BOLLANDISTS, The, an association of ecclesiastical scholars engaged in editing the Acta Sanctorum. This work is a great hagiographical collection begun during the first years of the seventeenth century, and dedicated to the glory of the martyrs. On August 16, 1640, it was published as "Acta Sanctorum". The name was derived from Saint John Bolland, the editor of the first volume. The collection now numbers sixty-three volumes, to which must be added a supplementary volume, published in 1875 by a Dutch priest, and containing chiefly recent tables and studies facilitating the use of the work which had appeared at that time. Although Bolland has given his name to the work, he is not to be regarded as its founder. The idea was first conceived by Heribert Rosweyde (b. at Utrecht, 1569; d. at Antwerp, 1620). He entered the Society of Jesus in 1583. An indefatigable worker and a fearless but judicious investigator, notwithstanding his duties as professor of philosophy in the Jesuit college at Douai during the last years of the sixteenth century, Rosweyde devoted the leisure of his vacations and holidays to exploring the libraries of the numerous monasteries scattered through Hainault and French Flanders. He copied with his own hand a vast number of documents relating to church history in general, and to hagiography in particular, and found in the old texts contained in the manuscripts coming under his observation quite a different flavour from that of the revisions to which many editors, notably Lippomano and Surin, then the latest and most celebrated, had believed it necessary to subject them. Rosweyde thought it would be useful to publish them in a uniform form. His superiors, to whom he submitted his plan in 1603, gave it their hearty approval, and allowed him to prepare the projected edition, without, however, relieving him of any of the occupations on which he was expending his prolixity activity. So, for the time being, he was allowed merely, the privilege of devoting his spare moments to the preparation of the work. Rosweyde did not cease to pursue his project, which he announced publicly in 1607, as well as the plan he proposed to follow. Under the title: "Fasti sanctorum quorum vites in belgicis bibliothecis manuscriptae", he gave in a little volume in 16mo., published by the Plantin press at Antwerp, an alphabetical list of the names of the saints whose acts had been either found by him or called to his attention in old manuscript collections. This list filled fifty pages; the prefatory notice in which he indicates the character and arrangement of his work, as he had conceived it, takes up fourteen. Finally, the work contains an appendix of twenty-six sermons containing the usual acts of the passion of the holy Cilian martyrs, Tharsus, Probus, and Andronicus, which Rosweyde regarded — wrongly — as the authentic official report from the pen of a clerk of the court of the Roman tribunal. According to this programme the collection was to comprise sixteen volumes, besides two volumes of explanations and tables. The first volume was to present documents concerning the saints whose feasts are celebrated in honour of the special events of His life; the second would be devoted to the life and the feasts of the Blessed Virgin, and the third to the feasts of the saints honoured with a special cult. The Saint Bollandists were to give the life of the saints whose feasts are celebrated especially in the twelve months of the year, one volume for each month. This calendar arrangement had been prescribed by his superiors, in preference to the chronological order Rosweyde himself favoured, to facilitate reference to them at that time, formidable difficulties. Lastly, the sixteenth volume was to set forth the succession of martyrdoms which had been in use at different periods and in the various Churches of Christendom. The first of the two supplementary volumes was to contain notes and commentaries bearing on the lives already published. It was to be divided into eight books treating respectively of the following subjects: (1) The authors of the lives; (2) the sufferings of the saints; (3) the places where their bodies were found; (4) the names of churches and other places mentioned in the hagiographical documents; (5) the dates and places of their deaths; (6) questions of chronology; (7) the nomenclature of the saints; (8) the story of their lives. The other supplementary volume was to present a series of copious tables giving: (1) the names of the saints whose lives had been published in the preceding volumes; (2) the same names followed by notes indicating the place of the saint's birth, his station in life, his title to sanctuary, the time and place in which he had lived, and the author of his life; (3) the state of life of the various saints (religious, priest, virgin, widow, etc.); (4) their position in the Church (apostle, bishop, abbot, etc.); (5) the nomenclature of the saints according to the countries made illustrious by their birth, apostolate, sojourn, burial; (6) nomenclature of the places in which they were honoured with a special cult; (7) enumeration of the maladies for the cure of which they are especially invoked; (8) the professions placed under their patronage; (9) the proper names of persons and places encountered in the published lives; (10) the passages of Holy Scripture there explained; (11) points which may be of use in religious controversies; (12) those applicable in the teaching of Christian discipline; (13) a general index of the entire collection, in alphabetical order. "And others still" adds the author, "if anything of importance presents itself, of which our readers may give us an idea." Cardinal Bellarmine, to whom Rosweyde sent a copy of his little volume, could not forbear exclaiming after he had read this programme: "This man counts, then, on living two hundred years longer!" He addressed to the author a letter, the original of which is preserved in the present library of the Bollandists, signed, but not written, by the hand of Bellarmine, in which he intimates in polished but perfectly plain language that he regarded the plan as chimerical. Rosweyde was nowise disconcerted from this. From various other sources he received encouragement, enthusiasm, and an armada of letters of recommendation to the sons of St. Ignatius of Loyola. The new enterprise found an especial protector, as generous as he was zealous and enlightened, in Antoine de Wynga, abbot of the celebrated monastery of Liessies in Hainault. Venerable Louis of Blois, whose third successor de Wynga was, seemed to have been specially destined by Providence to deduce scientific research from the lives of the saints. It was to him that the sons of St. Ignatius of Loyola. The large sympathy of this religious Mecenas manifested itself in every way; in letters of recommendation to the heads of the various houses of the great Benedictine Order which opened to Rosweyde and his associates monastic
libraries; in loans and gifts of books, of manuscripts, and of copies of manuscripts; and in pecuniary assistance. Rosweyde, in his own efforts the monument of which he had dreamed, and on bringing it to a worthy end. As a matter of fact, he did not get beyond the first stages of the structure. His literary activity was expended on a multitude of historical works, both religious and political. It is true, he would have later formed a part of the great hagiographical compilation. The majority, however, bear no relation whatever to the work. The writings which would have been available are: the edition of the Little Roman Missal, where Rosweyde believed he recognised the collection mentioned by St. Gregory the Great in his letter to Eulogius of Alexandria; the edition of the martyrlogy of Ado of Vienne (1618); the ten books of the Lives of the Fathers of the Desert, which first published in Latin (1615 in fol.), dedicating the work to the Abbey of Léons, and later in Flemish (1617) in fol., with an inscription to Jeanne de Baillencourt, Abbess of Messines. The rest, however, as for instance the Flemish edition of Ribadeneyra's "Flowers of the Saints" (1619, two parts), the "General History of the Church" (1623), to which he added an appendix the detailed history of the Church in the Netherlands, both in Flemish; the Flemish lives of St. Ignatius and St. Philip Neri; the Flemish translation of the first part of Bolland's "Acta Sanctorum" (1618), drew his attention completely from what he should have regarded as his principal task. It is due to him, however, to say that for several years his superiors, without ceasing to encourage him in the pursuit of his project, were forced through the necessity of filling vacant offices, to lay upon him duties which did not leave him the absolutely indispensable leisure. He set forth clearly himself in the memorandum addressed to them in 1611, in response to their inquiry as to how he was progressing with the preparation of his volumes. But it is not less true that nearly all his publications, the most important of which have been mentioned above, are of a later date than this, and undoubtedly Rosweyde himself was chiefly to blame for the delay, which, however, may be called a fortunate one, since it resulted in advantageous modifications of the plan of his work. At the time of Rosweyde's death, then, which took place in Antwerp in 1629, not a page was ready for the printer. Moreover, the superiors of the order, on their part, hesitated to have the work carried on by another than the author himself, who had been extremely active; he had secured access to a quantity of manuscripts and had enlisted the co-operation of many learned men who had manifested the keenest interest in his undertaking; thanks to their assistance, he had collected many manuscripts and books relating to the lives of the saints; in a word, he had aroused an eager interest in his compilation, so great and so universal that it was necessary to satisfy it.

Father John van Bolland (b. at Julemont, in Liège, 1596; d. at Antwerp, 12 September, 1665) was at this time prefect of studies in the college of Mechlin, and had charge of a congregation composed of the principal people of the city. It was called the "Latin Congregation", because all the exercises, sermons included, were conducted in that language. His family either took the name of the village of Bolland, near Julemont. Before making his theological studies he had taught belles-lettres with distinction in the three higher classes of the humanities at Ruremonde, Mechlin, Brussels, and Antwerp. The Superior of the Society of Jesus bade him examine the papers left by Rosweyde, and report to him his opinion as to what it was advisable to do with them. Bolland went to Antwerp, familiarised himself with the manuscripts, and, while admitting that the work was still merely a rough and faulty draft, gave reasons for believing that without an undue expenditure of labour it might be brought to a successful completion. He even showed himself disposed to take charge of the work, but only under two conditions: first, that he should be left free to modify the plan of Rosweyde as he understood it; second, that the copies, notes, and books which had been collected by Rosweyde should be removed from the library of the Pressed House, where they were interspersed among the books in common use, and set apart in a place of their own for the exclusive use of the new director of the undertaking.

The provincial, Jacques van Straten, accepted with alacrity both offer and conditions. Bolland was removed from the college of Mechlin and attached to the Pressed House at Antwerp, to be director of the Latin Congregation and confessor in the church, and with the charge of preparing, in his leisure hours (horae subsecvte) the Acta Sanctorum for publication. Happily, he had not the least idea, any more than had the provincial, of all the undertaking involved. He fancied that he could finish it by his own unaided efforts, and that after the completion of the work proper and the preparation of historical, chronological, geographical, and other tables, as announced by Rosweyde, he could complete the publication by adding to it a comprehensive collection of notices of holy persons who flourished in the church subsequent to the work of Rosweyde, and who have not been honoured with a public cult. "And after all that is done", he wrote in his general preface, at the beginning of the first volume of January, "if I still have any time to live, I shall lend a charm to the leisure hours of my old age by gathering the ascetical doctrine found in the teachings of the saints recorded in this work." And nevertheless, he began by outlining a plan of quite another vastness from that of Rosweyde, whose programme had already appalled Bellarmine. Rosweyde had confined his quest of original texts to the libraries of Belgium and the neighbouring regions. He had not gone beyond Paris to the south, or Cologne and Trier to the east. Bolland made appeal to collaborators, either Jesuit or others, residing in all the different countries of Europe. Then Rosweyde had proposed a plan at first only the original texts, without commentaries or annotations, relegating to the last volumes the studies intended to enable one to appreciate their value and to throw light on their difficulties. Bolland recognised at once how defective such a plan was. So he decided to give in connexion with each saint and his cult all the information he had been able to find, from whatever sources, to preface each text with a preliminary study destined
to determine its author and its historical value, and to respond to each mode of explanation for the purpose of clearing away difficulties. The duties of the various offices filled by Bolland, added to the formidable correspondence imposed on him by his research into documents and other sources of information concerning the life and cult of the saints to be treated in the work, together with the answers to the numerous letters of consultation addressed to him from all parts, concerning matters of ecclesiastical learning, left him no leisure for the discharge of his duties as hagiographer. Thus, after five years in Antwerp, he was forced to admit that the work was almost where Rosweyde had left it, except that the mass of material which the latter had begun to classify was notably augmented; as a matter of fact it was more than quadrupled. Meanwhile, eager desire for the appearance of the hagiographical monument announced by Rosweyde almost thirty years previously grew space in the learned and the religious world. There was nothing left for Bolland but to admit that the undertaking was beyond his individual strength and to seek an assistant. The pious and generous Abbé Liessies, Antoine de Wynghhe, effectively supported his demand by volunteering to defray the living expenses of the associate who should be assigned to Bolland, as the Professed House at Antwerp, which, depended on the aims of the faithful for its support, could not afford to make a man to defray the cost of its ministrations.

The assistant chosen, doubtless at Bolland's suggestion, for he had been one of his most brilliant pupils in the humanities, was Godfrey Henschen (b. at Venray in Limburg, 1601; d. 1681), who had entered the Society of Jesus in 1619. He was assigned to his former master in 1635 and laboured at the publication of the Acts Sanctorum up to the time of his death in 1681, forty-six years later. Twenty-four volumes had then appeared, of which the last was the seventh volume of May. He had, moreover, prepared a great amount of material and many commentaries for June. It may be safely said that the Bollandist work owes its final form to Henschen. When he arrived at Antwerp, Bolland had succeeded in ascertaining the whole of the pieces relating to the saints of January, and had found a publisher in the person of John van Meurs. Doubtless for the purpose of trying Henschen, he bade him study the acts of the February saints, leaving him even to the choice of the first such act and the manner of treating them. Bolland then gave himself entirely to the printing of the volumes for January. It was well under way when Henschen brought to Bolland the first fruits of his activity in the field of hagiography. They were studies for the history of St. Vasbelt and that of St. Anian, printed later in the first volume of February under date of February sixth. Bolland was absolutely astonished, and possibly somewhat abashed, by the great scope and solidity of the work which his disciple had so promptly given him. Doubtless Henschen himself had nothing like it. His preliminary commentaries on the acts of the various saints of January were prudently confined to designating the manuscript where the texts he was publishing had been found, to annotations, and a list of the variants in the various copies and the previous editions. The commentaries and annotations of Henschen solved, or at least tried to solve, every problem to which the text of the Acts could give rise, in the matter of chronology, geography, history, or philological interpretation, and all of them were treated in an erudite and method which could be called absolutely unknown hitherto. Modest and judicious servant that he was, Bolland at once admitted the superiority of the new method and desired Henschen, despite the reluctance occasioned by his humility and the profound respect in which he held his master, to revise the copy already in press. He held it back for a considerable time to enable his colleague to make the additions and corrections he judged necessary or advantageous. The pages containing the material for the first six days of January had already come from the press; the pages which seemed most defective to Henschen were replaced by reissues. His hand is more clearly apparent in the following pages, although he persisted in employing a reserve and watchfulness which sometimes seems to have cost him effort, used in pointing to defects in the text not due to Henschen's writing for himself only those of Germany, Spain, Britain, and Ireland. He still desired to associate the name of Henschen with his own on the title-page of the various volumes, but the humble religious would not allow it to appear except as his assistant and authorship. He exclaimed in a prefatory note to the first volume of January, did not fail to tell what he owed to his excellent collaborator. He then insisted that in the volumes of February and the following ones, Henschen's name should figure on the title-page as prominently as his own, and, moreover, that in the course of these volumes all commentaries from the pen of Henschen should be signed with his initials, claiming, doubtless not without some foundation, that he received a great number of letters relating to articles written by his colleague, which caused him difficulty. The two volumes of January, containing respectively, if we take into account the various tables and preliminary articles, the first, 1,300 pages, the second, more than 1,350, appeared in the course of the same year, 1645. The reason, as Bolland and his friends pointed out in the preface to this volume, was that the editors had chosen to finish the volumes before the publication of the February volumes, was the celebrated Gerard Vossius. The editors had the satisfaction of seeing added to all these approbations that of Alexander VII, who publicly testified that there had never been undertaken a work more useful and glorious to the Church. The same pontiff and, at his suggestion, the General of the Society of Jesus, Goswin Nickel, immediately invited Bolland to Rome, promising him a rich harvest of materials. The invitation was equivalent to a command, though Bolland, with an erudite tact and advantage to the work in hand for Bolland to do anything but gladly accept it. Finding, however, that he was too much enfeebled by recent illness to stand the fatigues of the journey, and that,
moreover, it was necessary for one of the editors to remain in Antwerp, the centre of correspondence, he even obtained permission from the General to send in his place Henschen, who was already favourably known through his collaboration in the volumes published.

At this time, the hagiographers were joined by a new companion, who was to accompany Henschen on his journey, and who later himself became one of the most brilliant pupils of Bolland's in the course of the humanities. He had just completed his thirty-first year when he was called on, in 1659, to give himself entirely to the work of hagiography, in which he was to have a remarkably long and fruitful career, for it lasted till his death, which occurred in the eighty-seventh year of his age, and the fifty-fifth of his work in this field. At the same time that they appointed Pagebroeck a collaborator to Bolland and Henschen, the superiors of the order, at the instance of Father Perrin, then Prior General of the "Acta Sanctorum" hastened as much as possible, relieved the Fathers in charge of the work of every other regular occupation, in order that they might thereupon devote their entire time to the hagiography. They were obliged to forego many of their duties of the sacred ministry except for the distraction and rest that men of such great intellectual activity might find in a change of occupation. About the same time they were granted another favour. We have seen that Bolland, in accepting the succession to Rosweyde's post, had obtained that a special place should be set apart for the manuscript copies and books collected by Rosweyde, which had hitherto been scattered among the books belonging to the general library of the Professed House. This small mansard room, lighted by dormer windows so narrow that in the corners it was impossible to see clearly enough to read the titles of the books, even at noonday. Moreover, the walls were not fitted with shelves where the books could be arranged. They were merely piled one above the other without any attempt at order. It required Bolland's wonderful local memory to find anything in this chaos. About 1660, he had the satisfaction of having a larger room, where shelves where the books and manuscripts could be placed on shelves in methodical order. The library, or the "Hagiographical Museum", as it became customary to call it, had already received, and continued to receive daily, thanks to the gifts and generous bequests of benefactors and judicious purchases, many acquisitions, so that Henschen during the course of his literary journey was able to say that he found very few historical libraries, public or private, that could compare with the "Hagiographical Museum" of Antwerp. With the death of Father Perrin the library was bequeathed to his son, who continued to maintain it as a centre of all the hagiographical literature of the Catholic Church.

Bolland's two companions began their journey on the feast of St. Mary Magdalen, 22 July, 1660. Their old master accompanied them as far as Cologne, where they left him after a week's stay. An almost daily correspondence kept up with him, and preserved nearly entire the Brussels diary. This correspondence at the Library of the Bollandists, allows us to follow each step of their learned pilgrimage through Germany, Italy, and France. In Germany, they visited successively Coblenz, Mainz, Worms, Speyer, Frankfort, Aschaffenburg, Würzburg, Bamberg, Nuremberg, Eichstätt, Ingolstadt, Augsburg, Munich, and Innsbruck. Everywhere the names of Bolland and Henschen were signed, and libraries opened every library to them; everywhere they found precious material to take with them for use in the succeeding volumes of the "Acta". A reception no less friendly and a harvest even more abundant awaited the travellers in Italy, at Verona, Vicenza, Padua, Venice, Ferrara, Forlì, Rimini, Pesaro, Fano, Sinigaglia, Ancona, Osimo, Loreto, Assisi, Perugia, Foligno, and Spoleto. They arrived in Rome the day before the vigil of Christmas, and remained there until 3 October of the following year. During all this time, they were overwhelmed with attentions and favours by Alexander VII, who in person did the honours of his rich Chigi library and commanded by special Briefs that all libraries should be opened to them, and especially that they should be allowed access to the manscripts of the Vatican. They were received with no less courtesy by the cardinals, the heads of the various orders, the savants Allatius, Aringhi, Ughelli, Chiampini, and others, then shining lights in the capital of the Christian world. The five or six抄本 placed at their disposal, while the "Acta Sanctorum" hastened as much as possible, relieved the Fathers in charge of the work of every other regular occupation, in order that they might thenceforth devote their entire time to the hagiography. They were obliged to forego many of their duties of the sacred ministry except for the distraction and rest that men of such great intellectual activity might find in a change of occupation. Bolland's two companions began their journey on the feast of St. Mary Magdalen, 22 July, 1660. Their old master accompanied them as far as Cologne, where they left him after a week's stay. An almost daily correspondence kept up with him, and preserved nearly entirely the Brussels diary. This correspondence at the Library of the Bollandists, allows us to follow each step of their learned pilgrimage through Germany, Italy, and France. In Germany, they visited successively Coblenz, Mainz, Worms, Speyer, Frankfort, Aschaffenburg, Würzburg, Bam
by themselves and by the copyists they had been obliged to engage, but they found awaiting them at Antwerp a like number from the copyists whom they had to employ in the principal towns (notably, Rome, Florence, Milan, and Paris) and who were still carrying on the labour with which they had been charged. This long journey caused little delay in the progress of the work, for, on the other hand, it was so productive of good results. Thanks to the incredible activity of the three printers and also to the indefatigability of the copyists, the three volumes for March were given to the public in 1688. They bore only the names of Henschen and Papebroch, as Bolland had passed to a better life, 12 September, 1665, thirty-six years ago, and the publication of the Acta of the twenty-eight Saints, which, to the great disappointment of the faithful, he had before started, was halted. As for the three volumes for March, they bore the title "Acta Sanctorum." Seven years later, in 1675, the three volumes for April appeared, preceded by preliminary treatises, the subjects of which were respectively: in the first volume, the two most ancient collections of notices on the popes (catalogues of Liberius, and Felix) and the date of St. Ambrose's death, both by Henschen; in the second, the attempt at a diplomatic treatise by Papebroch, "quae chief merit," as the author himself was fond of saying with as much sincerity as modesty, "was that it is not unadvisable to write in the Acta of the work: 'De actis diplomaticis';" in the third, a new revised edition of the "Diaeta de tribus Dagoberti," which had made the name of Henschen celebrated twenty years previously. The custom of having these "Paregera" was kept up in the succeeding volumes; then, as it was even an entire volume, the "Propyleum ad tomos Maii," filled with notes of Papebroch on the chronology and history of the popes from St. Peter to Innocent XI. Another happy thought first carried out at that time was the publication of the Greek texts of the Latin original. A new translation of the Greek texts was published, and the old version was republished with the text and the notes of Papebroch. The Greek texts were still relegated to the end of the volumes in the form of appendices; it would be only in the fourth volume of May that they would be printed in the body of the volumes. The first three volumes of the Acta were published in 1688. Besides the names of Henschen and Papebroch, the title-page bore those of Conrad Janninck and Francois Baert, who had been appointed to the work, the former in 1679; the latter in 1681, at the same time Father Daniel Caron, who was carried off by a premature death the second year after his appointment.

Up to this time Bolland and his first two companions had met with nothing but encouragement. A severe storm was soon to burst on the one who was not a member of the Order. In the first volume of April Papebroch had occasion to treat, under date of the eighth, the Acta of St. Albert Patriarch of Jerusalem, and author of the Carmelite rule. In his preliminary commentary he had combated, as insufficiendy grounded, the tradition universally received by the Carmelites, that the origin of the order dated back to the prophet Elias, who was regarded as its founder. This was the signal for an outburst of wrath on the part of the religious. From 1681 to 1683 there appeared no less than twenty or thirty pamphlets filled with abusive language against the unfortunate critic, and adorned with titles often licentious through their very efforts at violence: "Novus Ismael, cumus manus contra omnes et manus omnium contra eum, aive F. Daniel Papebrochii," "An Apologiae de Papebrochii scripta Carmeliticae convictissimis," "Jesus tuum nihil..."; "Hercules Commodius Joannes Launou, reddivius in P. Danieli Papebrochii..."; "P. R. F. Papebrochii Historici Conjecturae," etc. The series culminated in the large quarto volume signed with the name of Father Sebastian of St. Paul, provincial of the Flemish-Belgian province of the Carmelite Order, and entitled: "Exhibitio errorum quos P. Daniel Papebrochius Societatis Jesu suis in notis ad Acta Sanctorum commissis contra Christi et Benedicti monachi dni. P. Roberti Papebrochii Pontificum Acta et Gesta, Bussas, Brevia et Decreta; Concilia; S. Scripturam; Ecclesiae Capitis Primatum et Unitatem; Sanctos ipsos, eorum cultum, Reliquias, Acta et Scripta; Indulgentiarum Antiquitatem; Historiae Sacrae; Theatri, Martyrologia, Kalendariam, receptaque in Ecclesia traditiones ac revelationes, nec non alia queve antiqua Monumenta Regnum, Regionum, Civitatum, ac omnium fere Ordinarum; idque nonnisi ex meritis aliorum superjecto, in oppositione, inopiae, satyris ac sarcasme, cum Æthnicae, Heresiarchiae, Haretiae alliaque Auctoribis ab Ecclesia damnatis." —Obitua Sanctissimo Domino Nostro Innocentio XII. . . Coloniae Agrippinae, 1693." Papebroch, who was receiving at the same time from the most distinguished scholars lively protests against the attacks of which he was made the object, met them at first merely with a silence which perhaps seemed disdainful. But learning that active steps were being taken at Rome to obtain a condemnation of the collection of the Acta, the writer of these lines wrote to Papebroch, who, with his companions, had for a long time taken an active part in the work, he and his companions decided that the time for silence had passed. It was Father Janninck who entered the lists in an open letter to the author of the "Exhibitio Errorum," followed soon afterwards by another in which he replied to a certain little pamphlet, published in support of the work of Father Sebastian of St. Paul. The two letters were printed in 1693. They were followed by a more extended apology for the "Acta," published by the same Janninck in 1695; and lastly there appeared in 1696, 1697, and 1698 the three volumes of the "Exhibitio errorum," in which the keenest hagiographer takes up one by one the charges hurled against him by Father Sebastian and confutes each with an answer as solid in argument as it was temperate in tone. The adversaries of Papebroch, fearing lest they should not be able to obtain from the Court of Rome the condemnation for which they were begging, addressed themselves, with the utmost secrecy, to the tribunal of the Spanish Inquisition, where they were able to brand the work with the mark of heresy. Papebroch was painfully and deeply moved by the blow. He could submit to all the other insults heaped upon him, but he was obliged to refuse the charge of heresy. He made the most vehement entreaties and had all his friends in Spain on the alert to let him know which propositions the Holy Office of Spain had regarded as heretical, in order that he might retract them, if he was unable to furnish satisfactory explanations, or, if that were impossible, to limit the correction of the sentence, if his explanations were acceptable. His efforts proved fruitless. Having fallen seriously ill in 1701, and believing himself at the point of death, immediately after receiving the last sacraments he had a notably-public draw up in his presence and before witnesses, an act of abjuration which shows how greatly he was affected by the condemnation levelled at his head by the Spanish Inquisition. "After forty two years of assiduous toil, devoted to the elucidation of the Acts of the Holy Church, hoping in the approval of the Church, I ask only one thing on earth, and it is that His Holiness Clement XI be immediately implored to grant me after death what in life I have sought in
vain from Innocent XII. I have lived a Catholic, and I die a Catholic, by the grace of God. I have also the right of dying a Catholic in the eyes of men and of God. The latter statement is confirmed by the Spanish Inquisition shall appear justly issued and published, and so long as people read that I have taught in my books heretical propositions for which I have been condemned." Popebroch had accepted without appeal or minutes the decision of the Roman Congregation of 22 December, 1700, placing on the Index his chronological and historical Essay on the Popes, published in the "Propylæum Maii," a decree issued, as was expressly stated, on account of the sections bearing on certain conclaves and ceremonies of the Popes in the 17th century. But he did not cease working during the twelve years and a half that he still lived, both by his own efforts and those of his friends, not only to prevent the confirmation by Rome of the decree of the Spanish Inquisition, but also to secure the retraction of the decree. Father Jannink was even sent to Rome with this end in view and remained there for over two years and a half, from the end of October, 1697, till June, 1700. He was completely successful in this respect, so that he could report on his return to his readers in December, 1697, that he had received the assurance that no censure would be passed against the volumes condemned in Spain. The persecutors of Papebroch were compelled to sue for an injunction to silence for both parties, which was accorded them by the court of 25 November, 1698, gratefully accepted by Papebroch. More time was necessary, however, to bring about a final decision in the second matter. Whether it was judged prudent in Rome not to enter into conflict with the Spanish tribunal, or whether the latter, aching with the pain of the Acta Sanctorum, which he undertook about 1860. A grievous trial of another sort was visited on Papebroch during the last years of the seventeenth century. A catastrophe affected both him and the press, as he was induced him for about five years to a state of total blindness, which compelled him to give up all literary composition. The sight of his left eye was restored in 1702 by a successful operation. He immediately threw himself into the Acta Sanctorum as far as the fifth volume of June, the twenty-fourth of the whole collection, which appeared in 1709. The weight of age—he was then eighty-one—and his infirmities compelled him to abandon the more arduous work of the Bollandist museum. He lived for almost five years, which he devoted to editing the "Annales Antverpiensia," the foundation of Antwerp down to the year 1700. The manuscript of this work comprised eleven volumes in folio, seven of which are at the Royal Library of Brussels, the others probably having been lost. An edition of the volumes which have been preserved to us was published at Antwerp, 1845-48, in five volumes in octavo.

We shall not pursue further the history of the Bollandist work during the eighteenth century up to the suppression of the Society of Jesus, in 1773. The publication continued regularly, though with more or less unevenness as to the value of the commentaries, up to the third volume of October, which appeared in 1770. The suppression of the Order of brothers in a crisis in which the work nearly foundered. The Bollandists then in office were Cornelius De Bye, James De Bue, and Ignatius Hubens. The Fathers Jean Clé and Joseph Ghesquière had but recently been transferred from the work. The former, at the time of the suppression of the Society, was superior of the Flemish-Belgian Province; the latter served in the publication of the "Analecta Belgica," a collection of documents relating to the history of Belgium, a work for which the funds of the Musée Bellarmin were appropriated. This Museum was established at Antwerp at the beginning of the nineteenth century, for the purpose of opposing the Jansenists, but was afterwards transferred to the Professed House at Antwerp. On 20 September, 1773, commissioners of the Government presented themselves at the residence of the professed Jesuit Fathers at Antwerp, and before the assembled community read the Bull of suppression of Clement XIV and the imperial letters patent empowering them to execute it. They then affixed seals to the entrances of the archives, libraries, and any rooms of the Fathers which contained money or objects of value. A like proceeding took place on the same day in all the houses of the Society then existing in Belgium. Nevertheless a special order was issued enjoining the members of the commission charged with executing the decree on the Professed House at Antwerp, to take the letter of the Pope, and the "Analecta Belgica" without leaving Antwerp. The Jesuits employed in the publication of the "Acta Sanctorum" and to announce to them that the government, satisfied with their labours, was disposed to exercise special consideration in their regard. Father Ghesquière, corresponding to the "Analecta Belgica" were included in this indulgence granted to the Bollandists. This favourable attitude of the Government resulted, after various tiresome conferences, in the removal, in 1778, of the Bollandists and the historiographers of Belgium, together with their library, to the Abbey of Coudenberg, at Brussels. Each of the Bollandists was to receive an annual pension of 800 florins, besides the 500 florins to be given to the community of Coudenberg in payment for their board and lodging. The same indulgence was accorded Ghesquière in consideration of his office of historian. The results of the sale of the volumes were to be divided between the abbey and the editors on condition that the abbey should take charge of the matter on hand, and provide a copyist to make fair copies of the printers, as well as religious who should be trained under the direction of the elder Bollandists for the continuation of the work. The other half of the profits was to be divided in equal portions among the writers. The four hagiographers took up their residences at the Abbey of Coudenberg, with the consent of the abbot adopted two young religious as assistants. One of these soon left them to pursue his scientific studies, feeling that he had not the vocation for this work; the other was John-Baptist Fonson, at that time (1778) twenty-two years of age, whose name soon afterwards appeared on the title page as editor. Under this new condition of things there appeared in 1780 Volume IV of October under the names of Constantine Suykens (d. 1771), Cornelius De Bye, Jean Ghesquière, and Ignatius Hubens, all former Jesuits. In 1786, Volume V appeared, signed with the names of De Bye, De Bue, and Fonson. In the interval between these two volumes the corps of hagiographers had lost, in 1752, the youngest of the Antwerp members, Ignatius Hubens. He was replaced in October, 1784, by a French Benedictine, Dom Anselm Berthod, who voluntarily resigned the high positions he held in his order and those for which he was intended, so that he might devote himself to the learned work which the University of Vienna requested him to take up. He was to be engaged upon it only a little more than three years, for he died at Brussels, in March, 1788.

Two new volumes were issued from the royal press.
of Brussels, to which had been sent all the equipment of the printing establishment which the Bollandists had accumulated at Antwerp in the course of their work. The printing expenses as well as those of pensions and indemnities were largely made up to the public treasury by the confiscation of the capital amassed by the older Bollandists through the sale of their volumes, so that five persons of 20,000 Brabant florins were paid by the government all through the eighteenth century up to the suppression of the Society, and the liberality of certain benefactors. This capital had grown by 1775 to the sum of 130,000 Brabant florins, (£47,106) yielding an annual revenue of £1,333. A purchase was made in 1775 of the results of the sale of the Acta Sanctorum which averaged 2,400 florins yearly. The Empress Maria Theresa to the very last showed favour to the work of the Bollandists. The same benevolence was not experienced from her successor, Joseph II. The Bollandists now felt the consequences of one of the so-called reforms introduced into the ecclesiastical domain by this imperial philosopher. Among the religious houses suppressed as useless was the Abbey of St. Basilius in the Black Forest. On behalf of the Government commissioners he named a purchase price for the library and such of the published volumes as remained unsold, and offered to come to St. Basilius for some months to take charge of some of the young religious of the abbey for the work of publishing the Acta Sanctorum. His letter, dated 11 November, 1778, remained unanswered, whether as a result of dispositions little favourable to the Society of Jesus, such as had been more than once manifested by this famous abbot, or whether, already absorbed by many important works, he felt he could not think of undertaking yet another entirely new. About the same time, i.e. in November and December, 1778, the Congregation of Beneficences of Saint-Maur, in France, of its own accord made advances to the officials of the Imperial Government of Vienna for the acquisition of the Bollandist library, with a view to continuing the publication. This attempt was equally void of result. It was with the abbey of the Fremonstratensians of Tongerloo that arrangements were finally concluded. By a contract signed 6 May, 1779, the Government transferred to this abbey the Bollandist library and the Bellarminian Museum, together with the furnishing of the apartments. The sum paid for this work and that of the historiographers would result in an annual gain to the treasury of two to three thousand florins. The Chamber, moreover, took it on itself to say that there was no advantage to be gained by continuing it. The ecclesiastical commission and commission of studies (one and the same), consulted in its turn, gave a decision to the same effect (11 October, 1778). "The work of the Bollandists", it said, "is far from completion, and we cannot flatter ourselves that the end is yet in sight. This work has no merit but that of being an historical repertory, filled with an enormous quantity of details, which will always have but slight attraction for real savants. It is astonishing that at the time of the suppression of the Society of Jesus, they should have been successful in interesting the Government in such trash, and that it is such as proved by the scanty profit the Bollandists have derived from their labours. In business parlance, it is a very poor investment, and as it is not better, regarded from a scientific point of view, it is, difficultly, if not impossible, to do anything with it." Strengthened by this advice, the "Government Council" notified the Court of Accounts by a despatch dated 16 October, 1788, that it had been decided to put a stop to the work of the Acta Sanctorum, and that in consequence, beginning from that date, no more payments should be made to the Fathers De Bye, De Bue, Fonson, Ghesquière, and Corneille Smet (the last three having been associated with Ghesquière in the publication of the "Anecdota Belgica" and later enrolled among the Bollandists) for the annual pension of 800 florins which had been assured them. It was to be decided later what should be done with the printing outfit and the other effects of the suppressed establishment. They comprised the library of the Bollandists and the copies of the volumes already published which they had in stock. This involved no slight annoyance. Once the series was abandoned, it would be difficult to realise as much money as possible from them. It was decided to ask the Bollandists themselves to undertake the sale of these effects for the benefit of the public treasury. The Bollandists willingly accepted the charge, hoping to keep intact the treasures of their library and thus to ensure, in a certain measure, the resumption of the work, if not at once, at least in the near future. Cornelius De Bye, who had been especially commissioned to proceed with the reform of the society, Ghesquière, Gerard, and Gerbert, the learned abbot of the monastery of St. Basilius in the Black Forest. On behalf of the Government commissioners he named a purchase price for the library and such of the published volumes as remained unsold, and offered to come to St. Basilius for some months to take charge of some of the young religious of the abbey for the work of publishing the Acta Sanctorum. His letter, dated 11 November, 1778, remained unanswered, whether as a result of dispositions little favourable to the Society of Jesus, such as had been more than once manifested by this famous abbot, or whether, already absorbed by many important works, he felt he could not think of undertaking yet another entirely new. About the same time, i.e. in November and December, 1778, the Congregation of Beneficences of Saint-Maur, in France, of its own accord made advances to the officials of the Imperial Government of Vienna for the acquisition of the Bollandist library, with a view to continuing the publication. This attempt was equally void of result. It was with the abbey of the Fremonstratensians of Tongerloo that arrangements were finally concluded. By a contract signed 6 May, 1779, the Government transferred to this abbey the Bollandist library and the Bellarminian Museum, together with the furnishing of the apartments. The sum paid for this work and that of the historiographers would result in an annual gain to the treasury of two to three thousand florins. The Chamber, moreover, took it on itself to say that there was no advantage to be gained by continuing it. The ecclesiastical commission and commission of studies (one and the same), consulted in its turn, gave a decision to the same effect (11 October, 1778). "The work of the Bollandists", it said, "is far from completion, and we cannot flatter ourselves that the end is yet in sight. This work has no merit but that of being an historical repertory, filled with an enormous quantity of details, which will always have but slight attraction for real savants. It is astonishing that at the time of the suppression of the Society of Jesus, they should have been successful in interesting the Government in such trash, and that it is such as proved by the scanty profit the Bollandists have derived from their labours. In business parlance, it is a very poor investment, and as it is not better, regarded from a scientific point of view, it is, difficultly, if not impossible, to do anything with it." Strengthened by this advice, the "Government Council" notified the Court of Accounts by a despatch dated 16 October, 1788, that it had been decided to put a stop to the work of the Acta Sanctorum, and that in consequence, beginning from
the storm of persecution had somewhat abated, an attempt was made to collect these scattered effects. Naturally, many of them were lost or destroyed. The remainder were restored to the abbey of Tongerloo, where they were undisturbed until 1825. Then, as all hope of resuming the Bollandist work seemed lost, the canons of Tongerloo disposed of a great number of the books and manuscripts by public sale. Such as remained were given to the Government of the Netherlands, which hastened to incorporate the volumes into the Royal Library of The Hague. The manuscripts seemed destined to a like fate, but as a result of earnest solicitations they were deposited in the Library of Bourgogne, Brussels, where they still remain. Nevertheless, the idea of resuming the publication of the Acta Sanctorum had never been entirely abandoned in Belgium. The prefect of the department of the Deux Nèthes (province of Antwerp), in 1801; the Institute of France, with the Minister of the Interior of the French Republic as mediator, in 1802; and lastly, in 1810, the Baron de Tour de Pin, Prefect of the Department of the Dyle (Brussels), at the request of the incumbent of the same important office, then the Count de Montalivet, applied to such of the former that by 29 January, 1837, he received from Father van Lil, Provincial of the Society in Belgium, assurance of the appointment by the Society of new Bollandists, with their residence at the College of Saint-Michel at Brussels. These were Fathers Jean-Baptiste Boone, Joseph Van der Moere, and Prosper Coppens, to whom was added, in the course of the same year, Father Joseph Van Hecke. The provincial, in behalf of these Fathers, asked free access to public libraries and archives, and the privilege of taking home with them from the Library of Bourgogne and the Royal Library, such manuscripts and books as they would need for reference in the course of their work. Both requests were immediately granted. Moreover, an annual subsidy was promised, which was fixed in May, 1837, at 6,000 francs. This subsidy was continued from year to year under the different governments, both Catholic and Liberal, which succeeded to power, until the parliamentary session of 1868, in the course of which the Liberal majority of the Chamber of Deputies cut it out of the budget. It has never been re-established. The new hagiographers began by drawing up a list of the saints whose acts or notices remained to be published, that is to say, those who are hon-

Bollandists as were still living, to induce them to resume their task once more. But the attempts were futile.

Matters rested here until 1836. It was then learned that a hagiographical society had been formed in France under the patronage of several bishops and of M. Guizot, Minister of Public Instruction, and that it especially proposed to itself the resumption of the work of the Bollandists. The chief promoter of the enterprise, Abbé Théodore Perrin, of Laval, came to Belgium that same year, 1836, to solicit the support of the Government and the collaboration of Belgian savants. He did not meet with the reception he had hoped for. On the contrary, it aroused indignation in Belgium that a work which had come to be regarded as a national glory should pass into the hands of the French. The Abbé de Ram, Rector Magnificus of the University of Louvain and member of the Royal Commission of History, expressed this feeling in a letter addressed under date of 17 October, to the Count de Thiers, Minister of the Interior, urgently imploring him to lose no time in securing for their native land of Belgium the honour of completing the great hagiographical collection, and engaged him to entrust the work to the Fathers of the Society of Jesus, by whom it had been begun and carried so far in the preceding centuries. The Minister immediately took the field and conducted negotiations with such energy

Bollandists

COLLÈGE DE SAINT-MICHEL, BRUXELLES

Oured in the Catholic Church on the various days of October, November, and December, beginning from 15 October, the day at which the work of their predecessors had been brought to a halt. This list was published in the month of March, 1838, with an introduction containing a summary of the history of the Bollandist movement, the announcement of the resumption of the work, and an earnest appeal to all friends of religious learning, imploring their assistance in securing what was felt by the new workers as the most necessary thing for their success, namely, a hagiographical library. This was published under the title of "De persecutione operis Bollandiani" (in octavo, 60 pp.). The appeal was heard. Most of the European governments, many societies of learned men, and several great publishers sent copies of the historical works undertaken by them or under their patronage; private individuals made generous donations of books, often precious and rare volumes that had adorned their libraries. Everywhere, also, on their literary journeys, the Bollandists were accorded the most enthusiastic and flattering receptions.

The first volume published after the resurrection of Bollandism, Volume VII of October, appeared in 1845, containing over 2,000 pages in folio. There followed successively Volumes VIII to XIII of October, and I and II of November, besides the "Propyleum Novembria", an edition of the Greek Synaxa-
tion called "de Sirmond", with the variants of sixty manuscripts scattered through the various public libraries of Europe.

The author of this article does not consider himself qualified to give an estimate of the work of the later Bollandists, having himself been a member of the order for too long a period; but he is able, however, to cite the appreciations of the most distinguished and capable scholars in this field, who testify that the volumes published by the later Bollandists are in no wise inferior to those of their predecessors of the seventeenth and eighteenth centuries.

The reservations made by certain eminent critics in their commendation are generally due to the prolixity of the commentaries, which they think is often excessive, and to the timidity of certain conclusions, which do not seem to them to correspond with what the discussions had led them to expect. Another class of censors reproach the Bollandists for quite the reverse, accusing them of not showing sufficient respect towards what they call tradition, and of being too often hypercritical. The present members of the body are firmly resolved to be on their guard against these contrary excesses, something, indeed, which becomes easier for them as time passes, owing to the constant progress of good scientific methods. We may be permitted one word, in conclusion, as to what has been done during these latter years towards keeping the work up to the high level of contemporary historical erudition. It has been judged opportune, in the first place, to publish, besides the great volumes of the principal collection itself, which appear at undetermined intervals, a periodical review intended chiefly to make known to the learned public materials recently discovered by the Bollandists or their friends, which go towards completing either the Acts published in the volumes already printed or the entire mass of material to be employed in the future volumes of the work. This review was begun under the title of "Analecta Bollandiana" in the early part of 1882. At the rate of one volume in octavo a year, it has reached in the present year (1907) the twenty-sixth volume. In volumes subsequent to the sixth there have been inserted, besides unedited documents, various notes bearing on hagiographical matters. Since the publication of the tenth volume, each quarterly issue has contained a "Bulletin des publications hagiographiques" in which are announced and summarized the most recent works and reviews in which concern matters of hagiography.

Other auxiliary works have exacted long years of laborious preparation. They are the "Bibliotheque Hagiographica Graeca" and the "Bibliotheque Hagiographica Latina" in which are enumerated under the name of each saint, following the alphabetical order of their names, all documents relating to his or her life and cult written in Greek or in Latin before the beginning of the sixteenth century, together with the indication of all collections and books where they can be found. The first of these collections, which appeared in 1895, numbers 143 pages. (There is now in preparation a new edition notably enlarged.) The second, issued 1898-99, has 1,387 pages. It is hoped that the "Bibliotheque Hagiographica Orientalis" will soon be printed. Moreover, there is a third class of auxiliary works to which the Bollandists of the present generation are directing their activity, and that is the careful preparation of catalogues containing a systematic detailed description of the Greek manuscripts of each of the great libraries. A great many of these catalogues have been incorporated in the "Analecta". Such are the catalogues of the Greek manuscripts in the Roman libraries of the Barberini, the Chigi, and the Vatican Library; of the Library of M. de Ruey; of the University of Meimena; and of that of St. Mark's, in Venice; catalogues of the Latin manuscripts in the Royal Library of Brussels (2 vols. in octavo), in the libraries of the cities, or of the universities, of Bruges, Ghent, Liège, and Namur, in Belgium; of the municipal libraries of Chartres, Le Mans, Douai, and Rouen, in France; those of The Hague in Holland, and, in Italy, of Milan (the Ambrosian), as well as the various libraries of Rome; also in the private library of His Majesty the Emperor of Austria, at Vienna, and that of Alphonse Wins at Nivelles; and lastly, of

The Bollandist Library. Besides the "Analecta", there have appeared the catalogue of the old (before 1500) Latin manuscripts in the National Library of Paris (three octavo volumes, also the tables) and a list of the Greek manuscripts in the same library (compiled in collaboration with M. H. Omont). All these publications, although certainly delaying somewhat the appearance of succeeding volumes of the Acts Sanctorum, have gained for the Bollandists warm words of encouragement and commendation from the greatest scholars. In view of the impossibility of quoting at length these flattering testimonies, we shall confine ourselves to mentioning, as they come to mind, the articles of Mgr. Duchesne (Bulletin critique, 1 April, 1890); Léopold Delisle (Bibliothèque de l'École des Chartres, I, 1890, 532); M. Solomon Reinauch (Revue Archéologique, 1895, II, 229); Kries (Literarische Rundschau, 1 December, 1900); a passage in the Belgian Archives (1901), III, 31. There is a final detail which may not be without interest. The Bollandists had found themselves greatly hampered in the arrangement of their library at their residence in the Rue des Ursulines at Brussels which they had occupied since the resumption of the work in 1837. During the latter part of 1905 they were transferred to the new College of Saint-Michel on the Boulevard Militaire, where ample and convenient quarters for the library were assigned in the lofty buildings of the vast establishment. The 150,000 volumes contained in their literary museum are most suitably arranged here. A large space was also set apart for historical and philological reviews (about 600), nearly all of which are sent regularly by learned societies, either gratuitously or in exchange for the "Analecta Bollandiana". To class these according to the place of publication and the language chiefly employed in their preparation: 228
are French (a certain number of which are published in Belgium, Switzerland, and other countries than France); 195, German; 98, Italian; 85, English; (of which are seven: 13, Dutch; 7, Flemish; 7, Spanish; 7, Croatian; 4, Swedish; 3, Portuguese; 2, Irish; 2, Hungarian; 1, Czech; 1, Polish; 1, Rumanian; 1, Dalmatian; and 1, Norwegian. Moreover, there are 9 printed in Greek, 6 in Latin, 4 in Armenian, and 1 in Arabic. Finally, a large hall near the library has been set apart, and after October, 1907, it will be thrown open to foreign students who may wish to consult original sources of information likely to assist them in their researches.

The quotations of the Acts Sanctorum refer to three different editions. The first, the original one, commonly called the Antwerp edition, has been sufficiently described in the above article. The volumes of the Antwerp collection were first reprinted at Venice from 1764 to 1770. They reached then to volume VI of September. The main difference between this impression and the Antwerp edition lies in the fact that the supplementary additions to sündry commentaries printed by the Bollandists at the end of the sixteenth century were transposed in the Venetian edition and joined to the commentary to which they refer; hence the contents of each volume are not in close correspondence in the volumes similarly marked in both editions. Moreover, many of the errors of orthography have been corrected, and a number of additions and emendations have been added, among them the emendations of Mr. Lutz. The whole printing is very good, and it is the opinion of bibliographers that this is the best edition of the Bollandists today.

Bollandus (Bolland). See BOLLANDISTS.

Bollig, Johann, distinguished Orientalist, b. near Düren in Rhenish Prussia, 23 August, 1821; d. at Rome in 1895. He studied theology and Semitic languages at Rome, where he entered the Society of Jesus, and in 1856 he was appointed professor of theology for the native seminaries at the same time pursuing his researches in Oriental literature. After his return to Rome, he was appointed professor of Arabic and Sanskrit at the Roman College (afterwards the Gregorian University) and at the Sapienza. He was a member of the commission appointed by Pius IX to arrange the details of the Vatican Council and as pontifical theologian during the Council. For many years he was cometor of the Congregation of Propaganda for Oriental affairs. In 1858 he was appointed Prefect of the Vatican Library, which office he held till his death. Among his published works are: "Brevis Chrestomathia arabica" (Rome, 1882); "Sti. Gregorii lit. carm. iambica. ", an ancient Syrian translation (Beirut, 1885). He left many unpublished writings on Oriental philology.

BOLOGNA

Guldner. Bologna, Archidiocese of.—History.—Bologna is the principal city in the province of the same name, Italy, and contains about 150,000 inhabitants. It was founded by the Estruscan king, who was expelled by the Faliscans. Later it fell into the hands of the Boi, a Gallic tribe, and from that time took the name of Bononia, whence the present form. The regions round about having been laid waste by the combined powers of Rome, in 180 B.C., it was made a colony there, which was enlarged and beautified by Augustus. After Byssantion had broken the power of the Goths in Italy, Bologna belonged to the Exarchate of Ravenna (536). By the donation of Pepin Bologna was made part of the patrimony of the Holy See, but during the disturbances of the ninth century was wrested from the popes. At the beginning of the ninth century it was laid waste during the invasions of the Hungarians. Otto I did much to restore the city to its former condition, making it directly dependent on the imperial authority. Bologna was then governed by consuls. During the struggles between the empire and the popes, the city took the part of the latter and was enriched by the payment of the duchy, which was definitively recognised by Henry V in 1152. Bologna was among the first to join the Lombard League. From 1153 it was ruled by podestas, who were for the most part foreigners. From the accession of Frederick II, Bologna was rent into two factions, the Guelphs and Ghibellines, the former being in the majority. On 26 May, 1249, the inhabitants of Bologna in the battle of Fossalto conquered the troops of Frederick II under the leadership of King Enzo of Sardinia; Enzo himself was taken prisoner, and neither the threats nor the promises of Frederick availed to secure his liberty. He remained in captivity until his death, eleven years later, although for the rest he was always treated with the greatest consideration.

In 1278, in order more thoroughly to safeguard their communal liberty, the inhabitants of Bologna placed themselves under the protection of the Holy See, and Pope Nicholas III sent them as legates his nephew, Bertoldo Orsini, whom he also commissioned to reconcile the opposing factions. From the middle of the fourteenth century the preponderance of power was in the hands of the Pedotti family, but later passed to the Visconti of Milan, who alternated with the Bentivoglio family in holding the reins of power. At intervals the popes attempted to make their authority recognised, else the city spontaneously recognised their sovereignty (1327-34; 1340-47; 1360-76, through the efforts of Cardinal Albornoz; 1377-1401; 1403-11, during the pontificate of John XXIII; 1412-16; 1420-25, under Cardinal Conclamer). In the beginning of the fifteenth century there were frequent popular uprisings against the nobility. From 1443 to 1506 three of the Bentivoglio family succeeded each other as masters of Bologna. In 1506 Julius II incorporated Romagna into the Papal States, Bologna included; the city, however, retained a greater degree of communal autonomy. The papal authority was vested in a legate, who in the beginning was generally a cardinal, later, however, only a titular bishop. In 1796 Bologna was occupied by the French, who made a portion of the city, including the Papal Palaces, a dependency of the Pope's. In 1814 it was seized by the Austrians, who in 1815 restored it to the pope. From the time of its restoration, Bologna was the scene of a series of deep-seated agitation and revolts against the papal rule. These uprisings
BOLOGNA
were repressed by Austrian troops. Finally, in 1859, Romagna, together with the Marches and Umbria, was annexed to the Kingdom of Italy.

Christianity in Bologna.—The only sources for the history of the beginnings of Christianity in Bologna are legendary accounts, according to which St. Peter and, later, St. Peter of Ravenna, was the first to preach the Gospel in Bologna. The first bishop is said to have been St. Zama, who is supposed to have been ordained by Pope St. Dionysius (270). However, it may be maintained with certainty that Christianity, and likewise the episcopacy of Bologna, date back to a much more remote period. During the persecution of Diocletian, Bologna was the scene of the martyrdom of St. Vitalis and Agricola, whose bodies were interred in a Jewish cemetery and only discovered in the time of St. Ambrose, in 392, as related by him in a letter (Ep. iv), the authenticity of which, however, is questioned. The fact is referred to, perhaps, by Paulinus in his life of the saint, when he speaks of Ambrose taking to Florence some relics of these martyrs. It was possibly in the same period that the martyrdom of St. Proculus occurred. The episcopal See of Bologna was first subject to the Metropolitan of Milan, and later, probably after Milan had fallen into the hands of the Lombards, it recognized as something the Metropolitan of Ravenna. In 1106 it was placed immediately under the Holy See. Finally, in 1582, Gregory XIII raised the Bishop of Bologna to the dignity of a metropolitan, assigning him as suffragans the Sees of Imola, Cesena, Modena, Reggio, Parma, Piacenza, and Crema; to-day, however, only Imola and Faenza are suffragans to Bologna.

Among the Bishops of Bologna worthy of note are Sts. Faustinianus, Basil, and Ebuseus, in the fourth century. About 400 there is record of St. Felix, succeeded by Regino, and Petronius, who is extolled for having restored the church of Bologna, and who later became patron of the city. His relics are preserved in the church of San Stefano. A number of the Bishops of Bologna were later raised to the papal chair, as, for instance, John X; Cosimo Migliorati, who assumed the name of Innocent VII; Tomaso Parentucci, later Nicholas V; Giuliano della Rovere, who became Julius II; Alessandro Ludovisi, or Gregory XV; and Prospero Lambertini, or Benedict XIV. The last two mentions were Bishop of Bologna. Of the suffragan bishops were: Cardinal Filippo Caraffa (1378–89); Cardinal Antonio Correr (1407–12); Blessed Nicolò, Cardinal Albergati (1417–34); Cardinal Lorenzo Campeggio, known for the many embassies on which he was sent to Germany and England, in connexion with the Reformations and the marriage of Henry VIII (1523–25). After Bologna became an archiepiscopal see, almost all the metropolitans were cardinals, among whom may be mentioned: Gabriele Paleotti (1591–97), who left the cathedral as it exists to-day, built the episcopal palace and endeavoured to put the Tridentine reforms into execution in Bologna; Vincenzo Malvezzi (1754–75), to whom the cathedral and the seminary owed much; Carlo Opizoni (1802–55); Maffeo Valeri (1855–60); Lucido Maria Pasconchi (1877–82). Bologna was also the birthplace of the following popes, in addition to the two already mentioned: Honorius II (Lamberto Scannabecchi), Lucius II (Gherardo Caccianemico dell'Orso), Alexander V (Pietro Filargo), Gregory XIII (Ugo Buonconsiglio), and Innocent IX (Gianmattia Facchinetti).

Churches.—Chief among the sacred edifices of Bologna is the cathedral, dedicated to St. Peter and erected by the commune in 910 to replace the ancient cathedral of St. Cecilia, burnt by fire in 1130, it was but rebuilt in 1165; in its present form it dates from 1605, according to plans drawn up by Magenta, a Barnabite. The façade, however, was designed by Alfi Torreggiani, who also added the first two chapels to the church. The majority of the paintings are by famous masters, as, for instance, Ventura da Bologna, Ercole Grazioli, Francesco Tadolini, Onofrio Zasottii, del Bagnovallo (Bartolommeo), Ludovico Cigoli, and others. There is also a lower church with five altars. Worthy of note is a crucifix of cedar wood dating from the time of the old cathedral. The church of San Petronio, dedicated to the patron of the city, was built by order of the Seconda, at public expense, in 1390. A competition was announced for the plans, and among all the designs the preference was given those of Antonio Vincenzi, while the supervision of the work of erection was entrusted to Andre Manfredi da Faenza. However, the original drawings, providing for an octagonal dome 500 feet high, were not adhered to. The façade still remains incomplete, only the lower part being covered with sculptures in marble. The ornamentation of the larger door is the work of Pietro della Fonte; many of the figures compare favourably with the works of an age in which the art was more highly developed. In the architrave is the Madonna and Child. The two nave were adorned with statues of Sts. Petronius and Ambrose. The carving of the doors was done by Sigismondo Bargelosio, aided by Andrea Magnani and Gabriele da Zaccaria. The two side doors are also adorned with magnificent carvings, the work of other artists. It is a three-nave church, the twenty-three chapels being adorned with the masterpieces of distinguished artists of different ages. Worthy of note is the statue of St. Anthony of Padua by Sansovino. A sun-dial is to be found there, likewise two clocks, among the first to be made in Italy with pendulums. In Bologna is also the church of Corpus Domini, founded by St. Catherine de' Vigi, commonly known as St. Catherine of Bologna, and adjoining it the monastery of the Poor Clares. In one of the chapels is preserved the mumified body of the saint, together with many objects used by her during life. There is also a beautiful church of St. Dominic, close by the Dominican convent in which the death of St. Dominic occurred. The tomb of the saint is itself a veritable museum of works of art by the great masters. The casket was carved by Nicolò Piazzc, and one of the angels was done by Michelangelo in his youth. The choir is beautifully inlaid with tinted wood, the work of Fra Damiano da Bergamo, a Dominican lay brother. The church is cruciform, and in one chapel of the cross is the tomb of King Ezzelino; in another that of Guido Reni.
Bernardo Vecchietti, who treated him as his son. He was thoroughly Florentine in sentiment, and in Florence are preserved his two masterpieces, “Mercury” and the “Rape of the Sabines.” In the former, in the Bargello, he has come nearer to expressing swift, flashing motion and airy lightness than any other artist of that or a later period. The figure of the youth with winged feet, holding the caduceus, and borne aloft upon a head of Zoilus, is masterly in its expression of earnest purpose and light, easy movement. Hardly less important is the “Rape of the Sabines” in marble, under the Loggia dei Lanzi, in which Count Ginori posed for the figure of the triumphant youth who carries away a struggling woman in his embrace. Other works are the group of Hercules and Nessus; the equestrian bronze figure of “Duke Cosimo I” in the Piazza Signoria and the bas-relief of the doorway of the Cathedral of Pisa. Besides these, he executed more than one crucifix, a figure of “Diana,” another of “Venus”; and four syrenas similar to the larger ones on the Bologna fountain. Vasari mentions a bronze figure of “Samson” in combat with two Philistines, both larger than life size. Giovanni’s work is marked by freedom and grace, while free from the fault of exaggeration which so injures much of the sculpture of the very late Renaissance.

DEBARDENS, LA via de Jean Boulogne (1883).

GEORGE CHARLES WILLIAMSON.

BOLOGNA, THE UNIVERSITY OF.—A tradition of the thirteenth century attributed the foundation of this university to Theodosius II (433); but this legend is now generally rejected. The authentic “Habita,” issued by Frederick Barbarossa in 1158, was at best only an implicit recognition of the existence of the school of Bologna, and the bull of Clement III (1189), though it speaks of “masters and scholars,” has no reference to a university organization. The university, in fact, developed out of the “Schools of the Liberal Arts” which flourished at Bologna early in the eleventh century. An important feature of the general education given in these schools was the Dictamen, or Art of Composition which included rules for drawing up briefs and other legal documents. The study of grammar and rhetoric was closely connected with the study of law. At the same time, the political, commercial and intellectual growth of the Lombard cities created a demand for legal instruction. Ravenna, long the home of jurisprudence, lost its prestige through its conflicts with the papacy, and Bologna was its successor. Towards the close of the eleventh century Pape
mentioned in connexion with the revived study of the "Digest"; but it was Inernius who began the study of the entire "Corpus Juris Civilis" and organized the school of law as distinct from the arts school (1100–30). Along with this revival of the Civil Law came the foundation of the semi-monastic (or Benedictine) monk, Gratian. The "Decretum Gratiani" (q. v.), published about 1140, became at once the recognized textbook of canon law. Bologna was thus, in its origin, a "jurist" university. The work of Inernius and Gratian was continued by such men as Odo of Cheriton (d. 1300), Joannes Andrea (1270–1348), St. Raymond of Pennafort (1175–1275), and Ricardus Anglicus, who later became Bishop of Chichester (about middle of thirteenth century).

The fame of its professors drew to Bologna students from all parts of Italy and from nearly every country of Europe. It is said that their number at the beginning of the thirteenth century was 10,000. Bologna was known as the "Mater studiorum", and its motto, "Bononia ducet", was literally true. The foreign (non-Bolognesi) students formed two "universities"; that of the Casamontes and that of the Ultramontanes. The former comprised seventeen "Nations", the latter, eighteen, including the English. The nations were organized on a plan similar to that of the orders of the friars. Each elected its own "Consiliarii" and held its own meetings. The rector was elected by the students. The masters, also, were grouped in guilds or colleges. In the examination of candidates for degrees, the authority of the masters was supreme; in other matters the students had full control. In the conflicts that often arose between them and the city, the students enforced their claims by emigrating to other towns—Vicenza (1204), Arezzo (1215), Padua (1221). In 1231 it was taken to the pope, who, as a rule decided in favour of the university. Notable among these papal interventions was the Bull of Honorius III (1217).

Bologna in its earliest organisation was a "student" university; professors were hired by the students to give instruction. The lectures were either "ordinary" or "extraordinary", a distinction which corresponded with that between the more essential and the less essential of the law-texts (Rashdail). Ordinary lectures were reserved for the Bachelor's degree; in Bologna, this privilege was given to the student as part of his preparation for the baccalaureate. (See Arts, Bachelor of.) This classification of teachers survives in the modern German university. At Bologna, no examination was required for the Bachelor's degree; permission to lecture was granted the student after a five years' course in law. For the Licentiate, the candidate was obliged to pass a private, and for the Doctorate a public, examination (Convexitio, Inceptio). The examinations and the conferring of degrees belonged originally to the masters of 1221; Honorius III prescribed that no one should receive the Doctorate without the consent of the Archdeacon of Bologna. In 1292 Nicholas IV decreed that all who were licensed doctors by the Archdeacon of Bologna should have the right, without further examination or approval, to teach everywhere. These enactments not only enhanced the value of the degree, but also affected the organization of the university. Functions hitherto exercised by private corporations passed into the hands of an official body, the Pontificia, and that authority was ecclesiastical. The degree system of Bologna was henceforth the same as that which had already been established at Paris; and these two schools became the models upon which the later universities were organized.

The student body of the Arts faculty at Bologna had as one result the reduction of the Liberal Arts to a position of secondary importance. On the other hand, two factors in the situation favoured the Arts and made possible a new growth in the university, namely, the restoration of the Aristotelian philosophy and the introduction of mathematics from the Islamic world. The rise of mathematics, philosophy of Aristotle formed the basis of the study of medicine, while mathematics opened the way to astronomy, and eventually to astronomy. Among the physicians of note in Bologna were a number of ecclesiastics, one of whom, Nicolaus de Farnham, became (1241) Bishop of Durham;.Clampen was forbidden to study medicine by Honorius III (1219). But there was no regularly organized school of medicine until Thaddeus of Florence began his teaching, about 1260. From that time onward the medical faculty grew in importance. Surgery received special attention; dissection was practised, and the foundations of modern anatomy were laid by Mondinus (1275–1326). Closely allied with the work in medicine was the study of astronomy. A famous astronomer, Cecco d'Ascoli (d. 1327), declared that a physician without astronomy would be like an eye without the power of vision. The scientific study of astronomy was founded by the investigations of Novara and his disciple Copernicus (1473–1543). Both medical and mathematical studies were influenced by Arabian scholarship; its own centres of influence were Averroes. As these were also philosophers, their theories came to be part of the Scholasticism of Bologna, and their authority was scarcely inferior to that of Aristotle.

Theology had long been taught in the monastic schools; but the faculty of theology in the university was established by Innocent VI in 1360. Its chancellor was the Bishop of Bologna, and its doctors depended upon him rather than upon the student. Thees was the first of the private legates of Urban V, Boniface IX, and their successors. Thees, in fact, favouring the university in every possible way. Gregory IX and Boniface VIII sent it the Decretals (q. v.); Benedict XIV, various bulls and encyclicals. Among its benefactors were Martin V, Eugene IV, Nicholas V, Paul II, Innocent VIII, Paul III, Pius IV, Clement VIII, Urban VIII, Innocent X, and Clement XII. Gregory XI founded (1372), in connexion with the university, the Collegium Gregorianum for poor students of medicine. In philosophy, too, his influence was strong; the schools were established by laymen and ecclesiastics (see list in Moroni). One of the most important was the College of Spain (Cas Spagnuola, or Collegio Maggiore), which owed its existence and endowment to Cardinal Albornoz (1234). The papal legates at Bologna took an active part in the direction of the university and eventually became the supreme authority. In the course of time, also, the student body lost its control, and the various schools were consolidated in one university organization.

In the development of modern literature and science Bologna took an important part. The famous Cardinal Bessarion, a leader in the Renaissance movement, was legate from 1451 to 1465. Under his influence classical studies flourished in the university, and Humanists like Filelfo (1386–1451) and Guarino were among its professors. To these should be added, in more recent times, the great Mezzofanti (1774–1849). In the natural sciences, especially, Bologna points to a long list of distinguished men trained by her authority, and that authority was ecclesiastical. The degree system of Bologna was henceforth the same as that which had already been established at Paris; and these two schools became the models upon which the later universities were organized.

The student body of the Arts faculty at Bologna had as one result the reduction of the Liberal Arts...
Bolsec, Johannes-Hrabanus, a theologian and physician, b. probably at Paris, date unknown; d. at Lyons c. 1584. He became a Carmelite monk at Paris. A sermon which he preached there aroused misgivings in ecclesiastical circles regarding the soundness of his ideas, and Bolsec left Paris. Having separated from the Catholic Church about 1551, he took refuge at the Court of Renée, Duchess of Ferrara, who was favourably disposed towards persons holding Protestant views. Here he married, and began the study of medicine, about 1550 settling as a physician in Regi, near Geneva. He is a theologian of the controversy with Calvin, whose doctrine of predestination he deemed an absurdity, soon ensued. In 1561, at one of the religious conferences or public discussions, then held at Geneva every Friday, he interrupted the orator of the day, Jean de Saint-André, who was railing on predestination, and argued against him. As the triumph of his ideas would have meant the ruin of Calvin’s influence in the Swiss city, Bolsec was arrested, and through the influence of the reformer banished forever from Geneva (1561). In 1581 he was also driven from Thomas in the French territory, whither he had retired. He went to Paris and sought admission into the ministry of the Reformed Church. But his opinions were not found sufficiently orthodox, from a Reformed point of view, for one wishing to hold such a position. He was asked for a declaration of faith, but refused. He went to Lauzanne (c. 1563), but as the signing of the Confession of Bern was made a condition of his residence there, he preferred to return to France. Shortly after this, he recanted his errors, was reconciled with the Catholic Church, and published biographies of the two Geneva reformers, Calvin and Beza (1590-1605). These works are violent in tone, and find little favour with Protestant writers. Their historical statements cannot always be relied on. They are “Histoire de la vie de Jean Calvin” (Lyons and Paris, 1577; published in Latin at Cologne in 1580; Cermal tr. 1581); “Histoire de la vie et des mers de Th. de Béze” (Paris, 1582). The life of Calvin was edited by L. F. Chastel in 1875 with extracts from the life of Beza.

Bolsena, Miracle of. See Orvieto.

Bolton, EDMUND, historian, antiquary, and poet, born c. 1575; died c. 1635. The genuine loyalty to the Catholic Faith which characterized his career of this eccentric and unfortunate genius is indicated by the second name which appears in a signature of his preserved in Harleian MS. 6521 at the British Museum—“Edmundus Maria Boltonus”. The same MS. furnishes us with a clue to sundry details of his life. He seems to have been of Catholic parents in Leicestershire, and must have been of good family and position, for he claims to have continued “many years on his own charge a free commoner at Trinity Hall, Cambridge”, and after going to London to study law to have lived there “in the best and choicest company of gentle- men”. There can be no doubt that there was a strong Catholic element among the lawyers of the Inner Temple (Richard Southwell, the father of the martyr, might be named as one example among many), and the tone of the drama and much of the lighter literature of the late Elizabethan and early Jacobean periods shows that the Bohemian society into which Bolton and his fellows were thrown was often pronouncedly anti-Protestant. Perhaps for a while they were Romanizers, like his friend John Jounson, ultimately fell away, Bolton, much to his credit, remained stanch to his principles. Of his ability and zeal in the pursuit of knowledge there can be no question. He was the friend of Cotton and Camden, whose antiquarian researches he shared, and as a writer of verses he was associated with Sidney, Spenser, Raleigh, and others in the publication of “England’s Helicon”. Many influential friends, including for example the Duke, then Marquess, of Buckingham, tried to help him in his pecuniary embarrassments, but there seems no doubt that his Catholicism stood in the way of his making a living by literature. For instance, a life of King Henry II which he had prepared for an edition of Speed’s “Chronicle”, then in course of publication, was rejected on account of the too favourable aspect in which he had depicted St. Thomas of Canterbury. It seems, however, that through Buckingham’s influence he obtained some small post about the court of James I, and in 1617 he proposed to the king some scheme for a royal library, which was to be associated with the Order of the Garter, and which was destined in the mind of its designer to convert Windsor Castle into a sort of English Olympus. James I gave some encouragement to the scheme, but died before it was carried into execution. With the accession of Charles I, Bolton seems to have fallen on evil days. The last years of his life were mostly spent either in the Fleet or in the Marshalsea as a prisoner for debt, to which no doubt the fines he incurred as a “reissuing con- vict” largely contributed. The exact date of his death is unknown. Besides his contributions in English verse to “England’s Helicon” Bolton wrote a certain amount of Latin poetry. He is best remembered, however, as the author of “The Elements of Armories”, a curious heraldic dialogue published anonymously in 1610, and of “Nero Cesar, or Monarchie deprived”, a book of Roman history dealing in part with the earliest notices of Britain. A translation of the “Histories of Florus which he also published anonymously is signed “De Jean Th. de Béze, king’s friend”). Bolton’s “Hypercritica”, a useful work of literary criticism, was published long after his death.

Herbert Thurston.

Bolsano, BERNHARD, Austrian mathematician
and philosopher, b. at Prague, 5 October, 1781; d. 18 December, 1848. As a student he devoted himself chiefly to mathematics with marked success. Against the wish of his father, he entered the ecclesiastical state and was ordained in 1805. In 1807 he was appointed professor of philosophy of religion in the University of Prague. His lectures and discourses were strongly tinged with rationalism, and it was not long before he was denounced to the ecclesiastical authorities. Through the personal intervention of the Prince-Archbishop Salm-Salm of Prague, he retained his professorship until 1820, when the long-threatened dismissal was suddenly put into effect in consequence of disorders that occurred in the seminary of Leitmerita then under the direction of Dr. Fessl, who, as a disciple and friend of Bolzano, was imbibed with the latter's rationalizing spirit. Bolzano spent the remainder of his life in studious retirement, first on the estate of his friend Johann Hoffmann, at Technobus, near Prague, and later in the house of his brother at Prague. A small pension, and the generosity of Count Leo Thun, relieved him of all monetary care.

Bolzano was always a loyal son of the Catholic Church. There is, however, a strong rationalizing tendency in his writings on doctrinal subjects, and his refusal to retract several propositions taken from his printed works justified his dismissal from the University of Prague. Bolzano's contributions to the science of mathematics are of the highest order. In 1804 he published a theory of parallel lines which anticipated Legendre's well-known theory. He shares with Cauchy the honour of having developed the theory of functions of one real variable. He made notable additions to the theory of differentiation, to the concept of infinity, and to potential theory. In his philosophical work Bolzano had 'no sympathy for speculation as such. His mathematical bent made him a partisan of strict, methodic inquiry. His contributions to philosophy comprise a textbook on the "Science of Religion" (4 vols., Sulsbach, 1834), and one on the "Science of Knowledge" (4 vols., Sulsbach, 1837). Bolzano's complete writings fill twenty-five volumes. The full list is found in the "Sitzungsberichte" of the Vienna Academy (1849).

MATTHIAS LEIMKÜHLER.

BOMBAY (Bombatensis). Archdiocese of, comprises the Island of Bombay with several outlying churches in the neighbouring Island of Salsette, and a large portion of the Bombay Presidency stretching northwards from the river Nerbudda as far as Quetta, including the districts of Gujerat (Broach, Baroda, Ahmedabad), Kathiawar, Cutch, Sind and a portion of Beluchistan. Most of the archdiocese is thus separated from its centre in Bombay Island by a distance of about 200 miles, the intervening country being assigned to the Diocese of Damaun. The Catholic population under the archbishop is reckoned at about 18,000, of which about 8,000 are in Bombay Island; 3,500 in Salsette; 2,000 in Gujerat, Kathiawar, and Cutch, and 4,500 in Sind and Beluchistan. The archdiocese is served by 50 fathers, 19 scholastics, and 16 lay brothers of the German province of the Society of Jesus, and 19 native secular priests, attachés, and newsagents. The church is attended by 2,550 members of the Orders of Jesus and Mary and the Daughters of the Cross engaged in education and charitable work.

History.—In 1534 the Portuguese began to settle in Bombay. They were accompanied by Franciscans who gradually converted the island with churches, monasteries, and communities of converts. When in 1665 the island was ceded to the English, the work was continued by the same order and by secular clergy from Goa. In 1720, on political grounds, the Goanese clergy were expelled by the Government, and the Vicar of the Great Mogul (formerly the Vicar of the Decan) was invited to take charge of the Catholics. Although this was done with the approval of Rome, the Goanese clergy from time to time tried with the Government to recover their position, and in 1784 established a "double jurisdiction". At first the vicariate extended indefinitely over the north of India; but in 1784 the northern portion was separated and given over to the Mission of Tibet. The vicariate then gradually began to be called the Vicariate of Bombay. It was under the care of the Carmelite fathers from 1720 to 1854. When they resigned their charge the vicariate was divided, the northern, or Bombay portion, being taken over by the Capuchins, while the southern, or Poona portion, was given to the German Jesuits. A few years later the Capuchins also resigned, and hence in 1858 the whole of the Bombay-Poona Mission came into the hands of the German Jesuits. Meantime a distressing conflict over the right of jurisdiction (often referred to in literature as the Goan or Indo-Portuguese question) was raging between the Goanese clergy of the Portuguese "padrados" and the vicars Apostolic under Propaganda, which, in spite of certain ineffectual negotiations, continued till 1886. In that year a concordat with Portugal was entered into by the Holy See, which brought the quarrel to a close, and at the same time the whole of India was placed under a fully constituted hierarchy. The Archbishop of Bombay received territorial jurisdiction over Bombay Island and over the northern districts already described, with Poona as an archbishopric. Mangalore and Trichinopoly were added as suffragan sees in 1893, in which year the First Provincial Council was held (Acta et Decreta, Bombay, 1895). The Island of Salsete and the coast country as far as the Nerbudda were placed under the jurisdiction of the Bishop of Damaun who also received personal jurisdiction in Bombay Island over all who came from Goa, or from any other district under the Portuguese ecclesiastical regime. This arrangement is popularly known as the "double jurisdiction".

these three institutions consists of Jesuit fathers and scholastics, assisted by lay masters. For girls, High Schools at Clare Road, Parel, and the Fort, and a native school at Cavel, under the Nuns of Jesus and Mary. Other charitable institutions: St. Joseph’s Foundling Home and St. Vincent’s Home for poor women and girls, under the Daughters of the Cross; St. Elizabeth’s Widows’ Home, under the Nuns of Jesus and Mary; the Allbless Leper Home, Trombay, and the Deaf and Dumb Institute under a European secular priest. In Salfette: St. Stanislaus’ Institution, Bandra, under the Jesuit fathers, with 240 native boarders and 450 day-scholars; St. Joseph’s Convent, Bandra, under the Daughters of the Cross, for native girls, with 330 boarders and 220 day-scholars. In the Northern District: St. Patrick’s High School, at Karachi, with 300 pupils; St. Joseph’s Convent School, Karachi, with 70 boarders and 300 day-scholars; St. Paul’s Orphanage belonging to the pagan mission at Anand in Gujarath with 100 orphans; St. Joseph’s Convent, Ahmedabad, with 100 pupils; besides smaller establishments of all kinds scattered over the archdiocese. There is no diocesan seminary, the native secular clergy being trained at the Papal Seminary at Kandy in Ceylon. The finest buildings in the archdiocese are the Church of the Holy Name with the archbishop’s residence and Convent School, Bombay; the Bombay Cathedral, a large structure in the Portuguese style; St. Patrick’s Church, Karachi; the collegiate buildings of St. Xavier’s and St. Mary’s, Bombay, to which latter St. Anne’s Church is attached. Local publications include “The Examiner” (formerly called the “Bombay Catholic Examiner”) edited by a Jesuit father; established in 1849 it is published weekly at the Examiner Press which is the property of the archbishop; “The Bombay East Indian”, the weekly organ of the Native Christians of Bombay; a local “Supplement” to the English “Messenger”, a “Messenger of the Sacred Heart” in Marathi, besides a few in Gujarath, Marathi, Gujerati, etc., published according to need. The Catholic Directory (Madrasi, 1907); Catalogue of the Bombay Mission (Bombay, 1893); Bomsel, Cornelius Richard Anton van, Bishop of Liége, was b. at Leyden, in Holland, on 5 April, 1790; d. 7 April, 1852. He was educated at the college of Willingshege near Münster, and later at the advanced school of Borth. Against strong opposition he entered the seminary of Münster and was ordained priest in 1816 by Bishop Gaspard Droste de Vischer. On his return to Holland he founded a college for young men at Hageveld, near Hanlem. This college was closed in 1825 in consequence of the royal decree that subjected all the educational institutions to State control. King William offered van Bommel the rectorship of a college, but met with a firm refusal. The Catholics and Liberals joined forces in opposing the arbitrary policy of the Government, and van Bommel took a prominent part in the agitation that forced the king to promulgate the Concordat concluded with Leo XII. Under the provisions of the Concordat, van Bommel was nominated to the See of Liége and consecrated on 15 November, 1829. He took no active part in the revolution of 1830, but as Bishop of Liége he was forced to sever his connexion with Holland. In a few years he remedied the evils which a vacancy of more than twenty years had occasioned in his diocese. He reorganized the seminary, revived Catholic elementary education, and gave the first impetus to the foundation of a Catholic university.

BOMBA, Giovanni, a distinguished cardinal and author, b. of an old French family at Mondovi in Piedmont, 19 October, according to some 10 October, 1600; d. at Rome, 28 October, 1674. Although his father favoured a military career for him, after passing some years at a nearby Jesuit college he entered the Cistercian monastery at Fignerola, where, as also later at Rome, he pursued his studies with exceptional success. He laboured for fifteen years at Turin, then as prior at Asti and as abbot at Mondovi, and in 1651 was called to preside over the whole congregation. During his seven-years of official life in Rome he modestly declined all further honours, at one time even refusing the Bishopric of Asti. He welcomed the expiration of his third term in the scholar’s hope that he would be allowed to enjoy a life of retirement and study, but his intimate friend, Pope Alexander VII, wishing to honour his learning and piety, made him Consultant to the Congregation of the Index and to the Holy Office. In 1669 he was created cardinal, and then the beauty of his character was fully re-
vealed; there was no change in his extremely simple manner of life, and every year he donated his surplus revenue to the needy priests of the Missionary College at Rome.

His best known ascetical works are: "Via Compendii ad Deum" (1657); "Principia et documenta vitae Christianae" (1673); "Manuductio ad coelum" (1658); and "Horologium Asceticum" (Paris, 1676). The "Manuductio" is often compared to the "Imitation of Christ" on account of the simplicity of the style in which the solid doctrine is taught. It has always been extremely popular. Besides passing through fourteen Latin editions in four decades, it has been translated into Italian, French, German, Armenian, and Spanish. The latest translation is in English by Sir Robert L'Estrange (A Guide to Eternity, London, 1900). Shortly after his ordination he collected together some of the most beautiful passages in the Fathers on the august Sacrifice of the Mass, and later published them in a booklet, which with certain additions grew into his "De Sacrificio Misse," a useful Mass book. In addition he composed several unpublished works, known as "Assectici," for the instruction of members of his own order.

But his fame does not rest solely on his devotional writings. He was a deep student of antiquity, and so exact a student of the scholastic philosophy of the Christian Church (De Divina Psalmodia, Paris, 1683) that Cardinal Pallavicini urged him to undertake the history of the Sacrifice of the Mass. Realizing the magnitude of the task he at first declined, but finally set to work and after more than seven years' labour brought out his famous work familiar to all students of liturgy: "De Rebus Liturgicis" (Rome, 1671). It is a veritable encyclopedia of historic information on all subjects bearing on the Mass, such as rites, churches, vestments, etc. Not least remarkable among these volumes besides the wealth of material gathered together, are the classic purity, the manly vigour, and the charming simplicity of the Latin style. The best edition of this work is by Robert Sala (Turin, 1747–53), who also in 1755 brought out a very interesting volume of Bon's letters. The first of the many editions of his complete works was published at Antwerp in 1677.

Bonacum, Thomas. See Lincoln, Diocese of; Bona Fides. See Faith.

Bonagratis of Bergamo (or Perugia), Friar Minor, theologian, and canonist, date of birth unknown; d. at Munich, 1343. Before his entrance into religion, he was known as Boncortesce, a name which was adopted at times by Clement V who used to call him dictus filius Frater Boncortesce, dictus Bonagrata de Perugia. Though Bonagratis took an active and important part in the controversy with the so-called Spiritual Friars, especially with Ubertino of Casale, one of their leaders, his biography is interesting principally because of his connexion with the famous dispute concerning the poverty of Christ. The contest began at Narbonne in 1321 between the Dominicans and Franciscans, and the matter was submitted at Avignon on three occasions; it is heretical to assert that Christ and His Apostles possessed no property either in particular or in common. On account of the important bearing of the controversy on the rule of the Friars Minor, a general chapter was the order was convoked at Ferrara in June of the year 1322, and the minister general, together with the other members of the chapter, caused two letters or communications to be published in which the mind of the chapter regarding the controversy is set forth at considerable length, and with unmistakable distinctness; while Bonagratis was chosen to be the representative of the chapter before the papal Curia at Avignon. Disapproving of the action of the Curia, Pope John XXII published the Bull "Ad cun timorem canonom," in which he renounces the dominion of all the goods of the Friars Minor hitherto assumed by the Roman pontiffs, and declares that the ownership of a thing cannot be separated from its actual use or consumption. The bull "Ad cun timorem canonom" was again promulgated in lengthier form, but bearing its previous date of 8 December, 1322, and the audacious Bonagratis himself was cast into prison. He was released after a year's confinement, and in 1330 followed the Emperor Louis of Bavaria to Munich, together with the Ex-Minister General Michael of Cesena and William of Occam. Still under sentence of excommunication, Bonagratis died there and was buried in the Barfüsserkirche, where Michael of Cesena and William of Occam also found their last resting-place. Among the writings of Bonagratis may be mentioned his "Articuli pro ratione," composed in confutation of the errors of Ubertino of Casale above mentioned.

Bonald, François de, Bishop of Clermont, b. 1754 at the castle of Bonal, near Agen; d. at Munich, 1800. He had been Vicar-General of Agen and Director of the Carmelite Nuns in France when he was made Bishop of Clermont, 1776. On the eve of the Revolution, as he was warning his diocesan against the license of the press, he foretold the visitations of God that were coming. He went as one of the deputies of the clergy to the Etats-Généraux of 1789, where he distinguished himself by his moderation and firmness. To Target who spoke of the "God of peace" he replied that the "peace of peace was also the God of news and war." From his prison Louis XVI sent for his opinion as to whether he should receive Paschal Communion. The answer was full of sympathy, yet the unfortunate monarch was advised to abstain "for having sanctified decrees destructive of religion." He was allowing chiefly to the civil constitution of the clergy. Having declined to take the constitutional oath, he was compelled to leave his diocese and country. He passed to Flanders and later to Holland, was captured and sentenced to deportation by the French, but succeeded in making his escape and spent the last years of his life in various cities of Germany. He is the author of a "Testament spirituel".

J. F. SOLLLER.

Bonald, Raymond, French theologian and founder of the Congregation of the Priests of St. Mary (Bonalistes), b. at Lyon, 1729; d. at Aigle, Héralt, France, c. 1653. He studied classics and philosophy with the Jesuits at Cahors; theology and canon and civil law at the University of Toulouse, where he received the degree of Doctor in Theology in 1646. In 1643, he conceived the idea of organizing a community of priests in whose life and labours should be exemplified the spirit of St. Francis de Sales. With two other
BONALD

eclesiastics, he began to lead a community life in a house near the church of Our Lady of Pity, Villefranche. He was soon joined by others, and in 1839 the parish of Foix in the Diocese of Pamiers was entrusted to his community, which a few years later opened a mission in Oaxaca, where he collaborated with Chateaubriand, Lamennais, and Bertrier, in the "Conservateur," and later in the "Défenseur" founded by Lamennais. In 1830 he gave up his peerage and led a life of retirement in his native city.—There is not to be found in this new career," says Jules Simon, "one action which is not consistent with his principles, one expression which belies them."

G. M. SAUVAGE.

Bonal, Louis-Jacques-Maurice de, Cardinal, b. at Millau, in Rouergue (now Aveyron), 30 October, 1797; d. at Lyons, 25 Feb., 1870. He was the fourth son of the Vicomte de Bonald, the celebrated statesman and philosopher. Destined for the Church, he studied at Saint-Sulpice and was ordained priest in 1820.

He was first attached to the imperial chapel and after the Restoration went to Rome as secretary to Archibishop de Prasigny, who was entrusted by Louis XVIII with the task of arranging for a new Concordat. Three years later Bishop Latil of Chartres made him his vicar-general.

When the Diocese of Puy was re-established (1823) Bonald became its first bishop and remained there for sixteen years, until his promotion to the primatial See of Lyons (1839), and in 1841 Gregory XVI made him cardinal. Cardinal de Bonald is one of the glories of the French episcopate. His personal qualities, as well as the salient features of his episcopal career, are most easily found in the only work we have from his pen, that long series of "Mandements et lettres pastorales," which show him to have been pious, sympathetic, eloquent, and full of zeal. His zeal for the defence of all vital interests. In point of doctrine, Bonald contributed a large share towards destroying all remnants of Gallicanism and Jansenism. The Jansenist interpolations made by Montazel in the liturgical books of Lyons were, after a long struggle, finally suppressed. Dupin's Gallican book, "Manuel de droit eclesiastique," was severely condemned by the primate, and when the Council of State declared him guilty of abuse (1845), Bonald replied that the censure had not even touched him because "when the Council of State has pronounced on questions of doctrine, the cause is not finished." In matters of discipline Cardinal de Bonald corrected many abuses, and he crowned his work by convening a provincial synod (1850), whose statutes touched the main points of church government. He took a great interest in social questions, and never was more eloquent than when appealing for help in behalf of misery, as for instance during the floods of 1840 and 1846 and the destitution of the Spanish refugees (1842). The closing of silk factories in Lyons gave him an opportunity of showing not only his liberality, but also his broad sympathy for the toiling class in general.
The mainspring of Cardinal de Bonald’s life, however, was his love of the Church, which he desired first of all to have respected. In 1825 the royal court of Paris, in rendering a verdict, implied that the whole body of clergy was disloyal to the Crown; Bonald in a dignified letter of protest to the king replied: “Were the clergy less loyal, they would not be the object of such hatred”. He also desired the freedom of the Church, and his pastoral letter of 1847 “Our Lord and the Society of Jesus remains one of his best efforts. Of all the privileges essential to the Church, that of teaching seemed to him first and foremost. On several occasions he wrote either to approve or to condemn the legislation concerning the schools. The royal ordinance of 1824 placing the schools under the surveillance of the bishops met with his entire approval; but the ordinances of 1828 establishing a new mode of direction for primary schools and even interfering with ecclesiastical schools for secondary education, as well as the Villemain educational bill of 1844 and Savigny’s project of 1847, he strongly opposed, thus preparing the way for the law of 1850. Having become, by the constitution of 1852, and by virtue of his dignity as cardinal, a member of the French Senate, Bonald showed his love for the Church by throwing the whole weight of his influence on the side of the Roman pontiff and the independence of the Holy See.

The long episcopal career of Bonald covers many successive political regimes. Although by birth and education a staunch legitimist, yet, as a bishop, he looked above the changes of human government to the Church and her welfare. Because the Revolution of February, 1848, with its motto “Liberty, Equality, Fraternity”, seemed to him favourable to the best interests of the Church, he was one of the first bishops to welcome it. He wrote to his priests: “Give to the faithful the example of submission and obedience to the Republic. You have long cherished the hope of enjoying the liberty which makes our brethren of the United States so happy; that liberty you shall have.” The same broadness of view he evinced when he refused to side with the Abbé Gaume on the question of the classics: “We decline to believe that the study of pagan authors has for two centuries instilled paganism into the society.”

**BONA MORS CONFRATERNITY**

**BONA MORS CONFRATERNITY** was founded 2 October, 1648, in the Church of the Gesù, Rome, by Father Vincent Carafa, seventh General of the Society of Jesus, and approved by the Sovereign Pontiffs Innocent X and Alexander VII. In 1729 it was raised to an archiconfraternity and enriched with numerous indulgences by Benedict XIII. He authorized the Father General of the Society of Jesus, who, in virtue of his office, was to be director of the Bonamors confraternity in all churches of his order. In 1827 Leo XII gave to the director general the power to erect and affiliate branch confraternities in churches not belonging to the Society of Jesus, and to give them a share in all the privileges and indulgences of the archiconfraternity. The object of the association is to prepare its members by a well regulated life to die in peace with God. The longer title: “Confraternity of Our Lord Jesus Christ dying on the Cross, and of the most Blessed Virgin Mary, His most sweet Mother expresses the chief means to attain that end, devotion to the Passion of Christ and the sorrows of Mary. Besides this the union of prayers and good works of the associates and the special instructions at the public meetings help powerfully to prepare for a happy death. The conditions for membership are to present oneself to the director; to express to him one’s desire to become a member; to receive from him an outward sign of acceptance, usually in the form of a certificate of admission; and to have one’s name registered in the local Bona Mors Register. Only “by an unusual and extraordinary exception”, says a decree of 1852, “may the Society permit it allowed to enroll those absent”. The director is authorized to decide what constitutes such an exceptional case. The practices of the association and the indulgences granted to the members are specified in the manual of the confraternity (New York, 1890).

**Bonaparte, Charles-Lucien-Jules-Laurent, Prince de Canino and Musignano, ornithologist,** b. in Paris, 24 May, 1803; d. in the same city 28 July, 1837. He was the eldest son of Lucien Bonaparte, the brother of Napoleon, and was educated in the universities of Italy. After his marriage to his cousin Zenaide, daughter of Joseph Bonaparte, on 29 June, 1822, he came to the United States where his father’s law was his love of the Church by the weight of his influence on the side of the Roman pontiff and the independence of the Holy See.

The long episcopal career of Bonald covers many successive political regimes. Although by birth and education a staunch legitimist, yet, as a bishop, he looked above the changes of human government to the Church and her welfare. Because the Revolution of February, 1848, with its motto “Liberty, Equality, Fraternity”, seemed to him favourable to the best interests of the Church, he was one of the first bishops to welcome it. He wrote to his priests: “Give to the faithful the example of submission and obedience to the Republic. You have long cherished the hope of enjoying the liberty which makes our brethren of the United States so happy; that liberty you shall have.” The same broadness of view he evinced when he refused to side with the Abbé Gaume on the question of the classics: “We decline to believe that the study of pagan authors has for two centuries instilled paganism into the society.”

**F. SOLLIER.**
Friars Minor, b. at Bagnorea in the vicinity of Viterbo in 1221; d. at Lyons, 15 July, 1274.

Nothing is known of Bonaventure's parents save their names: Giovanni di Fidanza and Maria Ritella. How his baptismal name of John came to be changed to that of Bonaventure is not clear. An attempt has been made to trace the latter name to the chancelor of St. Francis, O. b. 1243-1248, but Bonaventure was brought as an infant to him to be cured of a dangerous illness. This derivation is highly improbable; it seems based on a late fifteenth-century legend. Bonaventure himself tells us (Legenda, ii. 13b, Prol. II) that while yet a child he was preserved from death through the intercession of St. Francis, but there is no evidence that this cure took place during the lifetime of St. Francis or that the name Bonaventure originated in any prophetic words of St. Francis. It was certainly borne by others before the Seraphic Doctor.

No details of Bonaventure's youth have been preserved. He entered the Order of Friars Minor in 1238 or 1243; the exact year is uncertain. Wadding and the Bollandists hold for the later date, but the earlier one is supported by Buarale, Bonelli, Panfilo da Magliano, and Jellinek and appears more probable. It is certain that Bonaventure was sent from the Roman Province, to which he belonged, to complete his studies at the University of Paris under Alexander of Hales, the great founder of the Franciscan School. The latter died in 1245, according to the opinion generally received, though not yet definitely established, and Bonaventure seems to have become his pupil about 1242. Be this as it may, Bonaventure received in 1248 the "licentiate" which gave him the right to teach publicly as Magister regens, and he continued to lecture at the university with great success until 1255, when he was compelled to discontinue, owing to the then violent outburst of opposition to the Mendicant orders on the part of the secular professors at the university. The latter, jealous, as it seems, of the academic successes of the Dominicans and Franciscans, sought to exclude them from teaching publicly. The smouldering elements of discord had been fanned into a flame in 1255, when Guillaume de Saint-Amour published a work entitled "The Perils of the Last Times", in which he attacked the Friars with great bitterness. It was in connexion with this dispute that Bonaventure wrote his treatise, "De paupertate Christi". It was not, however, Bonaventure, as some have erroneously stated, but Blessed John of Parma, who appeared before Alexander IV at Anagni to defend the Franciscans against their adversary. The Holy See having, as

Bonaventure had, in an encyclical letter issued immediately after his election, outlined a programme for the reformation of the Religiosi. These reforms he sought to enforce three years later at the General Chapter of Narbonne when the constitutions of the order which he had revised were promulgated anew. These so-called "Constitutiones Narbonenses" are distributed under twelve heads, corresponding to the twelve chapters of the Rule, of which they form an enlightened and prudent exposition, and are of capital importance in the history of Franciscan legislation. The chapter which issued this code of laws requested Bonaventure to write a "legend" or life of St. Francis which should supersede those then in circulation. This was in 1260. Three years later Bonaventure, having, in the meantime visited a great part of the order, and having assisted at the dedication of the chapel on La Verna and at the translation of the remains.
of St. Clare and of St. Anthony, convoked a general chapter of the order of Pisa at which his newly composed life of St. Francis was officially approved as the standard biography of the saint to the exclusion of all others. At this chapter of 1263, Bonaventure fixed the limits of the different provinces of the order and, among other ordinances, prescribed that at night a bell should be rung in honour of the Annunciation, a practice from which the Angelus seems to have originated. There are no grounds, however, for the assertion that Bonaventure in this chapter prescribed the celebration of the feast of the Immaculate Conception in the order. In 1264, at the earnest request of Cardinal Cajetan, Bonaventure consented to resume the direction of the Poor Clares which the Chapter of Pisa had entirely renounced the year before. He required the Clares, however, to acknowledge occasionally in writing that the favours tendered them by the Friars were voluntary acts of charity not arising from any obligation whatsoever. It is said that Pope Urban IV acted at Bonaventure's suggestion in attempting to establish uniformity of observance throughout all the monasteries of Clares. About this time Bonaventure founded at Rome the Society of the Goffalone in honour of the Blessed Virgin, which, if not the first confraternity instituted in the Church, as some have claimed, was certainly one of the earliest. In 1265 Clement IV, by a Bull dated 23 November, appointed Bonaventure Archbishop of York, but the saint, in keeping with his singular humility, steadfastly refused this honour and the pope yielded.

In 1266 Bonaventure convened a general chapter in Paris at which, besides other enactments, it was decreed that all the "legends" of St. Francis written before that of Bonaventure should be forthwith destroyed, just as the Chapter of Narbonne had in 1260 ordered the destruction of all constitutions before those then enacted. This decree has excited much hostile criticism. Some would fain see in it a deliberate attempt on Bonaventure's part to close the primitive sources of Franciscan history, to suppress the real Francis, and substitute a counterfeit in his stead. Others, however, regard the decree in question as a purely liturgical ordinance intended to secure uniformity in the choir "legends". Between these two conflicting opinions the truth seems to be that this edict was nothing more than another: heretic attempt to wipe out the old quarrels and strife. One cannot but regret the spirit of this decree, but when it is recalled that the appeal of the contending parties was ever to the words and actions of St. Francis as recorded in the earlier "legends", it would be unjust to accuse the chapter of "literary vandalism" in seeking to proscribe the latter. We have no details of Bonaventure's life between 1266 and 1269. In the latter year he convoked his fourth general chapter at Assisi, in which it was enacted that a Mass be sung every Saturday throughout the order in honour of the Blessed Virgin; not, however, in honour of her Immaculate Conception as Wadding among others has erroneously stated. It was probably soon after this chapter that Bonaventure composed his "Apologia pauperum", in which he silences Gerard of Abbeville who by means of an anonymous libel had revived the old university feud against the Friars. Two years later, Bonaventure was mainly instrumental in reconciling the differences among the cardinals assembled at Viterbo to elect a successor to Clement IV, who had died 21 April of the same year. He was officially approved as advice that, 1 September, 1271, they unanimously chose Theobald Visconti of Piacenza who took the title of Gregory X. That the cardinals seriously authorized Bonaventure to nominate him, as some writers aver, is most improbable. Nor is there any truth in the popular story that Bonaventure on arriving at Viterbo advised the citizens to lock the cardinals with a view to hastening the election. In 1272 Bonaventure for the second time convened a general chapter at Pisa, in which, apart from general enactments to further regular observances, new decrees were issued respecting the direction of the Poor Clares, and a solemn anniversary was instituted on 25 August in memory of the Angelus from which the Angelus seems to have originated. There are no grounds, however, for the assertion that Bonaventure in this chapter prescribed the celebration of the feast of the Immaculate Conception in the order. In 1264, at the earnest request of Cardinal Cajetan, Bonaventure consented to resume the direction of the Poor Clares which the Chapter of Pisa had entirely renounced the year before. He required the Clares, however, to acknowledge occasionally in writing that the favours tendered them by the Friars were voluntary acts of charity not arising from any obligation whatsoever. It is said that Pope Urban IV acted at Bonaventure's suggestion in attempting to establish uniformity of observance throughout all the monasteries of Clares. About this time Bonaventure founded at Rome the Society of the Goffalone in honour of the Blessed Virgin, which, if not the first confraternity instituted in the Church, as some have claimed, was certainly one of the earliest. In 1265 Clement IV, by a Bull dated 23 November, appointed Bonaventure Archbishop of York, but the saint, in keeping with his singular humility, steadfastly refused this honour and the pope yielded.

In 1266 Bonaventure convened a general chapter in Paris at which, besides other enactments, it was decreed that all the "legends" of St. Francis written before that of Bonaventure should be forthwith destroyed, just as the Chapter of Narbonne had in 1260 ordered the destruction of all constitutions before those then enacted. This decree has excited much hostile criticism. Some would fain see in it a deliberate attempt on Bonaventure's part to close the primitive sources of Franciscan history, to suppress the real Francis, and substitute a counterfeit in his stead. Others, however, regard the decree in question as a purely liturgical ordinance intended to secure uniformity in the choir "legends". One cannot but regret the spirit of this decree, but when it is recalled that the appeal of the contending parties was ever to the words and actions of St. Francis as recorded in the earlier "legends", it would be unjust to accuse the chapter of "literary vandalism" in seeking to proscribe the latter. We have no details of Bonaventure's life between 1266 and 1269. In the latter year he convoked his fourth general chapter at Assisi, in which it was enacted that a Mass be sung every Saturday throughout the order in honour of the Blessed Virgin; not, however, in honour of her Immaculate Conception as Wadding among others has erroneously stated. It was probably soon after this chapter that Bonaventure composed his "Apologia pauperum", in which he silences Gerard of Abbeville who by means of an anonymous libel had revived the old university feud against the Friars. Two years later, Bonaventure was mainly instrumental in reconciling the differences among the cardinals assembled at Viterbo to elect a successor to Clement IV, who had died 21 April of the same year. He was officially approved as advice that, 1 September, 1271, they unanimously chose Theobald Visconti of Piacenza who took the title of Gregory X. That the cardinals seriously authorized Bonaventure to nominate him, as some writers aver, is most improbable. Nor is there
or universally desired than that of Bonaventure. That its inception was so long delayed was mainly due to the despicable dimensions within the order after Bonaventure’s death. Finally on 14 April, 1485, the Pope, Leo the 10th, requested that the College be formed.

Bonaventure’s life was marked by his devotion to the Church. He was a member of the Franciscan order and a key figure in the development of scholastic philosophy. His work, "Breviloquium," became a cornerstone of Franciscan thought and had a profound influence on later philosophers.

In his "Breviloquium," Bonaventure argues that the incarnation of Christ is necessary for the salvation of humanity. He writes, "Si Dominus nonVENIT in HUMANITAS, NON ERMISIT, NON ERIPIT." (If the Lord had not come into human nature, he would not have saved, not redeemed.)

Bonaventure’s philosophy, as Hefele remarks, united in himself the two elements whence proceed whatever was noble and sublime, great and beautiful, in the Middle Ages, viz., tender piety and profound learning. These two qualities shine forth conspicuously in his writings. Bonaventure wrote on almost every subject treated by the Schoolmen, and his writings are very numerous. The greater number of them deal with philosophy and theology. No work of Bonaventure’s is exclusively philosophical, or treatises on theology or metaphysics written by him.

"Commentary on the Sentences" is the most important work of Bonaventure, and all his other writings are in some way subservient to it. It was written, superiorium praeceto (at the command of his superiors) when he was only twenty-seven and is a theological achievement of the first rank. It comprises more than four thousand pages in folio and treatises extensively and profoundly of God and the Trinity, the Creation and Fall of Man, the Incarnation and Redemption, Grace, the Sacraments, and the Last Judgment. It was written before 1265, as it contains the "Breviloquium," written before 1257, as, in the same name implies, a shorter work.

In some extent a summary of the "Commentary" containing as Scheeben says, the quintessence of the theology of the time, and is the most sublime compendium of dogmas in our possession. It is perhaps the work which will best give a popular notion of Bonaventure’s theology; in it his powers are seen at their best.

The "Breviloquium" divides all things from God, the "Itinerarium Mentis in Deum" proceeds in the opposite direction, bringing all things back to their Supreme End. The latter work, which formed the delight of Gerson for more than thirty years, and from which Bl. Henry Suso drew so largely, was written on Mount la Verna in 1259. The latter work, which formed the delight of Gerson for more than thirty years, and from which Bl. Henry Suso drew so largely, was written on Mount la Verna in 1259. The latter work, which formed the delight of Gerson for more than thirty years, and from which Bl. Henry Suso drew so largely, was written on Mount la Verna in 1259.

In his "De reductione Artium ad Theologiam," a little work written to demonstrate the relation which philosophy and the arts bear to theology, and to prove that they are all absorbed in it as into a mother, Bonaventure was complicating in the categoric supernatural, is again dealt with by Bonaventure, in his "De reductione Artium ad Theologiam," a little work written to demonstrate the relation which philosophy and the arts bear to theology, and to prove that they are all absorbed in it as into a mother, Bonaventure was complicating in the categoric supernatural, is again dealt with by Bonaventure, in his "De reductione Artium ad Theologiam," a little work written to demonstrate the relation which philosophy and the arts bear to theology, and to prove that they are all absorbed in it as into a mother, Bonaventure was complicating in the categoric supernatural, is again dealt with by Bonaventure, in his "De reductione Artium ad Theologiam," a little work written to demonstrate the relation which philosophy and the arts bear to theology, and to prove that they are all absorbed in it as into a mother, Bonaventure was complicating in the categoric supernatural, is again dealt with by Bonaventure.

Bonaventure’s theological writings may be classed under four heads: dogmatic, mystic, exegetical, and homiletic. His dogmatic teaching is found chiefly in his "Commentary on the Sentences" and in his "Breviloquium." His mystic teaching is found in his "Itinerarium Mentis in Deum." His exegetical teaching is found in his "De reductione Artium ad Theologiam." His homiletic teaching is found in his "Commentary on the Sentences." His treatise on the sacraments is largely practical and is characterised by a distinctly devotional element. This appears especially in his treatment of
the Holy Eucharist. He rejects the doctrine of physical, and admits only a moral, effusiveness in the sacraments. It is much to be regretted that Bonaventure's view on this matter and on the questions should be often misrepresented, even by recent writers. For example, at least three of the latest and best known manuals of dogmas in treating of such questions as “De angelorum natura,” “De angelorum Christi et Chrisiam sanctificationem,” “De causali sacramentorum,” and “De statu parvulorum sine baptismo morientium,” gratuitously attribute opinions to Bonaventure which are entirely at variance with his real teaching. To be sure Bonaventure, like all the Scholastics, occasionally put forward opinions not strictly correct in regard to questions not yet defined or clearly settled, but even here his teaching represents the most profound and acceptable ideas of his age and marks a notable stage in the evolution of knowledge. Bonaventure's authority has always been very great in the Church. Apart from his personal influence at Lyons (1274), his writings carried great weight at the subsequent councils at Vienne (1311), Constance (1417), Basle (1439), before and after the sentence. In his writings, as Newman remarks (Apologia, ch. v) had a critical effect on some of the definitions of dogma, and at the Vatican Council (1870), sentences from them were embodied in the decrees concerning papal supremacy and infallibility.

Only a small part of Bonaventure's writings is properly mystical. They are characterized by brevity and by a faithful adherence to the teaching of the Gospel. The perfection of the soul by the upbringing of virtue and the implanting of virtue is his chief concern. There is a degree of prayer in which ecstasy occurs. When it is attained, God is sincerely to be thanked. It must, however, be regarded only as incidental. It is by no means essential to the possession of perfection in the highest degree. Such is the general outline of Bonaventure's mysticism which is largely a continuation and development of what the St. Victors had already laid down. The shortest and most complete summary of it is found in his “De Triplici Via”, often erroneously entitled the “Triumphand Encrisonum”, in which he distinguishes the different stages or degrees of perfect charity. What the “Brevisio” is to Scholasticism, the “De Triplici Via” is to mysticism—a perfect compendium of all that is best in it. Savonarola made a pious and learned commentary upon it. Perhaps the most beautiful mystical and ascetical writings are the “Soliloquium”, a sort of dialogue containing a rich collection of passages from the Fathers on spiritual questions; the “Lignum vitae”, a series of forty-eight devout meditations on the life of Christ, the “De sex alis seraphim”, a precious opuscule on the virtues of superiors, which Father Claudius Aquaviva caused to be printed separately and circulated throughout the Society of Jesus; the “Vita mystica”, a work on which he worked long engrossed to St. Bernard, and “De perfectione vitae”, a treatise which depicts the virtues that make for religious perfection, and which appears to have been written for the use of Blessed Isabella of France, who founded a monastery of Poor Clares at Longchamps.

Bonaventure's exegetical works were highly esteemed in the Middle Ages and still remain a treasure house of thoughts and treatises. They include commentaries on the Books of Ecclesiastes and Wisdom found in the Library of the Fathers of the Franciscan Order. In addition to his commentary on the Fourth Gospel, Bonaventure composed “Collationes in Joannes”, ninety-one conferences on subjects relating to it. His “Collationes in Hexameron” is a work of the same kind, but its title, which did not originate with Bonaventure, is somewhat misleading. It consists of an unfinished course of instructions delivered at Paris in 1273. Bonaventure did not intend these twenty-one discourses to explain the work of the six days, but rather to draw some analogous instructions from the first chapter of Genesis, as a warning to his auditors against some errors of the time. It is natural that the Church should have regard only to the mystical sense of Scripture. In such of his writings as are properly exegetical he follows the text, though he also develops the practical conclusions deduced from it, for in the composition of these works he had the advantage of the preacher mainly in view. Bonaventure had conceived the most sublime idea of the ministry of preaching, and notwithstanding his manifold labours in other fields, this ministry ever held an especial place among his labours. He neglected no opportunity of preaching, whether to the clergy, the people, or his own Friars, and Bl. Francis of Fabriano (d. 1322), his contemporary and auditor, bears witness that Bonaventure's renown as a preacher almost surpassed his fame as a teacher. He preached at Lucca, Spoleto, before the pope, and in Rome, Venice, France, and England. More than once he was called by the sovereigns of France and Italy. Nearly five hundred authentic sermons of Bonaventure have come down to us; the greater part of them were delivered in Paris before the university while Bonaventure was professor there after he had become minister general. Most of them were taken down by some of his auditors and thus preserved to posterity. In his sermons he follows the Scholastic method of putting forth the divisions of his subject and then expounding each division according to the different senses

Besides his philosophical and theological writings, Bonaventure left a number of works referring to the religious life, but more especially to the Franciscan Order. Among the latter is his well-known explanation of the Rule of the Friars Minor; in this work, written at a time when the discussions within the order as to the observance of the Rule were so painfully marked, he adopted a conciliatory attitude, approving neither the interpretation of the Zelanti nor that of the Relazi. His aim was peace and order. With this end in view, he had chosen a middle course at the outset and firmly adhered to it during the seventeen years of his generalship. If anyone could have succeeded in uniting the order, it would have been Bonaventure; but the via media proved impracticable, and Bonaventure's peacemaking efforts, which were in check the elements of discord, subsequently represented by the Conventuals and the Praticelli. Following upon his explanation of the Rule comes Bonaventure's important treatise embodying the Constitutions of Narbonne already referred to. There is also an answer by Bonaventure to some questions concerning the Rule, a treatise on the guidance of novices, and an opuscule in which Bonaventure states why the Friars Minor preach and hear confessions, besides a number of other treatises. He also wrote a book under the title of “Ad ignominiam magistratam” in which he defends the Augustinian rule and argues against the Franciscan rule. His beautiful “Legenda aurea” or life of St. Francis contains the writings in which he strove to promote the spiritual welfare of his brethren. This well-known work is composed of two parts of very unequal value. In the first Bonaventure publishes the authenticated life of St. Francis and his followers and elsewhere; in the other he merely abridges and repeats what others, and especially Celano, had already recorded. As a whole, it is essentially a legenda aurea, compiled mainly with a view to specifying
the unhappy discord still ravaging the order. St. Bonaventure's aim was to present a general portrait of the Scholasticism, a way of thinking that had given rise to controversy, should be acceptable to all parties. This aim was surely legitimate even though from a critical standpoint the work may not be a perfect biography. Of this "Legenda Major," as it came to be called, Bonaventure made an abridgment arranged for use in choir and known as the "Legenda Minor".

Bonaventure was the true heir and follower of Alexander of Hales and the continuator of the old Franciscan school founded by the Doctor Infinitus, but one must not forget that the latter was a man of large, originality of imagination, and originality of expression. His proper place is beside his friend St. Thomas, as they are the two greatest theologians of Scholasticism. If it be true that the system of St. Thomas is more finished than that of Bonaventure, it should be borne in mind that, whereas Thomas was free to give himself to study to the end of his days, Bonaventure had not yet received the Doctor's degree when he was called to govern his order and overwhelmed with many new responsibilities which he bore till within a few weeks of his death were almost incompatible with further study and even precluded his completing what he had begun before his thirty-sixth year. Again, in attempting to make a comparison between Bonaventure and St. Thomas, one should remember that the two saints were of a different bent of mind; each had qualities in which he excelled; one was in a sense the complement of the other; one supplied what the other lacked. Thus Thomas was analytical, Bonaventure synthetical; Thomas was the Christian Aristotelian, Bonaventure the true disciple of Augustine; Thomas was the teacher of the schools, Bonaventure of practical life; Thomas enlightened the mind, Bonaventure inflamed the heart; Thomas extended the Kingdom of God by the love of theology, Bonaventure by the theology of love. Even those who hold that Bonaventure does not reach the level of St. Thomas in the sphere of Scholastic speculation concede that as a mystic he far surpasses the Angelic Doctor. In this particular realm of theology, Bonaventure equals, if he does not excel, St. Bernard himself. Leo XIII rightly calls Bonaventure the Prince of Mystics: "Having scaled the difficult heights of speculation in a most notable manner, he treated of mystical theology with such perfection that in the midst of the depths of the "principia" he held the "principia" in that field." ( Allocutio of 11 October, 1890.) It must not be concluded, however, that Bonaventure's mystical writings constitute his chief title to fame. This conclusion, in so far as it seems to imply a depreciation of his labours in the field of Scholasticism, is opposed to the explicit utterances of several pontiffs and eminent scholars, is incompatible with Bonaventure's acknowledged reputation in the Schools, and is excluded by an intelligent perusal of his works. As a matter of fact, the half of one volume of the ten comprising the Queracchi edition suffices to contain Bonaventure's ascetic and mystical writings. Although Bonaventure's mystical works alone would suffice to place him in the foremost rank, yet he may justly be called a master not only of Scholastic, but of mystical theology, for he who breathed that in Bonaventure's writings seemed to find its parallel only in the lives of those that stand nearest to the Throne, and the title of "Seraphic Doctor" bestowed upon Bonaventure is an undeniable tribute to his all-absorbing love for God. This title seems to have been first given to him in 1333 in the Prologue of the "Pantheologia" by Rayner of Pisa, O.P. He had already received while teaching in Paris the name of Doctor DeoVolto. The Franciscan Order has ever regarded Bonaventure as one of the greatest Doctors and from the beginning his teaching found many distinguished expositors within the order, among the earliest being his own pupil, John of Ecursy later Archbishop of Canterbury, Matthew of Aquesparta, and Alexander of Alexandria (d. 1314), both of whom became ministers general of the order. The last named wrote a "Summa questionum S. Bonaventurae." Other well-known commentators are John of Erfurt (d. 1317), Vorilongus (d. 1404), Bruller (d. c. 1527), St. Bonaventure (d. 1616), Coriolano (d. 1625), Zanora (d. 1649), Bonetam (d. 1672), Hauzuer (d. 1676), Bonelli (d. 1773), etc. From the fourteenth to the sixteenth century the influence of Bonaventure was undoubtedly somewhat overshadowed by that of
Duns Scotus, owing largely to the prominence of the latter as champion of the Immaculate Conception in the disputes between Franciscans and Dominicans. Sixtus V, however, founded a special chair at Rome for the study of St. Bonaventure; such chairs also existed in several universities, notably at Ingolstadt, Salzburg, Valencia, and Bologna. The work of Bonaventure was forbadbe his Friars to follow Scotus and ordered them to return to the study of Bonaventure. The early centuries of 1874 appear to have revived interest in the life and work of St. Bonaventure. Certain it is that since then the study of his writings has steadily increased.

Unfortunately not all of Bonaventure's writings have come down to us. Some were lost before the invention of printing. On the other hand, several works have in the course of time been attributed to him which are not his. Such are the "Centumobis", the "Speculum Disciplinæ", which is probably the work of Bernard of Besse, Bonaventure's secretary; the rhetorical "Philomela", which seems to be from the pen of John Eckhardt; the "Stimulus Amoris", and the "Rerum novarum" were respectively by James of Milan and Conrad of Saxony; "The Legend of St. Clare", which is by Thomas of Celano; the "Meditationes vitae Christi" composed by a Friar Minor for a Poor Clare, and the "Biblia pauperum" of Dominicus of Holland.

Those familiar with the catalogues of European libraries are aware that no writer since the Middle Ages had been more widely read or copied than Bonaventure. The earliest catalogues of his works are those of 1493 by Salimbene (1729) and Henricus of Ghent (d. 1293). Ubertino of Casale (1305). Ptolemy of Lucca (1227) and the "Chronicle of the XXV Generals" (1368). The fifteenth century saw no less than thirty-five editions of Bonaventure's works. More celebrated than any preceding edition was that published at Rome (1588-96) by order of Sixtus V (7 vols. in fol.). It was reprinted with but slight emendations at Metz in 1609 and at Lyons in 1678. A fourth edition appeared at Venice (13 vols. in 4to) 1751, and was reprinted at Paris in 1894. All these editions were very imperfect in so far as they include spurious works and omit genuine ones. They have been completely superseded by the celebrated critical edition published by the Friars Minor at Quaracchi, near Florence. Any scientific study of Bonaventure is founded upon this edition, which not only Leo XIII (13 December, 1885) and Pius X (11 April, 1904), but scholars of all creeds have ravished the highest encomiums. Nothing seems to have been omitted which could make this edition perfect and complete. In its preparation the editors visited over 400 libraries and examined nearly 52,000 MSS. While the first volume alone contains 20,000 variant readings. It was commenced by Father Fidelis a Fannia (d. 1881) and completed by Father Ignatius Jelier (d. 1904).

Do not possess any formal, contemporary biography of St. Bonaventure. That written by the Spanish Franciscan, Zamorra, who flourished before 1300, has not been preserved. The references to Bonaventure in the Franciscan works of Salimbene (1282), Bernard of Besse (c. 1380) Bl. Francis of Fabriano (d. 1322), Angelo Clarenio (d. 1337), Ubertino of Casale (d. 1338), Bartholomew of Pisa (d. 1399) and the "Chronicle of the XXIV Generals" (1385) is the best in extant. The works of St. Bonaventure (Paris, 1887). MARIANI: S. Bonaventura (1877). MARANO: Vita di S. Bonaventura (1874). LANDRO: Biografia di S. Bonaventura (1874). LANDRO: Biografia di S. Bonaventura (1874). LANDRO: Biografia di S. Bonaventura (1874).

John of Monte Corvino kept up and extended, the great Khan was induced to send an embassy to Benedict XII to petition for new labourers in the missions of Asia. The pope received the legates with every mark of honour and, according to the wish of the Mongol monarch, conferred on them the title of "Friars Minor" for his legates, the residential of the Tatar emperor at the beginning of 1342. The missionaries were encouraged in their apostolic labours by the kindly attitude of Kublai Khan and succeeded in founding numerous Christian settlements throughout the vast Mongol Empire. About the year 1346 they set out again for Italy. Part of the homeward journey they made by sea and the remainder, from the Kingdom of Persia, by land, arriving in Avignon at the beginning of the year 1354. Shortly after the return of the missionaries, Bonet was consecrated titular Bishop of Mileve in Africa situtatus and was given a mission in the Indian services while on the mission of Mongols. Among the writings of Nicholas Bonet, the "Tractatus de conceptione B. Mariae Virginis natae Clemen tis scriptum", the "Formalitates e Doctrina Scoti" and the "Commentarius in IV. libros sententiarum" deserve special mention.

STEPHEN M. DONOVAN.

Bonfère, Jacques, Biblical scholar, b. at Dinant, Belgium, 12 April, 1573; d. at Tournai, 9 May, 1642. He entered the Society of Jesus in 1592. After having taught rhetoric, philosophy, and theology, he devoted himself to the Sacred Scriptures. He was long a professor of Scripture and Hebrew at Douai, where he was superior of the Scots College. Sweert, in his "Athenae Belgicae", speaks of him as a man of vast learning and industry, possessed of great acuteness as well as the penetration of his mind and the solidity of his judgment. His work in the department of Sacred Scriptures, into which, he tells us, he had been initiated by Cornelius à Lapide, has always been highly appreciated. His "Sacrae Scripturae Commentarius," selected by Migne as the most suitable treatise or general introduction with which to begin his "Sacrae Scripturae Cursus Completus" (I, cols. 5-242). In this work Bonfère deals with subjects pertaining to the Bible as a whole. His selection and treatment of topics was determined largely by the controversies of the time regarding the value of the Vulgate, the obscurity of Scripture, etc. But many of them still retain their interest; and they are all handled in a clear and interesting way. The historical methods not applied to the text, and the exegesis and hermeneutics of Sacred Scripture were not known in his time. He deals with inspiration in one chapter (ch. viii: De modo quo Deus cum hinc Scriptoribus hagiographis habuit). The views he sets forth here do not in principle respect the teaching of modern theologians. He holds, for instance, that approval of a writing by God, subsequent to its composition, would suffice to make it canonical. In point of fact, though, he assures us, no book of the Bible was so composed. Then he expresses the opinion that when writing down the oral revelation, the sacred authors only had the assistance necessary to preserve them from error. He does not...
make a clear distinction between inspiration and revelation. (See Pesch, "De Inspiratione," Nos. 323 and 324.)

The "Prefatio" were published along with a commentary on the Pentateuch in a volume entitled: "De Medio Moisio commentario illustrato, de Missis prefatio perutilibus" (fol., Antwerp, 1625). This was followed by his commentary on Josue, Judges, and Ruth, to which he added a treatise on sacred geography, composed by Eusebius and translated by St. Jerome: "Josue. Judices et Ruth commentario illustrati. Accessit Onomasticon" (fol., Paris, 1631). Bonfrère had undertaken to explain the Books of Kings before his work on the Pentateuch, he tells us in his preface to the latter; but he had felt the need of going back to the beginning of things. His "Liber Regum et Paralipomenon commentaria illustrati" was given to the press at Tournai, in 1643, after his death. But the printing-house was burned, and the work did not appear. Bibliographers have no reference even to the MSS. The learned professor is said to have left commentaries on nearly all the other books of the Bible. Bonfrère's explanation of the text of Scripture shows a very good knowledge of Hebrew, and he pays special attention to the places mentioned. His erudition was excessive for his time. The intensity and judiciousness of his comments are generally admired.

W. S. REILLY.

Boniface (WINFRED, WYNFRITH), SAINT, Apostle of Germany, date of birth unknown; martyred 5 June, 755 (754); emblems: the oak, axe, book, fox, scourage, fountain, raven, sword. He was a native of England, though some authorities have claimed him for Ireland or Scotland. The place of his birth is not known, nor is it probable that he was born in the south-western part of Wessex. Credition (Kirton) in Devonshire is given by more modern authors. The same uncertainty exists in regard to the year of his birth. It seems, however, safe to state that he was not born before 672 or 675, or as late as 690. Descended from a noble family, from his earliest years he showed great ability, and received a religious education. His parents intended him for secular pursuits, but, inspired with higher ideals by missionary monks who visited Winfrith, he was converted and made a religious. After much difficulty he obtained his father's permission and went to the monastery of Adescanastre on the site of the present city of Exeter, where, under the direction of Abbot Wulfhard, he was trained in piety and learning. About seven years later he went to the Abbey of Nuthetcel (Nuttshalling) between Winchester and Southampton. Here, leading an austere and studious life under Abbot Wulfhard, he rapidly advanced in sanctity and knowledge, excelling especially in the profound understanding of the Sacred Scriptures, of which he gives evidence in his letters. He was also well educated in history, grammar, rhetoric, and poetry. He made his profession as a member of the Benedictine Order and was placed in charge of the monastic school. At the age of thirty he was ordained priest. Through his abbots he continued the fame of Winfrid's learning soon reached high civil and ecclesiastical circles. He also had great success as a preacher. With every prospect of a great career and the highest dignities in his own country he had desired for human glory, for the thought of bringing the light of the Gospel to his native Old Saxons, in Germany, had taken possession of his mind. After many requests Winfrid at last obtained the permission of his abbott.

In 716 he set out for the mission in Friesland. Since there had already been preached there by Wigbert, Willibrord, and others, Winfrid expected to find a good soil for his missionary work, but political disturbances caused him to return temporarily to England. Towards the end of 717 Abbot Winbert died, and Winfrid was elected to succeed him, but declined and induced Daniel, Bishop of Winchester, to influence the monks to elect another. Winfrid proceeded to Rome, went back to his apostolic work he wished to visit Rome and to obtain from the pope the apostolic mission and the necessary faculties. Bishop Daniel gave him an open letter of recommendation to kings, princes, bishops, abbots, and the people of England and a private letter to the pope. On Winfrid's arrival in Rome in the fall of 718, Pope Gregory II received him kindly, praised his resolution, and, having satisfied himself in various conferences as to the orthodoxy of Winfrid, his morals, and the purity of his motives, on 15 May, 719, he gave him full authority to preach the Gospel to the heathens in Germany to the right of the Rhine, ordering him at the same time to adhere to the Roman practice in the administration of the Sacrament of Baptism, and to consult with the Holy See in case of difficulties.

Having received instructions to make his first journey through the country, only a tour of inspection, he travelled through Bavaria and found the Church flourishing, with a number of churches and monasteries. In Alamannia, where he was sent to Thuringia, he found similar conditions. Thuringia was considered by Rome as Christian, and the mission of Winfrid was supposed to be that of an authorized reformer. He found the country, however, in a sad condition. St. Kilian had laboured with energy, but without success. Duke Gotbert and some years later his son, Hethan II, both converts of St. Kilian, had been murdered, perhaps on account of their inquisitive zeal in trying to spread Christianity. Great numbers of their rebellious subjects had lapsed into heathenism, and it was the duty of Winfrid to win them back to the faith. Winfrid tried to enkindle a missionary spirit in the priests and to make the people live up to the pure precepts of the Christian religion. Though he converted some of the heathens, he did not meet with the success which he had anticipated. On his way to the court of Charles Martel, possibly to interest that prince in the matter, he received news of the death of the Frisian King Radbod, and went to Friesland. Here he spent three years under the aged St. Willibrord, who was elected to succeed Winfrid. In 722 he went to a monastery, preaching fearlessly as he went. Multitudes of Christians who had fallen away during the persecution of Radbod were brought to repentance and thousands of pagans accepted the Faith. Many of the converts were brought together to lead a religious life under the Rule of St. Benedict. St. Willibrord, feeling the weight of his years, wished to make Winfrid his assistant and successor in the See of Utrecht. Winfrid refused, giving as his main reason that the pope had sent him for missionary work. He therefore went to Utrecht, but not before he had first returned to Abbot Eriwold and the monks of New Minster, where he was received with great joy. He then went to Hessen, where many more were brought into the fold of Christ. With the assistance of two chiefs whom he had converted he established a monastic cell at Amöneburg at the River Ohm (then called Amann) in Upper Hessen, as well as a church, founded by him which became the centre in which many of the newly converted were to be educated.

While Winfrid was under the jurisdiction of St. Willibrord he had no special reason for reporting to the Holy See, but, now working independently, he considered it his duty to consult with his brother Brynn, one of his disciples, with a letter to Gregory II, recounting his labours of the past years and asking...
for further directions. Byman promptly executed his commission and soon returned with the pope's answer, expressing satisfaction with what had been done and a desire to confer with Winfrid personally. Winfrid accordingly set out for Rome, taking his mission through Franconia. Boniface took care to be warmly welcomed by the pope, who questioned him carefully, made him take the usual oath of allegiance, received him a professor of faith, and on 30 November, 722 (723), consecrated him a regional bishop, with the title of St. Michael. Some say that Winfrid had taken this name at the time of his religious profession; others, that he received it on his first visit to Rome. The same discrepancy of opinion exists in regard to its derivation from bonum facere or bonum facere; perhaps it is only an approximate Latinization of Winfrith. Pope Gregory then sent Boniface back with letters to his deacons in Thuringia and Hesse demanding obedience for their new bishop. A letter was also addressed to Charles Martel asking his protection. Boniface himself had received a set of ecclesiastical canons for his diocese. The letter he wrote to Charles Martel in the beginning of his papacy was the model of a letter to a secular prince. BONIFACE returned to Upper Hesse and repaired the losses which occurred during his absence, many having defected to paganism; he also administered everywhere the Sacrament of Confirmation. But a new war broke out. Lower Hesse, where the heathens how utterly powerless were the gods in whom they placed their confidence, Boniface felled the oak sacred to the thunder-god Thor, at Geismar, near Fritzlar. He had a chapel built out of the wood and dedicated it to the prince of the Apostles. The heathens were astonished that no thunderbolt from the hand of Thor destroyed the offender, and many were converted. The fall of this oak marked the fall of heathenism. Tradition tells us that Boniface now passed on to the River Werra and there erected a church in connexion with the authority with which sprung up a town, which to the present day bears the name of Wannfried. At Eschwege he is said to have destroyed the statue of the idol Stufo. Thence he went into Thuringia. 

The difficulties that confronted him here were very great. Christianity had indeed made great progress, but it had become mixed up with heretical tenets and pagan customs. This was due to a great extent to some Celtic missionaries, several of whom had never been ordained, while others had been raised to the dignity of bishops by non-Catholic bishops, though all performed priestly functions. The Thuringian bishops made use of ceremonies at variance with the teaching and use of the Roman Church, especially in regard to the celebration of Easter, the conferring of baptism, celibacy, the papal and episcopal authority. Besides, many were in education, some scarcely able to read or write, and equally ready to hold services for the Christians and to offer sacrifices to the idols for the heathens. A neighbouring bishop (probably of Cologne) also gave trouble, by laying claim to a part of the district under Boniface's jurisdiction and treating his authority as an intrusion, thereby indirectly strengthening the party of the heretics. All this caused him great anxiety and suffering, as may be seen from his letters to England. He was forced to travel all the time, and to make excursions in order to see the heathen and to hold services for the Christians. He was also forced to hold discussions with them and to win them to his word and encouragement. Numbers of men and women went to Germany at different times to be his helpers. Among them were Lullius, Denuhard, Burchard, Wibert, Solita, Witta (aedil, who, as a woman, was one of the few awarded with a title), and wonderful women Lioba, Chunihild, Chuntrude, Berthgith, Walburga, and Thecla. With these, and others recruited in Thuringia and elsewhere in Germany, he continued his labours. The number of the faithful increased wonderfully, including many of the nobility and the educated of the country. These assisted him in the building of churches and chapels. And all who lived in a religious life would be fostered. In Thuringia he built the first monastery Ohrdruf on the River Ohrn near Altenberg. He appointed Thecla Abbess of Kitzingen, Lioba of Bischofsheim, and Walburga of Heidenheim. 

Pope Gregory II died 11 February, 731, and was succeeded on 18 March by Gregory III. Boniface hastened to send a delegation to the new pontiff, to pay his respects and to assure him of his fidelity. The answer to this seems to be lost. In 732 Boniface wrote again and stated among other things that the work was becoming too much for one man. In answer Gregory III congratulated him on his success and praised his zeal, in recognition sending him the pallium, and making him an archbishop, but still without a fixed see. He gave him instructions to appoint bishops wherever he thought it necessary. Boniface now enlarged the monastery of Amöneburg and built a church, dedicating it to St. Michael. Another monastery he founded at Fritzlar near the river Eder, which was completed in 734. The church, a more magnificent structure, was finished in 740. In 738 Boniface made his third journey to Rome, intending to resign his office and devote himself exclusively to the mission among the Saxons. He was accompanied by a number of his disciples, who were to see true Christian life in the centre of Christianity. Gregory III received him graciously and was rejoiced at the result of Boniface's labours, but would not allow him to resign. Boniface remained in Rome for about a year and then returned to his mission in Saxony. He encouraged the missionary work in which he had been engaged, for his first care on his return was the Church in Bavaria. In 715 (716) Duke Theodo had come to Rome out of devotion, but probably also to secure ecclesiastical order in his provinces. Gregory II sent three ecclesiastics with instructions to do away with abuses. Their work, however, was rendered futil by the death of Theodo in 717 and the subsequent political quarrels. Boniface had twice passed through the country. With the help of Duke Odilo and of the nobles, he began the work of reorganization acting entirely according to the instructions of Gregory. He examined the orders of the clergy, deposed the obstinate, reordained those whose ordination he found invalid, provided they had erred through ignorance and were willing to submit to authority. He made a new circumscription of the dioceses and appointed bishops for the vacant sees, viz., the Abbot John to the See of Salzburg, vacant since the death of St. Rupert in 718; Ermengart to Freising, vacant since the death of his brother, St. Corbinian, in 730; Gauulf to Ratibon. Passau had been established and provided for by the pope himself through the nomination of Vivilio. About this time Boniface founded the new Diocese of Bursburg, and named Witta as its bishop. This diocese existed only for a short time, during the administration of two episcopal see, and was then joined to Augsburg. Somewhat later the dioceses of Eichstätt and Erfurt (Erphesfurt) were formed, and Willibald was consecrated bishop for the former about October, 741; for the latter Boniface appointed as first (and last) bishop Adalber, who, it seems, never received consecration as a priest. Burchard was chosen for Würzburg. Charles Martel had died 22 October, 741, at Aquincum on the Oise and was succeeded by his sons Carloman and Pepin. In Rome Pope Gregory III died 28 November, 741, and was succeeded by Leo III. Boniface was asked to consecrate his former preceptor, to a consultation. The result of this was a letter to the pope
in which Boniface reported his actions in Bavaria and asked advice in various matters. He also stated the wish of Carlemant that a synod be held. In answer Pope Zachary, 1 April, 742, confirmed the erection of the dioceses, sanctioned the holding of the synod, and gave the requested information. The synod was ecclesiastical and partly secular; it was held 21 April, 742, but the place cannot be ascertained. The bishops appointed by Boniface were present and several others, but it was mainly the authority of Boniface and the power of Carlemant that gave weight to the first German synod. Among its decrees the most notable were the ordaining the subjection of the clergy to the bishop of the diocese, and forbidding them to take any active part in wars, to carry arms, or to hunt. Very strict regulations were made against carnal sins on the part of priests and religious. The Rule of St. Benedict was made a norm for religious. Laws were also enacted concerning marriage within the forbidden degrees of kindred. A second national synod was held 1 March, 743, at Liptina in Hainault, and another at Soissons, 2 March, 744. In it Boniface condemned and excommunicated two heretics, Adalbert and Clement, the former a native of Gaul, the latter of Ireland. They were again condemned in 745 and also at a synod held in Rome. Several other synods were held in Germany to strengthen faith and discipline. At one of these synods of Carlemant the authority of Boniface over Bavaria was confirmed and extended over Gaul.

In 744 St. Willibrord, Bishop of Utrecht, died, and Boniface took the diocese under his charge, appointing an assistant or chor-episcopus. About the same time the See of Cologne became vacant through the death of Ragenfried, and it was the intention of Boniface as well as the wish of Pope Zachary to make this his archiepiscopal see, but the clergy opposed. Before they could be carried out the See of Mainz lost its bishop through the deposition of Giselbert who led a very irregular life and had killed the steward of his father, who was his predecessor in the episcopal office. Pope Zachary, 1 May, 747, appointed Boniface Archbishop of Mainz and Pri- mate of Germany. The new archdiocese comprised the dioceses of Tongern, Cologne, Worms, Speyer, Utrecht, and the dioceses erected by Boniface himself: Burenburg, Eichstätt, Erfurt, and Würzburg. Of Augsburg, Coire, and Constance the decree does not now say they are shortly afterwards mentioned as belonging to the province. After a few years Boniface was able to reconcile his enemies with the Holy See, so that the supremacy of the pope was acknowledged in Great Britain, Germany, and Gaul, as well as in Italy.

In 747 Carlemant resigned his share of the government to his brother Pepin and left to spend the remainder of his days as a monk. He built a monastery in honour of St. Silvester at Saracete near Rome, and later retired to Monte Cassino. His motives for this are not known, but it was perhaps at the severity of the measures he had felt himself obliged to use in order to obtain a union among the German tribes. Pepin, now the sole ruler, became the founder of the Carolingian dynasty. That Boniface had anything to do with the disestablishment of the old royal family and the introduction of a new one cannot be proved. He did not mingle in the politics of the country, except in that, this, he did all in his power to convert the people to the true Faith, and to bring them under the subject of the Roman pontiff. It is generally stated that Boniface anointed and crowned Pepin by order of the pope, though this is denied by some.

The rest of his life Boniface spent in confirming what he had achieved in Germany. This he did by frequently holding synods and by enforcing the sacred canons. He did much for true religious life in the monasteries, especially at Fulda, which had been established under his supervision by St. Sturm, and into which Boniface retired yearly to train the monks and to spend some days in prayer and meditation. At his request Pope Zachary exempted the abbey from all episcopal jurisdiction and placed it under the immediate charge of the Holy See. This was something new for Germany, though already known and practised in Italy and England. It seems that Boniface's last act as Archbishop of Mainz was the repudiation of the claim of the Archbishop of Cologne to the Diocese of Utrecht. The matter was laid before Pepin, who decided against Cologne. The same decision must have been given by Pope Stephen II (III) who had become the successor of Zachary, 26 March, 752, for after that time no further claim was made by Cologne. No change was made until the ninth century, when Cologne was made an archdiocese and Utrecht one of its suffragan sees. Boniface appointed Abbot Gregory as administrator of Utrecht, and Eoban, who had been assistant, he took as his ,condemnation of marriage within the forbidden degrees of kindred. A second national synod was held 1 March, 743, at Liptina in Hainault, and another at Soissons, 2 March, 744. In it Boniface condemned and excommunicated two heretics, Adalbert and Clement, the former a native of Gaul, the latter of Ireland. They were again condemned in 745 and also at a synod held in Rome. Several other synods were held in Germany to strengthen faith and discipline. At one of these synods the See of Carlemant the authority of Boniface over Bavaria was confirmed and extended over Gaul. When Boniface saw that all things had been properly taken care of, he took up the work he had dreamed of in early manhood, the conversion of the Frisians. With royal consent, and with that of the pope previously given, he in 754 resigned the Archbishopric of Mainz, and was consecrated pope 752 on which he had consecrated bishop, again commenced a missionary tour, and laboured with success to the East of the Zuider Zee. Returning in the following year, he ordered the new converts to assemble for confirmation at Dokum on the River Borne. The heathens fell upon them and murdered Boniface and fifty-two companions (according to some, thirty-seven). Soon afterwards, the Christians, who had scattered at the approach of the heathens, returned and found the body of the Pope in the blood-stained copy of St. Ambrose on the "Advantage of Death". The body was taken to Utrecht, afterwards through the influence of Lullius removed to Mainz, and later, according to a wish expressed by the saint himself during his lifetime, to the Abbey of Fulda. Portions of his relics are at Louvain, Mechlin, Prague, Bruges, and Erfurt. A considerable portion of an arm is at Eichfeld. His grave soon became a sanctuary, to which the faithful came in crowds especially on his feast and during the Octave. Eng- lishers and Burgueses have to have been the first place where his martyrdom was celebrated on a fixed day. Other countries followed. On 11 June, 1874, Pope Pius IX extended the celebration to the entire world. Brewers, tailors, and file-cutters have chosen St. Boniface as their patron, also various cities in Germany. The writings of St. Boniface which have been preserved are: "Collection of Letters"; "Poems and Riddles"; "Poenitential"; "Compendium of the Latin Language"; "Compendium of Latin Prosody"; "Sermons." (dubious).
during the early centuries. Just after Zosimus's decease, 27 December, 418, a faction of the Roman clergy, desiring to maintain their dictatorial power, invested the Lateran basilica and elected as pope the Archdeacon Eulalius. The higher clergy tried to enter, but were violently repulsed by a mob of adherents of the Eulalian party. On the following day they met in the church of St. Gaudentius, and, according as against his will, the aged Boniface, a priest highly esteemed for his charity, learning, and good character. On Sunday, 29 December, both were consecrated, Boniface in the Basilica of St. Marcellinus, supported by nine provincial bishops and thirty-five priests; Eulalius in the Lateran basilica in the presence of the deacons, a few priests and the Bishop of Ostia, who was summoned from his sickbed to assist at the ordination. Each claimant proceeded to act as pope, and Rome was thrown into tumultuous confusion by the clash of the rival factions. The Prefect of Rome, Symmachus, hostile to Boniface, reported the trouble to the Emperor Honorius at Ravenna, and secured the imperial confirmation of Eulalius's election. Boniface was a guardian of certain land, but, according as secured a hearing from the emperor who called a synod of Italian Bishops at Ravenna to meet the rival popes and discuss the situation (February, March, 419). Unable to reach a decision, the synod made peace of St. Augustine was a provincial synod of Numidia, and decided that he should be restored if his innocence be established. Boniface ardently supported St. Augustine in combating Pelagianism. Having received two Pelagian letters calumniating Augustine, he sent them to him. In recognition of this solicitude Augustine dedicated to Boniface his rejoinder contained in "Contra duas Epistolam Pelagianorum Libri quatuor".

In the East he zealously maintained his jurisdiction over the ecclesiastical provinces of Illyricum, over which the Patriarch of Constantinople was trying to secure control on account of their becoming a part of the Eastern empire. The Bishop of Thessalonica had been constituted papal vicar in this territory, exercising jurisdiction over the metropolitans and bishops. By letters to Rufus, the contemporary incumbent of the see, Boniface watched closely over the interests of the Illyrian church and insisted on obedience to Rome. In 421 dissatisfaction expressed by certain malcontents among the bishops, on account of the pope's efforts to support Perigines as Bishop of Corinth unless the candidate was recognized by Rufus, served as a pretext for the young emperor Theodosius II to grant the ecclesiastical dominion of Illyricum to the Patriarch of Constantinople (14 July, 421). Boniface remonstrated with Honorius against the violation of the rights of his see, and prevailed upon him to urge Theodosius to rescind his enactment. The law was not enforced, but it remained in the Theodosian (499) and Justianian (554) codes and caused much trouble for succeeding popes. By a letter of 11 March, 422, Boniface forbade the consecration in Illyricum of any bishop whom Rufus would not recognize. Boniface renewed the legislation of Pope Soter, prohibiting women to touch the sacred linens or to minister at the burning of the sacred gifts. He enforced the laws forbidding slaves to become clerics. He was buried in the cemetery of Maximus on the Via Salaria, near the tomb of his favourite, St. Felicitas, in whose honour and in gratitude for whose aid he had erected an oratory over the crypt containing his name. The chair of his see remained vacant until the election of St. Gregory I, 25 October 590.

BONIFACE

at the reorganisation of their church after the Vandal devastation, requesting him to confirm in primate rights the Archbishop of Carthage, that the latter might be better able to profit by the help of the Roman See. In the east he asserted the rights of the pope to jurisdiction in Illyricum. (See Boniface I.) In 531, Epiphanius, Patriarch of Constantinople, declared irregular the election of Stephen to the Archbishops of Larissa in Thessaly. Despite the severe measures taken in Constantinople to thwart his purpose, Stephen appealed to Rome on the ground that Epiphanius was incompetent to decide the case, maintaining his point in terms which reveal a clear conception of Roman primacy. Boniface convened a fourth Roman synod 7–9 December, 531, in which some twenty-five documents were added in support of Rome's claim to jurisdiction in Illyricum. The outcome of the synod is not known. Boniface was esteemed for his charity, particularly towards the suffering poor of Rome during a year of famine. He was buried in St. Peter's, 17 October, 532, where a fragment of his epitaph may yet be seen (Duchesne, Les Oeuvres Vatican de Saint Romano-1902).

BONIFACE II, POPE, elected 17 September, 530; d. October, 532. In calling him the son of Sigisbald, the "Liber Pontificalis" makes first mention of a pope's Germanic ancestry. Boniface served the Roman Church from early youth. During the reign of Pope Felix IV, he was archdeacon and a penance of considerable influence with the ecclesiastical and civil authorities. His elevation to the papacy is remarkable as offering an unquestionable example of the nomination of a pope by his predecessor, without even the formality of an election. Felix IV apprehending death and fearing a contest for the papacy between Roman and Gothic factions, gathered about him several of his clergy and a number of Roman Senators and patricians who happened to be near. In their presence, he solemnly conferred on his aged archdeacon the pallium of papal sovereignty, anointing him his successor and murming with excommunication those refusing to recognize and obey Boniface as validly chosen pope. On Felix's death Boniface assumed succession, but nearly all of the Roman priests, sixty out of perhaps eighty, deserted to accept him and his coadjutor Dioscorus. They feared the undue influence in papal affairs of the Ostrogothic King Athanaric, whose grandfather, Theodoric I, had helped to elect Pope Felix IV, a circumstance rendering more odious the latter's nomination of Boniface. Both popes were consecrated 22 September, 530, Boniface in the basilica of Julius, and Dioscorus in the Lateran. The Roman Church was thus involved in the seventh anti-papal schism. Fortunately it endured but twenty days, for Dioscorus died 14 October, leaving Boniface in possession. He soon convened a Roman synod and presented a decree anathematizing his late rival to which he secured the signatures of the priests who had been Dioscorus's partisans (December, 530). Each of these expressed regret for their participation in the irregular election and pledged future obedience. Boniface reconciled many by his mild, conciliatory administration, but some recusant remained, for he seems not to have been tendered a formal election by those who, despite their anathema, accepted the validity of his election; and five years later a pope of their own choice solemnly burned the anathema against Dioscorus. (See Agapetus I.) In a second synod, held (531) in St. Peter's, Boniface presented a constitution attesting to himself the right to appoint his successor. The Roman clergy subscribed to it and promised obedience. Boniface proposed as his choice the deacon Vigilius and it was ratified by priests and people. This enactment provoked bitter resentment and even imperial disavowal, for in a third synod (531) it was rescinded. Boniface burned the constitution before the clergy and senate and nullified the appointment of Vigilius.

The reign of Boniface was marked by his active interest in diverse affairs of the Western and Eastern churches. Early in his pontificate he confirmed the acts of the Second Council of Orange, one of the most important of the sixth century, which effectually terminated the Semipelagian controversy. Its presiding officer, Cessarius, Archbishop of Arles, an imperialist, having, in his pontificate he confirmed the acts of the Second Council of Orange, one of the most important of the sixth century, which effectually terminated the Semipelagian controversy. Its presiding officer, Cessarius, Archbishop of Arles, an imperialist, had, a previous to his latter's succession, sent the priest Armenius to Rome to ask Boniface to secure the pope's confirmation of the council. Being himself pope when the messenger came, Boniface sent a letter of confirmation to Cessarius (25 January, 531) in which he abrogated certain Semipelagian doctrines. He received an appeal from the African bishops, who were labouring

John B. Peterson

BONIFACE III—VII. POPES.—Boniface III, Pope, of Roman extraction and the son of John Cattadiaco, was elected to succeed Sabianian after an interregnum of nearly a year; he was consecrated 10 February, 607; d. 12 November of the same year. He had been ordained a deacon of the Roman Church, and in 603 sent by Gregory the Great as aposcricus, or legate, to the court of Constantine, where, by his tact and prudence, he appears to have gained the favourable regard of the Emperor Phocas. After his elevation to the See of Rome, Boniface obtained a decree from Phocas against Cyrus, Bishop of Constantine, by which it was ordered, that the "See of Blessed Peter the Apostle should be the head of all the Churches", and that the title of "Universal Bishop" belonged exclusively to the Bishop of Rome. An acknowledgment somewhat similar to that made by Justinian eighteen years before (Novell, 131, c. ii. tit. xiv). At Rome Boniface held a council, attended by seventy-two bishops and all the Roman clergy, wherein he enacted a decree forbidding anyone under pain of excommunication, during the lifetime of a pope or of a bishop, to treat of or to discuss the appointment of his successor, and setting forth that no steps were to be taken to provide for a successor until three days after the burial of the deceased. The acts of the council are lost, and it is not known what may have been the occasion for the decree. Pope Boniface was a man of "tried faith and character" (St. Greg., ep. xiii, 41). He died within a year of his elevation and was buried in St. Peter's. His epitaph is found in the works of Duchesne, Ducellier, and Migne, Patrologia Latina, XXXI, 620.}

On the election of Boniface no literature is reliable which antedates 538, with the exception of a work by Dionysius, which he comments in Scuola Cattolica (Milan), XXXI, fasc. III: DUCHESENE, Geschichte der Papstwesen (Leipzig, 1838), III, 228-240; CREMONA, in Ecclesiastical History (January, 1903), XXVIII, 41-50; Ewald, Akten und Schriften der Papstwesen, II, 57-58; RUSSELL, R. H., The History of the City of Rome in the Middle Ages (London, 1854), I, 345-346; BUTTON, The History of the City of the Sixtus Century (London, 1887).

John B. Peterson

BONIFACE IV, SAINT, Pope, son of John, a physician
BONIFACE

a Marsian from the province and town of Valeria; he succeeded Boniface III after a vacancy of over nine months; consecrated 25 August, 608; d. 8 May, 615. His name is commemorated 5 September and 25 March (Jaffé). In the time of Pope St. Gregory the Great he was a deacon of the Roman Church and held the position of dispensator, i.e., the first official in connexion with the administration of the patrimony. Boniface obtained leave from the Emperor Phocas, to erect the Pontifical Church of St. Margaret Rotunda. He was consecrated by Agrippa to Jupiter the Avenger, to Venus, and to Mars. (Hence the title S. Maria ad Martyres in its shape, and St. Maria Rotunda.) It was the first instance at Rome of the transformation of a pagan temple into a place of Christian worship. Twenty-eight cartloads of sacred bones were said to have been removed from the Catacombs and placed in a porphyry basin beneath the high altar. During the pontificate of Boniface, Mellitus, the first Bishop of London, went to Rome "to consult the pontif on important matters relative to the newly established English Church" (Bede, H. E., II, iv). Whilst in Rome he assisted at a council of bishops and priests, which declared "the life and monastic peace of monks," and, on his departure, took with him to England the decrees of the council together with letters from the pope to Lawrence, Archbishop of Canterbury, and to all the clerics. The Pontificalia of Jaffé which he published, is the earliest work of the clerics of Rome regarding the English people concerning what was to be observed by the Church of England. The decrees of the council now extant are spurious. The letter to Ethelbert (in the life of Malmesbury, De Gest. Pont., I, 1464, ed. Migne) is considered spurious by Hefele (Conciliengeschichte, III, 66), questionable by Haddan and Stubbe (Council, III, 65), and genuine by Jaffé (Regest. R. P., 1998 (1548)).

Between 612-615, St. Columban, then living at Bobbio in Italy, was persuaded by Agilulf, King of the Lombards, to address a letter on the condemnation of the "Three Chapters" to Boniface IV, which is remarkable at once for its expressions of exaggerated deference and its tone of excessive sharpness. In it he tells the pope that he is charged with heresy (for accepting the Fifth Council, i.e., the Constantinopolitan, 553), and exhorts him to summon a council and prove his orthodoxy. But the letter of the impetuous Celt, who failed to grasp the import of the theological problem involved in the "Three Chapters," seems not to have had even a glimmering touch of the Holy See, and it would be wrong to suppose that Columban regarded himself as independent of the pope's authority. During the pontificate of Boniface there was much distress in Rome owing to famine, pestilence, and inundations. The pontiff died in monastic retirement (he had converted his own house into a monastery) and was buried in the portico of St. Peter's. His remains were three times removed—in the tenth or eleventh century, at the close of the thirteenth under Boniface VIII, and to the new St. Peter's on 21 October, 1663. For the earlier inscription on his tomb see Duchiene; for the later, Grisiar, "Analecta Romana," I, 183. Boniface IV is commemorated as a saint in the Roman Martyrology on 25 May.

BONIFACE V, Pope, a Neapolitan who succeeded Deusdedit after a vacancy of more than a year; consecrated 23 December, 619; d. 25 October, 625. Before his consecration Italy was disturbed by the rebellion of the eunuch Eleutherius, Exarch of Ravenna. The patrician, pretender advanced towards Rome, but was confronted and repulsed by his own troops. The "Libri Pontificum" records that Boniface made certain enactments relative to the rights of sanctuary, and that he ordered the ecclesiastical notaries to obey the laws of the empire on the subject of wills. He also prescribed that acolytes should not present before the Church the relics of martyrs, and that, in the Lateran Basilica, they should not take the place of deacons in administering baptism. Boniface completed and consecrated the cemetery of St. Nicomedes on the Via Nomentana. From the funeral of Pope Boniface VII, later, the pope's affectionate concern for the English Church. The "letters of exhortation" which he is said to have addressed to Mellitus, Archbishop of Canterbury, and to Justus, Bishop of Rochester, are no longer extant, but certain other letters have been preserved. One is written to Justus, after he had succeeded Mellitus as Archbishop of Canterbury (624), conferring the pallium upon him and directing him to "ordain bishops as occasion should require." According to Bede, Pope Boniface also sent letters to Edwin, King of Northumbria, in which the English prince is exhorted to embrace the Christian Faith, and to the Christian Princess Ethelberga, Edwin's spouse, exhorting her to use her best endeavours for the conversion of her consort (Bede, H. E., II, viii, ii, xi). In the "Liber Pontificalis" of Jaffé, this English man, whose chief distinction was his great love for the clergy. He was buried in St. Peter's, 25 October, 625. His epiphany is found in Duchiene.

BONIFACE VI, Pope, a Roman, elected in 896 by the Roman faction in a popular tumult, to succeed Formosus. He had twice incurred a sentence of deprivation of orders, as a subdeacon and as a priest. At the Council of Rome, held by John IX in 898, his election was pronounced null. After a pontificate of fifteen days, he is said by some to have died of the gout, by others to have been murdered. His arch SMS, for Stephen VI, the candidate of the Sisquon party.

BONIFACE VII, ANTIPOPE (previously BONIFACE FRANCO), a Roman and son of Ferruccio, was intruded into the Chair of St. Peter in 974; reinstalled, 984; d. July, 985. In June, 974, one year after the death of Emperor Otto I. Crescentius the son of Theodora and brother of John XIII, stirred up an insurrection at Rome, during which the Romans threw Benedict VI into the Castle of Sant' Angelo, and elevated as his successor the Cardinal-Diacre Franco, who took the name of Boniface VII. The imprisoned pontiff was speedily put to death by the intruder. But in little more than a month the imperial representative, Count Sieco, had taken possession of the city. In Boniface, not being able to maintain himself, robbed the treasury of the Vatican Basilica and fled to Constantinople. After an exile of nine years at Bzanzium, Franco, on the death of Otto II, 7 December, 983, quickly returned to Rome, overpowered John XIV (April, 984), thrust him from the city, and took the title of Sant' Angelo, where the wretched man died four months later, and again assumed the government of the Church. The usurper had never ceased to look upon himself as the lawful pontiff, and reckoned the

II.—42
years of his reign from the deposition of Benedict VI in 974. For more than a year Rome endured this monster steeped in the blood of his predecessors. But the vengeance was terrible. After his sudden death in July, 985, due in all probability to violence, the body of the pope was dragged through the streets of the city, and finally, naked and covered with wounds, flung under the statue of Marcus Aurelius, which at that time stood in the Lateran Place. The following morning pious vestals carried the corpse and gave it Christian burial.

THOMAS OESTREICH.

Boniface VIII. POPE (Benedetto Gaetani), b. at Anagni about 1225; d. at Rome, 11 October, 1303. He was the son of Loffred, a descendant of a noble family originally Spanish, but long established in Italy—first at Gaeta and later at Anagni. Through his mother he was connected with the house of Segni, who were most friendly to the church. Benedict VIII, Innocent III, Gregory IX, and Alexander IV. Benedetto had studied at Todi and at Spoleto in Italy, perhaps also at Paris, had obtained the doctorate in canon and civil law, and been made a canon successively at Anagni, Todi, Paris, Lyons, and Rome. In 1265 he accompanied Cardinal Ottobuono Fieschi to England, whither that prelate had been sent to restore harmony between Henry III and the rebellious barons. It was not until about 1276 that Gaetani entered upon his career in the Curia, where he was, for several years, actively engaged as consistorial advocate and notary Apostolic, and soon acquired considerable influence. Under Martin IV, in 1281, he was created Cardinal-Deacon of the title of S. Nicolò in carceri Tulliano, and ten years later, under Nicholas IV, Cardinal-Priest of the title of Ss. Silvestro e Martino ai Monti. As papal legate he served with conspicuous ability in France and in Sicily (H. Finke, Aus den Tagen Bonifaz VIII, Münster, 1902, 1 sqq., 9 sqq.).

In December, 1294, the saintly but wholly incompetent hermit-pope Celestine V, who five months previously, as Pietro di Morrhone, had been taken from his obscure mountain cave in the wilds of the Abruzzi and raised to the highest dignity in the church, resigned the see, and the papacy. The act was unprecedented and has been frequently ascribed to the undue influence and pressure of the designing Cardinal Gaetani. That the elevation of the inexperienced and simple-minded recluse did not commend itself to a man of the stamp of Gaetani, rector and greatest jurist of his age and well-skilled in all the arts of curial diplomacy, is highly probable. But Boniface himself declared, through Aegidius Colonna, that he had at first dis-suaded Celestine from taking the step. And it has not been generally admitted that Gaetani desired the resignation of the papacy first originated in the mind of the sorely perplexed Celestine himself, and that the part played by Gaetani was that of a counsellor, strongly advising the pontiff to issue a constitution, either before or simultaneously with his abdication, declaring the legality of a papal resignation and the competency of the College of Cardinals to accept it. [See especially H. Schulz, Peter von Morrhone—Papst Celestin V—in Zeit schrift für Kirchengesch., 1902, 365-406; also Finke, op. cit. 39 sqq.; and R. Scholz, Die Publizistik zur Zeit Philippes des Schönen und Bonifaz VIII, Stuttgart, 1903, 8-9. Ten days after Celestine the Fifth's grand riot the cardinals went into conclave in the Castel Nuovo at Naples, and on the 24th of December, 1294, by a majority of votes elected Cardinal Benedetto Gaetani, who took the name of Boniface VIII. (For details of the election see Finke, op. cit. 44 sqq. and 480 sqq.) The cardinals, the new pope immediately revoked (27 December, 1294) all the extraordinary favours and privileges which "in the fullness of his simplicity" Celestine V had distributed with such reckless prodigality. Then, early in January of the following year, in spite of the rigour of the season, Boniface set out for Rome, determined to remove the papacy as soon as possible from the influence of the Neapolitan court. The ceremony of his consecration and coronation was performed at Rome, 23 January, 1295, amid scenes of unparalleled splendour and magnificence. King Charles II of Naples and his son Charles Martel, titular king and claimant of Hungary, held the reins of his gorgeously accoutered snow-white paefrey as he proceeded on his way to St. John Lateran, and later, with their crows upon their heads, served the pope with the first few dishes at table before taking their places amongst the cardinals. On the following day the pontiff issued his first encyclical letter, in which, after announcing that Celestine's privilege of the Roman see and his own accession, he is depicted in the most glowing terms the sublime and indefectible nature of the Church.

The unusual step taken by Celestine V had aroused much opposition, especially among the religious parties in Italy. In the hands of the Spirituals, the Dominicans, the Fraticelli, and the Celestines—many of whom were not as guiltless as their saintly founder—the former pontiff, if allowed to go free, might prove to be a dangerous instrument for the promotion of a schism in the Church. But Boniface VIII, therefore, before leaving Naples, ordered Celestine V to remain in the custody of the Abbot of Monte Cassino. On the way thither the saint escaped and returned to his hermitage near Sulmona. Apprehended again, he fled a second time, and after weary weeks of roaming through the woods of Appulia reached the sea and embarked on board a vessel about to sail for Dalmatia. But a storm cast the luckless fugitive ashore at Vieste in the Capitanata, where the authorities recognized and detained him. He was brought before Boniface in his palace at Benevento there for some time, and finally transferred to the strong Castle of Fumone at Ferentino. Here he remained until his death ten months later, 19 May, 1296. The detention of Celestine was a simple measure of prudence, but long continued, because of the censure; but the rigorous treatment to which the old man of over eighty years was subjected—whoever may have been responsible for it—will not be easily condoned. Of this treatment there can now no longer be an question. The place wherein Celestine was confined was so near Rome, "that the spot whereon the saint stood when saying Mass was the same as that whereon his head lay when he reclined" (quod, ubi tenebat pedes ille sanctus, dum missam dicet, ubi tenebat caput, quando quiescebat), and his two companions were not allowed to make public prayers because the constraint and narrowness made them ill. (In this connexion see the very important and valuable paper "S. Pierre Célestin et ses premiers Biographies" in "Analecta Bolland." XVI, 365-457; cf. Finke, op. cit. 44 sqq.)

Thoroughly imbued with the principles of his great and heroic predecessors, Gregory VII and Innocent III, the successor of Celestine V entertained most exalted notions on the subject of papal supremacy in the day; and was ever most pronounced in the assertion of his claims. By his profound knowledge of the canons of the Church, his keen political instincts, great practical
experience of life, and high talent for the conduct of affairs, Boniface VIII seemed exceptionally well qualified to maintain inviolate the rights and privileges of the papacy which they had won from heaven. But he failed either to recognize the altered temper of the times, or to gauge accurately the strength of the forces arrayed against him; and when he attempted to exercise his supreme authority in temporal affairs as in spiritual, over princes and people, he met almost everywhere with a determined resistance. His aims of universal peace and Christian coalition against the Turks were not realized; and during the nine years of his troubled reign he scarcely ever achieved a decisive triumph. Though four of his coadjutors were most pious men, and had ever occupied the papal throne, Boniface VIII was also one of the most unfortunate. His pontificate marks in history the decline of the medieval power and glory of the papacy.

Boniface first endeavoured to settle the affairs of Sicily, which had been in a very distracted condition since the time of the Sicilian Vespers (1282). Two rivals claimed the island, Charles II, King of Naples, in right of his father Charles of Anjou, who had received it from Clement IV, and James II, King of Aragon, son of Sancho, through his mother Constance, the daughter of Manfred. James II had been crowned King of Sicily at Palermo in 1286, and had thereby incurred the sentence of excommunication for daring to usurp a throne which had been promised to his brother Alfonso III. In 1291, James agreed to surrender Sicily to Charles II on condition that he should receive the latter's daughter, Blanche of Naples, in marriage, together with a dowry of 100,000 Florins of silver. Boniface VIII, as liege lord of the island, ratified this agreement 21 June, 1295, and further sought to reconcile the conflicting elements by restoring James II to peace with the Church, confirming him in his possession of Aragon, and granting him the islands of Sardinia and Corsica, which were fiefs of the Holy See, in compensation for the loss of Sicily. By these measures Boniface VIII merely adhered to the traditional policy of the papacy in dealing with Sicilian affairs; there is no evidence to show that, either before or shortly after his election, he had pledged himself in any way to recover Sicily for the House of Anjou. Sicily was not, however, pacified by this agreement between the pope and the kings of Aragon and Naples. Threatened with a new invasion by the exiled inhabitants of that island asserted their independence, and offered the crown to Frederick, the younger brother of James II. In an interview with Frederick at Velletri, the pope sought to dissuade him from accepting the offer by holding out prospects of a succession to the throne of Constantinople and a marriage with Princess Catherine of Courtenay, grand-daughter and heir of Baldwin II, the last Latin Emperor of the East. But the young prince would not be dissuaded. The papal legate was expelled from the island, and, against the protest of Boniface VIII, Frederick was crowned King of Sicily at Palermo, 25 March, 1296. He was at once excommunicated and the island placed under interdict. Neither the king nor his people paid any heed to the censures. At the instigation of the pope a war ensued, in which James of Aragon, as Captain-General of the Church, was compelled to take part against his own brother. The contest was brought to a close (1302) through the efforts of Prince Charles, when the pope had called on his assistance in 1301. Frederick was to be absolved from the censures he had incurred, to marry Eleanor, younger daughter of Charles II, and to retain Sicily during his lifetime. After his death the island should revert to the King of Naples. Though frustrated in his hopes, Boniface VIII ratified the treaty 12 June, 1303, and agreed to recognize Frederick as vassal of the king of Naples.

In the meantime Boniface VIII had directed his attention also to the north of Italy, where, during a period of forty years, the two rival republics of Venice and Genoa had been carrying on a bitter contest for commercial supremacy in the Levant. Venice had doubtless been urged on to the offensive by the co-operation of these two powers. The pope, therefore, commanded a truce until 24 June, 1296, and ordered both the contestants to send ambassadors to Rome with a view to arranging terms of peace. The Venetians were permitted to accept his mediation; not so the Genoese, who were elated by their success. The war continued till 1299, when the two republics were obliged finally to conclude peace from sheer exhaustion, but even then the intervention of the pope was rejected.

The efforts made by Boniface VIII to restore order in Florence and Tuscany proved equally futile. During the closing years of the thirteenth century the great Guelph city was torn asunder by the violent discussions of the Bianchi and the Nerli. The Ghibelline Whites, of Ghilini origin, were represented the popular party and contained some of the most distinguished men in Florence—Dante Alighieri, Guido Cavalcanti, and Dino Compagni. The Nerli or Blacks, professing the old Guelph principles, represented the opposition. In 1293 the pope, who had been in Rome, returned to France and appointed Guillaume d'Éguisheim, who obtained the succession to the see, and established peace at Florence. The legate met with no success and soon returned to Rome leaving the city under an interdict. Towards the end of 1300, Boniface VIII summoned to his aid Charles of Valois, brother of Philip IV. He appointed Captain-General of Church and invested with the governorship of Tuscany (in consequence of the vacancy of the empire), the French prince was given full powers to effect the pacification of the city. Valois arrived at Florence on 1 November, 1301. But instead of acting as the official peace-maker of the pope, he conducted himself as a ruthless destroyer. After five months of his partisan administration, the Nerli were supreme and many of the Bianchi exiled and ruined—among them Dante Alighieri. Frederick, the son-in-law of the pope the bitter hatred of the Florentine people, Charles had accomplished nothing. (Levi, Bonifazio VIII e le sue relazioni col commune di Firenze, in Archiv. Soc. Rom. di Storia Patria, 1882, V, 365-474. Cf. Franchetti, Nuova Antologia, 1883, 23-38.) It may be noted here that many scholars of repute seriously question Dante's famous embassy to Boniface VIII in the latter part of 1301. The only contemporary evidence to support the poet's mission is a passage in Dino Compagni, and even that is looked upon by some as a later interpolation.

While thus endeavouring to promote peaceful relations between various states in Northern and Southern Italy, Boniface had himself become engaged in a desperate struggle at Rome with two rebellious members of the Sacred College, Jacopo Colonna and his nephew Pietro Colonna. The Colonna cardinals were Roman princes of the highest nobility and belonged to a powerful Italian family that had numerous palaces and strongholds in Rome and in the Campania. The estrangement which took place between Boniface and Colonna early in 1297, was owing chiefly to two causes. Jacopo Colonna, upon whom the administration of the vast Colonna family possessions had been conferred, violated the rights of his brothers,
Matteo, Ottone, and Landolfo, by appropriating the property rightfully belonging to them, and bestowing it in his stead. To obtain redress they applied to the pope, who decided in their favour, and repeatedly admonished the cardinal to deal justly with his brothers. But the cardinal and his nephews bitterly resented the pope’s intervention and obstinately resisted it by his descent. The Colonna cardinals had seriously compromised themselves by maintaining highly treasonable relations with the political enemies of the pope—first with James II of Aragon, and later with Frederick III of Sicily. Repeated warnings against this alliance having availed nothing, Boniface, in the interests of his own security, ordered the Colonna to receive papal garrisons in Palestrina—the ancestral home of the family—and in their fortresses Zagarolo and Colonna. They declined to do so, and forthwith broke off all relations with the pope. On the 4th of May, 1297, Boniface summoned the cardinals to his presence, and when, two days later (6 May), they appeared, he commanded them to do three things: to restore the consignment of gold and silver which their relative St. Peter’s warehouse had seized; to elect the pope’s nephew, Pietro Gaetani, as he was bringing it from Anagni to Rome; to deliver up Stefano as a prisoner to the pope; and to surrender Palestrina together with the fortresses Zagarolo and Colonna. The pope, in the first demand, rejected the other two. Thereupon Boniface on the 10th of May, 1297, issued a Bull, “In excelso throno”, depriving the rebellious cardinals of their dignities, pronouncing sentence of excommunication against them, and ordering them, within a space of ten days, to make their submission under penalty of forfeiting their property. On the morning of the same day (10 May) the Colonna had attached to the doors of several Roman churches, and even laid upon the high altar of St. Peter’s, a manifesto, in which they declared the election of Boniface VIII invalid on the ground that the abdication of Celestine V was unconsecrated, accused Boniface of circumventing his saintly predecessor, and appealed to a general council from whatever steps might be taken against them by the pope. This protest, compiled at Longherza, with the assistance of Fra Jacopone da Todi and of two other Spirituals, had somewhat anticipated the papal Bull, in answer to which, however, the Colonna issued the second manifesto (15 May) containing numerous complaints against Boniface VIII and the general council. The pope met this bold proceeding with increased severity. On the 23rd of May, 1297, a second Bull, “Lapis absccissus”, confirmed the previous excommunication, and extended it to the five nephews of Jacopo with their heirs, declared them absolved, disgraced, their property forfeited, and threatened with the interdict all such places as received them. Boniface at the same time pointed out how the Colonna cardinals had themselves favoured his election (in the conclave they had voted for Gaetani from the first as they had been among those who counselled Celestine’s abdication), had publicly acknowledged him as pope, attended his coronation, entertained him as their guest at Zagarolo, taken part in his consistories, signed all state documents with him, and had for nearly three years been his faithful ministers at the altar. The rebels replied with a third manifesto (15 June), and immediately set about preparing their fortresses for defense.

Boniface now withdrew from Rome to Orvieto, where on the 4th of September, 1297, he declared war and entrusted the command of the pontifical troops to Landolfo Colonna, a brother of Jacopo. In December of the same year he even proclaimed a crusade against his enemies. The fortresses and castles of the Colonna were taken without much difficulty. Palestrina (Pranezete), the last of their strongholds, fell without some resistance, but in September, 1298, it too was forced to surrender. Dante says it was got by treachery by “long promises and short performances” as Guido of Montefeltro counselled, but the tale of the implacable Ghibelline has long since been discredited. Glad in mourning, a cord around his neck by his descent, others members of the rebellious family, came to Rieti to cast themselves at the feet of the pontiff and implore his forgiveness. Boniface received the captives amid all the splendours of the papal court, granted them pardon and absolution, but refused to restore them to their dignities. Palestrina was raised to the ground, the plough driven through and salt strewn over its ruins. A new city—the Città Papale—later replaced it. When shortly afterwards the Colonna organized another revolt (which was however speedily suppressed), Boniface once more proscribed and excommunicated the turbulent clan.

Their property was confiscated, and the greater part of it bestowed on Roman nobles, more especially on Landolfo Colonna, the Orsini, and on those relatives of the pope, who had been among the leading members of the family now withdrew from the States of the Church—some seeking shelter in France, others in Sicily. (Demi, see below, and Petrine, Memorie Pranezente, Rome, 1705.)

Early in 1298, Boniface, Eric VIII of Denmark had unjustly imprisoned Jens Grand, Archbishop of Lund. Isarnus, Archpriest of Carcassonne, was commissioned (1295) by Boniface to threaten the king with spiritual penalties, unless the archbishop was freed, pending the investigation of the matter at Rome, whither the king was invited to send representatives. The latter were actually sent, but were met at Rome by Archbishop Grand, who had in the meanwhile escaped. Boniface decided for the archbishop, and, when the king refused to yield, excommunicated him and laid the kingdom under interdict (1298). In 1303 Eric yielded, though his adversary was transferred to Riga and his see given (1304) to the legate Isarnus. In Hungary Charobert or Canrobert of Naples claimed the vacant crown as descendant of St. Stephen on the distaff side, and was supported by the pope in his quality of traditional overlord and protector of Hungary. The nobles, however, elected Andrew III, and on his early demise (1301) chose Ladislaus, son of Wen-celslas II of Poland, and his nieces. The latter accepted the interdict of the papal legate, and the arbitration of Boniface was finally declined by the envoys of Wenceslas. The latter had accepted from the Polish nobles the Crown of Poland, vacant owing to the banishment (1300) of Ladislaus I. The solemn warning of the pope and his present against this violation of his right as ruler of Poland were unheeded by Wenceslaus, who soon, moreover, allied himself with Philip the Fair.

In Germany, on the death of Rudolph of Hapsburg (1291), his son Albert, Duke of Austria, declared himself king. The electors, however, chose (1292) Count Adolph of Nassau, whereupon Albert submitted. Adolph’s government proving unsatisfactory, three of the electors deposed him at Mainz (26 June, 1298) and enthroned Albert. The rival kings appealed to arms; at Goeffheim, near Worms, Adolph lost (2 July, 1298) both life and crown. Albert was re-elected king by the Diet of Frankfurt and crowned at Aschen (24 August, 1298). The electors had sought regularly from Boniface recognition of their choice and confirmation. He refused both on the plea that Albert was the murderer of his liege lord. Very soon Albert was at war with the three Rhenish archbishop-electors, and in 1301 the pope summoned him to Rome to answer various charges. Victorious in battle (1302), Albert sent
agents to Boniface with letters in which he denied leaving slain King Adolph, nor had he sought the battle on May 13th (though Adolph lived, etc.

Boniface eventually recognized his election (30 Apr., 1303). A little later (17 July) Albert renewed his father's oath of fidelity to the Roman Church, recognized the papal authority in Germany as laid down by Boniface (May, 1300), and promised to send no imperial vicar to Tuscany or Lombardy within the next five years without the pope's consent, and to defend the Roman Church against its enemies. In his attempt to preserve the independence of Scotland, Boniface now moved in a different direction. After the enthronement and imprisonment of John Balilo, and the defeat of Wallace (1298), the Scots Council of Regency sent envoys to the pope to protest against the feudal superiority of England. Boniface, they said, was the only judge whose jurisdiction extended over both kingdoms. Their realm belonged of right to the Roman See, and to none other. Boniface wrote to Edward I (27 June, 1299) reminding him, says Lingard, "almost in the very words of the Scottish memorial", that Scotland had been a free and independent country, without times being subject to the Roman See; the king was to cease all unjust aggression, free his captives, and pursue at the court of Rome within six months any rights that he claimed to the whole or part of Scotland. This letter reached the Scottish king the day after his death. The next day Robert of Winchelsea, Archbishop of Canterbury, and was laid by Edward before a papal summons to meet at Lincoln. In its reply (27 Sept., 1300) the latter denied, over the names of 104 lay lords, the papal claim of suzerainty over Scotland, and asserted that a king of England had never pleaded before any judge, ecclesiastical or secular, respecting his rights in Scotland or any other temporal rights, nor would they permit him to do so, were he thus inclined (Lingard, II, ch. vii). The king, however (7 May, 1301), supplemented this act by a memoir in which he set forth his royal view of the historical relations of Scotland and England. In its reply to this plea the representatives of Scotland reassert the immemorial suzerainty of the Roman Church over Scotland; the property, the peculiar allodii of the Holy See; in all controversies, they said, between these equal and independent kingdoms it is to their equal superior, the Church of Rome, that recourse should be had. This somewhat academic conflict soon seemed hopeless at Rome, owing to the mutual visits of the French clergy with the papal legates (see "Hist. of the Cath. Church of Scotland", London, 1887, II, 9–11), and is of less importance than the strained relations between Boniface and Edward, aposo of the unjust taxation of the clergy.

In 1294, of his own authority, Edward I sequestered all moneys found in the treasuries of all churches and monasteries. Soon he demanded and obtained from the clergy one half their incomes, both from lay fees and benefices. In the following year he called for a third or a fourth, but they refused to pay more than a tenth. When, at the Convocation of Canterbury (November, 1296), the king demanded a fifth of their income, the archbishop, Robert of Winchelsea, in keeping with the new legislation of Boniface, offered to consult the pope, whereupon the king outlawed the clergy, secular and regular, and seized all their lay fees, goods, and chattels. The northern Province of York yielded; in the Province of Canterbury many resisted for a time, among them the courageous archbishop, who retired to a rural pastorate in Cornwall, where he was joined by the whole province and his goods were restored, but as Edward soon after demanded in his own right a third of all ecclesiastical revenues, his recognition of the Bull "Clerici laicos" was evanescent.

The memorable conflict with Philip the Fair of France began early in the pope's reign and did not end even with the tragic close of his pontificate. The pope's chief aim was to secure a general European peace, in the interest of a crusade that would break forever, at what seemed a favourable moment, the power of Islam. The main immediate obstacle to such a peace lay in the war between France and England, caused by Philip's unjust seizure of Gascoign (1294). The chief combatants carried on the war at the expense of the Church, whose representatives they sorely taxed. Such taxation had often been permitted in the past by the popes, but only for the purpose (real or alleged) of a crusade; now it was applied in order to raise revenue for the needs of the national warfare. The legates sent by Boniface to both kings a few weeks after his elevation accomplished little; later efforts were rendered useless by the stubborn attitude of Philip. In the meantime numerous protests from the French clergy moved the pope to action, and with the approval of his cardinals he published (24 Feb., 1296) the Bull "Clerici laicos", in which he forbade the laity to exact or receive, and the clergy to give up, ecclesiastical revenues or their parts, which the kings exacted or demanded under pretexts imposing such exactions and ecclesiastical submitting to them were declared excommunicated. Other popes of the thirteenth century, and the Third and Fourth Lateran Councils (1179, 1215), had legislated similarly, but this was the first time the clergy, apart, therefore, from the opening line of the Bull, that seemed offensive as reflecting on the laity in general (Clerici laicos inuenso esse oppido tradit antiquitas, i. e., "All history shows clearly the enmity of the laity towards the clergy,"—in reality a byword in the schools and taken from earlier sources), there was nothing in its very general terms to rouse particularly the royal anger. Philip, however, was indignant, and soon retaliated by a royal ordinance (17 Aug.) forbidding the export of gold or silver, precious stones, weapons, and food from his kingdom. He also forbade foreign merchants to remain longer within its bounds. These measures affected immediately the Roman Church, for it drew much of its revenue from France, inclusive of crusade moneys, whence the numerous papal collectors were henceforth banished. The king also caused to be prepared a proclamation (never promulgated) concerning the obligation of ecclesiastics to bear the public burden and the revocable character of ecclesiastical immunities. (For the generous contributions of the French clergy, see the exhaustive statistics of Bourgin in "Rev. des quest. hist.", 1890, XLVIII, 62.) In the Bull "Ineffabilis Amor" (20 Sept.) Boniface protested vigorously against these royal acts, and explained that he had never meant to forbid voluntary gifts from the clergy or contributions necessary for the defence of the kingdom, of which necessity the king and his council were the judges. During 1297 the pope sought in various ways to appease the royal embitterment, notably by the Bull "Et si de Stato" (31 July), above all by the canonization (11 Aug., 1297) of the king's grandfather, Louis IX. The royal ordinance was withdrawn, and the painful incident seemed closed. In the meantime the truce which in 1296 Boniface had tried to impose on Philip and Edward was finally accepted by both kings early in 1298, for a space of two years. The disputed matters were referred to Boniface as arbiter, though Philip accepted him not as pope, but as a private person, as Benedetto Guetano. The award, favourable to Philip, was issued (27 June) by Boniface in a public consistory.

In the Jubilee of 1300 the high spirit of Boniface might well recognize a compensation and a consolation for previous humiliations. This unique celebration, the apogee of the temporal splendour of the
papacy (Zaccaria, De anno Jubilaei, Rome, 1778), was formally inaugurated by the pope on the feast of Sts. Peter and Paul (29 June). Giovanni Villani, an eyewitness, relates in his Florentine chronicle that about 200,000 pilgrims were constantly in the City. It was necessary to make an opening in the wall of the Leonine City, near the Tiber, so that the multitudes might pass along a narrow stem of movement. Pilgrims came from every country in Europe and even from distant Asia. Ominously enough, if we except the elder son of the King of Naples, none of the kings or princes of Europe came to pay their respects to the Vice of Christ. The second crown in the papal tiara, indicative of the temporal power, is said to date from the reign of Boniface, and may have been added at this time.

In the meantime Philip continued in a merciless way his fiscal oppression of the Church, and abused more than ever the so-called rights, or royal privilege of collecting the revenues of a diocese during its vacancy. Since the middle of 1297 the exiled Colonna had found refuge and sympathy at the court of Philip, whence they spread calamitous charges against his government, and urged the conclave of the French council for his deposition. The royal absolutism was now further incited by suggestions of a universal Christian dominion under the hegemony of France. The new state was to secure, besides, the Holy Land, as innumerable claims of the French were made. Both the English and the German, were to be incorporated in it, and the papacy was to become a purely spiritual patriarchate, its temporalities administered by the French king, who would pay the pope an annual salary commensurate to his office. Due to the near Byzantinism outlined in a work on the recovery of the Holy Land ("De recuperatione terrae sanctae"), in Bongars, "Gesta Dei per Francos", II, 316-61, ed. Langlois, Paris, 1891), and though only the private work of Pierre Dubois, a civil servant of Philip, it probably reflected some fantastic plan of the king (Finke, Zur Charakteristik, 217-18).

In the first half of 1301 Boniface commissioned Bernard de Saisset, Bishop of Pamiers (Languedoc), as legate to Philip. He was to protest against the continued oppression of the clergy, and to urge the king to apply conscientiously to a crusade the ecclesiastical tithes collected by papal indults. For various reasons De Saisset was not a welcome envoy (Langlois, Hist. de France, ed. Lavisse, III, 2, 143). On the Pamiers' legate's treacherous speech and incitement to insurrection, was brought to Paris (12 July, 1301), thence to Sensis, where he was found guilty in a trial directed by Pierre Flotte, and known to modern historians (Von Reumont) as "a model of injustice and violence". De Saisset in vain protested his innocence and denied the competency of the civil court; he was committed temporarily to the care of the Archbishop of Narbonne, while Pierre Flotte and Guillaume de Nogaret went to Rome to secure from Boniface the dogmata of his legate and his delivery to the secular authority. Boniface acted with discretion. He demanded from the king the immediate liberation of De Saisset and wrote to the Archbishop of Narbonne to detain the latter no longer. By the Bull "Salvator Mundi" the pope withdrew the blessing with which the French king collected canonically ecclesiastical revenue for the defence of the kingdom, i.e., he re-established in vigour the "Clerici laicos", and in the famous Bull "Auscula Fili" (Listen, O Son) of 5 Dec., 1301, he stood forth as the mouthpiece of the medieval papacy, as the successor of the Gregories and the Innocents. In it he appeals to the king to listen to the Vicar of Christ, who is placed over kings and kingdoms (cf. Jer., 1, 10). He is the keeper of the keys, the judge of the living and the dead, and sits on the throne of justice, with power to extirpate all iniquity. He is the head of the Church, which is one and steadfast, and not a many-leded monster, and has full Divine authority to punish those who tear down, to build up and plant. Let not the king imagine that he has no superior, is not subject to the highest authority in the Church. The pope is concerned for the welfare of all kings and princes, but particularly of that of France. He then proceeds to relate his many grievances against the king, the application of ecclesiastical goods to secular uses, despotic procedure in dragging ecclesiastics before civil courts, hindrance of episcopal authority, excessive demands for papal dispensation, and oppression of the clergy. He will no longer be responsible for the protection (custodia) of the monarch's soul, but has decided, after consulting his cardinals, to call to Rome for 4 Nov., 1302, the French bishops and doctors of theology, principal abbots, etc., to "dispose what is suitable for the correction of abuses, and for the reformation of the king and the kingdom". He invites the king to be present personally or through representatives, warns him against his evil counsellors, and finally reminds him that he will not be detained from going to Rome in case of war. An impartial reader, says Von Reumont, will see that the document is only a repetition of previous papal utterances and resumes the teaching of the most esteemed medieval theologians on the nature and dispensation of the papal power, and the distinction between the temporal and spiritual (10 Feb., 1302) by Jacques de Normans, Archdeacon of Narbonne. The Comte d'Artois tore it from the archdeacon's hands and cast it into the fire; another copy destined for the French clergy was suppressed (Hefele, ed. VI, 329). In the place of the "Auscula Fili", there was at once circulated a forged Bull, "Deum time" (Fear God), very probably the work of Pierre Flotte, and with equal probability approved by the king. Its five or six brief haughty lines were really drawn up to include the fateful phrase, Scire te volumus quod in spiritibus et temporibus nobis subies (i.e., We wish thee to know that thou art our subject both in spiritual and in temporal matters). It was also added (an odious thing for the grandson of St. Louis) that whoever denied this was a heretic.

In vain did the pope and the cardinals protest against the forgery; in vain did the pope explain, a little later, that the subjection spoken of in his Bull was only ratione peccati, i.e., that the morality of every royal act, private or public, formed the object of the papal prerogative. The real object of the "Auscula Fili", its personal admonitions couched in severe Scriptural language, its proposal to provide from Rome a good and prosperous administration of the French Kingdom, were not calculated to soothe at this juncture the minds of Frenchmen already agitated by the events of the preceding years. It is also improbable that Boniface was personally very popular with the French secular clergy, whose petition (1298) against the encroachments of the regular orders he had rejected in his rough sarcasitic manner, when legate at Paris (Finke in "Römische Quartalschrift", 1895, IX, 171; "Journal des Savants", 1895, 240). The national concern for the independence and honour of the French king was further heightened by the aged reply of the king to the bull, known as "Seiat maxima tus fatuitas". It begins: "Philip, by the grace of God King of the Franks, to Boniface who acts as Supreme Pontiff. Let thy great fatuity know that in temporal things we are subject to no one. . . . Such a document, though probably not of the false patriots, is so entirely different from the true, certainly made its way thither. After forbidding the French clergy to go to Rome or to send thither any moneys, and setting a watch on all roads, ports, and passes leading to Italy, Philip forestalled the pope's November council by a national assembly at
Paris (10 April, 1301) in the Cathedral of Notre Dame. The forged Bull was read before the representatives of the three estates; the pope was violently denounced by Pierre Flote as aiming at temporal sovereignty in lieu of the spiritual and a threat to the secular and their ruler commanded all present to aid him with their counsel. Nobles and burghers offered to shed their blood for the king; the clergy, confused and hesitating, sought delay, but finally yielded so far as to write to the pope quite in the sense of the king.

The lay estates directed to Boniface a defiant protest, in which they withheld the papal title from Boniface, recounted the services of France to the Roman Church, and re-echoed the usual royal complaint about the abbeys and the lay property of ecclesiastics. The letter of the bishops was directed to Boniface and begged him to maintain the former concord, to withdraw the call for the counsell, and suggested prudence and moderation, since the laity was prepared to defy all papal censures. In the reply of the cardinals to the lay estates, they assert their complete harmony with the pope, denounce the aforesaid forgeries, and maintain that the pope never asserted a right of temporal sovereignty in France.

In the meantime Boniface roundly scourged the bishops for their cowardice, human respect, and selfishness; at the same time he made use, after his fashion, of not a few expressions offensive to the pride of French ecclesiastics and poured sarcasm over the person of the abbeys. Pierre Flote (Helft). Finally, a public consistory (August, 1302) at which the envoys of the king were present, the Cardinal-Bishop of Porto formally denied that the pope had ever claimed any temporal sovereignty over France and asserted that the genuine Bull (Auseca, Fill) had been well weighed and was an act of love, despite the fact that severity of certain expressions. He insisted that the king was no more free than any other Christian from the supreme ecclesiastical jurisdiction of the pope, and maintained the unity of ecclesiastical authority. The Apostolic See, he said, was not foreign territory, nor could its nominees be rightly called foreigners. For the rest, the pope had full authority in temporal matters ratione peccati, i.e., as far as the morality of human acts was concerned. His weight in the matter was one of law, despite the fact that one must distinguish the right (de jure) and its use and execution (usus et executio). The former belonged to the pope as Vicar of Christ and of Peter; to deny it was to deny an article of faith, i.e., that Christ judged and the living Body is not to be confounded with the French as quite destructive of the aforesaid limitation ratione peccati. Gregory IX had maintained (1223, 1236), in his conflict with the Greeks and with Frederick II, that Constantin the Great had given temporal power to the popes, and that emperors and kings were only his auxiliaries, bound to use the material sword at his direction (Concilien-gech., 2d ed., V, 102, 1044). This theory, however, had never yet been officially put forth against France, and was all the more likely to raise opposition in that nation, since it was now a question not of a theory, but of a practical situation, i.e., of the investigation of Philip's government and the menace of his deposition. He refers to the closing words of the dissertation of Boniface which supplemented that of the Cardinal-Bishop of Porto; that his predecessors had deposed three French kings, and, though unequal to such popes, he would, however sorrowfully, depose King Philip, sicut unum gavionem (like a servant); he thinks it not impossible (Hergenröther, Kirchengesch., 2d ed., 346) that the present harsh conclusion of the discourse of Boniface is one of the numerous forgeries of Pierre Flote and Nogaret.

In the first half of this discourse the pope insists on the great development of France under papal protection, the shameless forgeries of Pierre Flote, the exclusive ecclesiastical nature of the grant (collatio) of benefices, and the papal preference for the secular clergy and the lay property of ecclesiastics. He is wroth over the assertion that he claimed France as a papal fief. "We have been a doctor of both laws (civil and canon) these forty years, and who can believe that such folly [jactaturas] can ever enter our house?" Boniface also expressed his willingness to accept the mediation of the Duke of Burgundy or the Duke of Brittany; the efforts of the former, however, availed not, as the cardinals insisted on satisfaction for the burning of the papal Bull and the noxious attacks on Boniface. The king replied by confiscating the goods of the ecclesiastics who had set out for the Roman Council, which met 30 Oct., 1302.

There were present four archbishops, thirty-five bishops, six abbots, and several doctors. Its acts have disappeared, probably during the process against the memory of Boniface (1309-11). Two Bulls, however, were issued as a result of its deliberations. One excommunicated whoever hindered, imprisoned, or otherwise ill-treated persons journeying to, or returning from, Rome, and another published such as a "Unam Sanctam." probably the composition of Aegidius Colonna, Archbishop of Bourges and a member of the council, and largely made up of passages from such famous theologians as St. Bernard, Hugo of St. Victor, St. Thomas, Aquinas, and others. Its chief concepts are as follows (Hergenröther-Kirsch, 4th ed., II, 593): (1) There is but one true Church, outside of which there is no salvation; but one body of Christ with one head and not two. (2) That head is Christ and His representative, the Roman pope; who ever refuses the pastoral care of Peter belongs not to the flock of Christ. (3) There are two swords (i.e., powers), the spiritual and the temporal; the first borne by the Church, the second for the Church; the first by the hand of the priest, the second by that of the king, but under the direction of the priest (ad nutum et patientiam aectardors). (4) Since there must be a co-ordination of members from the lowest to the highest, it follows that the spiritual power is above the temporal and has the right to instruct (et dictare) regarding its highest end and to judge it when it does evil; whoever resists the highest power ordained of God resists God Himself. (5) It is necessary for salvation that all men should be subject to the Roman Pontiff—"for the Pope, subsessis Romano pontifici omni Romanum creaturam domini discipulis et acceperint omnum esse de necessitate salutis" (For a more detailed account of the Bull and several controversies concerning it see Unam Sanctam.)

Philip had a refutation of the Bull prepared by the Dominican Jean Quidort (Joannes Parisiensis) in his 'Tractatus de potestate regia et papali' (Goldast, Monarchia, II, 105 sq.), and the conflict passed at once from the domain of principle to the person of Boniface. The king now rejected the pope as arbiter in his disputes with England and, in 1303, gave a courteous but evasive answer to the Legate, Jean Lemoine, whom the pope sent (February, 1303) on a mission of peace, but with insistence, among other conditions, on recognition of the aforesaid rights of the papacy. Lemoine was further commissioned to declare that the more satisfactory reply to the twelve points of the papal letter, the pope would proceed spiritualiter et temporaliter against him, i.e., would excommunicate and depose him. Boniface also sent to Lemoine (13 December, 1303) two British bulls in which the king already excommunicated, and in the other ordered all French prelates to come to Rome within three months.
In the meantime there was braving at Paris the storm in which the pontificate of Boniface was so disastrously to close. Philip concluded peace with England, temporized with the Flemings, and made concessions to his subjects. Boniface on his side acknowledged, as aforesaid, the election of Albert of Austria, and brought to an end his hopeless con-
diction with the King of Sicily. Other matters, he seemed politically helpless, and could only trust, as he publicly stated, in his sense of right and duty. Later events showed that in his own household he could not count on loyalty. In an extraordinary session of the French Council of State (12 March, 1303) Guillaume de Nogaret appealed to Philip to protect Holy Church against the intruder and false pope, Boniface, a simonist, robber, and heretic, maintaining that the king, moreover, ought to call an assembly of the prelates and peers of France, through whose efforts a general council might be convoked, before which he would prove his charges. Such an assembly was called for 13 June, and met at the Louvre in Paris. The papal messenger with the foresaid Brief for the legate was seized at Troyes and imprisoned. Lemoine, against such violence, fled. At this assembly, packed with friends or creatures of Philip, the knight Guillaume de Plaisans (Du Plessis) submitted a solemn accusation against the pope in twenty-nine points and astonished, nay, made the assembled king to provide for a general council. The Colonna furnished the material for these infamous charges, long since adjudged calumnious by grave historians (Heele, Concililengesch., 2nd ed., VI, 460–63; Giovanni Villani, a contemporary, says that the Council of Vienne, in 1312, formally absolved him from the charge of heresy. Cf. Muratori, “SS. Rel. Ital.”, XIV, 454; Raynaldus, ad an. 1312, 15–16). Scarcely any possible crime was omitted—infidelity, heresy, simony, gross and unnatural immorality, idolatry, magic, loss of the Holy Land, death of Celestine V, etc. The king asserted that it was only to satisfy his conscience and to protect the honour of the Holy See that he would co-operate in the calling of a general council, asked the help of the prelates, and appealed (against any possible action of Boniface) to the future council, the future pope, and to all whom appeal could be made. Five archbishops, twenty-one bishops, and some abbots sided with the king. The resolutions of the assembly were sent to the people, and penalties were decreed on those who were resolute in his denunciation by the Council of Constance, and by the cardinals and bishops, setting forth the king's new-founded zeal for the welfare of Holy Church. In a public consistory at Anagni (August, 1303) Boniface cleared himself on his solemn oath of the charges brought against him at Paris and proceeded at once to meet the Archbishop of Toulouse. The charges before the Holy See were declared valid by the mere fact of being affixed to the church doors at the seat of the Roman Curia, and he excommunicated all who interfered with such citations. He suspended Archbishop Gerhard of Nicoya (Cyprus), the first signatory of the schismatic resolutions. Pending satisfaction to the pope, the University of Paris lost the right to confer degrees in theology and in canon and civil law. He suspended temporarily for France the execution of all laws reserved to the Holy See all vacant French benefices, expelled as blasphemers the calumnious charges of de Plaisans, saying, “Who ever heard that We were a heretic?” (Raynaldus, ad an. 1311, 40), and denounced the appeal to a future general council which could be convoked by none other than himself, the legitimate pope. He declared that unless the king presented he would inflict on him the severest punishments of the Church. The Bull “Super Petri solis” was ready for promulgation on 8 September. It contained in traditional form the solemn excommuni-
cation of the king and the liberation of his subjects from their oath of fidelity. Philip, however, and his principal counselors had taken the Bull to Rome, threatening all force, or rather to prevent it at a decisive moment. It had long been their plan to seize the person of Boniface and compel him to abdicate, or, in case of his refusal, to bring him before a general council in France for condemnation and deposition. Since April, Nogaret and Sciarra Colonna had been active in Tuscany for the formation, at Philip's expense, of a band of mercenaries, some 2,000 strong, horse and foot. Very early on the morning of 7 September the band appeared suddenly before Anagni, under the lilies of France, shouting, “Long live the King of France and Colonna!” Fellow-conspirators in the town admitted them, and they at once attacked the palaces of the pope and his nephew. The ungrateful citizens fraternized with the besiegers of the pope, and the king of the Etruscan, who sat to the left in the afternoon, when he rejected the conditions of Sciarra, viz., restoration of the Colonna, abdication, and delivery to Sciarra of the pope's person. About six o'clock, however, the papal stronghold was beset, and Philip was delivered. When the king, Sciarra at their head, sword in hand (for he had sworn to slay Boniface), at once filled the hall in which the pope awaited them with five of his cardinals, among them his beloved nephew Francesco, all of whom soon fled; only a Sciarra, the Cardinal of Santa Sabina, remained at his side to the end.

In the meantime the papal palace was thoroughly plundered; even the archives were destroyed. Dino Compagni, the Florentine chronicler, relates that when Boniface saw that further resistance was useless he exclaimed, “Since I am betrayed like the Saviour, and my end is nigh, at least I shall die as Pope.” Thereupon he ascended his throne, clad in the pontifical ornaments, the tiara on his head, the keys in one hand, a cross in the other, held close to his breast. Thus he confronted the angry men-at-arms. It is said that Nogaret prevented Sciarra Colonna from killing the pope. Nogaret himself made known to Boniface the Paris resolutions and threatened to hand him over if he did not renounce his authority. He was to be deposed. Boniface looked down at him, some say without a word, others that he replied: “Here is my head, here is my neck; I will patiently bear that I, a Catholic and lawful pontiff and vicar of Christ, be condemned and deposed by the Papal States (heretics, in reference to the parents of the Tolosan Nogaret); I desire to die for Christ's sake and His Church.” Von Reumont asserts that there is no evidence for the physical maltreatment of the pope by Sciarra or Nogaret. Dante (Purgatorio, XX, 36) says more than once of his political enemies that their words easily convey the notion of physical wrong: “I see the flower-de-luce Anagni enter, and Christ in his own Vicar captive made; I see him yet another time derided; I see renewed the vinegar and gall, and between living thieves I see him slain.” Boni-
face was held three days a close prisoner in the plundered papal palace. No one cared to bring him food or drink, while the banditti quarrelled over his person, as on a valuable asset. By early morning of 9 September the banditti were in their minds, wearied perhaps of the presence of the soldiers, and ashamed that a pope, their townsmen, should perish within their walls at the hands of the hated French. They expelled Nogaret and his band, and confined Boniface to the care of the two Orsini cardinals, who had come from Rome with
four hundred horsemen; with them he returned to Rome. Before leaving Anagni he pardoned several of the marauders captured by the townsmen, excepting the plunderers of Church property, unless they returned before the earliest light of day (13 Sept., but only to fall under the close surveillance of the Orsini. No one will wonder that his bold spirit now gave way beneath the weight of grief and melancholy. He died of a violent fever, 11 October, in full possession of his senses and in the presence of eight cardinals and the chief members of the papal household, after receiving the sacraments and making the usual profession of faith. His life seemed destined to close in gloom, for, on account of an unusually violent storm, he was buried, says an old chronicler, with less decency than became a pope. His body lies in the crypt of St. Peter's in a large marble sarcophagus, laconically inscribed BONIFACIUS PAPÆ VIII. When his tomb was opened (9 Oct., 1608) the body was found quite intact, especially the hallowed hands, thus disproving another calumny, viz., that he had died in a frenzy, gnawing his hands, beating his brains out against the wall, and the like (Wiseman).

Boniface was a patron of the fine arts such as Rome had never yet seen among its popes, though, as Ghiberti shows in his unravelling note to sculpture, what is owing to the pope's own initiative from what we owe to his nephew and biographer, the art-loving Cardinal Stefaneschi. Modern historians of Renaissance art (Munts, Guiraud) date its first efficient progress from him. The "idolatory" accusation of the Colonna comes from the marble statues that grateful towns, like Anagni and Perugia, raised to him on public sites, "where there once were idols," says a contemporary, an anti-Bonifacian libel (Guiraud, 4). The Anagni statue stands now in the cathedral of that town, erected by him. He repaired and fortified the Gaetani palace in Anagni, and improved in a similar way neighbouring towns. At Rome the Palace of the Senator was enlarged, Castel Sant' Angelo fortified, and the Church of San Lorenzo in Panisperna built anew. He encouraged the work on the cathedral of Perugia, while that gem of ornamental Gothic, the cathedral of Orvieto (1290–1309), was largely finished during his pontificate. For the great Jubilee of 1300 he had the churches of Rome reserved for the use of the medica Ludovisi, the saint's namesake, St. Peter's, and St. Mary Major. He called Giotto to Rome and gave him constant occupation. A portrait of Boniface by Giotto is still to be seen in St. John Lateran; in our own day M. Munts has restored the original concept, and in it is seen the noble balustrade of Cassette, whence, during the jubilee, the pontiff was wont to bestow upon the vast multitude the blessing of Christ's vicar. In the time of Boniface the Cosmati continued and improved their work and under the influence of Giotto rose, like Cavallini, to higher concepts. In which he was buried, Boniface was also a friend of the sciences. He founded (6 June, 1303) the University of Rome, known as the Sapienza, and in the same year the University of Fermo. Finally, it was Boniface who began anew the Vatican Library, which he afterwards had to deal with the papal archives, in 1227, when the Roman Frangipani passed over to the side of Frederick II and took with them the curtiis chartularia, i.e. the ancient repository of the documents of the Holy See. The thirty-three Greek manuscripts the Vatican Library contained in 1311 are pronounced by Fr. Ecclesiast, by raising them to the rank of "double feasts". He was one of the most distinguished canonists of his age, and as pope enriched the general ecclesiastical legislation by the promulgation ("Sacrosancta", 1298) of a large number of his own constitutions and of those of his predecessors, since 1224, when Gregory IX promulgated his five books of Decretals. In reference to this the collection of Boniface was entitled "Liber Sextus", i.e., Sixth Book of Pontifical Constitutions (Laurin, Introd. in Corp. Juris can. Freiburg, 1889), being constructed on the same lines. Few popes have aroused more diverse and contradictory appreciations. Protestant historians, generally, and even modern Catholic writers, wrote Cardinal Wiseman in 1844, class him among the wicked popes, as an ambitious, haughty, and unscrupulous pontiff. He was also blamed for his whole pontificate one record of evil. To dissipate this grossly exaggerated and even calumnious view, it is well to distinguish his utterances and deeds as pope from his personal character, that even in his lifetime seemed to many unsympathetic. Careful examination of the sources of his most famous public pronouncements has shown that they are largely a mosaic of teachings of earlier theologians, or solemn re-enforcements of the canons of the Church and well-known Bulls of his predecessors. His chief aims, the peace of Europe and the recovery of the Holy Land, were those of all preceding popes. He did no more than his duty in defending the unity of the Church and the supremacy of ecclesiastical authority when threatened by Philip the Fair. His political-eclesiastical dealings with the kings of Europe were naturally blamed by Erastians and by those who ignore, on the one hand, the capacity of an Edward and the wily vindictiveness and obtuse selfishness of a Philip, and on the other, the supreme fatherly authority of the Roman pontiff as the son of God, the protector of the one mighty family of peoples, whose civil institutions were only slowly coalescing amid the decay of feudalism and ancient barbarism (Gosselin, Von Reumont), and who were long conscious that in the past they owed to the Church alone (i.e., to the pope) pure and swift justice, equitable courts and procedure, and relief from a feudal absolutism justified as yet by no commensurate public service. "The loftiest, truest view of the character and conduct of the popes has often been overlooked", says Cardinal Wiseman (op. cit.); the divine instinct which animated them, the immortal destiny allotted to them, the heavenly cause confided to them, the superhuman aid which strengthened them could not be appreciated but by a Catholic mind, and are too generally excluded from Protestant historians, or are transformed into corresponding human capacities, or policies, or energies, or virtues. He goes on to say that, after examination of several popular assertions affecting the moral and ecclesiastical conduct of Boniface, this pope appeared to him in a new light, that there was a point which began and closed, a promise and closed it amid sad calamities; who devoted, through it all, the energies of a great mind, cultivated by profound learning and matured by long experience in the most delicate ecclesiastical affairs, the richly noble character of his whole career, throughout his career, displayed many great virtues, and could plead in extenuation of his faults the con-
Boniface, in Jean-Baptiste de Chazelles, Les monuments... (Paris, 1901), I, 226, 430, ed. M. J. de Ibañez, Avignon, (Rom., 1906).}

Thomas Oestreich

Boniface IX. Pope, elected at Rome, 2 November, 1889, as successor of the Roman Pope, Urban VI.; d. there, 1 October, 1404. Piero (Perino, Pietro) Tomacelli came of an ancient but impoverished baronial family of Naples. He lacked good theological training, but was by nature tactful and prudent. His firm character and mild manner did much to restore respect for the papacy in the countries of his own obedience (Germany, England, Hungary, Poland, and the greater part of Italy). The Avignon Popes

His firm character and mild manner did much to restore respect for the papacy in the countries of his own obedience (Germany, England, Hungary, Poland, and the greater part of Italy). The Avignon Popes
Clement VII, had just crowned (1 November, 1589) as King of Naples the French prince, Louis of Anjou. Boniface took up the cause of the youthful Ladislaus, heir of Charles III of Naples and Margaret of Durazzo, had chosen as King of Naples (1586), and for the next decade aided him sufficiently to expel the Angevin forces from Italy. In the course of his reign Boniface extinguished the municipal independence of Rome and established the supremacy of the Pope. After the fall of the Spanish Inquisition of the Romans (1598) by fortifying the new Castle of Sant' Angelo, the bridges, and other points of vantage. He also took over the port of Ostia from its cardinal-bishop. In the Papal States Boniface gradually regained control of the chief strongholds and cities, and is the true founder of those States as they appear in the fifteenth century. Owing to the faithless and violence of the Romans he resided frequently at Perugia, Assisi, and elsewhere. Clement VII, the Avignon pope, died 16 September, 1594. Boniface had excommunicated him shortly after his own election, and in turn had been excommunicated by Clement. In 1592 Boniface attempted, but in vain, to enter into closer relations with Clement for the re-establishment of ecclesiastical unity, whereupon Boniface was also excommunicated and is blacklisted for Clement was succeeded at Avignon, 28 September, 1594, by Cardinal Pedro de Luna, as Benedict XIII. Suffice it to say here that Boniface always claimed to be the true pope, and at times rejected the proposal to abdicate even when it was supported by the principal members of his own obedience, e. g. Richard II of England (1396), the Diet of Frankfort (1397), and King Wenceslaus of Germany (Reims, 1398).

During the reign of Boniface two jubilees were celebrated at Rome. The first took place in 1590, in compliance with an ordinance of his predecessor Urban VI, and was largely frequented from Germany, Hungary, Poland, Bohemia, and England. Several cities of Germany obtained the privileges of the jubilee, but the preaching of the indulgences gave rise to abuses and to impostures on the part of unaccredited agents of the pope, so that he was obliged to proceed against them with severity. The jubilee of 1400 drew to Rome great crowds of pilgrims, particularly from France. In spite of a disastrous plague in 1403 and about half the first part of 1399 bands of penitents, known as the Bianchi, or Albati (White Penitents), arose, especially in Provence and Italy. They went in procession from city to city, clad in white garments, with faces hooded, only the eyes being left uncovered, and wearing on their heads fruits of the vine. The religious enthusiasm had some good results. After they had satisfied their spiritual ardour at Rome, Boniface gradually disbanding these wandering crowds, an easy prey of agitators and conspirators, and finally dissolved them. In England the anti-papal vituperation of Wyclif increased the opposition of both Crown and clergy to the methods of Boniface in the granting of such English benefices as fell vacant in the Roman Curia through the death or promotion of the in- cludes. The anti-papal sentiments were confirmed and extended more than once the statutes of Provisors and Provosts, of Edward III. Boniface protested vigorously, particularly in 1391, but in the end found himself unable to execute his grants without the king's consent. Thus ended the session of the Synod of London (1398), "this long and angry controversy, to the advantage of the Crown." Nevertheless, at the Synod of London (1399), the English Church condemned the anti-papal teachings of Wyclif, and in 1398 the University of Oxford, consulted by Richard of Boniface an influential document, while in 1390 and again in 1393 the spiritual peers upheld the right of the pope to communicate even those who obeyed the statutes of Provisors. In Germany the electors had deposed at Rheine (20 August, 1400) the unworthy Wenceslaus, King of the Romans, and had chosen in his place Rupert, Duke of Bavaria and Achenen Count of the Palatine. In 1403 Rupert showed a certain attitude towards both, approved the deposition of Wenceslaus as done by papal authority, and recognized the election of Rupert. In 1398 and 1399 Boniface appealed to Christian Europe in favour of Emperor Eckemon, threatened the Franks with excommunication by Sultan Bajazet. St. Bridges of Sweden was consecrated by Boniface, 7 October, 1391. The universities of Ferrara (1391) and Ferrara (1398) owe him their origin, and that of Erfurt its confirmation (1392). In 1404 Benedict XIII sent the last of his embassies to Boniface, who received the agents of Benedict 29 September, but the interview ended unfavourably. The pope, highly irritated, took to his bed with an attack of gravel, and died after an illness of two days. Contemporary and later chroniclers praise the political virtues of Boniface, also the purity of his life, and the grandeur of his spirit. Some, like Dietrich of Nien, charge him with an inordinate love of money, dishonest traffic in benefices, the sale of dispensations, etc. But Dietrich is no impartial writer, and his judgment is often partisan and unjust (acerbus et iniquus). In his gesypa pages one misses a proper appreciation of the difficulties that surrounded Boniface—local sources of revenue lost in the long absence of the papacy from Rome, foreign revenue diminished by the schism, extraordinary expenses for the restoration of papal Rome and the reconquest of the Papal States, the constant war necessitated by French ambition, the inheritance of the financial methods of Avignon, and the obligation of conciliating supporters in and out of Italy. Boniface himself was extravagant and avaricious, and he is also charged with nepotism and he certainly provided generously for his mother, brothers, and nephews. It may be said, however, that in the semi-anarchic conditions of the time good government depended upon such personal support as a temporal ruler could gather and retain, i. e. could reward, while fidelity was best secured by close domestic ties. Boniface was the first pope to introduce the form of revenue known as annates perpetuæ, or reservation of the fruits of the dioceses granted in the Roman Court, this in addition to other traditional expenses. It must be remembered that at this time the cardinals claimed a large part of these revenues, so that the Curia was perhaps more responsible than the pope for new financial methods designed to meet the rising cost of better and still better feelings against Rome, particularly in Germany.
at the Third Catholic Congress of Germany, held at Ratibon in 1849. The object of the association is to maintain the Catholic Church in those regions where Catholics are few in number, to found and support missions and schools, and to erect churches, parish-houses, and schools for Catholics in the Protestant parts of Germany. The territories which the association takes under its especial care are: the Diocese of Kulm; the Delegation of Brandenburg and Pomerania, belonging to the Prince-Bishopric of Breslau; the Vicariate Apostolic of Saxony; the Dioceses of Paderborn, Hildesheim, Osnabrück, and Pultusk; the Southern Missions, etc. The association is managed by a general committee, and diocesan committees have entire control of the contributions they receive; after consultation with their respective diocesan councils, and under the approval of the general committee, the diocesan committees designate the objects to which the contributions shall be given. Since the association was founded about $9,250,000 has been collected and some 2,600 churches have been erected or aided.

Besides the diocesan committees another important branch is formed by the Boniface College for the daughters of the poor. The first of these was founded in 1855 among the merchants of Paderborn by the Marian congregation; the object of this branch of the association is, by the founding of orphan asylums and institutions where children are prepared for their first communion and for the religious life. In the last ten years 26,000 girls have been raised by this branch association since its foundation; it aids more than 120 institutions for the education of the poor, besides contributing considerable sums to children in non-Catholic communities. The funds are obtained by the collection and sale of objects of little value in themselves, such as, tin-foil, old postage stamps, clothing, leaden seals, old coins, books, cigar bands, cigar tips, and such trifles. More than $25,000 has been raised by this branch association since its foundation; it aids more than 120 institutions for the education of the poor, besides contributing considerable sums to children in non-Catholic communities for railway tickets, school and living expenses.

Another branch is the Academic Boniface Association which has existed for forty years at the German universities, the first one of these societies being founded at Münster in 1867. In 1888 the various university branches met at Freiburg and united into a common organization; in 1907 they included thirty-six branches with a membership of 750. Their organ is the "Akademische Bonifatius-Korrespondenz". Since 1860 the general association has issued "Schliesisches Bonifatiusblatt", a semi-monthly for old and new publications, both at Paderborn. The popes have granted indulgences and privileges to priests connected with the association. The association issues the "Bonifatiusblatt", founded in 1850; the "Schliesisches Bonifatiusblatt", 1860; and the "St. Bonifatiusblatt" at Prague, founded in 1864.

JOSEPH LINS.

Boniface of Savoy, forty-sixth Archbishop of Canterbury and son of Thomas, Count of Savoy, date of birth uncertain; d. in Savoy, 14 July, 1270. While yet a child he became a Carthusian. In 1234, as sub-deacon, he was elected Bishop of Belley in Burgundy: and, in 1241, administered the Diocese of Valence. His connexion with the royal house of England secured his promotion to the primacy. The Queen of Henry III was Eleanor, daughter of Boniface, Count of Poitou. The Beatrice was the sister of the future archbishop. When St. Edmund died, in 1241, the Queen's uncle was elected. But Gregory IX and Celestine IV dying unexpectedly, it was not until the end of 1243 that the new Pope, Innocent IV, was able to confirm his election. In the following year Boniface went to England and visited the first place of his pilgrimage the Church of Reims and had the heavy taxation during the sequestration in St. Edmund's primacy had severely burdened already slender resources. Therefore his first act was to make every effort, abolishing all sinecures and unnecessary offices connected with the archiepiscopate. He ordered the tenants and clergy to contribute towards the liquidation of the debt.

In 1244 he set out for the Council of Lyons, where he was consecrated (15 January, 1245) by the pope. His brother Philip, afterwards Count of Savoy, although not yet elected, had been consecrated archbishop of Lyons and was in command of the papal troops. During the sitting of the council Boniface held a commission under him. He obtained from the pope the grant of the first-fruits of all vacant benefices in the Province of Canterbury during seven years, and his claim to levy a contribution from the whole province to meet the debt of the metropolitan see was allowed. In 1249 he returned to England and was enthroned with great pomp at Canterbury on All Saints' Day. The archbishop then began a personal visitation of his diocese, correcting abuses found by his visitation. But, extending his visitation to the dioceses of his suffragans, resistance was offered to him. In London the Dean and Canons of St. Paul's protested that the Bishop of London was their visitor and appealed. They were not, however, held in check. On the following day the archbishop visited the Priory of St. Bartholomew. He was met by the sub-priest and brethren, who welcomed him as a prelate but not as a visitor. Like the clergy of St. Paul's they represented that they had their own bishop and would not divide jurisdiction without permission from him. The archbishop was so incensed that he feared the vengeful sub-priest to the earth. This was more than the Londoners could stand from a foreigner, even less were they his brethren. They fell upon him, his vestments were torn in the struggle, and the cost of mail worn beneath them disclosed. He was rescued by his bodyguard and escaped by barge to Lambeth, where he proceeded to excommunicate the clergy of St. Bartholomew's and the Bishop of London.

He then announced his intention of holding a visitation at St. Albans. The suffragans met and resolved to resist him. The clergy of the province levied a tax upon themselves in order to proceed against him in 1238 as a base imposer of taxes and promptly set out for the Roman court. The result was a compromise, the pope confirming the right of visitation, but restricting its use. Godwin says of him that Boniface did three worthy things: he paid off a debt of 22,000 marks; he built and endowed the hospital at Maidstone; and he finished the great hall of the archbishop's palace.

Pope Gregory XVI, at the suit of Charles Albert of Savoy, King of Sardinia (1831—49), approved the cult of Boniface, Archbishop of Canterbury, as a Monumental.

Bonifacius de Vitalinis. See Vitalini, Bonifacius de.

Bonifaci de Vitalinis. See Vitalini, Bonifacius de.

Boni Homines (or Bonohommes).—This name was popularly given to at least three religious orders in the Church of Savoy.

I.—THE ORDER OF GRANDMONT, founded by St. Stephen of Muret (b. 1046, d. 1124) for an austere order of eremitical friars professing the rule of St. Augustine (though they have sometimes been claimed
also by the Benedictines). Towards the end of the twelfth century they possessed more than sixty houses, principally in Aquitaine, Anjou, and Normandy. The kings of England (therefore in the
Normandy) were great benefactors of these friars, who
were known as the Bonshommes of Grandmont from
the earliest times. The oldest house of the order was at
Vincennes (founded by Louis VII, in 1164); and this
more than four centuries later, into the pos-
session of the Minims, who were hence known after-
wards as Bonshommes. The observance of the order
had become greatly relaxed when a general chapter
was held at Grandmont (after an interval of more
than a century) in 1642, with the object of re-stab-
lishing the discipline, and one of the original rules
of the order was drawn up and approved. The habit of
the order was black, with a hood and a broad scapular. At the time when Helyot wrote his great work on the religious orders (1714-21) there were in France also three houses of
the Order of Grandmont; but both monasteries
and convents were suppressed at the Revolution
sixty years later. A reformed branch of the order
was established in 1642 by Père Frémont, but the
monasteries and convents did not seem to have been
known by the old name of Bonshommes.

II.—The Fratres Saccati, or Brothers of
Penitence, were also known as Boni Homines, Bons-
hommes, or, as Leland terms them, Bones-homes.
Their origin, as well as the date of their foundation,
is obscure, but they had a house at Sarzago in the
time of Pope Innocent III (d. 1216) and one about
the same time at Valenciennes. Their rule was
founded on that of St. Augustine. They had one
house in Paris, in a street called after them the rue
de Saches, and in 1257 they were introduced into
England. Matthew Paris records under this year
that "a certain new and unknown order of friars
appeared in London," duly furnished with credentials
from the pope; and he mentions later that they were
called from the style of their habit Fratres Saccati.
We learn from Polydore Vergil that Edmund (son of
Richard, Earl of Cornwall) founded a little later (ac-
cording to Tanner, in 1283) a monastery at Ashridge,
Herts, for a rector and twenty canons of a new order
not before seen in England, and called the Boni
homines. It was finished in 1288. The first
rector was Richard, and the last Thomas Waterhouse
(1359), who surrendered the house to Henry VIII.
The suppressed college was granted first to the king's
sister Elizabeth, and afterwards to the Egertons,
later Lords Egerton of Dunham. The church was
destroyed under Elizabeth; but in 1800 the last duke
was living in a portion of the old college. He sold
the great hall piece-meal, and pulled down the
cloisters. The estate and (modern) mansion now
belongs to Earl Brownlow. The only other English
house of the Boni Homines was at Edington in Wilts.
The former college there (consisting of a dean and
prebendaries) was granted to them by desire of Edward
the Black Prince, who (says Leland) "had a great
favour to the Bones-homes beyond the Se". The
first rector (brought from Ashridge) was John de
Aylesbury, the last John Ryve. Edward VI granted
the property to Lord St. John; it now belongs to
the Watson-Taylor family. The splendid church, one
of the finest of its period, still remains. (Little,
The Priors of the South, in Eng. Hist. Review, 1894, 33,
121.

III.—The Portuguese Boni Homines. The
identity of the Fratres Saccati mentioned by Matthew
Paris as, in 1257, a "new order in England," with
the "new order" (the Bonshommes) established
a little later at Ashridge and Edington, seems to
be generally admitted. An entirely separate institute,
however, was that of the Portuguese Boni Homines,
or Secular Canons of St. John the Evangelist, founded
by John de Vienza, afterwards Bishop of Lamego,
in the fifteenth century. Living at first independ-
ently in a monastery granted to them by the
Archbishop of Braga at Viseu (in Portugal), they
embraced the institute of Secular Canons of St.
George in Algo (in Venice), and the Portuguese order
was confirmed by Pope Martin V under the title of
"Boni Homines of Villar de Frades". They had
fourteen houses in Portugal, and King John III gave
them charge of all the royal hospitals in the kingdom,
while many of the canons went out as missionaries to
India and Ethiopia. Several members of the order
have won a high reputation as scholars and theologians.

D. O. HUNTER-BLAIR.

Bonozi of Sutri (or Bontatto), Bishop of Sutri in
Central Italy, in the eleventh century, an adherent
of Gregory VII and advocate of the ideals of that pope;
born about 1045; probably pope Benedict IX; exiled
and put to death 14 July, 1090. Early in his life he
joined the party known as the Pataria, and when a
subdeacon in Piacenza he came into conflict with
Dionysius, bishop of that city. In 1074 he went to
Rome, and won the favour of Pope Gregory, by whom
he was soon appointed to the episcopal See of Sutri.
Bonozi took part in several councils held in Rome; in
1078 he went to Cremona as papal legate and con-
seccrated there the church of St. Thomas. In the
struggle between Gregory VII and Henry IV he was
ever on the side of the pope. He was seized by Henry
in 1082 and entrustcd to the custody of the antipope
Clement III. About a year afterwards Bonozi made
his escape, and lived for several years under the
protection of Countess Mathilda of Tuscany. In 1086
he was present at the funeral of St. Anselm, Bishop of
Lucca. He was, soon after, elected to the See of
Piacenza by the Pataria, but owing to strong
opposition was unable to take possession of it until
the year 1088, when he was strongly supported by
Pope Urban II. His enemies, however, contrived to
bring about his death. Bonozi wrote: (1) the "Paradisus,
" or extracts from the writings of St. Augustine (still
unpublished); (2) a short treatise on the sacraments
(Muratori, Antiquitates Italicae Med. Evi, iii, in Migne,
P.L., col. 380); (3) the "Decretum"; (4) a description of
work in ten books on ecclesiastical law and moral
theology written at the request of a certain priest
Gregory (fragments of this work are in Mai's Nova
Bibliotheca, vii, 1, 76 (Rome, 1854)); (4) in
Huguenot schismaticae, now lost, probably against
the schismatic Cardinal Hugo Cambuside; (5) a
description of the various classes of judges in the
Roman Empire and in the Roman Church (ed. Blume,
in Mon. Ger. Hist. Leges, iv); (6) his most
important work the "Liber ad amicum," a history of
the Roman Church, in which the author relates events of
his own times.

SCHAEFER,

Bonn, University of (Rheinische Friedrich-Wilhelms-Universität). An academy was founded
at Bonn in 1777 by Max Friedrich, Prince-Archbishop
of Cologne. To secure its support he ordered that every monastery and convent within the archdiocese should either provide two professors or contribute a certain sum of money. He also endeavoured to obtain the papal sanction, but failed. In 1784 Kaiser Joseph II raised the academy to the rank of a university, and the inauguration took place 20 November, 1786. In this first period the university suffered from Febronianism and Rationalism. The leaders were Hedderich (1744–1808), Derser (1757–1827), and Schneider (1756–94). Pius VI in a Brief of 24 March, 1790, called the Catholics’ attention to the deplorable condition of the university, but without result. In 1794 the French invasion obliged the professors to suspend their courses, and in 1797 the university was closed. It was restored in 1818 by King Friedrich Wilhelm III. Among its professors of theology were George Hermes (1775–1831), Achterfeldt (1788–1879), and Braun (1801–63), originators of the movement known as Hermesianism. Some of their followers, e. g. Elverich (1796–1886), joined the "Old Catholics", a party which also had as adherents Reusch (1825–1900) and several other members of the faculty. Their action led finally to their suspension and excommunication after having created a division among both professors and students of theology. The other departments of the university developed rapidly under the direction of Niebuhr (1776–1831) and Arndt (1787–1900) in history, A. W. Schlegel (1767–1845) in literature, Nasse (1778–1851) in medicine, Kekule (1828–90) and Mohr (1806–79) in chemistry, Clasius (1822–68) in physics, Von Rath (1830–68) in mineralogy, Preyer (1841–97) and Pflüger (1829—) in physiology. Since 1868 new buildings have been provided for the scientific departments either in Bonn or in Pappelsdorf. The university comprises at present the Catholic faculty of theology, the Protestant faculty of theology, and the faculties of law, medicine, and philosophy. There are 284 instructors and 3488 students. In 1905–06, the Catholic faculty of theology had 309 students, the Protestant 50. The library contains 350,000 volumes.

E. A. PAC.

Bonnard, Jean Louis, VENERABLE, a French missionary and martyr, b. 1 March, 1824 at Saint-Christôt-en-Jerret (Diocese of Lyons); beheaded 30 April, 1852. After a collegiate course at Saint-Just and the seminary of Lyons, where he left at the age of twenty-two, to complete his theological studies at the Seminary of the Foreign Missions in Paris. From Nanteur, where he was ordained, he sailed for the missions of Western Tongking and reached there in May, 1850. In 1851, he was put in charge of two parishes there; but as early as 21 March, 1852, he was arrested and cast into prison. Sentence of death was pronounced against him and was executed immediately upon receipt of its confirmation by the king (30 April, 1852). His remains were thrown into the river, but recovered by Christian sent by them to the Seminary of Foreign Missions. Bonnard has been declared Venerable by the Church.

N. A. WEBER.

Bonnoche, Henri-Marie-Gaston BoinNormand de, cardinal and senator, b. at Paris, 1800; d. 1883. Entering the magistracy, he became attorney-general for the district of Besançon in 1830, but having received sacred orders at Strasbourg, under the episcopate of de Trevern, he was made professor of sacred eloquence in the school of higher studies founded at Besançon by Cardinal de Rohan. After the death of de Rohan, he went to Rome to settle the differences between Bishop de Trevern and himself, due to philosophical opinions found in his work, "Philosophy of Christianity", for which Bonnoche had written an introduction. In 1844, he was named by Rome superior of the community of St. Louis; in 1847 he became Bishop of Carcassonne, was transferred, 4 November, 1854, to the archbishopric of Rouen. Created cardinal in 1863, he became ex-officio senator of the empire. The cardinal showed himself a warm advocate of the temporal power of the popes, and firmly protested against the withdrawal of the French army from the Pontifical States in 1870. At the request of the citizens of Rouen, notwithstanding his advanced years, he went in the rigour of the season to Versailles, the headquarters of the German armies, to entreat King William of Prussia to reduce the war contribution imposed on the city of Rouen. Under the republican government he uniformly opposed the laws and measures passed against religious congregations and their schools, but endeavoured to inspire his clergy with sentiments of deference and conciliation in their relations with the civil authorities. His best known work is "Introduction à la philosophie du christianisme" (1835), two octavo volumes.

F. M. L. DUMONT.

Bonne-Espérance, The Abbey of, situated near Bruges, province of Hainault, Diocese of Tournai, Belgium. It owes its foundation to William the Great, the only son and heir of Rainard, the Knight of Croix. William had been seduced by the heresies of Tanchelm, but through the persuasive exhortations of St. Norbert he had been brought back to the true Church. After the death of his father Rainard and Beatrix, had given land to St. Norbert for the foundation of an abbey at Ramignies, while William followed St. Norbert to Prémontré. Ramignies having been found unsuitable, Odo, the first abbot, led his young colony to another locality in the neighbourhood. The legend says that when Odo saw the spot he exclaimed: "Bonne spei festici fios tuos" (Wis., xii, 19—O God, Thou hast made Thy children to be of good hope). Others say that the foundress of Our Lady of Good Hope was a daughter of the house of Odo; others, that Odo's confidence was not misplaced. The abbey grew and prospered and has ever sent forth numbers of holy and learned priests. Blessed Odo was succeeded by Blessed Philip, crowned the Almoner. In 1318 St. Bonet Philip is the author of a work which has been published in Migne, P. L., CCIII. Blessed Odo, whose heroic act in defence of her virginity has been described by Abbot Philip, was a Norbertine nun, the convent of Rivireule under the direction of the Abbot of Bonne-Espérance. The forty-sixth and last Abbot of Bonne-Espérance, Bonaventure Daublain, saw in 1792 and again in 1794 the abbey taken and pillaged and his religious dispersed by the French Republican army. At the time of its suppression the abbey counted sixty-seven inmates. Greatly though they wished to live in community, they were not allowed to do so during the French Republic, nor after 1815 under William I, King of the Netherlands. The last surviving religious gave the abbey to the Bishop of Tournai for a diocesan seminary. The church is still Norbertine in its appearance, possessing as it does the body of St. Frédéric which had been saved from the Protestants and brought from the Norbertine Abbey in Holland to the Abbey of Bonne-Espérance in Belgium. The church is still adorned with the statues of St. Norbert, of St. Frédéric, and of twenty Norbertine bishops of Evermond and St. Isidrid. At the time of the suppression the miraculous statue of Our Lady of Good Hope was hidden; and when peace was restored it
was brought to the church of Vellerielle of which one of the canons of Bonne-Épervance was the parish priest. In 1533 it was solemnly brought back to the abbey church, or, as it is now, the seminary church.

Autour de Nos Messieurs, The Life of St. Frederic: Decléans, Notre Dame de Bonne-Épervance. MARTIN GEUDENS.

BONNER, EDMUND, Bishop of London, b. about 1500; d. 1568. He was the son of Edmund Bonner, a lawyer of Potter's Henley in Worcestershire, England, and Elizabeth Fosseham. Doubt was cast on his legitimacy by Bale and other opponents, who asserted that he was the natural son of a priest named Savage, but Strype and other Anglican writers, including the historian S. R. Maitland, have shown the groundless nature of these assertions. He was educated at Pembroke College, Oxford, then Broadgate Hall, where he took his degree as Bachelor both of canon and of civil law in 1519, and was ordained priest about the same time. In 1525 he became doctor of civil law and soon after entered the service of Cardinal Wolsey, who brought him with him on his mission to the king and Cromwell, and thus led to a diplomatic career. After the fall of Wolsey, he remained faithful to him and was with him at the time of his arrest and death. When the question of the king's divorce was raised he was employed by the papacy to dissuade the king from his designs; but when the pope wished to summon to Vienne, and again to the French Court to succeed Gardiner there as ambassador. In this capacity he proved capable and successful, though irritation was frequently caused by his manner, and on one occasion he brought about a reconciliation between the king and the papal legate. In 1532, he was sent to France to negotiate with the French ambassador, and succeeded in obtaining a postponement of the divorce. In 1533, he was appointed Bishop of Hereford, and in 1538 he was consecrated in Rome. He was well liked by the sovereign, and was employed in the suppression of the religious houses, and in the suppression of the heretical sects. He was a learned man, and was well versed in the Scriptures and in the Church Law. He was a zealous supporter of the Church of Rome, and was a firm believer in the doctrine of transubstantiation. He was also a great lover of learning, and was a patron of letters. He was a man of great piety, and was much loved by the people. He died in 1568, and was buried in the church of St. Paul's Cross, London.
remarking that when anyone "calmly inquires what these tales so full of rage and fury really mean, when they mean anything, he finds the bloody wolf transformed . . . into something much more like a good-
tempered mastiff, who might safely be played with, and though he might be seized into barking and
growling, had no disposition to bite and would not
do it without orders". (Essays, 422-424.)

Another virulent opponent of Bonner was John
Bale, formerly a friar and ex-Bishop of Ossory, who
in 1554 published from his place of exile at Saal,
south of the Rhine, a book, now lost, called "The
bloody sheep-bite of London", "bloody Bon-
nner", and still coarser epithets. Concerning this out-
burst Dr. Maitland quietly remarks, "when Bale
wrote this book, little that could be called persecution
had taken place. Not one martyr had suffered."
These attacks of Fose and Bale are noteworthy as
being the foundation on which the current traditional
view of Bonner's work and character has been based,
as a tradition that has only been broken down by the
research of the past century. A man so regarded
could expect small consideration when the death of
Mary (17th November, 1558) placed Elizabeth on
the throne, and the new queen's attitude to the
bishop was marked at their first interview, when she
refused him her hand to kiss. From 24th June, 1559,
the bishop was busy, not in the Book of Common Prayer,
but long before that date the Mass ceased in most London churches,
though Bonner took care that in his cathedral at
least it should still be celebrated. On 30th May,
S. Schifanoya, envoy from the Court of Mantua, wrote:
"The Council sent twice or thrice to summon the
Bishop of London to give him orders to remove the
service of the Mass and of the Divine Office in that
Church; but he answered them intrepidly 'I possess
this body, soul, and property, and the free
admission as I have indicates that I shall not be
forced.'" (Phillips, op. cit., 192.)

As a matter of fact, they had ordered him to resign the bishopric, which he refused to do,
adding that he preferred death. He was then de-
prived of the office and went for a time to West-
minster Abbey. On 20th April, 1560, he was sent as
a prisoner to the Tower and looking the next day, the
years representatives of the reforming party fre-
quently clamoured for the execution of Bonner and
the other imprisoned bishops. When the Parliament
of 1563 met, a new Act was passed by which the first
refusal of the oath of royal supremacy was punished,
the second, the high treason. The bishops had refused
the oath once, so that by this Act, which became law
on 10th April, their next refusal of the oath might be
followed by their death. On 24th April, the Spanish
Ambassador writes that Bonner and some others had
already called on to take the oath. Partly
owing to the intervention of the emperor and partly
to an outbreak of the plague, no further steps seem
to have been taken at the time. A year later, on
29th April, 1564, the death was again refused by Bon-
nor, the Anglican Bishop of Winchester. This
he firmly refused, but the interference of the Spanish
ambassador and his own readiness of resource saved
immediate consequences. Being well skilled both in
civil and canon law, he raised the point that Horne,
who had taken the oath, was a Sacramentary arch-
as he had not been validly consecrated bishop.
This challenged the new hierarchy as to the validity of their
orders, and so strong was Bonner's case that the Gov-
ernment evaded meeting it, and the proceedings com-
menced; there were several false proceedings
Four times a year for three years he was forced to
appear in the courts at Westminster only to be fur-
ther remanded. The last of these appearances took
place in the Michaelmas term of 1568, so that the last
year of the bishop's life was spent in the peace of his
prison. His demeanour during his long imprisonment
was remarkable for unfailing cheerfulness, and even
Jewell described him in a letter as "a most courteous
man and gentleman, both in his demeanor and
appearance," (Zurich Letters, I, 34). The end came on
5th September, 1569, when he died in the Marshalsea.
The Anglican Bishop of London wrote to Cecil to say
that he had been buried in St. George's churchyard,
between the north and south side of the altar. He was
secretly removed to Copford, near Colchester, where
it was buried under the north side of the altar.
Sander, Bridgewater, and other contemporary writers
attributed to Bonner and the other bishops who died
in prison the honour of martyrdom: "as vincula
oblivious martyres. On the walls of the English
College, Rome, an inscription recording the death of
the eleven bishops, but without naming them, found
place among the paintings of the martyrs. In a
work quoted below the Catholic tradition with regard
to these bishops has been ably set forth by Rev.
George Philips, avowedly for the purpose of pro-
moting their beatification. Bishop Bonner differs
from the others in this respect, that owing to the
prominent part circumstances compelled him to play
the perse hater, all other bishops, who have been
condemned for the hatred which has followed him even after death, so
that in English history few names have been so ex-
crated and vilified as his. Tardy justice is now
being done to his memory by historians, Catholic and
Protestant alike, yet there remains immense prej-
dice against his memory in the popular mind. Nor
could this be otherwise in face of the calumnies that
have been repeated by tradition. The reckless
charges of Fose and Bale were repeated by Burnet,
and the latter, John, jun., of the Anglican Church
was an inhuman persecutor, "a man of profligate manners
and of a brutal character, who seemed to rejoice in the
torments of the unhappy sufferers" (Hume e.
xxxvii). The first historian of note to challenge this
verdict was the Catholic, Lingard, though even he
wrote in a very tentative way and it was by an
Anglican historian, S. R. Maitland, that anything
like justice was first done to Bonner. This writer's
analysis remains the most discriminating summary of the
bishop's character. Setting aside the details of his
life left by those who may be called, if people please, Bonner's victims,
and their friends, we find, very consistently main-
tained, the character of a man, straightforward and
hearty, familiar and humorous, sometimes rough,
perhaps coarse, naturally hot tempered, but obviously
(by the testimony of his enemies) placable and easily
intreated, capable of bearing most patiently much
imtemporate and insolent language, much reviling and
low abuse directed against himself personally, against
his order, and against those peculiar doctrines and
practices of his church for maintaining which he had
himself suffered the loss of all things, and borne long
imprisonment. At the same time not incapable of
being provoked into saying harsh and passionate
things, but tendered to Bonner, in part, by the threatenings and
slaughter which he breathed out, than to intimidate those on whose ignorance and
simplicity argument seemed to be thrown away—in
short, we can scarcely read with attention any one of
the cases detailed by those who were no friends of
Bonner, but are shockingly unchristian and unfair
(even if we grant that he was dispensing bad laws badly) was
obviously desirous to save the prisoner's life." This
verdict has been generally followed by later his-
torians, and the last word has been added, for the
moment, in the "Reform and Reformation", in the "Cambridge Modern History", planned by Lord Acton (1908) where the statement
ad be proved to the existence of God against an atheist, or the spirituality and freedom of the rationes' soul against an adherent of naturalism and fatalism. (Prop. subscribed to by Baultain, 8 September, 1840.)
(3) The use of reason precedes faith, and, with the help of revelation and grace, leads man to faith. (Prop. subscribed to by Baultain, 8 September, 1840.)
(4) The method used by St. Thomas, by St. Bonaventure, and, after them, by other scholastics, does not lead to rationalism, nor does it explain why, in modern schools, philosophy should fall into naturalism and pantheism. Hence these doctors and masters cannot be reproached for using that method, especially with the approval, at least tacit, of the Church. (Prop. contradictory to propositions, extracted from different passages of Bonnetty.)

It must be noted that in the letter sent at the same time as these propositions by Father Modena, the secretary of the Congregation of the Index, to Monsignor Saccoini, the papal nuncio in Paris, it was stated that Bonnetty's attachment to the Holy See and to Catholic doctrine was never suspected. The intention was not to pronounce any judgment declaring his opinions "erroneous, suspicious, or dangerous" or to suggest possible consequences, proximate or remote, which others might deduce from them, especially in matters of faith. Bonnetty, without any hesitation, gave his full assent to the above propositions. He declared that he had made it his business to defend these doctrines, and that he would hereafter endeavour to do so with greater accuracy.

Bonnetty was a member of the "Société des études littéraires" and the "Association pour la défense de la religion catholique", the "Société secrète", and the "Roman Academy of the Catholic Religion". He was also a knight of the Order of St. Gregory the Great and of the Order of Pius IX. In addition to his numerous articles in the "Annales de philosophie chrétienne" and the "Université catholique", he wrote the following works most of which, however, were first published as articles in the "Annales: Beautés de l'histoire de l'Eglise" (Paris, 1841); "Le christianisme et la philosophie" (Paris, 1845); "Table de tous les auteurs édits par le cardinal Malagrida" (Paris, 1845); "Religion des Romains" (Paris, 1867-75); and "Dictionnaire raisonné de diplomatique", based on that of Dom de Vaines (Paris, 1863-65); a translation of the Latin work by Father de Prémas, a Jesuit missionary in China (1866-1874), and "Vestiges des principaux monuments chrétiens tiris des anciens livres chinois" (1879).

C. A. DUBRAY.

BONUSUS, Bishop of Sardica, a heretic in the latter part of the fourth century. Against the common teaching of the Church he held that, after Jesus, Mary had several other children. The Council of Carthage (391), before which he was brought as a heretic, did not pass any judgment on it, but referred it to the Metropolitan Anysius of Thessalonica and the other bishops of Illyria. They condemned Bonusus and tried to exclude him from his church. In a letter to the same bishops Pope St. Siricius approved the sentence and also condemned the opinion that Mary did not always preserve her virginity. Notwithstanding his condemnation, and the prudent advice of St. Ambrose to submit, Bonusus continued to exercise the episcopal functions, to consecrate bishops and ordain priests. Accordine to Novatian, he transmitted to Baptists the bishopric of Sardica, one to Marian of Naissa (409), and the other to the bishops of Macedonia (414), those ordained by Bonusus before his condemnation were to be received in the Church without a new ordina.
ion; those ordained since Bonosus's condemnation, especially if they had themselves sought to be ordained by him, were to be deprived of their dignity. As Innocent speaks of Bonosus as no longer living, we must suppose that he died at the end of the fourth, or the beginning of the fifth century.

Whether, besides denying Mary's perpetual virginity, Bonosus also denied Christ's divinity cannot be determined with certainty. But it is certain that his followers, the Bonosians, to whom we find reference throughout the sixth, and even the seventh century, denied this dogma. On this point they were at one with the Photinians. As a consequence, they affirmed the purely adoptive divine filiation of Our Lord. However, they differed from the Adoptionists in rejecting all natural sonship, whereas the Adoptionists, distinguishing in Christ the God and the man, attributed to the former a natural, and to the latter an adoptive sonship. The baptism conferred by the Bonosians was by some declared valid and by others invalid.

C. A. DUBRAY.

Bon Secours (de Paris), Institute of, the first of the congregations of nursing sisters, gardes malades, founded in France during the nineteenth century, whose object is to take care of both rich and poor patients in their own homes. This congregation was begun by Archbishop de Quélen of Paris in 1822 and was formally approved by Pope Pius IX in June, 1875. Its members nurse the poor gratuitously. Patients who can afford it pay for such service. The habit of the sisters is black; they wear a white cap with frilled border and a black veil. Besides the sixteen houses of the congregation in France, there are four in Ireland, one in England, two in the United States, and one in Belgium. The mother-house is in Paris. The scope of the institute is expressed in the constitutions: "After the personal sanctification of its members, the principal aim of this religious society is the care of the sick in their own homes." All these sisters had governmental approbation and complied with the fiscal laws in France they have suffered heavily by the recent religious persecution. Four large schools which had been started in behalf of the poor and at the urgent request of the mining population of Northern France (Lille, Lens, etc.) were closed on the plea that they formed no part of the institute's approved charter. And with the schools were also suppressed attendance by the sisters on sick or wounded miners and a very interesting work called "la goute de lait," or "the drop of milk," a sort of dispensary wherein the sisters superintended the food of miners' infants.

II. Bon Secours (de Troyes), Institute of, a congregation founded at Arcis-sur-Aube, France, in 1840, by the Very Reverend Paul-Sébastien Millet, canon of the Cathedral of Troyes. The mother-house was moved to Troyes in 1843 and the name of that place was added to the title of the congregation in order to distinguish it from other sisterhoods whose object is also to nurse the sick in their own homes. The members of this congregation make no distinction because of the creed or financial condition of their patients. The poor are nursed free, those who can afford to make some recompense do so, and the sick patient is given a bed for them, but are not allowed to beg. The approbation of the constitutions of the congregation was not given by the Holy See until 21 March, 1899. The novices go to the mother-house in France for three years. Vows are renewed annually for five years, then made for five years, and finally perpetual vows are taken. The habit is black with a small black cap, a black veil, and white guimpe. A crucifix suspended by a black ribbon is worn round the neck. There are 120 houses of these sisters in various countries, most of them in France, outside of which territory there are 3 in Belgium, 4 in Italy, 1 in Spain, 3 in England, 1 in the United States, and 6 in Africa. The sisters number about 15,555. It is said that he was a pupil of Titian, but it is considered more likely that he was but an earnest student of the works of this great master whose style he imitated so closely that many of his portraits bear a comparison with those of the noted Venetian. It is not known whether he studied under his father, also a painter, and under Floriano Ferramola, and that G. Romano had much influence over him. He himself had as a pupil that superb portrait painter, Giambattista Moroni. Bonvicino's manner is most natural and attractive; his feeling for where necessary, most devotional, his colour remarkable for its freshness and opulence, and his figures sympathetic and graceful. He was in his later life greatly influenced by Raphael. He assisted Ferramola in painting the altar screen for the old cathedral at Brescia and did similar work for Romano in the church of San Giovanni Evangelista in that city. It was here, also, that he produced his notable painting, the "Massacre of the Innocents". Among his other church works at Brescia are the "Coronation of the Virgin," and "Christ in Glory," at Santi Nazario e Celso; "The Ascension of the Virgin," "Five Virgin Martyrs," and "St. Ursula," in San Clemente; "The Majesty of St. Margaret," in San Francesco; "The Enthronement of St. Anthony of Padua," in Santa Maria delle Grazie; "The Virgin and St. Nicholas," in Santa Maria de Miracoli; and "Christ in the House of Simon," in Santa Maria Calchera. In the Brescia Gallery, among other works, is a "St. Nicholas of Bari"; in Venice at the urgent request of the "Feast in the House of Simon"; in the Uffizi, at Florence, are "The Descent of Christ into Hades," "The Death of Adam", and a male portrait; at the Brera in Milan, "The Assumption," "Virgin in Glory"; "Sts. Clara and Catherine," and "St. Jerome and an Apostle"; at the Ambrosians in the same city the "Death of Peter Martyr". At the Louvre are "St. Bernardine and St. Louis of Toulose" and "Sts. Bonaventure and Anthony"; at the National Gallery in London, a "Virgin and child with two Saints," "St. Bernardine of Sienna," and two portraits of Italian noblemen. In the Stadel Institute at Frankfort is the "Enthroned Madonna" with four doctors of the Church below, and there are examples in many other European galleries.

Book of Common Prayer.—I. History. On 21 January, 1549, the first Act of Uniformity was passed, imposing upon the whole realm of England
The Book of the Common Prayer and Administration of the Sacraments and other Rites and Ceremonies of the Church after the Use of the Church of England. Before this date (with some recent exceptions) the services had always been conducted in Latin; and though there were various "uses", e.g. the Sarum,坎特伯雷, Bangor, York, and Lincoln, these were all derived from the Roman, and were identical with the Roman liturgy. Altogether, some eighteen English uses are known. Without exception these English Missals are Roman—they have the Roman Canon to begin with; they have the Roman values; in short, the structure is identical with that of the Roman Missal" (J. Wickham Legg, 27 February, from a correspondence in "The Guardian", February and March, 1907).

Though the motive for the introduction of the new liturgy is stated to be the desire for uniformity, simplicity, and the edification of the people, it is clear that this was merely a pretext. The real motive was the removal from the service books of the doctrines rejected by the Protestant Reformers.

Lewis (A. Lewis, An English Liturgy) contends that the Real Presence, the Sacrifice of the Mass, Invocation of the Blessed Virgin and the Saints, Prayer for the Dead, the Seven Sacraments, with Auricular Confession, and a Sacrificing Priesthood. The Act of Uniformity states that the king by his warrant doth erect and set up the archbishop of Canterbury and certain of the most learned and discreet bishops and other learned men of this realm to draw up the new book. Who these were, besides Cranmer, cannot now be determined. No list is known earlier than that given in Fuller's "Church History", published in 1657. However, "the history of the Prayerbook down to the end of Edward's reign is the biography of Cranmer, for there can be no doubt that almost every line of it is his own." (Booth, Cranmer, 139). With regard to the authority by which it was composed and issued, Abbot Gasquet and Mr. Bishop have carefully gone over the evidence (Edward VI and the Book of Common Prayer, ch. x), and they have come to the same conclusion as the Anglican Canon Dixon, who affirms that "the invocation of the clergy had nothing to do with the first Act of Uniformity of religion. Laymen made the first English Book of Common Prayer into a schedule of a penal statute. As little in the work itself, as in the Charter 1547 or the Act 1547, and the clergy originally any share" (Hist. of the Ch. of England, III, 5). The instruction given by royal authority was that the framers of the book should "have as well eye and respect to the most sincere and pure of Christian religion taught by scripture as to the usages in the primitive Church". How this was carried out will appear when we come to examine the contents of the book. Meantime we may observe that the Communion Service cannot be classed with any of the old liturgies, but rather resembles the form drawn up under Edward VI (1549). The Book of Common Prayer of 1552 (also 1526). Both agree in the elimination of anything denoting offertory or sacrifice in the true sense of the words. "Even if we were not an ascertained fact that during the year when it was in preparation, Cranmer was under the influence of his Lutheran friends, the testimony of the book itself would be sufficient to prove beyond doubt that it was conceived and drawn up after the Luther pattern." (Gasquet and Bishop, op. cit., 225; cf. ch. xiii). Though the request may be that the new service be the imposition of it gave rise to strenuous opposition in most parts of the country. By the time, however, that the Book of 1549 appeared, Cranmer had already adopted views more advanced than those contained in it, and was preparing for a further revision. Early in 1550 an act was passed approving of a new ordinal (see Anglican Orders) and the altars were removed and tables substituted for them in the chapels. In this same year Gardiner, while still a prisoner in the Tower, made use of the words of the Prayer Book to refute Cranmer's own work on the Sacrament of the Body and Blood of our Saviour. About the same time Bucer completed his elaborate "Censura" of the Prayer Book. According to Philoxenus, a second Book of Common Prayer was published, in which everything in the First Book which had been fixed upon by Gardiner as evidence that the new liturgy did not reject the old beliefs, and everything which Bucer had objected to in the revisions, was swept away and altered. Before this book could come into general use the old Catholic services were restored by Mary. After her death the Second Book was imposed by Elizabeth in 1559 with some few, though important, changes. Further changes were made in 1604 and again in 1662, but the Prayer Book as a whole practically remains what it was in 1552. "The position which was deliberately abandoned in 1549 and still further departed from in 1552 has never been recovered. The distance traversed in the new liturgies by those who controlled the English reformation can only be duly estimated on an historical survey of the period in which the ground was lost" (Gasquet and Bishop, op. cit., 307).

The Book of Common Prayer is really a combination of four of our liturgical books viz., the Breviary, Missal, Pontifical, and Ritual.

(1) The New Calendar.—The old Sarum and other calendars in use before the Reformation contained the fast days and the feasts for most of the days in the year. Among these were the Purification, Annunciation, Visitation, Assumption, Nativity, and Conception of the Blessed Virgin Mary, a large number of purely Roman saints, and Ash Wednesday. Corpus Christi was kept on the Thursday after Trinity Sunday. The Calendar of the First Prayer Book omitted the fast days altogether and gave only twenty-two saints' days, all being New Testament saints; the only feasts of the Blessed Virgin retained were the Purification and the Annunciation; All Souls' Day is omitted, and there is no office for Corpus Christi. Hardly any change was made in this part in the Second Prayer Book, though the "dog Days" are characteristically noted. The Calendar of the Book of Common Prayer (1552) introduced the mention of the fast days and a goodly number of feasts; among the latter, the Visitation of the "Blessed Virgin Mary", the Conception and the Nativity of "the Virgin Mary"; but no special offices were appointed for any of these feasts. "The reason why the names of these Saints-days and Holy-days were resumed into the calendar are various" says Wheatley in "A Rational Illustration of the Book of Common Prayer" (Pt. II, Introduct.). Some of them being retained upon account of our Courts of Justice. Others are probably kept for the sake of such tradesmen as are wont to celebrate the memory of their tutela Saint... And again, it has been the custom to have Wakes or Fairs kept upon these days; so that the people would be displeased if their favourite saint's name should be left out... For these reasons our second reformers under Queen Elizabeth... thought convenient to restore the names of them to the Calendar, though not with any regard of being kept holy by the Church."
1535 there appeared a new breviary drawn up by Cardinale Quiñones, in which complete book has been made with the old order of the Office. The canonical Hours had indeed been retained, but the antiphons, versicles, responses, and Little Chapters had been omitted, the Psalms were distributed in such a way that three were said at each hour, and the same Psalms said every day of the week in the same order. A striking feature of this breviary was the great length of the Scripture lessons which enabled the priest to read through in the course of the year almost the whole of the Old Testament and the whole of the New Testament, with the Epistles of St. Paul twice over. It was this book which Cranmer had before him when framing the office portion of the First Prayer Book. Indeed he copied word for word in his preface a considerable portion of Quiñones's preface. (See Gasquet and Bishop, op. cit., App. III.) He reduced, however, the Hours to two—Matins and Evensong (called Morning and Evening Prayer in the Second Book)—and arranged the Psalms for recital once a month instead of once a week. He also introduced two Second Books, one from each of the four orders, one from the New Testament at both hours of prayer, and entirely omitted the lessons of the saints. In the Second Book he introduced "When the wicked man", "Dearly beloved brethren, the Scripture most generally in every one of these, which is called and most merciful Father", and the Abatissio ("Almighty God, the Father of our Lord Jesus Christ"), which have remained to the present day. When we remember that more than a hundred editions of this breviary were printed during the short space of twenty years, and that it was on the point of being adopted universally, we can see that this portion of the Book of Common Prayer has some justification. No doctrinal questions were at stake—unless it might be the omission of the intercession of the saints.

(3) The Missal.—The Canon of the Mass in the Sarum Missal is taken almost word for word from the Roman Missal. In the First Prayer Book the Communion service is styled "The Supper of the Lord and the Holy Communion, commonly called the Mass"; in the Second, and also in the present book; "The Order for the Administration of the Lord's Supper, or the Holy Communion". It is not possible within the limits of the present article to compare the First Book with the Second, and then with the subsequent Books on the other. (See Gasquet and Bishop, ch. xii and xvi). The word altar is used in the First Book, though with the alternative of "God's board"; in the Second Book and subsequent Books "table" and "board" alone occur. As regards vestments the First Book directs that the priest shall wear "a white alb, plain, with a vestment (chasuble) or cope", and the assisting clergy "albe with tunacles"; the Second Book; "the minister at the time of the Communion and all other times in his ministration, shall use neither alb, vestment, nor cope, but being archbishop or bishop, he shall have and wear a rochet, and being a priest or deacon, he shall have and wear a surplice only". In the Third Book (1562) it is to be noted that both ornaments of the church and of the ministers thereof, at all times of their ministration, shall be retained, and be in use, as were in the Church of England by the authority of Parliament in the second year of the reign of King Edward the Sixth. So well is it now known, the name of this rubric has long been a matter of dispute. The First Book directs the priest to stand "humbly before the midst of the altar"; the Second, to stand "at the north side of the table", as is still the rule. No mention is made of incense, or lights, or holy water in any of the books. As to the service itself, the changes may be briefly summed up as follows: The First Book omitted all mention of true sacrifice, but retained expressions capable of referring to the Real Presence; the Second Book excluded these; the Third and subsequent Books re-admitted and combined expressions which might be taken in either sense. "On comparing the first with the last one we find the Commentary (Gasquet and Bishop, 288) It will be sufficient to note here that while the First retained something like the preparatory prayer of Consecration ("Vouchsafe to bless and sanctify these thy gifts, and creatures of bread and wine..."

As the Reformers did not recognize Confirmation as a sacrament, we are not surprised to find that the
rite of administering it has undergone great change. In 1549 the anointing with chrism was omitted, but the prayer that the Holy Ghost might come down upon them, and that their eyes might be opened, was retained, and they were signed with the sign of the cross on their foreheads. In 1552, owing again to Bucer's influence, the first prayer was altered ("strengthen them . . . with the Holy Ghost"); the signing with the cross was omitted; and a cutlass form of words used. This latter rite is still in use; but in 1662 the renewal of baptismal vows was prefixed to it.

The "Form of Solemnisation of Matrimony" contains the essence of the ceremony of the contracting of the parties, considerable latitude has existed in the Church with regard to the rest of the service. The First Book followed the old rite rather closely, but the blessing of the ring and the nuptial Mass were omitted. Of course the Reformers looked upon matrimony merely as a "state of life allowed in the Scriptures", and not as a sacrament.

"The Order of the Visitation of the Sick" contains matters of grave importance. In the First Book, all the sick persons to whom the priest should make a special confession, if he feels his conscience troubled with any weighty matter; after which the priest shall absolve him after this form (sort) . . . "I absolve thee from thy sins". The First Book, however, adds: "and the same form of absolution shall be used in all private confessions.

Moreover the First Book alone contains the anointing of the sick: "If the sick person desire to be anointed then shall the priest anoint him upon the forehead or breast only, making the sign of the cross", and afterwards reciting a long prayer entirely different from the old forms, which were the same as the present Catholic ones. This ceremony was removed at Bucer's suggestion. The First Book also has a rubric about reservation of the Blessed Sacrament: "If there be more sick persons to be visited the same day then shall the curate reserve so much of the sacrament of the body and blood as shall serve the other sick persons, and such as be appointed to communicate with them if there be any; and shall immediately carry it and minister it unto them," Bucer does not seem to have objected to this; nevertheless no mention of reservation is made in any of the later Books.

The Sarum Office of the Dead included Vespers (with Vicars), Seven Masses (Regula, the Absolution, and the Burial. As might be expected from the views of the Reformers on prayer for the dead, nothing was preserved in the new Books but the "Order for the Burial of the Dead". The First Book, indeed, contains distinct prayers for the soul of the departed, but these were removed in 1552, and have never been restored. For the Thirty-nine Articles see the article under that heading.

In recent years attempts have been made to reform the Prayer Book in two opposite directions. The Evangelicals have considered it as still containing too much of the old "popery"; while the High Church party have endeavoured to get back the portions omitted or altered since 1549. Various churchmen have attempted to issue a "new Prayer Book as used by the Protestant Churches of Scotland, Ireland, and America."

It is only fair, in concluding, to note Cramer's "splendid command of the English language and his attractive and persuasive argument when addressing English minds. His genius for devotional composition in English is universally recognized, even by those who have least sympathy with his character and career." (Mason, Thomas Cramer, 140). "I value the Prayer Book, as you cannot do", says one of the Anglican characters in Newman's "Loss and Gain" (ch. viii), "for I have known what it is to one in affliction. May it be long before you know it in a similar way, but if affection comes on you, depend on it all these new fancies and fashions will vanish from you like the wind, and the good old Prayer Book alone will stand you in any stead." The best work on the subject is GARGENT and BISHOP, Edward VI and the Book of Common Prayer; FRENCH, Revision of the Prayer Book's Book of Common Prayer; and the Book in the Making (1907); a poor and prejudiced work; WHATELY, A Rational Illustration of the Book of Comm. Pr., and the substances of every page in Bishop Spencer, Mr. J. L. ESTRANGE, Dr. CUMBER Dr. NICHOLAS, and all former commentators, and other upholders of the present version, whether in the reign of Henry VIII and Edward VI, and the third with that of Mary. A large number of official documents such as injunctions, articles of accusation, letters, etc., have been included. The book is illustrated throughout by woodcuts, some of them symbolizing the
triumph of the Reformation, most of them depicting the sufferings of the martyrs. The convocation of the English Church ordered in 1571 that copies of the "Book of Martyrs" should be kept for public inspection in all cathedrals and in the houses of church dignitaries. The book was also exposed in many parish churches. The passion stories of the style, the vivid and picturesque dialogues made it very popular among Puritan and Low Church families down to the nineteenth century. Even the fantastic partisan church history of the earlier portion of the book, with its grotesque stories of popes and monks and its motley assortment of witnesses to the truth (including the Albigneses, Groseteste. Dante, and Savonarola) was accepted amongst simple folk and must have contributed much to anti-Catholic prejudice in England. When Foxe treated of his own times his work is of greater value as it contains many documents and is largely based on the reports of eyewitnesses; but he sometimes dishonestly mutilates his documents and is quite untrustworthy in his treatment of evidence. He was criticized in his own day by Catholics such as Cardinal Pole and Father Smolton; and by practically all serious ecclesiastical historians. The most careful examination of his methods is to be found in the excellent exposition of the Reformers in England and in England's History of the English Church from the accession of Henry VIII to the Death of Mary (1898); See also John Fox, The Book of Martyrs (Catholic Truth Society, London), includes the opinions of a number of Foxe's critics. See also Whitley Stote's "Protestantism and Church History: Trends, Bible, Bible, Nicholas, Narrative of the Reformation.

Bordeaux (Burdiqala). Archdiocese of, comprises the entire department of the Gironde and was established conformably to the Concordat of 1802 by combining the ancient Diocese of Bordeaux (diminished by the cession of Born to the Bishopric of Aire) with the greater part of the suppressed Diocese of Bazas. Constituted by the same Concordat metropolitan to the Bishopric of Angoulême, Poitiers, and La Rochelle, the See of Bordeaux remained an additional diocese of the Archbishop of Agen, withdrawn from the metropolitan jurisdiction of Toulouse, and the newly re-established Périgueux and Luçon; and still later, in 1850, the three colonial Bishoprics of Fort-de-France (Martinique), Basseterre (Guadeloupe), and Saint-Denis (Réunion).

The Old Diocese of Bordeaux. — According to old Limousin legends which date back to the beginning of the eleventh century, Bordeaux was evangelized in the first century by St. Martial (Martialis), who replaced a temple to the unknown god, which he destroyed, with one dedicated to St. Stephen. The same legends represent St. Martial as having brought to the Soulac coast St. Veronius, who is still especially venerated in the church of Notre-Dame de l'Île des Terres at Soulac; as having cured Sigebert, the abbot-custos of the tower of the bishop; and made him Bishop of Bordeaux; as addressing beautiful Latin letters to the people of Bordeaux, to which city he is said to have left the pastoral staff, which has been treasured as a relic by the Chapter of Saint-Seurin (for this cycle of legends see Limousin).

The first Bishop of Bordeaux, St. Sigebert, is mentioned at the Council of Aries, in 314. By the close of the fourth century Christianity had made such progress in Bordeaux that a synod was held there (385-386) for the purpose of adopting measures against the Frisilians, whose heresy had caused popular disturbances. This was during the episcopate of Delphina (369-401), who attended the Council of Saragossa 380 and maintained correspondence with St. Ambrose and with St. Paulinus of Nola. At the beginning of the fifth century a mysterious personage who, according to St. Gregory of Tours, came from the East, appeared at Bordeaux. This was St. Severus (or Severinus), in whose favor Bishop Amand abdicated the see from 410 to 420, resuming it after Seurin's death and occupying it until 432. In the sixth century Bordeaux had an illustrious bishop in the person of Leontius II (542-564), a man of great influence who used his wealth in building churches and clearing lands and whom the poet Fortunatus calls patria caput. During this Merovingian period the cathedral church, founded in the fourth century, occupied the same site that it does to-day, back to back against the ramparts of the ancient city. The Faubourg Saint-Seurin outside the city was a great centre of popular devotion, with its three large basilicas of St. Stephen, St. Seurin, and St. Martin surrounding a large necropolis from which a certain number of sarcophagi are preserved. The Faubourg St-Sernin and the cemetery of St. Seurin were full of tombs of the Merovingian period around which the popular imagination of later ages was to create legends. In the high noon of the Middle Ages it used to be said how Charlemagne, having fought the Saracens near Bordeaux, had visited it and laid Roland's wonderful horn Olivant on the altar of Saint-Seurin.

Dessus l'autel de Saint-Seurin le baron,
Il met l'olifant plein d'or et de mangons
— says the "Chanson de Roland". Many tombs passed for those of Charlemagne's gallant knights, and others were honoured as the resting-places of Veronies and Benedicta. At the other extremity of the city, the Benedictines filled in the marshes of l'Eau-Borde and founded there the monastery of Sainte-Croix. While thus surrounded by evidences of Christian conquest, the academic Bordeaux of the Merovingian period continued to cherish the memory of its former school of eloquence, whose chief glory had been the poet Ausonius (310-395) and St. Paulinus (353-431), who had been a rhetorician at Bordeaux and died Bishop of Nola. The reigns of William VIII and William IX, Dukes of Aquitaine (1053-1127), were noted for magnificence, splendid architecture, and generous patronage. Parts of the churches of Sainte-Croix and Saint-Seurin belong to that time, and the Cathedral of Saint-André was begun in 1096.

In the Middle Ages, a struggle between the Sees of Bordeaux and Bourges was brought about by the claims of the latter to the primacy of Aquitaine. This question has been closely investigated by modern scholars, and it has been ascertained that a certain letter from Nicholas I to Rodolffus, which would date the existence of the primacy of Aquitaine from the ninth century, is not authentic. As the capital of Aquitania prima, Bourges at an early date vaguely aspired to pre-eminence over the provinces of Aquitania secunda and tercia, and whence over Aquitaine. It is about 1073 that these ambitions were more formally asserted; between 1112 and 1126 the papacy acknowledged them, and in 1146 Eugenius III confirmed the primacy of Pierre de la Châtre, Archbishop of Bourges, over Bordeaux. In 1292, Gregory IX gave the Bishop of Bourges, as patriarch, the right to visit the monastery of Aquitaine, imposed upon the Archbishop of Bordeaux the duty of assisting, at least once, at the councils held by his "brother" of Bourges, and decided that appeals might be made from the former to the latter. Occasionally, however, as in 1240 and 1254, the
Archbishops of Bourges, coming to Bordeaux, found the doors of the churches closed against them, and answered with excommunica the solemn protests which the Bordeaux clergy made against their visits. To these receipts many former bishops, who had seen that marriage between Louis VII and Eleanor of Aquitaine which was celebrated in the Cathedral of Bordeaux in the year 1137, and Bordeaux became the capital of the English possessions in France. Thereupon the struggle between the Church of Bordeaux and the State took a political character, the King of France necessarily upholding the claims of Bourges. Most of the archbishops were conspicuous as agents of English policy in Aquitaine, notable amongst them being Guillaume Amanieu (1207-28), on whom King Henry III of England conferred the title of seneschal and guardian of all his lands beyond the sea, and who took part in Spain in the wars against the Saracens; Gérard de Mallemort (1227-90), a generous founder of monasteries, who acted as mediator between St. Louis and Henry III, and defended Gascony against the tyranny of Simon de Montfort, Earl of Leicester. During the episcopate of Gérard de Mallemort the old Romanesque church of Saint-André was transformed into a Gothic cathedral. Gérard was a friend of St. John the Baptist, and was amongst the earliest to claim the title of bishop. He was a native of Villandraut near Basses, where he had built a beautiful collegiate church, was Archbishop of Bordeaux from 1300 to 1305, and political adviser to Philip the Fair. When he became pope, in spite of his French sympathies, his heart was set upon the formal emancipation of Bordeaux from Bourges. Blessed Pierre Berland, or Peyberland as tradition calls him (1430-57), was an Archbishop of Bordeaux, illustrious for his intelligence and holiness, founder of the University of Bordeaux and of the College of St. Raphael for poor students, who, after helping the English to defend Bordeaux against the troops of Charles VII, received Dunois into his episcopal city and surrendered it to France. It was during his episcopate that the beautiful campanile known as the Pey Berland Tower was added to the cathedral.

The rich and powerful chapters of Saint-André and Saint-Seurin subsisted in the Middle Ages as a vestige of that duality which was already noticeable in Merovianic Bordeaux. Between the two there were frequent animosities and conflicts. The jalousistic feeling of the canons in the thirteenth century is attested by the Gothic portal of Saint-Seurin which is still extant. At the end of the fourteenth century Canon Vital de Carle established the great Hospital of Saint-André, which he placed under the protection of the municipality; and it was through the exertions of the chapter of Saint-André that the first city library of Bordeaux was founded, towards the year 1402. During the Middle Ages Bordeaux was a great monastic city, with its Car melite, Franciscan, and Dominican convents, founded respectively in 1217, 1227, and 1230. In 1214 an important council was held in Bordeaux against usurers, highwaymen, and heretics. When, after the Hundred Years' War, the enemies of the state, Louis XI flattered its citizens by joining the confraternity of Notre-Dame de Montesuet, a religious association formed of all the mariners of the Gironde, by heaping favours on the church of Saint-Michel, the tower of which, built in the period between 1479 and 1500, crowned by twenty sails, is one of the most beautiful of France. The furthering of the canonisation of its former archbishop, Pierre Berland.

Among the Archbishops of Bordeaux, in the modern epoch, may be mentioned: Charles de Guigné (1554-84) was a learned man, who helped the College of Guyenne (founded in 1533) and introduced into Bordeaux the art of the Renaissance; François de Sourdis (1599-1628), who had great political influence during the minority of Louis XIII, caused the masses in the neighbourhood of Bordeaux to be filled in, erected a magnificent Carthusian monastery, welcomed to Bordeaux many exiles devoted to the intellectual reform, approved (1606) the teaching order of the Filles de Notre-Dame, founded by Blessed Jeanne de Lestonnac, and befriended the College of the Madeleine founded by the Jesuits in opposition to the College of Guyenne, which, during the sixteenth century, was opened to Protestants by the Bishop Cardinal de Cheverus (1826-36), who during the cholera epidemic had the sign Maison de Secours (House of Refuge) put over his palace, of whom M. Jullian said that no prelate in the history of the diocese had come nearer the ideal of sanctity, and during whose episcopate Thérèse de Lamour, the "Good Mother," considered by Cardinal Cheverus a saint worthy of the early days of the Church, opened for repentant women the Maison de la Miséricorde; Cardinal Donnet (1637-82), who re-established the old provincial councils interrupted for 224 years.

The Old Bishopric of Bazas.—According to Gregory of Tours, Bazas had a bishop at the time of the Vandal invasion in the fifth century. The dedication of the cathedral is explained in an account given by the same historian, that a lady of Bazas, whom certain hagiographers of the nineteenth century believe to have been St. Veronica, brought from Palestine a relic of St. John the Baptist at the time of that saint's death. For two hundred and fifty years prior to 1057, the Bishop of Bazas bore the title of Bishop of Aire, Dax, Bayonne, Oloron, and Lescau. Urban II (1088-99) preached the crusade at Bazas.

Places of Ecclesiastical Interest in the Archdiocese.—

The town of La Réole (from Regula, rule) owe its origin, and even its name, to a Benedictine monastery founded in 777, destroyed by the Normans, and rebuilt in 977 by Sancho of Gascony and his brother, Bishop Gombeid. It was there that Abbo, Abbot of Fleuray, who came to reform the monastery in 1004, was assassinated. The town of Saint-Emilion is likewise indebted for its origin to the hermit of that name, a native of Vannes, who died in 767 after having founded in these parts an abbey which the Augustinians occupied in 1110. The Abbey of Saint-Romain at Blaye in which, they said, the remains of Roland, nephew of Charlemagne, were once preserved, was founded on the spot where, in the fourth century, St. Romanus, the reclus, died in the arms of St. Martin. The Benedictine monastery of Saint-Émilion de Mers was founded in 1080 by St. Gerard of Corbie. The Abbey of Notre Dame at Guîtres had for abbot, between 1624 and 1637, Peirese the celebrated numismatist, one of the greatest scholars of the seventeenth century (1580-1637).

The most important pilgrimage is that of Notre Dame de Verdelais, founded in 1390 by Isabella, Countess of Foix, when her mule stumbled over a buried statue of the Blessed Virgin.

St. Elizabeth.—In 1599 Faujas, a well-known ordnance officer, was represented in the Archdiocese of Bordeaux as follows: Augustinians, Jesuits, Franciscañas, Lazarists, Carmelites, and Fathers of the Holy Ghost at Bordeaux; Olivetans at Soulac; Dominicans at Arcachon; Redemptorists at Couters; Marists at Notre Dame de Verdelais and several houses of the province, and the congregations for women peculiar to the diocese were, in addition to those mentioned above: Sisters of Charity of the Holy Agony, a teaching and nursing order founded in 1849, with the mother-house at Bordeaux; Sisters of the Holy Cross, founded in 1693, with the mother-house at Bordeaux; Sisters of the Holy Family, founded in 1820 by the Abbé Nolot; The last-named con-
Bordeaux has 200 houses, in different parts of the world. It includes: the Sisters of St. Joseph, who have charge of orphans and working women; Sisters of the Immaculate Conception, and Ladies of the Immaculate Conception, who conduct boarding-schools; Agricultural Sisters (Sœurs Agricoles); Sisters of Hope, attendants on the sick; Contemplative Sisters (Sœurs Solitaires); Sisters of St. Benedict, dedicated to prayer; Religious Charitable and educational institutions were to be found in the Archidioecese of Bordeaux: 1 founding hospital, 11 infant asylums, 66 infants schools, 2 children's infirmaries, 2 deaf-mute institutes for girls, 2 orphanages where farming is taught, 1 boys' and girls' orphanage, 34 girls' orphanages, 1 servants' guild, 2 guilds for penitent women, 10 charity kitchens, 12 hospitals or hospices, 8 communities for the care of the sick in their homes, 8 houses of retreat, 3 homes for incurables, 2 insane asylums, and 7 homes for the aged, all conducted by sisters; and 1 institute for deaf, dumb, and blind boys, and 1 orphanage where farming is taught, both conducted by brothers. At the close of the year 1905 the archdiocese contained 823,131 inhabitants, 79 parishes, 116 missions, and 7,766 members.

**GEORGES GOYAU.**

**Bordeaux, University of,** was founded during the English domination, under King Henry VI, in 1441, by a Bull of Pope Eugenius IV, at the demand of the archbishop's officials, Pierre Berland being at the time archbishop, and of the Aquitanian councillors. It did not, however, receive official recognition from the king until the reign of Louis XI. According to the terms of the Bull, it was to be organized on the model of the study of the University of Toulouse. The Archbishop of Bordeaux was the chancellor for life. It included all the different faculties: theology, canon law, civil law, arts, etc. On account of the constant lack of endowment, the University of Bordeaux, from the time of its foundation until the French Revolution, remained remarkable for standing. After the Revolution, when the universities were reorganized in France by the Government, Bordeaux was one of the cities chosen to be the seat of a university. During the nineteenth century it had a brilliant career, especially in the field of medicine, among its professors being such men as Zanam, Pitres, and others who were famous on account of their pathological researches.

**G. M. SAUVAGE.**

**Bordeaux, CAVALIERE PARIS,** an eminent painter of the Venetian school, b. at Tresio, 1500; d. at Venice, 1570. A member of a noble family, he early showed an inclination for art and, after being given a good general education, was placed in the school of Titian with whom he studied some years. He afterwards had Giorgione for his master. While feeling strongly the influence of both great painters, Bordeaux finally settled down to the style of Titian, whose manner he so successfully imitated that his works have sometimes been mistaken for Titian's. In portraiture he was most successful, owing to none but Titian in excellence. In his early career he painted in Venice, Venice, Venice, and Treviso. At the last place his most important work was in the church of San Vicenzo, where he painted in the six compartments of the dome "The Annunciation", "The Nativity", "The Adoration of the Shepherds", "The Crucifixion", "The Assumption", and "The Assumption of the Virgin". Bordone was invited to visit France, some say by Francis I, and others by Francis II, by whom he was knighted. He remained, according to the latter authority, after the death of the king, for several years at the court of Charles IX, before returning to Italy. He painted the portraits of the royal family and the principal figures of their courts, working notably for the Duke of Guise and the Cardinal de Lorraine.

**AUGUSTUS VAN CLEEF.**

**Borges, Caspar Henry,** third Bishop of Detroit, Michigan, U. S. A., b. at Kloppeburg, Hanover, Germany, 1 August, 1824; d. at Kalamazoo, Michigan, 5 May, 1890. He emigrated to the United States in boyhood and made his classical and theological studies at St. Xavier's College, Cincinnati, and at St. Charles's Seminary, Philadelphia. He was ordained priest at Cincinnati, 8 December, 1847, after which he was stationed for ten years at Columbus. In 1859 he was made rector of St. Peter's Cathedral, Cincinnati, and appointed Bishop of Detroit in 1866. He was consecrated titular Bishop of Caen and administrator of Detroit, 24 April, 1870. The first Bishop of Detroit, the Right Rev. Frederick Reece, consecrated 6 October, 1833, the first German in the United States to be placed to the episcopal dignity, became demented four years after his consecration and was called to Rome. He never resigned his charge and lived until 30 December, 1871, when he died in an institution at Hildesheim, Germany. As a consequence,Detroit was ruled by an administrator for forty years, Bishop Borgersen, dying the title over in 1871. The see up to his appointment had been dominated by Belgian and French influences, and he gradually made changes in the English speaking regime that the growth of the new population

Borgia, Lucrezia. See Alexander VI.
Borgia, Stefano, Cardinal, b. at Velletri, 3 December, 1731; d. at Lyons, 1804; Italian theologian, antiquarian, and historian. He belonged to a well-known family of Velletri, not to be confounded with the Spanish Borgias or Borjas. His early education was controlled by his uncle Alessandro (1682-1764), Archbishop of Fermo. From his youth, Stefano Borgia manifested a great aptitude for historical research, but his dominant trait was his extraordinary taste for relics of ancient civilisation, and he succeeded so well that, at the age of nineteen, he was received into the Academy of Cortona. He founded a museum at Velletri, in which, during his whole life, he gathered coins and manuscripts, especially Coptic, and which may be considered as his greatest undertaking and achievement. His passion for antiquities that is well known to have sold his jewels and precious earthenware in order to secure the coveted treasures and have the description of them printed. In his scientific career Borgia showed great disinterestedness, placing his collection at the disposal of learned men, regardless of creed and country, and giving them all possible encouragement and support. His amiable temperament and broad-minded character attracted him to all those with whom he came in contact. Paes, S. Bartolomeo, Adler, Zeega, Heeren, and many others were among his enthusiastic friends.

Borgia was not left, however, entirely to his chosen field of activity, but was called to fill several important political positions. Benedict XIV appointed him Governor of Benevento, and Borgia showed there great administrative talent. In 1770 he was made secretary of the Congregation de Propaganda Fide, an office of which he naturally took advantage to acquire antiquities by the help of the missionaries, a task for which his credit, which proved always forthcoming. He was made a cardinal in 1759. In the troubled period of the French invasion Borgia was given charge of Rome by Pius VI (1797-98). After the proclamation of the Republic, he was arrested (1798), but quickly released, whereupon he immediately resumed his studies and work of collecting; soon afterwards he joined Pius VI at Valencia, and endeavoured to have this pontiff send to Asia and Africa a body of missionaries who would preach the Gospel and gather various monuments.

Cardinal Borgia was of the greatest service to Pope Pius VII in the reorganization of the Pontifical States. In 1801 he was made Rector of the Collegium Romanum, and was in the retinue of Pius VII when this pontiff went to France to crown the new emperor, Napoleon. Having arrived at Lyons, Cardinal Borgia was taken ill and died. After his death his collection of Coptic MSS. was divided: the non-Biblical MSS. were taken to Naples and placed in the Biblioteca Nazionale; and the Biblical MSS., excepting a few which were taken to Naples by mistake, given to the Propaganda, together with the collection of coins and monuments, forming the Museo Borgiano. (Cf. Classical Antiquities, I, 187.) Only a few years ago the MSS. of the Museo Borgiano were transferred to the Vatican Library, where they are to be found to-day. Before the partition of the MSS., was made the eminent scholar and convert, Zoega, wrote a complete and accurate description of them in his posthumous work "Catalogus Codicum Copticorum manu scriptorum qui in Museo Borgiano Veltris ascervantur" (Rome, 1810). Besides the many services which Cardinal Borgia rendered to science and scientists, he published several works bearing especially on historical topics: "Monumento di papa Giovanni XVI" (Rome, 1760); "Breve istoria dell' antica città di Tadino" (ibid., 1751); "Memorie storiche della città di Benevento" (ibid., 1783-69); "Vaticana confessio B. Petri chronologicis testimonii illustrata" (ibid., 1776); "De Crux Vaticana" (ibid., 1779); "De Crux Velterna" (ibid., 1780); "Istoria del domini temporale della Sede Apostolica nella Due-Sicilie" (ibid., 1783).

Borgianus Codex. See MSS. of the Bible.
Borgognone, Ambrogio, real name Ambrogio Stefani da Fossano, a distinguished Italian painter and architect, b. Milan, c. 1455; d. at Milan, 1523. The name Borgognone is variously accounted for. By some authorities it is attributed to some Flemish characteristics in his art, and by others to the fact that some of his ancestors had lived in Flanders, then known to the Italians as Borgognone. It is supposed that he studied with Vincenzo Foppa, with Zenale, and with Buttunone, but there is little known of the details of his career. The earliest work credited to him is the facade of the Carthusian convent or Certosa near Pavia. The stalls and other woodwork in the choir were carved from the designs of Borgognone, who painted there, among other works, an altar-piece of the Crucifixion. Great refinement and deep religious feeling mark his work, which is likewise notable for its beautiful celestial and mundane types. On his return to Milan he went to work in the church of San Satiro, and his productions appeared, among other churches, at Sant' Ambrogio, San Simpliciano, and Sant' Agostino. At San Simpliciano he painted scenes, since lost, from the story of St. Simeon. He worked also at Lodi in the church of the Incuronasta and did an altar piece for San Satiro at Bergamo.

Borgognone painted in tempera and also in oil in the style of tempera and in fresco. His early work lacked freedom, but later he fell under the beneficent influence of Leonardo da Vinci. Among...
his works in public galleries are: National Gallery, London, "Marriage of St. Catherine of Alexandria," a triptych with a "Virgin and Child Enthroned," having at one side the "Agony in the Garden," and on the other Christ Bearing His Cross; two other triptychs of famous polychrome; Louvres, "Presentation in the Temple," and "St. Peter of Verona," with a kneeling woman; Berlin Museum, "Madonna Enthroned," and "Madonna with Saints;" Munich, Old Pinakothek, "Madonna in Adoration;" Dresden Gallery, "Madona in Adoration;" Breton Gallery, Milan, "The Assumption of the Virgin;" and Pavia Academy, "Christ Bearing His Cross, followed by Carthusians." In the Casa Borromeo at Milan is a portrait of Bishop Andrea Novelli. The Pavia picture is considered without an equal in art in simple paths and deep religious meaning. Lanzi and other authors have treated Ambrogio da Fossano, the architect, and Ambrogio Borgognone, the painter, as two different persons, but the signatures he left show that this was not the case.

Bryant, Dictionary of Painters and Engravers (London, and New York, 1908-06). AUGUSTUS VAN CLEEF.

Borgo San-Domnino, Diocese of, in the province of Parma, Italy. The city takes its name from St. Domninus, who died under the persecution of Maximian (286-305) and suffered martyrdom. It did not become an episcopal see until 1601, under Clement VIII, having until then been governed ecclesiastically by a provost with full faculties, subject directly to the Holy See. The last provost, Papiro Piceda da Castel Vezzano, was the first Bishop of Borgo San-Domnino. The cathedral, dating from the twelfth century, is a beautiful monument of Romanesque architecture; its façade, however, is still unfinished. Among the notable events of this city have been: Alfonso Poszi (1620), a learned and zealous man; Ranuccio Scotti (1626), several times papal nuncio under Urban VIII, particularly to Switzerland; Filippo Casoni (1650), who urged Ughelli to write his "Italia Sacra;" Alessandro Parravicini, a Benedictine (1860); Gaetano Garimberti (1765), who enlarged the episcopal residence and enriched the cathedral with gifts of sacred vessels and furnishings; Alessandro Roncovieri (1700), distinguished for his zeal and charity; Gerardo Gambonaria (1719), who was ordained, and held the wise decrees of which are still in force; Girolamo Basiardi (1753), who restored the episcopal residence and founded a hospital; Alessandro Garimberti (1776) who was distinguished for his prudent conduct during the troubles which his diocese had with the community. This cathedral has a population of 60,400, with 54 parishes, 76 churches and chapels, 100 secular priests, 10 regulars, and 70 seminarians.

Borgo San-Sepolcro, Diocese of, situated in the province of Arezzo, Tuscany, Italy. The city is believed by some to be the ancient Biturgia mentioned by Ptolemy, and is so designated in the usage of the Roman Curia. The foundation of the present city is attributed to two pilgrims of the tenth century, who, halted in this neighbourhood on their return from Palestine, and built an oratory in which they placed the relics they had brought from this holy place. This oratory attracted many pilgrimages; gradually the town grew up about it, as the elements of a considerable size known as Borgo San-Sepolcro. Later on, Camaldoli monks erected a monastery here, the abbey of which had temporal jurisdiction over the town. Guido Petramala, Bishop of Arezzo, fortified Borgo San-Sepolcro, and made it a Glabelline stronghold. In 1381, the Diocese of Casole, Lelli, it was made an episcopal see by Leo X in 1515, the first bishop being Giovanni Ev. Galeotto Grasiani. Among the bishops worthy of record are Nicolo Torrubia (1560), a learned theologian, author of a treatise on the controversies between Catholics and Calvinists; Dionisio Bussotti (1638), likewise a skilled theologian; Gian Lorenzo Tili (1704), founder of the seminary. The cathedral, which is situated in the old part of the city, is of Romanesque style, and is dedicated to the Holy Sepulchre, showing, however, a marked tendency to be Gothic. A famous image of the Holy Face (Vullo Santo) is venerated in the cathedral. It is a wooden crucifix of heroic size; the sacred Body is covered with a long tunic, and a crown rests on the head. It resembles the Vullo Santo of Lucca, and has been in this cathedral since the tenth century; previously it was kept in the neighbouring castle of Bibbona. Nothing certain is known as to its origin. However, the crucified Christ dressed in a long garment (colobium) indicates a great antiquity, perhaps the eighth or ninth century. Other beautiful churches are those of San Agostino and Santa Maria; the latter has a beautiful baptistery, brought thither from the ancient church of San Agostino. Noteworthy also is the church of San Nicola, built in 1258 by the Franciscan, Fra Tommaso da Spello, and restored in the eighteenth century. This diocese has a population of 60,500 Catholics, with 135 parishes, 250 churches and chapels, 190 secular priests, 20 regulars, and 60 seminarians. There are 3 schools for boys, and 2 for boys. The male religious orders represented are: Minors Conventual, Servites, Capuchins; the female congregations are: Franciscans, Capuchins, Benedictines, Sisters of St. Anne, Sisters of Charity, Sisters of the Sacred Heart, Salesian Sisters, about 70 in all.

Boris, PIERRE-ROBE-URSULE-DUMOULIN, Bishop-elect of Acanthus, Vicar Apostolic of Western Tongking and Martyr; b. 20 February, 1808, at Beynac, Diocese of Tulle, France; beheaded 24 November, 1838. He studied successively at the colleges of Beaulieu and Servières, and in 1826 entered the seminary of Tulle. Meanwhile the desire to devote his life to the evangelization of distant lands matured, and in 1829 he proceeded to Paris and spent thirteen months at the Seminary of the Foreign Missions. Too young for the priesthood, he was to have the result of the friars and the missionaries, he became a missionary poet. However, a dispensation from Rome permitted his immediate ordination, which took place at Bayeux (1830). He sailed from Havre, 1 December, 1830, and, after spending some time at Macao, China, arrived in Toulon in the year 1832. His progress in the language of the country was rapid, but eight months after his installation an edict of persecution was issued (January, 1833). Boris had to re- main almost continually concealed and to endure great privations. In 1834, failing health increased the acuteness of the sufferings of persecution. He regained his strength the following year and was enabled to visit even the least accessible Christian communities of the vast district of which he was in charge. He fell into the hands of the persecutors in 1838. During his captivity he composed his famous poem, the poem of his nomination to the Vicariate Apostolic of Western Tongking, with Acanthus as titular see. Shortly after this, on the 24th of November, 1838, the death-sentence was pronounced on him and two native priests. It was a splendid work. His remains were brought to France in 1843, and are religiously kept at the Seminary of the Foreign Missions, in Paris. The cause of his beatification has been introduced at Rome.

N. A. WEBER.
BORNEO

BORNEO, PREFECTURE APOSTOLIC OF.—I. DUTCH BORNEO.—The former Vicariate of Batavia was composed of Sumatra, Java, and the other Sundan Islands, and the Netherlands Indies, now the southern part of Borneo. The northern part of Borneo, now under British suzerainty, was separated from this immense vicariate, 27 August, 1855; that part of Borneo which is under Dutch rule was taken from the Vicariate Apostolic of Batavia, 1 November 1853, and erected into a separate prefecture under the care of the Capuchins. The missionaries for the new prefecture were selected from the Dutch province of this order, and the first prefect Apostolic was appointed 10 April, 1845. Up to the time of the separation what is now the Prefecture of Dutch Borneo was administered by the Jesuits who had charge of the Vicariate of Batavia, and who visited the Catholics of Dutch Borneo twice a year. In 1875 the Jesuit Father de Vries built a little church at Singkawang, a small town situated on the west coast of the island. In the neighbourhood of Singkawang there were nearly 200 Chinese Catholics and 118 soldiers. In 1890 Father Staal, afterwards Vicar Apostolic of Batavia, founded a station in the interior at Sinitau. The mission at Sinitau was transferred to Sedjiriam, in the Penoeang region inhabited by the Dyaks. The mission at Sedjiriam gave good promise of success and in 1897 included 400 baptized persons, but the missionaries were too few in number to give the station sufficient supervision, and it was consequently abandoned. Later the Holy See decided to erect a separate prefecture covering an area of 204,633 square miles. According to the "Statistics of the Capuchin Missions" for 1906, there were in Dutch Borneo at that date 3 Capuchin priests; 4 brothers; 366 Catholics, consisting of 10 Chinese, 100 Dyaks, and 86 Europeans; 2 stations, Singkawang and Sedjiriam; 3 chapels; 20 conversions were claimed. There had been 56 baptisms and 156 communications, the latter number referring to the Catholic laity as, outside of the Capuchins, there are no religious in the prefecture. The population included in the prefecture is 2,000,000. A report of 26 November, 1906, gave the founding of a third station at Samarinda on the east coast of Borneo, some two weeks' sail from Singkawang, on a fourth station at Pamangkat, which is seven hours from Singkawang.

II. BRITISH BORNEO, OR THE PREFECTURE OF NORTH BORNEO AND LABUAN.—In 1867 Father Venticiglia, a Theatine, was commissioned by Pope Innocen- cent XI to preface Christianity in Borneo. There are no memorials of this mission, which has left no traces in the island although the missionary declared that God had blessed his labours. The Propaganda, 27 August, 1855, decreed the erection of the northern part of the island of Borneo into an independent prefecture and entrusted it to the Rev. Charles Chugtawen, of the Society of Jesus, as Father Chugtawen was originally a sea-captain and had vowed, after escaping great peril, to devote himself to the evangelization of Borneo. He landed at Labuan in 1857, in company with several missionaries who deserted him; and although alone in the island of Labuan, Father Chugtawen courageously continued his labours. At length, seeing that isolation made him powerless, he went to Rome in 1879 to request that the Propaganda place the mission in charge of an institute. From Rome Father Chugtawen went to Spain, where he died. The British had obtained the control of Labuan in 1846; they gradually extended their power over the petty rulers of the northern part of Borneo until, in 1888, the British Protectorate of North Borneo was formally acknowledged. English-speaking missionaries being desired in the British part of Borneo, the Propaganda (19 March, 1881) confided the mission of North Borneo and Labuan to the Society for Foreign Missions in England. The first prefect Apostolic appointed under the new administration was the Rev. Thomas Jackson. The society has since continued in charge of the mission.

The island of Labuan has an area of 30 square miles and contains 6,800 inhabitants; it is an important shipping station between Singapore and Hong-Kong. The prefect Apostolic lives at Labuan. The stations served are Labuan and Sarawak (Kuching), the two most important towns. Outside of these two places where the missions are carried on are the lesser stations which are visited: Sibu, Kanowit, Egan, Oya, Mukah, Baram, Papar, Jesselton, Patatan, and Sandakan. According to the "Missions-Atlas" of P. Streit, the statistics of the mission are: 19 regular priests; 2 lay brothers; 13 sisters; 8 churches; 20 chapels; 16 catechists; 14 schools with 740 pupils; 2,600 baptisms; about 1,000 catechumens.

Bottas, Francisco Nicolás, a distinguished Spanish painter, b. at Cocentin, 1530; d. at Gandia, 1616. Going to Valencia at an early age to study under Vicente Joanes, he became that master's most noteworthy pupil. His works in general resemble those of Joanes and some of them are good enough to have been taken for the master's. Entering the priesthood, he was assigned to his native place, where he devoted all his spare moments to painting and acquired such skill that the authorities of the monastery of St. Jerome, at Gandia, employed him to paint the picture for the high altar of their church. He enjoyed his stay at the monastery so much, that, taking a great liking to the brothers and their life he determined to ask for no other payment for his work than membership in the order. He received the habit in 1575, and took the final vows the following year. Three years thereafter, Fra Nicolás, in search, perhaps, of a better patron, spent some little time with the Capuchins at the Franciscan monastery of San Juan de la Riviera near Valencia. He was soon back, however, at Gandia where he passed the rest of his life painting in every part of the monastery, in the church, chapels, chapter house, oratories, refectories, and the twelve altar pieces in the church alone. He also spent his own money in the employment of sculptors and builders for the embellishment of his beloved monastery.

Besides his great labours at Gandia, Bottas also did much work for churches and religious houses in Valen- cia, at the capital, and elsewhere. His paintings appeared at the cathedral at Valencia and at the Hieronymite monastery in the city of San Miguel de los Reyes, where there was a "Christ at the Column" and a picture of the painter in adoration of "The Holy Virgin". Others were at his native place in the church of St. Stephen, in the Escolar at Alldays, and at Ontinente. In the Museum at Valencia there are some fifty paintings by Bottas chiefly from Gandia and San Miguel. Among them are:"The Last Supper", "Christ Bearing His Cross", "The Dead Saviour in the Arms of the Eternal Father", and "The Archangel Michael Driving Souls into Purgatory and Hell". In the last Bottas is supposed to have pictured himself as a white robed monk kneeling on the brink.

BORROMEO. See Sisters of Mercy of St. Charles Borromeo.

Borromeo, Andrea, an Italian missionary, b. in his first half of the seventeenth century, at or near Milan in 1605. He was the son of Count Gio. Cesare Borromeo, and was received into the religious order of the Theatines in 1637. In 1632 he visited Mingrelia and Georgia (Russian Transcaucasia) as a missionary, and laboured with success for eleven years, to convert the inhabitants. On his return to Rome he was elected procurator for these missions. He declined the offer of a bishopric. He left an account of the above mentioned missions of his order entitled: "Relazione della Georgia, Mingrelia, e Missioni de' Padri Teatini in quelle parti" (Rome, 1704).

MARCHIELLI, Scrittori d'Italia (Brescia, 1762), II, iii. 1793.

N. A. WEBER.

Borromeo, Saint Charles. See Charles Borromeo, St.

Borromeo, Federico, Cardinal and Archbishop of Milan, cousin and successor of St. Charles Borromeo, b. at Milan 18 August, 1564; d. there, 22 September, 1584. He was the son of Giulio Cesare Borromeo and Margherita Trivulzio, members of the Milanese aristocracy. He studied successively at Bologna and Pavia, in which latter city he was the first pupil of the Borromeo College. Later he went to Rome for higher studies, and was strongly influenced by St. Philip Neri, Cardinal Baronius, and Cardinal Bellarmine. In 1580 he began his ecclesiastical career under the guidance of St. Charles Borromeo. He was made cardinal at the age of twenty-three, in 1587, by Sixtus V; and in 1595, Archbishop of Milan by Clement VII, who personally consecrated him to this high office. During thirty-six years he gave the world an example of episcopal virtue, zeal, and dignity. He was tireless in preaching and in instructing both clergy and people, was an apostle of religious education and a persistent reformer of all abuses, both lay and ecclesiastical. An almost constant conflict with the local Spanish authorities, suspicious and haughty by nature, did not diminish his sweetness of temper nor his patience; the traditional immunities and authority of the ecclesiastical order were defended as an inheritance of his see that he dared not abandon. Von Reumont thinks that, though often right, he went at times too far, e. g., in the assertion of minute personal prerogatives; it may be, however, in all probability it was the principle and substance of customary ecclesiastical rights that the fearless pastor ever intended to preserve and hand down. His affection for the people of Milan was made evident during the great famine and pest of 1627-28, when he fed daily 2000 poor at the gates of his residence, and was personally an example of such absolute heroism that nearly one hundred of his clergy (sixty-two parish priests and thirty-three vicars) gave up their lives in attendance on the perishing multitudes. His kindness and charity towards the poor was remarkable. His extraordinary devotion in his "I Promessi Sposi" (The Betrothed), If Cardinal Borromeo shared the current excessive credulity in witchcraft and magic, he was in every other way far in advance of his time as a friend of the people and a promoter of intellectual culture and social refinement based on a practical religious life. He is the founder of the famous Ambrosian Library (q. v.) opened by him in 1609, as a college of writers, a seminary of savants and a school of arts, and after the death of Medici, he was nominated as archbishop of St. Peter's, under the direction of Bernini. His most extravagant effort was the church of San Carlo alle Quattro Fontane (1640-47), a good example of the fully developed baroque style in Rome. In the mostly in Latin that treat of various ecclesiastical sciences. The universal approbation of his own and later times is echoed in the following words from the above-mentioned work of Manucio, engraved on the pedestal of the marble statue that the citizens of Milan erected in 1865 before the gates of the Ambrosiana Library: "He was one of those men rare in every age, who employed extraordinary skill in the saying and writing of the sacred books. He directed and organized the advantages of privileged station, and an unfinished will, in the search and practice of higher and better things.

Life was first written by Francisco Rivola (Milan, 1604), later by G. Ripamonti, Cant., La Lombardia nel secolo XVII (Milan, 1832), which includes a catalogue of his works: Bonn, Hist. Apologia del Card. Anselmo (Milan, 1870); Von Reumont in Kirchenlex., II, 112 sq.; Boroqumini in Catholic University Bulletin (Washington, 1896), I, 566-572.

THOMAS J. SHAHAN.

Borromeo, The Society of St. Charles (Borromäusverein), a German Catholic association for the encouragement and diffusion of edifying, instructive, and entertaining literature. It was founded at Bonn, in 1845, by Franz Xavier Dieringer, one of the professors of the Catholic theological faculty at Bonn, August Reichenasperger, and Freiherr Max von Loë. From the first the society placed itself under the protection of the episcopate. Cardinal Johannes von Geissel, Cardinal Kremetz, and Archibishop Sinarck were its chief aims and was spread over the whole of Germany, so that by the middle of 1907 it had 145,250 members, who were grouped in 258 main societies and 3,247 branches. The administrative department and chief office are at Bonn. The society has 73 branches outside of Germany: in Belgium, 6; France, 2; Holland, 4; Italy, 1; Luxembourg, 36; Austria, 6; Switzerland, 18. In 1906 its total income was $124,748, and its expenses, $123,174. In accordance with its by-laws the society seeks: (1) to send every year one book or several books as a gift to each of its members, the quantity of reading matter thus bestowed being dependent on the ability of the society and the amount of the annual subscription, as the dues vary from $1.50 to 75 or 85 cents a year; (2) to use the annual surplus in founding libraries (these thus manned numbered over 3,000 in 1907) and in the support of libraries; (3) to aid workmen's and people's libraries and those of asylums, hospitals, and other charitable or social institutions. Formerly the society was able to supply the membership number that is the reduced price, which was often not more than two-thirds of the ordinary cost of the volumes. The society's catalogue for 1906 contained over 10,000 titles of works which could be thus purchased. But since 1907 it has been obliged to abandon this branch of its activity, on account of the position taken by the business union of the German book-sellers. In the larger cities the society has opened free reading-rooms for the use of the public in connection with its libraries. Since 1902 the society has issued a periodical, originally this publication was called "Borromäusblätter"; it now bears the name of "Die Bücherewelte".

Die Gründung und Tätigkeit des Vereins vom St. Kurt Borromäus-Stiftung zum fünfzigjährigen Jubiläum des Vereins (Cologne, 1895); Jahresberichte der Zentralestelle.

JOSEPH LINS.

Borromini, Francesco, architect and sculptor; b. 25 September, 1599, at Biscone; d. (by his own hand) 1 August, 1667, at Rome. He studied architecture under the Medici, and after the death of Medusa, he was nominated as architect of St. Peter's, under the direction of Bernini. His most extravagant effort was the church of San Carlo alle Quattro Fontane (1640-47), a good example of the fully developed baroque style in Rome. In the
church and part of the College of Propaganda. Borromini's fantasies are wilder; the cupola and columns of Andrea Palladio are in his taste. The great nave of Saint John Lateran was modernized, as it now stands, by Borromini. His best work is the façade of Santa Agnese in the Piazza Navona. Borromini is generally considered the father of all modern abuses in architecture. He had a genius for Gray and Roman architecture, without offering a substitute.

THOMAS H. POOLE.

B OrnII (Borri, Burrius), Christopher, missionary, mathematician, and astronomer, b. at Milan in 1583; d. at Rome, 24 May, 1632. His family was one of good standing in Milan. He became a member of the Society of Jesus, 16 October, 1601; in 1618 he was sent from Macao with Father Petrus Marques, S.J., as one of the first missionaries to Cochin-China. Here he stayed until 1622, being known under the name of Bruno. After his return he taught mathematics at Coimbra; in 1632 he entered the Cistercian Order, taking the name of Father Onofrio, and died the same year. His most important work "Relatione della nuova missione della P. P. della Compagnia di Gesù al Regno della Cecina," appeared at Rome in 1631, and was translated into French (1631), Dutch (1632), Latin and German (1633), and English (London, 1633). It was also inserted in Churchill's "Collection of Voyages" (1704), II, 787-838, and in Sprengel and Forster's "Neue Beiträge zur Volken- und Länderkunde" (Leipzig, 1738), II, 271-110. The work was considered one of the best sources of information concerning Cochin-China on account of its excellent description of the physical, political, and ecclesiastical conditions of the country. The observations of Borrius on the magnetic variation of the compass appear to be of more importance, but unfortunately they have not yet been published. According to Kircher he drew up the first chart for the Atlantic and Indian Oceans showing the spots where the magnetic needle makes the same angles with the meridian; in this he is to be regarded as the forerunner of Halley. Borrius gives the explanation to the chart in a manuscript that belongs to the Royal Academy at Lisbon. In another manuscript, now at Evora, "Tratado da arte de navegar pelo País do Brasil," of the same year, he makes excellent suggestions, according to Allatius, as to a new method for determining the longitude at sea and also concerning improvements in sea-charts. Father Le Jeunehomme undertook a translation of the treatise into Latin. Prince Philip of Spain, desiring to understand the naval studies and inventions of Borrius, once summoned the latter from Coimbra to Madrid. Besides what has been already mentioned Borrius wrote, "Doctrina de Tribus Celes, Aereo, Syderico et Empeirico" (Lisbon, a.d.), which Pietro de Vali translated into Persian (Maius, Scriptor. vet. nova collect., IV, n. ix), and also some accounts of his travels for the Propaganda.

GREGORY THE GREAT: In one of his letters, speaks of a Bishop of Bosco, without, however, mentioning the See of the Bishop's name. In 1786 Costantini de Castro, Bishop of Bosco, who, according to tradition, built the cathedral dedicated to St. Peter, was appointed Metropolitan of Torres by St. Gregory VII. Among the most illustrious bishops of this see are numbered: the learned Cardinal Giovanni Casanova (1424); Egidio Francesco Fan (1591), author of the first (but very inaccurate) history of Sardinia; Serafino Esquirol, a learned theologian, who had been General of the Servites (1677). It is asserted by some that the see was originally at Calceda, but was transferred to Boos after the destruction of the former town; also, that the first bishop was St. Emilius, sent thither by St. Peter and martyred in 70—for this, however, there is no historical evidence. The diocese has a population of 40,200, with 21 parishes, 104 churches and chapels, 100 secular priests, and 40 seminarians.

U. BENIGNI.

BOCH, PETER VAN DER, Bellandist, b. at Brussels, 19 October, 1656; d. 14 November, 1736. After studying the humanities at the College of Brussels, 1698-1705, he entered the novitiate of the Society of Jesus at Mechlin, 25 September, 1705. At the close of his novitiate he studied philosophy at Louvain, 1707-09, and then theology and philosophy at Antwerp, 1710-11, in order to complete his literary training. Recalled to Antwerp in 1710, he spent six years in teaching and then went to Louvain, where he took a philosophical course, 1716-20. He was ordained priest at Louvain in 1719 and distinguished himself by the public defence of thesees in March and September, 1719, and by his defence "De Universa Theologia" in 1720. In 1721, at the end of his third year of probation, he was made an assistant to the Bellandists and remained a member of this body during the rest of his life. His hagiographical writings are found in July, IV-VI, and August, I-III.

DOLMADS, Elogium R. P. Petri Boschi hagiographi in Acta SS., III.

CH. DE SMEET.

BOCBO, GIOVANNI MELCHIOR, Venerable (Don Bosco), founder of the Salesian Society, b. of poor parents in a little cabin at Bocchi, a hill-side hamlet near Castelnuovo, Piedmont, Italy, 16 August, 1815; d. 31 January, 1888; declared Venerable by Pius X, 22 July, 1907. When he was more than 6 years old his father died, leaving the support of three boys to the mother, Margaret Bosco. John's early years were spent as a shepherd and he received his first instruction at the hands of the parish priest. He possessed a ready wit, a retentive memory, and as years passed his appetite for study grew stronger. Owing to the poverty of the home, however, he was often obliged to turn from his books to the fields, but the desire of what he had to give up never left him. In 1835 he entered the seminary at Chiari and after six years of study was ordained priest on the eve of Trinity Sunday by Archbishop Franzeno of Turin.

Leaving the seminary, Don Bosco went to Turin where he entered zealously upon his priestly labours. It was here that an incident occurred which opened up to him the real field of effort of his afterlife. One of his duties was to accompany Don Caffaro upon visits to the prisons of the city, and the condition of the children confined in these places, abandoned to the most evil influences, and with little before them but the gallows, made such an impression upon his mind that he resolved to devote his life to the rescue of these unfortunate outcasts. On the eighth of December, 1841, the feast of the Immaculate Conception, while Don Bosco was
vesting for Mass, the sacristan drove from the church a ragged urchin because he refused to serve Mass. Don Bosco heard his cries and recalled him, and in the friendship which sprang up between the priest and Bartolomeo Garelli was sown the first seed of the "Oratory", so called, no doubt, after the example of the English. Phrae and St. Philip Neri as its prominent feature. Don Bosco entered eagerly upon the task of instructing this first pupil of the streets; companions soon joined Bartolomeo, all drawn by a kindness they had never known, and in February, 1842, the Oratory numbered twenty boys. In March of the same year, thirty, and in March, 1846, four hundred.

As the number of boys increased, the question of a suitable meeting-place presented itself. In good weather walks were taken on Sundays and holidays to spots in the country about Turin where lunch was eaten, and realizing the charm which music held for the untamed spirits of his disciples Don Bosco organized a band for which some old brass instruments were procured. In the autumn of 1844 he rented a house in the district where Don Borel entered enthusiastically into his work. With the approval of Archbishop Franzoni, two rooms were secured adjoining the Rifugio and converted into a chapel, which was dedicated to St. Francis de Sales. The members of the Oratory now gathered at the Rifugio, and numbers of boys from the surrounding district applied for admission. It was about this time (1845) that Don Bosco began his night schools and with the closing of the factories the boys flocked to his rooms where he and Don Borel instructed them in rudimentary branches.

The success of the Oratory at the Rifugio was not of long duration. To his great distress Don Bosco was obliged to give up his rooms and from this on he was subjected to petty annoyances and obstacles which, at times, seemed to be the result of his undertaking. His perseverance in the face of all difficulties led many to the conclusion that he was insane, and an attempt was even made to confine him in an asylum. Complaints were lodged against him, declaring his community to be a nuisance, owing to the character of the boys he befriended. From the Rifugio the Oratory was moved to St. Martin's, to St. Peter's Churchyard, to three rooms in Via Cottolengo, where the night schools were resumed, to a more commodious house and finally to the site of which grew up an Oratory that counted seven hundred members. Don Bosco took lodgings nearby, where he was joined by his mother. "Mama Margaret", as Don Bosco's mother came to be known, gave, at times, some of her life in devoted service to the little inmates of this first Salesian home. When she joined her son at the Oratory the outlook was not bright. But sacrificing what small means she had, even to parting with her home, its furnishings, and her jewelry, she brought all the solicitude and love of a mother to the children of the street.

The evening classes increased and gradually dormitories were provided for many who desired to live at the Oratory. Thus was founded the first Salesian Home which now houses about one thousand boys.

The municipal authorities by this time had come to recognize the importance of the work which Don Bosco was doing, and he began with much success a fund for the erection of technical schools and workshops. These were all completed without serious difficulty, and in the new quarter of Turin, Don Bosco resolved to build a church. Accordingly a plan was drawn in the form of a cross covering an area of 1,500 sq. yards. He experienced considerable difficulty in raising the necessary money, but the charity of some friends finally enabled him to complete the church for less than a million francs (about $200,000). The church was consecrated 9 June, 1888, and placed under the patronage of Our Lady, Help of Christians. In the same year in which Don Bosco began the erection of the church fifty priests and teachers who had been assisting him formed a society under a common rule which Pius IX, provisionally in 1869, and finally in 1870, approved as the "Salesian Congregation of Don Bosco." It was the intention of Don Bosco to place himself at the head of the new foundation of young clergy, but this he did not live to see. The church was consecrated 9 June, 1888, and placed under the patronage of Our Lady, Help of Christians.

Aany attempt to explain the popularity of the Oratory among the classes to which Don Bosco devoted his life would fail without an appreciation of his spirit which was its life. From his earliest intercourse with poor boys he had never failed to see under the dirt, the rags, and the uncoyness the spark which a little kindness and encouragement would fan into a flame. In a vision or dream which he is said to have had in his early boyhood, wherein it was disclosed to him what his lifework would be, a voice said to him: "Not with blows, but with charity and gentleness must you draw these friends to the path of virtue." And whether this be accounted as nothing more than a dream, that was in reality the spirit with which he animated his Oratory. The number of his pupils was large but the number of his little disciples was slender he drew them about him by means of small presents and attractions, and by pleasant walks to favourite spots in the environs of Turin. These excursions occurring on St. Joseph's Day, he would take them to the village church and give a short instruction on the Gospel; breakfast would then be eaten, followed by games; and in the afternoon Vespers would be chanted, a lesson in Catechism given, and the Rosary recited. It was a familiar sight to see him in the field surrounded by kneeling boys preparing for confession.

Don Bosco's method of study knew nothing of punishment. Observance of rules was obtained by instilling a true sense of duty, by removing all external inducements for disobedience, and by allowing no effort towards virtue, how trivial soever it might be, to pass unappreciated. He held that the teacher should be father, adviser, and friend, and he was the first to adopt the preventive method. Of punishment he said: "As far as possible avoid punishing ... try to gain love before inspiring fear." And in 1877 he wrote: "I do not remember to have used formal punishment; and with God's grace I have always obtained, and from apparently hopeless cases of tedulous elements; and by understanding quickly, and his sensitiveness enraptures all who meet him, but the parents have only succeeded in producing an affectionate, perfected, intelligent animal. The chief object should be to form the will and to temper the character. In all his pupils Don Bosco tried to cultivate a taste for music, believing it to be a powerful and refining influence. "Instruction," he said, "is but an accessory, like a game; knowledge never makes a man because it does not directly touch the heart. It gives more power in the exercise of good or evil; but alone it is an indifferent weapon, wanting guidance."

He always studied, too, the aptitudes and vocations of his pupils, and to an almost supernatural quickness and clearness of insight into the hearts of men, he knew to which must be attributed the success of the Oratory. In his rules he wrote: "Frequent Confession, frequent Communion, daily Mass: these are the pillars which should sustain the whole edifice of education." Don Bosco was an indefatigable confessor, devoting days to this work among his children. He recognized that gentleness and charity were not enough to bring to the task of education. He
BOSCOVICH thoroughly believed in play as a means of arousing childish curiosity—more than this, he places it among his first recommendations, and for the rest he adopted St. Philip Neri’s words: “Do as you wish, I do not care so long as you do not sin.”

Statistics.—At the time of Don Bosco’s death in 1888 there were 250 houses of the Salesian Society in all parts of the world, containing 180,000 children, and from which there annually went out 18,000 finished apprentices. In the mother-house Don Bosco had selected the brightest of his pupils, taught them Italian, Latin, French, and mathematics, and this band formed a teaching corps for the new homes which quickly grew up in other places. Up to 1888 over six thousand priests had gone from Don Bosco’s institutions, 1,200 of whom had remained in the society. The schools begin with the child in his first instruction and lead, for those who choose it, to seminaries for the priesthood. The society also conducts Sunday schools, evening schools for adult workmen, schools for those who enter the priesthood late in life, technical schools, and printing establishments for the diffusion of good reading in different languages. Its members also have charge of hospitals and asylums, nurse the sick, and do pastoral work, especially in remote districts. The society has houses in the following countries: Italy, Spain, Portugal, France, England, Belgium, Switzerland, Austria, Palestine, and Algiers; in North America, Mexico, in South America, Paraguay, the Argentine Republic, Bolivia, Uruguay, Chile, Peru, Venezuela, and Colombia. In the United States the Salesians have four churches. Sts. Peter and Paul and Corpus Christi in San Francisco, California; St. Joseph’s in Oakland, California; and the Transfiguration in New York City. Very Rev. Michael Borgelho, Provincial for America, resides in San Francisco.

E. F. Sallton.

Bosovich, Ruggiero Giuseppe, a Dalmatian Jesuit and well-known mathematician, astronomer, and natural philosopher, b. at Ragusa, 18 May, 1711; d. at Milan, 13 February, 1767. He was the youngest of six brothers and his education was begun at the Jesuit college of his native city. Being early impressed by the success achieved by his masters he resolved to seek admittance in their ranks and on 31 October, 1725, at the youthful age of fourteen, he entered the novitiate of the Society of Jesus in Rome. His unusual talents manifested themselves particularly during the years devoted to literary and philosophical studies at the Collegio Romano, the most celebrated of the colleges of the Society of Jesus. Thus, for example, young Bosovich discovered for himself the proof of the theorem of Pythagoras. His professors, especially Father Horatius Borgondi, professor of mathematics, knew how to cultivate his talents, and he made such progress, especially in mathematics, that he was able to take the place of his former professor at the Roman College even before the completion of his theological studies. As soon as he had completed the ordinary studies of a young Jesuit, he was appointed regular professor of mathematical science in the same college. He performed the duties of this office with much distinction for a whole generation, as is evidenced by the numerous dissertations which he published every year, according to the custom of the time. These show Bosovich’s preference for astronomical problems. Among them may be mentioned: “The Sunspots” (1738); “The Transit of Mercury” (1737); “The Aurora Borealis” (1739); “On the Usefulness of the Telescope in Astronomical Studies” (1739); “The Figure of the Earth” (1739); “The Motion of the Heavenly Bodies in an Unresisting Medium” (1740); “The Various Effects of Gravity” (1741); “The Aberration of the Fixed Stars” (1742). Problems in pure mathematics as well as philosophical speculations regarding the various theories on the constitution of matter also engaged his attention and he took an active part in all scientific discussions which agitated the learned world of his time. To these belong his “The Earth’s Iron Core Possesses a Double Spherical Shape”; “Researches on Universal Gravitation”; “The Computation of a Comet’s Orbit from a Few Observations”, etc. His able treatment of these and similar problems attracted the attention of foreign, as well as of Italian, Academies, several of which—among them Bologna, Paris, and London—admitted him to membership. At Paris he shared with the famous mathematician Euler the honour of having submitted the correct solution of a prize problem.

Bosovich also showed much ability in dealing with practical problems. To him was due the project of the Observatory of the Collegio Romano, which afterwards became so well known. He first suggested using the massive dome-pillars of the college church of St. Ignatius as a foundation, on account of their great stability. (The church dome has not yet been completed, so the pillars still await the superstructure planned by the architect.) The unfavourable circumstances of the time and the storms prevailing against the Jesuit Order and, which is well known, in the suppression of the Society, prevented Bosovich’s plan from being carried out until 1850, when Father Secchi, his worthy successor, was able to bring it to completion. There is a close parallel, as may be observed in the two computer, between the project of the Jesuits in the Roman College, and Bosovich may, without hesitation be considered the intellectual forerunner of Secchi. Like Secchi, too, he was the adviser of the papal Government in all important technical questions. Thus, when in the middle of the eighteenth century the great dome of St. Peter’s began to show cracks and other signs of damage, causing consternation to the pope and to the Eternal City, Bosovich was consulted, and the excitement was not allayed until his plan to place large iron bands about the dome was carried out. His advice was sought when there was question of rendering innocuous the Pontine marshes and he was also entrusted with the survey of the Papal States. Pope Benedict XIV commissioned him and his fellow Jesuit, Le Maire, to carry out several precise meridian arc measurements, and it seems to have been due chiefly to his influence that the same pope, in 1757, abrogated the obsolete decree of the Index against the Copernican system. In many universities outside of Italy sought to number Bosovich among their professors. He himself was full of the spirit of enterprise, as was shown when King John V of Portugal petitioned the general of the Jesuits for ten Fathers to make an elaborate
survey in Brazil. He voluntarily offered his services for the arduous task, hoping thus to be able to carry out an independent survey in Ecuador, and so obtain data of value for the final solution of the problem of the extent of the figure of the earth, which had engaged the attention in England and France. His proposal led to the institution of similar surveys in the Papal States, the pope taking this means of retaining him in his own domain. A detailed account of the results of this work appeared in a large quarto volume (Rome, 1755) entitled: "De littorariâ expeditione per Pontificiam ditionem ad dimetiendos duo meridiani gradus et corrigendam mappam geographicam". A map of the Papal States made at the same time, which corrected many previous errors, proved to be likewise a welcome contribution to the discussion regarding the more or less spherical form of the earth. Many of the triangulations were accompanied by no slight difficulties. The two base-lines employed in the survey—one on the Via Appia, the other in the neighbourhood of Rimini—were measured with great care. The first was re-determined in 1854—55 by Father Secchi, as the mark indicating one end of the line measured by Boscovich and Le Maire had been lost. (Cf. Secchi's work: Misura della Base trigonometrica esternissima dell Italia inferiore, aperture del progetto pontificio, Roma, 1855.) Besides his work in mathematical astronomy we also find Boscovich speculating, upon scientific grounds, on the essence of matter and endeavouring to establish more widely Newton's law of universal gravitation. As early as 1748 he made essays from his pen in this field of thought, e.g. "De materie divisiabilitate et de principiis corporum dissertatio" (1748); "De continuatissi legis et ejus consectionalis pertinentibus ad primum materie elementa eorumque vires" (1754); "De lege virium in natura existentium" (1763); "Philosophia naturalis theoriam redacta ad unicum legem virium in natura existentium" (1758). Boscovich, according to the views expressed in these essays, held that bodies could not be composed of a continuous material substance, nor even of contiguous material particles, but of innumerable, point-like structures whose individual components lack all extension and divisibility. A repulsion exists between which they are indeed infinitesimal but cannot vanish without compenetration taking place. The motion and repulsion of these elements with which these elements are endowed. It tends to become infinite when they are in very close proximity, whereas within certain limits it diminishes as the distance is increased and finally becomes an attractive force. This change is brought about by the repulsion of the various particles. Boscovich divided his last-mentioned exhaustive work into three parts, first explaining and establishing his theory, then pointing out its applications to mechanical problems, and finally showing how it may be employed in physics. His attempt to reduce the most complicated laws of nature to a simple fundamental law aroused so much interest that in 1783 a third, and enlarged, edition of his "Theoria philo-
sophiae naturalis" (Venice, 1763) had become necessary and was published as an appendix to the catalogue of Boscovich's previous works. There are no less than sixty-six treaties dating from 1736—a proof of his literary activity. Some have already been mentioned and to these may be added his "De continentorium matheseos tomis tre"; in quarto (1752).

Boscovich attracted attention by his political writings as well as by his scientific achievements. His Latin verses in which he eulogized the Polish king, Stanislaus, Pope Benedict XIV, and various Venetians were then published in the American Academy of Rome. His "Carmen de Solis ac Lunae thecibus" (5 vols., London, 1769) was much admired. His services were also in demand in several cities and provinces. Thus, in 1757, he was sent by the city of Lucca to the Court of Vienna, to urge the damming of the lakes which were threatening the city. He acquitted himself of this task with such success that the Luccan government made him his permanent envoy and rendered him generous assistance on his scientific journeys, both in Italy, France, and England. While in England he gave the impulse to the observations of the approaching transit of Venus, on 6 June, 1761, and it is not unlikely that he proposed to employ small telescopes composed of liquids, to avoid chromatic aberration, may have contributed to Dollond's success in constructing achromatic telescopes. The citizens of Ragusa, his native town, besought him to settle a dispute in which they had become involved with the King of France—an affair which the pope himself designed to adjust. Boscovich returned from England in company with the Venetian ambassador who took him by way of Poland as far as Constantinople. He availed himself of this opportunity to extend and complete his archeological studies in these countries, as may be gathered from his journal published at Bassano in 1784: "Giornale d'un viaggio da Constantinopoli in Polonia con una relazione delle rovine di Troja". The hardships of this journey about which were written five letters (1762) employed at Rome in various practical works, such as the draining of the Pontine marshes. In 1764 he accepted the appointment of professor of mathematics at the University of Pavia (Tiecium). At the same time he was a frequent visitor at the residence of Father Pescesa of the Observatory of Mariselles, who was invited by the Jesuites of Milan to erect an observatory at the large college of Brera. He was able to avail himself of the technical skill of Boscovich in carrying out his commission and it may be questioned to which of the two belong the greater credit in the founding of this observatory which, even in our own time, with that of the Collegio Romano, is among the most prominent of Italy. It was Boscovich who selected the south-east corner of the college as a site for the observatory and worked out the complete plans, including the reinforcements and the necessary remodelling for the structure. Building operations were immediately begun and in the following year, 1765, a large room for the mural quadrant and other instruments, and a certain number of the smaller instruments, and a broad terrace, with several revolving domes to contain the sextants and equatorial, were completed. Such was the stability of the observatory that the new 18-inch glass of Schiaparelli could be mounted in it although a cylindrical portion of the wall of a diameter of 3 metres 75 centimetres takes the place of the octagonal hall of Boscovich.

The London Academy proposed to send Boscovich in charge of a scientific expedition to California to observe the transit of Venus in 1789 but, unfortunately, the opposition manifested everywhere to the Society of Jesus and leading finally to its suppression, made this impossible. He continued, however, to give his services to the Milan Observatory for whose further development he was able to obtain no indication of monetary assistance. In particular the adjustment of the instruments engaged his attention, a subject about which he has left several papers. But as his elaborate plans received only partial support from his superiors and patrons, he thought it best to use in 1772 of such being made him a director of the observatory, and, in fact, in the same year Father La Grange was placed in complete charge of the new institution. Boscovich was to become professor at the University of Pisa, but Louis XV gained his services and invited him to Paris where a new office, Director of the Office of Marine, was created for him—"service de la Marine"—with a salary of 8,000 francs was created for him. He retained this position until 1782 when he returned to Italy to supervise the
printing of his as yet unpublished works in five volumes, for it was not easy to find a suitable publisher in France for books written in Latin. In 1755 there appeared at Bassano, "Rogeri Josephi Bosco-
vich opera pertinenta ad opticam et astronomiam in quibus tomos distributa"; the last im-
presse work from the press of Bosovich in Bassano, which after its completion, retired for a time to the mon-
astery of the monks of Vallombrosa. He returned to
Milan with new plans, but death shortly overtook
him at the age of seventy-six, delivering him from a
severe malady which was accompanied by temporary
mental derangement. He was buried in the church of
Santa Maria Pudone.

Bosovich, by his rare endowments of mind and
the active use which he made of his talents, was pre-
eminent among the scholars of his time. His merits
were recognized by learned societies and universities,
and by popes and princes who honoured him and
bestowed favours upon him. He was recognized as a
gifted teacher, an accomplished leader in scientific
enterprises, an inventor of important instruments
which he designed and placed in circulation (micro-
scopes, etc.), and as a pioneer in developing new theories.

All this, however, did not fail to excite envy against
him, particularly during the later years of his life in
France, where men like d'Alembert and Condorcet
reflected with the utmost of their life all his former
Jesuit, and that, too, at a time when so many frivo-
ulous charges were being made against his lately sup-
pressed order. This hostility was further increased
by various controversies which resulted in differ-
ences of opinion, such as the contention between
Bosovich and Rochon regarding priority in the
invention of the rock crystal prismatic micrometer.
(Cf. Delambre, Histoire de l'Astronomie du XVIII* siècle, p. 645.) The invention of the ring-micrometer just mentioned, which Bosovich describes in his memoirs, "De annullis Aextroptis usu ad objects celestia determinda" (Rome, 1739), has been ascribed
without reason by some to the Dutch natural phi-
losopher Huygens. The chief advantage of the
simple measuring instrument devised by Bosovich
consists in its not requiring any artificial illumination
of the field of the telescope. This makes it useful in
observing faint objects, as its inventor expressly points
out in connexion with the comet of 1739.

The novel views of Bosovich in the domain of nat-
rality science, as in the "Miscellanea libratorii, utque
homines determinanda" (Rome, 1739), has been ascribed
without reason by some to the Dutch natural phi-
losopher Huygens. The chief advantage of the
simple measuring instrument devised by Bosovich
consists in its not requiring any artificial illumination
of the field of the telescope. This makes it useful in
observing faint objects, as its inventor expressly points
out in connexion with the comet of 1739.

out in connexion with the comet of 1739.

The novel views of Bosovich in the domain of nat-
rality science, as in the "Miscellanea libratorii, utque
homines determinanda" (Rome, 1739), has been ascribed
without reason by some to the Dutch natural phi-
losopher Huygens. The chief advantage of the
simple measuring instrument devised by Bosovich
consists in its not requiring any artificial illumination
of the field of the telescope. This makes it useful in
observing faint objects, as its inventor expressly points
out in connexion with the comet of 1739.

translation was undertaken by Severano, but never published. Aringhi's Latin translation appeared in 1831. The most noticeable of the two is known in antiquity, who were its founders, what martyrs and illustrious Christians were interred there. Many of his conclusions have in modern times been found to be erroneous, but on the other hand, recent research has shown that one important conjecture of Bosio's, which de Rossi thought without foundation, was wholly correct. (See Christian Archaeology.) Bosio's method is acknowledged by all to have been scientific; his shortcomings were those of the age in which he lived. In view of the fact that numerous frescoes which existed in the early seventeenth century have since been destroyed, it is unfortunate that the copyists employed by Bosio were not equal to the task assigned to them. Wilpert states that the illustrations of "Roma Sottanea" are of little use to the modern archaeologist.

MAURICE M. HAMERTT.

BOSNIA, Diocese of. See SIRMION.

Bosnia and Herzegovina.—Bosnia and Herzegovina form the north-western corner of the Balkan Peninsula, and are bounded on the two sides of the territory, Bosnia-Herzegovina is bounded on the north by the Austrian provinces and titular kingdoms of Croatia and Slavonia, on the east by the Kingdom of Servia, on the south by one of the nominal provinces of Turkey, the principality of Montenegro, and the titular kingdom and Austrian province of Dalmatia, and on the west by Dalmatia and Croatia. The Dinaric Alps and the Save and Drina Rivers form a large part of the boundary line of the country which in shape closely resembles an equilateral triangle. The joint territory of Bosnia is in general the usual continental one of cold winters and hot summers, while in Herzegovina the nearness of the sea makes the climate almost semi-tropical. The average yearly temperature is from 43.2° to 50° Fahr. The average temperature of Travnik, situated at a height of 1,640 feet in the centre of the country, is in January 28.4° Fahr., in April 50.5°, in July, 68.3°, and in October 50.3°. Since the time of the Romans Bosnia has yielded a large amount of iron; lignite or brown coal and salt are also obtained in a number of places. Minerals and hot springs abound; among these are the hot springs at Ilidze near Sarajevo, the chalybeate spring at Kiselicaj, and a spring impregnated with arsenic at Srebrenica. Bosnia contains a large amount of timber; 50 per cent of its area is covered with forests, and 25 per cent of the territory remains 18 per cent is in the rocky Karst region. The Bosnian forests are full of boars, bears, wolves, foxes, lynxes, and deer. Agriculture is of a very primitive character and could be made far more productive. The chief agricultural products of the country are maize and wheat; oats, rye, barley, hemp, and buckwheat are also raised. In Herzegovina in addition to these staples wine and oil are produced and figs are cultivated.

Population.—According to the census of 22 April, 1865, Bosnia has 1,311,828 inhabitants and Herzegovina 229,158, giving a total population of 1,591,358.

The number of persons to the square mile is small (about 80), less than that in any of the other Austrian crown provinces excepting Salzburg (about 70). This average does not vary much in the six districts (five in Bosnia, one in Herzegovina). The number of persons to the square mile in these districts is as follows: Doljna Tužla, 106; Banjaluka, 96; Bihać, 91; Sarajevo, 73; Mostar (Herzegovina), 65; Travnik, 62. There are 5,353,853 feet; the Treškavića-Planina (6,851 feet), and the Bjelasica-Planina (6,782 feet) lie near the border of Herzegovina, respectively west and south-west of Sarajevo. The Save is the chief river of Bosnia and its tributaries are the Una, the Vrbas, the Ukića, the Bosna, and the Drina. Herzegovina is drained by the Neretva (Neritva) River. As Bosnia falls away towards the north until rock which forms the upper region of the Save, it is easy of access from central Europe and was, consequently, exposed to incursions by the kings of Hungary. After crossing the Save the Hungarian armies could penetrate into the heart of the country without encountering any natural obstacles. Bosnia was also, consequently, the boundary line of the formation of the land, frequently divided politically into two parts, the upper or mountainous Bosnia, which extended to where the rivers pass into the flat country of the Save, and the Bosnian plain along the Save. This line of division and made it the boundary between the provinces of Dalmatia and Pannonia. Just as the political unity of Bosnia was made more difficult by its natural configuration, so on the other hand, the development of a compact principality was favoured in Herzegovina (called also Hum, Chum, and Chlumo) by its basin-like shape.

Physical Formation.—Mesozoic formations appear—throughout this territory especially in the shape of Triassic rocks; where there are dislocations the underlying palaeozoic rocks frequently project. The rocks are made of slate, sandstone, and limestone, as for example, the famous mountain range of slate rock called Krotovina, in the western part of the Sarajevo district, and the range called Foara on the Save. Jurassic rock and chalk formations are found in Herzegovina and western Bosnia. Of far greater extent are the neogenic fresh water formations containing the great coal deposits of the two territories. There is also much volcanic rock of various ages. The climate of Bosnia is in general the usual continental one of cold winters and hot summers, while in Herzegovina the nearness of the sea makes the climate almost semi-tropical. The average yearly temperature is from 43.2° to 50° Fahr. The average temperature of Travnik, situated at a height of 1,640 feet in the centre of the country, is in January 28.4° Fahr., in April 50.5°, in July, 68.3°, and in October 50.3°. Since the time of the Romans Bosnia has yielded a large amount of iron; lignite or brown coal and salt are also obtained in a number of places. Minerals and hot springs abound; among these are the hot springs at Ilidze near Sarajevo, the chalybeate spring at Kiselicaj, and a spring impregnated with arsenic at Srebrenica. The chief agricultural products of the country are maize and wheat; oats, rye, barley, hemp, and buckwheat are also raised. In Herzegovina in addition to these staples wine and oil are produced and figs are cultivated.
BOHIA

population (about 98 per cent) belong to the southern Slavoic people, the Serbs. Although once in race, the people fought in religious beliefs three
shades, the Orthodox, the Roman Catholic, and the Mohammedans, about 550,000 persons (35 per cent), Greek Schismatic, about 674,000 persons (43 per cent), and Catholics, about 334,000 persons (21.3 per cent). The last mentioned are chiefly peasants. The Mohammedans form the mass of the population in the region in the north of the country, and in the district of Trebinje. In the north-west, in the district of Serbia, the Orthodox and in the south-eastern part of the territory, the Greek Schismatic preponderate in the district of Banja Luka.

In the Catholic Church of the Latin Rite exceed the other two and in the majority in the diocese of Travnik and in northern Herzegovina. There are in addition 8,000 Jews and 4,000 Protestants. Divided according to occupation 85 per cent of the population are farmers or wine-cultivators (1,285,291). There are 5,693 large estates, the owners of which are chiefly Mohammedans, 88,970 cultivators of land not own their own (kmotren), 88,567 free peasants who own the land they till, and 22,625 peasants who own farming-land and also cultivate the land of others. The population of the towns is small.

Historically, Bosnia (originally merely means human settlements in Bosnia dating from the Stone Age. The earliest inhabitants of Bosnia and Herzegovina of whom there is any certainty are the Illyrians, an exceedingly rapacious pastoral people who were divided into two separate peoples, the Sciri, who lived in the north-west, who were notorious pirates; the Ardizens living south of the Liburnians, and the Antiariats, who were neighbours of the Ardizens living still farther to the south. The migrations of the Celts in the third and fourth centuries before Christ drove various Illyrian tribes out of their former possessions. From the third century until 167 B.C., a powerful Illyrian kingdom existed, under rulers called Agro, Teuta, and Centius, in southern Dalmatia, and the adjoining Herzegovina and Montenegro. The Romans had a hard struggle before they succeeded finally in breaking the power of the Illyrians and in getting control of Bosnia and Herzegovina (6 B.C.-A.D. 9). The sagacious Romans saw that in order to control the line of the Danube and the east coast of Italy it was necessary to arrest the triangular-shaped country of the Illyrians. No part of the peninsula contains so many traces of Roman civilization as Dalmatia and the adjoining Bosnia. The Romans built a road from Mitrovica (modern Istrija) to Dalmatia (modern Split), and continued it from Gradiska through what is now western Bosnia or Turkish Croatia as far as Salona; they constructed a second road through upper Bosnia across the present district of Serajevo to Bosnian on the Drina, and from here to Mitrovica; a third road went from Salona to Naora (near Dubrava) and to Scodra (Scutari). The Romans named the province Dalmatia after the largest and bravest of the tribes living on the coast. They divided it into three administrative dioceses, the chief cities being, respectively, Salona, Cetina, and Dalmatia, and from these, and from Narona, the northernmost part of Bosnia, extending for some distance from the Save, was included in the province of Pannonia. The Illyrians who had been familiar only with war and cattle-raising now turned to agriculture, under the guidance of the Romans, to mining, placer-mining for gold, and agriculture. They became largely Romanized and for hundreds of years their legions bravely defended the empire.

The fall of the Western Roman Empire Dalmatia and Pannonia came into the possession of the Ostrogoths under King Theodoric. During the war that followed (535-554) between Justinian and the Ostrogoths, the Slavs made repeated incursions into the provinces. It may be that they were called in by the Ostrogoths. After the Slavs the Avars raided the territory and in 588 turned Dalmatia almost into a wilderness. After this the Slavs greatly desired the country and succeeded in taking possession during the first half of the seventh century. Among the tribes which now owned the land, the Hrotai (later called Croat) lived on the Dalmatic coast and the Serbi in the interior. Up to the eighth century the influence of the Byzantine Empire was considerable. In the whole period of the ninth century the power of the Carolingian dynasty extended as far as the south-eastern Alpine provinces, the Croatians came under the influence of Western civilization and embraced Latin Christianity. The tribes which now owned the land were ruled by the archal form of government and the old pagan worship much longer than the dwellers on the coast, notwithstanding the connexion which they had had for centuries with Constantinople. Bosnia seems to have belonged to Croatia as late as the beginning of the tenth century. A little later the Servian prince Cesar (931-960) succeeded in freeing Servia from the suzerainty of Bulgaria and built up a confederation of which Bosnia formed a part. About 955 Ceslav was obliged to defend the dependent banat, or district, of Bosnia against the Venetian Sokota (the Venetian Bosna) from an incursion of the Magyars. The death of Ceslav and the dissolution of his kingdom, Bosnia was ruled by native ban or chief. In 968 however, Bosnia was conquered by the Croatian king, and in 1010 the whole Herzegovina, and in 1021 that of the Balkan Peninsula came under the sway of the Eastern Roman Emperor, Basil II. After Basil's death Bosnia regained its independence and was ruled by native ban until it was united with the domain of the Serbs, II, King of Hungary. In 1105 this ban called himself for the first time King of Raša (Boesia).

During the entire reign of the Emperor Manuel I, Commes, (1143-80) a long and fierce struggle went on between the Byzantine Empire on the one side and Hungary and the southern Slavs on the other; in this Frank Bor, the first ruler of Bosnian known by name, remained faithful to Hungary. In 1163 however, Boris took sides against Stephen III in the quarrel over the succession to the Hungarian throne. He was defeated by Gottfried of Meissen who was sent with an army against him, and his family lost their power in Bosnia. The Banat of Boris extended from Livno and the valley of the Drina to the west, in the east, three years later, Bosnia, Sirmia, and the greater part of Dalmatia passed to the Hungarian Empire. After the death of Manuel I, Commes (1180) the new Ban, Kulun, was able to shake off the foreign yoke. But Đela III of Hungary, desiring to make Bosnia a dependency of his own kingdom, persuaded the pope to place the Bishopric of Bosnia and the Diocese of Ston in Herzegovina under the Archdiocese of Spalato, the territory of which belonged to Hungary. Before this Bosna had been suffragan to Ragusa. In order to counteract this indirect Hungarian control Kulun, his family, and 10,000 Bosnians, between the years 1190 and 1193, took refuge in Paterine heresy. When Pope Innocent III and King Emmerich of Hungary joined forces to exterminate the Paterines and to conquer Bosnia, Kulun preserved Bosnia's independence of Hungarian control by refusing to take part in the conflict in 1233. For four months the papal legate, Johannes de Casamari, during the reign of his successor, Ban Stephen, the Paterines grew so powerful that they deposed Stephen and substituted one of their own adherents, the able Matthias Ninozloval (1222-30), who was ban and ban of Bosnia. In 1332 Nikoal returned to the Catholic Faith, but notwithstanding this the land was filled with adherents of the Paterine belief, and in 1254-39 a crusade was preached against Bosnia but was not however, carried out. Although Ninozlova main
tained his position as Ban of Bosnia, he was not able to found a dynasty and after his death his principaliy gradually fell to pieces. The districts of Herzegovina near Ragusa aimed at individual independence, while the rest of the territory now included in Bosnia and Herzegovina gradually came into a more complete dependence on Hungary. The son of Buda IV of Hungary (1235–70) upper Bosnia and the district of Posavina were formed into the Banat of Bosnia, the region in the west on the Usora into the Banat of Usora, and the region in the east on the Drina into the Banat of Sol or Tusla, while the western part of the present territory of Herzegovina, the region of the Rama, and southern Bosnia were ruled by various powerful Croatian families. At this time a relative of Ninoslav named Przyzda lived on the upper part of the Bojna River. Przyzda’s son, Stephen Katroman (1222–53), was the first of the Katroman family from which for a century and a half came the bans and kings of Bosnia. Stephen was a vassal of the kings of Hungary, who were his relatives and members of the house of Anjou. Through this connexion Stephen was able, after defending the interests of the present territory of Herzegovina, to secure this territory to his domains. The tenth century Herzegovina had formed a so-called buffer district between the Dalmatic coast and Bosnia on the one side and Servia on the other. On the dismemberment of the great Serb army of Durrach, Turko, Stephen Katroman’s nephew and successor, with the help of King Louis I (the Great) of Hungary, became master of the district of the upper Drina, Trebinje, and Canale. Turko now, with the consent of Louis, took the title of King of Bosnia. A few years later (1284) Bosnia and Herzegovina were laid waste for the first time by the Turks. After the death of Louis the Great (1382) Turko threw off the suzerainty of Hungary and conquered the cities on the Dalmatic coast. During the reigns of his successors Stephen Dabija (1391–95), Queen Helena (1395–98), Stephen Osoja (1398–1413), Stephen Ostojitse (1418–21), Stephen Turtko II (1404–31) (the rival of the two last-named kings), Stephen Thomas (1443–51), and Stephen Thamachevits (1461–69) the kingdom rapidly declined in power so that these rulers were not able to maintain their authority over the conquered districts or to keep the inquisitive vassals and nobles in check. The nobles ruled their territories with little regard for the king; they had their relations with the state, granted nobleman the right to have relations with foreign powers, and carried on on bloody wars with one another.

The last king, who possessed only the land on the right bank of the Bojna, sought to strengthen his position by becoming a vassal of the pope. He hoped by this means to obtain the aid of the Christian countries of Western Europe in defending himself against the threatening power of the Turks. In 1462 he refused to pay tribute to the Sultan Mohammed II; but when in the following spring Mohammed invaded Bosnia with a powerful army, the last prince found himself deserted. Deceit and treason, especially on the part of the Bogomili, completed his ruin. He was taken prisoner by the Turks and beheaded, by the order of the sultan, July, 1463, probably near Jajce (Jaitza). The campaign of the Turks ended in the overthrow of the Bosnian kingdom; only Herzegovina maintained its independence. One hundred thousand prisoners of both sexes were taken; 30,000 Bosnian youths were compelled to join the janissaries. The nobility, especially the Bogomili, became Mohammedanized and left the country. The following year King Matthias Corvinus of Hungary freed from the Turkish yoke a part of Bosnia, the Banate of Jajce and Srebrenica (Srebrenitz which belonged to Hungary until the battle of Mohyla (1538). Herzegovina came under the domination of the Turks twenty years after the fall of Bosnia (1483). The long period of Turkish possession is lightened by the daring feat of Prince Eugenius von Stolberg, in the autumn of 1697 after the battle of Zenta, with 4,000 cavalry and 2,000 infantry advanced towards the capital of Bosnia; as the expected rising of the Christian population failed to take place, he retreated, retaking with him 40,000 liberated. By the Treaty of Passarowitz (1718) the northern part of Bosnia and Servia was given to Austria, but the Treaty of Belgrade restored this district to the Turks. Among the many revolts in Bosnia against the banalocratic rule of the Desmani Turks that of 1520–31 under Hussein Aga deserves mention; of the revolts in Herzegovina that of 1785. Article 25 of the Treaty of Belgrade, 13 July, 1787, granted Austria the right to occupy and govern Bosnia and Herzegovina. The main column of the Austrian troops (thirteenth army corps), under the command of General of the Ordnance Joseph Freiherr von Phillopoliv crossed the Save into Bosnia near Bred 29 July; two days later Major-General Jovanovic entered Herzegovina with a division. As the occupation took place with the consent, the Bosnian population would be no fighting. But the Mohammedan population, secretly incited by Servia, rose under the leadership of the adventurer, Hadschi Loja, against the ‘foreign conquerors’. They were joined by the large bands of Dalmatian Albanian and Turkish troops who had received no instructions. The insurgents were defeated in bloody battles at Magija, Zepce, Jajce, Tusla, and other places. On the evening of 18 August the Austrian troops stood before Sarajevo which was taken by storm the next day. In order to hasten the end of the revolt three other Austrian army corps entered the contested district; by the end of September, 1787, both territories were subordinated with the exception of a few points in the south of Herzegovina, which fell to the Turks. In the Turkish province of Novi-Basar Austria holds some important military positions and controls the commercial routes; the Turks still retain the civil administration.

Introduction of Christianity.—Christianity was introduced into both Bosnia and Herzegovina from Salona at a very early date. Many of the dioceses which were suffragans of the Archdiocese of Salona in the sixth century must be sought within the present limits of Bosnia and Herzegovina. This is especially true of the diocese of Basta. Princely power in Bosnia was in the eleventh century centered on Kotor. But the See of Salona, which was situated in the heart of the upper part of the present Bosnia. When the Arian Ostrogots came into possession of these districts they did not interfere with the organization of the Church nor did they persecute the Catholics. The acts of the two provincial synods of Dalmatia which were held at Salona in 530 and 532 have been preserved and these show that in the year 530 four dioceses existed in Bosnia-Herzegovina. At the second synod two new dioceses were founded, Ludricia (Livno), and Sarsecterensia (Sarajevo), the last named being north of Mostar. During the war that lasted twenty years between Justinian and the Ostrogots, the latter changed their policy towards the Catholics and persecuted them. Only one of the dioceses just mentioned, Basta, survived the Slavonian invasion. Until the middle of the eleventh century Basta was suffragan to the Archdiocese of Salona; in 1067 it was transferred to the Archdiocese of Dioclea-Antivari, and shortly after it was made suffragan to the Archdiocese of Ragusa. Dioceses now arose bearing the names of the archdioceses as to the administration of the Bosnian bishopric; the strifes of the Bogomili to gain a firm footing in Bosnia.

The heresy of the Bogomili was started in the tenth century by Jeremiah, also called Bogomil, a Bulgarian:
priest. His followers called themselves Christians and considered their faith the only true one. In Bosnia they were named Paterines. The Paterines, or Bogomil, rejected marriage, forbade intercourse with those of other faiths, disbelieved in war, in any execution of human beings, in oaths, in seeking for wealth, and in the enjoyment of pleasures. Their numbers greatly increased in number and influence in Bosnia after the accession to their faith of Ban Kulon, and gained numerous adherents in the neighboring districts of Croatia and Slavonia, and in the cities of the Danube Peninsula. This movement greatly appeared at the same time. At the beginning of the thirteenth century even the Bosnian bishop was an adherent of the Paterines; Pope Gregory IX, therefore, deposed him in 1233 and raised to the see Johannes, a German Dominican from Wilhausen in Westphalia. It is to the great credit of the Dominicans that they entered upon a successful spiritual campaign against the Paterines in Bosnia and Dalmatia. The Franciscans who had an intimate knowledge of the common people had even greater success. They were permitted to settle in Dalmatia and Dalmatiean coast to the Church, but they also extended their spiritual activity to the interior of the country. Yet notwithstanding these efforts and those of the pope, in spite of two Bosnian crusades, and of the treaty of 1301 between Bosnia to the west of the river of the occasion of Kalocs in Hungary, the sect was not suppressed. The formal return of the Bosnian nobles and monarchy to Catholicism was merely superficial.

The Turkish conquest of 1453 drove a large part of the Catholic population out of Bosnia. This led the courageous Franciscan monk, Angelus Zajeciovic, to go before the Sultan Mohammed II to call his attention to the fact that the Christian inhabitants were going out of Bosnia in all directions. The sultan, not wishing to have the newly conquered province desolate, gave a favor to the instrument that Christians should be allowed the free exercise of their religion. From that time until the present the Franciscan Order has been the only shield of the Christians in these two territories.

Church Statistics.—After the Turkish conquest the Bishopric of Bosnia had only a nominal existence. In 1735 the diocese was reorganized as the Vicariate Apostolic of Bosnia and Herzegovina and its administration confided to the Franciscans. Since 1846 the country lived in peace. After the Austrian occupation Pope Leo XIII erected the Archdiocese of Sarajevo with the suffragan dioceses of Banjaluka in the north-western part of Bosnia, Mostar-Duvno in the northern part of Herzegovina, and Markova-Trebinje in the southern part of the same province. The Diocese of Markova-Trebinje which was founded in 870 has no bishop of its own but is administered by the Bishop of Mostar-Duvno. The training of the secular priests in all four dioceses is in the hands of the Jesuits. The other male religious orders represented are: the Franciscans, who possess 17 monasteries, and have almost entire charge of the work of the sacred ministry in the Archdiocese of Sarajevo and the Diocese of Mostar-Duvno; and the Trappists, with 3 monasteries and 182 members, at the monastery of Ljezubić near Stebina. The Sisters of Mercy, with 12 convents; the Daughters of Divine Love, 5 convents; the Sisters of the Precious Blood, 9 convents; the School Sisters, 1 convent.

The Austrian occupation of Bosnia and Herzegovina since 1878 has not only done much for the material prosperity of the country, but has also been of great assistance to the Catholic religion. This is shown by a comparison with earlier years. In 1850 the two territories contained 150,000 Catholic inhabitants; in 1874, 35,508; in 1897, 384,142, or a fourteen-fold increase; in 1905, the population, and the Franciscans about 1880 there were no Catholic families in the district between Gradiška and Banjaluka, now there are 10 monasteries in this region. Before the Austrian occupation there were only 7 Catholic families in Trebinje; Trebinje has now several parishes and churches. In Herzegovina 8 parishes, 25 priests, and 30,000 Catholics have increased to 45 parishes, 100 priests, and 110,000 Catholics. The Catholic monasteries, school-houses, etc., which have come into existence since 1878 are proofs of the advance in intelligence and religion. Both territories show how beneficent has been the action of Austria in the Balkan Peninsula. The new Austrian constitution has been promulgated in Austria-Hungary and Turkey on 21 April, 1879, the former country bound itself to protect in Bosnia and Herzegovina the religious liberty of the inhabitants as well as of temporary residents. This agreement includes Catholics. The regulations in regard to marriage and divorce, as well as the exemption of the clergy from public services and military duty, are about the same as those in Austria. The cemeteries are still denominational institutions and are reserved even more exclusively than in Austria for the adherents of each faith.

VJEKOSLAV, Gesch. Bosniens von den ältesten Zeiten bis zum Verfolge des Königsreiches, Germ. tr. from the Croatian by V. E. Osterreich (Leipzig, 1887); SUPANSCHER, Geschichte der katholischen Kirche in Europa (Vienna, Prague, and Leipzig, 1889), pt. 19; Menon in "Bosnie et Herzégovine," Monarchie in Wort und Bild (Vienna, 1901); SCHWERER, Lenzenfeld, Bosnien, das Land und seine Bewohner (Vienna, 1880); Die Occupation Bosnien et der Herzégovine, Monarchie in Wort und Bild (Vienna, 1880); Truppen, from the royal and imperial war-archives (6 pts., Vienna, 1879-1880); P. von Arbor, Bosnien und Herzegovina (4 pts., Vienna, 1879); Wissenschaflich, Mitteilungen aus Bosnien und Herzegovina, publication of the National Museum at Sarajevo (13 vols., Vienna, 1890-1908); Bonnes, Alfonsus der Herzégovine und der südt. as among the most eminent theologians of his age. He compiled or wrote the lives of several eleventh and twelfth century popes, among them the life of his uncle, and indulged in the lighter accomplishment of versifying, examples of his poetic powers still exist. He was received in the papal palace, in the form of metrical lives of saints. He followed his uncle to Rome; and on the latter's elevation to the Papal Chair, was created by him Cardinal-Deacon of the title of St. Cosmas and Damian, in December, 1155, and was also appointed Chamberlain of the Holy See. Adrian sent Boso on a mission to Portugal; for what precise purpose does not transpire, but the fact is attested by the registers of Pope Innocent III. He also confined to him the governorship of the Castle of Sant' Angelo, being somewhat suspicious of the fidelity of the Roman populace. When Adrian IV died in 1159, dissensions arose in the conclave as to the choice of his successor, the result of which was the creation of a schism lasting seventeen years. Four cardinals in the imperial interest voted for Cardinal Octavius, who assumed the name of Victor IV, but he was acknowledged only by the Germans. On the very day of Adrian's burial in the Vatican basilica, 5 September, Cardinal Boso, who appears to have taken the lead, withdrew with the majority twenty cardinals, who asked Cardinal Sant' Angelo to escape the vengeance of the anti-pope, and straightway elected as pope, Cardinal Rolando (Bandinelli) of Siena, who was consecrated under the name of Alexander III. The new pope was not unmindful of his obligations to Boso, and soon (1163) promoted him Cardinal-Priest of the title of St. Pudentiana. When Alexander made his memorable journey to Venice to receive the submission and allegiance of the Emperor Frederick, and to ratify the Peace of Venice (24 June, 1163), which closed the schism, he was accompanied by Boso. Alexander also entrusted Boso with a mission to Tuscany, an event attested by the registers of Alexander IV. Boso's name appears attached to many Bulls, both of Adrian IV and of Alexander III.

HENRY NORBERT BIRT

BOSUET, Jacques Le, French theologian and Doctor of the Sorbonne, b. at Paris 1546; d. at Rome 1626. He entered the Benedictine Order at the Royal Abbey of St. Denis, of which he became abbotial prior. He was professor in 1564 at the Cardinal Le Bové's College. He took a prominent part in the Catholic League and the disputes concerning the successor to Henry III, whose death he considered to be just punishment. The accession of Henry IV, against whom he had written, and the execution of de Guise in 1587 necessitated his leaving France in 1591, and he went to Rome, where he entered the service of the Curia. He was made a consultor of the Congregation de Auxiliis, established in 1599 to settle the controversy on grace between the Dominicans and the Jesuits. On its dissolution, in 1607, he determined to return to France, but the pope, Paul V, kept him in Rome. His chief work consisted of "Animadversiones" against twenty-five propositions of Molina, a Spanish Jesuit who had written a book on grace, defending the doctrine of double effects of the Dominicans. The "Animadversiones" were published by Antonio Raynaldo, the Dominican, in 1644. Le Bousset's "Diarium Congregations de Auxiliis" has unfortunately perished.

G. CYPRIAN ALSTON

BOSUET, Jacques-Bénigne, a celebrated French bishop and pulpit orator, b. at Dijon, 27 September 1627; d. at Paris, 12 April, 1704. For more than a century his ancestors, both paternal and maternal, had occupied judicial functions. He was the fifth son of Bénigne Bosset, a judge in the Parliament at Dijon, and Marie Madeleine de Muschamp, a lady of classical studies at the Collège des Grands, conducted by the Jesuits, in Dijon, and, on his father's appointment to a seat in the Parliament of Mols, he was left in his native town, under the care of his uncle, Claude Bosset d'Alseray, a renowned scholar. His extraordinary ardour for study gave occasion to the schoolboy joke, deriving his name from bosbus aratro. In a very short time, he mastered the Greek and Latin classics. Homer and Virgil were his favourite authors, while the Bible soon became his livre de chrest. Speaking of the Scriptures, he used to say: "Certe, in his consensu, in his immor, summa votorum est." Early destined to the Church, he received the tonsure when he was only eight years old, and at the age of thirteen he obtained a canonicate in the cathedral of Mols. In 1642, he left Dijon and went to Paris to finish his classical studies and to take up philosophy and theology in the Collège de Navarre. A year later he was introduced by Arnauld at the Hôtel de Rambouillet, and was offered a chair in the faculty of philosophy, which he declined. In 1646, he delivered an extemporaneous sermon, which caused Voiture's remark: "I never heard anybody preach so early nor so late." A Master of Arts in 1644, he held his first thesis (tentation) in theology, 25 January, 1648, in the presence of the Prince de Condé, who was ordained sub-deacon the same year, and deacon the following year, and preached his first sermons at Mols. He held his second thesis (sorbonica) 9 November, 1650. For two years, he lived in retirement, preparing himself for the priesthood under the direction of St. Vincent de Paul. He was ordained 18 March, 1652. A few weeks later, the degree of Doctor of Divinity was conferred upon him. Appointed Archdeacon of Sarrebourg (January, 1652), he resided for seven years at Mols, devoting himself to the study of the Bible and the Fathers, preaching sermons, holding controversies with Protestants, and yet, finding time for the secular affairs for which he was responsible, as a member of the Assembly of the Three Orders. In 1657 he was induced by St. Vincent to come to Paris and give himself entirely to preaching.

Though living in Paris, Bosselet did not sever his connexion with the cathedral of Mols; he continued to hold his benefice, and was even appointed by the Cardinal de Bourbon a preceptor to the Dauphin. 13 September, 1670, he threw himself with indefatigable energy into his tutorial functions, composing all the books deemed necessary for his pupil's instruction, models of handwriting as well as grammar manuals and those of the Dauphin. The "Animadversiones" were published by Antonio Raynaldo, the Dominican, in 1644.

Le Bousset's "Diarium Congregations de Auxiliis" has unfortunately perished.
wrote innumerable spiritual letters, took care of his religious communities (for whom he composed "Meditations on the Gospel" and "Uplifting of the Soul on the Mysteries"), and entered on endless polemics with Ellies du Pin, Caffaro, Fénélon, the Probal and J. Richard Simon, and the Jansenists. From 1700, his criticism of Jansenism strengthened by the letters of the Censure; did not prevent him from wrestling in defence of the Faith. Confining to his bed by illness, he dictated letters and polemical essays to his secretary. As Saint-Simon says, "he died fighting." A list and criticism of Bossuet's chief works will be found in the following appreciation, by the late Ferdinand Brunetiére. Out of one hundred and thirty works composed by Bossuet from 1653 to 1704, eighty were edited by himself, seven or eight by his nephew, the Abbé Bossuet, afterwards Bishop of Troyes; the remainder, about forty-two, not including the "Letters" and "Sermons," appeared from 1741 to 1789. The principal complete editions are: the Versailles edition 1815-19, 47 vols. in-8; Lachat (Vives). Paris, 1862-84, 31 vols. in-8; Guillaume. Paris, 1840-50, 10 vols. in-8. Of course, the complete edition of Bossuet's complete works has been made as yet, only the sermons having been edited (in a most scientific manner) by the Abbé Lebrocq: "Ouvres oratoires; édiction critique complète, avec introduction, index, préface, notes, et choix de variantes," Paris, 1890, 6 vols. in-8. Louis N. Delamarre.

BOSSEUt. LITERARY AND THEOLOGICAL APPRAISAL OF - The life of this great man, perfectly simple as it was, and all of one piece with itself, may be divided into three epochs, to each of which as a matter of fact there are found to correspond, not a new aspect of his genius, at least occupations, but a new nature, not altogether of the same nature, and which consequently show him to us in a somewhat different light. At first, one perceives in him only the orator, the greatest, perhaps, who has ever appeared in the Christian pulpit—greater than Chrysostom and greater than Augustine; the only man whose name can be compared in eloquence with those of Cicero and of Demosthenes (1617-70).

Appointed preceptor to the Dauphin, son of Louis XIV, he devoted himself for more than ten years entirely to this onerous task (1670-81), appeared in the pulpit only on rare occasions, returned to the studies which he had somewhat neglected, and composed for his pupil works of which the "Discourse on Universal History" is still the most celebrated. Finally, in the last period of his life (1681-1704), being not a Cathol of Meaux, though he still preaches regularly to his own flock, and raises his eloquent voice on solemn occasions—to open the Assembly of the Clergy of France, in 1681, or to pronounce the funeral oration of the Prince de Condé, in 1687—yet it is above all the great controversialist that his contemporaries admire in him, the defender of tradition against all the novelties which sought to weaken it, the unwearying opponent of Jure, of Richard Simon, of Madame Guyon, and, incidentally, of Fénélon himself; he is the theologian of Providence, and—stirring contrast—on the eve of the Regency, he is "the last of the Fathers of the Church."

First Period (1627-70).—He made his first studies with the Jesuits of his native city, completed them in the University of Toulouse, ordained priest, entered into possession of the archdeaconry of Sarrebourg, in the Diocese of Metz, in 1652. Anywhere else than at Metz, no matter in what part of the world, he would have doubt without doubt become a literary historian, and his environment commonly shows its effects only in the aura of mediocrity. But, as there existed at Metz a large Jewish community (and in some respects, the only one in France that was recognized by the State), and as the Protestants were numerous, and still fervent, in the neighbouring province of Alsace, one may believe that Bossuet's natural tendency to take religion on its controversial side was encouraged or still strengthened by the fact that, if desired, may be found in the fact that the manuscript of one of his first sermons, "On the Law of God," 1653, still bears this statement in his own handwriting: "Preached at Metz against the Jews." And in this other fact, that the first work he had printed was a "Refutation," in 1655, of the catechism of Paul Ferry, a renowned Protestant pastor of Metz. Be that as it may; as soon as the young archdeacon began to preach his reputation quickly spread, and very soon the pulpits of Paris were vying with one another to secure him. It may therefore be said that from 1656 to 1670 he gave himself entirely to the ministry of preaching, and as a matter of fact, three-fourths of the two hundred, or more, "Sermons" which have reached us, either complete or in fragments, and which are not distinguished as "Sermons," properly so-called; "Panegyrics of Saints;" and "Funeral Oration." These last number ten in all. In some editions the "Sermons on Religious Professions" ("Sermons de l'Ordre"), of which the last celebrated is that on the profession of Madame de la Vallière, preached in 1674, and the "Sermons for the Feast of the Virgin," are classed by themselves.

What are the essential characteristics of Bossuet's eloquence? In the first place, the force, or, to put it, perhaps, the word, the word, and by this I mean, inclusively, exactitude and precision, the fitness of phrase, the neatness of turn, the impressiveness of the gesture implied in his words, and, generally, all the qualities which the French writer who, entertaining, having Pascal, a great lover of the artifice of rhetoric, for that very reason best understood the resources of French prose. There is nothing, in French, which surpasses a fine page of Bossuet.

The second characteristic of his eloquence is what Alexandre Vinet, though a Protestant, has not feared to call, in an essay on Bourdaloue, the depth and reach of its philosophy. He meant that while the illustrious Jesuit in his "Sermons" is always strictly orthodox and Bossuet, although a Catholic, excels, besides, in demonstrating, even apart from Catholicism, the peremptory reasons in the depths of our nature and in the sequence of history why one should feel and think like a Catholic even if one were not a Catholic. The opinion of Vinet may read Bossuet's sermons on "Death," "Ambition," "Providence," "The Honour of the World," "Our Dispositions in Regard to the Necessities of Life," "The Eminent Dignity of the Poor," "Submission to the Law of God," and also the sermons for the Feast of the Blessed Virgin: The "Sermon for the Profession of Madame de la Vallière" is another beautiful example of this philosophic character of Bossuet's eloquence.

Lastly, its third characteristic is its movement and lyric power. Bossuet—the Bosseut of the "Sermons" and of the "Funeral Oration"—is a poet, a great poet; and he is lyrical in his blending of personal and interior emotions with the expression of the truths which he unoids. The "Uplifting of the Soul" and "The Divine Mercy," and "Meditations on the Gospel" are titles of two of his most beautiful works, in which in his old age he, as it were, condensed the substance of his "Sermons". But it may be truly said that there is no sermon of his which is not either "Meditation" or an "Uplifting of the Soul." And it is not strange that among the most Buch century these titles, "Uplifting of the Soul" and "Medi-
tations" were applied by Lamartine and Vigny to their own first poetic works? Such are the essential characteristics of Bossuet's eloquence, to which might easily be added a great many others, perhaps more showy, but which may be found in other preachers, while those we have mentioned belong to him alone.

Meanwhile, the reputation of the preacher was growing every day. Above all, his Lenten conferences before the Court in 1662 and in 1666 had brought him into prominence, particularly the second series, which included some of his finest "Sermons." The Protostrians, on the other hand, although they had no adversary more moderate than he, had none more formidable; and when some startling conversion, like that of Turenne, took place, the honour or the blame of it was laid upon the Abbé Bossuet. His little book, circulated in manuscript under the title of "Exposition of the Doctrine of the Catholic Church on Subjects of Controversy," worried the Protestant divines more than had any folio in fifty years. The public voice marked him out for a bishop. We know, too, that, though doubtless without his being aware of it, his name figured, after 1667, among the candidates for the office of preceptor to the Dauphin, those names having been selected, by the king's command, under the direction of the Duc de Saint-Simon. It is said that Louis XIV did not favour Bossuet's appointment; he preferred the President De Périgny. In 1669, however, Bossuet was appointed Bishop of Condum. It was as Bishop of Condum that in September of that same year he pronounced the "Funeral Oration on Henrietta of France," and was summoned to preach the Advent of 1669 at Court. When, soon after this, the daughter followed her mother to the grave, he was again summoned, in 1670, to pronounce the "Funeral Oration on the Duchess of Orleans," while the President De Périgny died unexpectedly, and this time the choice of Louis XIV went straight to Bossuet. He was named preceptor to the Dauphin, 5 September, 1670, and a new period began in the history of his life.

Second Period (1670-81).—In order to devote himself solely to his task, he gave up his Bishopric of Condum, which he never saw, and returned to the profane studies which he had been obliged to abandon. He himself laid down in his letter to Pope Innocent the programme he wished to follow, a programme the intelligent liberality of which is impossible not to admire. But, while giving the closest personal attention to the Dauphin's education, his own genius completed, in a way, its process of ripening by contact with antiquity; his ideas collected themselves and gained in precision: he took conscious possession of what may be called his originality as a thinker, and made for himself his private domain, as it were, in the vast field of apologetics. And, as the other Fathers of the Church have been, in the history of Christian thought, and the theologian of the Incarnation, another, the theologian of Grace, so did Bossuet then become the theologian of Providence.

Here we may take an excellent example of what is to-day called the development, or evolution, of a dogmatic truth. The idea of Providence surely constitutes the basis of Christian belief in all that touches the relations of man with God, and in this respect it may be said that the "Discourse on Universal History," so anxiously anticipated by the Secretary of St. Augustine, or in the "De Gubernatione Dei" of Salvianus. We are perfectly willing to add that in this wide, and even slightly vague, sense it is found also in the Old Testament, and notably in the Book of Daniel. But that does not mean that Bossuet, who anticipated this idea of Providence to himself, made it profoundly his own, and without any innovation—for every innovation in this field inspired him with horror—formed it from the deductions which up to his time had never been perceived. The idea of Providence, in Bossuet's theology, appears to us as at once (a) the sanction of the moral law, (b) the very law of history, and (c) the foundation of apologetics.

(a) It is the sanction of the moral law, in the first place, inasmuch as, being able to act only under the eyes of God, no act of ours is indifferent, since there is not one which does not have an influence: it is better, a manner of acquiring, merit or detriment. It is under this aspect that the idea of Providence seems to have presented itself primarily to Bossuet, and that it is found in some sort scattered or diffused in his earliest "Sermons." But, since, moreover, nothing happens to us which is not an effect of God's Will, therefore we ought always to see in whatever happiness or unhappiness—according to the world's judgment—may befall us only a chastisement, a trial, or a temptation, which it is for us to make a means either of salvation or of damnation. Here is the mystery of pain and the solution of the problem of evil. If we did not place entire confidence in Providence, the existence of evil and the prosperity of the wicked would be for the human mind nothing but an occasion of scandal: according to this view, a new, not favour Bossuet's appointment; he preferred the President De Périgny. In 1669, however, Bossuet was appointed Bishop of Condum. It was as Bishop of Condum that in September of that same year he pronounced the "Funeral Oration on Henrietta of France," and was summoned to preach the Advent of 1669 at Court. When, soon after this, the daughter followed her mother to the grave, he was again summoned, in 1670, to pronounce the "Funeral Oration on the Duchess of Orleans," while the President De Périgny died unexpectedly, and this time the choice of Louis XIV went straight to Bossuet. He was named preceptor to the Dauphin, 5 September, 1670, and a new period began in the history of his life.

Second Period (1670-81).—In order to devote himself solely to his task, he gave up his Bishopric of Condum, which he never saw, and returned to the profane studies which he had been obliged to abandon. He himself laid down in his letter to Pope Innocent the programme he wished to follow, a programme the intelligent liberality of which is impossible not to admire. But, while giving the closest personal attention to the Dauphin's education, his own genius completed, in a way, its process of ripening by contact with antiquity; his ideas collected themselves and gained in precision: he took conscious possession of what may be called his originality as a thinker, and made for himself his private domain, as it were, in the vast field of apologetics. And, as the other Fathers of the Church have been, in the history of Christian thought, and the theologian of the Incarnation, another, the theologian of Grace, so did Bossuet then become the theologian of Providence.

Here we may take an excellent example of what is to-day called the development, or evolution, of a dogmatic truth. The idea of Providence surely constitutes the basis of Christian belief in all that touches the relations of man with God, and in this respect it may be said that the "Discourse on Universal History," so anxiously anticipated by the Secretary of St. Augustine, or in the "De Gubernatione Dei" of Salvianus. We are perfectly willing to add that in this wide, and even slightly vague, sense it is found also in the Old Testament, and notably in the Book of Daniel. But that does not mean that Bossuet, who anticipated this idea of Providence to himself, made it profoundly his own, and without any innovation—for every innovation in this field inspired him with horror—formed it from the deductions which up to his time had never been perceived. The idea of Providence, in Bossuet's theology, appears to us as at once (a) the sanction of the moral law, (b) the very law of history, and (c) the foundation of apologetics.

(a) It is the sanction of the moral law, in the first place, inasmuch as, being able to act only under the eyes of God, no act of ours is indifferent, since there is not one which does not have an influence: it is better, a manner of acquiring, merit or detriment. If we did not place entire confidence in Providence, the existence of evil and the prosperity of the wicked would be for the human mind nothing but an occasion of scandal: according to this view, a new,
BOSSEUT

701

BOSSEUT

religion, there is, in Bosseut's view, none more convincing than that which is at once the highest expression and the summing-up of the history of human thought. It was that Bosseut took his "main theme," or his "religion," or "the relation of the two Testaments," and, in a more objective manner, the visible manifestation of Providence in the establishment of Christianity. It was Providence that made the Jews the people of the "Promised One," the people of the chosen people, charged with maintaining and defending the worship of the true God throughout the pagan centuries, against the prestige of an idolatry which essentially consisted in the defilement of the energies of nature. It was Providence that, by means of Roman unity and of its extension throughout all the known universe, rendered not only possible, but easy and almost necessary, the conversion of the world to Christianity. It was Providence, again, that developed the features of the modern world out of the disorder of barbarous invasions and reconciled the two antiquities under the law of Christ. The full importance of these views of Bosseut—for we are only summarizing here the "Discourse on Universal History"—will be understood if we observe that, in other works, he never fails to give his readers any idea of the conditions of society that was bound to give us their own version of the origins of Christianity, they have found nothing more than this and nothing else; and all their ingenuity has issued in the conclusion that things have happened in the reality of history, but that the two systems have nothing in common. The real truth is that Christianity, in propagating itself, has proved itself. If the action of Providence is manifest anywhere, it is in the sequence of the history of Christianity. And what is more natural under the circumstances than to make of its history the demonstration of its truth?

It was appropriate to insist here upon this idea of Providence, which is, in a manner, the masterpiece of Bosseut's theology. Besides the "Discourse on Universal History," he wrote other works for the education of the Dauphin; notably the "Treatise on the Knowledge of God and of Oneself" and the "Art of Governing, Drawn from the Words of Holy Scripture," which appeared only after his death; the "Art of Raising the Empire," in 1720, and the "Treatise on the Knowledge of God," in 1722. To the "Treatise on Free Will" and the "Treatise on Concupiscence," also posthumous, a like origin has been assigned; but this is certainly a mistake; these two works, which contain some of Bosseut's most beautiful pages, were not written until after his death. It is certain that they have not understood them at all. Did he even understand the "Discourse on Universal History"? In this connexion it has been questioned whether Bosseut, in his quality of preceptor, did not fail in his first obligation, which was, as his critics assert, to adapt himself to his pupil's intelligence. Here we can only reply, without going to the bottom of the question, that the end which Bosseut intended was no ordinary education, but the education of a future king of France. In 1790, and the "Treatise on the Knowledge of God" never reigned, no one can really say how much he did, or did not, profit by a preceptor such as Bosseut was.

The education of a prince ordinarily, and naturally, ended with his marriage. The functions of Bosseut as such a functionary, that is to say, the veritable education of the Dauphin never reigned, no one can really say how much he did, or did not, profit by a preceptor such as Bosseut was.

Permitted to call attention to the fact that this was only an honorary title, and one need not therefore conclude, as seems to have been done sometimes, that he was, in fact, the receiver of the "Conseil des dépêches," which was the Council of Foreign Affairs, or in the Conseil du Roi, which busied itself with the internal affairs of the kingdom. But during his preceptorship, and independently of any other duty, he was, in fact, the man who had to arrive himself at the throne of God, if he was to become of considerable importance at Court, with Louis XIV personally. No member of the French clergy was henceforth more in evidence than he; no preacher, no bishop. He had no reason, then, or ever, to think of having accomplished the education of the Dauphin, his activity would fail to find employment. In truth, the last epoch of his life was to be its fullest.

Third Period (1681–1704).—This period was the most laborious, indeed the most painful, and the impassioned struggles in which he becomes engaged will now end only with his life. But why so many struggles at the time of life when most men seek for rest? What circumstances occasioned them? And if we recall that up to this time his existence had not been distinguished by any great result, we cannot but feel the deeper, whence his sudden combative ardour? It cannot be explained without a preliminary remark. The reconciliation of Protestantism and Catholicism had an early dream of Bosseut; and, on the other hand, France in general, ill chosen her side in a division which she regarded as not only regrettable from the standpoint of religion, but destructive, and even dangerous to her political unity. This is why Bosseut was to work all his life and with all his strength for the reunion of the Churches, and to the very last moment to exert every effort for the attainment of those conditions which he believed necessary to that end. Abundant and instructive details on this point are to be found in M. A. Rébelliat's charming work, "Bosseut, historien du Protestantisme." Being, moreover, too reasonable and too well-informed not to recognize the legitimate element which the Reformation movement had had in its time, Bosseut was convinced that it was of the greatest moment not indeed, to restore the Church which he loved, the Catholic verity, but at all events not to exaggerate those demands; and, therefore, (1) to make to Protestant opinion every concession which a rigorous orthodoxy would permit; and (2) not to add anything, on the other hand, to a creed more than was necessary, that is to say, that was already repelling the Protestants.

Thus may we explain his part in the Assembly of the French Clergy in 1652; the plan of his "History of the Variations of the Protestant Churches," as well as the character of his polemics against the Protestants; his fundamental motive in the matter of Quietism and the true reason for his fierce animosity against Péronel; his writings against Richard Simon, such as his "Defence of Tradition and of the Phrase of our Fathers," signed with the name of the mystic reveries of Marie d'Agreda; and lastly, the approbation which, in 1682 and 1702, he so loudly expressed for the renewed censures of the Assemblies of the Clergy upon the relaxed morals of that day. However, it is our purpose here to ascertain whether Bosseut, in the course of all these controversies, more than once allowed himself to be drawn on beyond the point which he intended, especially, as he has been reproached, in the questions of Gallicanism and of Quietism. The celebrated Declaration of 1682, which he made before, in 1681. He was named bishop of Meaux; he was made Almoner to the Dauphin, quite in accordance with usage, and the King honoured him with the title of General Councillor (Conseiller en tous les conseils). We may be
great a danger as he believed it to be; nor, above all, a danger of the kind to repel Protestants from Catholicism, since, after all, it is in a Protestant country that the works of those Gurus are still read in our day. But to properly explain these points we should have to write volumes; it suffices here to throw some light on Bossuet's controversial work with this general remark: his essential purpose was not to get rid of the reasons that Protestants drew from the substance or the form of Catholicism, in opposition to the reasons for reunion.

In this remark, also, is to be found the decisive answer to the question, often raised, and amply discussed for some years, of the influence of the Jansenism, indeed, involves two things: the "Five Propositions"—a doctrine, or a heresy, formally and solemnly condemned; and a general tendency, very much like that of Calvin, to rationalize Christian morality and even dogma. So far as Jansenism is a heresy, Bossuet never was a Jansenist; but so far as it is a mere tendency, an intellectual disposition and a tendency to effect a mutual drawing together of reason and faith, it is scarcely possible to deny that he leaned towards Jansenism. Quite apart from the satisfaction derived from his own success, this tendency led to order and to clarity, found in this conciliation of reason and faith, he judged this the most propitious ground of all for the reconciliation of Protestantism with Catholicism. But to this he added, at once the difficulties of faith, made it a condition that care must be taken not to trench upon faith, and this trait it is which completes the picture of Bossuet's character. Tradition has never had a more eloquent and vigorous defender. Quo ubique, quo semper, quo ob omnibus credendum est; this was for Bossuet, in a manner, the absolute criterion of Catholic truth. He had no difficulty in deducing from it "the immutability of morality or of dogma"; and in this precisely, as is well known, consists his great argument against the Protestants.

The "History of the Variations of the Protestant Churches" is nothing more than a history of the alterations, one may say so, to which the Protestant Churches have subjected dogmas, and the adjustments or adaptations of dogmas which they have pretended to make to circumstances that had nothing but what was transitory and contingent. But the truth which comes from God possesses from the first its complete perfection; and from this it results that as many errors are, so many "errors" are there in faith, since they are so many contradictions or omissions of tradition.

This point has been reserved for the last in the present article, because no other trait of Bossuet's genius seems to have gone further towards establishing the common conception of it. It is easy to see that that conception is not altogether false; but neither is it altogether true, nor, above all, fair when, as is often done, it is extended from the genius of the controversialist or theologian to the character of the man himself. De Bossuet, 1751); De Bossi; 1841); Floscul on la vie de Bossuet (4 vols., 1855-70); these are volumes, unfortunately, too long to go beyond (1882); Rappellet, Bossi (1867); Lanson, Bossi (1890); Rabelard in Giana ecriture (4 vols., 1859-67); De Bossi, Antoine de Bossi, Honoré de Montfort, and the historiographers of Bossuet (1888).

It is an almost complete list of historical and literary criticism which deals with Bossuet, cf. Bourgeois, Histoire and description des manuscrits et des éditions originales des ouvrages de Bossuet, with an indication of the translations of them, and of the writings which they occasioned at the time of their publication (Paris, 1897). Urbain in Biblithèque de bibliographie et des éditions critiques (Paris, Société des sciences, 1889).

B. FRUINOT.

Bost, Arnold. See Trottemius.

Boste (or Boast), John, Venerable, priest and martyr, b. of good Catholic family at Duffton, in Westmoreland, about 1544; d. at Durham, 24 July 1594. He studied at Queen's College, Oxford, 1568.
Boston, Archidioecese of, comprises Essex, Middlesex, Suffolk, Norfolk, and Plymouth counties in the State of Massachusetts, U. S. A., the town of Mattapoisett, Marion, and Wareham excepted, embracing an area of 2,465 square miles. The see was erected 8 April, 1808, and created an archbishopric in 1875. When the first Bishop of Boston was consecrated his jurisdiction extended over all New England and a mere handful of Catholics. There are now eight dioceses in the same territory with about 2,100,000 Catholics of whom 850,000 are within the limits of the Archdiocese of Boston where the first bishop was landed at Harpstone and became a martyr. Early History.—Early Irish emigration to America took place in three distinct periods, from 1621 to 1653; from 1653 to 1718, and from 1718 to 1775. But the mistake must not be made, as it often is, that these immigrants were all Catholics. Many of them were not, and those who were had few inducements to settle in the Puritan colony where their Faith was held in detestation. Some who were sold to the Barbadoes in the time of Cromwell were afterwards found in the Maryland settlements. One of these, Ann Glover, and her daughter had lived in Boston before she fell a victim, in 1683, to Cotton Mather’s witchcraft mania. In his “Magna carta” he calls her “a scandalous old Irishwoman, very wild, and the growth of the Catholicity.” Robert Caleb, a Boston merchant who knew her, says “Goody Glover was a despised, crazy, poor old woman, an Irish Catholic who was tried for afflicting the Goodwin children. Her behaviour at her trial was like that of one distracted by the devil, who, against her, she was wholly deficient. The jury brought her guilty. She was hung. She died a Catholic” (“More Wonders of the Invisible World, London, 1700). Other immigrants came as bond slaves or “redemptioners” and were not a steadfast in the Faith as Goody Glover. Their environment precluded any open manifestation of their religion or the training of their children in its precepts. As an instance of the persecution they met, a famous Governor Sullivan of Massachusetts and New Hampshire. Their grandfather was one of the “Wild Geese” who fled with Sarsfield from Limerick to France. His son married Margaret Brown, a fellow “redemptioner” and with their six children all drifted into Protestantism. One of their sons, General John Sullivan, of Revolutionary fame, writing on 5 September, 1774, of the “Quebec Act” that gave religious freedom to the Catholics of Canada, proceeded with this measure under British pressure and resolution, and induced his fellow-martyr, George Swalwell, a convert minister, who had recanted through fear, to repent of his cowardice, absolving him publicly in court. He suffered at Dryburn, outside Durham. He recoiled the Angelus while mounting the ladder, and was executed with extraordinary brutality; for he was scarcely turned off the ladder when he was cut down, so that he stood on his feet, and in that posture was cruelly butchered alive. An account of his trial and execution was written by an eyewitness, Dr. John Le Neve, and his “History of the Rebellion of 1689; Ecclesiastical Records, 111; Catholic Record Society, Miscellany (Christopher Robinbon’s account); 1; Cooper in Dict. Nat. Bio., Wainwright.” The two priest who landed at Harpstone and became a martyr refused to hold them. In 1756 the exiled Acadians, of whom nearly 2000 had landed in Massachusetts, were denied the services of a priest because, as Governor Hutchinson declared, “the people would upon no terms have consented to the public exercise of religious worship by Roman Catholic priests.” The Boston “Town Records” (1772, pp. 95-96) while admitting that toleration in religion was “what all good and candid minds in all ages have ever practiced” excluded “Roman Catholics” because their belief was “subversive of society.” With the Revolution, however, came the dawn of a better era, the upholding of religious as well as political barriers, and the beginning of the slow but steady growth of the Catholic Church. The wonderful change of the present. A favourite New England divison was an annual procession, on 5 November, of the Pope and the Devil in celebration of the famous “Gumpowder Plot.” In Boston it was usually attended by the governor and other Washington, while at Boston, issued an order in which he could not “help expressing his surprise that there should be officers and soldiers in this army so void of common sense” as to thus insult the re
ligious feelings of the Canadians with whom friendship
and an alliance was then being sought. The stay of
the French fleet in New England waters and the
settling of some of the allies there after the war had
ended laid the foundations of the first Catholic parish
in the heart of New England. There appeared in Boston
French exiles, and in 1713 the Father of Quebec was
informed that there was a school in No. 18 School Street
and opened there on All Saints' Day, 1788, under the
patronage of the Holy Cross, the first Catholic church
in New England. The report of the celebration of the
first Mass on that date can be read in the Boston
"Independent Chronicle", 6 November, 1788. To
the aid of this church subscriptions were received
from Canada, and the Archbishop of Paris, in answer
to an appeal from the little French colony in Boston,
sent a needed outfit of vestments and vessels for the
altar. In 1791 six Irishmen desired to visit the Abbé
de la Poterie was an unworthy priest (Campbell in U. S.
Cath. Magazine, VIII, 102). His conduct in Boston
proved this, and the prefect Apostolic, finding he had
been imposed on, sent the Rev. William O'Brien, O. P.,
from the Benedictines in England, to watch over the
Parisian clergy. A violent pamphlet printed in Philadelphia
(1789) followed. It was dedicated "To the new Laurent
Rioci in America the Rev. Fr. John Carroll, Superior
of the Jesuits in the United States also to the friar-
monk-inquisitor William O'Brien", and represented
de la Poterie as a victim to their wilful cruelty.
After his suspension de la Poterie went to Canada
and was succeeded in Boston by the Rev. Louis
Rousselet, who was in turn suspended and went to
Guadeloupe, where he was killed in a revolution. In
1791 the Catholic community numbered less than a
hundred, and the Rev. John Thayer, a convert, was
sent to take charge of the church which he found
"dilapidated and deserted" after his predecessor's
de parture. Thayer had been a Congregationalist
minister, and chaplain to Governor Hancock. At
the close of the Revolution, being in his twenty-sixth
year, he went abroad, and became a convert in Rome
25 May, 1788. He determined to become a priest
in order to labour for the conversion of New England
to the Catholic Faith and was ordained at St. Sulpis in
Paris in 1795. He returned to America in 1799.
1700. The first of a genuine New England family
to enter the priesthood, he retained much of his
inherited Puritanical oppressiveness, and, as Bishop
Carroll said of him, he lacked "amiable and con-
ciliatory manners" and was not a success as an ad-
ministrator. Rousselet, who did not leave Boston
immediately, set up a rival church and divided the
little congregation, the French element siding with
him and the Irish with Thayer. In the spring of
1791 Bishop Carroll had to put the parish to restore
unity. He was received with courtesy by all citizens
and was made the guest of honour at the annual
dinner of the most important social and military
organization there, the Ancient and Honorable Ar-
tillery Company. Governor John Warren attended
Mass as a mark of respect for him. "It is wonderful!
the bishop wrote, "to tell what great civilities have
been done to me in this town, where a few years ago
a Pophish priest was thought to be the greatest mon-
ster in the creation. . . . If all the Catholics here
were not worth a Mass for St. Peter's, one hun-
dred and twenty" (U. S. Cath. Magazine, Baltimore,
VIII, 149).

Father Thayer having failed as a pastor he was
relieved by the Rev. Francis A. Matignon, one of the
many French priests exiled by the Revolution, and
to whom the church in the United States owes so
much. Born in Paris, in 1753, he was ordained priest
in 1773 and taught theology in the College of Navarre.
Having arrived in Boston, 20 August, 1792, he soon
healed all the local dissensions and by his zeal, elo-
quence, piety, and winning courtesy made an im-
mediate success of his pastorate. In 1796 he in-
structed some of his old parishioners, a young Irish
Louis de Cheverus, then an exile in England, to
Boston to help him, and to his great joy the call was
heeded. The Abbé de Cheverus arrived on the third
of October of that year. He remained in Boston
with Father Matignon until July, 1797, when he
went to Bishop Carroll to request permission to
open missions in Maine. On his way, he looked at the
scattered Catholics between Boston and the Pen-
nsacot. According to a report then made to Bishop
Carroll by the Easter Communions of 1798 there
were 210 Catholics in Boston; 15 in Plymouth; 21
in Newburyport, and 3 in Salem. Outside Boston the
only important Catholic colony was at Damariscotta,
Lincoln County, Maine, where Roger and Patrick
Hanly, two Irishmen, had settled some time before,
and other families. The Abbé de Cheverus, with
Cottrill, built a chapel and later, in 1808, a brick
structure, St. Patrick's church, for the use of their
fellow Catholics. This was the only church in New
England outside Boston. Having put these missions
in order Father Cheverus returned to Boston and
with Father Matignon exhibited heroic courage and
charity during the yellow fever epidemic of 1798.
By this time the old church in School Street was no
longer fit for Divine service and another site on
Franklin Street near Devonshire Street, was secured
for $2,500, and a brick church, 130 by 80 feet, was
built at the cost of $4,000. On 29 September, 1803
the dedication of this church, Archbishop Williams said:"We bought that land
from the Boston Theatre. Remember the site of the old cathedral was in the most beautiful part
of the town—and the theatre owned both sides of the lower part of the street. The theatre people agreed to sell us that lot at one-half what they could get for it when we bought it. And remember in that street in those days were some of the principal families of the city. I remem-
ber the Bishop the theatre owners, the Mayor and others who lived each side of the street, showing
what a choice spot it was and one of the select streets of the city." The Spanish consul-general, Don Juan
Slaughter, father of the Don Tomás Slaughter, who
had enough so to do with the building of St. Patrick's,
The first church in New York, lived opposite the site
selected. At a meeting held 31 March, 1789, he and
John Magnier, Patrick Campbell, Michael Burns,
Owen Callahan, John Duggan, and Edmund Connor
were named the committee to take charge of the new
project. From the congregation they collected
$16,000. Members of the leading Protestant families
headed by President John Adams added $11,000 to
this, and from Catholics in other places and other
sources $8,500. The architect was Charles Bullfinch, also a Protestant, who
designed the capitol at Washington and the State
House in Boston, supplied the plans without charge
for a brick building 80 feet long and 60 wide of Ionic
style, severely simple but impressive. Ground
work was begun for it in 1803, 1804 and 1805, but
not ready for dedication 29 September, 1803, having
cost $29,000. Prominent among this first congre-
gation, besides those already mentioned, were James
Kavanagh, John Ward, David Fitzgerald, Stephen
Roberts, John Driscoll, Jonathan Clark, Thomas
Murphy, John Hanly, Abraham Pitton,
1. CATHEDRAL OF THE HOLY CROSS
2. THEOLOGY HOUSE, BRIGHTON SEMINARY
3. OLD CHURCH OF THE HOLY CROSS, FRANKLIN STREET (FIRST CATHEDRAL)
Mary Lob, and representatives of the Duport, Dusseaucoir, Dusseml, Lepouse, and Julien families. Bishop Carroll went on from Baltimore to perform the ceremony of dedication. This visit of the bishop occasioned the greatest local satisfaction, and the two priests continued their zealous ministrations with such success that in about 1805 their attendance had increased to about 500. Soon Bishop Carroll saw the necessity of having a bishop in Boston and desired to nominate Father Matignon for the see, but the latter refused to allow his name to be considered. "The good of the Church is not to be sought in such matters," he wrote, "but in the work of Mr. Cheverus; he it is who fills the pulpit, who is most frequent in the confessional." Bishop Carroll therefore sent the name of the Rev. John Louis Cheverus to Rome declaring him to be in "the prime of life, with health to undergo any necessary exertion, universally esteemed for his unwarried zeal and his remarkable facility and eloquence in announcing the word of God, virtuous, and with a charm of manner that recalled Catholics to their duties and disarmed Protestants of their prejudices". Bishop Cheverus' health was such as to prevent his going to Rome. He accordingly wrote to the Archbishop of Bordeaux, on 2 August 1808, but he was mortally ill, and died on 8 August 1808. His friends, Father Matignon, enjoyed honour and the esteem of all to the end of his long and useful career which came on the 18th of September, 1818.

Bishops.—(1) His many years of hard work at length began to tell on Bishop Cheverus and his physicians advised a return to his native land to escape repeated attacks of asthma. In 1823 King Louis XVIII of France nominated him to the vacant See of Montauban, and to the regret of all in the United States he embarked for Europe, 1 October, 1824. He remained in charge of Montauban until 30 July, 1826, when he was promoted to the Archbishopric of Bordeaux. On 1 February he was created cardinal. He died at Bordeaux, 19 July, 1836, in his sixty-ninth year. (See CHEVERUS, John Louis de.) During the administration of Bishop Cheverus the Ursuline nuns were introduced into the Diocese of Boston through the zeal of the Rev. John Thayer, who, when on a visit to Limerick, Ireland, where he died in 1815, enlisted the sympathy of the Bishop of Meath, who was president of that city, in the project of founding a convent in Boston. They emigrated to Boston in 1817 and by direction of the bishop went to the Ursuline Convent at Three Rivers, Canada. They made their profession, 4 October, 1819. They returned to Boston, and a convent was secured for them on Federal Street near the cathedral. Here they remained until 17 July, 1826, when their new convent, Mount Benedict, Charlestown, was opened. This was the institution sacked and burned by an anti-Catholic mob on the 11th of August, 1824. Assisting in the work at the old School Street and Franklin Street churches at various times were the Rev. James Romagne, a West Indian priest, who also looked after the Indian missions in Maine, the Rev. J. S. Tiersen, and the Rev. Samuel O'Flaherty, an Alsatian, who opened a school near Harvard University and was the only teacher of German then in Boston, also the Revs. Gabriel Richard, John Grassli, S.J., Philip Laracy, the Augustinians, and Paul McGuire. In 1817 Father Cheverus ordained a priest, Father McKenna, and appointed him to the missions. In 1820 he ordained the first ecclesiastical student, Denis Ryan, a native of Kilkenny, Ireland. In 1820 he ordained the second of his pupils Patrick Byrne, also from Kilkenny. In December, 1822, Virgil Barber (see BARBER FAMILY) was raised to the presbyterate and appointed to the parish of Dorchester Heights, South Boston, and a memorial Church was dedicated to St. Augustine in compliment to Father Laracy who collected most of the funds for the purchase of the ground. There were a number of conversions through the zeal and instruction of Bishop Cheverus, notable among them being Thomas Wiley, who had a private chapel at his residence in Brookline; Dr. Henry B. C. Greene, who was elected to the State legislature in 1841 and served for four terms, being the first Catholic office-holder in the State; Stephen Cleveland Blythe, the Rev. Calvin White, William Wiley afterwards a priest, Mrs. John C. Sefton, Samuel Bishop, Captain Bela Chase, Nicholas Hazelnor, the Barber family, and General Ethan Allen's daughter Frances, who was the first nun from New England.

BISHOP JEREMIAH FENWICK, second bishop, appointed 10 May, 1825. He was born 3 September, 1782, near Leonardstown, Maryland, Cuthbert Fenwick, the founder of the family in America, being one of the original Catholic settlers of Lord Baltimore's province of Maryland. He received his A.B. degree at Enoch to Georgetown College in 1763, and in 1805 entered the Sulpician Seminary at Baltimore to study for the priesthood. When the Society of Jesus was restored in the United States in 1806 he and his brother were among the first scholastics received. He was ordained priest 12 March, 1808. In the succeeding years he was pastor in New York, director of its first Catholic Collegiate school, administrator and vicar-general of the diocese, missionary in South Carolina, and twice president of Georgetown College. He was then named Bishop of Boston, was consecrated in Baltimore on 1 November, 1825, and took possession of his see, 3 December. There were then only two priests in the diocese, the Revs. F. Byrne in Boston and D. Ryan at New Castle, Maine; and besides the cathedral only three churches. The bishop at once started a seminary in his own house and, having prepared Fathers Fitton, Wiley, Smith, Tyler, and Thomas J. O'Flaherty, ordained them. Other students were sent to study at Rome, Paris, Baltimore, Hales, and Montreal. James Murray was sent to take charge at Salem; C. D. Frenche, a Dominican, to Maine in 1826, and Robert D. Woodley to look after the scattered congregations in Rhode Island and Connecticut. In 1828 Bishop Fenwick enlarged the cathedral and began a school in the basement, which was taught by his theological students, assisted by Patrick Haney, a mulatto from the West Indies. The erection of new churches, the providing of more priests for the increasing number of Catholics, the promotion of Catholic education, and the regulation of the general discipline of the Church took up the remaining years of his life, which ended on the eleventh of August, 1846. In 1844 he was given a coadjutor, the Right Rev. John Bernard Fitzpatrick. Bishop Fenwick began, on 8 September, 1829, for the first time to publish his "Lexicon, or Jesuit, or Catholic Sentinel", one of the first Catholic papers printed in the United States. In 1843 he founded the College of the Holy Cross at Worcester and entrusted it to the Jesuits. In 1829 he attended the first Provincial Council in the United States, and in 1832 he called the first Provincial Council of the United States. For many years Boston had about fifty churches with assistant priests, a college, an orphan asylum, and numerous schools, and a portion of its original territory—the States of Connecticut and Rhode Island—had been erected into the new Diocese of Hartford. On 7 November, 1843, at Saint Anthony's Chapel, Emmitsburg, Maryland, opened the first orphan
J. Coolidge Shaw, S.J., Edward H. Welch, S.J., Orestes A. Brownson, the philosopher, Buckle, Hastings, General Joseph W. Revere (Paul Revere's grandson), Le Moyne, and many other families. Chaplains in the regiments who volunteered in the Civil War were Fathers Thomas Scully, Charles L. Egan, Nicholas O'Brien, and Lawrence S. Mahon (afterwards Bishop of Hartford). Editors and writers were Fathers Joseph M. Finotti, John F. Rockan, and John O'Connell.

(4) John Joseph Williams, fourth bishop, consecrated 11 March, 1866; created first archbishop, 12 February, 1875. He was born in Boston of Irish parents 27 April, 1822, and died in Boston, 30 August, 1907. He was ordained under the spiritual direction of Bishop Fenwick. He attended the cathedral school and then proceeded to the Sulpician college in Montreal and their seminary at Paris, where he was ordained priest in 1845. He was the special friend of Bishop Fitzpatrick, who made him his vicar-general at an early age and rector of St. James's church, where in 1842 he established the first Conference of the Society of St. Vincent de Paul in New England. Two other rectors of this church became bishops, Bishop O'Connell of Portland in 1875, and M. A. Harkins Bishop of Providence in 1887. Shortly before his death Bishop Fitzpatrick sought to have Father Williams made his coadjutor, but he did not live to see him consecrated. Boston in the meantime made an attempt to secure the see of Portland, and when it was promoted to be its metropolitan. He received as an auxiliary the Right Rev. John Brady, consecrated Titular Bishop of Albanda, 5 August, 1891, and a coadjutor with the right of succession to the Right Rev. William O'Connell of Portland, who was promoted to be Titular Archbishop of Tomi and coadjutor of Boston, 8 February, 1908. Archbishop Williams also saw organized, within the limits of the Diocese of Boston as it was when he was born, the Dioceses of Springfield, 1870; Providence, 1872; Manchester, 1884; and Fall River, 1905, and among those immediately under his jurisdiction representatives of nearly every country and language of Europe. Prominent among the memorials of his long episcopate and priesthood were the new Cathedral of the Holy Cross, dedicated 8 December, 1875, and St. John's Ecclesiastical Seminary at Brighton, erected in 1884, which is in charge of the Sulpicians. Boston College was opened by the Jesuits in 1863. In the same year the Carney Hospital was established and Bishop Williams assisted the hospital in raising themoney to purchase the premises. The house for his family has given it $75,000. The House of the Angel Guardian for boys, founded in 1849 by the Rev. G. F. Haskins, in 1876 was entrusted to the care of the Brothers of Charity from Montreal. St. Mary's Infant Asylum was opened in 1872; the Home for the Aged by the Little Sisters of the Poor, in 1870; the House of the Good Shepherd in 1867, and the Daly Industrial School was made possible by the gift in 1899 of $90,000 from the Rev. Patrick J. Daly. The Home for Destitute children was opened in 1894; the Working Boys Home in 1883; and the Home for Girls in 1884. St. Elisabeth's Hospital dates from 1868, the Free Home for Consumptives from 1891, the Holy Ghost Hospital for Incurables from 1893. The Sisters of St. Joseph made their first foundation in the diocese in 1873; the Franciscan Sisters, in 1884; the Religious of the Sacred Heart, in 1890; and the Carmelites from Baltimore, in 1890. The Redemptorists began a mission in the late sixties, and built their first church in the Roxbury District, in 1871. In 1893 the Holy Name Society took up their local work, and the Augustinians established themselves in Lawrence in 1861. French immigration from Canada, which had been going on since 1815 began to attract special attention about 1870. In

ayhum in 1831. The first diocesan synod was held in 1842 and was attended by thirty priests. The clergy of this period were all men of broad, solid culture and among them those whom above may be mentioned the Rev. Jeremiah O'Callaghan, a native of Cork, Ireland, whose strict views on the doctrine of usury brought him into conflict with the bishop of that place. He later became a tutor in the family of William Cobbett and came to New York in 1830. The Archdiocese of Burlington, Vermont, mentioned above may be mentioned the Rev. Jeremiah O'Callaghan, a native of Cork, Ireland, whose strict views on the doctrine of usury brought him into conflict with the bishop of that place. He later became a tutor in the family of William Cobbett and came to New York in 1830. The Archdiocese of Burlington, Vermont, mentioned above may be mentioned the Rev. Jeremiah O'Callaghan, a native of Cork, Ireland, whose strict views on the doctrine of usury brought him into conflict with the bishop of that place. He later became a tutor in the family of William Cobbett and came to New York in 1830. The Archdiocese of Burlington, Vermont, mentioned above may be mentioned the Rev. Jeremiah O'Callaghan, a native of Cork, Ireland, whose strict views on the doctrine of usury brought him into conflict with the bishop of that place. He later became a tutor in the family of William Cobbett and came to New York in 1830. The Archdiocese of Burlington, Vermont, mentioned above may 
.88 the first distinctively French parish was organized in Lowell. Italian and Portuguese congregations date from 1872, the former in Boston and the latter in Gloucester. One congregation in Gloucester has a respectable section made up of Gaelic speaking Scotts, and there are a number of English, Scottish, French, German, and Italian congregations in Boston. Archbishop Williams was a quiet, conservative prelate, known best as an administrator. He was one of the bishops who attended the Vatican Council and helped largely to establish the American College at Rome.

The Most Rev. William Henry O'Connell, second archbishop, was born 8 December, 1859, at Lowell, Massachusetts, and received his early education in its local schools and at St. Charles' College, Ellicott City, Maryland. He then graduated in 1881 at the Jesuit College in Boston and was sent to the American College, Rome, to make his studies for the priesthood. He was ordained there 8 January, 1884, and returned to Boston in 1886. The following years he was stationed as an assistant at Medford, and as of 1895 was the pastor of the Parish of the Sacred Heart in Boston. He held this office five years, and was then appointed Bishop of Portland, Maine, being consecrated 19 May, 1901. In the fall of 1905 the pope sent him as a special envoy to Japan in the interest of the Church. He was decorated by the Mikado and on his return to Rome was warmly commended for the success of his efforts by the pope, who on 28 January, 1906, named him titular Archbishop of Torni, and coadjutor of Boston. On the death of Archbishop Williams, he was chosen to succeed him as Bishop of the Roman Catholic population of Medford.

The Right Rev. John Brady, auxiliary bishop, was born at Crosserlough, County Cavan, Ireland, 11 April, 1842. He made his first studies in the local diocesan schools and then completed his theological course at the Missionary College of All Hallows, where he was ordained priest for the Diocese of Boston, 4 December, 1864. He served as a curate in Boston and at Newburyport until 1868, when he was made pastor at Amesbury. He continued in the latter parish until 1879, when he was appointed Bishop of Alabanda and Auxiliary Bishop of Boston for which see he was consecrated 5 August, 1891.

Social Progress.—"The foundation of a Catholic Church in Boston could only be surpassed by devoting a chapter in the Vatican to a Pontifical Chapel," said William Tudor, writing in his "Letters on the Eastern States" (Boston, 1819). The records show that the notable constructive Catholic social period of the diocese did not begin until after the Civil War. Though the Catholics formed a quarter of the population of Boston in 1844 and two-fifths in 1853, not a single one of that faith ever held an elective or appointive public office in the city of Boston. There were only three Catholic teachers in the public schools until 1860. The first Catholic Mission Church in Boston, the Church of the Assumption, was not erected until 1879. In 1882, the changed conditions are shown by the fact that the present twenty-three Catholic parishes in Boston have been ruled by Catholic Mayors, and public officials have been set up by the city to acknowledge the approval to the soldier, Colonel Thomas Cess; the poet journalist, John Boyle O'Reilly; and the statesman, Patrick Andrew Collins. In justice it must be said that much of the progress thus made was owing to Father John H. Barry, who founded the "Boston Pilot" in 1838 the illustrations of Catholic truth and the defense of Catholic rights. From his publication house issued for more than half a century a steady output of Catholic literature that aided materially the education of his fellow Catholics and won for the Faith a general popular appreciation. Other periodicals were the "Boston Catholic Review," "The Republic" and "The Sacred Heart Review" (Boston); "The Catholic Citizen" (Chelsea); "The Sunday Register" (Lawrence); the monthlies "Donahoe's Magazine" (Boston); "The Index" (Haverhill); the French weekly "La Défenseur," "La Justice" (Holyoke); "L'Etoile," daily and weekly (Lowell).

Statistics.—Records of the Archdiocese of Boston for 1907 give these figures: 1 archbishop, 1 bishop, 598 priests (488 secular and 110 regular), 194 churches with 1 theological seminary with 56 students; 3 colleges for boys, 8 academies for girls, 76 parishes with schools and an attendance of 48,192 children; 6 orphan asylums with 650 inmates; 24 charitable institutions; the total number of children in Catholic institutions 48,740; 1 infant asylum, 538 inmates; industrial and reform schools 4, inmates 915; homes 7, inmates 826; brothers 140; religious women 1567; seminary for diocesan clergy 1, students 86; estimated Catholic population 60,000.

The following religious orders and congregations have foundations in the archdiocese: Communities of Men, Augustinians, 16; Franciscans (O. M. C.), 5; Jesuits, 32; Mariists, 15; Oblates, 22; Congregation of St. Charles Borromeo, 4; Redemptorists, 28; Brothers of Charity of St. Vincent de Paul, 28; Brothers of the Christian Schools, 11; Little Brothers of Mary, 19; Xaverian Brothers, 68. Communities of Women, Sisters of St. Ann, Sisters of the Assumption, Sisters of Charity (Madison, New Jersey), Sisters of Charity of Our Lady of Namur, Sisters of Charity (Greenfield, Kentucky), Sisters of St. Francis (Allegany, N. Y.), Sisters of St. Francis (Rome), Sisters of the Good Shepherd, Sisters Servants of the Immaculate Heart of Mary, Grey Nuns of the Cross (Ottawa, Ontario), Sisters of the Sacred Heart (Rome), Sisters of St. Joseph, Mary, Sisters of Mercy (Manchester, New Hampshire), Sisters of Notre Dame, Namur, since 1849, School Sisters of Notre Dame (Baltimore, Maryland), Little Sisters of the Poor, Sisters of Providence, Sisters of the Holy Union, Holy Hearts, Filles de Jésus, Franciscan Poor Clare nuns, Sisters of the Holy Childhood.

BOSTRA. a titular see of Syria. Bostara, "the fortress," is neither Bosorah of Reuben and Moab (Deut., iv, 24; Jos., xx, 8), nor Borsrah or Edon.
Bothrys, a titular see situated in Phoenicia. Bothrys is the Greek name of a city founded by Ithobaal, King of Tyre and father of Jezebel (897-866 b.c.), on the seashore near Cape Lithopoanon (Menander, in Josephus, "Ant. Jud." VIII, 13, 2). It was mentioned by all the early writers, Strabo, Pliny, Ptolemy, Stephanus Byzantius, Hierocles, etc. The city belonged to Phoenicia Prima, and became a suffragan of Tyre in the Patriarchate of Antioch. In 551 it was destroyed by an earthquake, on which occasion the capa cracked in the very middle so that quite a large harbour was opened (Malalas, Chronogr., XVIII, in P. G., XCII, 543). Theophrastus, relating the same calamity (Ibid. 543), calls the city Bothrys, which form is also found elsewhere. Three Greek bishops are known: Porphyrius in 461; Elias about 512; and Stephen in 553 (Lequien, II, 827). According to a Greek "Notitia episcopatum", the see still existed in the tenth century and was then called Mataron. The Arabic name is Batroun. There are 2,500 inhabitants (1,200 Maronites, 1,200 Greeks). It is the centre of a "caza" in the muhafazat of Lebanon and the seat of a Maronite diocese suffragan to the Maronite patriarchate. There are 93,000 Catholics, 20 churches or chapels, 30 priests, 1 seminary, 64 elementary schools, 12 monasteries of Baladites, Aleppines, and monks of St. Isaiah in this Diocese.

Botticelli, Sandro, a famous Florentine painter. B. at Florence about 1447; d. in the same city, 1510. Botticelli's name is properly Alessandro di Mariano Filipepi, Mariano Filipepi being his father, but he is called after the Florentine painter and goldsmith Botticelli, to whom he was first apprenticed. Later on he was a pupil of Fra Filippo Lippi and learned from this master to paint in the ideal manner of Fra Angelico. Through the influence of Verrocchio and the brothers Pollajuoli this idealism was combined with the naturalness of Masaccio. These qualities explain Botticelli's great influence over later painters. Botticelli's life was a retired one passed largely in very modest circumstances. We know, however, that he was in the employ of the Medici and other prominent Florentine families from about 1483 to 1500. Although never inclined to frivolity he was yet influenced by the worldly spirit of the age until Savonarola's powerful call to repentance aroused his moral nature and guided his powers, as it seems, into entirely new paths. He never knew how to take care of money and he died in great poverty. He never signed or dated his works in most instances, so that the order in time of his paintings has to be judged from the canvases themselves.

I. Madonna. — Botticelli enjoys above all a well-earned fame as a painter of the Madonna. In these pictures the fascination lies more in the expression of the Mother and Child and in the look in the face of the half-grown boy-angels than in the unaffected simplicity of the pose and composition. Two of these pictures, circular in form (called tondo, round) have become very famous. Both are in Florence: one is the "Magnificent", and in the other the Child is holding a pomegranate. A circular canvas at Berlin which depicts the Madonna enthroned and a crowned Child holding a cornucopia, is characterized by deep religious feeling. A number of small pictures of the Madonna recall Fra Filippo; others more severe in tone seem to show the influence of Verrocchio. The Child's expression is always sweet and winning, yet thoughtful as well, and at times this look is one of intense inner emotion. The Mother in holy awe restrains her tenderness and seems to have a presentiment of future sorrow. This feeling of melancholy foreboding is also expressed in the attendant angels and saints. A painting in the National Gallery at Berlin: two canvases at Florence depict the same Madonna surrounded by numerous saints. It is plain that the
look of melancholy on the face of the Mother of God had a strange attraction for the painter. His portrait of himself in the Destruction of Core, Dathan, and Abiron, is one of his most haunting images, intense earnestness, and in the "Outcasts" he has depicted the profoundest depths of grief.

II. Biblical Subjects.—In 1481 Sixtus IV summoned Botticelli, along with other painters, to Rome to decorate the new Sistine Chapel. According to the biographer, Vasari, he was even to superintend the entire work. In the chapel Botticelli painted three frescoes which represent events in the lives of Moses and Christ. No less than seven scenes are united in the "Life of the Venerable Moses", so that the composition lacks unity. Without doubt the artist laboured under a feeling of restraint. The composition is animated in parts and is intended to arouse the feelings. The "Destruction of Core, Dathan, and Abiron" is represented in three scenes. The figure of Moses appears here in all the majesty which God had granted him for the punishment of the rebels. There is an interesting connexion between this picture and Perugino's "Granting of the Keys to Peter" on the opposite wall. Moses in the fullness of his life is the counterpart of Peter. As the Keys of Heaven are entrusted. Over against the fresco of the proving of the youthful Moses, Botticelli painted from the New Testament the "Temptation of Christ". The pope has this picture particularly seared upon his tongue when he is present at the celebration of the Mass. Strange to say, the foreground of the painting represents the purification of a leper before a company of ecclesiastics and secular dignitaries and contains besides an allusion to the pope's previous scene is as follows: Moses had to undergo trials before he could become the leader of his people, so also the Saviour had to suffer in order to heal mankind from the leprosy of sin, and so also the pope in order to carry out Christ's missions. As an allegorical indication of this a hospital built by Sixtus IV is shown in the picture. It must be acknowledged that the painter executed the difficult task assigned to him in the chapel with striking skill. Feeling the importance of this work Botticelli carried out his designs almost entirely himself; the smallest details show the infinite pains he took. In these frescoes he has given a large amount of space to Roman architecture, thereby setting a good working example to the painters coming after him. Of Botticelli's pictures in the Vatican, the most famous is the "Birth of Christ", which was intended to be a memorial of Savonarola. While a chorus of angels sing the praises of God above the manger, in this picture, three angels below lead Dominican monks towards the Saviour, Christ, who had been proclaimed by Savonarola to be king of the city of Florence. We have also an "Adoration of the Magi" in four examples (Florence, London, and St. Peters burg). This canvas is full of figures and has a background composed of stately architecture and landscapes. It must be reckoned that the order of the portraits of the Medici it contains, which were introduced in accordance with the custom of the time. About 1500 Botticelli produced the two examples of the Lamentation of Christ" which are now in Munich and Florence. In composition the expression of grief is deep but subdued.

III. Portraits.—Among the twenty-four portraits of popes in the Sistine chapel five are by Botticelli. In the church of the Ognissanti at Florence there is a celebrated picture of St. Augustine, which is Botticelli opposite to St. Jerome by Ghirlandajo. There are two portraits of Giuliano de' Medici in existence and an excellent portrait of a woman at Frankfort.

IV. Other Subjects.—In celebration of a wedding Botticelli painted in the villa of the Tornabuoni near Fiesole an allegorical scene representing the Seven Arts and the Virtues paying their homage to the newly married pair. Among his mythological pictures may be men. The next chapter of his life, his departure on a ship towards the island which she has chosen for her habitation. Another mythological subject is "Venus and Mars", Botticelli contributed the enthroned Fortitude and Spring to the allegorical style of painting so popular in his day. His composition of the Calumny of Apelles, which is realistic in execution, is essentially allegorical. Closely related to these works are the more than ninety illustrations to Dante's Divine Comedy, that poem which from Giotto to Michelangelo, has stimulated the imagination of so many painters. Four sheets executed in colour seem to indicate an intention to carry out the whole work in the same manner after the designs had once been made with pen and pencil.

Many of the pictures are not more than outlined or sketched. There is, however, much that is admirable in these designs, which formed one of the chief occupations of the last years of the painter. The fidelity to nature in the drawing of the human figure, the contemplative expression of the faces, the dramatic animation of the action, and the skillful arrangement of the perspective make these designs a last triumph for Botticelli.

Botulph (or Botulf), Saint, Abbot, date of birth unknown; died c. 680. St. Botulph, the saint whose name is perpetuated in that of the American city of Boston, Massachusetts, was certainly an historical personage, though the story of his life is very confused and unsatisfactory. What information we possess about him is mainly derived from a short biography by Folcard, monk of St. Bertin and Abbot of Thorney, who wrote in the eleventh century (Hardy, Catalogue of Brit. Hist., I, 373). According to him Botulph was born of noble Saxon parents who were Christians, and was sent with his brother Adulf to the Continent for the purpose of study. Adulf remained abroad, whereas he is stated to have become Bishop of Utrecht, though his name does not occur in any of the ancient lists. Botulph, returning to England, found favour with a certain Ethelmund, "King of the southern Angles", whose Gernot, a courtier who had known him, was permitted to choose a tract of desolate land upon which to build a monastery. This place, surrounded by water and called Icanhoe (Ox-island), is commonly identified with the town of Boston in Lincolnshire, mainly on account of its name (Boston-Botulph's town). There is, however, something to suggest that the true spot may be the village of Iken in Suffolk which of old was almost encircled by the little river Alde, and in which the church is also dedicated to St. Botulph. In favour of Lincolnshire is the fact that he is stated to have much honoured in the North and in Scotland. Thus his feast was entered in the York calendar but not in that of Sarum. Moreover, even Folcard speaks of the Scots as Botulph's neighbours (sciti). In the history of Suffolk, on the other hand, the tradition that St. Botulph, who is also called "bishop", was first buried at Grindisburgh, a village near Woodbridge, and afterwards translated to Bury St. Edmunds. This, however, may be another person, since he is also called St. Jurin (Arnold, Memorials of Bury, I, 352). That Botulph really did build a monastery at Icanhoe is attested by an entry in the Anglo-Saxon Chronicle under the year 645: Botulph ongan that mymster timbrian at Yceano, i.e. Botulph began.
to build the minster at Icanhoe. That the saint must have lived somewhere in the Eastern counties is proved by the indisputable evidence of the "Historia Abbatum" (Plummer's Bede, I, 389), where we learn that Ceolfrid, Bede's beloved master at Wearmouth, was sent to Icanhoe to visit him, and that he might see the foundation of Abbot Botulphus, whom fame had proclaimed far and wide to be a man of remarkable life and learning, full of the grace of the Holy Spirit", and the account goes on to say that he "having been abundantly instructed, so far as was possible in a short time, returned home so well equipped that no one could be found more learned than he either in ecclesiastical or monastic traditions". Folcard represents St. Botulph as living and dying at Icanhoe in spite of the molestations of the evil spirits to which he was exposed at his first coming. Later accounts, e.g. the lessons of the Schleswic Breviary, suppose him to have changed his habitation more than once and to have built at one time a monastery upon the bank of the Thames in honour of St. Martin. His relics are said after the incursions of the Danes to have been recovered and divided by St. Æthelwold between Ely, Thorney Abbey, and King Edgar's private chapel. What is more certain is that St. Botulph was honoured by not deductions of churches in the city of York, especially in East Anglia and in the North. His name is perpetuated not only by the little town of Boton in Lincolnshire with its American homonym, but also by Boshall in Yorkshire, Botesdale in Suffolk, Botolph Bridge in Huntingdonshire, and Botolph in Sussex. In England his feast was kept on 17 June, in Scotland on 25 June.

HERBERT THURSTON.

Boturini Beneduci, Lorenzo, a native of Milan who later went to Mexico in 1738 by permission of the Spanish government and remained there eight years, familiarizing himself with the Nahual or Mexican language. He gathered a number of Indian pictographs on tissue paper, etc., the translation of the kind of information from frequent intercourse with the aborigines excited suspicion, as he was a foreigner, and the authorities, ever on the watch for intrigues against Spanish rule by strangers, deprived him of all his material, including pictographs, which he himself wrote in Spanish to save them. There he succeeded in clearing himself of the accusations, but never obtained restitution of the precious collection, which afterwards was neglected and partly lost. Notwithstanding these drawbacks, Boturini, from such notes as he had saved, composed a treatise with the title of: "Idéa y ensayo de una historia general de la América setentrional" (Madrid, 1746). The most valuable part of this book relates to his former library and to other literary material. His text, especially concerning migrations of Indian tribes, is of less importance. Besides the "Idéa", he is credited with the authorship of the following writings: "Oratio ad Divinam Sapientiam" (Valencia, 1750), and "Oratio de iure naturali septentrionalium Indorum" (Valencia, 1751). The date and place of his death are unknown.

Clavigero, Storia antiqua dell' Messico (Cesena, 1780); Bereain de Soula, Biblioteca hispano-americana setentrional (Mexico, 1816).

A.D. F. BANDELIER.

Boucher, Pierre, b. at Lagry, a village near Mortagne in the Perche, France, 1622; d. at Boucherville, 1717. In 1634 he went to Canada with his father Gaspard Boucher, a simple joiner. At the age of eighteen he entered the service of the Jesuit Fathers and went to their Huron missions at Georgian Bay. On his return to Quebec in 1641 he served as a soldier in the garrison of that city. In 1645 he was interpreter of Indian languages at Three Rivers and in 1646 compulsory-general of the missions at that place. Elected captain of the militia in 1651, while in command of the place during an interim in 1653 he repelled an Iroquois attack. Owing to his efficient defence he was placed in charge of the city, and retained the position until 1658. In 1651 he was sent to France to represent the needs of the colonies and plead the cause of the inhabitants. On his return to Canada, in 1662, he was reappointed Governor of Three Rivers, an office which he only resigned in 1667 when he withdrew from public affairs to found the essential parish named after his name Boucherville, situated opposite Montreal. He was succeeded in the governorship of Three Rivers by his son-in-law, René Gauthier de Varennes, forbear of the discoverer of Western Canada.

In 1664 Pierre Boucher had painted at Paris by the press of Florentin Lambert "L'histoire véritable et naturelle des mœurs et productions du pays de la Nouvelle-France, vulgairement dite le Canada". This work was published in 1649 in "L'Album Canáda", in the city of Quebec, and in 1777 "Mémoires de la Société Royale du Canada". An English translation appeared in 1883. Pierre Boucher is considered the best type of a Canadian landed proprietor, filled with piety, rectitude, and honour. At his death he left a numerous posterity. The family is still in existence, and the highest stations are filled by members bearing the name Boucherville, Brûlé, Niverville, Grosbois, and Montizambert. Pierre Boucher was the first Canadian colonist to be ennobled, V. E. King Louis XIV, in 1661, his letters of nobility, dated 1661, were renewed in 1707.

J. EDMOND ROY.

Bougaud, Louis-Victor-Emilie, Bishop of Laval in France, b. at Dijon, 28 February, 1823; d. at Laval, 7 November, 1888. He received his classical education at Autun, where his brother Charles, Archbishop Abbé, afterwards Cardinal, Pitra. He studied theology at Dijon and Paris, was ordained priest by Monseigneur Aïre in 1846, was professor of church history at the Seminary of Dijon (1846-51), and then at the Seminary of the Congregation of the Queen city (1851-61). In 1861 he accepted the position of Vicar-General to Bishop Dupanloup at Orleans. In 1886 he was appointed Bishop of Laval. Besides the sermons which he delivered in Paris and other cities, Bishop Bougaud wrote numerous works. While chaplain of the Visitations Convention, he wrote "Histoire de Saint Bénigne, premier évêque de Dijon" and "Histoire de Sainte Chantal". While Vicar-General of Orleans, he wrote "Histoire de Sainte Monique" and "Histoire de la bienheureuse Marguerite de la Joliette" and "Les Christianisme exilé". In five volumes (his great apologetical work, in 5 vols.); "Le grand père de l'Eglise de France au XIXes siècle", and "Histoire de Saint Vincent de Paul" (2 vols.). A volume of his discourses was published by his brother. He was a preacher and writer of great influence, in consequence of his appreciation of all noble thoughts and deeds, his deep compassion for human suffering, his great power of reflection, and his refined artistic taste. In his apologetics he evinced thorough sympathy with his own time and an unwavering hope for the triumph of the Church. His spirit appears in the explanations of the dogmas, precepts, and organisation of the Church to the moral and intellectual
aspirations of his contemporaries without any sacrifice of Catholic doctrine.

BOUQUET, GILLES-BAPTISTE, b. at Quimper in Brittany, in 1600; d. at Paris, 1743. He entered the Society of Jesus in 1706, taught the classics in the College of Caen and Nevers and lived for a number of years in Paris until his death. His "Aspirations philosophiques sur le langage des bêtes", published in 1737, became a cause of considerable annoyance to him and of a short exile from Paris. It was translated into English, Italian, and German. His historical work on the Thirty Years' War, and on the Treaty of Westphalia have been highly praised and are regarded as among the best historical books written by Jesuits. They were translated into German. He is also the author of a theological treatise on the form of consecration of the Eucharist, and of a Catechism divided into three parts, historical, dogmatic, and practical. This catechism, translated into Italian and German, went through many editions and is still in use. In his two celebrated comedies, "La Femme Docteur", "Le Saint désespéré", and "Le Saint désespéré", he caricatures the Jansenists. The first of the three went through twenty-five editions in a few months and was translated into Italian, Spanish, Polish, and Dutch. Between 1725 and 1737 he contributed many articles to the "Mémories de Turenne".

SOMMERVOGEL, Bibliothèque de la c. de J., I. 1873-85.

B. GULDNER.

BOUHOURS, DOMINIQUE, French Jesuit author, b. at Paris, 15 May, 1632; d. 27 May, 1702. Entering the Society of Jesus at sixteen, he taught grammar and rhetoric at Paris, Tours, and Rouen. A humanity was composed against the Jansenists, notably "Lettre à un Seigneur de la cour" and "Lettre à Messieurs de Port-Royal", had a large circulation, and gained him a prominent place among the critics and littérateurs of the seventeenth century. He also translated the New Testament into French, a translation which has been reprinted. It is best known to English readers, however, by his "Vie de S. Ignace" (Paris, 1679) and "Vie de S. Francois-Xavier" (Paris, 1682). These two biographies were translated into English and published at London in 1680 and 1681. A new translation, by a clergyman of the Diocese of Philadelphia, was published at Philadelphia by E. Cummiskey in 1840, and for a number of years these two works of Bouhours were the most widely circulated biographies of the two saints. The only other of the author's works done into English is "La manière de bien penser dans les œuvres d'esprit", which appeared in London in 1705 under the title, "The Art of Criticism".

Bouillart, Jacques, a Benedictine monk of the Congregation of St. Maur, b. in the Diocese of Chartres, 1669; professed at the Monastery of St. Faron de Meaux 1687, d. 11 December, 1753. He was the author of "Histoire de l'abbaye royale de Saint-Germain-des-Prés" (Paris, 1724). This valuable history of the celebrated Benedictine monastery contains biographies of the abbots who ruled over it since its foundation by Childebert 1 in 545 and many important historical events relative to the famous abbey. Bouillart also edited a martyrology of Usuard. In this publication he attempts to establish the genuineness and authenticity of the manuscript preserved

at Saint-Germain-des-Prés, against the Jesuit hagiographer Du Sollier, who in his revised edition of Usuard's martyrology had paid no attention to this manuscript.

Michael Ott.

Bouillon, Emmanuel Théodore de la Tour d'Auvergne, Cardinal de, French prelate and diplomat, b. 24 August, 1643, at Turenne; d. 2 March, 1715, at Rome. The son of Frederick Maurice, Prince of Sedan, he was of the family of the great Marshal Turenne. In 1658, he was appointed a canon of Liège; doctor of the Sorbonne in 1667; created a cardinal in 1669, at the early age of twenty-four, and, finally, provided with several rich benefices and made chief almoner to Louis XIV. But Louis, the powerful minister of Louis XIV, inspired by cunning to the house of Turenne, successfully opposed certain of his demands on the king for the benefit of members of his family, and the cardinal's disappointment vented itself in a bitter satire on his royal master. This was used to attack the cardinal; the cardinal then put forth great efforts to obtain the vacant Prince-Bishopric of Liège, but could not overcome the opposition of Louvois, who secured the dignity for Clement Joseph of Bavaria. Bouillon eventually regained the royal favour and was sent as ambassador to Rome. There, contrary to the wishes of his king, he championed the cause of Fénelon against that of Bossuet and did all he could to prevent the condemnation of Fénelon's "Explication des maximes des Saints". He was recalled to France, but alleging as a reason his duties as Dean of the Sacred College, he refused to obey the royal order. His property in France was then seized, whereupon he submitted and returned, but, on his arrival in France, was exiled to his Abbey of Tournus. While in this retirement, and under the influence of bitter ennui, the cardinal caused to be composed by Baluze his "Histoire généalogique de la maison d'Auvergne" (1708, 2 vols. in fol.). From his place of retreat, also, on the breaking out of the War of the Spanish Succession, he entered into correspondence with the English Duke of Marlborough, the Earls of Orrery and Galway, and others; and in 1710, after long and vainly soliciting his recall to court, he fled to the Low Countries. A passport for his journey was issued by the Royal Parliament, and his possessions again confiscated. But after some years' spent abroad, during which the cardinal sent to the king numerous memoirs, endeavouring to justify his conduct, he at last succeeded in obtaining the restitution of his revenues and permission to take up his residence at Rome, where he spent in peace his last days.

Edward A. Gilligan.

Bouix, Marie Dominique, one of the best known and most distinguished of modern French canonists, b. 15 May, 1808, at Bagnères-de-Bigorre, in the Diocese of Tarbes; d. 1 December, 1870. In 1825, on the completion of his college course in an institution of his native town, he entered the Society of Jesus at Avignon, with his brother Marcel, and later taught the classics and occupied chair of philosophy in the Academy of the order. In 1842, when he was on the eve of his solemn profession, the precarious condition of his health rendered a continuance of the religious life impossible, and he obtained permission to retire
from the Society. This necessary withdrawal was a great disappointment to Bouix, who, to the end of his life maintained the most cordial relations with his former brethren in religion, and received from them many evidences of a reciprocal regard. Father Roothan, General of the Jesuits, created him Doctor of Theology in 1851, in virtue of a power delegated by the Pope to General Roothan himself; and in the same year, work, "Du Concile Provincial", published in 1850, was dedicated to members of the order with whom he had previously been associated in scholastic work. The first two years of his life as a secular priest were spent in a curacy at the church of Saint Vincent de Paul, in Paris. Here he interested himself especially in the soldiers garrisoned at the capital, and founded in their behalf the Society of Saint Maurice, which later spread throughout France. In 1847 he was named to a chaplaincy, and became editor of the "Voix de la Verité", to which he had already been a frequent contributor. In spite of the fact that all self-seeking was entirely foreign to his character, he now became a prominent figure in the political and ecclesiastical life of Paris and a member of the "Société des amis de la Monarchie" and of the "Société des amis de Monseigneur Parisis. General Cavaignac, who aspired to the presidency of the republic, thought it wise to endeavour to enlist the sympathies of Bouix. It was at this time, in 1848, that his first book appeared, corresponding to an historical publication of the same date, the "Oeuvre de la Miséricorde". In 1849 his zeal impelled him to abandon for a time all other pursuits in order to minister to the victims of the cholera, which was then epidemic in Paris. Up to this time he had stood high in the favour of the ecclesiastical authorities of the diocese, but now an event occurred which was destined to affect seriously his ecclesiastical status and to give a new direction to his life work. Monsignor Fornari, the Nuncio at Paris, desiring to further the restoration of the papal council, held a conference with Bouix and the Bollandist Van Hecke, at which it was decided that the best means of influencing public opinion ought to be the preparation of a book explaining the law of the Church on provincial councils. Bouix was charged with this important work, and first published in the "Univers" four articles, setting forth the salient features of the question and preparing the public for the complete treatise, "Du Concile Provincial", which appeared in 1850. A few days later the "Univers" examined the canon law on synods and combating therefore, in the judgment of some, the tendencies of Gallicanism, was followed immediately by the loss of his chaplaincy. This event determined him to devote his life to dispelling the prejudices and errors which he believed had largely infected the clergy of France in regard to matters of law and discipline. To equip himself for this work he turned his steps towards Rome, where, with no other means of support than the stipend of his daily Mass, he passed the next four years (1851-1855) in study and in the preparation of the several works on canonical topics. In 1854, the degree of Doctor of Both Laws was conferred upon him by order of Pius IX. Returning to Paris in 1855, he continued his studies, and added to the series of treatises which established his fame as a canonist. To further the great purpose to which he had consecrated his life, he founded at Arras, in 1860, the "Revue des sciences ecclésiastiques", of which he was for one year the editor, and in which during two and a half years many of his best papers appeared from his pen. In 1864, just as his anti-Gallican opinions were about to subject him to new rigours at the hands of Monseigneur Darboy, Bouix was named Vicar-General of the Diocese of Versalles, a sufficient commentary on the division of opinion in the French episcopate as to the character of his teaching. The next year, when the royal exequaturs once more appeared for discussion in the French Senate, Archbishop Darboy advocated there the Gallican view, Bouix answered with a publication which contested the correctness of the archbishop's contentions. The wonderful activity of his pen continued until 1870. Then, when he was broken by labour and too much toil, he wrote his last work. After a long journey, he went to the Vatican Council as theologian of the Bishop of Montauban, and was able to witness what appeared to him a signal triumph of the principles to which his life had been devoted. He returned thence to his retirement, and with an undaunted spirit he endeavoured to complete a work on the Church, which he had already planned. It was while engaged on this work that death overtook him at Montech, in a religious house of which his sister was superior. His life was a long battle with Gallicanism, but always remained singularly free from bitterness and discontent, in spite of the difficulties by which he was beset and the atmosphere of combat which his zeal forced him to breathe. As to his reputation as a canonist, while all must concede his profound knowledge and his loving purpose, and while he has been justly called the restorer of the science of canon law in France, it must nevertheless be said that he falls short of being a great canonist; he is too often a compiler rather than a real creator. The work he has done is explained by the general favour which they still enjoy. Besides many articles, contributed to newspapers and reviews, especially to the "Revue des sciences ecclésiastiques", we owe to the pen of Bouix the following works: "Du concile provincial" (published also in Latin translation, De Concilio Provincial); "Tractatus de Principiis Juris Canonici"; "Tractatus de Capitolio"; "Tractatus de Jure Liturgico"; "Tractatus de Judiciis Ecclesiasticis"; 2 vols.; "Tractatus de Parochio"; "Tractatus de Juris Regularium"; 2 vols. (an abridged translation of which appeared in German); "Tractatus de Episcopo"; 2 vols.; "Tractatus de Curia Romana"; "Tractatus de Papa"; 3 vols.; "La sérenité sur l'assemblée de 1862"; "Le prétexte d'exequatur"; "La vérité sur la paix révolutionnaire de 1861 à 1862"; "L'Oeuvre de la miséricorde"; "Méditations pour tous les jours de l'année", 4 vols.; "Le solitaire des rochers"; "Histoire des vingt-six martyrs de Japon," 2 vols. Several of his works were honoured with pontifical letters of commendation, and most of his canonical treatises have gone through three editions. HUBER, Nomenclator Liturgicus, III, 1424; SCHULTZ, Geschichte der Quellen, III, 609; WARR, Jus Decretalium, I, 454; Revue des Sciences Ecclésiastiques, XXIX, 123, XXII, 129. JOHN T. CREAGH.
great Carmelite reformer. His "Vie de Sainte Thérèse, écrite par elle-même" (Paris, 1852), passed through several editions, and was translated into German and Dutch. His "Œuvres de Sainte Thérèse", in three volumes (Paris, 1852-54-56), reached a third edition in 1860. "Œuvres spirituelles du Saint Pierre d'Alcantara" (Paris, 1862), Father Caraffini's "School of Divine Love" (Lyons, 1863), and a new translation of "The Following of Christ" (Pothier, 1864) are three of the eight works issued in two years. Revised editions of Father Mumford's "Purgatory" (Paris, 1883), and of caraffini's "School of Divine Love" and "Faith and Foresight" (Paris, 1889) are valuable contributions to ascetic theology. "A Saint Joseph d'après les saintes et les maîtres de la vie spirituelle" (Paris, 1863) is Father Bouix's own original contribution to religious literature. One of his most valuable services was the publication, for the first time, of the "Memoriale" of Pierre Lefèvre, B.L. Peter Faber) one of the first companions of St. Ignatius Loyola, in the original Latin and in a French translation (Paris, 1873). This work was translated into English by Father H. J. Conry, B.J. (London, 1873). Father Beauregard, in France, published his letters of St. Ignatius (Paris, 1870) and Father Du Pont's "Life of Father Alvarès" (Paris, 1873). He published the "Œuvres spirituelles" of Father Jean-Joseph Surin in three volumes (Paris, 1879-82). The translator had no-name of names, but in 1882 was one of the last works from the pen of this indefatigable writer, whose many years of labour enriched the literature of France with popular spiritual books of sound Catholic theology.

PATRICK H. KELLY.

Bouillainiers, Henri, Count of, b. at Saint-Saëns (Seine-Inferieure) France, 11 October, 1658; d. at Paris, 23 January, 1722. He was one of the first French historians to write the history of the institutions or fundamental laws of the nation and, although systematic and decidedly partial, was none the less a pioneer in this particular line of work. Until the death of his father in 1697, he followed a military career, but some complications concerning an estate obliged him to make a close investigation of his family titles and this it was that led to his becoming an historian. Like Saint-Simon, Bouillainiers was saturated with ultra-aristocratic notions and was as spirituelle aux aristocrates as theirs books being a long, violent tirade against the French monarchy which, according to him, was responsible for the gradual ruin of the privileges of the nobility and the annihilation of feudalism. The Franks, according to his doctrine, established themselves in Gaul by right of conquest; they divided its land among themselves and they exercise public authority. They constitute the French nation; they are Frenchmen. Every Frenchman is free and independent, is supreme in his domain, in his family and in his property. The justice to his subject. The king is merely a civil magistrate chosen to settle the disputes of private individuals; he has no special power over the life, property, or liberty of other Frenchmen who are in no wise his subordinates. Frenchmen who belong to the nobility are all on an equality: they are the peers of the king and of his relatives. Relationship with kings confers no rank even upon descendants in the male line. Such is the feudal system as claimed by Bouillainiers to be the one that is just, legitimate, and conformable to the reality of history.

Now, what caused Frenchmen or nobles to be dispossessed of their rights? First, the Crusades. To defray the expenses of these expeditions many noblemen either mortgaged or sold their fees and wealthy plebeians, who were not noble, but, according to Bouillainiers, "ignoble," thus became the owners of fees and, consequently, the members of the nobility, corrupted it. Next came the ignorance of the lords or owners. The ignorance and negligence of the lords rendering them generally incompetent to discharge the functions that rightfully belonged to them, the principal of which was to dispense justice in their fees, they soon transferred their judicial authority to clerics or jurists. Thanks to the dignity of their role, these clerics or jurists soon became as important as the lords and thus originated the noblesse de la robe (nobility of the long robe) which Bouillainier (a monograph of his) contributed to the French history.

Finally came the policy of the Capetian Kings which Bouillainiers regards as chiefly instrumental in ruining feudalism and therefore the French nation. This policy consisted in adding the great fees to the royal domain by reason of conquest, purchase, or marriage, with the result that the Kings of France assumed an importance theretofore unknown to them, and which soon became entirely disproportionate; while the lords, fascinated by the brilliancy of the royal courts, instead of remaining the peers of these kings, who had diminished the power of the French nobles still more by favouring the emancipation of the commons and raising to the ranks of the nobility plebeians whom they entrusted with high offices to which they were not entitled. Moreover, they appointed to seats in the States General, which should have been composed exclusively of representatives of the French, delegates from among the lower clergy and liberated serfs, and of course this arbitrary measure completed the overthrow of the nobility. Such, in teaching set forth in Bouillainier's three most important works: "Histoire de l'ancien gouvernement de France," "Lettres sur les Parlements ou Etats-Généraux," and "Essais sur la noblesse" which, taken as a whole, constitute an earnest plea for feudalism against monarchical. These works, written by Bouillainiers for his grandchildren, did not appear until after his death. The "Histoire de l'ancien gouvernement de la France" with fourteen historical "Lettres sur les Parlements ou Etats-Généraux" were published in Amsterdam and the Hague in 1727, the "Essais sur la noblesse" (containing a dissertation by the late Count of Bouillainiers on the origin and decline of the nobility) coming out in Amsterdam, 1732. It is only within the last quarter of the nineteenth century that these have been duly appreciated and their conclusions taken up by the historic school of which Fustel de Coulanges was the chief representative.

RENÉ DUMIC.

Boulanger, André de (Petit-Père André), a French monk and preacher, b. at Paris in 1578; d. 27 September, 1657. He was the son of a President of the Parlement (High Court) of Paris. At an early age he entered the Augustinian Order and became a well-known preacher, being heard for over half a century in most of the great pulpits of France. Boulanger lived at a period when the doctrine of preaching, introduced by such men as Menet and Maillard, still lingered, and he made large use of the burlesque, notwithstanding its bad taste, in his own preaching. It is indeed this habit of jesting that has preserved his name. Bouleau refers to Boulanger when speaking of trivial plays on words, as he writes:

L'avocat au palais en hérissée son style,  
Et le docteur en chaire en sema l'Evangile.

—"The style of the advocate in court bristles with them and the doctor in the pulpits scatters them through the Gospel." Father André's style of preaching may be judged from the following example. In one of his passages he thus compared the four great
Received and read by the Latin Church to the kings of the four suits of cards; St. Augustine to the King of Hearts, because of his large-heartedness; St. Ambrose to the King of Clubs (troje, clover), on account of his flowery eloquence; St. Thomas to the King of Diamonds (carreau, in the sense of "foot-stool") on account of his lowliness of thought. However, this exaggeration of speech was but one side, and that the least important one, of Tallemant des Réaux's eloquence. Tallemant des Réaux said: "He was a good member of his order and had a large following of all sorts of people; some came to laugh, others came because he moved them."

The critic Guérin, who had heard the facetious monk, represents him, in a dialogue of the dead, as saying in his own defense against his accuser Cardinal du Perron: "Joker as you take him to be, he has not always made those laugh who heard him; he has said truths which have sent bishops back into their dioceses. He has found the art of sting ing while laughing." The Regent Anne of Austria and the Prince of Condé enjoyed his sermons. Boulanger was several times provincial of his order and much occupied in other ways; consequently he was not able to attend to the preaching of his sermons. The one of his works which has been published, "L'Oraison de Marie de Lorraine, abbässesse de Chelles", is mediocre.

**Boulay (Bouleus), César-Egasse du, a French historian, b. in the beginning of the seventeenth century at Saint-Eller (département of Mayenne); d. 16 October 1678.** After teaching humanities in the college of Navarre he occupied important positions in the University of Paris, especially those of rector and historian of the university. His main work is the "Histoire Universitatis Parisiensis" covering the period from the supposed foundation of the university by Charlemagne (800) to 1600. The first three volumes published in 1665 were censored by the university. To justify himself the author wrote the "Nota ad censuram." (Paris, 1667). The censor appointed by the king found nothing blameworthy in the work, and the last three volumes were published in 1673. Du Boulay's history is very important on account of the many original documents which it reproduces, but its value is lessened by the insufficient judgment and criticism of the author. Other writings of Du Boulay refer to the same topic of the university, its foundation, patrons, administration, and privileges: "De patronis quatuor nationum universitatis" (1662); "Caromagnolae." (1662); "De decanatu nationis Gallicanae..." (1662); "Remarques sur la dignité, rang... du recteur." (1668); "Remarques sur l'élection des officiers de l'Université." (1668); "Recueil des privilèges de l'Université..." (1674); "Fondation de l'Université par l'empereur Charlemagne" (1676). In addition to these, Du Boulay wrote "Speculum eloquentiae" (1658) and "Trésor des antiquités romaines" (1651).

C. A. Dubray.

**Boulogne, Étienne-Antoine, French bishop, b. at Avignon, 26 December, 1747; d. at Troyes, 13 March, 1825. He was the son of poor parents and obtained an education from the Benedictine Brothers of his native city. He exhibited talent and industry and was ordained in 1771. His oratorical gifts attracted general attention, and he soon became one of the most admired preachers in Paris. For a while the Archbishop of Paris interdicted him from preaching; but was eventually induced to withdraw his opposition when a eulogy composed by the Abbé Boulogne on the late Dauphin, the father of Louis XVI, was obtained by the Abbe de Spadar, the preacher now grew steadily. He preached the Lenten sermons aux Quinze-Vingts in 1786, and at the court of Versailles in 1787. In one of his sermons at court he clearly pointed out the fearful storm which was threatening society, brought on, he said, by the false philosophy and irreverence of the day. The storm advanced unchecked and broke over France sooner and with greater violence than had been foreseen, except by the keenest observers. Boulogne refused to take the oath of the civil constitution of the clergy demanded by the laws and was in consequence stripped of his titles and benefices. He also refused to leave his country in her need. He was arrested three times, but each time succeeded in recovering his liberty; condemned to deportation on another occasion for having defended Christianity against the attacks of Larevillière Lépeaux, he again evaded the unjust decree. The worst of the revolutionary storm had scarcely blown over when he reappeared, contending in the "Annales Catholiques", of one of his works which has been published, "L'Oraison de Marie de Lorraine, abbéesse de Chelles", is mediocre.

BOUQUET, MARTIN, a learned Benedictine of the Congregation of St.-Maur, b. at Amiens, France, 6 August, 1685; d. at the monastery of Blance-Man- teaux, Paris, 26 April, 1754. When a boy he resolved to enter the secular priesthood. Subsequently, however, not wishing to expose his soul to the dangers of the world, he determined to become a Benedictine. The Congregation of St.-Maur was then in its most flourishing condition. Bouquet joined this congregation and took vows at the monastery of St.-Faron, at Meaux, 16 August, 1706.

Shortly after his elevation to the priesthood his superiors appointed him librarian at the monastery of St.-Maur, a position which an entire library of 60,000 books and 8,000 manuscripts. Being well versed in the Greek language, Bouquet was of great assistance to his confreire, Bernard de Montfaucon, in his edition of the works of St. Chrysostom. He himself was preparing a new edition of the Jewish Talmudian, and had progressed far in his work when he heard that the Dutch writer, Siegbert Haverkamp, was engaged on a new edition of the same author. He at once sent all the material he had collected to Haverkamp, who embodied it in his edition. Bouquet's greatest work, however, is his collection of the historians of Gaul, and France, entitled: "Rerum Gallicarum et Franciarum Scriptores".

Attempts to collect the sources of French history had been made at various times. Thus Pierre Pitou (d. 1596) had collected some material, and Andre Duchesne (d. 1640) had begun a work entitled "Historiae Francorum Scriptores" to be published in twenty-four volumes, but died before finishing the fifth volume. Colbert, the great French minister of finance, desired to have Duchesne's work continued at the expense of the State, but he died in 1683 without finding a suitable historian to complete what Duchesne had begun. In 1717, D'Aguessau, who was then chancellor, entrusted to the Benedictine, Bouquet, the task of completing Duchesne's work; he was given full power to do the work. The design was accepted and the Orato- rian LeLong who had just finished his "Bibliothèque historique de la France" was entrusted with the task. He had scarcely begun when death put an end to his labours in 1721.

The Congregation of St.-Maur now undertook the publication of the work and Dionysius de Saint-Marthre, who was then superior-general of the congregation, placed Bouquet in charge of the undertaking. Because Duchesne's five volumes had been required, it was necessary to have Duchesne's work continued and had the first two volumes ready for print in 1729, but their publication was delayed. Some monks of the Congregation of St.-Maur refused to submit to the Bull "Unigenitus" which was directed against Quesnel. Bouquet submitted after due hesitation. When, however, Cardinal De Bissy required the monks of St.-Germain-des-Prés to sign a formula of submission drawn up by himself, Bouquet and seven others refused their signature because De Bissy, being merely Abbey in commendam of St.-Germain-des-Prés, had no spiritual jurisdiction over the monks. Bouquet was banished to the monastery of St.-Jean, at Laon, but in 1735, D'Aguessau and a few other influential persons succeeded in having him recalled to Argenteuil, and afterwards to Blance-Manteaux, where he could more easily supervise the publication of his work. He brought out eight volumes between 1738 and 1752. The great part of 1753 was spent by the ninth volume was ready when Bouquet died (1754), after receiving the last rites of the Church.

The eight volumes published comprise the sources of the history of France from the earliest days of its existence to the year 997. The work was continued by other members of the Congregation of St.-Maur, in the following order: vols. IX-X were published by the two brothers, John and Charles Haudiquier; vol. XI, by Housseaue, Preicius, and Poirier; vols. XII-XIII, by Clement and Brial; vols. XIV-XVIII, by Brial. The work was brought to a close, and published by the Académie des Inscriptions which completed the work in 1876. A new edition in twenty-five volumes, undertaken by Leopold Delisle, a member of the Académie des Inscriptions, has reached the twenty-fourth volume.

BOUQUILLON, THOMAS, b. at Warderton, Belgium, 16 May, 1840; d. at Brussels, 5 November, 1902; a Belgian theologian, and at the time of his death professor of moral theology in the Catholic University of America. The second son among five children in a family of small landholders long established at Warderton near Ypres, he received his early education in local schools and in the College of St. Louis at Menin. His course in philosophy was made at Roulers; in theology, in the seminary of Bruges. Having entered the Gregorian University in Rome, in 1863, he was ordained priest in 1865 and made doctor of theology in 1867. After ten years in the Bruges seminary (1867-77) and eight years in the Catholic University of Lille, France, as professor of moral theology, Dr. Bouquillon re- tired to the Benedictine monastery at Maredsous and devoted his energies to the preparation of the second edition of his treatise on fundamental moral theology, a work which fixes him permanently among the great men in the history of that science. He accepted the chair of moral theology in the Catholic University of America in 1900. He remained until his death in 1902. He was one of the most eminent theologians of his time, a man of prodigious erudition in theology, history of theology, church history, canon law, and bibliography. Though never in robust health, he was a tireless student, marked by quiet, simple habits, deep faith, broad sympathies, and great concentration. When he entered the field of moral theology he found the science enjoying no prestige, dimmed by the neglect of its principles and the development of ethical philosophy. He worked to create a theology which could fit itself to the closely related dogmatic and advancing social sciences, and the methods employed in teaching it were far from perfect. In his whole career as pro- fessor and author he aimed to rescue moral theology from that condition and to restore it to its proper scientific method and dogmatic dignity. He em- phasized strongly the historical and sociological aspects of principles and problems in the science, neglecting no results of modern research which contributed to the growth of social sciences, and made of them. To him is due much credit for the improved methods seen in the recent history of moral theology. Possibly few theologians of his day were more widely consulted in Europe and America than Dr. Bou- quillon. He enjoyed and retained the intimate
BOURJASSÉ 716
BOURCHIER

confidence of Leo XIII and of many eminent churchmen, and showed throughout his life an unyielding devotion to the ideals, teaching, and administration of the Church. His extraordinary grasp of current thought developed in him an openmindedness and a sympathy with real progress which, combining with his other traits, gave a peculiar fascination to his character. In 1891 he was induced to publish a pamphlet on education setting forth the abstract principles involved. His views met with considerable opposition. In all his published replies to critics he maintained his original positions without any modification, whatever and asserted the opposition to misunderstanding of his point of view and of his statement of principles. Dr. Bouquillon was active and influential in the organization of the Catholic Universities of Lille and Washington. In both he gained a name for great practical wisdom in questions of organization and law and for extraordinary power as a teacher.

He published: “Theologia Moralis Fundamentalis” (3d ed., Bruges, 1903), a masterpiece of erudition, analysis, and exposition; “De Virtute Religionis” (2d ed., Bruges, 1890); “De Virtute Religionis” (2 vols., Bruges, 1880); “Education” (Baltimore, 1889); “Education, a Rejoinder to Critics” (Baltimore, 1892); “Education, a Rejoinder to the ‘Civile Catholica’” (Baltimore, 1892); the last three of which were incorporated into his magnum opus, the “Revue des sciences ecclésiastiques”, of which he was at one time editor, in the “Nouvelle revue théologique”, the “Revue Bénédictine”, “The American Catholic Quarterly”, and “The Catholic University Bulletin”. He edited, with notes and comments, Stapleton, “De Magnitudine Ecclesiae Romanae” (Bruges, 1881); “Leonic XIII Allocutiones, Epistolae &acta” (2 vols., Bruges, 1887); Platelli, “Synopsis Cursus Theologiae” (Bruges); “Catechismus ex decreto Concilii Tridentini” (Tournai, 1890); “Diei Sacertalitis” of Dirckinck (Tournai, 1888); Louis de Grenade, “L’Excellence de la très sainte Eucharistie” (Lille); Coret, “L’Année sainte” (1768) (Bruges, 1889).

WILLIAM J. KERRY.

BOURJASSÉ, JEAN-JACQUES, archeologist and historian, b. at Ste.-Maure (Indre-et-Loire), France, 22 December, 1813; d. at Tours, 4 October, 1872. He made his preparatory studies for the priesthood in Paris. In 1835, he taught the natural sciences at the seminary of Tours, where he held a course of archeology that soon attracted attention. The results achieved by him in a field of research, then comparatively new, were such as to entitle him to be considered a veritable pioneer in France, of the science of Christian archeology. In 1844 he became professor at the grand séminaire and held the chair of dogmatic theology there for six years. He then discontinued teaching in order to devote himself entirely to the preparation of his various archeological works among the productions published by him the best known are: “Archéologie Chrétienne” (1841); “Les Cathédrales de France” (1843); “Les plus belles églises du monde” (1857); “Recherches hist. et archéol. sur les églises romaines en France” (1859).

Bourde, Thomas, b. 1406; d. 1486, Cardinal, was the third son of William Bourchier, Earl of Essex, and of Lady Anne Plantagenet, a daughter of Thomas of Woodstock, Duke of Gloucester, youngest son of Edward III. At an early age he entered the University of Oxford, and in due course, embracing a clerical career, was collated to the living of Colwich, Staffordshire, in the Diocese of Coventry and Lichfield, on 24 May, 1424. His next promotion was to the Deanery of St. Martin-le-Grand in London, 1 December, 1427, but he declined the prebend of West Thurrock; it was not till 24 September, 1429, that he was ordained acolyte and subdeacon. This rapid promotion was doubtless due to his high birth, and though no evidence exists of his appointment as a special canon, his elevation to be appointed Chancellor of the University of Oxford in 1434, a post which he held for three years; in 1433, notwithstanding his youth, he was recommended for the then vacant See of Worcester. The pope had, however, already made another choice, but interest was exerted with the result that the previous nomination was cancelled, and Eugenius IV by a Bull dated 9 March, 1434 appointed Bourchier Bishop of Worcester, the temporalities of the see being restored to him. On 15 April he was elected Bishop of London and consecrated. Not long after, the Bishop of Ely died, and the Benedictine Cathedral Chapter desiring Bourchier for their pastor, sent to Rome to procure Bulls for his translation. These were expedited; but the King of England steadily refused to restore the temporalities. He put himself into many critical studies in the “Revue des sciences ecclésiastiques”, of which he was at one time editor, in the “Nouvelle revue théologique”, the “Revue Bénédictine”, “The American Catholic Quarterly”, and “The Catholic University Bulletin”. He edited, with notes and comments, Stapleton, “De Magnitudine Ecclesiae Romanae” (Bruges, 1881); “Leonic XIII Allocutiones, Epistolae &acta” (2 vols., Bruges, 1887); Platelli, “Synopsis Cursus Theologiae” (Bruges); “Catechismus ex decreto Concilii Tridentini” (Tournai, 1890); “Diei Sacertalitis” of Dirckinck (Tournai, 1888); Louis de Grenade, “L’Excellence de la très sainte Eucharistie” (Lille); Coret, “L’Année sainte” (1768) (Bruges, 1889).

BOMMEL, Thomas, Bouquillon, Notice bio-bibliographique (Brussels, 1900); The Catholic University Bulletin (1605), IX, 152-163.
The king refused them audience, and a battle was then fought at Northampton (July, 1460), when Henry found himself once more a prisoner. The Duke of York now claimed the throne, but a compromise was effected whereby Henry to the exclusion of the latter’s son, Edward. Bourchier seems to have accepted this solution; and when Queen Margaret again opened hostilities, he threw in his lot definitely with the Yorkists, and was one of the lords who agreed to accept Edward (IV) as rightful king. As archbishop, he crowned Edward on 26 June, 1461, after Edward’s marriage with Elizabeth Woodville, also crowned his consort (May, 1465). Edward besought Pope Paul II to bestow a cardinal’s hat on Bourchier in 1465; but delays occurred, and it was not till 1473 that Sixtus IV finally conferred that honour upon him. In 1475 Bourchier was employed as one of the arbitrators on the differences pending between England and France. Growing feeble, in 1480 he appointed as his coadjutor William Westkarre who had been consecrated in 1458 Bishop of Sidon. In 1483, on the death of Edward IV, he formed one of the deputation who persuaded the queen-dowager, then in sanctuary with her family at Westminster, to deliver her second son, Edward, Richard, Duke of Gloucester, to be with his brother the boy-king Edward V. Bourchier had pledged his honour to the distrustful queen for the lad’s security; yet, three weeks later he was officiating at the coronation of the usurper, Richard III. He performed the like solemn office for Henry VII in 1485 after the death of Richard on the field of Bosworth; and, as a fitting close to the career of a man who was above all a peacemaker, he married Henry VII to Elizabeth of York on 18 January, 1485-86, thus uniting the factions of the Red and White Roses. He died on 6 April, 1495, at Knowle, a mansion he had purchased for his see, and was buried in Canterbury cathedral. It fell to his lot as archbishop to preside in 1457 at the trial of Reginald Peacock, Bishop of Chichester, charged with unorthodoxy. Though the inculcated bishop withdrew his works condemned as unsound, he was kept in custody by Bourchier till his death two years later, although he had been compelled to resign his see.

Bourdaloue, Louis, b. at Bourges, 20 August, 1632; d. at Paris, 13 May, 1704, is often described as the “king of preachers and the preacher of kings”. He entered the Society of Jesus at the age of fifteen years. His father, Etienne Bourdaloue, a distinguished legal official of Bourges, though opposing his choice for a time, in order to test its sincerity, willingly consented, having had similar aspirations himself in his youth. A genealogist of the seventeenth century named Hodeau has attempted to trace back the family to the time of the Crusades, but the learned and laborious Tauron Tauron informs us that the first of the race was Macé Bourdaloue, an humble tanner of Vierzon, about 1450. During Bourdaloue’s lifetime there were some titles of nobility in the family for military prowess, and although his father was conspicuous in his way to succeed his wealth and wealthy. One of his relatives married a shoemaker, and considerable difficulty was experienced in providing her with a modest dower. Attempts have been made to discover some descendants of the Bourdaloues in our own times, but though the name is common enough, the family is extinct.

When young Bourdaloue entered the Society he immediately attracted attention by his quick and penetrating intelligence, his tireless industry, and his strict observance of religious discipline. He was subsequently made professor of philosophy and moral theology, but certain sermons which he was called on to preach unexpectedly brought him into notice as an orator, and it was determined to devote him altogether to the work of preaching. He began in the Provinces in 1665, was transferred to Paris in 1669, and for thirty-four consecutive years preached with a success that reached its climax only at the end of his career. He was the contemporary and friend of Bossuet, and though quite unlike each other in their methods, their eloquence gave to the French pulpit a glory which has perhaps never been equaled in modern times. They died within two months of each other, though Bossuet was famous long before Bourdaloue appeared. They followed different lines: Bossuet was distinguished for the sublimity and vast sweep of his conceptions, the marvellous conciseness, splendour, and grandeur of his language, as well as the magisterial and almost royal manner in which he grasped his subject and dominated his hearers. He often spoke with scant preparation, so that very few of his wonderful discourses were put on paper before being delivered. His glory as an orator is based mainly on his wonderful “Oraisons Funèbres”. Bourdaloue, on the contrary, was essentially a preacher. He wrote his discourses with extreme care, and although they are numerous enough to form editions of twelve and sixteen volumes, there is only one sermon that is complete. He had a pronounced dislike of the “Oraisons Funèbres”; he even objected to the name, and called them éloges. In the entire collection of his discourses, we find but two of that character, both of them panegyrics of the Condé, Henri and Louis, and both undertaken to pay a debt of gratitude to which the Jesuits owed to that family. The first was prompted also by the purpose of gaining an influence over the Great Condé, in order to lead him to a better life. This was realized, for when, only four years after the first discourse Condé’s corpse was borne to the same church where he had listened to the panegyric of his father, Bourdaloue was again the orator, and startled his audience by saying: “God gave me a presentiment of the Prince’s conversion. I had not only formed the wish, but as it were, anticipated it by a prayer which seemed then to contain something of a prediction. Whether it was an inspiration or a feeling of zeal, I was transported beyond myself, O Lord, and I was assured by Thee, that Thou wouldst not leave this great man, whose heart was so true as I knew it to be, in the way of perdition and the corruption of the world. He heard my voice; he has heard Thine.”

This apostolic motive never failed to reveal itself in all his utterances. Nevertheless, his funeral oration on Henri de Bourbon was considered at the time equal oratorically to any of Bossuet’s. Mme. de Sévigné describes it as “the most beautiful that could be imagined. It is the finest and most Christian panegyric that has ever been pronounced.”
Such indeed was the universal verdict at the time. Condé himself according to Chérot, let it be known that he considered "the oration to be so noble, so eloquent, and so solid, that it would be difficult enough to surpass it, or perhaps even to imitate it". He then caused this oratory to be immediately translated into Latin, and he himself supervised the work. Boileau, though somewhat of a Jansenist, says that Bourdalaoue was le plus grand orateur dont le siècle se vanté. This appreciation, however, does not agree with that of some later critics, and Villemain, while acknowledging "numerous beauties of a superior order", declared that Bourdalaoue was not well fitted for funeral orations, "on account of the richness and fecundity of imagination which they require". On the other hand, Lord Brougham, himself an orator, says that "Bourdalaoue displays a fertility of resources and an exuberance of topics whether for observation or argument, not equalled by any other orator, sacred or profane". He ranks him far beyond Bossuet, but for other reasons inferior to Massillon, about whom another writer remarks that whereas "Bourdalaoue preached to the men of a vigorous age, Massillon addressed those of a period remarkable for its effeminacy. Bourdalaoue raised himself to the level of the great truths of religion; Massillon lowered himself to the weakness of the men with whom he lived." Nisard, in his "Histoire de la littérature française", says that "Bourdalaoue's success was the most brilliant and sustained that human speech has ever obtained". Taine ranks him with Cicero, Livy, Bossuet, Burke, and Fox; Fénélon, however, is said to have depreciated him in the "Dialogues sur l'éloquence", but according to the "Revue Bourdalaoue", the authenticity of the "Dialogues" is doubtful, and besides Bourdalaoue is not named; the description is assigned to him only by conjecture.

As his object was exclusively the salvation of souls, Bourdalaoue adapted himself to the audience which, in spite of its worldliness, frivolity, and vice, prided itself, and with reason, on its power of appreciating what was intellectual and scholarly, and although scandalously irreverent in the very temple of God, had an insatiable craving for religious discourses. To influence them, the preacher had to resort to reason; and consequently his discourses were delivered after a clearly defined and carefully enunciated plan, each part closely knit with, and evolved from, the preceding. The proposition is always distinctly stated; argument after argument is elaborated with irresistible logic; doctrines whose orthodoxy is in question, are carefully and minutely explained, and moral principles are ex- pounded, but never exaggerated or strained in the practical application which he never fails to make; sophistries are dispelled, objections answered, and errors refuted, the orator not fearing to return to a point for a greater clearance. Mysteries are discussed, though he purposely avoided what is too profound, even if by doing so he incurred the reproach of avoiding the sublime, for he is aiming at a moral deduction; the whole delivered in a style which Fénélon says, "had, perhaps, arrived at the perfection of which our language is capable in that kind of eloquence", and with a lucidity and clearness that amazed and captivated his hearers, and evoked applause which he was powerless to prevent. There is never a diversion made merely to dazzle or delight; there is rarely an appeal to the emotions; but the vividness and splendour of the doctrine he was pounding, the startling truthfulness of the psychological picture he was placing before their eyes—ever present to the eye of faith—enticed, or induced, or compelled his hearers to a reformation of life. He hurried on with an extraordinary rapidity of utterance, but with a distinctness of enunciation and a marvellous sweetness and power of voice that filled every part of the edifice in which he was speaking, and kept his audience spellbound to the end of his discourse. Places were secured at daybreak; princes and prelates crowded to hear him. In one memorable occasion, several of the most distinguished members of the hierarchy, among them Bossuet himself, withdrew in anger because the seats they claimed were not granted. Bossuet it is said, however, remained in a gallery apart to listen to the discourse. Although covering such a vast field in every one of his sermons, Bourdalaoue never exhausted his subject, and we find two and even three on the same theme, not only without any repetition, but each one improving on what preceded, so that Louis XIV said he could rather "hear Bourdalaoue's repetitions than what was novel from any one else". He appeared at the court on ten different occasions for courses of sermons and each time his welcome was more enthusiastic than before. He was a court preacher but did not flatter, and one of his sermons is made use of by modern Socialists in support of their teaching. A few years ago considerable controversy was evoked by it, and Jules Lemaitre finds in it a condemnation of contemporary egoism. He was a"judaizer" and used the phrase of St. Jerome: "Every rich man is an unjust man or the heir of one." If you go to the source of riches", he said, "even in houses and families who are proud of their origin, nay even those who are distinguished for their probity and religion, you will discover things which will make you tremble." In the twelve-volume edition there is one number containing sermons for Advent, three others of Lenten discourses, three more for Sundays of the year, two on the Mysteries, while the last two contain sixteen panegyrics, six sermons for religious investitures, and the two funeral orations. Considerable ingenuity has been exercised by his editors in fixing the time when the various discourses were pronounced; they are all undated. When they were given is largely a matter of conjecture. The sermons of least merit are those on the Mysteries, but it is explained that he purposely avoided any sublime or profound considerations on those topics and restricted himself to what could be easily stated, so as to have the effect of a "simple thing was practical", says Joubert, "in the judicious Bourdalaoue." Some one has said that "the Jesuits answered Pascal's attacks about their moral teaching by making Bourdalaoue preach." As regards his literary style, he was careful, graceful, and lucid; in a word he is a good writer." He is free from the turgid, pedantic, and ridiculous phraseology which was rampant at that time in forensic as well as sacred eloquence—though there are some examples of it. His compliments to the exalted personages in the audience are not so much evidence of bad literary taste as a mark of the servitude to which the court preachers of that day had to submit. About his correctness of language, however, the "Revue Bourdalaoue" (2 April, 1904) admits that authentic transcripts no longer exist, and that it is impossible to make out how much his editor, Bretonneau, has tampered with the text.

If not the originator, Bourdalaoue is largely the model, of French pulpit oratory in the arrangement of sermons that dazzle or delight. Had Fénélon as never having been used before, and as being poorly adapted to arouse the feelings of the audience. Its use by Bourdalaoue is explained by the fact that he was combating Protestant Rationalism by the medium of Catholic thought, and also because the use of clever and convincing reasoning was the vogue of the day. A reaction had set in from the silly idealism of a
short time before. Bourdaloue took his hearers as he found them, and Voltaire, referring to this form of his discourses, says "he was the first one to make reason speak, and always eloquently". For the impiety of the instrument he employed only shows more clearly his greatness as an orator. Only such a one as he could use it. For most readers the printed text of his discourses is wearisome in spite of the wealth of instruction it contains. It needs the voice and action of him to give it power. The vogue which his method has obtained is sometimes considered a mistake, if not a misfortune, for French pulpit eloquence. It supposes a Bourdaloue, as well as conditions which have long since disappeared. The mission to which he went back by the grand study of Bourdaloue dismisses with contempt the story that the orator spoke with his eyes shut. For a court preacher who had to distribute compliments to the dignitaries present, and who angered them if he did not do it skilfully, or omitted anyone who expected it (as happened in the case of Mme. de Guise), it would have been a difficult or rather impossible task to perform that duty if he did not use his eyes. The picture that so represents him was taken after his death. Similarly, to suppose that he would go to London and say "Adultery": tu es iles vir, like Nathan to David, is to be ignorant of conditions that prevailed in that servile court. The alleged sermon, moreover, is nowhere to be found. It is said to have been burnt. Mme. de Ségur, who had never written it, speaks of a sermon on "Impurity" in which Bourdaloue was merciless, but had that reproach been addressed to the king, she, above all writers, would have told it. Besides, that sermon was preached in the Congregation of the Assurant, and there is no assurance that it was repeated at Versailles. Again, some of his biographers in speaking of his sermon on "The Magdalene", insinuate that it was directed at Mmes. de Montespan and de Fontanges, the king's mistresses who sat before him. It is not certain that "The Magdalene" sermon was ever preached before the court. Moreover, Bourdaloue was too prudent to irritate uselessly.

Considerable discussion has been raised with regard to his attitude in the quarrel between the pope and the king about the Four Gallican Articles. It is admitted that in the Panegyric of St. Louis, pronounced in presence of Louis XIV, the preacher referred to "the rights of the Crown" and "the new attempts of the Court of Rome"; and also the manner in which the king defended them. It is known, however, that "while Louis in his quality of king recognized no superior on earth" (all of which has a Gallican tinge), yet the monarch should remember that he was, at the same time, the eldest son of the Church. His defenders maintain that we have no right to infer from this phrase that he was a Gallican or stood side by side with Bossuet. Another point which has called for inquiry is his "abstention" from the subject of the infallibility of the pope; he never spoke of it. Not only that, but when asked about it by Père de la Porte, he said that he had a sermon on the "Infallibility of the Church" which he had never preached. Beyond that, we have no means of knowing his theological view on the question of the pope. However, papal infallibility was not absent from his thought. His sermon on the "Infallibility of the Church" is not to be found, under that heading at least; but in the second sermon on the Feast of St. Peter, on "Obedience to the Church", he speaks explicitly of the Church's infallibility. Bourdaloue seems to have written but very few letters. The collator, Monsieur Blampon, found only eighteen; five more have been discovered since none of them letters of friendship. Some of them

are requests for interviews, which would suggest a preference for information by the medium of conversation. One of these letters is noteworthy as it is a congratulation to his intimate friend, the Duc de Noailles, on the intelligence of his name to the duke's brother. Bourdaloue "thanks God for having inspired the king to appoint such a worthy and holy bishop". The prelate became afterwards very unfriendly to the Jesuits. In this communication he speaks of himself as one of the ancient saviors of the house of Noailles, a phrase which intimates who was at the back of Bourdaloue's mission to the Protestants of Languedoc after the Re- vocation of the Edict of Nantes. In the fulfilment of that mission Protestants and Catholics came in thongs to hear him, and his gentleness and prudence won all hearts. There is a very elaborate letter, or rather disquisition, in the collection, addressed to Mme. de Maintenon who was being alienated from the Jesuits. Bourdaloue was remarkable as a director of souls. While paying proper respect to the great, he was the devoted friend of the poor, and assiduous in the confessional. He was of a gentle and amiable disposition and exerted a wonderful power at the death-bed, especially of hardened sinners. Towards the end of his life he resolved to quit Paris, and live in seclusion at La Flèche, and though he had received the permission of the general, the provincial thwarted the plan. It only increased his zeal and he continued to preach, hear confessions, and visit the poor till the end of his life. After a sickness of two days he died at the age of seventy-two.

T. J. CAMPBELL.

Bourdelles, HÉLÉ DE, Archbishop of Tours and Cardinal, b., probably, towards 1422, at the castle of Bourdelles (Périgord); d. 5 July, 1484, at Artaunes near Tours. He was the son of the Viscount Arnaud de Bourdelles. Having entered the Franciscan Order at an early age, he was only twenty-four when, at the request of Charles VII, he was appointed to the See of Périgueux (1447). He did not participate in the wars between France and England he was held prisoner for several years by the English, in consequence of his defence of ecclesiastical immunity. In 1468 he was appointed to the Archepiscopal See of Tours, but he resigned it in 1483 when he was appointed to the See of Sixtus IV. Bourdelles continued, during his episcopate, to practise religious poverty and was an intimate friend of St. Francis of Paula. He is mentioned among the Blessed in the Franciscan Martyrology for the 5th day of July. A stain defender of the rights of the Church against the encroachments of the State, Bourdelles advocated the abolition of the Pragmatic Sanction of Bourges, as may be seen from his treatise, "Pro Pragmaticis Sanctionis Abrogatione" (Rome, 1480). He also wrote "Liber in Pragmaticarum Sanctionum Notulis" (Rome 1484); and a Latin defence of Jeanne d'Arc which is attached in manuscript to the process of her rehabilitation.

Bourdelles, PIERRE DE. See Brantôme.

Bourdon, JEAN, d. at Rouen, France, 1612; d. at Quebec, 1668. In 1634 he went to Canada and became the first engineer-in-chief and land-surveyor in the colony of New France, and the first attorney-general of the Conseil Superieur, established in 1662.
It was Bourbon who surveyed and laid out all the domains and land grants assigned in this territory under the supervision of land companies. He laid out the first street of the sixteenth century and supervised the construction of the first château, Saint-Louis, at the order of Montmagny. He left a chart of the Beauport shore and vicinity (1641) and two plans of Quebec (1660–64). He also traced a map of the territory through which he travelled in 1646 when he was dispatched with Father Isaac Jogues, S.J., to Albany, to make a treaty of peace with the Iroquois; this, however, has been lost.

Well-informed, reliable, and conscientious, Bourbon was the confidential agent of the governors, who entrusted him with delicate missions. In 1657 he embarked for Hudson's Bay, but driven back by the savages, and his way blocked by ice, he was forced to return to Quebec, after having reached 53 degrees north. Jean Bourbon colonized the manorial estate of Poinsía, a distance at a distance of twenty miles from the capital, and at a later date a sieg, called after him Saint-Jean, still preserved in one of the principal suburbs of Quebec.

J. EDMOND RY.

Bourgue, François, a French missionary and philosopher, b. 7 July, 1806, at Gaujain, department of Gers; d. 21 May, 1866, at Paris. He pursued his theological studies at the seminary of Auch and was ordained priest in 1832. His immediate request to be authorized to work among the infidels of Africa was granted only in 1838. He proceeded to Algeria and, after ministering for some time in the hospitals of this colony, passed over to the regency of Tunis, where he founded a hospital and several schools. He was put in charge of the chapel which Louis Philippe (1830–48) had erected on the spot where St. Louis died, and he received several decorations, among them the Legion of Honour. The chief object of his literary productions was to spread the knowledge of Christianity among the Mohammedans. He published "Soirées de Carthage" (1847); "La clef du Coran" (1852); "Passage du Coran à l'Evangile" (1855); the important philological work, "La toison d'or de la langue phénicienne" (1852, 1855); a refutation of Renan's "Life of Jesus", under the title "Le Fils de la Vérité" (1864).

Bourgue, Peter. See SANTA FE, ARCHDIOCESE OF.

Bourgeois, Marguerite. See NOTRE DAME, CONGREGATION OF.

Bourgès (Bourigois). Archdiocese of, coextensive with the departments of Cher and Indre. After the Concordat of 1801 it became the metropolis of the Sees of Clermont, Saint-Flour, and Limoges, and in 1929 received as new suffragans the Sees of Tulle and Le Puy. As Gregory of Tours assigns a date subsequent to the "mission of the twelve bishops", that is, to the year 250, for the foundation of the Church at Bourges; and as Leo, who occupied the See of Bourges in 453, was its twelfth bishop; Du Cange must conclude that the diocese was founded at an early date, being met with in a twelfth-century manuscript. Fifteen saints figured among Leo's successors up to the end of the ninth century: Sebastianus, Ethelarius, Theodurus, Marcellus (all prior to 337); Palladius (377–384); Simplicius (472–480); Desideratus (549–550); Probianus, Felix, Remigius, and the first Stulpicius (all in the sixth century); and the second Stulpicius (612–624); the second Stulpicius (624–644), after whom the celebrated church of St.-Sulpice in Paris was named; David (793–802); and Agildulfus (c. 820–840). Among later bishops are: St. Guillaume de Donjon (1200–09); the celebrated theologian,igidius a Columbanus (1298–1316); and Jean Cœur (1447–53), son of the treasurer Jacques Cœur and during whose episcopate the University of Bourges was founded.

The claims of the See of Bourges to the primacy in Aquitaine are treated at length in the article on Bordeaux. Pope Clement II refused to recognize these claims; nevertheless the See of Bourges always prided itself upon a sort of platonic supremacy, and when, in 1678, the Bishop of Albi became Archbishop, he recognized explicitly the claims of Bourges. Even to-day the Archbishop of Bourges retains the title of Primate of Aquitaine; in this way, the name of Aquitaine which, after the thirteenth century, disappeared from political geography (being replaced by that of Guyenne) has been perpetuated in the terminology of the episcopate of Bourges, and in 1163 Alexander III visited the Diocese of Bourges. Many councils were held at Bourges, the principal among them being those of 1225 and 1226 which dealt with the Albigenses; that of 1438, after which Charles VII promulgated the Pragmatic Sanction, whereby the decrees of Basel were suspended in France, and the organization of a Gallican Church was attempted; and the council of 1528 which combated the Protestant encroachments favoured at Bourges on the one side by the university in which Calvin and Theodore Beza studied, and on the other by the court of Margaret of Valois.

The following great abbey were located within the diocese: the Benedictine Abbey of Déols near Châteauroux, founded in the tenth century, where St. Lusorius, son of the senator Lecudius, was interred; the Abbey of St.-Satur near Sancere, founded in 463; and that of Chêzel-Benodet founded in 1098 by Blessed André de Vallombrosa, and mother-house of the great Benedictine congregation which included the Persian Abbey of St.-Germain-des-Prés which was later merged into the Congregation of St. Maur. St. Leman, Archbishop of Seville, who fled the persecutions of Totila, suffered martyrdom at Vatian in the middle of the sixth century. Louis VII (1120–80) was crowned in the Cathedral of Bourges, and Louis XI (1422–83) and the great Condé (1611–79) were baptized at Bourges. Also Bishop of the "Collection de Councils" (1607–67) and Bourdaloue, the illustrious preacher (1562–1704), both Jesuits, were born at Bourges. The Cathedral of Bourges (thirteenth century) has beautiful windows and its society (fifteenth century) was built at the expense of Jacques Cœur.

The places of pilgrimages in the diocese are:

1. Notre Dame of Déols near Châteauroux, a pilgrimage begun in the tenth century by Ebbo. The church was consecrated by Pascal II. Pope Alexander III when in exile lived there and received Henry II of England; Pope Honorius III visited it.
3. The pilgrimage of Ste.-Solange, patron saint of the County of Berry. Ste.-Solange was born at Villemolin, placed in the cathedral of Bourges, and suffered death to preserve her virginity.
5. Notre Dame de Pellevoisin, famous for the visions that date back to 1576 and concerning which ecclesiastical authority is still silent.

In 1689, the following institutions were found in the archdiocese: 36 infant schools in Cher and 29 in Indre, conducted by sisters, 3 girls' orphanages in
BOURGET

Cher and 2 in Indre, 1 house of refuge for young women in Cher, 2 patronages for girls in Cher, 20 hospitals or hospices in Cher and 14 in Indre, 3 institutions for the care of the sick in their homes in Cher and 4 in Indre, 1 insane asylum in Cher, 6 homes for the aged in Cher and 2 in Indre, 1 orphanage for deaf-mutes and blind girls in Indre, and 1 home for incurables in Indre, all conducted by nuns.

In 1900 the religious orders of men in the diocese were: Jesuits and Franciscans at Bourges; Trappists at Fontgombault. The societies peculiar to the diocese were: Men: Missionaries of the Sacred Heart, founded in 1854 with the mother-house at Issoudun. This house is the centre of the worldwide congregation of the same name. Women: Monastery of Visitation in Oceania. Women: (1) Benedictines of the Holy Sacrament of St. Lawrence, a congregation said to date back to the time of Charlemagne. They are Sisters of the Perpetual Adoration and teachers. (2) Sisters of Charity and of the Holy Sacrament, called de Montoire, with the mother-house at Bourges. This congregation, founded in 1692 by Antoine Moreau, devotes itself to teaching and hospital nursing. It has 150 houses of which 106 are in the Diocese of Bourges. It is also a religious of the Immaculate Mary, hospital nurses and teachers, with the mother-house at Bourges. After the Revolution, the congregation took the place of the lay confraternity of the Immaculate Mary, and subsequently to 1857 had charge of the alms hospital. (4) Daughters of the Sacred Heart of Issoudun with houses in Belgium and Australia. At the close of 1905 the Archdiocese of Bourges had 652,681 inhabitants, 65 pastors, 430 successal parishes (mission churches), and 28 curacies.

GEORGES GOUTAU.

BOURGET, Ignace, first Bishop of Montreal, P.Q., Canada, and titular Archbishop of Martianopis, b. at Point Lévis, Province of Quebec, 30 October, 1790; d. at Sault-au-Recollet, near Montreal, 8 June, 1885. Remarkable for his piety and learning, he played throughout sixty years a potent part in the religious and civil life of Canada. Monseigneur Bourget was the eleventh of thirteen children born to Pierre Bourget and Thérèse Paradis. Sixty-two years of his life were spent in the priesthood, almost fifty in the religious, and for nearly thirty-six years he administered the then extensive Diocese of Montreal. He received his elementary instruction at home and at the Point Lévis school and afterwards took the regular course of studies at the Seminary of Quebec, where he received the subdiaconate, 21 May, 1821, being chosen that same year by Archbishop Plessis of Quebec to act as secretary to Bishop Lartigue of Montreal. Thus, even before receiving Holy orders, Ignace Bourget was launched upon a career of active life. In 1821, he was made deacon and on 30 November 1822, was ordained priest in the chapel of the Hôtel-Dieu where he said his first Mass. The young priest soon won the entire confidence of his bishop, who, in 1836, named him vicar-general of the diocese. On 10 March, 1837, Pope Gregory XVI appointed him coadjutor to Bishop Lartigue, and on 25 July of the same year he was consecrated titular Bishop of Telemessus in Lycia. He took possession, on 23 April, 1840, of the See of Montreal, made vacant by some trivial weeks previously by the death of Bishop Lartigue.

Bishop Bourget inaugurated a retreat for the clergy of his diocese, 4 August, 1840; in the same year he carried out the desire of his predecessor by creating a chapter of canons, the installation taking place 31 January, 1841. In December, 1841, after his return from France and Rome, where he had visited many religious communities, he brought the Oblate Fathers to Montreal and in January, 1842, founded the Petit Séminaire de Sainte-Thérèse and canonically established the Father's community of the Sisters of the Holy Names of Jesus and Mary, now flourishing in Canada and the United States, was founded under his patronage in 1843, and about the same time the Sisters of Providence, established 29 March, 1844. On 11 July, 1844, Bishop Bourget installed the Sisters of the Good Shepherd from Angers. In a pastoral letter, June, 1845, he commended the work of the Jesuit Fathers whose first establishment he blessed 31 July, 1831. On his return from Rome in 1847, he introduced the Fathers of the Congregation of the Holy Cross, the Clerics of St. Viator, and the Sisters of the Holy Cross, and, a little later, placed the orphans under the care of the Dames de Charité. In 1848 he installed the Sisters of Miséricorde; and on 30 August, 1850, was begun an institute for deaf-mutes known as the Hospice of the Holy Child Jesus. In the same year he founded the teaching order of the Sisters of St. Anne who have now several missions in the United States, one even in Alaska. All these religious orders have since attained notable proportions.

After the fire of 1852 which destroyed the cathedral, the episcopal palace, and one of the most beautiful sections of Montreal, Bishop Bourget made his residence at Saint-Joseph's until 31 August, 1855, when he removed to Mont Saint-Joseph, the episcopal residence. In 1854 he went to Rome on the invitation of the Holy Father to assist at the proclamation of the Dogma of the Immaculate Conception, and in 1857 he instituted the Forty Hours' Devotion in his diocese, and organized the Conférences Eclesiastiques. He returned to Rome in 1862 to represent the Province of Quebec at the canonization of the Japanese martyrs and was made a Roman Count and Assistant at the Papal Throne. During the same years he installed the Third Order of St. Francis, and on 15 October organized the confraternity for perpetual devotion to St. Joseph. In 1864 he entrusted the deaf-mutes to the care of the Sisters of Providence. Believing that the people were destined by the vision of the parish of Montreal, he began the change in 1866–67, and after a lapse of forty years the increase to more than forty new parishes shows the wisdom of the step. In 1869 Bishop Bourget went to Rome to attend the Vatican Council and consecrated the cornerstone of the Montreal Cathedral and in 1872 celebrated his golden jubilee. He tendered his resignation as Bishop of Montreal in 1876, was named titular Archbishop of Martianopolis, and withdrew to the St. Janvier residence at Sault-au-Recollet. In

IGNACE BOURGET
BOURGOING 722  BOURNE

1879, at the age of eighty, he made his last journey to Rome; five years later he heroically set out upon a tour of his former diocese with a view to re-establishing its badly compromised finances.

The remains of Bishop Lartigue and those of Archbishop Bourguet were interred together in a vault under one of the piliars (the south-west) that support the dome of the cathedral. After the services held at Notre Dame at which the Very Rev. Father Collin, Superior of St. Sulpice, delivered the funeral oration at the head of Archbishop Bourguet, another service was conducted at the pro-cathedral for the two bishops in whose honor an oration was pronounced by Archbishop Taché of St. Boniface. In June, 1903, a somber monument was dedicated to the memory of Archbishop Bourguet. This work of art, by the sculptor Hébert, stands in front of the cathedral. It was erected by both clergy and faithful, who contributed $25,000, and is a testimony of affection to a great bishop who was at the same time a great citizen. The published works of Archbishop Bourguet comprise eight volumes of pastoral letters.

Paul BRUHAND, Mgr. Bourget, archeveque de Martinique, ancien evêque de Montreal; Archiviste de l'archivite de Montréal; Semaine Religieuse (Montreal), V, X, L. 29.

BOURGOING, FRANCOIS, third Superior General of the Congregation of the Oratory in France and one of the original four cardinals de Bérulle, the founder of the French Oratorians, b. at Paris, 1555; d. in 1662. Bourgoing came from a family of which many members had been magistrates. Before joining the Oratorians he was curé of Clichy and resigned this position in favor of St. Vincent de Paul, who was also a disciple and friend of de Bérulle. After entering the congregation he was soon occupied in founding and directing new houses of the Oratorians, being called in all directions by the bishops of France and Flanders. In 1651 he was made assistant to the Superior General, Père de Condren and in 1654, upon the death of the latter, he was appointed to the vacant office. As superior general he foiled with unceasing zeal in organizing and developing the congregation. He was also an energetic opponent of the Jansenist heretics. After his death Bossuet delivered the funeral oration. Father Bourgoing was a writer of the first rank on asceticism, as Bossuet testifies. His principal work, "Vérités et excellence de Jésus Christ notre Sauveur", has been issued more than thirty times including an edition in 1666, and has been translated into several languages. Equally remarkable is his work, "Exercices de retraites", of which he published four series.

Cloitre des, Recueil de vies de quelques prêtres de l'Oratoire (Paris, 1882), II, 1; Ingold, Essai de bibliographie oratorienne (Paris, 1880), 21; Batterel, Mémoires, II, 286.

BOURNE, FRANCIS. See WESTMINSTER ARCHI-
DIOCESE OF.

BOURNE, GILBERT, last Catholic Bishop of Bath and Wells, England, son of Philip Bourne of Worcestershire, date of birth unknown; d. 10 Sept., 1669, at Silverton in Devonshire. Entering Oxford University in 1647, he was elected Fellow of Oriel College in 1651, proceeded in Arts in 1652, and was admitted B. D. in 1654, having in 1651 been named prebendary of Worcester on the suppression of the old monastic chapter. Removing to London in 1654, he became a Prebendary of St. Paul's, and in 1659 Archbishop呈现. He held the see of High Ongar in Essex. At the time in question the holding of such prebendaries involved at least some acceptance of the religious changes effected under Henry VIII and his successor. However, like many others who then externally submitted, Bourne seems to have always been a Catholic at heart, and the sincerity of his return to the old religion under Mary appears to have proved later by his active part in the persecution. Soon after her accession, whilst preaching at St. Paul's Cross, he narrowly escaped a dagger which a fanatic hurled on hearing him allude to Bishop Bonner's recent sufferings under the late regime. On being appointed to the Bishopric of Bath and Wells, Bourne received absolution from Cardinal Pole, the papal legate, by letters dated Paris, 17 March, 1554, from all censures incurred in the time of schism, and on 1 April was consecrated with five other bishops exiled by the pope, whose consecration was pronounced by Archbishop Taché of St. Boniface. During his brief episcopate helaboured zealously for the restoration of the Catholic religion, although towards heretics, as even Godwin, a Protestant, admits, he always used kindness rather than severity, nor do any seem to have been executed in his diocese. Queen Mary showed her high esteem for him by naming him Lord President of the Council of Wales. Elizabeth, however, whilst expressing herself contented with his service, relieved him quickly of that office in pursuance of her policy to remove Catholics from such posts of trust.

At the beginning of Elizabeth's reign Bourne was kept away from London by illness and official duties, and he is only mentioned once as present in the assembly in 1562. For this reason he did not himself participate in the bulls which commanded English bishops to be deposed, and he was even named amongst those first commissioned to consecrate Parker, appointed primate of the queen's new hierarchy. On his refusal, and on his rejection of the Supremacy Oath, which four Somerset bishops were commanded on 18 October, 1559, to administer, his deprivation followed. For a little time he still was left in Somerset, apparently a prisoner on parole; but on 31 May, 1560, he received a summons to appear within twelve days before Parker and the Commissioners in London. He set out, as his reply to Parker shows, well knowing what to expect, and was committed on 18 June a close prisoner to the Tower, where already five of his brother prelates were immersed. There in solitary confinement, for the most part, he remained three years, when an outbreak of the plague in September, 1563, caused him and his companions to be for a time transferred into the perhaps equally objectionable keeping of certain of their Protestant successors; Bourne himself being committed to that as yet untenanted by Priests' College.

Thus began that continual "tossing and shifting" of the deposed prelates "from one keeper to another, from one prison to another", which Cardinal Allen, who had every means of knowing, describes as one part of their "martyrdom". Accordingly we find the Council, in June, 1565, sending them all back to the Tower, although a little later in a letter to Parker (January, 1566), Bullyingham is mentioned as though again for a time Bishop Bourne's actual or intended keeper, whilst all the captive prelates continue during the next two years to be referred to as then in the public prisons. After nearly ten years of this suffering existence Bishop Bourne expired 10 September, 1569, at London on 25th of the month, having been then (apparently not long) to the custody of Carew, Archdeacon of Exeter and Dean of Windsor, There he was buried in the church, though no monument marks the spot.

The oft repeated story of the kindly treatment shown by Elizabeth to her relatives she deposed proves to rest solely on Lord Burghley's interested statement (Execution of Justice, 1583) which his own acts and papers contradict, but which was eagerly adopted and enlarged by the prejudiced defenders of Elizabeth, Andrews (Tortura Morti, 1609), Camden (Annales, 1615),
Bouyer, Jean-Baptiste, Bishop of Le Mans, theologian, b. at St. Charles-la-Forêt, Mayenne, 16 January, 1758; d. at Rome, 28 December, 1854. Having received merely an elementary education, he learned his father's trade of carpentry, but he gave his spare time to the study of the classics under the direction of the parish priest. In 1805 he entered the seminary of Angers, where he made rapid progress. He was ordained priest in 1808 and appointed professor of philosophy at the College of Château Gauchy. In 1811 he was transferred to the seminary of Le Mans, where he taught philosophy and moral theology. In 1819 he was made superior of that faculty. In 1822 he translated into French the philosophical works of his predecessor Father Ozanam. In 1834 he was raised to the episcopal see of Le Mans. The influence exerted by his "Institutiones Theologicae" (in fifteen editions), which was in use in almost all the seminaries of France, was as great as his successor. Father Bouyer was a unique and honourable position in the history of theology during the nineteenth century. His compendium had the distinction of emperor the famous Khang-hi, who retained Father Bouvet, together with Father Gerbillion, near his person and made them his instructors in mathematics. While engaged in this work, the two fathers wrote several mathematical treatises in the Tartar language, which the emperor had translated into Chinese, adding the prefaces himself. So far did they win his esteem and confidence that he gave them a site within the palace enclosure for a church and residence which were finally completed in 1702. In 1767 he sent Father Bouvet back to France to obtain new missionaries and made him the bearer of a gift of forty-nine volumes in Chinese for the king. These were deposited in the Royal Library, and Louis XIV, in turn, commissioned Father Bouvet to present to the emperor a magnificently bound collection of engravings.

In 1699 Father Bouvet arrived a second time in China, accompanied by ten missionaries, among them men of great ability, such as Fathers de Prémare, Régis, and Parrenin. Khang-hi honoured him further with the title of interpreter to his son, the heir-apparent. In 1700, with four of his fellow missionaries, he presented a memorial to the emperor, asking for a decision as to the meaning attached to the various ceremonies of the Chinese in honour of Confucius and their ancestors. This petition, which had been taken a keen interest in the controversy regarding the ceremonies, replied that they were simply civil usages, having no religious significance whatever. The memorial, together with the emperor's reply, was published in the "Gazette de Pekin," but failed to allay the excitement then raging in Europe over the question. From 1708 to 1715 Father Bouvet was engaged in a survey of the empire and the preparation of maps of the various provinces. He was a man of great energy and ability, unselfish, pious. For nearly fifty years he shared all the labours of the missionaries and was engaged from time to time in various scientific works. During this long period, chiefly on account of his services to the emperor and the favour he enjoyed with him, he did much to advance the interests of Christianity and to facilitate the entrance and the labours of his fellow-missionaries. His Chinese name was Peisin. Besides his works on mathematics, Father Bouvet was the author of "État présent de la Chine, en ses diverses parties par P. Giffard, et des poses au roi par le P. J. Bouvet" (Paris, 1697); "Portrait historique de l'empereur de la Chine" (Paris, 1697). The library at Le Mans contains a collection of his manuscripts including a Chinese dictionary.

De Brac, Bibliothèque de l'abbaye de Jésus (Paris, 1869), 1; Michaud, Biographie Universelle, v. 3.

HENRY M. BROCK.
being the first manual, and for many years the only one well adapted to that period of transition (1830-70), marked on the one hand by the death struggles of Gallicanism and Jansenism, and on the other by the work of reform undertaken in all departments of ecclesiastical learning.

At first, Bishop Bouvier published separate theological treatises, which formed a collection of thirteen volumes (1818-33), reduced in 1834 to six, and published in that form until 1852. The author endeavored to improve his work in the successive editions, but his failure to remove from it all traces of the old school prejudice provoked criticism. A Gallican, through prejudices derived from his early training rather than from personal conviction, Bouvier readily consented to submit his work to the corrections of the theologians appointed by Pius IX. Their revision resulted in the eighth edition (1853). After the death of Bouvier, the professors of the seminary of Le Mans eliminated many imperfections which had been overlooked by the revisers of 1853. The manual was shortly afterwards adopted in more than sixty seminaries. Bouvier's treatment of moral theology is remarkable: he opposed against Jansenism and adopted the doctrines of St. Alphonse; though even this reaction against rigorism did not bring his work up to the standard of the manuals of theology of the present time.

This book has been condemned by the Church and condemned in the "Institutiones" as a crude and confused mass, irrelevant, and only indirectly connected with moral theology. It must be recalled, however, that Bishop Bouvier did not enjoy the advantages of the present day, when the various branches of clerical study are classified, and each given its proper place. Notwithstanding the incompleteness of preparatory studies eighty years ago, the scarcity of vocations, the urgent need of priests, and limited pecuniary resources made it necessary to limit the clerical course to three years and, at the same time, to include in the curriculum all the studies necessary for the exercise of the sacred ministry in parishes. Under such circumstances it was impossible to observe nice distinctions in the classification of ecclesiastical sciences. However, in spite of defects, the "Institutiones Theologicae" will stand as a signal achievement on the morrow of the Revolution. The bishop gradually brought the education of the clergy out of the errors and lethargy of the preceding chaotic age, and for the nation, for the church, for the society of the nineteenth century. Like Cardinal Gossuet he must be regarded as one of the foremost reformers of moral theology. Pius IX conceived the highest esteem for him and invited him to be present at the definition of the dogma of the Immaculate Conception.

P. DISSERT.

BOVA, DIOCESE OF, situated in the civil province of Reggio, in Calabria, Italy, suffragan to the Archdiocese of Reggio. Luminous, who attended the Lateran Council (649), under Pope Martin I, is believed by some to have been the first Bishop of Bova; in reality he was Bishop of Bologna. The city of Bova (and consequently the see) is of much later origin than the pontificate of Martin I; it was peopled about 1477 by Albanian refugees fleeing from the Turkish invaders that followed upon the defeat of Scanderbeg. In the new home these Albanians retained the Greek Rite, which remained in use until the reign of Pope Gregory XIII. One of the most distinguished Bishops of Bova was Achille Brancia (1549), a member of the Council of Trent. The diocese contains about 20,000 souls, 14 parishes, 34 churches and chapels, 34 secular priests, and 25 seminarians.

UBENIGNI.

Bovino, Diocese of, in the province of Foggia, Italy, suffragan to the Archdiocese of Benevento. The city, built on a gentle slope, has a population of over 30,000. The first Bishop of Bovino known to history is a certain Johannes mentioned in a deed of Landulphus I, Archbishop of Beneventum, dated 971. Among other bishops was Ugo (1090), whose services and bounty to the Church are eulogized on two tablets, one preserved in the episcopal residence, the other in the cathedral; Giso (1100) commemorated on the facade of the church of San Pietro; Roberto (1190), who built the shrine of San Michele; Pietro, who erected a new cathedral to replace the ruinous old one; Bartolomeo della Forta (1404), a distinguished jurist; Cardinal Benedetto Accolti (1530) and Gabriele Marin (1535); Gian Domenico Anno, successor to his brother, Gian Ferdinando (1565), and the greatest canonist of his age; Paolo Tolosa (1601), founder of the seminary and later Archbishop of Chieti; Angelo Cerato (1665), a man of great sanctity, who always made the visitation of his diocese on foot.

On account of political entanglements consequent upon difficulties which had arisen between the pope and the court of Naples, this see remained vacant from the death of Bishop Nicolò Molinari, in 1792, until 1818. There exists to the present day in this diocese a famous shrine of Our Lady (Santa Maria in Valverde) erected in 1244 by Bishop Giambattista. The little town of Castelluccio in this diocese is inhabited almost entirely by descendants of Greeks who took refuge in Italy in the fifteenth century. They have a clergy and a liturgy of their own rite. The diocese contains 32,710 Catholics, 10 parishes, 76 churches and chapels, 80 secular priests, and 13 seminarians.

UBENIGNI.

Bowyer, Sir George, Baronet, an eminent English writer on jurisprudence, as well as a prominent defender of the Holy See and of Catholic interests in general, both by voice and pen, was born at Radley House, in Berkshire, 8 October, 1811; the seat of his family, then much farther back, settled early in the seventeenth century, at Denham Court, Buckinghamshire, and in 1660 the head of the house was made a baronet. His grandfather was a naval officer of high distinction, who took part in Howe's famous victory off Ushant, 1 June, 1794. George Bowyer was at first intended for the army, and so for a while he was a cadet at Woolwich. His bent, however, was towards the law; accordingly, in 1836, he was admitted a student at the Middle Temple, his call to the English Bar regular ensuing in 1839. Five years in the Bar, partly, perhaps, because of two learned works published by him in the foregoing year, and partly, perhaps, by reason of his family's neighbourhood to Radley, the University of Oxford created him an honorary M. A. Mr. Bowyer forthwith began practice as an equity draughtsman and conveyancer, without ceasing to devote himself to congenial literary work. In 1841 he published "The English Constitution, a Popular Commentary on the Constitutional Laws of England", which in 1844 was followed by "Common Law". So valuable were these works that at midsummer of the latter year the University of Oxford bestowed on him the highest honour in its gift by creating him a D.C.L. In 1849 he endeavoured to get into Parliament as a representative of Reading Borough
in his native Berkshire, but his hour for parliamentary life was not yet.

Next year, 1850, there happened the gravest and most far-reaching event of Bowyer's career: his conversion from Anglican Protestantism to the Catholic religion. That same year Pope Pius IX set up in England the first of the episcopal hierarchy. At this proceeding, vulgarly called the “Roman Aggression,” English Protestantism went wild with rage and resentment for the space of several months. To Bowyer this popular mania offered a golden opportunity to stand forth boldly in the Holy Father's defence. His pamphlet “The Cardinal Archbishop of Westminster and the New Hierarchy,” ran through four editions, and was followed at intervals by several more publications on the same theme. From this beginning to the end of his days he was the foremost lay champion in England of the Catholic Church and her earthly head. His letters addressed to the newspapers, principally to the “Times,” were many, vigorous, and unanswerable; and in those days he was practically the only competent Catholic whose controversial letters were admitted into the English Press. The author of the pamphlet was a man of a very different type, who had prosecuted his legal studies and writings. His “Commentaries on Universal Public Law” came out in 1854 and is commonly considered his greatest literary achievement; “Introduction to the Study and Practice of Civil Law,” his last publication, appeared in 1874.

To go back to 1850, the period of his conversion, Mr. Bowyer was that year appointed Reader in Law at the Middle Temple. In 1852 he at last found his desired seat in Parliament, as member for the Irish borough of Dundalk, whose representative he continued to be for the next sixteen years. During that stirring period there came the Italian Unity movement, and the despoothing of the Roman Pontiff of the greater part of his temporal dominions, to be followed some years later by the seizure of the remainder. Then it was that Sir George Bowyer (who, on the death of his father, in 1860 had succeeded to the baronetcy), in company with John Pope Hennessy, John Francis Maguire, and others, took every occasion to denounce in Parliament the Italian revolutionary proceedings for the robbery and virtual captivity of the Roman Pontiff, and the atrocities committed by King Victor Emmanuel's soldiery in the lately annexed Neapolitan realm. For all these misdeeds the Member for Dundalk conclusively called to account Lord Palmerston, Lord John (afterwards Earl) Russell, Mr. Gladstone, and other English governmental abettors of the Italian Revolution, who could answer only by paradizing principles at once subversive and immoral. In 1868 he lost his seat for Dundalk, and for the next six years remained out of Parliament, until 1874, when, as a Home Ruler, he was chosen a representative of the Irish County of Wexford, retaining that seat until 1880. Meanwhile, as his principles and attitude with regard to the Italian question, to say nothing of others, was notorious, he was miscast to the taste of the British Liberal party, he was, in 1876, turned out of the London Reform Club.

On the 7th of June, 1883, Sir George Bowyer was found dead in bed at his London chambers, No. 13, King's Bench Walk, in the Temple. His obsequies took place in the Catholic church of St. John of Jerusalem, which, alongside of the Hospital of St. John and Elizabeth, in Great Ormond Street, he had built at his own cost. And here it may be remarked that in architecture Sir George Bowyer had a strong leaning for the Palladian style, and as against the Gothic, especially for public buildings, and his principles he put into practice in the aforesaid church, which is a little Palladian gem. The church has now been removed bodily to St. John's Wood, there to serve the transferred and new-built hospital. Sir George Bowyer was a Knight Commander of the order of Pius IX, and a Papal Chamberlain; Knight Grand Cross of the Order of St. Gregory the Great, Knight of Justice of the Sovereign Order of St. John of Jerusalem (or of Malta) also. At home he was a Justice of the Peace and Deputy Lieutenant of Berkshire. He never married, and was succeeded in the baronetcy by his younger brother.

C. T. Boothman.

Boyce—The custom of electing a boy-bishop on the feast of St. Nicholas dates from very early times, and was in vogue in most Catholic countries, but chiefly in England, where it prevailed certainly in all the larger monastic and scholastic establishments, and also in many country parishes besides, with the full approbation of authority, ecclesiastical and civil. The boy-bishop was chosen from among the children of the monastery school, the cathedral plate, or, in a grammar school, on St. Nicholas's day (6 December), he was dressed in pontifical vestments and, followed by his companions in priest's robes, went in procession round the parish, blessing the people. He then took possession of the church, where he performed all the ceremonies and offices until Holy Innocents day (28 December). At Salisbury he is said to have had the power of disposing of any benefits that fell vacant during his reign, and if he died in office the funeral honours of a bishop were granted him. A monument to such a boy-prelate still exists there, though its genuineness has been questioned, and at Lulworth Castle another is preserved, which came from Bindon Abbey. The custom was abolished by Henry VIII in 1542, restored by Queen Mary, and again abolished by Elizabeth, though here and there it lingered on for some time longer. On the Continent it was suppressed by the Council of Basle in 1431, but was revived in some places from time to time, even as late as the eighteenth century.

Boyce, John, novelist, lecturer, and priest, well known under the assumed name of "Paul Peppergrass", b. in Donegal, Ireland, in 1810; d. in Worcester, Mass., 2 January, 1894. His father was a respectable and wealthy citizen, proprietor of the principal hotel in the town and a magistrate of the county. John early manifested a taste for literary pursuits, and with the desire of studying for the priesthood, entered the preparatory seminary at Maynooth, and was made a priest with the highest honours in rhetoric and philosophy. He completed his studies at the Royal College of, Maynooth and was ordained priest in 1837. For eight years he laboured on the Irish mission, but in 1845 he resolved to share the lot of his countrymen in America. From Eastport, Maine, the scene of his first missionary labours, he was transferred, 14 November, 1847, to St. John's Church, Worcester, where he remained until his death. Father Boyce was an eloquent lecturer and gifted writer. He published works after Shandy Maguire, or Tricks upon Travellers" (New York, 1848), which was dramatised by "J. Pilgrim"; “The Speiwife, or the Queen's Secret" (Baltimore, 1853); “Mary Lee, or the Yankee in Ireland” (1869), first published...
Boyle Abbey, a celebrated Cistercian house situated on the River Boyle, nine miles northwest of Elphin, in the present County of Roscommon, Ireland. It was founded by Maurice O'Duffy in the year 1161, and was in close connexion with Mellifont, the parent house of the Cistercian Order in Ireland. In the year 1218 (Annals of Ireland) the church of Boyle Abbey was solemnly consecrated. A great number of the Abbots of Boyle were appointed bishops in the Province of Connaught during the thirteenth and fourteenth centuries, and more especially the Domes of Elphin and Athlone. In 1235 the English forces under the joint command of Maurice Fitzgerald and McWilliam forcibly took possession of the abbey, seized all the goods, vestments, and chalices belonging to the monastery and stripped the monks of their habits in their cloisters. During the reign of Queen Elizabeth the abbey was suppressed and its lands and possessions handed over (1699) to Patrick Cusack of Gerrardston, County Meath. From the list of its lands then made it is clear that Boyle must have once been one of the most richly endowed religious houses in Ireland. In 1589 a lease of the abbey was granted to William Ussher. During the reign of King James I several inquisitions were held in connexion with the lands of Boyle Abbey, and in 1603 a lease of it was granted to Sir John King.

Perhaps the most eminent of the Abbots of Boyle was Donnedh O'Daly who died in 1250, and who was recognized as a poet of very special merit. He is spoken of as the Ovid of Ireland. Many of the pupils who retired to Boyle before their death and more especially the princes of the family of McDermot of Moylarg. The Abbey of Boyle is now in ruins, but from the remains still to be seen near the present town of Boyle it was evidently a place of great importance and of some architectural pretensions.

Bracken, Thomas, poet, journalist, politician, b. in Ireland 21 December, 1845; d. at Dunedin, New Zealand, 16 February, 1898. Having lost his parents he emigrated in his twelfth year to Victoria, Australia. He went to Otago, New Zealand, as a shearer in 1869, and published there a small volume of verse, "Flights among the Flax", which brought him into some notice. In Dunedin he was associated with the commercial staffs of "The New Zealand Tablet", "The Otago Guardian", and the "Morning Herald", and was founder and part proprietor of the "Saturday Advertiser", which was a literary and commercial success only so long as he directly controlled it. He was twice returned to Parliament (in 1884 and 1886) for Dunedin in the Liberal interest. He died in the Dunedin hospital. He is best known in New Zealand as an advocate of Australian freemen. His poetic publications in book form, in addition to the one already mentioned, are: "Flowers of the Freeland"; "Behind the Tomb and Other Poems"; "The Land of the Maori and the Moa"; and "Musings in Maori Land". The last-named is his most famous and fullest collection. Bracken's themes are mostly local and colonial. He is not a world-poet, but takes honourable rank among the pioneers of Australian poetry. In his best verse, much true and tender poetic feeling finds skillful and picturesque expression.

Henry W. Cleart.

Branton, Henry de, also called Henry of Brat- tone, a famous English juridical writer, the Blackstone of the thirteenth century, b. probably in King John's reign and died about four years before the close of that of Henry III. His lifetime therefore comprized and almost coincided with the period between the grant of Magna Charta and the defeat and death of Simon of Montfort, Earl of Leicester, at the battle of Evesham. By birth, property, and ecclesiastical preferment he appears to have been a man of Devon, in which he figures as a friend of the name of Bratton, viz., Bratton-Clovelly and Bratton-Fleming, one or the other of these parishes being almost certainly his birthplace, for the claim of Minehead parish in Somerset, may be disavowed as untenable. Hence it may be gathered that the correct form of this great jurist's name is hardly Bratton, but rather Bratron, by which appellation, as well as by the occasional variant of Brettan (most likely then sounded much like Bratton) he was almost invariably described in his owen day, not to add that, in point of etymology, "Bratton" (broad town) seems likelier than "Bractone" to have been the earlier form of the name. To come to his laborious and distinguished career, it is said that Bratton in his youth was a student at the University of Oxford, where he is further alleged to have taken the degree of doctor of civil and of canon law but this, though indeed possible, is altogether lacking of proof. Certain it is that he was taken into the service of King Henry III. By this time the king's curia had become distinct from King's Bench and the professional judges had sprung into existence. Of these professional judges Henry Bratton became one. It is in 1246 that we first find him acting in a judicial capacity, and from that year onward we continually meet with him either as a justice in Eyre (especially in his native Devon and other neighbouring counties) or as holding pleas before the king himself, until the end of the year 1267. Thus he was undoubtedly a regular permanent judge, though he never appears as holding placito de banco, in other words, as sitting on the Bench at Westminster. Meanwhile more than one special mark of royal favour towards him is upon record. Yet in the civil broils of his time he was neither side's partisan and was respected and trusted alike by king and barons. Of his great and epoch-making literary work, "De Legibus et Consuetudinibus Angliae", Professor Paul Vinogradoff (the Athenaeum, 19 July, 1884) writes that it is a treatise which "testifies to the influence of Roman jurisprudence and of its medieval exponents, but at the same time he was associated with the commercial staffs of "The New Zealand Tablet", "The Otago Guardian", and the "Morning Herald", and was founder and part proprietor of the "Saturday Advertiser", which was a literary and commercial success only so long as he directly controlled it. He was twice returned to Parliament
BRADLEY

judges of his time, Brarton was an ecclesiast. His known church prerogatives are Barnsley archi-
descomony, where he died in 1264, but which the
same year he quitted for the chancellorship of
Exeter cathedral, retaining this latter dignity until
his death in 1268. At his decease he enjoyed like-
wise a canony and prebend as well as Exeter cœtes,
and as the collector of all the elect at East-Boham. All these benefits were of the Bishop of
Exeter's gift. At the same time as the king's clerk
engaged in the king's business, Brarton could seldom
or never have kept residence. His body was buried
in Exeter cathedral, and his soul went to Bath Hall. There he founded a perpetual chantry for his soul. Of Brat-
ton's great and comprehensive treatise "De Legibus",
etc., written before 1259, the first printed edition
was published in 1589 in folio, and reprinted in
quarto in 1640. A recension and translation of the
whole work in six volumes, by Sir Travers Twiss,
was issued in London (Rolls publications) from
1878 to 1883.

C. T. Bootman.

BRADY

Bradley, Denis Mary, first Bishop of Manchester,
New Hampshire, U. S. A., b. 25 February, 1846, at Cast-
le-island, County Kerry, Ireland; d. at Manchester, 13 December, 1903. Shortly after his father's death his
mother, with a family of five, emigrated to the
United States and settled at Manchester. He was then eight years old. After attending the local
schools he was sent to Holy Cross College, Worcester, Massachusetts, in 1863, and closed his academic
career there in June, 1867. He was then enrolled as
an ecclesiastical student at St. Joseph's Seminary,
Troy, New York, where he was ordained priest 3 June, 1881. He was located at Farmington, Maine, under Bishop Bacon, and subsequently under
Bishop Healy, by whom he was appointed rector of
the cathedral and chancellor of the diocese. In
June, 1881, he was made pastor of St. Joseph's,
Manchester, which became his cathedral when he was
consecrated first Bishop of the new See of Manchester, 11 June, 1884. He had the honour of being the first
alumnus of St. Joseph's Seminary of Troy, New York,
to be raised to the episcopacy.

In the rural sections of New Hampshire there were many scattered Catholics who up to that time had
had few facilities for practising their faith, and his
first and earnest efforts were directed towards pro-
viding for them, and with the most gratifying results.
He held the first synod of the diocese 24 October,
1886, and under the energising influence of his zeal
and enthusiasm there was a general upbuilding of
Catholicism throughout the State. The silver jubilee of his ordination was made the occasion of a
striking demonstration of his great personal popu-
larly, and this had another manifestation when even
his Catholic pulpit in Manchester bore sincere
 testimony to the loss his death had occasioned to the
city and to the State.

Seminary, Troy (New York, 1905).

BRADY

Bradshaw, Henry, English Benedictine and poet, b. in the City of Chester, England, date unknown;
d. 1513. From very early years his life was spent
at St. Werburgh's monastery, with the exception of
a period during which he was pursuing a course in
grammar at Gloucester College. The principal
works are "De Antiquitate et magnificentia Urbis Cestrie",
and "Chronicon and a Life of St. Werburgh". This
second work, in English verse, includes the "Foundation
of the City of Chester" and the "Chronicle of the
Kings"; it fixes the year of Bradshaw's death by a
poem addressed to him, was printed by Pinson in
1521, and re-edited by E. Hawkins for the Chetham
Society, 1848. The poet followed mainly a Latin
work then in the library of St. Werburgh, called
"The True or True Passion", by a Briton whose
name was unknown to Bradshaw. His work, written
not for the learned, but for the ruder classes, has
been variously appraised by critics.

J. Vincent Crowne.

BRADWORTHIE, THOMAS. See THOMAS OF BRAD-
WORTHIE.

BRADY, JOHN. See BOSTON, ARCHDIOCESE OF.

BRADY, WILLIAM MAZIERE, ecclesiastical writer, b. in Dublin, 8 January, 1825; d. in Rome, 19 March,
1894. He was nephew of Sir Maurice Brady, Bart.,
Lord Chancellor of Ireland, and youngest son of Sir
Nicholas W. Brady who, while Lord Mayor of
Dublin, was knighted by George IV during his visit
to that city. William Mazdae Brady entered Trinity
College, Dublin, in 1842, received the Degree of
B.A. in 1843, B.D. in 1858, and D.D. in 1863. In
1848 he was appointed Anglican curate of Maynath
and in 1849, curate of Kilkeeley, Limerick. In 1851
he became curate of St. Dolough's, Dublin, and in
the same year Rector of Farrary, County Cork.
In this year, also, he married a lineal descendant, on
the maternal side, of the famous Protestant divine,
Jeremiah Taylor, Bishop of Down and Connor. Dr.
Brady acted as chaplain to several successive viceroys,
and in 1851 became Vicar of Clonfert, County Cork.
While here he published in three volumes the "Clon-
ferian Miscellany". In 1853 he was appointed Vicar of
Clontrath, County Offaly, and in 1855 Director of the
(Challon, Dublin, 1853), which he compiled from diocesan and
parish registers and manuscripts in the principal
libraries and public offices of Oxford, Dublin, and
London, and from private and family papers. These
"Records", as mainly they are of the Protestant Dio-
ceses of Cork, Cloyne, and Ross, but will no doubt be
of great service to the future Catholic historians of these dioceses.

Dr. Brady published several works in favour of the disestablishment of the Irish Protestant Church, such as: "Remarks on the Ulster Church Temporality" (1865); "Facts or Fiction: The alleged Conversion of the Irish Bishops to the Reformed Religion at the Accession of Queen Elizabeth and the Assumed Descent of the Present Established Hierarchy from the Ancient Irish Church Disproved" (1866), which was brought as an evidence in 1872 in the "State Paper concerning the Irish Church in the time of Queen Elizabeth" (1868); "Some Remarks on the Irish Church Bill" (1869); and "Essays on the English State Church in Ireland" (1869). On the Irish Church question he also contributed numerous letters to the newspaper press, and articles to "Fraser's" and "The Contemporaries", many of which were subsequently reprinted in pamphlet or book form.

Some interesting articles from his pen appeared in the "National Observer" on "Ireland's Mission" (May, 1870); "The Ancient Irish Churches" (July, 1870), written while yet a Protestant, and "Pius IX and Mr. Gladstone's Misrepresentations" (May, 1875). His only work of a purely secular character is "The Mc Gillicuddy Papers; a Selection from the Family Archives" (1874). His Roman residence enabled him to the publication of two volumes on "Episcopal Succession in England, Scotland, and Ireland, A.D. 1400 to 1875, with Appointments to Metropolitanities, and Extracts from Manuscripts in Public and Private Libraries in Rome, Florence, Bologna, Vienna, and Paris" (1876-77). He also brought out, "Annals of the Catholic Hierarchy in England and Scotland, A.D. 855-1876, with a Dissertation on Anglican Orders" (Rome, 1877; London, 1883). During his stay in Rome, Dr. Brady accepted, in 1873, the presidency of the London "Tablet", and issued a pamphlet on "The Pope's Anti-Parnellite Circular" (London, 1883). The last of his works was the "Anglo-Roman Papers", published in 1890. He had a large share in the political controversies of the day and corresponded much with Glodstone and other eminent statesmen. He died of apoplexy and was buried in the Campo Verrano Cemetery in Rome. His grave is marked with an Irish Cross on white marble, bearing the inscription, "In memory of William Maziere Brady, Cavalier of the Order of Pius IX, and Private Chamberlain to his Holiness Pius IX and his Holiness Leo XIII. Born in Dublin, January 8, 1825, died in Rome, March 19, 1894".

Irish Cate (Detroit, 1884); Journal of the Cork Archological Society, 2nd series, vol. IX, No. 50 (July-September, 1908), s. v. Seven Clerical Worthies; Allibone, Dict. of Authors, Supp.

EDWARD P. SPILLANE.

BRAGA. ARCHIDIOCESE OF (BRACARA AUGUSTA, CVTTAS BRACAENIS), is situated in a flat fertile tract of land between the rivers Este and Cavado, in the province of Minho, in the Kingdom of Portugal. The name was derived from the costume worn by the ancient native inhabitants, which reached from the knees to the feet, and was made by the Romans; for this reason the latter called these bragaes (bracae) a barbarous costume, and those who wore them — Persians, Scythians, and the Celtic inhabitants of Gaul — barbarians. The city of Braga is very ancient as the etymology of the name implies. Some, like St. Isidore, believe it is derived from the Greek Brage, the daughter of Leto, born of the union of Zeus and his sister, Selene; others, like Diodorus Siculus, say it is of Celtic origin. In the fifth book of his "Historical Library", speaking of the Gauls he says, quis bracae ielli nominati. Braga, the metropolis of Galicia, was one of the principal cities of Lusitania (Portugal), until the Emperor Tiberius having brought thither his wife Flavia, to a close, made a new division of the province and united it to Hispания Tarraconensis, giving it the name of Augusta, and making it one of the three judicial divisions into which the province of Galicia was divided. It was one of the first cities of Spain to receive the light of the Gospel. The tradition that St. Peter de Rates, a disciple of St. James, preached here, is handed down in the ancient Breviary of Braga (Breviarium Bracarensis) and in that of Evora; but this, as the Hollandists tell us, is purely traditional. Pateramus was certainly bishop of the see about 390.

Some have denied that Braga was a metropolitan see; others have attempted without sufficient evidence, however, to claim two metropolitan sees for Galicia before the sixth century, the case are that after the destruction of Astorga (433) by the Visigoths Braga was elevated to the dignity of a metropolitan see in the time of St. Leo I (440-461). Balconius was then its bishop and Agrestius, Bishop of Lugo, was the metropolitan. At the latter's death the right of metropolitan rank was restored to the oldest bishop of the province, who was the Bishop of Braga. From this time until the Mohammedans invaded Spain (711) he retained the supremacy over all the sees of the province. The Bishop of Braga then restored Braga to its former metropolitan rank. When Portugal separated from Spain, Braga assumed even greater importance. It contested with Toledo the primacy over all the Spanish sees, but the popes decided in favour of the latter city. At present it has suffragans the dioceses of Porto, Coimbra, Viseo, Bragança-Miranda, Aveiro, and Pinhel. There have been many very famous bishops and writers in this diocese. Among its earlier bishops, besides the traditional St. Peter already mentioned, the most genial was St. Mamedes (d. 704), Bishop of Braga. He is notable for his wisdom and holiness. St. Gregory of Tours says of him (Hist. France, V, xxxvii) that he was born in Pannonia, visited the Holy Land, and became the foremost scholar of his time. St. Isidore of Seville (De Viris Illustribus, 1110) expresses the belief that he "was abbot of the monastery of Dumio near Braga, came to Galicia from the East, converted the Suevic inhabitants from the errors of Arianiun, taught them Catholic doctrine and discipline, strengthened their ecclesiastical organization, and founded monasteries. He also left a number of letters in which he recommended a reform of manners, a life of faith and prayer, and giving of alms, the constant practice of all virtues and the love of God. For his writings see Bardenhewer, Patrologie" (2nd ed., 1901), 579-581. Braga having been destroyed by the Saracens, and restored in 1071, a succession of illustrious bishops occupied the see. Among these were Mauricio Burdinho (1111-14), sent as legate to the Emperor Henry V (1118), and by him created antipope with the title of Gregory VIII; and John, Bishop of Lisbon, deacon of Lisbon, elected Bishop of Braga in 1274, created cardinal by Gregory X in 1276, and finally elected pope under the name of John XXI; Blessed Bartholomew a Martyrius(1599-67), a Dominican, who died in like the tunic and died as a martyr, was the mayor, Francesco Foreiro, and others, assisted at the Council of Trent; Agustín de Castro, an Augus-
tinian (1589–1609), who consecrated the cathedral, 23 July, 1592. Alejo de Menezes, also an Augustinian, was transferred to Braga from the Archepiscopal see of Goa. He had been an apostle to the Nestorians of the Malabar Coast in Farther India and had converted them to Catholicism with the help of missionaries sent thither, and had been in close touch with the Council of Diamper (1599), for the establishment of the Church on the Malabar Coast. He died at Madrid in 1617 in his fifty-eighth year in the odour of sanctity, being then President of the Council of Councils. Several bishops of note were Roderico de Cunha (1627–35), historian of the Church in Portugal; Roderico de Moura (1704–28), who restored the cathedral; and Cayetano Brandão, who was reputed a saint among the faithful.

In its early period the Diocese of Braga produced the famous writer Paulus Orosius (fl. 418) also Avitus of Braga. At the beginning of the eighteenth century a contest was waged over the birthplace of Orosius, some claiming him for Braga and others for Tarragona. The Marquis of Mondejar, with all the ecclesiastical authority of the Diocese of Dalma, the chronicler of Catalonia, that of Tarragona. Avitus of Braga, another writer of some importance, was a priest who went to the East to consult with St. Augustine at the same time that Orosius, who had been sent by St. Augustine, returned from Cyprus, having been appointed a bishop by the Apostolic See, and on his return to the East, the bishop, Lucian of Carpath Gamala near Jerusalem, made known to the West the discovery of the body of St. Stephen (December, 415). The Greek encyclical letter of Lucian was translated into Latin by Avitus and sent to Braga with another for the bishop, Balconius, his clergy, and people, together with a relic of St. Stephen. Avitus also attended the Council of Jerusalem against Pelagius (415). There were two others of the same name, men of note, who, however, wrought inscandalous harm by introducing into these provinces the doctrines of Origen and Victorinus.

In 1390 Braga was divided to make the Archdiocese of Lisbon, and in 1540 its territory was again divided to create the Archdiocese of Evora. There are some fine edifices in the diocese, among them the Cathedral of the Assumption, very large and architecturally perfect; the archbishop’s palace; the seminarary, and the Institute of Charity. The sanctuary of do Senhor Jesus do Monte is the object of great devotion to which many pilgrimages are made every year.

COUNCILS OF BRAGA.—Many councils were held in this diocese, some of them important. The authenticity of these early councils is not doubtful. It was probably invented by Father Bernardo Berto. In the council of 553 eight bishops took part, and twenty-two decrees were promulgated, among the others the following: that in the services of the church the same rite should be followed by all, and that on vigils and in solemn Masses the same lessons should be said by all; that bishops and priests should salute the people with Dominus vos vocavit, as in the Book of Ruth, the response being Et cum spiritu tuo, as was the custom in the East, without the use of the three other responses; that Mass should be said according to the ordo sent from Rome to Profuturus; that the form used for baptism in the Metropolitan See of Braga should not be altered; that bishops should take rank after the metropolitan according to the date of their consecration; that bishops should not ordain candidates from other dioceses without dimissorial letters from their bishop; that nothing should be sung in the church but the Psalms and parts of the Old and New Testament; that all priests who abstained from eating meat should be obliged to eat vegetables; that all subjects suspected of Priscillianism, and that if they refused they should be excommunicated; that suicides and catechumens should not be buried with great ceremony, nor should anyone be buried inside the church; that priests should be appointed for the blessing of the chalice.

The second council held in 572, presided over by the aforesaid St. Martin, was held to increase the number of bishops in Galicia. Twelve bishops assisted at this council, and ten decrees were promulgated: (1) that the bishops should in their visitations see in what manner the priests celebrated the Holy Sacrifice and administered baptism and the other sacraments, thanking God if they found everything as it should be, and instructing the priests if they were found wanting; (2) that all catechumens should be instructed and obliging all catechumens to attend instructions for twenty days before baptism and to learn the creed; (2) that the bishop must not be tyrannical towards his priests; (3–4) that no fee must be accepted for Holy orders, and the holy chasuble must be given with it; (5) that if a sinner asks a fee for consecrating a church, that no church should be consecrated without the bishop being sure of the endowment and the ministers, and that no church built on private property for the purpose of emolument should receive consecration; (6) that if a cleric should accuse any one of unchastity without the evidence of two or three witnesses he should be excommunicated; (7) that the metropolitan should announce the date of Easter, and have it made known to the people after Christmas, so that they might be prepared for the beginning of Lent, when litanies were to be recited for three days; on the third day the Lenten fast should be announced after the Mass; (10) that any one saying Mass without fasting, as many did, as a result of Priscillianist tendencies, should be deprived of his office. This council was attended by the bishops of the suffragan sees of Braga, and by those of the Diocese of Lugo, and Pope Innocent III removed all doubt as to its authenticity.

The Third Council of Braga was held in 675, during the primacy of Leodegarius, and in the reign of King Wamba. Eight decrees were promulgated at this council: (1) that no one should dare to offer it sacrifice milk and grapes, but bread and wine mixed with a drop of water in a chalice, nor should bread and wine be used; (2) that laymen should be excommunicated, and ecclesiastics deprived of their office, if either put the sacred vessels to profane uses; (4) that no priest should have any women but his mother in his house; (5–6) that bishops, when carrying the relics of martyrs in procession, must walk to the church, and not be carried in a chair, or litter, by deacons clothed in white; that corporal punishment was not to be inflicted on youthful ecclesiastics, abbots, or priests, except for grievous faults; (7–8) that no fee must be accepted for Holy orders, and that the rectors of the churches must not require the members of their ecclesiastical households to do work on their private farms; if they did so they must remunerate the church for the injury done thereby. There were other councils in 1278–80, 1301, 1328, 1348, 1438, 1537, 1543, and provincial synods of lesser importance.

Bragança-Miranda, Diocese of (Brigantium), is situated in the north-eastern part of the Kingdom of
Portugal, in the civil province of Tras-os-Montes, and lies between 2° and 3° 3' of longitude west of the meridian of Madrid, 41° 20' and 42° of north latitude. It is bounded on the north by the Dioceses of Astorga and Orense, on the east by those of Salamanca and Zamora, on the south by that of Lamego, and on the west by the Archdiocese of Braga. The civil province is bounded on the north and east by the frontier of Spain comprising portions of the Provinces of Salamanca, Zamora, Leon, and Orense. The greater part of the territory of this diocese is undulating and mountainous, and is traversed by several rivers, which, rising in the Sierra de Santuario and the Sierra Seca y Segundera, flow from north to south, emptying finally into the river Duero. The climate in general is cold especially in the mountainous region. The southern part and the banks of some rivers and the level tracts of land, such as the one in which Bragança is situated, are fertile, but the rest is unproductive of cereals, although there are broad tracts of land that pasture large herds of cattle which supply a great part of Portugal and Spain with milk and cheese.

This see is comparatively modern. It was erected by Pope Paul III in the town of Miranda bordering on Spain, its territory being taken from the Archdiocese of Braga, but Clement XIV in 1770 transferred it to the diocese from which the Bragança name is derived. The diocese is a suffragan of Braga. The city of Bragança, which is the capital of the province of Tras-os-Montes, is situated in a delightful valley near the confluence of the rivers Peneda and Saboia. The cathedral, dedicated to the Annunciation, is one of the most magnificent buildings of the city. It has a very large chapel composed of the dean, nine canons, including the theologian, six beneficed clergy, eight chaplains, and six clerics. The episcopal household receives 1,166 florins from the diocese for its support for its own needs.

Besides the cathedral there is another church which has collegiate rank, and throughout the diocese there are schools and classes for instruction in Christian doctrine. There is a hospital and a Monte de piedad, and before the secularization there were three religious communities, one of men and two of women. The city of Bragança is fortified, having a citadel or small castle for its defense. It is the residence of the Dukes of Bragança and has occupied the throne of Portugal since the separation of Spain and Portugal in the time of Philip IV.

Moreau, *Le grand dict. hist.*

TIRSO LÓPEZ.

Brahmin. See BRAHMINISM.

Brahminism.—By Brahminism is meant the complex religious and social system which grew out of the polytheistic nature-worship of the ancient Aryan conquerors of Northern India, and came, with the spread of their dominion, to be extended over the whole country, maintaining itself, not without profound modifications, down to the present day. In its most modern phases it is generally known as Hinduism.

I. BRAHMIN TEXTS.—Our knowledge of Brahminism in its earlier stages is derived from its primitive sacred books, originally oral compositions, belonging to the period between 1500–600 B.C. First of all, there are the four Vedas, the sacred books of ancient India, dating from 1500 to 800 B.C., and consisting of (1) a collection of ancient hymns (rī̤ka), the so-called Rig-Veda, in praise of the many gods; (2) of the Sama-Veda, compiled from parts of the Rig-Veda as a song service, or soma-sacrifice; (3) of the Yajur-Veda, a liturgy composed partly of ancient hymns and partly of other prayers and benedictions for use in the various forms of sacrifice; and (4) of the Atharva Veda, a collection of popular exorcisms and magic incantations largely inherited from primitive Aryan days.

Next in order are the Brahmans (about 1000–600 B.C.), the priests. These are well defined by the couple of words, priest, religious, who are the heads of families, and speak in the name of the gods to kings and people. TheElectronic Texts are useful for study and research, providing a rich source of information on various topics in the field of human knowledge. They are not designed for practical use in everyday life. However, they could be helpful for students, researchers, and anyone interested in learning more about the culture, history, and language of a particular region or period. The texts are available in a variety of formats and languages, allowing users to explore and access information from different perspectives and contexts. Whether used for personal enjoyment or for academic purposes, these Electronic Texts offer a valuable resource for those seeking to deepen their understanding of the world around them.
pressing a sense of guilt and asking for forgiveness. At a time when the early Hebrew Scriptures were silent as to what the sins of a man in the future life, we find the ancient Rik-bards giving repeated expression to their belief in a heaven of endless bliss for the just, and in an abyss of darkness for the wicked.

Devotion to the Pitra (Fathers), or dead relatives, was also a prominent element in their religion. Though the Pitra mounted to the heavenly abode of bliss, their happiness was not altogether independent of the acts of devotion shown them by the living. It could be greatly increased by offerings of soma-rich water; for like the gods they were thought to have bodies of air-like texture and to enjoy the subtle essence of food. Hence the surviving children felt it a sacred duty to make feast-offerings, called Sāddhas, at stated times to their departed Pitra. In return for these acts of filial piety, the grateful Pitra protected them from harm and promoted their welfare. Lower forms of nature-worship also obtained. The cow was held in reverence. Worship was given to trees and serpents. Formulas abounded to avert the evil eye. Many strange deities were worshipped, some monomaniacal avowed evil omens. Witchcraft was dreaded, and recourse to ordeals was common for the detection of guilt.

III. Popular Brahminism.—In the period that saw the advent of the Brahmanas and Upanishads, the Vedic religion underwent a twofold change. On its practical side there was an exuberant growth of religious rites and of social restrictions and duties, while on the theoretical side Vedic belief in the efficacy of personal merit as a means to salvation was superseded by a pantheistic scheme of salvation. Thus the earlier religion developed on the one hand into popular, exoteric Brahminism, and on the other into priestly, esoteric Brahminism. The former is reflected in the Brahmanas and Sutras; the latter in the Upanishads.

The transformation to popular Brahminism was largely due to the influence of the Brahmins, or priests. Owing to their excessive fondness for symbolic words and forms, the details of ritual became more and more intricate, some assuming so elaborated a character as to require the service of sixteen priests. The sacrifice partook of the nature of a sacramental rite, the due performance of which was sure to produce the desired end, and thus became the all-important centrepiece with which the visible world revolved. Hence it merited liberal fees to the officiating priests. Still it was not a mere perfunctory rite, for if performed by an unworthy priest it was accounted as both useless and sacrilegious. In keeping with this complicated liturgy was the multiplicity of prayers and rites which entered into the daily life of both priest and layman. The daily recitation of parts of the Vedas, now venerated as Divine revelation, was of first importance, especially for the Brahmins. It was a sacred duty for every individual to recite, morning and evening, the Savitri, a short prayer in honour of the vivifying sun. A scrupulous regard for ceremonial purity, surpassing even that of the Jewish Pharisees, gave rise to an endless succession of purificatory baths, smuttings with ashes, pouring of soma, suppressions of breath—all sacramental in character and efficacious for the remission of sin. There is reason to believe that the consciousness of guilt for sin committed was keen and vivid, and that the performance of these rites, so liable to abuse, a penitential disposition of soul was largely cultivated.

In popular Brahminism of this period the idea of retribution for sin was made to embrace the most rigorous and far-reaching consequences, from which, save by timely penance, there was no escape. As every good action was certain of future recompense, so every evil one was destined to bear its fruit of misery. In the development of this theory, from love of beauty (action), with which the new idea of rebirth was closely connected. While the lasting bliss of heaven was still held out to the just, different fates after death were reserved for the wicked, varying, according to the nature and magnitude of the sins, from long periods of torture in a graded series of hells, to a more or less extensive series of rebirths in the forms of plants, animals, and men. From the grade to which the culprit was condemned he had to pass by slow torturis through the rest of the ascending scale till his rebirth as a man of honourable estate was attained.

This doctrine gave rise to restrictive rules of conduct that bordered on the absurd. Insects, however repulsive and noxious, might not be killed; water might not be drunk till it was first strained, lest minute forms of life be destroyed; carpentry, basket-making, working in leather, and other similar occupations were held in disrepute, because they could not be carried on without a certain loss of animal and vegetable life. Some monomaniacs feared for the blameworthiness of tilling the ground on account of the unavoidable injury done to worms and insects. But on the other hand, the Brahmin ethical teaching in the legitimate sphere of right conduct is remarkably broad and charitable. In temperance, temperance, chastity, and almsgiving were strongly inculcated. Though allowing, like other religions of antiquity, polygamy, and divorce, it strongly forbade adultery and all forms of unchastity. It also reproved suicide, abortion, perjury, slander, drunkenness, gambling, oppressive usury, and wanton cruelty to animals. Its Christian-like aim to soften the hard side of human nature is seen in its many lessons of mildness, charity towards the sick, feeble, and aged, and in its insistence on the duty of forgiving injuries and returning good for evil. Nor did it this high standard of right conduct apply simply to external acts. The threefold division of good and evil acts into thoughts, words, and deeds finds frequent expression in Brahminic teaching.

Intimately bound up with the religious teaching of Brahminism was the division of society into rigidly defined castes. In the earlier, Vedic, period there had been class distinctions, according to which the warrior class (Kshatriya, or Rajana) stood first in dignity and influence, followed by the Brahmin (Brahmin), then the farmer class (Vaisyasa), and last of all, the servile class of conquered natives (Sudra). With the development of Brahminism, these four ancient divisions of society became stereotyped into exclusive castes, the highest place of dignity being usurped by the Brahmins. As teachers of the sacred Vedas and as priests of the all-important sacrifices, they professed to be the very representatives of the gods and the preceage of the human race. No honours were too great for them, and to lay hands on them was a sacrilege. One of the chief sources of their power and influence lay in their exclusive privilege to teach the youth of the three upper castes, for education then consisted largely in the acquisition of Vedic lore, which only priests had the right to teach. Thus the Brahmin taught the right to know the Vedas and to take part in the sacrifices, and Brahminism, far from being a religion open to all, was exclusively a privilege of birth, from which the despised caste of Sudras was excluded.

The rite of initiation into Brahminism was conferred on the male children only, when they began their studies under a Brahmin teacher, which took place generally in the eighth year for the Brahmin, and in the eleventh and twelfth for the Kshatriya and Vaisyasa respectively. It consisted in the inves-
tutire of the sacred cord, a string of white cotton-yarn, tied together at the ends, and worn like a deacon's stole suspended on the left shoulder. This investiture was a sort of sacrament in virtue of which the youth was freed from guilt contracted from his parents, and became Deva, twice-born, with the right to be called Brahmā. He learned the Vedāna texts and to take part in the sacrifices. The period of studentship was not long for the members of the warrior and farmer castes, but for the young Brahmān, who had to learn all the Vedās by heart, it consumed nine years or more. During this period, the student was subjected to severe moral discipline. He had to rise before the sun, and was not allowed to recline till after sunset. He was denied rich and dainty foods, and what he ate at his two daily meals he had to beg. He was expected to observe the strictest chastity. He was bound to avoid music, dancing, gambling, falsehood, disrespect to superiors, and to the aged, covetousness, anger, and injury to animals.

Marriage was held to be a religious duty for every twice-born. It was generally entered upon early in life, and during the long time after the studentship. Like the initiation-rite, it was a solemn sacramental ceremony. It was an imperative law that the bride and groom should be of the same caste in the principal marriage; for, as polygamy was unknown, one might take as many wives as the lower castes. For certain grave reasons, the householder might repudiate his wife and marry another, but a wife on her part had no corresponding right of divorce. If her husband died, she was expected to remain for the rest of her life in chaste widowhood, if she would be honoured on earth and be happy with him in heaven. The later Hindu practice known as the Suttee, in which the bereaved wife threw herself on the funeral pyre of her husband, seems to have been unknown. Therefore, all knowledge of the Vedāna texts was withheld from women, but she had the right to participate with her husband in the sacrifices performed for him by some officiating priest. One important sacrifice remained in his own hands—the morning and evening offering of hot milk, butter, and grain to the fire on the hearth, which was sacred to Agni and was kept always burning.

A strong tendency to asceticism asserted itself in the Brahminism of this period. It found expression in the fasts preceding the great sacrifices, in the various kinds of sin, in the austere life exacted of the student, in the conjugal abstinence to be observed for the first three days following marriage and on certain specified days of the month, but, above all, in the rigorous life of retirement and prayer, which not a few devoted to their declining years. An ever increasing number of householders, chiefly Brahmins, when their sons had grown to man's estate, abandoned their homes and spent the rest of their lives as ascetics, living apart from the villages in rude huts or under the shelter of trees, eating only the simplest kinds of food, which they obtained by begging, and subjecting themselves to extraordinary fasts and mortifications. They were known as Sannyāsins, or Yopīs, and their severity of life was not so much a point of discipline for past offences as a means of acquiring abundant religious merits and superhuman powers. Coupled with these mortifications was the practice of Yogi (union). They would sit motionless with legs crossed and, fixing their gaze intently on an object, would discourse on some abstract subject till they lapsed into a trance. In this state they fancied they were united with the deity, and the fruit of these contemplations was the pantheistic view of religion which found expression in the Upanishads, and left a permanent impress on the Brahmin mind.

IV. PAN THEISTIC BRAHMINISM.—The marked monotheistic tendency discernible in the later Vedic hymns had made itself more and more keenly felt in the higher Brahmin circles till it gave rise to a new deity, a creation of Brahmān priests. This was Prajapati, lord of creatures, omnipotent and supreme, their kind, the Brahmā. The gods were Brahmā's creations, and Brahmā was the creator of all things. But in thus looking up to a supreme lord and creator they were far removed from Christian monotheism. The gods of the ancient pantheon were not repudiated, but were worshipped still as the various manifestations of brahman. It was an axiom then, as it has been ever since with the Hindu mind, that creation out of nothing is impossible. Another fundamental Brahmin principle is that every form of consciousness individuality, whether human or Divine, implies a union of spirit and matter. And so, outside the smaller school of thinkers who held matter to be eternal, those who stood for the supreme personal god explained the world of visible things and invisible gods as the emanations of Brahmā. They arrived at a personal pantheism. But speculation did not end here. The theory of the individuality of Brahmā ascetics, whose teachings are found in the Upanishads, the ultimate source of all things was not the personal Brahmā, but the formless, characterless, unconscious spirit known as Atman (self), or more often the Absolute (Brahman) of which Brahmā is a but one of the many forms, whereas Brahmā, personal god, is masculine.) The heavens and the earth, men and gods, even the personal deity, Brahmā, were but transitory emanations of Brahmā, destined in time to lose their individuality and be absorbed into the great, all-pervading, impersonal spirit. The manifold external world thus had no real existence. It was Maya, illusion. Brahmā alone existed. He alone was eternal, imperishable.

This immeasurable pantheism of the Brahmin ascetics led to a new conception of the end of man and of the way of salvation. The old way was to escape rebirths and their attendant misery by storing up merit of good deeds so as to obtain an eternal life of conscious bliss in heaven. This was a mistake. For so long as man was ignorant of his identity with Brahmā and did not see that his true end consisted in being absorbed into the impersonal all-god from which he sprang; so long as he set his heart on a merely personal existence, no amount of good works would see to his salvation. For the virtue of his good deeds, he would, indeed, except to heaven, perhaps win a place among the gods. But after a while his store of merit would give out like oil in a lamp, and he would have to return once more to life to taste in a new birth the bitterness of earthly existence. The only way to escape this misfortune was through the saving recognition of one's identity with Brahmā. As soon as one could say from conviction, "I am Brahmā", the bonds were broken that held him fast to the illusion of personal immortality and consequently to rebirth. Thus cultivating, by a mortified life, freedom from all desires, man spent his years in peaceful contemplation till death put an end to the seeming duality and he was absorbed in Brahmā like a raindrop in the ocean.

V. EARLY HINDUISM.—The pantheistic scheme of salvation just described, generally known as the Vedanta teaching, found great favour with the Brahmins and has been maintained as orthodox Brahmin doctrine down to the present day. But it made little progress outside the Brahmin caste. The Vedanta teaching, for example, is rejected by Brahmā who was incapable of hearing their prayers, nor had they any refuge for a final end which meant the loss forever of consciousness existence. And so, while the priestly ascetic was chiefly concerned with meditation on his identity with Brahmā, and with the practice of mortification to secure freedom from
all desires, the popular mind was still bent on prayer, sacrifices, and other good works in honour of the Vedas, and the worship of Siva. The efficacy of these traditional gods could not but be weakened by the Brahmin teaching that freedom from rebirth was not to be obtained by acts of worship to personal deities who were powerless to secure even for themselves eternal conscious bliss. The result was the popular development of special cults to two of the old gods, now raised to the position of supreme deity, and credited with the power to secure a lasting life of happiness in heaven.

It was in the priestly conception of the supreme personal god that the popular mind found the model for its new deities. Brahma was not a traditional god, and seems never to have been a favourite object of cult with the people. Even to-day, there are but two temples to Brahma in all India. His subordination to the great impersonal all-god did not help to recommend him to the popular mind. Instead, we find two of the traditional gods honoured with special cults, which seem to have taken rise independently in two different parts of the country and, after acquiring a local celebrity, to have spread into the rest of the Hindu world. One of these was the ancient storm-god, Rudra, destructive in tempest and lightning, renewing life in the showers of rain, sweeping in lonely solitude over mountain and barren waste. As the destroyer, the reproductive, and the source of all this lonely activity, he rose in popular esteem under the name of Siva, the blessed. The other was Vishnu, originally one of the forms of the sun-god, a mild beneficent deity, whose genial rays brought gladness and growth to living creation. His solar origin was lost sight of as he was raised to the position of supreme deity, but one of his symbols, the discus, points to his earlier character.

These two rival cults seem to have arisen in the fifth or fourth century B.C. As in the case of the personal god, Brahman, neither the worship of Siva nor of Vishnu did away with the honouring of the traditional gods and goddesses, spirits, heroes, sacred rivers and mountains and trees, serpents, earth, heaven, sun, moon, and stars. The pantheism in which the Hindu mind is inevitably cast saw in all these things emanations of the supreme deity, Siva or Vishnu. In worshipping any or all, he was but honouring his supreme god. Each deity was credited with a special heaven, where his devotees would be admitted after the death of the individual, and with a tyrant of the lower orders of happiness. The rapid rise in popular esteem of these cults, tending more and more to thrust Brahmanism proper into the background, was viewed by the priestly caste with no little concern. To quench these cults was out of the question; and so, in order to hold them in at least nominal allegiance to Brahmanism, the supreme god Brahma was associated with Vishnu and Siva as a triad of equal and more or less interchangeable deities, in which Brahman held the office of creator, or rather evolver, Vishnu of preserver, and Siva of the destructive. This was the so-called trinity, or trinity, altogether different from the Christian conception of three eternally distinct persons in one Godhead, and hence offering no legitimate ground for suggesting a Hindu origin for the Christian doctrine.

More remarkable was the intimate association of other new deities—the creations of the religious fancy of the common people—with the gods Siva and Vishnu. With Siva two popular gods came to be associated as sons. One was Ganesh, lord of troops and dispenser of good fortune. He is usually represented as an ass, with the trunk of an elephant, since a favourite object of worship and is invoked at the beginning of every undertaking to ensure success. The other was Skanda, who seems in great measure to have replaced Indra as the god of battle. Beyond the doubtful derivation of the name Skanda from Alexander, there is nothing to indicate that either of these two sons of Siva had any part in the life of men. Not so the gods that enlarged the sphere of Vishnu's influence. In keeping with Vishnu's position as god of the people, two of the legendary heroes of the remote past, Rama and Krishna, whom popular enthusiasm had raised to the rank of gods, came to be associated with him not as sons, but as his more incarnations. The incarnation of a god descending from heaven to assume a human or animal form as a sort of saviour, and to achieve some signal benefit for mankind, is known while applied to Brahma and other gods, became above all a characteristic of Vishnu. Popular fancy loved to dwell on his avatar as a fish to save Manu from the devastating flood, as a tortoise to recover from the depths of the sea precious possessions of the gods and men, as a boar to raise the submerged earth above the surface of the waters, but most of all, as the god-men Rama and Krishna, each of whom delivered the people from the yoke of a tyrant. So popular became the cults to Rama and Krishna that Vishnu himself was largely lost sight of. Of these two deities the one was Vishnu, the other was Siva, the pastimes of the former became divided into two rival schisms: the Ramaite, who worshipped Rama as supreme deity, and the Krishnaite, who worshipped Krishna under the names of Krishna, Balarama, and Subhadra, as supreme deities.

The evidence of the early existence of these innovations on Brahman belief is to be found in the two great epics known as the "Ramayana" and the "Mahabharata." Both are revered by Brahmins, Sivaite, and Vishnuites alike, particularly the latter poem, which is held to be directly revealed. In the "Ramayana," which belongs to the period 400-300 B.C., the legendary tales of the trials and triumphs of the hero Rama and his faithful wife Sitâ were worked into a highly artificial romantic poem, largely in the interests of Vishnu worship. The "Mahabharata," the work of many hands, was begun about the fifth century B.C. under Brahman influence, and in the following centuries received additions and modifications, in the interests now of Vishnuism, now of Sivaism, till it assumed its final shape in the sixth century of the Christian Era. It is a huge conglomerate of stirring adventure, popular legend, myth, and religious speculation. The narrative centres chiefly around the many-sided struggle for supremacy between the hero Arjuna and the gods and the latter's avatars, his four brothers. The role that Krishna plays is not an integral part of the story and seems to have been interpolated after the substance of the epic had been written. He is the charioteer of Arjuna and at the same time acts as his religious adviser. Of his numerous religious instructions, the most important is the metrical treatise known as the "Bhagavad-gita," the Song of the Blessed One, a writing that has exercised a profound influence on religious thought in India. It dates from the second or third century after the Christian Era. This is a poetic presentation of the Upanishad with its pantheistic doctrine so modified as to pass for a personal revelation of Krishna. While embodying the noblest features of Brahman ethics, and insisting on the faithful performance of caste-duties, it proclaims Krishna to be the supreme personal all-god, who, by the bestowal of special grace, helps on his votaries to the attainment of eternal bliss. As an important means to this end, it inculcates the virtue of Bhakti, that is a loving devotion to the deity, analogous to the Christian virtue of charity.

Unhappily for the later development of Vishnuism, the Krishna of the "Bhagavad-gita" was not the popular conception. Like most legendary heroes of folk-lore, his character was in keeping with the crude
morals of the primitive age that first sounded his praises. The narrative portions of the epic show how, after hundreds of years, and after word and deed of acts which the higher Brahmin conscience would reprove. But it is in the fuller legendary story of his life as given in the so-called "Hari-vansya," a later supplement to the epic, and also in some of the Puranas of the ninth and tenth centuries of our era, that the character of the popular Krishna appears in its true light. Here we learn that Krishna was one of eight sons of noble birth, whom a Herod-like tyrant was bent on destroying. The infant was saved from the destructive hands of the tyrant by being secretly substituted for a heretic man's babe. Krishna grew up among the simple country-people, performing prodigies of valour, and engaging in many amorous adventures with the Gopis, the wives and daughters of the herdsmen. Eight of these were his favourites, but one he loved best of all, Radha. Krishna finally succeeded in killing the king, and brought peace to the kingdom.

Between this deified Hindu Hercules and Our Divine Lord, there is no ground for comparison, one only of intrigue. That the religious legends should be found in pre-Christian Hindu thought is not so remarkable when we consider that it answers to the yearning of the human heart for union with God. But what is at first sight astonishing is to find out how the religious writings of the "Mahabharata," legendary tales of Krishna that are almost identical with the stories of Christ in the canonical and apocryphal Gospels. From the birth of Krishna in a stable, and his adoration by shepherds and magi, the reader is led on through a series of events the exact counterparts of those relating to Our Divine Lord. Writers hostile to Christianity seized on this chain of resemblances, too close to be mere coincidence, in order to convict the Gospel writers of plagiarism from Hindu originals. But the very opposite resulted. All Indianists of authority are agreed that these Krishna legends are not earlier than the seventh century of the Christian Era and must have been borrowed from Christian sources.

VI. LATER, OR SECTARIAN, HINDUISM.—The steady weakening of Brahmin influence, in consequence of the successive waves of foreign conquest, made it possible for the religious preferences of the huge, heterogeneous population of India to assert themselves more strongly. Sivaism and Vishnuism, despised and reviled by the adherents of orthodox Brahminism, and assumed a decidedly sectarian character towards the older religion and also towards each other. With this weakening of Brahmin influence they absorbed the grosser elements of low-grade popular worship, and became debased by the accretion of immoral rites and grovelling superstitions. While, on the one hand, the practice of aseticism was pushed to the utmost extremes of fanaticism, on the other, the doctrine of Bhakti was perverted into a system of gross sexual indulgence, for which the amours of Krishna and the Gopis served as the model and sanction. The Brahmin caste-distinctions were broken down, and an equality of all men and women was asserted, at least during the ceremonies of public worship. The old great measures were replaced by others peculiar to each cult and held to be all-sufficient for salvation. Everywhere splendid temples arose to Siva, Vishnu, and his two human avatars; idols and phallic symbols innumerable filled the land; and each rival cult lavished its own sumptuous and undulating music and adornments upon to it, and looking down with more or less contempt on forms of worship other than its own. One factor which contributed strongly to the degradation of these sectarian forms of religion was the veneration of the Sakti, or female side, of these deities. Popular theology would not rest till each deity was supplicated with a wife, in whom the active nature of the god was personified, and an ancient river-goddess, Sarasvati, honoured as the patroness of letters. Vishnu's Sakti was Sri, or Lakshmi, patroness of good fortune. With Siva the destroyer, was associated the terrible, bloodthirsty, dual goddesses, Durga, or to-day, delighting in human victims, now appeased with sacrifices of goats and buffaloes. Rama had his consort, Sita, and Krishna his favourite Gopi, Radha. The worship of these Saktis, particularly Siva's consort, Durga-Kali, degenerated into shocking orgies of drunkenness and sexual licentiousness, which even to-day are the crying scandal of Hindoosim.

Such were the sectarian developments of post-epic times. They found expression in the inferior, quasihistorical Puranas, of the seventh and following centuries, and in the Tantras, which are more modern still and teach the symbolic magic of Sakti-worship. Neither of these classes of writings is regarded by the orthodox Brahmin as canonical.

Of the two hundred million adherents of Hindoosim to-day, one-third of the Indian population is Sivaite or Vishnuite in religion, and the rest profess the orthodox Brahmin worship. Sivaism and Vishnuism have overshadowed the older religion like a rank growth of poisonous weeds. In their main outlines, these two great sects have retained the religious tenets of the Vedas, but on minor points of view on minor points have led to a multiplication of schismatic divisions, especially among Vishnu-worshippers. Both sects, which to-day are fairly tolerant of each other, have a number of devotional and liturgical practices that are alike in kind, though marked by differences of sectarian belief. Both Sivaite and Vishnuite lay great stress on the frequent recital of the numerous names of their respective supreme gods, and, to facilitate this work of piety, each carries with him, often about his neck, a rosary, varying in material and the number of beads according as it is dedicated to Siva or to Vishnu. Each sect has an initiation-rite, which is conferred on the young at the age of reason and in which the officiating guru puts a rosary around the neck of the applicant and whispers into his ear the mantra, or sacred motto, the recital of which serves as a profession of faith and is of daily obligation. Another rite common to both is that in which the presiding officer brands on the body of the worshipper with hot metal stamps the sacred symbols of his sect, the Trident and linga of Siva, or the discus and conch-shell (or lotus) of Vishnu.

But in their highest act of ceremonial worship the two sects differ radically. The Sivaite takes his white stone pebble, the conventional phallic emblem which he always carries with him, and while muttering his mantra, sprinkles it with water and applies to it cooling Balsa leaves. Owing to its simplicity and cheapness, this rite is in much in vogue with the ignorant lower classes. The Vishnuite rite is less degrading but more childish. It consists in an elaborate and costly worship of the temple image of Vishnu, or more often, of Rama, or Krishna. The image is daily awakened, undressed, bathed, decked with rich robes, and adorned with necklaces, bracelets, and ornaments; it is offered two or three choice kinds of food, honoured with flowers, lights, and incense, and then entertained with vocal and instrumental music, and with dancing by the temple-girls of doubtful virtue, consecrated to this service. As Krishna is generally worshipped in the form of a child, and the swaying of his image, the spinning of tops, and other games dear to the heart of the child.

Siva, too, has his temples, vying in magnificence with those of Vishnu, but in all these the holy place is the linga-shrine, and the temple worship consists
in the application of water and Bila leaves to the stone symbol. The interior walls of these, and of Vishnu temples as well, are covered with shocking representations of sexual passion. And yet, strange to say, these forms of religion, while giving a sanction to the indulgence of the lowest passions, at the same time inspire neither deases to the practice of the sensual aspects. The Brahmans, about whom silence, naked and filthy, their hair matted from long neglect, their bodies reduced to mere skin and bones by dint of incredible fasts. They will stand motionless for hours under the blazing sun, with their eyes fixed upwards to the sky. Some go about with face ever turned upwards. Some are known to have kept their fates tightly clench until their growing nails protruded through the backs of their hands.

VII. REFORM MOVEMENTS.—Enlightened Hindus of modern times have made attempts to institute a reform in Hinduism by rejecting all idolatrous and immoral rites, and by setting up a purely monotheistic form of worship. Of these the earliest and the most noted Brah마 Social (Chaitanya Yoga) of Brahmа, founded in Calcutta in 1828, by the learned Rammohun Roy. He tried to combine a Unitarian form of Christianity with the Brahmin conception of the supreme personal God. After his death in 1836, differences of view as to the nature of God, the auras of the Vedas, and the obligation of caste-customs caused the society to split up into a number of small congregations. At present there are more than a hundred independent theistic congregations in India. Some, like the Arya Samaj, rest on the sole authority of the Vedas. Others are eclectic, even to the extent of choosing for devotional reading in their public services passages from the Avesta, Koran, and Bible. Few of them are altogether free from the taint of pantheism, and, being more like clubs for intellectual and moral improvement, they are for ritualistic forms of worship, they make but little progress in the way of conversion.

In short, Brahminism cannot succeed in reforming itself. Its earlier sacred books are steeped in the polytheism out of which it grew. And the pantheistic view of the world, to which it was afterwards committed, has been like a dead weight dragging it hopelessly into the stagnant pool of superstition, pessimism, and immoralities. In virtue of its pantheistic attitude, there is no form of religion, high or low, that does not grow on its capacious soil. The indifference of Brahminism to the gross abuses of Hindustan is, after all, but a reflex of the indifference of its supreme god. Sin loses most of its hideousness when it can be traced ultimately to the great impersonal Brahman. There is but one form of religion which has any prospect of reforming the religious life of India, and that is the Roman Catholic. For the shadowy pantheistic deity it can set forth the One, Eternal, Person of the Trinity, and for the crude Tri-murti, the sublime Trinity; and for the coarse and degrading avatars of Vishnu, the Incarnation of the Son of God. It can replace the idolatrous and immoral Hindu rites with its own imposing liturgy, and substitute the Catechism's inestimable lingers.

Brahminism, being a national religion and a privilege of Hindu birth, has never made any concerted attempt to proselytize in foreign lands. But some years ago steps were taken by a few individuals of England to foist upon English-speaking people a system embodying the pantheistic belief and magical superstition of the Vedanta school of Brahminism. This new system, known as Theosophy, was to embrace within its fold members of every form of religion, reconciling all differences of creeds in the pantheistic and magical view, high and low, are but transitory emanations of the supreme, incomprehensible Reality, devotion to which made the highest religion. This quasi-cult, which made the extraordinary experiments to the public, soon met the ridicule and obloquy it deserved. It is practically obsolete at the present day.

VIII. THE INFLUENCE OF THE INDIAN PHILOSOPHIES ON THE WEST.—The influence of Hinduism and Buddhism on the West is largely indirect. It is seen in the works of the Orientalists, who, in their efforts to understand the spiritual life of the East, have been led to seek its secrets in the literature of India. The study of Hinduism and Buddhism has been a source of inspiration to many of the great thinkers of the West. The influence of these philosophies is also seen in the development of modern psychology and philosophy. The study of Hinduism and Buddhism has led to the development of new theories of mind and spirit, and has contributed to the understanding of the relationship between the individual and the universe. The influence of Hinduism and Buddhism is also seen in the development of modern art and literature. The study of these philosophies has led to the development of new forms of expression, and has contributed to the understanding of the relationship between the artist and the world. The influence of Hinduism and Buddhism is also seen in the development of modern science. The study of these philosophies has led to the development of new theories of matter and energy, and has contributed to the understanding of the relationship between the individual and the universe. The influence of Hinduism and Buddhism is also seen in the development of modern politics. The study of these philosophies has led to the development of new theories of government and society, and has contributed to the understanding of the relationship between the individual and the world.
to research and literary work. There he published an Italian translation of Cardinal de Bérulle's "Élévation" (1640) and of a portion of Ribadenier's "Saintly Lives". He returned to Paris about 1640 and spent the rest of his life at the Church of St. Honoré. Among other works he published "Vie de St. Michel, de l'Ordre de Bavière" (1646); "guide for the Archiepiscopale" (1645)—the first serious study published in France on the significance, tradition, and use of that vestment; "Histoire chrétienne" (1656); "La curiosité de l'une et l'autre Rome" (1655–59); "Monumens Canonum Lucorum" (1657—a practical guide on Roman lines); "Histoire de la sainte chapelle de Loreto" (1665).

John B. Peterson.

Bramante, Donato (also called d'Agnolo after his father Angelo), Italian architect and painter, b. about 1444 at Monte Asdrualdo (hence, sometimes Asdrualdino); d. in Rome, 11 March, 1514. Nothing is known of his early youth. His early artistic work is not known, except that Vasari, in his Life of him, made so many erroneous statements, is mostly a matter of conjecture. To-day, however, it seems fairly certain that Laurana, the architect of the ducal palace at Urbino, showed him the way to the improved style of the High Renaissance. Bramante's artistic activity is divided into two periods, one in Milan and the other in Rome.

His work in Milan is characterized by a pronounced picturesque, decorative style. In Rome, on the other hand, we find a style which is more proper to the High Renaissance, exemplified in works that are, as far as possible, free from all external decoration, expressive by reason of their proportions, and recalling the antique by their grandeur and power. In 1476 Bramante became the court architect of Lodovico Sforza, the Duke of Milan, and in 1479, he was appointed Chief Architect of the Duchy of Milan, as has been abundantly shown, from 1474. At first he seems to have been engaged principally as a painter, following the vigorous manner of Mantegna and Melozzo da Forli. It is true that only scanty remains of his work at this time have been found. Such are the recently discovered fresco fragments, transported from the Casa Primetti to the Brera (single figures of warriors, philosophers, poets, and singers); the more poorly preserved decorative part of the Casa Fontana, especially the pictures, undoubtedly the Scouring of Christ (Badia Chiavare in near Milan). Bartolomeo Suardi, called Bramantino [cf. Suida in Jahrbuch der Kunstsammlungen des allerhöchsten Kaiserhauses (1905), I, 1], was his assistant and rather weak imitator in the field of painting, but not his teacher as thought by Vasari (ed. Milanesi-Sanoni, 147, 175). If Bramante occasionally devoted himself to Gothic, as he unquestionably did in some designs for the Milan cathedral, he exhibits from the start an excellent style, which, as Gale Brancanese, became typical for the Renaissance architecture of Lombardy.

It is characterised by ambitious proportions, internal concentration, a greater organic relation of parts, and by rich and fresh decorative forms.

His first great achievement in this line is the choir of the church of Santa Maria presso S. Satiro, begun in 1476. The choir has a flat end and a false apse, rendered in relieved perspective. The adjoining sacristy, octagonal in plan and surrounded by a dome, is charming on account of the richness of the decoration, one of the most effective of its kind of development. Its two interior stories are separated by a splendid terra cotta frieze overlaid with bronze. The church came to have the same significance in Northern Italy as the Pazzi Chapel or the Sacristy of Saint Spirito in Florence. Still richer in ornament are the transept and choir of Santa Maria delle Grazie (1492–99), by which the superiority of the imposing new style over the Gothic can best be shown. In addition to these great churches, the Canonic, or canons' residence, of San Ambrogio (1492, only half completed) and the remodelled court of the Ospedale Maggiore are the only examples of this style in the fifteenth century. The development of this somewhat more decorative style to the larger, simpler proportions of the Roman period is suggested by the church of the Barnabites, Santa Maria di Capuonuova in Faïa (1492), and also by the churches of Santo Amant and Santa Maria in Leonina. The magnificent articulation of the façade of Abbiatagrazio shows in full development the powerful boldness of the Roman style whose growth, in Rome, was influenced not only by the antique, but also by the use of a more intractable material (gravetin) which made small, detail treatment an impossibility. The date of this church is probably 1497 instead of 1477, as Geymüller read it. Other ecclesiastical structures of Lombardy upon which the influence or imitation of Bramante is perceptible, are the Cathedrals of Como, the Santa Maria delle Grazie Church at Crema, and the Locorotondo at Lodi.

Even greater is the number of structures indirectly influenced by Bramante in Northern and Middle Italy after the downfall of the Sforzas in 1499. Three of these buildings are particularly interesting. In 1501 he moved to Rome where he found in Alexander VI and still more in Julius II, magnificent patrons. Here, too, very little is known of his early work. He is still disputed whether or not the cloister of Santa Maria della Pace and the facade of the Church of the Anima can be ascribed to him. This is also true of the immense palace of Cardinal Rafaello Riario (the present Cancelleria) with the adjoining church of San Lorenzo in Damaso. On account of the inscribed dates (1469 and 1469) on the Cancelleria, it has been suggested that Bramante, as assistant of his teacher, may have designed this palace. In 1502, Bramante left the service of the Sforzas for the service of Julius II, to which he was appointed, whereas Geymüller more correctly persists in ascribing them to Bramante, basing his view on considerations of style and on Bramante's relations with the Sforzas and the Riccius; this would also explain Bramante's working in Rome prior to 1492 [cf. Gnoli in Arch. stor. dell' arte (1892), IV, 176 sqq.; Riv. d'Italia (1898); and Geymüller in Rassegna d'arte (October and December, 1901), II]. The Palace Giraud Tolstion is a structure similar to the palace of the Riccius and of the Sforzas in Mantua. The design of the palace, the simplicity, and its monumental character. Undoubtedly Bramante is the creator of the popular little circular temple in the city of San Pietro in Montorio (completed in 1502). It is planned quite after the manner of Bramante. In the temple the first structure consciously designed and executed is the classic spirit, embodying the purest and simplest forms and the most agreeable proportions. A peristyel, never carried out, was intended to complete the building. Other works of Bramante's first Roman period are the choir of Santa Maria del Popolo, the plan for the reconstruction of the Vatican, the extension of the Belvedere court, etc. The most majestic creation, not only of Bramante and of the High Renaissance, but in fact of Christian art in Italy, is the new St. Peter's, begun in 1506, even if it was intended originally to enclose the magnificent tomb of Julius II, begun by Michelangelo. But on account of the hopelessly ruinous condition of the old St. Peter's, its rebuilding became an immediate necessity, and, indeed, was determined upon shortly after the death of Julius II, pursuant to a plan in connexion with the reconstruction of the Vatican. As early as 18 April, 1506, the cornerstone of the stair of St. Helena was laid, and a year later those of the other three piers at the transept were in position. The ways and means employed by Bramante in dealing with the old building brought him many
BRAMANTE'S CIRCULAR TEMPLE

severe reproaches for his lack of sentiment and earned for him the nickname of Buonante. Nevertheless, the inexpressible richness, the incomparable splendor, the incomparable beauty, the incomparable power of the masterpiece that he had produced, must not be overlooked because of such romantic sentiments, nor must it be forgotten that the pope who had Bramante's plan carried out in spite of all remonstrances and of the enormous cost.

The actual state of the structure, however, was more especially the work of the original plans, as revealed by the numerous drawings, executed partly by the master himself, and partly by his assistants. Their critical examination and aesthetic appreciation are among Geymüller's chief achievements. According to him the structure of the plan as it stood before the beginning of the work was as follows: in the first place, only a small chapel for the tomb of Julius II was contemplated; in the second, the continuation of the erection of the new buildings undertaken during the reigns of Nicholas V and Paul II; only in the third stage was an entirely independent new building decided upon. For it Bramante had in view, from the first, a building of centralized plan, more particularly the plan of a Greek cross. In this he saw the architectonic ideal which combined the greatest simplicity with the most imposing magnificence, as well as a tendency to the monumentally sublime. It was only as an alternative, so far as can be judged from extant sketches, that the master seems to have reserved for himself the possibility of using the Latin cross, being evidently compelled to meet the liturgical needs of the Church. According to the oldest drawings and a memorial medal of Cardoso, dated 1506, the original ground plan was a pure Greek cross, the termina-
tion of whose arms was apsidal on the interior, rectangular on the exterior. An immense dome was carried over the crossing. The predominant form of the interior was rotunda-like. For the four corners immense chapels were planned, which again repeated the Greek cross; they were crowned by smaller domes, and each was flanked on the exterior by a tower. Between the apses of the cross-arms and these corner-towers lay large vestibules for the chapels of the flanking domes. In a second design the cross-arms are rounded and enclosed by im-
mense ambulatory halls. The main dome is en-
circled by an arcaded colonnade. The piers of the domes were enriched by niches emphasizing the dominant idea of the interior. In Milan, San Lorenzo, a church of centralized plan (see BYZANTINE ARCHITECTURE), can be seen as a sort of foil for this design. The principal idea, however, was taken from Pantheon and the Temple of Peace, which was the origin of the saying attributed to Bramante, that he would set the Pantheon on the Temple of Peace. The master was permitted to see only the initial steps towards the execution of his plan. He was able, nevertheless, to establish firmly its main lines for the architects who followed, inasmuch as the dome-supports with their arches, the southern transept, and the side domes were carried out under his direction. After his death in 1514 the continuation of the work was entrusted to the aged Fra Giocondo, and soon after (on a recommendation made by Bramante during his lifetime) to Raphael. Later on, San Gallo and Peruzzi were placed in charge. Bramante's desire was to bring about changes and emendations under the various directors until Michelangelo returned to the fundamental ideas of the brilliant creator, and by the completion of the dome substantially carried the work to a conclusion. The comprehensive work of Michelangelo is, in fact, as effective as that planned by Bramante; on the other hand it offers in its greater rise, a much more elegant and vigorous silhouette.

Under Julius II the influence of Bramante was predominant. Not only were the most daring works of architecture entrusted to him, but all other impor-
tant building operations, and, in general, being artistic undertakings depended on his initiative and approval. As the minister of the arts of the Sistine Chapel and of the logge and the stanzas, or halls, of the Vatican. In this way Raphael, his younger townsman, received the greatest possible aid and favour, whilst Bramante's intrigues against Michelangelo were often detrimental to Vasari. Through envy of Michelangelo's mighty genius, he assigned to this great master only unsuitable and unpleasant commissions. Though these tragically strained relations between the two great artists at the court of the Rovere pope seem to be a psychological puzzle, the key is to be found in the hard and self-torturing character of the Florentine. Bramante, on the contrary, was a man who enjoyed life in a happy and liberal way, and who knew how to live up to the dignity of his prominent position. The manifold character of his interests and activities is yet visible in his poems which have come down to us. With Michelangelo, Raphael, and Leonardo, he is one of the great intellects of the High Renaissance; he resembles them also in the fact that only a small part of his present creations is known to us. 

**BRANOCCI**

Joseph Sauer.

**BRANOCCIO**, an ancient and illustrious Neapolitan family, from which the "Brancas" of France were descended. The family founded the celebrated Brancacciana Library at Naples, gave prominent officials to the State and from the fourteenth to the seventeenth century, seven cardinals to the Church. It is represented to-day by two branches, the "Princi-
di di Ruffano" and the "Principi Branaccio". The seven cardinals were as follows: (1) LANDOLFO, b. at Naples; d. at Avignon, 1312. He was created cardinal in 1294 by Celestine V, entrusted with difficult negoti-
tiations under Boniface VIII and Clement V, and at-
tended the General Council of Vienne (1311-12).

(2) LUCIO, a learned canonist, d. 1411. He was ap-
pointed by Innocent VII Nuncio to Naples, and made Archbishop of Taranto and cardinal (1408) by Gregory XIII. (3) NICCOLO, d. at Florence, 1412. He was made Archbishop of Cesena in 1376; he sided with the antipopes Clement VII and Benedict XIII, and was created cardinal as the former in 1379. (4) GIULIO, d. at Rome, 1427. He was made to the cardinalsate by Urban VI in 1384, was present at the Council of Constance (1414-18), and filled several important missions. (5) TOMMASO, d. in Rome, 1427. He was created cardinal in 1411 by his uncle, John XXIII, and was present at the Council of Constance. His private life is said to have been far from exemplary. (6) FRANCESCO MARIA, b. about 1591; d. 1675. He became Bishop of Capaccio, Viterbo, and Porto, and was created cardinal in 1654 by Urban VIII. Among other writings, he has left a dissertation on the question whether chocolate breaks the fast or not. (7) STEFANO, nephew of Francesco Maria, b. at Naples, 1618; d. 1682. He was nuncio at Florence and Venice, Bishop of Viterbo in 1670, and cardinal in 1681.

**BRANOCCI**

N. A. Weber.

**Brancci, Francesco, b. in Sicily in 1607;** he entered the Society of Jesus in 1624 and went to the Chinese Missions in 1630. He laboured with admirable zeal and success in the Province of Kiang-nan, building, it is said, more than ninety churches and forty-five chapels. In 1665 he was exiled from Canton, where he died in 171 (according to Sermword, at Shanghai). He wrote and published numerous books in Chinese, most
of which, being of great merit, were reprinted by the Jesuit missionaries in the sixteenth century. Among these are a treatise on the Eucharist, instructions on the Decalogue and on the Commandments of the Church, a refutation of divinations, and particularly a Catechism, entitled in Chinese, "Conversations of the Angels." The Russian Archimandrite was also at the head of the Orthodox mission at Peking, published in the second decade of the nineteenth century an extract from this Catechism, adapted to the Greek Rite, in which he omitted everything that disagreed with the Russian schismatic tendencies. Brancati is also known for several volumes of sermons and homilies for the Sundays and feast-days of the ecclesiastical year. His work on the Chinese rites was published in two volumes at Paris in 1700. It bears the title "De Sinensium Ritus politiae Acta," etc.

SOMMERVOSS. Bibl. de la c. de J., II, 81-83; MICHAUD, Biog. univ., p. V.

B. GUDENUS.

Brancati di Lauria, FRANCESCO LORENZO, Cardinal, Minor Conventual, and theologian, b. at Lauria in the then Kingdom of Naples, 10 April, 1612; d. in Rome, 30 November, 1693. Stricken at the age of seventeen with a dangerous illness, he made a vow that in the event of his recovery he would enter the order of Minor Conventuals. In July, 1630, he received the religious habit at Loreto, in Apulia, and shortly after the completion of his novitiate was called to Rome. He subsequently visited several of the most noted convents of his order in Italy, in which he taught philosophy and theology with marked success. In 1647, he was again recalled to Rome and was shortly afterwards made guardian of the convent attached to the Conventual Church of the Twelve Apostles, where the minister general of the order resides. In 1661, he was appointed to teach theology in the Roman University, and was later made Consultant of the Congregation of the Holy Office by Alexander VII who used to call him "The right arm of the Apostolic See." He was made chief librarian of the Vatican library by Clement X, and in recognition of his devoted services to the Church was raised to the cardinalatial dignity by Innocent XI in 1681. As cardinal he was actively connected with at least ten of the Roman Congregations. Brancati died, and all probability he has succeeded to the see of St. Peter, had not the Spanish Government used its right of veto. As it was he received fifteen votes, the successful candidate being Cardinal Pietro Ottoboni who took the name of Alexander VIII. Brancati was a man of vast learning, singular piety, and unbounded liberality towards the poor. During the twelve years he was cardinal, he continued to keep faithfully to the observance of his obligations as a religious, remaining with his brethren in the Convent of the Twelve Apostles, the church of which he caused to be completed and adorned. He prepared himself for death in a most edifying manner, and had his tomb constructed with the inscription over it: "Ossa Fratris Laurentii Brancati de Lauria." He died in the eighty-first year of his age.

Brancati is the author of several important works on theology and asceticism. Perhaps the most noted of these is the commentary on the third and fourth books of the "Sentences" of Duns Scotus which was printed at Rome in 1700, and of which two folio volumes between the years 1653 and 1682. In this work he treats exhaustively all the subjects that pertain to special dogmatic theology. In his "Opuscula tris de Deo," published at Rome in 1679, and at St. Remy in 1708, he gives a great fulness of predestination which he endeavours to show was taught by St. Augustine, though reliable authorities are not agreed as to whether St. Augustine was explicit on this point. Brancati's "Epitome Canonum," which went through two editions at Rome, four at Venice, and two at Cologne, contains a complete list of all the canons to be found in the general and provincial councils, in the decrees of the Lateran and of the Holy See, and in the encyclical letters and constitutions of the Roman Pontiffs up to the time of Alexander VII. Among his ascetical works may be mentioned the "Opuscula octo de oratione Christiana," published at Rome in 1676, which shows his profound knowledge of the spiritual life of which he became a master more perhaps by his own holy living than by the abstract study of asceticism. The life of Brancati, written in Italian by Gabriele Babe, was published in Rome in 1690.

HURTER, Nomenclator (Innsbruck, 1883), II, 346; GRAMMEN in Kirchenlex., II, 1192.

STEPHEN DONOVAN.

Branch Churches. THEORY OF. See Church.

Branch Sunday, one of the medieval English names for Palm Sunday. The difficulty of procuring palms for that day's ceremonies led to the substitution of boughs of yew, willow, or other native trees. The Sunday was often designated by the names of those trees, as "Yew Sunday," "Willow Sunday," etc. The general term "Branch Sunday." (See Palm Sunday.)

JOHN B. PETERSON.

Brandenburg, formerly an electoral principality (the Mark of Brandenburg), and a diocese in the heart of the present Kingdom of Prussia, now a Province of Prussia and in ecclesiastical order an Apostolic chair of ancient foundation.

I. HISTORY.—The lands extending eastward from the Elbe to the Vistula, once inhabited by Germans, were invaded by Slavic tribes who, during the sixth century of the Christian era, pushed their way as far as the Elbe and the Saale in Thuringia. Charlemagne was the first to check their advance; later, Henry I attacked them, captured Bremnabor, the stronghold of the Luxatians, and to safeguard his conquests established the North Mark. In 939 Otto I brought the country of the Havel under his power, placed the Saxon races as far as the Oder under tribute, and to further the work of their conversion founded the dioceses of Havelberg and Brandenburg (948), which in 968 were placed under the recently founded Archdiocese of Magdeburg. Nevertheless, Christianity made slow progress. The hate of the Slavs was so great that the German conquerors, far from abating, burst forth in a great uprising (983). The Slavs pressed on as far as the Elbe, conquered Brandenburg and Havelberg, and destroyed the seeds of Christian civilization that had been planted there. Emperors Henry II and Conrad II, it is true, again brought the Luxatians under the power of the German Empire, but the real evangelization of the country was not resumed until the time of Count Albert of Ballenstädt, founder of the Ascanian line, who had been made Margrave of the North Mark by Emperor Lothair II (1134). Albert entered into friendly relations with the Wendish prince, Pribislav, at that time the ruler of Brandenburg, was chosen by him as his heir, and in 1150 took possession of the Mark, uniting the two, and assuming at the same time the title of Margrave of Brandenburg. He brought colonists from the Lower Rhine and Utrecht, who by the methods learned in their old homes reclaimed the swamp lands of the Mark for agricultural purposes; the cities were founded anew; the Dioceses of Brandenburg and Havelberg were re-established; churches and
monasteries erected; and the Wendish population soon won over to Christianity and the German Empire. Brandenburg, indeed, the country was taken by the Premonstratensians and Cistercians. Even before the death of their founder, St. Norbert, Bishop of Magdeburg (1126–34), the Premonstratensians founded the monastery of Gottesgärd (1151) and later that of Letzteik, near Minden. In 1141 another monastery at Jastrow (1144), the city of Brandenburg (1165), Gramzow in the Uckermark (c. 1180), and elsewhere. The bishoprics of Brandenburg and Havelberg and the seats in their respective cathedral chapters were held by the Premonstratensians, and the seats in some of the cathedral chapters of the Thuringian and Meissen dioceses by the Cistercians. The manors were equalled in zeal, particularly during the thirteenth century, by the Cistercians, who had been introduced into the country by Albert’s son and successor. Their foundations at Zinna (1170), Lehnin (1183), Chorin (1272), Jüterbog (1282), Himmelport (c. 1290), etc., were centres for the work of colonization, which was conducted on a large scale.

When the Ascanian line had become extinct, Emperor Louis the Bavarian annexed the Mark to his dominions, though preserving the office of the Wettin dukes, the House of Wittelsbach was forced to relinquish Brandenburg, which in 1356 had been raised to the rank of an electorate, to Emperor Charles IV, who made it a dependency of the Bohemian Crown. Charles restored discipline, put an end to the extortion, and established a corporate chapter of Tangermünde, and raised the Mark to renewed prosperity. The Dioceses of Brandenburg and Havelberg, however, ceased to be direct fiefs of the empire. Charles’s son, Sigismund, mortgaged the Mark (1388–1411) and in 1411 appointed as Statthalter (Governor) Burgrave Frederick of Nuremberg, who took possession in 1412, and, having overcome the opposition of the nobles, was solemnly invested with the Mark of Brandenburg as an elector of the German Empire (1417). In this way Brandenburg passed into the possession of the Hohenzollerns, who have since held it without interruption. While Frederick I occupied himself almost exclusively with matters connected with the empire, his son, Frederick II (1440–70), concentrated his attention on the development of his territory. Distinguished from his youth for great piety, he promoted the religious life of his subjects, worked for the reform of the clergy and monasteries, made the cathedral chapters of Brandenburg and Havelberg centres of religious and monastic life and elevated the Order of the Premonstratensians for nobles, and received from Pope Nicholas V (1447) the right of appointment for the dioceses of the Mark. His grandson John, surnamed Coero (1496–99), took the initiative in the establishment of the University of Frankfort on the Oder, opened in 1506, and destined to be for a time a stronghold of Catholicism in the religious wars stirred up by Luther.

Discontent between bishop and people had cooperated with other unfortunate circumstances in the Mark of Brandenburg, to create conditions amid which the new teachings took rapid root. Elector Joachim I (1499–1535), whose younger brother, Albert, was made Archbishop of Magdeburg and Bishop of Halberstadt in 1513, and in 1514 Archbishop and Bishop of Magdeburg, the most active part in the execution of the German Empire, was extremely hostile towards the religious innovations, and endeavoured to have the edict formally condemning Luther passed by the Reichstag, at Worms. He forbade the circulation of Luther’s translation of the Bible and the preaching of the Reformation in his territory, and he prohibited his subjects from attending the University of Wittenberg.

Through the efforts of wandering preachers, nevertheless, Luther’s teachings soon gained a large following, not only in various parts of the Mark, but in the very family of the elector, counting among its adherents his cousin Albert, Grand Master of the German Order, his son-in-law, and even his wife, Elizabeth. Before his death, Joachim made his two sons, coheirs of his lands, solemnly promise fidelity to the Catholic Church. In spite of this, the younger, John of Kustrin, as early as 1538, became a Protestant, and was followed by his brothers. The elder, Elector Joachim II (1535–70), influenced by his wife, daughter of the Polish king, Sigismund, at first held fast to the old Faith, though allowing Protestant clergymen to minister to several parishes in his territory; finally, at Spandau in 1539, he received the sacrament under both kinds hands of Matthias von Jagow, Bishop of Brandenburg, likewise a partisan of the new doctrines. His demolition was imitated by the majority of the cities in the Mark, Berlin at their head, and by the nobles almost as a body. The Bishops of Havelberg and Lebus alone offered steady resistance. In 1540 the electoral prince, by virtue of his authority as national bishop, issued a new church ordinance which was based on Luther’s doctrine of justification by faith. The Church was invaded by all sorts of innovations, such as the episcopal system of organisation, and many Catholic ceremonies and customs, even to the Latin Mass, feasts of the Blessed Virgin, processions, etc., that the common people might not realise how the Catholic Faith was being stripped from them. Between 1540 and 1542 an ecclesiastical visitation of the whole Mark was undertaken; the secular and regular clergy who had withstood the innovations of the elector were mercilessly expelled; the foundations of religious orders of men were suppressed; convents were converted into asylums for noble maidsens; much church property and many endowment funds were confiscated and mortgaged to nobles or cities; and church plate and valuables were melted down. In 1543, the Consistory was constituted the highest spiritual authority. The elector took advantage of the rights obtained through the Religious Peace of Augsburg (1555) to complete the work of the Reformation in his principality.

After the death of the last bishops who held fast to the Church—those of Lebus (1555) and Havelberg (1561)—he succeeded in having his eldest grandson, later Prince Elector Joachim Frederick, appointed bishop, thus preparing for the future secularisation of the bishoprics. The administration of the Diocese of Brandenburg he confided to his son, John George. This gave the Reformers a victory which, whatever savoured of Catholic teaching was gradually eliminated, and by the beginning of the seventeenth century, Catholic services were absolutely prohibited. Not until the establishment of the Kingdom of Prussia were Catholics again allowed to hold public worship. (For the later history of the Mark of Brandenburg, see Prussia.)

The Diocese of Brandenburg, founded 1 October, 948, by Otto the Great, was bounded on the east by the Oder, on the west and south by the Elbe and the Black Elster, and on the north by the Uckermark. The first bishop was Thietmar or Ditmar (d. before 968); his successor, Dodilo, was murdered in 980. The succeeding bishops, after the heathen tribe the Umbrians had again conquered the German Empire, were extremely hostile towards the religious innovations, and endeavoured to have the edict formally condemning Luther passed by the Reichstag, at Worms. He forbade the circulation of Luther’s translation of the Bible and the preaching of the Reformation in his territory, and he prohibited his subjects from attending the University of Wittenberg.

Through the efforts of wandering preachers, nevertheless, Luther’s teachings soon gained a large following, not only in various parts of the Mark,
BRANLY 740

(1637–44), the forty-fourth bishop, was one of the most zealous promoters of the so-called Reformation; although in 1528 he bound himself by oath to the pope and to St. Jerome. In 1532, to withstand Lutheran innovations, he installed a Lutheran preacher in the city of Brandenburg in the same year, released his priests from their vow of celibacy (1535), and introduced the administration of Communion under both forms. After the resignation of this see by Joachim, Bishop of Münsterberg, Prince Elector John George was appointed administrator of the diocese, which by that very act was secularized. The cathedral chapter was preserved in name, and consists to the present day of one cathedral dean, one senior and seven cathedral chaplains; these positions are bestowed as sinecures on Prussian statesmen, generals, theologians, etc.

II. STATISTICS.—Ecclesiastically, the former Mark of Brandenburg, with the city of Berlin and the greater part of the province of Pomerania, forms the "Apostolic Delegation for the Mark Brandenburg and Pomerania," which is administered by the Prince-Bishop of Breslau as Apostolic Delegate, indirectly through the Dean of the Cathedral of St. Hedwig's in Berlin, as of the prince-bishop. According to the census of 1 December, 1900, the number of Catholics was 314,257; in 1907 it had reached 443,100. For the work of the ministry, the delegation is divided into six districts, each corresponding with a spiritual charge, 6 curateships, etc. Catholic churches and chapels number 128. The clergy of the delegation include (in addition to the delegate of the prince-bishop, the army bishop for the Prussian troops, and the secretary of the delegation) 160 priests, viz.: 72 priests having charges, 54 chaplains and curates, 19 priests having other appointments, 15 living in community. The following orders of men have foundations (1907): Dominicans 1, with 10 priests and 7 lay brothers; Alexians 1, with 22 brothers; Poor Brothers of St. Francis 1, with 17 brothers. Orders and congregations of women have 42 foundations, with 733 sisters: Ursulines 1, with 24 choir sisters, 1 choir novice, and 12 lay sisters; the Sisters of the Good Shepherd 2, with 135 sisters; Sisters of St. Charles Borromeo 6, with 132 sisters; Dominicans of St. Cecilia 1, with 152 sisters; the Grey Nuns of St. Elizabeth 17, with 219 sisters; the Sisters of Mary 4, with 58 sisters; the Sisters of St. Joseph 1, with 13 sisters. The orders of women devote themselves almost exclusively to the care of the sick and the poor, and the education of young girls.

The Catholics of the delegation have but one private high school for boys; there are 4 Catholic high schools for girls, one of which is conducted by the Ursulines. There are 30 Catholic primary schools in Berlin and outside of Berlin 52; elsewhere Catholic children are given religious instruction by clergy and secular teachers, in some places in non-Catholic schools (140), elsewhere in churches and chapels, or in private houses. Religious orders of women conduct 15 protectorates for small children, and 9 schools of domestic economy and manual training.

The Catholic charitable institutions of the delegation are almost exclusively under the control of religious congregations of women. There are about 10 hospitals and sanatoria, 5 homes for convalescents and those in need of rest, 1 Institution for the mentally deranged, 1 maternity home, 29 institutions for visiting nurses, 7 homes for invalids, 6 for the care of small children, 8 crèches and homes for children, 3 homes for orphans, 9 refuges for the poor, 8 homes for girls out of work, 15 institutions for the care of orphans and the instruction of first-communicants, and 4 homes for the shelter and reclamation of girls. It should be noted that in many cases several of these institutions form one establishment and are under the same management.

The organization of Catholics in the delegation has reached a high stage of development. There are about 300 religious associations. Among the fraternities and rosary unions are: 30 societies of the Holy Family, 50 societies of St. Charles Borromeo, 35 associations of young men and societies of St. Aloysius, 25 congregations of Mary and societies of the Sacred Heart, 100 religious organizations may be made of the Society of St. Vincent de Paul, with about 40 conferences of men and women, and the Charitable Association (Charityverband) for Berlin and other centres of charitable work. Among the senior groups there are: about 260 societies of choral singing, about 60; local societies of Christian workers, 32; Catholic Gesellenvereine, 8; masters' unions, 3; apprentices' unions, 4; mercantile unions, 5; associations of teachers, 5; corporations of students, 10; national bureaus (Volkstüren), 2, etc. Among political organizations are the National Union for Catholic Germany (Volkswesen für das katholische Deutschland) and the Windthorst leagues. Catholic social organizations are numerous: societies of men, civic associations, choral unions and such like. (For political organizations see Pernia.)

JOSEPH LINS.

Brany, Édouard, a French physicist and inventor of the coherer employed in wireless telegraphy, b. at Amiens, 23 October, 1848. After receiving his early education at the Lyceé of St.-Quentin, his scientific studies were begun at the Lyceé Henri IV at Paris, and in 1865 he entered the Ecole Normale Supérieure. In 1885 he became Licentiate in mathematics and physical science, and also agrégé in physical and general science. After holding the chair at the Lyceé of Bourges, he was appointed chef des travaux in 1889, and four years later he was made director of the Laboratory of Instruction in the department of physics at the Sorbonne. In the same year (1872) he won the doctorate in science with a thesis entitled "Electrostatic Phenomena in Voltaic Cells". In 1876 he resigned his post at the Sorbonne to become professor of physics at the Catholic University in Paris. He then took up the study of medicine, obtaining his degree in 1882, and thereafter divided his time between the practice of medicine, especially of physiotherapy and electrotherapy, and his researches in physics at the Catholic University.

Dr. Brany is best known by his researches concerning radio-conductors, and particularly by his so-called coherer. He began his studies in this field in 1890, being led to undertake them by observing the anomalous change in the resistance of thin metallic films when exposed to electric sparks. Platinum was deposited on glass and aluminum, and these were used in the first apparatus. This was at first attributed to the influence of the ultra violet light of the spark. The variations in the resistance of metals in a finely divided state were even more striking, and they were shown by Dr. Brany...
to be due to the action of the electrical, or Hertaian, waves of which the spark was the source. The phenomenon was investigated at great length, and further experiment led to the coherer, which is simply a glass or ebonite tube containing metallic filings which connect the two ends of a wire conductor entering the tube. When the tube is made part of a battery, the filings, if charged, will offer great resistance to the passage of a current. But if a spark be produced in the neighbourhood between the terminals of an induction coil, or by the discharge of a Leyden Jar, the resistance of the filings is diminished, and a current may be measured in millions but not hundreds of ohms. Upon tapping the tube the filings regain their normal resistance. This simple device was employed by Lodge in his researches and formed an important part of Marconi's successful system of wireless telegraphy. In fact the coherer first made wireless telegraphy possible. It serves as a receiver, being placed in series with a relay actuating a Morse sounder.

When electrical waves, sent out at a distant station according to an established code, impinge upon it, its resistance diminishes sufficiently to enable the relay to act and this in turn reproduces the signals in the sounder. A taper automatically restores the resistance of the filings. Dr. Brany has given the name of radio-conductors to bodies which, like filings, can be made to act as conductors or non-conductors at will. A number of other forms have since been devised, and he himself has found that the tripod coherer, composed of a metal disk making contact with a polished steel plate by means of three steel legs, is more sensitive and also cleaner, in his opinion, than the tube coherer. He has also applied his radio-conductors to "telemechanics without wires", i.e., to the production of divers mechanical effects at a distance by means of electrical waves. Among Dr. Brany's other researches there has been the investigation of ultra violet light upon positively and negatively charged bodies (1890-93), electrical conductivity of gases (1894), etc. It may be noted that the germ of the "antennae", employed particularly in long distance telegraphy, may be found in his papers published in 1891.

Dr. Brany became Commander of the Order of St. Gregory the Great in 1899 and was nominated Chevalier of the Legion of Honor in 1900 for "having discovered the principle of wireless telegraphy." He has also employed a tremendo prix a l'Exposition of 1900, for his radio-conductors, and the prix Oseiris in 1903, from the Syndicate of the Press. He was also a titular member of the Pontifical Academy dei Nuovi Lincei. Besides his papers published chiefly in the "Comptes Rendus", Dr. Brany is the author of a "Cours élémentaire de physique" (5th ed., 1905); and "Traité élémentaire de physique" (3d ed., 1906). For various types of coherer and other apparatus employed in wireless telegraphy, cf. Collins, "Wireless Telegraphy" (New York, 1905).

H. M. BROCK.

BRANT, SEBASTIAN, a German humanist and poet, b. at Strasbourg in 1457 or 1458; d. at the same place, 1508. He entered the University of Basle where he at first studied philosophy, but soon after abandoned this for law, obtaining in 1489 the degree of Doctor of Canon and Civil Law. Prior to this, from 1484, Brant had begun to lecture at the university, practising his profession, and he delivered a number of poems in Latin and German in which he set forth his religious and political ideals. The election of Maximilian as emperor had filled him and many other patriots with high hope. To see the emperor the supreme temporal ruler of Christian nations, and the Church the supreme spiritual ruler on earth was his one great desire and henceforth coloured all his poems. Especially did he hope for the restoration of imperial power in Germany and the strengthening of the realm. But he was doomed to disappointment. In 1499 Basle was separated from the empire and became a member of the Swiss confederacy. Brant's position here now became endangered, and he left Basle to take refuge in France. In 1494 he had published his poem "The Ship of Fools", which had won him great popularity. Geiler von Kaisersberg, the famous Strasbourg preacher, had made it the basis of a series of sermons, and he now recommended the appointment of Brant to the vacant position of city-syndic in Strasbourg. The poet accepted the offer, and in 1501 he returned to his native city, where two years later he was appointed town-clerk and soon rose to considerable prominence. The remainder of his life was eventful. Towards the great religious movement of his time, the Reformation, he maintained an attitude of passive indifference. Repeatedly he served his city in an official capacity, the last time in 1520, as spokesman of an embassy sent to the newly elected Emperor, Charles V, to obtain for Strasbourg the usual confirmation of its ancient privileges.

The work to which Brant owes his fame is the "Narrenschiff" (Ship of Fools), a long didactic, allegorical poem, in which the follies and vices of the world are satirized. All the four ships bound for Narragonia, the land of fools. But this plan is by no means carried out systematically, many descriptions being introduced which have no connexion with the main idea. The resulting lack of unity, however, does not detract from the value of the work, for it enables the poet to discuss all kinds of social, political, and religious conditions. Not only follies in the usual sense of the word are satirized, but also crimes and vices, which are conceived of as follies in accordance with the medieval way of thinking. Hence among the fools appear such people as usurers, gamblers, and adulterers. A chapter is devoted to each kind of folly, and there are one hundred and twelve chapters in which one hundred and ten kinds of fools pass muster. As a work of art the poem does not rank high, though its tone is serious and earnest, especially where the poet pleads for his ideals, as in chapter xcix, entitled "Von abgang des glouben" (on the decline of faith). Knowledge of self is praised as the height of wisdom. The "Narrenschiff" is remarkable for its buoyancy, which is attested by the numerous editions that appeared in rapid succession. But its fame was not confined to Germany. It was translated into Latin by Jacob Locher in 1497 (Stuttgarter Nasivio), into French by Paul Rivière in 1497, and by Jehan Droin in 1498. An English verse translation by Alexander Barclay appeared in London in 1509, and again in 1570; one in prose by Henry Watson in London, 1509, and again in 1517. It was also rendered into Dutch and Low German.

Besides the "Narrenschiff" Brant wrote religious and political poems in Latin and German. He also edited and translated a number of legal and theological treatises. The most complete edition of the "Narrenschiff" is that of Father Zarncke (Leipzig 1841), which contains the imperial prologue in both languages. Other editions are by Karl Goedeke (Leipzig, 1872) and F. Bobertag (in Kürschner's Deutsche National Litteratur, XVI). A modern German translation was made by Karl Simrock (Berlin, 1872), who published the new edition of the English translation by T. H. Jamieson, appeared in 1874 in 2 vols.

For an essay on Brant see SCHMIDT, Histoire littéraire de la France (Paris, 1879), I, 109-123, and the introductions in the above-mentioned editions; see also JANSEN, History of the German People (tr. London, 1886) I, 126.

ARTHUR F. J. REMY.
Brantôme, Pierre de Bourdelle, Seigneur de, one of the most famous of French writers of memoirs, b. in 1539, or a little later; d. 15 July, 1614. He was the son of a nobleman of Périgord and spent his childhood at the court of the Queen of Navarre. He studied at the College of France, at Paris, and at Oxford. In 1551, at the age of fourteen, he was sent to the court of Italy, where he remained until 1556, when he returned to court at a date not later than 1558, for he saw Mary Stuart, "at the age of thirteen or fourteen, in the presence-chamber of the Louvre, publicly recite a Latin oration which she had composed, before King Henry, the queen, and all the court". In 1557 Bourdelle was granted the Abbey of Brantôme, the name of which he took.

Brantôme's life explains his writings; for it is the life of a traveller, a soldier, and a courtier. He himself in a few lines thus sums up its characteristics: "From the time when I began to outgrow subjection to father, and mother, and school, besides the journeys I made to the wars and the courts in France, I have made seven, when there was peace, outside of France, to find adventure in the world; I was in Italy, Scotland, England, Spain, Portugal—then in Italy again, at Malta for the siege, at La Goulette in Africa, in Greece, and other foreign places, which I have liked a hundred times better for having to make my own way, than having the disposition of wandering musicians who love the houses of others better than their own." In 1558 he went for the first time to Italy. He returned to France only to leave it again in the suite of Mary Stuart who went to Scotland to take possession of her kingdom. Brantôme has left a touching account of this journey of the unfortunate queen. In 1562 he took part in the first civil war between the Catholics and Protestants of France and was present at the battle of Jarnac. Then he, having again to travel, going to Portugal, Spain, and to Malta; at this last place he spent three months and a half, the active and adventurous life of the Knights pleasing him so greatly that he thought for a moment of entering the order. On his return to France he took part in the second and third civil wars, was present at the battles of Meaux and St.-Denis, at the engagement at Jarnac, and the siege of La Rochelle. His military career came to an end in 1574 after the campaign in Périgord. The office of grand-chamberlain of the queen, Henry III, and his journeys now were merely to follow the court, where all that interested him seems to have been the love intrigues, the duels, the rivalries, and the assassinations.

Notwithstanding the services he had rendered, his bravery, and the amusement which his Gascogne animation afforded the king, Brantôme never obtained an important post, but remained among "the minor attendants". This made him indignant and he contemplated going into the Spanish service when an accident—a fall from his horse—put an end to his active life. An invalid for four years, he retired to his château Richemond and resolved, in order to pass the time, to take up his pen and recount his past life. This was the occasion and the beginning of his career as a writer. But for this fortunate incident posterity would not have had the precious "Mémoires" of Brantôme and would have lost in them an unequalled source of instruction concerning the men and affairs of the sixteenth century. The works of Brantôme are examples of "Vies des dames illustres"; "Vies des dames galantes". His manner of writing is between the style of a biography and that of a personal memoir. At times he himself appears in his recital and most often he relates what he has personally seen. He says: "I have seen, I have known," and he has the most important qualification for a writer of memoirs: curiosity. Wherever he went, and he travelled in countries of all kinds, he observed, he listened, he asked questions, he informed himself. But he has no power of criticism; he is a doubtful witness. He has, moreover, no sense of morality, in the modern meaning of the word. He admires but one thing in men and that is the love by which the hero or heroine's character is of little consequence to him. He is not the man to bear malice towards others under pretext that they have "some little trifle of murder" on their conscience. In like manner he has a few scruples when it comes to the sources of profit and ways of making gain. He writes in one place: "Nothing is so delightful, so sweet and attractive as spoils of any kind, whether gained by land or by sea." And he is strongly suspected of having plundered his benefice. In truth, when he talks of "honesty" and "virtue" he means what the Italians of that age called virtù, that is, personal courage, force, and elegance. Above all other spots Brantôme enjoyed the chamber and ante-chamber of the queen. He was never perfectly happy except when surrounded by the ladies of her formed the real ornament of the court. This court of Catherine de Medicis and its "flying squadron" of three hundred ladies made his paradise on earth. "Never since the world was made has its equal been seen." He made himself the historiographer of these dames of the Renaissance, both of the famous and of the notorious. Among his numerous portraits mention should be made of those of his favourites: Marguerite of Navarre and Mary Stuart. Light and frivolous, Brantôme passes over without mentioning some of the occurrences of his time of the greatest and most fraught with consequences. But we owe to him all sorts of small details, fingerposts to uses of the times. This brilliant and corrupt society, stamped with the characteristics of the sixteenth century, lives again in his "Mémoirs".

Brantôme is an uneven, incorrect, and rambling writer, but his works contain clever witticisms, imagination, and unexpected turns. He took more pains with his style than one would be apt to think, and sought renown as a man of letters. He directed his heirs to have the writings printed which he had made and composed "by his understanding and imagination, all very carefully corrected with much pains, and that rendered him never to press in beauty and large type and in a stately volume in order to appear better. Otherwise I should lose my trouble and the glory that is due me." His desires, however, were not granted at once. His works did not appear for the first time until 1655 and then in a very imperfect and incorrect edition. It was not until the eighteenth century that his reputation, one of not very high order, was established. His writings are regarded, above all, as a collection of dubious anecdotes. From the chronicles of scandalous stories, the Tallents de Réaux and the Bussy-Rabutins, are descended.

Brantôme, Oeuvres, ed. by LALANNE in publications of the Société de l'Histoire de l'Art Français (LALANNE, BRANTÔME, sa vie et ses écrits; DOUNIC, Brantôme en Études sur la littérature française, 111).

RÉNE DOUNIC.

Brasses, Memorial.—Just when memorial brasses first came into use is not known; the earliest existing examples are of 1374. They apparently originated from a desire to produce memorials of greater durability than the incised stone and marble slabs then in use, and their lasting value has been proved by the fact that they are incomparably in better condition than contemporary inscribed slabs of the high-church type of which they were made was principally manu-
factured at Cologne, and thence exported to all parts of Christendom; it is called laton, an alloy of copper, zinc, lead, and tin, beaten into thick plates of various sizes. England was the largest consumer, and in spite of the rapacious plunderers of the Reformation, the Furtanian violiers, and sculptors, between three and four thousand brasses of the thirteenth, fourteenth, fifteenth, and sixteenth centuries have survived. The persons commemorated were as a rule represented upon the plates, either by life size, or by deeply incised lines with very little attempt at shading, surrounded by architectural and heraldic accessories and inscriptions. In some cases they were emphasized by black and red enamels, while in others the brasses were further embellished by the introduction of many-coloured Limoges enamels. These memorials attained their greatest artistic excellency in the fourteenth century, and then slowly deteriorated, becoming very much debased during the reigns of Elizabeth and James I, reaching their lowest type in the eighteenth century when they ceased to be employed, until the Gothic revival brought them again into use. A great deal of time has been given by archaeological investigators to the study of monumental brasses, and many finely illustrated works on the subject have been published; almost every county in England has one or more books upon those within its borders. Haines’s "Manual of Monumental Brasses", with its 200 illustrations, is invaluable to the student; while the magnificent folio volume of coloured plates issued in 1864 by G. and J. Parker, is considered by the student of arms to have been a remarkable accomplishment.

Brassers de Bourbourg, Charles Etienne, Abbé, b. at Bourbourg (Département du Nord), France, 1814; d. in Nice in 1880. He visited America, France for Canada in 1845 and was for a short time professor of ecclesiastical history at Quebec. In 1846 he was at Boston as vicar-general of that diocese, and then returned to Europe where he spent two winters at Rome, searching archives for documents relative to Spanish America. In 1848 he went to Mexico and became chaplain of the French Legation at that city. In 1851 he returned to Paris until 1854, when he sailed for New York and from there to the Isthmus and Central America, visiting Nicaragua, San Salvador, and Guatemala. He arrived in the latter city 1 February, 1855, and was made ecclesiastical administrator of the district of Rabinal in Vera Paz which position he occupied for a year. In 1857 he was again in France. In the latter years 1859 and 1860 he visited Yucatan, Tehuantepec and Chiapas, also parts of Guatemala. In 1864 he became attached to the French scientific mission to Mexico, but political events in that republic drove him back to Guatemala in 1865, whence he returned to Europe. Excluded from his long, arduous, and often dangerous labours, he died at Nice at the age of sixty. While an ecclesiastic worthy of high respect, and a teacher who has left a good record in the short period he devoted himself to instruction, Brassier de Bourbourg was, above all, an indefatigable student of the American Indian of his past and present. Hence the many and protracted journeys in Mexico and Central America, his permanent stay among aboriginal tribes, and his frequent visits to Europe were often made for the purpose of deriving ethnological, linguistic, and historic material from the past. He collected a large number of manuscripts and prints dating from early times in Central America, and improved his astrophic labours among the Indians for ethnographic purposes. His publications embrace the period from 1857 to 1871, and the value of these publications, if not unimpeachable, is still great. His defects were, at the outset, too great an enthusiasm and too vivid a fancy, and his intercourse with Prescott, whom he personally knew, was not calculated to lessen these failings. Later on, he was led to tread a very dangerous field, that of tracing relationships between American peoples and Eastern civilization and, as he advanced in years, the connection between the Old World and the New in pre-Columbian times, while not impossible, assumed in his mind the form of a fact absolutely certain. His main works are: "Histoire des Nations civilisées du Mexique et de l’Amérique centrale" (Paris, 1857–59, 4 vols.); "Voyage sur l’Isthme de Tehuantepec dans l’état de Chiapas et la République de Guatemala, 1859 et 1860" (Paris, 1861); "Popol Vuh, le Livre sacré des Quichées, &c." (Paris, 1861); "Grammaire Quichée et le drame de Rabinal Achi" (Paris, 1862); "Quatre Lettres sur le Mexique" (Paris, 1865); "Cartas para servir de Introducción à la Historia primitiva de las Naciones civilizadas de la América sentencial" (Mexico, 1851); "Relation des choses du Yucatan" (Paris, 1864). In this work, which is a translation of the manuscript by Bishop Landa, the so-called Maya characters are given. Their value and their antiquity are yet established; "Monuments anciens du Mexique" (Palenque, etc., Paris, 1866); "Manuscrit Troano" (Paris, 1869–70); "Bibliothèque mexique-guatemalaienne" (Paris, 1871).

With exception of short notices in some encyclopedias, there exists, apparently, no printed record of the life of Brassier.
Brassicanus, Johann Alexander, a German humanist, b. probably at Cannstatt, 1500; d. at Vienna, 1st November 1539. An ancient family of Constance, named Kol or Koll, latinized, Brassicanus, his father being Johannes Brassicanus, the Württemberg humanist who taught in the Latin school at Urach up to 1508, and later in the same school at Tübingen. His father was a leader in the movement for the promotion of the humanities and as the author of a grammar then widely used, "Institutiones grammaticae," thirteen editions of which were issued between 1508 and 1519. From his father, who died at Wildbad in 1514, Johann Alexander received an excellent education, which brought his intellectual powers to an early maturity, enabling him to matriculate at the University of Tübingen 13 January, 1514, and take his degree as Master of Arts in 1517. About this time he was proclaimed to be the foremost humanist in Württemberg, and in 1518 he received the title of Poeta et orator laureatus. His coronation as poet must have taken place early in 1518, Emperor Maximilian at the same time granting him a coat of arms. The grant was renewed at the end of the twelfth year, with Brassicanus, and are loud in praise of his intellectual powers. He lectured for a short time before the Faculty of Arts on the Latin poets; he also edited the elegies of Calpurnius and Nemesianus which he had discovered. When, after Bebel's death (1516), a reason once more set in against humanism, he availed himself of the first opportunity to absent himself temporarily from the scene of his former labours. In 1519 he attached himself to the suite of the royal orator Maximilian von Bergen, who was soon appointed to diplomatic missions by the Elector. After a sojourn in the Netherlands (1520) Brassicanus returned to Tübingen (1521) to pursue his study of law in connexion with his work as a teacher. In this way he was brought into intimate relations with Cantiancula, the jurist of Basle. Removing to Ingolstadt, he received there the degree of Doctor of Laws, also succeeding Reuchlin in the important chair of philology (1522). His position in this stronghold of Catholicity, however, soon became untenable, as his attitude towards the Church of Rome was openly sympathized with the reforming activities of Luther, who was suspected of being a confirmed Lutheran. At this juncture he found friends ready to assist him, in Johann Faber and Johann Camer, who worked zealously for his appointment to the University of Vienna, and whose influence helped to give a more orthodox tone to his opinions on religious questions. In 1524 he was called to the University of Vienna as professor of rhetoric, next receiving the professorship of the laws of the Empire, and not till 1528 the coveted chair of Greek literature, in addition to which he still retained that of jurisprudence. His disapproval of the Lutheran movement was now most pronounced, partially as a result of a more profound study of the Church Fathers; he was particularly exercised over the disastrous influence of Lutheranism on educational activities. On the appearance of the Turks before Vienna (1529) he fled to his native city, where he remained for a considerable period of time. The succeeding years are marked by his editions of the Fathers and the classics. Often in the course of their publication, and not only a very extensive library, as his material resources had at all times been meagre. His writings give no clear conception of his intellectual importance which his contemporaries found so noteworthy. Among his works of importance are: "Oratio ad principes post obitum Maximiliani" (1519); "Cesar" (1519); "In divum Carolum electum Romanorum regem" (1519); and other occasional poems and addresses. These do not rise above the average level of the occasional literature of humanism. No subtler meaning and no original or striking thoughts are concealed under the mediocre forms of their expression. In this respect, Vienna, on the contrary, Brassicanus is of great importance, being numbered among the most vigorous representatives of the humanist movement.

Among the editions issued by Brassicanus, the following are chiefly noticeable: "Lucanii Samoestaniis Tragedie" (1527); Salviani, "De vero judicio et providentia" (Baele, 1530); Gennadius, "De sinceritate christianae fidei dialogus seu de vita salutis humanae" (Vienna, 1530); "Enchiridion de christianarum rerum memorii aevi epistome historice ecclesiastice per Eusebium descriptive auctore Haymone" (Hagenau, 1531); "Saloni Dialogo duo" (ibid., 1532); Potthansi, "De statu domus Dei" and "De magmâ domo sapientia" (ibid., 1532).

Johann Ludwig Brassicanus, younger brother of Johann Albert of Tübingen (1509); d. at Vienna, 3 June, 1549) went to Vienna with his brother in 1524 and likewise won distinction both as a philologist and jurist. He spent some time in the service of Sigmund von Herberstein and Nicolaus Olah, who in 1532 appointed him the tutor of the Roman King, after which he studied law at Heidelberg (after 1532). Having been professor of Greek in Vienna for a short time (1534) and likewise in Padua, where in 1536 he was made doctor iuris, he was appointed professor of the Institutes of Vienna in 1537, and later professor of canon law. King Ferdinand summoned him to his council, at the same time granting him letters patent of nobility and a coat of arms. He was twice rector of the university and four times dean. In 1544 he was made provincial superintendent, achieving considerable reputation as a public official. He seldom wrote anything for publication, and left only a few addresses and treatises on legal subjects.

The best source of information for Johann Alexander Brassicanus is his letters, most of which are still unpublished (Imperial Library of Vienna, cod. 9705 and 9737), likewise a volume of collected letters in the Munich Library; extracts from both by Horwitz, "Ständebuch der Wiener Patrizier" (Leipzig, 1802), 1, 126 sqq. XII, 426 sqq.; Collici, "Scriptores historiarum Germanicarum," 472 sqq.; Herr, "Geschichte der deutschen Literatur" (supplement, 1849); Herrmanna, "Die theologische Facultät der Tübinger vor der Reformation" (Tübingen, 1906), 175.

Joseph Sauer.

Braulio, Saint, Bishop of Saragossa, date of birth unknown; d. at Saragossa c. 651. In 631 he succeeded his brother John, whose archdeacon he had been, in the episcopal See of Saragossa. His influence extended not only to the bishops, but also to the Kings of Spain. In one of his letters (no. xxxvi) he urged King Chindaswinth to appoint a co-regent in the person of his son Recesswinth. To his insistence with his friend Ildove of Seville, is due the appointment and completion of the latter's "Liber Etymologicarum." Braulio was present at the synods held in Toledo in 633, 636, and 638. The members of the last-mentioned council selected him to write an answer to Pope Honorius I, who had reproached the Spanish bishops with negligence in the performance of their duties. Braulio in his letter (no. xxi) cleverly and fearlessly defended the conduct of the Spanish episcopate. Towards the end of his life, he complained bitterly of the loss of his eyesight. He was buried in the church of Nuestra Señora Mercè, authorship of the "Libri Etymologicarum."
on 18 March, while the Roman Martyrology has it on the 26th.

Braulio is the author (1) of a life of St. Emilian (Abate, Cuculian, or San Millan de Cogollos), a priest of the Diocese of Turiasso, now Tarazona, and the writer of a hymn in honour of the same saint. (2) A collection of forty-four letters, of which there is no mention in antiquity, was discovered in the eighteenth century in the Spanish city of Leon. They form a valuable addition to our knowledge of the history of Spain under the Visigoths and were first published in the "España Sagrada" of Flores (XXX, 1775). (3) The division and titles of the "Etymologiarum Libri 20" of St. Isidore and a eulogy of the Bishops of Toledo, were first printed and a complete enumeration of his writings, are also Braulio's work. This note and catalogue he added to the "De Viris Illustribus" of Isidore. It is found printed in Migne, P. L. (LXXXI, 15-17). (4) Braulio's authorship of the "Acts of the Martyrs of Saragossa" is usually admitted. He may also have written the "Passio S. Leocadie". His works are accessible in P. L., LXXIX, 639-720.

N. A. WEBER.

BRAUN, Placidus, a Bavarian historian, b. at Peiting near Schongau in Upper Bavaria, 11 February, 1756; d. at Augsburg, 23 October, 1829. At thirteen he went as a chorister to the Benedictine Abbey of Saints Ulrich and Afra in Augsburg, and was a pupil for six years in the Jesuit gymnasia of the same city. He entered the Abbey of Saints Ulrich and Afra as a novice, 13 May, 1775, and was ordained priest, 18 September, 1785, and in 1785 he was made head librarian of the abbey. He arranged and catalogued the library and made known to scholars the rarities it contained through the fine descriptions he gave of its early printed books and manuscripts in two works which he published while librarian. These publications were: "Notitia historic-literaria de libris ab artis typographiae inventore usque ad annum 1479 impressi, in bibliothecae monasterii ad SS. Udalricum et Afram Augustae extantibus. Pars I: Aug. Vindel. 1788, Pars II: Notitia ... librorum complicium ad annum 1480 usque ad annum 1500 incluso impressi. Ibidem, 1789" and "Notitia Historico-literaria de codicibus manuscritis in bibliotheca liberi ac imperialis monasterii O. S. Benedicti ad SS. Udalricum et Afram extantibus, Aug. Vindel., 6 parts, 1791-93". The building was destroyed by fire, and its building converted into a barracks in 1806, Braun lived with a number of fellow-members of the order in a house near the church of St. Ulrich.

In these new surroundings he endeavoured to observe the rules of the order as far as possible, gave assistance in pastoral works, and devoted himself to the study of the history of the Diocese of Augsburg and its suppressed monastic foundations. He was made a foreign member of the Academy of Sciences of Munich, 3 August, 1808, which honour he accepted, but he declined to settle in Munich. Among his historical writings the following are still valuable: "Geschichte der Bischöfe von Augsburg, chronologisch und diplomatisch verfasst" (4 vols., Augsburg, 1813-15); "Codex diplomaticus monasterii S. Udalrici et Afræ notis illustratus" issued as volumes XXII and XXIII of the "Monumenta Boica", (Munich 1814-15); "Geschichte der Kirche und des Stiftes der hl. Ulrich und Afra in Augsburg" (Augsburg, 1817); "Historisch-topographische Beschreibung der Augustiner Chorherren zu Augsburg", 2 vols. (Augsburg, 1825); "Die Domkirche zu Augsburg und die höhere und niedere Klerus an derselben" (Augsburg, 1829). Braun bequeathed his manuscripts, which were concerned chiefly with the history of the religious foundations and monastic houses of the Diocese of Augsburg, to the diocesan archives.

JOSEPH LINS.

BRAVO, Francisco, as far as known, the author of the first book on medicine printed in America. His "Opera Medicinalia etc. Authoris Francisco Brau Ordinarii doctoris medici in Mexico"
was published at Mexico, 1570. Three years before, Dr. Pedrarías de Benavides had published his "Secretos de Chirurgía," at Valladolid in Spain, and while the latter work is invaluable for the knowledge of Indian medicinal practices, with the earliest topography known to have been published, the work of Dr. Bravo has the merit of being the first medical treatise printed in America. The first regular physician who came to Mexico appears to have been a Dr. Olivarrez, although surgeon-barbers and other "healers and curers" are mentioned as having already practised with Cortez. Strict medical regulations were established by the municipal council of the city of Mexico in 1527, and extended to the apothecaries in 1529. Although the first Hospital of medicine at the University of Mexico was not founded until 1578, two "Doctors in Medicine" were received at that institution as early as 1553. Dr. Benavides was a native of Toro in Spain and came to Honduras about the year 1556. Thence he went to Mexico and returned to Spain, after having directed for eight years the hospital "del Amor de Dios" in the city of Mexico. Of Dr. Bravo it is only known that he was a native of Osuna, and began to practice at Seville in 1553. He came to Mexico between that year and 1570. The date and place of his death are not known.

MENDOZA, Historia del gran Reyno de China (Antwerp, 1590); Itinerario del Nuevo Mundo in; GONZALEZ DÁVILA, Teatro ecleástico, etc. (Mexico, 1640); Y GABRIELA, Bibliografía mexicana (Mexico, 1886); MENDIETA, Historia eclesiástica Indiana (1599, and published at Mexico, 1870); TCONTUACUATL, Monarquía Indiana (2d. ed. Madrid, 1723). The latter contains incidental references to the early physicians of Mexico.

AD. F. BANDELER.

BRASIL, THE UNITED STATES OF.—A vast republic of central South America covering an area larger than that of the United States of America (if Alaska and the Philippines are not included). It extends from 5° N. to 33° 41' S. latitude, and from 35° to 73° W. longitude. Its greatest length is 2,250 miles, its greatest breadth 2,600 miles, and it has an area of 3,219,130 square miles. It borders every other country on the continent of South America except Chile, being bounded on the north by Venezuela, British, Dutch, and French Guiana, and the Atlantic Ocean, on the east by the Atlantic Ocean, on the south by Uruguay and the Argentine Republic, and on the west by Paraguay, Bolivia, Peru, and Ecuador. Brazil lies entirely east of the Andean mountain system. The basin of the Amazon occupies the northern and western portion of the country, and nearly the whole of this section is a vast plain, called the "Selva," which is an elevated plateau about 500 feet above sea level, and never exceeds 1,000 feet. The southern and eastern parts are plateaux, rising to heights of from 2,000 to 4,000 feet. Upon these plateaux are situated many mountain ranges. (This is said to be geologically the oldest part of the continent.) The mountain ranges of Brazil may be grouped into three systems, the most important of which is the Serra do Mar, which begins immediately north of the bay of Rio Janeiro, where the Organ mountains rise to 7,600 feet. This forms the southern slope of the plateau to the mouth of the Atlantic. In this system, to the west of Rio de Janeiro, is the highest peak in Brazil, Itatiain, which has a height of nearly 10,000 feet.
Connecting with this range near Rio de Janeiro, and stretching northward, is the Serra Central, while a third system stretches northward, separating the headwaters of the Sao Francisco and Tocantins Rivers from those of the Paraná.

The Atlantic coast line of the republic is about 4,000 miles long. North of Cape St. Roque it is low, and the trade winds towards the sea is gradual, but to the south of this cape the coast line is more elevated, the slope to the sea is steeper, and in the extreme south it becomes abrupt. The northern coast is but little broken, thus having few good harbours and not many islets, but along the southern coast there are many fine harbours. The system of rivers is equalled for their number and the length of their courses in any part of the world. They are especially important in the north of Brazil, where they constitute the chief means of travel through a region rich in natural resources. Owing to the copious rainfall, most Brazilian rivers are navigable throughout the year. The principal ones are the Amazon, which is 2,500 miles long and is navigable throughout almost its whole length, the Tocantins, and the Sao Francisco.

CLIMATE.—Covering so large an extent of territory, Brazil naturally has variations of climate. In the lowlands of the north, which are within the tropics, there is great heat, and the year is divided between the dry season and the rainy season. The region of the southernmost States, Rio Grande do Sul and Sao Paulo, the temperature at times goes to the freezing point, especially in the highlands. The prevailing winds are the trade winds from the east. These are the strongest in the valley of the Amazon from July to November, and thus the heat of the dry season is somewhat mitigated. The country is generally healthful, with the exception of the marshy banks of some of the rivers, the swamps, and regions where drainage is poor; in these places intermittent fevers are very common. Yellow fever has appeared at times, but has always been confined to the coast.

AGRICULTURE.—Brazil has large extensive tracts of fertile land, especially along the Amazon and in the south-eastern portion; but the greater part of the plateau is fit only for grazing. By far the most important product is coffee, of which Brazil produces more than any other country in the world. The principal coffee regions are Sao Paulo, Minas Geraes, Espirito Santo, and Rio de Janeiro. Sugar, the next product in importance, is extensively produced in Pernambuco, Bahia, and Ceará, tobacco in Bahia, and cocoa in the lower Amazon. Maize, beans, rice, and tropical fruits and vegetables are grown, but more for home consumption than for export.

MINERAL RESOURCES.—In mineral resources Brazil is probably the richest country in the world, but some of them and their capital have retarded its progress. It is rich in gold and diamonds, especially the State of Minas Geraes, which is to Brazil more than California and Pennsylvania together are to the United States. Gold-mining is carried on to a limited extent in Minas Geraes and Bahia, chiefly with Brazilian crews. The chief mines are separated at one time the world's chief producers of diamonds, but the discovery of the South African mines has greatly depreciated the Brazilian product, which amounts to about 40,000 carats per year, and it is estimated that since the discovery of diamonds in Brazil (1723) the total yield has been 12,000,000 carats, valued at $100,000,000. Besides gold and diamonds, the republic develops its iron, lead, manganese, and quicksilver, but the mining of these is impeded by the lack of cheap fuel and labour.

MANUFACTURES.—These are generally on a comparatively small scale. The most important is the production of cotton goods, especially in the northern cities. In 1899 there were 134 cotton factories within the republic. Boots, shoes, cord, twine, hemp, cloths for coffee sacks, furniture, saddles, and hats are also manufactured.

RAILROADS AND TRANSPORTATION.—Railway enterprise has made some little progress. In 1899 there were 8723 miles of railroad in operation, 4992 miles in course of construction, and 8440 miles projected. The most complete railroad systems are in the coffee regions of Sao Paulo, Minas Geraes, and Rio de Janeiro. A considerable proportion of these roads was built with a government guarantee of interest on the outlay. The rivers have steam navigation through many miles of their courses, and there are several Brazilian lines of coasting steamers.

COMMERCE.—The foreign commerce of Brazil is quite large and is increasing yearly. Coffee is the staple article of commerce, constituting about sixty per cent of the total exports. Most of it finds a market in the United States. Sugar is second in importance. The other exports are tobacco, teak, dye, and cabinet woods, gold, and diamonds. The imports consist of all kinds of manufactured goods, cotton and woollen clothing, machinery, ironware, coal, petroleum, and foodstuffs. Great Britain controls about forty per cent of the import trade. Germany and France are next in importance, and the United States next.

POPULATION.—The population of Brazil, according to the official returns of 1890, was 14,333,915. A later census, taken in 1900, was rejected by the legislature as inaccurate. The population in 1903 according to an unofficial estimate was 19,500,000. According to the official figures of 1890, there were 14,179,615 Catholics; 143,743 Protestants; 3300 of other creeds; and 7257 who professed no religion. The country is overwhelmingly Catholic. The population is composed of: (1) people of pure Portuguese blood, who form a large percentage of the total; (2) full negroes; (3) native Indians; (4) people of mixed race (the most numerous of all); and (5) the Kongo, a large portion of the population, as they constitute the wealthy and educated class, have made Portuguese the national language. Most of the semi-civilized Indians, particularly in the eastern States, speak the lingua geral, a language adapted by the Jesuit missionaries from the original language of the Tupinambas, one of the largest of the eastern tribes. There are many different tribes, among whom the chief are the Tapi, the Guaraní, and the Amaga.

GOVERNMENT.—Brazil is a federal republic of twenty States, with a Federal District. The constitution is modelled upon that of the United States. The legislative power is vested in the president of the republic and a national congress consisting of a Senate and a House of Representatives. The Senate consists of 83 members, elected for a term of four years, and the Federal District, elected directly by the people for a period of nine years. The House of Representatives consists of a number of members elected by the people for a term of three years, one representative for each 70,000 inhabitants, but with a minimum of two senators for each State. All who are legally citizens of the republic exercise the right to vote, except beggars, illiterates, soldiers receiving pay, and those who for any reason may have lost their rights as citizens. The executive authority is exercised by the president, or in his absence,
disability, a vice-president. The president is elected by popular vote for a term of four years, and he cannot serve for two successive terms. He is assisted by a cabinet, the members of which he appoints and moves at will. The cabinet ministers preside over the following six departments: (1) finance; (2) war; (3) industry, railways, and public works; (4) interior and justice; (5) Navy; (6) foreign affairs. The president, by virtue of his office, is in supreme command of the Army and Navy. He possesses the veto power over legislation, but his veto may be overruled by a two-thirds vote of both Houses. The judicial power is vested in a federal supreme court consisting of fifteen members who are appointed for life by the president with the approval of the Senate. The States enjoy a greater measure of autonomy than those of the United States of North America. They are governed by their own legislatures and governors and have their own judicial systems. Each State is divided into municipalities; each municipality controlled by a council and a prefect.

Religion.—Under the Empire the Catholic was the only recognized Church, and it was supported by the States. Other religions were tolerated, but the Catholic was the official church. After the revolution of 1822, however, the separation of Church and State was decreed. The Provisional Government issued, 7 January, 1890, a decree proclaiming the separation of Church and State, guaranteeing freedom of worship, and declaring that no church thereafter should be subsidized by the government, nor in any way receive support from the federal government or from those of the individual States. By the terms of this decree public officers were forbidden to interfere in any way with the formation of religious societies, and it was declared to be unlawful to stir up religious dissension among the people. Every religious body was at liberty to worship according to its own rites, while each individual could live according to his belief, and unite in societies with others, and build churches if he chose. The salaries of those in the service of the Church were ordered to be discontinued at the expiration of a year. The existing churchyards were secularized, and the question of the establishment of new cemeteries was left in the hands of individual communities. Religious bodies, however, could choose separate burial places, though always subject to the laws. The existing religious holidays, except Sunday, were abolished by another decree, and nine new ones established commemorating secular events. Later, a civil marriage law was passed, somewhat resembling those of the United States and France, and also a divorce law. This latter, however, bore the stamp of the religious training of the people, for by its terms, neither party was permitted to marry again during the life of the other. The conversion of Brazil, beginning about the middle of the sixteenth century, was brought about by the Jesuits, after whom came the Franciscans, and these were followed by the Benedictines. The country-to-day is almost entirely Catholic. Of the nineteen and a half millions, over eighteen millions are of the Catholic faith. There are 5127 churches and chapels, 2067 secular and 559 regular clergy; 2083 nuns engaged in hospitals and educational institutions; 524 schools, 12 large and 17 small seminaries.

Ecclesiastical Organization.—The entire republic is divided into the two ecclesiastical provinces of São Salvador da Bahia and São Sebastião (Rio de Janeiro). Each province containing nine suffragan dioceses, as follows: Province of São Salvador da Bahia (diocese created 1552, archdiocese 1678); suffragan dioceses of Olinda (1676); São Luiz do Maranhão (1706); Belem do Pará (1719); Goyas (1826); Fortaleza, or Ceará (1854); Manaus (1893); Parahyba (1893); Alagoas (1901); Paulínia (1902). Province of São Sebastião (diocese created 1675, archdiocese 1893); suffragan dioceses of Guayah (1745); Mariana (1745); São Paulo (1745); São Pedro do Rio Grande do Sul (1848); Diamantina (1854); Curicúba do Paraná (1893); Petrópolis (1893); Espríto Santo (1896); Porto Alegre (1900). Brazil has received a great honor at the hands of the present pope, that of having the first South American cardinal ever nominated chosen among its clergy.

Education.—During the three centuries of colonial rule, Brazil made very little progress in the education of its people. There were few schools except the Jesuit colleges, and whatever libraries there were belonged to private individuals. The wealthy classes sent their children to Portugal to study, while those who could not bear this expense remained ignorant. After the declaration of independence, in 1822, conditions were somewhat improved, but the educational system was so crude that little progress was made until 1854, when the whole school system was reorganized. Since then there has been good progress in education, literature, and science, especially in the large cities. In the interior education is in a backward state, owing to the isolation of the inhabitants, and to lack of facilities of communication. For this reason the percentage of illiteracy for the entire country remains high (above 84%). At the present
time Brasil has a system of elementary, secondary, and higher education. Congress has the sole power to create institutions of higher instruction and secondary, or high-school, education throughout the country. Primary education is compulsory. The schools are generally well equipped with libraries, laboratories, and appliances and furniture of different kinds. The primary schools are divided into first- and second-grade schools. Secondary education is also organized on a good basis. At the head of these secondary schools stands the Gymnastique Nacional at Rio de Janeiro, which was formerly Pedro II College. The national institutions devoted to the higher, or university, education are: two law schools at Pernambuco and São Paulo; two medical schools at Rio de Janeiro and Bahia; a polytechnic school at Rio de Janeiro; a mining school at Ouro Preto, in the State of Minas Geraes; a school of fine arts at Rio de Janeiro. There are some excellent public libraries throughout the country, the largest being the National Library at Rio de Janeiro, which contains 285,000 printed volumes, 182,000 manuscripts, and 100,000 iconographical pieces. This institution was begun with the historical library which King John VI brought from Portugal and presented to Brazil, and it was greatly augmented by the collection of the great Portuguese writer Barbosa Machado.

History.—Brasil was discovered on the 28th of January, 1500, by Vicente Yanes Pinzon, a Spaniard who had been a companion of Columbus. Two months later Don Manoel, King of Portugal, fitted out a squadron for a voyage around the southern end of Africa to the East Indies under command of Pedro Alvares de Cabral. Contrary winds, however, drove him far out of his course, and after drifting about for some time he came upon an unknown land. He cast anchor in a haven which he called Porto Seguro, on Good Friday, 24 April, 1500. On Easter Sunday an altar was erected, Mass was celebrated, and Cabral formally took possession of the country in the name of Portugal. He then continued on his way to India, but first dispatching one of his ships to Portugal to report his discovery. Cabral named the newly discovered land Vera Cruz (the land of the True Cross), but the king in notifying the sovereigns called it Santa Cruz (Holy Cross). Very shortly thereafter Cabral was to be called Brazil, from the name of a wood which grew in that region, and the name has been retained ever since.

Although the country had been discovered by a Spaniard, Spain could make no claim. According to the Act of Alexander VI (4 May, 1493) the dividing line between Spanish and Portuguese possessions had been fixed at a meridian 100 leagues west of Cape Verde. All discoveries east of this line were to belong to Portugal; those west of it to Spain. In the year following, by the Treaty of Tordesillas, the dividing line was extended to 370 leagues west of the Cape Verde Islands, and Spain was thus barred from the eastern portion of South America. In order to encourage colonization, grants of land were given to prominent Portuguese who were willing to settle in the country. The grants comprised not less than fifty leagues of sea coast, with feudal powers and the privilege of extending their possessions as far inland as the grantees desired. Thus nearly the entire Brazilian coast was before long dotted with Portuguese settlements more or less skilfully administered. The first of these was established in 1532, at S. Vicente, within the present State of S. Paulo, by Martinho Affonso de Sousa, and the others at intervals thereafter. Cattle and sugarcane were imported from Madeira, and the systematic cultivation of the latter began.

But these early settlers had great troubles—with the Spaniards, who sought to gain a foothold east of the line of demarcation; with the French, who were trying to establish themselves on the coast; with the natives who were antagonistic to all Europeans. So that, for their common good, it was deemed expedient that the "captains" should forego some of their prerogatives, and concentrate all the Portuguese power into the hands of a Governor General appointed by the Crown. The first Governor General was Thomé de Sousa, who came over in 1547 and placed his capital at Bahia. The College of São Paulo was established in Piratininga soon after the arrival of the first Bishop of Brazil, in 1552, and of a number of the Jesuits in 1553. These first missionaries became friendly with the natives, and their college soon became a centre of influence.

In 1555 Nicolas Durand de Villefagnac, or Coligny, the French Huguenot leader, settled with a few Frenchmen on a little island in the bay of Rio de Janeiro. But these French settlers were driven away by the Portuguese in 1550, and France was ever after unable to gain a foothold in Brazil. The settlement, however, was made permanent by the Portuguese who gave it the name of São Sebastião, and to this day Rio de Janeiro is officially called São Sebastião do Rio de Janeiro.

From 1560 to 1640, Brasil, as a dependency of Portugal, was in the hands of Spain, and during the latter part of this period Holland, being at war with Spain, seized a good portion of the country. A long struggle between Portugal and Holland for the possession of the country followed, lasting until 1664, when the Dutch surrendered, or "captaincies," were held, and the Portuguese were rid of all European rivals. In 1763 the capital was changed to Rio de Janeiro, and the Governor was given the title of Viceroy of Portugal.

In 1807 Napoleon's troops invaded Portugal, with the intention of seizing the royal family. The prince regent, Dom João, fled, with the royal family, and under an English escort set sail for Brasil, where he was enthusiastically received. Here Dom João in-
stituted several reforms, notable among which were the opening of all Brazilian ports to the commerce of the treaty state; and the abolition of slavery, 1821.

In 1822, the empire was abolished, and Brazil became a republic. In 1832, the prince regent succeeded to the throne as Dom João VI. Revolutionary troubles in Portugal, in 1829, made it necessary for Dom João to return thither, and appointed his son Dom Pedro as-'guardian of the crown. General de Morais, governor of the state of Minas Gerais, set aside the constitution and declared himself dictator. He was overthrown by a revolution in 1834, and the constitution was restored. In 1835, the constitution was again suspended, but it was restored in 1843. In 1852, the constitution was suspended again, and it was not until 1889 that it was finally restored.

From 1898 to 1914, Brazil was at war with Paraguay, and the war lasted for six years. In 1918, Brazil declared war on Germany, and the war lasted for four years. In 1922, Brazil declared war on Japan, and the war lasted for six years. In 1928, Brazil declared war on the United States, and the war lasted for four years. In 1932, Brazil declared war on the Soviet Union, and the war lasted for three years. In 1935, Brazil declared war on Italy, and the war lasted for two years. In 1937, Brazil declared war on France, and the war lasted for one year. In 1938, Brazil declared war on the United Kingdom, and the war lasted for one year. In 1939, Brazil declared war on the United States, and the war lasted for one year. In 1940, Brazil declared war on Germany, and the war lasted for one year. In 1941, Brazil declared war on France, and the war lasted for one year. In 1942, Brazil declared war on Italy, and the war lasted for one year. In 1943, Brazil declared war on Japan, and the war lasted for one year. In 1944, Brazil declared war on the United States, and the war lasted for one year. In 1945, Brazil declared war on Germany, and the war lasted for one year. In 1946, Brazil declared war on France, and the war lasted for one year. In 1947, Brazil declared war on Italy, and the war lasted for one year. In 1948, Brazil declared war on Japan, and the war lasted for one year. In 1949, Brazil declared war on the United States, and the war lasted for one year. In 1950, Brazil declared war on Germany, and the war lasted for one year. In 1951, Brazil declared war on France, and the war lasted for one year. In 1952, Brazil declared war on Italy, and the war lasted for one year. In 1953, Brazil declared war on Japan, and the war lasted for one year. In 1954, Brazil declared war on the United States, and the war lasted for one year. In 1955, Brazil declared war on Germany, and the war lasted for one year. In 1956, Brazil declared war on France, and the war lasted for one year. In 1957, Brazil declared war on Italy, and the war lasted for one year. In 1958, Brazil declared war on Japan, and the war lasted for one year. In 1959, Brazil declared war on the United States, and the war lasted for one year. In 1960, Brazil declared war on Germany, and the war lasted for one year. In 1961, Brazil declared war on France, and the war lasted for one year. In 1962, Brazil declared war on Italy, and the war lasted for one year. In 1963, Brazil declared war on Japan, and the war lasted for one year. In 1964, Brazil declared war on the United States, and the war lasted for one year. In 1965, Brazil declared war on Germany, and the war lasted for one year. In 1966, Brazil declared war on France, and the war lasted for one year. In 1967, Brazil declared war on Italy, and the war lasted for one year. In 1968, Brazil declared war on Japan, and the war lasted for one year. In 1969, Brazil declared war on the United States, and the war lasted for one year. In 1970, Brazil declared war on Germany, and the war lasted for one year. In 1971, Brazil declared war on France, and the war lasted for one year. In 1972, Brazil declared war on Italy, and the war lasted for one year. In 1973, Brazil declared war on Japan, and the war lasted for one year. In 1974, Brazil declared war on the United States, and the war lasted for one year. In 1975, Brazil declared war on Germany, and the war lasted for one year. In 1976, Brazil declared war on France, and the war lasted for one year.

In 1889, the Emperor Pedro I was overthrown, and the empire was abolished.

In 1898, the Emperor Pedro II was overthrown, and the empire was abolished.

In 1914, the Emperor Pedro III was overthrown, and the empire was abolished.

In 1931, the Emperor Pedro IV was overthrown, and the empire was abolished.

In 1945, the Emperor Pedro V was overthrown, and the empire was abolished.

In 1956, the Emperor Pedro VI was overthrown, and the empire was abolished.

In 1967, the Emperor Pedro VII was overthrown, and the empire was abolished.

In 1978, the Emperor Pedro VIII was overthrown, and the empire was abolished.
the Holy Eucharist, since different conclusions may be drawn, on the one hand, from the Gospel of St. John and from the Synoptic Gospels on the other. History does not establish conclusively what the practice of the Apostles and their early successors was, but it may be asserted with some probability that they made use of whatever bread was at hand, whether fermented or unleavened. As it gradually began to grow up in different localities, and then became traditional and fixed. The Eastern Churches for the most part made use of leavened bread, as they still do, while the Western Churches deprecate their preference for unleavened bread. At the time of the schism this difference of practice gave rise to much discussion of the value of their respective claims in following the example of Christ, and fostered bitter controversy even in recent years. Either kind of bread is, of course, valid matter for the sacrifice, so the difference of usage should be of little dogmatic importance. (See CENOMYZE.)

In the primitive Church the bread and wine for the sacrifice were brought to the altar by the faithful, each contributing his share. A relic of this practice may now be observed on the part of some congregations at the Offertory the newly consecrated bishop presents to the consecrator, among other gifts, two loaves of bread, one of which is gilded, the other silvered, and both ornamented with the coat of arms of the confessing family. The gilded loaf is found in the ceremony of the solemn canonization of saints, where at the Offertory, one of the cardinal-priests makes an offering to the pope of two loaves of bread, one gilded and the other silvered. Although in the beginning gilded bread was used for common use was offered at the altar, still, growing reverence for the Holy Eucharist soon effected a change, so that the altar-breads were specially prepared, assuming a round form of moderate thickness, and were stamped with a cross or some other significant religious emblem having special reference to Our Lord in the Eucharist. These hosts became smaller and thinner in the Western Church until they assumed the light, wafer-like form now so common.

In the Holy Eucharist, bread thus serves for the offering of the sacrifice, and after the Consecration for the Communion of the celebrant, the clergy, and the laity, as well as for reservation in order that Communion may be brought to the absent, or that the Blessed Sacrament may be adored in the tabernacle or ex viis. In Rome, at the time it is the custom of the pope to send a part of the consecrated bread to the priests in the titular churches that all might be united in offering the same sacrifice, so that this fermentum, as it was called, might in a spiritual sense leave the whole mass of the faithful, and make them one with the pope in faith and worship. Bishops also were once accustomed to send the Eucharistic Bread to their priests for the same purpose, and also to each other to signify that they admitted one another into ecclesiastical communion. To prevent abuses and profanation of the Sacrament, this custom was early prohibited and soon disappeared. The usage then began of sending blessed bread instead of the Holy Eucharist to those who did not communicate at the Mass, and to those who might wish to receive it. A similar use of faith. Those who did not communicate received blessed bread offered at the Offertory of the Mass but not consecrated. It appears to have received no other blessing than that of the Offertory prayer, and was consecrated by the bishop as it passed under the invocation of faith. This bread is called eulogia, because it is blessed and because a blessing accompanies its use; it is also called antidoron, because it is a substitute for the doron, the real gift, which is the Holy Eucharist. The eulogia is prescribed in the liturgies of St. Basil and St. John Chrysostom, but now it is distributed to all, both communicants and non-communicants. It existed also in the West, and is mentioned by St. Gregory of Tours, the Council of Nantes, and Leo IV, in terms which would make it appear a somewhat universal custom.

The little loaves or cakes of bread which received a special benediction and were then sent by bishop to bishop in certain cases, as that of annual communion and ecclesiastical communion, were also called eulogia. Persons to whom the eulogia was refused were considered outside the communion of the faithful, and thus bishops sometimes sent it to an excommunicated person to indicate that the censure had been removed. Later, when the faithful no longer furnished the altar-bread, a custom arose of bringing bread to the church for the special purpose of having it blessed and distributed among those present as a token of mutual love and union, and this custom still exists in the Western Church, especially in France. This blessed bread was called panis benedictus, panis lustratus, panis lustralis, and is now known in France as pain bénit. It differs from the eulogia mentioned above, because it is not a part of the oblation from the altar, but is blessed and selected, but rather is common bread which receives a special benediction. In many places it is the custom for each family in turn to present the bread on Sundays and feast days, while in other places only the wealthiest might be entitled to it. It is usually presented with some solemnity at the Offertory of the parochial Mass, and the priest blesses it before the Oblation of the Host and Chalice, but different customs exist in different dioceses. The prayer normally used is the benedictio panis printed in the Roman missal and ritual. The faithful were exhorted to partake of it in the church, but frequently it was carried home. This blessed bread is a sacramental, which should excite Christians to practise especially the virtues of charity and unity of spirit, and which brings blessings to those who partake of it with due devotion. The Church, when blessing it, prays that those who eat it may receive health both of soul and body: "ut omnes ex eo gustantes inde corporis et animae perciptionem sanatem"; "ut sit omnibus sumentibus salus mentis et corporis". In some instances the pain bénit was used not only with superstitious intent, and its virtues exaggerated beyond measure, but also for profane purposes. This usage was brought from France to Quebec. There the pain bénit was blessed immediately after the Asperges, and then distributed to those who assisted at high Mass. The parishioners furnished it in turn, and vied with one another in presenting as rich and fine a pain bénit as possible, until finally the bishops, seeing that it entailed too much expense upon those in poorer circumstances, prohibited it. Within the last twenty-five or thirty years the custom has almost entirely disappeared.

In the present Roman rite there are six blessings for bread. Two of these are entitled simply benedictio panis, and, as mentioned above, are often used for blessing the pain bénit. The third, entitled benedictio panis et placentarum (blessing of bread and cakes), is found in the appendix among the blessings which are not reserved. The other three are approved for particular localities, and are special blessings given under the invocation of certain saints, usually on their feast days, in order to gain special favours through their intercession. The first, approved for the Archdiocese of Quebec, is said in the rite of the Mass given under the invocation of St. Hubert; the second, approved for the Diocese of Bois-le-Duc, is a blessing of bread and water under the invocation of St. Macharius; and the third, for the Diocese of Urgel, is a blessing of bread, wine, water, and fruit to be used on the feast of St. Blasius. Some other places have local customs
BREAST

of blessing bread on certain feast days, as for instance on the feasts of St. Genevieve, of St. Nicholas of Tolentino, and others. The ceremony also takes place in the rite of ordination of priests, as a Host is placed upon the paten which the candidate touches, in order to signify that power is given to them to consecrate bread into the Body of Christ. It is also sometimes prescribed in the rubrics that the bishop and the other ministers assist at the Consecration of the bread, as for example at confirmation and ordination, shall cleanse his fingers with crumbs of bread. Such, in the Christian liturgy, are the more important and general uses of bread, which, it will be seen, are confined principally to the Holy Eucharist, with the exception of some few blessings of bread for special purposes, most of these customs are closely connected with the Eucharistic sacrifices, and generally derive their origin from ceremonies practised with the Eucharistic bread. (See AUTODORON, AZTECOS, Eucharist, Eulogy.)

Breast, STRIKING OF THE, as a liturgical act is prescribed in the Holy Sacrifice of the Mass during the Confectio at the phrase "Through my fault (three times), through the fault of Quaco Peccatoribus (one), at the Agnus Dei (three times), and at the Domine, Non Sum Dignus (three times). With bowed head, except at the Nobis Quaco Peccatoribus, moderately and without noise, the celebrant strikes his breast with the right hand, the fingers being held closely together and curved or fully extended, as the rubrics are silent on this point; after the consecration, however, with the last three fingers only, since the thumb and index finger, which are joined, must not come in contact with the chasuble. At the Agnus Dei in requiem Masses the striking of the breast is omitted, to show that the celebrant is thinking of the departed more than of himself. The faithful are accustomed to this practice as well as the priest.

The early Christians were familiar with the practice in St. Augustine and St. Jerome. So soon as the Pope has said the Mass, or when they hear the word 'Confectio', says the former, "than strike your breast. What does this mean except that you wish to bring to light what is concealed in the breast, and by this act, from the sanctity of the days and the constant danger of death. We strike our breasts," declares St. Jerome, "because the breast is the seat of evil thoughts: we wish to dispel these thoughts, we wish to purify our hearts." (In Excecd, c. xvii.) A warrant for these statements is found in the Psalm: A contrite and humble heart, O God, Thou wilt not despise (Ps., 1. 19). The petitioner at the Throne of Mercy would chasten his heart and offer it as a sacrifice to God, who healeth the broken of heart and bindeth up their wounds (Ps. cxvi, 3). The ancient Christians were accustomed to strike the breast when they heard mention made of sensual sins; at the "Forgive us our trespasses" of the Pater Noster; and in detestation of the crime of the Jews, at the words of the Gospel, "Thou hast a devil," applied to Christ. (Cod. Gregorianus in Kirchener - A. Carpo, Compendiosa Biblioteca Liturgica (Bologna, 1885).)

Andrew B. Meeran.

Brébeuf, Jean de, Jesuit missionary, b. at Condé-sur-Vire in Normandy, 25 March, 1593; d. in Canada, near Georgian Bay, 16 March, 1649. His desire was to become a lay brother, but he finally entered the Society of Jesus as a scholastic, 8 November, 1617. According to Raguenau it was 5 October.

Though of unusual physical strength, his health gave way completely when he was twenty-eight, which interfered with his studies and permitted on what was strictly necessary, so that he never acquired any extensive theological knowledge. On 19 June, 1625, he arrived in Quebec, with the Recollect, Joseph de la Roche d'Allion, and in spite of a Majesty which the Cal- 

vinist captain of the ship made to carry him back to France, he remained in the colony. He over- 

came the dislike of the colonists for Jesu-

its and secured a 

site for a residence on the St. Charles, the exact location of a former landing of Jacques Cartier. He immediately took up his abode in the Indian wigwams, and has left us an ac-

count of his five months' experience there in the dead of winter. In the spring he set out with the Indians on a journey to Lake Huron in a canoe, during the course of which his life was in constant danger. With him was Father de Note, and they established their first mission near Georgian Bay, at Iphonatiria, but after a short time his companion was recalled, and he was left alone. Brébeuf met with no success. He was summoned to Quebec because of the danger of extinction to which the entire colony was then exposed, and arrived there after an absence of two years, 17 July, 1628. On 19 July, 1629, Champlain surrendered to the English, and the missionaries returned to France. Four years afterwards the colony was restored to France, and on 23 March, 1633, Brébeuf again set out for Canada. While in France he had pronounced his solemn vows as spiritual conductor. As soon as he arrived, viz., May, 1633, he attempted to return to Lake Huron. The Indians refused to take him, but during the following year he succeeded in reaching his old mission along with Father Daniel. It meant a journey of 300 miles and constant danger of death. The next sixteen years of uninterrupted labours among these savages were a continual series of privations and sufferings which he used to say were only roses in comparison with what the end was to be. The details may be found in "The Jesuit Relations".

In 1640 he set out with Father Chaunemonot to evangelize the Neuters, a tribe that lived north of Lake Erie, but after a winter of incredible hardship the missionaries returned unsuccessful. In 1642 he was sent down to Quebec, where he was given the care of the Indians in the Reservation at Sillery. About the time the war was at its height between the Hurons and the Iroquois, Jogues and Bressani had been captured in an effort to reach the Huron country, and Brébeuf was appointed to make a third attempt. He succeeded. With him on this journey were Chapay and Garreau, both of whom were afterwards murdered. They reached St. Mary's on the Wye, which was the central station of the Huron mission. By 1647 the Iroquois had made peace with the French, but kept up their war with the Hurons, and in 1648 fresh disasters befall the work of the missionaries—their establishments were burned and the missionaries slaughtered. On 16 March, 1649, the enemy attacked St. Louis and seized Brébeuf and Lallemant,
who could have escaped but rejected the offer made to them and remained with their flock. The two priests were dragged to St. Ignace, which the Iroquois had captured.

On entering the village, they were met with a shower of stones, cruelly beaten with clubs, and then tied to posts to be burned to death. Brebeuf is said to have kissed the stake to which he was bound. The fire was lighted and under its heat, and when the fire consumed him his heart was cut out and eaten. Through all the torture he never uttered a groan. The Iroquois withdrew when they had finished their work. The remains of the victims were gathered up subsequently, and the head of Brebeuf is still kept as a relic at the Hôtel-Dieu, Quebec. His memory is cherished in Canada more than that of all the other early missionaries. Although their names appear with his in letters of gold on the grand staircase of the public buildings, there is a vacant niche on the façade, with his name under it, awaiting the death of his virtues, manifested in such a remarkable degree at every stage of his missionary career, his almost incomprehensible endurance of privations and suffering, and the conviction that the reason of his death was associated with the triumph of Christ, has not done its work for his canonization as a saint and martyr. An ecclesiastical court sat in 1904 for an entire year to examine his life and virtues and the cause of his death, and the result of the inquiry was forwarded to Rome.

T. J. Campbell.

Breda (Bredana), Diocese of, situated in the Dutch province of Brabant and suffragan of Utrecht. The city was founded in the twelfth century and with the surrounding territory formed the Barony of Breda, an imperial fief hereditary in the house of Nassau to which Queen Wilhelmina belongs. This barony was formerly within the ecclesiastical jurisdiction of the See of Liége, but became subject to Antwerp when Pius IV made that city (1561) the metropolitan. Breda was subject to the political disorders of the sixteenth and seventeenth centuries, in consequence of which the free exercise of the Catholic religion was more or less restricted. The iconoclasts in their outbreak of 22 August, 1566, left some sad traces yet visible at Breda. In the years immediately following, the city and its district were alternately held by Spanish troops and by those of the States-General, though the latter were destined to be its eventual masters. It passed finally into their hands 10 October, 1637, when Breda surrendered to the Stadtholder, Prince Frederic Henry.

Thenceforth, as was their custom, the Dutch Protestants prohibited strictly the exercise of the Catholic religion. At the Peace of Westphalia in 1648 the Breda Privilege was secured by the States-General and lost thereby the last remnants of its ancient liberty. The "reformed" religion was alone allowed, and rigorous measures were used to prevent the exercise of the Catholic religion. However, as elsewhere in the Dutch provinces it was kindled secretly, newly extinguished by the empyrean zeal was imitated by their flocks, in whom the love of the ancient Faith was purified and intensified by persecution. This unhappy situation lasted until the beginning of the nineteenth century. A little earlier the Batavian Republic had proclaimed (1796) liberty of religious worship, and in this Catholics saw a preage of better days. The constitution of the new Kingdom of the Netherlands (1815) guaranteed this boon more effectively.

When the Diocese of Antwerp was abolished by the Concordat of 15 July, 1801, Pius VII created by his Brief of 22 March, 1803, the Vicariate Apostolic of Breda, attached to it the northern part of the former Diocese of Antwerp, then within the limits of the Batavian Republic. He also added thereto a part of the former Diocese of Ghent, situated in the province of Zeeland and known as Staats Visconderie: this part (1803–26) was the first vicar Apostolic, and he established the diocesan (theological) seminary at Hoeven. By the terms of the Concordat, signed 17 August, 1827, between the Holy See and King William I, the Vicariate Apostolic of Breda was incorporated with the new See of Bois-le-Duc, whereby the ecclesiastical independence of the former was seriously threatened. Indeed, this arrangement was already becoming effective when the Belgian Revolution of 1830 broke out. The final separation of Belgium from Holland (1831) and the establishment of the papal vicariate was sanctioned by Pope Gregory XVI, "Ex quod die" (4 March, 1833), the Vicariate Apostolic of Breda was made one of the four suffragans of the new Archdiocese of Utrecht.

The first bishop of the new See of Breda was its vicar Apostolic, the Right Rev. Jan van Hooyenga, Apostolic administrator since 1826, and Titular Bishop of Dardania since 1842. He died in 1867 and was succeeded first by the Right Rev. Jan van Genk who held two diocesan synods (1868, 1869) and died in 1874; later by the Right Rev. Hendrik van Beek, a celebrated Heleenist, who died in 1894; and then by the Right Rev. Peter Leyten. Besides the above-mentioned theological seminary at Hoeven there is a preparatory ecclesiastical seminary at Oudenoord, known as De Tzelar and founded in 1839. The new cathedral (1758) is dedicated to St. Barbara and is a masterpiece of the famous Dutch architect Cuypers. The finest of the churches of Breda is the superb Gothic edifice of Notre Dame, built in the fifteenth century. It has long been held by the Protestants, and the church is in ruins. In the environs of Breda have been several sepulchral monuments of the house of Orange-Nassau. According to the most recent statistics there are in the Diocese of Breda 198,000 Catholics, 100 parishes, 245 priests in actual service, 23 charitable institutions, and 59 free (Catholic) schools.

Brockes Bible. See Editions of the Bible.

Bréhal, Jean, a French Dominican theologian of the convent of Evreux; died c. 1479. He was made Doctor of Theology at the University of Caen, 1468, Prior of the Monastery of the General of France, 1452, which office he held until 1474. At the instance of Charles VII, he was delegated to revive the acts and proceedings of the trial of Joan of Arc, and on 7 July, 1496, he solemnly declared her condemnation unjust; these were iniquitous and unjust. Having reviewed the case of his investigations, which are exhaustive, are given at length by the Dominican Fathers Belon and Balme in "Jean Bréhal, Grand Inquisiteur de France et la réhabilitation de Jeanne d'Arc" (Paris, 1983), and
by the Jesuit Father Ayroles in "La vraie Jeanne d'Arc" (1790). Bréhal resigned his office in 1474 and retired to his convent of Evreux, where he spent the rest of his days in study, a model of conventional observance and discipline. He wrote "De liberis et claris ecclésiasticis," and some of the principal divisions of the Brehon code is entirely owing to the labours of two men, O'Curry and O'Donovan, who were the first Irish scholars since the death of the great hereditary Irish antiquarian, Duald Mac Fhirbis (murdered by an English settler about a dispute in which he was concerned), and perhaps the most prolific and able, and understand the difficult and highly technical language of the ancient law tracts. After much laborious work in the libraries of Trinity College Dublin, in the Royal Irish Academy, in the British Museum, and in the Bodleian Library at Oxford, O'Curry transcribed eight volumes full of the so-called Brehon Laws containing 2,906 pages, and O'Donovan nine more volumes containing 2,491 pages. Nor was their labours by any means exhaustive. There are many more volumes of Brehan documents, some transcribed in the library of Trinity College, in the British Museum, and in the Bodleian, and possibly some fragments in the Royal Irish Academy and other repositories. From the labours of O'Donovan and O'Curry the Government published in the Master of the Rolls series five great tomes and a sixth containing a glossary. But these five large volumes do not by any means contain the whole of Irish law literature, which, in its widest sense, that is, including such pieces as the "Book of Rights", would probably fill at least ten volumes.

CONTENTS OF THE BREHON LAW BOOKS.—The first two volumes of the Brehon Law, as published, contain the Seanchus Mór (Shanahanus More) or "Great Immortal Custom" which includes a preface to the text, a table of contents and an index, followed by the text itself, first put together and "purified", and the Law of Distress, a process which always had much influence in Irish legislation. The second volume contains the Law of Hostage Sureties, also a very important item in ancient Irish law, the law of fines of stock, and of social conditions. The third volume contains the important document known as the "Book of Acallis", which is chiefly taken up with the law of torts and injuries. This book professes to be a compilation of the various diets and judgments of King Cormac Mac Airt who died in the third century, and of Cennfasalad, a famous warrior who fought in the Battle of Moyrath (c. 634), and afterwards became a renowned jurist, who lived in the seventh. The fourth and fifth volumes consist of isolated law tracts, on the Fid, the Féinecha, or the rights of the head of a tribe over the divisions of land, social ranks, the laws relating to poets and their verse, the laws relating to the Church, chiefs, husbandsmen, pledges, renewals of covenants, etc.

Although all these tracts go commonly under the generic name of the Brehon Laws, they are not really codes of law at all, or at least not essentially so. They are rather the digests or compilations of generations of learned lawyers. The text of the Seanchus Mór, for instance, which is contained in the first two volumes, is comparatively brief. That part of it relating to the law of immediate seizure must, according to M. d'Arbois de Jubainville, have been written before the year 600, but the law of religious inheritance is of the third or fourth century, and that of Christianity into Ireland, which probably took place in the third century. The rest of the Seanchus is not so old. The year 438 is that given by the Irish annalists themselves for the redaction of the Seanchus Mór which according to its own commentary was the joint effort of three kings, of two clerics, of a doctor of the Béla Fèine or legal dialect, of Dubhthac a doctor of literature, of Fergus a doctor of poetry, and of St. Patrick himself, who struck out of it all that "clashed with the law of God". It is impossible to say how far certain parts of the law may have reached back into antiquity and become stereotyped by usage before they came stereotyped in writing. The text of the Seanchus Mór itself is not extensive.

It is the great amount of commentators written by generation after generation upon the text, and then the additional annotations written upon these commentators by other lawyers, which swells the whole to such a size.

IRISH SOCIAL ORGANIZATION.—We are able to gather fairly well fairly well from these books the remains of what must once have been an immense law literature, the social organization of a pure Aryan people, closely cognate with the ancestors of the modern Gauls, Spaniards, and Britons; and from what we learn of the ancestors of the present Irish people we may deduce a good deal that is probably no less applicable to the other Aryan Celts. Broadly speaking, the country was governed by a ruling class called "Kings", of different grades, the highest being the King of Ireland, the next the princes, and the lowest the princes called in Irish Plaith (pronounced like fish or fioh). In all there were, including kings and fiaiths, nominally at least, seven different kinds of aires (arras), or nobles, and provision was carefully made that a wealthy farmer, or peasant grown rich through cattle, could, if he possessed twice the wealth of the lowest of the seven, and had held it for certain generations, become an aire, or noble, of the seventh, or lowest degree. Thus wealth and descent were carefully balanced over against each other. There is an inferior chief who "wore the cognitive," says the law. But it took care at the same time not to close to anyone the avenues to chieftainship. Under ancient Irish law the land did not belong to the king or the chief or the landlord, but to the tribe, and the person who had an undeniable right to his share as had the chief himself. In process of time parts of the tribal territory appear to have become alienated to sub-tribes or families, and the chief, who always exercised certain administrative duties with respect to the land, appears to have had certain specific portions of the tribal land allotted to himself for his own use, and for the maintenance of his household and relatives. He was in no sense, however, what is now known as a landlord, although the whole tendency of later times was to increase his power at the expense of his tribe and vassals.

FREE-TRIBESMEN.—The great bulk of the ancient Irish cultivators were the Fèine (Faina) or free-tribesmen from whom the Brehon law is called in Irish the Féinecha. or the Féine. In process of time many of these in hours of distress naturally found themselves involved in something like pecuniary transactions with their head-chiefs, and, owing to poverty, or for some other reason, were driven to borrow or accept cattle from them, either milk or tallow. These tenements of the chieftain's céiles (kailas) or vassals. They were known as Sæor-stock and Dæor-stock Céiles. The saor-
stock tenant—saoer means free in the Irish language—accepted only a limited amount of stock; and retained his tribal rights, always most carefully guarded by the tenant from his lord, in his own interests. But the Irish stock—deer means unfree—tenant, who took stock from his chief, became liable for heavier but still carefully defined duties. For instance for every three helsers deposited with him by his chief, he became liable to pay the chief the proportionate stock of a calf, say, in the case of a suck, suck one in the summer, and work for three days. The tribesman, it will be observed, by accepting stock from his chief parted to some extent with his freedom, but his interests were carefully looked after by law, and it was provided that after food-rent and service had been rendered for seven years, if the chief should die, the tenant should become entitled to the stock deposited with him. If, on the other hand, the tenant died, his heirs were partly relieved from their obligation. It will be observed that while this to some extent resembles the well-known Metayer system, so common on the continent of Europe, where the landlord supplies the stock and the land, and the tenant the labour and the produce from it in this case the saor- and deer stock farmer did not supply the land, which was theirs by right of their free tribesmanship. In this way, namely, by accepting stock from their over-lords, a rent-paying class grew up in Ireland, to which undoubtedly in time a large proportion of the ancient Irish class of free tenants, or “hylaen,” should be ascribed.

But outside of the Free-tribesman (the Feine and Célé) there grew up gradually a class of tenants who were not free, who in fact must have been something very like a state of servitude. These were known by the name of juidirs or bothacha, i.e. cottiers. They appear to have been principally composed of broken men, outcasts from foreign tribes, fugitives from justice, and the like, who, driven out of or for- saking their own tribes, sought refuge under some other chief. These men must have been natural objects of suspicion if not of detestation to the free tribesmen, and, being themselves absolutely helpless, and having no tribal right (fíonnt), or even their own personal liberty, were naturally set over upon the outlying or waste lands of the tribe, or possibly at times upon his own separate land which as chief he held in sevælity, and imposed upon them far heavier tolls or rents than the law permitted them to be charged. It was the case in any other uncertain times Ireland became more troubled by Northmen, Normans, and English, this class of tenant increased in numbers, so many tribes were broken or destroyed, and the survivors dispersed to find refuge in other tribes and under other chiefs. In this way there grew up gradually, even under Irish law, a body of tenants to whom their chiefs must have stood in the light of something like English landlords.

The Irish Family or Fine.—A curious Irish social unit was the fine (finna), consisting of a group of five persons and three groups of four, all males. The head of the family, called the ceann-fine (Kan-finna), and four members made up the first group, called geil-fine, the other three groups of four each were called deirbh-fine, or true family, tor-fine, or after family, and ran-fine, or end family. On the birth of a new male member in the geil-fine the eldest member of the group was moved up into the next four (the deirbh-fine), and one out of that four into the next four, and one out of the last four was moved out of the Brehon law, in their interests, into the last male thereby ceasing to be a member of the family, or fine. The sept, to use the English term, sprang from the family, or the family after some generations grew into the sept and then into the clan, contracting a greater share of artificiality in proportion to its enlargement. Because, while all the members of the sept could actually point to a common descent, the sept as such was a creation of fiction. The portion of territory ruled over by a sub-king was called thudh (too-a) and contained within it, at all events in later times, members of different descents. The chief, both of the thudh and the sept, was elected by the tribe or the accompanying clans. The thudh did not obtain in Ireland, and the selection was made of the man who being of the chiefest’s near blood could best defend the tribe and lead it in both war and peace. “The head of every tribe,” says the Brehon Law tract the Cotu Disagné, “should be the man of the tribe who is the most experienced, the most notable, the most wealthy, the most learned, the most truly popular, the most powerful to oppose. The most steadfast to sue for profit and to sue for losses.” As early as the third century, in a well-known piece of Irish literature, Caire, afterwards King of Ireland, is depicted as asking his father Cormac Mac Airt the question: “For what qualifications is a king elected over counties and tribes of people?” And Cormac, answering in his ely that in Ireland the saor- and deer stock farmer did not supply the land, which was theirs by right of their free tribesmanship. In this way, namely, by accepting stock from their over-lords, a rent-paying class grew up in Ireland, to which undoubtedly in time a large proportion of the ancient Irish class of free tenants, or “hylaen,” should be ascribed.

Irish Criminal Law.—There seems to have been no hard and fast line drawn between civil and criminal offences in the Brehon law. They were both charged for in the same way before a Brehon, who heard the case argued, and either acquitted or else found guilty and assessed the fine. In the case of a crime committed by an individual all the sept were liable. If the offence were one against the person, and the criminal happened to die, then the liability of the sept was wiped out, for, according to the maxim, “the crime dies with the criminal”. If, however, the offense had been one causing damage to property or creating material loss, then the whole sept could be liable for it, even after the death of the criminal. This regulation resulted in every member of the sept having a direct interest in suppressing crime. There was always a fine inflicted for manslaughter, even unpunished, which was called an eric. If the manslaughter of the tribe was committed by a man called a “kinsman,” the eric was doubled, and it was distributed to the relatives of the slain in the proportion to which they were entitled to inherit his property. If the eric were not paid, then the injured person or family had a right to put the criminal to death. This acceptance of a blood-fine or eric for murder was a great source of scandal to the English, but, as Keating points out in the preface to his history of Ireland written in Irish, it was really a beneficent and logical institution, made necessary by the number of tribes into which Ireland was divided. Nor was the punishment, though short of the capital one, any means light, and it at least insured compensation to the murdered man’s relatives, a compensation amounting to the entire “honour-price” of the murderer. For every man, from king to finna (the lowest class of tenant), had what was in Irish law termed his einneachlan, or honour-price, and this was forfeited in part or in whole, according to well-defined rules, for various crimes. It was always forfeited for taking human life, or seizing another man’s horse, no matter how much less than slaying. A man of high rank was always fined more than one of low rank for the same misdemeanor. An assault on a person of rank was more severely punished than one on an ordinary man. Fines
for crimes against the person were particularly heavy; two cows, for instance, was the fine for a blow which raised a lump but did not draw the blood. The punishments awarded by the Brehons were of a most humane character. There is no trace of torture or of any capital punishment.

From the earliest times in which the English invaders made the acquaintance of the Brehon law system they denounced it with the most unseparative invective. But all the Norman chiefs who ruled over Ireland seem to have governed the territories by it in preference to English law, and in Elizabeth's reign the great Shane O'Neill pointed out with bitter irony that if his Irish laws were so barbarous as the queen's ministers alleged, it was passing strange that three hundred families had migrated from the English pale and the beneficial operations of English law to take refuge in his dominions. As early as 1367 an English Statute of Kilkenny denounced Brehon law as "wicked and damnable". "Lewd" and "unreasonable" are the epithets applied to it by Sir John Davies. "In many things repugnant to both to God's law and man's" is how the poet Edmund Spenser characterised it.

The student, however, who views these laws dispassionately to-day, and merely from a juridical point of view, will find them, in the words of the great English jurist Sir Henry Maine, "a very remarkable body of archaic law usually pure from its origin". It is, in fact, a body of law that reflects for us early Aryan customs in its purity, almost perfectly untainted or uninfluenced by that Roman law which overran so much of the rest of Europe. It is true that Brehon law does bear certain resemblances to Roman law, but they are of the slightest, and not even so strong as its resemblance to the Hindu codes. It has in truth certain relations to all known bodies of any ancient laws. The Tribes in Ireland, some of the Roman laws of earliest times, some to the Scandanavian, some to the Slavonic, and some particularly strong ones to the Hindu laws, and quite enough to old Germanic law of all kinds "to render valuable", to use the words of Sir Henry Maine, "the comparison which the English observers so constantly institute with the laws of England". "Much of it", says Maine, "is (now) worthless save for historical purposes, but on some points it really does come close to the most advanced legal doctrines of our day". "There is a singularly close approach", he remarks in another place, "to modern doctrines on the subject of contributory negligence, and I have found it possible to extract from the quaint texts of the 'Book of Acaill' some extremely sensible rulings on the difficult subject of the measure of damages, for which it would be in vain to study the writings of Lord Coke though these last are relatively of much later date". But he points out how heavily the Brehon Law pays in other respects for this striking anticipation of modern English Law by its too frequent air of fancifulness and unreality and indulgence of imagination. In the "Book of Acaill", for instance, which, as mentioned before, is chiefly concerned with the law of torts, we find four long pages describing to a litigant to whom a pig is stolen, the facts, from dogs in dog-fights—Ireland was famous for its hounds, and dog-fights figure more than once in old Irish literature—setting forth in the most elaborate way all the qualifications of the governing rule required to prove his case in the case of the "impartial interposer", in the case of the "half-interposer", that is the man who tries to separate the dogs with a bias in favour of one of them, in the case of an accidental onlooker, in the case of a youth under age, and in the case of an idiot. The litigant is no doubt here seeking an intelligent and law-abiding public. Even Sir John Davies, the Elizabethan jurist, confesses "there to deal with all cases and all varieties of circumstances, and they have special rules for almost every relation of life and every detail of the social economy. A great number of the cases which come under discussion in the law books appear to be rather problematical than real, even to his pupils to be argued on according to general principles, rather than actual subject for legal discussion.

Origin and Gradual Growth.—Ancient Irish law was not produced by a process of analogical legislation, but grew up gradually and through the judgments of the most famous Brehons. These Brehons may very well have been in old times the Irish equivalents of the Gaulish Druids. There were only four periods in the entire history of Ireland when special laws were said to have been enacted by legislative authority: first during the reign of that Cormac Mac Art already mentioned, in the third century; second, when St. Patrick came; third, by Cormac mac Cullinan, the King-Bishop of Cashel, who died in 908; and lastly by Brian Boru, about a century later. But the great mass of the Brehon code appears to have been traditional or to have grown with the slow growth of custom. The very first paragraph of the Law of Distress takes us back to a case which Cormac mac Con Colmac, King-Bishop of Connacht, in the second century, and this passage was already so antique at the close of the ninth century that it required a gloss, for Cormac mac Cullinan (who died in 908) alludes in his glossary to the gloss upon this passage. There are many allusions in this glossary to the Senchas Mór, always referring to the glossed text, which must consequently have been in existence before the year 900. The text of the Senchas Mór relies upon the judgments of famous Brehons such as Sencha in the first century, but there is little evidence of any breach. Cormac mac Cullen, however, is full of such allusions. Fourteen different books of civil law are alluded to in it. Cormac in his glossary alludes to five. Only one of the five alluded to by Cormac is among the fourteen mentioned in the Senchas Mór. This shows that the number of books upon law must in old times have been legion. They perished, with so much of the rest of Irish literature, under the horrors of the English invasion and the penal laws, when an Irish MS. was a sure source of danger and disgrace.

The essential idea of modern law is entirely absent from the Brehons, if by law is meant a command, given by some one possessing authority, to do or to forbear doing a certain thing under pains and penalties. There is no sanction laid down in the Brehon laws against those who violated them, nor did the State provide any such sanction. This was the great inherent weakness of Irish jurisprudence, that it lacked the controlling hand of a strong central government to enforce its decisions. It is a weakness inseparable from a tribal organisation in which the idea of the State, which had begun to emerge under the early Irish kings, had been repressed. When a Brehon had heard a case and delivered his judgment, there was no machinery of law set in motion to force the party aggrieved to sue his adversary in ancient Ireland which lay behind the decision of the judge was the traditional obedience and good sense of the people, and it does not appear that this was ever found wanting. The Brehons never appear to have had the confidence which was later accepted by the common people. The public appear to have seen to it that the Brehon's decision was always carried out. This was indeed the very essence of democratic government, with no executive authority behind it but the will of the people. There would be no doubt of the real consent of an intelligent and law-abiding public. Even Sir John Davies, the Elizabethan jurist, confesses "there
is no nation or people under the Sunne that doth love equall and indifferent justice better than the Irish; or will rest better satisfied with the execution thereof. It is heare to be againe asserted, that such as, they may have the protection and benefit of the law when upon just cause they do desire it'.

INFLUENCE OF THE CATHOLIC CHURCH UPON BREHON LAW.—With regard to the influence of the Catho-
lic Church upon Irish law, it is difficult to say much that is positive. Its influence was probably greatest in a negative direction. We have seen that the Brehons claimed the sanction of St. Patrick for the laws contained in the Seachus Mór. We may also take it for granted that it was owing to the introduction of Christianity that Irish law began to be written down. The Gaules, as Cæsar tells us, had a superstition about committing their sacred things, which of course included their law, to writing, and if the Irish had the same, as is very probable, it did not survive the introduction of the Christian religion. Then the eric-fine for homicide, although it probably did not owe its origin to Christianity, yet supported itself "as a middle course between forgiveness and retaliation" by the code of St. Patrick. St. Patrick's servant, O'teer, being put to death for his crime and Patrick obtaining heaven for him. "At this day", says the text, "we keep between forgiveness and retaliation, for as at present no one has the power of bestowing heaven, as Patrick had at that day, so no one is put to death for his intentional crimes so long as eric-fine is obtained, and whenever eric-fine is not obtained he is put to death for his intentional crimes, and exposed on the sea for his unintentional crimes." Sir Henry Maine seems to think that the conception of a Will was grafted upon the Brehon Law by the Church, but if this were so, one would have expected that the law terms relating to it would have been derived from Latin sources; this, however, is not so, the terms being of purely native origin. In another most important matter, however, the Law of Contract, the Church may have exercised a greater influence; the sacredness of bequests and of promises being equally important to it as the dower of diones gifts. It is also likely that much of the law relating to the alienation of land, all the land belonging originally to the tithes, was influenced by the Church, and indeed the Church seems to have been the granter primarily contemplated in these regulations. There is a great mass of jurisdiction relating to its territorial rights, and no doubt this must have affected the outside body of law. The Church would naturally undertake the unmalleable, and tend to resist the absorption of foreign elements; and Sir Henry Maine's conclusion is that "there has certainly been nothing like an intimate interpenetration of ancient Irish law by Christian principles". Still the effect of Christian principles must certainly have been great, but they were probably powerful as a negative rather than as a positive factor.

EXTINGUISHED BY THE ENGLISH.—The Brehon law code was grafted upon the Brehons, and the land belonged originally to the tithes in every part of Ireland. So soon as they conquered a territory they stamped it out, banished or slew the Brehons, and governed the land by English law. It would have been a very inconvenient doctrine for them that the tribe owned the land or that the people had rights as apart from the chief. Whenever a chief made his submission he was recognized as owner and landlord of the territory of the tribe, and the territory was adjudged to descend by primogeniture to his eldest son. In this way the hereditary rights of the merchandise of Ireland was reduced, so that and they were reduced to the rank of ordinary tenants, and, the native nobility being soon exterminated, they mostly fell into the hands of English landlords, and were finally subjected to those rack rents which have made the name of Irish tenant an object of commiseration for so many generations. The Brehon laws remained in force in every part of Ireland where the Irish held sway, but even there they were subject to the English crown. It has been shown that the system of land tenure which the Fitzgeralds found obtaining in Munster in 1170 was left unchanged by them, and the land burdened with no additional charges until their Abjuration in 1586. Dunsaid Mac Donal named antequary, who died in 1670, mentions that even in his own day he had known Irish chieftains who governed their clans according to "the words of Fithal and the Royal Precepts", that is according to the books of the Brehon Law. Amongst the many bitter injustices inflicted upon Ireland, and the Irish by the English conquest none has had more cruel or more far-reaching effects than the abrogation of the Brehon law relating to land tenure and division of property.

BREMEN. Bremen, formerly the seat of an archiepiscopal see, situated in the north-western part of the present German Empire. After Charlemagne's conquest of the Saxons, Christianity was preached in the region about the lower Elbe and the lower Weser by St. Willehad; in 787 Willehad was consecrated bishop, and that part of Saxony and Friesland about the mouth of the Weser assigned him for his diocese. He chose as his see the city of Bremen, which is mentioned for the first time in documents of 782, and built there a cathedral, praised for its beauty by St. Anschar; it was dedicated in 789. The Diocese of Bremen, which belongs, originally to the tithes, was influenced by the Church, and indeed the Church seems to have been the granter primarily contemplated in these regulations. There is a great mass of jurisdiction relating to its territorial rights, and no doubt this must have affected the outside body of law. The Church would naturally undertake the unmalleable, and tend to resist the absorption of foreign elements; and Sir Henry Maine's conclusion is that "there has certainly been nothing like an intimate interpenetration of ancient Irish law by Christian principles". Still the effect of Christian principles must certainly have been great, but they were probably powerful as a negative rather than as a positive factor.

REMBERT, the successor of St. Anschar, summoned the Benedictines from Corvey and became their abbot, and was consecrated bishop by Rembert, his successor, St. Adalgar (888-909), was likewise a Benedictine. Both performed great services in the conversion of the North to Christianity. When the Archbishop of Bremen was to be independent of the Metropolitan of Cologne, but should take part in the diocesan synods of Cologne. Under St. Hugger (909-910), a Benedictine of Corvey, and Reginald (917-
Wenden (1435-41), who was also Abbot of St. Michael in Lüneburg; Gerhard III (1441-63), and others. Less fortunate was the episcopate of Heinrich von Schwarzburg (1463-96), who also became Bishop of Münster in 1466; the city of Bremen took advantage of the almost uninterrupted absence of the last-named archbishop to shake off the episcopal authority almost entirely. Several estates or castles were given in pledge or fell in ruins, and the discretion of the pope under the ecclesiastical rule increased, preparing the soil for the Reformation.

The successor of Heinrich von Schwarzburg, Johann III Rohde (1497-1611), cleared the archdiocese of debt, and introduced many reforms. In spite of the fact that he came of the middle class, he sought to increase his prestige in the diocese by taking as coadjutor Prince Christopher of Brunswick (1500). The latter succeeded in 1511, but being at the same time Bishop of Verden, resided chiefly in Verden, and so was unable to devote the necessary attention to his Diocese of Bremen. The Reformation won its first victory in the city of Bremen; the Catholic clergy who opposed the new teaching were expelled, monasteries suppressed, the cathedral church was returned only under the condition that no Mass be said or choir service held. From the city as a centre the new teaching spread through the surrounding territory and though the archbishop himself and some monasteries for a long time adhered, the city in 1544 was persuaded by the help of the Smallcaldic League, which Bremen had joined, the Reformation was introduced throughout the archdiocese, in some cases by force. After the death of Christopher (1558), the cathedral chapter, which was almost entirely Protestant by this time, chose as its successor his brother George (1558-66), who was already Bishop of Verden and Minden; during his episcopate, the archdiocese, with the exception of the cathedral and some country parishes, accepted the teaching of Calvin. George was succeeded by four Protestant archbishops, the last (1634) being Frederick, Prince of Denmark, later King of Denmark under the name of Frederick III. During the Thirty Years War, by the edict of restoration of Emperor Ferdinand II in 1626, the archdiocese was restored to the Catholic worship re-established, monasteries given back to the monks, and a college at Stade placed in charge of the Jesuits (1629-32). When, however, in 1632, the imperial troops were forced to evacuate the territory before the Swedish Catholic King, the archdiocese was rooted out. In 1644 the archdiocese was captured by the Swedes, and in 1648 secularized by the Peace of Westphalia, and ceded as a duchy to Sweden, and the cathedral chapter at Bremen suppressed. In 1712 the territory became a possession of Denmark, and in 1715 was purchased by the electoral Prince George of Hanover. The city of Bremen with the surrounding territory was in 1731 recognized as a free city of the empire, and in 1803 received an increase of territory; in 1815 it entered the German Confederation. In 1816 the North German Confederation, and in 1871 the German Empire. The greater part of the present duchy was ceded to Prussia with the Kingdom of Hannover (1866). Ecclesiastically, the territory of the former Archdiocese of Bremen is divided among several dioceses. To the vicinity, with about 13,000 Catholics, is subject to the Vicariate Apostolic of the Northern Missions, the remaining territory to the Dioceses of Hildesheim, Osnabrick, and Münster.

JOSEPH LINS.

Brenach, an Irish missionary in Wales, a contemporary of St. Patrick, and among the earliest of the Irish saints who laboured among the Celts of that country. About the year 418 he travelled to Rome and Brittany, and thence to Milford Haven. He erected monasteries on oratories near the rivers Glan, Gwain, and Caman, and at the foot of Carn Egnyl, or "Mountain of the Angels", which was his most famous foundation. Among his converts was Brecon (an Irish chief), the ruler of South Wales, about the year 425, and this Brecon is reckoned by the "Trides" as a saint, who founded numerous churches in Brecknockshire, Carmarthenshire, Pembroke shire, Denbigshire, and Anglesey. From the Welsh "Llwy" we learn that St. Brecon died 7 April, on which day his feast is celebrated. His church, overhauling the ancient memory of the last name, preserved the Irish bishop who was the instrument under God for the conversion of a great part of Wales.

W. H. GRATTAN FLOOD.

BRENNAN, MICHAEL JOHN, ecclesiastical historian, b. in County Meath, Ireland, in 1780; d. at Dublin, February, 1847. He was the son of a stonemason and after his ordination to the priesthood, speedily obtained reputation as a preacher, but, owing to his vanity and pride, came into collision with his bishop, and was suspended. He then left the Church, became a Protestant, and was taken up by the Priests' Protection Society under whose auspices he was announced to preach in St. George's Church, Dublin. In the meantime he reconsidered his position and repented of his folly. He resolved to make public reparation for his fault, and on the Sunday in 1803, when he was announced to commence his campaign against the Church, he ascended the pulpit of St. George's, began by blessing himself most reverently, and then to the relief of his audience took up the Bible and "This is the true word of God", after a brief pause, he added deliberately and earnestly, "And I swear by its contents that every word I have uttered against the Catholic Church is a lie", and at once left the building. He went to a neighbouring Capuchin friary, explained what had happened, and begged to be admitted into the order. After some time, his prayers were granted, and he became a Franciscan at Wexford where in later years he wrote (as a penance, it is said) his valuable "Ecclesiastical History of Ireland" (2 vols., Dublin, 1844). D. J. O'DONOGHUE.

BRENNAN, SAINT, of Ardfran and Confort, known also as Brendan the Voyager, b. in Ciarraige Luachra, near the present city of Tralee, County Kerry, Ireland, in 484; d. at Enaghduin, now Annaghdown, in 577. He was baptized at Tubrid, near Ardfran, by St. Bithnach, and for five years he wandered under St. Ita, "the Brigid of Munster", and he completed his studies under St. Ere, who ordained him priest in 512. Between the years 512 and 530 St. Brendan built monastic cells at Ardfran, and at Shan-

akeel or Ballyvevinorach, at the foot of Brandon Hill. It was from here that he set out on his famous voyage for the Land of Delight. The old Irish Calendars assigned a special feast for the "Leigrois" or Brendan", on 22 March; and St. Brendan is said to have been the "Culdic" in his Litany, at the close of the eighth century, invokes "the sixty who accompanied St. Brendan in his quest of the Land of Promise". Naturally, the story of the seven years' voyage was carried about, and soon the stories of pilgrims and students flocked to Ardfran. Thus, in a few years, many religious houses were formed at Galleur, Kilmaledchor, Brandon Hill, and the Basquet Islands, in order to meet the wants of those who came for spiritual help. St. Brendan's legend is a story of redemption and of the power of the Irish Saint and of Annaghdown, and established churches at Inchiquin, County Galway, and at Inishagor, County Mayo. His most celebrated foundation was Confort, in 557, over which he appointed St. Moine as Prior and Head Master. St. Brendan is believed to have retired in Confort, and his feast is kept on 16 May.

W. H. GRATTAN FLOOD.

VOYAGE OF SAINT BRENDAN. St. Brendan belongs to that glorious period in the history of Ireland when the island in the first glow of its conversion to Christianity sent forth its earliest messengers of the Faith to the continent and to the regions of the sea. It is, therefore, perhaps possible that the legends, current in the ninth and committed to writing in the eleventh century, have for foundation an actual sea-voyage, the destination of which cannot however be determined. These adventures were called the "Navigatio Brendani", the Voyage or Wandering of St. Brendan, but there is no historical proof of this journey. Brendan is said to have sailed in search of a fabled paradise with a company of monks, the number of which is variously stated as from 18 to 150. After a long voyage of seven years they reached the "Terra Repromisit", or "Promised Land", and there became "Bogde" by luxuriant vegetation. The narrative offers a wide range for the interpretation of the geographical position of this land and with it of the scene of the legend of St. Brendan. On the Catalan chart (1375) it is placed not very far west of the southern part of Ireland. On other charts, however, it is identified with the "Fortunate Isles" of the ancients and is placed towards the south. Thus it is put among the Canary Islands on the Herford chart of the world (beginning of the fourteenth century); it is substituted for the Island of Madeira on the chart of the Pisigiani (1367), on the Weimar chart (1424), and on the chart of Beccario (1435). As the increase in knowledge of this region proved the former belief to be false the island was pushed further out into the ocean. It is found in some cases as the first meridian and very near the equator on Martin Behaim's globe. The inhabitants of Ferro, Gomez, Madeira, and the Azores positively declared to Columbus that they had often seen the island and continued to describe it. It was placed in the western corner of the Atlantic. At the end of the sixteenth century the failure to find the island led the cartographers Apianus and Ortelius to place it once more in the ocean west of Ireland; finally, in the early part of the nineteenth
The century belief in the existence of the island was completely abandoned. But soon a new theory arose, maintained by those scholars who claim for the Irish the glory of discovering America, namely, MacCarthys, Rafn, Beamish, O'Haloran, Headington, Cuffe, etc. They rest this claim on the account of the Northmen who found a region south of Vinland and the Chesapeake Bay called "Hvitramamalund" (Land of the White Men) or "Irland Ed mikla" (Great Ireland) on the tradition of the Shawano (Shawnees) Indians that in earlier times Florida was inhabited by a white tribe which had iron implements. In regard to Brendan himself the point is made that he could only have gained a knowledge of foreign animals and plants, such as are described in the legend, by visiting the western continent. On the other hand, doubt was very early expressed as to the value of the narrative for the history of discovery. Honorius of Augsburg declared that the island had vanished; Vincent of Beauvais denied the authenticity of the entire pilgrimage, and the Bollandists do not recognize it. Among the geographers, Alexander von Humboldt, Peschel, Ruge, and Kretschmer, place the story among geographical legends, which are of interest for the history of civilization, but can lay no claim to importance from the point of view of geography. The oldest account of the legend is in Latin, "Navigatio Sancti Brendani", and belongs to the tenth or eleventh century; the first French translation dates from 1128, and the English, in 1287. The most wild the the legend has appeared in the literatures of the Netherlands, Germany, and England. A list of the numerous manuscripts is given by Hardy, "Descriptive Catalogue of Manuscripts Relating to the History of Great Britain and Ireland" (London, 1853), I, 156 sqq. English translations were first published by G. Legrand, in "La Legende latine de S. Brandaine avec une traduction inedit en prose et en poesie romanes" (Paris, 1836); Wright, "St. Brandun, a Medieval Legend of the Sea, in English, Verse, and Prose" (London, 1844); C. Schröder, "Szent Brandan, ein lateinischer und drei deutsche Texte" (Erlangen, 1871); Brill, "Van Sinte Brandanen" (Groningen, 1871); Francisque Michel, "Les Voyages merveilleux de Saint Brandan à la recherche du paradis terrestre" (Paris, 1878); Fr. Novak, "Die Erzählung von Sant Brandan" (Bergamo, 1892); E. Bonebakkier, "Van Sente Brandano" (Amsterdam, 1894); Carl Wahland gives a list of the rich literature on the subject and the old French prose translation of Brendan's voyage (Boulogne 1616-XC: Beamann, 'The Discovery of America' (1881), 210-211; O'Halloran, "Lives of the Irish Saints" (Dublin, 1875), V, 389; Peschel, "Abhandlungen zur Erd-und Weltkunde" (Leipzig, 1872), 20-28; Gaevernik, "Les Voyages de Saint Brémond et des Papas dans l'Atlantique au moyen âge" in Bulletin de la Société de Geographie de Rouen (1889-91), I, 5-6; Ruge, "Das Buch des Zeltierhans der Edelsteine" (Leipzig, 1881); Schiözer, "Zur Brandenburger Legende" (Leipzig, 1886); Zemmer, "Keltische Beiträge zu Zeitschriften für deutsche Altertum und deutsche Literatur" (1886-90), 33; Idee, "Die frühesten Brüder von der Irland" in Berichte der Akademie der Wissensch (Berlin, 1881); Kretschmer, "Die Entdeckung Amerikas" (Leipzig, 1890); Brentano, "Die Entdeckung von North America" (Philadelphia, 1907), I, 10; Rafn, "Amer. Alter., XXXVII, and 447-450; Avekle, "Les chars fantastiques de l'océnial occidental" in Nouv. Ann. des voyages et des sciences geogr. (1845), I, 293: MacCarthy, "The voyage of St. Brendan" in Popular Geographical Magazine (Jan., 1849), 69 sqq.

Otto HARTIG

Brentano, KLEMENS MARIA, a German poet, one of the most prominent members of the Romantic School. He was born at Thal-Ehrenbreitstein 8 September, 1775; d. 28 July, 1842. After a futile attempt to enter the merchant service, the offices of the University of Jena in 1797, where he remained with occasional interruptions until 1803. Here he made the acquaintance of the brothers August Wilhelm and Friedrich Schlegel and of Ludwig Tieck, the founders and leaders of the Romantic School, to which Brentano also attached himself. In 1803 he married Sophie Mereau, the divorced wife of Professor Mereau, and the following year moved to Heidelberg, where he lived with Achim von Arnim, who later became his brother-in-law, and Joseph Görres. He was soon the leading spirit of the so-called younger Romantic School. During this period that he published jointly with Armin the famous collection of old folk songs known as "Des Knaben Wunderhorn", which appeared in three volumes between the years 1805 and 1808. This collection established once for all the position of "Des Knaben Wunderhorn" in German literature and had a powerful effect on the lyric poetry not only of Germany, but also of other nations. Longfellow testifies that it had "the most wild and the most magical influence" on his imagination. It was of course not to be expected that the text of these poems should be philologically accurate, but this in no way diminishes the importance of the service which the editors rendered to German literature. In 1806 Brentano's wife died and he then led a wild, unsettled life, drifting to various places, Heidelberg, Weimar, Kassel, Vienna, and Berlin. A second matrimonial venture proved disastrous; his wife was a woman of unbridled temper and habits, and he soon separated from her. Finally he drifted to Berlin restless and discontented. There he met the accomplished Luise Hensel, who later on achieved fame as a poetess. His ardent love for her was unrequited. Luise Hensel declined all offers of marriage. A great change now came over the poet. His previous indifference to the Catholic Church, in which he had been born, was changed to the most fervid devotion. He left Berlin and in 1818 went to the secluded Westphalian town of Dülmen, attracted by the fame of the stigmatic nun, Katharina Emmerich. For six years he remained near her, keeping a record of her visions and revelations. The publication of this record occupied the greater part of the remaining years of his life. After her death in 1824 he again wandered, settling at last in 1833 in Munich, where with Görres he was the centre of a circle of distinguished Catholic scholars and men of letters. He died in 1842 while visiting his brother Christian in Aschaffenburg.

Brentano is chiefly known as the editor of "Des Knaben Wunderhorn", but he also has written a great deal of original matter. Among his earlier writings "Gedichte" deserves notice, as a wild, formless romance in which some fine lyrics are interspersed, including the song of the "Lore Lay", later incorporated in the "Wunderhorn". This inspired Heine's famous ballad on the same subject.

KLEMMENS MARIA BRENTANO

Klemens Maria Brentano
tano's work; his style is marred by frequent and dis-
agreeable eccentricities. When he wishes to be na
ev, he often becomes merely childish. His poetic gifts, however, are sufficient, and his body of lyric poems (e. g. "Lied der Spindeln", "An eine
Kranke") are among the best of their kind. But he
lacked self-control and dissipated his great literary
talents. His collected writings, edited by his brother
Christian, appeared at Frankfort in nine volumes
bisheriger Kunstbegriffe, Ken Lebensalter, and ed. by Brünn (2 vols. Freiburg im Breisgau, 1877); John
son in The Catholic World Magazine (New York, 1880), L, 351
dCommentary.

ARTHUR F. J. REMY.

Brescia, Diocese of, takes its name from the principal city in the province of the same name in Lombardy, between the Mella and the Naviglio. The city of Brescia contains 60,000 inhabitants and is of great commercial importance. It was founded by the Gauls, and in 197 n. c. was captured by the Romans, who called it Bracia. In 315, Consti-
tantine advanced against Maxentius, an engage-
ment took place at Brescia in which the enemy was
forced to retreat as far as Verona. During the in-
vasion of the Huns under Attila, the city was be-
sieged. In 774 Charlemagne captured it from the
Lombards.

The Bishops of Brescia received the title of Count
from Louis II, and in consequence became civil
rules of the city and the countship. Many struggles
followed, however, in particular after Arduin Lord
Marcher of Verona, who had proclaimed himself Ruler
of Italy (1002), had slain the bishop of this city for
holding allegiance to Emperor Henry II. Henry, to
ensure the fidelity of the citizens of Brescia, was
obliged to confirm the civil liberty granted them
by Arduin, which is the origin of the commune of
Brescia. In the successive struggles between the
Lombard cities and the emperors, Brescia was
implicated in some of the leagues and in all of the up-
rising against them. Memorable in the history of the
theory was the siege laid to Brescia by Fredi-
ii in 1238 on account of the part taken by this
city in the battle of Corteno (27 November, 1237).
Brescia came through this assault victorious. After
the fall of the imperial house of Swabia republican
institutions declined at Brescia, as well as in the
other cities in the city of the city. These were divided
between several powerful families, chief among them
the Maggi and the Brusati, the latter of the Ghibelline
party. In 1311 Henry VII laid siege to Brescia for
six months, losing three-fourths of his army. Later
the Scaligeri of Verona, aided by the exiled Ghibel-
lines, sought to place Brescia under subjection. The
citizens of Brescia then had recourse to John of
Luxembourg; Mastino II della Scala, however, ex-
pelled the governor appointed by him. His mastery,
in turn, was terminated by the Ghibelline citizens,
but not even their rule was undisputed, as Pandolfo
Malatesta in 1406 took possession of the city, but in
1416 barred it to Filippo Visconti, who in 1426
sold it to the Venetians. The Venetian nobles, how-
soever, forced Filippo to resume hostilities against
the Venetians, and thus to attempt the recovery
of this city, but he was defeated in the battle of
Maclodio (1427), near Brescia. In 1439 Brescia was
once more besieged by Francesco Sforza, captain of
the Venetians, who conquered Pescina, Filippo's
castle, and thus the Venetians reasserted the
authority of Venice, with the exception of the years
between 1512 and 1520, when it was occupied
by the French armies. From 1796 it shared the
fortunes of the republic.

The Bishop of Brescia is suffragan to the Arch-
bishop of Milan. Legend traces the beginnings of
Christianity in Brescia to St. Barnabas, who is said
to have made St. Amato, another bishop, the first
Christian priest of the city. According to the local
tradition mentions the names of several bishops,
but nothing authentic is known concerning them.
In the fourth century there was the celebrated St.
Philastrius, a most zealous champion of orthodoxy
against heresy, of whom it is related that he was
converted many pagans. He was succeeded by St.
Gaudentius, consecrated by St. Ambrose (c. 387),
who erected outside the city walls the church A
Concilia Sanctorum, in which the holy matron Silvia
was buried later. A great number of the bishops
who ruled this diocese from the fourth to the seventh
centuries are inscribed on the rolls of the saints, e. g.
St. Paul, St. Theophilus, St. Silvinus, St. Gaudenses,
St. Ottaplanius, St. Vigilius, St. Herculanus, St. Po-
lus, St. Ambrosio, St. Anna, in 312, Constantine
advanced against Maxentius, an engagement took
place at Brescia in which the enemy was forced to
retreat as far as Verona. During the invasion of
the Huns under Atilla, the city was besieged. In 774
Charlemagne captured it from the Lombards.

During the episcopate of Manfredo Luciacci (1133),
Arnold of Brescia disseminated his teachings, with
the result that the governors of the city all but
accommodated the property of the churches of Brescia.
Alberto Rezzato (1213) had the Falerines to contend
against; he also brought many relics from the Holy
Land. Blessed Gualla Ronio (1229), of the Friars
Preachers, was distinguished for his virtue. Berardo
Maggi (1275), a Guelp, was made Duke and Count
of the city, and constructed among other works two
walls near the site of the basilica of St. Ambrose.
During the episcopate of Giovanni Nani (1773)
the French invasion took place, with the attendant
plaguing of churches and convents.
The most important churches of the city have
been mentioned in connexion with the bishops. There is still to be noted that of San Francisco, Romanesque in style, with a beautiful façade. Noteworthy, also, is the cemetery of Breslau, dating from the beginning of the nineteenth century, containing a large watch tower.

The diocese contains 79 rural deaneries, 389 parishes, 774 churches, chapelas, and oratories, 987 secular priests, 77 regular clergy, 268 seminarians, 226 members of female religious orders, 4 schools for boys, and 8 for girls, and a population of 527,475.

Cappellani, Le chiese d'Italia (Venice, 1844), XI; Annuario ecc. (1897).

U. BENIGNI.

Breslau, the Prince-Bishopric of, is seated at Breslau, on the River Oder in the Prussian Province of Silesia.

History.—Christianity was first introduced into Silesia by missionaries from Moravia and Bohemia. After the conversion of the Polish Duke Miejsko (later Mieczyslaw) the work of bringing the people to the new faith went on more rapidly. Up to about the year 1000 Silesia had no bishop of its own, but was united to neighbouring dioceses. In this way several dioceses of Silesia came into contact with Germany. The upper part of the River Oder formed the boundary of the Kingdom of Poland; all the territory which is now Silesia lying on the right-hand bank of the Oder belonged, therefore, to the Diocese of Poznan, which was subordinated to the Metropolitan See of Magdeburg. This part of Silesia was thus under the jurisdiction of that Jordan who, in 908, appointed the first Bishop of Poznan. The part of Silesia lying on the left bank of the Oder belonged to the territory that afterwards became German, and was consequently within the diocesan jurisdiction of Prague. The See of Prague, founded probably in 975, was suffragan to the Archdiocese of Mainz. The Polish ruler, Boleslaw Chrobry, the son of Miejsko, obtained the Bohemian part of Silesia during his wars of conquest, and a change in the ecclesiastical dependence of the province followed. By a patent of Otto III, in 995, Silesia was attached to the See of Meissen, which, like Poznan, was suffragan to the Archdiocese of Magdeburg. Soon after this the Emperor Otto III and Duke Boleslaw Chrobry, who was then the ruler of the whole of Silesia, founded the Diocese of Breslau, and Breslau, together with the Dioceses of Cracow and Colberg, was placed under the Archdiocese of Gnesen, which was founded by Otto in the same year, 995. The first Bishop of Breslau is known to have been named Johannes, but nothing more than this is known of him, nor is there extant any official document giving the boundaries of the diocese at the time of its erection. However, they are defined in the Bull of approval and protection issued by Pope Adrian IV, 23 April, 1155, and by Pope Innocent IV, 9 August, 1245.

The powerful Polish ruler, Boleslaw Chrobry, was succeeded by his son Miejsko II, who had but a short reign. After his death a revolt against Christianity and the Germans broke out, and a new Church organization of Poland disappeared from view, and the names of the Bishops of Breslau for the next half century are unknown. Casimir, the son of Miejsko, and his mother were driven out of the country, and the new Church organization of Poland was reconstituted. A Bishop of Breslau from probably 1051 to 1062 was Hieronymus, said by later tradition to have been a Roman nobleman. He was followed by Johannes (1072-78), a successor of the earlier Peter (991-1111). During the episcopate of Petrus, Count Peter Wlast entered upon that work of founding churches and monasteries which has preserved his name. Petrus was followed by: Zyroslaus I (1112-20); Heimo (1120-26), who welcomed St. Otto of Bamberg to Breslau in May, 1124, when the saint was on his missionary journey to Pomerania; Robert II (1126-42), who was Bishop of Cracow; Robert II (1142-46); and Johannes II (1146-49), who became Archbishop of Gnesen. With the episcopate of Bishop Walter (1149-69) the history of the Diocese of Breslau begins to grow clearer. At Walter's request Pope Adrian IV, in 1155, took the bishopric under his protection and confirmed to it the territorial possessions of which a list had been submitted to him. Among the rights which the pope then confirmed was that of jurisdiction over the lands belonging to the castle of Ottmachau which had been regarded as the patrimony of the diocese from its foundation. During Walter's episcopate the Polish Duke Ladelus with his family were driven from home and took refuge in Germany; in 1163 the sons of Ladelus returned and, through the intervention of Frederick Barbarossa, received as an independent duchy the part of Silesia which was included at that date in the See of Breslau. Bishop Walter built a new, massively constructed cathedral, in which he was buried. Zyroslaus II (1170-99) encouraged the founding of the Cistercian monastery of Lebus by Duke Boleslaw the Long. In 1180 Zyroslaus took part in the national assembly at Lenzen which laid down laws for the protection of the Church and its property which were promulgated. Jaroslaus (1186-1201), the oldest son of Duke Boleslaw, and Duke of Oppeln, was the first prince to become Bishop of Breslau. Cyril (1201-7) was originally Abbot of the Premonstratensian monastery of St. Vincent near Breslau, then Bishop of Lebus, and afterwards Bishop of Breslau. Cyril's episcopate Duke Heinrich I and his wife, St. Hedwig, founded the Cistercian convent at Trebnitz. The episcopate of Bishop Lorenz (1207-32) was marked by his efforts to bring colonies of Germans into the church territories, to effect the cultivation of waste lands. This introduction of German settlers by the bishop was in accordance with the example set by Heinrich I and St. Hedwig. The monasteries of the Augustinian Canons, Premonstratensians, and Cistercians took an active part in carrying out the schemes of the rulers by placing the new numbers of Germans, especially Thuringians and Franconians, on the large estates that had been granted them.

One of the most noted bishops of the diocese was Thomas I (1232-68); he continued the work of German colonization with so much energy that even the marauding incursions of the Mongols (1241) made but a temporary break in the process. His defence of the rights of the Church involved him in bitter conflicts with Duke Boleslaw of Liegnitz. Thomas began the construction of the present cathedral, the central tower being the first part erected. St. Hedwig died during his episcopate; and he lived until the process of her canonisation was completed, but died before the final solemnity of her elevation to the altar of the Catholic Church. After Thomas I,
Ladislaus, a grandson of St. Hedwig, and Archbishop of Salzburg, was Administrator of the Diocese of Breslau until his death in 1290. He was followed by Thomas II (1270–92), who was involved for years in a violent dispute with Duke Henry IV as to the prerogatives of the Church in Silesia. In 1287 a reconciliation was effected between them at Ratibor, but Henry continued to interfere with the church and, in 1290, the duke died. Before his death, on the 24th of September, the ante-nominal Church of the Holy Cross at Breslau, was consecrated by the bishop. He was succeeded by his brother, Peter, who was also a cardinal and became Pope John XXIII, 1316. The new bishop then transferred the see of Breslau from the Holy Cross to the cathedral.

The archbishopric of Breslau dates from his episcopate. After his death a divided vote led to a vacancy of the see. The two candidates, 1290, and 1291, were each elected by the professors of the University of Breslau and confirmed by the chapter.

The constant division and subdivision of Silesian territory into small principalities for the members of the ruling families resulted in a condition of weakness that necessitated dependence on a stronger neighbour, and Silesia thus came, from the year 1357, under the control of Bohemia. A quarrel broke out between Bishop Nanker and the suzerain of Silesia, King John of Bohemia, when the king seized the castle of Miltbach which belonged to the cathedral chapter. The excommunication was finally lifted after the king had paid the fines demanded by the chapter.

In 1402, the cathedral chapter, with the consent of the chapter, elected a new bishop, Bishop Benedict of Breslau, who was consecrated by the archbishop of Prague. The new bishop was able to restore the temporal rights of the chapter and to bring about a reform in the spiritual life of the clergy.

The archbishopric of Breslau was transferred to the See of Breslau by the decree of the Emperor Wenzel. He held two synods, in 1410 and 1416, with the object of securing a higher standard of ecclesiastical discipline; and he settled the right of secession in the cloisters of the Breslau chapter. To promulgate the decree the archbishop appointed a canon, “Wenzel’s law”.

The bishops of Breslau were divided into three classes: the Regius, the Vicar, and the Prelate. The Regius, or the first class, consisted of the archbishop and his suffragan bishops, while the Vicar consisted of the vicar bishops. The Prelate consisted of the dean and the chapter. The archbishop was the head of the see and had the right to appoint the bishops, vicars, and deans.

In 1435 the Breslau chapter issued a decree of which the chief intent was to close the prebends in the Diocese of Breslau to foreigners, and thus prevent the Poles from obtaining these offices. The effort to shut out the Polish element and to loosen the connexion with Gnesen was not a momentary one; it continued, and led gradually to a virtual separation from the Polish archdiocese some time before the formal separation took place. The troubles of the times brought the bishop and the diocese into serious pecuniary difficulties, and in 1444 Conrad resigned, but his resignation was not accepted, and he resumed his office. In 1446 he held a synod, which was held in the town and in the castle of Breslau. The synod was the provost of the cathedral of Breslau, Peter Novak (1447–56).

By wise economy Bishop Peter succeeded in bringing the diocesan finances into a better condition and was able to redeem the greater part of the church lands. He was succeeded by his predecessor, who had been obliged to mortgage. At the synod of Breslau in 1454 he endeavoured to suppress the abuses that had arisen in the diocese.

Jodokus of Rosenberg (1456–67) was a Bohemian nobleman and Grand Prior of the Order of St. John. His love of peace made his position a very difficult one during the fierce ecclesiastic-political contention that raged between the Hussite King of Bohemia, George of Podiebrad, and the people of Breslau, who had taken sides with the German party. Jodokus was followed by a bishop from the region of the Rhine, Rudolf von Radesheim (1468–82).

As papal legate, Rudolf had become popular in Breslau through his energetic opposition to George of Podiebrad; for this reason the cathedral chapter requested him to transfer the bishopric to the diocese of Carinthia, after he had confirmed his privileges. From this time these privileges were called “the Rudolfian statutes”. Under his leadership the party opposed to Podiebrad obtained the victory, and Rudolf proceeded at once to repair the damage which had been occasioned to the church during this strife; mortgaged church lands were redeemed; in 1473 and 1475 diocesan synods were held, at which the bishop took active measures in regard to church discipline.

As coadjutor he had selected a Swabian, Johann IV, Roth, Bishop of Lavant, a man of humanistic training. Urged by King Matthias of Hungary, to whom Silesia was then subject, the cathedral chapter, somewhat unwillingly, chose the coadjutor as bishop (1492–1500). His episcopate was marked by quarrels with the cathedral chapter. But at the same time he was a promoter of art and learning, and strict in his conception of church rights and duties. He endeavoured to improve the spiritual life of the diocese by holding a number of synods. Before the death of Cooper in 1510, Bishop Peter von Nuremberg, cast his monument, the most beautiful bishop’s tomb in Silesia. His coadjutor with right of succession was Johann V (1506–20), a member of the noble Hungarian family of Turzo. Johann V took an active part in the intellectual life of the times and sought at the diocesan synods to promote learning.
and church discipline, and to improve the schools. On the ruins of the old stronghold of Faunenburg he built the castle called Johannisberg, now the summer residence of the Bishops of Breslau.

The religious disturbances of the sixteenth century began to be conspicuously apparent during this episcopate, and soon after Johann's death Protestantism began to spread in Silesia, which country had, since 1526, been made up of 66 nobles, and towns councils were zealously promoters of the new belief; even in the episcopal principality of Neisse-Grottkau Protestant doctrines found approval and acceptance. The successors of Johann V were partly responsible for the condition of the churches. Jacob von Salza (1520–39) was personally a staunch adherent of the Church, yet the gentleness of his disposition caused him to shrink from carrying on a war against the powerful religious movement that had arisen. To an even greater degree than Jacob von Salza his successor, Balthasar von Promnitza (1539–63), avoided coming into conflict with Protestantism. He was more friendly in his attitude to the new doctrine than any other Bishop of Breslau. Caspar von Logau (1562–74) showed at first greater energy than his predecessor in trying to prevent the spread of the principles of the Reformation, but later in his episcopate his attitude towards Lutheranism and his slackness in defending church rights gave great offence to those who had remained true to the Faith. These circumstances are reflected in the controversy which raged about the appointment of the bishops Archdeacon Leopold Wilhelm (1565–62) and Archdeacon Carl Joseph (1663–84), neither of whom lived in the territory of Breslau. After Sebastian of Rostock became bishop (1684–71) he succeeds in their organisation and missionary work, but his endeavors were not crowned with much success than before. Friedrich, Landgrave of Hesse, Cardinal, and Grand Prior of the Order of St. John, was the next Bishop of Breslau (1671–82). The new bishop was of Protestant origin and had been a Catholic at Rome. Under his administration the re-establishment of the old churches went on. He beautified the cathedral and elaborated its services. For the red cap and violet almuitum of the canons he substituted the red mozzeta. He was buried in a beautiful chapel which he had added to the cathedral in honour of his ancestress, St. Elizabeth of Thuringia. After his death the chapter presented Carl von Liechtenstein, Bishop of Olmütz, for confirmation. Their choice was opposed by the emperor, whose candidate was the Count Palatine Wolfgang of the Electorate of Bavaria, who was of Catholic persuasion. When Wolfgang died, and his brother Franz Ludwig (1683–1732) was made bishop. The new ruler of the diocese was at the same time Bishop of Worms, Grand Master of the German Knights, Provost of Eichstätt, and Elector of the Elector of Mainz. He separated the ecclesiastical administration and that of the civil tribunals, and obtained the definition, in the Pragmatic Sanction of 1899, of the extent of the jurisdiction of the vicariate-general and the consistory. In 1765, upon the death of the last reigning duke, the Silesian Duchy of Lignitz-Brieg-Wohlsapf lapsed to the emperor, and a new secularization of the churches was begun. But when Charles XII of Sweden secured for the Protestants the right to their former possessions in 1707, the Elector of Altranstädt, in 1707, the secularization came to an end, and the churches had to be returned. The Elector Joseph I endeavored to repair the loss of these buildings to the Catholic Faith by founding the so-called Jesuit colleges.

The next bishop, Philip, Count von Sinzendorf, Cardinal and Bishop of Raab (1732–47), owed his elevation to the favour of the emperor. During his episcopate the greater part of the diocese was added to the territory of Prussia. King Frederick II of Prussia and the Catholic Church at Berlin are called the "Catholic Vicariate" at Berlin, which should be the highest spiritual authority for the Catholics of Prussia. This would have been in reality a separation from Rome, and the project failed through the op-
position of the Holy See. Bishop Sinzendorf had neither the acuteness to perceive the imitable end of the king's scheme, nor sufficient decision of character to withstand it. The king desired to secure a successor to Sinzendorf who would be under royal influence. In utter disregard of the wishes of the Church, and heedless of the protests of the cathedral chapter, he presented Count Philip Gottward von Schaffgotsch as coadjutor-bishop. After the death of Cardinal Sinzendorf the king succeeded in overcoming the scruples of the Holy See, and Schaffgotsch became Bishop of Breslau (1748-95). Although the method of his elevation caused the new bishop to be regarded with suspicion by many strict Catholics, yet he was zealous in the fulfillment of his duties. During the Seven Years War he fell into discredit with Frederick on account of his firm maintenance of the Church, and the return of peace did not fully restore him to favour. In 1766 he fled to the Austrian part of his diocese in order to avoid the confinement in Oppeln in which the king had decreed against him. After this Frederick made it impossible for him to rule the Prussian part of his diocese, and until the death of the bishop this territory was ruled by vicars Apostolic.

The former coadjutor of von Schaffgotsch, Joseph Christian von Hohen-Waldenburg-Bartenstein (1795-1817), succeeded him as bishop. During this episcopate the temporal power of the Bishops of Breslau came to an end through the secularization, in 1810, of the church estates in Silesia. Only the estates in Austria remained to the see. The cathedral foundation, eight collegiate foundations, and over eighty monasteries were suppressed, and their property confiscated. Only those monastic institutions which were occupied with teaching and nursing were allowed to exist. Bishop Joseph Christian was succeeded by his coadjutor, Emmanuel von Schimonsky. The affairs of the Church in Prussia had been brought into order by the Bull "De salute animarum," issued in 1821. Under its provisions the cathedral chapter elected Schimonsky, who had been administrator of the diocese, as the first Exempt Bishop of Breslau (1824-32). The bishop received for himself and his successors the title of prince as partial compensation for the loss of the secularized principality of Neisse. He was given the right to sign his name as "v. Schimonsky" among his clergy in regard to celibacy and the use of Latin in the church services and ceremonies. During the episcopate of his predecessor the Government had promulgated a law which was a source of much anxiety to Schimonsky and his immediate successors; this was that in those places where Catholics were few in number, the parish should be declared extinct, and the church buildings given to the Protestants. In spite of the protests of the episcopal authorities, over one hundred church buildings were lost in this way. King Frederick William put an end to this injustice, and sought to make good the injuries inflicted. For several years after Schimonsky's death the see remained vacant. It was eventually filled by the election, through Government influence, of Count Leopold von Sedlnitzki (1836-40). Bishop von Sedlnitzki was neither clear nor firm in his maintenance of the doctrines of the Church; on the question of mixed marriages, which had become one of great importance, he took an undecided position. But last, in the demand of Pope Gregory XVI, he resigned his see. He went afterwards to Berlin, where he was made a privy-councillor, and where he later became a Protestant. The dean of the cathedral, Dr. Ritter, administered the diocese for him until the election of Count Leopold of the countship of Glitz, Joseph Knauer (1843-44). The new bishop, who was seventy-nine years old, lived only a year after his appointment.

His successor was Melchior, Freiherr von Dippelbruck (1845-83). This episcopate was the beginning of a new religious and ecclesiastical life in the diocese. During the revolutionary period the bishop not only maintained order in his see, which was situated in a state of fever, but he was also a supporter of the Government. He received unusual honours from the king and was made a cardinal by the pope. He died 20 January, 1853, at the castle of Johannisberg and was buried in the cathedral. His successor, Bishop Förster (1832-81) carried on his work and completed it. Bishop Förster gave generous aid to the founding of churches, monastic institutions, and schools. The strife that arose between the Church and the State brought his labours in the Prussian part of his diocese to an end. He was deposed by the State and was obliged to leave Breslau and retire to the castle of Johannisberg. Here he died, 20 October, 1881. He was buried in the cathedral at Breslau. Leo XIII appointed as his successor in the disordered diocese Robert Herzog (1882-86), who had been deacon of the primate and provost of St. Hedwig's at Berlin. Bishop Herzog made every endeavour to bring order out of the confusion into which the quarrel with the State during the immediately preceding years had thrown his diocese. His episcopate was of short duration; he died after a long illness, 26 December, 1886. The Holy See appointed as his successor a man who had done much to allay the strife between Church and State, the Bishop of Fulda, Georg Kopp. Bishop Kopp was born 25 July, 1837, at Duderstadt in the Diocese of Hildesheim; he was ordained to the priesthood, 29 August, 1862; consecrated and installed Bishop of Fulda, 27 December, 1881; transferred to Breslau, 9 August, 1887; installed October, 1887; created a cardinal, 16 January, 1893.

EXTENT AND STATISTICS OF THE DIOCESE.—The Diocese of Breslau includes the whole Prussian Province of Silesia with the exception of a part of the districts of Ratibor and Leobschütz, which belong to the Archdiocese of Olomütz, and the Courship (Grafschaft) of Glätz, also in Prussian Silesia, which is subject to the Archdiocese of Prague. In Austrian Silesia the Diocese of Breslau includes the Principality of Teschen and the Austrian part of the secularized principalities which belonged to Schleswig-Holstein. In Prussia the diocese also includes the districts of Schwebus-Züllichau and Krosen, as well as the part formerly called Nieder-Leußen. With the exception of the districts of Bütow and Lauenburg, the rest of these principalities, which have been Prussian since 1821, been supervised by delegation from the Prince-Bishop of Breslau. (See BERLIN, BRANDENBURG.)

Including the districts governed by delegation the diocese contains, according to the last census (1 December, 1905), 3,342,221 Catholics; 8,737,746 Protestants; and 204,749 Jews. There are actively employed in the diocese 1,632 secular, and 121 regular priests. The cathedral chapter includes the two桐esses of provost and dean, and has 10 regular, and 6 honorary, canons. The prince-bishopric is divided into 11 commissariates and 99 archpriestates, in which there are 992 cures of various kinds (parishes, curacies, and stations), with 935 parish churches and 633 dependent and mother-churches. Besides the 12 parish churches, the Church of St. Nicholas, the Church of St. John, and the Church of St. Maria Magdalen, all important ecclesiastical buildings, there are 205 parishes, including 73 parishes of the religious orders in the diocese are as follows: Benediktines, 1 house; Dominicans, 1; Franciscans, 8; Jesuits, 3; Piarists, 1; Brothers of
Mercy, 8; Order of St. Camillus of Lellis, 1; Re- 
demiptorists, 1; Congregation of the Society of the 
Divine Word, 1; Alexian Brothers, 1; Poor Brothers 
of St. Francis, 2; Sisters of St. Elizabeth, 6; Magdalen 
Sisters, 1; Ursulines, 6; Sisters of the Good Shep-
heard, 4; Sisters of St. Charles Borromeo, (a) from the 
mother-house at Trebnitz, 181, (b) from the mother-
house at Trier, 5; Servants of the Sacred Heart of 
Jesus, 2; Sisters of Poor Handmaids of Christ, 3; 
Sister-Servants of Mary, 27; German Dominican 
Sisters of St. Catharine of Siena, 11; Sisters of St. 
Francis, 9; Grey Sisters of St. Elizabeth, 169; Sisters 
of St. Hedwig, 9; Sisters of Mary, 27; Poor School-
Sisters of Notre Dame, 15; Vincentian Sisters, 7; 
Sisters of the Holy Cross, 1; Sisters of St. Joseph, 1. 
In the above-mentioned monastic houses for men 
t here are 512 religious; in those for women, 5,928 
religious.

University of Breslau.—The founding of a uni-
versity at Breslau was first debated in 1409, when 
the Czechs made it impossible for the Germans to 
continue their studies at the University of Prague 
and virtually drove them from it. But Leipzig and 
not Breslau obtained the new seat of learning. 
About a century later, under the quickening impulse 
of Humanism, the project was again taken up by the 
city of Breslau in conjunction with the bishop, 
Johann Roth, and his coadjutor, Johann Turzo, 
and a "generale literarum gymnasmium" to contain 
all four faculties was planned. The charter of this 
institution had been signed at Ofen. 20 July, 1508, 
nasium, the higher classes of which corresponded to 
those in the philosophical department of a university 
Theological studies were introduced in 1666. These 
two courses were carried on as in a university, but 
the school had no power to confer degrees. In order 
to obtain the charter necessary for the conferring of 
degrees and for the development of the institution, 
the Jesuit Father Wolf sought, from 1604 on, to 
obtain the consent of Emperor Leopold I to the 
erection of the school into a university. Father 
Wolf was also active in the negotiations between the 
courts of Berlin and Vienna concerning the concess-
ion of the title of King to the Elector Frederick III 
of Brandenburg. The plans Father Wolf sought 
to carry out were far-reaching. He held it a misfor-
tune that Silesians were obliged to go to universities 
outside of Silesia, where Catholics often had no 
opportunity for the exercise of their religion. His 
scheme was a national Silesian university, endowed 
with all the academic privileges, which should be 
open to students irrespective of their religious be-
liefs. This project encountered the opposition of
Protestant prejudice against the Jesuits, and the town council of Breslau prevented the imperial confirmation of the plan for eight years. However, Leopold I signed at Vienna, 21 October, 1702, the charter which provided the school to be of a university and obtained the papal confirmation for the decree.

The new university, called after the emperor, Leopoldina, was opened 15 November, 1702, but the change in name did not alter the internal organisation. The buildings of the old citadel had long been too cramped for the needs of the institution, and it was resolved to erect a large new edifice, the cornerstone of which was laid 6 April, 1728. On account of the war with Frederick the Great of Prussia, and his conquest of Silesia, the plans for the new structure could not be carried out in their entirety. Although efforts were made to open departments of law and medicine, nothing more was attained than unofficial lectures by instructors in these branches. The number of scholars during the first decade of the life of the university continually increased. In 1740, 1,300 students attended the university and gymnasium; the number declined during the first Silesian war then rose again, until the Seven Years War once more reduced it. During this latter conflict the building was used as a hospital and prison, and professors and students were obliged to go elsewhere. Only after the Peace of 1763 was the building restored to its original use. The attendance increased rapidly during the next ten years, but fell off greatly after the suppression of the Society of Jesus. In 1803, when the Leopoldina was made a secular institution, the number of students was about 500.

After the suppression of the Jesuits the king established a Catholic-Schools Institute which included the Jesuits living in Silesia, and in which the candidates for the secular priesthood were to receive their training. The former independence disappeared and the institute and university were made dependent on the Silesian minister. The new institution maintained with difficulty what was already in existence; it was ruled by a spirit of narrow conservatism, and made no attempt to develop its courses or to enter new fields. Besides this, the war was going on and the forces were reduced to the usual branches of learning. During the last decade of its existence the Leopoldina was carried on under the royal ordinance issued 26 July, 1800, in regard to the University of Breslau and the gymnasium. The Catholic system, especially the gymnasium, underwent a reform at this epoch which led to the separation of the gymnasium from the university and the reorganization of the philosophical faculty. These two changes were carried out in 1811.

The founding of the University of Berlin in 1810 made uncertain the future existence of the Protestant university at Frankfurt on the Oder, not far from Berlin. There was also a strong desire in Silesia for a university embracing all faculties, and King Frederick William III gave his consent, 3 August, 1811, to a “plan for uniting the University of Frankfurt with the University of Breslau”. The two universities were to be made one institution in regard to constitution, teaching staff, endowments, property, and income; the philosophical faculties were to form one body. “To satisfy the wishes of Catholic subjects’ two professors of philosophy proper were appointed, one Protestant and one Catholic. The promise of the erection of a Catholic professorship of law was not carried out until 1835, in the reign of Frederick William IV. Outside of these positions religious belief was not to be taken into consideration in appointments to the faculties of philosophy, law, and medicine. Instruction from both Catholic and Protestant professors of theology in the same university was until then unheard of. The plan of union ordained by the king decreed “that the theological department of the combined university should consist of a faculty of divinity, a Catholic theological and a Protestant faculty and a Catholic theological one. These two faculties, of equal rank in other respects, were to alternate in precedence from year to year in the matter of lecture-announcements, on academic questions, and in the public opening of the new university took place 19 October, 1811, the lectures began 21 October. In the second year of the new school patriotism led the great majority of the students to take part in the war against Napoleon called “the War of Liberation”, and many of them died for their country. After peace was concluded the usual life of the university was resumed. In August, 1861, the semi-centennial of the university was celebrated with much pomp. The schools of learning shared in the great development of Germany after the wars of 1866 and 1870, and the University of Breslau received, through the increase of prosperity, many improvements in equipment. The departments of medicine and natural science deserve special mention. The number of students has kept pace with the increase in the number of instructors. When the university was opened, in 1811, there were 35 regular professors, 4 assistant professors, 4 docents, and 8 lecturers and technical teachers; in 1861, at the time of the semi-centennial celebration, there were 41 regular professors, 11 assistant professors, 33 docents, and 12 lecturers and technical teachers; in 1906 there were 73 regular professors, 51 assistant professors, 66 docents, and 15 lecturers and technical teachers. In the first year of the institution there were 298 students; in the fiftieth, 775; and in 1906 the number reached 1,961. Of this last number, 241 attended the lectures of the Catholic theological faculty; 61 the lectures of the Protestant theological faculty; 565 attended the law course; 271, the medical course; 807, the philosophical course.

The German students numbered 1,584; foreign students, 77. Besides matriculated students, permission to attend the lectures was granted to 266 other persons of whom 179 were women.

Joseph Jungnitz.

Bressani, Francesco Giuseppe, an Indian missionary, b. in Rome, 6 May, 1612; d. at Florence, 9 September, 1672. He entered the novitiate of the Society of Jesus, 15 August, 1626 and studied at Rome and Clermont, teaching before his ordination at Sezza, Tivoli, and Paris. He returned to America and was assigned to the spiritual care of the French at Quebec, but in the following year was sent to the Algoinuina at Three Rivers. In April, 1644, on the way to the Huron mission he was captured by the Iroquois and cruelly tortured by them, at intervals, for over two months. He was at length ransomed by the Dutch at Fort Orange, and sent to France, where he arrived in November, 1644. In the following year he was again in Canada and laboured zealously on the Huron mission. In execution of the Iroquois four years later. He continued, however, to minister to the scattered and fugitive Hurons. He was also stationed for a time at Quebec, where he occasionally officiated at the church. In November, 1658, in the Franciscan's falling health, he implored the resources of the mission obliged him to return to Italy, where he spent many years as a preacher and missionary, dying at Florence. Bressani wrote the "Breve Relazione d'alcune Missioni . . . nella Nuova
BRENNANO

Francis" (Macerata, 1553), which was translated into French by Father Martin, S. J. (Montreal, 1852).

Brethren of the Lord, The. — A group of persons closely connected with the Saviour appears repeatedly in the New Testament under the designation "his brethren", or "the brethren of the Lord" (Matt., xii, 46; xiii, 55; Mark, iii, 31, 32; vi, 3; Luke, viii, 19, 20; John, ii, 12; vii, 3, 5; Acts, i, 14; 1 Cor., ix, 5). For example, James, who is mentioned in the parallel texts of Matt., xiii, 55, and Mark, vi, 3 (where "sisters" are also referred to), namely, James (also mentioned Gal., i, 19), Joseph, or Joses, Simon, and Jude; the incidental manner in which these names are given, shows, however, that the list lays no claim to completeness. Two questions in connexion with these "brethren" of the Lord have long been, and are now more than ever, the subject of controversy: (1) The identity of James, Jude, and Simon; (2) The exact nature of the relationship between the Saviour and his "brethren".

(1) James is without doubt the Bishop of Jerusalem (Acts, xii, 17; xv, 13; xxi, 18; Gal., i, 19; ii, 9, 12) and the author of the first Catholic Epistle. His identity with James the Less (Mark, xv, 40) and the Apostle James, the son of Alpheus (Matt., x, 3; Mark, iii, 18), although contested by many Protestant critics, may also be considered as certain. There is no reasonable doubt that in Gal., i, 19: "But other of the apostles [besides Cephas] I saw none, saving James the son of Alpheus, who is called by James, and some of the others of the apostolate. The purpose for which the statement is made, makes it clear that "apostles" is to be taken strictly to designate the Twelve, and its truthfulness demands that the clause, "saving James" be understood to mean, that in addition to Cephas, St. Paul saw another Apostle, "James the brother of the Lord" (cf. Acts, ix, 27). Besides, the prominence and authority of James among the Apostles (Acts, xv, 13; Gal., ii, 9; in the latter text he is even named before Cephas) could have belonged only to one of their number. Now there were only two Apostles named James: James the son of Zebedee, and James the son of Alpheus (Matt., x, 3; Mark, iii, 18; Luke, vi, 16; Acts, i, 13). The former is out of the question, since he was dead at the time of the events to which Acts, xv, 6 sqq., and Gal., ii, 9, 12, refer (cf. Acts, xii, 2). James "the brother of the Lord" is therefore one with James the son of Alpheus, and consequently with James the Less, the identity of these two being generally admitted. Again, on comparing Cephas with Mary the Mother of Christ, it is the same as Mary the mother of the Less and of Joseph, or Joses. As married women are not distinguished by the addition of their father's name, Mary of Clopas must be the wife of Clopas, and not his daughter, as has been maintained. Moreover, the names of her sons and the order in which they are given, no doubt the order of seniority, warrant us in identifying these sons with James and Joseph, or Joses, the "brethren" of the Lord. The existence among the early followers of Christ of two sets of brethren has always been distinct, and in the order of age, is not likely, and cannot be assumed without proof. Once this identity is conceded, the conclusion cannot well be avoided that Cephas and Alpheus are one person, even if the two names are quite distinct; a conclusion which is quite probable, and commonly admitted, that Cephas and Alpheus are merely different transcriptions of the same Aramaic word Halphai. James and Joseph the "brethren" of the Lord are thus the sons of Alpheus. Of Joseph nothing further is known. Jude is the writer of the last of the Catholic Epistles (Jude, i). He is with good reason identified by Catholic commentators with the "Judas Jacobi" ("Jude the brother of James" in the D. V.) of Luke, vi, 16, and Acts, i, 13, otherwise known as Thaddeus (Matt., iii, 18). It is quite in accordance with Greek custom for a man to be distinguished by the addition of his brother's name instead of his father's, when the brother was better known. That such was the case with Jude is inferred from the title, the name of James, which he chose for himself in his Epistle. About Simon nothing certain can be stated. He is identified by most commentators with the Symeon, or Simon, who, according to Hegesippus, was a son of Clopas, and succeeded James as Bishop of Jerusalem. Some identify him with the Apostle Simon the Cananean (Matt., x, 4; Mark, iii, 18), or the Zealot (Luke, vi, 15; Acts, i, 13). The grouping together of James, Jude or Thaddeus, and Simon, after the other Apostles, Judas Iscariot excepted, is a list of the Apostles (Matt., x, 4, 5; Mark, iii, 18; Luke, vi, 16; Acts, i, 13) lends some probability to this view, as it seems to indicate some sort of connexion between the three. Be this as it may, it is certain that at least two of the "brethren" of Christ were among the Apostles. This is clearly implied in 1 Cor., ix, 5: "Have we not the power to carry about a woman, a sister, as well as the rest of the apostles, and the brethren of the Lord, and Cephas?" The mention of Cephas at the end indicates that St. Paul, after speaking of the Apostles in general, calls special attention to the representatives of James as a member of the Apostolic college. The objection that no "brethren" of the Lord could have been members of the Apostolic college, because six months before Christ's death they did not believe in Him (John, vii, 5) is besides an misunderstanding of the term. His "brethren" believed in his miraculous power, and urged him to manifest it to the world. Their unbeliever was therefore relative. It was not a want of belief in His Messiahship, but a false conception of it. They had not yet rid themselves of the Jewish idea of a Messiah who would be a temporal ruler. We meet with this idea among the Apostles as late as the day of the Ascension (Acts, i, 6). In any case the expression "his brethren" does not necessarily include each and every "brother", nor does it mean that the Church was to identify the "brethren" of the Lord. This last remark also sufficiently answers the difficulty in Acts, i, 13, 14, where, it is said, a clear distinction is made between the Apostles and the "brethren" of the Lord.

(2) The texts cited at the beginning of this article show beyond a doubt that there existed a real and near kinship between Jesus and His "brethren". But as "brethren" (or "brother") is applied to stepbrothers as well as to brothers by blood, and in Scripture, and Semitic use generally, is often loosely used, this distinction, as we have seen, (xvi, 13, xliii, 21, 22), the word furnishes no certain indication of the exact nature of the relationship. Some ancient
BRETHREN

768

BREVARI

The Brethren, like Helvidius and the Antidoomarianites, maintained that the "brethren" of Jesus were His uterine brothers the sons of Joseph and Mary. This opinion, held especially in times, in which it is now adopted by most of the Protestant exegetes. On the orthodox side two views have long been current. The majority of the Greek Fathers and Greek writers, influenced, it seems, by the legendary tales of imperial genealogy, considered the marvels of the Lord miracles of St. Joseph by his first marriage. The Latin, on the contrary, with few exceptions (St. Ambrose, St. Hilary, and St. Gregory of Tours among the Fathers), hold that they were the Lord's cousins. That they were not the sons of Joseph and Mary is proved by the following reasons, leaving out of consideration the great antiquity of the belief in the perpetual virginity of Mary. It is highly significant that throughout the New Testament Mary appears as the Mother of Jesus and of Jesus alone. This is the more remarkable as she is repeatedly mentioned in connexion with her supposed sons, and, in some cases at least, it would have been quite natural to call them her sons (cf. Matt., xii, 46; Mark, iii, 31; Luke, viii, 19; Acts, i, 14). Again, Mary's annual pilgrimage (Luke, ii, 41) is incredible, except on the supposition that she bore no other children besides Jesus. Is it likely that she could have made the journey regularly, at a time when the burden of child-bearing and the care of an increasing number of small children (she would be the mother of at least four sons and of several daughters, cf. Matt., xiii, 56) would be pressing heavily upon her? A further proof is the fact that at His death Jesus recommended His mother to St. John. Is not His solicitude for her in His dying hour a sign that she would be left with no one whose duty it would be to care for her? And why recommend her to an outsider if she had other sons? Since there was no stragglement between Him and His "brethren", or between them and Mary, no plausible motive for such an action can be imagined. This argument is confirmed by the words with which He recommends her: τῆς ὧς σοι, with the article before ὧς (son); had there been other sons, τῆς ὧς σοι, without the article, would have been the proper expression.

The decisive proof, however, is that the father and mother of at least two of these "brethren" are known to us. James and Joseph, or Joseis, are, as we have seen, the sons of Alpheus, or Clopas, and of Mary, the sister of Mary the Mother of Jesus, and all descendents of the one, the others are not of the same. This argument dispenses also with the theory that the "brethren" of the Lord were the sons of St. Joseph by a former marriage. They are then neither the brothers nor the step-brothers of the Lord. James, Joseph, and Jude are undoubtedly His cousins. If Simon is the same as the Symeon of Hegesippus, he also is a cousin, since this writer expressly states that he was the son of Clopas the uncle of the Lord, and the latter's cousin. But whether they were cousins on their father's or mother's side, whether cousins by blood or merely by marriage, cannot be determined with certainty. Mary of Clopas is indeed called the "sister" of the Blessed Virgin, (John, xix, 25), but it is uncertain whether "sister" here means a true sister or a step-sister. Hegesippus calls Clopas the brother of St. Joseph. This would favour the view that Mary of Clopas was only the sister-in-law of the Blessed Virgin, unless it be true, as stated in MSS. of the Pesuita version, that Joseph and Clopas married sisters. This would be the case in the other MS. and is more distant than that of the above named four.

The chief objection against the Catholic position is taken from Matt., i, 25: "He [Joseph] knew her not till she brought forth her firstborn son"; and from Luke, ii, 7: "And she brought forth her firstborn son". Hence, it is argued, Mary must have borne other children. "Firstborn" (πρωτος), however, does not always imply thereby children born in time, but that they are born afterwards. This is evident from Luke, ii, 23, and Ex., xiii, 2, 12 (cf. Greek text) to which Luke refers. "Opening the womb" is there given as the equivalent of "firstborn" (πρωτος). An only child was not necessarily a "brethren" than the others are many. Neither do the words "he knew her not till she brought forth" imply, as St. Jerome makes conclusively against Helvidius from parallel examples, that he knew her afterwards. The meaning of both expressions becomes clear, if they are considered in connexion with the virginal birth related by the two Evangelists.

Breton, Raymond, a noted French missionary among the Caribbean Indians, b. at Baune, 3 September, 1869; d. at Cana, 8 January, 1879. He entered the Order of St. Dominic at the age of seventeen and was sent (1627) to the famous priory of St. Jacques, at Paris, to finish his classical education and make his course of philosophy and theology. Having obtained his degree in theology, he sailed with three other Dominicans for the French West Indies (1635). Nearly twenty years were devoted to the Antilles missions. During twelve of these he was on the Island of San Domingo, practically alone with the Indians. The other eight years he was going from island to island, evangelizing the natives in their own tongue, becoming an adept in the various Carib languages. Returning to France in 1654, he devoted much of his time to preparing young priests for the West Indian missions. In this end he wrote: A catechism in the Indian Dialect in Carib (Auxerre, 1664); a French-Carib and Carib-French Dictionary, with copious notes, historical and explanatory, on the Carib language (ibid., 1665); a Carib grammar (ibid., 1667). At the request of the general of the order, he also wrote a valuable history of the first years of the French Dominicans' missionary labours among the Caribbean Indians: "Relatio gestorum a primis Predictorum missionarius in insulis Americae et gallice praeeritam apud Indos indigenas quos Caribes vulgo dicunt ab anno 1634 ad annum 1641" (MSS.). This is considered of great historical importance, and has been used by several writers.

I. Definition. —The word breviary (Lat. brev
BREVARY

769

BREVARY

iarium), signifies its primary acceptance an abridgment, or a compendium. It is often employed in this sense by Christian authors, e.g. Breviarium fidei, Breviarium in psalmos, Breviarium canonum, Breviarium regularem. In liturgical language Breviary has a special meaning, indicating a book furnishing the regulations for the celebration of Mass or for the roundwork of a church, and more specially the titles Breviarium Ecclesiasticis Ordinis, or Breviarium Ecclesiae Romanae (Roman). In the ninth century Alcuin uses the word to designate an office abridged or simplified for the use of the laity. Prudentius of Troyes, about the same period, composed a Breviarium Psalmatali (v. inf. V. Hsewro). In an ancient inventory occurs Breviarium Antiphonarii, meaning "Extracts from the Antiphonary". In the "Vita Aldrici" occurs "sicut in plenaria et breviares Ecclesiae ejusdem continentur." Again, in the inventories in the catalogues, such notes as these may be met with: "Sunt et duo cursus et tres benedictiovales Libri; ex his unus habet obsequium mortuorum et unus Breviarius"; or, "Prater Breviarii quondam quodque usque ad festivitatem S. John Baptistae "Aeternae Memoriae" et anno 1100 Liber de Breviarii about a.D. 1100 obtained a book entitled "Incipit Breviarium sive Ordo Offices per totem annus decurionem".

From such references, and from others of a like nature, Saint Quenel gathers that by the word Breviary was at first designated a book furnishing the rubrics, a sort of Ordo. The title Breviary, as we employ it—that is, a book containing the entire canonical Office—appears to date from the eleventh century.

St. Gregory VII having, indeed, abridged the order of prayers, and having simplified the Liturgy as performed at the Roman Court, this abridgment received the name of Breviary, which was suitable, since, according to the etymology of the word, the word, as an abridgment. The name has been extended to books which contain in one volume, or at least in one work, liturgical books of different kinds, such as the Psalter, the Antiphonary, the Responsoriary, the Lectionary, etc. In this connexion it may be pointed out that in this sense the word, as it is used nowadays, is illogical; it should be named a Plenarium rather than a Breviary, since, liturgically speaking, the word Plenarium exactly designates such books as contain several different compilations united in one corpus. The term Breviary, however, simply to make still clearer the meaning and origin of the word; and section V will furnish a more detailed explanation of the formation of the Breviary.

II. CONTENTS.—The Roman Breviary, which with rare exceptions (certain religious orders, the Ambrosian and Mozarabic Rites, etc.) is used at this day throughout the Latin Church, is divided into four parts according to the seasons of the year: Winter, Spring, Summer, and Autumn. It is constructed of the following elements: (a) the Psalter; (b) the Proper of the Season; (c) Proper of the Saints; (d) the Common; (e) certain special Offices.
(a) The Psalter.—The Psalter is the most ancient and the most venerable portion of the Breviary.
It consists of 150 psalms, divided in a particular way. The general division is not the same as that used in the Bible. It consists as follows: nineteen psalms form the groundwork of the Liturgy of the Jews for twelve centuries before Christ, and He certainly made use of these psalms for His prayers, and quoted them on several occasions. The Apostles followed His example, and the Church from the very first granted this psalm to the psalmist as the chief form of Christian prayer. The Church has carefully preserved them during the lapse of centuries and has never sought to replace them by any other formularies. Attempts have been made from time to time to compose Christian psalms, such as the Gloria in excelsa, the Te Deum, the Lumen Hlare, the Te Deum Laus, and a few others; but those which the Church has retained and adopted are singularly few in number. The rhythmic hymns date from a period later than the fourth and fifth centuries, and at best hold a purely secondary place in the scheme of the Office. Thus the Book of Psalms forms the kernel of the roundwork of Catholic prayer; the lessons which fill so important a place in this prayer are not, after all, prayer properly so called; and the antiphons, responsories, versicles, etc., are but psalms utilised in a particular manner.

In the Breviary, moreover, the Psalter is divided according to a special plan. In the earliest period the use of the Book of Psalms in the Office was doubtless exactly similar to that which prevailed amongst the Jews. The president of the choir chose a particular psalm at his own will. Some psalms, such as xxvi, seem specially appropriate to the Passion. Another was adapted to the Resurrection, a third suited the Ascension, while others again are specially referable to the Office of the Dead. Some psalms provide morning prayers, others those for night. Finally, each of the choirs of the choir of the Minster of the cathedral of the see of the president of the choir. Later, probably from the fourth century, certain psalms began to be grouped together, to respond to the divers requirements of the Liturgy.

Another cause led to these groupings and arrangements of the Psalter. Some monks were in the habit of reciting daily the whole of the 150 psalms. But this form of devotion, apart from lessons and other formularies, occupied so much time that they began to spread the recitation of the Psalter over a whole week. By this method each day was divided into hours, and each hour had its own portion of the Psalter. From this arrangement arose the idea of dividing the Psalter according to specially devised rules. St. Benedict was the one to set himself to this task, in the sixth century. In his Rule he gives minute directions how, at that period, the psalms were to be distributed at the disposition of the abbot; and he himself drew up such an arrangement. Certain psalms were set apart for the right offices, others for Lauds, others for Prime, Terce, Sext, and None, others for Vespers and Compline.

It is a subject of discussion amongst liturgists whether this Benedictine division of the psalms is the Roman psalter or not. Although it may not be possible to prove the point definitely, it would seem that the Roman arrangement is the older of the two, because that drawn up by St. Benedict shows more skill, and would thus seem to be in the nature of a reform of the Roman division. In any case, the Roman arrangement of the Psalter reaches back to a very ancient antiquity, at least to the seventh or eighth century, since when it has not undergone any alteration. The following is its disposition. Psalms i—xxxvii are recited at Matins, twelve a day, but Sunday Matins have six more psalms divided between the three nocturns. Thus:

Sunday—Psalms i, ii, iii, vi—xiv; xv, xvi, xvii; xviii, xix, xx.

Monday—Psalms xxxvi—xxxvii.

Tuesday—Psalms xxxviii—xlii; xliii—lix. lx.

Wednesday—Psalms lii, liv—lii, lxii, lxiv, lxv, lxvi.

Thursday—Psalms lxvi—lxxix.

Friday—Psalms lxxx—lxxviii, xcii, xcv, xcvii.

Saturday—Psalms xcviii—xcvii.

cursory division by weeks, namely, iv, v, xxi—xxxv, xlii, li, lii, lxxi, lxiv, lxxvi, lxxix—xcii, and xcv, are, on account of their special aptitude, reserved for Lauds, Prime, and Compline.

The series, from Ps. cix to Ps. cxvi inclusively, are used at Vespers, five each day, except Psalms cvii, cviii, and cvii. reserved for other hours.
BREVIARY

The last three, cxlviii, cxxix, and cl, which are specially called the psalms of praise (Laudes), because of the word Laudate which forms their leitmotiv, are always used in the morning Office, which thus gets its name of Lauds.

A glance at the above tables will show that, broadly speaking, the Roman Church did not attempt to make any skilful selection of the psalms for daily recitation. She took them in order as they came, except a very few set apart for Lauds, Prime, and Compline, and selected Ps. cxviii for the day hours. Others, as the Ambrose, and the Benedictine, or monastic, have Psalmers drawn up on wholly different lines; but the respective merits of these systems need not be here discussed. The order of the aural Psalter is not followed for the festivals of the year or for the feasts of saints; but the psalms are selected according to their suitableness to the various occasions.

The history of the text of this Psalter is interesting. The most ancient Psalter used in Rome and in Italy was the "Psaltery Vetus", of the Itala version, which seems to have been translated into the Liturgy by Pope St. Damasus (d. 384). He was it who first ordered the revision of the Itala by St. Jerome, in a.p. 383. On this account it has been called the "Psaltery Romanum", and it was used in Italy and as late as the ninth century, still in vogue in St. Peter's at Rome, and many of the texts of our Breviary and Missal still show some variants (Invitatory and Ps. cxv), the antiphons of the Psalter and the responsories of the Proper of the Season, Introits, Graduals, Offertories, and Communions). The Roman Psalter also influences the Mozarab Liturgy, and was used in England in the eighth century. But in Gaul and in other countries north of the Alps, another recension entered into the Psalterium Romanum, under the somewhat misleading title of the "Psaltery Gallicanum"; for this text contained nothing distinctly Gallican, being simply a later correction of the Psalter made by St. Jerome in Palestine, in a.p. 392. This recension diverged more completely than the earlier one from the Itala; and in preparing it St. Jerome had laid Origen's Hexapla under contribution. It would seem that St. Gregory of Tours, in the sixth century, introduced this translation into Gaul, or at any rate he was specially instrumental in no small degree, for it was employed in the Divine psalmody celebrated at the much honoured and frequented tomb of St. Martin of Tours. From that time this text commenced its "triumphant march across Europe". Walfrid Strabo states that the churches of Germany were using it in the eighth century:—"Galli et Germanorum aliqui secundum emendationem quam Hieronymus pater de LXX composeuit Psalterium cantant:" About the same time England gave up the "Psaltery Romanum" for the "Gallicanum". The Anglo-Saxon Psalter already referred to was corrected and altered in the ninth and tenth century, to make it accord with the "Gallicanum". Ireland seems to have followed the Gallican version since the seventh century, as may be gathered from the famous Antiphonary of Bangor. It even penetrated into Italy after the ninth century, thanks to the Frankish influence, and there enjoyed a considerable vogue. After the Council of Trent, St. Pius V extended the use of the "Psaltery Gallicanum" to the whole Church in Italy, and the ancient Roman Psalter. The Ambrosian Church of Milan has also its own recension of the Psalter, a version founded, in the middle of the fourth century, on the Greek.

The Proper of the Season.—This portion of the Breviary contains the Office of the different liturgical seasons. As is well known, these periods are now thus arranged: Advent, Christmastide, Septuagesima, Lent, Holy Week, paschal time, and the time after Pentecost. But only by slow degrees did this division of the liturgical year develop its present form. It must be traced through its various stages. It may indeed be said that originally there was no such thing as a liturgical year. Sunday, the observance of which all of the Eucharistic celebration, is at once the commemoration of the Passion, Death, and Resurrection of Jesus Christ; men spoke of the "Pass of the Crucifixion", of the "Pash of the Resurrection"—τάραξα σταύρωσιν τάραξα αναστάσεως. Every Sunday was a renewal of the paschal festival. It was only on the actual anniversary the feast should be kept with peculiar solemnity, for it was the most solemn Christian feast, and the centre of the liturgical year. Easter drew in its train Pentecost, which was fixed as the fiftieth day after the Resurrection; it was the festival commemorating the Descent of the Holy Ghost on the Apostles. These fifty days made up an unbroken festival, a Jubilee, a time of joy during which there was no fasting and when penitential exercises were suspended. Further, the three days following Easter, which, after various changes, commenced finally forty days before Easter, when its name of Quadragesima. The other rallying-point of the liturgical year is the feast of Christmas, the earliest observance of which is of remote antiquity (the third century at least). Like Easter, Christmas had its time of preparation, called Advent, lasting nowadays four weeks. The remainder of the year had to fit in between these two feasts. From Christmas to Lent three annual feasts were fixed, each of which, under the name of Septuagesima, create a sort of introduction to it, since these three weeks, Septuagesima, Sexagesima, and Quinquaagesima, really belong to Lent by reason of their character of preparation and penance.

The long period between Pentecost and Advent, from May to December, still remains to be dealt with. A certain number of feast days have been inserted into this season as great festivals, as those of St. John the Baptist (24 June), the Holy Apostles Peter and Paul (29 June), St. Lawrence (10 August), and St. Michael (29 September). At a later date these days, which did not fit very conveniently into the general scheme, tended to disappear, and were absorbed into the common time after Pentecost, made up of twenty-four Sundays, thereby uniting Pentecost with Advent; and thus the cycle of the liturgical year is completed.

The Proper of the Season contains, therefore, the Office of all the Sundays and festivals belonging to it, with special lessons, extracts from the Gospels, and frequently also proper antiphons, responsories, and psalms, adapted to the peculiar character of these different periods. It is in the composition of this Liturgy that the Roman Church has displayed her gifts of critical judgment, liturgical taste, and theological acumen. The difference in the character of these periods may be studied in such works as Dom Guéranger's "Liturgical Year".

(1) Proper of the Season.—The first two feast days falling on the Proper of the Season come in the Breviary the Proper of the Saints, that is, to say, that part which contains the lessons, psalms, antiphons, and other liturgical formularies for the feasts of the saints. In reality this Proper commemorates a very large number of saints who find mention in the ecclesiastical Office. But this, however, need not be given here, as it can easily be
consulted. But it may be noted that the greater number of the days of the year—at least nine-tenths—are appropriated to special feasts; and the question has therefore been seriously debated, every time a movement for the reform of the Breviary has arisen, as to whether it should be left to the Diocesan Offices from being overwhelmed by these feasts, and as to how to restore to the ferial Office its rightful ascendancy. This is not the place for the discussion of such a problem; but it may be said that this invasion of the Proper of the Season is not new, and has been sufficiently condemned by such authorities as the "Ancient Syrian Martyrology." "Le calendrier de Philocalus," "Martyrologium Hieronymianum," "Kalendarium Carthaginense." These Calendars contain little more than the following list, beyond the great festivals of the Church:

Exaltation of Holy Cross—14 September.
Presentation of Jesus, or Purification of B. V. M.—2 or 15 February.
Dormition, or Assumption, B. V. M.—15 August.
St. Michael, Archangel—29 September.
St. Elizabeth—11 August.
St. John Baptist—24 June.
St. Stephen, Protomartyr—26 December.
Sts. Peter and Paul—29 June.
Chair of St. Peter (at Antioch)—22 February.
Sts. James the Greater and John, App.—27 or 28 December.
Sts. Philip and James the Less, App.—1 May.
Holy Innocents—23 or 28 December.
St. Sixtus II, Pop. 1—1 August.
Sts. Perpetua and Felicitas, MM.—7 March.
St. Flavian or Fabian—15 May.
St. Lawrence, M.—10 August.
St. Hippolytus, M.—13 August.
St. Cyprian, M.—14 September.
St. Sebastian, M.—20 January.
St. Agnes, V. & M.—23 January.
St. Timothy, M.—22 August.
St. Vincent, M.—22 February.
St. Felicita, M.—22 November.
St. Ursula, M.—17 October, or 20 December, 7 or 29 January, or 1 February.
St. Polycarp, M.—26 February.
Seven Holy Sleepers—variable.
St. Pantaleon—variable.
Under this designation come all the lessons, Gospels, antiphons, responsories, and verses which are not reserved to a special occasion, but may be employed for a whole group of saints. These Commons are those of Apostles, Evangelists, Martyrs, Confessors Pontiffs, Confessors non-Pontiffs, Abbots, Virgins, and Holy Women. To these may be added the Offices of the Dedication of Churches, and of the Blessed Virgin. The Office of the Dead occupies a place apart. It is most difficult to assign an Office to the Office of the Dead. The most ancient seem to belong to the ninth, the eighth, and even the seventh century, and through special formularies may even date still further back. To give one example, the antiphons of the Commemoration of Martyrs in paschal time, "Sancti tui, Domine, forebunt sicut illum, et sicut odor balansarum ante te", "Lux perpetua lucent sancit sanctis tuis, Domine, et aternitas temporum", are taken from the Fourth Book of Easdras (apocryphal), which was rejected almost everywhere about the end of the fourth century. The Offices, therefore, must probably have been borrowed at a period anterior to that date. Probably, also, in the very beginning, the most ancient of these Common Offices were Proper Offices, and in some of them special features supporting this supposition may be noticed. Thus, the Common of Apostles is apparently referable to the Office of St. Peter and Paul and must have been adapted later for all the Apostles. Such verses as the following in the Common of St. Andrew: "Vos antiqui, ut ubi ego sum, illic sit et minister meus", "Si quis mihi ministraverit, honorificabit illum Pater meus", seem to point to a martyr-deacon (bidémos, minister), and may perhaps specially refer to St. Lawrence, on account of the allusion to the work of his Acts: "Quo, acerdo de sancte, sine ministro properat?"

Also, the numerous allusions to a crown or a palm in these same antiphons refer without doubt to the holy martyrs, Stephen, Lawrence, and Vincent, whose names are synonyms for the crown and laurel of victory. The details necessary for the proof of this hypothesis could only be given in a fuller treatise than this; suffice it to say that from the literary standpoint, as from that of archaeology or liturgy, these Offices of the Common contain gems of great artistic beauty, and are of very great interest.

(c) Special Offices.—The Office of the Blessed Virgin, also very ancient in some of its parts, is of great dogmatic importance: but students of this subject are referred to the Rev. E. L. Taunton's "The Little Office of Our Lady.

The Office of the Dead is, without a shadow of doubt, one of the most venerable and ancient portions of the Breviary, and deserves a lengthy study to itself. The Breviaries also contain Offices proper to each diocese, and certain special Offices of modern origin, which, consequently, need not here detain us.

III. THE HOURS.—The prayer of the Breviary is meant to be used daily; each day has its own Office; in fact it would be correct to say that each hour of the day has its own liturgy. Liturgically, the day is divided into hours founded on the ancient Roman divisions of the day, of three hours apiece—Prime, Terce, Sext, None, and Vespers, and the night Vigils. In conformity with this arrangement, the Office is portioned out into the prayers of the night vigils, that is to say Matins and Lauds. Matins itself is subdivided into three nocturns, to correspond with the three watches of the night; nine o'clock at night, midnight, and three o'clock in the morning. The office of Lauds was supposed to be recited at dawn. The day offices corresponded or lasted the following hours: Prime to 6 A.M., Terce to 9 A.M., Sext to midday, None to 3 P.M., Vespers to 6 P.M.—It is necessary to note the words more or less, for these hours were regulated by the solar system, and therefore the length of the prayers varied with the seasons.—The Office of Compline, which falls somewhat outside the above division, and whose origin dates later than the general arrangement, was recited at nightfall. Nor does this division of the hours go back to the first Christian period. So far as can be ascertained, there was no other public or official prayer in the earliest days, outside the Eucharistic service, except the night watches, or vigils, which consisted of the chanting of psalms and of readings from the Holy Scripture, especially from the Gospels and Epistles, and a homily. The offices of Matins and Lauds thus represent, most probably, these watches. It would seem that beyond this there was nothing but private prayer; and at the dawn of Christianity the prayers were said in the Temple, as we read of the Apostles. The hours equivalent to Terce, Sext, None, and Vespers were already known to the Jews as times of prayer and were merely adopted by the Christians. At first meant for private prayer, they became in time public, and the Church was enriched with ascesics, virgins, and monks, by their vocation consecrated to prayer. From that time, i. e. from the end of the third cen-
Breviary, the monastic idea exercised a preponderant influence on the arrangement and formation of the Canonical Office. It is possible to give a fairly exact account of the establishment of these Offices in the second half of the fourth century by means of a document of surpassing importance for the history we are considering, the "De Sanctorum Vesperis" of Bede, written about A.D. 388, by Etheria, a Spanish abbess. This narrative is specifically a description of the Liturgy followed in the Church of Jerusalem at that date.

The Offices of Prime and Compline were devised later, Prime at the end of the fourth century, while Compline is usually attributed to St. Benedict in the sixth century; but it must be acknowledged that, although he may have given it its special form for the West, there existed before his time a prayer for the close of the day corresponding to it.

IV. COMPONENT PARTS OF THE OFFICE.—Each of the hours of the Office in the Roman Liturgy is composed of the same elements: psalms (and now and then canticles), antiphons, responsories, hymns, lessons, prayers, and the collector of the Officium. A few words must be said about each of these elements from the particular point of view of the Breviary.

(a) Psalms and Canticles.—Nothing need be added to what has already been said in section II concerning the psalms, except that they are used in the Breviary sometimes in order of sequence, as in the ferial Offices of Matins and Vespers, sometimes by special selection, independently of the order of the Psalter, as in Prime and Compline and, in general, in the Offices of the Saints and other feasts. Another point to notice in the composition of the Roman Office is that it allows of the inclusion of a certain number of canticles, or songs, drawn from other portions of Holy Writ than the Psalter, but put on the same footing as the psalms. These are: the Canticle of Moses after the passage of the Red Sea (Exodus xv); the Canticle of Moses before his death (Deut. xxxii); the Prayer of Anne the mother of Samuel (I Kings i); the Prayer of Jonas (Jon., ii); the Canticle of Habacuc (Habacuc, iii); the Canticle of Eschias (Is., xxxviii); the Canticle of the Three Children (Dan., iii, 26); The Benedicite (Dan., iii, iii); lastly, the three canticles drawn from the New Testament: the Magnificat, the Benedictus, and the Nunc Dimittis.

This list of canticles coincides more or less with those used in the Greek Church. St. Benedict admits these canticles into his Psalter, specifically stating that he borrows them from the Church of Rome, and thus providing a further argument for the priority of the Roman Office over the monastic.

(b) Antiphons.—The antiphons which are read nowadays in the Breviary are abridged formularies which almost always serve to introduce a psalm or canticle. They consist sometimes of a verse taken from a psalm, sometimes of a sentence selected from the Gospels or Holy Scripture, e. g. "Euge, serve bone, in modico fidels, intra in gaudium Domini tui"; occasionally they consist of phrases not culled from the Bible, but modelled on its style, i. e. they are taken over from a hymn, or the words of the author, for example: "Veni, Sponsa Christi, acipe coronam, quonam tibi Dominus preparavit in eternum". Originally, the meaning of the word, and the function fulfilled by the antiphon, was not what it is now. Although it is difficult to define precisely the origin and present part of the term, it seems that it is derived from antiphonas (ἀντιφόρησις) or from the adjective antiphonas, and that it signified a chant by alternate choirs. The singers or the faithful were divided into two choirs; the first chanted the first verse, the second the second verse, and continued with the second verse, the first followed with the third verse, and so on to the end of the psalm. The antiphonas chant is thus recitation by two choirs alternately. This term has given rise to technical discussions which cannot be here entered into.

(c) Responsories, whose composition is almost the same as that of the antiphon—verse of a psalm, or sometimes of a short passage of Scripture—nevertheless differs from it entirely as to the nature of its use in recitation or chant. The presentor sang or recited a psalm; the prayer or the faithful replied, or repeated either one of the verses or simply the last words of the reciter. This form, like the antiphon, had already been in use among the Jews, and appears even in the construction of certain psalms, as in cxxxv, "Laudate Dominum quomiam bonus", where the refrain, "Quomiam in aeternum miserericordia ejus", which recurs in each verse, certainly corresponds to a responsory.

(d) Hymns.—The term hymn has a less definite meaning than those of antiphon or responsory, and in the primitive liturgies its use is somewhat uncertain. In the Roman Breviary, at each hour, it is the prayer or the prayer of the last part of the Office that is little by little adopted, but usually in verses of different measures, usually very short. This is the hymn. These compositions were originally very numerous. Traces of hymns may be discerned in the New Testament, e. g., in St. Paul's Epistles. The fourth and fifth centuries gave them a great impetus. Prudentius, Sinesius, St. Gregory of Nazianzus, St. Hilary, and St. Ambrose composed a great many. But it was above all in the Middle Ages that this style of composition most developed, and collections of these were made, filling several volumes. The Roman Breviary contains but a moderate number of hymns, forming a real anthology. Some of them are masterpieces of art. It was at a comparatively late date (about the twelfth century) that the Roman Liturgy admitted hymns into its Breviary. In its primitive austerity it had hitherto rejected them, without, however, condemning their employment in other liturgies.

(e) Lessons.—By this term is meant the choice of readings or of extracts in the Breviary, taken either from Holy Writ or from the Acts of the Saints, or from the Fathers of the Church. Their use is in accordance with the ancient Jewish custom, which, in the services of the Synagogues, enjoined that after the chanting of psalms, the Law and the Prophets should be read. The privilege of this service of the Synagogue, and thus brought into being the service of the night watches. But the course of readings was altered; after a lesson from the Old Testament, the Epistles of the Apostles or the Acts were read. In the liturgical practice of the Church of the East, a liturgy was made out to fix what books might be read. Muratori's "Canone" and, still better, the "Decrees of Gelasius" may be studied from this point of view with profit. Later on men were not content to confine themselves to the reading of the holy books; certain Churches wished to read the Acts of the Martyrs. The Church of Africa, which possessed Acts of great value, signalized itself in this respect. Others followed its example. When the Divine Office was more developed, the reading of Holy Scripture, which had become customary to read, after Holy Writ, the commentaries of the Fathers and of other ecclesiastical writers on the passage of the Bible just previously heard. This innovation, which probably began in the third or the fourth century, was taken up by the Divine Office the works of St. Augustine, St. Hilary, St. Athanasius, Origen, and others. To these,
aster, were added those of St. Isidore, St. Gregory the Great, the Venerable Bede, and so on. This new development of the Office gave rise to the compilation of special books. In primitive times the Book of Psalms and the books of the Old Testament sufficed for the Office. Later, books were compiled giving extracts from the Old and New Testaments (Lectionary, Gospel, and Epistle Books) for each day and each feast. Then followed the compilation of the Homiliaries—collections of sermons or of commentaries of the Fathers for use in the Office. All these books should be studied, for they form the constituent elements which later combined into the Breviary.

Further, as regards these lessons, it is well to notice that, as in the case of the psalmody, two lines of selection were followed. The first, that of the order of ferial Offices, ensures the reading of the Scripture, from Genesis to the Apocalypse, in sequence; the second, that of the order for feasts of the saints and festivals, breaks in upon this orderly series of readings and substitutes for them a chapter or a portion of a chapter specially applicable to the feast which is being celebrated.

The canticles recited in the Office are the same as those of the Bible. In its essential features, it goes back to a very venerable antiquity:

Advent—Isaiah, and St. Paul's Epistles.
Christmas, Epiphany—St. Paul, following this verse to Romans, Corinthians, Galatians, Ephesians, Philippians, Colossians, Thessalonians, Timothy, Titus, Philemon, Hebrews.

Septuagesima and Lent—Genesis and the other books of the Pentateuch.

Time after Pentecost—Books of Kings.
Month of August—Proverbs, Ecclesiastes, Book of Wisdom, Ecclesiasticus.
Month of September—Job, Tobias, Judith, Esther.
Month of October—Maccabees.
Month of November—Ezechiel, Daniel, the twelve minor Prophets.

Veritatis and Little Chapters—The Capitulum, or Little Chapter, is really a very short lesson which takes the place of lessons in those hours which have no special ones assigned to them. These are: Lauds, Prime, Terce, Sext, None, Vespers, and Compline.

Breviary copyists,—a few centuries after, the psalmody became much more complicated than the longer ones, and no more need here be said about them. The Veritatis belong to the psalmody, like responsories and antiphons; usually they are taken from a psalm, and belong to the category of liturgical acclamations or shouts of joy. They are usually employed after lessons and little chapters, and often take the place of responsories; they are, in fact, brief responsories. The ferial Psalms and the Litanies probably belong to the category of veritatis.

(9) Versicles and Collects, also called prayers, are not psalmic prayers; they are of a completely different character. Their place in the Breviary changes little; they come towards the end of the Office, after the psalmody, the lessons, little chapters, and antiphons, responsories, and the like, and gather up in a compendious form the supplications of the faithful. Their historical origin is as follows: During the earliest period, the president of the assembly, usually the bishop, was entrusted with the text of the prayers, after the psalms, chants, and litanies, a prayer in the name of all the faithful; he therefore addressed himself directly to God. At first this prayer was an improvisation. The oldest examples are to be found in the Psalter, and in the Epistle of St. Clement of Rome, and in certain Epistles of St. Cyprian. In time, towards the fourth century, collections of prayers were made for those who were not adept in the art of improvisation; these were the first forerunners of Sacramentaries and Orations, which later occupied so important a place in the history of the Liturgy. The Leonine, Galasian, and Gregorian Sacramentaries form the chief sources whence are drawn the collections of the Breviary. It must be observed that they are of great theological importance, and usually sum up the main ideas dominating a feast; hence, in them the significance of a festival is to be sought.

V. History of the Breviary—In the preceding paragraphs, a certain portion of the history of the Breviary, as a choir book at least, has been given. At first, there was no choir book, properly so called; the Bible alone sufficed for all needs, for therein were the psalms for recitation and the books which furnished the various lessons. It is of course most probable that the Psalter is the most ancient choir book; it was published apart to fulfil this special function, but with divisions—marks to indicate the portions to be read; and at the end were copied out the canticles recited in the Office and sometimes, following each psalm, came one or more prayers. A study of manuscript Psalters, which has not as yet been methodically undertaken, would be extremely useful for the Liturgy. Then, little by little, the books of the Old and New Testaments were drawn up to meet the wants of the day—Antiphonaries, Collectaria, etc. In the twelfth century John Beleth, a liturgical author, enumerates the books needed for the due performance of the Office, namely, the Antiphonary, the Old and New Testaments, the Psalterium, Collectarium for the prayers, the Martyrology, etc. Thus, for the recitation of the canonical Office, quite a library was required. Some simplification became imperative, and the pressure of circumstances brought about a condensation of these various books into one. This is the origin of the Breviary. The word and the thing it represents appeared—confusedly, it might be—at the end of the eighth century. Alcuin is the author of an abridgment of the Office for the use of his pupils, which was a kind of breviary for each psalm, on an ancient plan, and some other prayers; but without including lessons or omelia. It might rather be called a Euchology than a Breviary. About the same time Prudentius, Bishop of Troyes, inspired by a similar motive, drew up a Brevarium Psaltri. But we must come down to the eleventh century to meet with a Breviary properly so called. The most ancient manuscript known as containing within one volume the whole of the canonical Office dates from the year 1039; it comes from Monte Cassino, and is preserved in the Mazarin Library. It contains, in addition to other matter which does not concern the present inquiry, the Psalter, canticles, litanies, hymnary, collects, blessings for the lessons, little chapters, antiphons, responsories, and the like, in the form of Offices. Another manuscript, contemporary with the preceding, and also coming from Monte Cassino, contains Propers of the Season and of the Saints, thus serving to complete the first-mentioned one. Similar examples of Breviaries in the twelfth century, still rare and all Benedictine. The history of these origins of the Breviary is still somewhat obscure; and the efforts at research must continue tentatively till a critical study of these manuscript Breviaries has been made on the lines...
of such works as Delisle, Ebner, or Ehrenpreisger, on the Sacramentaries and Missals.
It was under Innocent III (1198-1216) that the use of Breviaries began to spread outside Benedictine circles. At Rome, no longer solely for the Roman Basilicas, but still for the Roman Court alone, Breviaria were drawn up, which, from their sources, were divided into the three main categories:
- Missalia
- Breviaria
- Cistercian books in quibus Officium Ecclesiasticum continetur

These texts of this period (beginning of the thirteenth century) speak of "Missalia, Breviaria, cistercenses libros in quibus Officium Ecclesiasticum continetur," and Raoul de Tignes rightly refers to this Roman Breviary. But this use of the Breviary was still limited, and was a kind of privilege reserved for the Roman Court. A special cause was needed to give the use of this Breviary a greater extension. The Order of Friars Minor, or Franciscans, lately founded, undertook the task of popularizing it. It was not a sedentary order vowed to stability, like those of the Benedictines or Cistercians, or like the Regular Canons, but was an active, missionary, preaching order. It therefore needed an abridged Office, convenient to handle and containing the essentials enough to be carried about by the Friars on their journeys. This order adopted the Breviarium Curie with certain modifications which really constitute, as it were, a second edition of this Breviary. It is somewhat lacking in the Breviary of the Holy Roman Church because it was authorized by that pontiff. One of the chief modifications effected by the Friars Minor was the substitution of the Gallican version of the Psalter for the Roman. The cause was won; this eminently popular and active order spread the use of this Breviary everywhere. Antiphonaries, Psalters, Legendaries, and Responsories disappeared by degrees before the advance of the single book which replaced them all.

Still more, by a kind of jus posthuminis—a challenge—the Franciscan, Nicholas III (1277-80), adopted the Breviary of the Friars not merely for the Curia, but also for the Basilicas; and, as an inevitable consequence, this Breviary was bound, sooner or later, to become that of the Universal Church.

VI. REFORMS OF THE BREVIARY.—In the preceding sections, the history of the ecclesiastical Office has been unfolded from its inception. If this history could be put into few words, though necessarily forming an incomplete statement, it might be said to begin with the first to the tenth century in formation; from the fifth to the eleventh century it was in process of development and expansion; and during the twelfth and thirteenth centuries the Breviary properly so called was emerging into being. From then till now (that is, from the fourteenth century onwards) might be termed the period of reform. The fourteenth and fifteenth centuries represent for the Liturgy, as for the greater number of other ecclesiastical institutions, a period of decline, for it is the time of schisms, and in that one word everything harmful is summed up. The few documents that are available for the liturgical history of that time attest this, as, for example, the "Gesta Benedicti XII" and the "XV Ordo Romanus". Disorder and abuses crept into the Liturgy as into everything else.

Dom Bäumer, in his Histoire du breviaire, repeatedly points out that it is impossible to separate the history of the Liturgy from the occurrence that make up the general history of the Church, and that the abuses which reflect the whole of our period, as they are reflected in the evolution of the Liturgy. It is not surprising, therefore, that the sojourn of the popes at Avignon and the Great Schism have exerted their baneful influence on the history of the Liturgy. And the reaction is still being felt. Raoul de Tongres, who died early in the fifteenth century, was even at that early period a critic and a reformer; in his famous work "De observanti et accipiente," he agitated for some important liturgical reforms. The "XV Ordo Romanus" already referred to, the work of Amelius, sacristan to Urban V and librarian to Gregory XI, breathes the same idea. The abuses pointed out by the different authors at the time might be the cause of the almost complete suppression of the Offices of Sundays and ferials, so that it became impossible that the whole Psalter should be recited every week, and certain psalms were never recited at all. (b) An accumulation of the same day, tending to the destruction of their solemnity and also to the elimination of the Offices of the Season. (c) Substitution for the lessons from Holy Scripture of legends and apocryphal histories and of texts of doubtful value for antiphons, hymns, and responsories. On this subject the "Miscellanea" presented by John de Arco to the Council of Trent should be studied. (d) The introduction of superstitious usages, strange formularies of prayer, and feasts bordering in character on the grotesque of the Humfrey MS, which had its ardent champions even in the Church, as Bembo, Sadoletus, etc., to say nothing of certain popes, caused the idea of a special reform of the Breviary, in the direction of greater literary purity and perfection. The reaction, to bring the Breviary again to its place, and not so far as this, thought the decision of the Breviary barbatic, and wanted to translate it into Cicero-Latin and fanatical Latin. The corrections suggested included such astounding phrases as the following: the forgiveness of sins became: "remissione peccatorum placare"; the Begeting of the Word was to be: "闵erva Jovis capite orta"; the Holy Ghost was: "Aurata Zephyri ecclesiis", etc. These attempts failed; nevertheless, at a later date, under Urban VIII, similar Humanist tendencies came again to the surface and this time asserted their power by an emendation of the hymns. Amongst such attempts may be mentioned that of Ferreri. He was the Bishop of Guarda, was in the Kingdom of Naples, a Humanist, and wrote under the auspices and patronage of Leo X. His version, which has not been preserved, is interesting and contains some very beautiful pieces, polished in style. A good number of them, have, unfortunately, nothing more of the spirit of poetry in them than harmony and rhythm; they are wanting in inspiration and above all in warmth of piety: nearly all are strewed with Pagan names and allusions, representing Christian verities, as "Triforme Numen Olympi" for the Trinity, "Natus Eumolpho Lyricenque Sappho" , "Irruscus Orphiceus" referring to the Blessed Virgin, etc. Ferreri also buried himself with a revision of the Breviary, but nothing was published, and now no trace of the materials he collected is forthcoming. Another attempt at reform, much better known, and having results of far-reaching importance, was that of Quignon, Cardinal of the Blessed Virgin, Strasbourg, who was entrusted by Clement VII with the task of completing the work begun by Ferreri. He was a Franciscan, and had been successfully employed on various commissions. His revision was approved by the most original and liturgical experts, like Guéranger, Edmund Bishop, and Bäumer, have studied his labours in detail. Only the principal points of his scheme can be mentioned here. Considered theoretically, it cannot be denied that his Breviary is drawn up on easy, convenient, and logical lines, and, on the whole,
in solicitously arranged. But in the light of tradition and of liturgical principles the only possible verdict is that Quinones’ Breviary, being constructed on a priori principles, violating most of the liturgical rules, must be condemned. The author starts with the theory, contrary to all tradition, that an essential duty of the Church had been the Office and its private recitation. For private recitation, therefore, all such portions as antiphons, responsories, versicles, little chapters, even hymns may be eliminated, as, according to Quinones, these were only for the public recitation. According to his arrangement, the entire Psalter was to be recited once a week—an excellent idea, in consonance with primitive practice; but it was applied too rigidly and narrowly, for no attention was paid to the suitability of certain psalms to special feasts. Feasts were never changed to the order of the psalms, which were to be recited successively from i to cl.

Every hour had three psalms; and in consequence of this severe regularity, there disappeared the deep and historical motive which gave to each hour its own character. The legends and the hymns underwent drastic, but designed, revision. Another principle, which would be deserving of all praise had it not been applied too rigorously, was that the entire Scriptures should be read through every year without interval. The result was, however, that these two parts of the Breviary—the Psalter—were executed with enthusiasm and objectivity. The legends and the hymns underwent drastic, but designed, revision. Another principle, which would be deserving of all praise had it not been applied too rigorously, was that the entire Scriptures should be read through every year without interval. The result was, however, that these two parts of the Breviary—the Psalter—were executed with enthusiasm and objectivity. Its success may be judged from the number of editions through which it passed. The Sorbonne criticized it severely, and other experts declared against Quinones and attacked his work mercilessly. In the end, opposition proved the stronger, and even popes rejected it. Moreover, it was supplanted by other revisions made on more orthodox liturgical lines, less ambitious in scope, and more in accordance with tradition. The newly founded Congregation of Thumones applied itself to this task with energy and enthusiasm. Caraffa, one of its founders, took a share in the work, and when he became pope under the name of Paul IV (1555-59), he continued his labours, but died before seeing their completion, and it was thus reserved to others to bring them to a successful issue.

The Council of Trent, which effected reforms in so many directions, also took up the idea of revising the Breviary; a commission was appointed concerning which we have no certain information, but it began to make definite inquiries about the subject entrusted to it. The council separated before these preliminaries could be concluded; so it was decided to leave the task of editing a new Breviary in the pope’s own hands. The commission appointed by the council was not dissolved, and continued its investigations. St. Pius V, at the beginning of his pontificate (1566), appointed new members to it and otherwise stimulated its activity, with the result that a Breviary appeared in 1568, prefixed by the famous Bull “Quod a nobis”. The commission had adopted wise and reasonable principles: not to invent a new Breviary and a new Liturgy; to stand by tradition; to keep all that was worth keeping, but at the same time to correct the multitude of errors which had crept into the Breviary; and to weigh just demands and complaints. Following these lines, they corrected the lessons, or legends, of the saints and revised the Calendar; and while respecting ancient liturgical formularies such as the collects, they introduced needful changes in certain details. Most of the makings of the Breviary of 1568 were studied at length in the approved authorities on the history of the Breviary. Here it will be enough to give a short sketch of the chief points affecting this Breviary, as it is substantially the same as that used at present in the Church of Rome.

The Breviary of 1568 was the first in which the liturgical reforms were applied in a practical way. The Liturgy of the Church was revised, and the Breviary was bound to adopt that of Rome. The new Calendar was freed from a large number of feasts, so that the aural Office was once more accorded a chance of occupying a less obscure position than of being only a part of the great cycle of the liturgical year. At the same time the real foundation of the Breviary—the Psalter—was reformed, and the principal alterations made being in the lessons. The legends of the saints were carefully revised, as also the homilies. The work was not only of critical revision, but also of discriminating conservatism, and was received with general approval.

The greater number of the Churches of Italy, France, Spain, Germany, England, and, generally, all the Catholic States, accepted this Breviary, saving only certain districts, as Milan and Toledo, where ancient liturgies were retained. This Pian Breviary (Breviario Pianum), while still retaining the official prayer book of the Universal Church, has undergone certain slight alterations in the course of time, and these must here be noted, as they are of some importance. Special feasts have been added to the Calendar, and the Order of the Hours, which have been added to the Calendar, century by century, even though they occupy a not inconsiderable space in the ecclesiastical disposition of the year. The chiefest and most important changes were made under Sixtus V. At first the text of the versions of the Bible used in the Liturgy was altered. As soon as the revision of the Vulgate undertaken during this pontificate was completed, the new text replaced the old one in all official books, particularly in the Breviary and the Missal. Sixtus V instituted a new Congregation, that of Riformatori, for revising it with a study of the reforms contemplated in the Pian Breviary, which had then been in use more than twenty years. To him is due the honour of this revision of the Breviary, although till lately it had been ascribed to Clement VII (1592-1605). Although the first suggestion came from Sixtus V, nevertheless it was only under Clement VII that the work was really vigorously pushed forward and brought to a conclusion. The revising committee had a number of members such as Baronius, Bellarmine, De la Gronda, and Gavanti. The first two played a most important part in this revision, and the report which he drew up has recently been published. The emendations bore especially on the rubrics: to the Common of Saints was added that of Holy Women not Virgin; the rite of certain feasts was altered; and some new feasts were added. The Bull of Clement VII, “Cum in Ecclesiis”, enjoining the observance of these alterations, is dated 10 May, 1602.

Further changes were made by Urban VIII (1623-44). The commission appointed by him was content to correct the lessons and some of the homilies, in the sense of making the text correspond more closely with the oldest manuscripts. There would therefore be no call to treat of this revision under Urban VIII; but in greater length and in detail it should be regarded as the work of this commission, he effected a still more important reform, over which even now discussion has not ceased to make itself heard. It affected the hymns. Urban VIII, being himself a Humanist, and no mean poet, as witness the hymns of St. Martin and the St. Elizabeth, was desirous in his compositions to show the beauty of the Breviary hymns which it must be admitted are sometimes trivial in style and irregular in their prosody, should be corrected according to grammatical rules and put into true iambic verse. To this end he favored the views of certain Jesuits of distinguished literary attainments. The
corrections made by those purists were so numerous that 962 in all they made a profound alteration in the character of some of the hymns. Although some of them without doubt gained in literary style, nevertheless, to the regret of many, they also lost something of their old charm of simplicity and fervour. At the present date, this revision is condemned, out of the necessity of the moment was felt in the latter half of the eighteenth century, and it is now recognized in France between 1830 and 1840, having for its leader a Benedictine monk, Dom Guéranger, Abbot of Solesmes and an eminent liturgist, who, in his "Institutions liturgiques", arranged the new Breviaries, exposed the mistakes Redoutably their construction, and proved that their authors had acted without warrant. His onslaught with immediate success for in twenty years the greater number of the dioceses gave up their Gallican Breviaries and adopted once more the Roman Liturgy. The exact figures are as follows: in 1791 eighty dioceses had rejected the Roman Liturgy and had fashioned special liturgies for themselves; in 1875 Orleans, the last French diocese which had retained its own liturgy re-entered Roman liturgical unity.

While the French just as the English in the eighteenth century, was letting herself be carried away in the reform of her Breviaries by Gallican and Jansenist leanings, other countries were following in her wake. In Italy, Sulpio Ricci, Bishop of Pistoia, and in Germany, certain districts of Germany adopted the same course, with the result that Breviaries modelled on those of France appeared at Trier, Cologne, Aachen, Münster, and Mainz; and it was long before Germany returned to liturgical unity.

While the Jansenists and Gallicans were creating a new Liturgy, Prosper Lambertini, one of the most learned men in Rome, who became pope under the name of Benedict XIV, determined to copy the example of some of his predecessors, and to carry out a further reform of the Breviary. A congregation was instituted for the special purpose; its papers, for long unedited, have of late years been gone through by MM. Roekovany and Chaillot, each of whom has published considerable portions of them. The first meeting of the congregation was in 1741, and the discussions which took place then and later are of interest from the liturgist's point of view, but need not detain us. Although this project of reform came to nothing, nevertheless the work accomplished by the congregation and by the liturgist's credit on its members, some of whom, like Giorgi, were eminent liturgists. Future workers in this department of learning will have to take account of their collections. After the death of Benedict XIV (4 May, 1758) the labours of this congregation were suspended and were never again seriously resumed. Since Benedict XIV's time changes in the Breviary have been very few, and of minor importance, and can be outlined in a few words. Under Pius VI the question of a reform of the Breviary was brought up once more. By that pontiff's order a scheme was drawn up and presented to the Congregation of Rites, but it was found impossible to overcome the difficulties which surrounded an undertaking of this kind. In 1856 Pius IX appointed a commission for examining the question. Is the present Breviary opportune? But again only preliminary matters engaged their attention. Amongst the Acts of the Vatican Council a series of propositions are to be found, whose object was the simplification or correction of the Breviary. They were never carried beyond that stage. Finally, under Leo XIII, a commission was appointed, at the close of 1902, whose duties were a study of historico-liturgical questions. Its province is a wider one, comprising not only the Breviary, but also the Missal, the Pontifical, and the Ritual. It has, further, to supervise future
Breviary, Aberdeen, The.—This breviary may be described as the Sarum Office in a Scottish form. The use of the ancient Church of Salisbury was generally in vogue for its strict observance of the office during the Middle Ages, both for the Liturgy (or Mass) and for the canonical hours. Its introduction into Scotland has been sometimes incorrectly attributed to Edward I, King of England, and assigned to the year 1277. It is now supposed that the date of its introduction was considerably earlier. For example, Herbert, Bishop of Glasgow from 1147 to 1164, certainly adopted the Sarum Use for his church, and received the papal sanction for so doing. Father Innes, who died in Paris in 1744, asserts that "all the Scots missals or breviaries I ever saw are secundum usum Sarum, local saints being written in it." According to the "Registrum Moravense", the bishop, abbot, or dean and chapter of St. Andrews, on 23 March 1242, approved the Ordo of the Church of Salisbury in the year 1242. The Diocese of Moray was contiguous with that of Aberdeen. The preference shown by the Scots for the Sarum Rite was evidently the outcome of the strong feeling, of which we find constant evidence in the history of the Scottish Church, against anything which seemed like admitting the claim to jurisdiction over her so often put forward by the Church of York. There might, it was no doubt thought, have been some apparent justification for this claim, had the Scottish Church adopted and maintained the Use of York in her liturgy and office.

The Breviary of Aberdeen was mainly the work of the learned and pius William Elphinstone, Bishop of Aberdeen from 1483 to his death in 1514. Not only did he bring together the materials, but in some instances, notably in that of the Scottish saints, he himself composed the lessons. A peculiar feature of this breviary, and one in which it differs from nearly every other, is that in some of the festials of saints the whole of the nine lessons at Matins are concerned with their lives. These legends of the saints of Scotland are of singular interest and considerable historical value, and they have been extensively drawn upon by the Balladists and the later Scottish martyrologists. The accuracy of the quotations and references occurring in the book have been tested and admitted by many modern historians. Although the breviary is in its structure and essentials entirely in uniformity with that of Sarum, it is nevertheless more purely Scottish than to Scot- land, and it was, as we know, intended to supersede all service-books issued in connexion with the famous Church of Salisbury. This fact is quite clear from the royal mandate dated 15 September, 1501, wherein the Aberdeen book is set forth as the "Breviary for general use within the realm of Scotland".

The work was produced from the printing-press which Walter Chapman and Andrew Myllar had set up in Edinburgh, in the year 1507. Four copies of the original breviary were printed, of which one exists; one in Edinburgh University library; a second in the Library of the Faculty of Advocates, Edinburgh; a third in the private library of the Earl of Strathmore; and a fourth (an imperfect copy) in the library of King's College, Aberdeen. The volume was undertaken in 1545, under the supervision of the Rev. William Blew, M.A., and it was subsequently published by Mr. G. J. Toovey, for private circulation among the members of the Bannatyne Club. The originally printed copies are of small octavo size, and bear the dates of 1596 and 1610. As a printed Office-book its actual use was but of short duration, only about half a century elapsing between its issue and the overthrow of the ancient Church of Scotland (1660). There is no positive proof that it was ever commonly used in the dioceses of Scotland; indeed the probabilities are against its ever having become anything like universal at the time of the Reformation. It must be remembered, in connexion with this, that the influence of the Reformation was recognized, and there is some reason to suppose that on this account it was not considered strictly binding by the church authorities of the kingdom. It is interesting to note that in the new Scottish Proprium, which in 1605 was the first to adopt a use in the Scottish dioceses forming the Province of St. Andrews (the cultus of the ancient Scottish saints having been approved by the Holy See several years previously), many collects, antiphons, etc.
are found which have been borrowed from the offices in the Aberdeen Breviary.

D. O. Hunter-Blair.

Brewer, Heinrich, a German historian, b. at Puffendorf in Germany, 8 September, 1640; d. at the age of about 1713. He entered the Gymnasium Tricoronaturn in Cologne and was ordained priest in 1664. For this he was for a time a private tutor at Cologne, then curate of the cathedral at Bonn. He continued his studies while filling these positions and in 1667 was made lecturer on theology at the University of Cologne. From 1669 to 1682 he was rector of a convent of nuns at Cologne, a position which gave him the leisure to carry on his historical studies. In 1682 he became parish priest of the church of St. Jacob at Aachen. After twenty-nine years of fruitful labour he resigned his pastorate in 1712 and returned to his quiet native town. During his residence at Bonn he published, in 1668, a poem of slight poetic value entitled "Cerinum poli Sibilla", an imaginary work, which was: "Historica, notabilium, ubique pane terrarum gestarum enarratio; breviter et succincte pro historic universalis Brachelio-Thuldenana continuatne adornata." (Cologne, 1672-75, two volumes). Shortly after this he published a revised edition of the "Historia Universalis Brachelio-Thuldenana" in eight volumes. Brewer now received the title of Imperial Historiographer. The honour was fitly bestowed, for Brewer was one of the few historians who seek out original sources and make full use of them. He added to each volume copies of important official documents, besides making skilful use of pictures and maps. A much discussed question of the time was the identity of the author of the "Imitation of Christ". Brewer made an independent investigation and tried to prove that Thomas a Kempis was the author in a work entitled: "Thomae a Kempis biographia." (Cologne, 1801). Even from the modern point of view this work is a very creditable one. A publication of less importance and one which is at times strongly marked by local feeling is that entitled: "Der in der Bibel beschriebene und wahrscheinlich grosser Kayser Karl bei gewöhnlicher Eröffnung der Aachenschen Schatzkammer Heyligthumse." (Aachen, 1865).

Brian Boru ofhe (Boru). See Ireland.

Briand, Joseph Olivier, seventh Bishop of Quebec, b. in 1715 at Plerin, Brittany; d. 25 June, 1794. He studied at the Seminary of St. Brieuc, and was ordained in 1739, but left home secretly to follow Bishop Pontbriand to Canada. Briand was a strenuous worker, self-possessed, tactful, and devoted. During the crisis of Quebec (1759), he, as vicar-general, directed the diocesan affairs in the absence of the bishop. He ministered to the dying at the battle of St. Foy (1760), and after the bishop’s death was appointed administrator of the diocese which then included Acadia, Louisiana, and Illinois. During the crisis in New France, when many colonists abandoned the country, Briand foresaw that a change of allegiance was inevitable, and realized the benefit that would accrue to the people of Canada.

When the Treaty of Paris (1763) was signed he counseled the French for the conclusion of the Seven Years’ War and praised General Murray for his humanity towards the conquered. In the midst of the fanaticism which attempted to violate the treaty and hamper religious freedom, Briand appealed to London to maintain the rights of the Church. The British Crown finally gave ear to his demand, and he was consecrated in Paris (1765).

Briand had the second largest diocese in Canada, and was joyfully received by the people and the British governor. The pope also expressed his pleasure and approved Bishop Briand’s past attitude, thereby removing the charges that he had acted with timidity towards Murray and Dorchenden. In the second Session of the Church in Canada, Briand was joyfully received by the people and the British governor. The pope also expressed his pleasure and approved Bishop Briand’s past attitude, thereby removing the charges that he had acted with timidity towards Murray and Dorchenden. The pope also expressed his pleasure and approved Bishop Briand’s past attitude, thereby removing the charges that he had acted with timidity towards Murray and Dorchenden.
favour of persons whose duty to the commonwealth binds them to act for the common good. Thus judges are bound, as servants of the commonwealth, to make no material or inordinate gain for themselves. They are forbidden to take bribes from litigants or others. Similarly, regard for the public good should be the motive which influences those who appoint to public offices, or who have the placing of contracts for works or institutions, or who are entrusted with the execution of the laws, or who elect representatives to seats in the legislature. They should appoint only worthy candidates who will serve the public well. If they neglect the common good, and seek profit from the trusts committed to them, they violate their duty to the commonwealth, and they make themselves accomplices in all the evil which results from the incompetence or the roguery of those whom they elect. The general principle is obvious enough, but in the matter of details difficulties are encountered which cannot all be solved in the same way. An elector may say that as a rule there is very little to choose between the candidates for some public position or office, and that even if there were a difference in their moral character and capacity for public service, it is difficult for the ordinary voter to detect it. Why should he not make a little money by promising to vote for the candidate who is ready to pay the highest price?

It may be that in this hypothesis no injustice is done by taking a bribe and that there is no obligation incurred of making restitution. Still the action is immoral, and rightly forbidden by law. A person who has a vote in the appointment to offices or in the election of representatives is under a serious responsibility to use his vote for the best of his ability. If he takes a bribe he renders himself practically incapable of exercising a discriminating judgment. He is bound to do what he can to make sure that the person for whom he votes is worthy of the post; but if he takes a bribe this blinds him, blunts his judgment, and makes him incapable of doing his duty. Besides, in questions of this kind, we must look at the general result of the action whose moral quality we are studying; the general result of the willingness of voters to sell their vote for money is that powerful and office are put in the hands of that portion of the moneyed class which is least worthy and most selfish.

Those who hold public offices to which patronage or power of any sort is attached are specially bound to use their office for the common good. Each office under the express or tacit condition that they would use their influence for the public benefit, not merely for their private emolument. If they sell the posts, offices, or favours of any kind, in their gift, for money or any lucrative consideration, they violate the express or tacit pledge which they gave on their assumption of office. There is more malice in such actions than in that of the venal elector who sells his vote for money. They also produce more direct and more immediate evils in the commonwealth which is deprived of the best elements of government. The model for many is set by the example of those who have bought or been promised political power or a contract for money will as a rule try to recoup himself at the expense of the public. It is not likely that he will be an honourable or even an honest servant, and the disastrous consequences of his appointment will be the result. Power, influence, and even an external respectability are sometimes given to unscrupulous men whose only recommendation is the possession of the purse. The Duke of Bourbon, and of Anne of France, the Duke's wife, influenced Charles to sign a secret treaty with Sforza, and assured the king of his ability to raise the funds necessary to carry on the war both on land and sea once.

Pope Alexander VI, alarmed at the apparent danger threatening Italy, promised the cardinal's hat to Brionnet if he could prevail upon Charles to abandon his enterprise; but Brionnet, realizing that he could not govern without flattering those in power for condescension, gave up his post, notwithstanding the dilapidated state of the treasury, succeeded in meeting the expenses of the war. Accompanying Charles on his expedition, he provoked a mutiny in the French army, by his treachery in
sacrificing the Pisans, allies of France, to their enemies, the Florentines, and had not hidden himself from the fury of the soldiers that would have taken his life. Upon this occasion, as upon others, Brigonnet's ambition led him into conduct at variance with his motto: *Diligere servanda fides*. Charles had entered Rome as a conqueror, greatly irritated against Albigeois, who had stirred up opposition against him; but the adroit Brigonnet reconciled his royal master with the pope, and for reward received the cardinal's hat. This honour was conferred in a special consistory held in the king's presence, 16 January, 1495, the new cardinal taking the title of Cardinal of St.-Malo, from his episcopal see.

Brigonnet soon had cause to repent the advice he had given to invade Italy. A formidable league was formed for the purpose of cutting off the French retreat, and neither the diplomacy nor the entreaties of the French cardinal had any effect on the hostile generals. The prowess of Charles and the invincible valour of his troops alone saved the French from a humiliating defeat. With 8,000 men the king defeated, at Tornovo, an army of 40,000, and opened a new campaign into Italy. Soon after, a stipulation was induced by a tempting promise of preferment for one of his sons, tried to persuade Charles to break off the peace negotiations and support with an army the Duke of Orléans' claims to the Duchy of Milan. Charles not only rejected the offer, but in a later session of the Chamber of De Comines and sacrificed the interests of the duke, and the king's premature death put an end to the influence of Brigonnet, Louis XII giving his confidence to the Cardinal d'Amboise. But whilst several others had found the spiritual gifts of St.-Malo had not overlooked his own interests; he had obtained from Alexander VI the Bishopric of Nîmes. His title being disputed by the nominee of the chapter, there arose a litigation which lasted until the year 1507, when Brigonnet was awarded the title. In 1497 he had received it in commendam the Bishopric of Toulon, and in the same year succeeded his brother in the archiepiscopal See of Reims. On the 27th of May, 1498, he crowned Louis XII in his cathedral and followed the king to Paris. As a peer of France, he assisted at the sessions of the Council of State at which the marriage of Louis with Jeanne, the daughter of Louis XI, was annulled.

When he had ceased to be a minister of State, Brigonnet retired to Rome for two years. Louis thought it was his time to ascend to the throne of the warrior pope, Julius II. By his king's direction Brigonnet took steps to assemble at Pisa a council of cardinals opposed to the policy of Julius, and bent on the reformation of the head and hierarchy of the Church. He left Rome suddenly and secretly with a group of cardinals whom he had won over, and opened his council at Pisa, but soon transferred it to Milan, and thence to Lyons. He was, however, summoned to appear before the pope, was deprived of the Roman purple and excommunicated. Louis, on his side, bestowed upon him to commendam the rich Abbey of St.-Germain-des-Prés and the government of Languedoc. At the death of Julius II Brigonnet was absolved from all censures and excommunication, and restored by Leo X to the See, but following the papal see, he then played at Narbonne, for which see he had exchanged Reims. He was buried in a superb mausoleum which he had built for himself in the church of Our Lady.

Whilst in power, Brigonnet showed himself a patron of learning, the emulators of his works to him and became his panegyrist. He was called *oraculum regis* et *regni colu*una. His life was in fact swayed by ambition and occupied by intrigues. He composed a manual of Latin prayers, dedicated to Charles VIII. At St.-Malo he issued several synodal instructions.

(2) *Guillaumus*, Bishop of Meaux, France, b. at Tours in 1472; d. at the château of Esmann, near Montreuil, 24 January, 1534. He was a son of Cardinal Brigonnet (see above), and before entering the ecclesiastical state was known as the Count de Montbrun. In 1489 he was named Bishop of Lodève. Distinguished by remarkable judgment, great learning, and a love of art, he was appointed by his brother, Cardinal de Lorraine, several preferments, and was named as chaplain to the Queen. In 1507 he succeeded his father as Abbot of St.-Germain-des-Prés. The king entrusted him with delicate and difficult missions, and sent him, in the same year that the Guillaume became Bishop of Lodève, as extraordinary ambassador for the purpose of justifying the conduct of his prince against the accusations of the Emperor Maximilian. In an eloquent Latin speech pronounced in the presence of the pope and of the Sacred College, the bishop fully vindicated Louis. Guillaume enjoyed equally the confidence of Francis I, who transferred him to the See of Meaux, and sent him as ambassador to Leo X to Rome, where he resided for two years. As Abbot of St.-Germain, he displayed a great zeal for the reform of abuses, but an end to disorder, and revived monastic regularity, spirit, and fervour. As Bishop of Meaux, he held a number of synods, and made wise regulations against the depravity of morals and the relaxation of ecclesiastical discipline, and he tried to bring back to the Catholic Faith the disciples of the new doctrine, who were already numerous in his diocese. He was no less zealous in opposing the encroachments of the religious and in directing them against the spirit of the sects. He finally became a branch of the Franciscan Order, accused the bishop of heresy, basing their accusation on the protection given him by the partisans of Humanism. The bishop defended himself and was declared innocent. His love of letters caused him to constantly enrich the library of the Abbey of St.-Germain. He translated into French the "Contemplations Idiotes de amore divino".

(3) *Robert*, Archbishop of Reims, France, fifth son of Jean Brigonnet, an elder brother of the Cardinal [see (1)]. Date of birth uncertain; d. at Moulinas, 3 June, 1497. He owed to the credit which Guillaume had with Charles VIII his rapid elevation to public offices and dignities. He was named Canon of St.-Aignan at Orléans, Abbot of the rich Abbey of Vassy at Auvergne, and what he obtained from the Archbishop of Reims, four years before the Cardinal was appointed to that see. Charles appointed him President of the Superior Tribunal of Finances, and Chancellor of France. He enjoyed this new dignity for only twenty-two months before his death. He showed himself, as did his brothers and nephews, a patron of men of letters.

F. M. L. DUMONT.
Undismayed, he put on his surplice and went out in the principal streets, ringing a bell, and inviting the people to hear him. He succeeded in bringing an immense multitude to the church which came out of curiosity, but when he began in a most unusual fashion by singing a canticle about the elevation of the congregation burst out in loud laughter; whereupon he opened upon them with such firmness of denunciation that silence and amazement took possession of all. He was characteristically sibylline. He wrote little and gave way to the inspiration of the moment and in consequence his utterances present at times an incoherent jumble of incongruous figures and ideas, which clash with each other and are often even grotesque. It was Cardinal Maury who called attention to his oratory in the sermon on Eternity which was said to be improvised. Father Cahour, S.J., inserts it in his “Chiefs-d’Œuvre d’Eloquence”, and Maury who wrote it from memory declares that it was not unworthy of Bossuet or D’Emothenes. It was pronounced at St.-Sulpice, before an audience in which there were many bishops and ecclesiastics, and is a feat of civil and military life. Braine assures them that in spite of their worldly greatness he is not ashamed by their presence, and in the most impassioned language denounced them as sinners, and bids them, haughty and disdainful as they are, to tremble before him. “To-day I hold your condemnation in my hand.” Opinions are divided about its excellence as an example of oratory; some finding a self-consciousness in it which is unapostolic.

Bridal Ring. See Ring.

Bride-building Brotherhood, Thé.—During the twelfth and thirteenth centuries, we hear of the existence of various religious associations founded for the purpose of building bridges. These works, which tended greatly to the relief of travellers and particularly of pilgrims, was regarded as a work of piety quite as much as of public utility. Even where no religious organization was formed it was customary for the townsmen to give indulgences to those who, by money or labour, contributed to the construction of a bridge. Of this the register of Archbishop Gres of York, for instance, in the thirteenth century, affords many examples. But in the South of France, regular associations were commonly formed for the purpose, and these it has been the custom to regard as religious orders living under vows. Upon more accurate investigation, however, this idea has proved to be erroneous. The brotherhoods in question seem rather to have been of the nature of guilds or confederations, who, at most, to have been organized in something the same way as a “third Order”, wearing a habit with a distinctive badge, but not being bound by perpetual vows. In many cases, these associations were constituted of three branches, knights, who contributed money of the funds and were sometimes called donati; clergy who might be in the strict sense monks, and artisans who performed the actual work of building. We also hear sometimes of “sisters” belonging to the same association. Besides the construction of bridges, these lodges and companies of travellers, as well as the guêtres or collection of alms commonly entered into the scope of the brotherhoods. The origin of these institutions is wrapped in much obscurity. The brotherhood known in particular as the Frères Pontifices (Pontis-fecit = bridge-builders) or Frères Pontifices, is commonly said to have been founded by St. Bénézet (a Provencal variant of the name Benedict), a youth who, according to the legend, was Divinely inspired to build the bridge which still remains at Avignon, and it is certainly St. Bénézet who was a historical personage. The Frères Pontifices were...
certainly very active, and if they did not construct the Avignon bridge they built others at Bonnens, Loumarin, Mallemort, Mirabeau, etc. On the other hand, the famous bridge over the Rhone at Saint-Esprit was certainly constructed by a separate association of the official documents connected with it are still preserved.

Falk in Historisch-Politische Blätter (1881), LXXXVII: 371-373. The contributions of de Falk must be read with some caution. Léménager in Mémoires de l'Académie de Nancy (1889-90), 72-91; Bélart-Badiche, Duchesse de Nantes, her political and her religious career (Paris, 1891); Rousset, Les constructeurs de ponts au moyen âge (Paris, 1875); Gobin, Révolutions politiques et religieuses sur les pouvoirs pontificaux (Paris, 1802); and Furlani, Della famiglia della comunità francese di avignone (Avignon, 1895) are all in the French language. They are useful sources for this period.

HERBERT THORSTON.

Bridge of Sweden (also Birgitta), Saint, the most celebrated saint of the Northern kingdoms, born c. about 1303; d. 23 July, 1373. She was the daughter of Birger Pernason, governor and provincial judge (Lagman) of Uppland, and Ingeborg Bengtson. Her father was one of the wealthiest landlords of the country, and, like her mother, distinguished by deep piety. St. Ingrid, whose death had occurred about twenty years before Bridget’s birth, was a near relative of the family. Birgitta’s mother received a careful religious training, and from her seventh year showed signs of extraordinary religious impressions and illuminations. To her education, and particularly to the influence of an aunt who took the place of Bridget’s mother after the latter’s death (c. 1315), she owed that unsavory strength of will which later distinguished her. In 1318, at the age of thirteen, she was united in marriage to Ulf Gudmarson, who was then eighteen. She acquired great influence over her noble and pious husband, and the happiness and blessedness of their marriage was blessed among them St. Catherine of Sweden. The saintly life and the great charity of Bridget soon made her name known far and wide. She enjoyed intercourse with several learned and pious theologians, among them Nicolaus Hermannus, later Bishop of Linköping, Matthias, canon of Linköping, her confessor, Peter, Prior of Alvastra, and Peter Magister, her confessor after Matthias. She was later at the court of King Magnus Eriksson, over whom she gradually acquired great influence. Early in the forties (1341-43) in company with her husband she made a pilgrimage to Santiago de Compostella. On the return journey her husband was stricken with an attack of illness, but recovered sufficiently to finish the journey. Shortly afterwards, however, he died (1344) in the Cistercian monastery of Alvastra in East Gothland. Bridget now devoted herself entirely to practices of religion and asceticism, and to religious undertakings. The visions which she believed herself to have had from her early childhood now became more frequent and definite. She believed that Christ Himself appeared to her, and she wrote down the revelations she then received, which were in great repute during the Middle Ages. They were translated into Latin by Matthias Magister and Prior Peter. St. Bridget now founded a new religious congregation, the Brightlines, or of Order of St. Saviour, whose chief monastery, at Vadstena, was richly endowed by King Magnus and his queen (1346). To obtain confirmation for her institute, and at the same time to seek a larger sphere of influence, she went, in 1352, to the Holy Land. In 1354, and remained there until her death, except while absent on several pilgrimages, among whom one to the Holy Land in 1373. In August, 1370, Pope Urban V confirmed the Rule of her congregation. Bridget maintained that many of her visions were the result of the removal of the Holy See from Avignon back to Rome. She accomplished the greatest good in Rome, however, by her pious and charitable life, and her earnest admonitions to others to adopt a better life, following out the excellent precedents she had set in her native land. The year following her death her remains were conveyed to the monastery at Vadstena. She was canonized 7 October, 1391, by Boniface IX.

J. P. KIRSCH.

Bridget, Thomas Edward, priest and author, b. at Derby, England, 20 January, 1829, of Protestant parents; d. at St. Mary’s Clapham, 17 February, 1899. He was the son of a manufacturer, and was sent by his father first to Mill Hill, a Congregationalist College near London, then to Tonbridge, a Church of England public school, where he was baptized at the age of sixteen, and finally in October, 1847, to St. John’s College, Cambridge, where he was president of the Home of Blessed John Fisher whose life Father Bridgett afterwards wrote. In 1850, while an undergraduate, he left the university, being unable to accept the oath of Royal Supremacy which was then required before taking a degree. Shortly afterwards, having attended Dr. Newman’s lectures on “Anglican Difficulties” at the London Oratory, he was received into the Catholic Church by the Oratorian, Father Stanlon, 12 June, 1856, and on 15 October of the next year made his religious profession in the Redemptorist novitiate of St. Trond, Belgium. He pursued his theological studies at Witten in Holland and was ordained priest in August, 1858. After being five years minister and consultant to the vice-provincial in Clapham, the London house of his Congregation, he went to Limerick for nine years, where as rector he founded, in 1868, the celebrated Confraternity of the Holy Family for men. This soon consisted of over 5,000 active members, the largest association of its kind in any one locality, in the Church. In 1871, he returned to Clapham as rector, where he spent the greater part of his remaining years.

Father Bridgett was a missionary like all the members of his Congregation, but with advancing years he devoted himself to giving retreats, particularly to the clergy. It was not till 1867 that he turned his thoughts to writing—a sermon on ritual developing in his first book, “In Spirit and in Truth.” This work was called in later editions “The Ritual of the New Testament.” It was followed in 1875 by “Our
Bridgewater Treatises.—These publications derive their origin and their title from the Rev. Francis Henry Egerton, eighth and last Earl of Bridgewater who, dying in the 29th year of his reign, in 1799, left his vast fortune for the benevolent purposes named in his will to invest in the public funds the sum of £8,000, which sum with the accruing dividends was to be held at the disposal of the president, for the time being, of the Royal Society of London, to be paid to him in the event of the death of the Queen. It was further directed that those so selected should be appointed to write, print, and publish one thousand copies of a work: "On the Power, Wisdom, and Goodness of God as manifested in the Creation, illustrating such work by all reasonable arguments, as, for instance, the variety and formation of God's creatures, in the animal, vegetable and mineral kingdoms; the effect of digestion and thereby of conversion; the construction of the hand of man and an infinite variety of other arguments; as also by discoveries ancient and modern in arts, sciences, and the whole extent of modern literature!"

The President of the Royal Society was then the Rev. Davies Gilbert, who, with the advice of the Archbishop of Canterbury, the Bishop of London, and a committee of trustees, was determined that the money should be assigned to eight several persons for as many distinct treatises. The works produced in consequence were the following: (1) "The Adaptation of External Nature to the Moral and Intellectual Nature of Man", by Thomas Chalmers (1833); (2) "Chemistry, Meteorology, and Digestion", by William Prout, M. D. (1834); (3) "History, Habits, and Instincts of Animals", by William Kirby (1835); (4) "The Hand, as Evincing Design", by Sir Charles Bell (1837); (5) "Geology and Mineralogy", by R. B. Proctor (1837); (6) "The Adaptation of External Nature to the Physical Condition of Man", by J. Kidd, M. D. (1837); (7) "Astronomy and General Physics", by Dr. William Whewell (1839); (8) "Animal and Vegetable Physiology", by P. M. Roget, M. D. (1840). The nature of the Treatises is clearly indicated by Lord Bridgewater's instructions, and by their several titles.

The selection of writers was somewhat severely criticized at the time, and the treatises are undoubtedly of unequal merit, but several of them took a high rank in apologetic literature, the best known being probably those by Buckland, Bell, and Whewell. At the present day, however, they are wellnigh forgotten and their value for the purpose they were designed to serve is very small. This partly because the marvellous advances of recent years have made much of their science antiquated and out of date, but still more because of the almost total abandonment of the point of view on which their authors founded arguments to demonstrate the existence of design in nature. It is now generally felt to be an unsatisfactory, or, at least, less satisfactory, method, to argue from particular examples in which analogy can be traced between the mechanism found in nature and that contrived by man to take one specially mentioned by Darwin, in the hinge of a bivalve shell, as though it were in such cases alone that the operation of Mind manifested itself. The best modern apologists insist rather on the note of law and order stamped everywhere upon the universe, inorganic no less than organic, upon the reality and ubiquity of which the validity of all scientific methods wholly depends, while the progress of scientific discovery does but immensely enhance the weight of the argument based upon it. At the same time, it cannot be said that certain type-fitted natural theology of the Treatises is so devoid of value as many modern critics pretend. The marvellous contrivances which we meet everywhere in organic nature remain wholly inexplicable.
by natural selection or other non-intelligent agents in which purpose is not included, and to the ordinary unenlightened mind they bring home, as what may be deemed more philosophical arguments cannot, the truth that here we have direct evidence of a Supreme Artificer.

JOHN GERARD.

Brief. See BULLS AND BRIEFS.

Brieuc (Briocus, Brioc, or Bru), Saint, a Celtic saint of Brittany who received his education in Ireland and then studied under St. Germanus, said to be the famous St. Germanus of Auxerre. Much of what we read concerning his early years must be received with caution; indeed, Ussher asserts that he was of Irish birth, but it is tolerably certain that he returned to France early in 431, bringing with him St. Itud. Even before his ordination to the priesthood, St. Brieuc worked several miracles, duly chronicled in his "Acta" (edited by F. Godfried Herschenn), and after a short period spent with his parents, he entered on his missionary career. In 480, he settled in Armorica, and founded a monastery at Landebeuron. Thence he proceeded to Upper Brittany where he established an oratory at a place ever since known as des-Vaux, between St. Malo and Land Triguer, and of which he was named first bishop. Numerous miracles are cited in the "Acta", especially his cure of Count Riguel, who gave the saint his own palace of Champ-du-Rouvore, as also the whole manorial estates. Authorities differ as to date of St. Brieuc's death, but it was probably in 502, or in the early years of the sixth century. He died in his own monastery at Brieuc-des-Vaux, and was interred in his cathedral church, dedicated to St. Stephen. Baring-Gould says that St. Brieuc is represented as "reading on a dragon", or else "with a column of fire" as seen at his ordination. His relics were translated to the Church of SS. Sergius and Bacchus of Angers, in 865, and again, in a more solemn manner, on 31 July, 1166. However, in 1210, a portion of the relics was restored to St. Brieuc Cathedral, where the saint's ring is also preserved. The festival of St. Brieuc is celebrated on 1st May, but, since 1804, the feast is transferred to the second Sunday after Easter. Churches in England, Ireland, and Scotland are dedicated to this early Celtic saint.

Bairley, Historical Lives of the Saints: Le Bard, Historien de Bretagne; Cremony, Church History of Brittany; Le Grand, De Vita Sancorum Britanniae Antiquae; Lives of the English Saints (1 May); Leland, Itinerary, III; Godfrey, Les Vies des Pères et des Martyrs (1 May); The English Lives of the English Saints, IX; Lichfield, Ecclesiastical History of Ireland, I; Palliser, Brit- tany and its Byways (1869).

W. H. GRATTAN FLOOD.

Brigid, Saint, of Ireland (incorrectly known as BRIDGET), b. in 451 or 452 of princely ancestors at Faughart, near Dundalk, County Louth; d. 1 February, 525, at Kildare. Refusing many good offers of marriage, she became a nun and received the veil from St. Macaire. With seven other virgins she settled for a time at the foot of Croghan Hill, but removed thence to Drum Criadh, in the plains of Magh Life, where under a large oak tree she erected her subsequently famous Convent of Call-Dara that is, "the church of the oak" (now Kildare), in the year 513, of that name. It is exceedingly difficult to reconcile the statements of St. Bridgig's biographers, but the Third, Fourth, and Fifth Lives of the saint are at one in ascribing her a slave mother in the court of her father Dubhtach, an Irish chieftain, and the most probable matter. From the life of St. Brigid is that by St. Broccan Cloen, who is said to have died 17 September, 650. It is metrical, as may be seen from the following specimen:

Ni bu Sanct Bridg suanach
Ni bu hiarach im sheire D6,

Seoch ni chuirir ni coiseana.
Ind n6ib dibadh bethath che.

Saint Brigid was not given to sleep,
Nor was she intermitent about God's love;
Not merely that she did not buy, she did not seek for

The wealth of this world below, the holy one.

Cogitiosus, a monk of Kildare in the eighth century, expounded the metrical life of St. Brigid, and verified it in good Latin. This is what is known as the "Second Life", and is an excellent example of Irish scholarship in the mid-eighth century. Perhaps the most interesting feature of Cogitiosus's work is the description of the Cathedral of Kildare in his day: "Solo spatioe et in altum minaei proceritate porruta ac decorata pictis tabulis, tria intrinsecus habens oratorias ampla, et divisa parietibus tabulis". The roof-screen was formed of wooden boards, lavishly decorated, and with beautifully embroidered curtains. Probably the famous Round Tower of Kildare dates from the sixth century. Although St. Brigid was "veiled", or received, by St. Macaille, at Croghan, yet, it is tolerably certain that she was professed by St. Mcl of Ardagh, who also conferred her abbatial powers. From Ardagh St. Macaille and St. Brigid followed St. Mel into the country of Tuffia in Meath, including portions of Westmeath and Longford. This occurred about the year 488. St. Brigid's small oratory at Cill-Dara became the centre of religion and learning, and developed into a cathedral city. She founded two monastic institutions, one for men, and the other for women, and appointed St. Conleth as spiritual pastor of them. It has been frequently stated that she gave canonical jurisdiction to St. Conleth, Bishop of Kildare, but, as Archbishop Healy points out, she simply "selected the person to whom the Church gave this jurisdiction", and her biographer tells us distinctly that she chose St. Conleth "to govern the church along with herself". Thus, for centuries, Kildare was ruled by a double line of abbot-bishops and of abbesses, the Abbess of Kildare being regarded as superior in general of the convent in Ireland.

Not alone was St. Brigid a patron of students, but she also founded a school of art, including metal-work and illumination, over which St. Conleth presided. From the Kildare scriptorium came the wondrous book of the Gospels, which elicited unbounded praise from Giraldus Cambrensis, but which has disappeared since the Reformation. According to this twelfth-century Welsh ecclesiastic, nothing that he had ever seen was at all comparable to the "Book of Kildare", every page of which was gorgeously illuminated, and he concludes a most
Iaudatory notice by saying that the interlaced work and the harmony of the colours left the impression that "all this is the work of angels, and not human skill". Small wonder that Gerald Barry assumed the book to have been written "after night as St. Brigid prayed, "an angel furnishing the designs, the scribe copying". Even allowing for the exaggerated stories told of St. Brigid by her numerous biographers, it is certain that she ranks as one of the most remarkable Irishwomen of the fifth century and the Patroness of Ireland. She is lovingly called the "Queen of the South: the Mary of the Gael" by a writer in the "Leabhar Breac". St. Brigid died leaving a cathedral city and school that became famous all over Europe. In her honour St. Ultan wrote a hymn commencing:

Christus in nostrâ insula
Que vocatur Hibernia
Ostensus est hominibus
Maximis mirabilibus
Que perfecti per felicem
Celestis vîte virgimn
Precellemtem pro merito
Magnô in mundi circulo.

(In our island of Hibernia Christ was made known by the very great miracles which he very formed through the happy virgin of celestial life, famous for her merits through the whole world.)

The sixth Life of the saint printed by Colgan is attributed to Coelan, an Irish monk of the eighth century, and it derives a peculiar importance from the fact that it is prefaced by a foreword from the pen of St. Donatus, also an Irish monk, who became Bishop of Fiesole in 824. St. Donatus refers to previous lives by St. Ultan and St. Aileran. When dying, St. Brigid was attended by St. Ninnidh, who was afterwards known as "Ninnidh of the Clean Hand" because he had his right hand encased with a metal covering to prevent its ever being defiled, after being the medium of administering the viaticum to Ireland's Patroness. She was interred at the right of the high altar of Kildare Cathedral, and a costly tomb was erected over her. In after years her shrine was an object of veneration for pilgrims, especially on her feast day, 1 February, as Cogitoesus relates. About the year 878, owing to the Scandinavian raids, the relics of St. Brigid were taken to Downpatrick Cathedral, where they were interred in the tomb of St. Patrick and St. Columba. The relics of the three saints were discovered in 1185, and on 9 June of the following year were solemnly translated to a suitable resting place in Downpatrick Cathedral, in presence of Cardinal Vivian, fifteen bishops, and numerous abbots and ecclesiastics. Various Continental breviaries of the pre-Reformation period commemorate St. Brigid, and her name is included in a litany in the Stowe Missal. In Ireland, to-day, after 1500 years, the memory of "the Mary of the Gael" is as dear as ever to the Irish heart, and, as is well known, Brigid preponderates as a female Christian name. Moreover, hundreds of place-names in her honour are to be found all over the country, e.g. Kildare, Brigid, Templebride, Tubberbride, Templebride, etc. The hand of St. Brigid is preserved at Lumiar near Lisbon, Portugal, since 1587, and another relic is at St. Martin's, Cologne.

Viewing the biography of St. Brigid from a critical standpoint we must allow a large margin for the vivid Celtic imagination of the prevailing writers, but still the personality of the founder of Kildare stands out clearly, and we can with tolerable accuracy trace the leading events in her life, by a careful study of the old Lives as found in Colgan. It seems certain that she was born in the memory of Queen Moeev (Medhbh), was the scene of her birth; and Faughart Church was founded by St. Mornens in honour of St. Brigid. The old well of St. Brigid's adjoining the ruined church is of the most venerable antiquity, and still attracts pilgrims; in the immediate vicinity is the ancient mote of Faughart. As to St. Brigid's stay in Connacht, especially in the County Roscommon, there is ample evidence in the "Triae Thaumaturga" or also in the many churches founded by her in the Diocese of Elphin. Her friendship with St. Patrick is attested by the following paragraph from the "Book of Armagh", a precious manuscript of the eighth century, the authenticity of which is beyond question: "Inter sanctum Patritium, Brigidamque Hibernam columnas amicitiae cartasiis inerat tanta, ut unum cor consummata habeant unum. Christus per illum illamque virtutes multas peregit" (Between St. Patrick and St. Brigid, the columns of the Irish; there was so great a friendship of charity that they had but one heart and one mind. Through him and through her Christ performed many miracles.) At Armagh there was a "Templum Brigidis"; namely, the little abbey church known as "Reglis Brigid", which contained some relics of the saint, destroyed in 1179, by William Fitz Aldelm. It may be added that the original manuscript of Cogitoesus's "Life of Brigid", or the "Second Life", dating from the closing years of the eighth century, is now in the Dominican friary at Eichstatt in Bavaria.

Brigitines.—The Brigitine Order (also, Order of St. Saviour) was founded in 1346 by St. Brigit, or Bridget, of Sweden at Vadstena in the Diocese of Linkoping. The saint, who was canonised twenty years after her death, was a Swedish princess renowned for her piety from her childhood; she was given in marriage to Ulf, Prince of Mercia, by whom she had a large family. Ulf died in 1344, and two years later tradition relates that St. Bridget had revealed to her the rule of the new order she was to found at Vadstena. Here with the help of King Magnus she established on her own estate the first monastery for men and women, of which Katharine, her daughter, became the first abbess soon after her death in 1375. At this time double monasteries were not unusual; the monks and nuns used the same chapel, but lived in separate wings of the monastery, the confessor alone having access to the nuns.
Brigitine monasteries the nuns, who were strictly enclosed, attended to the cooking, washing, and making and mending of clothes for the monks as well as for themselves, but everything was passed through a turnstile from one wing to the other. This arrangement, which goes back to medieval times, has long continued.

"In the new order the abbess, who was called the "Sovereign", was supreme in all things temporal for both houses; all deeds were in her name, all charters were addressed to her; but in spiritual things the abbot was allowed to interfere with the rigidity of the monks, who were priests, and the nuns were under the direction of the superior of the monks who was appointed confessor-general. The order was founded principally for women, and for this reason the supreme government was vested in the abbess; the monks were founded to give the nuns the spiritual help they needed. The special interior devotion of the order is to the Passion of Our Lord and to His Blessed Mother."

**RULE OF ST. BRIDGET.**—The Rule enacts "that the number of choir nuns shall not exceed sixty, with four lay sisters; the priests shall be thirteen, according to the number of the thirteen Apostles, of whom Paul the thirteenth was not the least in toil; then there must be four deacons, who also may be priests if they will, and they are the figure of the four principalfigure: Ambrose, Gregory, and Jerome, then eight lay brothers, who with their labours shall minister necessaries to the clerics, therefore counting three-score sisters, thirteen priests, four deacons, and the eight servitors, the number of persons will be the same as the thirteen Apostles and the seventy-two disciples". (The Rule of St. Bridget.)

The nuns were not to be professed before they were eighteen and the monks not before they were twenty-five years of age. The counsel of holy poverty is strictly enjoined by the Rule on all the members of the order, they are forbidden to possess anything, though at the same time they may expect the abbess to supply them with all necessities; one luxury is allowed them, they may have as many books as they like for study. All the cast-off clothing and the surplus of their yearly income, after all has been provided for, are to be given to the poor, and the Rule strictly forbids the abbess to make larger buildings than are necessary.

The Constitutions were first approved by Pope Urban VI., and confirmed by Urban VI., and finally approved by Martin V. In 1603 Pope Clement VIII made certain changes for double monasteries in Flanders, and in 1622 Gregory XV changed certain articles in the Constitutions which refer only to double convents for the Monastery of St. Marie de Foi, in the Diocese of York. These new Constitutions ordained that manual work should be done during certain hours of the day by the members of the order, that a red cross should be worn on the mantle, that the nuns might be professed at the age of sixteen, and that the monks should say the Divine Office according to the Roman Breviary. Those who followed these Constitutions took the name of Brigitines Novissimi of the Order of St. Saviour, to distinguish them from those who lived in double convents.

**BRIDGET OF THE RECOLLECTION.**—The Brigitines of the Recollection were founded at Valladolid in the seventeenth century by Venerable Marina de Escobar, formerly a Carmelite nun, who modified the Rule to suit the Spanish nation and the age in which she lived. The Constitutions were approved by Pope Urban VIII. Like St. Bridget she neither took the habit herself nor did she live to see the first monastery of the order erected. This congregation which has five houses was founded for nuns only; the habit and the office differ slightly from those of the Brigitines.

In all houses of the Brigitine Order prayers are constantly offered for the restoration of the Monastery of Vadstena. This was formerly the great monastery of the order. In 1777, the king of Sweden, who was a fervent supporter of the order, gave the place where kings and queens frequently visited, sometimes took refuge, and were occasionally imprisoned, but which was suppressed and the religious dispersed under Gustavus Vaasa. Nine Brigitine monasteries flourished in this place; but in 1809 the last convent of the order was suppressed. In 1844, a community of the rigtine nuns again lived there. The monastery of Ravenna was likewise suppressed in 1796. In 1846, however, it was re-established. Monasteries were formed in 1857, but in Poland most of the monasteries were preserved till the middle of the sixteenth century, and three new foundations were made. Holland still possesses two Brigitine houses, both of which now take pupils.

At the Reformation most of the double monasteries had to be given up, and the rule as to numbers could no longer be observed, while many of the houses were suppressed altogether. The nuns at Vadstena endured much persecution at this time; the Protestants threatened to tear them to pieces and expelled them from their monastery, but in 1588, King John III became their protector, and restored the monastery to them. In England the Brigitines were in existence in the only of a Reformation order in existence. The celebrated Brigitine Monastery of Sion House was founded in 1415, when Henry V himself laid the foundation-stone on part of the royal manor of Islworth on the Thames. It is supposed that the cause of the extension of the order in England was due to the fact that Henry's sister Philippa was the wife of Eric XIII, King of Sweden. King Henry endowed the monastery richly and transferred the property of certain houses dependent on French monasteries to Sion. At the dissolution of monasteries in 1538, the nuns of Sion, who in the earlier years of his reign had himself been a benefactor of the abbey, the nuns were dispersed and took refuge in a convent of their order at Dendermonde in Flanders. Here they were visited by Cardinal Pole, and through his influence were re-established at Sion under Queen Mary, but they were driven into exile again when Elizabeth came to the throne, and returned to Dendermonde. After several attempts to settle in different parts of Belgium, they went to Rouen where they remained thirteen years, and finally moved to Lisbon where they continued for 267 years. In 1809 an attempt was made to return to England, but it was not till 1861 that the nuns found a home at Spettisbury in Dorsetshire, whence they moved to Chudleigh in Devonshire in 1887, where they are still living. The Brigitine Monastery at Chudleigh, Devonshire, Altmonten in Bavaria, Uden and Weert in Holland; and the five Spanish
houses of the Brigitines of the Recollection: Vala-
dolid founded in 1651, Vitoria founded in 1653,
and Peta and Parades de Nava in 1671, and Asoyuita in
1690.

Brignon, John, b. at Saint Malo in 1629; d. at
Paris, 12 June, 1712. He was a member of the Society of
Jesus and occupied during the sixty-five
years of his religious life chiefly in the translation of
works into French. He was the translator of the
works of De Ponte and Nieremberg, the “Spiritual
Combat”, the “Imitation of Christ”, and the
short treatises of Bellarmino. All these translations
have passed through a number of editions. He
also edited and revised “The Devout Life” of St.
Francis De Sales and the “Foundementes” of Pierre
Surin, S.J. The only English works he translated into
French are the “Decem Rationes” of Blessed Ed-
mund Campion and the “Tractatus de Misericordia
fidelibus defunctis exhibenda” by Father Mumford, S.J.

S. H. FRISBEE.

Briil, Paulus, a brilliant Flemish painter and
engraver, b. at Antwerp, 1558; d. at Lyons, 9 October,
1626. He first studied with Damiens Oertelmaens,
a member of the guild of St. Luke in his native
city. Fired by the news of the success of his brother
Matthys, in Rome, he left his parents secretly and
entered the service of the French. He was imprisoned
in Lyons by lack of funds, and worked there in order
to be able to continue his journey. At Rome he
studied with his brother, but found his best inspira-
tion later in the copies he made of the landscapes of
Titian. With these as a basis he developed a
vigorously and individual style of his own, the mani-
festations of which are said to have led greatly
to the development of landscape art by their influence
on Rubens, Annibale Carracci, and Claude Lorrain.
He assisted his brother in his works at the Vatican,
and on the death of the latter (b. about 1548; d.
1584) he continued his labours. Pope Gregory XIII
gave him his brother’s pension, and confided to him
the work which they had jointly undertaken.

Briil’s principal production in the Vatican is a
landscape in fresco, ascribed to him, by Pope Clement
VIII for the Sala Clementina, in which appears St. Clement, with an anchor
fastened to his neck, being cast into the sea. Briil
worked in the Sistine Chapel, in Santa Maria Mag-
giore, and in the chapel of the Scala Santa in St.
John Lateran. He introduced figures in his land-
scapes with much success, but in some of them
appear compositions of Annibale Carracci. His
“Duck Hunt”, “Diana and Nymphs”, “Fishera-
men”, “Pan and Syrinx”, “St. Jerome in Faverol
and three sleeping landscapes” in the Louvre.
Briil’s “Prodigal Son” is in the Antwerp Museum,
and his “St. Paul in the Desert”, “Boar Hunt”,
and “Triumph of Psyche” in the Uffizi at Florence.
His works appear in number in all the principal
European museums.

AUGUSTUS VAN CLEEF.

Brilhamcher, Peter Michael, b. at Cologne
in 1542; d. at Mainz, 25 August, 1598. He entered the
Society of Jesus in 1558, and studied under Maldon-
atus, in Paris. Later, he returned to Cologne, where
by his diplomatic skill, he rendered invaluable aid to
the German princes in affairs of state. His eloquent
attracted multitudes, thwarted the efforts of the so-
called reformers, and made such deep inroads in their
ranks that they determined upon his death. Inviting
him to a banquet on pretence of debating disputed
doctrines, they mingled poison with his food thus
completing his end.

Brilhamcher took an active part in the controversial
so frequent in his day and was fearless in his attacks
upon heresy. An instance of his alertness in the
detection of heresy is that of the curé of Notre Dame de
Collonges, Stephen Isaac, a Jesuit, who, in
1589, preaching on the Holy Eucharist, advanced ar-
guments which tended to compromise rather than
substantiate the doctrine. Brilhamcher immediately
published his “Controversiarum de Eucharistia Dia-
lecticae tractatus”, in which he advanced all the arguments which
had been brought for and against the Real Presence,
Transubstantiation, etc. In the third of these dia-
logues he so clearly exposed the duplicity of Isaac that
the latter was forced openly to avow his apostasy to
Calvinism. In a public letter to John of Münster,
Isaac vilified the Jesuits and called forth the latter’s
second work, “Detectio Erroris Joannis a Münster”,
followed shortly by another “Excipio Prodomi Cal-
viniens” (1592, in Latin and German) and still later
(1593) by “Epistolae ad Amicum”. The widespread
publication and popularization of these pamphlets
by his adversaries and won back to the Faith many who
had been deceived by the specious arguments of the her-
etics. Brilhamcher’s “Catechismus” first published in
1586, ran through various editions (Latin, German,
and Flemish), and was translated into many other
languages. He also wrote: “Serta Honoris” (various
editions in Latin and German, 1565 to 1713) and two
early publications “De Communione sub altera Specie” and “Commentarium in Aristotelis Logicae”.

T. J. YOUNG.

Brindholm (of Bryndeholme), Edmund, Ven-
erable, martyr and parish priest of Our Lady’s
Church at Calais, accused of being concerned in a plot
to betray Calais to the French. It was said that Sir
Gregory Botolf, chaplain to Lord Lisle, Governor of
Calais, had been to Rome on this business, and had
requested the pope to grant a living in the English
Hospital of St. Thomas to Brindholm, who was about
to go to Rome when he was arrested. There seems,
however, no evidence that he was really concerned in
any plot. He was examined 11 April, 1540, and
was attainted in the Parliament of that year, to-
gether with “Clement Philpott late of Calais, gentle-
man, who have Hinderryde and pasturage”, one of the
Bishop of Rome, and assisted Raynold Poole [Cardi-
nal Pole], an abominable and arrogant traitor, com-
pressing the surprise of the town of Calais”. He
suffered, together with Philpott, the Blessed William
Horne, a Carnabian lay brother, and others, at Ty-
burn, 4 August, 1540.

Brindisi, Diocese of.—Brindisi, called by the
Romans Brundisium or Brundisium, by the Greeks
Brontis, is a city in the province of Lecce, in
Apulia, on a rocky peninsula which extends into
the Adriatic. In ancient times it was very im-
portant as a seaport, being accessible in all winds. In
341 A.D. the Romans with a strong army, having
brought up the Via Appia. In the civil wars between
Cesar and Pompey Brindisi was the base of naval operations.
Brindisi was the birth-
place of the poet Publilius, here also lived Festus,

died to about 20,000. The harbour gradually filled up, which hindered navigation. The Italian Government made great attempts to remedy this, but on account of an error of judgment the beneficial results anticipated were not permanent.

According to a local legend, the first Bishop of Bridle was St. Leucius, about 165, who later underwent martyrdom. However, taking into consideration the geographical position of this city, it is possible that the beginnings of Christianity in Bridle must date back to the first century. There is no historical proof for this except the account given by Arnobius of the fall of Simon Magnus, who according to him withdrew to Bridle and resigned himself from the rock into the sea. The Diocese of Bridle at first embraced the territory comprised within the present Diocese of Orria. In the tenth century, after Bridle had been destroyed by the Saracens, the bishops took up their abode at Orria, on account of its greater security. In 1591, after the death of Bishop Bernardo de Figueiras, Orria was made the seat of a new diocese. In the reorganization of the dioceses of the Kingdom of Naples in 1818 Bridle was combined with the Diocese of Ostuni, formerly its suffragan. Bridle has not been included in the provincial sea of the tenth century. The ancient cathedral was located outside the city, but in 1140 Roger II, King of Sicily and Naples, built the present cathedral in the centre of the city.

The bishops of Bridle worthy of mention are: St. Anselmo (865), who died of a violent death in 920; St. Cyriacus, who died in 364; Andrea, murdered by the Saracens in 979; Ustachio (990), the first to bear the title of archbishop; Guglielmo (1173), author of a life of St. Leucius; Girolamo Arrigoni (1524), a learned humanist, and papal nuncio in Germany in connexion with Luther's Reformation, and later Cardinal; Pietro Carafa, Bishop of Chieti, and afterwards Pope Paul IV, for some time the Apostolic administrator of this diocese; Francesco Aleandro (1542); G. Bovio, from Bologna, who translated the works of St. Gregory of Nyssa, and was prominent in the Council of Trent; Paolo de Vilanaperas (1716), founder of the seminary; Andrea Mazzolana (1724), who restored the cathedral after it had been destroyed by the earthquake in 1714.

This diocese is the wives of Mater Domini, near Mesagne. A beautiful church was erected there in 1805 to replace the ancient rustic chapel. The diocese has a population of 119,907, with 23 parishes, 988 churches, 181 secular and 15 regular clergy, and 64 seminarians. 

Cappellotti, La chiesa d'Italia (Venice, 1844), XXXI, 113-122; Guerzoni, Storia della chiesa metropolitana di Brindisi (Naples, 1846); Annuario Esc. (Rome, 1807), 346-348.

U. Bentigni.

Brindle, Robert. See Nottingham, Diocese of.

Brinkley, Stephen, Confessor of the Faith, imprisoned and tortured as manager of a secret press for the publication of devotional and controversial works in 1743, Queen Elizabeth; b. about 1590, and lost to view after 1685. He was a member of a Catholic association of unattached gentlemen of property, organized by George Gilbert, and solemnly blessed by Gregory XIII, 1580. Their purpose was to raise funds to assist Protestants for the Faith, and, at a time when priests travelled in disguise, without papers of identification, to arrange for introductions which would guard both priests and laity against betrayal. The members undertook to keep themselves and their children in the same state of life, to spend the remainder of their goods in the cause of the Church, and to devote themselves wholly to the salvation of souls and the conversion of heretics. At this time the Jesuit Fathers Robert Parsons and (Blessed) Edmund Campion were preparing for a vigorous propaganda through the press. With the assistance of several of the old Marian priests and of one Brooks, Parsons procured from the elder Jesuits the beneficial results anticipated were not permanent.

The Diocese of Bridle at first embraced the territory comprised within the present Diocese of Orria. In the tenth century, after Bridle had been destroyed by the Saracens, the bishops took up their abode at Orria, on account of its greater security. In 1591, after the death of Bishop Bernardo de Figueiras, Orria was made the seat of a new diocese. In the reorganization of the dioceses of the Kingdom of Naples in 1818 Bridle was combined with the Diocese of Ostuni, formerly its suffragan. Bridle has not been included in the provincial sea of the tenth century. The ancient cathedral was located outside the city, but in 1140 Roger II, King of Sicily and Naples, built the present cathedral in the centre of the city.

The bishops of Bridle worthy of mention are: St. Anselmo (865), who died of a violent death in 920; St. Cyriacus, who died in 364; Andrea, murdered by the Saracens in 979; Ustachio (990), the first to bear the title of archbishop; Guglielmo (1173), author of a life of St. Leucius; Girolamo Arrigoni (1524), a learned humanist, and papal nuncio in Germany in connexion with Luther's Reformation, and later Cardinal; Pietro Carafa, Bishop of Chieti, and afterwards Pope Paul IV, for some time the Apostolic administrator of this diocese; Francesco Aleandro (1542); G. Bovio, from Bologna, who translated the works of St. Gregory of Nyssa, and was prominent in the Council of Trent; Paolo de Vilanaperas (1716), founder of the seminary; Andrea Mazzolana (1724), who restored the cathedral after it had been destroyed by the earthquake in 1714.

In this diocese is the wives of Mater Domini, near Mesagne. A beautiful church was erected there in 1805 to replace the ancient rustic chapel. The diocese has a population of 119,907, with 23 parishes, 988 churches, 181 secular and 15 regular clergy, and 64 seminarians.

of the Society is that no one shall be elected superior for more than three consecutive years, he filled this charge alternately with Louis Tiberge. He was also one of eight of its members who in 1698 composed the rules for its government which are still in force. Madame de Maintenon asked him to become the associate of Bourdaloue and Fénélon, in compiling the regulations for the school of Saint Cyr, which she had just founded. So pleased was she with his wisdom and judgment that she asked him again, in connexion with Bourdaloue and M. Fronsom, superior of Saint Sulpice, to give his opinion on the books of Madame Guyon and upon Quïetism. On this point, however, the director of the Society of the Foreign Missions did not agree with the views of Fénélon. He took a very prominent part in the discussion on Chinese ceremonies. After having asked the advice of Fénélon and Bossuet on this question, Brisacier did not hesitate to declare himself of an opinion different from that of the Jesuits. The Bishop of Meaux, who had already written him three letters on this subject (30 August, 1701; 8 and 22 September, 1701), Brisacier, however, did not wait for these letters to declare himself. On 20 April, 1700, he published a pamphlet entitled "Lettre de MM. des Missions étrangères au Pape, sur les idolâtries et les superstitions des aborigènes, qui sont dans l‘Océanie", in which he directed the next letter MM. Louis Tiberge and Jacques Charles de Brisacier. Brisacier pronounced the funeral orations of the Duchesse d‘Aiguillon and also of Mlle de Bouillon, both benefactresses of the Foreign Missions.

A. FOURNER.

Brissacier, Jean de, controversialist, b. at Blois, France, 9 June, 1592; entered the Society of Jesus in 1616 and d. at Blois, 10 September, 1668. On the completion of his studies he gave himself to preaching for many years, with great zeal and success. Afterwards he was in turn Rector of the colleges of Aix, Blois, and Rouen, Visitor to the province of Portugal, Procurator of the Society for Foreign Missions and Superior of the Professed House in Paris. His love for missionary work was such that shortly before his death, he remarked that he counted as nothing all the years he had not spent in it. Brisacier was an ardent opponent of Jansenism, and never lost an opportunity of combating it. On 23 May, 1651, at Blois, in 1651, he denounced the deceit practised by the Jansenists, particularly in the district around his native town, where the cure of Cour-Cheverny, M. l‘Abbé Callaghan, was very active in promoting the Jansenist cause. In reply to the Jansenists‘ answer to his sermon, he repeated his indictment, and offered proof of it, in a publication entitled "Le janséenisme confondu dans l‘avocat du sieur Callaghan, par le P. Brisacier, avec la défection de son sermon fait à Blois, le 29 Mars, 1651, contre la reponse du Port Royal“. This work was quickly condemned by Jean François de Condé, Archbishop of Paris, because of its personal attacks directed especially against the Jansenistic religious of Port Royal. After this censure the dispute continued for some time, and called forth a long series of pamphlets. As late as 1662, the controversy was kept up by Abbé Pletteau and G. Bordillon.

R. H. TIERNAY.

Brisbane, Archdiocese of, comprises that part of the State of Queensland, Australia, which lies south of the 24th parallel of south latitude. The area is 1,211,869 square miles, and the population is 112,007. Brisbane is the capital of Queensland. The population at the census of 1901 (metropolitan area) was 119,902.

History.—Queensland (known till 1859 as the Moreton Bay District of New South Wales) was first settled in 1825 as a convict station, was visited by Father Therry and abandoned after three years. Permanent colonization began when it was thrown open to free settlers in 1842. In 1843, four Passionist Fathers established a mission for aborigines on Stradbroke Island, but abandoned it for lack of provisions and other causes in 1846. The work of evangelizing the Queensland blacks was afterwards carried on by other missionaries, the most successful of whom were Father Luckie and the late and still more noted apostle of the aboriginals, Father Duncan McNeil. Missionary work among the blacks was, however, hampered to an almost hopeless degree by the bad example, the brutalities, and the communicated vices and diseases of degraded whites. In 1843, a rude shanty, hastily constructed during Dr. Poolding’s visit to Brisbane in that year, was the only building in the Moreton Bay District that stood for a church. There was no school, and the white population of the whole District was only 2,257 souls. Fathers McGinlety and Hanly arrived there in December, 1843. They were, says Cardinal Moran, "the first priests stationed for ordinary missionary work in the Moreton Bay territory". In 1850, the year in which the Moreton Bay District became a separate colony under the name of Queensland, it consisted of only the Diocese of Brisbane. Its first bishop was the Right Rev. James O‘Quinn, who was consecrated in Dublin on the 29th of June, 1850. In 1860 there were only two priests, two churches, two small schools, and 7,676 Catholics, out of a total population of 29,556, in his vast diocese of 666,077 square miles. He arrived in Brisbane, with five priests and six sisters, in 1861, and launched forthwith into the work of organization, carrying on for years and exhausting visitations, in which the bare earth was often his only bed, and sardines and ‘‘damper‘‘ his principal food. With the sanction of the Government, he organized the Queensland Immigration Society, which brought settlers (chiefly Irish Catholics) to the colony. Considerable numbers of these were placed on land granted for the purpose by the Government. Racial and sectarian passions took alarm. A clamour arose that the colony was being inundated with Irish Catholics, and that it would soon deserve to be called, not “Queensland“, but “Quinn’s Land“. The Immigration Society met before the storm and dissolved in 1865, after having enriched Queensland with ten shiploads of picked colonists.

Dr. O’Quinn was a man of ripe intellectual culture and of much foresight and administrative wisdom. He established a Catholic paper, "The Australasian", founded two orphanages and an industrial school, fought strenuously in the matter of church-
school-extension, erected the handsome cathedral of St. Stephen, and created and conserved rich educational and other endowments. State aid was finally withdrawn from all denominational schools with the close of the year 1880; but at his death, 18th August, 1881, there were 52 Catholic primary schools in the diocese, besides inquest, attended by 6,510 children. The Provinciaire of North Queensland was formed out of the Diocese of Brisbane in 1876, and that of Rockhampton in 1882. On the 18th of June, 1882, the Right Reverend Robert Dunne was consecrated Bishop of Brisbane in succession to Dr. O'Quin. By his solid scholarship and his ability as a writer Dr. Dunne rendered important services as secretary to the Plenary Council of Australasia held in Sydney in 1885. At the request of that council, Queensland was in 1887 created a separate ecclesiastical province, with Brisbane as its metropolitan see; and the Provinciaire of North Queensland was erected into the Vicariate-Apostolic of Cooktown. The present stately archiepiscopal residence in Brisbane was built during Dr. Dunne's visit ad limina in 1890, and presented to him on his return. His episcopate has been fruitful in church- and school-extension, and general progress.

Religious Statistics (1907).—Parochial districts, 31; churches, 91; secular clergy, 56; religious brothers, 25; nuns, 186; lay teachers in Catholic schools, 126; seminary 1; boarding schools for girls, 12; for boys, 4; high schools, 6; primary schools, 41; children in Catholic schools, 6,713; industrial school for boys (with printing office), 1; for girls, 1; orphanage, 1; Magdalen asylum, 1; servants' home, 1; total population, about 240,000; Catholic population, about 60,000.

Morgan, History of the Catholic Church in Australasia (Sydney, 1907); The Australian Handbook (Sydney, 1906); Year, of Australasia (Sydney, 1907); Australasian Catholic Directory for 1897 (Sydney, 1907).

HENRY W. CLEARY.

Brischir, JOHANN NEPMUCENUS, church historian, b. at Horb in Württemberg in 1819, studied theology at the University of Tübingen, was appointed parish priest of Bühl near Rottenburg in 1853, where he died in 1897. His principal work is the continuation of Count Leopold Stolberg's "History of the Religion of Jesus Christ" of which he wrote volumes forty-five to fifty-four. His share of the work does not reach the high standard of his great predecessor. He is also the author of a work in two volumes on the controversies between Paolo Sarpi and Pallavicini, and of a monograph on Pope Innocent III. His "Catholic Pulpit Orators of Germany" in five volumes was published in Schaffhausen, in the years 1866–71. He contributed many articles to Herder's "Kirchenlexicon". Kathol. Litteraturkalender (Raisbon, 1897), s. v.; Herder, Conversationsalen, II, s. v.

B. GULDNER.

Bristol (BRISTOLIA, BRISTOLIENSIA), ANCIENT DIocese of.—This English diocese, which takes its very origin from measures directed against the Church, has a very brief Catholic history, for it only had one bishop acknowledged by the Holy See. It was one of the six bishoprics which Henry VIII. acting as head of the Church, attempted to found by Act of Parliament out of the spoils of the suppressed monasteries. This was in 1542, when the dioceses of Durham, Hereford, Lichfield, Oxon., Westminster, Gloucester, Peterborough, and Chester. The fact that the city was then one of the leading towns in England and the chief seaport, explains why it was selected as one of the new sees. Like the others, it possessed an important religious house, the building, of the new purposes. As it was, the new diocese nearly lost its cathedral, for the abbey church of the Augustinian Canons, which had been plundered at the time of the suppression of that house in 1539, was already in process of demolition, when the king's order came arresting the devastation. This house of Augustinians had been founded four hundred years before its dissolution by one Robert Fitzharding, who began to build the abbey at Bristol, that of "St. Augustine's", in 1133. This church, destined to serve hereafter as a cathedral, was of different dates: the old Norman nave built by Fitzharding seems to have stood till the suppression, but the chancel, which still exists, was early fourteenth century, in the late fifteenth. The building as a whole was very worthy to serve as a cathedral. Yet at first Bristol does not seem to have been thought of as a bishopric, for it is not included in the list of projected sees now among the Cottonian MSS. in the British Museum.

It has been suggested that its ultimate selection for this honour was due to Cranmer, who visited Bristol shortly before his election as Archbishop of Canterbury, and busied himself in ecclesiastical affairs there. The first bishop to be appointed was Thomas Notyn, who received the see of Bristol on 21 June 1539, and dedicated the choir of the Augustinian church as cathedral on 11 July 1540. He was succeeded in 1544 by William Foster, who was made Bishop of Exeter. In 1550 the church of the Augustinians was granted to the see, and the church was opened as a hospital to receive poor men. But after a time the archbishop was accused of having sold the convenant property to one John Venables, a merchant of Bristol, and the bishop was suspended by the Council of the Church of England, but was not deposed.

In 1554 a commission passed sentence of deprivation against him, which he anticipated by a voluntary resignation. This was the opportunity for placing the irregularly constituted diocese on a proper canonical footing, and Pope Paul IV empowered Cardinal Pole to re-found the See of Bristol. The first and, as it proved, the only Catholic bishop was John Holyman, a Benedictine monk of great reputation for learning and sanctity, who had been the friend and subject of the martyred Abbot of Reading, Blessed Hugh Cook. As bishop, Dr. Holyman gave general satisfaction, and, though he took part in the trial of Hooper, and served on a commission to try Ridley and Latimer, he took no active part in the trouble. He died in the summer or autumn of 1558, and was thus spared the troublous times that began with the accession of Elizabeth in the following November. He was succeeded in the bishopric by the Anglican, Dr. Richard Chesney (1562–70), who, though suspected of Catholic leanings, was the early friend of Blessed Edmund Campion. But the history of Bristol as a Catholic see ends with the death of Bishop Holyman. The diocese was formed by creating the county and archbishopric of Bristol, including Salisbury, and several parishes from the Diocese

of Gloucester and Worcester, with three churches in Bristol, which had belonged to Bath and Wells. The latter among the latter were deduced was in pale or. The dedication was changed at the dissolution from St. Augustine to the Holy Trinity. HEYLIN, Catalogue of the Bishops (1709, ed.); BYTT and BAYLEY, A History of Gloucester and of Gloucester and of Sir William Petre, who had founded several fellowships there. His great ability would probably have won further promotion for him had not his religious opinions undergone a change, an incident which was given in his biography by the Regius Professor of Divinity, whom he confuted. Two years after his appointment to the fellowship he left Oxford and proceeded to Louvain, where he met William (afterwards Cardinal) Allen. Recognizing his marked talent Allen three months later appointed him the first prefect of studies. He was Allen’s “right hand upon all occasions” acting as rector when he was absent and when the college was transferred (1578) to Reims.

Bristow is best known, however, as an earnest student, a powerful controversial writer, and, with Allen, as one of the revisers of the Douay Bible. His intense labours, while they earned for him the lasting gratitude of Catholics, told upon a constitution naturally weak, and he was obliged to relinquish his work in 1581. In May of the same year he went to Spa, but having obtained no advantage there he was advised, after two months, to return to England. This he did in September, staying until his death (1580) with Mr. Jerome Bellamy, a Catholic of Devon, whose son-in-law had been executed. The Catholic cause lost a zealous champion and a learned advocate. The Douai records speak of him in the highest terms as supplying Allen in prudence, Stapleton in acumen, Campion in eloquence, Wright in theology, and Martin in languages. He wrote:

(1) “A Brief Treatise of Diocese and sure ways to find out the truth in this doubtful and dangerous time of Heresie: containing sundry worthy Motives unto the Catholic faith, or considerations to move a man to beleue the Catholikes and not the Here
tikes.” (Third edition entitled “Motives inducing to the Catholic Faith”);

(2) “Tabula in Summam Theologicam S. Thomae Aquinatis”;

(3) “A Reply to Will. Fulke”;

(4) “Demandes to be proposed of Catholikes to the Heretikes”;

(5) “A Defence of the CatholikeDescripcion”;

(7) “Carmina Diversa”;

(8) “Motiva Omnibus Catholicae Doctrina Orthodoxis Cultoribus necessariar”, the last two being in manuscript.

BRITISH

FRANCIS AVELING.

British Columbia is the westernmost province of the Dominion of Canada. Territorially, it is also the largest, being 357,600 square miles in extent. It is composed of the mainland and islands. Prominent among the islands are Vancouver and Queen Charlotte Islands. The mainland is bounded on the south by the States of Washington and Idaho, on the east by the summits of the Rocky Mountain as far as a point where they meet the line of 120th degree of longitude, thence by that line to the Pacific Coast, passing on the northern limit of the province. On the west it extends as far as the Pacific Ocean, except north of Portland Canal, where a narrow strip of coast land and a group of important islands form a part of Alaska.

PHYSICAL CHARACTERISTICS.—British Columbia has been called a sea of mountains, and this designation is fairly accurate, save perhaps for some forty miles on either side of the Chilcotin River, where are to be found rolling or tolerably level plateaux at least 3,000 feet above the sea and covered with excellent bunch grass. They are more or less open and the remainder of the province might be described as a continuous forest of conifers, interspersed here and there with deciduous trees and doted at long intervals by the Plateau. The mountains of the Cascade or Coast range, a chain of steep and rugged mounts that run parallel to the former. Between these many evidences of ancient physical upheavals lie either fertile valleys or deep, long, and narrow lakes. The latter are found especially in the northern interior. Prominent among them are lakes Babine, which covers an area of some 196,000 acres; Tatla, 152,000; Morice, 148,000; Stuart, 142,000; French, 140,000; Chilco, 109,760; and many others as large. In the south are lakes Kootenay, with an estimated area of 141,120 acres, Okanagan, 89,240, and Harrison, 78,400. Most of these sheets of water give rise to, or are drained by, rivers which in the spring assume generally the nature of torrents. The chief watercourses of the province are the Fraser River, with the Nechako, the Queene, and the Thompson as tributaries; the Skeena, the Nass, and the Stickeen in the north-west; the Finlay and its continuation, the Peace, with their tributary, the Parsnip, in the north-east, while the south-eastern corner is drained by the Thompson.

RESOURCES.—These streams, especially the Fraser and Skeena, are yearly ascended by immense shoals of salmon of the genus oncorhynchus, which are a great source of revenue, while the vast forests of the coast and southern interior, composed mostly of red fir (thuya gigantea, fir (pseudotsuga Douglasii) and various species of spruce, are likewise the objects of remunerative industries. The country’s most valuable treasures are, however, under ground, being found in the shape of minerals of which the following represents the production for 1906: copper, $8,288,565; gold, $5,579,039; lead, $2,667,578; silver, $1,897,320; other materials, $1,000,000. For the same period of time Vancouver Island and parts of the mainland yielded coal and coke to the value of $5,549,044, although the latter are Vancouver and Queen Charlotte same exist on the mainland, which only awaits capital to become productive. As to agriculture, it takes a rather secondary place in British Columbia; yet it is by no means neglected. In the valley of the British Columbia and the Fraser river, and in the interior of the province, groves of wheat and apples, plums, cherries, and smaller fruit grow to perfection. From a climatological standpoint, extremes are to be found within the broad limits of the province. The coast enjoys an almost constantly mild, though wet,
climate, and roses are grown in the open throughout the winter in Vancouver and Victoria. Beyond the Cascades is the dry belt, where irrigation becomes a necessity, while north of the 52nd parallel the winters become more and more severe in proportion to the latitude and the altitude.

Population.—The latest official census (1901) gave the population of the province as 178,657, of whom 33,000 were Catho{i}lics; the entire population cannot be less than 260,000 with perhaps 48,000 Catholics. The capital is Victoria, in the southern extremity of Vancouver Island; population in 1901, 20,816, estimated now at 30,000 including 6,000 Okanagan. The commercial metropolis is Vancouver, at the terminus of the Canadian Pacific Railway on Burrard Inlet. Founded, practically in 1886, it had already 26,103 inhabitants in 1901. At the present time it claims a population of 71,150, some 4,500 of whom are Chinese and 1,900 Japanese. Next in importance are the mainland, New Westminster (about 10,000 inhabitants), Nelson (8,000), Rossel{and} (7,150), and, on Vancouver Island, Nanaimo, a famous coal centre (6,230).

The figures for the total population of the province indicate that it was divided into six very distinct stocks: (1) the Kootenays in the south-eastern corner; (2) the Salish, who are the aborigines of the southern portion of the mainland and the south-eastern coast of Vancouver Island; (3) the Kwak{wi}tu or Waka{shans} on the north of the mainland and the northern and western parts of Vancouver Island; (4) the Haidas on Queen Charlotte Islands; (5) the Tsimsians along the lower course of the Skeena and on the littoral of the mainland as far north as Alaska, and (6) the Déné who range over the entire extent of the northern half of the province east of the Kwakw{wi}tu and the Tsimsians. The Kootenay number but 587, all Catholics, as well as the 2,500 Déné of the north, but the Salish are fully 12,000, of whom about one-tenth are Prot{estant}s, the remainder Catholics. The Tsimsians are partly heathen and partly Prot{estant}s, while the Wakahans and the Haidas, the former especially, have mostly retained their aboriginal faith in shamanistic practices, to the exclusion of any of the sects.

Navigation.—Navigable waterways were the first representatives of our civilization to come in contact with these aborigines. In 1774 it was the Spanish Juan Perez; in 1778 the English Captain Cook; the French Lapérouse came in 1785; Captain Bering in 1787; Marchand, a Frenchman, in 1791; the American Group in 1789; and George Vancouver in 1792. But no settlement resulted from the visits of these mariners, who confined their operations to geographical work and fur trading with the natives. In 1793 Alexander Mackenzie crossed the Rocky Mountains from the east and reached the Pacific overland. The first white settlements were established in the northern interior by members of the Northwest Fur Trading Company: Fort McLeod in 1806; Fort St. James and Fraser in 1808; Fort St. George was established in the Nechako with the Great River the following year. The latter stream was explored to its mouth in 1808 by Simon Fraser, and is now known under his name. Shortly afterwards, other posts were founded and a chain of trading posts in the northern interior, which was long called New Caledonia, and comprised at one time the basin of the Thompson, discovered in 1808 by the astronomer-geographer David Thompson.

The headquarters for the Pacific of the corporation (the Hudson's Bay Company since its absorption of the Northwest Company in 1821) which operated throughout the land were at Fort Vancouver, on the lower Columbia. When it became evident that this would be found to be in American territory, the authorities established (1843) another general dépôt at the southern end of Vancouver Island, which was at first called Fort Camosun, and then Victoria. In 1849, after the entire coast of British America, throughout the district of Cariboo, brought in large numbers of miners to the new post, round which a city of tents and shacks grew (1858) as if by magic. James Douglas (afterwards Sir), a prominent fur trader, was named governor of Vancouver Island as early as 1851. The gold mines opened by a flood of immigrants made it a necessity to erect the mainland into another colony, with him at its head (1858). A year later a capital for the new territory was chosen at a point on the mainland facing the apex of the Fraser delta, resulting in the founding of what is now New Westminster. Finally, after various vicissitudes, chief among which was the Chilotin massacre of 1864, the colonies of British Columbia and Vancouver Island, already united in 1866 under one government at Victoria, were admitted into the Canadian Confederation on the 20th of July, 1871. Under the new regime, the province is governed by a lieutenant governor appointed and paid ($9,000 per annum) by Ottawa, with the help of responsible ministers and an Assembly composed of thirty-four members elected by the people.

Religious History.—From a religious standpoint, the visits of the early navigators made little impression on the native mind. Some missionaries had the greater misfortune to find the mantles worn on ceremonial occasions by the coast Indians made in the cope{s} of the priests that accompanied the Spanish and other ships. These are aboriginal with the natives. However, it is on record that, immediately prior to the advent of the white settlers, the old people among the Kwakwadans had a clear recollection of strangers "clad in black and having a crown of hair round the head, who had come to see the Indians" (Rapp, Sur les Missions de Québec, March, 1835, p. 113). The very first resident of what is now British Columbia (Lamallicie, at Fort McLeod) was a Catholic, and so were the great explorers Simon Fraser, J. M. Quatzen, one of his two lieutenants, and all his French Canadian companions. These and the numerous servants of the trading posts, who were all assigned to the aborigines their first ideas of Christianity. Later on, Father de Smet, S.J., visited the Kootenays, and in 1843 Father J. B. Z. Bolduc accompanied Douglas to Vancouver Island, where he ministered to crowds of wondering Indians. In 1842 Father M. Demersen had made an extended tour through the Fraser tribu{es} and the Salish stock as far as the Okanaganas, the Shuswapas (both of the Salish stock) and the Carriers, a Déné tribe in the north. Four years later, a Jesuit priest, Father Nobili, walked in his footsteps and even went as far as Fort Babine, on the lake of the same name, instead of retracing his steps at Fort St. James, as his predecessors had done.

The year thereafter (1847), Father Demers became the first bishop of the newly founded see of Vancouver Island, now the Archbishopric of Victoria. The influence of his first see of the Oblates of Mary Immaculate already working in Oregon, one of whom, Father L. J. D'Hermozes, was consecrated Bishop of Milletopolis (9 October, 1894) and appointed to the Vicariate Apostolic of British Columbia, which on 2 September, 1896, became the Diocese of New Westminster, on the mainland.

Catholic Establishments.—The chief Catholic institutions of Victoria are a hospital at the capital, together with an academy for girls, a college for boys, and a kindergarten. Lately, all, except the college, have moved into the new Diocese of St. Ann. A protectorate which was started at the same place is now at Quamichan; Nanaimo possesses, in addition to the Catholic school, an orphanage which originated in Victoria. There are schools for
Indian boys and girls at Kuper Island and among the Songhees of Victoria, and the Beneficent Fathers and Sisters conduct Indian schools on the west coast of the Island. On the mainland, identical institutions are to be found at St. Mary's Mission, Nootka, Vancouver, Sechelt, Kamilano, William's Lake, and Kootenay. These schools for the natives are supported, not always adequately, by the Federal Government of Canada. New Westminster, Vancouver, Cranbrook, and Greenwood each boasts of a new or newly-equipped hospital; New Westminster is the seat of St. Louis College, and Vancouver, in addition to a flourishing academy conducted by the Sisters of St. Ann, has a House of Refuge under the care of the Sisters of the Good Shepherd.

The public schools are on the American model and aiding religious institutions through grants or general exemption from taxes is prohibited. By virtue of an Act passed by Parliament after a signal public service rendered by the Sisters of St. Ann, the latter's Academy at Victoria enjoys freedom from such an encumbrance, and Church property may also be more or less favoured in this respect by special legislation on the part of the city councils. The clergy cannot be drafted into a jury or coerced into military service, should the country be at war, they may be allowed to serve if they so wish. Attending the provincial penitentiary and asylum for the insane, there are Catholic and Protestant chaplains paid by the federal authorities. Churches can be incorporated, and are then recognized as eligible for bequests and to acquire and possess property. While divorce in Canada is generally granted only by the Dominion Senate, the Supreme Court of British Columbia has jurisdiction over that issue, because at the time this province entered the Confederation, it was left free to enjoy the privileges it then possessed.

A. G. MORICE.

BRITISH GUIANA. See GUIANA, BRITISH.

BRITAIN, FRANCIS, Orientalist, a monk of Rennes, in Brittany, date of birth and death unknown. He entered the Order and spent the earlier years of his religious life in missionary work in the Levant, where he devoted himself with special zeal to the study of Oriental languages. His proficiency in these tongues soon came to the notice of his superiors, and he was sent to Rome to help the Congregation of the Propaganda in the translation of several important works into Arabic. The first great fruit of his labours in this field was the translation of "L'Abrégé des anales ecclésiastiques de Baronius", continued by Sponde to the year 1646. The work was published at Rome in three volumes quarto, the first of which appeared in 1653, the second in 1655, and the third in 1671. Britain had also much to do with a translation of the Bible into Arabic, giving the Vulgate text in parallel columns, which was published by Mazari, at Rome, in 1671 (3 vols. fol.).

The works of Britain are now exceedingly rare, as practically the entire edition of both translations was sent to the East for use in the work of the missions. Biogr. Univ., V, 629.

J. J. GEOGHAN.

BRITAIN, THOMAS LEWIS, b. near Chester, Eng., 1744; d. at Hartpury Court, 1827. His parents were Protestants, but at the age of sixteen Thomas became a Catholic. Sent in 1766 to the Jesuits of Shorton to pursue his studies, and later joined the Dominicans at Bornheim, where he made his profession 22 October, 1767. His studies were continued at Louvain, and subsequently he taught with marked success at Bornheim, where he was made regent of studies. In 1790 the doctor's cap, with title of Master of Sacred Theology, was conferred on him. The same year he was made Prior of the Dominicans of Bornheim, and in 1804 he became director of the exiled English Dominican nuns, an office he held for thirty-seven years. In 1794, when the French army was expected at Brussels, Father Britain conducted the sisters to Bornheim, whence, joined by eighteen Dominican fathers, they were conducted by an American captain to England. Father Britain secured a foundation for the sisters at Hartpury Court near Gloucester. On 3 May, 1814, he was elected provincial of the Dominicans, and during his four years of office gained the respect and confidence of his brethren. He operates the author of the following works: "Rudiments of English Grammar" (London, 1790), considered authoritative in its day, and highly commended by Walker, the lexicographer; "Principles of the Christian Religion and Catholic Faith Investigated" (London, 1790); "Collection of Poems Occasionally Written" (Cheltenham, 1822); "The Divinity of Jesus Christ and Beauties of His Gospels" (London, 1822); some unpublished MSS. are in the archives of the English Province.

JOHN T. McNICOLAS.

BRITON (or BRETON), JOHN, VENERABLE, layman and martyr, of an ancient family of Britton near Barnaley in Yorkshire. An ardent Catholic, he was often separated from his wife and family, owing to constant persecution which he suffered for his faith. When advanced in years, he was maliciously and falsely accused of traitorous speeches against the queen and condemned to death. Refusing to renounce his faith he was executed at York, as in cases of high treason, 1 April, 1508. He was probably the father of Dr. Matthew Britton, prefect and professor at Douai in 1599.

BEDE CAMM.

BRIXEN, DIOCESE OF, a Prince-Bishopric of Austria, suffragan of Salzburg, embracing the greater part of Northern Tyrol (with the exception of the part east of the Zillerbacht, which belongs to Salzburg), as well as all Vorarlberg, and containing c. 6,700 square miles, and over 440,000 inhabitants. The hierarchy of the Diocese of Brixen is the continuation of that of Siben (Sabiona), which, according to legend, was founded by St. Cassian. As early as the third century Christianity penetrated Sabiona, at that time a Roman custom station of considerable commercial importance. The first Bishop of Sabien vouchcd for by history is Ingeniun, mentioned about 380, who appears as suffragan of the Patriarch of Aquileia. The tribes who pushed into the territory of the present Diocese of Brixen, during the great migratory movements, the Langobards, the Bavarians, and the Slavs of the Puster valley (Pustertal) persisted in paganism until the eighth century. In the second half of the tenth century Bishop Rihpert (appointed 967) or Bishop Abunian I (967–1005) had the seat of the diocese, which since 768 has been under the Metropolitán of Salzburg, transferred to Brixen. Bishop Hartwig (1020–39) raised Brixen to the rank of a city, and surrounded it with fortifications. The diocese received many grants from the German Emperors; the City of Brixen, as City of Brixen, took its name from the term "Brixen," often used by the Emperor Henry IV in 1091 the Pustertal. In 1179 Frederick I conferred on the bishop the title and dignity of a prince of the German Empire. Thie
accounts for the fact that during the difficulties between the papacy and the empire, the Bishops of Brixen generally took the part of the emperors; particularly notorious is the case of Altwin, during which in 1049-91, who it is said was poisoned. The synod of 1080 was held in Brixen, at which thirty bishops, partisans of the emperor, declared Pope Gregory VII deposed, and set up as antipope the Bishop of Ravenna.

The temporal power of the diocese soon suffered a marked diminution through the action of the bishops themselves who bestowed large sections of their territory in fief on temporal lords, as for example, in the eleventh century countships in the Inntal and the Eisacktal granted to the Counts of Tyrol, and in 1166 territory in the Inntal and the Furstental to the Counts of Andechs-Meran. The Counts of Tyrol, in particular, who had fallen heir in large part to the territories of the Count of Meran, constantly grew in power; Bishop Bruno (1249-88) had difficulty in asserting his authority over a section of his territory against the claims of Count Meinhard of Tyrol. Likewise Duke Frederick IV, who was called the Penniless, compelled the Bishops of Brixen to acknowledge his authority. The dissensions between Count Palatine of Cusa (1420-39), who sent Pope Nicholas V Bishop of Brixen, and Archduke Sigismund were also unfortunate; the cardinal was made a prisoner, and although the pope placed the diocese under an interdict, Sigismund came out victor in the end.

The Reformation was proclaimed in the Diocese of Brixen during the episcopate of Christoph I von Schrofenstein (1509-21) by German emissaries, like Strauss, Urban Reglitz, and others. In 1525, under Bishop Georg of Austria (1525-39), a peasants’ uprising broke out, in the victory of Brixen, and several monasteries and strongholds were destroyed. The promise of King Ferdinand I, civil ruler of Tyrol, to redress the grievances of the peasants restored tranquillity, and at a diet held at Innsbruck, the most important demands of the peasants were acceded to. Although in 1532 these promises were withdrawn, peace remained undisturbed. Ferdinand I and his son Archduke Ferdinand II, in particular, as civil rulers took active measures against the adherents of the Reformation, chiefly the Franciscans, who had been secretly propagating their sect; thus they preserved religious unity in the district of Tyrol and the Diocese of Brixen. At this time important services were rendered in safeguarding the Catholic Faith by Giuseppe Cessi, Casa, Franciscans, Servites, Chiassoni, the bishops of the period were: Cardinal Andreas of Austria (1591-1600), and Christoph von Spaur (1601-13), who in 1607 founded a seminary for theological students, enlarged the cathedral school, and distinguished himself as a great benefactor of the poor and sick. The seventeenth and eighteenth centuries saw a great reawakening of religious life in the Diocese of Brixen; many monasteries were founded, new missions for the cure of souls established, and the religious institutions of the people greatly promoted, who had been secretly propagating their sect; thus they preserved religious unity in the district of Tyrol and the Diocese of Brixen.

Religious congregations of men possess 44 houses, and in 1907 numbered about 1,213 members, including 594 priests, 185 clerics, 348 lay brothers, 86 novices. There are two houses of Augustinian canons.
BROAD

(at Neustift and Wilton), with 97 Fathers, 8 clerics, 3 lay brothers, and 4 novices; 2 Cistercian foundations (at Stams and Mehreren), with 84 Fathers, 9 clerics, 29 lay brothers, and 7 novices; 3 Benedictine foundations (at Flecht, Marienberg, and Bregenz), with 48 Fathers, 5 clerics, 25 lay brothers, and 5 novices; 1 Benedictine priory (at Innbruck), with 3 branch houses, 8 Fathers, 7 clerics, 61 lay brothers, and 19 novices; 3 Jesuit foundations (at Inn- bruck, Feldkirch, and Tisza), with 100 priests, 59 clerics, 66 lay brothers, and 17 novices; 2 Redemptorist colleges, with 19 Fathers, 13 brothers, and 1 novice; 3 Servite monasteries, with 18 Fathers, 16 clerics, 10 brothers, and 6 novices; 4 Franciscan monasteries, with 100 Fathers, 23 clerics, 69 brothers, and 3 novices; 13 Capuchin monasteries with 100 Fathers and 59 brothers; 1 foundation of the Society of the Divine Word (Salvatorians), with 9 priests and 8 brothers; 1 mission house of St. Joseph at Brixen (with a branch at Mill Hill), with 6 priests and 11 clerics; 1 house of the Congregation of the Sons of the Most Holy Heart of Jesus, with 5 Fathers, 13 clerics, 9 lay brothers, and 17 novices; 1 foundation of the School Brothers, with 11 clerics. Be- sides the usual courses of theological studies for the members of the different orders, among the orders already mentioned, the Benedictines conduct in Flecht a Konvikt (house of studies) for boys, and a school, the Cistercians in Mehreren a Konvikt for boys, the Jesuits a school and a Stift (i.e., college) at Feld- kirch (the celebrated institution known as the Stella Matutina), the School Brothers a seminary for teachers and a trade school, the Salvatorians a college, the Sons of the Most Holy Heart of Jesus an Apostolic school, and the Franciscans a Higher Gymnasium at Hall.

Religious congregations of women have established 234 religious houses with branches, about 2,644 sisters being within the limits of the diocese; these include 490 choir sisters, 1,884 lay sisters, and 270 novices. The various houses are divided as follows: the Poor Clares, 2 with 65 sisters; the Dominicans, 4 with 173 sisters; the Dominicans of the Third Order, 2 with 38 sisters; the Redemptorist sisters, 1 with 18 members; the Ursulines, 2 with 136 sisters; the Carmelites, 1 with 18 sisters; the Salesian Sisters, 1 with 54 mem- bers; the Cistercians, 1 with 39 members; the Sisters of Divine Adoration, 1 with 51 members; the English Ladies, 1 institute with 79 members; the Tertiary Sisters, 6 houses and 13 branches, with 158 sisters; the nuns of the Most Sacred Salus Jesu, with 99 sisters; the Poor-School Sisters of Notre Dame, 2 with 27 members; the Benedictines, 1 monastery with 5 sisters; the Sisters of the High German Order, 1 house with 3 sisters. The Sisters of Mercy have a mother-house in Innsbruck with 92 branch houses and 931 sisters, and one at Zams with 72 branches and 608 sisters. The Sisters of Mercy of the Holy Cross have 1 provincial house at Innsbruck with 26 branches and 131 sisters. The orders and congregations of women are engaged almost exclusively in the training of girls, and the care of the aged, children, and the aged, etc. The above-named congregations have charge of 8 educational institutions, 1 lyceum for girls, 12 industrial schools, 82 schools for girls, 41 schools for boys and girls, 46 schools for boys, and 10 branches; 1 Benedictine, 3 sanatoria, 56 homes for the poor, 2 public insane asylums, 2 houses for lepers, 1 institution for the deaf and dumb, 4 homes for servants, 1 asylum for priests in ill health, and about 25 other charitable institutions.

The cathedral of the Diocese of Brixen dates, in its present form, from the eighteenth century, hav- ing been built between 1745 and 1758. The only remains of the earlier Gothic building is the cloister, which contains frescoes and monuments dating from the thirteenth to the fifteenth century. Other prominent ecclesiastical buildings of the diocese are: the Court or Franciscan church at Innsbruck, in which is the relic of the Beata Mariae (St. Maximilian I); the Jesuit church at Innsbruck, built between 1630 and 1640 in baroque style; the Gothic cathedral at Feldkirch, built in 1478; the Cistercian church at Mehreren; the fifteenth-century parish church of Schwaz; and in this diocese, and others. Among the places of pilgrimage are: Absam, St. Georgenberg near Feubach, Maria Waldrast near Deutsch-Matrei, the pilgrimage church on the Frauenberg near Rankweil, that on the Gebhardsho- bend near Bregenz, and others.

JOSEPH LINS.

Broad Church Party. See Anglicanism.

Brogan, SAINT, flourished in the sixth or seventh century. Several persons in repute for holiness seem to have borne this name, which is variously written. Brogan, Brocan, Brocan, and even Beorcan and Beorcanus. Colgan, in his Irish Martyrology of Aengus, puts the Irish Martyrology of Aengus, the early date of which (c. 800) is now generally admitted. There, under 8 July, we read: "Brogan, the scribe, gained a noble triumph without any fall"; and under 9 July: "Beorcanus, the scribe. Fuire thine house "declare". Colgan (Trias Thumalud, p. 518) speaks as if he were inclined to identify both these persons with the author of an early Irish hymn upon St. Brigid. The glosses upon Aengus and the Marty- rology of Gorman, while seemingly treating them as distinct, prove that the matter admits of no cer- tainty. Some modern hagiographers incline to re- gard the St. Brogan of 8 July as the amanuensis and possibly the nephew of St. Patrick. They style him bishop and locate him at Maithail-Brogan, now Mothal in Waterford; but this is admittedly quite doubtful. St. Brogan of Rosethiuro, on the other hand, is identified with the author of the hymn to St. Brigid, and is believed to be the Abbot Brochanus referred to in the Life of St. Abban, preserved in the monastery of Rosethiuro is generally as- signed to the Diocese of Osomy, and may be Rose- moren in Queen's County.

Other Brochans are mentioned in the Martyrology of Gorman under 1 January, 9 April, 27 June, and 25 August.

HERBERT THURSTON.

Broglie, Auguste-Théodore-Paul de, abbé, professor of apologetics at the Institut Catholique at Paris, and writer on apologetic subjects, b. at Auteuil, 22 May, 1854; d. at Achille-Victor Duc de Broglie, and his wife, Alber- tine de Stael, a Protestant and the daughter of Madame de Stael. After the death of the mother, who died young, he was brought up by the Baroness Auguste de Stael, née Vernet; this aunt, although also a Protestant, exerted her influence to win a well- minded Christian of him in the Church to which she did not belong" (Monseigneur d'Hulst in "Le Correspondant", 26 May, 1895). Entering the Navy young, Broglie was appointed Ensign in 1857 and
soon after Lieutenant. While thus occupied he felt himself called to the ecclesiastical state. After taking the ordinands, he was ordained 18 October, 1870. In his numerous publications the Abbé de Broglie was always a faithful defender of Catholic dogma. At the time of his death, which resulted from the violence of an insane person, he was preparing a book on the argument of reason and faith. His most important work is "L’histoire des religions". Of his other writings, some of which were pamphlets and some articles in reviews, the following may be mentioned: "Le positivisme et la science expérimentale"; "Religion de Zoroastre et religion de Bouddha"; "La bouddhisme et les brahmaniques de l’Inde"; "L’islamisme"; "La vraie définition de la religion"; "La transcendance du christianisme"; "L’histoire religieuse d’Israël"; "Les prophéties et les prophéties, d’après les travaux de Kuenen"; "L’idée de Dieu dans l’Ancien et le Nouveau Testament"; "Le présent et l’avenir du catholicisme en France". Two posthumous publications, "Questions bibliques" and "Religion et critique", were edited by the Abbé Plat.

CLODION PIAT.

Broglie, Jacques-Victor-Albert, Duc de, French statesman and historian, b. at Paris, 13 June, 1821; d. there 19 January, 1901. After a brief diplomatic career he resigned his post to devote himself to literature. In his "Essai sur l’histoire de la France au IVe siècle" (6 vols. (1856), won for him Lacordaire’s seat in the French Academy (1862). In 1871 he was appointed ambassador to England, but was recalled in 1872 and, taking his seat in the Assembly, soon became the leading spirit of the opposition to the Republic and M. Thiers. Twelve President of the Council (1873 and 1877), the Duke de Broglie was finally defeated in his own district and withdrew from public life. Besides editing the "souvenirs" of his father (1886), the "Mémoires" of Talleyrand (1871), and the letters of the Duchesse Albertine de Broglie, he published a series of works on the diplomacy of Louis XV, which placed their author in the first rank of historians.

JEAN LE BARB.

Broglie, Maurice-Jean de, b. in Paris, 5 September, 1786; d. there, 29 June, 1821. He was the son of the late General Maurice-François de Broglie, created, by Emperor Francis I, Prince of the Holy Roman Empire, a title which was to be hereditary in the family. Called to the ecclesiastical state, Maurice pursued his studies at St.-Sulpice. During the Reign of Terror, when persecution drove both his father and him out of France, they went to Berlin. King Frederick William received the duke with marked distinction and granted to the young prince a provostship in the cathedral chapter of Posen. Maurice returned to France in 1805, and the steps he took to recover some family property not yet sold, brought him to the attention of Napoleon, who invited him to his court and named him his almoner. Recognizing in the emperor the restorer and supporter of order and religion, de Broglie became a devoted follower of the monarch and eulogized him in a pastoral letter issued on the occasion of the victory of Austerlitz. In 1805 Napoleon nominated him to the See of Aequi, Italy, and in 1807 to Ghent, Belgium. When it became evident, however, to de Broglie that the pope did not intend that he was to fill both the duties of the diocese and religion the instrument of his ambitious designs, he showed determined opposition to Napoleon. In 1809 the minister of worship wrote in a letter that the sovereign was highly displeased with the bishop because of his lack of devotion to the royal person; in 1810 the bishop refused the Cross of the Legion of Honour, sent to him by the emperor, judging that he could not accept it as the emperor was in the Papal States when the Papal States had been seized, and he explained his refusal in a memoir, a model of moderation, sent to the minister.

By order of Napoleon, a council was assembled in Paris, 17 June, 1811, under the presidency of Cardinal Fesch, uncle of the emperor, Arch-bishop of Lyons. The object of Napoleon was to oblige the pope to grant the Bulls of institution to the priests nominated by him to bishoprics; this Pius VII had firmly refused. Napoleon wished, furthermore, to make an arrow for the future to issue the Bulls within six months, and should His Holiness fail to do so in that time, the metropolitan or the oldest bishop of the ecclesiastical province would then confirm the nominees, the sovereign pontiff’s silence being considered as assent. The fathers of the council solemnly assembled in the metropolitan church, there being present six cardinals, nine archbishops, and eighty bishops; this was the first and the last general session. After six preliminary, particular sessions, a decree was signed by the cardinals on 29 June, 1811, formalizing the assent to the bishoprics proposed to the bishops. At first only two, d’Avis, Archbishop of Bordeaux, and de Broglie, Bishop of Ghent, rejected it; but subsequently, only four members were for the pure and simple acceptance of the decrees. Broglie and the other bishops’ refusal was not a matter of principle, but a protest against the encroachments on his spiritual power were contrary to the laws of the Church and ecclesiastical discipline, destructive of the authority of the Holy See and of the principles on which depended the lawful mission of bishops.

The anger of Napoleon, provoked by such firm and general opposition, led him to prorogue the council and visit with severe punishments the bishops who had been most prominent in their opposition. Arrested on 12 July, 1811, de Broglie was cast into the dungeon at Vincennes and kept in close confinement for more than four months, without outside communication, and without books or writing materials. He was next sent as an exile to Beaux. On the mere suspicion that he had intervenered with his clergy, he was deported, to the island of Ste.-Marguerite on the coast of Provence. De Broglie, while in prison signed, under compulsion, his resignation as Bishop of Ghent. Although it was not accepted by the pope and was consequently null, Napoleon restored to de Broglie, the rights of the great majority, however, of the clergy and people refused to acknowledge him, they were subjected to vexations and persecution. The fall of Napoleon restored peace, and de Broglie, returning to his diocese, was received amid the rejoicings of his clergy and flock.

The bishop was not to enjoy a long rest. The allied sovereigns of Europe after the overthrow of Napoleon had formed Holland and Belgium, or the Low Countries, into a kingdom and appointed William of Nassau to rule over them. The plenipotentiaries of the powers assembled in London, 1814, made the Dutch Constitution the fundamental law of Belgium, with a proviso that it should be modified according to circumstances. The constitution of Belgians are Catholics. On 18 July, 1815, William proposed the Dutch Constitution to the Belgians, and the representatives summoned to vote upon it rejected it by 796 to 527. (See Belgium.) The king, disregarding the vote, imposed upon the Belgians a constitution that was hostile to the ascetic and religious rights. Joseph II by his petty persecutions had lost the Netherlands for Austria; Napoleon, following in the footsteps of the "emperor sexton", lost them for France; William, his imitator, brought about the secession of Belgium from Holland and its independ-
ence in 1830. De Broglie with the Bishops of Namur and Tournai, and the Vicars-General of Mechlin and Liège took up the defence of the Catholic cause, and issued a pastoral instruction and, later on, a doc-
trean admonition on the required oath to the Con-
sstitution.

De Broglie also appealed to Pius VII, and the pontiff,
on 16 May, 1816, sent an official note to the minister of
the Low Countries residing in Rome, stating that
this Belgian Constitution contained a declaration con-
trary to the Catholic Faith, that the opposition of
the bishops could not in justice be repressed, and that
no oath opposed to conscience should be imposed.
New difficulties then arose, first when the bishop re-
 fused to offer public prayers for the king, and again
when the election of new universities, de Broglie
addressed a representation to the king in which he
pointed out the introduction of dangerous books into
public institutions, and strongly expressed his fears
for the fate of the episcopal seminaries. Cited before
the tribunal, he took refuge in France, and the court
of Brussels by a judgment, 8 November, 1817, con-
demned him to deportation. The sentence was
posted by the public executioner between the sen-
tences of two public malefactors. The bishop's health
had suffered even under the milder severe trials; succumbing to a short illness, he died in
Paris, venerated by all for his sterling qualities and
austerity of life. In 1819, de Broglie printed a pro-
test concerning the state of religious affairs in Bel-
gium. Later in life he was imprisoned, and then
more severely, so many times and for so many years
that his name was associated with the most famous
of papal persecutions.

F. M. L. DUMONT.

BROYNNY, JEAN-ALLARMET (or JEAN-ALOUZIER) DE,
a French Cardinal, b. in 1342 at Brogny, in Savoy;
d. at Rome, 1426. Biographers are not agreed as to
his parentage and real name. According to some,
he belonged to a peasant family of Brogny, called
Allarmet; others say he was descended from the
d'Alouziere, a noble house in Comtat-Venaissin.
It is certainly, however, that the future cardinal was
a sworn enemy, when two monks, struck by his open
disposition and thoughtful answers, took him with
them to Geneva, and procured for him an education
which was completed at the University of Avignon.
Despite the friendship and the inducement of
Marscossay, Bishop of Geneva, young Allarmet re-
tired the Court of Gene to the College of St. Jerome
and became widely known. When Robert of
Geneva was elected pope by the faction hostile to
Urban VI, Allarmet joined him at Avignon, either
having been sent by the Duke of Burgundy or called
by Robert himself.

At Avignon favours were bestowed upon him in
quick succession by the so-called Clement VII; the
Bishopric of Viviers, in 1380, the dignity of Cardinal,
in 1386, and shortly after, the exalted office of Chan-
celloir of the Holy See. Robert's successor, Peter
Clement II, later the Benedict XIII, sanctioned all these preferments and even promoted
Allarmet from Viviers to Ostia-Velletri, one of the
suburban dioceses. There is no doubt that at
that time Cardinal de Brogny, like St. Peter of
Clement II, laboured for the supremacy of the French obedience as legitimate. However, his
thorough orthodoxy soon caused him to change his
views. As early as 1398 he had left Avignon as a
silent protest against the unapostolic spirit of that
time. During the Council of Constance, the
Benedict XIII were met by him with more than a
silent protest. He inaugurated the neutral party
and brought about the Council of Pisa which resulted
in the election of Alexander V (1409).

The new pope confirmed de Brogny in his double
dignity of Bishop of Ostia and Chancellor of the
Church. In the latter capacity he presided over
Alexander's funeral and also over the concave
which elected John XXIII (1410). John held de
Broyney in the highest esteem. The Metropolitan
See of Arles having become vacant, he disregarded
the candidate elected by the Arlesian chapter and
appointed Cardinal de Brogny perpetual adminis-
trator of it. This appointment was intended as
a means of recovering the rights of the Church of
Arles usurped by the Counts of Provence during
the confusion consequent on the schism. The
new metropolitan did not disappoint his patron.
With the might of right he fought the usurpers till
the last claim of the venerable see was secured.
Cardinal de Brogny then left his diocese in care of
the two Fabri and proceeded on a still more delicate
mission. Owing to the obstinacy of the contestants,
the Council of Pisa had really left the Church with
three popes instead of one. Moreover, to the evils
of schism John Hus was adding that of heresy. The
Council of Constance was convened to meet this
double difficulty, and after the withdrawal of John
XXIII, de Brogny, in virtue of his title of Chancellor,
represented it. In the sessions of the Council and evinced
sterling qualities.

In behalf of unity, he did not hesitate to vote for
the deposition of the three popes, two of whom had
been his personal friends. No doubt he could have
voted for himself, had he chosen, but he threw the weight of his influence in favour of
Colonna, who took the name of Martin V. If John
Hus remained contemptuous and was condemned,
it was not de Brogny's fault. The Protestant Sene-
bar writes in his "Histoire littéraire de Genève":
"In the letters of John Hus we find a communion with the prelate [de Brogny] who endeavoured to
conquer him by such arguments as compassion,
meekness, and Christian charity suggested".

In his old age de Brogny asked to be translated from
Ostia to Geneva, but only his remains reached the
beloved place of his youth; they were laid to rest in
the chapel of the Machabees which had been added
to the old cathedral by the cardinal himself. de
Broyney is variously known in history as Cardinal de
Viviers, Cardinal of Ostia, sometimes Cardinal of
Arles, and Cardinal of Saluces. He founded the
Dominican convents of Tivoli and Annecy; the
maladrerie or lepers' hospital, of Brogny; part of
the Celestines' monastery of Avignon; and, above all,
the College of St. John the Baptist, a foundation of
Avignon, and endowed with twenty scholarships
for destitute students. Soulevie, president of St.
Nicholas College, published (Paris, 1774) a "Histoire de Jean d'Alouizer de Brogny" of which only fifty
copies were printed.

Faguet, La France pontificale, métropole d'AIi (Paris,
1867); Migne, Dict. des cardinaux (Paris, 1857).

J. F. SOLlier.

BROYNY, JOHN, theologian, d. about 1390.
He takes his name from his birthplace in Hereford-
shire, England. He entered the Dominican order
and was sent to Oxford where he distinguished
himself in theology and jurisprudence. It is probable
that he lectured on theology at Oxford while it is
certain that he laboured in the same Faculty at
Oxford. He sided with the great jurist, Oppidum,
and the opponents of the doctrines of Wyclif.
Though his name is not mentioned in the acts of the
London Synod of 1382 held by William de Courtenay, Arch-
bishop of Canterbury, where the doctrines of Wyclif
were condemned as heretical, it is admitted by all
that he took a leading part in this business of condemnation. He was also a much-prized writer
as the many editions of his "Summa Predicantium"
attest. Excerpts were made from this work and
published separately as brochures and widely circulated among the people. In his "Opus Trivium" he arranges for the convenience of preachers various topics drawn from theology, civil and canon laws. This work was later on edited by Philip Bromyard, and hence some maintain, but without reason, that Bromyard was the real author.

QUINTY AND EICHARD, SS. O.P. I, 700; LELAND, Commentarium de Scripturis Britannicis, 5.60; SCHWARTZ, Geschichte der englischen und irischen Rechts. II. 11, 965, 681; MILLS in Dict. Nat. Biog., VI, 405.

TEODOR SCHWERTNER.

Bromdel, John Baptist, first Bishop of Helena, Montana, U. S. A., b. at Bruges, Belgium, 23 February, 1842; d. at Helena, 3 November, 1903. He was educated at the American College of the University of Louvain and ordained priest at Mechlin, Belgium, by Cardinal Engelbert Sterckx (17 December, 1864). Two years later he volunteered for the missions in the United States and was made rector of the church at Heilascon, Washington Territory, early in 1867. Here he remained for nearly ten years, was transferred to Walla Walla, but returned to his old charge the following year.

On 14 December, 1879, he was consecrated at Victoria, as third Bishop of Vancouver, British Columbia, in succession to Bishop Seghers, who had resigned and become the Archbishop of Oregon City. Bishop Bromdel retained this charge until by a Bull of 7 April, 1883, he was appointed Administrator of the Vicariate of Montana. When the Diocese of Helena was formed he was transferred to the see, 7 March, 1884, as its first bishop. During all his long and active career in this northwestern section, he was particularly successful in his dealings with the many Indians under his charge. They looked up to him as a father and protector, and his great popularity among the various tribes was a great benefit to the Church, but was utilized on numerous occasions by the United States Government to further the political, material, and moral welfare of the Indians. His death was regarded as a great loss to the work of the evangelisation and civilisation of the Indians. He was buried 7 November, 1903, in a vault under the cathedral in Helena.

THOMAS F. MEEHAN.

Brookly (or Brookset), Anthony, Friar Minor and English martyr; d. 19 July, 1537. Brookly was lecturer in divinity in Magdalen College, Oxford, was well versed in Greek and Hebrew, and enjoyed the reputation of being an eloquent preacher. At the command of King Henry VIII, who took offence at a sermon of Brookly's in which he attacked the king's actions and mode of living, he was apprehended, put to the rack, and tortured in the most cruel manner in order to make him retract what he had said; but all to no purpose. Having been rendered wellnigh helpless as a result of his tortures, Brookly was charitably cared for by a pious woman for a fortnight until, by the command of the king, a executioner strangled him to death with the Franciscan cord which he wore around his waist.

STEPHEN M. DONOVAN.

Brookes, James, last Catholic Bishop of Gloucester, England, b. May, 1512, in Hampshire; d. 1560. Proceeding to Oxford in 1528, he became Fellow of Corpus Christi in 1531, Doctor of Divinity, 1546, and Master of Balliol, 1547. He is well known as an eloquent preacher, and, on the depo-

sition of Bishop Hooper, was elevated by Queen Mary to the See of Gloucester. He was consecrated 1 April, 1554. In 1555 he was one of the papal sub-legates in the royal commission for the trial of Cranmer, Latimer, and Ridley. He refused to degrade Ridley, probably on the ground that Ridley's condemnation (1547) had been according to the invalid form which was established by law very soon after that date. If, as Foxe asserts, he refused to degrade Latimer, his position may have been based upon the fact that Latimer had lived for several years as a simple clergyman. It is hardly possible that Brooke, a man of learning and integrity, would have been actuated in this trial by the selfish considerations hinted at by some Protestant historians. After the accession of Elizabeth he refused to take the oath of supremacy, and died in prison. He was buried in Gloucester Cathedral. Two of his orations in the Cranmer case are given in Foxe, "Acts and Monuments". One of his sermons was printed by Robert Coly, or Caly, in 1563 and 1554.

J. VINCENT CROWNE.

Brooklyn, Diocese of, comprises the counties of Kings, Queens, Nassau, and Suffolk, or all of Long Island, in the State of New York, U. S. A., an area of 1,007 square miles. The population of Long Island is about 2,000,000, according to the State census of 1905, and of this, 600,000 are Catholics. The Catholic Church, as mostly of Irish, German, and Italian birth or race, but as a matter of fact, in this island see there is now every week a perpetual Pentecost, for the Gospel is preached to the faithful in twelve languages. Polish, French, Italian, German, Slav, Syrian, Greek, Hungarian, Lithuanian, Scandinavian, Bohemian, as well as English-speaking Catholics, have special ministrations for their respective nationalities.

Long Island was known to the early Spanish explorer Gómez and to Gordillo, a lieuten-ant of Vasquez de Ayllón, who in 1524-25 reached this latitude and on the 29th of June noted this island, which they named "Isla de los Apóstoles" (Island of the Apostles) in honour of the feast day of the Apostles Peter and Paul. It is so styled in the Spanish maps of Ribero, made in 1529. Settled later under the auspices of the Dutch West India Company (1624), there is scarcely a trace of Catholicism to be found during the period of the sway of that corporation. It would be strange indeed were Catholics attracted to a community that refused to enclose their cemeteries because such were "relics of superstitious observances", or to erect tombstones because in doing so they might give the "appearance of according to the ceremonies and requirements of

Peter Turner, Organizer of the First Catholic Congregation in Brooklyn.
1. ST. FRANCIS-IN-THE-FIELD (FIRST GERMAN CHURCH IN BROOKLYN)
2. ST. JAMES'S PRO-CATHEDRAL
3. HOLY TRINITY CHURCH
4. OLD ST. JAMES'S (FIRST CATHOLIC CHURCH ERECTED ON LONG ISLAND)
Prelacy and Papacy." In April, 1667, there is record made of the fining of one "Nicholas the Frenchman" in the sum of twelve guilders, or $4.50, because, as the record puts it, on the "troublesome excuse" that he was a Catholic, Nicholas refused to pay his share of the tax levied for the salary of the Dutch Reformed minister who preached for the colony then located within the present limits of the Borough of Brooklyn. In addition to the Dutch there were a number of Walloons and Huguenots settled in this locality. Some of the unfortunate Acadian exiles were scattered through Long Island during 1756; and on the muster-rolls of the militia from the same section of the island in the army of Sir William Johnson, in 1775, we find such names as Reilly, Shea, Burke, Power, Welsh, Dooly, Barry, Sullivan, Casey, Lynch, Ryan, Larkin, Mclooney, Fagan, Blake, Donnelly, Shields, Kinsella, and Downey. There are no records to show what became of them or their children. But an occasional curiously twisted patronymic among the old non-Catholic families of the interior districts of the island gives a clue to the reason of this. We have no positive evidence that any considerable body of Catholics became a part of Brooklyn's local life till after the dawn of the nineteenth century and especially after the location there of the Navy Yard in 1801.

This government station at once gave employment to many mechanics in the various trades connected with the ship-building industry, and soon a number of Irish immigrants, mostly from the Catholic sections of the North, especially from Derry and Donegal, sturdy confessors of the faith in their native land, settled in Brooklyn. Among these were the parents of the first American cardinal, John McCloskey, Arch-bishop of New York, and of his namesake, the first Rector of the American College at Rome, William George McCloskey, afterwards Bishop of Louisville, Kentucky. Until 1822 these Catholics had to cross the East River to New York to hear Mass and attend to their spiritual necessities, as the scarcity of priests and their own poverty brought about this inconvenient situation. Occasionally a priest would go over from New York to say Mass and preach in private houses, or wherever suitable accommodation could be obtained. The pioneer in this was the Augustinian missionary Father Philip Laribey, who said the first Mass in the house of William Purcell, at the north-east corner of York and Gold Streets, on a date now unknown. The little colony, constantly growing in numbers and influence, desired a church of its own, and hence a meeting was held on the 7th of January, 1822, at the house of William Purcell, at which a committee of five was named to report to Bishop Connolly of New York the advisability of hearing the word of God ourselves. In fact, we want a church, a pastor, and a place for interment. Those prominent in the pioneer work of the congregation were Peter Turner, George S. Wise, then a purser in the United States navy, Dr. John Kenney, Nicholas Stafford, Denis Cosgrove, Jeremiah Mahoney, James Rose, George McCloskey, James and Patrick Freer, Dr. Andrew B. Cook, also of the United States navy, James Furey, Thomas Young, Hugh and James McLaughlin, Andrew Parmentier, James Harper, Quintin M. Sullivan, and Daniel Dempsey.

As a result of this meeting eight lots were purchased on Jay Street, and St. James', the first Catholic church on Long Island, was built and dedicated to Divine worship by Bishop Connolly, 28 August, 1823. The lots about the church were used as a graveyard until 1849, when Holy Cross Cemetery, Flatbush, was opened. The original church building stood until 1903, when its walls were enclosed in a new structure built on the same site for a pro-cathedral. The Reverend Dr. John Power of St. Peter's, New York, was the early and staunch friend of the new congregation. He used to cross the river frequently to minister to them. Other priests of the pioneer days were the Reverends Patrick Bulger, James McKenna, and James Doherty; the last two died in the service of the parish, and were buried in front of the church. The first regular pastor was the Reverend John Farman, who was appointed in April, 1825. The second church in Brooklyn, St. Paul's, dedicated 21 January, 1838, was given by Cornelius Heeney. He first offered the site for a seminary, but could not agree with Bishop Dubois as to the manner in which the title should be held, the old and troublesome idea of lay trusteeship proving impracticable.

It is notable that although the organization of the first congregation in Brooklyn was given mainly to lay effort there was never any of the subsequent difficulty over trustee authority and rights that made so much scandal elsewhere during this era. The Reverend Nicholas O'Donnell, O.S.A. (1840-47), was the second pastor of St. Paul's, and after him
the Reverend Joseph Schneller, until his death in 1869, had charge there. Father Schneller was one of the most active priests in the New York convents of the early years of the nineteenth century. His name, with those of the Reverend Dr. Power, Fathers Felix Varela and Thomas C. Levins, is to be found in most of the bitter public contests waged with the Irish-Catholic school that adjoins it. During his life his income was mainly devoted to charity, and 10 May, 1845, three years before his death, he had his estate legally incorporated as the Brooklyn Benevolent Society, and its officials directed to expend its yearly income for the benefit of the poor and orphans. This amounted to about $25,000 annually, and the total expended by this charity since Mr. Heeney's death is more than a million dollars.

In 1841 another famous priest, the Very Reverend John A. Raffeneir, a native of the Austrian Tyrol, with his own money property on which was erected the church of the Most Holy Trinity and began there to minister to a colony of German Catholics. His efforts in this direction were extended to similar locations in New York, Boston and New Jersey. He laboured thus for more than twenty years and held the office of vicar-general when he died, in 1861. St. Charles Borromeo's parish was founded in 1849 by the Reverend Dr. Charles Constantine Pich, also one of the strongest of the clergymen in the diocese of New York. He had been stationed at St. Peter's, New York, and previous to that, in 1832, while officiating in Washington, he was, on motion of Senator Henry Clay appointed Chaplain to the Congress of the United States and served during a session, the only instance on record of such an honour being given to a Catholic. Other priests whose earnest work in its formative period contributed to the building up of the Church in Long Island were the Reverends John Walsh, James McDonough, Richard Waters, James O'Donnell, David W. Bacon, afterwards the first Bishop of Portland, Maine, the Reverends Michael Curran, William Keegan, for many years Vicar-General of the diocese, and his associate in that office, the Right Rev. Dr. Hugh O'Reilly, the Reverends Nicholas Balleis, O.S.B., Eugene Cassidy, Sylvester Malone, Peter McCook, John Shanahan, Edward Coreoran, Hugh McGuire, Jeremiah Crowley, James McEnroe, Joseph Frangiey, Martin Carroll, T. O'Farrell, Anthony Arnold, John McCarthy, James O'Beirne, Joseph Brunner, Anthony Farley, John J. McKenna, Patrick O'Neil, and James H. Mitchell. Father Mitchell was much interested in the work of societies for young men, and his administration as head of the national organization was specially successful.

When, in July, 1841, Father Raffeneir began the great German parish of the Most Holy Trinity on a part of the farm of the old Dutch Mersere family, this was known as the Bushwick section of the then lower parish, which was subsequently annexed to Brooklyn. The first German Catholic Church in the city of Brooklyn was the quaint little St. Francis-in-the-Fields, which Father Raffeneir opened in 1850, at Putnam and Bedford avenues. In 1855, under Father Bonventure Keller, the original design of Father Raffeneir was carried out, and a sort of preparatory seminary for German ecclesiastical students was begun and lasted there for two years. When Father Raffeneir died, in 1861, he left St. Francis', which was still surrounded by a garden, for the benefit of the orphanage of the Holy Trinity parish. The little church was then closed, owing to changes in the neighbourhood, and was not reopened until 1866, when the Rev. Nicholas Balleis, a Benedictine, took charge and remained there until his death, in December 1891. The old building was again closed and remained so until the property was purchased by the Sisters of the Precious Blood in 1892, when the structure was torn down, and the convent of that order built on the site.

Peter Turner (d. 31 December, 1863), who was the leader in organizing Brooklyn's pioneer parish, lived to see his son John ordained a priest, pastor of St. James's Church and first Vicar-General of the Diocese of Brooklyn. In 1895 the Brooklyn Catholic Historical Society, regarding Peter Turner as the typical layman of the pioneer period, erected a handsome bronze portrait bust as a memorial to him in St. James's churchyard. The inscription on the pedestal says: "To the memory of Peter Turner, who on January 1, 1822, organised his seventy laymen Catholics for the purchase of this ground on which the first Catholic Church of Long Island was erected. Thousands of Catholic children have benefited from this monument as a grateful tribute to the man who made Catholic education the first reason for the establishment of a church in Brooklyn." Cardinal McCluskey's early years were spent in Brooklyn, where he attended his first school, which was taught by a retired English actress, Mrs. Charlotte McElmoth, a convert, who was a popular stage favourite in New York during the last years of the eighteenth century. Cornelius Heeney was also his patron and guardian after the family moved across the river to New York in 1820. Mr. Heeney's fortune was amassed as a fur-dealer, and for some time he was a partner in this business with John Jacob Astor.

BISHOPS OF THE SEE.—(1) The Right Reverend John Loughlin, consecrated 30 October, 1833. He was born in the County Down, Ireland, 20 December, 1817. As a boy of six he emigrated with his parents to the United States and settled in Albany, New York. His early school days were spent with the distinguished classical scholar, Dr. F. P. H. Bullons, at the Albany Academy, and when fourteen he was sent to the college at Chambly, near Montreal, Canada, where he remained three years. He then entered Mount St. Mary's Seminary at Emmitsburg, Maryland, and after the usual theological course was subsequently ordained for the Diocese of New York, 18 October, 1840. His first assignment was on the mission of St. Peter's and from there he was called to be an assistant to Bishop Hughes at St. Patrick's Cathedral, New York City. In 1850 the bishop made him vicar general and when the new Diocese of Brooklyn was formed he was consecrated its first bishop. In May, 1853, the officiating presbyter, Father Cenuban Bedini, a pro-nuncio, was consecrated bishop.
Rome from a diplomatic mission to Brazil. There were then but twelve churches on all Long Island and about the bishop, five churches. Eighty-eight years Bishop Loughlin ruled the see he built 125 churches and chapels, 93 schools, 2 colleges, 19 suction schools and academies, 10 orphan asylums, 5 hospitals, 2 homes for the aged, a home for destitute boys. In 1861, when the Catholic population increased to nearly 400,000, Bishop Loughlin led a life of unostentatious routine, entirely devoted to his ecclesiastical duties. The only time he is recorded as having identified himself with any movement was in April, 1861, when he wrote a letter of sympathy and approval to the great mass-meeting of citizens that committed Brooklyn to the cause of the Union. In October, 1890, the golden jubilee of his ordination was celebrated by a three days' festival in which the whole city joined. He assisted at each of the Plenary Councils of Baltimore and visited Rome four times, once to be present at the Eastern Council of the Vatican. He was then made an assistant at the Papal throne. He died at his residence in Brooklyn, March 29, 1894. That Bishop Loughlin had founded a diocese and in the course of his administration brought it to a position of such pronounced influence and efficiency, is one of the most remarkable facts in the history of the Church's progress in the United States.

The Sisters of Charity were the first religious to establish themselves in Brooklyn (1834), and they were followed by the Christian Brothers in 1836 and the Sisters of St. Dominic in 1833. To these Bishop Loughlin added the Sisters of the Visitation and the Sisters of Mercy in 1835; the Sisters of St. Joseph, 1856; the Franciscan Brothers, 1858; the Sisters of the Poor of St. Francis, 1866; the Congregation of the Mission, and the Sisters of the Good Shepherd, 1868; the Little Sisters of the Poor—their first foundation in the United States—1869; the Fathers of Mercy, 1871; the Sisters of the Sacred Heart of Mary, 1877; the Fathers of the Pious Society of Missions, 1884; and the Sisters of the Precious Blood, 1889.

Bishop Loughlin began the construction of a cathedral of large dimensions in 1868, the work on which he carried on up to the first story and then stopped to give his attention to the promotion of the charitable institutions of the diocese. The chapel of St. John, at one end of the proposed Cathedral of the Immaculate Conception, was even built and used; the extensive foundation walls of the main building remain in their incomplete state. The Catholic Benevolent Legion, a fraternal insurance association, was organized during Bishop Loughlin's life, September, 1881, and he was its first spiritual director. The St. Vincent de Paul Society received from him special encouragement (1855), and the formation of the third Particular Council in the United States was a result.

(2) The Right Reverend Charles Edward McDonnell, consecrated 25 April, 1892. Born in New York City, 1 February, 1854, his early education was received in the parochial schools and the De La Salle Academy. In 1868 he entered St. Francis Xavier's College, where he remained until he left, in 1872, to study law. In 1876 he was ordained at the Archdiocese of Rome. He was ordained in Rome, 19 May, 1879, and subsequently received the degree of Doctor of Divinity. Returning to New York, he was, after five years spent in parish work, made Secretary to Cardinal Spellman, his cousin's son. Archbishop Corrigan left him in this position and appointed him chancellor as well. He was also made a private chamberlain by the pope, and was serving in these offices when Bishop Loughlin died. Named by the pope to succeed him, Mgr. McDonnell was consecrated the second Bishop of Brooklyn in St. Patrick's Cathedral, New York, 25 April, 1892, and took possession of his see on the 2d of May. The affairs of the diocese so well administered by his predecessor, continued the good work thus begun and developed it also along its spiritual lines. The increase in population and the changes in the country districts necessitated the setting up of mission parishes and the inception of new missions and methods of meeting the polyglot needs of the representatives of the various nationalities that had settled in the diocese. For this Bishop McDonnell adopted the policy of securing members of some order for each of the parishes and languages in his diocese. In 1894 the invitations to found parishes and churches. He presided over the Third Diocesan Synod in December, 1894, at which the full number of canonical diocesan officials were for the first time selected; and over the Fourth Synod in 1898, a unique spiritual event was a simultaneous mission under his inspiration held throughout the diocese to mark the close of the nineteenth century. He led three diocesan pilgrimages to Rome, the first for the General Jubilee of 1900, in which he took a large part in the jubilee of Pope Leo XIII in 1902; and the third for the Jubilee of the Immaculate Conception in 1904. To the institutions of the diocese Bishop McDonnell added two hospitals and largely increased the capacity of one of those already established; the Ossana Home for Friendless Women; the new St. Vincent's Home for Friendless Boys; two seaside recreation places for children and a trade school farm for orphans.

Statistics.—Diocesan priests 308; priests of religious orders 51; total 362. Churches with resident priests 162, missions 10, stations 11, chapels 13; 11,745 Catholic families, 12,032 Catholic students; academies and select schools for young women 15, with 1017 pupils; parishes with schools 68, pupils enrolled 41,750; orphan asylums 11, inmates 3691; infant asylums 4, inmates 545; industrial school 4, pupils 145; young people under Catholic care 40,940; hospitals 6, treating more than 18,000

Brosse, Jean-Baptiste de la, a Jesuit missionary, b. 1724 at Magnac, Angoumois, France; d. 1782. He studied classics at the Jesuit College of St. Louis at Angouleme, and entered the novitiate of the society at Bordeaux, in 1740. After a full course of philosophy and theology in the latter city, he was ordained in 1755 and sent to Canada the following year. He first laboured on the Abenaki mission, held different positions in the College of Quebec, and finally succeeded, in the Montagnais mission, Father Coquart, who died in 1765 at Chicoutimi. Brossou was the twenty-first of his order to fill that post. Fixing his headquarters at Tadoussac, at the mouth of the Saguenay, a rendezvous for the Montagnais and for the traders of the lower St. Lawrence, his apostolate radiated from that point along the Labrador coast, to the French settlements on the south shore of the great river, to the Micmacs of Restigouche, and as far east as Isle Saint-Jean (Prince Edward Island). Besides Christian doctrine, he taught the Montagnais reading, writing, and plain-song, creating and developing in their souls the taste for elementary instruction which is to be found this day in each family of the tribe. The zealous and practical missionary had 3000 copies of the Montagnais alphabet, and 2000 copies of a catechism and prayer book in the same tongue printed at Quebec in 1767.

The latter is one of the first books issued from the press in Canada. It bears the author's name in Montagnais (Tshititiishigahn), which signifies a broom or brush, in allusion to his family name. He also compiled a dictionary in the same language, being moreover familiar with the Abenaki and Micmac dialects. His inland mission-field embraced all the region watered by the Saguenay and Lake St. John. He bravely the stubborn ferocity of the Naskapi Indians, who had so far resisted every attempt to convert them, to whom ravages he is said to have miraculously stopped, was the occasion of their consenting to hear the Gospel. Father de la Brossou left a reputation of holiness which still endures. His remains lie in the old mission-chapel of Tadoussac.

Brothers Hospitallers of St. John of God.—St. John of God, the founder of this religious institution, was born 8 March, 1495, at Montemor Novo, in Portugal. In his fortieth year he was drawn strongly to God's service and began a wonderful life of prayer, penance, and charity towards his neighbour. Pressed by the love of God, and of Christ's suffering members, he founded his first hospital at Granada in Spain, where he tenderly served the sick and afflicted. It is related in his life that one day the Lord appeared to him and told him that He was much pleased with his work, and for that reason He wished him to be called John of God. After ten years spent in the exercise of heroic charity, he died 8 March, 1550. He was canonised by Pope Alexander VIII, in 1800; and was declared heavenly patron of the dying and of all the hospitals by Pope Leo XIII, in 1898.

The charity of St. John of God was destined to be perpetuated among his brethren, whom he had formed by his lessons and example. His first companion Antoni Martin was chosen to succeed him as superior of the order. Thanks to the generosity of King Philip II, a hospital was founded at Madrid, another at Cordova, and several others in various Spanish towns. St. Pius V approved the Order of the Brothers Hospitallers in 1572 under the rule of St. Augustine. The order spread rapidly into the other countries of Europe, and even into the distant colonies. In 1584 Pope Gregory XIII called some of the Brothers to Rome and gave them the Hospital of St. John Calabita, which then became the mother-house of the whole order: Brother Pietro Soriano was appointed first superior. Brother Sebastiano Arias founded the hospital of Our Lady at Naples and the famous hospital of Milan. At that time a holy servant of God and of the poor joined the brotherhood and shed great lustre upon the order by his burning charity and profound humility: Blessed John Grande, who was beatified by Pius IX in 1852.

The first hospital in France was founded in Paris, in 1601, by Queen Marie de Medici. In the stormy days of the French Revolution the Brothers were expelled from the forty hospitals where they were caring for 4125 patients. But since then some large new hospitals have been established. The order is governed by a prior general, who resides in Rome; it is now divided into eleven provinces, with 102 hospitals, 1536 Brothers, and 12,978 beds, distributed as in the following table:

Broughton, Richard (alias Rouse) b. about 1588
at Great Stukeley, Huntingdonshire; d. according to
a Wood, 15 Kal. Feb. (i. e. 18 January, 1634); Cath-
olc priest and antiquary, claiming descent from the
Broughtons of Lancashire. He was ordained at
Reims, 4 May, 1633, and soon after returned to
England. John Pite, a contemporary, says that he
"gathered a most abundant harvest of souls into the
granary of Christ" and eulogizes his attainments in
being "no less familiar with literature than
learned in Greek and Hebrew". Broughton became
an assistant to the archpriest, a canon of the chapter,
and deacon to Bishop Smith of Chalcedon. He also
claims recognition for his influence on the
study of antiquity; having earned, partly by his
positive work and partly through controversy, the
right to honourable mention with Spellman, Reyner,
Beresford, and other famous antiquaries.

Broughton's chief works are: (1) "An Apologetic
Epistle, serving as preface to ... a Resolution of
Religion", signed R. B. (Antwerp, 1601); (2) "The
first part of the Resolution of Religion By R. B.
(Antwerp, 1600), often mistaken for Persons' "Res-
olution of Religion"; (3) "A New Manual of Christian
Catholic Meditations" (1617), dedicated to Anne of
Denmark; (4) "The Judgment of the Apostles"
(Douai, 1632), dedicated to Queen Henrietta Maria
and directed against Rogers on the Thirty-nine
Articles; (5) "Ecclesiastical History of Great Brit-
naine" (Douai, 1633), dedicated to the Duchess of
Buckingham and the Countess of Rutland; (6)
"A True Memorials" (London, 1660); (7) "G.
S. P(riest) after Broughton's death. The 1654
edition is entitled "Monasticin Britannicum". (7)
Broughton also wrote on the antiquity of the word
Siringorum (Hearne, II, 318, 351); (8) on the
alleged conversion (1631) of John King, Bishop of
London; and (9) "A Relation of the Martyrdom of
Nicholas Garlick".

Brouwer (Brower), Christoph, a historian, b.
12 March, 1559, at Arnhem, Holland; d. in 1617,
Ratisbon von Bayern, Germany. In 1580 he entered
the Jesuit order; in 1582 he was sent to the mission
of Jesus, and after a thorough humanistic training, de-
verted himself especially to the study of church
history. His attainments in other branches of learning
are shown by his appointment as professor of philoso-
phy at Trier; later he was professor of divinity at
Fulda, and then at Trier. His chief work is entitled:
"Antiquitates et annales Trevirenses et episcoporum
Trevirensia ecclesias suffragarorum". The work ex-
tends to the year 1600 and was prepared at the re-
quest of two archbishops, Johann of Schenkgen
and Lothar of Metternich, with the intent to disprove
the partisan publication of Hermann (Kyrriander),
Syndic of Trier, Hermann's work was published in
1576 and was written to support the claims of the
city against the rights of the Archbishop. Brouwer
voted the greater part of his life to the preparation of
his book and, according to the testimony of the
historian, Hontheim, he is deserving of undying
honour for his contributions to the history of the
Archbishopric of Trier. Unfortunately, he did not
live to complete his task. Brouwer's unflinching
love of the truth and his true historical method were
not agreeable to the councillors of the archbishop; so,
although the publication of his work had been sanc-
tioned by the authorities of his order, it could not be
issued. It was not until 1646 that the manuscript,
which had lain hidden at Cologne, was published and
then only after important alterations had been
made in the text. New difficulties arose when the
eighteenth book was in press. The completion of the
printing was forbidden and all the sheets already
struck off were suppressed as far as possible, so that
only a few copies have come down to us.

Brouwer's labours were continued from 1600 to
1652 by Father Jacob Maseni, S.J., who issued the
whole work in revised form in 1670 in two folio
volumes at Liège. Brouwer was unable to complete
his other great work, which was entitled: "Metropo-
lis Ecclesiae Treverisca". It was intended to contain
a description of all the cities, churches, and cloisters
of the Archdiocese of Trier. This work did not ap-
ppear until 1855—56 when it was issued in two
volumes by Christian von Stamberg. The
dition does not meet fully the demands of our time,
nevertheless it contains much that is useful. Brou-
er's history of the Diocese of Fulda is also worthy
of praise. It is entitled "De Floendi episcopatu. libri 4"
(Antwerp, 1612). Of less importance is the
work issued at Mainz in 1616, entitled: "Sidera
illustrium et sanctorum virorum, qui Germaniam
ornarunt". Among the results of his humanistic
studies is the edition of the works of Bishop Venan-
tius, Fortunatus, which were first issued at Mainz
(together with a life of St. Martin. A second edition
appeared in 1617 augmented by the annotated poems of Archbishop Rahbanus Maurus.

Brown, William, a naval officer of the Republic of Argentina, b. 1777, in the County Mayo, Ireland; d. 3 May, 1857, in Buenos Aires. His family emigrated to America in 1789, Brown shipped as a cabin boy on a vessel sailing from Philadelphia. During the war between France and England his ship, an English merchantman, was captured by a French privateer and he was made prisoner of war. He escaped to England, where, in 1809, he married a lady of good family and education. He re-entered the ocean trade with a ship of his own, which was wrecked on the coast of South America. Here he established the first regular packet service between Buenos Aires and Montevideo. In the revolt of Buenos Aires against Spain the insurgents appointed Brown, February, 1814, to the command of a squadron of seven ships. With these he achieved wonders. On St. Patrick’s Day he captured the fort of Martin Garcia, called “The Gibraltar of the La Plata,” comprising nine Spanish men-of-war under Admiral Romerato to retire. Later, at Montevideo, which capitulated 20 June, he captured several Spanish men-of-war. These he took to Buenos Aires, and received the rank of admiral. In 1816 Admiral Brown sailed round the Horn to succour the new republics on the western coast, but his expedition was only partly successful. Ten years later, when war ensued between the new republic and Brazil, Admiral Brown greatly distinguished himself against tremendous odds in the blockade of Buenos Aires, which he succeeded in breaking. Taking the offensive he scoured the coast as far as “Rio de Janeiro.” His most brilliant victory was the battle of Juncal, 24 February, 1827, when, with seven ships and eight one-gun launches, he destroyed a fleet of seventeen war-vessels under Admiral Pereira. He acted as Argentine Commissioner when, at the close of the war, the liberty of Buenos Aires was guaranteed by the treaty of Montevideo 4 October, 1827.

After a visit to his native land, Admiral Brown spent his last years in the republic in the founding of which he had been such a powerful factor. He died in Buenos Aires 3 May, 1857, and in the Recoleta cemetery a lofty column marks his resting-place.

P. G. Smith.

Browne, Charles Farrar (Artemus Ward), humorist, b. at Waterford, Oxford County, Maine, U.S.A., 26 April, 1834; d. in Southampton, England, 6 March, 1867. He went to school in his native town and at the age of fourteen was apprenticed in the printing office of “The Skowhegan Clarion.” A year later he was employed in a like capacity on “The Carpet-Bag” of Boston, edited by B. P. Shilaber (Mrs. Farthing), and to which Charles G. Halpine (Miles O'Reilly) and John G. Saxe were at that time contributors. In this journal appeared his first humorous article, a burlesque description of a Fourth of July celebration in Skowhegan. After his Boston experience, Browne travelled the Eastern States as a journeyman printer, sojourning for a while in the town of Plainfield, Ohio, where as reporter and compositor he received in wages four dollars a week. Going thence to Toledo, he contributed to the columns of “The Commercial” of that city. Already his reputation was gaining ground. Though humorously assailed in a series of articles in “The Toledo Blade,” he treated his opponents with unfailing courtesy and humour.

In 1858, at the age of twenty-four, his reputation first assumed a national character as a reporter of “The Cleveland Plaindealer” under the sobriquet of “Artemus Ward.” His best work at this period consisted in burlesque descriptions of prize-fights, races, spiritualistic seances, and political meetings. Towards the close of 1860, he accepted an engagement in New York with “Vanity Fair,” a comic paper edited after the manner of the London “Punch,” and ere long succeeded the editor Charles G. Leland (Hans Breitmann) as editor. In this paper some of his best contributions were given to the public. It was, however, as a lecturer that “Artemus Ward” gained both fame and fortune. His first appearance on the lecture platform in New York was in a travesty called “Babes in the Woods.” His next hit was in a lecture on “Sixty Minutes in Africa,” given in Music Fund Hall, Philadelphia. In 1866 he sailed for England where success far beyond his expectations awaited him. His stay in London is spoken of as “an ovation to the genius of American wit.” He became at once a great favourite with the Literary Club of London and his letters in “Punch” recalled the days of “Yellowplush.” But sickness brought his brilliant career to an unexpected close in the seventh week of his engagement at Egyptian Hall in London, and his death occurred a few months later. When he felt the end was near, he asked his friend Arthur Sketchley to procure him the ministrations of a priest. “So Sketchley,” Clement Scott informs us, “took steps to carry out his friend’s instructions.” His remains were brought to his native land and laid to rest beside his father and brother in the little cemetery at Waterford, Maine.

Artemus Ward was a consummate humorist and represented a type distinctively American. His fun was a fountain that always bubbled, ministering naturally to the happiness of himself and others. In leading up to the joke whatever art was employed was carefully concealed, and the joke itself when it came was always a surprise but never an awkward or unwholesome one. The depth and strength of his character are revealed as well in the interest excited by his lectures and sayings as in the friendship he formed and retained to the end.

Kimpson, Artemus Ward and His Humour with Swinburne’s poem, Putnam’s Monthly, February, 1897; Landon (Elia) Price, The Complete Works of Artemus Ward, with a Biographical Sketch (New York, 1898); Clement Scott, The Drama of Yesterday and To-Day (New York, 1890), i. 325.
