leaves, blossoming from June to August, and a yellow, semi-double yellow jasmine, J. fruiticos, a native of southern Europe and the Mediterranean region, a hardy evergreen shrub, 10 to 12 ft. high, with weak, slender stems requiring support, and bearing yellow, odourless flowers from spring to autumn; and J. nudiflorum (China), which bears its bright yellow flowers in winter before the leaves appear. It thrives in almost any situation and grows rapidly.

JASON ('Iásow), in Greek legend, son of Aeson, king of Ioleus in Thessaly. He was the leader of the Argonautic expedition (see ARGONAUTS). After he returned from it he lived at Corinth with his wife Medea (q.v.) for many years. At last he put away Medea, in order to marry Glaucce (or Creusa), daughter of the Corinthian king Creon. To avenge herself, Medea presented the new bride with a robe and head-dress, by whose magic properties he was carried away to death, and slew her with her own hand. A later story represents Jason as reconciled to Medea (Justin, xlii. 2). His death was said to have been due to suicide through grief, caused by Medea's vengeance (Diod. Sic. iv. 53); or he was crushed by the fall of the poop of the ship "Argo," under which, on the advice of Medea, he had laid himself down to sleep (argument of Euripides' Medec). The name (more correctly Jason) means "healer," and Jason is possibly a local hero of Ioleus to whom healing powers were attributed. The ancients regarded him as the oldest navigator, and the patron of navigation. By the moderns he has been variously explained as a solar deity; a god of summer and of storms; a god of rain, who carries off the rain-giving cloud (the golden fleece) to refresh the earth after a long period of drought. Some regard the legend as a chthonian myth, Aea (Colchis) being the under-world in the Aelian religious system from which Jason liberates himself and his betrothed; others, in view of certain resemblances between the story of Jason and that of Cadmus (the ploughing of the field, the sowing of the dragon's teeth, the fight with the Sparti, who are finally set fighting with one another by a stone hurled into their midst), associate both with Demeter the corn-goddess, and refer certain episodes of practices in use at country festivals, e.g. the stone throwing, which, like the Σαλβωρις at the Eleusinia and the Χιλαμβια at
JASON OF CYRENE—JĀTAKA

Trozen (Pausanias ii. 30, 4 with Frazer's note) was probably intended to secure a good harvest by driving away the evil spirits of unfruitfulness.

See articles by C. Seeleger in Roscher’s Lexikon der Mythologie and by F. Durrbach in Darenberg and Saglio’s Dictionnaire des antiques; II. D. Müller, Mythologie der griechischen Stämme (1861), ii. 428, who explains the name Jason as “wanderer”; W. Mannhart, Mythologische Forschungen (1856). pp. 175, 130; O. Creusen, Beiträge zur griechischen Mythologie und Religionsgeschichte (Leipzig, 1850).

Later Versions of the Legend.—Les faits et procès de du noble et vaillant chevalier Jason was composed in the middle of the 15th century by Raoul Lefèvre on the basis of Benoît’s Roman de Troie, and presented to Philip of Burgundy, founder of the order of the Golden Fleece. The manners and sentiments of the 15th century are in close accordance with the classical legends after the fashion of the Italian poets, including one of Scolopi, who compiled, Jewish warriors with knighthood and armament. The story is well told; the digressions are few; and there are many touches of domestic life and natural sympathy. The first edition is believed to have been printed at Bruges in 1474.

The Histoire de la Thoison d’Or (Paris, 1516) by Guillaume Fillastre (1490-1514), written about 1440-1450, is an historical compilation dealing with the exploits of the três chrétiens nations of France, Burgundy and Flanders.

JASON OF CYRENE, a Hellenistic Jew, who lived about 100 B.C. and wrote a history of the times of the Maccabees down to the victory over Nicancor (175-161 B.C.). This work is said to have been in five books and formed the basis of the present 2 Macc. (see ch. ii. 19-32).

JASPER, an opaque compact variety of quartz, variously coloured and often containing argillaceous matter. The colours are usually red, brown, yellow or green, and are due to admixture with compounds of iron, copper, or other oxides, as silicates. Although the term jasper is now restricted to opaque quartz it is certain that the ancient jaspir or lairas was a stone of considerable translucency. The jasper of antiquity was in many cases distinctly green, for it is often compared with the emerald and other green objects. Jasper is referred to in the Nibelungenlied as being clear and green. Probably the jasper of the ancients included stones which would now be classed as chalcedony, and the emerald-like jasper may have been akin to our chryspars. The Hebrew word yashefōh has been designated a green jasper (cf. Assyrian yaskpē). Professor Flinders Petrie has suggested that the first stone on the High Priest’s breastplate, translated “sard,” was a red jasper, whilst tarshish, the tenth stone, may have been a yellow jasper (Hastings’s Dict. Bible, 1902).

Many varieties of jasper are recognized. Riband jasper is a form in which the colours are disposed in bands, as in the well-known ornamental stone from Siberia, which shows a regular alternation of dark red and green stripes. Egyptian jasper is a brown jasper, occurring as nodules in the Lybian desert and in the Nile valley, and characterized by a zonar arrangement of light and dark shades of colour. Agate-jasper is a variety intermediate between true jasper and agate, occurring in layers, bands, or clear and black flinty jasper, used as a touchstone for testing the purity of precious metals by their streak. Porcelain jasper is a clay indurated by natural calcination.

(J. W. R.)*

JASSI (Jasōi), also written Jasti, Jasci and Yassy, the capital of the department of Jassy, Rumania; situated on the left bank of the river Bahlui, an affluent of the Jijia, about 10 m. W. of the Pruth and the Russian frontier, and connected by rail with Galatz on the Danube, Kishinev in Bessarabia, and Czernowitz in Bukowina. The surrounding country is one of uplands and woods, among which rise the monasteries of Cetatuia, Frumoasa, and Galata with its mineral springs, the water-cure establishment of Rapid and the great seminary of Socola. Jassy itself stands pleasantly amid vineyards and gardens, partly on two hills, partly in the hollow between. Its primitive houses of timber and plaster were mostly swept away after 1860, when brick or stone came into general use, the main streets were cut among the network of narrow, insanitary lanes. Jassy is the seat of the metropolitan of Moldavia, and of a Roman Catholic archbishop. Synagogues and churches abound. The two oldest churches date from the reign of Stephen the Great (1458-1504); perhaps the finest, however, are the 17th-century metropolitan, St Spiridion and Trei Erarchi, the last a curious example of Byzantine art, erected in 1639 or 1640 by Basil the Wolf, and adorned with countless gilded carvings on its outer walls and twin towers. The St Spiridion Foundation (due to the liberality of Prince Gregory Ghioca in 1727, and available for the sick of all countries and creeds) has an annual income of 20,000 roubles, and is the second hospital in several towns of Moldavia, besides the baths at Slanic in Walachia. The main hospital in Jassy is a large building, and possesses a matron, institute, a midwifery school, a chemical institute, an inoculating establishment, &c. A society of physicians and naturalists has existed in Jassy since the early part of the 19th century, and a number of periodicals are published. Besides the university, founded by Prince Cuza in 1864, with faculties of literature, philosophy, law, science and medicine, there is a military academy and schools of art, music and commerce; and in which the mother-tongue is the Greek.

The inscription by which the existence of a Jassiorum municipium in the time of the Roman Empire is sought to be proved, lies open to grave suspicion; but the city is mentioned as early as the 14th century, and probably does derive its name from the Jews, or Jassyans, who accompanied the Cumanian invaders. It was often visited by the Moldavian court. About 1564, Prince Alexander Lapusneanu, after whom one of the chief streets is named, chose Jassy for the Moldavian capital, instead of Suceava (now Suceza, in Bukowina). It was already famous as a centre of culture. Between 1561 and 1563 an excellent school and a Lutheran church were founded by the Greek adventurer, Jacob Basilicis (see RUMANIA: History). In 1643 the first printed book published in Moldavia was issued from a press established by Basil the Wolf. He also founded a school, the building of which was paid for by the Moldavian convent of Jassy; it was burned by the Tatars in 1513, by the Turks in 1538, and by the Russians in 1686. By the Peace of Jassy the second Russo-Turkish War was brought to a close in 1792. A Greek insurrection under Ypsilanti in 1821 led to the storming of the city by the Turks in 1822. In 1844 there was a severe conflagration. For the loss caused to the city in 1861 by the removal of the seat of government to Bucharest the constituent assembly voted £14,5150, to be paid in ten annual instalments, but no payment was ever made.

JĀTAKA, the technical name, in Buddhist literature, for a story of one or other of the previous births of the Buddha. The word is also used for the name of a collection of 547 of such stories included, by a most fortunate conjunction of circumstances, in the Buddhist canon. This is the most ancient and the most complete collection of folk-lore now extant in any literature in the world. As it was made at latest in the 3rd century B.C., it can be trusted not to give any of that modern or European colouring which renders suspect much of the folk-lore collected by modern travellers. Jātaka is the oldest document, drawn up by the disciples soon after the Buddha’s death, he is identified with certain ancient sages of renown. That a religious teacher should claim to be successor of the prophets of old is not uncommon in the history of religions. But the current belief in metempsychosis led, or enabled, the early Buddhists to make a much wider claim. It was not very long before they gradually identified their master with the hero of each of the popular fables and stories of which
they were so fond. The process must have been complete by the middle of the 3rd century n.c.; for we find at that date illustrations of the Jātakas in the bas-reliefs on the railing round the Buddhist stupa with the titles of the Jātaka stories inscribed above them in the characters of that period.1 The hero of each story is made into a Bodhisattā; that is, a being who is destined, after a number of subsequent births, to become a Buddha. This rapid development of the Bodhisattā theory is the distinguishing feature in the early history of Buddhism, and was both cause and effect of the simultaneous growth of the Jātaka book. In adopting the folk-lore and fables already current in India, the Buddhists did not change them very much. The stories as preserved to us, are for the most part Indian rather than Buddhist. The ethics they inculcate or suggest are milk for babies; very little, however, and this almost exclusively to matters common to all schools of thought in India, and indeed elsewhere. Kindness, purity, honesty, generosity, worldly wisdom, perseverance, are the usual virtues praised; the higher ethics of the Path are scarcely mentioned. These stories, popular with all, were especially appreciated by that school of Buddhists that laid stress on the Bodhisattā theory—a school that obtained its chief support, and probably had its origin, in the extreme north-west of India and in the highlands of Asia. That school adopted, from the early centuries of our era, the use of Sanskrit, instead of Pali, as the means of literary expression. It is almost impossible, therefore, that they would have missed the canonical Pali book, voluminous as it is, into Central Asia. Selections of the original stories, written in Sanskrit, were in vogue among them. One such collection, the Jātaka-mālā by Ārya Sūra (6th century), is still extant. Of the existence of another collection, though the Sanskrit original has not yet been found, we have curious evidence. In the 6th century a book of Sanskrit fables was translated into Pahlavi, that is, old Persian (see BRDPA). In succeeding centuries this work was retranslated into Arabic and Hebrew, thence into Latin and Greek and all the modern languages of Europe. The book bears a close resemblance to the earlier chapters of a later Sanskrit fable book called, from its having five chapters, the Pancha tantra, or Penteauche.

The introduction to the old Jātaka book gives the life of the historical Buddha. That introduction must also have reached Persia by the same route. For in the 8th century St John of Damascus put the story into Greek under the title of Barlaam and Josaphat. This story became very popular in the West. It was translated into Latin, into seven European languages, and even into Icelandic and the dialect of the Philippine Islands. Its story, in the latter case, was canonized as a Christian saint; and the 27th of November was officially fixed as the date for his adoration as such.

The book popularly known in Europe as Aesop's Fables was not written by Aesop. It was put together in the 14th century at Constantinople by a monk named Planudes, and he drew largely for his stories upon those in the Jātaka book that had reached Europe along various channels. The tales of Babrius and Phaedrus, written respectively in the 1st century before, and in the 1st century after, the Christian era, also contain Jātaka stories known in India in the 4th century B.C. A great deal has been written on this curious question of the migration of fables. But we are still very far from being able to trace the complete history of each story in the Jātaka book, or in any of the later collections. For India itself the reckoning is most incomplete. We have the original Jātaka book in text and translation. The history of the text of the Pancha tantra, about a thousand years later, has been fairly well traced out. But for the intervening centuries scarcely anything has been done. There are illustrations, in the bas-reliefs of the 3rd century n.c., of Jātakas not contained in the Jātaka book. Another collection, the Carīyādā piṭaka, of about the same date, has been edited, but not translated. Some collections both in Pali and Sanskrit are known to be extant in MS.; and a large number of Jātaka stories included in any formal collection, are mentioned, or told in full, in other works.

JATH, a native state of India, in the Deccan division of Bombay, ranking as one of the southern Mahrratta jagirs. With the small state of Daphiupur, which is an integral part of it, it forms the Bijapur Agency, under the collector of Bijapur district. Area, including Daphiupur, 280 sq. m. Pop. (1901), 68,665, showing a decline of 14% in the decade. Estimated revenue £24,000; tribute £700. Agriculture and cattle-breeding are carried on there and there are no important manufactures. The chief, whose title is deshmukh, is a Mahrratta of the Deccani family. The town of Jath is 92 m. S.E. of Satara. Pop. (1901), 5,000.

JĀTIVA (formerly written XATIVA), or SAN FELIPE DE JĀTIVA, a town of eastern Spain, in the province of Valencia, on the right bank of the river Albaria, a tributary of the Júcar, and at the junction of the Valencia-Murcia and Valencia-Albacete railways. Pop. (1900), 12,000. Jātiva is built on the margin of a fertile and beautiful plain, and on the southern slopes of the Montes Bernisa, a hill with two peaks, each surmounted by a castle. With its numerous fountains, and spacious avenues shaded with elms and cypress, the town has a clean and attractive appearance. Its collegiate church, dating from 1474, but rebuilt about a century later in the Renaissance style, was formerly a cathedral, and is the chief among many churches and convents. The town-hall and a church on the castle hill are partly constructed of inscribed Roman masonry, and several houses date from the Moorish occupation. There is a brisk local trade in grain, fruit, wine, oil and rice.

Jaitiva was the Roman Saetabis, afterwards Valeria Augusta, of Carthaginian or Iberian origin. Pliny (23-79) and Martial (c. 40-102) mention the excellence of its linen cloth. Under the Visigoth kings, and the Moorish kings, the town was a royal city, but early in the 8th century it was captured by the Moors, under Yacub ibn Iyad, and it attained great prosperity, and received its present name. It was reconquered by James I. of Aragon (1213-1276). During the 15th and 16th centuries, Jātiva was the home of many members of the princely house of Borja or Borja, who migrated thither from the town of Borja in the province of Saragossa. Alphonso Borja, afterwards Pope Calixtus III., and Rodrigo Borja, afterwards Pope Alexander VI., were natives of Jātiva, born respectively in 1378 and 1431. The painter Jusepe Ribera was also born here in 1598. Owing to its gallant defence against the Moors, the town was granted the title of Archducal; and in the Spanish succession, Jātiva received the additional name of San Felice from Philip V. (1700-1746).

JĀTS, or JUTS, a people of north-western India, who numbered altogether more than 7 millions in 1901. They form a considerable proportion of the population in the Punjab, Rajputana and the adjoining districts of the United Provinces, and are also widely scattered through Sind and Baluchistan. Some writers have identified the Jāts with the ancient Getae, and there is strong reason to believe them a degraded tribe of Rājputs, whose Scythic origin is shown by their number of Yaks, the legends point to a prehistoric occupation of the Indus valley by this people, and in some of the Mahommedan conquest of Sind (1212) they, with a cognate tribe called Meds, constituted the bulk of the population. They enlisted under the banner of Mahommed bin Kāsim, but at a later date offered a vigorous resistance to the Arab invaders. In 836 they were overthrown by Amran, who imposed on them a tribute of dogs, and used their arms to vanquish the Meds. In 1025, however, they had gathered audacity, not only to invade Mansura, and compel the abjuration of the Mu'llimatian amir, but to attack the victorious army of Mahommed, laden with the spoil of Sonnath. Chastisement duly ensued: a formidable flotilla, collected at Mūltān, shattered in thousands the comparatively defenceless Jāt boats on the Indus, and annihilated their national pretensions. It is not until the decay of the Mogul Empire that the Jāts again appear in history. One branch of them, settled...
south of Agra, mainly by bold plundering raids founded two dynasties which still exist at Bhawatpura (q.v.) and Dholpur (q.v.).

Another branch, settled north-west of Delhi, however, adopted the Sikh religion, ultimately made themselves dominant throughout the Punjab (q.v.) under Ranjit Singh, and are now represented in their original home by the Phulkian houses of Patiala (q.v.), Jind (q.v.) and Nabha (q.v.). It is from this latter branch that the Sikh regiments of the Indian army are recruited. The Jats are mainly agriculturists and cattle breeders. In their settlements on the Ganges and Jumna, extending as far east as Bareilly, they are divided into two great clans, the Dhe and the Hele; while in the Punjab the language is divided into hundreds of sections. Their religion varies with locality. In the Punjab they have largely embraced Sikh tenets, while in Sind and Baluchistan they are Mahomedans. In appearance they are not ill-favoured though extremely dark; they have good teeth, and large beards, sometimes stained with indigo. Their inferiority of social position, however, to some extent betrays itself in their aspect, and tends to be perpetuated by their intellectual apathy.

**JAUBERT, PIERRE AMÉDÉÉ ÉMILIAN PROBE** (1777-1847), French Orientalist, was born at Aix in Provence on the 3rd of June 1779. He was one of the most distinguished pupils of Silvestre de Sacy, who announced in 1838. Jaubert acted as interpreter to Napoleon in Egypt in 1798-1799, and on his return to Paris held various posts under government. In 1802 he accompanied Sebastiani on his Eastern mission; and in 1804 he was at Constantinople. Next year he was despatched to Persia to arrange an alliance with the shah; but on the way he was seized and imprisoned in a dry cistern for four months by the pasha of Bayazid. The pasha's death freed Jaubert, who successfully accomplished his mission, and rejoined Napoleon at Warsaw in 1807. On the eve of Napoleon's downfall he was appointed charge d'affaires at Constantinople. The restoration ended his diplomatic career, but in 1818 he undertook a journey with government aid to Tibet, whence he succeeded in introducing into France 400 Kashmir goats. The rest of his life Jaubert spent in study, in writing and teaching. He became professor of Persian in the collège de France, and director of the école des langues orientales, and in 1850 was elected member of the Académie des Inscriptions. In 1841 he was made a peer of France and councillor of state. He died in Paris on the 26th of January, 1847.

**JAUCOURT, ARNAL FRANÇOIS, MARQUIS DE** (1757-1852), French politician, was born on the 14th of November 1757 at Tournon (Seine-et-Marne) of a Protestant family, protected by the prince de Condé, whose regiment he entered. He adopted revolutionary ideas and became colonel of his regiment. In the Assembly, to which he was returned in 1791 by the department of Seine-et-Marne, he voted generally with the minority, and his views being obviously too moderate for his colleagues he resigned in 1792 and was soon after arrested on suspicion of being a reactionary. Mme de Staël procured his release from P. L. Manuel just before the September massacres. He accompanied Talleyrand on his mission to England, returning to France after the execution of Louis XVI. He lived in retirement until the establishment of the Consulate, when he entered the tribunate, of which he was for some time president. In 1803 he entered the senate, and next year became attached to the house of Joseph Bonaparte. Promptly his imperialist views cooled, and at the Restoration he became minister of state and a peer of France. At the second Restoration he was for a brief period minister of marine, but held no further office. He devoted himself to the support of the Protestant interest in France. A member of the upper house throughout the reign of Louis Philippe, he was driven into private life by the establishment of the Second Republic, but lived to see the Coup d'état and to rally to the government of Louis Napoleon, dying in Paris on the 5th of February 1852.

**JAUER**, a town of Germany, in the Prussian province of Silesia, 13 m. by rail S. of Leignitz, on the Wittthene Neisse. Pop. (1900), 13,024. St. Martin's (Roman Catholic) church dates from 1267-1290, and the Evangelical church from 1655. A new town-hall was erected in 1895-1898. Jauer manufactures leather, carpets, cigars, carriages and gloves, and is especially famous for its sausages. The town was first mentioned in 1245, and was formerly the capital of a principality embracing about 1200 sq. m., now occupied by the circles of Jauer, Bünzlau, Löweberg, Hirschberg and Schöna. From 1370 to 1741 it belonged to the kings of Bohemia, being taken from Maria Theresa by Frederick the Great, who declared it to be formerly the prosperous seat of the Silesian linen trade, but the troubles of the Thirty Years' War, in the course of which it was burned down three times, permanently injured this

**JAUHARI (ABU NASR ISMAIL IBN ḤAMMAD UL-JAUHARI)** (d. 1002 or 1010), Arabian lexicographer, was born at Fārāb on the borders of Turkestan. He studied language in Fārāb and Bagdad, and later among the Arabs of the desert. He then settled in Damghan and afterwards in Nishapûr, where he died by a fall from the roof of a house. His great work is the *Kitāb al-Sāhib li-l-Lughah* (Dictionary of Arabic), in which the words are arranged alphabetically according to the last letter of the root. He himself had only partially finished the last recension, but the work was completed by his pupil, Abū Ḥishāq Ibrāhīm ibn Sāliḥ Ul-Warrāq.

An edition was begun by E. Scheidius with a Latin translation, but one part only appeared at Harderwijk (1776). The whole has been published at Tebriz (1854) and at Cairo (1865), and many abridgments and Persian translations have appeared; cf. C. Broekelmann, *Geschichte der arabischen Literatur* (Weimar, 1898), i. 128 seq. (G. W. T.)

**JAUNDICE** (Fr. *jaunisse*, from *jaune*, yellow), or *ICTERUS* (from its resemblance to the colour of the golden oriole, of which Pinyo relates that if a jaundiced person looks upon it he recovers but the bird dies), a term in medicine applied to a yellow coloration of the skin and other parts of the body, depending in most instances on some derangement affecting the liver. This yellow color is due to the presence in the blood of bile or of some of its elements of that secretion. Jaundice, however, must be regarded more as a symptom of some morbid condition previously existing than as a disease per se.

Cases with jaundice may be divided into three groups.

1. **Obstructive Jaundice**.—Any obstruction of the passage of bile from the liver into the intestinal canal is sooner or later followed by the appearance of jaundice, which in such circumstances is due to the absorption of bile into the blood. The obstruction is due to one of the following causes: (1) Obstruction by foreign bodies within the bile duct, e.g. gallstones or parasites; (2) inflammation of the duodenum or the lining membrane of the duct; (3) stricture or obliteration of the duct; (4) a tumour growing from the duct; (5) pressure on the duct from without, from the liver or other organ, or tumours arising from them. Obstructions from these causes may be partial or complete, and the degree of jaundice will vary accordingly, but it is to be noted that extensive organic disease of the liver may exist without the evidence of obstructive jaundice.

The effect upon the liver of impediments to the outflow of bile such as those above indicated is in the first place an increase of the whole biliary passages and the liver cells being distended with retained bile. This enlargement, however, speedily subsides when the obstruction is removed, but should it persist the liver ultimately shrinks and undergoes atrophy in its whole texture. The bile thus retained is absorbed into the system, and shows itself by the yellow staining seen to a greater or lesser extent in all the tissues and many of the fluids of the body. The kidneys, which in such circumstances act in some measure vicariously to the liver and excrete a portion of the
Jaunpur, [Jaunpur] thin, speedily some almost the served often the a the tributary new-born usually always stains light most strong cause on jaundice recovery such want by the is impacted certain tion. in those, 282 The The artificial treatment the urine play chief to the kidneys distinct the eye, of the colour, in the liver. The name malignant jaundice is sometimes applied to that very fatal form of disease otherwise termed acute yellow atrophy of the liver (see ATROPHY).

Jaunpur, a city and district of British India, in the Benares division of the United Provinces. The city is on the left bank of the river Gumti, 34 m. N.W. from Benares by rail. Pop. (1901), 42,771. Jaunpur is a very ancient city, the former capital of a Mahomedan kingdom which once extended from Budaun and Etawah to Behar. It abounds in splendid architectural monuments, most of which belong to the period when the rulers of Jaunpur were independent of Delhi. The fort of Feroz Shah is in great part completely ruined, but there remain a fine gateway of the 16th century, a mosque dating from 1376, and the hamams or baths of Ibrahim Shah. Among other buildings may be mentioned the Atala Masjid (1408) and the ruined jinjiri Masjid, mosques built by Ibrahim, the first of which has a great cloistered court and a magnificent façade; the Dariba mosque constructed by two of Ibrahim's governors; the Lal Darwaza erected by the queen of Mahmud; the Jama Masjid (1438-1478) of great mosque of Husain, with court and cloisters, standing on a raised terrace, and with gateways in each of its four sides; and finally the splendid bridge over the Gumti, erected by Mumin Khan, Mogul governor in 1560-1573. During the Mutiny of 1857 Jaunpur formed a centre of disaffection. The city has now lost its importance, the only industries surviving being the manufacture of perfumes and papier-maché articles.

The District of Jaunpur has an area of 1551 sq. m. It forms part of the wide Gangetic plain, and its surface is accordingly composed of a thick alluvial deposit. The whole country is closely tilled, and no waste lands break the continuous prospect. The fields are irrigated by canals, which supply water to the numerous navigable channels, and the soil is of great fertility. The proverbial fertility of the Gangetic region is here prominently displayed. The rainfall is moderate, and the world's irrigation systems are of vital importance. The area is subject to periodic floods, and the rivers overflow their channels in the rainy season, flooding vast tracts of land with water that remains for weeks, causing great destruction and damage. The floods are of great importance to agriculture, as they provide much-needed irrigation water. The city of Jaunpur is situated on the banks of the Gumti River, which is a tributary of the Ganges, and the city is surrounded by a number of smaller rivers and canals.

The city of Jaunpur is an ancient and historic city, with a rich cultural heritage. It was the capital of a Mahomedan kingdom that extended from Budaun and Etawah to Behar. The city is known for its splendid architectural monuments, including a mosque dating from 1376 and the hamams or baths of Ibrahim Shah. The city was also the site of the Lal Darwaza, erected by the queen of Mahmud, and the Jama Masjid, constructed during the reign of two of Ibrahim's governors.

Jaunpur is also renowned for its irrigation systems, which are crucial to the fertility of the region. The river Gumti, a tributary of the Ganges, flows past the city of Jaunpur. The city's irrigation system includes canals that supply water to the surrounding fields, which are subject to periodic floods. The city is also known for its industries, including the manufacture of perfumes and papier-maché articles.

The city of Jaunpur has a rich history, with a number of significant events and figures associated with it. The city was the capital of a Mahomedan kingdom and was known for its splendid monuments, including a mosque dating from 1376 and the hamams or baths of Ibrahim Shah. The city's irrigation system is also an important feature, with canals supplying water to the surrounding fields that are subject to periodic floods. The city is also known for its industries, including the manufacture of perfumes and papier-maché articles.
the Sharqi dynasty ruled at Jaunpur, and proved formidable rivals to the sovereigns of Delhi. The last of the dynasty was Sultan Husain, who passed his life in a fierce and chequered struggle for supremacy with Bahrol Lodi, then actual emperor at Delhi. At length, in 1478, Bahrol succeeded in defeating his rival in a series of decisive engagements. He took the city of Jaunpur, but permitted the conquered Husain to reside there, and to complete the building of his great mosque, the Jama Masjīd, which now forms the chief ornament of the town. Many other architectural works in the district still bear witness to its greatness under its independent Mussulman rulers. In 1775 the district was made over to the British by the Treaty of Lucknow. From that time nothing occurred which calls for notice till the Mughals were driven out of the country in 1857, a change which was succeeded by a state of complete anarchy till the arrival of the Gurkha force from Azamgarh in September. In November the surrounding country was lost again, and it was not till May 1858 that the last smouldering embers of dissatisfaction were stifled by the repulse of the insurgent leader at the hands of the people themselves.

JAUNTING-CAR, a light two-wheeled carriage for a single horse, in its commonest form with open back and room for passengers on each side, with the front and back back to back, with the foot-boards projecting over the wheels. It is the typical conveyance for persons in Ireland (see Car). The first part of the word is generally taken to be identical with the verb "to jaunt," now only used in the sense of to go on a short pleasure excursion, but in its earliest uses meaning to make a horse caracole or prance, hence to jolt or bump up and down. It would apparently be a variant of "jaunce," of the same meaning, which is supposed to be taken from O. Fr. jauncer. Skeat takes the origin of jaunt and jaunce to be Scandinavian, and connects them with the Swedish dialect word gansla, to romp; and he finds cognate bases in such words as "jump," "high jinks." The word "jaunty," sprightly, especially used of anything done with an easy nonchalant air, is a corruption of "jaunty," due to confusion with "jaunt." "Jauntly," often spell in the 17th and 18th centuries "janté" or "jantee," represents the English pronunciation of Fr. gentil, well-bred, neat, spruce.

JAUREGUI, JUAN (1562–1582), a Biscayan by birth, was in 1582 in the service of a Spanish merchant, Gaspar d'Anastro, who was resident at Antwerp. Timed to arrive with the fleet of Philip II. in Spain for the assassination of William the Silent, prince of Orange, but being himself without courage to undertake the task, d'Anastro, with the help of his cashier Venero, persuaded Jauregui to attempt the murder for the sum of 2877 crowns. On Sunday the 18th of March 1582, as the prince came out of his dining-room Jauregui offered him a petition, and William had no sooner taken it into his hand than Jauregui fired a pistol at his head. The ball pierced the neck below the right ear and passed out at the left jaw-bone; but William ultimately recovered. The assassination was killed on the spot.

JAURÉGUIBERRY, JEAN BERNARD (1815–1887), French admiral, was born at Bayonne on the 26th of August 1815. He entered the navy in 1831, was made a lieutenant in 1845, commander in 1856, and captain in 1860. After serving in the Crimean and in China, and being governor of Senegal, he was promoted to rear-admiral in 1869. He served on land during the second part of the Franco-German War of 1870–71, in the rank of auxiliary general of division. He was present at Coulmiers, Villépion and Loigny-Pourpy, in command of a division, and in Chanzy's retreat upon Le Mans and by the battle of Mars-la-Tour, in command of a corps. He was the most distinguished of the many naval officers who did good service in the military operations. On the 9th of December he had been made vice-admiral, and in 1871 he commanded the fleet at Toulon; in 1875 he was a member of the council of admiralty; and in October 1876 he was appointed to command the military squadron in the Mediterranean. In February 1879 he became minister of the navy in the Waddington cabinet, and on the 27th of May following was elected a senator for life. He was again minister of the navy in the Freycinet cabinet in 1886. A fine example of the finest French seaman of his time, Jauregibierry died at Paris on the 21st of October 1887.

JAUREGUI Y AGUILAR, JUAN MARTÍNEZ DE (1533–1641), Spanish poet, was baptized at Seville on the 24th of November 1533. In due course he studied at Rome, returning to Spain shortly before 1610 with a double reputation as a painter and a poet. A reference in the preface to the Novelas exemplares has been taken to mean that he painted the portrait of Cervantes, who, in the second part of Don Quijote, praises the translation of Tasso's Aminta published at Rome in 1667. Jauregui had a large and copious output of poems. His most notable and controversial preface which attracted much attention on account of its outspoken declaration against culteranismo. Through the influence of Olivares, he was appointed grandson of the chamber to Philip IV., and gave an elaborate exposition of his artistic doctrines in the Discurso politico contra el hablar culto y oscuro (1624), a skilful attack on the new theories, which procured for his author the order of Calatrava. It is plain, however, that the shock of controversy had shaken Jauregui's convictions, and his poem Orfeo (1624) is visibly influenced by Góngora. Jauregui died in Madrid (1621), a city always dear to his heart, in the 19th of January 1644, and is succeeded by a translation of the Pharsalia which was not published till 1684. This rendering reveals Jauregui as a complete convert to the new school, and it has been argued that, exaggerating the affinities between Lucan and Góngora—both of Cordovan descent—he deliberately translated the thought of the earlier poet into the vocabulary of the later master. This is possible; but it is at least as likely that Jauregui unconsciously yielded to the current of popular taste, with no other intention than that of conciliating the public of his own day.

JAURES, JEAN LEON (1859–1914), French Socialist leader, was born at Castres (Tarn) on the 3rd of September 1859. He was educated at the lycée Louis-le-Grand and the école normale supérieure, and took his degree as associate in philosophy in 1881. After teaching philosophy for two years at the lycée of Albi (Tarn), he lectured at the university of Toulouse. He was elected republican deputy for the department of Tarn in 1885. In 1889, after unsuccessfully contesting Castres, he returned to his professional duties at Toulouse, where he took an active interest in municipal affairs, and helped to found the medical faculty of the university. He also prepared two theses for a doctorate in philosophy. De primitivism socialismo germanico inmutis apud Lutherum, Kant, Fichte y Hegel (1891), and De la realidad del mundo sensible. In 1902 he gave energetic support to the miners of Carmaux who went out on strike in consequence of the dismissal of a socialist workman, Calvignac; and in the next year he was re-elected to the chamber as deputy for Albi. Although he was defeated at the elections of 1898 and was for four years outside the chamber, his eloquent speeches made him a force in politics as an intellectual champion of socialism. He edited the Petite République, and was one of the most energetic defenders of Captain Alfred Dreyfus. He approved the inclusion of M. Millerand, the socialist, in the Waldeck-Rousseau ministry, though this led to a split with the more revolutionary section led by M. Guesde. In 1902 he was again returned as deputy for Albi, and during the Combes administration his influence secured the coherence of the radical-socialist coalition known as the bloc. In 1904 he founded the socialist paper, L'Humanité. The French socialist groups held a congress at Rouen in March 1905, which resulted in a new consolidation; the new party, headed by M. Jaures and Guesde, ceased to be the word of the socialists and radical-socialists, and became known as the united socialists, pledged to advance a collectivist programme. At the general elections of 1906 M. Jaurès was again elected for the Tarn. His ability and vigour were now generally recognized; but the strength of the socialist party, and the practical activity of its leader, still had to reckon with the equally practical and vigorous liberalism of M. Clemenceau. The latter was able to appeal to his countrymen (in a notable
speech in the spring of 1906) to rally to a radical programme which had no socialist Utopia in view; and the appearance in him of a strong and practical radical leader had the result of considerably diminishing the effect of the socialist propaganda. M. Jaurès, in addition to his daily journalistic activity, published Les preuves; affaire Dreyfus (1900); Action socialiste (1890); Êtudes socialistes (1902), and, with other collaborators, Histoire socialiste (1901), &c.

JAVA, one of the larger islands of that portion of the Malay Archipelago which is distinguished as the Sunda Islands. It lies between 105° 12' 40" (St Nicholas Point) and 114° 35' 58" E. (Cape Seloko) and between 5° 32' 34" and 8° 46' 46" S. It has a total length of 682 m. from Pepper Bay in the west to Banyuwangi in the east, and an extreme breadth of 121 m. from Cape Bugel in Java to the coast of Jokjakarta, narrowing towards the middle to about 55 m. Politically and commercially it is important as the seat of the colonial government of the Dutch East Indies, all other parts of the Dutch territory being distinguished as the Outer Possessions (Buitenbestuuringen). According to the triangulation survey (report published in 1901) the area of Java proper is 48,504 sq. m.; of Madura, the large adjacent and associated island, 1732; and of the smaller islands administratively included with Java and Madura 1416, thus making a total of 50,070 sq. m. The more important of these islands are the following: Pulau Panaitan, or Princes Island (Prinseneiland), 47 sq. m., lies in the Sunda Strait, off the southwestern peninsula of the main island, from which it is separated by the Behouden Passage. The Thousand Islands are situated almost due N. of Batavia. Of these five were inhabited in 1906 by about 1280 seafarers from all parts and their descendants. The Karimon Java archipelago, to the north of Semarang, numbers twenty-seven islands with an area of 16 sq. m. and a population of about 800 (having one considerable village on the main island). Bavian (Bavian), 100 m. N. of Surabaya, is a ruined volcano with an area of 75 sq. m. and a population of about 44,000. About a third of the men are generally absent as traders or coolies. In Singapore and Sumatra they are known as Boyans. They are devout Mahomedans and many of them make the pilgrimage to Mecca. The Sapudi and Kangean archipelagoes are eastward continuations of Madura. The former, thirteen in all, with an area of 58 sq. m. and 35,000 inhabitants, export cattle, dried fish and trepang; and many of the male population work as day labourers in Java or as lumbermen in Sumbawa, Flores, &c. The main island of the Kangeans has an area of 19 sq. m.; the whole group 23 sq. m. It is best known for its limestone caves and its buffaloes. Along the south coast the islands are few and small—Clapper or Deli, Trouwers or Tingal, Nusa Kamhang, Sempu and Nusa Barung.

From Sumatra on the W., Java is separated by the Sunda Strait, which at the narrowest is only 14 m. broad, but widens the details to 50 m. of the island of Bali, which parts it from the island of that name, is at the northern end not more than 1½ m. across. Through the former strong currents run for the greater part of the day throughout the year, outwards from the Java Sea to the Indian Ocean. In the strait of Bali the currents are perhaps even stronger and are extremely irregular. Pilots with local knowledge are absolutely necessary for vessels attempting either passage. In spite of the strength of the currents the Sunda Strait is steadily being diminished in width, and the process if continued must result in a restoration of that junction of Sumatra and Java which according to some authorities formerly existed.1

In general terms Java may be described as one of the breakwater islands of the Indian Ocean—part of the mountainous rim (continuous more or less completely with Sumatra) of the partially submerged plateau which lies between the ocean on the S. and the Chinese Sea on the N., and has the massive island of Borneo as its chief subaerial portion. While the waves and currents of the ocean sweep away most of the products of denudation along the south coast or throw a small percentage back in the shape of sandy downs, the Java Sea on the north—

not more than 50 fathoms deep—allows them to settle and to form sometimes with extraordinary rapidity broad alluvial tracts.2

It is customary and obvious to divide Java into three divisions, the middle part of the island narrowing into a kind of isthmus, and each of the divisions thus indicated having certain structural characteristics of its own. West Java, which consists of Bantam, Krawang and the Preanger Regencies, has an area of upwards of 18,000 sq. m. In this division the highlands lie for the most part in a compact mass to the south and the lowlands form a continuous tract to the north. The main portion of the uplands consists of the Preanger Mountains, with the plateaus of Bandoeng, Pekalongan, Tegal, Badug and Gurut, encircled with volcanic summits. On the borders of the Preanger, Bantam and Bawian are the Halimun elsewhere (to about 50 m. on the E. the strait of Bali, thus not only takes in the whole of the isthmus but encroaches on the broad eastern portion of the island. In the isthmus mountains are not so closely missed

1 It must be observed that Bavian, &c., are mere conventional appendices to Java.

2 H. J. Guppy (R. S. G. Soc. Magazine, 1869) holds that there is no sufficient proof of this connexion but gives interesting details of the present movement.

3 See G. F. Tijdeman's map of the depths of the sea in the eastern part of the Indian archipelago in M. Wever's 6Stige Expedition, 1903. The details of the coast forms of the island have been studied by J. F. Snelleman and J. F. Niermeyer in a paper in the Veth Feest- bundel, utilizing inter alia Guppy's observations.

$$\text{JAVA}$$

$$\text{JAVA}$$

$$\text{JAVA}$$

$$\text{JAVA}$$
in the south nor the plains so continuous on the north. The watered
sheltering in Slamet lies almost midway between the ocean
and the Java Sea, and there are some extensive lowlands in the
south. In that part of middle Java which physically belongs to
this region, this area is marked by a large and low tongue, almost
right across the island from Semarang in the north to Jogjakarta
in the south. Eastern Java comprises Rembang, Madiun, Kediri, Surabaya, and Banyuwangi, and an area of about 17,500 sq. miles.
In this division lowlands and hills are interstratified in an endless variety except along the south coast, where the watersheds
range forms a continuous breakwater from Jogjakarta to Besuki.
The calcic eminences, instead of rising in lines or groups, are
isolated.
For its area Java is one of the most distinctly volcanic regions
of the world. Volcanic forces made it, and volcanic forces have con-
tinued to develop through the ages. Indeed, it is safe to state that
about 125 volcanic centres can be distinguished, a number which
may be increased or diminished by different methods of classi-
fication. They can be arranged in the following groups: westernmost Java 11 (all extinct); Pangan 50 (active); Cheribon 2 (both extinct); Slamet 2 (1 active); middle Java 16 (2 active); Murio 2 (both extinct); Lavo 2 (extinct); Wilis 2 (extinct); east Java 21 (5 active). The active volcanoes of the present
time are, Gedeh, Tungkahan, Prahu, Gutar, Papandayan, Galung-gung, Slamet, Sendor, Merapi,1 Kalut (or Kut), Bromo, Semeru, Lamongan, Raung, but the activity of many of these is trifling, consisting of slight
eruptions of hot ashes or scoriae.
The plains differ in surface and fertility, according to their geologi-
ical formation. Built up of alluvium and diluvium, the plains of the
northern and western coast and of the areas near to the mouths of
many rivers, present a flat surface, and are covered by many
marshy, sandy, and dune plains as well as sandy stretches and dunes
impeding the outlet of the rivers. They are, nevertheless, available
for the cultivation much more easily than the higher and
wetter parts of the Javanese highlands. A second group of narrow
plains, again, the narrow coast plains are to be distinguished from
the wider plains lying between the parallel chains of limestone and
between the volcanoes. The narrow plains of the north coast are
constantly used in a line of flat and wide terraces formed by the
rivers from the mountain chains and volcanoes. Like the
western plains, they, too, are in many cases low and marshy, and
fringed with sand and dunes. The plains, on the other hand, at
some distance from the coast, are sometimes covered by basaltic
or andesitic lavas, as in the case of the Barito, the Banjar, and other
rivers such as Surakarta, Madiun, Kediri, Pasuruan, Probolinggo and
Besuki, owe their formation to the volcanoes at whose bases they lie,
occupying levels as high as 1640 ft., down to 228 ft. above the
sea, which, when they decline to the lower plains of the coast. Lastly,
the plains of Lusi, Solo and Brantas, lying between the parallel
chains in Java, Rembang and Surabaya, are in part the product of
rivers formerly flowing at a higher level of 30 to 60 or 70 ft., in
in part the product of the sea, dating from a time when the northern
part of the above-named residences was an island, such as Madura,
the mountains of which are the continuation of the north parallel
chain.
The considerable rivers of western Java all have their outlets on
the north coast, the chief among them being the Chi (Dutch Tji)
The rivers of western Java have their source in one of the
1877 P. van Rooy, the "schist formation," which occurs in Sumatra, Borneo, etc., does not rise
several months of May, and is almost entirely shut off until the latter part of August. The
flow of the rivers generally varies, as the rainfall is seasonal, but they have a mean discharge of
the order of a few hundred cubic feet per second. The mouths of the rivers are often
rugged or cleft by small gorges. The coastal strip is much
interrupted by small rocks and islands. In
the north coast the Chi Tanduwi, on the east of the Preanger, is the only
stream available as a waterway, and this only for a few miles above its
mouth. In middle Java, also, the rivers discharging at the north
coast—the Pamali, Chomal, &c.—are serviceable for the purposes
of irrigation and cultivation, but are navigable only near their
mouths.
The rivers of the south coast—Progo, Seraya, Bogowonto, and
Upek, enriched by rills from the volcanoes, serve abundantly
to irrigate the plains of Bagelen, Banyumas, &c. Their stony beds,
shallow and rapid, and the condition of their mouths lessen,
having only a little silt and clay in their waters. The rivers of eastern Java. The Solo is navigable for large praus, or
native boats, as far up as Surakarta, and above that town for lighter
boats, as is also its affluent the Gentung. The canal constructed
in 1866, from the town of Gentung to the sea, is now in a state of
repair, and is used for the transport of coal and salt. On the south
coast, the Chi Tanduwi, on the east of the Preanger, is the only
stream available as a waterway, and this only for a few miles above its
mouth. In middle Java, also, the rivers discharging at the north
coast—the Pamali, Chomal, &c.—are serviceable for the purposes
of irrigation and cultivation, but are navigable only near their
mouths.

extremely frequent; but the loss of life from lightning is probably
diminished by the fact that the palm-trees are excellent conductors.
At night the air is almost invariably still. The average rainfall at
Batavia is 72-28 in. per annum, of which 51-49 in. are contributed
by the west monsoon. The amount varies considerably from year
to year: in 1889, 1891 and 180,7 there were about 47-24 in.; in 1868
and 1877 nearly 51-17, and in 1872 and 1882 no less than 94-8.
There are no long tracts of unbroken rainfall and no long periods of
continuous drought. The rainfall is heaviest in January, but it
Next in order come
rains only for about one-seventh of the time.
February, March and December. August, the driest month, has
from three to five days of rain, though the amount is usually less
than an inch and not more than one and a half inches. The popular description of the rain falling not in drops but streams was proved
erroneous by J. Wiesner's careful observations (see Kais. Akad. d.
Wiss. Math. Natural. Cl. Bd. xiv., Vienna, 1895), which have been
confirmed by A. Woeikof (" Regensintensitat und Regendauer in

along the north coast.
Fauna. In respect of its fauna Java differs from Borneo, Sumatra
and the Malay Peninsula far more than these differ among themselves; and, at the same time, it shows a close resemblance to the
Malay Peninsula, on the one hand, and to the Himalayas on the
other. Of the 176 mammals of the whole Indo-Malayan region
the greater number occur in Java. Of these 41 are found on
the continent of Asia, 8 are common to Java and Borneo, and 6 are
common to Java and Sumatra (see M. Weber, Das Indo-Malay
Archipelago und die Geschichte seiner Thierwelt, Jena, 1902). No
genus and only a few species are confined to the island. Of the landbirds only a small proportion are peculiar. The elephant, the tapir,
the bear, and various other genera found in the .rest of the region are
altogether absent. The Javanese rhinoceros (Rhinoceros sundaicus;
sarak in Javanese, badak in Sundanese), the largest of the mammals
on the island, differs from that of Sumatra in having one horn

as, if shot by day, they often cling after death to the branches.
Smaller kinds of bats are most abundant, perhaps the commonest
being Scotophilus Temminckii. In certain places they congregate
in myriads, like sea-fowl on the cliffs, and their excrement produces
extensive guano deposits utilized by the people of Surakarta and
Madiun. The creature known to the Europeans as the flying-cat
and to the natives as the kubin is the Galeopithecus volans or variagatus a sort of transition from the bats to the lemuroids. Of these
last Java has several species held in awe by the natives for their
supposed power of fascination. The apes are represented by the
wou-wou (Hylobates leuciscus), the lutung, and kowi (Semnopithecus
maurus and pyrrhus), the surili (Semnopithecus mitratus), and the
munyuk (Cercocebus, or Macacus, cynamolgos), the most generally

Mustela Henrici, and an otter (Aonyx leptonyx) in the streams of the
hot zone. The coffee rat (Paradoxurus hermaphroditus) a civet cat
(Viverricula indica), the Javanese ichneumon (Herpestes javanicus),
and Priodon gracilis may also be mentioned.
In 1820, 176 species of birds were known in Java; by 1900 Vorderman and O. Finsch knew 410. Many of these are, of course, rare
and occupy a limited habitat far from the haunts of man. Others
exist in myriads and are characteristic features in the landscape.
Water-fowl of many kinds, ducks, geese, storks, pelicans, &c., give
life to sea-shore and lake, river and marsh.
Snipe-shooting is a
favourtie sport. Common night-birds are the owl (Strix flammea)
and the goatsucker (Caprimulgus affinis). Three species of hornbill,
the year-bird of the older travellers (Buceros plicatus, lunatus and

honey-birds (eight species) take
which they rival in beauty and diminutiveness, ranging from the
lowlands to an altitude of 4000 ft. In the upper regions the birds,
like the plants, are more like those of Europe, and some of them
notably the kanchilan (Ilyloterpe Philomela) are remarkable for
their song.
The edible-nest swallow (Collocalia fuciphaga) builds
in caves in many parts of the island. 2
As far back as 1859 P. Bleeker credited Java with eleven hundred
species of fish and naturalists are perpetually adding to the number.'
In splendour and grotesqueness of colouring many kinds, as is well
known, look rather like birds than fish. In the neighbourhood of
Batavia about three hundred and eighty species are used as food by
the natives and the Chinese, who have added to the number by the
introduction of the goldfish, which reaches a great size. The sea

Flora.—For the botanist Java is a natural paradise, affording him
the means of studying the effects of moisture and heat, of air-
currents and altitudes, without the interference of superincumbent
arctic conditions. The botanic gardens of Buitenzorg have long
been the nursery of these Oriental plants, from whose treasures
have been accumulated and displayed, their value in connexion with
the economic development of the island and the extensive scientific
literature published by their directors.1

Many which have been considered as pests in their own haunts,
are found to be of great use in Java. In the first place, the plagues
of beetles, which are so destructive in the American tropics, are
now of rare occurrence through the agency of some small parasitic
species, Selene sminia javanensis. In many parts the island is
plagued with ants, termites and mosquitoes. Crops of all kinds
are frequently destroyed by attacks of these insects. But there are
many still unidentified (see especially Snellen van Hollenhoven,
Essai d'une faune entomologique de l'Archipel Indo-néerlandais).
Of still lower forms of life the profusion is no less perplexing.
Among the most destructive are the ants, whose territories is
covered with the silvery alang-alang grass broken by bamboo thickets,
clusters of trees and shrubs (Buisa ferdosiana, Ficus microcarpa, N. and
many others), to the climbing of which they are assigned. The
lizards, too, are very destructive. For instance, the Pholidopus
brevipes, which is found in the Java region, attacks the saplings
of trees and shrubs and has even been seen destroying the seedlings
of rice. The butterflies and moths which are so numerous in the
island, some dropping their leaves (e.g. Tetranes nudifilora) at
the very time they are in bloom or ripening their fruit. This and
other contrasts are graphically described from personal observation
by F. W. Schimper in his Pflanzen-Geographie auf physiologischer Grundlage
(Jena, 1898). The abundance of epiphytes, orchids, pitcher-plants,
moosses and fungi is a striking result of the prevalent
humidity; and many trees and plants indeed, which in colder
climates root in the soil, have become as it were, colonists and
moisture from their stronger neighbours. Of orchids J. J. Smith
records 562 species (100 genera), but the flowers of all except a score are inde-
spondant. Of the more than half a score of trees the forest affords
the Fraseria javanica, the Mangostana, the Cloves, the Java Sandalwood,
which Smirnoff describes as "old tree planner, almost unknown
generally, the Javanese vegetation differs from that of many of the other
tropical countries by being abundantly and often gorgeously
glorious. Many of the loftiest trees crown themselves with bright
pink, white, red, or yellow flowers, while the others proclaim their
beauty, as it were, to rival them in their display of colour. Shrubs,
too, and herbaceous plants often give brilliant effects in the savannahs,
the deserted clearings, the edges of the forest and along the
highways. The lanata, a verbenaceous alien introduced, it is said,
from Jamaica by Lady Raffles, has made itself aggressively
conspicuous in many parts of the island, more especially in the
Praengar and middle Java, where it occupies areas of hundreds of
acres.

The effect of mere altitude in the distribution of the flora was
long ago emphasized by Friedrich Junghuhn, the Humboldt of Java.
While the flora of the lowlands is divided into three regions
a division which has generally been accepted by his successors,
though, like all such divisions, it is subject to many modifications
and exceptions. The forest, or hot zone, extends to about the
second degree of moderate heat, it has its upper limit at about 4500;
the third, or cool, zone reaches 7000 and the fourth, or coldest,
comprises all that lies beyond. The lowest zone has, of course, the most extensive area; the second is
only a fiftieth and the third a five-thousandth of the first; and the
fourth is an insignificant remainder. The lowest is the region of the true tropical forest, of rice-fields and sugar-plantations, of cocoa
and sugar-palms. In the third region the rice is cultivated and
the eye for very different reasons. Farther inland along the
sea-board appear the nipah dwarf palm (Nipa fruits), the Alstonia
scholaris (the wood of which is lighter than cork), Ceydacaea,
treecrocus, and acacia; and the forest ends, more or less, in the
Cypria geophae) grows in clumps and bends not far from
but never quite to the coast; and in east Java a similar position
is occupied by the lontar (Borassus fabelifolius), valuable for its
timber and leaves for thatch and for the manufacture of mats, which were
used as a writing-material. The fresh-water lakes and
ponds of this region are richly covered with Utricularia and various
kinds of lotus (Nymphaea lotus, N., stellata, N. tuberosa, N. aurea,
N. caerulea, etc.); and the most remarkable is the water plantain
(Saccharum spontaneum). Alang-alang (Imperata arundinacea, Cy.
var. Bentham) grows from 1 to 4 ft. in height. It springs up
wherever the ground is cleared of trees and is a perfect plague to the
field-cultivator. It cannot be uprooted, it defies the scythe, the
kratok (Phaseolus lunatus) or the lantana; and, in the natural
progress of events, the forest resumes its sway except where
the natives encourage the young growth of the grass by annually
setting the prairies on fire. The true forest, which occupies a great part
of this region, changes its character as we proceed from west to
cast. In western Java it is a dense rain-forest in which the struggle of exist-
ence is maintained at high pressure by a host of lofty trees and
parasitic plants in bewildering profusion. The preponderance
of certain types is remarkable. Thus the of the Monocoeae there are in Java (and mostly here) seven genera with ninety-five species,
especially in the region of the east coast, the showy orchids and
arise in the forest, the Paracordia. In the west there are the
Monocoeae and Annonaceae are both numerously represented. In middle
Java the variety of trees is less, a large area being occupied by teak;
in east Java the character of the forest is mainly determined by the
abundance of the Casuarina or thomoro (C. montana and
Junglinhuania). Another species, C. equisetifolia, is planted in west
Java as an ornamental tree. These trees are not crowded together
as in the wild forest; they are interspersed with the parasitic growths of the rain-forest;
but their tall stems are often covered with multitudes of minute
verminil fungi. Wherever the local climate has sufficient
humidity, the true rain-forest claims its own. The second of Junghuhn's
zones, the region of the mountains, is the most luxuriant. There
are on the Java mountain slopes rice-fields, prairies, forests, and
plantations, of maize and the sugar palm (arec). In the forest
the trees are richly clad with ferns and enormous fungi; there is
a profusion of underwood (Pantellea macrophylla Java and salicili-
sula; several species of Lasiuris, Boemiastris, Strepheliastrus, &c.),
of woody lianas and ratans, of tree ferns (especially Asplilia). Between
the bushes the ground is covered with ferns, lycopods,
traskencius, Bignoniaceae, and species of Aeschynelnon. On
the lanius the largest is Plococenia elongata; one species of which
was found to have a length of nearly 790 ft. One of the fungi,
Telephora princeps, is more than a yard in diameter. The trees are
very ornamental and the forests are divided into the"hot forest," the "cool
forest," the "middle forest," and the "cold forest," each
being of the same species; and new types appear mostly in limited areas.
The third zone, which consists mainly of the upper slopes of volcanic
mountains, but also comprises several plateaus (the Dieng, parts
of the Java highland), presents a considerable number of lakes and swamps in several parts of the region,
and these have a luxuriant environment of grasses, Cypera-
There are palms, orchids, ferns, oak, chestnuts, various Lauraceae, and four or five species of Podocarpus—with some striking exceptions, Astronia spectabilis,
&c., are less floriferous than those of the lower zones; but the shrubs
(Rhododendron javanicum, Ardisia javanica, &c.), herbs and parasites
more than make up for this defect. There is little cultivation,
except in the Tengger, where the natives grow maize, rye and tobacco,
and various European vegetables (cabbage, potatoes, &c.), which
they supply the lowland region. The most striking features of the upper parts of this tropical region is what Schimper calls the "absolute
dominion of mosses," which are the "ruling type" of the vegetation.
As he expresses it "the whole surface of the ground is
a tangle of "low, thick, oblique or even horizontal stems," almost
choked to leaflessness by their grey and ghostly burden. Much
of the lower vegetation begins to have a European aspect; violet,
buttercups, the ballerina, the little yellow and white flowers Of
Artemisia vulgaris, Plantago major, Solanum nigrum, Stellaria media;
and altogether the alpine flora contains representatives of no fewer
than thirty-three families. A characteristic shrub is Anaphalis
Bretschneideri, locally called the Javanese edelweiss, but it
entirely excludes all other woody plants.1

1 Bertha Hoola van Nooten published Fleurs, fruits et feuilles de la flore et de la pomone de l'Ile de Java (1863), but the book is difficult of
access. Excellent views of characteristic aspects of the vegetation
will be found in Karsten and Schenck, Vegetationsbilder (1902).

287

The Annales de Buitenzorg, with their Icones bogorienses, are
universally known; the Tevesmannaia is named after a former
director. A history of the gardens was published by Dr Treub,
Festhoo van's Lands Plantenbouw (1891).
JAVA

of all the trees in the island is the rasamala or liquid-ambar (Altingia excelsa), which, rising with a straight clean trunk, sometimes 6 ft. in diameter, may reach a height of 30 ft., and bear a magnificent crown of branches and foliage. When by chance a climbing plant has joined partnership with it, the combination of both becomes very picturesque. 

The rasamala, however, occurs only in the Preanger and in the neighbouring parts of Bantam and Buitenzorg. Of the other trees that may be classified as timber—from 300 to 400 species—many are valuable. 

It is the area east of the Timor Islands which furnishes the inophyllum, which forms fine woods in the south of Bantam, Minnusops acuminata, Inra gabrea, Dalbergia latifolia (sun wood, English black-wood) in middle and east Java; the rare but splendid Pithcoleus, Schima javanica, Bismarckia nodosa, Pterospermum javanicum (greatly prized for ship-building), and the upas-tree. 

From the economic point of view all these hundreds of tropical trees besides the valuable hardwoods, tropical shrubs which, almost to the exclusion of all others, occupies about a third of the government forest-lands. It grows best in middle and eastern Java, preferring the comparatively dry and hot climate of the plains and lower hills to a height of about 2000 ft. above the sea, and thriving best in more or less calciferous soils. In June it sheds its leaves and begins to bud again in October. Full-grown trees reach a height of 15 to 25 ft. In 1895 teas (with a very limited quantity of other timber) was sold to the value of £101,800, and in 1904 the corresponding figure was about £19,935.

That an island which has for so long maintained a dense and growing population could have been cleared for cultivation should be an extant tracts of primeval or quasi-primeval forest as have been above indicated would be matter of surprise to one who did not consider the simplicity of the life of the Javanese. They require but little shelter for their dwelling and their food and clothing is mostly constructed of bamboo supplemented by a palm or two. They destroy the forest mainly to get room for their rice-fields and pasture-lands. In doing so, however, they are not sufficiently reckless and wasteful; and if it had not been for the unusual humidity of the climate their annual fires would have resulted in widespread conflagrations. As it is, many mountains are now bare which within historic times were forested to the top; but the Dutch government has proved fully alive to the danger of denudation. The state has control of all the woods and forests of the island with the exception of those of the Preanger, the 'particular land' of Banyumas, and Batur; and it has long been engaged in replanting with native trees and experimenting with aliens from other parts of the world—Eucalyptus globulus, the jati, Cassia fistula from Sumatra, the acuminata, Altingia excelsa, &c. The greatest success has been with cinchona.

Left to itself Java would soon clothe itself again with even a richer natural vegetation than it had when it was first occupied by man. The open space left by the demolition of the fortifications on Nusa Kambangan was in twenty-eight years densely covered by thousands of shrubs and trees of about twenty varieties, many of the latter 80 ft. high. Resident Snijthoff succeeded about the close of the last century in differentiating two parts of Madura province and the simple expedient of protecting the territory he had to deal with from all encroachments by natives. 

Population.—The population of Java (including Madura, &c.) was 30,098,908 in 1905. In 1900 it was 28,746,688; in 1890, 23,912,504; and in 1880, 19,794,505. The natives consist of the Javanese proper, the Sundanese and the Madurese. All three bear the same local name.

Between the Javanese and Sundanese, the distinction is mainly due to the influence of the Hindus on the former and the absence of this in the latter. Between Javanese and Madurese the distinction is rather to be ascribed to differences of natural environment. The Sundanese have best retained the Malay type, both in physique and fashion of life. They occupy the west of the island. The Madurese area, besides the island of Madura and neighbouring isles, includes the eastern part of Java itself. The settlements of Tegal, Pekalongan, Banyumas, Bagelen, Kedu, Semarang, Japara, Surakarta, Jokjakarta, Rembang, Maduvin, Kediri and Surabaya have an almost purely Madurese population.

The Javanese are the most numerous and civilized of the three peoples.

The colour of the skin in all three cases presents various shades of yellowish-brown; and it is observed that, owing per- haps to the Hindu strain, the Javanese are generally darker than the Sundanese. The eyes are always brown or black, the hair of the head black, long, lank and coarse. Neither beard nor limbs are provided with hair, and there is hardly even the suggestion of a beard. In stature the Sundanese is less than the Javanee

1 It is interesting to compare this with the natural "reflorization" of Krakatau. See Penang, Anim. jur. de Buitenzorg, vol. VIII (1902); and W. Bott in Nature (1903). proper, being little over 5 ft. in average height, whereas the Javanese is nearly 5½ ft.; at the same time the Sundanese is more stoutly built. The Madurese is as tall as the Javanese, and as stout as the Sundanese. The eye is usually set straight in the head in the Javanese and Madurese; among the Sundanese it is often oblique. The nose is generally flat and small, with wide nostrils, although among the Javanese it not infrequently becomes more prominent. The lips are thick, yet well formed; the teeth are naturally white, but often filed and stained. The cheek-bones are well developed, more particularly with the Madurese. In expressiveness of countenance the Javanese and Madurese are far in advance of the Sundanese. The women are not so well made as the men, and among the lower classes especially soon grow absolutely ugly. In the eyes of the Javanese a golden yellow complexen is the perfection of female beauty. To judge by their early history, the Javanese must have been a warlike and vigorous people, but now they are peaceable, docile, sober, simple and industrious.

One million only out of the twenty-six millions of natives are concentrated in towns, a fact readily explained by their sources of livelihood. The great bulk of the population is distributed over the country in villages usually called by Europeans dessas, from the Low Javanese word des (High Javanese dusun). Each desa, however small (and those containing from 100 to 1000 families are exceptionally large), forms an independent community; and no sooner does it attain to any considerable size than it sends off a score of families or so to form a new desa. Each lies in the midst of its own area of cultivation. The general formation of the villages is therefore one of the most striking features of Java, and it is not unusual for the oldest villages to be 70 ft. high. Within this live the houses, each with its own enclosure, which, even when the fields are the communal property, belongs to the individual householder. The capital of a district is only a larger desa, and that of a regency has the same general type, but includes several kampongs or villages. The bamboo houses in the strictly Javanese districts are always built on the ground; in the Suna lands they are raised on piles. Some of the well-to-do, however, have stone houses. The principal article of food is rice; a considerable quantity of fish is eaten, but little meat. Family life is usually well ordered. The upper class practice polygamy, but among the common people a man has generally only one wife. The Javanese are nominally Mahomedans, as in former times they were Buddhists and Brahmins; but in reality, not only such exceptional groups as the Kalangs of Surakarta and Jokjakarta and the Baduwis or nomad tribes of Bantam, but the great mass of the people must be considered as believers rather in the primitive animism of their ancestors, for their belief in Islam is overlaid with superstition. As we ascend in the social scale, however, we find the name of Mahomedan more and more applicable; and consequently the more profound one of the populace the influence of the Mahomedan "priests" (this is their official title in Dutch), is widespread and real. Great prestige attaches to the pilgrimage to Mecca, which was made by 5068 persons from Java in 1900. In every considerable town there is a mosque. Christian missionary work is not very widely spread.

Languages.—In spite of Sundanese, Madurese and the intrusive Malay, Javanese has a right to the name. It is a rich and cultivated language which has a literary form in which has been written a great deal of poetry, and, under peculiar influences, has become a linguistic complex of an almost unique kind. Though it is customary and convenient to distinguish New Javanese from Kayi or Old Javanese, just as it was customary to distinguish English from Anglo-Saxon, there is no break of historical continuity. Kavi (Bas a Kavi, i.e. the language of poetry) may be defined as the form spoken and written before the founding of Majapahit; and middle Javanese, still represented by the dialect of Banyumas, north Cheribon, north Krawang and north Bantam, as the form the language assumed under the Majapahit court influence; while New Javanese is the language as it has been since the kingdom's collapse. Since the language as such has been in continuous use for a thousand years, it could become arcas. It contains more Sanskrit than any other language of the archipelago. New Javanese breaks up into two great varieties, so different that some linguists are regarded as speaking two different languages. Each variety use one form, Krâma; the common people another, Ngoko, the "thoinge" language (cf. the "tuyotang", Ger. duitsend); but each class understands the language of the other class. The aristocrat speaks
to the commonality in the language of the commoner; the commoner speaks to the aristocracy in the language of the aristocrat; and, according to clearly recognized etiquette, every Javanese plays the part of courtier in the eyes of the young girl of fifteen. To speak Ngoko to a superior is to insult him; to speak Krâmân to an equal or inferior is a mark of respect. In this way Dipa Negra, shrewd and alert, educated by the European teachers, makes his way. Javanese thinks in Ngoko; the children use it to each other, and soon. Between the two forms there is a kind of compromise, the Madya, or middle form of speech, employed by those who stand to each other on a footing, as the eldest in a family, or as the master and servant, or the couple in love, and to modify the tone of etiquette. For every idea expressed in the language Krâmân has one vocable, the Ngoko another, the words being sometimes completely different and sometimes differing only in the termination, thus giving a more exact and polished turn to the sentence. There are probably two or three languages delicately differentiated from each other. How this state of affairs came about is matter of speculation. Among educated people, the Madya, though on the side of the natives, bears each its own tongue, and tending towards each other the position intellectually and politically of superior and inferior, had much to do with it. But Professor Kerk thinks that some influence must also have been at work in the possg or pandæg, word-taboo—certain words being in certain circumstances regarded as of evil omen—a superstition still lingering, e.g. even among the Shetland fishermen (see G. A. F. Hazen, De taalstaten). It has sometimes been argued that Krâmân contains more Sanskrit words than Ngoko does; but the total number in Krâmân does not exceed 20; and sometimes there is a Sanskrit word in Ngoko which is not in Krâmân. There is, indeed, a great deal of Sanskrit language not used, perhaps, in Krâmân, but in Ngoko, with a vocabulary of about 300 words, is used in addressing the deity or persons of exalted rank. The Basa Kedaton or court language is a dialect used by all living at court except royal blood. Among the common people, the court employ Krâmân or Madya, but they address the men in Basa Kedaton.

**Literature.**—Though a considerable body of Kavi literature is still extant, nothing like a history of it is possible. The date and authorship of most of the works are totally unknown. The first place may be assigned to the Brata Yuda (Sansk., Bharata Yuda, the conflict of the Bharatas), an epic poem dealing with the struggle between the Pandâwas and the Kórawas for the throne of Ngastina celebrated in parwas 5-10 of the Mahabhârata. To the conception, however, of the modern Javanese it is a purely native poem; its kings and heroes find a place in the literature of the islands as in the history of India. The poet is unknown, though the Javanese believe he was a king. The Kavi text was lithographed at the Hague by S. Lankhout. Of greater antiquity probably is the Arjûndu Wûndâ (or marriage festival of Arjûna), which Professor Kerk thinks may be assigned to the first half of the 11th century of the Christian era. The name indicates its Mahâbhârata origin. Fricerich published the Kavi text from a Sunda MS, and Wûndâ Asta Vanâra en Brâdëa Koeâ (the marriage of the poet with the daughter of King Astavanara and of the poet with the daughter of King Astavanara). The oldest poem of which a Kavi trace is preserved is probably the mythological Kandâ (i.e. tradition); the contents are to some extent known from the modern Javanese version. In the literature of the island, the Kavi poetry is divided into two classes: the Kāvî, or the so-called babads or chronicles. It is sufficient to mention the "history" of Baron Sakender, which appears to give an account—though hardly recognizable—of the settlement of Europeans in Java. (Cohen Stuart, in his translation, has endeavoured to trace the main points (see above).) The Babad Tanah Djawi (the Hague, 1847, 1877), giving the history of the island to 1647 of the Javanese era, is probably the best of the chronicles, being the work of a person who usually takes their subjects from the Hindu legends or from those relating to the kingdoms of Majapahit and Pajajaran (see e.g. H. C. Hume, Abûdë, een Javaansche loensbi, the Hague, 1876). In these plays grotesque figures of gilded leather are worn by the performer, who recites the appropriate speeches and, as occasion demands, plays the part of chorus.

Several Javanese specimens are also known in the form of ballads, which take a special place in the Kavi literature (W. Palmer, van den Broek, Javansche Vertellingen, benadende et depotrevelen van een kantjil, en reek, &c., the Hague, 1878). To the Hindu-Javanese literature there naturally succeeded a Mahomedan-Javanese literature containing largely of translations or adaptations of Arabic originals; it comprises religious romances, moral exhortations and mystical treatises in great variety.

The modern Javanese literature in advance of the other peoples of the archipelago. Of thirty different crafts practised among them, the most important are those of the blacksmith or cutler, the carpenter, the kris-sheath maker, the coppersmith, the goldsmith and the potter. Their skill in the working of the metals is the more noteworthy as they have to import the raw materials. The most esteemed product of the blacksmith's skill is the kris; every man and woman in Java are fitted with a kris to protect themselves against robber. The clothing is of very fine silk, the women wear gowns of fine muslin, the men a shirt and a figure of the same, and the men have often two or three. When visiting the market they sometimes fetch exorbitant prices. The Javanese gold and silver wares are very ornamental and costly, but there is nothing equal to the filigree of Sumatra; the brass musical instruments are of exceptional excellence. Both brass and iron tiles are made, and in the very few cases the latter are not made entirely in the form of tiles. The art of making tiles is of Indian origin: it has been transmitted to Java from India in several styles. The tradition is, however, that they are manufactured in Sumatra by the Semarang people and that the art is several centuries old. The style of the tile is of the same form as that of the Indian style used in Java, but it cannot be repeated according to the number of colours required. As a consequence the battles, as the cloths thus treated are called, are in request by the wealthier classes. For the most part quiet colours are preferred. To the Javanese of the present day the ancient buildings of the Hindu periods are the work of supernatural power. Except when employed by his European master he seldom builds anything more substantial than a bamboo or timber framework: but in the details of such erections he exhibits both skill and taste.

When Europeans first came to the island they found native vessels of large size well entitled to the name of ships; and, though ship-building at that time was not one of their natural arts, the Javanese are able to build cangkars, boat-building is a very extensive native industry along the whole of the north coast—the boats sometimes reaching a burden of 50 tons. The only one of the higher arts which the Javanese have succeeded in reaching any degree of perfection in is the art of making tiles, and has to be repeated according to the number of colours required. As a consequence the battles, as the cloths thus treated are called, are in request by the wealthier classes. For the most part quiet colours are preferred. To the Javanese of the present day the ancient buildings of the Hindu periods are the work of supernatural power. Except when employed by his European master he seldom builds anything more substantial than a bamboo or timber framework: but in the details of such erections he exhibits both skill and taste.

When Europeans first came to the island they found native vessels of large size well entitled to the name of ships; and, though ship-building at that time was not one of their natural arts, the Javanese are able to build cangkars, boat-building is a very extensive native industry along the whole of the north coast—the boats sometimes reaching a burden of 50 tons. The only one of the higher arts which the Javanese have succeeded in reaching any degree of perfection in is the art of making tiles, and has to be repeated according to the number of colours required. As a consequence the battles, as the cloths thus treated are called, are in request by the wealthier classes. For the most part quiet colours are preferred. JAVAHeld every year. For natural beauty few parts of Java can compare with the
plain of Tasikmalaya, itself remarkable, in a country of
trees, for its magnificent avenues. N.E. of the Preanger lies the
residency of Sukabumi, and the former (proprietor of the
chief town (pop. 24,564) is one of the most important places
on the north coast, though the unhealthfulness of the site has
caused Europeans to take refuge in the town of Cirebon (2,460 m.,
district of Cirebon) for its great natural strength and
(18?) the residence of the regent, and of considerable interest are the
principal buildings; there are also extensive salt warehouses. The
native part of the town is laid out more regularly than is usual, and
the wide streets, lined by rows of firm trees, are a feature of the
place. The palace of the old sultans of Cirebon are less extensive
than those of Surakarta and Jokjakarta. Though the harbour has
to be kept open by constant dredging the roadstead is good all the
year round, and the principal silt is carried away by the
expresses, and described by travellers, lies about 2 m. off near Sunia Raja.
Mundu, a village 4 m. south-east of Cirebon, is remarkable as the
only known abode of the species of shark known as the
crystal (Schomburgk's crystal, or the
crystal). It is a common fish in the
meres, native trade and industry, and fisheries are all well repre-
sented and the sugar factories give abundant employment to the
inhabitants. The harbour has been the object of various improve-
ments, and has been largely deepened by European work. The
town proper, with 16,665 inhabitants, is surrounded by extensive
kampungs (Balapulang, Lebaklu, &c.). In Pekalongan (pop. 33,211) and Bongkong (31,652),
industries is the production of batik and the making of cloth;
these are also iron-works and sugar factories. The two towns are only
some 5 m. apart. The former has a large mosque, a Protestant
church, an old fort and a large number of European houses. The
Chinese quarters consist of neat stone or brick buildings. Peka-
longan smoked ducks are well known. Brebes (13,474) on the
Panali is an important trade centre. Banyumas (5000) is the
Of the town proper (21,604), and Plengkung (12,094)
and Chilchap (12,000). This last possesses the best
harbour on the south coast, but as for malaria would have
been an unhealthy spot. It was chosen as the seat of a great military
establishment but had to be abandoned, the fort being built up
in 1835. Semarang (pop. 89,286, of whom 4800 are Europeans and
12,572 Chinese) lies on the Kali Ngaran near the centre of the
north coast. Up to 1824 the old European town was surrounded
by a wall and ditch. It was almost the exact reproduction of a
Dutch town without the slightest accommodation to the exigencies
of the climate, the streets narrow and irregular. The modern town is
wider, and has been built on the British model. The old town
(Menganti, and the Roman Catholic church, the Protestant church, the
mosque, the palace of the regent, &c. The church is in ruins and
improved by the opening of the railway to Surakarta and Jokjakarta in
1875. As a seaport the place is unfortunately situated. The
river has long been silted up; the roadstead is insecure in the west
monsoon; and the trade is depressed and the people impoverished.
the two towns of Mataram and Jokjakarta, by the
and the Murai, at the entrance to the town Bondowoso (82,865); Besuki, about the same size, but with no
foreign trade; Jember, a small but rapidly increasing place, and
Banyuwangi (17,539). This last was at one time the seat of the
regency of Banyuwangi, which was suppressed by the Dutch in
1836. It was a seaport on the Bali Strait with an important office of the
telegraph company controlling communication with Port Darwin
and Singapore. It has a very mingled population, besides Javanese and
Madurese, Chinese and Arabs, Balinese, Buginese and Europeans.
The chief town of Kediri (10,486) is the only residency town in the
interior traversed by a navigable river, and is exceeded by Tufunga,
and the residencies of Madian have the most commodious centres of
population: Madian (21,168) and Ponororo (16,765).
Agriculture.—About 40% of the soil of Java is under cultivation.
Bantam and Besuki have each 16% of land under cultivation;
Banyumas, 23; South Central Java, 45; Tegal, 53; Surakarta, 65; Surabaya, 66; Samargam, 67. Proceeding along the
south coast from its west end, we find that in Bantam all the
land cultivated on its south south coast amounts to at most 5% of
that regency; in Preanger and Banyumas, as far as Chilchap, the
land under cultivation amounts at a maximum to 20%. East
of Surakarta the percentages of land on the south coast under cultiva-
tion increase; in the north of Central Java it reaches 25% of
the total area. Proceeding along the north coast, we find that in
Chilchap the percentage of land cultivated on the south coast sinks
to as low as 2%. On the north coast, in Krawang and Rembang, with
their morasses and double chains of chalk, there are districts with
very little agriculture. In Tegal, Surakarta, and Banyumas, in
the south of Java, and in the middle of Central Java, on the other
hand, of Batavia, Cirebon, Tegal, Samargam, Japara,
Surabaya and Pasuruan, there are districts having 80% to 90% of
small farms and more.

But the agricultural products of Java must be distinguished into those
raised by the natives for their own use and those raised for
the government and private proprietors. The
land assigned to the

1 Cheribon is the form employed by the Dutch: an exception to their usual system, in which Tj-
takes the place of the Ch- used in this article.
natives for their own culture and use amounts to about 9,625,000 acres, but extensively grown for export, are cultivated in middle Java, while in eastern Java and Madura other articles of food, take the first rank. The Javanese tell strange legends concerning the introduction of rice, and observe various ceremonies when planting, during which rites, its importance to them is greater than to the proper cultivation of the cereal. The agricultural produce grown on the lands of the government and private proprietors, comprising an annual yield of 18,743,314 metric tons of rice, 7,363,012 metric tons of sugar, 299,869 metric tons of tobacco, tea, pepper, &c. The Javanese possess buffaloes, ordinary cattle, horses, dogs and cats. The buffalo was probably introduced by the Hindus. As in agricultural production, the number of buffaloes in Java is distinguished from middle and eastern Java. The average distribution of buffaloes is 106 per 1000 habitants but it varies considerably in different districts, being greatest in western Java. The fact that rice is the principal food of the Javanese and appears at every meal, with the exception of the rice porridge "nasi" of which the Javanese are enthusiastic, is well illustrated in the600 daily consumption of rice by each family is about 3,000 grams. The Javanese do not grow corn but it is imported in very large quantities from eastern Java and the Netherlands. The "nasi" is served with an accompaniment of vegetable, usually "nasi campur" and "sambal". The "nasi" is usually consumed with a variety of dishes such as "sambal" (spicy green chili paste), "gélat" (boiled or fried eggs), "bakso" (meatballs), "nisia" (roasted rice), "kacang" (peanuts), and "umebaka" (pickled plum). The "nasi" is consumed with a variety of dishes, such as "sambal" (spicy green chili paste), "gélat" (boiled or fried eggs), "bakso" (meatballs), "nisia" (roasted rice), "kacang" (peanuts), and "umebaka" (pickled plum). The "nasi" is consumed with a variety of dishes, such as "sambal" (spicy green chili paste), "gélat" (boiled or fried eggs), "bakso" (meatballs), "nisia" (roasted rice), "kacang" (peanuts), and "umebaka" (pickled plum).

The Javanese are fond of "kopi" (coffee) and "teh" (tea). "Kopi" is the national drink and is consumed in various forms, such as "kopi susu" (which means coffee with milk) and "kopi putih" (which means coffee without milk). "Teh" is consumed in various forms, such as "teh susu" (which means tea with milk) and "teh pelita" (which means tea with ginger). The Javanese are also fond of "cendrawasih" (fruit) and "buah" (fruit). The Javanese are also fond of "cendrawasih" (fruit) and "buah" (fruit). of salt is a government monopoly and confined to the districts of Sumeneip, Panakesan and Sampeng in Madura, where from 3000 to 4000 people are hereditarily engaged in extracting salt from sea water. The proportion of salt to government revenue was at one rate of 17½ per koyang (3700 lb). The distribution of this salt (rough-grained, greyish and highly hygroscopic) is extremely unsatisfactory. The waste was so great that in 1901 the government paid a price of about 300,000 florins (10,000 lb) to Carl Boltz von Bolberg for an improved method of packing. Between 1888 and 1892 the annual amount delivered was 71,405 tons; in the next five years it rose to 89,532, and in 1897 it rose again to 92,565. The origin of this monopoly has been investigated by J. E. de Meyer, "Zout als middel van belasting," De Ind. Gids. (1905). The scarcity of salt has led to a great importation of salted fish from Siam (upwards of 600,000 cam) in 1902.

Communications.—Roads and railways for the most part follow the fertile plains and table-lands along the coast and between the volcanic areas. The principal railways are the Semarang-Jogjakarta, Batavia-Buitenzorg, the North India, Surakarta-Madiun, Pasuruan-Pdoblinggo, the Surabaya-Pasuruan, Bangli-Malang, Sidorjo-Paron, Kertosono-Tulung Angun, Buitenzorg-Chianjur, Surakarta-Jojokarta, Probolinggo, Jogjakarta-Chilacap and other lines of the government. The earliest lines, between Batavia and Buitenzorg and between Surakarta and the capitals of the sultanes, were built about 1870 by a private company with a state guarantee. Since 1875, when Dr van Goltstein, then a cabinet minister and afterwards Dutch minister in London, had an act passed for the construction of state railways in Java, their progress has been considerable. Governmental or semigovernmental private companies have built either light railways or tramways, such as between Semarang and Joana, and the total length of all lines was 2460 in 1905. There are some 3500 miles of telegraph line, and cables connect Surakarta, Batavia, Buitenzorg, Bandoeng and Batavia with Sydney and Australia. Material welfare was promoted by the establishment of lines of steamships between Java and the other islands, all belonging to a Royal Packet Company, established in 1888 under a special charter, and really possessing a monopoly on account of the government mail contracts.

Administration.—Each village (dessa) forms an independent community, a group of dessas forms a district, a group of districts a department and a group of departments a residency, of which there are seventeen. At the head of each residency is a resident, with an assistant resident and a controller, all Dutch officials. The officials of the central administration are known as "fiscaal" by the government; those of the dessa are also natives, elected by the inhabitants and approved by the resident. In the two sultanes of Surakarta and Jogjakarta the native sultanes govern under the supervision of the residents. (For the colonial administration of Netherlands India see Malayan Archipelago.)

History.—The origin of the name Java is very doubtful. It is not improbable that it was first applied either to Sumatra or to what was known of the Indian Archipelago—the insular character of the separate parts not being at once recognized. Jawa Dwipa, or "land of milket," may have been the original form and have given rise both to the Jau diu of Ptolemy and to the Jh-po-thi of Fa-hien, the Chinese pilgrim of the 4th century. The oldest form of the name in Arabic is apparently Zabej. The first epigraphic occurrence of Jawa is in an inscription of 1343. In Marco Polo the name is the common appellation of the whole island. The Jawa of Ibn Battuta is Sumatra; Java is his Mul Jawa (i.e. possibly "original Jawa"). Jává is the modern Javanese name (in the court speech Jawi), sometimes with Nusa, "island," or Tana, "country," prefixed.

It is impossible to extract a rational historical narrative from the earlier babads or native chronicles, and even the later are destitute of any satisfactory chronology. The first great era in the history is the ascendency of the Hindus, and that breaks up into three periods—a period of Buddhism, a period of aggressive Sivaism, and a period of apparent compromise. Of the various Hindu states that were established in the island, that of Majapahit was the most widely dominant down to the end of the 15th century; its tributaries were many, and it even extended its sway into other parts of the archipelago. The second era of Javanese history is the invasion of Islam in the beginning of the 15th century; and the third is the establishment of European and more particularly of Dutch influence and authority in the island. About 1520 the Portuguese entered into commercial relationship with the natives, but at the close of the same century the Dutch began to establish themselves. At the time when the Dutch East India company began to fix its trading factories on the coast towns, the chief native state was Mataram, which had in the 16th century succeeded to the overlordship possessed by the house of Demak—one of the states that rose after the fall of Majapahit. The emperors of Java, as the princes of Mataram are called in the early accounts, had their capital at Kartasura, now an almost deserted place, 6 m. west of Surakarta. At first and for long the company had only forts and little fragments of territory at Jakarta (Batavia), &c.; but in 1705 it obtained definite possession of the Preanger by treaty with Mataram; and in 1745 its authority was extended over the whole north-east coast, from Cheribon to Banyuwangi. In 1811 the kingdom of Tretjakarta was conquered, and in middle Java, one of the two states of Surakarta and Jogjakarta, which still retain a shadow of independence. The kingdom of Bantam was finally subjugated in 1808. By the English occupation of the island (1811-1818), the European ascendency was rather strengthened than weakened; the great Java war (1825-1830), in which Dipd Negârâ, the last Javanese prince, a brave, bold and unscrupulous leader, struggled to maintain his claim to the whole island, resulted in the complete success of the Dutch. To subdue him and his following, however, taxed all the resources of the Dutch Indian army for 4 years. The main changes were of an economical character, but the political developments were also important. Since 1830 Dutch authority has steadily advanced, principally at the expense of the semi-independent sultanes in central Java, which had been allowed to remain after the capture and exile of Dipd Negârâ. The power of the sultanes of Jogjakarta and Surakarta has diminished; in 1863 Dutch authority was strengthened in the neighbouring island of Madura, and Bantam has lost every vestige of independence. The strengthening of the Dutch power has largely resulted from a more statesmanlike and more generous treatment of the natives, who have been educated to regard the orang blanda, or white man, as their protector against the native rulers. Thus, in 1866, passports for natives travelling in Java were abolished by the then governor-general, Dr Sloet van de Beele, who also introduced many reforms, reducing the corvée in the government plantations to a minimum, and doing away with the monopoly of fisheries. Six years later a primary education system for the natives, and a penal code, whose liberal provisions seemed framed for Europeans, were introduced.

Antiquities.—Ordinary traces of early human occupation are few in Java. The native bamboo buildings speedily perish. Stone weapons are occasionally found. But remains of the temples and monastic buildings of the Hindu period are numerous and splendid, and have remarkably preserved their original form, and their high standard without the use of mortar, supporting columns or arches. Chandi (i.e. temples, though the word originally meant a mount), the ashes of a saint, are not found in western Java. They exist in two general types, one in middle Java, one in eastern Java, each with its own distinguishing characteristics, both architectural and religious. The former begins in the Dyeng plateau, in the east of Bandung and Bantul, the latter in the highlands of Kedu and the neighbouring districts of Semarang, northern Jogjakarta, and the western corner of Surakarta. The latter lies mainly in Surabaya, Kodiri and Pasuruan. A considerable number of
ruins also exist in Probolinggo. Further east they grow scarce. There is none in Madura. The remains of Macham Putih in Benteng Malang, and of several smaller temples near it, at Ngeudal (Semarang), to the north of Kedu, the place-names show that temples once existed. Some of them are Sivaites, some Buddhist, some astoundingly composite. None of the Buddhist buildings show much similarity of form or composition. They were, appropriately, the creation of all that is perfect sculptural exposition of the Mahayana doctrine. As to the period during which these temples were erected, authorities are divided. J. W. Ijzerman assigns the central Java temples to the 6th and 7th centuries. There are other interpretations (XXI) mentioned in the famous Menang-Kabu inscription (Sumatra) as founded by Maharaja Dhira Drayavadyathra in a.d. 650. But the following is not in the temple at Banyuwangi, and its sculptured cushion. It is one of the sacred mountains of Java. One thing seems certain, that the temples of the central Java are of much more recent origin than most, at least, of the central zone. The Banyuwangi temple is an example of the and no volcanic age, and show that the art of the time had become less Indian and more Javanese, with traces of influences derived from the more eastern part. At the same time, it must be noted that even in Boro-Budur there are non-Indian elements in the decoration, indicating that the Hindu architect employed native artists and to some extent left them a free hand. In his standard work on Indian and Eastern Architecture (London, 1876), James Ferguson asserted that the Javanese temples are in the Chalukian style. But J. W. Ijzerman in an elaborate paper in the Journal of the Asiatic Society, which makes the style of architecture was misled by basing his opinion mainly on inaccurate drawings reproduced by Raffles. The Javanese temples, with the solitary exception of Chandi Bima in the Dyeng, are Dravidian and not Chola. The temple of Boro-Budur is Dravidian, while it is carefully examined, disprove his statement: a fact not without its bearing on the history of the Hindu immigration.

The wonderful scenery of the Dyeng plateau was already in all probability an incentive for the country’s religious practices, and the infants of Java; and thus it would catch the attention of the earliest Hindū settlers. The old crater floor is full of traces of human occupations; there were, in spite of the tradition of the existence of a considerable town, no sepulchral relics of the inhabitants have been discovered. There still remain five groups of temples—some well preserved, some mere heaps of stone—to prove the devotion theirbuilders. This suggests that the whole district, which holds the Arjuna group, in the middle of the plateau, is the Chandi Arjuna (with its chapel or priests’ residence, Ch. Semar), Ch. Srikahadhi, Ch. Pundadewa and Ch. Sembadre, each a simple square chamber with a point; the Arjuna temples and the group of stellate form and group, Ch. Darawati and Ch. Parakasit, lies to the north-east. The third, the lower mound, lies to the east. The fourth, to the north-west, is a group of seven small temples of which Sanchi is the most important, with a square ground plan and an octagon roof with a second circular storey. Of the fifth, in the south, only one temple remains—the Chandi Bima—a small, beautiful and except for the periphery of the temple, covered in stucco, the top of which stand out much more prominently than the horizontal lines of the niche-shaped ornaments which rest each on its lotus column. To resist the effects of the continual change and decay amid hundreds is a problem to be solved. The plateau lies 600 feet above the sea, and roads and stairways, locally known as Buddha roads, lead up from the lowlands of Bagelen and Pekalongan. The sacred path leads from the temple row the arduous ascent of 4700 steps. The width of the roadway, however, is only some three or four feet. A remarkable subterranean tunnel still exists, which served to drain the plateau.

Of all the Hindu temples of Java the largest and most magnificent is Boro-Budur, which ranks among the architectural marvels of the world. It lies in the residence of Kedu, a little to the west of the Pongo, a considerable stream flowing south to the Indian Ocean. The place is best reached by taking the steam-tram from Magesala or Jokjakarta to the village of Muntiram Passar, where a conveyance may be hired. Strictly speaking, Boro-Budur is not a temple but a huge temple complex consisting of two rows of square walls each constructed of hewn lava-blocks and crowded with sculptures. The lowest terrace now above ground forms a square, each side 497 ft. long. About 50 ft. higher there is another terrace square, 260 ft. each side, with a lower terrace, and a fourth one with a lower contour. The structure is crowned by a dome or cupola 52 ft. in diameter surrounded by sixteen smaller bell-shaped cupolas. Regarded as a whole, the main design, to quote Mr Sewell, may be described as "an archaic Indian temple, considerably flattened and consisting of a series of terraces, surmounted by a quasi-stupa capped by a dagoba." It was discovered by the engineer J. W. Ijzerman in 1885 that the basement of the structure had been earthed and that the roof had covered the lower part. The top wall was completely concealed by the embankment. The architects had evidently found that their temple was threatened with a destructive subsidence; and, while the sculptures were still busy with their work; the main shutters had to be constructed. But the unfinished bas-reliefs were carefully protected by clay and blocks of stone and left in position; and since 1896 they are gradually being cleared away. The sculptures are of an exceptionally high order of excellence. In the opinion of the German archaeologists, who, however, have to proceed with caution, filling up one portion of the embankment before they go on to deal with another. The subjects treated in this lowest entablature of the temple are a simple pagoda and a group of dignified figures in scenes of outdoor and domestic life, mingled with mythological and religious designs. Among the genre class appear men shooting birds with blow-pipe or bow and arrow, fishermen with rod or net, a man leaping into a river to catch a fish, and birds flitting about. The sculptors intended gradually to wear the devotees from the things of this world. When once they began to ascend from stage to stage of the temple-hill they were introduced to the realities of religion; and, by the time they reached the dagoba they had passed through a process of instruction and were ready, with enlightened eyes, to enter and behold the image of Buddha, symbolically left imperfect, as beyond the power of human art, to realize or portray. From basement to summit the whole hill is a great picture bible of the Mahayana creed.

The statues and bas-reliefs of Boro-Budur were placed side by side they would extend for 3 m. The eye of the spectator, looking up from the present ground-level, is caught, says Mr Sewell, by the rows of life-size Buddhas that adorn the retreating walls of the temple, with their eye on the spectator, who is in the same position as Vishnu when he first beheld the world.
square of 45 to 46 ft. each side. The building fronts the west, and is constructed of an andesite tuff of inferior quality and dark colour. Of distinctly Buddhist influence there is no trace. The makara (elephant-fish head) is notably absent. The sculptures, which are crowded upon and along the sides of the three terraces or terraces are of the most elaborate and varied description—kings on thrones, dwarfs, elephants, supernatural beings, diabolical and grotesque, treants, the faces of courtiers, deities, divinities—all are represented. In one place appears a Chinese or Burmese-looking seven-roofed pagoda; in another, a tall temple strangely strung down the centre, with a flight of steps running up the face. The latter is the one in the Eishonmari pictures; in the same neighbourhood are Ch. Singossari, Ch. Kidal, &c. Another of the most beautiful of the eastern temples is Ch. Jabung, mentioned in 1330. It is built of red brick; and its distinctly Javanese style of suprastructure is of the most interesting character. 

JAWARIQ, Abu Mansur Ma'uni ul-Jawariq (732-1145), Arabian grammarian, was born at Bagdad, where he studied philology under Tibriz and became famous for his handwriting. In his later years he acted as imam to the caliph Moqtan. His chief work is the Khilaf-ul-Mur'arab, or "Explanation of Foreign Words used in Arabic,"

JAWARHAR, a native state of India, in the Konkan division of Bombay, situated among the lower ranges of the western Ghats. Area 310 sq. m. Pop. (1901), 47,538. The estimated revenue is Rs. 117,000; there is no tribute. The chief, who is a Koli by caste, traces his descent to 1343. The leading exports are teak and rice. The principal village is that of Jawhar (pop. 3567).

JAY, a bird, has everything which makes it a symbol of freedom, and more. It is, when all is said, a native American bird, a native American symbol, and a native American institution.

JAY, Peter (1745-1829), American statesman, the descendant of a Huguenot family, and son of Peter Jay, a successful New York merchant, was born in New York City on the 12th of December 1745. On graduating at King's College (now Columbia University) in 1764, Jay entered the office of Benjamin Kissam, an eminent New York lawyer. In 1768 he was admitted to the bar, and rapidly acquired a lucrative practice. In 1774 he married Sarah, youngest daughter of William Livingston, and was thus brought into close relations with one of the most influential families in New York. Like many other able young lawyers, Jay took an active part in the proceedings that resulted in the independence of the United States, identifying himself with the conservative element in the Whig or patriot party. He was sent as a delegate from New York City to the Continental Congress at Philadelphia on September 1774, and though almost the youngest member, was entrusted with drawing up the address to the people of Great Britain. Of the second congress, also, which met at Philadelphia on the roth of May 1775, Jay was a member; and on its behalf he prepared an address to the people of Canada and an address to the people of Jamaica and Ireland. In April 1776, while still retaining his seat in the Continental Congress, Jay was chosen as a member of the third provincial congress of New York; and his consequent absence from Philadelphia deprived him of the honour of signing one of the documents of Independence.

JAWLIK, O. Norman-Fr. garelot, javelot, Ital. garelooto. The origin seems to be Celtic, and the word is cognate with Ir. gafa, a hook, fork, gaff; the root is seen in "gable" (p. t.), and in the German Gabel, fork. The change in meaning from fork, forked end of a spear, to the spear itself is obscure.

JAWLICK, O. Norman-Fr. garelot, javelot, Ital. garelooto. The F. javej, javee and geoee, O. Eng. chewan, connected with "chaw" and "chew," and in form with "jowl," in anatomy, the term for the upper maxillary bone, and the mandible or lower maxillary bone of the skull; it is sometimes loosely applied to all the lower front parts of the skull (p. t.).
but in November 1778 the legislature pronounced the secession of what is now the state of Vermont from the jurisdiction of New Hampshire and New York to be such an occasion, and sent Jay to Congress charged with the duty of securing a settlement of the territorial claims of his state. He took his seat in Congress on the 7th of December, and on the 10th was chosen president pro tempore of the Senate by Henry Laurens.

On the 27th of September 1779 Jay was appointed minister plenipotentiary to negotiate a treaty between Spain and the United States. He was instructed to endeavour to bring Spain into the treaty already existing between France and the United States by a guarantee that Spain should have the Floridas in case of a successful issue of the war against Great Britain, reserving, however, to the United States the free navigation of the Mississippi. He was also to solicit a subsidy in consideration of the guarantee, and a loan of five million dollars. His task was one of extreme difficulty. Although Spain had joined France in the war against Great Britain, she feared to impair her own colonial interests by directly encouraging and aiding the former British colonies in their revolt against their mother country, and she had refused to recognize the United States as an independent power. Jay landed at Cadiz on the 22nd of January 1780, but was told that he could not be received in a formally diplomatic character. In May the king's minister, Count de Florida Blanca, intimating to him that the one obstacle to a treaty was the question of the free navigation of the Mississippi, and for months following this interview the policy of the court was one of delay. In February 1781 Jay instructed Jay that he might make concessions regarding the navigation of the Mississippi, if necessary; but further delays were interposed, the news of the surrender of Yorktown arrived, and Jay decided that any sacrifice to obtain a treaty was no longer advisable. His efforts to procure a loan were not much more successful, and he was seriously embarrassed by the action of Congress in drawing bills upon him for large sums. Although by importing the Spanish minister, and by pledging his personal responsibility, Jay was able to meet some of the bills, he was at last forced to protest others; and the credit of the United States was saved only by a timely subsidy from France.

In 1781 Jay was commissioned to act with Franklin, John Adams, Jefferson and Henry Laurens in negotiating a peace with Great Britain. He arrived in Paris on the 23rd of June 1782, and jointly with Franklin had proceeded far with the negotiations when Adams arrived late in October. The instructions of the American negotiators were as follows:

> "You are to make the most candid and confidential communications upon all subjects to the ministers of our generous ally, the king of France; to undertake nothing in the negotiations for peace or truce without their knowledge and concurrence; and ultimately to govern yourselves by their advice and opinion, endeavouring in your whole conduct to make them sensible how much we rely on his majesty's influence for effectual support in every thing that may be necessary to the present security, or future prosperity, of the United States of America."

Jay, however, in a letter written to the president of Congress from Spain, had expressed in strong terms his disapproval of such dependence upon France, and, on arriving in Paris, he demanded that Great Britain should treat with his country on an equal footing by first recognizing its independence, although the Count de Florida Blanca denied that the acknowledgment of independence as an effect of the treaty was as much as could reasonably be expected. Finally, owing largely to Jay, who suspected the good faith of France, the American negotiators decided to treat independently with Great Britain. The provisional articles, which were so favourable to the United States as to be a great surprise to the courts of France and Spain, were signed on the 9th of November 1782, and were adopted with no important change as the final treaty on the 3rd of September 1783.

On the 24th of July 1784 Jay landed in New York, where he was received with the freedom of the city and elected a delegate to Congress. On the 7th of May Congress had already chosen him to be secretary for foreign affairs, and in December Jay resigned his seat in Congress and accepted the secretariaship. He continued to act in this capacity until 1790, when Jefferson became secretary of state under the new constitution. In the question of this constitution Jay had taken a keen interest, and as an advocate of its ratification he wrote over the name "Publius," five (Nos. 3, 4, 5 and 6) of the famous series of papers known collectively as the Federalist (see Hamilton, Alexander). He also edited the Federalist Address by Alexander Hamilton (though the authorship) An Address to the People of New York, in vindication of the constitution; and in the state convention at Poughkeepsie he ably seconded Hamilton in securing its ratification by New York. In making his first appointments to federal offices President Washington asked Jay to take his choice; Jay chose that of chief justice of the Supreme Court, and held this position from September 1789 to June 1795. The most famous case that came before him was that of Chisolm v. Georgia, in which the question was, Can a state be sued by a citizen of another state? Georgia argued that it could not be so sued, on the ground that it was a sovereign state, but Jay decided against Georgia, on the ground that sovereignty in America resided with the people. This decision led to the adoption of the eleventh amendment to the federal constitution, which provides that no suit may be brought in the federal courts against any state by a citizen of another state or by a citizen or subject of any foreign state. In 1792 Jay consented to stand for the governorship of New York State, but a partisan returning-board found the returns of three counties technically defective, and though Jay had received an actual majority of votes, his opponent, George Clinton, was declared elected.

Ever since the War of Independence there had been friction between Great Britain and the United States. To the grievances of the United States, consisting principally of Great Britain's refusal to withdraw its troops from the forts on the north-western frontier, as was required by the peace treaty of 1783, her refusal to make compensation for negroes carried away by the British army at the close of the War of Independence, her restrictions on American commerce, and her refusal to enter into any commercial treaty with the United States, were added, after war broke out between France and Great Britain in 1793, the anti-neutral naval policy according to which British naval vessels were authorized to search American merchantmen and impress American seamen, provisions were treated as contraband of war, and American vessels were seized for no other reason than that they had on board goods which were the property of the enemy or were bound for a port which though not actually blockaded was declared to be blockaded. The anti-British feeling in the House of Representatives became so strong that on the 7th of April 1794 a resolution was introduced to prohibit the neutral intercourse between the United States and Great Britain until the north-western posts should be evacuated and Great Britain's anti-neutral naval policy should be abandoned. Thereupon Washington, fearing that war might result, appointed Jay minister extraordinary to Great Britain to negotiate a new treaty, and the Senate confirmed the appointment by a vote of 18 to 8, although the non-intercourse resolution which came from the house a few days later was defeated in the senate only by the casting vote of Vice-President John Adams. Jay landed at Falmouth in June 1794, signed a treaty with Lord Grenville on the 19th of November, and disembarked again at New York on the 28th of May 1795. The treaty, known in history as Jay's Treaty, provided that the north-western posts should be evacuated by the 1st of June 1796, that commissioners should be appointed to settle the north-east and the north-west boundaries, and that the British claims for British debts as well as the American claims for compensation for illegal seizures should be referred to commissioners. More than one-half of the clauses in the treaty related to commerce, and although they contained rather small concessions to the United States, they were about as much as could reasonably have been expected in the circumstances. The duration of the treaty was limited to two years from the close of the existing war, provided that American vessels not exceeding 70 tons burden
might trade with the West Indies, but should carry only
American products there and take away to American ports only
West Indian products; moreover, the United States was to
export in American vessels no molasses, sugar, coffee, cocoa
or cotton to any part of the world. Jay consented to this
prohibition under the impression that the articles named
were peculiarly the products of the West Indies, not being aware
that cotton was rapidly becoming an important export from
the southern states. The operation of the other commercial
clauses was limited to twelve years. By them the United States
was granted limited privileges of trade with the British West
Indies. These were in every respect a violation of freedom
from the United States and the British dominions in
Europe; some articles were specified under the head of "contra-
band of war"; it was agreed that whenever provisions were
seized as contraband they should be paid for, and that in cases of
the capture of a vessel carrying contraband goods such goods
only and not the whole cargo should be seized; it was also
agreed that no vessel should be seized merely because it was bound
for a blockaded port, unless it attempted to enter the port
after receiving notice of the blockade. The treaty was laid before
the Senate on the 8th of Jan. 1795, and, with the advice and
consent of the Senate, was ratified by the President on the 24th
by the vote of 20 to 10. As yet the public was ignorant
of its contents, and although the Senate had enjoined secrecy
on its members even after the treaty had been ratified, Senator
Mason of Virginia gave out a copy for publication only a few
days later. The Republican party, strongly sympathizing with
France and strongly disliking Great Britain, had been opposed
to Jay's mission, and had denounced Jay as a traitor and
guillotined him in effigy when they heard that he was actually
negotiating. The publication of the treaty only added to that
fury. Those filled newspapers with articles denouncing it,
written in effigy. The British flag was insulted. Hamilton was stoned at a
public meeting in New York while speaking in defence of the treaty, and
Washington was grossly abused for signing it. In the House of
Representatives the Republicans endeavoured to prevent the
execution of the treaty by refusing the necessary appro-
priations, and a vote (20th of April, 1795) on a resolution that it
ought to be carried into effect stood 49 to 49; but on the next
day the opposition was defeated by a vote of 51 to 48. Once in operation, the treaty grew in favour. Two days after the
return of the English mission, Jay had been elected
governor of New York state; notwithstanding his temporary
unpopularity, he was re-elected in April 1798. With the close
of this second term of office in 1801, he ended his public career.
Although not yet fifty-seven years old, he refused all offers
of office and retiring to his estate near Bedford in Westchester
county, N.Y., spent the rest of his life in rarely interrupted
seclusion. In politics he was throughout inclined toward
Conservatism, and after the rise of parties under the federal
government he stood with Alexander Hamilton and John
Adams as one of the foremost leaders of the Federalist party,
as opposed to the Republicans or Democratic-Republicans.
From 1821 until 1828 he was president of the American Bible
Society. He died on the 17th of May 1829. The purity and
integrity of his life are commemorated in a sentence by Daniel
Webster: "When the spotless ermine of the judicial robe
fell on John Jay, it touched nothing less spotless than itself."

See The Correspondence and Public Papers of John Jay (4 vols.,
New York, 1890-1893), edited by H. P. Johnston; William Jay,
Life and Letters of John Jay (New York, 1895); Jay's Miscellaneous
Papers (2 vols., New York, 1833); William Whitehead, Life
and Times of John Jay (New York, 1887); and George Pellow,
John Jay (Boston, 1890), in the "American Statesmen Series."

John Jay's son, William Jay (1789-1838), was born in New
York City on the 16th of June 1789, graduated from Yale in
1807, and soon afterwards assumed the management of his
father's large estate in Westchester county, N.Y. He was
actively interested in peace, temperance and anti-slavery move-
ments. He took a prominent part in 1816 in founding the
American Bible Society; was a judge of Westchester county
from 1818 to 1843, when he was removed from office by the party
in power in New York, which hoped, by sacrificing an anti-slavery
judge, to gain additional strength in the southern states;
joined the American anti-slavery society in 1834, and held
several important offices in this organization. In 1840, how-
ever, when it began to advocate measures which he deemed too
radical, he withdrew his membership, but with his pen he con-
tinued his labours on behalf of the slave, urging emancipation
in the district of Columbia and the exclusion of slavery from the
Territories, though deprecating any attempt to interfere with
slavery in the states. He was a member of the American peace
society and was its president for several years. His pamphlet,
War and Peace: the Evils of the First with a Plan for Securing the
Last, advocating international arbitration, was published by
the English Peace Society in 1842, and is said to have contributed
to the promulgation, by the powers signing the Treaty of Paris
in 1856, of a protocol expressing the wish that nations, before
resorting to arms, should have recourse to the good offices of a
friendly power. Among William Jay's other writings, the most
important are The Life of John Jay (6 vols., 1853) and a Review
of the Facts and Causes of the Mexican War (1849). He died at Bedford on the 14th of October 1858.

See Bayard Taylor; William Jay and the Constitutional
Movement for the Abolition of Slavery (New York, 1893).

William Jay's son, John Jay (1817-1894), also took an active
part in the anti-slavery movement. He was a prominent
member of the free soil party, and was one of the organizers of
the Republican party in New York. He was United States
minister to Austria-Hungary in 1860-1875, and was a member, and for
a time president, of the New York civil service commission
appointed by Governor Cleveland in 1883.

JAY, WILLIAM (1769-1853), English Nonconformist divine,
was born at Tisbury in Wiltshire on the 6th of May 1769. He
adopted his father's trade of stone-mason, but gave it up in
1785 in order to enter the R.N. Cornelius Winter's school at
Marlborough. During the three years that Jay spent there,
his preaching powers were rapidly developed. Before he was
twenty-one he had preached nearly a thousand times, and in
1788 he had for a while occupied Rowland Hill's pulpit in London.
Wishing to continue his reading he accepted the humble pastor-
ate of Christian Malford, near Chippenham, where he remained
about two years. After one year at Hope chapel, Clifton, he
was called to the ministry of Argyle Independent chapel in Bath;
and on the 30th of January 1791 he began the work of his life
there, attracting hearers of every religious denomination and
of every rank, and also of men who were to become brilliant pulpit orators, an earnest religious author, and a friendly
counsellor. Sheridan declared him to be the most manly orator
he had ever heard. A long and honourable connexion of sixty-
two years came to an end in January 1853, and he died on the
27th of December following.

The best-known of Jay's works are his Morning and Evening
Exercises: The Christian contemplated: The Domestic Minister's
Assistant; and his Discourses. He also wrote a Life of Rev. Cornelius
Winter, Memorial of Rev. John Clarke. The first edition of Jay's
Works in 12 vols., 8vo, revised by himself, was issued in 1842-1844,
and again in 1856. A new edition, in 8 vols., 8vo, was published
in 1862. See Autobiography (1844) S. Wilson's Memoir of Jay (1854); S.
Newth in Pulpit Memorials (1878).

JAY (Fr. gëa), a well-known and very beautiful European
bird, the Cereus glandarius of Linnaeus, the Garrulus glandarius
of modern ornithologists. To this species are more or less
closely allied numerous birds inhabiting the Palearctic and
Indian regions, as well as the greater part of America,
but not occurring in the Antilles, in the southern portion
of the Neotropic Region, or in the Ethiopian or Austra-
lian. All these birds are commonly called jays, and form
a group of the crows or Corvidae, which may fairly be considered
a sub-family, Garrultinae. Indeed there are, or have been,
systematists who would elevate the jays to the rank of a family
Garrulidae—a proceeding which seems unnecessary. Some of

them have an unquestionable resemblance to the pies, if the group now known by that name can be satisfactorily severed from the true Corvidae. In structure the jays are not readily differentiated from the pies; but in habit they are much more arboreal, delighting in thick coverts, seldom appearing in the open, and seeking their food on or under trees. They seem also never to walk or run when on the ground, but always to hop. The body-feathers are commonly loose and soft; and, gaily coloured as are most of the species, in few of them has the plumage the metallic glossiness it generally presents in the pies, while the proverbial beauty of the "jay's wing" is due to the vivid tints of blue—turquoise and cobalt, heightened by bars of jet-black, an indication of the same style of ornament being observable in the greater

number of the other forms of the group, and in some predominating over nearly the whole surface. Of the many genera that have been proposed by ornithologists, perhaps about nine may be deemed sufficiently well established.

The ordinary European jay, Garrulus glandarius (fig. 1), has suffered so much persecution in the British Islands as to have become in many districts a rare bird. In Ireland it seems now to be indigenous to the southern half of the island only; in England generally, it is far less numerous than formerly; and in Scotland its numbers have decreased with still greater rapidity. There is little doubt that it would have been exterminated but for its stock being supplied in autumn by immigration, and for its shy and wary behaviour, especially at the breeding-season, when it becomes almost wholly mute, and thereby often escapes detection. No truthful man, however much he may love the bird, will gainsay the depredations on fruit and eggs and that it at times commits; but the gardeners and gamekeepers of Britain, instead of taking a few simple steps to guard their charge from injury, deliberately adopt methods of wholesale destruction—methods that in the case of this species are only too easy and too effectual—by pioofering temptation to trespass which it is not in jay-nature to resist, and accordingly the bird runs great chance of total extirpation. Notwithstanding the war carried on against the jay, its varied cries and active gesticulations show it to be a sprightly bird, and at a distance that renders its beauty-spots invisible, it is yet rendered conspicuous by its cinnamon-coloured body and pure white tail-coverts, which contrast with the deep black and rich chestnut that otherwise mark its plumage, and even the young at once assume a dress closely resembling that of the adult. The nest, generally concealed in a leafy tree or bush, is carefully built, with a lining formed of fine roots neatly interwoven. Hern in from four to seven eggs, of a greenish-white closely flecked, so as to seem suffused with light olive, are laid in March or April, and the young on quitting it accompany their parents for some weeks.

Though the common jay of Europe inhabits nearly the whole of this quarter of the globe south of 64° N. lat., its territory in the east of Russia is also occupied by G. brandti, a kindred form, which replaces it on the other side of the Ural, and ranges thence across Siberia to Japan; and again on the lower Danube and thence to Constantinople the nearly allied G. krynicki (which alone is found in southern Russia, Caucasus and Asia Minor) shares its haunts with it.\(^1\) It also crosses the Mediterranean to Algeria and Morocco; but there, as in southern Spain, it is probably but a winter immigrant. The three forms just named have the widest range of any of the genus. Next to them come G. atricapillus, reaching from Syria to Baluchistan, G. japonicus, the ordinary jay of southern Japan, and G. sinensis, the Chinese bird. Other forms have a much more limited area, as G. cervidialis, the local and resident jay of Algeria, G. bycanus, found on the southern shores of the Caspian Sea, and G. taenatus, confined to the island of Formosa. The most aberrant of the true jays is G. fulvus, a very rare species, which seems to come from some part of Japan (vide Salvadori, Alti. Accad. Torino, vii. 474), though its exact locality is not known.

Leaving the true jays of the genus Garrulus, it is expedient next to consider those of a group named, in 1831, Perisoreus by Prince C. L. Bonaparte (Saggio, &c., Anim. Verlebati, p. 43) and Dysornithia by Swainson (F. B.-Americana, ii. 495).\(^2\)

This group contains two species—one the Linanus infaustus of Linnaeus and the Siberian jay of English writers, which ranges throughout the pine-forests of the north of Europe and Asia, and the second the Corvus canadensis of the same author, or Canada jay, occupying a similar station in America. The so-called Siberian jay is one of the most entertaining birds in the world. Its versatile cries and actions, as seen and heard by those who penetrate the solitude of the northern forests it inhabits, can never be forgotten by one who has had experience of them, any more than the pleasing sight of its rust-coloured tail, which an occasional gleam of sunshine will light up into a brilliancy quite unexpected by those who have only surveyed the bird's otherwise gloomy appearance in the glass-case of a museum. It seems scarcely to know fear, obtruding itself on the notice of any traveller who invade its haunts, and, should he halt, making itself at once a denizen of his bivouac. In confinement it speedily becomes friendly, but suitable for it is not easily found. Linnaeus seems to have been under a misapprehension when he applied to it the trivial epithet it bears; for by none of his countrymen is it deemed an unlucky bird, but rather the reverse. In fact, no one can listen to the cheerful sound of its ordinary calls with any but a hopeful feeling. The Canada jay, or "whisky-jack" (the corruption probably of a Cree name), seems to be of a similar nature, but it presents a still more sombre coloration, its nesting plumage,\(^3\) indeed, being thoroughly covinse in appearance and suggestive of its being a pristine form.

\(^1\) Further information will possibly show that these districts are not occupied at the same season of the year by the two forms.

\(^2\) Recent writers have preferred the former name, though it was only used sub-generationly by its author, who assigned to it no characters, which the inventor of the latter was careful to do, regarding it at the same time as a genus.

\(^3\) In this it was described and figured (F. B. Americana, ii. 296, pl. 55) as a distinct species, G. brachyrhynchus.
coloured of the sub-family, and the common blue jay\(^1\) of Canada and the eastern states of the Union, *Cyanurus cristatus* (fig. 2), is one of the most conspicuous birds of the Transatlantic woods. The account of its habits by Alexander Wilson is known to every student of ornithology, and Wilson's followers have had little to do but supplement his history with unimportant details. In this bird and its many allied forms, coloration, though almost confined to various tints of blue, seems to reach its climax, but want of space forbids more particular notice of them, or of the members of the other genera *Cyanocitta*, *Cyanocorax*, *Xanthura*, *Psilornis*, and more, which inhabit various parts of the Western continent. It remains, however, to mention the genus *Cissa*, including many beautiful forms belonging to the Indian region, and among them the *C. gapea* and *C. ramae*, so often represented in Oriental drawings, though doubts may be expressed whether these birds are not more nearly related to the pies than to the jays.

**JEALOUSY** (adapted from Fr. *jalousie*, formed from *jalous*, jealous, Low Lat. *selosus*, Gr. *zēlos*, ardour, zeal, from the root seen in *ζηλευω*, to boil, ferment; cf. "yeast"), originally a condition of zealous emulation, and hence, in the usual modern sense, of resentment at being (or believing that one is or may be) supplanted or preferred in the love or affection of another, or in the enjoyment of some good regarded as properly one's own. A jealousy is represented on a great variety of personal claims which in envy or covetousness is wanting. The jealousy of God, as in Exod. xx. 4, "For I, the Lord thy God, am a jealous God," has been defined by Pusey (Minor Prophets, 1866) as the attribute "whereby he does not endure the love of his creatures to be transferred from him." "Jealous," by etymology, is, however, only another form of "zealous," and the identity is exemplified by such expressions as "I have been very jealous for the Lord God of Hosts" (I Kings xix. 10). A kind of glass, thick, ribbed and non-transparent, was formerly known as "jealous-glass," and this application is seen in the borrowed French word *jalousie*, a blind or shutter, made of slats of wood, which slope in such a way as to admit air and a certain amount of light, while excluding rain and sun and inspection from without.

**JEAN D'ARRAS**, a 15th-century trouvère, about whose personal history nothing is known, was the collaborator with Antoine du Val and Fouquet de Cambray in the authorship of a collection of stories entitled *Évangiles de quenouille*. They purport to record the narratives of a group of ladies at their spinning, and represent the current theories on a variety of subjects. The work dates from the middle of the 15th century and is of considerable value for the light it throws on medieval manners.

There were many editions of this book in the 15th and 16th centuries, one of which was printed by Wyakyn de Worde in English, as *The Gospelles of Dystasys*. A modern edition (Collection Jannet) has a preface by Anatole France.

Another trouvère, **JEAN D'ARRAS** who flourished in the second half of the 14th century, wrote, at the request of John, duke of Berry, a long prose romance entitled *Clionique de la princesse*. It relates with many digressions the antecedents and life of the fairy Mélusine (q.v.).

**JEAN DE MEUN**, or **DE MEUN** (c. 1250-c. 1303), whose original name was Jean Cleopinel or Chopolin, was born at Meun-sur-Loire. Tradition asserts that he studied at the university of Paris. At any rate he was, like his contemporary, Rutebeuf, a defender of Guillaume de Saint-Amour and a bitter critic of the mendicant orders. Most of his life seems to have been spent in Paris, where he is in the Rolls Saint-Jacques, a house with a tower, court and garden, which was described in 1303 as the house of the late Jean de Meun, and was then bestowed by a certain Adam d'Andely on the Dominicans. Jean de Meun says that in his youth he composed songs that were sung in every public place and school in France. In the enumeration of his own works he places first his continuation of the *Roman de la rose* of Guillaume de Lorris (q.v.). The date of this second part is generally fixed between 1268 and 1285 by a reference in the poem to the death of Manfred and Conradin, executed (1268) by order of Charles of Anjou (d. 1285) who is described as the present king of Sicily. M. F. Guillaud (Jean l'Avé experimental, 1903), however, considering the poem primarily as a political satire, places it in the last five years of the 13th century. Jean de Meun doubtless edited the work of his predecessor, Guillaume de Lorris, before using it as the starting-point of his own vast poem, running to 19,000 lines. The continuation of Jean de Meun is a satire on the monastic orders, on celibacy, on the nobility, the papal see, the excessive pretensions of royalty, and especially on women and marriage. Guillaume had been the servant of love, and the exponent of the laws of "courtisie"; Jean de Meun added an emphasis to the brutality of the vices of women, their arts of deception, and the means by which men may outwit them. Jean de Meun embodied the mocking, sceptical spirit of the *fabliaux*. He did not share in current supertations, but had no respect for established institutions, and he scorned the conventions of feudalism and romance. His poem shows in the highest degree, in spite of the looseness of its plan, the faculty of keen observation, of lucid reasoning and exposition, and it entitles him to be considered the greatest of French medieval poets. He handled the French language with an ease and precision unknown to his predecessors, and the length of his poem was no hindrance to its popularity. The vogue of his work spread out of its immediate appeal, and the language of *jean l'ayme* or *jaine l'ayme* ("I love you") was spread abroad, though the vogue was no doubt due to the fact that the author, who had mastered practically all the scientific and literary knowledge of his contemporaries in France, had found room in his poem for a great amount of useful information and for numerous citations from classical authors. The book was attacked by Guillaume de Degulville in his *Pèlerinage de la vie humaine* (c. 1309), long a favourite work both in England and France; by John Gerson, and by Christine de Pisan in her *Épître au dieu d’amour* but it also found energetic defenders.

Jean de Meun translated in 1284, the treatise, *De re militari*, of Végèce into French as *Le livre de l'art de l'adamor* (Paris, 1495; first printed, 1535). That of 1287, *Livre de la vie humaine*, was translated for the first time in French, of the letters of Abélard and Héloïse. A 14th-century MS. of this translation in the Bibliothèque Nationale has annotations by Petrarch. His translation of the *De consolatione philosophiae* of Boetius is preceded by a letter to Philip IV, in which he enumerates his earlier works, two of which are lost—*De spirituall omitie à l'Esprit du monde* (d. 1166), and *Le Livre de meruers des Eristren* from the Topographia Hibernica, or De Mirabilibus Hiberniae of Giraldus Cambrensis (Giraud de Barry). His last poems are in the *Testimonia* of Jean d'Arras.

**JEANNE, QUEEN OF JUARES** was born at Juranon, and probably died in 1490 or 1491. She was the wife of Louis I, duke of Bourbon, and was the mother of Charles the Bold of Burgundy.

**JEANNE, QUEEN OF JUARES** was born at Juranon, and probably died in 1490 or 1491. She was the wife of Louis I, duke of Bourbon, and was the mother of Charles the Bold of Burgundy.

1 The birds known as blue jays in India and Africa are rollers (q.v.).
JEBB, JOHN—JEDBURGH

(see Henry IV.), and the defensive alliance between France and the United Netherlands in 1608. As superintendent of finances under Louis XIII., he tried to establish harmony between the king and the queen-mother.

See Berger de Xivry, Lettres missives de Henrie IV. (in the Collection ancienne pour l'histoire de France); i. v. (1856); P(other) (Bastiments), Eloqur sur la vie de Pierre Dann (Dijon, 1623); Sainte-Beuve, Cours d'anc. du lundi, t. x (May 1854).

JEBB, John (1736–1780), English divine, was educated at Cambridge, where he was elected fellow of Peterhouse in 1761, having previously been second wrangler. He was a man of independent judgment and warmly supported the movement of 1771 for abolishing university and clerical subscription to the Thirty-nine Articles. In his lectures on the Greek Testament he is said to have expressed Socinian views. In 1775 he resigned his Suffolk church livings, and two years afterwards graduated M.D. at St Andrews. He practised medicine in London and was elected F.R.S. in 1779.

Another John Jebb (1775–1833), bishop of Limerick, is best known as the author of Sacred Literature (London, 1826).

JEBB, SIR RICHARD CLOVERHOUSE (1841–1905), English classical scholar, was born at Dundee on the 27th of August 1841. His father was a well-known barrister, and his grandfather a judge. He was educated at Charterhouse and at Trinity College, Cambridge. He won the Porson and Craven scholarships, was senior classic in 1862, and became fellow and tutor of his college in 1863. From 1869 to 1875 he was public orator of the university; professor of Greek at Glasgow from 1875 to 1883, and at Cambridge from 1883 till his death on the 9th of December 1905. In 1891 he was elected member of parliament for Cambridge University; he was knighted in 1900. Jebb was acknowledged to be one of the most brilliant classical scholars of his time, a humanist in the best sense, and his powers of translation from and into the classical languages were univalued. A collected volume, Translations into Greek and Latin, appeared in 1873 (ed. 1906). He was the recipient of many honorary degrees from European and American universities, and in 1905 he was made a member of the Order of Merit. He married in 1874 the widow of General A. J. Slomer, of the United States army, who survived him.

Jebb was the author of numerous publications, of which the following are the most important: The Characters of Theophrastus (1870), text, introduction, English translation and commentary (re-edited by J. E. Sandys, 1909); The Attic Orators from Anthonius to Isaeus (2nd ed., 1893), with companion volume, Selections from the Attic Orators (2nd ed., 1888); Benetley (1882); Sophocles (3rd ed., 1893); the seven plays, text, English translation and notes, the promised edition of the fragments being prevented by his death; Bacchylides (1905), text, translation, and notes; Homer (3rd ed., 1888), an introduction to the Iliad and Odyssey; Modern Greece (1901); The Nucleus of the Poet's Defence of Greece (1903); and The translation of the Rhodius of Aristotle was published posthumously under the editorship of J. E. Sandys (1906). A selection from his Essays and Addresses, and a subsequent volume, Life and Letters of Sir Richard Cloverhouse Jebb (with critical introduction by A. W. Verrall) were published by his widow in 1907; see also an appreciative notice by J. E. Sandys, Hist. of Classical Scholarship, iii. (1908).

JEBBLE (anc. Gebal-Byblos), a town of Syria pleasantly situated on a slight eminence near the sea, about 20 m. N. of Beirut. It is surrounded by a wall 12 m. in circumference, with square towers at the angles, and a castle at the south-east corner. Numerous broken granite columns in the gardens and vineyards that surround the town, with the number of ruined houses within the walls, testify to its former importance. The stele of Jehovah, above mentioned, found in Lebanon's most important of Phoenician monuments. The small port is almost choked up with sand and ruins. Pop. 3000, all Moslems.

The inhabitants of the Phoenician Gebal and Greek Byblos were renowned as stonecutters and ship-builders. Arrian (ii. 21. 1) represents Enylus, king of Byblos, as joining Alexander with a fleet, after that monarch had captured the city. Philo of Byblos makes it the most ancient city of Phoenicia, founded by Cronus, i.e. the Moloch who appears from the stele of Jehovahle to have been with Baalit the chief deity of the city. According to Plutarch (Mor. 357), the ark with the corpse of Osiris was cast ashore at Byblus, and there found by Isis. The orgies of Adonis in the temple of Baalit (Aphrodite Byblos) are described by Lucian, De Dea Syr., cap. vi. The river Adonis is the Nahal lbrahim, which flows near the town. The crusaders, after failing before it in 1109, captured "Giblet" in 1103, but lost it again to Saladin in 1189. Under Mahomedan rule it has gradually decayed.

Jebel (plur. jibah), also written Jebel with h, g (jibbah), an Arabic word meaning a mountain or a mountain range. It is frequently used in place-names. The French transliteration of the word is jebel. Jebel signifies a mountaineer. The pronunciation with a hard g sound is that used in the Egyptian dialect of Arabic.

JEDBURGH, a royal and police burgh and county-town of Roxburghshire, Scotland. Pop. of police burgh (1901), 3136. It is situated on Jed Water, a tributary of the Teviot, 56 m. S.E. of Edinburgh by the North British railway, via Roxburgh and St Boswells (40 m. by road), and 10 m. from the border at Catcleuch Shin, a peak of the Cheviots, 1742 ft. high. Of the name Jedburgh there have been many variants, the earliest being Jedwearde (800), Jedworth (1251), and Geddart (1868), while locally the word is sometimes pronounced Jethart. The town is situated on the left bank of the Jed, the main streets running at right angles from each side of the central market-place. Of the renowned group of Border abbeys—Jedburgh, Melrose, Dryburgh and Kelso—that of Jedburgh is the smallest. In 1118, according to tradition, but more probably as late as 1138, David, prince of Cumbria, here founded a priory for Augustinian canons, being 30 ft. square and fully 100 ft. high; the nave collapsed in 1147, after he had become king, erected it into an abbey dedicated to the Virgin. Repeatedly damaged in Border warfare, it was ruined in 1544–45 during the English invasion led by Sir Ralph Evers (or Eure). The establishment was suppressed in 1559, the revenues being temporarily annexed to the Crown. After changing owners more than once, the lands were purchased in 1657 by the 3rd earl of Lothian. Latterly five of the bays at the west end had been utilized as the parish church, but in 1873–1875 the 9th marquess of Lothian built a church for the service of the parish, and presented it to the heritors in exchange for the ruined abbey in order to prevent the latter from being injured by modern additions and alterations.

The abbey was built of Old Red sandstone, and belongs mostly to the end of the 12th and the beginning of the 13th centuries. The architecture is mixed, and the abbey is a beautiful example of the well-defined English and Norman styles. The total length is 235 ft., the nave being 135 ft. long and 59 ft. wide. The west front contains a great Norman porch and a fine window. The nave, on either side of which are five painted arches in the basement storey, nine round arches in the triforium, and thirty-six pointed arches in the clerestory, through which an arcade is carried on both sides. The tower, at the intersection of the nave and transept, is of unusually massive proportions, being 30 ft. square and fully 100 ft. high; the main baluster round the top is modern. With the exception of the north piers and a small portion of the wall above, which are Norman, the tower dates from the end of the 13th century. The whole of the south transept has perished. The north transept, with early Decorated windows, has been covered in and walled off, and is the burial-ground of the Kerrs of Fernihurst, ancestors of the marquesses of Lothian. The earliest tombstone is dated 1224; one of the latest is the recumbent effigy, by G. F. Waits, R.A., of the 8th marquess of Lothian (1832–1870). All that is left of the choir, which contains some very early Norman work, is two bays with three trefoiled arches to the aisle, and a chancel, on the north side, which is supposed that the aisle, with Decorated window and groinèd roof, south of the chancel, formed the grammar school (removed from the abbey in 1731) in which Samuel Rutherford (1600–1661), principal of St Mary's College, St Andrews, and James Thomson, author of The Seasons, were educated. The door leading from the south aisle into a herbaceous garden, formerly the cloister, is an exquisite copy of the abbey arches, and had become a ruinous ruin before Sir Rowand Anderson, under whose superintendence restoration in the abbey was carried out.

The castle stood on high ground at the south end of the burgh, or "town-head." Erected by David I., it was one of the strongholds ceded to England in 1174, under the treaty of Falaise, for the ransom of William the Lion. It was, however, so often captured by the English that it became a menace rather than a protection, and the townsfolk demolished it in 1490. It had
occasionally been used as a royal residence, and was the scene, in November 1825, of the revels held in celebration of the marriage (solemnized in the abbey) of Alexander III. to Joleta, or Yolande, daughter of the count of Dreux. The site was occupied in 1823 by the county prison, now known as the castle, a castellated structure which gradually fell into disuse and was acquired by the corporation in 1890. A house exists in Backgate in which Mary Queen of Scots, resided in 1566, and one in Castlegate which Prince Charles Edward occupied in 1745.

The public buildings include the grammar school (built in 1853 to replace the successor of the school in the abbey), founded by Richard Turnburn, bishop of ripon in 1456. The churchyard, the free library and the public hall, which succeeded to the corn exchange destroyed by fire in 1898, a loss that involved the museum and its contents, including the banners captured by the Jethart weavers at Bannockburn and Killiecrankie. The old market cross still exists, and there are two public parks. The chief industry is the manufacture of woollens (blankets, hosiery), but brewing, tanning and iron-founding are carried on, and fruit (especially pears) and garden produce are in repute. Jedburgh was made a royal burgh in the reign of David I., and received its charter of incorporation by the hand of Robert the Bruce, in 1313, from Mary Queen of Scots. Sacked and burned time after time during the Border strife, it was inevitable that the townsmen should become keen fighters. Their cry of "Jethart's here!" was heard wherever the fray waxed most fiercely, and the Jethart axe of invention—a steel axe on a 4-ft. pole—wrought havoc in their hands.

"Jethart or Jeddart justice," according to which a man was hanged first and tried afterwards, seems to have been a hasty generalization from a solitary fact—the summary execution in James VI.'s reign of a gang of rogues at the instance of Sir George Home, but has nevertheless passed into a proverb.

Old Jeddart, 4 m. S. of the present town, the first site of the burgh, is now marked by a few grasy mounds, and of the great Jedburgh forest, only the venerable oaks, the "Capon Tree" and the "King of the Woods" remain. Dunjon Hill (1055 ft.), about 2 m. south-west of Jedburgh, commands a fine view of the capital of the county.

Jeejeebhoy—Jeffries

JEEJEEBHoy (JIJBIJAI), SIR JAMSETJEE (JAMSETJI), Bart. (1783-1859), Indian merchant and philanthropist, was born in Bombay in 1783, of poor but respectable parents, and was left an orphan in early life. At the age of sixteen, with a smattering of mercantile education and a bareittance, he commenced a career of business destined to lead him to fortune and fame. After a preliminary visit to Calcutta, he undertook a voyage to China, then fraught with so much difficulty and risk that it was regarded as a venture betokening considerable enterprise and courage; and he subsequently initiated a systematic trade with that country, being himself the carrier of his merchant wares on his passages to and fro between Bombay and Canton and Shanghai. His second return voyage from China was made in one of the East India Company's vessels, which, under the command of Sir Nathaniel Dance, defeated the French squadron under Admiral Linois (Feb. 15, 1804). On his fourth return voyage from China, the Indiaman in which he sailed was forced to surrender to the French, by whom he was carried as a prisoner to the Cape of Good Hope, then a neutral Dutch possession; and it was only after much delay, and with great difficulty, that he made his way to Calcutta in a Danish ship. Nothing daunted, he undertook yet another voyage to China, which was more successful than any of the previous ones. By this time he had fairly established his reputation as a merchant possessed of the highest spirit of enterprise and considerable wealth, and thenceforth he settled down in Bombay, where he directed his commercial operations on a widely extended scale. By 1836 his firm was large enough to engross the energies of his three sons and other relatives; and he had amassed what at that period of Indian mercantile history was regarded as fabulous wealth. An essentially self-made man, having experienced in early life the miseries of poverty and want, in his days of affluence Jamsetjee Jeejeebhoy developed an active instinct of sympathy with his poorer countrymen, and commenced that career of private and public philanthropy which is his chief title to the admiration of mankind. His liberality was unbounded, and the absorbing occupation of his later life was the alleviation of human distress. To his own community he gave lavishly, but his benevolence was mainly cosmopolitan. Hospitals, schools, homes of charity, pension funds, were founded or endowed by him, while numerous public works in the shape of wells, reservoirs, bridges, causeways, and the like, not only in Bombay, but in other parts of India, were the creation of his bounty. The total of his known benefactions amounted at the time of his death, which took place in 1859, to over 230,000. It was not, however, the amount of his charities so much as the period and circumstances in which they were performed that made his benevolent career worthy of the fame he won. In the first half of the 19th century the various communities of India were much more isolated in their habits and their sympathies than they are now. Jamsetjee Jeejeebhoy's unsectarian philanthropy awakened a common understanding and created a bond between them which has proved not only of domestic value but has had a national and political significance. His services were recognized by his appointment as a knight of the Order of the Bath, in 1838 by that of a baronetcy. These were the very first distinctions of their kind conferred by Queen Victoria upon a British subject in India.

His title devolved in 1859 on his eldest son CURSETJEE, who, by a special Act of the Viceroy's Council in pursuance of a provision in the letters-patent, took the name of Sir Jamsetjee Jeejeebhoy as second baronet. At his death in 1877 his eldest son, MENEKJEE, became Sir Jamsetjee Jeejeebhoy, the third baronet. Both had the advantage of a good English education, and continued the career of benevolent activity and devoted loyalty to British rule which had signalized the life-work of the founder of the family. They both visited England to do homage to their sovereign; and their public services were recognized by their nomination to the order of the Star of India, as well as by appointment to the Legislative Councils of Calcutta and Bombay.

On the death of the third baronet, the title devolved upon his brother, COWSAJEE (1853-1906), who became Sir Jamsetjee Jeejeebhoy, fourth baronet, and the recognized leader of the Parsee community all over the world. He was succeeded by his son, D. (1878), who became Sir Jamsetjee Jeejeebhoy, fifth baronet.

Since their emigration from Persia, the Parsee community had never had a titular chief or head, its communal funds and affairs being managed by a public body, more or less democratic in its constitution, termed the Parsee panchayat. The first Sir Jamsetjee, by the hold that he established on the community, by his charities and public spirit, gradually came to be regarded in the light of its chief; and the recognition which he was the first in India to receive at the hands of the British sovereign can be fixed and his successors in the baronetcy in the position and title of the official Parsee leader.

JEFFRIES, RICHARD (1848-1887), English naturalist and author, was born on the 6th of November 1848, at the farmhouse of Coate about 2½ m. from Swindon, on the road to Marlborough. He was sent to school, first at Sydenham and then at Swindon, till the age of fifteen or so, but his actual education was at the hands of his father, who gave him his love for Nature and taught him how to observe. For the faculty of observation, as Jeffries, Gilbert White, and H. D. Thorace have remarked, several gifts are necessary, including the possession of long sight and quick sight, two things which do not always go togeth. To them many joined trained sight and the knowledge of what to expect. The boy's father first showed him what there was to look for in the hedge, in the field, in the trees, and in the sky. This kind of training would in many cases be wasted: to one who can understand it, the book of Nature will by-and-by offer pages which are blurred and illegible to the city-bred lad, and even to the country lad the power of reading them must be maintained by constant practice. To live amid streets or in the working world destroys
it. The observer must live alone and always in the country; he must not worry himself about the ways of the world; he must be always, from day to day, watching the infinite changes and variations of Nature. Perhaps, even when the observer can actually read this book of Nature, his power of articulate speech may be such that he can be heard from the high platform which was the natural environment of a Whig like Jefferson, as a boy, was more than an observer of the fields; he was bookish, and read all the books that he could borrow or buy. And presently, as is apt to be the fate of a bookish boy who cannot enter a learned profession, he became a journalist and obtained a post on the local paper. He developed literary ambitions, but for a long time to come was as one beating the air. He tried local history and novels; but his early novels, which were published at his own risk and expense, were, deservedly, failures. In 1872, however, he published a remarkable letter in The Times, on "The Wiltshire Labourer," full of original ideas and of facts new to most readers. This was in reality the turning-point in his career. In 1873, after more false starts, Jeffereys returned to his true field of work, the life of the country, and began to write for Fraser's Magazine on "Farming and Farmers." He had now found himself. The rest of his history is that of continual advance, from close observation becoming daily more and more close, to that intimate communion with Nature with which his later pages are filled. The developments of the later period are throughout touched with the melancholy that belongs to ill-health. For, though in his prose poem called "The Pageant of Summer" the writer seems absolutely revelling in the strength of manhood that belongs to that pageant, yet, in the Story of My Heart, written about the same time, we detect the mind that is continually turned to death. He died at Goring, worn out with many ailments, on the 14th of August 1887. The best-known books of Richard Jeffereys are: The Gamekeeper at Home (1878); The Story of My Heart (1883); Life of the Fields (1884), containing the best paper he ever wrote, "The Pageant of Summer"; Amaryllis at the Fair (1884), in which he sets the portraits of his own people; and Open Air. He stands among the scantly company of countrymen who address a small audience, for whom he read aloud these pages of Nature spoken of above, which only he, and the few like unto him, can decipher.

See Sir Walter Besant, Eulogy of Richard Jeffereys (1888); H. S. Salt, Richard Jeffereys: a Study (1894); Edward Thomas, Richard Jeffereys, his Life and Work (1909).

JEFFERSON, JOSEPH (1829-1909), American actor, was born in Philadelphia on the 2oth of February 1829. He was the third actor of this name in a family of actors and managers, and the most famous of all American comedians. His earliest performances appeared as the boy in Kotzebue's Pizarro, and throughout his youth he underwent all the hardships connected with theatrical touring in those early days. After a miscellaneous experience, partly as actor, partly as manager, he won his first pronounced success in 1853 as Asa Trenchard in Tom Taylor's Our American Cousin at Laura Keene's theatre in New York. This play was the turning-point of his career, as it was of Sothern's. The naturalness and spontaneity of his manner, with which he acted the features revealed a spirit in comedy new to his contemporaries, long used to a more artificial conviction and the touch of pathos which the part required revealed no less to the actor an unexpected power in himself. Other early parts were Newman Noggs in Nicholas Nickleby, Caleb Plummer in The Cricket on the Heath, Dr Pangloss in The Heir at Law, Salem Scudder in The Octoress, and Bob Acres in The Rivals, the last being not so much an interpretation of the character as Sheridan sketched it as a creation of the actor's. In 1859 Jefferson made a dramatic version of the story of Rip Van Winkle on the basis of older plays, and acted it with success at Washington. The play was given its permanent form by Dion Boucicault in London, where it ran 170 nights, with Jefferson in the leading part. Jefferson continued to act with undiminished popularity in a limited number of parts in nearly every town in the United States, his Rip Van Winkle, Bob Acres, and Caleb Plummer being the most popular. He was one of the first to establish the travelling combinations which superseded the old system of local stock companies. With the exception of minor parts, such as the First Gravedigger in Hamlet, which he played in an "all star combination" headed by Edwin Booth, Jefferson created no new character after 1865; and the success of Rip Van Winkle was so pronounced that he had spent some dozen years in professional acting, he continued speaking impossible, and he had neither the ability nor the temperament for oratory. To his legal scholarship and collecting zeal Virginia owed the preservation of a large part of her early statutes. He seems to have lacked interest in litigiousness, which was extraordinarily developed in colonial
Jefferson, T.

Virginia; and he saw and wished to reform the law’s abuses. It is probable that he turned, therefore, the more willingly to politics; at any rate, soon after entering public life he abandoned practice (1774).

The death of his father had left him an estate of 1900 acres, the income from which (about £400) gave him the position of an independent country gentleman; and while engaged in the law he had added to his farms after the ambitious Virginia fashion, until he owned 5000 acres. Many of these were given to him in 1773 on the death of his father-in-law. On the 1st of January 1772, Jefferson married Martha Wayles Skelton (1740–1782), a childless widow of twenty-three, very handsome, accomplished, and very fond of music. Their married life was exceedingly happy, and Jefferson never remarried after her early death. Of six children born from their union, two daughters alone survived infancy. Jefferson was emotional and very affectionate in his home, and his generous and devoted relations with his children and grand-children are among the finest features of his character.

Jefferson began his public service as a justice of the peace and parish vestryman; he was chosen a member of the Virginia house of burgesses in 1769 and of every succeeding assembly and convention of the colony until he entered the Continental Congress in 1775. His forceful, facile pen gave him great influence from the first; but though a foremost member of several great deliberative bodies, he can fairly be said never to have made a speech. He hated the “morbid rage of debate” because he believed that men were never convinced by argument, but only by reflection, through reading or unprovocative conversation; and this belief guided him through life. Most of his unprovocative thought he could ever have shone as a public speaker, and to this fact unfriendly critics have attributed, at least in part, his abstention from debate. The house of burgesses of 1769, and its successors in 1773 and 1774, were dissolved by the governor (see Virginia) for their action on the subject of colonial grievances and inter-colonial co-operation. Jefferson was prominent in all; was a signer of the Virginia agreement of non-importation and economy (1766); and was elected in 1774 to the first Virginia convention, called to consider the state of the colony and advance inter-colonial union. Prevented by illness from attending, Jefferson sent to the convention elaborate resolutions, which he proposed as instructions to the Virginia delegates to the Continental Congress that was to meet at Philadelphia in September. In the direct language of reproach and advice, with no disingenuous loading of the Crown’s policy upon its agents, these resolutions attacked the errors of the king, and maintained that the relation between Great Britain and these colonies was exactly the same as that of England and Scotland after the accession of James and until the Union; and that our emigration to this country gave England no more rights over us than the emigration of the Danes and Saxons gave to the present authorities of their mother country over England.” This was cutting at the common root of allegiance, emigration and colonization; but such radicalism was too thorough-going for the immediate end. The resolutions were published, however, as a pamphlet, entitled A Summary View of the Rights of America, which was widely circulated. In England, after receiving such modifications—attributed to Burke—as adapted it to the purposes of the opposition, this pamphlet ran through many editions, and procured for its author, as he said, “the honour of having his name inserted in a long list of propositions enrolled in the new administration in one of the two houses of parliament, but suppressed in embryo by the hasty course of events.” It placed Jefferson among the foremost leaders of revolution, and procured for him the honour of drafting, later, the Declaration of Independence, whose historical portions were, in large part, only a revised transcript of the Summary View. In June 1775 he took his seat in the

Continental Congress, taking with him fresh credentials of radicalism in the shape of Virginia’s answer, which he had drafted, to Lord North’s conciliatory propositions. Jefferson soon drafted the reply of Congress to the same propositions. Reappointed to the next Congress, he signaled his service by the authorship of the Declaration of Independence (q.v.). Again reappointed, he surrendered his seat, and after refusing a proffered election to serve as a commissioner with Benjamin Franklin and Silas Deane in France, he entered again, in October 1776, the Virginia legislature, where he considered his services most needed.

The local work to which Jefferson attributed such importance was a revision of Virginia’s laws. Of the measures proposed to this end he says: “I considered four, passed or reported, as forming a system by which every trace would be eradicated of ancient or future aristocracy, and a foundation laid for a government truly republican”—the repeal of the laws of entail; the abolition of primogeniture and the unequal development of inheritances (Jefferson was himself an eldest son); the guarantee of freedom of conscience and relief of the people from supporting, by taxation, an established church; and a system of general education. The first object was embodied in law in 1776, the second in 1785, the third in 1786 (supplemented 1799, 1801). The last two were parts of a body of codified laws prepared (1776–1779) by Edmund Pendleton, George Wythe, and Jefferson, and principally by Jefferson. Not so fortunate were Jefferson’s ambitious schemes of education. District, grammar and classical schools, a free state library and a state college, were all included in his plan. He was the first American statesman to propose by legislation the emancipation of the slaves. His earliest legislative effort, in the five-day session of 1769, had been marked by an effort to secure masters freedom to manumit their slaves without removing them from the state. It was unsuccessful, and the more radical measure he now favoured was even more impossible of attainment; but a bill he introduced to prohibit the importation of slaves was passed in 1778—the only important change effected in the slave system of the state during the War of Independence. Finally he endeavoured, though unsuccessfully, to secure the introduction of juries into the courts of chancery, and—a generation and more before the fruition of the labours of Romilly and his co-workers in England—aided in securing a humanitarian revision of the penal code, which, though lost by one vote in 1785, was sustained by public sentiment, and was adopted in 1796. Jefferson is of course not entitled to the sole credit for all these services: Wythe, George Mason and James Madison, in particular, were his devoted lieutenants, and—after his departure for France—the principals in the struggle; moreover, an approving public opinion must receive large credit. But Jefferson was throughout the chief inspirer and foremost worker.

In 1775, at almost the gloomiest stage of the war in the southern states, Jefferson succeeded Patrick Henry as the governor of Virginia, being the second to hold that office after the organization of the state government. In his second term (1780–1781) the state was overrun by British expeditions, and Jefferson, a civilian, was blameworthy for its lack of preparation. Though he cannot be said to have been eminently fitted for the task that devolved upon him in such a crisis, most of the criticism of his actions was aimed against him personally. The local punishment was confined to treason and murder; the former was not to be attended by corruption of blood, drawing, or quartering; all other felonies were made punishable by confinement and hard labour, save a few which was applied, against Jefferson’s desire, the principle of retaliation.

1 It was embarrassed with a debt, however, of £3740, which, owing to conditions caused by the War of Independence, he really paid three times to his British creditors (not counting destruction on his estates, of equal amount, ordered by Lord Cornwallis). This greatly reduced his income for a number of years.
administration was undoubtedly grossly unjust. His conduct being attacked, he declined renomination for the governorship, but was unanimously returned by Albermarle as a delegate to the state legislature; and on the day previously set for legislative inquiry on a resolution offered by an impulsive critic, he received, by unanimous vote of the house, a declaration of thanks and confidence. He wished however to retire permanently from public life, a wish strengthened by the illness and death of his wife. At this time he composed his Notes on Virginia, a semi-

statistical work full of humanitarian liberalism. Congress twice offered him the presidency as a reward for his services abroad; but, though he accepted the second offer, the business was so far advanced before he could sail that his appointment was recalled. During the following winter (1783) he was again in Congress, and headed the committee appointed to consider the treaty of peace. In the succeeding session his service was marked by a report, from which resulted the present monetary system of the United States (the fundamental idea of its decimal basis being due, however, to Gouverneur Morris); and by the honour of reporting the first definitely formulated plan for the government of the western territories,1

the one of which was adopted as the Ordinance of 1787. He

Thereafter was particularly associated with the great territory north-west of the Ohio; for Virginia had tendered to Congress in 1781, while Jefferson was governor, a cession of her claims to it, and in 1784 formally transferred the territory by act of Jefferson and his fellow delegates in congress; a consummation for which he had laboured from the beginning. His anti-slavery opinions grew in strength with years (though he was somewhat inconsistent in his attitude on the Missouri question in 1820–1821). Not only justice but patriotism as well pleased with him the cause of the negroes,2 for he foresaw the certainty that the rarefied logic of the cultivated classes of France. Jefferson was deeply interested in all the events leading up to the French Revolution, and all his ideas were coloured by his experience of the five seething years passed in Paris. On the 3rd of June 1789 he proposed to the leaders of the third estate a compromise between the king and the nation. In July he received the extraordinary honour of being invited to assist in the deliberations of the committee appointed by the national assembly to draft a constitution. This honour his official position compelled him, of course, to decline; for he sedulously observed official proprieties, and in any case gave offence to the government to which he was accredited.

When Jefferson left France it was with the intention of soon returning; but President Washington tendered him the secretaryship of state in the new federal government, and Jefferson reluctantly accepted. His only essential objection to the constitution—the absence of a bill of rights—was soon met, at least partially, by amendments. Alexander Hamilton (q.v.) was secretary of the treasury. These two men, antipodal in temperament and political belief, clashed in irreconcilable hostility, and in the conflict of public sentiment, first on the financial measures of Hamilton, and then on the questions with regard to France and Great Britain. Jefferson's sympathies being predominantly with the former, Hamilton's with the latter, they formed against themselves the two great parties of Democrats and Federalists. The schools of thought for which they stood have since contended for mastery in American politics: Hamilton's gradually strengthened by the necessities of stronger administration, as time gave widening amplitude and increasing weight to the specific powers—and so to Hamilton's great doctrine of the implied powers—of the general government of a growing country; Jefferson's rooted in colonial life, and buttressed by the hopes and convictions of democracy.

The most perplexing questions treated by Jefferson as secretary of state arose out of the policy of neutrality adopted by the United States toward France, to whom she was bound by treaties and by a heavy debt of gratitude. Separation from European politics—the doctrine of "America for Americans," that was emboldened later in the Monroe declaration—was a tenet cherished by Jefferson as by other leaders (not, however, Hamilton) and by none cherished more firmly, for by nature he was peculiarly opposed to war, and peace was a fundamental part of his politics. However deep, therefore, his French sympathies, he drew the same safe line as did Washington between French politics and American politics,3 and handled the Genet complications to the satisfaction of even the most partisan Federalists. He expounded, as a very high authority has said, "with remarkable clearness and power the nature and scope of neutral duty," and gave a "classic" statement of the doctrine of recognition.4

But the French question had another side in its reaction on American parties.5 Jefferson did not read excesses in Paris as warnings against democracy, but as warnings against the abuses

1This plan applied to the south-western as well as to the north-western territory, and was notable for a provision that slavery should not exist therein after 1800. This provision was defeated in 1784, but was adopted in 1787 for the north-western territory—a step which is very often said to have saved the Union in the Civil War; the south-western territory (out of which were later formed Mississippi, Alabama, &c.) being given over to slavery. Thus the anti-slavery clause of the ordinance of 1784 was not adopted; and it was preceded by unofficial proposals to the same end; yet to it belongs rightly some special honour as blazoning the way for federal control of slavery in the territories, which later proved of such enormous consequence. Jefferson in the first draft of the Ordinance of 1784, suggested the measures to be given to the states eventually to be formed out of the territory concerned. For his suggestions he has been much ridiculed. The names are as follows: Illinois, Michigan, Sylvania, Polypotamia, Assenopia, Charonesus, Polyshilas, Polyphamotamia, etc.

2He owned at one time above 150 slaves. His overseers were under contract never to bleed them; but he manumitted only a few a year.

3During this time he assisted in negotiating a treaty of amity and commerce with Prussia (1785) and one with Morocco (1789), and negotiated with France a "convention defining and establishing the principles of commerce and navigation between the said United States and France" (1786).

4Patrick Henry humorously declaimed before a popular audience that Jefferson, who favoured French wine and cookery, had "abjured his native victuals.

5Jefferson did not sympathise with the temper of his followers who condemned the zealous excesses of Genet, and in general with the "bouillonneurs" or "radicals" of the French revolution, who were against all civil liberties, he could not accept Washington's doctrine that for a self-created permanent body to declare "this act unconstitutional, and that act pregnant with mischief" was "a stretch of arrogant pretension," which would "reduce the checks of the Constitution to absurdity." The

of monarchy; nor did he regard Bonaparte's coup d'état as revealing the weakness of republics, but rather as revealing the danger of standing armies; he did not look on the war of the coalition against France as one of powers, but as one between forms of government; and though the immediate fruits of the Revolution belied his hopes, as they did those of ardent humanitarians the world over, he saw the broad trend of history, which vindicated his faith that a successful reformation of government in France would insure "a general reformation through Europe, and the resurrection to a new life of their people." Each of these statements could be reversed as regards Hamilton. It is the key to an understanding of the times to remember that the War of Independence had disjoined society; and that Jefferson's brand of Anti-Republicanism was vindicated in the Declaration of Independence, and enshrined in Virginia—after strengthening its rights by the sword, had run to excesses, particularly in the Shays' rebellion, that produced a conservative reaction. To this reaction Hamilton explicitly appealed in the convention of 1787; and of this reaction various features of the constitution, and Hamiltonian federalism generally, were direct fruits. Moreover, independently of special incentives to the alarmist and the man of property, the opinions of many Americans turned again, after the war, into a current of sympathy for England, as naturally as American commerce returned to English ports. Jefferson, however, far from America in these years and unexposed to reactionary influences, came back with undiminished fervor of democracy, and the talk he heard of praise for England, and fearful recoil before even the beginning of the revolution in France, disheartened him, and filled him with suspicion. Hating as he did feudal class institutions and Tudor-Stuart traditions of arbitrary rule, his attitude can be imagined toward Hamilton's oft-availed partialities—and Jefferson assumed, his intrigues—for British class-government with its eighteenth-century measure of corruption. In short, Hamilton took from recent years the elements of young government; whereas Jefferson clung to the other lesson, which crumbling colonial governments had illustrated, that governments derived their strength (and the Declaration had proclaimed that they derived their just rights) from the will of the governed. Each built his system accordingly: the one on the basis of order, the other on individualism—which led Jefferson to liberty alike in religion and in politics. The two men and the fate of the parties they led are understandable only by regarding one as the leader of reaction, the other as in line with the American tendencies. The educated classes characteristically furnished Federalists, of course. Jefferson, however, far from America in these years, it happened that Jefferson, because, with only a few of his great contemporaries, he had a thorough trust and confidence in the people, became the idol of American democracy.

As Hamilton was somewhat officious and very combative, and Jefferson, although uncontentious, very suspicious and quite independent, both men holding inflexibly to opinions, cabinet harmony became impossible when the two secretaries had formed parties about them and their differences were carried into the Treasury. 1 It was at this period of his life that Jefferson gave expression to some of the opinions for which he has been most severely criticized and ridiculed. For the Shays' rebellion he felt little abhorrence, and wrote: "A little rebellion now and then is a good thing . . . an observation of this truth should render honest republican governors so mild in their punishment of rebellion as not to discourage them too much. It is a medicine necessary for the sound health of government" (Writings, Ford ed., iv. 362-363). Again, "Can history produce an instance of rebellion so honorably conducted? . . . God forbid that we should ever be twenty years without such a rebellion. . . . What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is the natural manure" (Ibid. iv. 467). Again he says: "Societies exist under three forms—(1) without government, as among our Indians; (2) under governments wherein the will of every one has a just influence. . . . (3) under governments of force. . . . It is a problem not clear in my mind that the first condition is not the best." (Ibid. iv. 362.)

He turned law students from Blackstone's tosryism to Coke on Littleton; and he would not read Walter Scott, so strong was his aversion to that writer's predilection for class and feudalism; newspapers; and Washington abandoned perfidious his idea "if parties did exist to reconcile them." Partly from discontent within a position in which he did not feel that he enjoyed the absolute confidence of the president, and partly because of the embarrassed condition of his private affairs, Jefferson repeatedly sought to resign, and finally on the 31st of December 1793, with Washington's reluctant consent, gave up his portfolio and retired to his home at Monticello, near Charlottesville.

Here he remained improving his estate (having refused a foreign mission) until elected vice-president in 1796. Jefferson was never truly happy except in the country. He loved gardening, experimented enthusiastically in varieties and rotations of crops and kept meteorological tables with diligence. For eight years, 1776-1784, he accumulated the first and latest appearance of thirty-seven vegetables in the Washington market. When abroad he sought out varieties of grasses, trees, rice and olives for American experiment, and after his return from France received yearly for twenty-three years, from his old friend the superintendent of the Jardin des Plantes, a box of seeds, which he distributed to public and private gardens throughout the United States. Jefferson seems to have been the first discoverer of an exact formula for the construction of mould-boards of least resistance for ploughs. He managed to make practical inculcations in government and agriculture; he hoped the truly apt in the practical applications of mechanical principles.

In the presidential election of 1796 John Adams, the Federalist candidate, received the largest number of electoral votes, and Jefferson, the Republican candidate, the next largest number, and under the law as it then existed the former became president and the latter vice-president. Jefferson re-entered public life with reluctance, though doubtless with keen enough interest and resolution. He had rightly measured the strength of his followers, and was waiting for the government to "drift into union" with the republican sense of its constituents, predicting that President Adams would be "overthrown" thereby. This prediction was speedily fulfilled. At first the reign of terror and the X. Y. Z. disclosures strengthened the Federalists, until these, mistaking the popular resentment against France for a reaction against democracy—an equivalence in their own minds—passed the alien and sedition laws. In answer to these odious measures Jefferson and Madison prepared and procured the passage of the Kentucky and Virginia resolutions. These resolutions later acquired extraordinary and pernicious prominence in the historical elaboration of the states' rights doctrine. It is, however, unquestionably true, that as a startling protest against measures "to silence," Jefferson's words, "by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of our agents," they served, in this respect, a useful purpose; and as a counterblast against Hamiltonian principles of centralization they were probably, at that moment, very salutary; while even as pieces of constitutional interpretation it is to be remembered that they did not contemplate nullification by any single state, and, moreover, are not to be judged by constitutional principles established later by courts and war. The Federalist party had ruined itself, and it lost the presidential election of 1800. The Republican candidates, Jefferson and Aaron Burr (g.e.), received equal votes; it was left to the House of Representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years following

1 Hamilton wrote for the papers himself; Jefferson never did. A talented clerk in his department, however, Philip Freneau, set up an anti-administration paper. It was alleged that Jefferson approved of his proceedings, and encouraged him to keep the Jansen Christmas Day in the House of Representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years following

3 Jefferson was expected in the cabinet where there is the president's explicit statement that "there were as many instances" of his deciding against as in favor of the secretary of the treasury.
this election; discount as one will the contrary obsessions of men like Fisher Ames, Hamilton and Jefferson, the time was 
[...]

Jefferson's first administration was marked by a reduction of the army, navy, diplomatic establishment and, to the uttermost, of governmental expenses; some reduction of the civil service, accompanied by a large shifting of offices to Republicans; and, above all, by the Louisiana Purchase (q.v.), following which Meriwether Lewis and William Clark, sent by Jefferson, con- 

duct their famous exploring expedition across the continent to the Pacific (see LEWIS, MERIWETHER). Early in his term he carried out a policy he had urged upon the government when minister to France and when vice-president, by dispatching naval forces to coerce Tripoli into a decent respect for the trade of his country—the first in Christendom to gain honourable im-

munity from tribute or piracy in the Mediterranean. The Louisiana Purchase, although the greatest "inconsistency" of his career, was also an illustration, in corresponding degree, of his essential practicality, and one of the greatest proofs of his 

statemanship. It was the crowning achievement of his admin-

istration. It is often said that Jefferson established the "spoils system," and his critics and some of his political enemies were 

right; but, because for the first time there was opportunity for ini-

tiative. But mere justice requires attention to the fact that incentive to that innovation, and excuse for it, were found in the 

absolute one-party monopoly maintained by the Federalists. Moreover, Jefferson's ideals were high; his reasons for changes 

were in general excellent; he at least so far resisted the great 

pressure for office—producing by his resistance dissatisfaction 

within his party—as not to have lowered, apparently, the per-

sonnel of the service; and there were no such riots on his admini-

stration, such misadventures in the management of the public 

funds, as occurred on that of his successor, Madison. Nevertheless, 

his record here was not clear of blots, showing a few regrettable 

inconsistencies. Among important but secondary measures of 

his second administration were the extinguishment of Indian 

titles, and promotion of Indian emigration to lands beyond the 

Mississippi; reorganization of the militia; fortification of the 

seaports; reduction of the public debt; and a simultaneous 

reduction of taxes. But his second term derives most of its 

historical interest from the unsuccessful efforts to convict Aaron 

Burr of treasonable acts in the south-west, and from the efforts 

made to maintain, without war, the rights of neutrals on the 

high seas. In his diplomacy with Napoleon and Great Britain 

Jefferson betrayed a painful incorrigibility of optimism. A 

national policy of "growing before fighting"—later practised 
successfully enough by the United States—was not then pos-

sible; and one writer has very justly said that what chiefly 

affects one in the whole matter is the pathos of it—"a philo-

sopher and a friend of peace struggling with a despot of super-

human genius, and a Tory cabinet of superhuman insolence and 

stolidity" (Trent). It is possible to regard the embargo as a 

proof, not as an interesting illustration of Jefferson's love of peace. The idea of a very old nation which was not entirely original; in essence it received other attempted 

applications in the Napoleonic period—and especially in the 

continental blockade. Jefferson's statemanship had the limita-

tions of an agrarian outlook. The extreme to which he carried 

his advocacy of diplomatic isolation, his opposition to the 

creation of an adequate navy, his estimate of cities as "sor-

es upon the body politic," his prejudice against manufactures, 

trust in farmers, and political distrust of the artisan class, all 

reflect them. 

When, on the 4th of March 1809, Jefferson retired from the 
presidency, he had been almost continuously in the public 

service for forty years. He refused to be re-elected for a third 
time, though requested by the legislatures of five states to be a 
candidate; and thus, with Washington's prior example, helped
to establish a precedent deemed by him to be of great importance under a democratic government. His influence seemed scarcely lessened in his retirement. Madison and Monroe, his immediate successors—neighbours and devoted friends, whom he had advised in their early education and led in their mature years—consulted him on all great questions, and there was no break of principles in the twenty-four years of the Jeffersonian system. Jefferson was one of the greatest political managers his country has known. He had a quick eye for character, was genuinely amiable, uncontentious, tactful, and masterful; and it may be assumed from his success that he was wary or shrewd to a degree. It is true, moreover, that, unless tested by a few unchanging principles, his acts were often strikingly inconsistent; and even when so tested, not infrequently remain so in appearance. Full explanations do not remove from some important transactions in his political life an impression of indirectness. But reasonable judgment must find very unjust the stigma of duplicity put upon him by the Federalists. Measured by the records of other men equally successful as political leaders, there seems little of this nature to criticize severely. Jefferson had the full courage of his convictions. Extreme as were his principles, his pertinacity in adhering to them and his independence of expression were quite as extreme. There were philosophic and philanthropic elements in his political faith which will always lead some to class him as a visionary and fanatic; but although he certainly indulged at times in dreams at which one may still smile, he was not, properly speaking, a visionary; nor did he dare to be still more visionary; for, though inferring, was not afraid to risk all on the conclusions to which his heart and his mind led him, declared himself with openness and energy; and he spoke and even wrote his conclusions, how ever bold or abstract, without troubling to detail his reasoning or clip his off-hand speculations. Certain it is that there is much in his utterances for a less robust democracy than his own to cavil at. Soar, however, as he might, he was essentially not a doctrinaire, but an empiricist; his mind was objective. Though he remained, to the end, firm in his belief that there had been an active monarchist party, this obsession did not carry him out of touch with the customs of human nature and of his time. He built with surety on the colonial past, and had a better reasoned view of the actual future than had any of his contemporaries.

Events soon appraised the ultra-Federalist judgment of American democracy, so tersely expressed by Fisher Ames as 'like death ... only the dismal passport to a more dismal hereafter'; and, with it, appraised Jefferson's word in his first inaugural for those who, 'in the full tide of successful experiment,' were ready to abandon a government that had so far kept them, and 'to shrink from the visionary fear that it might by possibility lack energy to preserve itself.' Time soon tested, too, his principle that that government must prove the strongest on earth 'where every man ... would meet invasions of the public order as his own personal concern.' He summed up as follows the difference between himself and the Hamiltonian group: "One feared most the ignorance of the people; the other the selfishness of rulers independent of them." Jefferson, in short, had unlimited faith in the honesty of the people; a large faith in their common sense; believed that all is to be won by appealing to the reason of voters; that by education their ignorance can be eliminated; that human nature is indefinitely perfectible; that majorities rule, therefore, not only by virtue of force (which was Locke's ultimate justification of them), but of right. His importance as a maker of modern America can scarcely be overstated, for the ideas he advocated have become the foundation of American republicanism. His later administration ended the possibility, probability or certainty—measure it as one will—of the development of Federalism in the direction of class government; and the party he formed, inspired by the creed he gave it, fixed the democratic future of the nation. And by his own labours he had vindicated his faith in the experiment of self-government.

Jefferson's last years were devoted to the establishment of the university of Virginia at Charlottesville, near his home. He planned the buildings, gathered its faculty—mainly from abroad—and shaped its organization. Practically all the ideas of aim, administration and curriculum that dominated American universities at the end of the 19th century were anticipated by him. He hoped that the university might be a dominant influence in national culture, but circumstances crippled it. His educational plans had been maturing in his mind since 1776. His financial affairs in these last years gave him grave concern. His fine library of over 10,000 volumes was purchased at a low price by Congress in 1815, and a national contribution ($16,500) just before his death enabled him to die in peace. Though not personally extravagant, his salary, and the small income from the sale of his books, was insufficient for his many engagements. His friend Madison gave him an engaging charm. Beneath a quiet surface he was fairly aglow with intense convictions and a very emotional temperament. His politics he could sum up habitually, in great and little things, on system. His mind, no less trenchant than penetrating, was, so it seemed, the most impressive, the most receptive, mind of his time in America. The range of his interests is remarkable. For many years he was an interested spectator of construction of the stagecoach, and of the biographical tradition that he lacked wit, Molère and Don Quixote seem to have been his favourites; and though the utilitarian whole crowds romanticism out of his writings, he had enough of that quality in youth to learn Gaelic in order to translate Ossian, and sent to Macpherson for the originals! His interest in art was evidently intellectual. He was singularly sweet-tempered, and shrank from the impassioned political bitterness that raged about him; bore with relative equanimity a flood of coarse and malignant abuse of his motives, morals, religion, personal honesty and decency; cherished very few personal animosities; and better than any of his great contemporaries clearly distinguished the element of blooded personality. In short, his kindness of heart rose above all social, religious or political differences, and nothing destroyed his confidence in men and his sanguine views of life. He edited and wrote several books, and the Writings by H. A. Washington (9 vols., New York, 1835-1854), and the best—by Paul

1 See e.g., his letters in 1787 on the Shays' rebellion, and his speculations on the doctrine that one generation may not bind another by paper documents. With the latter may be compared present-day movements like the intiative and referendum, and the oft-discussions of national debts. Jefferson's distrust of governments was nothing exceptional for a consistent individualist.

2 In his later years he carefully sifted and revised his contemporary notes evidencing his personal action; was published, a distance of such notes, and other Oliver Wolcott, Theodore Sedgwick, George Cabot and the Hamiltonians. Such a comparison measures also the relative judgment, temper and charity of these writers and Jefferson. It must still remain true, however, that Jefferson's Ana present him in a far from engaging light.

3 Jefferson, in 1789, wrote some such stuff about the will of majorities, as a New Englander would lose his rank among men of sense to avow—"Fisher Ames (Jan. 1800).

4 He was classed as a French infidel "and atheist. His attitude towards religion was simply this: he 'believed in nothing'; insisted that religion was purely an individual matter, 'evidenced, as concerns the world by each one's daily life,' and demanded absolute freedom of private judgment. He looked on Unitarianism with a favour which he scorns to put on paper. 'I am a Christian,' he wrote in 1823, 'in the only sense in which he (Jesus) wished any one to be; sincerely attached to his doctrines in preference to all others; ascribing to himself every human excellence, and believing he never claimed any other.'
LEICESTER FORD (10 vols., New York, 1892-1899); letters in Massachusetts Historical Society, Collections, series 7, vol. 1; S. E. Forman, The Letters and Writings of Thomas Jefferson, including all his Important Utterances on Public Questions (1900); J. P. Foley, The Jefferson Cycle (New York, 1900); Tupamana, Correspondence, Sec. by T. J. Randolph (4 vols., Charlottesville, Va., 1829); biographies by James Schouler ("Makers of America Series," New York, 1893); John H. Schroeder, The Constitution of the United States (1854), by George Tucker (2 vols., Philadelphia, 1837); James Parton (Boston, 1874); and especially by Henry S. Randall (3 vols., New York, 1893), a monumental work, although marred by some special pleading, and sharing Jefferson's common opinions of his contemporaries. See also Henry Adams, History of the United States 1801-1817, vols. 1-4 (New York, 1889-1900); Herbert B. Adams, Thomas Jefferson (New York, 1910); Parton, Domestic Life of Thomas Jefferson (New York, 1871); and an illuminating appreciation by W. P. Trent, in his Southern Statesmen of the Old Regime (New York, 1897); that by John Fiske, Essays, Historical and Literary, vol. 1 (New York, 1902), has slighter merits.

JEPHRON CITY—JEFFREY, LORD

The capital of Jefferson County, on the Missouri river, near the geographical centre of the state and about 125 miles west of St. Louis. Pop. (1890), 6747; (1900), 9604, of whom 386 were foreign-born and 182 were negroes; in 1860, the population was 7903. It is the seat of the Normal Institute of Missouri, the Chicago & Alton, and the Missouri, Kansas & Texas railroads. Its site is partly in the bottom-lands of the river and partly on the steeps at an elevation of about 600 feet above the sea. A steel bridge spans the river. The state capitol, an imposing structure built on a bluff above the river, was built in 1838-1842 and enlarged in 1857-1858; it was first occupied in 1840 by the legislature, which previously had met (after 1837) in the county court house. Other prominent buildings are the United States post office and post office, the state supreme court house, the county court house, the state penitentiary, the state armory and the executive mansion. The penitentiary is to a large extent self-supporting; in 1903-1904 the earnings were $3493.80 in excess of the costs, but in 1904-1905 the costs exceeded the earnings by $904.4. Employment is furnished for the convicts on the penitentiary premises by incorporated companies. The state law library here is one of the best of the kind in the country, and the city has a public library. In the city is Lincoln Institute, a school for negroes, founded in 1866 by two regiments of negro infantry upon their discharges from the army and taken over by the state in 1879, and having sub-normal, normal, college, industrial and agricultural courses. Coal and limestone are found near the city. In 1905 the total value of the factory product was $3,926,032, an increase of 28.3% since 1900. The original constitution of Missouri prescribed that the capital should be on the Missouri river within 40 miles of the mouth of the Osage, and a commission selected in 1821 the site of Jefferson City, on which a town was laid out in 1822, the name being adopted in honour of Thomas Jefferson. The legislature first met here in 1826; Jefferson City became the county-seat in 1828, and in 1839 was first chartered as a city. The constitutional conventions of 1845 and 1875, and the state convention which issued the call for the National Liberal Republican convention at Cincinnati in 1872, met here, and so for some of its sessions did the state convention of 1861-1863. In June 1861 Jefferson City was occupied by Union forces, and in September-October 1864 it was threatened by Confederate troops under General Sterling Price.

JEFFERSONVILLE, a city and the county-seat of Clark county, Indiana, U.S.A., situated on the N. bank of the Ohio river, opposite Louisville, Kentucky, with which it is connected by several bridges. Pop. (1890), 10,666; (1900), 10,774, of whom 1818 were of negro descent and 615 were foreign-born; (1910 census), 10,412. It is served by the Baltimore & Ohio South-western, the Cleveland, Cincinnati, Chicago & St Louis, and the Pittsburg, Cincinnati, Chicago & St Louis railways, and by three inter-urban electric lines. It is attractively situated on bluffs above the river, which at this point has a descent (known as the falls of the Ohio) of 26 ft. in 2 m. This furnishes good water power for manufacturing purposes both at Jeffersonville and at Louisville. The total value of the factory product in 1905 was $4,526,443, an increase of 20% since 1900. The Indiana reformatory (formerly the Southern Indiana penitentiary) and a large supply depot of the United States army are at Jeffersonville. General George Rogers Clark started (June 24, 1778) on his expedition against Kaskaskia and Vincennes from Corn Island (now completely washed away) opposite what is now Jeffersonville. In 1786 the United States government established Fort Finney (built by Captain Walter Finney), afterwards re-named Fort Steuben, on the site of the present city; which was abandoned in 1791, and the actual beginning of Jeffersonville was in 1802, when a post office was opened (the site of the present city) was transferred by its original owner, Lieut. Isaac Bowman, to three trustees, under whose direction a town was laid out. Jeffersonville was incorporated as a town in 1815, and was chartered as a city in 1839.

JEFFREY, FRANCIS JEFFREY, Lord (1773-1850), Scottish judge and literary critic, son of a depute-clerk in the Court of Session, was born at Edinburgh on the 23rd of October 1773. After attending the high school for six years, he studied at the university of Glasgow, 1787-1790. The May 1789, and at Queen's University, Oxford, from September 1790, under Dr. Holdsworth, and began the study of law at Edinburgh before going to Oxford, and now resumed his studies there. He became a member of the speculative society, where he measured himself in debate with Scott, Brougham, Francis Horner, the marquess of Lansdowne, Lord Kinnaird and others. He was admitted to the Scotch bar in December 1794, but, having abandoned the Tory principles in which he had been educated, he found that his Whig colleagues seriously prejudiced his legal prospects. In consequence of this lack of success at the bar he went to London in 1798 to try his fortune as a journalist, but without success; he also made more than one vain attempt to obtain an office which would have secured him the advantage of a small but fixed salary. His marriage with Catherine Wilson in 1801 made the question of a settled income even more pressing. A project for a new review was brought forward by Sydney Smith in Jeffrey's flat in the presence of H. P. Brougham (afterwards Lord Brougham), Francis Horner and others; and the scheme resulted in the appearance on the 10th of October 1802 of the first number of the Edinburgh Review. At the outset the Review was not under charge of a Scotchman; the first three numbers were, however, practically edited by Sydney Smith, and on his leaving for England the work devolved chiefly on Jeffrey, who, by an arrangement with Constable, the publisher, was eventually appointed editor at a fixed salary. Most of those associated in the undertaking were Whigs; but, although the general bias of the Review was towards social and political reforms, it was at first so little of a party organ that for a time it numbered Sir Walter Scott among its contributors; and no distinct emphasis was given to its political leanings until the publication in 1808 of an article by Jeffrey himself on the work of Don Pedro Cavallot on the French usurpation of Spain. This article expressed despair of the success of the British arms in Spain, and Scott at once withdrew his subscription, the Quarterly being soon afterwards started in opposition. According to Lord Cockburn the effect of the first number of the Edinburgh Review was "electrical." The English reviews were at that time practically publishers' organs, the articles in which were written by hack-writers instructed to praise or blame according to the publishers' interests. Few men of any standing consented to write for them. The Edinburgh Review, on the other hand, enlisted a brilliant and independent staff of contributors, guided by the editor, not the publisher. They received sixteen guineas a sheet (sixteen printed pages), increased subsequently to twenty-five guineas in many cases, instead of the two guineas which formed the ordinary London reviewer's fee. Further, the review was not limited to literary criticism. It constituted itself the accredited organ of moderate Whig public opinion. The particular work which provided the starting-point of an article was in many cases merely the occasion for the exposition, always
brilliant and incisive, of the author's views on politics, social subjects, ethics or literature. These general principles and the novelty of the method ensured the success of the undertaking even after the original circle of exceptionally able men who founded it had been dispersed. It had a circulation, great for those days, of 12,000 copies. The period of Jeffrey's editorship extended over thirty years, covering the ninety-eighth number, published in June 1820, when he resigned in favour of Macvey Napier.

Jeffrey's own contributions, according to a list which has the sanction of his authority, numbered two hundred, all except six being written before his resignation of the editorship. Jeffrey wrote with great rapidity, at odd moments of leisure and with little special preparation. Great fluency and ease of dictation, considerable warmth of imagination and moral sentiment, and a sharp eye to discover any oddity of style or violation of the accepted canons of good taste, made his criticism pungent and effective. But the essential narrowness and timidity of his general outlook prevented him from detecting and estimating latent forces, either in politics or in matters strictly intellectual and moral; and this lack of understanding and sympathy accounts for his distrust and dislike of the passion and fancy of Shelley and Keats, and for his praise of the half-hearted and elegant romanticism of Rogers and Campbell. (For his treatment of the lake poets see Wordsworth, William.)

A criticism in the fiftieth number of the Review on the morality of Moore's Poems led in 1826 to a duel between the two, on the lawn at Chalk Farm. The proceedings were stopped by the police, and Jeffrey's pistol was found to contain no bullet. The affair led to a warm friendship, however, and Moore contributed to the Review, while Jeffrey made ample amends in a later article on Lola Rothe (1817).

Jeffrey's wife had died in 1805, and in 1810 he became acquainted with Charlotte, daughter of Charles Wilkes of New York, and great-niece of John Wilkes. When she returned to America, Jeffrey followed her, and they were married in 1813. Before returning to England they visited several of the chief American cities, and his experience strengthened Jeffrey in the conciliatory policy he had before advocated towards the States. Notwithstanding the increasing success of the Review, Jeffrey always continued to look to the bar as the chief field of his ambition. As a matter of fact, his literary reputation helped his professional advancement. His practice extended rapidly in the civil and criminal courts, and he regularly appeared before the general assembly of the Church of Scotland, where his work, though not financially profitable, increased his reputation. As an advocate he sharpened and rapidity of insight gave him a formidable advantage in the detection of the weak points of his opponent's case, while he grouped his own arguments with an admirable eye to effect, especially excellent in eloquent closing appeals to a jury. Jeffrey was twice, in 1820 and 1822, elected lord rector of the university of Glasgow. In 1829 he was chosen dean of the faculty of advocates. On the return of the Whigs to power in 1830 he became lord advocate, and entered parliament as member for the Perth burghs. He was unseated, and afterwards returned for Malton, a borough in the interest of Lord Fitzwilliam. After the passing of the Scottish Reform Bill, which was introduced in parliament, he was returned for Edinburgh in December 1832. His parliamenitary career, which, though not brilliantly successful, had won him high general esteem, was terminated by his elevation to the judicial bench as Lord Jeffrey in May 1834. In 1842 he was moved to the first division of the Court of Session. On the disruption of the Scottish Church he took the side of the seceders, giving a judicial opinion in their favour, afterwards reversed by the house of lords. He died at Edinburgh on the 26th of January 1850.

Some of his contributions to the Edinburgh Review appeared in four volumes in 1844 and 1845. This selection includes the essay on "The Book of the City of London." (Vol. i. p. 141) The Life of Lord Jeffrey, with a Selection from his Correspondence, by Lord Cockburn, appeared in 1852 in 2 vols. See also the Selected Correspondence of Macvey Napier (1827); the sketch of Jeffrey in Carlyle's Reminiscences, ed. by Lewis E. Gates in Three Studies in Literature (New York, 1890).
of April 1680; but when parliament met in October the House of Commons passed a hostile resolution which induced him to resign his lordship, a piece of pusillanimity that drew from the king the remark that Jeffreys was "not parliament-proof." Jeffreys nevertheless received from the city aldermen a substantial token of appreciation for his past services. In 1681 he was created a baronet. In June 1683 the first of the Rye House conspirators were brought to trial. Jeffreys was briefed for the crown in the prosecution of Lord William Howard; and, having been raised to the bench as lord chief justice of the king's bench in September, he presided at the trials of Algernon Sidney in November 1683 and of Sir Thomas Armstrong in the following June. In 1686 Jeffreys, who in his active role in procuring the surrender of municipal charters to the crown, was called to the cabinet, having previously been sworn of the privy council. In May 1685 he had the satisfaction of passing sentence on Titus Oates for perjury in the plot trials; and about the same time James II. rewarded his zeal with a peerage as Baron Jeffreys of Wem, an honour never before conferred on a chief justice during his tenure of office. Jeffreys had for some time been suffering from stone, which aggravated the irritability of his naturally violent temper; and the malady probably was the cause of his conduct in the House of Commons when, on July 16, an act was carried abolishing corporal punishment, as witnessed at the trial of Richard Baxter (q.v.) for seditious libel: if the unofficial ex parte report of the trial, which alone exists, is to be accepted as trustworthy.

In August 1685 Jeffreys opened at Winchester the commission known in history as the "bloody assizes," his conduct of which has branded his name with indelible infamy. The number of persons sentenced to death at these assizes for complicity in the duke of Monmouth's insurrection is uncertain. The official return of those actually executed was 320; many hundreds more were transported and sold into slavery in the West Indies. In all probability the great majority of those condemned were in fact concerned in the rising, but the trials were in many cases a mockery of the administration of justice. Numbers were cajoled into pleading guilty; the case for the prisoners seldom obtained a hearing. The merciless severity of the chief justice did not however exceed the wishes of James II.; for on his return to London Jeffreys received from the king the great seal with the title of lord chancellor. For the next two years he was a strenuous upholder of prerogative, though he was less abjectly pliant than has sometimes been represented. There is no reason to doubt the sincerity of his attachment to the Church of England; for although the king's favour was capricious, Jeffreys never took the easy and certain path to secure it that lay through apostasy; and he even withstood James on occasion, when the latter pushed his Catholic zeal to extremes. Though it is true that he accepted the presidency of the ecclesiastical commission, Burnet's statement that it was Jeffreys who suggested that institution to James is probably incorrect; and he was so far from having instigated the prosecution of the seven bishops in 1687, as has been frequently alleged, that he disapproved of the proceedings and rejected secretly at the acquittal. But while he watched with misgiving the king's preferment of Roman Catholics, he made himself the masterful instrument of unconstitutional prerogative in coercing the authorities of Cambridge University, who in 1687 refused to confer degrees on a Benedictine monk, and the fellows of Magdalen College, Oxford, who declined to elect as their president a disreputable nominee of the king.

Being thus conspicuously identified with the most tyrannical measures of James II., Jeffreys found himself in a desolate plight than has sometimes been represented. There is no reason to doubt the sincerity of his attachment to the Church of England; for although the king's favour was capricious, Jeffreys never took the easy and certain path to secure it that lay through apostasy; and he even withstood James on occasion, when the latter pushed his Catholic zeal to extremes. Though it is true that he accepted the presidency of the ecclesiastical commission, Burnet's statement that it was Jeffreys who suggested that institution to James is probably incorrect; and he was so far from having instigated the prosecution of the seven bishops in 1687, as has been frequently alleged, that he disapproved of the proceedings and rejected secretly at the acquittal. But while he watched with misgiving the king's preferment of Roman Catholics, he made himself the masterful instrument of unconstitutional prerogative in coercing the authorities of Cambridge University, who in 1687 refused to confer degrees on a Benedictine monk, and the fellows of Magdalen College, Oxford, who declined to elect as their president a disreputable nominee of the king.

traditional estimate of the character of Jeffrey's obtains no confirmation from the refinement of his features and expression as depicted in Kneller's portrait in the National Portrait Gallery of London. But even though the popular notion requires to be thus modified in certain respects, it remains incontestable that Jeffrey was probably on the whole the worst example of a period when the administration of justice in England had sunk to the lowest degradation, and the judicial bench had become the too willing tool of an unconstitutional and unscrupulous executive.

BIBLIOGRAPHY.—The chief contemporary authorities for the life of Jeffrey are Bishop Burnet's History of my own Time (1724), and see "with that" in The Epsom, by John Hardwick, Speaker Onslow and Dean Swift "(Oxford Press, 1833); Roger North's Life of the Right Hon. Francis North, Baron of Guildford (1806) and Autobiography (ed. by Augustus Jessopp, 1887); Ellis Correspondence, Vernay Papers (Hist. MSS. Comm.); Italian Correspondence (Cadem Soc. pub.); the earl of Ailesbury's Memoirs; Evelyn's Diary. The only trustworthy information as to the judicial conduct and capacity of Jeffrey's is to be found in the reports of the State Trials, vols. vii.-xii.; and cf. Sir J. F. Stephenson's History of the Criminal Law of England (1835). For details of the "bloody assizes," see Harl. MSS., 4589; George Roberts, The Life, Progresses and Rehabe of Jemmet Duke of Monmouth, vol. ii. (1842); also many pamphlets, lampoons, etc., in the British Museum, as to which see the article on "Sources of History for Monmouth's Rebellion and the Bloody Assizes," by A. L. Humphreys, in Proceedings of the Somersetshire Arch. Soc. (1892). Launay's Memoirs of the Life of Judge Jeffrey (1827); Lord Campbell, The Lives of the Lord Chancellor (1845), 1st series, vol. iii.; E. Foss, The Judges of England (1846), vol. vii.; Henry Roses Lives of the Judges (1830); Burnet's Hist. of England (1848); and many subsequent editions. Most of these works, and especially those by Maclay and Campbell, are uncritical in their hostility to Jeffrey, and are based for the most part on untrustworthy authorities. The best modern work on the subject, though unduly favourable to Jeffrey's, is H. B. Irving's Life of Judge Jeffreys (1868), the appendix to which contains a full bibliography. (R. J. M.)

JEHOIAChIN (Heb. "Yah[weh] establisheth ", in the Bible, son of Jehoiakim and king of Judah (2 Kings xxiv. 8 sqq.; 2 Chron. xxxvi. 9 sqq.) He came to the throne at the age of eighteen in the midst of the Chaldean invasion of Judah, and is said to have reigned three months. He was compelled to surrender to Nebuchadnezzar and was carried off to Babylon (597 B.C.). This was the First Captivity, and from it Ezekiel (one of the exiles) dates his prophecies. Eight thousand people of the better class (including artisans, &c.) were removed, the Temple was partially depoised (see Jer. xxvii. 18-20; xxix. 9); and in 2 Kings xxi. 18-19, Jehoiachin is called "Jeho" in Jer. xxiv. 8-13. He was appointed king. Jehoiachin's fate is outlined in Jer. xxii. 20-30 (cf. xxvii. 20). Nearly forty years later, Nebuchadnezzar II. died (562 B.C.) and Evil-Merodach (Amil-Marduk) his successor released the unfortunate captive and gave him precedence over the other subjugated kings who were kept prisoners in Babylon. With this gleam of hope for the unhappy Judeans both the book of Kings and the prophecies of Jeremiah conclude (2 Kings xxv. 27-30; Jer. lii. 31-34).

See, further, Jeremiah (especially chaps. xxiii., xxvii. seq.), and Jews, § 17.

JEHOIAKIM (Heb. "Yah[weh] raiseth up ", in the Bible, son of Josiah (p.s.) and king of Judah (2 Kings xxiii. 34-xxiv. 6). On the defeat of Josiah at Megiddo his younger brother Jehoahaz (or Shallum) was chosen by the Judeans, but the Egyptian conqueror Necho summoned him to his headquarters at Riblah (south of Hamath on the Orontes) and removed him to Egypt, appointing in his stead Eliakim, whose name "El(God) raiseth up ") was changed to its better-known synonym, Jehoiakim. For a time Jehoiakim remained under the protection of Necho and paid heavy tribute; but with the rise of the new Chaldean Empire under Nebuchadnezzar II. and the overthrow of Egypt at the battle of Carchemish (605 B.C.) a vital change occurred. After three years of allegiance the king revolted. Invasions followed by Chaldeans, Syrians, Moabites and Ammonites, per-

1 2 Kings xxiv. 13 seq. gives other numbers and a view of the disaster which is more suitable for the Second Captivity. (See Zedekiah.)

haps the advance troops despatched by the Babylonian king; the power of Egypt was broken and the whole land came into the hands of Nebuchadnezzar. It was at the close of Jehoiakim's reign, apparently just before he was carried off to the gates of Jerusalem, and although he himself "slept with his fathers" his young son was destined to see the first captivity of the land of Judah (597 B.C.). (See Jehoiachin.)

Which "three years" (2 Kings xxiv. 1) are intended is disputed; it is uncertain whether Judah suffered in 605 B.C. (Berosus in Jos. a. P. 19) or was left unharmed (Jos. Ant. x. 6. 1); perhaps Nebuchadnezzar made his first raid against Judah in 605 B.C. because of his intrigue with the Egyptians, and with whom he was in "little war" (see also Jos. xxiv. 13, seq.), and the three years of allegiance extends to 599. The chronicle's tradition (2 Chron. xxxvi. 8-9) speaks of Jehoiakim's captivity, apparently confusing him with Jehoiachin. The Septuagint, however, still preserves there the record of his peaceful death, in agreement with the earlier source in 2 Kings, but against the prophecy of Jeremiah (xxxi. 18 seq., xxxvi. 30), which is accepted by Jos. Ant. x. 6. 3. The different traditions can scarcely be reconciled.

Nothing certain is known of the marauding bands sent against Jehoiakim; for Syrians (Arama) one would expect Edomites (Edom), but see Jer. xxxv. 11; some recensions of the Septuagint even include the "Samarians"! For further references to this reign see especially Jeremiah; see also Jews: History, § 17. (S. A. C.)

JEHOL ("hot stream"), or Cteen-Te-Fu, a city of China, formerly the seat of the emperor's summer palace, near 1181 E. and 41° N., about 140 m. N.E. of Peking, with which it is connected by an excellent road. Pop. (estimate), 10,000. It is a flourishing town, and consists of one great street, about 2 m. long, with smaller streets radiating in all directions. The people are well-to-do and there are some fine shops. The palace, called Pi-shu-shan-chuang, or "mountain lodge for avoiding heat," was built in 1703 on the plan of the palace of Yuen-ming-yuen near Peking. A substantial brick wall 6 m. in circuit encloses the well-wooded gardens and extensive grounds, rockeries, pavilions, &c. Jehol was visited by Lord Macartney on his celebrated mission to the emperor K'ienlung in 1793; and it was to Jehol that the emperor Hien-feng retired when the allied armies of England and France occupied Peking in 1860. In the vicinity of Jehol are numerous Lama monasteries and temples, the most remarkable being Potala-su, built on the model of the palace of the grand lama of Tibet at Potala.

JEHORAM, or Joram (Heb. "Yah[weh] is high "), the name of two Biblical characters.

1. The son of Ahab, and king of Israel in succession to his brother Ahaziah. He maintained close relations with Judah, whose king came to his assistance against Moab which had revolted after Ahab's death (2 Kings i. 11). The king in question is said to have been Jehoshaphat; but, according to Lucian's recension, it was Ahaziah, whilst i. 17 would show that it was Jehoram's namesake (see 2). The result of the campaign appears to have been a defeat for Israel (see on the incidents Edom, Edishamia, Moab). The prophetic party were throughout hostile to Jehoram (with his reform iii. 2 contrast x. 27), and the king's account led to the war with Benhadad king of Syria against the king of Israel (vi. 24-vii.) shows the feeling against the reigning dynasty. But whether the incidents in which Elisha and the unnamed king of Israel appear originally belonged to the time of Jehoram is very doubtful, and in view of the part which Elisha took in securing the accession of Jehu, it has been urged with much force that they belong to the dynasty of the latter, when the high position of the prophet would be perfectly natural. The briefest account is given of Jehoram's alliance with Ahaziah (son of 2 below) against Hazael of Syria, at Ramoth-Gilead.

2 2 Kings i. 17 seq.; see Lucian's reading (cf. Vulg. and Pesh.) of the name of the allusion in 2 Kings i. 11 and the narrative in 2 Kings i. (see Elijah), nothing is known of this Ahaziah. Notwithstanding his very brief reign (1 Kings xxii. 51; 2 Kings iii. i), the compiler passes the natural hostile judgment (1 Kings iii. 32 seq.) on his name. The chronology in 1 Kings xii. 51 is difficult; if Lucian's text (twenty-fourth year of Jehoshaphat) is correct, Jehoram 1 and 2 must have come to their respective thrones at the same time.

In vii. 6 the hostility of Hitites and Mizrak (gaz.) points to a period after 842 B.C. (See Jews, § 10 seq.)
(2 Kings viii. 25-26), and the incident—with the winding of the Israelite king in or about the critical year 842 B.C.—finds a noteworthy parallel in the time of Jehoshaphat and Athaliah (1 Kings xiii. 39-40) at the period of the equally momentous event in 854 (see Athaliah). See further Jehoahaz.

2. The son of Jehoshaphat and king of Judah. He married Athaliah the daughter of Athahaz, and thus became brother-in-law of 1. above, and contemporary with him (2 Kings i. 17). In his days Edom revolted, and this with the mention of Libnah's revolt (2 Kings viii. 20 sqq.) suggests some common action on the part of Philistines and Edomites. The chronicler's account of his life (2 Chron. xxvi.-xxvii. 1) presupposes this, but adds many remarkable details: he began his reign by massacring his brethren (cf. Jehoram, 1 Chron. vii. 42), his own sister the wicked Athaliah (distinct from the Athaliah of 2 Chron. xxiv.), for his wickedness he received a communication from Elijah foretelling his death from disease (cf. Elijah and Ahaziah of Israel, 2 Kings i.); in a great invasion of Philistine and Arabian tribes he lost all his possessions and family, and only Jehoahaz (i.e. Ahaziah) was saved. His son Ahaziah reigned only for a year (cf. his namesake of Israel); he is condemned for his Israelite sympathies, and met his end in the general butchery which attended the accession of Jehu (2 Kings viii. 25 sqq.; 2 Chron. xxiii. 3 sqq., 7 sqq.; with 2 Kings ix. 27 sqq.), note the variant traditions of his death; and the details which he has commented on (2 Kings xii. 17 sqq.; 1 Chron. xxi. 15 sqq.; (Lucan) appends to 2 Kings x.)

JEHOSHAPAT (Heb. "Yahweh judges"), in the Bible, son of Ass, and king of Judah, in the 9th century B.C. During his period close relations subsisted between Israel and Judah; the two royal houses were connected by marriage (see Athaliah; Jehoram, 2), and undertook joint enterprise in war and commerce. Jehoshaphat aided Athahaz in the battle against Benhadad at Ramoth-Gilead in which Athahaz was slain (1 Kings xxiii.; 2 Chron. xxvi.; cf. the parallel Incident in 2 Kings viii. 25-26), and trading journeys to Ophir were undertaken by his fleet in conjunction with Athahaz. No mention of Jehoahaz. The chronicler's account of his war against Moab, Amnon and Edomites (2 Chron. xx.), must rest ultimately upon a tradition which is presupposed in the earlier source (1 Kings xxii. 47 sqq.), and the disaster to the ships at Ezion-Geber at the head of the Gulf of Akaba preceded, if it was not the introduction to the great revolt in the days of Jehoshaphat's son Jehoram, where, again, the details in 2 Chron. xxii. must rely in the first instance upon an old source. Apart from what is said of Jehoshaphat one of his less illustrious achievements is his undertaking of the war against Sion-Geber. Jehoahaz (2 Kings xi. 26 sqq.; the meaning of his name above), an account is preserved of his alliance with Jehoram of Israel against Moab (2 Kings iii.), on which see Jehoram; Moab. The "valley of Jehoshaphat" (Joel iii. 12) has been identified by tradition (as old as Eusebius) with the valley between Jerusalem and the mount of Olives.

JEHOVAH (Yahweh), in the Bible, the God of Israel. "Jehovah" is a modern mispronunciation of the Hebrew name, resulting from combining the consonants of that name, Jhvh, with the vowels of the word אֱלֹהֵי ("El, Lord," which the Jews substituted for the proper name in reading the scriptures. In such cases of substitution the vowels of the word which is to be read are written in the Hebrew text with the consonants of the word which is not to be read. The consonants of the word to be substituted are ordinarily written in the margin; but inasmuch as Adonay was regularly read instead of the ineffable name Jhvh, it was deemed unnecessary to note the fact at every occurrence. When Christian scholars began to study the Old Testament in Hebrew, if they were ignorant of this general rule or regarded the substitution as a piece of Jewish superstition, reading was actually stated in the text, e.g. Lev. xxi. 15 sqq., not "Lord Jehovah." It is an unprofitable inquiry who first made this blunder; probably many fell into it independently. The statement still commonly repeated that it originated with Petrus Galatinus (1518) is erroneous; Jehovah occurs in manuscripts at least as early as the 14th century. The form Jehovah was used in the 16th century by many authors, both Catholic and Protestant, and in the 17th was zealously defended by Fuller, Gataker, Leusden and others, against the criticisms of such scholars as Drusius, Cappellus and the elder Buxtorf. It appeared in the English Bible in Tyndale's translation of the Pentateuch (1530), and is found in all English Protestant versions of the 16th century except that of Coverdale (1535):

In the Authorized Version of 1611 it occurs in Exod. vi. 3; Ps. lxxxii. 18; Isa. xii. 2; xxvi. 4, beside the compound names Jehovah-jireh, Jehovah-nissi, Jehovah-shalom; elsewhere, in accordance with the usage of the ancient versions, Jhvh is reprinted (as in the Authorized Version, e.g. in Jhvh, Ps. cxliv. 10; l. 7; li. 14; observe also the frequency of the "Most High," of Jehovah, "King of Heaven," of "Heaven" in First Maccabees. The oldest Greek versions (Septuagint), from the third century B.C., consistently use Κύριος, "Lord," which the Hebrews have Jhvh, corresponding to the substitution of Adonay for Jhvh in reading the original; in books written in Greek in this period (e.g. Wisdom, 2 and 3 Maccabees), as in the New Testament, Κύριος takes the place of the name of God. Josephus, who as a priest knew the pronunciation of the name, declares that religion forbids him to divulge it; Philo calls it ineffable, and says that it is lawful for those only whose ears and tongues are purified by wisdom to hear and utter it in a holy place (that is, for priests in the Temple); and in another passage, commenting on Lev. xxiv. 15 sqq.: "If any one, I do not say should blaspheme against the Lord of men and gods, but should even dare to utter his name unseasonably, let him expect the most direful death."

Various motives may have concurred to bring about the suppression of the name. An instinctive feeling that a proper name for God implicitly recognizes the existence of other gods may have had some influence; reverence and the fear lest the holy name should be profaned among the heathen were potent reasons; but probably the most cogent motive was the desire to prevent the abuse of the name in magic. If so, the secrecy had the opposite effect; the name of the god of the Jews was one of the great names in magic, heathen as well as Jewish, and miraculous efficacy was attributed to the mere utterance of it.

In the liturgy of the Temple the name was pronounced in the priestly benediction (Num. vi. 27) after the regular daily sacrifice (in the synagogues a substitute—probably Adonay—was employed); on the Day of Atonement the High Priest uttered the name ten times in his prayers and benediction. In the last generations before the fall of Jerusalem, however, it was pronounced in a low tone so that the sounds were lost in the chant of the priests.

1 See Josephus, Ant. ii. 12, 4; Philo, Vita Mevis, iii. 11 (f. 311a, ed. Cohn and Wendland); ib. iii. 27 (f. 286). The Palestinian authorities in more contemporary manuscripts (except Lev. xxiv. 15 sqq., not of the name Jehovah), pronounced the name ineffable, but of the use of the name of God in blaspheming God.

2 Siphr., Num. §§ 39, 43; M. Sotath, iii. 7; Sotath, 38a. The tradition that the utterance of the name in the daily benedictions ceased with the death of Simeon the Just, two centuries or more before the Christian era, perhaps arise from a misunderstanding of Mena- sim, 108b; in any case it cannot stand against the testimony of older and more authoritative texts.

3 Yoma, 39b; Jer. Yoma, iii. 7; Kiddushin, 71a.

1 These details are scarcely the invention of the chronicler; see Chronicles, and Expositor, Aug. 1906, p. 191.

2 This form, Yahweh, as the correct one, is generally used in the separate articles through this work.
After the destruction of the Temple (A.D. 70) the liturgical use of the name ceased, but the tradition was perpetuated in the schools of the rabbis. It was certainly known in Babylonia in the latter part of the 4th century, and not improbably much later. Nor was the knowledge confined to these pious circles; the name continued to be employed by healers, exorcists and magicians, and has been preserved in many places in the written and oral tradition with which the utterance of the name is denounced in the Mishna—"He who pronounces the Name with its own letters has no part in the world to come!"—suggests that this misuse of the name was not uncommon among Jews.

The Samaritans, who otherwise shared the scruples of the Jews about the utterance of the name, seem to have used it in judicial oaths to the scandal of the rabbis. The early Christian scholars, who inquired what was the true name of the God of the Old Testament, had thus a great difficulty in getting the information they sought. Clement of Alexandria (d. c. 212) says that it was pronounced Ieow. Epiphanius (d. 404), who was born in Palestine and spent a considerable part of his life there, gives laše (one cod. Iave). Theodorit (d. c. 457), born in Antioch, writes that the Samaritans pronounced the name laše (in another passage, Iaše), the Jews Ata. The latter is probably not Jhvh but Iahveh (Exod. iii. 14), which the Jews counted among the names of God; there is no reason whatever to imagine that the Samaritans pronounced the name Jhvh differently from the Jews. This tradition is supported by the later vessels with which the papyri of first century (Jahveh Sebaôth), as well as laše, occurs frequently. In an Ethiopic list of magical names of Jesus, purporting to have been taught by him to his disciples, Yâwêd is found. Finally, there is evidence from more than one source that the modern Samaritan priests pronounce the name Yahweh or Yâwâ.11

There is no reason to impugn the soundness of this substantially consentient testimony to the pronunciation Yahweh or Jahuâ, coming as it does through several independent channels. It is confirmed by grammatical considerations. The name Jahuâ enters into the composition of many proper names of persons in the Old Testament, either as the initial element, in the form Jebo- or Jo- (as in Jehoram, Joram), or as the final element, in the form Jahu or oh (as in Adonijah, Adoniah). These various forms are perfectly regular if the divine name was Yahweh, and, taken altogether, they cannot be explained on any other hypothesis. Recent scholars, accordingly, but with few exceptions, are agreed that the ancient pronunciation of the name was Yahweh (the first h sounded at the end of the syllable).

Gennebrardus seems to have been the first to suggest the pronunciation Jehovah, but it was not until the 19th century that it became accepted.

Jahweh or Yahweh is apparently an example of a common type of Hebrew proper names which have the form of the 3rd pers. sing. of the verb, e.g. Jahneb (name of a city), Jâbîn, Jâmâlêk, Jîptâb (Jephthah), &c. Most of these are verbs, the suppressed or implicit subject being el, "I am, God," or the name of a god; cf. Jahneb and Jâbên-el, Jîptâb and Jîptâb-el.

The ancient explanations of the name proceed from Exod. iii. 14, 15, where "Yahweh hath sent me" in v. 15 corresponds to "Ehyeh hath sent me" in v. 14, thus seeming to connect the former with the Hebrew word, to be.

The Palestinian interpreters found in this the promise that 1. R. Johanan (second half of the 3rd century),Kidushin, 710.

God would be with his people (cf. v. 12) in future oppressions as he was in the present distress, or the assertion of his eternity, or eternal constancy; the Alexandrian translation "Elyâ elyô ô rôn... O wô anáptakên me rôs ñyâs," understands it in the more metaphysical sense of God's absolute being. Both interpretations, "He (who) is (always) the same," and "He (who) is (absolutely, the truly existent)," import into the name all that he professes to find in it; the one, the religious faith in God's unchanging fidelity to his people, the other, a philosophical conception of absolute being which is foreign both to the meaning of the Hebrew verb and to the force of the tense employed. Modern scholars have sometimes found in the name the expression of the asety of God; sometimes of his reality, in contrast to the imaginary gods of the heathen. Another explanation, which appears first in Jewish authors of the middle ages and has found wide acceptance in recent times, derives the name from the causative of the verb; He (who) causes things to be, gives them being; or calls events into existence, brings them to pass; with many individual modifications of interpretation—creator, life-giver, fullfiller of promises. A serious objection to this theory in every form is that the verb háyâh, "to be," has no causative stem in Hebrew; to express the ideas which these scholars find in the name Yahweh the language employs altogether different verbs.

This assumption that Yahweh is derived from the verb "to be," as seems to be implied in Exod. iii. 14 seq., is not, however, free from difficulty. "To be" in the Hebrew of the Old Testament does not mean creation, as the derivation would require, but háyâh; and we are thus driven to the further assumption that háwâh belongs to an earlier stage of the language, or to some older speech of the forefathers of the Israelites. This hypothesis is not intrinsically improbable—and in Aramaic, a language closely related to Hebrew, "to be" actually is háwâ—but it should be noted that in adopting it we admit that, using the name Hebrew in the historical sense, Yahweh is not a Hebrew name. And, inasmuch as nowhere in the Old Testament, outside of Exod. iii., is there the slightest indication that the Israelites connected the name of their God with the idea of "being" in any sense, it may fairly be questioned whether, if the author of Exod. iii. 14 seq., intended to give an etymological interpretation of the name Yahweh, his etymology is any better than many other paronomastic explanations of proper names in the Old Testament, or than, say, the connexion of the name ἀπόλλων with ἀπόλλων, ἀπόλλων in Plato's Cratylus, or the popular derivation from ἀπόλλυμι.

A root háwâh is represented in Hebrew by the nouns háwâh (Ezek., Is. xlvii. 11) and háwâhâ (Ps., Prov., Job) "disaster, calamity, ruin." The primary meaning is probably sink down, fall, in which sense the Hebrew verb is used in Job xxxvi. 6 (of snow falling to earth). A Catholic commentator of the 16th century, Hieronymus ab Oleastro, seems to have been the first to connect the name "Jchova" with háwâh interpreting it contrito, sine percinnis (destruction of the Egyptians and Canaanites); Daumer, adopting the same etymology, took it in a more general sense: Yahweh, as well as Shaddai, meant "Destroyer," and fitly expressed the nature of the terrible god whom he identified with Moloch.

The derivation of Yahweh from háwâh is formally unimpeachable, and is adopted by many recent scholars, who proceed, however, from the primary sense of the root rather than from the specific meaning of the nouns. The name is accordingly interpreted, He (who) falls (baetyl, steôrados, meteorite); or causes (rain or lightning) to fall (storm god); or casts down (his foes, by his thunderbolts). It is obvious that if the derivation be correct, the significance of the name, which in itself denotes only "He falls" or "He falls," must be learned, if at all, from early Israelitish conceptions of the nature of Yahweh rather than from etymology.

14 A-se-la-as, a scholastic Latin expression for the quality of existing before the world is.
A more fundamental question is whether the name Yahweh originated among the Israelites or was adopted by them from some other people and speech. The biblical author of the history of the sacred institution (P) expressly declares that the name Yahweh was unknown to the patriarchs (Exod. vi. 3), and the much older Israelite historian (E) records the first revelation of the name to Moses (Exod. iii. 13-15), apparently following a tradition according to which the Israelites had not been worshippers of Yahweh before the time of Moses, or, as he conceived it, had not worshipped the god of their fathers under that name. The revelation of the name to Moses was made at a mountain sacred to Yahweh (the mountain of God) far to the south of Palestine, in a region where the forefathers of the Israelites had never roamed, and in the territory of other tribes; and long after the settlement in Canaan this region continued to be regarded as the abode of Yahweh (Judg. v. 4; Deut. xxxii. 3 sqq.; 1 Kings xix. 8 sqq. &c.). Moses is closely connected with the tribes in the vicinity of the holy mountain; according to one account, he married a daughter of the priest of Midian (Exod. ii. 16 sqq.; iii. 1); to this mountain he led the Israelites after their deliverance from Egypt; there his father-in-law met him, and extolling Yahweh as "greater than all the gods," offered (in his capacity as priest of the place) sacrifices, at which the chief men of the Israelites were his guests; through the religion of Yahweh was revealed through Moses, and the Israelites pledged themselves to serve God according to its prescriptions. It appears, therefore, that in the tradition followed by the Israelite historian the tribes within whose pasture lands the mountain of God stood were worshippers of Yahweh before the time of Moses; and the surmise that the name Yahweh belongs to their speech, rather than to that of Israel, has considerable probability. One of these tribes was Midian, in whose land the mountain of God lay. The Kenites also, with whom another tradition connects Moses, seem to have been worshippers of Yahweh. It is probable that Yahweh was at one time worshipped by various tribes south of Palestine, and that several places in that wide territory (Horeb, Sinai, Kadesh, &c.) were sacred to him; the oldest and most famous of these, the mountain of God, seems to have lain in Arabia, east of the Red Sea. From some of these peoples and at one of these holy places, a group of Israelite tribes adopted the religion of Yahweh, the God who, by the hand of Moses, had delivered them from Egypt. The tribes of this region probably belonged to some branch of the great Arab stock, and the name Yahweh has, accordingly, been connected with the Arabic ʿâwâb, "the void" (between heaven and earth), *the atmosphere,* or with the verb ʿâwâb, cognate with Heb. ʿâwâb, "sink, glide down" (through space); ʿâwâb "blow" (wind). ʿHe rides through the air, He blows" (Wellhausen), would be a fit name for a god of wind and storm. There is, however, no certain evidence that the Israelites in historical times had any consciousness of the primitive significance of the name.

The attempts to connect the name Yahweh with that of an Indo-European deity (Jehovah-Jove, &c.), or to derive it from Egyptian or Chinese, may be passed over. But one theory which has had considerable currency requires notice, namely, that Yahweh, or Yahu, Yaho, is the name of a god worshipped throughout the whole, or a great part, of the area occupied by the Western Semites. In its earlier form this opinion rested chiefly on certain misinterpreted testimonies in Greek authors about a god Ἰανώ, and was conclusively refuted by Baudissin; recent adherents of the theory build more largely on the occurrence in various parts of this territory of proper names of persons which they explain as compounds of Yahu or Yah. The explanation is in most cases simply an assumption of the point at issue; some of the names have been misread; others are undoubtedly the names of Jews. There remain, however, some cases in which it is highly probable that names of non-Israelites are really compounded with Yahweh. The most conspicuous of these is the king of Hamath who in the inscriptions of Sargon (722-705 B.C.) is called Yaubî’dî and Ilubî’dî (compare Jehoiakim-Eliakim). Azriyau of Jaundi, also, in inscriptions of Tiglath-Pileser (745-728 B.C.), who was formerly supposed to be Azarilh (Uzziah) of Judah, is probably a king of the country in northern Syria known to us from the Zenjirî inscriptions as Ja’dî.

Friedrich Delitzsch first took notice of three tablets, of the age of the first dynasty of Babylon, in which he read the names of Yahu-ā-ne-hu, Yahu-ā-ne-hu, and Yahu-ā-mu-hu ("Yahweh is God"), and which he regarded as conclusive proof that Yahweh was known in Babylonia before 2000 B.C.; he was a god of the Semitic invaders in the second wave of migration, who, according to Winckler and Delitzsch, of North Semitic stock (Canaanites, in the linguistic sense). We should thus have in the tablets evidence of the worship of Yahweh among the Western Semites at a time long before the rise of Israel. The reading of the names is, however, extremely uncertain, not to say improbable, and the fact-revealing influence drawn from them carry no conviction. In a tablet attributed to the 14th century B.C. which Sellin found in the course of his excavations at Tell Ta`annuk (the Taanach of the O.T.) a name occurs which may be read Abi-Yawi (equivalent to Hebrew Ahijah); if the reading be correct, this would show that Yahweh was worshipped in Central Palestine before the Israelite conquest. The reading is, however, only one of several possibilities. The fact that the full form Yahweh appears, whereas in Hebrew proper names only the shorter Yahu and Yah occur, weighs somewhat against the interpretation, as it does against Delitzsch’s reading of his tablets.

It would not be at all surprising, if, in the great movements of populations and shifting of ascendency which lie beyond our historical horizon, the worship of Yahweh should have been established in regions remote from those which it occupied in historical times; but nothing which we now know warrants the opinion that his worship was ever general among the Western Semites.

Many attempts have been made to trace the West Semitic Yah-šu back to Babylonia. Thus Delitzsch formerly derived the name from an Akkadian god, I or Ēa; or from the Semitic nominative ending, Yahu; but this deity has since disappeared from the pantheon of Assyriologists. The combination of Yah with Ēa, one of the great Babylonian gods, seems to have a peculiar fascination for amateurs, by whom it is periodically "discovered." Scholars are now agreed that, so far as Yahu or Yah occurs in Babylonian texts, it is as the name of a foreign god.

Assuming that Yahweh was primitively a nature god, scholars in the 19th century discussed the question over what sphere of nature he originally presided. According to some he was the god of consuming fire; others saw him in the bright sky, or the heaven; still others recognized him in a storm god, a theory with which the derivation of the name from Heb. Ēāwēh or Arar. Ēāwē well accords. The association of Yahweh with storm and fire is frequent in the Old Testament; the thunder is the voice of Yahweh, the lightning his arrows, the rainbow his bow. The revelation at Sinai is amid the awe-inspiring phenomena of tempest. Yahweh leads Israel through the desert in a pillar of cloud by day, he signifies Elijah’s altar by lightning, and translates the prophet in a chariot of fire. See also Judges, v. 4 sq.;

A recent collection and critical estimate of this evidence by Zimmermann, Die Keilinschriften und das Alte Testament, 465 sqq.

Bibel und Bibel, 1902. The enormous, and for the most part ephemeral, literature provoked by Delitzsch’s lecture cannot be cited. Several

Wo lag das Paradies? (1881), pp. 158-166.
Deut. xxxiii. 1; Ps. xviii. 7-15; Hab. iii. 3-6. The cherub upon which he rides when he flies on the wings of the wind (Ps. xviii. 10) is not improbably an ancient mythological personification of the storm cloud, the genius of tempest (cf. Ps. civ. 3). In Ezekiel the throne of Yahweh is borne up on cherub's, the noise of whose wings is like thunder. Neither can we recognize in this poetical imagery the survival of ancient and, if we please, mythical notions, we should err if we inferred that Yahweh was originally a departmental god, presiding specifically over meteorological phenomena, and that this conception of him persisted among the Israelites till very late times. Rather, as the god—or the chief god—of a region and a people, the most sublime and impressive phenomena, the control of the mightiest forces of nature are attributed to him. As the God of Israel Yahweh becomes its leader and champion in war; he is a warrior, mighty in battle; but he is not a god of war in the specific sense.

In the inquiry concerning the nature of Yahweh the name Yahweh Sebaeth (E.V., The Lords of Hosts) has had an important place. The hosts have by some been interpreted of the armies of Israel (see 1 Sam. xvii. 45, and note the association of the name in the Books of Samuel, where it first appears, with the ark, or with war); by others, of the heavenly hosts, the stars conceived as living beings, later, perhaps, the angels as the court of Yahweh and the instruments of his will in nature and history (Ps. lxxxix.); or of the forces of the world in general which do his bidding. cf. B.C. Windisch's rendering of this line (though we may here recognize the likeness of it to our modern K. warrôfîp Köro, Universal Ruler). It is likely that the name was differently understood in different periods and circles; but in the prophets the hosts are clearly superhuman powers. In many passages the name seems to be only a more solemn substitute for the simple Yahweh, and as such it has probably often been inserted by scribes. Finally, Sebaeth came to be treated as a proper name (cf. Ps. lxxx. 5, 8, 20), and as such is very common in magical texts.

JEHU, son of Jehoshaphat and grandson of Nimshi, in the Bible, a general of Ahab and Jehoram, and, later, king of Israel. Ahaziah son of Jehoram of Judah and Jehoram brother of Ahaziah of Israel had taken joint action against the Aramaeans of Damascus who were attacking Ramoth-Gilead under Hazael. Jehoram had returned wounded to his palace at Jezreel, whither Ahaziah had come down to visit him. Jehu, meanwhile, remained at the seat of war, and the prophet Elisha sent a messenger to anoint him king. The general at once acknowledged the call, "drove furiously" to Jezreel, and, having slain both kings, proceeded to exterminate the whole of the royal family (2 Kings ix. x.). A similar fate befell the royal princes of Judah (see Athaliah), and there was no one left at least to found new kingdoms (cf. 2 Chron. xxii. 9). Israelite historians viewed these events as a great religious revolution inspired by Elijah and initiated by Elisha, as the overthrow of the worship of Baal, and as a retribution for the cruel murder of Naboth the Jezreelite (see JEEZEBEL). A vivid description is given of the destruction of the prophets of Baal at the temple in Samaria (2 Kings x. 27; contrast ii. 2). While Jehu was supported by the Rechabites in his reforming zeal, a similar revolt against Baalism in Judah is ascribed to the priest Jehoiada (see JEHOLDAH). It seems that Jehu's interest in both Jehu and the Syrian Hazael (2 Kings viii. 7 sqq.) had some political significance, and in opposition to the "Deuteronomic" the commendation in 2 Kings x. 28 sqq., Hosea's denunciation (i. 4) indicates the judgment which was passed upon Jehu's bloodshed in other circles.

In the course of an expedition against Hazael in 842 Shalmaneser II. of Assyria received tribute of silver and gold from Ya-u-a son of Omri,\textsuperscript{1} Tyre and Sidon; another attack followed in 839. For some years after this Assyria was unable to interfere, and war broke out between Damascus and Israel. The Israelite story, which may perhaps be supplemented from Judahite sources (see JOASE), records a great loss of territory on the east of the Jordan (2 Kings x. 32 seq.). Under Jehu's successor Jehoahaz there was continual war with Hazael and his son Ben-hadad, but relief was obtained by his grandson Joash, and the land recovered complete independence under Jeroboam.

Jehu is also the name of a prophet of the time of Baasha and Jeshophat (1 Kings xvi.; 2 Chron. xix. xx.). (S. A. C.)

JEKYLL, Sir Joseph (1663-1738), English lawyer and master of the rolls, son of John Jekyll, was born in London, and after serving in the Middle Temple d'as which he took in 1687. He rapidly rose to be chief justice of Chester (1697), serjeant-at-law and king's serjeant (1700), and a knight. In 1717 he was made master of the rolls. A Whig in politics, he sat in parliament for various constituencies from 1697 to the end of his life, and took an active part there in debating constitutional questions with much learning, though, according to Lord Hervey (Mem. 1, 474), with little "approbation." He was censured by the House of Commons for accepting a brief for the defence of Lord Halifax in a prosecution ordered by the house. He was one of the managers of the impeachment of the Jacobite earl of Wintoun in 1713, and of the earl of Orber in 1715. In later years he supported Walpole. He became very unpopular in 1736 for his introduction of the "gin act," taxing the retailing of spirituous liquors, and his house had to be protected from the mob. Pope has an illusion to "Jekyll or some odd Whig, Who never changed his principle or wig" (Epistle to the Saturies). Jekyll was also responsible for the Mortmain Act of 1736, which was not superseded till 1888. He died without issue in 1738.

His great-nephew Joseph Jekyll (d. 1837) was a lawyer, politician and wit, who excited a good deal of contemporary satire, and who wrote a book that is still well-known in the form of a work in verse. His Leaders of the late Ignatius Sanchez, an African, was published in 1782. In 1845 his correspondence was edited, with a memoir, by the Hon. Algernon Bourke.

JELLACHICH, JOSEP, Count (1801-1859), Austrian statesman, was born on the 16th of October 1801 at Pétervárás. He entered the Austrian army (1819), fought against the Bosnians in 1845, was made ban of Croatia, Slavonia and Dalmatia in 1848 on the petition of the Croatians, and was simultaneously raised to the rank of lieutenant-general by the emperor. As ban, Jellachich's policy was directed to preserving the Slav kingdoms for the Habsburg monarchy by identifying himself with the "black croats", and to the time discouraging the extreme "Illyrism" advocated by Lodovik Gáj (1809-1872). Though his separatist measures at first brought him into disfavour at the imperial court, their true objective was soon recognized, and, with the triumph of the more violent elements of the Hungarian revolution, he was hailed as the most conspicuous champion of the unity of the empire, and was able to bring about that union of the imperial army with the southern Slavs by which the revolution in Vienna and Budapest was overthrown (see AUSTRIA-HUNGARY: History). He began the war of independence in September 1848 by crossing the Drave at the head of 40,000 Croats. After the bloody battle of Buda he concluded a three days' truce with the Hungarians to enable him to assist Prince Windischgrätz to reduce Vienna, and subsequently fought against the Magyars at Schwechát. During the winter campaign of 1848-49 he commanded, under Windischgrätz, the Austrian right wing, capturing Magyar-Ovar and Raab, and defeating the Magyars at Mör. After the recapture of Buda he was made commander-in-chief of the southern army.

\textsuperscript{1} I.e. either descendant of, or from the same district as, Omri (see Hogg, Encyc. Bb. col. 2291). The Assyrian king's sculpture, depicting the embroidery of his tunic is now in the British Museum (Nimrud Central Gallery, No. 98; Guide to Bab. and Ass. Antq., 1900, p. 24 seq., pl. ii).
JELLINEK—JENA

At first he gained some successes against Bem (q.e.), but on the 14th of July 1849 was routed by the Hungarians at Hegyes and driven behind the Danub. He took no part in the remainder of the war, but returned to Agram to administer Croatia. In 1853 he was appointed commander-in-chief of the army sent against Montenegro, and in 1855 was created a count. He died on the 23d of May 1859. His Gedichte were published in Vienna in 1851.

See the anonymous The Croatian Revolution of the Year 1848 (Croat.), Agram, 1898.

JELLINEK, ADOLF (1821-1863), Jewish preacher and scholar, was born in Moravia. After filling clerical posts in Leipzig, he became preacher (Preger) in Vienna in 1853. He was associated with the promoters of the New Learning within Judaism, and wrote on the history of the Kabbala. His bibliographies (each bearing the Hebrew title Qontres) were useful compilations. But his most important work lay in three directions. (1) Midrashi. Jellinek published in the six parts of his Beth ha-Midrash (1853-1858) a large number of smaller Midrashi, ancient and medieval homilies and folk-lore records, which have been of much service in the recent revival of interest in Jewish apocryphal literature. A translation of these collections was undertaken by A. Wuenesch under the general title Aus Israels Lehrhalle. (2) Psychological. Before the study of ethnic psychology had become a science, Jellinek devoted attention to the subject. There is much keen analysis and original investigation in his two essays Der jüdische Stamm (1869) and Der jüdische Stamm in nicht-jüdischen Sprüch-wörtern (1881-1882). It is to Jellinek that we owe the oft-repeated comparison of the Jewish temperament to that of women in its quickness of perception, versatility and sensibility. (3) Homiletic. Jellinek was probably the greatest synagogue orator of the 19th century. He published some 200 sermons, in most of which are displayed unobtrusive learning, fresh application of old sayings, and a high conception of Judaism and its claims. Jellinek was a powerful apologist and an accomplished homilist, at once profound and ingenious.

His son, GEORGE JELLINEK, was appointed professor of international law at Heidelberg in 1891. Another son, MAX HERMANN JELLINEK, was made assistant professor of philology at Vienna in 1892.

A brother of Adolf, HERMANN JELLINEK (b. 1823), was executed at the age of 26 on account of his association with the Hungarian national movement of 1848. One of Hermann Jellinek's best-known works was Uriel Acosta. Another brother, MORITZ JELLINEK (1823-1883), was an accomplished economist, and contributed to the Academy of Sciences essays on the price of cereals and on the statistical organization of the country. He founded the Budapest tramway company (1864) and was also president of the corn exchange.

See Jewish Encyclopedia, vii. 92-94. For a character sketch of Adolf Jellinek see S. Singer, Lectures and Addresses (1908), pp. 88-931. KUHUT, Berühmte israelitische Männer und Frauen. (L. A.)

JEMAPPS, a town in the province of Hainaut, Belgium, near Mons, famous as the scene of the battle at which Dumouriez, at the head of the French Revolutionary Army, defeated the Austrian army (which was greatly outnumbered) under the duke of Saxe-Teschen and Clerfayt on the 6th of November 1792 (see FRENCH REVOLUTIONARY WARS).

JENA, a university town of Germany, in the grand duchy of Saxe-Weimar, on the left bank of the Saale, 56 m. S.W. from Leipzig by the Grossbergen-Saalfeld and 12 m. S.E. of Weimar by the Weimar-Gera lines of railway. Pop. (1905), 26,355. Its situation in a broad valley environed by limestone hills is somewhat dreary. To the north lies the plateau, descending steeply to the valley, famous as the scene of the battle of Jena. The town is surrounded by promenades occupying the site of the old fortifications; it is circular, and to the north, east, and south are characterized by many old-fashioned houses and quaint narrow streets. Besides the old university buildings, the most interesting edifices are the 15th-century church of St Michael, with a tower 318 ft. high, containing an altar, beneath which is a door-way leading to a vault, and a bronze statue of Luther, originally destined for his tomb; the university library, in which is preserved a curious figure of a dragon; and the bridge across the Saale, as long as the church steeple is high, the centre arch of which is surmounted by a stone carved head of a malefactor. Across the river is the "mountain," the meteorological station is obtained of the town and surroundings, and hard by the Fuchs-Turm (Fox tower) celebrated for student orgies, while in the centre of the town is the house of an astronomer, Weigel, with a deep shaft through which the stars can be seen in the day time. Thus the seven marvels of Jena are summed up in the Latin lines—

Ara, caput, draco, mons, ponis, tulpeca turris, Weigeltiana domus; septem miracula Jena.

There must also be mentioned the university church, the new university buildings, which occupy the site of the ducal palace (Schloss) where Goethe wrote his Hermann und Dorothea, the Schwarzer Bär Hotel, where Luther spent the night after his flight from the Wartburg, and four towers and a gateway which now alone mark the position of the ancient walls. The town has of late years become a favourite residential and has greatly extended towards the west, where there is a colony of pleasant villas. Its chief prosperity centres, however, in the university. In 1547 the elector John Frederick the Magnanimous of Saxony, while a captive in the hands of the emperor Charles V., conceived the idea of founding a university at Jena, which was accordingly established by his three sons. After having obtained a charter from the emperor Ferdinand I., it was inaugurated on the 2nd of February 1558. It was most numerous attended about the middle of the 18th century; but the most brilliant professoriate was under the duke Charles Augustus, Goethe's patron (1787-1806), when Fichte, Hegel, Schelling, Schulze and Schiller were on its teaching staff. Founded as a home for the new religious opinions of the 16th century, it has ever been in the forefront of German universities in liberally accepting new ideas. It is thus perhaps a peculiarity of Jena that at the extent to which it carries out what are popularly regarded as the characteristics of German student-life—duelling and the passion for Freiheit. At the end of the 18th and the beginning of the 19th century, the opening of new universities, co-operating with the suspicions of the various German governments as to the democratic opinions which obtained at Jena, militated against the university, which has never regained its former prosperity. In 1905 it was attended by about 1100 students, and its teaching staff (including privatscicnten) numbered 112. Amongst its numerous auxiliaries may be mentioned the library, with 200,000 volumes, the observatory, the zoological institute, the botanical garden, seminars of theology, philology and education, and well equipped clinical, anatomical and physical institutes. There are also veterinary and agricultural colleges in connexion with the university. The manufactures of Jena are not considerable. The book trade has of late years revived, and there are several printing establishments. Jena appears to have possessed municipal rights in the 13th century. At the beginning of the 14th century it was in the possession of the margraves of Meissen, from whom it passed in 1319 to the elector of Saxony. Since 1547, it has been enfranchised in the Ernestine line of the house of Saxony. In 1662 it fell to Bernhard, youngest son of William duke of Weimar, and became the capital of a small separate duchy. Bernhard's line having become extinct in 1696, Jena was united with Eisenach, and in 1741 reverted with that duchy to Weimar. In more modern times Jena has been made famous by the defeat inflicted in the Prussian victory, on the 14th of October 1806, by Napoleon upon the Prussian army under the prince of Hohenlohe (see NAPOLEONIC CAMPAIGNS).

E. A. Martin and O. Devrient (1888-1903).
JENATSCH, GEORG (1596–1630), Swiss political leader, one of the most striking figures in the troubled history of the Grisons in the 17th century, was born at Samaden (capital of the Upper Engadine). He studied at Zürich and Basel, and in 1617 became the Protestant pastor of Scharans (near Thusis). But almost at once he plunged into active politics, taking the side of the Venetian and Protestant party of the Säis family, against the Spanish and Romanist policy supported by the rival family, that of Planta. He headed the “preachers” who in 1618 tormented to death the arch-priest Rusca, of Sondrio, and outlawed the Plantas. As reprisals, a number of Protestants were massacred at Tirano (1620), in the Valtellina, a very fertile valley, of considerable strategical importance (for through it the Spaniards in Milan could communicate by the Umbrail Pass with the Austrians in Tirol), which then fell into the hands of the Spanish. Jenatsch took part in the murder (1621) of Pompeo Planta, the head of the rival party, but later with his friends was compelled to fly the country, giving up his position as a pastor, and henceforward acting solely as a soldier. He helped in the revolt against the Austrians in the Prättigau (1622), and in the invasion of the Valtellina by a French army (1624), but the peace made (1626) between France and Spain left the Valtellina in the hands of the pope, and so destroyed Jenatsch’s hopes. Having killed his colonel, Ruinelli, in a duel, Jenatsch had once more to leave his native land, and took service with the Venetians (1629–1630). In 1631 he went to Paris, and actively supported Richelieu’s schemes for driving the Spaniards out of the Valtellina. He was received with success by the Säis family, against one of whose firmest supporters was Jenatsch. But he soon saw that the French were as unwilling as the Spaniards to restore the Valtellina to the Grisons (which had seized it in 1512). So he became a Romanist (1632), and negotiated secretly with the Spaniards and Austrians. He was the leader of the conspiracy which broke out in 1637, and resulted in the expulsion of Rohan and the French from the Grisons. This treachery on Jenatsch’s part did not, however, lead to the freeing of the Valtellina from the Spaniards, and once more he tried to get French support. But on the 24th of January 1639 he was assassinated at Coire by the Plantas; later in that same year the much coveted valley was restored by Spain to the Grisons, which held it till 1797. Jenatsch’s career is of general historical importance by reason of the long conflict between France and Spain for the possession of the Valtellina, which forms one of the most bloody episodes in the Thirty Years’ War. (W. A. B. C.)

See biography by E. Haffter (Davos, 1894).

JENGHIZ KHAN (1162–1227), Mongol emperor, was born in a tent on the banks of the river Onon. His father Yesukai was almost the last of these old nomadic Tatar chieftains and a rival of the chieftain Temuchin, the founder of the great Mongol empire. Young Jenghiz was born in the year 1162 near the place of birth of his father Temuchin. In the eyes of the superstitious Mongol this circumstance referred to his victory over the Tatar chieftain, and he therefore named his son Temuchin. The death of Yesukai, which placed Temuchin at the age of thirteen on the Mongol throne, was the signal also for the dispersal of several tribes whose allegiance the old chieftain had retained by his iron rule. When, however, Temuchin’s son, after the death of the founder of the empire, took the field, and in the first battle routed the Naiman troopers and made Kushlekh a prisoner. His ill-gotten kingdom became

of his kingdom to an assembly on the banks of the Onon, and at their unanimous request adopted the name and title of Jenghiz Khan (Chinese, Chêng-sze, or “perfect warrior”). At this time there remained to him but one open enemy on the Mongolian steppes, Polo the Naiman khan. Against this chief he now led his troops, and in one battle so completely shattered his forces that Kushlekh, the successor of Polo, who was left dead upon the field, fled with his ally Toto, the Merkit khan, to the river Irysh.

Jenghiz Khan now meditated an invasion of the empire of the Kin Tatars, who had wrested northern China from the Sung dynasty. As a first step he invaded western Hia, and, having captured several strongholds, retired in the summer of 1208 to Lung-ting to escape the great heat of the plains. While there news reached him that Toto and Kushlekh were preparing for war. In a pitched battle on the river Irysh he overthrew them completely. Toto was amongst the slain, and Kushlekh fled for refuge to the Khitan Tatars. Satisfied with his victory, Jenghiz again directed his forces against Hia. After having defeated the Kin army under the leadership of a son of the sovereign, he captured the Wu-liang-hai Pass in the Great Wall, and penetrated as far as Ning-sia Fu in Kansuh. With unceasing vigour he pushed on his troops, and even established his sway over the province of Liao-tung. Several of the Kin commanders, seeing how persistently victory attended his banners, deserted to him, and garrisons surrendered at his bidding. Having thus secured a firm footing within the Great Wall, he despatched three armies from Naiman to the south and west, and to Hia. His strategy followed the plan of capturing the vital points by his three sons, Juji, Jagatai, and Ogotai, marched towards the south; the left wing, under his brothers Hohar, Kwang-tsins Noyen and Chow-tse-te-po-shi, advanced eastward towards the sea; while Jenghiz and his son Tulè with the centre directed their course in a south-easterly direction. Complete success attended all three expeditions. The right wing advanced as far as Honan, and after having captured upwards of twenty-eight cities rejoined headquarters by the great western road. Hohar made himself master of the country as far as Liao-si; and Jenghiz ceased his triumphant career only when he reached the cliffs of the Shan-tung promontory. But either because he was weary of the strife, or because it was necessary to revisit his Mongolian empire, he sent an envoy to the Kin emperor in the spring of the following year (1214), saying, “All your possessions in Shan-tung and the whole country north of the Yellow River are now mine with the solitary exception of Yenking (the modern Peking). By the decree of heaven you are now as weak as I am strong, but I am willing to retire from my conquests; as a condition of my doing so, however, it will be necessary that you distribute largess to my officers and men to appease their fierce hostility.” These terms of safety the Kin emperor eagerly accepted. Jenghiz, as a peace offering he presented Jenghiz with a daughter of the late emperor, another princess of the imperial house, 500 youths and maidens, and 500 horses. No sooner, however, had Jenghiz passed beyond the Great Wall than the Kin emperor, fearing to remain any longer so near the Mongol frontier, moved his court to K’ai-fèng Fu in Honan. This transfer of capital appearing to Jenghiz to indicate a hostile attitude, he once more marshalled his troops into the doomed empire.

While Jenghiz was thus adding city to city and province to province in China, Khushe, the fugitive Naiman chief, was not idle. With characteristic treachery he requested permission from his host, the Khitan khan, to collect the fragments of his army which had been scattered by Jenghiz at the battle on the Irysh, and thus having collected a considerable force he leagued himself with Mahommed, the shah of Khwárizm, against the confiding khan. After a short but decisive campaign the allies remained masters of the position, and the khan was compelled to abdicate the throne in favour of the late guest.

With the power and prestige thus acquired, Kushlekh prepared once again to measure swords with the Mongol chief. On the 26th of March 1218 Jenghiz addressed his army: ‘I can take the field, and in the first battle routed the Naiman troopers and made Kushlekh a prisoner. His ill-gotten kingdom became
Mahommed, with short the The Born 1219 80,000 warriors, escaped into Tule Sea, fired, of The spies Mahommed appeared we of knowest most his silver, the pursuers of the wall, than Sogd & the to save. From Merv, this outrage Jenghiz demanded the extradition of the offending governor. Far from yielding to this summons, however, Mahommed beheaded the chief of the Mongol envoys, and sent the others back without their beards. This insolent made war inevitable, and in the spring of 1219 Jenghiz set out from Karakorum on a campaign which was destined to be as startling in its immediate results as its ultimate effects were far-reaching. The invading force was in the first instance divided into two armies, one commanded by Jenghiz himself, which was to move toward the Khwârizm empire; and the other, led by Juji, his eldest & senior, advanced by way of Sighnâk against Jand (Jend). Against this latter force Mahommed led an army of 400,000 men, which were completely routed, leaving it is said 160,000 dead upon the field. With the remnant of his host Mahommed fled to Balkh. Meanwhile Jagatai marched down upon the Syr Daria (Jaxartes) by the pass of Taras and invested Otrar, the offending city. After a siege of five months the citadel was taken by assault, and in his fury Mahommed had his followers put to the sword. The conquerors levelled the walls with their hoofs, gave the city over to pillage. At the same time a third army besieged and took Khoenjent on the Jaxartes; and yet a fourth, led by Jenghiz and his youngest son Tûlé, advanced in the direction of Bokhara. Tashkent and Nur surrendered on their approach, and after a short siege Bokhara fell into their hands. On entering the town Jenghiz ascended the steps of the principal mosque, and shouted to his followers, "The hay is cut; give your horses fodder." No second invitation to plunder was needed; the city was sacked, and the inhabitants either escaped beyond the walls, or were compelled to submit to terms which were worse than death. As a final act of vengeance the town was burned, and before the last of the Mongols left the district, the great mosque and certain palaces were the only buildings left to mark the spot where the "centre of science" once stood. From the ruins of Bokhara Jenghiz advanced along the valley of the Sogd to Samarkand, which, weakened by treachery, surrendered to him, as did also Balkh. But in neither case did submission save either the inhabitants from slaughter or the city from pillage. Beyond this point Jenghiz went no farther westward, but sent Tûlé, at the head of 70,000 men, to ravage Khorasan, and two flying columns under Châpé and Sabutai Bahadar to pursue after Mahommed who had taken refuge in Nishapur. Defeated and almost alone, Mahommed fled before his pursuers to the village of Astara on the shore of the Caspian Sea, where he died of an attack of pleurisy, leaving his empire to his son Jalâeddin (Jalal ud-din). Meanwhile Tûlé carried his arms into the fertile province of Khorasan, and after having captured Nessa by assault appeared before Merv. By an act of atrocious treachery the Mongols gained possession of the city, and, after the manner, sacked and burned the town. Tûlé marched upon Nishapur, where he met with a most determined resistance. For four days the garrison fought desperately on the walls and in the streets, but at length they were overpowered, and, with the exception of 400 artisans who were sent into Mongolia, every man, woman and child was slain. Herat escaped the fate which had overtaken Merv and Nishapur by opening its gates to the Mongols. At this point of his victorious career Tûlé received an order to join Jenghiz before Talikhan in Badakshân, where that chieftain was preparing to renew his pursuit of Jalâeddin, after a check he had sustained in an engagement fought before Ghazni. As soon as sufficient reinforcements had arrived, Jenghiz advanced against Jalâeddin, who had taken up a position on the banks of the Indus. Here he met the Turks, though far outnumbered, defended their ground with undaunted courage, until, beaten at all points, they fled in confusion. Jalâeddin, seeing that all was lost, mounted a fresh horse and jumped into the river, which flowed 20 ft. below. With admiring gaze Jenghiz watched the desperate venture of his enemy, and even saw without regret the dripping horseman mount the opposite bank. From the Indus Jenghiz sent in pursuit of Jalâeddin, who fled to Delhi, but failing to capture the fugitive the Mongols returned to Ghazni after having ravaged the provinces of Lahore, Peshawar and Melikpur. At this moment news reached Jenghiz that the inhabitants of Herat had deposed the governor whom Tûlé had appointed over the city, and had placed one of their own choice in his room. To punish this act of rebellion Jenghiz sent an army of 80,000 men against the offending city, which after a siege of six months was taken by assault. For a whole week the Mongols ceased not to kill, burn and destroy, and 7,000,000 persons are said to have been massacred within the walls. Having consummated the act of vengeance, Jenghiz returned to Mongolia by way of Balkh, Bokhara and Samarkand. Meanwhile Châpé and Sabutai marched through Azerbaijan, and in the spring of 1222 advanced into Georgia. Here they defeated a combined force of Lesghians, Circassians and Kipchaks, and after taking Astrakhan followed the retreating Kipchaks to the Don. The news of the approach of the mysterious enemy of whose name even they were ignorant was received by the Russian princes at Kiev with dismay. At the instigation, however, of Mihail, prince of Galicia, they assembled an opposing force under the command of Pat Dniéper, who attacked and overpowered the Mongol camp, whom they barbarously put to death. "You have killed our envoys," was the answer made by the Mongols: "well, as you wish for war you shall have it. We have done you no harm. God is impartial; He will decide our quarrel." In the first battle, on the river Kaleza, the Russians were utterly routed, and fled before the invaders, who, after ravaging Great Bulgaria retired, gorged with booty, through the country of Saksin, along the river Aktus, on their way to Mongolia. In China the same success had attended the Mongol arms as in western Asia. The whole of the country north of the Yellow river, with the exception of one or two cities, was added to the Mongol rule, and, on the death of the Kinh emperor Sián Tsang in 1223, the Kinh empire virtually ceased to be, and Jenghiz's frontiers thus became conterminous with those of the Sung emperors who held sway over the whole of central and southern China. After his return from Central Asia, Jenghiz once more took the field in western China. While on this campaign the five planets appeared in a certain conjunction, which to the superstitiously minded Mongol chief foretold that evil was a-waiting him. With this presentiment strongly impressed upon him he turned his face homewards, and he never moved farther than the Si-Kiang river in Kansuh when he was seized with an illness of which he died a short time afterwards (1227) at his travelling palace at Ha-lao-tu, on the banks of the river Sale in Mongolia. By the terms of his will Ogotai was appointed his successor, but so essential was it considered to be that his death should remain a secret until Ogotai was proclaimed that, as the funeral procession moved northwards to the great ordal on the banks of the Kerulen, the escort killed every one they met. The body of Jenghiz was then carried successively to the ordal of his several wives, and was finally laid to rest in the valley of Kilien. Thus ended the career of one of the greatest conquerors the world has ever seen. Born and nurtured as the chief of a petty Mongolian tribe, he lived to see his armies victorious from the China Sea to the banks of the Dnieper; and, though the empire
JENKIN—JENKS

which he created ultimately dwindled away under the hands of his degenerate descendants, leaving not a wreck behind, we have in the presence of the Turks in Europe a consequence of his rule, since it was the advance of his armies which drove their Osmanli ancestors from their original home in northern Asia, and thus led to their invasion of Bithynia under Othman, and finally their advance into Europe under Amurath I.

JENKIN, HENRY CHARLES FLEEMING (1833-1885), British engineer, was born near Dunbegness on the 25th of March 1833, his father (d. 1883) being a naval commander, and his mother (d. 1888) a novelist of some literary repute, her best books perhaps being Cousin Stella (1850) and Who brooks, pets (1861). Fleem-
ing Jenkin was educated at first in Scotland, but in 1846 the family went to live abroad, owing to financial straits, and he studied at Genoa University, where he took a first-class degree in physical science. In 1851 he began his engineering career as assistant in an establishment at Manchester, and subsequently he entered Newall's submarine cable works at Lime Street. In 1853 he began work with Sir William Thomson (afterwards Lord Kelvin), to work on problems respecting the making and use of cables, and the importance of his researches on the resistance of gutta-percha was at once recognized. From this time he was in constant request in connexion with submarine telegraphy, and he became known also as an inventor. In partnership with Thomson, he made a large income as a consulting telegraph engineer. In 1865 he was elected F.R.S., and was appointed professor of engineering at University College, London. In 1868 he obtained the same professorship at Edinburgh University, and in 1870 he published a textbook of Electricity, full of original work. He was author of the article "Bridges" in the ninth edition of this encyclopaedia. His influence among the Edinburgh students was pronounced, and R. L. Stevenson's well-known Memoir is a sympathetic tribute to his ability and character. The meteoric charm of his conversation is well described in Stevenson's essay on "Talk and Talkers," under the name of Cockshot. Jenkin's interests were by no means confined to engineering, but extended to the arts and literature; his miscellaneous papers, showing his critical and unconventional views, were issued posthumously in two volumes (1887). In 1882 Jenkin invented an automatic method of electric transport for goods—"telepharge"—but the completion of its details was prevented by his death on the 12th of June 1883. A telepher line on this system was subsequently erected at Glynde in Sussex. He was also well known as a sanitary reformer, and during the last ten years of his life he did much useful work in inculcating more enlightened ideas on the subject both in Edinburgh and other places.

JENKINS, SIR LEOLINE (1623-1683), English lawyer and diplomatist, was the son of a Welsh country gentleman. He was born in 1623 and was educated at Jesus College, Oxford, of which he was elected a fellow at the Restoration in 1660, having been an ardent royalist during the civil war and commonwealth; and in 1661 he became head of the college. In the same year he was made registrar of the consistory court of Westminster; in 1669 deputy judge of the court of arches; about a year later judge of the admiralty court; in 1680 judge of the prerogative court of Canterbury. In these offices Jenkins did enduring work in elucidating and establishing legal principles, especially in relation to international law and admirality jurisdiction. He was selected to draw up the claim of Charles II. to succeed to the property of his mother, Henrietta Clementina, on her death in August 1666, and while in Paris for this purpose he succeeded in defeating the rival claim of the duchess of Orleans, being rewarded by a knighthood on his return. In 1673, on being elected member for Hythe, Jenkins resigned the headship of Jesus College. He was one of the English representatives at the congress of Cologne in 1673, and at the more important congress of Nijmegen in 1676-1679. He was made a privy councillor in February 1680 and became secretary of state in April of the same year, in which office he was the official leader of the opposition to the Exclusion

Bill, though he was by no means a pliant tool in the hands of the court. He resigned office in 1684, and died on the 1st of September 1685. He left most of his property to Jesus College, Oxford, including his books, which he bequeathed to the college library, built by himself; and he left some important manuscripts to All Souls College, where they are preserved. Jenkins left his impress on the law of England in the Statute of Frauds, and the English Colonial Laws in which he was largely concerned, and of which the former profoundly affected the mercantile law of the country, while the latter regulated the inheritance of the personal property of intestates. He was never married.

See William Wynne, Life of Sir Leoline Jenkins (2 vols., London, 1724), which contains a number of his diplomatic despatches, letters, speeches, and other papers; and other papers, including vol. ii. (4 vols., 1770); Anthony à Wood, Athenae Osmenienses (Fasti) edited by P. Bliss (4 vols., London, 1815-1820), and History and Antiquities of the University of Oxford, edited by J. Gutch (Oxford, 1792-1797).

JENKINS, ROBERT (fl. 1731-1743), English master mariner, is known as the protagonist of the "Jenkin's ear" incident, which, magnified in England by the press and the opposition, became a contributory cause of the war between England and Spain (1739). Bringing home the brig "Rebecca" from the West Indies in 1731, Jenkins was boarded by a Spanish guarda-costa, whose commander riddled the hols and cut off one of his ears. On arriving in England Jenkins stated his grievance to the king, and his case was successfully handled by the House of Commons which furnished him with a commission to go to the West Indies confirming his account. At first the case created no great stir, but in 1738 he repeated his story with dramatic detail before a committee of the House of Commons, producing what purported to be the ear that had been cut off. Afterwards it was suggested that he might have lost the ear in the pillory.

Jenkins was subsequently given the command of a ship in the East India Company's service, and later became supervisor of the company's affairs at St Helena. In 1741 he was sent from England to that island to investigate charges of corruption brought against the acting governor, and from May 1741 until March 1742 he administered the affairs of the island. Thereafter he resumed his naval career, and is stated in an action with a pirate vessel to have preserved his own vessel and three others under his care (see T. H. Brooke, History of the Island of St Helena (London, 2nd ed., 1824), and H. R. Janisich, Extracts from the St Helena Records, 1885).

JENKS, JEREMIAH WHIPPLE (1856- ), American econo-
mist, was born in St Clair, Michigan, on the 2nd of September 1856. He graduated at the university of Michigan in 1878; taught Greek, Latin and German in Mt. Morris College, Illinois; studied in Germany, receiving the degree of Ph.D. from the university of Halle in 1883; taught political science and English literature at Knox College, Galesburg, III., in 1886-1889; was professor of political economy and social science at Indiana State University in 1889—1891; and was successively professor of political, municipal, and social institutions (1891-1892), professor of political economy and civil and social institutions (1892-1901), and after 1901 professor of political economy and politics at Cornell University. In 1899-1900 he served as an expert agent of the United States industrial commission on investigation of trusts and industrial combinations in the United States and Europe, and contributed to vols. i., viii. and xiii. of this commission's report (1900 and 1901), vol. viii. being a report, written wholly by him, on industrial combinations in Europe. In 1901-1902 he was special commissioner of the United States war department on colonial administration, and wrote a Report on Certain Economic Questions in the English and Dutch Colonies in the Orient, published (1902) by the bureau of insular affairs; and the report was advised by the cotton-vessels' contractors on projected currency exchanges. In 1903-1904 he was a member of the United States commission on international exchange, in special charge of the reform of currency in China; in 1905 he was special representative of the United States with the imperial Chinese special mission visiting the United States. In 1909 he became a member of the United States immigration commission. Best known as an expert on "trusts," he has written besides on elections, ballot reform, proportional representation, on education (especially as a training for citizenship), on legislation regarding highways, etc.
JENNE—JENNER, EDWARD

His principal published works are Henry C. Carey als National-ökonom (Halle a. S., 1855); The Trust Problem (1900; revised 1903); Great Fortunes (1906); Citizenship and the Schools (1906); and Principles of Politics (1909).

JENNÉ, a city of West Africa, formerly the capital of the Songhôö empire, now included in the French colony of Upper Senegal and Niger. Jenné is situated on a marigot or natural canal connecting the Niger and its affluent the Banni or Mahel Bavele, and is within a few miles of the latter stream. It lies 230 m. S.W. of Timbuktu in a straight line. The city is surrounded by channel connected with the mouth of Banni Bavele and during the dry season it ceases to be an island. On the north is the Moorish quarter; on the north-west, the oldest part of the city, stood the citadel, converted by the French since 1853 into a modern fort. The market-place is midway between the fort and the commercial harbour. The old mosque, partially destroyed in 1830, covered a large area in the south-west portion of the city. It was built on the site of the ancient palace of the Songhôö kings. The architecture of many of the buildings bears a resemblance to Egyptian, the façades of the houses being adorned with great buttresses of pylon form. There is little trace of the influence of Moorish or Arabian art. The buildings are mostly constructed of clay made into flat long bricks. Massive clay walls surround the city. The inhabitants are great traders and the principal merchants have representatives at Timbuktu and all the chief places on the Niger. The boats built at Jennê are famous throughout the western Sudan.

Jennê is believed to have been founded by the Songhôö in the 8th century, and though it has passed under the dominion of many races it has never been destroyed. Jennê seems to have been at the height of its power from the 12th to the 16th century, when its merchandise was found at every port along the west coast of Africa. From this circumstance it is conjectured that Jennê (Guinea) gave its name to the whole coast (see Guinea). Subsequently, under the control of Moorish, Tuareg and Fula invaders, the importance of the city greatly declined. With the advent of the French, commerce again began to flourish.

See F. Dubois, Tombouctou la mystérieuse (Paris, 1897), in which several chapters are devoted to Jennê; also SONGHOI; TIMBUKTU; and SENEGAL.

JENNER, EDWARD (1749–1823), English physician and discoverer of vaccination, was born at Berkeley, Gloucestershire, on the 17th of May 1749. His father, the Rev. Stephen Jenner, rector of Kockhampton and vicar of the cathedral church of Christchurch, had been long established in that county, and was possessed of considerable landed property; he died when Edward was only six years old, but his eldest son, the Rev. Stephen Jenner, brought his brother up with paternal care and tenderness. Edward received his early education at Wotton-under-Edge and Cirencester, where he already showed a strong taste for natural history. The medical profession having been selected for him, he began his studies under Daniel Ludlow, a surgeon of Sodbury near Bristol; but in his twenty-first year he proceeded to London, where he became a favourite pupil of John Hunter, in whose house he resided for two years. During this period he was employed by Sir Joseph Banks to arrange and prepare the valuable zoological specimens which he had brought back from Captain Cook's first voyage in 1771. He must have acquitted himself satisfactorily in this task, since he was offered the post of naturalist in the second expedition, but declined it as well as other advantageous offers, preferring rather to practise his profession in his native place, and near his eldest brother, to whom he was much attached. He was the principal founder of a local medical society, to which he contributed many papers of marked ability, in one of which he apparently anticipated later discoveries concerning rheumatic inflammations of the heart. He maintained a correspondence with John Hunter, under whose direction he investigated various points in biology, particularly the hibernation of hedgehogs and habits of the cuckoo; his paper on the latter subject was laid by Hunter before the Royal Society, and appeared in the Phil. Trans. for 1788. He also devoted considerable attention to the varied geological character of the district in which he lived, and constructed the first balloon seen in those parts. He was a great favourite in general society, from his agreeable and instructive conversation, and the many accomplishments he possessed. Thus he was a fair musician, both as a part singer and as a performer on the violin and flute, and a very successful writer, after the fashion of that time, of fugitive pieces of verse. In 1788 he married Catherine Kingscote, and in 1792 he obtained the degree of doctor of medicine from St Andrews.

Meanwhile the discovery that is associated with his name had been slowly maturing in his mind. When only an apprentice at Sodbury, his attention had been directed to the relations between cow-pox and small-pox in connexion with a popular superstition. He found cow-pox to be, so to say, the antithesis or counterpart to small-pox, the former being a disease much milder than the latter, and the latter being the severe one. He perceived that the cure for the one was the cause of the other, and the smeared skin of the former could be the source of the latter. He saw that the preventive powers of cow-pox were the antithetical counterpart of the disease. He had also noted that the small-pox of India, or as it is now known, Gile, was milder than the small-pox of Europe. This discovery, however, was not published until 1779, and five years elapsed before he had succeeded in clearing away the perplexing difficulties by which it was surrounded. He first satisfied himself that two different forms of disease had been hitherto confounded under the term cow-pox, only one of which protected against small-pox, and that many of the cases of failure were to be thus accounted for; and his next step was to ascertain that the true cow-pox itself only protects when communicated at a particular stage of the disease. At the same time he came to the conclusion that "the grease of horses is the same disease as cow-pox and small-pox, each being modified by the season in which it occurs. The latter was very scarce in his county, he had no opportunity of inoculating the disease, and so putting his discovery to the test, but he did all he could in the way of collecting information and communicating what he had ascertained. Thus in 1788 he carried a drawing of the cow-pox, as seen on the hands of a milkmaid, to London, and showed it to Sir E. Home and others, who agreed that it was "an interesting and curious subject." At length, on the 14th of May 1796, he was able to inoculate James Phipps, a boy about eight years old, with matter from cow-pox. The operation took place on the 15th July, and the child was carefully inoculated with variolous matter, but (as Jenner had predicted) no small-pox followed. The discovery was now complete, but Jenner was unable to repeat his experiment until 1798, owing to the disappearance of cow-pox from the dairies. He then repeated his inoculations with the utmost care, and prepared a pamphlet (Inquiry into the Cause and Effects of the Variolae Vaccineae) which should announce his discovery to the world. Before publishing it, however, he thought it well to visit London, so as to demonstrate the truth of his assertions to his friends; but he remained in London nearly three months, without being able to find any person who would submit to be vaccinated. Soon after he had returned home, however, Henry Cline, surgeon of St Thomas's Hospital, inoculated some vaccine matter obtained from him over the diseased hip-joint of a child, thinking the counter-irritation might be useful, and found the patient afterwards incapable of acquiring small-pox. In the autumn of the same year, Jenner met with the first opposition to vaccination; and this was the more formidable because it proceeded from J. Ingenhousz, a celebrated physician and man of science. But Jenner's advocacy of vaccination brought it more and more decided by the medical profession, of whom the majority were prudent enough to suspend their judgment until they had more ample information. But besides these there were two noisy and troublesome factions, one of which opposed vaccination as a useless and dangerous practice, while the other endeavored its success much more by rash and self-seeking advocacy. At the head of the latter was George Pearson,
who in November 1798 published a pamphlet speculating upon the subject, before even seeing a case of cow-pox, and afterwards endeavoured, by lecturing on the subject and supplying the virus, to put himself forward as the chief agent in the cause. The matter which he distributed, which had been derived from cows that were found to be infected in London, was found frequently to produce, not the slight disease described by Jenner, but more or less severe eruptions resembling small-pox. Jenner concluded at once that this was due to an accidental contamination of the vaccine with various matters, and a visit to London in the spring of 1799 convinced him that this was the case. In the course of this year the practice of vaccination spread over England, being urged principally by non-professional persons of position; and towards its close attempts were made to found institutions for gratuitous vaccination and for supplying lymph to all who might apply for it. Pearson proposed to establishe one of these in London, without Jenner's knowledge, in which he offered him the post of honorary corresponding physician! On learning of this scheme to supplant him, and to carry on an institution for public vaccination on principles which he knew to be partly erroneous, Jenner once more visited London early in 1800, when he had influence enough to secure the abandonment of the project. He was afterwards presented to the king, the queen and the prince of Wales, whose encouragement materially aided the spread of vaccination in England. Meanwhile it had made rapid progress in the United States, where it was introduced by Benjamin Rush, an adage physician at Philadelphia, and on the continent of Europe, where it was at first diffused by Dr Carro of Vienna. In consequence of the war between England and France, the discovery was later in reaching Paris; but, its importance once realized, it spread rapidly over France, Spain and Italy.

A few of the incidents connected with its extension may be mentioned. Perhaps the most striking is the expedition which was sent out by the court of Spain in 1803, for the purpose of diffusing cow-pox through all the Spanish possessions in the Old and New Worlds, and which returned in three years, having circumnavigated the globe, and succeeded beyond its utmost expectations. Clergymen in Geneva and Holland urged vaccination upon their parishioners from the pulpit; in Sicily, South America, and Naples religious processions were formed for the purpose of receiving it; the anniversary of Jenner's birthday, or of the successful vaccination of James Phipps, was for many years celebrated as a feast in Germany; and the empress of Russia caused the first child operated upon to receive the name of Vaccinov, and to be educated at the public expense. About the close of the year 1801 Jenner's friends in Gloucestershire presented him with a small service of plate as a testimonial of the esteem in which they held his discovery. This was intended merely as a preliminary to the presenting of a petition to parliament for a grant. The petition was presented in 1802, and was referred to a committee, of which the investigations resulted in a report in favour of the grant, and ultimately in a vote of £10,000.

Towards the end of 1802 steps were taken to form a society for the proper spread of vaccination in London, and the Royal Jennerian Society was finally established, Jenner returning to town, and presenting his remonstrance. This institution began very prosperously, more than twelve thousand persons having been inoculated in the first eighteen months, and with such effect that the deaths from small-pox, which for the latter half of the 18th century had averaged 20,818 annually, fell in 1804 to 622. Unfortunately the chief resident inoculator soon set himself up as an authority opposed to Jenner, and this led to such dissensions as caused the society to die out in 1808.

Jenner was led, by the language of the chancellor of the exchequer when his grant was proposed, to attempt practice in Leningrad. Waterhouse, a trial attorney of London, was his agent. His grant was not paid until 1804, and then, after the deduction of about £1,000 for fees, it did little more than pay the expenses attendant upon his discovery. For he was so thoroughly known everywhere as the discoverer of vaccination that, as he himself said, he was "the vaccine clerk of the whole world." At the same time he continued to vaccinate gratuitously all the poor who applied to him on certain days, so that he sometimes had as many as three hundred persons waiting at his door. Meanwhile honours began to shower upon him from abroad: he was elected a member of almost all the chief scientific bodies in Europe, the first being that of Göttingen, where he was proposed by J. F. Blumenbach. But perhaps the most flattering proof of his influence was derived from France. On one occasion, when he was endeavouring to obtain the release of some of the unfortunate Englishmen who had been detained in France on the sudden termination of the Peace of Amiens, Napoleon was about to reject the petition, when Josephine uttered the name of Jenner. The emperor paused and exclaimed: "Ah, we can refuse nothing to that name." Somewhat later he did the same service to another Englishman, who, in Mexico and in Austria; and during the latter part of the great war before leaving England would sometimes obtain certificates signed by him which served as passports. In his own country his merits were less recognized. His applications on behalf of French prisoners in England were less successful; he never shared in any of the patronage at the disposal of the government, and was even unable to obtain a living for his nephews George.

In 1806 Lord Henry Petty (afterwards the marquess of Lansdowne) became chancellor of the exchequer, and was so convinced of the inadequacy of the former parliamentary grant that he proposed his recommendation, and formed the board of college of physicians should be directed to report upon the success of vaccination. Their report being strongly in its favour, the then chancellor of the exchequer (Spencer Perceval) proposed that a sum of £3,000,000 without any deductions should be paid to Jenner. The anti-vaccinationists found but one advocate in the House of Commons; and finally the sum was raised to £20,000. Jenner, however, at the same time had the mortification of learning that government did not intend to take any steps towards checking small-pox inoculation, which so persistently kept the disease. About the same time a subscription list, to which his benefit was begun in India, where his discovery had been gratefully received, but the full amount of this (£738) only reached him in 1812.

The Royal Jennerian Society having failed, the national vaccine establishment was founded, for the extension of vaccination, in 1808. Jenner spent five months in London for the purpose of organizing it, but was then obliged, by the dangerous illness of one of his sons, to return to Berkeley. He had been appointed director of the institution; but he had no sooner left London than Sir Lucas Pepys, president of the college of physicians, in a case of small-pox, recommended his son as a graduate of the college, and the college of surgeons, Jenner at once resigned his post as director, though he continued to give the benefit of his advice whenever it was needed, and this resignation was a bitter mortification to him. In 1810 his eldest son died, and Jenner's grief at his loss, and his incessant labours, materially affected his health. In 1813 the university of Oxford conferred on him the degree of M.D. It was believed that this would lead to his election into the college of physicians, but that learned body decided that he could not be admitted under the new regulations, which required a knowledge of the classics. This Jenner at once refused; to brush up his classics would, he said, "be irksome beyond measure. I would not do it for a diadem. That indeed would be a bauble; I would not do it for John Hunter's museum."

He visited London for the last time in 1814, when he was presented to the Allied Sovereigns and to most of the principal personages who accompanied them. In the next year his wife's death was the signal for him to retire from public life: he never left Berkeley again, except for a day or two, as long as he lived. He found sufficient occupation for the remainder of his life in collecting further evidence on some points connected with his great discovery, and in his engagements as a physician, a naturalist and a magistrate. In 1818 a severe epidemic of small-pox prevailed, and fresh doubts were thrown on the
efficacy of vaccination, in part apparently owing to the bad quality of the vaccine lymph employed. This caused Jenner much annoyance, which was relieved by an able defence of the practice, written by Sir Gilbert Blane. But this led him, in 1821, to send a circular letter to most of the medical men in the kingdom inquiring into the effect of other skin diseases in making the proper cow-pox. A year later he published his last work, On the Influence of Artificial Eruptions in Certain Diseases; and in 1823 he presented his last paper—"On the Migration of Birds"—to the Royal Society. On the 24th of January 1823 he retired to rest apparently as well as usual, and next morning rose and came down to his library, where he was found insensible on the floor, in a state of apoplexy, and with the right side paralysed. He never rallied, and died on the following morning.

A public subscription was set on foot, shortly after his death, by the medical men of his county, for the purpose of erecting some memorial in his honour, and with much difficulty a sufficient sum was raised to enable a statue to be placed in Gloucester Cathedral. In 1839 another attempt was made to set up a monument to him; this appears to have failed, but at length, in 1858, a statue of him erected by public subscription in London.

Jenner's life was written by the intimate friend of his later years, Dr John Baron of Gloucester (2 vols., 1827, 1838). See also Vector, 1856.

JENNEN, SIR WILLIAM, Bart. (1815-1898), English physician, was born at Chatham on the 30th of January 1815, and educated at University College, London. He became M.R.C.S. in 1837, and F.R.C.P. in 1832, and in 1844 took the London M.D. In 1847 he began at the London fever hospital investigations into cases of "continued" fever which enabled him finally to make the distinction between typhus and typhoid on which his reputation as a pathologist principally rests. In 1849 he was appointed professor of pathological anatomy at University College, and also assistant physician to University College Hospital, where he afterwards became physician (1854-1876) and consulting physician (1879), besides holding similar appointments at other hospitals. He was also successively Holme professor of clinical medicine and professor of the principles and practice of medicine at University College. He was president of the college of physicians (1881-1888); he was elected F.R.S. in 1864, and received honorary degrees from Oxford, Cambridge and Edinburgh. In 1867 he was appointed physician extraordinary, and in 1862 physician in ordinary, to Queen Victoria, and in 1863 physician in ordinary to the prince of Wales; he attended both the prince consort and the prince of Wales in their attacks of typhoid fever. In 1868 he was created a baronet. As a consultant Sir William had a great reputation, and he left a large fortune when he died, at Bishop's Waltham, Hants, on the 14th of December 1888, having then retired from practice for eight years owing to failing health.

JENNET, a small Spanish horse; the word is sometimes applied in English to a mule, the offspring of a she-ass and a stallion. Jennett comes, through Fr. genêt, from Span. jinetes, a light horseman who rides à la gitêna, explained as "with his legs tucked up." The name is taken to be a corruption of the Arabic Zenâta, a Berber tribe famed for its cavalry. English and French transferred the word from the rider to his horse, meaning which the word has only acquired in Spain in modern times.

JENOLAN CAVES, a series of remarkable caverns in Roxburgh county, New South Wales, Australia; 313 m. W. by N. of Sydney, and 36 m. from Tarana, which is served by railway. They are the most celebrated of several similar groups in the limestone of the country; they have not yielded fossils of great interest, but the stalactite formations, sometimes pure white, are of extraordinary beauty. The caves have been rendered easily accessible to visitors and lighted by electricity.

JENSSEN, WILHELM (1857-1937), German author, was born at Lübeck, Jensen studied medicine at the universities of Kiel, Würzburg and Breslau. He, however, abandoned the medical profession for that of letters, and after engaging for some years in individual private study proceeded to Munich, where he associated with men of letters. After a residence in Stuttgart and Munich, where he was associated with the journal 'Leipziger Volks-Zeitung,' he became editor in Flensburg of the Norddeutsche Zeitung. In 1872 he again returned to Kiel, lived from 1876 to 1888 in Freiburg im Breisgau, and since 1888 has been resident in Munich.

Jenssen is perhaps the most prolific of modern German writers of fiction, more than one hundred works having proceeded from his pen; but only comparatively few of them have caught the public taste; such are the novels, Karin von Schweden (Berlin, 1878); Die braune Erica (Berlin, 1868); and the tale, Die Pfeifer von Dusenbach, Eine Geschichte aus dem Elsaß (1884). Among others may be mentioned Barthenia (Berlin, 1879); Götz und Güte (Berlin, 1886); Heimkehr (Dresden, 1894); Aus See und Sand (Dresden, 1897); Lüd und Lee (Berlin, 1897); and the narratives, Aus den Tagen der Hansa (Leipzig, 1885); Aus alter Zeit (Berlin, 1881-1885); and Heimkehr (1907). Jenssen also published some tragedies, among which Dieta (Berlin, 1870) and Der Kampf für's Reich (Freiburg im Br., 1884) may be mentioned.

JENNOYS, SOAME (1704-1787), English author, was born in London on the 1st of January 1704, and was educated at St John's College, Cambridge. In 1742 he was chosen M.P. for Cambridgeshire, in which his property lay, and he afterwards sat for the borough of Dunwich and the town of Cambridge. From 1757 to 1760 he was one of the board of the house of trade. He died on the 18th of December 1787.

For the measure of literary repute which he enjoyed during his life Jenynos was indebted as much to his wealth and social standing as to his accomplishments and talents, though both were considerable. His poetical works, the Art of Dancing (1772) and Miscellaneous (1770), contain many passages graceful and lively though occasionally verging on licence. The first of his prose works was his Free Inquiry into the Nature and Origin of Evil (1759). This essay was severely criticized on its appearance, especially by Samuel Johnson in the Literary Magazine. Johnson, in a slashing review—the best paper of the kind he ever wrote—condemned the book as a slight and shallow attempt to solve one of the most difficult of moral problems. Jenynos, a gentle and amiable man in the main, was extremely irritated by his failure. He put forth a second edition of his work, prefaced by a vindication, and tried to take vengeance on Johnson after his death by a sarcastic epitaph. In 1776 Jenynos published his View of the Internal Evidence of the Christian Religion. Though at one period of his life he had affected a kind of deistic scepticism, he had now returned to orthodoxy, and there seems no reason for his sincerity, qualified at the time, in defending Christianity on the ground of its total variance with the principles of human reason. The work was deservedly praised in its day for its literary merits, but is so plainly the production of an amateur in theology that as a scientific treatise it is valueless.

A collected edition of the works of Jenynos appeared in 1790, with a biography by Charles Nelson Cole. There are several references to him in Boswell's Johnson.

JEOPARDY, a term meaning risk or danger of death, loss or other injury. The word, in Med. Eng. jepart, jeparture, &c., was adapted from O. Fr. jeu, later jeu, and pari, even game, in medieval Latin pæron, and originally denoted a problem in chess or of a stage in any other game at which the chances of success or failure are evenly divided between the players. It was thus early transformed to any state of uncertainty.

JEPSON, ROBERT (1736-1803), British dramatist, was born in Ireland. After serving for some years in the British army, he retired with the rank of captain, and lived in England, where he was the friend of Garrick, Reynolds, Goldsmith, Johnson, Burke, Burney and Charles Townshend. His appointment as master of the horse to the lord-lieutenant of Ireland "two lines will suffice. Boswell and Thrale, retailers of his wit, Will tell you how he wrote, and talk'd, and coug'd, and spit."
took him back to Dublin. He published, in the *Mercury* newspaper a series of articles in defence of the lord-lieutenant's administration which were afterwards collected and issued in book form under the title of *The Bachelor, or Speculations of Jeffrey Wragge*. A pension of £300, afterwards doubled, was granted him, and he held the post until his death, which came in November, 1798, after a long and arduous life. His name is best known in history and literature in connexion with the Jewish question, and especially the question of the rights of the Jews in the United Kingdom.
finches, the proportionate length of the thigh-bone or femur to the tibia and foot (metatarsus and toes) is constant, being 2 to 5; in animals, on the other hand, such as the rabbit, hares, which is not the case; the corresponding lengths are 4 to 7. The resemblance between the jerboa's and the bird's skeleton is owing to adaptation to a similar mode of existence. In the young jerboa the proportion of the femur to the rest of the leg is the same as in ordinary running animals. Further, at an early stage of development the fibula is a complete and separate bone, while the three metatarsals, which subsequently fuse together to form the cannon-bone, are likewise separate. In addition to their long hind and short fore limbs, jerboas are mostly characterized by their silky coats—of a fawn colour to hares—of their jerboas always—there is a one that the ears. As is always the case with large-eared animals, the tympanic bulae of the skull are of unusually large size; the size varying in the different genera according to that of the ears. (For the characteristics of the family and of its more important generic representatives, see Rodentia.)

In the Egyptian jerboa the length of the body is 8 in., and that of the tail, which is long, cylindrical and covered with short hair terminated by a tuft, 10 in. The five-toed front limbs are extremely long, with their hind paws lying quite flat, when in a resting posture. When about to spring, this jerboa raises its body by means of the hinder extremities, and supports itself at the same time upon its tail, while the fore-feet are so close to each other as to look like a sandy ball, which doubtless suggested the name Dipsus, or two-footed. It then leaps into the air and alights upon its four feet, but instantaneously erecting itself, it makes another spring, and so on in sequence such as to appear a flying animal.

It is a gregarious animal, living in considerable colonies in burrows, which it excavates with its nails and teeth in the sandy soil of Egypt and Arabia. In these it remains during good part of the day, emerging at night in quest of the herbs on which it feeds. In addition to its food, it will not eat, and this, together with its extraordinary agility, renders it difficult to capture. The Arabs, however, succeed by closing up all the exits from the burrows with a single exception, by which the rodents are forced to escape, and over which a net is placed for their capture. When confined, they will gnaw through the hardest wood in order to make their escape. The Persian jerboa (Achata indica) is also a nocturnal burrowing animal, feeding chiefly on grain, which it stores up in underground repositories, closing these when full, and only drawing upon them when the supply of food above ground is exhausted (see also Jumping Mice, i.e. Hylartia).

JERDAN, WILLIAM (1782–1869), Scottish journalist, was born on the 16th of April 1782, at Kello, Scotland. During the years between 1799 and 1806 he spent short periods in a country lawyer's office, a London West India merchant's counting-house, an Edinburgh solicitor's chambers, and held the position of surgeon's mate on board H.M. guardship "Gladiator" in Portsmouth Harbour, under his uncle, who was surgeon. He went to London in 1806, and became a newspaper reporter. He was in the lobby of the House of Commons on the 11th of May 1812 when Spencer Perceval was shot, and was the first to seize the assassin. By 1812 he had become editor of The Sun, a semi-official Tory paper; he occasionally inserted literary articles, then quite an unusual proceeding; but a quarrel with the chief proprietor brought that engagement to a close in 1817. He passed next to the editor's chair of the Literary Gazette, which he conducted with success for thirty-four years. Jerdan's position as editor brought him into contact with many distinguished writers. An account of his friends, among whom Canning was a special intimate, is to be found in his Men I have Known (1866). When Jerdan retired in 1850 from the editorship of the Literary Gazette his pecuniary affairs were far from satisfactory. A testimonial of over £500 was subscribed by his friends; and in 1852 a presentation of 100 guineas was conferred on him by Lord Aberdeen. He published his Autobiography in 1852–1853, and died on the 11th of July 1869.

JEREMIAH, in the Bible, the last pre-exilic prophet (J 566–586 n.C.?), son of Hilkiah.

Early Days of Jeremiah.—There must anciently have existed one or more prose works on Jeremiah and his times, written partly to do honour to the prophet, partly to propagate those views respecting Israel's past with which the name of Jeremiah was associated. Some fragments of this work (or these works) have come down to us; they greatly add to the popularity of the Book of Jeremiah. Strict historical truth we must not ask of them, but they do give us what was believed concerning Jeremiah in the following age, and we must believe that the personality so honoured was an extraordinary one. We have also a number of genuine prophecies which admit us into Jeremiah's inner nature. These are our best authorities, but they are deficient in concrete facts. By birth Jeremiah was a countryman; he came of a priestly family whose estate lay at Anathoth "in the land of Benjamin" (xxxiii. 3; cf. i. 1). He came forward as a prophet in the thirteenth year of Josiah, i.e. in the year 625 B.C., still young, and continued his twelve years' ministry, to the reign of Josiah's son, Jeconiah (kings xxiii. 1), during which account of the call and of the object of the divine caller came to us from a later hand (ch. i.), but we can well believe that the concrete fact which the prophetic call illuminated was an impending blow to the state (i. 13–16; cf. ch. iv.). What the blow exactly was is disputed, but it is certain that Jeremiah saw the gathering storm and anticipated its result, while the statesmen were still wrapped in a false security. Five years later came the reform movement produced by the "finding" of the "book of the law" in the Temple in 622 B.C. (kings xxiii. 8), and some might be a creation of Jeremiah (ch. xxiii. 10). The whole of the fore-feet of these are still running, and the hind feet of the "royal fore-feet" of the elephantine "beast" of the Old Testament

Early Days of Jeremiah.—There must anciently have existed one or more prose works on Jeremiah and his times, written partly to do honour to the prophet, partly to propagate those views respecting Israel's past with which the name of Jeremiah was associated. Some fragments of this work (or these works) have come down to us; they greatly add to the popularity of the Book of Jeremiah. Strict historical truth we must not ask of them, but they do give us what was believed concerning Jeremiah in the following age, and we must believe that the personality so honoured was an extraordinary one. We have also a number of genuine prophecies which admit us into Jeremiah's inner nature. These are our best authorities, but they are deficient in concrete facts. By birth Jeremiah was a countryman; he came of a priestly family whose estate lay at Anathoth "in the land of Benjamin" (xxxiii. 3; cf. i. 1). He came forward as a prophet in the thirteenth year of Josiah, i.e. in the year 625 B.C., still young, and continued his twelve years' ministry, to the reign of Josiah's son, Jeconiah (kings xxiii. 1), during which account of the call and of the object of the divine caller came to us from a later hand (ch. i.), but we can well believe that the concrete fact which the prophetic call illuminated was an impending blow to the state (i. 13–16; cf. ch. iv.). What the blow exactly was is disputed, but it is certain that Jeremiah saw the gathering storm and anticipated its result, while the statesmen were still wrapped in a false security. Five years later came the reform movement produced by the "finding" of the "book of the law" in the Temple in 622 B.C. (kings xxiii. 8), and some might be a creation of Jeremiah (ch. xxiii. 10). The whole of the fore-feet of these are still running, and the hind feet of the "royal fore-feet" of the elephantine "beast" of the Old Testament.
peoples, as well as the course of political history, had appeared to lower the position of the God of Israel in relation to other gods. Still, some adherents of the old Israelitish moral and religious standards must have survived, only they were not to be found in the chief places of concourse, but as a rule in coteries which had trailed on the traditions of Amos and Isaiah in sorrowful retirement.

Danger of Book Religion.—Probably, too, even in the highest class there were some who had a moral sympathy with Jeremiah; otherwise we can hardly account for the contents of Deuteronomy, at least if the book "found" in the Temple at all resembled the central portion of our Deuteronomy. And the assumption seems to be confirmed by the respectful attitude of certain "elders of the land" in xxxv. 17 seqq., and of the "princes" in xxxvi. 19, 25, towards Jeremiah, which may, at any rate in part, have been due to the recent reform movement. If therefore Jeremiah aimed at Deuteronomy in the severe language of viii.8, he went too far. History shows that book religion has special dangers of its own. Nevertheless the same incorruptible adviser also shows that book religion may be necessary as an educational instrument, and a compromise between the two types of religion is without historical precedent.

Reaction: Opposition to Jeremiah.—This, however, could not as yet be recognized by the friends of prophecy, even though it seemed to offer a chance for the claims of book religion to be rebutted by facts. The death of the pious king Josiah at Megiddo in 608 B.C. dashed the high hopes of the "book-men," but meant no victory for Jeremiah. Its only result for the majority was a falling back on the earlier popular cultus of the Baals, and on the heathen customs introduced, or reintroduced, by Josiah's grand-father, Manasseh. Would that we possessed the section of the prophet's biography which described his attitude immediately after the news of the battle of Megiddo! Let us, however, be thankful for what we have, and notably for the detailed narrative of the suffering of judgment in xxxvi. The history of this beginning of the reign of Jehoiakim, though Wellhausen suspects that the date is a mistake, and that the real occasion was the death of Josiah. The one clear-sighted patriot saw the full meaning of the tragedy of Megiddo, and for "prophesying against this city"—secured, as men thought, by the Temple (vii. 4)—he was accused by "the priests, the prophets, and all the people" of high treason. But the divinity which hedged a prophet saved him. The "princes," supported by certain "elders" and by the "people" (quick to change their leaders), succeeded in quashing the accusation and setting the prophet free. No king, he observed, is mentioned. The latter part of the narrative is still more exciting. In the fourth year of Jehoiakim (= the first of Nebuchadrezzar, xxv. 1) Jeremiah wasidden to write down "all the words that Yahweh had spoken to him against Jerusalem (so LXX.), Judah and all the nations from the days of Josiah onwards" (xxxvi. 2). So at least the authors of Jeremiah's biography tell us. They add that in the next year Jeremiah's scribe Baruch read the prophecies of Jeremiah first to the people assembled in the Temple, then to the "princes," and then to the king, who decided his own future policy by burning Baruch's roll in the brazier. We cannot, however, bind ourselves to this tradition. Much more probably the prophecy was virtually a new one (i.e. even if some old passages were repeated yet the setting was new), and the burden of the prophecy was "The king of Babylon shall come and destroy this land." We cannot therefore assent to the judgment that "we have, at least as regards [the] oldest portions [of the book] information considerably more specific than is usual in the case of the writings of the prophets." 1

Fall of the State.—Under Zedekiah the prophet was less fortunate. Such was the tension of feeling that the "princes," who 1 C.f. Ewald, The Prophets, Eng. trans., iii. 63, 64.
2 Cheyne, Ency. Brit. (9th ed.), "Jeremiah," suggests after Gratz that the roll simply contained ch. xxvi., omitting the most obvious interpolations. Against this view see N. Schmidt, Ency. Bib., "Jeremiah, Book," § 8, who, however, accepts the negative part of Cheyne's argument.

JEREMY—JERICHO

Jeremy, Epistle of, an apocryphal book of the Old Testament. This letter purports to have been written by Jeremiah to the exiles who were already in Babylon or on the way thither. The author was a Hellenistic Jew, and not probably a Jew of Alexandria. His work, which shows little literary skill, was written with a serious practical purpose. He inveighed his fierce attack on the idol gods of Egypt by holding up to derision the idolatry of Babylon. The fact that Jeremiah (xxix. 1 sqq.) was known to have written a letter of this nature naturally suggested to a Hellenist, possibly of the 1st century B.C. or earlier, the idea of a second epistolary undertaking, and other passages of Jeremiah's prophecy (x. 1-12; xxix. 4-23) may have determined also its general character and contents. The writer warned the exiles that they were to remain in captivity for seven generations; that they would there see the worship paid to idols, from all participation in which they were to hold aloof; for that idols were nothing save the work of men's hands, without the powers of speech, hearing or self-preservation. They could not bless their worshippers even in the smallest concerns of life; they were indifferent to moral qualities, and were of less value than the commonest household objects, and finally, "with rare irony, the author compared an idol to a scarecrow (v. 70), impotent to protect, but deluding to the imagination" (Marshall).

The date of the epistle is uncertain. It is believed by some scholars to be referred to in 2 Mac. ii. 2, which says that Jeremiah charged them as an example not to forget the statutes of the Lord, neither

\[1\] li. 59-61a, however, is a specimen of imaginative "Midrashic" history. See Gesenius's monograph.

JERÉZ DE LA FRONTERA (formerly Xéres), a town of southern Spain, in the province of Cadiz, near the right bank of the river Guadalete, and on the Seville-Cadiz railway, about 7 m. from the Atlantic coast. Pop. (1900), 63,473. Jeréz is built in the midst of an undulating plain of great fertility. Its whitewashed houses, clean, broad streets, and squares planted with trees extend far beyond the limits formerly enclosed by the Moorish walls, almost entirely demolished. The principal buildings are the 15th-century church of San Miguel, the 17th-century collegiate church with its lofty bell-tower, the 16th-century town-hall, superseded, for official purposes, by a modern edifice, the bull-ring, and many hospitals, charitable institutions and schools, including academies of law, medicine and commerce. But the most characteristic features of Jeréz are the huge bodegas, or wine-lodges, for the manufacture and storage of sherry, and the vineyards, covering more than 150,000 acres, which surround it on all sides. The town is an important market for grain, fruit and livestock, but its staple trade is in wine. Sherry is also produced in other districts, but takes its name, formerly written in English as sherries or xeres, from Jeréz. The demand for sherry diminished very greatly during the last quarter of the 19th century, especially in England, which had been the chief consumer. In 1872 the sherry shipped from Cadiz to Great Britain alone was valued at £2,500,000; in 1902 the total export hardly amounted to one-fifth of this sum. The wine trade, however, still brings a considerable profit, and few towns of southern Spain display greater commercial activity than Jeréz. In the earlier part of the 18th century the neighbourhood suffered severely from yellow fever; but it was rendered comparatively healthy when in 1869 an aqueduct was opened to supply pure water. Strikes and revolutionary disturbances have frequently retarded business in more recent years.

Jeréz has been variously identified with the Roman Municipium Seriense; with Asido, perhaps the original of the Moorish Shersh; and with Hasta Regia, a name which may survive in the designation of La Mesa de Asta, a neighbouring hill. Jeréz was taken from the Moors by Ferdinand III. of Castile (1217-1252); but it was twice recaptured before Alphonsso X. finally occupied it in 1264. Towards the close of the 14th century it received the title de la Frontera, i.e. of the frontier, common to several towns on the Moorish border.

The town of De los Caballeros, a town of south-western Spain, in the province of Badajoz, picturesquely situated on two heights overlooking the river Ardaña, a tributary of the Guadiana, 12 m. E. of the Portuguese frontier. Pop. (1900), 10,271. The old town is surrounded by a Moorish wall with six gates; the newer portion is well and regularly built, and planted with numerous orange and other fruit trees. Owing to the lack of railway communication Jeréz is of little commercial importance; its staple trade is in agricultural produce, especially in ham and bacon from the large herds of swine which are reared in the surrounding oak forests. The town is said to have been founded by Alphonsso I. of Leon in 1229; in 1229 it was extended by his son St Ferdinand, who gave it to the knights templar. Hence the name Jeréz de los Caballeros, "Jeréz of the knights."

Jericho (יְרוֹחָה, יֶרְחָה, once יַרְחָה, a word of disputed meaning, whether "fragrant" or "moon [god] city"), an important town in the Jordan valley some 5 m. N. of the Dead Sea. The references to it in the Pentateuch are confined to rough geographical indications of the latitude of the trans-Jordanic camp of the Israelites in Moab before their crossing of the river. This was the first Canaanite city to be attacked and taken, and was destroyed by the victorious Israelites. The story of its conquest is
fully narrated in the first seven chapters of Joshua. There must be some little exaggeration in the statement that Jericho was totally destroyed; a hamlet large enough to be enumerated among the towns of Benjamin (Josh. xviii. 21) must have remained; but that it was small is shown by the fact that it was deemed a suitable place for David's ambassadors to retire to after the indignities put upon them by Hanun (2 Sam. x. 5; 1 Chron. xix. 5). Its refortification was due to a Bethelite named Hiel, who endeavored to build Jericho, but could not carry on the work because of the death of his son (Josh. xvi. 34). After this event it grew again into importance and became the site of a college of prophets (2 Kings ii. 4 sqq.) for whom Elisha "healed" its poisonous waters. The principal spring in the neighbourhood of Jericho still bears (among the foreign residents) the name of Elisha; the natives call it, Ain es-Sultan, or "Sultan's spring." To Jericho the victorious Israelite marauders magnanimously returned their Judaite captives at the bidding of the prophet Oded (2 Chron. xxvii. 15). Here was fought the last fight between the Babylonians and Zedekiah, wherein the kingdom of Judah came to an end (2 Kings xxv. 5; Jer. xxxix. 5, lli. 8). In the New Testament Jericho is connected with the well-known stories of Bar-Timaeus (Matt. xx. 29; Mark x. 46; Luke xviii. 35) and Zacchaeus (Luke xix. 1) and with the good Samaritan (Luke x. 30).

The extra-Biblical history of Jericho is as disastrous as are the records preserved in the Scriptures. Bacciches, the general of the Syrians, captured and fortified it (1 Macc. ix. 50), Aristobulus (Jor. Jér., i. 2) made it into a fortress and Strigau (ib. lv. vi. 1) encamped here on his way to Jerusalem. Before Herod its inhabitants ran away (ib. XIV. xiv. 3) as they did before Vespasian (Wars, IV. viii. 2). The reason of this lack of war-tary was no doubt the ever-present effect of the great heat of the depression in which the city lies, which has the same effect on the handful of degraded humanity that still occupies the ancient site.

But in Jericho in time are more fertile. It was the city of palm trees of the ancient record of the Israelite invasion preserved in part in J. d. 16; and Josephus speaks of its fruitfulness with enthusiasm (Wars IV. 8. 3). Even now with every possible hindrance, in the way of cultivation it is an important centre of fruit-growing.

The modern er-Riha is a poor squard village of, it is estimated, about 500 inhabitants. It is not built exactly on the ancient site. Indeed, the site of Jericho has shifted several times. The mound of Tell es-Sultan, near "Elisha's Fountain," north of the modern village, no doubt covers the Canaanite town. There are two later sites, Tell es-Sultan and Tell ed-Duweir, on the other side of the village, near the modern village. It was probably the Crusaders who located this modern site. An old tower attributed to them is to be seen in the village, and in the surrounding mountains are many remains of early monasticism.

The German explorers of 1890, in their reconnaissances, observed the remains of ancient buildings in the neighbourhood. The whole district is the private property of the sultan of Turkey. In 1907-8 the Cannaamite Jericho was excavated under the direction of Prof. Sellin of Vienna.

JERKIN, a short close-fitting jacket, made usually of leather, and without sleeves, the typical male upper garment of the 16th and 17th centuries. The origin of the word is unknown. The Dutch word jurk, a child's frock, often taken as the source, is modern, and represents neither the sound nor the sense of the English word. In architecture the term " jerkin-roofed " is applied, probably with some obscure connexion with the garment, to a particular form of gable end, the gable cut off half way up the roof and sloping back like a "hipped roof" to the edge.

JEROBOAM (Heb. yārebō‘ăm, apparently "Am [the clan], here perhaps a divine name" contends LXX. μεθοβασα), the name of two kings in the Bible.

1. The first king of (north) Israel after the disruption (see SOLOMON). According to the traditions of his early life (1 Kings xi. 26 sqq. and LXX.), he was an Ephraimitc who for his ability was placed over the forced levy of Ephraim and Manasseh. Having subsequently incurred Solomon's suspicions he fled to Shishak, king of Egypt, and remained with him until Rebo-boa. The Egyptians then the latter came to be more king at Shechem, the old religious centre (see ANIMELECH), hoped were entertained that a more lenient policy would be introduced. But Reboboa refused to depart from Solomon's despotic rule, and was tactless enough to send Adoniram, the overseer of the corvée. He was stoned to death, and Reboboa realizing the temper of the people fled to Jerusalem and prepared for war. Jeroboam became the recognized leader of the northern tribes. Conflicts occurred (1 Kings xiv. 30), but no details are preserved except the late story of Reboboa's son Abijah in 2 Chron. xiii. Jeroboam's chief achievement was the erection of Shechem (his new capital) and of Penuel in east Jordan. To counteract the influence of Jerusalem he established golden calves at Dan and Bethel, an act which to later ages was as gross a piece of wickedness as his rebellion against the legitimate dynasty of Judah. No notice has survived of Shishak's invasion of Israel (see REBOBOA), and after a reign of twenty-two years Jeroboam was succeeded by Nadab, whose violent death two years later brought the whole house of Jeroboam to an end.

The history of the separation of Judah and Israel in the 10th century b.c. was written from a strong religious standpoint at a date considerably later than the event itself. The visit of Ahijah to Shiloh (xx. 29-39), to announce symbolically the rending of the kingdom, replaces some account of a rebellion in which Jeroboam lifted up his hand (cf. 1 Kings xiv. 30) against Solomon. To such an account, not to the incident of Ahijah and the cloak, his flight (x. 40) is the natural sequel. The story of Ahijah's prophecy against Jeroboam (ch. xiv.) is not in the original LXX., but another version of the same narrative appears in xii. 24, in which there is made to Jeroboam a promise to Jeroboam through Ahijah, but the prophet is introduced as a new character. Further, in this version (xii. 24) the incident of the tearing of the cloak is related of Shemaiah and made to supply a reason why the oracle was not accepted by Jeroboam, who counselled Reboboa to refrain from war (xii. 21-24); the injunction is opposed to xiv. 30, but appears to be intended to explain Reboboa's failure to overcome north Israel. (See W. R. Smith, Old Test. in Jewish Church (2nd ed.), 117 seqq.; Winckler, Alte Test. Untersuch. 12 seqq., and J. Skinner, Century Bible: Kings, pp. 443 seqq.)

2. JEROBOAM, son of Joash (2) a contemporary of Azariah king of Judah. He was one of the greatest of the kings of Israel. He succeeded in breaking the power of Damascus, which had long been devastating his land, and extended his kingdom from Hamath on the Orontes to the Dead Sea. The brief summary of his achievements preserved in 2 Kings xiv. 23 sqq. may be supplemented by the original writings of Amos and Hosea. There appears to be an allusion in Hosea vi. 2, to the recovery of Asherioth-Karnaim and Lodebar in E. Jordan, and the conquest of Moab (1sa. xv. seq.) is often ascribed to this reign. After a period of prosperity, internal disturbances broke out and the northern kingdom hardened to its fall. Jero-boa was succeeded by his son Zechariah, who after six months was killed at Ibleam (so read in 2 Kings xv. 10; cp. ix. 27, murder of Ahabiah) by Shallum the son of Jabesh—i.e. possibly of Jabesh-Gilead—who a month later fell to Menahem (q.v.).

(S. A. C.)

See, further, JESVS §§ 7, 9, and §§ 12, 13.

JEROME, ST (HIERONYMUS, in full EUSEBIUS SOPHONIUS HERIONYMUS, c. 340-420), was born at Strido (modern Strigau), a town on the border of Dalmatia fronting Pannonia, destroyed by the Goths in A.D. 377. What is known of Jerome has mostly been recovered from his own writings. He appears to have been born about 340; his parents were Christians, orthodox though living among people mostly Arians and wealthy. He was at first educated at home, Bonosus, a life-long friend, sharing his youthful studies, and was afterwards sent to Rome. Donatus taught him grammar and explained the Latin poets. Victorinus taught him rhetoric and logic. He was attracted to the Roman advocates pleading in the Forum. He went to the schools of philosophy, and heard lectures on Plato, Diogenes, Clitomachus and Carneades; the conjunction of names show how philosophy had become a dead tradition.

1 On the variant traditions in the Hebrew text and the Septuagint, see the commentaries on Kings.

2 See also JONAH. In 2 Kings xiv. 28, "Hamath, which had belonged to Judah," C. Winckler (Kritische u. Alte Test., 2nd ed., 262) suspects a reference to Israel's overlordship in Judah; Burney (Heb. Texts of Kings) reads: "how he fought with Damascus and how he turned away the wrath of Yahweh from Israel"; see also Ency. Bib. col. 2406 n. 4, and the commentaries.
His Sundays were spent in the catacombs in discovering gravies of the martyrs and deciphering inscriptions. Pope Liberius baptized him in 360; three years later the news of the death of the emperor Julian came to Rome, and Christians felt relieved from a great dread.

When his student days were over Jerome returned to Strido, but did not stay there long. His character was formed. He was a scholar, with a scholar's tastes and cravings for knowledge, easily excited, bent on scholarly discoveries. From Strido he went to Aquileia, where he formed some friendships among the monks of the large monastery, notably with Rufinus, with whom he was destined to quarrel bitterly over the question of Origen's orthodoxy and worth as a commentator; for Jerome was a man who always sacrificed a friend to an opinion, and when he changed sides in a controversy expected his acquaintances to follow him. From Aquileia he went to Gaul (366–370), visiting in turn the principal places in that country, from Narbonne and Toulouse in the south to Treves on the north-east frontier. He stayed some time at Treves studying and observing, and it was there that he first began to think seriously upon sacred things. From Treves he returned to Strido, and from Strido to Aquileia. He settled down to literary work in Aquileia (370–373) and composed there his first original tract, De muliure septies percessa, in the form of a letter to his friend Innocentius. Some dispute caused him to leave Aquileia suddenly; and with a few companions, Innocentius, Evagrius, and Heliodorus being among them, he started for a long tour in the East. The epistle to Rufinus (3rd in Vallarsi’s enumeration) tells us the route. They went through Thrace, visiting Athens, Siphon, Gallipoli, Pontus, Cappadocia and Cilicia, to Antioch, Jerome observing and making notes as they went. He was interested in the theological disputes and schisms in Galatia, in the two languages spoken in Cilicia, &c. At Antioch the party remained some time. Innocentius died of a fever, and Jerome was dangerously ill. This illness induced a spiritual change, and he resolved to renounce whatever kept him back from God. His greatest temptation was the study of the literature of pagan Rome. In a dream Christ reproached him with caring more to be a Ciceronian than a Christian. He disliked the uncouth style of the Scriptures. "O Lord," he prayed, "thou knowest that whenever I have and study secular MSS. I deny thee," and he made a resolve henceforth to devote his scholarship to the Holy Scripture. "David was to be henceforth his Simonides, Pindar and Alcaeus, his Phaccus, Catullus and Severus." Fortified by these resolves he betook himself to a hermit life in the wastes of Chalcis, S.E. from Antioch (373–379). Chalcis was the Thebaid of Syria. Great numbers of monks, each in solitary cell, spent lonely lives, scorched by the sun, ill-clad and scantily fed, pondering on portions of Scripture or copying MSS., to serve as objects of meditation. Jerome, at first, set himself to such scholarly work as the place afforded. He discovered and copied MSS., and began to study Hebrew. There also he wrote the life of St Paul of Thebes, probably an imaginary tale embodying the facts of the monkish life around him. Just then the Meletian schism, which arose over the relation of the orthodox to Arian bishops and to those baptized by Arians, distressed the church at Antioch (see MELETIUS OF ANTIOCH), and Jerome as usual eagerly joined the fray. Here as elsewhere he had but one rule to guide him in matters of doctrine and discipline—the practice of Rome and the West; for it is singular to see how Jerome, who is daringly original in points of scholarly criticism, was a ruthless partisan in all other matters; and, having discovered what was the Western practice, he set tongue and pen to work with his usual bitterness (Attercatio luciferian et orthodoxi).

At Antioch in 379 he was ordained presbyter. From there he went to Constantinople, where he met with the great Eastern scholar and theologian Gregory of Nazianzus, and with his aid tried to perfect himself in Greek. The result of his studies there was the translation of the Chronicon of Eusebius, with a continuation of twenty-eight homilies of Origen on Jeremiah and Ezekiel, and of nine homilies of Origen on the visions of Isaiah.

In 381 Meletius died, and Pope Damasus interfered in the dispute at Antioch, hoping to end it. Jerome was called to Rome in 382 to give help in the matter, and was made secretary during the investigation. His work brought him into intercourse with this great pontiff, who soon saw what he could best do, and how his vast scholarship might be made of use to the Church. Damasus suggested to him to revise the "Old Latin" translation of the Bible; and to this task he henceforth devoted his great abilities. At Rome were published the Gospels (with a dedication to Pope Damasus, an explanatory introduction, and the canons of Eusebius), the rest of the New Testament and the version of the Psalms from the Septuagint known as the Psalterium romanum, which was followed (c. 388) by the Psalterium gallicanum, based on the Hexaplar Greek text. These scholarly labours, however, did not take up his whole time, and it was almost impossible for Jerome to be long anywhere without penitence and fasting. He was a zealous defender of that monastic life which was beginning to take such a large place in the church of the 4th century, and he found enthusiastic disciples among the Roman ladies. A number of widows and maidens met together in the house of Marcella to study the Scriptures with him; he taught them Hebrew, and preached the virtues of the celibate life. His arguments and exhortations may be gathered from many of his epistles and from his tract Adversus Helvidium, in which he defends the perpetual virginity of Mary against Helvidius, who maintained that she bore children to Joseph. Jerome was the first to observe that this marriage and excite the suspicions of the regular priesthood and of the populace, but while Pope Damasus lived Jerome remained secure. Damasus died, however, in 384, and was succeeded by Siricius, who did not show much friendship for Jerome. He found it expedient to leave Rome, and set out for the East in 385. His letters (especially Ep. 45) are full of outcries against his enemies and of indignant protestations that he had done nothing unbecoming a Christian, that he had taken no money, nor gifts great or small, that he had no delight in silken attire, sparkling gems or gold ornaments, that no matron moved him unless by his route is given in the third book In Rufinum; he went by Rhegium and Cyprus, where he was entertained by Bishop Epiphanius, to Antioch. There he was joined by two wealthy Roman ladies, Paula, a widow, and Eustochium, her daughter, one of Jerome's Hebrew students. They came accompanied by a band of Roman maidens vowed to live a celibate life in a nunnery in Palestine. Accompanied by these ladies Jerome made the tour of Palestine, carefully noting with a scholar's keenness the various places mentioned in Holy Scripture. The results of this journey may be traced in his works, and are noticeable by the clearness of his statements and the fidelity with which he describes the situation and names of Hebrew places, written probably three years afterwards, when he had settled down at Bethlehem. From Palestine Jerome and his companions went to Egypt, remaining some time in Alexandria; and they visited the convents of the Nitrian desert. Jerome's mind was evidently full of anxiety about his translation of the Old Testament, for we find him in his letters recording the conversations he had with learned men about disputed readings and doubtful renderings; the blind Didymus of Alexandria, whom he heard interpreting Hosea, appears to have been more to his mind than these, and he writes, "I have no wish to be on bad terms with the Jews, but I wish to be on bad terms with the Jews, but I wish to be on bad terms with them, while I am in Jerusalem; on my return I shall be in Rome."

1 Of Schoene's critical edition (Berlin, 1866, 1875).
accracy of his version: "Let him who would challenge aught in this translation," he says, "ask the Jews." The result of all this labour was the Latin translation of the Scriptures which, in spite of much opposition from the more conservative party in the church, afterwards became the Vulgate or authorized version; but the Vulgate as we have it now is not exactly Jerome's Vulgate, for it suffered a good deal from changes made under the influence of the older translations; the text became very corrupt during the middle ages, and in particular all the Apocrypha, except Tobit and Judith, which Jerome translated from the Chaldee, were added from the older versions. (See Bible: O.T. Versions.)

Notwithstanding the labour involved in translating the Scriptures, Jerome found time to do a great deal of literary work, and also to indulge in violent controversy. Earlier in life he had a great admiration for Origen, and translated many of his works, and this lasted after he had settled at Bethlehem, for in 389 he translated Origen's homilies on Luke; but he came to change his opinion and wrote violently against two admirers of the great Alexandrian scholar, John, bishop of Jerusalem, and his own former friend Rufinus.

At Bethlehem he also found time to finish Didymi de spiritu sancto liber, a translation begun at Rome at the request of Pope Damasus, to denounce the revival of Gnostic heresies by Jovinianus and Vigilantius (Adv. Jovianianum lib. II. and Contra Vigilantianum liber), and to repeat his admiration of the hermit-life in his Vita S. Hierionis eremita, in his Vita S. Mariae matronae, in his translation of St. Pachomius (the founder of Egyptian monasteries), and in his S. Pachomii et S. Theodoricæ epistolæ et verba mystica. He also wrote at Bethlehem De viris illustribus sive de scriptoribus ecclesiasticis, a work in biographies, ending with the life of the author; De nominibus Hebraicis, compiled from Philo and Origen; and De situ et nominibus locorum Hebraicorum.1 At the same place, too, he wrote Questiones Hebraeae on Genesis,2 and a series of commentaries on Isaiah, Jeremiah, Ezekiel, Daniel, the Twelve Minor Prophets, Matthew and the Epistles of St. Paul. About 394 Jerome came to know Augustine, for whom he held a high regard. He engaged in a heated controversy with Augustine rather than his own usual bitterness (Dialogi contra pelagianos); and it is said that the violence of his invective so provoked his opponents that an armed mob attacked the monastery, and that Jerome was forced to flee and to remain in concealment for nearly two years. He returned to Bethlehem in 418, and after a lingering illness died on the 30th of September 420.

Jerome "is one of the few Fathers to whom the title of Saint appears to have been given in recognition of services rendered to the Church rather than for eminent sanctity. He is the great Christian historian, rather than the profound theologian or the wise guide of souls." His great work was the Vulgate, but his achievements in other fields would have sufficed to distinguish him. His commentaries are valuable because of his knowledge of Greek and Hebrew, his varied interests, and his comparative freedom from allegory. To him we owe the distinction between canonical and apocryphal writings; in the Prologus Galeatus prefixed to his version of Samuel and Kings, he says that the church reads the Apocrypha for the edification of the people, not for confirming the authority of ecclesiastical doctrines.3 He was a pioneer in the fields of patrology and of biblical archaeology. In controversy he was too fond of mingling personal abuse with legitimate argument, and this weakness mars his letters, which were held in high admiration in the early middle ages, and are valuable for their history of the man and his times. Luther in his Table Talk condemns them as dealing only with fasting, meats, virginity, &c. "If he only had insisted upon the works of faith and performed them! But he teaches nothing either about faith, or love, or hope, or the works of faith."

1 Compare the critical edition of these two works in Lagarde's Onomastica sacra (Götting, 1870).

2 See Lagarde's edition appended to his Genesis Graece (Leipzig, 1868).

JEROME, JEROME KLAPOKA (1859— ), English author, was born on the 2nd of May 1859. He was educated at the philosophical school, Marylebone, London; and was by turns clerk, schoolmaster and actor, before he settled down to journalism. He made his reputation as a humorist with the book Idle Thoughts of an Idle Fellow (1858), Three Men in a Boat, and from 1897 to 1904 he was co-editor of the Idler with Robert Blyth. At the same time he was also the editor of To-Day. A one-act play of his, Barbara, was produced at the Globe theatre in 1886, and was followed by many others, among them Sunset (1883), Wood Barrow Farm (1891), The Passing of the Third Floor Back (1907). Among his later books are Letters to Clarinda (1898), The Second Thoughts of an Idle Fellow (1898), Three Men on the Bummel (1909), Tommy and I (1909).

JEROME OF PRAGUE (d. 1416), an early Bohemian church-reformer and friend of John Hus, Jerome, for whom the Hussite movement was first organized, lived a life of saintly devotion. He was a close friend of Wycliffe, who brought some of his works to him in England. Jerome was born in Prague about 1350. He was educated at the university of Paris, where he never attempted to obtain any ecclesiastical office, Jerome proceeded to Oxford in 1388. There he became greatly impressed by the writings of Wycliffe, of whose Dialologus and Triologus he made copies. Always inclined to a roving life, he soon proceeded to the university of Paris and afterwards continued his studies at Cologne and Heidelberg, returning to Prague in 1407. In 1403 he is stated to have undertaken a journey to England. At Paris his open advocacy of the views of Wycliffe brought him into conflict with John Gerson, chancellor of the university. In Prague Jerome soon attracted attention by his advanced and outspoken opinions. He gave great offence also by exhibiting a portrait of Wycliffe in his room. Jerome was soon on terms of friendship with Hus, and took part in all the controversies of the university. When in 1408 a French embassy arrived at Kutna Hora, the residence of King Wenceslaus of Bohemia, and proposed that the Pope should be summoned to hear the protests of Bohemia against the Roman pope, Gregory XII. The reorganization of the university was also discussed, and as Wenceslaus for a time favoured the Germans, Hus and Jerome, as leaders of the Bohemians, incurred the anger of the king, who threatened them with death by fire should they oppose his will.

In 1410 Jerome, who had incurred the hostility of the archbishop of Prague, the principal friend in favour of Wycliffe's teaching, went to Osten, where King Sigismund of Hungary resided, and, through a layman, preached before the king denouncing strongly the rapacity and immorality of the clergy. Sigismund shortly afterwards received a letter from the archbishop of Prague containing accusations against Jerome. He was imprisoned by order of the king, but does not appear to have been detained long in Hungary. Appearing at Vienna, he was again brought before the archbishop, and was finally allowed to go to Prague, where he was received with great distinction as a public deacon. In 1416 he was killed by mob violence on the charge of heresy, and was canonized by the church.

The statement that Jerome's family name was Faulisch, is founded on a misunderstood passage of Aeneas Sylvius Piccolomini, the early Bohemian reformer's name "genere nobilis, eugo domo quam Putridii Piscis vocavit." This was erroneously believed to refer to Jerome.
before the ecclesiastical authorities. He was accused of spreading Wyckliffe's doctrines, and his general conduct at Oxford, Paris, Cologne, Prague and Ofen was censured. Jerome vowed that he would not leave Vienna till he had cleared himself from the accusation of heresy. Shortly afterwards he secretly left Vienna, declaring that this promise had been forced on him. He went first to Vittau in Moravia, and then to Prague. In 1414 the representatives of Pope Gregory XII. publicly offered indulgences for sale at Prague, wishing to raise money for the pope's campaign against King Ladislaus of Naples, an adherent of the antipope of Avignon. Contrary to the wishes of the archbishop of Prague a meeting of the members of the university took place, at which both Hus and Jerome spoke strongly against the sale of indulgences. The fiery eloquence of Jerome, which is noted by all contemporary writers, obtained for him greater success even than that of Hus, particularly among the younger students, who conducted him in triumph to his dwelling-place. Shortly afterwards Jerome proceeded to Poland—it is said on the invitation of King Wladislaus. His courtly manners and his eloquence here also caused him to become very popular, but he again met with strong opposition from the Roman Church. While travelling with the grand-duke Lithold of Lithuania Jerome took part in the religious services of the Greek Orthodox Church.

During his stay in northern Europe Jerome received the news that Hus had been summoned to appear before the council of Constance. He wrote to his friend advising him to do so and adding that he would also proceed there to afford him assistance. Constance had been the dwelling-place of Hus from 1410 to 1414, and he had been proclaimed on the 4th of April 1415. Advised to fly immediately to Bohemia, he succeeded in reaching Hirschau, only 25 m. from the Bohemian frontier. He was here arrested and brought back in chains to Constance, where he was examined by judges appointed by the council. His courage failed him in prison and, to regain his freedom, he denounced the doctrines of Wyckliffe and Hus. He declared that Hus had been justly executed and stated in a letter addressed on the 10th of August 1415 to Lasek, lord of Kravâr—the only literary document of Jerome that has been preserved—that "the dead man (Hus) had written many false and harmful things." Full confidence was not placed in Jerome's recantation. He claimed to be heard at a general meeting of the council, and this was granted to him. He now again maintained all the theories which he had formerly advocated, and, after a trial that lasted only one day, he was condemned to be burnt as a heretic. The sentence was immediately carried out on the 30th of May 1416, and he met his death with fortitude. As Poggio Bracciolini writes, "none of the Stoics with so constant and brave a soul endured death, which he (Jerome) seemed rather to long for." The eloquence of the Italian humanist has bestowed on him an entirely merited aureole on the memory of Jerome of Prague.

See all works dealing with Hus; and indeed all histories of Bohemia contain detailed accounts of the career of Jerome. The Lives of John Wyckliffe, Lord Cobham, John Huss, Jerome of Prague and Žižka by William Gilpin (London, 1705) still has a certain value.

JERROLD, DOUGLAS WILLIAM (1803-1857), English dramatist and man of letters, was born in London on the 3rd of January 1803. His father, Samuel Jerrold, actor, was at that time lessee of the little theatre of Willys near Cranbrook in Kent, but in 1807 he removed to Sheerness. There, among the blue-jackets, he passed the war, and the war made Douglas grow by youth. He occasionally took a child's part on the stage, but his father's profession had little attraction for the boy. In December 1813 he joined the guardship "Namur," where he had Jane Austen's brother as captain, and he served as a midshipman until the peace of 1815. He saw nothing of the war save a number of wounded soldiers from Waterloo; but till his dying day there lingered traces of his early passion for the sea. The peace of 1815 ruined Samuel Jerrold; there was no more prize money. On the 1st of January 1816 he removed with his family to London, where he ex-midshipman began a new world again as a printer's apprentice, and in 1819 became a compositor in the printing-office of the Sunday Monitor. Several short papers and copies of verses by him had already appeared in the sixpenny magazines, and one evening he dropped into the editor's box a criticism of the opera Der Freischütz. Next morning he received his own copy to set up, together with a flattering note from the editor, requesting further contributions from the anonymous author. Thenceforward Jerrold was engaged in journalism. In 1821 a comedy that he had composed in his fifteenth year was brought out at Sadler's Wells theatre, under the title More Friggin than's Hunt. Other pieces followed, and in 1825 he was engaged for a few pounds weekly to produce dramas and farces to the order of Davidge of the Coburg theatre. In the autumn of 1824 the "little Shake-speare in a camlet cloak," as he was called, married Mary Swann; and, while he was engaged with the drama at night, he was steady pushing his way as a journalist. For a short while he was part proprietor of a small Sunday newspaper. In 1829, through a quarrel with the exacting Davidge, Jerrold left the Coburg; and his three-act melodrama, Black-eyed Susan; or, All in the Downs, was brought out by R. W. Elliston at the Sunderland theatre. The success of the piece was enormous. With its free gallon sea-flavour, it took the town by storm, and "all London went over the water to see it." Elliston made a fortune by the piece; T. P. Cooke, who played William, made his reputation; Jerrold received about £60 and was engaged as dramatic author at five pounds a week. But his fame as a dramatist was achieved. In 1830 it was proposed that he should adapt something from the French for Drury Lane. "No," was his reply, "I shall come into this theatre as an original dramatist with a weekly newspaper till I have succeeded." The French play (1831) was the first of a number of his plays produced at Drury Lane. The other patent houses threw their doors open to him also (the Adelphi had already done so); and in 1836 Jerrold became co-manager of the Strand theatre with W. J. Hammond, his brother-in-law. The venture was not successful, and the partnership was dissolved. While it lasted Jerrold wrote his only tragedy, The Painter of Ghent, and himself appeared in the title rôle, without any marked success. He continued to write sparkling comedies till 1854, the date of his last piece, The Heart of Gold. Meanwhile he had won his way to the pages of numerous periodicals—before 1830 of the second-rate magazines only, but after that to those of more importance. He was a contributor to the Monthly Magazine, Blackwood's, the New Monthly, and the Athenæum. To Punch, the publication which of all others is associated with his name, he contributed from its second number in 1841 till within a few days of his death. He founded and edited for some time, though with indifferent success, the Illustrated Magazine, Jerrold's Shilling Magazine, and Douglas Jerrold's Weekly Newspaper; and under his editorship Lloyd's Weekly Newspaper rose from almost nonentity to a circulation of 182,000. The history of this magazine is a catalogue of his literary productions, interrupted now and again by brief visits to the Continent or to the country. Douglas Jerrold died at his house, Kilburn Priory, in London, on the 8th of June 1857.

Jerrold's figure was small and spare, and in later years bowed almost to deformity. His features were strongly marked and expressive from the thin humorous lips to the keen blue eyes gleaming from beneath the shaggy eyebrows. He was brisk and active, with the careless bluntness of a sailor. Open and sincere, he considered war no work for his pleasure; to his simple frankness all polite duplicity was distasteful. The cynical side of his nature he kept for his writings; in private life his hand was always open. In politics Jerrold was a Liberal, and he gave eager sympathy to Kossuth, Mazzini and Louis Blanc. In social politics especially he took an eagler part; he never tired of denouncing against the horrors of war, the luxury of bishops, and the iniquity of capital punishment.

Douglas Jerrold is now perhaps better known from his reputation as a brilliant wit in conversation than from his writings. As a dramatist he was very popular, though his plays have not kept the stage. He dealt with rather humble forms of social life than had commonly been represented on the boards. He was one of the first and certainly one of the most successful of those
who in defence of the native English drama endeavoured to stem the tide of translation from the French, which threatened early in the 19th century altogether to drown original native talent. His skill in construction and his mastery of epigram and brilliant dialogue are well exemplified in his comedy, *Time Works Wonderers* (Haymarket, April 26, 1842). The tales and sketches which form the bulk of Jerrold's collected works vary much in skill and interest; but, although there are evident traces of their having been composed from week to week, they are always marked by keen satirical observation and pungent wit.

Among the best known of his numerous works are: *Men of Character* (1836), including "Job Pippin: The man who couldn't help", and *Journal of the same kind; Cakes and Ale* (2 vols., 1842), a collection of short papers and whimsical stories; some more serious novels—*The Story of a Feather* (1844), *The Chronicles of Clovernoak* (1846), *A Man made of Money* (1849), and *St Giles and St James* (1851); and various series of papers reprinted from *Punch—Punch's Letters to his Son* (1843), *Punch's Complete Letter-writer* (1845), and the famous *Mrs Caudle's Curtain Lectures* (1846).

His eldest son, William Blanchard Jerrold (1826-1884), English journalist and author, was born in London on the 23rd of December 1826, and abandoning the artistic career for which he was educated, began newspaper work at an early age there. He was appointed Crystal Palace commissioner to Sweden in 1853, and wrote *A Brage-Beaker with the Swedes* (1854) on his return. In 1855 he was sent to the Paris exhibition as correspondent for several London papers, and from that time he lived much in Paris. In 1857 he succeeded his father as editor of *Lloyd's Weekly Newspaper*, a post which he held for twenty-six years. During the Civil War in America he strongly supported the North, and several of his leading articles were reprinted and placarded in New York by the federal government. He was the founder and president of the English branch of the international literary association for the assimilation of copyright laws. Four of his plays were successfully produced on the London stage, the popular farce *Cool as a Cucumber* (Lyceum 1854) being the best known. His French experiences resulted in a number of books, most important of which is his *Life of Napoleon III.* (1874). He was occupied in writing the biography of Gustave Doré, who had illustrated several of his books, when he died on the 10th of March 1884.

**JERRY**—**JERSEY**

JERRY, a short form of the name Jeremiah, applied to various common objects, and more particularly to a machine for finishing cloth. The expression "jerry-built" is applied to houses built badly and of inferior materials, and run up by a speculative builder. There seems to be no foundation for the assertion that this expression was occasioned by the work of a firm of Liverpool butchers called Jerry.

**JERSEY, EARLS OF.** Sir Edward Villiers (c. 1636-1711), son of Sir Edward Villiers (1620-1688), of Richmond, Surrey, was created Baron Villiers and Viscount Villiers in 1601 and earl of Jersey in 1607. His grandfather, Sir Edward Villiers (c. 1585-1620), master of the mint and president of Munster, was half-brother of George Villiers, 1st duke of Buckingham, and of Christopher Villiers, 1st earl of Anglesey; his sister was Elizabeth Villiers, the mistress of William III., and afterwards countess of Orkney. Villiers was knight-marshal of the royal household, by strict command of his three great predecessors in the office, horse to Queen Mary; and lord chamberlain to William III. and Queen Anne. In 1666 he represented his country at the congress of Ryswick; he was ambassador at the Hague, and after becoming an earl was ambassador in Paris. In 1690 he was made secretary of state for the southern department, and on three occasions he was one of the lords justices of England. In 1704 he was dismissed from office by Anne, and after this event he was concerned in several of the Jacobite schemes. He died on the 24th of August 1711. The 2nd earl was his son William (c. 1682-1721), an adherent of the exiled house of Stuart, and the 3rd earl was the latter's son William (d. 1760), who succeeded his kinsman John Fitzgerald (c. 1692-1766) as 6th Viscount Grandison. The 3rd earl's son, George Bussy, the 4th earl (1735-1805), held several positions at the court of George III., and on account of his courtly manners was called the "prince of Macaronies." The 4th earl's son, George, 5th earl of Jersey (1772-1859), one of the most celebrated fox-hunters of his time and a successful owner of racehorses, married Sarah Sophia (1785-1867), daughter of John Fane, 10th earl of Westmorland, and granddaughter of Robert Child, the banker. She inherited her grandfather's great wealth, including his interest in Child's bank, and with her husband took the name of Child-Villiers. Since this time the connexions of the earls of Jersey with Child's bank has been maintained. Victor Albert George Child-Villiers (b. 1845) succeeded his father George Augustus (1808-1859), 6th earl, who had only held the title for three weeks, as 7th earl of Jersey in 1859. This nobleman was governor of New South Wales from 1890 to 1893.

JERSEY, the largest of the Channel Islands, belonging to Great Britain. Its chief town, St. Helier, on the south coast of the island, is in 49° 12′ N., 2° 7′ W., 105 ft. S. by E. of Portland Bill on the English coast, and 24 m. from the French coast to the east. Jersey is the southernmost of the more important islands of the group. It is of oblong form with a length of 10 m. from east to west and an extreme breadth of 6½ m. The area is 28,717 acres, or 45 sq. m. Pop. (1901), 52,576.

The island reaches its greatest elevation (nearly 300 ft.) in the north, the land rising sharply from the north coast, and displaying bold and picturesque cliffs towards the sea. The east, south west, and west coasts consist of a succession of large open bays, shallow and rocky, with marshy or sandy shores separated by rocky headlands.

The principal bays are Grève au Laçons, Grève de Leecq, St John's and Bouley Bays on the north coast; St Catherine's and Grouville Bays on the east; St Clement's, St Aubin's and St Brelade's Bays on the south; and St Ouen's Bay, the wide sweep of which occupies nearly the whole of the west coast. The sea in many places has encroached greatly on the land, and sand drifts have been found troublesome, especially on the west coast. The surface of the country is broken by winding valleys having a general direction from north to south, and as they approach the southern coasts they form the southerly valleys as an inland continuation of the cliffs. The chief of these is the Leas, consisting of a group of small elongated valleys which run in a north-westerly direction. The highest point of Jersey is the 'Mont Orgueil,' which is 264 ft. above the sea.
at night from May till October. There was formerly a small black breed of horses peculiar to the island, but horses are now chiefly imported from France or England. Pigs are kept principally for local consumption, and only a few sheep are reared. Fish are not so plentiful as round the shores of Guernsey, but mackerel, tuna-bait, cod, whiting and other small fish are abundant at the Minglers.

There is a large oyster bed between Jersey and France, but partly on account of over-dredging the supply is not so abundant as formerly. There is a great variety of other shell fish. The fisheries, ship-building and boat-building employ many of the inhabitants. Kelp and iodine are manufactured from sea-weed. The principal exports are granite, fruit and vegetables (especially potatoes), butter and cattle; and the chief imports coal and articles of human consumption.

Communications with England are maintained principally from Southampton and Weymouth, and there are regular steamship services from Granville and St Malo on the French coast.

The Jersey railway runs west from St Helier round St Aubin's Bay to St Aubin, and continues to Corbière at the southwestern extremity of the island; and the Jersey eastern railway follows the southern and eastern coasts to Gorey. The island is intersected with a network of good roads.

Jersey is under a distinct and in several respects different form of administrative government from Guernsey and the smaller islands included in the bailiwick of Guernsey. For its peculiar constitution of justice, government and finance, see CHANNEL ISLANDS. There are twelve parishes, namely St Helier, Grouville, St Brelade, St Clement, St John, St Laurence, St Martin, St Mary, St Ouen, St Peter, St Saviour and Trinity. The population of the island nearly doubled between 1821 and 1901, but decreased from 54,518 to 52,576 between 1891 and 1901.

The history of Jersey is treated under CHANNEL ISLANDS. Among objects of antiquarian interest, a cromlech near Mont Orgueil is the finest of several examples. St Brelade's church, probably the oldest on the island, contains among the later churches St Helier's, of the 14th century, may be mentioned. There are also some very early chapels, considered to date from the 6th century or earlier; among these may be noted the Chapelle-es-Pêcheurs at St Brelade's, and the picturesque chapel in the grounds of the manor of Rozel. The castle of Mont Orgueil, of which there are considerable remains, is believed to be founded upon the site of a Roman stronghold, and a "Caesar's fort" still forms a part of it.

JERSEY CITY, a city and the county-seat of Hudson county, New Jersey, U.S.A., on a peninsula between the Hudson and Hackensack rivers at the N. and between New York and Newark bays at the S., opposite lower Manhattan Island. Pop. (1800), 163,003; (1900), 206,432, of whom 58,424 were foreign-born (19,314 Irish, 17,375 German, 4642 English, 3852 Italian, 1604 Russian, 1690 Scottish, 1643 Russian Poles, 1445 Austrian) and 3704 were negroes; (1910 census) 267,779. It is the eastern terminus of the Pennsylvania, the Lehigh Valley, the West Shore, the Central of New Jersey, the Baltimore & Ohio, the Northern of New Jersey (operated by the Erie), the Erie, the New York, Susquehanna & Western, and the New Jersey & New York (controlled by the Erie) railways, the first three using the Pennsylvania station; and of the little-used Morris canal. Jersey City is served by several inter-urban electric railways and by the tunnels of the Hudson & Manhattan railroad company to Dey St. and to 33rd St. and 6th Ave., New York City, and it also has docks of several lines of Transatlantic and coast steamers. The city occupies a land area of 14.3 sq. m. and has a waterfront of about 12 m. Bergen Hill, a southerly extension of the Pallisades, extends longitudinally through it from north to south. At the north end this hill rises on the east side precipitously to a height of nearly 200 ft.; on the west and south sides the slope is gradual. On the crest of the hill is the fine Hudson County Boulevard, about 19 m. long and 100 ft. wide, extending through the city and county from north to south and passing through West Side Park, a splendid county park containing lakes and a 70-acre playground.

The water-front, especially on the east side, is used up to manufacturing and shipping establishments. In the hill section are the better residences, most of which are wooden and detached.

The principal buildings are the city hall and the court house. There are also one small city park (of 39.9 acres).

The city has a public library containing (1907) 107,600 volumes and an historical museum. At the corner of Bergen Ave. and Forrest St. is the People's Palace, given in 1904 by Joseph Milbank to the Episcopal church and containing a library and reading-room, a gymnasium, bowling alleys, a billiard-room, a rifle-range, a roof-garden, and an auditorium and theatre; kindergarten classes are held and an emigration office maintained. Among the educational institutions are the German American school, Hasbrouck institute, St Aloysius academy (Roman Catholic) and St Peter's college (Roman Catholic); and there are good public schools.

Grain is shipped to and from Jersey City in large quantities, and in general the city is an important shipping port; being included, however, in the port of New York, no separate statistics are available. There are large slaughtering establishments, and factories for the refining of sugar and for the manufacture of tobacco-goods, soap and perfumery, lead pencils, iron and steel, railway cars, chemicals, rubber goods, silk goods, dressed lumber, and malt liquors.

The value of the city's manufactured products increased from $37,376,322 in 1890 to $77,225,116 in 1900, or 106.6%; in 1905 the factory product alone was valued at $75,749,934, an increase of only 39.9% over the factory product in 1900, this small rate in increase being due to the decrease in the value of the products of the sugar and molasses refining industry. The value of the wholesale slaughtering and meat-packing product decreased from $3,243,017 in 1900 of this $5,708,763 represented wholesale slaughtering alone; in 1903 the wholesale slaughtering product was valued at $7,506,739.

In 1908 the assessed valuation of the city was $267,039,754. The city is governed by a board of aldermen and a mayor (elected biennially), who appoints most of the officials, the street and water board being the principal exception.

Jersey City when first incorporated was a small sandy peninsula (an island at high tide) known as Paulus Hook, directly opposite lower Manhattan Island. In 1820 it was annexed to the city of New York, and in 1868 the British garrison was surprised by Major Henry Lee ("Light Horse Harry"), who with about 500 men took 159 prisoners and lost only 2 killed and 3 wounded, one of the most brilliant exploits during the War of Independence. In 1804 Paulus Hook, containing 117 acres and having about 15 inhabitants, passed into the possession of three enterprising New York lawyers, who laid it out as a town and formed an association for its government, which was incorporated as the "associates of the Jersey company." In 1840 the town was incorporated as the City of Jersey, which it remained for 23 years. But in 1868, when it was reincorporated as a distinct municipality. In 1863 the township of Van Vorst, founded in 1804 between Paulus Hook and Hoboken, was annexed. In 1870 there were two annexations: to the south, the town of Bergen, the county-seat, which was founded in 1660; to the north-west, Hudson City, which had been separated from the township of North Bergen in 1852 and incorporated as a city in 1855. The town of Greenville, to the south, was annexed in 1873.

JERUSALEM (Heb. יְרוּשָׁלָם, Jerusalem), pronounced as a dual, the chief city of Palestine. Letters found at Tell el-Amarna in Egypt, written by an early ruler of Jerusalem, show that the name existed under the form Urusalam, i.e. "City of Salim" or "City of Peace," many years before the Israelites under Joshua entered Canaan. The emperor Hadrian, when he rebuilt the city, changed the name to Aelia Capitolina. The Arabs usually designate Jerusalem by names expressive of
holiness, such as Beit el Maqdis and El Muqaddis or briefly El Kuds, i.e. the Sanctuary.

Natural Topography.—Jerusalem is situated in 31° 47' N. and 35° 15' E., in the hill country of southern Palestine, close to the watershed, at an average altitude of 2500 ft. above the Mediterranean, and 3800 ft. above the level of the Dead Sea. The city stands on a rocky plateau, 269 ft. above the level of the Tyropoeon Valley, the eastern part of which is the Kidron valley. The Kidron valley, separated from the east the valley of the Kidron separates this plateau from the ridge of the Mount of Olives, which is 100 to 200 ft. higher, while the Wadi Er Rababi bounds Jerusalem on the west and south, meeting the Kidron valley from the west. Both valleys rapidly as they approach the point of junction, which lies at a depth of more than 500 ft. below the general valley of the plateau. The last mentioned 500 ft. is almost 1000 acres, has at the present time a fairly uniform surface and is divided into four distinct parts, i.e., the south and east, the north and west (Tyropoeon valley). Originally, however, its formation was very different, as it was intersected by a deep valley, called Tyropoeon by Josephus, which the Ape Aphrahat, a PTOLEMAIC writer, of the Damascus gate, followed a course first south-east and then west of south, and joined the two main valleys of Kidron and Er Rababi at Siloam. Another shorter valley began near the present Jaffa gate and taking an easterly direction, joined the Tyropoeon; while a third ravine passed across what is now the northern part of the Haram enclosure and fell into the valley of the Kidron. The exact form of these ravines and their relative importance on the construction and history of the city, is still imperfectly known, as they are to a great extent obliterated by vast accumulations of rubbish, which has filled them up in some places to a depth of more than 100 ft. Many conjectures have been formed and modifications made during the later years of the 19th century. The limited knowledge which we possess of the original features of the ground within the city makes a reconstruction of the topography of this region extremely difficult and a study of the ancient history and the topographical features of the city cannot be given without an understanding of the topographical features of the city. The geological formation of the plateau consists of thin beds of hard slightly calcareous, locally called mica, which overlie a thick bed of soft white limestone, known by the name of melke. Both descriptions of rock yielded good material for building; while in the soft meleke tanks, underground chambers, tombs, &c., were easily excavated. In ancient times a brook flowed down the valley of the Kidron, and it is possible that a stream flowed also through the Tyropoeon valley. The only known spring existing at present within the limits of the city is the "fountain of the Virgin," on the west side of the Kidron valley, but there may have been others which are now called the "fountain of Zion." Cisterns were also used for the storage of rain water, and aqueducts, of which the remains still exist (see AQEDUCTS, AD INIIT), were constructed for the conveyance of water for distances of miles, generally, it is probable that the water supply of Jerusalem in ancient times was better than it is at present.

History.—The early history of Jerusalem is very obscure. The Tell el-Amarna letters show that, long before the invasion by Joshua, it was occupied by the Egyptians, and was probably a stronghold of considerable importance, as it formed a good strategical position in the hill country of southern Palestine. We hear of it briefly in the Biblical accounts, as a fortified city in the time of the Hebrews, and the city was captured and destroyed by Nebuchadrezzar. It was also invaded by Nebuchadrezzar, king of Babylon, who pillaged the city, destroyed the Temple, and ruined the fortifications (see JEWS, § 17). A number of the principal inhabitants were carried captive to Babylon, and Jerusalem was reduced to the position of an insignificant town. Nebuchadrezzar placed in the city a garrison which appears to have been quartered on the western hill, while the eastern hill on which were the Temple and the city of David was left more or less desolate. We have no information regarding Jerusalem during the period of the captivity, but fortunately Nehemiah, who was permitted to return and rebuild the defences about 445 B.C., has given a fairly clear description of the line of the wall which enables us to obtain a good idea of the extent of the city at this period. The Temple had already been partially rebuilt by Zedekiah and his captives, but on a scale far inferior to the magnificent building of King Solomon, and Nehemiah devoted his attention to the reconstruction of the walls. Before beginning the work, he made a preliminary reconnaissance of the fortifications on the south of the town from the Valley Gate, which was near the S.E. corner, to the pool of Siloam and valley of the Kidron. He then allotted the reconstruction of wall and gates to different parties of workmen, and
The map shows Jerusalem in the time of the Kings and Nehemiah, with the Palace of Herod Agrippa indicated.

The second map illustrates Jerusalem at the time of the Siege by Titus, highlighting the Old City, the Second Wall, and the Mount of Olives.
his narrative describes the portion of wall upon which each of these was employed. It is clear from his account that the lines of fortifications included both the eastern and western hills. North of the Temple enclosure there was a gate, known as the Sheep Gate, which must have opened into the valley at Jerusalem, and stood somewhere near what is now the north side of the Haifa Gate, but probably south of the present north wall of the latter. To the west of the Sheep Gate there were two important towers in the wall, called respectively, Mehal and Haman. A large space is probably near the memorable division known as Wilson’s arch. A gate in the valley, known as the Fish Gate, opened on a road which, leading from the north, went down the Tyropoeon valley to the southern part of the city. Westward of this gate the wall followed the south side of the valley which joined the Tyropoeon from the west as far as the north-western corner of the city at the site of the present Jaffa Gate and the so-called tower of David. In this part of the wall there were apparently two gates facing north, i.e. the Old Gate and the Gate of Ephraim, 400 cubits from the corner. At the corner stood the residence of the Babylonian governor, near the site upon which King Herod and his son Archelaus built their magnificent pleasure palaces. The governor’s house, the wall went in a southerly direction and turned south-east to the Valley Gate, remains of which were discovered by W. M. F. Petrie in his Excavations in Jerusalem in 1887. From the Valley Gate to the present entrance there was an enclosure with a distance of 1000 cubits to the Dung Gate, near which on the east was the Fountain Gate, not far from the lower pool of Siloam. Here a great gate was planned and the wall turned south and then north, and the building of the town was begun hence to the north followed the west side of the valley of the Kidron enclosing the city of David and the Temple enclosure, and finally turning west at some point near the site of the Golden Gate joined the wall, already described, at the Sheep Gate. Nehemiah mentions a number of places on the eastern hill, including the tomb of David, the positions of which cannot with our present knowledge be fixed with any certainty.

After the restoration of the walls of Jerusalem by Nehemiah, a small number of Jews returned to the city, but we know practically nothing of its history for more than a century until, in 332 B.C., Alexander the Great conquered Syria. The gates of Jerusalem were opened to him and he left the Jews in peaceful occupation. But his successors did not act with similar leniency; when the city was captured by Ptolemy I, king of Egypt, twelve years later, the fortifications were partially demolished and apparently not again restored until the period of the high priest Simon II., who repaired the defences and also the Temple buildings. In 168 B.C. Antiochus Epiphanes captured Jerusalem, destroyed the walls, and devastated the Temple, reducing the city to a state of indigence. He built a citadel called the Acra to dominate the town and placed in it a strong garrison of Greeks. The position of the Acra is doubtful, but it appears most probable that it stood on the eastern hill between the Temple and the city of David, both of which it commanded. Some writers place it north of the Temple on the site afterwards occupied by the fortress of Antonia, but such a position is not in accord with the descriptions either in Josephus or in the books of the Maccabees, which are quite consistent with each other. Other writers again have placed it on the eastern side of the hill upon which the church of the Holy Sepulchre now stands, but this position was probably quite outside the city at the time of Antiochus Epiphanes, and is at too great a distance from the Temple, it can hardly be accepted. But the site which has been already indicated at the N.E. corner of the present Mosque el Akas meets the accounts of the ancient authorities better than any other. At this point in the Haram enclosure there is an enormous underground cistern, known as the Great Sea, and this may possibly have been the source of water supply for the Greek garrison. The oppression of Antiochus led to a revolt of the Jews under the leadership of the Maccabees, and they were successful in capturing Jerusalem after severe fighting, but could not get

1 The sites shown on the plan are tentative, and cannot be regarded as certain; see Nehemiah ii. 12–15, iii. 1–32, xii. 37–39.

2 See 2 Kings xiv. 13.
old or first wall, on the west also by the old wall, on the south by a line of defence somewhat in the same position as the present south wall where it passes the Zion Gate, and on the east by an enceinte that continued north and south parallel to the existing thoroughfare known as David North of the Damascus Gate. The Roman garrison were left in undisturbed occupation, but in 132 the Jews rose in revolt under the leadership of Bar-Cocheba or Bar-Cochba, and took possession of Jerusalem. After a severe struggle, the revolt was suppressed by the Roman general, Julius Severus, and Jerusalem was recaptured and again destroyed. According to some writers, this devastation was even more complete than after the siege by Titus. About 350 the emperor Hadrian decided to rebuild Jerusalem, and make it a Roman colony. The new city was called Aelia Capitolina. The exact size of the old town, however, but it probably extended as far as the present north wall of Jerusalem and included the northern part of the western hill. A temple dedicated to Jupiter Capitolinus was erected on the site of the Temple, and other buildings were constructed, known as the Theatre, the Demosia, the Tetranymphon, the Dodecapylon and the Codra. The Jews were forbidden to reside in the city, but Christians were freely admitted. The history of Jerusalem during the period between the foundation of the city by the emperor Hadrian and the accession of Constantine the Great in 306 is obscure, but no enceinte of St Stephen north of the Damascus Gate was made in the time of Constantine. The fortifications of the city, which continued as a Roman colony. In 326 Constantine, after his conversion to Christianity, issued orders to the bishop Macarius to recover the site of the crucifixion of Jesus Christ, and the tomb in which his body was laid (see Sepulchre, Holy). After the holy sites had been determined, Constantine gave orders for the construction of two magnificent churches, the one over the tomb and the other over the place where the cross was discovered. The present church of the Holy Sepulchre stands on the site upon which one of the churches of Constantine was built, but the second church, the Basilica of the Church of the Holy Sepulchre, was the most important epoch in building construction at Jerusalem was about 490, when the empress Eudocia visited Palestine and expended large sums on the improvement of the city. The walls were repaired by her orders, and the line of fortifications appears to have been extended on the south so as to include the pool of Siloam. A church was built above the pool, probably at the same time, and, after having completely disappeared for many centuries, it was recovered by F. J. Bliss when making his exploration of Jerusalem. The empress also erected a large church in honour of St Stephen, which is marked by marked contrast in ecclesiastical import. The church of St Stephen is believed to have been built near the site of the Church of the Holy Sepulchre, which was discovered in 1874, and it has since been rebuilt. In the 6th century the emperor Justinian erected a magnificent basilica at Jerusalem, in honour of the Virgin Mary, and attached to it two hospitals, one for the reception of pilgrims and one for the accommodation of the sick poor. The description given by Procopius does not indicate clearly where this church was situated. A theory frequently put forward is that it stood within the Haram area near the Mosque of El Aksa, but it is more probable that it was on Zion, near the traditional place of the Coenaculum or last supper, where the ecclesiastical history of Jerusalem is said to have taken place. The caliph Omar marched on Jerusalem, which capitulated after a siege of four months. Omar behaved with great moderation, restraining his troops from pillage and leaving the Christians in possession of their churches. A wooden mosque was erected near the site of the Temple, which was replaced by the Mosque of Aksa, built by the amir Abdalmalik (Abd el Malek), who also constructed the Dome of the Rock, known as the Mosque of Omar, in 688. The Mahommedans held Jerusalem until 1009, when it was captured by the crusaders under Godfrey of Bouillon, who founded the Latin Kingdom of Jerusalem (see Crusades, vol. viii. p. 406) until 1260. It was reconquered, and it rebuilt. Since that time, except from 1229 to 1259, and from 1243 to 1244, the city has been held by the Mahommedans. It was occupied by the Egyptian Turks until 1357, when the Turks under Sells S. occupied Syria. Selim's successor, Suleiman the Magnificent, restored the fortifications, which since that time have been little altered.

Modern Jerusalem.—Jerusalem is the chief town of a sanjak, governed by a muhesserdi, who reports directly to the Porte. It has the usual executive and town councils, upon which the recognized government officers are the principal members. The only Asiatic Communist group in the city is garrisoned by the V. army corps. The city is connected with its port, Jaffa, by a carriage road, 41 m., and by a metre-gauge railway, 54 m., which was completed in 1892, and is worked by a French company. There are also carriage roads to Bethlehem, Hebron and Jericho, and a road to Nablus was in course of construction in 1909. Prior to 1895, when the modern building period commenced, Jerusalem lay in a line of east-west walls, and even as late as 1875 there were few private residences beyond the walls. At present Jerusalem without the walls covers a larger area than that within. The growth has been chiefly towards the north and east, where a new suburb has been made in the time. Jerusalem is the theatre of religious and philanthropic establishments; the settlement of Jewish colonies from Bokhara, Yemen and Europe; the Ambassadors of the Congregation of the Holy Sepulchre; and many Jews from the city to the suburbs; the increased vegetation, due to the numerous gardens and improved methods of cultivation; the substitution of timber and red tiles for the vaulted stone roofs which were so characteristic of the old city; the striking if somewhat unmeaning improvement in the length of the walls, and harmony with their environment exhibited by most of the new buildings; and the introduction of wheeled transport, which, cutting through the huge limestones, has produced mud and dust to an extent previously unknown. The modern city is divided into two parts, the city and its suburbs, the Bab ez-Zahire, or Herod's Gate, and a new gate, near the north-west angle of the walls, has been opened; and a portion of the wall, adjoining the Jaffa Gate, has been thrown down, to allow free access for carriages. Within the city the principal streets have been roughly paved, and iron bars placed across the narrow alleys to prevent the passage of camels. Without the walls, the roads and lanes are made wide and lighted by electricity, and the railway station, and various parts of the suburbs, but they are kept in bad repair. Little effort has been made to meet the increased population, or to improve the larger population and wider inhabited area. There is no municipality of the city, though the city discharges into the lower pool of Siloam, which has become an open cesspit. In several places the définitions within the walls is very thick, while the walls in the distance are made of small stone, of the inferior quality of Virgin, and of many of the old cisterns, is unfit for drinking. Amongst the more important buildings for ecclesiastical and philanthropic purposes erected to the north of the city since 1860 are the Russian cathedral, the hospital and school of the Russian mission to the Jews; the Abyssinian church; the churches and schools of the Church mission; the Anglican church, college and bishop's house; the Dominical monastery, seminary and church of St Stephen; the Rothchild hospital and girls' school; the Catholic chalk church of St Francis; the Coptic monastery; the German church of the Redeemer, and hospice; the United Armenian church of the Sarcoph; the Batholomew and school of the Sarcoph of Zion; the Austrian hospice; the Turkish school, college and hospice; the Roman-Catholic church of the Frères de la Mission Algérienne, with the restored church of St Anne, the church, schools and hospital of the London mission to the Jews; the Armenian monastery and Patriarchal buildings; the Rothchild hospital; and Jewish hospices and synagogues.
The climate is naturally good, but continued neglect of sanitary precautions has made the city unhealthy. During the summer months the heat is tempered by a fresh sea-breeze, and there is usually a sharp fall of temperature at night; but in spring and autumn, especially in the western and south-west winds, which blow away the depression of the Ghor, are enervating and oppressive. A dry season, which lasts from May to October, is followed by a rainy season, divided into the early winter and latter rains. Snow falls two or three times a year. The temperature is 62°-8° F., the maximum 112°, and the minimum 25°. The mean monthly temperature is lowest (47°-2) in February, and highest (75°-8) in August. The mean annual temperature is 52°-00 (11°-3). The most unhealthy period is from 1st May to 31st October, when there are, from time to time, outbreaks of typhoid, small-pox, diphtheria and other epidemics. The unhealthiness of the climate is increased by the pollution of the atmosphere, in which smoke, gas, dust from the uncleaned roads and streets. The only industry is the olive-wood and mother-of-pearl goods. Great sale to pilgrims and for export. The imports (see JAPA) are chiefly food, clothing and building materials. The population in 1905 was about 60,000 (Moslems 7000, Christians 13,000, Jews 40,000). During the pilgrimage season it is increased by about 15,000 travellers and pilgrims.

JERUSALEM, SYNOD OF (1672). By far the most important of the many synods held at Jerusalem (see Wetzler and Welte, Kirchenlexikon, 2nd ed., vi. 1357 sqq.) is that of 1672; and its consecration is the most vital statement of faith made in the Greek Church during the past thousand years. It refutes article by article the confession of Cyril Lucaris, which appeared in Latin at Geneva in 1629, and in Greek, with the addition of four "questions," in 1633. Lucaris, who died in 1653 as patriarch of Constantinople, had corresponded with Western scholars and had imbibed Calvinistic views. The great opposition which arose during his lifetime continued after his death, and found expression in the 1672 Synod, in the historic confession of the patriarchs of Mogilas, metropolitan of Kiev (1643). Though this was intended as a barrier against Calvinistic influences, certain Reformed writers, as well as Roman Catholics, persisted in claiming the support of the Greek Church for sundry of their own positions. Against the Calvinists the synod of 1672 therefore aimed its rejection of unconditional predestination and of justification by faith alone, also its advocacy of what are substantially the Roman doctrines of transubstantiation and of purgatory; the Oriental hostility to Calvinism had been fanned by the Jesuits. Against the Church of Rome however, there was directed the affirmation that the Holy Ghost proceeds from the Father and not from both Father and Son; this rejection of the filioque was not unweelcome to the Turks. Curiously enough, the synod refused to believe that the heretical confession it refused was actually by a former patriarch of Constantinople; yet the proofs of its genuineness seem to most scholars overwhelming. In negotiations between Anglican and Russian churchmen the concession of Dositeus1 usually comes to the front.

TEXTS.—The confession of Dositheus, or the eighteen decrees of the Synod of Jerusalem, appeared in 1676 at Paris as Synodus Synodice Jerusalems, in Acts and Councils, vol. viii, 703-705; Michalescu, 123 sqq. (See Councils.) (W. R. W.)

JESI (anc. Asis), a town and episcopal see of the Marches, Italy, in the province of Ancona, from which it is 17 m. by W. by rail, 313 ft. above sea-level. Pop. (1891), 23,285. The place took its ancient name from the river Asis (mod. Esino), upon the left bank of which it lies. It still retains its picturesque medieval town walls. The Palazzo del Comune is a fine, simple, early Renaissance building (1487-1503) by Francesco di Giorgio Martini; the walls are of brick and the window and door-frames of stone, with severely restrained ornamentation. The courtyard with its loggia was also done in the same good pictures by Lorenzo Lotto. The castle was built by Baccio Pontelli (1488), designer of the castle at Ostia (1483-1486). Jesi was the birthplace of the emperor Frederick II. (1194), and also of the musical composer, Giovanni Battista Fergolesi (1710-1730). The river Asis formed the boundary of Italy proper from about 250 B.C. to the time of Sulla (c. 82 B.C.); and, in Augustus’ division of Italy, that between Umbria (the 6th region) and Picenum (the 5th). The town itself was a colony, of little importance, except, apparently, as a furnishing-mountain.

JESUS in the Bible, the father of David (q.v.), and as such often regarded as the first in the genealogy of Jesus Christ (cf. Isa. xi. 10). Hence the phrase “tree of Jesse” is applied to a design representing the descent of Jesus from the royal line of David, formerly a favourite ecclesiastical ornament. From a recumbent figure of Jesse springs a tree bearing in its branches the chief figures in the line of descent, and terminating in the figure of Jesus, or of the Virgin and Child. There are remains of such a tree in the church of St Mary at Abercavenny, carved in wood, and supposed to have once stood behind the high altar. Jesus’ handkerbana were also much used. At Lzon and Amiens there are sculptured Jeses over the central west doorways of the cathedrals. The design was chiefly used in windows. The great east window at Wells and the window at the west end of the nave at Chartres are fine examples. There is a 16th-century Jesse window from Mechlin in St George’s, Hanover Square, London. The Jesse window in the choir of Durham Abbey, Oxfordshire, is remarkable in that the tree forms the central mullion, and many of the figures are represented as statuettes on the branches of the upper tracery; other figures are in the stained glass; the whole gives a beautiful example of the combination of glass and carved stonework in one design.

JESSE, EDWARD (1750-1868), English writer on natural history, was born on the 14th of January 1750, at Hutton Cranwick, Yorkshire, where his father was vicar of the parish. He became clerk in a government office in 1785, and for a time was secretary to Lord Dartmouth, when president of the Board of Control. In 1812 he was appointed commissioner of hackney coaches, and later he became deputy surveyor-general of the royal parks and palaces. On the abolition of this office he retired on a pension, and he died at Brighton on the 28th of March 1866.

The result of his interest in the habits and characteristics of animals was a series of pleasant and popular books on natural history, the principal of which are Gleanings in Natural History (with Latin text), An Account of the Animals and Birds of Jersey (1860); and Lectures on Natural History (1865). He also edited Isaak Walton’s Compleat Angler, Gilbert White’s Selbourne, and L. Ritchie’s Windsor Castle, and wrote a number of handbooks to places of interest, including Windsor and Hampton Court.

JESSE, JOHN HENSCHE (1815-1874), English historian, son of Edward Jesse, was educated at Eton, and afterwards

became a clerk in the secretary's department of the admiralty. He died in London on the 7th of July 1874. His poem on Mary Queen of Scots was published about 1831, and was followed by a collection of poems entitled Tales of the Dead. He also wrote a dramma, Richard III., and a fragmentary poem entitled London. None of these works achieved any success, but his numerous historical works are written with vivacity and interest, and, in their own style, are an important contribution to the history of England. They include Memoirs of the Court of England during the Reign of the Stuarts (1840), Memoirs of the Court of England from the Revolution of 1688 to the Death of George II. (1843), George Selwyn and his Contemporaries (1843, new ed. 1882), Memoirs of the Pretenders and their Adherents (1845), Memoirs of Richard the Third and his Contemporaries (1861), and Memoirs of the Life and Reign of King George the Third (1867). The titles of these works are sufficiently indicative of their character. They are sketches of the principal personages and of the social details of various periods in the history of England rather than complete and comprehensive historical narratives. In addition to these works Jesse wrote Literary and Historical Memorials of London (1847), London and its Celebrities (1850), and a new edition of this work as London: its Celebrated Characters and Remarkable Places (1871). His Memoirs of Celebrated Etonians appeared in 1875.

A collected edition containing most of his works in thirty volumes was published in London in 1901.

**JESSEL, SIR GEORGE** (1824-1883), English judge, was born in London on the 12th of February 1824. He was the son of Zadok Aaron Jessel, a Jewish coral merchant. George Jessel was educated at a school for Jews at Kew, and being prevented by then existing religious disabilities from proceeding to Oxford or Cambridge, went to University College, London. He entered as a student at Lincoln's Inn in 1842, and a year later took his B.A. degree at the university of London, becoming M.A. and gold medallist in mathematics and natural philosophy in 1844. In 1846 he became a fellow of University College, and in 1847 he was called to the bar at Lincoln's Inn. His earnings during his first three years at the bar were £3,568, and 795 guineas, from which it will be seen that his rise to a tolerably large practice was rapid. His work, however, was mainly conveyancing, and for long his income remained almost stationary. By degrees, however, he got more work, and was called within the bar in 1865, becoming a bencher of his Inn in the same year and practising in the Rolls Court. Jessel entered parliament as Liberal member for Dover in 1868, and although neither his intellect nor his oratory was of a class likely to commend itself to his fellow-members, he attracted Gladstone's attention by two learned speeches on the Bankruptcy Bill which was before the house in 1869, with the result that in 1873 he was appointed solicitor-general. His opinions at this time stood high in the chancery courts; on the common law side he was unknown, and on the first occasion upon which he came into the court of Queen's bench to move on behalf of the Crown, there was very nearly a collision between him and the bench. His forceful and direct method of bringing his arguments home to the bench was not modified in his subsequent practice before it. His great powers were fully recognized; his business in addition to that on behalf of the Crown became very large, and his income for three years before he was raised to the bench amounted to nearly £4,355. His work at this time was already, as master of the rolls. From 1873 to 1881 Jessel sat as a judge of first instance in the rolls court, being also a member of the court of appeal. In November 1874 the first Judicature Act came into effect, and in 1881 the Judicature Act of that year made the master of the rolls the ordinary president of the first court of appeal, relieving him of his duties as a judge of first instance. In the court of appeal Jessel presided almost to the day of his death. For some time before 1883 he suffered from diabetes with chronic disorder of the heart and liver, but struggled against it; on the 16th of March 1883 he sat in the court for the last time, and on the 21st of March he died at his residence in London, the immediate cause of death being cardiac syncopé.

As a judge of first instance Jessel was a revelation to those accustomed to the proverbial slowness of the chancery courts and of the master of the rolls who preceded him. He disposed of the business before him with rapidity combined with correctness of judgment, and he not only had no arraers himself, but was frequently able to help other judges to clear their lists. His knowledge of law and equity was wide and accurate, and his treatment of cases and command of the principles laid down in them extraordinary. In the rolls court he never reserved a judgment, not even in the Epping Forest case (Commissioners of Sewers v. Glasse, L.R. 19 Eq.; The Times, 11th November 1874), in which the evidence and arguments lasted twenty-two days (150 witnesses being examined in court, while the documents went back to the days of King John), and in the court of appeal he did so only twice, and then in deference to the wishes of his colleagues. The second of these two occasions was the case of Robarts v. The Corporation of London (49 Law Times 435; The Times, 10th March 1883, and those who may read Jessel's judgment should remember that, reviewing as it does the law and custom on the subject, and the records of the city with regard to the appointment of a remembrancer from the 16th century, together with the facts of the case before the court, it occupied nearly an hour to deliver, but was nevertheless delivered without notes—this, too, on the 9th of March 1883, when the judge who uttered it was within a fortnight of his death. Never during the 19th century was the business of any court performed so rapidly, punctually, and satisfactorily as it was when Jessel presided. He was master of the rolls at a momentous period of legal history. The Judicature Acts, completing the fusion of law and equity, were passed while he was judge of first instance, and were still new to the courts when he died. His knowledge and power of assimilating knowledge of all subjects, his mastery of every branch of law with which he had to concern himself, as well as of equity, together with his willingness to give effect to the new system, caused it to be said when he died that the success of the Judicature Acts would have been impossible without him. His faults as a judge lay in his disposition to be intolerant of those who, not able to follow the rapidity of his judgment, endeavoured to persist in an argument after he had made up his mind; but though he was peremptory with the most eminent counsel, young men had no cause to complain of his treatment of them.

Jessel sat on the royal commission for the amendment of the Medical Acts, taking an active part in the preparation of its report. He actively interested himself in the management of London University, of which he was a fellow from 1861, and of which he was elected vice-chancellor in 1880. He was one of the commissioners of patents, and trustee of the British Museum. He was also chairman of the committee of judges which drafted the new rules rendered necessary by the Judicature Acts. He was a member of the Judicature Act (1873-75) and vice-president of the council of education. He was also a fellow of the Royal Society. Jessel's career marks an epoch on the bench, owing to the active part taken by him in rendering the Judicature Acts effective, and also because he was the last judge capable of sitting in the House of Commons, a privilege of which he did not avail himself. He was the first Jew who, as solicitor-general, took a share in the executive government of his country, the first Jew who was sworn a regular member of the privy council, and the first Jew who took a seat on the judicial bench of Great Britain. While he was at the bar, he lived in Vauxhall garden, so situated that any one might have driven him from it, because, being a Jew, he was not qualified to be a member of the bar. In person Jessel was a stoutish, square-built man of middle height, with dark hair, somewhat heavy features, a fresh ruddy complexion, and a large mouth. He married in 1856 Amelia, daughter of Joseph Moses, who survived him together with three daughters and two sons, the elder of whom, Charles James (b. 1860), was made a baronet shortly after the death of his distinguished father and in recognition of his services.

See The Times, March 23, 1885; E. Manson, Builders of our Law (1904).

**JESSORE**, a town and district of British India, in the Presidency division of Bengal. The town is on the Bhairab river, with a railway station 75 m. N.E. of Calcutta. Pop. (1901), 8054.
**JESTER—JESUITS**

The District of Jessore has an area of 2925 sq. m. Pop. (1901), 1,813,155, showing a decrease of 4% in the decade. The district forms the central portion of the delta between the Hugli and the united Ganges and Brahmaputra. It is a vast alluvial plain intersected by rivers and watercourses, which in the southern portion spread out into large marshes. The northern part is intersected by numerous and large rivers; villages are numerous and large; and the people are prosperous. In the central portion the population is sparse, the only part suitable for dwellings being the high land on the banks of rivers. The principal rivers are the Madhumati or Haringhata (which forms the eastern boundary of the district), with its tributaries the Nabaganga, Chitra, and Bhabar; the Kumar, Kabadak, Katki, Harihar, Bhadra and Atharabanka. Within the last century the rivers in the interior of Jessore have ceased to be true deltaic rivers; and, whereas the northern portion of the district formerly lay under water for several months every year, it is now reached only by unusual inundations. The tide reaches as far north as the latitude of Jessore town. Jessore is the centre of sugar manufacture from date palms. The exports are sugar, rice, pulse, timber, honey, shells, &c.; the imports are salt, English goods, and cloth. The district is crossed by the Eastern Bengal railway, but the chief means of communication are waterways.

British administration was completely established in the district in 1781, when the governor-general ordered the opening of a court at Muruli near Jessore. Before that, however, the fiscal administration had been in the hands of the English, having been transferred to the East India company with that of the rest of Bengal in 1765. The changes in jurisdiction in Jessore have been very numerous. After many transfers and rectifications, the district was in 1863 finally constituted as it at present stands. The rajas of Jessore or Chanchra trace their origin to Bhabeswar Rai, a soldier in the army of Khan-i-Azam, an imperial general, who deprived Raja Pratapadiya, the popular hero of the Sundarban-s, of several fiscal divisions, and conferred them on Bhabeswar. But Manohar Rai (1499–1702) is regarded as the principal founder of the family. The estate when he inherited it was of moderate size, but he acquired one pargana after another, until, at his death, the property was by far the largest in the neighbourhood.

**JESTER** is a provider of "jests" or amusements, a buffoon, especially a professional fool at a royal court or in a nobleman's household (see Fool). The word "jest," from which "jester" is formed, is used from the 16th century for the earlier "gest," Lat. gesta, or res gestae, things done, from gerere, to do, hence deeds, exploits, especially as told in history, and so used of the merits of the heroes of the Middle Ages, and of the middle ages in general.

The word became applied to satirical writings and to any long-winded empty tale, and thence to a joke or piece of fun, the current meaning of the word.

**JESUATI** is a religious order founded by Giovanni Colombini of Siena in 1360. Colombini had been a prosperous merchant and a senator in his native city, but, coming under ecclesiastical influences, abandoned secular affairs and his wife and daughter (after making provision for them), and with a friend of like temperment, Francesco Miani, gave himself to a life of apostolic poverty, discipline, hospital service and public preaching. The name Jesuati was given to Colombini and his disciples from the habit of calling loudly on the name of Jesus at the beginning and end of their ecstatic sermons. The Senate banished Colombini from Siena for imparting foolish ideas to the young men of the city, and he continued his mission in Arezzo and other places, only to be honourably recalled home on the outbreak of a devastating pestilence. He went out to meet Urban V. on his return from Avignon to Rome in 1367, and craved his sanction for the new order and a distinctive habit. Before this was granted Colombini had to clench his fate in a struggle with a priory that it was not connected with the heretical sect of Fraticelli, and he died on the 31st of July 1367, soon after the papal approval had been given. The guidance of the new order, whose members (all lay brothers) gave themselves entirely to works of mercy, devolved upon Miani. Their rule of life, originally a compound of Benedictine and Franciscan elements, was later modified on Augustinian lines, but traces of the early penitential idea persisted, e.g. the wearing of sandals and a daily flagellation. Paul V. in 1666 arranged for a small proportion of clerical members, and later in the 17th century the Jesuati became so secularized that the members were known as the Aquatitae Fathers; their order was dissolved by Clement IX. in 1668. The female branch of the order, the Jesuati sisters, founded by Caterina Colombini (d. 1387) in Siena, and thence widely dispersed, more consistently maintained the primitive strictness of the society and survived the male branch by 200 years, existing until 1872 in small communities in Italy.

**JESUITS** is the name generally given to the members of the Society of Jesus, a religious order in the Roman Catholic Church, founded in 1539. This Society may be defined, in its original conception and well-avowed object, as a body of highly trained religious men of various degrees, bound by the three personal vows of poverty, chastity and obedience, together with, in some cases, a special vow to the pope's service, with the object of labouring for the spiritual good of themselves and their neighbours. They are declared to be mendicants and enjoy all the privileges of the other mendicant orders. They are governed and live by constitutions and rules, mostly drawn up by their founder, St Ignatius of Loyola, and approved by the popes. Their proper title is "Clerks Regular of the Society of Jesus." Their word for the discipline of the canon law was the term Spanish term, Compania; perhaps the military term Cokers might more fully have expressed the original idea of a band of spiritual soldiers living under martial law and discipline. The ordinary term "Jesuit" was given to the Society by its avowed opponents; it is first found in the writings of Calvin and in the registers of the Parliament of Paris as early as 1552.

**Constitution and Character.—**The formation of the Society was a masterpiece of genius on the part of a man (see LOYOLA) who was quick to realize the necessity of the moment. Just before Ignatius was expediencing the call to conversion, Luther had begun his ow;nt against the Roman Church by burning the papal bull of excommunication on the 10th of December 1520. But while Luther's most formidable opponent was thus being prepared in Spain, the actual formation of the Society was not to take place for eighteen years. Its conception seems to have developed very slowly in the mind of Ignatius. It introduced a new idea into the Church. Hitherto all regulars made a point of the choral office in choir. But as Ignatius conceived the Church to be in a state of war, what was desirable in days of peace ceased when the life of the cloister was exchanged for the life of war. The Jesuits proposed to change the sketch of the new society which he laid before Paul III, Ignatius laid down the principle that the obligation of the breviary should be fulfilled privately and separately and not in choir. The other orders, too, were bound by the idea of a constitutional monarchy based on the democratic spirit. Not so with the Society. The founder placed the general for life in an almost uncontrolled position of authority, giving him the faculty of dispensing individuals from the decrees of the highest legislative body, the general congregations. Thus the principle of military obedience was exalted to a degree higher than that obtaining in the other orders, which preserved to their members certain constitutional rights.

The soldier-mind of Ignatius can be seen throughout the constitutions. Even in the spiritual labours which the Society shares with the other orders, its own ways of dealing with persons and things result from the system of training which succeeds in forming men to think alike in certain ways. It is characteristic of the Society that it has acquired the power of teaching for itself new methods of thinking and doing. A principle which now the Society holds is that in practice the rule of the Society and the high degree of obedience demanded result in mere mechanism. By a system of check and counter check devised in the constitutions the power of local superiors is modified so that in practice the working is smooth. Ignatius knew that while a high ideal was necessary for every society, his followers were flesh and blood, not machines. He made it clear from the first that the Society was everything and the individual nothing, except so far as he might prove a useful instrument for carrying out the Society's objects. Ignatius said to his
secretary Polanco that "in those who offered themselves he looked less for the goodness of the heart than for the ability for business, for he was of opinion that those who were not fit for public business were not adapted for filling offices in the Society." He further declared that even exceptional qualities and endowments must be subordinated to the superior's will and his own condition of being brought into play, or held in abeyance, strictly at the command of a superior. Hence his teaching on obedience was the subject of a composed letter to the Governor of Coimbra in 1553, still one of the standard formularies of the Society, ranking with those other products of his pen, the Spiritual Exercises and the Constitutions. In this letter Ignatius clothes the gentleman in the robe of a competitor for a most liberal giving him the absolute disposal of all members of the Society in every place and for every purpose. He pushes the claim even further, requiring, besides entire outward submission to community, also the complete submission of the will will to that of the superior. He lays down that the superior is to be obeyed simply as such and as standing in the place of God, without reference to his personal judgment. He speaks of obedience as short of making the superior's will one's own, in inward affection as well as outward effect, is lax and imperfect; that going beyond the letter of command, even in things abstractly good and praiseworthy, is disobedience, and that the "sacrifice of the intellect" is the third and highest grade of obedience, well pleasing to God, when the inferior not only wills what the superior wills, but thinks what he thinks, submits to his judgment and wills, it is perfectly necessary and he will fulfill the guidance and lead the judgment. This Letter on Obedience was written for the guidance and formation of Ignatius's own followers; it was an entirely domestic affair. But when it became known, and found its way into the treatises of spiritual life, especially from members of other orders whose institutes represented the normal days of peace rather than those of war. The letter was condemned by the Inquisitions of Spain and Portugal, and was then added to the Index of Forbidden Books and banned together with the whole influence of the Society, to aver what seemed to be a probable condemnation at Rome.

The superior must be understood in the living spirit of the Society. Ignatius himself lays down the rule that an inferior is bound to make all necessary representations to his superior so as to guide him in imposing a precept of obedience. When a superior knows the views of his inferior and wills and commands, it is but not is aware of other sides of the question which appear of greater importance than those that the inferior has brought forward. Ignatius distinctly excepts the case where obedience in itself would be justifiable; it is only that he do so with the approval of his superior and not my own." There may be cases where an inferior judges that what is commanded is unlawful. What is to be done? Ignatius says: "When it seems to me that I am commanded by my superior to do a thing against which my conscience revolts as sinful and my superior judges otherwise, it is my duty to yield to his judgment; unless I am otherwise constrained by evident reasons, I should appear in a graver conscience obedience, I can not have my doubts to two or three persons of discretion and abide by their decision from this it is clear that only in doubtful cases concerning sin should an inferior try to submit his judgment to that of his superior, who to do so not should be permitted by one who is not clearly such a judge, but also a competent judge who knows and understands, better than the inferior, the nature and aspect of the command under consideration, because it cannot be clearly impossible that he should be bound to obey in what is directly opposed to the divine service. A Jesuit lives in obedience all his life, though the yoke is not calling nor always felt. He can accept no dignity or office which will make him independent of the Society, and even if ordered by the pope to accept the cardinalate or the episcopate, he is still bound, if not to obey, yet to listen to the advice of those whom the general deputes to counsel him in important matters.

The Jesuits had to find their principal work in the world and in direct and immediate contact with mankind. To seek spiritual perfection in a life of contemplation and perpetual prayer and fasting was contrary to Ignatius to be the best way of reforming the evils which had brought about the revolt from Rome. He withdrew his followers from this sort of retirement, except as a mere temporary preparation for labor and penance. He made the mission the prime duty; and to this end he rigidly suppressed all such external peculiarities of dress or rule as tended to put obstacles in the way of his followers acting freely as emissaries, agents or missionaries in the most various places and circumstances. Another change he introduced even more completely than did the founders of the Friars. The Jesuit has no home; the whole world is his parish. More than other orders are the very essence of the Society. As Ignatius said, the ancient monastic communities were the infantry of the Church, whose duty was to stand firmly in one place on the offensive; the Jesuits were the guards who were going anywhere as a command's notice, but especially apt and designed for scouting and skirmishing. To carry out this view, it was one of his plans to send foreigners as superiors or officers to the Jesuit houses in each country, reasoning of these envos, however, invariably to use the language of their new place of residence and to study it both in speaking and writing till entire mastery of it be had. This was accomplished thus by degrees making all the parts of his system mutually interchangeable, and so largely increasing the number of persons eligible to fill any given post without reference to locality. But subsequent experience has, in practice, modified this interchange of offices as far as locally possible, and tho' through the central government of the Society is always cosmopolitan.

Next we must consider the machinery by which the Society is constituted and governed so as to make its spirit a living energy and not a mere abstract theory. The Society is distributed into six grades: novices, scholastics, temporal coadjutors (lay brothers), spiritual coadjutors, professed of the three vows, and professed of the four vows. No one can become a postulant for admission to the Society until fourteen years old, unless by special dispensation. The novice is classified according as his destination is the priesthood or lay brotherhood, while a third class of revolted superior disobedience is reserved for any inquiry before a decision of this kind is made. The novice has first to undergo a strict retreat, practically in solitaria conformation, during which he receives from a director the Spiritual Exercises and makes a general confession of his whole life; after which the first novitiate of two years' duration begins. In this period of trial the real character of the man is discerned, his weak points are noted and his will is tested. Prayer and the practices of asceticism, as means to an end, are the chief occupations of the novice. He may leave or be dismissed at any time during the two years; but at the end of the period if he is approved and designated as a candidate for the grade of scholastic and takes the following simple vows in the presence of certain witnesses, but not to any person:

"Almighty Everlasting God, albeit everywhere most unworthy in Thy holy sight, yet relying on Thine infinite kindness and mercy and impelled by the desire of serving Thee, before the Most Holy Virgin and all Thy heavenly hosts, I, N., vow to Thy divine Majesty Poverty, Chastity and Perpetual Obedience to the Society of Jesus, and promise that I will enter the same Society to live in it perpetually, understanding all things according to the Constitutions of the Society. I will use Thy grace, Thy clemency, through the Blood of Jesus Christ, that Thou wilt deign to accept this sacrifice in the odour of sweetness; and as Thou hast granted me to desire and to offer this, so wilt Thou bestow abundant grace to fulfill it."

The scholastic then follows the ordinary course of an undergraduate at a university. After passing five years in arts he has, while still keeping up his own studies, to devote five or six years more to teaching the junior classes in various Jesuit schools or colleges. About this period he takes his simple vows in the following terms:

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M. in place of the General of the Society of Jesus and his successors holding the place of God), Poverty, Chastity and Obedience; and especially care in the education of boys, according to the manner expressed in the Apostolic Letter and Constitutions of the said Society."

The lay brothers leave out the clause concerning education. The scholastic does not begin the study of theology until he is twenty-eight or thirty, and then passes through a four or six years' course. Only when he is thirty-four or thirty-six can he be ordained a priest and enter on the grade of a spiritual coadjutor. A lay brother therefore has only the temporal coat of arms for the discharge of domestic duties, must pass ten years before he is admitted to vows. Sometimes after ordination the priest, in the midst of his work, is again called away to a third year's novitiate, called the tertianship, as a preparation for his solemn profession of the three vows. His former vows were simple and the Society was at liberty to dismiss him for any canonical reason. The formula of the famous Jesuit vow is as follows:

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M. in place of the General of the Society of Jesus and his successors holding the place of God), Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys according to
the form of life contained in the Apostolic Letters of the Society of Jesus and in its Constitutions."

Immediately after the vows the Jesuit adds the following simple vows: (1) that he will never act nor consent that the provisions in the constitutions concerning poverty should be changed; (2) that he will endeavor to have his election or promotion for himself to any prelacy or dignity in the Society; (3) that he will not accept or consent to his election to any dignity or prelacy outside the Society unless forced thereunto by obedience; (4) that if he knows of others doing these things he will denounce them to the superiors; (5) if elected to a bishopric he will never refuse to hear such advice as the general may deign to send him and will follow it if he judges it is better than his own opinion. The professed is now eligible to certain offices in the Society, and he may serve as a professed father in the three vows for the rest of his life. The highest class, who constitute the real core of the Society, whence all its chief officers are taken, are the professed of the four vows. This grade can seldom be reached until the candidate is in his forty-fifth year, which involves a probation of thirty-one years in the case of those who have entered on the novitiate at the earliest legal age. The number of these select members is small in comparison with the whole Society; the exact proportion varies from time to time, the present tendency being to increase the number. The vows of this grade are the same as the last formula, with the addition of the following clause:

"Moreover I promise the special obedience to the Sovereign Pontiff concerning missions, as is contained in the same Apostolic Letter and Constitutions."

These various members of the Society are distributed in its novitiate houses, its colleges, its professed houses and its mission residences. The question has been hotly debated whether, in addition to these six grades, there be not a seventh answering in some degree to the tertiaries of the Franciscan and Dominican orders, but secretly affiliated to the Society and acting as its emissaries in various lay positions. This class was styled in France "Jesuits of the short robe," and there is some evidence in support of its actual existence under Louis XV. The Jesuits themselves deny the existence of any such body, and are able to adduce the negative disproof that no provision for it is to be found in their constitutions. On the other hand there are clauses therein which make the creation of such a class perfectly feasible if thought expedient. An admitted instance is the case of Francisco Borgia, who in 1545, while still duke of Gandia, was received into the Society. What has given colour to the idea is that certain persons have made vows of obedience to the Jesuits; as Thomas Worthington, rector of the Douai seminary, to Father Robert Parsons; Ann Vaux to Fr. Henry Garnet, who told her that he was not indeed allowed to receive her vows, but that she might make them if she wished and then receive his direction. The archaeologist George Oliver of Exeter was, according to Foley's Records of the English Province, the last of the secular priests of England who vowed obedience to the Society before its suppression.

The general lives permanently at Rome and holds in his hands the most important of all the offices in the Society, not only to the office of provincial over each of the head districts into which the Society is mapped, but to the offices of each house in particular. There is no standard of electoral right in the Society except in the election of the general himself. By a minute and frequent system of official and private reports he is informed of the doings and progress of every member of the Society and of everything that concerns it throughout the world. Every Jesuit has not only the right but the duty in certain cases of communicating, directly and privately, with his general. While the general thus controls everything, he himself is not exempt from supervision on the part of the Society. A consultative council is imposed upon him by the general congregation, consisting of the assistants of the various nations, a socius, or adviser, to warn him of mistakes, and a confessor. These he cannot remove nor select; and he is bound, in certain circumstances, to listen to their advice, although he is not obliged to follow it. Once elected the general may not refuse the office, nor abdicate, nor accept any dignity or office outside of the Society; on the other hand, for certain definite reasons, he may be suspended or even deposed by the authority of the Society, which can thus preserve itself from destruction. No such instance has occurred, although steps were once taken in this direction in the case of a general who had set himself against the current feeling.

It is said that the general of the Jesuits is independent of the pope; and his popular name, "the black pope," has gone to confirm this idea. But it is based on an entirely wrong conception of the two offices. The suppression of the Society by Clement XIV. in 1773 was an object of the utmost purpose on the part of the Pope. The Society was found to have become exceedingly numerous and, from time to time, received extraordinary privileges from popes, who were warranted by the necessities of the times in granting them. A great number of influential friends, also, gathered round the fathers who, naturally, sought in every way to retain what had been granted. Popes who thought it well to bring about certain changes, or to withdraw privileges that were found to have passed their intentions or to interfere unduly with the rights of other bodies, often met with loyal resistances against their proposed measures. Resistance up to a certain point is lawful and is not disobedience, for every society has the right of self-preservation. In cases where the popes insisted, in spite of the representations of the Jesuits, their commands were obeyed. Many of the popes were distinctly unfavourable to the Society, while others were as friendly, and often what one pope did against them the next pope withdrew. Whatever was done in time, when strong divergence of opinion existed, and whatever may have been the actions of individuals who, even in so highly organized a body as the Society, were controlled by their superiors, yet the ultimate result on the part of the Society has always been obedience to the pope, who authorized, protected and privileged them, and on whom they ultimately depend for their very existence.

Thus constituted, with a skillful union of strictness and freedom, of complex organization with a minimum of friction in working, the Society was admirably devised for its purpose of introducing a new power into the Church and the world. Though not a separate Church service, it accomplished much, single-handed, to roll back the tide of Protestant advance when half of Europe, which had not already shaken off its allegiance to the papacy, was threatening to do so. The honours of the reaction belong to the Jesuits, and the reactionary spirit has become their tradition. They had the wisdom to see and to admit, in their correspondence with their superiors, that the real cause of the Reformation was the ignorance, neglect and vicious lives of so many priests. They recognized, as most earnest men did, that the difficulty was in the higher places, and that these could best be touched by indirect methods. At first the Jesuits came to the Church with the burden of the damage; if the Church could be saved, by present remedies, it would be saved; and it is possible that in most places become a mere effete and pedantic adherence to obsolete methods, they were bold enough to innovate, both in system and material. Putting fresh spirit and devotion into the work, they not merely taught and catechized in a new, fresh and attractive manner, besides establishing free schools of good quality, but provided new school books for their pupils which were an enormous advance on those they found in use; so that for nearly three centuries the Jesuits were the best schoolmasters in Europe, as they were, till their forcible suppression by the First Vatican Council in 1870, the most zealous and most liberal in their spirit and direction. The Jesuit teachers conciliated the goodwill of their pupils by mingled firmness and gentleness. Although the method of the Ratio Studiorum has ceased to be acceptable, yet it played in its time as serious a part in the intellectual development of Europe as did the method of Frederick the Great in modern warfare. Bacon succinctly gives his opinion of the Jesuit teaching in these words: "As for the pedagogical part, the shortest rule would be, Consult the schools of the Jesuits; for nothing better has been put in practice" (De Augmentis, vii. 4). In instruction they were excellent; but in education, or formation of character, deficiencies. Again, the discipline could be rigorous, and sank, more or less, into the moral and intellectual slough which is pictured for us in the writings of Erasmus and the Epistola obscurorum virorum (see Hutten, Ulrich von), the Jesuits won back respect for the clerical calling by their personal culture
and the unimpeachable purity of their lives. These qualities they have carefully maintained; and probably no large body of men in the world has been so free from the reproach of discreditable members or has kept up, on the whole, an equally high average of intelligence and conduct. As preachers, too, they delivered the pulpit from the bondage of an effete scholasticism and reached at once a clearness and simplicity of treatment such as the English pulpit scarcely begins to exhibit till after the days of Tillotson; while in literature and theology they count a far larger number of respectable writers than any other religious society can boast. It is in the mission field, however, that their achievements have been most remarkable. Whether toiling among the teeming millions in Hindustan and China, labouring amongst the Hurons and Iroquois of North America, governing and civilizing the natives of Brazil and Paraguay in the missions and "reductions," or ministering, at the hourly risk of his life to his fellow-Catholics in England under Elizabeth and the Stuarts, the Jesuit appears alike devout, indefatigable, cheerful and worthy of hearty admiration and respect.

Nevertheless, two startling and indisputable facts meet the student who pursues the history of the Society. The first is the universal suspicion and hostility it has incurred—not merely from the Protestants whose avowed foe it has been, not yet from the enemies of all clericalism and dogma, but from every Catholic state and nation in the world. Its chief enemies have been those of the household of the Roman Catholic faith. The second fact is the ultimate failure which marked the fall of its most promising schemes and efforts. These two results are to be observed alike in the provinces of morals and politics. The first cause of the opposition indeed redounds to the Jesuits' credit, for it was largely due to their success. Their pulpit rang with a studied eloquence; their churches, sumptuous and attractive, were crowded; and in the confessional their advice was eagerly sought in all kinds of difficulties, for they were the fashionable professors of the art of direction. Full of enthusiasm and zeal, devoted wholly to their Society, they were able to bring to numbers of rich and influential persons to their ranks; and, with a clear understanding of the power of wealth, they became, of set purpose, the apostles of the rich and influential. The Jesuits felt that they were the new men, the men of the time; so with a perfect confidence in themselves they went out to set the Church to rights. It was no wonder that success, so well worked for and so well deserved, failed to win the approval or sympathy of those who found themselves supplanted. Old-fashioned men, to whom the apostles' advice to "do all to the glory of God" seemed sufficient, mistrusted those who professed to go beyond all others and adopt as their motto the maxims of Paul, "Gloria in excelsis Deo!" Yet, besides this, the spirit de corps which is necessary for every body of men was, it was held, carried to an excess and made the Jesuits intolerant of any one or anything if not of "ours." The novelty too which they introduced into the conception of the religious life, naturally, were displeasing to the older orders, who felt like old aristocratic families towards a newly rich or purse-proud upstart. The Society, or rather its members, were too aggressive and self-assertive to be welcomed; and a certain characteristic, which to their Society they were able to bring, in numbers of rich and control, showed that the quality of "Jesuitry," usually associated with the Society, was singularly lacking in their dealings with opponents. Their political attitude also alienated many. Many of the Jesuits could not separate religion from politics. To say this is only to assert that they were not clearer-minded than most men of their age. But unfortunately they invariably took the wrong side and allowed themselves to be made the tools of men who saw farther and more clearly than they did. They had their share, direct or indirect, in the embroiling of states, in concocting conspiracies and in kindling wars. They were also responsible by their theoretical teachings in theological schools, where cases were considered and treated in the abstract, for not a few assassinations of the enemies of the cause. Weak minds heard tyrannicide discussed and defended in the abstract; and it was no wonder that, when opportunity served, the train that had been heedlessly laid by speculative professors was fired by rash hands. What professors like Suarez taught in the calm atmosphere of the lecture hall, what writers like Mariana upheld and praised, practical men took as justification for deeds of blood. There is no evidence that any Jesuit took a direct part in political assassinations; however, indirectly, they may have been morally responsible. They were playing with edged tools and often got wounded through their own carelessness. Other grievances were raised by their perpetual meddling in politics, e.g., their large share in fanning the flames of political hatred against the Huguenots under the last two Valois kings; their perpetual plotting against England in the reign of Elizabeth; their share in the Thirty Years' War and in the religious miseries of Bohemia; their decisive influence in causing the revocation of the edict of Nantes and the expulsion of the Protestants from France; the ruin of the Stuart cause under James II., and the establishment of the Protestant succession. In a number of cases where the evidence against them is defective, it is at least an unfortunate coincidence that there is always direct proof of some Jesuit having been in communication with the actual agents engaged. They were the stormy petrels of politics. Yet the Jesuits, as a body, should not be made responsible for the doings of men who, in their political intrigues, were going directly against the distinct law of the Society, which in strict terms, and under heavy penalties, forbade them to have anything to do with such matters. In other cases, they may have been in number, though unfortunately they held high rank; and their disobedience to the rule besmirched the name of the society and destroyed the good work of the other Jesuits who were faithfully carrying out their own proper duties.

A far graver cause for uneasiness was given by the Jesuits' activity in the region of doctrine and morals. Here the charges against them are precise, early, numerous and weighty. Their founder himself was arrested, more than once, by the Inquisition and required to give account of his belief and conduct. But St. Ignatius, with all his powerful intellect, was entirely from France; the ruin of the Stuart cause under James II., and the establishment of the Protestant succession. Jesuits

Jesuit moral theologians have again and again been condemned by the pope and declared untenable. Many of these can be found in Viva’s Condemned Propositions. As early as 1554 the Jesuits were censured by the Sorbonne, chiefly at the instance of Eustache de Bellay, bishop of Paris, as being dangerous in matters of faith. Melchior Cano, a Dominican, one of the divines of the 16th century, never ceased to lift up his testimony against them, from their first beginnings till his own death in 1590; and, unanointed by the bire of the bishopric of the Canaries, which their interest procured for him, he succeeded in banishing them from the university of Salamanca. Carlo Borromeo, to whose original advocacy they owed much, especially in the council of Trent, found himself attacked in his own cathedral pulpit and interfered with in his jurisdiction. He withdrew his protection and expelled them from his colleges and churches; and he was followed in 1604 in this policy by his cousin and successor Cardinal Federigo Borromeo. St. Theresa learnt, in after years, to mistrust their methods, although she was grateful to them for much assistance in the first years of her work.

The credit of the Society was seriously damaged by the publication, at Cracow, in 1602, of the Monita Secreta. This book, which is undoubtedly a forgery, professes to contain the authoritative secret instructions drawn up by the general Acquaviva and given by the superiors of the Society to its various officers and members. A bold caricature of Jesuit methods, the book has been more popular than that of the kindred works by Antoine Arnauld, Théologie morale des Jésuites, consisting of extracts from writings of members of the Society, and Morale pratique des Jésuites, made up of narratives professing to set forth the manner in which they carried out their own maxims. But, like most controversial writers, the authors were not scrupulous in their quotations, and by giving passages divorced from their contexts often entirely misrepresented their opponents. The immediate reply on the part of the Jesuits, The Discourses of Cleander and Eudea by Père Daniel, could not compete with Pascal’s work in brilliancy, wit or style; moreover, it was unfortunate enough to be put upon the Index of Prohibited Books in 1702.

The reply on behalf of the Society to Pascal’s charges of lax morality, apart from general denials, is broadly as follows:

1. St. Ignatius himself, the founder of the Society, had a special aversion from untruthfulness in all its forms, from quibbling, equivocation or even studied obscurity of language, and it would be contrary to the spirit of conformity with his example and institutions for his followers to think and act otherwise. Hence, any who practised equivocation were, so far, unfaithful to the Society.

2. Several of the cases cited by Pascal are mere abstract hypotheses, many of them now obsolete, argued simply as intellectual exercises, but having no practical bearing whatever.

3. Even such as do belong to the sphere of actual life are of the nature of counsel to spiritual physicians, how to deal with exceptional maladies; and were never intended to fix the standard of moral obligation for the general public.

4. The theory that they were intended for this latter purpose is, in the opinion of the Jesuits, the ground of this misunderstanding of the controversy.

5. The Society itself has no difficulty in asserting its life independently of such excesses or, in time, in freeing itself from them.

A charge persistently made against the Society is that it teaches the end justifies the means. And the words of Busemann, whose Meditatio theologiae has gone through more than fifty editions, are quoted in proof. It is true that Busemann uses these words: Cui eicitur est finis etiam licent media. But on turning to his work (ed. Paris 1729, p. 584, or Lib. vi. Tract vi. cap. ii., De sacramentis, dubium il.) it will be found that the author is making no universal application of an old and important subject (concerning certain lawful liberties in the marital relation) beyond which his words cannot be forced. The sense in which other Jesuits understood (Ignatius Sambucus 1570; Robert Morus, moralis (Munich, 1562), and Ludwig Wagemann (1713–1729), in his Synopsis theologiae moralis (Innsbruck, 1762)—quote the axiom in an equally harmless piece of common sense. For instance, if it is a question of saving a life by doing a bad act and another good one, the better is the better.

So when Wagemann says tersely Finis determinat probitatem actus he is clearly referring to acts which in themselves are indifferent, and none will pronounce as licit until the motive has been added. One neither good nor bad in itself. The morality of any specified shooting depends upon what is shot, and the circumstances attending that; shooting a man in self-defence is, as a moral act, on an entirely different footing than shooting a man in murder. It has never been proved, and never can be proved, although the attempt has frequently been made, that the Jesuits ever taught the nefarious proposition ascribed to them, which would be entirely subversive of all morality. Again, the doctrine of probabilism is utterly misunderstood. It is based on an accurate conception of law. Law to bind must be clear and definite; if it be not so, its obligation ceases and every act of action comes under the judgment of the conscience against a clear and definite law; but when a law is doubtful in its application, in certain circumstances, so is the obligation of the act. As a general principle of legal practice, law is the same at all, so it superinduces no obligation. Hence, probable opinion is one, founded on reason and held on serious grounds, that the law does not apply to certain specified cases; and that the law-giver who does not inform himself is not in a position to judge by law. In moral matters a probable opinion, that is one held on no trivial grounds but by unprejudiced and solid thinkers, has no place where the voice of conscience is clear, distinct and formed.

Two causes have been at work to produce the universal failure of the great Society in all its plans and efforts. First stands its lack of really great intellects. It has had its golden age. No society can keep up to its highest level. Nothing can be wider of the truth than the popular misconception of the Jesuit as a being of almost superhuman abilities and universal knowledge. The Society, numbering as it does so many thousands, and with abundant means of devoting men to special branches of study, has, without doubt, produced men of great intelligence and solid learning. The average member, too, on account of his long and systematic training, is always equal and often superior to the average member of any other equally large body, besides being disciplined by a far more perfect drill. But it has been too great a universal plan out of great plans, and has too many great men, as the outside world knows and judges, the Society has been markedly barren from almost the first. Apart from its founder and his early companion, St. Francis Xavier, there is none who stands in the very first rank. Laynez and Acquaviva were able administrators and politicians; the Bollandists (p.r.) were industrious workers and have developed a critical spirit from which much good can be expected; Francisco Suarez,
Leonard Lessius and Cardinal Franzelin were some of the leading Jesuit theologians; Cornelius a Lapide (1567–1637) represents their old school of scriptural studies, while their new German writers are the most advanced of all orthodoxy higher critics; the French Louis Bouladrois (q.v.), the Italian Paolo Segneri (1624–1694), and the Portuguese Antonio Vieyra (1608–1667) represent their best pulpit orators; some of the greatest intellectual productions by the Society Angelo Secchi, Ruggiero Giuseppe Bosovich and G.B. Beccaria are conspicuous, and in modern times Stephen Joseph Perry (1833–1880), director of the Stonyhurst College observatory, took a high rank among men of science. Their boldest and most original thinker, Denis Petua, so many years neglected, is now, by inspiring Cardinal Newman’s Essay on the Development of Christian Doctrine, producing a permanent influence over the current of human thought. The Jesuits have produced no Aquinas, no Anselm, no Bacon, no Richelieu. Men whom they trained, and who broke loose from their teaching, Pascal, Descartes, Voltair, have powerfully affected the philosophical and religious beliefs of great masses of mankind; but respectable mediocrity is the brand on the long list of Jesuit names in the catalogues of Aegambe and De Backer. This is doubtless due in great measure to the destructive process of scooping out the will of the Jesuit novice, to replace it with that of his superior (as a watchmaker might fit a new movement into a case), and thereby tending, in most cases, to annihilate those subtle qualities of individuality and originality which are essential to genius. Men of the higher stamp will either refuse to submit to the process and become sterile and the same, or be reduced to groveling from the mill with their finest qualities pulverized and useless. In accordance with the spirit of its founder, who wished to secure uniformity in the judgment of his followers even in points left open by the Church (“Let us all think the same way, let us all speak in the same manner if possible”), the Society has shown itself to be impatient of those who think or write in a way different from what is current in its ranks.

Nor is this all. The Ratio Studiorum, devised by Aquaviva and still obligatory in the colleges of the Society, lays down rules which are incompatible with all breadth and progress in the higher forms of education. True to the anti-speculative and traditional side of the founder’s mind, it prescribes that, even where religious topics are not in question, the teacher is not to permit any novel opinions or discussions to be mooted; nor to cite or allow others to cite the opinions of an author not of known repute; nor to teach or suffer to be taught anything contrary to the prevalent opinions of acknowledged divines. Obscure and false opinions are not to be mentioned at all, even for refutation, nor are objections to received teaching to be dwelt on at any length. The result is that the Jesuit emerges from his schools without any real knowledge or skill in the sciences. He has thought those things which are instilled into him. The professor of Biblical Literature is always to support and defend the Vulgate and can never prefer the marginal readings from the Hebrew and Greek. The Septuagint, as far as it is incorrupt, is to be held not less authentic than the Vulgate. In philosophy Aristotle is always to be followed, and St Thomas Aquinas generally, care being taken to speak respectfully of him even when abandoning his opinions, though now it is customary for the Jesuit teachers to explain him in their own sense. De vera mente D. Thomas is no unfamiliar expression in their books. It is not wonderful, under such a method of training, fixed as it has been in minute detail for more than three hundred years, that highly cultivated commonplace should be the inevitable average result; and that in proportion as Jesuit power has become dominant in Christendom, especially in ecclesiastical circles, the same doom of intellectual sterility and consequent loss of influence with the higher and thoughtful classes, has separated the part from the whole. The initial mistake in the formation of character is that the Jesuits have aimed at educating boys in the same way, that is, always advisable for their own novices, for whom obedience and direction is the one thing necessary; whereas for lay people the right use of liberty and initiative are to be desired.

The second cause which has blighted the efforts of the Society is the lesson, too faithfully learnt and practised, of making its corporate interests the first object at all times and in all places. Many feel that the Jesuits have shown more zeal in maintaining with the other members of the Church than directly or indirectly at mastery. The most brilliant exception to this rule is found in some of the missions of the Society and notably in that of St Francis Xavier (p.89). But he quitted Europe in 1541 before the new society, especially under Laynez, had hardened into its final mould; and he never returned. His work, so far as can be gathered from contemporary accounts, was not done on true Jesuit lines as they afterwards developed, though the Society has reaped all the credit; and it is even possible that, had he been able to lay his hands on the foundation on which his name might not have received that political and self-seeking turn which Laynez, as second general, gave at the critical moment.

It would almost seem that careful selection was made of the men of the greatest piety and enthusiasm, whose unworldliness made them less apt for diplomatic intrigues, to break new ground in the various missions where their success would throw lustre on the Church, or where their services might best be employed. The men are not to be found easily; and, as they died off, the tendency was to fill their places with more ordinary characters, whose aim was to strengthen the power and prestige of the body. He has an especial tendency to heathen rites in Hindustan and China, and the attempted subjugation of the English Catholic clergy. The first successes of the Indian mission were entirely among the lower classes; but when, in 1609, Robert de Nobili, a nephew of Bellarmine, to win the Brahmns, adopted their dress and mode of life—a step sanctioned by Gregory XV. in 1623 and by Clement XI. in 1707—the fathers who followed his example pushed the same caste-feeling so far that the Brahmns and the mandarins would be obliged to return to their parishes lest the Brahm converts should take offence—an attempt which was reported to Rome and was vainly censured by the brevissimae XVII. by Pius XI. in 1844. Gregory XIII. in 1579, and Clement XIV. in 1739, and Benedict XIV. in 1745. The Chinese rites, assailed with equal success by one pope after another, were not finally put down until 1744 by a bull of Benedict XIV. For Japan, where it was a question of the conversion of the people, we have a remarkable letter, printed by Lucas Wadding in the Annales minorum, addressed to Paul V. by Soleta, a Franciscan missionary, who was martyred in 1624, in which he complains to the pope that the Jesuits systematically postponed the spiritual welfare of the native Christians to their own convenience and advantage; while as regards the test of martyrdom, no such result had followed on their teaching, but only that of the other orders who had undertaken missionary work in Japan. Yet soon many Jesuit martyrs in Japan were to shed a new glory on the Society (see JAPAN: Foreign Intercourse). Again, even in Paraguay, the most promising of all Jesuit undertakings, the evidence shows that the fathers, though they did their best to the population just sufficiently to make them useful and docile servants, happier no doubt than they were before or after, stopped there. While the mission was begun on the rational principle of governing races still in their childhood by methods adapted to that stage in their mental development, yet for one hundred and fifty years the “reductions” were conducted in the same manner, and when the hour of trial came the Jesuit civilization fell like a house of cards.

These examples are sufficient to explain the final collapse of so many promising efforts. The individual Jesuit might be, and often was, a hero, saint and martyr, but the system which he was obliged to administer was foredoomed to failure; and the success which came in 1773 was the result of force and threat elements they had set in antagonism without the power of controlling.

The influence of the Society since its restoration in 1814 has not been marked with greater success than in its previous history. It was natural after the restoration that an attempt should be made to pick up again the threads that were dropped; but soon they came to realize the truth of the saying of St Ignatius: “The Society shall adapt itself to the times and not the times to the Society.” The political conditions of Europe have completely changed, and constitutionalism, though civilizing the Guaraní, or the African slave, has not prevented the Jesuits being able to bring to bear upon the heads of states. In Europe they confine themselves mainly to educational and ecclesiastical politics, although both Germany and France have followed the example of Portugal and refuse, on political grounds, to allow them to be in these countries. It would appear as though some of the Jesuits had not, even yet, learnt the lesson that meddling with politics has always been their ruin. The main cause of any difficulty that may exist to-day with the Society is that the Jesuits are true to the teaching of that remarkable man, Martin de Rado, the author of the Regulae (probably written by John Tollenarius in 1640), by identifying the Church with their own body, and being intolerant of all who will not share this view. Their power is still large in certain sections of the ecclesiastical
world, but in secular affairs it is small. Moreover within the church itself there is a strong and growing feeling that the interests of Catholicism may necessitate a second and final suppression of the Society. Cardinal Manning, a keen observer of times and influences, was wont to say:—"The work of 1773 was the work of God; and there is another 1773 coming."

But this is the due season of the papal government, as in the 18th century, but to the action of the Church itself. The very nations which have cast out the Society have shown no disposition to accept its own estimate and identify it with the Church; while the Church itself is not conscious of depending upon the Society. To the Church the Jesuits have been what the Janissaries were to the Ottoman Empire, at first its defenders and its champions, but in the end its taskmasters.

History.—The separate article on Loyola tells of his early years, his conversion, and his first gathering of companions. It was not until November 1535, when all hope of going to the Holy Land was given up, that any outward steps were taken to form these companions into an organized body. It was on the eve of their going to Rome, for the second time, that the fathers met Ignatius at Venice and it was determined to adopt a common rule and, at the suggestion of Ignatius, the name of the Company of Jesus. Whatever may have been his private hopes and intentions, it was not until he, Laynez and Faber (Pierre Levevre), in the name of their companions, were sent to lay their services at the feet of the pope that the history of the Society really begins.

On their arrival at Rome the three Jesuits were favourably received by Paul III., who at once appointed Faber to the chair of scripture and Laynez to that of scholastic theology in the university of the Sapienza. But they encountered much opposition and were even charged with heresy; when this accusation had been disposed of, there were still difficulties in the way of starting any new order. Despite the approval of Cardinal Contarini and the good will of the pope (who is said to have exclaimed on perusing the scheme of Ignatius, "The finger of God is here"), there was a strong and general disposition among the faithful to demand that this new society should not be wisely developed farther. Cardinal Guidicioni, one of the commission of three appointed to examine the draft constitution, was known to advocate the abolition of all the existing orders, so far as which were to be remodelled and put under strict control. That year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadoleto, Caraffa (afterwards Paul IV.), Fregoso and others, had reported that the conventual orders, which they had to deal with, had drifted into such a state that they should all be abolished. Not only so, but, when greater strictness of rule and of exercise was prescribed for the members, which had become too secular in tone, the proposal of Ignatius, to make that the first principle that the members of his institute should mix freely in the world and be as little marked off as possible externally from secular life, was viewed with great disfavour. Ignatius was therefore able to save that Caraffa's then recent order of Theatines, which had some analogy with the proposed Society, had taken some steps in the same direction.

Ignatius and his companions, however, had but little doubt of ultimate success, and so bound themselves, on the 15th of April 1535, to obey any superior chosen from amongst their body, and added on the 4th of May certain other rules, the most important of which was a vow of special allegiance to the pope for mission purposes to be taken by all the members of the society. But Guidicioni, on a careful study of the papers, changed his mind; it is supposed that the cause of this change was in large measure the strong interest in the new scheme exhibited by John III., king of Portugal, who instructed his ambassador to press it on the pope and to ask Ignatius to send secretaries for Spain. The Society, for Portugal, in Portugal's Indian possessions, Francis Xavier and Simon Rodriguez were sent to the king in March 1540. Obstacles being cleared away, Paul III., on the 27th of September 1540, issued his bull Regimini militantis ecclesiae, by which he confirmed the new Society (the term "order" does not belong to it), but limited the members to sixty, a restriction which was removed by the same pope in the bull Injunction nobis of the 14th of March 1543. In the former bull, not only the order of the new Society, but the entire form of the scheme of the proposed society, and in it we get the founder's own ideas: "... This Society, instituted to this special end, namely, the conversion of all the nations, shall have for its object in life and Christian doctrine, for the propagation of the faith by public preaching and the ministry of the word of God, spiritual exercises and works of charity and, especially, by the instruction of children ... and by this means the salvation of the world, and by the consolation of the faithful in Christ in hearing confessions."

In this original scheme it is clearly marked out that this entire Society and all its members fight for God under the faithful obedience of the most sacred lord, the pope, and the other Roman pontiffs his successors, of St. Ignatius's plan, and Ignatius states that the Jesuit member should "be bound by a special vow," beyond that formal obligation under which all Christians are of obeying the pope, "so that the Jesuit member, over and above the Roman pontiffs for the time being shall ordain, pertaining to the advancement of souls and the propagation of the faith, to whatever provinces he shall resolve to send us, we are straightway bound to obey, as far as in us lies, without any forgiverness or excuse, whether he send us among the Turks or to any other unbelievers in being, even to those parts called India, or to any heretics or schismatics or likewise to any believers." Obedience to the general is enjoined "in all things pertaining to the institute of the Society ... and in him they shall acknowledge Christ as though present, and as far as is becoming venerate him": poverty is enjoined, and this rule affects not only the individuals, but the entire community. They promised that in the case of colleges revenues are allowed "to be applied to the wants and necessities of the students"; and the private recitation of the Office is distinctly mentioned. On the other hand, the perpetuity of the general's office during his life was no part of the original scheme.

On the 7th of April 1544, Ignatius was unanimously chosen general. His refusal of this post was overruled, so he entered on his office on the 13th of April; and two days after, the newly constituted Society took its formal corporate vows in the basilica of San Paolo fuori le mura, and the pope, very wisely, was the Society launched into life. The new members dispersed in various places, and there were no further tasks. Alfonso Salmeron and Pasquier-Brouet, as papal delegates, were sent on a secret mission to Ireland to encourage the native clergy and people to resist the religious changes introduced by Henry VIII.; Nicholas Bobadilla went to Naples; Faber, first to the diet of Worms and then to Spain; Laynez and Claude le Jay to Germany, while Ignatius busied himself at Rome in good works and in drawing up the constitutions and completing the Spiritual Exercises. Success crowned these first efforts; and the Society began to win golden opinions. The first college was founded at Rome in 1542 by John III., of Portugal, at the suggestion of the rectorship of Rodriguez. It was designed as a training college to feed the Indian mission of which Francis Xavier had already taken the oversight, while a seminary at Goa was the second institution founded outside Rome in connexion with the Society. Both from the original scheme and from the foundation at Coimbra it is clear that the original idea of the colleges was to provide for the education of future Jesuits. In Spain, national pride in the founder aided the Society's cause almost as much as royal patronage did in Portugal; and the third house was opened in Granada under the patronage of the local viceroy, Francisco Borgia, a brother-in-law of Alexander VI. In Germany, the Jesuits were eagerly welcomed as the only persons able to meet the Lutherans on equal terms. Only in France, among the countries which were still united with the Roman Church, was their advance checked, owing to political distrust of their Spanish origins, together with the hostility of the Sorbonne and the bishop of Paris. However, after many difficulties, they succeeded in getting a footing through the help of Guillaume du Prat, bishop of Clermont (d. 1560), who founded a college for them in 1543 in the town of Bilhom, besides making over to them his house at Paris, the hôtel de Clermont, which became the nucleus of the afterwards famous college of Louis-le-Grand, while a formal legalization was granted to them by the states-general at Poissy in 1561. In Rome, Paul III.'s favour did not lessen. He bestowed on them the church of St. Andrea and conferred at the same time the valuable privilege of making and altering their own statutes; besides the other points, in 1546, which Ignatius had still more at heart, as touching the very essence of his institute, namely, exemption from ecclesiastical offices and dignities and from the task of acting as directors and confessors to convents of women. In what other matters Ignatius and his companions put forth these measures effectually stopped and kept to the interests of the best members away from the society and limited their hopes within its bounds, by putting them more freely at the general's disposal, especially as it was provided that the final vows could not be annulled, nor could a professed member be dismissed, save by the joint action of the general and the pope. The regulation as to convents seems partly due to a desire to avoid the worry and expenditure of time involved in the discharge of such offices.
and partly to a conviction that penitents living in enclosure, as all religious persons then were, would be of no effective use to the Society; whereas the founder, against the wishes of several of his companions, laid much stress on the duty of accepting the post of confessor to kings, queens and women of high rank when opportunities presented itself. And the year 1546 is notable in the annals of the Society, as it witnessed the great educational career, especially by the annexation of free-day schools to all its colleges.

The council of Trent, in its first period, seemed to increase the reputation of the Society; for the pope chose Laynez, Faber and Salmeron to act as his theologians in that assembly, and in this capacity, albeit with little influence on the body passing the decrees, the council reassembled under Pius IV., Laynez and Salmeron again attended in the same capacity. It is sometimes said that the council formally approved of the Society. This is impossible; for as the Society was occupying itself about regulars, that it should make some honourable mention of the Society in order to recommend it. This would be in the twenty-fifth session (cap. XVI., d. 1.) where the decree was passed that at the end of the time of probation novices should either be professed or dismissed; and the words of the council are: "By these things; however, the Synod does not intend to make an attack on the Society, but it is of the opinion that the novices of the Clerks of the Society of Jesus from being able to serve God and His Church, in accordance with their pious institute approved of by the Holy Apostolic See.

In 1548 the Society received a valuable recruit in the person of Francisco Borgia, duke of Gandia, afterwards thrice general, while two important events marked 1550—the foundation of the Collegio Romano and a fresh confirmation of the Society by Julius III. The German college, for the children of poor nobles, was founded in 1552; and in the same year Ignatius himself settled the discipline of the Society by putting down, with promptness and severity, some attempts at independent action on the part of Rodriguez de Cimbrés—a thing being the occasion of the famous letter on obedience; while 1553 saw the despatch of a mission to Abyssinia with one of the fathers as patriarch, and the first rift within the lute when the pope thought that the Spanish Jesuits were taking part with the emperor against the Holy See. Paul IV. (whose election alarmed the Jesuits, for they had formerly endeavoured to cast it away as circuitous for the reform of the Church) was with supreme tact by Ignatius, whom he respected personally.

In 1556, the founder died and left the Society consisting of forty-five professed fathers and two thousand ordinary members, distributed over twelve provinces, with more than a hundred colleges and houses.

After the death of the first general there was an interregnum of two years, with Laynez as vicar. During this long period he occupied the powers of the general. Laynez, taking a leading part in the colloquy of Poissy in 1563, between the Catholics and Huguenots; and obtained a legal footing from the general-councils for the Society in France. He died in 1564, leaving the Society inhabited with eighty-eight houses, and his seat was succeeded by Francisco Borgia. During the third generalate, Pius V. confirmed all the former privileges, and in the amplest manner dedicated to the Society a mendicant institute, all favours that had been or might afterwards be enjoyed by the Society, and appointed the first superior general. It was a trifling set-off that in 1567 the pope again enjoined the fathers to keep church and to admit only the professed novices; and the General, enacting in the same year a decree against the Albanian band in 1573; and, indeed, as regards the hours, all that Pius V. was able to obtain was the nominal concession that the brethren would be recited in church in the professed houses only, and that not of necessity by more than two persons at a time. Gerard Mercurian, a Fleming, and a subject of Spain, succeeded Borgia in 1573, being forced on the Society by the pope, in preference to Ferdinand Guise, whom the general’s character was rejected partly as a Spaniard and still more because he was a “New Christian” of Jewish origin and therefore objected to in Spain itself. During his term of office there took place the troubles in Rome concerning the English college and the subsequent Jesuit insurrection; and in 1560 the first Jesuit mission, headed by the recoulerable Robert Parsons and the saintly Edmund Campion, set out for England. This mission, on one side, carried on an active propaganda against Elizabeth in favour of Spain; and on the other, among the true missionaries, was marked with devoted zeal and heroism even to the ghastly death of traitors. Claude Legrand, who died in the fifty-fourth year of his age, was almost coinciding with the high tide of the successful reaction, chiefly due to the Jesuits. He was an able, strong-willed man, and crushed what was tantamount to a rebellion in Spain. It was during this year that Marquis de la Plata and Rodrigo de Castro, authors of De rege in which he defends tyrannicide, wrote their treatise On the Defects in the Government of the Society. He confessed daily to the pope of the manifold faults and errors committed by the members; and he mentioned among the various points in which he wished for reform the education of the novices and students; the state of the lay brother and the possessions of the Society; the spying system, which he declared to be carried so far that, if the general’s archives at Rome should be searched, not one Jesuit’s character would be found to escape; the monopoly of the higher offices by a small clique: and the absence of all encouragement and recompense for the best members of the Society.

It was chiefly during the generalship of Acquaviva that the Society began to gain an evil reputation which eclipsed its good report. To France the Jesuits joined, if they did not originate, the league against Henry de Navarre. Absolution was refused by them to those who would not join in the Guise rebellion, and Acquaviva is said to have tried to stop them, but in vain. The assassination of Henry III. in the interests of the league and the wounding of Henry IV. in 1594 by Chastel, a pupil of theirs, revealed the danger that the whole Society was running by the intrigues of a few men. The Jesuits were banished from France in 1594, but were allowed to return by Henry IV. under conditions; as Sully has recorded, the king declared his only motive to be the expediency of the country, and the possible disastrous results to his life, and because his only hope of tranquillity lay in appeasing them and their powerful friends. In England the political schemings of Parsons were no small factors in the odium which fell on the Society at large; and his determination to capture the English Catholics as an apanage of the Society, to the exclusion of all else, was an object lesson to the rest of Europe of a restless ambition and lust of domination which were to find many imitators. The political turn which was being given by some to the Society, to the detriment of its religious work and general work for the spiritual welfare of the body; and in the fifth general congregation held in 1593-1594 it was decreed: “Whereas in these times of difficulty and danger it has happened through the fault of certain individuals, through ambition and intemperate zeal, that our institute has been ill spoken of in divers places and before divers sovereigns, it is severely and strictly forbidden to all members of the Society to interfere in any manner whatever in public affairs even though they be hereto invited; or to devote from the institute through entreaty, persuasion or any other motive whatever.’ It would be well if Acquaviva enforced this decree, but Parsons was allowed to keep on with his work, and other Jesuits in France for many years after directed, to the loss of religion, affairs of state. In 1605 took place in England the Gunpowder Plot, in which Henry Garnet, the superior of the Society in
England, was implicated. That the Jesuits were the instigators of the plot there is no evidence, but they were in close touch with the conspirators, of whose designs Garnet had a general knowledge. There is now no reasonable doubt that he and other Jesuits were the chief agents in the plot. Whether Garnet was a conspirator and Jesuit, as he was accused by Henry VIII., or, as he denies, merely a speculator, Garnet as a traitor was substantially just (see Garnet, Henry).

It was during Acquaviva's generalship that Philip II. of Spain complained bitterly of the Society to Sixtus V., and encouraged him in his plans of reform (even to changing the name) which were only cut short by the pope's death in 1559, and also to the long protracted discussions on grace, wherein the Dominicans contended against the Jesuits, were carried on at Rome with little practical result. But the trouble emerged fresh from it in 1606. The 

\[ \text{Ratio Studiorum} \] 

took its shape during this time. The Jesuit influence at Rome was supported by the Spanish ambassador; but when Henry IV. went to Mass, "the balance inclined to the side of France," and "the bank which the Jesuits maintain there." Acquaviva saw the expulsion of the Jesuits from Venice in 1606 for siding with Paul V. when he placed the republic under interdict, but did not live to see their recall, which took place at the intercession of Louis XIV. in 1654. He also had to banish Parsons from Rome, by order of Clement VIII., who was wearied with the perpetual complaints made against that intrigue. Gregory XIV., by the bull "Jucunda," July 30, 1673, nullified, and another of the Society, and granted that Jesuits might, for true cause, be expelled from the body without any form of trial or even documentary procedure, besides denouncing excommunicactions against every one, say it was from a Jesuit, who did not agree with it. Directly the constitutions of the Society or attempted to bring about any change therein.

Under Vitelleschi, the next general, the Society celebrated its first centenary on the 28th of September 1639, the hundredth anniversary of the verbal approbation given to the scheme by Paul III. During this hundred years the Society had grown to thirty-six province, and with eight hundred and thirty thousand members. In 1640 broke out the great Jansenist controversy, in which the Society took the leading part on one side and finally secured the victory. In this same year, considering themselves ill-used by Olivares, prime minister of Philip IV., the Jesuits powerfully aided the revolution which placed the duke of Braganza on the throne of Portugal: and their services were rewarded by a stipend granted to them, with the practical control of ecclesiastical and almost of civil affairs in the kingdom.

The Society also gained ground steadily in France; for, though held in check by Richelieu and little more favoured by Mazarin, yet from the moment that Louis XIV. took the reins, their star was in the ascendant, and Jesuit confessors, the most celebrated of whom were Francisco de La Chaise (q.v.) and Michel Le Tellier (1643-1719), guided the policy of the king; not hesitating to take his side in his quarrel with the Holy See, which nearly resulted in a schism, nor to sign the Gallican articles. Their hostility to the Huguenots forced on the revocation of the Edict of Nantes in 1685, and their war with the French Protestants can not cease until the walls of Port Royal were demolished in 1710, even to the very abbey church itself, and the bodies of the dead taken with every mark of insult from their graves and literally flung to the dogs to devour. But it was not long before the Society which had ventured so far was in another. The Japanese mission had vanished in blood in 1631; and though many Jesuits died with their converts bravely as martyrs for the faith, it was impossible to acquit them of a large share in the causes of that overthrow. It was also about this same period that the great scandal of the Chinese and Malabar rite began to attract attention in Europe, and to make the thinking men ask seriously whether the Jesuit missionaries in those parts taught anything which could fairly be called Christianity at all. When it was remembered, too, that they had decided, at a council held at Lima, that it was inexpedient to impose any act of Christian devotion except baptism on the South American converts, without the agent's intercessions, on the ground of intellectual difficulties, it is not wonderful that this doubt was not satisfactorily cleared up, notably in face of the charges made by the Society by Bernardino de Cardona, bishop of Paraguay, and the saintly Juan de Palafox (q.v.), bishop of Angélopolis in Mexico.

But "the terrible power in the universal church, the great riches and the extraordinary prestige" of the Society, which Palafox complained had raised it "above all dignities, laws, councils and apostolic constitutions," carried with them the seeds of rapid and inevitable decay. A succession of devout but incapable generals, after a group of opposite and secularizing tendencies, was brought about by the flocking in of recruits of rank and wealth desirous to share in the glories and influence of the Society, but not well adapted to increase its spiritual dignity and prosperity. There was a shock when the eleventh general congregation appointed Olivera as vicar-general, but he was then the right of succession and powers that practically superseded those of the general Goswin Nickel, whose infirmities, it is said, did not permit him to fulfill his duties. "This necessary and vigorous attempt, was made to depose Tirso Gonzalez, the thirteenth general, whose views on probability diverged from those favoured by the rest of the Jesuits. Though the political weight of the Society continued in the hands of Europe, it was brought into internal decay. The Jesuits abandoned the system of free education which had won them so much influence and honour; by attaching themselves exclusively to the interests of courts, they lost favour with the people and their control over the concords, by the loss of power and patronage in France, with the fatal use they had made of it, drew down the bitterest hostility upon them. It was to this, that the emasculated condition of those representatives of Christianity, but they are accountable in no small degree in France, as in England, for alienating the minds of men from the religion for which they professed to work.

But the most fatal part of the policy of the Society was its activity, wealth and importance as a great trading firm with branch houses scattered over the richest countries of the world. Its founder, with a wise instinct, had forbidden the accumulation of wealth; its own constitutions, as revised in 1618 by decree, the sixth general congregation, had forbidden all pursuit of a commercial nature, as also had various popes; but nevertheless the trade went on unceasingly, necessarily with the full knowledge of the general, unless it be pleaded that the system of obligatory espionage had completely broken down. The first muttering of the storm which was soon to break was heard in a breve issued in 1741 by Benedict XIV., wherein he denounced the Jesuit offenders as "disobedient, contumacious, captious and reprobate persons," and enacted many stringent regulations for the effective government of their world-wide society, with the first success in Portugal, the only country where they had been long dominant. In 1753 Spain and Portugal exchanged certain American provinces with each other, which involved a transfer of sovereign rights over Paraguay; but it was also provided that the populations should severally migrate also, that the subjects of each crown might remain the same as before. The inhabitants of the "reductions," whom the Jesuits had trained in the use of European arms and discipline, naturally rose in defence of their homes, and attacked the troops and authorities. Their previous docility and their entire submission to the Jesuits left no possible doubt of the loyalty of the rebellious几个 kings who had the Jesuits to handle against them that was not forgotten. In 1759 Carvalho, marquis of Pombal, prime minister of Joseph I. of Portugal, and an old pupil of the Jesuits at Coimbra, dismissed the three Jesuit chaplains of the king and named three secular priests in their stead. He next complained to Benedict XIV. that the trading operations of the Society hampered the commercial prosperity of the nation, and asked for remedial measures. The pope, who knew the situation, committed a visitation of the Society to Cardinal Saldanha, an intimate friend of Pombal, who issued a decree in 1758 against the Jesuits and ordered the confiscation of all their merchandise. But at this juncture Benedict XIV., the most learned and able pope of the period, was succeeded by a pope strongly in favour of the Jesuits, Clement XIII. Pombal, finding no help from Rome, adopted other means. The king was fired at and wounded on returning from a visit to his mistress on the 3rd of September 1758. The duke of Aveiro and other high personages were tried and executed for conspiracy; while some of the Jesuits, who had undoubtedly been in communication with them, were charged, on doubtful evidence, with complicity in the attempted assassination. Pombal charged that the whole Society with the possible guilt of a few, and, unwilling to wait the dubious issue of an application to the pope for licence to try them in the civil courts, whence they were exempt, issued on the 1st of September 1759 a decree ordering the immediate deportation of every Jesuit from Portugal and all its dependencies and their suppression by the bishops in the schools and universities. Those in Portugal were at once shipped, in great misery, to the papal states, and were soon followed by those in the colonies. In France, Madame de Pompadour was their enemy because they had refused her admission while she remained the king's mistress; but the immediate cause of their ruin was the bankruptcy of Father Lavalette, the Jesuit superior in Martinique, a daring speculator, who failed, after trading for some years, for 2,400,000 francs and brought ruin upon some French commercial houses of note. Lorenzo Ricci, then general of the Society, repudiated the debt, alleging lack of authority on Lavalette's part to pledge
the credit of the Society, and he was sued by the creditors. Losing his cause, he appealed to the parlement of Paris, and it, to decide the issue raised by Ricci, required the constitutions of the Jesuits to be produced in evidence, and affirmed the judgment of the courts below. But the publicity given to a document scarcely known till then raised the utmost indignation against the Society. A royal commission, appointed by the duc de Choiseul to examine the constitutions, convoked a private assembly of fifty-one archbishops and bishops under the presidency of Cardinal de Luynes, all of whom except six voted that the unlimited authority of the general was incompatible with the laws of France, and that the appointment of a resident vicar, subject to those laws, was the only solution of the question fair on all sides. Ricci replied with the historical answer, Sint ut sunt, aut non sint; and after some further delay, during which much interest was exerted in their favour, the Jesuits suppressed the Society, which in 1764, but suffered to remain on the footing of secular priests, a grace withdrawn in 1767, when they were expelled from the kingdom. In the very same year, Charles III. of Spain, a monarch known for personal devoutness, convinced, on evidence not now forthcoming, that the Jesuits were plotting against his authority, prepared, through his minister D'Aranda, a decree suppressing the Society in every part of his dominions. Sealed dispatches were sent to every Spanish colony, to be opened on the same day, the 2nd of April 1767, when the measure was to take effect in Spain itself, and the expulsion was relentlessly carried out. Nearly six thousand priests being deported from Spain alone, and sent to the Italian coast, whence, however, they were repelled by the orders of the pope and Ricci himself, finding a refuge at Corte in Corsica, after some months' suffering in overcrowded vessels at sea. The general's object may probably have been to accentuate the harshness with which the fathers had been treated, and so to increase public sympathy, but the actual result of his policy was blame for the cruelty with which he enhanced their misfortunes, for the poverty of Corsica made even a bare subsistence scarcely procurable for them there. The Bourbon courts of Naples and Parma followed the example of France and Spain. Clement XIII. retorted with a bull launched at the weakest adversary, and declaring the rank and title of the duke of Parma forfeit. The Bourbon sovereigns threatened to make war on the pope in return (France, indeed, seizing on the county of Avignon), and a joint note demanding a retraction, and the abolition of the Jesuits, was presented by the French ambassador at Rome on the 10th of December 1768 in the name of France, Spain and the two Sicilies. The pope, a man of eighty-two, died of apoplexy, brought on by the shock, early in 1769. Cardinal Lorenzo Ganganelli, a conventual Franciscan, was chosen to succeed him, and took the name of Clement XIV. He endeavoured to avert the decision foreseen by the Pope, who joined the Bourbon league, and Maria Theresa with her son the emperor Joseph II. ceased to protect the Jesuits, there remained only the petty kingdom of Sardinia in their favour, though the fall of Choiseul in France raised the hopes of the Society for a time. The pope began with some preliminary measures, permitting first the renewal of lawsuits against the Society, which had been suspended by papal authority, and which, indeed, had in no case been ever successful at Rome. He then closed the Collegio Romano, on the plea of its insolvency, seized the houses at Frascati and Tivoli, and broke up the establishments in Bologna and the Legations. Finally, on the 21st of July 1773, the famous breve Dominus ac Redemptor appeared, suppressing the Society of Jesus. This remarkable document opens by citing a long series of precedents for the suppression of religious orders by the Holy See, amongst which occurs the ill-omened instance of the Templars. It then briefly sketches the objects and history of the Jesuits themselves. It speaks of their defiance of their own constitution, expressly revived by Paul V., forbidding them to meddle in politics; of the great ruin to souls caused by their quarells with local ordinaries and the other religious orders, their condescension to heathen usages in the East, and the prejudices, resulting in persecution against, which they had stirred up, in Catholic countries, so that several popes had been obliged to punish them. Seeing then that the Catholic sove-
regins had been forced to expel them, that many bishops and other eminent persons demanded their extinction, and that the Society had ceased to fulfil the intention of its institute, the pope declares it unnecessary for the peace of the Church that it should be suppressed, extinguished, abolished and abrogated for ever, with all its houses, colleges, schools and hospitals; transfers all the authority of its general or officers to the local ordinaries; forbids the reception of any more novices, directing that such as were actually in probation should be dismissed, and declaring that profession in the Society should not serve as a title to holy orders. Priests of the Society are given the option of either joining other orders or remaining as secular clergy, under obedience to the ordinaries, who are empowered to grant or withhold from them licences to hear confessions. Such of the fathers as are engaged in politics; in the ministry; or in the care of the sick, they are permitted to continue, on condition of abstaining from lax and questionable doctrines apt to cause strife and trouble. The question of missions is reserved, and the relaxations granted to the Society in such matters as fasting, reciting the hours and reading heretical books, are withdrawn; while the breve ends with clauses carefully drawn to bar any legal exceptions that might be taken against its full validity and obligation. It has been necessary to cite these heads of the breve because the apologists of the Society allege that no motive influenced the pope save the desire of peace at any price, and that he did not believe in the culpability of the fathers. The catego-
rical charges made in the document, the excommunication, the pope followed up this breve by appointing a congregation of cardinals to take possession of the temporalities of the Society, and armed it with summary powers against all who should attempt to retain or conceal any of the property. He also threw Lorenzo Ricci, the general, into prison, first in the English college and then in the castle of St Angelo, where he died in 1775, under the pontificate of Pius VI., who, though not unfavourable to the Society, and owing his own advancement to it, dared not release him, probably because his continued imprisonment was made a condition by the powers who enjoyed a right of veto in papal elections. In September 1774, Clement XIV, died after much suffering, and the question has been hotly debated ever since whether poison was the cause of his death. But the latest re-
searches have shown that there is no evidence to support the theory of poison. Salicetti, the pope's physician, denied that the body showed signs of poisoning, and Tanucci, Neapolitan ambassador at Rome, who had a large share in procuring the breve of suppression, entirely acquires the Jesuits, while F. Theiner, no friend to the Society, does the like.

At the date of this suppression, the Society had 41 provinces and 22,580 members, of whom 11,995 were priests. Far from this being the end of the matter, it was only the beginning. Effectual attempts at direct resistance, withdrew into the terri-
ories of the free-thinking sovereigns of Russia and Prussia, Frederick II. and Catherine II., who became their active friends and protectors; and the fathers alleged as a principle, in so far as their theology is concerned, that no papal bull is binding in a state whose sovereign has not approved and authorized its publica-
tion and execution. Russia formed the headquarters of the Society, and two forged breves were speedily circulated, being dated June 9 and June 29, 1774, approving their establishment in Russia, and implying the repeal of the breve of suppression. But these are contradicted by the tenor of five genuine breves issued in September 1774 to the archbishop of Gnesen, and making certain assurances to the ex-Jesuits, on condition of their complete obedience to the injunctions already laid on them. The Jesuits also pleaded a verbal approbation by Pius VI., technically known as an Oraculum vitae vocis, but this is invalid for purposes of law unless reduced to writing and duly authenticated.

They elected three Poles successively as generals, taking, how-
ever, only the title of vicars, till on the 7th of March 1801 Pius VII. granted them liberty to reconstitute themselves in north Russia, and permitted Karew to found the first of these 346
the pope thus anticipating the further action of 1814, when, by the constitution Sollicitudo omnium Ecclesiarum, he revoked the action of Clement XIV., and formally restored the Society to corporate legal existence, yet not only omitted any censure of his predecessor’s conduct, but all vindication of the Jesuits from the heavy charges in the breve Dominus ac Redemptor. In France, even after their expulsion in 1765, they had maintained a precarious footing in the country under the partial disguise and names of "Fathers of the Faith," or "Clerks of the Sacred Heart," but were obliged by Napoleon I. to retire in 1804. They reappeared under their true name in 1814, and obtained formal licence in 1822, but became the objects of so much hostility that Charles X. deprived them by ordinance of the right of instruction, and applied a general law which made oath that they did not belong to any community unrecognized by the laws. They were dispersed again by the revolution of July 1830, but soon reappeared and, though put to much inconvenience during the latter years of Louis Philippe’s reign, notably in 1845, maintained their footing, recovered the right to teach freely after the revolution of 1848, and gradually became the leading educational and ecclesiastical power in France, notably under the Second Empire, till they were once more expelled by the Ferry laws of 1860, though they quietly returned since the execution of those laws. They have since been expanded by the Law of Associations of 1902. In Spain they came back with Ferdinand VII., but were expelled at the constitutional rising in 1820, returning in 1823, when the duke of Angoulême’s army replaced Ferdinand on his throne; they were driven out once more by Espartero in 1835, and have had no legal position since, though their presence is openly tolerated. In Portugal, ranging themselves on the side of Dom Miguel, they fell with his cause, and were exiled in 1834. There are some to this day in Lisbon under the name of "Fathers of the Faith," in Russia, which had been their warmest patron, drove them from St. Petersburg and Moscow in 1813, and from the whole empire in 1820, mainly on the plea of attempted proselytizing in the imperial army. Holland drove them out in 1816, and, by giving them thus a valid excuse for aiding the Belgian revolution of 1830, secured them the strong position they have ever since held in Belgium; but they have succeeded in returning to Holland. They were expelled from Switzerland in 1847–1848 for the part they were charged with in exciting the war of the Sonderbund. In South Germany, inclusive of Austria and Bavaria, their annals since their restoration have been less bloody than in northern Germany, where the king Frederick II. had given them in Prussia, they became very powerful, especially in the Rhine provinces, and, gradually mollusing the younger generation of clergy after the close of the War of Liberation, succeeded in spreading Ultramontane views amongst them, and so leading up to the difficulties with the civil government which issued in the Falk laws, and their own expulsion by decree of the German parliament (June 19, 1872). Since then many attempts have been made to procure the recall of the Society to the German Empire, but without success, although as individuals they are now allowed in the country. In Great Britain, whether they began to struggle over during the revolutionary troubles at the close of the 18th century, and where, practically unaffected by the clause directed against them in the Emancipation Act of 1829, their chief settlement has been at Stonyhurst in Lancashire, an estate conferred on them by Thomas Weld in 1795, they have been unmolested; but there has been little affinity to the order in the British temperament, and the English province has consequently never risen to numerical or intellectual importance in the Society. In Rome itself, its progress after the restoration was at first slow, for it was not till the reign of Leo XII. (1823–29) that it got any footing, and then as the chief educational body there. It advanced steadily under Gregory XVI., and, though it was at first shunned by Pius IX., it secured his entire confidence after his return from Gaeta in 1849, and obtained from him a special breve erecting the staff of its literary journal, the Civiltà Cattolica, into a perpetual college under the general of the Jesuits, for the purpose of teaching and propagating the faith in its pages. How, with this pope’s support throughout his long reign, the gradual filling of nearly all the sees of Latin Christendom with bishops of their own selection, and their practical capture, directly or indirectly, of the education of the clergy in seminaries, they contrived to stamp out the last remains of independence everywhere, and to crown the Ultramontane triumph with the Vatican Decrees, is matter of familiar knowledge. Leo XIII., while favouring them somewhat, never gave them his full confidence; and by his adhesion to the Thomist philosophy and theology, and his active work for the regeneration and progress of the older orders, he made another suppression possible by destroying much of their prestige. But the usual sequence has been observed under Pius X., who appeared to be greatly in favour of the Society and to regard them as the only means of his pontificate.

The Society has been ruled by twenty-five generals and four vicars from its foundation to the present day (1910). Of all the various nationalities represented in the Society, neither France, its original cradle, nor England, has ever given it a head, while Spain, Italy, Holland, Belgium, Germany and Poland, were all represented. The numbers of the Society are not accurately known, but are estimated at about 20,000, in all parts of the world; and of these the English, Irish and American Jesuits are under 3000.

The generals of the Jesuits have been as follow:—

1. Ignatius de Loyola (Spaniard) 1514–1556
2. Francis Xavier (Portuguese) 1506–1552
3. Francis Borgia (Spaniard) 1510–1572
4. Everard Mercurian (Belgian) 1563–1598
5. Claudio Acquaviva (Italian) 1572–1630
6.Erro Tigvet (Spaniard) 1617–1645
7. Vincenzo Caraffa (Neapolitan) 1646–1649
8. Francesco Piccolomini (Florentine) 1649–1651
9. Alessandro Gottorfoi (Italian) 1652–1663
10. Giovanni Paolo Oliva (Genoese) vicar-general and coadjutor, 1664–1681
11. Charles de Noelie (Belgian) 1682–1686
12. Tirso Gonzalez (Spaniard) 1687–1707
13. Michele Angelo Tamburini (Modenese) 1707–1739
14. Francesco Soresini (Ferrarese) 1739–1773
15. Ignazio Visconti (Milanese) 1754–1794
16. Alessandro Centurioni (Genoese) 1775–1797
17. Lorenzo Ricci (Florentine) 1798–1795
18. Stanislaus Czerniewicz (Pole), vicar-general 1799–1802
19. Gabriel Lienkiewicz (Pole) 1798–1798
20. Francis Xavier Karcu (Pole), (general in Russia, 1799–1802)
21. Gabriel Gruber (German) 1802–1805
22. Thaddeus Brzozowski (Polish) 1805–1806
23. Aloysio Fortis (Veronese) 1806–1829
24. Andreas Bona (Dutchman) 1829–1833
25. Peter Johannes Beck (Belgian) 1834–1883
26. Antoine Anderley (Swiss) 1884–1892
27. Louis Martin (Spanish) 1893–1906
28. Francisco Javier Varela (German) 1906–

The bibliography of Jesuitism is of enormous extent, and it is impracticable to cite more than a few of the most important works. They are as follows: Institutum Societatis Jesu (7 vols., Avignon, 1830–1838); Orlandini, Historia Societatis Jesu (Antwerp, 1620); Imago primi societatis Societatis Jesu (Antwerp, 1690); Nieremberg, Vida de San Ignacio de Loyola (9 vols., fol., Madrid, 1645–1736); Genelli, Life de St Ignatius de Loyola (London, 1872); Backer, Bibliographie des écrits pour la Compagnie de Jésus (7 vols., Paris, 1874–80); Crétez de Joly, Histoire de la Compagnie de Jésus (6 vols., Paris, 1844); Guettée, Histoire des Jésuites (3 vols., Paris, 1858–1859); Wolff, Allgemeine Geschichte der Jesuiten (4 vols., Zurich, 1789–1792); Gioberti, Il Gesuista moderno (Lausanne, 1846); F. Parkman, Pioneers of France in the New World and The Jesuits in North America (London and New York, 1867); R. G. Thwaites, Jesuit Relations and Allied Documents (73 vols., Cleveland, 1896–1901).

(R. F. L.; E. T.)

JESUP, MORRIS KETCHUM (1830–1898), American banker and philanthropist, was born at Westport, Connecticut, on the 21st of June 1830. In 1842 he went to New York City, where after some experience in business he established a banking house
in 1852. In 1856 he organized the banking firm of M. K. Jesup & Company, which after two reorganizations became Cuyler, Morgan & Jesup. He became widely known as a financier, retiring from active business in 1884. He was best known, however, as a munificent patron of scientific research, a large contributor to the needs of education, and a public-spirited citizen of wide interests, who did much for the betterment of social conditions in New York. He contributed largely to the funds for the Arctic expeditions of Commander Robert E. Peary, becoming president of the Peary Arctic Club in 1899. To the American museum of natural history, in New York City, he gave large sums in his lifetime and bequeathed $1,000,000. He was president of the New York chamber of commerce from 1890 until 1907, and was the largest subscriber to its new building. To his native town he gave a fine public library. He died in New York City on the 2nd of January 1908.

**JESUS CHRIST.** To write a summary account of the life of Christ, though always involving a grave responsibility, was until recent years a comparatively straightforward task; for it was assumed that all that was needed, or could be offered, was a chronological outline based on a harmony of the four canonical Gospels. But to-day history is not satisfied by this simple procedure. Literary criticism has analysed the documents, and has already established some important results; and many questions are still in debate, the answers to which must affect our judgment of the historical value of the existing narratives. It seems therefore consonant alike with their spirit and with the strain from attempting to combine afresh into a single picture the materials derivable from the various documents, and to endeavour instead to describe the main contents of the sources from which our knowledge of the Lord Jesus Christ as an historical personage is ultimately drawn, and to observe the picture of Him which each writer in turn has offered to us.

The chief elements of the evidence with which we shall deal are the following:

1. First, because earliest in point of time, the references to the Lord Jesus Christ in the earliest Epistles of St. Paul.
2. The Gospel according to St. Mark.
3. A document, no longer extant, which was partially incorporated into the Gospels of St. Matthew and St. Luke.

With regard to traditional sayings or doings of our Lord, which were only preserved a later period, it will suffice to say that those which have any claim to be genuine are very scanty, and that their genuineness has to be tested by their correspondence with the great bulk of the narrative which is derived from the sources just enumerated. The factitious literature of the second and third centuries, known as the Apocryphal Gospels, offers no direct evidence of any historical value at all: it is chiefly valuable for the contrast which it throws on the genuine. The grave sin of these canonical Gospels, and as showing how incapable a later age was of adding anything to the Gospel history which was not papyrus absurd.

1. **Letters of St. Paul.**—In the order of chronology we must give the first place to the earliest letters of St. Paul. The first piece of Christian literature which has an independent existence and to which we can fix a date is St. Paul's first Epistle to the Thessalonians. Lightfoot dates it in 52 or 53; Harnack places it five years earlier. We may say, then, that it was written some twenty years after the Crucifixion. St. Paul is not an historian; he is not attempting to describe what Jesus Christ said or did. He is writing a letter to encourage a little Christian society which he, a Jew, had founded in a distant Greek city; and he reminds his readers of many things which he had told them when he was with them. The evidence to be collected from his epistles generally must not detain us here, but we may glance for a moment at this one letter, because it contains what appears to be the first mention of Jesus Christ in the literature of the world. Those who would give a true historical account of Christianity must afford to neglect their earliest documents. Now the opening sentence of this letter is as follows: "Paul and Silvanus and Timothy to the Church of the Thessalonians in God the Father and the Lord Jesus Christ: Grace to you, and peace." Three men with Greek or Latin names are writing to some kind of assembly in a city of Macedonia.

The writers are Jews, to judge by their salutation of "peace," and by their mention of "God the Father," and of the assembly or society as being "in" Him. But what is this new name which is placed side by side with the Divine Name—"in God the Father and the Lord Jesus Christ"? An educated had spread to new something (as may be that by of the Greek translation of the ancient Hebrew Scriptures, if he had picked up this letter before he had ever heard the name of Jesus Christ, would have been deeply interested in these opening words. He would have known that "Jesus" was the Greek form of Joshua; that "Christ" was the Greek rendering of Messiah, or Anointed, the title of the great King for whom the Jews were looking; he might further have remembered that "the Lord" is the expression which the Greek Old Testament constantly uses instead of the ineffable name of God, which we now call "Jehovah" (q.e.). But if he could, he might in ask is this Jesus Christ who is lifted to this unexampled height? For it is plain that Jesus Christ stands in some close relation to "God the Father," and that on the ground of that relation a society has been built up, apparently by Jews, in a Greek city far distant from Palestine. He would learn something as he read on; for the letter makes a passing reference to the foundation of the society, and to the expansion of its influence in other parts of Greece; to the conversion of its members from heathenism, and to the consequent sufferings at the hands of their heathen neighbours. The writers speak of themselves as preachers of Christ, and to refer to similar societies as "in Christ Jesus," which they call "churches of God," in Judaea, and they say that these also suffer from the Jews there, who had "killed the Lord Jesus" some time before. But they further speak of Jesus as "raised from the dead," and they refer to the belief which they had led the society to entertain, that He would come again "from heaven to deliver them from the coming wrath." Moreover, they urge them not to grieve for certain members of the society who have already died, saying that, "if we believe that Jesus died and rose again, we may also be assured that "the dead in Christ will rise" and will live forever with Him." Thus the letter assumes that its readers already have considerable knowledge as to "the Lord Jesus Christ," and as to His relation to "God the Father," a knowledge derived from teaching given in person on a former visit. The purpose of the letter is not to give information as to the past, but to stimulate its readers to persevere by giving fresh teaching as to the future. Historically it is of great value as showing how widely within twenty or twenty-five years of the Crucifixion a religion which proclaimed developed theological teaching as to "the Lord Jesus Christ" had spread to the Roman Empire. We may draw a further conclusion from this and other letters of St. Paul before we go on. St. Paul's missionary work must have created a demand. Those who had heard him and read his letters would want to know more than he had told them of the earthly life of the Lord Jesus. They would wish to be able to picture Him to their minds; and especially to understand what could have led to His being put to death by the Romans at the requisition of the Jews. St. Paul had not been one of his personal disciples in Greece or Jerusalem; he had no memories to relate of His miracles; He taught nothing that the Church would consider an obvious need. And we may be sure that any such narrative concerning One who was so deeply revered would be most carefully scrutinized at a time when many were still living whose memories went back to the period of Our Lord's public ministry. One such narrative we now proceed to describe.

2. **St. Mark's Gospel.**—The Gospel according to St. Mark was written within fifteen years of the first letter of St. Paul to the Thessalonians—i.e. about 65. It seems designed to meet the requirements of Christians living far away from Palestine. The author was not an eyewitness of what he relates, but he writes with the firm security of a man who has the best authority behind him. The characteristics of his work confirm the early belief that St. Mark wrote this Gospel for the Christians of Rome under the guidance of St. Peter. It is of the first importance that

348
we should endeavour to see this book as a whole; to gain the total impression which it makes on the mind; to look at the picture of Jesus Christ which it offers. That picture must inevitably be an incomplete representation of Him; it will need to be supplemented by other books; and He came forth and bade them. But it is important to consider it by itself, as showing us what impress the Master had made on the memory of one disciple who had been almost constantly by His side.

The book opens thus: "The beginning of the Gospel of Jesus Christ." This "beginning" is shown to be itself rooted in the past. Hebrew prophets had foretold that God would send a "messenger," that a voice would be heard saying, "Prepare the way of the Lord." And so, in fact, John came, baptizing in the wilderness and turning the heart of the nation back to God. But John was only a forerunner. He was himself a prophet, and his prophecy was this, "He that is stronger than I am is coming after me." Then, we read, "Jesus came." St Mark introduces Him quite abruptly, just as he had introduced John; for he is writing for those who already know the outlines of the story. "Jesus came from Nazareth of Galilee." He was baptized by John, and as He came out of the water He had a vision of the opened heavens and the Holy Spirit, like a dove, descending upon Him, and He heard a Voice saying, "Thou art My Son, the Beloved, in Thee I am well pleased." He then passed away into the wilderness, where He was tempted by Satan and fed by angels. Then He begins His work; and from the very first we feel that He fulfils John's sign: He is strong. His first words are words of strength; "the time is fulfilled"—that is to say, all the past has been leading up to this great moment; "the kingdom of God is at hand"—that is to say, all your best hopes are on the point of being fulfilled; "reap, and believe the Gospel"—that is to say, turn from your sins and accept the tidings which I bring you. It is but a brief summary of what He must have said, but we feel its strength. He does not hesitate to fix all eyes upon Himself. Then He healed two brothers who are fishermen "Come after Me," He says, "and I will make you fishers of men." They dropped their nets and went after Him, and so did two other brothers, their partners; for they all felt the power of this Master of men: He was strong. He began to teach in the synagogue; they were astonished at His teaching, for He spoke with authority. He was interrupted by a demoniac, but He quelled the evil spirit by a word; He was stronger than the power of evil. When the sun set the Sabbath was at an end, and the people could carry out their sick into the street where He was and be healed; but He passed away all. The demonsiac showed a strange faculty of recognition, and cried that He was "the holy one of God," and "the Christ," but He silenced them at once. The next morning He was gone. He had sought a quiet spot for prayer. Peter, one of those fishermen whom He had called, whose wife's mother had been healed the day before, found Him and tried to bring Him back. "All men are seeking Thee," He pleaded. "Let us go elsewhere" was the quiet reply of one who could not be moved by popular enthusiasm. Once again, we observe, He fulfils John's sign: He is strong; but we feel its strength. This is our first sight of Jesus as teacher. The next shows us that this great strength is united to a most tender sympathy. To touch a leper was forbidden, and the offence involved ceremonial defilement. Yet when a leper declared that Jesus could heal him, if only He would, "He put forth His hand and touched him." The act perfected the leper's faith, and He was healed immediately. But he disobeyed the command to be silent about the matter, and the result was that Jesus could not openly enter into the town, but remained outside in the country. It is the first shadow that falls across His path; His power finds a check in human willfulness. Presently He is in Capernaum again. He heals a paralysed man, but not until He has come into touch, as we say, with him also, by reaching his deepest need and declaring the forgiveness of his sins. This declaration disturbs the rabbis, who regard it as a blasphemous usurpation of Divine authority. But He claims that "the Son of Man hath authority on earth to forgive sins." The title which He thus adopts must be considered later.

We may note, as we pass on, that He has again, in the exercise of His power and His sympathy, come into conflict with the established religious tradition. This freedom from the trammels of conventional approval is again when he claims as a new disciple a publican, a man whose calling as a tax-gatherer for the Roman government made him odious to every patriotic Jew. Publicans were classed with open sinners; and when Jesus went to this man's house and met a company of his fellows the rabbis were scandalized: "Why eateth your Master with publicans and sinners?" The gentle answer of Jesus showed His sympathy even with those who opposed Him: "The doctor," He said, "must go to the sick." And again, when He challenged His disciples for not observing the regular fasts, He gently reminded them that they themselves relaxed the discipline of fasting for a bridegroom's friends. And He added, in picturesque and pregnant sayings, that an old garment could not bear a new patch, and that old wine-skins could not take new wine. Such language was at once gentle and strong; without condemning the old, it claimed liberty for the new. To what lengths would this liberty go? The sacred badge of the Jews' religion, which marked them off from other men all the world over, was their observance of the Sabbath. It was a national emblem, the test of religious orthodoxy; the Sabbath was to them the parliamentary round with minute commands, lest any Jew should even seem to work on the Sabbath day. Thus, plucking and rubbing the ears of corn was counted a form of reaping and threshing. The hungry disciples had so transgressed as they walked through the fields of ripe corn. Jesus defended them by the example of David, who had eaten the shewbread, which only priests might eat, and had given it to his hungry men. Necessity absolves from ritual restrictions. And he went farther, and proclaimed a principle: "The Sabbath was made for man, and not man for the Sabbath." For a second time, in justifying His position, He used the expression "the Son of Man." The words might sound to Jewish ears merely as a synonym for "man." For Himself, and possibly for some others, they involved a reference, as appears later, to the "one like to a son of man" in Daniel's prophecy of the coming kingdom. They emphasized His relation to humanity as a whole, in contrast to such narrower titles as "Son of Abraham" or "Son of David." They were fitted to express a wider mission than that of a merely Jewish Messiah: He stood and spoke for mankind. But the controversy was renewed when Jesus was with a withered hand appeared for the Sabbath on the Sabbath, and the rabbis watched to see whether Jesus would heal him. For the first time, we read that Jesus was angry. They were wilfully blind, and they would rather not see good done than see it done in a way that contradicted their teachings and undermined their influence. After a sharp remonstrance, He healed the man by a mere word. And they went out to make a compact with the followers of the worldly Herod to kill Him, and so to stave off a religious revolution which might easily have been followed by political trouble. Yet the stage of Palestine, an outlying district of the Roman Empire, the home of the Jewish nation, now subject but still fired with the hope of freedom and even of universal domination under the leadership of a divinely anointed King, a new figure has appeared. His appearance has been announced by a reforming prophet, who has summoned the nation to return to its God, and promised that a stronger than himself is to follow. In fulfilment of this promise, who is it that has come? Not a rough prophet in the desert like John, not a leader striking for political freedom, but one who appears aiming at the petty throne of the Herods, not even a great rabbi, building on the patriotic foundation of the Pharisees who had secured the national life by a new devotion to the ancient law. None of these, but, on the contrary, an unknown figure from the remote hills of Galilee, standing on the populous shores of its lake, proclaiming as
a message from God that the highest hopes were about to be fulfilled, fastening attention on Himself by speaking with authority and attaching a few followers to His person, exhibiting wonderful powers of healing as a sign that He has come to fulfil all needs, manifesting at the same time an unparalleled sympathy, and setting quietly aside every religious convention which limited the outflow of this sympathy; and as the result of all this arousing the enthusiasm of astonished multitudes and evoking the opposition and even the murderous resentment of the religious guides of the nation. Of His teaching we have heard Lord Jesus speak and act, and we have often seen and witnessed which justified some of His unexpected actions. No party is formed, no programme is announced, no doctrine is formulated; without assuming the title of Messiah, He offers Himself as the centre of expectation, and seems to invite an unlimited confidence in His person. This, then, in brief summary, is what we have seen: the natural development of an historical situation, a march of events leading rapidly to a climax; an unexemplified strength and an unexamined sympathy issuing inevitably in an unexamined liberty; and then the forces of orthodox religion combing with the forces of worldly indifference. Yet, the writer who in a few pages presents us with so remarkable a representation shows no consciousness at all of artistic treatment. He tells a simple tale in the plainest words: he never stops to offer a comment or to point a moral. The wonder of it all is not in the writing, but in the subject itself. We feel that we have here no skilful composition, but a bare transcript of what occurred. And we feel besides that such a narrative as this is the worthy commencement of an answer to the question with which its readers would have come to it: What was the beginning of the Gospel? How did the Lord Jesus speak and act, and why did He arouse such malignant enmity amongst His own people?

We have followed St Mark's narrative up to the point at which it became clear that conciliatory argument could have no effect upon the Jewish religious leaders. The controversy about the Sabbath had brought their dissatisfaction to a climax. Henceforth Jesus was to them a revolutionary, who must, by any means, be suppressed. After this decisive breach a new period opens. Jesus leaves Capernaum, never again, it would seem, to appear in its synagogue. Henceforward He was to be found, with His disciples, on the shores of the lake, where vast multitudes gathered around Him, drawn not only from Galilee and Judea, but also from the farther districts north and east of these. He would take refuge from the crowds in a boat, which carried Him from shore to shore; and His healing activity was now at its height. Yet in the midst of this popular enthusiasm He knew that the time had come to prepare for a very different future, and accordingly a fresh departure was made when He selected twelve of His disciples for a more intimate companionship, with a view to a special mission: "He appointed twelve that they might be with Him, and that He might send them forth to preach and to have power to cast out the devils." The excitement and pressure of the crowds was at this time almost overwhelming, and the relatives of Jesus endeavoured to restrain Him; "for they said, He is mad." The scribes from Jerusalem offered a more sinister explanation, saying that He was possessed by the prince of the devils, and that this was why He was able to control all the evil spirits. He answered them first in figurative language, speaking of the certain downfall of a kingdom or a family divided against itself, and of the strong man's house which could not be looted unless the strong man were first bound. Then followed the tremendous warning, that to assign His work to Satan, and so to call good evil, was to blaspheme against the Holy Spirit—the one sin which admitted of no forgiveness. Presently, when He was told that His mother and brethren were calling for Him, He exclaimed their interference by pointing to a new circle of family relationship, consisting of all those who "do the will of God."

Again we find Him teaching by the lake, and the pressure of the multitude is still so great that He sits in a boat while they line the shore. For the first time we are allowed to hear how He taught them. He gives them a parable from nature—the sower's three kinds of failure, compensated by the rich produce of the good soil. At the close He utters the pregnant saying: "He that hath ears to hear let him hear." When His disciples afterwards asked for an explanation, He prefaced it by saying that the inner circle only were intended to understand. The disciples might learn that the message would often prove fruitless, but that nevertheless an abundant harvest would result. For the light was intended to shine, and the hidden was meant to be revealed. Another enigmatic speech affords a glimpse of the kingdom of God: it was prophesied that when once planted, must inevitably germinate; the process was secret and slow, but the harvest was certain. Again, it was like the tiny mustard-seed which grew out of all proportion to its original size, till the birds could shelter in its great branches. These enigmatic speeches were all that the multitudes got, but the disciples in private were taught their lesson of hope. As we review this teaching it is very remarkable. The world of common things is seen to be a lesson-book of the kingdom of God to those who have eyes to read it. What that kingdom is to be we are not told; we are only taught that its coming is secret, slow, and sudden; that it begins with the marriage in the mountain-side. He believed himself to be possessed by a regiment of demons. When Jesus bade them go forth, He begged that they might be allowed to enter into a herd of swine which was hard by. His request was granted, and the swine rushed over a steep place into the lake. It is worth while to note that while most of the cures which Jesus had performed appear to have belonged to this class, this particular case is described as an exceptionally severe one, and the visible effect of the removal of his tormentors may have greatly helped to restore the man's shattered personality.

We must not attempt to trace in detail the whole of St Mark's story. We have followed it long enough to see its directness and simplicity, to observe the naturalness with which one incident succeeds another, and to watch the gradual manifestation of a personality at once strong and sympathetic, wielding extraordinary powers, which are placed wholly at the service of others, and refusing to be hindered from helping men by the ordinary restrictions of social or religious custom. And we have seen as the consequence of all this the development of an historical situation in which the leaders of current orthodoxy ally themselves with the indifferentism which accepts existing political institutions in order to put down a disturber of the peace. We must now be content with a broader survey of the course of events.

Two notable cures were wrought on the western side of the lake—the healing of the woman with the issue and the raising of Jairus's daughter. In each of these cures prominence Healing Powers. is given to the requirement and the reward of faith— that is to say, of personal confidence in the Healer: "Thy faith hath made thee whole." "Fear not, only believe." After this Jesus passed away from the enthusiastic crowds by the lake to visit His own Nazareth, and to find there a strange incredulity in regard to one whom the villagers knew as the carpenter. Once more we come across a mysterious limitation of His powers: "He could not do there any miracle," save the healing of a few sick folk; and He marvelled because of their want of faith. The moment had now come when the twelve disciples were to be entrusted with a share of His healing power and with the proclamation of repentance. While they are journeying two and two in various directions St Mark takes occasion to tell us the current conjectures as to who Jesus really was. Some
JESUS CHRIST

thought him Elijah or one of the ancient prophets returned to earth—a suggestion based on popular tradition; others said He was John the Baptist risen from the dead—the superstition of Herod who had put him to death. When the disciples returned, Jesus took them apart for rest; but the crowds reassembled when they found Him again near the lake, and His yearning compassion for these sheepherd sheeps led Him to give them an impressing sign that He had indeed come to supply all human needs. Hitherto His power had gone forth to individuals, but now He fed five thousand men from the scanty stock of five loaves and two fishes. That night He came to His disciples, walking upon the waters, and in the period which immediately followed there was once more a great manifestation of healing power.

We have heard nothing for some time of any opposition; but now a fresh conflict arose with certain scribes who had come down from Jerusalem, and who complained that the disciples neglected the ceremonial washing of their hands before meals. Jesus replied with stern rebuke, addressing the questioners as hypocrites, and exposing the falsity of a system which allowed the breach of fundamental commandments in order that traditional regulations might be observed. He then turned from them to the multitude, and uttered a saying which in effect annulled the Jewish distinction between clean and unclean meats. This was a direct attack on the whole Pharisaic position. The controversy was plainly irreconcilable, and Jesus withdrew to the north, actually passing outside the limits of the Holy Land. He desired to remain unknown, and not to extend His mission to the heathen population, but the extraordinary faith and the modest importance of a Syrophemanican woman induced Him to heal her daughter.

Then He returned by a circuitous route to the Sea of Galilee. His return was marked by another miraculous feeding of the multitude, and also by two healing miracles which present unusual features. In both the patient was withdrawn from the multitude and the cure was wrought with the accompaniment of symbolic actions. Moreover, in one case Jesus is described as groaning before He spoke; in the other the cure was at first incomplete; and both of the men were strictly charged to observe silence afterwards. It cannot be a mere coincidence that these are the last cures which St Mark records as performed in Galilee.

In fact the Galilean ministry is now closed. Jesus retires northwards to Caesarea Philippi, and appears henceforth to devote Himself entirely to the instruction of his disciples, who needed to be prepared for the fatal issue which could not long be delayed. He begins by asking them the popular opinion as to His Person. The suggestions are still the same—John the Baptist, or Elijah, or some other of the prophets. But when He asked their own belief, Peter replied, “Thou art the Christ.” He warned them not to make this known; and He proceeded to give them the wholly new teaching that the Son of Man must suffer and be killed, adding that after three days He must rise again. Peter took Him aside and urged Him not to speak so. But He turned to the other disciples and openly rebuked Peter. And then, addressing a yet wider circle, He demanded of those who should follow Him a self-sacrifice like His own. He even used the metaphor of the cross which was carried by the sufferer to the place of execution. Life, He declared, could only be saved by voluntary death. He went on to demand an unwavering loyalty to Himself and His teaching in the face of a threatening world; and then He promised that by the end of those who were present should not die before they had seen the coming of the kingdom of God. We have no hint of such teaching as this in the whole of the Galilean ministry. Jesus had stood forth as the strong healer and helper of men; it was bewildering to hear Him speak of dying. He had promised to fulfil men’s highest expectations, if only they would not doubt His willingness and power. He had been enthusiastically revered by the common people, though suspected and attacked by the religious leaders. He had spoken of “the will of God” as supreme, and had set aside ceremonial traditions. He had announced the nearness of the kingdom of God, but had described it only in parables from nature. He had adopted the vague title of the “Son of Man,” but had refrained from proclaiming Himself as the expected Messiah. At last the disciples had expressed their conviction that He was the Christ, and immediately He tells them that He goes to meet humiliation and death as the necessary steps to a resurrection and a coming of the Son of Man in the glory of His Father. It was an amazing announcement and He plainly added that their path like His own lay through death to life. The dark shadows of this picture of Jesus’ work of sacrifice and commitment impressed the disciples. It is possible that three of them were allowed a momentary vision of the light which should overcome the darkness. They saw Jesus transfigured in a radiance of glory: Elijah appeared with Moses, and they talked with Jesus. A cloud came over them, and a Voice, like that of the Baptism, proclaimed “This is My Son, the Beloved: hear ye Him.” They were bidden to keep the vision secret till the Son of Man should have risen from the dead. It was in itself a foretaste of resurrection, and the puzzled disciples remembered that the scribes declared that before the resurrection Elijah would appear. The minds were confused as never resurrection was meant. Jesus told them that Elijah had in fact come; and He also said that the Scriptures foretold the sufferings of the Son of Man. But the situation was wholly beyond their grasp, and the very language of St Mark at this point seems to reflect the confusion of their minds.

The other disciples, in the meantime, had been vainly endeavouring to cure a peculiarly violent case of demonic possession. Jesus Himself cast out the demon, but not before the suffering child had been rendered seemingly lifeless by a final assault. Then they journeyed secretly through Galilee towards Judea and the eastern side of the Jordan. On the way Jesus reinforced the new lesson of self-renunciation. He offered the little children as the type of those to whom the kingdom of God belonged; and He disappointed a young and wealthy aspirant to His favour, amusing His disciples by saying that the kingdom of God could hardly be entered by the rich; he who forsook all should have all, and more than all; the world’s estimates were to be reversed—the first should be last and the last first. They were now journeying towards Jerusalem, and the prediction of the Passion was repeated. James and John, who had witnessed the Transfiguration, and who were confident of the coming glory, asked for the places nearest to their Master, and professed their readiness to share His sufferings. When the other ten were aggrieved Jesus declared that greatness was measured by service, not by rank; and that the Son of Man had come not to be served but to serve, and to give His life to ransom many other lives. As they came up from the Jordan valley and passed through Jericho, an incident occurred which signalized the beginning of the final period. A blind man appealed to Jesus as “the Son of David,” and was answered by the restoration of his sight; and when, a little later, He fulfilled an ancient prophecy by mounting an ass and riding into Jerusalem, the multitudes shouted their welcome to the returning “kingdom of David.” Hitherto He had not permitted any public recognition of His Messiahship, but now He entered David’s city in lowly but significant pomp as David’s promised heir.

Two incidents illustrate the spirit of judgment with which He approached the splendid but apostate city. On His arrival He had carefully observed the condition of the Temple, and had retired to sleep outside the city. On the following morning, finding no fruit on a fig-tree in full leaf, He said, “Let no man eat fruit of thee henceforth for ever.” It was a parable of impending doom. Then, when He entered the Temple, He swept away with a fiery zeal the merchants and merchandise which had turned God’s House into “a robbers’ den.” The act was at once an assertion of commanding authority and an open condemnation of the religious rulers who had permitted the desecration. Its immediate effect was to make new and powerful enemies; for the chief priests, as well as their rivals the scribes, were now inflamed against Him. At the moment they could do nothing, but the next day they formally
demanded whence He derived His right so to act. When they refused to answer His question as to the authority of John the Baptist He in turn refused to tell them His own. But He uttered a parable which more than answered them. The owner of the vineyard, who had sent his servants and last of all his only son, would visit their rejection and murder on the wicked husbandmen. He added a reminder that the stone which the builders refused was, after all, the Divine choice. They were restrained from arresting Him by fear of the people, to whom this parable was probably sent; a joint deputation of Pharisees and Herodians to entrap Him with a question as to the Roman tribute, in answering which He must either lose His influence with the people or else lay Himself open to a charge of treason. When they were baffled, the Sadducees, to whose party the chief priests belonged, sought in vain to pose Him with a problem as to the resurrection of the dead; and after that a more honest scribe confessed the truth of His teaching as to the supremacy of love to God and man over all the sacrificial worship of the Temple, and was told in reply that he was not far from the kingdom of God. Jesus now put a question as to the teaching of the scribes which identified the Messiah with “the Son of David”; and then He denounced those scribes whose pride and extortion and hypocrisy were preparing for them a terrible doom. Before He left the Temple, never to return, one incident gave Him pure satisfaction. His own teaching that all must be given for God was illustrated by the devotion of a poor widow who cast into the treasury the two tiny coins which were all that she had. As He passed out He foretold, in words which corresponded to the doom of the fig-tree, the utter desolation of the imposing but profitless Temple; and presently He opened up to four of His disciples a vision of the future, warning them against false Christs, bidding them expect great sorrows, national and personal, declaring that the gospel must be proclaimed to all the nations, and that after a great tribulation the Son of Man should appear, “coming with the clouds of heaven.” The day and the hour none knew, neither the angels nor the Son, but only the Father: it was the duty of all to watch.

We now come to the final scenes. The passover was approaching, and plots were being laid for His destruction. He Himself poured a vase of costly ointment upon His head. To some this seemed a wasteful act; but He accepted it as a token of the love which gave all that was in its power, and He promised that it should never cease to illustrate His Gospel. Two of the disciples were sent into Jerusalem to prepare the Passover meal. During the meal Jesus declared that He should be betrayed by one of their number. Later in the evening He gave them bread and wine, proclaiming that these were His body and His blood—the tokens of His giving Himself to them, and of a new covenant with God through His death. As they withdrew to the Mount of Olives He foretold their general flight, but promised that when He was risen He would go before them into Galilee. Peter protested faithfulness unto death, but was told that he would deny his Master three times that very night. Then coming to a place called Gethsemane, He bade the disciples wait while He should pray; and taking the three who had been with Him at the Transfiguration He told them to tarry near Him and to watch. He went forward, and fell on the ground, praying that “the cup might be taken away” from Him, but resigning Himself to His Father’s will. Presently Judas arrived with a band of armed men, and greeted Him with a kiss, the signal for His arrest. The disciples fled in panic, after one of them had wounded the high priest’s servant. Only a nameless young man tried to follow, but he too fled when hands were laid upon him. Before the high priest Jesus was charged, among other accusations, with threatening to destroy the Temple; but the matter was brought to an issue when He was plainly asked if He were “the Christ, the Son of the Blessed One.” He answered that He was, and He predicted that they should see the fulfilment of Daniel’s vision of the Son of Man sitting on the right hand of power. Thereupon He was condemned to death for manifest blasphemy, and a scene of cruel mockery followed. Meanwhile Peter in the court below had been sitting with the servants, and in his anxiety to escape recognition had thrice declared that he did not know Jesus. Thus the night passed, and in the morning Jesus was taken to Pilate, for the Jewish council had no power to execute their decree of death. Pilate’s question, “Art Thou the King of the Jews?” shows the nature of the accusation which was thought likely to tell with the people, and the wisdom of the messenger who was already to be leader of revolution, whose hands were stained with blood—a striking contrast to the calm and silent figure who stood before him. At this moment a crowd came up to ask the fulfilment of his annual act of grace, the pardon of a prisoner at the Passover. Pilate, discerning that it was the envy of the rulers which sought to destroy an inconvenient rival, offered “the King of the Jews” as the prisoner to be released. But the chief priests succeeded in making the people ask for Barabbas and demand the crucifixion of Jesus. Pilate fulfilled his pledge by giving them the man of their choice, and Jesus, whom he had vainly hoped to relieve of a satisfactory pretext, he now condemned to the shameful punishments of scourging and crucifixion; for the cross, as Jesus had foreseen, was the inevitable fate of a Jewish pretender to sovereignty. The Roman soldiers mocked “the King of the Jews” with a purple robe and a crown of thorns. As they led Him out they forced the cross, which the sufferer commonly carried, upon the shoulders of one Simon of Cyrene, whose sons Alexander and Rufus are here mentioned—probably as being known to St Mark’s readers; at any rate, it is interesting to note that, in writing to the Christians at Rome, St Paul a few years earlier had sent a greeting to “Rufus and his mother.” Over the cross, which stood between two others, was the condemnable inscription, “The King of the Jews.” This was the Roman designation of Him whom the Jewish rulers tauntingly addressed as “the King of Israel.” The same revilers, with a deeper truth than they knew, summoned up the mystery of His life and death when they said, “He saved others, Himself He cannot save.”

A great darkness shrouded the scene for three hours, and then, in His native Aramaic, Jesus cried in the words of the Psalm, “My God, My God, why has Thou forsaken Me?” One other cry for pardon was heard before He came out, and at that moment the top of the Temple was rent from top to bottom—an omen of fearful import to those who had mocked Him, even on the cross, as the destroyer of the Temple, who in three days should build it anew. The disciples of Jesus do not appear as spectators of the end, but only a group of women who had ministered to His needs in Galilee, and had followed Him up to Jerusalem. These women watched His burial, which was performed by a Jewish counsellor, to whom Pilate had granted the body after the centurion had certified the reality of the unexpectedly early death. The body was placed in a rock-hewn tomb, and a great stone was rolled against the entrance. Sunset brought on the Jewish sabbath, but the next evening the women brought spices to anoint the body, and at sunrise on the third day they arrived at the tomb, and saw that the stone was rolled away. They entered and found a young man in a white robe, who said, “He is risen, He is not here,” and bade them say to His disciples and Peter, “He goeth before you into Galilee; there ye shall see Him, as He said unto you.” In terror they fled from the tomb, “and they said nothing to any man, for they feared . . .

So with a broken sentence the narrative ends. The document is imperfect, owing probably to the accidental loss of its last leaf. In very early times attempts were made to furnish it with a fitting close; but neither of the supplements which we find in manuscripts can be regarded as coming from the original writer. If we ask what must, on grounds of literary probability, have been added before the record was closed, we may content ourselves here with saying that some incident must certainly have been narrated which should have realized the twice-repeated promise that Jesus would be seen by His disciples in Galilee.

3. Document used by St Matthew and St Luke.—We pass on now to compare this narrative of St Mark another very early
document which no longer exists in an independent form, but which can be partially reconstructed from the portions of it which have been embodied in the Gospels of St Matthew and St Luke.

When we review St Mark’s narrative as a whole we are struck, first of all, with its directness and simplicity. It most straight-forward upon a well-defined path. It shows us our Lord Jesus entering on the mission predicted by the Baptist without declaring Himself to be the Messiah; attracting the multitudes in Galilee by His healing power and His unbounded sympathy, and at the same time awakening the envy and suspicion of the leaders of religion; training a few disciples till they reach the conviction that He is the Christ, and then, but not till then, admitting them into the secret of His coming sufferings, and preparing them for a mission in which they also must sacrifice themselves; then journeying to Jerusalem to fulfill the destiny which He foresaw, accepting the responsibility of the Messianic title, only to be condemned by the religious authorities as a blasphemer and handed over to the Roman power as a pretender to the Jewish throne. That is the story in its briefest outline. It is adequate to its presumed purpose of offering to distant Gentiles a clear account of their Master’s earthly work, and of the causes which led to His rejection by His own people and to His death by Roman crucifixion. The writer makes no comment on the wonderful story which he tells. Allusions to Jewish customs and beliefs are indeed, explained as they occur, but apart from this the narrative appears to be a mere transcript of remembered facts. The actors are never characterized; their actions are simply noted down; there is no praise and no blame. To this simplicity and directness of narrative we may in large measure attribute the fact that when two later evangelists desired to give fuller accounts of our Lord’s life they both made this early book the basis of their work. In those days there was no sense of unfairness in using up existing materials in order to make a more complete treatise. Accordingly so marked a feature as St Mark’s Gospel has been taken over word for word in the Gospels of St Luke and St Matthew, and much that is in respect to His crucifixion, or had perished, we could still reconstruct large portions of it by carefully comparing their narratives. They did not hesitate, however, to alter St Mark’s language where it seemed to them rough or obscure, for each of them had a distinctive style of his own, and St Luke was a literary artist of a high order. Moreover, though they both accepted the general scheme of St Mark’s narrative, each of them was obliged to omit many incidents in order to find room for other material which was at their disposal, by which they were able to supplement the deficiencies of the earlier book. The most conspicuous deficiency was in respect to our Lord’s teaching, of which, as we have seen, St Mark had given surprisingly little. Here they were happily in a position to make a very important contribution.

For side by side with St Mark’s Gospel there was current in the earliest times another account of the doings and sayings of Jesus Christ. Our knowledge of it to-day is entirely derived from a comparison of the two later evangelists who embodied large portions of it, working it in and out of the general scheme which they derived from St Mark, according as each of them thought most appropriate. St Luke appears to have taken it over in sections for the most part without much modification; but in St Matthew’s Gospel its incidents seldom find an independent place; the sayings to which they gave rise are often detached from their context and grouped with sayings of a similar character so as to form considerable discourses, or else they are linked on to sayings which were uttered on other occasions recorded by St Mark. It is probable that many passages of St Luke’s Gospel which have no parallel in St Matthew were also derived from this early source; but this is not easily capable of distinct proof; and, therefore, in order to gain a secure conception of the document we must confine ourselves at first to those parts of it which were borrowed by both writers. We shall, however, look to St Luke in the main as preserving for us the more nearly its original form.

We proceed now to give an outline of the contents of this document. To begin with, it contained a fuller account of the teaching of John the Baptist. St Mark tells us only his message of hope; but here we read the severer language with which he called men to repentance. We hear his warning of "the coming wrath"; his mighty Successor will baptize with fire; the fruitless tree will be cast into the fire; the chaff will be separated from the wheat and burned with unquenchable fire; the claim to be children of Abraham will not avail, for God can raise up greater children to Abraham, if it be from the stones of the desert. Next, we have a narrative of the Temptation, of which St Mark had but recorded the bare fact. It was grounded on the Divine sonship, which we already know was proclaimed at the Baptism. In a threefold vision Jesus is invited to enter upon His inheritance at once; to satisfy His own needs, to accept of earthly dominion, to presume on the Divine protection. The passage stands almost alone as a revelation of inner conflict in a life which outwardly was marked by unusual calm.

Not far from the beginning of the document there stood a remarkable discourse delivered among the hills above the lake. It opens with a startling reversal of the common estimates of happiness and misery. In the light of the coming kingdom it proclaims the blessedness of the poor, the hungry, the sad and the maligned; and the wofulness of the rich, the full, the merry and the popular. It goes on to reverse the ordinary maxims of conduct. Enemies are to be loved, helped, blessed, prayed for. No blow is to be returned; every demand, just or unjust, is to be granted; in short, "as ye desire that men should do to you, do in like manner to them." Then the motive and the model of this conduct are adduced: "Love your enemies . . . and ye shall be sons of the Highest; for He is kind to the thankless and wicked. Be merciful, as your Father is merciful; and judge not, and ye shall not be judged." We note in passing that this is the first introduction of our Lord’s teaching of the fatherhood of God. God is your Father, He says in effect; you will be His sons if like Him you will refuse to make distinctions, loving without looking for a return. Then there will not be sorrowful losses. There will follow grave warnings—generous towards others, you must be strict with yourselves; only the good can truly do good; hearers of these words must be doers also, if they would build on the rock and not on the sand. So, with the parable of the two builders, the discourse reached its formal close.

It was followed by the entry of Jesus into Capernaum, where He was asked to heal the servant of a Roman officer. This man’s unusual faith, based on his soldierly sense of discipline, surprised the Lord, who declared that it had no equal in Israel itself, and that in future He will not be able to do such works; but the officer, who asked if Jesus were indeed “the coming One” of whom he had spoken. Jesus pointed to His acts of healing the sick, raising the dead and proclaiming good news for the poor; thereby suggesting to those who could understand that He fulfilled the ancient prophecy of the Messiah. He then declared the greatness of John in exalted terms, adding, however, that the least in the kingdom of God was John’s superior. Then He complained of the unreasonableness of an age which refused John as too austere and Himself as too lax and as being “the friend of publicans and sinners.” This narrative clearly presupposes a series of miracles already performed, and also such a conflict with the Pharisees as we have seen recorded by St Mark. Presently we find an offer of discipleship met by the warning that “the Son of Man” is a homeless wanderer; and then the stern refusal of a request for leave to perform a father’s funeral rites.

Close upon these incidents follows a special mission of disciples, introduced by the saying: “The harvest is great, but the labourers are few.” The disciples as they journeyed were to take no provisions, but to throw themselves on the bounty of their hearers; they are to heal the sick and to proclaim the nearness of the kingdom of God. The city that rejects them shall have a less lenient judgment than Sodom; Tyre and Sidon shall be better off than cities like Chorazin and Bethesda which have seen His miracles;
Capernaum, favoured above all, shall sink to the deepest depth. If words could be sterner than these, they are those which follow: “He that heareth you heareth Me; and he that rejecteth you rejecteth Me; but He that rejecteth Me rejecteth Him that sent Me.” This reference to His own personal mission is strikingly expanded in words which He uttered on the return of the disciples. After thanking the Father for revealing to babes what He hides from the wise. He continued in mysteries language: “All things are delivered to Me by My Father; and none knoweth who the Son is but the Father; and who the Father is but the Son, and he to whom the Son chooseth to reveal Him.” Happy were the disciples in seeing and hearing what prophets and kings had looked for in vain.

When His disciples, having watched Him at prayer, desired to be taught how to pray, they were bidden to address God as “Father”; to ask first for the hallowing of the Father’s name, and the coming of His kingdom; then for their daily food, for the pardon of their sins and for freedom from temptation: it was the prayer of a family—that the sons might be true to the Father, and the Father true to the sons; and they were further encouraged by a parable of the family: “Ask and ye shall receive...” for the heavenly Father will do more, not less, than an earthly father would do for his children. After He had cast out a dumb demon, some said that His power was due to Beelzebub. He accordingly asked them by whom the Jews themselves cast out demons; and He claimed that His power was a sign that the kingdom of God was come. But He warned them that demons cast out once might receive a worse. When He spoke of the faith of little children. He would give them no more than the sign of Jonah, explaining that the repentant Ninevites should condemn the present generation: so, too, should the queen of Sheba; for that which they were now rejecting was more than Jonah and more than Solomon. Yet further warnings were given when a Pharisee invited Him to his table, and expressed surprise that He did not wash His hands before the meal. The cleansing of externals and the tithe of garden-produce, He declares, have usurped the place of judgment and the love of God. Woe is pronounced upon the Pharisees: they are successors to the murderers of the prophets. Then citing from Genesis and 2 Chronicles, the first and last books in the order of the Jewish Bible, He declared that all righteous blood from that of Abel to that of Zachariah should be required of that generation. After this the disciples are encouraged not to fear their murderous opponents. The very sparrows are God’s care—much more shall they be; the hairs of their head are all counted. In the end the Son of Man will openly own those who have owned Him before men. For earthly needs no thought is to be taken; the birds and the flowers make no provision for their life and beauty. God will give food and raiment to those who are seeking His kingdom. Earthly goods should be given away in exchange for the imperishable treasures. Suddenly will the Son of Man come: happy the servant whom His Master finds at his appointed task. In brief parables the kingdom of God is likened to a mustard-seed and to leaven. When Jesus is asked if the saved shall be few, He replies that the door is a narrow one. Then, changing His illustration, He says that many shall seek entrance in vain; for the master of the house will refuse to recognize them. But while they are excluded, a multitude from all quarters of the earth is gathered to those who are seeking His kingdom. A mustard seed, a leaven, and the parables of the Ten Virgins and the Talents which was revealed to the disciples in mysterious language. There is a warning that he who forsakes not father and mother cannot be a disciple, nor he who does not bear his cross. Saviourless salt is fit for nothing. The lost sheep is brought home with a special joy. “Ye cannot serve God and Mammon.” Scandals must arise, but woe to him through whom they arise. The Son of Man will come with the suddenness of lighting; the days of Noah and the days of Lot will find a parallel in their blind gaiety and their inevitable disaster. He who seeks to gain his life will lose it. One shall be taken, and the other left.” “Where the carcasse is, the vultures will gather.” Then, lastly, we have a parable of the servant who failed to employ the money entrusted to him; and a promise that the disciples shall sit on twelve thrones to judge the twelve tribes of Israel. We cannot say by our present method of determination, how this document closed; for in the narratives of the Passion and the Resurrection St Matthew and St Luke only coincide in passages which they have taken from St Mark.

Now that we have reconstructed in outline this early account of the Lord Jesus, so far as it has been preserved by both the later evangelists, we may attempt to compare the picture which it presents to us with that which was offered by St Mark. But in doing so we must remember that we know it only in fragments. There can be little doubt that much more of it is embedded in St Luke’s Gospel, and something more also in St Matthew’s; but in order to stand on firm ground we have considered thus far only those portions which both of these writers elected to use in composing their later narratives. To go beyond this is a work of delicate discrimination. It can only be effected by a close examination of the matter of narrative. Next, we see that wherever we are able to observe its method of relating an incident, as in the case of the healing of the centurion’s servant, we have the same characteristics of brevity and simplicity which we admired in St Mark. No comment is made by the narrator; he tells his tale in the fewest words and passes on. Again, we note that it supplies just what we feel we most need when we have reached the end of St Mark’s story, a fuller account of the teaching which Jesus gave to His disciples and to the people at large. And we see that the substance of that teaching is in complete harmony with the statements which we first met with in St Mark. If the fatherhood of God stands out clearly, we may remember a passage of St Mark also which speaks of “the Heavenly Father” as forgiving those who forgive. If prayer is encouraged, we may also remember that the same passage of St Mark records the saying: “All things whatsoever ye pray for and ask, believe that ye have received them and ye shall have them.” If in one mysterious passage Jesus speaks of “the Father” and “the Son”—terms with which the Gospel of St John has made us familiar—St Mark also in one passage uses the same expressive terms “the Father” and “the Son.” There are, of course, many other parallels with St Mark, and at some points the two documents seem to overlap and to relate the same incidents in
somewhat different forms. There is the same use of parables from nature, the same incisiveness of speech and employment of paradox, the same demand to sacrifice all to Him and for His cause, the same important claim made by Him on the human soul.

But the contrast between the two writers is even more important for our purpose. No one can read through the passages to which we have pointed without feeling the solemn sternness of the Teacher, a sternness which can indeed be traced here and there in St Mark, but which does not give its tone to the whole of his picture. Here we see Christ standing forth in solitary grandeur, looking with the eyes of another world on a society which is blindly hastening to its dissolution. It may be that if this document had come down to us in its entirety, we should have gathered from it an exaggerated idea of the severity of our Lord’s character. Certain it is that as we read over these fragments we are somewhat startled by the predominance of the element of warning, and by the assertion of rules of conduct which seem almost inconsistent with a normal condition of settled social life. The warning to the nation sounded by the Baptist, that God could raise up a new family for Abraham, is heard again and again in our Lord’s teaching. Gentle faith puts Israel to shame. The sons of the kingdom will be left outside, while strangers feast with Abraham. Capernaum shall go to perdition; Jerusalem shall be a desolate ruin. The doom of the nation is pronounced; its fate is imminent; there is no ray of hope for the existing constitution of religion and society. As to individuals within the nation, the despised publicans and sinners will find God’s favour before the self-satisfied representatives of the national religion. In such a condition of affairs it is hardly surprising to find that the great and stern Teacher congratulates the poor and has nothing but pity for the rich; that He has no interest at all in comfort or property. If a man asks you for anything, give it him; if he takes it without asking, do not seek to recover it. Nothing material is worth a thought; anxiety is folly; your Father, who feeds His birds and clothes His flowers, will feed and clothe you. Rise to the height of your sonship to God; love your enemies even as God loves His; and if they kill you, God will care for you still; fear them not, fear only Him who loves you all.

Here is a new philosophy of life, offering solid consolation amid the ruin of a world. We have no idea who the disciple may have been who thus seized upon the sadder elements of the teaching of Jesus; but we may well think of him as one of those who were living in Palestine in the dark and threatening years of internecine strife, when the Roman eagles were gathering round their prey, and the first thunder was muttering of the storm which was to leave Jerusalem a heap of stones. At such a moment the warnings of our Lord would claim a large place in a record of His teaching, and the strange comfort which He had offered we should be the only hope which it would seem possible to entertain.

4. Additions by the Gospel according to St Matthew.—We have now examined in turn the two earliest pictures which have been preserved to us of the life of Jesus Christ. The first The Earliest Narratives. portrays Him chiefly by a record of His actions, and illustrates His strength, His sympathy, and His freedom from conventional restraints. It shows the disturbing forces of these characteristics, which aroused the envy and apprehension of the leaders of religion. The first bright days of welcome and popularity are soon clouded: the storm begins to lower. More and more the Master devotes Himself to the little circle of His disciples, who are taught that they, as well as He, can only triumph through defeat, succeed by failure, and find their life in giving it away. At length, in fear of religious innovations and pretending that He is a political usurper, the Jews deliver Him up to die on a Roman cross. The last page of the story is torn away, just at the point when it has been declared that He is alive again and about to show Himself to His disciples. The second picture has a somewhat different tone. It is mainly a record of teaching, and the teaching is for the most part stern and paradoxical. It might be described as revolutionary. It is good tidings to the poor: it sets no store on property and material comfort: it pities the wealthy and congratulates the needy. It reverses ordinary judgments and conventional maxims of conduct. It proclaims the downfall of institutions, and compares the present blind security to the days of Noah and of Lot: a few only shall escape the coming overthrow. Yet even in this sterner setting the figure portrayed is unmistakably the same. There is the same strength, the same tender sympathy, the same freedom from conventional theses, as were found no promise to fulfill the highest hopes, the same surrender of life, and the same imperious demand on the lives of others. No thoughtful man who examines and compares these pictures can doubt that they are genuine historical portraits of a figure wholly different from any which had hitherto appeared on the world’s stage. They are beyond the power of human invention. They are drawn with a simplicity which is their own guarantee. If we had these, and these only, we should have an adequate explanation of the beginnings of Christianity. There would still be a great gap to be filled before we reached the earliest letters of St Paul; but yet we should know what the Apostle meant when he wrote to “the Church of the Thessalonians in God the Father and the Lord Jesus Christ,” and reminded them how they had “turned from idols to serve the living and true God, and to wait for His Son from heaven, whom He raised from the dead, even Jesus who deliveth us from the wrath to come.”

If these two narratives served the first needs of Christian believers, it is easy to see that they would presently stimulate further activity in the same direction. For, to begin with, they were obviously incomplete: many incidents and teachings known to the earliest discipulis found no place in them; and they contained no account of the life of Jesus Christ before His public ministry, no record of His pedigree, His birth or His childhood. Secondly, their form left much to be desired; for one of them at least was rude in style, sometimes needlessly repetitive and sometimes brief to obscurity. Moreover the very fact that there were two challenged a new and combined work which perhaps should supersede both.

Accordingly, some years after the fall of Jerusalem—we cannot tell the exact date or the author’s name—the book which we call the Gospel according to St Matthew was written to give the Palestinian Christians a full account of Jesus Christ, which should present Him as the promised Messiah, fulfilling the ancient Hebrew prophecies, proclaiming the kingdom of heaven, and founding the Christian society. The writer takes St Mark as his basis, but he incorporates into the story large portions of the teaching which he has found in the other document. He groups his materials with small regard to chronological order; and he fashions out of the many scattered sayings of our Lord the earliest discipulis’ most popular teaching by extracting it from this or that sentence, and giving it a new shape.” A wide knowledge of the Old Testament supplies him with a text to illustrate one incident after another; and so deeply is he imprinted with the correspondence between the life of Christ and the words of ancient prophecy, that he does not hesitate to introduce his quotations by the formula “that it might be fulfilled which was spoken by the prophet.”

His Hebrew instinct leads him to begin with a table of genealogy, artifically constructed in groups of fourteen generations—from Abraham to David, from David to the Captivity, and from the Captivity to the Christ. The royal descent of the Messiah is thus claimed, and in the outermost, His foundation against the background of the Old Testament. He then proceeds to show that, though His lineage is traced through Joseph’s ancestors, He was but the adopted son of Joseph, and he tells the story of the Virgin-birth. The coming of the Child draws Eastern sages to his cradle and fills the court of Herod with suspicious fears. The cruel tyrant kills the babes of Bethlehem, but the Child has been withdrawn by a secret flight into Egypt, whence he presently returns to the family home at Nazareth in Galilee. • All this is necessarily fresh material, for the other records had dealt only within the period of public ministry. We have no knowledge of the source from which it was drawn. From the historical standpoint
its value must be appraised by the estimate which is formed of the writer's general trustworthiness as a narrator, and by the extent to which the incidents receive confirmation from other quarters. The central fact of the Virgin-birth, as we shall presently see, has high attestation from another early writer.

The next addition which St Matthew's Gospel makes to our knowledge is the sayings of our Lord, which are combined with discourses found in the second document and are worked up into the great utterance which we call the Sermon on the Mount. Such grouping of materials is a feature of this Gospel, and was possibly designed for purposes of public instruction; so that continuous passages might be read aloud in the services of the Church, just as passages from the Old Testament were read in the Jewish synagogues. This motive would account not only for the arrangement of the material, but also for certain changes in the language which seem intended to remove difficulties, and to interpret what is ambiguous or obscure. An example of such interpretation meets us at the outset. The startingly saying, "Blessed are ye poor," followed by the we pronounced upon the rich, might seem like a condemnation of the very principle of property; and when the Christian Church had come to be organized as a society containing rich and poor, the heart of the saying was felt to be more truly and clearly expressed in the words, "Blessed are the poor in spirit." This interpretative process may be traced again and again in this Gospel, which frequently seems to reflect the definite tradition of a settled Church.

After the important parables of the tares, the pearl and the net, the writer adds little to his sources until we come to the remarkable passage in ch. xvi., in which Peter the Rock is declared to be the foundation of the future Church, and is entrusted with the keys of the kingdom of heaven. The function of "binding and loosing," here assigned to him, is in identical terms assigned to the disciples generally in a passage in ch. xviii. in which for the second time we meet with the word "Church"—a word not found elsewhere in the Gospels. There is no sufficient ground for denying that these sayings were uttered by our Lord, but the fact that they were now first placed upon record harmonizes with what has been said already as to the more settled condition of the Christian society which this Gospel appears to reflect.

The parables of the two debtors, the labourers in the vineyard, the two sons, the ten virgins, the sheep and goats, are recorded only by this evangelist. But by way of incident he has almost nothing to add till we come to the closing scenes. The earthquake at the moment of our Lord's death and the subsequent appearance of departed saints are strange traditions unattested by other evangelists, and could in no way be placed to guard the tomb, and of the story that they had been bribed to say that the sacred body had been stolen while they slept. On the other hand, the appearance of the risen Christ to the women may have been taken from the lost pages of St Mark, being the sequel to the narrative which is broken off abruptly in this Gospel: and it is not improbable that St Mark's Gospel was the source of the great commission to preach and baptize with which St Matthew closes, though the wording of it has probably been modified in accordance with a settled tradition.

The work which the writer of this Gospel has chosen, and which he has placed to guard the tomb, and of the story that they had been bribed to say that the sacred body had been stolen while they slept. On the other hand, the appearance of the risen Christ to the women may have been taken from the lost pages of St Mark, being the sequel to the narrative which is broken off abruptly in this Gospel: and it is not improbable that St Mark's Gospel was the source of the great commission to preach and baptize with which St Matthew closes, though the wording of it has probably been modified in accordance with a settled tradition.

The scene ends with the rejection of Christ by His own townsfolk, as in the parallel story of St Mark which St Luke does not give. It is probable that St Luke found this narrative in the second document, and combined it with his manner in preference to the less instructive story in St Mark. He similarly omits the Marcan account of the call of the fishermen, substituting the story of the miraculous draught. After that he follows St Mark alone, until he introduces after the call of the twelve apostles the sermon which begins with the beatitudes and woes. This is from the second document, which he continues to use, and that without interruption (if we may venture to assign to it the raising of the widow's son at Nain and the anointing by the sinful woman in the Pharisee's house), until he returns to incorporate another section from St Mark.

This in turn is followed by the most characteristic section of his Gospel (ix. 51—xviii. 14), a long series of incidents wholly independent of St Mark, and introduced as belonging to the period of the final journey from Galilee to Jerusalem. Much of this material is demonstrably derived from the second document: and it is quite possible that the whole of it may come from that source. There are special reasons for thinking so in regard to certain passages, as for example the mission of the seventy disciples and the parable of the good Samaritan, although they are not contained in St Matthew's Gospel.

For the closing scenes at Jerusalem St Luke makes considerable additions to St Mark's narrative: he gives a different account of the Last Supper, and he adds the trial before Herod and the
incident of the penitent robber. He appears to have had no information as to the appearance of the risen Lord in Galilee, and he accordingly omits from his reproduction of St Mark’s narrative the twice-repeated promise of a meeting with the disciples there. He supplies, however, an account of the appearance to the two disciples at Emmaus and to the whole body of the apostles in Jerusalem.

St Luke’s use of his two main sources has preserved the characteristics of both of them. The sternness of certain passages, which has led some critics to imagine that he was an Ebionite, is mainly, if not entirely, due to his faithful reproduction of the language of the second document. The key-note of his Gospel is universality: the mission of the Christ embraces the poor, the weak, the despised, the heretic and the sinful: it is good tidings to all mankind. He tells of the devotion of Mary and Martha, and of the band of women who ministered to our Lord’s needs and followed Him to Jerusalem; he tells also of His kindness to more than one sinful woman. Zachaeus the publican and the grateful Samaritan leper further illustrate this characteristic. Writing as he does for Gentile believers he omits many details which from their strongly Jewish cast might be unintelligible or uninteresting. He also modifies the harshness of St Mark’s style, and frequently recasts his language in reference to diseases. From an historical point of view his Gospel is of high value. The proved accuracy of detail elsewhere, as in his narration of events which he witnessed in company with St Paul, enhances our general estimation of his work. A trustworthy observer and a literary artist, the one non-Jewish evangelist has given us—to use Mr Renan’s words—‘the most beautiful book in the world.’

6. Additions by St John.—We come lastly to consider what additional to our knowledge of Christ’s life and work is made by the Fourth Gospel. St Mark’s narrative of our Lord’s ministry and passion is so simple and straightforward that it satisfies our historical sense. We trace a natural development in it: we seem to see why with such power and such sympathy He necessarily came into conflict with the religious leaders of the people, who were jealous of the influence which He gained and were scandalized by His refusal to be hindered in His mission of mercy by rules and conventions to which they attached the highest importance. The issue is fought out in Galilee, and when our Lord finally journeys to Jerusalem He knows that He goes there to die. The story is so plain and convincing in itself that it gives at first sight an impression of completeness. This impression is confirmed by the Gospels of St Matthew and St Luke, which though they add much fresh material do not disturb the general scheme presented by St Mark. But on reflection we are led to question the sufficiency of the account thus offered to us. Is it probable, we ask, that our Lord should have neglected the sacred custom in accordance with which Jerusalem was visited several times each year for the observance of the divinely appointed feasts? It is true that St Mark does not break his narrative of the Galilean ministry to record such visits: but this does not prove that such visits were not made. Again, is it probable that He should have so far neglected Jerusalem as to give it no opportunity of seeing Him and hearing His message until the last week of His life? If the writers of the other two Gospels had no means at their disposal for enlarging the narrow framework of St Mark’s narrative by recording definite visits to Jerusalem, at least they preserve to us words from the second document which seem to imply such visits; for how else are we to explain the pathetic complaint, ‘Jerusalem, Jerusalem, how often would I have gathered thee, as a hen gathereth her chickens under her wings; but ye would not’?

St John’s Gospel meets our questionings by a wholly new series of incidents, and by an account of a ministry which is concerned mainly not with Galileans but with Judeans, and which centres in Jerusalem. It is carried on to a large extent concurrently with the Galilean ministry: it is not continuous, but is taken up from feast to feast as our Lord visits the sacred city at times of his religious activity. It differs in character from the Galilean ministry: for among the simple, unsophisticated folk of Galilee Jesus presents Himself as a healer and helper and teacher, keeping in the background as far as possible His claim to be the Messiah; whereas in Jerusalem His authority is challenged at His first appearance, the element of controversy is never absent, His relation to God is from the outset the vital issue, and consequently His Divine claim is of necessity made explicit. Time after time His life is threatened before the feast is ended, and when the last passover has come we can feel certain what is going to happen. If what was not made sufficiently clear in the brief Marcan narrative, why Jerusalem proved so fatally hostile to His Messianic claim.

The Fourth Gospel thus offers us a most important supplement to the limited sketch of our Lord’s life which we find in the Synoptic Gospels. Yet this was not the purpose which The Purpose led to its composition. That purpose is plainly stated by St John’s Gospel. He avowed his purpose to write history, but to produce conviction. He desires to interpret the coming of Jesus Christ into the world, to declare whence and why He came, and to explain how His coming, as light in the midst of darkness, brought a crisis into the lives of all with whom He came in contact. The issue of this crisis in His rejection by the Jews at Jerusalem is the main theme of the book.

St John’s prologue prepares us to find that he is not writing for persons who require a succinct narrative of facts, but for those who having such already in familiar use are asking deep questions as to our Lord’s mission. It goes back far behind the life of Christ from a new point of view, to observe His self manifestation, “In the beginning,” The Book of Genesis had told how all things were called into existence by a Divine utterance: “God said, Let there be . . . and there was.” The creative Word had been long personified by Jewish thought, especially in connexion with the prophets to whom “the Word of the Lord” came. “In the beginning,” then, St John tells us, the Word was—was with God—yea, was God. He was the medium of creation, the source of its light and its life—especially of that higher life which finds its manifestation in men. So He was in the world, and the word was made by Him, and yet the world knew Him not. At length He came, came to the home which had been prepared for Him, but His own people rejected Him. But such as did receive Him found a new birth, beyond their birth of flesh and blood: they became children of God, were born of God. In order thus to manifest Himself He had undergone a human birth: “the Word was made flesh, and dwelt among us, and we beheld His glory”—the glory, as the evangelist has learned to see, of the Father’s only-begotten Son, who has come into the world to reveal to men that God whom “no man hath ever seen.” In these opening words we are invited to study the life of Christ from a new point of view, to observe His self manifestation and its issue. The evangelist looks back across a period of half a century, and writes of Christ not merely as he saw Him in those far-off days, but as he has come by long experience to think and speak of Him. The past is now filled with a glory which could not be so fully perceived at the time, but which, as St John tells us, was the function of the Holy Spirit to reveal to Christ’s disciples.

The first name which occurs in this Gospel is that of John the Baptist. He is even introduced into the prologue which sketches in general terms the manifestation of the Divine Word: “There was a man sent from God, whose name was John: he came for witness, to witness to the Light, that through him all might believe.” This witness of John holds a position of high importance in this Gospel. His mission is described as running on for a while concurrently with that of our Lord, whereas in the other Gospels we have no record of our Lord’s work until John is cast into prison. It is among the disciples of the Baptist on the banks of the Jordan that Jesus finds His first disciples. The Baptist has pointed Him out to them in striking language, which recalls at once the symbolic ritual of the law and the spiritual lessons of the prophets: “Behold, the Lamb of God, which taketh away the sin of the world.”
Soon afterwards at Cana of Galilee Jesus gives His first "sign," as the evangelist calls it, in the change of water into wine to supply the deficiency at a marriage feast. This scene has all the happy brightness of the early Galilean ministry which St Mark records. It stands in sharp contrast with the subsequent appearance of Jesus in Jerusalem at the Passover, when His first act is to drive the traders from the Temple courts. In this He seems to be carrying the Baptist's stern mission of purification from the desert into the heart of the sacred city, and so fulfilling, perhaps consciously, the solemn prophecy of Malachi which opens with the words: "Behold, I will send My Messenger, and He shall prepare the way before Me; and the Lord whom ye seek shall suddenly come to be the Temple of the Lord." This significant action provokes a challenge of His authority, which is answered by a mysterious saying not understood at the time, but interpreted afterwards as referring to the Resurrection. After this our Lord was visited secretly by a Pharisee named Nicodemus, whose advances were severely met by the words, "Except a man be born again, he cannot see the kingdom of God." When Nicodemus objected that this was to demand a physical impossibility, He was answered that the new birth was " of water and spirit ""—words which doubtless contained a reference to the mission of the Holy Spirit to the expected Messiah. He received a welcome with the Holy Spirit. Towards the end of this conversation the evangelist passes imperceptibly from reporting the words of the Lord into an interpretation or amplification of them, and in language which recalls the prologue He unfolds the meaning of Christ's mission and indicates the crisis of self-judgment which necessarily accompanies the manifestation of the Light to each individual. When he resumes his narrative the Lord has left Jerusalem, and is found baptizing disciples, in even greater numbers than the Baptist himself. Though Jesus did not personally perform the rite, it is plain once again that in this early period He closely linked His own mission with that of John the Baptist. When men hinted at a rivalry between them, John plainly declared "He must increase, and I must decrease," and the reply of Jesus was to leave Judaea for Galilee.

Away from the atmosphere of contention we find Him manifesting the same broad sympathy and freedom from convention which we have noted in the other Gospels, especially in that of St Luke. He converses with a woman, with a woman moreover who is a Samaritan, and who is of unchaste life. He offers her the "living water" which shall supply all her needs: she readsily accepts His mission with that of John the Baptist. When men hinted at a rivalry between them, John plainly declared "He must increase, and I must decrease," and the reply of Jesus was to leave Judaea for Galilee.

But St John's interest does not lie in Galilee, and he soon brings our Lord back to Jerusalem on the occasion of a feast. The Baptist's work is now ended; and, though Jesus still appeals to the testimony of John, the new conflict with the Jewish authorities shows that He is moving now on His own independent and characteristic lines. In cleansing the Temple He had given offence by what might seem an excess of rigour: now, by healing a sick man and biding him carry his bed on the Sabbath, He offended by His laxity. He answered His accusers by the brief but poignant sentence: " My Father worketh even until now, and I work." They at once understood that He thus claimed a unique relation to God, and their antagonism became the more intense: "the Jews therefore sought the more to kill Him, because He had not only broken the Sabbath, but had also said that God was His own Father, making Himself equal to God." His first reply is then expanded to cover the whole region of life. The Son beholds the Father at work, and works concurrently, doing nothing of Himself. He does the Father's will. The very principle of life is entrusted to Him. He quickens, and He judges. As Son of Man He judges man.

The next incident is the feeding of the five thousand, which belongs to the Galilean ministry and is recorded by the three other evangelists. St John's purpose in introducing it is not historical but didactic. It is made the occasion of instruction as to the heavenly food, the flesh and blood of Him who came down from heaven. This teaching leads to a conflict with certain Jews who seem to have come from Jerusalem, and it proves a severe test even to the faith of disciples.

The feast of tabernacles brings fresh disputes in Jerusalem, and an attempt is made to arrest Jesus. A climax of indignation is reached when a blind man is healed at the pool of Siloam on the sabbath day. At the feast of the dedication a fresh effort at arrest was made, and Jesus then withdrew beyond the Jordan. Here He learned of the sickness of Lazarus, and presently He returned and came to Bethany to raise him from the dead. The excitement produced by this miracle led to yet another attack, and it was only by this time to be successful, on the life of Jesus. The Passover was at hand, and the last supper of our Lord with His disciples on the evening before the Passover lamb was killed is made the occasion of the most inspiring consolations. Our Lord interprets His relation to the disciples by the figure of a tree and its branches—He is the whole of which they are the parts; He promises the mission of the Holy Spirit to continue His work in the world; and He solemnly commends to His Father the disciples whom He is about to leave.

The account of the trial and the crucifixion differs considerably from the accounts given in the other Gospels. St John's narrative is large and lavish with the details, and in more than one significant incident he himself figures as the unnamed disciple "whom Jesus loved." In the Resurrection scenes he also gives incidents in which he has played a part; and the appearances of the risen Lord are not confined either to Jerusalem or to Galilee, but occur in both localities.

If we ask what is the special contribution to history, apart from theology, which St John's Gospel makes, the answer would seem to be this—that beside the Galilean ministry reported by St Mark there was a ministry to "Jews" (Judaeans) in Jerusalem, not continuous, but occasional, taken up from time to time as the great feasts or periods of celebration demanded; that this ministry was, in many respects, different from that which was given to Galileans, and that the situation created was wholly unlike that which arose out of the Galilean ministry. The Galilean ministry opens with enthusiasm, ripening into a popularity which even endangers a satisfactory result. Where opposition manifests itself, it is not native opposition, but comes from religious teachers who are parts of a system which centres in Jerusalem, and who are sometimes expressly noted as having come from Jerusalem. The Jerusalem ministry on the contrary is never welcomed as an anachronism. It has a freshness and power which challenges us from the first. There is no atmosphere of simplicity and teachability which rejoices in the manifestation of power and sympathy and liberty. It is a witness delivered to a hostile audience, whether they will hear or no. Ultimate issues are quickly raised: keen critics see at once the claims which underlie deeds and words, and the claims in consequence become explicit: the relation of the teacher to God Himself is the vital interest. The conflict which thus arises explains what St Mark's succinct narrative had left unexplained—the fatal hostility of Jerusalem. It may have been a part of St John's purpose to give this explanation, and to make other supplements or corrections where earlier narratives appeared to him incomplete or misleading. But he says nothing to indicate this, while on the other hand he distinctly proclaims that his purpose is to produce and confirm conviction of the divine claims of Jesus Christ.

For bibliography see BIBLE; CHRISTIANITY; CHURCH HISTORY; and the articles on the separate Gospels.

JET (Fr. jais, Ger. Gagat), a substance which seems to be a peculiar kind of lignite or anthracite; often cut and polished for ornaments. The word "jet," probably comes, through O.Fr. jais, from the classical gagates, a word which was derived, according to Pliny, from Gagas, in Lycia, where jet, or a similar substance, was originally found. Jet was used in Britain in prehistoric times; many round bars of the Bronze age have yielded jet beads, buttons, rings, armlets and other ornaments. The abundance of jet in Britain is alluded to by Caesar Julius
Solinus (fl. 3rd century) and jet ornaments are found with Roman relics in Britain. Probably the supply was obtained from the coast of Yorkshire, especially near Whitby, where nodules of jet were formerly picked up on the shore. Caedmon refers to this jet, and at a later date it was used for rosary beads by the monks of Whitby Abbey.

The Whitby jet occurs in irregular masses, often of lenticular shape, embedded in hard shales and known as jett-rock. The jett-rock series belongs to that division of the Upper Lias which is termed the zone of Ammonites serpentinitus. Microscopic examination of jet by the author reveals the structure of concentric wood, which A. C. Seward has maintained to be a true conifer. Probably the wood were brought down by a river, and drifted out to sea, where becoming water-logged they sank, and became gradually buried in a succession of fine mud, which eventually hardened into shale. Under pressure, perhaps assisted by heat, and with exclusion of air the wood suffered a peculiar kind of decomposition, probably modified by the presence of salt water, as suggested by Percy E. Spilmann. Scales of fish and other fossils of the jett-rock are frequently impregnated with bituminous products, which may replace the original tissues. Drops of liquid bitumen occur in the cavities of some fossils, whilst inflammable gas is not uncommon in the jet-workings, and petroleum may be detected by its smell. Iron pyrites is often associated with the jet.

Formerly sufficient jet was found in loose pieces on the shore, set free by the disintegration of the cliffs, or washed up from a submarine source. When this supply became insufficient, the rock was attacked by the jet-workers; ultimately the workings took the form of true infillings. The jet being driven into the shales not only at their outcrop in the cliffs but in some of the inland dales of the Yorkshire mainland, such as Eskdale. The best jet has a uniform black colour, and is hard, compact and homogeneous in texture, breaking with a conchoidal fracture. It must be tough enough to be readily cut or turned on the lathe, and sufficiently compact in texture to receive a high polish. The polishing was formerly given by means of rouge, which produces a beautiful velvety surface, but rotten-stone and lamp-black are often employed instead. The softer kinds, not capable of being freely worked, are known as bastard jet. A soft jet is obtained from the estuarine series of the Lower Oolites of Yorkshire.

Much jet is imported from Spain, but it is generally less hard and lustrous than true Whitby jet. In Spain the chief locality is Villaviciosa, in the province of Asturias, France furnishes jet, especially in the department of the Aude. Much jet, too, occurs in the Lias of Württemberg, and works have been established for its utilization. In the United States jet is known at many localities but is not systematically worked. Pennsylvania anthracite, however, has been occasionally employed as a substitute. In like manner Scotch canal cannel coal has been sometimes used at Whitby. Imitations of jet, or substitutes for it, are furnished by vulcanite, glass, black obsidian and black onyx, or stained chalcedony. Jet is sometimes produced by the art of man, because like amber, though in less degree, it becomes electric by friction.

JETHRO (or Jethor, Exod. iv. 18), the priest of Midian, in the Bible, whose daughter Ziporah became the wife of Moses. He is known as Hobab the son of Rebuel the Kenite (Num. x. 29; Judg. iv. 11), and once as Reuel (Exod. ii. 18); and if Ziporah is the wife of Moses referred to in Num. xii. 1, the family could be regarded as Cushite (see CBUR). Jethro was the priest of Yahweh, and resided at the sacred mountain where the deity commissioned Moses to deliver the law to Israel, and to act as the father of the Hebrew people. Jethro came to Moses (probably at Kadesh), a great sacrificial feast was held, and the priest instructed Moses in legislative procedure; Exod. xvi. 27 (see EXODUS) and Num. x. 10 imply that the scene was not Sinai. Jethro was invited to accompany the people into the promised land, and later, we find his clan settling in the south of Judah (Judg. i. 16); see KENITES. The traditions agree in representing the kin of Moses as related to the mixed tribes of the south of Palestine (see EDOM) and in ascribing to the family an important share in the early development of the worship of Yahweh. Cheyne suggests that the names of Hobab and of Jethro are the name of the Rechabites (q.v.) were originally identical (Encyc. Bib. ii. col. 2100).

JETTY. The term jetty, derived from Fr. jetée, and therefore signifying something "thrown out," is applied to a variety of structures employed in river, dock and maritime works, which are generally carried out in pairs from river banks, or in continuation of river channels at their outlets into deep water; or out into docks, and outside their entrances; or for forming basins along the sea-coast for ports in tideless seas. The forms and construction of these jetties are as varied as their uses; for though they invariably extend out into water, and serve either for directing a current or for accommodating vessels, they are sometimes formed of high open timber-work, sometimes of low solid projections, and occasionally only differ from breakwaters in their object.

Jetties for regulating Rivers.—Formerly jetties of timber-work were very commonly extended out, opposite one another, from each bank of a river, at intervals, to contract a wide channel, and by concentration of the current to produce a deepening of the central channel; or sometimes mounds of rubble stone, stretching down the foreshore from each bank, served the same purpose. As, however, this system occasioned a greater scour between the ends of the jetties than in the intervening channels, and consequently produced an irregular depth, it has to a great extent been superseded by longitudinal training works, or by dipping cross dikes pointing somewhat upstream (see RIVER ENGINEERING).

Jetties at Docks.—Where docks are given sloping sides, openwork timber jetties are generally carried across the slope, at the ends of which vessels can lie in deep water (fig. 1); or more solid structures are erected over the slope for supporting coal-tips. Fliwork jetties are also constructed in the water outside the entrances to docks on each side, so as to form an enlarging trumpet-shaped channel between the entrances, lock or tidal basin and the approach channel; in order to guide vessels in entering or leaving the docks. Solid jetties, moreover, lined with quay walls, are sometimes carried out into a wide dock, at right angles to the line of quays at the side, to enlarge the accommodation; and they also serve, when extended on a large scale from the coast of a tideless sea under shelter of an outgoing breakwater, to form the basins in which vessels lie when discharging and taking in cargoes in such a port as Marseilles (see Dock).

Jetties at Entrances to Jetty Harbours.—The approach channel to some ports situated on sandy coasts is guided and protected across the beach by parallel jetties, made solid up to a little above low water of neap tides, on which open timber-work is erected, provided with a planked platform at the top raised above the highest tides. The channel between the jetties was originally maintained by tidal scour from low-lying areas close to the coast, as occasioned occasionally by the current from slushing basins; but it is now often considerably deepened by sand-pump dredging. It is protected to some extent by the solid portion of the jetty, formed by the back of sand from the adjacent beach, and from the levelling action of the waves; whilst the upper open portion serves to indicate the channel, and to guide the vessels if necessary (see HARBOUR). The bottom part of the older jetties, in such long-established jetty ports as Calais, Dunkirk and Ostend, was composed of clay or rubble stone, covered on the top by fascine-work or pitching; but the deepening of the jetty channel by dredging, and the need which arose for its enlargement, led to the reconstruction of the jetties at these ports. The new jetties at Dunkirk were founded in the sandy beach, by the aid of compressed air, at a depth of 22 ft. below low water of spring and their solid mahogany portion, on a concrete foundation, was raised 3 ft. above low water of neap tides (fig. 2).

Jetties at Lagoon Outlets.—A small tidal rise spreading tidal water over a large expanse of lagoon or inland back-water causes the influx and efflux of the tide to maintain a deep channel through an irregular outlet; but the issuing current on emerging from the outlet, being
no longer confined by a bank on each side, becomes dispersed, and owing to the reduction of its scouring force, is no longer able at a moderate distance from the shore effectively to resist the action of the waves and littoral currents tending to form a continuous beach in front of the outlet. Hence a bar is produced which diminishes the available depth in the approach channel. By carrying out a solid jetty over the bar, however, on each side of the outlet, the littoral currents are concentrated in the channel across the bar, and lower it by scour. Thus the available depth of the approach channels to Venice through the Malamocco and Lido outlets from the Venetian lagoon have been deepened several feet over their bars by jetties of rubble stone surmounted by a small superstructure (fig. 3), carried out across the foreshore into deep water on both sides of the channel. Other examples are provided by the long jetties extended into the sea in front of the entrance to Charleston harbour, formerly constructed of fascines, weighted with stone and logs, but subsequently of rubble stone, and by the two converging rubble jetties carried out from each shore of Dublin bay for deepening the approach to Dublin harbour.

Jetties at the Outlet of Tideless Rivers.—Jetties have been constructed on each side of the outlet of some of the rivers flowing into the Baltic, with the objects of prolonging the scour of the river and protecting the channel from being shoaled by the littoral drift along the shore. The most interesting application of parallel jetties is in lowering the bar in front of one of the mouths of a deltoid river flowing into a tideless sea, by extending the scour of the river out to the bar by a virtual prolongation of its banks. Jetties prolonging the Sulina branch of the Danube into the Black Sea, and the south pass of the Mississippi into the Gulf of Mexico (fig. 4), formed of rubble stone and concrete blocks, and fascine mattresses weighted with stone and surmounted with large concrete blocks respectively, have enabled the discharge of these rivers to scour away the bars obstructing the access to them; and they have also carried the sediment-bearing waters sufficiently far out to come under the influence of littoral currents, which, by conveying away some of the sediment, post-pone the eventual formation of a fresh bar farther out (see River Engineering).

Jetties at the Mouth of Tidal Rivers.—Where a river is narrow near its mouth, and its discharge is generally feeble, the sea is liable on an exposed coast, when the tidal range is small, to block up its outlet during severe storms. The river is thus forced to seek another exit at a weak spot of the beach, which along a low coast may be at some distance off; and this new outlet in its turn may be blocked up, so that the river from time to time shifts the position of its mouth. This inconvenient cycle of changes may be stopped by fixing the outlet of the river at a suitable site, by carrying a jetty on each side of this outlet across the beach, thereby concentrating its discharge in a definite channel and protecting the mouth from being blocked up by littoral drift. This system was long ago applied to the shifting outlet of the river Yare to the south of Yarmouth, and has also been successfully employed for fixing the wandering mouth of the Adur near Shoreham, and of the Adour flowing into the Bay of Biscay below Bayonne. When a new channel was cut across the Hook of Holland to provide a straighter and deeper outlet channel for the river Maas, forming the approach channel to Rotterdam, low, broad, parallel jetties, composed of fascine mattresses weighted with stone (fig. 5), were carried across the foreshore into the sea on either side of the new mouth of the river, to protect the jetty channel from littoral drift, and cause the discharge of the river to maintain it out to deep water (see River Engineering). The channel, also, beyond the outlet of the river Nervion into the Bay of Biscay has been regulated by jetties; and by extending the south-west jetty out for nearly half a mile with a curve concave towards the channel the outlet has not only been protected to some extent from the easterly drift, but the bar in front has been lowered by the scour produced by the discharge of the river following the concave bend of the south-west jetty. As the outer portion of this jetty was exposed to westerly storms from the Bay of Biscay before the outer harbour was constructed, it has been given the form and strength of a breakwater situated in shallow water (fig. 6). (L. F. V.-H.)

**Jever**

a town of Germany, in the grand-duchy of Oldenburg, 13 m. by rail N.W. of Wilhelmshaven, and connected with the North Sea by a navigable canal. Pop. (1901), 5486. The chief industries are weaving, spinning, dyeing, brewing and milling; there is also a trade in horses and cattle. The fathers (Die Gebrüder) of the town used to send an annual birthday present of 101 plovers' eggs to Bismarck, with a dedication in verse. The castle of Jever was built by Prince Edro Wiemken (d. 1410), the ruler of Jeverland, a populous district which in 1575 came under the rule of the dukes of Oldenburg. In 1603 it passed to the house of Anhalt and was later the property of the empress Catherine II. of Russia, a member of this family. In 1814 it came again into the possession of Oldenburg.

**Jeveros** (Jeveros, Jibreros, Jivaros of Givaros), a tribe of South American Indians on the upper Marañon, Peru, where they wander in the forests. The tribe has many branches and there are frequent tribal wars, but they have always united against a common enemy. Juan de Velasco declares them to be faithful, noble and amiable. They are brave and warlike, and
though upon the conquest of Peru they temporarily submitted, a general insurrection in 1599 won them back their liberty. Curious dried human heads, supposed to have been objects of worship, have been found among the Jeveros (see Ethnol. Soc. Trans. 1862, W. Bollaert).

JEVONS, WILLIAM STANLEY (1835-1882), English economist and logician, was born at Liverpool on the 1st of September 1835. His father, Thomas Jevons, a man of strong scientific tastes and a writer on legal and economic subjects, was an iron manufacturer and had written a treatise on the subject of steam. At the age of fifteen he was sent to London to attend University College. He appears at this time to have already formed the belief that important achievements as a thinker were possible to him, and at more than one critical period in his career this belief was the decisive factor in determining his conduct. Towards the end of 1853, after having spent two years at University College, where his favourite subjects were chemistry and botany, he unexpectedly received the offer of the assayership to the new mint in Australia. The idea of leaving England was distasteful, but pecuniary considerations had, in consequence of the failure of his father's business in 1847, become of vital importance, and he accepted the post. He left England for Sydney in June 1854, and remained there for five years. At the end of that period he resigned his appointment, and in the autumn of 1859 entered again as a student at University College, London, proceeding in due course to the B.A. and M.A. degrees of the university of London. He now gave his principal attention to the moral sciences, but his interest in natural science was by no means exhausted: throughout his life he continued to write occasional papers on scientific subjects, and his intimate knowledge of the physical sciences greatly contributed to the success of his chief logical work, the Principles of Science. Not long after taking his M.A. degree Jevons obtained a post as tutor at Owens College, Manchester. In 1866 he was elected professor of logic and mental and moral philosophy and Cobden professor of political economy in Owens college. Next year he married Harriet Ann Taylor, whose father had been the founder and proprietor of the Manchester Guardian. Jevons suffered a good deal from ill health and sleeplessness, and found the delivery of lectures covering so wide a range of subjects very burdensome. In 1876 he was glad to exchange the Owens professorship for the professorship of political economy in University College, London. Science and music were the principal recreations of his life; but his health continued bad, and he suffered from depression. He found his professorial duties increasingly irksome, and feeling that the pressure of literary work left him no spare energy, he decided in 1880 to resign the post. On the 13th of August 1882 he was drowned whilst bathing near Hastings. Throughout his life he had pursued with devotion and industry the ideals with which he had set out, and his journal and letters display a noble simplicity of disposition and an unswerving honesty of purpose. He was a prolific writer, and at the time of his death he occupied the foremost position in England both as a logician and as an economist. Professor Marshall has said of his work in economics that it “[will probably be found to have more constructive force than any, save that of Ricardo, that has been done during the last hundred years.” At the time of his death he was engaged upon an economic work that promised to be at least as important as any that he had previously undertaken. It would be difficult to exaggerate the loss which logic and political economy sustained through the accident by which his life was prematurely cut short. Jevons arrived quite early in his career at the doctrines that constituted his most characteristic and original contributions to economics and logic. The theory of utility, which became the keynote of his general theory of political economy, was practically formulated in a letter written in 1860; and the germ of his logical principles of the substitution of similars may be found in the view which he propounded in another letter written in 1861, that “philosophy would be found to consist solely in pointing out the likeness of things.” The theory of utility above referred to, namely, that the degree of utility of a commodity is some continuous mathematical function of the quantity of the commodity available, together with the implied doctrine that economics is essentially a mathematical science, took more definite form in a paper on “A General Mathematical Theory of Political Economy,” written for the British Association in 1862. This paper does not appear to have attracted much attention either in 1862 or on its publication four years later in the Journal of the Statistical Society; and it was not till 1871, when the Theory of Political Economy appeared, that Jevons set forth his doctrines in a fully developed form. It was not till after the publication of this work that Jevons became acquainted with the applications of mathematics to political economics; and he was a rather writer, notably Antoine Augustin Cournot and H. H. Gossen. The theory of utility was about 1870 being independently developed on somewhat similar lines by Carl Menger in Austria and M. L. Walras in Switzerland. As regards the discovery of the connexion between value in exchange and final (or marginal) utility, the priority belongs to Gossen, but this in no way detracts from the great importance of the service which Jevons rendered to English economics by his fresh discovery of the principle, and by the way in which he ultimately forced it into notice. In his published work from the prevailing view he sometimes expressed himself without due qualification: the declaration, for example, at the commencement of the Theory of Political Economy, that “value depends entirely upon utility,” lent itself to misinterpretation. But a certain exaggeration of emphasis may be pardoned in a writer seeking to attract the attention of an indifferent public. It was not, however, as a theorist dealing with the fundamental data of economic science, but as a brilliant writer on practical economic questions, that Jevons first received general recognition. A Serious Fall in the Value of Gold (1863) and The Coal Question (1869) placed him in the front rank as a writer on applied economic subjects; and he would be remembered as one of the leading economists of the 19th century even had his Theory of Political Economy never been written. Amongst his economic works may be mentioned Money and the Mechanism of Exchange (1875), written in a popular style, and descriptive rather than theoretical, but wonderfully fresh and original in treatment and full of suggestiveness, a Primer on Political Economy (1878), The State in Relation to Labour (1882), and two works published after his death, namely, Methods of Social Reform and Investigations in Currency and Finance, containing papers that had appeared separately during his lifetime. The last-named volume contains Jevons's interesting speculations on the connexion between commercial crises and sun-spots. He was engaged at the time of his death upon the preparation of a large treatise on economics and had drawn up a table of contents and completed some chapters and parts of chapters. This fragment was published in 1905 under the title of The Principles of Economics: a Fragment of a Treatise on the Industrial Mechanism of Society, and other Papers. Jevons's work in logic went on pari passu with his work in political economy. In 1864 he published a small volume, entitled Pure Logic; or, the Logic of Quantity apart from Quantity, which was based on Boole's system of logic, but freed from what he considered the false mathematical dress of that system. In the years immediately following he devoted considerable attention to the construction of a logical machine, exhibited before the Royal Society in 1870, by means of which the conclusion derivable from any given set of premises could be mechanically obtained. In 1866 what he regarded as the great and universal principle of all reasoning dawned upon him; and in 1869 he published a sketch of this fundamental doctrine under the title of The Substitution of Similars. He expressed the principle in its simplest form as follows: “Whatever is true of a thing is true of its like,” and he worked out in detail its various applications. In the following year appeared the Elementary Lessons on Logic, which soon became the most widely read elementary textbook on logic in the English language. In the meantime he was engaged upon a much more important logical treatise, which appeared in 1874 under the title of The Principles of Science. In this work Jevons embodied the substance of his earlier works on pure logic and the substitution of similars; he also enunciated
and developed the view that induction is simply an inverse employment of deduction; he treated in a luminous manner the general theory of probability, and the relation between probability and induction; and his knowledge of the various natural sciences enabled him throughout to relieve the abstract character of logical doctrine by concrete scientific illustrations, often worked out in great detail. Jevons’s general theory of induction was a revival of the theory laid down by Whewell and criticized by Mill; but it was quite a new form, and was from the time of the non-essential adjuncts which rendered Whewell’s exposition open to attack. The work as a whole was one of the most notable contributions to logical doctrine that appeared in Great Britain in the 19th century. His Studies in Deductive Logic, consisting mainly of exercises and problems for the use of students, was published in 1860. In 1877 and the following years Jevons contributed to the *Contemporary Review* some articles on J. S. Mill, which he had intended to supplement by further articles, and eventually publish in a volume as a criticism of Mill’s philosophy. These articles and one other Jevons’s death, together with his earlier logical treatises, in a volume, entitled *Pure Logic, and other Minor Works*. The criticisms on Mill contain much that is ingenious and much that is forcible, but on the whole they cannot be regarded as taking rank with Jevons’s other work. His strength lay in his power as an original thinker rather than as a critic; and he will be remembered by his constructive work as logician, economist and statistician.

See *Letters and Journal of W. Stanley Jevons*, edited by his wife (1882). This work contains a bibliography of Jevons’s writings. See also *Logic: History* (J. N. K.)

**Jew, The Wandering**

A legendary Jew (see Jews) doomed to wander till the second coming of Christ because he had taunted Jesus as he passed bearing the cross, saying, “Go on quicker.” Jesus is said to have replied, “I go, but thou shalt wait till I return.” The legend in this form first appeared in a pamphlet of four leaves alleged to have been printed at Leiden in 1602. This pamphlet relates that Paulus von Eizen (d. 1598), bishop of Schleswig, had met at Hamburg in 1542 a Jew named Ahasuerus (Ahasverus), who declared he was “eternal” and was the same who had been punished in the above-mentioned manner by Jesus at the time of the crucifixion. The pamphlet is supposed to have been written by Chrysostomus de Dudelouch of Westphalia and printed by one Christoff Crutzer, but as no such author or printer is known at this time—the latter name indeed refers directly to the legend—it has been conjectured that the whole story is a myth invented to support the Protestant contention of a continuous witness to the truth of Holy Writ in the person of this “eternal” Jew; he was to form, in his way, a counterpart to the apostolic tradition of the Catholic Church.

The story met with ready acceptance and popularity. Eight editions of the pamphlet appeared in 1602, and the fortieth edition before the end of the following century. It was translated into Dutch and Flemish with almost equal success. The first French edition appeared in 1609, and the story was known in England before 1625, when a parody was produced. Denmark and Sweden followed suit with translations, and the expression “eternal Jew” passed as a current term into Czech. In other words, the story in its usual form spread wherever there was a tincture of Protestantism. In southern Europe little is heard of it in this version, though Rudolph Botoreus, parliamentary advocate of Paris (*Comm. histor.*, 1604), writing in Paris two years after its first appearance, speaks contemptuously of the popular belief in the Wandering Jew in Germany, Spain and Italy.

The popularity of the pamphlet and its translations soon led to reports of the appearance of this mysterious being in all parts of the civilized world. Besides the original meeting of the bishop and Ahasuerus in 1542 and others referred back to 1252 in Spain and 1599 at Vienna, the Wandering Jew was stated to have appeared at Prague (1602), at Lübeck (1603), in Bavaria (1644), at Ypres (1623), Brussels (1640), Leipzig (1642), Paris (1644, by the “Turkish Spy”), Stamford (1658), Astrakhan (1672), and Frankenstein (1678). In the next century the Wandering Jew was seen at Munich (1721), Altbach (1769), Brussels (1774), Newcastle (1790, see Brand, *Pop. Antiquities*, s.), and on the streets of London between 1818 and 1830 (*Athenaeum*, 1866, ii. 561). So far as can be ascertained, the latest report of his appearance was in the neighbourhood of Salt Lake City in 1858, when he is said to have made himself known to a Mormon named O’Grady. It is difficult to tell in any one of these cases how far the story is an entire fiction and how far some ingenious impostor took advantage of the existence of the myth.

The reiterated reports of the actual existence of a wandering being, who retained in his memory the details of the crucifixion, show how the idea had fixed itself in popular imagination and found its way into the 19th-century collections of German legends. The two ideas combined in the story of the restless fugitive akin to Cain and wandering for ever are separately represented in the current names given to this figure in different countries. In most Teutonic languages the stress is laid on the perpetual wandering of his name, and it is known as the “everlasting,” or “eternal” Jew (Ger. “Ewige Jude”). In the lands speaking a Romance tongue, the usual form has reference to the wanderings (Fr. “le Juif errant”). The English form follows the Romance analogy, possibly because derived directly from French. The actual name given to the mysterious Jew varies in the different versions: the original pamphlet calls him Ahasver, and this has been followed in most of the literary versions, though it is difficult to imagine any Jew being called by the name of the typical anti-Semitic king of the Book of Esther. In one of his appearances at Brussels his name is given as Isaac Laqueumen, implying an impostor knowledgeable to represent Isaac “from of old.” Alexandre Dumas also made use of this title. In the *Turkish Spy* the Wandering Jew is called Paul Marrane and is supposed to have suffered persecution at the hands of the Inquisition, which was mainly occupied in dealing with the Marranos, i.e. the secret Jews of the Iberian peninsula. In the few references to the legend in Spanish writings the Wandering Jew is called Juan Espera en Dios, which gives a more hopeful turn to the legend.

Under other names, a story very similar to that given in the pamphlet of 1602 occurred nearly 400 years earlier on English soil. According to Roger of Wendover in his *Flores historiarum* under the year 1228, an Armenian archbishop, then visiting England, was asked by the monks of St Albans about the well-known Joseph of Arimathea, who had spoken to Jesus and was said to be still alive. The archbishop claimed to have seen him in Armenia under the name of Cartaphilus or Cartaphilius, who had confessed that he had taunted Jesus in the manner above related. This Cartaphilus had afterwards been baptized by the name of Joseph. Matthew Paris, in repeating the passage from Roger of Wendover, reported that other Armenians had confirmed the story on visiting St Albans in 1252, and regarded it as a great proof of the Christian religion. A similar account is given in the chronicles of Philippe Mouskes (d. 1243). A variant of the same story was known to Guido Bonati, an astronomer quoted by Dante, who calls his hero or villain Butta Deus because he struck Jesus. Under this name he is said to have appeared at Mugello in 1413 and at Bologna in 1415 (in the garb of a Franciscan of the third order).

The source of all these reports of an ever-living witness of the crucifixion is probably Matthew xvii. 26: “There be some of them that stand here which shall in no wise taste of death till they see the Son of Man coming in his kingdom.” As the kingdom had not come, it was assumed that there must be persons living who had been present at the crucifixion; the same reasoning is at the root of the Anglo-Israel belief. These words are indeed quoted in the pamphlet of 1602. Again, a legend was based on John xxi. 20 that the beloved disciple would not die before the second coming; while another legend (current in the 16th century) condemned Malchus, whose ear Peter cut off in the garden of Gethsemane (John xvii. 10), to wander perpetually till the second coming. The legend alleges that he had been so condemned for having scoffed at Jesus. These legends and the
utterance of Matt. xvi. 28 became “contaminated” by the legend of St Joseph of Arimathaea and the Holy Grail, and took the form given in Roger of Wendover and Matthew Paris. But there is nothing to show the spread of this story among the people before the pamphlet of 1602, and it is difficult to see how this Carthophilus could have given rise to the legend of the Wandering Jew, since he is not a Jew nor does he wander. The author of 1602 was probably acquainted either directly or indirectly with the story as given by Matthew Paris, since he gives almost the same account. But he gives a new name to his hero and does not associate him with Matthew Paris.

Moncure D. Conway (Encyc. Brit., 9th ed., xili. 675) attempted to connect the legend of the Wandering Jew with a whole series of myths relating to never-dying heroes like King Arthur, Frederick Barbarossa, the Seven Sleepers, and Thomas the Rhymer, not to speak of Rip Van Winkle. He goes even farther and connects our legend with mortals visiting earth, as the Yima in Parism, and the “Ancient of Days” in the Books of Daniel and Enoch, and further connects the legend with the whole medieval tendency to regard the Jew as something uncanny and most distressing. But all these mythological explanations must be rejected, since the actual legend in question can be definitely traced to the pamphlet of 1602. The same remark applies to the identification with the Mahomedan legend of the “eternal” Chadhir proposed by M. Lidzbarski (Zeits. f. Assyrv. vii. 116) and I. Friedländer (Arch. f. Religionswiss. xili. 130).

This combination of eternal punishment with restless wandering has attracted the imagination of innumerable writers in almost all European tongues. The Wandering Jew has been regarded as a symbolic figure representing the wanderings and sufferings of his race. The Germans have been especially attracted by the legend, which has been made the subject of poems by Schubart, Schreiber, W. Müller, Lenau, Chamisso, Schlegel, Mosen and Kochler, from which enumeration it will be seen that it was a particularly favourite subject with the Romantic school. They were perhaps influenced by the example of Goethe, who in his Autobiography describes, at considerable length, the plan of a poem he had designed on the Wandering Jew. More recently poems have been composed on the subject in German by Adolf Wilbrandt, Fritz Lienhard and others; in English by Robert Buchanan, and in Dutch by H. Helgersman. German novels also exist on the subject, by Franz Horn, Ockert, Laun and Sauschinger, tragedies by Klinemann, Haushofer and Zedlitz. Sigismund Heller wrote three cantos on the wanderings of Ahasuerus, while Hans Andersen made of him an “Angel of Doubt.” Robert Harington even identifies Nero with the Wandering Jew. In France, E. Quinet published a prose epic on the subject in 1833, and Eugène Sue, in his best-known work, Le Juif errant (1844), introduces the Wandering Jew in the prologues of its different sections and associates him with the legend of Herodias. In modern times the subject has been made still more popular by Gustave Doré’s elaborate designs (1850), containing some of his most striking and imaginative work. Thus, probably, he suggested Gnegener’s poem on the subject (1857).

In England, besides the ballads in Percy’s Reliques, William Godwin introduced the idea of an eternal witness of the course of civilization in his St Leon (1799), and his son-in-law Shelley introduces Ahasuerus in his Queen Mab. It is doubtful how far Swift derived his idea of the immortal Strudbrugs from the notion of the Wandering Jew. George Cruikshank’s Salathiel, which appeared anonymously in 1828, gave a highly elaborate turn to the legend; this has been re-published under the title Tarry Thou Till I Come. The most notable of the Wandering Jew stories written in English, was written by C. Th. Grasse, Die Sage von einem Juden (1844); F. Helbig, Die Sage vom ewigen Juden (1874); G. Paris, Le Juif errant (1881); M. D. Conway, The Wandering Jew (1881); S. Morpugo, L’Ebreo errante in Italia (1891); L. Neubaur, Die Sage von einem Juden (1894). The recent literary handling of the subject has been dealt with by J. Frost, Die Sage vom ewigen Juden in der neueren deutschen Literatur (1905); T. Kappstein, Ahazier in der Weltpoesie (1905).

JEWEL, JOHN (1552–1654), bishop of Salisbury, son of John Jewel of Buden, Devonshire, was born on the 24th of May 1552, and educated under his uncle John Bellamy, rector of Hampton, and other private tutors until his matriculation at Merton college, Oxford, in July 1555. There he was taught by John Parkhurst, afterwards bishop of Norwich; but on the 10th of August 1559 he was elected scholar of Corpus Christi college. He graduated B.A. in 1540, and M.A. in 1545, having been elected fellow of his college in 1542. He made some mark as a teacher at Oxford, and became after 1547 one of the chief disciples of Peter Martyr. He graduated B.D. in 1552, and was made vicar of Sunningwell, and public orator of the university, in which capacity he had to compose a congratulatory epistle to Mary. Who her access. He in April 1554 he acted as notary to Cranmer and Ridley at their disputation. In the autumn he signed a series of Catholic articles. He was, nevertheless, suspected, fled to London, and thence to Frankfurt, which he reached in March 1555. There he sided with Coxe against Knox, but soon joined Martyr at Strassburg, accompanied him to Zurich, and then paid a visit to Padua.

Under Elizabeth’s success he returned to England, and made earnest efforts to secure what would now be called a low-church settlement of religion. Indeed, his attitude was hardly disputes its authenticity. He was, to be sure, of the Elizabethan Puritans, but he gradually modified it under the stress of office and public duty. He was one of the disputants selected to confute the Romanists at the conference of Westminster after Easter 1554; he was select preacher at St Paul’s cross on the 5th of June; and in the autumn was engaged as one of the royal visitors of the western counties. His congé d’être as bishop of Salisbury had been made out on the 27th of July, but he was not consecrated until the 21st of January 1560. He now constituted himself the literary apostle of the Elizabethan settlement. He had on the 26th of November 1559, in a sermon at St Paul’s Cross, challenged all the Roman Catholic preachers to prove the falsity of these scriptures, and to the councils or Fathers for the first six hundred years after Christ. He repeated his challenge in 1560, and Dr Henry Cole took it up. The chief result was Jewel’s Apologia ecclesiae Anglicanae, published in 1562, which in Bishop Creighton’s words is “the first methodical statement of the position of the Church of England against the Church of Rome, and forms the groundwork of all subsequent controversy.” A more formidable antagonist than Cole now entered the lists in the person of Thomas Harding, an Oxford contemporary whom Jewel had deprived of his prébend in Salisbury for heresy. He published an elaborate and bitter Answer in 1564, to which Jewel issued a Reply in 1565. Harding followed with a Confutation, and Jewel with a Defence, of the Apologia in 1566 and 1567; the combattants ranged over the whole field of the Anglo-Roman controversy, and Jewel’s theology was officially enjoined upon the Church by Archbishop Bancroft in the reign of James I. Latterly Jewel had been confronted with criticism from a different quarter. The arguments that had weaned him from his Zwinglian simplicity did not satisfy his unpromoted brethren, and Jewel had to refuse admission to a benefice to his friend Laurence Humphrey (q.v.), who would not wear a surplice. He was consulted a good deal by the government on such questions as England’s attitude towards the council of Trent, and political considerations made him more and more hostile to Puritan demands with which he had previously sympathized. He wrote an attack on Cartwright, which was published after his death by Whitgift. He died on the 23rd of September 1571, and was buried in Salisbury Cathedral, where he had built a library. Hooker, who speaks of Jewel as “the worthiest divine that Christendom hath bred for some hundreds of years,” was one of the boys whom Jewel prepared in his house for university; and his Ecclesiastical Polity owes much to Jewel’s training.

Jewel’s works were published in a folio in 1609 under the direction of Bancroft, who ordered the Apologia to be placed in churches, in some of which it may still be seen chained to the lectern; other editions appeared at Oxford (1848, 8 vols.) and Cambridge (Parker Soc., 4 vols.). See also Gough’s Index in Parker Soc. Publ.: Strype’s Works (general index); Acts of the Privy Council; Calendar of Domestic and Spanish State Papers; Dixon’s and Freer’s Church Histories; and Dictionary of National Biography (art. by Bishop Creighton).

(A.F.P.)
JEWELRY

JEWELRY (O. Fr. jœul, Fr. joyau, perhaps from jote, joy; Lat. gaudium; retranslated into Low Lat. jocale, a toy, from jocus, by misapprehension of the origin of the word), a collective term for jewels, or the art connected with them—jewels being personal ornaments, usually made of gems, precious stones, &c., with a setting of precious metal; in a restricted sense it is also common to speak of a gem-stone itself as a jewel, when utilized in this way. Personal ornaments appear to have been among the very first objects on which the invention and ingenuity of man were exercised; and there is no record of any people so rude as not to employ some kind of personal decoration. Natural objects, such as small shells, dried berries, small perforated stones, feathers of variegated colours, were combined by stringing or tying together to ornament the head, neck, arms and legs, the fingers, and even the toes, whilst the cartilages of the nose and ears were frequently perforated for the more ready suspension of suitable ornaments.

Amongst modern Oriental nations we find almost every kind of personal decoration, from the simple caste mark on the forehead of the Hindoo to the gorgeous examples of beaten gold and silver work of the various cities and provinces of India. Nor are such decorations mere ornaments without use or meaning. The hook with its corresponding perforation or eye, the clasp, the buckle, the button, grew step by step into a special ornament, according to the rank, means, taste and wants of the wearer, or became an evidence of the dignity of office. Nor was the jewel deemed to have served its purpose with the death of its owner, for it is to the tombs of ancient peoples that we must look for evidence of the early existence of the jeweller’s art.

The jewelry of the ancient Egyptians has been preserved for us in their tombs, sometimes in, and sometimes near the sarcophagi which contained the embalmed bodies of the wearers. An amazing series of finds of the intact jewels of five princesses of the XIIth Dynasty (c. 2400 B.C.) was the result of the excavations of J. de Morgan at Dahshur in 1804–1805. The treasure of Princess Hathor-Set contained jewels with the names of Senwosri (Usertesen) II. and III., one of whom was probably her father. The treasure of Princess Merit contained the names of the same two monarchs, and also that of Amenemhê III., to whose family Princess Nebhopt may have belonged. The two remaining princesses were Ita and Khnumit.

Near a thousand years later we have another remarkable collection of Egyptian art in the jewelry taken from the coffin of Queen Aah-hotp, discovered in 1859 by Mariette in the entrance to the valley of the tombs of the kings and now preserved in the Cairo museum. Compared with the Dahshur treasure the jewelry of Aah-hotp is in parts rough and coarse, but none the less it is marked by the ingenuity and mastery of the materials that characterize all the work of the Egyptians. Hammered work, incised and chased work, the evidence of soldering, the combinations of layers of gold plates, together with coloured stones, are all present, and the handicraft is complete in every respect.

A diadem of gold and enamel, found at the back of the head of the mummy of the queen (fig. 3), was fixed in the back hair, showing the cartouche in front. The box holding this cartouche has on the upper surface the titles of the king, "the son of the sun, Aah-mes, living for ever and ever," in gold on a ground of lapis lazuli, with a chequered ornament in blue and red pastes, and a sphinx couchant on each side. A necklace with three pendant flies (fig. 4) is entirely of gold, having a hook and loop to fasten it round the neck. Fig. 5 is a gold drop, inlaid with turquoise or blue paste, in the shape of a fig. A gold

The art of the nameless Memphite jewellers of the XIIth Dynasty is marked by perfect accuracy of execution, by sureness of intention, by decorative instinct and sobriety in design, and by the serviceable nature of the jewels for actual wear. All forms of work are represented—including chiselling, soldering, inlaying with coloured stones, moulding and working with twisted wires and filigree. Here also occurs the earliest instance of granulated work, with small grains of gold, soldered on a flat surface (fig. 1). The principal items in this dazzling group are the following: Three gold pectorals (fig. 2 and Plate I. figs. 35, 36) worked à jour (with the interstices left open); on the front side they are inlaid with coloured stones, the fine cloisons being the only portion of the gold that is visible; on the back, the gold surfaces are most delicately carved, in low relief. Two gold crowns (Plate I. figs. 32, 34), found together, are curiously contrasted in character. The one (fig. 32) is of a formal design, of gold, inlaid (the plume, Plate I. fig. 33, was attached to it); the other (fig. 34) has a multitude of star-like flowers, embodied in a filigree of daintily twisted wires. A dagger with inlaid patterns on the handle shows extraordinary perfection of finish.
chain (fig. 6) is formed of wires closely plaited and very flexible, the ends terminating in the heads of water fowl, and having small rings to secure the collar behind. To the centre is suspended by a small ring a scarabaeus of solid gold inlaid with lapis lazuli. We have an example of a bracelet, similar to those in modern use (fig. 7).

and worn by all persons of rank. It is formed of two pieces joined by a hinge, and is decorated with figures in repoussé on a ground inlaid with lapis lazuli.

That the Assyrians used personal decorations of a very distinct character, and no doubt made of precious materials, is proved by the bas-reliefs from which a considerable collection of jewels could be gathered, such as bracelets, ear-rings and necklaces. Thus, for example, in the British Museum we have representations of Assur-nazir-pal, king of Assyria (c. 885-860 B.C.), wearing a cross (fig. 8) very similar to the Maltese cross of modern times. It happens, however, that the excavations have not hitherto been fertile in actual remains of gold work from Assyria. Chance also has so far ordained that the excavations in Crete should not be particularly rich in ornaments of gold. A few isolated objects have been found, such as a duck and other pendants, and also several necklaces with heads of the Argonaut shell-fish pattern. More striking than these is a short bronze sword. The handle has an agate pomme1, and is covered with gold plates, engraved with spirited scenes of lions and wild goats (fig. 9. A. J. Evans in Archaeologia, 59, 447). In general, however, the gold jewelry of the later Minoan periods is more brilliantly represented by the finds made on the mainland of Greece and at Enkomi in Cyprus. Among the former the gold ornaments found by Heinrich Schliemann in the graves of Mycenae are pre-eminent.

The objects found ranged over most of the personal ornaments still in use; necklaces with gold beads and pendants, butterfiles (fig. 10), cuttlefish (fig. 11), single and concentric circles, rosettes and leafage, with perforations for attachment to clothing, crosses and stars formed of combined crosses, with crosses in the centre forming spikes—all elaborately ornamented in detail. The spiral forms an incessant decoration from its facile production and repetition by means of twisted gold wire. Grasshoppers or tree crickets in gold repoussé suspended by chains and probably used for the decoration of the hair, and a griffin (fig. 12), having the upper part of the body of an eagle and the lower parts of a lion, with wings decorated with spirals, are among the more remarkable examples of perforated ornaments for attachment to the clothing.

There are also perforated ornaments belonging to necklaces, with intaglio engravings of such subjects as a contest of a man and lion, and a duel of two warriors, one of whom stabs his antagonist in the throat. There are also pinheads and brooches formed of two stages lying down (fig. 13), the bodies and necks crossing each other, and the horns meeting symmetrically above the heads, forming a finial. The heads of these ornaments were of gold with silver blades or pointed pins inserted for use. The bodies of the two stages rest on fronds of the date-palm growing out of the stem which receives the pin. Another remarkable series is composed of figures of women with doves. Some have one dove resting on the neck, others have the birds on the head and the others resting on arms. The arms in both instances are extended to the elbow, the hands being placed on the breasts. These ornaments are also perforated and were evidently sewed on the dresses, although there is some evidence that an example with three doves has been fastened with a pin.

An extraordinary diadem was found upon the head of one of the bodies discovered in the same tomb with many objects similar to those noticed above. It is 25 in. in length, covered with shield-like or rosette ornaments in repoussé, the relief being very low but perfectly distinct, and further ornamented by thirty-six large leaves of repoussé gold attached to it. As an example of design and perfection of detail, another smaller diadem found in another tomb may be noted (fig. 14). It is of gold plate, so thick as to require no "piping" at the back to sustain it; but in general the repoussé examples have a plating of copper wire.

The admirable inlaid daggers of the IVth grave at Mycenae are unique in their kind, with their subjects of a lion hunt, of a lion chasing a herd of antelopes, of running lions, of cats hunting wild ducks, of inlaid lilies, and of geometric patterns. The subjects are inlaid in gold of various tints, and silver, in bronze plates which are inserted in the flat surfaces of the dagger-blades. In part also the subjects are rendered in relief and gilded. The whole is executed with marvellous precision and vivid representation of motion. To a certain limited extent these daggers are paralleled by a dagger and hatchet found in the treasure of Queen Ash-hotep mentioned above, but in their most characteristic features there is little resemblance. The gold ornaments found by Schliemann at Hissarlik, the supposed site of Troy, divide themselves, generally speaking, into two groups, one being the "great treasure" of diadems, ear-rings, beads, bracelets, &c., which seem the product of a local and uncultured art. The other group, which were found in smaller "treasures," have spirals and rosettes similar to those of Mycenae. The discovery, however, of the gold treasures of the Artemision at Ephesus has brought out points of affinity between the Hissarlik treasures and those of Ephesus, and has made any reasoning difficult, in view of the uncertainties surrounding the Hissarlik finds. The group with
JEWELRY

Mycenaean affinities (fig. 15) includes necklaces, brooches, bracelets (g), hair-pins (e), ear-rings (c, d, e, f), with and without pendants, beads and twisted wire drops. The majority of these are ornamented with spirals of twisted wire, or small rosettes, with fragments of stones in the centres. The twisted wire ornaments were evidently portions of necklaces. A circular plaque decorated with a rosette

(k) is very similar to those found at Mycenae, and a conventionalized eagle (k) is characteristic of much of the detail found at that place as well as at Hissarlik. They were all of pure gold, and the wire must have been drawn through a plate of harder metal—probably bronze. The principal ornaments differing from those found at Mycenae are diadems or head fillets of pure hammered gold (b) cut into thin plates, attached to rings by double gold wires, and fastened together at the back with thin twisted wire. To these pendants (of which those at the two ends are nearly three times the length of those forming the central portions) are attached small figures, probably of idols. It has been assumed that these were worn across the forehead by women, the long pendants falling on each side of the face.

The jewelry of the close of the Mycenaean period is best represented by the rich finds of the cemetery of Enkomi near Salamis, in Cyprus. This field was excavated by the British Museum in 1896, and a considerable portion of the finds is now at Bloomsbury. It was rich in all forms of jewelry, but especially in pins, rings and diadems with patterns in relief. In its geometric patterns the art of Enkomi is entirely Mycenaean, but special stress is laid on the mythical forms that were inherited by Greek art, such as the sphinx and the griffon.

Figs. 37-48 (Plate I.) are examples of the late Mycenaean treasures from Enkomi.

37, 38 Ear-rings.
39 Diadem, to be tied on the forehead. The impressed figure of a sphinx is repeated twelve times.
40, 41, 46 Ear-rings, originally in bull's head form (fig. 40). Later, the same general form is retained, but decorative patterns (figs. 41, 46) take the place of the bull's head.
42 Pin, probably connected by a chain with a fellow, to be used as a cloak fastening.
43 Pomegranate pendant, with fine granulated work.
44, 45 Pins as No. 42. The heads are of vitreous paste.
46 (See above.)
47 Pendant ornament, in lotus-form, of a pectoral, inlaid with coloured pastes.
48 Small slate cylinder, set in filigree.

Another find of importance was that of a collection of gold ornaments from one of the Greek islands (said to be Aegina) which also found its way to the British Museum. Here we find the themes of archaic Greek art, such as a figure holding up two water-birds, in immediate connexion with Mycenaean gold patterns.

Figs. 49-53 (Plate I.) are specimens from this treasure.

49 Plate with repoussé ornament for sewing on a dress.
50 Pendant. Figure with two water-birds, on a lotus base, and having serpents issuing from near his head, modified from Egyptian forms.

For the beginnings of Greek art proper, the most striking series of personal jewels is the great deposit of ornaments which was found in 1905 by D. G. Hogarth in the soil beneath the central basis of the arcaic temple of Artemis of Ephesus. The gold ornaments in question (amounting in all to about 1000 pieces) were mingled with the closely packed earth, and must necessarily, it would seem, have been in the nature of votive offerings, made at the end of the 7th or the beginning of the 6th century B.C. The hoard was rich in pins, brooches, beads and stamped disks of gold. The greater part of the find is at Constantinople, but a portion was assigned to the British Museum, which had undertaken the excavations.

Figs. 54-58 (Plate II.) Examples of the Ephesos hoard.
54 Electrum pin, with pomegranate head.
55 Hawk ornament.
56 Electrum pin.
57, 58 Electrum ornaments for sewing on drapery.

The cemeteries of Cyprus have yielded a rich harvest of jewelry of Graeco-Phoenician style of the 7th and following centuries B.C. Figs. 16 and 17 are typical examples of a ring and ear-ring from Cyprus.
JEWELRY

EARLY EGYPTIAN.

LATE MYCENAEAN.

(From Enkoml)

(From the Greek Islands)

XV. 366.
The Greek jewelry of the best period is of extraordinary delicacy and beauty. Fine examples are shown in the British Museum from Melos and elsewhere. Undoubtedly, however, the most brilliant collection of such ornaments is that of the Hermitage, which was derived from the tombs of Kerch and the Crimea. It contains examples of the purest Greek work, together with objects which must have been of local origin as is shown by the themes which the artist has chosen for his reliefs. Fig. 18 illustrates the jewelry of the Hermitage (see also Ear-Ring).

As further examples of Greek jewelry see the pendant oblong ornament for containing a scroll (fig. 19).

![Fig. 19](image1)

The ear-rings (figs. 20, 21) are also characteristic. Figs. 59-70 (Plate II.) Examples of fine Greek jewelry, in the British Museum.

- 59-60
  - Pair of ear-rings, from a grave at Cyme in Aeolis, with filigree work and pendant Erotes.
- 61
  - Small bracelet.
- 62-63
  - Small gold ring with repoussé figures of Nereid with helmet of Achilles, and Eros. From Cameiros (Rhodes).
- 64
  - Filigree ornament (ear-ring?) with Eros in centre. From Syria.
- 65
  - Medallion ornament with repoussé head of Dionysos and filigree work. (Blacas coll.)
- 66
  - Stud, with filigree work.
- 67-68
  - Pair of ear-rings, of gold, with filigree and enamel, from Eretria.
- 69
  - Diadem, with filigree, and enamel scales, from Tarquinii.
- 70
  - Necklace pendants.

Etruscan jewelry at its best is not easily distinguished from the Greek, but it tends in its later forms to become florid and diffuse, without precision of design. The granulation of surfaces practised with the highest degree of refinement by the Etruscans was long a puzzle and a problem to the modern jeweller, until Castellani of Rome discovered gold-workers in the Abruzzi to whom the method had descended through many generations. He induced some of these men to go to Naples, and so revived the art, of which he contributed examples to the London Exhibition of 1872 (see Filigree).

Figs. 71-77 (Plate II.) are well-marked examples of Etruscan work, in the British Museum.

- 71
  - Pair of sires, repoussé, forming a hook and eye fastening. From Chiusi (?).
- 72
  - Early fibula. Horse and chimæra. (Blacas coll.)
- 74
  - Medallion-shaped fibula, of fine granulated work, with figures of sires in relief, and set with dark blue paste. (Bale coll.)
- 73: 75
  - Pair of late Etruscan ear-rings.
- 76: 77
  - Pair of late Etruscan ear-rings, in the florid style.

The jewels of the Roman empire are marked by a greater use of large cut stones in combination with the gold, and by larger surfaces of plain and undecorated metal. The adaptation of imperial gold coins to the purposes of the jeweller is also not uncommon.

Figs. 78-82 (Plate II.) Late Roman imperial jewelry, in the British Museum.

- 78
  - Large pendant ear-ring, set with stones and pearls. From Tunis, 4th century.
- 79
  - Pierced-work pendant, set with a coin of the emperor Philip.
- 80
  - Ear-ring, roughly set with garnets.
- 81
  - Bracelet, with a winged cornucopia as central ornament, set with plasmas, and with filigree and leaf work.
- 82
  - Bracelet, roughly set with pearls and stones. From Tunis, 4th century.

With the decay of the Roman empire, and the approach of the barbarian tribes, a new Teutonic style was developed. An important example of this style is the remarkable gold treasure, discovered at Pétrossa in Transylvania Alps in 1837, and now preserved, as far as it survives, in the museum of Bucharest. A runic inscription shows that it belonged to the Goths. Its style is in part the classical tradition, debased and modified, in part it is a singularly rude and vigorous form of barbaric art. Its chief characteristics are a free use of strongly conventionalized animal forms, such as great bird-shaped fibulae, and an ornamentation consisting of pierced gold work, combined with a free use of stones cut to special shapes, and inlaid either cloisonné-fashion or in a perforated gold plate. This part of the hoard has its affinities in objects found over a wide field from Siberia to Spain. Its rudest and most naturalistic forms occur in the East in uncouth objects from Siberian tombs, whose lineage however has been traced to Persepolis, Assyria and Egypt. In its later and more refined forms the style is known by the name, now somewhat out of fashion (except as applied to a limited number of finds), of Merovingian.

The so-called Merovingian jewelry of the 5th century, and the Anglo-Saxon of a later date, have as their distinctive feature thin plates of gold, decorated with thin slabs of garnet, set in walls of gold soldered vertically like the lines of cloisonné enamel, with the addition of very decorative details of filigree work, beading and twisted gold. The typical group are the contents of the tomb of King Childeric (A.D. 481) now in the Bibliothèque Nationale at Paris. In Figs. 22 and 23 we have examples of Anglo-Saxon fibulae, the first being decorated with a species of cloisonné, in which garnets are inserted, while the other is in hammered work in relief. A pendant (fig. 24) is also set with garnets. The buckles (figs. 25, 26, 27) are remarkably charac-

![Fig. 22](image2)

![Fig. 23](image3)

![Fig. 24](image4)

![Fig. 25](image5)

![Fig. 26](image6)

![Fig. 27](image7)

![Fig. 28](image8)
whole group is a special development within the British Isles of the art of the mid-European Early Iron age, which in its turn had been considerably influenced by early Mediterranean culture. In its early stages its special marks are combinations of curves, with peculiar central thickenings which give a quasi-naturalistic effect; a skilful use of inlaid enamels, and the chased line. After the introduction of Christianity, a continuous tradition combined the old system with the interlaced winding scrolls and other forms of decoration, and so led up to the extreme complexity of early Irish illumination and metal work.

A remarkable group of gold ornaments of the pre-Christian time (probably of the 1st century) was discovered about 1896, in the north-west of Ireland, and acquired by the British Museum. It was subsequently claimed by the Crown as treasure trove, and after litigation was transferred to Dublin (see Archaeologia, iv., pl. 22).

Figs. 29 and 30 are illustrations of two brooches of the latest period in this class of work. The first is 13th century; the latter is probably 12th century, and is set with paste, amber and blue.

Rings are the chief specimens now seen of medieval jewelry from the 10th to the 13th century. They are generally massive and simple. Through the 16th century a variety of changes arose; in the traditions and designs of the cinquecento we have plenty of evidence that the workmen used their own designs, and the results culminated in the triumphs of Albert Dürer, Benvenuto Cellini and Hans Holbein. The goldsmiths of the Italian republics must have produced works of surpassing excellence in workmanship, and reaching the highest point in design as applied to handicrafts of any kind. The use of enamels, precious stones, niello work and engraving, in combination with skilful execution of the human figure and animal life, produced effects which modern art in this direction is not likely to approach, still less to rival.

In fig. 31 illustrations are given of various characteristic specimens of the Renaissance and later forms of jewelry. A crystal cross set in enamelled gold (a) is German work of the 16th century. The pendant reliquary (b), enamelled and jewelled, is of 16th century Italian work, and so probably is the jewel (c) of gold set with diamonds and rubies. The Darnley or Lennox jewel (d), now in the possession of the king, was made about 1576-1577 for Lady Margaret Douglas, countess of Lennox, the mother of Henry Dalreay. It is a pendant golden heart set with a heart-shaped sapphire, richly lacquered in red and gold. It also has Scottish mottoes around and within it. The ear-ring (e) of gold, enamelled, hung with small pearls, is an example of 17th century Venetian work, and another (f) is Italian of the same period, being of gold and filigree with enamel, also with pendant flowers. A Spanish ear-rings of 18th century work (g), is a combination of ribbon, cord and filigree in gold; and another (k) is Flemish, of precious stones of the same kind set in gold in the form of birds to deck the comb. The old French-Norman pendant cross and locket (i) presents a characteristic example of peasant jewelry; it is of branched open work set with bosses and ridged ornaments of crystal. The ear-ring (j) is French of 17th century, also of gold open work set with crystals. A small pendant locket (k) is of rock crystal, with the cross of Santiago in gold and translucent crimson enamel; it is 16th or 17th century Spanish work. A pretty ear-ring of gold open scroll work (m), set with minute diamonds and three pendant pearls, is Portuguese of 17th century, and another ear-ring (n) of gold circular open work, set also with minute diamonds, is Portuguese work of 18th century. These examples fairly illustrate the general features of the most characteristic jewelry of the dates quoted.

During the 17th and 18th centuries we see only a mechanical kind of excellence, the results of the mere tradition of the workshop—the lingering of the power which when wisely directed had done so much and so well, but now simply living on traditional forms, often combined in a most incongruous fashion. Gorgeous effects were aimed at by massing the gold, and introducing stones elaborately cut in themselves or clustered in groups. Thus diamonds were clustered in rosettes and bouquets; rubies, pearls, emeralds and other coloured special stones were brought together for little other purpose than to get them into a given space in conjunction with a certain quantity of gold. The question was not of design in its relation to use as personal decoration, but of the value which could be got into a given space to produce the most striking effect.

The traditions of Oriental design as they had come down through the various periods quoted, were comparatively lost in the wretched results of the rococo of Louis XIV. and the pieces of what is called “modern” work. The Anglo-Belgian style, called “Queen Anne.” In the London exhibition of 1851, the extravagances of modern jewelry had to stand comparison with the Oriental examples contributed from India. Since then we have learnt more about these works, and have been compelled to acknowledge, in spite of what is sometimes called inferiority of workmanship, how completely the Oriental jeweller understood his work, and with what singular simplicity of method he carried it out. The combinations are always harmonious, the result aimed at is always achieved; and if in attempting to work to European ideas the jeweller failed, this was rather the fault of the form he had to follow, than the want of skill in making the most of a subject in which half the thought and the intended use were foreign to his experience.

A collection of peasant jewelry got together by Castellani for the Paris exhibition of 1857, and now in the Victoria and Albert Museum, illustrates in an admirable manner the traditional jewelry and personal ornaments of a wide range of peoples in Europe. This collection, and the additions made to it since its acquisition by the nation, show the forms in which these objects existed over several generations among the peasantry of France, chiefly in Holland, Spain, Portugal, Denmark, Germany and Switzerland, and also show how the forms popular in one country are followed and adopted in another, almost invariably because of their perfect adaptation to the purpose for which they were designed.

Apart from these humbler branches of the subject, in the middle of the 19th century the production of jewelry, regarded as a personal art, and not as a commercial and anonymous industry, was almost extinct. Its revival must be associated with the artistic movement which marked the close of that century, and which found emphatic expression in the Paris International exhibition of 1850. For many years before 1805 this industry, though prosperous from the commercial point of view, and always remarkable from that of technical finish, remained stationary as an art. French jewelry rested on its
The traditions were maintained of either the 17th and 18th centuries or the style affected at the close of the second empire—light pierced work and design borrowed from natural flowers. The last type, introduced by Massin, had exercised, indeed, a revolutionary influence on the treatment of jewelry. This clever artist, not less skilful as a craftsman, produced a new genre by copying the grace and lightness of living blossoms, thus introducing a perfectly fresh element into the limited variety of traditional style, and by the use of filigree gold work altering its character and giving it greater elegance. Massin still held the first rank in the exhibition of 1878; he had a marked influence on his contemporaries, and his name will be remembered in the history of the goldsmith's art to designate a style further confirmed in his remarkable position by the exhibition of 1900. What specially stamps the works of Lalique is their striking originality. His work may be considered from the point of view of design and from that of execution. As an artist he has completely reconstructed from the foundation the scheme of design which had led the poverty-stricken imagination of the last generation of goldsmiths. He had recourse to the art of the past, but to the spirit rather than the letter, and to nature for many new elements of design—free double curves, suave or soft; opalescent harmonies of colouring; reminiscences, with quite a new feeling, of Egypt, Chaldea, Greece and the East, or of the art of the Renaissance; and infinite variety of floral forms even of the humblest. He introduces also the female nude in the form of sirens and sphinxes. As a craftsman he has effected a radical change, breaking through old routine, combining all the processes of the goldsmith, the chaser, the enamelier and the gem-setter, and freeing himself from the narrow lines in which the art had been confined. He ignores the hierarchy of gems, caring no more on occasion for a diamond than for a flint, since, in his view, no stone, whatever its original estimation, has any value beyond the characteristic expression he lends it as a means to his end. Thus, while he sometimes uses diamonds, rubies, sapphires or emeralds as a background, he will, on the other hand, give a conspicuous position to common stones—carnelian, agate, malachite, jasper, coral, and even materials of no intrinsic value, such as horn. One of his favourite stones is the opal, which lends itself to his arrangements of colour, and which has in consequence become a fashionable stone in French jewelry.

In criticism of the art of Lalique and his school it should be observed that the works of the school are apt to be unsuited to the wear and tear of actual use, and inconveniently eccentric in their details. Moreover, the preciousness of the material is an almost inevitable consideration in the jeweller's craft, and cannot be set at naught by the artist without violating the canons of his art.
The movement which took its rise in France spread in due course to other countries. In England the movement conveniently described as the "arts and crafts movement" affected the design of jewelry. A group of designers has aimed at purging jewelery of its character of mere gem-mouthing in conventional forms (of which the imagination is inevitably starved), and in which stars, bows, flowers and the like, are varied by such absurdities as insects, birds, animals, figures of men and objects made up simply of stones clustered together). Their work is often excellently and fancifully designed, but it lacks that perfect ingenuity perfected by the incomparable craftsmen of France. At the same time English sculptor-decorators—such as Alfred Gilbert, R.A., and George J. Frampton, A.R.A.—have produced objects of a still higher class, but it is usually the work of the goldsmith rather than of the jeweller. Examples may be cited as a good model of this branch of work, which is the result of the Institute of Painters in Water Colours and in the mayoral chain for Preston. Symbolism here enters into the design, which has not only an ornamental but a didactic purpose.

The movement was represented in other countries also. In the United States it was led by L. C. Tiffany, in Belgium by Philippe Wolfers, who occupies in Belgium the position which in France is held by René Lalique. If his design is a little heavier, it is not less beautiful in imagination or less masterly in execution, more Graceful, ingenious, fanciful, elegant, fantastic by turns, his Jouhy is considered of goldsmithy is a solid claim to be considered créations d'art. The same feeling as in France has been felt in Austria, Russia and Switzerland. It must be admitted that many of the best artists who have devoted themselves to jewelry have been more successful in design than in securing the lightness and strength which are required by the wearer, and which were a characteristic in the works of the Italian craftsmen of the Renaissance. For this reason many of their masterpieces are more beautiful in the case than upon the person.

Modern Jewelry.—So far we have gone over the progress and results of the jeweller's art. We have now to speak of the production of the jeweller in modern days. As the numbers of men and women are employed in the larger cities of Europe, Paris, Vienna, London and Birmingham are the most important centres. An illustration of the manufacture as carried on in London and Birmingham will be sufficient to give an insight into the technique and artistic manipulation of this branch of art industry; but, by way of contrast, it may be interesting to give in the first place a description of the native working jeweller of Hindustan.

He travels very much after the fashion of a tinker in England; he can set all the stones, and all the requirets of his handicraft. The gold to be used is generally the property of the patron or employer, and is frequently in gold coin, which the travelling jeweller undertakes to convert into the ornaments required. He squats down the his implements by Gillis, or for the position of the goldsmiths, light his fire, cuts up the gold pieces entrusted to him, hammers, cuts, shapes, drills, solders with the blow-pipe, files, scrapes and burnishes until he has produced the desired effect. If he has stones to set or coloured enamels to introduce, he never seems to make a mistake; his instinct for harmony of colour, like that of his brother craftsman the weaver, is as unerring as that of the bird in the construction of its nest. Whether the materials are common or rich and rare, he invariably does the very best possible with them, according to native ideas of beauty in design and combination. It is only when he is interfered with by European dictation that he ever vulgarizes his art or makes a mistake. The result may appear rude in its finish, but the design and the thought are invariably right. We thus see how a trade in the working of which patience is so simple desire are so readily mastered and spread itself, as in years past it did at Clerkenwell and at Birmingham before gigantic factories were invented for producing everything under the sun.

It is impossible to find any date at which the systematic production of jewelry was introduced in England. Probably the Clerkenwell trade dates its origin from the revocation of the edict of Nantes, 1685, as so simple and wants are so readily made and spread itself, as in years past it did at Clerkenwell and at Birmingham before gigantic factories were invented for producing everything under the sun.

Modern jewelry may be classified under three heads: (1) objects in which gems and stones form the principal ornaments and in which the work in silver, platinum or gold is only a means for carrying out the design by fixing the gems or stones in the shapes to which they have been reduced. The principal part of the work is done by engraving and polishing, and the pieces being visible only as a setting; (2) when gold work plays an important part in the development of the design, being itself ornamented by engraving (now rarely used) or enamelling or both, the stones and jewels entering into the design are mere additions. The metal is arranged in different positions as to give a decorative effect to the whole; (3) when gold or other metal is alone used, the design being wrought out by hammering in repoussé, casting, engraving, chasing or by the addition of filigree work (see JEWELRY). In the last mentioned class various ingenious processes were invented, by which greater accuracy in the portions to be repeated in a design could be produced with certainty and economy; hence the various methods of stamping used in the production of hand-made jewelry, which are in themselves as much mechanical in relation to the end in view as if the whole object were stamped out at a blow, twisted into its proper position and then the detains or stamped portions fitted into each other for the mechanical completion of the work. It is therefore rather difficult to draw an absolute line between hand-made and machine-made jewelry, except in extreme cases of hand-made, for which the term "jewelry" is used. Modern jewelry is a mere fabrication, when the hand has only to give the ornament a few touches of a tool, or fit the parts together if of more than one piece.

The best and most costly hand-made jewelry produced in England, whether it regards the work of solitary jewelers, or emplacements, is made in London, and chiefly at Clerkenwell. A design is first made with pencil, sepia or water colour, and then needful with separate enamels of details, to make the drawing thoroughly intelligible to the working jeweller. According to the nature and purpose of the design, he cuts out, hammers, files and brings into shape the constructive portions of the work as a basis. Upon this, as each detail is wrought out, he soldiers, and forms the principal portions of the design, the gold or other metal has to be wrought by hand so as to receive them in little cup-like ornaments which wall encloses; these walls of gold enclosing the stones and allowing the edges to be bent over. Setting is never arranged cement in well-made jewelry. Machine-made settings have in recent years been made, but these are simply cheap imitations of the machine-made jewelry of the French. The principle is the same, though the design and arrangement of the parts may be extremely varied. This gives the object a visible part and gives the imitation of coloured gold of various tints. This colouring process requires skill and experience in the manipulation of the materials according to the quality of the gold and the amount of silver alloy in it. The objects to be coloured are dipped in a boiling mixture of salt, alum and saltpetre. Of general colouring it may be said that the object aimed at is to enhance the appearance of the gold by the use of these materials; the particles of gold are not always the pure gold only to remain visible to the eye. The process has, however, gone much out of fashion. It is at to rot the solder, and the gold is gold "coloured" and the object finished by electro-gilding.

The application of machinery to the execution of the different classes of jewelry, not necessarily imitations, but as much real gold "work, to use a trade phrase, as the best hand-made, has been an increase in the craftsman. Nearly every kind of gold chain now made is manufactured by machinery, and nothing like
JEWETT—JEWS

The beauty of design or perfection of workmanship could be obtained by hand at, probably, any cost. The question therefore in relation to the influence of the principle of inequality of the metal. Eighteen carat gold is of course preferred by those who believe in the value of gold. But this is only gold in the proportion of 18 to 24, pure gold being represented by 24. The gold coin of the realm is 22 carat; that is, it is composed of 91.67% gold and 8.33% alloy to have it to stand withstand the wear and tear. Thus 18 carat gold has one-fourth of alloy, and so on with lower qualities down to 12, which is in reality only gold by courtesy. It is the retailer who, if he is unprincipled, may strike the blows that the metals are made by weight, and as gold is nearly twice as heavy as the metal it is mixed with, it only forms a third of the bulk of a 12 carat mixture.

The application of machinery to the production of personal ornaments in gold and silver can only be economically and successfully carried on when there is a large demand for similar objects, that is to say, objects of precisely the same design and decoration throughout. As such, mass-manufactured jewelry everything is stereotyped, so to speak, and the only work required for the hands is to fit them together—in some instances scarcely that. A design is made, and from it steel dies are sunk for stamping out as rapidly as possible from a plate of rolled metal the portion represented by each die. It is in these steel dies that the skill of the artist dies-sinker is manifest. Brooches, ear-rings, pins, necklaces, bracelets, lockets, pendants, &c., are struck out by the gross. This is more especially the case in silver and in plated work—that is, imitation jewelry, of which an alloy, afterwards gilt by electro-plating. With these ornaments imitation stones in paste and glass, pearls, &c., are used, and by the late 19th century some of the best designs, the most simple, appropriate and artistic, have appeared in imitation jewelry. It is only to those engaged in this manufacture to state distinctly that their work is never sold wholesale for anything even near the value of the materials. Throughout the maker of imitation jewelry, and he only makes of a quality well known to his customers. The producer of silver work only manufactures silver ornaments, and so on throughout the whole class of plated goods. It is only on the one hand that advantage of the ignorance of the buyer and sells for gold that which is in reality an imitation, and which he bought as such. The imitations of old styles of jewelry which are largely sold in curiosity shops at foreign places of fashionable resort are said to be made in Germany, especially at Munich.

JEWETT, SARAH ORNE (1849-1906), American novelist, was born in South Berwick, Maine, on the 3rd of September 1849. She was a daughter of the physician Theodore H. Jewett (1815-1878), by whom she was greatly influenced, and whom she has drawn in A Country Doctor (1884). She studied at the Berwick Academy, and began her literary career in 1859, when she contributed her first story to the Atlantic Monthly. Her best work consists of sketches, notably those in The Country of the Painted Pies (1890), In Southern Africa (1892), and A White Heron and other Stories (1886). The King of Folkland and other People (1888); Strangers and Washyers (1890); A Native of Winby and other Tales (1893); The Queen's Own and other Stories (1899), and The Towy Lover (1901), an historical novel.

JEWS (Heb. יְהֹאָדָד, man of Judah; Gr. Ἰουσαύς; Lat. Judaeus), the general name for the Semitic people which inhabited Palestine from early times, and is known in various connexions as "the Hebrews," "the Jews," and "Israel" (see §5 below). Their history may be divided into three great periods: (1) That covered by the Old Testament to the foundation of Judaism in the Persian age, (2) that of the Greek and Roman domination to the destruction of Jerusalem, and (3) that of the Diaspora or Dispersion to the present day.

I.—OLD TESTAMENT HISTORY

1. The Land and the People.—For the first two periods the history of the Jews is mainly that of Palestine. It begins among those peoples which occupied the area lying between the Nile on the one side and the Tigris and the Euphrates on the other. Surrounded by ancient seats of culture in Egypt and Babylonia, by the mysterious deserts of Arabia, and by the highlands of Asia Minor, the Palestine Jews were in the north, the high road of civilization, trade and warlike enterprise, and the meeting-place of religions. Its small principalities were entirely dominated by the great Powers, whose weakness or acquiescence alone enabled them to rise above dependence or vassalage. The land was traversed by old-established trade routes and possessed important harbours on the Gulf of Akaba and on the Mediterranean coast, the latter exposing it to the influence of the Levantine culture. It was the "physical centre of those movements of history from which the world has derived much of its progress," and this portion of this abashment upon the Mediterranean may be divided into two main parts:—Syria (from the Taurus to Hermon) and Palestine (southward to the desert bordering upon Egypt). The latter is about 150 m. from north to south (the proverbial "Dan to Beersheba"), with a breadth varying from 25 to 80 m., i.e. about 6040 sq. m. This excludes the land east of the Jordan, on which see PALESTINE.

From time to time streams of migration swept into Palestine and Syria. Semitic tribes wandered northwards from their home in Arabia to seek sustenance in its more fertile fields, to plunder or escape the pressure of tribes in the rear. The course leads naturally into either Palestine or Babylonia, and, following the Euphrates, northern Syria is eventually reached. Tribes also moved down from the north: nomads, or offshoots from the powerful states which stretch into Asia Minor. Such frequently recurring movements introduced new blood. Tribes, chiefly of pastoral habits, settled down among others who were so nearly of the same type that a complete amalgamation could be effected, and this without any marked modification of the general characteristics of the earlier inhabitants. It is from such a fusion as this that the ancestors of the Jews were descended, and both the story and the genius of this people can be properly understood only by taking into account the physical features of their land and the characteristics of the Semitic races in general (see PALESTINE, SEMITIC LANGUAGES).

2. Society and Religion.—The similarity uniting the peoples of the East in respect of racial and social characteristics is accompanied by a striking similarity of mental outlook which has survived to modern times. Palestine, in spite of the numerous vicissitudes to which it has been subjected, has not lost its fundamental characteristics. The political changes involved in the Babylonian, Assyrian, Egyptian or Persian conquests merely affected it as little as the vast influence of waves of Greek, Roman and other European invasions. Even during the temporary Hellenization in the second great period the character of the people as a whole was untouched by the various external influences which produced so great an effect on the upper classes. When the foreign civilization perished, the old culture once more came to the surface. Hence it is possible, by a comprehensive comparative study of Eastern peoples, in both ancient and modern times, to supplement and illustrate within certain limits our direct knowledge of the early Jewish people, and thus to understand more clearly those characteristics which were...
peculiar to them, in relation to those which they shared with other Oriental peoples.

Even before authentic history begins, the elements of religion and society had already crystallized into a solid coherent structure which was to persist without essential modification. Religion was inseparable from ordinary life, and, like that of all peoples who are dependent on the fruits of the earth, was a nature-worship. The tie between deities and worshippers was regarded as physical and entailed mutual obligations. The study of the clan-group as an organization is as instructive here as in other fields. The members of each group lived on terms of equality, the families forming a society of worship the rites of which were conducted by the head. Such groups (each with its local deity) would combine for definite purposes under the impulse of external needs, but owing to inevitable internal jealousies and the incessant feuds among a people averse from discipline and authority, the unions were not necessarily lasting. The elders of those groups possessed some influence, and tended to form an aristocracy, which took the lead in social life, although their authority generally depended merely upon custom. Individual leaders in times of stress acquired a recognized supremacy, and, once a tribe outstripped the rest, the opportunities for continued advance gave further scope to their authority. "The interminable feuds of tribes, conducted on the theory of blood-revenge, . . . can seldom be durably healed without the intervention of a third party who is called in as arbiter, and in this way an impartial and wholesome power arises of necessity in a great and beneficent member over all around it" (W. R. Smith). In time, notwithstanding a certain inherent individualism and impatience of control, veritable despotsisms arose in the Semitic world, although such organizations were invariably liable to sudden collapse as the old forms of life broke down with changing conditions.¹

3. Early History.—Already in the 17th century B.C. Palestine was inhabited by a settled people whose language, thought and religion were not radically different several hundred years later. Small native princes ruled as vassals of Egypt which, after expelling the Hyksos from its borders, had entered into new series of conquests as far as the Euphrates. Some centuries previously, however, Babylonia had laid claim to the western states, and the Babylonian (i.e. Assyrian) script and language were now used, not merely in the diplomatic correspondence between Egypt and Asia, but also for matters of private and everyday life among the Palestinian princes themselves. To what extent specific Babylonian influence showed itself in other directions is not completely known. Canaan (Palestine and the south Phoenician coast land) and Amor (Lebanon district and beyond) were under the constant supervision of Egypt, and Egyptian officials journeyed round to collect tribute, to attend to complaints, and to assure themselves of the allegiance of the vassals. The Amarna tablets and those more recently found at Taanach (bibl. Taannah), together with the contemporary archaeological evidence (from Lachish, Gezer, Megiddo, Jericho, &c.), represent advanced conditions of life and culture, the precise chronological limits of which cannot be determined with certainty. This age, with its regular maritime intercourse between the Aegean settlements, Phoenicia and the Delta, and with lines of caravans connecting Babylonia, North Syria, Arabia and Egypt, presents a remarkable picture of life and activity, in the centre of which lies Palestine, with here and there Egyptian colonies and some traces of Egyptian cults. The history of this, the "Amarna" age, reveals a state of anarchy in Palestine for which the weakness of Egypt and the downward pressure of north Syrian peoples were responsible. Subdivided into a number of little local principalities, Palestine was suffering both from internal intrigues and from the designs of this northern power. It is now that we find the restless Habiru, a name which is commonly identified with that of the Hebrews" (i.e., the Israelites). They offer themselves where necessary to either party, and at some time at least perhaps belonged to the settled population. The growing prominence of the new northern group of "Hittite" states continued to occupy the energies of Egypt, and when again we have more external light upon Palestinian history, the Hittites (q.v.) are found strongly entrenched in the land. But by the end of the first quarter of the 13th century B.C. Egypt had recovered its province (precise boundary uncertain), leaving its rivals in possession of Syria. Towards the close of the 13th century the Egyptian king Merneptah (Minepehtah) records a successful campaign in Palestine, and alludes to the defeat of Canaan, Ascalon, Gezer, Yevam (in Lebanon) and (the people or tribe) Israel. Bodies of aliens from the Levant coast had previously threatened Egypt and Syria, and at the beginning of the 12th century they formed a coalition on land and sea which taxed all the resources of Rameses III. In the Purasati, apparently the most influential of these peoples, may be recognized the origin of the name "Philistine." The Hittite power became weaker, and the invaders, in spite of defeat, appear to have succeeded in maintaining themselves on the sea coast. External history, however, is very fragmentary just at the age when its evidence would be most welcome. For a time the fate of Syria and Palestine seems to have been no longer controlled by the great powers. When the curtain rises again we enter upon the historical traditions of the Old Testament.

4. Biblical History.—For the rest of the first period the Old Testament forms the main source. It contains in fact the history itself in two forms: (a) from the creation of man to the fall of Judah (Genesis-2 Kings), which is supplemented and continued further—(b) to the foundation of Judah in the 5th century B.C. (Chronicles—Ezra-Nehemiah). In the light of contemporary monuments, archaeological evidence, the progress of specific knowledge and the recognized methods of modern historical criticism, the representation of the origin of mankind and of the history of the Jews in the Old Testament can no longer be implicitly accepted. Written by an Oriental people and clothed in an Oriental dress, the Old Testament does not contain objective records, but subjective history written and incorporated for specific purposes. Like many Oriental works it is a compilation, as may be illustrated from a comparison of Chronicles with Samuel-Kings, and the representation of the past in the light of the present (as exemplified in Chronicles) is a frequently recurring phenomenon. The critical examination of the nature and growth of this compilation has removed much that had caused insuperable difficulties and had quite unnecessarily been made an integral or a relevant part of practical religion. On the other hand, criticism has given a deeper meaning to the Old Testament history, and has brought into relief the central truths which really are vital; it may be said to have replaced a divine account of man by man's account of the divine. Scholars are now almost unanimously agreed that the internal features are best explained by the Graf-Wellhausen hypothesis. This involves the view that the historical traditions are mainly due to two characteristic though very complicated recensions, one under the influence of the teaching of Deuteronomy (Joshua to Kings, see § 20), the other, of a more priestly character (akin to Leviticus), of somewhat later date (Genesis to Joshua, with traces in Judges to Kings, see § 23). There are, of course, numerous problems relating to the nature, limits and dates of the two recensions, of the incorporated sources, and of other sources (whether early or late) of independent origin; and here there is naturally room for much divergence of opinion. Older material (often of composite origin) has been used, not so much for the purpose of providing historical information, as with the object of showing the religious significance of past history; ¹ On the homogeneity of the population, see further, W. R. Smith, Religion in the Ancient East (2nd ed., enlarged), ch. 26. T. Noldeke, Vorlesungen aus Ostern Geschichte, pp. 1–20 (in "Some Characteristics of the Semitic Race"); and especially E. Meyer, Gesch. d. Altertums (2nd ed., i. §§ 330, sqq.). For the relation between the geographical characteristics and the political history, see G. A. Smith, Historical Geography of the Holy Land.

For fuller information on this section see PALESTINE: HISTORY, and the related portions of BABYLONIA AND ASSYRIA, EGYPT, HITTITES, SYRIA.
and the series Joshua–Kings is actually included among the "prophets" in Jewish reckoning (see MIDRASH). In general, one may often observe that freedom which is characteristic of early and unscientific historians. Thus one may note the reshaping of older material to agree with later thought, the building up of past periods from the records of other periods, and a sense of history as a whole. The historical traditions are to be supplemented by the reconstructions of scholarly, legal and poetic literature which reveal contemporary views of the various internal literary, theological or sociological features.

The investigation of their true historical background and of the trustworthiness of their external setting (e.g. titles of psalms, dates and headings of prophecies) involves a criticism of the historical traditions themselves, and thus the two major classes of material must be constantly examined both separately and in their bearing on one another. In a word, the study of biblical history, which is dependent in the first instance upon the written sources, demands constant attention to the text (which has had an interesting history) and to the literary features; it requires a sympathetic acquaintance with Oriental life and thought, both ancient and modern, an appreciation of the necessity of employing the methods of scientific research, and (from the theological side) a reasoned estimate of the dependence of individual religious convictions upon the letter of the Old Testament.

In view of the numerous articles in this work dealing with biblical subjects, only a few brief illustrations of such work can be given. The whole of Maspero’s work is in a way historical; it is managed separately under Hebrew Religion. The related literature is entered in the bibliographies to the special articles; it is indexed annually in Orientalistische Bibliographie (Berlin), and is usefully summarized in the Theologische Jahresbericht (Berlin). On this and similar lines goes the work of C. A. Briggs, Study of Holy Scripture (1890), especially ch. xxv. The first scientific historical work was by H. Ewald, Gesch. d. Volkes Israel (1843; 3rd ed., 1864–1868; Eng. trans., 1869–1885), popularized by Arthur Reimarus in his Briefe über die alte Hebräische Sprache (1869), and followed by two noteworthy works of J. Wellhausen (especially Prolegomena to the Hist. of Israel, Eng. trans., 1885, also the brilliant article "Israel" in the 9th ed. of the Ency. Brit., 1879) were epoch-making; his position was interpreted to English readers by H. A. Robinson Smith (Old Test. in Jewish Church, 1881, 2nd ed., 1892; Prophets of Israel, 1882, 2nd ed. by T. K. Cheyne, 1892). The historical (and related) works of T. K. Cheyne, H. Gneuss, H. Guteh, F. C. Kent, A. Kittel, W. H. Kosters, A. Kuenen, C. Piepenbring, and especially B. Stade, although varying greatly in standpoint, are among the most valuable by recent scholars; H. P. Smith’s Old Test. Hist. (‘International Bibliography of the Old Testament’), is a very helpful and most serviceable and complete study; a modern and more critical "Ewald" is a desideratum. For the works of numerous other scholars who have furthered Old Testament research in the past it may be of some use to mention a list by J. M. P. Smith, Books for O.T. Study (Chicago, 1908).

For the external history, E. Schrader, Conformism Inschr. and the Old Testament (Eng. trans. by O. C. Whitehouse, 1885–1888) is still useful; among the less technical works are J. F. McCurdy, History, Prophecy and the Monuments; B. Paton, Syria and Palestine (1902); G. Maspero, Hist. ancienne (6th ed., 1904); A. Jeremias, Alte Texte im Lichte d. Alien Oriens (2nd ed., 1906); and especially Altoriental. Texte u. Bilder zum Alten Text, ed. by H. Gressam, with A. Unger and H. Ranke (1909). The most complete is that of Ed. Meyer, Gesch. d. Allthums (2nd ed., 1907, sqq.). That of Jeremias follows uniformly throughout, and may well be read from start to finish; and what narrow limits of purely "Israelite" histories, emphasize the necessity of observing the characteristics of Oriental thought and policy, and are invaluable for discriminating students. Winckler in the edition—a re-writing—of Schrader’s work (Keilinschr. u. d. Alte Testament, 1903), and, with an instructive account of the history of "ancient nearer Asia," in H. F. Holtzclaw’s World’s History, li. 2–352 (1903). All modern

---

1 It is useful to compare the critical study of the Konan (q.v.), where, however, the investigation of its various "revelations" is strongly connected with the historical study of the earlier Jewish literature to which it is dependent.

2 The greater wealth of independent historical tradition. See also G. B. Gray, Contemporary Review (July 1907); A. A. Bevan, Cambridge Biblical Essays (ed. Swete, 1909), pp. 1–19.

4 For the sections which follow the present writer may be permitted to refer to his introductory contributions in the Expositor (June, 1907, "Old Testament History"); and further, Critical Notes on O.T. History, especially sections vii.–ix.: July and October 1907; April 1908; Amer. Journ. Theol. (July 1909, "Simeon and Levi: the Problem of the Old Testament"); and Brit. Cambridge Bibl. Essays, pp. 54–59 ("The Present Stage of O.T. Research").
deserves preference where precise distinction is unnecessary or impossible.

The traditions which prevailed among the Hebrews concerning their origin belong to a time when Judah and Israel were regarded as a unit. Twelve divisions or tribes, of which Judah was one, held together by a traditional sentiment, were traced back to the sons of Jacob (otherwise known as Israel), the son of Isaac and grandson of Abraham. Their names vary in origin and probably also in point of age, and where they represent fixed territorial divisions of the districts so named were shown to be certainly peopled by groups of non-Israelite ancestry. But as tribal names they invited explanation, and of the many characteristic traditions which were doubtless current a number have been preserved, though not in any very early dress. Close relationship was recognized with the Aramaeans, with Edom, Moab and Ammon. This is characteristically expressed when Esau, the ancestor of Edom, is represented as the brother of Jacob, or when Moab and Ammon are the children of Lot, Abra-

ham’s nephew (see GENEALOGY: Biblical). Abraham, it is figured, came from Harran (Carrhae), primarily from Babylonia, and Jacob re-enters from Gilead in the north-east with his Aramaean wives and concubines and their families (Benjamin excepted). It is on this occasion that Jacob’s name is changed to Israel. These traditions of migration and kinship are in them-

selves entirely credible, but the detailed accounts of the ancestors Abraham, Isaac and Jacob, as given in Genesis, are inherently doubtful as regards both the internal conditions, which the (late) chronological scheme ascribes to the first half of the second millennium B.C., and the general circumstances of the life of these strangers in a foreign land. From a variety of independent reasons one is inclined to conclude that whatever historical elements they may contain, the stories of this remote past represent the form which tradition had taken in a very much later age.

Opinion is at variance regarding the patriarchal narratives as a whole. To deny their historical character is to reject them as trustworthy accounts of the age to which they are ascribed, and even those scholars who claim that they are essentially historical already go so far as to concede idealization and the possibility of probability of later revision. The failure to apprehend historical method has often led to the fallacious argument that the trust-

worthyness of individual features justifies our accepting the whole, or that the elimination of unhistorical elements will leave an historical residuum. Here and frequently elsewhere in biblical history it is necessary to allow that genuine historical tradition may be cloaked in an unsuitable dress, but since diverse motives are often concentrated upon one narrative (e.g. Gen. xxxii. 22–32, xxvii., xxviii.), the work of internal historical criticism (in view of the scarcity of the evidence) can rarely claim finality. The patriarchal narratives themselves belong to the popular stock of tradition of which only a portion has been preserved. Many of the elements lie outside questions of time and place and are almost immemorial. Some appear written for the first time in the book of Jubilees, in “the Testament of the Twelve Patriarchs” (both perhaps 2nd century B.C.) and in later sources; and although in Genesis the stories are now in a post-exilic setting (a stage earlier than Jubilees), the older portions may well belong to the 7th or 6th century. This question, however, will rest upon those criteria alone which are of true chronological validity (see further Genesis).

The story of the settlement of the national and tribal ancestors in Palestine is interrupted by an account of the southward move-

ment of Jacob (or Israel) and his sons into a district under the immediate influence of the kings of Egypt. After an interval of uncertain duration we find in Exodus a numerous people subjected to rigid oppression. No longer individual sons of Jacob or Israel, united tribes were led out by Moses and Aaron; and, after a series of incidents extending over forty years, the “children of Israel” invaded the land in which their ancestors had lived. The traditions embodied in the books Exodus-Joshua are considerably later than the apparent date of the events themselves, and amid the diverse and often conflicting data it is possible to recognize distinct groups due to some extent to distinct historical conditions. The story of the "exodus" is that of the religious birth of "Israel," joined by covenant with the national god Yahweh whose aid in times of peril and need

proved his supremacy. In Moses (q.v.) was seen the founder of Israel’s religion and laws; and in Aaron (q.v.) the prototype of the Israelite priesthood. Although it is difficult to determine the true historical kernel, two features are most prominent in the narratives which the post-exilic compiler has incorporated: the revelation of Yahweh, and the movement into Palestine. Yahweh had admittedly been the God of Israel’s ancestors, but his name was now only made known (Exod. iii. 13 seq., vi. 2 seq.), and this revelation of a new era in Yahweh’s relations with the people is associated with the family of Moses and Aaron. The Israelites came from the south of Palestine which reappear in religious move-

ments in later history (see KENITES). Amid a great variety of motives the prominence of Kadesh in south Palestine is to be recognized, but it is uncertain what clans or tribes were at Kadesh, and it is possible that traditions, originally confined to those with whom the new conception of Yahweh was connected, were subsequently adopted by others who came to regard them-

selves as the worshippers of the only true Yahweh. At all events, two quite distinct views seem to underlie the opening books of the Old Testament. The one associates itself with the ancestors of the Hebrews and has various chapters in it, the other, part of the religious history of “Israel,” is essentially bound up with the religious genius of the people, and is partly connected with clans from the south of Palestine whose influence appears in later times. Other factors in the literary growth of the present narratives are not excluded (see further § 8, and Exodus, Titre).

6. The Monarchy of Israel.—The book of Joshua continues the fortunes of the “children of Israel” and describes a successful occupation of Palestine by the united tribes. This stands in striking contrast to the earlier accounts of the partial successes of individual groups (Judg. i.). The former, however, is based upon the account of victories by the Ephraimite Joshua over confederations of petty kings to the south and north of central Palestine, apparently the specific traditions of the people of Ephraim describing from their standpoint the entire conquest of Palestine. The book of Judges represents a period of unrest after the settlement of the people. External oppression and internal rivalries rent the Israelites, and in the religious philoso-

phy of a later (Deuteronomic) age the period is represented as books of alternate apostasy and from of penitent return to the Yahweh of the “exodus.” Some of the earlier accounts of the historical events (§ 3 end) might be claimed among the traditions ascribed to the closing centuries of the second millennium, but the view that the prelude to the monarchy was an era when individual leaders “judged” all Israel finds no support in the older narratives, where the heroes of the age (whose correct sequence is uncertain) enjoy only a local fame. The best historical narratives belong to Israel and Gilead; Judah scarcely appears, and in a relatively old poetic account of a great fight of the united tribes against a northern adversary lies outside the writer’s horizon or interest (Judg. v., see DEBORAH, JUDGES). Stories of successful warfare and of temporary leaders (see ANESIS, ELIUD; GIDEON; JEPHTHAH) form an introduction to the institution of the Israelite monarchy, an epoch of supreme importance in biblical history. The heroic figure who stands at the head is Saul (“asked”), and two accounts of his rise are recorded.

(1) The Philistines, a foreign people whose presence in Palestine

The story of Joseph has distinctive internal features of its own, and appears to be from an independent cycle, which has been used to form a connecting link between the Settlement and the Exodus; see also Ed. Meyer, Die Israeliten u. ihre Nachbarnstämme (1906), pp. 228, 433; B. Lüter, ibid. pp. 108 seq., 142 seq. Neither of the two accounts, xxv. 29 to 35, xxvi. 29 to 35, is regarded as devoutly inspired, xxv. 29 is a “fraction” description of the tribe of Levi. xxvi. 30 is a local place-name. xxvii. 20, 21 suggests that the name was a mere exclamation inspired by association and the non-Jewish name of the man's town. xxvii. 25-27 is a lifting up of the case of a tribe which was left out of the story of the Israelite exodus and incorporation into the nation. xxvii. 28 is a pastoral tribe inspired to settle in Palestine. Apparently the two accounts arise from different traditions of the exodus not of very great antiquity; according to Jeremiah ii. 2, 7 (cf. Hos. ii. 15) some traditions of Joseph's exodus are common to both accounts.

The capture of central Palestine itself is not recorded; ac-

Aram. Gen. xviii. 22; cf. the later form of the tradition in the Rabbinic Literature. This conception of a conquering hero is entirely distinct from the narratives of the descent of Jacob into Egypt, &c. (see Meyer and Lüter, op. cit. pp. 110, 227 seq., 415, 433).
has already been noticed, had oppressed Israel (cf. Samson) until a brilliant victory was gained by the prophet Samuel, some account of whose early history is recorded. He himself held supreme sway over all Israel as the last of the “judges” until compelled to accede to the popular demand for a king. The young Saul was acknowledged by the various parties and the still extant Canaanite narratives and the account of the Annals of Carchemish to represent the people scattered and in hiding; Israel is groaning under the Philistine yoke, and the unknown Saul is raised up by Yahweh to save his people. This he accomplishes with the help of his son Jonathan. The first account, although now essential to the canonical history, clearly gives a less authentic account of the change from the “judges” to the monarchy, while the second is fragmentary and can hardly be fitted into the present historical thread (see Saul). At all events the first of a series of annalistic notices of the kings of Israel ascribes to Saul conquests over the surrounding peoples to an extent which implies that the district of Judah formed part of his kingdom (1 Sam. xiv. 47 seq.). His might is attested also by the fine elegy (2 Sam. i. 19 sqq.) over the death of two great Israelite heroes, Saul and Jonathan, knit together by mutual love, inseparable in life and death, whose unhappy end after a career of success was a national misfortune. Disaster had come upon the north, and the plain of Jezreel saw the total defeat of the king and the rout of his army. This was hastily removed across the Jordan to Mahanaim, where Saul’s son Ishbaal (Ish-bosheth), thanks to his general Abner, and the men of Judah, gained lost prestige. In circumstances which are not detailed, the kingdom seems to have regained its strength, and Ishbaal is credited with a reign of two years over Israel and Gilead (2 Sam. ii. 8–10; contrast v. 11). But at this point the scanty annals are suspended and the history of the age is given in more popular sources. Both Israel and Judah had their own annals, brief excerpts from which appear in the books of Samuel, Kings and Chronicles, and they are supplemented by fuller narratives of distinct and more popular origin. The writings are the result of a conscious effort to counteract the influence of the later and more ancient national history has come down to us through Judaean hands, and in the godless hands of which it has been coloured by late Judaean feeling. It is precisely in Saul’s time that the account of the Judaean monarchy, or perhaps of the monarchy from the Judaean standpoint, now begins.

7. The Monarchy of Judah.—Certain traditions of Judah and Jerusalem appear to have looked back upon a movement from the south, traces of which underlie the present account of the “exodus.” The land was full of “sons of Anak,” giants who had terrified the scouts sent from Kadesh. Caleb (q.v.) alone had disputed the land, and he and his followers, having driven them out from Hebron in south Judah (Josh. xv. 14 sqq.; cf. also xi. 21 seq.). David and his followers are found in the south of Hebron, and as they advanced northwards they encountered wondrous heroes between Gath and Jerusalem (2 Sam. xxi. 15 sqq.; xxiii. 8 sqq.). After strenuous fighting the district was cleared, and Jerusalem, taken by the sword, became the capital. History saw in David the head of a lengthy line of kings, the founder of the Judaean monarchy, the psalmist and the priest-king who inaugurated religious institutions now recognized to be of a distinctly later character. As a result of this backward projection of later conceptions, the recovery of the true historical nucleus is difficult. The prominence of Jerusalem, the centre of post-exilic Judaism, necessarily invited reflection. Israelite tradition had ascribed the conquest of Jerusalem, Hebron and other cities of Judah to the Ephraimite Joshua; Judaean tradition, on the other hand, relates the capture of the sacred city from a strange and hostile people (2 Sam. v.). The famous city, within easy reach of the southern desert and central Palestine (to Hebron and to Samaria the distances are about 8 and 35 miles respectively), had already entered into national history in the “Amarna” age (§ 2). Anathoth, a few miles to the north-east, points to the cult of the goddess Anath, the near-lying Nob has suggested the name of the Babylonian Nebo, and the neighbouring, though unidentified, Beth-Ninib of the Amarna tablets may indicate the worship of a Babylonian war and astral god (cf. the solar name Beth-She’mem). Such was the religious environment of the ancient city which was destined to become the centre of Judah. Judaean tradition dated the sanctity of Jerusalem from the installation of the ark, a sacred movable object which symbolized the presence of Yahweh. It another phase of the history of the Ark it is a different Saul, within the confines of the same district, the south of Palestine, or with the wanderings of David and his own Israel. At this point it is ultimately placed within the newly captured city. Quite another body of tradition associates it with the invasion of all the tribes of Israel from beyond the Jordan (see Axz). To combine the heterogeneous narratives and isolated statements into a consecutive account is impossible; to ignore those which conflict with the now predominating views would be unmethodical. When the narratives describe the life of the young David at the court of the first king of the northern kingdom, when the scenes cover the district which he took with his sword, and when the brave Saul is represented in an unfavourable light, one must allow for the popular tendency to idealize great figures, and for the Judaean origin of the compilation. To David is ascribed the sovereignty over a united people. But the stages in his progress are not clear. After being the popular favourite of Israel in the little district of Benjamin, he was driven away by the jealousy and animosity of Saul. Gradually strengthening his position by alliance with Judaean clans, he became king at Hebron at the time when Israel suffered defeat in the north. His subsequent advance to the kingship over Judah and Israel at Jerusalem is represented as due to the overthrow of Saul, by the influence of Abner; partly also, to the long-expressed wish of the Israelites that their old hero should reign over them. Yet again, Saul had been chosen by Yahweh to free his people from the Philistines; he had been rejected for his sins, and had suffered continuously from this enemy; Israel at his death was left in the unhappy state in which he had found it; it was the Judaean David, the faithful servant of Yahweh, who was now chosen to deliver Israel, and to the last the people gratefully remembered their debt. David accomplished the kingdom of Israel, facilitated by the compliance of Abner; partly also, to the long expressed wish of the Israelites that their old hero should reign over them. But David, as Solomon, had assumed complete sway over all the lines and David his tens of thousands is the popular couplet comparing the relative merits of the rival dynasts. A series of campaigns against Edom, Moab, Ammon and the Aramaean states, friendly relations with Hiram of Tyre, and the recognition of his sovereignty by the king of Hamath on the Orontes, combine to portray a monarchy which was the ideal.

But in passing from the books of Samuel, with their many rich and vivid narratives, to the books of Kings, we enter upon a period of different atmosphere, due to the character of the material and the aims of the compiler (see § 9 beginning). David, the conqueror, was followed by his son Solomon, famous for his wealth, wisdom and piety, above all for the magnificent Temple which he built at Jerusalem. Phoenician artificers were enlisted for the purpose, and with Phoenician sailors successful trading-journeys were regularly undertaken. Commercial intercourse with Asia Minor, Arabia, Tarshish (probably in Spain) and Tyre (q.v.) filled his coffers, and his realm extended from the Euphrates to the border of Egypt. Tradition depicts him as a worthy successor to his father, and represents a state of luxury and riches impressive to all who were familiar with the great Oriental courts. The commercial activity of the king and the picture of intercourse and wealth are quite in accordance with what is known of the ancient monarchies, and could already be illustrated from the Amarna age. Judah and Israel dwelt at ease, or held the superior position of military officials, while the earlier inhabitants of the land were put to forced labour. But another side of the picture shows the domestic intrigues which darkened the last days of David. The accession of Solomon had not been without bloodshed, and Judah, together with David’s old generally good and his faithful priest Abiathar, were opposed to the son of a weak condition that been the wife of a Hittite warrior. The era of the Temple of Jerusalem starts with a new régime, another captain of the army.
and another priest. Nevertheless, the enmity of Judah is passed over, and when the kingdom is divided for administrative purposes into twelve districts, which ignore the tribal divisions, the centre of David's early power is exempt from the duty of providing supplies (1 Kings iv.). Yet again, the approach of the divided monarchy is foreshadowed. The employment of Judaeans and Israelites for Solomon's palatial buildings, and the hearing of the king's counsel in suits which were later to cause the world, gave rise internal discontent. External relations, too, were unsatisfactory. The Edomites, who had been almost exterminated by David in the valley of Salt, south of the Dead Sea, were now strong enough to seek revenge; and the powerful kingdom of Damascus, whose foundation is ascribed to this period, began to threaten Israel on the north and north-east. These troubles, we learn, had affected all Solomon's reign, and even Hiram appears to have acquired a portion of Galilee. In the approaching disruption writers saw the punishment for the king's apostasy, and they condemn the sanctuaries in Jerusalem which he erected to the gods of his heathen wives. Nevertheless, these places of cult remained some three hundred years until almost the close of the monarchy, when their destruction is attributed to Josiah (§ 16). When at length Solomon died the opportunity was at once seized to request from his son Rehoboam a more generous treatment. The reply is memorable: "My little finger is thicker than my father's loins; my father chastised you with whips, but I will chastise you with scorpions." These words were calculated to inflame a people whose history proves to have been happily guided under their kings, and the greater part of Israel, including the union with the small district of Judah. Jeroboam (q.v.), once one of Solomon's officers, became king over the north, and thus the history of the divided monarchy begins (about 930 B.C.) with the Israelite power on both sides of the Jordan and with Judah extending southwards from a point a few miles north of Jerusalem.

8. Problems of the Earliest History.—Biblical history previous to the separation of Judah and Israel holds a prominent place in current ideas, since over two-fifths of the entire Old Testament deals with these episodes. The archaeological evidence of the crucial period, from the separation to the fall of Jerusalem (586 B.C.), occupies only about one-twelfth, and even of this about one-third is spread over some fifteen years (see below, § 11). From the flourishing days of the later monarchy and onwards, different writers handled the early history of their land from different standpoints. The feeling of national unity between north and south would require historical treatment, the national monarchy having been required to demand an account of itself. But the surviving material is extremely uneven; vital events in these centuries are treated with a slavishness in striking contrast to the relatively detailed evidence for the preceding period—evidence, however, which has been marred in places by a modern interpretation of the material, full of serious discrepancies are found; and where external evidence is fortunately available, the independent character of the biblical statements is illustrated. It is clear that this stage cannot be regarded as objective history. It is naturally impossible to treat them from any modern standpoint as fiction; they are honest even where they are most untrustworthy. But the recovery of successive historical nuclei does not furnish a continuous thread, and if one is to be guided by the historical context of events the true background to each nucleus must be sought. The northern kingdom cherished the institution of a monarchy, and in this, as in all great political events, the prophets took part. The precise part these figures play is often idealized and expresses the later views of their prominence. It was only after a bitter experience that the kingdom began to regard anarchy as a misfortune, and this later idea was reversed in order to illustrate the opposition to secular authority. In this and in many other respects the records of the first monarchy have been elaborated and now reveal traces of differing conceptions of the historical past (1 Kings iv.). See below, § 11. The oldest narratives are not in their original contexts, and they contain features which render it questionable whether a very trustworthy recollection of the period was retained. Although the writing of the Hebrew state, at an age when the great powers were quiescent and when such a people as the Philistines is known to have appeared upon the scene, is entirely intelligible, it is not improbable that legends, interpretations of the first monarchy which had been put in a historical setting with the help of later historical tradition. It is at least necessary to distinguish provisionally between the historical framework and narratives which may be of later growth—numbers which may be evidence that can test and details which cannot be tested and appear isolated without any cause or devoid of any effect.

Many attempts have been made to present a satisfactory sketch of the early history and to do justice to (a) the patriarchal narratives, (b) the exodus from Egypt and the Israelite invasion, and (c) the rise of the monarchy. As regards (b), external evidence has already been cited (p. 351). "Scholarly opinion is divided as to whether the invasion; internal historical criticism is against the view that all the tribes entered under Joshua; and in (d) there are traces of an actual settlement in the land, entirely distinct from the cycle of events which provides the background, allusions and compromises by modern apologistic and critical writers alike involve without exception an extremely free treatment of the subject (cf. Sir. 40: 14). It is highly probable that the former was the origin of a substantial data. On the one hand, a sweeping invasion of all the tribes of Israel moved by a common zeal may, like the conquests of Islam, have produced permanent results. According to this view New Jerusalem was built on the spot where the new Israelites had filled the lofty ideal monothecism in the desert, and after the fall of the northern tribes (latter part of the 8th cent.) Judah is naturally regarded as their spiritual home. On the other hand—such a conquest, and all the consequent problems, conflict both with external evidence, of course (question of excavations), and with any careful inspection of the narratives themselves. On the other hand, the reconstructions which allow a historical settlement (perhaps of a elective group), and an interfusion with the earlier inhabitants, certainly find support in biblical evidence, and they have been ingeniously built up with the help of tribal and other data (e.g. Gen. xxiv., xxxviii.; Judg. i. x.). But they imply political, sociological and religious developments which do not do justice either to the biblical evidence as a whole or to a comprehensive survey of contemporary conditions. Thus, one of the possible solutions of the problem is to place the stories of the invasion in the land—early, but further, and those who had not. This inquiry is further complicated by (c), where the history of Israel and Judah, as related in Judges and 1 Samuel, has caused endless dispute. The traditional development suggests that the first king of (north) Israel virtually treats Judah as part of Israel and are related to the underlying representations in (a). But the specific independent Judaean standpoint treats the unification of the two kingdoms as a new foundation, and the division of the 'invasion' is again, to Solomon. The varied narratives, now due to Judaean editors, preserve distinct points of view, and it is extremely difficult to determine the threads that are to be set apart as to the relative position in the history. Finally, the consciousness that the people as a religious body owed everything to the desert clans (b) (see § 5) subsequently leaves its mark upon (north) Israelite history (§ 14), but has not the same inevitably critical effect which has been receivers in the history of Jerusalem. Without sufficient external and independent evidence wherewith to interpret in the light of history the internal features of the intricate narratives, any reconstruction would naturally be hazardous, and all attempts must inevitably be considered in the light of the biblical evidence itself, the date of the Israelite exodus, and the external conditions. Biblical criticism is concerned with a composite history based upon other histories (partly of non-Judaean origin), and the relation between native written sources and external contemporary evidence (monumental and archaeological) distinctly fords any haphazard selection from sources of this kind, and the processes of selection are best observed in other fields (ancient Britain, Greece, Egyptians, &c.), where, however, the native documents and sources have not that complexity which characterizes the composite biblical history. For this reason it is under review when it appears in the light of existing external evidence, see PALESTINE; HISTORY.

9. The Royal Kingdoms.—The Palestine of the Hebrews was but part of a great area breathing the same atmosphere, and there was little to distinguish Judah from Israel except when they were distinct political entities. The history of the two kingdoms is contained in Kings and the later and relatively less trustworthy Chronicles, which deals with Judah alone. In the former a separate history of the northern kingdom has been combined with Judahian history by means of synchronisms in accordance with a definite scheme. The 480 years from the foundation of the temple of Jerusalem back to the date of the exodus (1 Kings vi.) corresponds to the period forward to the return from the exile (§ 20). This falls into three equal divisions, of which the first ends with Jehoash's temple-reforms and the second with Hezekiah's death. The kingdom of Israel lasts exactly half the time. The history of the kingdom begins with the rise of Jeroboam, who unites the two tribes and begins the invasion of the Israelites with the movements of the Habiru in the Amarna period (§ 3).
JEWS

Of the 240 years from Jeroboam I., 80 elapsed before the Syrian wars in Ahab's reign, these cover another 80; the famous king Jeroboam II. reigns 40 years, and 40 years of decline bring the kingdom to an end. These figures speak for themselves, and the present chronology can be accepted only where it is independently proved to be trustworthy (see further W. R. Smith, Prophets of Israel, pp. 144-145). Narratives by the Judaean compiler regularly finds in Israel's troubles the punishment for its schismatic idolatry; nor does he spare Judah, but judges its kings by a standard which agrees with the standpoint of Deuteronomy and is scarcely earlier than the end of the 7th century B.C. (§§ 16, 20). But the history of (north) Israel had naturally its own independent political backgrounds and the literary sources contain the same internal features as the annals and prophetic narratives which are already met with in 1 Samuel. Similarly the thread of the Judaean annals in Kings is also found in 1 Samuel, although the supplementary narratives in Kings are not so rich or varied as the more popular records in the preceding books. The striking differences between Samuel and Kings are due to differences in the writing of the history; independent Israelite records having been incorporated with those of Judah and supplemented (with revision) from the Judaean standpoint (see Chronicles; Kings; Samuel).

The Judaean compiler, with his history of the two kingdoms, looks back upon the time when each laid the foundation of its subsequent fortunes. His small kingdom of Judah enjoyed an unbroken dynasty which survived the most serious crises, a temple which grew in splendour and wealth under its long reign, and a legitimate priesthood which owed its origin to Zadok, the successful rival of David's priest Abiathar. Israel, on the other hand, had signed its death-warrant by the institution of calf-cult, a cult which, however, was scarcely recognized as contrary to the worship of Yahweh before the denunciations of Hosea. The scantiness of political information and the distinctive arrangement of material preclude the attempt to trace the relative position of the two rivals, Judah had natural connexions with Edom and southern Palestine; Israel was more closely associated with Gilead and the Amorites of the north. That Israel was the stronger may be suggested by the acquisitiveness of Judah in the new situation. A diversion was caused by Shishak's invasion, but of this reappearance of Egypt after nearly three centuries of inactivity little is preserved in biblical history. Only the Temple records recall the spoliation of the sanctuary of Jerusalem, and traditions of Jeroboam I. show that Shishak's prominence was well known.1 Although both kingdoms suffered, common misfortune did not throw them together. On the contrary, the statement that there was continued war with Israel and Edom, and that Hadad, one of the Edomite princes, remained in the kingdom of Judah under Solomon, indicates that the northern kingdom was not becoming a part of Israel itself. Moreover, Judah (now under Jehoshaphat) enjoyed intimate relations with Israel during Omri's dynasty, and the traditions of intermarriage, and of co-operation in commerce and war, imply what was practically a united Palestine. Alliance with Phoenicia gave the impulse to extended intercourse; trading expeditions were undertaken from the Gulf of Akaba, and Ahab built himself a palace decorated with ivory. The cult of the Baal of Tyre followed Jezebel to the royal city Samaria and even found its way into Jerusalem. This, the natural result of matrimonial and political alliance, was also met with under Solomon, receives the usual denunciation. The conflict between Yahweh and Baal and the defeat of the latter are the characteristic notes of the religious history of the period, and they leave their impression upon the records, which are now more abundant. Although little is preserved of Omri's history, the fact that the northern kingdom long continued to be called by the Assyrians after his name is a significant indication of his great reputation. Assyria was now making itself felt in the west for the first time since the days of Tiglath-Pileser I. (c. 1700 B.C.), and external sources come to this area, the battle of Karkar (perhaps Apiammon or the city of Israel). In 870 B.C., and his successor Shalmaneser II, in the course of a series of expeditions, succeeded in gaining the greater part of that land. A defensive coalition was formed in which the kings of Cilicia, Hamath, the Phoenician coast, Damascus and Ammon, the Arabs of the Syrian desert, and "Ahabu Siralai" were concerned. In the last, we must recognize the Israelite Ahab. His own contribution of 10,000 men and 12,000 chariots perhaps included levies from Judah and Moab (cf. for the number 1 Kings x. 26). In 854 the allies at least maintained themselves at the battle of Karkar (perhaps Apiammon or the city of Hamath). In 859 and 856 other indecisive battles were fought, but the precise constitution of the coalition is not recorded. In 843 Shalmaneser records a campaign against Hazael of Damascus; no coalition is mentioned, although a battle was fought at Sanir (Hermom, Deut. iii. 9), and the cities of Hauran to the south of Damascus were spoiled. Tribute was received from Tyre and Sidon; and Jehu, who was now king of Israel, sent his gifts of gold, silver, &c., to the conqueror. The Assyrian inscription (the so-called "Black Obelisk" now in the British Museum), which records the submission of the petty kings, gives an interest in our representation of the humble Israelite's experiences with their long fringed robes and strongly marked physiognomy (see Costume, fig. 9). Yet another expedition in 839 would seem to be successful. Babylonia and Assyria, §§ v. and viii.

1 2 Chron. xii. 8, which is independent of the chronicler's artificial treatment of his material, apparently points to some tradition of Egyptian suzerainty.

2 The name is that of a man of Nobah's time found in the list of kings of Judah in Kings vii. 2 and in the list of kings of Judah in Chronicles iv. 32.
show that Damascus was neither crushed nor helpless, but thenceforth for a number of years Assyria was fully occupied elsewhere and the west was left to itself. The value of this external evidence for the history of Israel is enhanced by the fact that biblical traditions associate the changes in the throne of Israel and Damascus with the work of the prophets Elijah and Elisha, but handles the period without a single reference to the Assyrian Empire. Ahab, it seems, had aroused popular resentment by encroaching upon the rights of the people to their landed possession; had it not been for Jezebel (q.v.) the tragedy of Naboth would not have occurred. The worship of Baal of Tyre roused a small circle of zealots, and again the Phoenician marriage was the cause of the evil. We read the history from the point of view of prophets. Elijah of Gilead led the revolt. To one who favoured simplicity of cult the new worship was a desecration of Yahweh, and, braving the anger of the king and queen, he foretold their fate. Hostility towards the dynasty culminated a few years later in a conspiracy which placed on the throne the general Jehu, the son of one Jehoshaphat (or, otherwise, of Nimshi). The work which Elijah began was completed by Elisha, who supported Jehu and the new dynasty. A massacre ensued in which the royal families of Israel and Judah perished. While the extirpation of the cult of Baal was furthered in Israel by Jonadab the Rechabite, it was the "people of the land" who undertook a similar reform in Judah. Jehu (q.v.) became king as the champion of the purer worship of Jehovah. The descent of the one from the other was not acknowledged by all, but unless the close intercourse between Israel and Judah had been suddenly broken, it would be supposed that the new king at least laid claim to the south. The events form one of the fundamental problems of biblical history.

11. Damascus, Israel and Judah.—The appearance of Assyria in the Mediterranean coast-lands had produced the results which inevitably follow when a great empire comes into contact with minor states. It awakened fresh possibilities—successful combination against a common foe, the sinking of petty rivalries, the chance of gaining favour by a neutrality which was scarcely benevolent. The alliances, counter-alliances and far-reaching political combinations which spring up at every advance of the greater powers are often perplexing in the absence of records of the states concerned. Even the biblical traditions alone do not always represent the same attitude, and our present sources preserve the work of several hands. Hazael of Damascus, Jehu of Israel and Elisha the prophet are the three men of the new age linked together in the words of one writer as though commissioned for like ends (1 Kings xix. 15-17). Hostility to Phoenicia (i.e., the Baal of Tyre) is as intelligible as a tendency to look to Aramaean neighbours. Though Elisha sent to anoint Jehu as king, he afterwards regarded the less moral of the two (Old. Test. Ben-hadad) of Damascus and recognized Hazael as its future ruler. It is a natural assumption that Damascus could still count upon Israel as an ally in 842; not until the withdrawal of Assyria and the accession of Jehu did the situation change. "In those days Yahweh began to cut short" (or, altering the text, "to be angry with") "Israel." This brief notice heralds the commencement of Hazael's attack upon Aramaean territory east of the Jordan (2 Kings x. 32). The origin of the outbreak is uncertain. It has been assumed that Israel had withdrawn from the reigns of Ahaz and Jotham so that Jehu sent tribute to Shalmaneser to obtain that monarch's recognition, and that Hazael consequently seized the first opportunity to retaliate. Certain traditions, it is true, indicate that Israel had been at war with the Aramaeans from before 854 to 842, and that Hazael was attacking Gilead at the time when Jehu revolted; but in the midst of these are other traditions of the close and friendly relations between Israel and Damascus! With these perplexing data the position of Judah is inextricably involved. The special points which have to be noticed in the records for this brief period (1 Kings xix.-2 Kings xi.) concern both literary and historical criticism. A number of narratives illustrate the work of the prophets, and sometimes purely political records appear to have been used for the purpose. In the case of Hazael (q.v.) it is the prophet of the fall of Omri's dynasty, Elisha is no less the prophet of Jehu and his successors; and it is extremely probable that his LifeWork was confined to the dynasty which he inaugurated.2 The following narrative, therefore, is an attempt to give the joint undertaking by Judah (under Jehoshaphat) and Israel against Syria at Ramoth-Gilead at the time of Ahab's death, and again (under Ahaziah) when Jehoram was wounded, shortly before the death of Ahab. It has been suggested that the two terms of Jehu, and that they may be harmonized with the known events of 854 and 842 or with the course of the intervening years. Further, all the traditions point clearly to the destruction of Bethel and Judah at this period, a union which is apt to be obscured by the fact that the annalistic summaries of each kingdom are mainly independent. Thus we may contrast the favourable Judaean view of Jehoshaphat's marriage with the condemnation passed upon Judah by Hosea, who calls the daughter Athaliah married Jehoram, son of Jehoshaphat. It is noteworthy, also, that an Ahaziah and a Jehoram appear as kings of Israel, and (in the reverse order) of Judah, and somewhat similar names appear in the lists of the rulers of the Aramaean kingdoms. The most striking is a great revolt in south Palestine. The alliance between Jehoshaphat and Ahab doubtless continued when the latter was succeeded by Jehoram, and some disaster befall their trading fleet in the Gulf of Akab (1 Kings ii. 35-37). Next came the revolt of Moab (2 Kings i. 1), and Ahaziah, after the briefest of reigns, was followed by Jehoram, whose Judah then continued to sink. But Ahaziah was followed by a new king, Joash, whose Hebrew name is Jehoash (see Amos i. 1). The popular story of Jehoram's campaign against Moab, with which Edom was probably allied (see Moab), hints at a disastrous ending, and the Judaean annals, in their turn, record the revolt of Edom and the Philistine Libnah (see Philistia), and allude obscurely to a defeat of the Judaean Jehoram (2 Kings vii. 20-22). Further details in 2 Chronicles xxii.-xxv. i record an invasion of Judah by the Philistines and Aram, the death of Jeroboam II at Jerusalem, the removal of the palace treasures and of all the royal sons except for the sole exception of Jehoahaz, i.e., Ahaziah (see Jeremiah; Jehovah). Had the two kingdoms been under a single head, these features might find an explanation, but it must be allowed that it is extremely difficult to fit the general situation into our present history, and to determine where the line is to be drawn between trustworthy and untrustworthy details. Moreover, of the various accounts of the massacre of the princes of Judah, Chronicles ascribes it not to Jehu and the reforming party (2 Kings x. 13 seq.) but to Athaliah (q.v.). Only the babe Jehoash was saved, and he was hidden in the house of the Lord, the queen, Athaliah, despite the weak state of Judah after the revolt in Philistia and Edom, actually appears to have maintained herself for six years, until the priests slew her in a conspiracy, overthrow the young prince and, after an interregnum of less than three years, crown Joash (see Jehoash, q.v.). It is here suddenly introduced, belonging apparently to a history of the Temple; it throws no light upon the relations between Judah with its priests and Israel with its prophets, the circumstances of the succession to Jehu. In Chronicles the rebellion of Jehoiakim and the provinces occupy the first place in the compiler's interest. The Judaean annals then relate Hazael's advance to Gath; the city was captured and Jerusalem was saved only by using the Temple and palace "treasure" as a bribe. On the other hand, Chronicles has a different story with a novel prelude. Jehoash, it is said, turned away from Yahweh after the death of Jehoiada and gave heed to the Judahite nobles, "wretched upon Judah and Jerusalem for their guilt," and the prophets were sent to bring them back but they turned a deaf ear. The climax of iniquity was the murder of Jehoash's son Zecarhiah. Soon after, a small band of Syrians entered Judah, destroyed its capital, and sent the captive Zecarhiah "as a token... as a prompt retribution (2 Chronic. xxiv.). The inferiority of Chronicles as a historical source and its varied examples of "tendency-writing" must be set against its possible access to traditions of contact with those of Saul in 1 Samuel, and the relation is highly suggestive for the study of their growth, as also for the perspective of the various writers.

1 See Jev. Quart. Rev. (1908), pp. 597-630. The independent Israelite traditions which here become more numerous have points of contact with those of Saul in 1 Samuel, and the relation is highly suggestive for the study of their growth, as also for the perspective of the various writers.

2 R. Smith (after Kuenen), Ency. Bib., col. 2670; also W. E. Addis, ib., 1276, the commentators of Benzing (p. 130) and Kittel (pp. 153 seq.) on Kings; J. S. Strachan, Hastings's Dict. Bible, s.v.; A. Smith, Ency. Bib., and Hirsch, Jens. Ency. v. 137 seq. ("legend... as indifferent to accuracy in dates as it is to definiteness of places and names"); W. R. Harper, Amos and Hosea, p. xiii. seq. ("the lack of chronological order... it is to create..."). The bearing of this displacement upon the literary and historical criticism of the narratives has never been worked out.
as trustworthy as those in Kings. In the present instance the novel details cannot be lightly brushed aside. The position of Judah at this period must be estimated (a) from the preceding years of intimate relationship with Israel to the accession of Jehoahaz, and (b) from the period of their separate history, when Judah was sacked by Israel. The Judaean narratives do not allow us to fill the gap or to determine whether Judaean policy under the regent Jehoahaz (or, rather, his mother) was friendly or hostile to Israel, or whether Judaean nobles may have received the superior bond of union. If the latter actually occurred, the hostility of the Israelite prophets is only to be expected. But it is to be presumed that the punishment came from Israel, rather than Syria, because it is not so probable that Syria would have had to take the initiative in using his treasure to ward off the invasion of Syria, Jehoash bribed Damascus to break off relations with Israel, an alternative explanation of the origin of the Aramean wars may be found. 12. The Aramaean Wars.—If the records leave it uncertain (a) whether Jehu (like Tyre and Sidon) sent tribute to Shalmaneser as a sign of submission or, while severing relations with Hazael, sought the favour of Assyria, and (b) whether Judah only escaped Hazael’s vengeance by a timely bribe or, in freeing itself from Israel, had bribed Hazael to create a diversion, it appears that the southern kingdom suffered little in the disastrous wars between Damascus and Israel. There were, indeed, internal troubles, and Jehoash perished in a conspiracy. His son Amaziah had some difficulty in gaining the kingdom and showed unwonted leniency in sparing the children of his father’s murderers. This was a departure from the customs of the age, and was perhaps influenced by a remembrance that, while Israel, on the other hand, was almost annihilated, the Syrians, seized Gilgal, crossed over into Palestine, and occupied the land. Jehu’s son Jehoahaz saw his army made "like the dust that is threshing," and the desperate condition of the country recalls the straits in the time of Saul (1 Sam. xii. 6, 7, 19-22), and the days before the great overthrow of the northern power as described in Judges v. 6-8. The impression left by the horrors of the age is clear from the allusions to the barbarities committed by Damascus and its Ammonite allies upon Gilgal (Amos i. 5, 13), and in the account of the interview between Elisha and Hazael (2 Kings x. 13-16). The narrative may be more readily realized from the narratives of Syrian wars ascribed to the time of Omri’s dynasty, even if these did not originally refer to the later period. Under Joash, son of Jehoahaz, the tide turned. Elisha was apparently the champion, and posterity told of his exploits when Samaria was visited with the sword. Thrice Joash smote the Syrians—in accordance with the last words of the dying prophet—and Aphek in the Sharon plain, famous in history for Israel’s disasters, now witnessed three victories. The enemy under Hazael’s son Ben-hadad (properly Bar-hadad) was driven out and Joash regained the territory which his father had lost. A peace was accordingly concluded, and the treaty was concluded (cf. 1 Kings xx. 34). But the peace does not seem to have been popular. The story of the last scene in Elisha’s life implies in Joash an easily contented disposition, which hindered him from completing his successes. Syria had not been crushed, and the failure to utilize the opportunity was an act of impolitic leniency for which Israel was bound to suffer (2 Kings xii. 10). Elisha’s indignation can be illustrated by the denunciation passed upon an anonymous king by the prophetic particle on a similar occasion (1 Kings xx. 35-43). It is not possible to connect any of the fresh invasion of Syria by Hadad (Adad)-nirari, who besieged Mari, king of Damascus, and exacted a heavy tribute (c. 800 b.c.). A diversion of this kind may explain the Israelite victories; the subsequent withdrawal of Assyria may have afforded the occasion for retaliation. Those in Israel who remembered the previous war between Assyria and Damascus would realize the recuperative power of the latter, and would perceive the danger of the short-sighted policy of Joash. It seems interesting to find that Hadad-nirari is lionised by Tyre, Sidon, and Tyre when Shalmaneser (Israel), also from Edom and Palastu (Philistia). There are no signs of an extensive coalition in as the days of Shalmaneser; Ammon is probably included under Damascus; the position of Moab—which had freed itself from Jehoram of Israel—can hardly be calculated. But the absence of Judah is surprising. Both Jehoahaz (of Judah) and his son Amaziah left behind them a great name; and the latter was comparable only to David (2 Kings xiv. 5). He defeated Edom in the Valley of Salt, and hence it is possible that Amaziah’s kingdom extended over both Edom and Philistia. A very important question is the rise to one of the two fabliaux that are preserved in the Old Testament (Judg. ix. 8 sqq.; see ABIMELECH). It was followed by a battle at Beth-shemesh; the scene would suggest that Philistia was also involved. The result was the route of Judah, the capture of Amaziah, the destruction of the northern wall of Jerusalem, the sacking of the temple and palace, and the removal of hostages to Samaria (2 Kings xiv. 12 sqq.). Only a few words are preserved, but the details, when carefully weighed, are extremely significant. This momentous event for the southern kingdom was scarcely paralleled by any act of a character similar to it in the northern kingdom. It was at any rate another sequel to a period of smouldering jealousy and hostility. The Judaean records have obscured the history since the days of Omri’s dynasty, when Israel and Judah were as one, when they were moved by common aims and by a single reformation zeal, and other Israel’s vengeance and measures were accepted. That the Judaean compiler has not given fuller information is not surprising; the wonder is that he should have given so much. It is one of those epoch-making facts in the light of which the course of the history of the preceding and following years must be estimated. It is, taken strangely enough, from an Israelite source, but the tone of the whole is quite dispassionate and objective. It needs little reflection to perceive that the position of Jerusalem and of Judah was now a vulnerable one. The gradual confirmation of the chronological notices betray the attempt to maintain intact the thread of Judaean history. So, on the one hand, the year of the disaster sees the death of the Israelite king, and Amaziah survives for fifteen years, while, on the other, twenty-seven years elapse between the battle and the accession of Uzziah, the next king of Judah. The importance of the historical questions relating between Damascus, Israel, and Judah is clear. The defeat of Syria by Joash (of Israel) was not final. The decisive victories were gained by Jeroboam II. He saved Israel from being blotted out, and through his successes 2 the children of Israel dwelt in their tents as their fathers dwelt in the days of Omri (1 Kings xiv. 22 sqq.). The warfare with redoubled energy, and a state of affairs is presupposed which can be pictured with the help of narratives that deal with earlier historical situations. Without the war of old Israel as foreshadowed in 1 Kings xxi. implies an Aramean invasion (cf. xv. 17, 25), after a treaty (xx. 35 sqq.), although this can scarcely be justified by the events which followed the death of Ahaz, and those placed in the context of 1 Kings xxi. 10. For the understanding of these great wars between Syria and Israel—which the traditional chronology spreads over eighty years—for the significance of the crushing defeats and inspiring victories, and for the alternations of despair and hope, a careful study of all the records of relations between Israel and the north is at least instructive, and it is important to remember that, although the present historical outlines are sketchy and incomplete, some—if not all—of the analogous descriptions in their present form are certainly later than the second half of the 9th century B.C., the period in which these great events fall. 3

3 Critical Development.—Under Jeroboam II. the borders of Israel were restored, and in this political revival the prophets again took part. 4 The defeat of Ben-hadad by the king of

4 It is possible that Hadad-nirari’s inscription relates to conditions in the latter part of his reign (812-783 B.C.), when Judah apparently was no longer independent and when Jeroboam II. was king of Israel. The accession of the latter has been placed between 785 and 782 B.C.; it is now known from a record that were defeated by the king of Hamath; but the bearing of this upon Israelite history is uncertain.

5 Cf. generally, 1 Kings xxii. xxxi.; 2 Sam. vii. 8; 1 Kings xx., xxii.; 2 Kings vi. 8-11; 20; also Judges v. (see DEBORAH).

6 Special mention is made of Jonah, a prophet of Zebulun in (north) Israel (2 Kings xiv. 9). Nothing is known of him, unless the name of the prophet is connected with the people called Nineveh rests upon some old tradition, which, however, can scarcely be recovered (see JONAH).
was opposed to the simpler local forms of government, and a military régime had distinct disadvantages (cf. 1 Sam. viii. 11–18). The king stood at the head, as the court of final appeal, and upon him and his officers depended the people's welfare. A more intricate social organization caused internal weakness, and Eastern history shows with what rapidity peoples who have become strong by discipline and moderation pass from the height of their glory into extreme corruption and disintegration. 1 This was Israel's fate. Opposition to social abuses and enmity towards religious innovations are regarded as the factors which led to the overthrow of Omri's dynasty by Jechu, and when Jehu seemed to be at the height of his glory under Jeroboam II, warning voices again made themselves heard. The two factors are inseparable, for in ancient times no sharp dividing-line was drawn between religious and civic duties: righteousness and equity, religious duty and national custom were one.

Elaborate legal enactments codified in Babylonia by the 20th century B.C. find striking parallels in Hebrew, late Jewish (Talmudic), Syrian and Mahomedan law, or in the unwritten usages of all ages; for even where there were neither written laws nor duly instituted lawgivers, there was no lawlessness, since custom and belief were, and still are, almost invariable. Various collections are preserved in the Old Testament; they are attributed to the time of Moses the lawgiver, to Solomon, and to David. Thus, in the Islamic and religious history. But many of the laws were quite unsuitable for the circumstances of his age, and the belief that a body of intricate traditional legislation was imposed suddenly upon a people newly emerged from bondage in Egypt raises insurmountable objections, and underestimates the fact that legal usage existed in the earliest stages of society, and therefore in pre-Mosaic times. However important these laws are certainly, the date of their distinct form and content. Collections of laws are found in Deuteronomy and in exilic and post-exilic writings; groups of a relatively earlier type are preserved in Exod. xxxiv. 14–26, xx. 23–xxiii., and (of another stamp) in Lev. xviii., xxvi. (now in post-exilic form). For a useful conspectus of details, see J. E. Carpenter and G. Harford-Batterby, The Hexateuch (vol. i., appendix); C. F. Kent, Israel's Laws and Institutions (1848); E. J. Young, "Israel's Law," W. F. Smith, "Government," "Family," and "Law and Justice," E. E. Bib., and G. B. Gray, "Law Literature," ib. (the literary growth of legislation). Reference may also be made, for illustrative material, to W. R. Smith, Kinship and Marriage, Religion of the Semites; to E. Day, Social Life of the Hebrews; and, for some comparison of customary usage in the Semitic field, to S. A. Cook, Laws of Moses and Code of Hammurabi.

14. Religion and the Prophets. — The elements of the thought and religion of the Hebrews do not sever them from their neighbours; similar features of cult are met with elsewhere under different names. Sometimes the religious ideas of men could be understood from the biblical evidence studied in the light of comparative religion; and without going afield to Babylonia, Assyria or Egypt, valuable data are furnished by the cults of Phoenicia, Syria and Arabia, and these in turn can be illustrated from excavation and from modern custom. Every religion has its customary cult and ritual, its recognized times, places and persons for the observance. Worship is simpler at the smaller shrines than at the more famous temples; and, as the rulers are the patrons of the religion and are brought into contact with the religious personnel, the character of the social organization leaves its mark upon those who hold religious and judicial functions alike. The Hebrews shared the paradoxes of Orientals, and religious enthusiasm and ecstasy were prominent features. Seers and prophets of all kinds ranged from those who were consulted for daily mundane affairs to those who revealed the oracles in times of stress, from those who haunted local holy sites to those high in royal favour, from the quiet domestic communities to the austere mountain recluse. Among these were to be found the most sordid opportunism and the most heroic self-effacement, the crassest supernaturalism and— the loftiest conceptions of practical morality. A development of ideas and a growth of spirituality can be rendered by the biblical writings with their series of prophecies a unique

1 This is philosophically handled by the Arabian historian Ibn Khaldun, whose Prolegomena is well worthy of attention. De Slane, Not. et extrait., vols. xix.–xxii., with Von Kremer's criticisms in the Sitz. d. Kais. Akad. of Vienna (vol. xxii., 1879); cf. also R. Flint, History of the Philosophy of History, l. 157 sqq.
phenomenon.  The prophets taught that the national existence of the people was bound up with religious and social conditions; they changed the dynasty of the Huts, and in regard to them simply as foretellers of the future is to limit their sphere unduly. They took a keen interest in all the political vicissitudes of the Oriental world. Men of all standards of integrity, they were exposed to external influences, but whether divided among themselves in their adherence to conflicting parties, or isolated in their fierce denunciation of contemporary abuses, they shared alike in the worship of Yahweh whose inspiration they claimed. A recollection of the manifold forms which religious life and thought have taken in Christendom or in Islam, and the passion which these so easily engendered among opposing sects, prevent a one-sided evaluation of the religious literature, points which the writings betray; and to the recognition that they represent lofty ideals it must be added that the great prophets, like all great thinkers, were in advance of their age.

The prophets are thoroughly Oriental figures, and the interpretation of their profound religious experiences requires a particular sympathy which is not inherent in Western minds. Their writings are to be understood in the light of their age and of the conditions which gave birth to them. With few exceptions they are preserved in fragmentary form, with additions and adjustments which were necessary in order to make them intelligible to later conditions. When, as often, the great figures have been made the spokesmen of the thought of subsequent generations, the historical criticism of the prophecies becomes one of peculiar difficulty. According to the historical traditions it is precisely in the age of Jeroboam II. and Uzziah that the first of the extensive prophecies begin (see Amos and Hosea). Here it is enough to observe that the highly advanced doctrines of the distinctive character of Yahweh, as ascribed to the 8th century B.C., presuppose a foundation and development. But the evidence does not allow us to trace the early worshipping community of Yahweh, which is left in superscription.

Yahweh presents itself under a variety of aspects, and the history of Israel's relations to the God Yahweh (whose name is not necessarily of Israelite origin) can hardly be disentangled amid the complicated threads of the earlier history. The view that the seeds of Yahwehism were planted in the young Israelite nation in the days of the "exodus" conflicts with the belief that the worship of Yahweh began in the pre-Mosaic age. Nevertheless, it implies that religion passed into a new stage through the influence of Moses, and to this we find a relatively less complete analogy in the specific north Israelite traditions of the 13th century B.C. From the time of Omri, Israel has been treated by several hands, and the writers, in their recognition of the introduction of a new tendency, have obscured the fact that the cult of Yahweh had flourished even under such a king as Ahab. While the influence of the great prophets Elijah and Elisha is clearly visible, it is instructive to find that the south, too, has its share in the inauguration of the new era. At Horeb, the mount of God, was located the dramatic theophany which heralded to Elijah the advent of the sword, and Jethus' supporter in his sanguinary measures belongs to the Rechabites, a sect which felt itself to be the true worshipping community of Israel, but with the Kenites, the kin of Moses. It was at the holy well of Kadesh, in the sacred mounts of Sinai and Horeb, and in the field of Edom that the

1 Cf. J. G. Frazer, Adonis, Attis, Ostris (1907), p. 67: "Prophecy of the Hebrew type has not been limited to Israel; it is indeed a phenomenon of almost world-wide occurrence; in many lands and in many ages the wild, whirling words of frenzied men and women have been accepted as the utterances of an in-dwelling deity. What does distinguish Hebrew prophecy from all others is that the genius of a few members of the profession wrested this vulgur from the name of Israel to the interest of a high morality rendered a service of incalculable value to humanity. That is indeed the glory of Israel."

2 The use which was made in Apocalyptic literature of the traditions of Moses, Isaiah and others finds its analogy within the Old Testament itself; cf. the relation between the present late prophecies of Judah and the unknown prophet of the time of Hezekiah (see § 13, note 5). To condemn re-formation or adaptation of this nature from a modern Western standpoint is to misunderstand entirely the Oriental mind and oriental usage.

Yahweh of Moses was found, and scattered traces survive of a definite belief in the entrance into Palestine of a movement of Yahwists from the foreign heathen to the purer worship of Yahweh. The course of the dynasty of Judah—warlike, occasionally Aramaean wars, and, at length, Yahweh's "arrow of victory"—constituted an epoch in the Israelite history, and it is regarded as such.

The problem of the history of Yahwehism depends essentially upon the view adopted as to the date and origin of the biblical details and their validity for the various historical and religious conditions they presuppose. Yahwehism is a religion which appears upon a soil saturated with ideas and usages which find their parallel in extra-biblical sources and in neighbouring lands. The problem cannot be approached from modern preconceptions because there was much to do with the words red Yahweh which only gradually survive to be recognized as repugnant, and there was much in earlier ages and in other lands which reflects an elevated and even complex religious philosophy. In the south of the Sinaitic peninsula, remains have been found of an elaborate half-Egyptian, half-Semitic cultus (Petrie, Researches in Sinai, xiii.), and not only does Edom possess some reputation for "wisdom," but, where this district is concerned, the old Arabian religion (whose historical connexion with Palestine is still imperfectly known) claims some attention. The characteristic denunciations of corruption and base ritual in the writings of the prophets which point to a deeply and punitively sanctified and purificatory simplicity of religious life are suggestive of the influence of the nomadic spirit rather than of an internal evolution on Palestinian soil. Desert pastoral life does not necessarily imply any intellectual sanctions and its religion, when it has been made intelligible, are not artificially moulded through the influence of other civilizations. Nomadic life is recognized by Arabian writers themselves as possessing a relative superiority, and its characteristic simplicity and manner and its revolt from the Canaanite, the Phœnician, are not incompatible with a warlike spirit. If nomadism may be recognized as one of the factors in the growth of Yahwism, there is something to be said for the hypothesis which associates it with the clans connected with the Levites (see E. Meyer, Israeliten, pp. 82 sqq.; B. Luther, ib. 138). It is, however, obvious that the influence due to immigrants could be, and doubtless was, exerted at remote epochs (cf. the later progress of Edom and the Philistines). Edomites and the queen of Arbia (Arabia, the Syrian desert). Israel was once more in league with Damascus and Phoenicia, and the biblical records must be read in the light of this political history. Judah was probably holding aloof. Its king, Uzziah, was a leper in his latter days, and his son and regent, Jotham, claims notice for the circumstantial reference (2 Chron. xxvii.; cf. xxvi. 8) to his subjugation of Amman—the natural allies of Damascus—for three years. Scarcely had Assyria withdrawn before Manasseh lost his life in a conspiracy, and Phewah with the help of Gilead made himself king (2 Kings i. 20; I Kings iv. 21). The whole era was one of anti-Assyrian, and strenuous endeavours were made to present a united front. It is suggestive to find Judah the centre of attack. Phewah and Phewah directed their blows from the north, Philistia threatened the west flank, and the Edomites who drove out the Judeaens from Elath (on the Gulf of Akaba) were no doubt only taking their part in the concerted action. A more critical situation could scarcely be imagined. The throne of David was then occupied by the young Ahaz, Jotham's son.

3 The condemnation passed upon the impetuous and fiery zeal of the adherents of the new movement (cf. Hos. l. 4), like the remarkable vicissitudes in the traditions of Moses, Aaron and the Levites (q.v.), represents changing situations of real significance, whose true place in the history can with difficulty be recovered.

4 As against the third of Jer. xxvii. 8.

5 Perhaps Judah had come to an understanding with Tliglatpileser (H. M. Haydn, Journ. Bib. Lit., xxviii. 1909, pp. 182-199); see Uzziah.
In this crisis we meet with Isaiah (q.v.), one of the finest of Hebrew prophets. The disorganized state of Egypt and the uncertain allegiance of the desert tribes left Judah without direct aid; on the other hand, opposition to Assyria among the conflicting interests of Palestine and Syria was rarely unanimous. Either in the natural course of events—to preserve the unity of his empire—or influenced by the rich presents of gold and silver with which Ahaz accompanied his appeal for help, Tiglath-pileser intervened with campaigns against Philistia (734 B.C.) and Damascus (733-732). Israel was punished by the ravaging of the Assyrians, and the king claims to have carried away the people of “the house of Omri.” Pekah was slain and one Hoshea (q.v.) was recognized as his successor. Assyrian officers were placed in the land and Judah thus gained its deliverance at the expense of Israel. But the proud Israelites did not remain submissive for long; Damascus had indeed fallen, but neither Philistia nor Edom had yet been crushed.

At this stage a new problem becomes urgent. A number of petty peoples, of whom little definite is known, fringed Palestine from the south of Judah and the Delta to the Syrian desert. They were about “Egypt” in which matter counsel in thiria was begged, and Egypt in fact had a hereditary claim upon it. Continued intercourse between Egypt, Gaza and north Arabia is natural in view of the trade-routes which connected them, and on several occasions joint action on the part of Edomites (with allied tribes) and the Philistines is recorded, or may be inferred. The part played by Egypt proper in the ensuing anti-Assyrian combinations is not clearly known; with a number of petty dynasts fomenting discontent and revolt, there was an absence of cohesion in that ancient empire previous to the rise of the Ethiopian dynasty. Consequently the references to “Egypt” (Heb. Mitzrayim, Ass. Muzir) sometimes suggest that the geographical term was really extended beyond the bounds of Egypt proper towards those districts where Egyptian influence or domination was or had been recognized (see further Mizraim).

When Israel began to recover its prosperity and regained confidence, its policy halted between obedience to Assyria and reliance upon this ambiguous “Egypt.” The situation is illustrated in the writings of Hosea (q.v.). When at length Tiglath-pileser died, in 727, the slumbering revolt became general; Israel refused the usual tribute to its overlord, and defiantly threw in its lot with “Egypt,” when messengers arrived from thither was begged, and Egypt in fact had a hereditary claim upon it. the outlook. The assumption that the decay of Assyria arose from the national feeling of independence is perhaps justified by those events which made the greatest impression upon the Jews and an account is given of Josiah's religious reforms, based upon a source apparently identical with that which described the work of Jehoash. In an age when the oppression and corruption of the ruling classes had been such that those who cherished the old worship of Yahweh dared not confide in their own intimate companions (Mic. vii. 5, 6), no social reform was possible; but now the young Josiah, the popular choice, was upon the throne. A roll, it is said, was found in the Temple, its contents struck terror to the hearts of the priests and king, and it led to a solemn covenant before Yahweh in the presence of the law-book which had been so opportunely recovered.

That the writer (2 Kings xxii. seq.) meant to describe the discovery of Deuteronomy is evident from the events which followed; and this identification of the roll, already made by Jerome, Chrysostom and others, has been substantiated by modern literary criticism since De Wette (1805). (See DEUTEROLOGY; JOSIAH.) Some very interesting parallels have been cited from Egyptian and Assyrian records where religious texts, said to have been found in temples, or oracles from the distant past, have come to light at the very time when "the days were full." There is, however, no real proof for the traditional antiquity of Deuteronomy. The book forms a very distinct part of the religious literature of Judah and its contribution to cult and ritual (see HEBREW RELIGION, §7). In particular it is aimed against the worship at the numerous minor sanctuaries and inculcates the sole pre-eminence of the one great sanctuary—the Temple. This centre of the Mosaic institution involved the local priests and a modification of ritual and legal observance. The fall of Samaria, Sennacherib's devastation of Judah, and the great transformation of the political, the religious, the spiritual, tended to raise the position of the Temple, although Isaiah (Isa. xxxv. 5) had feared for the sanctuaries of its own. From the standpoint of the popular religion, the removal of the local altars, like Hezekiah's destruction of the brazen serpent, was an act of desecration, an iconoclasm which can be partly appreciated from the sentiments of 2 Kings xvii. 22, and partly also from the modern Wahhabite reformation (of the 19th century). But the details and success of the reforms, when viewed in the light of any theory of continued prophecy or divine in- tervention. The book of Deuteronomy crystallizes a doctrine; it is the codification of teaching which presupposes a carefully prepared soil. The account of Josiah's work, like that of Hezekiah, is written by one of the Deuteronomic school: that is to say, the writer describes the promulgation of the teaching under which he lives. It is part of the scheme which runs through the book of Kings, and its apparent object is to show that the Temple planned by David and founded by Solomon ultimately gained its true position as the only sanctuary of Yahweh to which his worshippers should repair. Accordingly, in handling Josiah's successors the writer no longer refers to the high priest but speaks of the scribe, who, it is said, was of the blood of Jehoiada; otherwise he would have been of no lasting effect. This is conclusively shown by the writings of Jeremiah (xxv. 3-7; xxvi. 2 seq.) and Ezekiel. Josiah himself had been a justice before he became a king (Jer. iii. 16), and those who claim to possess Yahweh's law are denounced (viii. 8). If Israel could appear to be better than Judah (iii. 11; Ezek. xvi. xxiii.), the religious revulsion was a practical failure, and Josiah could not return a century later with the imperial intention to put any new teaching into effect (§20). On the other hand, the book of Deuteronomy has a characteristic social-religious side: its humanity, philanthropy and charity are the distinctive features of its laws, and Josiah's reputation (Jer. xxiv. 15 seq.) and the circumstances in which he was chosen king may suggest that he, like Jehoash (2 Kings xi. 17; cf. xxii. 3), had entered into a relationship with the people who, as Micah's writings would indicate, had suffered grievous oppression and misery.  

17. The Fall of the Judean Monarchy.—In Josiah's reign a new era was beginning in the history of the world. Assyria was rapidly decaying and Egypt had recovered from the blooms of Assur-bani-pal (to which the Hebrew prophet Nahum alludes iii. 8-10). Psammctichus (Psamtek) I., one of the ablest Egyptian rulers for many centuries, threw off the Assyrian yoke

with the help of troops from Asia Minor and employed these to guard his eastern frontiers at Daphne. He also revived the old connections between Egypt and Phoenicia. A Chaldean prince, Nabopolassar, set himself up in Babylonia and Assyria was compelled to invoke the aid of the Akkazzas. It was perhaps after this that an inroad of Scythians (q.v.) occurred (c. 626 B.C.); if it did not actually touch Judah, the advent of the people of the north appears to have caused great alarm (Jer. iv.-vi.: Zephaniah). Bethshean in Samaria has perhaps preserved in its later (though temporary) name Scythopolis an echo of the invasion. Later, Necho, son of Psammetichus, proposed to add to Egypt some of the Assyrian provinces, and marched through Crete in a manner which impressed the pharaoh. Certain whether, in spite of the power of Egypt, he had hopes of expanding his empire, the Chaldean, or whether the famous reformer was, like Manasses, a vassal of Assyria. The book of Kings gives the standpoint of a later Judean writer, but Josiah's authority over a much larger area than Judah alone is suggested by xxiii. 19 (part of an addition), and by the references to the border at Riblah in Ezek. vi. 14, xi. 10 seq. He was slain at Megiddo in 608, and Egypt, as in the long-distant past, again held Palestine and Syria. The Judeans made Jehoiakim (or Shallum) their king, but the Pharaoh banished the populace to a city called Babylon. A few years later his brother Jehoiakim. Shortly afterwards Nineveh fell, and with the empire which had dominated the fortunes of Palestine for over two centuries (see §10). Nabonidus (Nabunaid) king of Babylon (550 B.C.) saw in the disaster the vengeance of the gods for the sacrilege of Sennacherib; the Hebrew prophets, for their part, exulted over Yahweh's far-reaching judgment. The newly formed Chaldean power at once recognized in Necho a dangerous rival and Nabopolassar sent his son Nebuchadrezzar, who over-threw the Egyptian forces at Carchemish (605). The battle was the turning-point of events, and with it the succession of the new Chaldean or Babylonian kingdom was assured. But the relations between Egypt and Judah were not broken off. The course of events is not clear, but Jehoiakim (q.v.) at all events was inclined to rely upon Egypt. He died just as Nebuchadrezzar, seeing his warnings disregarded, was preparing to lay siege to Jerusalem. His young son Jehoiachin surrendered after a three months' reign, with his mother and the court; they were taken away to Babylon, together with a number of the artisan class (596). Jehoiachin's brother, Mattaniah or Zedekiah, was set in his place under an oath of allegiance, which he broke, preferring Hophra as Pharaoh of Egypt to the Chaldean. The second siege took place. It began on the tenth day of the tenth month, January 587. The looked-for intervention of Egypt was unavailing, although a temporary raising of the siege inspired wild hopes. Desertion, pestilence and famine added to the usual horrors of a siege, and at length on the ninth day of the fourth month 586, a breach was made in the walls. Zedekiah fled towards the Jordan valley but was seized and taken to Nebuchadrezzar at Riblah (45 m. south of Hamath). His sons were slain before his eyes, and he himself was blinded and carried off to Babylon after a reign of eleven years. The Babylonian Nebuzar-adan was sent to take vengeance upon the rebellious city, and on the seventh day of the fifth month 586 B.C. Jerusalem was destroyed. The Temple, palace and city buildings were burned, the walls broken down, the chief priest Seraiah, the second priest Zephaniah, and other leaders were put to death, and a large body of people was again carried away. The disaster became the great epoch-making event for Jewish history and literature.

Throughout these stormy years the prophet Jeremiah (q.v.) had realized that Judah's only hope lay in submission to Babylon. Still, however, as a prophet, he could not concede, he had not ceased to utter his warnings to deaf ears, although Zedekiah himself was perhaps open to persuasion. Now the penalty had been paid, and the Babylonians, whose policy was less destructive than that of Assyria, contented themselves with appointing a governor a certain Gedaliah. The new centre was Mizpah, a commanding eminence and sanctuary, about 5 m. N.W. of Jerusalem; and here Gedaliah issued an appeal to the people to
be loyal to Babylonia and to resume their former peaceful occupa-
tions. The land had not been devastated, and many gladly
returned from their hiding-places in Moab, Edom and Ammon.
But discontented survivors of the royal family under Ishmael
intrauged with Baalis, king of Ammon. The plot resulted in the
murder of Gedaliah and an unsuccessful attempt to carry off
various princesses and officials who had been left in the governor’s
care. This new confusion and the fear of God’s vengeance
made them feel that their only safety lay in flight to Egypt,
and, although warned by Jeremiah that even there the
word would find them, they fled south and took refuge in
Tabanpes (Daphnae, q.v.), afterwards forming small settle-
ments in other parts of Egypt. But the thread of the history
is broken, and apart from an allusion to the favour shown to
the captive Jehoiachin (with which the books of Jeremiah and
Kings conclude), there is a gap in the records, and subsequent
events are viewed from a new standpoint (§ 20).

The last few years of the Judaean kingdom present several difficult
problems.

(a) That there was some fluctuation of tradition is evident in the
case of Jehoiachin, with whose quiet end (2 Kings xxiv. 6 [see also
Lucian]; 2 Chron. xxxvi. 8 [Septuagint]) contrast the fate fore-
shadowed (cf. Jer. xxxvi. 21; Jos. Ant. c. 9, 2).
The tradition of his captivity (2 Chron. xxxvi. 6; Dan. i. 2) has
apparently confused him with Jehoiachin, and the latter’s reign is
so brief that some overlapping is conceivable. Moreover, the
problems of Judah after Jehoiachin were such that Zedekiah, who
died in peace is not borne out by the history, nor does Josiah’s fate agree with the
promise in 2 Kings xxii. 20. There is also an evident relation between
the patriarchal period and Jehoiachin and Zedekiah (e.g., the length of reigns),
and the difficulty felt in regard to the second and third is obvious in the attempts of the Jewish historian Josephus
to provide a compromise. The contemporary prophecies ascribed to
Jeremiah and Ezekiel require careful examination in this con-
nexion, partly as regards their traditional background (especially
the headings and setting), and partly for their contents, the details of which
sometimes do not admit of a literal interpretation in our
day. For the old tradition (e.g., Ezek. xix. 3–9, where the
two brothers carried off to Egypt and Babylon respectively would
seem to be Jehoahaz and his nephew Jehoiachin),
and the flank and has obvious parallelism with the previous
numbers, dates and extent of the deportations. Jer. ii. 28–30 gives a total of 4560 persons,
in contrast to 2 Kings xxiv. 14, 16 (the numbers are not inclusive),
and reckons three deportations in the 7th (1716), 18th and 23rd
years of Nebuchadrezzar. Only the second is specifically said to be
from Jerusalem (the remaining are of Judaens), and the last has been
plausibly connected with the murder of Gedaliah, an interval
of five years being assumed. For this twenty-third year Josephus
(2 Kings vii. 1), according to the invasion of Egypt and an attack upon Ammon,
Mosh and Palestine (see Nebuchadrezzar).

(b) That the exile lasted seventy years (if from 586 B.C. to the comple-
tion of the temple) is based on the canonical (2 Chron. xxxvi. 21; Jer. xxv. 11, xxix. 10; Zech. i. 12; cf. Tyro Isa. xxii. 15), but it is usually reckoned from the first deportation,
which was looked upon as of greater significance than the second
(Jer. lxxiv. 2). It would be better to take the former as the
interpretation of the 40 years in Ezek. iv. 6 (cf. Egyptian xxix. 11) and the
390 in n. 5 (Septuagint 150 or 190; 130 in Jos. x. 9, end).
A period of fifty years is allowed by the chronological scheme
of Ezekiel (Ch. vii. 1; Jos. c. Ap. i. 21), and the late book of Baruch (vi. 3)
even speaks of seven generations. Varying chronological schemes
may have been current and some weight must be laid upon the
reasonable vagueness of the historical information in later
writings (see Daniel).

(c) The attitude of the neighbouring peoples constitutes another seri-
ous problem (cf. 2 Kings xxiv. 2 and 2 Chron. xxxvi. 5, where Lucian’s
report is to be contrasted with the contention of the Samarians
of the view of the circumstances of Gedaliah’s appointment (Jer. xl. 11, see
above) as contrasted with the frequent prophecies against Ammon,
Moab and Edom which seem to be contemporary (see Enom; Moab).

(d) Finally, the recurrence of similar historical situations in Judaean
history must be considered. The period under review, with its rela-
tions between Judah and Egypt, can be illustrated by prophecies
ascribed to a similar situation among the Nineveh of the Assyrian
world. There are no parallels, however, on internal grounds, are unsuitable to
the present period, and when they show independent signs of a
later date (in their present form), there is a very strong probability
that they are later and due to some subsequent disaster. The scantiness
of historical tradition makes a final solution impossible, but the study
of these years has an important bearing on the history of the later
Judaean state, which has been characteristically treated from the
standpoint of exile who returned from Babylonia and regard them-

selves as the kernel of “Israel.” From this point of view, the
desire to intensify the demodulation of Palestine and the fate of its
remnants look to the Babylonian exiles for the future, can probably be recognized in the writings attributed to contemporary
prophets.

18. Internal Conditions and the Exile.—Many of the exiles
accepted their lot and settled down in Babylonia (cf. Jer. xxix.
4–7); Jewish colonies, too, were being founded in Egypt. The
agriculturists and herdsmen who had been left in Palestine
were left in the desert (Jer. xlviii. 4), and little change can be
imagined either Judah or Israel as denuded of its inhabitants.
The down-trodden peasants were left in peace to divide the
land among them, and new conditions arose as they took over
the ownerless estates. But the old continuity was not entirely
broken; there was a return to earlier conditions, and life moved
more freely in its wonted channels. The fall of the monarchy
involved a return to a pre-monarchical state. It had scarcely
been otherwise in Israel. The Israelites who had been carried
off by the Assyrians were also removed from the cult of the
land (cf. 1 Sam. xxvii. 19; Ruth ii. 15 seq.). It is possible that some had
escaped by taking timely refuge story bellows in Judah; indeed, if national tradition availed, there were doubtless times
when Judah cast its eye upon the land with which it had been
so intimately connected. It would certainly be unwise to draw
a sharp boundary line between the two districts; kings of Judah
could be tempted to restore the kingdom of their traditional
founder, or Assyria might be complaisant towards a faithful
Judaean vassal. The character of the Assyrian domination over
Israel must not be misunderstood; the regular payment of tribute and the provision of troops were the main requirements,
and the position of the two did not concern them. Baasha,
the Assyrian governor took the place of an unpopular native ruler.
The two sections of the Hebrews who had had so much in
common were scarcely severed by a border-line only a few miles to
the north of Jerusalem. But Israel after the fall of Samaria
is artificially excluded from the Judaean horizon, and lies as
a foreign land, although Judah itself had suffered from the intru-
sion of foreigners in the preceding centuries of war and turmoil,
and strangers had settled in her midst, had formed part of the
royal guard, or had even served as janissaries (§ 15, end).
Samaria had experienced several changes in its original
population, 4 and an instructive story tells how the colonists,
in their ignorance of the religion of their new home, incurred the
divine wrath. Cujus regio ejus religio—settlement upon a new
soil involved dependence upon its god, and accordingly priests
were sent to instruct the Samaritans in the fear of Yahweh.
Thereafter they continued the worship of the Israelite Yahweh
along with their own native cults (2 Kings xvii. 24–28, 33).
Their descendants claimed participation in the privileges of the
Judaens (cf. Jer. xlii. 5), and must have identified themselves
with the old stock (Ezra iv. 2). Whatever recollection they
preserved of their origin and of the circumstances of their entry
would be retold from a new standpoint; the ethnological tradi-
tions would gain a new meaning; the assimilation would in
time become complete. In view of subsequent events it would be
difficult to find a more interesting subject of inquiry than the
internal religious and sociological conditions in Samaria at this
time.

To the prophets the religious position was lower in Judah
than in Samaria, whose iniquities were less grievous (Jer. iii.
11 seq., xxii. 11 sqq.; Ezek. xvi. 51). The greater prevalence of heathen elements in Jerusalem, as detailed in the reforms
of Josiah or in the writings of Ezekiel, is not unexpected. But
Sargon had removed Babyloniens into the land of Hatti (Syria and Phoenicia), and in 705 B.C. (cf. 2 Kings xviii. 11, note)
the Tigris as the border of Assyria, the whole Semitic
empire of desert origin (Tamar, Hayappa, &c.); other settlements
are ascribed to Assur-haddon and perhaps Assur-bani-pal (Ezra iv. 2, 10).
See for the evidence, A. E. Cowley, Encyc. Bib., col. 4257; J. A.
at least suggest that the destruction of the state was not entirely a disaster. To this catastrophe may be due the fragmentary character of old Judaean historical traditions. Moreover, the land was purified when it became divorced from the practices of a luxurious court and lost many of its worst inhabitants. In Israel as in Judah the political disasters not only meant a shifting of population, they also brought into prominence the old popular and non-official religion, the character of which is not to be condemned because of the attitude of later times. Of their age. When there were sects like the Rechabites (Jer. xxxvii. 27) and the Samaritan fields could produce a Micah or a Zephaniah, and when Israel no doubt had men who inherited the spirit of a Hosea, the nature of the underlying conditions can be more justly appreciated. The writings of the prophets were cherished, not only in the unfavourable atmosphere of courts (see Jer. xxxvi., 21 sqq.), but also in the circles of their followers (Isa. xviii. 16). In the quiet smaller sanctuaries the old-time beliefs were maintained, and the priests, often perhaps of the older native stock (cf. 2 Kings xvii. 28 and continue), were the recognized guardians of the religious cults. The old stories of earlier days encircle places which, though denounced for their corruption, were not regarded as illegitimate, and in the form in which the dim traditions of the past are now preserved they reveal an attempt to purify popular belief and thought. In the domestic circles of prophetic communities the part played by their great heads in history did not suffer in the telling, and it is probable that some part at least of the extant history of the Israelite kingdom passed through the hands of men whose interest lay in the pre-eminence of their seers and their beneficent deeds on behalf of these small communities. This interest and the popular tone of the history may be combined with the fact that the literature does not take us into the midst of that world of activity in which the events unfolded themselves.

Although the records preserve complete silence upon the period now under review, it is necessary to free oneself from the narrow outlook of the later Judaean compilers. It is a gratuitous assumption that the history of (north) Israel ceased with the fall of Samaria or that Judah then took over Israelite literature and inherited the old Israelite spirit: the question of the preservation of earlier writings is of historical importance. It is true that the situation in Israel or Samaria continues obscure, but a careful study of literary productions, evidently not earlier than the 7th century B.C., reveals a particular freshness in conception and a tendency which finds its parallel in the works of Hosea and perhaps in other fragmentary portions of the Deuteronomistic school of thought. But the history which the Jewish writers have handed down is influenced by the later hostility between Judah and Samaria. The traditional bond between the north and the south, beginning with the kingdom of Davidos, Amos, Hosea and Isaiah, seems to have been carried back to the earliest ages; yet the present period, after the age of rival kingdoms, Judah and Israel, and before the foundation of Judaism, is that in which the historical background for the interpretation of the history of the Israel is completely accessible (§§ 5, 20, end). The circumstances favoured a closer alliance between the people of Palestine, and a greater prominence of the old holy places (Hebron, Bethel, Shechem, &c.), which the ruined Jerusalem would not be one, and the existing condition of Judah and Israel from internal and non-political points of view—not their condition in the pre-monarchical ages—is the more crucial problem in biblical history.

10. Persian Period. — The course of events from the middle of the 6th century B.C. to the close of the Persian period is lamentably obscure, although some evidence indicates that this age holds the key to the growth of written biblical history. It was an age of literary activity which manifested itself, not in contemporary historical records—only a few of which have survived—but rather in the special treatment of previously existing sources. The problems are of unusual intricacy and additional light is needed from external evidence. It will be convenient to turn to this first. Scarcely 40 years after the destruction of Jerusalem, a new power appeared in the east in the person of Cyrus the Great. Babylon speedily fell (539 B.C.) and a fresh era opened. To the petty states this meant only a change of masters; they now became part of one of the largest empires of antiquity. The prophets who had marked in the past the advent of Assyrians and Chaldeans now fixed their eyes upon the advance of Cyrus, confident that the fall of Babylon would bring the restoration of their fortunes. Cyrus was hailed as the deliverer of the God whom the ancients had anointed as the king of Yahweh. The poetic imagery in which the prophet puts before the doom of Babylon, like the romantic account of Herodotus (i. 191), falls short of the simple contemporary account of Cyrus himself. He did not fulfil the detailed predictions, and the events did not reach the ideals of Hebrew writers; but these anticipations may have influenced the form which the Jewish traditions subsequently took. Nevertheless, if Cyrus was not originally a Persian and was not a worshipper of Yahweh (Isa. xlii. 25), he was at least tolerant towards subject races and Jewish reforms; an Exile and Nebuchadrezzar, flourished under a king to the honour in which his memory was held. Throughout the Persian supremacy Palestine was necessarily influenced by the course of events in Phoenicia and Egypt (with which intercourse was continual), and some light may thus be indirectly thrown on its otherwise obscure political history. Thus, when Cambyses, the son of Cyrus, made his great expedition against Egypt, with the fleets of Phoenicia and Cyprus and with the camels of the Arabs, it is highly probable that Palestine itself was concerned. Also, the revolt which broke out in the Persian provinces at this juncture may have extended to Palestine; although the usurper Darius encountered his most serious opposition in the north and north-east of his empire. An outburst of Jewish religious feeling is dated in the second year of Darius (520), but whether Judah was making a bold bid for independence or had received special favour for abstaining from the above revolts, external evidence alone can decide. Towards the close of the reign of Darius there was a fresh revolt in Egypt; it was quelled by Xerxes (485—462), who did not imitate the religious tolerance of his predecessors. Artaxerxes I. Longimanus (465—425), attracts attention because the famous story of the Persian satrap Megabyzos (c. 448—447), independent evidence for the position of Judah is needed, since a catastrophe apparently befell the unfortunate state before Nehemiah appears upon the scene. Little is known of the mild and indolent Artaxerxes II. Mnemon (404—359). With the growing weakness of the Persian empire Egypt reasserted its independence for a time. In the reign of Artaxerxes III. Ochus (359—338), Egypt, Phoenicia and Cyprus were in revolt; the rising was quelled without mercy, and the details of the vengeances are valuable for the possible fate of Palestine itself. The Jewish historian Josephus (Ant. xi. 7) records the enslavement of the Jews, the pollution of the Temple by certain Bagosae (see BAGOAS), and a seven years' punishment. Other late sources narrate the destruction of Jericho and a deportation of the Jews to Babylonia and to Hycraina (on the Caspian Sea). The evidence for the catastrophes under Artaxerxes I. and III. (see ARTAXERXES), exclusively contained in biblical and in external tradition respectively, is of particular importance, since several biblical passages refer to disasters to those of 586 but presuppose different conditions and are apparently of later origin. The murder of Artaxerxes III. by...
Bagosse gave a set-back to the revival of the Persian Empire. Under Darius Codomannus (336–330) the advancing Greek power brought matters to a head, and at the battle of Issus in 333 Alexander settled its fate. The overthrow of Tyre and Cyprus secured the possession of the coast and the Jewish state entered upon the Greek period. (See § 25.)

During these two centuries the Jews in Palestine had been only one of a number of objects of mercantile interest, and even their own religious and national traditions were forgotten in the world of trade, until the time of the Maccabees. The Jews were subject to the Persian kings and they had to provide them with the temple treasures and relics which they had brought back from Babylon. In this way the Jewish people retained their ancient religious and national traditions.

In 561 B.C. the captive Judaea king, Jehoachin, had received special marks of favour from Nebuchadrezzar's son Amil-marduk. So little is known of this act of recognition that its significance can only be conjectured. A little later Tyre received its king Merbaal (555–552) who had been fetched from Babylonia. Babylonia was politically unsettled, the representative of the Davididic dynasty had descendants; if Babylonia was assured of the allegiance of Judah further acts of clemency may well have followed. But the later recension of Judaeana history—our sole source—entirely ignores the elevation of Jehoachin (2 Kings xxv. 27 sqq.; Jer. lii. 31–34), and proceeds at once to the first year of Cyrus, who proclaims as his divine mission the rebuilding of the Temple (538). The Judaeana Sheshbazzar (a corruption of some Babylonian name) brought back to Jerusalem the temple vessels and skillfully disposed of them away and prepared to undertake the work at the expense of the royal purse. An immense body of exiles is said to have returned at this time to Jerusalem under Zerubbabel, who was of Davididic descent, and the priest Jeshua or Joshua, the grandson of the murdered Seraiah (Ezra i.iii.; v. 13–vi. 9.

When these refused the proferred help of the people of Samaria, men of the same faith as themselves (iv. 2), their troubles began, and the Samaritans retaliated by preventing the rebuilding. The next historical notice is dated in the second year of Darius (520) when two prophets, Haggai and Zechariah, came forward to the Jewish people and the two prophetic books of the Old Testament were composed. The work went steadily onwards, thanks to the favour of Darius, until the Temple was completed four years later (Ezra v. 2; vi. 13 sqq.). On the other hand, from the independent writings ascribed to these prophets, it appears that no considerable body of exiles could have returned—it is still an event of the future (Zech. ii. 7, vi. 13); little, if anything, had been done to the Temple (Hag. ii. 15); and Zerubbabel is the one to take in hand and complete the great undertaking (Zech. iv. 9). The prophets address themselves to men living in comfortable circumstances, and try to keep them alive to the great heavenly power and agricultural depression, and though the country is unsettled there is no reference to any active opposition on the part of Samaritans. So far from drawing any lesson from the brilliant event in the reign of Cyrus, the prophets imply that Yahweh's wrath is still upon the unfortunate city and that Persia is still the oppressor. Consequently, although small bodies of individuals no doubt came back to Judah from time to time, and some special mark of favour may have been shown by Cyrus, the opinion has gained ground since the early arguments of E. Schrader (Stud. u. krit., 1867, pp. 456–504), that the composition of the present representations of the historical narrative object is to make the new Israel, the post-exilic community at Jerusalem, continuous, as a society, with the old Israel. Greater weight must be laid upon the independent evidence of the prophetic writings, and the objection that Palestine could not have produced the religious fervency of Haggai or Zechariah without an initial impulse from Babylonia beg the question. Unfortunately the internal conditions in the 6th century B.C. can be only indirectly estimated (§ 18), and the political position must remain for the present quite uncertain. In Zerubbabel the people beheld once more a ruler of the Davididic race. The new temple heralded a new future; the mournful fasts commemorative of Jerusalem's disasters would become feasts; Yahweh had left the Temple at the fall of Jerusalem, but had now returned to sanctify it with his presence; the city had purged its iniquity and was fit once more to become the central sanctuary. So Haggai sees in Zerubbabel the representative of the

1 Thus a decree of Darius I. takes the part of his subjects against the excessive zeal of the official Gadatas, and grants freedom of taxation and exemption from forced labour to those connected with a temple of Apollo in Asia Minor (Bulletin de correspondance hellénique, xiii. 529; E. Meyer, Entstehung des Judenismus, p. 19 seq.; cf. id. Foro. in T. E. ii. 11, 40).

5 There is an obvious effort to preserve the continuity of tradition (a) in Ezra ii. which gives a list of families who returned from exile each to its own city, and (b) in the return of the holy vessels in the time of Cyrus (contrast 1 Esdras iv. 43 seq.), a view which, in spite of Dan. i. 2, v. 2 seq., conflicts with 2 Kings xxiv. 13 and xxv. 13 (see, however, e. 14). That attempts have been made to adjust contradictory representations is suggested by the prophecy ascribed to Jeremiah (xxviii. 16 sqq.) where the restoration of the holy vessels finds no place in the shorter text of the Septuagint (see W. R. Smith, Old Test. and J. E. Church, pp. 140 sqq.).
ideal kingdom, the trusted and highly favoured minister who was the signet-ring upon Yahweh's hand (contrast Hag. ii. 24 with Jer. xxii. 23). Zechiah, in his turn, proclaims the overthrow of all difficulties in the path of the new king, who shall rule in glory supported by the priest (Zech. vii). What political aspirations were revived, what other writers were inspired by these momentous events are questions of inference.

A work which inculcates the dependence of the state upon the pious and the influence of the house of God is not without its analogies to Deuteronomy. The Temple, the ideal centre of the nation, is regarded as the repository of the divine will, the abode of Yahweh, who is at once almighty and merciful, and the haven of safety for the erring and penitent. The sacrifices and liturgical services, though condemned by Deuteronomy, are still sanctioned; and the temple priesthood, though official and despotic, is guaranteed to exercise a ministry of mercy. The predictions which are presented in a more poetical form in Deuteronomy are given a more prosaic interpretation in the Book of the Wars of Yahweh. The means by which the Temple and the priests were to be employed are set forth in a more practical spirit.

In this connexion the Book of the Wars of Yahweh has a more practical object. It is intended to indicate the path which the nation should pursue in order to secure the blessings of Yahweh and to escape the punishment of Israel. It is also intended to teach the people the duties of the priests, who are to be employed in the service of Yahweh, and to show the people the way in which the priests are to be elected and appointed. The Book of the Wars of Yahweh is also intended to teach the people the duties of the Levites, who are to be employed in the service of Yahweh, and to show the people the way in which the Levites are to be elected and appointed.

In the Book of the Wars of Yahweh the priests are represented as the ministers of Yahweh, who are to be employed in the service of Yahweh, and to show the people the way in which the priests are to be elected and appointed. The Book of the Wars of Yahweh is also intended to teach the people the duties of the Levites, who are to be employed in the service of Yahweh, and to show the people the way in which the Levites are to be elected and appointed.
historical criticism is faced with the established literary conclusions which, it should be noticed, place the Deuteronomism and priestly compilations posterior to the great changes at and after the fall of the northern monarchy; and, to some extent, contemporary with the equally series of changes in Judah. Such changes may be traced to the preservation of older literary records, and vices-situated which, if they have not left their mark on contemporary history, the documents thus preserved may be traced on the representations of the past. There are extraneous and historical causes and internal literary features which unite to show that the application of the literary hypotheses of the Old Testament to the course of Israelite history is still incomplete, and that we are not so much concerned with the intrinsic value of religious and didactic writings as whether it should be tested in the light of purely external evidence (see further § 24; and Palestine: History).

21 Nehemiah and Ezra.—There is another remarkable gap in the historical traditions between the time of Zerubbabel and the reign of Artaxerxes I. In obscure circumstances the enthusiastic hopes have melted away, the Davidic scion has disappeared, and Jerusalem has been the victim of another disaster. The country is under Persian officials, the nobles and priests form the local government, and the ground is being prepared for the erection of a hierarchy. It is the work of rebuilding and remanagement, which are to be contrasted with the last pages of biblical history, and in the records of Ezra and Nehemiah we stand in Jerusalem in the very centre of epoch-making events. Nehemiah, the cup-bearer of Artaxerxes at Susa, plunged in grief at the news of the desolation of Jerusalem, obtained permission from the king to rebuild the walls. Provided with an escort and with the right to obtain supplies of wood for the buildings, he returned to the city of his fathers' sepulchres (the allusion may suggest his royal ancestry). His zeal is represented in a twofold aspect. Having satisfied himself of the extent of the ruins, he aroused the people to the necessity of fortifying and repopulating the city, and a vivid account is given in his name of the many dangers which beset the rebuilding of the walls. Sanballat of Horon, Tobiah the Ammonite, and Gashmu the Arabian (? Edomite) unceasingly opposed him. Tobiah and his son Johanan were related by marriage to Judaeans secular and priestly families, and active intrigue resulted, in which nobles and prophets took their part. It was insinuated that Nehemiah had his prophets to proclaim that Judah had again its own king; it was even suggested that he was intending to rebel against the Persian. Nehemiah naturally gives us only his version, and the attitude of Sanballat and Gashmu is illustrated by the feeling of his partisans. But Tobiah and Johanan themselves were worshippers of Yahweh (as their names also show), and consequently, with prophets taking different sides and with the Samaritan claims summarily repudiated (Neh. ii. 20; cf. Ezra iv. 3), all the facts cannot be gathered from the narratives. Nevertheless the undaunted Judaeans pressed on unswayed by the threatening letters which were sent around, and succeeded in completing the walls within fifty-two days.¹

In the next place, Nehemiah appears as governor of the small district of Judah and Benjamin. Famine, the avarice of the rich, and the necessity of providing tribute had brought the humbler classes to the lowest straits. Some had mortgaged their houses, fields and vineyards to buy corn; others had borrowed to pay the taxes, and had sold their children to their richer brethren to repay the debt. Nehemiah was faced with old abuses, and vehemently contrasted the harshness of the nobles with the generosity of the exiles who would redeem their poor countrymen from slavery. He himself had always refrained from exacting the usual provision which other governors had claimed; indeed, he had refused to accept any gifts or presents from the nobles, officials, and dependents at his table, apart from casual fugitives (Neh. v.). We hear some thing of a twelve-years' governorship and of a second visit, but the evidence does not enable us to determine the chronology (xiii. 6). Neh. v. is placed in the middle of the building of the walls in fifty-two days; the other reforms during the second visit are closely connected with the dedication of the walls and with the events which immediately follow his first arrival when he had come to rebuild the city. Nehemiah also turns his attention to religious abuses. The sabbath, once a festival, had become more strictly observed, and when he found the busy agriculturists and traders (some of them from Tyre) pursuing their usual labours on that day, he pointed to the disasters which had resulted in the past from such profanation, and immediately took measures for its punishment in such a way that the priests, who had always occupied a high place in the religious life of the common people, could not have missed observing his words (Ezra v. 14; Neh. xi. 19). The religious revival, with the corresponding zeal of the religious leaders, prepared the way for the second building of the walls. And thus, in the midst of a people divided and in fragments, under the leadership of Two brothers, Nehemiah and Sanballat, two men of very different temper, but with the same purpose of bringing back their country under the rule of one person and of one religious house, and to make it monarchical,' (cfr. the closing chapter of the last of the historical books of the Old Testament, Judah maintains its claim to the heritage of Israel and rejects the right of the Samaritans to the title¹ (see § 5). In this separation of the Judaeans from religious and social intercourse with their neighbours, the work of Ezra (q.v.) requires notice. The story of this scribe (now combined with the memoirs of Nehemiah) crystallizes the new movement inaugurated after a return of exiles from Babylonia. The age can also be illustrated from Isai. xi. 1-6 and Malachi (q.v.). There was a poor and weak Jerusalem, its Temple stood in need of renovation, its temple-service was meagre, its priests unworthy of their office. On the one side was the grinding poverty of the poor; on the other the abuses of the governors. There were two leading religious parties: one of oppressive formalists, exclusive, strict

¹ One may recall, in this connexion, Caxton's very interesting prologue to Malory's Morte d'Arthur and his remarks on the permanent value of the "histories" of this British hero. [Cf. also Horace, Ep. i. 11, and R. Browning, "Development."]

² It is noteworthy that Josephus, who has his own representation of the post-exilic age, allows two years and four months for the work (Ant. xi. 5, 8).
JEWS

and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influences, they were practically driven to adopt the necessary measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the book of the Law of Moses 1 daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.). A special account is given of this reform (Ezra ix. seq.) and the description of Ezra's horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and 4 Israel became a church, the foundation of which it sought in the desert of Sinai a thousand years before.

22. Post-exilic History. - The biblical history for the period in the Old Testament begins with Nehemiah (Neh. i. - iv.), and it is doubtful how far the traditions can be trusted before we reach the reign of Artaxerxes (Ezra vii. seq., Neh.). The records belonging to this period are very confused (Ezra iv. 7-23, with Artax. ii. 16 seq.), and it is not certain that Ezra left any record of the work of Nehemiah (Ex. v. 20), for the latter was a faithful scribe according to the practice of the Jews in their service in order. Fortified with remarkable powers, some of which far exceed the known tolerance of Persian kings, he began wide-sweeping marriage reforms; but the record ceases abruptly (vii. 6).

The work of Nehemiah was continued in collaboration with Ezra, 2 and the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Ezra iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion founded upon Artaxerxes I as the first of that name, certain features suggest that there has been some confusion with the traditions of the times of Artaxerxes II and III. (195). But the problems are admittedly complicated, and since one is necessarily dependent upon a somewhat arbitrary arrangement of the events, it is impossible to trace the successive steps of the sequel; although if the royal favour was continued (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah might be regarded as a governor in the second half of the first century B.C.

Although there was a stock of tradition for the post-exilic age (cf. Daniel, Esther, 1 Esdras, Josephus), the historical narratives are of a kind at best of uncertain value, and the evidence of the account of a return (Ezra iv. 12), which otherwise is quite ignored, appears to have been used for the times of Darius (1 Ezra iv. seq.) and subsequently of Cyrus (Ezra i.-iii.). Moreover, although general opinion founded upon Artaxerxes I as the first of that name, certain features suggest that there has been some confusion with the traditions of the times of Artaxerxes II and III. (195). But the problems are admittedly complicated, and since one is necessarily dependent upon a somewhat arbitrary arrangement of the events, it is impossible to trace the successive steps of the sequel; although if the royal favour was continued (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah might be regarded as a governor in the second half of the first century B.C.

1 The statement that the king desired to avoid the divine wrath may possibly have some deeper meaning (e.g. some recent revolt, Ezra vii. 23).

2 It must suffice to refer to the opinions of Berthold, Buhl, Caspari, Eissfeldt, Von Hoensack, Jahn, Kennett, Kent, Kosters, Marquart, Torrey, and Wildeboer.

3 This agrees substantially with the independent record of Nehemiah, and unless we assume two disasters not widely separated in date —viz. those presupposed in (a) and (c)—the record in (a) may refer to the destruction of the Samaritan colony in Judah (Neh. iv. 1). It is possible that the intriguing of the Samaritans and the letters sent by Tobiah (cf. Tabeel in Ezra iv. 7) to frighten Nehemiah (Neh. vi. 19). Their presence at the beginning of the second temple which is the subject of the narratives to Artaxerxes would be enough to alarm the king (cf. Neh. vi. 5-9, 19, and Ezra iv. 15 seq., 20 seq.), and it may possibly be gathered that Nehemiah at once departed to justify himself (Neh. vi. 18, vii. 1). Nehemiah's difficulties, no longer in their original form or sequence, it is impossible to trace the successive steps of the sequel; although if the royal favour was continued (cf. the account ascribed to the time of Darius, Ezra v. seq.), Nehemiah might be regarded as a governor in the second half of the first century B.C.

4 C. F. Kent, Israel's Hist. and Belg. Narratives (1905), p. 352 seq. The book is against this very probable view of events.

5 It is evident from Neh. iv. 7-23 and overlook the serious intricacies in the book of Nehemiah.

6 There are three inquiries: (a) the critical value of 1 Esdras, (b) the character of the different representations of post-exilic internal and external history, and (c) the recovery of the historical sources. To start with the last before considering (a) and (b) will be futile.

7 For example, to the sufferings under Artaxerxes III. (J 19) have been attached such passages as 1 Esdr. iv. 7-15, 32-36, 23, etc., and various excerpts, with its allusion to a further decree, forms a plausible prelude to the return of either Ezra (vii. 13) or Nehemiah (3. ii. 3), and it is surprising that the Samaritans and other opponents, who had previously worked against Ezra (v. 7-5), would not interfere when Nehemiah was armed with a royal mandate (Neh. ii. 7-9). It is very difficult not to conclude that the royal permissions, as now detailed, have Jewish party motives behind them.

8 Some stress is now being placed upon the importance of the history (cited in the Chronicles alone destroyed Jerusalem (2 Kings xxv.); Edom was friendly or at least neutral (Jer. xxxvii., xxxi. seq.)). The proposal to read "Edomites" for "Syrions" in the list of bands which troubled Jehohanan (2 Kings ii. 2) is not supported by the contemporary reference, Jer. xxxvi. 11.
Jews
OLD TESTAMENT HISTORY

references to the rebuilding of the Temple in the reign of Artaxerxes (1 Esdras i. 18, not in Ezra iv. 12); but both in a context relating to the
前の(18)る。これによると、文献上の(18)が、信頼できる(18)されたものを元の文脈(18)を元に(18)することができる。

The untrustworthy account of the return in the time of Cyrus (Ezra i. 7-10) is better than the one in the other books of Ezra, and is
accurately reported(19) that the Temple was finished according to the decree of "Cyrus, Darius and Artaxerxes king of Persia" (Ezra vi. 14).

The length of the untrustworthy account of the return in the time of Cyrus (Ezra i. 7-10) is better than the one in the other books of Ezra, and is
accurately reported that the Temple was finished according to the decree of "Cyrus, Darius and Artaxerxes king of Persia" (Ezra vi. 14).

1 The untrustworthy account of the return in the time of Cyrus (Ezra i. 7-10) is better than the one in the other books of Ezra, and is
accurately reported that the Temple was finished according to the decree of "Cyrus, Darius and Artaxerxes king of Persia" (Ezra vi. 14).

recast in accordance with the requirements of the time, with the
result that, by the side of usages evidently of very great
antiquty, details now appear which were previously unknown or
wholly unsuitable. The age, which the scanty historical tradi-
tions themselves represent as one of supreme importance for
the history of the Jews, once seemed devoid of interest, and it
is entirely through the laborious scholarship of the 19th century
that it now begins to reveal its profound significance. The
Graf-Wellhausen hypothesis, that the history of Israel in its
complete form in the Pentateuch stands at the close and not at
the beginning of biblical history, that this mature Judaism was
the fruit of the 5th century B.C. and not a divinely appointed
institute at the exodus (nearly ten centuries previously), has
won the recognition of almost all Old Testament scholars.

The post-exilic priestly spirit represents a tendency which is
absent from the Judaean Deuteronomistic book of Kings but is
fully mature in the later, and to some extent parallel, book of
Chronicles (p.v.). The "priestly" traditions of the creation and
of the patriarchs mark a very distinct advance upon the
earlier narratives, and appear in a further developed form in
the still later book of Jubilees, or "Little Genesis,"(2) where they
are used to demonstrate the pre-Mosaic antiquity of the priestly
or Levitical institutions. There is also an unmistakable de-
velement of the book "Joseph," and the priestly legislation, though ahead of
both Ezekiel and Deuteronomy, is not altogether to be
regarded as a new and independent book. The book has a
final, and the sudden

Biblical history ends with the triumph of the Judaean community,
the true "Israel," the right to which title is found in the distant
past. The Judaean view pervades the present sources, and whilst
its Da. and Pa. were preserved because their constant
dependence on the Temple was by no means
abandoned under Jeroboam is viewed as one of calf-worshipping northern tribes
from Jerusalem with its one central temple and the legitimate
priesthood of the Zadokites. It is from this narrower standpoint of
an exclusive and confined Judah (and Benjamin) that the traditions
are incorporated in the late recensions gain fresh force, and in Israel's
renewal in the Judaean yokel the later hostility between the
two nations may be traced in later sources. This is not
finally settled until a very late date, as is evident from the
variations in the Septuagint, and it is especially in the description
of the time of Solomon and the disaffection that
continued to be considerable fluctuations. The book has no finale and the sudden
break may not be accidental. It is replaced by Chronicles, which,
confining itself to Judaean history from a later standpoint (after
the Persian age), includes new characteristic traditions wherein
recollection of more recent events may be recognized. Thus, the
south Judaean or south Palestinian element shows itself in Judaean
genealogies and lists; there are circumstantial stories of the rehabilita-
tion of the Temple and the reorganization of cults; there are
fuller traditions of inroads upon Judah by southern peoples and their
allies. There is also a more definite subordination of the royal
authority to the priesthood (so too in the writings of Ezekiel, p.v.); and
ministers of the sainted kings who contend against the priests (Jehosh. Uziah) point to a conflict of
authority, a hint of which is already found in the reconciliation of
Zerubbabel and the priest Joshua in a passage ascribed to Zechariah
(ch. vi. 11).

23. Post-exilic Judaism.—With Nehemiah and Ezra we enter
upon the era in which a new impulse gave to Jewish life and
thought that form which became the characteristic orthodo-
Exilic Judaism. It was not a new religion that took root; older tend-
dencies were diverted into new paths, the existing material was
shaped to new ends. Judah was now a religious community
whose representative was the high priest of Jerusalem. Instead of
sacred oaths, there were royal priests, anointed with oil,
arrayed with kingly insignia, claiming the usual royal dues in
addition to the customary rights of the priests. With his priests
and Levites, and with the chiefs and nobles of the Jewish
families in the Holy state, and his death marks an epoch as truly as did that of the monarchs in the past.
This hierarchical government, which can find no foundation
in the Hebrew monarchy, is the forerunner of the Sanhe-
Drin (p.v.); it is an institution which, however inaugurated, set
its stamp upon the narratives which have survived. Laws were

1 It is at least a coincidence that the prophet who took the part
of Tobiah and Sanballat against Nehemiah (vi. 10 seq.) bears the same
name as the one who advised Rehoboam to acquiesce in the disrup-
tion; and Rehoboam announced the divine selection of Jerobo-
am (ib. p. 24, Septuagint only).
incompatibilities within its limits, and the two tendencies, prophetic and priestly, continue, the former finding its further development in Christianity.

The Graf-Wellhausen hypothesis (§ 4) does not pretend to be complete, it merely outlines, and it is independent of its application to the historical criticism of the Old Testament, to a later alleged development of the thesis prevails, mere deutsurn criticism of the internal intricacies being quite inadequate. Maintaining that the position of the Priestly writer is that of a later adherent of the theoretical position, conservative writers concede that it is composite, has been given some literary form, and has suffered some revision in the post-exilic age. Their concessions continue to become ever more significant, and all that for which the Priestly writer was claimed by the later adherents of his position, and which when, through often overlooked by their readers, are not essential to the position they endeavour to support, and the objections that are put forward against the theory of the introduction of new laws-books (under a Moses or an Ezra) only with equal force to the theory of the introduction of a genuine Mosaic teaching which had been admittedly ignored or forgotten. Their arguments have most weight, however, when they show the character of reconstructions which rely upon the trustworthiness of the historical narratives. What the Priestly writer proudly brought from Babylon is uncertain; the writer, it seems, is merely narrating the introduction of the law ascribed to Moses everywhere, and its development in the Pentateuch.

The importance which the biblical writer attaches to the return from Babylon in the reign of Artaxerxes forms a starting-point for several interesting inquiries. Thus, in any estimate of the influence of Babylonia upon the Old Testament, it is obviously necessary to ask whether certain features (a) are of true Babylonian origin, or (b) merely find parallels or analogies in its stores of legend, whether the indebtedness goes back to very early times or to the age of the Assyrian domination or to the exiles who now returned. Again, the importance which the Priestly writer attached to the Babylonian origin—already settled around Jerusalem, and questions inevitably arise concerning their relation to the new-comers and the literary views which gave us the Old Testament in its present form. To this age we may assign the Priestly narratives (symbolized by P), which differ markedly from the other sources. Yet it is clear from the book of Genesis alone that in the age of Priestly tradition, there were two phases of thought. Popular stories with many features of popular religion were current, they could be, and indeed had been made more edifying; but the very noteworthy conservatism of even the last compiler or editor, in contrast to the reshaping and rewriting of the material in the book of Jubilees, indicates that the Priestly spirit was not that of the whole community. But through the Priestly hands the Old Testament gradually passed, and their standpoint colours its records. This is especially true of the history of the post-exilic and to a certain extent of the post-

4) The most "unhistorical" tradition bears the greatest significance for the development of thought of or history-writing, and thus is of the greatest practical value. Only from an exhaustive comparison of controlling data can the scattered hints be collected and classified. There is much less room for argument and imaginative reconstruction in the "post-exilic" additions to the prophecies and the LXX in their new form; or in the singular prominence of the Judean family of Perez (its elevation over Zerah, a half-Edomite family, Gen. xxxviii.; its elevation above the Judahites, the line of David) in the genealogy of all the Judean sub-divisions, 1 Chron. ii. 5 sq.; or in the late insertion of local tradition encircling Jerusalem; or in the perplexing diversity of the exegetical method in the post-exilic and post-exilic ages, and one must await the more comprehensive study of the two or three centuries which are of the first importance for biblical historical and geographical discipline.

24. Old Testament History and External Evidence.—Thus the Old Testament, the history of the Jews during the first great period, describes the relation of the Hebrews to surrounding peoples, the transition of Judaism from the faithless (north) Israelite tribes, and the reorganization of the Jewish community in and around Jerusalem at the arrival of Ezra with the Book of the Law. The whole gives an impression of unity, which is designed, and is to be expected in a work of a systematic compilation. But the record of the early gaps and irreconcilable historical standpoints. For all serious biblical historicist, the stages in the growth of the written traditions and the historical circumstances which they imply, must inevitably be carefully considered. The much-debated question of whether or not there was almost every subject of Old Testament investigation. Yet it is impossible to recover with confidence or completeness the development of the text that is shown by the different stages of the Old Testament alone. The keen interest taken by the great prophets in bringing them is not prominent in the national records; political history has been subordinated, and the Palestine which modern discovery is revealing is not conspicuous in the religious discourses. To the extent of the evidence one must look, therefore, for that which did not fall within the scope or the horizon of the religious historians. They are the first to introduce the Priestly narratives, to the records of the age of the Babylonian monarch Khammurabi (perhaps 2200 B.C.). He is considered as the first conquistator in the XVIIIth and following dynasties, or of the period illustrated by the Amarna tablets (§ 3). They treat with almost unique fullness a few years in the middle of the 9th century n.c., but ignore Assyria; yet only the Assyrian inscriptions explain the political situation (§ 10 seq.), and were it not for them the true significance of the 8th-7th centuries could so far be realized (§ 15 seq.). It is the naive impression that each period of history was handled by some more or less contemporary authority which is not confirmed by a criticism which confines itself strictly to the literal evidence. An interest in the past is not necessarily confined to any one age, and the critical view that the biblical history has been compiled from relatively late standpoints finds support in the still later treatment of the events—in Chronicles as contrasted with Samuel-Kings or 1 Chronicles as contrasted with Genesis. It is instructive to observe in Egypt the formation of the literary traditions which have persisted. In the case of the narratives which deal with the events of the age of Cyrus, of the events during the Persian and Macedonian period, for instance, the Persian (A. H. Sayce, Proc. Soc. Biblical Archaeol., 1897, pp. 13 sq.), the links which unite the traditional heroes with Babylonia (e.g. with a Judea), with Assyria (e.g. Jacob), Egypt (e.g. Joseph, Simeon), and the Apokryphic addenda to the Old Testament and its influence.

1 Cf. the story of Phinehas, Num. xxvi. 6 sqq.; or Gen. xxxvii., see Simson. Apropos of hostility towards Samaria, it is singular that the prophet Ezechiel, whose express sympathy with the Samarians is derived from Cutha, the famous seat of the god Nergal, only some 25 m. N.E. of Babylon itself (see above, p. 286, n. 4).

The various tendencies which can be observed in the later post-exilic and post-exilic periods are of considerable value in any consideration of the development of thought illustrated in the Old Testament itself.
the Old Testament into its present form, and its preservation despite hostile forces, are the two remarkable phenomena which most arrest the attention of the historian; it is for the theologian to interpret their bearing upon the history of religious thought. (S. A. C.)

II.—GREEK DOMINATION

25. Alexander the Great.—The second great period of the history of the Jews begins with the conquest of Asia by Alexander the Great, disciple of Aristotle, king of Macedon and captain-general of the Greeks. It ends with the destruction of Jerusalem by the armies of the Roman Empire, which was, like Alexander, at once the masterful pupil and the docile patron of Hellenism. The destruction of Jerusalem might be regarded as an event of merely domestic importance, for the Roman cosmopolitan it was only the removal of the titular metropolis of a national and an Oriental religion. But, since a derivative of that religion has come to be a power in the world at large, this event has to be regarded in a different light. The destruction of Jerusalem in A.D. 70 concludes the period of four centuries, during which the Jews as a nation were in contact with the Greeks and exposed to the influence of Hellenism, not wholly of their own will but yet against it. Whether the master of the provinces, in which there were Jews, be Alexander, a Ptolemys, or a Caesar, the Hellenism, the force by which he rules is the force of Greek culture. These four centuries are the Greek period of Jewish history.

The ancient historians, who together cover this period, are strangely indifferent to the importance of the Jews, upon which Josephus is at pains to insist. When Alexander invaded the interior of the Eastern world, which had hitherto remained inviolable, he came as the champion of Hellenism. His death prevented the achievement of his designs; but he had broken down the barrier, he had planted the seed of the Greek's influence in the four quarters of the Persian Empire. His successors, the Diadochi, carried on his work, but Antiochus Epiphanes was the first who deliberately directed his efforts to the establishment of a religious community at Jerusalem, in which the rigour of the law should be observed. As a part of the Persian Empire the community was obscure and unimportant. But the race whose chief sanctuary it guarded and maintained was the heir of great traditions and ideals. In Egypt, moreover, in Babylon and in Persia individual Jews had responded to the influences of their environment and won the respect of the aliens whom they despised. The law which they cherished as their standard and guide kept them united and conscious of their unity. And the individual who acquired tools in the midst of those outside became a rebuffed glory upon the nation and its Temple.

In connexion with Alexander's march through Palestine Josephus gives a tradition of his visit to Jerusalem. In Arrian's narrative of Alexander's exploits, whose fame had already faded before the great glory of Rome, there is no mention of the establishment of a religious community at Jerusalem. According to Josephus Alexander visited the city of the Jews. Only Tyre and Gaza barred the way to Egypt. He took, presumably, the coast-road in order to establish and retain his command of the sea. The rest of Palestine, which is called the territory of the Diadochi, was divided among those outside Egypt. He shed a reflected glory upon the nation and its Temple.

GREEK DOMINATION] JEWISH ARTICLES 393

The heathen set up a temple on Mt Gerizim and became the Samaria
tan schism (§ 21 above). The combination is certainly artificial and not
in itself a valuation. It insinuates that the permanent tendencies which mould the history of the
Jews. It is true that Alexander was subject to dreams and visited
or in order to assure himself or his followers of victory. But it is
tried in Alexandria and certain of the Jews in the Temple of Jerusalem that he should turn aside on his way to Egypt
for such a purpose.

It may be, Alexander's tutor had been in Asia and had met
a Jew there, if his disciple Clearchus of Soli is to be trusted.
"The man," Aristotle says, "was by race a Jew out of Coele-Syria.
His people are descendants of the Indian philosophers. It is re
ported that they are called Hellenic Jews and Jews among the Syrians. The Jews take their name from their place of abode, which is called Judaea. The n
own city is very difficult; they call it Hierusalem. This man, then, having been a guest in many homes and having come down gradually from
the highlands to the sea-coast, was Hellenic not only in speech but
also in soul. And as we were staying in Asia at the time, the man
cast up at the same place and interviewed us and other scholars,
making trial of their wisdom. But inasmuch as he had come to be
at home with many cultured persons he imparted more than he got."
The date of this interview is probably determined by the
fact that Aristotle visited his friend Hermias, tyrant of Ataraxus,
in 347–345 B.C. There is no reason to doubt the probability or even
the accuracy of the narrative. Megasthenes also describes the Jews as
the philosophers of Syria and couples them with the Brahmins of
India. This heliopolitan Jew who descended from the hills to the
coast is a figure typical of the period.

26. The Ptolemies.—After the death of Alexander Palestine fell
in the end to Ptolemy (305 B.C.) and remained an Egyptian
province until 108 B.C. For a century the Jews in Palestine and
in Alexandria had no history—or none that Josephus knew.
But two individuals exemplify the different attitudes which
the nation adopted towards its new environment and its wider
opportunities, Joseph the tax-farmer and Jesus the sage.
The wisdom of Jesus ben Sira (Sirach) is contained in the book
commonly called Ecclesiasticus (4th cent. B.C.) a time when men
were attracted by the wisdom and science of the Greeks, he taught that
all wisdom came from Yahweh who had chosen Israel to receive it in
its manifest inspiration. The natural bond of things: it was enough for him that Yahweh had created and
ruled the universe. If a man had leisure to be wise—and this is
not for many—he should study the Scriptures which had come
down, and so become a scribe. For the scribe, as for the man at
the plough-tail, the Law was the rule of life. All, however much
or little preoccupied with worldly business, must fear God, from
whom come good things and evil, life, death, poverty and riches.
It is an extraordinary gift, which are given for the intelligence.
Enough that the individual did his duty in the state of
life in which he was set and left behind him a good name at
his death. "Every member of the congregation of Israel must labour,
as God has appointed, at some handicraft or profession to provide for his
home. It is his sacred duty and his private interest to beget children at an early age to take care of him in old age,
pity the smith, the potter, the carpenter and the farmer: with better
reason he is apt to condemn the trader who becomes absorbed in
greed of gain and so deserts the way of righteousness and fair dealing.
As a teacher Jesus gave his own services freely. For the soldier
he had no commendation. There were physicians who understood
the use of herbs, and must be rewarded when their help was invited.
But, whatever means each head of a family adopted to get a livelihood,
he must pay the priest's dues. The centre of the life of Israel
was the Temple, over which the high priest presided and which
was inhabited by Yahweh, the God of Israel. The scribe could translate this spiritual life in works and in manners; but the high priest was the
ruler of the nation.

As ruler of the nation the high priest paid its tribute to Egypt, its
overlord. But Josephus reports of one Onias that for avarice he
had raised taxes and that he showed his hatred of the civil service of the Egyptian Empire and yet remain a hero to
some of the Jews—provided that he did not intermarry with a Greek.
Josephus joined the sect of the Ptolemies, which regarded
it necessary to court and secure the taxes of Palestine, when they were put up
to auction. As tax-farmer he oppressed the non-Jewish cities and
so won the admiration of Josephus.

But while such men went out into the world and brought back wealth of one kind or another to Palestine, other Jews were
content to make their homes in foreign parts. At Alexandria in particular Alexander provided for a Jewish colony which soon
became so rich in its possessions that even the heathen were in envy of the Law. It is probable that, as in Palestine an Aramaic para
phrase of the Hebrew text was found to be necessary, so in
Alexandria the Septuagint grew up gradually, as need arose.
The legendary tradition which even Philo accepts gives it a
formal nativity, a royal patron and inspired authors. From
the text which Philo uses, it is probable that the translation had
already been in existence or that the date of the commencement of the undertaking for the reign of
Ptolemy Lagus.

The science for the necessary defects of a translation put forward
by the translator of Ecclesiasticus in his Prologue shows that the
work was carried on beyond the limits of the Ptolemaic
kingdom. Apparently it was in progress at the time of his coming to Egypt in the reign of
Cleopatra Euergetes I. or II. He seems to regard this body of
literature as the answer to the charge that the Jews had contributed
nothing useful for human life. Once translated into Greek, the
Jewish wisdom became accessible to all. The Jews of the dispersion
and were at least capable of being used as a bridge for
the conversion of the world to Judaism. So far as the latter function
is concerned Philo confesses that in the day he shared the
safety of the people, and seems to imply that the proselytes adopted
little more than the monotheistic principle and the observance of
the Sabbath. According to Juvenal the sons of such proselytes were
apt to go farther and to substitute the Jewish Law for the Roman—
Romans autem soliti contempere leges
Judicium edissent ac metuent ius
Tradidit arcano quodque unum volumine
Moyseos.

27. The Seleucids.—The end of the 3rd century the Palestine
Jews became involved in the struggle between Egypt and Syria. In Jerusalem there were partisans of both
the combatants. The more orthodox or conservative Jews preferred the tolerant rule of the Ptolemies: the rest, who chafed
under the proselytization and Hellenization looked to the Seleucids, who
inherited Alexander's idea of a universal adoption of Hellenism. At this point Josephus cites the
testimony of Polybius:—"Scopas, the general of Ptolemy,
advanced into the highlands and subdued the nation of the Jews
in the winter. After the defeat of Scopas, Antiochus gained
Bataana and Samaria and Abila and Gadara, and a little later
those of the Jews who live round the Temple called Jerusalem
adhered to him." From this it appears that the pro-Syrian
faction of the Jews had been strong and active enough to bring
an Egyptian army upon them (195-198 B.C.). Josephus adds
that an Egyptian garrison was left in Jerusalem. This act of
oppression presumably strengthened the Syrian faction of
the Jews and led to the transference of the nation's allegiance.
The language of Polybius suggests that he was acquainted with
other Jewish communities and with the fame of the Temple: in
his view they were not an organized state. They were not even
a pawn in the game which Antiochus proposed to play with Rome
for the possession of Greece and Asia Minor. His defeat left the
resources of his kingdom exhausted and its extent diminished;
and so the Jews became important to his successors for the sake
of their wealth and their position on the frontier. To pay his
debt to Rome he was compelled to resort to extraordinary
methods of raising money; he actually met his death (187 B.C.) in
an attempt to loot the temple of Elymais.

The pro-Syrian faction of the Palestinian Jews found their
opportunity in this emergency and informed the governor of
Coele-Syria that the treasury in Jerusalem contained untold
sums of money. Heliodorus, prime minister of Seleucus Philetapor, who succeeded Antiochus, arrived at Jerusalem
in his progress through Coele-Syria and Phoenicia and declared
the treasure confiscate to the royal exchequer. According to
the Jewish legend Heliodorus was attacked by the Jews and
he entered the Temple by a horse with a terrible rider and by two young men.
He was scourged and only escaped with his life at the inter
cession of Onias the high priest, who had pleaded with him
vainly that the treasure included the deposits of widows and
orphans and also some belonging to Hycranus, "a man in very
high position." Onias was accused by his enemies of having
given the information which led to this outrage and when,
relying upon the support of the provincial governor, they proceeded
to attempt assassination, he fled to Antioch and appealed to the king.

When Seleucus was assassinated by Heliodorus, Antiochus
IV., his brother, who had been chief magistrate at Athens, came

XV. 13 6
back secretly "to seize the kingdom by guile" (Dan. xl. 21 seq.). On his accession he appointed Jesus, the brother of Onias, to the high-priesthood, and sanctioned his proposals for the conversion of Jerusalem into a Greek city. The high priest changed his name to Jason and made a gymnasium near the citadel. The principle of separation was abandoned. The priests deserted the Temple for the palaestra and the young nobles wore the Greek cap. The Jews of Jerusalem were enrolled as citizens of Antioch. Jason sent money for a sacrifice to Heracles at Tyre; and the only recorded opposition to his policy came from his envos, who pleaded that the money might be applied to naval expenditure. Thus Jason stripped the high-priesthood of its sacred character and did what he could to stamp out Judaism.

Menelaus supplanted Jason, obtaining his appointment from the king by the promise of a larger contribution. In order to secure his position, he contrived the murder of Onias, who had taken sanctuary at Daphne. This outrage, coupled with his appropriation of temple vessels, which he used as bribes, raised against Menelaus the senate and the people of Jerusalem. Jason's brother and deputy was killed in a serious riot, and an accusation was laid against Menelaus before Antiochus. At the inquiry he bought his acquittal from a courtier and his accusers were executed. Antiochus required peace in Jerusalem and probably regarded Onias as the representative of the pro-Egyptian faction, the allies of his enemy.

During his second Egyptian campaign a rumour came that Antiochus was dead, and Jason made a raid upon Jerusalem. Menelaus held the citadel and Jason was unable to establish himself in the city. The people were presumably out of sympathy with hellenizers, whether they belonged to the house of Onias or that of Tobiah. When Antiochus finally evacuated Egypt in obedience to the decree of Rome, he thought that Judea was in revolt. Though Jason had fled, it was necessary to storm the city; the drastic measures which Menelaus advised seem to indicate that the poorer classes had been roused to defend the Temple from further sacrilege. A massacre took place, and Antiochus braved the anger of Yahweh by entering and pillaging the Temple with impunity. The author of 2 Maccabees infers from his success that the nation had forfeited all right to divine protection for the time (2 Macc. v. 18-20).

The policy which Antiochus pursued was to carry it on rigorously and systematically. His whole kingdom was to be unified; Judaism was an eccentricity and as such doomed to extinction. The Temple of Jerusalem was made over to Zeus Olympius: the temple of Gerizim to Zeus Xenius. All the religious rites of Judaism were proscribed and the neighbouring Greek cities were requested to enforce the prohibition upon their Jewish citizens. Jerusalem was occupied by an army which took advantage of the Sabbath and proceeded to suppress its observance. An Athenian came to be the missionary of Hellenism and to direct its ceremonies, which were established by force up and down the country.

28. The Maccabees.—Jerusalem and Gerizim were purged and converted to the state religion with some ease. Elsewhere, as there, some conformed and some became martyrs for the faith. And the passive resistance of those who refused to conform at length gave rise to active opposition. "The king's officers who were enforcing the apostasy came into the city of Modein to sacrifice, and many of Israel went over to them, but Mattathias... slew a Jew who came to sacrifice and the king's officer and pulled down the altar" (1 Macc. ii. 15 seq.). Whether led by this Mattathias or not, certain Jews fled into the wilder-nesses, and Judas Maccabaeus his reputed son, the first of the five Asmonian (Hasmonian) brethren. The warfare which followed was like that which Saul and David waged against the Philistines. Antiochus was occupied with his Parthian campaign and trusted that the Hellenized Jews would maintain their ascendency with the aid of the provincial troops. In his last illness he wrote to express his confidence in their loyalty. But the rebels collected adherents from the villages; and, when they resolved to violate the sabbath to the extent of resisting attack, they were joined by the company of the Assideans (Hasidim). Such a breach of the sabbath was necessary if the whole Law was to survive at all in Palestine. But the transgression is enough to explain the disfavour into which the Maccabees seem to fall in the judgment of later Judaism, as, in that judgment, it is enough to account for the instability of their dynasty. Unstable as it was, their dynasty was soon established. In the country-side of Judaea, Judaism—and no longer Hellenism—was propagated by force. Apollonius, the commander of the Syrian garrison in Jerusalem, and Seros the commander of the army in Syria, came in turn against Judas and his bands and were defeated. The revolt thus became important enough to engage the attention of the governor of Coele-Syria and Phoenicia, if not of Lysias the regent himself. Nicanor was despatched with a large army to put down the rebels and to pay the tribute due to Rome by selling them as slaves. Judas was at Emmaus; "the men of the citadel" guided a detachment of the Syrian troops to his encampment by night. The rebels escaped in time, but not into the hills, as their enemies surmised. At dawn they made an unexpected attack upon the main body and routed it (163 B.C.). Lysias himself entered the Idumaean country and laid siege to the fortress of Bethsura. Judas gathered what men he could and joined battle. The siege was raised, more probably in consequence of the death of Antiochus Epiphanes than because Judas had gained any real victory. The proscription of the Jewish religion was withdrawn and the Temple restored to them. But it was Menelaus who was sent by the king "to encourage" (2 Macc. xi. 32) the Jews, and in the official letters no reference is made to Judas. Such hints as these indicate the impossibility of recovering a complete picture of the Jews during the sovereignty of the Greeks, which the Talmudists regard as the dark age, best left in oblivion.

Judas entered Jerusalem, the citadel of which was still occupied by a Syrian garrison, and the Temple was re-dedicated on the 25th of Kislev (164 B.C.). So "the Pious" achieved the object for which presumably they took up arms. The re-establishment of Judaism, which alone of current religions was intolerant of a rival, seems to have excited the jealousy of their neighbours who had embraced the Greek way of life. The hellenizers had not lost all hope of converting the nation and were indisposed to acknowledge the Lacedaimonian pretender. Judas and his zealots were thus able to maintain their prominence and gradually to increase their power. At Joppa, for example, the Jewish settlers—two hundred in all—"were invited to go into boats provided in accordance with the common decree of the city." They accepted the invitation and were drowned. Judas avenged them by burning the harbour and the shipping, and set to work to bring into Judaea all such communities of Jews who had kept themselves separate from their heathen neighbours. In this way he became strong enough to deal with the apostates of Judaea.

In 163 Lysias led another expedition against these disturbances of the king's peace and defeated Judas at Bethzachariah. But while the forces were besieging Bethzur and the fortress on Mount Zion, a pretender arose in Antioch, and Lysias was compelled to come to terms—and now with Judas. The Jewish refugees had turned the balance, and so Judas became strategus of Judaea, whilst Menelaus was put to death.

In 162 Demetrius escaped from Rome and got possession of the kingdom of Syria. Jakim, whose name outside religion was Alcimus, waited upon the new king on behalf of the loyal Jews who had hellenized. He himself was qualified to be the legitimate head of a united state, for he was of the tribe of Aaron. Judas and the Asmonaeans were usurpers, who owed their title to Lysias. So Alcimus-Jakim was made high priest and Bacchides brought an army to install him in his office. The Assideans made their submission at once. Judas had won for them religious freedom: but the Temple required a descendant of Aaron for priest and he was come. But his first act was to seize and slay sixty of them: so it was clear to Judas at any rate, if not also to the Assideans who survived, that political independence was necessary if the religion was to be secure. In face of his active opposition Alcimus could not maintain himself

without the support of Bacchides and was forced to retire to Antioch. In response to his complaints Nicoran was appointed governor of Judaea with power to treat with Judas. It appears that the two became friends at first, but fresh orders from Antioch made Nicoran guilty of treachery in the eyes of Judas and his partisans. Warned by the change of his friend's manner Judas fled. Nicoran threatened to destroy the Temple if the priests would not deliver Judas into his hands. Soon it came to his knowledge that Judas was in Samaria, whither he followed him on a sabbath with Jews pressed into his service. The day was known afterwards as Nicoran's day, for he was found dead on the field (Capharsalama) by the victorious followers of Judas (13th of Adar, March 161 b.c.). After this victory Judas made an alliance with the people of Rome, who had no love for Demetrius his enemy, nor any intention of putting down professions of friendship in the practice. Bacchides and Alcimus returned meanwhile into the land of Judah; at Elasa "Judas fell and the rest fled" (1 Mac. ix. 18). Bacchides occupied Judaea and made a chain of forts. Jonathan, who succeeded his brother Judas, was captain of a band of fugitive outlaws. But on the death of Alcimus Bacchides retired and Jonathan with his followers settled down beyond the range of the Syrian garrisons. The Hellenizers still enjoyed the royal favour and Jonathan made no attempt to dispossess them. After an interval of two years they tried to capture him and failed. This failure seems to have convinced Bacchides that it would be well to recognize Jonathan and to secure a balance of parties. In 138 Jonathan began to rule as a judge in Michmash and he destroyed the godless out of Israel—so far, that is, as his power extended. In 135 Alexander Balas withdrew Jonathan from his allegiance to Demetrius by the offer of the high-priesthood. He had already made Jerusalem his capital and fortified the Temple mount: the Syrian garrisons had already been withdrawn with the exception of those of the Akra and Bethzur. In 147 Jonathan repaid his benefactor by destroying the army of the governor of Coele-Syria, who had espoused the cause of Bacchides. The fugitives took sanctuary in the temple of Dagon at Azotos. "But Jonathan burned the temple of Dagon and those who fled into it." After the death of Balas he laid siege to the Akra; and "the apostates, who hated their own nation," appealed to Demetrius. Jonathan was summoned to Antioch, made his peace and apparently relinquished his attempt in return for the addition of three Samaritan districts to his territory. Later, when the people of Antioch rose against the king, Jonathan despatched a force of 3000 men who played a notable part in the merciless suppression of the insurrection. 1 Maccabees credits him with having removed 80,000 of his compatriots away from the city. When he and Cleopatra left Syria, he left his brother Simon in command of theii forces. Simon was thus VI., but even greater political power into the hands of Jonathan and his brother Simon, but finally seized Jonathan on the pretext of a conference. Simon was thus left to consolidate what had been won in Palestine for the Jews and the family whose head he had become. The weakness of the king enabled him to demand and to secure immunity from taxation. The Jewish aristocracy became peers of the Seleucid kingdom. Simon was declared high priest: Rome and Sparta rejoiced in the elevation of their friend and ally. In the hundred and seventieth year (142 B.C.) the yoke of the Hellenists was removed from the nation: the people began to date their legal documents in the first year of Simon the great high priest and commander and leader of the Jews." The popular verdict received official and formal sanction. Simon was declared by the Jews and the priests their governor and high priest for ever, until there should arise a faithful prophet. The garrison of the Akra had been starved by a close blockade into submission, and beyond the boundaries of Judaea "he took Joppa for a haven and made himself master of Gaza and Bethsura." 20. John Hyrcanus and the Sadducees.—But in 138 B.C. Antiochus Sidetes entered Seleucia and required the submission of all the petty states, which had taken advantage of the weakness of preceding kings. From Simon he demanded an indemnity of 1000 talents for his oppression and invasion of non-Jewish territory: Simon offered 100 talents. At length Antiochus appeared to enforce his demand in 134. Simon was dead (135 B.C.) and John Hyrcanus had succeeded his father. The Jewish forces were driven back upon Jerusalem and the city was closely invested. At the feast of tabernacles of 133 Hyrcanus informed the Sanhedrin that Antiochus, granted him a week's truce. The only hope of the Jews lay in the eleventh of the victor's suzerainty, and it did not fail them. Some of his advisers urged the demobilization of the nation on the ground of their exclusiveness, but he sent a sacrifice and won thereby the name of "Pious." In subsequent negotiations he accepted the disarmament of the besieged and a tribute as conditions of peace, and in response to their entreaty left Jerusalem without a garrison. When he went on his last disastrous campaign, Hyrcanus led a Jewish contingent to join his army, partly perhaps a troop of mercenaries (for Hyrcanus was the first of the Jewish kings to hire mercenaries, with the treasure found in David's tomb). After his death Hyrcanus took advantage of the general confusion to extend Jewish territory with the countenance of Rome. He destroyed the temple of Gerizim and compelled the Idumaeans to submit to circumcision and embrace the laws of the Jews on pain of deportation.

In Jerusalem and in the country, in Alexandria, Egypt and Cyprus, the Jews were prosperous (Jos. Ant. xiii. 282). This prosperity and the apparent security of Judaism led to a breach between Hyrcanus and his spiritual directors, the Pharisees. Hyrcanus had already been criticized for his invasion of doubtful purity; and so it was his duty to lay down the high-priesthood and be content to rule the nation. That one man should hold both offices was indeed according to the example of Moses, and could only be admitted as a temporary concession to necessity. Hyrcanus could not entertain the proposal that he should resign the sacred office to which he owed much of his authority. The allegation about his mother was false: the Pharisaei who retailed it was guilty of no small offence. A Sadducean friend advised Hyrcanus to ask the whole body of the Pharisees to prescribe the (for Hyrcanus was the first of the Jewish kings to hire mercenaries, with the treasure found in David's tomb). After his death Hyrcanus took advantage of the general confusion to extend Jewish territory with the countenance of Rome. for help against her son. The result of this double-dealing was that his army was destroyed by Ptolemy, who advanced into Egypt leaving Palestine at the mercy of Cleopatra. But Cleopatra's generals were Jews and by their protests prevented her from annexing it. Being thus freed from fear on the side of Ptolemy, Alexander continued his desultory campaigns across the Jordan and on the coast without any apparent policy and with indifferent success. Finally, when he officiated as high priest at the feast of tabernacles he roused the fury of the people by a derisive breach of the Pharisaic ritual. They cried out that he was unworthy of his office, and pelted him with the citrons which they were carrying as the Law prescribed. Alexander summoned his mercenaries, and 6000 Jews were killed before he set out on his disastrous campaign against an Arabian king. He returned a fugitive to find the nation in armed rebellion. After six years of civil war he appealed to them to state the conditions under which they would lay aside their hostility. They replied by demanding his death and called in the Syrians. But when the Syrians chased him into the mountains, 6000 Jews went over to him and, with their aid, he put down the rebellion. Eight hundred Jews who had held a fortress against him were crucified; 8000 Pharisees fled to Egypt and remained there. Offering an ineffectual resistance to the passage of the Syrian troops, Alexander was driven back by Aretas, king of Arabia, against whom they had marched. His later years brought him small victories over isolated cities.

On his deathbed it is said that Alexander advised his wife to reverse this policy and rely upon the Pharisees. According to the Talmud, he warned her to fear neither the Pharisees nor their opponents but the hypocrites who do the deed of Zimri and claim the reward of Phinehas. The warning indicates his justification of his policy in the matter of the crucifixions. In any case the Pharisees were predominant under Alexander, who became queen (78-69) under her husband's will. Hyrcanus her elder son was only high priest, as the stricter Pharisees required. All the Pharisaic ordinances which Hyrcanus had abolished were reaffirmed as binding. Simon ben Shatach stood beside the queen: the exiles were restored and among them his great colleague Jehudah ben Tabai. The great saying of each of these rabbis is concerned with the duties of a judge; the selection does justice to the importance of the Sanhedrin, which was filled with Pharisees. The legal reforms which they introduced into the Law at this time are among the most important in Jewish history, and reference to one case which is an exception: false witnesses were condemned to suffer the penalty due to their victim, even if he escaped. This ruling may be interpreted as part of a campaign directed against the counsellors of Alexander or as an instance of their general principle that intention is equivalent to commission in the eye of the Law. The queen interposed to prevent the execution of those who had counselled the crucifixion of the rebels and permitted them to withdraw with her younger son Aristobulus to the fortresses outside Jerusalem. Against their natural desire for revenge may be set the fact that the Pharisees did much to improve the status of women among the Jews.

On the death of Alexander (69 B.C.) Aristobulus disputed the succession of Hyrcanus. When their forces met at Jericho, Hyrcanus, finding that the bulk of his following deserted to Aristobulus, fled with those who remained to the tower Antonia and seized Aristobulus's wife and children as hostages for his own safety. Having this advantage, he was able to abdicate in favour of Aristobulus and to retire into private life. But he was not able to save his friends, who were also the enemies of the reigning king. In fear of reprisals Antipas (or Antipater), the Idumaean, his counselor, played on the fears of Hyrcanus and persuaded him to buy the aid of the Nabataean Arabs with promises. Aristobulus could not withstand the army of Aretas; he was driven back upon Jerusalem and there besieged. The Jews deserted to the victorious Hyrcanus: only the priests remained loyal to their accepted king; many fled to Egypt.

30. The Romans and the Idumeans.—At this point the power of Rome appeared upon the scene in the person of M. Aemilius Scaurus (stepson of Sulla) who had been sent into Syria by Pompey (65 B.C.). Both brothers appealed to this new tribunal and Aristobulus bought a verdict in his favour. The siege was raised. Aretas retired from Judaea; and Aristobulus pursued the retreating army. But, when Pompey himself arrived at Damascus, Antipater, who pulled the strings and exploited the claims of Hyrcanus, realized that Rome and not the Arabs, who were cowed by the threats of Scaurus, was the ruler of the East. To Rome, therefore, he must pay his court. Others shared this conviction: Strabo speaks of embassies from Egypt and Judaea bearing presents—one deposited in the temple of Jupiter Capitolinus bore the inscription of Alexander, the king of the Jews. From Judaea there were three embassies pleading, for Aristobulus, for Hyrcanus, and for the nation, who would have no king at all but their God.

Pompey deferred his decision until he should have inquired into the state of the Nabataeans, who had shown themselves to be capable of dominating the Jews in the absence of the Roman army. In the interval Aristobulus provoked him by his display of a certain impatience. The people had no responsible head, of whom Rome could take cognisance: so Pompey decided in favour of Hyrcanus and humoured the people by recognizing him, not as king, but as high priest. Antipater remained secure, in power if not in place. The Roman supremacy was established: the Jews were once more one of the subject states of Syria, now a Roman province. Their national aspirations had received a contemptuous acknowledgment, when their Temple had been desecrated by the entry of a foreign conqueror.

Aristobulus himself had less resolution than his partisans. When he repented of his attempted resistance and treated with Pompey for peace, his followers threw themselves into Jerusalem, and, when the faction of Hyrcanus resolved to open the gates, into the Temple. There they held out for three months, succumbing finally because in obedience to the Law (as interpreted since the time of Antiochus Epiphanes) they would only defend themselves from actual assault upon the sabbath day. The Romans profited by this inaction to push on the siege without provoking resistance by actual assaults until the very end. Pompey finally took the stronghold by choosing the day of the fast, when the Jews abstain from all work, that is the sabbath (Strabo). Dio Cassius calls it the day of Cronus. On this bloody sabbath the priests showed a devotion to their worship which matched the inaction of the fighting men. Though the Romans already swept the Temple, a vast number of Jews had remained at worship untroubled and were slaughtered as they poured libation and burned incense, for they put their own safety second to the service of God. And there were Jews among the murderers of the 12,000 Jews who fell.

The Jews of Palestine thus became once more a subject state, stripped of their conquests and confined to their own borders. Aristobulus and his children were conveyed to Rome to grace their conqueror's triumphal procession. But his son Alexander escaped during the journey, gathered some force, and overran Judaea. The Pharisees decided that they could not take action on either side, since the elder son of Alexander was directed by the Idumaean Antipater; and the people had an affection for such Asmonean princes as dared to challenge the Roman domination of their ancestral kingdom. The civil war was renewed; but Aulus Gabinius, the proconsul, soon crushed the pretender and set up an aristocracy in Judaea with Hyrcanus as guardian of the Temple. The country was divided into five districts with five synods; and Josephus asserts that the people welcomed the change from the monarchy. In spite of this, Aristobulus (56 B.C.) and Alexander (55 B.C.) found loyalists to follow them in their successive raids. But Antipater found supplies for the army of Gabinius, who despite Egyptian and Parthian distractions, restored order according to the will of Antipater. M. Crassus, who succeeded him, plundered the Temple of its gold and the treasure (54 B.C.) which the Jews of the dispersion had contributed for its maintenance. It is said that Eleazar, the priest who guarded the treasure, offered Crassus the golden beam as ransom for the whole, knowing, what no one else knew, that it was mainly composed of wood. So Crassus departed to
Parthia and died. When the Parthians, elated by their victory over Cassius (43 B.C.) advanced upon Syria, Cassius opposed them. Some of the Jews, presumably the partisans of Aristobulus, were ready to co-operate with the Parthians. At any rate Antipater was ready to aid Cassius with advice; Tarchaeas was taken and 30,000 Jews were sold into slavery (51 B.C.). In spite of this vigorous coercion Cassius came to terms with Alexander, before he returned to the Ephorates to hold it against the Parthians.

Two years later Julius Caesar made himself master of Rome and despatched the captive Aristobulus with two legions to take care of the ethnarch. But Pompey's partisans were beforehand with him: he was taken off by poison and got not so much as a burial in his fatherland. At the same time his son Alexander was beheaded at Antioch by Pompey's order as an enemy of Rome. After the defeat and death of Pompey (48 B.C.) Antipater transferred his allegiance to Caesar and demonstrated its value during Caesar's Egyptian campaign. He carried with him the Arabs and the princes of Syria, and through Hyrkanus he was able to transform the hostility of the Egyptian Jews into active friendship.

These services, which incidentally illustrated the solidarity and unity of the Jewish nation and the interest of the communities of the dispersion for the metropolis, were recognized and rewarded. Before his assassination in 44 B.C. Julius Caesar had confirmed Hyrkanus in the high-priesthood and added the title of ethnarch. Antipater had been made a Roman citizen and procurator of the reunited Judaea. Further, as confederates of the senate and people of Rome, the Jews had received access to territory, including the port of Joppa and, with other material privileges, the right of observing their religious customs not only in Palestine but also in Alexandria and elsewhere. In the next year, Antipater had demonstrated the capacity of his adoptive or adopted nation for his own profit and theirs. And when Caesar died, Sextus notes that he was mourned by foreign nations, especially by the Jews (Caes. 84).

In the midst of all this civil strife the Pharisees and all who were preoccupied with religion found it almost impossible to discern what they should do to please God. The people whom they directed were called out to fight, at the bidding of an alien, for this and that foreigner who seemed most powerful and most likely to succeed. In Palestine few could command leisure to meditate; for as opportunities of effective intervention in affairs, they had none, it would seem, once Alexander was dead.

There is a story of a priest named Onias preserved both by Josephus and in the Talmud, which throws some light upon the decision of the religious in the period just reviewed. When Aretas intervened in the interest of Hyrcanus and defeated the usurper of his brother's inheritance, the people accepted the verdict of battle, sided with the victor's client, and joined in the siege of Jerusalem. The most reputable of the Jews fled to Egypt; but Onias, a righteous man and dear to God, who had hidden himself, was discovered by the besiegers. He had a name for power in prayer; for on a single occasion, he had won the favor and confidence of God.

Unrighteous Jews were in the ascendant. There were only Amosian priests, degenerate and barely titular sons of Levi, to serve as judges of Israel—and they were at feud and both relied upon foreign aid. The righteous could only flee or hide, and so wait, dreaming of the mercy of God past and to come. As yet our ancestors, not tied by ties of family, were prepared to follow them to Egypt with certainty, but the Psalms of Solomon express the mind of one who survived to see Pompey the Great brought low. Although Pompey had spared the temple treasure, he was the executioner of the Jews of Rome, who was always so considerably exercised. And so the psalmist exults in his death and dishonour (Ps. ii.): he prayed that the pride of the dragon might be humbled and God shewed him the ways of peace, which was that they should be killed. As one of those who fear the Lord in truth and in patience, he looks forward to the punishment of all sinners who oppress the righteous and profane the sanctuary. For the sins of the rulers God had rejected his people; but the remnant could not but inherit the promises, which belong to the chosen people. For the Lord is faithful unto those who walk in the righteousness of his commandments (xiv.): in the exerese of their freewill and with God's help they will attain salvation. As God's servant, Pompey destroyed their rulers and every wise counsellor; so the righteous and sinless king of David's house shall reign over them and over all the nations (xvii).

3. Herod the Great.—After the departure of Caesar, Antipater warned the adherents of Hyrcanus against taking part in any revolutionary attempts, and his son Herod, who, in spite of his youth, had been appointed governor of Galilee, dealt summarily with Ihezekiah, the robber captain who was overrunning the most remote part of Syria. The gratitude of the Syrians bound him to the knowledge of Sextus Caesar the governor of Syria; but his action inspired the chief men of the Jews with apprehension. Complaint was made to Hyrcanus that Herod had violated the law which prohibited the execution of even an evil man, unless he had been first condemned to death by the Sanhedrin. At the same time the mothers of the murdered men came to the Temple to demand vengeance. So Herod was summoned to stand his trial. He came in answer to the summons—but attended by a bodyguard and protected by the word of Sextus. Of all the Sanhedrin only Simeon a righteous man and therefore superior to fear dared to speak. Being a Pharisee he faced the facts of Herod's power and warned the tribunal of the event, just as later he counselled the people to receive him, saying that for their sins they could not escape him. Herod put his own profit above the Law, acting after his kind, and he also was God's instrument. The effect of the speech was to goad the Sanhedrin into condemning Herod: Hycanus postponed their decision and persuaded him to flee. Sextus Caesar made him lieutenant-governor of Coele Syria, and only his father restrained him from returning to wreak his revenge upon Hyrcanus.

It is to be remembered that, in this and all narratives of the life of Herod, Josephus was dependent upon the history of Herod's client, Nicolaus of Damascus, and was himself a supporter of law and order. The action of the Sanhedrin and the presence of the women suppliants in the Temple suggest, if they do not prove, that this Hezekiah who harassed the Syrians was a Jewish patriot, who could not acquiesce and wait with Simeon.

Malichus also, the murderer or reputed murderer of Antipater, appears to have been a partisan of Hycanus, who had a zeal for Judaism. When Cassius demanded a tribute of 700 talents from Palestine, Antipater set Herod, Phasael and this Malichus, his enemy, to collect it. Herod thought it imprudent to secure the favour of Rome by the sufferings of others. But some cities defaulted, and they were apparently among those assigned to Malichus. If he had been lenient for their sakes or in the hope of damaging Antipater, he was disappointed; for Cassius sent for four books, and had Malichus make up the deficit. Soon after this (43 B.C.) Malichus succeeded, it is said, in poisoning Antipater as he dined with Hycanus, and was assassinated by Herod's braves.

After the departure of Cassius, Antipater being dead, there was confusion in Judaea. Antigonus, the son of Aristobulus, made a raid and was with difficulty repulsed by Herod. The prince of Tyre occupied part of Galilee. When Antony assumed the dominion of the East after the defeat of Cassius at Philippi, an embassy of the Jews, amongst other embassies, approached him in Bithynia, and accused the sons of Antipater as usurpers of the power which rightly belonged to Hycanus. Another approached him at Antioch. But Hycanus was well content to forgo the title to political power, which he could not exercise in practice, and Antony had been a friend of Antipater. So Herod and Phasael continued to be virtually kings of the Jews: Antony's court required large remittances and Palestine was not exempt.

In 40 B.C. Antony was absent in Egypt or Italy; and the Parthians swept down upon Syria with Antigonus in their train. Hyrcanus and Phasael were captured. Hycanus fled by way of Egypt to Rome. Hyrcanus, who was Antigonus' only rival, was mutilated and carried to Parthia. So he could no more be
high priest, and his life was spared only at the intercession of the Parthian Jews, who had a regard for the Asmonean prince. Thus Antigonus succeeded his uncle as "King Antigonus" in the Greek and "Mattathiah the high priest" in the Hebrew by grace of the Parthians.

The senate of Rome under the influence of Antony and Octavian ratified the claims of Herod, and after some delay lent him the armed force necessary to make them good. In the hope of healing the breach, which his success could only aggravate, and for love, he took to wife Mariamne, grandniece of Hyrcanus. Galilee was pacified, Jerusalem taken and Antigonus beheaded by the Romans. From this point to the end of the period the Jews were dependents of Rome, free to attend to their own affairs, so long as they paid taxes to the subordinate rulers, Herodian or Roman, whom they detested equally. If some from time to time dared to hope for political independence their futility was demonstrated. One by one the descendants of the Asmoneans were removed. The national hope was relegated to an indefinite future and to another sphere. At any rate the Jews were free to worship their God and to study his law; their religion was recognized by the state and indeed established.

This development of Judaism was eminently to the mind of the Galileans; and Herod did much to encourage it. More and more it became identified with the synagogue, in which the Law was expounded; more and more it became a matter for the individual and his private life. This was so even in Palestine—the land which the Jews hoped to possess—and in Jerusalem itself, the holy city, in which the Temple stood. Herod had put down Jewish rebels and Herod appointed the high priests. In his appointments he was careful to avoid or to suppress any person who, being popular, might legitimize a rebellion by heading it. The Pharisees, who regarded his rule as an inevitable penalty for the sins of the people, he encouraged. Pollio and more it became identified with the synagogue, in which the Law was expounded; more and more it became a matter for the individual and his private life. This was so even in Palestine—the land which the Jews hoped to possess—and in Jerusalem itself, the holy city, in which the Temple stood. Herod had put down Jewish rebels and Herod appointed the high priests. In his appointments he was careful to avoid or to suppress any person who, being popular, might legitimize a rebellion by heading it. The Pharisees, who regarded his rule as an inevitable penalty for the sins of the people, he encouraged. Pollio and

Abtalon said, "Ye wise, be guarded in your words: perchance ye may incur the debt of exile." Precepts such as these could hardly fail to effect some modification of the reckless zeal of the Galileans, the pupils of the synagogue. Many if not all of the professed rabbis had travelled outside Palestine: some were even members of the dispersion, like Hillel the Babylonian, who with Shammai forms the second of the pairs. Through them the experience of the dispersion was brought to bear upon the Palestinian Jews. Herod's nominees were not the men to extend the prestige of the high-priesthood at the expense of these rabbis; even in Jerusalem the synagogue became of more importance than the Temple. Hillel also inculcated the duty of making converts to Judaism. He said, "Be of the disciples of Aaron, loving peace, and pursuing peace, loving mankind and bringing them nigh to the Law." But even he reckoned the books of Daniel and Esther as canonical, and these were dangerous food for men who did not realize the full power of Rome.

So long as Herod lived there was no insurrection. Formally he was an orthodox Jew and set his face against intermarriage with the uncircumcised. He was also ready and able to protect the Jews of the dispersion. But that ability was largely due to his whole-hearted Hellenism, which was shown by the Greek cities which he founded in Palestine and the buildings he erected in Jerusalem. In its material embodiments Greek civilization became as much a part of Jewish life in Palestine as it was in Alexandria or Antioch; and herein the rabbis could not follow him.

When all the Jewish people swore to be loyal to Caesar and the king's policy, the Pharisees—above 6000—refused to swear. The king imposed a fine upon them, and the wife of Phereoros—Herod's brother—paid it on their behalf. In return for her kindness, being entrusted with foreknowledge by the visitation of God, they prophesied that God had decreed an end of rule for Herod and his line and that the sovereignty devolved upon her and Phereoras and their children.

From the sequel it appears that the prophecy was uttered by one Pharisee only, and that it was in no way endorsed by the party. When it came to the ears of the king he slew the most responsible of the Pharisees and every member of his household who accepted what the Pharisee said. An explanation of this unwarrantable generalization may be found in the fact that the incident is derived from a source which was unfavourable to the Pharisees. From this time the social relations of the Jewish people were so transgressed by the gold and the trumpery which he had placed over the great gate of the Temple; its destruction was the obvious means to adopt for the quickening and assertion of Jewish principles.

By their labours in the education of the youth of the nation, these rabbis, Judas and Matthias, had endeared themselves to the populace and had gained influence over their disciples. A report that Herod was dead co-operated with their exhortations to send the iconoclasts to their appointed work. And so they went to earn the rewards of their practical piety from the Law. The most conspicuous of the many symbols and emblems which the rabbi, who pretended to set great store by the exactitude of the ancestral tradition and the laws in which the deity delights—as dominant over women-folk—and as sudden and quick in quarrel.

Towards the end of Herod's life two rabbis attempted to uphold by physical force the cardinal dogma of Judaism, which prohibited the use of images. Their action is intelligible enough. Herod was stricken with an incurable disease. He had sinned against the Law; and at last God had punished him. At last the law-abiding Jews might and must assert the majesty of the outraged Law. The most conspicuous of the many symbols and emblems which the rabbi, who pretended to set great store by the exactitude of the ancestral tradition and the laws in which the deity delights—as dominant over women-folk—and as sudden and quick in quarrel.

32. The Settlement of Augustus.—On the death of Herod in 4 B.C. Archelaus kept open house for mourners as the Jewish custom, signs of his transgression to be expressly prohibited by the Law. The province petitioned for the punishment of those who were responsible for the execution of Matthias and his associates and for the removal of the high priest. Archelaus temporized; the loyalty of the people no longer constituted a valid title to the throne; his succession must first be sanctioned by Augustus. Before he departed to Rome on this errand, which was itself an insult to the nation, there were riots in Jerusalem at the Passover which he needed all his soldiers to put down. When he presented himself before the emperor—apart from rival claimants of his own family—there was an embassy from the Jewish people who prayed to be rid of a monarchy and rulers such as Herod. As part of the Roman province of Syria and under its governors they would prove that they were not really disaffected and rebellious. During the absence of Archelaus, who would—the Jews feared—prove his legitimacy by emulating his father's ferocity, and to whom their ambassadors preferred Antipas, the Jews of Palestine gave the lie to their protestations of loyalty and peaceableness. At the Passover the pilgrims attacked the Roman troops. After hard fighting the procurator, whose cruelty provoked the attack, captured the Temple and robbed the treasury. On this the emperor demanded of the Jews that they should hand over Antipas, the last claimant of the Jewish throne, but they refused. He then sent a detachment of Roman soldiers against the fortress which the Jews had besieged. The Romans were at the moment in the city of Gaza, which had been already captured by the Romans and in the state of the country. Elsewhere the occasion tempted many to play at being king—Judas, son of Hezekiah, in Galilee; Simon, one of the king's slaves, in Perea. Most notable of all perhaps was the shepherd Athronges, who assumed the pomp of royalty and employed his four brothers as captains and satraps in the war which he waged upon Romans and king's men alike—not even Jews escaped him unless they brought him contributions.
Order was restored by Varus the governor of Syria in a campaign which Josephus describes as the most important war between that of Pompey and that of Vespasian. At length Augustus summoned the representatives of the nation and Nicholaus of Damascus, who spoke for Archelaus, to plead before him in the temple of Apollo. Augustus apportioned Herod's dominions among his sons in accordance with the provisions of his latest will. Archelaus received the lion's share; for ten years he was ethnarch of Idumaea, Judea and Samaria, with a yearly revenue of 600 talents. Antipas became tetrarch of Galilee and Perea, with a revenue of 200 talents. Philip, who had been left in charge of Palestine pending the decision and settled by the partition of Varus between Batanea, Trachonitis and Auranitis, with 100 talents. His subjects included only a sprinkling of Jews. Up to his death (A.D. 34) he did nothing to forfeit the favour of Rome. His coins bore the heads of Augustus and Tiberius, and his government was worthy of the best Roman traditions—he succeeded where proconsuls had failed. His capital was Caesarea Philippi, where Pan had been worshipped from ancient times, and where Augustus had a temple built by Herod the Great.

35. Archelaus.—Augustus had counselled Archelaus to deal gently with his subjects. But there was an outstanding feud between him and them; and his first act as ethnarch was to remove the high priest on the ground of his sympathy with the rebels. In violation of the Law he married a brother's widow, who had already borne children, and in general he showed himself so fierce and tyrannical that the Jews joined with the Samaritans to accuse him before the emperor. Archelaus was summoned to Rome and banished to Gaul; his territory was entrusted to a series of procurators (A.D. 6-41), among whom was an apostate Jew, but none with any pretension even to a semi-legitimate authority. Each procurator represented not David but Caesar. The Sanhedrin had its police and powers to safeguard the Jewish religion; but the procurator had the appointment of the high priests, and no capital sentence could be executed without his sanction.

36. The Procurators.—So the Jews of Judaea obtained the settlement for which they had pleaded at the death of Herod; and some of them began to regret it at once. The first procurator Coponius was accompanied by P. Sulpicius Quirinius, legate of Syria, who came to organize the new Roman province. As a necessary preliminary a census (A.D. 6-7) was taken after the Roman method, which did not conform to the Jewish Law. The tax was levied, but for the most part acquiesced in under the influence of Joazar the high priest. But Judas the Galilean, with a Phariess named Sadduc (Sadduk), endeavoured to incite them to rebellion in the name of religion. The result of this alliance between a revolutionary and a Phariess was the formation of the party of Zealots, whose influence—according to Josephus—brought about the great revolt and so led to the destruction of Jerusalem in 70. So far as this influence extended, the Jewish community was threatened with the danger of suicide, and the distinction drawn by Josephus between the Phariess and the Zealots is a valid one. Not all Phariess were prepared to take the action in order that Israel might "tread on the neck of the eagle" (as is said in The Assumption of Moses). So long as the Law was not deliberately outraged and so long as the worship was established, most of the religious leaders of the Jews were content to wait.

It seems that the Zealots made more headway in Galilee than in Judaea—so much so that the terms Galilean and Zealot are practically interchangeable. In Galilee the Jews predominated over the heathen and their ruler Herod Antipas had some sort of claim upon their allegiance. His marriage with the daughter of the Arabian king Aretas (which was at any rate in accordance with the general policy of Augustus) seems to have preserved his territory from the incursions of her people, so long as he remained faithful to her. He conciliated his subjects by his deference to the observances of Judaism, and—the case is probably typical of his policy—he joined in protesting, when Pilate set up a votive shield in the palace of Herod within the sacred city.

He seems to have served Tiberius as an official scrutinier of the imperial officials and he commemorated his devotion by the foundation of the city of Tiberias. But he repudiated the daughter of Aretas in order to marry Herod the holy son set the Arabians against him. Disaster overtook his forces (A.D. 36) and Tiberius, his patron, died before the Roman power was brought in full strength to his aid. Caligula was not predisposed to favour the favourites of Tiberius; and Antipas, having petitioned him for the title of king at the instigation of Herodias, was banished from his tetrarchy and (apparently) was put to death in 39.

Antipas is chiefly known to history in connexion with John the Baptist, who reproached him publicly for his marriage with Herodias. According to Josephus, he ventured to have imprisoned John to save him from the vengeance of Herodias. But—whatever his motive—Antipas certainly consented to John's death. If the Fourth Gospel is to be trusted, John had already recognized and acclaimed Jesus of Nazareth as the Messiah for whom the Jews were looking. By common consent of Christendom, John was the forerunner of the founder of the Christian Church. It was, therefore, during the reign of Antipas, and partly if not wholly within his territory, that the Gospel was first preached by the rabbi or prophet whom Christians have come to call the preacher of the faith, the founder of the Church. Josephus' history of the Jews contains accounts of John the Baptist and Jesus, the authenticity of which has been called in question for plausible but not entirely convincing reasons. However this may be, the Jews who believed Jesus to be the Christ play no great part in the history of the Jews before 70, as we know it. Many religious teachers and many revolutionaries were crucified within this period; and the early Christians were outwardly distinguished from other Jews only by their scrupulous observance of religious duties.

The crucifixion of Jesus was sanctioned by Pontius Pilate, who was procurator of Judaea A.D. 26-36. Of the Jews under his predecessors little enough is known. Speaking generally, they seem to have avoided giving offence to their subjects. But Pilate so conducted affairs as to attract the attention not only of Josephus but also of Philo, who represents for us the Jewish community of Alexandria. Pilate inaugurated his term of office by ordering his troops to enter Jerusalem at night and to take their standards with them. There were standards and standards in the Roman armies: those which bore the image of the emperor, and therefore constituted a breach of the Jewish Law, had been allowed; but for the most part were acquiesced in under the influence of Joazar the high priest. But Judas the Galilean, with a Phariess named Sadduc (Sadduk), endeavoured to incite them to rebellion in the name of religion. The result of this alliance between a revolutionary and a Phariess was the formation of the party of Zealots, whose influence—according to Josephus—brought about the great revolt and so led to the destruction of Jerusalem in 70. So far as this influence extended, the Jewish community was threatened with the danger of suicide, and the distinction drawn by Josephus between the Phariess and the Zealots is a valid one. Not all Phariess were prepared to take the action in order that Israel might "tread on the neck of the eagle" (as is said in The Assumption of Moses). So long as the Law was not deliberately outraged and so long as the worship was established, most of the religious leaders of the Jews were content to wait.

It seems that the Zealots made more headway in Galilee than in Judaea—so much so that the terms Galilean and Zealot are practically interchangeable. In Galilee the Jews predominated over the heathen and their ruler Herod Antipas had some sort of claim upon their allegiance. His marriage with the daughter of the Arabian king Aretas (which was at any rate in accordance with the general policy of Augustus) seems to have preserved his territory from the incursions of her people, so long as he remained faithful to her. He conciliated his subjects by his deference to the observances of Judaism, and—the case is probably typical of his policy—he joined in protesting, when Pilate set up a votive shield in the palace of Herod within the sacred city.
of the first high priest named Hyrcanus, and Herod had taken them over along with the tower, thinking that his possession of them would deter the Jews from rebellion against his rule. At the same time Vitellius vindicated the Roman supremacy by degrading Caiaphas from the high-priesthood, and appointing a son of Annas in his place. The motive for this change does not appear, and we are equally ignorant of the cause which prompted his transference of the priesthood from his nominee to another son of Annas in 37. But it is quite clear that Vitellius was concerned to reconcile the Jews to the authority of Rome. When he marched against Aretas, his army with their standards did not enter Judaea at all; but he himself went up to Jerusalem for the feast and, on receipt of the news that Tiberius was dead, administered to the Jews the oath of allegiance to Caligula.

35. Caligula and Agrippa I.—The accession of Caligula (A.D. 37–41) was hailed by his subjects generally as the beginning of the Golden Age. The Jews in particular had a friend at court. Agrippa, the grandson of Herod the Great, was an avowed partisan of the new emperor and had paid penalty for a previous avowal of his preference. But Caligula's favour, though lavished upon Agrippa, was not available for pious Jews. His foible was omnipotence, and heaped the gods of Greece in turn. So we learn something of the Palestinian Jews and more of the Jewish community in Alexandria. The great world (as we know it) took small note of Judaism even when Jews converted its women to their faith; but now the Jews as a nation refused to bow down, and the test of the civilized world. The new Catholicism was promulgated by authority and accepted with deference. Only the Jews protested: they had a notion of the deity which Caligula at all events did not fulfil.

The people of Alexandria seized the opportunity for an attack upon the Jews. Images of Caligula were set up in the synagogues, an edict deprived the Jews of their rights as citizens, and finally the governor authorized the mob to sack the Jewish quarter, as if it had been a conquered city (38). Jewesses were forced to eat pork and the elders were scourged in the theatre. But Agrippa had influence with the emperor and secured the dedication of the temple. The people and the Jews remained in a state of civil war, until each side sent an embassy (40) to wait upon the emperor. The Jewish embassy was headed by Philo, who has described its fortunes in a tract dealing with the divine punishment of the persecutors. Their opponents also had secured a friend at court and seem to have prevented any effective measure of redress. While the matter was still pending, news arrived that the emperor had commanded Publius Petronius, the governor of Syria, to set up his statue in the temple of Jerusalem. On the intervention of Agrippa the order was countermanded and the desecration of the emperor (41) effectively stopped the desecration.

36. Claudius and the Procurators.—Claudius, the new emperor, restored the civic rights of the Alexandrian Jews and made Agrippa I. king over all the territories of Herod the Great. So there was once more a king of Judaea, and a king who observed the tradition of the Pharisaeans and protected the Jewish religion. There is a tradition in the Talmud which illustrates his popularity. As he was reading the Law at the feast of Tabernacles he burst into tears at the words "Thou mayest not set a stranger over thee which is not thy brother"; and the people cried out, "Fear not, Agrippa; thou art our brother." The fact that he had begun to build a wall round Jerusalem may be taken as further proof of his patriotism. But the fact that he summoned five vassal-kings of the empire to a conference at Tiberias suggests rather a policy of self-aggrandisement. Both projects were prohibited by the emperor on the intervention of the legate. In 44 he died. The Christian records treat his death as an act of divine vengeance upon the persecutor of the Christian Church. The Jews prayed for his recovery and lamented him. The Gentile soldiers exulted in the downfall of his dynasty, which they signalized after their own fashion. Claudius intended that Agrippa's young son should succeed to the kingdom; but he was overruled by his advisers, and Judaea was taken over once more by Roman procurators. The success of Agrippa's brief reign had revived the hopes of the Jewish nationalists, and concessions only retarded the inevitable insurrection.

Cuspius Fadus, the first of these procurators, purged the land of bandits. He also attempted to regain for the Romans the custody of the high priest's vestments; but the Jews appealed to the emperor against the renewal of this advertisement of their servitude. The emperor granted the petition, which indeed the procurator had permitted them to make, and further transferred the nomination of the high priest and the supervision of the temple from the procurator to Agrippa's brother, Herod of Chalicias. But these concessions did not satisfy the hopes of the people. During the government of Fadus, the Jews, who claimed to be a prophet and whom Josephus describes as a wizard, persuaded a large number to take up their possessions and follow him to the Jordan, saying that he would cleave the river asunder with a word of command and so provide them with an easy crossing. A squadron of cavalry despatched by Fadus took them alive, cut off the head of Theudas and brought it to Jerusalem.

Under the second procurator Tiberius Alexander, an apostate Jew of Alexandria, nephew of Philo, the Jews suffered from a great famine and were relieved by the queen of Adiabene, a proselyte to Judaism, who purchased corn from Egypt. The famine was perhaps interpreted by the Zealots as a punishment for their acquiescence in the rule of an apostate. At any rate Alexander crucified two sons of Simon the Galilean, who had headed a revolt in the time of the census. They had presumably followed the example of their father.

Ventidius Cumanus (45–50) the mutual hatred of Jews and Romans, Samaritans and Jews, found vent in insults and bloodshed. At the passover, on the fourth day of the feast, a soldier mounting guard at the porches of the Temple provoked an uproar, which ended in a massacre, by indecent exposure of his person. Some of the rebels intercepted a slave of the emperor on the high road near the city and robbed him of his possessions. Troops were sent to pacify the country, and in one village a soldier found a copy of Moses' laws and tore it up in public with jeers and blasphemies. At this the Jews flocked to Caesarea, and were only restrained from a second outbreak by the execution of the soldier. Finally, the Samaritans attacked certain Galileans who were (as the custom was) travelling through Samaria to Jerusalem for the passover. Cumanus was bribed and refused to avenge the death of the Jews who were killed. So the Galileans with some of the lower classes of the Jews allied themselves with a "robber" and burned some of the Samaritan villages. Cumanus armed the Samaritans, and, with them and his own troops, defeated these Jewish marauders. The leading men of Jerusalem prevailed upon the rebels who survived the defeat to disperse. But the quarrel was referred first to the legate of Syria and then to the emperor. The emperor was still disposed to conciliate the Jews; and, at the instance of Agrippa, son of Agrippa I, Cumanus was banished.

37. Felix and the Revolutions.—Under Antonius Felix (52–60) the revolutionary movement grew and spread. The country, Josephus says, was full of "robbers" and "wizards." The high priest was murdered in the Temple by pilgrims who carried daggers under their cloaks. Wizards and impostors persuaded the multitude to follow them into the desert, and an Egyptian, claiming to be a prophet, led his followers to the Mount of Olives to see the walls of Jerusalem fall at his command. Such deeds were according to Josephus not less than an attempt to destroy the happiness of the city. Their hands were cleaner but their thoughts were more impious, for they pretended to divine inspiration.

Felix the procurator—a king, as Tacitus says, in power and in mind a slave—tried in vain to put down the revolutions. The "chief-robber" Eleazar, who had plundered the country for twenty years, was caught and sent to Rome; countless robbers of less note were crucified. But this severity cemented the alliance of religious fanatics with the physical-force party and induced the ordinary citizens to join them, in spite of the punishments
which they received when captured. Agrippa II. received a kingdom—first Chalcis, and then the tetrarchies of Philip and Lysanias—but, though he had the oversight of the Temple and the nomination of the high priest, and enjoyed a reputation for knowledge of Jewish customs and questions, he was unable to check the great zeal of the Zealots. His sister Delilla had broken the Law by her marriage with Felix; and his own notorious relations with his sister Berenice, and his coins which bore the images of the emperors, were an open affront to the conscience of Judaism. When Felix was recalled by Nero in 60 the nation was divided against itself, the Gentiles within its gates were watching for their opportunity, and the chief priests robbed the lower priests with a high hand.

In Caesarea there had been for some time trouble between the Jewish and the Syrian inhabitants. The Jews claimed that the city was theirs by an act of Josephus who had founded it. The Syrians admitted the fact, but insisted that it was a city for Greeks, as its temples and statues proved. Their rivalry led to street-fighting: the Jews had the advantage in respect of wealth and bodily strength, but the Greek party had the assistance of the soldiers who were stationed there. On one occasion Felix sent troops against the victorious Jews; but neither this nor the scourge and the prison, to which the leaders of both factions had been consigned, deterred them. The quarrel was therefore referred to the emperor Nero, who finally gave his decision in favour of the Syrians or Greeks. The result of this decision was that the synagogue at Caesarea was insulted on a Sabbath and the Jews left the city taking their books of the Law with them. So—Josephus says—the war began in the twelfth year of the reign of Nero (A.D. 60).

38. Festus, Albinus and Florus.—Meanwhile the procurators who succeeded Felix—Porcius Festus (60-62), Albinus (62-64) and Gessius Florus (64-66)—had in their several ways brought the bulk of the nation into line with the more violent of the Jews of Caesarea. Festus found Judaea infested with robbers and the scribes, who mingled with the crowds at the feasts and stabbed their enemies with the daggers (zica) from which their name was derived. He also had to deal with a Sabbath, who deceived many by promising them salvation and release from evils, if they would follow him into the desert. His attempts to crush all such disturbers of the peace were cut short by his death in his second year of office.

In the interval which elapsed before the arrival of Albinus, Ananus son of Annas was made high priest by Agrippa. With the apparent intention of restoring order in Jerusalem, he assembled the Sanhedrin, and being, as a Sadducee, cruel in the matter of penalties, secured the condemnation of certain law-breakers to death by stoning. For this he was deposed by Albinus and turned to his profit the struggle for power of the priests with priests and of the Zealots with their enemies. The general release of prisoners, with which he celebrated his impending recall, is typical of his policy. Meanwhile Agrippa gave the Levites the right to wear the linen robe of the priests and sanctioned the use of the temple treasure to provide work—the paving of the city with white stones—for the workmen who had finished the Temple (64) and now stood idle. But everything pointed to the destruction of the city, which one Jesus had prophesied at the feast of tabernacles in 62. The Zealots' zeal for the Law and the Temple was flouted by their pro-Roman king.

By comparison with Florus, Albinus was, in the opinion of Josephus, a benefactor. When the news of the troubles at Caesarea reached Jerusalem, it became known also that Florus had seized seventeen talents of the temple treasure (60). At this the patience of the Jews was exhausted. The sacrilege, as they considered it, may have been an attempt to recover arrears of tribute; but they were convinced that Florus was providing for himself and not for Caesar. The revolutionaries went about among the excited people with baskets, begging copperers for their destitute and miserable governor. Stung by this insult, he neglected the fire of war which had been lighted, and hastened to Jerusalem. His soldiers sacked the upper city and killed 650 persons—men, women and children. Berenice, who was fulfilling a Nazarite vow, interposed in vain. Florus actually dared to scourge and crucify Jews who belonged to the Roman order of knights. For the moment the Jews were cowed, and next day they went submissively to greet the troops coming from Caesarea. Their greetings were unanswered, and they tried to rally against Florus. On this the soldiers drew their swords and drove the people into the city; but, once inside the city, the people stood at bay and succeeded in establishing themselves upon the temple-hill. Florus withdrew with all his troops, except one cohort, to Caesarea. The Jews laid complaint against him, and he complained against the Jews before the governor of Syria, Cestius Gallus, who sent an officer to inquire into the matter. Agrippa, who had hurried from Alexandria, entered Jerusalem with the governor's emissary. So long as he counselled submission to the overwhelming power of Rome the people complied, but when he spoke of obedience to Florus they were compelled to fly. The rulers, who desired peace, and upon whom Florus had laid the duty of restoring peace, asked him for troops; but the civil war ended in their complete discomfiture. The rebels abode by their decision to stop the daily sacrifice for the emperor; Agrippa's troops capitulated and marched out unhurt; and the Romans, who surrendered on the same condition and laid down their arms, were massacred. As if to emphasize the spirit and purpose of the rebellion, one and only one of the Roman soldiers was spared, because he promised to become a Jew even to the extent of circumcision.

39. Josephus and Zealots. Simultaneously with this massacre the citizens of Caesarea slaughtered the Jews who still remained there; and throughout Syria Jews suffered—reprials. At length the governor of Syria approached the centre of the disturbance in Jerusalem, but retreated after burning down a suburb. In the course of his retreat he was attacked by the Jews and fled to Antioch, leaving them his engines of war. Some prominent Jews fled from Jerusalem—as from a sinking ship—to join him and carried the news to the emperor. The rest of the pro-Roman party were forced or persuaded to join the rebels and prepared for war on a grander scale. Generals were selected by the Sanhedrin from the aristocracy, who had tried to keep the peace and still hoped to make terms with Rome. Ananus the high priest, their leader, remained in command at Jerusalem; Galilee, where the first attack was to be expected, was entrusted to Josephus, the historian of the war. The revolutionary leaders, who had already taken the field, were superseded.

Josephus set himself to make an army of the inhabitants of Galilee, many of whom had no wish to fight, and to strengthen the strongholds. His organization of local government and his efforts to maintain law and order brought him into collision with Josephus and especially with Cestius Gallus, one of their leaders. The people, whom he had tried to conciliate, were roused against him; John sent assassins and finally procured an order from Jerusalem for his recall. In spite of all this Josephus held his ground and by force or craft put down those who resisted his authority.

In the spring of 67 Vespasian, who had been appointed by Nero to crush the rebellion, advanced from his winter quarters at Antioch. The inhabitants of Sepphoris—whom Josephus had judged to be so eager for the war that he left them to build their own walls—received a Roman garrison on their own request. Joined by Titus, Vespasian advanced into Galilee with three legions and the auxiliary troops supplied by Agrippa and other petty kings. Before his advance the army of Josephus fled. Josephus with a few stalwarts took refuge in Tiberias, and sent a letter to Jerusalem asking that he should be relieved of his command or supplied with an adequate force to continue the war. Hearing that Vespasian was preparing to besiege Jotapata, a strong fortress in the hills, which was held by other fugitives, Josephus entered it just before the road approaching it was made passable for the Roman horse and foot. A deserter announced to Vespasian the news of Josephus' flight (Josephus says that the cleverest of his enemies had thus voluntarily imprisoned himself). After some six weeks' siege the place was stormed, and its
exhausted garrison were killed or enslaved. Josephus, whose pretences had postponed the final assault, hid in a cave with forty men. His companions refused to permit him to surrender and were resolved to die. At his suggestion they cast lots, and the first man was killed by the second and so on, until all were dead except Josephus and (perhaps) one other. So Josephus saved them from the sin of suicide and gave himself up to the Romans. He had prophesied that the place would be taken—as it was taken on the forty-seventh day, and now he prophesied that both Vespasian and his son Titus would reign over all mankind. The prophecy saved his life, though many desired his death, and the rumour of it produced general mourning in Jerusalem. By the end of the year (67) Galilee was in the hands of Vespasian, and John of Giscala had fled. Agrippa celebrated the conquest at Caesarea Philippi with festivities which lasted twenty days.

In accordance with ancient custom Jerusalem welcomed the fugitive Zealots. The result was civil war and famine. Ananus incited the people against these robbers, who arrested, imprisoned and admitted prominent friends of Vespasian, and then in the midst of the Temple. The Idumaeans left, but John of Giscala remained master of Jerusalem.

40. The Fall of Jerusalem._—Vespasian left the tribes to consume another one and occupied his army with the subjugation of the country. When he had isolated the capital and was preparing to besiege it, the forty-seventh day of the Passover arrived, and Josephus says that Vespasian and his son Titus would reign over all mankind. For a year (June 68–June 69) he held his hand and watched events, until the robber-bands of Simon Bar-Giora (son of the proselyte) required his attention. But, before Vespasian took action to stop his raids, Simon had been invited to Jerusalem in the hope that he would act as a counterpoise to the tyrant John. And so, when Vespasian was proclaimed emperor in fulfillment of Josephus’ prophecy, and deputed the command to Titus, there were three rival wars in Jerusalem—Elezar, Simon and John. The temple sacrifices were still offered and worshippers were admitted; but John’s catapults were busy, directed to destroy the right of selecting the high priest by lot. The Zealots took refuge in the Temple and summoned the Idumaeans to their aid. Under cover of a storm, they opened the city-gates to their allies and proceeded to murder Ananus the high priest, and, against the verdict of a formal tribunal, Zacharias the son of Baruch in the midst of the Temple. The Idumaeans left, but John of Giscala remained master of Jerusalem.

41. From A.D. 70 to A.D. 135.—The destruction of the Temple carried with it the destruction of the priesthood and all its power. The priests existed to offer sacrifices, and by the Law no sacrifice could be offered except by one of the chief priests. Henceforward the remnant of the Jews who survived the fiery ordeal formed a church rather than a nation or a state, and the Pharisees exercised an extended supranational power. The Sadducees, who had been the allies of the Romans, were excluded from the House of God, and the Sadducees held high priestships and ministered at the Sanhedrin in which the Sadducees had competed with the Pharisees for predominance. The Sicarii or Zealots who had appealed to the arm of flesh were exterminated. Only three or four of the leaders of the Zealots were saved. Simon the chief of the Dispensers was killed, and his assistant, the high priest, was arrested. A Christian writer asserts that he proceeded to search out and execute all descendants of David who might conceivably come forward as claimants of the vacant throne. Even the most gentle and peace-loving Jews were sentenced to death and crucified.

In Egypt and in Cyrene fugitive Zealots endeavoured to continue their rebellion against the emperor, but there also with disastrous results. The doors of the Temple in Egypt were closed, and its sacrifices which had been offered for 243 years were prohibited. Soon after the death of Vespasian his temple was destroyed. When the outbursts of the Jews throughout the empire were subdued, the general hope of the nation was not necessarily bound up with the forms of worship. The Jewish nation was not incompatible with the yoke of Rome. They still looked for a true prophet, and meanwhile they had their rabbis.

Under Johanan ben Zaccai (g.v.) the Pharisees established themselves at Jamnia. A new Sanhedrin was formed there under the presidency of a ruler, who received yearly dues from all Jewish communities. The scribes through the synagogues preserved the national spirit and directed it towards the religious life which was prohibited by Scripture. The study of the Law was purified and gradually enhanced in its essentials. The canon of Scripture was decided in accordance with the touchstone of the Pentateuch, and it had received authenticated comments. Under Vespasian and Titus the Jews enjoyed freedom of conscience and equal political rights with non-Jewish subjects of Rome. But Domitian, according to pagan historians, bore hardly on them. The temple was still open to Jews; but no one was allowed to enter without openly confessing their religion and Jews who concealed their nationality were brought before the magistrates. Prophets to Judaism were condemned either to death or to forfeiture of their property. Indeed it would seem that Domitian instituted a persecution of the Jews, to which Nerva his successor put an end. Towards the end of Trajan’s reign (114–117) the Jews of Egypt and Cyrene rose against their Greek neighbours and set up a king. The rebellion spread to Cyprus; and when Trajan advanced from Mesopotamia into Parthia the Jews of Mesopotamia revolted. The massacres they perpetrated were avenged in kind by the Romans who were quartered at Dura-Europos.

In the 132 Jews of Palestine rebelled again. Hadrian had forbidden circumcision as illegal mutilation: he had also replaced Jerusalem by a city of his own, Aelia Capitolina, and the temple of Jerusalem by a temple of Jupiter Capitolinus and Saturn. The rabbi Akibah and his friends were arrested and put to death. Two central edicts were pronounced—the prohibition of the sign of the covenant and the desecration of the sacred place—the Jews had a leader who was recognized as Messiah by the rabbi Akibah and his friends. Hadrian looked for no such deliverer and refused to admit his claims. Barcocheonas (g.v.) drew the people after him to struggle for their national independence. For three years and a half he held his own and issued coins in the name of the Jewish emperor. But when the emperor moved to Jerusalem some attempt was apparently made to rebuild the Temple; and the Jews of the Dispersion, who had perhaps been won over by Aqiba, supported the rebellion. Indeed even Gentiles helped the Jews to make their stand, so that it was called the War of God. In the end, however, Hadrian sent his best generals against the rebels, and at length they were driven from Jerusalem to Bethar (135). The Jews were forbidden to enter the new city of Jerusalem on pain of death.
Jews

403

They were often on terms of intimate friendship with the emperors, who scarcely interfered with their jurisdiction. As late as Theodosius I. (379-395) the internal affairs of the Jews were formally committed to the care of the Patriarch (404) authorized the collection of the patriarch's tax (aurum coronarium), by which a revenue was raised from the Jews of the diaspora. Under Theodosius II. (408-450) the patriarchate was finally abolished after a régime of three centuries and a half (Graetz, History of the Jews, Eng. trans. vol. ii. ch. xxii.), though ironically enough the last holder of the office had been for a time elevated by the emperor to the rank of prefect. The real turning-point had been reached earlier, when Christianity became the state religion under Constantine I. in 312.

Religion under the Christian emperors became a significant source of discrimination in legal and social life, and so far as to produce complete loss of rights. The laws concerning the Jews had a repressive and preventive object: the repression of Judaism and the prevention of influence of Jewish influences into the state religion. The Jews were thrust into a position of isolation, and the Code of Theodosius and other authorities characterize the Jews as a lower order of defrocked beings (inferiores and perversi), their community as a godless, dangerous sect (secta nefaria, ferialis), their religion a superstition, their assemblies for religious worship a blasphemy (sacræici codex) and a contagion (Scherer, op. cit. pp. 11-12).

Yet Judaism under Roman Christian law was a lawful religion (religio legitima), but the imperial edicts of the 5th century constantly threatened the lives of the Jews, their property, and their synagogues. Theodosius I. prohibited interference with the synagogue worship (Judaeorum sectam nulla lege prohibere et, si quis contra se judaeum in judicato fuerit, non erit ad eum interveniri), and the next edict (423) was only a repetition of the former. But the Jews were not allowed to hold Christian slaves under 10 years of age, to settle in the capital (439) under penalty of a heavy fine (425). A similar penalty attached to intercourse between Jews and Christians, and an attempt was made to nullify all Jewish marriages which were not celebrated in accordance with Roman law. But Justinian (527-565) was the first to interfere directly in the religious institutions of the Jewish people. In 553 he interdicted the use of the Talmud (which had then long been completed), and forbade the practice of the traditional religion, and even enjoined greater indulgence and even more lenient regulations. As regards civil law, Jews were at first allowed to settle disputes between Jew and Jew before their own courts, but Justinian denied to them and to heretics the right to appear as witnesses in the public courts against orthodox Christians. To Constantine V. (911-959) goes back the Jewish form of oath which in its later development required the Jew to gird himself with thorns; stand in water; and, holding the scroll of the Torah in his hand, invoke upon his person the leprosy of Naman, the curse of Eli and the fate of Korah's sons should he perjure himself.

This was the original of all the medieval forms of oath more judaicus, which, as we have seen, was revealed by the Talmud as a veritable taboo and with which are still in force in the Jewish synagogues.

Moreover, a spiritual revival mitigated the crushing effects of material ruin. The synagogue had become a firmly established institution, and the personal and social life of the masses had come under the control of communal law. The dialectic of the school proved stronger to preserve than the edge of the sword to destroy. Pharasian Judaism, put to the severest test to which a religious system has ever been subject, showed itself able to control and idealize life in all its phases. Whatever question may be possible as to the force or character of Pharisaism in the time of Christ, there can be no doubt that it became both a conserving and enabling among the successors of Agiba (q.v.), himself one of the martyrs to Hadrian's severity. Little more than half a century after the overthrow of the Jewish nationality, the Mishnah was practically completed, and by this code of rabbinic law—and law is here a term which includes the social, moral and religious as well as the ritual and legal phases of human activity—the Jewish people were organized into a community, living more or less autonomously under the Sanhedrin or Synodion (q.v.) and its officials.

Judah the prince, the patriarch of Judah, lived early in the 3rd century. With him the importance of the Palestinian patriarchate attained its zenith. Gamaliel II. of Jamnia (Jabne Yebneh) had been raised to this dignity a century before, and, as members of the house of Hillel and thus descendants of David, the patriarchs enjoyed almost royal authority. Their functions were political rather than religious, though their influence was by no means purely secular.

42. The Later Empire.—With the failure in 135 of the attempt led by Barcochebas to free Judea from Roman domination a new era begins in the history of the Jews. The direct consequence of the failure was the annihilation of political nationality. Large numbers fell in the actual fighting. Dio Cassius puts the total at the incredible figure of 500,000, besides the incalculable number who succumbed to famine, disease and fire (Dio-Xiphilin Ixx. 11-13, 190). Of the synagogue of Jerusalem, Tiberius's greatest gift to the city, the date given during the emperor's first journey through Syria in 139, the date of its foundations at Gaza, Tiberias and Petra (Reinach, Textes relatifs au Judaisme, p. 198). The new city was named Aelia Capitolina, and on the site of the temple of Jehovah there arose another temple dedicated to Jupiter. To Eusebius the erection of a temple of Venus over the sepulchre of Christ was an act of mockery against the Christian religion. Rome had been roused to unwonted fury, and the truculence of the rebels was matched by the cruelty of their masters. The holy city was barred against the Jews; they were excluded from approaching within view of the walls. Hadrian's policy in this respect was matched later on by the edict of the caliph Omar (c. 638), who, like his Roman prototype, prevented the Jews from settling in the capital of their ancient country. The death of Hadrian and the accession of Antoninus Pius (138), however, gave the dispersed people of Palestine a breathing-space. The Roman law was by no means intolerant to the Jews. Under the constitution of Caracalla (198-217) all inhabitants of the Roman empire enjoyed the civil rights of the Cives Romani (Scherer, Die Rechtsverhältnisse der Juden, p. 160).

Moreover, a spiritual revival mitigated the crushing effects of material ruin. The synagogue had become a firmly established institution, and the personal and social life of the masses had come under the control of communal law. The dialectic of the school proved stronger to preserve than the edge of the sword to destroy. Pharasian Judaism, put to the severest test to which a religious system has ever been subject, showed itself able to control and idealize life in all its phases. Whatever question may be possible as to the force or character of Pharisaism in the time of Christ, there can be no doubt that it became both a conserving and enabling among the successors of Agiba (q.v.), himself one of the martyrs to Hadrian's severity. Little more than half a century after the overthrow of the Jewish nationality, the Mishnah was practically completed, and by this code of rabbinic law—and law is here a term which includes the social, moral and religious as well as the ritual and legal phases of human activity—the Jewish people were organized into a community, living more or less autonomously under the Sanhedrin or Synodion (q.v.) and its officials.

Judah the prince, the patriarch of Judea, died early in the 3rd century. With him the importance of the Palestinian patriarchate attained its zenith. Gamaliel II. of Jamnia (Jabne Yebneh) had been raised to this dignity a century before, and, as members of the house of Hillel and thus descendants of David, the patriarchs enjoyed almost royal authority. Their functions were political rather than religious, though their influence was by no means purely secular.

BIBLIOGRAPHY.—The most comprehensive of modern books dealing with the period is Emil Schürer, Geschichte des Jüdischen Volkes im Zeitalter Jesu Christi (3 vols., Leipzig, 1901 fols.). Exception has been taken to a certain lack of sympathy with the Jews, especially the later centuries, by Dr. R. H. Charles. But at least the book remains an indispensable storehouse of references to ancient and modern authorities. An earlier edition was translated into English under the title History of the Jewish People (Edinburgh, 1889), and the history of the period is Schürer's Geschichte Israel's von Alexander dem Grossen bis Hadrian (2nd ed. 1906), which is perhaps the least dependent upon Schürer and attempts more than others to interpret the fragmentary evidence available.

For the most important aspects of the life of the Jews, their legal and religious codes, and their bibliography, the reader should refer to the works of Peeters, J.H.A. H. (ed.), Das Judentum der Spätantike (1912). For the social life of the Jews a study of the Talmud is indispensable, and for the life of the peoples of the Middle East the work of Reinach, Textes relatifs au Judaisme, is a mine of information.

III.—FROM THE DISPERSION TO MODERN TIMES

43. Judaism in Babylonia.—The Jews themselves were during this period engaged in building up a system of isolation on their own side, but they treated Roman law with greater hospitality than it meted out to them. The Talmud shows the influence of that law in many points, and may justly be compared to it as a monument of codification based on great principles. The Palestinian Talmud was compiled in the 4th century, but the better known and more influential version was compiled in Babylonia about 500. The land which, a millennium before, had been a prison for the Jewish exiles was now their asylum of refuge. For a long time it formed their second fatherland. Here, far more than on Palestinian soil, was built the enduring edifice of rabbinism. The population of the southern part of Mesopotamia—the strip of land enclosed between the Tigris and the Euphrates—was, according to Graetz, mainly Jewish; while the district between the Euphrates and the Tigris, from 70 m. on the east of the Euphrates, from Nehardea in the north to Shush in the south, and from the borders of New Palestine with Nehardea for its Jerusalem. The Babylonian Jews were practically independent, and the exilarch (resh-galatha) or prince of the captivity was an official who ruled the community as a vassal of the Persian throne. The exilarch claimed, like the Palestinian patriarch, descent from the royal house of David, and exercised most of the functions of...
government. Babylonia had risen into supreme importance for Jewish life at about the time when the Mishnah had been completed. The great rabbinic academies at Sura and Nehardea, the former of which retained something of its dominant rôle till the 11th century, had been founded, Sura by Abba Arika (q.v.) (c. 210), but Nehardea, the more ancient seat of the two, famous both in the 2nd century for its association with Abba Arika’s renowned contemporary Samuel, lost its Jewish importance in the age of Mahomed.

To Samuel of Nehardea (q.v.) belongs the honour of formulating the principle which made it possible for Jews to live under alien laws. Jeremiah had admonished his exiled brothers: “Seek ye the peace of the city whither I have caused you to be carried away captives, and pray unto the Lord for it: for in the peace thereof shall ye have peace” (Jer. xxix. 7). It was now necessary to go farther, and the rabbis proclaimed a principle which was as influential with the synagogue as “Give unto Caesar that which is Caesar’s” became with the Church.

“*The law of the government is law*” (*Baba Qama* 113 b.), said Samuel, and ever since it has been a religious duty for the Jews to obey and accommodate themselves as far as possible to the laws of the country in which they are settled or reside. In 259 Odenathus, the Palmyrene adventurer whose memory has been eclipsed by that of his wife Zenobia, laid Nehardea waste for the time being, and in its neighbourhood arose the academy of Pumbedita (Pumbeditha) which became a new focus for the intellectual life of Israel in Babylonia. These academies were organised on both scholastic and popular lines; their constitution was democratic. An outstanding feature was the *Kallah* assemblage twice a year (in Elul at the close of the summer, and in Adar at the end of the winter), when there were gathered together vast numbers of outside students of the most heterogeneous character as regards both age and attainments. Questions received from various quarters were discussed and the final decision of the *Kallah* was signed by the *Rosh-Kallah* or president of the general assembly, who was only second in rank to the *Rosh-Megillah*, or president of the scholastic sessions. Thus the Babylonian academies combined the functions of secular law schools, universities and popular parliaments. They were a unique product of rabbinism; and the authors of the system were also the compilers of its literary expression, the Talmud.

44. *Judaism in Islam.*—Another force now appears on the scene. The new religion inaugurated by Mahomet differed in its theory from the Roman Catholic Church. The Church, it is true, in council after council, passed decisions unfriendly to the Jews. From the synod at Elvira in the 4th century this process began, and it was continued in the West-Gothic Church legislation, in the Lateran councils (especially the fourth in 1215), and in the council of Trent (1563). The anti-social tendency of these councils expressed itself in the infliction of the badge, in the compulsory domicile of Jews within ghettos, and in the erection of formidable barriers against all intercourse between church and synagogue. The protective instinct was responsible for much of this interference with the natural impulse of men of various creeds towards mutual esteem and forbearance. The church, it was conceived, needed defence against the synagogue at all hazards, and the fear that the latter would influence and dominate the former was never absent from the minds of medieval ecclesiastics. But though this defensive zeal led to active persecution, still in theory Judaism was a tolerated religion wherever the Church had sway, and many papal bulls of a friendly character were issued throughout the middle ages (Scherer, p. 32 seq.).

Islam, on the other hand, had no theocratic place in its scheme for tolerated religions; its principle was fundamentally intolerant. Where the mosque was erected, there was no room for church or synagogue. The caliph Omar initiated in the 7th century a code which required Christians and Jews to wear peculiar dress, denied them the right to hold state offices or to possess land, inflicted a poll-tax on them, and while forbidding them to enter mosques, refused them the permission to build new places of worship for themselves. Again and again these ordinances were repeated in subsequent ages, and intolerance for infidels is still a distinct feature of Mahommedan law. But Islam has often shown itself milder in fact than in theory, for its laws were made to be broken. The medieval Jews on the whole lived, under the crescent, a fuller and freer life than was possible to the under the cross. Mahomedean Babylonia (Persia) was the home of the gaonate (see GAON), the central authority of religious Judaism, whose power transcended that of the secular exilarchate, for it influenced the synagogue far and wide, while the exilarchate was local. The gaonate enjoyed a practical tolerance remarkable when contrasted with the letter of Islamic law. And as the Bagdad caliphate tended to become more and more supreme in Islam, so the gaonate too shared in this increased influence. Not even the Qaraite schism was able to break the power of the geonim. But the Dispersion of the Jews was proceeding in directions which carried masses from the Asiatic inland to the Mediterranean coasts and to Europe.

45. *In Medieval Europe: Spain.*—This dispersion of the Jews had begun in the Hellenistic period, but it was after the Bar-cohebas war that it assumed great dimensions in Europe. There were Jews in the Byzantine empire, in Rome, in France and Spain at very early periods, but it is with the Arab conquest of Spain that the Jews of Europe began to rival in culture and importance their brethren of the Persian gaonate. Before this date the Jews had been learning the rôle they afterwards filled, that of the chief promoters of international commerce. Already under Caliphate, Babylonia was a centre of commerce, and the generous treatment of the Jews this Christian emperor stood in marked contrast to his contemporary the caliph Harun al-Rashid, who persecuted Jews and Christians with equal vigour. But by the 10th century Judaism had received from Islam something more than persecution. It caught the contagion of poetry, philosophy and science. The schismatic Qaraite initiated or rather necessitated a new Hebrew philology, which later on produced Qimhi, the gaon Saadiah founded a Jewish philosophy, the statesman Hasdai introduced a new Jewish culture—and all this under Mahomedan rule. It is in Spain that above all the new spirit manifested itself. The distinctive feature of the Spanish-Jewish culture was its comprehensiveness. Literature and affairs, science and statecraft, poetry and medicine, these various expressions of human nature and activity were so harmoniously balanced that they might be found in the possession of one and the same individual. The Jews of Spain attained to high places in the service of the state from the time of the Moorish conquest in 711. From Hasdai Ibn Shaprut in the 9th century and Samuel the Nairi in the 11th the line of Jewish scholar-statesmen continued till we reach Isaac Abravanel in 1492, the date of the destruction of the vast underground event synchronized with the discovery of America; Columbus being accompanied by at least one Jewish navigator. While the Spanish period of Jewish history was thus brilliant from the point of view of public service, it was equally notable on the literary side. Hebrew religious poetry was revived for synagogue hymnology, and, partly in imitation of Arabian models, a secular Hebrew poetry was developed in metre and rhyme. The new Hebrew *Piyyut* found its first important exponent in Kalir, who was not a Spaniard. But it is to Spain that we must look for the best of the medieval poets of the synagogue, greatest among them being Ibn Gabirol and Halesi. So, too, the greatest Jew of the middle ages, Maimonides, was a Spaniard. In him culminates the Jewish expression of the Spanish-Moorish culture; his writings had an influence on European scholasticism and contributed significant elements to the philosophy of Spinoza. But the reconquest of Andalusia by the Christians associated towards the end of the 15th century with the establishment of the Inquisition, introduced a spirit of intolerance which led to the expulsion of the Jews and Moors. The consequences of this blow were momentous; it may be said to inaugurate the ghetto period. In Spain Jewish life had participated in the general life, but the expulsion—while it dispersed...
the Spanish Jews in Poland, Turkey, Italy and France, and thus in the end contributed to the Jewish emancipation at the French Revolution—for the time drove the Jews within their own confines and barred them from the outside world.

46. In France, Germany, England, Italy.—In the meantime Jewish life had been elsewhere subjected to other influences which produced a result at once narrower and deeper. Under Charlemagne, the Jews, who had begun to settle in Gaul in the time of Caesar, were more than tolerated. They were allowed to hold land and were encouraged to become—what their ubiquity qualified them to be—the merchant princes of Europe. The reign of Louis the Pious (814-840) was, as Graetz puts it, "a golden era for the Jews of his kingdom, such as they had never before known." He himself wrote: "the Jews of Europe"—prior, that is, to the age of Mendelssohn. In Germany at the same period the feudal system debared the Jews from holding land, and though there as yet no material persecution they suffered moral injury by being driven exclusively into finance and trade. Nor was there any widening of the general horizon such as was witnessed in Spain. The Jewries of France and Germany were thus thrown upon their own cultural resources. They rose to the occasion. In Malitz there settled in the 10th century Gershom, the "light of the exile," who, about 950, published his "ordinance forbidding polygamy in Jewish law as it had been forbidden in the Judaeo-Christian practice. This ordinance may be regarded as the beginning of the Synodal government of Judaism, which was a marked feature of medieval life in the synagogues of northern and central Europe from the 12th century. Soon after Gershom's death, Rashi (1040-1106) founded at Troyes a new school of learning. If Maimonides represented Judaism on its rational side, Rashi was the expression of its traditions.

French Judaism was thus in a sense more human if less humane than the Spanish variety; the latter produced thinkers, statesmen, poets and scientists; the former, men with whom the Talmud was a passion, men of robust character because of more naive and concentrated piety. In Spain and North Africa persecution created that strange and significant phenomenon Maranism or crypto-Judaism, a public acceptance of Islam or Christianity combined with a private fidelity to the rites of Judaism. But in England, France and Germany persecution altogether failed to shake the courage of the Jews, and martyrdom was borne in preference to ostensible apostasy. The crusades subjected the Jews to this ordeal. The evil was wrought, not by the regular armies of the cross who were inspired by noble ideals but by the undisguised vendettas which, for the sake of plunder, associated themselves with the genuine enthusiasts. In 1096 massacres of Jews occurred in many cities of the Rhineland. During the second crusade (1145-1147) Bernard of Clairvaux heroically protested against similar inhumanities. The third crusade, famous for the participation of Richard I., was the occasion for bloody riots in England, especially in York, where 150 Jews immobilized themselves to escape baptism. Economically and socially the crusades had disastrous effects upon the Jews (see J. Jacobs, Jewish Encyclopedia, iv. 370). Socially they suffered by the outburst of religious animosity. One of the commonest means taken by this ill-will was the oft-revived myth of ritual murder (q.v.), and later on when the Black Death devastated Europe (1348-1349) the Jews were the victims of an odious charge of well-poisoning. Economically the results were also injurious. "Before the crusades the Jews had practically a monopoly of trade in Eastern products, but the closer connexion between Europe and the East brought about by the crusades raised up a class of merchant traders among the Christians, and from this time onwards restrictions on the sale of goods by Jews became frequent" (op. cit.). After the second crusade the German Jews fell into the class of servit camerarius, which at first only implied that they enjoyed the immunity of imperial servants, but afterwards made of them slaves and pariahs. At the personal whim of rulers, whether royal or of lower rank, the Jews were expelled from states and principalties and were reduced to a condition of precarious uncertainty as to what the morrow might bring forth. Pope Innocent III. gave strong impetus to the repression of the Jews, especially by ordaining the wearing of a badge. Popular animosity was kindled by the enforced participation of the Jews in public disquisitions. In 1306 Philip IV. expelled the Jews from France, nine years later Louis X. recalled them for a period of twelve years. Such vicissitudes were the ordinary lot of the Jews for several centuries, and it was their own inner life—the pure life of the home, the idealism of the synagogue, and the belief in ultimate Messianic redemption—that saved them from utter demoralization and despair. Curiously enough in Italy—and particularly in Venice—the external policy of the popes—henceforward, within their own immediate jurisdiction, were often far more tolerant than their bulls issued for foreign communities, and Torquemada was less an expression than a distortion of the papal policy. In the early 14th century, the age of Dante, the new spirit of the Renaissance made Italian rulers the patrons of art and literature, and the Jews to some extent shared in this gracious change. Robert of Aragon—vicar-general of the papal states—in particular encouraged the Jews and supported them in their literary and scientific ambitions. Small coteries of Jewish minor poets and philosophers were born and even a religious movement—Maimonides—his friend—shared the versatility and culture of Italy. But in Germany there was no echo of this brighter note. Persecution was elevated into a system, a poll-tax was exacted, and the rabble was allowed (notably in 1336-1337) to give full vent to its fury. Following on this came the Black Death with its terrible consequences in Germany; even in Poland, where the Jews had previously enjoyed considerable rights, extensive massacres took place.

In effect the Jews became outlaws, but their presence being often financially necessary, certain officials were permitted to "work Jews," who were liable to all forms of arbitrament on the side of their "owners." The Jews had been among the first to appreciate the commercial advantages of permitting the loan of money on interest, but it was the policy of the Church that drove the Jews into money-lending as a characteristic trade. Restrictions on their occupations were everywhere common, and as the Church forbade Christians to engage in usury, this was the only trade open to the Jews. The excessive demands made upon the Jews forbade a fair rate of interest. The Jews were unwilling sponges by means of which a large part of the profits of war and commerce went into the royal exchequer" (Abrahams, Jewish Life in the Middle Ages, ch. xii.). Hence, though this procedure made the Jews intensely obnoxious to the peoples, they became all the more necessary to the rulers. A favourite form of tolerance was to grant a permit to the Jews to remain in the state for a limited term of years; their continuance beyond the specified time was illegal and they were therefore subject to sudden banishment. Thus a second expulsion of the Jews of France occurred in 1394. Early in the 15th century John Hus—under the inspiration of Wycliffe—initiated at Prague the revolt against the Roman Catholic Church. The "Jewish Jews," who were liable to all forms of arbitrary treatment, were next called to account. In 1420 all the Austrian Jews were thrown into prison. Martin V. published a favourable bull, but it was ineffectual. The darkest days were nigh. Pope Eugenius (1442) issued a fiercely intolerant missive; the Franciscan John of Capistrano moved the masses to activity by his eloquent denunciations; even Casimir IV. revoked the privileges of the Jews in Poland, when the Turkish capture of Constantiople (1453) offered a new asylum for the hunted Jews of Europe. But in Europe itself the catastrophe was not arrested. The Inquisition in Spain led to the expulsion of the Jews (1492), and this event involved not only the latter but the whole of the Jewish people. "The Jews everywhere felt as if the temple had again been destroyed" (Graetz). Nevertheless, the result was not all evil. If fugitives are for the next half-century to be met with in all parts of Europe, yet, especially in the Levant, there grew up thriving Jewish

1 For the importance of the Portuguese Jews, see PORTUGAL: History.
were Sephardic (or Spanish) Jews—descendants of the Spanish exiles. In the meantime the Ashkenazi (or German) Jews had been working out their own salvation. The chief effects of the change were not felt till the 18th century. In England emancipation was of democratic origin and concerned itself with practical questions. On the Continent, the movement was more aristocratic and theoretical; it was part of the intellectual renaissance which found its most striking expression in the philosophy of the Humanists and the political idealism of the Hegelians. Where there were no rights, the 18th century was less an era of stagnation than of transition. The condition of the European Jews seems, on a superficial examination, abject enough. But, excluded though they were from most trades and occupations, confined to special quarters of the city, disabled from sharing most of the amenities of life, the Jews nevertheless were gradually making their escape from the ghetto and from the moral degeneration which it had caused. Some ghettos (as in Moravia) were actually not founded till the 18th century, but the careful observer can perceive clearly that at that period the ghetto was only a temporary prison. In the "dark ages" Jews enjoyed neither rights nor privileges; in the 18th century they were still without rights but they had privileges. A grotesque feature of the time in Germany and Austria was the class of court Jews, such as the Oppenheims, the personal favourites of rulers and mostly their victims when their usefulness had ended. These men often rendered great services to their fellow-Jews, and one of the results was the growth in Jewish society of an aristocracy of wealth, where previously there had been an aristocracy of learning. Even more important was another privileged class—that of the Schutz-Jude (protector). Writing of this period, Graetz says: "For these people, no rights and privileges had to be bought. While the court Jews were the favourites of kings, the protected Jews were the protectors of town councils. Corruption is the frequent comcomitant of privilege, and thus the town councils often connived at a price for the presence in their midst of Jews whose admission was illegal. Many Jews found it possible to evade laws of domicile by residing in one place and trading in another. Nor could they be effectively excluded from the fairs, the great markets of the 18th century. The Sephardic Jews in all these respects had to stand on a very exalted pedestal, and they were permitted the partiality shown to them. Their personal dignity and the vast range of their colonial enterprises were in striking contrast to the retail traffic of the Ashkenazim and their degenerate bearing and speech. Peddling had been forced on the latter by the action of the gilds which were still powerful in the 18th century on the Continent. Another cause may be sought in the Cossack assaults on the Jews at an earlier period. Crowds of wanderers were to be met on every road; Germany, Holland and Italy were full of Jews who, pack on shoulder, were seeking a precarious livelihood at a time when peddling was neither lucrative nor safe. But underneath all this were signs of a great change. The 18th century has a goodly tale of Jewish artists in metal-work, makers of pottery, and (wherever the gilds permitted it) artisans and wholesale manufacturers of many important commodities. The last attempts at exclusion were irritating enough; but they differed from the earlier persecution. Such strange enactments as the Familianten-Gesetz, which prohibited more than one member of a family from marrying, broke up families by forcing the men to emigrate. In 1781 Dohm pointed to the fact that a Jewish father could seldom hope to enjoy the happiness of living with his children. In that very year, however, Joseph II initiated in Austria a new era for the Jews. This Austrian reformation was so typical of other changes elsewhere, and so expressive of the previous disabilities of the Jews, that, even in this rapid summary, space must be spared for some of the details supplied by Graetz. "By this new departure (19th of October 1781) the Jews were permitted to learn handicrafts, arts and sciences, and with certain restrictions to devote themselves to agriculture. The doors of the universities and academies, hitherto closed to them, were thrown open. ... An ordinance of November 2 enjoined that the Jews were everywhere considered fellow-men, and all excesses against them were
The Leibzoll (body-tax) was also abolished, in addition to the special law-taxes, the passport duty, the night-duty and all similar imposts which had stamped the Jews as outcast, for they were now (Dec. 15) to have equal rights with the Christian inhabitants. In the absence of any deliberate enactment, indeed, granted complete citizenship, and their residence and public worship in Vienna and other Austrian cities were circumscribed and even penalized. "But Joseph II. annulled a number of vexatious, restrictive regulations, such as the compulsory wearing of beards, the prohibition against going out in the forenoon on Sundays or holidays, or frequenting public pleasure resorts. The emperor even permitted Jewish wholesale merchants, notables and their sons, to wear swords (January 2, 1785), and especially insisted that Christians should behave in a friendly manner towards Jews."

48. The Mendelssohn Movement.—This notable beginning to the removal of "the ignominy of a thousand years" was causally connected with the career of Moses Mendelssohn (1729–1786; q.v.). He found on both sides an unreadiness for approximation: the Jews had sunk into apathy and degeneration, the Christians were still moved by hereditary antipathy. The failure of the hopes entertained of Sabbatai Zebi (q.v.) had plunged the Jewries of the world into despair. This Smyrnaan pretender not only proclaimed himself Messiah (c. 1650) but he was accepted in that role by vast numbers of his brethren. At the moment when Spinoza was publishing a system which is still a dominating note of modern philosophy, this other son of Israel was capturing the very heart of Jewry. His miracles were reported and eagerly believed everywhere; "from Poland, Hamburg and Amsterdam treasures poured into his court; in the Levant young men and maidens prophesied before him; the Persian Jews refused to till the fields. "We shall pay no more taxes," they said, "our Messiah is come." The expectation that he would lead Israel in triumph to the Holy Land was doomed to end in disappointment. Sabbatai lacked one quality without which this kind of assumption is ineffective; he failed to believe in himself. At the critical moment he embraced Islam to escape death, and though he was still believed in by many—it was not Sabbatai himself but a phantom resemblance that had assumed the turban!—his meteoric career did but colour the sky of the Jews with deeper blackness. Despite all this, one must not fall into the easy error of exaggerating the degeneration into which the Jewries of the world fell from the middle of the 17th till the middle of the 18th century. For Judaism had organized itself; the Shulhan aruc of Joseph Qaro (q.v.), printed in 1561 within a decade of his death, is confirmed even today, and written a jargon and a code, is still the law of the Jews. Never was a people more orthodox in their faith and its observance, than is that of Israel. But is not the slightest resemblance to Judaism. In these times progress in Judaism has implied more or less of revolt against the rigors and fetters of Qaro's code, yet for 250 years it was a powerful safeguard against demoralization and stagnation. No community living in full accordance with that code could fail to reach a high moral and intellectual level.

It is true to say that on the whole the Jews began at this period to abandon as hopeless the attempt to find a place for themselves in the general life of their country. Perhaps they even ceased to desire it. Their children were taught without any regard to outward distinctions. The Jew was spoken of in their whole training, both by what it included and by what it excluded, tended to produce isolation from their neighbours. Moses Mendelssohn, both by his career and by his propaganda, for ever put an end to these conditions; he more than any other man. Born in the ghetto of Dessau, he was not of the ghetto. At the age of fourteen he found his way to Berlin, where Frederick the Great, inspired by the spirit of Voltaire, held the maxim that "to oppress the Jews never brought prosperity to any government." Mendelssohn became a warm friend of Lessing, the hero of whose drama Nathan the Wise was drawn from the Dessau Jew. Mendelssohn's Phaethon, on the immortality of the soul, bought the author into immediate fame, and the simple home of the "Jewish Plato" was sought by many of the leaders of Gentile society in Berlin. Mendelssohn's translation of the Pentateuch into German with a new commentary by himself and others introduced the Jews to more modern ways of thinking. Two results emanated from Mendelssohn's work. A new school of scientific study of Judaism emerged, to be dignified by the names of Leopold Zunz (q.v.), H. Graetz (q.v.) and many others. This school of a legal divorce pronounced the whole concept of religion (especially in his Jerusalem) was in the belief of certain minds in the absolute truth of Judaism, and thus his own grandchildren (including the famous musician Felix Mendelssohn-Bartholdy) as well as later Heine, Böme, Gans and Neander, embraced Christianity. Within Judaism itself two parties were formed, the Liberals and the Conservatives, and as time went on these tendencies definitely organized themselves. Holdheim (q.v.) and Geiger (q.v.) led the reform movement in Germany and at the present day the effects of the movement are widely felt in America on the Liberal side and on the opposite side in the work of the neo-orthodox school founded by S. R. Hirsch (q.v.). Modern seminaries were established first in Breslau by Zacharias Frinkell (q.v.) and later in other cities. Brilliant results accrued from all this participation in the general life of Germany. Jews, engaged in all the professions and pursuits of the age, came to the front in many branches of public life, claiming such names as Rieser (d. 1803) and Lasker in politics, Auerbach in literature, Rubenstein and Joachim in music, Traube in medicine, and Lazarus in psychology. Especially famous have been the Jewish linguists, pre-eminent among them Theodor Benfey (1800–1851), the pioneer of modern comparative philology; and the Greek scholar and critic Jakob Bernays (1824–1881).

49. Effect of the French Revolution.—In close relation to the German progress in Mendelssohn's age, events had been progressing in France, where the Revolution did much to improve the Jewish condition, thanks largely to the influence of Mirabeau. In 1803 Napoleon convoked a Jewish assembly in Paris. Though the decisions of this body had no binding force on the Jews generally, yet in some important particulars its decrees represent the spirit of the French Revolution. By its decree of June 16, 1791, it proclaimed the acceptance of the spirit of Mendelssohn's reconciliation of the Jews to modern life. They assert the citizenship and patriotism of Jews, their determination to accommodate themselves to the present as far as they could while retaining loyalty to the past. They declare their readiness to adapt the law of the synagogue to the law of the land, for instance in the question of marriage and divorce. No Jew, they decided, may perform the ceremony of marriage unless civil formalities have been fulfilled; and divorce is allowed to the Jews only if and when the law of the land permits. This was a victory for Judaism, for the French assembly did not go on to obtain formal assent to these decisions (except from Frankfort and Holland), but they gained the practical adhesion of the majority of Western and American Jews. Napoleon, after the report of the assembly, established the consistorial system which remained in force, with its central consistory in the capital, until the recent separation of church and state. Many French Jews acquired fame, among them the ministers Crémieux (1796–1879), Fould, Gondechaux and Raynal; the archaeologists and philologists Oppert, Halévy, Munk, the Derobergs, Darmesteter and Reinach, the psychologists H. Delboeuf and Meyerbeer; the authors and dramatists Catulle Mendès and A. d'Ennery, and many others, among them several distinguished occupants of civil and military offices.

50. Modern Italy.—Similar developments occurred in other countries, though it becomes impossible to treat the history of the Jews, from this time onwards, in general outline. We must direct our attention to the most important countries in such detail as space permits. And first as to Italy, where the Jews in a special degree have identified themselves with the national life. The revolutions of 1848, which greatly affected the position of the Jews in several parts of Europe, brought considerable gain to the Jews of Italy. During the war against Austria in the year named, Isaac Pesaro Marogonato was finance minister in Venice. Previously to this date the Jews were still confined to the ghetto, but in 1859, in the Italy united under Victor
Emanuel II., the Jews obtained complete rights, a privilege which was extended also to Rome itself in 1870. The Italian Jews devoted themselves with ardour to the service of the state. Isaac Arton was Cavour's secretary, L' Olper a counsellor of Mazzini. "The names of the Jewish soldiers who died in the cause of Italian liberty were placed along with those of their Christian fellow soldiers on the monuments erected in their honour" (Jewish Encyclopedia, vii. 10). More recently men like the Signor Biglighi and Luzzatti rose to high positions as ministers of state. Most noted of recent Jewish scholars in Italy was S. D. Luzzatto (q.v.).

51. Austria.—From Italy we may turn to the country which so much influenced Italian politics, Austria, which had founded the system of "Court Jews" in 1518, had expelled the Jews from Vienna as late as 1670, when the synagoga of that city was converted into a church. But economic laws are often too strong for civil vagaries or sectarian fanaticism, and as the commerce of Austria suffered by the absence of the Jews, it was impossible to exclude the latter from the fair in the provinces of commerce and the markets of the capital. As has been pointed out above, certain protected Jews were permitted to reside in places where the expulsion of the Jews had been decreed. But Maria Theresa (1740-1780) was distinguished for her enmity to the Jews, and in 1744 made a futile attempt to secure their expulsion from Bohemia. "In 1760 she issued an order that all unbearded Jews should wear a yellow badge on their left arm" (Jewish Encyclopedia, ii. 330). The most petty limitations of Jewish commercial activity continued; thus at about this period the community of Prague, in a petition, "complain that they are not permitted to buy victuals before a certain hour, vegetables not before 9 and cattle not before 11 o'clock; to buy fish is sometimes altogether prohibited; Jewish druggists are not permitted to buy victuals at the same time with Christians" (op. cit.). So, too, with taxation. It was exorbitant and vexatious. To pay for rendering inoperative the banishment edict of 1744, the Jews were taxed 3,000,000 florins annually for ten years. In the same year it was decreed that the Jews should pay "a special tax of 40,000 florins for the right to import their citrons for the feast of booths." Nevertheless, Joseph II. (1780-1790) inaugurated a new era for the Jews of his time. The old law of proscription had vanished; the distinctive Jewish dress, abrogated the poll-tax, admitted the Jews to military service and their children to the public schools, and in general opened the era of emancipation by the Tolerantpatent of 1782. This enlightened policy was not continued by the successors of Joseph II. Under Francis II. (1792-1835) economic and social restrictions were numerous. Agriculture was again barred; indeed the Vienna congress of 1815 practically restored the old discriminations against the Jews. As time went on, a more progressive policy intervened, the special form of Jewish oath was abolished in 1846, and in 1848, as a result of the revolutionary movement in which Jews played an active part, legislation took a more liberal turn. Francis Joseph I. ascended the throne in that year, and though the constitution of 1849 recognized the principle of religious liberty, an era of reaction supervened, especially when "the concordat of 1855 delivered Austria altogether into the hands of the clericals." But the day of medieval intolerance had passed, and in 1867 the new constitution "abolished all disabilities on the ground of religious differences," though anti-Semitic manipulation of the law by administrative authority has led to many instances of intolerance. Many Jews have been members of the Reichsrath, some have risen to the rank of general in the army, and Austrian Jews have contributed their quota to learning, the arts and literature. Löw, Jellinek, Kaufmann, as scholars in the Jewish field; as poets and novelists, Komert, Franzos, L. A. Franki; the pianist Moscheles, the dramatist Mosenthal, and the actor Sonnenthal, the mathematician Spitzer and the chess-player Steinitz are some of the most prominent names. The law of 1890 makes it "compulsory for every Jew to be a member of the congregation of the district in which he resides, and so gives to every congregation the right to tax the individual members" (op. cit.). A similar obligation prevails in parts of Germany. A Jew can avoid the communal tax only by formally declaring himself as outside the Jewish community. The Jews of Hungary shared with their brethren in Austria the same alternations of expulsion and recall. By the law "De Judaearum" passed by the Diet in 1791 the Jews were accorded protection, but half a century passed before their tolerated condition was regularized. The "toleration-tax" was abolished in 1846. During the revolution of 1848, however, many Jewish breaks were made, but as many as 20,000 Jews are said to have joined the army. Kossuth succeeded in granting them temporary emancipation, but the suppression of the War of Independence led to an era of royal autocracy which, while it advanced Jewish culture by enforcing the establishment of modern schools, retarded the obtaining of civic and political rights. As in Austria, so in Hungary, these rights were granted by the constitution of 1867. But one step remained. The Hungarian Jews did not consider themselves fully emancipated until the Synagogue was "duly recognized as one of the legally acknowledged religions of the country." This recognition was granted by the Act of 1869. In the words of Büchter (Jewish Encyclopedia, i. 503): "Since their emancipation the Jews have taken an active part in the political, industrial, scientific and artistic life of Hungary. In all these fields they have achieved prominence. They have also founded great religious institutions. Their progress has not been arrested even by anti-Semitism, which first developed in 1883 at the time of the Tisza-Esler accusation of ritual murder."

52. Other European Countries.—According to M. Calmi the present Jewish communities of Greece are divisible into five groups: (1) Arabs, (2) Cretans, (3) Chalcis (Thrace), (4) Attica; (4) Volo, Larissa and Trikala (Thessaly); and (5) Corfu and Zante (Ionian Islands). The Greek constitution admits no religious disabilities, but anti-Semitic riots in Corfu and Zante in 1891 caused much distress and emigration. In Spain there has been of late a more liberal attitude towards the Jews, and there is a small congregation (without a public synagogue) in Madrid. In 1858 the edict of expulsion was repealed. Portugal, on the other hand, having abolished the Inquisition in 1812, has since 1826 allowed Jews freedom of religion, and there are synagogues in Lisbon and Faro. In Holland the Jews were admitted to civil liberty in 1796. As was granted more than half of the Dutch Jews are concentrated in Amsterdam, being largely engaged in the diamond and tobacco trades. Among famous names of recent times foremost stands that of the artist Josef Israels. In 1675 was consecrated in Amsterdam the synagogue which is still the most noted Jewish edifice in Europe. Belgium granted full freedom to the Jews in 1815, and the community has since 1858 been organized on the state consistorial system, which till recently also prevailed in France. It was not till 1874 that full religious equality was granted to the Jews of Switzerland. But there has been considerable interference (ostensibly on humanitarian grounds) with the Jewish method of slaughtering animals for food (Shehitah) and the method was prohibited by a referendum in 1893. In the same year a similar enactment was passed in Saxony, and the subject is a favourite one with anti-Semites, who have enlisted on their side some scientific authorities, though the bulk of expert opinion is in favor of Shehitah (see Dembo, Das Schlachten,1894). In Sweden the Jews have all the rights which are open to non-Lutherans; they cannot become members of the council of state. In Norway there is a small Jewish settlement (especially in Christiania) who are engaged in industrial pursuits. In 1891 they enjoyed complete liberty. Denmark has for long been distinguished for its liberal policy towards the Jews. Since 1814 the latter have been eligible as magistrates, and in 1840 full equality was formally ratified. Many Copenhagen Jews achieved distinction as manufacturers, merchants and bankers, and among famous Jewish men of letters may be specially named Georg Brandes.

The story of the Jews in Russia and Rumania remains a black spot on the European record. In Russia the Jews are more numerous and more harshly treated than in any other part of the world. In the remotest past Jews were settled in much of
the territory now included in Russia, but they are still treated as aliens. They are restricted to the pale of settlement which was first established in 1791. The pale now includes fifteen governments, and under the May laws of 1802 the congestion of the Jewish population, the denial of free movement, and the exclusion from the general rights of citizens were rendered more oppressive than ever before. The right to leave the pale is indeed granted to merchants of the first gild, to those possessed of certain religious convictions, to veteran soldiers, to certain classes of skilled artisans. But these concessions are unfavourably interpreted and much extortion results. Despite a huge emigration of Jews from Russia, the congestion within the pale is the cause of terrible destitution and misery. Fierce massacres occurred in Nižni-Novgorod in 1882, and in Kishinev in 1903. Many other pogroms have occurred, and the condition of the Jews has been reduced to one of abject poverty and despair. Much was hoped from the duma, but this body has proved bitterly opposed to the Jewish claim for liberty. Yet in spite of these disabilities there are—especially in the Russian Jews many enterprising contractors, skilful doctors, and successful lawyers and scientists. In Rumania, despite the Berlin Treaty, the Jews are treated as aliens, and but a small number has been naturalized. They are excluded from most of the professions and are hampered in every direction.

53. Oriental Countries.—In the Orient the condition of the Jews has been much improved by the activity of Western organizations, of which something is said in a later paragraph. Modern schools have been set up in many places, and Palestine has been the scene of a notable educational and agricultural revival, while the schools of modern Jewry—such as the agricultural college near Jaffa and the schools of the alliance and the more recent Bezalel in Jerusalem—have been established. Turkey has always on the whole tolerated the Jews, and much is hoped from the new régime. In Morocco the Jews, who until late in the 19th century were often persecuted, are still confined to a mellah (separate quarter), but at the coast-towns there are prosperous Jewish communities mostly engaged in commerce. In other parts of the same continent, in Egypt and in South Africa, many Jews have settled, participating in all industrial and financial pursuits. British Jews have also been sent to the Falashas of Abyssinia, and much interest has been felt in such outlying branches of the Jewish people as the Black Jews of Cochín and the Bene Israel community of Bombay. In Persia Jews are often the victims of popular outbursts as well as of official extortion, but there are fairly prosperous communities at Bushire, Isfahan, Teheran and Kashan (in Shiraz they are in low estate). The recent advent of constitutional government may improve the condition of the Jews.

54. The United Kingdom.—The general course of Jewish history in England has been indicated above. The Jews came to England at least as early as the Norman Conquest; they were expelled by Bury St Edmunds in 1190, after the massacres at the coronation of Richard I.; they were required to wear badges in 1218. At the end of the 12th century was established the “exchequer of the Jews,” which chiefly dealt with suits concerning money-lending, and arranged a “continual flow of money from the Jews to the royal treasury,” and a so-called “parliament of the Jews” was summoned in 1241; in 1275 was enacted the statute de Judaismo which, among other things, permitted the Jews to hold land. But this concession was illusory, and as the statute prevented Jews from engaging in finance—the only occupation which had been open to them—it was a prelude to their expulsion in 1290. There were few Jews in England from that date till the Commonwealth, but Jews settled in the American colonies earlier in the 17th century, and rendered considerable services in the advancement of English commerce. The Whitehall conference of 1655 marks a change in the status of the Jews in England itself, for though no definite result emerged it was clearly defined by the judges that there was no legal obstacle to the return of the Jews. Charles II. in 1664 continued Cromwell’s tolerant policy. No serious attempt towards the emancipation of the Jews was made till the Naturalization Act of 1753, which was, however, immediately repealed. Jews no longer attached to the Synagogue, such as the Herschels and Disraelis, attained to fame. In 1830 the first Jewish emancipation bill was brought in by Robert Grant, but it was not till the legislation of 1858–1860 that Jews obtained full parliamentary rights. In other directions progress was more rapid. The office of sheriff was, thrown open to Jews in 1835 (Moses Montefiore, sheriff of London was knighted in 1837); Sir J. L. Goldsmid was made a baronet in 1839; Sir J. H. Conyngham was returned to Parliament in 1847 (though he was unable to take his seat); Sir David Salomons became lord mayor of London in 1855 and Francis Goldsmid was made a Q.C. in 1858. In 1873 Sir George Jessel was made a judge, and Lord Rothschild took his seat in the House of Lords as the first Jewish peer in 1886. A fair proportion of Jews have been elected to the House of Commons, and Mr Herbert Samuel rose to cabinet rank in 1900. Sir Matthew Nathan has been governor of Hong-Kong and Natal, and among Jewish statesmen in the colonies Sir Julius Vogel and V. L. Salomon have been prime ministers (HAWKINSON: A History of the Jews in England, p. 342). It is unnecessary to recount the experiences of the British colonies, the Jews everywhere enjoy full citizenship. In fact, the colonies emancipated the Jews earlier than did the mother country. Jews were settled in Canada from the time of Wolfe, and a congregation was founded at Montreal in 1768, and since 1832 Jews have been entitled to sit in the Canadian parliament. There are some thriving Jewish agricultural colonies in the same dominion. In Australia the Jews from the first were welcomed on perfectly equal terms. The oldest congregation is that of Sydney (1817); the Melbourne community dates from 1835. The abolition of university tests removed all restrictions on Jews at Oxford and Cambridge, and both universities have since elected Jews to professorships and other posts of honour. The communal organization of English Jewry is somewhat inchoate. In 1841 an independent reform congregation was founded, and the Spanish and Portuguese Jews have always maintained their separate existence with a Haham as the ecclesiastical head. In 1870 was founded the United Synagogue, which is a metropolitan organization, and the same remark applies to the more recent Federation of Synagogues. The chief rabbi, who is the ecclesiastical head of the United Synagogue, has also a certain amount of authority over the provincial and colonial Jewries, but this is nominal rather than real. The provincial Jewries, however, participate in the election of the chief rabbi. At the end of 1909 was held the first conference of Jewish ministers in London, and from this is expected some more systematic organization of scattered communities. Anglo-Jewry is rich, however, in charitable, educational and literary institutions; chief among these respectively may be named the Jewish board of guardians (1859), the Jews’ college (1855), and the Jewish historical society (1893). Besides the distinctions already noted, English Jews have risen to note in theology (C. G. Montefoire), in literature (Israel Zangwill and Alfred Sutro), in art (S. Hart, R.A., and S. J. Solomon, R.A.) in music (Julius Benedict and Frederick Hymen Cowen). More than 1000 English and colonial Jews participated as active combatants in the South African War. The immigration of Jews from Russia was mainly responsible for the ineffectual yet oppressive Aliens Act of 1905. (Full accounts of Anglo-Jewish institutions are given in the Jewish Year-Book published annually since 1895.)

35. The American Continent.—In parallel with the progress of Sir Jews in England has been their steady advancement in America. Jews made their way to America early in the 17th century, settling in Brazil prior to the Dutch occupation. Under Dutch rule they enjoyed full civil rights. In Mexico and Peru they fell under the ban of the Inquisition. In Surinam the Jews were treated as British subjects; in Barbadoes, Jamaica and New York they are found as early as the first half of the 17th century. During the War of Independence the Jews of America took a prominent part on both sides, for under the British rule many had risen to wealth and high social position. After the Declaration of Independence, Jews are found all over America, where they
have long enjoyed complete emancipation, and have enormously increased in numbers, owing particularly to immigration from Russia. The American Jews bore their share in the Civil War (7038 Jews were in the two armies), and have always identified themselves closely with national movements such as the emancipation of Cuba. They have attained to high rank in all branches of the public service, and have shown most splendid instances of far-sighted and generous philanthropy. Within the Synagogue the reform movement began in 1825, and soon won many successes, the central conference of American rabbis and Union College (1873) at Cincinnati being the instruments of this progress. At the present time orthodox Judaism is also again acquiring its due position and the Jewish theological seminary of Hebrew Union College (1875) at Cincinnati has the aim of all Jewish religious activity, inclusive of various religious sections, was founded under the description "the Jewish community of New York." There have been four Jewish members of the United States senate, and about 30 of the national House of Representatives. Besides filling many diplomatic offices, a Jew (O. S. Straus) has been a member of the cabinet. Many Jews have filled professorial chairs at the universities, others have been judges, and in art, literature (there is a notable Jewish publication society), industry and commerce have rendered considerable services to national or international causes. The societies have by mutual support to Jewish generosity, a foremost benefactor of these (as of many other American institutions) being Jacob Schiff. Such institutions as the Gratz and Dropsie colleges are further indications of the splendid activity of American Jews in the educational field. The Jews of America have also taken a foremost place in the succour of their oppressed brethren in Russia and other parts of the world. (Full accounts of American Jewish institutions are given in the American Jewish Year-Book, published annually since 1899.)

56. Anti-Semitism.—It is saddening to be compelled to close this record with the statement that the progress of the European Jews received a serious check by the rise of modern anti-Semitism in the last quarter of the 19th century. While in Russia this took the form of actual massacre, in Germany and Austria it assumed the shape of social and civic ostracism. In Germany Jews are still rarely admitted to the rank of officers in the army, university posts are very difficult of access, Judaism and its doctrines are denounced in medieval language, and a tone of hostility prevails in many public utterances. In Austria, as in Germany, anti-Semitism is a factor in the parliamentary elections. The anti-Semites have long been a political party (q.v.), and has been revived, and every obstacle is placed in the way of the free intercourse of Jews with their Christian fellow-citizens. In France Edouard Adolphe Drumont led the way to a similar animosity, and the popular fury was fanned by the Dreyfus case. It is generally felt, however, that this recrudescence of anti-Semitism is a passing phase in the history of culture (see Anti-Semitism).

57. The Zionist Movement.—The Zionist movement (see Zionism), founded in 1895 by Theodor Herzl (q.v.), was in a sense the outcome of anti-Semitism. Its object was the foundation of a Jewish state in Palestine, but though it aroused much interest it failed to attract the majority of the emancipated Jews, and the movement has of late been transforming itself into a mere effort at colonization. Most Jews not only confidently believe that their own future lies in progressive development within the various nationalities of the world, but they also hope that a similar consummation is in store for the as yet unemancipated branches of Israel. Hence the Jews are in no sense internationally organized. The influence of the happier communities has been exercised on behalf of those in a worse position by individuals such as Sir Moses Montefiore (q.v.) rather than by societies or leagues. From time to time incidents arise which appeal to the Jewish sympathizes everywhere and joint action ensures. Such incidents were the Damascus charge of ritual murder (1840), the forcible baptism of the Italian child Mortara (1858), and the Russian pogroms at various dates. But all attempts at an international union of Jews, even in view of such emergencies as these, have failed. Each country has its own local organiza-

58. Statistics.—Owing to the absence of a religious census in several important countries, the Jewish population of the world can only be given by inferential estimate. The following approximate figures are taken from the American Jewish Year-Book, 1925, and are based on similar estimates in the English Jewish Year-Book, the Jewish Encyclopedia, Nossig's Jüdische Statistik and the Reports of the Alliance Israélite Universelle. According to these estimates the Jewish population of the world in the year named was approximately 11,500,000. Of this total there were in the British Empire about 380,000 Jews (British Isles 240,000, London accounts for 70,000), and in Ireland of these 18,000 (7,200), 18,000; South Africa 40,000). The largest Jewish populations were those of Russia (5,215,000), Austria-Hungary (2,684,000), United States of America (1,777,000), Germany (607,000 of whom 400,000 were in Berlin and 50,000 in Breslau), Hungary (315,000), Poland (263,000), Rumania (250,000), Morocco (109,000) and Holland (106,000). Others of the more important totals are: France 95,000 (besides Algeria 63,000 and Tunis 62,000); Italy 52,000; Persia 30,000; Egypt 16,000; Bulgaria 36,000; Argenteuil Republic 30,000; Tripoli 19,000; Turkishest and Afghanistan 14,000; Switzerland and Belgium each 12,000; Mexico 9,000; Greece 8,000; Servia 6,000; Sweden and Cuba each 4,000; Denmark 3,000; Brazil and Abyssinia (Falashas) each 3,000; Spain and Portugal 2,500; China and Japan 2,000. There are also Jews in Curacao, Surinam, Luxembourg, Norway, Peru, Crete and Venezuela; but in none of these does the Jewish population much exceed 1,000.

JEWSBURY, GERALDINE ENDOR (1812-1880), English writer, daughter of Thomas Jewsbury, a Manchester merchant, was born in 1812 at Measham, Derbyshire. Her first novel, Zoe: the History of Two Lives, was published in 1845, and was followed by The Half Sisters (1848), Marian Wife of (1851), Constance Herbert (1853), The Sorrows of Gentility (1856), Right or Wrong (1859). In 1850 she was invited by Charles Dickens to write for Household Words; for many years she was a frequent contributor to the Athenaeum and other journals and magazines. It is, however, mainly on account of her friendship with Thomas Carlyle and his wife that her name is remembered. Carlyle described her, after their first meeting in 1841, as "one of the most interesting young women I have ever known; clear definite sense and courage looking out of her small slyh-like figure." From this time till Mrs Carlyle's death in 1866, Geraldine Jewsbury was the most intimate of her friends. The selections from Geraldine Jewsbury's letters to Jane Welsh Carlyle (1892, ed. Mrs Alexander Ireland) prove how confidential were the relations.
obtained, owing to the limited capacity of the resonating cavity. The black notes on the stave show the scale which may be produced by using two harps, one tuned a fourth above the other. The player on the Jew's harp, in order to isolate the harmonics, frames his mouth as though intending to pronounce the various vowels. At the beginning of the 19th century, when much energy and ingenuity were being expended in all countries upon the invention of new musical instruments, the Maultrommel, re-christened Mundharmonica (the most rational of all its names), attracted attention in Germany. Heinrich Schelhoffer devised an ingenious holder with a handle, to contain five Jew's harps, all tuned to different notes; by holding one in each hand, a large compass, with duplicate notes, became available; he called this complex Jew's harp Aura and with it played themes with variations, marches, Scotch reels, &c. Other virtuosi, such as Eulenstein, a native of Württemberg, achieved the same result by placing the variously tuned Jew's harps upon the table in front of him, taking them up and setting them down as required. Eulenstein created a sensation in London in 1827 by playing on no fewer than sixteen Jew's harps at once.

Sir Charles Wheatstone published an essay on the technique of the instrument in the Quarterly Journal of Science. (K. S.)

JEZEBEL (Heb. i-zèbel, perhaps an artificial form to suggest "un-exalted," a divine name or its equivalent would naturally be without meaning instead of the first syllable), wife of Ahab, king of Israel (1 Kings xvi. 31), and mother of Athaliah, in the Bible. Her father Eth-�haal (Ithobal, Jos. contra Ap. 1. 18) was king of Tyre and priest of the goddess Ashtar. He had usurped the throne and was the first important Phoenician king after Hiram (see PHOENICIA). Jezebel, a true daughter of a priest of Ashtar, showed herself hostile to the worship of Yahweh, and to his prophets, whom she relentlessly pursued (1 Kings xvii. 4-13; see EILJAM). She is represented as a woman of virile character, and became notorious for the part she took in the matter of Naboth's vineyard. When the Jezeelites sheikh refused to sell the family inheritance to the king, Jezebel treacherously caused him to be arrested on a charge of treason, and with the help of false witnesses he was found guilty and condemned to death. For this the prophet Elijah pronounced a solemn curse upon Ahab and Jezebel, which was fulfilled when Jehu, who was anointed king at Elisha's instigation, killed the son Jehoram, massacred all the family, and had Jezebel destroyed (1 Kings xxi.; 2 Kings ix. 11-28). What is told of her comes from sources written under the influence of strong religious bias; among the exaggerations must be reckoned 1 Kings xviii. 13, which is inconsistent with xix. 18 and xxii. 6. A literal interpretation of the reference to Jezebel's idolatry (2 Kings ix. 23) has made her name a byword for a false prophetess in Rev. ii. 20. Her name is often used in modern English as a synonym for an abandoned woman or one who paints her face.

JEZREEL (Heb. "God sows"), the capital of the Israelite monarchy under Ahab, and the scene of stirring Biblical events (1 Sam. xxix. 1; 1 Kings xxi.; 2 Kings ix. 21-27). The name was also applied to the great plain (Esdraelon) dominated by the city ("valley of Jezerel," Josh. xvii. 16, &c.). The site has never been lost, and the present village Zerkin retains the name radically unchanged. In Greek (e.g. Judith) the name appears under the form 'Εζηρέλ, it is Stradilha in the Borodoux Pilgrim, and to the Crusaders the place was known as Parum Gerinum. The plain is stony and waterless, save on a bare rocky knoll, 500 feet above the broad northern valley, a terrace, formed of a long ledge, terminating in steep cliffs, forming part of the chain of Mt Gilboa. The buildings are modern, but some scanty remains of rock-hewn wine presses and a few scattered sarcophagi mark the antiquity of the site. The view over the plains is fine and extensive. It is vain now to look for Ahab's palace or Naboth's vineyard. The fountain mentioned in 1 Sam. xxix. 1 is perhaps the fine spring 'Ain el Mellýyéa, north of the village, a shallow pool of good water full of small fish, rising between black rocky boulders: or more probably the copious 'Ain Jafud. A second city named Jezerel lay in the hill country of Judah, somewhere near Hebron (Josh. xv. 56). This was the native place of David's wife Abinoam (1 Sam. xxv. 43).

JHABUA, a native state of Central India, in the Bhopawar agency. Area, with the dependency of Rutunal, 13,336 sq. m. 

1 See Alig. musik. Ztg. (Leipzig, 1816), p. 506, and Beilage 5, where the construction of the instruments is described and illustrated and the system of notation shown in various pieces of music. 

2 According to another tradition Naboth lived at Samaria (xxi. I [LXX]. 16 seq.; cf. xxii. 38). A similar confusion regarding the king's home appears in 2 Kings x. 11 compared with rev. 1, 17.
JHALAWAR—JHANSI

Pop. (1901), 89,889. More than half the inhabitants belong to the aboriginal Bhils. Estimated revenue, £7,000; tribute, £1,000. Manganese and opium are exported. The chief, whose title is raja, is a Rajput of the Rathor clan, descended from a branch of the Jodhpur family. Raja Udaí Singh was invested in 1898 with the powers of administration.

The town of JHABDA (pop. 3354) stands on the bank of a lake, and is surrounded by a mud wall. A dispensary and a guest-house were constructed to commemorate Queen Victoria's Diamond Jubilee in 1897.

JHALWAR, a native state of British India, in the Rajputana agency, pop. (1901), 26,717; estimated revenue, £26,000; tribute, £3,000. Area, 810 sq. m. The ruling family of Jhalwar belongs to the Jhala clan of Rajputs, and their ancestors were petty chiefs of Halwad in the district of Jhalwar, in Kathiawar. About 1700 one of the younger sons of the head of the clan left his country with his son to try his fortunes at Delhi. At Kotah he left his son Madhu Singh, who soon became a favourite with the maharaja, and received from him an important post, which became hereditary. On the death of one of the Kotah rajas (1771), the country was left to the charge of Zalim Singh, a descendant of Madhu Singh. From that time Zalim Singh was twice allied with Delhi, and finally became his master. He held his own until the year 1857, when the British government was formed, and for a time prospered. In 1882 it was resolved, with the consent of the chief of Kotah, to dismember the state, and to create the new principality of Jhalwar as a separate provision for the descendants of Zalim Singh. The districts then severed from Kotah were considered to represent one-third (£20,000) of the income of Kotah; by treaty they acknowledged the supremacy of the British, and agreed to pay an annual tribute of £500. Madan Singh received the title of maharaja rana, and was placed on the same footing as the other chiefs in Rajputana. He died in 1845. An adopted son of his successor took the name of Zalim Singh in 1875 on becoming chief of Jhalwar. He was a minor and was not invested with governing powers till 1884. Owing to his maladministration, his relations with the British government became strained, and he was finally deposed in 1896, "on account of persistent misgovernment and proved unfitness for the powers of a ruling chief." He went to live at Benares, on a pension of £2000; and the administration was placed in the hands of the British resident. After much consideration, the government resolved in 1897 to break up the state, and to form out of part of it the district of Jhalwar, and to divide the other parts of Shahabad and the Chaumahla into a new state, which came into existence in 1899, and of which Kunwar Bhawani Singh, a descendant of the original Zalim Singh, was appointed chief.

The chief town is Patan, or JHALRAPATAN (pop. 7955), founded close to an old site by Zalim Singh in 1796, by the side of an artificial lake. It is the centre of trade, the chief exports of the state being opium, oil-seeds and cotton. The palace is at the cantonment or chhauani, 4 m. north. The ancient site near the town was occupied by the city of Chandrawati, said to have been destroyed in the time of Aurangzeb. The finest feature of its remains is the temple of Staleswar Mahadev (c. 600).

JHANG, a town and district of British India, in the Multan division of the Punjab. The town, which forms one municipality with the newer and now more important quarter of Mahghiana, is about 3 m. from the right bank of the river Chenab. Founded by Mal Khan, a Sial chiefman, in 1462, it long formed the capital of a Mahomedan state. Pop. (1901), 24,382. Mahghiana has manufactures of leather, soap and metal ware.

The District of Jhang extends along both sides of the Chenab, including its confluences with the Jhelum and the Ravi. Area, 3726 sq. m. Pop. (1901), 378,695, showing an apparent decrease of 13 % in the decade, due to the creation of the district of Lyallpur in 1904. But actually the population increased by 13% on the old area, owing to the opening of the Chenab canal and the colonization of the tract irrigated by it. Within Jhang many thousands of acres of government waste have been allotted to colonists, who are reported to be flourishing. A branch of the North-Western railway enters the district in this quarter, extending throughout its entire length. The Southern Jech Doab railway serves the south. The principal industries are the ginning, pressing, and weaving of cotton.

Jhang contains the ruins of Shorkot, identified with one of the towns taken by Alexander. In modern times the history of Jhang centres in the famous clan of Sials, who exercised an extensive sway over a large tract between Shahpur and Multan, with little dependence on the imperial court at Delhi, until they finally fell before the all-absorbing power of Ranjit Singh. The Sials of Jhang are Mahomedans of Rajput descent, whose ancestors, Rai Shankar, of Darmanagar, entered the 12th century from the Ganges Doab. In the beginning of the 19th century Maharaja Ranjit Singh invaded Jhang, and captured the Sial chiefman's territory. The latter recovered a small portion afterwards, which he was allowed to retain on payment of a yearly tribute. In 1847, after the establishment of the British agency at Lahore, the district came under the charge of the British government; and in 1848 Ismail Khan, the Sial leader, rendered important services against the rebel chiefs, for which he received a pension. During the Mutiny of 1857 the Sial chief, Mahomed Ram, retained his loyalty by keeping in Multan on the British side. His pension was afterwards increased, and he obtained the title of khan bahadur, with a small jagir for life.

JHANSI, a city and district of British India, in the Allahabad division of the United Provinces. The city is the centre of the Indian Midland railway system, whence four lines diverge to Agra, Cawnpore, Allahabad and Bhopal. Pop. (1901), 55,724. A stone fort crowns a neighbouring rock. Formerly the capital of a Mahratta principality, which lapsed to the British in 1853, it was during the Mutiny the scene of disaffection and massacre. It was then made over to Gwalior, but has been taken back in recent years for other territory. Even when the city was within the state, Gwalior, the civil headquarters and the cantonment were at Jhansi Naoabad, under its walls. Jhansi is the principal centre for the agricultural trade of the district, but its manufactures are small.

The District of Jhansi was enlarged in 1891 by the incorporation of the former district of Lalitpur, which extends farther into the hill country, almost entirely surrounded by native states. Combined area, 3628 sq. m. Pop. (1901), 616,759 showing a decrease of 10 % in the decade, due to the results of the Sial leader. The main body of the town is an area known as the Pithon, now served by the railways, which forms a portion of the hill country of Bundelkhand, sloping down from the outliers of the Vindhyan range on the south to the tributaries of the Jumna on the north. The extreme south is composed of parallel rows of long and narrow-ridged hills. Through the intervening valleys the rivers flow down impetuously over ledges of granite or quartz. North of the hilly region, the rocky granite chains gradually lose themselves in clusters of smaller hills. The northern portion consists of the level plain of Bundelkhand, distinguished for its deep black soil, known as mar, and admirably adapted for the cultivation of cotton. The district is intersected or bounded by three principal rivers—the Pahuj, Betwa and Dhasan. The district is much cut up, and portions of it are insulated by the surrounding native states. The principal crops are millets, cotton, oil-seeds, pulses, wheat, gram and barley. The destructive kaus grass has proved as great a pest here as elsewhere in Bundelkhand. Jhansi is especially exposed to blights, droughts, floods, hailstorms, epidemics, and their natural consequence—famine.

Nothing is known with certainty as to the history of this district before the period of Chandel rule, about the 11th century of our era. To this epoch must be referred the artificial reservoirs and architectural remains of the hilly region. The Chandels were succeeded by their servants the Khangars, who built the fort of Karar, lying just outside the British border. About the 14th century the Bundelas poured down upon the plains, and gradually spread themselves over the whole region which now bears their name. The Mahomedan governors were constantly making irruptions into the Bundela country; and in
JHELUML—JHERING 413

1732 Chhatar Sal, the Bundela chieftain, called in the aid of the Maharrats. They came to his assistance with their accustomed promptitude, and were rewarded on the raja’s death in 1734, by the bequest of one-third of his dominions. Their general founded the city of Jhansi, and peopled it with inhabitants from Orchha state. In 1806 British protection was promised to the Maharrat chief, and in 1817 the peshwa ceded to the East India Company all his rights over Bundelkhand. In 1853 the raja died childless, and his territories passed to the British. They were divided into the Jhelam and Chanderi districts, and then formed into a superintendence. The widow of the raja considered herself aggrieved because she was not allowed to adopt an heir, and because the slaughter of cattle was permitted in the Jhansi territory. Reports were spread which excited the religious prejudices of the Hindus. The events of 1857 accordingly found Jhansi ripe for mutiny. In June a few men of the 17th native infantry seized the fort containing the treasure and magazine, and massacred the European officers of the garrison. Everywhere the usual anarchic quarrels rose among the rebels, and the country was plundered mercilessly. The rani put herself at the head of the rebels, and died bravely in battle. It was not till November 1858, after a series of sharp contests with various guerilla leaders, that the work of reorganization was fairly set on foot.

JHELUML, or JHELM (Hydaspes of the Greeks), a river of northern India. It is the most westerly of the “five rivers” of the Punjab. It rises in the north-east of the Kashmir state, flows through the city of Sinagar and the Wular lake, issues through the Fir Panjul range by the narrow pass of Baramula, and enters British territory in the Jhelum district. There it flows through the plains of the Punjab, forming the boundary between the Jech Doab and the Sind Sagar Doab, and finally joins the Chenab at Timmu after a course of 450 miles. The Jhelum colony, in the Shahpur district of the Punjab, formed on the example of the Chenab colony in 1901, is designed to contain a total irrigable area of 1,130,000 acres. The Jhelum canal is a smaller work than the Chenab canal, but its site is noted for its fertilizing qualities. Both projects have brought great prosperity to the cultivators.

JHELM, or JELM, a town and district of British India, in the Rawalpindi division of the Punjab. The town is situated on the right bank of the river Jhelum, here crossed by a bridge of the North-Western railway, 103 m. N. of Lahore. Pop. (1901), 14,951. It is a modern town with river and railway trade (principally in timber from Kashmir), boat-building and cantonments for a cavalry and four infantry regiments.

The District of Jhelum stretches from the river Jhelum almost to the Indus. Area, 2,813 sq. m. Pop. (1901), 501,424, showing a decrease of 2% in the decade. Salt is quarried at the Mayo mine in the Salt Range. There are two coal-mines, the only ones worked in the province, from which the North-Western railway obtains part of its supply of coal. The chief centre of the salt trade is Pind Dadan Khan (pop. 13,770). The district is crossed by the main line of the North-Western railway, and also traversed along the south by a branch line. The river Jhelum is navigable throughout the district, which forms the south-eastern portion of a rugged Himalayan spur, extending between the Indus and Jhelum to the borders of the Sind Sagar Doab. Its scenery is very picturesque, although not so wild a character as the mountain region of Rawalpindi to the north, and is lighted up in places by smiling patches of cultivated valley. The backbone of the district is formed by the Salt Range, a treble line of parallel hills running in three long forks from east to west throughout its whole breadth. The range rises in bold precipices, broken by gorges, clothed with brushwood and traversed by streams which are at first pure, but soon become impregnated with the saline matter over which they pass. Between the line of hills lies a picturesque table-land, in which the beautiful little lake of Kallar Kahar nestles amongst the minor ridges. North of the Salt Range, the country extends upwards in an elevated plateau, diversified by countless ravines and fissures, until it loses itself in tangled masses of Rawalpindi mountains. In this rugged tract cultivation is rare and difficult, the soil being choked with saline matter. At the foot of the Salt Range, however, a small strip of level soil lies along the banks of the Jhelum, and is thickly dotted with prosperous villages. The drainage of the district is determined by a low central watershed running north and south at right angles to the Salt Range. The waters of the western portion find their way into the Sohan, and finally into the Indus; those of the opposite slope collect themselves into small torrents, and empty themselves into the Jhelum and Chanderi districts.

The history of the district dates back to the semi-mythical period of the Mahabharata. Hindu tradition represents the Salt Range as the refuge of the five Pandava brethren during the period of their exile, and every salient point in its scenery is connected with some legend of the national heroes. Modern research has fixed the site of the conflict between Alexander and Porus as within Jhelum district, although the exact point at which Alexander effected the passage of the Jhelum (or Hydaspes) is disputed. After this event, we have little information with regard to the condition of the district until the Mahomedan conquest brought back control. To Upper India. The Jansuahs and Jats, who now hold the Salt Range and its northern plateau respectively, appear to have been the earliest inhabitants. The Ghakhars seem to represent an early wave of conquest from the east, and they still inhabit the whole eastern slope of the district; while the Awans, who now cluster in the western plain, are apparently later invaders from the opposite quarter. The Ghakhars were the dominant race at the period of the first Mahomedan incursions, and long continued to retain their independence. During the flourishing period of the Mughal dynasty, the Ghakhars were prosperous and loyal vassals of the house of Baber; but after the collapse of the Delhi Empire Jhelum fell, like its neighbours, under the sway of the Sikhs. In 1765 Gujjar Singh defeated the last independent Ghakkar prince, and reduced the wild mountaineers to subjection. His son succeeded to his dominions, until 1810, when he fell before the irresistible power of Ranjit Singh. In 1849 the district passed, with the rest of the Sikh territories, into the hands of the British.

JHERING, RUDOLF VON (1818—1892), German jurist, was born on 22nd of August 1818 at Aurich in East Friesland, where his father practised as a lawyer. Young Jhering entered the university of Heidelberg in 1836 and, after the fashion of German students, visited successively Göttingen and Berlin. G. F. Puchta, the author of Geschichte des Rechts bei dem römischen Volke, alone of all his teachers appears to have gained his admiration and influenced the bent of his mind. After graduating doctor juris, Jhering established himself in 1844 at Berlin as privy-counsel for Roman law, and delivered public lectures on the Geist des römischen Rechts, the theme which may be said to have constituted his life’s work. In 1845 he became an ordinary professor at Basel, in 1846 at Rostock, in 1849 at Kiel, and in 1851 at Giessen. Upon all these seats of learning he left his mark; beyond any other of his contemporaries he animated the dry bones of Roman law. The German juristic world was still under the dominating influence of the Savignay cult, and the older school looked askance at the daring of the young professor, who essayed to adapt the old to new exigencies and to build up a system of natural jurisprudence. This is the keynote of his famous work, Geist des römischen Rechts auf den verschiedenen Stufen seiner Entwicklung (1852—1863), which for originality of conception and lucidity of expression gained the name in the forefront of modern Roman jurists.

It is at once a bold and a judicious attempt to say that in the second half of the 19th century the reputation of Jhering was as high as that of Savigny in the first. Their methods were almost diametrically opposed. Savigny and his school represented the conservative, historical tendency. In Jhering the philosophical conception of jurisprudence, as a science to be utilized for the further advancement of the moral and social interests of mankind, was predominant. In 1868 Jhering accepted the chair of Roman Law at Vienna, where his lecture-room was crowded, not only with regular students but
with men of all professions and even of the highest ranks in the official world. He became one of the lions of society, the Austrian emperor conferring upon him in 1872 a title of hereditary nobility. But to a mind constituted like his, the social functions of the Austrian metropolis became wearisome, and he gladly exchanged its brilliant circles for the repose of Göttingen, where he became professor in 1872. In this year he read at Vienna before an admiring audience a lecture, published under the title of Der Kampf um’s Recht (1872; Eng. trans., Battle for Right, 1884). Its success was extraordinary. Within two years it attained twelve editions, and it has been translated into six languages. This was followed a few years later by Der Zweck im Recht (2 vols., 1872-1883). In these two works is clearly seen Jhering’s individuality. The Kampf um’s Recht shows the firmness of his character, the strength of his sense of justice, and his juristic method and logic: “to assert his rights is the duty that every responsible person owes to himself.” In the Zweck im Recht is perceived the bent of the author’s intellect. But perhaps the happiest combination of all his distinctive characteristics is to be found in his Jurisprudenz des täglichen Lebens (1879; Eng. trans., 1904). A great feature of his lectures was his so-called Praktika, put them in a clear and a logical way, a method that was of these with hints for solution was published as early as 1847 under the title Civilrechtsfälle ohne Entscheidungen. In Göttingen he continued to work until his death on the 17th of September 1892. A short time previously he had been the centre of a devoted crowd of friends and former pupils, assembled at Wilhelmshöhé near Cassel to celebrate the jubilee of his doctorate. Almost all countries were worthy represented, and this pilgrimage affords an excellent illustration of the extraordinary fascination and enduring influence that Jhering commanded. In appearance he was of middle stature, his face clean-shaven and of classical mould, lit up with vivacity and beaming with good nature. He was perhaps seen at his best when dispensing hospitality in his own house. With him died the best beloved and the most talented of Roman-law professors of modern times. It was said of him by Professor Adolf Merkel in a memorial address, R. v. Jhering (1893), that he belonged to the happy class of persons to whom Goethe’s lines are applicable: “Was ich in der Jugend gewünscht, das habe ich im Alter die Fülle,” and this may justly be said of him, though he did not live to complete his Geist des römischen Rechts and his Rechtsge- dichte, the former of which appeared in Der nationale und heiligen römischen und deutschen Privat-rechts, and then separately; Der Bestattuwe, and an article entitled “Besitz” in the Handwörterbuch der Staatswissenschaften (1801), which aroused at the time much controversy, particularly on account of the opposition manifested to Savigny’s conception of the subject. See also Scherz und Ernst in der Jurisprudenz (1885); Das Schuldmoment im römischen Privat-recht (1887); Das Trennfeld (1882); and among the papers he left behind him his Vorgeschichte der Industriewirtschaft, a fragment, has been published by v. Ehrenberg (1894). See for an account of his life also M. de Jonge, Rudolf v. Jhering (1888); and A. Merkel, Rudolf von Jhering (1893). (P. A. A.)

JIBITOS, a tribe of South American Indians of Apatapanac stock. Their former range was in New Mexico, about the headwaters of the Rio Grande and the Pecos, and they are now settled in a reservation on the northern border of New Mexico. Originally a scourage of the district, they are now subdued, but remain uncivilized. They number some 1300 and are steadily decreasing. The name is said to be from the Spanish jicara, a basket tray, in reference to their excellent basket-work.

JIBOUTI (or Djibouti, Dybbi, Djibby), a town in Arabia on the Red Sea coast in 21° 28’ N. and 40° 10’ E. It is of importance mainly as the principal landing place of pilgrims to Mecca, from which it is about 46 m. distant. It is situated in a low sandy plain backed by a range of hills 10 m. to the east, with higher mountains behind. The town extends along the beach for about a mile, and is enclosed by a wall with towers at intervals, the seaward angles being commanded by two forts, in the northern of which are the prison and other public buildings. There are three gates, the Medina gate on the north, the Mecca gate on the east, and the Yemen gate (rarely opened) on the south; the town is also enclosed on the west side, the centre one leading to the quay. In front of the Mecca gate is a rambling suburb with shops, coffee houses, and an open market place; before the Medina gate are the Turkish barracks, and beyond them the holy place of Jidda, the tomb of “our mother Eve,” surrounded by the principal cemetery.

The tomb is a walled enclosure said to represent the dimensions of the body, about 200 paces long and 15 ft. broad. At the head is a small erection where gifts are deposited, and rather more than half-way down a whitewashed dome encloses a small dark chapel within which is the black stone known as El Surra, the navel. The grave of Eve is mentioned by Edrisi, but except the black stone nothing bears any aspect of antiquity (see Burton’s Pilgrimage, vol. ii.).

The sea face is the best part of the town; the houses there are lofty and well built of the rough coral that crops out all along the shore. The streets are narrow and winding. There are two mosques of considerable size and a number of smaller ones. The outer suburbs are merely collections of brushwood huts. The bazaars are well supplied with food-stuffs imported by sea, and fruit and vegetables from Taif and Wadi Fatima. The water supply is limited and brackish; there are, however, two sweet springs, one a spring 73 m. from the town; the houses have cisterns for storing rain-water. The climate is hot and damp, but fever is not so prevalent as at Mecca. The harbour though inconvenient of access is well protected by coral reefs; there are, however, no wharves or other dock facilities and cargo is landed in small Arab boats, sambusks.

The governor is a Turkish kalmakam under the vail of Hejaz, and there is a large Turkish garrison; the sharif of Mecca, however, through his agent at Jidda exercises an authority
practically superior to that of the sultan's officials. Consulates are maintained by Great Britain, France, Austria, Russia, Holland, Belgium and Persia. The permanent population is estimated at 20,000, of which less than half are Arabs, and of these a large number are foreigners from Yemen and Hadramut, the remainder are negroes and Somalis with a few Indian and Greek traders.

Jidda is said to have been founded by Persian merchants in the caliphate of Othman, but its great commercial prosperity dates from the beginning of the 15th century when it became the centre of trade between Egypt and India. Down to the time of Burckhardt (1815) the Suez ships went no farther than Jidda, where they were met by Indian vessels. The introduction of steamers deprived Jidda of its place as an emporium, not only for Indian goods but for the products of the Red Sea, which formerly were collected here, but are now largely exported directly by steamers from Hodeda, Suez and Jiddah and Al-Abs.

At the same time it gave a great impulse to the pilgrim traffic which is now regarded as the annual harvest of Jidda. The average number of pilgrims arriving by sea exceeds 50,000, and in 1903-1904 the total came to 74,600. The changed status of the port is shown in its trade returns, for while its exports decreased from £250,000 in 1880 to £25,000 in 1904, its imports in the latter year amounted to over £1,400,000. The adverse balance of trade is paid by a very large export of specie, collected from the pilgrims during their stay in the country.

When, however, the pilgrimage is considered as a whole, the irregular steps of which have varied at different times and in the various countries in which it has been danced (see DANCE). The music of the "jig," or such as is written in its rhythm, is in various times and has been used frequently to finish a suite, e.g. by Bach and Handel. The word has usually been derived from or connected with Fr. gigue, Ital. giga, Ger. Geige, a fiddle. The French and Italian words are now chiefly used of the dance or dance rhythm, and in this sense have been taken by etymologists as adapted from the English "jig," which may have been originally an onomatopoetic word. The idea of jumping, jerking movement of which the literal meaning is an effort or a contest. It is used to designate the religious duty inculcated in the Koran on the followers of Mahomet to wage war upon those who do not accept the doctrines of Islam. This duty is laid down in five suras— all of these suras belonging to the period after Mahomet had established his power. Conquered peoples who will neither embrace Islam nor pay a poll-tax (jizya) are to be put to the sword. (See further Mahommedan Institutions.) By Mahommedan commentators the commands in the Koran are not interpreted as a general injunction on all Moslems constantly to make war on the infidels. It is generally supposed that the application given by the caliph (an office now claimed by the sultans of Turkey). Mahommedans who do not acknowledge the spiritual authority of the Ottoman sultan, such as the Persians and Moors, look to their own rulers for the proclamation of a jihad; there has been in fact no universal warfare by Moslems on unbelievers since the early days of Mahommedanism. Jihads are generally proclaimed by all persons who claim to be mahdis, e.g. Mahommed Ahmad (the Sudanese mahdi) proclaimed a jihad in 1885. In the belief of Moslems every one of their number slain in a jihad is taken straight to paradise.

JIMENES (of XIMENES) DE CISNEROS, FRANCISCO (1436-1517), Spanish cardinal and statesman, was born in 1436 at Torrelaguna in Castile, of good but poor family. He studied at Alcalá de Henares and afterwards at Salamanca; and in 1495, having entered holy orders, he went to Rome. Returning to Spain in 1495, he brought with him an "expective" letter from the pope, in virtue of which he took possession of the archbishopship of Uzeda in the diocese of Toledo in 1473. Carillo, archbishop of Toledo, opposed him, and on his obdurate refusal to Church with the papacy. Long and sincerely Jimenes strenuously opposed, and at length in 1480 Carillo restored him to his benefice. This Jimenes exchanged almost at once for a chaplaincy at Siguenza, under Cardinal Mendoza, bishop of Siguenza, who shortly appointed him vicar-general of his diocese. In that position Jimenes won golden opinions from ecclesiastics and laymen; and he seemed to be on the sure road to distinction among the secular clergy, when he abruptly resolved to become a monk. Throwing up all his benefices, and changing his baptismal name Gonzales for that of Francisco, he entered the Franciscan monastery of San Jeronimo de los Reyes, recently founded by Ferdinand and Isabella at Toledo. Not content with the ordinary severities of the novitiate, he added voluntary austerities. He slept on the bare ground, wore a hair-shirt, doubled his fasts, and scourged himself with much fervour; indeed throughout his whole life, even when at the acme of his greatness, his private life was most rigorously ascetic. The report of his sanctity brought crowds to confess to him; but from them he retired to the lonely monastery of Our Lady of Castafar; and even built with his own hands a rude hut in the neighbouring woods, in which he lived at times as an anchorite. He was afterwards guardian of a monastery at Salceda. Meanwhile Mendoza (now archbishop of Toledo) had not forgotten him; and in 1492 he recommended him to Isabella as her confessor. The queen sent for Jimenes, was pleased with him, and to his great reluctance forced the office upon him. The post was politically important, for Isabella submitted to the judgment of her father-confessor not only her private affairs but also matters of state. Jimenes's severe sanctity soon won him considerable influence over Isabella; and thus it was that he first emerged into political life. In 1494 the queen's confessor was appointed provincial of the order of St Francis, and at once set about reducing the laxity of the mendicants in those provinces, especially in Andalusia and Castile. Meanwhile, however, the civil war between the Moors and the Christians raged more and more fiercely; and Isabella's choice of the Franciscan friar as her chief counsellor, and specifically as her confessor, was a mark of appreciation of his qualities in every line. Jimenes became the very type of the wise and discreet minister, who, without losing any time in consulting the canons of the Church, knew how to adapt himself to the present exigencies of the case. He suggested to the queen the plan of delivering the Moors out of the hands oftheir own leaders, and an armistice was concluded and the Sultan surrendered to the queen.

On the 24th of November 1504 Isabella died. Ferdinand at once resigned the title of king of Castile in favour of his daughter Joan and her husband the archduke Philip, assuming instead
that of regent. Philip was keenly jealous of Ferdinand's pretensions to the regency; and it required all the tact of Jimenes to bring about a friendly interview between the princes. Ferdinand finally retired from Castile; and, though Jimenes remained, his political weight was less than before. The sudden death of Philip in September 1506 quite overset the already tottering intellect of his wife; his son and heir Charles was still a child; and Ferdinand was at Naples. The nobles of Castile, mutually jealous, agreed to enthrall affairs to the archbishop of Toledo, Rodrigo de Jimenes, as regent of Castile. On the 11th of November, 1517, Charles came to the throne. Ferdinand did not return till August 1507; and he brought a cardinal's hat for Jimenes. Shortly afterwards the new cardinal of Spain was appointed grand inquisitor-general for Castile and Leon.

The next great event in the cardinal's life was the expedition against the Moorish city of Oran in the north of Africa, in which his religious zeal was supported by the prospect of the political and material gain that would accrue to Spain from the possession of such a city. The prospects of the expedition, equipped, like that which followed, at the expense of Jimenes; in, afterwards port of Mers-el-Kebir in 1505; and in 1509 a strong force, accompanied by the cardinal in person, set sail for Africa, and in one day the wealthy city was taken by storm. Though the army remained to make fresh conquests, Jimenes returned to Spain, and occupied himself with the administration of his diocese, and in endeavouring to recover from the regent the expenses of his Oran expedition. On the 28th of January 1516 Ferdinand died, leaving Jimenes as regent of Castile for Charles (afterwards Charles V.), then a youth of sixteen in the Netherlands. Though Jimenes at once took firm hold of the reins of government, and ruled to a determined and even autocratic manner, the haughty and turbulent Castilian nobility and the jealous intriguing Flemish councillors of Charles combined to render his position peculiarly difficult; while the evils consequent upon the unlimited demands of Charles for money threw much undeserved odium upon the regent. In violation of the laws, Jimenes acceded to Charles's desire to be proclaimed king; he secured the person of Charles's younger brother Ferdinand; he fixed the seat of the cortes at Madrid; and he established a standing army by an act of the great towns. Immediately on Ferdinand's death, Adrian, dean of Lyons, produced a commission from Charles appointing him regent. Jimenes admitted him to a nominal equality, but took care that neither he nor the subsequent commissioners of Charles ever had any real share of power. In September 1517 Charles landed in the province of Asturias, and Jimenes hastened to meet him. On the way, however, he fell ill, not without a suspicion of poison. While thus feebly, he received a letter from Charles coldly thanking him for his services, and giving him leave to retire to his diocese. A few hours after this virtual dismissal, which some, however, say the cardinal never saw, Francisco Jimenes died at Roa, on the 5th of November 1517.

Jimenes was a bold and determined statesman. Sternly and in flexibly, with a confidence that became at times overwhelming, he carried through what he had decided to be right, with as little regard for the convenience of others as for his own. In the midst of a corrupt clergy his morals were irreproachable. He was liberal to all, and founded and maintained very many benevolent institutions in his diocese. His whole time was devoted either to the state or to religion; his only recreation was in theological or scholastic discussion. Perhaps one of the most noteworthy points about the cardinal is the advanced period of life at which he entered upon the stage where he was to play such leading parts. Whether his abrupt change from the secular to the regular clergy was the fervid outcome of religious enthusiasm or the far-seeing move of a wily schemer has been disputed; but the constant austerity of his life, his unvarying superiority to small personal aims, are arguments for the former alternative that are not to be met by merely pointing to the actual honours and power he at last attained.

In 1500 was founded, and in 1508 was opened, the university of Alcalá de Henares, which, fostered by Cardinal Jimenes, at whose sole expense it was raised, attained a great pitch of outward magnificence. In 1524 an earthquake, which at some time visited the town, destroyed much of its walls. In 1536 the university was removed to Madrid, and the costly buildings were left vacant. In the hopes of supplanting the romances generally found in the hands of the young, Jimenes caused to be published religious treatises by himself and others. He revived also the Mozarabic liturgy, and endowed a chapel at Toledo, in which it was to be used. But his most famous literary service is "The Book of Cards" (iusserat en Tarotis, in the original text. In this work, on which he is said to have expended half a million of ducats, the cardinal was aided by the celebrated Stunci of the Jewish scholars Nuñez de Guzman (Pin- cianus), the Hebrast Vergara, and the humanist Nebriva, by a Cretan Greek Demetrius Ducas, and by three Jewish converts, of whom Zamora edited the Targum to the Pentateuch. The other Tarot-decks are not included. In the Old Testament a trusteeship stands between the Greek and Hebrew. The synagogue and the Eastern church, as the preface expresses it, are set like the thieves on this side and on that, with Jesus (that is, the Roman Church) in the midst. The text occupies five volumes, and a sixth contains a Hebrew lexicon, &c. The work commenced in 1502. The New Testament was finished in January 1514, and the whole in April 1517. The Masonic conceptions were not included in the work.

The book by Alvar Gomez de Castro, De Rebus Gestis Frangicci Ximenis (folio, 1659, Alcalá), is the quarry whence have come the materials for biographies of Jimenes—in Spanish by Robles (1604) and Fidelio (1813); in Flemish by de Lough (1562, 1655, 1743); Marcelle (1684); Flecher (1694) and Richard (1704); in German by Scheele (1814, translated into English by Canon Dalton, 1860) and Have mann (1848); and in English by Barrett (1813). See also Prescott's "History of the Conquest of Mexico," and Spanish and Italian "Memos de l'Acad. d'ist. de Madrid," vol. iv.

JIND, a native state of India, within the Punjab. It ranks as one of the Cia-Stulej states, which came under British influence in 1809. The territory consists of three isolated tracts, amid British districts. Total area, 1332 sq. m. Pop. (1901), 282,004, showing a decrease of 1% in the decade. Estimated gross revenue £900,000; there is no tribute. Grain and cotton are exported, and there are manufactures of gold and silver ornaments, leather and wooden wares and cloth. The chief, whose title is raja, is a Sikh of the Sidhu Jat clan and of the Phulkian family. The principality was founded in 1763, and the chief was recognized as the Mogul emperor in 1768. The dynasty has always been famous for its loyalty to the British, especially during the Mutiny, which has been rewarded with accessions of territory. In 1857 the raja of Jind was actually the first man, European or native, who took the field against the mutineers; and his contingent collected supplies in advance for the British troops marching upon Delhi, besides rendering excellent service during the siege. Raja Ranbir Singh succeeded as a minor in 1857, and was granted full powers in 1899. During the Tirah expedition of 1897-98 the Jind imperial service infantry specially distinguished themselves. The town of Jind, the former capital, has a station on the Southern Punjab railway, 50 m. N.W. of Delhi. Pop. (1901), 8047. The present capital and residence of the raja since 1827 is Sangur; pop. (1901), 11,852.

JINGO, a legendary empress of Japan, wife of Chūai, the 14th mikado (191-200). On her husband's death she assumed the government, and fitted out an army for the Invasion of Korea (see JAPAN, § 9). She returned to Japan completely victorious after three years' absence. Subsequently her son Ojen Tenno, afterwards 15th mikado, was born, and later was canonized as Hachiman, god of war. The empress Jingo ruled over Japan till 1882.

As regards the English oath, usually "By Jingo," or "By the living Jingo," the derivation is doubtful. The identification with the name of Gingolph or Gengulphus, a Burgundian saint who was martyred on the 11th of May 766, was a joke on the part of R. H. Barham, author of the Ingoldsby Legends. Some explain the word as a corruption of Jainko, the Basque name for God. It has also been derived from the Persian jang (war), St Jingo being the equivalent of the Latin god of war, Mars; and is even explained as a corruption of "Jesus, Son of God," Je-n-go. In
support of the Basque derivation it is alleged that the oath was first common in Wales, to aid in the conquest of which Edward I. imported a number of Basque mercenaries. The phrase does not, however, appear in any writings before the 17th century, first in a conjurer's jargon. Motteux, in his "Rabelais," is the first to use "by jingo," translating par dieu. The political use of the word as indicating an aggressive patriotism (Jingoes and Jingoism) originated in 1877 during the weeks of national excitement preceding the despatch of the British Mediterranean squadron to Gallipoli, thus frustrating Russian designs on Constantinople. While the public were on the tip-toe of expectation as to what policy the government would pursue, aibellic music-hall song with the refrain "It don't want to fight, but by Jingo if we do," was produced in London by a singer known as "the great MacDermott," and instantly became very popular. Thus the war-party came to be called Jingoes, and Jingoism has ever since been the term applied to those who advocate a national policy of arrogance and pugnacity.

For a discussion of the etymology of jingo see Notes and Queries, (August 25, 1894), 8th series, p. 149.

JINN (Djinn), the plural of jinn, is a class of spirits (genii) in Arabian mythology. They are the offspring of fire, but in their form and the propagation of their kind they resemble human beings. They are ruled by a race of kings named "Suleyman," one of whom is considered to have built the pyramids. Their central home is the mountain Kaf, and they manifest themselves to men under both animal and mortal form and become invisible at will. There are good and evil jinns, and these in each case reach the extremes of beauty and ugliness.

JIRECEK, JOSEF (1827-1888), Czech scholar, was born at Vysoké Mýto in Bohemia on the 4th of October 1827. He entered the Prague bureau of education in 1849, and became minister of the department in the Hohenzollern cabinet in 1871. His efforts to secure equal educational privileges for the Slav nationalities in the Austrian dominions brought him into disfavour with the German element. He became a member of the Bohemian Landtag in 1878, and of the Austrian Reichsrat in 1879. His merits as a scholar were recognized in 1875 by his election as president of the royal Bohemian academy of sciences. He died in Prague on the 25th of November 1888.

With Hermenegild Jireček he defended in 1862 the genuineness of the Konigshof manuscript, discovered by Wenceslaus Hanka. He published in the Czech language an anthology of Czech literature (3 vols., 1858-1861), a biographical dictionary of Czech writers (2 vols., 1875-1876), a Czech chronology, editions of Czech grammarian Casimire Cermak, and of the works of his father-in-law Pavel Josef Safářík (1795-1861).

His brother HERMENGILD JIREČEK, Ritter von Samakov (1827-1892), Bohemian jurisconsult, who was born at Vysoké Mýto on the 13th of April 1827, was also an official in the education department.

Among his important works on Slavonic law were Codex juris bohemici (11 parts, 1869-1892), and a Collection of Slav Law-Law (Czech, 1880). Slow Law in Bohemia and Moravia down to the 14th Century (Czech, 3 vols. 1863-1873).

JIREČEK, KONSTANTIN JOSEF (1854-1926), son of Josef, taught history at Prague. He entered the Bulgarian service in 1879, and in 1881 became minister of education at Sofia. In 1883 he became professor of universal history in Czech at Prague, and in 1893 professor of Slavonic antiquities at Vienna.

The bulk of Konstantin's writings deal with the history of the southern Slavs and their literature. They include a History of the Bulgarians (Czech and German, 1876), The Principality of Bulgaria (1861), Travels in Bulgaria (Czech, 1888), &c.

JIZAKH, a town of Russian Central Asia, in the province of Samarkand, on the Transcaspian railway, 71 m. N.E. of the city of Samarkand. Pop. (1907), 76,641. As a fortified post of Baban, it was taken by the Russians in 1806.

JOAB (Heb. "Yahweh is a father"), in the Bible, the son of Zeruiah, David's sister (1 Chron. ii. 16). His brothers were Asaiah and Abishai. All three were renowned warriors and played a prominent part in David's history. Abishai on one occasion saved the king's life from a Philistine giant (2 Sam. xxi. 17), and Joab as warrior and statesman was directly responsible for much of David's success. Joab won his spurs, according to one account, by capturing Jerusalem (1 Chron. xi. 4-9); with the help of his brother Asaiah he captured a city called Rabbah, and again directed the famous campaign against Absalom (2 Sam. xvii. 2); and he superintended the campaign against Ammon and Edom (2 Sam. xii. 1, xiii. 26; 1 Kings xi. 15). He showed his sturdy character by urging the king after the death of Absalom to place his duty to his people before his grief for the loss of his favourite son (2 Sam. xix. 1-8), and by protesting against David's proposal to number the people, an innovation which may have been regarded as an infringement of their liberties (2 Sam. xxiv.; 1 Chron. xvi. 6).

The hostility of the "sons of Zeruiah" towards the tribe of Benjamin is characterized by contrasted with David's own generosity towards Saul's fallen house. Abishai proposed to kill Saul when David surprised him asleep (1 Sam. xxvi. 8), and was anxious to slay Shimei when he cursed the king (2 Sam. xvi. 9). But David was reconciled to the will of Yahweh and refused to entertain the suggestions. After Asaiah met his death at the hands of Abner, Joab expostulated with David for not taking revenge upon the captors of his brother Absalom; but David reminded him of how he had ordered the captors to be let go (2 Sam. xix. 35). Joab was executed by his men after he had been summoned to the side of Adonijah against Solomon, and was put to death by Benaiah at Solomon's command, and it is possible that the charges are the fabrications of Joab's enemies in order to remove all possible blame to himself (2 Sam. xiv. 31). It is singular that Joab is not blamed for killing Absalom, but that he would be strange if the man who helped to reconcile father and son (2 Sam. xxv.) should have persevered so cruel an act in direct opposition to the king's wishes (xviii. 5, 10-16). A certain animus against Joab's family thus seems to underlie some of the popular narratives of the life of David (q.v.).

Joachim of Floris (c. 1145-1202), so named from the monastery of San Giovanni in Fiore, of which he was abbot, Italian mystic theologian, was born at Celico, near Cosenza, in Calabria. He was of noble birth and was brought up at the court of Duke Roger of Apulia. At an early age he went to visit the holy places. After seeing his comrades decapitated by the plague at Constantinople he resolved to change his mode of life, and, on his return to Italy, after a rigorous pilgrimage and a period of ascetic retreat, became a monk in the Cistercian abbey of Casamari. In August 1177 we know that he was abbot of the monastery of Corazza, near Martirano. In 1183 he went to the court of Pope Lucius III. at Veroli, and in 1185 visited Urban III. at Verona. There is extant a letter of Pope Clement III., dated the 8th of June 1188, in which Clement alludes to two of Joachim's works, the Considatio and the Expositio in Apocalypse, and urges him to continue them. Joachim however was unable to remove all possible blame to continue (q.v.).

He accordingly retired into the solitudes of Pietralata, and subsequently founded with some companions under a rule of his own creation the abbey of San Giovanni in Fiore, on Monte Nero, in the massif of La Sila. The pope and the emperor heirodized this foundation; Frederick II. and his wife Constance made important donations to it, and promoted the spread of its writings. Since then, not without success, the "order Florissian," and the "institution" which its founder had bestowed upon it. Joachim died in 1202, probably on the 20th of March.

Of the many prophetic and polemical works that were attributed to Joachim in the 13th and following centuries, only those enumerated in his will can be regarded as absolutely authentic. These are the Concordia novi et veteris Testamenti (first printed at Venice 1506), and the Expositio in Apocalypse (Venice, 1527), the Postillion decem chordarum (Venice, 1527), together with some "libelli" against the Jews or the adversaries of the Christian faith. It is very probable that these "libelli" are the writings entitled: Concordia veteris et novi testamenti; Controversiae, libri duo; De fidibus; Confessio fidei; Confessio fidei; De uniate Trinitatis. The last is perhaps the work which was condemned by the Lateran council in 1215 as containing an erroneous
criticism of the Trinitarian theory of Peter Lombard. This council, though condemning the book, refrained from condemning the author, in order to avoid a rupture with the bishops of Germany. Various attempts were then continued to be subjected to insulists as followers of a heretic, until they obtained from Honorius III. in 1220 a bull formally recognizing Joachim as orthodox and forbidding anyone to injure his disciples.

Some of his friends from Germany, who were not immediately convinced by these changes, continued to defend and help Joachim. Some served their avowed object with great success, being powerful instruments in the anti-papal polemic and sustaining the doctrine in various form in their writings and sermons. Among the most widely circulated were the commentaries on Jeremiah, Isaias, and Ezekiel, the Vaticinis pontificum and the De oneribus ecclesiae. Of his authentic works the doctrinal essential is the threefold division of the ages, i.e., the history of humanity, as present and future, into three periods, which, in his Expositio in Apocalypse (bk. i. ch. 3), he defines as the age of the Law, or of the Father; the age of the Gospel, or of the Son; and the age of the Spirit, which has not yet arrived. It is only through a day-by-day approach to this second age that the first period is a period of incubation, or initiation; the first age begins with Abraham, but the period of initiation with the first man Adam. The initiation period of the third age begins with St Benedict, while the actual age of the Spirit is not to begin until 1260, the Church—

miser amicta sole (Rev. xii. 1)—remaining hidden in the wilderness 1260 years. We cannot here enter into the infinite details of the other subdivisions imagined by Joachim, or into his system of perpetual concordances between the New and the Old Testaments, which, according to him, furnish the prefiguration of the third age. Far more interesting as explaining the diffusion of his ideas is the doctrine of the three ages, from the historical conception of the second and third centuries. The first age was the age of the Letter, the second the intermediary between the Letter and the Spirit, and the third was the Spirit age, which was to be the last and the most perfect. Its sound is that of study and wisdom, the period of striving towards mystical knowledge. In the age of the Father all that was necessary was obedience; in the age of the Son reading was enjoined; but the age of the Spirit was promised, and the one who reads and understands shall be as 

plena spiritus libertas, the age of contemplation, the monastic age, the era of the tropical, or spiritual age, the era of the Ordinare Oriental; spiritual age is never to be confused with the precociousness of the spirit. Joachim does not conceal his sympathies with the ideal of Basilian monachism. In his opinion—which is, in form at least, perfectly orthodox—the church of Peter will be, not abolished, but purified; actually, the same period is the model of the church in the three ages, as the monks, the viri spirituales. The entire world will become a vast monastery in that day, which will be the resting-season of a people with the mastery of the human being in the age of the Father, and the contemplative order by her son Joseph, and Rachel is destined to efface herself before her son. Similarly, the teaching of Christ and the Apostles on the sacraments is considered, implicitly and explicitly, as tertiary, as representing that passage from the sinignificantia to the significata which Joachim signifies at every stage of his demonstration. Joachim was not disturbed during his lifetime. In 1200 he supervised the ceremonies of the burning of the parchment of the book, which was undeniably confirmed his orthodoxy; the Lateran council, which condemned his criticism of Peter Lombard, made no allusion to his scholastic theologies; and the bull of 1220 was a formal condemnation of his teaching. The Joachimites ideas soon spread into Italy and France, and especially after a division had been produced in the Franciscan order. In 1220 a second bull was passed, which denouned St Francis as the initiator of Joachim's third age. Certain convents became centres of Joachimism. Around the hermit of Hyères, Hugh of Digne, was a group of Franciscans who expected from the advent of the third age the triumph of their ascetic ideas. The Joachimites even obtained a majority in the general chapter of 1227, and elected John of Parma, one of their number, general of the order. Pope Alexander IV. however, compelled John of Parma to renounce his dignity, and the Joachimite opposition became more and more vehement. Pseudo-Joachimite treatises sprang up on every hand, and, finally, in 1254, there appeared the Defensor Pacis justifying the Encyclics, or, as they are known abroad, the Speculum historiale, the work of a Spiritual Franciscan, Gherardo da Borgo San Donnino. This book was published with, and as an introduction to, the three principal works of Joachim, in which the Spirituals had made some inroads, but which were not altogether so unassailable as many persons supposed, that Joachim's books were the new gospel, but merely that the Calabrian abbot had supplied the key to Holy Writ, and that with the help of that intelligence mystica it would be possible to extract from the Old and New Testaments the eternal meaning, the gospel according to the Spirit, a gospel which would never be written; as for this eternal sense, it had been entrusted to an order set apart, the Christian order, chosen by Jesus Christ; and that this order the ideal of the third age was realized. These affirmations provoked very keen protests in the ecclesiastical world. The second bull, condemning the unorthodox opinions, was signed by Pope Innocent IV., and the bishop of Paris sent it to the pope. It was Innocent's successor, Alexander IV., who appointed a commission to examine it; and as a result of this commission, which sat at Lyons in 1256, the destruction of all books of Joachim and the papal breve dated the 23rd of October 1256. In 1260 a council held at Arles condemned Joachim's writings and his supporters, who were very numerous in that region. The Joachimite ideas were also repressed in the region of Lombardy. These works attack the papacy with the publication of the commentary on the Apocalypse. This book, probably published after the death of its author and probably by a number of Joachimite monks, was condemned at Lyon in 1265. An affirmation even clearer than that of Gherardo da Borgo is the elect character of the Franciscan order, as well as extremely violent attacks on the papacy. The Joachimite literature is extremely refined, and written by the middle of the century, with the aid of the more primitive works. Gherardo and the rest. Arnoldus de Villa Nova and Bernard Déléix have often comforted themselves with the thought of the era of justice and peace promised by Joachim. Dante indubitably Joachim in great reverence, and has placed him in Paradise (Paradiso, Canto XXXI.).

JOACHIM II. (1505–1571), surnamed Hector, elector of Brandenburg, the elder son of Joachim I, elector of Brandenburg, was born on the 13th of January 1505. Having passed some time at the court of the emperor Maximilian I, he married in 1524 a daughter of George, duke of Saxony. In 1532 he led a contingent of the imperial army on a campaign against the Turks; and soon afterwards, having lost his first wife, married Hedwig, daughter of Sigismund I, king of Poland. He became elector of Brandenburg on his father’s death in July 1555, and undertook the government of the old and middle marks, while the new mark passed to his brother John. Joachim took a prominent part in imperial politics as an advocate of peace, though he was never accepted for the throne of the Hapsburg. He attempted to make peace between the Protestants and the emperor Charles V. at Frankfort in 1530, and subsequently at other places; but in 1542 he led the German forces on an unsuccessful campaign against the Turks. When the war broke out between Charles and the league of Schmallkalden in 1546 the elector at first remained neutral; but he afterwards sent some troops to serve under the emperor. With Maurice, elector of Saxony, he persuaded Philip, landgrave of Hesse, to surrender to Charles after the imperial victory at Mühlberg in April 1547, and partook of the defeat of the elector. He was in no way connected with the incident; but, although he felt aggrieved when the emperor declined to be bound by this promise, he refused to join Maurice in his attack on Charles. He supported the Intermitt, which was issued from Augsburg in May 1548, and took part in the negotiations that resulted in the treaty of Passau (1552), and the religious peace of Augsburg (1555). In domestic politics he sought to consolidate and strengthen the power of his house by treaties with neighbouring princes, and succeeded in secularizing the bishoprics of Brandenburg, Havelberg and Lebus. Although brought up as a strict adherent of the older religion, he showed signs of wavering soon after his accession, and in 1559 allowed free entrance to the reformed teaching in the electorate. He took the communion himself in both kinds, and established a new ecclesiastical organization in Brandenburg, but retained much of the ceremonial of the Church of Rome. His position was not unlike that of Henry VIII. in England, and may be partly explained by a desire to replenish his impoverished exchequer with the wealth of the Church (see Brandenburg). After the peace of Augsburg the elector mainly confined his attention to Brandenburg, where he showed a keener desire to further the principles of the Reformation. By his luxurious habits and his lavish expenditure on public buildings he piled up a great accumulation of debt, which was partly discharged by the estates of the land in return for important concessions. He cast covetous eyes upon the archbishopric of Magdeburg and the bishopric of Halberstadt, both of which he secured for his son Frederick in 1551. When Frederick died in the following year, the elector’s son Sigismund obtained the two sees; and on Sigismund’s death in 1566 Magdeburg was secured by his nephew, Joachim Frederick, afterwards elector of Brandenburg. Joachim, who was a prince of generous and cultured tastes, died at Köpenick on the 3rd of January 1571, and was succeeded by his son, John George. In 1880 a statue was erected to his memory at Spandau.

JOACHIM, JOSEPH (1831–1907), German violinist and composer, was born at Kittsee, near Pressburg, on the 28th of June 1831, the son of Jewish parents. His family moved to Budapest when he was two years old, and he studied there under Serwaczynski, who brought him out at a concert when he was only eight years old. Afterwards he learnt from the elder Hellmesberger and Joseph Böhm in Vienna, the latter instructing him in the management of the bow. In 1843 he went to Leipzig to enter the newly founded conservatorium. Mendelssohn, after testing his musical powers, pronounced that the regular training of a music school was not needed, but recommended that he should receive a thorough general education in music from Ferdinand David and Moritz Hauptmann. In 1844 he visited England, and made his first appearance at Drury Lane Theatre, where his playing of Ernst’s fantasia on Otello made a great sensation; he also played Beethoven’s concerto at a Philharmonic concert conducted by Mendelssohn. In 1847–1849 and 1852 he revisited England, and after the foundation of the popular concerts in 1859, up to 1890, he played there regularly in the latter part of the season. On Liszt’s invitation he accepted the post of Konzertmeister at Weimar, and was there from 1850 to 1853. This brought Joachim close contact with the advanced school of German musicians, headed by Liszt; and he was soon persuaded to adopt the Lisztian style, which was beginning to be called the “music of the future”; but his artistic convictions forced him to separate himself from the movement, and the tact and good taste he displayed in the difficult moment of explaining his position to Liszt afforded one of the finest illustrations of his character.

His acceptance of a similar post at Hanover brought him into a different atmosphere, and his playing at the Düsseldorf festival of 1853 procured him the intimate friendship of Robert Schumann. His introduction of the young Brahms to Schumann is said to have been an incident which collaborated with Albert Dietrich in a joint sonata for violin and piano, as a welcome on his arrival in Düsseldorf. At Hanover he was königlicher Konzerdirектор from 1853 to 1868, when he made Berlin his home. He married in 1863 the mezzo-soprano singer, Amalie Weiss, who died in 1890. In 1869 Joachim was appointed head of the newly founded königliche Hochschule für Musik in Berlin. The famous “Joachim quartet” was started in the Sing-Akademie in the following year. Of his later life, continually occupied with public performances, there is little to say except that he remained, even in a period which saw the rise of numerous violinists of the finest technique, the acknowledged master of all. He died on the 15th of August 1907.

Besides the consummate manual skill which helped to make him famous in his youth, Joachim was gifted with the power of interpreting the greatest music in absolute perfection: while Bach, Mozart, Beethoven and Brahms were masters, whose works he played with a degree of insight that has never been approached, he was no less supreme in the music of Mendelssohn and Schumann; in short, the whole of the classical repertory has been identified with his playing. No event of Joachim’s artistic career would be complete which omitted mention of his absolute freedom from tricks or mannerism, his dignified bearing, and his unselfish character. His devotion to the highest ideals, combined with a certain austerity and massivity of style, brought against him an accusation of coldness from admirers of a more effusive temperament. But the answer to this is given by the depth and variety of expression which his mastery of the resources of his instrument put at his command. His biographer (1898), Andreas Moser, expressed his essential characteristic in the words: “He plays the violin, not for its own sake, but in the service of an ideal.”

As a composer Joachim did but little in his later years, and the works of his earlier life never attained the public success which, in the opinion of many, they deserve (see MUSIG). They undoubtedly have a certain austerity of character which does not appeal to every hearer, but they are full of beauty of a grave and dignified kind; and in such things as his “Hungarian concerto” for his own instrument the utmost degree of difficulty is combined with great charm of melodic treatment. The “romance” in B flat for violin and the variations for viola and orchestra are among his finest things, and the noble overture in memory of Kleist, as well as the scene for mezzo soprano from Schiller’s Demetrius, show a wonderful degree of skill in orchestration as well as originality of thought. Joachim’s place in musical history as a composer can only be properly appreciated in the light of his intimate relations with Brahms, with whom he studiously refrained from putting himself into independent rivalry, and to whose work as a composer he gave the co-operation of one who might himself have ranked as a master.
There are admirable portraits of Joan by G. F. Watts (1866) and by J. S. Sargent (1875), the latter presented to him on the 16th of October 1874, at the celebration of the sixtieth anniversary of his first appearance in England.

JOAN, a mythical female pope, who is usually placed between Leo IV. (847-855) and Benedict III. (855-858). One account has it that she was born in England, another in Germany of English parents. After an education at Cologne, she fell in love with a Benedictine monk and fled with him to Athens disguised as a man. On his death she went to Rome under the alias of Joannes Anglicus (John of England), and entered the priesthood, eventually receiving a cardinal's hat. She was elected pope under the title of John VIII., and died in childbirth during a papal procession.

A French Dominican, Steven of Bourbon (d. c. 1261) gives the legend in his Seven Gifts of the Holy Spirit. It is believed he has derived it from an earlier writer. More than a hundred authors between the 13th and 17th centuries gave circulation to the myth. Its explosion was first seriously undertaken by David Blondel, a French Calvinist, in his Éclaircissement de la question si une femme a été assise au siège papal de Rome (1657); and De Joanne Papissa (1657). The refutation was completed by Johann Dollinger in his Papsfalschen des Mittelalters (1863; Eng. trans. 1872).

JOAN OF ARC, more properly Jeanne d'Arc, afterwards known in France as Jeanne d'Arc! (1411-1431), the "Maid of Orleans," was born between 1410 and 1412, the daughter of Jacques d'Arc, peasant proprietor, of Domremy, a small village in the Voges, partly in Champagne and partly in Lorraine, and of her wife Isabeau, of the village of Doutoir, who from having married in Doutoir had received the surname of Romée. Although her parents were in easy circumstances, Joan never learned to read or write, and received her sole religious instruction from her mother, who taught her to recite the Pater Noster, Ave Maria, and Credo. She sometimes guarded her father's flocks, but at her trial in 1431 she strongly resented being referred to as a shepherd girl. In all household work she was specially proficient, her skill in the use of the needle not being excelled (she said) by that of any matron even of Rouen. In her childhood she was noted for her astounding physical energy; but her vivacity, so far from being tainted by any coarseness of feminine trait, was the direct outcome of an abnormally sensitive, nervous temperament. Towards her parents her conduct was uniformly exemplary, and the charm of her unselshish kindness made her a favourite in the village. As she grew to womanhood she became inclined to silence, and spent much of her time in solitude and prayer. She repelled all attempts of the young men of her acquaintance to win her favour; and while active in the performance of her duties, and apparently finding her life quite congenial, inwardly she was engrossed with thoughts reaching far beyond the circle of her experiences.

At this time, through the alliance and support of Philip of Burgundy, the English had extended their conquest over the whole of France north of the Loire in addition to their possession of Guienne; and while the infant Henry VI. of England had in 1422 been proclaimed king of France at his father's grave at St Denis, Charles the dauphin (still un crowned) was forced to watch the slow dismemberment of his kingdom. Isabella, the dauphin's mother, had favoured Henry V. of England, the husband of her daughter Catherine; and under Charles VI. a visionary named Merlin is said to have informed that England would be restored by a woman and would be restored by an armed virgin from the marches of Lorraine. To what extent this idea worked in Joan's mind is doubtful. In Geoffrey of Monmouth's tract, De prophetis Merlinii, there is a reference to an ancient prophecy of the enhancer Merlin concerning a virgin ex nomine canuio, and it appears that this nemus canuaitum had been identified in folklore with the oak wood of Domremy. Joan's knowledge of the prophecy does not, however, appear till 1420; and already before that, from 1424, according to her account at her trial, she had become imbued with a sense of having a mission to free France from the English. She heard the voices of St Michael, St Catherine and St Margaret urging her on. In May 1428 she tried to obtain from Robert de Baudricourt, governor of Vaucouleurs, an introduction to the dauphin, saying that God would send Charles at once, but she was rebuffed. When, however, in September the English (under the earl of Salisbury) crossed the Marne, the way to the south of France, she renewed her efforts with Baudricourt, her mission being to relieve Orleans and crown the dauphin at Reims. By persistent importunity, the effect of which was increased by the simplicity of her demeanour and her calm assurance of success, she at last prevailed on the governor to grant her request; and in February 1429, accompanied by six men-at-arms, she set out on her perilous journey to the court of the dauphin at Chinon. At first Charles refused to see her, but popular feeling in her favour induced his advisers to persuade him after three days to grant her an interview. She is said to have impressed him with the divinity of his mission by discovering him though disguised in the crowd of his courtiers, and by reassuring him regarding his secret doubts as to his legitimacy. And Charles was impressed by her knowledge of a secret prayer, which (he told Dunois) could only be known to God and himself. Accordingly, after a commission of doctors had reported that they had found in her nothing of evil or contrary to the Catholic faith, and a council of matrons had reported on her chastity, she was permitted to set forth with an army of 4000 or 5000 men to liberate Orleans. At the head of the army she rode clothed in a coat of mail and a red mantle, saying that she was to be that with which Charles Martel had vanquished the Saracens, the hind ing-place of which, under the altar of the parish church of the village of Ste Catherine de Fierbois, the "voices" had revealed to her; she carried a white standard of her own design embroidered with lilies, and having on the one side the image of God seated on the clouds and holding the world in His hand, and on the other a representation of the Annunciation. Joan succeeded in entering Orleans on the 29th of April 1429, and through the vigorous and unremitting efforts of the French was at last enabled to advance and, by the time of the May they raised the siege. It is admitted that her extraordinary pluck and sense of leadership were responsible for this result. In a single week (June 12 to 19), by the capture of Jargeau and Beaugency, followed by the great victory of Patay, where Talbot was taken prisoner, the English were driven beyond the Loire. With some difficulty the dauphin was then persuaded to set out towards Reims, which he entered with an army of 12,000 men on the 16th of July, Troyes having yielded on the way. On the following day, holding the sacred banner, Joan stood beside Charles at his court of investiture.

The king then entered into negotiations with a view to detach Burgundy from the English cause. Joan, at her importunity, remained with the army, but the king played her false when she attempted the capture of Paris; and after a failure on the 8th of September, when Joan was wounded, 2 his troops were disband ed. Joan went into Normandy to assist the duke of Alençon, but in December returned to the court, and on the 29th she and her family were ennobled with the surname of du Lis. Unconsol ed by such honours, she rode away from the court in March, to assist in the defense of Orleans against the siege of Burgundy; and on the 15th of May she was taken prisoner, after an unsuccessful sortie against the besiegers, when she was surrounded and taken prisoner. Charles, partly perhaps on account of his natural indolence, partly on account of the intrigues at the court, made no effort to effect her ransom, and never showed any sign of interest in her fate. By means of negotiations instigated and prosecuted with great perseverance by the university of Paris and the Inquisition, and through the persistent scheming of Pierre Cauchon, the bishop of Beauvais—a Burgundian partisan, who, chased from his own see, hoped to obtain the archbishopric of Rouen—she was sold in November by John of Luxemburg and Burgundy to said English, who on the 3rd of January 1431, at the instance of the

2 The Porte St Honoré where Joan was wounded stood where the Comédie Francaise now stands.
university of Paris, delivered her over to the Inquisition for trial. After a public examination, begun on the 9th of January and lasting six days, and another conducted in the prison, she was, on 10th of March, publicly accused as a heretic and witch, and, being in the end, was condemned to make her submission at the scaffold on the 24th of May, and received pardon, it is certain, still, however, the prisoner of the English, and, having been induced by those who had her in charge to reserve her male clothes, she was on this account judged to have relapsed, was sentenced to death, and burned at the stake on the streets of Rouen on the 10th of May 1341. In 1346 an impostor appeared, professing to be Joan of Arc escaped from the flames, who succeeded in inducing many people to believe in her statement, but afterwards confessed that he had professed her. The sentence passed on Joan of Arc was revoked by the pope on the 7th of July 1456, and since then it has been the custom of Catholic writers to uphold the reality of her divine inspiration.

During the latter part of the 19th century a popular cult of the Maid of Orleans sprang up in France, being greatly stimulated by the clerical party, which desired to advertise, in the person of this national heroine, the intimate union between patriotism and the Catholic faith, and for this purpose ardently desired her enrolment among the Saints. On the 27th of January 1804 solemn approval was given by Pope Leo XIII., and in February 1808, the formal declaration of her canonization. The Feast of the Epiphany (Jan. 6), 1904 was made the day on which a public declaration by Pope Pius X. that she was entitled to the designation Venerable. On the 13th of December 1908 the decree of beatification was published in the Consistory Hall of the Vatican.

As a historical figure, it is impossible to dogmatize concerning the personality of Joan of Arc. The modern clerical view has to some extent provoked what appears, in Anatole France's learned account, ably presented as it is, to be a delusion, in regards to the actual facts of her life and good faith, but her character was in any case exceptional. She undoubtedly was a Frenchman, his existence, and a powerful inspiration for all Frenchmen, the movement of the School of the Puritans. Moreover, as regards her genuine military qualities we have the testimony of Dunois and d'Alençon; and Captain Marin, in his Jeanne d'Arc, tacticien et stratége (1891), takes a high view of her achievements. The nobility of her purpose and the genuineness of her belief in her mission, combined with her purity of character and simple patriotism, stand clear. As Anatole France says, his unusual faculties, a matter concerning which belief largely depends, he found in her talents that there is no such thing as Joan of Arc, a freethinker wholly devoid of clerical influences, an opinion that Quicherat, a freethinker wholly devoid of clerical influences, admires them (Apercu nouveau, 1850), saying that the evidence is as good as for any facts in history. See also A. Lang on the "voices" in Proc. Soc. Psychological, vol. xii.

AUTHORITIES.—For bibliography see Le Livre d'or de Jeanne d'Arc (1894), and A. Mollinier, Sources de l'histoire de France (1904). Until the 19th century the history of Joan of Arc was almost entirely neglected; Voltaire's scurrilous satire La Pucelle, while indicating the attitude of his time, may be compared with the very farcical praisings in the Encyclopédie. The first attempt at a study of the life and work of the Maid of Orleans was that of L'Abbé d'Hérouet in 1796, published in the third volume of Mémoires of the Academy of Inscriptions, which served as the base for all lives until J. Quicherat's great work, Le Proverbes de Jeanne d'Arc (1841-46), and in his collection of the tales so full and so vivid that they reveal the character and life of the heroine with great distinctness. Michelet's sketch of her work in Histoire de France, one of the best sections of the history, is hardly more vivid than these sources, upon which all the later biographies (notably that of H. A. Wallon, 1866) are based. See also A. Marty, L'Histoire de Jeanne d'Arc d'après des documents originaux, with introduction by M. Sepet (1907); I. H. Dumas, Jeanne d'Arc et l'église (1908); and especially A. Marty, L'Influence de Jeanne d'Arc sur la France (1906). The Vie de Jeanne d'Arc by Anatole France (2 vols., 1908), is brilliant and erudite, but in some respects open to charges of inaccuracy and prejudice in its history of the town of Orleans. See also W. C. Rendell, in Times, Lit. Suppl., May 28, 1908. The attempt to establish the reality of the "revelations" and consequently to obtain the canonization of Joan of Arc led the Catholic church in France to publish lives (such as Sepet's, 1841) in support of their claims. Excellent works worth special mention are: Siméon Luce, Jeanne d'Arc à Domremy; L. Jarry, L'Arme anglaise au siège d'Orléans (1892); J. J. Bourrassé, Miracles de Madame Sainte Catherine de Fierbois (1883); Lacombe, L'Armée anglaise vaincue par Jeanne d'Arc (1892); E. P. Agnello, S.J., La Vie de Jeanne d'Arc. For the "false Pucelle" see A. Lang's article in his Valeurs Tragédie (1903). Of the numerous poems on the subject of Joan of Arc has been the subject, mention can only be made of Die Jüdinnen von Orleans of Schiller, and of the Joan of Arc of Southey. A drama in verse by Jules Barbier was set to music by C. Gounod (1873). (J. T. S. *; H. C.P.)

JOANNE (or JEANNE), VICENTE (1506-1570), head of the Valenciennes school of painters, and often called "the Spanish Raphael," was born at Fuente de la Higuera in the province of Valencia in 1506. He is said to have studied for his art some time in Rome, with which school his affinities are closest, but his most important part of life was spent in Italy. The last sentence on Joan of Arc has been the subject, mention can only be made of Die Jüdinnen von Orleans of Schiller, and of the Joan of Arc of Southey. A drama in verse by Jules Barbier was set to music by C. Gounod (1873).

JOANNA (1479-1555), called the Mad (la Loca), queen of Castile and mother of the emperor Charles V., was the second daughter of Ferdinand and Isabel, king and queen of Spain, and was born at Palermo on the 17th of January 1479. Her youngest sister was Catherine of Aragon, the first queen of Henry VIII. In 1496 at Lille she was married to the archduke Philip the Handsome, son of the German King Maximilian I., and at Ghent, in February 1500, she gave birth to the future emperor. The death of her only brother John, of her eldest sister Isabel, queen of Portugal, and then of the latter's infant son Miguel, made Joanna heiress of the Spanish kingdoms, and in 1502 the cortes of Castile and of Aragon recognized her and her husband as their future sovereigns. Soon after this Joanna's reason began to give way, she was dressed in an extravagant fashion for her absent husband, whom at length she joined in Flanders; in this country her passionate jealousy, although justified by Philip's conduct, led to deplorable scenes. In November 1504 her mother's death left Joanna queen of Castile, but as she was obviously incapable of ruling, the duties of government were undertaken by her father, and then for a short time by her husband. The queen was with Philip when he was wrecked on the English coast and became the guest of Henry VII. at Windsor; soon after this event, in September 1505, he died and Joanna's mind became completelyAtPathetic, and she was not possible to get her away from the dead body of her husband. The remainder of her miserable existence was spent at Tordesillas, where she died on the 3rd of April 1555. In spite of her afflictions the queen was sought in marriage by Henry VII. just before his death. Nominally Joanna remained queen of Castile until her death, her name being joined with that of Charles in all public documents, but of necessity she took no part in the business of state. In addition to Charles she had a son Ferdinand, afterwards the emperor Ferdinand I., and four daughters, among them being Maria (1525-1558), wife of Louis II., king of Hungary, afterwards Governor-general of the Netherlands.

See R. Villa, La Reina doña Jeanne la Loca (Madrid, 1882); Rüdiger, Johanne die Wahrsinnige (Vienna, 1890); W. H. Prescott, Hist. of Fer-

dinand and Isabelia (1854); and H. Tighe, A Queen of Unrest (1907).

JOANNA I. (c. 1327-1382), queen of Naples, was the daughter of Charles duke of Calabria (d. 1328), and became sovereign of Naples in succession to her grandfather King Robert in 1343. Her first husband was Andrew, son of Charles Robert, king of Hungary, who like the queen herself was a member of the house of Anjou. In 1345 Andrew was assassinated at Aversa, possibly with his wife's connivance, and at once Joanna married Louis, son of Philip prince of Taranto. King Louis of Hungary then came to Naples to avenge his brother's death, but the queen took refuge in Provence—which came under her rule at the same time as Naples—purchasing pardon from Pope Clement VI. by selling to him the town of Avignon, then part of her dominions. Having returned to Naples in 1352 after the departure of Louis, Joanna lost her second husband in 1362, and married James, king of
JOANNA II. OF NAPLES-JOBS

422

Majorca (d. 1375), and later Otto of Brunswick, prince of Taranto. This queen had 90 sons, and as both her daughters were dead she made Louis I. duke of Anjou, brother of Charles V. of France, her heir. This proceeding so angers Charles, duke of Durazzo, who regarded himself as the future king of Naples, that he seized the city. Joanna was captured and was put to death at Aversa on the 22nd of May 1382. The queen was a woman of intellectual tastes, and was acquainted with some of the poets and scholars of her time, including Petrarch and Boccaccio.

See Crivelli, Della prima e della seconda Giovanna, regina di Napoli (1830); G. Battaglia, Giovanna I., regina di Napoli (1838); S. C. Barcelo, Giovanna I. de Nàpols (1893); and Francesco M. Steele, The Beautiful Queen Joanna I. of Naples (1910).

JOANNA II. (1371-1435), queen of Naples, was descended from Charles II of Anjou through his son John of Durazzo. She had been married to William, son of Leopold III. of Austria, and at the death of her brother King Ladislaus in 1414 she succeeded to the Neapolitan crown. Her life had always been very dissolute, and although now a widow of forty-five, she chose as her lover Pandolfo Alpo, a youth of twenty-six, whom she made her successor. He and his confederate Giacomo Attavanti Sforza, compelling her to marry him, and the turbulent barons wished to provide her with a husband who would be strong enough to break her favourites yet not make himself king. The choice fell on James of Bourbon, a relative of the king of France, and the marriage took place in 1415. But James at once declared himself king, had Alpo killed and Sforza imprisoned, and kept his wife in a state of semi-confinement; this led to a counter-agitation on the part of the barons, who forced James to liberate Sforza, renounce his kingship, and eventually to quit the country. The queen now sent Sforza to re-establish her authority in Rome, whence the Neapolitans had been expelled after the death of Ladislaus; Sforza entered the city and obliged the condottiere Braccio da Montone, who was defending it in the pope's name, to depart (1416). But when Oddo Colonna was elected pope as Martin V., he allied himself with Joanna, who promised to give up Rome, while Sforza returned to Naples. The latter found, however, that he had lost all influence with the queen, who was completely dominated by her new lover Giovanni (Sergianni) Caracciolo. Hoping to re-establish his position and crush Caracciolo, Sforza favoured the pretensions of Louis III. of Anjou, and in 1416 obtained the succession of Naples at Joanna's death, a course which met with the approval of the pope. Joanna refused to adopt Louis owing to the influence of Caracciolo, who hated Sforza; she appealed for help instead to Alphonso of Aragon, promising to make him her heir. War broke out between Joanna and the Aragonese on one side and Louis and Sforza, supported by the pope, on the other. After much fighting by land and sea, Alphonso entered Naples, and in 1422 peace was made. But dissensions broke out between the Aragonese and the Catalans, and the Neapolitans, and Alphonso had Caracciolo arrested; whereupon Joanna, fearing for her own safety, invited the aid of Sforza, who with difficulty carried her off to Aversa. There she was joined by Louis whom she adopted as her successor instead of the ungrateful Alphonso. Sforza was accidentally drowned, but when Alphonso returned to Spain, leaving only a small force in Naples, the Angevins with the help of a Genoese fleet recaptured the city. For a few years there was peace in the kingdom, but in 1432 Caracciolo, having quarrelled with the queen, was seized and murdered by his enemies. Internal disorders broke out, and Gian Antonio Orsini, prince of Taranto, led a revolt against Joanna in Apulia; Louis of Anjou died while en route to campaign against the rebels (1434), and Joanna herself died on the 11th of February 1435, after having appointed his son René as her successor. Weak, foolish and dissolute, she made her reign one long scandal, which reduced the kingdom to the lowest depths of degradation. Her perpetual intrigues and her political incapacity made Naples a prey to anarchy and foreign invasions, destroying all sense of patriotism and loyalty both in the barons and the people.

JOASH, or JEROASH (Heb. "Yahuweth is strong, or hath given"), the name of two kings of Palestine in the Bible.

1. Son of Ahaziah (see JEHORAM, 2) and king of Judah. He obtained the throne by means of a revolt in which Athahiah (q.v.) perished, and his accession was marked by a solemn covenant, and by the overthrow of the temple of Baal and of its priest Mattan-Baal. In this the priest Jehoiada (who must have continued to act as regent) took the leading part. The account of Joash's reign is not from a contemporary source (2 Kings xi. 4–xii. 16), and 2 Chronicles adds several new details, including a tradition as to the fate of the kings and priests who conspired against J. Jehoiada (xxii. 11; xxiv. 3, 15 sqq.). At an unostentatious, the Arameans under Hazael captured Gath, and Jerusalem only escaped by buying off the enemy (2 Kings xii. 17 sqq.). This may perhaps be associated with the Aramean attacks upon Israel (2 below), but the tradition recorded in 2 Chron. xxiv. 23 sqq. differs widely and cannot be wholly rejected. The king perished in a conspiracy, the origin of which is not clear; it may have been for his attack upon the priests, it was scarcely for the course he took to save Jerusalem. He was succeeded by his son Amaziah, whose moderation in averting his father's death received much moral condemnation. After defeating the Edomites, Amaziah turned his attention to Israel.

2. Son of Jehoshaz and king of Israel. Like his grandfather Jehu, he enjoyed the favour of the prophet Elisha, who promised him a triple defeat of the Arameans at Aphek (2 Kings xiii. 14 sqq. 22–25). The cities which had been taken from his father by Hazael the father of Ben-hadad were recovered (cf. 1 Kings xx. 34, time of Ahab) and the released gained by Israel from the previous blows of Syria prepared the way for its speedy extension of power. When challenged by Amaziah of Judah, Joash utterd his godliness by an offer to select a place of meeting and crown a king from the example of the king of Judah (xxiv. 13, 15 sqq. see also 2 KINGS, xi. 8–15; see also ARMENIAN), and a battle was fought at Beth-shemesh, in which Israel was completely successful. An obscure statement in 2 Chron. xxv. 13 would show that this was not the only conflict; at all events, Amaziah was captured, the fortifications of Jerusalem were partially destroyed, the treasures of the Temple and palace were looted, and hostages were carried away to Samaria. According to one statement, Amaziah survived the disaster fifteen years, and lost his life in a conspiracy; but there is a gap in the history of Judah which the narratives do not enable us to fill (2 Kings xxiv. 1; see xxvii. 17, 25). See further UZZIAH; JEROBOAM (2); and JEWS.

(S. A. C.)

JOBS. The book of Job (Heb. 37ου 'Iyôb, Gr. 'Iâbô), in the Bible, the most splendid creation of Hebrew poetry, is so called from the name of the man whose history and afflictions and sayings form the theme.

Contents.—As it now lies before us it consists of five parts. 1. The prologue, in prose, ch. i.–ii., describes in rapid and dramatic steps the history of this man, his prosperity and greatness corresponding to his godliness; then how his life is drawn in under the operation of the sifting providence of God, through the suspicion suggested by the Satan, the minister of this aspect of God's providence, that his godliness is selfish and only the natural return for unexamined prosperity, and the insinuation that if stripped of his prosperity he will curse God to His face. These suspicions bring down two severe calamities on Job, one depriving him of children and possessions alike, and the other throwing the man himself under a painful malady. In spite of these afflictions Job retains his integrity and acquires no wrong to God. When in is described the advent of Job's three friends—Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite—who, having heard of Job's calamities, come to condo his with him. 2. The body of the book, in poetry, consists in a series of speeches in which the form of Job's afflictions and the relation of external evil to the righteousness of God and the conduct of men are brilliantly discussed. This part, after Job's passionate outburst, in ch. xiv., is divided into three sections, each one of which, one by each of the friends, and three by Job, one in reply to each of theirs (ch. iv.–xiv.; xv.–xxi.; xxii.–xxxii.), although in the last cycle the

1 That the murder of Zerubiah the son of Jehoaddah (2 Chron. I.c.) is referred to in Matt. xxi. 35, Luke xi. 51 is commonly held; but see Cheyne, Ency. Bib. col. 5373.
third speaker Zophar fails to answer (unless his answer is to be found in ch. xxviii.). Job, having driven his opponents from the field, cast about for a cue which he might make use of to pour some
pathetic words upon his early prosperity, contrasting with it his present humiliation, and ends with a solemn repudiation of all the offences which might be suggested against him, and a challenge to God to cast the whole burden of which He had accused him and for which He afflicted him. 3. Elihu, the representative of a younger generation, who has been a silent observer of the debate, interposes in the manner of one who responded to both Job and his friends the cause, and offers what is in some respects a new solution of the question (xxxii.–xxxvii.). 4. In answer to Job's repeated demands that God would appear and solve the riddle of his trials the Lord answers Job out of the whirlwind. The divine speaker does not condescend to refer to Job's individual problem, but in a series of ironical interrogations asks him, as he thinks himself capable of fathoming all things, to expound the mystery of existence to the unsatisfied world, the origin of the universe, the instincts of the creatures that inhabit the desert, and, as he judges God's conduct of the world, invites him to seize the reins, gird himself with the thunder and quell the rebellious forces of evil in the universe (xxxviii.–xlii.). Job is humbled and abashed, lays his hand upon his mouth, and repents his hasty words in dust and ashes. No solution of his problem is vouchsafed; but God Himself effects that which neither man's own thoughts of God nor the representations of the friends could accomplish: he had heard of him with the hearing of the ear without effect, but had now the personal presence of God to correct religious dogma in the book. 5. The epilogue, in prose (xlii.–l), describes Job's restoration to a prosperity double that of his former estate, his family felicity and long life.

Design.—With the exception of the episode of Elihu, the connexion of which with the original form of the poem may be doubtful, all five parts of the book are essential elements of the work as now extant, and the whole of the former parts of the second and fourth divisions may have been expanded by later writers. The idea of the composition is to be derived not from any single element of the book, but from the teaching and movement of the whole piece. Job is unquestionably the hero of the work, and in his ideas and his history combined we may assume that we find the author himself speaking and teaching. The discussion between Job and his friends of the problem of suffering occupies two-thirds of the book, or, if the space occupied by Elihu be not considered, nearly three-fourths, and in the direction which the author causes this discussion to take we may see revealed the main didactic purpose of the book. When the three friends, the representatives of former theories of providence, are reduced to silence, we may be certain that it was the author's purpose to discredit the ideas which they represent. Job himself offers no positive contribution to the doctrine of evil; his position is negative, merely antagonistic to that of the friends. But this negative position victoriously maintained by him has the effect of clearing the ground, and the author himself supplies in the prologue the positive truth, when he communicates the real explanation of his hero's calamities, and teaches that they were a trial of his faith, not a menace. It was therefore the author's main purpose in his work to widen men's views of the providence of God and set before them a new view of suffering. This purpose, however, was in all probability subordinate to some wider practical design. No Hebrew writer is merely a poet or a thinker. He is always a teacher. He has men before him in their relations to God, and usually not men in their individual relations, but members of the family of Israel, the people of God. It is consequently scarcely to be doubted that the book has a national scope. The author considered his new truth regarding the meaning of suffering, and the source of its origin, as a matter of deep concern and interest for the heart of his people. But the teaching of the book is only half its contents. It contains also a history—deep and inexplicable affliction, a great moral struggle, and a victory. The author meant his new truth to inspire new conduct, new faith, and new hopes. In Job's sufferings, undeserved and inexplicable to him, yet capable of an explanation most consistent with the goodness and faithfulness of God, and casting honour upon his faithful servants; in his despair bordering on unbelief; at last overcome; and in the happy issue of his afflictions—in all this Israel may see itself, and from the sight take courage, and forecast its own history. Job, however, is not to be considered Israel, the righteous servant of the Lord, under a feigned name; he is no mere parable (though such a view is found as early as the Talmud); he and his history have both elements of reality in them. It is these elements of reality that the author wished his readers to understand, and he wrought with humanity as a whole, confined within the straitened limits set by its own ignorance, wounded to death by the mysterious sorrows of life, tortured by the uncertainty whether its cry finds an entrance into God's ear, alarmed and paralysed by the irreconcilable discrepancies which it seems to discover between its necessary thoughts of Him and its experience of Him in His providence, and faint with longing that it might come into His place; and behold him, not girl with His majesty, but in human form, as one looketh upon his fellow. 2. It is these elements of truth that make the history of Job instructive to Israel in the times of affliction when it was set before them, and to men of all races in all ages. It would probably be a mistake, however, to imagine that the author consciously stepped outside the limits of his nation and assumed a human position antagonistic to it. The chords he touches vibrate through all humanity—but this is because Israel is the religious kernel of humanity, and because from Israel's heart the deepest religious music of mankind is heard, whether of pithos or of joy.

Two threads requiring to be followed, therefore, run through the book—one the discussion of the problem of evil between Job and his friends, and the attempt at a solution of it by God, the first being subordinate to the second. Both Job and his friends advance to the discussion of his sufferings and of the problem of evil, ignorant of the true cause of his calamities—Job in his strong in his sense of innocence, and the friends armed with their theory of the righteousness of God, who giveth to every man according to his works. With fine psychological instinct the poet lets Job represent the perfect man, his innocence, his justice, his serenity, his calmness, his fearlessness in the face of suffering. He has not a malicious design to harm him. His bereavements and his malady be bore with a steady courage, and his wife's direct instigations to godlessness he repelled with severity and resignation. But when his equals and the old men of his time see his happiness, as they will see his looks and in their seven days' silence: the depth of his own misery, his self-command deserted him, and he broke out into a cry of despair, cursing his day and crying for death (iii.). Job had somewhat misinterpreted the demeanour of his friends. It was not all pity that it expressed. Along with their pity they had also brought their theology, and they trusted to heal Job's malady with less than a few days' suffering. His soul would be exercised, with the sovereign virtues of this remedy. But he had learned through a higher teaching, the events of God's providence, that it was no longer a specific in his case. His violent impatience, however, became less when he attacked upon the divine rectitude only served to confirm the view of his sufferings which their theory of evil had already suggested to his friends. And thus commences the dialogue which gives through the book its permanent voice in the world.

The three friends of Job came to the consideration of his history with the principle that calamity is the result of evil-doing, as prosperity is the reward of righteousness. Suffering is not an accident or a spontaneous growth of nature; man may be in trouble as the sparks fly upwards; there is in human life a tendency to do evil which draws down upon men the chastisement of God (v. 6). The principle is thus enunciated by Eliapha, from whom the other spokesmen take their cue: where there is suffering there has been sin in the sufferer. Not suffering in itself, but the effect of it on the sufferer is what gives insight into his true character. Suffering is not always punished; it may deliver or resolve the distress described to the hero in his sin. If he sees in his suffering the monition of God and turns from his evil, his future shall be rich in peace and happiness, and his latter estate more prosperous than his first. If he murmurs or resists, he can only perish under the multiplying chastisements which his impertinence will provoke. Now this principle is far from being a peculiar crotchet of the friends; its truth is undeniable, though they erred in supposing that it would cover the wide providence of God. The principle is the fundamental idea of moral government, the expression of the natural conscience, a principle common more or less to all peoples, though perhaps more prominent in the Semitic mind, and under the religious conditions prevailing in the L地中海o, not suggested to Israel first by the law, but found and adopted by the law, though it may be sharpened by it. It is the fundamental principle of prophecy no less than of the law, and, if possible, of the whole of philosophy. But it is not to be supposed that the idea among the Hebrews had a simpler task before it than it had in the West or in thefarther East. The Greek philosopher began his operations upon the sum of things; he threw the universe into his crucible at once. His object was to effect some analysis of it, so
JO

that he could call one element cause and another effect. Or, to vary the figure, his endeavour was to pursue the streams of tendency which led to the reach of his persecutors, and sent them all forth. God, a single cause and explanation, was the object of his search. But to the Hebrew of the later time this was already found. The analysis resulting in the distinction of God and man, with the whole moral sphere as the centre of the universe, had, in the progress of time, shed upon these circumstances of the process had been forgotten, and only the unchallengeable result remained. His philosophy was not a quest of God whom he did not know, but a recognition on all hands of God, who was in plain and simple terms that idea of God, a Being wholly just, doing all. And the world was little more than the phenomena that revealed the mind and the presence and power of God to such as might and might not have confessed that there was such sinfulness in every human life as was sufficient to account for the severest chastisement from heaven, or at least he might have stopped short of charging God foolishly. But the Hebrew took up his meditation on the idea of God, and such an explanation of his sufferings would suggest itself to the sufferer, even though it might be in truth a false explanation. For instance, when God's idea is that of the author of the art of the writer, or his truth to nature, and the extraordinary freedom with which he moves among his materials, as well as the power and individuality of his dramatic creations, are most remarkable. Hence the problem remains what is the meaning of the truth on the question in dispute, and he accomplishes this by allowing his performers to push their false principles to their proper extreme. There is nothing about which men are usually so sure as the character of God. They are ever ready to take Him in their own hand, to interpret His providence in their own sense, to say what things are consistent or not with His character and word, and to beat down the opposing consciences of other men by His so-called authority, which is nothing but their own. The friends of Job were religious Orientals, men to whom God was a being in immediate contact with the world and life, to whom the idea of sin or righteousness was related to a spirit within the heart. It was not to dwell on the idea of a divine scheme pursuing a distant end by complicated means, in which the individual's interest may suffer for the greater good. The broad sympathies of the author and his friends are the true key-note of the whole book, and the scope which he allows them, in the richness of the thought and the splendid luxuriance of the imagery—drawn from the immemorial monuments of the past in the history of the world, and the observation of life—with which he makes them clothe their views. He remembered the elements of truth in the theory from which he was departing, that it was a national heritage, which he himself had been constrained not without a noble and manly heart and spirit to abandon; and, while showing its insufficiency, he sets it forth in its most brilliant form.

The extravagance of Job's assertions was occasioned partly by the common position of his friends, which left no room for his conscious innocence along with the rectitude of God. Again, the poet's purpose, as the prologue shows, was to teach that afflictions may fall on a man out of all connexion with any offence of his own, and merely as the trial of his righteousness; and hence he allows Job, as by a true instinct of the nature of his sufferings, to repudiate all connexion between them and sin in himself. And further, the terror conflict into which the suspicions of the Satan brought Job could not be exhibited without pushing him to the verge of ungodliness. These are all elements of the poet's art; but art and passion are one. In ancient Hebrew life the sense of sin was far deeper than it is now, and the poet is more honest to God. Nothing is more false than to judge the poet's creation from our later point of view, and construct a theory of the book according to our later convictions of the world, and the less so as it is more than belonged to antiquity. In complete contradiction to the testimony of the book itself, some critics, as Hengstenberg and Budde, have assumed that Job's spiritual pride was the cause of his afflictions. The world idea, powerfully developed in the book, never was or could be that man, whatever he was, who is the wick of a common lamp, who already foresees that he will not be the last to be covered with a veil if he should ever raise himself above others. The poet drapes his story in the garb of facts; and it is not the poet speaking in his speech, who is the true man of the drama, but Job himself. Job's is the poetry of the poet; and the passion of the poet is the poem of Job, and no other man can be Job. In the poet's purpose is seen the fact that at the end of each of his great trials he notes that Job sinned not, even ascribed wrong to God (i. 22; ii. 10), and from the effect which the divine voice施加 from Him, to their blame. In the first cycle of debate (ix.-xv.) Job's mind reaches the deepest limit of estrangement. There he neither charges God with rashness, justice, or at least he is not in the mood for it. In his present enmity, he regards the latter as the true expression of God's attitude towards His creatures, and the former, comprising all his infinite creative skill in weaving the delicate organism of
human nature and the rich endowments of His providence, only as the means of exercising His majesty and moral powers in the infinite.

When the Semitic skin of Job is scratched, we find a modern pessimist beneath. Others in later days have brought the keen senses of a poet to the frame with all the subtlety and force that God has given. To him, the whole moral corruption around him, from the author's manner of using the idea we may judge that it was familiar to himself. In the second century the thought of a future reconciliation with God is not altogether new. That same sense of the moral and religious evolution of the world, which, when we observe calumnies that we cannot morally account for, we reach by considering that providence is a great scheme moving according to general laws, and that it does not always certainly relate to the subject, is possible to a Semitic mind. He drew a distinction between an outer God whom events obey, pursuing him in his anger, and an inner God whose heart was with him, who was aware of his innocence, and he appeals to God from God, and beseeches God to acknowledge that He shall receive justice from God (xxxvi. 19; xvii. 3). And so high at last does this consciousness that God is at one with him, that, in his exultation, he assures the ascension of the phlegm, He shall raise him from the dust and render him justice before men, and that he shall see Him with his own eyes, no more estranged on his side, and for this moment he faints with longing (xxix. 25 seq.).

After this excess of faith Job's mind remains calm, even to the point of firmness and reward, as he tends by firmly charging God with perverting his right, and demanding to know the cause of his afflictions (xxxvii. 2 seq.; xxxviii. 3, wherein Job's language is the language of which he has written). In answer to this demand the Divine voice answers Job out of the tempest: "Who is this that darkeneth counsel by words without knowledge? The word "counsel" intimates to Job that God does not act without a design, and large and beyond the comprehension of man; and to impress this is the purpose of the Divine speeches. The speaker does not enter into Job's particular case; there is nothing in it tending to uncloud his riddle; his thought is a way to the wisdom and majesty of God Himself. His own words and those of his friends are but echoed, but it is God Himself who now utters them. Job is in immediate nearness to the man of God, but he is unfruitful. His soul overflown by sorrow, and he is enabused! God Himself effects what neither the man's 1

This remarkable passage reads thus: "But I know that my redeemer liveth, and afterwards he shall arise upon the dust, and after my skin, even this body, is destroyed, without my flesh shall I see God, whom I shall see for myself, and mine eyes shall behold, and not as a stranger; my reins within me are consumed with longing." The redeemer who liveth and shall arise or stand upon the earth is God, whom he shall see with his own eyes, on his side. The course of exegesis was greatly influenced by the translation of Jerome, who, designating God, rendered the words sanctus sum . . . et rursus circumdabit pelle mea in carne mea video deum meum. The only point now in question is whether the words destroyed and without my flesh should be taken literally, and only, of the physical frame, and his disease upon him, or, literally, of the separation of the body from death. A third view which assumes that the words rendered without my flesh, which run literally, out of my flesh, mean losing out of my flesh, that is, clothed with a new body, and finds the idea of resurrection replaced, perhaps imports more into the language than it will fairly bear. In favour of (b) may be adduced the persistent refusal of those who hold that the book is the product of the seventy-five fragments, of the word afterwards; and perhaps the analogy of other passages where the same situation appears, as Ps. cxix. and lxix., although the actual denouement of the tragedy supports (a). The difference between the two senses is not important, when the Old Testament conception of the soul is considered, though it may become important in the New Testament. The view of immortality is considered. To the Hebrew the life beyond was not what it is to us, a freedom from sin and sorrow and admission to an immediate divine fellowship not anterior to here. To him the life beyond was not to be conceived of as a transference of the life here; all he desired was his fellowship with God here should not be interrupted in death, and that Shed, the place into which deceased persons descend, is a place of unmerited remuneration. He might be overeager. On this account the theory of Ewald, which throws the centre of gravity of the book into this passage in ch. xlix., considering its purpose to be to teach that the riddles of this life shall be solved by the inequalities correponding from all ages in the life of the one-sided. The point of the passage does not lie in any distinction which draws between this life and a future life; it lies in the assurance which Job expresses that God, who even now knows his innocence, will not be forgotten, though estranged now, He will at last take him to His heart.
disappears, his personality being too slight to have any place in the result.

Much graver are the suspicions that attach to the speeches of Elihu. Most of those who have studied the book carefully hold that this part does not belong to the original text, but that it has been inserted at a considerably later time. The piece is one of the most interesting parts of the book; both the person and the thoughts of Elihu are marked by a strong individuality. This individuality has been generally regarded as a personal expression. The almost general opinion is that Elihu passed a very severe judgment on Elihu: he is a buston, a boisterous youth whose shallow intermeddling is only to be explained by the fearfulness of his years, the incalculable of folly, or even the Saxicism of himself and his blood. Some have regarded him as the incarnation of the voice of God or even of God himself. The main objections to the connexion of the episode of Elihu with the original text are: first, that the prologue and epilogue would be out of place; second, that on the cause of Job's afflictions he occupies virtually the same position as the friends; that his speeches destroy the dramatic effect of the divine manifestation by introducing a lengthened break between Job's character and the answer of God; that the language and style of the piece are marked by an excessive mannerism, too great to have been created by the author of the rest of the poem; that the allusions to the rest of the book are so minute as to betray a reader rather than a writer; and that the views regarding sin, and especially the scandal given to the author by the irreverence of Job, indicate a religious advance which marks a later age. Thus, Job is an interpolation to the book.

Regarding the origin of afflications he is at one with the friends, although he dwells more on the general sinfulness of man than on actual sins, and his reproachment of Job's position is the direct antithesis of theirs and of Job because he made himself righteous before God, and against his friends because they found no answer to Job. His whole object is to refute Job's charge of injustice against God. What is Job's position regarding the question of sin? Elihu's position is as an argumenter. These do not lack cogency, but betray a kind of thought different from that of the friends. Injustice in God, he argues, can only arise from selfishness and pride; to permit sin to feed upon itself is to break the harmony of creation and to cast upon the parties concerned a moral responsibility; and justice in God is in keeping with the philosophy of the book.

The meaning of ch. xxvii, can only be that "Wisdom" that, is, a theoretical comprehension of providence, is unattainable by man; whose only wisdom is the fear of the Lord or practical piety. But to bring Job to the feeling of this truth was just the purpose of Elihu and the divine speeches; and if Job had reached it already through his own reflection, the theophany becomes an irrelevancy. It is difficult, therefore, to find a place for these two characters in the work. They are in a way dramatic, and the book is an exquisite poem, which probably originated separately, and was brought into our book with a purpose similar to that to which suggested the speeches of Elihu. Objectives have also been raised to the descriptions of passageways in the xii-xiii, and the xiv-xv; but it may be only to say that in meaning these passages are in perfect harmony with other parts of the Divine words, although the words are repeated and the style unlike the rest. However, the ironical touches otherwise characteristic of this part of the poem.

(Other passages, the originality of which has been called into question, are: xiv. 8 seq.; xvi. 16-18; xvi. 17 seq.; xxvi. 7 seq.; xxvii. 1 seq.; xxviii. 1 seq.; xxix. 3 seq.; xxxi. 2 seq.)

On the other hand, the language of the epilogue is distinctly and unmistakably that of Solomon. Another among the many serious objections to the date of the book.

Date.—The age of such a book as Job, dealing only with principles and having no direct references to historical events can be fixed only approximately. Any conclusion can be reached only by an induction founded on matters which do not afford perfect certainty, such as the comparative development of certain moral ideas in different ages, the pressing claims of certain problems for solution at particular epochs of the history of Israel, and points of contact with other writings of which the age may have some certain be determined. The Jewish tradition that the book is Moses, and the idea that it is a reproduction of the desert, written in another tongue and translated into Hebrew, want even a shadow of probability. The book is a genuine outcome of the religious life and thought of Israel, the product of a religious knowledge and experience that were possible among no other people. That the author lays the scene of the poem outside his own nation and in the patriarchal age is a proceeding common to him with other dramatic writers, who find freer play for their principles in a region removed from the present, where they are not hampered by the obtrusive forms of actual life, but are free to mould occurrences into the moral form that their ideas require.

It is the opinion of some scholars, e.g., Delitzsch, that the book belongs to the age of Solomon. It cannot be earlier than this age, for Job (vii. 17) travesties the ideas of Ps. viii. in a manner which shows that this hymn was well known. To infer the date from a comparison of literary coincidences and allusions is however a very delicate operation. For, first, owing to the unity of thought and language which prevades the Old Testament, in which, regarded merely as a national literature, it differs from all other national literatures, we are apt to be deceived by a resemblance of expression and to overlook the use of words in distinction of the Eastern tongue; and, secondly, even when we are sure that there is dependence, it is often uncommonly difficult to decide which is the original source. The reference to Job in Ezek. xiv. 14 is not to our book, but to the man (a legendary figure) who was afterwards made the hero of it. The affinities on the other hand between Job and Isa. xl-v. are very close. The date, however, of this part of Isaiah is uncertain, though it cannot have received its final form, if it be composite, long before the return. Between Job iii. and Jer. xx. 14 seq. there is, again, certainly literal connexion. But the judgment of different minds differs on the question whether Isaac is another name for Job. The language of Jeremiah, however, has a natural pathos and genuineness of feeling in it, somewhat in contrast with the elaborate poetical finish of Job's words, which might suggest the originality of the former.

The tendency among recent scholars is to put the book of Job not earlier than the 5th century B.C. There are good reasons for putting it in the 4th century. It stands at the beginning of the era of Jewish philosophical inquiry—its affinities are with Proverbs, Ecclesiastes, Ecclesiastes, and the Wisdom of Solomon. Its affinities, however, are to the pre-Christian Jewish literary development (see Wisdom Literature). Its points of connexion with Isa. xl-v. relate only to the problem of the suffering of the righteous, and that it is later than the Isaiah passage appears from the fact that this latter is national and ritual in scope, while Job is universal and ethical.

The book of Job is not literal history, though it reposes on historical tradition. To this tradition belong probably the name of Job and his country, and the names of his three friends, and perhaps also many other details impossible to specify particularly. The view that the book is entirely a literary creation with no basis in historical tradition is as old as the Talmud (Baba Bathra, xv. 1), in which a rabbi is cited who says: Job was not, and was not created, but is an allegory. This view is supported by Hengstener and others. But pure poetical creations on so extensive a scale are not probable in the East and at so early an age.

Author.—The author of the book is wholly unknown. The religious life of Israel was at certain periods very intense, and at those times the spiritual energy of the nation expressed itself almost impersonally, through men who forgot themselves and were speedily forgotten in name by others. Hitzig conjectures that the author was a native of the north on account of the free criticism of providence which he allows himself. Others, on account of some affinities with the prophet Amos, infer that he belonged to the south of Judah, and this is supposed to account
for his intimate acquaintance with the desert. Ewald considers that he belonged to the exile in Egypt, on account of his minute acquaintance with that country. But all these conjectures localize an author whose knowledge was not confined to any locality, who was a trueiser of the East and familiar with life and nature in every country there, who was at the same time a true Israelite and felt that the earth was the Lord's and the fullness thereof, and whose sympathies and thoughts took in all God's works.

JOBYST, or JODOCUS (c. 1350–1411), margrave of Moravia, was a son of John Henry of Luxembourg, margrave of Bohemia, and grandson of John, the blind king of Bohemia. He became margrave of Moravia on his father's death in 1375, and his clever and unscrupulous character enabled him to amass a considerable amount of wealth, while his ambition led him into constant quarrels with his brother Procop, his cousins, the German king Wenceslaus and Sigismund, margrave of Brandenburg, and others. By taking advantage of their difficulties he won considerable power, and the record of his life is one of warfare and treachery, followed by broken promises and transactions in his favor. In 1385 and 1388 he purchased Brandenburg from Sigismund, and the duchy of Luxembourg from Wenceslaus; and in 1397 he also became possessed of upper and lower Lusatia. For some time he had entertained hopes of the German throne and had negotiated with Wenceslaus and others to this end. When, however, King Rupert died in 1410 he maintained at first that there was no vacancy, as Wenceslaus, who had been deposed in 1400, was still king; but changing his attitude, he was chosen German king at Frankfort on the 1st of October 1410 in opposition to Sigismund, who had been elected a few days previously. Jobst however was never crowned, and his marriage in January 1411 prevented hostilities between the rival kings.

JOBYST'S TEARS, in botany, the popular name for Cos Lachryma-jobi, a species of grass, of the tribe Poaceae, which also includes the maize (see Grasses). The seeds, or properly fruits, are contained singly in a stony involucre or bract, which does not open until the enclosed seed germinates. The young involucre surrounds the female flower and the stalk supporting the spike of male flowers, and when ripe has the appearance of bluish-white porcelain. Being shaped somewhat like a large drop of fluid, the form has suggested the name. The fruits are esculent, but the involucres are the part chiefly used, for making necklaces and other ornaments. The plant is a native of India, but is now widely spread throughout the tropical zone. It grows in marshy places; and is cultivated in China, the fruit having a supposed value as a diuretic and anti-phthisic. It was cultivated by John Gerard, author of the famous Herball, at the end of the 16th century as a tender annual.

JOCASTA, or CLEOPATRA (ἡ Ἰουκάστῃ, in Homer, Ἐκείνη), in Greek legend, wife of Laüs, mother (afterwards wife) of Oedipus (q.v.), daughter of Menoeceus, sister (or daughter) of Creon. According to Homer (Od. xi. 271) and Sophocles (Oed. Tyr. 1241), on learning that Oedipus was her son she immediately hanged herself; but in Euripides (Phoenissae, 1453) she stabs herself over the bodies of her sons Eteocles and Polynices, who had slain each other in single combat before the walls of Thebes.

JOCKEY, a professional rider of race-horses, now the current usage (see Horse-Racing). The word is by origin a diminutive of "Jock," the Northern or Scots colloquial equivalent of the name "John" (cf. Jack). A familiar instance of the use of the word as a name is in "Jockey of Norfolk" in Shakespeare's Richard III, v. 3, 304. In the 16th and 17th centuries the word was applied to horse-dealers, postillions, itinerant minstrels and vagabonds, and thus frequently bore the meaning of a cunning trickster, a "sharp," whence "to jockey," to outwit, or "to lead out of some kind. The current usage is found in John Evelyn's Diary, 1670, where it was clearly known. George Borrow's attempt to derive the word from the gipsy chuknī, a heavy whip used by horse-dealing gipsies, has no foundation.

JODELLE, ÉTIENNE, seigneur de Limodin (1532–1573), French dramatist and poet, was born in Paris of a noble family. He attached himself to the poetic circle of the Pléiade (see Daurat) and proceeded to apply the principles of the reformers to dramatic composition. Jodelle aimed at creating a classical drama that should be in every respect different from the moralities and sotties that then occupied the French stage. His first play, Cléopâtre captive, was represented before the court at Reims in 1552. Jodelle himself took the title rôle, and the cast included his friends Remy Belleau and Jean de la Péruse. In honour of the play's success the friends organized a little fête at Arcueil when a goat garnished with flowers was led in procession and presented to the author—a ceremony exaggerated by the enemies of the Ronsardists into a renewal of the pagan rites of the worship of Bacchus. Jodelle wrote two other plays. Evène, a comedy satirizing the superior clergy, had less success than it deserved. Its preface poured scorn on Jodelle's predecessors in comedy, but in reality his own methods are not so very different from theirs. Dido se sacrifiant, a tragedy which follows Virgil's narrative, appears never to have been represented. Jodelle died in poverty in July 1573. His works were collected the year after his death by Charles de la Mothe. They include a quantity of miscellaneous verse dating chiefly from Jodelle's youth. The intrinsic value of his tragedies is small. Cléopâtre is lyric rather than dramatic. Throughout the five acts of the piece nothing actually happens. The death of Antony is announced by his ghost in the first act; the story of Cleopatra's suicide is related, but not represented, in the fifth. Each act is divided into two scenes, and in the third scene, which occupies so much of the rest of the play, a gipsy who moralizes on such subjects as the inconstancy of fortune and the judgments of heaven, is introduced.

Jodelle's works are collected (1688) in the Pléiade française de Charles Marty-Laveaux. The prefatory notice gives full information of the sources of Jodelle's biography, and La Mothe's criticism is reprinted in its entirety.

JODHPUR, or MARRW, a native state of India, in the Rajputana agency. Area, 34,662 sq. m. Pop. (1901), 1,935,656, showing a decrease of 23% in the decade, due to the results of famine. Estimated revenue, £373,600; tribute, £1,400. The general aspect of the country is that of a sandy plain, divided into two unequal parts by the river Luni, and dotted with picturesque conical hills, attaining in places an elevation of 3000 ft. The river Luni is the main river flows through Jodhpur, and its south-westerly direction till it is finally lost in the marshy ground at the head of the Runn of Cutch. It is fed by numerous tributaries and occasionally overflows its banks, five crops of wheat and barley being grown on the saturated soil. Its water is, as a rule, saline or brackish, but comparatively sweet water is obtained from wells sunk at a distance of 20 or 30 yds. from the river bank. The famous salt-lake of Sambhar is situated on the borders of Jodhpur and Jaipur, and two smaller lakes of the same description lie within the limits of the state,
from which large quantities of salt are extracted. Marble is mined in the north of the state and along the south-east border.

The population consists of Rathor Rajputs (who form the ruling class), Brâhmanas, Charsans, Bhâts, Mahâjans or traders, and Jâts. The Charsans, a sacred race, hold large religious grants of land, and enjoy peculiar immunities as traders in local produce. The Bhâts are by profession genealogists, but also engage in trade. Mâtwarî traders are an enterprising class to be found throughout the length and breadth of India.

The principal crops are millets and pulses, but wheat and barley are largely produced in the fertile tract watered by the Lûni river. The manufactures comprise leather boxes and brass utensils; and turbans and scarfs and a description of embroidered silk knotted thread are specialties of the country.

The Mahârâja belongs to the Rathor clan of Rajputs. The family chronicles relate that after the downfall of the Rathor dynasty of Kanauj in 1194, Sivâjî, the grandson of Jî Chând, the last king of Kanauj, entered Mâtwar on a pilgrimage to Dwarka, and on halting at the town of Pâli he and his followers settled there to protect the Brâhman community from the constant raids of marauding bands. The Rathor chief thus laid the foundation of the state, but it was not till the time of Râo Chând, the tenth in succession from Sivâjî, that Mâtwar was actually conquered. His grandson Jodhâ became the chief of the city, which he made his capital. In 1561 the country was invaded by Akbar, and the chief was forced to submit, and to send his son as a mark of homage to take service under the Mogul emperor. When this son Uûdî Singh succeeded to the chieftainship, he gave his sister Jodhâbî in marriage to Akbar, and was rewarded by the restoration of most of his former possessions. Uûdî Singh's son, Gaj Singh, held high service under Akbar, and conducted successful expeditions in Gujarat and the Deccan. The bigoted and intolerant Aurangzeb invaded Mâtwar in 1679, plundered Jodhpur, sacked all the large towns, and commanded the conversion of the inhabitants to the Moslem religion. The chief escaped to the city of Pûlapur, but the Rajput clans became a bond of union, and a triple alliance was formed by the three states of Jodhpur, Uûdulîpur and Jaipur, to throw off the Mahommedan yoke. One of the conditions of this alliance was that the chiefs of Jodhpur and Jaipur should regain the privilege of marriage with the Uûdûpur family, which they had forfeited by contracting alliances with the Mogul emperors, on the understanding that the offspring of Uûdûpur princesses should succeed to the state in preference to all other children. The quarrels arising from this stipulation lasted through many generations, and led to the invitation of Maharâta help to the rival aspirants to power, and finally to the annexation of all the Rajput states to the Mahârâtas. Jodhpur was conquered by Sindhia, who levied a tribute of 560,000, and took from it the fort and town of Ajmer. Interminable disputes and succession wars disturbed the peace of the early years of the century, until in January 1818 Jodhpur was taken under British protection. In 1839 the misgovernment of the râj led to an insurrection which compelled the interference of the British. In 1843, the chief having died without a son, and without having adopted an heir, the nobles and state officials were left to select a successor from the nearest of kin. Their choice fell upon Raja Tâkhî Singh, chief of Ahmednagar. This chief, who did good service during the Mutiny, died in 1873. Mahârâja Jaswant Singh, who died in 1896, was a very enlightened ruler. His brother, Sir Pertab Singh (q.v.), conducted the administration until his nephew, Sardar Singh, came of age in 1898. The imperial service cavalry formed part of the reserve brigade during the Tirah campaign.

The state maintains a railway running to Bikanor, and there is also a branch railway into Sind. Gold, silver and copper money is coined. The state emblems are a jhâr or spig of seven branches and a khand or sword. Jodhpur practically escaped the plague, but it suffered more severely than any other part of Rajputana from the famine of 1899-1900. In February 1900 more than 110,000 persons were in receipt of famine relief.

The city of JODHPUR is 64 m. by rail N.W. of Mâtwar junction, on the Rajputana railway. Pop. (1901), 60,437. It was built by Râo Jodîh in 1459, and from that time has been the seat of government. It is surrounded by a strong wall nearly 6 m. in extent, with seventy gates. The fort, which stands on an isolated rock, contains the mahârâjâ's palace, a large and handsome building, completely covering the crest of the hill on which it stands, and overlooking the city, which lies several hundred feet below. The city contains palaces of the mahârâjâ, and town residences of the thâkurs or nobles, besides numerous fine temples and tanks. Building stone is plentiful and close at hand, and the architecture is solid and handsome. Three miles north of Jodhpur are the ruins of Mandor, the site of the ancient capital of Mâtwar, before its conquest by the Rathors. Mills for grinding flour and crushing grain have been constructed for the immediate service of the city, and the agricultural college is affiliated to the B.A. standard of the Allahabad university. To the Hawson hospital a wing for eye diseases was added in 1898, and the Jaswant hospital for women is under an English lady doctor.

**JOEL.** The second book among the minor prophets in the Bible is entitled *The word of Yahweh that came to Joel the son of Petchnâd, or, as the Septuagint, Latin, Syriac and other versions read, Bethuel.* Nothing is recorded as to the date or occasion of the prophecy. Most Hebrew prophecies contain pointed allusions to the foreign policies and actual situations of the nation at the time. In the book of Joel there are only scanty allusions to Phoenicians, Philistines, Egypt and Edom, couched in terms applicable to very different ages, while the prophet's own people are exhorted to repentance without specific reference to any of those national sins of which other prophets speak. The occasion of the prophecy, described with great force of rhetoric, is no known historical event, but a plague of locusts, perhaps repeated in successive seasons; and even here there are features in the description which have led many expositors to seek an allegorical interpretation. The most remarkable part of the book is the description of the movement of the locusts, and the picture of the plague of locusts appears to be taken as foreshadowing the final judgment—the great day or assize of Yahweh, in which Israel's enemies are destroyed—is so unique as greatly to complicate the exegetical problem. It is not therefore surprising that the most various views are still held as to the date and meaning of the book. Allegorists and literalists still contend over the first and still more over the second chapter, and, while the largest number of recent interpreters accept Credner's view that the prophecy was written in the reign of Joash of Judah (835-796 B.C.), a powerful school of critics (including A. B. Davidson) adheres to the view suggested by Vitae (Bib. Theol. p. 462 seq.), and reckon Joel among the post-exilic prophets. Other scholars give yet other dates; see the particulars in the elaborate work of Merx. The followers of Credner are literalists; the opposite school of moderns includes some literalists (as Duhm), while others (like Hilgenfeld, and in a modified sense Merx) adopt the old allegorical interpretation which treats the locusts as a figure for the enemies of Jerusalem.

There are cogent reasons for placing Joel either earlier or later than the great series of prophets extending from the time when Amos first proclaimed his message of the Assyrian day to the Babylonian exile. In Joel the enemies of Israel are the nations collectively, and among those specified by name neither Assyria nor Babylon is mentioned. This circumstance, however, must stand alone as explained by placing Joel with Zechariah in the brief interval between the decline of the empire of Nineveh and the advance of the Babylonians. It is, however, obvious that Joel has no place in the internal struggle between spiritual Yahweh-worship and idolatry which occupied all the prophets from Amos to the captivity. He presupposes a nation of Yahweh-worshippers, whose religion has its centre in the temple and priesthood of Zion, which is indeed threatened, perhaps even involved in the notion of sin, but not in form or substance. The Spirit, but is not visibly divided, as the kingdom of Judah was, between the adherents of spiritual prophecy and a party whose national worship of Yahweh involved for them no fundamental separation from the surrounding nations. The book, therefore, must have been written before the ethico-spiritual and the popular conceptions of Yahweh came into conscious antagonism, or else after the fall of the state and the recognition of the power of Jerusalem to religious rather than political existence had decided
The contest in favour of the prophets, and of the Law in which their teaching was ultimately crystallized.

The considerations which have given currency to an early date for the book of Joel. The theory of a Literary Development can even be pressed further. The theory of a propagating, or oppressor world-power seems most natural before the westward march of Assyria involved Israel in the general politics of Asia. The purity of the style is also urged, and a comparison of Amos i. 2, Joel ii. 21 and the heading of the iv. 1. The matter has been taken as proving that Amos knew our book. The last argument might be inverted with much greater probability, and numerous passages of connexion between Joel and other parts of the Old Testament (e.g. Joel ii. 2. Exod. x. 28). Note also that Ezek. iv. 3.) make it not incredible that the purity of his style—which is rather elegant than original and strongly marked—is in large measure due to his imitating the prophet’s style. A hostile or oppressing empire may be fairly taken in connexion with the fact that the prophecy gives no indication of political life at Jerusalem. When the whole people is muster in ch. i., the elders or the (iii. 1.) is not mentioned as a fact which has always been treated as a sect outside the true religion, can reconcile this fact with an early date. But in ancient times it was not so; and under Joash, the contemporary of Elisha, such a limitation of the command of the prophet’s name is always treated rather to “reverse the calamity,” but the dispersion of Israel among the nations, and the allotment of the Holy Land to new occupants, cannot fairly be referred to any calamity less than that of the captivity. With regard to Joel’s name (cf. xvi. 20), the name is most prominent. The name is not mentioned—which on Credner’s view is explained by assuming that the plague fell in the minority of Joash, when the priest Jehohada held the reins of power, and the princes, councilors and warriors necessary to an independent state, and so often referred to by the prophets before the exile, are altogether lacking. The nation has only a municipal organization with a priestly aristocracy, precisely the state of things that prevailed under the Persian empire. That the Persians do not appeal as enemies of Yahweh and his people is perfectly natural. They were hard masters but not invaders, and under them the enemies of the Jewish nation. In such a case it is as much as could be expected that those who place our prophet in the minority of King Joash draw a special argument from the mention of Phoenicians, Philistines and Edomites (iii. 7, viii. 20) and the inclusion of the Philistines in the same reign (2 Chron. xxi. 16, xxii. 1). These were recent events in the time of Joash, and in like manner the Phoenician slave trade in Jewish children is carried back to an early date by the reference in Amos i. 9. This argument is rather specious than sound. Edom’s hostility to Judah was incessant, but the feud reached its full intensity only after the time of Deuteronomistic xxxiv. 27 when the Edomites joined the Chaldaeans, drew profit from the overthrow of the Jews, whose land they partly occupied, and exercised barbarous cruelty towards the fugitives of Jerusalem (Obad. xxxii. 2). Even if the Edomites assisted the Chaldaeans in the fall of Jerusalem (cf. Ezek. xxii. 25), this event was not soon followed in history. It is natural after these events, but hardly so in connexion with the revolt against Joram.

As regards the Philistines, it is impossible to lay much weight on the statement of Chronicles inconsistent with it is by the older historians, and in Joel the Philistines plainly stand in one category with the Phoenicians, as slave-dealers, not as armed foes. Gaza in fact was a slave emporium as early as the time of Amos (i. 6), and continued so till Roman times.

Thus, if any inference as to date can be drawn from ch. iii., it must rest on special features of the trade in slaves, which was always an important part of the commerce of Tyre and Jaffa. Amos the slaves collected by Philistines and Tyreans were sold en masse to Edom, and presumably went to Egypt or Arabia. Joel complains that they were sold to the Greeks (Javan, Ionians). It is by no means certain that the Edomites, who were so far as we know never a naval people, could send their goods to the Mediterranean coasts from a very early date, and Isa. xi. 11 clearly speaks of Israelites captive in these districts as well as in Egypt (cf. xxvii. 11). Traffic in slaves of the type actually treated as property can hardly became extensive till a later date. In Deut. xxviii. 68, Egypt is still the chief goal of the maritime slave trade, and in Ezek. xxvii. 13 Javan exports slaves to Tyre, not conversely. Thus the allusion to Javan in Joel better suits a later date, when Syrian slaves were in special request in Greece. And the name of Javan is not found in any part of the Old Testament certainly older than Ezekiel. In Joel it seems to stem from an even later period. The commerce reached by the Mediterranean (in contrast with the southern Arabians, Sabaeans, ch. iii. 8), the faintest nation reached by the fleets of the Red Sea. This is precisely the geographical extension of the hypothetical Arabian voyages, and to the name that Ethon = Carthage and Tarshish = Tarshussu) Javan includes Carthage and Tarshussu.

Finally, the allusion to Egypt in Joel iii. 19 must on Credner’s theory be explained as the announcement of Solon a century before.

1 In the A.V. of ii. 17 it appears that subscription to a foreign power is represented as a thing dishonourable. But the passage (Gen. x. 19, and v. 19. 19) is on the rendering in margin of R.V. “ ‘use a byword against them.’

2 The hypothesis of an Arabian Javan, applied to Joel iii. 6 by Credner, Hitzig, and others, may be viewed as exploded (see Stade, ‘Das Volk Javan,’ 1880, reprinted in his A. k. ed. Kreden u. Abhandlungen, 1899, pp. 123-142). The question, however, has to be re-examined; late interest in the ‘land to the east’ may not understand the text of the passages to have been critically treated anew. See Cheyne, Traditions and Beliefs of Ancient Israel (Gen. x. 2). Compare Movers, Phonistisches Altherum, iii. 1. 70 seq.

3 In the A.V. of ii. 17 it appears that subscription to a foreign power is represented as a thing dishonourable. But the passage (Gen. x. 19. 19) is on the rendering in margin of R.V. ‘ ‘use a byword against them.’

5 See Wellhausen, Geschichts der Israel, p. 78 seq.; Prolegomena zur Gesch. der Israel (1883), p. 82 seq.
JOEL, M.—JOFFRIN

Eastern rhetoric, there is no occasion to seek in this section anything else than literal locusts. Nay, the allegorical interpretation, which takes the locusts to be hostile invaders, breaks through the laws of all reasonable writing; for the poetical hyperbole which compares the invading swarms to an army (II. 4 seq.) would be inconceivably lame if a literal army was already concealed under the figure of the locusts. Nor could the prophet so far forget himself in his allegory as to speak of a victorious host as entering the conquered city like a thief (II. 9). The second part of the book is Yahweh’s answer to the people’s prayer. The answer begins with a promise of deliverance from famine, and of fruitful seasons compensating for the ravages of the locusts. In the new prosperity of the land the union of Yahweh and his people shall be sealed anew, and so the Lord will proceed to punish his people for their higher blessings. The aspiration of Moses (Num. xi. 27, and xiii. hope, of earthly prophets (Isa. xxii. 15, lx. 21; Jer. xxxi. 33) shall be fully realized in the outpouring of the Spirit on all the Jews and even upon their servants (Isa. lixi. 5 with lvi. 6, 7); and then the great day of judgment, which had seemed to overshadow Jerusalem in the now averted plague, shall draw near with awful tokens of blood and fire and darkness. But the terrors of that day are not for the Jews but for their enemies. The worshippers of Yahweh on Zion shall be delivered (cf. Obad. v. 17, whose words Joel expressly quotes in ch. ii. 32), and it is their heathen enemies, assembled before Jerusalem to smite the Jews, who shall be driven down into the valley of Jehoshaphat (“Yahweh judgeth”) by no human arm, but by heavenly warriors. Thus definitively freed from the profane foot of the stranger (Isa. lii. 1), Jerusalem shall abide a holy city for ever. The fertility of the land shall be such as was long ago predicted in Amos ix. 13, and streams issuing from the Temple, as Ezekiel had described in his picture of the restored Jerusalem (Ezek. xlvii.), shall fertilize the barren Wadi of Acacias. Egypt and Edom, on the other hand, shall be desolate, because they have shed the blood of Yahweh’s innocents. Compare the simple prayers against Edom, Isa. xxxiv. 9 seq. (Mal. i. 3), and against Egypt, Isa. xxviii. 1 seq. (see Ezek. xlvii. 17 seq.; II. King ii. 18, 19) logical picture appears indeed to be largely a combination of elements from other unfurnished prophecies. Its central feature, the assembling of the nations to judgment, is already found in Zeph. iii. 8, and in Ezekiel’s prophecy concerning Gog and Magog, where the wonders of fire and blood named in Joel ii. 30 are also mentioned (Ezek. xxxviii. 22). The other physical features of the great day, the darkening of the lights of heaven, are a standing figure of the prophets from Amos v. 6, viii. 9, downwards. It is characteristic of the prophetic eschatology that images suggested by nature prophets are adopted by the Messianic, who shall be the Messiah. They become part of the permanent scenery of the last times; and it is a proof of the late date of Joel that almost his whole picture is made up of such features. In this respect there is a close parallelism, extending to minor details, between Joel and the last chapters of Zechariah.

That Joel's delineation of the final deliverance and glory attaches itself directly to the deliverance of the nation from a present calamity is quite in the manner of the so-called prophetic perspective. But the fact that the calamity which breaks so largely is natural and not political is characteristic of the post-exile period. Other prophets of the Babylonian age speak of pestilence, death and failure of crops, which in Palestine then as now were aggravated by bad government, and were far more serious to a small and isolated community than they could ever have been to the old kingdom. It was indeed by no means impossible that Jerusalem might have been altogether undone by the famine caused by the locusts; and so the conception of these visitants as the destroying army, executing Yahweh’s final judgment, is really much more natural than appears to us at first sight, and does not need to be explained away by allegory. The chief argument relied upon by those who still find allegory at least in ch. ii. is the expression kāsēphānī, “the northerner” [1] (if this rendering is correct), in ii. 20. In view of the other points of affinity between Joel and Ezekiel, this word inevitably suggests Gog and Magog, and it is difficult to see how a swarm of locusts could receive such a name, or if they came from the north could perish, as the verse puts it, in the desert between the Mediterranean and the Dead Sea. The verse remains a cruze interpretium, and no egressus hitherto can be found. Equally renowned were factory; but the interpretation of the whole book must not be made to hinge on a single word in a verse which might be altogether removed without affecting the general course of the prophet’s argument.

The whole verse is perhaps the addition of an allegorizing glossator. The prediction in v. 19, that the seasons shall henceforth be fruitful, is given after Yahweh has shown his zeal and pity for Israel, not of course by mere words, but by acts, as appears in verses 20, 21, where the verbs are properly perfects recording that Yahweh hath already done great things, and that vegetation has already revived. In other words, the mercy already experienced in the removal of the plague is taken as a pledge of future grace not to stop short till all God’s old promises are fulfilled. In this context v. 20 is out of place. Observe also that in v. 25 the locusts are spoken of in the plain language of chap. i.

See the separate commentaries on Joel by Credner (1831), Wünsche (1872), Merx (1879). The last-named gives an elaborate history of interpretation from the Septuagint down to Calvin, and appendes the Ethiopic text edited by Dillmann. Nowack and Marti should also be consulted (see their respective series of commentaries); also G. A. Smith, In The Book of the Twelve Prophets, v. i. (1896), and S. R. Driver, The Prophets, ii. 1 and Amos, London (Oxford, 1889), pp. 59-131. Of older commentaries the most valuable is Pocock’s (Oxford, 1869). Bochard’s Hierozoicon may also be consulted. (W. R. S.; T. K. C.)

JOEL, MANUEL (1826-1890), Jewish philosopher and preacher. After teaching for several years at the Breslau rabbinical seminary, founded by Z. Frankel, he became the successor of Abraham Geiger in the rabbinate of Breslau. He made important contributions to the history of Jewish philosophy, his essays on Ibn Gabirol and Maimonides being of permanent worth. But his most influential work was connected with the relations between Jewish philosophy and the medieval scholasticism. He showed how Albertus Magnus derived some of his ideas from Maimonides and how Spinoza was indebted to the same writer, as well as to Hasdai Crescas. These essays were collected in two volumes of Beiträge zur Geschichte der Philosophie (1879), while another two volumes of Blicke in die Religionsgeschichte (1880-1883) concern the development of religious thought in the early centuries of the Christian Church. Joel was a frequent contributor to Joel’s pulpits addresses. Though he was no orator, his appeal to the reason was effective, and in their published form his three volumes of Prediglen (issued posthumously) have found many readers. (I. A.)

JOFFRIN, JULES FRANÇOIS ALEXANDRE (1846–1890), French politician, was born at Troyes on the 16th of March 1846. He served in the Franco-German War, was involved in the Commune, and spent eleven years in England as a political exile. He attached himself to the “possibilist” group of the socialist party, the section opposed to the root-and-branch movement of Jules Guesde. He became a member of the municipal council of Paris in 1882, and vice-president in 1888-1889. Violently attacked by the Boulangist organs, L’Intransigeant and La France, he won a suit against them for libel, and in 1889 he contested the 18th arrondissement of Paris with General Boulanger, who obtained a majority of over 2000 votes, but was declared ineligible. Joffrin was only admitted to the Chamber after a heated discussion, and continued to be attacked by the nationalists. He died in Paris on the 17th of September 1890.

The current popular corruption of shimo' n = Ishmael. In Ezek. xxxviii. 15 it is distinctly said that Gog is to come from the recesses of Siphon. "Meshik'" and "Tubil" are no hindrance to this view, if the names of the so-called "sons of Japheth" are critically examined. For they, too, as well as Siphon, can be plausibly shown to represent regions of North Arabia. See Cheyne, Traditions and Beliefs of Anc. Israel, on Gen. x. 2-4.
JOUGUES—JOHANNESBURG

JOUGUES, ISAAC (1607-1646), French missionary in North America, was born at Orleans on the 10th of January 1607. He entered the Society of Jesus at Rouen in 1624, and in 1636 was ordained and sent, by his own wish, to the Huron mission. In 1639 he went among the Tobacco Nation, and in 1641 journeyed to Sault Sainte Marie, where he preached to the Algonquins. Returning from an expedition to Three Rivers he was captured by Mohawks, who tortured him and kept him as a slave until the year 1643, when, aided by some Dutchmen, he escaped to the manor of Rensselaerwyck and thence to New Amsterdam. After a brief visit to France, where he was treated with high honour, he returned to the Mohawk country in May 1646 and ratified a treaty between that tribe and the Canadian government. Working among them as the founder of the Mission of the Martyrs, he incurred their enmity, was tortured as a sorcerer, and finally killed at Ossernenon, near Auversie, N.Y.

See Parkman, The Jesuits in North America (1898).

JOHANAN BEN ZACCAI, Palestinian rabbi, contemporary of the Apostles. He was a disciple of Hillel (q.v.), and after the destruction of the Temple of Jerusalem by Titus was the main instrument in the preservation of the Jewish religion. During the last decades of the Temple Johanan was a member of the Sanhedrin and a skilled controversialist against the Sadducees. He is also reported to have been head of a great school in the capital. In the war with Rome he belonged to the peace party, and finding that the Zealots were resolved on carrying their revolt to its inevitable sequel, Johanan had himself conveyed out of Jerusalem in a coffin. In the Roman camp the rabbi was courteously received, and Vespasian (whose future elevation to the imperial dignity Johanan, like Josephus, is said to have foretold) agreed to grant him any boon he desired. Johanan obtained permission to found a college at Jamnia (Jabneh), which became the centre of Jewish culture. It practically exercised the judicial functions of the Sanhedrin (see JEWS, § 40 ad fin.). That chief literary expression of Pharisaism, the Mishnah, the outcome of the work begun at Jamnia, Johanan solicited his disciples on the fall of the Temple by the double thought that charity could replace sacrifice, and that a life devoted to the religious law could form a fitting continuation of the old theocratic state. "Johanan felt the fall of his people more deeply than anyone else, but—and in this lies his historical importance—he did more than any one else to prepare the way for Israel to rise again" (Bacher).

See Graetz, History of the Jews (Eng. trans.), vol. ii. ch. xiii.; Weiss, Der dor ve-doreesh, ii. 36; Bacher, Die Agada der Jebusiten, vol. i. ch. iii. (I. A.)

JOHANNESBURG, a city of the Transvaal and the centre of the Rand gold-mining industry. It is the most populous city and the commercial capital of South Africa. It is built on the southern slopes of the Witwatersrand in 26° 11' S. 28° 2' E., at an elevation of 5764 ft. above the sea. The distances by rail from Johannesburg to the following seaports are: Lourenco Marques, 364 m.; Durban, 483 m.; East London, 659 m.; Port Elizabeth, 714 m.; Cape Town, 957 m. Pretoria is, by rail, 46 m. N. by E.

The town lies immediately north of the central part of the main gold reef. The streets run in straight lines east and west or north and south. The chief open spaces are Market Square in the west and Government Square in the south of the town. Park railway station lies north of the business quarter, and farther north are the Wanderers' athletic sports ground and Joubert's Park. The chief business streets, such as Commissioner Street, Market Street, President Street and Pritchard Street, run east and west. In these thoroughfares and in several of the streets which intersect them are the offices of the mining companies, the banks, clubs, newspaper offices, hotels and shops, the majority being handsomely stone or brick buildings, while the survival of some wooden shanties and corrugated iron buildings recalls the early character of the town.

Chief Buildings, &c.—In the centre of Market Square are the market buildings, and at its east end the post and telegraph offices, a handsome block of buildings with a façade 200 ft. long and a tower 106 ft. high. The square itself, a quarter of a mile long, is the largest in South Africa. The offices of the Witwatersrand chamber of mines face the market buildings. The stone church is in Marshall Square. The telegraph exchange is in the centre of the city, in Von Brandis Square. The law courts are in the centre of Government Square. The Transvaal University college is in Limpopo Square, a little south of Park Street.

The city is one of the most modern in South Africa. There is a fine public hall (1905-1907), the first portion of a large building planned to take the place of "Old" St Mary's Church, the "mother" church of the Rand, built in 1887. The chief Jewish synagogue is in the same neighbourhood. In Kerk Street, on the outskirts of central Johannesburg, is the Roman Catholic Church of the Immaculate Conception, the headquarters of the vicar apostolic of the Transvaal. North of Joubert's Park is the general hospital, and beyond, near the crest of the hills, commanding the town and the road to Pretoria, is a fort, built by the government and now used as a gaol. On the hills, some 3 m. E.N.E. of the town, is the observatory, built in 1903. Johannesburg has several theatres and buildings adapted for public meetings. There is a race-course 2 m. south of the town under the control of the Johannesburg Turf Club.

The Suburbs.—North, east and west of the city proper are suburbs, laid out on the same rectangular plan. The most fashionable are to the east and north—Jeppestown, Belgravia, Doornfontein, the Berea, Hillbrow, Parktown, Yeoville and Bellevue. Braamfontein (with a large cemetery) lies north-west and thence to Fordsburg are the gas and electric light and power works, and north of Doornfontein there is a large reservoir. There are also on the Rand, and dependent on the gold-mining, three towns possessing separate municipalities—Germiston and Boksburg (q.v.), respectively 9 m. and 15 m. E. of Johannesburg, and Krugersdorp (q.v.), 21 m. W.

The Mines and other Industries.—South, east and west of the city are the gold mines, indicated by tall chimneys, battery houses and the compounds of the labourers. The bare veld is dotted with these unsightly buildings for a distance of over fifty miles. The mines are worked by the most scientific lines. Characteristic of the Rand is the fine white dust arising from the crushing of the ore, and, close to the batteries, the incessant din caused by the stamps employed in that operation. The compounds in general, especially those originally made for Chinese labourers, are well built, comfortable, and fulfil every hygienic requirement. Besides the buildings, the compounds include wide stretches of veld. To enter and remain in the district, Kafris require a monthly pass for which the employer pays 2s. (For details of gold-mining, see Gold.) A railway traverses the Rand, going westward past Krugersdorp and eastward past Springs to Delagoa Bay. From Springs, 25 m. E. of Johannesburg, is obtained much of the coal used in the Rand mines.

The mines within the municipal area produce nearly half the total gold output of the Transvaal. The other industries of Johannesburg include brewing, printing and bookbinding, timber sawing, flour milling, iron and brass founding, brick making and the manufacture of tobacco.

Health, Education and Social Conditions.—The elevation of Johannesburg makes it, despite its nearness to the tropics, a healthy place for European habitation. Built on open undulating ground, the town is, however, subject to frequent dust storms and to considerable variations in the temperature. The nights in winter are frosty and snow falls occasionally. The average day temperature in winter is 53° F., in summer 75°; the average annual rainfall is 28 in. The death-rate among white habitants averages about 17 per thousand. The principal causes of death, both among the white and coloured inhabitants, are diseases of the lungs—including miners' phthisis and pneumonia—diarrhoea, dysentery and enteric. The death-rate among young children is very high.

Education is provided in primary and secondary schools maintained by the state. In the primary schools education is
JOHANNISBERG—JOHN

free but not compulsory. The Transvaal university college, founded in 1904 as the technical institute (the change of title being made in 1906), provides full courses in science, mining, engineering and law. In 1906 Alfred Beit (q.v.) bequeathed £200,000 towards the cost of erecting and equipping university buildings.

In its social life Johannesburg differs widely from Cape Town and Durban. The white population is not only far larger but more cosmopolitan, less stationary and more dependent on a single industry; it has few links with the past, and both city and citizens bear the marks of youth. The cost of living is much higher than in London or New York. House rent, provisions, clothes, dwellings are very dear, and more than counterbalance the lowness of rates. The customary unit of expenditure is the threepenny-bit or "tickey."

Sanitary and other Services.—There is an ample supply of water to the town and mines, under a water board representing all the Rand municipalities and the mining companies. A waterborne sewerage system began to be introduced in 1906. The general illuminant is electricity, and both electrical and gas services are owned by the municipality. The tramway service, opened in 1891, was taken over by the municipality in 1904.

Up to 1906 the trams were horse-drawn; in that year electric cars began running. Blackshaws are also a favourite means of conveyance. The police force is controlled by the government.

Area, Government and Rateable Value.—The city proper covers about 6 sq. m. The municipal boundary extends in every direction some 5 m. from Market Square, encloses about 82 sq. m. and includes several of the largest mines. The local government is carried on by an elected municipal council, the franchise being restricted to white British subjects (men and women) who rent or own property of a certain value. In 1908 the rateable value of the municipality was £36,466,644, the rate 21d. in the £, and the town debt £5,000,000.

Population.—In 1887 the population was about 3000. By the beginning of 1890 it had increased to over 25,000. A census taken in July 1896 showed a population within a radius of 3 m. from Market Square of 102,078, of whom 50,007 were whites. At the census of April 1901 the inhabitants of the city proper numbered 99,022, the population within the municipal area being 155,642, of whom 83,363 were whites. Of the white inhabitants, 35% were of British origin, 51,629 were males, and 31,734 females. Of persons aged sixteen or over, the number of males was almost double the number of females. The coloured population included about 7000 British Indians—chiefly small tradesmen. A municipal census taken in August 1898 gave the following result: whites 95,162; natives and coloured 78,781; Asians 6780—total 180,687.

History.—Johannesburg owes its existence to the discovery of gold in the Witwatersrand reefs. The town, named after Johannes Rissik, then surveyor-general of the Transvaal, was founded in September 1886, the first buildings being erected on the part of the reef where are now the Ferreira and Weemser mines. These buildings were found to cover valuable ore, and in December following the Boer government marked out the site of the city proper, and possession of the plots was given to purchasers on the 1st of January 1887. The exploitation of the mines led to a rapid development of the town during the next three years. The year 1890 was one of great depression following the exhaustion of the surface ore, but the provision of better machinery and cheaper coal led to a revival in 1891. By 1892 the leading mines had proved their dividend-earning capacity, and in 1895 there was a great "boom" in the shares of the mining companies. The linking of the town to the seaports by railways during 1892–1895 gave considerable impetus to the gold-mining industry. Material prosperity was accompanied, however, by political, educational and other disadvantages, and the desire of the Johannesburgers—most of whom were foreigners or "Uitlanders"—to remedy the grievances under which they suffered led, in January 1896, to an abortive rising against the Boer government (see Transvaal: History). One result of this movement was a slight advance in municipal self-government.

Since 1887 the management of the town had been entrusted to a nominated sanitary board, under the chairmanship of the mining commissioner appointed by the South African Republic. In 1890 elected members had been admitted to this board, but at the end of 1897 an elective stadsrads (town council) was constituted, though its functions were strictly limited. There was a great development in the mining industry during 1897–1898 and 1899, the value of the gold extracted in 1898 exceeding £1,500,000, but the political situation grew worse, and in September 1899, owing to the imminence of war between the Transvaal and Great Britain, the majority of the Uitlanders fled from the city. Between October 1899, when war broke out, and May 1900, when the town was taken by the British, the Boer government worked certain mines for their own benefit. After a period of military administration and of government by a nominated town council, an ordinance was passed in June 1903 providing for elective municipal councils, and in December following the first election to the new council took place. In 1905 the town was divided into wards. In that year the number of municipal voters was 23,338. In 1909 the proportional representation system was adopted in the election of town councillors.

During 1901–1903, while the war was still in progress or but recently concluded, the gold output was comparatively slight. The difficulty of obtaining sufficient labour for the mines led to a successful agitation for the importation of coolies from China (see Transvaal: History). During 1904–1906 over 50,000 coolies were brought to the mines, a greatly increased output being the result, the value of the gold extracted in 1905 exceeding £20,000,000. Notwithstanding the increased production of gold, Johannesburg during 1905–1907 passed through a period of severe commercial depression, the result in part of the unsettled political situation. In June 1907 the repatriation of the Chinese coolies began; it was completed in February 1910.

An excellent compilation, entitled Johannesburg Statistics, dealing with almost every phase of the city's life, is issued monthly (since January 1897) by the town council. See also the Post Office Directory, Transvaal (Johannesburg, annually), which contains specially prepared maps, and the annual reports of the Johannesburg chamber of commerce. For the political history of Johannesburg, see the bibliography under Transvaal.

JOHANNISBERG, a village of Germany, in the Prussian province of Hesse-Nassau, in the Rhincgau, on the right bank of the Rhine, 6 m. S. of Rüdesheim by railway. The place is mainly celebrated for the beautiful Schloss which crowns a hill overlooking the Rhine valley, and is surrounded by vineyards yielding the famous Johannisberger wine. The Schloss was built in 1757–1759 by the abbots of Fulda on the site of a Benedictine monastery founded in 1000, was bestowed, in 1807, by Napoleon upon Marshal Kellermann. In 1814 it was given by Francis, emperor of Austria, to Prince Metternich, in whose family it still remains.

JOHN (Heb. יוחנן), Yohanan, "Yahweh has been gracious," Gr. Iohannes, Lat. Ioannes, Ital. Giovanni, Span. Juan, Port. João, Fr. Jean, Ger. Johannes, Johann [abbr. Hans], Gael. Iain, Pol. and Czech Jan, Hung. János), a masculine proper name common in all Christian countries, its popularity being due to its having been borne by the "Beloved Disciple" of Christ, St John the Evangelist, and the forerunner of Christ, St John the Baptist. It has been the name of twenty-two popes—the style of Popes John XXII. and XXIII. being due to an error in the number assumed by John XXI. (q.v.)—and of many sovereigns, princes, &c. The order followed in the biographical notices below is as follows: (1) the Apostle, (2) the Baptist, (3) popes, (4) Roman emperors, (5) kings; John of England first, the rest in the alphabetical order of their countries, (6) other sovereign princes, (7) non-sovereign princes, (8) saints, (9) theologians, chroniclers, &c. Those princes who are known by a name in addition to John (John Albert, &c.) will be found after the article JOHN, GOSPEL OF.

JOHN, the Apostle, in the Bible, was the son of Zebedee, a Galilæan fisherman, and Salome. It is probable that he was born at Bethsaida, where along with his brother James he followed
his father's occupation. The family appears to have been in easy circumstances, at least, of find that Zebedee employed hired servants, and that Salome was among those women who contributed to the maintenance of Jesus (Mark i. 20, xx. 49, 51, xvi. 1). John's "call" to follow our Lord occurred simultaneously with that addressed to his brother, and shortly after that addressed to the brothers Andrew and Simon Peter (Mark i. 19, 20). John speedily took his place among the twelve apostles, sharing with James the title of Boanerges ("sons of thunder," perhaps strictly "sons of anger," i.e. men readily angered), and became a member of that inner circle to which, in addition to his brother, Peter alone belonged (Mark v. 37, ix. 2, xiv. 33). John appears throughout the synoptic records as a zealous, fiery Jew-Christian. It is he who indignantly complains to Jesus, "We saw one casting out devils in Thy name, and he followed not us," and tells Him, "We forbade him" for that reason (Mark ix. 38); and who with his brother, when a Samaritan village will not receive Jesus, asks Him, "Wilt thou that we command fire to come down from heaven and consume them?" (Luke ix. 54). The book of Acts confirms this tradition. After the departure of Jesus, John appears as present in Jerusalem with Peter and the other apostles (i. 13); is next to Peter the most prominent among those who bear testimony to the fact of the resurrection (i. 12-26, ix. 13, 17-22); is sent with Peter to Samaria, to confirm the newly converted Christians there (viii. 14, 25). St Paul tells us similarly that when, on his second visit to Jerusalem, "James," the Lord's brother, "and Cephas and John, who were considered pillars, perceived the grace that was given unto me, they gave to me and Barnabas the right hand of fellowship, that we should go unto the heathen, and they unto the circumcision" (Gal. ii. 9). John thus belonged in 46-47 to the Jewish-Christian school; but we do not know whether to the stricter group of James or to the milder group of Peter (ibid. ii. 11-14).

The subsequent history of the apostle is obscure. Polycrates, bishop of Ephesus (in Euseb., H. E. iii. 31; v. 24), attests in 196 that John "who lay on the bosom of the Lord rests at Ephesus?"; but previously in this very sentence he has declared that "Philip one of the twelve apostles rests in Hierapolis," although Eusebius (doubtless rightly) identifies this Philip not with the apostle but with the deacon-evangelist of Acts xxi. 8. Polycrates also declares that John was a priest wearing the πηραλοχ (gold plate) that distinguished the high-priestly mitre. Irenaeus in various passages of his works, 181-191, holds a similar tradition. He says that John lived up to the time of Trajan and published his gospel in Ephesus, and identifies the apostle with John the disciple of the Lord, who wrote the Apocalypse under Domitian, whom Irenaeus's teacher Polycarp had known personally and of whom Polycarp had much to tell. These traditions are accepted and enlarged by later authors, Tertullian adding that John was banished to Patmos after he had miraculously survived the punishment of immersion in burning oil. As it is evident that legend was busy with John as early as the time of Polycrates, the real worth of these traditions requires to be tested by examination of their ultimate source. This inquiry has been pressed upon scholars since the apostolic authorship of the Apocalypse or of the Fourth Gospel has been disputed. (See JOHN, GOSPEL OF, and REVOLUTION, BOOK OF.)

The question has not been strictly one between advanced and conservative criticism, for the Tubingen school recognized the Apocalypse as apostolic, and found in it a confirmation of John's residence in Ephesus. On the other hand, Lützeler (1840), Th. Keim (Jesus v. Naz., vol. i., 1867), J. H. Scholten (1872), H. J. Holtzmann (esp. in Einl. in d. N. T., 3rd ed., 1902), and other recent writers, wholly reject the tradition. It has had, able defenders in Stitz (Stud. u. Krit., 1868), Hilgenfeld (Einl., 1870) and Lightfoot (Essays on Supernatural Religion, collected 1850). W. Sanday (Criticism of Fourth Gospel, 1905) makes possible the subsequent Ignatian as to the strength of the negative position; whilst amongst Roman Catholic scholars, A. Loisy (Le 4me. Ev., 1903) stands with Holtzmann, and Th. Calmes (Ev. selon S. Jean, 1904, 1906) and L. Duchesne (Hist. anc. de Egl., 1906) exhibit, with papal approbation, the inconclusiveness of the conservative arguments.

The opponents of the tradition lay weight on the absence of positive evidence before the latter part of the 2nd century, especially in Papias and in the epistles of Ignatius and of Irenaeus's authority, Polycarp. They find it necessary to assume that Irenaeus mistook Polycarp; but this is not a difficult task, since already Eusebius (c. 310-313) is compelled to point out that Papias testifies to two Johns, the Apostle and a presbyter, and that Irenaeus is mistaken in identifying those two Johns, and in holding that Papias had seen John the Apostle (H. E. iii. 39, 5, 2). Irenaeus tells us, doubtless correctly, that Papias was "the companion of Polycarp": this identification may have been suggested by the purely personal style of Papias, to make Irenaeus decide that Polycarp had seen John than the Apostle. The chronicler George the Monk (Hamartolus) in the 9th century, and an epitome dating from the 7th or 8th century but probably based on the Chronicles of Philip of Side (c. 430), declare, on the authority of the second book of Papias, that John the Zebedee was killed by Jews (presumably in 60-70). Adolf Harnack, Chron. d. allch. Lit. (1897), pp. 656-680, rejects the assertion; but the number of scholars who accept it as correct is distinctly on the increase. (F. v. H.)

JOHN THE BAPTIST. In the Bible, the title of "forerunner" of Jesus Christ in the Gospels receives its elaboration. The central theme of his preaching was, according to the Synoptic Gospels, the nearness of the coming of the Messianic kingdom, and the consequent urgency for preparation by repentance. John was evidently convinced that he himself had received the divine commission to bring to a close and complete the prophetic period, i.e. inaugurating the Messianic age. He identified himself with the "voice" of Isa. xl. 3. Noteworthy features of his preaching were its original and prophetic character, and its high ethical tone, as shown e.g. in its anti-Pharisaic denunciation of trust in mere racial privilege (Matt. iii. 6). Herein also lay, perhaps, the true baptismal character of which he administered to those who accepted his message and confessed their sins. It was an act symbolizing moral purification (cf. Ezek. xxxvi. 25; Zech. xiii. 1) by way of preparation for the coming "kingdom of heaven," and implied that the Jew so baptized no longer rested in his privileged position as a child of Abraham. John's appearance, costume and habits of life, together with the tone of his preaching, all suggest the prophetic character. He was popularly regarded as a prophet, more especially as a second Elijah. His preaching awoke a great popular response, particularly among the masses of the people, "the people of the land." He had disciples who fasted (Mark ii. 18, &c.), who visited him...
regularly in prison (Matt. xi. 2, xiv. 12), and to whom he taught special forms of prayer (Luke v. 35, xi. 1). Some of these afterwards became followers of Christ (John i. 57). John’s activity indeed had far-reaching effects. It profoundly influenced the Messianic movement depicted in the Gospels. The preaching of Jesus shows traces of this, and the Fourth Gospel (as well as the Synoptists) displays a marked interest in connecting the Johannine movement with the beginnings of Christianity. The fact that after the lapse of a quarter of a century there were Christians in Ephesus who accepted John’s baptism (Acts xxi. 25, xix. 3) is highly significant. This influence also persisted in later times. Christ’s estimate of John (Matt. xi. 7 seq.) was a very high one. He also pointedly alludes to John’s work and the people’s relation to it, in many sayings and parables (sometimes in a tone of irony). The duration of John’s ministry cannot be determined with certainty: it terminated in his imprisonment in the fortress of Macherus, to which he had been committed by Herod Antipas, whose incestuous marriage with Herodias, the Baptist had sternly rebuked. His execution cannot with safety be placed later than A.D. 28.

In the church calendar this event is commemorated on the 29th of August. According to tradition he was buried at Samaria (Theodoret, H. E. iii. 3). (G. H. Bo.)

JOHN I., pope from 523 to 526, was a Tuscan by birth, and was consecrated pope on the death of Hormisidas. In 525 he was sent by Theodoric at the head of an embassy to Constantinople, to obtain from the emperor Justinian I. the unwelcome presence of the Arians; but he succeeded so imperfectly in his mission that Theodoric on his return, suspecting that he had acted only half-heartedly, threw him into prison, where he shortly afterwards died, Felix IV. succeeding him. He was enrolled among the martyrs, his day being May 27.

JOHN II., pope from 533 to 535, also named Mercurius, was elevated to the papal chair on the death of Boniface II. During his pontificate a decree against simony was engraved on marble and placed before the altar of St Peter’s. At the instance of the emperor Justinian he adopted the proposition unus de Trinitate patris est in carne as a test of the orthodoxy of certain Scythian monks accused of Nestorian tendencies. He was succeeded by Agapetus I.

JOHN III., pope from 561 to 574, successor to Pelagius, was descended from a noble Roman family. He is said to have been successful in preventing an invasion of Italy by the recall of the deposed exarch Narses, but the Lombards still continued their incursions, and, especially during the pontificate of his successor Benedict I., inflicted great miseries on the province.

JOHN IV., pope from 640 to 642, was a Dalmatian by birth, and succeeded Severinus after the papal chair had been vacant for six months. He adhered to the Monothelitic doctrine by Severinus, he endeavoured to explain away the connexion of Honorius I. with the heresy. His successor was Theodorus I.

JOHN V., pope from 685 to 686, was a Syrian by birth, and on account of his knowledge of Greek had in 680 been named papal legate to the sixth ecumenical council at Constantinople. He was the successor of Benedict II., and after a pontificate of little more than a year, passed chiefly in bed, was followed by Conon.

JOHN VI., pope from 701 to 705, was a native of Greece, and succeeded to the papal chair two months after the death of Sergius I. He assisted the exarch Theophylact, who had been sent into Italy by the emperor Justinian II., and prevented him from using violence against the Romans. Partly by persuasion and partly by means of a bribe, John succeeded in inducing Gisulf, duke of Benevento, to withdraw from the territories of the empire.

JOHN VII., pope from 705 to 707, successor of John VI., was also of Greek nationality. He seems to have acceded to the request of the emperor Justinian II. that he should give his sanction to the decrees of the Quinexert or Trullan council of 692. There are several monuments of John in the church of St Maria Antiqua at the foot of the Palatine hill; others were formerly in the chapel of the Virgin, built by him in the basilica of St Peter. He was succeeded by Sisinnius.

JOHN VIII., pope from 872 to 882, successor of Adrius II., was a Roman by birth. His chief aim during his pontificate was to defend the Roman state and the authority of the Holy See at Rome from the Saracens, and from the nascent feudalism which was represented outside by the dukies of Spoleto and the marquises of Tuscany and within by a party of Roman nobles. Events, however, were so fatally opposed to his designs that no sooner did one of his schemes begin to realize itself in fact than it was shattered by an unlooked-for chance. To obtain an influential alliance against his enemies, he agreed in 875, after death had deprived him of his natural protector, the emperor Louis II., to bestow the imperial crown on Charles the Bald; but that monarch was too much occupied in France to grant him much effectual aid, and about the time of the death of Charles he found it necessary to come terms with the Saracens, who were only prevented from entering Rome by the promise of an annual tribute. Carloman, the opponent of Charles’s son Louis, soon after invaded northern Italy, and, securing the support of the bishops and counts, demanded from the pope the imperial crown. John attempted to temporize, but Lambert, duke of Spoleto, a partisan of Carloman, whom sickness had recalled to Germany, entered Rome in 878 with an overwhelming force, and for thirty days virtually held John a prisoner in St Peter’s. Lambert was, however, unsuccessful in winning any concession from the pope, who, after his withdrawal carried out a previous agreement with respect to the imperial crown. Thus he presided at the council of Troyes, which promulgated a ban of excommunication against the supporters of Carloman—amongst others Adalbert of Tuscany, Lambert of Spoleto, and Formosus, bishop of Porto, who was afterwards elevated to the papal chair. In 879 John returned to Italy accompanied by Boso, duke of Provence, whom he adopted as his son, and made an unsuccessful attempt to get recognized as king of Italy. In the same year he was compelled to give a promise of his sanction to the claims of Charles the Fat, who received from him the imperial crown in 881. Before this, in order to secure the aid of the Greek emperors against the Saracens, he had agreed to sanction the restoration of Photius to the see of Constantinople, and had withdrawn his consent on finding that he reaped from the concession no substantial benefit. Charles the Fat, partly from unwillingness, partly from natural inability, gave him also no effectual aid, and the last years of John VIII. were spent chiefly in hurling vain anathemas against his various political enemies. According to the annalist of Fulda, he was murdered by members of his household. His successor was Marinus.

JOHN IX., pope from 908 to 909, not only confirmed the judgment of going to France. There he presided at the council of Troyes, which promulgated a ban of excommunication against the supporters of Carloman—amongst others Adalbert of Tuscany, Lambert of Spoleto, and Formosus, bishop of Porto, who was afterwards elevated to the papal chair. In 879 John returned to Italy accompanied by Boso, duke of Provence, whom he adopted as his son, and made an unsuccessful attempt to get recognized as king of Italy. In the same year he was compelled to give a promise of his sanction to the claims of Charles the Fat, who received from him the imperial crown in 881. Before this, in order to secure the aid of the Greek emperors against the Saracens, he had agreed to sanction the restoration of Photius to the see of Constantinople, and had withdrawn his consent on finding that he reaped from the concession no substantial benefit. Charles the Fat, partly from unwillingness, partly from natural inability, gave him also no effectual aid, and the last years of John VIII. were spent chiefly in hurling vain anathemas against his various political enemies. According to the annalist of Fulda, he was murdered by members of his household. His successor was Marinus.

JOHN X., pope from 914 to 928, was deacon at Bologna when he attracted the attention of Theodora, the wife of Theophylact, the most powerful noble in Rome, through whose influence he was elevated first to the see of Bologna and then to the archiepiscopate of Ravenna. In direct opposition to a decree of council, he was also at the instigation of Theodora promoted to the papal chair as the successor of Lando. Like John IX. he endeavoured to secure himself against his temporal enemies through a close alliance with Theophylact and Alberic, marquis of Camerino, then governor of the duchy of Spoleto. In December 915 he granted the imperial crown to Berengar. In order to obtain such a sacred boon as the coronation of the crowned heads of the all the princes of the Italian peninsula he took the field in person against the Saracens, over whom he gained a
great victory on the banks of the Garigliano. The defeat and death of Berengar through the combination of the Italian princes, again frustrated the hopes of a united Italy, and after witnessing several years of anarchy and confusion John perished through the intrigues of Marozia, daughter of Theodora. His successor was Leo XI.

John XI., pope from 931 to 935, was the son of Marozia and the reputed son of Sergius III. Through the influence of his mother he was chosen to succeed Stephen VII. at the early age of twenty-one. He was the mere exponent of the purposes of his mother, until her son Albertic succeeded in 933 in over-throwing their authority. The pope was kept a virtual prisoner in the Lateran, where he is said to have died in 935, in which year Leo VII. was consecrated his successor.

John XII., pope from 955 to 964, was the son of Albertic, whom he succeeded as patriarch of Rome in 954, being then only sixteen years of age. His original name was Octavian, but when he assumed the papal tiara as successor to Agapetus II., he adopted the apostolic name of John, the first example, it is said, of the custom of altering the surname in connexion with elevation to the papal chair. As a temporal ruler John was devoid of the vigour and firmness of his father, and his union of the papal office—which through his scandalous private life he made a by-word of reproach—with his civil dignities proved a source of weakness rather than of strength. In order to protect himself against the intrigues which were confirmed by the emperor of Berengar II. of Italy, he called to his aid Otto the Great of Germany, to whom he granted the imperial crown in 962. Even before Otto left Rome the pope had, however, repented of his recognition of a power which threatened altogether to overshadow his authority, and had begun to conspire against the new emperor. His intrigues were discovered by Otto, who, after he had defeated and taken prisoner Berengar, returned to Rome and summoned a council which deposed John, who was in hiding in the mountains of Campania, and elected Leo VIII. in his stead. An attempt was made by Otto to depose him, but he was supported by the inhabitants of Rome even before Otto left the city, and on his departure John returned at the head of a formidable company of friends and retainers, and caused Leo to seek safety in immediate flight. Otto determined to make an effort in support of Leo, but before he reached the city John had died, in what manner is uncertain, and Benedict V. had mounted the papal chair.

John XIII., pope from 965 to 972, was descended from a noble Roman family, and at the time of his election as successor to Leo VIII. was bishop of Narni. He had been somewhat inconsistent in his relations with his predecessor Leo, but his election was confirmed by the emperor of Berengar II. of Italy, and his concessive attitude towards the imperial power was so distasteful to the Romans that they expelled him from the city. On account of the threatening procedure of Otto, they permitted him shortly afterwards to return, upon which, with the sanction of Otto, he took savage vengeance on those who had formerly opposed him. Shortly after holding a council along with the emperor at Ravenna in 967, he gave the imperial crown to Otto II. at Rome in assurance of his succession to his father; and in 972 he also crowned Theophano as empress immediately after her marriage. On his death in the same year he was followed by Benedict VI.

John XIV., pope from 983 to 984, successor to Benedict VII., was born at Pavia, and before his elevation to the papal chair was imperial chancellor of Otto II. Otto died shortly after his election, when Boniface VII., on the strength of the popular feeling against the new pope, returned from Constantinople and placed John in prison, where he died either by starvation or poison.

John XV., pope from 985 to 996, generally recognized as the successor of Boniface VII., the pope John who was said to have ruled for four months after John XIV., being now omitted by the best authorities. John XV. was the son of Leo, a Roman presbyter. At the time he mounted the papal chair Crescentius was patriarch of Rome, but, although his influence was on this account very much hampered, the presence of the emperor Théophane in Rome from 989 to 991 restrained also the ambition of Crescentius. On her departure the pope, whose vanity and nepotism had made him very unpopular with the citizens, died of fever before the arrival of Otto III., who elevated his own kinsman Bruno to the papal dignity under the name of Gregory V.

John XVI., pope or antipope from 997 to 998, was a Calabrian Greek by birth, and a favourite of the empress Théophano, from whom he had received the bishopric of Placentia. His original name was Philagathus. In 995 he was sent by Otto III. on an embassy to Constantinople to negotiate a marriage with a Greek princess. On his way back he either accidentally or at the special request of Crescentius visited Rome. A little before this Gregory V., at the end of 996, had been compelled to flee from the city, and the citizens, willy and ambitious, had now in accepting the papal tiara from the hands of Crescentius. The arrival of Otto at Rome in the spring of 998 put a sudden end to the teacorous compact. John sought safety in flight, but was discovered in his place of hiding and brought back to Rome, where after enduring cruel and ignominious tortures he was immured in a dungeon.

John XVII., whose original name was Sicco, succeeded Silvester II. as pope in June 1003, but died less than five months afterwards.

John XVIII., pope from 1003 to 1009, was, during his whole pontificate, the mere creature of the patrician John Crescentius, and ultimately he abdicated and retired to a monastery, where he died shortly afterwards. His successor was Sergius IV.

John XIX., pope from 1024 to 1033, succeeded his brother Benedict VIII., both being members of the powerful house of Tusculum. He merely took orders to enable him to ascend the papal chair, having previously been a consul and senator. He displayed his freedom from ecclesiastical prejudices, if also his utter ignorance of ecclesiastical history, by agreeing, on the payment of a large bribe, to grant to the patriarch of Constantinople the dignity of a cardinal-bishop, but the temporal disposition which the proposal excited throughout the church compelled him almost immediately to withdraw from his agreement. On the death of the emperor Henry II. in 1024 he gave his support to Conrad II., who along with his consort was crowned with great pomp at St Peter's in Easter of 1027. John died in 1033, in the full possession of his dignities. A successor was found for him in his nephew Benedict IX., a boy of only twelve years of age.

John XX. (L. D.)

John XXI. (Pedro Giuliano-Rebulo), pope from the 8th of September 1276 to the 20th of May 1277 (should be named John XX., but there is an error in the reckoning through the insertion of an antipope), a native of Portugal, educated for the church, became archdeacon and then archbishop of Braga, and so ingratiated himself with Gregory X. at the council of Lyons (1274) that he was taken to Rome as cardinal-bishop of Frascati, and succeeded Gregory after an interregnum of twenty days. As pope he excommunicated Alfonso III. of Portugal for interfering with episcopal elections and sent legates to the Great Khan. He was devoted to secular science, and his small affection for the monks awakened the distrust of a large portion of the clergy. His life was brought to a premature close through the fall of the roof in the palace he had built at Viterbo. His successor was Nicholas III.

John XXII. has been identified since the 14th century, most probably correctly, with Petrus Hispanus, a celebrated Portuguese physician and philosopher, author of several medical works—notably the curious Liber de oculo, trans. into German and well edited by A. M. Berger (Munich, 1899), and of a popular textbook in logic, the Summulae logicae. John XXI. is constantly referred to as a magician by ignorant chroniclers.

(C. H. Ha.)
JOHN (POPEs)

JOHN XXII, pope from 1316 to 1334, was born at Cahors, France, in 1249. His original name was Jacques Duèse, and he came either of a family of petty nobility or else of well-to-do middle-class parents, and was not, as has been popularly supposed, the son of a shoemaker. He began his education with the Dominicans at Cahors, subsequently studied law at Montpellier, and law and medicine in Paris, and finally taught at Cahors and Toulouse. At Toulouse he became intimate with the bishop Louis, son of Charles II., king of Naples. In 1300 he was elevated to the episcopal see of Fréjus by Pope Boniface VIII. at the instance of the king of Naples, and in 1308 was made chancellor of Naples by Charles, retaining this office under Charles's successor, Robert of Anjou. In 1310 Pope Clement V. summoned Jacques to Avignon and instructed him to advise upon the affair of the Templars and also upon the question of condemning the memory of Boniface VIII. Jacques decided on the legality of suppressing the order of the Templars, holding that the pope would be serving the best interests of the church by pronouncing its suppression; but he rejected the condemnation of Boniface as a sacrilegious affront to the church and a monstrous abuse of the lay power. On the 23rd of December 1312 Clement appointed him cardinal-bishop of Porto, and it was while cardinal of Porto that he was elected pope, on the 7th of August 1316. Clement had died in April 1314, but the cardinals assembled at Carpentras were unable to agree as to his successor. As the two-thirds majority requisite for an election could not be obtained, the cardinals separated, and it was not until the 28th of June 1316 that they reassembled in the cloister of the Dominican church at Avignon and then only in deference to the pressure exerted upon them by Philip V. of France. After deliberating for more than a month they elected Robert of Anjou's candidate, Jacques Duèse, who was crowned on the 5th of September, and on the 2nd of October arrived at Avignon, where he remained for the rest of his life.

More jurist than theologian, John defended the rights of the papacy with rigorous zeal and as rigorous logic. For the restoration of the papacy to its old independence, which had been so gravely compromised under his immediate predecessors, and for the execution of the vast enterprises which the papacy deemed useful for its prestige and for Christendom, considerable sums were required; and to raise the necessary money John burdened Christian Europe with new taxes and a complicated fiscal system, which was fraught with serious consequences. For his personal use, however, he retained but a very small fraction of the sums thus acquired, and at his death his private fortune amounted to scarce a million florins. The essentially practical character of his administration has led many historians to tax him with avarice, but later research on the fiscal system of the papacy of the period, particularly the joint work of Samaran and Mollat, enables us very sensibly to modify the severe judgment passed on John by Gregorovius and others.

John's pontificate was continually disturbed by his conflict with Louis of Bavaria and by the theological revolt of the Spiritual Franciscans. In October 1314 Louis of Bavaria and Frederick of Austria had each been elected German king by the divided electors. Louis was gradually recognized by the whole of Germany, especially after his victory at Mühlendorf (1322), and gained numerous adherents in Italy, where he supported the Visconti, who had been condemned as heretics by the pope. John affected to ignore the success of this rival, and on the 13th of October 1323 forbade his recognition as king of the Romans. After demanding a respite, Louis abruptly appealed at Nuremberg from the future sentence of the pope to a general council (December 8, 1332). The conflict then assumed a grave doctrinal character. The doctrine of the rights of the lay monarchy sustained by Occam and John of Paris, by Marsilius of Padua, John of Jandun and Leopold of Bamberg, was affirmed by the jurists and theologians, penetrated into the parlements and the universities, and was combated by the upholders of papal absolutism, such as Alvaro Pelago and Alfonso Tresparron. Excommunicated on the 21st of March 1324, Louis retired by appealing for a second time to a general council, which was held on the 22nd of May 1324, and accused John of being an enemy to the peace and the law, stigmatizing him as a heretic on the ground that he opposed the principle of evangelical poverty as professed by the strict Franciscans. From this moment Louis appeared in the character of the natural ally and even the protector of the Spirituals against the persecution of the pope. On the 11th of July 1324 the pope laid under an interdict the places where Louis or his adherents resided; but this bull had no effect in Germany. Equally futile was John's declaration (April 3, 1327) that Louis had forfeited his crown and abetted heresy by granting protection to Marsilius of Padua. Having reconciled himself with Frederick of Austria, Louis penetrated into Italy and seized Rome on the 7th of January 1328, with the help of the Roman Ghibellines led by Sciarra Colonna. After installing himself in the Vatican, Louis got himself crowned by the deputies of the Roman people; instituted proceedings for the deposition of John, whom the Roman people, displeased by the spectacle of the papacy abandoning Rome, declared to have forfeited the pontificate (April 18, 1328); and finally caused a Minorite friar, Pietro Rainalucci da Corvara, to be elected pope under the name of Nicholas V. John preached a platonic crusade against Louis, who burned the pope's effigy at Fisa and in Amelia. Soon, however, Louis felt his power waning, and quitted Rome and Italy (1329). incapable of independent action, the antipope was abandoned by the Romans and handed over to John, who forced him to make a solemn submission with a halter round his neck (August 15, 1330). Nicholas was condemned to perpetual imprisonment, and died in obscurity at Avignon while the Roman people submitted to King Robert, who governed the church through his vicars. In 1317, in execution of a bull of Clement V., the royal vicariate in Italy had been conferred by John on Robert of Anjou, and this appointment was renewed in 1322 and 1324, with threats of excommunication against any one who should seize the vicariate of Italy without the authorization of the pope. One of John's last acts was his decision to separate Italy from the Empire, but this bull was of no avail and fell into oblivion. After his death, however, the interdict was not removed from Germany, and the resistance of Louis continued.

A violent manifestation of this resistance took place in connexion with the accusation of heresy brought against the pope. On the third Sunday in Advent 1329, and afterwards in public consistory, John had preached that the souls of those who have died in a state of grace go into Abraham's bosom, sub altari Dei, and do not enjoy the beatific vision (visio facie ad faciem) of the Lord until after the Last Judgment and the Resurrection; and he had even instructed a Minorite friar, Gauthier of Dijon, to collect the passages in the Fathers which were in favour of this doctrine. On the 7th of December 1331 a Dominican, Thomas of England, preached against this doctrine at Avignon itself and was thrown into prison. When news of this affair had reached Paris, the pope sent the general of the Minorites, Gerard Odonis, accompanied by a Dominican, to sustain his doctrine in that city, but King Philip VI., perhaps at the instigation of the refugee Spirituals in Paris, referred the question to the faculty of theology, which, on the 2nd of January 1333, declared that the souls of the blessed were elevated to the beatific vision immediately after death; the faculty, nevertheless, were of opinion that the pope should have pronounced his sentence of condemnation polemically, and not "determinando, asserendo, seu etiam opinando." The king notified this decision to the pope, who assembled his consistory in November 1333, and gave a haughty reply. The theologians in Louis's following who were opposed to papal absolutism already spoke of "the new heretic, Jacques de Cahors," and reiterated with increasing insistence their demands for the convocation of a general council to try the pope. John appears to have retracted shortly before his death, which occurred on the 4th of December 1334.1

1 On the 29th of January 1336 Pope Benedict XII. pronounced a long judgment on this point of doctrine, a judgment which he declared had been included by John in a bull which death had prevented him from sealing.
John had kindled very keen animosity, not only among the upholders of the independence of the lay power, but also among the upholders of absolute religious poverty, the exalted Franciscans. Early in 1324, Louis II. of Anjou, who was already devoting himself to bringing back the Spirituals to the common rule by concessions; John, on the other hand, in the bull Quo quaedam exigit (April 13, 1317), adopted an uncompromising and absolute attitude, and by the bull Gloriosam ecclesiam (January 23, 1318) condemned the protests which had been raised against the bull Quo quaedam by a group of seventy-four Spirituals and conveyed to Avignon by the monk Bernard Deliciex. Shortly afterwards four Spirituals were burned at Marseilles. These were immediately hailed as martyrs, and in the eyes of the exalted Franciscans, and in Italy and Sicily in particular, the pope was regarded as anticlerical. In the bull Sancta Romana et universa ecclesia (December 28, 1318) John definitely excommunicated them and condemned their principal book, the Postil (commentary) on the Apocalypse (February 8, 1326). The bull Quia nonnullum (March 26, 1322) defined the derogations from the rule punished by the pope, and the bull Cum inter nonnullas (November 12, 1323) condemned the proposition which had been admitted at the general chapter of the Franciscans held at Perugia in 1322, according to which Christ would never have been born. These were all internecine property, either personal or common. The minister general, Michael of Cesena, though opposed to the exaggerations of the Spirituals, joined with them in protesting against the condemnation of the fundamental principle of evangelical poverty, and the agitation gradually gained ground. The pope, by the bull Quo quaedam (November 10, 1324), cited Michael to appear at Avignon at the same time as Occam and Bonagranda. All three fled to the court of Louis of Bavaria (May 26, 1328), while the majority of the Franciscans made submission and elected a general entirely devoted to the pope. But the resistance which had been sustained by Marsilius of Padua and John of Jandun, became daily more serious. Treatises on poverty appeared on every side; the party of Occam clamoured with increasing imperiousness for the condemnation of John by a general council; and the Spirituals, confounded in the persecution with the Beghards and with Fraticelli of every description, maintained themselves in the south of France in spite of the reign of terror instituted in that region by the Inquisition.

JOHN XXIII. (Baldassare Cossa), pope, or rather anti-pope from 1410 to 1415, was born of a good Neapolitan family, and began by claiming the life of a corsair before entering the service of the Church under the pontificate of Boniface IX. His abilities, which were mainly of an administrative and military order, were soon rewarded by the cardinal's hat and the legation of Bologna. On the 20th of June 1408 he and seven of his colleagues broke away from Gregory XII., and together with six cardinals of the obedience of Avignon, who had in like manner separated from Benedict XIII., they agreed to aim at the assembling of a general council, setting aside the two rival pontiffs, an expedient which they considered would put an end to the quarrels and the great schism of the Western Church, but which resulted in the election of yet a third pope. This act was none the less decisive for Baldassare Cossa's future. Alexander V., the first pope elected at Pisa, was not, perhaps, as has been maintained, merely a man of straw put forward by the ambitious cardinal of Bologna; but he reigned only ten months, and on his death, which happened rather suddenly on the 4th of May 1410, Baldassare Cossa succeeded him. Whether the latter had bought his electors by money and promises, or owed his success to his dominant position in Bologna, and to the support of Florence and of Louis II. of Anjou, he seems to have received the unanimous vote of all the seventeen cardinals gathered together at Bologna (May 17). He took the name of John XXIII., and France, England, and part of Italy and Germany recognized him as head of the Catholic church.

The struggle in which he and Louis II. of Anjou engaged with Ladislaus of Durazzo, king of Sicily, and Gregory XII.'s chief protector in Italy, at first went in John's favour. After the brilliant victory of Roccasecca (May 19, 1411) he had the satisfaction of dragging the standards of Pope Gregory and King Ladislaus before the people of Rome. But the success of Louis of Anjou's troops and his carelessness, together with the lack of success which attended the preaching of a crusade in Germany, France and England, finally decided John XXIII. to abandon the French claimant to the throne of Sicily; he recognized Ladislaus, his former enemy, as king of Naples, and Ladislaus did not fail to salute John XXIII. as pope, appending Gregory XII. (June 15, 1412). This was a fatal step: John XXIII. was trusting in a dishonest and insatiable prince; he would have acted more wisely in remaining the ally of the weak but loyal Gregory. However, it was not long after his appointment as pope that the council of Pisa, which the popes set up by this synod seemed in no hurry to carry into effect, should be further discussed in the new council which it had been agreed should be summoned about the spring of 1412. But John was anxious that this council should be held in Rome, a city where he alone was master; the few prelates and ambassadors who very slowly gathered there held only a small number of sessions, in which John again condemned the writings of Wycliffe. John was attacked by the representatives of the various nations sent to demand even for his private conduct, that he be forced by discipline, which seemed to turn towards the head of the empire. Less than a year after the treaty concluded with Ladislaus of Durazzo, the latter forced his way into Rome (June 8, 1413), which he sacked, expelling John, to whom even the Florentines did not dare to throw open their gates for fear of the king of Sicily. Sigismund, king of the Romans, not only extorted, it is said, a sum of 50,000 florins from the pontiff in his extremity, but insisted upon his summoning the council at Constance (December 9). It was in vain that, on the death of Ladislaus, which took place unexpectedly (August 6, 1414), John was inspired with the idea of breaking his compact with Sigismund and returning to Rome, at the same time appealing to Louis of Anjou. It was too late. The cardinals forced him towards Germany by the most direct road, without allowing him to go by way of Avignon as he had projected, in order to make plans with the princes of France.

On the 5th of November 1414 John opened the council of Constance, where, on Christmas Day, he received the homage of the head of the empire, but where his lack of prestige, the defection of his allies, the fury of his adversaries, and the general sense of the necessity for union soon showed that only too clearly how small was the chance of his retaining the tiara. He had to take a solemn oath to abdicate if his two rivals would do the same, and this concession, which was not very sincere, gained him for the last time the honour of seeing Sigismund prostrate at his feet (March 2, 1415). But on the night of the 20th–21st of March, having donned the garments of a layman, with a cross-bow slung at his side, he succeeded in making his escape.
JOHN (ROMAN EMPERORS)

from Constance, accompanied only by a single servant, and took refuge first in the castle of Schaffhausen, then in that of Laufenburg, then at Freiburg-im-Breisgau, and finally at Brisach, whence he hoped to reach Alsace, and doubtless ultimately Avignon, under the protection of an escort sent by the duke of Burgundy. The news of the pope's escape was received at Constance with an extraordinary outburst of rage, and led to the subversive decrees of the 4th and 4th sessions, which proclaimed the superiority of the council over the pope. Duke Frederick of Austria had hitherto sheltered John's flight; but, laid under the ban of the empire, attacked by powerful armies, and feeling that he was courting ruin, he preferred to give up the pontiff who had trusted to him. John was brought back to Freiburg (April 27), and there in vain attempted to appease the wrath which he had aroused by more or less vague promises of resignation. His trial, however, was already beginning. The three Cardinals whom he charged with his defence hastily declined this compromising task. Seventy-four charges were drawn up, only twenty of which were set aside after the witnesses had been heard. The accusation of having poisoned Alexander V. and his doctor at Bologna was not maintained. But enough deeds of immorality, tyranny, ambition and simony were found proved to justify the severest judgment. He was suspended from his functions as pope on the 14th of May 1415, and deposed on the following 20th of May.

However irregular this sentence may have been from the canonical point of view (for the Cardinals did not seem to have actually given the crown of heresy, which was necessary, according to most scholars of the period, to justify the deposition of a sovereign pontiff), the condemned pope was not long in confirming it. Baldassare Cossa, now as humble and resigned as he had before been energetic and tenacious, on his transference to the castle of Rudolfzell admitted the wrong which he had done by his flight, refused to bring forward anything in his defence, acquiesced entirely in the judgment of the council which he declared to be infallible, and, finally, as an extreme precaution, ratified muta proprio the sentence of deposition, declaring that the faculty of laying down any rights which he might still have in the papacy. This fact has subsequently been often quoted against those who have appealed to the events of 1415 to maintain that a council can depose a pope who is scelisator ecclesiae.

Cossa kept his word never to appeal against the sentence which stripped him of the pontificate. He was held prisoner for three years in Germany, but in the end bought his liberty from the count palatine. He used this liberty only to go to Florence, in 1419, and throw himself on the mercy of the legitimate pope. Martin V. appointed him Cardinal-bishop of Terracina, a dignity by which Cossa only enjoyed for a few months. He died on the 22nd of December 1419, and all visitors to the Baptistry at Florence may admire, under its high baldacchino, the sombre figure sculptured by Donatello of the deposed pontiff, who had at least the merit of bowing his head under his chastisement, and of contributing by his passive resignation to the extinction of the series of popes which sprang from the council of Pisa. (N.V.)

JOHN I. (925-976), surnamed Tzimisces, East Roman emperor, was born of a distinguished Cappadocian family. After helping his uncle Nicephorus Phocas (q.v.) to obtain the throne and to restore the empire's eastern provinces, he was dispatched by an intrigue, upon which he retaliated by conspiring with Nicephorus' wife Theophania to assassinate him. Elected ruler in his stead, John proceeded to justify his usurpation by the energy with which he repelled the foreign invaders of the empire. In a series of campaigns against the newly established Russian power (970-973) he drove the enemy out of Thrace, crossed Mt Haemus and besieged the fortress of Doryistol on the Danube. In several hard-fought battles he broke the strength of the Russians so completely that they left him master of eastern Bulgaria. He further secured his northern frontier by transplanting to Thrace some colonies of Paulicians whom he suspected of sympathising with their Saracen neighbours in the east. In 974 he turned against the Abbasid empire and easily recovered the inland parts of Syria and the middle reaches of the Euphrates. He died suddenly in 976 on his return from his second campaign against the Saracens. John's surname was apparently derived from the Armenian իսհեմշիկ (red boot).

JOHN II. (1088-1143), surnamed Comnenus and also Kalojannes (John the Good), East Roman emperor, was the eldest son of the East Roman emperor Alexius, whom he succeeded in 1118. On account of his mild and just reign he has been called the Byzantine Marcus Aurelius. By the personal purity of his character he effected a notable improvement in the manners of his age, but he displayed little vigour in internal administration or in extirpating the long-standing corruptions of the government. Nor did his various successes against the Hungarians, Servians and Seljuk Turks, whom he pressed hard in Asia Minor and proposed to expel from Jerusalem, add much to the stability of his empire. He was accidentally killed during a wild-bear hunt on Mt Taurus, on the 8th of April 1143.

JOHN III. (1103-1154), surnamed Vatatzes and also Ducas, East Roman emperor, earned for himself such distinction as a soldier that in 1222 he was chosen to succeed his father-in-law Theodore I. Lascaris. He reorganized the remnant of the East Roman empire, and by his administrative skill made it the strongest and richest principality in the Levant. Having secured his eastern frontier by an agreement with the Turks, he set himself to recover the European possessions of his predecessors. While his fleet harassed the Latins in the Aegean Sea and extended his realm to Rhodes, his army, reinforced by Frankish mercenaries, defeated the Latin emperor's forces in the open field. Though unsuccessful in a siege of Constantinople, which he undertook in concert with the Bulgarians (1235), he obtained supremacy over the despots of Thessalonica and Epirus. The ultimate recovery of Constantinople by the Rhomaic emperors is chiefly due to his exertions.

JOHN IV. (c. 1250-c. 1300), surnamed Lascaris, East Roman emperor, son of Theodore II. His father dying in 1258, Michael Palaeologus conspired shortly after to make himself regent, and in 1261 dethroned and blinded the boy monarch, and imprisoned him in a remote castle, where he died a long time after.

See E. Gibbon, The Decline and Fall of the Roman Empire, vi. 459-466 (ed. Bury, 1896); A. Mellarakès, 'Ηιστορία τοῦ Βασιλείου τῆς Νικαίας (Athens, 1898), pp. 491-528.

JOHN V. or VI. (1332-1391), surnamed Palaeologus, East Roman emperor, was the son of Andronicus III., whom he succeeded in 1341. At first he shared his sovereignty with his father's friend John Cantacuzene, and after a quarrel with the latter was practically superseded by him for a number of years (1347-1355). His reign was marked by the gradual dissolution of the imperial power through the rebellion of his son Andronicus and by the encroachments of the Ottomans, to whom in 1381 John acknowledged himself tributary, after a vain attempt to secure the help of the popes by submitting to the supremacy of the Roman Church.

See E. Gibbon, The Decline and Fall of the Roman Empire, vii. 38 seq. (ed. Bury, 1896); E. Pears, The Destruction of the Greek Empire, pp. 79-96 (1903).

JOHN VI. or V. (c. 1292-1383), surnamed Cantacuzene, East Roman emperor, was born at Constantinople. Connected with the house of Palaeologus on his mother's side, on the accession of Constantine VIII. he was elected by the emperors ousting with the supreme administration of affairs. On the death of the emperor in 1341, Cantacuzene was left regent, and guardian of his son John Palaeologus, who was but nine years of age. Being suspected
JOHN PALAEOLOGUS VI.—JOHN OF ENGLAND

by the empress and opposed by a powerful party at court, he rebelled, and got himself crowned emperor at Didymoteicho in Thrace, while John Palaeologus and his supporters maintained themselves at Constantinople. The civil war which ensued lasted six years, during which the rival parties called in the aid of the Servians and Turks, and engaged mercenaries of every description. It was only by the promise of rewards that he made a disgraceful bargain, that Cantacuzene brought the war to a termination favourable to himself. In 1347 he entered Constantinople in triumph, and forced his opponents to an arrangement by which he became joint emperor with John Palaeologus and sole administrator during the minority of his colleague. During this period, the empire, already broken up and reduced to the narrowest limits, was assailed on every side. There were wars with the Genoese, who had a colony at Galata and had money to spend; with the Turks, and with the Servians, who were at that time establishing an extensive empire on the north-western frontiers; and there was a hazardous alliance with the Turks, who made their first permanent settlement in Europe, at Callipolis in Thrace, towards the end of the reign (1354). Cantacuzene was far too ready to invoke the aid of foreigners in his European quarrels; and as he had no money to pay them, this gave them a ready pretext for seizing upon a European town. The financial burdens imposed by him had long been disquieting to his subjects, and a strong party had always been friendly to his Palaeologan enemies. Hence, when the latter entered Constantinople at the end of 1354, his success was easy. Cantacuzene retired to a monastery (where he assumed the name of Joassaph Christodolus) and occupied himself in literary labours. He died in the Peloponnese and was buried by his sons at Mysithra in Lacoia. His History in four books deals with the years 1320-1356. Really an apology for his own actions, it needs to be read with caution; fortunately it can be supplemented and corrected by the work of a contemporary, Nicephorus Gregorius. It possesses the merit of being well arranged and homogeneous, the incidents being grouped round the chief actor in the person of the author, but the information is defective on matters with which he is not directly concerned.

Cantacuzene was also the author of a commentary on the first five books of Aristotle's Ethics, and of several controversial theological treatises, of which (Against Mohammedanism) is printed in Migne (Patrologia Graeca, cliv.). History, ed. by J. Pottanus (1603); in Bonn, Corpus scriptorum hist. Byz., by J. Schopen (1828-1832) and Migne, eii., cliv. See also Al Parisot, Cantacuzene, homme d'état et historien (1845); E. Gibbon, Decline and Fall, ch. xiv. and C. Krumbacher, Geschichte der byzantinischen Literatur (1897).

JOHN VI. or VII. (1390-1448), surnamed Palaeologus, East Roman emperor, son of Manuel II., succeeded to the throne in 1425. To secure protection against the Turks he visited the pope and consented to the union of the Greek and Roman churches, which was ratified at Florence in 1439. The union failed of its purpose, but by his prudent conduct towards the Ottomans he succeeded in holding possession of Constantinople, and in 1432 witnessed a siege by Sultan Murad I.

See TURKEY: History; and also E. Gibbon, The Decline and Fall of the Roman Empire, vi. 97-107 (ed. Bury, 1866); E. Pears, The Destruction of the Greek Empire, pp. 115-130 (1903).

JOHN (1167-1216), king of England, the youngest son of Henry II. by Eleanor of Aquitaine, was born at Oxford on the 24th of December 1167. He was given at an early age the nickname of Lackland because, unlike his elder brothers, he received no apanage in the continental provinces. But his future was a subject of anxious thought to Henry II. When only five years old John was betrothed (1173) to the heiress of Maurienne and Savoy, a principality which, as dominating the chief routes from France and Burgundy to Italy, enjoyed a consequence out of all proportion to its extent. Later, when this plan had fallen through, he was endowed with castles, revenues and lands on both sides of the channel; the vacant earldom of Cornwall was reserved for him (1175); he was betrothed to Isabella the heiress of the earldom of Gloucester (1176); and he was granted the lordship of Ireland with the homage of the Anglo-Irish baronage (1177). Henry II. even provoked a civil war by attempting to transfer the duchy of Aquitaine from the hands of Richard Cœur de Lion to those of John (1185). In spite of the incapacity which he displayed in this war, John was sent a little later to govern Ireland (1185); but he returned in a few months covered with disgrace, having insulted the loyal chiefs by his childish insolence and entirely failed to defend the settlers from the hostile raids. Remaining henceforth at his father's side he was treated with the utmost indulgence. But he joined with his brother Richard and the French king Philip Augustus in the great conspiracy of 1189, and the discovery of his treason broke the heart of the old king (see Henry II.).

Richard on his accession confirmed John's existing possessions; married him to Isabella of Gloucester; and gave him, besides other grants, the entire revenues of six English shires; but excused himself from an undue favour to the regency which was appointed to govern England during the third crusade; and only allowed him to live in the kingdom because urged to this concession by their mother. Soon after the king's departure for the Holy Land it became known that he had designated his nephew, the young Arthur of Brittany, as his successor. John at once began to intrigue against the regents with the aim of securing England for himself. He picked a quarrel with the unpopular chancellor William Longchamp (q.v.), and succeeded, by the help of the barons and the Londoners, in expelling this minister, whose chief fault was that of fidelity to the absent Richard. Not being ready to surrender London with the head of the administration, John next turned to Philip Augustus for help. A bargain was struck; and when Richard was captured by Leopold, duke of Austria (December 1192), the allies endeavoured to prevent his release, and planned a partition of his dominions. They were, however, unable to win either English or Norman support and their schemes collapsed with Richard's return (March 1194). He magnanimously pardoned his brother, and they lived on not unfriendly terms for the next five years. On his deathbed Richard, reversing his former arrangements, caused his barons to swear fealty to John (1199), although the hereditary claim of Arthur was by the law of primogeniture undoubtedly superior.

England and Normandy, after some hesitation, recognized John's title; the attempt of Anjou and Brittany to assert the rights of Arthur ended disastrously by the capture of the young prince at Mirebeau in Poitou (1202). But there was no part of his dominions in which John inspired personal devotion. Originally accepted as a political necessity, he soon came to be detested by the people as a tyrant and despised by the nobles for his cowardice and corruption. He had inherited his father's dissension in the disensions of the continental provinces, the growing indifference of England to foreign conquests, the discontent of all his subjects with a strict executive and severe taxation. But he cannot be acquitted of personal responsibility for his misfortunes. Astute in small matters, he had no breadth of view or foresight; his policy was continually warped by his passions or caprices; he flaunted vices of the most sordid kind with a cynical indifference to public opinion, and shocked an age which was far from tenderhearted by his ferocity to vanquished enemies. He treated his feudal allies with utter indifference to their base lessons of favours that were a favour for unscrupulous adventurers, and gave a free rein to the licence of his mercenaries. While possessing considerable gifts of mind and a latent fund of energy, he seldom acted or reflected until the favourable moment had passed. Each of his great humiliations followed as the natural result of crimes or blunders. By his divorce from Isabella of Gloucester he offended the English baronage (1200); by his marriage with Isabella of Angoulême, the betrothed of Hugh of Lusignan, he gave an opportunity to the discontented Poitevins for invoking French assistance and to Philip Augustus for pronouncing against him a sentence of forfeiture. The murder of Arthur (1203) ruined his cause in Normandy and Anjou; the story that the court of the peers of France condemned him for the murder is a fable, but no legal process was needed to convince men of his guilt. In the later quarter with Innocent III. (1207-1213; see Langton,
JOHN OF ARAGON—JOHN OF BOHEMIA

JOHN (1366-1346), king of Bohemia, was a son of the emperor Henry VII by his wife Margaret, daughter of John I, duke of Brabant, and was a member of the family of Luxemburg. Born on the 10th of August 1296, he became count of Luxemburg in 1306, and about the same time was offered the crown of Bohemia, which was granted to him on his marriage with the daughter of John XXII, king of Bohemia, in 1309. The kingdom of the Premyslides dynasty in 1306, had passed to Henry, duke of Carinthia, under whose weak rule the country was in a very disturbed condition. The emperor accepted this offer on behalf of his son, who married Elizabeth (d. 1330), a sister of Wenceslas, and after Henry's departure for Italy, John was crowned king of Bohemia at Prague in February 1311. Henry of Carinthia was driven from the land, where a certain measure of order was restored, and Moravia was again united with Bohemia. As imperial vicar John represented his father at the diet of Nuremberg in January 1313, and was leading an army to his assistance. John's reign was marked by ill success. In 1312, at the battle of Vionna, he was defeated by the forces of the Teutonic Order, and in 1313, he was defeated again at the battle of Möhlendorf in 1312, and was alternately at peace and at war with the dukes...
of Austria and with his former foe, Henry of Carinthia. He was a frequent and welcome visitor to France, in which country he had a personal and hereditary interest; and on several occasions his prowess was serviceable to his brother-in-law King Charles IV., and to Charles's successor Philip VI., whose son John, afterwards King John II., married a daughter of the Visconti family. After the battle of Mühldorf, the relations between John and the emperor became somewhat strained, partly owing to the king's growing friendship with the Papacy and with France, and partly owing to territorial disputes. An agreement, however, was concluded, and John undertook his invasion of Italy, which was perhaps the most dazzling of his exploits. Invited by the citizens of Brescia, he crossed the Alps with a meagre following in 1331, quickly received the homage of many of the cities of northern Italy, and soon found himself the ruler of a great part of the peninsula. But his soldiers were few and his enemies were many, and a second invasion of Italy in 1333 was followed by the dissipation of his dreams of making himself king of Lombardy and Tuscany, and even of supplanting Louis on the imperial throne. The fresh trouble between king and emperor, caused by this enterprise, was intensified by a quarrel over the inheritance of Louis by Henry of Carinthia, and still later by the interference of Louis in Tirol; and with bewildering rapidity John was allying himself with the kings of Hungary and Poland, fighting against the emperor and his Austrian allies, defending Bohemia, governing Luxemburg, and negotiating at the pope's instance. About 1340 the king was overthrown by blindness, but he continued to lead an active life, successfully resisting the attacks of Louis and his allies, and campaigning in Lithuania. In 1346 he made a decisive move against the emperor. Acting in union with Pope Clement VI. he secured the formal deposition of Louis and the election of his own son Charles, margrave of Moravia, as German king, or king of the Romans, in July 1346. Then journeying to help Philip of France against the English, he fought at the battle of Crécy, where his heroic death on the 26th of August 1346 was a fitting conclusion to his adventurous life.

John was a chivalrous and romantic personage, who enjoyed a great reputation for valour both before and after his death; but as a ruler he was careless and extravagant, interested only in his kingdom when seeking relief from his constant pecuniary embarrassments. After the death of his first wife, who bore him two sons, Charles, afterwards the emperor Charles IV., and John Henry (d. 1375), and who had been separated from her husband for some years, the king married Beatrice (d. 1389), daughter of Louis I., duke of Bourbon, by whom he had sons, Wenceslas and John. His first marriage with the princess of Orleans had been arranged by the poet Alphonse de Poitiers in 1338, and produced a son, Claude, who was afterwards to be the mine of having substituted a dead child in his place; but nothing was ever proved. An impostor calling himself John I., appeared in Provence, in the reign of John II., but he was captured and died in prison.

John II. (1310-1364), surmounted the Good, king of France, son of Philip VI. and Jeanne of Burgundy, succeeded his father in 1350. At the age of 13 he married Bonne of Luxembourg, daughter of John, king of Bohemia. His early exploits against the English were failures and revealed in the young prince both avarice and sentiment for his former ally. His quinquennial visits to France were always celebrated with a brilliant display of festivity, with the most lavish expenditure of money. It was said by his enemies that his expenses were paid for by the tax on wine and beer which he imposed. He was very popular among the people, and was utterly defeated at the battle of Aljubarrota, on the 14th of August 1385. King John was killed at Alcalá on the 9th of October 1390 by the fall of his horse, while he was riding in a fantasia with some of the light horsemen known as the farouche, who were mounted and equipped in the Arab style. John, son of Philip (V.) of Castile, was born on the 30th of March 1495, the son of Henry III. of Castile and of his wife Catherine, daughter of John of Gaunt. He succeeded his father on the 27th of December 1406 at the age of a year and ten months. It was one of the many misfortunes of Castile that the long reign of John II.—forty-nine years—should have been granted to one of the most incapable of her kings. John was amiable, weak and dependent on those about him. He had no taste except for ornament, and no serious interest except in amusements, verse-making, hunting and tournaments. He was entirely under the influence of his favourite, Alvaro de Luna, till his second wife, Isabella of Portugal, obtained control of his feeble will. At her instigation he threw over his faithful and able vassal, a meaness which is said to have caused him well-deserved remorse. He died on the 20th of July 1454 at Valladolid. By his second marriage he was the father of Isabella "the Catholic."
JOHN OF HUNGARY—JOHN III. OF POLAND

frequent guest of Edward at Westminster. He died on the 5th of April, and the body was sent back to France with royal honours.

JOHN (ZAPOLYA) (1487-1540), king of Hungary, was the son of the palatine Stephen Zapolya and the princess Hedwig of Toschen, and was born at the castle of Szepsévár. He began his public career at the famous Rákós diet of 1505, when, on his motion, the assembly decided that after the death of the reigning king, Wladislaus II., no foreign prince should be elected king of Hungary. Henceforth he became the national candidate for the throne, which his family had long coveted. He was a devout and widely read personality, a connoisseur of political intrigue and a master of diplomatic negotiation. His reign was marked by constant negotiations and alliances, with the goal of maintaining the independence of Hungary.

In 1507 Zapolya sued in person for the hand of the Princess Anne in vain, and his appointment to the voivody of Transylvania (1511) was with the evident intention of removing him far from court. In 1513, after a successful raid in Turkish territory, he hastened to Buda at the head of 1000 horsemen and renewed his suit, which was again rejected. In 1514 he stamped out the revolution in Transylvania, and in 1515 his forces were defeated by the Turks at Mohács. His war with the Ottoman Empire continued until his death in 1540.

He contributed to the subsequent conquest of Hungary by admitting the Turk as a friend.

See Vilmos Frkoni, Ungarn vor der Schlacht bei Mohács (Budapest, 1914); L. Kaposki, Die Zeiten mit den Osmanen bis zur Schlacht bei Mohács (Vienna, 1895); Ignace Acsády, History of the Hungarian Realm, vol. i. (Hung.) (Budapest, 1902-1904).

JOHN OF BRIENNE (c. 1148-1237), king of Jerusalem and Latin emperor of Constantinople, was a man of sixty years of age before he began to play any considerable part in history. Destined originally for the Church, he had preferred to become a knight, and in forty years of tournaments and fights he had won himself a considerable reputation, when in 1208 he came from the Holy Land to ask Philip Augustus, king of France, to select him as one of his barons as husband to the heiress and ruler of the kingdom, of Jerusalem. Philip selected John of Brienne, and promised to support him in his new dignity. In 1210 John married the heiress Mary (daughter of Isabella and Conrad of Montferrat), assuming the title of king in right of his wife. In 1211, after some desultory operations, he concluded a six years' truce with Malik-el-Adil; in 1212 he lost his wife, who left him a daughter, Isabella; soon afterwards he married an Armenian princess. In the fifth crusade (1218-1221) he was a prominent figure. The legate Pelagius, however, claimed the succession, and the adventure of the Emperor Philip was in vain. In spite of the warnings of King John, he refused to accept the favourable terms of the sultan, as the king advised, until it was too late. After the failure of the crusade, King John came to the West to obtain help for his kingdom. In 1223 he met Honorius III., and the emperor Frederick II. at Ferentino, where, in order that he might be connected more closely with the Holy Land, Frederick betrothed to John's daughter Isabella, now heiress of the kingdom. After the meeting at Ferentino, John went to France and England, finding little consolation; and thence he travelled to Compostella, where he married a new wife, Berengaria of Castile. After a visit to Germany he returned to Rome (1225). Here he received a demand from Frederick II. (who had now married Isabella) that he should abandon his title and dignity of king, which—so Frederick claimed—had passed to himself along with the heiress of the kingdom. John was now a septuagenarian "king in exile," but he was still vigorous enough to revenge himself on Frederick, by commanding the papal troops which attacked southern Italy during the emperor's absence on the sixth crusade (1228-1229). In 1229 John, now eighty years of age, was invited by the barons of Hungary to return, in the expectation of a new crusade. On that condition Baldwin of Courtenay should marry his second daughter and succeed him. For nine years he ruled in Constantinople, and in 1235, with a few troops, he repelled a great siege of the city by Vataces of Nicea and Azen of Bulgaria. After this last feat of arms, which has perhaps been exaggerated by the Latin chroniclers, who compare him to Hector and the Maccabees, John died in the habit of a Franciscan friar. An aged paladin, somewhat uxorious and always penniless, he was a typical knight errant, whose wanderings led him all over Europe, and planted him successively on the thrones of Jerusalem and Constantinople.

The story of John's career must be sought partly in his claims to the kingdom of Jerusalem and partly in the ascent of the East, particularly in monarchical. Among these, of which R. Köhrich gives a list (Geschichte des Königsrechts Jerusalem, p. 699, n. 3), see especially that of E. de Montcertain, Un chevalier du temps passé (Limoges, 1876 and 1881).

JOHN III. (SÓBIESKI) (1624-1696), king of Poland, was the eldest son of James Sobieski, castellan of Cracow, and Theofila Duninowicowa, grand-daughter of the great Hetman Zol-Kiewski. After being educated at Cracow, he made the grand tour with his brother Mark and returned to Poland in 1648. He served against Chmielnicki and the Cossacks and was present at the battles of Beresteczko (1651) and Batoka (1652), but was one of the first to desert his unhappy country when invaded by the Swedes in 1654, and actually assisted them to conquer the Prussian provinces in 1655. He returned to his lawful allegiance.
JOHN I. OF PORTUGAL

in the following year and assisted Czarniecki in his difficult task of expelling Charles X. of Sweden from the central Polish provinces. For his subsequent services to King John Casimir, especially in the Ukraine against the Tatars and Cossacks, he received the grand bateau of the crown, or commandanship-in-chief (1668). He had already (1665) succeeded Czarniecki as acting command-in-chief. Sobieski had well earned these distinctions by his extraordinary military capacity, but he was now to exhibit a less pleasing side of his character. He was in fact a typical representative of the unscrupulous self-seeking Polish magnates of the 17th century who were always ready to sacrifice everything, their country included, to their own private interests. But the election of 1669 constrained large bribes from Louis XIV. to support one of the French candidates; after the election of Michael Wisniowiecki (June 19, 1669) he openly conspired, again in the French interest, against his lawful sovereign, and that too at the very time when the Turk was ravaging the southern frontier of the republic. Michael was the feeblest monarch the Poles could have placed upon the throne, and Sobieski deliberately attempted to make government of any kind impossible. He formed a league with the prime Prazmowski and other traitors to dethrone the king, and the plot was discovered in Warsaw, and in it repudiated by Louis XIV., the traitors sought the help of the elector of Brandenburg against their own justly indignant countrymen. Two years later the same traitors again conspired against the king, at the very time when the Turks had defeated Sobieski's unsupported lieutenant, Luzecki, at Czerwetwyworska and captured the fortress of Kamieniec (Kamenz-Podolski), the key of south-eastern Poland, while Lemberg was only saved by the valour of Elias Lanki. The unhappy king did the only thing possible in the circumstances. He summoned the tuzenica postpolite, or national armed assembly; but it failed to assemble the time. Whereupon Michael was constrained to sign the disgraceful peace of Buczac (Oct. 17, 1672) whereby Poland ceded to the Porte the whole of the Ukraine with Podolia and Kamieniec. Aroused to duty by a series of disasters for which he himself was primarily responsible, Sobieski now hastened to the frontier, and won four victories in ten days. But he could not recover Kamieniec, and when the tuzenica postpolite met at Goleba and ordered an inquiry into the conduct of Sobieski and his accomplices, he frustrated all their efforts by summoning a counter confederation to meet at Szczecbreszyn. Sobieski was impeached, he was actually imprisoned, but the command-in-chief, both the king and the diet had to give way, and a compromise was come to whereby the peace of Buczac was repudiated and Sobieski was given a chance of rehabilitating himself, which he did by his brilliant victory over an immense Turkish host at Khotin (Nov. 10, 1673). The same day King Michael died and Sobieski, determined to secure the throne for himself, hastened to the capital, though Tatar bands were swarming over the frontier and the whole situation was acutely perilous. Appearing at the elective diet of 1674 at the head of 6000 veterans he overawed every other competitor, and despite the persistent opposition of the Lithuanians was elected king on the 21st of May. By this time, however, the state of things in the Ukraine was so alarming that the new king had to hasten to the front. Assisted by French diplomacy at the Porte (Louis XIV. desiring to employ Poland against Austria), and his own skilful negotiations with the Tatar khan, John III. now tried to follow the example of Vladislaus IV. by leaving the guardianship of the Ukraine entirely in the hands of the Cossacks, while he assembled as many regulars and militiamen as possible at Lemberg, whence he might hasten with adequate forces to defend whichever of the provinces of the Kingdom might be in most danger. But the appeal of the king was like the voice of one crying in the wilderness, and not one gentleman in a hundred hastened to the assistance of the fatherland. Even at the end of August Sobieski had but 3000 men at his disposal to oppose to 60,000 Turks. Only his superb strategy and the heroic devotion of his lieutenants—notably the converted Jew, Jan Samuel Chrzanowski, who held the Ottoman army at bay for eleven days behind the walls of Trembowla—enabled the king to remove the pagan yoke from our shoulders"; and he returned to be crowned at Cracow on the 12th of February 1676. In October 1676, in his entrenched camp at Zaravno, he with 13,000 men withstood 80,000 Turks for three weeks, and recovered by special treaty two-thirds of the Ukraine, but without Kamieniec (treaty of Zaravno, Oct. 16, 1676).

Having now secured peace abroad Sobieski was desirous of strengthening Poland at home by establishing absolute monarchy; but Louis XIV. looked coldly on the project, and from this time forth the old familiar relations between the republic and the French monarchy were strained to breaking point, though Sobieski's efforts to dethrone Louis XIII. did not come till 1682 on the arrival of the Austrian minister, Zerowski, at Warsaw. After resisting every attempt of the French court to draw him into the anti-Habsburg league, Sobieski signed the famous treaty of alliance with the emperor Leopold against the Turks (March 31, 1683), which was the prelude to the most glorious episode of his life, the relief of Vienna and the liberation of Hungary from the Ottoman yoke. The epoch-making victory of the 12th of September 1683 was ultimately decided by the charge of the Polish cavalry led by Sobieski in person. Unfortunately Poland had no effective navy, and never having seen a sea battle Sobieski had broken the back of the enemy she was left to fight the common enemy in the Ukraine with whatever assistance she could obtain from the unwilling and unready Muscovites. The last twelve years of the reign of John III. were a period of unmitigated humiliation and disaster. He now reaped to the full the harvest of treason and rebellion which he himself had sown so abundantly during the first forty years of his life. A reasonable senate secretly plotting his dethronement, a mutinous diet rejecting the most necessary reforms for fear of "absolutism," ungrateful allies who profited exclusively by his victories—these were his irreparable companions during the remainder of his life. Nay, at last his evil destiny pursued him to the battlefield and his own home. His last campaign (in 1690) was an utter failure, and the last years of his life were embittered by the violence and the intrigues of his dotingly beloved wife, Marya Kazimiera d'Arquien, by whom he had three sons, James, Alexander and Constantine. He died on the 17th of June 1696, a disillusioned and broken-hearted old man.

JOHN I. (1337-1433), king of Portugal, the natural son of Pedro I. (el Justiciero), was born at Lisbon on the 22nd of April 1337, and in 1364 was created grand-master of Aviz. On the death of his lawful brother Ferdinand I., without male issue, in October 1383, strenuous efforts were made to secure the succession for Beatrice, the only child of Ferdinand I., who as heir-apparent had been married to John I. of Castile (Spain), but the popular voice declared against an arrangement by which Portugal would virtually have become a Spanish province, and John was after violent tumults proclaimed protector and regent in the following December. In April 1385 he was unanimously chosen king by the estates of the realm at Coimbra. The king of Castile invaded Portugal, but his army was compelled by pestilence to withdraw, and subsequently by the decisive battle of Aljubarrota (Aug. 14, 1385) the stability of John's throne was permanently secured. Hostilities continued intermittently until John I. died, July 21, 1399. Meanwhile the king of Portugal went on consolidating the power of the crown at home and the influence of the nation abroad. In 1415 Ceuta was taken from the Moors by his sons who had been born to him by his wife Philippa, daughter of John, duke of Lancaster; specially distinguished in the siege was Prince Henry (q.v.) afterwards generally known as "the Navigator." John I., sometimes surmised "the Great," and sometimes "father of his country," died on the
JOHN II. OF PORTUGAL—JOHN OF SAXONY

11th of August 1433, in the forty-eighth year of a reign which had been characterized by great prudence, ability and success; he was succeeded by his son Edward or Duarte, so named out of compliment to Edward III. of England.

See J. P. Oliveira Martins, Os filhos de D. João I. and A vida de Nuno Álvares (Lisbon, 2nd ed. 1894).

JOHN II. (1455-1495), the Perfect, king of Portugal, succeeded his father, Alphonso V., in August 1481. His first business was to curtail the overgrown power of his aristocracy; noteworthy incidents in the contest were the execution (1483) of the duke of Braganza for correspondence with Castile, and the murder, by the king's own hand, of the youthful duke of Visco for conspiring against him. His reign was signalized by Bartholomew Diaz's discovery of the Cape of Good Hope in 1488. Maritime rivalry led to disputes between Portugal and Castile until their claims were adjusted by the famous treaty of Tordesillas (June 7, 1494). John II. died, without leaving male issue, in October 1495, and was succeeded by his brother-in-law, the crown prince, Emmanuel (Manuel I.).

See J. P. Oliveira Martins, O principio perfeito (Lisbon, 1895).

JOHN III. (1502-1557), king of Portugal, was born at Lisbon, on the 6th of June 1502, and ascended the throne as successor of his father John II., in December 1554. In December 1506 he married Catherine, sister to the Emperor Charles V., who shortly afterwards married the infant Isabel, John's sister. Succeeding to the crown at a time when Portugal was at the height of its political power, and Lisbon in a position of commercial importance previously unknown, John III., unfortunately for his dominions, became subservient to the clerical party among his subjects, with disastrous consequences to the commercial and social prosperity of his kingdom. He died of apoplexy on the 6th of June 1557, and was succeeded by his grandson Sebastian, then a child of only three years.

JOHN IV. (1603-1656), the Fortunate, king of Portugal, was born at Villaviciosa in March 1603, succeeded to the dukedom of Braganza in 1630, and married Luiza de Guzman, eldest daughter of the duke of Medina Sidonia, in 1633. By the unanimous voice of the people he was raised to the throne of Portugal (of which he was held to be the legitimate heir) at the revolution effected in December 1640 against the Spanish king, Philip IV. His accession led to a protracted war with Spain, which only ended with the recognition of Portuguese independence in a subsequent reign (1668). He died on the 6th of November 1656, and was succeeded by his son Alphonso VI.

JOHN V. (1689-1755), king of Portugal, was born at Lisbon on the 22nd of October 1689, and succeeded his father Pedro II., in December 1706, being proclaimed on the 1st of January 1707. One of his first acts was to intimate his adherence to the Grand Alliance, which his father had joined in 1703. Accordingly his general Das Minas, along with Lord Galway, advanced into Castile, but sustained the defeat of Almanza (April 14). In October 1708 he married Maria Anna, daughter of Leopold I., thus strengthening the alliance with Austria; the series of unsuccessful campaigns which ensued ultimately terminated in a favourable peace with France in 1713 and with Spain in 1715. The rest of his long reign was characterized by royal subservience to the clergy, the kingdom being administered by ecclesiastical persons and for ecclesiastical objects to an extent that gave him the best of rights to the title "Most Faithful King," bestowed upon him and his successors by a bull of Pope Benedict XIV. in 1748. John V. died on the 31st of July 1750, and was succeeded by his son Joseph.

JOHN VI. (1769-1826), king of Portugal, was born at Lisbon on the 1st of May 1769, and received the title of prince of Brazil in 1788. This reign was marked by government in name of his mother Queen Maria L., who had become insane. He had been brought up in an ecclesiastical atmosphere, and, being naturally of a somewhat weak and helpless character, was but ill adapted for the responsibilities he was thus called on to undertake. In 1799 he assumed the title of regent, which he retained until his mother's death in 1816. (For the political history of his regency, see PORTUGAL.) In 1816 he was recognized as king of Portugal but he continued to reside in Brazil; the consequent spread of dissatisfaction resulted in the peaceful revolution of 1820, and the proclamation of a constitutional government, to which he swore fidelity on his return to Portugal in 1822. In the same year, and again in 1823, he had to suppress a rebellion led by his son Dom Miguel, whom he ultimately was compelled to banish in 1824. He died at Lisbon on the 26th of March 1826, and was succeeded by Pedro IV.

JOHN (1801-1873), king of Saxony, son of Prince Maximilian of Saxony and his wife Caroline of Parma (d. 1803), was born at Dresden on the 12th of December 1801. As a boy he distinguished himself by the talents (literary, artistic, and political science), and studied with the greatest ardour classical and German literature (Herder, Schiller, Goethe). He soon began to compose poetry himself, and drew great inspiration from a journey in Italy (1821-1822), the pleasure of which was however darkened by the death of his brother Clemens. In Pavia the prince met with Biagioi's edition of Dante, and this gave rise to his lifelong and fruitful studies of Dante. The first part of his German translation of Dante was published in 1828, and in 1833 appeared the complete work. Several new editions appeared under his constant supervision, and he collected a complete library of works on Dante.

On his return from Italy he was betrothed to Princess Amalia of Bavaria, daughter of King Maximilian Joseph. He thus became the brother-in-law of Frederick William IV., king of Prussia, with whom he had a deep and lasting friendship. His wife Amalia died on the 8th of November 1877, having borne him nine children, two of whom, Albert and George, later became kings of Saxony.

On his return to Dresden John was called in 1822 to the privy board of finance (Geheimes Fiskanzesskriegium) and in 1825 became its vice-president. Under the leadership of the president, Freiherr von Manteuffel, he acquired a thorough knowledge of administration and of political economy, and laid the foundations of that conservatism which he retained throughout life. These new activities did not, however, interrupt his literary and artistic studies. He came into still closer relations with politics and government after his entry into the privy council in 1830. During the revolution in Saxony he helped in the pacification of the country, became commandant of the new national guard, and the political tendencies of which he tried to keep a check, and thus became an exceptionally active part in the organization of the constitution of the 4th of September 1831, and especially in the deliberations of the upper chamber, where he worked with unfailing energy and great ability. Following the example of his father, he taught his children in person, and had a great influence on their education. On the 12th of August 1845, during a stay at Leipzig, the prince was the object of hostile public demonstrations, the people holding him to be the head of an alleged ultramontane party at court, and the revolution of 1848 compelled him to interrupt his activities in the upper chamber. Immediately after the suppression of the revolution he resumed his place and took part chiefly in the discussion of legal questions. He was also interested in the amalgamation of the German historical and archaeological societies. On the death of his brother, Frederick Augustus II., John became, on the 9th of August 1854, king of Saxony. As king he soon won great popularity owing to his simplicity, graciousness and increasingly evident knowledge of affairs. In his policy as regards the German confederation he was entirely on the side of Austria. Though not opposed to a reform of the federal constitution, he held that its maintenance under the presidency of Austria was essential. This view he supported at the assembly of princes at Frankfort in August and September 1863. He was unable to uphold his views against Prussia, and in the war of 1866 fought on the side of Austria. It was with difficulty that, on the conclusion of peace, Austrian diplomacy succeeded in enabling the king to retain his crown. After 1866 King John gradually became reconciled to the new state of affairs. He entered the North German
confederation, and in the war of 1870-71 with France his troops fought with conspicuous courage. He died at Dresden on the 29th of October 1873.

JOHN I. (d. 1294), duke of Brabant and Lorraine, surnamed the Victorious, one of the most gifted and chivalrous princes of his time, was the second son of Duke Henry III. and Aleidis of Burgundy. In 1267 his elder brother Henry, being infirm of mind and body, was deposed in his favour. In 1271 John married Margaret, daughter of Louis IX. of France, and on her death in childbirth he took as his second wife (1273) Margaret of Flanders, daughter of Guy de Dampierre. His sister Marie was espoused in 1275 to Philip III. (the Bold) of France, and during the reign of Philip and his son Philip IV. there were close relations of friendship and alliance between Brabant and France. In 1285 John accompanied Philip III. in his expedition against Peter III., king of Aragon, but the duchy of Limburg was the scene of his chief activity and greatest successes. After the death of Waleran IV. in 1279 the succession to this duchy was disputed. His heiress, Ermengarde, had married Reinald I. count of Gelderland. She died childless, but her husband and his rights were disputed by Count Adolph of Berg, nephew to Waleran IV. (see LIMBURG).

Not being strong enough to eject his rival, Adolph sold his rights to John of Brabant, and hostilities broke out in 1283. Harassed by desultory warfare and endless negotiations, and seeing no prospect of holding his own against the powerful duke of Brabant, Reinald made over his rights to Henry III. count of Luxemburg, who was a descendant of Waleran III. of Limburg. Henry III. was sustained by the archbishop of Cologne and other allies, as well as by Reinald of Gelderland. The duke of Brabant at once invaded the Rhineland and seized Breda and Valkenburg. Here he was attacked by the forces of the confederacy on the 5th of June 1288. After a bloody struggle John of Brabant, though at the head of far inferior numbers, was completely victorious. Limburg was henceforth attached to the duchy of Brabant. John consolidated his conquest by giving his daughter in marriage to Henry of Luxemburg (1291). John the Victorious was a perfect model of a feudal prince in the days of chivalry, brave, adventurous, excelling in every form of active exercise, fond of display, generous in temper. He delighted in tournaments, and was always eager personally to take part in jousts. On the 3rd of May 1294, on the occasion of some marriage festivities at Bar, he was wounded in the arm in an encounter by Pierre de Bausner, and died from the effects of the hurt.

JOHN, or HANS (1513-1571), marcaigne of Brandenburg-Cüstrin, was the younger son of Joachim I., elector of Brandenburg, and was born at Tangermünde on the 3rd of August 1513. In spite of the dispostio Achillii v. Treitschke. Preuss. Jahrb. (1852), he inherited the new mark of Brandenburg on his father's death in July 1535. He had been brought up as a strict Catholic, but soon wavered in his allegiance, and in 1538 ranged himself definitely on the side of the Reformers. About the same time he joined the league of Schmalkalden; but before the war broke out between the league and the emperor Charles V. the promises of the emperor had won him over to the imperial side. After the conclusion of the war, the relations between John and Charles became somewhat strained.

The marquise opposed the Interim, issued from Augsburg in May 1548, and he was the leader of the princes who formed a league for the defence of the Lutheran doctrines in February 1550. The alliance of these princes, however, with Henry II., king of France, does not appear to have commended itself to him and after some differences of opinion with Maurice, elector of Saxony, he returned to the emperor's side. His remaining years were mainly spent in the new mark, which he ruled carefully and economically. He added to its extent by the marriages of his son and Storko and Peitz. He died at Cüstrin on the 13th of January 1571. His wife Catherine was a daughter of Henry II., duke of Brunswick, and as he left no sons the new mark passed on his death to his nephew John George, elector of Brandenburg.

See Berg, Beiträge zur Geschichte des Markgrafen Johann von Künstl (Leipzig, 1903).

JOHN (1371-1410), called the Fearless (Sans Peur), duke of Burgundy, son of Philip the Bold, duke of Burgundy, and Margaret of Flanders, was born at Dijon on the 28th of May 1371. On the death of his royal mother a ceremony of 1384 he received the title of count of Nevers, which he bore until his father's death. Though originally destined to be the husband of Catherine, sister of Charles VI. of France, he married in 1385 Margaret, daughter of Duke Albert of Bavaria, an alliance which consolidated his position in the Netherlands. In the spring of 1396 he took arms for Hungary against the Turks and on the 28th of September was taken prisoner by the Sultan Bayezid I. at the bloody battle of Nicopolis, where he earned his surname of "the Fearless." He did not recover his liberty until 1397, and then only by paying an enormous ransom. He succeeded his father in 1404, and, immediately found himself in conflict with Louis of Orleans, the young brother of Charles VI. The history of the following years is filled with the struggles between these two princes and with their attempts to seize the authority in the name of the demented king. John endeavoured to strengthen his position by marrying his daughter Margaret to the dauphin Louis, and by betrothing his son Philip to a daughter of Charles VI. Like his father, he looked for support to the popular party, to the tradesmen, particularly the powerful guild of the butchers, and also to the university of Paris. In 1405 his father in 1404, and, immediately found himself in conflict with Louis of Orleans, the young brother of Charles VI. was reinstated in his ancient privileges. By the peace of Chartres (March 9, 1409) the king absolved him from the crime, and Valentina Visconti, the widow of the murdered duke, and her children pledged themselves to a reconciliation; while an edict of the 27th of December 1409 gave John the guardianship of the dauphin. Nevertheless, a new league was formed against the duke of Burgundy in the following year, principally at the instance of Bernard, count of Armagnac, from whom the party opposed to the Burgundians took its name. The peace of Bicêtre (Nov. 2, 1410) prevented the outbreak of hostilities, inasmuch as the parties were enjoined by its terms to return to the league in case of recurrence of it. However, the king, having been outraged by the Burgundians, renewed his complaint to the Armagnacs in the environs of Paris, the duke of Burgundy was called back to Paris. He relied more than ever on the support of the popular party, which then obtained the reforms Ordonnance Cabochienne (so called from Simon Caboche, a prominent member of the gild of the butchers). But the bloodthirsty excesses of the populace brought a change. John was forced to withdraw to Burgundy (August 1413), and the university of Paris and John Gerson once more censured Petit's propositions, which, but for the lavish bribes of money and title granted by John to its prelates, would have been solemnly condemned at the council of Constance. John's attitude was undecided; he negotiated with the court and also with the English, who had just renewed hostilities with France. Although he talked of helping his sovereign, his troops took no part in the battle of Agincourt (1415), where, however, two of his brothers, Anthony, duke of Brabant, and Philip, count of Nevers, fell fighting for France. In 1447 John made an attack on Paris, which failed through his losing at Lagny; 1 but on the 30th of May 1418 a traitor, one Perrenot Leclerc, opened the gates of Paris to the Burgundian captain Villiers d'Isle Adam. The dauphin, after a brisk fight, fled the town, and John betook himself to the king, who promised to forget the past. John, however, did nothing to prevent the surrender of Rouen, which had been besieged by the English, and which the fate of the kingdom seemed to depend; and the town was taken in 1419. The dauphin then decided on a reconciliation, and on the 11th of July the two princes swore peace on the bridge of Pouilly, near Melun. On the ground that peace was not sufficiently assured by the Pouilly meeting, a fresh interview was proposed by the dauphin and took place on the 10th of September 1420 on the bridge of Montereau, when the duke of Burgundy was felled with an ax by Tanneguy du Chastel, one of the dauphin's companions, and done to death by the other members of the dauphin's escort. His body was first buried at Montereau and afterwards removed to the Chartreuse of Dijon and placed in a magnificent tomb sculptured by Juan de la Huerta; the tomb was afterwards transferred to the museum in the hôtel de ville. 1

By his wife, Margaret of Bavaria, he had one son, Philip the Good, who succeeded him; and seven daughters—Margaret, who married in 1404 Louis, son of Charles VI., and in 1423 Arthur, earl of Richmond and afterwards duke of Ricardo; Mary, wife of Adolph of Cleves; Catherine, promised in 1410 to a son of Louis of Anjou; Isabella, wife of Olivier de Châtillon, count of Penthievre; Joanna, who died young; Anne, who married John, duke of Bedford, in 1423; and Agnes, who married Charles I., duke of Bourbon, in 1425.

JOHN (1465–1532), called the Steadfast, elector of Saxony, fourth son of the elector Ernest, was born on the 30th of June 1468. In 1486, when his eldest brother became elector as Frederick III., John received a part of the paternal inheritance and afterwards assisted his kinsman, the German king Maximilian I., in several campaigns. He was an early adherent of Luther, and, becoming elector of Saxony by his brother's death in May 1525, was soon prominent among the Reformers. Having assisted to suppress the rising led by Thomas Munzer in 1525, he helped Philip, landgrave of Hesse, to found the league of Gothic, formed in 1526 for the protection of the Reformers. He was active at the diet of Spires in 1526, and the "recess" of this diet gave him an opportunity to reform the church in Saxony, where a plan for divine service was drawn up by Luther. The assertions of Otto von Pack that a league had been formed against the elector and his friends induced John to ally himself again with Philip of Hesse in March 1528, but he restrained Philip from making an immediate attack upon their opponents. In 1529, at the Diet of Regensburg, the prominence of John was opposed to the Reformers, being thus one of the original Protestants, and was actively hostile to Charles V. at the diet of Augsburg in 1530. Having signed the confession of Augsburg, he was alone among the electors in objecting to the election of Ferdinand, afterwards the emperor Ferdinand I., as king of the Romans. He was among the first members of the league of Schmalkalden, assented to the religious peace of Nuremberg in 1532, and died at Schwetzingen on the 16th of August 1533. John was twice married and left two sons and two daughters. His eldest son, John Frederick, was released from his position as Duke of Saxony by his father; and in 1535, his brother, John Ernst, was elected Elector of Saxony. He rendered great services to the Protestant cause in its infancy, but as a Lutheran resolutely refused to come to any understanding with other opponents of the old faith.

JOHN, DON—JOHN OF THE CROSS

447

league, and though Don John captured Tunis in 1573, it was again speedily lost. The schemes of Don John found no support in Philip II, who refused to entertain them, and even withheld from his half-brother the title of infante of Spain. At last, however, he was appointed (1576) governor-general of the Netherlands, in succession to Luis de Requesens. The administration of the latter had not been successful, the revolt headed by the prince of Orange had spread, and at the time of Don John’s nomination the Pacification of Ghent appeared to have united the whole of the seventeen provinces of the Netherlands in determined opposition to Spanish rule and the policy of Philip II. The magic of Don John’s name, and the great qualities of which he had given proof, were to recover what had been lost. He was, however, now brought into contact with an adversary of a very different calibre from himself. This was William of Orange, whose influence was now supreme throughout the Netherlands. The Pacification of Ghent, which was really a treaty between Holland and Zeeland and the other provinces for the defence of their common interests against Spanish oppression, had been followed by an agreement between the southern provinces, known as the Union of Brussels, which, though maintaining the Catholic religion and the king’s authority, guaranteed the expulsion of the Spanish soldiery and officials from the Netherlands. Confronted by the refusal of the states general to accept him as governor unless he assented to the conditions of the Pacification of Ghent, swore to maintain the rights and privileges of the provinces, and to employ only Netherlanders in his service, Don John, after some months of fruitless negotiations, saw himself compelled to give way. At Huey on the 12th of February 1577 he signed a treaty, known as the “Perpetual Edict,” in which he complied with these terms. On the 1st of May he made his entry into Brussels, but he found himself governor-general only in name, and the prince of Orange master of the situation. In July he suddenly betook himself to Namur and withdrew his concessions. William of Orange forthwith took up his residence at Brussels, and gave his support to the archduke Matthias, afterwards emperor, whom the states-general accepted as their sovereign. Meanwhile Philip had sent large reinforcements to Don John under the leadership of his cousin Alexander Farnese. At the head of a powerful force Don John now suddenly attacked the patriot army at Gemblores, where, chiefly by the skill and daring of Farnese, a complete Catholic victory was won on the 15th of January 1578. He could not, however, follow up his success for lack of funds, and was compelled to remain inactive all the summer, chafing with impatience at the cold indifference with which his appeals for the sinews of war were treated by Philip. His health gave way, he was attacked with fever, and on the 1st of October 1578, at the early age of 33, Don John died, brokenhearted at the failure of all his soaring ambitions, and at the repeated proofs that he had received of the king his brother’s jealousy and neglect.

See Sir W. Stirling Maxwell, Don John of Austria 1547–1575 (1883) and the bibliography under Philip II. of Spain.

JOHN, DON (1629–1679), of Austria, the younger, recognized as the natural son of Philip IV., king of Spain, his mother, Maria Calderon, or Calderona, being an actress. Scandal accused her of a prodigality of favours which may have rendered the paternity of Don John very dubious. He was, however, recognized by the king, received a princely education at Ocaña, and was amply endowed with commanderies in the military orders, and other forms of income. Don John was sent in 1647 to Naples—then in the throes of the popular rising first led by Masaniello—with a squadron and a military force, to support the viceroy. The restoration of royal authority was due rather to the exhaustion of the insurgents and the follies of their French leader, the duke of Guise, than to the forces of Don John. He was next sent as viceroy to Sicily, whence he was recalled in 1651 to complete the pacification of Catalonia, which had been in revolt since 1640. The excesses of the French, whom the Catalans had called in, had produced a reaction, and Don John had not much more to do than to preside over the final siege of Barcelona and the convention which terminated the revolt in October 1652.

On both occasions he had played the peacemaker, and this sympathetic part, combined with his own pleasant manners and handsome person with bright eyes and abundant raven-black hair—a complete contrast to the fair complexion of the Habsburgs—made him a popular favourite. In 1656 he was sent to command in Flanders, in combination with the prince of Condé, then in revolt against his own sovereign. At the storming of the French camp at Valenciennes in 1656, Don John displayed brilliant personal courage at the head of a cavalry charge. When, however, he took a part in the leadership of the army at the Dunes in the battle fought against Turenne and the British forces sent over by the duke of York in 1658, he was completely beaten, in spite of the efforts of Condé, whose advice he neglected, and of the hard fighting of English Royalist exiles. During 1661 and 1662 he commanded against the Portuguese in Estremadura. The Spanish troops were ill-appointed, irregularly paid and untrustworthy, but they were superior in numbers and some successes were gained. If Don John had not suffered from the indulgence which Clarendon, who knew him, considered his chief defect, the Portuguese would have been hard pressed. The greater part of the south of Portugal was overrun, but in 1663 the king, seeing that the expeditions were unproductive, removed him from command and sent to him the commandery at Consuegra. After the death of Philip IV. in 1665 Don John became the recognized leader of the opposition to the government of Philip’s widow, the queen regent. She and her favourite, the German Jesuit Nithard, seized and put to death one of his most trusted servants, Don José Malladas. Don John, in return, put himself at the head of a rising of Aragon and Catalonia, which led to the expulsion of Nithard on the 25th of February 1669. Don John was, however, forced to content himself with the viceroyalty of Aragon. In 1677, the queen mother having aroused universal opposition by her shameless favour for Fernando de Valenzuela, Don John was able to drive her from court, and establish himself as prime minister. Great hopes were entertained of his administration, but it proved disappointing and short. Don John died on the 17th of September 1679.

The career of Don John can be followed in J. C. Dunlop’s Memòirs of Spain 1621–1700 (Edin. 1834).

JOHN OF BEVERLEY, ST (d. 721). English bishop, is said to have been born of noble parents at Harpham, in the east riding of Yorkshire. He received his education at Canterbury under Archbishop Theodore, the statement that he was educated at Oxford being of course untrue. He was elected for a time a member of the Whitby community, under St Hilda, and in 687 he was consecrated bishop of Hexham and in 705 was promoted to the bishopric of York. He resigned the latter see in 718, and retired to a monastery which he had founded at Beverley, where he died on the 7th of May 721. He was canonized in 1657, and his feast is celebrated (June 18) in the Roman Church. Many miracles of healing are ascribed to John, whose pupils were numerous and devoted to him. He was celebrated for his scholarship as well as for his virtues.

The following works are ascribed to John by J. Bale: Pro Luca exponendo (an exposition of Luke); Homiliae in Evangelia; Epistolae ad Hieraldum, Audenam, et Berinnum; and Epistolae ad Hyldam abbatem. See Life by Folkeard, based on a C. Bede, in Acta SS. Bolland.; and J. Raini’s Fasti Eboracenses (1863).

JOHN OF THE CROSS, ST (1542–1591). Spanish mystic, was born at Ontiveros (Old Castile) on the 24th of June 1542. He became a professed Carmelite in 1564, and was ordained priest at 1567. He met with much opposition in his efforts to introduce the reforms proposed by St Theresa, and was more than once imprisoned. His real name was Juan de Yepes y Álvarez; in religion he was known as Juan de San Matías till 1568, when he adopted the name of Juan de la Cruz.
JOHN OF ASIA—JOHN OF DAMASCUS

Broken by persecution, he was sent to the monastery of Ubeca, where he died in 591; his Obras espirituales were published posthumously in 1618. He was beatified in 1674 and canonized on the 27th of December 1726. The lofty symbolism of his prose is frequently obscure, but his lyrical verses are distinguished for their rapturous ecstasy and beauty of expression.

Some of his poems have been translated with great success by Arthur Symons in Images of Good and Evil; the most convenient ed. is his work in three parts, which have frequently rgs. books, is that contained in vol. xvi. of the Biblioteca de autores españoles.

JOHN OF ASIA (or Epheus), a leader of the Monophysite Syrian-speaking Church in the 6th century, and one of the earliest and most important of Syriac historians. Born at Amid (Diarbekr) about 505, he was there ordained as a deacon in 520; but in 534 we find him in Palestine, and in 535 he passed to Constantinople. The cause of his leaving Amid was probably either the great pestilence which broke out there in 534 or the furious persecution directed against the Monophysites by Euphras (patriarch of Antioch 520-544) and Abraham (bishop of Amid c. 520-541). In Constantinople he seems to have early won the notice of Justinian, one of the main objects of whose policy was the consolidation of Eastern Christianity as a bulwark against the heathen power of Persia. John is said by Barhebraeus (Chron. eccl. i. 195) to have succeeded Anthimus as Monophysite bishop of Constantinople, but this is probably a mistake.1 Anyhow he enjoyed the emperor’s favour until the death of the latter in 565 and (as he himself tells us) was entrusted with the administration of the entire revenues of the Monophysite Church. He was also, with the rank of bishop, on a mission for the conversion of such heathen as remained in Asia Minor, and informs us that the number of those whom he baptized amounted to 70,000. He also built a large monastery at Trulli, on the left bank of the Meander, and more than 90 other monasteries. Of the mission to the Nubians which he promoted, though he did not himself visit their country, an interesting account is given in the 4th book of the 3rd part of his History.2 In 546 the emperor entrusted him with the task of rooting out the secret practice of idolatry in Constantinople and its neighbourhood. But his fortunes changed soon after the accession of Justin II. About 571 Paul of Asia, the orthodox or Chalcedonian patriarch, began (with the sanction of the emperor) a rigorous persecution of the Monophysite Church leaders, and John was among those who were ordered to disband the monasteries, to close the prisons, to visit and sufferings in prison, his loss of civil rights, &c., in the third part of his History. The latest events recorded are of the date 585, and the author cannot have lived much longer; but of the circumstances of his death nothing is known.

John’s main work was his Ecclesiastical History, which covered more than six centuries, from the time of Julius Caesar to 555. It was divided into three parts, the first of which contains his account of the Church in the time of Justin II. The first part seems to have wholly perished. The second, which extended from Theodosius II. to the 6th or 7th year of Justin II., was (as F. Nau has recently proved)3 reproduced in full or almost in full, in John’s own words, in the third part of the Chronicle which was still till lately attributed to the patriarch Dionysius Telmaharetan, but is really the work of an unknown compiler. Of this second division of the History in which he has a considerable share, the Chronicle of Brundis is termed, a copy of which was once preserved in the Vatican MS. (chvii.), which contains the third part of the Chronicle of pseudo-Dionysius. The third part of John’s history, which is a detailed account of the ecclesiastical events which happened in 571-595, as well as of some earlier occurrences, survives in a fair complete state in Add. 14640, a British Museum MS. of the 7th century. It forms a contemporary record of great value to the historian. Its somewhat disordered state, the want of chronological arrangement, and the occasional repetition of accounts of the same events are due, as the author himself informs us (ii. 50), to the work being almost entirely composed during the times of persecution. The writer shows himself sometimes somewhat slovenly style. “The writer claims to have treated his subject with simplicity, and to have written from the narrow point of view of one to whom Monophysite “ orthodoxy ” was all-important, it is evidently a faithful reproducer of the statements as they were made to him by his informer, by the historian Eusebius, or by his physician, by an author named Bertram, or by a person named Apollonius, or by another named 'Origen.’”4

John’s other known work was a series of Biographies of Eastern Saints, compiled about 566. These have been edited by Land in Analecta Syriaca, ii. 1-288, and translated into Latin by Douwen in Acta Sanctorum, November, i. 179-163, and into English by A. E. Cayley (Oxford, 1853), and was translated into English by R. Payne-Smith (Oxford, 1860) and into German by J. M. Schöpfeld (Munich, 1871).

John of Hexham—John of Salisbury

449

natures by relegating to the divine Logos the formative and controlling agency. It is not a human individual that the Logos assumes, nor is it humanity, or human nature in general. It is rather a potential human individual, a nature not yet developed into a person or substance. The hypostasis through which this takes place is the personal Logos through whose union with this potential man, in the womb of Mary, the potential man acquires a concrete reality, an individual existence. He has, therefore, no hypostasis of himself but only of the personal Logos. In other words, there is an internal relation of the divine and human attributes, a communication of the former which defines the receptive and passive human nature. In Christ the personal will has become the organ of the divine will. Thus while John is an adherent of Chalcodon and a dyothelite, the drift of his teaching is in the monophysite direction. “The Chalcedonian Definition is victorious, but Apollinaris is not overcome”; what John gives with one hand he takes away with the other. On the question of the Atonement he regards the death of Christ as a sacrifice offered to God and not a ransom paid to the devil.

Literature.—The Life of John of Damascus was written by John, patriarch of Jerusalem in the 10th century (Migne, Patrolog. Graec., xcviii, 429-480). The works were edited by Le Quien (4 vols., fol., Paris, 1712) and form vols. 94 to 96 in Migne’s Greek series. A monograph by J. Langen was published in 1879. A. Harnack’s History of Dogma is very full (see especially vols. iii. and iv.; on the importance of the K. v. 227 sqq., of the work of F. Loofs-Seeberg and A. Dorner. See also O. Bardenhewer’s Patrologie, and other literature cited in F. Kattenbusch’s excellent article in Hauck-Herzog, Realencyclopaedie, vol. ix.

John of Hexham (c. 1160–1200), English chronicler, is known to us merely as the author of a work called the Historia XXV. annorum, which continues the Historia regum of Simeon of Durham and contains an account of English events 1130–1153. From the title, as given in the only manuscript, we learn John’s name and the fact that he was prior of Hexham. It must have been between 1160 and 1200 that he held this position; but the date at which he lived and wrote cannot be more accurately determined. Up to the year 1139 he follows closely the history written by his predecessor, Prior Richard; thenceforward he is an independent though not a very valuable authority. He is best informed as to the events of the north country; his want of care, when he ventures farther afield, may be illustrated by the fact that he places in 1145 King Stephen’s siege of Oxford, which really occurred in 1142. Even for northern affairs his chronology is faulty; for instance, he puts his own death in 1171, but Prior Richard is not the only author to whom John is indebted; he incorporates in the annal of 1138 two other narratives of the battle of the Standard, one in verse by the monk Serlo, another in prose by Abbot Ailred of Rievaulx; and also a poem, by a Glasgow clerk, on the death of Sumerled of the Isles.

John of Ireland (Johannes de Irlanda), (fl. 1460), Scottish writer, perhaps of Lowland origin, was resident for thirty years in Paris and later a professor of theology. He was confessor to James IV. and also to Louis XI. of France, and was rector of Yarrow (de Foresta) when he completed, at Edinburgh, the work on which rests his sole claim as a vernacular writer. This book, preserved in MS. in the Advocates’ Library, Edinburgh (MS. 18, 2, 8), and labelled “Johannis de Irlandia opera theologica,” is a treatise in Scots on the wisdom and discipline necessary to a prince, especially intended for the use of the young James IV. The book contains the author’s own original Latin work. It was still in MS. in 1516, but an edition was promised by the Scottish Text Society. In this book John refers to two other vernacular writings, one “of the commandements and other things prentend to the salvacione of man,” the other “of the tabill of confessione.” No traces of these have been discovered. The author’s name appears on the registers of the university of Paris and on the rolls of the Scottish parliaments, and he is referred to by the Scottish historians, Leslie and Dempster.

See the notices in John Lydén’s Introduction to his edition of the Complaynt of Scotlande (1801), pp. 85 seq.; The Scottish Antiquary, xiii. 111–115 and xv. 1–14. Annotated extracts are given in Gregory Smith’s Specimens of Middle Scots (1902).

John of Ravensn. Two distinct persons of this name, formerly confused and identified with a third (anonymous) Ravennan in Petrarch’s letters, lived at the end of the 14th and the beginning of the 15th century.

1. A young Ravennan born about 1347, who in 1364 went to live with Petrarch as secretary. In 1367 he set out to see the world and make a name for himself, returned in a state of destitution, but, greatly changed for the better, left his employer in 1368. He is not mentioned again in Petrarch’s correspondence, unless a letter “to a certain wanderer” (saggio cuidoam), congratulating him on his arrival at Rome in 1372, is addressed to him.

2. Son of Conversanus (Conversinus, Convertinus). He is first heard of (Nov. 17, 1368) as appointed to the professorship of rhetoric at Florence, where he had for some time held the post of notary at the courts of justice. This differentiates him from (1). He entered (c. 1370) the service of the ducal house of the Carraras, in which he continued at least until 1407, although the whole of that period was not spent in Padua. From 1375 to 1379 he was a schoolmaster at Belluno, and was dismissed as too good for his post and not adapted for teaching boys. On the 22nd of March 1384, he was appointed professor of rhetoric at Padua. During the struggle between the Carraras and Visconti, he spent five years at Udine (1387–1392). From 1397–1406 he was chancellor of Francis of Carrara, and is heard of for the last time in 1406 as living at Venice. His history of the Carraras, a tasteless production in barbarous Latin, says little for his literary capacity; but as a teacher he enjoyed a great reputation, amongst his pupils being Vittorio da Feite and Guarino of Verona.

3. Malpaghini (De Malpaghini), the most important. Born about 1356, he was a pupil of Petrarch from a very early age to 1374. On the 19th of September 1397 he was appointed professor of rhetoric and eloquence at Florence. On the 9th of June 1412, on the re-opening of the studio, which had been shut from 1405 to 1411 owing to the plague, his appointment was renewed for another five years, before the expiration of which period he died (May 1417). Although Malpaghini left nothing behind him, he did much to encourage the study of Latin; amongst his pupils was Poggio Bracciolini.

The local documents and other authorities on the subject will be found in E. T. Klette, Beiträge zur Geschichte und Literatur der italienischen Gelehrtenrenaissance, vol. i. (1888); see also G. Voigt, Die Wiederbelebung des klassischen Alterthums, who, however, identifies (1) and (2).

John of Salisbury (c. 1115–1180), English author, diplomatist and bishop, was born at Salisbury between the years 1115 and 1120. Beyond the fact that he was of Saxon, not of Norman race, and applies to himself the cognomen of Pervus, “short,” or “small,” few details are known regarding his early life; but from his own statements it is gathered that he crossed to France about 1136, and began regular studies in Paris under Abelard, who had there for a brief period re-opened his famous school on Mont St Geneviève. After Abelard’s retirement, John carried on his studies under Alberich of Reims and Robert of Melun. From 1138 to 1140 he studied grammar and the classics under William of Conches and Richard l’Evêque, the bishops of Bernard of Chartres, though it is still a matter of controversy whether he was in Chartres or not (cf. A. Cerval, Les Écoles de Chartres au moyen âge, 1893). Bernard’s teaching was distinguished partly by its pronounced Platonic tendency, partly by the stress laid upon literary study of the greater Latin writers; and the influence of the latter feature is noticeable in all John of Salisbury’s works. About 1140 he was at Paris studying theology under Gilbert de la Porre, then under Robert Pullus and Simon of Poissy. In 1148 he resided at

5
JOHN OF SWABIA—JOHN, EPISTLES OF

Motiers la Celle in the diocese of Troyes, with his friend Peter of Celle. He was present at the council of Reims, presided over by Pope Eugenius III., and was probably presented by Bernard of Clairvaux (cf. Leipoldt’s O.C., 424) to the abbey of Clairvaux, where he received the tonsure. Appointed prior to St. Theobald, he was frequently sent on missions to the papal see. During this time he composed his greatest works, published almost certainly in 1159, the Poliorcaricus, sive de nugis curialium et de vestigio philosophorum and the Metalogicus, writings invaluable as storehouses of information regarding the matter and form of scholastic education, and remarkable for their cultivated style and humanist tendency. After the death of Theobald in 1161, John continued as secretary to Thomas Becket, and took an active part in the long disputes between the primate of Canterbury and the French king, Henry II. He was a light on the constitutional struggle then agitating the English world. With Becket he withdrew to France during the king's displeasure; he returned with him in 1170, and was present at his assassination. In the following years, during which he continued in an influential situation in Canterbury, but at what precise date is unknown, he drew up the Life of Thomas Becket.

In 1176 he was made bishop of Chartres, where he passed the remainder of his life. In 1179 he took an active part in the council of the Lateran. He died at or near Chartres on the 25th of October 1180.

John’s writings enable us to understand with much completeness the literary and scientific position of the 12th century. His views were imbibed with the knowledge of Greece and Rome in primitive form, and have left a protest of the extremes of both nominalism and realism a practical common sense. His doctrine is a kind of utilitarianism, with a strong leaning on the speculative side to the modified literary scepticism of Cicero, for whom he had unbounded admiration. He was a humanist before the Renaissance, surpassing all other representatives of the school of Chartres in his knowledge of the Latin classics, as in the purity of his style, which was evidently moulded on that of Cicero. Of Greek writers he appears to have known nothing at first hand, and very little in translations. The Timæus of Plato in the Latin version of Chalcidius was known to him as to his contemporaries and predecessors, and probably he had access to translations of the Phaedo and Meno. Of Aristotle he possessed the whole of the Organon in Latin; he is, indeed, the first of the medieval writers of note to whom the whole of Aristotle. Of other Aristotelian writings he appears to have known nothing.

The collected editions of the works are by J. A. Giles (5 vols., Oxford, 1848), and by Migne, in the Patrologia cursus, vol. 193; neither is accurate. The Poliorcaricus was followed with notes and introductions by C. C. I. Webb, Ioannis Saresberiensis episcopi Carnalensis Poliarchi (Oxford, 1909), 2 vols. The most complete study of John of Salisbury is the monograph by C. Schaarschmidt, John of Salisbury. Sohn und Nachfolger nach Leben und Studien, Schriften und Philosophie, 1862, which is a model of accurate and complete workmanship. See also the article in the Dict. Nat. Biog.

JOHN (1090–c. 1320), surnamed the Paraclete, and called also John of Swabia, was a son of Rudolph II, count of Habsburg and Agnes daughter of Ottakar II. king of Bohemia, and consequently a grandson of the German king Rudolph I. Having passed his early days at the Bohemian court, where he came of age he demanded a portion of the family estates from his uncle, the German king Albert I. His wishes were not gratified, and with three companions he formed a plan to murder the king. On the 1st October 1122 Albert and his chancellor Windisch became separated from his attendants, and was at once attacked and killed by the four conspirators. John escaped the vengeance of Albert’s sons, and was afterwards found in a monastery at Pisa, where in 1313 he is said to have been visited by the emperor Henry VII., who had placed him under the ban. From this time he vanishes from history. The character of John is used by Schiller in his play Wilhelm Tell.

JOHN, THE EPISTLES OF. The so-called epistles of John, in the Bible, are not epistles in the strict sense of the term, for the first is a homily, and encyclical or pastoral (as has been recognized since the days of Bretschneider and Michaelis), while the other two are brief notes or letters. Nor are they John’s, for there is no mention of a son of Zebedee. The latter conclusion depends upon the particular hypothesis adopted with regard to the general Johannine problem, yet even when it is held that John the apostle (q.v.) survived to old age in Ephesus, the second and third epistles may be fairly ascribed (with Erasmus, Grotius, Croiset, Bretschneider, Reuss, &c.) to the presbyter; as several circles in the early church held ("Oppin. plerisque tradita," Jerome: De vir. ill. i 18). An apostle indeed might call himself a presbyter (cf. 1 Pet. 3). But these notes imply no apostolic claim on the part of the author, and, although their author is anonymous, the likelihood is that their composition by the great Asiatic presbyter John led afterwards to their incorporation in the “instrumentum” of John the apostle’s writings, when the prestige of the latter had obscured the former. All hypotheses as to their pseudonymity or composition by different hands may be dismissed. They would never have had their present position. His claim to be considered as the author is supported by some primitive authority. If this was not connected with John the apostle the only feasible alternative is to think of John the presbyter, for Papias refers to the latter in precisely this fashion (Euseb. H. E. iii. 30, 15; Kai toio to v. &c.).

The period of all three lies somewhere within the last decade of the 1st century and the first decade of the 2nd. No evidence is available to determine in what precise order they were written, but it will be convenient to take the two smaller notes before the larger. The so-called Second Epistle of John is one of the excommunicae note occasions dispatched by early Christian leaders to the church. Eccles. at Ephesus is the most obvious of these, and it was probably written on the support of some primitive authority. If this was not connected with John the apostle the only feasible alternative is to think of John the presbyter, for Papias refers to the latter in precisely this fashion (Euseb. H. E. iii. 30, 15; Kai toio to v. &c.).

The notes were addressed to the churches of Asia Minor, and are addressed as “the elect lady” (cf. 13 with 1 Pet. 3; 3 with 10, and 11, and the plural of 8, 6, 10, and 13, against some Itineraries (cf. Didache xi. 1–2) teachers who were promulgating advanced Docetic views (7) upon the person of Christ. The note is merely designed to serve (12) until the writer arrives in person. He sends greetings to his correspondents from some community in which he is residing at present (13), and with which he had evidently some connexion.

The note was familiar to Irenæus (twice p. 16, 13. 16. 8, 16. 8) once quoting it from the first epistle by mistake, but no tradition has preserved the name of the community in question, and all opinions on the matter are guess-work. The reference to “all who know the truth” (ver. 1) is, of course, to be taken relatively (cf. Rev. ii. 23); it does not necessarily imply a centre like Antioch or Rome (Chapman). Whiston thought of Philadelphia, and probably it must have been one of the Asiatic churches.

The so-called Third Epistle of John belongs to the κατά τοὺς ἱδρύας (2 Cor. ii. 1) of the early church, like Rom. xvi. It is a private note addressed to a certain Gaius, a member of the same community or house-church (9) as that to which 2 John is written. A local errourist, Diotrephes (9–10) had repudiated the authority of the writer, and his party, threatening even to excommunicate Gaius and others from the church (cf. Abbott’s Didascalia, § 2258). With this opponent the writer promises (10) to deal sharply in person before very long. Meantime (14) he despatches the present note, in hearty appreciation of his correspondent’s attitude and character. The allusion in 9 (ἐγείρεται) refers in all likelihood to the ἐκκλήσια (so Ewald, Wolf, Salmen, &c.). In order to avoid the suggestion that it implied a lost epistle, 6 was inserted at an early stage in the textual history of the note. ἐκκλήσια could be read in 9, Demetrius would be a presbyter; in any case, he is not to be identified with Demas (Chapman), nor is

1 So Selwyn, Christian Prophets (pp. 133–145), Harnack, Heinrich (Das Urchristentum, 1902, pp. 159 seq.), and von Soden (History of Christian Literature, pp. 445–446), after Renan (L’Eglise chrétienne, pp. 78 seq.). Von Dobschütz (Christian Life in the Primitive Church, 218 seq.) and R. Knopf (Das nachapostol. Zeitalter, 1895, 32 seq., &c.) are among the most recent critics who ascribe all three epistles to the presbytery of a certain Gaius.

there any reason to suppose (with Harnack)4 that the note of 9 was written to, and suppressed by, him. What the presbyter is afraid of is not so much that his note would not be read (Ewald, Harnack), as that it would not be acted upon.

Irenaeus, who originally on small sheets of papyrus, reveal the anonymous presbyter travelling (so Clem. Alex. Quis dites salve. xii.) in his circuit or diocese of churches, and writing occasional pastoral letters, in which he speaks not only in his own name but in that of a coterie of like-minded Christians.5 It is otherwise with the brochure or manifesto known as the "first epistle." This was written neither at the request of its readers nor to meet any definite local emergency, but on the initiative of its author (i. 4) who was evidently concerned about the effect produced upon the Church in general by certain contemporary pharisaic movements. The writer, indeed, portrays himself as a itinerant prophet (ii. 1-3), the writer passes on to its conditions (i. 5-ii. 17), under the antithesis of light and darkness. These conditions are twofold: (a) a sense of sin, which leads Christians to a sense of sin to sin through Jesus Christ, (b) obedience to the supreme law of earthly love (cf. Ignat. Ad Smyrn. 6). If these conditions are fulfilled, moral darkness is the issue, a darkness which spells ruin to the soul. This prompts the writer to explain the dangers of (ii. 18-29), under the antithesis of truth and falsehood, the immediate peril being a novel heretical view of the person of

1 In his ingenious study (Texte und Untersuchungen, xv. 3), whose main content is adopted by von Dobschütz and Knopf. On this view (for criticism see Blicher in the Tübinger. Quaestiones, 1897, pp. 150 seq.), Krüger in Zeitschrift für die wiss. Theologie, 1898, pp. 307-311, and Hilgenfeld: ibid. 316-320), Diotrophes was voicing a successful protest of the local monarchical bishops against the authority of the more itinerant churches (cf. Schmiedel, Ency. Bibl. 316-317). As Willaumowitz-Moellendorff (Hermes, 1898, pp. 529 seq.) points out, there is a close connexion between ver. 11 and ver. 10. The same writer argues, that the asubstitution of χύμαλα for φάραγα (ver. 11) is an anachronism and is not a genuine "polemic," the writer adds δο καὶ ἀληθεία υπό εἰκονα.

2 This is the force of the υἱές in 3 John 9-10 (cf. 1 John iv. 6, 14) "The truth" (3 John 3-5) seems to be answering to the apocalyptic phrase in the preceding verse and exemplified.

3 Several of these traits were reproduced in the teaching of Cerinthus, others may have been directly Jewish or Jewish-Christian. The first episode (88) the Messianic role of Jesus had varied adherents. The denial of the Virgin-birth, which also formed part of the system of Cerinthus, was met by anticipation in the stories of Matthew and Luke, which pushed back the reception of the spirit from the baptism to the birth, but the Johannine sources evidently preferred to answer this heresy by developing the theory of the Logos, with its implication of pre-existence.

4 On this vexed question whether the language of this paragraph is purely spiritual or includes a realistic reference, cf. G. E. Findlay (Expositor, 1893, pp. 97 seq.), and Dr E. A. Abbott's recent study in Dialectosaria, §§ 1615-1620. The writer is countering the Doctrical heresy, and is the same time keeping up the line of communication with his apostolic base.

5 The universal range (ii. 2) ascribed to the redacting work of Christ is directed against Gnostic dualism and the Ebionite narrow-mindedness; for only the Valentinian sects denotes Christians in general, not Jewish Christians. On the answer to the Gnostic pride of perfectionism (i. 8), cf. Epict. iv. 12, 19. The emphasis on you all (i. 20) hints at the Gnostic system of concentrating only on the book of life, for the Valentinian sects ignores Christians in general, not Jewish Christians. On the answer to the Gnostic pride of perfectionism (i. 8), cf. Epict. iv. 12, 19. The emphasis on you all (i. 20) hints at the Gnostic system of concentrating only on the book of life, for the Valentinian sects ignores Christians in general, not Jewish Christians.

who mission furnishes the proof of God's love as well as the example to the energy of man's (iv. 10 seq.). The same conception of the real humanity of Jesus Christ as to essential faith, and being and being are worked out in the following paragraph (v. 1-12), while the allusion to eternal life (v. 11-12) leads to the closing recapitulation (v. 13-21) of the homily's leading ideas under this special category.

The curious idea, mentioned by Augustine (Quaest. evang. ii. 39), that the writing was addressed ad Parthos, has been literally taken by several Latin fathers and later writers (e.g. Grotius, Paulus, Hammond), but this title probably was a corruption of ad sparsos (Wetstein, Wegscheider) or of πόρων πιστών (Whiston: the word is derived, as we have seen, from πλοῦτος, not by not of πάθος, as applied in early tradition to John the apostle. The circle for which the homily was meant, probably, in the first instance, that of the Fourth Gospel, but it is impossible to determine whether the epistle preceded or followed the later treatise.

The division of opinion on this point (cf. J. Moffat, Historical New Testament, 1901, p. 534) is serious, but the evidence for either position is purely subjective. There are sufficient peculiarities of style and conception to justify provisionally some hesitation on the matter of the authorship. The style and language differ from those of the earlier epistles, from a more popular standpoint, by the author of the gospel, possibly (as some critics hold) by the author of John xii. But res Iubrica, opinio incerta.

It is unsafe to lay much stress upon the apparent reminiscence of 2-3 (of 2 John 7) in Polycarp, ad Phil. 7 reading ἀληθεύω instead of ἀληθεύω, though, if a literary imitation is assumed, the probability is that Polycarp is quoting from the epistle, not vice versa (as Volkmar contends, in his Ἰστορία ὑπάρχοντος Εὐαγγέλιον 47 seq.). But Papias is said by Eusebius (H. E. iii. 39) to have an Ἀναφορά ( commentator, υποτέλεια, υποτέλεια, νάτορ) of the anonymous tract, which, by the time of Eusebius, had come to be known as 1 John, and we have no reason to suspect or reject this statement, particularly as Justin Martyr, another Asiatic writer, furnishes clear echoes of the epistle (Dial. 123). The tract must have been in circulation throughout Asia Minor at any rate before the end of the first quarter of the 2nd century. The terminus a quo is approximately the period of the Fourth Gospel's composition, but there is no valid evidence to indicate the priority of either, even upon the hypothesis that both came from the same pen. The aim of each is too special to warrant the conclusion that the epistle was intended to accompany or to introduce the gospel.

Literature.—The most adequate modern editions of the three epistles are by Westcott (3rd ed., 1892), H. J. Holtzmann (Hand-Commentar zum N. T., 3rd ed., 1908), B. Weiss (in Meyer, 6th ed., 1909), B. Streeter (in the William Breisgau, 1907). English notes are furnished by W. Alexander (Speaker's Commentary, 1881), W. H. Bennett (Century Bible, 1901) and H. P. Forbes (Internal Handbooks to New Testament, vol. iv, 1907), while Plummer has a conciae edition of the Greek text (The Cambridge Greek Testament, 1886). Huther's edition in Meyer, 1880, has been translated into English (Edinburgh, 1882), like Rothe's (1878) invaluable commentary on the first epistle (Expository Times, vols. iii. of the Otto Baumgarten's popular edition in Die Schriften des N. T. (1907) is like that of Forbes, written from practically the same standpoint as Holtzmann's. The earlier commentaries of Alford (2nd ed., 1862), C. A. Wolf (2nd ed., 1885), Ewald (Die Joh. Briefe übersezt und erklärct, Göttingen, 1861-1862), and Lücke (3rd ed., revised by Bertheau, 1886) still repeat the reader, and among previous editions those of W. Whiston (Comm. on St John's Three Catholic Epistles, London, 1694) and of Jacobus a Detti (Würzburg, 1790) have little interest. Special editions of the first epistle have been published by John Cotton (London, 1655), Neander (1851; Eng. trans. New York, 1855), E. Haupt (in E. Weiss, J. E. 197, 1859; Lias (1887) and C. Watson (The Epistles of John) among others. See also Harnack (De epistolae Joh. consilio, Tübingen, 1839), Erdmann (Primae Joh. epistolae argumentum, nexus et consilium, Berlin, 1855), C. E. Luzzatto (De epistolae Joh. argumento, nexus et consilium, Breisgau, 1880). The critical editions of John may be found either in F. Baumgarten’s (Die Struktur des ersten Joh. Briefes, Basel, 1873) and most elaborately, by H. J. Holtzmann (Jahrb. für protest. Theologie, 1881, pp. 606 seq.; 1882, pp. 128 seq.; 318 seq.; 660 seq.). To the monographs (Historische Überprüfung der Briefe des Apostels Johannes, by Wiesinger (Studien und Kritiken, 1899, pp. 575 seq.) and Wohlenberg ("Glossen zum ersten Johannesbrief," Neue Kirchliche Zeitschrift, 1890, pp. 213 seq., ed. Hermanns, 2nd ed., 1898) are many later commentaries and studies by Ritmeyer (De electa domina, 1700), C. Krösele (De copia Johannis, 1758), Carpow (Theolog. exegetica, pp. 105-208), H. G. B. Müller (Comment, in secondum epistolam Johannis, 1783), C. Klug (De auctore, &c., 1812). J. M. ...
with the woman at the well concerning the spiritual, universal character of the new religion; and cure of the ruler's son, the reward of faith: (vi.) Of the Passion and its immediate results, (xxvii.) of the vividly narrated Life-Logos and its contradiction in Judea, v.: the paralytic's cure.

(3) Manifestation of Jesus as the heaven-descended living Bread and its contradiction in Galilee, vi.: multiplication of the loaves, walking on the waters; and His discourse on the holy Eucharist.

(vi.) To journey to and from Galilee, and the soul thirst to come to Him (the fountain of Life) and drink, and proclamation of Himself as the Light of the world; cure of the man born blind—two parables are added; the great feast at the Lord's house; they strive to stone or to take Him. (vii.) The Logos-Life brings Lazarus to life; effects of the act (x. x.-xxii.). Jesus withdraws beyond Jordan, and then comes to Bethany, His friends draw the crowd to the resurrection of a friend. (viii.) Resurrection and the Life; and calls Lazarus back to life. Some who saw it reported the act to the Pharisees; the Sanhedrim meets, Caiphas declares that one man must die for the people, and henceforth He seeks ceaselessly plan His death. Jesus withdraws to the Judean desert, but soon returns, six days before Passover, to Bethany; Mary anoints Him, a crowd comes to see Him and Lazarus, and the hierarchy then plans to arrest Him. Next morning He rides into Jerusalem on an ass's colt. Certain Greeks desire to see Him; He declares the hour of His glorification to have come: "Now My soul is troubled. . . . Father, save Me from this hour. But for this reason I came to this hour. . . ."

(iii.) Jesus answers, "I have glorified it and will glorify it again": some think that an angel spoke; but Jesus explains that this voice was not an angel's, "it came from God, heard by them of His Voice.

He am I (Mark xx. 2) could be innocent. In John He does not declare Himself Messiah before the Jewish Sanhedrin (Mark xiv. 61) but declares Himself son of God (John x. 30). China has more to do with the bringing back upon the ground on He revealing Himself as Jesus of Nazareth. The long scenes with Pilate culminate in the great sayings concerning His kingdom not being of this world and are immediately followed by His giving the parables which point to the mystical kingdom, thus explaining how, though affirming kingship (Mark xv. 2) He

The scene on Calvary differs as follows: In the Synoptists the soldiers divide His garments among them, casting lots (Mark xv. 27); in John only a last cast and cast, His seamless tunic, thus fulfilling the text, "They divided My garments among them and upon My vesture they cast lots": the parallelism of Hebrew poetry, which twice describes one fact, but divides it into two, is here illustrated in designating the unity of the Church, as in Philo the high priest’s seamless robe symbolizes the indivisible unity of the universe, expressive of the Logos (De ebratia, xxi.). In the Synoptists, of John’s, rulers only women—the careful, seemingly exhaustive lists do not include His mother—remain, looking on "from afar" (Mark xv. 40); in John, His mother stands with the two other Marys and the beloved disciple beneath the cross, and "from that hour the disciple, being His mother, took Him unto His own house," while in the older literature His mother does not appear in Jerusalem till just before Pentecost, and with "His brethren" (Acts i. 14). And John alone tells how the bones of the dead rise (John xi. 22-23, 43-44), the chorus [--boors, Ezech. xli. 14] and paschal lamb (Exod. xii. 46) and how blood and water flow from His spear-pierced side: thus the Lamb "taketh away the sins of the world" (xv. 7); the waters of the Jordan with us symbolized the "born again" and "He cometh by water and blood," historically at His baptism and crucifixion, and mystically to each faithful soul in baptism and the eucharist. The story of the risen Christ (xx.) shows dependence on, for the Synoptic account, it is two loaves of bread, a negative and a positive scene. The empty grave (i-16) and the appearance to the Magdalen (i-18) together correspond to the message brought by the women (Matt. xxviii. 1-10); and the appearance to the ten joyously believing apostles (v. 19) and then to the sad, doubting Thomas (21-23) together correspond to Luke xxiv. 36-43, where the eleven apostles jointly receive one visit from the risen Christ and alike rejoice.

The Johannine discourses reveal differences from the Synoptists so profound as to be admitted by all. Here Jesus, the Baptist and the writer speak so much alike that it is sometimes impossible to say where each speaker begins and ends: e.g. in iii. 27-36, 39-45. The speeches dwell upon Jesus’ person and work, as we shall find, with a didactic directness, philosophical terminology and denunciatory exclusiveness unmatched in the Synoptist sayings. This is eternal life, that they may know the only true God, who is before all worlds and in Jesus Christ whom Thou hast sent " (xvii. 3), is part of the high-priestly prayer; yet Père Calmes, with the papal censor’s approbation, says, “I find nothing to object to not to say that it can be both, (1) that we have developments explicable rather by the evangelist’s habits of mind than by the actual words of Jesus.” “I have told you of earthly things and you believe not; how shall ye believe if I tell you of heavenly things?” (xii. 38), and “If I had not come and spoken to you, ye had no sin” (v. 16), are both above “ (viii. 23), give us a Plato-Philos like upper, “true, world, and a lower, delusive world.” “Ye shall die in your sins” (vii., 21); “I am the light of the world” (xi. 9); “I am the door of the sheep, all that came before Me are thieves and robbers,” “ (x. 7, 8); “they have no excuse for their sin” (xx. 22)—contrast strongly with the yearning over Jerusalem: “The blood of Abel the just” (Matt. xxiii. 35-37); and “Father, forgive them; for they know not what they do” (Luke xxiii. 34). And whilst the Synoptist speeches and actions stand in loose and natural relation to each other, the Johannine deeds so closely illustrate the sayings that each set everywhere supplements the other; the history itself here tends to become one long allegory. So with the woman at the well and “the living water” ; the multiplication of the loaves is coextensive in the Synoptists: “I am the bread of life” (v. 25) and the blind man’s cure; “I am the Resurrection and the Life” and the raising of Lazarus; indeed even with the “Temple cleansing and the prophecy as to His resurrection, Nicodemus’s night visit (xx. 14-18), and men loved the darkness rather than the light; the cure of the inoperable paralytic and “My Father and I work hitherto,” the walking phantom-like upon the waters (John vi. 15-21, Mark vi. 48), and the declaration concerning the eucharist, “This is my body,” “This is my blood” (xx. 25-26). Of course some Synoptic sayings reappear here; but we are given some great new sayings full of the Synoptic spirit.

Characteristics and Object.—The book’s character results from the continuous operation of four great tendencies. There is everywhere a readiness to handle traditionally, largely historical, materials with a sovereign freedom, controlled and limited by doctrinal convictions and devotional experiences alone. There is everywhere the mystic’s deep love for double, even treble

meanings: e.g. the “again” in iii. 2, means, literally, “from the beginning,” to be physically born again; morally, to become as a little child; mysteriously, “from heaven, God,” to be spiritually renewed. “Judgment” (κρίνειν), in the popular sense, condemnation, a future act in the mystical sense, discrimination, a present fact. There is everywhere the influence of certain central ideas, partly identical with, but largely developments of, those less reflectively operative in the Synoptists. Thus six great terms are characteristic of, or even special to, this Gospel.

The Only-Begotten is most nearly reached by St Paul’s term “His own Son,” The “Word,” or “Logos,” is a term derived from Heraclitus of Ephesus and the Stoics, through the Alexandrian Jew Philo, but conceived here throughout as definitely personal. The Light of the World is the Lamb, and Jesus here only declares His disciples to be such. “The Paraclete,” as in Philo, is a “helper,” “intercessor”; but in Philo he is the intelligible universe, whilst here He is a self-conscious Spirit. “Truth,” “the truth,” “to know,” have here a prominence and significance far beyond their Synoptic or even their Pauline use. And above all stand the uses of “Life,” “Eternal Life.” The living ever-working Father (vi. 57; v. 17) has a Logos in whom is Life (i. 4), an ever-working Son (v. 17), who declares Himself the living Bread, “‘the Resurrection and the Life,” “the Way” he has come to, “the Truth” (vi. 24), “to quicken” (v. 21), “to make strong,” “the kingdom of God,” the standing Synoptic expression, which appears here only in iii. 3-5; xviii. 36. Note that the term “the Logos” is peculiar to the Apocalypse (xix. 13), and the prologue here; but that, as Light and Life, the Logos-conception is present throughout the book. And thus there is everywhere a striving to contemplate history under specie of Logos in order to englobe the successiveness of events in the simultaneity of God.

Narratives Peculiar to John.—Of his seven great symbolic, doctrinally interpreted “signs,” John shares three, the cure of the ruler’s son, the multiplication of the loaves, the walking on the waters, with the Synoptists: yet here first is transformed almost beyond recognition; and the two others only typify and prepare the eucharistic discourse. Of the four purely Johannine signs, two—the cures of the paralytic (v. 1-16), and of the man born blind (ix. 1-34)—are, admittedly, profoundly symbolic. In the first case, the man’s physical and spiritual blindness is transformed spiritually and meaningfully connected with the ever-active God and His Logos. In the second case there is also the closest parallel between physical blindness cured, and spiritual darkness dispelled, by the Logos-Light as described in the accompanying discourse. Both narratives are doubtless based upon actual occurrences—the cures narrated in Mark ii., iii., viii., and scenes witnessed by the writer in later times; yet here they do but picture our Lord’s spiritual work in the human soul achieved throughout Christian history. We cannot well claim more than these three kinds of reality for the first and the last signs, the miracle at Cana and the resurrection of Lazarus.

For the marriage-feast sign yields throughout an allegorical meaning. Water stands in this Gospel for what is still but symbol; thus the water-pots serve here the external Jewish ablutions—old bottles which the “new wine” of the Gospel is to burst (Mark ii. 22). Wine is the blood of the new covenant, and He will drink the fruit of the vine new in the Kingdom of God (Mark xiv. 23-25); the vineyard where He Himself is the true Vine (Mark xii. 1; John xv. 1). And “the kingdom of heaven is like a man who had a feast” (Matt. ii. 11; Acts xxv. 10) “the marriage of the Lamb has come” (Rev. xix. 7). “They have no wine”: the hopelessness of the old conditions is announced here by the true Israel, the Messiah’s spiritual mother, the same “woman” who in Rev. xii. 2, 5 “brought forth a man-child who was to rule all nations.” Cardinal Newman admits that the latter woman “represents the church, this is the real or direct sense”; yet as her man-child
is certainly the Messiah, this church must be the faithful Jewish church. Thus also the "woman" at the wedding and beneath the cross stands primarily for the faithul Old Testament community, corresponding to the beloved disciple, the typical New. Edify the bystanders: all point the Messiah in itself, since the devotional accommodation to His earthly mother is equally ancient and legitimate. He answers her "My hour is not yet come," i.e. in the symbolic story, the moment for working the miracle; in the symbolized reality, the hour of His death, condition for the spirit's advent; and "what is there between Me and thee?" i.e. "My motives spring no more from the old religion," words devoid of difficulty, if spoken thus by the Eternal Logos to the passing Jewish church. The transformation is soon afterwards accomplished, but in symbol only; the "hour of the full seas" is still over three years off. Already Philo says "the Logos is the master of the spiritual drinking-feast," and "let Melchisedek"—the Logos—in lieu of water offer wine to souls and inebriate them "(De somn. ii. 37; Legg. all. iii. 26). But in John this symbolism figures a great historic fact, the joyous freshness of Jesus' ministerial beginnings, as indicated in the sayings of the Bridegroom and of the new wine, a freshness typical of Jesus' ceaseless renovation of souls.

The raising of Lazarus, in appearance a massive, definitely localized historical fact, requires a similar interpretation, unless we would, in favour of the direct historicity of a story peculiar to a profoundly allegorical treatise, ruin the historical trustworthiness of the largely historical Synoptists in precisely their most complete and verisimilar part. For especially in Mark, the passing through Jericho, the entry into Jerusalem, the Temple-cleansing and its immediate effect upon the hierarchs, their next day's interrogatory, "By what authority dost thou these things?" i.e. the cleansing (x. 46-xi. 33), are all closely interdependent and lead at once to His discussions with His Jerusalem opponents (xii. xiii.), and to the anointing, last supper, and passion (xiv. 21). John's last and greatest symbolic story, the raising, is nowhere else mentioned by the other accounts of Lazarus which determines the hierarcha to kill Jesus (xi. 46-52), and occasions the crowds which accompany and meet Him on His entry (xii. 19). The intrinsic improbabilities of the narrative, if taken as direct history, are also great: Jesus' deliberate delay of two days to secure His friend's dying, and His rejoicing at the death, since thus He can revivify His friend and bring His disciples to believe in Himself as the Life; His deliberate weeping over the death which He has thus let happen, yet His anger at the similar tears of Lazarus's other friends; and His praying, as He tells the Father in the parable (John vii. 11), that wherein no one can give "a cone of the doctrinal allegory. Indeed the climax of the whole account is already reached in Jesus' great saying: "I am the Resurrection and the Life; He that believeth in Me ... shall not die for ever," and in Martha's answer: "I believe that Thou art the Christ, the Son of God, who hast come into the world" (xi. 26, 27); the sign which follows is but the pictorial representation of this abiding truth. The materials for the allegory will have been certain Old Testament narratives, but especially the Synoptic accounts of Jesus' raisings of Lazarus's daughter and of the widow's son (Mark v.; Luke x.); Martha and Mary are most aptly identical with the sisters in Luke x. 38-42; and already some Greek fathers connect the Lazarus of this allegory with the Lazarus of the parable (Luke xvi. 19-31). In the parable Lazarus returns not to earth, since Abraham foresees that the rich man's brethren would disbelieve even if one rose from the dead; in the corresponding allegory, Lazarus does actually return to life, and the Jews believe so little as to determine upon killing the very Life Himself.

Special Difficulties and Special Greatness.—The difficulties, limitations and temporary means special to the book are closely connected with its ready appeal and abiding power; let us take both sets of things together, in three couples of inter-related price and gift.

The book's method and form are pervadingly allegorical; its instinct and aim are profoundly mystical. Now from Philo to Origen we have a long Hellenistic, Jewish and Christian application of that all-embracing allegorism, where one thing stands for another and where no factual details resist resolution into a symbol of religious ideas and forces. Thus Philo had, in his life of Moses, allegorized the Pentecostal narratives so as to represent him as mediator, saviour, intercessor of his people, the one great organ of revelation, and the soul's guide from the false lower world into the upper true one. The Fourth Gospel is the noblest instance of this kind of literature, of which the truth depends not on the factual accuracy of the symbolizing appearances but on the truth of the ideas and experiences thus symbolized. And Origen is still full of spontaneous sympathy with its pervading allegorism. But this method has lost its attraction; the Synoptists, with their rarer and slimmer pragmatic rearrangements and their greater closeness to our Lord's actual words, deeds, experiences, environment, now come home to us as indefinitely richer in content and stimulative appeal. Yet mysticism persists, as the intuitive and emotional apprehension of the most specifically religious of all truths, viz. the already full, operative existence of eternal beauty, truth and goodness, of infinite Personality and Spirit independently of our action, and not, as in ethics, the simple possibility and obligation for ourselves to produce such-like things. And of this elemental mode of apprehension and root-truth, the Johannine Gospel is the best sample and model: its ultimate aim and deepest content retain all their potency.

The book contains an intellectualist, static, determinist, abstractive trend. In Luke x. 25-28, eternal life depends upon loving God and man; here it consists in knowing the one true God and Christ whom He has sent. In the Synoptists, Jesus "grows in favour with God and man," passes through true human experiences and trials, prays alone on the mountain-side, and dies with a cry of desolation; here the Logos' watchword is "I am," He has deliberately to stir up emotion in Himself, never pray for Himself, and in the garden and on the cross shows but power and self-possession. Here we find "ye cannot hear, cannot believe, because ye are not from God, not of My sheep" (viii. 47, x. 26); "the world cannot receive the spirit of truth" (xiv. 17). Yet the ethical current appears here also strongly: "he who doeth the truth, cometh to the light" (iii. 21), "if you love Me, keep My commandments" (xiv. 15). Libertarianism is here: "the light came, but men loved the darkness better than the light," "ye will not come to Me" (iii. 19, v. 40); hence the appeal "abide in Me"—the branch can cease to be in Him (xiv. 15) (xv. 4, 5). Indeed the whole first currents stand here for the broad religious truths, the predestination of God and man's affinity to Him. "Not we loved God (first), but He (first) loved us"; "let us love Him, because He first loved us" (1 John iv. 19, 19); "no man can come to Me, unless the Father draw him" (vi. 44), a drawing which effects a hunger and thirst for Christ and God (iv. 14, vi. 35). Thus man's spirit, ever largely but potential, can respond actively to the historic Jesus, because already touched and made hungry by the all-actual Spirit-God who made that soul akin unto Himself.

The book has an outer protective shell of acutely polemical and exclusive moods and insinuations, whilst certain splendid Synoptic breadths and reconciliations are nowhere reached; but this is primarily because it is fighting, more consciously than they, for that inalienable ideal of all deepest religion, unity, even external and corporate, amongst all believers. The "Pneumatic" Gospel comes thus specially to emphasize certain central historical facts; and, the most explicitly institutional and sacramental of the four, to proclaim the most universalistic and developmental of all Biblical sayings. Here indeed Jesus will not pray for the world (xiv. 4); "ye shall die in your sins," He insists to His opponents (viii. 44, 24); it is the Jews generally who appear throughout as such; nowhere is there a word as to forgiving our enemies; and the commandment of love is designated by Jesus as His, as new, and as binding the disciples to "love one another" within the community to which He gives His "example" (xv. 12, xiii. 34, 15). In the Synoptists, the
disciples' intolerance is rebuked (Mark ix. 38-41); Jesus' opposition is everywhere restricted to the Pharisees and the worldly Sadducees; he ever longs for the conversion of Jerusalem; the great double commandment of love is proclaimed as already formulated in the Mosaic law (Mark xii. 38-34); the neighbour to be thus loved and served is simply any and every suffering fellow-man; and the pattern for such perfect love is found not in a schismatical Samarian, (Luke x. 30-37), but in the Japan (John xiv. 13-17). Yet the deepest strain here is more serenely universalist even than St Paul, for here Jesus says: "God so loved the world, that he gave His only begotten Son, that whosoever believeth in Him should . . . have everlasting life" (iii. 16). True, the great prologue passage (i. 9) probably reads "He was the true Light coming into the world, that enlighteneth every man," so that the writer would everywhere concentrate his mind upon the appropriate attendant upon explicit knowledge of the incarnate, historic Christ. Yet Christian orthodoxy, which itself has, as it uniformly, understood this passage of the spiritual radiation throughout the world of the Word before His incarnation, has been aided towards such breadth as to the past by the Johannine outlook into the future. For, in contrast to the earliest Synoptic tradition, where the full Christian truth and its first form remain undistinguished, and where its earthly future appears restricted to that generation, in John the Eternal Life conception largely absorbs the attention away from all successiveness; Jesus' earthly life does not limit the religion's assimilation of further truth and experience: "I have many things to tell you, but you cannot bear them now; but when the Helper, the spirit of truth, who will abide with you for ever" (xvi. 12, xiv. 15). This universalism is not simply spiritual; the external element, presupposed in the Synoptists as that of the Jewish church within which Jesus' earthly life was spent, is here that of the now separate Christian community: He has other sheep not of this fold—them also He must bring, there will be one fold, one shepherd; and His seamless tunic, and Peter's net which, holding every kind of fish, is not rent, are symbols of this visible unity. Ministerial gradations exist in this church; Jesus begins the feet-washing with Peter, who alone speaks and is spoken to; the beloved disciple outruns Peter to Jesus' monument, yet waits to go in till Peter has done so first; and in the appendix the treble pastoral commission is to Peter alone: a Petrine pre-eminence which but echoes the Synoptists. And sacramentalism informs the great discourses concerning rebirth by water and the spirit, and feeding on the Living Bread, Jesus' flesh and blood, and the narrative of the issue of blood and water from the dead Jesus' side. Indeed so severe a stress is laid upon the explicitly Christian life and its specific means, that orthodoxy itself interprets the rebirth by water as being the entrance of the spirit, and not the washing of the body, to which entrance into the Kingdom and possession of interior life are here exclusively attached, as often represented by a simple sincere desire and will for spiritual purification and a keen hunger and thirst for God's aid, together with such cultural acts as such souls can know or find, even without any knowledge of the Christian rites. Thus there is many a "pedagogue to Christ," and the Christian visible means and expressions are the culmination and measure of what, in various degrees and forms, accompanies every sincerely striving soul throughout all historical church stages.

*Origin and Authorship.*—The question as to the book's origin has lost its poignancy through the ever-increasing recognition of the book's intrinsic character. Thus the recent defenders of the apostolic authorship, the Unitarian James Drummond (1903), the Anglican William Sanday (1905), the Roman Catholic Theodore Calmes (1904), can tell us, the first, that "the evangelist did not aim at an illustrative picture of what was most characteristic of Jesus"; the second, that "the author sank into his own consciousness and at last brought to light what he found there"; the third, that "the Gospels contained the entire theological system," "history is seen through the intervening dogmatic development," "the Samaritan woman is . . . a personification," "the behaviour of the Greeks is entirely natural in such a book." We thus get at cross-purposes with this powerful, profound work. Only some such position as Abbé Loisy's critical summing up (1903) brings out its specific greatness. "What the author was, his book, in spite of himself, tells us to some extent: a Christian of Judeo-Alexandrine formation; a believer without, apparently, any personal reminiscence of what he had actually been the life, preaching and death of Jesus; a theologian far removed from every historical preoccupation, though he retains certain principal facts of tradition without which Christianity would evaporate into pure ideas; and a seer who has lived the Gospel which he propounds." "To find his book beautiful and true, we need but take it as it is and understand it." "The church, which has never discussed the literary problem of this Gospel, in nowise erred as to its worth."

Several traditional positions have indeed been approximately maintained or reconquered against the critics. As to the date, though admitted earlier, from 166 (Baur), 170 (Zeller), 170 (Keim), to 110-115 (Renan) and 80-110 (Harnack): since Irenaeus says its author lived into the times of Trajan (90-117), a date somewhere about 105 would satisfy tradition. As to the place, the critics accept proconsular Asia with practical unanimity, thus endorsing Irenaeus's declaration that the Gospel was published in Ephesus. As to the author's antecedents, critics have ceased to hold that he could not have been a Jew-Christian (so Bretschneider, 1850), and admit (so Schmiedel, 1901) that he must have been by birth a Jew of the Dispersion, or the son of Christian parents who had been such Jews. And so he will be given a position of outstanding price. But the predominant critical verdict now is that he betrays an eye-witness's knowledge of the country between Sichem and Jordan and as to Jerusalem; he will have visited these places, say in 90, or may have lived in Jerusalem shortly before its fall. But the reasons against the author being John the Zebedean or any other eyewitness of Jesus' earthly life have accumulated to a practical demonstration.

As to the external evidence for the book's early date, we must remember that the Epistle to the Hebrews and the Book of Revelation, though admitted earlier, and of the same school, and, with the great Pauline Epistles, show many preformations of Johannine phrases and ideas. Other slighter prousions will have circulated in that Philionian centre Ephesus, before the great Gospel englobed and superseeded them. Hence the precariousness of the proofs derived from more or less close parallels to Johannine passages in the apostolic fathers. Justin Martyr (163-175) certainly uses the Gospel; but his conception of Jesus' life is so strictly Synoptic that he can hardly have accepted it as from an apostolic eyewitness. Papias of Hierapolis, in his *Exposition of the Lord's Sayings* (143-160) appears nowhere to have heard of John's Gospel, and indeed ascribes it to the Holy Spirit as seen in all the other Gospels. Tertullian, Irenaeus, and consequently also Andrew, Peter, ... John or Matthew or any other of the Lord's disciples spoke," and "what Aristion and the presbyter John, the Lord's disciples, say," Thus Papias, as Eusebius about 314 insists, knew two Johns, and the apostle was to him a far-away figure; indeed early medieval chroniclers record that Papias "in the second book of the Lord's sayings" asserted that both the sons of Zebedee were "slain by Jews," so that the apostle John would have died before 70. Irenaeus's testimony is the earliest and admittedly the strongest we possess for the Zebedean John, and, in a curious confession of this in a recent author like Calvin, "it is seen that this witness is to be considered decisive." In his work against the Heresies and in his letter to Florinus, about 185-191, he tells how he had himself known Bishop Polycarp of Smyrna, and how Polycarp "used to recount his familiar intercourse with John and the others who had seen the Lord"; and explicitly identifies this John with the Zebedean and the evangelist. But Irenaeus was at most fifteen when thus frequenting Polycarp; writes thirty-five to fifty years later in Lyons, admitting that he noted down nothing at the time; and, since his mistaken description of Papias as "a hearer to the voice of the Zebedean" was certainly reached by mistaking the presbyter for the apostle, his additional words "and a companion of Polycarp" point to this same mistaken identification having also operated in his mind with regard to Polycarp. In any case,
the very real and important presbyter is completely unknown to Ireneaus, and his conclusion as to the book's authorship resulted apparently from a comparison of its contents with Polycarp's teaching. If the presbyter wrote Revelation and was Polycarp's master, such a mistake could easily arise. Certainly Polycrates, bishop of Ephesus, made a precisely similar mistake when about 190 he described the Philip "who rests in Hierapolis" as "one of the twelve apostles," since Eusebius rightly identifies this Philip with the deacon of Acts xxii. A positive testimony for the critical conclusion is derived from the existence of a group of Asia Minor Christians who about 165 rejected the Gospel as not by John but by Cerinthus. The attribution is doubtless wrong, but the Christians sufficiently numerous to deserve a long discussion by St Epiphanius in 374-377, who upheld the Synoptists, stoutly opposed the Gnostics and Montanists, and had escaped every special designation till the bishop nicknamed them the "Alogoi" (irrational reactors of the Logos-Gospel), dare, in such a time and country, to hold such views, had the apostolic origin been uncontestable? Surely not. The Alexandrian Clement, Tertullian, Origen, Eusebius, Jerome and Augustine only tell of the Zebedean what is traceable to stories told by Papias of others, to passages of Revelation and the Gospel, or to the assured fact of the long-lived Asian presbyter.

As to the internal evidence, if the Gospel typifies various imperfect or sinful attitudes in Nicodemus, the Samaritan woman and Thomas; if even the mother appears to symbolize faithful Israel; then, profoundly spiritual and forward-looking as it is, a type of the perfect disciple, not all unlike Clement's perfect "Gnostic," could hardly be omitted by it; and the precise details of this figure may well be only ideally, mysteriously true. The original work nowhere identifies this disciple with any particular historic figure. He who sons known to us at least "born again," and his witness is true," is asserted (xiii. 35) of the disciple. Yet "to see" is said also of intuitive faith, "whoso hath seen Me, hath seen the Father" (xiv. 9); and "true" appears also in "the true Light," "the true Bread from heaven," as characterizing the realities of the upper, alone fully true world, and equals "heavenly" (iii. 12); thus a true witness testifies to some heavenly reality, and appeals to the reader's "pneumatic," i.e. allegorical, understanding.

Only in the appendix do we find any deliberate identification with a particular historic person; "this is the disciple which testifieth of these things, and wrote them" (xxi. 24-25), and to the whole previous work and to the "disciple whom Jesus loved," identified here with an unnamed historic personage whose recent death had created a shock, evidently because he was the last of that apostolic generation which so keenly the second coming (18-23). This man was so great that the writer strives to win his authority for this Gospel; and yet this man was not John the Zebedean, else why, now he is dead and gone, no proclaim the fact? If the dead man was John the presbyter—if this John had in youth just seen Jesus and the Zebedean, and in extreme old age had still seen and approved the Gospel—to attribute this Gospel to him, as is done here, would not violate the literary ethics of those times. Thus the heathen philosopher Iamblichus (d. c. 330) declares: "this was admirable" amongst the Neo-Platonic "that they ascribed everything to Pythagoras; but few of them acknowledge their own works as their own" (de Pythag. vita, 198). And as to Christians, Tertullian about 210 tells how the presbyter who, in proconusal Asia, had "composed the Acts of Paul and Thecla" was convicted and deposed, for how it could be credible that Paul should confer upon women the power to teach and baptize as he had averred? The attribution as such, then, was not condemned.

The facts of the problem would all appear covered by the hypothesis that John the presbyter, the eleven being all dead, wrote the book of Revelation (its more ancient Christian portions) say in 69, and died at Ephesus say in 100; that the author of the Gospel wrote the first draft, here, say in 97; that this book, expanded by him, first circulated within a select Ephesian Christian circle; and that the Ephesian church officials added in the appendix and published it in 110-120. But however different or more or less alien it may have been the actual origins, three points remain certain.

The real situation that confronts us is not an unbroken tradition of apostolic eye-witnesses, incapable of re-statement with any hope of ecclesiastical acceptance, except by another apostolic eye-witness. On one side indeed there was the record, underlying the Synoptists, of at least two eye-witnesses, and the necessity of its preservation and transmission; but on the other side a profound double change had come over the Christian outlook and requirements. St Paul's heroic labours (50-64) had gradually gained full bases of a decisive change in the foundation of the universalist strain in our Lord's teaching and body, for the earthly Jesus, but only the heavenly Christ, could even declare that Christ "thorough the Jewish fathers according to the flesh" had died, "so that henceforth, even if we have known Christ according to the flesh, now we further know Him thus," "the Lord is the Spirit," and "where the Spirit of the Lord is, there is liberty." And the Jewish church, within which Christianity had first lived and moved, ceased to have a visible centre. Thus a super-temporal and super-temporal interpretation has been found for a markedly Jewish setting and apprehension of the Christian truth because of the necessity of preserving the original contingencies. The Fourth Gospel, inexpressible without St Paul and the fall of Jerusalem, is fully understandable with them. The attribution of the book to an eye-witness nowhere resolves, it everywhere increases, the real difficulties; and by insisting upon having history in the same degree and way in John as in the Synoptists, we cease to get it sufficiently anywhere at all. And the Fourth Gospel's true greatness lies well within the range of this its special character. In character it is profoundly "pneumatic", Paul's super-earthly Spirit-Christ here breathes and speaks, and invites a corresponding spiritual comprehension. And its greatness appears in its inextinguishable deep teachings concerning Christ's sheep and fold; the Father's drawing of souls to Christ; the dependence of knowledge as to Christ's doctrine upon the doing of God's will; the fulfilling of the commandment of love, as the test of true discipleship; eternal life, begun even here and now; and God a Spirit, to be served in spirit and in truth.

BIBLIOGRAPHY.—See also the independent discussion, under REVELATION, BOOK OF, of the authorship of that work. Among the many treatments of the question there are two which are especially instructive by the classically trained reader: Origen's commentary, finished (only to John xiii. 33) in 235-237 (best ed. by Haug, 1903). The works of Eusebius (320) and of Jerome (398) about 416. The Spanish Jesuit Juan Maldonatus' Latin commentary, published 1596 (critical reprint, edited by Raich, 1874), a pathfinder on many obscure points, is still a model for tenacious historical scholarship of John; see E. Brunfelsius, Historia de Evangeli... Joannis Apostoli indole et origine (1820), the first systematic assault on the traditional attribution, remains unfretted in its main contention. The best summing up and ripest fruit of the critical labour since then are Professor H. J. Holtzmann's Hand- kommentar (2nd ed., 1893) and the respective sections in his Einleitung in d. N. T. (3rd ed., 1892) and his Lehrbuch der N. T. Theologie (1897), vol. 2. Professor C. C. Luthardt's St John, Author of the Fourth Gospel (Eng. trans., with admirable bibliography by C. R. Gregory, 1875), still remains the best conservative statement. Among the few critically satisfactory French books, Abbé Loisy's Le Quatrième Evangile (1901) stands pre-eminent for delicate psychological analysis and continuous sense of the book's closely knit unity; whilst Père Th. Calmes' Evangile selon S. Jean (1904) indicates how numerous are the admissions as to the book's character and the evidences for its authorship, made by Intelligent Roman Catholic apologists with Rome's explicit approval. In England a considerably less docile conservatism has been predominant. Bp Lightfoot's Essays on... Religion and Revelation (1874) stands pre-eminent for delicate psychological analysis and conservative interpretations of the external evidence; but they leave this evidence still inconclusive, and the formidable contrary evidence remains practically untouched. Much the same applies to Mr. E. W. Bouverie's A Gospel according to St John, (1888), devotedly attractive, and in textual criticism excellent. Dr James Drummond's Inquiry into the Character and Authorship of the Fourth Gospel (1903) has weighed both its value and importance, giving credibility to the eyewitness origin of such a book as this is admitted to be. Professor W. Sanday's slimmer Criticisms of the Fourth Gospel (1905) is in a similar position. Professor P. W. Schmiedel's
JOHN ALBERT (1450–1509), king of Poland, third son of Casimir IV, king of Poland and Elizabeth of Austria. As crown prince he distinguished himself by his brilliant victory over the Tatars at Kopersztyn in 1487. He succeeded his father in 1492. The loss of revenue consequent upon the secession of Lithuania placed John Albert at the mercy of the Polish Sejmiki or local diets, where the szlachta, or country gentry, made their subsidies dependent upon the king’s subservience. Primarily a warrior with a strong taste for heroic adventure, John Albert desired to pose as the champion of Christendom against the Turks. Circumstances seemed, moreover, to favour his ambition in his brother Wladislaw, who as king of Hungary and Bohemia possessed a dominant influence in Central Europe, he found a counterpoise to the machinations of the emperor Maximilian, who in 1492 had concluded an alliance against him with Ivan III. of Muscovy, while, as suzerain of Moldavia, John Albert was favourably situated for attacking the Turks. At the conference of Leutschau in 1494 the details of the expedition were arranged between the kings of Poland and Hungary and the elector Frederick of Brandenburg, with the co-operation of Stephen, hospodar of Moldavia, who had appealed to John Albert for assistance. In the course of 1496 John Albert with great difficulty collected an army of 80,000 men in Poland, but the crusade was deflected from its proper course by the sudden invasion of Galicia by the hospodar, who apparently—for the whole subject is still very obscure—had been misled by reports from Hungary that John Albert was bent upon placing his younger brother Sigismund on the throne of Moldavia. Be that as it may, the Poles entered Moldavia not as friends, but as foes, and, after the abortive siege of Suceava, were compelled to retreat through the Bukowina to Sniatyn, harassed all the way by the forces of the hospodar. The insubordination of the szlachta seemed to have been one cause of this disgraceful collapse, for John Albert confiscated hundreds of their estates after his return; in spite of which, to the end of his life he retained his extraordinary popularity. When the new grand master of the Teutonic order, Frederic of Saxony, refused to render homage to the Polish crown, John Albert compelled him to do so. His intention of still further humiliating the Teutonic order was frustrated by his sudden death in 1501. A valiant soldier and a man of much enlightenment, John Albert was a poor politician, recklessly sacrificing the future to the present.

See V. Czarny, The Reigns of John Albert and Alexander Jagiello (Pol.) (Cracow, 1882).

JOHN ANGELUS (d. 1244), emperor of Thessalonica. In 1232 he received the throne from his father Theodore, who, after a period of exile, had re-established his authority, but owing to his loss of eyesight resolved to make John the nominal sovereign. His reign is chiefly marked by the aggressions of the rival emperor of Nicaea, John Vatatzes, who laid siege to Thessalonica in 1243 and only withdrew upon John Angelus consenting to exchange the title “emperor” for the subordinate one of “despot.”

See G. Finlay, History of Greece, vol. iii. (1877).

JOHN FREDERICK I. (1503–1554), called the Magnanimous, elector of Saxony, was the elder son of the elector, John the Steadfast, and belonged to the Ernestine branch of the Wettin family. Born at Torgau on the 30th of June 1503 and educated as a Lutheran, he took some part in imperial politics and in the business of the league of Schmalkalden before he became elector by his father’s death in August 1532. His lands comprised the western part of Saxony, and included Thuringia, but in 1542 Coburg was surrendered to form an anapage for his brother, John Ernest (d. 1553). John Frederick, who was an ardent Lutheran and had a high regard for Luther, continued the religious policy of his father. In 1534 he assisted to make peace between the German king Ferdinand I. and Ulrich, duke of Württemberg, but his general attitude was one of vacillation between the emperor and his own impetuous colleague in the league of Schmalkalden, Philip, landgrave of Hesse. He was often at variance with Philip, whose bigotry he did not approve, and the war that ensued between his state and the Electorate of Hesse was only ended by the death of Albert and the loyalty to the Empire prevented him from pursuing any definite policy for the defence of Protestantism. In 1541 his kinsman Maurice became duke of Saxony, and cast covetous eyes upon the electoral dignity. A cause of quarrel soon arose. In 1541 John Frederick forced Nicholas Amsdorf into the see of Naumburg in spite of the chapter, who had elected a Roman Catholic, Julius von Flüg; and about the same time he seized Wurzen, the property of the bishop of Meissen, whose see was under the joint protection of electoral and ducal Saxony. Maurice took up arms, and war was only averted by the efforts of the elector and the emperor to make the issue of the dispute central. Maurice, who assisted to drive Henry, duke of Brunswick-Wolfenbüttel, from his duchy, but in spite of this his relations with Charles V. at the diet of Spires in 1544 were very amicable. This was, however, only a lull in the storm, and the emperor soon began to make preparations for attacking the league of Schmalkalden, and especially John Frederick and Philip of Hesse. The support, or at least the neutrality, of Maurice was won by the hope of the electoral dignity, and in July 1546 war broke out between Charles and the league. In September John Frederick was placed under the ban by the electors of Saxony, and the March of Brandenburg was invaded by the elector. John Frederick, who had hastened from Southern Germany the elector Maurice from the land, took his ally, Albert Alcibiades, prince of Bayreuth, prisoner at Rochlitz, and overran ducal Saxony. His progress, however, was checked by the advance of Charles V. Notwithstanding his valour he was wounded and taken prisoner at Mühlberg on the 24th of April 1547, and was condemned to death in order to induce Wittenberg to surrender. The sentence was not carried out, but by the capitulation of Wittenberg (May 1547) he renounced the electoral dignity and a part of his lands in favour of Maurice, steadfastly refusing however to make any concession on religious matters. He remained in captivity until May 1552, when he returned to the Thuringian lands which his sons had been allowed to retain, his return being hailed with wild enthusiasm. During his imprisonment he had refused to accept the Interim, issued from Augsburg in May 1548, and had urged his sons to make no peace with Maurice. After his release the emperor had restored his dignities to him, and his assumption of the electoral arms and title prevented any arrangement with Maurice. However, after the death of this prince in July 1553, a treaty was made at Naumburg in February 1554, and John Frederick consented to the transfer of the electoral dignity, but retained for himself the title of “born elector,” and received some lands and a sum of money. He was thus the last Ernestine elector of Saxony. He died at Weimar on the 3rd of March 1554, having had three sons by his wife, Sibylla (d. 1554), daughter of John III., duke of Cleves, whom he had married in 1527, and was succeeded by his eldest son, John Frederick. The elector was a great hunter and a hard drinker, whose brave and dignified bearing in a time of misfortune won for him his surname of Magnanimous, and drew eulogies from Roger Ascham and Melancthon. He founded the university of Jena and was a benefactor to that of Leipzig.

See Mentz, Johann Friedrich der Grossmütige (Jena, 1903); Rogge, Johann Friedrich der Grossmütige (Halle, 1902) and L. von Ranke, Deutsche Geschichte im Zeitalter der Reformation (Leipzig, 1888).

JOHN FREDERICK (1529–1595), called der Müllere, duke of Saxony, was the eldest son of John Frederick, who had been deprived of the Saxon electorate by the emperor Charles V. in 1547. Born at Torgau on the 8th of January 1529, he received a good education, and when his father was imprisoned in 1547...
undertook the government of the remnant of electoral Saxony which the emperor allowed the Ernestine branch of the Wettin family to keep. Released in 1558 John Frederick the elder died two years later, and his three sons ruled Ernestine Saxony together until 1557, when John Frederick was made sole ruler. This arrangement lasted until 1565, when John Frederick shared his lands with his surviving brother, John William (1530-1573), retaining for himself Gotha and Weimar. The duke was a strong, even a fanatical, Lutheran, but his religious views were gradually subordinated to the one idea of regaining the electoral dignity then held by Augustus I. To attain this end he lent a willing ear to the schemes of Wilhelm von Grumbach, who came to his court about 1557 and offered to regain the electoral dignity and even to acquire the Empire for his patron. In spite of repeated warnings from the emperor Ferdinand I, John Frederick continued to protect Grumbach, and in 1566 his obstinacy caused him to be placed under the imperial ban. Its execution was entrusted to Augustus who, aided by the duke’s brother, John William, marched against Gotha with a strong force. In consequence of a mutiny the town surrendered in April 1567, and John Frederick was delivered to the emperor Maximilian II. He was imprisoned in Vienna, his lands were given to his brother, and he remained in captivity until his death at Steyer on the 6th of May 1595. These years were mainly occupied with studying theology and in correspondence. John Frederick married firstly Agnes (d. 1555) daughter of Philip, landgrave of Hesse, and widow of Maurice, elector of Saxony, and secondly Elizabeth (d. 1594) daughter of Frederick III., elector palatine of the Rhine, by whom he left three sons, John Christian (1563-1633) and John Ernest (1566-1638). Elizabeth shared her husband’s imprisonment for twenty-two years.

See A. Beck, Johann Friedrich der Müllere, Herzog zu Sachsen (Vienna, 1858); and F. Ortolff, Geschichte der Grumbachischen Händel (Jena, 1868-1870).

JOHN GEORGE I. (1585-1636), elector of Saxony, second son of the elector Christian I., was born on the 30th of March 1585, succeeding to the electorate in June 1611 on the death of his elder brother, Christian II. The geographical position of electoral Saxony hardly less than her high standing among the German Protestants gave her ruler much importance during the Thirty Years’ War. At the beginning of his reign, however, the new elector took up a somewhat detached position. His personal allegiance to Lutheranism was sound, but he liked neither the growing strength of Brandenburg nor the increasing prestige of the Palatinate; the adherence of the other branches of the Saxon ruling house to Protestantism seemed to him to suggest that the head of electoral Saxony should throw his weight into the other scale, and he was prepared to favour the advances of the Habenburgs and the Roman Catholic party, much as easily induced to vote for the elector Ferdinand, archduke of Styria, as emperor in August 1619, an action which nullified the anticipated opposition of the Protestant electors. The new elector secured the help of John George for the impending campaign in Bohemia by promising that he should be undisturbed in his possession of certain ecclesiastical lands. Carrying out his share of the bargain by occupying Silesia and Lusatia, where he displayed much clemency, the Saxon elector had thus some part in driving Frederick V., elector palatine of the Rhine, from Bohemia and in crushing Protestantism in that country, the crown of which he himself had previously refused. Gradually, however, he was made uneasy by the obvious trend of the imperial policy towards the annihilation of Protestantism, and by a dread lest the ecclesiastical lands should be taken from him; and the issue of the edict of restitution in March 1629 put the coping-stone to his fears. Still, although clamouring vainly for the exemption of the electorate from the area covered by the edict, John George took no decided measures to break his alliance with the emperor. He did, indeed, in February 1631 call a meeting of Protestant princes at Leipzig, but in spite of the high claims of the preacher Matthias Hildebrandt (1582-1645) he contented himself with a formal protest. Meanwhile Gustavus Adolphus had landed in Germany, and the elector had refused to allow him to cross the Elbe at Wittenberg, thus hindering his attempt to relieve Magdeburg. But John George’s reluctance to join the Protestants disappeared when the imperial troops under Tilly began to ravage Saxony, and in September 1631 he concluded an alliance with the Swedish king. The Saxon troops were present at the battle of Breitenfeld, but were routed by the imperialists, the elector himself seeking safety in flight. Nevertheless he soon took the offensive. Marching into Bohemia the Saxons captured Prague, but John George soon began to negotiate for peace and consequently his soldiers offered little resistance to Wallenstein, who drove them back into Saxony. However, for the present the efforts of Gustavus Adolphus prevented the elector from deserting him, but the position was changed by the death of the king at Lützen in 1632, and the refusal of Saxony to join the Protestant league under Swedish leadership. Still letting his troops fight in a desultory fashion against the Imperialists, John George again negotiated for peace, and in May 1635 he concluded the important treaty of Prague with Ferdinand II. His reward was Lusatia and certain other additions of territory; the retention by his son Augustus of the archbishopric of Magdeburg; and some concessions with regard to the edict of restitution. Almost at once he declared war upon the Swedes, but in October 1636 he was beaten at Wittstock; and Saxony, ravaged impartially by both sides, was soon in a deplorable condition. At length in September 1645 the elector was compelled to agree to a truce with the Swedes, who, however, retained Leipzig; and as far as Saxony was concerned this ended the Thirty Years’ War. After the peace of Westphalia, John George was in his declining years, his power gradually falling, and the ancient capital was the constant scene of musical and other festivals. His enormous expenditure compelled him in 1661 to grant greater control over monetary matters to the estates, a step which laid the foundation of the later system of finance in Saxony. John George died at Freiberg on the 22d of August 1680.

JOHN GEORGE III. (1647-1681), elector of Saxony, the only son of John George II., was born on the 20th of June 1647. He forsook the vacillating foreign policy of his father and in June 1683 joined an alliance against France. Having raised the first standing army in the electorate he helped to drive the Turks from Vienna in September 1688, leading his men with great gallantry; but disgusted with the attitude of the emperor Leopold I. after the victory, he returned at once to Saxony. However, he sent aid to Leopold in 1685. When Louis XIV.’s armies invaded Germany in September 1688 John George wasone of the first to take arms against the French, and after sharing in the capture of Mainz he was appointed commander-in-chief of the imperial forces. He had not, however, met with any notable success when he died at Tübingen on the 12th of September 1691. Like his father, he was very fond of music, but he appears to have been less extravagant than John George II. His wife was Anna Sophia, daughter of Frederick III. king of
JOHN MAURICE—JOHNS HOPKINS UNIVERSITY

Denmark, and both his sons, John George and Frederick Augustus, became electors of Saxony, the latter also becoming king of Poland as Augustus II.

JOHN GEORGE II. (1668-1694), elector of Saxony, was born on the 18th of October 1668. At the beginning of his reign his chief states armad to a dark von Schöning (1641-1668), who counselled a union between Saxony and Brandenburg and a more independent attitude towards the emperor. In accordance with this advice certain proposals were put before Leopold I. to which he refused to agree; and consequently the Saxo troops withdrew from the imperial army, a proceeding which led the charmed emperor to seize and imprison Schöning in July 1692. Although John George was unable to procure his minister's release, Leopold managed to allay the elector's anger, and early in 1693 the Saxon soldiers rejoined the imperialists. This elector is chiefly noted for his union for architecture Sylva von Neidschütz (d. 1694), created in 1693 countess of Rochlitz, whom on his accession he publicly established as his mistress. John George left no legitimate issue when he died on the 27th of April 1694.

JOHN I. MAURICE OF NASSAU (1604-1679), surnamed the Brazilian, was the son of John the Younger, count of Nassau-Siegen-Dillenburg, and the grandson of John, the elder brother of William the Silent and the chief author of the Union of Utrecht. He distinguished himself in the campaigns of his cousin, the stadtholder Frederick Henry of Orange, and was by him recommended to the directors of the Dutch West India company in 1636 to be governor-general of the new dominion in Brazil recently conquered by the company. He landed at the Recife, the port of Pernambuco, and the chief stronghold of the Dutch, in January 1637. By a series of successful expeditions he gradually extended the Dutch possessions from Sergipe on the south to S. Luis de Maranhon in the north. He likewise conquered the Portuguese possessions of St George del Mina and St Thomas on the west coast of Africa. With the assistance of the famous architect, Pieter Post of Haarlem, he transformed the Portuguese fort at Benguela into a great Dutch trading post which was later called his name Mauritstad. By his statesmanlike policy he brought the colony into a most flourishing condition and succeeded even in reconciling the Portuguese settlers to submit quietly to Dutch rule. His large schemes and lavish expenditure alarmed however the parsimonious directors of the West India company, but John Maurice refused to retain his post unless he was given a free hand, and he returned to Europe in July 1644. He was shortly afterwards appointed by Frederick Henry to the command of the cavalry in the Netherlands, and he took part in the campaign of 1645-6. In 1646. When the war was ended by the peace of Münster in January 1648, he accepted from the elector of Brandenburg the post of governor of Cleves, Mark and Ravensberg, and later also of Minden. His success in the Rhineland was as great as it had been in Brazil, and he proved himself a most able and wise ruler. At the end of 1652 he was appointed head of the order of St John and made a prince of the Empire. In 1664 he came back to Holland; when the war broke out with England supported by an invasion from the bishop of Münster, he was appointed command-in-chief of the Dutch forces on land. Though hampered in his command by the restrictions of the states-general, he repelled the invasion, and the bishop, Christoph von Galen, was forced to conclude peace. His campaigning was not yet at an end, for in 1673 he was appointed by the stadtholder William III. to command the forces in Friesland and Groningen, and to defend the eastern frontier of the Provinces. In 1675 his health compelled him to give up active military service, and he spent his last years in his beloved Cleves, where he died on the 20th of December 1679. The house which he built at the Hague, named after him the Maurits-huis, now contains the splendid collections of pictures so well known to all admirers of Dutch art.

JOHN O'GROAT'S HOUSE, a spot on the north coast of Caithness, Scotland, 14 m. N. of Wick and 1 1/2 m. W. of Duncansby Head. It is the mythical site of an octagonal house said to have been erected early in the 16th century by one John Groat, a Dutchman who had migrated to the north of Scotland by permission of James IV. According to the legend, other members of the Groat family followed John, and acquired lands around Duncansby. When there were eight Groat families, disputes began to arise as to precedence at annual feasts. These squabbles John Groat is said to have settled by building an octagonal house in which each family could enter by his own door and sit at the head of his own table. Being but a few miles south of Dunnet Head, John o'Groat's is a colloquial term for the most northerly point of Scotland. The site of the traditional building is marked by an outline traced in turf. Descendants of the Groat family, now Groat, still live in the neighbourhood. The cowry-shell, Cypraea europea, is locally known as " John o' Groat's bucky."

JOHNS HOPKINS UNIVERSITY, an American educational institution at Baltimore, Maryland, U.S.A. Its trustees, chosen by Johns Hopkins (1794-1873), a successful Baltimore merchant, and his estate executor, Thomas Hill Stussey, was established in 1876 as "an act "for the promotion of education in the state of Maryland." But nothing was actually done until after the death of Johns Hopkins (Dec. 21, 1873), when his fortune of $7,000,000 was equally divided between the projected university and a hospital, also to bear his name, and intended to be an auxiliary to the medical school of the university. The trustees of the university consulted with many prominent educationists, notably Charles W. Eliot of Harvard, Andrew D. White of Cornell, and James B. Angell of the university of Michigan; on Oct. 22, 1873, at the election of a committee of eleven, the name of the president. The university was formally opened on the 3rd of October 1876, when an address was delivered by T. H. Huxley. The first year was largely given up to consultation among the newly chosen professors, among whom were—in Greek, B. L. Gildersleeve; in mathematics, J. J. Sylvester; in chemistry, Ira Remsen; in biology, Henry Newell Martin (1848-1896); in zoology, William Keith Brooks (1848-1908); and in physics, Henry Augustus Rowland (1848-1901). Prominent among later teachers were Arthur Cayley in mathematics, the Semitic scholar Charles C. Post in comparative philology, and the linguist Frederick Goodwin, in Biblical philology, James Wilson Bright in English philology, Herbert B. Adams in history, and Richard T. Ely (b. 1854) in economics. The university at once became a pioneer in the United States in teaching by means of seminary courses and laboratories, and it has been eminently successful in encouraging research, in scientific production, and in preparing its students to become instructors in other colleges and universities. It includes a college in which each of five parallel courses leads to the degree of Bachelor of Arts, but its reputation has been especially hinged on the chief course in two-year college work, acting as a bridge between the secondary school and the medical school. The graduate school offers courses in philosophy and psychology, physics, chemistry and biology, historical and economic science, language and literature, and confers the degree of Doctor of Philosophy after at least three years' residence. From its foundation the university had novel features and a liberal administration. Twenty annual fellowships of $500 each were opened to the graduates of any college. Petography and laboratory psychology were among the new sciences fostered by the new university. Such eminent outsiders were secured for brief residence and lecture courses as J. R. Lowell, F. J. Child, Simon Newcomb, E. H. von Holst, F. A. Walker, William James, Sidney Lanier, James Bryce, E. A. Freeman, W. W. Goodwin, and Alfred Russel Wallace. President Gilman gave up his presidential duties on the 1st of

1 This name is usually written Joan, the form used by the man himself in his signature. In Netcher's Hollandais en Brésil.
September 1901, Ira Remsen, succeeding him in the office. The medical department, inaugurated in 1853, is closely affiliated with the excellently equipped Johns Hopkins Hospital (opened in 1889), and is actually a graduate school, as it admits only students holding the bachelor's degree or its equivalent. The degree of Doctor of Medicine is conferred after four years of successful study, and advanced courses are offered. The department's greatest teachers have been William Osler (b. 1849) and William Welch (1850-1932).

The buildings of the university were in 1901 an unpretentious group on crowded ground near the business centre of the city. In 1902 a new site was secured, containing about 25 acres amid pleasant surroundings in the northern suburbs, and new buildings were designed in accordance with a plan formed with a view to secure harmony and symmetry. In 1907 the library contained more than 150,000 bound volumes. Among the numerous publications issued by the university press are: American Journal of Mathematics, Studies in Historical and Political Science, Reprint of Economic Tracts, American Journal of Philology, Contributions to Assyriology and Semitic Philology, Modern Language Notes, American Chemical Journal, American Journal of Insanity, Terrestrial Magnetism and Atmospheric Electricity, Reports of the Maryland Geological Survey, and Reports of the Maryland Weather Service. The institution is maintained chiefly with the proceeds of the endowment fund. It also receives aid from the state, and charges tuition fees. Its government is entrusted to a board of trustees, while the direction of affairs of a strictly academic nature is delegated to an academic council and to department boards. In 1906-1907 the regular faculty numbered 124, and there was an enrollment of 683 students, of whom 318 were in post-graduate courses.

On the history of the university, see Daniel C. Gilman, The Launching of a University (New York, 1906), and the annual reports of the president.

JOHNSON, ANDREW (1808-1875), seventeenth president of the United States, was born at Raleigh, North Carolina, on the 29th of December 1808. His parents were poor, and his father died when Andrew was four years old. At the age of ten he was apprenticed to a tailor, his spare hours being spent in acquiring the rudiments of an education. He learned to read from a book which contained selected orations of great British and American statesmen. The young tailor went to Laurens Court House, South Carolina, in 1824, to work at his trade, but returned to Raleigh in 1825 and soon afterward removed to Greenville in the present state of Tennessee. He married, working the same year, the infamously defrocked Eliza McCord (1819-1873), much his superior by birth and education, who taught him the common school branches of learning and was of great assistance in his later career. In East Tennessee most of the people were small farmers, while West Tennessee was a land of great slave plantations. Johnson began in politics to oppose the aristocratic element and became the spokesman and champion of the poorer and labouring classes. In 1828 he was elected an alderman of Greenville and in 1830-1834 was mayor. In 1834, in the Tennessee constitutional convention he endeavoured to limit the influence of the slaveholders by basing representation in the state legislature on the white population alone. In 1835-1837 and 1839-1841 Johnson was a Democratic member of the state House of Representatives, and in 1841-1843 of the state Senate; in both houses he uniformly upheld the cause of the "common people," and, in addition, opposed legislation for "internal improvements." He soon was recognized as the political champion of East Tennessee. Though his favourite leaders became Whigs, Johnson remained a Democrat, and in 1840 canvassed the state for Van Buren for president.

In 1843 he was elected to the national House of Representatives and there remained for ten years until his district was gerrymandered by the Whigs and he lost his seat. But he at once offered himself as a candidate for governor and was elected and re-elected, and was then sent to the United States Senate, serving from 1857 to 1862. As governor (1853-1857) he proved to be able and non-partisan. He championed popular education and recommended the homestead policy to the national government, and, from his sympathy with the being oftentimes reasserted in his former calling he became known as the "mechanic governor." In Congress he proved to be a tireless advocate of the claims of the poorer whites and an opponent of the aristocracy. He favoured the annexation of Texas, supported the Folk administration on the issues of the Mexican War and the Oregon boundary controversy, and though voting for the admission of free California demanded national protection for slavery. He also advocated the homestead law and low tariffs, opposed the policy of "internal improvements," and was a zealous worker within the borders. Though opposed to a monopolistic political power in the South by the great slaveholders, he deplored anti-slavery agitation (even favouring denial of the right of petition on that subject) as threatening abolition or the dissolution of the Union, and went with his sectional leaders so far as to demand freedom of choice for the Territories, and protection for slavery where it existed—this even so late as 1860. He supported in 1860 the ultra-Democratic ticket of Breckinridge and Lane, but he did not identify the election of Lincoln with the ruin of the South, though he thought the North should give renewed guarantees to slavery. But he followed Jackson rather than Calhoun, and above everything else of the Union, though believing the South to be grievously wronged. He was the only Southern member of Congress who opposed secession and refused to "go with his state" when it withdrew from the Union in 1861. In the judgment of a leading opponent (O. P. Morton) "perhaps no man in Congress exerted the same influence on the public sentiment of the North at the beginning of the war" as Johnson. During the war he suffered much for his loyalty to the Union. In March 1862 Lincoln made him military governor of the part of Tennessee captured from the Confederates, and afterward (with much danger to himself) he succeeded in organizing a Union government for the state. In 1864, to secure the votes of the war Democrats and to please the border states that had remained in the Union, Johnson was nominated for vice-president on the ticket with Lincoln.

A month after the inauguration the murder of Lincoln left him president, with the great problem to solve of reconstruction of the Union. All his past career and utterances seemed to indicate that he would favour the harshest measures toward ex-Confederates, and hence the susceptibility to the most radical republicans. But, whether because he thought it a distinction between the treason of individuals and of states, or was influenced by Seward, or simply, once in responsible position, separated Republican party politics from the question of constitutional interpretation, at least he speedily showed that he would be influenced by no acrimony, and adopted the lenient reconstruction policy of Lincoln. In this he had for some time the cordial support of his cabinet. During the summer of 1865 he set up provisional civil governments in all the seceded states except Texas, and within a few months all those states were reorganized and applying for readmission to the Union. The radical congress (Republican by a large majority) sharply opposed this plan of restoration, as they had opposed Lincoln's plan: first, because the members of Congress from the Southern States (when readmitted) would almost certainly vote with the Democrats; secondly, because relatively few of the Confederates were punished; and thirdly, because the newly organized Southern States did not give political rights to the negroes. The question of the status of the negro proved the crux of the issue. Johnson was opposed to general or immediate negro suffrage. A bitter contest began in Feb. 1866, between the president and the Congress, which refused to admit representatives...
JOHNSON, B.—JOHNSON, R.

President Johnson's leading political principles were a reverence of Andrew Jackson, unlimited confidence in the people, and an intense fervor for the constitution. Throughout his life he remained in some respects a "backwoodsman." He lacked the finish of systematic education. But his whole career sufficiently proves him to have been a man of extraordinary qualities. He did not rise above untoward circumstances by favour, nor—until after his election as senator—by fortunate and fortuitous connexion with great events, but by strength of native talents, persistent purpose, and an iron will. He had strong, rugged powers, was a close reasoner and a forcible speaker. Unfortunately his extemporaneous speeches were commonplace, in very bad taste, frequently intemperate and denunciatory; and though this was probably due largely to temperament and habits of stump-speaking formed in early life, it was attributed by his enemies to "demon gin." Resorting to demonstrations after illness, his marked excess in this respect on the occasion of his inauguration as vice-president undoubtedly did him harm with the public. Faults of personality were his great handicap. Though approachable and not without kindliness of manner, he seemed hard and inflexible; and while president, physical pain and domestic anxieties, added to the struggles of public life, combined to accentuate a naturally somewhat severe temperament. A lifelong Southern Democrat, he was forced to lead (nominally at least) a party of Northern Republicans, with whom he had no bond of sympathy or confidence. The charges against his president's policy, his ardent, aggressive convictions and character, above all his complete lack of tact, unfitted him to deal successfully with the passionate partisanship of Congress. The absolute integrity and unflinching courage that marked his career were always ungrudgingly admitted by his greatest enemies.

See L. Foster, The Life and Speeches of Andrew Johnson (1866); D. M. De Witt, The Impeachment and Trial of Andrew Johnson (1903); C. E. Chassey, The Struggle between President Johnson and Congress over Reconstruction (1860); and W. A. Dunning, Essays on the Civil War and Reconstruction (1898). Also see W. A. Dunning's "More Light on Andrew Johnson" (in the American Historical Review, August, 1908). Copies to which a prosecuting evidence is presented to prove that Johnson's first inaugural, a notable state paper, was written by the historian George Bancroft.

JOHNSON, BENJAMIN (c. 1665-1742), English actor, was first a scene painter, then acted in the provinces, and appeared in London in 1695 at Drury Lane after Betterton's defection. He was the original Captain Driver in Orosoooko (1690), Captain Fireball in Farquhar's Sir Harry Wildair (1701), Sable in Steele's Funeral (1702), &c.; as the First Gravedigger in Hamlet and in several characters in the plays of Ben Jonson he was particularly famous. His most characteristic parts were Shylock, Falstaff, and Bottom, and his reputation, when it reached America, was considered such that he was engaged to act under President Washington. Among his most famous addresses were his "speeches" to the Juries of the Supreme Court in various parts of America, including Daniel Webster; Presidents Hayes, Arthur, Cleveland and Harrison; William M. Evarts, Charles J. Folger; Emerson, Longfellow, Hawthorne, James McCosh, Noah Porter and Sir Edward Archibald. He died in New York City on the 5th of April 1806.

JOHNSON, REVERDY (1796-1876), American political leader and jurist, was born at Annapolis, Maryland, on the 21st of May 1796. His father, John Johnson (1770-1824), was a distinguished lawyer, who served in a non-controversial Maryland General Assembly as an attorney-general of the state (1806-1811), as a judge of the court of appeals (1811-1821), and as a chancellor of his state (1821-1824). Reverdy graduated from St John's college in 1812. He then studied law in his father's office, was admitted to the bar in 1815 and began to practise in Upper Marlborough,
Prince George's county. In 1817 he removed to Baltimore, where he became the professional associate of Luther Martin, William Pinkney and Roger B. Taney; with Thomas Harris he reported the decisions of the court of appeals in "Harris and Johnson's Reports" (1820-1827); and in 1818 he was appointed chief commissioner of insolvent debtors. From 1821 to 1825 he was a state senator; from 1825 to 1845 he devoted himself to his practice; from 1845 to 1849, as a Whig, he was a member of the United States Senate; and from March 1849 to July 1850 he was attorney-general of the United States. In 1856 he became identified with the conservative wing of the Democratic party, and four years later supported Stephen A. Douglas for the presidency. In 1861 he was a delegate from Maryland to the peace convention at Washington; in 1861-1862 he was a member of the Maryland House of Delegates. After the capture of New Orleans he was commissioned by Lincoln to revise the decisions of the military commander, General B. Butler, in regard to foreign governments, and reversed all those decisions to the entire satisfaction of the administration. In 1863 he again took his seat in the United States Senate. In 1868 he was appointed minister to Great Britain and soon after his arrival in England negotiated the Johnson-Clarendon treaty for the settlement of disputes arising out of the Civil War; this, however, the Senate refused to ratify, and he returned home on the accession of General U. S. Grant to the presidency. Again resuming his practice he was engaged by the government in the prosecution of the Ku-Klux cases. He died on the 19th of February 1876 in Annapolis. He was a well-read man, and professed to a love of learned speculation, but after a long and fruitless effort to reconcile himself to a compromise and conciliation. Opposed to the Reconstruction measures, he voted for them on the ground that it was better to accept than reject them, since they were probably the best that could be obtained. As a lawyer he was engaged during his later years in most of the especially important cases in the Supreme Court of the United States and in the courts of Maryland.

JOHNSON, RICHARD (1573-1659?), English romance writer, was baptized in London on the 24th of May 1573. His most famous work is "The Pomander, or the Seven Champions of Christendom" (1596?). The success of this book was so great that the author added a second and a third part in 1608 and 1616. His other stories include: The Nine Worthies of London (1592); The Pleasant Walks of Moorefields (1607); The Pleasant Conceits of Old Hobson (1607), the hero being a well-known haberdasher in the Poultry; The Most Pleasant History of Tom a Lincoln (1607); A Remembrance of ... Robert Earle of Salisbury (1612); Looke on Me, London (1613); The History of Tom Thumb (1611). The Crown Garland of Golden Roses ... set forth in Many Pleasant new Songs and Sonnets (1612) was reprinted for the Press in 1647 and 1648.

JOHNSON, RICHARD MENTOR (1781-1859), ninth vice-president of the United States, was born at Bryant's Station, Kentucky, on the 17th of October 1781. He was admitted to the bar in 1800, and became prominent as a lawyer and Democratic politician, serving in the Federal House of Representatives and in the Senate for many years. From 1837 to 1841 he was vice-president of the United States, to which position he was elected over Francis Granger, by the Senate, none of the four candidates for the vice-presidency having received a majority of the electoral votes. The opposition to Johnson was strongly organized during his term, and the Democratic national convention of 1840 adopted the unprecedented course of refusing to nominate anyone for the vice-presidency. In the ensuing election Johnson received most of the Democratic electoral votes, but was defeated by the Whig candidate, John Tyler. He died in Frankfort, Kentucky, on the 19th of November 1850.

JOHNSON, SAMUEL (1700-1784), English writer and lexicographer, was the son of Michael Johnson (1663-1731), bookseller and magistrate of Lichfield, who married in 1706 Sarah Ford (1669-1759). Michael's abilities and attainments seem to have been considerable. He was so well acquainted with the content of the works which he exposed for sale that the county records of Staffordshire and Worcestershire thought him an oracle on points of learning. Between him and the clergy, indeed, there was a strong religious and political sympathy. He was a zealous churchman, and, though he had qualified himself for municipal office by taking the oaths to the sovereigns in possession, was to the last a Jacobite in heart. The social position of Samuel's paternal grandfather, William Johnson, remains obscure. His mother was the daughter of Cornelius Ford, "a little Warwickshire Gent."

At a house (now the Johnson Museum) in the Market Square, Lichfield, Samuel Johnson was born on the 18th of September 1709 and baptized on the same day at St Mary's, Lichfield. In the child the physical, intellectual and moral peculiarities which afterwards distinguished the man were plainly discernible: great muscular strength accompanied by much awkwardness and many infirmities; great quickness of parts, with a morbid propensity to sloth and procrastination; a kind and generous heart, with a gloomy and irritable temper. He had inherited from his ancestors a scrofulous taint, and his parents were weak enough to believe that the royal touch would cure him. In his third year he was taken up to London, inspected by the court surgeon, prayed over by the court chaplains and stroked and presented with a piece of gold by Queen Anne. Her hand was applied in vain. The boy's features, which were originally noble and not irregular, were distorted by his malady. His cheeks were deeply scarred. He lost for a time the sight of one eye; and he saw but very imperfectly with the other. But the force of his mind overcame every impediment. Indolent as he was, he proficiently read the whole of the Latin classics of school (such as those at Lichfield and Stourbridge) to which he was sent he soon the best scholar. From sixteen to eighteen he resided at home, and was left to his own devices. He learned much at this time, though his studies were without guidance and without plan. He ransacked his father's shelves, dipped into a multitude of books, read what was interesting, and passed over what was dull. An ordinary lad would have acquired little or no useful knowledge in such a way; but much that was dull to ordinary lads was interesting to Samuel. He read little Greek; for his proficiency in that language was not such that he could take much pleasure in the masters of Attic poetry and eloquence. But he had left school a good Latinist, and he soon acquired an extensive knowledge of Latin literature. He was peculiarly attracted by the works of the great restorers of learning. Once, while searching for some apples, he found a huge folio volume of Petrarch's works. The name excited his curiosity, and he eagerly devoured hundreds of pages. Indeed, the diction and versification of his own Latin compositions show that he had paid at least as much attention to modern copies from the antique as to the original models.

While he was thus irregularly educating himself, his family was sinking into hopeless poverty. Old Michael Johnson was much better qualified to pore over books, and to talk about them, than to trade in them. His business declined; his debts increased; it was with difficulty that the daily expenses of his household were defrayed. It was out of his power to support his son at either university; but a wealthy neighbour offered assistance; and, in reliance on promises which proved to be of very little value, Samuel was entered at Pembroke College, Oxford. When the young scholar presented himself to the rulers of that society, they examined him, and found him so essentially awkward in his ungainly figure and eccentric manners than by the quantity of extensive and curious information which he had picked up during many months of desultory but not unprofitable study. On the first day of his residence he surprised his teachers by quoting Macrobius; and one of the most learned among them declared that he had never known a freshman of equal attainments.

At Oxford Johnson resided barely over two years, possibly less. He was poor, even to raggedness; and his appearance excited a mirth and a pity which were equally intolerable to his haughty spirit. He at once took refuge from the rapidity of Christ Church by the sneering looks which the members of that aristocratic society cast at the holes in his shoes. Some charitable person placed a new pair at his door; but he spurned them away
in a fury. Distress made him, not servile, but reckless and un-
governable. No opulent gentleman commoner, panting for one-
and-twenty, could have treated the academical authorities with
more gross disrespect. The needy scholar was generally to be
seen under the gate of Pembroke, a gate now adorned with his
eggy, haranguing a circle of lads, over whom, in spite of his
tattered gown and dirty linen, his wit and audacity gave him an
undisputed ascendency. In every mutiny against the discipline
of the college he was the ringleader. Much was pardoned, how-
ever, to a youth so highly distinguished by abilities and acquire-
ments. He had early made himself known by turning Pope’s
“Messiah” into Latin verse. The style and rhythm, indeed, were
not exactly Virgilian; but the translation found many admirers,
and was read with pleasure by Pope himself.

The time drew near at which Johnson would, in the ordinary
course of things, have become a Bachelor of Arts; but he was at
the end of his resources. Those promises of support on which he
had relied had not been kept. His family could do nothing for
him. His debts to Oxford tradesmen were small indeed, yet
larger than he could pay. In the autumn of 1731 he was under
the necessity of quitting the university without a degree.
In the following winter his father died. The old man left but a
pittance; and of that pittance almost the whole was appro-
priated to the support of his widow. The property to which
Samuel succeeded amounted to no more than twenty pounds.

His life, during the thirty years which followed, was one hard
struggle. At best he shrank from hardship. The misery of that
aggravation, but was aggravated by the sufferings of an unsound
body and an unsound mind. Before the young man left the
university, his hereditary malady had broken forth in a sin-
grularly cruel form. He had become an incurable hypochondriac.
He said long after that he had been mad all his life, or at least
not perfectly sane; and, in truth, eccentricities less strange than
his have often been thought ground sufficient for absolving
felons and for setting aside wills. His grimaces, his gestures,
his mutterings, sometimes diverted and sometimes terrified
people; and it was one of his fashion, night or day, to mimic
his misfortune. [At a dinner table he would, in a
fit of absence, stoop down and touch off a lady’s shoe.] He would
amaze a drawing-room by suddenly ejaculating a clause of the
Lord’s Prayer. He would conceive an unintelligible aversion to
a particular alley, and perform a great circuit rather than see
the hateful place. He would set his heart on touching every post
in the streets through which he walked. If by any chance he
missed a post, he would go back a hundred yards and repair the
omission. Under the influence of his disease, his senses became
morbidly torpid, and his imagination morbidly active. At one
time he would stand poring on the town clock without being able
to tell the hour. At another he would distinctly hear his mother,
who was many miles off, calling him by his name. But this was not
the worst. A deep melancholy took possession of him, and gav
a dark tinge to all his views of human nature and of human des-
tiny. Such wretchedness as he endured has driven many men to
shoot themselves or drown themselves. But he was under no
temptation to commit suicide. He was sick of life; but he was
afraid of death; and he shuddered at every sight or sound which
reminded him of the inevitable hour. In religion he found but
little comfort during his long and frequent fits of dejection; for
his religious partook of his own character. The light from heaven
shone on him indeed, but not in a direct line: were it so, he would
have had proof of a nameless splendour. The rays had to struggle through a disturbing
medium; they reached him refracted, dulled and discoloured by the
thick gleam which had settled on his soul, and, though they
might be sufficiently clear to guide him, were too dim to cheer
him.

With such infirmities of body and of mind, he was left, at two-
and-twenty, to fight his way through the world. He remained
during about five years in the midland counties. At Lichfield,
his birthplace and his early home, he had inherited some friends
and acquired others. He was kindly noticed by Henry Hervey,
a gay officer of noble family, who happened to be quartered
there. Gilbert Walmsley, registrar of the ecclesiastical court
of the diocese, a man of distinguished parts, learning and know-
ledge of the world, did himself honour by patronizing the young
adventurer, whose repulsive person, unpolished manners and
squalid garb moved many of the petty aristocracy of the
neighbourhood to laughter or disgust. At Lichfield, however,
Johnson could find no way of earning a livelihood. He becam
usher of a grammar school in Leicestershire; he resided as
a humble companion in the house of a country gentleman; but a
life of dependence was intolerable to his haughty spirit.
He repaired to Birmingham, and there earned a few guineas by
literary drudgery. In that town he printed a translation, little
noticed at the time, and long forgotten, of a Latin book about
Abyssinia. He then put forth proposals for publishing by sub-
scription the poems of Politian, with notes containing a history
of modern Latin verse; but subscriptions did not come in, and
the work never appeared.

While leading this vagrant and miserable life, Johnson fell in
love. The object of his passion was Mrs Elizabeth Porter (1688–
1752), widow of Harry Porter (d. 1734), whose daughter Lucy
was born only six years after Johnson himself. To ordinary
spectators the lady appeared to be a short, fat, coarse woman,
painted half an inch thick, dressed in gaudy colours, and fond
of exhibiting provincial airs and graces which were not exactly
those of the Queensberrys and Lepels. To Johnson, however,
whose passions were strong, whose eyesight was too weak to
distinguish rouge from natural bloom, and who had seldom or
never been in the same room with a woman of real fashion, his
beauty was as attractive to him, the most beautiful, graceful and ac-
complished of her sex. That his admiration was unfeigned cannot
be doubted; she had, however, a jointure of £600 and perhaps
a little more; she came of a good family, and her son Jervis
(d. 1765) commanded H.M.S. “Hercules.” The marriage, in spite
of occasional wranglings, proved happier than might have been
expected. The lover continued to be under the illusions of the
wedding-day (July 9, 1735) till the lady died in her sixty-fourth
year. On her monument at Bromley he placed an inscription
extolling the charms of her person and of her manners; and
when, long after her decease, he had occasion to mention her, he
exclaimed with a tenderness half ludicrous, half pathetic, “Pretty
creature!”

His marriage made it necessary for him to exert himself more
strenuously than he had hitherto done. He took a house at
Edial near Lichfield and advertised for pupils. But eighteen
months passed away, and only three pupils came to his academy.
The “faces” that Johnson habitually made (probably nervous
contortions due to his disorder) may well have alarmed parents.
Good scholar though he was, these twitchings had lost him ushers
ships in 1735 and 1736. David Garrick, who was one of the
pupils, used, ten years later, to throw the best company of
London into convulsions of laughter by mimicking the master
and his lady.

At length Johnson, in the twenty-eighth year of his age,
determined to seek his fortune in London as a literary adventurer.
He set out with a few guineas, three acts of his tragedy of Irene
in manuscript, and two or three letters of introduction from his
friend Walmsley. Never since literature became a calling in
England had it been a less gainful calling than at the time when
Johnson took up his residence in London. In the preceding
generation a writer of considerable talent was sure to be sufficiently
honoured by patronage. The least that he could expect
was a pension or a sinecure place; and, if he showed any apti-
dude for politics, he might hope to be a member of parliament,
a lord of the treasury, an ambassador, a secretary of state. But
literature had ceased to flourish under the patronage of the great,
and had not yet begun to flourish under the patronage of the
public. One man of letters, indeed, Pope, had acquired by his
pen what was then considered as a handsome fortune, and lived
on a footing of equality with nobles and ministers of state. But
this was a solitary exception. Even an author whose reputation
was established, and whose works were popular—such an author
as Thomson, whose Seasons was in every library, such an author
as Fielding, whose Pasquin had had a greater run than any drama
since The Beggar’s Opera—was sometimes glad to obtain, by
pawning his best coat, the means of dining on tripe at a cookshop underground, where he could wipe his hands, after his greasy meal, on the back of a Newfoundland dog. All the suffering, however, to imagine what humiliations and privations must have awaited the novice who had still to earn a name. One of the publishers to whom Johnson applied for employment measured with a scornful eye that athletic though uncouth frame, and exclaimed, "You had better get a porter's knot and carry trunks." Nor was the advice bad, for a porter was likely to be as plentifully fed, and as comfortably lodged, as a poet.

Some time appears to have elapsed before Johnson was able to form the necessary connexion from which he could expect more than bread for the body which was hanging over him. He never forgot the generosity with which Hervey, who was now residing in London, relieved his wants during this time of trial. "Harry Hervey," said Johnson many years later, "was a vicious man; but he was very kind to me. If you call a dog Hervey, I shall love him." At Hervey's table Johnson sometimes enjoyed feasts which were made more agreeable by contrast. But in general he dined, and thought that he dined well, on sixpenny-worth of meat and a pennyworth of bread at an alehouse near Drury Lane.

The effect of the privations and sufferings which he endured at this time was discernible to the last in his temper and deportment. His manners had never been courtly. They now became almost savage. Being frequently under the necessity of wearing shabby coats and dirty shirts, he became a confirmed sloven. Being often very hungry when he sat down to his meals, he contracted a habit of eating with ravenous greediness. Even to the end of his life, and even at the tables of the great, the sight of food affected him as it affects wild beasts and birds of prey. His taste in cookery, formed in subterranean ordinaries and a la mode beef shops, was far from delicate. Whenever he was so fortunate as to have near him a hare that had been kept too long, or a meat pie made with rancid butter, he gorged himself with such violence that his veins swelled and the moisture broke out on his forehead. The affronts which his poverty emboldened stupid and low-minded men to offer to him would have broken a mean spirit into sycophancy, but made him rude even to ferocity. Unhappily the insolence which, while it was defensible, was pardonable, and in some sense respectable, accompanied him into societies where he was treated with courtesy and kindness. He was repeatedly provoked into striking those who had taken liberties with him. All his sufferings, however, were not enough to abate him from talking about their beatings, except Osborne, the most rapacious and brutal of book-sellers, who proclaimed everywhere that he had been knocked down by the huge fellow whom he had hired to puff the Harleian Library.

About a year after Johnson had begun to reside in London he was fortunate enough to obtain regular employment from Edward Cave (q.v.) on the Gentleman's Magazine. That periodical, just entering on the ninth year of its long existence, was the only one in the kingdom which then had what would now be called a large circulation. Johnson was engaged to write the speeches in the "Reports of the Debates of the Senate of Lilliput" (see REPORTING), under which thin disguise the proceedings of parliament were published. He was generally furnished with notes, meagre indeed and inaccurate, of what had been said; but sometimes he had to find arguments and eloquence both for the ministry and for the opposition. He was himself a Tory, not from rational conviction—for his serious opinion was that one form of government was just as good or as bad as another—but from mere passion, such as inflamed the Capulets against the Montagues, or the Blues of the Roman circus against the Greens. In his infancy he had heard so much talk about the villains of the Whigs, and the dangers of the Church, that he had become a furious partisan when he could scarcely speak. Before he was three he had insisted on being taken to hear Sacheverel preach at Lichfield Cathedral, and had listened to the sermon with as much respect and probably as much intelligence, as any Staffordshire squire in the congregation. The work which had been begun in the nursery had been completed by the university. Oxford, when Johnson resided there, was the most Jacobitical place in England; and Pembroke was one of the most Jacobitical colleges in Oxford. The prejudices which he brought up to London were scarcely less absurd than those of his own Tom Tempest. Charles II. and James II. were two of the best kings that ever reigned. Laud was a prodigy of parts and learning over whose tomb Art and Genius still continued to weep. Hampden deserved no more honourable name than that of the "zealot of rebellion." Even the ship-money Johnson would not pronounce to have been an unconstitutional impost. Under a government which allowed to the people an unprecedented liberty of speech and action, he fancied that he was a slave. He hated Dissenters and thought that he could pursue and the army, septennial parliaments, and Continental connections. He long had an aversion to the Scots, an aversion of which he could not remember the commencement, but which, he owned, had probably originated in his abhorrence of the conduct of the nation during the Great Rebellion. It is easy to guess in what manner debates on great party questions were likely to be reported by a man whose judgment was so much disordered by party spirit. A show of fairness was indeed necessary to the prosperity of the Magazine. But Johnson long afterwards owned that, though he had saved appearance, he had been a "rascal" and the pavement, where he had the best of it; and, in fact, every passage which has lived, every passage which bears the marks of his higher faculties, is put into the mouth of some member of the opposition.

A few weeks after Johnson had entered on these obscure labours, he published a work which at once placed him high among the writers of his age. It is probable that what he had suffered during his first year in London had often reminded him of some parts of the satire in which Juvenal had described the misery and degradation of a needy man of letters, lodged among the pigeons' nests in the totering garrets which overhung the streets of Rome. Pope's admirable imitations of Horace's Satires and Epistles had recently appeared, were in every hand, and were by many readers thought superior to the originals. What Pope had done for Horace, Johnson aspired to do for Juvenal.

Johnson's London appeared without his name in May 1738. He received only ten guineas for this stately and vigorous poem; but the sale was rapid and the success complete. A second edition was required within a week. Those small critics who are always desirous to lower established reputations ran about perceiving that the anonymous author of this poem was Pope, in Pope's own peculiar department of literature. It ought to be remembered, to the honour of Pope, that he joined heartily in the applause with which the appearance of a rival genius was welcomed. He made inquiries about the author of London. Such a man, he said, could not long be concealed. The name was soon discovered; and Pope, with great kindness, exerted himself to obtain an academical degree and the mastership of a grammar school for the poor young poet. The attempt failed, and Johnson remained a bookseller's hack.

It does not appear that these two men, the most eminent writers of the generation which was going out, and the most eminent writer of the generation which was coming in, ever saw each other. They lived in very different circles, one surrounded by dukes and earls, the other by starving pamphleeters and index-makers. Among Johnson's associates at this time may be mentioned Boyse, who, when his shirts were pledged, scrawled Latin verses sitting up in bed with his arms through two holes in his blanket, who composed very respectable sacred poetry when he was sober, and who was at last run over by a hackney coach when he was drunk; Hogg, anonymous the metaphysical tailor, who, instead of attending to his measures, used to trace geometrical diagrams on the board where he sat cross-legged; and the penitent impostor, George Psalmanazar, who, after poring all day, in a humble lodging, on the folios of Jewish rabbis and Christian fathers, indulged himself at night with literary and theological conversation at an alehouse in the City. But the most remarkable, of the persons with whom at this time Johnson consortéd was Richard Savage, an earl's son, a shoemaker's apprentice,
who had seen life in all its forms, who had feasted among blue ribands in St James's Square, and had lain with fifty pounds weight of irons on his legs in the condemned ward of Newgate. This man had, after many vicissitudes of fortune, sunk at last into abject and hopeless poverty. His pen had failed him. His patrons had been taken away by death, or estranged by the riotous profusion with which he squandered their bounty, and the ungrateful insolence with which he rejected their advice. He now lived by begging. He dined on venison and champagne whenever he had been so fortunate as to borrow a guinea. If his questing had been unsuccessful, he appeased the rage of hunger with some scraps of broken meat, and lay down to rest under the piazza of Covent Garden in warm weather, and, in cold weather, as near as he could get to the furnace of a glass house. Yet in his misery he was still an agreeable companion. He had an inexhaustible store of anecdotes about that gay and brilliant world from which he was now an outcast. He had observed the great men of both parties in house of cards, relaxation, had seen the leaders of opposition without the mask of patriotism, and had heard the prime minister roar with laughter and tell stories not over-decent. During some months Savage lived in the closest familiarity with Johnson; and then the friends parted, not without tears. Johnson remained in London to drudge for Cave. Savage went to the west of England, lived there as he had lived everywhere, and in 1743 died, penniless and heartbroken, in Bristol Gaol.

Soon after his death, while the public curiosity was strongly excited about his extraordinary character and his not less extraordinary poverty, several poor houses, a life of him appeared widely different from the catchpenny lives of eminent men which were then a staple article of manufacture in Grub Street. The style was indeed deficient in ease and variety; and the writer was evidently too partial to the Latin element of our language. But the little work, with all its faults, was a masterpiece. No finer specimen of literary biography existed in any language, living or dead; and a discerning critic might have confidently predicted that the author was destined to be the founder of a new school of English eloquence.

The Life of Savage was anonymous; but it was well known in literary circles that Johnson was the writer. During the three years which followed, he produced no important work; but he was not, and indeed could not be, idle. The fame of his abilities and learning continued to grow. Warburton pronounced him a man of parts and genius; and the praise of Warburton was then no light thing. Such was Johnson's reputation that, in 1747, several eminent booksellers combined to employ him in the arduous work of preparing a Dictionary of the English Language, in two folio volumes. The sum which they agreed to pay him was only fifteen hundred guineas; and out of this sum he had to pay several poor men of letters who assisted him in the bumble parts of his task.

The prospectus of the Dictionary he addressed to the earl of Chesterfield. Chesterfield had long been celebrated for the politeness of his manners, the brilliancy of his wit, and the delicacy of his taste. He was acknowledged to be the finest speaker in the House of Lords. He had recently governed Ireland, at a momentous conjuncture, with eminent firmness, wisdom and humanity; and he had since become secretary of state. He received Johnson's homage with the most winning affability, and required it with his elegance, bestowed it without a tentative or awkward manner, but was by no means desirous to see all his carpets blackened with the London mud, and his soups and wines thrown to right and left over the gowns of fine ladies and the waistcoats of fine gentlemen, by an absent, awkward scholar, who gave strange starts and uttered strange growls, who dressed like a scarecrow and ate like a corromant. During some time Johnson continued to call on his patron, but, after being repeatedly told by the porter that his lordship was not at home, took the hint, and ceased to present himself at the inhospitable door.

Johnson then thanked himself that he should have completed his Dictionary by the end of 1750; but it was not till 1755 that he at length gave his huge volumes to the world. During the seven years which he passed in the drudgery of penning definitions and marking quotations for transcription, he sought for relaxation in literary labour of a more agreeable kind. In January 1749 he published The Vanity of Human Wishes, an excellent imitation of the tenth satire of Juvenal, for which he received fifteen guineas.

A few days after the publication of this poem, his tragedy of Irene, which began many years before, was brought on the stage by his old pupil, David Garrick, now manager of Drury Lane Theatre. The relation between him and his old preceptor was of a very singular kind. They repelled each other strongly, and yet attracted each other strongly. Nature had made them of very different clay; and circumstances had fully brought out the natural peculiarities of both. Sudden prosperity had turned Garrick's head. Continued adversity had soured Johnson's temper. Johnson saw with more envy than became so great a man the villa, the plate, the chima, the Brussels carpet, which the little mimic had got by repeating, with grimes and gesticulations, what wiser men had written; and the exquisitively sensitive vanity of Garrick was galled by the thought that, while all the rest of the world was applauding him, he could obtain from one morose cynic, whose opinion it was impossible to despise, scarcely any compliment not acridulated with scorn. Yet the two Lichfield men had so many early recollections in common, and sympathized with each other on so many points on which they sympathized with nobody else in the vast population of the capital, that, though the master was often provoked by the monkey-like impertinence of the pupil, and the pupil by the bearish rudeness of the master, they remitted friends till they were parted by death. Garrick now brought Irene out, with alterations sufficient to displease the author, yet not sufficient to make the piece pleasing to the audience. After nine representations the play was withdrawn. The poet however cleared by his benefit nights, and by the sale of the copyright of his tragedy, about three hundred pounds, then a great sum in his estimation.

About a year after the representation of Irene, he began to publish a series of short essays on morals, manners and literature. This species of composition had been brought into fashion by the success of the Tatler, and by the still more brilliant success of the Spectator. A crowd of small writers had vainly attempted to rival Addison. The Lay Monastery, the Censor, the Freethinker, the Plain Dealer, the Champion, and other works of the same kind had had their short day. At length Johnson undertook the adventure in which so many aspirants had failed. In the thirty-sixth year after the appearance of the last number of the Spectator appeared the first number of the Rambler. From March 1750 to March 1752 this paper continued to come out every Tuesday and Saturday.

From the first the Rambler was enthusiastically admired by a few great men. Richardson, when only five numbers had appeared, pronounced it equal if not superior to the Spectator. Young and Hartley expressed their approbation not less warmly. In consequence probably of the good offices of Bubb Dodington, who was then the confidential adviser of Prince Frederick, two of his royal highness's gentlemen carried a gracious message to the printing office, and ordered seven copies for Leicester House. But Johnson had had enough of the patronage of the great to last him all his life, and was not disposed to haunt any other door as he had haunted the door of Chesterfield.

It was the public the Rambler was at first very coldly received. Though the price of a number was only twopence, the sale did not amount to five hundred. The profits were therefore very small. But as soon as the flying leaves were collected and reprinted they became popular. The author lived to see thirteen thousand copies spread over England alone. Separate editions were published for the Scotch and Irish markets. A large party pronounced the style perfect, so absolutely perfect that in some essays it would be impossible for the writer himself to alter a single word for the better. Another party, not less numerous, vehemently accused him of having corrupted the purity of the English tongue. The best critics admitted that his diction was too monotonous, too obviously artificial, and now and then turgid.
even to absurdity. But they did justice to the acuteness of his observations on morals and manners, to the constant precision and frequent brilliancy of his language, to the weighty and magnificent eloquence of many serious passages, and to the solemn yet pleasing humour of some of the lighter papers.

The last Rambler was written in a sad and gloomy hour. Mrs Johnson had been given over by the physicians. Three days later she died. She left her husband almost broken-hearted. Many people have described the sorrows that betokened the end of his genius and learning stooping to every drudgery, and denying himself almost every comfort, for the purpose of supplying a silly, affected old woman with superfluities, which she accepted with but little gratitude. But all his affection had been concentrated on her. He had no brother nor sister, neither son nor daughter. Her opinion of his writings was more important to him than the voice of the pit of Drury Lane Theatre, or the judgment of the Monthly Review. The chief support which had sustained him through the most arduous labour of his life was the hope that she would enjoy the fame and the profit which he had wrung from his Dictionary. She was gone; and in that vast labyrinth of streets, peoples by eight hundred thousand human beings, he was alone. Yet it was necessary for him to set himself, as he expressed it, doggedly to work. After three more laborious years, the Dictionary was at length complete.

It had been generally supposed that this great work would be dedicated to the eloquent and accomplished nobleman to whom the prospectus had been addressed. Lord Chesterfield well knew the value of such a compliment; and therefore, when the day of publication drew near, he exerted himself to soothe, by a show of zealous and at the same time of delicate and judicious kindness, the pride which he had so cruelly wounded. Since the Rambler had ceased to appear, the town had been entertained by a journal called the World, to which many men of high rank and fashion contributed. In two successive numbers of the World, the Dictionary was, to use the modern phrase, puffed with wonderful skill. The writings of Johnson were warmly praised. It was proposed that he should be invested with the authority of a dictator, for, o a pope, over our language, and that his decisions about the meaning and the spelling of words should be received as final. His two folios, it was said, would cost every one the money which he could afford to buy them. It was soon known that these papers were written by Chesterfield. But the just resentment of Johnson was not to be so appeased. In a letter written with singular energy and dignity of thought and language, he repelled the tardy advances of his patron. The Dictionary came forth without a dedication. In the Preface the author truly declared that he owed nothing to the great, and described the difficulties with which he had been left to struggle so forcibly and pathetically that the ablest and most malevolent of all the enemies of his fame, Horne Tooke, never could read that passage without tears.

Johnson's Dictionary was hailed with an enthusiasm such as no similar work has ever excited. It was indeed the first dictionary which could be read with pleasure. The definitions show so much acuteness of thought and command of language, and the passages quoted from poets, divines and philosophers are so skillfully selected, that a leisure hour may always be very agreeably spent in turning over the pages. The faults of the book resolve themselves, for the most part, into one great fault. Johnson was a wretched etymologist. He knew little or nothing of any Teutonic language except English, which indeed, as he wrote it, was sacred. He had never seen a man of his genius and learning derive words from their sources; and thus he was absolutely at the mercy of Junius and Skinner.

The Dictionary, though it raised Johnson's fame, added nothing to his pecuniary means. The fifteen hundred guineas which the booksellers had agreed to pay him had been advanced and spent before the last sheets issued from the press. It is painful to relate that twice in the course of the year which followed the publication of this great work he was arrested and carried to sponging-houses, and that he was twice indebted for his liberty to his excellent friend Richardson. It was still necessary for the man who had been formerly saluted by the highest authorities as dictator of the English language to supply his wants by constant toil. He abridged his Dictionary. He proposed to bring out an edition of Shakespeare by subscription, and many subscribers sent in their names and laid down their money; but he soon found the task so little to his taste that he turned to more attractive employments. He contributed many papers to a new monthly journal, which was called the Literary Magazine. Few of these papers have much interest; but among them was one of the best things that he ever wrote, a master-piece both of reasoning and of satirical pleasantry, the review of Jenyns' Inquiry into the Nature and Origin of Evil.

In the spring of 1758 Johnson put forth the first of a series of essays, entitled the Idler. During two years these essays continued to appear weekly. They were eagerly read, widely circulated, and indeed impudently pirated, while they were still in the original form, and had a large sale when collected into volumes. The Idler may be described as a second part of the Rambler, somewhat livelier and somewhat weaker than the first part.

While Johnson was busied with his Idlers, his mother, who had accomplished her ninetieth year, died at Lichfield. It was long since she had seen her, but he had not failed to contribute largely out of his small means to her comfort. In order to defray the charges of her funeral, and to pay some debts which she had left, he wrote a little book in a single week, and sent off the sheets to the press without reading them over. A hundred pounds were paid him for the copyright, and the purchasers had great cause to be pleased with their bargain, for the book was Rasselas; and it had a great success.

The fame of Rasselas might, however, have seemed to severe criticism. Johnson has frequently blamed Shakespeare for neglecting the proprieties of time and place, and for ascribing to one age or nation the manners and opinions of another. Yet Shakespeare has not sinned in this way more grievously than Johnson. Rasselas and Imlac, Nekayah and Pekuah, are evidently meant to be Abyssinians of the 18th century; for the Europe which Imlac describes is the Europe of the 18th century, and the inhabitants of the Happy Valley talk familiarly of that law of gravitation which Newton discovered and which was not fully received even at Cambridge till the 18th century. Johnson, not content with turning filthy savages, ignorant of their letters, and gorged with raw steaks cut from living cows, into philosophers as eloquent and enlightened as himself or his friend Burke, and into ladies as highly accomplished as Mrs Lennox or Mrs Sheridan, transferred the whole domestic system of England to Egypt: Into a land of hares, a land of polygamy, a land where women are married without ever being seen, he introduced the flirtations and jealousies of our ball-rooms. In a land where there is boundless liberty of divorce, wedlock is described as the indissoluble compact. "A youth and maiden meeting by chance, or brought together by artifice, exchange glances, reciprocate civilities, go home, and dream of each other. Such," says Rasselas, "is the common process of marriage." A writer who was guilty of such improprieties had little right to blame the poet who made Hector quote Aristotle, and represented Julio Romano as flourishing in the days of the Oracle of Delphi.

By such exertions as have been described Johnson supported himself till the year 1762. In that year a great change in his circumstances took place. He had from a child been an enemy of the reigning dynasty. His Jacobite prejudices had been exhibited with little disguise both in his works and in his conversation. Even in his massy and elaborate Dictionary he had with a strange want of taste and judgment, inserted bitter and contumelious reflections on the Whig party. The excise, which was a favourite resource of Whig financiers, he had designates as a hateful tax. He had railed against the commissioners of excise in language so coarse that they had seriously thought of prosecuting him. He had with difficulty been prevented from holding up the lord privy seal by name as an example of the meaning of the word "renegade." A pension he had defined as pay given to a state hireling to betray his country; a pensioner as a slave of state hired by a stipend to obey a master. It
seemed unlikely that the author of these definitions would himself be pensioned. But that was a time of wonders. George III. had ascended the throne, and had, in the course of a few months, disgusted many of the old friends, and conciliated many of the old enemies of his house. The city was becoming mutinous; Oxford was becoming loyal. Cavendishes and Bentincks were murmuring; Somersets and Wyndhams were hastening to kiss hands. The head of the treasury was now Lord Bute, who was a Tory, and could have no sentiment to Johnson's. He had bought a patron of men of letters; and Johnson was one of the most eminent and one of the most needy men of letters in Europe. A pension of three hundred a year was graciously offered, and with very little hesitation accepted.

This event produced a change in Johnson's whole way of life. For the first time since his boyhood he no longer felt the daily good urging him to the daily toil. He was at liberty, after thirty years of anxiety and drudgery, to indulge his constitutional indolence, to lie in bed till two in the afternoon, and to sit up talking till four in the morning, without fearing either the prison's devil or the sheriff's officer.

One laborious task indeed he had bound himself to perform. He had received large subscriptions for his promised edition of Shakespeare; he had lived on those subscriptions during some years; and he could not without disgrace omit to perform his part of the contract. His friends repeatedly exhorted him to make an effort, and he repeatedly resolved to do so. But, notwithstanding their exhortations and his resolutions, month followed month, year followed year, and nothing was done. He prayed fervently against his idleness; he determined, as often as he recollected the engagement, that he would no longer dodge away and trifle away his time; but the spell under which he lay resisted prayer and sacrament. Happily for his honour, the charm which held him captive was at length broken by no gentle or friendly hand. He had been weak enough to pay serious attention to a story about a ghost which haunted a house in Cock Lane, and had actually gone himself, with some of his friends, at one in the morning, to St John's Church, Clerkenwell, in the hope of receiving a communication from the perturbed spirit. But the spirit, though adjoined with all solemnity, remained obstinately silent; and it soon appeared that a naughty girl of eleven had been amusing herself by making fools of so many philosophers. Churchill, who, confident in his powers, drunk with popularity, and burning with party spirit, was looking for some man of established fame and Tory politics to insult, celebrated the Cock Lane ghost in three cantos, nick named Johnson Pomposo, asked where the book was which had been so long promised and so liberally paid for, and directly accused the great moralist of cheating. This terrible word proved effectual, and in October 1765 appeared, after a delay of nine years, the new edition of Shakespeare.

This publication saved Johnson's character for honesty, but added nothing to the fame of his abilities and learning. The Preface, though it contains some good passages, is not in his best manner. The most valuable notes are those in which he had an opportunity of showing how attentively he had during many years observed human life and human nature. The best specimens are the note on the character of Polonius. Nothing so good is to be found even in Wilhelm Meister's admirable examination of Hamlet. But here praise must end. It would be difficult to name a more slovenly, a more worthless edition of any great classic. Johnson had, in his prospectus, told the world that he had been peculiarly fitted for the task which he had undertaken, because he had, as a biographer, been under the necessity of taking a wider view of the English language than any of his predecessors. But, unfortunately, he had altogether neglected that very part of our literature with which it is especially desirable that an editor of Shakespeare should be conversant. In the two folio volumes of the English Dictionary there is not a single passage quoted from any dramatist of the Elizabethan age except Shakespeare and Ben Jonson. Even from Ben the quotations are few. Johnson might easily in a few months have made himself well acquainted with every old play that was extant. But it never seems to have occurred to him that this was a necessary preparation for the work which he had undertaken. He would doubtless have admitted that it would be the height of absurdity in a man who was not familiar with the works of Aeschylus and Euripides to publish an edition of Sophocles and Euripides. Yet he had undertaken to publish an edition of Shakespeare, without having ever in his life, as far as can be discovered, read a single scene of Massinger, Ford, Dekker, Webster, Marlow, Beaumont or Fletcher. His detractors were noisy and scurrilous. He had, however, acquitted himself of a debt which had long lain heavy on his conscience and he sank back into the repose from which the sting of satire had roused him. He long continued to live upon the fame which he had already won. He was honoured by the university of Oxford with a doctor's degree, by the Royal Academy with a professorship, and by the king with an interview, in which his majesty expressed the hope that he had written, not to cease to write. In the interval between 1765 and 1775 Johnson published only two or three political tracts.

But, though his pen was now idle, his tongue was active. The influence exercised by his conversation, directly upon those with whom he lived, and indirectly on the whole literary world, was altogether without a parallel. His colloquial talents were indeed of the highest order. He had strong sense, quick discernment, wit, humour, immense knowledge of literature and of life, and an infinite store of curious anecdotes. As respected style, he spoke far better than he wrote. Every sentence which he dropped from his lips was as correct in structure as the most neatly balanced period of the Rambler. In his talk there were no pompous triads, and little more than a fair proportion of words in -osity and -ation. All was simplicity, ease and vigour. He uttered his short, weighty, and pointed sentences with a power of voice, and a justness and energy of emphasis, of which the effect was rather increased than diminished by the rollings of his huge form, and by the asmatic gaspings and puffings in which the peals of his eloquence generally ended. Nor did the laziness which made him unwilling to sit down to his desk prevent him from giving instruction or expression with a power of language, of learning, of casuistry, in language so exact and so forcible that it might have been printed without the alteration of a word, was to him no exertion, but a pleasure. He loved, as he said, to fold his legs and have his talk out. He was ready to bestow the overflowing of his full mind on anybody who would start a subject: on a fellow-passenger in a stage coach, or on the person who sat at the same table with him in an eating-house. But his conversation was nowhere so brilliant and striking as when he was surrounded by a few friends, whose abilities and knowledge enabled them, as he once expressed it, to send him hack every ball that he threw. Some of these, in 1764, formed themselves into a club, which gradually became a formidable power in the commonwealth of letters. The verdicts pronounced by this conclave on new books were speedily known over all London, and were sufficient to sell off a whole edition in a day, or to condemn the sheets to the service of the trunkmaker and the pastrycook. Goldsmith was the representative of poetry and light literature, Reynolds of the arts, Burke of political eloquence and political philosophy. There, too, were Gibbon the greatest historian and Sir William Jones the greatest linguist of the age. Garrick brought to the meetings his inexhaustible pleasure, his incomparable mimicry, and his consummate knowledge of stage effect.

Among the most constant attendants were two high-born and high-bred gentlemen, closely bound together by friendship, but of widely different characters and habits—Benett Langton, distinguished by his skill in Greek literature, by the orthodoxy of his opinions, and by the sanctity of his life, and Topham Beauclerk, renowned for his amours, his knowledge of the gay world, his fastidious taste and his sarcastic wit.

Among the members of this celebrated body was one to whom it has owed the greater part of its celebrity, yet who—
regarded with little respect by his brethren, and had not without difficulty obtained a seat among them. This was James Boswell (q.v.), a young Scots lawyer, heir to an honourable name and a fair estate. That he was a coxcomb and a bore, weak, vain, pushing, curious, garrulous, was obvious to all who were acquainted with him.

To a man of Johnson's strong understanding and irritable temper, the silly egotism and adulation of Boswell must have been as teasing as the constant buzz of a fly. Johnson hated to be questioned; and Boswell was eternally catechising him on all kinds of subjects, and sometimes propounded such questions as, "What, sir, if you were locked up in a tower with a baby?" Johnson was a water-drinker and Boswell was a wine-bibber, and indeed little better than an habitual sot. It was impossible that there should be perfect harmony between two such companions. Indeed, the great man was sometimes provoked into fits of passion, in which he said things which the small man, during a few hours, seriously resented. Every quarrel, however, was soon made up. During twenty years the disciple continued to worship the master; the master continued to scold the disciple, to sneer at him, and to love him. The two friends, indeed, were in most distant sympathy with each other. Boswell practised in the Parliament House of Edinburgh, and was called only occasional visits to London. During those visits his chief business was to watch Johnson, to discover all Johnson's habits, to turn the conversation to subjects about which Johnson was likely to say something remarkable, and to fill quarto notebooks with minutes of what Johnson had said. In this way were gathered the materials out of which was afterwards constructed the most interesting biographical work in the world.

Soon after the club began to exist, Johnson formed a connexion less important indeed to his fame, but much more important to his happiness, than his connexion with Boswell. He cultivated Dr. Thrale, one of the most opulent brewers in the kingdom, a man of sound and cultivated understanding, rigid principles, and liberal spirit, was married to one of those clever, kind-hearted, engaging, vain, pert young women who are perpetually doing or saying what is not exactly right, but who, do or say what they may, are always agreeable. In 1765 the Thrales became acquainted with Johnson, and the acquaintance ripened fast into friendship. They were astonished and delighted by the brilliancy of his conversation. They were flattered by finding that a man so hardy as himself was so great a friend to any other in London. Johnson, in fact, had an apartment at the brewery in Southwark, and a still more pleasant apartment at the villa of his friends on Streatham Common. A large part of every year he passed in those abodes, which must have seemed magnificent and luxurious indeed, when compared with the dens in which he had generally been lodged. But his chief pleasures were derived from what the astronomer of his Abyssinian tale called "the endearing elegance of female friendship." Mrs Thrale rallied him, soothed him, coaxed him, and if she sometimes provoked him by her flippancy, made ample amends by listening to his reproofs with angelic sweetness of temper. When he was diseased in body and in mind, she was the most tender of nurses. No comfort that wealth could purchase, no contrivance that womanly ingenuity, set to work by womanly compassion, could devise, was wanting to his sick room. It would seem that a full half of Johnson's life during about sixteen years was passed under the roof of the Thrales. He accompanied the family sometimes to Bath, and sometimes to Brighton, once to Wales and once to Paris. But he had at the same time a house in one of the narrow and gloomy courts on the north of Fleet Street. In the garrets was his library, a large and miscellaneous collection of books, falling to pieces and begrimed with dust. On a lower floor he sometimes, but very rarely, regaled a friend with a plain dinner—a veal pie, or a leg of lamb and spinach, and a rice pudding. Nor was the dwelling uninhabited during his long absences. It was the home of the most extraordinary assemblage of inmates that ever was brought together. At the head of the establishment Johnson had placed an old lady named Williams, whose chief recommendations were her blindness and her poverty. But, in spite of her murmurs and reproaches, he gave an asylum to another lady who was as poor as herself, Mrs Desmoulins, whose family he had known many years before in Staffordshire. Room was found for the daughter of Mrs Desmoulins, and for another destitute damsel, who was generally addressed as Miss Carmichael, but whom her generous host called Polly. An old Quack doctor named Levett, who had a wide practice, but among the very poorest class, poured out Johnson's tea in the morning and completed this strange menagerie. All these poor creatures were at constant war with each other, and with Johnson's negro servant Frank. Sometimes, indeed, they transferred their hostilities from their domestics to the master, complained that a bottle was not kept on the table for them, and till their benefactor was glad to make his escape to Streatham or to the Mitre Tavern. And yet he, who was generally the haughtiest and most irritable of mankind, was but too prompt to resent anything which looked like a slight on the part of a purse-proud bookseller, or of a noble and powerful patron, bore patiently from mendicants, who, for his bounty, have gone to the workhouse, insults more provoking than those for which he had knocked down Osborne and hidden defiance to Chesterfield. Year after year Mrs Williams and Mrs Desmoulins, Polly and Levett, continued to live at his house.

The course of life which has been described was interrupted in Johnson's sixty-fourth year by an important event. He had early read an account of the Hebrides, and had been much interested by learning that there was so near him a land peopled by a race which was still as rude and simple as in the Middle Ages. A wish to become intimately acquainted with a state of society so utterly unlike all that he had ever seen frequently crossed his mind. But it is not probable that his curiosity would have overcome his habitual sluggishness, and his love of the smoke, the mud, and the cries of London, had not Boswell importuned him to attempt the adventure, and offered to be his squire. At length, in August 1773, Johnson crossed the Highland line, and plunged courageously into what was then considered, by most Englishmen, as a dreary and perilous wilderness. After wandering about two months through the Celtic region, sometimes in rude boats which did not protect him from the rain, and sometimes on small shaggy ponies which could hardly bear his weight, he returned to his old haunts with a mind full of new images and new theories. During the following year he employed himself in recording his adventures as a pensioner; this work was published, and was, during some weeks, the chief subject of conversation in all circles in which any attention was paid to literature. His prejudice against the Scots had at length become little more than matter of jest; and whatever remained of the old feeling had been effectually removed by the kind and respectful hospitality with which he had been received in every part of Scotland. It was, of course, not to be expected that an Oxonian Tory should praise the Presbyterian polity and ritual, or that an eye accustomed to the hedgerows and parks of England should not be struck by the bareness of Berwickshire and East Lothian. But even in censure Johnson's tone is unferocious. The most enlightened Scotsmen, with Lord Mansfield at their head, were well pleased. But some foolish and ignorant Scotsmen were moved to anger by a little unpalatable truth which was mingled with much eulogy, and assailed him whom they chose to consider as the enemy of their country with libels much more dishonourable to their country than anything that he had ever said or written. They published paragraphs in the newspapers, articles in the magazines, sixpenny pamphlets, five-shilling books. One scribbler abused Johnson for being blear-eyed, another for being a pensioner; a third informed the world that one of the doctor's uncles had been convicted of felony in Scotland, and had found that there was in that country one tree capable of support in the weight of an Englishman. Macpherson, whose Fingal had been treated in the Journey as an impudent forgery, threatened to take vengeance with a cane. The only effect of this threat was that Johnson reiterated the charge of forgery in the most contemptuous terms, and walked about, during some time, with a cudgel.
Of other assailants Johnson took no notice whatever. He had early resolved never to be drawn into controversy; and he allowed to his resolution with a steadfastness which is the more extraordinary because he was, both intellectually and morally, of the stuff of which controversialists are made. In conversation he was a singularly eager, acute and pertinacious disputant. When at a loss for good reasons, he had recourse to sophistry; and when heated by altercation, he made unsparing use of sarcasm and invective. But when he took his pen in his hand, his whole character seemed to be changed. A hundred bad writers misrepresented him and reviled him; but not one of the hundred could boast of having been thought by him worthy of a refutation, however small and pettish. One Scotsman, bent on vindicating the fame of Scott's learning, defied him to the combat in a detestable Latin hexameter:

"Maxime, si tu vis, cupio contendere tecum."

But Johnson took no notice of the challenge. He always maintained that fame was a shuttlecock which could be kept up only by being beaten back as well as beaten forward, and which would soon fall if there were only one battledore. No saying was oftener in his mouth than that fine apologism of Bentley, that no man was ever written down but by himself. Unhappily, a few months after the appearance of the Journey to the Hebrides, Johnson did what none of his envious assailants could have reached, and to a certain extent succeeded in writing himself down. The disputes between England and her American colonies had reached a point at which no amicable adjustment was possible. War was evidently impending; and the ministers seem to have thought that the eloquence of Johnson might with advantage be employed to inflame the nation against the opposition at home, and against the rebels beyond the Atlantic. He had already written two or three tracts in defence of the foreign and domestic policy of the government; and those tracts, though hardly worthy of him, were much superior to the crowd of pamphlets which lay on the counters of Almon and Stockdale. But his Taxation no Tyranny was a pitiable failure. Even Boswell was forced to own that in this unfortunate piece he could detect no trace of his master's powers. The general opinion was that the strong faculties which had produced the Dictionary and the Rambler were beginning to feel the effect of time and of disease, and that the old man would best consult his credit by writing no more. But this was a great mistake. Johnson had failed for the last time. He was then only forty-three, and wrote Rasselas in the evenings of a week, but because he had foolishly chosen, or suffered others to choose for him, a subject such as he would at no time have been competent to treat. He was in no sense a statesman. He never willingly read or thought or talked about affairs of state. He loved biography, literary history, the history of manners; but political history was positively distasteful to him. The question at issue between the colonies and the mother country was a question about which he had really nothing to say. Happily, Johnson soon had an opportunity of proving most signal that his failure was not to be ascribed to intellectual decay.

On Easter Eve 1777 some persons, deputed by a meeting which consisted of forty of the first booksellers in London, called upon him. Though he had some scruples about doing business at that season, he received his visitors with much civility. They came to inform him that a new edition of the English poets, from Cowley downwards, was in contemplation, and to ask him to furnish short biographical prefaces. He readily undertook the task for which he was pre-eminently qualified. His knowledge of the English poets was unrivalled. That knowledge he had acquired partly from books, and partly from sources which had long been closed: from old Grub Street traditions; from the talk of forgotten poetasters and pamphleeters, who had long been lying in parish vaults; from the recollections of such men as Gilbert Walmsley, who had conversed with the wits of Button, Cibber, who had meditated the plays of two generations of dramatists, Orrery, who had been admitted to the society of Swift and Savage, who had rendered services of no very honourable kind to Pope. The biographer therefore sat down to his task with a mind full of motives. He had at first intended to give only a paragraph to every minor poet, and only four or five pages to the greatest name. But the flood of anecdote and criticism overflowed the narrow channel. The work, which was originally meant to consist only of a few sheets, swelled into ten volumes—small volumes, it is true, and not closely printed. The first four appeared in 1770, the remaining six in 1781.

The Lives of the Poets are, on the whole, the best of Johnson's works. The narrations are as entertaining as any novel. The remarks on life and on human nature are eminently shrewd and penetrating. The criticism is often excellent, and, even where grossly and provokingly unjust, was, as Boswell said, "Savage's life."

Johnson reprinted nearly as it had appeared in 1744. Whoever, after reading that life, will turn to the other lives will be struck by the difference of style. Since Johnson had been at ease in his circumstances he had written little and had talked much. When therefore he, after the lapse of years, resumed his pen, the mannerism which he had contracted while he was in the constant habit of elaborate composition was less perceptible than formerly, and his diction frequently had a colloquial ease which he had seldom wanted. The improvement may be discerned by reading the "Lives of the Poets" after the Journey to the Hebrides, and in the Lives of the Poets is so obvious that it cannot escape the notice of the most careful reader. Among the Lives the best are perhaps those of Cowley, Dryden and Pope. The very worst is, beyond all doubt, that of Gray; the most controverted that of Milton.

This great work at once became popular. There was, indeed, much just and much unjust censure; but even those who were loudest in blame were attracted by the book in spite of themselves. Malone computed the gains of the publishers at five or six thousand pounds. But the writer was very poorly remunerated. Intending at first to write very short prefaces, he had stipulated for only two hundred guineas. The booksellers, when they saw how far his performance had surpassed his promise, added only another hundred. Indeed Johnson, though he did not despise or affect to despise money, and though his strong sense and long experience ought to have qualified him to protect his own interests, seems to have been singularly unskilful and unlucky in his literary bargains. He was generally reputed the first English writer of his time. Yet several writers of his time sold their copyrights for sums such as he never ventured to ask. To give a single instance, Robertson received £4500 for the History of Charles V.

Johnson was now in his seventy-second year. The infirmities of age were coming fast upon him. That inevitable event of which he never thought without horror was brought near to him; and his whole life was darkened by the shadow of death. The strange dependants to whom he had given shelter, and to whom, in spite of their faults, he was strongly attached by habit, dropped off one by one; and, in the silence of his home, he regretted even the noise of their scolding matches. The kind and generous Thrale was no more; and it was soon plain that the old Streatham intimacy could not be maintained upon the same footing. Mrs Thrale herself confessed that without her husband's assistance she did not feel able to entertain Johnson as a constant inmate of her house. Free from the yoke of the brewer, she fell in love with a music master, high in his profession, from Brescia, named Gabriel Fiozzi, in whom nobody but herself could discover anything to admire. The secret of this attachment was soon discovered by Fanny Burney, but Johnson at most only suspected it.

In September 1782 the place at Streatham was from motives of economy let to Lord Shelburne, and Mrs Thrale took a house at Brighton, whither Johnson accompanied her; they remained for six weeks on the old familiar footing. In March 1783 Boswell was glad to discover Johnson well looked after and staying with Mrs Thrale in Argyll Street, but in a bad state of health. Impatience of Johnson's criticisms and infirmities had been steadily growing with Mrs Thrale since 1774. She now went to Bath with her daughters, partly to escape his supervision. Johnson
was very ill in his lodgings during the summer, but he still corre-
sponded affectionately with his "mistress" and received many 
favours from her. He retained the full use of his senses during 
the paralytic illness of July; he was sufficiently recovered in 
June 1784, when he returned to his usual pursuits. On June 
1784 he went with Boswell to Oxford for the last time. 
In September he was in Lichfield. On his return his health was 
rather worse; but he would submit to no dietary régime. His 
asthma tormented him day and night, and dropisical symptoms 
made their appearance. His wrath was excited in no measured 
terms against the re-marriage of his old friend Mrs Thrale, the 
news of which he heard this summer. The whole dispute seems, 
to-day, entirely uncalled-for, but the marriage aroused some of 
Johnson's strongest prejudices. He wrote incendiarily on the 
subject, but we must remember that he was out of frame 
afflicted in body and mentally haunted by dread of impending 
change. Throughout all his troubles he had clung vehemently 
to life. The feeling described in that fine but gloomy paper 
which closes the series of his Idlers seemed to grow stronger in 
him as his last hour drew near. He fancied that he should be 
able to draw his breath more easily in a southern climate, and 
would probably have set out for Rome and Naples but for 
his fear of the expense of the journey. That expense, indeed, he 
had the means of defraying; for he had laid up about two 
thousand pounds, the fruit of labours which had made the fortune of 
several publishers. But he was unwilling to break in his 
hoard, and he seems to have wished even to keep its existence 
a secret. Some of his friends hoped that the Government might 
be induced to increase his pension to six hundred pounds a year, 
but this hope was disappointed, and he resolved to stand one 
English winter more.

That winter was his last. His legs grew weaker; his breath 
grew shorter; the fatal water gathered fast, in spite of incisions 
which he, courageous against pain but timid against death, urged 
his surgeons to make deeper and deeper. Though the tender 
clays of his forehead were more than once washed away at Streatham 
was withdrawn, and though Boswell was absent, he 
noticed the absence of Dr. Johnson. His presence at Streatham 
called up the spirit of his mind. Windham's servant, who sat up with him 
during his last night, declared that "no man could appear more 
collected, more devout or less terrified at the thoughts of the 
approaching minute." At hour intervals, often of much pain, 
he was moved in bed and addressed himself vehemently to 
prayer. In the morning he was still able to give his blessing, 
but in the afternoon he became drowsy, and at a quarter past 
seven in the evening on the 13th of December 1784, in his seventy-
sixth year, he passed away. He was laid, a week later, in West-
minster Abbey, among the eminent men of whom he had been 
the dictator of fashion and Denham, Dryden and Congreve, 
Gay, Prior and Addison.

(M.)

BIBLIOGRAPHY. - The splendid example of his style which Macaulay 
contributed in the article on Johnson to the 8th edition of this ency-
clopedia has become classic, and has therefore been retained above 
with a few trifling modifications in those places in which his invincible 
love of the picturesque has drawn him demonstrably aside from the 
dull line of veracity. Macaulay, it must be noted, exaggerated 
persistently the poverty of Johnson's pedigree, the squeamishness of his 
entourage in Fleet Street, the decline and fall from complete virtue of Mrs Thrale, the novelty 
and success of the Dictionary, the complete failure of the Shakespeare and 
the political tracts. Yet this contribution is far more valuable than the article contributed on Shakespeare twenty-five years before to the Edinburgh Review in correction of Croker. Matthew Arnold, 
who edited six selected Lives of the poets, regarded it as one of 
Macaulay's best essays. It is an excellent example of his written 
style for Adam Black, and "payment was not so much as mentioned." The big reviews, especially the quarterly, have always been the 
natural home of Johnsonian study. Sir Walter Scott, Croker, Hay-
ley, and Boswell, (whose Essays Fraser article was reprinted in 1853) and Whittell Elwin have done many 
people perhaps to sustain the zest for Johnsonian studies. Macaulay's 
prediction that the interest in the man would supersede that in his 
works has in large measure been fulfilled. His praise of Johnson's 
theory that the man alone mattered and that a portrait painted 
by the hand of an inspired idolator was a true measure of the man has 
suffered a manner of Johnson run on classical literary 
propositions. Johnson's prose is not excessively read. But he has 
about all the great prose masters of the 18th century. As in the 
case of all great men, Johnson has suffered a good deal at the hands 
of his contemporaries and posterity. His writings are so uniformly 
monotonous or polysyllabic as the parodists would have us 
believe, was at one time greatly overpraised. From the "Life of 
Savage" to the "Life of Pope" it developed a great deal, and in 
the course it came to be more and more appreciated. Johnson 
was much to style, and he was perhaps over conscious of the balanced 
epitaph. But he contributed both dignity and dialectical force to 
the prose movement of his period.
The best edition of his works is still the Oxford edition of 1825 in 
9 vols. At the present day, however, his periodical writings are 
ignored, and all that can be said to excite interest are, first the 
Lives of the Poets (best edition by Birkbeck Hill and H. S. Scott, 3 vols., 
1805), and then the Letters, The Prayers and Meditations, and the 
Poems, to which may doubtfully be added the once idolized Rasselas. 
But Boswell's The Life of Johnson and Anecdotes of My Life (1808), a fragment 
which the publishers in all the fast-sounding times without number. 
The others have been re-edited with scrupulous care by the 
University Press by the pious diligence of that most enthusiastic 
of all Johnsonians, Dr Birkbeck Hill. But the tendency at the present 
moment seems to be to reprint, at least, any of his works to which 
are such as the "History," the "Directions," The History of Mr 
Aeneas (1788) and Letters; The Diary and Letters of Fanny 
Burney (D'Arlby) (1841); the shorter Lives of Arthur Murphy, 
T. Tyers, &c.; far above all, of course, the unique Life by James 
Boswell, first published in 1791, and subsequently encrustied with 
steps and Johnsoniana. The Life of Johnson is a great book; 
though Johnson is a great man; he is a great book; though 
true; the History of Johnson and Johnsoniana have been reprinted in many 
and various forms. Valuable work has been done in Johnsonian 
genealogy and topography by Alyn Lyell Reade in his Johnsonian 
Gleanings, &c., and in the Memorials of Old Staffordshire (ed. W. 
Beresford). The most excellent Lives are those by F. Grant 
(Eng. Writers) and Sir Leslie Stephen (Eng. Men of Letters). 
Professor W. Raleigh's essay (Stephen Lecture), Lord Rosebery's 
(1889), and Sir Leslie Stephen's (1890) in the Dictionary of 
National Biography, with bibliographical and list of portraits, should 
be consulted. Johnson's Club ("The Club") still exists, and 
has been for ever so large a part of his life; and his picture 
has a series of celebrities of its day. A "Johnson Club," which has included many 
Johnson scholars and has published papers, was founded in 1885. 
Lichfield has taken an active part in the commemoration of Johnson 
and Johnsoniana. On the 250th anniversary of his birth in 1791 
when a statue of him was dedicated in the Lichfield museum, and Lichfield was the chief scene of the Bicentenary 
Celebrations of September 1909 (fully described in A. M. Broadley's 
Dr Johnson and Mrs Thrale, 1909), containing, together with new 
materials and portraits, an essay dealing with Macaulay's treatment 
of the Johnson-Thrale episodes by T. Seccombe. Statues both of Johnson 
and Boswell are in the market-place at Lichfield. A statue 
was dedicated in St Paul's in 1829, and there are commemorative 
tables in Lichfield Cathedral, St Nicholas (Brighton), Uttoxeter, 
St Clement Danes (London), Gwyannon and elsewhere. (T. Se.)

JOHNSON, SIR THOMAS (1664-1729), English merchant, was 
born in Liverpool in November 1664. He succeeded his father 
in 1689 as bailiff and in 1695 as mayor. From 1701 to 1723 he 
represented Liverpool in parliament, and he was knighted by 
Queen Anne in 1708. He effected the separation of Liverpool from 
the parish of Walton-on-the-Hill; from the Crown he obtained 
the grant to the corporation of the site of the castle and 
its floating dock (1708) and the building of St Peter's and 
St George's churches were due in great measure to his efforts. He 
was interested in the tobacco trade; in 1715 he conveyed 
130 Jacobite prisoners to the American plantations. In 1723, 
having lost in speculation the fortune which he had inherited from 
his father, he went himself to Virginia as collector of customs on 
the Rappahannock river. He died in Jamaica in 1729. A 
Liverpool street is named Sir Thomas Buildings after him.
JOHNSON, THOMAS, English 18th-century wood-carver and furniture designer. Of excellent repute as a craftsman and an artist in wood, his original conceptions and his adaptations of other men's ideas were remarkable for their extreme flamboyance, and for the merciless manner in which he overloaded them with the Six Nations (1715-1752). He was himself a man of Genius, and Johnson appears to have so far exceeded his contemporaries that he must be called a barefaced thief. The three leading "motives" of the time—Chinese, Gothic and Louis Quatorze—were mixed up in his work in the most amazing manner; and he was exceedingly fond of introducing human figures, animals, birds and fishes in highly incongruous places. He appears to have defended his enormities on the ground that "all men vary in opinion, and a fault in the eye of one may be a beauty in that of another;" lis a duty incumbent on an author to endeavour at pleasing every taste." Johnson, who was in business at the same time, published a folio volume of Designs for Parlor Frames, Canadelor, Ceilings, &c. (1758); and One Hundred and Fifty New Designs (1761).

JOHNSON, SIR WILLIAM (1715-1774), British soldier and American pioneer, was born in Smithtown, County Meath, Ireland, in 1715, the son of Christopher Johnson, a country gentleman. As a boy he was educated for a commercial career, but in 1738 he removed to America for the purpose of managing a tract of land in the Mohawk Valley, New York, belonging to his uncle, Admiral Sir Peter Warren (1703-1752). He established himself on the south bank of the Mohawk river, about 25 m. W. of Schenectady. Before 1743 he removed to the northside of the river. The new settlement prospered from the start, and a valuable trade was built up with the Indians, over whom Johnson exercised an immense influence. The Mohawks adopted him and elected him a sachem. In 1744 he was appointed by Governor George Clinton (d. 1761) superintendent of the affairs of the Six Nations (Iroquois). In 1746 he was made commissary of the province for Indian affairs, and was influential in organizing and equipping the Six Nations for participation in the warfare with French Canada, two years later (1748) he was placed in command of a line of outposts on the New York frontier. The peace of Aix-la-Chapelle put a stop to offensive operations, which he had begun. In May 1750 by royal appointment he became a member for life of the governor's council, and in the same year he resigned the part of superintendent of Indian affairs. In 1754 he was one of the New York delegates to the inter-colonial convention at Albany, N.Y. In 1755 General Edward Braddock, the commander of the British forces in America, defined the command major-general, in which capacity he directed the expedition against Fort Duquesne (1754), and later (1758) he defeated the French and Indians under Baron Ludwig A. Dieskau (1701-1767) at the battle of Lake George, where he himself was wounded. For this success he received the thanks of parliament, and was created a baronet (November 1755). From July 1756 until his death he was "sole superintendent of the Six Nations and other Northern Indians." He took part in General James Abercrombie's disastrous campaign against Ticonderoga (1758), and in 1759 he was second in command in General John Bradstreet's expedition against Fort Niagara, succeeding to the chief command on that officer's death, and capturing the fort. In 1760 he was with General Jeffrey Amherst (1717-1797) at the capture of Montreal. As a reward for his services the king granted him a tract of 100,000 acres of land north of the Mohawk river. It was due to his influence that the Iroquois refused to join Pontiac in his conspiracy, and he was instrumental in arranging the treaty of Fort Stanwix in 1768. After the war Sir William retired to his estates, where, on the site of the present Johnston, he built his residence, Johnston Hall, and lived in all the style of an English baron. He devoted himself to colonizing his extensive lands, and is said to have been the first to introduce sheep and blood horses into the province. He died at Johnston, N.Y., on the 11th of July 1774. In 1750 Johnson had married Catherine Wisenberg, by whom he had three children. After her death he had various mistresses, including a niece of the Indian chief Hendrick, and Molly Brant, a sister of the famous chief Joseph Brant.

His son, SIR JOHN JOHNSON (1742-1830), who was knighted in 1765 and succeeded to the baronetcy on his father's death, took part in the French and Indian War and in the border warfare during the War of Independence, organizing a loyalist regiment known as the "Queen's Royal Greens," which he led at the battle of Oriskanya and in the raids (1778 and 1780) on Cherry Valley and in the Mohawk Valley. He was also one of the officers of the force defeated by General John Sullivan in the engagement at Newtown (Elmira), N.Y., on the 29th of August 1779. He was made brigadier-general of provincial troops in 1782. His estates had been confiscated, and after the war he lived in Canada, where he held from 1791 until his death the office of superintendent-general of Indian affairs for British North America. He received £4,500 from the British government for his services. Sir John Johnston (1740-1788), succeeded his uncle as superintendent of Indian affairs in 1774, and served in the French and Indian War and, on the British side, in the War of Independence.

JOHNSON, ALBERT SIDNEY (1803-1862), American Confederate general in the Civil War, was born at Washington, Mason county, Kentucky, on the 3rd of February 1803. He graduated from West Point in 1826, and served for eight years in the U.S. infantry as a company officer, adjutant, and staff officer. In 1834 he resigned his commission, emigrated in 1836 to Texas, where he became a republic, and joined his army as a private. He was very rapid, and before long he was serving as commander-in-chief in preference to General Felix Huston, with whom he fought a duel. From 1838 to 1840 he was Texan secretary for war, and in 1839 he led a regiment of Texas volunteers in the Mexican War. From 1840 to the outbreak of the Mexican War he lived in retirement on his farm, but in 1846 he led a regiment of Texas volunteers in the field, and at Monterrey, as a staff officer, he had three horses shot under him. In 1849 he returned to the United States army as major and paymaster, and in 1855 became colonel of the 2nd U.S. Cavalry (afterwards 5th), in which his lieutenant-colonel was Robert E. Lee, and his majors were Hardee and Thomas. In 1857 he commanded the expedition sent against the Mormons, and performed his difficult and dangerous mission so successfully that the objects of the expedition were attained without bloodshed. He was rewarded with the brevet of major-general of volunteers. At the outbreak of the Civil War in 1861 Johnston, then in command of the Pacific department, resigned his commission and made his way to Richmond, where Pres. Jefferson Davis, whom he had known at West Point, at once made him a full general in the Confederate army and assigned him to command the department of Kentucky. Here he had to guard a long and weak line from the Mississippi to the Alleghany Mountains, which was dangerously advanced on account of the political necessity of covering friendly country. The first serious advance of the Federals forced him back at once, and he was freely criticized and denounced for what, in ignorance of the facts, the Southern press and people regarded as a weak and irresolute defence. Johnston himself, who had entered upon the Civil War with the reputation of being the foremost soldier on either side, bore with
JOHNSTON, A.—JOHNSTON, SIR H. H. 473

fortitude the reproaches of his countrymen, and Davis loyally supported his old friend. Johnston then marched to join Benegareg at Cornith, Missis, and with the united forces took the offensive against Grant's army at Pittsburg Landing. The battle of Shiloh (p. e.) took place on the 6th and 7th of April, 1862. The Federals were completely surprised, and Johnston was in the full tide of success when he fell mortally wounded. He died a few minutes afterwards. President Davis said, in his message to the Confederate Congress, "Without doing injustice to the living, it may safely be said that our loss is irreparable," and the subsequent history of the war in the west went far to prove the truth of his eulogy.

His wife was William Preston Johnston (1821-1890), who served on the staff of General Johnston and subsequently on that of President Davis, was a distinguished professor and president of Tulane University. His chief work is the Life of General Albert Sidney Johnston (1878), a most valuable and exhaustive biography.

JOHNSTON, ALEXANDER (1849-1889), American historian, was born in Brooklyn, New York, on the 29th of April 1849. He studied at the Polytechnic Institute of Brooklyn, graduated at Rutgers College in 1870, and was admitted to the bar in 1875 in New Brunswick, New Jersey, where he taught in the Rutgers College grammar school from 1870 to 1875. He was principal of the Latin school of Norwalk, Connecticut, in 1879-1883, and was professor of jurisprudence and political economy in the College of New Jersey (Princeton University) from 1884 until his death in Princeton, N.J., on the 21st of July 1889. He wrote A History of American Politics (1882); The Genesis of a New England State—Connecticut (1883), in "Johns Hopkins University Studies"; A History of the United States for Schools (1886); Connecticut (1887) in the "American Commonwealths Series"; the article on the history of the United States for the 6th edition of the Encyclopaedia Britannica, reprinted as The United States: Its History and Constitution; and a chapter on the history of American political parties in the seventh volume of Winsor's Narrative and Critical History of America, and many articles on the history of American politics in Lalor's Cyclopaedia of Political Science, Political Economy, and Political History of the United States (1881-1884). These last articles, which like his other writings represent much original research and are excellent examples of Johnston's rare talent for terse narrative and keen analysis and interpretation of facts, were republished in two volumes entitled American Political History 1789-1876 (1904-1906), edited by John J. McCusker.

JOHNSTON, ALEXANDER KEITH (1804-1871), Scottish geographer, was born at Kirkhill near Edinburgh on the 28th of December 1804. After an education at the high school and the university of Edinburgh he was apprenticed to an engraver; and in 1826 joined his brother (afterwards Sir William Johnston, lord provost of Edinburgh) in a printing and engraving business, the well-known cartographical firm of W. and A. K. Johnston. His interest in geography had early developed, and his first important work was the National Atlas of general geography, which gained for him in 1843 the appointment of Geographer Royal for Scotland. Johnston was the first to bring the study of physical geography into competent notice in England. His attention had been called to the subject by Humboldt; and after years of labour he published his magnificent Physical Atlas in 1848, followed by a second and enlarged edition in 1856. This, by means of maps with descriptive letterpress, illustrates the geology, hydrography, meteorology, botany, zoology, and ethnology of the globe. The rest of Johnston's life was devoted to geography, his later years to its educational aspects especially. His services were recognized by the leading scientific societies of Europe and America. He died at Ben Rhydding, Yorkshire, on the 9th of July 1871. Johnston published a Dictionary of Geography in 1836, with many later editions; The Royal Atlas of Modern Geography, begun in 1835; an atlas of military geography to accompany Alison's History of Europe in 1848 seq.; and a variety of other atlases and maps for educational or scientific purposes. His son of the same name (1844-1879) was also the author of various geographical works and papers; in 1872-1875 he was geographer to a commission for the survey of Paraguay; in 1875 he was in Argentina during the Royal Geographical Society's expedition to Lake Nyasa.

JOHNSTON, ARTHUR (1587-1641), Scottish physician and writer of Latin verse, was the son of an Aberdeenshire laird Johnston of Johnston and Caskiebne, and on his mother's side a grandson of the seventh Lord Forbes. It is probable that he began his university studies at one, or both, of the colleges at Aberdeen, but in 1608 he proceeded to Italy and graduated M.D. at Padua in 1610. Thereafter he resided at Sedan, in the company of the poet Andrew Melville (p. e.), and in 1619 he published an Epistle to Personal Letters in the College of France, written about the time of James I's death and to have been in Aberdeen about 1628. He met Laud in Edinburgh at the time of Charles I's Scottish coronation (1633) and was encouraged by him in his literary efforts, partly, it is said, for the undoing of Buchanan's reputation as a Latin poet. He was appointed rector of King's College, Aberdeen, in June 1637. Four years later he died at Oxford, on his way to London, whither Laud had invited him.

Johnston left more than ten works, all in Latin. On two of these, published in the same year, his reputation entirely rests: a pamphlet entitled Evangelicorum historiae et ejusdem illustrium, Amsterdam (1837), and (6) his anthology of contemporary Latin verse by Scottish poets (Delicias poetarum scotorum hujus aevi illustrium, Amsterdam, 1637). He published a second volume of the latter, more extended, at Strasburg (1642), which, dedicated to Charles I., had brought him to the notice of Laud. The full version of the Psalms was the result of Laud's encouragement. The book was written to maintain a strong rival of Buchanan's work, though its great Latinity was not superior to that of the latter. The Delicias, in two small thick volumes of 699 and 575 pages, was a patriotic effort in imitation of the various (under a similar title) which had been popular on the Continent during the second decade of the century. The volumes are dedicated by Johnston to John Scott of Scotstarvet, at whose expense the collected works were published after Johnston's death, at the expense of his own children, in 1650, in 2 vols., quarto, 439-647 of the first volume, divided into three sections, Parerga, Epigrammata and Musae Aulicæ. He published a volume of epigrams at Aberdeen in 1632. In these pieces he shows himself at his best. His sacred poems, which had appeared in the Opera (1642), were reprinted by Laud in his Poetarum Scotorum musae sacrae (1679). The earliest lives are by Laudler (p. e.) and Benson (in Psalmo Davidei, 1741). Ruddiman's Vindicatio of Mr George Buchanan's Paraphrase (1745) began a pamphlet controversy regarding the merits of the rival poets.

JOHNSTON, SIR HENRY HAMILTON (1838- ), British administrator and explorer, was born on the 12th of June 1838 at Kirkintilloch, near Glasgow, and educated at Stonywell Grammar School and King's College, London. He was a student for four years in the painting schools of the Royal Academy. At the age of eighteen he began a series of travels in Europe and North Africa, chiefly as a student of painting, architecture and languages. In 1859-1860 he visited the then little known interior of Tunisia. He had also a strong bent towards zoology and comparative anatomy, and carried on work of this description at the Royal College of Surgeons, of whose Hunterian Collection he afterwards became one of the trustees. In 1882 he joined the earl of Mayo in an expedition to the southern part of Angola, a district then much traversed by Transvaal Boers. In 1883 Johnston visited H. M. Stanley on the Congo, and was enabled by that explorer to visit the river above Stanley Pool at a time when it was scarcely known to other Europeans than Stanley and De Brazza. These journeys attracted the attention of the Royal Geographical Society and the British Association, and the last-named in concert with the Royal Society conferred on Johnston the leadership of the scientific expedition to Mount Kilimanjaro which started from Zanzibar in April 1884. Johnston's work in this region was also under the direction of Sir John Kirk, British consul at Zanzibar. While in the Kilimanjaro district Johnston concluded treaties with the chiefs of Moshi and Taveta (Taveta). These treaties or concessions were transferred to the merchants who founded the British East Africa Company, and in the final agreement with Germany Taveta fell to Great Britain. In October 1885 Johnston was appointed British vice-consul in
Cameron and in the Niger delta, and he became in 1881 acting consul for that region. A British protectorate over the Niger delta had been notified on June 1885, and between the date of his appointment and 1888, together with the consul E. H. Hewett, Johnston laid the foundations of the British administration in that part of the delta not reserved for the Royal Niger Company. His action in removing the turbulent chief Ja-ja (an ex-slave who had risen to considerable power in the palm-oil trade) occasioned considerable criticism but was approved by the Foreign Office. It led to the complete pacification of a region long disturbed by trade disputes. During these three years of residence in the Gulf of Guinea Johnston ascended the Cameron Mountain, and made large collections of the flora and fauna of Cameroon for the British Museum.

In the spring of 1889 he was sent to Lisbon to negotiate an arrangement for the delimitation of the British and Portuguese spheres of influence in South-East Africa, but the scheme drawn up, though very like the later arrangement of those regions, was not given effect to at the time. On his return from Lisbon he was despatched to Mozambique as consul for Portuguese East Africa, and was further charged with a mission to Lake Nyassa to pacify that region, then in a disturbed state owing to the attacks of slave-trading Arabs on the stations of the African Mission. Johnston proceeded via Bombaro, Coimbra, Lisbon (afterwards Sir Alfred) Lugard and Mr (afterwards Sir Alfred) Sharpe distinguished themselves. Owing to the unexpected arrival on the scene of Major Serpa Pinto, Johnston was compelled to declare a British protectorate over the Nyasa region, being assisted in this work by John Buchanan (vice-consul), Sir Alfred Sharpe, Alfred Swann and others. A truce was arranged with the Arabs on Lake Nyassa, and within twelve months the British flag, by agreement with the natives, had been hoisted over a very large region which extended north of Lake Tanganyika to the vicinity of Ujiji, and south to the Zambesi. Johnston's scheme, in fact, was that known as the "Cape-to-Cairo," a phrase which he had brought into use in an article in The Times in August 1888. According to his arrangement there would have been an all-British route from Alexandria to Cape Town. But by the Anglo-German agreement of the 1st of July 1890 the British sphere north of Tanganyika was abandoned to Germany, and the Cape-to-Cairo route broken by a wedge of German territory. Johnston returned to Central Africa, and consular general in 1891, and retained that post till 1896, in which year he was made a K.C.B. His health having suffered much from African fever, he was transferred to Tunis as consul-general (1897). In the autumn of 1899 Sir Harry Johnston was despatched to Uganda as special commissioner to reorganize the administration of that protectorate after the suppression of the mutiny of the Sudanese soldiers and the long war with Unyoro. His two years' work in Uganda and a portion of what is now British East Africa were rewarded at the close of 1901 by a G.C.M.G. In the spring of the following year he retired from the consular service. After 1904 he interested himself greatly in the affairs of the Liberian republic, and negotiated various arrangements with that negro state by which order was brought into its finances, the frontier with France was delimited, and the development of the interior by means of roads was commenced. In 1903 he was defeated as Liberal candidate for parliament at a by-election at Rochester. He met with no better success at West Marylebone at the general election of 1906.

For his services to zoology he was awarded the gold medal of the Zoological Society in 1892, and in the same year was made an honorary fellow of the scientific society at Cambridge. He received the gold medal of the Royal Geographical and the Royal Scottish Geographical societies, and other medals for his artistic work from South Kensington and the Society of Arts. His pictures, chiefly dealing with African subjects, were frequently exhibited at the Royal Academy. He was the author of numerous books on Africa, including British Central Africa (1897); The Colonisation of Africa (1899); The Uganda Protectorate (1902); Liberia (1906); George Grenfell and the Congo (1908). During his travels in the north-eastern part of the Congo Free State in 1916 he was instrumental in discovering and naming the okapi, a mammal nearly allied to the giraffe. His name has been connected with many other discoveries in the African fauna and flora.

JOHNSTON, JOSEPH EGGLESTON (1807-1891), American Confederate general in the Civil War, was born near Farmville, Prince Edward county, Virginia, on the 3rd of February 1807. His father, Peter Johnston (1753-1841), a Virginian of Scottish descent, served in the War of Independence, and afterwards became a distinguished jurist; his mother was a niece of Patrick Henry. He graduated at West Point, in the same class with Lee, and served in the U.S. Army Artillery, in 1829. He served in the Black Hawk and Seminole wars, and left the army in 1837 to become a civil engineer, but a year afterwards he was reappointed to the army as first lieutenant, Topographical Engineers, and brevetted captain for his conduct in the Seminole war. During the Mexican war he was twice severely wounded in a reconnaissance at Cerro Gordo, 1847, was engaged in the siege of Vera Cruz, the battles of Contreras, Churubusco, and Molino del Rey, the storming of Chapultepec, and the assault on the city of Mexico, and received three brevets for gallant and meritorious service. In 1853 he was employed on Western river improvements, and in 1855 he became lieutenant-colonel of the 1st U.S. Cavalry. In 1861 he was made quartermaster-general, with the rank of brigadier-general. In April 1861 he resigned from the United States army and entered the Confederate service. He was commissioned major-general of volunteers in the Army of Virginia, and assisted in organizing the volunteers. He was later appointed a general officer of the Confederate, and assigned to the command of the Army of the Shenandoah, being opposed by the Federal army under Patterson. When McDowell advanced upon the Confederate forces under Beauregard at Manassas, Johnston moved from the Shenandoah Valley with great rapidity to Beauregard's assistance. As senior officer he took command on the field, and at Bull Run (Manassas) (q.v.) won the first important Confederate victory. In August 1861 he was made one of the five full generals of the Confederacy, remaining in command of the main army in Virginia. He commanded in the battle of Fair Oaks (May 31, 1862), and was so severely wounded as to be incapacitated for several months. In March 1863, still troubled by his wound, he was assigned to the command of the south-west, and in May he was ordered to take command of all the Confederate forces in Mississippi, then threatened by Grant's movement on Vicksburg. When Pemberton's army was besieged in Vicksburg by Grant, Johnston used every effort to relieve it, but his force was inadequate. Later in 1863, when the battle of Chattanooga brought the Federals to the borders of Georgia, Johnston was assigned to command the Army of Tennessee at Dalton, and in the early days of May 1864 the combined armies of the North under Sherman advanced against his lines. For the main outlines of the famous campaign between Sherman and Johnston see AMERICAN CIVIL WAR (§ 20). From the 9th of May to the 17th of July there were skirmishes, actions and combats almost daily. The great numerical superiority of the Federals enabled Sherman to press back the Confederates without a pitched battle, but the severity of the skirmishing may be judged from the casualties of the two armies (Sherman's about 26,000 men, Johnston's over 10,000), and the obstinate steadiness of Johnston by the fact that his opponent hardly progressed more than one mile a day. But a Fabian policy is never acceptable to an eager people, and when Johnston had been driven back to Atlanta he was superseded by Hood with orders to fight a battle. The wisdom of Johnston's plan was soon abundantly clear, and the Confederate cause was already lost when Lee reinstated him on the 23rd of February 1865. With a handful of men he opposed Sherman's march through the Carolinas, and at Bentonville, N.C., fought and almost won a most gallant and skillful battle against heavy odds. But the Union troops steadily advanced, growing in strength as they went, and a few days after Lee's surrender at
Appomattox. Johnston advised President Davis that it was in his opinion wrong and useless to continue the conflict, and he was authorized to make terms with Sherman. The terms entered into between these generals, on the 18th of April, having been rejected by the United States government, another agreement was signed on the 26th of April, the new terms being similar to those of the surrender of Lee. After the close of the war, Johnston engaged in civil pursuits. In 1874 he published a *Narrative of Military Operations during the Civil War*. In 1877 he was elected to represent the Richmond district of Virginia in Congress. In 1887 he was appointed by President Cleveland U.S. commissioner of railroads. Johnston was married in early life to Louisa (d. 1886), daughter of Louis M'Lane. He died at Washington, D.C., on the 21st of March 1891, leaving no children.

It was not the good fortune of Johnston to acquire the prestige which so much assisted Lee and Jackson, nor indeed did he possess the power of enforcing his will on others in the same degree, but his methods were exact, his strategy calm and balanced, and, if he showed himself less daring than his commanders, he was unsurpassed in steadiness. The duel of Sherman and Johnston is almost as personal a contest between two great captains as were the campaigns of Turenne and Montecucculi. To Montecucculi, indeed, both in his military character and in the incidents of his career, Joseph Johnston bears a striking resemblance.

**JOHNE, a** police burgh of Renfrewshire, Scotland, on the Black Cart, 11 m. W. of Glasgow by the Glasgow & South-Western railway. Pop. (1901), 10,503. The leading industries include flax-spinning, cotton manufactures (with the introduction of which in 1781 the prosperity of the town began), paper-making, shoe-lace making, iron and brass foundries and engineering works. There are also coal mines and oil works in the vicinity. Elderslie, 5 m. N. of the town, is a small parochial burgh. The town is the seat of an ancient university, of the college of St. John, founded in 1496, and of the United College, in 1698, with the Tolbooth Church, a site of worship since 1221.

**JOHNSTONE, a** police burgh of Renfrewshire, Scotland, on the Black Cart, 11 m. W. of Glasgow by the Glasgow & South-Western railway. Pop. (1901), 10,503. The leading industries include flax-spinning, cotton manufactures (with the introduction of which in 1781 the prosperity of the town began), paper-making, shoe-lace making, iron and brass foundries and engineering works. There are also coal mines and oil works in the vicinity. Elderslie, 5 m. N. of the town, is a small parochial burgh. The town is the seat of an ancient university, of the college of St. John, founded in 1496, and of the United College, in 1698, with the Tolbooth Church, a site of worship since 1221.

**JOHNSTOWN, a** city of Cambria county, Pennsylvania, U.S.A., at the confluence of the Conemaugh river and Stony creek, about 75 m. E. by S. of Pittsburgh. Pop. (1890), 21,805; (1900), 35,936, of whom 7318 were foreign-born, 2017 being Hungarians, 1663 Germans, and 923 Austrians; (1910 census) 55,482. It is served by the Pennsylvania and the Baltimore & Ohio railways. The city lies about 1170 ft. above the sea, on level ground extending for some distance along the river, and nearly enclosed by high and precipitous hills. Among the public buildings and institutions are the Cambria free library (containing about 14,000 volumes in 1908), the city hall, a fine high school, and the Conemaugh Valley memorial hospital. Roxbury Park, about 3 m. from the city, is reached by electric lines. Coal, iron ore, fire clay and limestone abound in the vicinity, and the city has large plants for the manufacture of iron and steel. The total value of the factory product in 1905 was $28,897,926, an increase of 35.2% since 1900. A settlement was established here in 1792 by Joseph Jahn, in whose honour it was named, and the place was soon laid out as a town, but it was not incorporated as a city until 1886. It was the scene of important junctions and conferences between the colonial authorities and the Iroquois Indians were held here, and on the 28th of October 1781, during the War of Independence, Colonel Marinus Willett (1740-1830) defeated here a force of British and Indians, whose leader, Walter Butler, a son of Colonel John Butler, and, with him, a participant in the Wyoming massacres, was mortally wounded near West Canada creek during the pursuit. Johnston was incorporated as a village in 1868, and was chartered as a city in 1895.

**JOHOR, a** the local official, but incorrect spelling, an independent Malay state at the southern end of the peninsula, stretching from 2° 40' S. to Cape Romanja (Ramunyi), the most southerly point on the mainland of Asia, and including all the small islands adjacent to the coast which lie to the south of parallel 2° 40' S. It is bounded N. by the protected native state of Pahang, N.W. by the Negri Sembilan and the territory of Malacca, S. by the strait which divides Singapore island from the mainland, E. by the China Sea, and W. by the Straits of Malacca. The province of Muar was placed under the administration of Johor by the British government as a temporary measure in 1877, and was still a portion of the sultan's dominions in 1910. The coast-line measures about 250 m. The greatest length from N.W. to S.E. is 165 m., the greatest breadth from E. to W. 100 m. The area is estimated at about 9000 sq. m. The principal rivers are the Muar, the most important waterway in the south of the peninsula; the Johor, up which river the old capital of the state was situated; the Endau, which marks the boundary with Pahang; and the Batu Pahat and Sèdèhi, of Edwards, who was buried there in the colonial cemetery. The value of the total factory product in 1905 was $4,543,72 (a decrease of 13.1% since 1900). Johnston was settled about 1760 by a colony of Scots brought to America by Sir William Johnson, within whose extensive grant it was situated, and in which he himself, in 1775, was named. A number of important junctions and conferences between the colonial authorities and the Iroquois Indians were held here, and on the 28th of October 1781, during the War of Independence, Colonel Marinus Willett (1740-1830) defeated here a force of British and Indians, whose leader, Walter Butler, a son of Colonel John Butler, and, with him, a participant in the Wyoming massacres, was mortally wounded near West Canada creek during the pursuit. Johnston was incorporated as a village in 1868, and was chartered as a city in 1895.
comparative unimportance. Johor is less mountainous than any other state in the peninsula. The highest peak is Gûnong Léang, called Mt Ophir by Europeans, which measures some 4,000 ft. in height. Like the rest of the peninsula, Johor is covered with mangroves, was given the supreme road by the British, broken here and there by clearings and settlements of insig-
nificant area. The capital is Johor Bharu (pop. about 20,000), situated at the nearest point on the mainland to the island of Singapore. The fine palace built by the sultan Abubakar is the principal feature of the town. It is a kind of Oriental Monte Carlo, and is much resorted to from Singapore. The capital of the province of Muar is Bandar Maharani, named after the wife of the sultan before he had assumed his final title. The climate of Johor is healthy and equable for a country situated so near to the equator, it is cooler than that of Singapour. The shade temperature varies from 98°-5° F. to 68°-5° F. The rainfall averages 97-28 in. per annum. No exact figures can be obtained as to the population of Johor, but the best estimates place it at about 200,000, of whom 150,000 are Chinese, 35,000 Malays, 15,000 Javanese. We are thus presented with the curious spectacle of a country under Malay rule in which the Chinese outnumbers the people of the land by more than four to one. It is not possible to obtain any exact data on the subject of the revenue and expenditure of the state. The revenue, however, is probably about 175,000 dollars, and the expenditure under public service is comparatively small. The revenue is chiefly derived from the revenue farms for opium, spirits, gambling, &c., and from duty on pepper and gambier exported by the Chinese. The cultivation of these products forms the principal industry. Areca-nuts and copra are also exported in some quantities, more especially from Muar. There is little mineral wealth of proved value.

History.—It is claimed that the Mahomedan empire of Johor was founded by the sultan of Malacca after his expulsion from his kingdom by the Portuguese in 1511. It is certain that Johor was, at one time, a very considerable power, and only protracted war between the Portuguese and the Dutch for the possession of Malacca. Later we find Johor ruled by an officer of the sultan of Riau (Riau), bearing the title of Tumenggong, and owing feudal allegiance to his master in common with the Bendâhârah of Pahang. In 1812, however, this officer seems to have thrown off the control of Riau, and to have assumed the title of sultan, for one of his descendants, Sultan Husein; ceded the island of Singapore to the East India Company in 1819. In 1855 the then sultan, Ali, was deposed, and his principal chief, the Dato' Haji, given the title of sultan. His son Tumenggong Abubakar proved to be a man of excep-
tional intelligence. He made numerous visits to Europe, took considerable interest in the government and development of his country, and was given by Queen Victoria the title of maharaja in 1879. On one of his visits to England he was made the defendant in a suit for breach of promise of marriage, but the plaintiff was non-suited, since it was decided that no action lay against a foreign sovereign in the English law courts. In 1885 he entered into a new agreement with the British government, and was allowed to assume the title of sultan of the state and territory of Johor. He was succeeded in 1885 by his son Sultan Ibrahim. The government of Johor has been compara-
tively so free from abuses under its native rulers that it has never been found necessary to place it under the residential system in force in the other native states of the peninsula which are under British control, and on several occasions Abubakar used his influence with good effect on the side of law and order. The close proximity of Johor to Singapore has constantly subjected the rulers of the former state to the influence of European public opinion. None the less, the Malay is by nature but ill fitted for the drudgery which is necessary if proper attention is to be paid to the dull details whereby government is rendered good and efficient. Abubakar's principal adviser, the Dato' Mêntri, was a worthy servant of his able master. Subsequently, however, the reins of government came chiefly into the hands of a set of young men who lacked either experience or the serious devotion to dull duties which is the distinguishing mark of the English civil service. Mêntri, in imitation of the British system, is ruled by a rajah of the house of Johor, who bears the title of resident. (H. C. L.)

JOIGNY, a town of central France, capital of an arrondisse-
ment in the department of Yonne, 18 m. N.N.W. of Auxerre by the Paris-Lyon-Méditerranée railway. Pop. (1906), 4,888. It is situated on the flank of the hill known as the Côte St Jacques on the right bank of the Yonne. Its streets are steep and narrow, and old houses with carved wooden façades are numerous. The church of St Jean (16th century), which once stood within the enceinte of the old castle, contains a representa-
tion (15th century) of the Holy Sepulchre in white marble. On a drive near by are the churches of St Andrè (12th, 16th and 17th centuries), of which the best feature is the Renaissance portal with its fine bas-reliefs; and the church of St Thibault (16th century), in which the stone crown suspended from the choir vaulting is chiefly noticeable. The Porte du Bois, a gateway with two massive flanking towers, is a relic of the 10th century castle; there is also a castle of the 16th and 17th centuries, in part demolished. The hôtel de ville (18th century) shelters the library; the law-court contains the sepul-
chral chapel of the Ferrands (16th century). The town is the seat of a sub-prefect and has tribunals of first instance and of bankruptcy. Claims by or against husband and wife may be joined with claims by or against either of them separately. Claims by or against an executor or administrator as such may be joined with claims by or against him personally, provided such claims are alleged to arise with reference to the estate of which the plaintiff or defendant sues or is sued as executor or administrator. Claims by plaintiffs jointly may be joined with claims by them or any of them separately against the same defendant.

Joinder in pleading is the joining of the parties on the point of matter issuing out of the allegations and pleas of the plaintiff and the defendant in a cause and the putting the cause upon trial.

Joinder of parties.—Where parties may jointly, severally or in the alternative bring separate actions in respect of or arising out of the same transaction or series of transactions they may, by Order XVI. of the rules of the supreme court, be joined in one action as plaintiffs.

JOinery, one of the useful arts which contribute to the comfort and convenience of man. As the arts of joinery and carpentry are often followed by the same individual, it appears natural to conclude that the same principles are common to both, but a closer examination leads to a different conclusion. The art of carpentry is directed almost wholly to the support of weight or pressure, and therefore its principles must be sought in the mechanical sciences. In a building it includes all the rough timber work necessary for support, division or connexion, and its proper object is to give firmness and stability. The art of joinery has for its object the addition in a building of all the fixed woodwork necessary for convenience or ornament. The joiner's works are in many cases of a complicated nature, and often require to be executed in an expensive material, therefore joinery requires much skill in that part of geometrical science which
JOINERY

477

treats of the projection and description of lines, surfaces and solids, as well as an intimate knowledge of the structure and nature of wood. A man may be a good carpenter without being a joiner at all, but he cannot be a joiner without being competent, at least, to supervise all the operations required in carpentry. The rough labour of the carpenter renders him in some degree unfit to produce that accurate and neat workmanship which is expected from a modern joiner, but it is no less true that the habit of neatness and the great precision of the joiner make him a much slower workman than the man practised in works of carpentry. In carpentry framing owes its strength mainly to the form and position of its parts, but in joinery the strength of a frame depends to a larger extent upon the strength of the joinings. The importance of fitting the joints together as accurately as possible is therefore obvious. It is very desirable that a joiner shall be a quick workman, but it is still more so that he shall be a good one, and that he should join his materials with firmness and accuracy. It is also of the greatest importance that the work when thus put together shall be constructed of such sound and dry materials, and on such principles, that the whole shall bear the various changes of temperature and of moisture and dryness, so that the least possible shrinkage or swelling shall take place; but provision must be made so that, if swelling or shrinking does occur, no damage shall be done to the work.

In early times every part was rude, and jointed in the most artless manner. The first dawning of the art of modern joinery appear in the thrones, stalls, pulpits and screens of early Gothic cathedrals and churches, but even in these it is indebted to the carver for everything that is worthy of regard. With the revival of classic art, however, great changes took place in every sort of construction. Forms began to be introduced in architecture which could not be executed at a moderate expense without the aid of new principles, and these principles were discovered and published by practical joiners. These authors, with sincerity, good-humour, and the most perfect conceptions of these principles, and accordingly their descriptions are often obscure, and sometimes erroneous. The framed wainscots of small panels gave way to the large bouléon moulded paneling. Doors which were formerly heavily framed and hung on massive posts or in jambs of cut stone, were now framed in light panels and hung in moulded dressings of wood. The scarcity of oak timber, and the expense of working it, subsequently led to the introduction of fir timber from northern Europe, and this gradually superseded all other material save for special work.

Materials and Materials.—The joiner operates with saws, planes, chisels, gouges, hatchet, adze, gimlets and other boring instruments (aided and directed by chalked lines), gauges, squares, hammers, wallets, floor cramps and a great many other tools. His operations consist principally of sawing and planing in all their varieties, and of setting out and making joints of all kinds. There is likewise a great range of other operations—such as paring, glueing up, wedging, pinning, fixing, fitting and hanging—and many which depend on nailing and screwing, such as laying floors, boarding ceilings, wainscoting walls, bracketing, glazing, flooring, and so forth. In addition to the work on which the joiner works, he requires also glue, white lead, nails, brads, screws and hinges, and accessory he applies bolts, locks, bars and other fastenings, together with pulleys, lines, weights, holdfasts, wall hooks, etc. The joiner’s work for a house is for the most part prepared at the shop, where there should be convenience for doing everything in the best and readiest manner, so that little remains when the carcass is ready and the floors laid but to fit, fix and hang. The sashes, frames, doors, shutters, linings and softs are all framed and put together, i.e. wedged up and cleaned of the shavings, the flooring is planed and prepared with rebated or grooved edges ready for laying, and the moulded work—the picture and dado rails, architraves, skirtings and paneling—is all got out at the shop. On a new building the joiner fits up a temporary workshop with benches, sawing stools and a stove for his glue pot. Here he adjusts the work for fitting up and makes any small portions that may still be required.

The preparation of joinery entirely by hand is now the exception—a fact due to the ever-increasing use of machines, which have remarkably shortened the time required to execute the ordinary operations. Various machines rapidly and perfectly execute planing and surfacing, mortising and moulding, leaving the craftsman merely to fit and glue up. Large quantities of machine-made flooring, window-frames and doors are now imported into England from Canada and the continent of Europe. The timber is grown near the place of manufacture, and this, coupled with the fact that labour at a low rate of wages is easily obtainable on the Continent, enables the cost of production to be kept very low. The nature and properties of wood should be thoroughly understood by every joiner. The man who has made the nature of timber his study has always a decided advantage over those who have neglected this. Timber shrinks considerably in the width, but not appreciably in the length. Owing to this shrinkage, some joints and details, hereinafter described and illustrated, are in common use for the purpose of counteracting the bad effect this movement would otherwise have upon all joinery work.

The kinds of wood most commonly employed in joinery are the different species of North European and North American pine, oak, teak and beech. Timber suitable for window frames (see timber) is cut in the northern pine exported from the Baltic countries. Hence the joiner obtains the planks, deals, battens and strips from which he shapes his work. The timber reaches the workman from the sawmill in a size convenient for the use he intends, considerable time and labour being saved in this way.

A log of timber sawn to a square section is termed a balk. In section, a balk may range from 2 in. to 6 ft. Planks are formed by sawing the balk into sections from 11 to 18 in. wide and 3 to 6 in. thick, and the term deal is applied to sawn stuff 9 in. wide and 2 to 4 in. thick. Battens are boards running not more than 3 in. thick in the wide, 4 to 7 in. wide. A strip is not thicker than 15 in., the width being about 4 in.

Joints.—Side joints (fig. 1) are used for joining boards together edge to edge, and are widely employed in flooring. In the square joint the edges of the boards are carefully shot, the two edges to be joined brought together with glue applied hot, and the boards tightly clamped and let to dry, when the surface is cleaned off with the smoothing plane. A joint in general use for joining up boards for fascias, panels, linings, window-frames and other work of a like nature is formed in a similar manner to the above, but with a cross-grained tongue inserted, thereby strengthening the joint, and giving it an otherwise naturally weak point. This is termed a cross-tongued and dovetailed joint. The dovetail joint is a square glued joint strengthened with hard wood or iron dowels inserted in the edge of each board to a depth of about 4 in. and placed about 18 in. apart. The matched joint is shown in two forms, beaded and jointed. The beaded boarding is frequently used as a less expensive substitute for panelled framing. Although of course in appearance it cannot equal the last, its somewhat ornamental appearance, and the moulded joints allow shrinkage to take place without detriment to the appearance of the work. The rebated joint is used in the meeting styles of casements and folding doors, and it is useful in external straight and corner work. The mitre and rebate, with a square section which facilitates nailing or screwing; the mitre rebate and feather, similar to the latter, but giving a stronger and firmer joint: and the feather, groove and tongue, having a tongue worked on the material itself in place of the feather of the last-named joint. The last two methods
are used in the best work, and, carefully worked and glued, with the assistance of angle blocks glued at the back, obviate the necessity of face screws or nails. 

Mitre joint, which after being well glued, is knocked home with mallet and hammer. 

The keyed mitre consists of a simple glued-up number, which may be worked to any degree required, and is especially suitable when a smooth surface is the object. 

Mouldings are used in joinery to relieve plain surfaces by the contrasts of light and shade formed by their members, and to ornament or accentuate those particular portions which the designer may wish to bring into prominence. 

Great skill and discrimination are required in designing and applying mouldings, but that matter falls to the qualified designer and is perhaps outside the province of the practical workman, whose work is to carry out in an accurate and finished manner the ideas of the draughtsman. The character of a moulding is greatly affected by the nature and appearance of the wood in which it is worked. A section suitable for a hard regularly grained wood such as mahogany, will be unsuitable for a soft one such as deal which is worked in a softer wood with pronounced markings. Mouldings worked on woods of the former type may consist of small and delicate members; woods of the latter class require bold treatment. 

The mouldings of joinery, as well as of all other moulded work used in connexion with a building, are usually worked in accordance with full-sized detail drawings prepared by the architect, and are designed by him to conform with the style and class of building. 

There are, however, a number of moulded forms in common use which have particular names; sections are shown of many of these in fig. 5. These mouldings are primarily used to soften the line of the joint, or to avoid the occurrence of the straight joint in the classic architecture of both Greeks and Romans. 

A striking distinction, however, exists in the moulds of the two peoples; the curves of the Greek mouldings were either derived from conic sections, or drawn in freehand, while in typical Roman work the curved component forms are regular and repeated at short distance from one another. 

Numerous examples of the use of these forms occur in ordinary building work, and may be recognized on reference to the illustrations, and be easily understood without further description. 

Mouldings may be either stuck or planted on. A stick moulding is worked direct on to the framing it is required to cover, and plant moulding is separately worked and fixed in position with nails or screws. Beads and other small mouldings should always be stuck; larger ones are usually either fixed by placing screws on panelled work, the nails should be driven through the secondary into the style or rail of the framing, and on no account into the panel. By adopting the former method the panel is free to shrink—as it will inevitably do with alterations in the temperature of the work, but should the moulding be fixed to the panel it will, when the latter shrinks, be pulled out of place, leaving an unsightly gap between it and the framing. 

Flooring.—When the bricklayer, mason and carpenter have prepared the carcass of a building for the joiner, one of the first operations is that of laying the floor boards. They should have been stacked under cover on the site for a long time in order to be thoroughly well seasoned when the time to use them arrives. 

The work of laying should take place in warm dry weather. The joints of flooring laid in winter time or during wet weather are sure to open in the following summer, however tightly they may be cramped up during the process of laying. An additional expense will then be incurred by the necessity of filling in the opened joints with wood glue and driven into place. 

Many of the side joints illustrated in fig. 1 are applied to flooring boards, which, however, are not usually glued up. The heart side of the board should be laid against the wall so that the tendency will be for the edges to press more tightly to the joints instead of curling upwards. The square joint should be used only on ground floors; if it is used for the upper rooms, dust and water will drop through the crevices and damage the ceiling beneath. Dowelled joints are open to the same objection. 

One of the best and most economical methods is the planed and tongued joint. The tongue may be of hard wood or iron, preferably the latter, which is stronger and more durable. The narrow tongue should be placed near the bottom of the board as is practicable, leaving as much wearing material as possible. Two varieties of secret joints are shown in fig. 1.—the planed, rebated, grooved and tongued, and the planed, grooved and tongued. Owing to the waste of material in forming these joints and the extra labour involved in laying the boards, they are costly and are only used when it is required that no heads shall be visible. Parquet floors are made of hard woods of various kinds, laid in patterns on a deal sub-floor, and may be of any thickness from $\frac{1}{2}$ to $\frac{3}{4}$ in. thick, and are usually 9 or 12 in. long by 3 in. wide.
Great care should be taken in laying the sub-floor, especially for the thinner parquet. The boards should be in narrow widths of well-seasoned stuff and well nailed, for any movement in the sub-floor due to warping or shrinking may have disastrous results on the parquet which is laid upon it. Plated parquet consists of selected hard woods firmly fixed on a framed deal backing. It is made in sections for easy transport, and these are fitted together in the apartment for which they are intended. When secured to the joists these form a perfect floor.

Skirtings.—In joinery, the skirting is a board fixed around the base of internal walls to form an ornamental base for the wall (see fig. 7). It also covers the joint between the flooring and the wall, and protects the base of the wall from injury. Skirtings may be placed in two classes—those formed from a plain board with its upper edge either left square or moulded, and those formed of two or more separate members and termed a built-up skirthing (fig. 5). Small angle fillets or mouldings are often used as skirtings. The skirting should be worked so as to allow it to be fixed with the heart side of the wood outwards; any tendency to warp will then only serve to press the top edge more closely to the wall. In good work a groove should be formed in the floor and the skirthing tongued into it so that an open joint is avoided should shrinkage occur. The skirthing should be nailed only near the top to wood grounds fixed to wood plugs in the joints of the brickwork. These grounds are about 1 to 1 in. thick, i.e. the same thickness as the plaster, and are generally splayed or grooved on the edge to form a key for the plaster. A rough coat of plaster should always be laid on the wall behind the skirthing in order to prevent the space becoming a harbourage for vermin.

Dadoes.—A dado, like a skirthing, is useful both in a decorative and a protective sense. It is filled in to ornament and protect that portion of the wall between the chair or dado rail and the skirthing. It may be of horizontal boards battenied at the back and with cross tongued and glued joints, presenting a perfectly smooth surface, or of matched boarding fixed vertically, or of panelled framing. The last method is of course the most ornate and admits of great variety of design. The work is fixed to rough framed wood grounds which are nailed to plugs driven into the joints of the brickwork. Fig. 7 shows an example of a panelled dado with capping moulding and skirthing. A picture rail also is shown; it is a small moulding with the top edge grooved to take the metal hooks from which pictures are hung.

Walls are sometimes entirely sheathed with paneling, and very fine effects are obtained in this way. The fixing is effected to rough grounds in a manner similar to that adopted in the case of dadoes. In England the architects of the Tudor period made great use of oak framing, panelled and richly carved, as a wall covering and decoration, and many beautiful examples may be seen in the remaining buildings of that period.

Windows.—The parts of a window sash are distinguished by the same terms as are applied to similar portions of ordinary framing, being formed of rails and stiles, with sash bars rebated for glazing. The upright sides are stiles; the horizontal ones, which are tenoned into the stiles, are rails (fig. 7).

Sashes hung by one of their vertical edges are called casements (fig. 8). They are really a kind of glazed door and sometimes indeed are used as such, as for example French casements (fig. 9). They may be made to open either outwards or inwards. It is very difficult with the latter to form perfectly water-tight joints; with those opening outwards the trouble does not exist to so great an extent. This form of window, though almost superseded in England by the case frame with hung sashes, is in almost universal use on the Continent. Yorkshire sliding sashes move in a horizontal direction upon grooved runners with the meeting styles vertical. They are
JOINERY

Bay windows with cases frames and double hung sashes often require the exercise of considerable ingenuity in their construction in order that the mullions shall be so small as not to intercept more light than necessary. At the same time, the frame must be strong and the whole framing be stable and strong. The sills should be mitred and tongued at the angles and secured by a hand-rail bolt. Frequently, the sill is not designed so as to permit of ventilation between the meeting rails, so that the side lights being fixed. To enable smaller angle mullions to be obtained, the cords of the front windows may be taken by means of pulleys over the heads of the side lights and attached to cord-eyes or small, blackened iron buttons fixed in casement heads of the window with the wall. This enables solid angle mullions to be employed. If all the lights are required to be hung the difficulty may be surmounted by hanging two sashes to one weight. Lead weights take up less space than iron, and are used for this purpose.

In framing and fixing skylights and lantern lights also great care is necessary to ensure the result being capable of resisting rough weather. A case forming the frame should be made of a bending wood, and any of the joints, as it would attract moisture from the atmosphere and set up decay. Provision must be made for the escape of the water which condenses on and runs down the under side of the glass, by means of a lead-lined channelled moulding, provided with zinc or copper pipe outlets. The skylight stands on a curb raised at least 6 in. to allow of the exclusion of rain by proper flashing. The sashes of the lantern usually take the form of fixed or half casement fitted to solid mullions and angle posts which are framed into and support a solid head. The glazed framing of the roof is made up of moulded sash bars framed to hips and ridges of stronger section, these rest on the head, projecting well beyond it in order to throw off the water.

Shutters for domestic windows have practically fallen into disuse, but a reference to the different forms they may take is perhaps necessary. There may be divided into two classes—those fixed to the outside of the window and those fixed inside. They may be battened, panelled or formed with louvres, the latter form admitting air and a light breeze. External shutters are generally hung but nearly all the hinges to the frame of the window; when the window is set in a reveals these hinges are necessarily of special shape, being of large projection to enable the shutters to fold back against the face of the building. They may be hung from a horizontal bar, or may be hung vertically or horizontally. Hinged folding boxed shutters are shown in the illustration of a casement window (fig. 8), where the method of working is clearly indicated; they are usually held in position by the weight of the sash. The shutters are usually fitted in a casing formed in the window back, and the window board is hinged to lift up, to allow the shutters to be raised by means of rings fixed in their upper edge. The shutters are balanced by weights enclosed with casings in the manner described for double hung sashes. The panels are of course filled in with wood and not glazed. The shutters are fixed by means of a thumb-screw through the meeting rails, the lower sashes being supported on the window board which is closed down when the sashes have been lifted out. Shutters sliding horizontally are also used in some cases, but they are not so convenient as the forms described above.

Shop-fronts.—The forming of shop-fronts may almost be considered a separate branch of joiners’ work. The design and construction are greatly varying with almost every trade, careful study and close attention to detail are necessary. In the erection of shop-fronts, in order to allow the maximum width of glass with the minimum amount of obstruction, many spectacles or sections of plate are used, the former often being reinforced by cast iron or steel of suitable form. For these reasons the construction of shop-fronts and fittings has been specialized by makers having a knowledge of the requirements of different trades and with facilities for making the special wood and metal fittings and casings necessary. Fig. 10 shows an example of a simple shop-front in Spanish mahogany, with sliding shutters and swinging roller blind; it indicates the typical construction of a front, and reference to it will inform the reader on many points which need no further description. The London Building Act 1894 requires the following regulations to be complied with in the erection of shop-fronts: The height of a shop-front may project 5 in. beyond the external wall of the building to which it belongs, and the cornice may project 13 in. (2) In streets of a width greater than 30 ft., the projections of the shop-front may be 10 in. and of the cornice 15 in. beyond the building line. No woodwork of any shop-front shall be fixed higher than 25 ft. above the level of the public pavement. No woodwork shall be fixed to an external wall at a distance of more than 2 ft. 6 in. from the face of brick or stone must project at least an inch in front of the woodwork. These by-laws will be made clear on reference to fig. 10, which is of a shop-front designed for a road frontage of over 30 ft. Four standard shutters for shop-fronts are made by a number of firms, and are usually the subject of a separate estimate, being fixed by the makers themselves. The shutter consists of a number of narrow panels, cut and tongued, and held in position by a tongue and hole at every joint, or it may be formed in iron or steel. This construction allows it to be coiled upon a cylinder containing a strong spring and usually fixed on strong brackets behind the fascia. The shutter
is guided into position by the edges working in metal grooves a little under an inch wide. When the width of the opening to be closed renders it necessary to divide the shutters into more than one portion, grooved movable pilasters are used, and when the shutters have to be lowered these are fixed in position with bolts, the shutter working on the grooved edges of the pilasters. *Spring roller canvas blinds* work on a similar principle. The wrought-iron blind arms are capable, when the blind is extended, of being pushed up by means of a sliding arrangement, and fixed with a pin at a level high enough to allow foot passengers to pass along the pavement under them.

The latter would need to be worked and framed in the shop and fixed entire. Polished hard wood architraves may be secretly fixed, i.e., without the heads of nails or screws showing on the face, by putting screws into the grounds with their heads slightly projecting, and hanging the moulding on them by means of keyhole staples formed in the back.

Doors may be made in a variety of ways. The simplest form, the *common ledged door*, consists of vertical boards with plain or matched joints nailed to horizontal battens which correspond to the rails in framed doors. For openings over 2 ft. 3 in. wide, the doors should be furnished with braces. *Ledged and braced doors* are similar, but have, in addition to the ledges at the back, oblique braces which prevent any tendency of the door to drop. The upper end of the brace is birdsmouthed into the side rail near the lock edge of the door and crosses the door in an oblique direction to be birdsmouthed into the upper edge of the rail below, near the hanging edge of the door. This is done between each pair of rails. *Framed ledged and braced doors* are a further development of this form of door. The framing consists of lock and hanging styles, top, middle and bottom rails, with oblique braces between the rails. These members are tenoned together and the door sheathed with boarding. The top rail and styles are the full thickness of the door, the braces and middle and bottom rails being less by the thickness of the sheathing boards, which are tongued into the top rail and styles and carried down over the other members to the bottom of the door. The three forms of door described above are used mainly for temporary purposes, and stables, farm buildings and outhouses of all descriptions. They are usually hung by wrought-iron cross garnet or strap hinges fixed with screws or through bolts and nuts.

Doors.—External doors are usually hung to solid frames placed in the reveals of the brick or stone wall. The frames are rebated for the door and ornamented by mouldings either stuck or planted on. The jamb or posts are tenoned, wedged and glued to the head, and the feet secured to the sill by stub tenons or dowels of iron. Solid window frames are of similar construction and are used chiefly for casements and sashes hung on centres as already described. Internal doors are hung to jamb linings (fig. 7). They are usually about 1½ in. thick and rebated for the door. When the width of jamb allows it, panelling may be introduced as in the example shown. The linings are nailed or screwed to rough framed grounds 1 in. in thickness plugged or nailed to the wall or partition. Architraves are the borders or finishing mouldings fixed around a window or door opening, and screwed or nailed to wood grounds. They are variously moulded according to the fancy of the designer. The ordinary form of architrave is shown in the illustration of a cased window frame (fig. 8), and a variation appears in the combined architrave and over door frieze and capping fitted around the six-panelled door (fig. 7).

The doors in dwelling-houses and other buildings of a like character are commonly fitted and panelled in one of the many ways possible. The framing consists of styles, rails and muntins or morting, and these members are grooved to receive and hold the panels, which are inserted previously to the doors being glued and wedged in position.

The common forms are doors in four or six rectangular panels, and although they may be made with any form and number of panels, the principles of construction remain the same. The usual method of jointing is by a Veneered door, with moulded raised panels on one side, and moulded and flat panels on the other. A clear idea of the method of jointing the various members may be obtained from Fig. 12. The tongues of raised panels should be of such thickness as to allow the members being stopped in the moulding. The projecting ends or horns of the styles are cut off after the door has been glued and wedged, as they prevent the ends of the doors being damaged by the wedging process.

Where there is a great deal of traffic in both directions sawing doors, either single or double, are used. To open them it is necessary simply to push, the inconvenience of turning a handle and shutting the door after passing through being avoided, as a spring causes the door to return to its original position without noise. They are usually glazed and should be of substantial construction. The door is hinged at the top on a steel pivot; the bottom part fits into a metal socket connected with the spring, which is placed in a box fixed below the floor.

For large entrances, notably for hotels and banks, a form of door working on the turnstile principle is frequently adopted. It is formed of four leaves fixed in the shape of a cross and working on top and bottom central ball-bearing steel pivots, in a circular framing which forms an entrance and vestibule. The leaves of the door are fitted with slips of india-rubber at their edges which, fitting close to the circular framing, prevent draughts.

When an elegant appearance is desired, and it is at the same time necessary to keep the cost of production as low as possible, doors of pine or other soft wood are sometimes covered with a veneer or thin layer of hard wood, such as oak, mahogany or teak, giving the appearance of a solid door of the better material. Made in the ordinary way, however, the shrinkage or warping of the soft wood is very liable to cause the veneer to buckle and peel off. Veneered doors made on an improved method obviating this difficulty have been placed on the market by a Canadian company. The core is made up of strips of pine with the grain reversed, dried at a temperature of about 60° F., and glued under pressure. Both the core and the hard wood veneer are grooved along their edges, and a special damping-setting glue is applied; the two portions are then welded together under hydraulic pressure. By reason of their construction these doors possess the advantages of freedom from shrinking, warping and splitting defects which are all too common in the ordinary veneered and solid hard wood doors.

The best glue for internal woodwork is that made in Scotland. Ordinary animal glue should not be used in wood exposed to the weather as it absorbs water and its place is taken by a compound termed beaumontique, composed of white lead, linedse oil and litharge, should be employed. Church Work.—Joinery work in connexion with the fitting up of churches indoors must be regarded as a special art. Pitchpine is often used, but the best work is executed in English oak; and when the screens, stalls and scatting are well designed and made in this material, a distinction and dignity of effect are added to the interior of the church which cannot be obtained in any other medium. The work is often of the richest character, and frequently enriched with elaborate carving (Fig. 13). Many beautiful specimens of early work are to be seen in the churches of England; good work of a later date will be found in many churches and public buildings erected in more recent years. Fine examples of Old English Joinery exist at Hampton Court Palace, the Temple Church in London, the Chapel of Henry VII, in Westminster Abbey, and Haddon Hall. Specimens of modern work are to be seen in Beverley Minster in Yorkshire, the Church of St Etheldreda in Ely Place, London, and the Wycliffe Hall Chapel at Oxford.

Carving is a trade apart from ordinary joinery, and requires a special ability and some artistic feeling for its successful execution. But even in this work machinery has found a place, and carved ornaments of all descriptions are rapidly wrought with its aid. Small carved mouldings especially are evolved in this manner, and, being inexpensively cheaper than those worked by manual labour, are used freely where a rich effect is desired. Elaborately carved panels also are made by machines and a result almost equal to work done entirely by hand is obtained if, after machinery has done all in its power, the hand worker with his chisels and gouges puts the finishing touches to the work.

Ironmongery.—In regard to the finishing of a building, no detail calls for greater consideration than the selection and accurate fixing of suitable ironmongery, which includes the hinges, bolts, locks, door and window fittings, and the many varieties of metal finishings required for the completion of a building. The task of the selection belongs to the employer or the architect; the fixing is performed by the joiner.
and protect the painted work. Sash fasteners are fixed at the meeting rails of double hung sashes to prevent the window being opened from the interior of the sash, and also to secure the sashes together. They should be of a pattern to resist the attack of a knife inserted between the rails. Sash lifts and pulls of brass or bronze are fitted to large sashes. Ornamental casement stays and fasteners in many instances are made of wrought iron, some being known as Fanlight openers for single lights, or geared for a number of sashes, may be designed to suit positions difficult of access.

The following are the principal books of reference on this subject: J. C. W. Gwilt, Elements of Architecture and Modern House Construction; Rivington, Notes on Building Construction (3 vols.); H. Adams, Building Construction; C. F. Mitchell, Building Construction; Robinson, Carpenter and Joinery; J. P. Allen, Practical Building Construction; J. Newlands, Carpenter and Joiner's Assistant; Bury, Ecclesiastical Woodwork; T. Trevigold and Young, Joinery; Peter Nicholson, Carpenter and Joiner's Assistant.

JOINT (through Fr. from Lat. junctum, jungere, to join), that which joins two parts together or the place where two parts are joined. (See JONNEY; JOINTS.) In law, the word is used adjectivally as a term applied to obligations, estates, &c., implying that the rights in question relate to the aggregate of the parties joined. Obligations to which several are parties may be several, i.e. enforceable against each independently of the others, or joint, i.e. enforceable only against all of them taken together, or joint and several, i.e. enforceable against each or all at the option of the claimant (see GUARANTEE). So an interest or estate given to two or more persons for their joint lives continues only so long as all the lives are in existence. Joint-tenants are co-owners who take together at the same time, by the same instrument without notice in the quality or extent of their respective interests; and when one of the joint-tenants dies his share, instead of going to his own heirs, lapses to his co-tenants by survivorship. This estate is therefore to be carefully distinguished from tenancy in common, when the co-tenants have each a separate interest which on death passes to the heirs and not to the surviving tenants. When several take an estate together any words or facts implying severance will prevent the tenancy from being construed as joint.

JOINTS, in anatomy. The study of joints, or articulations, is known as Anatomy. Gr. ἁρτοιος, and naturally begins with the definition of a joint. Anatomically the term is used for any connexion between two or more adjacent parts of the skeleton, whether they be bone or cartilage. Joints may be immovable, like those of the skull, or movable, like the knee.

Immovable joints, or synarthroses, are usually adaptations to growth rather than mobility, and are always between bones. When growth ceases the bones often unite, and the joint is then obliterated by a process known as synostosis, in which the union of the bones is the cause or the effect of the stoppage of growth is obscure. Immovable joints never have a cavity between the two bones; there is simply a layer of the substance in which the bone has been laid down, and the union is solid. If the bone is being deposited in cartilage a layer of cartilage intervenes, and the joint is called synchondrosis (fig. 1), but if in membrane a thin layer of fibrous tissue persists, and the joint is then known as a suture (fig. 2). Good examples of synchondroses are the epiphyseal lines which separate the epiphyses from the shafts of developing long bones, or the occipito-sphenoid synchondrosis in the base of the skull. Examples of sutures are plentiful in the vault of the skull, and are given special names, such as suture diastema, s. serrata, s. squamosa, according to the plan of their outline. There are two kinds of fibrous synarthroses, which differ from sutures in that they do not synostose. One of these is a schinolysis, in which a thin plate of one bone is received into a slot in another, as in the joint between the sphenoid

and vomer. The other is a peg and socket joint, or gomphosis, found where the fangs of the teeth fit into the alveoli or tooth sockets in the jaw bones.

Movable joints, or diarthroses, are divided into those in which there is much and little movement. When there is little movement the term half-joint or amphiarthrosis is used. The simplest kind of amphiarthrosis is in which two bones are connected by bundles of fibrous tissue which pass at right angles from the one to the other; such a joint only differs from a suture in the fact that the intervening fibrous tissue is more plentiful and is organized into definite bundles, to which the name of interesosseous ligaments is given, and also that it does not synostose when growth stops. A joint of this kind is called a syndesmosis, though probably the distinction is a very arbitrary one, and depends upon the amount of movement which is brought about by the muscles on the two bones. As an instance of this the inferior tibiofibular joint of mammals may be cited. In man this is an excellent example of a syndesmosis, and there is only slight movement between the two bones. In the mouse there is no movement, and the two bones form a synchondrosis between them which speedily becomes a synostosis, while in many Marsupials there is free mobility between the tibia and fibula, and a definite synovial cavity is established. The other variety of amphiarthrosis or half-joint is the symphysis, which differs from the syndesmosis in having both bony surfaces lined with cartilage and in the presence of a layer of fibro-cartilage, the centre of which often softens and forms a small synovial cavity. Examples of this are the symphysis pubis, the mesoternal joint, and the joints between the bodies of the vertebrae (fig. 3).

The true diarthroses are joints in which there is either fairly free or very free movement. The opposing surfaces of the bones are lined with articular cartilage, which is the unmodified remnant of the cartilaginous model on which they are formed and is called the cartilage of encroachment (fig. 4, c). Between the two cartilages is the joint cavity, while surrounding the joint is the capsule (fig. 4, i), which is formed chiefly by the superficial layers of the original periosteum or perichondrium, but it may be strengthened externally by surrounding fibrous structures, such as the tendons of muscles, which become modified and acquire fresh attachments for the purpose. It may be said generally that the greater the intermittent strain on any part of the capsule the more it responds by increasing in thickness. Lining the interior of the capsule, and all other parts
JOINTS

subject determine its shape. As an example of this it has been found that the mobility of the metacarpo-phalangeal joint of the thumb in a large number of working men is less than it is in a large number of women who use pens and scissors, and that a large number of medical students who use pens and scalpels, and that the slightly movable thumb has quite a differently shaped articular surface from the freely movable thumb (see J. Anat. and Phys. xxix. 446). R. Fick, in the present writer's opinion (see Handbuch der Gelenke, by R. Fick, Jena, 1904). Bernays, however, pointed out that the articular ends were moulded before the musculature was differenti- ated (see Jahrb. f. Anat. u. Entwicklungsg. Bd. XVIII). In all cases, R. Fick replies by pointing out that muscular movements begin before the musculature fibres are formed, and may be seen in the chick as early as the second day of incubation.

The freely movable joints (true diarthroses) are classified as follows:

1. Gliding joints (Arthrodii), in which the articular surfaces are flat, as in the carpal and tarsal bones.

2. Hinge-joints (Ginglymus), such as the elbow and interphalangeal joints.

3. Condyloid joints (Condyliarthroses), allowing flexion and extension, but no rotation. The metacarpo- phalangeal and wrist joints are examples of this.

4. Saddle-shaped joints (Articulus sellaris), allowing the same movements as the last with greater strength. The carpo-metacarpal joints of the thumb is an example.

5. Ball and socket joints (Enarthroses), allowing free movement in any direction, as in the shoulder and hip.

6. Rotational joints. An example is the atlanto-axial joint, between the cranial and mesosternal joints, has already been given as an example of a synarthrosis.

Embryology. Joints are developed in the mesenchyme, or that part of the mesoderm which is not concerned in the formation of the serous cavities. The synarthroses may be looked upon merely as a delay in development, because, as the embryonic tissue of the mesenchyme passes from a fibrous to a bony state, the fibrous tissue may remain along a certain line and so form a suture, or, when chondrification has preceded ossification, the cartilage may remain at a certain place and so form a synchondrosis. The diarthroses represent an arrest of development at an earlier stage, for a part of the original embryonic tissue remains as a plate of round cells, while the neighbouring two rods chondrify and ossify. This plate may become converted into fibro-cartilage, in which case an amphiarthrodial joint results, or it may become absorbed in the centre to form a joint cavity or, if this is a cartilage, to form in two places, two joint cavities with an intervening meniscus may result. Although, ontogenetically, there is little doubt that menisci arise in the way just mentioned, the teaching of comparative anatomy suggests that, phylogenetically, they originate as an ingrowth from the capsule pushing the synovial membrane in front of them. The subject will be returned to when the comparative anatomy of the individual joints is reviewed. In the human fetus the joint cavities are all formed by the tenth week of intra-uterine life.

The bodies of the vertebrae except those of the sacrum and coccyx are separated, and at the same time connected, by the intervertebral disks. These are formed of alternating concentric rings of fibrous tissue and fibro-cartilage, with an elastic mass in the centre known as the nucleus pulposus. The bodies are also bound together by anterior and posterior common ligaments. The odontoid process of the axis fits into a pivot joint formed by the anterior arch of the atlas in front and the transverse ligament behind; it is attached to the basioccipital bone by two strong lateral check ligaments, and, in the mid line, by a feebler middle check ligament which is regarded morphologically as containing the remains of the notochord. This atlanto-axial joint is the one which allows the head to be shaken from side to side. Not-

The development, the surrounding tissue is shown to be by the early elongating and convoluted form of bone; in the long bones of the extremities, the crest and protuberance as the ligamentum nucleus, a thin, fibrous, median septum between the muscles of the back of the neck.

The combined effect of all these joints and ligaments is to allow the spinal column to be bent in any direction or to be rotated, though only a small amount of movement occurs between any two vertebrae.

The heads of the ribs articulate with the bodies of two contiguous thoracic vertebrae and the disk between. The ligaments which connect them are called costo-central, and are two of the first usually wanting. The intercostal ligament, which has three bands radiating from the head of the rib to the two vertebrae and the intervening disk. The other one is the inter- articular ligament, which connects the ridge, dividing the two articular cavities on the head of the rib, to the disk; it is absent in the first and three lowest ribs.

The costo-transverse ligaments bind the ribs to the transverse processes of the thoracic vertebrae. The superior costo-transverse ligament binds the neck of the rib to the transverse process of the vertebra above; the middle or intersossus connects the base of the neck of the rib to the own transverse process; while the posterior runs from the tip of the transverse process to the outer part of the tubercle of the rib. The inner and lower part of each tubercle forms a diarthrodial joint with the upper and fore part of its own transverse process, except in the eleventh and twelfth ribs. At the junction of the ribs with their cartilages no diarthrodial joint is formed; the peristium simply becomes perichondrium and binds the two structures together. Where the cartilages, however, join the sternum, or where they join one another, diarthrodial joints with synovial cavities are established. In the case of the second rib this is double, and in that of the first usually wanting. The centrale scapulae joint, between the pre- and mesosuprarenal, has already been given as an example of a synarthrosis.

Comparative Anatomy. For the convexity or concavity of the vertebral centra in different classes of vertebrates, see Skeleton: axial. The intervertebral disks first appear in the Crocodilia, the highest existing order of reptilia. In many Mammals the middle joint of the neck is a synarthrosis, and the sacrum and vertebrae of the thorax form a single bone. The intervertebral surface of the disk into the articular form of the opposite side, and is probably serially homologous with the ventral arch of the atlas. A similar ligament joins the heads of the ribs dorsal to the transverse processes of the vertebrae, and is part of the same transverse process to the atlas. The ligamentum vertebrae is a strong elastic band in the Ungulata which supports the weight of the head. In the Carnivora it only reaches as far forward as the spine of the axis.

The JOINT, or tempo-mandibular articulation, occurs between the sigmoid cavity of the temporal bone and the condyle of the jaw. Between the two there is an interarticular fibro-cartilage or meniscus, and the joint is surrounded by a capsule of which the outer part is the thickest. On first opening the mouth, the joint acts as a hinge, but very soon the condyle begins to glide forward on to the eminentia articularis (see SKULL) and takes the meniscus with it. This gliding movement between the meniscus and temporal bone may be separately brought about by protruding the lower teeth in front of the upper, or, on one side only, by moving the jaw across to the opposite side.

Comparative Anatomy. The joint between the temporal and mandibular bones is only found in Mammals; in the lower vertebrates the jaw opens between the quadrate and articular bones. In the Carnivora it is a perfect hinge; in many Rodents only the anterior-posterior gliding movement is present; while in the Ruminants the lateralizing movement is the chief one. Sometimes, as in the Ornithorhynchus, the meniscus is absent.
JOINTS

Joints of the Upper Extremity.

The sternoclavicular articulation, between the sternum and clavicle, is a gliding joint, and allows slight upward and downward and forward and backward movements. The two bony surfaces are separated by a meniscus, the vertical movements taking place outside and the antero-posterior inside. There is a well-marked capsule, of which the anterior part is strongest. The two clavicles are joined across the top of the sternum by an interclavicular ligament.

The acromio-clavicular articulation is also a gliding joint, but allows a swinging or pendulum movement of the scapula on the clavicle. The upper part of the capsule is strongest, and from it hangs down a pouch, the acromio-clavicular ligament. The capsule is thin.

Comparative Anatomy.—Bland Sutton regards the inter-clavicular ligament as a vestige of the interclavicle of Reptiles and Monotremes. The mesial are only found in the Primates, but it must be borne in mind that many Mammals have no clavicle, or a very rudimentary one. By some the mesial of the sternoclavicular joint is regarded as the homologue of the lateral part of the interclavicle, but the fact that it only occurs in the Primates where movements in different planes are fairly free is suggestive of a physiological rather than a morphological origin for it.

The shoulder joint is a good example of the ball and socket or enarthrodial variety. Its most striking characteristic is mobility at the expense of strength. The small size of the glenoid cavity in comparison with the head of the humerus, and the great laxity of the capsule, favour this, although the glenoid cavity is slightly deepen by a fibrous lip, called the glenoid ligament, round its margin. The cavity of the glenoid process of the scapula, with the coraco-acromial ligaments, forms a well-marked socket for the head of the humerus. The coraco-acromial ligament, when drawn through the capsule, serves as an anchorage to the joint, while the biceps tendon runs over the head of the humerus, inside the capsule, though surrounded by a sheath of synovial membrane. Were it not for these two extra safeguards the shoulder would be even more liable to dislocation than it is. The upper part of the capsule, which is attached to the base of the coracoid process, is thickened, and known as the coraco-humeral ligament, while inside the front of the capsule are three folds of synovial membrane, called gleno-humeral folds.

Comparative Anatomy.—In the lower Vertebrates the shoulder is adapted to support rather than prehension and is not so freely movable as in the Primates. The tendons of the biceps has evidently sunk through the capsule into the joint, and even when it is intra-capsular there is usually a double fold connecting its sheath of synovial membrane with that lining the capsule. In Man this has been broken through, but remains of it persist in the superior gleno-humeral fold. The middle gleno-humeral fold is the vestige of a strong ligament which steadies and limits the range of movement of the joint in many lower Mammals.

The elbow joint is an excellent example of the ginglymus or hinge, though its transverse axis of movement is not quite at right angles to the central axis of the limb, but is lower internally than externally. This tends to bring the forearm towards the body when the elbow is bent. The elbow is a great contrast to the shoulder, as the trochlea and capitulum of the humerus are closely adapted to the sigmoid cavity of the ulna and head of the radius (see Skeleton: Appendicular); consequently movement in one plane only is allowed, and the joint is a strong one. The capsule is divided into anterior, posterior, and two lateral ligaments, though these are all readily continuous. The joint cavity communicates freely with that of the superior radio-ulnar articulation.

The radio-ulnar joints are three: the upper one is an example of a pivot joint, and in it the disk-shaped head of the radius rotates in a circle formed by the lesser sigmoid cavity of the ulna in front, and the interosseous membrane in the other three quarters. The middle radio-ulnar articulation is simply an interosseous membrane, the fibres of which run downward and inward from the radius to the ulna.

The inferior radio-ulnar joint is formed by the disk-shaped lower end of the ulna fitting into the slightly concave sigmoid cavity of the radius. Below, the cavity of this joint is shut off from that of the wrist by a triangular fibro-cartilage. The movements allowed at these three articulations are called pronation and supination of the radius. The head of that bone twists, in the orbicular ligament, round its central vertical axis for about half a circle. Below, however, the whole lower end of the radius circles round the lower end of the ulna, the centre of rotation being close to the styloid process of the ulna. The radius, therefore, in its pronation, describes half a cone, the base of which is below, and the hand follows the radius.

Comparative Anatomy.—In pronograde Mammals the forearm is usually permanently pronated, and the head of the radius, instead of being in the back of the small sigmoid cavity of the ulna anteriorly, is transversely oval and in front of that bone, occupying the same place that the coronoïd process of the ulna does in Man. This type of elbow, which is adapted to support and progression, is best seen in the Ungulata; in them both lateral ligaments are attached to the head of the radius, and there is no orbicular ligament, since the shape of the head of the radius does not allow of any supination. The olecranon process of the ulna forms merely a posterior guide or guard to the joint, but transmits no weight. No better example of the maximum changes which the uses of support and prehension bring about can be found than in contrasting the elbow of the Sheep or other Ungulate with that of Man. Towards one or other of these types the elbows of all Mammals tend. It may be roughly stated that, when pronation and supination to the extent of a quarter of a circle are possible, an orbicular ligament appears.

The wrist joint, or radio-carpal articulation, lies between the radius and triangular fibro-cartilage above, and the scaphoid, semilunar, and cuneiform bones below. It is a condyloid joint allowing flexion and extension round one axis, and slight lateral movement (abduction and adduction) round the other. There is a well-marked capsule, divided into anterior, posterior, and lateral ligaments. The joint cavity is shut off from the inferior radio-ulnar joint above, and the intercarpal joints below.

The intercarpal joints are gliding articulations, the various bones being connected by palmar, dorsal, and a few interosseous ligaments, but only those connecting the first row of bones are complete, and so isolate one joint cavity from another. That part of the intercarpal joints which lies between the first and second rows of carpal bones is called the transverse carpal joint, and at this a good deal of the movement which seems to take place at the wrist really occurs.

The carpo-metacarpal articulations are, with the exception of that of the thumb, gliding joints, and continuous with the great intercarpal joint cavity. The carpo-metacarpal joint of the thumb is the best example of a saddle-shaped joint in Man. It allows forward and backward and lateral movement, and is very strong.

The metacarpophalangeal joints are condyloid joints like the wrist, and are remarkable for the great thickness of the palmar ligaments of their capsules. In the four inner fingers these glenoid ligaments, as they are called, are joined together by the transverse metacarpal ligament. The interphalangeal articulations are simple hinges surrounded by a capsule, of which the dorsal part is very thin.

Comparative Anatomy.—The wrist joint of the lower Mammals allows less lateral movement than does that of Man, while the lower end of the ulna is better developed and is received into a cup-shaped socket formed by the cuneiform and pisiform bones. At the same time, unless there is a very free pronation and supination, the triangular ligament is only represented by an interosseous ligament, which may be continuous above with the interosseous membrane between the radius and ulna, and suggests the possibility that the whole joint is analogous to an interosseous membrane. In most Mammals the wrist is divided into two lateral parts, as it is in the human foetus, but free pronation and supination seem to cause the disappearance of the septum.

Joints of the Lower Extremity.

The sacro-innominate articulation consists of the sacro-iliac joint and the sacro-sciatic ligaments. The former is one of the amphiarthroses or half-joints by which the sacrum is bound to the ilium. The mechanism of the human sacrum is that of a suspension bridge slung between the two pillars or ilia by the very strong posterior sacro-iliac ligaments which represent the chains. The axis of the joint passes through the second sacral vertebra, but the sacrum is so nearly horizontal that the weight of the body, which is transmitted to the first sacral vertebra, tends to tilt that part down. This tendency is corrected by the
great and small sacro-sciatic ligaments, which fasten the lower part of the sacrum to the tuberosity and spine of the ischium respectively, so that, although the sacrum is a suspension bridge when looked at from behind, it is a lever of the first kind when seen from the side or in sagittal section.

The pubic symphysis is the union between the two pubic bones. It has all the characteristics of a symphysis, already described, and may have a small median cavity.

The hip joint, like the shoulder, is a ball and socket, but does not allow such free movement; this is due to the fact that the socket or acetabulum is deeper than the glenoid cavity and that the capsule is not so lax. At the same time the loss of mobility is made up for by increased strength. The capsule has three thickened bands, of which the most important is the ilio-femoral or Y-shaped ligament of Bigelow. The stalk of the Y is attached to the anterior inferior spine of the ilium, while the two limbs are fastened to the upper and lower parts of the spiral line of the femur. The ligament is so strong that it hardly ever ruptures in a dislocation of the hip. As a plumb-line, dropped from the centre of gravity of the body, passes behind the centre of the hip joint, this ligament, lying as it does in front of the joint, takes the strain in Man's erect position. The other two thickened parts of the capsule are known as pubo-femoral and ischiop-femoral, from their attachments. Inside the capsule, and deepening the margin of the acetabulum, is a fibrous rim known as the cotyloid ligament, which grips the spherical head of the femur and is continued across the cotyloid notch as the transverse ligament. The floor of the acetabulum has a horseshoe-shaped surface of articular cartilage, concave downward, and, occupying the "frog" of the horse's hoof, is a mass of fat called the ilaversian pad. Attached to the inner margin of the horseshoe, and to the transverse ligament where that is deficient, is a reflexion of synovial membrane which forms a covering for the pad and is continued as a tube to the depression on the head of the femur called the fossa capitis. This reflexion carries blood-vessels and nerves to the femur, and also contains fibrous tissue from outside the joint. It is known as the ligamentum teres.

Comparative Anatomy.—Bland Sutton regards the ilio-femoral ligament as an altered muscle, the scissorius, though against this is the fact that, in those cases in which a scissorius is present in Man, the ligament is as strong as usual, and indeed, if it were not there in these cases, the erect position would be difficult to maintain. He also looks upon the ligamentum teres as the divided tendon of the pectineus muscle. The subject requires much more investigation, but there is every reason to believe that it is a tendon which has slain into the joint, though we are also told that the pectineus is doubtful, since the intra-capsular tendon comes from the ischium in Reptiles. In many Mammals, and among them the Orang, there is no ligamentum teres. In others, such as the Armadillo, the structure has not slumped right into the joint, but is connected with the pubo-femoral part of the capsule.

The knee joint is a hinge formed by the condyles and trochlea of the femur, the patella, and the head of the tibia. The capsule is formed in front by the ligamentum patellae, and on each side special bands form the lateral ligaments. On the outer side there are two of these: the anterior or long external lateral ligament is a round cord running from the external condyle to the head of the fibula, while the posterior is slighter and passes from the same place to the styloid process of the fibula. The internal lateral ligament is a flat band which runs from the inner condyle of the femur to the internal surface of the tibia some two inches below the level of the knee joint. The posterior part of the capsule is strengthened by an oblique bundle of fibres running upward and outward from the semimembranosus tendon, and called the posterior ligament of Winslow.

The intra-articular structures are numerous and interesting. Passing from the head of the tibia, in front and behind the spine, are the anterior and posterior cruciate ligaments; the former is attached to the outer side of the intercondylar notch above, and the latter to the inner side. These two ligaments cross like an X. The semilunar fibro-cartilages—external and internal—are partly menisci, each of which has an anterior and a posterior cornu by which they are attached to the head of the tibia in front and behind the spine. They are also attached round the margin of the tibial head by a coronary ligament, but the external end is more movable than the internal, and this perhaps accounts for its coronary ligament being less often ruptured and the cartilage displaced than the inner one is. In addition to these the external cartilage has a fibrous band, called the ligament of Wrisberg, which runs up to the femur just behind the posterior cruciate ligament. The external cartilage is broader, and forms more of a circle than the internal. The synovial cavity of the knee runs up, deep to the extensor muscles of the thigh, for about two inches above the head of the patella, forming the bursa suprapatellaris. At the lower part of the patella it covers a pad of fat, which lies between the ligamentum patellae and the front of the head of the tibia, and is carried up as a narrow tube to the lower margin of the trochlear surface of the femur. This prolongation is known as the ligamentum mucosum, and from the sides of its base spring two lateral folds called the ligamenta alaria. The tendon of the popliteus muscle is an intracapsular structure, and is therefore covered with a synovial sheath. There are a large number of bursae near the knee joint, one of which, common to the inner head of the gastrocnemius and the semimembranosus, often communicates with the joint. The hinge movement of the knee is accompanied by a small amount of external rotation at the end of extension, and a compensatory internal rotation during flexion. This slight twist is enough to tighten up almost all the ligaments so that they may take a share in resisting over-extension, because, in the erect position, a vertical line from the centre of gravity of the body passes in front of the knee.

Comparative Anatomy.—In some Mammals, e.g. Bradypus and Ornithorhynchus, the knee is divided into three parts, two condylar and one trochantopatellar, by synovial folds which in Man are represented by the ligamentum mucosum. In a typical mammal the external semilunar cartilage is attached by its posterior horn to the internal condyle of the femur only, and this explains the ligament of Wrisberg, already mentioned. In the Monkeys and anthropoids this cartilage is circular. The semilunar cartilages first appear in the Amphibia, and, according to B. Sutton, are derived from muscles which are drawn into the joint. When only one kind of movement (hinge) is allowed, as in the fruit bat, these cartilages are not found. In most Mammals the superior tibio-fibular joint communicates with the knee. The tibio-fibular articulations resemble the radio-ulnar in position but are much less movable. The superior in Man is usually cut off from the knee and is a gliding joint; the middle is the interosseous
promoting connects

The ankle joint is a hinge, the astragalus being received into a slit-like arch formed by the lower ends of the tibia and fibula. Backward dislocation is prevented by the articular surface of the astragalus being broader in front than behind. The anterior and posterior parts of the capsule are feebly, but the lateral ligaments are very strong, the external consisting of three separate fasciculi which bind the fibula to the astragalus and calcaneum. To avoid confusion it is best to speak of the movements of the ankle as dorsal and plantar flexion.

The talo-metatarsal, metatarsal, meta-sesamo-phalangeal and inter-phalangeal joints closely resemble those of the hand, except that the tarsal metatarsal joint of the great toe is not saddle-shaped.

Comparative Anatomy.—The anterior fasciculus of the external lateral ligament of the ankle is only found in Man, and is probably an adaptation to the erect position. In animals with a long foot, such as the Ungulata and the Kangaroo, the lateral ligaments of the ankle are in the form of an X, to give greater protection against lateral movement. In certain marsupials a fibro-cartilage is developed between the external malleolus and the astragalus, and its origin from the deeper fibres of the external lateral ligament of the ankle can be traced. These animals have a rotary movement of the fibula on its long axis, in addition to the hinge movement of the ankle.

Fig. 7.—Dissection of the Kneec joint from the front: Patella thrown down.

Diseases and Injuries of Joints

The affection of the joints of the human body by specific diseases is dealt with under various headings (Rheumatism, &c.), but in the present article the more direct forms of ailment are discussed. In most joint-diseases the trouble starts either in the synovial lining or in the bone—rarely in the articular cartilage or ligaments. As a rule, the disease begins after an injury. There are three principal types of injury: (1) sprain or strain, in which the ligamentous and tendonine structures are stretched or lacerated; (2) contusion, in which the opposing bones are driven forcibly together; (3) dislocation, in which the articular surfaces are separated from one another.

A sprain or strain of a joint means that as the result of violence the ligaments holding the bones together have been suddenly stretched or even torn. On the inner aspect the ligaments are lined by a synovial membrane, so when the ligaments are stretched the synovial membrane is torn. Small blood-vessels of the bone may also torn, and bleeding occurs into the joint, which may become full and distended. If, however, bleeding does not take place, the swelling is not immediate, but synovitis has been set up, serious effusion comes on sooner or later. There is often great heat of the surrounding skin and of pain accompanying the synovitis. In the case of a healthy individual the effects of a spray may quickly pass off, but in a rheumatic or gouty person chronic synovitis may obstinately remain, though the actual injury is of tuberculous descent, a spray is apt to be the beginning of serious disease of the joint, and it should, therefore, be treated with continuous rest and prolonged supervision. If in the absence of vigour, a sprained joint should be at once bandaged. This may be the only treatment needed. It gives support and comfort, and the even pressure around the joint checks effusion into it. Wide pieces of adhesive strapping, layer on layer, form a still more useful support, and with the joint so treated the person may be able at once to use the limb. If strapping is not employed, the joint should be taken off from time to time in order that the limb and the joint may be massaged. If the spray is followed by much synovitis a plaster of Paris or leather splint may be applied, complete rest being secured for the limb. Later on, blistering or even "friring" may be found advisable.

Synovitis.—When a joint has been injured, inflammation occurs in the damaged tissue; that is inevitable. But sometimes the attack of inflammation is so slight and transitory as to be scarcely noticeable. This is specially likely to occur if the joint-tissues were in a state of imperfect nutrition at the time of the injury. But if the joint was in a bad state at that time in a state of imperfect nutrition, the effects are likely to become serious. As a rule, it is the synovial membrane lining the fibrous capsule of the joint which first and chiefly suffers; the condition is termed synovitis. Synovitis may, however, be due to other causes than mechanical injury, as when the interior of the joint is attacked by the micro-organisms of pyaemia (blood-poisoning), typhoid fever, pneumonia, rheumatism, gonorrhoea or syphilis. Under judicial treatment the synovitis generally clears up, but it may linger on and cause the formation of adhesions which may temporarily stiffen the joint; or it may, especially in tuberculous, septic or pyemic infections, involve the cartilages, ligaments and bones in a chronic way, as to destroy the joint, and possibly call for resection or amputation.

The symptoms of synovitis include stiffness and tenderness in the joint. The patient notices that movements cause pain. Expansion of fluid takes place, and there is marked fullness in the neighbourhood. If the inflammation is advancing, the skin over the joint may be flushed, and if the hand is placed on the skin it feels hot. Especially is this the case if the joint is near the surface, as at the knee, wrist or ankle.

The treatment of an inflamed joint demands rest. This may be conveniently obtained by the use of a light wooden splint, packing and bandaging the joint, and, if a bandage is useful in promoting absorption of the fluid. If the inflamed joint is in the lower extremity, the patient had best remain in bed, or on the sofa; if in a position of relative safety, he should wear his arm in a sling. The muscles acting on the joint must be kept in complete control. If the inflammation is extremely acute,
JOINTS

a few leeches, followed by a fomentation, will give relief; or an ice-bag or an evaporating lotion may, by causing constriction of the blood-vessels, lessen the congestion of the part and the associated pain. As the inflammation is passing off, massage of the limb and of the joint will prove useful. If the inflammation is long continued, the limb may be kept in a splint. If the knee be fixed in a faulty position, it may be brought down straight by dividing the bone near the upper end. A stiff shoulder or elbow may be converted into a useful, movable joint by excision of the articular cartilage.

A stiff joint may remain as the result of long continued inflammation; the unused muscles are wasted and the joint in consequence of the disease, and the hand may show that it is not materially larger than its fellow. And though all the tissues may have passed away, and though the neighbouring skin is no longer hot, still the joint remains stiff and useless. No progress can be made until a portion of the limb is amputated, and the surgeon may advise that the lingering adhesion be broken down under an anaesthetic, after which the function of the joint may quickly return.

The cases over which the "bone-setter" secures his greatest triumphs. A qualified practitioner may have been for months judiciously treating an inflamed joint by rest, and then feels with regret to suddenly flexing the stiffened limb. The "bone-setter," however, has no such qualms, and when the case passes out of the hands of the perhaps over-careful surgeon, the unqualified practitioner (because he, from a scientific point of view, is an unqualified practitioner) begins "to mould" and "to mould" and "to mould," and finally, when the adhesions, sets the joint free. And his manipulations prove triumphantly successful. But, knowing nothing and fearing nothing, he is apt to do grievous harm in carrying out his rough treatment in other cases, and sometimes in cases of tuberculous joint disease, the joint of a child or young person, the probability of its being under the influence of tuberculous infection must be considered. In such a case prolonged and absolute rest is the one thing necessary. If the joint be fitted with an appropriate Thomas' splint and allowed to walk about, for it is highly important to have these patients out in the open air. The skin being the deepest of the different forms, the joint disease may be treated by rest, a leather or porous-plastic splint should be moulded on, and the arm worn in a sling. There must be no hurry; convalescence will need be slow. And if the child can be sent to a bracing sea-side place it will do much good.

As the disease clears up, the surface heat, the pains and the tender- ness having disappeared, and the joint having so diminished in size as to be scarcely larger than its fellow—though the wasting of the muscles may cause the joint to appear smaller than it really is—largo the splint may be gradually left off. This remission may be for an hour or two every other day; then every other night; then every night, and so on, as the strength of the case or the joint demand; little, and the surgeon watching the case carefully. On the slightest indication of return of trouble, the former restrictive measures must be again resorted to. Massage and gentle exercises may be given day by day, but there must be no thought of "breaking down the stiffness." Many a joint has in such circumstances been wrecked by the manipulations of a "bone-setter."

Temporary Stiffness. Instead of the element of a chronic disease of a joint, the question naturally as to whether the joint will be left permanently stiff. People have the idea that if an inflamed joint is kept on a splint, it may eventually be found permanent. This is quite correct. But it should be clearly understood that it is not the rest of the inflamed joint which causes the stiffness. The matter should be put thus: in tuberculous and other forms of chronic disease stiffness may ensue in spite of long-continued rest. It is the destructive disease, not the enforced rest which causes it; for inflammation of a joint rest is absolutely necessary.

Temporary Stiffness is the destructive changes brought by the inflammation. In one case it may be that the synovial membrane is so far destroyed by the tuberculous or septic invasion that its future usefulness is lost, and the joint ever after will be stiff. In another case, the cartilages are so completely destroyed, that the joint is crippled but not destroyed. In another case the ligaments and the cartilages are implicated as well as the synovial membrane, and when the disease clears up, the bones are more or less wasted, and the range of the joint is lost. In all these cases of flexion and other methods of vigorous treatment are unable materially to improve. In another set of cases the inflammatory glands quickly destroy the soft tissues of the joint, and then invade the bones, and, the disease having at last come to an end, the softened ends of the bones solidly join together like the broken fragments in simple fracture. As a result, osseous solidification of the joint (spondylosis) ensues without, of course, the possibility of any movement. And, inasmuch as the surgeon cannot tell in any case whether the disease may not advance in this direction, he is careful to place the joint in a position in which it cannot get into the frightful union should occur. Thus, the leg is kept straight, and the elbow bent.

In the course of a tuberculous or other chronic disease of a joint, the germ of septic disease may find access to the inflamed area, through a wound or ulceration into the joint, or by the germs being carried thither by the blood-stream. A joint-abscess results, which has to be treated by incision and fomentations. If chronic suppura- tion continues, the joint becomes septic and the inflamed area is set on the joint, or even to amputate the limb. If tuberculosis disease of the joint is steadily progressing in spite of treatment, vigorous measures must be employed to prevent the germs from going their way and thus inviting the entrance of septic germs. The fluid may be drawn off by aspiration, and direct treatment of the diseased synovial membrane may be undertaken by injections of solution of iodoform, or special dressing, or scraping out with a sharp spoon the view of getting rid of the tuberculous material. Later, excision may be deemed necessary, or it is extreme, amputation. But before these measures are considered, A. C. C. Dyer's method of treatment by passive conges- tion, and the treatment by serum injection, will probably have been tried. If a joint is left permanently stiff in an awkward and useless condition, limb-lifting by amputation may become necessary. Thus, if the knee is left bent and the joint is excised a useful, straight limb may be obtained, somewhat shortened, and, of course, perhaps a little stiff, but greatly relieved.

In many cases of disease, when the joint has become firmly fixed in a faulty position, it may be brought down straight by dividing the bone near the upper end. A stiff shoulder or elbow may be converted into a useful, movable joint by excision of the articular cartilage.

A loosen Carilage, or a Displaced Cartilage in the Knee joint is apt to become caught in the hinge between the thigh bone and the leg bone, and by causing a sudden stretching of the ligaments of the joint to give rise to intense pain. When this happens the individual is...
JOINTS

apt to be thrown down as he walks, for it comes on with great suddenness.
And thus he feels himself to be in a condition of perpetual insecurity. After the joint has thus gone wrong, bleeding and serous effusion is brought about, and in severe cases the joint may become so painful that the patient is unable to walk.

And if the cartilage still remains in the grip of the bones he is unable to straighten or bend his knee. But the surgeon by suddenly flexing and twisting the leg may manage to unthink the cartilage and so the pain gradually lessens and the knee can be freely moved. Yet slipping of a cartilage first occurs as the result of a sudden fall or of a sudden and violent action — often it happens when the man is ' on his feet', the foot being firmly fixed on the ground and the body being violently turned. After a fall the patient is in a condition in which has occurred many times, the amount of swelling, distress and lame
ness may diminish with each subsequent slipping, and the individual may go on for a time without any serious complications. But delay in treatment, a tightly fitting steel cage-like splint, which, gripping the thigh and leg, limits the movements of the knee to flexion and exten
sion, may prove useful. But for a muscular, athletic individual the only alternative is to open the joint and remove the loose cartilage. The cartilage may be found on operation to be split, torn or crumpled, and lying right across together. The treatment of the bones, from which nothing but an operation could possibly have removed it. The operation is almost sure to give complete and permanent relief to the condition, the individual being able to resume his old exercises and amusements without fear of the knee playing him false. It is, however, one that should not be undertaken without due consideration and circumspection, and the details of the operation should be carried out with the utmost care and cleanliness.

An accidental dislocation of a joint, as from the blade of a knife, or a spike, entering the knee is a very serious affair, because of the risk of injury to the synovial sheath either at the time of the accident or in the injury later. If the joint becomes thus infected there is great swelling of the part, with redness of the skin, and with the escape of blood-stained or purulent synovia. Absorption takes place of the synovial substances produced by the action of the microbes and, as a result, great constitutional disturbance arises. Blood poisoning may thus threaten life, and in many cases life is saved only by the early treatment which is freely open to the joint, to wash it out with a strong antiseptic fluid, and to make arrange
ment for thorough drainage, the limb being fixed on a splint. Help may also be obtained by increasing the patient's power of resistance to the disease by sleeping by the administration of blood-giving serum, and in the cultivation of the septic germs in question. If the limb is saved, there is a great chance of the knee being permanently still.

Dislocation.—The ease with which the joint-end of the bone is dislocated varies with its form and structure, and with the position in which it happens to be placed when the violence is applied. The relative frequency of fracture of the bone and dislocation of the joint depends on the strength of the bones above and below the joint relatively to the strength of the joint itself. The strength of the various joints in the body is dependent upon either ligament or muscle, or upon the shape of the bones. In the hip, for instance, all the forces which bring about dislocation are on and through the great leverage of the long thigh bone, the hip is rarely dislocated. The shoulder, in order to allow of extensive movement, has no corresponding strength, it is easily and frequently dislocated. The wrist and ankle are rarely dislocated; as the result of violence at the wrist the radius gives way, at the ankle the fibula, these bones being relatively weaker than the respective joints. The wrist owes its strength to the fact of the bone being overhung by the hand bones, and the joints become tighter the greater the water-pressure is which tends to produce leakage. Relatively to its weaker general strength, wood is a better material than iron so far as regards the transmission of a thrust past a joint. So soon as a heavy pressure comes on the joint all the small irregularities of the surfaces in contact are crushed up, and there results an approximately uni
form distribution of the pressure over the whole area (i.e. if there be no bending forces), so that no part of the material is unduly stressed. To attain this result the abutting surfaces should be well fitted together, and the bolts binding the pieces together should be arranged so as to ensure that they will not interfere with the timber surfaces coming into this close contact. Owing to its weak shearing strength on sections parallel to the fibre, timber is peculiarly unfitted for tension joints. If the pieces exerting the pull are simply bolted together with wooden or iron bolts, the joint cannot be trusted to transmit any considerable force with safety. The stresses become intensely localized in the immediate neighborhood of the bolts. A tolerably strong amber tension can, however, be made by making the two pieces abut, and countersinking a hole and the bolts, cementing the joint and bolted to the sides of the timbers by bolts passing through the wood. These plates should have their surfaces which lie against the wood ribbed in a direction transverse to the pull. The bolts should fit their holes slackly, and should be well tightened up so as to make the ribs sink into the surface of the timber. There will then be very little localized shearing stress brought upon the interior portions of the wood.

The iron and other commonly used metals possess in variously
high degrees the qualities desirable in substances out of which joints are to be made. The joint ends of metal pieces can easily be fashioned to any advantageous form and size without waste of material. Also these metals offer peculiar facilities for the cutting of their surfaces at a comparatively small cost, so smoothly and evenly as to ensure the close contact over their whole areas of surfaces placed against each other. This is of the highest importance, especially in joints designed to transmit force. Wrought iron and mild steel are above all other metals suitable for tension joints where there is not continuous rapid motion. Where such motion occurs, a layer, or, as it is technically termed, a "cushion," or "testee," between the hard-faced steels of the joints, then possesses the high strength of a wrought-iron one and at the same time the good frictional qualities of a brass surface. Leakage past moving metal joints can be prevented by cutting the surfaces very accurately to fit each other. Steam-engine slide-valves and their seats, and piston "packing-rings" and the cylinders they work to and fro in, may be cited as examples. A subsidiary compressible "packing" is in other situations employed, an instance of which may be seen in the "stuffing boxes" which prevent the escape of steam from steam-engine cylinders through the piston-rod hole in the cylinder cover. Fixed metal joints are derived from the above type and are treated in (c) by hammering in the edge of the metal with a square-edged chisel (the tighter the joint requires to be against leakage the closer must be the spacing of the rivets—compare the rivet-spacing in bridge, ship and boiler-plate joints);(b) by the insertion between the surfaces of a layer of one or other of various kinds of cement, the layer being thick or thin according to circumstances; (c) by the insertion of a layer of soft solid substance called "packing" or "insertion."

Apart from cemented and glued joints, most joints are formed by "cutting out" or more holes in the ends of the pieces to be joined, and inserting in these holes a corresponding number of pins. The word "pin" is technically restricted to mean a cylindrical pin in a movable joint. The word "bolt" is used when the cylindrical pin is screwed up tight with a nut so as to be movable. When the pin is not screwed, but is fastened by being beaten down on either end, it is called a "rivet." The pin is sometimes rectangular in section, and tapered or parallel lengthwise. "Gibs" and "cottars" are examples of the latter. It is very rarely the case that fixed joints have their pins subject to simple compression in the direction of their length, though these are frequently subject to simple tension in that direction, as in riveting plates. A good example is the joint between a steam cylinder and its cover, where the bolts have to resist the whole thrust of the steam, and at the same time to keep the joint steam-tight.

JOINTS, in geology. All rocks are traversed more or less completely by vertical or highly inclined divisional planes termed joints. Soft rocks, indeed, such as loose sand and unconsolidated clay, do not show these planes; but even a soft loam after standing for some time, consolidated by its own weight, will usually be found to have acquired them. Joints vary in sharpness of definition, in the regularity of their perpendicular or horizontal course, in their lateral persistence, in number and in the directions of their intersections. As a rule, they are most sharply defined in proportion to the fineness of grain of the rock. They are often quite invisible, being merely planes of potential weakness, until revealed by the slow disintegrating effects of the weather, which induces fracture along their planes in preference to other directions in the rock; it is along the same planes that a rock breaks most readily under the blow of a hammer. In coarse-textured rocks, on the other hand, joints are apt to show themselves as irregular rents along which the rock has been shattered, so that they present an uneven sinuous course, branching off in different directions. In many rocks they descend vertically at not very unequal distances, so that the spaces between them are marked off into so many well-like masses. But this symmetry often gives place to a more or less tortuous course with lateral joints in various apparently random directions, more especially where in stratified rocks the beds have diverse lithological characters. A single joint may be traced sometimes for many yards or even for several miles, more particularly when the rock is fine-grained and fairly rigid, as in limestone. Where the texture is coarse and unequal, the joints, though abundant, run into each other in such a way that no one in particular can be identified for so great a distance. The number of joints in a mass of rock varies within wide limits. Among rocks which have undergone little disturbance the joints may be separated from each other by intervals of several yards. In other cases where the terrestrial movement appears to have been considerable, the rocks are so jointed as to have acquired therefrom a fissile character that has almost obliterated their tendency to split along the lines of bedding.

The Cause of Joints in Rocks.—The continual state of movement in the earth is manifested in the form of the term "joint," and of the fractures or "cracks" which are the causes of joints. It is to the outermost layers of the lithosphere that joints are confined; in what van Hise has described as the "zone of fracture," which he estimates must extend to a depth of 12,000 metres in the case of rigid rocks. Below the zone of fracture, joints cannot be formed, for there the rocks tend to flow rather than break. The rocky crust, as it slowly accommodates itself to the shrinking interior of the earth, is subjected progressively to stresses which induce it by tension, compression and torsion. Thus joints are produced during the slow cyclical movements of elevation and depression as well as by the more vigorous movements of earthquakes. Joints are formed in three principal ways, namely (1) by the cutting of dry rocks, (2) by the cutting of rocks which have undergone a considerable degree of weathering, and (3) by the cutting of rocks which have undergone a considerable degree of consolidation. Joints are formed by the cutting of rocks, which have undergone a considerable degree of weathering. Joints are formed by the cutting of rocks which have undergone a considerable degree of consolidation. Joints are formed by the cutting of rocks which have undergone a considerable degree of weathering. Joints are formed by the cutting of rocks which have undergone a considerable degree of consolidation.

Movement along Joint Planes.—In some conglomerates the joints may traverse the coarse pebbles and sand and the matrix of the breccia. In other cases the matrix of the breccia is the cementing material; large blocks of hard quartz are cut through by them as sharply as if they had been sliced by a lapidary machine. A similar phenomenon may be observed in joints as they lie embedded in the chalk, and the same joints may be traced continuously through many yards of rock. Such facts show that the agency to which the jointing of rocks was due must have operated with considerable force. Further indication of movement is supplied by the rubbed and striated surfaces of some joints. These surfaces, termed slickensides, have evidently been ground against each other.

Influence of Joints on Water-flow and Scenery.—Joints form natural passageways for the passage of water, and under upward pressure, and have an important bearing upon water supply. Water obtained directly from highly jointed rock is more liable to become contaminated by surface impurities than that from a more compact rock through which it has had to soak its way; for this reason many limestones are objected to as sources of potable water. On exposed surfaces joints have great influence in determining the rate and type of weathering. The effect of joints on the climate of a region, which, by lowering of temperature, expands into ice and wedges off blocks of the rock; and the more numerous the joints the more rapidly does the action proceed. As they serve, in conjunction with other jointed rocks, to divide large quadrangular blocks, their effect on cliffs and other exposed places is seen in the splintered and dislocated aspect so familiar in mountain scenery. In the case of the limestone, joints have been responsible for the course taken by large streams as well as for the type of scenery on their banks. In limestones, which succumb readily to the solvent action of water, the
JOINTURE—JOINVILLE, PRINCE DE

Joints in Limestone Quarry near Mallow, co. Cork.

(G. V. Du Noyer.)

Jointure, in law; a provision for a wife after the death of her husband. As defined by Sir E. Coke, it is "a competent livelihood of freehold for the wife, of lands or tenements, to take effect presently in possession or profit after the death of her husband, for the life of the wife at least, if she herself be not the cause of determination or forfeiture of it." (Co. Litt. 368.) A jointure is of two kinds, legal and equitable. A legal jointure was first authorized by the Statute of Uses. Before this statute a husband had no legal seizin in such lands as were vested in another to his "use," but merely an equitable estate. Consequently it was usual to make settlements on marriage, the most general form being the settlement by deed of an estate to the use of the husband and wife for their lives in joint tenancy (or "jointure"), so that the whole would go to the survivor. Although, strictly speaking, a jointure is a joint estate limited to both husband and wife, in common practice the word extends also to a sole estate limited to the wife only. The requisites of a legal jointure are: (1) the jointure must take effect immediately after the husband's death; (2) it must be for the wife's life or for a greater estate, or be determinable by her own act; (3) it must be made before marriage—if after, it is voidable at the wife's election, on the death of the husband; (4) it must be expressed to be in satisfaction of dower and not of part of it. In equity, any provision made for a wife before marriage and accepted by her (not being an infant) in lieu of dower was a bar to such. If the provision was made after marriage, the wife was not barred by such provision, though expressly stated to be in lieu of dower; she was put to her election between jointure and dower (see Dower).

JOINVILLE, the name of a French noble family of Champagne, which traced its descent from Étienne de Vau, who lived at the beginning of the 11th century. Geoffroi III (d. 1184), sire de Joinville, who married, in 1147, the Lady Elisabeth, daughter of the count of Champagne, to the Holy Land in 1147, received from him the office of seneschal, and this office became hereditary in the house of Joinville. In 1203 Geoffroi V, sire de Joinville, died while on a crusade, leaving no children. He was succeeded by his brother Simon, who married Beatrice of Burgundy, daughter of the count of Auxonne, and had as his son Jean (q.v.), the historian and friend of St Louis. Henri (d. 1374), sire de Joinville, the grandson of Jean, became count of Vaudemont, through his mother, Margaret, daughter of de Vaudemont. Henri of Joinville, sire de Joinville, married in 1393 Ferry de Lorraine (d. 1415), to whom she brought the lands of Joinville. In 1552, Joinville was made into a principality for the house of Lorraine. Mlle de Montpensier, the heiress of Mlle de Guire, bequeathed the principality of Joinville to Philip, duke of Orleans (1603). The castle, which overhung the Marne, was sold in 1791 to be demolished. The title of prince de Joinville (q.v.) was given later to the third son of King Louis Philippe. Two branches of the house of Joinville have settled in other countries: one in England, descended from Geoffroi de Joinville, sire de Vaux, who took part in the crusades, and became the historian, who served under Henry III. and Edward L.; the other, descended from Geoffroi de Joinville, sire de Briquenay, and son of Jean, settled in the kingdom of Naples.

See J. Simonnet, Essai sur l'histoire et la généalogie des seigneurs de Joinville (1875); H. F. Delaborde, Jean de Joinville et les seigneurs de Joinville (1894). (M. P.*)

JOINVILLE, FRANÇOIS FERDINAND PHILIPPE LOUIS MARIE, PRINCE DE (1818-1900), third son of Louis Philippe, duc d'Orléans, afterwards king of the French, was born at Neuilly on the 14th of August 1818. He was educated for the navy, and became lieutenant in 1836; he served in the Mediterranean in 1837, and was at the bombardment of San Juan de Ulloa, in November 1838, when he headed a landing party and took the Mexican general Arista prisoner with his own hand at Vera Cruz. He was promoted captain, and in 1840 was entrusted with the charge of bringing the remains of Napoleon from St Helena to France. In 1844 he conducted naval operations on the coast of Morocco, bombarding Tangier and occupying Mogador, and was recommissioned with the grade of vice-admiral. In the following year he published in the Revue des deux mondes an article on the difficulties of the French navy which attracted considerable attention, and by his hostility to the Guizot ministry, as well as by an affection of ill-will towards Great Britain, he gained considerable and popular popularity. The revolution of 1848 nevertheless swept him away with the other Orleans princes. He hastened to quit Algeria, where he was then serving, and took refuge at Claremont, in Surrey, with the rest of his family. In 1861, upon the breaking out of the American Civil War, he proceeded to Washington, and placed the services of his son and two of his nephews at the disposal of the United States government. Otherwise, he was little heard of until the overthrow of the Empire in 1870, when he re-entered France, only to be promptly expelled by the government of national defence. Returning incognito, he joined the army of General d'Aurelle de Paladines, under the assumed name of Colonel Lutherod, fought bravely before Orleans, and afterwards, divulging his identity, formally sought permission to serve. Gambetta, however, arrested him and sent him back to England. In the National Assembly, elected in February 1871, the prince was returned by two departments and elected to sit for the Haute Marne, but, by an arrangement with Thiès, old
not take his seat until the latter had been chosen president of the provisional republic. His deafness prevented him from making any figure in the assembly, and he resigned his seat in 1876. In 1886 the provisions of the law against pretenders to the throne deprived him of his rank as vice-admiral, but he continued to live in France, and died in Paris on the 16th of June 1900. He had married in 1843 the princess Franciska, sister of Pedro II., emperor of Brazil, and had a son, the duc de Penthièvre (born in 1843), also brought up to the navy, and a daughter Françoise (1844— ) who married the duc de Chartres in 1863.

The prince de Joinville was the author of several essays and pamphlets on naval affairs and other matters of public interest, which were originally published for the most part either unsigned or pseudonymously, and subsequently republished under his own name after the fall of the Empire. They include Essais sur la marine française (1853); Études sur la marine (1859 and 1870); La Guerre d'Amérique, campagne du Potomac (1862 and 1872); Encore un mot sur Sadove (Brussels, 1868); and Vieux souvenirs (1894).

JOINVILLE, JEAN, SIRE DE (1224—1310), was the second great writer of history in Old French, and in a manner occupies the interval between Villehardouin and Froissart. Numerous minor chroniclers fill up the gaps, but no one of them has the idiosyncrasy which distinguishes these three writers, who illustrate the three periods of the middle ages—admirable for their style, masterly for their power, and profound for their knowledge. Joinville was a head of a noble family of the province of Champagne (see Joinville, above). The provincial court of the counts of Champagne had long been a distinguished one, and the action of Thibaut the poet, together with the proximity of the district to Paris, made the province less rebellious than most of the great feudal divisions of France to the royal authority. Joinville's first appearance at the king's court was in 1241, on the occasion of the knighting of Louis IX.'s younger brother Alphome. Seven years afterwards he took the cross, thereby giving St Louis a valuable follower, and supplying himself with the occasion of an eternal memory. The crusade, in which he distinguished himself equally by wisdom and prowess, taught his practical spirit several lessons. He returned with the king in 1254. But, though his reverence for the personal character of his prince seems to have known no bounds, he had probably gauged the strategic faculties of the saintly king, and he certainly had imbibed the spirit of the dictum that a man's first duties are those to his own house. He was in the intervals of residence on his own fief a constant attendant on the court, but he declined to accompany the king on his last and fatal expedition. In 1258 he was one of the witnesses whose testimony was formally given at St Denis in the matter of the canonization of Louis, and in 1258 he was present at the exhumation of the saint's body. It was not till even later that he began his literary work, the occasion being a request from Jeanne de Navarre, the wife of Philippe le Bel and the mother of Louis le Huitin. The great interval between his experiences and the period of the composition of his history is important for the due comprehension of the latter. Some years passed before the task was completed, on its own showing, in October 1309. Jeanne was by this time dead, and Joinville presented his book to her son Louis the Quarreller. This original manuscript is now lost, whereby hangs a tale. Great as was his age, Joinville had not ceased to be actively loyal, and in 1315 he complied with the royal summons to bear arms against the Flemings. He was at Joinville again in 1317, and on the 11th of July 1319 he died at the age of ninety-five, leaving his possessions and his position as seneschal of Champagne to his second son Anselm. He was buried in the neighbouring church of St Laurent, where during the Revolution his bones underwent profanation. Besides his Histoire de Saint Louis and his Credo or Confession of Faith written much earlier, a considerable number, relating to the origin and business documents concerning the fief of Joinville and so forth are extant. These have an importance which we shall consider further on; but Joinville owes his place in general estimation only to his history of his crusading experiences and of the subsequent fate of St Louis.

Of the famous French history books of the middle ages Joinville's bears the most vivid impress of the personal character-istics of its composer. It does not, like Villehardouin, give us a picture of the temper and habits of a whole order or cast of men during a heroic period of human history; it falls far short of Froissart in vivid portraying of the picturesque and external aspects of social life; but it is a more personal book than either. The age and circumstances of the writer must not be forgotten in reading it. He is a very old man telling of circumstances which occurred in his youth. He evidently thinks that the times have not changed for the better—what with the frequency with which the devil is invoked in modern France, and the sinful expenditure common in the matter of embroidered silk coats. But this laudation of times past concentrates itself almost wholly on the period of the first crusade, and on the events which preceded him in his own time. The dependence he had declined to swear fealty to him, "because I was not his man," he evidently regarded with an unlimited reverence. His age, too, while garrulous to a degree, seems to have been free from the slightest taint of boasting. No one perhaps ever took less trouble to make himself out a hero than Joinville. He is constantly admitting that on such and such an occasion he was terribly afraid; he confesses without the least shame that, when one of his followers suggested defection of the Saracens and voluntary death, he (Joinville) paid not the least attention to it. He seems to have had a talent for doing good without doing it, and how he managed to keep company St Louis on his unlucky second crusade, or his invincible conviction that it was better to be in mortal sin than to have the leprosy, or his decided preference for wine as little watered as might be, or any other weakness. Yet he was a sincerely religious man, as the curious Credo, written at Acre and forming a kind of anticipatory appendix to the history, sufficiently shows. He presents himself as an altogether human person, brave enough in the field, and, at least when young, capable of extravagant devotion to an ideal, provided the ideal was fashionable, but having at bottom a sufficient respect for his own skin and a full consciousness of the side on which his bread is buttered. But can he be said to be in all respects an intelligent traveller. There were in him what may be called glimmerings of deliberate literature, but they were hardly more than glimmerings. His famous description of Greek fire has a most provoking mixture of circumstantial detail with absence of verifying particulars. It is as matter-of-fact and comparative as Dante, without a touch of Dante's genius. "The fashion of Greek fire was such that it came to us as great as a tun of verjuice, and the fiery tail of it was as big as a mighty lance; it made such noise in the coming that it seemed like thunder; it had the power to blow like a dragon flying through the air; so great a light did it throw that through out the host men saw as though it were day for the light it threw." Certainly the excellent seneschal has not stinted himself of comparisons here, yet they can hardly be said to be luminous. That the thing made a great flame, a great noise, and struck terror into the beholder is about the sum of it all. Every now and then indeed a striking circumstance, strikingly told, occurs in Joinville, such as the famous incident of the woman who carried in one hand a chafing dish of fire, in the other a phial of water, that she might burn heaven and quench hell, last in future any man should serve God merely for hope of the one or fear of the other. But in these cases the author only repeats what he has heard from others. On his own account he is much more interested in small personal details than in greater things. How the Saracens, when they took him prisoner, he being half dead with a complication of diseases, kindly left him "un mien couverture d'écarlate" which his mother had given him, and which he put over him, having made a hole therein and bound it round him with a cord; how when he came to Acre in a pitiable condition an old servant of his house presented himself, and "brought me clean white hoods and combed my hair most comfortably; he afterwards bought a hundred tens of wine and served it in—the best first, according to high authority—well-watered to his private soldiers, somewhat less watered to the squires, and to the knights next, but with a suggestive phial of the weaker liquid to mix "si comme ils vouloient" these are the details in which he seems to take greatest pleasure, and for readers six hundred years after date perhaps they are not the least interesting details.
It would, however, be a mistake to imagine that Joinville's book is exclusively or even mainly a chronicle of small beer. If he is not a Villiers de l'Isle Adam or a Carlyle, his battlepieces are vivid and truthful, and he has occasional passages of its small episodic importance, such as that dealing with the Old Man of the Mountain. But, above all, the central figure of his book redeems it from the possibility of the charge of being commonplace or ignoble. To St Louis Joinville is a nobler Boswell; and hero-worshipper, hero, and heroic ideal all have something of the sublime about them. The very pettiness of the details in which the good seceshal indulges as to his own weakness only serves to enhance the sublime worldliness of the king. Joinville is a hero as such, but he is a Christian hero, and he is wittily and frankly prayers for his own safety, the latter only thinks of his army's safety, he has escaped from the hands of the aliens. One of the king's knights boasts that ten thousand pieces have been "forcontes" (counted short) to the Saracens; and it is with the utmost trouble that Joinville and the rest can persuade the king that this is a joke, and that the Saracens are much more likely to have got the advantage. He warns Joinville against wine-bibbing, against bad language, against all manner of foibles small and great; and the pupil acknowledges that this physician at any rate had a certain success. But it is easy to understand the half-despairing adoration with which a shrewd and somewhat prosaic like Joinville must have regarded this flower of chivalry born out of due time. He has had his reward, for assuredly the portrait of St Louis, from the early collection of anecdotes to the last hearst sketch of the woeful end at Tunis, with the famous enseignement which is still the best summary of the theoretical duties of a Christian king in medieval times, is such as to take away all charge of vulgarity or mere commetmage from Joinville, a charge to which otherwise he might perhaps have been exposed.

Of these the last is very brief, the first not long; the middle constitutes the bulk of the work. The contents of the first part are, as might be expected, miscellaneous enough, and consist chiefly of stories chosen to show the valour of Louis, his piety, his justice, his personal temperance, and so forth. The second part enters upon the history of the crusade itself, and tells how Joinville pledged all his land save so much as would bring in a thousand livres a year, and started with a brave retinue of nine knights (two of whom besides himself wore banneters), and shared a ship with the sire d'Aspremont, leaving Joinville without raising his eyes," pour ce que le cuer ne me attendrist du biau chasteil que je lessoie et de mes deux enfans "; how they could not get out of sight of a high mountainous island (Lampedusa or Pantellaria) till they had made a procession round the mast in honour of the Virgin; how they reached first Cyprus and then Egypt, and how their tools made Damielita, and then enchanter themselves in the Delta. Bad generalship, which is sufficiently obvious, unwholesome food—it was Lent, and they ate the Nile fish which had been feasting on the carcasses of the slain—and Greek fire did the rest, and personal valour was of little avail, not merely against superior numbers and better generals, but against dysentery and a certain "mal de l'est" which attacked the mouth and the legs, a curious human version of a well-known bestial malady. After ransom Ace was the chief scene of Louis's stay in the East, and here Joinville lived in some state, and saw not a few interesting things, hearing besides much gospal as to the inferior affairs of Asia from unpractical generals, most of which he says were, after a journey back again to France, not without considerable experiences of the perils of the deep, which Joinville tells with a good deal of spirit. The remainder of the book is very brief. Some anecdotes of the king's "justice," his favourite and distinguishing attribute during the sixteen years which intervened between the two crusades, are given; then comes the story of Joinville's own refusal to join the second expedition, a refusal which bluntly alleged the harm done by the king's men who stayed at home to the valor of those who went abroad as the reason of Joinville's resolution to remain behind. At the end of the book, Joinville's, enseignement to his son, and the story of his canonization complete the work.

The book in which this interesting story is told has had a literary history which less affects its matter than the vicissitudes to which Froissart has been subjected, but which is hardly less curious in its way. There is no reason to suppose that Joinville intended in various editions, such as those which have given Kervyn de Lettenhofe and Simeon Luce so much trouble, and which make so vast a difference between the first and the last redaction of the chronicler of Joinville, that the book of the sixteenth century is a translation of the book of Maxen; and that Joinville himself, a mere seneschal of Champagne, and his intimate first-hand acquaintance with his subject, made such variations extremely improbable. But, whereas there is no great difficulty (though much labour) in ascertaining the original of all subsequent editions of the text, it is found that Joinville was until recently unknown, and even now may be said to be in the state of a conjectural restoration. It has been said that his "sole work was published in 1550, a copy catalogue of Louis le Huitin's library, and, strange to say, Joinville does not figure in it. His book seems to have undergone very much the same fate as that which befell the originals of the first two volumes of the Paston Letters which Sir John Fenno presented to George the Third. Several royal library catalogues of the 14th century are known, but in none of these does the Histoire de St Louis appear. The first edition ever published in the 19th century, a copy even of this survives. As everybody knows, however, books could be and were multiplied by the process of copying tolerably freely, and a copy at first or second hand which belonged to the fifteenth century would be used for the first printed edition in 1457. Other editions were printed from other versions, all evidently posterior to the original. But in 1741 the well-known medievalist La Curse de St Palafa was printed at Lucca a manuscript of the 16th century, evidently representing an older text than any yet printed. Three years later a 14th-century copy was found at Brussels, and this is the standard manuscript authority for the present. Joinville's book is thus without a doubt to have this, which appears in the well-known collection of Michaud and Poujollet as well as that of Buchon, and in a careful and useful separate edition by Francisque Michel. The genuine text of it is, however, still a subject of doubt, as the medieval texts the principles long recognized in editing the classics, has discovered in the 16th-century manuscript, and still more in the original. It is particularly pertinent to joinville's readers, already alluded to, the materials for what we have already called a conjectural restoration, which is not without its interest, though perhaps it is possible for that interest to be exaggerated.

For merely general readers Buchon's or Michaud's editions of Joinville will amply suffice. Both include translations into modern French, which, however, are hardly necessary, for the language is very easy. Natalis de Wailly's editions of 1868 and particularly 1874 are critical editions, embodying the modern research connected with the text, the value of which is considerable, but contestable. They are accompanied by ample annotations and appendices, with illustrations of great merit and value. Many of the passages that have already referred to, the materials for what we have already called a conjectural restoration, which is not without its interest, though perhaps it is possible for that interest to be exaggerated.

JOIST, in building, one of a row or tier of beams set edgewise from one wall or partition to another and carrying the flooring boards on the upper edge and the laths of the ceiling on the lower. In double flooring there are three series of joists, binding, bridging, and ceiling joists. The binding joists are the real support of the floor, running from wall to wall, and carrying the bridging joists above and the ceiling joists below (see CARPENTRY),
The Mid. Eng. form of the word was giste or gyste, and was adapted from O. Fr. giste, modern gîte, a beam supporting the platform of a gun. By origin the word meant that on which anything lies or rests (gîter, to lie; Lat. jacere).

The English word "gist," in such phrases as "the gist of the matter," the main or central point in an argument, is a doublet of Joist. According to Skeat, the origin of this meaning is an O. Fr. proverbial expression, Je sçay bien où gist le lièvre, I know well where the hare lies, i.e. I know the real point of the matter.

JÓKAI, MAURUS (1825-1904), Hungarian novelist, was born at Rév-Komárom on the 10th of February 1825. His father, Joseph, was a member of the Asva branch of the ancient Jókai family; his mother was a scion of the noble Pulays. The lad was timid and delicate, and therefore educated at home till his tenth year, when he went to Pest Subsequent to completing his education at the Calvinist college at Pápa, where he first met Petőfi, Alexander Kozma, and several other brilliant young men who subsequently became famous. His family had meant him to follow the law, his father's profession, and accordingly the youth, always singularly assiduous, plodded conscientiously through the usual curriculum at Kecskemet and Pest, and as a full-blown advocate actually succeeded in winning his first case. But the drudgery of a lawyer's office was uncongenial to the ardently poetical youth, and, encouraged by the encomiums pronounced upon the Hungarian version of his first work, in 1846, the Poems of Jókai ("The Jew Boy"), he flitted, when twenty, to Pest in 1845 with a MS. romance in his pocket; he was introduced by Petőfi to the literary notabilities of the Hungarian capital, and the same year his first notable romance Hétkétnapiok ("Working Days"), appeared, first in the columns of the Pesti Dieulafr, and subsequently, in 1846, in book form. Hétkétnapiok, despite its manifest crudities and extravagances, was instantly recognized by all the leading critics as a work of original genius, and in the following year Jókai was appointed the editor of Életképek, the leading Hungarian literary journal, and soon became a member of the Privy Council. On the outbreak of the revolution of 1848 the young editor enthusiastically adopted the national cause, and served it with both pen and sword. Now, as ever, he was a moderate Liberal, setting his face steadily against all excesses; but, carried away by the Hungarian triumphs of April and May 1849, he supported Kossuth's fatal blunder of deposing the Hapsburg dynasty, and, though, after the war was over, his life was saved by an ingenious stratagem of his wife, the great tragic actress, Roza Benke Laborfalvi, whom he had married on the 29th of August 1848, he lived for the next four or five years in a political suspect. Yet, there was perhaps the most glorious period of his existence for during that time he devoted himself to the rehabilitation of the proscribed and humiliated Magyar language, composing in it no fewer than thirty great romances, besides innumerable volumes of tales, essays, criticisms and facetiae. This was the period of such masterpieces as Erdely Arany Kord ("The Golden Age of Transylvania"), with its sequel Törvényalás Magyarországon ("The Turks in Hungary"), Egy Magyar Nádor ("A Hungarian Nabob"), Karápáthy Zoltán, Janisztok törzsgép ("The Last Days of the Janissaries"), Szomör apok ("Sad Days"). On the re-establishment of order in Hungary all foreign and domestic affairs were in Jókai's hands in 1867, Jókai took an active part in politics. As a constant supporter of the Tisza administration, not only in parliament, where he sat continuously for more than twenty years, but also as the editor of the government organ, Hon, founded by him in 1863, he became a power in the state, and, though he never took office himself, frequently extricated the government from difficult places. In 1867 the emperor appointed him a member of the upper house. As a suave, practical and witty debater he was particularly successful. Yet it was to literature that he continued to devote most of his time, and his productivity after 1870 was stupendous, amounting to some hundreds of volumes.

Stranger still, none of this work is slipped, and the best of it deserves to endure. Amongst the finest of his later works may be mentioned the unique and incomparable As arany ember ("A Man of Gold")—translated into English under the title of Timar's Two Worlds—and A tangernemű hölgy ("Eyes like the Sea"), the latter of which won the Academy's prize in 1890. He died at Budapest on the 5th of May 1904; his wife having predeceased him in 1886. Jókai was an arch-romantic, with a perpervid Oriental imagination, and humour of the purest, rarest description. If one can imagine a combination, in almost equal parts, of Walter Scott, William Beckford, Dumas père, and Charles Dickens, together with the native originality of an ardent Magyar, one may perhaps form a fair idea of the great Hungarian romantic's indisputable genius.

was represented by iron and steel goods. There are large industrial establishments just outside the city limits. The first settlement on the site of Jolliet (1833) was called Jolliet in honor of the daughter of James B. Campbell, one of the settlers. The present name was adopted in 1845, in memory of Louis Jolliet (1645-1700), the French Canadian explorer of the Mississippi, and in 1852 a city charter was secured.

JOLLY (from Fr. jolly; F. joli), the French word is obscure in origin; it may be from late Lat. gaudivus, from gaudere, to rejoice, the change of d to i being paralleled by cigade and cigale, or from O. Norse jol, Eng. "yule," the northern festival of midwinter, and adjective meaning gay, cheerful, jovial, high-spirited. The colloquial use of the term as an intensive adverb, meaning extremely, very, was in early usage quite literary; thus John Trapp (1601-1669), Commentaries on the New Testament, Matthew (1647), writes, "All was jolly quiet at Ephesus before St. Paul came hither." In the royal navy "jolly" used as a substantive, is the slang name for a marine. To "jolly" is a slang synonym for "chaff." The term "jolly boat," the name of a ship's small broad boat, usually clinker-built, is of doubtful etymology. It occurs in English in the 18th century, and is usually connected with Dan. or Swed. jole, Dutch jol, a small ship's boat; these words are properly represented in English by "yawl" originally a ship's small boat, now chiefly used of a rig of sailing vessels, with a cutter-rigged foremast and a small mizen stepped far aft, with a sparker sail (see Rigging). A connex on has been suggested with a word of much earlier appearance in English, jolyad, or goljuyatle. This occurs at the end of the 15th century. It is a smaller type of ship's boat. This is supposed to be a corruption of the French galiole or Dutch gallow, (see Galley). The galiole was, however, a large vessel.

JOLLY DE LOTBIÈRE, SIR HENRI GUSTAVE (1829-1928), Canadian politician, was born at Epernay in France on the 6th of December 1829. His father, Gaspard Pierre Gustave Joly, the owner of famous vineyards at Epernay, was of Huguenot descent, and married Julie Christine, grand-daughter of Eustache Gaspard Michel Charitet de Lotbinière, marquis de Lotbinière (one of Montcalm's engineers at Quebec); he thus became seigneur de Lotbinière. Henri Gustave adopted the name de Lotbinière in 1888, under a statute of the province of Quebec. He was educated in Paris, and called to the bar of lower Canada in 1858. On the 6th of May 1856 he married Marguerite Josephine (d. 1904), daughter of Hammond Gowen, of Quebec. At the general election of 1861 he was elected to the house of assembly of the province of Canada as Liberal member for the county of Lotbinière, and from 1867 to 1874 he represented the same county in the House of Commons, Ottawa, and in the legislative assembly, Quebec. Joly was opposed to confederation and supported Dorion in the stand which he took on this question. In 1878 he was called by Lue Letellier de St Just, lieutenant-governor of Quebec, to form an administration, which was defeated in 1879, and until 1883 he was leader of the opposition. During his brief administration he adopted a policy of retreatment, and endeavoured to abolish the legislative council. In 1885, as a protest against the attitude of his party towards Louis Riel, who was tried and executed for high treason, he retired from public life. Early in the year 1885 he was induced again to take an active part in the campaign of his party, and at the general election of 1896 he was returned as member for the county of Portneuf. He had already in 1895 been created K.C.M.G. On the formation of Sir Wilfrid Laurier's administration he accepted the office of controller of inland revenue, and a year later he became a privy councillor, as minister of inland revenue. From 1900 to 1906 he was lieutenant-governor of the province of British Columbia. He twice declined a seat in the senate, but rendered eminent service to Canada by promoting the interest of agriculture, horticulture, and forestry. He died on the 17th of November 1908.

JOMINI, ANTOINE HENRI, BARON (1779-1869), general in the French and afterwards in the Russian service, and one of the most celebrated writers on the art of war, was born on the 6th of March 1779 at Payerne in the canton of Vaud, Switzerland, where his father was syndic. His youthful preference for a military life was disappointed by the dissolution of the Swiss regiments of France at the Revolution. For some time he was a clerk in a Paris banking-house, until the outbreak of the Swiss revolution. At the age of nineteen he was appointed to a post on the Swiss headquarters staff, and when scarcely twenty-one to the command of a battalion. At the peace of Lunéville in 1801 he deserted to business life in France. He was, however, determined to prepair the celebrated Traité des grandes opérations militaires, which was published in 1804-1805. Introduced to Marshal Ney, he served in the campaign of Austerlitz as a volunteer aide-de-camp on Ney's personal staff. In December 1805 Napoleon, being much impressed by a chapter in Jomini's treatise, made him a colonel in the French service. Ney thereupon made him his principal aide-de-camp. In 1806 Jomini published his views as to the conduct of the impending war with Prussia, and this, along with his knowledge of Frederick the Great's campaigns, made him a part of the Traité, led Napoleon to attach to him his own headquarters. He was present with Napoleon at the battle of Jena, and at Eylau won the cross of the Legion of Honour. After the peace of Tilsit he was made chief of the staff to Ney, and created a baron. In the Spanish campaign of 1808 his advice was often of the highest value to the marshal, but Jomini quarrelled with his chief, and was left almost at the mercy of his numerous enemies, especially Berthier, the emperor's chief of staff. Overtures had been made to him, as early as 1807, to enter the Russian service, but Napoleon, hearing of his intention to leave the French army, compelled him to remain in the service with the rank of general of division. For some years thereafter Jomini held both a French and a Russian commission, with the consent of both sovereigns. But when war between France and Russia broke out, he was in a difficult position, which he ended by taking a command on the line of communication. He was thus engaged when the retreat from Moscow and the uprising of Prussia transferred the seat of war to central Germany. He promptly rejoined Ney, took part in the battle of Lützen and, as chief of the staff of Ney's group of corps, rendered distinguished services before and at the battle of Bautzen, and was despatched to the rank of general of division. Berthier, however, not only erased Jomini's name from the list, but put him under arrest and censured him in army orders for failing to supply certain returns that had been called for. How far Jomini was held responsible for certain misunderstandings which prevented the attainment of all the results hoped for from Ney's attack (see BAUTZEN) there is no means of knowing. But the pretext for censure was trivial and baseless, and during the armistice Jomini did as he had intended to do in 1809-10, and went into the Russian service. As things then were, this was tantamount to deserting to the enemy, and so it was regarded by Napoleon and by the French army, although not a few of his new comrades. It must be observed, in Jomini's defence, that he had for years held a dormant commission in the Russian army, that he had declined to take part in the invasion of Russia in 1812, and that he was a Swiss and not a Frenchman. His patriotism was indeed unquestioned, and he withdrew from the Allied Army in 1814 when he found that he could not prevent the violation of Swiss neutrality. Apart from love of his own country, the desire to study, to teach and to practise the art of war was his ruling motive. At the critical moment of the battle of Eylau he exclaimed, "If I were the Russian commander for two hours!" On joining the allies he received the rank of lieutenant-general and the appointment of aide-de-camp from the tsar, and rendered important assistance during the German campaign, though the charge that he betrayed the numbers, positions and intentions of the French to the enemy was later acknowledged by Napoleon to be without foundation. He declined as a Swiss patriot and as a French officer to take part in the passage of the Rhine at Basel and the subsequent invasion of France.

In 1815 he was with the emperor Alexander in Paris, and attempted in vain to save the life of his old commander Ney.
Jommelli—Jonah

This almost cost him his position in the Russian service, and he succeeded in making head against his enemies, and took part in the congress of Vienna. Resuming, after a period of several years of retirement and literary work, his post in the Russian army, he was about 1833 made a full general, and thenceforward, until his retirement in 1832, he was principally employed in the military education of the tsarevich Nicholas (afterwards emperor) and in the organization of the Russian staff college, which was opened in 1832 and still bears its original name of the Nicholas academy. In 1828 he was employed in the field in the Russian-Turkish War, and at the siege of Varna he was given the grand cordon of the Alexander order. This was his last active service. In 1829 he settled at Brussels where he chiefly lived for the next thirty years. In 1833, after trying without success to bring about a political understanding between France and Russia, Jomini was called to St Petersburg to act as a military adviser to the tsar during the Crimean War. He returned to Brussels on the conclusion of peace in 1856 and some years afterwards settled at Passy near Paris. He was busily employed up to the end of his life in writing treatises, pamphlets and open letters on subjects of military art and history, and in 1839 he was asked by Napoleon III. to furnish a plan of campaign in the Italian War. One of his last essays dealt with the war of 1866 and the influence of the breech-loading rifle, and he died at Passy on the 24th of March 1869 only a year before the Franco-German War. Thus one of the earliest of the great military theorists lived to speculate on the tactics of the present day.

Amongst his numerous works the principal, besides the Traité, are: Histoire critique et militaire des campagnes de la Révolution (1806; new ed. 1819-1824); Vie politique et militaire de Napoléon racontée par lui-même (1827) and, perhaps the best known of all his publications, the theoretical Précis de l'art de la guerre (1836).

See Ferdinand Lecomte, Le Général Jomini, sa vie et ses écrits (1861; new ed. 1888); C. A. Saint-Beuve, Le Général Jomini (1860); A. Pascal, Observations historiques sur la vie, etc., du général Jomini (1842).

Jommelli, Niccola (1714-1774), Italian composer, was born at Aversa near Naples on the 10th of September 1714. He received his musical education at two of the famous music schools of that capital, being a pupil of the Conservatorio de' poveri di Gesù Cristo under Peno, and also of the Conservatorio della pietà dei Turchini under Prota, Mancini and Leo. His first opera, L'Errore amoroso, was successfully produced at Naples (under a pseudonym) when Jommelli was only twenty-three. Three years afterwards he went to Rome to bring out two new operas, and thence to Bologna, where he profited by the advice of Padre Martini, the greatest contrapuntist of his age. In the meantime Jommelli's fame began to spread beyond the limits of his country, and in 1748 he went for the first time to Vienna, where one of his finest operas, Didone, was produced. Thence he proceeded to Dresden, in 1753 he was appointed to the post of chapel-master to the duke of Württemberg at Stuttgart, which city he made his home for a number of years. In the same year he had ten commissions to write operas for princely courts. In Stuttgart he permitted no operas but his own to be produced, and he modified his style in accordance with German taste, so much that, when after an absence of fifteen years he returned to Naples, his countrymen hissed two of his operas off the stage. He retired in consequence to his native village, and only occasionally emerged from his solitude to take part in the musical life of the capital. His death took place on the 25th of August 1774, his last composition being the celebrated Misere(re), a setting for two female voices of Saverio Mattei's Italian paraphrase of Psalm li. Jommelli is the most representative composer of the generation following Leo and Durante. He approaches very closely to Mozart in his style, and is important as one of the composers who, by welding together German and Italian characteristics, helped to form the musical language of the great composers of the classical period of Vienna.

Jonah, in the Bible, a prophet born at Gath-hepher in Zebulun, perhaps under Jeroboam (2 Kings i.) who foretold the deliverance of Israel from the Aramaeans (2 Kings xiv.-25). This prophet may also be the hero of the much later book of Jonah, but how different a man is he! It is, however, the later Jonah who chiefly interests us. New problems have arisen out of the book which relates to him, but here we can only attempt to consider what, in a certain sense, may be called the surface meaning of the text.

This, then is what we appear to be told. The prophet Jonah is summoned to go to Nineveh, a great and wicked city (cf. 4 Esdras ii. 8, 9), and prophesy against it. Jonah, however, is afraid (iv. 2) that the Ninevites may repent, so, instead of going himself to Nineveh, he procures from the king of Joppa, and takes his passage in a ship bound for Tarshish. But soon a storm arises, and, supplanting to the gods falling, the sailors cast lots to discover the guilty man who has brought this great trouble. The lot falls on Jonah, who has been roughly awakened by the captain, and when questioned frankly owns that he is a Hebrew and a worshipper of the divine creator Yahweh, from whom he has sought to flee (as if He were only the god of Canaan). Jonah advises the sailors to throw him into the sea. This, after praying to Yahweh, they actually do; at once the sea becomes calm and the vessel makes its way to Nineveh. Meantime God has "appointed a great fish" which swallows up Jonah. Three days and three nights he is in the fish's belly, till, at a word from Yahweh, it vomits Jonah on to the dry ground. Again Jonah receives the divine call. This time he obeys. After delivering his message to Nineveh he makes himself a booth outside the walls and waits in vain for the destruction of the city (probably iv. 5 is misplaced and should stand after iii. 4). Threonupon Jonah beseeches Yahweh to take away his worthless life. As an answer Yahweh "appoints" a small quickly-growing tree with large leaves (the castor-oil plant) to come up over the angry prophet, and the shelter from the sun. But the next day the beneficent tree perishes by God's "appointment" from a worm-bite. Once more God "appoints" something; it is the east wind, which, together with the fierce heat, brings Jonah again to desperation. The close is fine, and reminds us of Job. God himself gives short-sighted man a lesson. Jonah has pitied the tree, and should not God have pity on so great a city? Two results of criticism are widely accepted. One relates to the psalm in ch. ii., which has been transferred from some other place; it is in fact an anticipatory thanksgiving for the deliverance of Israel, mostly composed of phrases from other psalms. The other is that the narrative before us is not historical, but an imaginative story (such as was called a Midrash) based upon Biblical data and tending to edification. It is, however, a story of high type. The narrator considered that Israel had to be a prophet to the "nations" at large, that Israel had, like Jonah, neglected its duty and for its punishment was "swallowed up" in foreign lands. God had watched over His people and prepared its chosen members to fulfil His purpose. This company of faithful but not always sufficiently charitable men represented their people, so that it might be said that Israel itself (the second personage in the story) had taken up its duty, but in an ungenial spirit which grieved the All-merciful One. The book, which is post-exilic, may therefore be grouped with another Midrash, the Book of Ruth, which also appears to represent a current of thought opposed to the exclusive spirit of Jewish legalism.

Some critics, however, think that the key of symbolism needs to be supplemented by that of mythology. The "great fish" especially has a very mythological appearance. The Babylonian dragon myth (see COSMOGONY) is often alluded to in the Old Testament, e.g. in Jer. ii. 14, which, as the present writer long since pointed out, may supply the missing link between Jonah ii. 17 and the original myth. For the "great fish" is ultimately Tiamat, the dragon of chaos, represented historically by Nebuchadrezzar, by whom for a time God permitted or "appointed" Israel to be swallowed up.

For further details see T. K. Cheyne, Encyc. Bibb., "Jonah"; and his article "Jonah, a Study in Jewish Folklore and Religion," Theological Review (1872), pp. 210-217. See also Rink, basing his Die Bibel, "Jonah," full but not lucid; C. H. H. Wright, Biblical Studies (1886) argues ably for the symbolic theory. Against Cheyne, see Martin's work on the Minor Prophets (1894); the "great fish"...
and the "three days and three nights" remain unexplained by this writer. On these points see Zimmermann, K.A.T. (3), pp. 366, 389, 508.

The difficulties of the mission of a Hebrew prophet to Assyria are diminished by Cheyne's later theory, Critica Biblica (1894), pp. 150-152.

(T. K. C.)

JOHAN, RABBI (Abelwald Merwan Ibn Janah, also R. Marcus) (c. 909-c. 1050), the greatest Hebrew grammarians and lexicographer of the middle ages. He was born before the year 990, in Cordova, studied in Lucena, left his native city in 1012, and, after somewhat protracted wanderings, settled in Saragossa, where he died before 1050. He was a physician, and Ibn Abi Usha'ila, in his treatise on Arabic doctors, mentions him as the author of a medical work. But Rabbi Jonah saw the true value of his life's scientific investigation of the Hebrew language and in a rational biblical exegesis based on linguistic knowledge. It is true, he wrote no actual commentary on the Bible, but his philological works exercised the greatest influence on Judaic exegesis. His first work—composed, like all the rest, in Arabic—bears the title Almustafa, and forms, as is indicated by the word, a criticism and at the same time a supplement to the two works of Yehuda Ḥayyuj on the verbs with weak-sounding and double-sounding roots. These two tracts, with which Ḥayyuj had laid the foundations of scientific Hebrew grammar, were recognized by Abulwalid as the basis of his own grammatical investigations. Abulwalid, when enumerating the great Spanish Jews in his history, sums up the significance of R. Jonah in the words: "He completed what Ḥayyuj had begun." The principal work of R. Jonah is the Kitab al-Tanbih ("Book of Exact Investigation"), which consists of two parts, regarded as two distinct books—the Kitab al-Luma ("Book of Many-coloured Flower-beds") and the Kitab al-ṣayl ("Book of Roots"). The former (ed. J. Derenberg, Paris, 1886) contains the grammar, the latter (ed. Ad. Neubauer, Oxford, 1879) the lexicon of the Hebrew language. Both works are also published in the Hebrew translation of Yehuda Ibn Tībība (Sefer Ha-Rikmah, ed. B. Goldberg, Frankfurt am Main, 1855; Sefer Ha-O-Schoraschim, ed. W. Bacher, Berlin, 1897). The other Rabbi Jonah, so far as extant, have appeared in an edition of the Arabic original accompanied by a French translation (Opuscules et traités d'Abou' Walid, ed. Joseph and Hartwig Derenberg, Paris 1880). A few fragments and numerous quotations in his principal book form our only knowledge of the Kitab al-Tashmir ("Book of Refutation") a controversial work in four parts, in which Rabbi Jonah successfully repelled the attacks of the followers of his first tract. At the beginning of this opposition stood the famous Samuel Ibn Naqudah (S. Ha-Nagilda) a disciple of Ḥayyuj. The grammatical work of Rabbi Jonah extended, moreover, to the domain of rhetoric and biblical hermeneutics, and his lexicon contains many exegetical excursuses. This lexicon is of especial importance by reason of its ample contribution to the comparative philology of the Semitic languages—Hebrew and Arabic, in particular. Abulwalid's works mark the consummating point of Hebrew scholarship during the middle ages, and he attained a level which was not surpassed till the modern development of philological science in the 19th century.

Bacher, Leben und Werke des Abulwalid und die Quellen seiner Schriftenklärung (Leipzig, 1885); id., Aus der Schriffsklärung des Abulwalid (Leipzig, 1889); id., Die hebr.-arabischen Sprachvergleichung des Abulwalid (Vienna, 1884); id., Die hebräisch-neubeutsch und hebr.-arabisch Sprachvergleichung des Abulwalid (Vienna, 1885). (W. Ba.)

JONAS, JUSTUS (1493-1555), German Protestant reformer, was born at Nordhausen in Thuringia, on the 5th of June 1493. His real name was Jodokus (Jobst) Koch, which he changed according to the common custom of German scholars in the 16th century, when at the university of Erfurt. He entered that university in 1506, studied law and the humanities, and became Master of Arts in 1510. In 1511 he went to Wittenberg, where he took his bachelor's degree in law. He returned to Erfurt in 1514 or 1515, was ordained priest, and in 1513 was promoted doctor in both faculties and appointed to a well-endowed canonry in the church of St Severus, to which a professorship of law was attached. His great admiration for Erasmus first led him to Greek and biblical studies, and his election in May 1519 as rector of the university was regarded as a triumph for the partisans of the New Learning. It was not, however, until after the Leipzig disputation with Eck that Luther won his allegiance. He accompanied Luther to Worms in 1521, and there was appointed by the elector of Saxony professor of canon law at Wittenberg. During Luther's stay in the Wartburg Jonas was one of the most active of the Wittenberg reformers. Giving himself up to teaching and polemics, he aided the work against his gift as a translator, turning Luther's and Melancthon's works into German or Latin as the case might be, thus becoming a sort of double of both. He was busied in conferences and visitations during the next twenty years, and in diplomatic work with the princes. In 1541 he began a successful preaching crusade in Halle; he became superintendent of its churches in 1542. In 1546 he was present at Luther's deathbed at Eisleben, and preached the funeral sermon; but in the same year was banished from the duchy by Maurice, duke (later elector) of Saxony. From that time until his death, Jonas was able to secure a satisfactory living. He wandered from place to place, and finally went to Eislefeld (1553), where he died. He had been married three times.

JOHANNUH (Heb. "Yah [weh] gives"), Of the many Jewish bearers of this name, three are well known: (1) the grandson of Moses, who was priest at Dan (Judg. xvii. 19). The reading Manasseh (see R. v. mg.; obtained by inserting a between the consonantal text in the Hebrew) is apparently intended to suggest that he was the son of that idolatrous king. (2) The eldest son of Saul, who, together with his father, fled Israel from the crushing oppression of the Philistines (1 Sam. xiii. seq). Both are lauded in an elegy quoted from the Book of Jashar (2 Sam. i.) for their warm mutual love, their heroism, and their labours on behalf of the people. Jonathan's name is most familiar for the firm friendship which subsisted between him and David (1 Sam. xviii. 1-4; xix. 1-7; xx. xxii. 9; xxii. 16-18), and when he fell at the battle of Gilboa and left behind him a young child (1 Sam. xxxi. 2; 2 Sam. iv. 4), David mourned over him and gave him a place at his court (2 Sam. ix.). See further DAVID, SAUL. (3) The Maccabee (see JESUS; MACCABEES).

JONCIERES, VICTORIN (1839-1903), French composer, was born in Paris on the 12th of April 1839. He first devoted his attention to painting, but afterwards took up the serious study of music. He entered the Paris Conservatoire, but did not remain there long, because he had espoused too warmly the cause of Wagner against his professor. He composed the following operas: Sardanapale (1867), Le Dernier jour de Pompée (1869), Dimiril (1876), La Reine Berthe (1878), Le Chevalier Jean (1888), Loncelot (1900). He also wrote incidental music to Hamlet, a symphony, and other works. Joncières' admiration for Wagner asserted itself rather in a musical than a dramatic sense. The influence of the German master's earlier style can be traced in his operas. Joncières, however, adhered to the recognized forms of the French opera and did not model his works according to the later developments of the Wagnerian "music drama." He may indeed be said to have been at least as much influenced by Gounod as by Wagner. From 1871 he was musical critic for La Liberté. He died on the 26th of October 1903.

JONES, ALFRED GILPIN (1824-1906), Canadian politician, was born at Weymouth, Nova Scotia, in September 1824, the son of Guy C. Jones of Yarmouth, and grandson of a United Empire Loyalist. In 1865 he opposed the federation of the British American provinces, and in his anger at the refusal of the British government to repeal such portions of the British North America Act as referred to Nova Scotia, made a speech which won for him the name of Haul-down-the-flag Jones. He was for many years a member of the Federal Parliament, and
for a few months in 1878 was minister of militia under the Liberal government. Largely owing to his influence the Liberal party refused in 1872 to abandon its Free Trade policy, an obstinacy which led to its defeat in that year. In 1900 he was appointed lieutenant-governor of his native province, and held this position till his death on the 15th of March 1906.

JONES, SIR ALFRED LEWIS (1845–1909), British shipowner, was born in Carmarthenshire, in 1845. At the age of twelve he was apprenticed to the managers of the African Steamship Company at Liverpool, making several voyages to the west coast of Africa. By the time he was twenty-six he had risen to be manager of the business. Not finding sufficient scope in this, he purchased two or three small sailing vessels, and started in the shipping business on his own account. The venture succeeded, and he made additions to his fleet, but after a few years' successful trading, realizing that sailing ships were about to be superseded by steamers, he sold his vessels. About this time (1861) Messrs. Elder, Dempster & Co., who purchased the business of the old African Steamship Company, offered him a managerial post. This offer he accepted, subject to Messrs. Elder, Dempster selling him a number of their shares, and he thus acquired an interest in the business, and subsequently by further share purchases, its control. See further STEAMSHIP LINES. In 1901 he was knighted. Sir Alfred Jones took a keen interest in imperial affairs, and was instrumental in founding the Liverpool school of tropical medicine. He acquired considerable territorial interests in West Africa, and financial interests in many of the companies engaged in opening up and developing that part of the world. He also took the leading part in opening up a new line of communication with the West Indies, and stimulating the Jamaica fruit trade and tourist traffic. He died on the 13th of December 1909, leaving large charitable bequests.

JONES, EBENEZER (1820–1860), British poet, was born in Islington, London; on the 20th of January 1820. His father, who was of Welsh extraction, was a strict Calvinist, and Ebenezer was educated at a dull, middle-class school. The death of his father obliged him to become a clerk in the office of a tea merchant. Shelley and Carlyle were his spiritual masters, and he spent all his spare time in reading and writing; but he developed an exaggerated style of thought and expression, due partly to a defective education. The unkind reception of his Studies of Sensation and Event (1843) seemed to be the last drop in his bitter cup of life. Baffled and disheartened, he destroyed his manuscripts. He earned his living as an accountant and by literary hack work, and it was not until he was rapidly dying of consumption that he wrote his three remarkable poems, "Winter Hymn to the Snow," "When the World is Burning" and "To Death." The fame that these and some of the pieces in the early volume brought to their author came too late. He died on the 14th of September 1860.

It was not till 1879 that Dante Gabriel Rossetti praised his work in Notes and Queries. Rossetti's example was followed by W. B. Scott, Theodore Watts-Dunton, who contributed some papers on the subject to the Athenaeum (September and October 1878), and R. H. Sheppard, who edited Studies of Sensation and Event in 1879.

JONES, ERNEST CHARLES (1819–1869), English Chartist, was born in Berlin on the 25th of January 1819, and educated in Germany. His father, an officer in the British army, was then equerry to the duke of Cumberland—afterwards king of Hanover. In 1838 Jones came to England, and in 1841 published anonymously The Wood Spirit, a romantic novel. This was followed by some songs and poems. In 1844 he was called to the bar at the Middle Temple. In 1845 he joined the Chartist agitation, quickly becoming its most prominent figure, and vigorously carrying on the party's campaign on the platform and in the press. His speeches, in which he openly advocated physical force, led to his prosecution, and he was sentenced in 1848 to two years' imprisonment for sedition. While in prison he wrote, it is said in his own blood on leaves torn from a prayer-book, The Revolt of Hindostan, an epic poem. On his release he again became the leader of what remained of the Chartist party and editor of its organ. But he was almost its only public speaker; he was out of sympathy with the other leading Chartists, and soon joined the advanced Radical party. Thenceforward he devoted himself to law and literature, writing novels, tales and political songs. He made several unsuccessful attempts to enter parliament, and was about to contest Manchester, with the certainty of being returned, when he died there on the 26th of January 1860. He is believed to have sacrificed a considerable fortune rather than abandon his Chartist principles. His wife was Jane Atherley; and his son, Llewellyn Atherley-Jones, K.C. (b. 1851), became a well-known barrister and Liberal member for Southwark.

JONES, HENRY (1831–1899), English author, well known as a writer on whist under his nom de guerre "Cavendish," was born in London on the 2nd of November 1831, being the eldest son of Henry D. Jones, a medical practitioner. He adopted his father's profession, established himself in 1852 and continued for sixteen years in practice in London. The father was a keen devotee of whist, and under his eye the son became early in life a good player. He was a member of several whist clubs, among them the "Cavendish," and in 1862 appeared his Principles of Whist, stated and illustrated, which was adopted by the leading authority as to the practice of the game. This work was followed by treatises on the laws of piquet and écarté. "Cavendish" also wrote on billiards, lawn tennis and croquet, and contributed articles on whist and other games to the ninth edition of the Encyclopaedia Britannica. "Cavendish" was not a law-maker, but he codified and commented upon the laws which had been made during many generations of card-playing. One of the most noteworthy points in his character was the manner in which he kept himself abreast of improvements in his favourite game. He died on the 10th of February 1899.

JONES, HENRY ARTHUR (1851– ), English dramatist, was born at Grandborough, Buckinghamshire, on the 28th of September 1851, the son of Silvanus Jones, a farmer. He began to earn his living early, his spare time being given to literary pursuits. He was twenty-seven before his first piece, Only Round the Corner, was produced at the Exeter Theatre, but within four years of his début as a dramatist he scored a great success by The Silver King (November 1882), written with Henry Herman, a melodrama produced by Wilson Barrett at the Princess's Theatre. Its financial success enabled the author to write a play "to his own hand." Saffron and Tigers (1888), which ran for two hundred nights, placed on the stage a picture of middle-class life and religion in a country town, and the introduction of the religious element raised considerable outcry. The author defended himself in an article published in the Nineteenth Century (January 1885), taking for his starting-point a quotation from the preface to Molière's Tartuffe. His next serious piece was The Midsummerman (1889), followed by Judah (1890), both powerful plays, which established his reputation. Later plays were The Dancing Girl (1891), The Crusaders (1891), The Bauble Shop (1892), The Tempter (1892), The Masqueraders (1894), The Case of Rebellious Susan (1894), The Triumph of the Philistines (1895), Michael and his Lost Angel (1896), The Rogue's Comedy (1896), The Physician (1897), The Liars (1897), Carnac Sahib (1899), The Manoeuvres of Jane (1899), The Lackeys' Carnival (1900), Mrs Dane's Defence (1900), The Princess's Nose (1902), Chance the Idol (1902), Whittawashing Julia (1903), Joseph Entangled (1904), The Chevalier (1904), &c. A uniform edition of his plays began to be issued in 1891; and his own views of dramatic art have been expressed from time to time in lectures and essays, collected in 1895 as The Renaissance of the English Drama.

JONES, INIGO (1573–1611). English architect, sometimes called the "English Palladio," the son of a cloth-worker, was born in London on the 15th of July 1573. It is stated that he was apprenticed to a joiner, but at any rate his talent for drawing attracted the attention of Thomas Howard, earl of Arundel (some say Willaim, 3rd earl of Pembroke), through whose help he went to study landscape-painting in Italy. His preference soon transferred itself to architecture, and, following chiefly the style
JONES, J. P.

of Palladio, he acquired at Venice such a reputation that in 1604 he was invited by Christian IV. to Denmark, where he is said to have designed the two great royal palaces of Rosenborg and Frederiksborg. In the following year he accompanied Anne of Denmark to the court of James I. of England, where he was being appointed architect to the queen and Prince Henry, he was employed in supplying the designs and decorations of the court masques. After a second visit to Italy in 1612, Jones was appointed surveyor-general of royal buildings by James I., and was engaged to prepare designs for a new palace at Whitehall. In 1620 he was employed by the king to investigate the origin of Stonehenge, when he came to the absurd conclusion that it had been a Roman temple. Shortly afterwards he was appointed one of the commissioners for the repair of St. Paul’s, but the work was not begun till 1633. Under Charles I. he enjoyed the same offices as under his predecessor, and in the capacity of designer of the masques he came into collision with Ben Jonson, who frequently made him the butt of his satire. After the Civil War Jones was forced to pay heavy fines as a courtier and malignant. He died in poverty on the 4th of July 1671.

A list of the principal buildings designed by Jones is given in Dallaway’s edition of Walpole’s Anecdotes of Painting, and for an estimate of his work see his own History of Modern Architecture. The Architecture of Palladio, in 4 books, by Inigo Jones, appeared in 1715; The Most Notable Antiquity of Great Britain, called Stonehenge, restored by Inigo Jones, in 1655 (ed. with memoir, 1753); The Designes of Inigo Jones, by W. Kent, in 1775; The Designs of Inigo Jones, by J. Ware, in 1757. See also G. H. Birch, London Churches of the XVIIth and XVIIIth Centuries (1866); W. Nicholls, Jones, his Life, Work, and Writings, or the Rise and Decline of Modern Architecture in England (1893).

JONES, JOHN (c. 1680–1883), English art collector, was born about 1820 in or near London. He was apprenticed to a tailor, and about 1825 opened a shop of his own in the west-end of London. In 1830 he was able to retire from active management with a large fortune. When quite a young man he had begun to collect a series of vertu. The rooms over his shop in which he at first lived were soon crowded, and even the bedrooms of his new house in Piccadilly were filled with art treasures. His collection was valued at approximately £250,000. Jones died in London on the 7th of January 1885, leaving his pictures, furniture and objects of art to the South Kensington Museum. A Catalogue of the Jones Bequest was published by the Museum in 1882, and a Handbook, with memoir, in 1883.

JONES, JOHN PAUL (1747–1792), American naval officer, was born on the 6th of July 1747, on the estate of Arbigland, in the parish of Kirkbean and the stewartry of Kirkcudbright, Scotland. His father, John Paul, was gardener to Robert Craik, a member of parliament; and his mother, Jean Macduff, was the daughter of a Highlander. Young John Paul, at the age of twelve, became shipmaster’s apprentice to a merchant of Whitehaven, named Younger. At seventeen he shipped as second mate and in the next year as first mate in one of his master’s vessels; on being released from his indentures, he acquired an interest in a ship, and as first mate made two voyages between Jamaica and the Guinea coast, trading in slaves. Becoming dissatisfied with this kind of employment, he sold his share in the ship and embarked for England. During the voyage both the captain and the mate died of fever, and John Paul took command and brought the ship safely to port. The owners gave him and the crew 10% of the cargo; after 1768, as captain of one of their merchantmen, John Paul made several voyages to America; but for unknown reasons he suddenly gave up his command to live in America in poverty and obscurity until 1775. During this period he changed the name Paul, apparently out of regard for Willie Jones, a wealthy planter and prominent political leader of North Carolina, who had befriended John Paul in his days of poverty.

When war broke out between England and her American colonies, John Paul Jones was commissioned as a first lieutenant by the Continental Congress, on the 22nd of December 1775. In 1776 he participated in the unsuccessful attack on the island of New Providence, and as commander first of the “Providence” and then of the “Alfred,” he cruised between Bermuda and Nova Scotia, inflicting much damage on British shipping and fisheries. On the 10th of October 1776 he was promoted captain. On the 1st of November 1777 he sailed in the sloop-of-war “Ranger” for France with “despatches for the American commissioners, announcing the surrender of Burgoyne and asking that Jones should be supplied with a swift frigate for harassing the coasts of England. Failing to secure a frigate, Jones sailed from Brest in the “Ranger” on the 10th of April 1778. A few days later he surprised the garrisons of the two forts commanding the harbour of Whitehaven, a port with which he was familiar from boyhood, spiked the guns and made an unsuccessful attempt to fire the shipping. Four days thereafter he encountered the British ship “Of War” in a gale off the Isle of Wight, driven by his superior fighting capacity, and after an hour’s engagement the British ship struck her colours and was taken to Brest. By this exploit Jones became a great hero in the eyes of the French, just beginning a war with Great Britain. With the rank of commodore he was now put at the head of a squadron of five ships. His flagship, the “Duras,” a re-fitted East Indiaman, was re-named by him the “Bonhomme Richard,” as a compliment to Benjamin Franklin, whose Poor Richard’s Almanac was then popular in France. On the 14th of August the five ships sailed from L’Orient, accompanied by two French privateers. Several of the French commanders under Jones proved insubordinate, and the privateers and three of the men-of-war soon deserted him. With the others, however, he continued to take prizes, and even planned to attack the port of Leith, but was prevented by unfavourable winds. On the evening of the 23rd of September the three men-of-war sighted two British men-of-war, the “Serapis” and the “Countess of Scarborough,” off Flamborough Head. The “Alliance,” commanded by Captain Landais, made off, leaving the “Bonhomme Richard” and the “Pallas” to engage the Englishmen. Jones engaged the greatly superior “Serapis” and after a desperate battle of three and a half hours compelled the English ship to surrender. The “Countess of Scarborough” had meanwhile struck to the more formidable “Pallas.” Jones transferred his men and supplies to the “Serapis,” and the next day the “Bonhomme Richard” sank.

During the following year Jones spent much of his time in Paris. Louis XVI. gave him a gold-hilted sword and the royal order of military merit, and made him chevalier of France. Early in 1781 Jones returned to America to secure a command. He arrived in the “American,” a frigate then building, but the vessel was shortly afterwards given to France. In November 1783 he was sent to Paris as agent for the prizes captured in European waters under his own command, and although he gave much attention to social affairs and engaged in several private business enterprises, he was very successful in collecting the prize money. Early in 1787 he returned to America and received a gold medal from Congress in recognition of his services.

In 1788 Jones entered the service of the empress Catherine of Russia, avowing his intention, however, “to preserve the condition of an American citizen and officer.” As a rear-admiral he took part in the naval campaign in the Liman (an arm of the Black Sea, into which flow the Bug and Dnieper rivers) against the Turks, but the jealous intrigues of Russian officers caused him to be recalled to St Petersburg for the pretended purpose of being transferred to a command in the North Sea. Here he was compelled to remain in idleness, while rival officers plotted against him and even maliciously assailed his private character. In August 1789 he left St Petersburg a bitterly disappointed man. In May 1790 he arrived in Paris at the command of his retirement during the rest of his life, although he made several efforts to re-enter the Russian service.

Undue exertion and exposure had wasted his strength before he reached the prime of life, and after an illness, in which he was attended by the queen’s physician, he died on the 18th of July 1792. His body was interred in the St Louis cemetery for foreign Protestants, the funeral expenses being paid from the private purse of Piere François Simouonne, the king’s
Jones, Michael (1649—__), British soldier. His father was bishop of Killaloe in Ireland. At the outbreak of the English Civil War he was studying law, but he soon took service in the army of the king in Ireland. He was present with Ormonde's army in many of the expeditions and combats of the devastating Irish War, but upon the conclusion of the “Irish Cessation (see Ormonde, James Butler, Duke of) he resolved to leave the king's service for that of the parlement, in which he soon distinguished himself as an able statesman; he was in the service of the army in the war, and especially at the last great victory at Rowton Heath. Jones's cavalry was always far superior to that of the Roundheads, and in reward for his services he was made governor of Chester when that city fell into the hands of the parliament. Soon afterwards Jones was sent again to the Irish War, in the capacity of commander-in-chief. He began his work by reorganizing the army in the neighbourhood of Dublin, and for some time he carried on a desultory war of posts, necessarily more concerned for his supplies than for a victory. But at Dunquin Hill he obtained a very fine victory, and the Roundheads were driven into the sea. The campaign of General Wolfe was not involved in the war, and though the war was by no means ended, Jones was able to hold a large tract of country for the parliament. But on the execution of Charles I, the war entered upon a new phase, and garrison after garrison fell to Ormonde's Royalists. Soon Jones was shut up in Dublin, and then followed a siege which was regarded both in England and Ireland with the most intense interest. On the 2nd of August 1649 the Dublin garrison relieved itself by the brilliant action of Rathmines, in which the royal army was practically destroyed. A fortnight later Cromwell landed with heavy reinforcements from England. Jones, his lieutenant-general, took the field; but on the 19th of December 1649 he died, worn out by the fatigues of the campaign.

Jones, Owen (1741—1814), Welsh antiquary, was born on the 3rd of September 1741 at Llanvihangel Glyn Myvyr in Denbighshire. In 1769 he entered the service of a London firm of furriers, to whose business he ultimately succeeded. He had from boyhood studied Welsh literature, and later devoted time and money to its collection. Assisted by Edward William of Glamorgan (Iolo Morganwg) and Dr Owen Pughe, he published, at a cost of more than £800, the well-known Myrddin Archaology of Wales (1802—1807), a collection of pieces dating from the 6th to the 14th century. The manuscripts which he had brought together are deposited in the British Museum; the material not utilized in the Myrddin Archaology amounts to 100 volumes, containing 16,000 pages of verse and 15,500 pages of prose. Jones was the founder of the Gwyneddigion Society (1772) in London for the encouragement of Welsh studies and literature; and he began in 1805 a miscellany—the Great—which included only one volume. An edition of the poems of Dowydd ab Gawlyn was also issued at his expense. He died on the 26th of December 1814 at his business premises in Upper Thames Street, London.

Jones, Owen (1809-1874), British architect and art decorator, son of Owen Jones, a Welsh antiquary, was born in London. After an apprenticeship of six years in an architect's office, he travelled for four years in Italy, Greece, Turkey, Egypt and Spain, making a special study of the Alhambra. On his return to England in 1836 he busied himself in his professional work. His forte was interior decoration; his formula was to treat a building as a body without subdividing it into rooms. He was one of the superintendents of works for the Exhibition of 1851 and was responsible for the general decoration of the Crystal Palace at Sydenham. Along with Digby Wyatt, Jones collected the casts of works of art with which the palace was filled. He died in London on the 10th of April 1874.

Owen Jones was described in the Builder for 1874 as "the most apostle of colour that architectural England has had in a century. His life was devoted to the development of the principles which regulate the Colour of Buildings, to the cultivation of the sense of artistic effect, and the development of artistic means of expression."

Jones, Richard (1790-1853), English economist, was born at Tunbridge Wells. The son of a solicitor, he was intended for the legal profession, and was educated at Caius College, Cambridge. Owing to ill-health, he abandoned the idea of the law and took orders soon after leaving Cambridge. For several years he held curacies in Sussex and Kent. In 1833 he was appointed professor of political economy at King's College, London, resigning this post in 1835 to succeed T. R. Malthus in the political economy chair at the Royal Institution. In 1839 he became professor of political economy at Cambridge, and in 1847 at Haileybury College. He took an active part in the commutation of tithes in 1836 and showed great ability as a tithe commissioner, an office which he filled till 1851. He was for some time, also, a charity commissioner. He died at Haileybury, shortly after he had resigned his professorship, on the 26th of January 1855. In 1831 Jones published his Essay on the Distribution of Wealth and on the Sources of Taxation, his most important work. In it he showed himself a thorough-going critic of the Ricardian system.

Jones's method is inductive; his conclusions are founded on a wide observation of contemporary facts, aided by the study of history. The world he professed to study was not an imaginary world, inhabited by abstract "economic men," but the real world with the different forms which the ownership and cultivation of land, and in general, the conditions of production and distribution, assume at different times and places. His recognition of such different systems of life in communities occupying different stages in the progress of civilization led to his proposal of what he called a "political economy of nations." This was a protest against the practice of taking the exceptional state of facts which exists, and is indeed only partially realized, in a small corner of the planet as representing the uniform type of human societies, and ignoring the effects of the early history and special development of each community as influencing its economic phenomena. Jones is recognizable for his freedom from exaggeration and one-sided statement; thus, whilst holding Malthus in, perhaps, undue esteem, he declines to accept the proposition that an increase of the means of subsistence is necessarily followed by an increase of population; and he maintains what is undoubtedly true, that with the growth of population, in all well-governed and prosperous states, the command over food, instead of diminishing, increases.

A collected edition of Jones's works, with a preface by W. Whewell, was published in 1859.

Jones, Thomas Rupert (1810—__). English geologist and palaeontologist, was born in London on the 1st of October 1810. While at a private school at Iffilman, his attention was attracted to geology by the fossils that are so abundant in the Lias quarries. In 1835 he was apprenticed to a surgeon at Taunton, and he completed his apprenticeship in 1842 at
Newbury in Berkshire. He was then engaged in practice mainly in London, till in 1849 he was appointed assistant secretary to the Geological Society of London. In 1862 he was made professor of geology at the Royal Military College, Sandhurst. Having devoted his especial attention to fossil microfauna, he soon became the highest authority in England on the Foraminifera and Entomostraca. He edited the 2nd edition of Mantell's Medals of Creation (1854), the 3rd edition of Mantell's Geological Excursions round the Isle of Wight (1854), and the 7th edition of Mantell's Wonders of Geology (1857); he also edited the 2nd edition of Dixon's Geology of Sussex (1878). He was elected F.R.S. in 1872 and was awarded the Lyell medal by the Geological Society in 1896. For many years he was specially interested in the geology of South Africa.

His publications include A Monograph of the Entomostraca of the Cretaceous Formation of England (Palaeontograph. Soc., 1849); A Monograph of the Teritary Entomostraca of England (ibid. 1857); A Monograph of the Fossil Estheriae (ibid. 1862); A Monograph of the Foraminifera of the Crag (ibid. 1866, &c., with H. B. Brady); and numerous articles in the Annals and Magazine of Natural History, the Geological Magazine, the Proceedings of the Geologists' Association, and other journals.

JONES, WILLIAM (1726-1800), English divine, was born at Lowick, in Northamptonshire on the 30th of July 1726. He was descended from an old Welsh family and one of his progenitors was Colonel John Jones, brother-in-law of Cromwell. He was educated at Charterhouse School, and at University College, Oxford, where he took a waste for musick, as well as a similarity in regard to other points of character, led to his close friendship with George Horne (q.v.), afterwards bishop of Norwich, whom he induced to study Hutchinsonian doctrines. After obtaining his bachelor's degree in 1749, Jones held various preferments. In 1777 he obtained the perpetual curacy of Nayland, Suffolk, and on Horne's appointment to Norwich became his chaplain, afterwards writing his life. His vicarage became the centre of a High Church coterie, and Jones himself was a link between the non-Jurors and the Oxford movement. He could write intelligently on abstruse topics. He died on the 6th of January 1800.

In 1756 Jones published his tractate On the Catholic Doctrine of the Trinity, a statement of the doctrine from the Hutchinsonian point of view, with a succinct and able summary of biblical proofs. This was followed in 1762 by an Essay on the First Principles of Natural Philosophy, in which he maintained the theories of Hutchinson in opposition to those of Sir Isaac Newton, and in 1761 he dealt with the same subject in Physiological Disquisitions. Jones was also the originator of the British Critic (May 1793). His collected works, with his life and letters by himself, and by his daughter, and were condensed into 6 vols. in 1810. A life of Jones, forming pt. 5 of the Biography of English Divines, was published in 1849.

JONES, SIR WILLIAM (1746-1794), British Orientalist and jurist, was born in London on the 28th of September 1746. He distinguished himself at Harrow, and during his last three years there applied himself to the study of Oriental languages, teaching himself the rudiments of Arabic, and reading Hebrew with tolerable ease. In his vacations he improved his acquaintance with French and Italian. In 1764 Jones entered University College, Oxford, where he continued to study Oriental literature, and perfected himself in Persian and Arabic by the aid of a Syrian Mirza, whom he had discovered and brought from London. He added to his knowledge of Hebrew and made considerable progress in Italian, Spanish and Portuguese. He began the study of Chinese, and made himself master of the radical characters of that language. During five years he partly supported himself by acting as tutor to Lord Althorp, afterwards the second Earl Spencer, and in 1760 he obtained a fellowship. Though but twenty-two years of age, he was already becoming famous as an Orientalist, and when Christian VII. of Denmark visited England in 1768, bringing with him a life of Nadir Shah in Persian, Jones was requested to translate the MS. into French. The translation appeared in 1770, with an introduction containing a description of Asia and a short history of Persia. This was followed in the same year by a Traité sur la poésie orientale, and by a French metrical translation of the odes of Hafiz. In 1771 he published a Dissertation sur la littérature orientale, defending Oxford scholars against the criticisms made by Anquetil Du Perron in the introduction to his translation of the Zend-Avesta. In the same year appeared his Grammar of the Persian Language. In 1773 Jones published a volume of Poems, Chiefly Translations from Asiatic Languages, together with Two Essays on the Poetry of Eastern Nations and on the Arts commonly called Imitative, and in 1774 a treatise entitled Poësos Asiaticæ commentarium libri sex, which definitely confirmed his authority as an Oriental scholar.

Finding that some more financially profitable occupation was necessary, Jones devoted himself with his customary energy to the study of the law, and was called to the bar at the Middle Temple in 1774. He studied not merely the technicalities, but the philosophy, of law, and within two years had acquired so considerable a reputation that he was in 1776 appointed commissioner in bankruptcy. Besides writing an Essay on the Law of Bequests, which enjoyed a high reputation both in England and America, Jones translated, in 1778, the speeches of Isaeus on the Athenian right of inheritance. In 1780 he was a parliamentary candidate for the university of Oxford, but withdrew from the contest before the day of election, as he found he had no chance of success owing to his Liberal opinions, especially on the questions of the American War and of the slave trade.

In 1783 was published his translation of the ancient Arabic poems called Maedallâh. In the same year he was appointed judge of the supreme court of judicature at Calcutta, then termed Fort William, and was knighted. Shortly after his arrival in India he founded, in January 1784, the Bengal Asiatic Society, of which he remained president till his death. Convinced as he was of the great importance of consulting the Hindu legal authorities in the original, he at once began the study of Sanskrit, and undertook, in 1788, the colossal task of compiling a digest of Hindu and Mahomedan law. This he did not live to complete, but he published in 1792, in his Institutes of Hindu Law, or the Ordinances of Manu (1794); his Mohammedan Law of Succession to Property of Intestates; and his Mohammedan Law of Inheritance (1792). In 1786 Jones had completed his translation of Kâlidâsâ's most famous drama, Sakuntâlâ. He also translated the collection of fables entitled the Hitopadesa, the Gitagovinda, and considerable portions of the Vedas, besides editing the text of Kâlidâsâ's poem Ritusamhara. He was a large contributor also to his society's volumes of Asiatic Researches.

His unremitting literary labours, together with his heavy judicial work, told on his health after a ten years' residence in Bengal; and he died at Calcutta on the 27th of April 1794. An extraordinary linguist, knowing thirteen languages well, and having a moderate acquaintance with twenty-eight others, his range of knowledge was enormous. As a pioneer in Sanskrit learning and as founder of the Asiatic Society he rendered the language and literature of the ancient Hindus accessible to European scholars, and thus became the indirect cause of later achievements in the field of Sanskrit and comparative philology. A monument to his memory was erected by the East India Company in St Paul's, London, and a statue in Calcutta.

See the Memoir (1804) by Lord Teignmouth, published in the collected edition of W. Jones's works.

JÖNKÖPING, a town of Sweden, capital of the district (län) of Jönköping, 230 m. S.W. of Stockholm by rail. Pop. (1900), 23,143. It occupies a beautiful but somewhat unhealthy position between the southern end of Lake Vetter and two small lakes, Roksjö and Munksjö. Two quarters of the town, Svenska Mäa and Tysska Mäa, recall the time when the site was a marsh (mud), and buildings were constructed on piles. The residential suburbs among the hills, especially Dunkhelbar, are attractive and healthier than the town. The church of St Kristine (c. 1656), the court-houses, town-hall, government buildings, and high school, are noteworthy. The town is one of the leading industrial centres in Sweden. The match manufacture, for which it is principally famous, was founded by Johan Edvard Lundström in 1844. The well-known brand of sakerhets-tändsticks
JONSON

(play was a member The reason for the tions Adolphus the Water-power month Ben Jonkoping o2 Martin's origin. concentrated at the education Danish but in of 1593 parliaments of name. Two Lane, Countries and of unsatisfactory is been a factory at the university, Remains of Jonson's son, Mullinger, in 1602; Charles Lamb's doubts on the subject, which were shared by Coleridge, seem an instance of that subjective kind of criticism which it is unsafe to follow when the external evidence to the contrary is so strong. According to Aubrey, whose statement must be taken for what it is worth, "Jonson was never a good actor, but an excellent instructor." His physique was certainly not well adapted to the histrionic conditions of his—perhaps of any—day; but, in any case, it was not long before he found his place in the organism of his company. In 1597, as we know from Henslowe, Jonson undertook to write a play for the lord admiral's men; and in the following year he was mentioned by Meres in his Palladis Tamia as one of "the best for tragedy," without any reference to a connexion on his part with the other branch of the drama. Whether this was a criticism based on material evidence or an unconscious slip, Ben Jonson in the same year 1598 produced one of the most famous of English comedies, Every Man in his Humour, which was first acted—probably in the earlier part of September—by the lord chamberlain's company at the Curtain. Shakespeare was one of the actors in Jonson's comedy, and it is in the character of Old Knowell in this very play that, according to a bold but ingenious guess, he is represented in the half-length portrait of him in the folio of 1623, beneath which the words "Every Man in his Humour was published in 1601; the critical prologue first appears in the folio of 1616, and there are other divergences (see Castelain, appendix A). After the Restoration the play was revived in 1751 by Garrick (who acted Kityle) with alterations, and long continued to be known on the stage. It was followed in the same year by The Case is Altered, acted by the children of the queen's revels, which contains a satirical attack upon the pageant poet, Anthony Munday. This comedy, which was not included in the folio editions, is one of intrigue rather than of character; it contains obvious reminiscences of Slylock and his daughter. The earlier of these two comedies was indisputably successful.

Before the year 1598 was out, however, Jonson found himself in prison and in danger of the gallows. In a duel, fought on the 22nd of September in Hogsden Fields, he had killed an actor of Henslowe's company named Gabriel Spenser. The quarrel with ten years later (epigram 45). (A younger Benjamin died in 1615.) His wife Jonson characterized to Drummond as "a shrew, but honest"]; and for a period (undated) of five years he preferred to live without her, enjoying the hospitality of Lord Aubigny (afterwards duke of Lennox). Long burnings of oil among his books, and long spells of recreation at the tavern, such as Jonson loved, are not the most favoured accompaniments of family life. But Jonson was no stranger to the tenderer of affections: two at least of the several children whom wife bore to him he commemorated in touching little tributes of verse; nor in speaking of his lost eldest daughter did he forget "her tenderest tears." In 1617, when 59 we come across further documentary evidence of his at home, Jonson" (July 28) of 39 ed.," received of an entry in Philip Henslowe's diary (afterwards of Jonson's share." He was therefore by this time—when Shakespeare, his senior by nearly nine years, was already in prosperous circumstances and good esteem—at least a regular member of the acting profession, with a fixed engagement in the lord admiral's company, then performing under Henslowe's management at the Rose. Perhaps he had previously acted at the Curtain (a former house of the lord admiral's men), and "taken mad Jeronimo's part" on a play-wagon in the highway. This latter appearance, if it ever took place, would be pointed out by Gifford, probably have been in Thomas Kyd's Spanish Tragedy, since in The First Part of Jeronimo Jonson would have had, most inappropriately, to dwell on the "smallness" of his "bulk." He was at a subsequent date (1601) employed by Henslowe to write up The Spanish Tragedy, and this fact may have given rise to Wood's story of his performance as a stroller (see, however, Fley, The English Drama, ii. 29, 30). Jonson's additions, which were not the first changes made in the play, are usually supposed to be those printed with The Spanish Tragedy in the edition of 1602; Charles Lamb's doubts on the subject, which were shared by Coleridge, seem an instance of that subjective kind of criticism which it is unsafe to follow when the external evidence to the contrary is so strong.

According to Aubrey, whose statement must be taken for what it is worth, "Jonson was never a good actor, but an excellent instructor." His physique was certainly not well adapted to the histrionic conditions of his—perhaps of any—day; but, in any case, it was not long before he found his place in the organism of his company. In 1597, as we know from Henslowe, Jonson undertook to write a play for the lord admiral's men; and in the following year he was mentioned by Meres in his Palladis Tamia as one of "the best for tragedy," without any reference to a connexion on his part with the other branch of the drama. Whether this was a criticism based on material evidence or an unconscious slip, Ben Jonson in the same year 1598 produced one of the most famous of English comedies, Every Man in his Humour, which was first acted—probably in the earlier part of September—by the lord chamberlain's company at the Curtain. Shakespeare was one of the actors in Jonson's comedy, and it is in the character of Old Knowell in this very play that, according to a bold but ingenious guess, he is represented in the half-length portrait of him in the folio of 1623, beneath which the words "Every Man in his Humour was published in 1601; the critical prologue first appears in the folio of 1616, and there are other divergences (see Castelain, appendix A). After the Restoration the play was revived in 1751 by Garrick (who acted Kityle) with alterations, and long continued to be known on the stage. It was followed in the same year by The Case is Altered, acted by the children of the queen's revels, which contains a satirical attack upon the pageant poet, Anthony Munday. This comedy, which was not included in the folio editions, is one of intrigue rather than of character; it contains obvious reminiscences of Slylock and his daughter. The earlier of these two comedies was indisputably successful.

Before the year 1598 was out, however, Jonson found himself in prison and in danger of the gallows. In a duel, fought on the 22nd of September in Hogsden Fields, he had killed an actor of Henslowe's company named Gabriel Spenser. The quarrel with ten years later (epigram 45). (A younger Benjamin died in 1615.) His wife Jonson characterized to Drummond as "a shrew, but honest"]; and for a period (undated) of five years he preferred to live without her, enjoying the hospitality of Lord Aubigny (afterwards duke of Lennox). Long burnings of oil among his books, and long spells of recreation at the tavern, such as Jonson loved, are not the most favoured accompaniments of family life. But Jonson was no stranger to the tenderer of affections: two at least of the several children whom wife bore to him he commemorated in touching little tributes of verse; nor in speaking of his lost eldest daughter did he forget "her tenderest tears." In 1617, when 59 we come across further documentary evidence of his at home, Jonson" (July 28) of 39 ed.," received of an entry in Philip Henslowe's diary (afterwards of Jonson's share." He was therefore by this time—when Shakespeare, his senior by nearly nine years, was already in prosperous circumstances and good esteem—at least a regular member of the acting profession, with a fixed engagement in the lord admiral's company, then performing under Henslowe's management at the Rose. Perhaps he had previously acted at the Curtain (a former house of the lord admiral's men), and "taken mad Jeronimo's part" on a play-wagon in the highway. This latter appearance, if it ever took place, would be pointed out by Gifford, probably have been in Thomas Kyd's Spanish Tragedy, since in The First Part of Jeronimo Jonson would have had, most inappropriately, to dwell on the "smallness" of his "bulk." He was at a subsequent date (1601) employed by Henslowe to write up The Spanish Tragedy, and this fact may have given rise to Wood's story of his performance as a stroller (see, however, Fley, The English Drama, ii. 29, 30). Jonson's additions, which were not the first changes made in the play, are usually supposed to be those printed with The Spanish Tragedy in the edition of 1602; Charles Lamb's doubts on the subject, which were shared by Coleridge, seem an instance of that subjective kind of criticism which it is unsafe to follow when the external evidence to the contrary is so strong.

According to Aubrey, whose statement must be taken for what it is worth, "Jonson was never a good actor, but an excellent instructor." His physique was certainly not well adapted to the histrionic conditions of his—perhaps of any—day; but, in any case, it was not long before he found his place in the organism of his company. In 1597, as we know from Henslowe, Jonson undertook to write a play for the lord admiral's men; and in the following year he was mentioned by Meres in his Palladis Tamia as one of "the best for tragedy," without any reference to a connexion on his part with the other branch of the drama. Whether this was a criticism based on material evidence or an unconscious slip, Ben Jonson in the same year 1598 produced one of the most famous of English comedies, Every Man in his Humour, which was first acted—probably in the earlier part of September—by the lord chamberlain's company at the Curtain. Shakespeare was one of the actors in Jonson's comedy, and it is in the character of Old Knowell in this very play that, according to a bold but ingenious guess, he is represented in the half-length portrait of him in the folio of 1623, beneath which the words "Every Man in his Humour was published in 1601; the critical prologue first appears in the folio of 1616, and there are other divergences (see Castelain, appendix A). After the Restoration the play was revived in 1751 by Garrick (who acted Kityle) with alterations, and long continued to be known on the stage. It was followed in the same year by The Case is Altered, acted by the children of the queen's revels, which contains a satirical attack upon the pageant poet, Anthony Munday. This comedy, which was not included in the folio editions, is one of intrigue rather than of character; it contains obvious reminiscences of Slylock and his daughter. The earlier of these two comedies was indisputably successful.

Before the year 1598 was out, however, Jonson found himself in prison and in danger of the gallows. In a duel, fought on the 22nd of September in Hogsden Fields, he had killed an actor of Henslowe's company named Gabriel Spenser. The quarrel with
Henslowe consequent on this event may account for the produc-
tion of Every Man in his Humour by the rival company. In
prison Jonson was visited by a Roman Catholic priest, and the
result (certainly strange, if Jonson's parentage is considered) was
his conversion to the Church of Rome, to which he adhered for
twelve years. Jonson was afterwards a diligent student of
divinity; but, though his mind was religious, it is not probable
that its natural bias much inclined it to dwell upon creeds and
there being no pledges of guilt to the charge brought
against him, as the rolls of Middleses sesions show; but, after
a short imprisonment, he was released by benefit of clergy,
forfeiting his "goods and chattels," and being branded on his left
thumb. The affair does not seem to have affected his reputation;
in 1599 he is found back again at work for Henslowe, receiving to-
gether with Dekker, Chettle and "another gentleman," earnest-
money for a tragedy (undiscovered) called Robert II, King of
Scots. In the same year he brought out through the lord
chamberlain's company (possibly already at the Globe, then
newly built or building) the elaborate comedy of Every Man out
of his Humour (quarto 1600; folio 1616)—a play subsequently
presented before Queen Elizabeth. The sunshine of court favour,
rarely diffused during her reign in names otherwise than figuively
golden, was not to bring any material comfort to the most
learned of her dramatists, before there was laid upon her the
invariable hand of whom her courtly epilogue had besought death
to forget the use. Indeed, of his Cynthia's Revels, performed by
the chapel children in 1600 and printed with the first title of The
Fountain of Self-Love in 1601, though it was no doubt primarily
designed as a compliment to the queen, the most marked result
had been to offend two publishers with whom he had formerly worked in company, and who had a
healthy if rough grip of his own; and Marston, who was perhaps
less dangerous by his strength than by his versatility. Accord-
ing to Jonson, his quarrel with Marston had begun by the latter
attacking his morals, and in the course of it they came to blows,
and might have come to worse. In Cynthia's Revels, Dekker is
generally held to be satirized as Hedyon, and Marston as Annaides
(Fleay, however, thinks Annaides is Dekker, and Hedyon Daniel),
while the character of Crites most assuredly has some features of Jonson in himself. Learning the intention of the two writers
whom he had satirized, or at all events of Dekker, to wreak
literary vengeance upon him, he anticipated them in The Poetaster
(1601), again played by the children of the queen's chapel at the
Blackfriars and printed in 1602; Marston and Dekker are here
ridiculed respectively as the aristocratic Crispinus and the vulgar
Demetrius. The play was completed fifteen weeks after its plot
was first conceived. It is not certain to what the proceedings
against author and play before the lord chief justice, referred to
in the dedication of the edition of 1616, refered, or when they were
instituted. Fleay's supposition that the play was printed in 1601
said in the Return from Parnassus (Pt. II. act 1v. sc. iii.) to
have been administered by Shakespeare to Jonson in return for
Horace's "pall to the poets" in this piece, consisted of Trolius
and Cressida is supremely ingenious, but cannot be examined
here. As for Dekker, he retaliated on The Poetaster by the
Satiromastix, or The Unravelling of the Humorous Poet (1602).
Some more last words were indeed attempted on Jonson's part,
but in the Apologetic Dialogue added to The Poetaster in the edition
of 1616, though excluded from that of 1602, he says he intends to
turn his attention to tragedy. This intention he apparently
carried out immediately, for in June 1603 he received £10 from
Henslowe for a play entitled Richard Crookbacen, now lost—
unfortunately so, for purposes of comparison in particular, even
if it was only, as Fleay conjectures, "an alteration of Malowe's
play." According to a statement by Overbury, early in 1603,
"Ben Johnson, the poet, was, now lives upon one Townesend,
supposed to have been the poet and masque-writer Aurelian
Townshend, at one time steward to the 1st earl of Salisbury,
"and scorns the world." To his other early patron, Lord
Aubigny, Jonson dedicated the first of his two extant tragedies,
Sejanus, produced by the king's servants at the Globe late in
1603, Shakespeare once more taking a part in the performance.
Either on its performance or on its appearing in print in 1605,
Jonson was called before the privy council by the Earl of North-
ampton. But it is open to question whether this was the occa-
sion on which, according to Jonson's statement to Drummond,
"accused him both of popery and treason" (see Casteline, Appendix C). Though, for one reason or another,
unsuccessful at first, the endurance of its reputation is attested
by its performance, in a German version by an Englishman,
John Michael Girish, at the court of the grandson of James I. at
Heidelberg.

When the reign of James I. opened in England and an adula-
tory loyalty seemed intent on showing that it had not exhausted
itself at the feet of Gloriana, Jonson's well-stored brain and ready
pen had their share in devising and executing ingenious variations
on the theme "Welcome—since we cannot do without thee!"
With extraordinary promptitude his genius, which, far from being
"ponderous" in its operations, was singularly swift and flexible
in adapting itself to the demands made upon it, met the new
taste for masques and entertainments—new of course in degree
rather than in kind—introduced with the new reign and fostered
by both the king and his consort. The pageant which on the
7th of May 1603 had the king welcome to a capital dissolved
in joy was partly ofJonson's, partly of Dekker's, devising; and
he was able to deepen and diversify the impression by the com-
position of masques presented to James I. when entertained
at houses of the nobility. The Satyr (1603) was produced on one of
these occasions, Queen Anne's sojourn at Althorpe, the seat of
Sir Robert Spencer, afterwards Lord Althorpe, who seems to
have previously bestowed some patronage upon him. The
Penater followed on May-day 1604 at the house of Sir William
Cornwallis at Highgate, and the queen herself with her ladies
played his Masque of Blackness at Whitehall in 1605. He was
soon occasionally employed by the court itself—already in 1606
in conjunction with Inigo Jones, as responsible for the "painting
and carpentry"—and thus speedily showed himself master in a
species of composition for which, more than any other English
poet before Milton, he secured an enduring place in the national
poetic literature. Personally, no doubt, he derived considerable
material benefit from the new fashion—more especially if his
statement to Drummond was anything like correct, that out of
his plays (which may be presumed to mean his original plays) he
had never gained a couple of hundred pounds.

Good humour seems to have come back with good fortune.
Joint employment in The King's Entertainment (1604) had recon-
ciled him with Dekker; and with Marston also, who in 1604
dedicated to him his Malcontent, he was again on pleasant terms.
When, therefore, in 1604 Marston and Chapman (who, Jonson
truly told Drummond, was loved of him, and whom he had
probably honoured as "Virgil" in The Poetaster, and who has, though
double the age, to those who would have him(Sejanus) produced
the excellent comedy of Eastward He, it appears to have contained some contributions by Jonson.
At all events, when the authors were arrested on account of one or
more passages in the play which were deemed insulting to the
Scots, he "voluntarily imprisoned himself" with them. They
were soon released, and a banquet at his expense, attended by
Cameron and Selden, terminated the incident. If Jonson is to
be believed, there had been a report that the prisoners were
to have their ears and noses cut out, and with reference apparently
in the incident, "at the midst of the feast his old mother drank to
him, and showed him a paper which she had intended (if the
sentence had taken execution) to have mixed in the prison among
his drink, which was full of lusty strong poison; and that she was
no churl, she told him, she minded first to have drunk of it
herself." Strange to say, in 1605 Jonson and Chapman, though
the former, as he averred, had so "attempered" his style as to have
"given no cause to any good man of grief," were again in prison
on account of a "play"; but they appear to have been once
more speedily set free, in consequence of a very manly and
dignified letter addressed by Jonson to the Earl of Salisbury.
As to the relations between Chapman and Jonson, illustrated by
newly discovered letters, see Bertram Dobell in the Athenaeum.
No. 3831 (March 30, 1901), and the comments of Castelain. He thinks that the play in question, in which both Chapman and Jonson took part, was Sir Gyles Goosecappe, and that the last imprisonment of the two poets was shortly after the discovery of the Gunpowder Plot. In the mysterious history of the Gunpowder Plot Jonson certainly had some obscure part. On the 7th of November, very soon after the discovery of the conspiracy, the council appears to have sent for him and to have asked him, as a loyal Roman Catholic, to use his good offices in inducing the same person to place a pension and pensions reserve, usual one hard likes to conjecture it to have been some tampering with the secrets of confession. In any case, the negotiations fell through, because the priests declined to come forth out of their hiding-places to be negotiated with—greatly to the wrath of Ben Jonson, who declares in a letter to Lord Salisbury that "they are all so enveased in it that it will make 500 gentlemen less of the religion within this week, if they carry their understanding about them." Jonson himself, however, did not declare his separation from the Church of Rome for five years longer, however much it might have been to his advantage to do so.

His powers as a dramatist were at their height during the earlier half of the reign of James I.; and by the year 1616 he had produced nearly all the plays which are worthy of his genius. They include the tragedy of Catiline (acted and printed 1611), which achieved only a doubtful success, and the comedies of Volpone, or the Fox (acted 1605 and printed in 1607; with a dedication "from my house in the Blackfriars"), Epicoene, or the Silent Woman (1606; entered in the Stationers' Register 1610), the Alchemist (1610; printed in 1610), Bartholomew Fair and The Devil is an Ass (acted respectively in 1614 and 1616). During the same period he produced several masques, usually in connexion with Inigo Jones, with whom, however, he seems to have quarrelled already in this reign, though it is very doubtful whether the architect is really intended to be ridiculed in Bartholomew Fair under the character of Lanthorn Leatherhead. Littlewit, according to Fley, is Daniel. Among the most attractive of his masques may be mentioned the Masque of Blackness (1605), the Masque of Beauty (1608), and the Masque of Queens (1609), described by Swinburne as "the most splendid of all masques" and as "one of the typically splendid monuments or trophies of English literature." In 1616 a modest pension of 100 marks a year was conferred upon him; and possibly this sign of royal favour may have encouraged him to the publication of the first volume of the folio collected edition of his works (1616), though there are indications that he had contemplated its production, an exceptional task for a playwright of his times to take in hand, as early as 1612.

He had other patrons more bountiful than the Crown, and for a brief space of time (in 1613) had travelled to France as governour (without apparently much moral authority) to the eldest son of Sir Walter Raleigh, then a state prisoner in the Tower, for whose society Jonson may have gained a liking at the Mermaid Tavern in Cheapside, but for whose personal character he, like so many of his contemporaries, seems to have had but small esteem. By the year 1616 Jonson seems to have made up his mind to cease writing for the stage, where neither his success nor his profits had equalled his merits and expectations. He continued to produce masques and entertainments when called upon; but he was attracted by many other literary pursuits, and had already accomplished enough to furnish plentiful materials for retrospective discourse over pipe or cup. He was already entitled to lord it at the Mermaid, where his quick antagonist in earlier wit-combats (if Fuller's famous description be authentic) no longer appeared even on a visit from his comfortable retreat at Stratford. That on the other hand Ben carried his wicked town habits into Warwickshire, and there, together with Drayton, made Shakespeare drink so hard with them as to bring upon himself the fatal fever which ended his days, is a scandal with which we may fairly refuse to load Jonson's memory. That he had a share in the preparing for the press of the first folio of Shakespeare, or in the composition of its preface, is of course a mere conjecture.

It was in the year 1618 that, like Dr Samuel Johnson a century and a half afterwards, Ben resolved to have a real holiday for once, and about midsummer started for his ancestral country, Scotland. He had (very heroically for a man of his habits) determined to make the journey on foot; and he was speedily followed by John Taylor, the water-poet, who still further handicapped himself by the condition that he would accomplish the pilgrimage without a penny in his pocket. Jonson, who put up to his good friend's purse when he came up with him at Leith, speedily more than a year ago; in the hospitable Lowlands, being solemnly elected a burgess of Edinburgh, and on another occasion entertained at a public banquet there. But the best-remembered hospitality which he enjoyed was that of the learned Scottish poet, William Drummond of Hawthorden, to which we owe the so-called Conversations. In these famous jottings, the work of no extinguishing hand, Jonson lives for us to this day, delivering his censures, terse as they are, in an expansive mood whether of praise or of blame; nor is he at all generously described in the postscript added by his fatigued and at times irritated host as "a great lover and praiser of himself, a contemner and scorrer of others." A poetical account of this journey, "with all the adventures," was burnt with Jonson's library.

After his return to England Jonson appears to have resumed his former course of life. Among his noble patrons and patronesses were the countess of Rutland (Sidney's daughter) and her cousin Lady Wroth; and in 1619 his visits to the country seats of the nobility were varied by a sojourn at Oxford with Richard Corbet, the poet, at Christ Church, on which occasion he took up the master's degree granted to him by the university; whether he actually proceeded to the same degree is not known to us at Cambridge seems unknown. He confessed about this time that he was or seemed growing "restive," i.e. lazy, though it was not long before he returned to the occasional composition of masques. The extremely spirited Gipsies Metamorphosed (1621) was thrice presented before the king, who was so pleased with it as to grant to the poet the reversion of the office of master of the revels, besides proposing to confer upon him the honour of knighthood. This honour Jonson (harily in deference to the memory of Sir Petronel Playh) declined; but there was no reason why he should not gratefully accept the increase of his pension in the same year (1621) to £50—a temporary increase only, inasmuch as it still stood at 100 marks when afterwards augmented by Charles I.

The close of King James I.'s reign found the foremost of its poets in anything but a prosperous condition. It would be unjust to hold the Sun, the Dog, the Triple Tun, or the Old Devil with its Apollo club-room, where Ben's supremacy must by this time have become established, responsible for this result; taverns were the clubs of that day, and a man of letters is not considered lost in our own because he haunts a smoking-room in Pall Mall. Disease had weakened the poet's strength, and the burning of his library, as his Excruciation upon Vulcan sufficiently shows, must have been no mere transitory trouble to a poor poet and scholar. Moreover he cannot but have felt, from the time of the accession of Charles I. early in 1625 onwards, that the royal patronage would no longer be due in part to anything like intellectual sympathy. He thus thought it best to recur to the sure way of writing for the stage, and in 1625 produced, with no faint heart, but with a very clear anticipation of the comments which would be made upon the reappearance of the "huge, overgrown play-maker," The Staple of News, a comedy excellent in some respects, but little calculated to become popular. It was not printed till 1631. Jonson, whose habit of body was not more conducive than were his ways of life to a healthy old age, had a paralytic stroke in 1626, and a second in 1628. In the latter year, on the death of Middleton, the appointment of city chronologer, with a salary of 100 nobles a year, was bestowed upon him. He appears to have considered the duties of this office as purely ornamental; but in 1631 his salary was suspended until he should have presented some fruits of his labours in his place, or—as he more succinctly phrased it—"yesterday the barbarous court of
aldermen have withdrawn their chandler pension for verjuice and mustard, £33, 6s. 8d." After being in 1628 arrested by mistake on the utterly false charge of having written certain verses in approval of the assassination of Buckingham, he was soon allowed to return to Westminster, where it would appear from a letter of his "son and contiguous neighbour," James Howell, that he was living in 1629, and about this time narrowly escaped another conflagration. In the same year (1629) he once more essayed the stage with the comedy of The New Inn, which was actually, and on its own merits not unjustly, damned on the first performance. It was not "well acted," "it was never acted but most negligently played," and Jonson defended himself against his critics in a spirited Ode to Himself. The epilogue to The New Inn having dwelt not without dignity upon the neglect which the poet had experienced at the hands of "king and queen," King Charles immediately sent the unlucky author a gift of £100, and in response to a further appeal increased his standing salary to the same sum, with the addition of an annual tierce of canary —the poet-laureate's customary royal gift, though this designation of an office, of which Jonson discharged some of what became the ordinary functions, is not mentioned in the warrant dated the 26th of March 1630. In 1631 he enabled his soul, or what was left of it, to pass from the stage to the court, where he was made a member of the council for the time being. His salary as chronicler to the city was again paid. To his later years belong the comedies, The Magnetic Lady (1632) and The Tale of a Tub (1633), both printed in 1640, and some masques, none of which met with great success. The patronage of liberal-minded men, such as the earl, afterwards duke, of Newcastle—by whom he must have been commissioned to write his last two masques Love's Welcome at Welbeck (1633) and Love's Welcome at Bolsover (1634)—is not wanting, and his was hardly an instance in which the fogginess of time and taste could have allowed a literary veteran to end his career in neglect. He was the acknowledged chief of the English world of letters, both at the festivest meetings where he ruled the roost among the younger authors whose pride it was to be "sealed of the tribe of Ben," and by the avowal of grave writers, old or young, not one of whom would have ventured to dispute his titular pre-eminence. Nor was he to the last unconscious of the claims upon him which his position brought with it. When, nearly two years after he had lost his surviving son, death came upon the sick old man on the 6th of August 1637, he left behind him an unfinished work of great beauty, the pastoral drama of The Sad Shepherd (printed in the posthumous edition of 1640). In 1634, when he was made a member of the council for the city, he had said he "would set his country on fire; at first he could scarce hit its taste, but patience had at last enabled it to identify itself with the working of his pen."

We are so accustomed to think of Ben Jonson presiding, attentive to his own applause, over a circle of younger followers and admirers that we are apt to forget the hard struggle which he had passed through before gaining the crown now universally acknowledged to be his. Howell records, in the year before Ben's death, that a solemn supper at the poet's own house, where the host had almost spoiled the relish of the feast by vilifying others and magnifying himself, "T. C. [i.e. (Thomas Carew)] buzzed in the writer's ear" that, though Ben had barrell'd up a great deal of knowledge, yet it seemed he had not read the Ethics, which, among other precepts of morality, forbid self-commendation. Self-reliance is but too frequently coupled with self-consciousness, and for good and for evil self-confidence was no doubt the most prominent feature in the character of Ben Jonson. Hence the combativeveness which involved him in so many quarrels in his earlier days, and which jarred so harshly upon the less militant and in some respects more decorous nature of Drummond. But his quarrels do not appear to have entered deeply into his heated and overrearing mind in his vitiations to be bitter, and too outspoken to be malicious. He loved all of things to be called "honest," and there is every reason to suppose that he deserved the epithet. The old super-

1 With Inigo Jones, however, in quarrelling with whom, as Howell reminds Jonson, the poet was virtually quarrelling with his bread and butter, he seems to have found it impossible to live permanently at peace; his judicial Expectation against the architect was published as late as 1635. Chapman's satire against his old associate, perhaps due to this quarrel, was left unfinished and unpublished. stition that Jonson was filled with malignant envy of the greatest of his fellow-dramatists, and lost no opportunity of giving expression to it, hardly needs notice. Those who consider that Shakespeare was beyond criticism may find blasphemy in the saying of Jonson that Shakespeare "wanted art." Occasional jesting allusions to particular plays of Shakespeare may be found in Jonson, among which should hardly be included the sneer at "mouldy" Pericles in his Ode to Himself. But these amount to nothing collectively, and to very little individually; and against them have to be set, not only the many pleasant traditions concerning the long intimacy between the pair, but also the lines, later added to the first Shakespeare folio, as noble as those, judicious, dedicated by the survivor to "the star of poets," and the adaptation, clearly sympathetic notwithstanding all its buts, de Shakespeare nostrat, in the Discoveries. But if Gifford had rendered no other service to Jonson's fame he must be allowed to have once for all vindicated it from the cruellest aspersion which has ever been cast upon it. That in general Ben Jonson was a man of strong likes and dislikes, and was wont to manifest the latter as vehemently as the former, it would be idle to deny. He was at least impartial in his censures, dealing them out freely to the "amateur poets" like Wither, and (assuming him not to have exaggerated his free-spokenness) to princes of his church like Cardinal du Perron. And, if sensitive to attack, he seems to have been impervious to flattery—to judge from the conduct with which he condemned the foibles even of so enthusiastic an admirer as Beaumont. The personage that he disliked the most, and openly abused in the roundest terms, was unfortunately one with many heads and a tongue to hiss in each—no other than that "general public" which it was the fundamental mistake of his life to fancy he could "roll into approbation" before he had effectively secured its goodwill. And upon the whole it may be said that the admiration of the few, rather than the favour of the many, has kept green the fame of the most independent among all the masters of an art which, in more senses than one, must please to live.

Jonson's learning and industry, which were alike exceptional, by no means exhausted themselves in furnishing and elaborating the materials of his dramatic works. His enemies sneered at him as a translator—a title which the preceding generation was inclined to esteem the most honourable in literature. But his classical scholarship shows itself in other directions besides his translation from the Latin. In the Arden's Argenz; it was likewise the basis of his English Grammar, of which nothing but the rough draft remains (the MS. itself having perished in the fire in his library), and in connexion with the subject of which he appears to have pursued other linguistic studies (Howell in 1629 was trying to procure him a Welsh grammar). And its effects are very visible in some of the most pleasing of his non-dramatic poems, which often display that combination of polish and simplicity hardly to be reached—or even to be appreciated—without some measure of classical training.

Exclusively of the few lyrics in Jonson's dramas (which, with the exception of the stately choruses in Catiline, charm, and perhaps may surprise, by their lightness of touch), his non-dramatic works are comprised in the following collections. The book of Epigrams (published in the first folio of 1616) contained, in the poet's own words, the "ripet of his studies." His notion of an epigram was the ancient, not the restricted modern one—still less that of the critic (R. C., the author of The Times' Whistle) in whose language, according to Jonson, "witty" was "obscene." On the whole, these epigrams excel more in encomiastic than in satiric touches, while the pathos of one or two epitaphs in the collection is of the truest kind. In the lyrics and epistles contained in the Forest (also in the first folio), Jonson shows greater variety in the poetic styles adopted by him; but the subject of love, which Dryden considered conspicuous by its absence in the author's dramas, is similarly eschewed here. The Underwoods (not published collectively till the second and surreptitious folio) are a miscellaneous series, comprising, together with a few religious and a few amatory poems, a large number of epigrams,
epitaphs, elegies, and "odes," including both the tributes to Shakespeare and Voltaire to royal and other patrons and friends, besides the *Execution upon Valentine*, and the characteristic ode addressed by the poet to himself. To these pieces in verse should be added the *Discourses—Timber, or Discoveries made upon Men and Matters*, awedly a commonplace book of aphorisms noted by the poet in his daily readings—thoughts adopted and adapted in more tranquil and perhaps more sober moods than those which gave rise to the outpourings of the *Conversations at Hothornden*. As to the critical value of these *Conversations* it is far from being only negative; he knew how to admire as well as to disdain. For these thoughts, though abounding with biographical as well as general comment, were, with the exception of **Shakespeare**'s rhymes, perhaps carefully elaborated in diction than its successor, *Scianus*. is at least equally impressive as a highly wrought dramatic treatment of a complex historic theme. The character of Tiberius adds an element of curious psychological interest on which speculation has never quite exhausted itself and which, in Jonson's day at least, was wanting to the figures of Catiline and his associates. But in both plays the action is powerfully conducted, and the care bestowed by the dramatist upon the great variety of characters introduced cannot, as in some of his comedies, be said to distract the interest of the reader. Both these tragedies are noble works, though the relative popularity of the subject (for conspiracies are in the long run more interesting than camarillas) has perhaps secured the preference to Catiline. Yet this play and its predecessor were alike too manifestly intended by their author to court the goodwill of what he calls the "extraordinary" reader. It is difficult to imagine that (with the aid of judicious shortening) either could altogether miss its effect on the stage; but, while Shakespeare causes us to forget, Jonson seems to wish to remember, his authorities. The hall is often greater than the whole; and Jonson, like all dramatists and, it might be added, all novelists in similar cases, has had to pay the penalty incurred, by too obvious a desire to underline the learning of the author.

Perversity—or would-be originality—alone could declare Jonson's tragedy preferable to his comedy. Even if the revolution which he created in the comic branch of the drama had been mis-taken in its principles or unsatisfactory in its results, it would be clear that the strength of his dramatic genius lay in the power of depicting a great variety of characters, and that in comedy alone he succeeded in finding a wide field for the exercise of this power. There may have been no very original or very profound discovery in the idea which he illustrated in *Every Man in his Humour* and, as it were, technically elaborated in *Every Man out of his Humour*—that in many men one quality is observable which so possesses them as to draw the whole of their individualities one way, and that this phenomenon "may be truly said to be a humour." The idea of the master quality or tendency was, as has been well observed, a very considerable one for dramatist or novelist. Nor did Jonson (happily) attempt to work out this idea with any excessive scientific consistency as a comic dramatist. But, by refusing to apply the term "humour" (q.v.) to a mere peculiarity or affectation of manners, and restricting its use to actual or implied differences or distinctions of character, he broadened the whole basis of English comedy after his fashion, as Molière at 1

1Of The *Fall of Mortimer* Jonson left only a few lines behind him; but, as he also left the argument of the play, factious ingenuity contrived to furnish up the relic into a libel against Queen Caroline and Sir Robert Walpole in 1731, and to revive the contrivance by way of an insult to the princess dowager of Wales and Lord Bute in 1762.

Later date, keeping in closer touch with the common experience of human life, with a lighter hand broadened the basis of French and of modern Western comedy at large. It does not of course follow that Jonson's disciples, the Brome and the Cartwrights, always adequately reproduced the master's conception of "humorous" comedy. Jonson's wide and various reading helped him to diversify the application of his theory, while perhaps at times it led him into too remote illustrations of it. Still, Captain Bobadil and Captain Tucca, Macilente and Fungoso, Volpone and Mosca, and a goodly number of other characters impress themselves permanently upon the memory of those whose attention they have as a matter of course commanded. It is a most certain sign of vitality to condemn Jonson's characters as a mere series of types of general ideas; on the other hand, it is a very sound criticism to object, with Barry Cornwall, to the "multitude of characters who throw no light upon the story, and lend no interest to it, occupying space that had better have been bestowed upon the principal agents of the plot."

In the construction of plots, as in most other respects, Jonson's at once conscientious and vigorous mind led him in the direction of originality; he depended to a far less degree than the greater part of his contemporaries (Shakespeare with the rest) upon borrowed plots. His work was, on the other hand, occasionally at fault in this respect, or his devotion to his characters often diverted his attention from a brisk conduct of his plot. Barry Cornwall has directed attention to the essential likeness in the plot of two of Jonson's best comedies, *Volpone* and *The Alchemist*; and another critic, W. Bodham Donne, has dwelt on the difficulty which, in *The Poetaster* and elsewhere, Ben Jonson seems to experience in sustaining the promise of his actions. *The Poetaster* is, however, a play *sub generis*, in which the real business can hardly be said to begin till the last act.

Dryden, when criticizing Ben Jonson's comedies, thought fit, while allowing the old master humour and incontestable "pleasantness," to deny him wit and those ornaments thereof which Quintillian reckons up under the terms *urbana, salsa, faceto* and so forth. Such wit as Dryden has in view is the mere outward fashion or style of the day, the euphuism or "sheer wit" or *ckie* which is the creed of Fastidious Brisk and of their astute purveyors at any given moment. In this Ben Jonson was no doubt defective; but it would be an error to suppose him, as a comic dramatist, to have maintained towards the world around him the attitude of a philosopher, careless of mere transient externalisms. It is said that the scene of his *Every Man in his Humour* was originally laid near Florence; and his *Volpone*, which is perhaps the darkest social picture ever drawn by him, plays at Venice. Neither locality was ill-chosen, but the real atmosphere of his comedies is that of the native surroundings amidst which they were produced; and Ben Jonson's times live for us in his men and women, his country gulls and town gulls, his alchemists and exorcists, his "skeldring" captains and whining Puritans, and the whole ragamuffin rout of his *Bartholomew Fair*, the comedy *par excellence* of Elizabethan low life. After he had described the pastimes, fashionable and unfinished, of his age, his admirable superstitions and its flaunting naughtiness, its vapouring affectations and its lying effronteries, with an odour as of "divine tabacco" pervading the whole, little might seem to be left to describe for his "sons" and successors. Enough, however, remained; only that his followers speedily again threw manners and "humours" into an undistinguishable mediævel.

The gift which both in his art and in his life Jonson lacked was that of exercising the influence or creating the effects which he wished to exercise or create without the appearance of consciousness. Conceit never crept over his efforts, and he scorned insinuation. Instead of this, influenced no doubt by the example of the free relations between author and public permitted by Attic comedy, he resorted again and again, from *Every Man out of his Humour* to *The Magnetic Lady*, to inductions and commentary-intermezzos and appendices, which, though occasionally effective by the excellence of their execution, are
to be regretted as introducing into his dramas an exotic and often vexatious element. A man of letters to the very core, he never quite understood that there is and ought to be a wide difference of methods between the world of letters and the world of the theatre.

The richness and versatility of Jonson's genius will never be fully appreciated by those who fail to acquaint themselves with what is preserved of his "masques" and cognate entertainments. He was conscious enough of his success in this direction—"next himself," he said, "only Fletcher and Chapman could write a masque." He introduced, or at least established, the ingenious innovation of the anti-masque, which Schlegel has described, as a species of "parody added by the poet to his device, and usually prefixed to the serious entry," and which accordingly supplies a grotesque antidote to the often extravagantly imaginative main conception. Jonson's learning, creative power and humorous ingenuity—combined, it should not be forgotten, with a genuine lyrical gift—all found abundant opportunities for displaying themselves in these productions. Though a growth of foreign origin, the masque was by him thoroughly domesticated in the high places of English literature. He lived long enough to see the species produce its poetic masterpiece in Comus, *The Sad Shepherd,* of which Jonson left behind him three acts and a prologue, is distinguished among English pastoral dramas by its freshness of tone; it breathes something of the spirit of the Greenwood, and is not unnatural even in its supernatural elements. With it is associated, with its charming love-scenes between Robin Hood and Maid Marian, remains a fragmentary another pastoral by Jonson, *the May Lord* (which F. G. Fleay and A. J. Symonds sought to identify with *The Sad Shepherd*; see, however, W. W. Greg in introduction to the Louvain reprint), has been lost, and a third, of which Loch Lomond was intended to be the scene, probably remained unpublished.

Though Ben Jonson never altogether recognized the truth of the maxim that the dramatic art has properly speaking no didactic purpose, his long and laborious life was not wasted upon a barren endeavour. In tragedy he added two works of uncommon merit to our dramatic literature. In comedy his aim was higher, his effort more sustained, and his success more solid than were those of any of his fellows. In the subsidiary and hybrid species of the masque, he helped to open a new and attractive though undoubtedly devious path in the field of dramatic literature. His intellectual endowments surpassed those of most of the great English dramatists in richness and breadth; and in energy of application he probably left them all behind. Inferior to more than one of his fellow-dramatists in the power of imaginative sympathy, he was first among the Elizabethans in the power of observation; and there is point in Barrett Wendell's paradox, that as a dramatist he was really a poet but a painter. Yet it is less by these gifts, or by his unexcelled capacity for hard work, than by the true ring of manliness that he will always remain distinguished among his peers.

Jonson was buried on the north side of the nave in Westminister Abbey, and the inscription, "O Rare Ben Jonson," was cut in the slab over his grave. In the beginning of the 18th century a portrait bust was put up to his memory in the Poets' Corner by Harley, earl of Oxford. Of Honthorst's portrait of Jonson at Knole Park there is a copy in the National Portrait Gallery; another was engraved by W. Marshall for the 1840 edition of his *Poems.*

**Bibliography.**—The date of the first folio volume of Jonson's *Works* (of which title his novel but characteristic use in applying it to plays was at the time much ridiculed) has already been mentioned. It was published in 1616, and was described by Gifford as "a wretched continuation of the first, printed from MSS. surreptitiously obtained during his life, or ignorantly hurried through the press after his death, and bearing a variety of dates from 1611 to 1641 inclusive." The works were reprinted in a single folio volume in 1692, in which *The New Inn* and *The Case is Altered* were included for the first time, and again in 6 vols 8vo in 1715. Peter Whalley's edition in 7 vols, with a life, appeared in 1756, but was superseded in 1816 by William Gifford's, 4 in 9 vols. (of which the first includes a biographical memoir, and the famous essay on the "Proofs of Ben Jonson's Malignity, from the Commentators on Shakespeare"). A new edition of Gifford's was published in 1872 by T. C. Mclnnes. It was followed by several others, including a collection (unparalleled in number and variety of authors) of poems and plays, published about six months after Jonson's death by his friends and admirers. There is also a single-volume edition, with a very readable memoir, by Barry C. Fleay (1927), and a work limited to Jonson's plays from the original texts was recently undertaken by C. H. Herford and Percy Simpson. A selection from his plays, edited for the *Modern Library* series in 1894-98, by E. H. Gomme, with an introduction by C. H. Herford, was reissued in 1904. W. W. Greg has published *Unterredning zur Kunde des alten englischen Dramas* (Louvain, 1905). Both species of Jonson are too numerous for cataloguing here; among those by eminent Englishmen should be specially mentioned John Dryden's, particularly those in his *Essay on Dramatic Policy* (1665-1668; revised 1684), and in the preface to *An Evening's Entertainment* (1715). Another classic is Jonathan Swift's edition of Jonson (1780), in which, however, the significance of the Discoveries is misapprehended. See also F. G. Fleay, *Biographical Chronicle of the Drama* (1877); and C. J. St. G. Symonds, *Ben Jonson* (ed. in *Dict. Nat. Biog.* vol. xxx., 1802); A. W. Ward, *History of English Dramatic Literature,* 2nd ed. (1899), ii. 296-407; and for a list of early impressions, W. W. Greg, *List of English Plays* (London before 1660) and *Editions* (1909), pp. 55-58 and supplement 11-15. An important French work on Ben Jonson, both biographical and critical, and containing, besides many translations of scenes and passages, some valuable appendices to one of the three Jonson's, has recently been made above, is Maurice Castelain's Ben Jonson, *l'homme et l'œuvre* (1907). Among treatises or essays on particular aspects of his literary work may be mentioned Emil Koeppel's *Quellenstudien zu den Dramen Ben Jonson's,* (1895); the same writer's "Ben Jonson's Wirkung auf zeitgenössische Dramatiker," &c., in *Anglistische Forschungen,* 20 (1906); F. E. Schelling's *Ben Jonson and the Classical School* (1898) and *Ben Jonson's Drama* (1903); *De englischen Maskenspiele* (1882) and J. Schmidt, "Uber Ben Jonson's Maskenspiele," in *Herig's Archiv,* &c., xvii. 51-91. See also H. J. F. *Ben Jonson's Poetik und seine Beziehungen zu Horaz,* in *Münchener Beiträge* 16 (1899) (ed. W. W.).

**Joplin, a city of Jasper county, Missouri, U.S.A., on Joplin creek, about 140 m. S. of Kansas City. Pop. (1880) 9943; (1900) 26,023, of whom 893 were foreign-born and 72 were negroes; (1910 census) 32,073. It is served by the Missouri Pacific, the St. Louis & San Francisco, the Missouri, Kansas & Texas, and the Kansas City Southern railways, and by interurban electric lines. The city has a fine court-house, a United States government building, a Carnegie library and a large auditorium. Joplin is the trade centre of a rich agricultural and fruit-growing district, but its growth has been chiefly due to its situation in one of the most productive zinc and lead regions. The city was incorporated in 1881. In 1896 the value of zinc-ore shipments from this Missouri-Kansas (or Joplin) district was $12,074,105, and of shipments of lead ore, $3,048,558. The value of Joplin's factory product in 1905 was $3,006,203, an increase of 29.3% since 1900. Natural gas, piped from the Kansas fields, is used for light and power, and electricity for commercial lighting and power is supplied from plants on Spring River, near Vark, Kansas, and on Shool Creek. The municipality owns its electric-lighting plant; the water-works are under private ownership. The first settlement was made in 1872 at the site of Joplin, which was laid out and incorporated as a town in 1872; it and its white town on the other side of Joplin creek were united under the name Union City; in 1873 Union City was chartered as a city
under the name Joplín; and in 1888 Joplín was chartered as a city of the third class. The city derives its name from the creek, which was named in honour of the Rev. Harris G. Joplín (c. 1810-1847), a native of Tennessee.

JOPPA, less correctly Jaffa (Arab. Yaffa), a seaport on the coast of Palestine. It is of great antiquity, being mentioned in the tribute lists of Thothmes (Thothmes) III.; but as it never was in the territory of the pre-exilic Israelites it was to them of no importance. Its ascription to the tribe of Dan (Josh. xix. 46) is purely theoretical. According to the authors of Chronicles (2 Chron. ii. 16), Ezra (iii. 7) and Jonah (i. 3) it was a seaport for importation of the Lebanon timber floated down the coasts or for ships plying even to distant Tarshish. About 148 B.C. it was captured from the Syrians by Jonathan Maccabaeus (1 Macc. x. 75) and later it was retaken and garrisoned by Simon, his brother (2 Macc. xiii. 11). It was restored to the Syrians by Pompey (Jos. Ant. xiv. 4, 4) but again given back to the Jews (ib. xiv. 10, 6) with an exemption from tax. St Peter for a while lodged at Joppa, where he restored the benevolent widow Tabitha to life, and had the vision which taught him the universality of the plan of Christianity.

According to Strabo (xvi. iii.), who makes the strange mistake of saying that Jerusalem is visible from Joppa, the place was a resort of pirates. It was destroyed by Vespasian in the Jewish War (68). Tradition connects the story of Andromeda and the sea-monster with the sea-coast of Joppa, and in early times her chains were shown as well as the skeleton of the monster. Were it not for the sea-wrack it seems to have been shown even to some medieval pilgrims, and curious traces of it have been detected in modern Moslem legends.

In the 5th and 11th centuries we hear from time to time of bishops of Joppa, under the metropolitan of Jerusalem. In 1126 the district was captured by the knights of St John, but lost to Saladin in 1187. Richard Coeur de Lion retook it in 1191, but it was finally retaken by Malek el Adil in 1196. It languished for a time; in the 16th century it was an almost uninhabited ruin; but towards the end of the 17th century it began to grow and develop as a seaport. In 1799 it was stormed by Napoleon; the fortifications were repaired and strengthened by the British.

The modern town of Joppa derives its importance, first, as a seaport for Jerusalem and the whole of southern Palestine, and secondly as a centre of the fruit-growing industry. During the latter part of the 19th century it greatly increased in size. The old city walls have been entirely removed. Its population is about 35,000 (Moslems 23,000, Christians 5000, Jews 7000; with the Christians are included the "Templars," a semi-religious, semi-agricultural German colony of about 350 souls). The town, which is seated on a rounded hillock of soft limestone, is by sea and high, has a very picturesque appearance from the sea. The harbour (so-called) is one of the worst existing, being simply a natural breakwater formed by a ledge of reefs, safe enough for small Oriental craft, but very dangerous for large vessels, which can only make use of the seaport in calm weather; these never come nearer than about a mile from the shore. A railway and a bad carriage-road connect Joppa with Jerusalem. The water of the town is derived from wells, many of which have a brackish taste. The export trade of the town consists of soap of olive oil, sesame, barley, water melons, wine and especially oranges (commonly known as Jaffa oranges), grown in the famous and ever-increasing gardens that lie north and east of the town. The chief imports are timber, cotton and other textile goods; tiles, iron, rice, coffee, sugar and petroleum. The value of the exports in 1900 was estimated at £264,950, the imports £238,405. Over 10,000 pilgrims, chiefly Russians, and some three or four thousand tourists land annually at Joppa.

The town is the seat of a kaimakam or lieutenant-governor, subordinate to the governor of Jerusalem, and contains vice-consulates of Great Britain, France, Germany, America and other powers. There are Latin, Greek, Armenian and Coptic monasteries; and hospitals and schools under British, French and German auspices.

JORDAENS, JACOB (1593-1678), Flemish painter, was born and died at Antwerp. He studied, like Rubens, under Adam van Noort, and his marriage with his master's daughter in 1616, the year after his admission to the guild of painters, prevented him from visiting Rome. He was forced to content himself with studying such examples of the Italian masters as he found at home; but a far more potent influence was exerted upon his style by Rubens, who employed him sometimes to reproduce small sketches in large. Jordaens is second to Rubens alone in their special department of the Flemish school. In both there is the same warmth of colour, truth to nature, mastery of chiaroscuro and energy of expression; but Jordaens is wanting in dignity of conception, and is inferior in choice of forms, in the character of his heads, and in correctness of drawing. Not seldom he sins against good taste, and in some of his humorous pieces the coarseness is only atoned for by the animation. Of these last he seems in some cases to have painted several replicas. He employed his pencil also in biblical, mythological, historical and allegorical subjects, and is well-known as a portrait painter. He also etched some plates. See the elaborate work on the painter, by Max Rooses (1908).

JORDAN, CAMILLE (1777-1821), French politician, was born in Lyons on the 11th of January 1777 of a well-to-do mercantile family. He was educated in Lyons, and from an early age was imbued with royalist principles. He actively supported by voice, pen and musket his native town in its resistance to the Convention; and when Lyonsfell, in October 1793, Jordan fled. From Switzerland he passed in six months to England, where he formed acquaintances with other French exiles and with pro-English statesmen, and imbibed a lasting admiration for the English Constitution. In 1796 he returned to France, and the next year he was sent by Lyons as a deputy to the Council of Five Hundred. There his eloquence won him consideration. He earnestly supported what he felt to be true freedom, especially in matters of religious worship, though the energetic appeal on behalf of church bells in his Rapport sur la liberté des cultes procured him the sobriquet of Jordan-Cloche. Proscribed at the coup d'état of the 18th Fructidor (4th of September 1797) he escaped to Basel. Thence he went to Germany, where he met Goethe. Back again in France by 1800, he boldly published in 1802 his Vrai sens du vote national pour le consulat à vie, in which he exposed the ambitious schemes of Bonaparte. He was unwelcome, however, and during the First Empire lived in literary retirement at Lyons with his wife and family, producing for the Lyons academy occasional papers on the Influence réciproque de l'éloquence sur la Révolution et de la Révolution sur l'éloquence; Études sur Klostock, &c. At the restoration in 1814 he again emerged into public life. By Louis XVIII. he was ennobled and named a councillor of state; and from 1816 he sat in the chamber of deputies as representative of Ain. At first he supported the ministry, but when they began to show signs of retraction he separated from them, and gradually came to be at the head of the constitutional opposition. His speeches in the chamber were always eloquent and powerful. Though warned by failing health to resign, Camille Jordan remained at his post till his death at Paris, on the 10th of May 1821.

To his pen we owe Lettre à M. Lamourette (1791); Histoire de la conversion d'une dame Parissienne (1792); La Loi et la religion vengées (1792); Adresse à ses commettaires sur la révolution du 4 Septembre (1792); Sur les troubles de Lyon (1818); La Session de 1817 (1818). His Discours were collected in 1818. The "Fragments choisis," and translations from the German, were published in La Monnaie française, France, Germany, America and further details vol. x. of the Revue encyclopédique; a paper on Jordan and Madame de Staël, by C. A. Sainte-Beuve, in the Revue des deux mondes for March 1866 and R. Boëlle, "Camille Jordan à Weimar," in the Correspondant (1901), cxxv. 718-738 and 948-950.

JORDAN, DOROTHEA (1762-1816), Irish actress, was born near Waterford, Ireland, on 1762. Her mother, Grace Philips, was known as Mrs Femalek, or Mrs Dupont, Irish actress. Her father, whose name was Bland, was according to one account an army captain, but more probably a stage hand. Dorothy Jordan made her first appearance on the stage in 1777 in Dublin.
as Phoebe in *As You Like It*. After acting elsewhere in Ireland she appeared in 1782 at Leeds, and subsequently at other Yorkshire towns, in a variety of parts, including Lady Teazle. It was at this time that she began calling herself Mrs Jordan. In 1785 she made her first London appearance at Drury Lane as Peggy in *A Country Girl*. Before the end of her first season she had become an established public favourite, her acting in comedy being declared second only to that of Kitty Clive. Her engagement at Drury Lane lasted till 1809, and she played a large variety of parts. But gradually it came to be recognized that her special talent lay in comedy, her Lady Teazle, Rossland and Imogen being specially liked, and such "breve" parts as William in *Rosina*. During the rebuilding of Drury Lane she played at the Haymarket; she transferred her services in 1811 to Covent Garden. Here, in 1814, she made her last appearance on the London stage, and the following year, at Margate, retired altogether. Mrs Jordan’s private life was one of the scandals of the period. She had a daughter by her first manager, in Ireland, and four children by Sir Richard Ford, whose name she bore for some years. In 1790 she became the mistress of the Duke of Clarence (afterwards William IV.), and bore him ten children, who were ennobled under the name of Fitz Clarence, the eldest being created earl of Munster. In 1811 they separated by mutual consent, Mrs Jordan being granted a liberal allowance. In 1815 she went abroad. According to one story she was in danger of imprisonment for debt. If so, the debt must have been incurred on behalf of others—probably her relations, who appear to have been continually borrowing from her—for her own personal debts were very much more considerable. "In truth, I do not mind it at all, but I prefer it," she is said to have said. She is generally understood to have died at St. Cloud, near Paris, on the 3rd of July 1816, but the story that under an assumed name she lived for seven years after that date in England finds some credence.

**JOHN THOMAS (1612-1685)**. English poet and pamphleteer, was born in London and started life as an actor at the Red Bull theatre in Clerkenwell. He published in 1637 his first volume of poems, entitled *Poeticall Varieties*, and in the same year appeared *A Pill to Purge Melancholy*. In 1639 he recited one of his poems before King Charles I., and from this time forward Jordan’s output in verse and prose was continuous and prolific. He freely borrowed from other authors, and frequently republished his own writings under new names. During the troubles between the king and the parliament he wrote a number of Royalist pamphlets, one of the first of which, *A Medicine for the Times*, or *An Antidote against Faction*, appeared in 1641. Deductions, occasional verses, prologues and epilogues to plays poured from his pen. Many volumes of his poems bear no date, and they were probably written during the Commonwealth. At the Restoration he elogized Monk, produced a masque at the entertainment of the general in the city of London and wrote pamphlets in his support. He then for some years devoted his chief attention to writing plays, in at least one of which, *Money is an Ass*, he himself played a part which was produced in 1668. In 1671 he was appointed to the city of London; from this date till his death in 1685 he annually composed a panegyric on the lord mayor, and arranged the pageantry of the lord mayor’s shows, which he celebrated in verse under such titles as *London Triumphant*, or *The City in Jollity and Splendour* (1672), or *London in Luster, Projecting many Bright Beams of Triumph* (1679). Many volumes of these curious productions are preserved in the British Museum.

In addition to his numerous printed works, of which perhaps *A Royal Arbour of Loyal Poetry* (1664) and *A Nursery of Novelties in Variety of Poetry* are most deserving of mention, several volumes of his poems exist in manuscript. W. C. Hazlitt and other 19th-century critics found more merit in Jordan’s writings than in those of his contemporaries for the most part scornfully referred to his voluminous productions as commonplace and dull.
