In addition to the "Conformities," Bartholomew left some thirty other works, including an exposition of the Rule of the Friars Minor found in the "Speculum" Morin (Rouen, 1509) and a book "De Vita B. Maria Virginis," published at Venice in 1596; his Lenten sermons were printed at Milan in 1498, Venice, 1503, and Lyons, 1519. Sherales and others have erroneously attributed to him the "Summa Casuum Consceptionis," which is really the work of Bartholomew a.s. Concordio of Pisa, O. P., and the "Vita B. Gerardi," which was written by Bartholomew Albius mentioned above.

PARSCHEL ROBINSON.

Bartholomew of San Concordio (also of Pisa), canonist, and man of letters, b. at San Concordio near Pisa about 1290; d. at Padua, June 8, 1347. He entered the Dominican Order in 1277, studied at Pisa, Bologna, and Paris, and taught at Lucca.
Florence, and Pisa. A preacher of renown, he was as learned as he was devout, as skilled in Latin and Tuscan poetry as he was versed in canon and civil law. His fame rests chiefly on his alphabetically arranged "Summa de Casibus Conscientiae", various "Libri Tornaci" by Mino, and "Magistrucia". The idea if not the basis of this work was a "Summa Confessorum" by John Rumi, O. P., Lector of Freiburg (d. 1314). Bartholomew's treatise was clear and concise, and it continued the newer laws and canons of his time. Evidence of a highly useful digest, it was very popular and much used during the fourteenth and fifteenth centuries, and was among the first books undertaken by some of the earliest printers of Germany, France, and Italy. Nicholas of Osimo, O. M., added a supplement in 1444, which also appeared in many editions. Others likewise incorporated the work in later handbooks, notably James of Ascoli, O. M., 1464, and Anglo de Clavario, O. M., in his "Summa Angelica". Apart from several MSS. on moral and literary subjects, his works include "De documentis antiquorum", edited by Albertus Clarus, O. P. (Tarsvis, 1601) in 8vo. The same treatise in the vernacular, "Ammazastramenti degli antichi" (Florence, 1662), came to be regarded as a Tuscan classic.

JOHN R. VOLL.

Bartholomites, the name given to Armenian monks who sought refuge in Italy after the invasion of their country by the Sultan of Egypt in 1296. The first of their number landed at Genoa, where a church of St. Bartholomew was built for them, and a monastery of this name followed this first band and was established in various Italian cities, Parma, Sienna, Pisa, Florence, Civita Vecchia, Rome, and Ancona. To these early foundations were afterwards added others at Milan, Naples, Perga, Gubbio, Ferrara, Bologna, Padua, Rimini, Viterbo, etc.; in fact the Bartholomites were both numerous and prosperous. In the beginning they observed the Rule of St. Basil and the Armenian Liturgy, Clement V acknowledging their right thereto. But in time they abandoned their national traditions for those of the Western Church, and thus a bit resembling that of the Dominicans and finally replaced the Rule of St. Basil by that of St. Augustine. Innocent VI, who approved this change (1356), also confirmed the union of their monasteries into one congregation governed by a superior-general and a general chapter. The superiors-general were at first elected for life, but in 1474 Pope Sixtus IV caused them to be nominated for every three years.

Boniface IX granted the congregation the privileges of Urban VIII and Paul III ratified the same; nevertheless the Bartholomites were prohibited from joining any other religious order except that of the Carthusians. Durazzo, their first cardinal protector, was appointed by Urban VIII in 1640, but they did not long enjoy his signal advantage. Their regular observance began to decline, their ranks were but meagrely recruited, and most of their houses had to be closed until at length only four or five were left, in which about forty monks lived as best they could. There seemed to be but slow progress towards their decadence. In 1804 Pius VII authorized the Bartholomites to enter other religious orders or else to secularize themselves, assuring each of them a pension. He suppressed their congregation and its houses and revenues were put to new uses. Among the most noted were: Father James Martin, who conducted the first Armenian monks to Genoa and was their superior; Father Anthony of Pisa, who was the first superior-general of their congregation; Esteban Palma, who four times held the office of general and laboured zealously for the reform of the congregation; Cherubini Cerbelloni of Genoa, who had considerable influence as a preacher; and Sootti, Pori, Girolamo Cavalieri, J. B. Ladrian, and Gregorio Bitto who left literary works which were, however, soon forgotten. In their church at Genoa is still preserved the celebrated portrait of Christ known as the "Madonna di Balduini". Bitto, Relazioni del principe e stato della Religione de' Fr. di S. Basilio degli armeni in Italia; HIST. TOT. Histoire des ordres monastiques, I, 243-245.

J. M. BORRIN.

Bartoli, DANILO, a historian and littérateur, b. at Ferrara, 12 February, 1608; d. in Rome, 12 January, 1685. After a brilliant course of studies under the Jesuits, he entered the novitiate of San Andrea, Rome, in 1623, before the completion of his sixteenth year. The story of the labours and sufferings of the members of the Society of Jesus in the Indies and Japan is an account of religious an ardent desire to emulate the seed and devotion of the missionaries. He was sent to the foreign missions, but Father Mutius Vitellezchi, the General of the order, kept him in Italy. After some years of teaching, Father Bartoli began his apostolate in his native city and his sermons meeting with extraordinary success in Ferrara, his native place, Genoa, Lucca, Florence, and Rome. He was engaged in this fruitful ministry when the contemplation of the evils to youth, caused by the reading of romances, suggested one of his first books, "The Learned Man". This work was received with great applause and is said to have gone through eight editions in the first year of its publication; it was translated into French, German, and English.

The success of this venture decided the vocation of Father Bartoli as a writer. He was called to Rome by his superiors in 1650, and from that time until his death he published many works in history as well as in other departments of literature, all of them written in Italian. The best known and the most important is a history of the Society of Jesus, which appeared in Rome from 1660 to 1673, in six volumes folio, and was translated into Latin by Father Piani, S.J. Bartoli's works were collected and published in "Florentinis Iuris" in 40 volumes, 16mo. He is universally esteemed for his erudition, as well as for the purity and elegance of his style. His fellow-countrymen have honoured him with a place among the classical writers of the Italian language.

peared in four volumes during the years 1675-93. The last volume was published by his disciple, Carlo Giuseppe Imbonati, who also published a supplementary volume in 1694. This monumental work contains an account of Jewish literature and embodies besides its numerous bibliographical and biographical data, a number of dissertations on Jewish customs, etc. Although it has been adjudged uncritical by Richard Simon, Bartolocci's work was adopted by Wolf as the basis of his own "Bibliotheca Hebraica." Bartolocci died as Abbot of the monastery of St. Sebastiani ad Catacumbas in Rome.

F. X. E. Albert.

Bartolommeo, Fra, an Italian painter and a member of the Dominican Order, b. in 1475 in the territory belonging to Florence; d. at Florence in 1517. He bore the worldly name of Bartolommeo di Pagholo del Fattorino and was called, more familiarly, Baccio della Porta, the nickname being a reference to the circumstances of his family. His work as a painter characterizes the transition of the Renaissance from its early period to the time of its greatest splendour. In 1484 he entered the studio of Cosimo Rosselli, one of whose pupils at the same time was a lad of about Bartolommeo's age, Mariotto Albertinelli. The friendship between Bartolommeo and the somewhat more worldly Albertinelli caused the two to form a business partnership in 1490 which lasted until 1512. At times the two friends were estranged on account of Bartolommeo's admiration for Savonarola.

Bartolommeo adopted Savonarola's theories concerning art, painted the reformed picture a number of times and after Savonarola's tragic end (1498) entered the same order to which the reformer had belonged. Before this, though, he had painted the fresco of the Last Judgment, which is in the Church of Santa Maria Nuova, Florence. The upper part of the fresco depicts the Saviour, the Virgin Mary, and the Apostles; the figures while preserving their traditional dignity exhibit a striking freedom in the pose. The work also shows an entirely new perception of perspective. The lower half of the fresco, painted by Albertinelli, is also skilfully composed. At times, perhaps, a little more action would be preferable. Besides this work all that we have of Bartolommeo's first period are a few carefully executed drawings which are in various collections. Savonarola made the same deep impression on Bartolommeo that he made on many other Florentine painters. According to Vasari, the artist, influenced by Savonarola's preach-

ing, threw his secular and mythological designs into the bonfire.

For a number of years after his entrance (1500) into the Convent of San Marco he gave up his art, although he did not become a monk. He resumed his work, painting in the style of Angelico, which was in agreement with the spirit of Savonarola, and also in part in the style of Masaccio and Filippino. He had previously studied the Florentine art of the time with great diligence, and in a manner this the work that Bartolommeo had charge of the studio of San Marco when Raphael came to Florence. Raphael visited Bartolommeo and the acquaintance was productive of benefit to both. In 1508 Raphael went to Rome. In the same year a visit to Venice gave Bartolommeo a new stimulus. The influence of the rich colouring used by Bellini and Titian showed itself in the altar-piece (in the Museum at Lucca), which represents God the Father, with St. Catherine and Mary Magdalen in ecstasy. Some years later Bartolommeo went for a time to Rome. Here he studied the works of Michelangelo in addition to those of Raphael. For a while he was in Lucca, but generally he worked at San Marco, where he finally died.

Fra Bartolommeo developed his undoubted talent for painting by the manner in which he treated the work of religious feeling and the dignity suitable to sacred subjects are happily united with the advance in the technic of his time. In perspective, characterization of his subject, drapery, color, grouping, and rhythm of pose and movement Bartolommeo holds to the Quattrocento, while the impression made by his devotional pictures is in no way lowered by realism or by seeking after external effect. The works which he painted to sell are not so naive and unconscious as the Fiesole pictures, for Bartolommeo came more in contact with the world. The "Vision of St. Bernard" exhibits a shy, tender grace; the "Marriage of St. Catherine" (in the Pitti Palace, Florence) has more animation although filled with the mystic depths of religious feeling. Bartolommeo loved symmetry in his grouping, but he understood how to avoid monotony by variation in the position of the body, the turn of the head, and by the use of other signs of movement as, for example, in the Mother of Mercy in the museum at Lucca. An unfinished altar-piece, a beauty of form expressive of the character of the personage is united to skilful variety and strict adherence to the subject. This altar-piece (in the Uffizi, Palace, Florence) represents the patron saints of Florence with the Madonna and Child. St. Anna who is also portrayed is somewhat higher in position, while two angels sit at the foot of the altar and others are poised over the whole group.

The art with which Bartolommeo expressed the individuality of his subjects is still greatly admired in small frescoes which he produced, such as the "Ecce Homo" and representations of the Madonna with various saints. The heroic figure of St. Mark in the Pitti Palace, Florence, an imitation of the style of Michelangelo, is less striking in expression than in the true drapery. A delightful simplicity and dignity characterize the painting of a Risen Christ blessing the world. The evangelists are with him and the world is seen as a landscape in a mirror held by two angels. Still more2

The Descent from the Cross (Pitti Gallery, Florence)
graded and so subdued that a heavenly peace illumines the group. Bartolommeo’s masterpieces are to be found chiefly in Florence and Lucca.

GIETMANN.

Bartolozzi, Francesco, an engraver, etcher, and painter, b. at Florence, 1727; d. at Lisbon, 1815. His father was a goldsmith of excellent family and early taught the use of the burin to his boy who, when ten years of age, engraved two heads which gave promise of his future powers. In the Florentine Academy he learned to work in oil, chalks, and sanguine. Unsurpassed by any artist of his day in his knowledge of anatomy, and with a passion for the antique, young Bartolozzi became a master in depicting beauty of expression, movement, and form.

From 1745 until 1751 he studied with Wagner, the Venetian historical engraver. This apprenticeship ended, he married Lucia Ferro and the young pair, on Cardinal Bottari’s invitation, went to Rome. Returning to Venice, his fame grew very rapidly, and in 1760, when George III’s librarian, took him to England, where he was appointed Engraver to the King, and, four years later, Royal Academician. In London he engraved over two thousand plates, nearly all in stipple or the “red-chalk style,” a method recently invented by the French, but brought into vogue and elevated into a distinct art by Bartolozzi. He devoted himself to the human figure, and his engravings abound in sweet and tender types of beauty, graceful in form and outline. Everywhere are found delicate modulations of light and shade with a roundness, finish, and suggestion of flesh never before seen in engraved work.

Bartolozzi’s drawing was superb; and although he was a reproductive artist he improved the work he copied, especially the drawing, even Sir Joshua Reynolds thanking him for such a service. His pupils called him the “god of drawing.” His splendid line work was obscured by the great popularity attained by his stippled prints, and his few etchings show a free, bold, and unfeathered sweep of line. They, too, were reproduced from pictures by others, but the translation always improved on the original. In 1802 Bartolozzi went to Lisbon, where he was knighted, and where he worked and taught until his death at the church of Saint Isabella. Among Bartolozzi’s best productions are the “Royal Academy Diploma,” “The Marlborough Gems,” the “Illustrations to Shakespeare,” and some of his small “Tickets,” all in stipple; and “The Silence” and “Clytie,” engraved in pure line.

LEAN HUNT.

Barton, Elizabeth, b. probably in 1506; executed at Tyburn, 20 April, 1534; called the “Nun of Kent.” The career of this visionary, whose prophecies led to her execution under Henry VIII, has been the source of much controversy which is the subject of this inquiry: Was she gifted with supernatural knowledge or was she an impostor? In 1525, when nineteen years of age, being then employed as a domestic servant at Aldington, Kent, she had an illness during which she fell into frequent trances and to “wonderously things done in other places whilst she was neither herself present nor yet heard no report thereof”. From the first her utterances assumed a religious character and were “of marvellous holiness in rebuke of sin and vice”. Her parish priest, Richard Masters, convinced of her sincerity, reported the matter to the Archbishop of Canterbury, who sent a commission of three Canterbury Bishops, Bocking, Hadleigh, and Barnes, two Franciscans, Hugh Rich and Richard Riaby, a diocesan official, and the parish priest to examine her again. Shortly after this commission pronounced in her favour, her prediction that the Blessed Virgin would appear to her at a certain chapel was not followed. The presence of a large crowd she was restored to health. She then became a Benedictine nun, living near Canterbury, with a great Reputation for holiness. Her fame spread widely until she came into wide public notice. She protested “in the name and by the authority of God” against the king’s projected divorce. To further her opposition, besides writing to the pope she had interviews with Fisher, Wolsey, and the king himself. Owing to her reputation for sanctity she proved one of the most formidable opponents of the royal divorce, so that in 1533 Cromwell took steps against her, and after examination by Cranmer she was in November, with Dr. Bocking, her confessor, and others, committed to the Tower. Subsequently all the prisoners were made to do public penance at St. Paul’s and are fully and to publish confessions of deception and fraud.

In January, 1534, a bill of attainder was framed against her and her thirteen of her sympathizers, among whom were Fisher and More. Except the latter, whose name was withdrawn from the bill, seven including Bocking, Masters, Rich, Riaby, and Elizabeth herself being sentenced to death, while Fisher and five others were condemned to imprisonment and forfeiture of goods. Elizabeth and her companions were executed at Tyburn on 20 April, 1534, when she is said to have repeated her confession. Protestant authors allege that these confessions alone are conclusive of her imposture, but Catholic writers, though they have felt free to hold divergent opinions about the nun, have pointed to the suggestive fact that all that is known as to these confessions emanates from Cromwell or his agents; that all available documents are on his side; that the confession issued as here is on the face of it not her own composition; that she and her companions were never brought to trial; but were condemned and executed unheard; that there is contemporaneous evidence that the alleged confession was even then believed to be a forgery. For these reasons the matter cannot be considered as settled, and ultimately the difficulty of arriving at a satisfactory and final decision now seems insuperable.

EDWIN BURTON.

Baruch (Heb. ברוך, blessed, Benedict; Sept. Baruch). I. Baruch, the disciple of Jeremiah, and the traditional author of the deuteronomical book, which bears his name. He was the son of Nerias (Jer. xxxii, 12, 16; xxxvi, 4, 8, 32; Bar., i, 1), and most probably the brother of Sarsias, chief chamberlain to King Sedeccias (Jer. xxxii, 12; ii, 59; Bar., i, 1). After the Temple of Jerusalem had been plundered by Nebuchadnezzar (c. c.), he wrote under the dictation of Jeremiah the oracles of that great prophet, foretelling the return of the Babylonians, and read them at the risk of his life in the hearing of the Jewish people. He wrote also the second and enlarged edition of the prophet’s prophecies after the things done in other places and whilst she was neither herself present nor yet heard no report thereof. These utterances were of marvellous holiness in rebuke of sin and vice. Her parish priest, Richard Masters, convinced of her sincerity, reported the matter to the Archbishop of Canterbury, who sent a commission of three Canterbury Bishops, Bocking, Hadleigh, and Barnes, two Franciscans, Hugh Rich and Richard Riaby, a diocesan official, and the parish priest to examine her again. Shortly after this commission pronounced in her favour, her prediction that the Blessed Virgin would appear to her at a certain chapel was not followed. The presence of a large crowd she was restored to health. She then became a Benedictine nun, living near Canterbury, with a great reputation for holiness. Her fame spread widely until she came into wide public notice. She protested “in the name and by the authority of God” against the king’s projected divorce. To further her opposition, besides writing to the pope she had interviews with Fisher, Wolsey, and the king himself. Owing to her reputation for sanctity she proved one of the most formidable opponents of the royal divorce, so that in 1533 Cromwell took steps against her, and after examination by Cranmer she was in November, with Dr. Bocking, her confessor, and others, committed to the Tower. Subsequently all the prisoners were made to do public penance at St. Paul’s and are fully and to publish confessions of deception and fraud.

In January, 1534, a bill of attainder was framed against her and her thirteen of her sympathizers, among whom were Fisher and More. Except the latter, whose name was withdrawn from the bill, seven including Bocking, Masters, Rich, Riaby, and Elizabeth herself being sentenced to death, while Fisher and five others were condemned to imprisonment and forfeiture of goods. Elizabeth and her companions were executed at Tyburn on 20 April, 1534, when she is said to have repeated her confession. EDWIN BURTON.
and witnessed the purchase by the prophet of his ancestral estate in Anathoth (Jer., xxxii). After the fall of the Holy City and the ruin of the Temple (588 B.C.) Baruch lived probably for some time with Jeremiah at Masaph. His enemies accused him of having crucified the prophet and advised the Jews to remain in Judah, instead of going down into Egypt, as they were contemplating. In consequence, he was carried, together with his master, to Egypt (Jer., xxxiii), where, according to a Hebrew tradition preserved in I Esdr., xxxi, 6, 7, both before and after Nabuchodonosor’s invasion of that country. This tradition, however, conflicts with the data found in the opening chapter of the Prophecy of Baruch, wherein we are told of Baruch writing his book in Babylon, reading it publicly in the fifth year after the burning of the Holy City, and apparently being sent to Jerusalem by the Jewish captives with sacred vessels and gifts destined to the sacrificial service in Yahweh’s Temple. It conflicts likewise with various traditions, both Jewish and Christian, which perhaps contain some particles of truth, but which do not allow us to determine the date, place, or manner of Baruch’s death, with anything like probability.

In the Catholic Bible the “Prophecy of Baruch” is made up of six chapters, the last of which bears the signature of the “Epileste of Jeremiah”, and does not belong to the book proper. The Prophecy opens with an historical introduction (i, 1–14), stating first (1–2) that the book was written by Baruch at Babylon in the fifth year after Jerusalem had been burned by the Chaldeans, and next (v., 2–14) that it was read in an assembly of King Jehochains and other Babylonian exiles upon whom it produced the most beneficial effects. The first section in the body of the book (i, 15; ii, 8) contains a twofold confession of the sins which led to the exile (i, 15–4, 5; ii, 6–13), together with the prayer of the prophet to forgive His people (ii, 14; iii, 8). While the foregoing section has much in common with the Book of Daniel (Dan., ix, 4–19), Baruch’s second section (iii, 9; iv, 4) closely resembles passages in Job, xxviii, xxxviii. It is a beautiful panegyric of that Divine Wisdom which is nowhere found except in the Law given to Israel; only in the guise of the Law has Wisdom appeared on the earth and become accessible to man; let, therefore, Israel prove faithful again to the Law, subject the third section which extends from iv, 5 to v, 9. It is made up of four odes, each beginning with the expression, “Take courage!” (iv, 5, 21, 27, 30), and of a psalm closely connected with the eleventh of the apocryphal Psalms of Solomon (iv, 36; v, 1). Chapter vi as an appendix to the whole book “The Epistle of Jeremiahs”, sent by that prophet “to them that were to be led away captives into Babylon” by Nabuchodonosor. Because of their sins they were to be removed to Babylon and to remain there “for a long time, even to seven generations”. In that heathen city they would witness the gorgeous worship paid to “gods of gold, and of silver, and of stone, and of wood”, but should not conform to it. All such gods, it is argued in various ways, are powerless and perishable at man’s hand; and the same is the case with death. The apostles were to obey the Great Commandment which obviously bore upon the exile. Such a literary method of composition does not necessarily conflict with the traditional authorship of the Book of Baruch. Many of the sacred writers of the Bible were compilers, and Baruch may, and, according to the Catholic Church, have composed the Epistle to the Hebrews. The character of the work ascribed to him, must, be numbered among them. The grounds of Catholics
for this view are chiefly three: (1) The book is ascribed to Baruch by its title; (2) it has always been regarded as Baruch's work by tradition; (3) its composition and there later date of Baruch's time, or that should be regarded as foreign to the style and manner of that faithful disciple and secretary of Jeremiah. Over against this view, non-Catholics argue: (1) That its ultimate basis is simply the title of the book; (2) that the book itself is not in harmony with the historical and literary contents of the work; and (3) that those contents, when impartially examined, point to a much later compiler than Baruch; in fact some of them go so far as to ascribe the composition of the book to a writer living after B.C. 70. Catholics easily disprove this last date for the Book of Baruch; but they do not so easily dispose of the serious difficulties that have been raised against their own ascription of the whole work to Baruch. Their answers are considered as sufficient by Catholic scholars generally. Should any one, however, judge them inadequate, and therefore consider the Book of Baruch as the work of a later editor, the inspired character of the book would still remain, provided this later editor himself be regarded as inspired in his work. The Book of Baruch is “a sacred and canonical” writing has been defined by the Council of Trent; that it has just as much right to be held “inspired of God” as any other book of Holy Writ can readily be shown. For some take the study of the Bible, its Latin rendering in our Vulgate goes back to the old Latin version anterior to St. Jerome, and is tolerably literal from the Greek text.

II. BURCH, the son of Zachai, who helped to rebuild the wall of Jerusalem (II Esd., ii. 28).

III. Baruch, a priest who signed the renewed Covenant after the Exile; perhaps the same as the foregoing (II Esd., vi. 6).

IV. Baruch, one of the children of Juda who settled in Jerusalem after the Captivity (II Esd., viii. 3).

Basedow, Johann Bernhard. See Philanthropinism.

Basil, Liturgy of Saint. Several Oriental liturgies, or at least several anaphoras, have been attributed to the great St. Basil, Bishop of Cæsarea in Cappadocia from 370 to 379. That St. Basil composed a liturgy, or rather reformed an existing liturgy, is beyond doubt, since besides the constant tradition of the Byzantine Church there are many testimonies in ancient writings to establish the fact. In a treatise on the tradition of the Divine Liturgy attributed to St. Proclus, Patriarch of Constantinople (434-466), it is stated that when St. Basil noticed the slothfulness and degeneracy of men, how they were wearyied by the length of the liturgy, he shortened it in order to cure their sloth (P. G., LXV, 849). Moreover the Church has a liturgy which is now a text which went under the name of St. Basil is given in a letter of Peter the Deacon, one of the Scythian monks sent to Rome to settle certain dogmatic questions. Writing about the year 520 to the African bishops in exile inardinia, Peter, an Oriental, mentions a Liturgy of St. Basil, which was known and used throughout the entire East, and even quotes a passage from it: “Hence, also, Blessed Basil, Bishop of Cæsarea, in a prayer of the holy altar, with which almost the entire East is familiar, says among other things: Grant us, O Lord, Thy strength and protection; make the evil good and preserve the just in their righteousness. For Thou canst do all things, and wilt, most readily, oppose Thee; for when Thou desirest, Thou savest, and no one resists Thee will.” (P. L., LXXV, 449.)

Leontius of Byzantium, writing about the middle of the sixth century, censures Theodore of Mopsuestia because he was not content with the liturgies handed down by the Fathers to the churches, but composed a Mass of his own, showing, thereby, no reverence either for that of the Apostles, or for that composed in the same spirit by the great St. Basil (P. G., LXXVI, 1368). The Quinaxe, or Trullan Council (692), in its thirty-second canon draws an argument from the written liturgy of the archbishop of the church of the Cæsareans, St. Basil, whose glory has spread through the whole world (Mansi, Coll. Conc., XI, 858). Finally, in the Barberini library there is a manuscript of the latter part of the eighth, or the early part of the ninth, century which contains a Greek liturgy entitled the “Liturgy of St. Basil.”

It is not known precisely what the nature of the Basilian reformation was, nor what liturgy served as the basis of the saint's work. Very probably he shortened and changed somewhat the liturgy of his own diocese, which was akin to the Liturgy of St. James. In later times it underwent some development, so that with the study of the liturgical history it would be almost impossible to reconstruct it as it came from the pen of the Bishop of Cæsarea. According to the tradition of the Greek Orthodox Church, their liturgy is practically the work of St. Basil, due allowance being made for later amplification in the course of time. This is older than either of the other two Byzantine liturgies, and is mentioned under the name of St. Basil in ancient times as if were then the normal liturgy. Of the anaphoras attributed to St. Basil the Syriac and Armenian are probably derived from the Byzantine Greek with some modifications. The Abyssinian is a translation of the Coptic, while the Coptic, Arabic, and Greek Egyptian liturgies are substantially the same. These Egyptian anaphoras of St. Basil are different from the Cæsarean liturgy, and do not possess all the characteristics of the Alexandrian Rite, but appear rather to be modelled on the Syrian type, so they are probably an importation into Egypt. The Greek Egyptian contains several prayers (identical with those in the Pontine liturgy) expressly ascribed to St. Basil, and from these it may derive its title.

The Cæsarean or Byzantine Liturgy is used in the countries which were evangelized from Constantinople, or which came under its influence for any considerable period. It is used, for example, by the Orthodox and Uniat Greek churches in the Orient, as well as by the Greek communities in Italy and Sicily. Translated into the Old Slavonic it is used by Orthodox and Uniat Catholics in Russia and in some parts of the Austrian Empire; translated into Georgian and Rumanian it is used respectively in Georgia and Rumania. It has also been translated into several other languages and dialects for use in the Russian dependencies and where the Russian Church has a liturgical attachment. It is also in use in Syria. Since the Liturgy of St. John Chrysostom has become the normal liturgy of the Greek Church, that of St. Basil is now used only on the Sundays of Lent with the exception of Palm Sunday, the Holy Thursday of Holy Week, the Sunday of Christmas and of the Epiphany, and on the feast of St. Basil, which in the Greek calendar occurs on the first day of January.

The liturgy may be divided into the Mass of the catechumens and the Mass of the faithful. The first
contains the prayers of the prothesis of the antiphon, of the little entrance, and of the triasphion, the lessons, and the prayers of the eucene and of the catechumenas. The Mass of the faithful begins with the two prayers of the faithful, and contains the prayer of the great entrance, the prayer of the Offertory, which is expressed as: Basil, the offering of the Lord. Then the Offertory, and the Anaphora. The Anaphora proper, starting with the Eucharistic Preface followed by the Sanctus, embraces the preparatory prayers for the Consecration, the Consecration itself, the Epiclesis or invocation of the Holy Ghost, the Great Amen, and finally the dismissal, namely the Lord's Prayer, the inclination, Elevation, Communion, thanksgiving, and dismissal.

Goar, Εὐχέλαδος σεις ψιθυρικό γραμματις (Venice, 1730); Brightman, Liturgies Eastern and Western (Oxford, 1905), I, prints the Barberini Ms., p. 306, the prayers of the modern liturgy, p. 400. Tr. will be found in: Breyer, A Collection of the Principal Liturgies (London, 1833), and Swainson, The Greek Liturgies (Cambridge, 1884); Neal, History of the Holy Eastern Church (London, 1858); Forward, Liturgy, History of the Protestant, Lutheran, Eastern, Reformed, and Dissenting Churches (London, 1881); Rennardot, Liturgiarum orientalium collecta (Frankfort, 1847).

J. F. Goossens.

Basil, Rule of Saint.—I. Under the name of Basilians are included all the religious who follow the Rule of St. Basil. The monasteries of such religious have never possessed the hierarchical organization which ordinarily exists in the body of an order properly so called. Only a few houses were formerly grouped into congregations or are today so combined. St. Basil drew up his Rule for the members of the monastery he founded about 356 on the banks of the Iura in the province of Coele Syria. By forming this community St. Basil visited Egypt, Palestine, Cæsarea, and Mesopotamia in order to see for himself the manner of life led by the monks in those countries. St. Gregory of Nazianzus, who shared the retreat, aided Basil by his advice and experience. The Rule of Basil is divided into two parts: the “Greater Monastic Rules” (Regulae fusius tracetae, Migne, P. G., XXXI, 889-1052), and the “Lesser Rules” (Regulae brevius tracetae, ibid., 1051-1306). Rufinus who translated them into Latin united the two into a single Rule under the name of “Regule sancti Basilli episcopi Cappadociae ad monachos” (P. L., CIII, 483-554); this Rule was followed by some western monasteries. For a long time the Rule of Cæsarea was considered as the model of the author of a work on monasticism called “Constitutiones monasticorum” (P. G., XXXI, 1315-1428). In his Rule St. Basil follows a catechetical method; the disciple asks a question to which the master replies. He limits himself to laying down indisputable principles which shall guide the superiors and monks in their conduct. He sends his monks to the Sacred Scriptures; in his eyes the Bible is the basis of all monastic legislation, the true Rule. The questions refer generally to the virtues which the monks should practise and to the rules they should avoid. The greater number of the replies contain a verse or several verses of the Bible accompanied by a comment which defines the meaning. The most striking qualities of the Basilian Rule are its prudence and its wisdom. It leaves to the superiors the care of settling the many details of local, individual, and daily life; it does not determine the material exercise of the observance of the administrative regulations of the monastery. Poverty, obedience, renunciation, and self-negation are the virtues of the monastic life: St. Basil makes the foundation of the monastic life.

As he gave it, the Rule could not suffice for anyone who wished to organize a monastery, for it takes this work as an accomplished fact. The life of the Cappadocian monks could not be reconstructed from the traces they left, and the life of Basil of Caesarea. As the monks of the Cappadocian monastery were not much the superiors and to the garb of the inmates. The superiors had for guide a tradition accepted by all the monks. This tradition was enriched as time went on by the decisions of councils, by the ordinances of the Emperors of Constantinople, and by the regulations of a number of revered abbots. Thus there arose a body of law by which the monasteries were regulated. This law was accepted by all the abbeys. They were observed only by the houses of one country, while there were regulations which applied only to certain communities. In this regard Oriental monasticism bears much resemblance to that of the West; a great variety of observances is noticeable. St. Basil’s monasteries were organized in the Rule of St. Basil formed a principle of unity.

II. THE MONASTRIES OF THE EAST.—The monasteries of Cappadocia were the first to accept the Rule of St. Basil; it is afterwards spread gradually to all the monasteries of the East. Those of Armenia, Chaldea, and of the Syrian countries in general preferred instead of the Rule of St. Basil those observances which were known among them as the Rule of St. Anthony. Neither the ecclesiastical nor the imperial authority was able to conform to the Basilian Rule universal. It is therefore impossible to tell the epoch at which it acquired the supremacy in the religious communities of the Greek world; but the date is probably an early one. The monasticism of the Eastern Church was strongly held back by the obstacles of its diffusion. Protected by the emperors and patriarchs the monasteries increased rapidly in number. In 536 the Diocese of Constantinople contained no less than sixty-eight, that of Chalcedon forty, and these numbers continually increased. Although monasticism was not able to spread in all parts of the empire with equal rapidity, yet what it probably must have been may be inferred from these figures. These monks took an active part in the ecclesiastical life of their time; they had a share in all the quarrels, both theological and political, and they were associated with all the works of charity. Their monasteries were places of refuge for studious men. Many of the bishops and patriarchs were chosen from their ranks. Their history is interwoven, therefore, with that of the Oriental Churches. They gave to the preaching of the Gospel its greatest apostles. As a result monastic life gained a footing at the same time as Christianity among all the races won to the Faith. The position of the monks in the empire was one of great power, and the emperors did not always measure their influence. Thus their development ran a course parallel to that of their Western brethren. The monks, as a rule, followed the theological vicissitudes of the emperors and patriarchs, and they showed no notable independence except during the iconoclastic persecution; the stand they took in this aroused the anger of the imperial controversyists. The Faith had its martyrs among them; many of them were condemned to exile, and some took advantage of this condemnation to reorganize their religious life in Italy.

Of all the monasteries of this period the most celebrated was that of St. John the Baptist of Studium, founded at Constantinople in the fifth century. It acquired its fame in the time of the iconoclastic persecution during which it was under the direction of the saintly Hesychmenos (abbot) Theodore, called the Studite. Nowhere did the heretical emperors meet with more courageous resistance. At the same time the monastery was an active centre of intellectual life, and had considerable influence on monastic observances in the East. Further details may be found in “Prefiscriptio constitutionis monasterii Studii” (Migne, P. G., XCIX, 1703-20), and the monastery’s “Canones de confessione et pro pecatis satisfactione” (ibid., 1721-24). Theodore’s authority was upheld by his sons to his uncle, the saintly Abbot Plato.
who first introduced them in his monastery of
Basil. The other monasteries, one after another, adopted them, and they are still followed by
the monks of Mount Athos. The monastery of
Mount Athos was the direct descendant of the
tenth century through the aid of the Emperor Basil
the Macedonian and became the largest and most
celebrated of all the monasteries of the Orient; it
is in reality a monastic province. The monastery
of Mount Sinai, in particular, is thought complete to be the
monastery of Sinai, although it was never as important as the
other. The monastery of St. Catherine on Mount Sinai, which goes back to the early days of monas
ticism, had a great fame and is still occupied by monks.
Reference to Oriental monastic history must here be limited
to those who have left a mark upon ecclesiastical
literature: Leontius of Byzantium (d. 543), author of
a treatise against the Nestorians and Eutychians;
St. Sophronius, Patriarch of Jerusalem, one of
the most vigorous adversaries of the Monothelite heresy
(P. G., LXXXVII, 3147-4014); St. Maximus
the Confessor, Abbot of Chrysopolis (d. 662), the
most brilliant representative of Byzantine monasticism
in the seventh century; in his writings and letters
St. Maximus steadily combated the partisans of
the Monothelite heresy (in the Cod. XC and XCI); St. John Damascene, who may perhaps
be included among the Basilians; St. Theodore
the Studite (d. 829), the defender of the veneration
of sacred images; his works include theological, ascetic,
liturgical, and homiletical writings (P. G., XCIX).
The Byzantine monasteries furnish a long
line of historians who were also monks: John
Malalas, whose "Chronographia" (P. G., CXVII,
9-190) served as a model for Eastern chroniclers;
Georgius Syncellus, who wrote a "Selected Chrono
graphia"; his friend and disciple Theophanes (d. 817),
Abbot of the "Great Field" near Cysicus, the
author of another "Chronographia" (P. G., CVIII);
the Patriarch Nicophorus, who wrote (815-829) an
historical "Breviary" (a Byzantine history), and an
"Abridged Chronograpbia" (P. G., C, 879-991);
George the Monk, whose Chronicle stops at a. n. 842
(P. G., CX). There were, besides, a large number
of monks, hagiographers, hymnologists, and poets who
had a large share in the development of the Greek
Literature. Among the authors of hymns may be
mentioned: St. Maximus the Confessor; St. Theodore
the Studite; St. Romanus the Melodist; St. Andrew
of Crete; St. John Damascene; Cosmas of Jerusalem,
and St. Joseph the Hymnographer. Fine penman
ship is typical of Constantinople. He held
honour among the Basilians. Among the monasteries
which excelled in the art of copying were the
Sudium, Mount Athos, the monastery of the Nile of
Philox and that of Rossano in Sicily; the tradi
tion was continued later by the monastery of Grotta
Ferrata near Rome. These monasteries, and others
as well, were studios of religious art where the monks
toiled to produce miniatures in the manuscripts,
paintings, and goldsmith work. The triumph of or
thodoxy over the iconoclastic heresy infused an
extraordinary enthusiasm into this branch of their labours.

From the beginning the Oriental Churches often took
their patriarchs and bishops from the monasteries.
Later, when the secular clergy was recruited largely
from among married men, this custom became almost
universal, for, as the episcopal office could not be
conferred upon men who were married, it developed,
in a way, into a privilege of the religious who had
taken the vow of celibacy. Owing to this the monks
formed the periphery of the whole clerical
clergy of the Western Churches; this gave and still
gives a preponderating influence to the monasteries
themselves. In some of them theological instruction
is given both to clerics and to laymen. As long as
the spirit of proselytism existed in the East the
monasteries furnished the Church with all its mis
sionaries. The names of two have been inscribed
in Rome in its calendar of annual feasts; namely, St.
Cyril and St. Methodius. The name of the latter
The Byzantine schism did not change sensibly the
position of the Basilian monks and monasteries.
Their sufferings arose through the Mohammedan con
quest. To a large number of them this conquest
brought complete destruction. They are the best
known monasteries of the schismatic Basilians are those
of Mount Athos and of Mount Sinai. Besides these
there are still many monasteries in Turkey in Asia,
of which 10 are in Jerusalem alone, 1 at Bethlehem,
and 4 at Jericho. They are also numerous on the
islands of the Aegean Sea: Chios 3, Samos 6, Crete
about 50, Cyprus 11. In Old Cairo is the monastery
of St. George. In Greece there were formerly
400 monasteries, there were, in 1832, only 82, which
by 1904 had increased to 109; 9 Basilian convents
and 556 women are now in Mount Athos. In the
Rumania there are 22 monasteries; in Servia 44, with
only about 118 monks; in Bulgaria 78, with 193
inmates. Montenegro has 11 monasteries and 15
monks; Bosnia 3 and Herzegovina 11. In Dal
matia are 11 monasteries and in Bukovina 3.
Hungary has 25 monasteries and 5 branch houses.
The schismatic monks are much more numerous in
Russia; in this country, besides, they have the most
influence and possess the richest monasteries.
None were else has the monastery life been so closely inter
woven with the national existence. The most cele
brated monasteries are Pusecherkoi at Kieff and
Trotte at Moscow; mention may also be made of
the monasteries of Solovesk, Novgorod, Pakof, Yer,
and Vladimir. Russia has about 9,000 monks and
429 monasteries. There is no diocese which has not at
least one religious house. The monasteries are
divided into those having state subventions and
monasteries which do not receive such aid.

IV. CATHOLIC BASILIAN.—A certain number
of Basilian monasteries were always in communion
with the Holy See. Among these were the houses
founded in Sicily and Italy. The monastery of
Rossano, founded by St. Nilus the Younger, remained
for a long time faithful to the best literary traditions
of the Greek Church. The monastery of Messina and San Salvatore of Otranto may be
mentioned; the monastery of Grotta Ferrara was also
celebrated. The emigration of the Greeks to the
West after the fall of Constantinople and the union
with Rome, concluded at the Council of Florence,
gave a certain prestige to these communities. Car
dinal Bessarion, who was Abbot of Grotta Ferrara,
sought to stimulate the intellectual life of the Basil
ians by means of the literary treasures which their
libraries contained.

A number of Catholic communities continued to
exist in the East. The Holy See caused them to be
united into congregations, namely: St. Saviour,
founded in 1715, which includes 8 monasteries and
21 hospices with about 250 monks; the congregation of
Aleppo with 4 monasteries and 2 hospices; that of
the Baladites (Valadites) with 4 monasteries and
3 hospices. These last two congregations have their
houses in the district of Mount Lebanon. St. Jos
phat and Father Rutaki, who laboured to bring back
the Russian Church, established a congregation in
Kieff that reformed the Basilians of Lithuania. They began with
the monastery of the Holy Trinity at Vilna (1607). The
monastery of Byten, founded in 1613, was the
cathedral of the union in Lithuania. Other houses
adopted the reform or were founded by the reformed monks. On 19 July, 1617, the reformed monasteries were organized into a congregation under a protoarchimandrite, and known as the congregation of the Holy Trinity, or of Lithuania. The congregation increased with the growth of the union itself. The nucleus of the houses had risen to forty at the time of the general chapter of 1636. After the Council of Zamość the monasteries outside of Lithuania which had not joined the congregation of the Holy Trinity formed themselves into a congregation bearing the title of "Patriarchinum [Protection] B. M. V." (1799). Benedictine houses (1754) were formed one congregation out of these two, giving the new organization the name of the Russian Union of St. Basil and dividing it into the two provinces of Lithuania and Courland. After the suppression of the Society of Jesus these religious took charge of the Jesuit colleges.

The overthrow of Poland and the persecution instituted by the Russians against the Uniat Greeks was very unfavourable to the growth of the congregation, and the number of these Basilian monasteries diminished. Leo XIII (1903), by his Encyclical, "Vigiliae," on "Singularia praevidium" of 12 May, 1881, ordained a reform of the Russian Union of Basilians of Galicia. This reform began in the monastery of Dabromit; its members have gradually replaced the non-reformed in the monasteries of the region. They devote themselves entirely to union with the Union of Latinus, to various labours of the apostolate which the moral condition of the different races in this district demands.

V. LATIN BASILIANS.—In the sixteenth century the Italian monasteries of this order were in the last stages of decay. Urged by Cardinal Siret Pope Gregory XIII ordained (1573) their union in a congregation under the control of a superior general.

Use was made of the opportunity to separate the monasteries from the abbey of the monastery of the houses of the Italian Basilians were divided into the three provinces of Sicily, Calabria, and Rome. Although the monks remained faithful in principle to the Greek Liturgy they showed an inclination towards the use of the Latin Liturgy; some monasteries have adopted the latter altogether. In Spain there was a Basilian congregation which had no traditional connexion with Oriental Basilians; the members followed, the Latin Liturgy. Father Bernardino de la Cruz and the hermits of Santa Maria de Oviedo in the Diocese of Oviedo formed the nucleus of the congregation. Pope Pius VI added them to the followers of St. Basil, and they were affiliated with the monastery of Grotta Ferrata (1861). The monasteries of Turdun and of Valle de Guillos, founded by Father Mateo de la Fuente, were for a time united with this congregation but they withdrew later in order to form a separate congregation (1803) which increased very little, having only four monasteries and a hospice at Seville. The other Basilians, who followed a less rigorous observance, showed more growth; their monasteries were formed into the two provinces of Castile and Andalusia. They were governed by a vicar general and were under the control, at least nominally, of a superior general of the order. Each of their provinces had its college or scholas at Salamanca and Seville. They did not abstain from wine. Like their brethren in Italy they wore a cowl similar to that of the Benedictines; this led to reprobations and processes, but they were authorized by Rome to continue the use of this attire.

Several were the authors of interest in the nineteenth century: Clavel, the historiographer of the order; Diego Niceno, who has left sermons and ascetic writings; Luis de los Angeles, who issued a work on "Instrucciónes para Novicios" (Seville, 1615), and also translated Spanish works of his days; also the famous translators of St. Basil, Felipe de la Cruz, who wrote a treatise on money loaned at interest, that was published at Madrid in 1637, and one on tithe, published at Madrid in 1634. The Spanish Basilians were suppressed with the other orders in 1833 and have not been re-established. At Annanoy in France a religious community of men was formed (1822) under the Rule of St. Basil, which has a branch at Toronto, Canada. (See BASILIANS, PRIESTS OF THE COMMUNITY OF ST. BASIL.)

J. M. BESSE.

Basilians (Priests of the Community of St. Basil).—During the French Revolution, Mgr. de Laville, by his Encyclical "Vigiliae," on "Singularia praevidium" of 12 May, 1881, ordained a reform of the Russian Union of Basilians of Galicia. This reform began in the monastery of Dabromit; its members have gradually replaced the non-reformed in the monasteries of the region. They devote themselves entirely to union with the Union of Latinus, to various labours of the apostolate which the moral condition of the different races in this district demands.

In the sixteenth century the Italian monasteries of this order were in the last stages of decay. Urged by Cardinal Siret Pope Gregory XIII ordained (1573) their union in a congregation under the control of a superior general.

Use was made of the opportunity to separate the monasteries from the abbey of the monastery of the houses of the Italian Basilians were divided into the three provinces of Sicily, Calabria, and Rome. Although the monks remained faithful in principle to the Greek Liturgy they showed an inclination towards the use of the Latin Liturgy; some monasteries have adopted the latter altogether. In Spain there was a Basilian congregation which had no traditional connexion with Oriental Basilians; the members followed, the Latin Liturgy. Father Bernardino de la Cruz and the hermits of Santa Maria de Oviedo in the Diocese of Oviedo formed the nucleus of the congregation. Pope Pius VI added them to the followers of St. Basil, and they were affiliated with the monastery of Grotta Ferrata (1861). The monasteries of Turdun and of Valle de Guillos, founded by Father Mateo de la Fuente, were for a time united with this congregation but they withdrew later in order to form a separate congregation (1803) which increased very little, having only four monasteries and a hospice at Seville. The Spanish Basilians were suppressed with the other orders in 1833 and have not been re-established. At Annanoy in France a religious community of men was formed (1822) under the Rule of St. Basil, which has a branch at Toronto, Canada. (See BASILIANS, PRIESTS OF THE COMMUNITY OF ST. BASIL.)

J. M. BESSE.
signed by several French bishops, all of whom had
been able to appreciate the work done by the com-
munity, and to testify to the piety and zeal of its
members. The Holy See was pleased to declare the
society worthy of praise, and in 1863 Pius IX con-
firmed this decree, granting at the same time certain
privileges and imposing certain restrictions on the
possessions of the community. A few years ago, the
constitutions were again sent to Rome, but the Holy
See wished to make some changes in the administra-
tion of the community, and these are now being
tested with a view to their final approval. When
the recent decree banishing religious orders from
France was in force, the Basilians had colleges in
Annonay, Périgueux, Aubenas, Privas, and Ver-
neux, in France; Blissard and Bone in Algiers; and
Plymouth in England. All these, with the exception
of the last, were transferred to seculars or confisca-
ted, the commercial, the classical, and the philosophical.
Among the more prominent of those who made their
studies, either partially or entirely, at St. Michael's
were the Archbishops of Toronto and the Bishops
of Hamilton, Peterborough, London, and Sault
St. Marie in Canada, and Albany and Columbus in
the United States.

The American Province includes four other colleges
and numerous parishes. The colleges are Assumption
College, Sandwich, Canada; St. Basil's College, Waco;
St. Thomas's College, Houston, and St. Mary's Semi-
nary, La Porte, in Texas. Of the parishes in charge
of the Basilians, the most important are, St. Basil's
and the Holy Rosary, Toronto, Sandwich, Amherst-
burg, and Owen Sound in Canada, and St. Anne's,
Detroit. The novitiate of the community and the
scholasticate are in Toronto. The novitiate lasts for
one year, after which the members remain under

and the religious obliged to scatter until more
favorable times.

In 1852, Mgr. de Charbonnel, Bishop of Toronto,
Canada, requested the Basilians to found a college
in his diocese. Accordingly, a small number were
sent there, and opened a school which has developed
into the present St. Michael's College, the head-
quarters of the Basilians in America. It was opened
in a small house, but was soon moved to a wing of
the bishop's palace which had been built for the
purpose. In September, 1855, the cornerstone of the
present building was laid. Since then various
additions have been made, and the college is now
able to accommodate a large number of students.
The first superior was Father Soulier, who managed
the college from 1852 to 1865, when he was elected
superior general of his community. St. Michael's
is federated with the University of Toronto, its
president is ex officio a member of the Senate of the
university and of the university council, and it also
appoints two other representatives to the senate.

there are three courses of study open to its students,
temporal vows for three years. As no one can enter
the society who does not intend to become a priest,
the final vows are not taken until the subdiaconate,
so that, if at the end of three years the scholastic is
not ready for Holy orders, he renews his temporal
vows. St. Basil's College, Waco, Texas, was founded
in 1889. The course of studies includes both the
commercial and classical departments. St. Thomas's
College, Houston, Texas, was founded in 1900. It is
a day school. St. Mary's Seminary, La Porte, Texas,
was opened in October, 1901, by the Rt. Rev. N. A.
Gallagher, Bishop of Galveston. Its primary object
is the education of young men for the priesthood,
but there is also maintained in connexion with the
seminary a college in which boys and young men
are prepared for any of the learned professions. It
is under the direct supervision of the Bishop of
Galveston.

J. C. PLOMER.

Basilica (εὐκλησία, or βασιλικός) signifies a
kingly, and secondarily a beautiful, hall. The name

ANTHEOR OF SAINT APOLLINARE NUOVO, RAVENNA
BASILICA

indicates the Eastern origin of the building, but it is in the West, above all in Rome, that the finest examples of the basilica are found. Between 84 and 121 AD, there were built in the Forum at Rome the basilicas of Porcia, Fulvia, Semproniana, and Opimia; after 46 AD, the great Basilica Julia of Caesar and Augustus was erected. These buildings were used originally by the Forum and to a lesser extent also for market purposes and for the administration of justice. They were open to the public and well lighted. According to Vitruvius, who in this certainly agrees with Greek authors, the usual construction of a basilica was the following:

The ground plan was a parallelogram in which the width was not greater than one-half of the length and not less than one-third of it. When there was more space in the length, porticoes were built on the short sides. The middle space was separated by columns from a lower ambulatory or portico; the width of the ambulatory equaled the height of the columns and measured one-third of the width of the central space. Above the columns just mentioned stood others, giving entrance to light, which were altered in size, in order that, as in other structures, a tapering effect upwards should be given (De architectura, V, i, or ii). A basilica erected by Vitruvius himself showed a decided variation from this plan. It had two ambulatories, one above the other, and the columns of the middle space were left free so that light might enter. These columns rose up to the rafters. Pilasters leaning against the columns served to carry the flat roof of the ambulatories. The length of the middle nave was double its breadth and six times the breadth of the ambulatory. One of the long sides of the parallelogram spread out into an apse where legal cases were tried, but it was separated by the width of the ambulatory from the space for merchants (the ancient exchange).

The same writer speaks (VI, viii or v) of half-public basilicas in the houses of distinguished statesmen which served as council-chambers and for the settlement of disputes by arbitration. Vitruvius compares these (VI, v or iii) with the Egyptian halls because the latter had also covered ambulatories around a middle space supported by columns and openings for light between columns above. These are the distinctive features of a basilica which we may venture to define as an oblong structure with columns, having an ambulatory of lower height, receiving light from above, and presenting a projecting addition designed to serve a particular purpose.

The form of the basilica of the early Christian Church corresponds so exactly to the shape of the basilica of the Forum or of the house that it does not seem necessary to seek another model, as for instance, the atrium or the cemetery cells. The dark, narrow temple was entirely unsuited for the holding of the Christian church services. These services, which began with the Last Supper, were often held in large rooms in the dwellings of prosperous Christians. When these facts are considered it cannot be a matter of surprise that as early as the time of Constantine the style and name of the basilica seem to have been in common use for the Christian place of worship. Moreover, the chief deviations from the general type of the ancient basilica, such as five aisles, pillars, angular form of the apse, omission of the portico, etc., have been used as well in the Christian basilica to which the original meaning of the word basilica, "the hall of the king," could not be applied.

As a rule, the building at this time was divided into three parts by columns, the well-lighted central part rose higher than the other divisions, and there was an apse. Only, in place of the former surrounding portico, or ambulatory, there was a side aisle to the right and left. There were also basilicas with five and seven aisles. The old construction of the basilica with an apse was well suited to the service of the altar. A transept extending more or less towards both sides was often placed between the nave and the apse both to serve practical needs and on account of its symbolism. The roofing of the transept together with the apse and portico produced variety in the exterior of the basilica. Vaulting, in the west, was used only at times in the side aisles; nothing beyond a flat roof was ventured upon for the very broad middle nave, and often, at the beginning, the rafters of the roof were left uncovered.

It was only after the fifth century that round or square side-towers came into use. These towers were first incorporated in the main building in Syria. The early Christian basilica showed a high, yet light construction, and was roomy and well lighted. The arcades with slender columns which led up to the altar were a particularly beautiful feature. The round form of the arches, of the window-heads, and the ground plan of the basilica were the first indications of the Romanesque style. The idea of a room in which the King of Kings gave audience naturally led to such ornamentation. The back wall of the apse and the "arch of triumph," which opened into the transept, were decorated with mosaics. The altar stood in or before, the apse under a decorated baldacchino (ciborium). The walls were often adorned with pictures, and the floor was made of mosaic. Much use was made in the rich churches of beautiful woven stuffs and of fine goldsmith-work. If the employment of these symbols had a tendency to inspire pride, other observances produced humility of mind, as, for example, the symbolic washing at the fountain.

Basilic Libri. See Roman Law.

Basilides, the earliest of the Alexandrian Gnostic; he was a native of Alexandria and flourished under the Emperors Adrian and Antoninus Pius, about 120-140. St. Epiphanius’s assertion that he was a disciple of Menander is false. The move to Alexandria is unlikely in face of the statement of Eusebius and Theodoret that he was an Alexandrian by birth. Of his life we know nothing except that he had a son called Ialdore, who followed in his footsteps. The remark in the Acts of Archelaus (iv) that Basilides was a "member amongst the Persians" is almost certainly the result of some confusion. Basilides invented prophets for himself named Barcabba and Barchep, and claimed to have received verbal instructions from St. Matthias the Apostle and to be a disciple of Glaucias, a disciple of St. Peter.
His System. — As practically nothing of Basilides' writing is extant and as we have no contemporaneous Gnostic witnesses, we must gather the teaching of this System from the following extant and artificial sources: (a) St. Irenaeus, "Contra Hieresias", I, xxiv, written about 170; (b) Clement of Alexandria, " Stromata", I, xxi, II, vi, viii, xx, IV, xi, xii, xxy, V, i, etc., written between 205–210, and the so-called "Excerpta de Theophilo", "omnem" the one hand; (c) Hippolytus of Rome, "Philosophumena", VII, written about 225; (d) Pseudo-Tertullian, "Against All Heresies", a little treatise usually attached to Tertullian's "De Priestissimatis", but really by another hand, perhaps by Victorinus of Pettau, written about 240 and based upon a non-extant "Compendium" of Hippolytus; (e) Artistic remains of Gnosticism such as Abrasax gems, and literary remains like the Pistis Sophia, the later part of which probably dates back to the end of the second century and, though not strictly Basilidian, yet illustrates early Alexandrian Gnosticism. Later sources are Epiphanius, "Adv. Haer.", xxiv, and Theodoret, "Hist. Fab. Comp.", I, iv. Unfortunately, the descriptions of the Basilidian system given by our chief authorities show such divergences and contradictions that they seem to many quite irreconcilable. According to Irenaeus, Basilides was apparently a dualist and an emanationist, and according to Hippolytus a pantheistic evolutionist.

Some modern interpreters have held that Nous (Mind) was the first to be born from the Unborn Father; from Nous was born Logos (Reason); from Logos, Phronesis (Prudence); from Phronesis, Sophia (Wisdom) and Dynamis (Strength) and from Phronesis and Dynamis the Virtues, Principalities, and Archangels. By these angelic hosts the highest heaven was made, by their descendants the second heaven, and by the descendants again of these the third, and so on till they reached the number 365. Hence the year has as many days as there are heavens. The angels, who hold the last or visible heaven, brought about all things that are in the world and shared amongst themselves the earth and the nations upon it. The highest of these angels is the one who is thought to be the God of the Jews. And as he was to make the other nations, too, to that which was specially his own, the other angelic principalities withstood him to the utmost. Hence the aversion of all other peoples for this race. The Unborn and Nameless Father seeing their mission was too hard for him is called (the one who is called Christ) to deliver those who should believe in him from the power of the angelic agencies who had built the world. And to men Christ seemed to be a man and to have performed miracles. It was not, however, Christ who suffered, but rather Simon of Cyrene, who was constrained to carry the cross for him, and mistakenly crucified in Christ's stead. Simon having received Jesus' form, Jesus assumed Simon's and thus stood by and laugh'd at them. Simon was crucified and Jesus returned to heaven through the Gnosis (Knownece) of Christ the souls of men are saved, but their bodies perish.—Out of Epiphanius and Pseudo-Tertullian we can complete the description thus: the highest god, i.e. the Unborn Father, bears the mystical name Nous, not knowing of it. The Angels that made the world formed it out of Eternal Matter; but matter is the principle of all evil and hence both the contempt of the Gnostics for it and their doctile Christology. To undergo martyrdom in order to confer death upon the living is such a thing for them as the cross to Simon of Cyrene, not for Christ. Hippolytus sets forth the doctrine of Basilides as follows: "There was a time when nothing existed, neither matter nor form, nor accident; neither the simple nor the compound, neither, the unknowable nor the invisible, neither man nor angel nor god nor any of those things, which are called by names or perceived by the mind or the senses. The Not-Being God (αὐτὸς θεὸς τὸς άξωνα) was an absolute power of thought (γνώσεως τῆς νοησιός), without consciousness, without perception, without purpose, without aim, without passion, without desire, had the will to create the world. I say 'had the will', 'continues the "Eruption," 'for the same notion he had neither will, nor ideas nor perceptions; and by the word 'world' I do not mean this actual world, which is the outcome of extension and division, but rather the Seed of the world. The seed of the world contained in itself, as a mustard seed, all things which are eventually evolved, as the roots, the branches, the leaves arise out of the seedcorn of the plant.' Strange to say this World-seed or All-seed (Panspermia) is still described as Not-Being. It is a phrase of Basilides: "God is Not-Being, even He, who made the world out of what was not; Not-Being made Not-Being."—Basilides distinctly rejected both emanation and the eternity of matter. Tertullian, "What need is there", he said, "of emanation or why accept Hyle (αὐτός, Matter); as if God had created the world as the Alchemists do, with man fashions metal or wood. God spoke and it was; this Moses expresses thus: 'Let there be light and there was light.'" This sentence has a Christian ring, but we must not forget that to Basilides God was Absolute and Not-Being is the adequate name to bring enough to out the utter non-existence of God; God is not even "unspeakable" (άστερος), He simply is Not. Hence the popular designation of Oukontian for people who always spoke of Oukon, Not-Being. The difficulty lies in placing the actual transition from Not-Being into Being. It is he who was probably supposed to consist in the Sperm or Seed, which in one respect was Not-Being, and in the other, the All-seed of the manifol'd world. The Panspermia contained in itself a threefold Filiation, Hylotê (άληθή): one composed of refined elements, Leptomeres (λεπτόμερες), a second of grosser elements, Pachymeres (παχυμερεῖς), and a third needing purification, Apokathareose deemonen (ἀποκαθαρεωσα δημονον). These three Filiations ultimately reach the Not-Being God, but each reaches him in a different way. The first Filiation rose at once and flew with the swiftness of thought to the Not-Being God. The second, remaining as yet in the Panspermia, wished to imitate the first Filiation and rise upwards; but being too gross and heavy, it failed. The second Filiation takes to itself wings, which are the Holy Ghost, and with this aid almost reaches the Not-Being God. But when it has come near, the Holy Ghost, of different substance from the Second Filiation, can go no further, but conducts the Second Filiation near to the First Filiation and leaves. Yet he does not return empty but, as a vessel full of ointment, he retains the sweet odour of Filiation; and he becomes the "Boundary Spirit" (Methorion Pneuma, μεθόριον πνεύμα), between the Supermundane God and the Mundane. The second Filiation is still contained in the Panspermia. Now there arose out of the Panspermia the Great Archon, or Ruler; he sped upwards until he reached the firmament, and thinking there was nothing above and beyond, the Archon calls Thought (Hylotê) unto himself, who is contained in the Panspermia, he fancied himself Lord and Master of all things. He created to himself a Son out of the heap of Panspermia; this was the Christ and being himself amazed at the beauty of his Son, who was himself crucified for him, he sat by his right hand; and with him he created the ethereal heavens, which reach unto the Moon. The sphere where the Great Archon rules, i.e. the higher heavens, the lower boundary of which is the plane where the moon revolves, is called the Ogdoad.
The same process is repeated and we have a second Archon and his Son and the same where the role is the Hebdomad, beneath the Ogdoad. Lastly, the third Filiation must be raised to the Not-Being God. This took place through the Gospel. From Adam to Moses the Archon of the Ogdoad had reigned (Rom., v. 14); in Moses and the Prophets the Archon of the Archon of the Ogdoad had reigned of God. Now in the third period the Gospel must reign. This Gospel was first made known from the First Filiation through the Holy Ghost to the Son of the Archon of the Ogdoad; the Son told his Father, who was aconquered and trembled. He may have been moved to suit his Gnostic tenets, a diatessaron on Gnostic lines. (b) A Gospel Commentary in twenty-four books. (Clement of Alexandria calls it "Exegetica"; the Acta Archelai et Manetis, "Tractatus".) Fragments of this Commentary have come down to us (in Stromata, IV, 12–81, sqq.; Acta Arch., I, 4b; probably also in Origen, Commentary on Romans V, I). (c) HYMNS. Origen in a note on Job, xxii, 1 sqq., speaks of "Odes" of Basilides; and the so-called Muratorian Fragment, containing a list of canonical and non-canonical books (17 for the latter) ends with the words: "etiam novum paschalem librum marcionis conscripsistit una cum Basilide assiannum catachrysmum constituentoren". This sentence, notwithstanding its obscurity, supports Origen's statement. For a collection of Basilidian fragments see Hilgenfeld, "Ketzergeschichte des Urchrist" (Leipzig, 1884), 207, 213.

School.—Basilides never formed a school of disciples, who modified or added to the doctrines of their leader. Isidor, his son, is the only one who elaborated his father's system, especially on the anthropological side. He wrote a work on the "Psycye Prosphys" (πνευματική προσφυσι), or Appendage-Soul; another work, called "Ethics" by Clement and "Pa-

Basilidism survived until the end of the fourth century as Epiphanius knew of Basilidians living in the Nile Delta. It was however almost exclusively limited to Egypt, though according to Sulpicius Severus it seems to have found an entrance into Spain through a certain Mark from Memphis. St. Jerome states that the Priscillianists were infected with it. Of the customs of the Basilidians, we know no more than that Basilides enjoined on his followers, like Pythagorians, a refusal of animal food, the union of the flesh and the spirit of the Baptism of Jesus as a feast day and spent the eve of it in reading; that their master told them not to scruple eating things offered to idols; that they wore amulets with the word Abrasax and symbolic figures engraved on them, and, amongst other things, believed them to possess healing properties.

Although Basilides is mentioned by all the Fathers as one of the chiefs of Gnosticism, the system of Basilides seems to have been much more popular and wider spread, as was also Marcionism. Hence, though anti-Gnostic literature is abundant, we know of only one patriotic work, which had for its express purpose the refutation of Basilides, and this work is no longer extant. Eusebius (Hist. Eccl., IV, vii, 6–8) says: "There has come down to us a most powerful refutation of Basilides by Agrippa Castor, one of the most renowned writers of that day, which shows the terrible imposture of the man." With the exception of a few phrases given by Eusebius we have nothing of this Agrippa and his work. (See Gnosticism.)
Basiliades.—Various female martyrs, attributed to different localities yet bearing the common name of Basiliada, are referred to in the catalogues of martyrs both of early Christianity and of the Middle Ages; their names also appear in the calendars and liturgical books of the Greek and Roman Churches. Nothing is known positively as to any one of these martyrs for the Christian Faith; the female martyrs, so far as such exist, are purely legendary and originated at a later date. The fact, however, that the name occurs several times in the so-called martyrology of St. Jerome and in old Greek catalogues is certain proof that a number of female martyrs named Basiliada were actually venerated in the ancient Church. At the same time it is not impossible that the same martyr is recorded on different days. Among these saints should be mentioned: Julian and Basiliada of Antioch; in the martyrology of St. Jerome (ed. Rossii-Duchesne, 6.) they are given as martyrs under 6 January. A later legend makes Basiliada the virgin wife of Julian and narrates that she died a natural death together with other virgins, while Julian suffered martyrdom in company with many other Christians during the Diocletian persecution. The same martyrology makes mention, under 12 March, of a female martyr Basiliada, wife of Felicio, and states the locality “in Asia.” On the next day, 13 March, occurs the name of another martyr called Basiliada, wife of the presbyter Eutychion. Later legends, which were accepted by the Greek menologists and synaxaria, speak of a virgin and martyr, Basiliada of Nicomedia, whose feast was celebrated on 3 September; this Basiliada is probably identical with the one just mentioned, and the names of two martyrs, Basiliada and Calline, are given with the statement “in Galatia.” Under 16 April the old catalogues contain the names of a number of martyrs of Corinth, among whom appears Basiliada; according to a concise Latin summary for the Feast of the Fratres, all were thrown into the sea. Under the previous day, 15 April, two Roman matrons, Basiliada and Anastasia, are recorded; they apparently died in the persecution of Nero. Another female martyr of Rome, whose name is sometimes written Basiliea and sometimes Basiliada, was venerated on 27 May. She was buried, it is stated, on the Via Salaria. The celebrated Roman martyr Basila, who died in 304 and whose feast is entered from the year 354 under 22 September in the oldest known Roman catalogue of saints (Depositio virorum sanctitatis, Acta SS.), was buried on the catacomb of Hermes on the Via Salaria Veneta. It is, therefore, a question whether the saint given under 20 May and this latter Basila are not one and the same person; but the identity of the two cannot be positively affirmed. The present martyrology includes several of these saints; 9 January, Basiliada of Antioch; 22 March, Basiliada and Callinice; 15 April, Basiliada and Anastasia; 3 September, Basiliada of Nicomedia.

For Basiliada of Antioch and her companions, Acta SS., January 1, 570 sqq., and Mommbatur, Sancturarium, 1, 216 sqq.; ii, 46 sqq.; For Basiliada of Nicomedia, Acta SS., 277. For Basiliada of Nicomedia, ibid., September, 1, 609 sqq.

Basiliada (wife of Julian). See Julian and Basiliada.

Basil of Amasea (Basilus of Basilus), Bishop and Martyr. In St. Jerome’s Latin version of the Chronicle of Eusebius the statement occurs under 175th Olympiad (A.D. 315). The Bishop of Amasea in Pontus, suffered martyrdom in the reign of Licinius [ed. Schöne (Berlin, 1875), 191]. There is no reason for doubting the trustworthiness of this information. Among the signatures of the bishops who attended the Council of Nicæa (314) is to be found the name of Basilius.
of Amasea (Mansi, Coll. conc. II, 534, 548). Eusebius also relates (Hist. eccl., X, viii) that in the time of Licinius Christians were treated with great cruelty, especially in Amasea and the other cities of Pontus, and that, in particular, the governor inflicted upon several bishops the ordinary punishments of evildoers. St. Athanasius mentions the great Basilus of Pontus among the bishops of the early part of the fourth century who held firmly to the like substance of the Son with the Father; the reference is evidently to one that did not belong to Amasea (Athan. Opera, ed. Munnius, I, 122). The statement of Philogelosius (ed. Valesius; Eusebius, Hist. eccl. (Turin, 1748), III, 433), that Basilus attended the Council of Nicaea, cannot be quoted against this proof of the martyrdom of Basilus under Licinius, as there is evidently a mistake in what Philogelosius says; among the signatures at the Council of Nicaea appears that of Eutychianus as Bishop of Amasea. The Acts of the martyrdom of Basilus, supposedly written by an eyewitness, a presbyter named Johannes, are not authentic and the narrative is entirely legendary. The feast of Basilus falls on 26 April, on which date it occurs both in the Greek synaxaria and menusa and in the Roman martyrology.

Basil of Caesarea, Bishop and ecclesiastical writer, date of birth uncertain; d., probably, between 438 and 460; was distinguished during the period when the Eastern Church was convulsed by the Monophysite struggles, and was necessarily obliged to take sides in all those controversies. Those of his writings which have come down to us, though somewhat too rhetorical and involved, prove clearly that he was a man of great literary ability.

He was appointed Bishop of Scælica in Isauria, between the years 432 and 447, and was one of those who took part in the Synod of Constantinople, which was summoned (445) by the Patriarch Flavian for the condemnation of the Eutychian errors and the deposition of their great champion, Dioscorus of Alexandria. Curiously enough, though Basil seems to have agreed to these measures, he attended the Lactomium, or Robber Synod, of Ephesus, held in the same year (449), and indeed probably more by the threats and violence of the Monophysite party than by their arguments, he voted for the rehabilitation of Eutyches and for the deposition of the Patriarch of Constantinople, and was thus regarded afterwards as a heretic, by those who disapproved of his opinions. Like the other prominent supporters of Dioscorus, he should have been removed from his see had he not in the meantime accepted the doctrine contained in the Dogmatic Epistle of Pope Leo to Flavian, and joined in the condemnation of Eutyches and Dioscorus. After this period he seems to have continued a zealous opponent of the Monophysite party, for we find that in the year 458 he joined with his fellow-bishops of Isauria, in an appeal to the Emperor, requesting him to forward the Decrees of Chalcedon, and in securing the deposition of Timotheus Ælurus, who had intruded himself (457) into the Patriarchate of Alexandria. This is the last reference we find to Basil, and it is commonly supposed that he died shortly afterwards.

Forty-one sermons (Mémo) on different portions of the Old Testament have come down to us under his name, and are found in Migne (P. G., LXXXV, 27-474), where is also his history of the protomartyr Tryphon. He was attacked by the miracles wrought at her grave (ibid., 477-618). Most of these sermons may be regarded as genuine, though some of them are now generally assigned to Nestorius. According to Photius, Basil also dealt in verse with the life and miracles of Thecla.

HEERLE, Conciliengeschiede (2d ed.), i, 331, 375, 430; Photius-Nestorius: Bibl. Gr. Egl. in Luctu sanct., Apostropech. (1867), II, i, 426, 432; Battifol, Etude de l'IX, 353-353; Bardenhewer, Patrologie (Freiburg, 1901), 485, 486.

JAMES MACCRAGHY.

Basil the Elder, SAIN T. See BASIL THE GREAT, SAINT.

Basil the Great, SAIN T, Bishop of Cesarea, one of the most distinguished Doctors of the Church, b. probably 329; d. 1 January, 379. He ranks after Athanasius as a defender of the Oriental Church against the heresies of the fourth century. With his friend Gregory of Nazianzus and his brother, Gregory of Nyssa, he makes up the trio known as "The Three Cappadocians", far outclassing the other two in practical genius and actual achievement.

LIFE.—St. Basil the Elder, father of St. Basil the Great, was the son of a Christian of good birth and his wife, Macrina (Acta SS., January, II), both of whom suffered for the Faith during the persecution of Maximinus Galerius (305-314), spending several years of hardship in the wild mountains of Pontus. St. Basil the Elder was noted for his virtue (Acta SS., January, VII) and also worked as a presbyter and a teacher in Cesarea. He was not a priest (cf. Cave, Hist. Lit., I, 239). He married Eunemia, the daughter of a martyr, and became the father of ten children. Three of these, Macrina, Basil, and Gregory are honoured as saints; and of the sons, Peter, Gregory, and Basil attained the dignity of the episcopate.

Under the care of his father and his grandson, the elder Macrina, who preserved the traditions of their countryman, St. Gregory Thaumaturgus (c. 213-276), Basil was formed in habits of piety and purity. He was still young when his father died and the family moved to the estate of the elder Macrina at Annæi in Pontus, on the banks of the Iris. As a boy, he was sent to school at Cesarea, then "a metropolis of letters", and conceived a fervent admiration for the local bishop, Dianius. Later, he went to Constantinople, at that time "distinguished for its teachers of philosophy and rhetoric", and thence to Athens. Here he became the inseparable companion of Gregory of Nazianzus, who, in his famous panegyric on Epiphanius, gives a very interesting description of their academic experiences. According to him, Basil was already distinguished for brilliancy of mind and seriousness of character and associated only with the most earnest students. He was able, grave, indomitable, and was advanced in rhetoric, in philosophy, in geometry, and medicine. (As to his not knowing Latin, see Fialon, Étude historique et littéraire sur St. Basil, Paris, 1869.) We know the names of two of Basil's teachers at Athens, Phoebiores, possibly a Christian, and Hierius, a pagan. It has been affirmed, though probably incorrectly, that Basil spent some time under Libanius. He tells us himself that he endeavoured without success to attach himself as a pupil to Eustathius (Ep. I). At the end of his sojourn in Athens, Basil being laden, says St. Gregory of Nazianzus, "with all the learning attainable by the nature of man", was well equipped to be a teacher. Cesarea took possession of him gladly "as a founder and second patron" (Or. xliii), and tells us (cxix) he returned from his travels a most unusual man to the citizens of Neo-Cesarea, who wished him to undertake the education of the youth of their city.

To the successful student and distinguished professor, "there now remained", says Gregory (Or. xliii), "no other need than that of a spiritual perfection". Gregory of Nyssa, in his life of Macrina, urges us to understand that Basil's brilliant success both as a university student and a professor had left traces of worldliness and self-sufficiency on the soul of the
young man. Fortunately, Basil came again in contact with Dionysius, Bishop of Cesarea, the object of his boyish affection. Dionysius received him kindly, and ordained him Reader soon after his return to Cesarea. It was at this time also that he fell under the influence of that very remarkable woman, his sister Macrina, who had meanwhile formed a religious community on the family estate at Annesi. Basil himself tells us how, like a man roused from deep sleep, he turned his eyes to the marvellous truth of the Gospel, wept many tears over his miserable life, and prayed for guidance from God: "Then he said to me, 'Basil, if you wish to do a great means of reaching perfection was the selling of one's goods, the sharing of them with the poor, the giving up of all care for this life, and the refusal to allow the soul to be turned by any sympathy towards things of earth' (Ep. cxxii). To learn the ways of perfection, Basil now visited the monasteries of Egypt, Palestine, Cæle-Syria, and Mesopotamia. He returned, filled with admiration for the austerity and piety of the monks, and founded a monastery in his native Pontus, on the banks of the Iris. Cesarea was then a little town. (See P. J. C. Field, Cassanea or Asia Minor, London, 1890, p. 326.) Eustathius of Sebaste had already introduced the eremitical life into Asia Minor; Basil added the cenobitic or community form, and the new feature was imitated by many others and worked up by St. Basil. (See Hist. Eccl., VI, xxvii; Epiphanius, Hier., lxxv, 1; Basil, Ep. cxxixii; Tillemont, Mém., IX, Art. XXXI, and note XXVI.) Basil became known as the Father of Oriental monasticism, the forerunner of St. Benedict. He had fulfilled the title, how seriously and in what spirit he undertook the systematizing of the religious life, may be seen by the study of his Rule. It seems to have read Origens writings very systematically about this time, for in union with Gregory of Nazianzus, he published a selection of them called the 'Philocalia'.

Basil was drawn from his retreat into the arena of theological controversy in 380 when he accompanied two delegates from Seleucia to the emperor at Constantinople, and supported his namesake of Ancyrta. There is some dispute as to his courage and his perfect orthodoxy on this occasion (cf. Philostorgius, Hist. Eccl., IV, xii; answered by Gregory of Nyssa, In Eunom., I, and Maran, Prolog.; vii; Tillemont, Mém., note XVIII). A little later, however, both qualities were shown with great effect at St. Athanasius' Council. Presumably, Basil was a strong advocate of Athanasius. It is possible, also, that Basil wrote his monastic rules in the briefer form while in Pontus, and enlarged them later at Cesarea (Baert). There is an account of an invitation from Julian for Basil to present himself at court and of Basil's refusal, coupled with an admonition that angered the emperor and endangered Basil's safety. Both incident and correspondence however are questioned by some critics (e. g. Maran; cf. Tillemont, De Broglie, Fialon).

Basil still retained considerable influence in Cesarea, and it is regarded as fairly probable that he had a hand in the election of Eusebius as bishop. Eusebius had been bishop of Cesarea since 359, and had been re-elected in 362, after having been re-elected to Basil. In any case, the new bishop, Eusebius, was practically placed in his office by the elder Gregory of Nazianzus. Eusebius having persuaded the reluctant Gregory, gave him a prominent place in the administration of the diocese (363). In ability for the management of affairs Basil so far eclipsed the bishop that ill-feeling arose between the two. "All the more eminent and wiser portion of the church was roused against the bishop" (Greg. Naz., Or. xiii; Ep. x), and to avoid trouble Basil again withdrew into the solitude of Pontus. A little later (365) when the attempt of Valens to impose Ariusianism on the clergy of Cesarea was no longer tolerated, the presence of a strong personality, Basil was restored to his former position, being reconciled to the bishop by St. Gregory of Nazianzus. There seems to have been no further disagreement between Basil and Basil and the latter soon became the real head of the diocese. "The one", says Gregory of Nazianzus (Or. xiii), "led the people the other led their leader". During the five years spent in this most important office, Basil gave evidence of his nature as a man of voracious power. He laid down the law to the leading citizens and the imperial governors, settled disputes with wisdom and finality, assisted the spiritually needy, looked after "the support of the poor, the entertainment of strangers, the care of maidens, legislation written and unwritten for the monastic life, arrangements of prayers, liturgy, adornment of the sanctuary" (op. cit.). In time of famine, he was the saviour of the poor.

In 370 Basil succeeded to the see of Cesarea, being consecrated according to tradition on 14 June. Cesarea was then a large city. (See Hist. Eccl., V, v). Its bishop was Metropolitan of Cappadocia and Exarch of Pontus which embraced more than half of Asia Minor and comprised eleven provinces. The See of Cesarea ranked with Ephesus immediately after the capital, and the same year, the metropolitan and the bishop was the superior of fifty choepiscopi (Baert). Basil's actual influence, says Jackson (Prolegomena, XXXII) covered the whole stretch of country "from the Balkans to the Mediterranean and from the Ægean to the Euphrates". The need of a man like Basil, in such a see as Cesarea was most pressing, and he must have known this well. Some (e. g. Allard, De Broglie, Venables, Fialon) think that he set about procuring his own election; others (e. g. Maran, Baronius, Cellier) say that he made no attempt in his own behalf. In any event, he became Bishop of Cesarea largely by the influence of the elder Gregory of Nazianzus. His election, says the younger Gregory (loc. cit.), was followed by disaffection on the part of several suffragan bishops "on whose side were found the greatest acoudrels in the city". During his previous administration of the diocese Basil had so clearly defined his ideas of discipline and orthodoxy, that no one could doubt the direction and the vigour of his policy. Following his election (Ad Pallad., 953; Ad Joann. et Ant., 951), the Arianizing Emperor Valens, displayed considerable annoyance and the defeated minority of bishops became consistently hostile to the new metropolitan. By years of tactful conduct, however, "blending his correction with consideration and his gentleness with firmness" (Greg. Naz., Or. xiii), he finally overcame most of his opponents.

Basil's letters tell the story of his tremendous and varied activity; how he worked for the exclusion of unfit candidates from the sacred ministry and the deliverance of the bishops from the temptation of simony; how he required exact discipline and the faithful observance of the canons from both laymen and clerics; how he reigned the sinful, followed the offending, and banished the penitent. (Cf. Epp. xiv, xlv, and xlvii, the beautiful letter to a fallen virgin, as well as Epp. liii, liv, lv, clxxviii, cxci, cxcvii, and Ep. cix, on the strange incident of Glycerius, whose story is well filled out in Ramsey, The Church in the Roman Empire, New York, 1893, p. 443 sqq. If on the other hand, strenuously defended clerical rights and immunities (Ep. civ), on the other he trained his clergy so strictly that they grew famous as the type of all that a priest should be (Epp. cii, ciii). Basil did not confine his activity to diocesan affairs, but threw himself vigi
crucially in the troublesome theological disputes then raging the unity of Christendom. He drew up a summary of the orthodox faith; he attacked by word of mouth the heretics near at hand and wrote tellingly against those afar. His correspondence shows that he paid visits, sent messages, gave instructions, consolled, comforted, reproached, undertook the protection of nations, cities, individuals great and small. There was very little chance of opposing him successfully, for he was a cool, persistent, fearless fighter in defence both of doctrine and of principles. His bold stand against the rationalist iconoclasm of Amalarius and Theodore. The emperor was dumfounded at the archbishop’s calm indifference to his presence and his wishes. The incident, as narrated by Gregory of Nazianzus, not only tells much concerning Basil’s character but throws a clear light on the type of Christian bishop with which the emperors had to deal and goes far to explain why Arianism, with the court behind it, could make so little impression on the ultimate history of Catholicism.

Basil’s personal appearance in the court of his diocese. Basil had shown a marked interest in the poor and afflicted; that interest now displayed itself in the erection of a magnificent institution, the Ptochotrophion, or Basilicad, a house for the care of friendless strangers, the medical treatment of the sick, and the education of the industrious poor. Built in the suburbs, it attained such importance as to become practically the centre of a new city with the name of Ἐπαφίαντας or “Newtown”. It was the mother-house of like institutions erected in other dioceses and stood as a constant reminder to the rich of their privilege of spending wealth in a truly Christian way. It may be mentioned here that the social obligations of the wealthy were so plain and forcibly preached by St. Basil that modern socialists have ventured to claim him as one of their own, though with no more foundation than would exist in the case of any other consistent teacher of the principles of Catholic ethics. The truth is that St. Basil was a practical lover of Christian poverty, and even in his exalted position preserved that simplicity in food and clothing and that austerity of life for which he had been remarked at his first renunciation of the world (Nitti, Catholic Socialism, New York, 1895, iii; Villemain, Tableau d’éloq. Chrét., Paris, 1891, 116 sqq.). 1891 sqq.

When Emperor Valentinian died and the Arians recovered their influence, all Basil’s efforts must have seemed in vain. His health was breaking. The Goths were at the door of the empire, Antioch was in schism, Rome doubted his sincerity, the bishops refused to admit him to the episcopate. But, as Newman record, L’Eglise d’Orient, Paris, 1881.) “The notes of the church were obscured in his part of Christendom, and he had to fare on as best he might,—admiring, courting, yet coldly treated by the Latin world, desiring the friendship of Rome, yet wounded by her estrangement, writing a work of polemic in defence of Jerome of pride” (Newman, The Church of the Fathers). Had he lived a little longer and attended the Council of Constantinople (381), he would have seen the death of its first president, his friend Meletius, and the resignation of its sovereign, second, Gregory of Nazianzus. Basil died 1 January, 379. His death was regarded as a public bereavement; Jews, pagans, and foreigners vied with his own flock in doing him honour. The earlier Latin martyrologies (Hieronymian and Bede) make no mention of a feast of St. Basil. The first mention is by Usuard and Ado who place it on 14 June, the date on which Basil is said to have been elected bishop of Caesarea. In the Greek “Menexen,” he is commemorated on 1 January, the day of his death. In 1081, John, Patriarch of Constantinople, in consequence of a vision, established a feast in common honour of St. Basil, Gregory of Nazianzus, and John Chrysostom, to be celebrated on the 1st of January. The Bollandists give an account of the origin of this feast; they also record as worthy of note that no relics of St. Basil are mentioned before the twelfth century, at which time parts of his body, together with some other very extraordinary relics were reputed to have been brought to Bruges by a returning Crusader. Baronius (c. 1599) gave to the Naples Oratory a relic of St. Basil sent from Constantinople to the pope. The Bollandists and Baronius print descriptions of Basil’s personal appearance in his diocese. Basil had shown a marked interest in the poor and afflicted; that interest now displayed itself in the erection of a magnificent institution, the Ptochotrophion, or Basilicad, a house for the care of friendless strangers, the medical treatment of the sick, and the education of the industrious poor. Built in the suburbs, it attained such importance as to become practically the centre of a new city with the name of Ἐπαφίαντας or “Newtown”. It was the mother-house of like institutions erected in other dioceses and stood as a constant reminder to the rich of their privilege of spending wealth in a truly Christian way. It may be mentioned here that the social obligations of the wealthy were so plain and forcibly preached by St. Basil that modern socialists have ventured to claim him as one of their own, though with no more foundation than would exist in the case of any other consistent teacher of the principles of Catholic ethics. The truth is that St. Basil was a practical lover of Christian poverty, and even in his exalted position preserved that simplicity in food and clothing and that austerity of life for which he had been remarked at his first renunciation of the world (Nitti, Catholic Socialism, New York, 1895, iii; Villemain, Tableau d’éloq. Chrét., Paris, 1891, 116 sqq.). 1891 sqq.

By common consent, Basil ranks among the greatest figures in church history and the rather extravagant panegyric of Gregory of Nazianzus has been all but driven from the standard orthodoxy of the Church. Physically delicate and occupying his exalted position for a few years, Basil did magnificent and enduring work in an age of more violent world convulsions than Christianity has since experienced. (Cf. Newman, The Church of the Fathers.) By personal virtue he attained distinction in an age of saints; and his purity, his monastic fervour, his stern simplicity, his friendship for the poor became traditional in the history of Christian asceticism. If fact, this asceticism was not detached but deliberately on the Oriental conception of religious life. In his hands the great metropolitan See of Cæsarea took shape as a sort of model of the Christian diocese; there was hardly any detail of episcopal activity in which he failed to mark out guiding lines and to give splendid example. Not the least of his glories is the fact that toward the officials of the State he maintained that fearless dignity and independence which later history has shown to be an indispensable condition of healthy life in the Catholic episcopate. The same difficulty has arisen with the See of St. Basil with the Roman See. (Bossuet, “Gallia Orthodoxa”, c. Ixy; Puller, “Primitive Saints and the See of Rome”, London, 1900.) That he was in communion with the Western bishops and that he wrote repeatedly to Rome asking that steps be taken to assist the Eastern Church in her struggle with schismatics and heretics is undoubted; but the disappointing result of his appeals drew from him certain words which require explanation. Evidently he was deeply chagrined that Pope Damasus on the one hand hesitated to condemn Marcellus and the Eutychians, and on the other preferred Paulinus to Meletius in whose right to the See of Antioch St. Basil must firmly believed. At the best it must be admitted that St. Basil criticized the pope freely in a private letter to Eusebius of Samosata. (Ep. 333) and that he was indignant as well as hurt at the failure of his attempt to obtain help from the West. Later on, however, he must have recognized that in some respects he had been hasty; in any event, he is strongly emphasized that his work was to secure that the See could exercise over the Eastern bishops, and his abstaining from a charge of anything like usurpation are great facts that stand out obviously in the story of the disagreement. With regard to the question of the resignation with the Semi-Arians, Philostorgius speaks of him as championing the Semi-Arian cause.
BASIL

and Newman says he seems unavoidably to have
Arianized the first thirty years of his life. The ex-
planation of this, as well as of the disagreement with
the Holy See, must be sought in a careful study of
the times, with due reference to the unsettled and
changeable condition of theological distinctions,
the lack of a final condemnation by the Church's defin-
ing power, the "living power" of the Church of the
Saints" (Newman), the substantial orthodoxy of
many of the so-called Semi-Arians, and above all
the great plan which Basil was steadily pursuing
of effecting unity in a disturbed and divided Christen-
dom. It is doubtless in "The Three Persons of
the Trinity; it is well summarized by Jackson (Nicene and Post Nicene Fathers, Series II, VIII). The work "De Spiritu Sancto,"
or treatise on the Holy Spirit (c. 375) was evoked in
part by the Macedonian denial of the Divinity of the
Third Person in their schism with the Church.
Basil himself had "slurred over the Spirit" (Gregory
Naz., Ep. viii.), that he had advocated communion
with all as should admit simply that the Holy
Ghost was not a creature (Basil, Ep. xxii.), and that
he had sanctioned the use of a novel doctrine, namely,
"Glory be to the Father with the Son to-
gether with the Holy Ghost" (De Sp. S. I, i). The
treatise teaches the doctrine of the Divinity of the
Holy Ghost, while avoiding the phrase "God the
Holy Ghost," for prudential reasons (Gregory Naz.
Or. xliii. Wulckins and Swete affirm the necessity
of some such reticence on Basil's part. (Cf. Jackson,
op. cit., p. XXIII, note.) With regard to Basil's
teaching on the Third Person, as expressed in his
work against Eugenius (III, i), a controversy arose
at the Council of Florence between the Latins and
the Greeks; but strong arguments, both external
and internal, availed to place Basil on the side of
the "Filioque." The dogmatical writings were edited
separately by Thorndike, in his "Basilii Opera Dog-
matica et Sacrata" (London, 1854). "De Spiritu
Sancto," was translated into English by Johnston
(Oxford, 1892); by Lewis in the Christian Classic
Series (1888); and by Jackson (op. cit.). Excerpta.-
These include nine homilies "On the Hexaemerons
and thirteenth (Maran) genuine homilies on particular
Psalms. A lengthy commentary on the first sixteen
chapters of Isaias is of doubtful authenticity (Jack-
son), though by a contemporary hand. A comment-
ary on Job has disappeared. "The Hexaemerons"
was highly admired by Gregory Nazianzenus (Or.
xlii, n. 67). It is translated entire by Jackson (op.
cit.) The homilies on the Psalms are moral and
hortatory rather than strictly exegetical. In inter-
preting the Scripture, Basil uses both the literal
and figurative methods, but is no more than a
light system of Antioch. His second homily contains
a denunciation of usury which has become famous.
Homiletical.-Twenty-four sermons, doctrinal, moral,
and homiletical in character, are looked upon as
generally genuine, certain critical difficulties, how-
ever, are recognized. Several of these sermons were
translated into Latin by Rufinus. The discourses place Basil among the very greatest of
Christian preachers and evince his special gift for
preaching upon the responsibilities of wealth.
Prudentius wrote for prudential reasons the homilies
on the rich (vi and vii) copied by St. Ambrose
(De Nabuthe Jez., v. 21-24), and the homily (xii)
on the study of pagan literature. This latter was
edited by Fremyen (Paris, 1819, with French trans-
lation), Sommer (Paris, 1894), Bach (Münster, 1900),
and Maloney (New York, 1901). With regard to
Basil's style and his success as a preacher much has
been written. (Cf. Villenain, "Tableau d'éloq.
ques," Paris, 1789, i iV sijlcfi; Berthier, "Études lit.-
Litt. sur St. B.," Paris, 1861; Roux, "Étude sur la
préédication de B. le Grand," Strasbourg, 1867; Croiset,
"Hist. de la litt. Grecque," Paris, 1899.) Moral and
Asceiatical.-This group contains much of spurious
character, but many authentic sections in the latter
two of the three pre牧ary treatises, and the
five treatises: "Moralis," "On the Judgment of God",
"On Faith," "The Longer Monastic Rules," "The
Shorter Monastic Rules." The twenty-four sermons
on morals are a cento of extracts from the writings
of Basil made by Simeon Metaphrastes. Concerning
the authenticity of the Rules there has been a good
deal of discussion. As is plain from these treatises
and from the homilies that touch upon ascetical or
monastic subjects, Basil was particularly feleulous
in the field of spiritual instruction. Concerning his
letters, the extant letters of Basil are 366 in number, two-
thirds of them belonging to the period of his episco-
pate. The so-called "Canonical Epistles" have
been assailed as spurious, but are almost surely gen-

true. The correspondence with a certain Libanius is probably apocryphal; the correspondence with Apollinaris is uncertain. All of the 366 letters are translated in the "Nicene and Post-Nicene
Fathers." Some of the letters are really dogmatical
treatises, and others are apologetic replies to per-
sonal attacks. In general they are very useful for
their revelation of the saint's character and for the
pictures of his age which they offer. Liturgical.-
A so-called "Liturgy of St. Basil" exists in Greek
in Coptic. (See Seres.) It goes back at least to the sixth century, but its connexion with Basil has been a matter of critical discussion (Bright-
man, "Liturgies, Eastern and Western," Oxford, 1896, i; Probst, "Die Liturgie des vierten Jahrhun-
Eccorisons of St. Basil.—The édito princeps of
the original text of the extant works of Basil appeared
at Baale, 1551, and the first complete Latin trans-
lation at Rome, 1515 (autograph manuscript in the
British Museum). The best edition is that of the
Monastier Benedictines of La Fléche, not later than
1721-30, republished with appendixes by Migne (P.
G., XXIX-XXXII). For fragments attributed to
Basil, with or without the latter, see the apparatus
added by Matthey, Mai, Pitra, and others, see Bardenhewer,
"Patrologie," (Freiburg, 1901), 247. Portions of
letters recently discovered in Egyptian papyri were
published by H. Landwehr, "Griechische Handschrif-
ten aus Fayüm," in "Philologus," XLIII (1884).

BASIL, ECCLESIASTICAL USE OF.—Basins were extensively used in the Jewish Ritual and were in early use in Christian church and abbeys and to receive lamp-drippings etc. The Missal contains its use at the “Lavabo” of the Mass (Rit. Cel. vii, 10); the “Ceremoniale Episcoporum” provides a basin for the bearing of the cruets (Lib. i, xi, 10) and for the preparatory ablutions of bishops (ibid., 12). They are commonly ornamented with symmetrical motifs.

JOHN B. FETSONSON.

Basilé, AUGUSTINE Francis. See MYSiOS, DioceSe OF.

Basile, COUNCIL OF, convened by Pope Martin V in 1431, closed at Lausanne in 1449. The position of the pope as the common Father of the Christian world had been seriously compromised by the transfer of the papal court to Avignon, and by the subsequent identifications of the interests of the Church with those of a particular race. Men began to regard the papacy as more a national institution, and their feeling of religious loyalty was often nearly balanced by the promptings of national jealousy. Nor was the papacy likely to be strengthened by the events of the Great Western Schism (1378-1417), when rival claimants were seen contending for the throne of St. Peter and for the allegiance of the Christian nations. Such a spectacle was well calculated to shake men’s belief in the monarchical form of government and to drive them to seek a remedy for evils which they affected the Church. It was not strange that the advocates of a general council as the final arbitrator, the ultimate court of appeal to which all, even the pope, must yield, should have secured a ready attention. The success of the Council of Constance (1414-18) in securing the withdrawal or deposition of the three rival popes had supplied a strong argument in favour of the conciliar theory. It is clear both from the speeches of some of the Fathers of Constance as well as from its decrees that such a federal government was desired by the people who had come to regard the government of the Church by general councils, convoked at regular intervals, as the one most in harmony with the needs of the time. As a result, in the 39th session of the Council of Constance (1417) we find it decreed: that general councils should be held frequently; that the next should be convoked within five years; the following seven years later, and after this, a council should be held every ten years; that the place of convocation should be determined by the council itself, and could not be changed even by the pope unless in case of war or pestilence, and then only with the consent of at least two-thirds of the cardinals. It was in accordance with this decree that Martin V convoked the Council of Basle, and it is only by understanding the feeling underlying this decree that we can grasp the significance of the dispute waged between Eugene IV and the council. Which was to govern the Church? Was it to be the pope or the council? That was the issue raised.

Whether Basle is to be regarded as a general council, and if so, in what sense, has been often warmly discussed. The extreme Gallicans (e. g. Edmund Richer, Hist. Concil. Gen., III, vii) contend that it should not be regarded as a general council, beginning (1431) till its end in Lausanne (1449); while the moderate writers of the Gallican school (e. g. Nat. Alexander, IX, pp. 433-509) admit that after the appearance of the Bull of Eugene IV (18 September, 1437) transferring the council to Ferrara, the proceedings at Basle can be regarded only as the work of a schismatical convention. On the other hand, writers like Bellarmine (De Conciliis, i, viii), Roncalli (Ecclesiastica, i, 1) and others refuse to number Basle among the general councils of the Church on account of the small number of bishops in attendance at the beginning, and the subsequent rebellious attitude in face of the papal measures of dissolution. It would seem to be that put forward by Hefele (Conciliengesch., 2d ed., I, 63-99) that the assembly at Basle may be regarded as ecumenical from the beginning until the Bull *Doctoris Gentium* (18 September, 1437) transferred its sessions to Ferrara, and that the decree passed during that period regarding the extirpation of heresy, the establishment of peace among Christian nations, and the reform of the Church, if they are not prejudicial to the Apostolic See, may be considered as decrees of a general council. In accordance with the above-mentioned decree of Constance, the Council of Pavia had been convoked by Martin V (1423), and on the appearance of the plague in that city its sessions were transferred to Bienna. Very little was done except for a united endeavor to impede the next council should be held. An Italian city was looked upon with disfavour, as likely to be too friendly to the papacy; the French bishops and the Paris University were anxious that some place in France should be selected; but finally, owing mainly to the representations of Emperor Sigismund, Basle was agreed upon by all, and this choice having been made, the council was dissolved (7 March, 1424). As the time approached for the assembling of the council, the French clergy hesitated to place no obstacle in the way, and though knowing the tendency at the time, and fearing that the council would lead to revolution rather than reform, he finally gave his consent and appointed Cardinal Giuliano Cesarini as president (1 February, 1431).

The principal purpose of the council was to be the reformation of the Church in its “head and members”, the settlement of the Hussite wars, and the establishment of peace among the nations of Europe, and finally the reunion of the Western and Eastern Churches. Under its constant interference in the bestowal of benefices, the right of appeal on all matters to the prejudices of the local authorities, the financial burdens involved in such institutions as annates, expectancies, and reservations, not to speak of the direct papal taxation, only too common since the thirteenth century, had given just grounds for complaint to the clergy and secular powers of the different nations. These papal taxes and encroachments on the rights of the local authorities, both ecclesiastical and civil, had long been bitterly resented, especially in England and Germany, and it was because a remedy for these abuses was hoped for only from a general council that people regarded sympathetically the community at Basle and the decrees of its council, although not agree with its methods. In addition to these, the question of simony, of concubinage among the clergy, of reorganization of diocesan and provincial synods, of the abuse of censures, especially of interdict, called for some reform in the discipline of the Church. But besides these, the teaching of Wyclif and Hus had found sympathetic supporters in England and Bohemia, and notwithstanding the condemnation at Constance the Hussites were still a powerful party in the latter country reckoned from their foundation (1312) till the time of John Ziska (1424) had proved a serious loss, the different sections still continued the struggle, and Empereor
Sigismund was naturally anxious that an end should be put to the war which had already taxed his resources to the uttermost. Furthermore, the growing power of the Turks was a menace not alone to the interests of the Eastern Empire but to the whole of Europe, and made it imperative upon the Christian princes to abandon their interminable strife and unite with the Greeks in defence of their common Christianity against the power of Islam. The mission in favour of the county was applauded both by Martin V and by the Emperor John VII Palaeologus (1425-48).

The president of the council, Cardinal Giuliano Cesarini, appointed by Martin V and confirmed by Eugene IV, presided at the first public sitting but retired immediately upon the receipt of the papal Bull dissolving the council (December, 1431). The members then nominated Bishop Philibert of Constance as president. Later on, probably at the seventh general session (6 November, 1432), Cesarini resumed the presidency and continued the guiding spirit in opposition to the pope till the extreme element under Cardinal d'Allemagne of Arles began to gain the upper hand. In the general assembly (6 December, 1436) he refused to admit the right of the papal legates to Avignon, or some city of Savoy should be selected as the meeting place of the council to be held for the reunion of the Greeks with the Western Church, but he continued to act as president till the 31st of July, 1437, when a decree was passed summoning Pope Eugene IV to appear at Basle within sixty days to answer for his disobedience. Cesarini finally left Basle after the appearance of the Bull, "Doctoris Gentium" (18 September, 1437) transferring the council to Ferrara, and then joined the court of the pope. After his withdrawal, Cardinal d'Allemagne played the leading part and on the election of the antipope, Felix V, was nominated by him as president of the assembly. The nomination however, was disregarded by the members who thereupon elected the Archbishop of Tarentaise. The other members of the council who took a prominent part in the proceedings were Capranica who had been appointed cardinal by Martin, but who as his appointment had not been published was not admitted on the day on which the council was recognized by Eugene; Æneas Sylvius Piccolomini, afterwards Pope Pius II; the renowned scholar Nicholas of Cusa; Cardinal Louis d'Allemagne; John of Antioch; John of Ragusa, and the two canons of Tarentaise, Archbishop of Palermo, and Louis Pontanus.

Eugene IV confirmed his predecessor's appointment of Cesarini as president on the very day of his coronation (12 March), but with certain reservations which were dictated by Eugene's desire of holding a council in some city more convenient for the representatives of the Greeks. There was present at Basle on the day on which the council should have been opened (4 March) only one delegate, but by the beginning of April, three representatives arrived from the University of Paris, together with the Bishop of Chalons and the Abbot of Châteaux. These six came together (11 April) and issued pressing letters of invitation to the cardinals, bishops, and princes of Europe. Cesarini, who up to this time had been the Eastern Empire but to the whole against the Hussites, endeavoured to reassure the delegates and to restrain their eagerness, while the influence of Sigismund was employed in the same direction. The pope wrote to Cesarini (1 May) representing his views in the affairs of the Hussites as quickly as possible and then to proceed to Basle for the opening of the council. On the reception of this letter the legate determined, after consultation with Sigismund, to remain with the military forces, but at the same time to dispatch two of his companions, John of Palomar and John of Ragusa, to act as his representatives at Basle. These arrived there on 19 July and held an assembly (23 July) in the Cathedral of Basle at which the documents of authorization were read, and the council declared formally opened. Though there were not a dozen members present the assembly immediately arrogated to itself the title of a general council, and began to act as if it possessed authority to inform the pope of the proceedings. The delegate who was unfavourable to the continuance of the council represented to the pope that very few prelates had attended, that there was little hope of an increased number owing to the war between Burgundy and Austria and the general unsafety of the roads, and that even the city of Basle itself was in danger and its people unfriendly to the clergy. On the receipt of this news Eugene issued (12 November) a commission to Cesarini signed by twelve cardinals and the bishops of Avignon, or some city of Savoy should be selected as the meeting place of the council to be held for the reunion of the Greeks with the Western Church, but he continued to act as president till the 31st of July, 1437, when a decree was passed summoning Pope Eugene IV to appear at Basle within sixty days to answer for his disobedience. Cesarini finally left Basle after the appearance of the Bull, "Doctoris Gentium" (18 September, 1437) transferring the council to Ferrara, and then joined the court of the pope. After his withdrawal, Cardinal d'Allemagne played the leading part and on the election of the antipope, Felix V, was nominated by him as president of the assembly. The nomination however, was disregarded by the members who thereupon elected the Archbishop of Tarentaise. The other members of the council who took a prominent part in the proceedings were Capranica who had been appointed cardinal by Martin, but who as his appointment had not been published was not admitted on the day on which the council was recognized by Eugene; Æneas Sylvius Piccolomini, afterwards Pope Pius II; the renowned scholar Nicholas of Cusa; Cardinal Louis d'Allemagne; John of Antioch; John of Ragusa, and the two canons of Tarentaise, Archbishop of Palermo, and Louis Pontanus.

Eugene IV confirmed his predecessor's appointment of Cesarini as president on the very day of his coronation (12 March), but with certain reservations which were dictated by Eugene's desire of holding a council in some city more convenient for the representatives of the Greeks. There was present at Basle on the day on which the council should have been opened (4 March) only one delegate, but by the beginning of April, three representatives arrived from the University of Paris, together with the Bishop of Chalons and the Abbot of Châteaux. These six came together (11 April) and issued pressing letters of invitation to the cardinals, bishops, and princes of Europe. Cesarini, who up to this time had been the Eastern Empire but to the whole against the Hussites, endeavoured to reassure the delegates and to restrain their eagerness, while the influence of Sigismund was employed in the same direction. The pope wrote to Cesarini (1 May) representing his views in the affairs of the Hussites as quickly as possible and then to proceed to Basle for the opening of the council. On the reception of this letter the legate determined, after consultation with Sigismund, to remain with the military
ful army in Northern Italy; an Assembly of the French Clergy at Bourges (February, 1432) declared the council council as a Constantinople, and resolved to send representatives; the Duke of Burgundy wrote that he would send the bishops of his own nation and would use his influence with the King of England to induce him to do likewise; the French, Milan and Savoy were equally pugnacious; while the Paris University declared that 'he devil alone could have inspired the pope to adopt such a course. Thus encouraged the council held its third public session (29 April, 1432) in which the pope was commanded to withdraw the Bull of Blessing which the Bascians had recently issued, and that he be declared person from attending, and that all censure pronounced against it by him were null and void. They even went so far as to appoint a governor for the territory of Avignon and to forbid any papal embassy to approach Bascians unless they had been previously requested and granted.

Sigismund was in constant communication with the pope and urged him to make some concessions. In the beginning Eugene IV agreed to allow a national council to be held in some German city for the reform of abuses in the Church of Germany and for the settlement of the Hussite controversy. Later on, he was willing to permit the council at Bascians to continue its discussions on church reform, the Hussite controversy, and the establishment of peace among Christian nations, provided that its decisions were subject to the papal confirmation, and provided, too, that a council should be held in Bologna, or some Italian city for the reunion of the Eastern Church. Sigismund forwarded this letter to Bascians (27 July) and exhorted the delegates to moderation. On the 22nd of August, the pleni-potentiaries of the pope were received at Bascians and addressed the council at length, pointing out that the monarchial form of government was the one established by Christ, that the pope was supreme judge in ecclesiastical affairs, and that the Bull of dissolution was not due to the pope's jealousy of a general council as such. They ended by declaring that the assembly at Bascians, if it persisted in its opposition to Eugene, could be regarded only as a schismatical convention and was certain to lead, not to reform, but to still greater abuses. In the name of the pope they made an offer of Bologna or some city in the Papal States as the place for the future council, the pope to resign his sovereign rights over the city selected, so long as the assembly should be in session. The council replied to this communication (3 September) by reasserting the superiority of a general council over the pope in all matters appertaining to faith, discipline, and the constitution of the church, by absolute rejection of the offers made by the pleni-potentiaries.

In the sixth public session (6 September), at which were present four cardinals (Cesarei, Branda, Cagliari, and Albegno) and thirty-two bishops, it was proposed to declare Eugenius and his eighteen cardinals uncontaminous, but this proposal was postponed, owing, mainly, to the representations of Sigismund. In October, the standing orders for the transaction of the business of the council were drawn up. Without reference to their ecclesiastical rank the members were divided into four committees, on which the four nations attending the council sat as a committee of the whole body. Each committee was to carry on its sitting a separate hall and to communicate its decisions to the others, and it was only when practical unanimity had been secured among the committees that the matter was introduced at a public session of the whole body. The threat to the Bascians had gained the upper hand, tended to bring affairs to a crisis. In the seventh public session (6 November) it was arranged that in case of Eugene's death the cardinals should appear at the council within 60 days for the holding of the clavus. Shortly afterwards, at the eighth public session (18 December), the pope was allowed a further term of sixty days to withdraw the Bull of dissolution, under threat of canonical proceedings in case he failed to comply. In the meantime Eugene IV (19 February, 1433) this threat was enforced, and in the presence of five cardinals and forty-six bishops the pope was declared uncontaminous and canonical proceedings were instituted against him.

Eugene IV, afflicted with bodily suffering, deposed by many of his cardinals and hard pressed by Italian rebels, endeavoured by every means in his power, together with the support of Philip, Duke of Milan, to bring about a settlement. He proposed (14 December, 1432) an Italian town as the place for the council, allowing the assembly at Bascians four months to settle the Hussite controversy; on the rejection of this, he agreed that it should be held in a German city provided twelve impartial bishops and the ambassadors of the different countries so wished it. Later still (1 February, 1433) he accepted a German town unconditionally, and even went so far as to agree to accept (14 February, 1433) Bascians itself in case the decrees against the papal power were withdrawn, his own legate allowed to preside, and the number of bishops present at least seventy-five. These offers were rejected by the council (March, 1433), the decree about the superiority of a general council renewed (27 April), and it was with difficulty that Duke William of Bavaria prevented the opening of the proceedings till the pope was in the twelfth month (13 July). Meanwhile Sigismund had made peace with Eugene and had received the imperial crown in Rome (31 May, 1433). He requested the council not to proceed further against the pope until he himself should be present, and on the other hand he pressed the pope to make some further concession. In response to this appeal Eugene issued (1 August, 1433) a Bull in which he declared that he was willing and content that the council should be recognized as lawfully constituted from the beginning and continued as if nothing had happened, and that he himself would assist its deliberations by every means in his power, provided, however, that his legates were admitted as real presidents, and that all decrees against himself or his church, and the excommunication pronounced by the pope, were declared to be useless and not to be binding; and the position coincided exactly with the formula sent by Cesarini to the emperor (18 June) except that the pope had inserted "we are willing and content" (voluntatem et contentiamur) in place of the words "we decree and declare" (ad vivendum et declarandam). This change was displeased to the council, implying as it did, mere toleration and not the approbation which they desired; so relying upon Eugene's troubles in Italy with the Colonnas, the Duke of Milan, and others, they refused to accept even this concession. Finally, on the 15th of December, 1433,
Eugene issued a bull in which he accepted the formula "we decree and declare" by which he withdrew all his previous manifestoes against the Council of Basle. Peace was established between the two parties, but the reconciliation was more apparent than real. The papal legates were indeed admitted as presidents, but their jurisdiction was denied, their powers limited by the will of the council, they were even forced to accept the decree of Constance. The council, at the same time, announced their opposition but not in the name of the pope (24 April, 1434), and finally, when in the eighteenth public session (26 June) the Constance decrees were solemnly renewed they refused to attend. In spite of their efforts the council proceeded in its opposition to the pope, claiming jurisdiction in all affairs, political and religious, and entering into negotiations with the Greeks about the reunion of the Churches. At the twentieth public session (22 January, 1435) the reform of church discipline was begun. Decrees were passed against concubinage of the clergy and the abuse of excommunications and interdicts. On the 9th of June, 1435, annates and all the customary papal taxes were abolished, although no step was taken to provide for the revenue of the papacy. Later still the papal collectors were ordered to appear in Basle to render an account of their work, and all outstanding debts due to the pope were to be paid at Basle. The papal delegates, especially Osvers and Bertran de Vich, defended the rights of Eugene, but the moderate element was gradually losing control in the assembly, and the extreme party, gathered around Cardinal Louis d'Allemont, could no longer be restrained. No legislation had any chance of being passed unless directed against the Holy See. At last, after the papal legates, Cardinals Albergati and Cervantes, had been received very badly at Basle (25 March, 1436), and after decrees had been passed regarding the future concclave, the papal oath, the number of cardinals, etc., Eugene IV realized that conciliation was no longer possible, and addressed a Note to the princes of Europe in which he summed up the injuries inflicted on the papacy by the council and requested the different rulers to withdraw their bishops from d'Allemont's session and to call another general council from the deliberations of which something better might be awaited. The council had previously opened communication with the Greeks (September, 1434) to determine whether an assembly for reunion should be held. In December 1436, it was decided that the council should be held either at Basle itself, at Avignon, or in Savoy. Cardinal Cesarini refused to put this proposal to the meeting, but on the motion of Cardinal d'Allemont it was passed. The pope refused to consent, and the deputies of the Greek Emperor protested against it (23 February, 1437), whereupon a new embassy was dispatched to Constance. The Greeks refused to come either to Basle or Savoy, and the people of Avignon had also been known to have their council. The case was left there. A strong minority, including the papal legates, and most of the bishops present, wished that some Italian city should be selected; the majority, led by Cardinal d'Allemont and composed mainly of French and Italian cardinals, wished for Felix V. A new proposal, and after a disorderly session (7 May, 1437), at which both parties published their decrees, Eugene IV confirmed that of the minority, and the Greek ambassador declared it to be the one acceptable to the emperor. The revolutionary party now completely controlled the council. Against the wishes of Cesarini, Cervantes, and Sigismund, the pope was commanded (31 July, 1437) to appear before the council to answer for his disobedience, and on the 1st of October he was declared contumacious. Eugene IV replied to these excesses by the publication of the bull "Doctoris gentium" (18 September), in which it was stated that unless the delegates abandoned their methods for a limited number of days only to the Bohemian affair the council would be transferred to Ferrara. The reply was a reassessment of the superiority of a general council (19 October). Cardinal Cesarini made one final effort to effect a reconciliation; but it failed, and then, at the request of the council, except d'Allemont and by most of the bishops, he left Basle and joined the pope at Ferrara, to which place the council had been definitely transferred by a bull of Eugene IV (30 December).

Henceforth the assembly at Basle could be regarded only as schismatic. Most of the Christian world stood loyal to the pope and to the Council of Ferrara. England, Castile and Aragon, Milan, and Bavaria disavowed the assembly at Basle, while, on the other hand, France and Germany, though recognizing Eugene IV, endeavoured to maintain a neutral position. In a meeting of the French Clergy at Bourges (May, 1438), at which were present delegates from the pope and from Basle, it was determined to remain loyal to Eugene, while at the same time many of the reforms of Basle were accepted with certain modifications. It was on this basis that the twenty-three articles of the Pragmatic Sanction of Bourges were drawn up (July, 1438). In Germany, after the death of Sigismund (9 December, 1437), delegates of both parties attended at Frankfort (1438) to seek the assistance of the princes, but they declared for neutrality until a king had been elected, and even after the election of Albrecht II the attitude of neutrality was maintained until at last, in Mainz (March, 1439), they followed the example of France and declared for Eugene IV as lawful pope while they accepted many of the reforms of Basle.

In Basle itself it was resolved to depose the pope and in order to prepare the way for deposition three articles were drawn up, namely: (1) that a general council is superior to a pope; (2) that the pope cannot prorogue, or dissolve such an assembly; (3) that whoever denies these is a heretic. Cardinal d'Allemont vainly resisted this undertaking. Against the wishes of the bishops and most of the ambassadors present, these decrees were passed (16 May, 1439), and Eugene IV was deposed as a heretic and schismatic (25 June). Immediate steps were taken to elect his successor.

Cardinal Louis d'Allemont, although some theologians, and nine jurists and canonists formed the conclave, and on the 30th of October, 1439, Amadeus, ex-Duke of Savoy, was elected and took the name of Felix V. Since his retirement he had been living with a body of knights, which he organized as the Order of St. Maurice, on the banks of the Lake of Geneva. He was closely connected with many of the princes of Europe, and the council stood in bad need of the wealth which he was supposed to possess. Felix V was elected president, but the convocation presented this act of authority and elected instead the Archbishop of Tarentaise (28 February, 1440). Steps were also taken to levy taxes on ecclesiastical benefits to provide for his election. Ordo, the election of an antipope alienated the sympathy of the world from Basle. Henceforth they could rely only upon Switzerland and Savoy.

Disputes soon broke out between Felix V and the convocation at Basle. It refused to allow him to proceed to Pisa to examine the transactions of its decrees, and he was unwilling to undergo the expense of supporting nuncios in the different countries. The sessions became less frequent, the
The Council of Basle might have done much to secure reforms, then so badly needed, and to restore to the Church its independence. From all sides it was assured of sympathy and support as the one remedy for the abuses which existed. But under the influence of extreme theories and theorists it allowed itself to be hurried into an inglorious struggle with the pope, and the valuable time and money which were spent in vain discussions. It is not clear what the ecclesiastical authority had shamefully failed to set right. It struck a terrible blow at the rights of the Holy See and shook men’s faith in the pope’s spiritual power at a time when his temporal sovereignty was in imminent danger. In this way it led directly in France, through the Pragmatic Sanction of Bourges, to the establishment of Gallerianism as a definite formula, while in Germany, through the long intervals of neutrality, people were prevented from seeing the importance of the Holy See which was afterwards effected in the Reformation.

James MacCaffrey.

Basle-Lugano, Diocese of, is the largest Catholic diocese of Switzerland. It is composed of the two Dioceses of Basle and Lugano which are united only by having a bishop in common.

I. THE DIocese of Basle.—This has taken the place of the old Diocese of Augst (Augusta Rauracorum), the origin of which is obscure; a Bishop of Augst was a member of a council held at Cologne in 346. When August Rauracorum sank into decay during the disorders of the migrations the seat of the diocese was transferred to the present Basle (Basilea), founded in 574 by the Emperor Valentinian I. No definite information has been preserved of the first bishops. The most important bishop in the early period of the history of the diocese is Hatto, a Benedictine from the monastery of Reichenau, who was a friend of Charlemagne; he was Bishop of Basle from the year 805. He issued a capitulary of great importance for his diocese, resigned his position in 822, and retired to Reichenau where he died in 836. During the episcopate of Adalbert (999-1025) the foundation of the secular jurisdiction of the Bishops of Basle was laid by the grants made by King Rudolph III of Burgundy; the king appointed the bishop administrator and protector of several religious foundations, bestowed a number of towns and territories on him, and conferred various rights, such as the right of hunting, hunting-grounds, etc. Adalbert rebuilt the cathedral which had been pillaged by the Magyars and consecrated it with much pomp in 1019 in the presence of the Emperor Henry II and his wife. Adalbert’s immediate successors Ulricus II (1025-40) and Dietrich (1041-53) were included among the spiritual princes of the Holy Roman Empire. In the period following Adalbert’s administration the diocese of Basle was greatly increased, especially through gifts made by the Emperors Henry II, Henry III, and Conrad II.

As princes of the empire the Bishops of Basle were
The Diocese of Basle attained its greatest extent in the course of the fifteenth century. The spiritual power of the bishops, but not their secular jurisdiction, extended over the entire northwestern part of present Switzerland and lying between the rivers Aare, Rhine, and Doubs, over the southern part of the present Alsace as far as Rappoltweiler and Schlettstadt, as well as over some small districts in Baden and France. The Reformation was to rob the bishops of a large part of their former jurisdiction. At the height of the religious agitation the diocese was under the rule of Christoph of Utzenheim (1502–27), one of the most distinguished of the Prince-Bishops of Basle. He was a friend of the arts and sciences and a promoter of the new art of printing, then flourishing in Basle. In order to transplant to Basle Bishop Christoph held in 1503 a synod at which excellent statutes were issued; he also called learned men as professors and preachers for the university that had been founded in 1460. This last measure, however, promoted the entry of the new doctrine. A number of the scholars who had been appointed, as Capito, Pellicanus, Ecolampadius, and for a time also, Erasmus and Glareanus, took sides with the Reformers and worked for the spread of the Reformation. Basle became a center for the preparation of dispatch in all directions of the writings of the Reformers. Before long the Great Council and the citizens were split into two religious parties and internal disputes were common. Bent from extreme age, Bishop Christoph, in 1527, resigned his See. Before his successor Philip of Gundelabeh (1527–53) was able to enter the city, the party advocating the new doctrine obtained control, the Catholic members of the Great Council were driven from office, the Catholic religion was declared to be abolished, the monasteries were closed, and the churches were plundered. The bishop changed his place of residence to Pruntrut (Porrentruy); the cathedral chapter went to Freiburg-in-the-Breisgau and did not return into the territory of the diocese until 1678 when it established itself at Aarau.

Succeeding bishops devoted themselves to repairing the severe losses which the diocese had suffered during the Reformation. The bishop who deserves the greatest credit for the restoration of the prosperity of the diocese and the new development of the diocese was the successor of the bishopric was Jacob Christopher Blarer von Wartensee (1575–1608). He made an alliance offensive and defensive with the Catholic cantons of Switzerland in 1580, proclaimed the decisions of the Council of Trent, held in 1581 a diocesan synod which elected a good fruit, and brought back to the diocese numerous subjects who had been estranged from the Catholic religion. He was ably seconded in his labours by the Jesuits whom he called in 1691 to Pruntrut and put in charge of the newly founded college. His successors followed in his footsteps, especially Joseph William Rink von Beldenstein (1608–28). In the course of the Thirty Years War the diocese suffered from invasions by the troops of Bernard of Weimar. During the episcopate of Bishop John Conrad von Roggenbach (1656–93) the cathedral chapter established itself once more in the diocese, at Aarau, as has been mentioned above. Bishop Conrad von Reinsch (1705–37), who founded the seminary for priests and built Castle Delsberg, a residence of the prince-bishops, issued a series of ordinances in 1726 which we are the basis of the privileges of the land. This caused a revolt that lasted into the episcopate of his successor Jacob Sigmund von Reinsch (1737–43) and was only suppressed with the aid of French troops. The three years of the revolt were considered in 1744. The estrangement resulted that was not overcome in spite of all the efforts of the succeeding bishops; Joseph William Rink von Beldenstein (1744–62), Simon Nicholas von Froben (1782–73), and Frederick Ludwig von Wangen-Geroldseck (1775–82).

The French Revolution put an end to the secular
jurisdiction of the bishop. The prince-bishopsric was occupied by French troops in 1702 and Bishop John Sigmund von Roggenbach (1782–94) fled to Constance. His territory was turned into the Rau-
racian Republic which after four months was in-
cluded in 1703, in the French Republic. From the loss of secular jurisdiction the bishop had also to forgo a large part of his ecclesiastical diocese, for, according to the Concordat made in 1801 between Pius VII and Napoleon, a large part of the Bishopsric of Basel was given to the Diocese of Straubing.

The next bishop, Francis Xavier von Neveu (1794–
1828), resided first at Constance and then at Offen-
burg; he ruled only a small territory in the present Cantons of Solothurn, Aargau, and Bern. It was not until 1814 that the bishop obtained again the right to ecclesiastical supervision over the larger part of the former prince-bishopsric; but his efforts to bring about the restoration of the secular power were unavailing. In 1815 the Congress of Vienna gave the territory of the diocese to the Cantons of Bern and Basel, with the exception of the portion already be-
longing to Germany. Not long after this, however, the Diocese of Basel was enlarged. After the disor-
ders of the Napoleonic era the Swiss confederation had been reorganized; in order to make it equally in-
corporate the Church matters, the Diocese of Constance was separated in 1814 from that bishopric and placed provisionally under a vicar Apostolic. Long negotiations were entered into be-
between the cantons in the territory of which these portions of the diocese lay, and it was finally resolved to carry out the plan that had been steadily urged by the Canton of Solothurn; this, was, to revive the Bishopsric of Basel and to define anew its boundaries. The negotiations with Rome were concluded in 1828; the Bull of Leo XII, "Inter presbiterius nostrum apostolicus Satis munera", issued 7 May, 1828, settled the bounds of the new Diocese of Basel, and the Bull of 13 July, 1828, was solemnly read at Solothurn in the collegiate church of Sts. Ursus and Victor which had been elevated to a cathedral. Bishop Francis Xavier von Neveu died a few days later. The new cathedral chapter, which had been appointed, in order to bring it into existence by the pope, nomi-
nated as bishop the dean of the cathedral who had formerly been the administrator Apostolic, Anthony Sales (1822–34). The See which is directly dependent on the Apostolic See, embraced at first the Cantons of Lucerne, Bern, Solothurn, and Zug; in 1829 Aargau and Thurgau were added; somewhat later Basel, for the Catholic diocese of Basle; in 1841 the Bernese, and finally in 1858, definitely without confirmation from Rome.

The germ of many conflicts lay hid in this merely provisional new arrangement and in the uncertainty as to the legal relations of the new see. However, during the episcopate of Bishop Salzmann and that of his immediate successor Charles Arnold (1854–62), the founder of a seminary for priests at Solothurn, peace was fairly well preserved. During the epis-
copate of Lachat (1862–95) a schism was set out, caused by the Old-Catholic movement which won many adherents in Switzerland. The liberal cantons of the Diocese of Basel (all except Lucerne and Zug) closed the seminary for priests in April, 1870, and forbade the promotion of the decrees of the Council of the Vatican II; in 1871 the bishop, nevertheless, proclaimed these decrees, the majority of the cantons belonging to the diocese voted his deposition, 29 January, 1873, and dissolved the cathedral chapter, 21 December, 1874, which had refused to elect a new bishop, being forced to leave his residence, went to Lucerne which, like the canton of Zug, had protested against the action of the other cantons and had remained faith-
ful to the bishop. Here in Lucerne he continued to administer the diocese. His appeals to the federal authorities of Switzerland were rejected and the Catho-
lic community was forbidden to have communica-
tion with him. It was not until the pontificate of Leo XIII that this unfortunate state of affairs was brought to an end and peace re-established. Bishop Lachat resigned his office in 1885 and was made titu-
lar Archbishop of Damiatte and Administrator Aposto-
tic of the newly formed Bishopsric of Lugano (see Bishopsric of Lugano). For the new archbishop the Holy See appointed Frederick Fiela Bishop of Basel (1885–88). The new bishop sought to efface the traces of the late struggle and re-establish the cathed-
ral chapter; he died 4 May, 1888. Leonard Haas (1888–1906) was appointed to the see 11 July, 1888. Bishop Haas was an eloquent preacher; he encour-
aged the use of congregational singing and held a diocesan synod in 1896. He was followed in 1906 by Dr. Jacob Stammier, born 2 January, 1840, and ordained to the priesthood in 1863.

Statistics.—The present Diocese of Basel (ex-
cluding Lugano) embraces the Cantons of Basel, Bern, Lucerne, Solothurn, Aargau, Thurgau, and Schaffhausen; in 1900 it contained 444,471 Catholics and 903,400 Protestants. The majority of the in-
cidents in the Swiss Church is in the Catholic part; in the Evangelic part in the Cantons of Zug and Schaffhausen; Bern some 6,000 Catholics speak French. For the spiritual direction of the Catholic community the diocese is divided into 8 deaneries, 14 rural chapters, 406 parishes, and 148 curacies and chaplaincies. The parishes in the Cantons of Zug and Schaffhausen are not united in a rural chapter. The secular priests number 660; the regular clergy (O.B.B. and O. M. C.) 85. The cathedral senate, which has the right to elect the bishop, consists of five resident canons (canonici residi) and five urban canons (canonici forames); besides these there are seven cathedral capillars, who do not belong to the cathedral senate. In 1907 the office of capilus was vacant. There is a collegiate church at Lucerne having an independ-
ent provost and 9 canons (in 1907 the canopies were not filled), and a collegiate church at Beromunster with 1 provost and 20 regular canons (the number of canons in 1907 was 17).

The schools for the education of the clergy are: a
cantonal theological school at Lucerne with a semi-
inary for priests, and a college for boys. The pri-
sary seminary for teachers at Zug is entirely Catholic in character. In accord-
ance with the Swiss constitution the public schools are open to members of all denominations, conse-
quently there is a Catholic school at Lucerne. In the Cantons of Lucerne and Zug, which are almost entirely Catholic, instruction is given in many of the schools by Catholic teaching-sisters, who are obliged to pass a state examination. The male orders and their houses in the Diocese of Basel are as follow-
Capuchins, 7 houses with 73 priests, 19 clerics, and 24 lay brothers; the Hermits-Brothers of Luthern, 1 house; the Benedictines of Mariastein, who were included in the Swiss congregation of the Benedict-
ines, are a straggler, 18 houses. The Cistercians of Muri have gone to Dürenberg near Salzburg; the Benedictines of Muri have gone for the same reason to Gries near Bozen, and the Cistercians of Wittengen to Meihaven near Bregens. The female orders and congregations are more largely represented in the diocese than the male orders; here in 1908 their houses are as follows: Benedictine nuns, 1 house; Ursulines, 4 houses; Capuchin nuns, 4; Franciscan Sisters, 1; Cistercians, 2; Clares, 1; Sisters of St. Francis de Sales, 1 house with a boarding-school for girls attached; Claries of the Cross, 2 houses. The bishop of Basel, being forced to leave his residence, went to Lucerne which, like the canton of Zug, had protested against the action of the other cantons and had remained faith-
ants on the sick; also of the teaching Sisters of the Holy Cross of Menzingen, who carry on large institutes for girls at Menzingen, Baldegg, and Cham, and conduct, besides, 250 elementary schools, and 49 institutions for the poor, orphans, and sick in different parts of Switzerland. In addition to the three classes of clergy in this diocese there are similar institutions at Solothurn and Lucerne. The most important Catholic church of the diocese is the Cathedral of Solothurn, which was built, 1762-63, in the style of the Italian Renaissance; others worthy of mention are the collegiate church of St. Leodegar at Lucerne (built 1633-35); the church of St. Oswald at Zug; the churches of the former monasteries of Fischingen, Kreuzlingen, and Bernoumieter; the church of the institute of Menzingen, etc. The most frequented pilgrimages are: Mariastein near Basle, and Vorb urg near Dela berg. (See Switzerland.)

NEUGART, Episcopus Constantinus Almiranicus (St. Basiliensis, 2 vols.), SCHMIDT, Die Bischöfe von Basel (Zürich, 1830); Grafenhein, Monuments historiques et civils de la Suisse et du Liechtenstein, extending to 1830; ATTENHEUER, Die kirchliche Stellung der heiligen Kirche gegenüber der Sozialstruktur in der Diözese Basel (Leipzig, 1907); HISTORIQUE DES ÉGLISES DE LA Suisse, 1700 bis zum Jahre 1883 (Bern, 1894-96); FLEISCHER, Staats und Börsenzeitung in der Bischöfskurie (Leipzig, 1887); DAVOUR, Les institutions religieuses à l'époque des reformes (Geneva, 1887); IDEM, Dictionnaire historique des paroisses de l'évêché de Bâle (Porrentruy, 1893-1905, 5 vols.); Bätiger, Die ältesten Schriften der Schweiz (Munich, 1893); Statut clausi omnium Helvetiae dioecesium (Solothurn, 1805).

II. THE DIOCESE OF LUGANO.—The Diocese of Lugano was erected by a Bull of Leo XIII (7 September, 1888). It includes the Swiss Canton of Ticino, where the population is almost entirely Catholic and Italian and the common language. Before the Diocese of Lugano was established the Canton of Ticino was under the jurisdiction, in ecclesiastical matters, of bishops who were not Swiss. The smaller, northern part belonged to the Archdiocese of Milan and, consequently, still uses the Ambrosian Rite; the other, and much larger part of the canton, belonged to the Diocese of Como. Soon after the formation of the Canton of Ticino, in 1803, efforts were made to separate it in its church relations as well as from foreign powers and to unite it in these with the rest of Switzerland. But it was several decades before the Great Council, in 1855, went thoroughly into the matter. Without consultation with the Holy See the Federal Council in 1859 declared the jurisdiction of the Bishops of Como and Milan to be abolished in the territory of Switzerland; after these negotiations were begun with Rome. No settlement of the question was reached until the pontificate of Leo XIII. By the convention of 1 September, 1884, made between the Curia and the Federal Council, Ticino was canonically separated from its former diocesan connections and was placed, provisionally, under an administrator Apostolic, the present Bishop of Basle, as administrator Apostolic of the Bishop of Basle. After Bishop Lachat's death (1886) the new Bishopric of Ticino was formed by the Bull of circumscription "Ad universum" of Leo XIII (7 September, 1886), and united with the Diocese of Basle under the title of the Diocese of Basle-Lugano. The same year the Church of San Lorenzo was elevated to a cathedral. The union is merely a nominal one, for, although the Bishop of Basle is the Bishop of Lugano he has no right of jurisdiction in that diocese. It is, in reality, under the independent rule of an administrator Apostolic who has the rank and power of a bishop. He is appointed by the pope with the concurrence of the Bishop of Basle from among the members of the clergy of the Canton of Ticino. The first administrator Apostolic was Eugène Lachat; he was followed by Mgr. Vincent Molo (1887-1904), and Mgr. Alfred Peri-Morosini. The latter was born 12 March, 1862, and was consecrated 17 April, 1904.

STATISTICS.—According to the Swiss census of 1900 the Diocese of Lugano includes 135,200 Catholics in a total population of 442,800 for the Canton of Ticino. For purposes of religious administration the diocese is divided into six rural chapters, and 248 parishes and chaplaincies; 54 parishes use the Ambrosian Rite; the other 194 parishes belong to the Latin Rite. The care of souls is exercised by 330 secular priests and 22 regular religious. The cathedral and the church of the bishop and 16 canons (10 resident and 6 non-resident). The collegiate churches are: Bellinzona, a provost and 14 canons; Agno, a provost and 7 canons; Locarno, a provost and 5 canons; Balerna, a provost and 6 canons, and Mendrisio, a provost and 8 canons. Catholic institutions of learning are: the seminary for priests at Lugano; the episcopal seminary for boys, Santa Maria near Pollegio; the papal academy at Ascona; the College Don Bosco at Bellinzona; the Institute Dante Alighieri, conducted by the Augustinians at Bellinzona, and the college at Domodossola. The orders and congregations in the diocese and the number of their houses are as follows: Capuchins, 4 houses; the Somaschi, 1; Benedictine nuns, 1; Augentinian nuns, 1 house, which has an academy connection with it; the Brothers of Mercy of St. Vincent de Paul, 2 hospitals at Lugano and Locarno; School-Sisters of Menzingen, 2 (college at Bellinzona); Sisters of the Holy Cross, 3 (they also conduct an asylum for the deaf and dumb at Locarno); Sisters of St. Vincent de Paul, 1; Sisters of the Childhood of Jesus, 1; and the Sisters of the Divine Providence, 1. The most noted church of the diocese is the cathedral of San Lorenzo at Lugano, which was built in the fifteenth and sixteenth centuries and has a celebrated Renaissance façade; the most frequented place of pilgrimage is the shrine Madonna del Sasso not far from Locarno, which is the national shrine of the Canton of Ticino.

FRANCINI, Der Kantons Tessin, historisch, geographisch und statistisch gezeichnet (St. Gall and Bern, 1850); PERI-MOROSINI, La questione diocesana ticinese, ovvero origine della diocesi di Lugano (Einsiedeln, 1890); IDEM, Dizionario di geografia e demografia del canton Tessin, 1898; BORRANI, IL TIRANO DEMOCRATA (Zurich, 1895); CAVRON, Storia della città e della diocesi di Como (Milan, 1859-60); IDEM, Motta, Bollettino storico di Ticino (since 1879), and the works by BÖCHI and DAVOUR quoted in the bibliography above. (JOSPEH LING.)

Bas-relief, a sculpture executed upon and attached to a flat surface. The usual impression produced by an artistic relief is that about one-third of the actual proportions of the object are being seen in their third dimension of depth. Strictly speaking, however, relief sculpture is subdivided into various kinds. In alto-relievo (lt. for high relief) the figures are sculptured partly or wholly in the round, that is, they project entirely, or almost entirely, from the surface of the block in which they are cut. The metopes from the Parthenon (Elgin Marbles) now in the British Museum, are among the best examples of alto-relievo. Mezzo-relievo (lt. for semi-relief; Fr. demi-relief) presents figures that are rounded to half the natural proportions, but without detached parts. Basso-relievo (lt. for low-relief; Fr., bas-relief) is a form of surface-ornamentation in which the projection is very slight. The finest known specimen of low relief is the frieze around the cela of the Parthenon; its position of high honor in the British Museum. The lowest kind of relief is that described by the Tuscan term rilievo-stiacciato (depressed or flattened relief). This scarcely rises from the surface upon which it is carved, and is neither an art of fine line nor sculpture. Donatello's Florentine Madonnas and saints are among the best examples. Finally cavou-relievo
(It. for hollow relief; Fr. relief-en-croix) is a method of concave sculpture in which the highest part or outline is on a level with the surface, while the roundness is considerably below it. Cavö-riëveo was practised chiefly by the Egyptians whose hollow reliefs are known by the Greek term Kollanaglyphs.

Relief is the form of sculpture that comes nearest to painting, both having composition, perspective, and the play of light and shadow. Relief would seem to have much in common with drawing, though in reality less importance attaches to line than to the modelling of contour and to the true and effective rendering of chiaroscuro. The human form is undoubtedly the proper object of relief, which appears to be particularly suited to the representation of numerous figures in action. In the Greek and Roman classic reliefs these figures are usually in processional order, engaged in historic or military events, or in the ceremonial of worship. Relief is existed before the introduction of sculpture in the round, or when only rude figures of the deities had been attempted. The Babylonians, Assyrians, and Hittites practised it contemporaneously with sculpture in the round. The Egyptians, though they employed a kind of low relief, especially on the interiors of buildings, made a still greater use of Kollanaglyphs. The Greeks, conceiving relief sculpture in its purely plastic sense, achieved the greatest mastery of the art. With them it was used both as an ornament and as an integral part of the plan when allied with architecture. Distinguishing strictly between high and low relief, they used the former between the triglyphs, and in the tympana of the temples, and the latter in friezes, tombstones, etc. Certain fixed principles governed the Greek relief: the spaces were adequately filled the backgrounds never carved, and it was a rule that all heads should be at the same height from the base, whether the figures sat, rode, or stood (ıso-

The Annunciation, Andrea della Robbia, Hospital of the Innocents, Florence

well suited, also, to the portrayal of series of scenes, as in the bronze doors of various Italian baptisteries illustrating the Old and the New Testament. Figures and objects in relief are generally worked out in the same material as the background, though there are exceptions to this rule in Greek art, and in the decorative work of the Chinese and Japanese. In the larger reliefs marble, bronze, and terra-cotta are used exclusively; while in smaller works the precious metals and stones, ivory, stucco, enamel, wood, etc., predominate. The reliefs of the Egyptians and Assyrians, not highly plastic, were made more effective by the introduction of strong colours. The early Greeks also made use of polychromy, as instanced in the metope relief in the Museum of Palermo. In Gothic art and in the Renaissance it was the custom to tint wood, terra-cotta, and stucco, but not marble or stone. Relief is one of the earliest forms of sculpture practised, and probably originated with the stone-cutters of prehistoric days, though clay and wood are supposed to have been the earliest materials employed, owing to greater facility in moulding and carving them.

There is reason to believe that relief sculpture kephaleia). In the Hellenistic period a more picturesque and dramatic form of composition prevailed, and the backgrounds were carved in pictorial style. With the Etruscan relief was applied mainly in the artistic handicrafts. In Rome it frequently degenerated into a pictorial mode in which several planes were employed, but examples are still extant that are highly classic, e. g. the groups of the Arch of Titus, the continuous winding reliefs of the Column of Trajan, imperial sarcophagi (in the Vatican), and reliefs of the Capitol Museum, Rome. The Romans no doubt owed their finest reliefs to the Greek artists they harboured and employed upon themes taken from the history of Rome.

The Christian Era inaugurated what might be mistaken for a new art, but the change was in subject more than in mode, for all the early examples show a great similarity to antique models in form, pose, and drapery. Christian relief appears mainly in the sarcophagi with their Biblical, Apostolic, or symbolic subjects: Daniel in the lions' den, Moses striking water from the rock, the adoration of the Magi, the raising of Lazarus, the Good Shepherd. Heathen myths are also used, invested with a new signifi-
ance: Orpheus is Christ, drawing the creatures of the wild by the sweet strains of his music; Ulysses attached to the mast is believed to typify the Crucifixion (O. Marucchi). Occasionally a carving on a Catacomb tombstone shows real merit, and the lamps adorned with Christian symbols are frequently artistic. As they depart from the classic tradition, however, Christian reliefs grow ruder and more imperfect. Those of the latter part of the second and the third century have little merit. The fourth century, in spite of its decline, bequeathes some specimens, now in the Lateran Museum; the sarcophagus of Junius Bassus in the vaults of St. Peter's is highly esteemed as a work of art. When the Christian basilica replaced the cubiculum the influence of imperial Constantinople had substituted mosaics for both sculpture and painting. The few reliefs of that period that have survived bear a strongly Byzantine character, which is also apparent in all early Frankish workmanship, reliefs, ivory diptychs, etc. The reliefs of Ravenna, from the time of Theodoric, show the same influence in combination with the Teutonic spirit, as in the sixth-century sculptures of San Vitale. In figure-carving, however, there is a distinct tending from symbolism to realism. The rude Lombardic bas-reliefs of Milan and Brescia frequently border on the grotesque, but the authors went to nature for their hunting scenes and forms of animals. The bronze reliefs of the church of St. Michael, Hildesheim, Germany, are one of the legacies of the eleventh century; those of the Golden Gate, Freiburg, are considered the finest work of the late Romanesque period.

With the merging of the Romanesque into the Gothic, relief sculpture assumes a new character and a peculiar importance in its close association with architecture, and in the many uses it is put to in tympana, spandrels, etc. As a purely Christian and beautiful form of art it ranks high; numerous examples are extant, especially in the northern countries of Europe. In Italy it had small hold, for as early as 1300 Andrea Pisano, who is called a Gothic, was inaugurating a renaissance. Picturesque relief reached its fullest development in Florence, as in the baptismal bowels of Ghiberti and the marble pulpit of Santa Croce by Benedetto da Majano. Donatello in his admirable high and low reliefs and the Della Robbias in their enamels return to a more plastic conception. During the entire baroque period (Michelangelo being the last Italian sculptor of the late Renaissance) works of a low order of inspiration prevailed. The Danish sculptor Thorwaldsen, influenced by the study of Attic models, produced reliefs of great beauty and plasticism. The works of Canova were likewise classic, though frequently cold and feeble. Rauch in Germany and Rude in France modelled spirited reliefs. In our day at the head of the admirable French school of sculpture stands Rodin, an impressionist and psychologist, producing unfinished reliefs which nevertheless are almost Greek in their imprint of life. In Germany, Austria, and England, fine reliefs, especially decorative works, are being modelled. In Spain and Italy the younger men are forming new schools of plastic work. In America, though good work in relief is done, sculpture in the round prevails. Everywhere the tendency is to neglect the distinction between the different kinds of relief, to be independent in method and treatment, and principles sway as of old between the pictorial and the plastic.

M. L. Handley.
BASSETT, JOSHUA, convert and controversialist, Master of Sidney Sussex College, Cambridge, England, under James II, b. about 1641, at Lynn Regis, where his father was a merchant; d. in London, in 1720. In 1657, after preliminary instruction by a Mr. Bell, he was sent to the Jesuits at Paris, where he afterwards entered the Society of Jesus, and at last, by the aid of Cardinal Richelieu, was sent to the University of Cambridge, in care of a Mr. Bolt. He proceeded B. A. in 1661, M. A. in 1665, and B. D. in 1671. In 1664 he became junior fellow, and in 1673 senior fellow of his college. On the death of Dr. Richard Minshull in December, 1680, he was, by mandate of James II, elected Master of Sidney Sussex College.

He was unskilled without the usual oaths, and in January 1721/22, he was declared a Catholic. He had been celebrated in his private rooms, and altered some of the college statutes which stood in the way of his co-religionists. He was concerned in the famous dispute which arose when the king demanded that the university confer the degree of M. A. upon the Jesuit. He was also active in the preparation of the Oxford Declaration. When Bassett, having left the college in haste, desired to take away his personal belongings, he was threatened with arrest as a priest. It is thought, however, that Bassett had not been ordained. He died in extreme poverty.

The criticisms of Bassett admitted that he possessed learning and ability, but objected to his pride and to his interference, for religious reasons, with college regulations and routine. He forbade a chapel service on the 5th of November, disciplined a speaker who had satirized Rome, and threatened to take over the chapel for Catholic services. Craven, who was Master of Sidney Sussex College, declared in 1725 that Bassett "had so many nostrums in his religion that no part of the Roman Church could own him". Bassett was considered to be in conflict with the University authorities. His known or supposed writings are: (1) "Ecclesiae Theoria Nova Dodwelliana Exposita" (1713), the only work containing his name on the title page; (2) "Reason and Reformation" (1713); (3) "Essay for a Catholic communion...by a minister of the Church of England" (1704); this was reprinted in 1879, with an introduction, in "An Eirenicon of the Eighteenth Century" by H. N. Oxenham; (4) "Occasional verses in the University collections. COOPER in Dict. Nat. Bio., III, 381; GILLOW, Bibl. Dict. Eng. Cath., I, 155; MACAULAY, History of England.

J. V. CROWNE.

Bassi, Matthew, a founder and first Superior-General of the Order of Francis Minors, the principal branch issued from the Reform of the Observance, b. in 1495, at Basco, Diocese of Montefeltro, in the Duchy of Urbino; d. at Venice in 1525. At the age of seventeen he entered the Order of the Observants at Montefiorentino. In 1525 he was a priest and missionary, being a member of the Reformed Province of Ancona. Moved by the need of reform which was felt almost all through theFranciscan family, he resolved, in 1525, the year of the Jubilee, to begin a more austere life, choosing for himself the form of caritated life. Pope Clement VII granted his request and also permitted him to preach everywhere and to have a companion. Some other members of the Observance asked and obtained permission to join him, and on the 3d of July, 1528, the pope issued the Bull "Religiosis sedulius" by which the new Reform was canonically approved and placed under the nominal jurisdiction of the Conventuals. The name "Capuchin", at first given by the people to the new Franciscan monks, was afterwards officially adopted. In the pontifical征集Bassi's followers are variously styled "Capucini", "Capuciatii", "Capulati", and "Fratres de Observantia Capuchinorum".

In April, 1529, the new order held its first chapter at Albacina, where Matthew of Bassi was elected vicar-general by acclamation. A code of constitutions which was to serve as a basis to the Reform was elaborated. But the humble founder did not hold his charge very long. After visiting his brethren, wishing to resume his apostolic career, and perhaps fearing the anger of Contarini, who had menaced his disciples, he resigned his office. Thenceforward he took no part in the government of the Order. He even decided, about 1637, to return to the obedience of the Observants, through fear of incurring some ecclesiastical censure. As it was, these last had obtained, at different times
BELL or DECREES AGAINST THE NEW REFORM. Basiu
preached through the whole of Italy and part of
France with burning zeal, and did not rest till his
labours, and was buried in the Church of the Ob-
servants of that city in the presence of a vast con-
course of people attracted by his reputation as a
saint. The following eulogy by Arthur du Monnier
was written on the occasion for the French Revue

F. CANDIDE.

BASILIANUS, Bishop of Ephesus (444-445). As
a priest of Ephesus he charged of Basilianus and
the affection of the people that his bishop, Mennone,
roused to jealousy, sought his removal by promoting
him to the Bishopric of Evaza. Basilianus repudiated
the consecration to which he was violently forced to
submit, an attitude approved by Mennon's successor,
Basil, and in the latter's death (444) Basilianus suc-
cceeded him and though popular enthusiasm disre-
garded canonical procedure his election was con-
firmned by Theodosius II and reluctantly by Proclus, Patric-
arch of Constantinople. Basilianus reigned undin-
terrupted for more than 12 years. At the Easter of 448 he was seized by a mob and imprisoned.
The emperor was importuned to remove him, and the
man was referred to Pope Leo I and the Bishops of
Constantinople, Alexandria, and Antioch, who declared
the election invalid. Stephen, whom Basilianus
called the ringleader of his opponents, was elected
in his stead. The Council of Chalcedon on 29 Oc-
tober, 451, considered the plea of Basilianus for
reinstatement and was disposed to favour him, but owing
to the multiplicity of irregularities of the case it was
deemed advisable to declare the vacuum. Basilianus
was retired on a pension with episcopal dignity.
In the process Stephen cited Pope Leo's letter deposing Basilianus, a document unfor-
tunately lost.

JOHN B. PETERSON.

BASTIAT, CLAUDE-FRÉDÉRIC, a French economist,
b. at Rouen, 29 November, 1741; d. at Saint-Laurent, 26 September, 1825. He studied
theology at St. Sulpice in Paris and finished his
studies at Angers. He was then appointed professor
of theology at Rouen. During the Revolution he
wrote against the Civil Constitution of the Clergy.
Having refused to take the oath, he was obliged to
obligate himself to the clergy, and finally to Kôfelf in
Westphalia. In 1803 he returned to Rouen, where he was appointed vicar-
general and dean of the chapter by Archbishop Cambacérès. As a Gallican, he won the favour of
Napoleon, who appointed him Bishop of Sées (1813)
and the chapter of the cathedral accepted him as
capital vicar. Pope Pius VII failing to approve of
this nomination, the cathedral chapter revoked
the nomination (1814), and Bastian went into retire-
ment at Saint-Laurent, eventually dying on 13 June
he died. Bastian was the author of numerous works
on theology, the most important being "Lectiones théologicae", written while he was professor of theolo-
y, in collaboration with Abbé Tuvache (10 vols.,
Rouen, 1818), and he published several polemical
BASOTULAND

works on the subject of theology: "Réponse au mémoire et à la consultation de M. Linguet, touchant l'indissolubilité du mariage" (Paris, 1772); "Les entretiens du pape Ganganelli" (Clement XIV) (Antwerp, 1817); "Voltairemes, ou première journée du Prince de Voltaire dans l'histoire de France" (Brussels, 1779). During the Revolution he wrote many pamphlets against the Civil Constitution of the Clergy and his book "Dogmatique catholique sur le mariage" (1791) was published at about the same time. During his exile in Rome, he began his "Mémoires de l'abbé Baudé" (1805), and edited lately by the Société des amis de l'histoire contemporaine (3 vols., Paris, 1897-99). In his last years he wrote "Rédaction pour l'Eglise de France et pour la vérité contre les ouvrages de M. le comte de Maistre [Du Pape]" (Rouen, 1820): "Antidote contre les erreurs et la réputation de l'Eai sur l'indifférence en matière de religion" (Paris, 1823): "Concordance des lois civiles et des lois ecclésiastiques touchant le mariage" (Paris, 1824).

Mémoires de l'Abbé Baudé, ed. Loti and Verdet (Paris, 1897); Hunter, Nomenclator (Innsbruck, 1855); Bellamy in Dict. de théol. cath., s. v.

G. M. SAUVAGE.

Basutoland, Prefecture Apostolic of.—Basutoland, a mountainous district of South Africa, is bounded on the north and west by the Orange Free State, on the east by Natal, and on the south by Cape Colony. It has an area of 10,293 square miles. The white population is about 700 and natives number about 309,000. The chief town is Maséré. The county is administered by native chiefs under an acting British Resident Commissioner who meets the National Assembly or "Pito" in council once a year. Whites require special permission to settle in the country. The climate is healthful, though cold in winter, while the summer is characterized by heavy rains. The country has no railway nor roads properly so called. Basutoland was annexed to Cape Colony in 1871, and became a British Crown Colony in 1884. The inhabitants, till about 1820, were Bushmen of a low type but they have been replaced by highly intelligent Kafirs. The principal articles of export are wheat, mealies, and wool, Kafir corn, mohair, and cattle.

Basutoland, first a part of the Vicariate Apostolic of Natal, and later of the Vicariate of Kimberley, was made an independent prefecture by the papal See on 8 May, 1894. It comprises the whole of the territory known as Basutoland. The first prefect Apostolic of the new ecclesiastical territory was the Rev. Father Monginoux, O.M.I.; he was succeeded by the Rev. Father Baudry, O.M.I., and the last to succeed him was the Rev. Father Cenez, O.M.I. The Oblates of Mary Immaculate established themselves in that portion of South Africa about 1882. Roma, the first Catholic mission in Basutoland, was founded by the Right Rev. Dr. Allard, O.M.I., in 1867. The first church was built in the same year. The second mission situated about six miles from Roma was founded in 1867 and received the name of St. Michael. Since then, several new missions have been established in different parts of the territory. There are at present 19 churches, chapels, and stations, 5 convents, and 9 schools. The missionary work is carried on by the Oblates of Mary Immaculate assisted by the Sisters of the Holy Family. The total number of Oblate Fathers in Basutoland is at present 19; lay brothers, 60; European Sisters, 36; native Sisters, 12; total number of Catholics, about 8,900; catechumens, 700; children attending school, about 1,200.

Undoubtedly Christianity has progressed immensely during recent years in Basutoland, and it would have spread still more speedily had the resources been more abundant. Unfortunately, there, as elsewhere in South Africa, everything seems to be precarious. Agriculture is too often compromised by long droughts, and crops are sometimes destroyed by locusts, all of which bring on misery and famines. In addition to this the limited number of priests does not allow the evangelization of the country to be carried out very rapidly. The position of the country, however, is well settled, which greatly facilitates the work of the missionary, who can remain always in touch with his flock.

A. LANGAUTE.

Batavia, Vicariate Apostolic of.—When the Portuguese took possession of the island of Java, of which Batavia is the capital, they brought the Christian religion with them; but the Dutch, having conquered Java in 1696, set about the destruction of Catholicism. Nevertheless, the memory has been preserved of a Friar Minor who was expelled from Batavia in 1721, and attempted to continue his apostolic labours in China. It was with difficulty that a priest could enter Java, and, if recognized, he was hunted out. When in 1807 Louis Napoleon became King of Holland, Pius VII divided all the Dutch territory outside of Europe into three prefectures, the One West, the East Indies and Batavia for its seat, in the East Indies. At this period the Dutch missionaries James Nelissen and Lambert Preffens set out for the Sunda Islands, and reached Batavia, 4 April, 1808. The Government gave them at first a ruinous Calvinist place of worship, and then added to this act of generosity sufficiently to enable them to erect a church, which was blessed, under the title of Our Lady of the Assumption, 6 November, 1829. Nelissen died 6 December, 1817, and Preffens succeeded him in this preface.

On the 20th of September, 1842, Gregory XVI raised the Prefecture of Batavia to a vicar Apostolic, and Monsignor Groof, titular Bishop of Canes, and previously prefect Apostolic of Surinam, became the first vicar Apostolic. A coadjutor was given him, 4 June, 1847, in Monsignore Pierre-Marie Vrancken, titular Bishop of Colophon, who succeeded him in 1852. The Dutch Government, however, did not leave the first missionaries in peace, and Monsignor Groof, together with Father Van den Brand, a missionary, was murdered at Streit, in the vicariate of Batavia, 17 October, 1851. He was succeeded by Father Malech, who, in 1852, was succeeded by Father van Balen, and the latter by Father van der Stok, in the vicariate of Streit, 1855. Father Malech's "Atlas des missions" now gives the following statistics: Total population of the vicariate, 37,325,000; native Christians, 27,313 (in addition to 25,000 European Catholics); 720 catechumens; 24 European priests; 40 native priests; 250 Sisters; 300 of different orders; 94 catechists; 22 principal stations; 78 secondary stations; 40 churches, and 59 schools with 2482 pupils.

Pius IX had separated the British portions of the islands of Borneo and Labuan from the vicariate in 1855; in 1863 Leo XIII erected Dutch New Guinea into a new prefecture; and Pius X, in 1905, formed a prefecture out of the remainder of the island of
in the abbey church of St. Peter in 973, and a few years later the abbot was St. Elpheege, afterwards Bishop of Winchester and Archbishop of Canterbury, who was killed by the Danes in 1012. Elfrïge, who was in the same line as the Abbot of Bath; for in 1088 William Rufus granted the abbey and its lands to John de Villula, Bishop of Wells, and the resident superior was henceforth a cathedral prior instead of an abbot. This bishop later restored its lands to the monastery, which was endowed also by other benefactors. A great fire in 1137, destroyed nearly the whole city, greatly damaging the abbey buildings, which were promptly rebuilt. In the following century there was a warm dispute between the monks of Bath and the canons of Wells as to their respective rights in electing the bishop. Innocent IV decreed, in 1245, that the election should be held alternately in either city, that the bishop should have a throne in both churches and should be styled Bishop "of Bath and Wells". This arrangement continued until the Reformation, and the subsequent occupants of the see have retained the double title. Henry VIII's Commission visited Bath in August, 1535, and a report of the usual type followed. In 1539 Prior Holloway surrendered the house and revenues (valued at £617) to the king, and the monastic life of the abbey came to an end.

The present church of St. Peter, occupying only the nave of the great Norman fabric, was begun by Prior Birdie, about 1460; to its west was the church of St. John de Villula, which had fallen into decay. The new church was not finished until 1572, and is thus one of the latest specimens of Perpendicular work in England. The latest so-called restoration took place in 1874. No trace remains of the monastery, of which the last portion (probably the prior's lodgings) disappeared in 1755. Since 1879 the Catholic mission of Bath has been served by the English Benedictines.

D. O. Hunter-Blair.

Bath and Wells (Badvoniesbe et Wollensib) Ancient Diocese of (Bath, Aquas Solis, Bathonia, Bathennata, Bathoniensis; Wells, Thebaniensis, Wollensia, Ecclesia Fontanensis, Wollensia, Wollensib), coextensive with the County of Somerset, England. The first Bishop of Bath and Wells, properly so described, was appointed by the pope in 1244, but the diocese has a much longer history, though its bishops used different titles; Somerset, Wells, Bath, or Bath and Glastonbury, being at different times occupied. Æthelhelm (909–914), afterwards Archbishop of Canterbury, first exercised episcopal jurisdiction there, choosing the secular church of Wells as his cathedral. Henceforth, there was a certain rivalry between the secular canons of Wells and the monks of the two great abbeys, Glastonbury and Bath. The advantage, however, lay with the latter and the cathedral church at Wells maintained but a struggling existence. During the time of Edward the Confessor (1042–66), the energetic Bishop Gisa (1060–88), who on his appointment found the church small and poor, and the few canons who served it forced to beg their bread, succeeded in putting matters on a firmer foundation. He not only enlarged the church but they could live a community life, but obtained grants of lands for their support from St. Edward the Confessor, Harold, and William the Conqueror. This good work was partly undone by his successor, John de Villula (1088–1129), who removed the see to Bath, using the abbey there as his cathedral. It was not until the appointment of Bishop Robert of Lewes (1130–66), who rebuilt the cathedral at Wells and in other ways proved himself a wise and liberal administrator, that an arrangement was made by which Bath should take precedence of Wells, but that future bishops should have a throne in both churches and should be elected by the two chapters conjointly. This arrangement lasted through the administrations of Reginald de Bohun (1174–91), who brought St. Edmund of Lincoln to England, the Bishops of Lincoln (1192–1205), who annexed Glastonbury by force, and lastly Jocelin Trotman de Welles (1206–42), who though a native of Wells was known as Bishop of Bath and Glastonbury until 1219, when he gave up the claim to Glastonbury and resigned himself Bishop of Bath. But though he omitted Wells from his title, he did more than any other bishop for the town, for he restored and enlarged the cathedral, adding the beautiful west front, increased the number of

Bath Abbey. —The first religious house in Bath was a monastery of nuns founded by King Osric, A.D. 676. This was followed by a community of Benedictines, of which the last portion (probably the prior's lodgings) disappeared in 1755. Since 1879 the Catholic mission of Bath has been served by the English Benedictines.

Albert Battenstier.

Bath Abbey, BATH

in the territory of the vicariate. There still remains of its territory: the island of Sumatra, 181,250 sq. m.; Java, 50,715 sq. m.; the small islands of the Sunda group (Bali, Lombok, Sumbawa, Sumba, Flores, and Timor) aggregating 35,075 sq. m.; and Celebes, 73,270 sq. m. The Moluccas have been attached to the Prefecture of Dutch New Guinea. The Vicariate of Batavia, therefore, now comprises an area of more than 340,000 sq. m., or more than the combined areas of the German Empire and Great Britain and Ireland. The principal stations are: in Sumatra, Medan, in the north-east and Padang, in the west; in Java, Batavia (residence of the vicar Apostolic), Semarang, and Surabaya; in Timor, Filarang; in Flores, Maumere and Larantuk; in Celebes, Macassar and Menado. The natives speak their own dialects, but in the coast towns Dutch and Malay are the languages current. The Ursulines, established at Batavia and Surabaya, furnish the largest contingent of religious women in the vicariate, amounting to 170.

Annales ord. min. capuc. for September, 1906; Stéet, Atlas des missions; Missions Catholiques (Propaganda, Rome, 1907), 265.
canons from thirty-five to fifty, and founded a grammar school. On his death, the monks of Bath ignoring the chapter of Wells, elected as his successor Roger, one of their own community, for whom they obtained royal and papal confirmation, but the consequent appeal by the Wells chapter brought about the first settlement of the city. It was decided that Roger should remain bishop with the style "Bishop of Bath and Wells", and that the old arrangement as to joint election should in future be observed.

The history of the see was thenceforth tranquil, only three bishops during the next two centuries calling for special mention, Ralph of Shrewsbury (1329–63), who completed the buildings; Thomas Bekynton (1443–65), another liberal benefactor of the city; and Oliver King (1495–1503), who rebuilt Bath Abbey in the Perpendicular style. The bishop, William Byton (1267–74), died with a reputation for sanctity and his tomb became a place of pilgrimage.

In the fifteenth century there were two absent bishops, Adrian de Castello (1504–18), whose tenures were administered by the Latins, Polydore Vergil; and Cardinal Wolesey (1518–23), who held the see simultaneously with that of York. After the dissolution of Bath Abbey in 1538, the bishop, though retaining the old style, had his seat at Glastonbury, but small remuneration was bestowed on him. In 1549 the notorious William Barlow was intruded into the see, and alienated much of its property.

On the accession of Mary he fled, and was succeeded by the last Catholic bishop, Gilbert Bourne (1554–59), who held the see till he was deposed of it by Elizabeth and imprisoned in the Tower, thus becoming one of the eleven Confessor-Bishops who died in bonds. He died in 1569. Of the twin cathedrals of the diocese, Bath Abbey was rebuilt (1499–1539) in late Perpendicular style and is the last complete monastic building erected before the Reformation, while the cathedral at Wells, though small, is the most perfect example of a secular cathedral and one of the most beautiful Gothic buildings in England. Dating in the main from the early thirteenth, it was practically complete by the middle of the fourteenth century. The diocese contained three archdeaconries, Bath, Wells, and Taunton. The arms of the see were: Azure, a saltier quarterly, or and az.

**EDWIN BURTON.**

Bathie, William, writer on music and education, b. at Dublin, Ireland, 2 April, 1564; d. at Madrid, 17 June, 1614. His parents, John Bathie and Eleanor Preston, were distinguished both by their lineage and by their loyalty to the Catholic Faith. He went to Oxford about 1583 and while a student there wrote "A Brief Introduction to the Art of Music" (1586), which was reprinted in 1590. A discharge to his talent, "A Brief Introduction to the Skill of Song", was published at London in 1600. These writings and his skill at master of various instruments, especially the Irish harp, won him the favour of Queen Elizabeth to whom he was related through the Kildare faction. He was one of the first to introduce into his own country the religious life. From the English court he went to Louvain where he studied theology. On 6 August, 1595 (1596) he entered the novitiate of the Society of Jesus at Tournai. His later studies were pursued at S. Urban and completed at Aix. In 1611 he was selected by the father general to accompany Father Mansoni, the Apostolic Nuncio, to Ireland. This mission led them first to the Court of Spain and while there they learned that peace had been concluded between Spain and England and that the journey to Ireland was no longer necessary. Bathie remained in Spain, living at Valladolid and later at the Irish College of Seville. In 1614 he wrote his principal work "Janua Linguarum" (Salamanca, 1611). It was designed to facilitate the study of languages and thus to aid missionaries, confessors, and students both young and old. For this purpose, 1530 short sentences were grouped under certain headings, the Latin and Spanish on opposite pages, with an index giving the translation of the Latin words—in all about 5300. The work went through many editions in which its method was applied, by various combinations, to eleven languages, including Greek and Hebrew. It was first printed at London (1615), Leipzig (1626), Milan (1628), Venice (1655), and by 1637 it had been published in Bohemian, Illyrian, and Hungarian. An English edition (London, 1617) bore the title, "The Key to Languages, or, The Englishman's Grammar of All Languages". Naturally found imitators, and among these the great work by John Amos Comenius holds first rank. In the preface to his "Janua Linguarum Reserata" (1631), Comenius acknowledges his indebtedness to the Bathie, while in the work itself he adopts and develops the plan which the Jesuit had originated.

Bathilde (or Batilde), Saint, wife of Clovis II, King of France, time and place of birth unknown; d. January, 680. According to some chronicles she was from England and was the cousin of the Anglo-Saxon kings, but this is a doubtful statement. It is certain that she was a slave in the service of the wife of Erchinoald, mayor of the palace of Neustria. Her unusual qualities of mind and her virtues inspired the confidence of her master who gave many of the affairs of the household into her charge and after the death of his wife, wished to marry her. At this the young girl fled and did not return until Erchinoald had married again. About this time Clovis II met her at the house of the mayor of the palace, and was impressed by her beauty, grace, and the good report he had of her. He freed and married her, 649. This sudden elevation did not diminish the virtues of Bathilde but gave them a new lustre. Her humility, spirit of prayer, and large-hearted generosity, rise from his testimony. Seven years after their marriage Clovis II died, 656, leaving Bathilde with three sons, Clothaire, Childeric, and Thierry. An assembly of the leading nobles proclaimed Clothaire III, aged five, king under the regency of his mother, Bathilde. Abetted by the archbishop, by the advice of Erchinoald, and by the abbots, Eloi (Eligius) of Noyon, Ouen of Rouen, Léger of Autun, and Chrodebert of Paris, the queen was able to carry out useful reforms. She abolished the disgraceful trade in Christian slaves, and firmly supported the church. In 601 she founded the way in founding charitable and religious institutions.
such as hospitals and monasteries. Through her generosity the Abbey of Corbie was founded for men, and the Abbey of St. Stanislaus, College, in 1873, at a cost of £15,000, and of St. Charles Ecclesiastical Seminary eight years later. Dr. Quinn was a man of great energy, deep piety, cultivated intellect, and, says Cardinal Moran, was one of the “foremost champions of religious education in Australia”. At his death, 16 January, 1885, there were 28 priests, 56 Catholic schools, 21 convents, 192 nuns, and 5 religious orders. Dr. Quinn was succeeded by the Right Rev. Joseph Patrick Byrne (consecrated 9 August, 1885). In 1887 the new Diocese of Williamstown was formed out of portions of the Archdiocese of Melbourne. At the same time some districts from the Maitland diocese were added to the Bathurst jurisdiction. Dr. Byrne, says Cardinal Moran, “strenuously and successfully carried on the great work of education and religion begun by his predecessor”, and, like him, was “a model to his clergy in his unwearying and self-sacrificing toil”. St. Stanislaus’ College, which from its foundation had been under the control of secular priests, was in 1888 entrusted to the Vincentians of the Brothers of Charity. The University of Sydney, educational institutions in Australia, and noted for the work done in its well-equipped physical and chemical laboratories. When pronounced to be stricken by an incurable malady, Dr. Byrne received from his priests and people, on the Epiphany, 1901, an immense sum in subscription for the hospital to which he had contributed largely by a money gift of £2,500. He passed away on the 12th of January, 1901. To him succeeded the Right Rev. John Dunne—builder, missioner, organizer—who was consecrated 8 September, 1901. He is to complete the architecturally fine college of St. Stanislaus, and under his administration the missionary and scholastic traditions of the diocese are well sustained. The efficiency of the Catholic schools is in no small measure due to the system of inspection inaugurated by the Rev. J. J. Beophy, D. D., L. L. B. The principal lay benefactors of the diocese are Mr. James Dalton, K.S.G., and Mr. John Meagher, K.S.G.

Batrun, Diocese of. See GIBAIL and BATRUN.

Battaglini, Marco, a historian of the councils, b. at Rimini, Italy, 25 March, 1645; d. at Cesena, 19 September, 1717. He studied law at Cesena, both civil and ecclesiastical, and at the age of sixteen he obtained the degree of doctor in both branches. After some years of service in the civil administration of the Papal States, he entered the priesthood, was appointed Bishop of Nocera in Umbria, 1890, and in 1716 was transferred to Cesena. He was greatly esteemed for his learning, and for his generous and frank character. His principal works are: (1) "Il legisla filosofo" (Rome, 1680), or the man of law as a philosopher; (2) "Istorica universale di tutti i concili" (Venice, 1686, 1689, 1696, 1714), containing the first edition of the conciliar code of all the councils; in subsequent editions that of 403 more was added. A valuable supplement was the catalogue of all the ancient and contemporary episcopal sees; (3) "Annali del sacerdozio e dell’ imperio intorno all’ intero secolo decimo settimo" (Venice, 1701-
BATEUX, Charles, abbe and writer on philosophy and aesthetics, b. near Vouziers, France, 6 May, 1713; d. at Paris, 14 July, 1780. He was professor at Paris of the humanities and rhetoric, then of Greek and Roman philosophy, and was made a member of the Academy of Inscriptions and of the Académie Française. His works on Epicurus and other Greek philosophers attracted much attention. At the time of his death he was issuing a large collection of memoirs on China; the series was continued by Bréquilly and de Guignes. Of Bateau's works those that received at once the most praise and blame were the following three works: "Beaux-arts réduits à un même principe", "Cours de belles-lettres", and "Traité de la construction oratoire". These were issued later in five volumes under the common title: "Cours des belles-lettres", and in a new edition of six volumes, 1824, as "Principes abrégés de la littérature".

Following Aristotle, but taking at the same time a somewhat one-sided and superficial view of the philosophy of Epicurus, Bateau dedicated art to the free imitation of nature, that is, from the free copying of nature in its beautiful forms. Utility is the aim of the mechanical arts; beauty, the end of the fine arts, and both utility and beauty aim the aim of the beautifying arts. Architecture and oratory belong to the last category. The arts aim to influence either sight or hearing and are divided, therefore, into two classes. Besides these the rhythmical arts, music and dancing, and, in addition, painting and poetry are closely related to another. In these writings there is a lack of comprehensive definitions of the different arts; those given are often inexact and uncertain. Nevertheless, Bateau may be regarded as the real founder of aesthetics in France. Of his works devoted exclusively to rhetoric and poetry mention should be made of "Les quatre poétiques d'Aristote, d'Horace, de Vida, et de Boileau" in two volumes.

Critical mention of Bateau may be found in: Néronologie des hommes de tous et de tous temps, 1781: Anale Industria, 1790: Schlarl, Gesch. der Ästhetik; Zimmermann, Gesch. der Ästhetik.

G. Gietmann.

Battista, Giovanni Guida Giona (his original name was Jacopo Buona Ben-Isaac), b. of Jewish parentage, in Galilea, on the 28th of October, 1558; d. at Rome, 26 May, 1668. As a Jewish rabbi he undertook an extensive journey through Europe, and it was during his stay in Poland that he was converted to Catholicism. After his conversion he was sent by the King of Poland on a mission to Constantinople, where he was arrested as a spy and narrowly escaped with his life through the intervention of the ambassador of Venice. Later he went to Italy, where he taught Hebrew and Aramaic at the Academy of Pisa and then at the Propaganda at Rome. Among his pupils was Giulio Bacchiera, who is indebted to his learned master for the idea and plan of his famous work "Bibliotheca Magna Rabbinica". Battista's principal work was the translation of the Gospels from Latin into Hebrew, published, with a preface by Clement IX, at Rome, 1668.

F. X. E. Albert.

Battle Abbey, founded by William the Conqueror on the site of the Battle of Senlac or Hastings (1066), nearly seven miles from the town of Hastings, in the County of Sussex, England. The building was begun in the following year, but was erected on such a great scale that it was not finished till the reign of William Rufus. It was designed for one hundred and forty monks, though there were never more than sixty in residence at any one time. The first monks were from the Benedictine Abbey of Marivoutier in Normandy; the new foundation was dedicated to the Holy Trinity, St. Mary, and St. Martin, and was consecrated on 11 February, 1094. The king offered there his father's sword and coronation robes, and the abbey was enriched by the king increasing the right of sanctuary, of treasure trove of free warren, and of inquest, and the inmates and tenants were exempt from all episcopal and secular jurisdiction. It was ruled by a mitred abbot who afterwards had a seat in Parliament and who had the curious privilege of pardoning any outlaw he might meet being led to execution. The monastic buildings were about a mile in circuit and formed a large quadrangle, the high altar of the church being on the spot where Harold fell. At the Abbey was kept the famous "Roll of Battle Abbey" which was a list of all those who accompanied William from Normandy. As time went on and the honour of descent from one of these Norman families was more highly thought of, unauthorized additions seem to have been made, and the present state is unsatisfactory from a critical point of view. At the time of the suppression of the Abbey (May, 1838), there were seventeen monks in residence and the income was returned as £997 which would be more than £20,000 in present day values. The last of the line of thirty-two abbots, was pensioned off and the buildings were given to Sir Antony Browne, a royal favourite, who pulled down the abbey, and built a mansion on its site. The entrance gate and considerable ruins of the original buildings. In 1719, Lord Montague sold Battle Abbey to Sir Thomas Webster whose descendants held it until 1858, when it was bought by Lord Harry Vane, afterwards Duke of Cleveland. On the death of the Duchess of Cleveland in 1901 it was purchased by Sir Augustus Webster, a descendant of its former owners. Through the eighteenth century a small Catholic congregation continued to exist at Battle, and now there is a Catholic church and a resident priest in the town.

Edwin Burton.

Bauberger, Wilhelm, German physician, novelist, and poet, b. at Thannhausen in Swabian Bavaria, 3 March, 1809; d. at the same place, 3 February, 1883. As a physician he was greatly esteemed for his skill, but more so for his kindliness of manner. His fame rests chiefly, however, on his tales. The earliest of these, "Die Beatushöhle", written at the age of nineteen, while the author was still a medical student, met with such immediate success among all classes of readers that Bauberger published all his subsequent tales as by the author of "Die Beatushöhle". He drew his most successful themes from history and legend. His recognized models for the spirit and tone of his stories was Christoph Schmid.

Bauberger also essayed lyrical and dramatic compositions, but with indifferent success, for, along with much that is strong and beautiful, his verse contains more that is trifling and weak. His fame as a writer suffered no permanent eclipse from the inferiority of his poetry, for new tales, exhibiting all the charm of his early work, constantly appeared to redeem his dramatic failures or half-successes. Bauberger's literary activity continued.
unabated until his death. A list of his works printed during his lifetime is found in Kehrein's "Lexicon der kath. Dichter, Volks- und Jugendschriftsteller im 19ten Jahrhundert" (1872), I, 13, and a complete list of his posthumous works in the "Allgemeine deutsche Biographie", XLVI, 232 sqq.

HENDLER, Repertorium der Abhandlungen, 31; MATTHIAS LEHMKUEHLER.

Baudeau, NICOLAS, Regular Canon and economist, b. at Arbois, France, 25 April, 1750; d. in 1792. He became a religious of the Abbey of Chevalade, near Périgueux, and taught theology there for some time. It was there that he wrote his "Analyse de l'ouvrage du pape Benoît XIV sur les fameux canons et canonisations" (Paris, 1759), which was examined and approved by the pope himself. It is found in Migne's "Theologische Cursus Complectus" (tom. III). He was called to Paris by the Archbishop de Beau- mont and there he gave all his time to the study of economics. In 1765 he founded a periodical "Les Ephémérides du citoyen" in which he attacked the principles of Quesnay and of the physiocratic school. Soon after, he accepted and defended these principles and became one of their most notable supporters. In 1777 the most important of his writings was published: "Première introduction à la philosophie économique", in which he expounds the doctrines of the physiocratic school. There are two great economic factors, nature and art; and there are three kinds of art, foundry or productive, which consists in helping nature to give the most abundant production possible (hunting, fishing, breeding, agriculture, etc.); sterile or non-productive, which gives to these productions a more useful or pleasing form (industry, commerce, etc.); social art, which gives the knowledge, protection, and means necessary for the exercise of the productive and non-productive arts (instruction, religious worship, protection, administration). Productive art is the most important.

When he died he had lost the use of his faculties. Besides the works already mentioned, he wrote "Idées d'un citoyen sur l'administration des finances du roi" (1763); "Idées d'un citoyen sur les besoins, les droits, et les devoirs des vrais pauvres" (1765); "Lettres sur les émeutes populaires" (1768); "Lettres du baron de Prémélle et de sa valet d'honneur" (1768); "Principes économiques de Louis XII et du Cardinal d'Amboise, de Henri IV, et du duc de Sully sur l'administration des finances" (1775); "Charles V, Louis XII, et Henri IV aux Français" (1785).

MIGNE, Théologicae Cursus Complectus, III; ESTIENNE, Histoire des doctrines économiques; DA màn, Collection des principaux économistes.

G. M. SAUVAGE.

Baudouin, Michel, Indian missionary, b. in Quebec, Canada, 8 March, 1692, entered the Society of Jesus in France at the age of twenty-one, arrived in Louisiana (on his return to America) in 1728; d. at New Orleans in, or after, 1768. Shortly after his arrival in Louisiana, he was sent to the Choctaw Mission, where he laboured for eighteen years. When he was on the eve of deriving some fruit from his labours, he was recalled by his superior to New Orleans, owing to the disturbances excited by the English among the Indians and the dangers to which he was exposed. He was Superior-General of the Louisiana Mission from 1749 until the expulsion of the Jesuits from that colony in 1763. When that untoward event took place, Baudouin, having never knelt in the company as his fellow Jesuits were, but with a pension of three or four hundred francs was allowed to remain in the colony, a planter having offered the aged priest a home on his estate. "Etat des Missions, Index Vol. LXXII. 78, where full references are given; Kip, Early Jesuit Missions in North America (London, 1847), II.

Edward P. Spillane.
Bauzset, Louis-François de, a French cardinal, writer, and statesman, b. in 1748 at Pondichéry, where his father held an administrative position; d. in Paris, 1824. He studied in France at the Jesuit "Collège de la Flèche" and at St. Sulpice. Ordained priest, he became vicar-general at Aix in 1772; administrator of Digne, 1778; Bishop of Alais, in Languedoc, 1784. Although a prominent member of the Assembly of Notables of Languedoc in 1786 and in 1788, he was not delegated to the Etats Généraux of 1789. In 1791, Bausset was one of the first bishops who endorsed the "Exposition of Principles of the Civil Constitution of the Clergy" and declined to take the oath and pass to Switzerland. Returning to France in 1792, he was incarcerated, but set free when Robespierre fell (9 Thermidor). He then retired to Villemoisson, where he began his literary career. After the Consulate of 1801, Bausset cheerfully resigned his sees into the hands of Pius VII. Ill health prevented his appointment to one of the newly-formed sees, but Napoleon made him a canon of St. Denis (1806) and a member of the Council of the University of France (1808). Under the Restoration, he became president of the University Council and peer of the realm (1815); Member of the French Academy (1816); Cardinal (1817), and Minister of State (1821). The valuable library and manuscripts of Bausset were bequeathed to St. Sulpice.

The career of Bausset as an educator and statesman deserves no special notice; he was guided by, more than he guided, the policy of the two regimes under which he served. From his pen we have, besides several minor writings, "Exposé des principes sur le concordat" and a long introduction by Emmanuel (Paris, 1796); "Notices historiques" (Paris, 1804), on Legris-Duval (Paris, 1820), and on Talleyrand (Paris, 1821); two considerable biographies: "Histoire de Fénélon" (Versailles, 1809; Paris, 1823; ed. Migne, 1826) and "Histoire de J.-B. Bosuet évêque de Meaux" (Paris, 1814, 1818; Ver-
BAUTAIN

BAVARIA

383

siles, 1821; Besançon, 1847). The original document concerning Fénélon he had from the Abbé Emery, Superior of Saint-Sulpice. Bossuet's manuscript, not yet purchased by the National Library, is borrowed from Lamy, a bookseller into whose hands they had fallen. The purity of his style won for Bossuet the approval of the French and raised him to the best biography. Still, that very purity often passes into a tiresome sameness which fails to suggest either the winning qualities of Fénélon's character or the elevation of the Eagle of Meaux. As a historian, Bossuet fails in critical acumen and judicial impartiality. His "Histoire de Fénélon" is so much of a panegyric that, especially in the delicate and intricate question of the Quietist movement, it needs to be supplemented and corrected by such works as those of Chiereau and of Crouzet. It is said that the "Histoire de Bossuet" was written as an offset against the partiality which Basset had shown to Fénélon; if so, Basset had a strange way of rehabilitating the subject of his second biography, praising Bossuet's Gallicanism as Bossuet's if in his last years, by his panegyric "Defensores gallicani", would not have wished it praised. Brunetière calls Basset's "Histoire de Bossuet" "la plus franchement gallicane de toutes".

J. F. SOLLIER.

Bautain, Louis-Eugène-Marie, philosopher and theologian, b. at Paris, 17 February, 1796; d. there, 15 October, 1867. He entered a course at the Collège Bourbon, where he was influenced by Cousin and Jouffroy, he became (1819) professor of philosophy at Strasbourg. Three years later he took up the study of medicine and finally that of theology and was ordained priest (1824). As director of the seminary at Strasbourg, he at first won distinction by his work in apologetics, especially against atheism and materialism. He was chiefly interested, however, in the problem of the relations between faith and reason, concerning which he accepted the views of Fidesian and Traditionalism, and reduced to a minimum the function of reason. Divine revelation, he claimed, is the only source of knowledge and certitude. He was consequently obliged to sign (18 November, 1835) ten propositions containing the Catholic doctrine on faith and reason examined in his book, "Philosophie du christianisme" (Paris, 1833). Bautain signed (8 September, 1840) six other propositions differing but slightly from those of 1835. Finally, in obedience to the Congregation of Bishops and Cardinals (26 April, 1844) not to teach that the existence of God, the spirituality and immortality of the soul, the principles of metaphysics, and the motives which make revelation credible are beyond the reach of understood reason. Bautain was appointed Vice-General of Paris (1850) and taught at the Sorbonne (1853-62). His works include: "De l'enseignement de la philosophie au 19e siècle" (Strasbourg, 1833); "Psychologie experimentale" (ib., 1839); Philosophie morale" (ib., 1842); "La religion et la libertè" (Paris, 1849); "L'idéalisme de Fichte" (ib., 1852); "L'apologie des lois" (ib., 1860); "La Conscience" (ib., 1868).

E. A. PAGE.

Bautista, Fray Juan, b. at Mexico, 1555; date of death unknown, but probably between 1606 and 1615. He joined the Franciscans in his native city, and taught theology and metaphysics at the convent of St. Francis of Mexico. He was also a definitor of the province, and became Guardian of Tecoeco twice (1596 and 1606), of Tlatelolco (1600), and of Tacuba in 1605. Although born at Mexico, he did not at first care to familiarize himself with the language of the Mexican Indians who formed the main part of the population among which he had lived. He looked with little patience on the Nahuatl, the language of the so-called Aztecs. But after joining the Franciscans and becoming acquainted with the educational work going on through the Church among the Indians he willingly learned the language and became a member of the order, and soon acquired a thorough knowledge of the idiom. A number of his works are known by title only. Ten of these were written in the Nahuatl language, previous to 1607; several were printed at Mexico.

(Madrid, 1706); H. J. Garcia Y Ceballos, Bibliografia mexicana del siglo XVII (Mexico, 1890).

AD. F. BANDELIER.

Bavaria, The Kingdom of.—I. Political Constitution, Area, Population, etc.—The present Kingdom of Bavaria—named after the city of Boiarri—has formed, since 1871, a constituent part of the German Empire. It is an independent State of the confederation with special rights; its rulers belong to the Wittelsbach dynasty, the head of the Government in 1897 being Prince-Regent Luitpold. The line of peace between the king or his representative is the lord of the army; in time of war the emperor, as head of all the forces, has, by agreement, the control. As the second state (in size) of the empire Bavaria has six representatives in the Federal Council and forty-eight in the Reichstag (Reichstag), the latter deputies being chosen by direct vote. In its present form Bavaria consists of two parts of unequal size, geographically some distance from each other, on either side of the Rhine. It has an area of 29,283 square miles, and a population (census of 1 December, 1905) of 6,254,372 persons. According to individual declaration of belief 4,608,469 persons, or 70 per cent of the population, belong to the Catholic Church; 1,843,123 persons, or 28.3 per cent of the population, are adherents of the Lutheran and Calvinist Confessions, or of the religious bodies (Old-Catholics, Irvingites, Mennonites, Methodists, etc.) have but a small following. There are in Bavaria 58,000 Jews, living chiefly at Munich, Nuremberg, and Fürth, who are engaged principally in commercial and industrial pursuits; they form a large proportion of the physicians, lawyers, and judges of the country. The German population of Bavaria is made up as follows: descendants of the Boiarri, living in Upper and Lower Bavaria and in the greater part of the Upper Palatinate; Franchonians, a mixture of Rhine Franks, Thuringians, and Slavs, found in the region of the Main and the Red-witz; Swabians, living in the province bearing their name; and the inhabitants of the Palatinate, a mixed race of Bavarians and German blood having their home on the left bank of the Rhine. The presence of stock is evidenced by the variety of dialects and provincial characteristics. Naturally these distinctions are not so marked in the cities.

Outside the Rhenish Palatinate Bavaria is elevated, hilly country. It is bordered on the south by the Alps, on the east by the mountains called the Bohemian Forest (Reinwald), and on the north by the range called the Francoconian Forest (Frankenwald), while the various ranges called Fichtelgebirge, Spessart, and Rhöngebirge represent isolated districts of larger or smaller extent. The Rhine Palati-
Bavaria is divided by spurs of the Vosges into an easterly and a westerly half, both parts having a fruitful soil. The chief rivers are the Danube and the Rhine. The former enters the country at Ulm and leaves it at Passau. Under ordinary conditions it is navigable for large vessels in its lower reaches. Bavaria from the south are the Iller, a stream rich in fish, the Lech, the Isar, and the Inn; from the north its tributaries are the Wörnitz, the Altmühl, the Regen, and the Vils. For a distance of about fifty miles from the Rhine the plains form the Rhenish Palatinate and Baden. The three Franconian provinces lie in the valley of the Main, a stream bordered by vineyards and much used for commerce beyond Bamberg. Three flourishing Bavarian cities are situated on its banks: Schweinfurt, Würzburg, and Aschaffenburg. The southern tributaries of the Main, which leave Bavarian territory near Osthain, are the Regnitz and the Tauber; the northern are the Rodach and the Saale. Only a small part of Lake Constance belongs to Bavaria, but there are numerous lakes in Swabia and a still larger number in Upper Bavaria. Many of these bodies of water are noted for their picturesque scenery, such as the Ammersee, Alpsee, Würmsee, Tegernsee, Königssee, and especially Chiemsee, which contains much mineral wealth: iron, coal, granite, basalt, and salt, of which last there is a large yield of excellent quality. There are numbers of mineral springs, some of which are known throughout the world. Farming in lower Bavaria and cattle-breeding in Swabia, Upper Bavaria, and Middle Franconia are the chief occupations, while the wines of Franconia and the Palatinate and the fruit and vegetables of Bamberg have a high reputation. Industrial life centres in Nuremberg, Fürth, Augsburg, and Ludwigshafen. Linz is a centre of artificial silk, the highest rank in Germany. The railway lines have a length of about 3,700 miles, to which additions are constantly being made.

No expense is spared in advancing education. In 1903-04 the public schools cost over $7,500,000. The Bavarian troops are equipped with the same arms as the other divisions of the Imperial German army but wear a different uniform. They are commanded by native generals and consist of three army corps which are divided as follows: 23 infantry regiments, 11 cavalry regiments, 15 chasseur regiments, 3 battalions of pioneers, 3 transportation battalions, and 1 railway battalion. Including all the reserves the Bavarian army numbers over 200,000 men. The annual cost of the army is $200,000,000.

II. Early History.—The early history of Bavaria varies according to the province in question; the races that now live peacefully together under the rule of the Wittelsbach dynasty were once constantly engaged in bloody feuds. A thousand years ago the Bavarian domain included what is now Upper and Lower Austria and the Alpine provinces of the Tyrol and Stria. (See Austria-Hungarian Monarchy.) The Palatinate was united with Bavaria proper through its rulers; on the extinction (1778) of the younger (Bavarian) branch of the Wittelsbach line the elder (Palatinate) branch became the reigning house of electoral Bavaria. Before the changes caused by the French Revolution and the disappearance of the Holy Roman Empire (1803 and 1814) the affairs of Franconia and Swabia, which had been affected by it, were restored to the Church. The Emperor Ferdinand II granted Duke Maximilian of Bavaria for his loyalty the electoral dignity (1623). Bavaria paid a bitter price for its new position in the devastations of the Thirty Years' War. The principalities of Castell and Oettingen, the possessions of the Counts of Ortenburg, Giech, etc. Only the most important periods in the history of the Duchy and, later, Electorate of Bavaria can be touched on in this article.

The Boiarii, apparently, were either related to the Marcomanni or else identical with that people who, after the Romans had been driven out of their region in the first century B.C., spread from the right bank of the Danube and gradually extended their control as far as the River Loth and deep into the Alpine region. The chiefs of the Boiarii belonged to the family of the Agilolfings, who chose Regensburg as their abode. In 960 Charles the Fat, who lived in the middle of the seventh century, wished to have had the power of a sovereign. His daughter, Theodolinda, became Queen of the Langobardi. Her brother, Tassilo I, was, however, obliged to acknowledge the supremacy of the Franks which he did not relinquish until about 843. This independence was of short duration. The Franks under Charles Martel again subdued his descendants. When Tassilo II, who had done much to further the spread of Christianity and civilisation in the direction of Eastern Europe, sought to regain his lost independence he was deposed and sent to a monastery.

Bavaria now became a Frankish province ruled by representatives of the Frankish king (794). It came into "Law and Order," and a German, who had received the eastern part of the Frankish kingdom by the Treaty of Verdun (843), made his residence in Bavaria. His grandson Arnulf, Duke of Carinthia, was crowned emperor in 886. One of his relatives, Margrave Luitpold, fell in a battle (906) against the Magyars, is regarded as the first of the line of Scheyern-Wittelsbach. Upon the extinction of the Carlovingian dynasty Arnulf, son of Luitpold, claimed the position of a sovereign prince. This involved him in war with Henry I the Saxon, King of Germany, who, in 910, in an attempt to conquer Arnulf was completed by Otto I. After the deposition of Eberhard I, the elder son of Duke Arnulf (939), Bavaria no longer had native born rulers but Saxons, Franconians, and members of the Welf family who ruled as vassals of the king with the title of duke. Not until Emperor Frederick I, in 1160, rewarded Otto of Wittelsbach for his courage by granting him Bavaria did a genuine Bavarian ascend the throne of his fathers. Otto and his energetic successors laid the foundations of the future greatness of Bavaria.

In 1214 the Rhine Palatinate was united to Bavaria. Louis II (1235–94) was succeeded by his son Louis III (known as Emperor Louis IV of the Holy Roman Empire) who, by an agreement in 1239 at Pavia, took Bavaria proper, leaving to Rudolph, his brother, the Rhine Palatinate. The large possessions which Louis III secured for his family (Holland, Brandenburg, the Tyrol, etc.) were lost to his successors by discord and successive partitions. Albert IV, however, reunited the country into one domain and secured it against further division by his law of 1506. His son William IV (1508–50) and his grandson Albert V (1550–79) prevented Lutheran and Anabaptist doctrines from entering Bavarian territory. During the reign of William V (1579–98) and still more during the reign of Maximilian I (1568–1651), Bavaria stood at the head of the counter-Reformation and the Catholic League. To these two rulers it was due that the progress of the Reformation was checked, and that many of Swabia, which had been affected by it, was restored to the Church. The Emperor Ferdinand II granted Duke Maximilian of Bavaria for his loyalty the electoral dignity (1623). Bavaria paid a bitter price for its new position in the devastations of the Thirty Years' War. The principalities of Castell and Oettingen, the possessions of the Counts of Ortenburg, Giech, etc. Only the most important
BAVARIA

of his son, Maximilian Emanuel (1679–1726), con-
queror of the Turks, and of his grandson Charles
Albert (1729–45) by the wars of the Spanish and
Austrian successions. It was not until the reign of
the Elector Maximilian Joseph III (1745–77) that
order was again restored. During this reign the
Jesuits were expelled (1773).

Maximilian was the last of the younger branch of
the Wittelsbach line. After his death the elder
(Palatinate) branch of the family succeeded to the
throne in the person of the art-loving Charles Theo-
dore (1778–99), under whose administration the
order was restored. The last years of
Charles Theodore were embittered by many misfor-
tunes. The young French Republic took from him
the territory on the other side of the Rhine and he
had to endure many humiliations from his subjects.
Up to this time Bavaria had been entirely a Catholic
country. New conditions arose when Maximilian IV
(Joseph) ascended the throne (1799). This ruler was
twice married to Protestants; non-Catholics were
granted the same political rights as Catholics, and
Lutheran schools were established. The Government
proceeded with severity against all forms of Cathol-
cic religious life. The number of churches which
were dismantled or profaned at this time is hardly
credible; treasures of art of earlier days were
thrown away for a mere prudence or shamefully treated;
whole walls were torn down because of the doors or
burnt or thrown into the river; professorial posi-
tions filled by avowed opponents of all religions;
and an extravagant and frivolous luxury became the
fashion at Court. In 1805 Bavaria entered into an
alliance with Napoleon against Austria and Russia.
In return for this the victorious Corsican made
Bavaria a kingdom (1 January, 1806). As a member
of the Rhenish Confederation Maximilian (Joseph IV)
fought against Prussia in 1806, against Austria in 1813,
and against Russia in 1815; his Bavarian troops died in
Russia, victims of the climate or of encounters with
the Cossacks. After the battle of Leipzig Bavaria joined the Allies at the right
moment, so that it was able to retain the greater part
of its territory. After the chancellor, Count von Mont-
gelais, had retired from office (2 February, 1817)
efforts were made to restore former conditions and
that same year a Concordat, which is still operative,
was made with the Roman Curia; the next year the
king granted a constitution which has produced
great good effects.

During the reign of the King Louis I (1825–48)
the Church prospered greatly; old cathedrals were
restored; new churches and monasteries founded;
and painters and sculptors came in large numbers to
Munich where they found profitable employment.
The colossal figure of Bavaria, the Hall of Fame,
the Walhalla, the Hall of Freedom, and the basilica of
St. Boniface keep alive the memory of Louis I,
the greatest ruler in the history of Bavaria. The
revolutionary movement of 1848 compelled Louis to
abdicate. His son, Maximilian II (1848–64), a
well-meaning but weak ruler, did much to further
learning, especially in the domain of history; he was
not fortunate, however, in the men he selected to
fill professorships and on this account lost popularity
with his Catholic subjects. His successor, the vision-
ary Louis II (1864–86), ascended the throne at the
age of eighteen. The civil war of 1866 obliged
Bavaria to make great sacrifices. Four years later
the Bavarian army took an honourable part in the
French war with the civil authorities on the borders
of the new German Empire. During the reign of
Louis II special encouragement was given to
architecture and industrial art. The growing
magnific of the king necessitated the appointment of
Prince Leopold as "regent of the kingdom", and
not long after Louis met his death, in a manner
never clearly explained, in the Starnbergsee. As
his brother Otto was mentally incapable of ruling,
Luitpold (b. 12 March, 1821) continued in his office
of regent. Bavaria has prospered greatly under his
wise rule; his great-grandson Luitpold, assures the
succession in his line.

II. Introduction of Christianity.—The Christian
faith was probably first introduced into Bavaria,
both on the Danube and on the Rhine, by Roman
soldiers and merchants. [Cf. Huber, "Geschichte
der Einführung und Verbreitung des Christenthums
zwischen Donau und Rhein" (Salzburg, 1874–75),
4 vols.; Hefele, "Geschichte der Erstzuständen
Christentums im südwestlichen Deutschland"
(Tübingen, 1837).] In the earliest ages of the Church
Augusta Vindelicorum (Augsburg) was famous on
account of the martyrdom of St. Afra and her com-
panions; Ratibon had also its confessors and the
same may be said of Speyer. But it was not until
the end of the German migrations and the establish-
ment of more orderly conditions in the Merovingian,
Carlovingian Empire that Christianity took firm
root in Bavaria. As is well known, Frankish and
Saxon missionaries sowed the
seed of the Gospel in the hearts of the rude warriors
whose life until then had been given to fighting,
hunting, gambling, and drinking. Among these
missionaries were: St. Kilian and his pupils Colonat
(Columnan) and Tottian and Donatus. The bishop of
the region St. Magnus; at Ratibon and Freising St.
Rupert, St. Emmeram, and St. Corbinian. Stricter
regulations were introduced by Winfrid (St. Boniface)
who is in truth entitled to the name of the "Apostle
of the Germans". The Dioceses of Freising, Ratib-
on, Passau, Würzburg, and Eichstätt were either
established or reorganized, while the founding of
monasteries made it possible to train the priesthood
properly and to raise the spiritual and moral level
of the Bavarian people. The Archbishop of Mainz (747) Augsburg and Constance became
his suffragans, having previously belonged, respectively,
to Aquileia and Besançon. After Charlemagne had
overthrown the native ruling family, the Agilolfings,
the Popes erected (786) the new province of Salz-
cburg to which Ratibon, Freising, Passau, and Seben
(Brixen) in what is now the Tyrol, were attached.
But the first mentioned dioceses together with
Neuburg, which in a short time disappeared, were
left dependent on Mainz. With some changes of
boundaries and names the Dioceses of Freising, Rat-
bon, Passau, and Würzburg remain the same to this
day. The Diocese of Bamberg, later formed from
the existing provinces, was not a suffragan of Mainz
but was directly dependent on the Apostolic See.
The small Diocese of Chiemsee, founded in 1206,
was always dependent on Salzburg; it was suppressed at
the beginning of the nineteenth century.

IV. Ecclesiastical Divisions.—The present eccle-
siastical divisions of Bavaria rest upon the Bull of
Circumcision issued by Pope Pius VII, 1 April,
1818, and made public, 25 September, 1821. Accord-
ing to this Bavaria is divided into the provinces of Munich-Freising and Bamberg; the first
archdiocese has for suffragans Augsburg, Passau,
and Ratibon; the suffragans of the second are Würz-
burg, Speyer, and Eichstätt. The Ministry of the
Interior for Worship and Education has charge of
the interests of the Crown and State in their relations
to the Catholic Church of the country; this ministry
is the chief State guardian of the various religious
and charitable endowments and is aided therein by
the Dioceses. A court of administration has been in existence since
1878 which has control over various matters relating
to religious societies (among others, the religious
training of children). Cf. Silbernagl, "Verfassung
und Verwaltung sämtlicher Religionsgenossen-
schaften in Bayern" (4th ed., Ratibon, 1900); Schleich,
"Bayerns Kirchenprovinzen, ein Ueberblick über Geschichte und gegenwärtigen Bestand der katholischen Kirche im Königreich Bayern" (Munich, 1902).

The boundaries of the dioceses do not agree with the boundaries of the political divisions except in the case of Würzburg (Lower Franconia) and of Speyer (Rheinpfalz). The last extends across Bavaria from Würtemberg to Bohemia and Saxony; the territory of the suffragan Diocese of Würzburg stretches beyond the boundaries of the country. Einbautät includes parts of Middle Franconia, the Upper Palatinate, Upper Bavaria, and Swabia. Ratibson is the largest diocese; it includes not only the greater part of the Upper Palatinate but also parts of Upper and Lower Bavaria, as well as Upper Franconia. The Archdiocese of Munich-Freising embraces besides the greater part of Upper Bavaria a part of Lower Bavaria, chiefly included in the suffragan Diocese of Passau. The Diocese of Augsburg includes the whole of Swabia and the western judicial districts of Upper Bavaria; in the north it extends well into Middle Franconia.

VI. Education and Charitable Institutions.—The school system consists of public schools, continuation and technical schools, gymnasia with classical courses, Realgymnasia (no Greek), Realrealschulen (high schools without Latin and Greek), Oberrealschulen (gymnasia with no Latin or Greek, which prepare for the technical schools), commercial schools, seminaries for teachers, lyceums, 3 universities, a technical high-school, etc. Except in cases where the primary schools are chiefly denominational. The middle and high-schools are used by all denominations. Religious instruction is provided for these schools as well as for the primary ones. The universi- ties at Munich and Würzburg have theological faculties. There is at Munich a seminary for the training of priests called the Georgium and the lyceum have similar institutions, generally in connexion with lyceums. Following the directions of the Council of Trent there are in all the dioceses seminaries for boys (petiti seminarists) which are intended to prepare youths without means to study in the gymnasium. In Munich the total number of university instructors is 250; in Würzburg, 158; in Erlangen, 100; in the technical high-school, 100. In the other institutions the number of teachers is correspondingly smaller.

The attendance of students at Munich is between 5,000 and 6,000; at Würzburg, 1,400. The students at the technical high-school number about 3,000; the academy of fine arts and the academy of music have each 300 students. In 1904 the lyceums had about 1,000 matriculated students. Some of the gymnasium, such as that of St. Stephen at Augsburg and those at Metten and Münnerstadt, are in charge of members of the regular orders (Benedictines and Augustini- ans). The majority of the lyceums in Middle Franconia, in Würzburg (15,000), Aschaffenburg, Ingolstadt, and Forichheim; while in the Catholic provinces Protestant churches and chapels are rapidly springing up. The same can hardly be said of Catholic churches in the Protestant districts, although more has been done in this direction lately than in former years and a few parishes like Wunsiedel, Hof, and Weißenburg have there possess creditable churches. The establishment of the Boniface Verein might have proved very helpful in this respect and would have counteracted the efforts of the Gustavus-Adolphus Verein; but a false respect for King Louis I (founder of the Ludwig-Mission Verein, which is exclusively Bavarian) has, in spite of all efforts, prevented its establishment in the kingdom.

Every diocese has a cathedral chapter which, according to the Concordat, besides choir-service acts as a council for the bishop. These chapters include a provost, dean, a number of canons, and curates. In Munich, besides the chapter there is a collegium of canons (St. Cajetan) similarly organized. At the close of 1904 there were 3,022 parishes served by 3,144 parish priests or curates, and 2,678 vicars and chaplains; there were also 1,985 regular clergy (Benedictines, Franciscans, Carmelites, Capuchins) living in 80 monasteries and friaries. The orders for women had at that date 12,580 mem-
bers in 79 houses and 1,087 dependencies. With a few exceptions the female religious devote themselves to teaching and nursing. There are in Bavaria over 1,000 Protestant parishes with 1,400 pastors and assistant preachers. In 1903 the Catholic Church funds, including real estate, amounted to about 13,000,000. The bulk of the Bavarian benefactions amount to $5,000,000. As the revenues from the church funds are often not sufficient to keep the church buildings, etc., in repair, a number of cities have decided to impose a church tax, which so far has been moderate. In Munich and Swabia, for example, for the Katholischen Klerus (Ratisbon, 1907), as to the salaries, pensions, and ranking of the clergy.

In the Rhine Palatinate, Upper Franconia, and especially in Middle Franconia the non-Catholic population is decidedly in the majority, namely: Rhine Palatinate 479,694; Upper Franconia, 362,519; Middle Franconia, 623,546. In Upper Bavaria, Lower Franconia, and Swabia the Protestants number over 100,000 persons, while in the Upper Palatinate the figures are hardly half as large. In Lower Bavaria there are not over 10,000 non-Catholics.

Rapid growth is reported in the Catholic parishes of Nuremberg (90,000), Augsburg (70,000), Erlangen, Schweinfurt, and Memminger; the Protestant parishes decreased in population in Munich (90,000), Würzburg (15,000), Aschaffenburg, Ingolstadt, and Forichheim; while in the Catholic provinces Protestant churches and chapels are rapidly springing up. The same can hardly be said of Catholic churches in the Protestant districts, although more has been done in this direction lately than in former years and a few parishes like Wunsiedel, Hof, and Weißenburg there possess creditable churches. The establishment of the Boniface Verein might have proved very helpful in this respect and would have counteracted the efforts of the Gustavus-Adolphus Verein; but a false respect for King Louis I (founder of the Ludwig-Mission Verein, which is exclusively Bavarian) has, in spite of all efforts, prevented its establishment in the kingdom.
Bayuy

Bayu y Subias, Francisco, b. at Saragossa, 9 March, 1754; d. Madrid, 4 August, 1795, a distinguished religious and historical painter. He first studied at Tarragona with José Luís Martínez, and gaining the first prize at the Academy there, he received a pension to go to Madrid, where he entered the San Fernando Academy and had for his master Antoni Venceslas Pellicer. While there he attracted the attention of Raphael Mengs, then court painter to Charles III. After returning to Saragossa, he was recalled, on the suggestion of Mengs, by that monarch, who put him to work on the country palace of the Parterre and on the new Royal Palace at Madrid. He also painted pictures for several churches in Madrid. Painting with, and presumably partly under the direction of, Mengs, he became devoted to his style and is classed with his school. Don Pedro de Madrazo in the Prado catalogue speaks of him as a mannered painter only to be appreciated as a frescoist. In 1765 Bayeu y Subias was chosen a member of the San Fernando Academy, and became, twenty-three years later, its director and painter to the court. In the palace at Madrid are his frescoes, "The Fall of the Giants", "The Apotheosis of Hercules", and "The Conquest of Granada". He decorated the royal chapel at Aranjuez, and pictured scenes from the life of St. Bruno at the convent of the Carthusians in Madrid. He painted many frescoes in the churches of Toledo and Saragossa, being assisted on the latter by his brother and pupil, Ramón, b. Saragossa, 1746; d. Aranjuez, 1793. His subjects at the Toledo cathedral are scenes from the life of St. Eugenio. There are fifteen frescoes by him in the Prado at Madrid. Among them are "The Coronation of the Virgin", "The Ascension", "The Evangelist St. Matthew", "The Evangelist St. Mark", "The Evangelist St. Luke", "The Evangelist St. John", "Olympus"—all studies for more important works. Saint Francis de Sales Founding the Order of the Visitacion, the last being attributed by some to Ramón Bayeu y Subias, "View of the Canal of Manzanares", "View of the Paseo de las Delicias in Madrid", "Luncheon in the Country", a scene in a Manzanares orchard, and four sketches of sacred allegories for arch panels at the college of San Ildefonso. Don Francisco was an etcher as well as a painter, and executed a small number of plates.

Bayeux

Bayeux (Baioces), Diocese of, coextensive with the Department of Calvados, is subject to the Archdiocese of Rouen. As was the case with most of the Cot- cordat (1802) the ancient Diocese of Lisieux was united to that of Bayeux. A pontifical Brief, in 1854, authorized the Bishop of Bayeux to call himself Bishop of Bayeux and Lisieux.

The See of Bayeux.—A local legend, found in the breviaries of the fifteenth century, makes St. Exuperius, first Bishop of Bayeux, an immediate disciple of St. Stephen, and founds a foundation of the first century. St. Regnobertus, the same legend tells us, was the successor of St. Exuperius. But the Bollandists and M. Jules Laff have shown how little ground there is for this legend; it was only towards the middle of the fourth century that St. Exuperius founded the See of Bayeux; after him the saint St. Reverendus did much for the propagation of the Faith in these parts. A certain number of the successors of St. Exuperius were saints: Rufinianus; Lupus (about 465); Vigor (beginning of the sixth century), who destroyed the state of the city and only frequented; Regnobertus (about 629), who founded many churches, and whom the legend, owing to an anachronism, made first successor to Exuperius; and Hugues (d. 730), simultaneously bishop of two other sees, Paris and Rouen. We may also mention Odon of Conventile (1050–97), brother of William the Conqueror, who built the cathedral, was present at the Battle of Hastings, intrigued for the tiara on the death of Gregory VII (1085), and died a crusader in 1087. The see was transferred to Rouen in the Roman Campagna during the siege and pillage of Rome by the Constable de Bourbon; Cardinal d'Assas (1602–04), an illustrious diplomat prominent in the conversion of Henry IV. of France, passed his youth in Bayeux. He is mentioned in 1616. In 1617, Louis XIII, bestowing one of the "conquerors" of the Bastille, was chosen Constitutional Bishop of Bayeux in 1719, and was beheaded 31 October, 1793. Mgr. Ametot, coadjutor, with right of succession to the Cardinal Archbishop of Paris was, until 1905, Bishop of Bayeux. In the municipal Musée Archéologique is preserved the famous "Bayeux Tapestry", one of the most remarkable relics of medieval textile art. Its contemporary embroideries reproduce scenes from the Norman Conquest of England (1066) and are valuable as illustrations of eleventh-century costume and life.

The See of Lisieux.—The first known Bishop of Lisieux is Theudibaudes, mentioned in connexion with a council held in 386. The most celebrated among his successors were Freclitus (d. 850), a pupil of the palace school founded by Charlemagne, and author of a universal history; Arnoul (1141–81), bystander and writer; Nicole Oresme (1378–82), philosopher, mathematician, and tutor to Charles V; Pierre Cauchon (1432–42) canonized in 1925 by John of Avon. Jacques Barbe (1447–74), the historian of Charles VII, and one of the promoters of the rehabilitation of Joan of Arc; Guillaume du Voir (1618–21), the well-known philosopher who left the bench for the Church.

In the Middle Ages both sees were very important. The Bishop of Bayeux was senior among the Norman bishops, and the chapter was one of the richest in France. The See of Lisieux maintained the College de Lisieux at Paris for poor students of the diocese. Important councils were held within this diocese at Caen, in 1042 and 1081; in the latter was proclaimed "the Truce of God." The statutes of a synod held at Bayeux about 1300, furnish a very fair idea of the discipline of the time.

Among the abbots of the Diocese of Bayeux should be mentioned those of St. Stephen (Abbaye-aux-Hommes) and of the Trinity (Abbaye-aux-Dames), both founded at Caen by William the Conqueror (1029–87) and his wife Matilda, in expiation of their unlawful marriage. The former of these abbots was governed by S. Stephen, and its infractions, under Archbishops of Canterbury. Other abbey were those of Troarn of which Durand, the successful opponent of Berengarius, was abbot in the eleventh century, and the Abbaye du Val, of which Rancé was abbot in 1691, prior to his reform of La Trappe. The Abbey
of St. Eyrrou (Ebrulphus) in the Diocese of Lisseux, founded about 600 by St. Eyrrou, a native of Bayeux, is famous as the home of Ordericus Vitalis, the chronicler (1075–1141). Venerable Jean Eudes founded in 1641 in Caen the congregation of Notre Dame de Charité du Refuge, which is devoted to the poor and to the mercies of the sick. In 1697 the first missionary society was established in France and elsewhere. At Tilley, in the Diocese of Bayeux, Michel Vinglas established, in 1839, the politico-religious society known as La Miséricorde, in connection with the survivors of La Petite Église, who were made a professed religious order in 1671. Daniel Huët, the famous savant (1630–1721) and Bishop of Avranches, was a native of Caen.

The cathedral of Bayeux (twelfth to fourteenth centuries) and of Lisseux (twelfth and thirteenth centuries) are inferior in point of interest to the church of St. Etienne at Caen, which is one of the most beautiful architectural monuments of Normandy (eleventh and twelfth centuries). The church of Notre-Dame de la Délivrande (the devotion to Our Lady of Deliverance dates back to the seventh century) is visited by the priests of Bayeux even before they enter their own cathedral.

At the close of the year 1905 the Diocese of Bayeux included a population of 410,178, 73 parishes, 640 mission churches, and 120 curacies, the latter being ministrated by 411 priests. In St. Patrick at Bayeux (1907) obtainable, the Diocese of Bayeux has 2 infant asylums, 16 infant schools, 1 deaf-mute institute, 1 orphanage where farming is taught, 9 girls' orphanages, 4 industrial schools, 2 trades schools, 1 refuge for young women, 6 hospitals and homes for the aged, 1 dispensary, 4 communities for the care of the sick in their homes, 3 private hospitals, 1 private insane asylum, 9 homes for the aged, all conducted by sisters; and 1 orphanage where farming is taught, conducted by brothers.

In 1697 the following institutions were represented in the diocese: the Franciscans at Caen and the Premonstratensians, who have an abbey at Juaye-Mondaye. Among the local congregations are the diocesan missionaries, stationed at the basilica of Notre Dame de la Délivrande, directors of several educational institutions throughout the diocese. In this diocese also was founded the congregation of Our Lady of Charity and Refuge established at Caen in 1641 by Venerable Jean Eudes for the education of young girls. This congregation has 30 monasteries in France and 4 in the United States. Gallia christiana (sous) (1758), XI. 346-405, 762-814, Instrumentum, 50-106, 70-128, Acta SS. XVI. May, Lat., Etudes sur les Bienheureux de l'Église du Pénitent à l'Église des Chrétiens du XVIIIe Siècle, Confréries (1561-63); Farct., Abbayes du diocèse de Bayeux (1860-69); Guérard, Topographie, 327-361, 707-08; Comte, Topoaytie de Bayeux (Paris, 1878).

Georges Goyau.

Bayle, Pierre. See Rationalism.

Bayley, James Roosevelt, first Bishop of Newark, New Jersey, U. S. A.; eighth Archbishop of Baltimore, Maryland; b. at Rye, New York, 23 August, 1814; d. at Newark, 3 October, 1877. His Dutch and English non-Catholic ancestors were locally notable. His father was the son of Dr. Richard Bayley, professor of anatomy in Columbia College, New York, and successor to Guy, New York, in the professorship of anatomy in Columbia College. His mother, of Dutch extraction, was the founder of the Sisters of Charity in the United States, was his aunt. He was named after his maternal grandfather, James Roosevelt, a merchant of large fortune, who made him his heir, but altered the will when Bayley became a Catholic priest, and the property was not left to the Church. A large part of the money went to build the Roosevelt Hospital in New York. Bayley's early school days were spent at Amherst College, where he once thought of going to sea and obtained a commission of midshipman in the navy. He abandoned the plan, however, and continuing his studies, entered Trinity College, Hartford, Connecticut, to prepare for the Episcopal ministry. He graduated here in 1835 and after receiving orders was appointed rector of St. Peter's church, Harlem, New York. He resigned this charge in 1841 and went to Rome, where on 29 April, 1842, he was baptized and received into the Catholic church by the bishop of St. Ignatius by Father Emond, S.J. He then entered the seminary of St. Sulpice at Paris for his theological studies. Returning to New York, he was ordained priest by Bishop Hughes, 2 March, 1844, and was made a professed religious in the same seminary at Fordham. He was acting president there in 1846 and was next given charge of the parish at the Quarantine Station on Staten Island, so long the residence of his grandfather, Dr. Bayley. Bishop Hughes then appointed him his private secretary, an office he held for several years and in which his administrative ability was specially manifested. He devoted some of his leisure to the collection and preservation of local historical data, much of which would otherwise have been lost. Part of this material was published in a small volume, "A Brief History of the Early History of the Catholic Church on the Island of New York" (New York, 1853; 2nd ed., 1870).

When the Diocese of Newark was established he was named its first bishop and consecrated 30 October, 1853, by Bishop Bedini, the Apostolic Nuncio, who was then en route to Rome. The Bishops of Brooklyn and Burlington were consecrated at the same time, the first occurrence of such an elaborate ceremony in the United States. Bishop Bayley's work of organizing the new diocese was not easy. He had more than 40,000 Catholics, mainly of Irish and German extraction, with only twenty-five priests to minister to them. There was not a single diocesan institution, no funds, and poverty on all sides. He therefore applied for help to the Association of the Propagation of the Faith of Lyons, France, and to the Leopoldine Association of Vienna and from both received material assistance. In a letter he wrote 10 April, 1855, reviewing the condition of the diocese after his first ten years there he says: "I find that while the Catholic population has increased a third, the churches and priests have doubled in number. In 1854 there was no religious community. Now we have a monastery of Benedictines, another of Passionists, a mother-house of Sisters of Charity, conducting seventeen different establishments; two convents of Benedictine nuns, two others of German Sisters of Notre Dame and two others of the Sisters of the Poor of St. Francis. In 1854 there was no institution of learning; to-day we have a flourishing college and a diocesan seminary, an academy for young ladies, a boarding school for boys, and parish schools attached to almost all the parishes." In addition to these he introduced the Jesuits and the Sisters of St. Joseph and of St. Dominic into the diocese, and was one of the strongest upholders of the temperance movement of the seventies. He made several journeys to Rome and the Holy Land, attending the canonization of the Japanese martyrs at Rome in 1862; the centenary of the Apostles in 1867; and the Ecumenical Council of 1869.

At the death of Archbishop Spalding of Baltimore he was promoted, on 30 July, 1872, to succeed that prelate. He left Newark with much reluctance. In 1875 as Apostolic Delegate he imposed the cardinal's biretta on Archbishop McCloskey of New York. In May, 1876, he conducted the centenary of the Baltimore archiepiscopal see, having freed it from debt. Convening the Eighth Provincial Synod of the clergy, August, 1875, he enacted many salutary regulations, particularly with regard to clerical dress, mixed marriages, and church music. Illness obliged him to resign, and Bishop Gibbons of Richmond was appointed to
that position 29 May, 1877. The archbishop then went abroad to seek for relief, but in vain. He returned to his former home in Newark in August, 1877, and after lingering for two months, died in October of that year. [120] In his own request he was buried beside his aunt, Mother bottle, at the convent at Emmitsburg, Maryland. He was a noble model of a Christian bishop. He seemed animates with the spirit of St. Francis de Sales, full of zeal in the spread abroad of true religion and charity to all mankind. In conversation he once told Bishop Corrigan that before his conversion he thought of becoming a Jesuit, and after his consecration a Redemptorist, but from both intentions his heart revolted. On his return to America in 1852, on the Church in New York he wrote the "Memoirs of Simon Gabriel Bruté, First Bishop of Vincennes" (New York, 1855).

BAYMA, Joseph, a Jesuit mathematician and scientist, b. in Piedmont, Italy, 9 November, 1816; d. at San Francisco, U. S., 7 February, 1881. He entered the Society of Jesus, 5 February, 1832, and distinguished himself in literature, mathematics, and physics. He was in charge of the episcopal seminary of Bertinoro when the troubles of 1850 found him in the city of his birth, Bertinoro, in Italy. He took up the study of physics, and many of his books and papers were printed in private circulation. No sooner were they out than he introduced numerous corrections; thus the printed volumes cannot be relied upon as evidence of his mature opinions. In 1868 Father Bayma left for California, where he was Rector of Saint Ignatius' College, San Francisco, for three years, but afterwards resided at Santa Clara, teaching elementary mathematics there till his death. At his death he left behind, in manuscript, an elaborate new edition of the "Realis Philosophia", which never saw the light. His published works are: "Molecular Mechanics" (Cambridge, 1866); "The Love of Religious Perfection", originally written in Italian, in the style of "The Imitation of Christ" (published in English, Dublin, 1863); articles in "The Catholic World" (1857-61) and in the "American Catholic Quarterly Review" (1873-77); and "A Discussion with an Infidel", a review of Büchner's "Force and Matter" (New York, London, and Leipzig, 1901). His elementary works on mathematics, all published at San Francisco, are: "Algebra" (1890), "Geometry" (1895), "Analytical Geometry" (1887), "Plane and Spherical Trigonometry" (1886), "Infinite Calculus" (1889).

Father Bayma took the Venerable Bede for his model, and lived to refer to the old Breivarii Lesson, which used to be read in England on St. Bede's day. It ran: "Bede [and Bayma too] was handsome of stature, grave of gait, rich and sonorous of voice, eloquent of speech, noble of countenance, a blend of affability with severity. He was the good and devout, formidable to the proud and neglect- ing. He was always reading, always writing, always teaching, always praying." Only the young men who sat under him could know his fascination as a teacher. To posterity, he must be known by his farm schools, 2 orphanages, a metaphysical and mathematical work treating of the constitution of matter. With Roger Boscovich, Bayma reduces all matter to extended points, centres of force acting in the inverse square of the distance. Thus acting upon one another, but of course not touching, for Bayma abhorred continuous matter and upheld the atomic model in dynamics, these points were bound up into molecules, and molecules into bodies. Boscovich made his points, or elements, attractive at molecular distances, repulsive at atomic distances. Bayma divides elements into attractive and repulsive, the former always attracting, the latter always repelling; the attractive elements corresponding in the nucleus of the molecule, the repulsive in the envelope. The work drew attention at Cambridge, and at Trinity College, Dublin. The author was advised to test his theories by ten years of experiments in chemistry and electricity, and convert all this into metaphysics. One of his proofs certainly lies open to grave objection, but Bayma's main theory does not stand or fall with that proposition. The gravest objection against the theory is its alleged failure to account for inertia. Father Bayma ever professed the utmost reverence for St. Thomas. He saying was: "the metaphysics of St. Thomas, with modern physics".

JESUS RICKARY.

BAYONNE (LAFERDUM), Diocese of, comprises the Department of Basses-Pyrénées. Reorganized in 1802, it included, besides certain parishes of the Dioceses of Dax and Tarbes, the Dioceses of Oloron and Lescar. It was suffragan to the Archiepiscopal See of Toulouse from 1802 to 1822, thereafter to that of Auch.

Diocese of Bayonne.—Local tradition maintains that St. Leo, the martyr, with whose memory is associated a miraculous fountain, was the first Bishop of Bayonne. No bishop is historically known prior to the sixth century, although it is thought that Bayonne, designated as civitas in the Treaty of Andecot (587), must have had a bishop at that time, whilst others couple the foundation of the See of Bayonne with the establishment of the Kingdom of Aquitaine (778). Until 1556, the Diocese of Bayonne included much Spanish territory, i. e. the four Archeparchies of Bastan, Lérin, Cinco Villas in Navarre, and Fontarabia in Guipuzcoa, a remnant of Charlemagne's conquests beyond the Pyrenees. Christophe de Beaumont, afterwards Archbishop of Paris, occupied the See of Bayonne from 1741 to 1745 and Astrus occupied it from 1820 to 1830.

Sees of Lescar and Oloron.—A local legend recorded in the great "Brévairia de Lescar" of 1541, and patterned after the Limousin legend of St. Marcellus, tells how the apostles converted the Godaui, a tribe of the Basques, by the force of St. Leontius, was the first Bishop of Lescar, according to history, St. Galactorius, martyred perhaps by the Visigoths after their defeat at Vouillé. St. Gratus, both mentioned in the Council of Agde (506), were respectively the first incumbents of the See of Lescar and the See of Oloron known to history. Until 1789 the Bishops of Lescar presided by right over the Assembly of the States of Béarn. Amongst those who occupied the See of Oloron was Roussel, the Dominican (1536-80), protégé of Marguerite de Navarre and convert to Protestantism. Sponde (Spondanus, 1568-1643), Bishop of Pamiers, who carried on the work of Baronius; Duvergier de Hauranne (1581-1643), Abbé de St. Cyr, the second founder of Jansenism, and Cardinal Lavigerie were born in territory now included in the Diocese of Bayonne. Bétharram is celebrated as a place of pilgrimage as also are Notre Dame de Pésta, at Paradies, and Notre Dame de Sarrance, visited by King Louis XI. In 1899 the following institutions were to be found in the diocese: 1 infant asylum, 36 in- termediate schools, 2 orphanages, 2 metapsychological and mathematical work treating of the constitution of matter. With Roger Boscovich, Bayma reduces all matter to extended points, centres of force acting in the inverse square of the distance. Thus acting upon one another, but of course not touching, for Bayma abhorred continuous matter and upheld the atomic model in dynamics, these points were bound up into molecules, and molecules into bodies. Boscovich made his points, or elements, attractive at molecular distances, repulsive at atomic distances. Bayma divides elements into attractive and repulsive, the former always attracting, the latter always repelling; the attractive elements corresponding in the nucleus of the molecule, the repulsive in the envelope. The work drew attention at Cambridge, and at Trinity College, Dublin. The author was advised to test his theories by ten years of experiments in chemistry and electricity, and convert all this into metaphysics. One of his proofs certainly lies open to grave objection, but Bayma's main theory does not stand or fall with that proposition. The gravest objection against the theory is its alleged failure to account for inertia. Father Bayma ever professed the utmost reverence for St. Thomas. He saying was: "the metaphysics of St. Thomas, with modern physics". 

JOSEPH RICKARY.
BAYSOY (Baiso) Guido de, an Italian canonist, b. about the middle of the thirteenth century, d. at Avignon, 10th March 1313. The probable place of his birth is Reggio, where he also studied law under Guido de Susaria. Here he became, successively, doctor and professor of canon law and also obtained an ecclesiastical benefice. Canon Gerhard, Bishop of Parma, attached him to himself and remained his patron, also as Cardinal-Archbishop of Sabina (d. 1302). To this patron Bayso dedicated his chief work, a commentary on the "Decretum" of Gratian, which he wrote about the year 1300 and entitled "Rosarium". It is an excellent collection of glossaries, not contained in the "Glossa Ordinaria" and principally compiled from Huguccio. Many additions to the glossary which are found in the editions published since 1505 (Paris), are taken from the "Rosarium" of Bayso, the patron of the author and the patron of his name.

In 1296 Pope Boniface VIII appointed Bayso Archbishop of Bologna and chancellor of the celebrated university in that city. Here he at first taught canon law privately and later on became a public professor, with the position he held for three years. Called to Avignon in 1304 he retained the dignity of archdeacon, held the office of papal chaplain, and also served in the Apostolic chancery until his death. His stay at Avignon was marked by several literary productions. Here he wrote an accurate and complete commentary on the Liber Sextus and also a "Tractatus super hieresi et aliis criminiibus in causâ Templarium et D. Bonifacii". This latter work was written in connexion with the condemnation of the Templars at the Council of Vienne. The second part of the work constitutes a defence of the orthodoxy of Boniface VIII, and is published in Mansi, "Coll. Sacr. Concil.", XXV (Venice, 1782), 415-426. Having held the position of archdeacon, Bayso is often known by the name of Archiconcubus and thus quoted (see Ferraris, Bibliotheca, Rome, 1892), VIII, 271. His chief work, the "Rosarium", has gone through many editions: Strasburg, 1472; Rome, 1477; Venice, 1498; 1513; 1601, etc. The "Apparatus ad Sextum", Mafra, 1592; Venice, 1577. Such a story as the origin of the rosary is well known. The rosary is a chain of links, each one of which is called a bead. The rosary is usually composed of a number of links, and each link contains a letter or word which is pronounced as it is grasped in the hand. The rosary is often used as a means of prayer and meditation, and is especially popular in Catholic countries. The rosary is composed of five decades, each containing a set of prayers and reflections. The rosary is often used as a means of prayer and meditation, and is especially popular in Catholic countries.

Beads, Use of, or, At PRAYERS.—Beads variously strung together, according to the kind, order, and number in certain forms of devotion, are in common use among Catholics as an expedient to ensure a right count of the parts occurring in more or less frequent repetition. Made of materials ranging from common wood or natural berries to costly metals and precious stones, they may be blessed, as they are in most cases, with prayer and holy water, thereby becoming sacramentals. In this character they are prescribed by the rules of most religious orders, both of men and women, to be kept for personal use or to be worn as part of the religious garb. They are now mostly found in the form of the Dominican Rosary, or Marian Psalter (see Rosary); but Catholics are also familiar with the Brightine beads, the Dolour beads, the Immaculate Conception beads, the Crown of Our Saviour, the Chaplet of the Five Wounds, the Crosier beads, and others. In all these devotions, due to individual zeal or fostered by particular religious bodies, the beads serve one and the same purpose of distinguishing and numbering the constituent prayers.

Rationalistic criticism generally sacrifices an Oriental origin to prayer beads; but man's natural tendency to iteration, especially of prayers, and the spirit and training of the early Christians may still safely be assumed to have spontaneously suggested fingers, pebbles, knotted cords, and strings of beads or berries as a means of counting, when it was desired to say a specific number of prayers. The earliest historical indications of the use of beads at prayer by Christians show, in this as in other things, a natural growth and development. Beads strung together or ranged on chains are an obvious improvement over the well-known primitive method instanced, for example, in the life of the Egyptian Abbot Paul (d. a. d. 341), who used to take three hundred pebbles into his hand and count and to drop one as he finished each of the corresponding number of prayers it was his wont to say daily. In the eighth century the penitentials, or rule books relating to penitents, prescribed various penances of twenty, fifty, or more, paters. The strings of beads, the origin of which is so generally said, gradually came to be known as paternosters. Archaeological records mention fragments of prayer beads found in the tomb of the holy abbesse Gertrude of Nivelles (d. 659); also similar devices discovered in the tombs of St. Michael and of St. Rosalia, both of
the twelfth century. The Byzantines quote William of Malmesbury (De Gest. Pont. Angl. IV, 4) as stating that the Countess Godiva, who founded a religious house at Coventry in 1040, donated, when she was about to die, a circket or string of costly precious stones on which she used to say her prayers, to be placed on a statue of the Blessed Virgin. In the course of the seventh, twelfth, and thirteenth centuries, such paternosters came into extensive use especially in the religious orders. At certain times corresponding to the canonical hours, lay brothers and lay sisters were obliged to say a certain number of Our Fathers as an equivalent of the clerical obligation of the Divine Office. The military orders likewise, notably the Knights of St. John, adopted the paternoster beads as a part of the equipment of lay members. In the fifteenth century, wearing the beads at one's girdle was a distinctive sign of membership in a religious confraternity or third order. If a certain worldliness in the use of beads as ornaments in those days had to be checked, as it was by various capitulary ordinances prohibiting monks and friars, for instance, from having beads of coral, cut stone, and similar materials around the neck, evidence is not wanting that paternosters were also openly carried as a sign of penance, especially by bands of pilgrims processiously visiting the shrines, churches, and other holy places of Rome. From this practice it is to be deduced that in the fifteenth century the beads were prized as gifts of friendship. They were especially valued if they had been worn by a person of known sanctity or if they had touched the relics of any saint, in which cases they were often piously believed to be the instruments of miraculous power and healing virtue.

Beads were generally strung either on a straight thread, or cord, or so as to form a circket, or loop. At the present time chain-d beads have almost entirely taken the place of the corded ones. To facilitate the counting or to mark off certain divisions of a devotion, sets of beads, usually decades, are separated from each other by a larger bead or sometimes by a medal or metal cross. The number of beads on a chaplet, or Rosary, depends on the number of prayers making up each particular form of devotion. A full Rosary consists of one hundred and fifty Hail Marys, fifteen Our Fathers, and three or four beads corresponding to introductory verses and the "Glory be to the Father," etc. Such a "pair of beads" is usually worn by pious persons and commonly has beads representing a third part of the Rosary. The Brigitte beads number seven paters in honour of the sorrows and joys of the Blessed Virgin, and sixty-three aves to commemorate the years of her life. Another Crown of Our Lady, in use among the Franciscans, has seventy-two aves, based on another tradition of the Blessed Virgin's age. The devotion of the Crown of Our Lord consists of thirty-three paters in honour of the years of Our Lord on earth and five aves in honour of His sacred wounds. In the church Latin of the Middle Ages, many names were applied to prayer beads as: devotions, sigmatica, oraculca, precaria, patrolipiquum, serta, precula, numeralia, computum, calculi, and others. An old English form, bedes, or bedies, meant primarily prayers. From the end of the fifth century and in the beginning of the sixteenth, the name paternoster beads fell into disuse and was replaced by the names ave beads and Rosary, chaplet, or crown.

The use of beads among pagans is undoubtedly of greater antiquity than their Christian use; but there is no evidence to show that the latter is derived from the former, any more than there is to establish a relation between Christian devotions and pagan forms of prayer. One sect in India used a chaplet consisting generally of one hundred and eight beads made of the wood of the sacred Tulsi shrub, to tell the names of Vishnu; another accompanying its invocations of Siva by means of the names of sixty-four or sixty-four berries of the Rudraksha tree. These or other species of seeds and berries were chosen as the material for these chaplets on account of some traditional association with the deities, as recorded in sacred legends. Some of the ascetics had a string of beads made of the teeth of dead bodies. Among some sects, especially the votaries of Vishnu, a string of beads is placed on the neck of children when, at the age of six or seven, they are about to be initiated or to be the users of the yantras. Most Hindus continue to wear the beads both for ornament and for use at prayers. Among the Buddhists, whose religion is of Brahminic origin, various prayer-formulas are said or repeated with the aid of beads made of wood, berries, coral, amber, or precious metals and stones. A string of beads cut from the bones of some holy lama is especially valued. The number of beads is usually one hundred and eight; but strings of thirty or forty are in use among the poorer classes. Buddhism in Burma, Tibet, China, and from silke are mainly made of more or less complicated forms of devotion, but the frequently recurring conclusion, a form of salutation, is mostly the same, and contains the mystic word Om, supposed to have reference to the Buddhist trinity, and an image, always a human head or a skull, attached to a Buddhist's prayer beads, and generally each string is provided with two little cords of special counters, ten in number, in the form of beads or metal disks. At the end of one of these cords is found a miniature thunderbolt; this, therefore, is converted into a small bell. With the aid of this device the devotee can count a hundred repetitions of his beads or 108x10x10 formulas in all. Among the Japanese, especially elaborate systems of counting exist. One apparatus is described as capable of registering 36,726 prayers or repetitions.

The Mohammedans use a string of ninety-nine (or one hundred) beads called the suhba or tawib, on which they recite the "beautiful" names or attributes of Allah. It is divided into three equal parts either by a bead of special shape or size, or by a tassel of gold or silk thread. The use of these Islamic beads appears to have been established as early as the ninth century independently of Buddhist influence. Some critics have thought the Mohammedan devotion to be the forerunner of the Rosary. The beads in general use are said to be often made of the sacred clay of Mecca or Medina. Among travellers' records of prayer beads is the famous instance, by Marco Polo, of the King of Malabar, who wore a fine silk thread strung with one hundred and four large pearls and rubies, on which he was wont to pray to his idols. Alexander Von Humboldt is also quoted as finding prayer beads, called Quipos, among the native Peruvians.

Beard.—Among the Jews, as among most Oriental peoples, the beard was especially cherished as a symbol of virility; to cut off another man's beard was an outrage (II Kings, x, 4); to shave or to pluck one's own beard was a sign of mourning (Ezra, xii, 5; xiv, 37); to allow the beard to be filed constituted a presumption of guilt (I Kings, xxi, 13). Certain ceremonial cuttings of the beard which probably imitated pagan superstition were strictly forbidden (Lev., xix, 27; xxi, 5). On the other hand, the leper was commanded to shave (Lev., xiv, 9). These usages which we learn from
the Bible are confirmed by the testimony of the monuments, both Egyptian and Assyro-Babylonian, in which the Jews are invariably depicted as bearded. The Egyptians themselves commonly shaved, and we are told that Joseph, on being taken from his prison, was made to shave before appearing in the presence of the king (Gen. xl. 14).

Such a practice existed in Rome, shortly before the time of Christ, it was the fashion to shave, but from the accession of Hadrian onwards, as we may see from the existing statues of the Roman emperors, beards once more became the order of the day. With regard to the Christian clergy, no clear evidence is available for the early centuries. The Apostles, in our most ancient monuments, are for the most part represented as bearded, but not uniformly so. (See Weis-Liebesdorffer, Christus- und Apostelbildnisse, Freiburg, 1902.) St. Jerome seems to censure the practice of wearing long beards, but no very definite conclusion can be drawn from his allusions or those of his contemporary, St. Augustine. The earliest positive legislation on the subject for clerics appears to be Canon xxvi of the so-called Fourth Council of Constantinople (599), which imposed a synodal censure on some council in Southern Gaul in the time of St. Cessarius of Arles (c. 503). There it is enjoined that a cleric is to allow neither hair nor beard to grow freely (Clericus nec comam nec barbae licet hinc et illinc apparere, but only directed only against beards of excessive length. Still this canon, which was widely quoted and is included in the "Corpus juris", had great influence in creating a precedent. (See for example the Canon spiritualis of the Ely Synod and the so-called "Exception" attributed to Egbert of York.) So far as concerns England, in particular it was certainly regarded throughout the Middle Ages as uncanonical to allow the beard to grow. A cleric was known as a "summon (seconum men, Laws of Whtubred, a.c. 696), and if it should seem that this might refer to the tonsure, we have a law of King Alfred: "If a man shave off another's beard let him make amends with xx shillings. If he bind him first and then shave him like a priest (hinc to proste bescire) let him make amends with lx shillings." And under King Edgar we find the canon: "Let no man in holy orders conceal his tonsure, nor let himself be misshaven nor keep his beard for any time, if he will have God's blessing and St. Peter's and ours." A similar moral direction is implied in the Church of the West and it was one of the great subjects of reproach on the part of the Greek Church, from the time of Photius onwards, that the Roman clergy systematically cut off their beards. But as Rattramus of Corbie protested, it was foolish to make an outcry about a matter which concerned salvation so little as this barba detentio aut conservatio.

The legislation requiring the beard to be shaved seems to have remained in force throughout the Middle Ages. Thus an ordinance of the Council of Tours, in 1119, threatened that the "cleric who "like a layman allowed hair and beard to grow," and Pope Alexander III ordained that clerics who nourished their hair and beard were to be shorn by their archdeacons, by force if necessary. This last decree was intended to withstand the plea in the text of the canon law (Declarals of Gregory IX, III, tit. i, cap. vii). Durandus, finding mystical reasons for everything, according to his wont, tells us that "length of hair is symbolical of the multitude of sins. Hence clerics are directed to shave their beards; for the cutting off of the best of the beard is similar to being nourished by the superfluous humours of the stomach, denotes that we ought to cut away the vices and sins which are a superfluous growth in us. Hence we shave our beards that we may seem like the angels who remain always in the bloom of youth." (Ratst. II, 16, 14.)

In spite of this, the phrase barbae nutritae which was classical in the matter, and was still used by the Fifth Council of Lateran (1512), always remained somewhat ambiguous. Consequently usage in the sixteenth century began to interpret the prohibition as not inconsistent with a short beard. Yet still many ordinances of episcopal synods which deal with the subject, but the point upon which stress is laid is that the clergy "should not seem to be aping the fashions of military folk" or wearing flowing beards like goats (Cincinnus et caprorum more), or allowing the hair on their upper lip to impede their drinking of the chalice. This last has always been accounted a solid reason in favour of the practice of shaving. To judge by the portraits of the popes, it was with Clement VII (1523) that a distinct beard began to be worn, and many among his successors, for example Paul III, allowed the beard to grow to considerable length. St. Charles Borromeo attempted to check the spread of the new fashion, and in 1576 he addressed to his clergy a pastoral "De barba" instructing them to observe the canons. Still, though the length of clerical beards decreased during the seventeenth century, it was not until its close that the example of the French court and the influence of Cardinal Oregi, Archbishop of Aix (1675), brought about a return to the earlier usage. For the last 200 years there has been no change, and an attempt made by some of the clergy of Bavaria in 1865 to introduce the wearing of beards was re-But by the Holy See.

As already noted, in Eastern lands a smooth face carries with it the suggestion of effeminacy. For this reason the clergy, whether Uniat or Schismatic, of the Oriental churches have always worn their beards. The same consideration, together with a regard for practical difficulties, has influenced the Roman authorities in according a similar privilege to missionaries, not only in the East but in other barbarous countries where the conveniences of civilization cannot be found. In the case of religious orders like the Capuchine and the Camaldolese Hermits the wearing of a beard is prescribed in their constitutions as a mark of austerity and penance. Individual priests who for medical or other reasons desire to exempt themselves from the law may procure the permission of their bishop.

HERBERT THURSTON.

Beardsley, Aubrey, English artist, b. at Brighton, 1872; d. at Mentone, France, 16 March, 1898. It has been cleverly said that Beardsley was "a boy who never grew up", and the statement has a considerable amount of truth in it. He was a wonderfully precocious boy all his life, with the frank merriment, enthusiasm, and exuberance of a lad. He was unable to withstand the desire to do one thing and to do another, and to shock people of narrow opinions, and his ignoble and vicious works were more the result of his Huck-like mischief and eccentricity of habit than of any evil disposition. His earliest published work was a programme for an entertainment in 1888 at the Brighton Grammar School, where he was a pupil, and his next in the "Be Magazine", Blackburn, 1891.

Young Beardsley commenced work as a clerk in the Guardian Fire Office, but at the earnest persuasions of Aymer Vallance and Pennell he entered Fred Brown's studio at Westminster and devoted his
Beatafic Vision, the immediate knowledge of God which the angelic spirits and the souls of the just enjoy in Heaven. It is called ‘vision’ to distinguish it from the mediately knowledge of God which the human mind may attain in the present life. And since in beholding God face to face the created intelligence finds perfect happiness, the vision is termed ‘beatafic’. For further explanation of the subject, see HEAVEN.

E. A. Pace.

Beatification and Canonization.—1. HISTORY.—According to some writers the origin of beatification and canonization in the Catholic Church is to be traced back to the ancient pagan apotheosis. (See APOTHEOSIS.) In his classic work on the subject (De Servorum Dei Beatificatione et Beatorum Canonizione) Benedict XIV examines at the very outset and refutes this view. He shows so well the substantial differences between them that no right-thinking person need henceforth confound the two institutions or derive one from the other. It is a matter of history who were elevated to the honour of apotheosis, on what grounds, and by whose authority; no less clear is the meaning that was attached to it. Often the decree was due to the statement of a single person (possibly bribed or enticed by promises, and with a view to fix the fraud more securely in the minds of an already superstitious people) that the dead body of the saint was being visited by an eagle, in the case of the emperors, or a peacock (Juno’s sacred bird), in the case of their consorts, was seen to carry heavenward the spirit of the departed (Livy, Hist. Rome, I, xvi; Herodian, Hist. Rome, IV, ii, iii). Apotheosis was awarded to most members of the imperial family of which family Romulus was the exalted prince. No regard was paid to virtues or remarkable achievements. Recourse was frequently had to this form of deification to escape popular hatred by distracting attention from the cruelty of imperial rulers. It is said that Romulius was deified by the senators who slew him; Poppaea was deified by her husband Nero in April, 68, after he had killed her to death; Geta had the honour from his brother Caracalla, who had got rid of him through jealousy. Canonization in the Catholic Church is quite another thing. The Catholic Church canonizes only those whose lives have been marked by the exercise of heroic virtue, and only after this has been proved by common repute for sanctity and by conclusive arguments. The chief difference, however, lies in the meaning of the term canonization, the Church seeing in the saints nothing more than friends and servants of God whose holy lives have made them worthy of His special love. She does not pretend to make gods (cf. Eusebius Emesinum, Serm. de S. Rom. M.; Augustine, De Civitate Dei, XXII, x; Curril. Alexandr., De Antiquo, i, xxvii; Cyrrian, De Exhortat. marty.; Conc. Nic., II, act. 3).

The true origin of canonization and beatification must be sought in the Catholic doctrine of the worship (cultus), invocation, and intercession of the saints. A few serious fault and caused him to be often misunderstood. By those who knew him he was regarded as the most original, brilliant, witty, and lovable man they ever met. His illustrations of ‘Salome’, ‘The Rape of the Lock’, ‘Mademoiselle de Maupin’, and ‘Volpone’ are amongst his greatest works. From boyhood he had bad health and suffered from frequent attacks of hemorrhage. He was always a man of deep religious feeling and became a Catholic at the close of his life (31 March, 1885).

George Charles Williamson.

Beatific Vision, the immediate knowledge of God which the angelic spirits and the souls of the just enjoy in Heaven. It is called ‘vision’ to distinguish it from the mediately knowledge of God which the human mind may attain in the present life. And since in beholding God face to face the created intelligence finds perfect happiness, the vision is termed ‘beatafic’. For further explanation of the subject, see HEAVEN.

E. A. Pace.

Beatification and Canonization.—1. HISTORY.—According to some writers the origin of beatification and canonization in the Catholic Church is to be traced back to the ancient pagan apotheosis. (See APOTHEOSIS.) In his classic work on the subject (De Servorum Dei Beatificatione et Beatorum Canonizatione) Benedict XIV examines at the very outset and refutes this view. He shows so well the substantial differences between them that no right-thinking person need henceforth confound the two institutions or derive one from the other. It is a matter of history who were elevated to the honour of apotheosis, on what grounds, and by whose authority; no less clear is the meaning that was attached to it. Often the decree was due to the statement of a single person (possibly bribed or enticed by promises, and with a view to fix the fraud more securely in the minds of an already superstitious people) that the dead body of the saint was being visited by an eagle, in the case of the emperors, or a peacock (Juno’s sacred bird), in the case of their consorts, was seen to carry heavenward the spirit of the departed (Livy, Hist. Rome, I, xvi; Herodian, Hist. Rome, IV, ii, iii). Apotheosis was awarded to most members of the imperial family of which family Romulus was the exalted prince. No regard was paid to virtues or remarkable achievements. Recourse was frequently had to this form of deification to escape popular hatred by distracting attention from the cruelty of imperial rulers. It is said that Romulius was deified by the senators who slew him; Poppaea was deified by her husband Nero in April, 68, after he had killed her to death; Geta had the honour from his brother Caracalla, who had got rid of him through jealousy. Canonization in the Catholic Church is quite another thing. The Catholic Church canonizes only those whose lives have been marked by the exercise of heroic virtue, and only after this has been proved by common repute for sanctity and by conclusive arguments. The chief difference, however, lies in the meaning of the term canonization, the Church seeing in the saints nothing more than friends and servants of God whose holy lives have made them worthy of His special love. She does not pretend to make gods (cf. Eusebius Emesinum, Serm. de S. Rom. M.; Augustine, De Civitate Dei, XXII, x; Curril. Alexandr., De Antiquo, i, xxvii; Cyrrian, De Exhortat. marty.; Conc. Nic., II, act. 3).

The true origin of canonization and beatification must be sought in the Catholic doctrine of the worship (cultus), invocation, and intercession of the saints. A few serious fault and caused him to be often misunderstood. By those who knew him he was regarded as the most original, brilliant, witty, and lovable man they ever met. His illustrations of ‘Salome’, ‘The Rape of the Lock’, ‘Mademoiselle de Maupin’, and ‘Volpone’ are amongst his greatest works. From boyhood he had bad health and suffered from frequent attacks of hemorrhage. He was always a man of deep religious feeling and became a Catholic at the close of his life (31 March, 1885).

George Charles Williamson.
of the martyrs. Let one instance suffice. In the circular epistle of the Church of Smyrna (Eus., Hist. Eccl., IV, xxiii) we find mention of the religious celebration of the day on which St. Polycarp suffered martyrdom (23 February, 155); and the words of the pastorate express the sentiments of the Church in the celebration of such anniversaries: "We have at last gathered his bones, which are dearer to us than priceless gems and purer than gold, and laid them to rest where it was befitting they should lie. And if it be possible for us to assert, according to God's grace, the celebration of the birthday of his martyrdom with gladness, thus to recall the memory of those who fought in the glorious combat, and to teach and strengthen, by his example, those who shall come after us." This anniversary celebration and veneration of the martyrs was a service of thanksgiving and congratulation, a token and an evidence of the joy of those who engaged in it (Muratori, de Paradiso, x), and its general diffusion explains why Tertullian, though asserting with the Chiliasm that the death of the apostles did not entail eternal glory only after the general resurrection of the body, admitted an exception for the martyrs (de Resurrectione Carnis, xlix).

It must be obvious, however, that, while private moral certainty of their sanctity and possession of the heavenly reward sufficed for the devout veneration of the saints, it cannot suffice for public and common acts of that kind. No member of a social body may, independently of its authority, perform an act proper to that body. It follows naturally that for the public veneration of the saints the ecclesiastical authority of the pastors and rulers of the Church was constantly required. The Church had at heart, indeed, the honour of the martyrs, but she did not therefore grant liturgical honours indiscriminately to all those who had suffered death at it. St. Stephen, dying at the end of the fourth century, tells us (De Schiam. Donat., I, xvi, in P. L., XI, 916-917) of a certain noble lady, Lucilla, who was reprehended by Cæcilius, Archdeacon of Carthage, for having kissed before Holy Communion the bones of one who either was not a martyr or whose right to the title was unproved. The decision as to the martyr having died for his faith in Christ, and the consequent permission of worship, lay originally with the bishop of the place in which he had borne his testimony. The bishop determined on the martyrdom or death by torture; finding he had died a martyr, sent his name with an account of his martyrdom to other churches, especially neighbouring ones, so that, in the event of approval by their respective bishops, the cultus of the martyr might extend to their churches also, and that the faithful, as we read of St. Ignatius in the "Acts" of his martyrdom (Ruinaert, Acta Sinecura Martyrum, 19), "might hold communion with the generous martyr of Christ" (generoso Christi martyri communicantem). Martyrs whose cause, so to speak, had been discussed, and the fame of whose martyrdom had been confirmed, were known as proved (vindicati) martyrs. As far as the word is concerned it may probably not antedate the fourth century, when it was introduced into the Church by its usage; but the fact is certainly older. In the earlier ages, therefore, this worship of the saints was entirely local and passed from one church to another with the permission of their bishops. This is clear from the fact that in none of the ancient Christian cemeteries are we acquainted with the ecclesiastical authority having been so quickly paid to some martyrs, e.g. St. Lawrence, St. Cyprian of Carthage, Pope St. Sixtus of Rome (Duhamel, Origines du culte chrétien (Paris, 1903), 261).

The worship of confessors—of those, that is, who died peacefully after a life of heroic virtue—is not as ancient as that of the martyrs. The word itself takes on a different meaning after the early Christian periods. In the beginning it was given to those who confessed Christ when examined in the presence of the authorities of the Roman Empire (barbarism in his times to Ro. Mart., 2 January, D), as Benedit XIV (op. cit., II, c. ii, n. 6), to those who died peacefully after having confessed the Faith before tyrants or other enemies of the Christian religion, and undergone tortures or suffered other punishments of whatever nature. The consent of confessors was of course a holy life and closed it by a holy death in Christian peace. It is in this sense that we now treat of the worship paid to confessors.

It was in the fourth century, as is commonly held, that confessors were first given public ecclesiastical honour, though occasionally praised in ardent terms by earlier Fathers, and though an abundant reward (multiplex corona) is declared by St. Cyprian to be theirs (De Zeelo et Livore, col. 509; cf. Innoe. III, De Myst. Missae, n. 27; Benedict XIV, op. cit., I, v, n. 3 sqq; Bellarmine, De Missa, II, xx, n. 5). Still Bellarmine thinks it uncertain when confessors began to be objects of cultus, and asserts that it was not before 800, when the feasts of Sts. Martin and Remigius are found in the catalogue of feasts composed by the Council of Martin and Benedict XIII, by Pope Episcopal, that the veneration of Innocent III and Benedict XIV is confirmed by the implicit approval of St. Gregory the Great (DiaL, I, xiv, and III, xv) and by well attested facts: in the East, for example, Hilarius (Sozomen, III, xiv, and VIII, xix), Ephrem (Greg. Nysa., Orat. in laud. S. Ephrem), and other confessors were publicly honoured in the fourth century; and, in the West, St. Martin of Tours, as is gathered plainly from the oldest breviaries and the Mozarabic Missal (Bona, Rel. Lat., II, n. 3, and Duhamel, Dictionnaire des antiquités chrétiennes, s. v. Confesseurs). The reason of this veneration lies, doubtless, in the resemblance of the confessors' self-denying and heroically virtuous lives to the sufferings of the martyrs; such lives could truly be called prolonged martyrdoms, in which the believer, after being first paid to the saints (Duchesne, op. cit., 284) and only afterwards to those who resembled in their lives the very penitential and extraordinary existence of the saints. So true is this that the confessors themselves are frequently called martyrs. St. Gregory Nazianzen calls Sts. Basil a martyr (Orat. de laud., P. L., XXXVI, 602); St. Chrysostom applies the same title to Eustachius of Antioch (Opp. II, 606); St. Paulinus of Nola writes of St. Felix of Nola that he won heavenly honours, in sanctis saepe facta est (s. v. Sancti) ("a bloodless martyr"—Poem, XIV, Carm. III, v 4); St. Gregory the Great styles Zeno of Verona a martyr (DiaL, III, xix), and Metronius gives to St. Roterius (Acta SS., II, May 11, 306) the same title. Later on, the cultus of the confessors was extended to the dioceses, and due reverence was paid them. Their tombs were honoured (Martigny, loc. cit.) with the same title (martyria) as those of the martyrs. It remained true, however, at all times that it was unlawful to venerate confessors without permission from the ecclesiastical authority; and confessors public ecclesiastical honour; such honour, however, was always decreed only for the local
BEATIFICATION

BEATIFICATION

terry over which the grantors held jurisdiction. Still, it was only the Bishop of Rome's acceptance of the cultus that made it universal, since he alone could permit or command in the Universal Church (Gonzales Tellez, Comm. Perpet. in singulos textus lib. Decr. III, xiv), in cap. I, De reliquiis et vener. Sanct.). Abuses, however, crept into this form of devotion, and as well for the affection of the faithful, as to the carelessness of some bishops in inquiring into the lives of those whom they permitted to be honoured as saints. Towards the close of the eleventh century the popes found it necessary to restrict episcopal authority on this point, and decreed that the virtues and miracles of persons proposed for public veneration should be examined in councils, more particularly in general councils. Urban II, Calixtus II, and Eugenius III followed this line of action. It happened, even after these decrees, that "some, following the ways of the pagans and deceived by the fraud of the evil one, venerated as a saint a man who had been killed while intoxicated". Alexander III (1159-81) took occasion to prohibit his veneration in these words: "For the honor is not proper to a fool's dead body, as, even though miracles were worked through him, it would not allow you to revere him as a saint unless with the authority of the Roman Church" (c. i, tit. cit., X, III, xiv). Theologians do not agree as to the decree of this council and whether it was made (Bellarmine, De Ecles. Triumph., I, viii), in which case the pope then for the first time reserved the right of beatification, or a pre-existing law was confirmed. As the decretal did not put an end to all controversy and some bishops did not obey it in as far as it regarded beatification (which right they had certainly possessed hitherto), Urban VII published, in 1654, a Bull which put an end to all discussion by reserving to the Holy See exclusively the miraculous right of canonization, but also that of beatification.

NATURE OF BEATIFICATION AND CANONIZATION.— Before dealing with the actual procedure in causes of beatification and canonization, it is proper to define these terms precisely and briefly in view of the preceding considerations. Canonization, generally speaking, is a decree regarding the public ecclesiastical veneration of an individual. Such veneration, however, may be permissive or preceptive, may be universal or local. If the decree contains a precept, and in the case of the Roman Church, it is a decree of canonization; if it only permits such worship, or if it binds under precept, but not with regard to the whole Church, it is a decree of beatification. In the ancient discipline of the Church, probably even as late as Alexander III, bishops of their several dioceses allowed public veneration to be paid to saints, and such episcopal decrees were not merely permissive, but, in my opinion, preceptive. Such decrees, however, could not prescribe universal honour; the effect of an episcopal decree of this kind, was usurping the power of the Roman pontiff in determining the rules of veneration. In such cases there was, properly speaking, no canonization, unless with the consent of the pope extending the cultus in question, implicitly or explicitly, and imposing it by way of precept upon the Church at large. In the more recent discipline beatification is a permission to venerate, granted by the Roman Pontiff with restriction to certain places and to certain liturgical exercises. Thus it is unlawful to pay to the person known as Blessed J. (e. the Beatus, beatified), public reverence outside the place where the permission is granted, or to recite an office in his honour, or to celebrate Mass with prayers referring to him, unless special indulg. be had; similarly, other methods of honour have been interdicted. Canonization is a precept of the Roman pontiff commanding public veneration to be paid an individual by the Universal Church. To sum up, beatification, in the present discipline, differs from canonization in this: that the former implies (1) a locally restricted, not a universal, permission to venerate, which is (2) a mere permissio; and, (3) no precept; while canonization implies a universal precept. In exceptional cases, either for other elections of Popes, or the pope, the latter may be lacking: thus, Alexander III not only allowed but ordered the public cultus of Bl. William of Malaval in the Diocese of Grosseto, and his action was confirmed by Innocent III; Leo X acted similarly with regard to Bl. Rosalba for the city and district of Mantua; Clement IX with regard to Bl. Rose of Lima, when he selected her as principal patron of Lima and of Peru; and Clement X, by making her patron of all America, the Philippines, and the Indies. Clement X also chose Bl. Stanislaus Kostka as patron of Poland, Lithuania, and the allied provinces. Again, in respect to universality, Sixtus IV permitted the cultus of Bl. John Boni for the Universal Church. In all these instances there was only beatification. The cultus of Bl. Rose of Lima, it is true, was general, but its purpose was not to promote a preceptive universality, was not strictly speaking canonization (Benedict XIV, op. cit., I, xxxii). Canonization, therefore, creates a cultus which is universal and obligatory. But in imposing this canonization of a new saint and a new name, the method, each constituting a new species of canonization, i.e. formal canonization and equivalent canonization. Formal canonization occurs when the cultus is prescribed in an explicit and definitive decision, after due judicial process and the ceremonies usual in such cases. Equivalent canonization occurs when the pope, omitting the judicial process and the ceremonies, orders some servant of God to be venerated in the Universal Church; this happens infrequently when such a cultus from a remote period the object of veneration, when his heroic virtues (or martyrdom) and miracles are related by reliable historians, and the fame of his miraculous intercession is uninterrupted. Many examples of such canonization are to be found in Benedict XIV: e. g. Saints Romuald, Norbert, Bruno, Peter Nolasco, Raymond Nonnatus, John of Matha, Felix of Valois, Queen Margaret of Scotland, King Stephen of Hungary, Wenceslaus Duke of Bohemia, and Gregory VII. Such instances afford a good basis for the distinction between the terms beatification and canonization. It proceeds in these equivalent canonizations. St. Romuald was not canonized until 430 years after his death, and the honour came to him sooner than to any of the others mentioned. We may add that this equivalent canonization consists usually in the ordering of an Office and Mass by the pope in honour of the saint, and that mere enrolment in the Roman Martyrology does not by any means imply this honour (Bened. XIV, 1, e. xiii, n° 14).

PAPAL INfallIBILITY AND CANONIZATION.—Is the papal infallibility in matters of canonization? Most theologians answer in the affirmative. It is the opinion of St. Antoninus, Melchior Cano, Suarez, Bellarmine, Bañez, Vasquez, and, among the canonists, of Gonzales Tellez, Paganus, Schmalegruber, Barbossa, Reinastell, Covarruvias (Varia resol., I, x, n° 13), Albitius (De Inconstituentia in fide, xl, n° 205), Petra (Comm. in Const. Apost. I, in notes to Const. I, Alex., III, n° 17 sqq.), Joannes a S. Thomà (on II-II, Q. I, disp. 9, a. 2), Silvester (Summna, s. v. Infallibilitas), Del Benito in II, dub. 253), and many others. In Quodlib. IX, a. 19, Thomas says: "Since the honour we pay the saints is in a certain sense a profession of faith, i.e. a belief in the glory of the Saints [sed sanctorum gloriarum credimus] we must piously believe that in this matter also the judgment of the Church is not liable to error."
BEATIFICATION

367

BEATIFICATION

These words of St. Thomas, as is evident from the authorities just cited, all favouring a positive infallibility, have been interpreted by his school in favor of infallibility in the matter of canonization, and this interpretation is supported by several other passages in the same Quodlibet. This infallibility, however, according to the holy doctor, is only a point of pious belief. Theologians generally oppose to the fact of papal infallibility in this matter of canonization, but disagree as to the quality of certificate due to a papal decree in such matter. In the opinion of some it is of faith (Arrigas, De fide, disp. 9, § 8, n° 27); others hold that to refuse assent to such a judgment of the Holy See would be both impious and heretical (Arrigas, De fide, disp. 9, § 8); many more (and this is the general view) hold such a pronouncement to be theologically certain, not being of Divine Faith as its purport has not been immediately revealed, nor of ecclesiastical Faith as having thus far not been defined by the Church.

What is the object of this infallible judgment of the pope? Does he define that the person canonized is in heaven or only that he has practised Christian virtues in an heroic degree? I have never seen this question discussed; my own opinion is that nothing else is defined than the fact that such a person was in heaven. The formula used in the act of canonization has nothing more than this: “In honour of... we decree and define that Blessed N. is a Saint, and we inscribe his name in the catalogue of saints, and order that his memory be celebrated on the... day of... his feast.” (Ad honorem... beatum N. Sanctum esse decernimus et definimus ac sanctorum catalogo adscribimus statues et ecclesiæ universalis illius memoriam qua libet anno, diebus natalibus, pia devotioni recoli debere.) There is no question of heroic virtue in this formula; on the other hand, sanctity does not necessarily imply the exercise of heroic virtue, since one who had not hitherto practised heroic virtue would, by the one transient heroic act in which he yielded up his life for Christ, have justly deserved to be considered a saint. This view seems all the more certain if we reflect that all the arguments of theologians for papal infallibility in the canonization of saints are based on the fact that on such occasions the pope believes and asserts that the decision which they publish is infallible (Pesch, Pral. Dogm., I, 552).

This general agreement of theologians as to papal infallibility in canonization must not be extended to beatification. Withstanding the “Ignoramus” teaching of the canonical commentary known as “Glossæ,” in cap. un. de reliquis et venerat. SS. (III, 22) in 6; Innocent., Comm. in quinque Decretalium libros, tit. de reliquis, etc., n° 4; Ostieniae in eund. tit. n° 10; Felini, cap. liii, De testibus, etc., X (II, 20); Caesari, tract. De individuibus adversus Lutherum ad Julium Medecem; Augustini de Ancora, seu Triumphi, De potestate eccl. Q. xiv, a. 4j). Canonists and theologians generally deny the infallible character of decrees of beatification, whether formal or equivalent, since it is always a permission, not a command; while it leads to canonization, it is not the last step. Moreover, in most cases, the cultus permitted by beatification is restricted to a determined province, city, or religious body (Benedict XIV, op. cit., I, xiii). Some, however, have thought otherwise (Arrigas, Theol. V, disp. 7, § 6; Amicus, Theol. IV, disp. 7; 14, n° 98; Turrianus on II—II, V, disp. 17, n° 6; De Bene, De S. Inquiat. II, dub. 254).

PRESIDENT PROCESSION IN CAUSES OF BEATIFICATION AND CANONIZATION.—We must first distinguish causes and processes, notwithstanding the “central teaching” of the method followed is not entirely identical in both cases.

(a) The Beatification of Confessors.—In order to secure beatification (the most important and difficult step in the process of canonization) the regular procedure is as follows:

(1) Choosing an opus postulatum by the postulator-general of the cause, to promote all the judicial inquiries necessary in places outside of Rome. Such inquiries are instituted by the local episcopal authority.

(2) The preparation of the inquiries (processus), all of which are carried on by the ordinary episcopal authority. They are of three kinds: Informative inquiries regard the reputation for sanctity and miracles of the servant of God, not only in general, but also in particular instances; there may be several such inquiries if it is thought that they belong to different dioceses. Processus de non cultu are instituted to prove that the decrees of Urban VIII regarding the prohibition of public worship of servants of God before their beatification have been obeyed; they are generally conducted by the bishop of the place where the relics of the servant of God are preserved. Other inquiries are known as Processus diligentiarum and have for their object the writings attributed to the person whose beatification is in question; they vary in number according to the case, but are thought likely to be found, and may not be judicially executed before an “Instruction” is obtained from the promoter of the Faith by the postulator-general and by him sent to the bishop in question.

(3) The results of all these inquiries are sent to Rome, to the Congregation of Rites, in charge of a messenger (portitor) chosen by the judges, or by some other secure way, in case a rescript of the congregation dispenses from the obligation of sending a messenger.

(4) They are opened, translated if necessary into Italian, a public copy is made, and a cardinal is deputed by the pope as relator or ponens of the cause, for all which steps rescripts of the congregation, confirmed by the pope, must be obtained.

(5) The writings of the servant of God are next revised by theologians appointed by the cardinal relator himself, authorized to so act by a special rescript. Meantime, the advocate and the procurator of the cause, chosen by the postulator-general, have prepared all the documents that concern the introduction of the cause (positio super introductione causa). These consist of (a) a summary of the informative processes, (b) an information, (c) answers to the observations or difficulties of the promoter of the faith sent by the postulator-general.

(6) This collection of documents (positio) is printed and distributed to the cardinals of the Congregation of Rites forty days before the date assigned for their discussion.

(7) If nothing contrary to faith and morals is found in the writings of the servant of God, a decree is published authorizing further action (quod in causa procedi posset ad ulteriorem), i.e. the discussion of the matter (dubium) of appointment or non-appointment of a commission for the introduction of the cause.

(8) At the time fixed by the Congregation of Rites an ordinary meeting (congregatio) is held in which this appointment is debated by the cardinals of the aforesaid congregation and its officials, but without the vote or participation of the consultors, though this privilege is always granted them by rescript.

(9) If in this meeting the cardinals favour the appointment of the aforesaid commission, a decree to that effect is promulgated, and the pope signs it, but, according to custom, with his papal name, not with that of his pontificate. The consequent approval of the servant of God is judicially given the title of Venerable.

(10) A petition is then presented asking remissorial letters for bishops in partibus (outside of Rome),
authorizing them to set on foot by Apostolic authority, the inquiry (processus) with regard to the fame of sanctity and miracles in general. This permission is granted by rescript, and such remissorial letters are prepared and sent to the postulator-general. In case the eyewitnesses be of advanced age, other remissorial letters are usually granted for the purpose of opening a process known as 'inchoative' concerning the particular virtues and miracles that the person is connected with. This is done in order that the proofs may not be lost (ne perempt probationes), and such inchoative process precedes that upon the miracles and virtues in general.

(11) While the Apostolic process concerning the reputation of sanctity is under way outside of Rome, documents are being prepared by the procurator of the cause for the discussion de non cultu, or absence of cultus, and at the appointed time an ordinary meeting (congregatio) is held in which the matter is investigated; if it be found that the decree of Urban VIII has been complied with, another decree provides that further steps may be taken.

(12) When the inquiry concerning the reputation of sanctity (super famam) has arrived in Rome, it is opened (as already described in speaking of the ordinary, and with the same formularies in regard to rescripta), then translated into Italian, summarized, and declared valid. The documents super fama in general are prepared by the advocate, and at the proper time, in an ordinary meeting of the cardinals of the Congregation of Rites, the question is discussed: whether there is evidence of a general repute for sanctity and miracles of this servant of God. If the answer is favourable, a decree embodying this result is published.

(13) New remissorial letters are then sent to the bishops in partibus for Apostolical processes with regard to the reputation for sanctity and miracles in particular. These processes must be finished within eighteen months and when they are received in Rome are opened, as above described, and by virtue of an equal number of rescripta, by the cardinal prefex, translated into Italian, and their summary authenticated by the Chancellor of the Congregation of Rites.

(14) The advocate of the cause next prepares the document (positio) which has reference to the discussion of the validity of all the preceding processes, informative and Apostolic.

(15) This discussion is held in the meeting called congregatio rostialis from the fact that it is only judges of the Rota who vote. If the difficulties of the process are met with satisfaction, the advocate, the postulator, and the rest of the consistory, draft a decree establishing the validity of the inquiries or processes is published.

(16) Meanwhile all necessary preparation is made for the discussion of the question (dubium): Is there evidence that the venerable servant of God practised virtues both theological and cardinal, and in an heroic degree? (An constat de virtutibus Ven. servi Dei, tam theologics quam cardinalibus, in heroico gradu?) In the causes of confessors this step is of primary importance, and the point is discussed in the same way as in cases or congregations called respectively, ante-preparatory, preparatory, and general. The first of these meetings is held in the palace of the cardinal relator (reporter) of the cause, and in it only consultants of the Congregation of Sacred Rites are allowed to vote; the second takes place in the Vatican, and again only the afore-said consultants vote, though on this occasion in presence of the Cardinals of the Congregation of Rites, and, with their chairman, or prefect, presiding; the third is also held in the Vatican, and at it the postulator, the relator, and both consultants vote. For each of these congregations the advocate of the cause prepares and prints official reports (positiones), respectively report, new report, final report, concerning the virtues, etc., positio, positio nova, positio nonissima, super virtutibus. In each case, before proceeding to the subsequent meeting, a majority of the consultors must decide that the difficulties of the theologian of the Faith have been satisfactorily solved.

(17) When the Congregation of Rites in the above described general meeting has decided favourably, the pope is asked to sign the solemn decree which announces that there is evidence of the heroic virtues of the servant of God. This decree is not published until after the pope, having commended the matter to God in prayer, gives a final consent and confirms by his supreme sentence the decision of the congregation.

(18) The miracles now remain to be proved, of which two of the first class are required in case the practice of virtues in the heroic degree has been proved, in both ordinary and Apostolic inquiries or processes, by eyewitnesses—three, if the eyewitnesses were found only in the ordinary processes; four, if the virtues were proven only by hearsay (de audito) witnesses. If the miracles have been sufficiently proven in the Apostolic processes (super virtutibus) already declared valid, steps are taken at once to prepare with the same formularies (super miracula). If in the Apostolic processes only general mention has been made of the miracles, new Apostolic processes must be opened, and conducted after the manner already described for proving the presence of virtues in the heroic degree.

(19) The discussion of the particular miracles proceeds exactly in the same way and in the same order as that of the virtues. If the decisions be favourable, the general meeting of the congregation is followed by a decree, confirmed by the pope, in which it is announced that there is proof of miracles. It must be noted here that in the positio for the ante-preparatory congregation there are required, and are printed, opinions of two physicians, one of whom has been chosen by the postulator, the other by the Congregation of Rites. Of the three reports (positiones) above mentioned, and which are now also required, the first is prepared in the usual way; the second consists of an exposition of the heroic virtues of the servant of God, an information, and a reply to laborious observations of the opponents of the heroic decision. If a majority of the consultors are favourable, a decree to this effect is issued by the pope, and at the time appointed by him the solemn beatification of the servant of God takes place in the Vatican Basilica, on which occasion a pontifical Brief is issued permitting the public cultus and veneration of the beatified person now known as Blessed (Beatus).

(b) The Beatification of Martyrs.

(1) The causes of martyrs are conducted in the same way as those of confessors as far as the informative processes and those de non cultu and ad introductionem cause are concerned. But when once the commission of introduction has been appointed they advance much more rapidly.

(2) No remissorial letters are granted for Apostolic processes concerning the general reputation for martyrdom and miracles; the letters sent call for an immediate investigation into the fact of martyrdom, its motive, and the particular miracles alleged. There is no longer a discussion of the general reputation for martyrdom and miracles.

(3) The miracles are not discussed, as formerly, in separate meetings, but in the same meetings that deal with the fact and the motive of the martyrdom.
(4) The miracles (signa) required are not those of the first class; those of the second class suffice, nor is their number determined. On some occasions the decision as to miracles has been entirely dispensed with.

(5) The discussion as to martyrdom and miracles, formerly in these meetings or congregations, via, the ante-preparatory, preparatory, and general, is now usually conducted. Through a dispensation to be had in each instance from the sovereign pontiff, in a single congregation known as particularia, or special. It consists of six or seven cardinals of the Congregation and the pope personally, or specially deputed by the pope. There is but one postito prepared in the usual way; if there be an affirmative majority a decree is issued concerning the proof of martyrdom, the cause of martyrdom, and miracles. (Consilare de Martyrio, causâ Martýrí et signâ.)

(6) The final stage is a discussion of the security (super tuto) with which advance to beatification may be made, as in the case of confessors; the solemn beatification below. If followed in all cases of formal beatification in causes of both confessors and martyrs proposed in the ordinary way (per viam non cultus). Those proposed as coming under the definition of causes excepted (causa excepta) by Urban VIII are treated in another way. In such cases it must be proved to an immemorial public veneration (at least for 100 years before the promulgation, in 1640, of the decrees of Urban VIII) has been paid the servant of God, whether confessor or martyr. Such cause is proposed under the title of “confirmation of veneration” (de confinitione cultus); it is dealt with in an ordinary meeting of the Congregation of Rites. When the difficulties of the promotor of the Faith have been satisfied, a pontifical decree confirming the cultus is promulgated. Beatification of this kind is called equivalent or virtual.

(c) The Canonization of Confessors or Martyrs.—The canonization of confessors or martyrs may be taken up as soon as two miracles are reported to have been worked at their intercession, after the pontifical permission of public veneration as described above. At this stage it is only required that the two miracles worked after the permission awarding a public cultus be discussed in three meetings of the congregation. The discussion proceeds in the ordinary way; if the miracles be confirmed, another meeting (super tuto) is held. The pope then issues a Bull of Canonization in which he not only permits, but commands, the public cultus, or veneration, of the saint.

It is with the utmost possible brevity that I have described the elements of a process of beatification or canonization. It may be easily conjectured that considerable time must elapse before any cause of beatification or canonization can be conducted, from the first steps of the information, inquiry, or process, to the issuing of the decree super tuto. This is especially true at present, when a great number of causes, new and old, are proposed for discussion before the Sacred Congregation of Rites (see “Catalogue ac Status Caesarum Beatificationes”), Rome, (1901). According to the constitution of this Congregation, more than one important discussion (dubia majora) cannot be proposed at the same time. It must be remembered (a) that the same cardinals and consultors must vote in all discussions; (b) that there is a single promoter of the Faith and one sub-promotor, who alone have charge of all observations to be made with regard to the dubia; (c) that these cardinals and consultors have to treat questions of ritual as well as processes of canonization and beatification. To exceed all this business there is but one weekly meeting (congressus), a kind of minor congregation in which only the cardinal prefect and the major officials vote; in it less important and practical questions are settled regarding rites as well as causes, and answers are given, and rescripts which the pope afterwards verbally approves. The other meetings of the congregation (ordinary, rotal, and “upon virtues and miracles”) may be held six times in the course of the year. Some other cause must therefore be found for the slow progress of causes of beatification or canonization than a lack of good will or activity on the part of the Congregation of Rites.

Expense.—It will not be out of place to give succinctly the ordinary actual expenses of canonization and beatification. Of these expenses some are necessary others merely discretionary, i. e. some are specified (e. g. the expenses incurred in obtaining the most of gifts presented) to others, though necessary, are not specified. Such are the expenses of the solemnity in the Vatican Basilica, and for paintings representing the newly beatified which are afterwards presented to the pope, the cardinals, officials, and consultors of the Congregation of Rites. The limits of this class of expenses depend on the postulator of the cause. If he chooses to spend a moderate sum the entire cause from the first process to the solemn beatification will not cost him less than $20,000. The expenses of the process from beatification to canonization will easily exceed $30,000. In illustration of this we subjoin the final account of the expenses of the public solemnities in the Vatican Basilica for the canonization, by Leo XIII, of Saints Anthony Maria Zaccaria and Peter Fourier, as published by the Most Rev. Domenico Plane, titular Archbishop of Lodicea, then Secretary of the Congregation of Rites.

CAMILLO BECCARI

Beatiudes, Mount of.—This name is given to the place where Our Saviour delivered the "Sermon on the Mount," beginning with the Beatitudes. It is a scene of this discourse today. It is known as Mount Tabor, Karn Hattin (or Kurun Hattin), the Horns of Hattin, a mountain which receives its name from the little village at its northern base and from the two cones or horns which crown its summit. Karn Hattin is in Galilee, within easy distance of Nazareth, Caesarea, and Mt. Tabor, and of the shores of Lake Gennesaret (the Sea of Galilee) to the east, and of Capharnaum to the north-east, in the centre, therefore, of much of the ministry of Jesus. It lies 1,816 feet above the lake and 1,133 feet above the sea level (according to Bedeker, Palestine and Syria, Leipzig, 1898, pp. 385, 288, which has the high au
BEATITUDES

According to another opinion recently put forth by certain critics, the mountain is purely ideal in Matthew, while in Luke a plain is the place on which the Beatitudes were spoken. The author of the First Gospel, in the opinion of Loisys (Le Discours sur la Montagne) "desires to have for the publication of the New Law, a setting analogous to that which is described in Exodus (xx, 16-22) for the Old Law. The mountaineous landscape of Mathew is the Sima Winetor, where Jesus speaks as prince of the kingdom of God and shows Himself greater than Moses. . . . To seek an exact geographical determination here is no more expedient than in the case of the mountain of the temple, which was a level field, being represented as high enough to afford a view of all the kingdoms of the world. There is most probably an element of truth in this opinion; nearly all the Fathers seek a symbolic meaning in the mountain (v. St. Thomas Aquinas, Catena Aurea, loc. cit.) and are probably right in attributing it to Matthew. But his account and that of St. Luke have too matter-of-fact an air to allow us to believe that either intended the mountain to be regarded as purely ideal. Mathew believed, then, that the New Law, just as the Old, was to be given from the mountain. We are assuming here, of course, that the Sermon on the Mount was a genuine discourse by Our Lord, not a mere rearrangement of His sayings made by Mathew.

If we seek to determine the particular mountain to which the Evangelists allude, we cannot advance with anything like certainty beyond the ancient opinion of St. Jerome (Comm. in Ev. Matt.) that the events before and after the discourse, show that it was given on a mountain on the border of Galilee. It is unlikely that the locality was not far distant from Capernaum, into which Our Lord entered after finishing His discourse (Matt., vii, 5; Luke, vii, 1); but the Evangelists do not say how soon after the discourse He entered Capernaum. We know from their literary methods that it may have been a day, a week, or even more, for they had little interest in the chronological sequence of events, and the attempt to press details of this sort only results in inextricable contradictions. Besides, the site of Capernaum itself is uncertain. Matthew gives us a hint as to what vicinity Jesus set out from to ascend the mountain, except that it was somewhere in Galilee; how then can the mountain be determined? It is true many (e.g. Stanley) assume that Jesus must have been in Galilee in the Sabbath; but no word in the Gospels warrants the assumption, though it is the most likely one.

In favour of Karn Hattin, it is said, is the fact that it is accessible from all sides, which is thought to be demanded by the narratives of Matthew (iv, 25, v, 1) and Luke (vi, 17). But this argument, although it is accepted by Dean Stanley (Sinai and Palestine, London, 1883, p. 369) who is usually quite rigorous in requiring proof, has little force, since the multitude did not flock to the mountain on all sides, of passing into Matthew Evangelists, first gathered together and followed Jesus up the mountainside. (Cf. iv, 25, v, 1, with vii, 28, where the multitude, not merely the disciples, are found on the spot where the sermon was delivered.) There is, however, in support of Karn Hattin; Edersheim (Life and Times of Jesus, New York, 1886) says there are several reasons which make it unsuitable, but gives none. It is near the scene of Our Lord's greatest activity and fulfils all the requirements to be the place where the Beatitudes were spoken. It is, however, that so great an authority as Robinson (Biblical Researches in Palestine, III, 487) says there are several mountains to the west of the lake equally as suitable as Karn Hattin; but this hardly gives it the proper force to the word, as mountain.
which seems to mark the place as distinct from the hills of almost uniform height in the vicinity.

JOHN F. FENLON.

Beatitude. The Exorc, the solemn blessings (beatiudines, benedictiones) which mark the opening of the Sermon on the Mount, the very first of Our Lord's sermons in the Gospel of St. Matthew (v, 3–10). Four of them occur again in a slightly different form in the Gospel of St. Luke (vi, 22), likewise at the beginning of a sermon, and running parallel to Matthew, 5–7, if not another version of the same. And here they are illustrated by the opposition of the four curses (24–26). The fuller account and the more prominent place given the Beatitudes in St. Matthew is quite in accordance with the scope and the tendency of the First Gospel, in which the spiritual character of the Messianic kingdom—the paramount idea of the Beatitudes—is consistently put forward, in sharp contrast with Jewish prejudices. The very peculiar form in which Our Lord proposed His blessedness, as it were, a dispensation, the only example of its kind, His sayings that may be styled poetical—the parallelism of thought and expression, which is the most striking feature of Biblical poetry, being unmistakably clear.

The text of St. Matthew runs as follows:

3. Blessed are the poor in spirit: for theirs is the kingdom of heaven.
4. Blessed are the meek: for they shall possess the land.
5. Blessed are they that mourn: for they shall be comforted.
6. Blessed are they that hunger and thirst after justice: for they shall have their fill.
7. Blessed are the merciful: for they shall obtain mercy.
8. Blessed are the clean of heart: for they shall see God.
9. Blessed are the peacemakers: for they shall be called the children of God.
10. Blessed are they that suffer persecution for justice' sake, for theirs is the kingdom of heaven.

TEXTUAL CRITICISM.—As regards textual criticism, the passage offers no serious difficulty. Only in verse 9, the Vulgate and many other ancient authorities omit the pronoun ab iis, ipse: probably a merely accidental omission. There is room, too, for serious critical doubt, whether verse 5 should not be placed before verse 4. Only the etymological connexion, which in the original is supposed to have existed between the “poor” and the “meek,” makes us prefer the order of the Vulgate.

First Beatitude.—The word “poor” seems to represent an Aramaic ‘dnyd (Hebr. ‘dn), bent down, afflicted. Perhaps it is a noun from the root, ‘dnyn, bending oneself down, humble, meek, gentle. Some scholars would attach to the former word also the sense of humility; others think of “beggars before God, in humble spirit,” their need of Divine help. But the opposition of “rich” (Luke, vi, 24) points especially to the common and obvious meaning, which, however, ought not to be confined to economical need and distress, but may comprehend the whole sphere of the opposite intimation, their low estate, their social dependence, their defenceless exposure to injustice from the rich and the mighty. Besides the Lord’s blessing, the promise of the heavenly kingdom is not bestowed on the actual external condition of such poverty. The blessed ones are the poor “in spirit,” who by their free will are ready to bear for God’s sake this painful and humble condition, even though at present they be actually rich and happy, while on the other hand, the really poor man may fall short of this poverty “in spirit.”

Second Beatitude.—Inasmuch as poverty is a state of humble subjection, the “poor in spirit” come near to the “meek,” the subject of the second blessing. The ἀνατελλω, they who humbly and meekly bend themselves down before God and man, shall “inherit the land” and possess their inheritance in peace. This is a phrase taken from Ps., xxxvi, (Hebr., xxxvi), 11, where it refers to the people of the God-forsaken land of Israel, but here, in the words of Christ, it is of course but a symbol of the Kingdom of Heaven, the spiritual realm of the Messiah. Not a few interpreters, however, understand “the earth.” But they overlook the original meaning of Ps., xxxvi, 11, and unless, by a far-fetched expiency, they take the earth also to be a symbol of the Messianic kingdom, it will be hard to explain the possession of the earth in a satisfactory way.

Third Beatitude.—The “mourning,” in the Third Beatitude is in Luke (vi, 25) applied to laughter and similar frivolous worldly joy. Motives of mourning are not to be drawn from the miseries of a life of poverty, abjection, and subjection, which are the very blessings of verse 3, but rather from those miseries from which the pious man is suffering in himself and in others, and most of all the tremendous might of evil throughout the world. To such mourners the Lord Jesus carries the comfort of the heavenly kingdom, “the consolation of Israel” (Luke, ii, 25) foretold by the prophet, and especially by the prophet of Consolation of Isaias (xi–lxvi). Even the Later Jews knew the Messiah by the name of Mêndēthm, Consoler. These three blessings, poverty, abjection, and subjection, are a commendation of what nowdays are called the passive virtues: abstinance and endurance, and the Eighth Beatitude (verse 10) leads us back again to the same teaching.

Fourth Beatitude.—The others, however, demand a more active behaviour. First of all, “hunger and thirst” after justice; a strong and continuous desire of progress in religious and moral perfection, the reward of which will be the very fulfilment of the desire, the continuous growth in holiness.

Fifth Beatitude.—From this interior desire a further step should be taken to acting; to the works of “mercy”, corporal and spiritual. Only the merciful will obtain the Divine mercy of the Messianic kingdom, in this life and in the final judgment. The wonderful fertility of the Church in works and institutions of corporal and spiritual mercy of every kind shows the prophetic sense, not to say the creative power, of this simple word of the Divine Teacher.

Sixth Beatitude.—According to Biblical terminology “cleansing of heart” (verse 8) cannot exclusively be found in interior chastity, nor even, as many scholars suppose, in a general state of purity of conscience, as opposed to the Levitical, or legal, purity required by the Scribes and Pharisees. At least the proper place of such a blessing does not seem to be between mercy (verse 7) and peacemaking (verse 9), nor after the spiritual and happy; while on the other hand, after justice. But frequently in the Old and New Testaments [Gen., xx, 5; Job, xxxiii, 3; Ps., xxiii (Hebr., xxiv), 4; lxii (Hebr., lxxxii), l; I Tim., i, 5; II Tim., ii, 22] the “pure heart” is the simple and natural word, the recipient of the divine vision, of the heavenly kingdom without any condition, heavenly without any condition. Moreover, vi, 22, and thus opposed to the unavowed by-ends of the Pharisees (Matt., vi, 1–6, 16–18; vii, 15; xxiii, 5–7, 14). This “single eye” or “pure heart” is most of all required in the works of mercy (verse 7)
and zeal (verse 9) in behalf of one's neighbour. And it stands to reason that the blessing, promised to this continuous looking for God's glory, should consist of the supernatural "seeing" of God Himself, the last aim and end of the heavenly kingdom in its completion.

Seventh Beatitude.—The "peacemakers" (verse 9) are those who not only live in peace with others but moreover do their best to preserve peace and friendship among mankind and between God and man, and to restore it when it has been disturbed. It is on account of this godly work, "an imitating of God's love of man" as St. Gregory of Nyssa styles it, that they shall be called the sons of God, "children of your Father who is in heaven" (Matt., v. 45).

Eighth Beatitude.—When after all this the pious disciples of Christ are repaid with gratitude and even "persecution" (verse 10) it will but be a new blessing, "for theirs is the kingdom of heaven".

So by an inclusion, not uncommon in Biblical poetry, the last blessing goes back to the first and the second. The pious, whose sentiments and desires, whose works and sufferings are held up before us, shall be blessed and happy by their share in the Messianic kingdom, here and hereafter. And viewed in this light the different kinds of blessing enumerated in the immediate verses seem to express, in partial images of the one endless beatitude, the same possession of the Messianic salvation. The eight conditions required constitute the fundamental law of the kingdom, the very pith and marrow of Christian perfection. For its depth and breadth of thought, and its practical bearing on Christian life, the passage may be put on a level with the Decalogue in the Old, and the Lord's Prayer in the New Testament, and it surpasses both in its poetical beauty of structure. The commentaries on St. Matthew and St. Mark, and the monographs on the Sermon on the Mount, the Beatitudes are treated in eight homilies of ST. GREGORY OF NYSSA, P. L., X., 348-375; P. L., XX, 322-328. Different patristical sentences on single beatitudes are noticed in P. L., XXI (Index IV), 28 sqq.

JOHN P. VAN KASTENEN.

Beaton (or Bethune), David, Cardinal, Archbishop of St. Andrews, b. 1494; d. 29 May, 1546. He was of an honourable Scottish family on both sides, being a younger son of John Beaton of Balfour, Fifeshire, and Isabel, daughter of David Monypenny of Pittin's Fife. Educated at the University of St. Andrews, he went in his seventeenth year to Glasgow, where his uncle, James Beaton, was then archbishop, and where his name appears in the list of students of the university in 1511. He completed his education in Paris, and in 1519 was appointed by James V., then King of Scotland, resident at the French court. His first ecclesiastical preferment was to the rectories of Campsie and Cambuslang, to which he was presented by his uncle, the Archbishop of Glasgow, and when the latter was translated to the primatial see in 1522, he resigned to his nephew the commendatory Abbey of Arbroath, obtaining for him from Pope Adrian VI a dispensation from wearing the monastic habit. Beaton returned from France in 1525, took his seat in Parliament as Abbot of Arbroath, and was soon created by the young King Lord Privy Seal, and in succession to Bishop Crichton of Dunkeld. James V. dispatched him to Paris in 1533, with Sir Thomas Erskine, in order to renew the Scottish alliance with Francis I, and to negotiate for the marriage of James V. with Margaret, the sister of the French king. Beaton was present at the marriage of the royal pair at Notre-Dame on 1 January, 1537, and returned with them to Scotland in May; but the young queen died of consumption two months later. We next find Beaton on a mission in England, negotiating for the marriage of Marjory, the King's sister, the Queen-Mother Margaret James, on the other hand, was backed by the zeal, wealth, influence, and talent of the whole clergy of the realm, and by many loyal Scottish lords; he had the sympathy of France and of the Emperor of Germany, the strong support of the Holy See, and the warm substance of the great mass of his subjects. Henry in vain tried to shake his nephew's confidence in Beaton by sending two successive embassies to...
Scotland, in order to urge James to follow his example in usurping the supremacy of the Church in his dominions. The King of Scots refused to be drawn into Henry's net, maintained his unshaken trust in Beaton's statesmanship and patriotism, and declined to leave his kingdom for a personal interview with his cousin the Pope. The Council at St. Andrews being thereby left to the recourse to force; and hostilities broke out between the two kingdoms in 1542. The Scotch, successful in the first engagement, were hopelessly defeated by the English forces on Solway Moss, and James died broken-hearted at Falkland soon afterwards, leaving a daughter (Mary) a week old, to inherit the crown. Beaton produced a document in which he, with three nobles, was appointed regent by the late monarch's will; but the nobles assembled in Edinburgh refused to act on this, declared the Earl of Arran (his presumptive heir to the throne) regent during the queen's minority, and imprisoned the cardinal on a false charge of conspiring with the Duke of Guise against Arran's authority. Henry now commenced negotiations with the Scottish regent and Parliament to hurry on the marriage between the infant queen and his own heir (afterwards Edward VI), of getting the Scottish fortresses and the government of the country committed into his hands, and the person of Mary entrusted to his custody. Arran and the Parliament avowedly had no opposition to the marriage of the child, but were resolute against the rest of Henry's schemes. Meanwhile the unjust imprisonment of the cardinal-primate had been followed by the proclamation of an interdict throughout the kingdom; and so deep was the feeling aroused among the still Catholic people by the closing of the churches and the suspension of the sacraments that it was thought prudent at once to release Beaton. The undaunted primate instantly summoned the bishops and clergy to St. Andrews; and the assembly passed a resolution of this tribute: and the names of the nobles, including the regent himself (who about this time abjured the new doctrines and submitted to the Catholic Church), abandoned their unnatural alliance with the invader, and ranged themselves on the cardinal's side.

In October, 1543, Marco Grimani, Patriarch of Aquileia, came from Rome as nuncio to the Scottish court; and it was during his sojourn in Scotland that the high dignity of legate a catastrophes (in January, 1544) beset Beaton by the pope. About the same time the cardinal was invested with the office of chancellor of the kingdom; the Parliament annulled the treaty of marriage between the queen and Prince Edward, on the ground of the duplicity and bad faith of Henry VIII: vigorous measures were taken against the "English party" among the Scottish nobles; and the bishops were desired to take equally stern measures for the suppression of heretical doctrines. Furious at the frustration of his schemes, Henry avowed openly his intention of overrunning Scotland, a plot for the removal from his path of the able and patriotic man who had been the chief instrument in foiling his ambitious plans. George Wishart (whose identity, long disputed, with the Wishart afterwards put to death as a heretic, was conclusively proved by the published State Papers of the time) was employed to negotiate between Cranmer of Brunswick and Beaton's English enemies, on the subject of the assassination of the cardinal. Nearly three years were devoted to the intrigues and correspondence, and with this dark shadow, Beaton's life and, meanwhile, the prime never relaxed his zeal and diligence in the performance of his high functions. He summoned another convention of the clergy in Edinburgh in January, 1546, when further large sums were voted in support of the defence of the realm against the invading armies of England; and two months later he convoked a provincial Council at St. Andrews. Beaton was already sitting at Trent, but no Scottish prelate was able to attend it, the cardinal himself seeking dispensation from Pope Paul III., on the ground of the overwhelming nature of his duties in Scotland. The council at St. Andrews was presided over by the apprehension, and trial, for preaching heretical doctrines, of George Wishart. The trial took place in St. Andrews Cathedral, in presence of the two archbishops and other prelates; the articles of accusation were read and duly proved; and Wishart, remaining obdurate in his errors, was condemned to death, and suffered (being first strangled and afterwards burned) at St. Andrews on 28 March, 1546.

The profound impression caused throughout Scotland by Wishart's execution induced Beaton's enemies to seek a pretext forthwith. The same time later a pretext was found for the consummation of the long-cherished plot in a dispute which had arisen, on a question of property, between the cardinal and Norman Leslie, Master of Rothes. The latter, with his uncle John Leslie, Bishop of Kirkwall, and James Melville, undertook the work of butchery; and at daybreak on 29 May, 1546, they obtained admission into the castle of St. Andrews, and dispatched the cardinal with repeated blows of their swords. Thus perished, in the forty-fifth year of his age, one to whom (as his most recent, and far from partial, biographer, Professor Herkless, declares) "historic truth must give a place among Scotland's greatest statesmen and patriots". No student of his life and of the history of his times can deny the justice of this tribute; and in this respect the cardinal be proved himself not less vigilant in the discharge of the spiritual functions of his office, in watching over the interests of the Scottish Church, and protecting her by every means at his command from the inroads of heresy and schism. As to the charge of persecution brought against him, account must be taken of the age in which he lived, and the prevailing sentiments of the time. Seven persons in all are said to have suffered death under him; and Hossack, comparing this number with the hundreds to which the number under some of his contemporaries, concludes that Beaton deserves rather to be commended for his moderation than denounced for his barbarity. With regard to his moral character, it has been violently attacked by his enemies, and no less warmly defended by his friends. The charges of impiety against him, never raised until after his death, are in many cases absurd and contradictory; and Leslie, Winzet, and others who strenuously denied them, are fully as worthy of credit as those who maintained them. The evidence from contemporary history is indeed insufficient to decide the truth or falsity of these charges; and Lyon, the historian of St. Andrews, prudently concludes that the accusations and the denials may be considered as neutralizing one another.

There are two well-known portraits of Beaton, one (formerly in the Scots College at Rome, now at Blairs College, Aberdeenshire), depicting him in his doctor's cap, with slightly silvered brown hair, and star-cut features, beset with large, dark eyes. In the other portrait, which hangs in Holyrood Palace, he is represented in a black dress, with white bands, and wearing the red skull-cap of a cardinal. 

LESLIE, Hist. of Scotland (Bannatyne Club, 1850), 149, 150, 151. State Papers, Henry VIII; Transactions of the Society of Antiquaries of Scotland, vii. MEMOIRS, 606, 611, 612; Lyon, Hist. of St. Andrews, Ancient and Modern (Edinburgh, 1858); HERKLESS, Cardinal Beaton, Priest and Politician (Edinburgh, 1891).
Beaton (or BETHUNE), James, a Scottish Archbishop; b. c. 1473; d. at St. Andrews, 1539, was the sixth and youngest son of John Beaton of Balfour, in Fife. He graduated as Master of Arts at St. Andrews University in 1493, four years later was Precentor of Dunfermline Cathedral (Diocese of Caithness), and in 1503 Provost of the Collegiate Church of Bothwell. Next year he became Prior of Whithorn and Abbot of Dunfermline, and in 1505 was made Treasurer of the Kingdom. In 1508 he was elected to the See of Galloway, in succession to George Vaux, but before his consecration he was chosen to succeed Robert Blackader (who had died, whilst on a pilgrimage to the Holy Land, in July, 1508) as Archbishop of Glasgow, and was consecrated at Stirling, 15 April, 1509. With the archbishopric he held the commendatory Abbeys of Arbroath and Kilwinning, and in 1515 he became Chancellor of Scotland. King James V, whose father had fallen at Flodden in 1513, was at this time a child of three, and Beaton, as one of the Council of Regency, without whose consent the queen-mother could not make a move of the most important personages in the realm during the minority of the young king. The country was at this time distracted by the feuds between two of the regents, Angus and Arran, and Beaton, who was connected with the latter (for Arran had married as his third wife a daughter of Sir James Beaton of Creich), naturally espoused his kinsman's side. A well-known story tells how Bishop Gavin Douglas of Dunkeld came to Glasgow to urge the archbishop to ally the strife within the council, and how Beaton, strongly as he declared for his decision, yet, to his considerate feeling, that he was powerless in the matter, caused the coat of mail which he wore under his ecclesiastical habit to rattle. "Alas, my Lord!" said his brother bishop at this strange sound, "I fear your conscience clatters!" In 1522 Beaton was translated to St. Andrews, vacant by the death of Archbishop Foreman. As primate he threw all his powerful influence into the scale against the intrigues of Henry VIII to obtain predominance in Scotland; and it was greatly owing to his statesmanship that the old league with France, of which he had been a chief defender, was continued. At length he was appointed, by royal authority, to be the ambassador of France instead of Mary of England. Albany's jealousy had deprived Beaton of the chancellorship some years previously, and he was never reappointed, though he enjoyed the full favour of the crown. A few months after the second marriage of James (to Mary of Guise) the primate got his nephew, David Cardinal Beaton, appointed his coadjutor with right of succession and he died in the autumn of 1539 in his castle at St. Andrews.

The stormy period in which Beaton's public life was cast, with France and England both intriguing for the alliance of Scotland, and the independence of the kingdom trembling in the balance, has made him, perhaps inevitably, appear to posterity more prominent as a statesman (in which quality there is no room for doubt as to his ability or his patriotism) than as a churchman and a prelate. There is, however, evidence that during both his thirty years' tenure of the See of Glasgow and the seventeen years during which he held the see, he conducted himself closely with both the material and spiritual interests of the two dioceses, and in particular with the advancement of learning. In Glasgow he added and endowed altars in his cathedral, made additions also to the episcopal palace, which he erected with a wall, and he erected stone bridges in various parts of the diocese. He was, moreover, as sedulous as his predecessors had been in safeguarding the ancient privileges of the archiepiscopal see. On his translation to St. Andrews he proved himself a constant benefactor to the university of that city, and he founded there a new college (St. Mary's) for the study of divinity, civil and canon law, medicine, and other subjects. The new college was confirmed by Pope Paul III in February, 1538, and was extended and completed by Beaton's successor, Archbishop Hamilton, sixteen years later. It still exists as the divinity college of the university. Finally, Beaton showed himself ever zealous for the propagation of the true faith in Scotland. Under the direct orders of the pope (Clement VII) and unhesitatingly supported by the king, he caused many of those engaged in propagating the new doctrines to be arrested, prosecuted, and in some cases put to death. Modern humanity condemns the cruel manner of their execution; but such severities were the result of the spirit of the age, for which Archbishop Beaton cannot be held responsible. There is no reason to doubt that his motive in sanctioning the capital punishment of notorious heretics was simply to avert the miseries which religious schism could not but entail on a hitherto united people.

D. O. Hunter-Blair.
with the League against Henry IV, and on its dis-

solution he was threatened with banishment; but by the intervention of Cardinal Bourbon and Sully

and of Queen Catherine, he was allowed to remain

in France, where he was regarded with the greatest

esteem. Perhaps the most remarkable testimony

to the respect felt for his character in Scotland is

to be found in the fact that in 1588, nearly forty

years after the overthrow of the ancient Church,

the archbishop was formally restored, by an act of

the Scottish Parliament, to all his “heritages, honours,
dignities, and benefices, notwithstanding that he has never acknowledged the religion

professed by the king himself.” He survived for a month before his death, the union of the English and

Scottish crowns under King James. On the 24th of April, 1603, when James was actually on

his way to London to take possession of his new

kingdom, the archbishop died in Paris, in the eighty-

sixth year of his age, and half a century after his

episcopal consecration.

Beaton had lived in Paris for forty-three years, and had been Scottish ambassador to five successive

kings of France. He was buried in the church of St. 

Pierre Le Vieux, his own church, being attended by

a great gathering of prelates, nobles, and common

people. The poetical inscription on his tomb

eulogizes him, in the exaggerated language of the

times, as the greatest bishop and preacher of his age in the whole world. A source of comfort to

all was that of his Protestant successor in the See of

Glasgow, Spottiswoode, who describes him as “a

man honourably disposed, faithful to his queen while

she lived and to the king her son; a lover of his

country, and liberal to all his countrymen.” No

breath of scandal, in a near relation, ever attached

to the honour of his name or the purity of his private

life. Beaton left his property, including the archives of the Diocese of Glasgow, and a great mass of

important correspondence, to the Scots College in

Paris. Some of these documents had already been

deposited by him in the Carthusian monastery in

the same city. In the stress of the French Rev-

olution many of these valuable manuscripts were

packed in barrels and sent to St. Omera. These

have unfortunately disappeared, but the papers left in

the college were afterwards brought safely to Scot-

land, and are now preserved at Blair Atholl, the

Catholic seminary near Aberdeen.

Beatrix (or Beatrice).—The name Beatrice has been borne by a certain number of holy persons, but
to one of them has attainted to any very eminent

renown of sanctity.

I. BEATRICE, SAINT, a Roman virgin and martyr, inscribed in the Roman Martyrology on 29 July.

She is believed to have been the sister of the martyrs

Simplicius and Fortunatus, whose relics are found in Via Portuensi. The legend says that she was then

denounced as a Christian by Lucretius to whom she

was betrothed, and was stript by her own servants.

Lucretius shortly afterwards died suddenly by the

execution of the sentence of death.

II. BEATRICE D’ESTE, SAINT, d. 1262. Custom seems to warrant the giving the title Saint to one of

the two holy nuns named Beatrice d’Este. She

belonged to the family of the Norman Dukes of Apulia

and was herself the daughter of the Marcheess of

Ferrara, and to her are due many modifications in the

legal organisation of Venice, but he died of his wounds, after a battle, just before the wedding day, and his bride refused to return home, but attended by some of her maidens,
devoted herself to the service of God, following the

Benedictine rule, at San Lazzaro just outside

Ferrara. Her cultus was approved by Clement XIV, and Pius VI allowed her festival to be kept on 19

July.

III. BEATRICE seems also to have been accepted as

the Latin name of a noble lady of Bohemia, called, in

Bohemian Bozena, who lived at the end of the

twelfth century and became a nun. Her brother was

the famous St. Hronom, one of the patrons of the

Kingdom of Bohemia. From the Bollandist life of

Hronom (Acta SS., 4 July) it would seem that his

sister Beatrice was honoured on 13 November.

IV. BEATRICE d’Este, aunt of the saint of that

name, who is generally known as Blessed Beatrice,

seems to have died in 1226 or perhaps in 1246. She

was born in the castle of Este, became a nun in the

convent of Santa Margherita at Solerolo, but not

finding herself sufficiently secluded from the world,

she founded another religious house in a deserted

monastery at Gemona. Her body after death was

translated to the church of Santa Sophia at Padua

and it was a tradition that when anything important

was about to befall the family of Este she turned in

her grave so that the noise was audible throughout

the church. An account of her is given in the Acta SS.,

under 10 May.

V. BEATRICE, Blessed, a Cistercian nun, first

prioress of the convent called Nazareth near Lier

in Brabant; d. 1291. She came of a wealthy family,

and was wishing to continue her studies until at the age

of seven she was sent to live with the Béguines.

She afterwards joined the Cistercian nuns at Vallie Florida

whence she was sent to commence the new foundation

at Nazareth. She practised very severe austerities,
wearing a girdle of thorns and compressing her body with cords. Our Lady is said to have appeared to her and to have pierced her heart with a

fairy dart. After Nazareth was abandoned in a time

of disturbance, the body of Blessed Beatrice is believed to have been translated by angels to Lier.

Her day is 29 July, and a short life of her is included by

Henriques in his “Lilia”.

VI. BEATRICE OF ORNAGIEUX, Blessed, d. about

1306, a Carthusian nun who founded a settlement

of the order at Eymieux in the department of Drome.

She was specially devoted to the Passion of Christ

and is said to have driven a nail through her left hand

to help herself to realize the sufferings of the Crucifi-

xion. Her cultus was confirmed by Pius IX in 1889. (See “Anal. jur. pont.”, 1869, XI, 264.)

There are modern lives by Bonfier and Chapsin.

(V, 5) Her feast is on 13 February.

VII. BEATRICE DA SILVA, Blessed, a Portoguese

nun, d. 1 September, 1490. In Portuguese she is

known as Blessed Brites. She was a member of the

house of Portalegre and descended from the royal

family of Portugal. She accompanied the Portu-

guese Princess Isabel to Spain, when she married

John II of Castile. There Beatrice seems to have

aroused the jealousy of her royal mistress and was

persecuted for three years by the Inquisition and

vision of Our Blessed Lady, whom she saw attired in

the blue mantle and white dress of the Conception

Order which she was afterwards to found, Beatrice

was allowed to retire to Toledo where she entered

the Dominical Order. Then her life was being specially honoured and frequently visited by

Queen Isabel the Catholic. The latter aided her to

found an order in honour of the Immaculate Con-

ception, which adopted the Franciscan Rule. It was

approved by Innocent VIII in 1489 and with some

modifications by Julius II in 1511. Beatrice died

ten days before the solemn inauguration of her new

order. She is much honoured in Spain, and there

is a life of her by Bivar. (See also the “Anal. jur.

pont.”, III, 549.)
BEAUFORT

A fuller notice of all the above will be found in Dunbar, Dictionary of Scantly Women (London, 1804), I, 107-110. Several of them also are noticed with more or less fulness in the SS. Cellaret, huii, des sources hist., Bio-Bibli, (2d ed., 1905).

HERBERT THURSTON.

BEAUFORT, LADY MARGARET, Countess of Richmond and Leycester, b. 1441; d. 1508, daughter and heiress of John Beaufort, first Duke of Somerset. Her father, the grandson of John of Gaunt, Duke of Lancaster, and great-grandson of Edward III, having died when she was three years old, she was brought up by her mother with the greatest care and devotion. Married while a mere child to John de la Pole, son of the Duke of Suffolk, whose ward she was, she refused to ratify the union on attaining the years of discretion and was then given in marriage to Edmund ap Meredith ap Tudor, Earl of Richmond and brother of Henry VI, of whom, with his brother Jasper, she became the ward on Suffolk’s attainder. Edmund died (1456) a few months after the marriage, his posthumous son Henry, Earl of Richmond (afterwards Henry VII), being born 28 January, 1456. In 1459 Margaret married Lord Henry Staf- ford, heir apparent to the hereditary lordship and marriage, which traced his descent from Henry III. He died in 1482. Her third husband was Thomas, Lord Stanley, afterwards created Earl of Derby. She was instrumental in bringing to an end the discord among the Lancastrian party, who, as a result of the victory of Bosworth (1485) became King Henry VII, took in marriage Elizabeth of York, daughter of Edward IV.

Lady Margaret Beaufort was an exceedingly religious woman—"to God and to the Church full obedient and tractable sechying his honour and pleasure full besly" (Mornyyme Remembrance).—and a model of piety and devotion. Blessed John Fisher, who became her chaplain in 1502 and who had singular opportunities of understanding the nobleness of her character both as her spiritual director and as the instrument of her princely benefactions, bears testimony to her virtues and good works in the funeral oration preached at her Month’s Mind. All England, he says, had cause to mourn her death. The poor would miss her bounteous alms: the students of both universities, “to whom she was as a moder”, and the learned her patronage. The virtuous and devout lost in her a loving sister; relatives and clerks prized her powerful devotions. Divine service “dayly was kept in her chappell with grate number of preestes clerkes and children to her grate charge and cost.” She was used to recite the Divine Office, as well as the Office of Our Lady, and to assist at many Masses daily. She made a public voyage of charity before Fisher and was enrolled as a “sister” in many monastic houses, among others in those of the Charterhouse, Croyland, Durham, and Westminster. In her own establishment she provided for the education of numbers of young men at her own cost, for many of whom she used her influence with great wisdom and discernment in the matter of ecclesiastical preferment. Besides her private works of charity and of benevolence, and her benefactions to religious houses, she was a munificent patron of learning, establishing Resident- ships (now Professorships) in Divinity at Oxford and Cambridge (Royal Licenses, 1496, 1497: Charters, 8 September, 1503); and, in 1504, she made provision for a preacher to deliver six yearly sermons "to the praise and honour of the Holy Name of Jesus Christ, and of the Blessed Virgin Mary." By her liberality God’s House at Cambridge was refounded as Christ’s College (Royal License, 1505) for a master, twelve fellows, and forty-seven scholars. St. John’s College, Cambridge, was also established, in the place of the ancient foundation of St. John’s Hospital, by provision made in her will, in a codicil to which she states her intention of foure eng and suitably to cast it out for a master and fifty scholars. She had a tender devotion to the Real Presence and translated into English and caused to be printed the fourth book of the imitation of Christ, which treats of the Blessed Sacrament. She "promised to memorise many prayers for those who fared to the burning faith with which she received the Body of the Lord upon her death-bed. She also herself translated "The Mirourre of Golde for the sinful soule." Historians agree in extolling her many saintly and pious qualities; and it is said that "all the "devotion those days afforded", the "errors of the age she lived in". The Catholic sees the important part she played in the civil and political history of her time, but perceives in her as well a singularly high example of a Christian life, in which a robust and sturdy faith bore its natural and wholesome fruits in deeds of liberality and benevolence.

FRANCIS AVELING.

BEAUCLERC, Abbey (abbatia sua vocatur Bellus Locus) was a Cistercian house in Hampshire, one of the three monasteries founded by King John (c. 1204) and peopled by thirty monks from Citeaux. The founder granted it a rich endowment, including land in the New Forest, corn, money, one hundred and twenty cows, twelve bulls, a golden chalice, and an annual tun of wine. The buildings were dedicated in 1246, in the presence of Henry III and his queen, Richard Earl of Cornwall, and many prelates and nobles. Pope Innocent III constituted Beauclerc an "exempt abbey," with the right of sanctuary; and this was sought in 1247 by Ann Neville, wife of Warwick the King-maker, the day before the battle of Barnet. Twenty-six years later Perkin Warbeck fled to Beauclerc from the pursuing armies of Henry VII. Shortly before the suppression of the monastery in 1539, the Visitors’ report mentioned that "thirty-two sanctuary-men, who were support of debt, felony, or misdeem" were housed in the monastic precincts with their wives and families.

The first Abbot of Beauclerc was Hugh, and the last Thomas Stephens, elected in 1535. In the following year the abbey, with its annual revenue of £220, was granted to Thomas Wriothesley, afterwards Earl of Southampton. In 1540, the Dukes of Montagu to the Dukes of Bucleuch; and Lord Montagu of Beauclerc, the Duke of Bucleuch’s nephew, now (1907) owns it. He resides in the old gatehouse of the abbey, which has been care- fully restored. Little else remains of the domestic buildings, except the fine early English refectory, used as the parish church. The cloisters are in ruins, but the guest-house dormitory still exists, and has been restored. Not least is a stone of the beautiful church, 350 feet long, with a nave of nine bays, transepts, tower, and double-aired choir with cir- cular apse, of a purely Continental type most unusual in England. The late Duke of Bucleuch had the foundations of the church, with every column and buttress, carefully traced out and marked in sand. The new Abbey, on the outskirts of the town of Water, was founded from Beauclerc in 1239, by Henry III.

DUGDALE, Monast. Anglic., v 680 sq.; Register Cart. Mon. de Bellis Locus (Cott. MSS., Birr, 1529); Notitia Monasticon (Hampshire, vii); Hampshire and the Isle of Wight (Victoria County History, 1912); BSAV, 1923; D. O. HUNTER-BLAIR.

BEAUNE, RENAUD DE, a French Bishop, b. in 1597.
at Tours; d. 1600 in Paris. Before entering the ecclesiastical state he held secular positions such as Councillor of Parliament and Chancellor of Francis of Bourbon. He was also a great orator and greatly favoured him and appointed him to numerous ecclesiastical offices. In 1588, he became Bishop of Mende and in 1581, Archbishop of Bourges. King Henry IV of France named him his grand almoner in 1591 and appointed him to the Archbishopric of Sens in 1595; but the pope did not confirm the appointment until 1602. He was a member of the commission instituted by Henry IV in 1600 to reform the University of Paris. By his contemporaries, Renaud de Beaune was ranked as one of the greatest orators of the time. Posterity rated his work for the pacification of France higher than his oratorical talent. It was his influence that led to the successful issue of the conference of Suresnes, near Paris, in 1586. He promised the conversion of Henry IV and brought about peace between the latter and the "League." He received the abdication of the king, and, although the abdication of an excommunicated prince was reserved to the pope, absolved him, July, 1585, on condition, however, that "the approval of the same dispersion of monasteries and proceeds obtained. In spite of this condition the abdication was invalid, and the action of the archbishop caused, at least partly, the delay in obtaining the papal confirmation of his nomination to the See of Sens. The principal among de Beaune's opponents were the Jansenists;其次是朝圣者，among them funeral orations on Mary, Queen of Scots (1587), and on Queen Catharine de Medicis (1589); (2) translation of the Psalms of David into French (Paris, 1575, 1587); (3) "La réformation de l'université de Paris (1605, 1607)."

N. A. WEBER.

Beauregard, JEAN-NICOLAS, celebrated French pulpit orator, b. at Metz in Lorraine, 4 Dec., 1773; d. at the castle of Gröningen in Southern Germany, 27 July, 1804. He entered the Society of Jesus at Nancy, 30 Sept., 1749. After his noviceship and higher studies, he taught classics and rhetoric with distinction for six years at the colleges of the Society in Nancy, Verdun, Strasburg, and Pont-a-Mousson. His theological studies, which followed, were completed in Strasbourg, and after the year of third probation Father Beauregard was back at Nancy for the year 1786-87 as perfect of studies. The next year he was assigned to the teaching of the Classics, and thenceforth became the ruling spirit of his life. Having gained a wonderful reputation in the lesser towns of France, he was summoned to Paris, where his success was even more phenomenal. Especially noteworthy was the course of sermons preached before the Court during the Lent of 1789, in which Father Beauregard is said to have clearly foretold the evils that were about to engulf France. Father Beauregard escaped the first terrors of the Revolution, but was forced to flee to London in 1794. Later on he established himself at Waverley, where the last years of his life were spent at the castle of the Princess Sophia of Hohenlohe-Bartenstein. His works, which for the most part are still only in manuscript, consist of sermons and letters. A collection of his sermons, made by the royal court printer, was printed in Paris in 1890, often reprinted, and later embodied in Migne's "Oeuvres Sacrées", vol. LXXI.

Daniel. Le P. Beauregard, sa vie et ses travaux: Sommervies. Thés. de la c. d. J., 1; HART. Galerie illustrée de la c. de J., 1. *

JOHN F. X. MURPHY.

Beauregard, PIERRE GUSTAVE TOUTANT, soldier, b. near New Orleans, Louisiana, U. S. A., 28 May, 1818; d. there 20 February, 1893. He was appointed to the U. S. Military Academy at West Point and graduated in 1838. Assigned first to an artillery regiment, he passed to the engineers and served thereafter in that corps. During the war with Mexico he was engaged in yam operations, notably at Cerro Gordo, Contreras, Chapultepec, and the city of Mexico, being wounded twice in the last-mentioned battle (13, 14 September, 1847), and was brevetted major. After fourteen years of continuous service he was made Captain of Engineers. 3 March, 1863, the war over, he was given supervision of the construction work along the Gulf coast, and on 23 January, 1861, was detailed as superintendent of the Military Academy at West Point. He almost immediately resigned, however, and on 20 February, 1863, threw in his lot with the seceding States of the Southern Confederacy. He was placed in command at Charleston, South Carolina, and began the Civil War by the attack on Fort Sumter. When the fort was evacuated he was sent to Virginia and was in charge of the Confederate forces in the battle of Bull Run, 21 July. He was then sent to Tennessee, second in command to A. S. Johnson at the battle of Shiloh; succeeding Johnson, when the latter was killed, he nearly routed the Union army in the first day's fight. For his acting as General in Chief, Gen. Grant, he was forced to retreat on the next day. Beauregard's failing health compelled him to take a leave of absence for three months, when, with a promotion to a general's rank, he was again placed in command at Charleston, where he successfully resisted for a year and a half the siege operations of Gen. Gilmore and his naval assistants. In May, 1864, he joined Lee in Virginia and held Petersburg against the Union advance. In October of the same year he was made commandant of the military division of the West and sent to George and then to North Carolina where he united with Gen. J. E. Johnson to resist the march of Gen. Sherman. The attempt was futile and they surrendered, April, 1865. After the war he became president of the New Orleans, Jackson and Mississippi Railroad, and Adjutant-General of the State of Louisiana. In 1866 he refused the offer of the chief command of the Rumanian army, and in 1869 that of the army of the Khedive of Egypt. He lent his name to the Louisiana Lottery and as its salaried manager was for several years one of its chief supporters. He was the author of "Principles and Maxims of the Art of War" (Charleston, 1863) and "Report of the Defence of Charleston" (Richmond, 1864).

THOMAS F. MEEHAN.

Beauvais (Bellocvum), Diocese of, a suffragan of the archiepiscopal See of Reims. The Dioceses of Beauvais, Noyon, and Senlis having been suppressed by the Concordat of 1802 for the benefit of Amiens, a see was re-established at Beauvais in 1822, having within its jurisdiction the former Diocese of Beauvais and a large portion of the ancient Dioceses of Noyon and Senlis. A pontifical Brief of 1581 appointed the incumbents of the See of Beauvais to call themselves Bishops of Beauvais, Noyon, and Senlis.

Diocese of Beauvais.—Tradition looks upon St. Lucianus, sent to Beauvais by Pope Fabianus and martyred, about 272, Thaddaeus and Julianus, as the founder of Christianity in that place. The martyrdom of St. Romana under Diocletian, of St. Just during the atrocious persecution by the legendary Rictiovarus (about 410), of St. Maxentia, daughter of the King of Scotland, who, as Eudoxia, preferred to die a martyr at the altar or behead himself, render the primitive Church of Beauvais illustrious. The exact date of the foundation of the episcopal see is obscure, but we know that the bishop who occupied it from 632 to 660 was the thirteenth
incumbent. Among its bishops Beauvais counts Odo (860–881), charged by Nicholas I in 867 to answer with Hincmar the grievances of Photius; Gui (1033–85), who founded St. Quentin of Beauvais, the great school of theology; Pierre Cauchon (1420–32), identified with the condemnation of Joan of Arc; Jean Juvenal des Ursins (1433–44), author of the Chronicle of Charles VI; Cardinal Odet de Châtillon (1535–62), nephew of Colignon, who turned Protestant at

the Reformation; François-Joseph de la Rochefoucauld (1772–92), martyred in the Carmelite prison in 1792; and Feurtrie (1825–30), minister of ecclesiastical affairs in the Martignac cabinet.

Diocese of Senlis.—The Church founded at Senlis by St. Rieul (Regulus) about 300, had its ninth bishop, St. Levangius, in 611. Saints Sanctinus, Agmarus, and Aubertus were bishops in the sixth and seventh centuries.

Diocese of Noyon.—The headquarters of the city of the Vermandou, who undoubtedly had a bishop from the beginning of the fourth century, having been destroyed by the barbarians, the bishops were without a residence until St. Médard (530–545), fourteenth bishop, installed himself at Noyon. This city counted among its bishops the goldsmith St. Eloi (Eliius, 640–650), Dagobert’s prime minister; St. Mummolenus (second half of seventh century), and St. Eunutius (eighth century). The Belgian See of Tournai was cut off from Noyon in 1146. These sees played an important part in the history of France during the Carolingian, and at the beginning of the Capetian, period. A council convoked at Beauvais by Charles the Bald, in 845, elected Hizemar Archbishop of Reims. At Compiègne, where, next to his hunting-lodge, Charles the Bald had built the great Abbey of Notre Dame, placing therein the bodies of Sta. Cornelius and Cyprian, and where Kings Louis the Stammerer and Eudes were crowned and buried, there were held, in the course of the ninth century, numerous councils which regulated the political and religious questions of the time. A council at Compiègne in 1092 forced

the heretic Roscelin to retire, and one at Senlis in 1310, condemned nine Templars. Being Count of Beauvais from 1013, and Peer of France from the twelfth, the Bishop of Beauvais bore the royal mantle at the coronation of the Kings of France; it was he, who, with the Bishop of Langres, was sent to raise the King from his throne to present him to his people. The Bishop of Noyon was both duke and peer. The monastic life was established in this region by St. Euvrost in the sixth, and St. Germer in the seventh century.

The medieval Cathedrals of Beauvais and Senlis are inferior in point of interest to that of Noyon, which is one of the most beautiful monuments of the twelfth century. During the Middle Ages, on each recurring 14th of January, the Feast of Asses was celebrated in the Beauvais Cathedral, in commemoration of the flight of the Virgin into Egypt (see Asses, Feast Of), and every year, on 27 June, there is a religious procession through the streets of Beauvais to perpetuate Jeanne Hachette’s opposition to Charles the Bold in 1472. John Calvin was a native of Noyon, and Cardinal Pierre de Rieux was born in Compiègne. The places of pilgrimage are: Notre Dame de Bon Secours at Compiègne, a shrine erected in 1637 as an expression of gratitude for the raising of the siege of the city by the Spaniards; Notre Dame de Bon Secours at Gannes; Notre Dame de Bon Secours at Feuquières; Notre Dame du Hamel at L’Oueil Notre-Dame; Notre Dame de Bon Secours at Montmélan; Notre Dame de Senlis at Senlis; Notre Dame des Fleurs at Ville-en-Bray.

In 1890 the following institutions were found in the diocese: 6 infant asylums, 44 infant schools, 14 girls’ orphanages, 1 free industrial school, 2 patronages, 2 charity kitchens, 9 hospitals and hospices, 1 house of retreat, 12 homes for the aged, 9 communities devoted to care for the sick in their homes, all conducted by nuns; and 2 parishes under the care of the Brothers of the Christian Schools. In 1900 there were the following religious orders for men: Marians at Senlis, Redemptorists at Thury in Valois, and Fathers of the Holy Ghost at Beauvais. Among the orders for women there were no congregations belonging exclusively to the diocese. At the close of 1905 the Diocese of Beauvais had 407,808 inhabitants, 39 pastores, 501 succursals (parish churches), and 10 curacies.

Georges Goyau.

Beauvais. Gilles-François-de, Jesuit writer and preacher, b. at Main, France, 7 July, 1083; d. probably at Paris about 1773. He entered the Society of Jesus 16 August, 1709, and taught belles-lettres, rhetoric, and philosophy. After ordination he was assigned to preach and gave the Advent course at Court in 1774, during which year he published his "Life of the Ven. Ignatius Arvevedo, S. J.", and in 1748 that of Ven. John de Britto, S. J., the latter of which has been translated into English by Father Faber of the Oratory (Richardson, London, 1851). He wrote a number of other works of devotion and for spiritual reading.

Sommervogel, Bibl. de la c. de J., IX, 1098–1116.

Mark J. McNeal.

Beauvais. Jean-Baptiste-Charles-Marie de, a French bishop, b. at Cherbou, 17 October, 1731; d. at Paris, 4 April, 1790. The sermons he preached before the court during Advent, 1768, and Lent, 1773, raised his reputation as a pulpit orator to such a height that he was promoted to the See of Leids. He distinguished himself on all occasions by his de
of the Church and is considered one of the best preachers of the eighteenth century. In 1783 he resigned his bishopric and settled at Paris. In 1787, he was made the president of the new academy which was formed. His sermons were printed at Paris in 1806, prefaced by an interesting account, written by the Abbé Bougogne, of the preacher and his discourses. The most celebrated of his funeral orations is the one on Louis XV; this discourse, however, failed to please the courtiers. The best of his panegyrics are one on St. Augustin, delivered before the Assembly of the Clergy of France, and one on St. Louis, before the Académie Française.

BESSEYRE, RENÉ-FRANÇOIS DE. See TOULOUSE.

BOOSTER, THOMAS. See SPRINGFIELD, Diocese of.

Bédan, ROC-HAMOISE-AUGUSTE, b. 4 August, 1783 at Pointe-a-Pitre, Guadeloupe; d. there 24 February, 1839. His father sent him to France, where he was committed to the care of his godfather, the Abbé Sicard, the well-known educator of the deaf and dumb. The latter put him under the direction of Abbé Jauffret then exhibiting a great interest in the education of deaf-mutes. After a brilliant course at the Lyceé Charlemagne in Paris, Bonaparte devoted himself to the study of the system of education of the deaf and dumb. He followed the course of instruction given by Abbé Sicard and gave special attention to Laurent Clerc, a deaf-mute who afterwards became president of an institution for the deaf and dumb at Hartford, Connecticut, U. S. A. As prefect of studies in the institution for the deaf and dumb at Paris, he directed all his efforts to finding the signs best adapted, in precision and extension of meaning, to the expression of the ideas of the deaf and dumb. Bédan published the result of his studies in his first book, "Essai sur les sourdes-muettes et sur le langage naturel" (1817). His principal works, under the titles "Mimographie" (1822) and "Manuel d'enseignement pratique des sourdes-muettes" (1822), laid down the principles used in the institution for the deaf and dumb in Paris. After leaving this school, he published several other works, the most important being "L'éducation des sourdes-muettes mise à la portée des instituteurs primaires et de tous les parents". Having refused the direction of the school of the deaf and dumb of St. Petersburg, and New York he founded a similar institution at Paris on the boulevard Montparnasse; later he became director of the school of Rouen and finally went back to Guadeloupe, where he founded a school for the deaf and dumb. He had already written, in 1819, "Eloge historique de l'abbé de l'Epée", which was awarded the prize offered by the Academy of Sciences.

G. M. SAUVAGE.

Bec, ABBEY OF.—The Benedictine Abbey of Bec, or Le Bec, in Normandy, was founded in the earlier part of the eleventh century by Herluin, a Norman knight who about 1011 left England to devote himself to a life of religion. The abbey itself is now in ruins, but the modern name of the place, Bec-Hellouin, preserves the memory of its founder. There is some difference in reckoning the date of the foundation, for Herluin's religious family would have been moved to new quarters, and any one of the three dates may be regarded as the beginning of the famous abbey. Herluin's first foundation was at Bonneville, or Burneville, where a monastery was built in 1034, and here in 1037, Herluin was canonically abbot. About 1250, the monks were directed to move to a more suitable site, two miles away, by the banks of the Bec (Danish, Bek, a brook) which gave its name to the abbey. This removal took place about 1040. About two years after this, Lanfranc, who had already become famous for his lectures at Avranches, left the scene of his triumph and came to bury himself in this humble home of piety. At first his retreat was unknown, but when the works were begun by the simple piety of Herluin was crowned by the learning of Lanfranc. Before long it was necessary to build a larger and more lasting monastery. As the site first chosen had proved to be unsatisfactory, the new foundations were begun farther up the valley of the Bec and further away from the water. This important change was really the work of Lanfranc, who was now the prior and the right hand of the aged abbot. As the first change of site was closely followed by the arrival of one great teacher, this second foundation was almost coincident with the coming of a yet greater glory of the abbey, St. Anselm of Canterbury.

The future archbishop and Doctor of the Church first came to Bec in 1060 while the work of building was in progress, and the year after was able to move into their new home. In 1062, Lanfranc was appointed Abbot of Caen, and Anselm, in spite of the fact that he had been such a short time at Bec, was chosen to take his place as prior. In the same year also the famous master at Canterbury was made yet more illustrious disciple. When the new abbey church at Bec, which had taken some fifteen years to build, was finished in 1077, it was appropriately consecrated by Lanfranc, who was now Archbishop of Canterbury. Abbot Herluin, the founder, died in the following year, and Anselm succeeded him as second Abbot of Bec. Only six years later Abbot Anselm was called to take the place of his old master, Lanfranc, as Archbishop of Canterbury. The abbey continued in existence down to the French Revolution. The long list of abbots from the eleventh to the eighteenth century, given in "Gallia Christiana" (XI, 222-239), contains many of the most illustrious French names, and shows that even in its later years Bec was a place of some importance. It had suffered much in the Hundred Years' War with England, and still more in the Huguenot troubles. But after these desolations it was restored to something of its former state by the Congregation of St. Maur. Thus the chief house of medieval learning was renewed by the fathers of modern historical scholarship. Its restoration was too soon undone by the excesses of revolution; but the Maurists rendered a more enduring service to the abbey by their admirable editions of Lanfranc, Anselm, and the "Chronicon Becense". Of the old abbey whose erection is recorded in that chronicle, some ruins still remain. The later buildings now serve as a military station. This transformation is a curious counterpart to the happier change effected at Fort Augustus.

In its later years the Abbey of Bec was but one among many religious houses engaged in work for learning and religion, but in the golden age of Lanfranc and Anselm it held a unique position, and exerted a far-reaching influence on the course of church history and the advancement of theological learning. In its early days it was not unusual for archbishops to the See of Canterbury: Lanfranc, Anselm, and Theobald the fifth abbot. Among other prelates who came from this famous school, it will be enough to mention Pope Alexander II, William, Archbishop of Rouen; Armot, Gundulf, and Ernulf, who were unknown to the world without, and Gilbert Crispin, Abbot of Westminster. The influence of Lanfranc's work at Bec John Richard Green says very truly: "His teaching raised Bec in a few years into the most famous school of
Christendom. It was in fact the first wave of the intellectual movement which was spreading from Italy to the ruler countries of the West. The whole meagre intellectual atmosphere concentrated upon the group of scholars who gathered around him; the fabric of the canon law and of medieval scholasticism with the philosophical scepticism which first arose under its influence, all trace their origin to Bec. (A Short History of the English People, I, ii, 3). When we recall that the first treatise he composed under the influence of its greatest scholar, Anselm, on later theology, we cannot but feel that though the old Abbey may be in ruins the school of Bec still lives on, and all may sit at the feet of its famous master.

W. H. Kent.

Beca, (Verbeek, Van der Beek), Martin, controversialist, b. at Hilvarenbeek, Brabant, Holland, 6 January, 1563; d. at Vienna, 24 January, 1624. He entered the Society of Jesus, 22 March, 1583, taught theology for twenty-two years at Würzburg and Utrecht, and was later made forefather to Ferdinand II from 1620 until the time of his death. He possessed a style clear and dignified, and noticeably free from the bitterness which marked the polemical literature of the day. His writings were directed principally against Calvin, Luther, and the Anabaptists; of these his "Manuale Controversiarum," Mainz, 1623, treating of predestination, free will, the Eucharist, and the infallibility of the Church, passed through several editions. For a complete list see the Soverweg, Biblia Sacra, de la companhia de Jesus" (14, col. 1091-1111), wherein are mentioned by title forty-six volumes. His chief theological work, "Summa Theologiae Scholasticae" (4 vols. 4to, Mainz, 1612) is in great part a compendium of Suarez's Commentary on St. Thomas Aquinas. By a decree of the Congregations of the Index, 3 January, 1613, his book "Controversia Anglica de potestate regis et pontificis" was put on the Index donte corruptur, not so much to condemn certain exaggerations it contained as to prevent the facile theology of Parisian condottieri, and at the same time adding some declarations against papal authority. The "Controversia" was corrected and published somewhat later with a dedication to Pope Paul V. Becan, in 1608, published at Mainz, "Aphorismi doctrine Calvinistarum ex eorum libris, dictis et factis collecti," in reply to Calvin's "Aphorismi doctrine Jansenitarum." Aphorismus XV, "Jesus vero qui se maxime nobis opponat, aut necandi aut si id commore fieri non potest, ejiciend, aut corde mendaciae ac calumniis oppressi sunt." The Jesuits, our chief adversaries, ought to be put to death, or, if that cannot be easily done, they ought to be banished, or, at any rate, overwhelmed with lies and calumnies, has been misconstrued so as to make it appear that Becan wished a complete destruction of thejoyous, and the very words of Calvin. That such was not Becan's intention is clear from the title of the book "Aphorismi ex eorum libris dictis et factis collecti" and the development shows that the author was only drawing a logical consequence from the position of the Calvinists of the time. A lengthy discussion about this aphorism was carried on by A. Sabatier in the "Journal de Genève" (26 January, 1896; 10 May, 1896) and the "Revue Chrétienne."
that the Greek Church entirely agreed with Rome in matters of doctrine. Several synods were held shortly afterwards, all with the same object in view; and in one of them it was discovered that a certain Pleanesiota had tampered with a passage of St. Gregory of Nazianz, 7 July 444. The year 1335 brought the martyrdoms of the three Carthusian priors (4 May), of Bl. John Fisher (22 June), and of St. Thomas More (6 July), all five for the Divine right of the Roman Church to universal supremacy in spirituals. The pope was so deeply affected by their example that his unguarded expressions of reverence and veneration for the martyrs, reported by spies, drew down upon him the resentment of the schismatical king. In November, 1538, the Abbots of St. John's further exasperated Henry and his ministers by denying the legal right of a royal commission to confiscate his abbey. Within a year of this he was committed to the Tower on a charge of treason, was discharged from custody, and rearrested some time before the last of November, 1539. Witnesses were found to testify how the abbot had said that God would "take vengeance for the putting down of these houses of religion", that Fisher and More "died like good men and it was pity of their deaths", and that the reason for the king's revolt from Catholic unity was the king's desire to marry Anne Boleyn and to be crowned in Westminster Abbey without the Pope's permission. When the examination the abbot yielded to human weakness and tried to explain away his former assertions of Catholic truth. In spite of these lapses he eventually received the crown of martyrdom. Tried at Colchester, by a special commission, in November, 1539, he no longer pleaded against the charge of contumacy to the newly established order of things. He was convicted and executed. An anonymous contemporary partisan of Henry's schism, quoted by Dom Bede Camm in "Engl. Martyrs", I, 400, says of Abbot Beeche and other bishops who died at the same offences, "It is not to be as these trusty traitors have so valiantly jeopardized a joint for the Bishop of Rome's sake... his Holiness will look upon their pains as upon Thomas Becket's, seeing it is for like matter". The decree of Pope Leo XIII by which Abbot John Beeche received beatification bears date 13 May, 1895.

Beckedorff, Georg Philipp Ludolf von, b. at Havelberg, 14 April, 1778; d. at Grünhöf, 27 February, 1858. He first studied theology at Jena, then medicine at Göttingen, where he obtained the degree of doctor in 1799. In 1810 he gave up the medical profession and accepted the office of tutor to the crown-prince of Anhalt-Bernburg. For seven years he lived at Ballenstedt. In the movement for the reunion of the churches, then agitating the various religious sects, he took an active part by able and timely publications. An appeal "To Young Men of Germany over the body of the murdered Kotzebue" caught his attention. The head of a Catholic Government secured his services, and he became a member, first of the High Privy Council, then of the Ministry of Public Worship, and later on, supervisor of the public school system. In this capacity he contributed largely, in co-operation with Niethammer, to the expansion of popular education and publication. Nine volumes the "Year Book of the Catholic Schools". The State recognized his efficiency by appointing him attorney-general for the University of Berlin. The new line and inclinations kept him remote from political movement and while studying the history and claims of the various sects, his conviction became stronger...
that the Catholic Church was the true Apostolic Church. It was not an easy step for one in his position to follow up his conviction; but the death of a beloved child decided him and he informed the king of his resolve. The kindly crown-prince advised a consultation with Bishop Salier of Ratibson, and a few days later with this prelate sufficed to prepare Beckedorff for abjuration, Holy Communion, and Confirmation in June, 1827. His dismissal from public office quickly followed and he withdrew with his family from the capital to Grünhof in Pomerania.

Beckedorff now devoted himself to the management of his estates and the education of his children, but his abilities were too marked to suffer this retirement for long. In spite of repeated refusals of the Government to ratify his election, his admiring counymen chose him again as their deputy. It was not until the accession of King Frederick William, however, that his rights and merits were recognized. In reparation for the injustice done, the king raised him to the nobility and made him president of the state agricultural department. Two volumes on agriculture attest his competence in his entirely new office and his zeal in the service of his country. With the still higher aim of furthering religious union and peace he published several works on the mutual relations of family, school, State, and Church. His work, "The Catholic Truth, Words of Peace", was through the editions and still remains an excellent popular manual of apologetics. Nowhere was Beckedorff's influence felt more than at Grünhof and in its neighbourhood. Having learned that some Catholics were scattered throughout the district, he built a church for them and maintained the resident priest in his own house. He founded also a school and home for poor children and entrusted them to the Sisters of Charity; both of these institutions began to flourish during his lifetime.

CHARLES B. SCHRAUTZ.

Becker, Thomas Andrew, sixth Bishop of Savannah, Georgia, U.S.A., b. at Pittsburg, Pennsylvania, 20 December, 1832; d. at Washington, Georgia, 29 July, 1899. His parents were German Protestants and he became a convert in early manhood. He made his theological course at the College of Propaganda, Rome, where he was ordained 18 July, 1859. Returning to the United States he was given charge of a mission at Martinsburg, West Virginia, whence he went to Mount St. Mary's College, Emmitsburg, to act as one of the professors. Archbishop Spalding then made him his secretary. Later he was sent to St. Peter's Church, Richmond, Virginia, and while there was appointed, 3 March, 1868, first Bishop of the new Diocese of Wilmington, Delaware, for which he was consecrated by Archbishop Spalding at Baltimore, 16 August, 1868. He ruled this diocese until, on the promotion (1 February, 1886) of Bishop William G. Gross from Savannah to the bishopric of Oregon City, Bishop Becker was transferred to the See of Savannah, 26 March, 1886. He was regarded as one of the most accomplished bishops of his day, and was noted for his ability as a linguist. He was one of the secretaries of the Fourth Plenary Council of Baltimore, and contributed frequently to current reviews and periodicals. A series of articles in the "American Catholic Quarterly Review" on the idea of a true university attracted wide attention. He was devoted always to the cause of temperance, and by his exordia in this line, with twenty-five years for the education of worthy and deserving young men, on condition that they be American born, total abstainers, and willing to devote their energies to the service of the Diocese of Savannah.

THOMAS F. MEEHAN.

Becket, Thomas. See Thomas Becket, St.

Beckx, Pierre-Jean, twenty-second General of the Society of Jesus, b. at Sichem, Belgium, 8 February; 1755; d. at Rome, 4 March, 1857. Father Beckx was ordained priest, 7 March, 1819, and appointed to a little parish near Brussels; eight months afterwards he resigned this office and entered the Society of Jesus at Hildesheim, Germany. Having learned the German language, he was soon able to reside in Munich, bear confessions, and give religious instruction to German. The Duke and Duchess of Anhalt-Köthen were converted to the Catholic Faith in 1825 and asked for a Jesuit chaplain; Father Beckx was appointed to this duty and went to live in Köthen. He found only twenty Catholics there; in four years he had 200 converts. In 1830 he went to live in Vienna, where he was the only Jesuit for many years. From time to time he was called to Rome and sent on important missions to Lombardy, Hungary, and Bavaria. In 1855, he was made Provincial of Austria and brought the Society of Jesus to the Father of the Immaculate, Zollikofen, and Lemberg. The next year, on the death of Father Roothaan, he was chosen General of the Society by the unanimous vote of delegates from all parts of the world. The new father-general brought to his office a deep spiritual faith; a profound knowledge of the divine law; a deep knowledge of the human heart; firmness and dignity; serenity of mind in extreme trial; faultless manners; and a remarkable soundness of judgment.

During the thirty-four years that Father Beckx governed the society its membership was doubled; new provinces were established in Ireland, France, Spain, Portugal, and America; new missions were begun in different parts of the world; the education of youth was continued with success; new colleges were opened in every province. During his term of office eighty Jesuits were raised to the honours of the altar; all but three of these were missionaries or martyrs. The society was expelled from Italy in 1860, from Spain in 1868, from Germany in 1873, from France and the French colonies in 1890. In 1866 Father Beckx went back to his native country, to Florence, where he remained until the election of Father Anderledy as Vicar-General, in 1883; then he went back to Rome, abdicating his charge entirely. There, four years later, he died at the advance of ninety-two years, a son of the author of "Der Monat Maria", Vienna, 1838, which passed through thirty editions in German, and was translated into English, French, Italian, Dutch, Polish, Armenian, and Arabic.

Sommerhof, Bibl. de la o. de J.; Roodstock, Letters, XV: Messenger of the Sacred Heart (New York, 1889); Ezechia Historique (April, 1887).

PATRICK H. KELLY.

Bequerel, Antoine-César, French physicist, b. at Chartillon-sur-Loing (Loiret), 7 March, 1758; d. at Paris, 18 January, 1878. In 1806 he entered the Polytechnic School after having studied at the Central School of Fontainebleau under Baily, and later at the Collège Henri IV with Cauchois. In 1808 he was sent to the military school (d'application) at Metz, which he left the following year with the rank of second lieutenant. During two and a half years, he fought under General Suchet in the Spanish campaign, distinguishing himself at several of the important sieges. Ill health obliged him to ask for a leave of absence. He was raised to the rank of captain, made Chevalier of the Legion of Honour, and nominated to the new position of assistant inspector of studies at the Polytechnic School. During
the invasion of 1814 he resumed military service for a time, but was soon retired with the rank of \textit{chef de bataillon}.

A change of career then became necessary. After some hesitation, he settled down to the real work of his life, the study and advancement of the science of electricity. Becquerel’s achievements are numerous and important. He combated Volta’s contact theory of the electro motive force in a cell and showed that the real source of voltaic electricity is to be found in chemical action. That in fact, the generation of electricity in any case is possible only where there is chemical action, frictional work, or difference of temperature. He observed the dismagnetic properties of the metal antimony before Faraday, and constructed a constant cell with two liquids which was the forerunner of the well-known \textit{Daniell cell}”. His differential galvanometer increased the accuracy to be attained in the measurement of electrical resistances. He applied the results of his study of thermo-electricity to the construction of an electric thermometer and measured with it the temperature of the interior of animals, of the soil at different depths, of the atmosphere at different heights. He was also very much interested in questions of meteorology, climate, and agriculture.

Becquerel’s work in electro-chemistry brought him, in 1837, the award of the Copley medal of the Royal Society of London. He was a member of the Academy of Sciences (1829), professor-administrator of the Museum of Natural History, and Commander of the Legion of Honour. His chemical work was described by the chemist Dumas: “Becquerel loved his country, his science, his family”. Fizeau ends his eulogy with these words: “He died with the serenity of a sage and the tranquillity of a good man, with confidence in God and the immortal hopes of a Christian”.

More than 500 papers were published in the \textit{Comptes Rendus} in Vols. I–LXXV, and in the \textit{Annales de Chimie et Physique”}, series II–V. The following are some of his more important works: (1) Traité expérimental de l’électricité et du magnétisme et de leurs phénomènes naturels (Paris, 1834–40, 7 vols.; 1853, 2 vols.); (2) La physique considérée dans ses rapports avec la chimie et les sciences naturelles (1844, 2 vols.); (3) Éléments de physique-technique et de météorologie (1847, with his son Edmond); (4) Résumé de l’histoire de l’électricité et du magnétisme (1858); (5) Des forces physico-chimiques, de leur intervention dans la production des phénomènes naturels (with plates, Paris, 1873). The title of the book “On the Physico-chemical forces that direct their intervention in the production of natural phenomena” would appear to indicate a materialistic philosophy. This impression is entirely removed by his explicit statement that “we must admit the existence of a creative Power which manifests itself at certain times”, especially in order to explain the appearance of organic life.

\textbf{Bédard, Pierre}, a French-Canadian lawyer and member of the Assembly of Lower Canada, b. at Charlesbourg near Quebec, 13 November, 1762; d. at Three Rivers, 26 April, 1829. He was the son of Pierre-Stanislas Bédard and Marie-Isabelle Le Moyne. After he had completed the course of studies at the seminary of Quebec, where he proved himself an excellent pupil, he studied law and was admitted to the bar. In 1792 Bédard was elected member of the legislature for Northumberland and continued a member of the Assembly until 1812. During these years he represented successively Northumberland, the lower town of Quebec, and Surrey, and gave proof of his sterling qualities. He devoted himself, however, chiefly to the study of constitutional questions of which many of the government officials seemed to have but an imperfect conception. When the newspaper, \textit{“Le Canadien”} was founded in 1806, he became a regular contributor and expressed his views concerning the constitutional government of the province of Quebec with such effect that the governor, Sir James Craig, in the spring of 1810 suppressed \textit{“Le Canadien”} and threw Bédard into prison. Here Bédard remained some twelve months, although the governor offered him his freedom several times, so that he could take his seat in the Assembly to which he had been elected during his imprisonment. Bédard, however, demanded a regular trial, which the authorities were not willing to grant. Finally for the sake of peace Bédard left the prison. After Craig had resigned his position and gone to England, the new governor, Sir George Prevost, appointed Bédard a judge of the superior court at Three Rivers as compensation for what he had endured. Bédard filled this position from 11 December, 1813, until March, 1827, when illness obliged him to absent himself from his duties for some months. After this his health failed steadily until his death. He was buried in the parish church at Three Rivers. Bédard had four children, one of whom, Elsevir, became a distinguished judge.

\textbf{Bede} (or \textbf{Bead}, whence \textit{Bedehous}, \textit{Bedesman}, \textit{Bedol})—The Old English word \textit{bede} (Anglo-Saxon \textit{beod}) means a prayer, though the derivative forms, \textit{beot} and \textit{gebed}, was more commonly used in this context in Anglo-Saxon literature. When, in the course of the twelfth and thirteenth centuries, the use of little perforated globes of bone, wood, or amber, threaded upon a string, came into fashion for the purpose of counting the repetitions of the Our Father or Hail Mary, these objects themselves became known as beads (i.e. prayers), and our modern word \textit{bead}, as applied to small globular ornaments of glass, coral, etc., has no other derivation. In middle English the word \textit{bead} was used both in the sense of prayer and rosary. Thus Shakespeare could still write (\textit{Rich. III}, iii, 7)

\begin{quote}
When holy and devout religious men
Are at their beads [prayers], 'tis much to draw
Them thence.
So sweet is raululous contemplation.
While of Chaucer’s Prioresse we are told
\end{quote}

Of smal coral aboute hire arm she bar
A peirc of bedes, gauded al with grewe.

The gaunds, or gauds, were the ornaments or larger beads used to divide the string of "the prayer quir of beads" (i.e. set of beads—cf. pair of stairs), which may still be heard on the lips of old-fashioned English and Irish Catholics, is consequently of venerable antiquity. With such speakers a pair of beads means the round of the beads, i.e. the chaplet of
five decades, as opposed to the whole rosary of fifteen. Again, to “bid beads” originally meant only to say prayers, but the phrase “bidding the beads”, by a series of misconceptions explained in the “Historical English Dictionary”, came to be attached to certain public devotions and to the prayers which precede the reading of the Credo in the Book of Common Prayer. The prayers referred to used to be recited in the vernacular at the Sunday Mass in medieval England, and the distinctive feature of them was that the subject of each was announced in a formula read to the congregation in the Exact Office. This was called “bidding the beads”. From this the idea was derived that the word “bidding” meant commanding or giving out, and hence a certain survival of these prayers, still retained in the Anglican “Book of Canons”, and recited before the sermon, is known as the “bidding prayer”.

The words bedesman and bedeswoman, which date back to Anglo-Saxon times, also recall the original meaning of the word. Bedesman was at first the term applied to one whose duty it was to pray for others, and it sometimes denoted the chapter of a guild. But in later English a bedesman is simply the recipient of any form of bounty; for example, a poor man who obtains free quarters in an almshouse, and who is supposed to be bound in gratitude to his benefactor. Similarly, bedehouse, which originally meant a place of prayer or an oratory, came at a later date to be used of any charitable institution like an almshouse. It has now practically disappeared from literary English, but survived provincially in a number of Welsh place-names in the form betting, e.g. Betws y Coed. Finally, bede-roll, as its etymology suggests, meant the roll of those to be prayed for, and in some sense corresponded to the diptychs of the early Church. This word is tolerably frequent occurrence in manuscripts with the early English gilds. In these associations a list was invariably kept of departed members who had a claim on their prayers. This was the bede-roll.

For beads in the sense of rosary, see ROSARY.

HERBERT THURSTON.

Bede, THE VENERABLE, historian and Doctor of the Church, b. 672 or 673; d. 735. In the last chapter of his great work on the “Ecclesiastical History of the English People” Bede has told us something of his own life, and it is, practically speaking, all that we know. It is written in 731, when death was not far off, not only show a simplicity and piety characteristic of the man, but they throw a light upon the composition of the work through which he is best remembered by the world at large.

“Thus much” he says, “concerning the ecclesiastical history of Britain, and especially of the race of the English, I, Beda, a servant of Christ and priest of the monastery of the blessed apostles St. Peter and St. Paul, which is at Wearmouth and at Jarrow (in Northumberland), have with the Lord’s help composed so far as I could gather it either from ancient documents or from the traditions of the elders, or from my own knowledge. I was born in the territory of the said monastery, and at the age of seven I was, by the care of my relations, given to the most reverend Abbot Benedict (St. Cuthbert), and afterwards to Ceolfrid, to be educated. From that time I have spent the whole of my life within that monastery, devoting all my pains to the study of the Scriptures, and amid the observance of monastic discipline and the duties of singing in the Church, it has been my delight to learn or teach or write. In my nineteenth year I was admitted to the diaconate, in my thirtieth to the priesthood, both by the hands of the most reverend Bishop John (St. John of Beverley), and at the bidding of Abbot Ceolfrid. From the time of my admission to the priesthood to my present fifty-ninth year, I have endeavoured for my own use and that of my brethren, to make brief notes upon the living God, and the other works of the venerable Fathers or in conformity with their meaning and interpretation.” After this Bede inserts a list or Indiculus, of his previous writings and finally concludes his great work with the following words: “And I pray thee, loving Jesus, that as Thou hast graciously given me to drink in with delight the words of Thy knowledge, so Thou wouldst mercifully grant me to attain one day to Thee, the fountain of all wisdom and to appear for ever before Thy face.” It is plain from Bede’s letter to Bishop Egbert that the historian occasionally visited his friends for a few days, away from his own monastery of Jarrow, but with such rare exceptions his life seems to have been one peaceful round of study and prayer passed in the midst of his own community. How much he was beloved by them is made manifest by the touch-
BEDE

answered, 'it is finished. Take my head in thy
hands for it much delights me to sit at opposite any
good place where I used to pray, that so sitting I
may sit still upon my Father.' The legend of his
cell singing, 'Glory be to the Father and to the
Son and to the Holy Ghost' and the rest, he peace-
fully breathed his last breath."

The title *Venerabilis* seems to have been associ-
ated with the name of Bede within two generations after
his death. There is no evidence for the legend reported
by Fuller of the "dunce monk" who in composing an
epitaph on Bede was at a loss to complete the line:
*Hac sumi in *fossad Bede . . . .
and who next morning found that the angel had
filled the Ages, but his feat was not so generally
praised as Alcuin, Amalarius, and seemingly
Paul the Deacon, and the important Council of
Aschen in 835 describes him as *venerabilis et
moderna temporis doctor admirabilis* Beda. This
decree was specially referred to in the petition which
Cardinal Wiseman and the English bishops addressed
to the Holy See in 1859 praying that Bede might be
declared a Doctor of the Church. The question had
already been debated even before the time of Bene-
dictine, and on 13 December, 1858, that Leo XIII
decreed that the feast of Venerable Bede with the title of
*Doctor Ecclesiae* should be celebrated throughout the
Church each year on 27 May. A local cultus of St. Bede had been main-
tained at York and in the North of England through-
out the Middle Ages, but its feast was not so generally
observed in the South, where the Sarum Rite was
followed.

Bede's influence both upon English and foreign
scholarship was very great, and it would probably
have been greater still had it not been for the devastation
inflicted upon the northern monasteries by the inroads
of the Danes less than a century after his death. In
numberless ways, but especially in his moderation,
gentleness, and breadth of view, Bede stands out from
his contemporaries. In point of scholarship he was
undoubtedly the most learned man of his time. A
very remarkable trait, noticed by Plummer (I, p.
xxvii), is his sense of literary property, an extraor-
dinary thing in that age. He himself scrupulously
noted in his writings the passages he had borrowed
from others and he even bequeathed the copies of his
works to preserve the references, a recommendation
to which they, alas, have paid but little attention.
High, however, was the general level of Bede's
culture, he repeatedly makes it clear that all his
studies could not be fully understood by the best
Scripture. In his "De Schematibus" he says in so
many words: "Holy Scripture is above all other
books not only by its authority because it is Divine,
or by its utility because it leads to eternal life, but
also by its antiquity and by its literary form" (po-
sitione descend). It is perhaps the highest tribute
to Bede's genius that with so uncompromising and
evidently sincere a conviction of the inferiority of human
learning, he should have acquired so much real cul-
ture. Though Latin was to him a still living tongue,
and though he does not seem to have consciously
looked back to the Augustan Age of Roman Lit-
erature as preserving purer models of style than the
time of Fortunatus or St. Augustine, still whether
through native genius or through contact with the
classics, he is remarkable for the relative purity of
his language, as also for his lucidity and his sobriety,
more especially in matters of historical criticism.
In all these respects he presents a marked contrast
to St. Aldehelm who approaches more nearly to the
Greek authors.

WRITINGS AND EDITIONS.—No adequate edition
founded upon a careful collation of manuscripts has
ever been published of Bede's works as a whole. The
text printed by Giles in 1844 and reproduced in
Migne (XCV-XCIV) shows little if any advance on
the Baele edition of 1563 or the Cologne edition
of 1888. It is of course as an historian that Bede is
chiefly remembered. The great work, the "Historia
Ecclesiastica Gentis Anglorum", giving an account
of Christianity in England from the beginning until
his own day, is the foundation of all our knowledge
of early British history and a masterpiece eulogized
by the scholars of every age. Of this work, together
with the "Historia Abbatum," and the "Lettres to Eg-
bert", Plummer has produced an edition which
doubtless be called final (2 vols., Oxford, 1896). Bede's
remarkable industry in collecting materials and his
critical skill of them have been admirably illustrated
in Plummer's *Introductio*. The
"History of the Abbots" (of the twain monasteries of
Wearmouth and Jarrow), the "Letter to Egbert", the
metrical and prose lives of St. Cuthbert, and the
other smaller pieces are also of great value for the
light they shed upon the state of Christianity in
Northumbria in Bede's own day. The "Ecclesiastical
History" was translated into Anglo-Saxon at the
instance of King Alfred. It has often been translated
since, notably by T. Stapleton who printed it (1565).

Antwerp as a controversial weapon against the
Reformation divines in the 16th and 17th centuries.
The Latin text first appeared in Germany in 1475; it is
worthwhile that no edition even of the Latin was
printed in England before 1643. Smith's more
accurate text saw the light in 1742.

Bede's chronological treatises, "De temporibus
liber" and "De temporum ratione" also contain sum-
marys of the general history of the world from
the Creation to 725 and 703, respectively. These
historical portions have been satisfactorily edited
by Mommsen in the "Monumenta Germaniae his-
toricae" (4to series, 1898). They may be counted
among the earliest specimens of this type of general
chronicle and were largely copied and imitated.
The topographical work "De loes sanctis" is a descrip-
tion of Jerusalem and the holy places based upon
Adamnan and Arroulus. Bede's work was edited in
1898 by Geyer in the "Itinera Hierosolymitana"
for the Vienna "Corpus Scriptorum". That Bede
compiled a Martyrology we know from his own
statement. But the work attributed to him in extant
manuscripts has been so much interpolated and
supplemented that his share in it is quite uncertain.

Bede's exegetical writings both in his own idea
and in that of his contemporaries stood supreme in
importance amongst his works, but the list is long
and in some cases obscure. There is much comment-
ary upon the Pentateuch as a whole as well as on
selected portions, and there are also commenta-
tories on the Books of Kings, Esdras, Tobias, the
Canticles, etc. In the New Testament he has cer-
tainly interpreted St. Mark, St. Luke, the Acts, the
Canonical Epistles, and the Apocalypse. But the
authenticity of the commentary on St. Matthew
printed under his name is more than doubtful. (Plaine
in "Revue Anglo-Romaine", 1896, III, 61.)
The homilies of Bede take the form of commentaries
upon the Gospel. The collection of fifty, divided into
two books, which are attributed to him by Giles (and in
Migne) are for the most part authentic, but the genu-
inosity of a few is open to suspicion. (Morin in
"Revue Bénédictine", IX, 1892, 318.)

By various didactic works are mentioned by Bede in
the list which he has left us of his own writings.
Most of these are still preserved and there is no reason
to doubt that the texts we possess are authentic.
The grammatical treatises "De arte metrica" and
"De orthographia" have been collected by modern times
by Keil in his "Grammatice Latini" (Leipzig, 1880), VII, and the "De Schematibus et
Tropis" by Halin in his "Rhetorici Latinhi mini-
ero" (Leipzig, 1863). But the larger works "De natura
BEDFORD

BEDFORDING

rerum", "De temporebus", "De temporum ratione", dealing with science as it was then understood and especially with chronology, are only accessible in the unsatisfactory texts of the earlier editors and Giles. Beyond the metrical life of St. Cuthbert and some verses preserved in the "Ecclesiastical History" we do not possess much poetry that can be assigned to Bede with confidence, but, like other scholars of his age, he certainly wrote a good deal of verse. He himself mentions his "book of hymns" composed in different metres or rhythms. So Alcuin says of him: "Poeni numquam, in quem curationis partis erat, it is possible that the shorter of the two metrical calendars printed among his works is genuine. The Penitential ascribed to Bede, though accepted as genuine by Haddan and Stubbe and Wasserschleben, is probably not his (Plummer, I, 157).

Venerable Bede is the earliest witness of pure Gregorian tradition in England. His works "Musicae theoreticae" and "De arte metrica" (Migne, XC) are found especially valuable by present-day scholars concerned in the study of the primitive form of the chant.

HERBERT THURSTON.

BEDFORD, Frank H. S., medical writer and teacher, b. at Baltimore, Maryland, U. S. A., of a distinguished family in 1806; d. in New York, 5 September, 1870. He was a nephew and namesake of Gunning Bedford, first Attorney-General of Delaware and one of the framers of the Constitution of the United States, who was side-de-camp to General Washington and was appointed by him U. S. Judge for the District of Delaware. Dr. Bedford graduated in 1825 at Mount St. Mary's College, Emmitsburg, Maryland, and took his degree in medicine from Rutgers College, New York. He spent two years in foreign study and traveled 1,533 miles, and twenty-six years of his life became professor of obstetrics in Charleston Medical College. From here he accepted a professorship in the Albany Medical College. He went to New York in 1836 and four years later founded the University Medical College, which became a great success. In connexion with it he established an obstetrical clinic for those too poor to pay a doctor's fee. This was the first of its kind in the country and was of great service to the poor and to medical science. Dr. Bedford continued to teach until his health broke down in 1862 and he died in 1870. His funeral panegyric was preached by Archbishop McCloskey who had been his fellow student at Mount St. Mary's. Two books written by him, "Diseases of Women" and "Practice of Obstetrics" went through many editions, were translated into French and German, and were adopted as textbooks in American schools.

Medical Record, files (New York, 1870), p. 330; Cyclopaedia of American Biography, b. v.

JAMES J. WALSH.

BEDFORD, Henry, writer, educator, b. in London 1 October, 1810; d. in Dublin, Ireland, 21 May, 1903. With the intention of becoming a clergyman of the Church of England, he was educated at King's College, London, and at Cambridge University in 1835 and after a distinguished course received the degree of M. A. He made his theological studies and after ordination was given charge of a church in London where he became noted in High Church circles as a popular writer and preacher. A very advanced "Puseyite" sermon during the Tractarian excitement brought him in conflict with the Bishop. Immediately after his conversion to Catholicism in 1851. He wished to take Holy orders, but a natural defect in his right hand was a canonical obstacle to ordination. In 1852 he accepted an invitation to join the staff of All Hallows Missionary College, Drumcondra, near Dublin, Ireland, and the rest of his life of service, effective work as professor of natural science, treasurer, and one of the college directors. He also did much in furtherance of the Catholic movement then at its height in England and was a constant contributor to Catholic periodicals and a public lecturer on Catholic topics. His writings on a variety of subjects, embracing travels, archaeology, art, science, music and the general treatment of past periods of English literature were frequent features of The Month, "The Irish Monthly", and "The Irish Ecclesiastical Record". Some of them were later reprinted for private circulation in pamphlet form, notably his "Vacation Rambles", which were issued in a series (1874-75-76-77-78-79) subsequent to their appearance in the Popular Magazine. All Hallows Annual (Dublin, 1890); The Freeman's Journal files (Dublin); The Irish Monthly files (Dublin).

THOMAS F. MEEHAN.

BEDFORD, Francis (alias Long) superior of the English Institute of Mary, b. 1816 of a gentle family of Norfolk, England; d. at Munich, Germany, 1704. She and her eleven sisters entered religious life. Sent abroad to finish her education, she entered the English Institute of Mary at Munich and was professed in 1833. This society, founded at St. Omer in 1603, had been transferred to Munich in 1805 and then to Munich. Francia's sister Winifred, the first superior, died 26th December, 1666. In 1669, Frances, who had become head of the Munich house, was induced by Catherine of Braganza, wife of Charles II, to establish a house in London. With a group of the English members she set up a school for young women, first at St. Martin's Lane, then at Hammersmith. In England, she wore a secular garb, and was known as Mrs. Long. Summoned before a magistrate, she was liberated through family influence, but warned against instructing youth. Though disregarding this injunction, she was not again molested. In 1777, with the aid of Sir Thomas Gascoigne, she established a community in the north, in a house on the site of the present convent, outside Micklegate Bar, York. From 1777 to 1866 she divided her time between her two English communities, but after 1866, having transferred the care of the Hammersmith house to Mrs. Cicely Cornwallis, she remained at York. In her seventy-eighth year, after her house had been repeatedly harassed and threatened with destruction, she, with her niece, Mother Dorothy Pastor Bedingfield, was summoned before the Mayor of York and committed to Ouebridge Gaol. Released soon afterwards, she was again attacked, and in 1865 her house barely escaped destruction. In 1899, resigning in favour of her niece, Mother Bedford returned to Munich and died there, one year after the rule of her institute had been approved by Clement XI.

J. VINCENT CROWNE.

BEDFORD, Sir Henry, Knight, b. 1509; d. 1583. He was the grandson of Sir Edmund Bedingfield, who had a family blessed, to whom were granted by Edward IV for his faithful service letters patent authorizing him "to build towers.
walk, and such other fortifications as he pleased in his manors of Oxburgh, together with a market there weekly and a court of pye-powder". Sir Henry was mainly instrumental, together with Sir Henry Jermyn, in placing Mary Tudor on the throne. He proceeded with her to Norwich, and for his loyalty he received an annual pension of £100 out of the forfeited estates of Sir Thomas Wyatt. Ultimately he became Lieutenant of the Tower of London and Captain of the Yeomen of the Guard. As "jailer" of the Princes Elizabeth, who was expected to be a nest of spies and to plot revolts in Wyatt's rebellion, he has been persistently misrepresented by Foxe and others, but the whole history of his custodianship of Elizabeth is contained in a series of letters addressed to the Queen and the Privy Council, and in their replies, his correspondence, which has been published by the Norfolk and Norwich Archæological Society, completely exonerates Sir Henry from either cruelty or want of courtesy in his treatment of the royal captive. On Elizabeth's accession he retired to Oxburgh and was called upon in a letter, in which the Queen addressed him as "trusty and well-beloved", to furnish a horse and man armed, as his contribution to the defence of the country against an expected invasion of the French.

When, however, the penal laws against Catholics were enforced with extreme severity, Sir Henry Bedingfield was not spared. He was required to pay heavy monthly fines for non-attendance at the parish church, while his house was searched for priests and church-furniture, and his servants dismissed for refusing to conform to the new state religion. Together with his fellow-Catholics, he was suspected of complicity in within five miles of his own house and might pass that boundary only by a written authorization of the Privy Council. He was buried in the Bedingfield chantry at Oxburgh. He married Katharine, daughter of Sir Roger Townshend, whose widow was the present Countess Townshend, by whom he had numerous issue.

"State Papers relating to the custody of the Princess Elizabeth at Woodstock (Norfolk and Norwich Archæological Society); Buxtonfield, History of Norfolk; Mansion, History of Norfolk; Calendar of State Papers, Dom. BL., 1581-90; original letters in the Oxburgh archives."

J. M. STONE.

Bedingfield, Thomas. See Downes, Thomas.

Bedini, Caietan, Italian Cardinal and diplomat, b. at Singsigale, Italy, 1577; d. Rome 1636. He was appointed in 1684, by Pope Pie IX, Commissary Extraordinary at Bologna, one of the four Papal Provinces then recently in revolt and in which the Government of the Holy See was being maintained with the aid of the military of the Austrian States; he returned from this office in 1682 and after serving in various diplomatic posts was promoted to be Titular Archbishop of Thespias. In 1853, upon his appointment as Apostolic Nuncio to the Court of Brazil, he was commissioned by the Holy Father to visit the United States to examine into the state of ecclesiastical affairs and, incidentally, to call on the President and present to him the compliments and good wishes of the Pope. Arriving in New York in June, 1853, he at once visited Washington and called upon the President, who, from whom he was received with great courtesy and to whom he presented an autograph letter of the Holy Father. This visit, purely one of courtesy, was afterwards distorted into an attempt to gain official recognition of himself as a diplomatic representative of the Pope to the United States. He returned in this country was the signal for a series of anti-Catholic demonstrations against him lasting throughout his tour. In New York the colony of Italian revolutionists who had fled to this country, urged on by the apostate priest Giacomo, "Know-nothing element," held a mass meeting and denounced the nuncio. A plot to assassinate him was formed, but was defeated through a warning given by one of the conspirators, Sassi, who himself was stabbed to death by one of his associates in New York City a day or two after.

Monsignor Bedini travelled extensively throughout the country and participated in many public religious ceremonies. He arrived in Pittsburg, Louisville, and Cincinnati, his visit excited hostile comment and demonstration, chiefly by the adherents of Know-nothingism, which was then rampant. In Cincinnati, particularly, this element, cooperating with some German infernal revolutionaries, exiles, plotted to do violence to him and to attack the cathedral where he was to officiate, but this design was frustrated by the vigilance of the city authorities. Not, however, without bloodshed and rioting in which a number of the rioters lost their lives. He remained in this country until January, 1854, when he returned to Rome. So apprehensive of personal violence had he become, that when about to depart from New York, he left the city secretly and journeyed to Staten Island, five miles distant, where a tug carried him to the outgoing steamer. Later, he was elevated to the rank of cardinal and received the appointment to the See of Viterbo and Tornacocella.

PETER CONDON.

Bedlam (an English abbreviation of BETHLEHEM), a London hospital originally intended for the poor suffering from any ailment and for such as might have no other lodging, hence its name, Bethlehem, in Hebrew, the "house of bread." During the fourteenth century it began to be used partly as an asylum for the insane, for there is a report of a Royal Commission, in 1405, as to the state of lunatics in and about London, that an asylum known as Bedlam in popular speech, and the confinement of lunatics there gave rise to the use of this word to mean a house of confusion. Bedlam was founded in 1247 as a priory in Bishopsheath Street, for the order of St. Mary of Bethlehem, by Simon Fitz Mary, an Alderman and Sheriff of London. This site is now occupied by the Liverpool Street railway station. In the next century it is mentioned as a hospital in a license granted (1380) to collect alms in England, Ireland, and Wales. In 1376 a hospital was opened by the pope in a house of the order of St. Bartholomeus in Southwark, and it was placed under the charge of the Prior of the hospital of St. Bartholomew, with the same privileges as the hospital of St. Bartholomew's. In 1674, the old premises having become untenable, it was decided to build another hospital, and this was erected in what is now Finsbury Circus. This came to be known as old Bedlam, after the erection of a new building in George Street, George's Fields, which was opened August, 1815, on the site of the notorious tavern called the Dog and the Duck.

The attitude of successive generations of Englishmen towards the insane can be traced interestingly in Bedlam. Originally it was a hospital for those suffering from nervous and religious ailments. Every effort seems to have been made to bring patients to such a state of mental health as would enable them to leave the asylum. An old English word, "a Bedlam," signifies one discharged and licensed to be free. Such a person was at first, like the sign at bedlam, a badge and were known as Bedlamites, Bedlamites, or Bedlam Beggars. Whenever outside inspection was not regularly maintained.
abuses crept into the management of Bedlam, and in every century there were several commissions of investigation. Evelyn in his Diary, 21 April, 1666, notes that he saw several poor creatures in Bedlam in the next day, and many loose became the theme for the idle classes to visit Bedlam and observe the antics of the insane patients as a novel form of amusement. This was done even by the nobility and their friends. One penniless was charged for admission into the hospital, and there is a tradition that an unknown man found a position there, and the Boulter. This would mean that nearly 100,000 persons visited the hospital in the course of a year. Hogarth’s famous picture represents two fashionable ladies visiting the hospital as a show place, while his “Rake” at the end of the “Progress,” is being fettered by a keeper. After an investigation in 1851, the hospital came under regular government inspection and has since been noted for its model care of the insane. It accommodates about three hundred, with over sixty attendants. Its convoluted home at Witley is an important feature. The management is so good that each year more than one-half of the patients are returned as cured.

BEE, Bethlem Royal Hospital in British Journal of Mental Insanity, 1876; BUNDELI, British Hospitals and Charities Annual, 1905.

JAMES J. WALSH.

Beelen, JAN THEODOR, exegete and Orientalist, b. at Amsterdam, 12 January, 1807; d. at Louvain, 31 March, 1884. After a brilliant course of studies at Rome, crowned by the Doctorate of Theology, he was in 1836 appointed Professor of Sacred Scripture and Oriental languages in the recently reorganized Catholic University of Louvain. This position he held till 1876, when he resigned his place to his pupil, Prof. T. J. Lamy. He was the author of the following Biblical works, among which his commentary on the Epistle to the Romans is especially esteemed: “Disquisitiones et Sententiae super Sacramentum Scripturæmultiplici interdum aeneum litteralem, nullo fundamento satis firma niti demonstrare consur” (Louvain, 1845); “Interpretatio ep. S. Pauli ad Philipp.” (ib., 1849; 2nd ed., ib., 1852, entitled: Commentarius in ep. S. Pauli ad Philipp.); “Commentarius in Acta Apost.”, with Greek and Latin texts, (2 vols., ib., 1850–55; 2nd ed., without Greek and Latin texts, ib., 1864); “Commentarius in ep. S. Pauli ad Rom. (ib., 1854); “Grammatica graecitatis N. T.” (ib., 1857); and “Dutch, Rules for a new Training for Students (ib., 1858)." A translation of the N. T. made according in these rules (3 vols., ib., 1859–69); “The Epistles and Gospels of the Ecclesiastical Year”, with annotations (ib., 1870); translation of the Psalms, with annotations (2 vols., ib., 1877–78); translation of Proverbs and of Ecclesiasticus (ib., 1879). He also published two works in the field of Oriental scholarship: “Chrestomathia rabbinica et chaldæa” (3 vols., Louvain, 1841–43); and Clementia Rom. epistolæ binae de Virginitate, syriacæ (ib., 1856), in which he defends the genuine ness of these two letters. Beelen also devotes the erudit of reviving Oriental studies in Belgium, and of introducing into that country Oriental printing by means of a complete font of Hebrew, Syriac, Arabic, and Ethiopic type, which he purchased. In recognition of his merit as a scholar he was made domestic prelate of the pope, consultor of the Congregation of the Index, honorary canon of Liège, and Knight of the Order of Leopold.

BEE, F. BECHEL.

Beelphogor (בֶּלפֶּפֶּגוֹר, Behelpogor), or Baalphogor, was the baal of Mt. Phogor, or Peor, a mountain of Moab. The exact form of baal seems to be “the possessor”, the one who holds the real domination (Lagrange, Religions Sémites, 83, 84); so Bed phegor was the Moabite divinity who ruled over Phogor. Some identify him with Chamos (Chemosh), the national god of Moab, but this is not at all certain, inasmuch as Chamos became the Ba’al of the Canaanites distinct to the popular mind. To the baal was generally ascribed the fertility of the soil and the increase of flocks; he was worshipped by offerings of the products he gave and often by unchaste practices done in his honor. One of the greatest works of the prophets was to stamp out this immoral cult on the soil of Palestine.

Israel came in contact with Beelphogor at Septim, on the plains of Moab, their last station before entering the land of Canaan. Here many men of Israel, as a sequel to their immoral intercourse with the women of Moab, took part in the sacrificial banquets in honor of Beelphogor, for which crimes they were punished by death (Num., xxv). It is commonly held, in view of the occurrences at Septim and of the general nature of baal-worship, that immoral rites were part of the worship of this god; while the text does not make this certain, the large number of persons involved and the fact that “the affair of Phogor” is ascribed to the instigation of the seer Balaam, seems to indicate that its origin was with Beelphogor (xxii, 16). Marucchi believes the survival of the cult till the middle of the second century is attested by an inscription dedicated by some soldiers from Arabia (?) to Jupiter Beelphogar, whom he identifies with Beelphogor. The proof is slight, nothing more than the resemblance in name. The terrible chastisement inflicted on Israel for the sin at Septim is mentioned several times in the Bible, and St. Paul (1 Cor., x, 8) uses it to point a moral.

BEE, RENALO, De Num. in Numb. (Marseille, 1803); MARCIN, in Vio. Dist. de la Bible (Paris, 1804); LAGRANGE, Religious Sémites (Paris, 1805); SMITH, Religion of the Semites (London, 1844); Article Beal in Encyc. Bibl. and in Hastings, Dict. of the Bible.

JOHN F. FENLON.

Beelzebub (בֶּלצֶבֶב, Beelazel), or Baalzebul, (1) The Philistine god of Accaron (Ekron), scarcely 25 miles west of Jerusalem, whose oracle King Ochobiaz (Ahasiah) attempted to consult in his last illness, IV (II) Kings, i, 2. It is only as an oracle that the god is known to us; no other mention of him occurs in the Old Testament. The name is commonly translated “the lord of the flies”, but it seems to be so called either because as a sun god he brings the flies, though the Ba’al was probably not a sun god, or more likely because he is invoked to drive away the flies from the sacrifices, like the Zeus Apollos, who drove them away from their offerings to Myiairos in Arcadia. Halévy and Winckler interpret the name, according to the analogy of very many names compounded with baal, as “the lord of Zebub”, supposed to be a locality in Accaron; there is no proof, however, for the existence of such a locality, and besides Beelzebub is called the god of Accaron. Cheyne thinks the original form of the name is Ba’al Zebul, “the lord of the mansion”, or high house, which would refer to the god’s temple or to the mountain on which the god dwelt, or rather, in his opinion, to both. But the textual evidence, as Lagrange objects, is entirely in favour of Zebub. Cheyne, admitting this, holds that the title “lord of the high house”, which would suggest to the writer of Kings a reference to Jehovah’s temple or to His heavenly dwelling place, would be considered offensive, and would induce him, in contempt, to change it to Ba’al Zebub, the lord of flies. The tradition of the true name, lingering on, accounts for its presence in the Gospels (Zeboul). This conjecture, which has a certain plausibility, and the contempt should lead to the particular form, Baal Zebub, a name without parallel in Semitic religions. It seems more reasonable, then, to regard
Baalzebub as the original form and to interpret it as "lord of the flies".

(2) In the New Testament, there is question of an evil spirit, Beelzeboul. On account of the great similarity of names, he is usually identified with Baalzebub, being the Aramaic form of Baal, and the change from the final b to l such as might easily occur in the近百 years for the text at that time, and this one may have been newly invented, having no relation to the other; the fact that one element of the compound is Aramaic and the other Hebrew would not disprove this. The meaning of the term "Beelzeboul" is "lord of the dung dwelling", and it would be supposed by the Jews of this time to refer to the nether regions, and so be an appropriate name for the prince of that realm. Beelzeboul (Baalzebub) is used, then, merely as another name for Satan (Matt., xii, 24-29; Luke, xi, 15-22), by whom the enemies of Our Lord accused Him of being possessed and by whom they claimed He cast out demons. Their charge seems to have been that the good Our Lord did was wrought by the Evil One in order to deceive, which Jesus showed to be absurd and to be an open lie. If the New Testament may be considered a transformation of the old, the question arises as to how the god of the little town of Accaron came to give a name to the Prince of Darkness. The mission on which Ochomia sent his followers was to show that Beelzebub already lived in the country and was widely renowned in Palestine. The narrative (IV Kings, i) was a very striking one, well known to the contemporaries of Our Lord (Luke, ix, 54); from it might easily be derived the idea of Beelzebub as the special adversary of God, and the change in the final letter of the name which took place (ex hypothesi) would lend the Jews to regard it as designating the prince of the lower regions. With him was naturally connected the idea of demonical possession; and there is no need of Christ to say that Beelzebub's "name naturally rose to Jewish lips when demoniacal possession was spoken of, because of the demonical origin assumed for heathen oracles". How can we account for the idea of Beelzeboul exercising the demons? On the assumption that he is to be identified with the Philistine god, Lagrange thinks the idea is derived from the special prerogative of Beelzebub as fly-chaser (chasse-mouche). In the Babylonian epic of the deluge, "the gods gather over the sacrificial flies" (see Driver, Genesis, 105). It was noted by Semites, according to Lagrange, to come to conceive of the flies troubling the sacrifice as images of spirits hovering around with no right to be there; and so Beelzebub, the god who drove away the flies, became the prince of demons, in whose name the devils were exorcized from the bodies of the possessed. Others think the idea naturally arose that the lord of the demons had power to command them to leave the possessed. It seems much more reasonable, however, to regard this faculty of Beelzeboul not as a tradition, but simply as a charge invented by Our Lord's enemies to throw discredit on His exorcisms. His other miracles were probably accounted for by ascribing them to Beelzeboul and so these likewise. Allen (Comm. on Matt., 107, 124) has endeavored to simplify the problem by the use of higher criticism. According to him, the role of Beelzebub as archdemon and exorcist was not a Palestinian belief; in Mark's Gospel, Beelzebub is simply the demon said to possess Our Lord. Matthew and Luke by mistake fused the two, where their work lay, for they served the same end. The furnace and identify Beelzebub with Satan, to whom the faculty of exorcism is ascribed. The fusion, however, seems to be justified by the next verse of Mark, which is more naturally interpreted in the sense of Matthew and Luke, though Allen's interpretation may be admitted as possible. Beelzebub does not appear in the Jewish literature of the period; there we usually find Beliar (Belial) as an alternative name for Satan.

JOHN F. FENLON.

Beeley (or BISLEY), George, Venerable, martyr, b. at The Hill in Gosnargh parish, Lancaster, England, of an ancient Catholic family; d. 2 July, 1591. He was ordained priest at the English College at Reims, 14 March, 1587, and left for England, 2 November, 1588. A man of sound education, strong, and robust, he was captured by Topcliffe late in 1590, and was by his tortures reduced to a skeleton. He endured all with invincible courage and could not be induced to betray his fellow Catholics. He suffered by the statute of 27 Eliz., merely for being a priest, in Fleet Street, London. His last words were "Abis mihi gloriam nisi in Cruce Domini Nostri Jesu Christi" and, after a pause, "Good people, I beseech God to send all felicity."' BLOW in Bibl. Dict. (London, 1885); CHALLONER, Memoirs; POLLEN, Acts of English Martyrs (London, 1891).

Begnudelli-Basso, Francesco Antonio, a canonist, who lived at the end of the seventeenth century; d. at Freising, 9 October, 1713. From 1675 he was Vicar-General of Trent, his native place. In 1679, however, he held a canonry in the Cathedral of Freising, where also he became in 1696 vicar-general of the diocese, and where he died. His "Bibliotheca juris canonico-civilis practica secus repertorium questionum magis practicarum in urbe et foro" ranked him among the best canonists of his day. His canonical acumen is especially noteworthy, while he speaks in the clearest terms of papal infallibility. The work was published in Freising in 1712, four vols. in folio; Geneva, 1747; Modena and Venice, 1758. It has, however, lost its practical usefulness owing to the later editions of Lucius Ferraris's "Bibliotheca", which is vastly superior to the work of Begnudelli.

ANDREW B. MEEHAN.

Beguines: Beghards.—The etymology of the names Beghard and Beguine can only be conjectured. Most likely they are derived from the old Flemish word beghren, in the sense of "to pray", not "to beg", for neither of these communities were at any time mendicant orders; maybe from Beg, the patron saint of Niwelles, where, according to a doubtful tradition, the first Beguine was established; maybe, again, from Lambert le Bègue, a priest of Liège who died in 1180, after having expended a fortune in founding in his native town a cloister and church for the widows and orphans of crusaders.

As early as the commencement of the twelfth century there were women in the Netherlands who lived alone, and without taking vows devoted themselves to prayer and good works. At first there were not many of them, but as the century grew older their numbers increased; it was the time of the Crusades, and the land teemed with desolate women—the raw material for a host of neophytes. These solitaries made their homes not in the forest, where the true hermit loves to dwell, but on the fringe of the town, where the poor and the poor lived more poor. About the beginning of the thirteenth century some of them grouped their cabins together, and the community thus formed was the first Beguine.

The Beguine could hardly be called a nun; she took no vows, could return to the world and wed if she would, and did not renounce her property. If she
was without means she neither asked nor accepted alms, but supported herself by manual labour, or by teaching the children of burghers. During the time of her novitiate she lived with "the Grand Mistress" of her cloister, but afterwards she had her own dwelling and, if she could afford it, was attended by her own servants. The same aim in life, kindred pursuits, and community of worship were the ties which bound her to her companions. There was no mother-house, nor common rule, nor common general of the order. Every community was complete in itself and fixed its own order of living, though later on many adopted the rule of the Third Order of Saint Francis. These communities were no less varied as to the social status of their members; some of them only admitted ladies of high degree; others were exclusively reserved for persons in humble circumstances; others again opened their doors wide to women of every condition, and these were the most densely peopled. Several, like the Great Beguinage of Ghent, numbered their inhabitants by thousands. Such was this semi-monastic institution. Admiredly adapted to the spiritual and social needs of the age which produced it, it spread rapidly throughout the land and soon began to exercise a profound influence on the religious life of the people. Each of these institutions was an independent centre of mysticism, and it was not the monks, who mostly dwelt on the country side, nor even the secular clergy, but the Beguines, the Beghards, and the sons of Saint Francis who moulded the thought of the urban population of the Netherlands. There was a Beguinage of Mechlin as early as 1207, at Brussels in 1245, at Louvain in 1234, at Bruges in 1244, and by the close of the century there was hardly a commune in the Netherlands without its Beguinage, whilst several of the great cities had two or three or even more. Most of these institutions were supported by the religious fraternities of the time, hundreds or during the stormy years which closed the eighteenth century, but a few convents of Beguines still exist in various parts of Belgium. The most notable are those of Bruges, Mechlin, Louvain, and Ghent, which last numbers nearly a thousand members.

The widespread religious revival of which the Beguinage was the outcome brought forth also about the same time several kindred societies for men. Of these the Beghards were the most widespread and important. The Beghards were all of them laymen, and, like the Beguines, they were not bound by vows, the rule of life which they observed was not uniform, and the members of each community were subject only to their own local superiors; but, unlike them, they had no private property; the brethren of each cloister had a common purse, dwelt together under one roof, and ate at the same board. They were for the most part, though not always, men of humble origin—weavers, dyers, fullers, and so forth—and thus they were intimately connected with the city craft-guilds. Indeed, no man could be admitted to the Beghards' convent at Brussels unless he was a member of the Weavers' Company, and this was in all probability not a unique case. The Beghards were often men to whom fortune had been kind—men who had outlived their friends, or whose family ties had been broken by some untoward event, and who, by reason of failing health or advancing years, or perhaps on account of some accident, were unable to stand alone. If, as a recent writer on the medieval monasticism, he had witnessed, the Saint Bernard Groot ur seine Stiftungen (Bonn, 1833); Delp, Verhand. over de Broederschap van G. O. (Utrecht, 1822); Gerard Mornin, De Beghards (Amsterdam, 1817); Canon, Reg. (1621); The Chronicles of the Beggards regular of the Beghards and of the Brothers of the Common Life (London, 1886); Heimbucher, Die Orden u. Kongregationen; Bauer in Kirchenr. E. V.

ERNEST GILLIAT-SMITH.
Behaim, Albertus von (known also as Albertus Bohemus): b. c. 1180, probably at Boheming, in the Diocese of Passau; d. at Passau, 1260; a partisan of the popes in their struggle with the Emperor Frederick II (1215–50). In 1205 he went to Rome, where he was employed at the papal court as an expert in law. In 1257 he went to Germany, and through his efforts a league was formed against Frederick II between Otto of Bavaria, Wenceslaus of Bohemia, and came to an end in 1253. From that time he lived in Passau, where he had been dean of the chapter since 1246. He laboured with zeal and credit to himself, but not without many conflicts, until his death. He left two diaries, known as the first and second Missi-ebuch. Fragments of the first were edited by Oesele, in "Rerum Belgarum Scriptores", vol. I; the second by Höfner in "Bibliothek des litterarischen Vereins" (Stuttgart, 1847).

Frederick of Austria. When excommunication was pronounced against the emperor in 1239, Behaim was made a permanent delegate and commissioneer to make the sentence effective. For that purpose he appealed to the bishops of Germany (1240), and when they proved themselves negligent he excommunicated a number of ecclesiastics and laymen of prominence. At the same time, he worked for the election of a new king. However, his excessive severity had no effect, and he was forced to leave the country. In 1245 he was at the Council of Lyons, where Frederick was again excommunicated, and he worked as before against the emperor. His office of papal delegate

FRANCIS J. SCHAEFER.

Behaim, Martin (Martinus de Bohemia), a German cartographer and navigator, b. at Nuremberg in 1459; d. at the German hospice of St. Bartholomew in Lisbon, Portugal, 29 July, 1507. Behaim came from a wealthy merchant family which settled in Nuremberg about 1300 and which is still in existence. He received the usual education but
according to his own statement, had among his teachers the celebrated mathematician and astronomer Regiomontanus. Behaim entered business life at an early age and became an agent at Antwerp. In 1481 or 1482 he went to Lisbon on business. Here his brother-in-law, a pupil of Regiomontanus, had been appointed by King John (João) II as a member of a commission, the "Junta dos Matematicos," which was to find some improved method for determining latitude. Behaim furnished them with the so-called Jacob's staff, or cross-staff, and the astronomical tables necessary for determining the declination of the sun. Having in this way become favourably known, Behaim was offered the opportunity of accompanying Diego Cam (Cibo) on a voyage of discovery along the west coast of Africa. In the course of his explorations Cam discovered the mouth of the Congo and went as far as Walvis Bay. After his return Behaim was made a Knight of the Portuguese Order of Christ in 1486, and married a daughter of João von Hutter, hereditary governor of the islands of Fayal and Pico of the Azores group. In 1492, while he was at Nuremberg, Behaim made the well-known globe, probably with the scientific help of Hartmann Schedel, the Nuremberg humanist.

His influence on the great discoverers of his time was formerly much overestimated; at present it is questioned whether he had any part in the discoveries of Cam. Nevertheless his "apple", the oldest of all existing globes, ensures his lasting fame. The apple was made in 1492 and has a diameter of 25 inches, and no network to mark longitudes and latitudes. It is provided merely with the equator, one meridian, the tropics and the constellations of the zodiac, and is a unique example of miniature painting. There is an unmistakable connexion between Behaim's manner of representing the world and the geographical views of Toscanelli whose chart is usually reconstructed with the aid of Behaim's globe. Unfortunately the reproductions of Behaim's globe, so far made, are not satisfactory. The first attempts by Berytos (in 1496) and by the Aperiter von den Nürnbergischen Mathematikern (1730) and reproduced by Nordenskjöld in his "Fascimile Atlas to the Early History of Cartography" (1889). Another was drawn in 1847 for Jamard by Jean Jouve, and in 1848 by Dr. Günther, which was the latter used in his biography of Behaim. This drawing is also to be found in Ruge, "Geschichte des Zeitalters der Entdeckungen" (1881), in Günther's biography of Behaim, and in Kretzschmer, "Die Entdeckung Amerikas" (1860).

OTTO HARTIG.

Beiderlinden, Bernard. See POONA, Dioecese of.

Beirut, in Phoenicia, a titular Latin see, and the residence of several patriarchs of Oriental rite. The earliest form was likely Beeroth "springs", not Beroth (II Kings, viii, 8) or Berotha (Ezech., xlvii, 16), probably situated near Baalbek in Cæsæ-Syria. It is difficult to explain the more usual form, Berytos, but it comes from Béruti, the Phoenician name of a fish-goddess related to the god of Gebal or Byblos. In a Coptic inscription of the 4th century Berytus was the birthplace of Sanchoniathon, an early Phoenician author, and seems to have been unimportant in remote times. It is mentioned by the Greeks before Alexander, but is not spoken of in connexion with the expeditions of this conqueror. After the time of Alexander it was called Byblos, and in the 1st century B.C. Ortelius writes that Berytus was known as Laodicæa of Chanaan, a name which it kept until the reign of Alexander II, Zabinas (129-123 b.c.); see J. Rouvier, in "Revue de numismatique" (1896), and "Revue bibliq"., VII, 272-275. According to Strabo (XVI, ii, 9) it was destroyed by King Tryphon (137-134 a.c.) If this be true, it must have been rebuilt after a short time, for there are records for the complete series of the coins of Berytos from 123 to 14 b.c. It is certain that the Romans enlarged and embellished it; that it was garrisoned by two legions, the Leg. V Macedonica and Leg. VIII Augusta, and that in the year 14 b.c. it became a Roman colony with the name Colonia Julia Augusta Felix Berytos, so called after Julia, the daughter of Augustus (Müller, Historia Romana Inscript. 335, 119). The Jewish kings Herod the Great, Herod Agrippa I, and Herod Agrippa II built sumptuous monuments at Berytos and gave gladiatorial combats there (Josephus, Bell. Jud., I, xx, 11; Antiq., XVI, xi, 2; XVII, x, 9; xx, x, 7; xx, vii, 5; XX, ix, 4). Thus also after the siege of Jerusalem, gave gladiatorial games at Berytos, in which the combatants were Jews. (Josephus, Bell. Jud., VII, iii, 1.) From that time dates the magnificent aqueduct, the remains of which may still be seen. The town was thrice walled, and a fort guarding the mouth of the River Magoras, now Nahr Beiruth. About the middle of the third century Berytos became the seat of the most renowned law school in the Eastern Roman Empire. Many celebrated jurists and jurists were among its teachers (Montreuil, Hist. du droit byzantin, I, 264-273, 279-283). This school was spared by Justinian when he closed all similar schools in favour of Constantinople. The town had suffered much from an earthquake in 529, and when taken by the Arabs about 635 it had fallen into decay. The Byzantines burned it in a Genoese sack in an early date, and was a suffragan of Tyre in Phoenicia Prima, a province of the Patriarchate of Antioch. In antiquity its most famous Bishop was Eusebius, afterwards Bishop of Nicaea, the courtier-priest and strong supporter of Arianism in the fourth century. Lequien (II, 815-820) gives a list of thirteen Greek bishops reaching to 1673, rectified and completed by Cyril Charon, a Greek Catholic priest in Al-Mashriq, Beirut, 1 March, 1905). In 450 Beirut obtained from Theodosius II the title of metropolis, with jurisdiction over six sees taken from Tyre; but in 451 the Council of Chalcedon restored these to Tyre, leaving, however, to Beirut its rank of metropolis (Mansi, VII, 85-98). Thus, from 451 Beirut was an exempt metropolis depending directly on the Patriarch of Antioch. The city was captured on 27 April, 1111, by Baldwin I, King of Jerusalem, and with the exception of short intervals was held by the Franks till 1241. At an early date they established there a Latin see subject to Tyre and, with the provinces of Tripoli and Byblos, constituted the Diocese of Tyre Metropolita, in the Patriarchate of Jerusalem. Lists of its Latin bishops are available (Lequien, III, 1325-27; Gams, 434; Eubel, I, 137; II, 117; Revue bénédictine, 1904, 133-34).

Owing to the fertility of the soil and the security of the harbour, Beirut soon became one of the most active commercial cities in the East. The Druse
The Catholic opposition to their propaganda is supported chiefly by French missionaries. The Capuchins, Franciscans, and Lazarists each have a monastery and a school; the Christian Brothers, schools and a college; the Sisters of Charity, priory schools, a boarding-school, an industrial school for orphan girls; they also have charge of the hospital at the Catholic University. The Sisters of St. Joseph and the Dames de Nazareth have a boarding-school; the Sisters of the Holy Family, a school; the Mariamites, native nuns, their principal house. The institute of the Jouts is maintained and outside of Beirut 192 schools for boys and girls, with 294 teachers and 12,000 pupils. There is in the city a faculty of medicine (120 students) founded in 1881 with the help of the French Government; its examinations are conducted before French and Ottoman physicians, and its diplomas are recognized by both France and Turkey. They conduct, moreover, St. Joseph's Catholic University, the title of which was granted by Leo XIII, 25 February, 1881. This university includes: (1) a seminary (90 students) for natives of all rites, which up to 1902 had sent out 228 students, including 3 patriarchs, 15 bishops, 115 priests, and 83 friars; (2) a faculty of philosophy and theology (90 students), which grants degrees as the Gregorian University in Rome; (3) a faculty of Oriental languages and sciences, founded in 1902, which teaches the literary and conversational use of Arabic, Hebrew, Syriac, Coptic, and Ethiopic; the comparative grammar of Semitic languages, the history and geography of the Orient; Oriental archeology; Greek-Roman epigraphy and antiquities; (4) a classical and modern tuition college (400 pupils); (5) 3 primary schools (600 pupils). A printing-house, inaugurated in 1853, is now famous as the foremost Arabic printing-house in the East. Since 1871 the Jouts have published "Al-Bushir", a weekly Arabic newspaper, and since 1898 a fortnightly Arabic review, "Al-Masriq", the editors of which took rank at once among the best Orientalists. In 1900 they began a collection of philological papers, "Mélanges de la Faculté orientale de l'Université Saint-Joseph". Finally, they contribute to many scientific periodicals and publish, chiefly in Arabic, works of great value. We may mention here another precious collection: "Documents inédits pour servir à l'histoire du christianisme en Orient", the first volume of which appeared at Paris in 1905. These missionaries are the strongest bulwark of Catholicism in Syria.

S. VAILLÉ.

Beja (Beersheb), Diocese of, in Portugal, suffragan of Evora. It was created 10 June, 1770, and numbers 115 parishes, 115 primary schools with 197 priests, and 197 churches. It is the capital of the district of Baixo Alentejo. The city is supposed to be the "Paz Julia", or "Paco", of the Romans, and is still surrounded by remains of old Roman walls, which, however, were partly restored during the Moors. Beja was taken from the Moors in 1162 by Alfonso Henrique. It stands on the summit of a high hill surrounded by beautiful and fertile valleys under cultivation, as the district is rich in agricultural products, mainly cereals, olive oil, and wine. The best example of medieval architecture and an industry Portugal is the castle built in Beja by King Dom Diniz. It is a square, massive structure 120 feet high,
from the top of which the whole of the Alentejo country and the Cíntra mountains may be seen. The walls of the castle are covered with hieroglyphics. Beja was in its early days an episcopal city, but at the time of the invasion by the Moors lost its dignity. The Cathedral of Beja is an old temple, though so much modernized as to make it impossible to determine with certainty its original date. Other famous churches are those of Our Lady of the Conception, St. Iago, or Santiago, and Santa Maria de la Feira, said to have been an old Moorish mosque. The College of St. Sisennado, which belonged to the Jesuits, and was built principally at the expense of Donna Maria Sophia, in 1695, stands in the street where the saint was born. Part of this building is now occupied by the episcopal palace. The city has about 8,000 inhabitants, modern improvements, schools, banks, libraries, etc. It is said to be the richest in Roman remains of all the cities in Portugal, except Evora, which now possesses a large collection of Roman antiquities collected in Beja.

FRANCISCO J. YANES.

Bejarano, FERNANDO. See MIES.

BELASYSE, JOHN, BARON BELASYSE, b. about 1614; d. 1699, a loyal Catholic English nobleman, second son of Thomas first Lord Fauconberg. His mother was Barbara, daughter of Sir Henry Cholmondeley of Ruxby, Yorkshire. John Belasyse, who represented Thirsk in both the Short and Long Parliaments, but was “disabled” as a Royalist to sit, played a conspicuous part in the civil war, commanding a “Tertia” on the Royalist side. He raised six regiments of horse and foot at his own expense, took part in the battles of Edgehill, Newbury, and Naseby, as well as the sieges of Reading and Bristol, and was subsequently made Lieu tenant-General of the King’s forces in the North of England and Governor of York. He was wounded several times and in January, 1645, was raised to the peerage by the King at Oxford under the title of Baron Belasyse of Worlaby, Lincolnshire. During the Commonwealth Lord Belasyse acted as a sort of Royalist agent in England and was in frequent communication with Charles II and his supporters in the Netherlands. After the Restoration he was made Lord-Lieutenant of the East Riding of Yorkshire (1661-73) and Governor of Argyll (1664-66). He held the post of Captain-General of the forces in Africa and Governor of Tangier. Somewhat later, however, upon the passing of the Test Act (1673) he found himself as a Catholic unable to take the necessary oath and resigned all his appointments. At the time of the Oatmeal plot, Belasyse, along with four other Catholic peers, the Lords Arundell of Wardour, Stafford, Powys, and Petre, was denounced as a conspirator and formally impeached in Parliament. Belasyse in particular was said to have been designated Commander-in-Chief of the Popish army, but Charles II, according to Von Ranke, ridiculed the idea on the ground that the man could then hardly stand on his feet with gout. Nevertheless, Lord Belasyse lived on for another ten years. The impeachment Catholic peers, though they endured a long imprisonment in the Tower, were never brought to trial, and at the accession of James II Belasyse was again received into high favour. His appointment in 1687 as First Lord Commissary-General of the Treasury was the step which roused strong religious feeling against James’s government. Lord Belasyse died in 1689, the year of the accession of William of Orange. He was three times married, and left five children, but the title became extinct upon the death of his grandson Henry, third Baron Belasyse of Worlaby.

HERBERT THURSTON.

Belcham, THOMAS, VENERABLE, a Franciscan martyr in the reign of Henry VIII, date of birth uncertain; d. 3 August, 1537. He boldly opposed the king’s first divorce, Collyweston, and is said to have been the model of a heretic. He wrote a book addressed to his brethren, beginning with the text: “They that wear soft clothing are in kings’ houses,” in which he rebuked the faithless bishops, who were afraid to tell the king the truth. The book seems to be lost, but one copy got into Henry’s hands, and he is said to have moved to tears by reading it, though he soon repented of this weakness. Belcham and some thirty of the Observant Franciscans were thrown into prison, where they perished of hunger.

BEDE CAMM.

Belem do Para, Archidioce of, in South America, formerly (after 4 March, 1719) a suffragan diocese of Bahia (San Salvador, now a Metropolitan see), with a population rank 3 May, 1906. The city of Belem is the capital of the Brazilian State of Para, and is situated on the Bay of Guajara, in the richest rubber and coffee section of the Republic. Santa Maria de Nazareth do Povoado, to give the city its full name, was founded in 1615, but has reached its present importance as one of the largest shipping ports of northern Brazil only during the last twenty years. Not only is it the most northerly port of any importance in South America, and as such the nearest to the great shipping centres of Northern America and Europe, but it is also the great outlet for the natural products of the State of Para. It has a population of 100,000, an export trade of about $25,000,000, and an import trade of about $12,000,000 annually. The mean temperature is about 80°F. Fahrenheit.

Among the churches of this cathedral city is that of Santa Maria de Nazareth in the pretty suburb of Nazareth. The old convent and chapel of the Carmelite Order have been converted into a seminary. In the old Jesuit College is now operated the episcopal palace and another seminary. The city has all modern improvements, and what are considered the best museum and botanical gardens in Brazil. The Amparo Orphan Asylum is ranked among the leading charitable institutions of the State and the city.

In 1903 the Prelatura Nullius of Santarem was made from the Diocese of Belem; and again, in 1904, a new delimitation of the same quasi-episcopal territory took place. The Catholic population of Archidioce of Belem is now about 450,000. There are about 500 Protestants. In this vast territory, which before the above-mentioned division included 1,176,100 square miles, the parishes are 77 in number, with 29 filial churches. There are 47 secular, and 13 religious, priests, and 21 brothers.

Belfry. — The upper part of the tower or steeple of a church, for the reception of the bells; or a detached tower containing bells, as the campanile of the Italians. The term is sometimes applied to the timber frame by which the bells are supported; also to the room or loft in the tower of a church, from which the bells are rung. Originally it denoted a tower in which ministers were placed to ring bells.

FRANCISCO J. YANES.
and thus give notice of the approach of the enemy, or a tower used in besieging a fortified place; it was of wood and movable. In England the bell-tower usually forms a part of the church and is quite separate from the actual church; it is rarely detached from it, as at Evesham, Worcestershire, and Berkeley, Gloucestershire; Chichester cathedral, Sussex, etc. At Pembroke, in Herefordshire, there is a detached belfry built entirely of wood, the frame in which the bells are hung being supported from the ground, with merely a casing of boards.

In Belgium, one of the earliest architectural expressions of the newly acquired independence (12th century) was the erection of a belfry. The right of building one was one of the first privileges granted to cities in all old countries, not only as a symbol of power, but as a means of calling the community together. The tower, too, in which the bell was hung was a symbol of power in the Middle Ages; the first care of every enfranchised community was to erect a "tower of pride" proportionate to its importance. The tower was generally the record-office of the city. All these uses have passed away, and most of the belfries have either fallen into neglect or been appropriated to other purposes. Of those remaining the oldest seems to be that of Tournai, a fine tower, though it is a good deal altered and its effect destroyed by modern additions. The belfry at Ghent was commenced in 1183, but the stone-work was only completed in 1337. In 1376 a wooden spire was placed upon it, making the highest spire in Belgium. This spire was recently taken down in order to complete the tower according to the original design, which, like that of most of the unfinished buildings of Belgium, has been carefully preserved. When finished it will be about 300 feet in height, and one of the finest belfries in the Low Countries.

THOMAS H. POOLE.

Belgium.—I. THE NAPOLEONIC ERA.—The victory of Fleurus, gained by the French army over the Austrian forces, 26 June, 1794, gave to revolutionary France new life, which constituted Belgium 26 July. The Austrian Netherlands, the ecclesiastical principality of Liège, the little monastic principality of Stavelot-Malmedy, and the Duchy of Bouillon. The French, who professed to have entered the country to deliver the Belgians from the yoke of tyranny and superstition, showed to their countrymen, in such pillaging and extortion that, as a Brussels magistrate said, they left the inhabitants nothing but their eyes to weep with. After this, in alleged compliance with the express wish of the Belgians, who as a matter of fact had not been consulted, a decree of the Convention, dated 1 October, 1795, proclaimed the annexation of the Belgian provinces to France. At the beginning of the French rule, which was to last twenty years (1794-1814), religious conditions were not as bad as might have been feared. The University of Louvain was a bulwark of Catholic orthodoxy; even the Vonckist party, which in 1789 had been clamouring for political reforms, showed great respect for religion and had taken as its motto Pro aris et focis. On the other hand, in the secular province and in Brussels, where, since the fourteenth century had shown the deepest sympathy with France, public sentiment was gallophile, revolutionary, and even somewhat Voltairean; the predominant desire was to throw off the yoke of the priests, and the principality had literally cast itself into the arms of France through hatred of theocracy. But the French Government soon caused the priests to be lost sight of in the common hatred of the foreign oppressor.

The Directory began by enforcing, one after another, the French revolutionary laws concerning monastic orders and public worship in Belgium. Religious houses, except those of devoted to teaching or to the care of the sick, were suppressed; it was forbidden to wear an ecclesiastical garb; the clergy were forced to publish a declaration recognizing the people of France as the sovereign authority, and promising obedience to the laws of the state. The communes were forbidden to contribute to the expenses of public worship and every external symbol of religion was prohibited. The Belgians stood firm, and the elections of the fifth year having shown an undesirable reaction of public opinion against the revolutionary spirit, the clergy appealed to the Five Hundred (Cinq Cent) to demand a suspension of the declaration until a papal decision should be received settling the question of its licitness. In the meantime, the priests who had not made the declaration were exiled, and their priests for the Doyle, a priest, and the tribunal of La Dyle acquiesced those who were brought before it. At this juncture, Camille Jordan made a favourable report to the Cinq Cent on the clergy's request, and thus the Belgians had the hope of having opposing the current of French legislation for the better.

The coup d'état of the fifth Fructidor, however, carried out by the revolutionary members of the Directory, destroyed all hope. The victorious conspirators dismissed many Belgians who had been elected, and the electoral sixth year, conducted under the violent pressure of republican deputies, gave the Government the wished-for results. Then persecution began again. The observance of the decree, or the last day of the republican decade (week of ten days), was made obligatory and the Sunday rest was forbidden; for the second time, the wearing of any ecclesiastical garb was prohibited; in the suppression of religious orders no exception was made for nursing and teaching orders; seminaries and colleges were closed; the worship in Protestant churches was prohibited; the University of Louvain was closed on the ground of not having "the kind of public instruction conformable to Republican principles". As if the "declaration" had not sufficiently overtaxed consciences, priests were compelled to take oath of oath of loyalty for royalty. On the refusal of the great majority, the bishop of Beauvais was deposed, his church was declared an immeuble, and a decree issued, closing all churches served by recalcitrant priests. The officials of many communes ignored this order, and in more than one respect, it became a source of trouble. The interdicted priests continued to exercise their functions in the woods, or in private houses which afforded them places of retreat; in many places the faithful, deprived of the clergy, assembled in churches or in barns, to celebrate "blind Masses"; as they were called, viz. Masses without anything at the altar. The French deputies daily devised new methods of persecution in revenge for the opposition of public opinion, all the more unconquerable by reason of its silence and its tranquillity.

Things did not rest here. The space of time and the confederation was the enforcing (1798) in the Belgian provinces of the French conscription laws requiring the enlistment of young men in the armies of the Republic. Rather than shed their blood for masters whom they hated, they rose in revolt, first in the Walloon provinces and in the German Luxemburg. The Walloon provinces took part in the movement, but with much less energy. This was "the peasants' war" called in Luxemburg, "the war of the cudgels" (Kloppekrig). There was
no lack of courage and devotion among the combatants, and some among them afforded admirable examples. But, in the end, they were unarmmed, had inefficient commanders, and were totally lacking in discipline and military organisation; they were deprived of the support of the nobility and of the middle class, who remained absolutely inactive, because they were abandoned even by the Austrian Government which had every reason to stir up a Belgian insurrection. Consequently they could offer no serious resistance to the French troops. They fell back every time they met the enemy in open field; those who hid and did not fight were shot.

After this rising had been quelled, the persecution of the clergy was resumed; 7,500 priests were illegally condemned to be deported. The great majority escaped, only four or five hundred being arrested. Of this number, the oldest and those who were ill were detained in Belgium and in France; about three hundred were sent to Rochefort with Guiana as their ultimate destination, and, in the interval, were held at the Île de Ré and the Île d'Oléron where they had much to undergo from ill treatment. It was the darkest hour in the Napoleonic domination, and was terminated by the coup d'état of 18 Brumaire, 1799. The new Government did not persecute on principle, but only in so far as was believed necessary to enforce the revolutionary laws, to maintain the interests of power. A solution of difficulties was supposed to have been discovered when the clergy were required to take merely an oath of "fidelity to the Republic as resting on the sovereignty of the people". The Belgian bishops who were refugees in England condemned this oath because the doctrine of the sovereignty of the people seemed to them heretical. They also refused to sanction the promise of fidelity to the Constitution of the seventh year, which the Government exacted of the clergy before permitting them to exercise the duties of their ministry, because the Constitution rested on false bases and contained articles deserving of condemnation. The leader of this opposition was a priest named Corneille Stevens (1747-1828), who, appointed administrator of the Diocese of Namur (1799) by Cardinal Frankenberg, Archbishop of Mechlin, forbade the clergy to promise fidelity to the Constitution, and who, in a series of pamphlets appearing under the pseudonym of Lemaigre, continued to advocate resistance. Finally, the Concordat of 15 August, 1801, brought, if not an end, at least a temporary respite; the four Belgian bishops who had survived the persecutions - tendered their resignations and of the nine episcopal sees into which Belgium had been divided since 1559, five only were retained: Mechlin, Tournai, Ghent, Namur, and Liège. The bishops of Antwerp, Bruges, Ypres, and Ruremonde were suppressed. This organization of 1801 is still effective with this difference, however, that the See of Bruges was re-established in 1834, and that of Ruremonde in 1840.

Great was the rejoicing in the Belgian provinces when, on Pentecost day, 1802 (6 June), Catholic worship was solemnly re-established throughout the country. For some years, the name of Bonaparte, the First Consul, was most popular, and it even seemed as if "everything", by the grace of heaven, had gone well. The Grand Duke of Brabant, an Austrian, and the Bishop of Bruges, a German, had gained the support of the Belgians for a foreign government. The bishops appointed by Napoleon fostered in the people sentiments of personal devotion to him, and to such an extent that to-day they cannot be acquitted of the charge, so sincerely and ardently did they fan theoolation and servility. There were, it is true, protests against the new regime. The "non-communicants", as they were styled, refused to recognize the Concordat, contending that it had been forced upon the pope, and they formed a schismatical group, termed the "little church" (la petite église), which, though continually falling off in numbers, has preserved its existence, and in consequence have often been erroneously designated as Stevens. Stevens did not oppose the Concordat. The champion of a rigorous and uncompromising orthodoxy, he recognized the authority of the bishops of the Concordat, and did not shrink from the zealous attitude towards the civil authorities, against whose religious policy he never ceased protesting. From the recesses of his retreat he sent forth brochures, training his guns upon "Saint Napoleon", whose finger he had been fixed by the Government as the 15th of August. He also attacked bitterly the imperial censure of 1806 already adopted by the greater part of the French clergy, which contained a special chapter upon the duties of the faithful toward the emperor. This uninterrupted propaganda struck a responsive chord in the national consciousness and was doubtless responsible for the courage displayed by the Belgian episcopacy in refusing to accept the imperial censure, which was adopted only in the Diocese of Mechlin. Stevens was perhaps the most active of the clerics who opposed the Concordat. The contest was extremely interesting. Although the emperor offered thirty thousand francs to anyone who would deliver Father Stevens into his hands, the priest was never seized; nor was he silenced as long as he was in France. ratification. The more anti-religious the policy of the emperor, the more energetic became the resistance. At a Bishop's request, the four Belgian bishops who had survived the persecutions - tendered their resignations and of the nine episcopal sees into which Belgium had been divided since 1559, five only were retained: Mechlin, Tournai, Ghent, Namur, and Liège. The bishops of Antwerp, Bruges, Ypres, and Ruremonde were suppressed. This organization of 1801 is still effective with this difference, however, that the See of Bruges was re-established in 1834, and that of Ruremonde in 1840.

Great was the rejoicing in the Belgian provinces when, on Pentecost day, 1802 (6 June), Catholic worship was solemnly re-established throughout the country. For some years, the name of Bonaparte, the First Consul, was most popular, and it even seemed as if "everything", by the grace of heaven, had gone well. The Grand Duke of Brabant, an Austrian, and the Bishop of Bruges, a German, had gained the support of the Belgians for a foreign government. The bishops appointed by Napoleon fostered in the people sentiments of personal devotion to him, and to such an extent that to-day they cannot be acquitted of the charge, so sincerely and ardently did they fan theoolation and servility. There were, it is true, protests against the new regime. The "non-communicants", as they were styled, refused to recognize the Concordat, contending that it had been forced upon the pope, and they formed a schismatical group, termed the "little church" (la petite église), which, though continually falling off in numbers, has preserved its existence, and in consequence have often been erroneously designated as Steven-
imprisoned, and all the seminarians of Ghent were drafted into the army and dispatched to Wessel on the Rhine, where forty-nine of them succumbed to contagious disease (1815). Such was the end of a region which had been living for two centuries under the rule of the austere and universal joy. The fall of Napoleon was greeted with no less satisfaction, and many Belgian volunteers took up arms against him in the campaigns of 1814 and 1815. In this nation of loyal Catholics, it was Napoleon's blundering religious policy which alienated his subjects.

II. The Kingdom of the Netherlands (1814–30).—Soon after the victory of the Allied Powers, who became masters of Belgium, they established there a provincial government in the States General (11 June, 1814). The new governing powers promptly proclaimed to the Belgians that, in conformity with the intentions of the Allied Powers, "they would maintain inviolable the spiritual and the civil authority in their respective spheres, as determined by the canonical laws of the Church and by the old constitutional laws of the country". These declarations roused hopes which, however, were destined to be disappointed; for by the secret treaty of Chaumont (1 March, 1814), confirmed by Article 6 of the Treaty of Paris, it was agreed that the bishopric of Ghent should be suppressed and that Holland should receive an additional diocese, and that this addition should be Belgium. The secret Treaty of London (23 June, 1814) furthermore provided that the union of the two countries was to be internal and thorough, so that they "would form one and the same State governed by the constitution already established in Holland, which would be modified by mutual consent to accord with new conditions". The new State took the name of the Kingdom of the Netherlands and was placed under the sovereignty of William I of Orange-Nassau.

The object of the Powers in creating the Kingdom of the Netherlands was to give France on her northern frontier a neighbour strong enough to serve as a barrier against her, and with this aim in view they disposed of the Belgian provinces without consulting them. The State resulting from this union seemed to offer numerous guarantees of prosperity from the standpoint of economics. Unfortunately, however, the two peoples, after being separated for more than two centuries, had conflicting temperaments; the Dutch were Calvinists, the Belgians Catholics, and the former, although greatly in the minority, 2,000,000 as against 3,500,000 Belgians, expected to rule the Belgians and to treat them as subjects. These differences of culture and of faith to the Fundamental Law which would take the duty on himself; they were, however, aggravated by the policy adopted by William I. Arbitrary, narrow-minded, obstinate, and moreover an intolerant Calvinist, he surrounded himself almost exclusively with Dutchmen, who were totally ignorant of Catholic matters and of the Belgian character. In addition, he was imbued with the principles of "enlightened despotism" which made him regard his absolutism as the form of government best suited to the needs of his kingdom, and thus he was unequal to his task from the very outset. While still Prince of Fulda, he had persecuted his Catholic subjects until the Diet was forced to check him. As King of the Netherlands, he showed that he had learned nothing by experience, and imagined that he could dispense with the assistance of the bishops to transform Belgium into Holland as far as possible.

On the other hand, the Belgians, passionately attached to their national traditions, and even more to their religious unity, did not take sufficiently into account the profound changes which had taken place in the Church in the two centuries since the French Revolution and the consequent upheaval of Western Europe they were convinced that past conditions could be restored even in the midst of a society that had outgrown them; nor did they grasp the fact that as the Treaty of London established freedom of worship in the Kingdom of the Netherlands they were under an international obligation which could not be renounced. They could not reconcile their idea of an independent and free Church, the Sovereigns, then of the Congress of Vienna, not only the restoration of the former rights of the Church, but the re-establishment of their old constitution in its entirety. Their disappointment was great when their sovereign, obeying the provisions of the Treaty of London, submitted for their acceptance the "Fundamental Law of Holland", with some modifications. Leaving out of the question the initial injustice in granting each country the same numerical representation, the 1,603 prominent Belgians consulted 290 did not think that the population of Belgium was at least twice that of Holland, it entirely overthrew the old order of things, suppressed the clergy as an order, abolished the privileges of the Catholic Church, and guaranteed the enjoyment of the same civil and political rights to every subject of the king, and equal protection to every religious creed. The Belgian bishops promptly made respectful appeals to the king. William having disregarded these, they issued a Pastoral Instruction for the use of the prominent Belgians summonsed to the States General, desiring the fact that the Fundamental Law was therefore rejected by the nation; for, adding to the 527 favourable votes the 110 unanimous votes of the States of Holland, the final vote was 637. Nevertheless, the king declared the Fundamental Law adopted, because, according to him, those who did not vote were to be regarded as favouring it, while of the 796 who opposed it, 126 did so only because they misunderstood its meaning. Owing to this "Dutch arithmetic", as King William's computations were termed, Belgium found itself under a constitution which it had legally repudiated, a constitution too which proved the Kingdom of the Netherlands a heavy burden during its brief, stormy existence temporary tenure.

The adoption of the Fundamental Law, by the king's decision, did not end the conflict between the civil authority and the Belgian conscience. Besieged with questions as to whether it was permissible to take the Holy See to the Supreme Council, the princes of the Church published their "Doctrinal Decision", which condemned it (1815). In consequence, many Catholics in obedience to their religious superiors, refused to take the oath, resigned their offices and their seats in the legislature. On the other hand, the Prince de Méan, former Prince-Bishop of Liège, took the required oath, and the king immediately appointed him to the archiepiscopal See of Mechlin, then vacant. The king next had attempted to gain the Holy See for his side in his struggle with the Belgian episcopacy, by practically demanding its submission to that of the King. Bulla of canonical instituting for his candidate as well as a formal censure of the "Doctrinal Decision". The pope replied gently but firmly, condemning the words of the oath of allegiance to the Fundamental Law, sending a Brief of Indulgence to the priests and the populace, and the sacred right to the Prince de Méan until he should have publicly declared that his oath had not bound him to anything "contrary to the dogmas and laws of the Catholic Church, and that in swearing to protect all religious communications, he understood this protection not only to include the property and the title of the Holy See in this matter, instead of winning the king to moderation, seemed to make him bolder. Reviving the obsolete claims of the old Gallican and Jo-
establishing the General Seminary, a State institution was erected under the name of Philosophical College (Collège philosophique), in which every aspirant for the priesthood was obliged to make a course of at least two years before he could be admitted to a second seminar. This was the real desire of the Belgians to have the philosophical college under the patronage of the State, which it was done in 1823, and the council of the college, being composed of the bishops, was made the executive of the philosophical college.

On this occasion, the Archbishop of Mechlin, whose servility toward the king had till then known no limit, did not hesitate to make some respectful reproofs to the Government, declaring that he could not in conscience accept these decrees. Gouba, in answering, repeated in substance Napoleon's gibe to the Prince de Broglie, "Your conscience will be regarded as a mere pretext and for good reasons." The other bishops, however, the capillitate vicars of vacant sees, and the rest of the clergy, unanimously took sides with the Archbishop of Mechlin and joined in his protest. The Catholic Belgian prelates to the States-General protested; the Holy See protested in its turn. Nothing availed; the Government closed the free colleges one after another, thereby ruining the flourishing educational system in which the Belgian families had absolute confidence; the Philosophical College was opened with great pomp, with a corps of instructors little thought of, either from a scientific or a moral point of view; students were drawn thither by the idea of the practical education and service from military service. The Government becoming more radical than ever, then undertook to create a schism in the Belgian Church by elaborating a plan, whereby the authority of the Holy See would be abolished and the bishops placed immediately under the Government.

But all these measures only increased the discontent of the Belgians and their passive resistance. To get the mastery, the Government conceived the idea of having recourse to the army, to the foreign pontiff, and branching again the project of a Concordat, which had failed in 1823, on account of the king's inadmissible claims. The king counted, on the one hand, on wresting as many concessions as possible from the Holy See, and on the other, on gaining popularity among the Belgians through the arrangement he would make with the pope. These calculations failed, and once more the superiority of papal diplomacy was made manifest in the difficult negotiations which finally resulted in the Concordat of 1829. The Government was compelled to resign its claims and become a mere matter of choice; in place of having the right of designating the bishops, the king was obliged to content himself with that of vetoing the choice made by the Chapters. The Concordat, which filled the hearts of the king with the ire of the Calvinists and the Liberals, and the Government tried hard to quiet the latter by showing the worst possible will in the application of the treaty which it had just concluded with the Vatican. The Philosophical College was not declared optional until 20 June, 1829; vacant episcopal sees were provided with titulars elected according to the conditions laid down in the Concordat, but a royal decree rendered the recruiting of the clergy almost impossible save from the ranks of the old pupils of the Philosophical College. The Catholic opposition, headed by the范·邦梅尔, the new Bishop of Liège, was so vigorous, and political complications so grave, that the king at last consented to permit the bishops to reorganize their seminaries as they wished (20 October, 1829). Then the king went farther, and on 9 June, 1830, entirely suppressed the Philosophical College, which had been deserted from the time attendance had become optional. On 27 May of the same year, the king even revoked his decrees regarding freedom of worship, and in particular Gouba and committed to Catholic zeal the direction of matters concerning Catholic worship, and would have left no ground for grievance on the part of...
Catholics had he not, at the last moment, seen fit in the negotiations with the Holy See, to demand the right of approving appointments to canonries. But all the king's concessions, which were really extorted from him by the force of circumstances, and despite his dogged reluctance, came too late, and the negotiations in regard to the question of canonries were in vain. In July the Belgian Revolution broke out.

As to the causes of an event so decisive for the future of the Belgian people, it is highly improbable that if King William had given them grounds for complaint only in religious matters, the public discontent would have culminated in a revolution. The Catholics, faithful to the teachings of the Church and to the counsels of their pastors, had no wish to exceed what was lawful and knew that they should confine themselves to peaceful protests. But the Government had injured many other interests to which a great number were more sensitive than they were to the oppression of the Catholic Church, at which they would have been wholly indifferent if, indeed, they would not have rejoiced. It will suffice to recall the principal grievances. Although Belgium was not richer than Belgium by almost half, each nation was allowed the same number of deputies in the States-General. Acquaintance with the Dutch language was at once made obligatory for all officials. The greater number of institutions of the central Government were located in Holland, and a majority of the offices were reserved for the Dutch. Taxes on corn and on slaughtering weighed most heavily on the southern provinces. The press was under the arbitrary control of the Government and the courts, and they vigorously prohibited any criticism of the Government and its deputies. The Government stubbornly opposed the introduction of the jury system, the verdicts of which, inspired by a saner appreciation of public feeling, would often have caused opinions adverse to the Government to the Government, in turn, was voting to be drawn into the current; the Government, wilfully blind, continued wantonly, in its imprudence, to pile up the materials for a great conflagration; at last, nothing was lacking but a fuse. This came from France. The revolt of July 1789, which began on the 27th to the 29th, overthrew the government of Charles X; on 25 August, of the same year, a riot broke out in Brussels and brought on the revolution which culminated in the conflicts between (24–28 September) the Dutch troops and the people of Brussels assisted by re-enforcements of volunteers from the provinces. The whole country rose up; at the end of some weeks the Dutch army had evacuated the soil of the southern provinces, and Belgium was free.

III. INDEPENDENCE (1830) Leuven. After the liberal forces had been shown, not only was revolution the work of two parties but the chief rôle in it had been played by the Liberals, and for a long time, although a minority in the nation, their ranks supplied the principal leaders in national life. The Catholics did not close their eyes to this state of things. Sincerely attached to the Union of 1828, they wanted a unionist policy without laying too much stress on party names. The provisional government which assumed the direction of affairs after the revolution had but one Catholic among its three members, and its rule was marked by caution and inspiration. Charles Rogier, who, in September, 1830, had come, at the head of the Liége volunteers, to lend a strong helping hand to the combatants in Brussels. The constituent Congress, convoked by the provisional government, was in great majority composed of Catholics; partisans of liberty “in all and for all”, in conformity with the teachings of Lamennais. The Liberal minority was split into two groups; the stronger professed the same ideas of liberty as the Catholics; the other was made up of a small number of sectarians and of State idolaters who had dreams of bringing the Catholic Church into subjection to the civil power. The leaders of the Catholic group were Count Félix de Mérode, a member of the provisional government, and Baron de Gerlache, President of the Congress; the most prominent among the Liberals were Charles Rogier, Joseph Lebeau, Paul Devaux, J. B. Nothomb, and Sylvain Van de Weyer; the group of sectarians followed the orders of Eugene Defacqz. The Constitution which resulted from the deliberations of the materials being the dispositions of the great majority of the assembly and showed at the same time a reaction against the tyrannical regime of King William. It proclaimed the absolute freedom of worship and of the press, which the Liberals put first, and also freedom of education and association, two things especially dear
to the Catholics; concessions were even made to the prejudices of some, by rendering obligatory the priority of civil marriage over the religious ceremony and commanding that no one should be forced to observe the religious holidays of any denomination. The Congress showed the same broad-mindedness in the case of the Prince of Andorra, whose stepson the Duke de Nemours, son of Louis Philippe, but the French king, fearing the jealousy of the European powers, dared not accept the throne for his son. Then, after having given the regency for some months to Baron Surlet de Chokier, the Congress declared in favour of the Prince Leopold, who, widower of the Princess Charlotte, heir presumptive to the Crown of England. Though a Protestant prince, Leopold I (1831-65) showed himself worthy of the confidence of a Catholic people; during his entire reign he maintained an even balance between the two parties, and never lost his solicitude for the moral and religious interests of the nation. Owning largely to Leopold's wise policy, Belgium successfully inaugurated free institutions, and showed the world that a nation is capable of progressive每一 essence.

During the early years of the new kingdom both sides remained faithful to the union of 1828, the administration being divided between the Catholics and Liberals. The dominant thought was to defend against Holland the patrimony of independence and of integrity established by the revolution, and to base an unanimous opposition to the foreigner. The tendency towards mutual conciliation was evident in the organic laws perfected during these early years, especially in that of 1842 on primary education which was passed unanimously by the Chamber, save for three blank votes, and received the unanimous vote of the senate. This law, the work of J. B. Nothomb, the minister, made religious teaching obligatory, but dispensed dissidents from attendance. King Leopold expressed his gratitude on hearing it. For thirty-seven years this remained the fundamental charter of public education. At this time, everyone of whatever party was convinced of the necessity of religion in the education of the people. The clergy readily rallied to the support of the bill and even suffered a great number of the 2,281 private schools which they had opened to be closed that they might co-operate in the establishment of the public schools.

The law of 1842 was, in a way, the last product of Unionist principles. Since the treaty of 1839 had dissolved Belgium's ties with Holland, the fear of an outside enemy had been removed, and the Liberal party was convinced that there was no longer anything to hinder its political doctrines from prevailing in the national government. This attitude was partly justified by the state of affairs. The Catholics were weak, without organization, without a press, without consciousness of their own strength; they had no relish for partisan contests, and they counted on Unionism to maintain public life along the lines of 1839. In contrast to the Catholic masses who lacked cohesion, and consciousness of their strength, the Liberals formed a young, spirited, united party, gaining recruits from the bourgeoisie and the learned classes alike, commanding much sympathetic support from official circles, in possession of a press with twenty times the influence of the Catholic press, in a word, master of the Belgian Government since 1830. Paul Devaux, one of the most remarkable men of this party and one of the organizers of the Union in 1828, became the apostle of Liberalism in its later development, which included the abolition of the Union and the victory of a policy exclusively Liberal in character. The articles which, beginning with 1839, he published in the "National Review", founded by him, exerted an enormous influence upon his party and finally gradually won over to his ideas a large number of moderate Liberals.

While the Union of 1828 was being dissolved and some of its promoters were seeking to give a partisan predominance to mixed ministries, the dissenters, who cherished an implacable hatred for the Catholic Church, wished to profit by the new turn of affairs in Liberal ranks to avenge the defeat they had met with. Thus at the first general election of 1841 Masonic lodges entered on the scene with the avowed intention of forming the "conscience" of the Liberal party and of outlining its programme. They established a large society called "The Alliance", which soon numbered 1,000 members, and which was to serve as their instrument. Without regard to the people in which Freemasonry awakened distrustfulness. In 1846, the Alliance called together a Liberal Congress, presided over by Eugene Defacqz, the dissenter of 1830, now Grand Master of Belgian Freemasonry. The same secrecy was preserved in the deliberations of the Congress as in the Lodges, from which it originated, and the only knowledge of its proceedings was to be gained from the programme which it published. In this document, side by side with a number of resolutions concerning the independence of the civil power", mere formula signify systematic war on the Church, and "the organization of public instruction under the exclusive direction of civil authority, which should be granted legal means to maintain a competition with private schools, and to bring them on the market on the ground of authority. At the time that this programme was being drawn up, the Congress made plans for a general confederation of Liberalism in Belgium, with which the Alliance as centre and type, was to establish in each district an association of free Liberal electors, bound in honour to vote for the candidates chosen by the Congress. There were also to be electoral divisions in every one of the cantons to extend the influence of the association.

The Liberal Congress of 1846 brought the session to a close with a resolution favouring the liberation of the lower clergy", whom they hoped to incite against the bishops by suggesting possibilities of bettering their condition. This resolution brought out strongly the true character of the Congress, as a reactionary movement against the work of the National Congress of 1830. It stands to reason that the strong impulse received up to that time from the Government and party, and the ardent hopes based on it reacted on the legislative elections, while the Catholics remained buried in their dream of Unionism, then merely an anachronism. The elections of 1847 placed the Liberals in power.

The new Government brought together in the same ministry Charles Rogier, member of the Congress of 1830, and Frère-Orban, one of the promoters of the Congress of 1846. Under the influence of the latter, a man of great talent but extremely arbitrary, whose imperious will got the better of the Unionist scruples of his colleague, the Cabinet declared that it would inaugurate a "new policy" taking as its principle the "independence of the civil power". And as a matter of fact, from this time forth, war was declared upon religious influence with a bitterness destined to divide the Belgian nation into two hostile camps. De Haussy, the Minister of Justice, set about applying to charitable foundations the most unheard-of principles. According to him, only charitable (State) endowments were to be turned over to them, even though the testator had made the selection of an administrator for the endowment an indispensable condition. On the other hand, the law of 1830 on middle-superior education was inspired by a spirit diametrically opposite to that of the law concerning

primary education; it showed the Government's intention of using the taxpayers' money to start competition with free education, and if, as a matter of policy, the clergy were invited to give religious instruction in the public institutions, their influence was more as to make their co-operation lack both dignity and effectiveness.

The Belgian nation was not yet ripe for the adoption of a policy so out of harmony with the spirit of its national traditions, and, after five years, the cabinet which had approved the measure most understood the law of 1850 by adopting the "agreement of Antwerp" made between the communal administration of that city and the bishopric, giving to the clergy the guarantees required for their admission to the public institutions of secondary education. The support given to this agreement, by the Chamber, the vote being 86 to 7, showed that the necessity of religious instruction was still understood by a large number of Liberals. The elections of 1855, which returned a Catholic majority, resulted in a cabinet presided over by P. de Decker, who may be called the last of the Unionists. This cabinet, which its friends might have reproached with excessive moderation, was destined to be overtaken as reactionary. One of its members, A. Notombe, drafted a law concerning the establishment of monitors and the revision of the decrees of testators and repair the unfortunate effects of De Haussey's legislation. Testators were authorized to appoint special administrators for their bequests, but the powers of the latter were circumscribed and that of the court placed under the strict supervision of the State (1857). Under the leadership of Frère-Orban, who under the pseudonym of Jean Van Damme had just written a sensational pamphlet, the Liberals pretended to find in this scheme a roundabout restoration of the monastic main-morte: they called it the law of the convents, and when the plan was brought up for discussion, they organized riots which intimidated the head of the cabinet. He took advantage of the communal elections, which had been favourable to the Liberal party, to tender the resignation of the cabinet. This pusillanimous conduct delivered the Government again into the hands of the Liberals, who held power for thirteen years (1857-70).

During this period, the new ministry, which was the result of a riot, did nothing but emphasize the anti-religious character of its policy. The real head was Frère-Orban, who in the end forced his colleague, Rogier, to retire (1868), and carried out successively the principal features in his program without the aid of the political parties. More prominent than ever was the alleged aim of protecting civil society against the "encroachments of the clergy." The law of 1859 on charitable endowments was the counterpart of that of 1857 and the despoothing policy inaugurated in 1847 by de Haussy. A law of 1869, of the same animus, confiscated all the bursaries for free scholarships, nine-tenths of which had been established to advance the Christian education of the young, annulling the formal provisions of the testators.

A law of 1870 confined exemption from military service to students of the grandi séminaires, refusing it to novices of religious orders. In actual practice, the Government was sectarian and intolerant towards religion and the clergy. It countenanced the efforts prompted by the Masonic lodges to secularize cemeteries. At Antwerp a mob, the bolandisti, on the evening of December 27, 1870, that there should be a cemetery for each denomination, which left Catholic cemeteries under the jurisdiction of the Church's jurisdiction. Appearances to public offices, especially to the magistracy, were noticeably partisan. An act in public prejudice of the Government, which was its suppression of the annual address of which the Bolandisti (q. v.) had hitherto received for the continuation of their magnificent work, the "Acta Sanctorum".

It seemed as if the rule of the Liberal party would continue indefinitely, and that Catholics were permanently excluded from power, which their adversaries declared they were incapable of exercising. However, the initiative of the Catholic party had long passed. At the same time, in imitation of the German Catholics, they held important Congresses at Mechlin, in 1863, 1864, and 1867, which awakened Catholic enthusiasm and gave courage to the pessimists. In this way, Catholics found themselves able to resume the struggle with new vigour. Dissensions in the Liberal party, the strenuous opposition to the Liberals, or Doctrinaires, of the Government, on the part of men of advanced ideas, who claimed the double title of Progressists, and of Radicals, combined to help the Catholics and in 1870, they finally succeeded in overthrowing the Liberal Government.

The Liberals then had recourse to the means which had contributed to their success in 1857. The ministry had appointed as Governor of Limburg P. de Decker, who had become the head of the resistance in 1855, and whose name had been connected with the failure of a financial association. The Liberals affected to be greatly scandalized and organized riots which so frightened Leopold II that he dismissed his ministry (1871). He replaced it, it is true, by another Catholic ministry, of which Jules Malou was president. Though formed during the disturbances of a popular outbreak in defiance of the wishes of the large cities, which were all Liberal in their sympathies, and further impugned before the king by Jules Van Neste, the royal secretary, who was nicknamed the "Seventh Ministry", this ministry managed to hold out until 1878 only by dint of being as unobtrusive as possible. None of the anti-religious laws made by the Liberals were revised, not even the one concerning bursaries, which had been passed by a bare majority. There was no restoration of the balance of power in public offices, which continued to be held by the Liberals. In 1875, the Burgomaster of Liège having forbidden the Jubilee processions in that city, in defiance of the Constitution, the Government gave an illegal order and had the humiliation of seeing the 1,500 Liberals tender him a complimentary banquet. Catholic rule seemed in very truth what its adversaries called it, an "empty parenthesis", and, toward the administration, Jules Malou, in a Catholic meeting, summed it up in these words: "we have existed"—Nous avons vécu.

When a turn in the elections brought the Liberals back into power, after the Catholic administration had dragged out a precarious existence of eight years, they were able to continue their anti-Catholic policy from the point where they had left it. While out of office they had become more irreligious owing to the growing influence of Masonry. Not only the clergy, but the Church, and religion itself, became the objects of their attacks. They encouraged writers who, like Professor Laurent of the University of Ghent, denied the necessity of granting liberty to the Church, or who, like Professor de Leavelye of the University of Liège, asserted the superiority of Protestantism. The Catholic party flooded the country with copies of a pamphlet written by the latter in this vein. Besides this, the Liberals sought to make the country Protestant by supporting de Leavelye and Goblet d'Alviella, who, taking advantage of a quarrel between the villagers of Saint-Marien and the brothers of Saint-Caterine, introduced Protestant worship there and tried to proselytize the inhabitants. They adopted the name Gueux (beggars) which they found in the story
of the religious troubles of the sixteenth century. Their presses daily waged war on the Catholic religion; their carnival pageants were vulgar parodies which exposed the most sacred things to popular derision. Lastly, the leaders of the movement agreed upon a revision of the law of 1842 dealing with public instruction. On the pretext of drafting this law, was placed in charge of Van Humbeck, the Minister of Public Instruction, a Freemason who some years before had declared in his lodge that "Catholicism was a corpse that barred the way of progress and would have to be thrown into the grave." The law did him justice, being in every respect the reverse of the law of 1842; it excluded from the schools all religious instruction, and barred from the ranks of teachers all graduates of free normal, i.e. religious schools. But for once, Freemasonry had counted too much on the apathy and good nature of the Catholic ministry, and the resistance was unanimous. At the call of the bishops Catholicism rose in a body and entered on a campaign of petitions; committees for resistance were everywhere formed; public prayers were offered in all the churches for draughts of "teachers with useless schools". In the Chambers, the Catholics after emphatic protests refused to take any part in the discussion of the law even of its amendment, which forced the Liberals to do their worst and to shudder at the expense responsibility. It was carried without formal opposition. The President of the Senate, Prince de Ligne, a Liberal, resigned his post, deploring the division of the nation into Guelphs and Ghibellines. The Catholics, co-operating with the bishops and the clergy, achieved wonders. In one year they erected three or four thousand Catholic schools; the rule that there should be one to each commune was obeyed with few exceptions. More than 2,000 teachers of both sexes resigned their positions, the greater number to take part in free education often at a very small salary. At the end of a year, the State schools had lost fifty-five per cent. of their pupils, and retained only thirty-eight per cent. of the entire body of school children, while the Catholic schools had sixty-one per cent. Many of the State schools were emptied, and others had a ridiculous small attendance. Dumbfounded and enraged at such unexpected resistance, the Government tried every resource, however contemptible or absurd. Negotiations were begun with the Vatican, and a breach of diplomatic relations threatened, in the hope of forcing Leo XIII to condemn the action of the Belgian bishops. Nothing came of this, and in consequence the Belgian ambassador to the Holy See was recalled. To intimidate the clergy and the Catholics, a decree was passed ordering an inquiry as to the execution of the school law, and the investigators journeyed through the country like real judges, and cited people before their tribunal at random, exposing the most respectable people to the insults of the mob. This tour of investigation was severely criticized, whether on account of their blindness to the limit, proposed to the Chamber another inquiry concerning the main-morte measure that is to say, a campaign against convents. This time, the nearness of elections dictated a more prudent policy and the motion was lost by a majority of two votes.

The country was roused to great excitement. In the face of open persecution, the Catholics showed unexpected energy. Foreseeing their triumph, they established the "Union for the Redress of Grievances", which helped the candidates to adopt a vigorous policy. On 10 June, 1884, the country was called on to pronounce judgment. The result was overwhelming. Half the members of the Chamber had been candidates for re-election. Only two Liberal deputies were returned, the others being defeated in the whirlwind which uprooted Liberalism. Amid great national rejoicing, the representatives of Catholicism in power had been about their work of uprooting Christianity without delay, and framed the famous school law of 1879, which the Catholics called the "Law of Misfortune" (Loi de malheur), a name it still retains.

The law of 1879 was the first in the history of Belgium that a Catholic Government had courage to repeal a law made by the Liberals. The legislators of 1884, however, did not revive the law of 1842. Taking into consideration the change of times, they took the primary schools from State control and placed them under the communes, leaving each commune to decide whether or not religious instruction should be given; the State subsidized these schools, on condition that they would accept the State programme and would submit to State inspection; all other schools were subject to the same conditions. The resistance was unanimous. At the call of the bishops Catholicism rose in a body and entered on a campaign of petitions; committees for resistance were everywhere formed; public prayers were offered in all the churches for draughts of "teachers with useless schools". In the Chambers, the Catholics after emphatic protests refused to take any part in the discussion of the law even of its amendment, which forced the Liberals to do their worst and to shudder at the expense responsibility. It was carried without formal opposition. The President of the Senate, Prince de Ligne, a Liberal, resigned his post, deploring the division of the nation into Guelphs and Ghibellines. The Catholics, co-operating with the bishops and the clergy, achieved wonders. In one year they erected three or four thousand Catholic schools; the rule that there should be one to each commune was obeyed with few exceptions. More than 2,000 teachers of both sexes resigned their positions, the greater number to take part in free education often at a very small salary. At the end of a year, the State schools had lost fifty-five per cent. of their pupils, and retained only thirty-eight per cent. of the entire body of school children, while the Catholic schools had sixty-one per cent. Many of the State schools were emptied, and others had a ridiculous small attendance. Dumbfounded and enraged at such unexpected resistance, the Government tried every resource, however contemptible or absurd. Negotiations were begun with the Vatican, and a breach of diplomatic relations threatened, in the hope of forcing Leo XIII to condemn the action of the Belgian bishops. Nothing came of this, and in consequence the Belgian ambassador to the Holy See was recalled. To intimidate the clergy and the Catholics, a decree was passed ordering an inquiry as to the execution of the school law, and the investigators journeyed through the country like real judges, and cited people before their tribunal at random, exposing the most respectable people to the insults of the mob. This tour of investigation was severely criticized, whether on account of their blindness to the limit, proposed to the Chamber another inquiry concerning the main-morte measure that is to say, a campaign against convents. This time, the nearness of elections dictated a more prudent policy and the motion was lost by a majority of two votes.

The country was roused to great excitement. In the face of open persecution, the Catholics showed unexpected energy. Foreseeing their triumph, they established the "Union for the Redress of Grievances", which helped the candidates to adopt a vigorous policy. On 10 June,
Belgium

The interference was accepted as the guiding principle, and particularly when there was any question of labour legislation, the words on every tongue were: "our aim is to give a man able to give certain proofs of education had three. The electoral body was increased tenfold, and henceforth only the worthless and the incompetent were excluded from the administration of public affairs in Belgium.

In this way the Belgian Government, by exercising prudence as well as courage, succeeded in a few years in carrying out a splendid reform programme, and deserved the admirable eulogy of Fernand Payen, a staunch juriscncek. The Belgian law reform, if nothing else, has been the most complete body of legislation which the history of this century can show in any country." A former liberal minister praised hardly less emphatically the wise policy of the Catholic Government, by declaring that it was difficult to combat it because it offered no grounds for complaint. For the first time in the history of Belgium Catholics showed their ability to govern, that is to say, their ability to comprehend at a glance the needs of the times and to meet them satisfactorily. Even the king, hitherto distrustful of Catholics, gradually gave up his prejudices, and at every election the voters confirmed their tenure of power. The party of the Right showed their ingratitude towards M. Beernaert, by declining, partly through motives of personal interest, to vote for the proportional representation which would have made this the head of the Cabinet demanded as an indispensable item in the revision of the Constitution. On this refusal, M. Beernaert resigned his position at the head of the Cabinet, in 1894, depriving Belgium of her greatest statesman.

The result proved M. Beernaert's wisdom. From the time of the revision, the Liberal party, which had its exclusive support in the bourgeoisie of the cities, had been entirely shut out of Parliament, where its place had been taken by a strong group of Socialists. This group, destitute, for the most part, of culture and parliamentary training, introduced coarse and violent methods of discussion into the Chamber, seriously compromising the dignity of parliamentary debate. On the other hand, the total suppression of Liberal representation was both an injustice, since this party still retained the sympathies of the middle class in the large cities, and a danger, for the true parliamentary spirit was violated by the exclusion from public life of views which had formerly been all powerful and still existent. Proportional representation seemed to be the only way of restoring parliamentary balance, and it came about that those who had caused M. Beernaert's loss of power to avoid this very thing were won over to his views. Proportional representation was therefore proposed and carried, making electoral legislation in Belgium the most complete in the world.

The Liberals returned to the Chambers, the Catholics sacrificing their overwhelming majority in their desire for the representation of every shade of opinion not only in their party, but in the electoral body of the whole country. The three parties for the two which had divided the power previous to 1893.

The Catholics, nevertheless, retained a permanent majority. The successors of M. Beernaert continued to conduct the Government, with less prestige and authority. From time to time the administration was affected by reactionary influences, occasionally compromised by mistakes in policy, but the current of social legislation has not changed its course. In 1895, a special department of work and labour was created. M. M. D. Nyssens, who had been minister, filled the position with great distinction. Laws were passed regulating workshops, trade unions, pensions for workmen, insurance against accidents while working, and providing for rest on Sundays.
The number and importance of these legislative enactments was such that a Socialist deputy codified and published them in a collection, rendering thereby tacit but significant homage to the Government responsible for them.

The very stability of the Government, which each successive election retained in power, was the despair of its enemies who saw the impossibility of overthrowing it by legal methods. The Socialists decided that their success would be greater if they obtained by threats, or, if necessary, by violence, a new revision of the Constitution, supplanting by universal suffrage, pure and simple: "One man, one vote." Failing to bring about this reform by intimidating the Chamber, they sent revolutionary bands into the streets. I have always tried to dissuade you from violence," said Vandervelde, their leader, to his audience of workingmen; "but to-day, I say to you: The pear is ripe, and must be plucked." Another leader, Grimard, the Socialist senator, and a millionaire, even went so far as to declare that he would turn over his whole fortune to the workingmen and would start again with nothing. Intoxicated by these words, the workingmen of many large cities and industrial districts abandoned themselves to excesses, and blood was shed in several places, notably at Louvain. The energy with which the Government applied repressive measures, however, soon put an end to these attempts. Then the General Council of the workingmen's party declared a general strike, the last weapon of the revolutionary party. This failed after a few days, and the General Council was forced to advise the workmen to return to work. The prestige of the Socialists with the popular masses was greatly impaired by the failure of so great an effort and the Catholic Government came out of the conflict unscathed (1905).

There remained but one way of overcoming the Government: the alliance of the two opposition parties, the Socialists and the Liberals. This was effected at the time of the general elections of 1908. Although from the economic point of view the two parties were antipodal, they were united in their anticlerical sympathies, and there was reason to fear that their success would mean the downfall of religion. In their certainty of success they circulated the names of their future ministers, and openly avowed their posts as a temptation to their creditors. But their alliance met with a crushing defeat in the elections of 1906, which left the Catholic Government as strong as ever. The fêtes, commemorating the seventy-fifth anniversary of national independence, had been celebrated throughout the country with unrestrained enthusiasm, under the patronage of the Catholic Government, which, in 1909, will celebrate the twenty-fifth anniversary of its own existence. In the history of Belgium no government has held power so long, and the Catholic party has come to be more and more of a national party, or, to speak more correctly, the nation itself.

This summary would be incomplete if the history of the struggles in defence of religion and of social order were not supplemented by the internal history of the Catholic people of Belgium, i.e., the development of popular opinion during a quarter of a century. Generally, in the face of adversaries who attacked their most precious possession, the religion of their fathers, Catholics had proclaimed themselves "conservative" in a sense that political opponents had not designated it and was the name which the leaders of the party were fond of applying to themselves in Parliament. But the appearance of the workingmen on the political scene and the programme of their elections (1886, brought home to enlightened Catholics the danger of this name. Hence the name "Conservative" was repudiated not only by the advanced members of the party, who called themselves "Democratic Christians", but even by the Catholics opposed to reforms, who really aimed at preserving the economic regime which had caused all the grievances of the working classes. The latter, rejecting the term "Conservative" as a weapon for the working classes, called simply "Catholics". Of the two groups, that of the Democratic Christians is at present numerically inferior, although more influential by reason of its enthusiasm, its activity, its faculty for taking the initiative in the political movement. It must be recalled that before the revision of the Constitution the Catholic, like the Liberal, party was exclusively a bourgeois party, as its members had to pay a large poll tax for the privilege of suffrage. Its leaders for the most part were drawn from the upper bourgeoisie, and those whose ability and energy called them to a share in the direction of affairs had no other ideals, or interests, than those of the bourgeoisie. When the revision heavily recruited their ranks, the new voters, though large in number, played the part of mere privates and had no active part in the management of the parties. Those of the new-comers, who were conscious of possessing the requisite ability and courage in order to carry out their ideas and programme were obliged to organize themselves under the leadership of the former leaders, often even regarded with suspicion, and accused of socialistic tendencies.

In a large number of arrondissements, the rivalry of conservative and democratic tendencies among Belgian Catholics resulted in the establishment of two distinct political groups, and the Belgian bishops, and the most sagacious leaders, found it a hard task to prevent an open rupture. At Ghent, where the Democratic Christians assumed the harmless name of Anti-Socialists, there was a distinct break in the ranks. At Liège, which was a centre of opposition to democratic ideas, Catholic circles being under the control of employers and financiers inimical to reform principles, a rupture was barely averted. At Alost, where the break was beyond control, the Abbé Daens organized an independent and radical body, which, taking the name of "Christelijke Volkspartij" (Christian people's party), abandoned by the Anti-Socialists, opposed the Catholics more bitterly than the Socialists. It made common cause with the Socialists against the Government in the elections of 1906. But, apart from the Daensists, a group, very small at most, which in its best days was unable to send more than two or three representatives to the Chamber, the Democratic Christians, in all their electoral battles, have always marched to the polls side by side with the conservative Catholics. They held the controlling vote indispensable for any victory, and their leaders in Parliament have been in the forefront in advocating the labour legislation which has produced the social laws. After opposing them for a long time, the Conservatives have gradually become accustomed to regard them as an essential factor of the Catholic army. In the meantime, the birth and progress of this group clearly marked the internal division of the Catholic party in the direction of a new social ideal, an evolution too slow for some, and too rapid for others, but in any case, evident and undeniable.

IV. Conclusion.—This politico-religious history of Belgian institutions extending over a hundred years, contains more than one lesson. In the first place, it clearly establishes the fact that in every generation the Belgian nation has fought with vigour against every regime that was inimical to its faith. It struggled against the constitutional revolution of 1830, against William I, against the Liberal Government, and against the coalition of the Liberals and the Socialists.
and has come forth victorious. In the second place it must be remarked that the war on the religion of the people has naturally been a war on the people. At the close of the eighteenth century, Belgium had no enemies except its foreign oppressors, abetted by a few handfuls of traitors. Under the Dutch Government, it was evident that the generation which developed under the French domination had been partly Christianized, but the danger was that among the bourgeoisie of the cities there was a body which no longer recognized the authority of religion in social matters. After 1846, it was manifest that this faction was under the control of the Masonic lodges, and that the desire of the workingmen for war upon religion and the Church. In 1856, it was evident that, in the bourgeoisie class, the great mass of workingmen had been won over to the cause of irreligion and that the population of the industrial districts had been seriously affected. In addition to this, the four larger cities of Belgium, Brussels, Antwerp, Liège, and Ghent, and most of the cities of the Waalmon provinces, had gone over to the Anti-Catholic party. The defenders of religion and its opponents tended to become numerically equal, a state of things which would have been the envy of a society but not in a way by the system of plural voting. In the votes cast at the general elections there was always a Catholic majority, but it is a question whether the majority of voters are Catholics. If the latter are distributed in the Catholic countries and the Belgiums who submit to the teachings of the Church, still constitute the majority of the nation, the answer would be more or less doubtful. This leads to a third remark. The resistance to the enemies of religion has not been as effective as the duration and intensity of the contest might lead one to believe. Whenever the Catholics were successful, they have been satisfied with keeping the power in their hands; they have not exercised it to carry out their programme. No Catholic wrongs have been redressed; every law passed by the Liberals against the Church and the clergy has remained unrepealed, and it was only in 1884 that the Government, supported by the entire nation, felt strong enough to inaugurate a bolder policy. But the revision of the School Law of 1879 is the solitary instance of progress which probably continue to be so for some time to come.

The social condition of the Catholic religion in Belgium, while doubtless favourable, is not, therefore, free from danger. The School Law of 1884, among other heads, aimed at the degradation of the Christian education of the people. It is evaded by the municipal government of the capital, which manages by trickery to exempt the majority of the children from religious instruction, and even in the Liberal communes, where the pupils receive religious instruction, it is neutralized by the lessons given them by their freethinking teachers. Many of the public schools are now developing generations of unbelievers. This is a matter that needs attention. It is also imperative to re-enforce the Catholic army by drawing recruits from the only legible open to it, namely, the people. To do this the Government must accentuate the character of its social legislation, which is too often compromised by provisions which deprive it of a large part of its effectivness. The law on trade unions deprives them of the means most likely to make them prosper, which is to make trade. The law on labour accidents would be excellent, if insurance against accidents was made obligatory. The law enjoining the Sunday rest, carelessly assumed a moralizing character, contains such a large number of exceptions and is enforced with such want of earnestness that it is almost a dead letter. The Socialists declare, often with a semblance of truth, that the laws passed to benefit the workingmen are mere blind, and it is not always easy to convince them of the contrary.

The continuation of the Catholic regime in Belgium seems to be contingent upon a renewal of legislation, on provision for the division of State subventions among all the communal or private schools in proportion to the services that they render, and greater boldness in the solution of the labour questions. Religion has in Belgium so strong a support in popular loyalty, and the Church, still taking advantage of them at the proper time, an indefinite tenure of power will be ensured.

V. STATISTICS.—According to the census of 31 December, 1905, the population of Belgium is 7,160,547. The great majority of the inhabitants are Catholics, but the lack of religious statistics makes it difficult to give the exact number of non-Catholics. There are about 30,000 Protestants, 3,000 to 4,000 Jews and several thousand persons who, not having been baptized, do not belong to any faith. The kingdom is divided into six dioceses, namely: The Archdiocese of Mechlin and the suffragan Dioceses of Bruges, Ghent, Liège, Namur, and Tournai. Each diocese has a seminary and one or several preparatory schools for the training of the clergy; there are, in addition, the Belgian College at Rome, a seminary for the training of the Belgian bishops send the best of their pupils, and the College of the Saint-Esprit at Louvain, where a superior theological course is pursued. The secular clergy number 5,419: the regular clergy, 6,237; these latter are distributed in the religious orders in Belgium have 29,303 members living in 2,207 houses; the members of the orders, both male and female, devote their time chiefly to teaching and nursing the sick; the male orders also aid the secular clergy in parochial work.

Under the guidance of this large body of labourers for the Church, the religious life in Belgium is intense, and the works of piety and charity are very numerous. Statistics of these charities are given in Madame Charles Vluesbourg’s “La Belgique charitable” in the preface to which M. Bernaert states that no country has their equal. Belgium also takes a share out of all proportion to the size of its territory in international works of piety and in foreign missions. It is at the head of the work of the Eucharistic Congress, two of its bishops are the presidents of the congregation of Liège, and Monseigneur Heylen, of Namur, having been the first two presidents of the association. Five sessions of this congress have been held in Belgium; at Liège (1883), Antwerp, Brussels, Namur, and Tournai. Equally enormous is the influence of Belgium in the sphere of Catholic missions. The congregation of secular priests of the Immaculate Heart of Mary, founded at Scheutveld near Brussels in 1862, labour for the evangelization of Mongolia and the Congo; several of their members have suffred martyrdom in these countries. The Belgian Jesuits have for their mission-field Calcutta and Western Bengal. Their missionaries are trained in the Apostolic school established at Turnhout. The American seminary at Louvain (1857) sides in restoring the secular clergy of the United States. Other religious orders also labour for the evangelization of foreign regions. The toils and heroism of a number of the Belgian missionaries have given them a world-wide renown; such are, Father Charles de Smid, the apostle to the Indians of the Rocky Mountains, and Father Damien de Veuster, who devoted himself to the lepers of Molokai.

The great success of Catholicism in Belgium is largely explained by the freedom it enjoys under the Constitution. “The free opinion of all” and their public exercise, as well as the right to the expression of opinions on all subjects are guaranteed, with the exception of misdemeanours committed in exercising this liberty” (art. 14). The sole restriction to this liberty is contained in article 16 of the Constitution
which says that a civil marriage must always precede the religious ceremony, with such exceptions as may be established by law. The priest who, in fulfilling his duty, blesses a marriage in extrems under this article is in danger of prosecution and condemnation; the law which the Constitution provided for, and which would have protected such cases, has never been enforced. With the exception of this and the authorizing divorce, to which, however, recourse is seldom had, it may be said that the legislation of Belgium conforms to the Catholic standard of morality. Although the Church is independent in Belgium, and the country has no State religion, it does not follow that the governmental and the religious authorities have no connexion with each other. Tradition and custom have produced numerous points of contact and relations of courtesy between Church and State. The latter pays the stipends of the Catholic clergy as well as of the clergy of the Protestant and Jewish religions, very moderate salaries which have been slightly increased by a law passed in 1900. The State also assists in the expense of erecting buildings for religious purposes and of keeping them in repair. The parishes have been granted a civil existence and can hold property; each parish has a board of administration, of which the mayor of the town is a member by law, for the aid of the clergy in the management of the finances of the Church. The Liberal party, it is true, has, on a number of times to get control of the church property, but the law of 1870 (a compromise law), concerning the temporalities of the different religions, only requires the supervision of the public authorities over the clergy, and the intervention of these authorities is requested. Students at the theological seminaries, who are to be parish priests, are exempted from military duty. Finally, the civil authorities are officially present at the "Te Deum" which is sung on the national anniversaries; and except during the period of 1880-84 (see above) the Government has maintained diplomatic relations with the Holy See.

VI. EDUCATION.—The most successful work of the Belgian Church has been done in the field of education, in spite of most violent opposition on the part of the Liberal party. Article 17 of the Constitution, says, concerning instruction: "Teaching is free; all preventive measures are forbidden; the repression of offences is reserved to the law. Public instruction given by the State is equally free. The Constitution, therefore, supposes at the same time a free instruction and an instruction by the State; it guarantees complete liberty to the first and subordinates the latter to the enforcements of the law. The Catholics alone have made use of this article of the Constitution to establish a flourishing series of schools and colleges leading up to a university. The Liberals have contented themselves with founding a university (subsidized by the city of Brussels and the province of Brabant) and an insignificant number of schools, and are generally satisfied with State instruction for their children; this instruction they endeavour to make as neutral, that is, as religious as possible. They also favour in every way State instruction to the detriment of the free teaching. Though the Liberal party is against and Labour, which have, respectively, 1000 and 2000 students. There are also 20 State athenaeums with 6000 students, besides 7 communal colleges having about 1000 pupils; these institutions are for secondary education, and are taught in 112 intermediate schools, 78 of which are for boys and 34 for girls, with a total of 20,000 pupils. There are also 11 intermediate schools opened by the communities, 5 for boys and 6 for girls, with a total of 4000 pupils. The law of 1885 makes the communes responsible for primary instruction; each commune is obliged to have at least one school, but it may be relieved of this responsibility if it is shown that private initiative has made sufficient provision for instruction. The State intervenes also in primary instruction by means of its normal schools for male and female teachers, by employing school inspectors whose business it is to see whether all the legal requirements are observed, and who also advises the communes on how to carry out the law.

Compared with these State institutions the schools established for free education are equal in several respects superior. The Catholic University of Louvain, founded by the bishops, has 2200 students; it is surrounded by several institutes, one of the most famous of which is the "Institut philosophique" of which Monseigneur Mercier, now Cardinal Archbishop of Mechlin, was the founder and first president (until 1906). The Episcopal Institute of St. Louis at Brussels and the Jesuit Colleges of Notre-Dame at Namur prepare pupils for degrees of philosophy and letters. There are 90 free colleges for intermediate instruction, most of them diocesan, others carried on by the different religious orders, among whom the Jesuits have a high reputation; there are also 83 seminaries having 6500 pupils. The free colleges have a total of 18,000 pupils, which is more than three times that of corresponding State schools. The situation in the intermediate classes of the lower grade is not satisfactory, and may be called the dark page of their school statistics.

Since 1879 the subject of primary education has been the real battle-field; during this struggle the Catholics almost attained the ideal, having at least one school in almost every commune. But this was done at the cost of great sacrifices, so that since the suppression of the "Law of Misfortune" (Loi de malheur) of 1879, which had taken the Christian character from the primary schools, Catholics have accepted the communal schools in their renewed Christian form and have given up those which they had founded. The State, moreover, subsidizes the free schools when they give the guarantees necessary from a pedagogical point of view, and it authorizes the communes to adopt them as communal schools. Notwithstanding this, the legislation concerning primary teaching is far from being absolutely satisfactory; the large communes evade or even openly disregard the law, and it is only at long intervals that the Government interferes to check the most scandalized by law. The law guarantees the primary instruction and the free teaching on an absolute equality, and this equality is maintained by the Government; the diplomas granted by the free universities open the way to government positions just as do those granted by the State universities; the certificates given by the free institutes are equal to those of the State schools.

VII. CEMETERIES.—It is only by the greatest exertions that the Catholics of Belgium have saved the Catholic cemeteries. In regard to the question of cemeteries they have shown less vigour. The decree of Praesidial of the year XII (1804), by which the cemeteries of Belgium were regulated, stipulated that, in localities where several religions exist, each form of faith should have its own cemetery, and that where there was but one community it should be divided into as many sections as there were different denominations. The Catholic cemeteries, in conformity with the Ritual, had separate sections for those who had died in communion with the Church, for infants dying without the lower classes. The Church refused religious burial, and for free-thinkers who died outside of the Catholic communion. There was no conflict until 1802 when, obedient to the order of the Freemason lodges, the Liberals declared the law of 1804 to be unconstitutional. The Government, then carried on by the Liberals, left it to the
communal authorities to apply the law of 1804 or not, and for some fifteen years the law was disregarded and the measure of the majority of the towns. With the lapse of time the enforcement of the law declined, and a further step was taken; in 1879 the year of the Loi de malheur, the Court of Cassation suddenly changed its traditional method so as to convict those magistrates who enforced the law of 1804. From this day the law became a misnomer, and many adverse sentences fell on the authorities who believed themselves bound in conscience to maintain this decree. Owing to the inactivity of the Catholics, there has been since that time, no freedom with regard to cemeteries in Belgium.

Belgrade and Smederevo, titular (united) sees of Servia. The history of these sees is as confused as their present plight is pitiful from the Catholic standpoint. Dalmatia and Illyria claim St. Titus, the disciple of St. Paul, as their first Christian missionary; but the first Bishop of Belgrade, Theodosius, dates only from 1059. As the ancient Singidunum, however, it was an episcopal see in the fourth century, but gradually declined during the invasions of the barbarian Slavs. The medieval see was founded by the Kings of Serbia, and the Hungarians and the Serbs disputed the possession of Belgrade (Serb Beograd, white city). The latter having destroyed the town (1126), the episcopal see was transferred to the neighbouring Scardona, so extensively embittered that it received the name of Scardona Nova. Religion had long flourished there, for one of the bishops at the Council of Salona (530) signs as Episcopus Ecclesiae Scardonitanae. On the occasion of the transfer to Scardona the title of Belgrade disappears for centuries from ecclesiastical history. The neighbouring city of Smederevo (Lat. Semedrija) was also an episcopal see. Gami gives the names of four of its bishops from 1544 to 1605, a list, beginning 1334, of bishops whom he styles of Belgrade and Semendria" (Nadarulbenea și Belgradenea). It is possible that we may be able to add to this list the title and See of Belgrade; for a Brief (4 December, 1651) is extant addressed to Matthew Benlich, Episcopus Belgradensis, Ecclesiae Samadiensis Administrator, creating him vicar Apostolic for those sees of the Church of Hungary which were under Turkish domination.

In 1729 the two Dioceses of Belgrade and Smederevo were united by Benedict XIII, and in 1733 Vincent Bagradin became the first holder of the diocesan title. Thenceforward the list of bishops is regular and complete di Rome in the Official annual of the Holy See) gives the names of all the prelates of this see. Until recent years Belgrade and Smederevo were considered residential sees; it is expressly so stated in the consistory of 1858. It was added that these two sees (ancient Alba Graeca and Singidunum respectively) were suffragans of the metropolitan See of Antivari, and that the nomination to them resided in the Emperor. "As they are held by the infidels, their actual state is passed over in silence". For many years the title was given to the auxiliary of an Hungarian bishop (at present to the auxiliary of the Archbishop of Zagreb) who was bound to reside with his superior. The "Gerarchia" for 1906, without giving any notice of the change, has transferred this see to the list of titular bishoprics, though Bishop Krapac, who now holds the title, was named in 1904 as a residential bishop.

The present condition of this Church is most lamentable. The limits of the diocese are those of the Kingdom of Servia, which has an area of 18,630 square miles and a population (1905) of 2,678,999, belonging for the most part to the Greek schism, which is the official religion of the State. Since 1851 the Bishop of Diakova acts as administrator Apostolic; since 1886 the territory is united to the ecclesiastical province of Scutari (Kirch. Handlex., I, 553). There are only two or three priests, who divide their activities between the principal towns of Belgrade (4,000 Catholics), Kragujevatz (200), and Nis (1,000). There are also seven secondary stations, numbering about 1,000 Catholics all told. (It is to be noted that according to the "Statesman's Year Book for 1907", the Catholic population of Servia is 10,243 Catholics.) One church, two chapels, and two elementary schools (at Belgrade and Nish respectively) complete the list of the mission's resources.

The statistics say nothing of Uniat Greeks, which leads us to suppose that these Latin Churches are only western Europeans whose business obliges them to reside in Servia. Belgrade has (1905) a population of 80,747. Situated on the right bank of the Danube, just below the Save, it has always been a natural fortress, and as such is famous in military history. From 1523 to 1877 it passed alternately from Turks to Austrians; in the latter year the Turkish garrison was withdrawn, and in 1878, by the Treaty of Berlin, Belgrade became the capital of the new Christian Kingdom of Servia.

ALBERT BATTANDIER.

Belgrado, GIACOPO, Italian Jesuit and natural philosopher, b. at Udine, 16 November, 1704; d. in the same city, 26 March, 1789. He belonged to a noble family and received his early education at Padua. He entered the novitiate of the Society of Jesus, 16 October, 1725, and showed marked talent, studying mathematics and philosophy at Bologna under Father Luigi Marchenti, a former pupil of Varignon at Paris. After completing his philosophical studies he taught letters for several years at Venice, where he won the affection of his students as well as the esteem and friendship of the scholars of that city. He studied theology at Parma and then became professor of mathematics and physics at the university, holding this position for twelve years. While at Parma he did much experimental work in physics with apparatus specially constructed by two of his assistants. After pronouncing his solemn vows, on 2 February, 1742, Belgrado was summoned to the court, where he was appointed confessor, first to the Duchess and later to the Duke Don Philip. The title of mathematician was also conferred on him. In 1757 he erected an observatory on one of the towers of the college of Parma and furnished it with the necessary instruments. In 1773 he became rector of the college of Bologna. He was a member of most of the academies of Italy and a corresponding
BELIAL

was likewise one of the founders of the Arcadian colony of Parma. He wrote on a variety of subjects, among his works being: "II Fenomeni Elettrici" (1749); "Della riflessione de' corpi dall' acqua e della diminuzione della mole de' sassi ne' torrenti e ne' fiumi" (1755); "De analysos vulgaris usi in re physica" (1761-62); "Delle sensazioni del freddo e del calore" (1764); "Teoria Cochleis Archimedea" (1767); "Dell' esistenza di Dio da' teoremi geometrici" (1777), etc.

Belial, found frequently as a personal name in the Vulgate and various English translations of the Bible, is commonly used as a synonym of Satan, or the personification of evil. This sense is derived from II Cor., vi, 15, where Belial (or Beliar) as prince of darkness is contrasted with the light. It is clear in the Vulgate and Douay translations of III Kings, xxxi, 10 and 13, where the same Hebrew word is rendered once as Belial and twice as "the devil". In the other instances, too, the translators understood it as a name for the prince of evil, and so it has passed into English. Milton, however, distinguishes Belial from Satan, regarding him as the demon of impurity. In the Hebrew Bible, nevertheless, the word is not a proper name, but a common noun usually signifying "wickedness" or "extremity of wickedness". The English renders "sons of Belial" as "vile soundround" (Judges, xix, 22); most prefer "worthless fellows". In some cases belial seems to mean "destruction", "ruin"; thus in Ps. xxii, 10 (Heb.), the word is parallel to the thought of utter destruction and seems to mean "ruin". In Ps. xxi, 20, it is parallel to "death" and "Sheol"; some understand it as "destruction", Chyenu as "the abyss". The etymology of the word הַבַיָּל is doubtful; it is usually given as הַבָּיָל, "not", "without", and ב, a verb which occurs only in the Hiphil (constructive active) form, "to use", "be of use", "to be profitable"; the compound is simply Belial. Carnes suggests רבי ילב, that from which no one comes up, namely the abyss, Sheol. St. Jerome's etymology "without yoke", which he has even inserted as a gloss in the text of Judges, xix, 22, is contrary to Hebrew philology.

Belial, from meaning wickedness or Sheol, could develop into a name for the prince of evil or of death. Such was perhaps the meaning in the beginning of our era. Under the names Beliar, Belial, he plays a very important role in apocryphal literature, in the "Ascension of Isaias", the "Sibylline Oracles", and the "Testament of the Twelve Patriarchs". He is the prince of this world and will come as Antichrist; his name is sometimes given also to Nero, returning as Antichrist.

JOHN F. PENLON.

Belief (be and liyan, to hold dear), that state of the mind by which it assents to propositions, not by reason of true knowledge, but by evidence, but by evidence, authority.

Though the term is commonly used in ordinary language, as well as in much philosophical writing, to cover a great many states of mind, the quasi-definition advanced is probably the best calculated to differentiate belief from all other forms of assent. In the sense of the tenor of the assent rather than to its nature; for, since intellectual assent is of its nature simple and indivisible, no differentia proxima can be assigned by which it could be separated into various species. As the objects of belief, also, are of a nature similar to those of knowledge, opinion, and doubt, so, again, no criterion of division can be found in them (as in the case of epoche) and of distinguishing it from other mental states. St. Thomas Aquinas qualifies his definition of faith with the addition of the note of certainty (Summa, I-II, Q. i, a. 4). Though he treats of faith as a theological virtue in the article cited, his words may well be extended to include belief as a religiously cousin of the state of the mind. It will thus be seen to cover intellectual assent to truths accepted on authority either human or Divine. In the former case belief may be designated by the synonym credence; in the latter the more usual term is faith, and belief is used in the sense of fiducia, or trust; and this especially in Protestant theology as a substitute for faith. By the definition given above we are enabled to distinguish belief (1) from intelligence, in that the truth of the fact or proposition believed is not seen intuitively; (2) from science or knowledge, since there is no question of resolving it into its first principles; (3) from doubt, because belief is an assent and positive; (4) from opinion and conjecture, in which the assent is not final.

Belief, however, as has already been noted, is often indiscriminately used for these and for other states of mind from which for the sake of accuracy it should be as carefully distinguished as is possible. Though we may know a thing and at the same time believe it (as in the case of the existence of God, which is a natural verity as well as a revealed truth), it is in the interest of clearness that we should keep to the distinction drawn and not confound belief and knowledge, because of the fact that the same truth may simultaneously be the object of both. But there is another very general use of the term belief in which it is taken to designate assent complete enough to exclude any practical doubt and yet distinguishable from the assent of knowledge. In this use no account is taken of authority. We have many convictions resting upon evidence that is not sufficiently clearly presented to our mind to enable us to say we know, but abundantly sufficient for us to produce a practically unqualified assent. While this would seem to fall, with the common use of the word, in the category of opinion, it is the point about which has turned the controversy that has been waged since David Hume brought the question into prominence upon the philosophical issue. Briefly, to select a certain number of typical views for examination, the issues involved are as follows: How far do beliefs, in the sense of trusting our natural faculties in their reports and judgments; and in how far can we be said to know? Hume, in accordance with his sensist principles, would restrict our knowledge to purely ideal truths. We are capable of knowing, according to the Scotch sceptic, such ideal principles as those of mathematics, together with the conclusions that are derived from them. But our attribution of an objective reality to what we imagine to be the causes of sensations is a belief. So all under the Scholastic use of the principle of causality. We cannot be said to know, but to believe, that there is actually such a relation as that of effect to cause. We believe this, and other similar truths, because of a peculiar charactera of the faculty of belief in us, disattaching to our conceptions of them. The division is an arbitrary one and the explanation offered as to the nature of belief unsatisfactory and insufficient. Similarly, James Mill would have the assent given to the objective reality of beings; to regard the belief in God, or, rather, as he wrongly states it, the association of ideas is the belief. If belief is a state of mind at all, it can scarcely be described as an association of ideas. Such an association could at most be considered as
a cause of the belief. John Stuart Mill in his note to his father’s Analysis, makes belief a primitive fact. It is impossible to analyze it. Locke, though he deals at length with the problem of so-called truths, does not even attempt to analyze it or do more than assign objects to it and investigate the grounds of credibility. Alexander Bain originally held belief to be a function of the will rather than a state of the intellect. In his opinion it was an act of the will and not the pursuit of immediate ends. Later, he modified this opinion, and, while retaining the essentially volitional and emotional character, or tendency, as causes, relegated the act of belief itself to the intellectual part of man’s nature. On this view, these admirable propositions of the whole subject ought to be consulted, advances an acute criticism of Dr. Bain’s position. He points out (1) that readiness to act is a test of belief, not the belief itself; (2) that belief is generally not active but characteristically passive; (3) that primitive credulity, which Bain makes a chief factor in belief, involves a vicious circle, explaining, as it does, belief by credulity or believing.

A not inconsiderable part of the "Grammar of Assent" is concerned with this subject, though hardly in sympathy with the problem of the ongoing lines. In his treatment of "Simple Assent," and especially in sections 4 and 5 of Chapter iv, Par. 1, Cardinal Newman’s view can be found. He calls the notional assent that we give to first principles presumptuous. He cannot be said to trust our powers of reasoning or memory as faculties, though we may be supposed to have a trust in any one of their particular acts. That external nature exists is a first principle and is founded upon an instinct. The use of reason is justified by the realization that the brute creates and not merely discovers it. Further, “the belief in causation” is one of these presumptions, and the assent to it notional. But, on the other hand, “we believe without any doubt that we exist; that we have an individuality and identity all our own; ... that we have a present sense of good and evil, of a right and a wrong.” Again: “Assent on reasonings not demonstrative is too widely recognized an act to be irrational, unless man’s nature is irrational, too familiar to the prudent and clear- minded to be an infirmity or an extravagance.” It will be noted that Newman (1) justifies belief as an assent because based on a common use of the rational faculty. Demonstrative grounds may be lacking, but the conviction is none the less neither an infirmity nor an extravagance at all. The groups belief and knowledge together under the heading of presumption without drawing any hard and fast line between them. And indeed, from the point of view of mere assent, there is nothing psychological by which they are to be distinguished; since assent itself, as has been noted, is a simple and ultimate fact. The difference lies elsewhere. In this broader sense of belief, it is to be found in the antecedent cause of the assent. For knowledge there will be explicit, for belief implicit, intuition or evidence.

Of German philosophers who have treated this topic, Germain, Fechner, and Ulrici may be consulted. The first limits belief to a conscious assent arising from fact; that is, an assent given without consciousness. In the second, which is the length with which he believes action not only to be by the exigencies of our moral nature. And these truths have necessary validity on account of the requirements of that moral nature. We need motives upon which to act. Such beliefs are practical and lead to action. All natural truths that we accept on belief might conceivably be accepted as truths of knowledge. The implicit may unfold and become explicit. This fusion of knowledge and belief not is not a fact. Evidence may be adduced to prove assertions. Similarly, any truth of knowledge may be accepted as belief. What is said to be known to one individual may be, and often is, accepted upon his testimony by another pursuing the same experience. A great variety of factors may play their part in the genesis of belief. We are accustomed to assent to propositions that we cannot be said to know, on account of many different causes. Some of them are based on an inadequate or incomplete knowledge. We frequently discover that our beliefs rest on no stable foundation, that they must be reconstructed or done away with altogether. The ordinary reasons upon which belief may be based can be reduced to two: testimony and the partial evidence of reason. A third class of causes of belief is sometimes added. Feeling, desire, and the wish to believe have been noted as antecedent causes of the act of assent. That feeling, desire, or the wish to believe is a direct antecedent is open to discussion. It cannot be denied that many so-called beliefs, most profoundly cherished, are based on trust or hope, have their immediate origin in feelings or wishes; but, as a rule, they seem not to be capable of bearing any real strain; whereas we are accustomed to consider that belief is one of the most unchangeable of mental states. Where these antecedents were indirectly through the election of the will, to which reference is made below, belief may issue as a firm and certain assent. (1) Testimony is a valid and satisfactory cause of assent provided it possess the necessary note of assurance that the belief is not only a direct antecedent of the ensuing belief. Our ultimate witness must know his facts or truths and be veracious in his presentation of them. Intermediate witnesses must have accurately preserved the form of the original testimony. In the case of human testimony the ordinary rules of prudence will naturally be applied before giving credence to its statements. Once, however, the question of knowledge and veracity is settled, belief may validity issue and an assent be given as to a certainty. Of course there is room also for doubt or for opinion, as the credentials of the authority itself may vary almost indefinitely. But there is a further class of truths believed upon testimony that does not fall within the scope of natural investigation and inquiry. The supersensible, supra-intellectual truths upon which the present state of man’s existence, cannot be said to be assented to either on account of an intuition of their nature or because of any strict process of demonstration of their validity. They are neither evident in themselves nor in their principles. The assent to such truths is of the same nature as that given to truths believed naturally. Only here the authority motivating it is not human but Divine. Acts of assent on such authority are known as acts of faith and, theologically speaking, connote the assistance of grace. They are, none the less, integral in the eluting of which the will has its part to play, just as are those in which assent is given to the authoritative utterances of credible human witnesses. With regard to the nature of this authority upon the strength of which such super natural truths are believed, it is sufficient to indicate that God’s knowledge is infinite and His veracity absolute. (2) The partial evidence of reason has already been touched upon. It may be noted, however, that the evidence may be relative either relatively to the absolutely. In the first case we may have reason to examine the authority of those who know for our belief, or base it for ourselves upon such evidence as is forthcoming. In the second, as is the case with much of the teaching of science and philosophy, the whole human race can have no more
than a strictly so-called belief in it. Probable opinions, conjectures, observed or partially recalled memories, or any truths or facts of which we have not a consciously evidential grasp, are the main objects of a belief resultant upon partial evidence. In this its distinction from knowledge lies. We are said to know intuitional truths as well as all truths and the entirety of our principles. We know all facts and truths of our own personal experience, whether of consciousness or of objective nature. Similarly, we know the truth of the reports of memory that come clearly and distinctly into consciousness. Nor is it necessary, with Hamilton, to have recourse to an initial belief or trust as implied in all knowledge. We cannot properly be said to trust our faculties. We do not believe evident truth. (3) With the two immediate causes of belief already noted, the action of the will must also be alluded to. Under this head emotion, feeling, and desire may conveniently be grouped, since they play an important, though indirect, part in motivating assents through the election of the will and so causing belief. The action of the will referred to is essentially not an act of the data to be examined and approved by the intellect. Where there are several sets of evidences or partial arguments, for and against, the will is said to cause belief in the sense of directing the intellect to examine the particular set of arguments in favor of or against the resultant assent and to neglect all that might be urged against it. In this case, however, the belief can easily be referred to the partial evidence of reason, in that as a rational, rather than a volitional act, it is due to the individual considerations before the mind. Whether these are voluntarily restricted or incomplete from the very nature of the case, does not alter the fact that the assent is given because of the partial evidence they furnish. In faith the meritorious nature of the act of belief is referred to this elective action of the will.

The effects of belief may be summed up generally under the head of action or movement, though all beliefs are not of their nature operative. Indeed, it would seem to depend more on the nature of the belief than upon the act of believing. As with certain truths of knowledge, there are beliefs that leave us unmoved and even tend to restrict and prevent rather than instigate to action. The distinction drawn between the assents of knowledge and belief is, however, to be observed at all costs in practice, where they are frequently confused. It is none the less undoubtedly felt to exist, and, upon analysis of the antecedents, the one can readily be distinguished from the other. It is found that most of the practical affairs of ordinary life depend entirely upon beliefs. In the vast majority of cases in which action is called for it is impossible to have strictly so-called knowledge upon which to act. In such cases belief readily supplies its place, growing stronger as it is justified by the event. Without it, as a practical incentive to action and security of it, social intercourse would be an impossibility. Such things as our estimates of the character of our friends, of the probity of those with whom we transact business, are examples of the beliefs that play so large a hand necessary a part in our lives. In their own subject-matter they are a part with the reasonable beliefs of science and philosophy—founded, as are hypotheses and theories, upon practically sufficient, yet indemonstrative and incomplete data.

FRANCIS AVELING.

Bell, Albert (Jean) French prelate and writer, b. in Besançon early in the seventeenth century; d. 29 April, 1677. He made his profession in the Benedictine monastery of Faverney, 29 December, 1629, and spent some time at the monasteries of Charité-sur-Loire, Nevers, and Paris as prior and subsequently as abbot. He was consecrated Bishop of Belley, 14 February, 1660. His works, which were written in French, are: "Pierre philosophale" (Paris, 1653); "Talisman justifié" (ibid., 1653); "Poudre de sympathie mystérieuse" (ibid., 1653); "Poudre de projection demontée" (ibid., 1653); "Le voyage inconnu" (ibid., 1653); "Principes de la foi démontrés par la raison" (ibid., 1667); "Preuves convaincantes des vérités du christianisme" (ibid., 1669); "Éléments eucharistiques, ou octave du trés. S. Sacrement" (1647, 1660); "Les soldes pesées de l'ame, pour la porter à son devoir" (Paris, 1668). He is probably identical with Alphonso Bellin, O.S.B., Prior of Charité-sur-Loire in the latter part of the seventeenth century, and author of "La vérité de la religion catholique et la fausseté de la religion prétendue réformée" (Nevers, 1683).

Alexius Hoffmann.

Bell, Arthur (alias Francis), Venerable Friar Minor and English martyr, b. at Temple-Broughton near Worcester, 13 January, 1590; d. at London, 11 December, 1643. When Arthur was eight his father died and his mother gave him in charge of her brother Francis Daniel, a man of wealth, learning, and piety, who sent him to the age of twenty-four to the English college at St.-Omer; thence he went to Spain to continue and complete his studies. Having been ordained priest, he received the habit of the Friars Minor at the monastery of the Order at Segovia, 9 August, 1618, and shortly after the completion of his novitiate was called from Spain to labour in the restoration of the English province. He was one of the first members of the Franciscan community at Douai, where he subsequently fulfilled the offices of guardian and professor of Hebrew. In 1632 Bell was sent to Scotland as first provincial of the Franciscan province there; but his efforts to restore the order in Scotland were unsuccessful and in 1637 he returned to England, where he laboured until November, 1643, when he was apprehended as a spy by the parliamentary troops at Stevenage in Hertfordshire and committed to Newgate prison.

The circumstances of his trial show Bell's singular devotion to the cause of religion and his desire to suffer for the Faith. When condemned to be drawn and quartered it is said that he broke forth into a solemn Te Deum and thanked his judges profusely for the favour they were thus conferring upon him in allowing him to die for Christ. The cause of his beatification was introduced at Rome in 1900. He
Bell, JAMES, priest and martyr, b. at Warrington in Lancashire, England, probably about 1530; d. 20 April, 1584. For the little known of him we depend on the account published four years after his death by Bridgewater in his "Concertatio" (1588), and derived from a manuscript which was kept at Douay when Challoner wrote his "Miscellany Priests" in 1741, and is now in the Westminster Diocesan Archives. A few further details were collected by Challoner, and others are supplied by the State Papers. Having studied at Oxford he was ordained priest in Mary's reign, but unfortunately converted to the established Church under Elizabeth, and according to the Douay MS. "ministered their bare few sacraments about 20 years in diverse places of England". Finally deserted by conscience from the cure of souls and reduced to destitution, he supported himself as a bare subsistence. To obtain this he approached the patron's wife, a Catholic lady, who induced him to be reconciled to the Church. After some time he was allowed to resume priestly functions, and for two years devoted himself to arduous missionary labours. He was at length apprehended (17 January, 1583-84) and, having confessed his priesthood, was arraigned at Manchester Quarter Sessions held during the same month, and sent for trial at Lancaster Assizes in March. When condemned, he sentenced he said to the Judge: "I beg your Lordship would add to the sentence that my lips and the tops of my fingers may be cut off, for having sworn and subscribed to the articles of heretics contrary both to my conscience and to God's Truth". He spent that night in prayer and on the following day was hanged and quartered together with Ven. John Finch, a layman, 20 April, 1584.

Bridgewater, Concertatio ecclesiastic Catholice Angliae, 1588; you may consult the original for personal details; Challoner, Miscellany Priests, 1741; Dict. Nat. Biog. IV, 1820; Biog. Dict. Eng. Cath. I, 175, citing State Papers in Public Record Office.

EDWIN BUTTON.

Bellamy, JEROME, of Uxenden Hall, near London, England, d. 1586, a member of an old Catholic family noted for its hospitality to missionaries and recusants. He was a warm sympathizer with Mary Queen of Scots. In the latter part of the sixteenth century the Babington plot to free Mary and assassinate Elizabeth was exposed, and Babington, with two of his fellow-conspirators, Barnwell and Donne, sought refuge in Bellamy's house. He concealed them and was later arrested with them and accused of complicity in the plot. All four were indicted, tried, convicted 15 September, 1586, and within six days thereafter executed.

THOMAS GAFFNET TAAFFE.

Bellarmino, JOHN, Barnabite theologian, b. at Castelnuovo, Italy, in 1528; d. at Milan, 27 August, 1630. He was Visitor and twice Assistant General of his order. He taught theology at Padua and Rome, and was highly esteemed by bishops and cardinals, particularly by Gregory XV. Best known as a moral theologian, he has left a number of solid theological treatises, the most valuable of which is a commentary on the Council of Trent and the Roman Catechism, in two parts, forming two distinct volumes. The first, for the instruction of the faithful, is entitled "Doctrina d. Concilii Tridentini et Cathedram Romanam de Symbolo Apostolorum" (Brescia, 1608). The parts of this work relating to the decalogue have been published in French. The second work, designed for the conversion of heretics, and entitled "Doctrina Catholicae ex Sacro Concilio Tridentino et Catachetismo Romano" (Milan, 1620), has passed through several editions. Bellarmini also composed a number of booklets in Italian for confessors and penitents, and a treatise on the doctrine of St. Thomas on physical predetermination and on the determination in general of all things and causes into active operation (Milan, 1606). He is also the author of a work on method (Milan, 1806), which was republished under a slightly different title, along with his "Mirror of Divine and Human Wisdom" (Milan, 1830). For the above-mentioned works, see Bénézit, Dict. des Am. contemp. II, 555; Bibliotheca Scriptorum et Cong. Citat. Equl. S. Pauli (Rome, 1830), 140.

S. H. FRISBER.

BELLARMINO (BELLARMINO), ROBERT FRANCIS ROMULUS, VENERABILE, a distinguished Jesuit theologian, writer, and cardinal, b. at Montepulciano, 4 October, 1542; d. 17 September, 1621. His father was Vincenzo Bellarmino, his mother Cinitha Cervini, sister of Cardinal Marcello Cervini, afterwards Pope Marcellus II. He was brought up at the newly founded Jesuit college in his native town, and entered the Society of Jesus on 20 September, 1560, being admitted to his first vows on the following day. The next three years he spent in studying philosophy at the Roman College, after which he taught the humanities first at Florence, then at Mondovì. In 1567 he began his theology at Rome, but in 1569 was sent to finish it at Louvain, where he could obtain a fuller acquaintance with the prevailing heresies. Having been ordained there, he quickly obtained a reputation both as a professor and a preacher, in the latter capacity drawing to his pulpit both Catholics and Protestants, even from distant parts. In 1673 he was recalled to Italy, and entrusted with the chair of Controversies recently founded at the Roman College. He proved himself equal to the arduous task, and the lectures thus delivered grew into the work "De Controversiis" which, amidst so much else of excellence, forms the chief title to his greatness. This monumental work was the earliest attempt to systematise the various controversies of the time, and made an immense impression throughout Europe, the blow it dealt to Protestantism being so scotely felt in Germany and England that special chairs were founded in order to provide replies to it. Nor has it even yet been superseded as the classical book on its subject-matter, though, as was to be expected, the progress of criticism has impaired the value of some of its historical arguments.

In 1588 Bellarmine was made Spiritual Father to the Roman College, but in 1590 he went with Cardinal Gaetano as theologian to the embassy Sixtus V
BELLARMINE

was then sending into France to protect the interests of the Church amidst the troubles of the civil wars. Whilst he was there news reached him that Sixtus, who had warmly accepted the dedication of his "De Controversiis", was now proposing to put its first volume on the Index. This was because he had disbelieved most of his own teaching and had imparted the Holy See not a direct but only an indirect power over temporals. Bellarmine, whose loyalty to the Holy See was intense, took this greatly to heart; it was, however, averted by the death of Sixtus, and the new pope, Gregory XIV, even granted to Bellarmine's detractors the dispensation of special approbation. Gaetao's mission now terminating, Bellarmine resumed his work as Spiritual Father, and had the consolation of guiding the last years of S. Aloysius Gonzaga, who died in the Roman College in 1591. Many years later he had the further consolation of successfully promoting the beatification of the saintly youth. Likewise at this time he sat on the final commission for the revision of the Vulgate text. This revision had been desired by the Council of Trent, and subsequent popes had laboured to carry it out, but the task had been left incomplete. But Sixtus V, though unskilled in this branch of criticism, had introduced alterations of his own, all for the worse. He had even gone so far as to declare that this vitiates edition printed and distributed, together with the present Bull enforcing its use. He died, however, before the actual promulgation, and his immediate successors at once proceeded to remove the blunders and call in the defective impression. The difficulty was how to substitute a more correct edition without affixing a stigma to the name of Sixtus, and Bellarmine proposed that the new edition should continue in the name of Sixtus, with a prefatory explanation that, on account of aliqua viae vel typographorum vel aitorum which had crept in, Sixtus had himself resolved that a new impression should be undertaken. The suggestion was accepted, and Bellarmine himself wrote the preface, still prefixed to the Clementine edition ever since in use. On the other hand, he has been accused of untruthfulness in stating that Sixtus had resolved on a new impression. But his testimony, as there is no evidence to the contrary, should be accepted as decisive, seeing how conscientious a man he was in the estimation of his contemporaries; and the more so since it cannot be impugned without casting a slur on the character of his fellow-commissioners. The suggestion was accepted, and of Clement VIII who with full knowledge of the facts gave his sanction to Bellarmine's preface being prefixed to the new edition. Besides, Angelo Rocca, the Secretary of the revisory commissions of Sixtus V and the succeeding pontiffs, himself wrote a draft preface for the new edition in which he makes the same statement: (Sixtus) "dum errores ex typographiis ortos, et mutationes omnes, atque varias hominum opiniones recognoscere cepit, ut postea de toto negotio deliberare atque Vulgatum editionem, prout debeat, publicare posset, morte preventus quod cooperat perfectione non potuit". This draft preface, to which Bellarmine's was preferred, is still extant, attached to the copy of the Sixtine edition in which the Clementine version is still in use. The preface is in the Biblioteca Angelica at Rome (see this question well discussed by Père Prat in the "Etudes religieuses" for September, 1890).

In 1592 Bellarmine was made Rector of the Roman College, in 1595 Provincial of Naples. In 1597 Clement VIII recalled him to Rome to form his own theologian and likewise Examiner of Bishops and Consultor of the Holy Office. Further, in 1599 he made him Cardinal-Priest of the title of Santa Maria in Vrd, alleging as his reason for this promotion that it was "to quell all heresy by teaching". He was now appointed, along with the Dominican Cardinal d'Ascoli, an assessor to Cardinal Madruzzio, the President of the Congregatio de Auzilis, which had been instituted shortly before to settle the controversy which had recently arisen between the Thomists and the Molinists concerning the nature of the concord between efficacious grace and human free will. But Bellarmine came to the conclusion that the first that the doctrinal question should not be decided authoritatively, but left over for further discussion in the schools, the disputants on either side being strictly forbidden to indulge in censures or condemnation of their adversaries. Clement VIII first made Bellarmine to exercise this rateful charge completely and determined on a doctrinal definition. Bellarmine's presence then became embarrassing, and he appointed him to the Archdiocese of Capua just then vacant. This is sometimes spoken of as the cardinal's disgrace, but Clement consecrated him with his own hands—an honour which the popes usually accord as a mark of special regard. The new archbishop departed at once for his see, and during the next three years set a bright example of pastoral zeal in its most striking features.

In 1605 Clement VIII died, and was succeeded by Leo XI, who reigned only twenty-six days, and then by Paul V. In both conclaves, especially the latter, the name of Bellarmine was much more before the electors, greatly to the prejudice of the candidates who had spoken good against him in the judgment of many of the cardinals. The new pope insisted on keeping him at Rome, and the cardinal, obediently complying, demanded that at least he should be released from an episcopal charge the duties of which he could no longer fulfil. He was now made a member of the Holy Office and of other congregations, and thenceforth was the chief adviser of the Holy See in the theological department of its administration. Of the particular transactions with which his name is most generally associated the following were perhaps the most important: The inquiry de Auzilis, which after all Clement had not seen his way to decide, was now terminated with a settlement on the lines of Bellarmine's original suggestion. 1606 marked the beginning of the quarrel between the Holy See and the Republic of Venice which, without even consulting the pope, had presumed to arrogate the law of clerical exemption from civil jurisdiction and to withdraw the Church's right to hold real property. The quarrel led to a war of pamphlets in which the Holy See, for part of which the Republic was, and Nantes by John Marsigli, is an apostate monk named Paolo Sarpi, and that of the Holy See by Bellarmine and Baronius. Contemporaneous with this Venetian episode was that of the English Oath of Allegiance. In 1606, in addition to the grave disabilities which already weighed them down, the English Catholics were required under pain of præmunire to take an oath of allegiance craftily worded in such wise that a Catholic in refusing to take it might appear to be disavowing an undoubted civil obligation, whilst if he should take it he would be not merely rejecting but even condemning as "impious and heretical" the doctrine of the depoing power, that is to say, of a power, which, whether rightly or wrongly, the Holy See had claimed and exercised for centuries with the benefit of the Church and which even in that age the mass of the theologians of Europe defended. The Holy See having forbidden Catholics to take this oath, King James himself came forward as its defender, in a book entitled "Triplex nodo triplex cœnus", to which Bellarmine replied in his "Rerum et Matici Dei". Ought the oath to be followed on either side, and the result of one, written in denial of the depoing power by William Barclay, an English jurist resident in France, was that Bellarmine's reply to it was branded by the Regular Administration of the Papal States as "ruffianism". Following the via media of the indirect power, he was
condemned in 1590 as too much of a Regalist and in 1605 as too much of a Papalist.

Bellarmine did not live to deal with the later and more serious stage of the Galileo case, but in 1616 he took part in his earlier stage. He had shown great interest in the discoveries of that investigator, and was on terms of friendly correspondence with him. He took up too—as is witnessed by his letter to Galileo's friend Foscari—exactly the right attitude towards scientific theories in coming contradiction with Scripture. If, as was undoubtedly the case then with Galileo's heliocentric theory, a scientific theory is insufficiently proved, it should be advanced only as an hypothesis; but if, as is the case with this theory now, it is solidly demonstrated, it must be taken to interpret Scripture only in accordance with it. When the Holy Office condemned the heliocentric theory, by an excess in the opposite direction, it became Bellarmine's official duty to sign the condemnation to Galileo, and receive his submission. Bellarmine lived to see one more concile, that which elected Gregory XV (February, 1621). His health was now failing, and in the summer of the same year he was permitted to retire to Sant' Andrea and prepare for the end. His death was most edifying and forming fitting terminus to a life which had been of no little worth for its virtues than for its achievements.

His spirit of prayer, his singular delicacy of conscience and freedom from sin, his spirit of humility and poverty, together with the disinterestedness which he displayed as much under the cardinal's robes as under the Jesuit's gown, his lavish charity to the poor, and his devotedness to work, had combined to impress those who knew him intimately with the feeling that he was the man of the number of the saints. According to him, he died there with a general expectation that his cause would be promptly introduced. And so it was, under Urban VIII in 1627, when he became entitled to the appellation of Venerable. But a technical obstacle, arising out of Urban VIII's own general legislation in regard to beatifications, required its prorogation at that time. Though it was reintroduced on several occasions (1675, 1714, 1752, and 1832), and though on each occasion the great preponderance of votes was in favour of the cause, a successful issue has never been reached. This was partly because of the influential character of some of those who recorded adverse votes, Barbarigo, Cassanate, and Aszolino in 1785, and Passione in 1792, but still more for reasons of its success. The cause of Bellarmine, a successful issue has never been reached. This was partly because of the influential character of some of those who recorded adverse votes, Barbarigo, Cassanate, and Aszolino in 1785, and Passione in 1792, but still more for reasons of its success. The cause of Bellarmine, a successful issue has never been reached. This was partly because of the influential character of some of those who recorded adverse votes, Barbarigo, Cassanate, and Aszolino in 1785, and Passione in 1792, but still more for reasons of its success.

Ven. R. Bellarmini, S.R.E. Cardinalis, vita quam ipsa scripsit (with an Appendix), written for the use of Fathers Eudoxium Joanna and Mutius Vitiellone, first published among the acts of the Process of Beatification, 1675; republished in 1857 by Bollinger in Aequium, where it is shown that there were many of which are useful but the general tone of which is unfair to the saint. The work is a compendium of the archives of the Vatican, Simancas, Salamanca, the Society of Jesus, etc.; Epistolae familiares (1660); Eudoxium Joanna, De paepstis Card. Bellarmini (1621); Final. Exame fatto per me, that is, by the lay brother who attended him in his last sickness, 1682; lives by Felicid (1624); translated into Latin with additions by Petra Sambta, 1626 and Bartoli, 1678; Cervini, Imago virtutum (1625). These form the chief original material. The text in the Appendix, lived the best are those by Frizone (1678) and Giura (1893). See also Le Bachellet in Vactant, Dict. de la biog., ed.; and for Bellarmine. See also the beatification of la Serviere, De Jacopo Angl. Rege cum Card. R. Bellarmine . . . disputante (1600).

SYDNEY F. SMITH.

Bellais, Edward, Serjeant-at-Law, b. 14 October, 1800; d. 24 January, 1873, was one of the most learned and respected of the Elizabethan Bar. He was closely associated with a doctrine of papal authority most obnoxious to the Regalist politicians of the French Court. "We have said," wrote Benedict XIV to Cardinal de Tencin, "in confidence to the General of the French that the delay of the Cause has come not from the petty matters laid to his charge by Cardinal Passione, but from the sad circumstances of the times" (Etudes Religieuses, 15 April, 1896). A full list of Bellarmine's writings, and of those directed against him, may be seen in Sommervogel's "Bibliotheque de la compagnie de Jesus." The following are the principal: "Controversial works." "Disputationes de Controversiis Christianae Fidei adversus hujus temporis heretici", of the innumerable editions in Latin, at least thirty-three; in French, 1586-89; Venicce (1596), revised personally by the author, but abounding in printer's errors, Paris or "Triolphi" (1605), Prague (1721), Rome (1832); "De Exemptione clericorum", published, in 1598, but the text has been corrected in the "De Controversiis"; "De Transiti Romani Imperii a Grecis ad Francos"; (1584); "Responsio ad praecepta capita Apologie . . . pro successione Henrici Navarrimi" (1588); "Judicium de Libro quem Lutherani vocant Concordi" (1585); four "Rispoette" on the writings of the Venetian Republic of John Marinello and Paolo Sarpi (1600); "Responsorio Mathaei Tortis ad librum inscriptum Triplici Errore" (1598); "Apologia Bellarmino pro responsoni sua ad librum Jacobii Magnae Britanniae Regis" (1600); "Tractatus de potestate Summi Pontificis in rebus temporasibus, adversus Guilielnum Barclay" (1610). "Catachetical and Spiritual Works." "De inimicorum christiana breve," and "Dichiarazione piu copiosa della doctrina cristiana" (1598), two catachetical works which have more than once received papal approbation, and have been translated into various languages; "Dichiarazione" (1609), a work in the cause of priests; "Admonitio ad Episcopum Thaeannem sepem suum quam sequi sint necessaria episcopo" (1612); "Exhortationes domesticae", published only in 1859, by Fere van Ortry; "Conciones habitae Lovani", the more correct edition (1615); "De Ascensione mensis" (1615); "De Eternitate felicitate sanctorum" (1616); "De septem verbis Christi" (1618); "De arte bene moriendi" (1620). The last five are spiritual works written during his annual retreats. "Exegetical and other works.

Bibliography:

Bellais, Edward, Serjeant-at-Law, b. 14 October, 1800; d. 24 January, 1873, was one of the most learned and respected of the Elizabethan Bar. He was closely associated with a doctrine of papal authority most obnoxious to the Regalist politicians of the French Court. "We have said," wrote Benedict XIV to Cardinal de Tencin, "in confidence to the General of the French that the delay of the Cause has come not from the petty matters laid to his charge by Cardinal Passione, but from the sad circumstances of the times" (Etudes Religieuses, 15 April, 1896). A full list of Bellarmine's writings, and of those directed against him, may be seen in Sommervogel's "Bibliotheque de la compagnie de Jesus." The following are the principal: "Controversial works." "Disputationes de Controversiis Christianae Fidei adversus hujus temporis heretici", of the innumerable editions in Latin, at least thirty-three; in French, 1586-89; Venicce (1596), revised personally by the author, but abounding in printer's errors, Paris or "Triolphi" (1605), Prague (1721), Rome (1832); "De Exemptione clericorum", published, in 1598, but the text has been corrected in the "De Controversiis"; "De Transiti Romani Imperii a Grecis ad Francos"; (1584); "Responsio ad praecepta capita Apologie . . . pro successione Henrici Navarrimi" (1588);
various companies in the proceedings to which the opening up of the new lines gave rise. In 1844 he received the gold of a Serjeant-at-Law and was now abolished, and amongst other causes célèbres took part in the famous libel action, Achill v. Newman, in 1852, and in the litigation connected with the title and estates of the last Catholic Earl of Shrewsbury. In this, as in all his legal work, Bellasis, as an example of great disinterestedness, retired from the profession in 1867, leaving behind him the reputation of an excellent lawyer and a careful and finished speaker.

Although brought up amid rather evangelical surroundings, the translation from the latter part of the nineteenth century, continues to be of great interest the developments of the Oxford movement. His Catholic tendencies were stimulated partly by the narrowness of anti-Roman prejudice which he recognised in the attitude of his fellow-religious, and partly by his intercourse with Catholics whom he met on his travels abroad. His approach towards the Church was slow and characteristically prudent, but the friendships he formed with many advanced Anglicans like Oscar Wilde and J. M. Morris, who before long passed over to the Roman side, could not fail to produce an effect. Eventually he was received into the Church by Father Brownbill, S.J., 27 December, 1860. His wife and children followed soon after. From that time until his death Serjeant Bellasis was among the first to attend at the edifying of Catholic laymen. His interest in all Catholic projects was keen, his social and intellectual position was such as commanded respect, and his charity was inexhaustible. From the founding of the new school of the Oratorians under the direction of Dr. Newman, at Edgbaston, to the providing of scientific apparatus for the Observatory at Stonyhurst; from the collection of relics for churches to the encouragement of the Nazareth House Sisters who tended the aged poor, the Serjeant was foremost in every good work. His personal holiness, fostered by constant private retreats, and his kindliness towards all won him universal respect and lent additional effectiveness to the conciliatory pamphlets which he occasionally published in the interest of Catholic truth. His first wife had died as early as 1832. By his second marriage, in 1835, with Miss Eliza Garnett, he left ten children, of whom two sons, the eldest and the youngest, are priests, and three daughters became nuns. In judging the beauty of the Serjeant's wife one more plainly seen than in those fragments of his intercourse with his children which have been reproduced by his biographer. After his death on the 24th of January, 1873, Cardinal Newman wrote: "He was one of the best men I ever knew." Newman's "Grammar of Assent," published in 1870, bears a dedication to Bellasis. Of the Serjeant's own publications the best remembered is a volume of short dialogues collected under the title "Philotheus and Eugenia." "Bellasis, Memorial of Mr. Serjeant Bellasis" (2d ed., London, 1866), a charming biography written by his son, Mr. Edward Belasis, is partly based on some very biographical notes. It includes two excellent portraits. "Dict. of Nat. Biog., IV, 180; Glayow, Bibl. Dict. d'Eng. Cat., I, 212; Bellasis, Aloysius, Jesuit ascetic author, b. at Freiburg im Breisgau, 15 February, 1704; d. at Augsburg, 27 April, 1757. He taught philosophy one year and theology seven, and spent four years as a missionary in South America among the Indians living near the Amazon river. When the bishop of Ecuruiz was charged with the spiritual care of his religious brethren and later with the direction of the seminary of Porrentruy in the Diocese of Basle. He is the author of a number of ascetical works in Latin, most of which have been translated into different languages and often reprinted. The most noteworthy of these are: "Christianus pie mortens" (1749); "Virtutum Socia per al-Law, a Serjeant at Arms" (1755); "Medulla Ascendens seu Exercitia S. P. Ignatii" (1757); "Triduum Sacrum precipue Religionorum usui ac commodationum" (1757). English translations of the last three have been made and are still in print. The first, entitled "Solid Virtue," is translated from the French (London, 1887); the second appeared under the title "Spiritual Exercise according to the method of St. Ignatius," translated from the Italian version of Father Bresciani, S. J., by William Ruthe, D.D. (London, 1876). In this translation Father Bresciani slightly modified some of the opinions of Bellasis which he considered too rigid. The third translation was made by Father John Holser, S. J., and was published in New York in 1852. It is entitled "Solid Virtue: A Triduum and Spiritual Conferences." The Triduum is an abridgment of Bellasis's larger work on "Solid Virtue"—an abridgment made by himself. The three Spiritual Conferences show practically in what solid virtue consists. Bibliotheque de Jésus, i., 1200: Wattrant in Dict. de théol. cath., II, 599.

S. H. FRISBEE.

Bellenden (Ballenden, or Ballantyne), John, a Scotch poet, b. at Haddington or Berwick in the latter part of the fifteenth century; d. at Rome, 1410. He was one of the most devout poets of that Caroline. His most important work received with great favour at the University of James V. He was subsequently appointed by the king to undertake the work of translating the "Historia" into the Scotch vernacular, which, together with some poems that he wrote at this period, occupied him about three years. He was also commissioned by the king to translate Livy into English, a work which hitherto had not been attempted. Bellenden was appointed Archdeacon of Moray, and in the succeeding reign he was vigorous in his opposition to Protestantism. This opposition subsequently led to his flight to escape persecution. He is supposed to be identical with one of the same name who was at one time secretary to Archibald, Earl of Angus. "Dict. Nat. Biog., IV, 186." THOMAS GAFFNEY TAAFFE.

Belleville, Diocese of, comprises that part of southern Illinois, U. S. A., which lies south of the northern limits of St. Clair, Clinton, Marion, Clay, Richland, and Lawrence counties, an area of 11,678 square miles. This territory was formerly a part of the Diocese of Alton, but upon the demise of Bishop Baltes, of that see, a new diocese was erected, 7 January, 1867, with the episcopal see at Belleville, St. Clair Co. The Right Rev. J. J. H. Jansen, who had held the office of vicar-general successively under Bishop Juncker and Bishop Baltes of Alton, was appointed first bishop of the newly erected diocese on 28 February, 1858, and consecrated on 23 April. The territory at the time of the new diocese at that time is shown by the following statistics: secular priests fifty-six; regular four; churches with resident priests fifty-three; missions with churches twenty-nine; academies three; parochial schools fifty-three; grammatists 5,395; orphans 1, orphan asylum 1; orphans 30; hospitals 3. The Catholic population was about 50,000 and remained almost stationary for a number of years. The mining industries in the southern part of the diocese are fast developing, so that, with immigration, the population has increased to 52,200, with
trect prospects for the future. The diocese has 100 secular and two regular priests; eighty-two churches with resident priests; thirty-two missions with missions; sixty-eight parishes; forty-two schools; a high school for boys; two academies for young ladies; sixty-seven parochial schools with 5,033 pupils; an orphan asylum with 112 orphans; eight hospitals; and a house for the aged.

The following religious communities are represented in the diocese: Brothers of the Christian Charity, Sisters of St. Dominic, Franciscan Sisters, Hospital Sisters of St. Francis, School Sisters of St. Francis, Sisters of the Poor Handmaids of Christ, Sisters of the Holy Cross, Sisters of St. Joseph and is buried at St. Joseph, Missouri. The Archdiocese, School Sisters of Notre Dame, Sisters of the Precious Blood, Servants of Mary, Ursuline Sisters, and White Benedictine Sisters of Mt. Olive.

To this diocese belong some of the oldest missions of the West. The records of the church of Kasckia date from the year 1805 and give the name of the Rev. J. Gravier, S.J., as the missionary priest. The Jesuits continued to attend to the wants of the Indian tribe of the Kasckia and of the French, and alternately the Jesuit Fathers De Pasqual and Bonaparte, and then in 1815 Meurin had this territory as the field of their apostolic labours. Father Meurin was the last Jesuit doing missionary work at Kasckia; the order was suppressed in his time. He died at Prairie du Rocher and is buried at St. Joseph, Missouri. The Rev. P. Gibault who in 1768 came from Quebec was the first secular priest, who as resident pastor of Kasckia had charge also of the large surrounding territory, and who became vicar-general of the territory of Illinois. He continued his arduous labours until 1791, the time of his death. Until 1820 the Lazarist Fathers were in this field; after that the work was continued by secular priests. The old town of Kasckia, with its statehouse and church, has been swallowed up by the Mississippi River and about two miles farther inland a new town and a new church have been built up.

The organization of the congregation of Prairie du Rocher coincides with the building of the first Fort Chartres on the banks of the Mississippi in 1720. The Rev. J. Le Boullenger, chaplain of the mission, stationed at the Fort, was placed in charge of the congregation. The church, built by the people, was placed under the protection of St. Anne. In 1743 the Rev. J. Gagnon, S.J., took charge of the mission. In the first half of the eighteenth century, his remains were interred by the side of the altar in the chapel in the cemetery. This chapel was built in 1734, and placed under the patronage of St. Joseph. When the river inundated one corner of the newly built stone structure at Fort Chartres and threatened the village and St. Anne's church, the Fort was evacuated, the village deserted; its inhabitants sought the high ground at the foot of the bluffs, and the cemetery chapel became the parish church and served as such until 1768, when a brick church was erected. This church was worked by the French, who worked there, the names of Gabriel Richard (later Delegate to Congress from Michigan); Doutien Olivier (who lived to be ninety-five years of age); Xavier Dahmen, and John Timon (later Bishop of Buffalo, New York) desire special mention. The early records of the old church of Cahokia have been lost, and accurate data can be found from the year 1783 only. At that time the religious wants of the Catholics of Cahokia and the surrounding territory were attended to by Father De Saintpierre. When in 1843 the Diocese of Chicago was erected, Cahokia, Prairie du Long, Belleville, Shoal Creek (now Germania), Kasckia, Prairie du Rocher, and Shawntown were the only parishes in the territory now comprised by the Diocese of Belleville.

H. J. HAGEN.

Belley (BELLIUM), Diocese of, coextensive with the civil department of Ain and a suffragan of the Archdiocese of Besançon. Although suppressed at the time of the Concordat, the Diocese of Belley was re-established in 1822 and took from the Archdiocese of Lyons the arrondissements of Belley, Bourg, Nantua, and Trévoux, and from the Archdiocese of Chambéry the arrondissement of Gex.

Local tradition maintains that Belley was evangelized in the seventh century by the martyr Marcellus and Valerian, companions of St. Pothinus. The first bishop of historic certainty is Vincentius, mentioned in 552. Others who occupied the see were St. Hippolytus, Abbot of Condat (eighth century); St. Anthem (1163-78), seventh General of the Carthusian Order; St. Arthaud (1179-90), founder of the Carthusians at Avireux; Camus (1069-90), a noted preacher and an encastre; and Monseigneur François M. Richard (1672-75), later Cardinal and Archbishop of Paris. Bishop Bonifacius in a special missal St. Amandus, Bishop of Maestricht, who founded the Abbey of Nantua about 690; St. Vullas, a patrician of Bourgogne and a war companion of King Dagobert, treacherously assasinated in 642; St. Rambert, killed by order of Fritin in the seventh century, whose name has been given to a city of the diocese; St. Trivier, the solitary, who died about 650; St. Barnard (ninth century), who founded the great Benedictine Abbey of Ambronay and died Archbishop of Vienna; St. Lambert (twelfth century), founder of the Cistercian Abbey at Ceyzery; St. Roland (twelfth century), Abbot of Chexery; St. Stephen of Châtillon, who founded the Carthusian monastery at Portes in 1115, and died Bishop of Die; St. Stephen of Bourg, who founded the Carthusian monastery at Meyrin in 1116; and St. Jean-Baptiste Vianney (1786-1857), parish priest at Ars.

The Diocese of Belley which, in the Middle Ages, had no less than eight Carthusian monasteries, was the birthplace of the Josephite congregation founded by Jacques Le Moyne, C.Ss.R. (1600-79), a man of genius, a learned humanist and a great literary figure in the history of France. His life and work are noted in the history of modern society. The history of the period, was published by the Jesuits at Trévoux, in this diocese. The church at Brou, near Bourg, is a marvel of architecture and contains some wonderful pieces of sculpture. It was built between 1611 and 1630 under the direction of Marget of Austria, widow of Philibert (II) the Fair, Duke of Savoy.

The latest statistics for the diocese give the following institutions: 1 maternity hospital, 66 infant schools, 1 deaf-mutes' institute, 3 girls' orphanages, 21 hospitals, 6 hospices, 2 dispensaries, 21 communities for the care of the sick in their homes, 1 home for incurables, and 5 homes for the aged, all conducted by sisters; and I deaf-
munte institute, and 2 insane asylums conducted by brothers.

In 1900 the following religious orders were represented in the Diocese of Belley: Carthusians at Portes et Ségignac; Trappists at Notre Dame des Dombes; Marists at Belley; Lazarists at Musinien; and Fathers of the Blessed Sacrament at Trévoux. Congregations local to the diocese are two teaching orders; the Brothers of the Society of the Christian Brothers (founded in 1813 by M. Bochard) in 1824, and the Brothers of the Holy Family, founded by Brother Taborin in 1835; and the Sisters of St. Joseph, with motherhouse at Bourg, very numerous throughout the department. At the close of the year 1905 the Diocese of Belley contained 350,416 inhabitants, 36 parishes, 404 mission churches, and 75 curacies.

Guliaca christiana (1860), XV, 601-644; Instrumenta, 305-355; Débats, Histoire topographique de Belley (Bourg, 1867); NDU, Studes sur les origines du siège épiscopal de Belley et recherches historiques sur les origines et les temps anciens des diocèses en France; Duchesne, Fastes épiscopaux, i, 16; Chevalier, Topobbl., 302.

GEORGES GOYAU.

Bel-lings (or Bellings), Sir Richard, Irish historian, b. near Dublin early in the seventeenth century; d. in 1677. He was the son of Sir Henry Bellings, a Catholic landowner in Leinster. He was trained to the law and entered Lincoln's Inn, London, and while there wrote a supplementary book (the sixth) of Philip Sydney's "Arcadia", which has generally been printed with that work. He returned to Ireland, became a member of the Irish Parliament, and married a daughter of Viscount Mountgarret. In 1642, when the Irish Confederation was formed, Bellings joined, his father-in-law being president, and became secretary to the Supreme Council. He was sent to the continent in 1644 as a representative of this body. In the following year he returned to Ireland and was active as a royalist till 1649, when he withdrew to France, most of his property having been confiscated by the Cromwelleans. His estates were restored to him after the accession of Charles II, who, with Ormonde, held him in high regard. He died in 1677 and was buried near Dublin. Perhaps his chief work is his defence of the Catholics of Ireland, "Vindicatum Catholicon Hibernum libri duo," which, under the pseudonym of "Philopater Irenicus", was published at Paris in 1650. During his latter years he also wrote an account of Irish affairs (1641-48), an imperfect copy of which was printed. The complete work was, however, recovered, and was published under the editorship of John T. Gilbert, with the following title: "History of the Irish Confederation and the War in Ireland, 1641-48". This edition (Dublin, 1882-85) is enriched with many valuable documents and many illustrative cuts, and was published from the original MSS. The above-mentioned "Vindications" is regarded as one of the most trustworthy of the many works written on that period. However, the Irish Franciscan, Father John Ponce, controverted much of this statement in his "Vindicatio Eversae" (Paris, 1653). A "Letter from Richard Bellings to M. Callaghan" on Irish affairs (Paris, c. 1652) is to be found in a French translation of the same date in the Gilbert Library, Dublin.

HARRIS, Writers of Ireland (Dublin, 1764), i, 165.

D. J. O'DONOGHUE.

Bellini, Giacomo (Jacopo), father of Gentile and Giovanni Bellini, b. about 1400; d. 1471. Interest in him arises mainly from the fact that he was the teacher of his sons who were the chief founders of the Venetian school of painting. The paintings produced by Giaco-mo are still in existence and are still considered" very important and few in number. His interesting sketch-book proved, however, his industry and power of observation. It contains copies of antique statues and re-

liefs, drawings portraying Biblical stories and Chris-

tian legends, and sketches from nature and life which are executed with animation and show a sense of proportion and composition in the comic and serious aspects of life. As a competitor in art of the painters of the Vivarini family who came from the neighbouring island of Murano; Antonio and Bartolommeo Vivarini opened a studio in Venice but they were excelled by the Bellinis. Gaio-

sio. Bellini had worked under Gentile da Fabri-

ano in his native city and at Padua. He had also been employed at other places, especially at Padua, where he came under the influence of the classic and plastic tendencies of Squarcione. His sons at an early age became his assistants at Venice.

Giovanni Bellini (b. about 1430; d. 1516) was the elder of the brothers. He also had been in Padua and painted at first in the style of Squarcione, Donato-
tello, and Mantegna; this style was good in conveying individuality, but it was weak in composition and somewhat clumsy. The painting containing the four heroic-sized figures of Saints Mark, Theodore, Jerome, and Francis, the picture of the patriarchs surrounded by ecclesiastics and angels, a Madonna with the benefactors of a religious foundation, and a bust-portrait of the doge belong to this period. At first Gentile was noted mainly in partnership with his father and brother, as at Padua in the "Cappella di Gattamelata". But after the father retired, Gentile's fame soon exceeded that of the elder Bellini. He painted eight pictures in the Scuola di San Giovanni Evangelista at Venice in continuation of his father's work, "The Miracle of the Holy Cross". Three of these pictures, painted between 1490-1500, are preserved in a damaged condition at the Academy of Venice. These pictures bear throughout the characteristic peculiarity of the Venetian school of painting. They are filled with figures from real life, which are clearly modelled, each figure having its own individuality; the religious processions are stately, the architecture which appears of great splendour, and skill is shown in the perspective of lines and atmosphere.

The "Sermon of St. Mark at Alexandria" now at Milan, which Giovanni completed after the death of his brother, equals those just mentioned in worth. It also shows a large number of figures skilfully grouped, an over-elaborate architectural background, much pomp in the scene depicted, brilliant light, and great richness of colour. The Oriental costumes added a new grace to the painting. In 1479 Gentile had gone to Constantinople on the recommendation of the Signory who had been re-

viewed by the Sultan Mehmet, with the design of being his portrait-painter. Gentile painted the Sultan and other important personages. He brought home a great many sketches, including one of the Sultan and the Dowager Sultan in sitting posture. The jour-

ney to Constantinople was not only instructive but greatly increased the fame of the painter. Among the fruits of this trip are a portrait (in the Layard collection at Venice) giving the head and shoulders of Mohammed, and the canvas "Reception of the Venetian Ambassadors by the Grand Vizier", now in the Louvre. The visit to Constantinople had, however, interrupted another large undertaking. In 1474 Gentile had been honoured with the commission to restore the paintings in the Great Council Chamber of the doge's palace and to add to their number. Ear-

lier artists had painted for the hall a series of pictures on a large scale representing the history of Venice. Gentile after his return from Constanti-

nople, in company with his brother, went on with the work. The seven pictures they produced were de-

stroyed in the fire of 1577. In his middle and later period Gentile's are unexceptionable. GIOVANNI BELLINI (b. about 1428; d. 1516) car-

ried the new form of art to its greatest height. He was greatly influenced by the tendencies which have
been mentioned; of these the style of his father and of the Paduan school had the most effect upon him. Manzega was his brother-in-law. Another painter who strongly affected him was Antonello da Messina. Messina was the first person in Italy to understand the Flemish method of painting in oil, and towards the end of his life he spent several years (1474–76) in Milan and Venice. The surroundings of Venetian life and the realistic direction which Venetian art had taken gave the Venetian painters a keen perception of the charm of colour, so that even the short time during which Messina was with them sufficed to lead them into a new path. The genius of Giovanni Bellini enabled him to obtain the full benefit of the new stimulus; at the same time other painters, Bartolomeo and Luigi Vivarini, Gentile Bellini, and other men, also took up the new technic. The use of the new medium produced a softness of outline and an improvement in the modelling which tempered the harshness of the Paduan style and obtained beautiful effects in colour. Giovanni had more feeling and a keener spiritual insight than his brother, and his style gradually developed until he attained a perfect harmony of drawing, perspective, drapery, light, and colour.

His two Pietàs, in Venice, produce a deep effect on the mind, yet they betray a striking harshness which becomes at times even ugliness, but the characteristic qualities of his style had not yet developed into a harmonious beauty. The painting at Berlin of the “Angels Mourning over Christ” although in the relief style, is noble, tender, and rich in colour. The feeling of devotion loses nothing here through the realistic portrayal of all the details. A peculiarity of these pictures is the upright position of the dead body of Christ. The smaller pictures of the Madonna appear at all stages in the development of the artist. Notwithstanding their large number they show no real repetition; at times the expression of Mother and Child is very earnest, at times strange, then again it is lovely and perfectly natural. In one of them the Child listens in a most winning way to the song of the angels and looks upward with open mouth in childlike astonishment, while the Mother is absorbed in her Infant.

The carefully worked out details of these pictures are not too obtrusive. Giovanni preferred half-length figures even when a number of saints were grouped together; as, for example, in the pictures which represent Mary Magdalen and St. Catherine, or St. Paul and St. George, in company with the Madonna. Similar to these is the fine picture “The Presentation of Jesus in the Temple.” Mary offers the Child to the high-priest over a table while the aged Simeon and Joseph worship. Giovanni did not attempt to solve, even in his larger works, such difficult problems of perspective and of the gradation of light and shade as his brother undertook. He had, however, learned from his brother the entire art of the distribution of light and shade and applied it with more skill to bringing out the inner feeling of a composition. Unfortunately we are not able to judge of his style in historical work as we are in the case of his brother. His historical compositions, seven in all, were painted for the Great Council Chamber of the doge’s palace. He worked on these from 1479 until his death; at times the work was done in conjunction with his brother, at times he had the aid of other men. The paintings were all destroyed by fire in 1577. Two duplicates remain of the portraits of the doges, painted in the same place, and these show his skill in portrait-painting. His masterpieces, however, are his great devotional and altar pictures.

Giovanni’s artistic powers entered their period of highest development in 1479. In this year he completed the first large oil painting produced at Venice. In a niche which rises in arched form over pilasters is enthroned the Madonna holding with a solemn, earnest expression the Divine Child. The Child stretches out its little hands towards the worshiping sufferer, Job, who is thus honoured as a patron of the Church. Near Job stands St. Francis, farther back is John the Baptist, to the right are St. Sebastian, St. Dominic, and Bishop Leo. At the foot of the throne are angels playing musical instruments, above in the curve of the arch are cherubim and the inscription, “Ave virginitis flos intereatud pudoris”. The Virgin herself seems to be thrilled by the solemn inspiration of the moment and raises her left hand as if in warning not to disturb the music of the angels. Deep devotion is expressed on all the faces. A large picture of the year 1488 at Murano in which St. Martin presents the Doge Barbarigo to the enthroned Madonna suffers somewhat from a mechanical symmetry. Nevertheless the same musical tone prevails in it, together with great richness of colouring and costume. On each side is seen a beautiful landscape in the dis-
tance. By means of the action represented a greater unity is obtained in this case than in the other mentioned, and much more still than in the Madonna of San Zaccaria, Venice (1505). In the latter the enthroned Madonna holding the Child is surrounded by Saints Catherine, Peter, Jerome, and Lucia. Each one of the saints is separately absorbed in devotion while an angel at the foot of the throne softly touches the strings of his instrument in accompaniment to the spirit of adoration. Here also the feeling produced by the music creates the unity of the whole composition and the painting is a wonderful expression of worship. The scene is laid in a beautiful renaissance structure and the arches of which are adorned with mosaics.

One can perceive the unity of composition attained by means of this spirit of devotion and music of the angels even in those canvases where the surrounding saints stand in separate niches. Such, for example, is the picture where four saints are represented on the wings of an altar-piece in the church of Santa Maria dei Frari at Venice (1488). The Mother and Child are enthroned in the middle space; at their feet two beings are playing the hunting- and flutes. A lighter, although by no means a jarring impression, is made by this triptych. The separated positions of the saints, to whom an altar and a church had been consecrated, recalls the practice of the older painters. By gilding the space and giving them an outer as well as an inner relation to one another Bellini created the so-called "Sacre Conversazioni", or "the Societies of Saints". It was not necessary that the personages should belong to the same historical time, as they receive in the altar-piece a new, ideal life. The spirit of devotion inspired by the Madonna and her Divine Child unites them sufficiently but the more so when a new bond of union arises from the action indicated in the composition, such as, in many cases, the beautiful music or even the effect produced by light and shade.

A couple of pictures should be mentioned in which Giovanni, whom time never robbed of the freshness of his imagination, set for himself problems in landscape-painting. In 1501 he painted a "Baptism of Christ" in which the art of Giorgione and Titian seems to be apparent. The scene is laid in a romantic mountain-valley lighted by the evening sunshine. Three kneeling angels are the witnesses. The influence of younger painters is very evident in a picture having the same tone as the one just mentioned. St. Jerome. Giovanni continued to learn even when he was old, although he was properly more often the teacher and never obscured his own individuality of style. St. Jerome, in this picture, is seated on a great rock in front of a mountain landscape and is absorbed in the study of the Scriptures. In the foreground, on an eminence, stands St. Augustine absorbed in thought, and on the other side is St. Christopher holding the Child Jesus. These three mighty men of Christianity may also be considered as bound together by an inner spiritual unity. In the "Death of Peter the Martyr" there is a prospect to right and left from the forest out over a city and mountains. Such vistas are always important features in the genre pictures for which Giovanni had a strong liking. Giovanni had little taste for mythological scenes and his few canvases of this kind do not need mention.

Belloy, JEAN-BAPTISTE DE, Cardinal-Archibishop of Paris, b. 9 October, 1709, at Morangies in the Diocese of Beauvais; d. in Paris, 10 June, 1808. Although of an ancient family of no mean military fame, young Belloy-preferred an ecclesiastical career, made his classical and theological studies at Paris, where he was ordained priest and received the degree of Doctor in Theology in 1737. In the ministry he shone more by his virtue than by his learning. Sweetness of character, enlightened and moderate zeal, unswerving fidelity to the principles and traditions of the Church, in which he lived and died, rendered even his early ministry remarkably fruitful. His bishop, Cardinal de Gêvres, appointed him vicar-general and archdeacon of his cathedral. In 1751 he was consecrated Bishop of Glandèves. At the famous Assembly of the French Clergy of 1755, he took sides with the moderate party and contributed to the restoration of tranquillity in the Church of France. Dissensions occasioned by the Bull "Unigenitus" had become so great in the Diocese of Marseilles that, at the death of the saintly Bishop de Belenuse, there was imminent danger of schism. In this emergency a chief pastor of consummate prudence and tact was needed, and Bishop de Belloy was accordingly transferred to that see. Without sacrifice of principle or duty, by gentleness, tact, and just the burnished grace of the good pastor, he restored order and parties and restored peace. In July, 1790, the National Assembly decreed the suppression of the Diocese of Marseilles. The bishop withdrew, but sent to the assembly a letter of protest against the usurpation of the most important ecclesiastical functions. He retired to Chambly, a little town near his native place, where he remained during the most critical period of the Revolution. When, in 1801, the sovereign pontiff decided that the French bishops should tender their resignations in order to facilitate the conclusion of the Concordat, he was the first to comply, setting an example which exercised great influence over the other bishops. Napoleon, highly pleased with this act of devotion to Church and State, appointed the nonagenarian bishop to the See of Paris. Notwithstanding his extreme age he governed his new diocese with astonishing vigour and intelligence, reorganized the parishes, provided them with good pastors, and visited his flock in person. He restored the Crown of Thorns (10 August, 1806) to its place of honour in the Sainte Chapelle. Napoleon was so well satisfied that he asked and readily obtained for him the cardinal's hat, which Pius VII placed on the prelate's venerable head in a consistory held in Paris, 1 February, 1808. At his death Cardinal de Belloy had been appointed in the holy ministry to the edification of all and to evident satisfaction of both Napoleon and Pius VII, then engaged in deadly conflict. He is buried in Notre Dame, Paris, where the monument erected by Napoleon in his honour is one of the finest in the cathedral.

G. GIETMANN.

BELLOY, JEAN-BAPTISTE DE, Cardinal-Archibishop of Paris, b. 9 October, 1709, at Morangies in the Diocese of Beauvais; d. in Paris, 10 June, 1808. Although of an ancient family of no mean military
banes to Abbot Eugippius. It has been suggested from a Latin inscription connected with the Arval Brethren on Mount I. L. vi. no. 207) to mean some kind of brazen vessel. However no quite satisfactory examples of campana in church Latin seem to be forthcoming before the latter part of the seventh century, and it is then found in the North. It was used by Columban at Iona (608) and by Bede in Northumbria (c. 710), and frequently elsewhere after that date. In Rome the "Liber Pontificalis" tells us that Pope Stephen II (755-775) erected a belfry with three bells (campana) at St. Peter's. It was probably the same which led Walafrid Strabo in the first half of the 9th century to say that the assertion that bells were of Italian origin and that they came from Campania and more particularly from the town of Nola. Later writers went further and attributed the invention to St. Paulinus of Nola, but as St. Paulinus himself in the minute description which he has left of his own church makes no mention of bells, this is extremely improbable.

The word clocca (Fr. cloche; Ger. Glocke; Eng. Clock) is interesting because in this case it is definitely known what was meant by it. It was certainly Irish in origin and it occurs at an early date both in Latin and in the Irish form clog. Thus it is found in the Book of Armagh and is used by Adamnan in his life of St. Columkill written c. 685. English missionaries do not doubt it imported it into Germany where it appears more than once in the Sacramentary of Gellone. It is plain that in primitive Celtic lands an extraordinary importance was attached to bells. A very large number of these ancient bells, more than sixty in all—the immense majority being Irish—are still in existence. Many of them are reputed to have belonged to Irish saints and partake of the character of relics. The most famous is that of St. Patrick, the clog-an-clocha or "bell-of-the-will", now preserved in the Museum of the Royal Irish Academy, Dublin. There seems no serious reason to doubt that this was the bell which lay upon St. Patrick's breast and was taken from his tomb in the year 552. Like most of these bells it had an official and hereditary custodian (in this case named Mulholland) in whose possession it remained, being handed down for centuries from father to son. Other similar early bells are those of St. Senan (c. 540) and St. Mura; there are several in Scotland and Ireland, one at St. Gall in Switzerland, one known as the Saupin at Cologne, and a number in the South of France. The evidence for the extraordinary veneration with which these bells were regarded in Celtic lands is overwhelming. Even Giraldus Cambrensis notes in the twelfth century that upon them was taken the most solemn form of oath. They were also carried into battle, and though the earlier specimens are nothing but rude cow-bells, wedge-shape in form and made of iron plate bent and roughly riveted, still they were often enclosed at a later date in cases or "shriners" of the richest workmanship. The shrine of St. Patrick's bell bears an inscription of some length from which we learn that this beautiful specimen of the jeweller's craft must have been wrought about the year 1005. History tends to repeat itself, and if we remember the important missionary work of St. Francis Xavier by the handbell with which he gathered round him the children, the idle, or the curious, we have probably a clue to the intimate association of these early Celtic bells with the work of Christianity. When in 1656 Father Mauoir, the great Breton, had to hasten further expeditions, the bell which he handed on to his successor was regarded as a sort of investiture. It may be noted that the famous round towers of Ireland, which are now generally recognised to have been places of refuge against the inroads of the

In coming to the Christian period the same difficulty is encountered. A new set of terms is introduced, signum, campana, clocca, nola, which are all commonly translated "bell", and at a later period these were all used to denote what were in the strictest sense "church bells" of large size. The first Christian writer who frequently speaks of bells (signa) is Gregory of Tours (c. 585). We learn that they were struck or shaken, and we even find mention of a cord being used for this purpose (funem ulum de quo signum commovetur, "De Vitâ Mart., I. xxviii"). While as regards the use of these signa it appears that they rung before church services and then that the monks from their beds. Again, the word signum appears in the almost contemporary "Life of St. Columban" (c. 615), for when one of his monks was dying Columban is said to have assembled the community by ringing the bell (sino taceo omnes adesse impavids, Kruse, "Scrip. Merov.", IV, 85). Similar expressions, signum taceo, or cum exauditio fuert signum, are used in Constitutions attributed to St. Cesarus of Arles (c. 513) and in the Rule of St. Benedict (c. 540). Moreover, if Dom Ferotin's view of the very early date of the Spanish ordinals which he has published (Monumenta Liturgiae, 1906) be safely accepted, it is possible that large bells were in common use in Spain at the same period. Still it must be remembered that signum primarily meant a signal and we must not be too hasty in attributing to it a specific instead of a generic meaning when first employed by Merovingian writers.

Again, the word campana, which even in the early Middle Ages undoubtedly meant a church bell and nothing else, occurs first, if Reifferscheid's "Anecdota Cassinensis" (p. 8) may be trusted, in Southern Italy (c. 515) in a letter of the deacon Ferdinandus.
Danes and other marauders, were commonly called *cloch teacht*. The bells occasionally stored there for the sake of safety seem to have been regarded as the most precious of their treasures and from this circumstance the towers probably derived their name, though it is of course possible that they in some cases served as bases in the manner of *campana*. The great development in the use of bells may be identified with the eighth century. It was then, seemingly, that they began to be regarded as an essential part of the equipment of every church, and also that the practice of blessing them by a special form of consecration became generally prevalent. If we interpreted literally a well-known passage in Bede (Hist. Eccl., IV, xxxi) we should have to believe that already in the year 850, the bell (*campana*) that was rung at Whitby at the passing away of St. Hilda was heard at Hackness thirteen miles off. But the whole setting of the story implies that Bede regarded the occurrence as miraculous and that the distance might as well have been thirty miles as thirteen. On the other hand, it is clear that in the eighth century church bells began to be the expression of an act of consecration of hanging bells in them, which implies that the bells must have been increasing in size. The case of St. Peter's at Rome has already been noticed. So in the annals of St. Vanclaire (esp. x, p. 33) we read that `in the time of Ermarius, an abbot had a bell made, to be hung in the little tower (*turricalum*) as is the custom of such churches'; while the *Monachus Sangallensis* (De Carollo Magni, I, xxxi) tells the story of a monastic bell-founder who asked Charlemagne to give him a hundred pounds of silver with a proportionate amount of copper to provide materials for a single great bell. In any case it is certain from Charlemagne's *Capitularies*, as well as from Alcuin, Amalarius, and other writers of the early ninth century, that by that time in the Frankish dominions every parish church was expected to have at least one bell. In the next century Regino of Prüm, providing a programme of questions to be asked at an episcopal visitation, puts in the very first place a question about the church bells. Seeing that the clearest evidence of the popularity of church bells in Carolingian times is encountered in regions where the influence of Irish or English missionaries had prevailed, it may perhaps be concluded that this development should be traced to Celtic influence. Ermarius's bell, which gathered his congregation together in the open air, would soon become sacred as a thing immediately associated with him and his work. Moreover, the idea would grow up that no religious service could take place without the mention of the sacred tinkle of the bell. Although we have traces of the use of *signum* and *campana* in monasteries before the Irish became missionaries, there is no evidence to show that these were bells rather than gongs. On the other hand, the *tumularia* used to announce the beginning of services in Greek monasteries was a flat plate of metal and its name (from *tumularia*, "to make a signal") is obviously the counterpart of *signum*. Further we also find in an old glossary of the tenth century that the Greek word *tumularia* (drum) is given as the equivalent of *campanum* (Corpus Glossariorum Latinorum, III, 24). At the same time we can trace in Ireland itself a gradual evolution of the shape of the bell, passing from the small cow-bell of riveted iron to the cast bronze instrument of considerable size, nearly approximating the bell with which we are now familiar.

II. BENEDICTION.—Since the beginning of the sixteenth century there has been much purposeless controversy over the question of the so-called "baptism of bells." Protestant critics, following the lead of Luther, have professed not only superstition but a profanation of the sacra-
Some rude lines quoted in the gloss of the "Corpus Juris", and often found in inscriptions, describe the principal functions of a bell (cf. Longfellow, The Golden Legend):  
Laudo Deum verum plebem voco congrego clerum  
Defunctos ploro, nimbum fugio, festa decoro.  
(I praise the true God, I call the people, I assemble the clergy;  
I bewail the dead, I disperse storm clouds, I do honour to feasts.)  
Or otherwise:  
Funera plano fulmina frango sabbata pango  
Excito lentos diepos ventos pace cruentos  
(At obsequies I mourn, the thunderbolts I scatter, I  
ring in the sabbaths;  
I hustle the sluggards, I drive away storms, I proclaim peace after bloodshed.)  
Under defunctus ploro we may reckon the "passing bell", which in its strict meaning is a usage of very early date. In all monastic orders when any one of the community seemed to be at the point of death a signal was given by ringing a bell or striking a wooden board (tabula) either to summon the monks to his bedside or to admonish them to pray (see Edius, Vita Wifridi, 64).  
This was extended later to parishes, and a bell was rung to announce that a parochioner was in his agony, which seemingly also developed further into a bell tolled after his decease to solicit prayers for his soul. So deeply rooted were these practices in England that it was found impossible at the Reformation to abolish them altogether. Hence the "Canon" of the Church of England prescribes (Can. lxvii): "When any is passing out of this life a bell shall be tolled and the minister shall not then slack to do his last duty. And after the party's death, if it so fall out, there shall be rung no more than one short peal, and one other before the burial and one other after the burial". "Though the tolling of this bell", says Ellacombe, "has been prescribed for four distinct occasions, modern custom has limited it to two: first, after the death of the parishioner, to which the term passing-bell has been incorrectly transferred; and the second time during the procession of the dead from the house of the deceased to the church-gate or entrance". In many places it was formerly customary by some variation in the manner of ringing to indicate the sex, quality, or age of the deceased. Thus Durandus in the fourteenth century directed that when anyone was in extremis the passing-bell should be tolled twice for a woman, thrice for a man, and for a cleric a greater number of times according to the orders which he had hitherto received. Among the Celtic peoples the ancient hand-bells which, as already noted, were so deeply venerated partly as objects immediately connected with God's worship, partly as relics of holy men, were usually carried and rung at funerals. To this day St. Finnan's little bell lies exposed upon the altar of a ruined chapel in one of the Catholic dia-

III. Uses.—The first ecclesiastical use of bells was to announce the hour of church services. It is plain that in the days before watches and clocks some such signal must have been a necessity, more especially in religious communities which assembled many times a day to sing the Divine praises. Among the Egyptian cenobites we read that a trumpet was used for the purpose; among the Greeks a wooden board or sheet of metal was struck with a hammer; in the West small bells eventually prevailed. In the Merovingian period there is no trustworthy evidence for the existence of large bells capable of being heard at a distance, but, as it became needful to call to church the inhabitants of town or hamlet, bell turrets were built, and bells increased in size, and as early as the eighth century we hear of two or more bells in the same church. Perhaps these were at first intended to reinforce each other and add to the volume of sound. But in any case it became in time a recognised principle that the clashing of several bells rung at once, constituted an element of joy and solemnity befitting great feasts (Rupert of Deutz, De Div. Offic., I, 16). Medieval consecutaries show that where there were many bells, different bells were used for different purposes. Even in ordinary parish churches it was customary to ring not only for Mass but before both Matins and Vespers (Hartseim, IV, 247; V, 327) while differences in the manner of ringing and the number of bells employed indicated the grade of the feast, the sanctity of the occasion, the fact that the bell would be preached, and many other details. The custom of making such announcements by bell still survives here and there. Thus in Rome on the evening before a fast day the bells are rung for a quarter of an hour in all the parish churches to remind people of their obligations on the morrow.  

II.—27
tricts of the Highlands of Scotland. It is used at funerals, but is otherwise left unprotected, being regarded with such deep veneration by all that no one dares to interfere with it (see Macdonald, Moldart, Oban, 1889, 120). In many parts of France there were churches for the bonfire-ringers. The bells were regularly attended funerals, walking at the head of the procession. They also paraded the streets at night and rang to remind people to pray for the holy souls. This happened especially on the eve of All Saints and on Christmas Eve (Mornilat, Clochettes, 160 sqq.).

In Rome the “De Profundis” is rung every evening by the parish churches one hour after the Ave Maria. Clement XII in 1736 granted an indulgence for this practice and endeavoured to extend it. This custom is observed in many other places, particularly in North America.

The Curfew (ignitium), a warning to extinguish fires and lights, after which all respectable characters went home to bed, was possibly of ecclesiastical origin but seems to have been rung as a rule by the town bell (campana communis, bando.) Still in many cases one of the church bells was used for this and similar purposes. In England this was particularly frequent, and in many small towns and parishes it is rung to this day at hours varying from 8 P.M. to 10.

The Angelus or Ave Maria may or may not have developed out of the curfew. There seems good reason to believe that a special bell, often called the Gabriel bell, was devoted to this purpose. In the Middle Ages the Angelus seems commonly to have been rung with three equal peals, and this arrangement still obtains in many places. In Rome, where the Ave Maria is sung half an hour after sunset this method obtains: three strokes and a pause, four strokes and a pause, five strokes and a pause, a final stroke.

From the introduction of the Elevation of the Host in the Mass at the beginning of the thirteenth century it seems to have been customary to ring one of the great bells of the church, at any rate during the principal Mass, at the moment when the Sacred Host was raised on high. This was to give warning to the people at work in the fields in order that they might momentarily kneel down and make an act of adoration. These, however, in England the big bell was not commonly rung but that a small hand-bell was used for the purpose. This was taken to a small window (low side window) ordinarily closed by a shutter, thrust through the aperture and rung outside the church. Whether this is the origin of the little bell which the rubrics of the Mass now order to be rung by the server is not quite clear. It may be noted here that in regard to this same tintinnabulum usage varies very much in different countries. In Belgium, France, and some other places, this little bell is rung also at the “little elevation” before the Pater Noster. In Rome it is never rung at the Domine non sum dignus and is not used at all at Masses said by the pope or by cardinals.

In the rite of the blessing of bells the verse is applied to the bell (nec Dominus in virtute, nec Dominus in magnificat). The voice of the Lord is in power, the voice of the Lord in magnificence, Ps., xxviii, 4). It is no doubt in virtue of the solemnity which they lend to worship that the “Ceremoniales Episcoporum” directs: “At they are to be rung in honour of the bishop who visits the parish. The same custom of respect is observed in the case of secular princes, while such occasions as processions of the Blessed Sacrament, solemn Te Deums, marriages, and days of national rejoicing are similarly distinguished. On the day when in taken of the bells are silent from the Gloria of the Mass on Maundy Thursday until the Gloria on Holy Saturday. This rule goes back to the eighth century and Amasaaria is authority for the statement that then as now a wooden rattle was used in their place. Again the idea of voc Domini in Virtute in remembrance of their special consecration has led to the bells being rung at the commencement of the Mass.

The inscription Salva Terra often found in the old bells of the South of France seems to bear special reference to this virtue of the bells as sacramentals.

IV. ARCHAEOLOGY AND INSCRIPTIONS. — Unquestionably the oldest existing Christian bells are those of Irish, or at least Celtic, origin, of which, as already stated, a surprisingly large number are preserved. The earliest, made of iron plate, bent and rivetted, seem to have been dipped in melted bronze, a process which probably much improved their sonority. Somewhat later hand-bells began to be cast in bronze, and one such specimen (eight inches in diameter and nearly a foot high) can be dated by the aid of the inscription which it bears or GR CHUMASCAEC SSE AILILA (A prayer upon [i.e. for] Chumascach son of Ailil). Now as Chumascach, steward of the Church of Armagh, died in 904, this bell probably belongs to the closing years of the ninth century. Another bell of early date, but of small size (five and one-half inches high and seven inches in diameter), is preserved in the Museum of Cordova, which bears the inscription “Offert hoc munus Sambon abbatis [sic] in domum sancti Sebastiani martyrise Christi em DOCCCLIII”. This is the Spanish Era and corresponds with A.D. 925. Of church bells properly so called, the earliest existing specimens seem to belong to the eleventh, twelfth, and thirteenth centuries. They are for the most part of a sort of Beehive, thimble or barrel shape, sometimes disproportionately broad, sometimes narrower, while the sides are commonly straight or even in some few instances converge a little towards the bottom. They are also often perforated with three or four small triangular apertures in the upper part of the bell. The inscriptions, when they occur, are engraved and not as a rule cast in relief. Most of them are very short, but this is probably due to the accident that so very few early bells have survived, for we have record of much longer inscriptions engraved on bells as far back as the ninth century. Thus Folceuin who was Abbot of Lobbes from 965 to 990, tells us in his chronicle of one of his duties that he was responsible for “1050, for having put eight bells in the church, to which three or four small triangular apertures were added, and inscribed in the upper part of the bell: "Offert hoc munus Sambon abbatis [sic] in domum sancti Sebastiani martyrise Christi en DOCCLXXXI". This last instance, perhaps the earliest example of a bell with a name, throws an interesting light on the origin of the practice of assigning bells to a particular patron. Again we know that the Cistercians of Waverley about 1230 had a bell made with the legend: "Dicor nomine quo tu Virgo domesticae Christi Sum Domini prece culus tutea fuisse." And an even longer inscription on one of four hexameter lines was to be read upon the bell called Edmund at Bury, which dated from about 1105. The oldest church bell now in existence is probably that known as the Lullus bell at Hersfeld which may belong to the middle of the eleventh century, but the bell which excited the greatest excitement was that discovered to be one at Igensbach in Bavaria. It may be doubted, however, whether certain ancient Italian bells at Siena and elsewhere have not yet been accurately studied (see Eiliacono, 406, 530). In England many medieval bells have been cast and it is only a little bigger than that of Cloughton in Lancashire, 1296. As regards the lettering of the inscriptions, it suffices to say...
that while the earlier bells often show a very ornate style of character, known as "crowned Lombardic", those of the fifteenth and late fourteenth century approximate to the ordinary Gothic or "black letter" type.

As regards the inscriptions themselves, both purport and wording are infinitely varied. Some are barbarous in syntax and metre, others have evidently been submitted to some sort of scholarly revision. That the practice of naming bells began as stated by Baronius, with the dedication of a bell to St. John the Baptist by Pope John XIII in 969 rest on unsatisfactory evidence, but most existing medieval bells preserve some indication of the name by which they were called. A very large number were in one way or other dedicated to the Blessed Virgin, and most of these were probably used either for the Angelus or at the Mary Mass. The inscriptions vary indefinitely. One of the commonest was Protexs prece pia quos convoco sancta Maria or what is metrically a little more correct:

Ors mente piá pro nobis Virgo Maria.

In Germany a very favourite inscription for Mary bells was:

Maria voceor. O rex glorie veni cum pace.

This almost certainly was meant as a reference to the Incarnation, for in many cases this legend was joined with the words: "Et homo factus est". Such terre m'était nommée". Or again we often find only: "Xutus vincit; Xutus regnat; Xutus imperat". Later inscriptions were often chronographic. Thus in a bell of 1650 we have:

Rupta bis ante fui nune integra cantem Magno Igii LIIqefacita Deo reparata beligno —capitales in second line giving date MDCLVIII.

The following inscriptions are on the principal bell of St. Peter's Basilica, Rome (shown in illustration): On the upper part:

+In nomine Domini Matris, Petrique Paulique, Accipe devotum, parvarm licet, accipe munus Quod tibi Christe datum Petri Paulique triumphum +Explicat, et nostram petit publicum salutem Ipsum pietate dari meritique radiund. Et Verbum caro factum est,

+Anno milleno trecenteno cum quinquageno Additis et tribus, Septembris mense, colatur, Ponderat et mille decies septiesque liberum.

+Campanam hanc longo usus contractam non plus quam quatuordecim millia libras pendere consentiit; Benedictus XIV addito usque ad viginti mille libras metallo, confiari et denso refici iussit, anno reparatis salute MDCCCLVII.

+Enandem septimo viii exacto lustro, rins actis in aedem, uno plus et viginti millia libras metallic repertam, Pius Sextus, Pont. Max. non mediocri metallo superaddito ad idem ponderis confiari fundique mandavit, anno Domini MDCCCLXXXV, Pont. XI.

Aloysius eques Valadier construit.

For the credit of eighteenth century scholarship, it seems desirable to explain that only the latter part of this inscription belongs to the pontificate of Pius VI. The earlier portion with its metrical irregularities is simply a copy of what was read upon the great bell of St. Peter's at the beginning of the fourteenth century. Probably the metal came from the bell originally cast by Leo IV in 850, or even earlier, under Pope Stephen II. Then, when the campanile was burned down in 1303, Boniface VIII had a new bell made with the inscription which stands first in the above series. Only fifty years afterwards the tower was struck by lightning and a new great bell was founded (colatur, cf. the French couler) in September, 1353. Then Benedict XIV had the bell recast in larger size in 1747, and when this cracked (rimis actis), the metal was once more used by Aloysius Valadier to make the present beautiful bell under Pius VI in 1785. (See Cancellier, De Secretariis, Rome, 1786, III, 1357, and IV, 1995 seq.)

In point of size any very great development of medieval bells was probably checked by the mechanical difficulty of ringing them. At Canterbury, for example, we hear of as many as twenty-four men being required to ring one bell, while sixty-three men were needed for the whole peal of five (Elacombe, 443). In the eleventh century a bell given by King Robert to the church at Orleans was thought to be of remarkable size, but it weighed little over a ton. The "Cantabona" bell of Blessed Azelin at Hildesheim (eleventh century) is said to have weighed about four tons, a Rouen bell of 1501 sixteen tons, and the still existing "Maria Gloriosa" of Erfurt Cathedral, cast in 1497, weighs thirteen tons. Of modern bells consecrated with the rites of the Catholic Church, the largest is that of Cologne Cathedral, which was made out of captured French cannon, and weighs nearly twenty-seven tons. That in the church of the Sacred Heart at Montmartre weighs only eighteen, and others at Vienna and Rouen about seventeen. In the Catholic cathedral of Montreal is a bell of thirteen and one-half tons. The very beautiful bell of St. Peter's, Rome, weighs about nine tons. The gigantic bells cast in Russia, China,
Japan, and Burns seem only to be struck with a human passion for "hanging". The largest bell in England is that of St. Paul's Cathedral, London, which weighs seventeen and one-half tons.

V. Points of Law.—In medieval England it was distinctly laid down that the church bells and ropes had to be provided at the cost of the parishioners. The cost of the church tower, if more bells, a parish church two or three, while the churches of the mendicant orders, like public oratories, were originally limited to one. The solemn ceremony of benediction provided in the Pontifical was carried out by a knop or by a specially empowered, and it is only to be employed in the case of bells intended for church use. For other bells a simpler blessing is provided in the “Rituale”. Numerous prohibitions exist against the church bells being used for “prophane” purposes, e.g. for summoning meetings or for merely secular festivities and in particular for executions. In Catholic ecclesiastical legislation the principle is maintained that the control of the bells rests absolutely with the clergy. In cathedral churches according to the jurisdiction vested in the Sacrista. Theoretically, the actual ringing of the bells should be performed by the coadjutor and in the conferring of this minor order the cleric is given a bell to ring, but for centuries priests have been exempted from this obligation, and lay bell-ringers have been almost exclusively employed. Finally, we may note a decision of the secular courts given in an action brought against the Redemptorists of Clapham, England, in 1851, where by an induction was granted to these Fathers from ringing their bells at certain hours, at which, as it was complained, such ringing caused unreasonable annoyance to residents in the neighbourhood.

Herbert Thurston

Belluno-Feltre, Diocese of.—Belluno, which was anciently called Bellinum, is a metropolis of the province of that name in Venetia, Italy, and is situated on a hill between the torrent of Aro and the River Piave, and has a population of 10,000. At the end of the tenth century Belluno was affected by the powerful dukes of the province. Bishop Joannes II (959) obtained from Emperor Otto I for himself and his successors the title of count and temporal sovereignty over this city and the surrounding territory. He also fortified the city. In the course of time there were many disputes over the civil mastery of Belluno, but in 1420 the inhabitants of their own accord acknowledged the authority of Venice. Belluno is the seat of a bishopric suffragan to the Patriarchate of Venice, and is united with the See of Feltre. Christianity is said to have been first preached there by St. Hermagoras, a disciple of St. Mark and first Bishop of Aquileia, and next by Prosdocimus, first Bishop of Padua, who becomes the patron of the city. From the reign of Emperor Commodus and the second, St. Salvador, as succeeding under Pertinax. About 300 another Theodosius is thought to have brought from Egypt the remains of St. Giovan, patron of the city. The top knop, by a popen history is a certain Laurentius, who, in 587, attended the schismatic assembly convened by Severus, Patriarch of Aquileia, in connexion with the dispute of the Three Chapters. The thirteenth century was a stormy period for the united see of Belluno and Feltre. In 1197 Bishop Gerardo de Tellenci was murdered by the inhabitants of Treviso, after which Innocent III united the Diocese of Belluno with that of Feltre. Feltre, the ancient Feltria, is situated in the province of Belluno in Venetia, on the River Col meda, and contains an area of 11,450 acres. From 80 B.C. it enjoyed the rights of Roman citizenship. It was besieged during the invasion of Attila. Emperor Henry III created the Bishops of Feltre counts of the city and vicinity, but their authority was almost extinguished by the Counts of Camino, by Eszello da Romano, the Scaligeri, the Carrara, and finally by the Visconti themselves. At last, in 1404, the city fell into the power of the Venetians. Feltre also claims to have received the Gospel from St. Peter in reestablishment, a martyr, is said to have lived there about A.D. 170. The first Bishop of Feltre whose date can be fixed is Fonteius, who in 579 took part in a council in Aquileia and in 591 dedicated a book to Emperor Mauritius. Drudo of Camino (1174) was the first Bishop united with the See of Belluno and Feltre, the latter being the residence of the bishop. The twelfth, thirteenth, and fourteenth centuries were filled with civil strife. In 1462, at the request of the Venetian Republic, the two dioceses were separated. The first Bishop of Belluno was Ludovico Donato. Bishops Pietro Barozzi, Mosè Bufarelli, and Bernardo Rossi (1499) rebuilt the cathedral. One of the most illustrious bishops was Luigi Lollin (1603) who did much to promote the love of learning among the clergy and to increase the large number of priests by the Counts of Camino. Giovanni Berlinghieri (1655) completed the work of enforcing the Tridentine reforms, and Gianfrancesco Bembo, a member of the Somaschi (1695), was very earnest in the cause of popular education. In 1818 the diocese was reunited with that of Feltre. Among the Bishops of Feltre after the separation mention should be made of Angelo Fasolo (1646), who was appointed on many legations in connexion with the Crusade against the Turks; Lorenzo Campeggio (1512), famous as the name of the English during the time of Henry VIII, later made cardinal and transferred (1520) to Bologna. He was succeeded by his nephew Tommaso Campeggio, who was nuncio several times. Agostino Gradoni (1610) restored the cathedral; Zanino Bortoli (1685) was librarian; Giovanni Bortoli (1748) was a distinguished professor of canon law at Padua. The most remarkable sacred edifices in Belluno are, in addition to the cathedral, the church of San Giacomo, dedicated to St. Lawrence, the oratory of San Giacomo, the churches of San Giorgio in Villa bruna, and San Rocco; in the last named the painting over the high altar is the work of Palma il Vecchio.
BELMONT

425

BEMBO

Outside the city, on the slopes of Mount Mismeas is the church of St. Victor's Corone, erected by the Crusaders of Feltre after the First Crusade. The Diocese of Belluno contains 72 parishes, 280 churches, chapels, and oratories, 137 secular priests, 22 regulars, 22 seminarians, 5 lay brothers, 29 sisters, and a population of 127,500. Feltre has 17 parishes, 100 churches, chapels, and oratories, 48 secular priests, 25 regulars, 56 seminarians, 2 schools for boys and 2 for girls, and a population of 48,000.

U. BENIGNI.

Bélanger, FRANCOIS VACHON DE, fifth superior of the Penitents at Montreal, b. at Grenoble, France, 1645; d. 1732. He went to Canada in 1680 and was appointed a missionary among the Indians of La Montagne; he held this position until 1700, when he succeeded Dollier de Casson as superior of the order. He erected at his own expense Fort de La Montagne on the site of the present Grand Séminaire, built the old seminary which still exists in the street of Notre Dame, and began the construction of the Lachine Canal. Among his writings are: "Histoire du Canada", printed in the "Collection de mémoires de religion et de relations sur l'église du Canada"; "Histoire de l'atelier de la Conception de l'Assomption de la Vierge", published by the Historical Society of Quebec; "Histoire de l'atelier de l'Assomption de la Vierge", published by the Historical Society of Quebec. In 1721 he published a number of memoirs still in manuscript. Mention should also be made of the funeral oration of Bishop Montmorency-Laval, first Bishop of Quebec, delivered at Montreal, June 1705.

BERTRAND, Bibliothèque Supplémentaire ou hist. lit. de la c. de Saint-Sulpice (Paris, 1900).

A. FOURNET.

BELSON, THOMAS, VENERABLE, martyr, b. at Brill in Oxfordshire, England, date uncertain; d. July 5, 1589. He was at the college at Reims in 1584, and in 1589 was arrested at the Catherine Wheel Inn, near Bailiol College, Oxford, with his confessor George Nicola, Richard Yaxley, a priest, and Prichard, a servant. They were sent to London, whence, after examination before Walsingham and repeated tortures in Bridewell and the Tower, they were sent back to Oxford to be tried. Belson was found guilty of foreign adherence, and was executed with his companions at Oxford. He suffered after the priests and, kissing the dead bodies of his pastors, begged the intercession of their happy souls that he might have the grace to imitate their courage and constancy.

BELSHE, CAMM.

BELSHE, DE CASTELMORON, HENRI FRANCOIS XAVIER DE, Bishop of Marseilles, b. 1871 at the Chateau de la Forize, in Périgord; d. 1758 at Marseilles. His father was Armand de Belshe, Marquis de Castelmoron and his mother Anne de Caumont de Lassay. He studied classics in Paris at the College de Clermont or Louis-le-grand and then entered the Order of the Society of Jesus and in 1696 he left the Society in order to become Vicar-General of Agen. The "Vie de Suzanne de Belshe de Fos", his aunt, was written by him and published while at Agen, 1709. That same year we made Bishop of Marseilles. The heroic charity he displayed during the plague of 1729 and 1731 in his native household and won for him the title of "Good Bishop". When the plague broke out a large fleet was taking the Princess of Orléans to Italy where she was to marry the Duke of Modena. The suite of the princess took to flight, and with them all the notables of the city, but Bishop Belshe remained with a few heroic friends, and together they battled against the plague with heroic self-sacrifice and devotion, till they conquered it. In his address to the Assembly of the Clergy in 1725, Belshe stated that more than 250 priests and religious perished in their mission of Christian charity. But he was the soul of the rescuers and the praises bestowed on him by Père Arnauld d'Eillevoye ("Essai sur Man") and "Belshe ou la peste de Marseille") are not above his real merits. The King of France offered him, by way of recognition, the See of Laon to which was attached the first archiepiscopal peerage of the realm and afterwards the metropolitan See of Bordeaux. Belshe refused both and contented himself with accepting the pallium sent him by Clement XII. During his incumbency Belshe fought against another plague called Jansenism. He attended, 1727, the Synod of Embrun where Soane was condemned. He opposed with all his power Colbert of Pamiers. In spite of the protest of the Parliament of Provence, he instructed his priests to refuse absolution to the appellants against the Bull "Unigenitus". Nearly all his pastoral instructions, he wrote, he gave against Jansenism. Belshe was a writer of no mean power. Besides the "Vie de Suzanne de Foix" (Agen, 1709), and his pastoral instructions, we have from his pen "Le combat chrétien" translated from St. Augustin's "De Agone Christiano" and "De l'Art de bien mourir", translated from Bellarmine's "De Arte Bene Moriendi", also "Antiquité de l'Eglise de Marseille" (Marseilles, 1747-51). All these writings have been published by Jauffret under the title of "Œuvres de Belshe" (Mâts, 1829).

BEL. See CHELM.

BELSONI, GIAMBATTISTA, an Egyptian explorer, b. at Padua, Italy, in 1778; d. at Gato, Africa, 3 Dec., 1823. His father was a barber, and intended his son to follow that trade, but the boy, who was born a traveller, left home at the age of fifteen, and after some wanderings settled down at Rome, where he began the study of hydraulics. Whether or not he became a monk is uncertain, but, at any rate, he travelled in Italy in 1788 and 1789.

Having returned to Italy, he again departed in 1803 and travelled through the British Isles, being finally obliged, by reduced circumstances, to secure an engagement in pantomime. Leaving England, he went to Egypt, where, soon after his arrival, he undertook a scheme for raising the waters of the Nile at Zabra, but the work was later abandoned by the authorities, and he turned his attention to unearthing the colossal bust of Memnon now in the British Museum. Having accomplished this difficult task, he ascended the Nile, and besides many other important Egyptological investigations, made his famous discovery of the mummy of Ponnamethis. Again setting out from Cairo, he explored the pyramids of Chephren, travelled through Fayum, visited Lake Mounz and the ruins of Arisnoe, penetrated into Libya, and reached the oasis of El-Cassar. In 1819 he went to England, whence, after a stay of a few years, he set out for further travels in Africa, intending to explore Timbucto and the sources of the Niger, and to visit Benin and Abyssinia; but having landed, he was attacked by a fever, and died. He printed a narrative of his journeys at London, in 1821, and his original drawings of "The Tombe of the Kings" were published by his widow, at London, in 1829.

EDWIN RYAN.

BEM. See AMBO.

BEMBO, PIETRO, a famous Italian scholar and Cardinal, b. of a noble family at Venice, 20 May
1470; d. at Rome, 18 January, 1547. He was the son of Bernardo Bembo, whose enthusiasm for Italian literature led him to raise a monument to Dante at Ravenna. His early education was received at Florence. He afterwards studied Greek under Lascaris at Messina and philosophy under Pomponazzi at Padua. After spending some time at the court of Ferrara, where he met Lucrezia Borgia, with whom he maintained a Platonic friendship for many years, he went in 1506 to Urbino, where he became the leading figure among the brilliant group of men of wit and culture gathered about the court. In 1512 he accompanied Medicis, to Rome, where a short time afterwards he was appointed secretary to Pope Leo X. He remained at Rome for eight years, enjoying the society of many distinguished men and loved and admired by all who knew him. There he became enamoured of the beautiful Morosina. It was at her urgent solicitation that Bembo, in 1520, on the death of Leo X, withdrew from public affairs and retired with his health impaired by severe sickness to Padua, where he lived in ease and elegance, devoting himself to literary pursuits and the society of his learned friends. Here he collected an extensive library and formed a rich museum of medals and antiquities. His Paduan retreat became the gathering-place of all the most cultured and most scholarly men in Italy. In 1529 he accepted the office of historiographer of the Republic of Venice, and shortly afterwards was appointed librarian of St. Mark's. In 1539 Pope Paul III recalled him to Rome and conferred on him the cardinal's hat. From the time of Bembo's ecclesiastical preferment there was a marked change in his conduct. Heretofore his life had been anything but edifying—in fact it had been more pagan than Christian. But now he renounced the study of the classics and applied himself chiefly to the study of the Fathers and the Holy Scriptures. Two years after he was appointed a cardinal, he set out for Gubbio, and still later he received the Bishopric of Bergamo. He died more admired and lamented than any man of letters of his time and was buried not far from Pope Leo in the Church of the Minerva.

Bembo was a thorough master of elegant diction. He possessed beyond any contemporary the formal perfection of style, both in Latin and Italian, demanded by the age in which he lived. In his Latin writings it was his aim to imitate as closely as possible the style of Cicero. His letters were masterpieces of Latin style and of the art of letter-writing. He is said to have passed his compositions through numerous portfolios, revising them in each one of them. Bembo's works include a history of Venice, poems, dialogues, criticisms, and letters. The most important are: "Rerum Venetiarum Libri XV" (1565); a history of Venice covering the period from 1487 to 1513, originally published in Latin, but afterwards translated by the author into Italian; "Gli Asolani" (Venice, 1585), a dialogue in Italian on Platonic love, composed in imitation of Cicero's Tusculan Disputations, and dedicated to Lucrezia Borgia; "Le Pensieri," a short treatise on the Italian language; "Le Rime" (Venice, 1580); "Carmina" (Venice, 1533), a collection of Latin poems; and several volumes of letters, written in Latin. Besides these original works he edited the Italian poems of Petrarch, printed by Aldus (1501), and the "Terre romane" of Dante (1502). His collected works were published at Venice in four volumes in 1729.

**Benadir, Prefecture Apostolic of, in Africa.** Lies between 8th and 12th N. lat. and between 51° and 51° 16' E. long. It comprises the whole territory of Italian Somaliland, the area of which is a little more than 192,800 square miles, or nearly twice that of Italy; and its boundaries are identical with those of the Italian possessions in East Africa, namely; on the east, the Indian Ocean; on the north, the Gulf of Aden from Cape Guardafui to the boundary of British Somaliland; on the west, the same British boundary as far south as the Juba River; and on the south, the course of that river from Lugh to the Indian Ocean. The longest dimension of the territory measures 776 miles, while the greatest width is 550 miles.

The commercial company which had been formed for the exploitation of St. Benadir (i.e. "The Ports") of the littoral region of Italian Somaliland devotes it to its own interest to call the Church to its aid, and asked for missionaries, to whom it assigned a subsidy of 10,000 lire (£2,000) per annum. Propaganda, by a decree of 21 January, 1904, entrusted the mission to the Discalced Trinitarians, for which order the Dispensation of captives is a special tradition, and the first prefect Apostolic, Father Leander of the Seven Dolours, embarked within the same year. However, the presence of a religious who would zealously watch the slave trade, and denounce infractions of the treaties, might become inconvenient; the governor, therefore, forbade Father Leander to enter his territory, and the prefect Apostolic, excluded from his mission, was obliged to take refuge in the British territory to the south. The governor's order was revoked, and in May, 1906, the missionary then entered upon his prefecture; but on the 10th of July, 1906, he died at Gelbi, nearly 250 miles from the coast. Towards the end of that year Father Guiglino da San Felice was sent as successor to Father Leander, taking with him the new mission. At the press of the writing (1907) too short a time has, of course, elapsd to permit of obtaining any information as to the actual progress of missionary work in Italian Somaliland.

The residence of the prefect Apostolic is at Brava, while the headquarters of the colonial government are at Mogadishu (Mogadocko, or Moksdu). The population of the whole territory is estimated at 3,000,000, almost all Mohammedans. Slavery is practised, and the efforts of the Anti-Slavery Society to suppress the slave trade, by representations to the Italian Government, have so far had no result.

**Edmund Burke.**

**Benadir, Prefecture Apostolic of, in Africa.** Lies between 8th and 12th N. lat. and between 51° and 51° 16' E. long. It comprises the whole territory of Italian Somaliland, the area of which is a little more than 192,800 square miles, or nearly twice that of Italy; and its boundaries are identical with those of the Italian possessions in East Africa, namely; on the east, the Indian Ocean; on the north, the Gulf of Aden from Cape Guardafui to the boundary of British Somaliland; on the west, the same British boundary as far south as the Juba River; and on the south, the course of that river from Lugh to the Indian Ocean. The longest dimension of the territory measures 776 miles, while the greatest width is 550 miles.

The commercial company which had been formed for the exploitation of St. Benadir (i.e. "The Ports") of the littoral region of Italian Somaliland devotes it to its own interest to call the Church to its aid, and asked for missionaries, to whom it assigned a subsidy of 10,000 lire (£2,000) per annum. Propaganda, by a decree of 21 January, 1904, entrusted the mission to the Discalced Trinitarians, for which order the Dispensation of captives is a special tradition, and the first prefect Apostolic, Father Leander of the Seven Dolours, embarked within the same year. However, the presence of a religious who would zealously watch the slave trade, and denounce infractions of the treaties, might become inconvenient; the governor, therefore, forbade Father Leander to enter his territory, and the prefect Apostolic, excluded from his mission, was obliged to take refuge in the British territory to the south. The governor's order was revoked, and in May, 1906, the missionary then entered upon his prefecture; but on the 10th of July, 1906, he died at Gelbi, nearly 250 miles from the coast. Towards the end of that year Father Guiglino da San Felice was sent as successor to Father Leander, taking with him the new mission. At the press of the writing (1907) too short a time has, of course, elapsd to permit of obtaining any information as to the actual progress of missionary work in Italian Somaliland.

The residence of the prefect Apostolic is at Brava, while the headquarters of the colonial government are at Mogadishu (Mogadoxo, or Moksdu). The population of the whole territory is estimated at 3,000,000, almost all Mohammedans. Slavery is practised, and the efforts of the Anti-Slavery Society to suppress the slave trade, by representations to the Italian Government, have so far had no result.

**Missions Catholique** (Propaganda, Rome, 1907), 355; *Statesman's Year Book* (London, 1907).
BENVADIS

ATT. AT HIS SUGGESTION the Congregation of 8.-M. was formed to see for France what that of St.-Vannes was for Lorraine. Records prove that in 1618 the project was warmly supported by Cardinal de Retz and others. Beaud's works include "Paradises", "De l'esprit des ordres religieux", "Instructions Monastiques", "L'édit de Bourbon", and "Police régulière", all published in Paris between 1616 and 1619.

G. CYPRIAN ALSTON.

BENVADIS (BENVADIS), FRAY ALONZO, Archbishop of Goa in the Portuguese Indies. Although a prelate of high rank, the life of Fray Alonzo de Benvedis is very imperfectly known. He was born on the Island of San Miguel, professed in the Franciscan convent of Mexico in 1603, and after acting as master of novices at the convent of Puebla, became Custos of the Missions of New Mexico, returned to Spain in 1630 and there was in communication with the Venerable Maria de Agreda. Upon his return to Mexico, he was made Archbishop of Mexico. He died in 1638. The date and place of his death are as yet unknown. Fray Alonzo de Benvedis was indefatigable in his efforts to promote the welfare, temporal and spiritual, of New Mexico. He was who, through the advice of the Holy Office of Peru, secured a greater enforcement of missionaries for the utterly neglected province. In order to excite interest in those remote regions, he wrote and published two booklets, full of exaggerations in regard to the number of Indians, but otherwise of the highest value for the ethnography and ethnology of New Mexico. They must be judged as "encouraging guides", embodying at the same time much accurate and valuable information gathered from personal knowledge. His account of the numbers of people and villages may have been influenced by data taken from Espinosa, but such mistakes do not affect the value of his writings in general. He published "Relación de los grandes Tesores espirituales y temporales descubiertos con el auxilio de Dios en el Nuevo Mexico", in 1630, and is best known through the "Memorial que Fray Juan de Santander de la orden de San Francisco d'ece presenta á la Majestad Católica del Rey" (Madrid, 1630; translated into various languages and republished).

AD. P. BANDZELLER.

BENDIA, a titular see of Albania. Its history is closely connected with that of the See of Narenta and Mostar. Narenta, or in Italian Narona, represents the ancient Chelium, or Chumlia, and its bishop, a suffragan of Dyrrhachium (Durazzo), took the title of episcopus Stephananas, or Stephanianaes, the cathedral being dedicated to St. Stephen; this is the title of Coernum, the name under which it was called in 579. But as these bishops resided at Spalato, the title shortly became Spalatensis. About the middle of the fourteenth century, Narenta became a bishopric, to which was united the See of Benda, the chief town in a district of this name, near Coria. It is still a part of the Diocese of Scutari. Its bishop held the title of episcopus Bendienae et Stephanianaes; to which, about 1400, was added the title Prizanens, or Prizenesans, from Prizan, or Priani, probably identical with the village Press, or Presa, in Albania. It also bore the title of episcopus Bendienae, the first by only one titular; Gama separates them wrongly (Series episcop., 422). The first titular was not, as is commonly said, the Dominican Petrus de Anagnia, but Demetrius, probably identical with the Franciscan Demetrius de Scutari who is mentioned in the Bullar, Franciscan. (VI, n. 662). From the seventeenth century the see became a deanery, probably because the bishops gave up their residence to Mostar, on the left bank of the River Narenta, a see known as Mand mosaic or Dumneanens.

Benedetti, Pietro. See AMBRAZCH, PETER.

Benedict I, Popes. — Of the first Pontiff who bore the name of Benedict practically nothing is known. The date of his birth is unknown; he d. 30 July, 579. He was a Roman and the son of Benedict, called Bonosus by the Greeks (Evagrius, Hist., V, 16). The ravages of the Lombards rendered it very difficult to communicate with the emperor at Constantinople, who claimed the privilege of confirming the election of the popes. Hence there was a vacancy of nearly eleven months between the death of John III and the arrival of the imperial confirmation of Benedict's election, 2 June, 575. He reigned four years, one month, and twenty-eight days. Almost the last act recorded of him was his synod at Rome, the Massa Veneris, in the territory of Minturnae, to Abbot Stephen of St. Mark's "near the walls of Spoletio" (St. Gregory I, Ep. ix, 87, l. al. 30). Famine followed the devastations Lombards, and from the few words the Liber Pontificalis has about Benedict we gather that he died in the midst of his people to cope with these difficulties. He was buried in the vestibule of the sacristy of the old basilica of St. Peter. In an ordinance which he held in December, he made fifteen priests and three deacons, and consecrated twenty-one bishops.

Benedict II, Saint, Pope, date of birth unknown; d. 8 May, 685; was a Roman, and the son of John. When young was sent to the schola cantorum, he distinguished himself by his knowledge of the Scriptures and by his singing, and as a priest was remarkable for his humility, love of the poor, and generosity. He became pope 26 June, 684, after an interval of over eleven months. To abridge the vacancies of the Holy See which followed the deaths of the popes, he obtained from the Emperor Constantine Pogonatus a decree which either abolished imperial confirmations altogether or made them obtainable from the exarch in Italy (cf. "Liber Dionissius R.R. PP.", ed. Sicken (Vienna, 1889), and Duchesne's criticism, "Le Liber Dionissius" (Paris, 1891)). He added Constantine's two obsequies, by which his body was changed by the legates to the care of the poor, and its lay sanctification all benefited by his liberality. He was buried in St. Peter's.

Benedict III, Pope, date of birth unknown; d. 17 April, 855. The election of the learned and ascetic Roman, Benedict, the son of Peter, was a troubled one. On the death of Leo IV (17 July, 855) Benedict was chosen to succeed him, and envos were despatched to secure the ratification of the legates; the business was twice attempted by Bari and Louis II. But the legates betrayed their trust and allowed themselves to be influenced in favour of the ambitious and excommunicated Cardinal Anastasius. The imperial envoys, gained over in turn by them, endeavoured to force Anastasius on the Roman
Church. Benedict was insulted and imprisoned. Most of the clergy and people, however, remained true to him, and the missae had to yield. Benedict was accordingly consecrated on the 29th of September, or 6th of October, 855; and though his rival was chosen by synod, he admitted him to lay communion. Owing to dissensions and attacks from without, the kingdom of the Franks was in disorder, and the Church within its borders was oppressed. Benedict wrote to the Frankish bishops, attributing much of the misery in the empire to their inability to lead the people (Cfr. "Benedictus, Rerum Francorum", Boretius, II, 424); and to lessen its internal evils endeavoured to curb the powerful subdeacon Hubert (Ep. Bened., in Mon. Germ. Epp., V, 612), who was the brother-in-law of Lothaire II, King of Lorraine, and defied the laws of God and man till he was slain, in 864. In an appeal made to Benedict from the East, he held the balance fair between St. Ignatius, Patriarch of Constantinople, and Gregory, Bishop of Syracuse. He was visited by the Anglo-Saxon King Ethelwulf with his famous son Alfred, and completed the restoration of the Schola Angelorum, destroyed by fire in 847. He continued the work of repairing the damage done to the churches in the kingdom by the Saracen raids of 846. He was buried near the principal gate of the city of Canterbury; and when there was no Pope Joan between Leo IV and himself [Garampi, "De nummo argenteo Bened. III" (Rome, 1749)].

Benedict IV, Pope, date of birth unknown; d. in the summer of 903. The Popes Benedict from the fourth to the ninth inclusive belong to the darkest period of papal history. The reigns of several of them were very short, and very little is known about their deeds. The dates of their accession to the See of Peter and of their deaths are largely uncertain. Benedict IV, a Roman, was elected in 901. Mammalus, became pope in the first half of 900. His high birth, his generosity, his zeal for the public good are loudly commended by the contemporary historian Frodoard, who gives him the title of "Great". The principal historic act of his reign was his crowning Louis the Blind as emperor. He supported the decision of Pope Formosus, who had ordained him priest, in favour of Armigum's claim to the See of Langres (Jaffé, "Regesta", 3527, 3528), unseated Stephen V, Bishop of Narbonne (Auxilius ap. Dümmler, "Auxilii und Vulgulii", 96 sqq.), excommunicated the assassin of Fulko, Archbishop of Reims (Frodoard, Hist. Remensis, IV, 10), and offered practical sympathy to Malaecenus, Bishop of Amiens, who had been driven from his see by the advances of the Saracens (Jaffé, loc. cit., 3530). Fulda and other monasteries received privileges from him. He was buried in front of St. Peter's near the gate of Guido.

Benedict V, Pope, date of birth unknown; d. 4 July, 965; was elected pope (May, 964) in very critical circumstances. The powerful emperor, Otho I, had forcibly deposed the unworthy John XII, and had replaced him by a nominee of his own who took the title of Leo VIII. But at the first opportunity of the emperor's absence, he was expelled, and on the 14th of May, 964, was deposed, and the pope elected the Cardinal-Deacon Benedict (known from his learning as Grammaticus—see Benedict of Soracte, xxxvii). Otho was furious, marched on Rome, seized Benedict, and put an end to his pontificate (23 Dec., 964, Hist. Otton., Thietmar, Chron., II, 18). It is more probable that Benedict was degraded by force than that he voluntarily declared himself an intruder. After reinstating Leo, Otho left Rome and carried Benedict with him to Germany. Placed in the care of Adalric, Archbishop of Hamburg-Bremen, who treated him with great consideration, he was even then acknowledged as pope by some of the German clergy. His remains, first laid to rest in the cathedral at Hamburg, were afterwards translated to Rome (Adam of Bremen, Gesta, II, 10; IV, 39, 40; VI, 53).

Benedict VI, Pope, date of birth unknown; d. August, 974 (see Ricobaldi of Ferrara, Compil. Chron., in Reg. Ital. SS. IX). Benedict, Cardinal-Deacon of St. Theodore, a Roman and the son of Hildebrand, was elected as the successor of John XIII, who died 6 September, 972; but the necessity of an acceptation from the emperor (Otto delayed his consecration till 19 January, 973. Nothing is known of his deeds, except that he confirmed the privileges of some churches and monasteries. The most striking event of his pontificate is its tragic close. He was seized and thrown into the Castle of Sant' Angelo by a faction of the nobility headed by Crescentius and the Deacon Boniface Franco, who afterwards became the antipope Boniface VII. There, after a confinement of less than two months, he was strangled by their orders, to prevent his release by Sico, an imperial envoy, sent to Rome by Otho II.

Benedict VII, Pope, date of birth unknown; d. c. October, 993. Acting under the influence of Sico and Berengar of Tours, Otho II elected to succeed Benedict VI and elected Benedict, Bishop of Sutri, a Roman and the son of David (October, 974). His authority was opposed by Boniface VII, and, though the antipope himself was forced to fly, his party followed fiercely in his footsteps and compelled Benedict to call upon Otho II for help. Firmly established on his throne by the emperor, he showed himself both desirous of checking the tide of simony which was rising high in the Church, and of advancing the cause of monasticism. In 975, an edict was published in connection with the anti-papal revolt which he had been called on to suppress. In 976, Benedict and the emperors; Henry II and Henry III, assembled at Tours in order to, as was the custom, renew the old, treat with the bishops and reach the agreement as to the future conduct of ecclesiastical business. This assembly was the first of the kind that the papacy had called in their own behalf. Benedict saw the need of a council in order to enforce the authority of the papacy. He was succeeded by Benedict VIII, elected by the councils of Rome (974); but his pontificate was short, and he had to resign his office to the Council of Worms (975). Benedict VIII was one of the many popes who were called upon
w intervies in the interminable strife for precedence between the Patriarchs of Grado and of Aquileia (Dandolo, Chron., IX, 2, n. 2). In 1022 he received the benefice of Canterbury "with great worship and very honourably hallowed him archbishop," and sat at his position Leofwine, Abbot of Ely (Benedict, De ordinibus St. Odilo, Abbot of Cluny, and one of the few popes of the Middle Ages who was at once powerful at home and great abroad, Benedict VIII has, on seemingly insufficient grounds, been accused of avarice.

Benedict IX, Pope.—The nephew of his two immediate predecessors, Benedict VIII was not only very different character to either of them. He was a disgrace to the Chair of Peter. Regarding it as a sort of hereditum, his father Alberic placed him upon it when he was mere youth, not, however, apparently of only twelve years of age (according to Raoul Glaber, Hist., IV, 5, n. 17. Cf. V, 5, n. 26), but of about twenty (October, 1032). Of his pontificate actius life is known, except that he held two or three synods in Rome and granted a number of privileges to various clerics and laymen. In the latter years of his pontificate, the important assignment was leading, one of the factions in the city drove him from it (1044) amid the greatest disorder, and elected an antipope (Sylvester III) in the person of John, Bishop of Sabina (1046—Ann. Romani, init. Victor, Dialogi, III, init.). Benedict, however, succeeded in expelling Sylvester the same year; but, as some say, that he might marry, he resigned his office into the hands of the Archpriest John Gratian for a large sum. John was then elected pope and became Gregory VI (May, 1045). Repea

In the intervention of King Henry III. Benedict, Sylvester, and Gregory were deposed at the Council of Sutri (1046) and a German bishop (Suidger) became Pope Clement II. After his speedy demise, Benedict again seized Rome (November, 1047), but was driven from it to make way for a second German pope, Damasus II (November, 1048). Of the end of Benedict it is impossible to speak with certainty. Some authors suppose him to have been imprisoned and then beheaded. His body was later exhumed, and the exhumation is considered an important act of the Holy See, as legate a latere to labour for the restora

The principal event of his pontificate was the restoration of peace with the French court. Immediately after his election Philip sent three ambassadors to the pope bearing the royal letter of congratulation. The king, while professing his obedience, continued to play tricks, and Benedict, according to the will of the pope the King and Church of France. Benedict, judging the policy of indulgence to be necessary for the restora

The Colonna cardinals were also absolved from their censures, but not reinstated in their former dignities. This policy of leniency Benedict carried out without compromising the dignity of the Holy See or the memory of Boniface VIII. Nogaret and Sciarr Colonna and those implicated in the outrage of Anagni were declared excommunicated and summoned to appear before the pontifical tribunal. After a brief pontificate of eight months, Benedict died suddenly at Perugia. It was suspected, not altogether without reason, that his sudden death was caused by poisoning through the agency of William of Nogaret. Benedict XI was beati

Benedict XII, Pope (Nicholas Boccazini), was born at Treviso, Italy, 1240; d. at Perugia, 7 July, 1304. He entered the Dominican Order at the age of fourteen. After fourteen years of study, he became lector of theology, which office he filled for several years. In 1296 he was elected Master General of the Order of Preachers. When Boniface VIII was becoming more pronounced, the new general issued an ordinance

The arms of Benedict XI remain unaltered to the end, as was recognized by Boniface, who showed him many marks of favour and confidence. Thus with the two cardinal-legates, the Holy See as legate a latere to labour for the restoration of peace with the French court. Immediately after his election Philip sent three ambassadors to the pope bearing the royal letter of congratulation. The king, while professing his obedience, continued to play tricks, and Benedict, according to the will of the pope the King and Church of France. Benedict, judging the policy of indulgence to be necessary for the restora

The Colonna cardinals were also absolved from their censures, but not reinstated in their former dignities. This policy of leniency Benedict carried out without compromising the dignity of the Holy See or the memory of Boniface VIII. Nogaret and Sciarr Colonna and those implicated in the outrage of Anagni were declared excommunicated and summoned to appear before the pontifical tribunal. After a brief pontificate of eight months, Benedict died suddenly at Perugia. It was suspected, not altogether without reason, that his sudden death was caused by poisoning through the agency of William of Nogaret. Benedict XI was beatified in the year 1773. His feast is celebrated at Rome and throughout the Catholic Church on the 7th of July. He is the author of a volume of sermons and commentaries on a part of the Gospel of St. Matthew, on the Psalms, the Book of Job, and the Apocalypse.

HORACE K. MANN.
John Bussian Archbishop of Arles in deference to the insistence of the cardinals; he compelled his only niece to discourage noble suitors and marry one of her humble rank. A legend, vouched for by Regulus of Viterbo (d. 1352), accredits him with saying, "a pope should be like Melchisedech. without barbers, mother, or gender. God particularly engaged his seal. Himself a Cistercian, he sought to revive pristine monastic fervor and devotion to study. Pertinent papal constitutions and visitations of monasteries attest his solicitude for a monastic renaissance.

Being a learned theologian, he was as bishop, cardinal, and pope, keenly interested in scholastic discussions. He terminated the controversy on the vexed question as to whether the Beatific Vision was enjoyed before or only after the General Judgment. John XXII had advocated the latter view and stirred up vigorous discussion. Eager to solve the question, Benedict heard the opinions of those maintaining the theory of deferred vision, and, with a commission of theologians, gave four months to patristic research. The Bishop of Aosta, the Bishop of Pavia, and the Bishop of Perugia were among those who prepared the two volumes of Bull "Benedictus Deus" defining the immediate intuitive vision of God by the souls of the just having no faults to expiate. Zealous too for the preservation of the Church in times of trial, he strenuously labored to vigilance in the repression of heresy and urged the use of the preventive remedies of the Inquisition. He combatted energetically the anti-papal doctrines which the ecclesiasticato-political theorists of the disordered Avignon period had spread, and which were unfortunately sustained by a school of misguided Franciscans. (See FRATICELLI, MAR SILLUS OF PATUA, WILLIAM OF OCM; MICHAEL OF CEBILE.)

Dissatisfied with schism in Ireland, he tried to persuade Edward III to establish the Inquisition in Ireland and urged him to assist the Irish bishops to extirpate heresy. But, though the most ardent foe of heresy, Benedict was remarkably patient and loving in dealing with heretics. He looked also to the interests of the Faith in the East; negotiated for the union of the Eastern Church with Rome through a delegate of the Emperor Andronicus, whose sincerity, however, Benedict was forced to question; manifested his solicitude for the Church in Armenia which, in the early fourteenth century, suffered from Mohammedan invasions; succumbed to illness, he propounded as a compromise a transfer of his court to Bologna. The cardinals urged the slender hope of securing obedience, and Benedict decided to remain at Avignon, where in 1339 he commenced to build the massive papal castle which still exists. Mindful always of distracted Italy, he often sent money to succour the famine-stricken people and to restore churches. Reform of abuse was Benedict's chief concern. Immediately after his elevation he remanded to their benefices clerics not needed at Avignon, and menaced with summary punishment mutineers of the law of residence. He revoked the scandalous "expectancies" granted by his predecessors and forbade conferring benefices in commendam. (See COMMENTATORY ABBOT.) He condemned unseemly "pluralities" and conferred benefices with such conscientious discrimination that several were left long vacant, and so gave colour to the calumny that he was himself harvesting their revenues. He inveighed vigorously against greed for gain among ecclesiastics; regulated the prices of documents. Wholly opposed by papal bureaux; made episcopal visitation less of a financial burden to the clergy; abolished the practice of countersigning requests for papal favours, which was extremely lucrative to venal officials; and established the Registry of Supplications for the conduct of abuse. Adhering to composition, he granted preference to but one relative, naming the eminent

ARM OF BENEDICT XII.

Benedict XII (Jacques Fournier), third of the Avignon popes, b. at Sauve in the province of Toulouse, France, elected 20 December, 1334; d. at Avignon 24 April, 1342. Nothing is known of his parentage or boyhood. In youth he became a Cistercian monk in the monastery of Boulbonne, whence he moved to that of Fontfroide, whose abbot was his natural uncle, Arnold Novelli, by whose name Fournier was also known. He studied at the University of Paris, where he received the doctorate in theology. Meanwhile he was made Abbot of Fontfroide, succeeding his uncle who was created cardinal 19 December, 1310. In December 1317, he consecrated the Bishop of the native Diocese of Palamiers, was translated to Mirepoix 26 January, 1327, and was made cardinal by Pope John XXII, 18 December, 1327. On the latter's death, 4 December, 1334, the cardinals in medias res, abdicated a papacy which, in 1329, he proposed to restore to Rome, demanded of Cardinal de Comminges whose election seemed assured, the promise to remain at Avignon. His refusal precipitated an unexpected canvass for candidates. On the first ballot, 20 December, 1334, many electors, intending to sound the mind of the conclave, voted for the unlikely Cardinal Fournier, who, though he was one of the few men of real merit in the college, was but lightly regarded because of his obscure origin and lack of wealth and following. He amassed the conclave by receiving the necessary two-thirds vote. On 8 January, 1335, he was enthroned as Benedict XII.

Resolved to re-establish the papacy at Rome, Benedict signalized his accession by providing for the restoration of St. Peter's basilica and the Lateran. He was prepared to acquiesce in the petition of a Roman deputation soliciting his return, but his cardinals pictured the impossibility of living in faction-rid Italy. They were right, whatever were their motives, and Benedict yielded. Conscience-stricken during a crisis, he propounded as a compromise a transfer of his court to Bologna. The cardinals urged the slender hope of securing obedience, and Benedict decided to remain at Avignon, where in 1339 he commenced to build the massive papal castle which still exists. Mindful always of distracted Italy, he often sent money to succour the famine-stricken people and to restore churches. Reform of abuse was Benedict's chief concern. Immediately after his elevation he remanded to their benefices clerics not needed at Avignon, and menaced with summary punishment mutineers of the law of residence. He revoked the scandalous "expectancies" granted by his predecessors and forbade conferring benefices in commendam. (See COMMENTATORY ABBOT.) He condemned unseemly "pluralities" and conferred benefices with such conscientious discrimination that several were left long vacant, and so gave colour to the calumny that he was himself harvesting their revenues. He inveighed vigorously against greed for gain among ecclesiastics; regulated the prices of documents. Wholly opposed by papal bureaux; made episcopal visitation less of a financial burden to the clergy; abolished the practice of countersigning requests for papal favours, which was extremely lucrative to venal officials; and established the Registry of Supplications for the conduct of abuse. Adhering to composition, he granted preference to but one relative, naming the eminent

[The rest of the text is not provided.]
impossible to absolve Louis. The latter, as Benedict feared, allied himself with Edward III of England against France. In vain the pope tried to aver war, for the know of the kings and their allies. His good offices were strained in vain; he was humiliated by Philip's later alliance with Louis, who had also allied to himself the pope's political and ecclesiastical enemies, and by the emperor's denial of the pope's authority over him, and, worst insult of all, by his usurpation of the nuptial joy of his nieces. He was induced to the nullity of the marriage of John Henry of Bohemia and Margaret Maultasch, that the latter might marry his son, Louis of Brandenburg. The French king hindered Benedict's projected crusade against the infidels, making the war with England an excuse to forego his promise to lead the armies, and even diverting the money subscribed for it to financing his own wars, despite the protests of the conscientious pope. Benedict's crusading ardour found solace in Spain, where he encouraged the campaign against the Mohammedans who in 1339 invaded the peninsula.

Benedict XII has not escaped calumny. Reform, foe of heresy, builder of the Avignon papal palace, unwilling ally of France and enemy of Germany, he made many enemies whose misrepresentation of his character was intense. Much harm was done to his memory by the satires of Petrarch, who, though befriended and honoured by Benedict, yet bitterly resented his failure to return to Rome. His natural obsequiousness, too, stimulated caricature and undeserved criticism. But history offers a vindication and testifies that, though defeated in coping successfully with the political difficulties to which he fell heir, his piety, virtue, and peaceful spirit, his justice, rectitude, and firmness in ruling, his zeal for ecclesiastical and temporal reform, and his integrity of character were above reproach.

Benedict XIII, Pope (PIETRO FRANCESCO ORSINI), b. 2 February, 1649; d. 23 February, 1730. Being a son of Ferdinando Orsini and Giovanna Frangipani of Tolpath, he belonged to the archducal family Orsini-Gravina. Enlisted at Rome, he exhibited a decided liking for the Order of St. Dominic, and at the age of sixteen during a visit to Venice he entered the Dominican novitiate against the will of his parents, though he was the eldest son and heir to the title and estates of his childless uncle, the Duke of Bracciano. Their appeal to Clement IX was fruitless; the pope not only approved the purpose of the young novice, but even shortened his novitiate by half in order to free him from the importunities of his relatives. As student and novice, the young prince was a model of humility and zeal, and devoted himself to the acquisition of ecclesiastical learning. At the age of twenty-one he was promoted to a professorship. On 22 February, 1672, he was elected to the cardinals' college and made his relator to Clement X. He protested strenuously against this honour, but was compelled to accept it under the vow of obedience by the General of the Dominicans, at the instance of the pope. As cardinal he adhered strictly to the observance of the rule of his order, and never laid aside its habit. In 1675 having the choice between the Archbishopric of Salerno and that of Manfredonia (Siponto) he chose the latter with a desire to resume the exercise of pastoral zeal. His virtuous life not only overcame the opposition made by his relatives when he became a monk, but exercised such a salutary influence that in time his mother, his sister, and two of his nieces emulated him. In the religious life of the Order of St. Dominic. During the conclave that followed the death of Clement X (1676), he was one of the band of cardinals known as the selanti who had agreed that no considerations of worldly prudence should affect the election of a successor. In the government of his diocese, Cardinal Orsini was unremitting in his labours and zeal. He visited even the most remote hamlets and was not less watchful over temporal than over spiritual things. He provided for the needs of the people, repaired churches and held a diocesan synod, the decrees of which he published. In 1680, when Innocent XI transferred him to Cesena, he left to the people of Siponto a memorial of his apostolic activity in a pastoral letter on the rules of Christian life which had always interested him at Cesena. It was full of modesty, and activity, his devotion to the poor and his constant preaching brought about a thoroughgoing reformation among both clergy and people. Seeing on his frequent journeys the condition of the churches in even the poorest parishes, he neglected none and by the promulgation of strict rules, he abolished all known abuses.

In 1686, a serious illness, attributed by his physicians to the climate, caused his transfer to Benevento, where he remained for thirty-eight years or until he was elected pope. During this long period he seldom left his diocese. Year by year he made an episcopal visitation to every parish. Whenever necessary, he built or renovated churches. He built hospitals and strove incessantly for the alleviation of the suffering of the poor. Twice during his episcopate (5 June, 1688, and 14 March, 1702) Benevento was visited by earthquakes and on these occasions his courage, his active charity in behalf of the stricken inhabitants, and his energy in the reconstruction of the city, won for him the title of the "Second Founder" of Benevento. He held two provincial synods, the first in 1693 attended by eighteen bishops, the second in 1698, with an attendance of twenty, the acts of which were approved by Clement XI. His contemporaries agree that his administration is that his simplicity and child-like confidence exposed him to the wiles of some unscrupulous persons who abused his confidence.

Cardinal Orsini had already taken part in four conclaves, when Innocent XIII died in March, 1724; and in all he had acted in the spirit of the selanti. The conclave at which he was himself chosen assembled on 20 March; two months afterwards (25 May) no choice had been made. This long delay weighed heavily on the soul of Orsini, who commenced a novena of prayers to his patron, St. Philip Neri, that the election of a new pope might be no longer delayed. Before the novena was finished he saw with terror that he himself would be chosen, and, reluctant to accept a position which filled him with dread, he sought by all means in his power to prevent his election. Against his oft repeated protestations he was chosen 29 May, 1724, and even after the final vote was taken he refused to yield, arguing that this age, his physical weakness, his incapacity, and a resolution which he had made to the pope, should exempt him from such a grave responsibility. He yielded only when it was made clear to him that grave dangers were to be feared if the conclave should be reopened. So with tears, and
obeying the command of the general of his order, he allowed himself to be proclaimed pope. In honour of Benedict XI, a member of the Dominican Order, he took the name of Benedict XIV, which he shortly changed to Benedict XIII as Peter de Luna who had previously borne the name (1384–1423) was a scoundrel.

His first concern as pope was to enforce rigidly ecclesiastical discipline. He issued several decrees on ecclesiastical dress and was unceasing in his efforts to annull any semblance of luxury or worldly pomp among the cardinals. During the Jubilee of 1722 he discharged personally the duties of Grand Penitentiary, and is said to have seriously considered the revival of public penances for certain grave offences. In order to encourage the foundation of diocesan seminaries, he organized a special commission (Congregatio Seminariorum). At a provincial, Roman Lateran synod held in 1725, he required an unqualified acceptance of the Bull "Unigenitus" and through his efforts Cardinal de Noailles, Archbishop of Paris, was led to accept it in 1728. During Benedict's pontificate, the bishopric of Benevento which he administered by a vicar-general and which he twice visited (1727, 1729).

In diplomatic matters and in his relations with foreign powers Benedict did not exhibit the vigour and energy which marked him as administrator in religious matters. His love of peace led him to attempt a settlement of the dispute in regard to the ecclesiastical privileges of the Kings of Naples (Monarchia Sicula) by a revocation of the constitution of Clement XI (1715) and by granting to the King of Naples (and Sicily) and his successors the right to appoint a spiritual judge in ecclesiastical affairs, reserving, however, the most important cases to the Holy See. The quarrel with Victor Amadeus of Savoy was compounded by giving to the right of patronage over the churches and monasteries in his dominions, without, however, conceding any claim to the incomes from vacant benefices. Towards John V, King of Portugal, the pope exhibited extraordinary firmness in refusing a claim based on the privilege held by other courts to propose candidates for the cardinalate. This was in consequence of the protests made by the cardinals against the elevation of Vincenzo Bichi, Nuncio to Lisbon. In retaliation John recalled all Portuguese residents in Rome, forbade all communication with the Roman Curia, and attempted to prevent the sending of the customary alms from Portugal to Rome; he also interfered with applications for dispensations from matrimonial impediments. At many courts of Europe grave offence was taken by the extension (1728) to the Universal Church of the Office of Gregory VII containing an account of the excommunication and deposition of Henry IV, which to Gallicans and Protestants seemed offensive.

Although full justice can scarcely be done to the virtuous life and the fatherly zeal for the interests of religion of Benedict, his pontificate lost much of its lustre because of his misplaced confidence in Cardinal Nicolò Coessa, who had been his coadjutor at Benevento. The pope was ignorant of the peculations and venality of his favourite, whose greed did much to diminish the prestige of the Holy See, and against whom a popular uprising took place on the pope's death, resulting in a ten years' imprisonment for the cardinal. Many of his official writings were published in three volumes (Ravenna, 1728).

Benedict XIV (Prospero Lorenzo Lambertini), b. at Bologna 31 March, 1675; d. 3 May, 1758. His early education was received from tutors. At the age of thirteen he went to the Collegium Clementinum in Rome where he studied rhetoric, philosophy, and theology. The title nobili was given him by a favourite author, but the bent of his own mind was towards historical and legal studies in which latter he excelled, as well in civil as in ecclesiastical law. In 1694, though only nineteen, he received the degree of Doctor of Theology and Doctor Virtutum Juris (canon and civil law). On the death of Innocent XII he was made consistorial advocate by Clement XI, and shortly afterwards Consultor of the Holy Office. In 1708 he was appointed Promoter of the Faith; in 1712 canon law; in 1714 promotor of the Congregation of Rites; in 1713 he was named domestic prelate; in 1718 secretary of the Congregation of the Council; and in 1725 titular Bishop of Theodosia. He was made Bishop of Ancona in 1727 and cardinal 30 April, 1728. He was transferred to the Arch-bishopric of Bologna in April, 1731, in succession to Lorenzo Corsini who had become pope as Clement XII.

Benedict XIV is best known to history as a student, a scholar. Though by no means a genius, his enormous application coupled with more than ordinary cleverness of mind made him one of the most erudite men of his time and gave him the distinction of being perhaps the greatest scholar among the popes. His character was many-sided, and his range of interests large. His devotion to science and the serious investigation of historical problems did not interfere with his purely literary studies. "I have been reproached," he once said, "because of my familiarity with Tasso and Dante and Ariosto, but it seems to me a necessity to give energy to my thought and life to my style." This devotion to the arts and sciences brought Lambertini throughout his whole life into close and friendly contact with the most famous authors and scholars of his time. Montesquieu, whom he knew in Rome, said of him: "Young as he is, he has two souls: one for science, the other for society." This last characterization did not interfere with his restless activity in any of the many important positions which he was called on to fill, nor did it diminish his marvellous capacity for the most arduous work.

The zeal and energy which Lambertini carried to this office infused new life into all his subjects. He himself explained his assiduity by saying that he looked on the episcopate not as an honour, but as an opportunity to do good. His administration was exemplary: he visited all parts of his diocese, held synods, incited the people to piety by word and example, and supervised the affairs of his diocese so thoroughly that nothing needing change or correction escaped him. His humility did much to give impetus and strength to his clergy, and his broad firm grasp of public affairs and public questions gave him a position of unique influence among rulers and people. In his opinion the foundation of success in episcopal administration was through harmony between bishop and clergy, and this he succeeded in obtaining.

**Benedict XIV**

**Arms of Benedict XIV**
cause of his wonderful gifts and his extraordinary success as Bishop of Ancona, Pope Benedict XIII wished to transfer him to some other place of greater responsibility affording a wider field for the display of his powers and activity, but he replied in his usual jocose vein that no change of place could make him any other than he was, cheerful, joyous, and the friend of the pope. When he was transferred to Bologna in 1731 his energies and activities seemed to redouble. He became all things to all men and is said to have never allowed anyone to leave his presence disgruntled or in anger, and without being strengthened and refreshed by his wisdom, advice, or admonitions. His efforts were largely directed to the augmentation of ecclesiastical revenues from a new curriculum in which special stress was laid on the study of Sacred Scripture and patrology. When Clement XII died (6 February, 1740) the fame of Lamberti was at its highest. Through intrigue of various kinds the conclave which commenced on 17 February lasted for six months. It was composed of fifty-four cardinals of whom forty-six were Italians, three French, four Spanish, and one German. These were split into several parties. One was composed of those who had been appointed by Clement XI, Innocent XIII, and Benedict XIII; another of those appointed by Clement XII who were known as the new college. The long, tedious session and the intense heat did not improve the temper of the cardinals; after six months of fruitless effort and constant intrigue, the election seemed no nearer than in the beginning. Various expedients were suggested, such as the withdrawal of the names of the leading candidates and the suspension of all others, but without avail. After several plans had been tried to end the deadlock, Lamberti, whose name had been proposed as a compromise, addressed the conclave, saying: ‘If you wish to elect a saint, choose Gotti: a statesman, Aldobrandini; an honest man, elect me.’ These words spoken as much perhaps in jest as in earnest helped to end the difficulty. Lamberti was chosen and took the name of Benedict XIV in honour of his friend and patron Benedict XIII. As pope, Lamberti was no less energetic, brave, and unassuming than before his election. His great learning placed him in a position to deal successfully with ecclesiastical situations that needed reform and, the broad Christian spirit which animated his dealings with foreign powers removed the pressure and hostility of Protestant courts and rulers. He was undoubtedly liberal in his political dealings, though he never lost sight of the essential interests of the Church and religion.

PUBLIC POLICY.—To go to the extreme limit of concession and conciliation seems to have been the principle that dominated all Benedict’s actions in greater negotiations with governments and rulers, so much so, indeed, that he has not escaped criticism from those within the Church as being too prone to settle difficulties by making concessions or compromises. However his actions may be judged, and whatever may be thought of his motives, it cannot be denied that he aimed constantly at peace and that the causes of friction of great importance of his administration. Moreover, in estimating the value and effect of his concessions, it is clear that in nearly every case he strengthened the moral influence of the papacy even though some rights of patronage or other material interests were abandoned. Nor was their influence less potent among Protestant than Catholic rulers; the universal esteem in which he was held throughout the world meant much in an epoch, the close of which was to witness the disruption of many time-honoured institutions, national and political as well as religious. An enumeration of his personal dealings with the heads of states will show that Benedict wisely abandoned, in most cases, the shadow of temporal authority to maintain the substance of spiritual supremacy.

The King of Portugal received the right of patronage over all the sees and abbeys in his kingdom (1740) and was further favoured with the title of Rex Fidelissimus (1748). In the matter of church revenues and the allotment of ecclesiastical benefices, permission was also granted to tax the clergy, and in 1753 the Government received the right of nomination to nearly all the Spanish benefices; in 1754 an agreement was ratified by which the American colonies were paid into the government treasury to carry on the war against the African pirates. The King of Sardinia received the title of Vicar of the Holy See which carried with it the right of nomination to all ecclesiastical benefices in his dominions and the income of the pontifical fiefs in lieu of which a yearly indemnity of one thousand ducats was to be paid. Through the mediation of the pope a tribunal was established in Naples consisting of an equal number of clerical and lay members presided over by an ecclesiastic, which formed the final court for the trial of ecclesiastical cases. As mediator between the Knights of Malta and the King of Naples the pope brought a long standing controversy to a happy termination. By the Encyclical ‘Ex omnibus christiani orbi’ (16 October, 1756), the bitter controversy regarding the question of admitting to the sacraments persons who would not accept the Bull ‘Unigenitus’ was brought to a close. While insisting on the authority of the ‘Unigenitus’ and pointing out that it was the duty of the faithful to accept it with veneration, the pope decreed that only those persons should be excluded from the sacraments whose opposition to the pontifical constitution was public and notorious, and who therefore should be regarded as public enemies. The title of King of Prussia, taken in 1701 by the Elector of Brandenburg, was recognized by Benedict against the vigorous opposition of many members of the Curia. He was referred to as the ‘sage par excellence’ by Maria Theresa, and received many encomiums from the sultan to whom he playfully referred in his writings as the ‘Good Turk’. At the close of his pontificate the only question of importance in the foreign relations of the Holy See which had not been successfully settled was that concerning the Patriarchate of Aquileia over which the Republic of Venice and the emperor claimed control. Benedict decided that the rights of the patriarchate should be divided between the Archbishopric of Görz, in Austria, and that of Udine in the Venetian States. This decision was regarded as unjust by Venice, which in retaliation decreed that any diocese not included in the Bull, Brief or Ordinance after the close of the 18th century should be promulgated within the jurisdiction of the Republic without the supervision and approval of the Government.

TEMPORAL AND SPIRITUAL RULER.—As temporal sovereign Benedict governed the States of the Church
with wisdom and moderation and introduced many reforms for the purpose of diminishing abuses and promoting the happiness and prosperity of the people. With no wish to relinquish what had been exhausted by the extravagance of some of his predecessors, especially that of Benedict XIII under the influence of Cardinal Cossa, and because of the enormous outlay for public buildings under Clement XII, he made no promotions to the Sacred College for four years. Measures were set on foot to reform the nobility, a new regional division of the city was introduced for the purpose of greater administrative efficiency, agriculture was fostered and enterprise was introduced into commerce, the methods of commerce was promoted, and luxury restrained, while the practice of usury, against which he published the Encyclical "Vix Pervenit" (1745), was almost entirely suppressed. (See Usury.)

Benedict abandoned none of the claims of his predecessors, but the liberal use of his powers had no other aim than the promotion of the arts of peace and industry. How serious the problem was is best seen from his own words: "The pope orders, the cardinals do not obey, and the people do as they please." He introduced a system of estates with a spiritual and temporal code, and the influence of Benedict left a lasting impress on the entire Church and its administration. His Bulls and Encyclicals, which have played such an important part in defining and clarifying obscure and difficult points of ecclesiastical law, were treated with respect, an expression of wisdom and scholarship. The vexed question of mixed marriages, unions between Catholics and Protestants, demanded settlement in consequence of the increasing frequency with which they occurred. Much of the bitterness of the Reformation time had passed away and Protestantism sought to have their marriages with Catholics solemnized with ceremonies equal to those when both parties were Catholics. Though the doctrine prevailed in Rome that the contracting parties were the real ministers of the Sacrament of Matrimony, no general unanimity prevailed among theologians on this point. Without derogating in the least from this theory, Benedict in reply to the questions from bishops in many places, especially in Holland and Poland, decried the Bull "Magnae nobis admirations" (29 June, 1748) that mixed marriages were allowable only under certain well-defined conditions, the principal of which was that children born of those marriages should be brought up in the Catholic Faith, but that such marriages, while tolerated, should never be performed with the ceremonies that imply formal ecclesiastical approval.

RELATIONS WITH EASTERN CHURCHES.—Under the skilful hand of Benedict a formal union was consummated with some of the Eastern Churches. The frequent attempts of the Greek Melchite Patriarch of Alexandria, Antioch, and Jerusalem to obtain recognition from the Holy See did not for a long time result in any definite union, because of dissatisfaction on the part of the popes with the formulation of the Oriental creeds. In 1744, Benedict XIV the pallium to Seraphin Tanae whom he acknowledged as Patriarch of the Greek Melchites of Antioch. The conflicts in the Maronite Church, after the deposition of Jacob II, which seriously threatened its unity were settled by a national council (1750), the decrees of which were approved by Benedict. On 15 March, 1751, he renewed the prohibitions of Clement XII against the Freemasons, and though very few governments regarded the suppression of this society as demanding decisive action on their part, laws were enacted by Spain and by the Holy See, and in 1773, the Senate of Milan. The controversy in regard to Chinese and Malabar customs, or the system of accommodation to heathenism which some missionaries had permitted their converts to practice, and by which it was said that pagan ideas and pagan practices had been grafted on Christianity, was terminated by Benedict XIV who issued two Bulls on the subject, and required the missionaries to take an oath that such abuses would not be tolerated in the future. The Bull "Ex quo singulari" in regard to the abuses in China, was published 11 July, 1742; that in regard to Malabar, "Omnium sollicitudinum", 12 September, 1744. (See CHINA, INDIA.) Because of the massacre in which church festivals had been multiplied, Benedict strove to diminish them. This he did in Spain in 1742, in Sicily and Tuscany in 1748, and later in Sardinia, Austria, and the Papal States. Such a restrictive policy was not well received by many, and the Emperor and Benedict silenced their reproaches by saying that fewer feasts observed in a more Christian manner would contribute more to the glory of religion.

LITURGICAL REFORMS.—In liturgical matters Benedict XIV was extremely conservative. He viewed with grief the profound changes which had been introduced into the Roman Calendar since the time of Pius V. The increase in the number of Feasts of Saints and the multiplication of offices with the rank of Duplex had superseded the old ferial and dominical offices, and his spiritual and religious reform was determined against the introduction of any new offices in the Breviary, a policy which he adhered to so strictly that the only change it underwent during his administration was that Leo the Great was removed from the Breviary. He was thus impressed was he with the necessity of a thorough revision of the Breviary which would eliminate those portions with which the critical sense of the eighteenth century found fault that he commissioned the Jesuit, Fabio Baussett, to prepare a report on the subject. This report, however, was not published in such a sweeping character that it is said to have caused Benedict to desist from his project. The plan of reforming the Roman Martyrology was, however, carried to a successful issue, and a new edition was published by his authority in Rome in 1747. The same is true of the "Ceremoniale Episcoporum", which Benedict XIII undertook to reform and which Benedict XIV published (1752) in the usual form. The classical work of Benedict on liturgical matters is his "De Servorum Dei Beatificatione et de Beatissimorum Canonizazione" which still regulates the process of beatification and canonization. Other important liturgical writings of Benedict deal with the sacrifice of the Mass and the feasts of Our Lord, the Holy Virgin, and some of his saints. Benedict published numerous works on the rites of the Greeks and Orientals; Bulls and Briefs on the celebration of the octave of the Holy Apostles, against the use of superstitious images, on the blessing of the pallium, against profane music in churches, on the golden rose, etc.

In order that the clergy should not be deficient in ecclesiastical and historical science, and that they might not lack opportunity to profit by the intellectual progress of the period, he founded at Rome four academies for the study of Biblical antiques, Christian antiquities, the history of the Church and the councils, and the history of canon law and liturgy. He also established a Christian museum, and commissioned Joseph Assemani to prepare a catalogue of the manuscripts in the Vatican Library containing 3,300 MSS. of unique value and importance. He founded chairs of chemistry and mathematics in the Roman university known as the Sapienza, and many others for painting, sculpture, etc., at other schools, and in 1773, he exercised the closest supervision; he also found time to carry out many schemes for the building and adornment of churches in Rome. The fact that Benedict never raised a Jesuit to the cardinalate is attributed
to his hostility to the Society; on the other hand, it must be noted that it was to a Jesuit, Emmanuel Azevedo, that he committed the complete edition of his works (1747-51). He had been long urged by his friends Cardinals Passionei and Archinto to order a thorough reformation of that body, but it was not until the last year of his life that any decisive action was taken. On 1 April, 1768, he issued a Brief by which Cardinal Saldanha was commissioned to inspect all the colleges and houses of the Society in Portugal, and to undertake a reform of the same, but this authority was withdrawn by his successor, Clement XIII.

Benedict XIV sought recreation in the society of learned men and artists, among whom he shone as a wit and a scholar. Gay, lively, and talkative, his conversation at times amazed, if it did not shock, the saintly sensibilities of some of the dignified courtiers who came in contact with him. Mild and gracious in continue to be pope and I shall be ambassador." This brusqueness, however, was not usual with Benedict. He could be gracious, and the Abbate Galliani once presented him with a collection of minerals saying: *Dies ut lapides inti panes sancti* (Command that these stones be made bread), and the hint was not lost. The miracle requested was performed and the abbe received a pension.

To his subjects Benedict was an idol. If they complained at times that he wrote too much and governed them too little, they all agreed that he spoke well and wittily, and his jokes and bon mots were the delight of Rome. Care for the State, and his elevation to the pontificate prevented him from devoting himself as much as he would have wished to his studies of former days; but he never lacked intellectual stimulus. He surrounded himself with such men as Quirini, Garampi, Borgia, Muratori, and carried on an active correspondence with scholars of many shades of opinion. His intellectual pre-eminence was not only a source of pride to Catholics, but formed a strong bond with many not of the Faith. Voltaire dedicated to him his "Mahomet" with the words: "Au chef de la véritable religion, le fondateur d'une religion fausse et barbare". On another occasion he composed for a portrait of the pope the following distich:

*Lambertinus hic est, Romae decus, et pater orbis.*

*Qui mundum scriptis docuit, virtutibus ornatus.*

(This is Lambertini, the pride of Rome, the father of the world, who teaches that world by his writings and honours by his virtues.) The distich caused discussion regarding the quantity of "hic", but the pope defended the prosody of Voltaire who confirmed his opinion by a quotation from Virgil which he said ought to be the epitaph of Benedict.

Great as a man, a scholar, an administrator, and a priest, Benedict's claim to immortality rests principally on his admirable ecclesiastical writings. The most important of them, besides those already mentioned, are: "Institutiones Ecclesiasticas", written in Italian, but translated into Latin by P. Ildefonsus a S. Carolo; it is a collection of 107 documents, principally pastoral letters, letters to bishops and others, independent treatises, instructions, etc., all of which are really scientific dissertations on subjects connected with church law or the care of souls; the classical work "De Synodo Dioceseana", published after his elevation to the papacy, an adaptation to diocesan administration of the general ecclesiastical law; this book is called by Schulte, because of its influence, one of the most important, if not the most important, modern work in canon law; "Casus Conscientiae de mandato Præp. Lambertini Archiep. Bonon proposcit et resoluti", valuable for the lawyer as well as the confessor; "Ballarium Benedicti XIV", which contains the legislation of his pontificate, many of its documents being scientific treatises. He also compiled a "Thesaurus Resolutum Sacris Congregationis Concilii in the first attempt at a scientific presentation of the "Praxis" of the Roman Congregations. A complete edition of his works appeared at Rome (1747-51) in twelve folio volumes, by Emanuel Azevedo, S.J., who also translated into Latin the Italian documents. A better and more complete edition is that of Venetian and most serviceable (Prato, 1844) is in seventeen volumes. Some letters of Benedict were published by Kraus: "Brieve Benedicti XIV an den Canonicos Pier Francesco Peggi in Bologna (1729-1758) nebst Benedicti libri Diarium des Concilii Lateranensi" (2 ed., Freiburg, 1888). Cf. Batifol, "Inventaire des lettres inédites du Pape Bénédicte XIV" (Paris, 1894); R. De Martinis, "Acta Benedicti XIV" (Naples, 1884, passim). In 1904 Heiner edited three hitherto unpublished treatises of Benedict XIV on rites, the feasts of the Apostles, and the Sacraments.
The best account of the writings of Benedict and the sources for the Rule are contained in the above-mentioned work of Krause. See also Guarnacci, Vita et res gestae Romanorum, Pontifl, et Card, a. c. 519 et seq. et Clem. XI (Rome, 1827); Notaiam, Storia dei Sommi Pontefici (Rome, 1822); Ranke, Die röm. Päpste in den letzten vier Jahrh., (Leipzig, ed. 1900); Vie du Pape Bened. XI (Paris, 1763); Gröne, Päpste-Geschichte (Ratisbon, 1875). For a long account of the Curia and the character of the cardinals at the time of Benedict XIV, see Otonelli, Lettere e Memoriale, published by Napoleon Borel (Paris, 1855).

On Benedict as a canonist see Schulte, Geschichte d. Quellen und Litt. d. can. Recht (Stuttgart, 1880), I, 533 sqq.

Patrick J. Healy.

Benedict, Rule of Saint.—This work holds the first place among monastic legislative codes, and was by far the most important factor in the organization and spread of monasticism in the West. For its general character and also its illustration of St. Benedict’s own life see the article Benedict, Saint. Here, however, it is treated more in detail, under the following heads: I. The Text of the Rule; II. Analysis of the Rule; III. Practical Working of the Rule.

I. THE TEXT OF THE RULE.—The exact time and place at which St. Benedict wrote his Rule are not known, nor can it be determined whether the Rule, as we now possess it, was composed as a single whole or whether it gradually took shape in response to the needs of his monks. Somewhere about 530, however, may be taken as a likely date, and Monte Cassino as a more probable place than Subiaco, for the Rule certainly reflects St. Benedict’s matured monastic and spiritual wisdom. The earliest chronicler says that when Monte Cassino was destroyed by the Lombards in 581, the monks fled to Rome, carrying with them, among their treasures, a copy of the Rule "which the holy Father had composed"; and in the middle of the eighth century there was in the pope’s library a copy believed to be St. Benedict’s autograph. It has been assumed by many scholars that the latter copy was brought from Monte Cassino; but though the supposition is likely enough, it is not a certainty. Be that as it may, this MS. of the Rule was presented by Pope Zachary to Monte Cassino in the middle of the eighth century, a short time after the restoration of that monastery. Charlemagne found it there when he visited Monte Cassino.

Rule of St. Benedict. MS. A.D. 1129
(British Museum)

The text of the "autograph" is the one to be adopted. The MSS., from the tenth century onwards, and the ordinary printed editions, give mixed texts, made up out of the two earliest types. Thus the text in current use is critically a bad one, but very few of the readings make any substantial difference. The Rule was written in the Vulgaris or Low Latin vernacular of the time, and contains much syntax and orthography not in conformity with classical models. There is as yet no edition of the Rule that satisfies the requirements of modern criticism, though one is in process of preparation for the Vienna "Corpus" of Latin Ecclesiastical writers.
a sufficiently good manual edition was published by Dom Edmund Schmidl, of St. Gall, in 1892, presenting in substance the text of the St. Gall MS., with the Low Latin element eliminated.

The number of commentators on the Rule is legion. Calmet gives a list of over one hundred and thirty such writers, and Ziegelbauer gives a similar list. The earliest, against the heretics in the second century, is that of Cyprian, who has been variously ascribed to Paul Warnefrid (a monk of Monte Cassino about 780-799), Hildemar, Ruthard of Hirsau, and others. Hildemar, a Gallic monk, brought to Italy by Angelbert, Archbishop of Milan, reformed the monastery of Sts. Faustus and Jovita at Brescia and died in 840. Martène, who considered this commentary to be the best ever produced, maintained that Hildemar was its real author, but modern critics attribute it to Paul Warnefrid. Amongst other commentators the following deserve mention: St. Hildegarde (d. 1178), the foundress and first Abbess of Mount St. Rupert, near Bingen on the Rhine, who held that St. Benedict’s prohibition of flesh-meat did not include that of birds; Bernard, Abbot of Monte Cassino, formerly of Lérins and Cluny (d. 1153); Durandus (Torquemada) a Dominican (1465); Trithemius, Abbot of Sponheim (1516); Perez, Archbishop of Tarragona and Superior-General of the congregation of Valladolid; Haeften, Prior of Affligem (1648); Tencalla, Abbot of Fontaine, with whom are combined the various editions of Migne, who published a new edition of the Rule (1739). Mauriac; Calmet, Abbot of Senones (1757); and Mabillon (1707), who discusses at length several portions of the Rule in his Prefaces to the different volumes of the “Acta Sanctorum CL.”

It is impossible to gauge the comparative value of these and other commentaries, because the different authors treat the Rule from different points of view. That of Calmet is perhaps the most literal and is exhaustive on many important points; those of Mauriac and Haeften are mines of information regarding monastic tradition; Perez and Mège are practical and pious, though the latter has been considered lax in many of the views maintained; that of Turrecuremata is useful as treating the Rule from the standpoint of moral theology; and others give mystical interpretations of its contents. It may here be pointed out that in studying the Rule as a practical code of monastic legislation, it is necessary to remember that in order to facilitate uniformity and to avoid confusion, it has also its own Constitutions, approved by the Holy See, by which are regulated many matters of detail not touched upon in the Rule itself.

Before proceeding to analyze St. Benedict’s Rule and to discuss its leading characteristics, something must be said about the monasticism that preceded his times, and out of which his system grew, in order that some idea may be gained as to how much of the Rule was borrowed from his predecessors and how much was due to his own initiative. Such considerations are important because there is no doubt whatever that the introduction and propagation of St. Benedict’s Rule was the turning-point which changed the whole trend of monasticism in the West.

The earliest forms of Christian monachism were characterized by the extreme austerity and of their more or less eremitical nature. In Egypt the followers of St. Anthony were purely eremitical, whilst those who followed the Rule of St. Pachomius, though they more nearly approached the ceno- nite ideal, yet with the element of stability insisted upon by St. Benedict, viz.: the “common life” and family spirit. Under the Antonian system the austerities of the monks were left entirely to their own discretion; under the Pachomian, though there was an obligatory rule of limited severity, the monks were free to add to it what other ascetical practices they chose. And, in fact, the prevailing idea was that the ascetical athletes, and as such they rivalled each other in austerity. Syrian and strictly Oriental monasticism need not be considered here, as it had no direct influence on that of Europe. When St. Basil (fourth century) organized Greek monasticism, he set himself against the ascetics, and made the monasteries a community life, with meals, work, and prayer, all in common. With him the practice of austerity, unlike that of the Egyptians, was to be subject to the control of the superior, for he considered that to appear out the body by austerities so as to make it unfit for work, was a misconception of the Scriptural precept of penance and mortification. His idea of the monastic life was the result of the contact of primitive ideas, as existing in Egypt and the East, with European culture and modes of thought.

Monasticism came into Western Europe from Egypt. In Italy, as also in Gaul, it was chiefly Antonian in character, though both the rules of St. Basil and St. Pachomius were translated into Latin and doubtless made their influence felt. As far as we know, each monastery had practically its own rule, and we have examples of this irresponsible form of monastic life in the community which St. Benedict was called from his cave to govern, and in the Gyerwagi and Sarabente, whom he mentions in the Rule as the first members of his community. A proof that the prevailing spirit of Italian monachism was Egyptian lies in the fact that when St. Benedict determined to forsake the world and become a monk, he adopted, almost as a matter of course, the life of a solitary in the desert, in accordance with the rules and other documents bearing upon the life of the Egyptian monks is shown by his legislating for the daily reading of the “Conferences” of Cassian, and by his recommendation (c. lxiii) of the “Institutes” and “Lives” of the Fathers and the Rule of St. Basil.

When, therefore, St. Benedict came to write his own Rule for the monasteries he had founded, he embodied in it the result of his own mature experience and observation. He had himself lived the life of a solitary after the most extreme Egyptian pattern, and in his first communities he had no doubt thoroughly tested the prevailing type of monastic rule. Being fully cognizant, therefore, of the unsuitability of much in the Egyptian systems of the times and of the defects of his own rule, he now struck out on a new line, and instead of attempting to revive the old forms of asceticism, he consolidated the cenobitical life, emphasized the family spirit, and discouraged all private venture in austerities. His Rule thus consists of a carefully considered combination of old and new ideas; rivalry in austerity was eliminated, and there was to be henceforth a sinking of the individual in the community. In adapting a system essentially Eastern, to Western conditions, St. Benedict gave it coherence, stability, and organization, and the verdict of history is unanimous in applauding the results of such adaptation.

II. Analysis of the Rule.—Of the seventy-three chapters comprising the Rule, nine treat of the duties of the abbot, nine of the abbot’s right to the worship of God, twenty-nine are concerned with discipline and the penal code, ten refer to the internal administration of the monastery, and the remaining twelve consist of miscellaneous regulations.

The Rule opens with a prologue or hortatory preface, in which St. Benedict sets forth the main principles of the religious life, viz.: the renunciation of one’s own will and the taking up of arms under the banner of Christ. He proposes to establish a ‘school’ in which the science of salvation shall be taught, so that by persevering in the monastery till
death his disciples may "deserve to become partakers of Christ's kingdom". In chapter i are defined the four principal kinds of monks: (1) Cenobites, those living together in a monastery, under an abbot; (2) Anchorites, or hermits, living in solitary hermitages; (3) Monks in long probation in the monastery; (4) Sarabaites, living by twos and threes together, without any fixed rule or lawfully constituted superior; and (5) Gyravagi, a species of monastic vagrants, whose lives are spent in roving from one monastery to another, only served to bring discredit on the monastic profession. It is for the first of these classes, as the most stable kind, that this Rule is written.

Ch. ii describes the necessary qualifications for an abbot, to distinguish him from other members of a monastery except for particular merit, warning him at the same time that he will be answerable for the salvation of the souls committed to his care. Ch. iii ordains the calling of the brethren to council upon all affairs of importance to the community. Ch. iv summarizes the duties of the Christian life under seventy-two precepts, which are called the "Instruments of good works" and are mainly Scriptural either in letter or spirit. Ch. v prescribes prompt, cheerful, and absolute obedience to the superior; (3) respect for laws, without which there can be no first degree of humility. Ch. vi deals with silence, recommending moderation in the use of speech, but by no means prohibiting profitable or necessary conversation. Ch. vii treats of humility, which virgins enter into twelve degrees or steps by a ladder that leads to heaven. They are: (1) fear of God; (2) reproof of self-will; (3) submission of the will to superiors; (4) obedience in hard and difficult matters; (5) confession of faults; (6) acknowledgment of one's own worthlessness; (7) preference of others to self; (8) avoidance of singularity; (9) speaking only in due season; (10) stifting of unseemly laughter; (11) reproof of pride; (12) exterior humility. Ch. ix-xii are occupied with the regulation of the Divine Office, the opus Dei to which "nothing is to be preferred", or Canonical Hours, seven of the day and one of the night. Detailed arrangements are made as to the number of Psalms, etc., to be recited in winter and summer, on Sundays, weekdays, Holy Days, and at other times. Ch. xii emphasizes the reverence due to the presence of God. Ch. xx directs that prayer in common is to be short. Ch. xxi provides for the appointment of deans over every ten monks, and prescribes the manner in which they are to be chosen. Ch. xxii regulates all matters relating to the dormitory, as, for example, that each monk is to have a separate bed, and to pass that habit, so as to be ready to rise without delay, and that a light shall burn in the dormitory throughout the night. Ch. xxiii-xxx regulate with offences against the Rule and a graduated scale of penalties is provided: first, private admonition; next, public reproof; then separation from the brethren at meals and elsewhere; then scourging; and finally expulsion; though this last is not to be resorted to until every effort to reclaim the offender has failed. And even in this last case, the outcast must be received when he should be so desire, but after the third expulsion all return is finally barred. Ch. xxxi and xxxii ordain the appointment of a cellarer and other officials, to take charge of the various goods of the monastery, which are to be stowed in consecrated vessels of the altar. Ch. xxxiii forbids the private possession of anything without the leave of the abbot, who is, however, bound to supply all necessary. Ch. xxxiv prescribes a just distribution of such things. Ch. xxxv arranges for the service in the kitchen. Ch. xxxvi regulates the order due care for the sick, the old, and the young. They are to have certain dispensations from the strict Rule, chiefly in the matter of food.

Ch. xxxviii prescribes reading aloud during meals, which duty is to be performed by such of the brethren, week by week, as can so do with edification to the rest. Signs are to be used for whatever may be required at the table, lest the conscience of the reader. The reader is to have his meal with the servers after the rest have finished, but he is allowed a little food beforehand in order to lessen the fatigue of reading. Ch. xxxix and xli regulate the quantity and quality of the food allowed: a day are allowed and two dishes of cooked food at each. A pound of bread also and a hemina (probably about half a pint) of wine for each monk. Flesh-meat is prohibited except for the sick and the weak, and it is allowed only within the abbots' houses. The increase of the daily allowance when he sees fit. Ch. xlii prescribes the hours of the meals, which are to vary according to the time of year. Ch. xliii enjoins the reading of the "Conferences" of Caesarius or some other edifying book in the evening before Compline and orders that after Compline the strictest silence shall be observed until the following morning. Ch. xliii-xlv relate to minor faults, such as coming late to prayer or meals, and impose various penalties for such transgressions. Ch. xlvii enjoins on the abbots and their brethren to "be the last to blame". Ch. xlviii honors God in choir, and of appointing those who are to chant or read. Ch. xlviii emphasizes the importance of manual labour and arranges the time to be devoted to it daily. This varies according to the season, which is apparent only in the observance of Lent, and recommends some voluntary self-denial for that season, with the abbot's sanction. Ch. xlii-lvi contain rules for monks who are working in the fields or travelling. They are directed to join in spirit, as far as possible, with their brethren in the monastery at the regular hours of prayer. Ch. li commands that the oratory be used for purposes of devotion only. Ch. liii is concerned with the treatment of guests, who are "never wanting in a monastery", and who were to be received as "Christ Himself". This Benedictine hospitality is a feature which has in all ages been characteristic of the order. The guests are to be met with due courtesy by the abbot or his deputy, and during their stay they are to be ordered the same food as the monks, but they are not to associate with the rest of the community except by special permission. Ch. liv forbids the monks to receive letters or gifts without the abbot's leave. Ch. lv regulates the clothing of the monks. It is to be sufficient in both quantity and quality and to be suited to the climate and locality, according to the discretion of the abbot, but at the same time it must be as plain and cheap as is consistent with due economy. Each monk is to have a change of garments, to all of which clothing he shall be supplied with clothes of rather better quality. The old habits are to be put aside for the poor. Ch. lvi directs that the abbot shall take his meals with the guests. Ch. lvii enjoins humility on the part of the abbot, who must not be in the least interested in that which is done to him. Finally, Ch. lviii lays down rules for the admission of new members, which is not to be made too easy. These matters have since been regulated by the Church, but in the main St. Benedict's Rule is followed.
is always free to depart. If, after twelve months' probation, he still perseveres, he may be admitted to the vows of Stability, Conversion of Life, and Obedience, by which he binds himself for life to the monastery of his profession. Ch. lxx allows the admission of brothers to the abbey under certain conditions. Ch. lx regulates the position of priests who may desire to join the community. They are charged with setting an example of humility to all, and can only exercise their priestly functions by permission of the abbot. Ch. lxiii provides for the reception of strange monks as guests, and for their admission if desirous of joining the community. Ch. lxiii empowers the abbot to choose certain of his monks for ordination, which, however, shall not give them any higher rank in the community, unless perchance they be promoted for special merits. Ch. lxiii lays down that precedence in the community shall be determined by the date of admission, merit of life, or the appointment of the abbot. Ch. lxiv orders that the abbot be elected by his monks and that he be chosen for his charity, zeal, and discretion. Ch. lxv allows the appointment of a provost, or prior, if need be, but warns such a one that he is to be entirely subject to the abbot and may be dismissed, deposed, or expelled for misconduct. Ch. lxvi gives the abbot the power to lower the appointment of a person, and recommends that each monastery should be, if possible, self-contained, so as to avoid the need of intercourse with the outer world. Ch. lxvii gives instructions as to the behaviour of a monk who is sent on a journey. Ch. lxviii forebids that all shall cheerfully attempt to do whatever is commanded them, however hard it may seem. Ch. lxix forbids the monks to defend one another. Ch. lxx prohibits them from striking one another. Ch. lxxi encourages the brethren to be obedient not only to the abbot and in consents made with regard to what the monks of Egypt would have looked upon as luxuries. A few comparisons between the customs of these latter and the prescriptions of St. Benedict's Rule will serve to bring out more clearly the extent of his changes in this direction.

Characteristics of the Rule.—In considering the leading characteristics of this Holy Rule, the first that must strike the reader is its wonderful discretion and moderation, its extreme reasonableness, and its keenness of eye and capable of detecting weak spots in the weaknesses of human nature. Here are no excesses, no extraordinary asceticism, no narrow-mindedness, but rather a series of sober regulations based upon sound common-sense. We see these qualities displayed in the deliberate elimination of LXXIV. and in the exhortation to seal and fraternal charity; and LXXIII. is an epilogue declaring that this Rule is not offered as an ideal of perfection, but merely as a means towards godliness and is intended chiefly for beginners in the spiritual life.

With regard to food, the Egyptian ascetics reduced it to a minimum, many of them eating only twice or thrice in the week, whilst Cassian describes a meal consisting of parched vetches with salt and oil, three cups of water, and a cup of water for a "recept" (Coll. viii. 1). St. Benedict, on the other hand, though he restricts the use of flesh-meat to the sick, orders a pound of bread daily and two dishes of cooked food at each meal, of which there were two in summer and three in winter. He also allows a moderate allowance of wine, though admitting that it should not properly be the drink of monks (Ch. xli). As to clothing, St. Benedict's provision that habits were to fit, to be sufficiently warm, and not too old, was in great contrast to the poverty of the Egyptian monasteries. A look at the contemporary saints should be so poor that if left on the road no one would be tempted to take them (Apophthegmata, in P. G., LXXV, 360). In the matter of sleep, whereas the solitaries of Egypt regarded its diminution as one of their most valued forms of austerity, St. Benedict ordered from six to eight hours of unbroken sleep a day, with the addition of a siesta in summer. Further, Egyptian monks observed the custom of resting in the shade, on the bare ground, with stones or mats for pillows, and often even sitting or merely reclining, as directed in the Paehomian Rule, whilst Abbot John was unable to mention without shame the finding of a blanket in a hermit's cell (Cassian, Coll. viii. 6). St. Benedict, however, allowed not only a blanket but also a coverlet, a mattress, and a pillow to each monk. This comparative liberalism with regard to the necessaries of life, though plain and meagre perhaps, if tested by modern notions of comfort, was far greater than amongst the Italian poor of the sixth century or even amongst many of the European peasantry at the present day. St. Benedict's aim seems to have been to keep the bodies of his monks in a healthy condition by means of proper clothing, sufficient food, and ample sleep, so that they might thereby be more fit for the due performance of the Divine Office and be freed from all that distracting rivalry in asceticism which has already been mentioned. There was, however, no desire on the part of St. Benedict to lower the standard of life, and the great sacrifice that the adoption of the monastic life entailed, but rather the intention of bringing it into line with the altered circumstances of Western environment, which necessarily differed much from those of Egypt and the East. The wisdom and skill with which he did this is evident in every page of the Rule, so much so that Bossuet was able to call it "an epitome of Christianity, a learned and mysterious abridgment of all the doctrines of the Gospel, all the institutions of the Fathers, and all the Counsels of Perfection".

St. Benedict perceived the necessity for a permanent and uniform rule of government in place of the arbitrary and variable choice of models furnished by the lives and maxims of the Fathers of the Desert. And so we have the characteristic of collective, exercised in his insistence on the common life, as opposed to the individualism of the Egyptian monks. One of the objects he had in view in writing his Rule was the extirpation of the Saramites and Gervagiates, and he stresses the danger of these in his first chapter and of whose evil lives he had probably had painful experience during his early days at Subiasso. To further this aim he introduced the vow of Stability, which became the guarantee of success and pauperisation. It is only another example of the family idea that pervades the entire Rule, by means of which the members of the community are bound together by a family tie, and each takes upon himself the obligation of persevering in his monastery until death, unless sent elsewhere by his superiors. It secures to the community as a whole, and to every member of it individually, a share in all the fruits that may arise from the labours of each monk, and it gives to each of them that strength and vitality which necessarily result from being one of a united family, and not being, in any way and all pursuing the same end. Thus, whatever the monk does, he does it not as an independent being but as part of a larger organization, and the community itself becomes one united whole rather than a mere collection of independent members. The Vow of Conversion of Life indicates the personal striving after perfection that must be the aim of every Benedictine monk. All the legislation of the Rule, the constant repression of self, the conforming of one's every action to a definite standard, and the threefold plan of setting aside the first thirty days of each month, the end of one's days, is directed towards "putting off the old man and putting on the new", and thereby
accomplishing that consensus morum which is inseparable from a life-long perseverance in the maxims of the Rule. The practice of obedience is a necessary feature in St. Benedict's idea of the religious life, if not indeed its very essence. Not only is it a prescribed duty of the Rule devoted to it, but it is repeatedly referred to as a guiding principle in the life of the monk; so essential is it that it is the subject of a special vow in every religious institute, Benedictine or otherwise. In St. Benedict's eyes it is a positive work, a good, with which the whole work of salvation is bound together, for he calls it labor obediencie (Prologue). It is to be cheerful, unquestioning, and prompt; to the abbot chiefly, who is to be obeyed as holding the place of Christ, and also to all the brethren according to the dictates of fraternal charity, as being 'the path that leads to God' (Ch. Lxxi). It is likewise extended to hard and even impossible things, the matter being at least attempted in all humility. In connection with the question of obedience there is the further question as to the system of government embodied in the Rule. The life of the community centres round the abbot as the father of the family. Much latitude with regard to details is left to his discretion and judgment", but this power, so far from being absolute or unlimited, is safeguarded by the restraint imposed on his will by the will of his brethren—either the seniors only or else the entire community—upon all matters affecting their welfare. And on the other hand, wherever there seems to be a certain amount of liberty left to the monks themselves, this, in turn, is protected against indecency by the repeated insistence on the necessity for the abbot's sanction and approval. The vows of Poverty and Chastity, though not explicitly mentioned by St. Benedict, as in the rules of other orders, are yet implied so clearly as to form an indispensable and essential part of the law for which he legislates. Thus by means of the vows and the practice of the various virtues necessary to their proper observance, it will be seen that St. Benedict's Rule contains not merely a series of laws regulating the external details of monastic life, but also all the principles of perfection according to the Evangelical Counsels.

With regard to the obligation or binding power of the Rule, we must distinguish between the statutes or precepts and the counsels. The former are those laws which either command or prohibit in an absolute manner, and by the latter those that are merely recommendations. It is generally held by commentators that the precepts of the Rule bind only under the penalty of venial sin, and the council of the Church, and the regulations of the Constitutions of the different monastic congregations must be taken into consideration in judging of any particular case.

III. Practical Working of the Rule.—No higher testimony as to the inherent excellencies of the Rule can be adduced than the results it has achieved in Western Europe and elsewhere; and no more striking quality is exhibited by it than its adaptability to the ever-changing requirements of time and place since St. Benedict's days. Its enduring character is the highest testimony to the wisdom of the Rule. For four centuries it has been the guiding light of a numerous family of religious, men and women, and it is a living code at the present day, just as it was a thousand years ago. Though modified, it has been adapted, from the peculiar necessities and conditions of various ages and countries, by reason of its wonderful elasticity its principles still remain the same, and it has formed the fundamental basis of a great variety of other religious bodies. "It has merited the encomiums of councils, popes, and commentators, and its vitality is as vigorous at the present day as it ever was. To St. Benedict's work and to St. Benedict's design that his spiritual descendant should make a figure in the world as author or statesmen, as preservers of pagan literature, as pioneers of civilization, as revivers of agriculture, or as a churchman, or as both, is one of the circumstances brought into all these spheres. His sole idea was the moral and spiritual training of his disciples, and yet in carrying this out he made the cloister a school of useful workers, a real refuge for society, and a solid bulwark of the Church (Dudder, Gregory the Great, II, ix). The Rule, instead of restricting the monk to one particular form of work, makes it possible for him to do almost any kind of work, and that in a manner spiritualized and elevated above the labour of merely secular craftsmen. In this lies one of the secrets of its success.

The results of the fulfilment of the precepts of the Rule are abundantly apparent in history. That of manual labour, for instance, which St. Benedict laid down as absolutely essential for his monks, has lasted down to the present day and is a glory which are the glory of the Christian world. Many cathedrals (especially in England), abbeys, and churches, scattered up and down the countries of Western Europe, were the work of Benedictine builders and architects. The cultivation of the soil, encouraged by St. Benedict, was another form of labour to which his followers gave themselves without reserve and with conspicuous success, so that many regions have owed much of their agricultural prosperity to the skilful husbandry of the sons of Benedict. Another life for which the monks were devoted daily to systematic reading and study, have given to the world many of the foremost scholars and writers, so that the term "Benedictine erudition" has been for long centuries a byword indicative of the learning and laborious research fostered in the Benedictine cloister. The regulations regarding the reception and education of children, moreover, were the germ from which sprang up a great number of famous monastic schools and universities which flourished in the Middle Ages.

It is true that as communities became rich and consequently less dependent upon their own labours for support, the primitive fervour for the Rule diminished, and for this reason grave charges of corruption and absolute departure from monastic ideals have been made against the monks. But, although it is impossible to deny that the many reforms that were initiated seem to give colour to this view, it cannot be admitted that the Benedictine Institute, as a whole, ever became really degenerate or fell away seriously from the ideals established by its legislator. Individual failures there certainly were, as well as mitigations of rule, from time to time, but the loss of fervour in one particular monastery no more compromises all the other monasteries of the same country than the sin of one individual monk reflect necessarily upon the rest of the community to which he belongs. So, whilst admitting that the rigour of the Rule has varied at different times and in different places, we must, on the other hand, remember that modern historical research has thrown a web of light upon the real nature of the Rule, and has removed a web of false and distorted interpretations of the Rule itself. The fact that the Benedictines still glory in their Rule, guard it
with jealousy, and point to it as the exemplar according to which they are endeavouring to model their lives, is in itself the strongest proof that they are still alive in its spirit, though recognizing its latitude of application and its adaptability to various conditions.

order to fulfill a vow went on a pilgrimage to the Holy Land. Wadding says that he was a man of most distinguished parts and great culture, having thoroughly mastered the learning of his day and being especially conversant with the Hebrew, Greek, and Latin tongues. In 1599 the first edition of his "Somme des pêchés et le remède d'icieux comprenant tous les foyers du mal;" published in Paris and was immediately in great demand among confessors, for we learn that after having been revised, corrected, and augmented by the Theological Faculty of Paris it reached its fifteenth edition. He also wrote "La complaisante victoire de la Sainte Vierge," which tells of a remarkable exorcism in the church of the Cordeliers at Lyons. His remains were interred in the Friary at Laval.

ANDREW EGAN.

Benedict Joseph Labre, Saint, b. 26 March, 1748, at Amettes in the Diocese of Boulogne, France; d. in Rome, 16 April, 1783. He was the eldest of fifteen children. His parents, Jean-Baptiste Labre and Marie Grandrieu, were of the lower class and so were able to give to their numerous offspring considerable opportunities in the way of education. His early training he received in his native village in a school conducted by the vicar of the parish. This was during the period of his life written by his confessor, Marconi, and that contained in the one compiled from the official processes of his beatification are at one in emphasizing the fact that he exhibited a seriousness of thought and demeanour far beyond his years. Even at that tender age he had begun to show a marked predilection for the spirit of mortification, with an aversion for the ordinary childish amusements, and he seems from the very dawning of reason to have had the liveliest horror for even the smallest sin. All this we are told was coexistent with a frank and open demeanour and a fund of cheerfulness which remained unabated to the end of his life. At the age of twelve his education was taken over by his paternal uncle, François-Joseph Labre, curé of Erin, with whom he then went to live. During the six following years which he spent under his uncle's roof, he made considerable progress in the study of Latin, history, etc. but found himself unable to conquer a constantly growing distaste for any form of knowledge which did not make directly for union with God. A love of suppression of austerities, and devotedness to his religious exercises were discernible as distinguishing features of his life at this time and constitute an intelligible prelude to his subsequent career. At the age of sixteen he resolved to embrace a religious life as a Trappist, but having on the advice of his uncle returned to Amettes to submit his design to his parents for their approval he was unable to win their consent. He therefore resumed his sojourn in the rectory at Erin, redoubling his penances and exercises of piety and in every way striving to make ready for the life of complete self-denial to which the voice within his soul seemed to be calling him.

After the heroic death of his uncle during an epidemic in September, 1766, Benedict, who had dedicated himself during the course to the service of the sick and dying, returned to Amettes in November of the same year. His absorbing thought at this time was still to become a religious at La Trappe, and his parents fearing that further opposition would be useless, yielded to the will of God and consented to his proposal to enter the cloister. It was suggested, however, by his maternal uncle, the Abbé Vincent, that application be made to the Carthusians at Val-Sainte-Aldegonde rather than to La Trappe. Benedict's petition at Val-Sainte-Aldegonde was unsuccessful, but he was directed to another monastery of the same order at Neuvill. There he was told that as he was not yet twenty there was no hurry, and that he must first learn plainchant and logic. During the next two years he applied twice unsuccessfully to be received at La Trappe and was for six weeks as a postulant with the Carthusians at Neuvill; he finally sought and obtained admission to the Cistercian Abbey of Sept-Fonts. He stayed at Sept-Fonts during which his exactness in religious observances and humility endeared him to the whole community, his health gave way, and it was decided that his vocation lay elsewhere. In accordance with a resolve formed during his convalescence he then set out for Rome. From Chieti in Piedmont he wrote to his parents a letter which proved to be the last they would ever receive from him. In it he informed them of his design to enter some one of the many monasteries in Italy noted for their special rigour of life. A short time, however, after the letter was dispatched he seems to have had an internal illumination which set at rest forever any doubts he might have as to what his method of living was to be. He then understood that it was God's will that he should return to his native country, try, his parents, and whatever is flattering in the world to lead a new sort of life, a life most painful, most penitential, not in a wilderness nor in a cloister, but in the midst of the world, devoutly visiting as a pilgrim the shrines of the saints, and of the image of God. He set forward on his life's journey clad in an old coat, a rosary about his neck, another between his fingers, his arms folded over a crucifix which lay upon his breast. In a small wallet he carried a Testament, a breviary, which it was his wont to recite daily, a copy of the "Imitation of Christ," and some other pious books. Clothing other than that which covered his person he had none. He slept on the ground and for the most part in the open air. For food he was satisfied with a piece of bread or some herbs, frequently taken but once a day and either provided by charity or gotten from some refuse heap. He never asked for alms and was anxious to give away to the poor whatever he received in excess of his scanty wants.

Thus bred, a generally, his thirteen remaining years of his life were spent in pilgrimages to the more famous shrines of Europe. He visited in this way Loreto, Assisi, Naples, Bari, Fabriano in Italy; Einsiedeln in Switzerland; Compostella in Spain; Paray-le-Monial in France. The last six years he spent in Rome, leaving it only once a year to visit the Holy House of Loreto. His unremittent and ruthless self-denial, his unaffected humility, hesitating obedience and perfect spirit of union with God in prayer disarmed suspicion not unnaturally aroused as to the genuineness of a divine call to so extraordinary a way of existence. Literally worn out by his sufferings and austerities, on the 16th of April, 1783, he sank down on the steps of the church of Santa Maria dei Monti in Rome and utterly exhausted, was carried to a neighbouring hospital where he died. His death was followed by a multitude of unequivocal miracles attributed to his intercession. The life written by his confessor, Marconi, an English version of which bears the date of 1785, witnesses to 136 miracles performed with his intercession from 6 July, 1783. So remarkable, indeed, was the character of the evidence for some of the miracles that they are said to have had no inconsiderable part in finally determining the conversion of the celebrated American convert, Father John Thayer, of Boston, who was in Rome at the time of the saint's death.
Benedict was proclaimed Venerable by Pius IX in 1859 and canonized by Leo XIII 8 December, 1881. His feast is kept on the 18th of April, the day of his death.

Benedictine Order, The, comprises monks living under the Rule of St. Benedict, and commonly known as "black monks". The order will be considered in this article under the following sections: I. History of the Order; II. Condition of the Order; III. Influence and Work of the Order; IV. Present Condition of the Order; V. Benedictines of Special Distinction; VI. Other Foundations Originating from, or Based upon, the Order.

I. History of the Order. The term Order as here applied to the spiritual family of St. Benedict is used in a sense differing somewhat from that in which it is applied to other religious orders. In its ordinary meaning the term implies one complete religious family, made up of a number of monasteries, all of which are subject to a common superior or "general" who usually resides either in Rome or in the mother-house of the order, if there be one. It may be divided into various provinces, according to the countries over which it is spread, each provincial being immediately subject to the general, just as the superior of each house is subject to his own provincial. This system of centralized authority has never entered into the organization of the Benedictine Order. There is no general or common superior over the whole order other than the pope himself, and the order consists, so to speak, of what are practically a number of orders, called "congregations", each of which is autonomous; all are united, not under the obedience to one general superior, but only by the spiritual bond of allegiance to the same Rule, which may be modified according to the circumstances of each particular congregation. It is in this latter sense that the term Order is applied in this article to all monasteries professing to observe St. Benedict's Rule.

Beginnings of the Order. St. Benedict did not, strictly speaking, found an order; we have no evidence that he ever contemplated the spread of his Rule to any monasteries besides those which he had himself established. Subiaco was his original foundation and the cradle of the institute. From St. Gregory we learn that twelve other monasteries in the vicinity of Subiaco also owed their origin to him, and that when he was obliged to leave that neighbourhood he founded the celebrated Abbey of Monte Cassino, which eventually became the centre whence his rule and institute spread. These fourteen are the only monasteries of which there is any reliable evidence of having been founded during St. Benedict's lifetime.

The tradition of St. Placid's mission to Sicily in 534, which first gained general credit in the eighth century, though accepted as genuine by such writers as Mabillon and Ruinart, is now generally admitted to be mere romance. Very little more can be said in favour of the supposed introduction of the Benedictine Rule into Gaul by St. Maurus in 542, though it also has been strenuously upheld by many responsible writers. At any rate, evidences for it are so extremely doubtful that it cannot be seriously regarded as historical. There is reason for believing that it was the third Abbot of Monte Cassino who began to spread a knowledge of the Rule beyond the circle of St. Benedict's own foundation. It is at least certain that when Monte Cassino was sacked by the Lombards about the year 880, the monks fled to Rome, where they were housed by Pope Pergius II in a monastery adjoining the Lateran Basilica. There, in the very centre of the ecclesiastical world, they remained for upwards of a hundred and forty years, and it seems highly probable that this residence in so prominent a position constituted an important factor in the diffusion of knowledge of Benedictine monachism. It is generally agreed also that when Gregory the Great embraced the monastic state and converted his family palace on the Celian Hill into a monastery dedicated to St. Andrew the Apostle, it was the Benedictine form of monachism that he adopted there.

It was from the monastery of St. Andrew in Rome that St. Augustine, the prior, and his forty companions set forth in 595 on their mission for the evangelization of England, and with them St. Benedict's idea of the monastic life first emerged from Italy. The arguments and authorities for this statement have been admirably marshalled and estimated by Reyner in his "Apostolatus Benedictinorum in Anglia" (Douai, 1626), and his proofs have been adjudged by Mabillon to amount to demonstration. [Cf. Butler, "Was St. Augustine a Benedictine" in Downside Review, III (1884).] At their various stopping places during the journey through France the monks left behind them traditions concerning their rule and form of life, and probably also some copies of the Rule, for we have several evidences of its
having been gradually introduced into most of the chief monasteries of Gaul during the seventh century. Lérins, for instance, one of the oldest, which had been founded by St. Honoratus in 375, probably received its first knowledge of the Benedictine Rule from the visit of St. Augustine and his companions in 596. Dismayed by the account they had heard of the ferocity of the English, the missionaries had sent their leader back to Rome to implore the pope to allow them to abandon the object of their journey. During his absence they remained at Lérins. Not long after their departure, Agyulp, Abbot of the latter place, was called in to restore the discipline and he probably introduced the full Benedictine observance; for when St. Benedict Biscop visited Lérins later on in the seventh century he received the Benedictine habit and tonsure from the hands of Abbot Agyulp. Lérins continued through several centuries to supply from its monks bishops for the chief churches of Southern Gaul, and to them perhaps may be traced the general diffusion of St. Benedict's Rule throughout that country. There, as also in Switzerland, it had to contend with and supplement the Celtic traditions. The Irish or Celtic Rule introduced by St. Columbanus and others. In some monasteries the two rules were amalgamated, or practised side by side. Gregory of Tours says that at Aigues, in the sixth century, the monks "followed the rules of Basili, Cassian, Cesarious, and other fathers, taking and using whatever seemed proper to the conditions of time and place" and doubtless the same liberty was taken with the Benedictine Rule when it reached them. In other monasteries it entirely supplanted the earlier codes, and had by the end of the eighth century so completely superseded them throughout France that Charlemagne could gravely doubt whether monks of any kind had been possible before St. Benedict's time. The authority of Charlemagne and of his son, Louis the Pious, did much, as we shall presently see, towards propagating the principles of the Father of western monachism.

St. Augustine and his monks established the first English Benedictine monastery at Canterbury soon after their arrival in 597. Other foundations quickly followed as the Benedictine missionaries carried the light of the Gospel with them throughout the length and breadth of the land. It was said that St. Benedict seemed to have taken possession of the country as his own, and the history of his order in England is the history of the English Church. Nowhere did the order link itself so intimately with people and institutions, secular as well as religious, as in England. Through the influence of saintly men, Wilfrid, Benedict Biscop, and Dunstan, and in the north, when once the Easter controversy had been settled and the Roman supremacy acknowledged (Synod of Whithby, 664), it was adopted in most of the monasteries that had been founded by the monks and by the missionary order from Iona. Many of the episcopal sees of England were founded and governed by the Benedictines, and no less than nine of the old cathedrals were served by the black monks of the priories attached to them. Even when the bishop was not himself a monk, he held the place of titular abbot, and the community formed his chapter.

Germany owed its evangelization to the English Benedictines. St. Boniface, who preached the Faith there in the seventh and eighth centuries and founded several celebrated monasteries. From thence spread, hand in hand, Christianity and Benedictine monasticism, to Denmark and Scandia, and to the Faroe Islands. In Spain, monasteries had been founded by the Visigothic kings as early as the latter half of the fifth century, and it was probably some two or three hundred years later that St. Benedict's Rule was adopted. Mabillon gives 640 as the date of its introduction into that country (Acta Sanctorum O. S. B., sec. 1, pref. 74), but his conclusions on this point are not now generally accepted. In Switzerland the disciples of Columbanus had founded monasteries early in the seventh century, two of the best known being St. Gall's, established on the site of the name, and Disentis (612), founded by St. Sigisbert. The Cluniac rule was not entirely supplanted by that of St. Benedict until more than a hundred years later, when the change was effected chiefly through the influence of Peh, abbot of Cluny. Benedictine observance still prevailed for another century or two. At the time of the Reformation there were nine Benedictine houses in Ireland and six in Scotland, besides numerous abbeys of Cistercians.

Benedictine monasticism never took such deep root in the eastern provinces of the Roman Empire as it had in the West. The Bohemians and the Poles, nevertheless, owed their conversion respectively to the Benedictine missionaries Adalbert (d. 997) and Casmir (d. 1058), whilst Bavaria and what is now the Austrian Empire were evangelized first by monks from Gaul in the seventh century, and later on by St. Boniface and his disciples. A few of the larger abbeys founded in these countries during the ninth and tenth centuries still exist, but the number of foundations was always small in comparison with those farther west. It is true that the Benedictine Rule never penetrated in early times, and the great schism between East and West effectually prevented any possibilities of development in that direction.

Early Constitutions of the Order.—During the first four or five centuries after the death of St. Benedict there existed no organic bond of union amongst the various abbey churches other than the Rule itself and obedience to the Holy See. According to the holy legislator's provisions each monastery constituted an independent family, self-contained, autonomous, managing its own affairs, and subject to no external authority except that of the local diocesan bishop, whose powers of control were, however, limited to certain specific occasions. The earliest departures from this system occurred when several of the greater abbeys began sending out offshoots, under the form of daughter-houses retaining some sort of dependence upon the mother abbey from which they sprang. This mode of propagation, together with the various re-forms that began to appear in the eleventh and succeeding centuries, paved the way for the system of independent congregations, still a feature peculiar to the Benedictine Order.

Reforms.—A system which comprised many hundreds of monasteries, and many thousands of monks, spread over a number of different countries, without any unity of organization; which was exposed,
moreover, to all the dangers and disturbances inseparable from those troublous times of kingdom-making; such a system was inevitably unable to keep worldliness, and even worse vices, wholly out of its midst. Hence it cannot be denied that the monks often failed to live up to the monastic ideal and sometimes even fell short of the Christian and moral standards. There were failures and scandals in Benedictine history, just as there were declensions from the right path outside the cloister, for monks are, after all, but men. But there does not seem ever to have been a period of widespread and general corruption in the order. Here and there the members of some particular house allowed abuses and relaxations of rule to creep in, so that they seemed to be falling away from the true spirit of their state, but whenever such did occur they soon called forth efforts for a restoration of primitive austerity; and these constantly recurring reform movements form one of the surest evidences of the vitality which has pervaded the Benedictine Institute throughout its entire history. It is important to note, moreover, that none of the reforms ever achieved any measure of success came invariably from within, and were not the result of pressure from outside the order.

The first of the reforms directed towards confederating the monastic houses of a single kingdom was in the ninth century by Benedict of Aniane under the auspices of Charlemagne and Louis the Pious. Though a Benedictine himself, born in Aquitaine and trained at Saint-Seine near Dijon, Benedict was imbued with the rigid austerity of the East, and in his Abbey of Aniane practised a mode of life that was severe in the extreme. Over Louis he acquired an ascendency which grew stronger as years went on. At his instigation Louis built for him a monastery adjoining his own palace at Aix-la-Chapelle, which was intended to serve as a model according to which all others were to be reformed, and to bring about this end Benedict was invested with a general authority over all the monasteries of the empire. Absolute uniformity of discipline, observance, and habit, after the pattern of the royal monastery, was then the general scheme which was launched at an assembly of all the abbots at Aachen (Aix-la-Chapelle) in 817 and embodied in a series of eighty capitula passed by the meeting. Though by reason of the very minuteness of these capitula, which made them at first almost unworkable, and the absence of centralized authority lasted only for the lifetime of Benedict himself, the capitula (printed in full in Herrgott, "Vetus Disciplina Monastica," Paris, 1726) were recognized as supplying a much needed addition to St. Benedict's Rule concerning points not sufficiently provided for therein, and as filling much the same place as the approved Constitutions of a monastery or congregation do now.

A century later, in 910, the first real reform that produced any widespread and general effect was commenced at the Abbey of Cluny in Burgundy, under St. Berno, its first abbot. The object was an elaboration of the Benedictine ideal, for the uniform preservation of which a highly centralized system of government was required. There was a system of centralization, except as suggested by St. Benedict of Aniane, was introduced. It was in fact the establishment of a veritable order, in the common acceptance of that term, within the Benedictine family, the abbey of Cluny retaining an actual headship of the order, differing, however, from the others only by priors as his vicars. For two centuries or more Cluny was probably the chief religious influence in the Latin Church, as it was also the first abbey to obtain exemption from episcopal oversight. To it, and through it, the successors the congregation grew space, partly by founding new houses and partly by incorporating those already existing, so that by the twelfth century Cluny had become the centre and head of an order embracing some 314 monasteries in all parts of Europe, France, Italy, the Empire, Lorraine, Spain, England, Scotland, and Poland. Although the congregation had its own constitutions and was absolutely autonomous, its members always claimed to be an order. The abbeys were actually recognized as real Benedictines; hence it was not strictly a new order but only a reformed congregation within the order. (See Cluny.)

Following the example of Cluny, foundations of several other reformes were initiated from time to time in different parts during the next three centuries, which while taking the Rule of St. Benedict as a basis, aimed frequently at a greater austerity of life than was practised by the black monks or contemplated by the holy Rule. Some were even semi-eremitical in their constitution, and one—Fontevrault—consisted of double monasteries, the religious of both sexes being under the rule of one of the abbesses. In dealing with these reformed congregations a distinction must be made between those which, like Cluny, continued to be considered as part of the main Benedictine body, and those which constituted practically a new independent order, like Citeaux, and have always been looked upon as outside the Benedictine confederation, though still professing the Rule of St. Benedict in some form or other. Those of the former category are treated here, since they and their successors constituted the order as we understand it at the present day. In the latter class the most important were Camaldoli (1009), Vallombrosa (1039), Grammont (1076), Citeaux (1089), Fontevrault (1099), Savigny (1112), Monte Vergine (1119), Sylvesterins (1291), Celestines (1254), and Olivetans (1319). All of these will be detailed in detail under the respective titles.

The influence of Cluny, even in monasteries which did not join its congregation or adopt any of the other reforms mentioned above, was large and far-reaching. Many such abbeys, including Subiaco and Monte Cassino, adopted its customs and practices, and modelled their life and spirit according to the example it set. Monasteries such as these often became in turn the centres of revival and reform in their respective neighbourhoods, so that during the tenth and eleventh centuries there arose several free unions of monasteries based on a uniform observance derived from a central abbey. These unions, the germ of the congregational system which developed later on, deserve a somewhat detailed discussion here. In England there had been three distinct efforts at systematic organization. The various monasteries founded by St. Augustine and his fellow-monks had preserved some sort of union, as was only natural with new foundations in a pagan country proceeding from a common source of origin. As Christianity spread through the land this necessity
for mutual dependence diminished, but when St. Benedict Bishop came to England with Archbishop Theodore in 669, it fell to him to foster a spirit of uniformity amongst the various Benedictine monasteries then existing. In the eighth century, Dunstan set himself to reform the English monastic houses on the model of Fleury and of what he had seen successfully carried out at Ghent during his exile in Flanders. With his co-operation St. Ethelwold brought out his "Concordia Regulataria", which is interesting as an early attempt to procure a uniform observance in all the monasteries of a nation. A century later Lanfranc continued the same idea by issuing a series of statutes regulating the life of the English Benedictines. It should be noted here that these several attempts were directed only towards securing outward uniformity, and that as yet there was apparently no idea of a congregation, properly so called, with a central source of all legislative authority. In France the abbeys of Fleury, Marmoutier, St. Benignus (Dijon), St. Denis, Chaise-Dieu (Auvergne), St. Victor (Marseilles), St. Claude, Lérins, Saune-Majour, Tiron, and Val-des-Choux, were all centres of larger or smaller groups of houses, in each of which there was uniformity of rule as well as more or less dependence upon the chief house. Fleury adopted the Cluniac reform, as did also St. Benignus of Dijon, though without subjecting it to that organization; and all were eventually absorbed by the congregation of St. Maur in the seventeenth century, excepting St. Claude, which preserved its independence until the Revolution, Val-des-Chaux, which became Cistercian, and Lérins, which in 1505 joined the Italian congregation under St. Benedictus of Padua. In Italy the chief groups had their centres at Cluse in Piedmont, at Fonte Avellana, which was united to the Camaldolese congregation in 1569, La Cava, which joined the congregation of St. Justinia in the fifteenth century, and Sasso-Vivo, which was suppressed as a separate federation in the same century and its forty houses united to other congregations of the Benedictine family. The monasteries of Germany were divided chiefly between Fulda and Hirsau, both of which eventually joined the Bursfeld Union. (See BURSVELD.) In Austria, the Salzburg was divided into two groups of monasteries, the abbey of Melk (Molek or Melek) and Salzburg being the chief houses. They continued thus until well into the seventeenth century, when systematic congregations were organized in compliance with the fifteenth century St. decrees, as will be described in due course. Other free unions, for purposes of mutual help and similarity of discipline, were to be found also in Scotland, Scandinavia, Poland, Hungary, and elsewhere, in which the same idea was carried out, but not as much a congregation in its latter sense, with a centralized form of government, as a mere banding together of houses for the better maintenance of rule and policy.

Notwithstanding all these reform movements and unions of monasteries, a large number of Benedictine abbeys in different countries retained to the end of the twelfth century, and even later, their original independence, and this state of things was only terminated by the regulations of the Fourth Lateran Council, in 1215, which were to change materially the whole trend of Benedictine polity and history. By the twelfth canon of this council it was decreed that the chalets of each ecclesiastical province were to unite into a congregation. The abbots of each province or congregation were to meet in chapter every third year, with power to pass laws binding on all, and to appoint from among their own number "visitors" who were to make canonical visitations of the monasteries and to report upon their condition to the ensuing chapter. In each congregation one of the abbots was to be elected president, and the one so chosen presided over the triennial chapter and exercised a certain limited and well-defined authority over the houses of his congregation, in such a way as not to interfere with the independent authority of each abbot in his own monastery. England was the first and for some time the only country to give this new arrangement a fair trial of the fruit. The first "Benedictins" by Benedict XII, in 1336, that other countries, somewhat tardily, organized their national congregations in conformity with the designs of the Lateran Council. Some of these have continued to the present day, and this congregational system is now, with very few exceptions and some slight variations in matters of detail, the normal form of government throughout the order.

Progres of the Order.—At the time of this important change in the constitution of the order, the black monks of St. Benedict were to be found in almost every country of Western Europe, including Iceland, where they had two abbeys, founded in the twelfth century, and from which missionaries had penetrated even into Greenland and the lands of the Eskimo. At the beginning of the fourteenth century the order is estimated to have comprised the enormous number of 37,000 monasteries. It had up to that time given to the Church no less than 24 popes, 200 cardinals, 7,000 archbishops, 15,000 bishops, and over 1,000,000 monks, well enrolled among the members 20 emperors, 10 empresses, 47 kings, and 50 queens. And these numbers continued to increase by reason of the additional strength which accrued to the order from its congregation under St. Benedictus in the fourteenth century the Reformation and the religious wars spread havoc amongst its monasteries and reduced their number to about 5,000. In Denmark, Iceland, and Sweden, where several houses had joined the German (Bursfeld) Union, the order was entirely obliterated by the Lutherans about 1551 and its property confiscated by the crown. The arbitrary rule of Joseph II of Austria (1765-90) and the French Revolution and its consequences completed the work of destruction, so that in the early part of the nineteenth century the number fell to less than a hundred, in America the order and its subdivisions, or, including affiliated congregations and convents of nuns, a total of nearly seven hundred. These revivals and examples of expansion will now be treated in detail under the headings of the various congregations, which will be following the history of the order down to the present day.

(1) The English Congregation.—The English were the first to put into practice the decrees of the Lateran Council. Some time was necessarily spent
in preliminary preparations, and the first general chapter was held at Oxford in 1218, from which time up to the dissolution under Henry VIII the triennial chapters appear to have been held more or less regularly. (Details of these chapters will be found in Keymer, "Apostolatus Benedictinorum"). At this pre-monastic period the see of Canterbury was represented, but in 1338, in consequence of the Bull "Benedictina", the two provinces were united and the English congregation definitely established. This system of the union of houses and provinces had been introduced in the degree with the Benedictine tradition of mutual independence of monasteries, though the Bull "Benedictina" was intended to give some further development to it. In other countries attempts were made from time to time to effect a greater degree of organization, but in England there was never any further advance along the path of centralization. At the time of the dissolution there were in England nearly three hundred houses of black monks, and though the numbers had from one cause or another somewhat increased, the English congregation might be truthfully said to have been in a flourishing condition at the time of the attempt to suppress it in the sixteenth century. The grave charges brought against the monks by Henry VIII's Visitors, though long contested, are still in dispute with the modern historians. This reversal of opinion has been brought about mainly through the researches of such writers as Gasquet (Henry VIII and the English Monasteries, London, new ed., 1896; Eve of the Reformation, London, 1898), and Gairdner (Prefaces to "Calendars of State Papers of Henry VIII"). Throughout the period of suppression the monks were the champions of the old Faith, and when turned out of their homes very few conformed to the new religion. Some sought refuge abroad, others sojourned in priories, established in towns with the hope of a restoration of the former state of things, whilst not a few preferred to suffer lifelong imprisonment rather than surrender their convictions and claims. In Queen Mary's reign there was a brief revival at Westminster, where some of the surviving monks were brought together under Abbot Feckenham in 1556. Of the monasteries professed there during the three years of revived existence, Dom Sigebert Buckley alone survived at the beginning of the seventeenth century; and he, after forty years of imprisonment, when released for St. Michael's, was sent with twenty English habit and affiliated to Westminster Abbey and to the English congregation two English priests, already Benedictines of the Italian congregation. By this act he became the link between the old and the new lines of English black monks, and through him the true succession was perpetuated. About the same time a number of English monks were being trained abroad, mostly in Spain, for the English mission, and these were in 1619 aggregated by papal authority to the English congregation, though the monasteries founded by them had perforce to be situated abroad. St. Gregory's at Douai was established in 1605, St. Lawrence's at Dieulouard in Lorraine in 1606, and St. Edmund's at Paris in 1611. The first two of these communities remained on the continent until driven to England by the French Revolution, but the third has only recently returned. In 1835, by the Bull "Plantata", Pope Urban VIII bestowed upon the restored English congregation every privilege, grant, indulgence, faculty, and other advantages which had belonged to the ancient English congregation and also approved of its members taking an oath by which they bound themselves to labour for the reformation of their country. So zealous were they in this work that during the personal troubles of the twenty-six who suffered martyrdom for the Faith, whilst eleven died in prison. Two other monasteries were added to the congregation, viz., Lamspring in Germany in 1643, and Saint-Malo in Brittany in 1611, the latter, however, being passed over to the French (Maurist) congregation in 1672. In 1785 the monks of Douai were expelled from their monastery by the Revolution, and after many hardships, including imprisonment, escaped to England, where, after a temporary residence at Acton Burnell (near Shrewsbury), they settled in 1814 at Downside in Somerset. The monks of Dieulouard were also driven out at the same time and after some wanderings established themselves in 1802 at Ampleforth in Yorkshire. The monks of St. Edmund's, Paris, not successful in making their escape from France, were dispersed for a time, but when, in 1818, the buildings of St. Gregory's at Douai were recovered by the congregation, the remains of St. Edmund's community reassembled and resumed conventual life there in 1823. For eighty years they continued undisturbed, recruited by English subjects and carrying on their school for English boys, until the Government of the French Republic once more expelled them from their monastery; returning to England, they have established themselves at Woolhampton in Berkshire. The Abbey of Lamspring continued to flourish amongst their own people in Germany, but the Prussian Government in 1802 and the community dispersed. In 1828 a restoration of conventual life in a small way was attempted at Broadway in Worcestershire, which lasted until 1841. The monks then went to other houses of the congregation, though the community was never formally disbanded. Continuity was preserved by the last survivors of Broadway being incorporated in 1876 into the newly founded community of Fort Augustus in Scotland. In 1859 St. Michael's priory, at Belmont, near Hereford, was re-established, but too late to be the others of Pius IX, as a central novitiate and house of studies for the whole congregation. It was also made the pro-cathedral of the Diocese of Newport, the bishop and canons of which are chosen from the English Benedictines, the cathedral-priest acting as provost of the chapter. Up to 1901 Belmont had no community of its own, but only members from the other houses who were resident there either as professors or students; the general chapter of that year, however, decided that novices might be received there. In 1890 Leo XIII raised the three priories of St. Gregory's (Downside), St. Lawrence's (Ampleforth), and St. Edmund's (Douai) to the rank of abbeys, so that the congregation now consists of three abbeys and one cathedral-priory, each with its own community, but Belmont still remains the central novitiate and tyrocinium for all the houses. Besides its regular prelates, the English congregation is, by virtue of the Bull "Plantata" (1835), allowed to perpetuate as titular dignities the nine cathedral-priories which belonged to it before the Reformation, viz., Canterbury, Winchester, Durham, Coventry, Ely, Worcester, Rochester, Norwich, and Bath; to these have been added three more, Peterborough, Gloucester, and Chester, originally Benedictine, but now with a central rank by Henry VIII. Six ancient abbeys also, St. Alban's, Westminster, Glastonbury, Evesham, Bury St. Edmunds, and St. Mary's, York, are similarly perpetuated by privilege granted in 1835. (2) The Cassinosy Congregation.—To prevent confusion it is necessary to point out that there are two congregations of this name. The first, with Monte Cassino as its chief house, was originally known as that of St. Justinus of Pada, and with one exception has always been contained in Italy, though much later an institution and is distinguished by the
title of “Primitive Observance”. What follows relates to the former of these two.

Most of the Italian monasteries had fallen under the influence of Cluny in the tenth and eleventh centuries, and had adopted its customs, but by the end of the fourteenth century the abbey of Subiaco was thoroughly independent of its mother-house and many of the monasteries which had been dependent on Cluny were then, particularly one in which the Cluniac observance was retained. The Abbey of St. Justina at Padua, which had formerly been Cluniac, was, in a very corrupt and ruinous state in 1407 when Gregory XII bestowed it to commendators on the Bishop of Bologna, who, besides desiring reform, introduced some Olivetan monks, but the three remaining Cluniac monks appealed to the Venetian Republic against this encroachment on their rights, with the result that the abbey was restored to them and the Olivetans dismissed. The cardinal resigned the abbey to the pope, who thereupon gave it to Ludovico Barbo, a canon regular of St. George in Alga. He took the Benedictine habit and received the abbatial blessing in 1409. With the help of two Camaldolese monks and two canons of Alga, he instituted a reformed observance, which was quickly adopted in other monasteries as well. Permission was obtained from the pope for these to unite and form a new congregation, the first general chapter of which was held in 1421, when Abbott Baroncelli was elected. The first provinces those that joined were the celebrated abbeys of Subiaco, Monte Cassino, St. Paul’s in Rome, St. George’s at Venice, La Cava, and Parfa. In 1504 its title was changed to that of the “Cassinense Congregation”. Gradually came to embrace all of the chief Benedictine houses of Italy, to the number of nearly two hundred, divided into seven provinces, Rome, Naples, Sicily, Tuscany, Venice, Lombardy, and Genoa. In 1506 the Abbey of Lérins in Provence together with all itsdependencies joined, and a new general system of government was devised, modelled on the Italian republics, by which the autonomy of the individual houses was almost entirely destroyed. All power was vested in a committee of “definitors”, in whose hands were all appointments, from that of president down to the lowest official in the smallest monastery. But in spite of this obvious departure from the Benedictine ideal and the dangers arising from such a system, the congregation continued in considerable prosperity until the wars of the Revolutions and the latter half of the Napoleonic era put a check to its reception of novices and began a series of suppressions which have reduced its numbers enormously and shorn it of much of its former greatness. The formation of the congregation of Primitive Observance from out of its midst has still further diminished the congregation, until it now consists nominally of sixteen monasteries, some entirely without communities, and only three or four with sufficient numbers to keep up full conventual observances.

(3) The Cassinese Congregation of Primitive Observance. — In the year 1831 Abbott Cassotto of Subiaco initiated at Genoa a return to a stricter observance than was then in vogue, and several other monasteries in the Cassinese congregation, including Subiaco itself, desiring to unite in this reforming movement, Pius IX joined all such abbeys into one federation, which was called after its chief house, the “Province of Subiaco”. Before long monasteries in other countries adopted the same reformed observance, and by 1872 this union of monasteries was separated altogether from the original congregation and erected as a new and independent body under the title of the “Cassinese Congregation of Primitive Observance”, which was divided into provinces according to the different countries in which its houses were situated, with the Abbots of Subiaco as abbot-general of the whole federation. (a) The Italian Province dates from the original federation in 1851, and comprises ten monasteries with over two hundred religious. One of these is the Abbey of Monte Vergine, formerly the mother-house of an independent congregation, but which had to be re-established. Another was built at Ramsgate in 1858, when certain English monks at Subiaco obtained permission to make a foundation in England. The Isle of Thanet, hallowed by the memory of St. Augustine’s landing there twelve hundred and sixty years ago, was selected as the site of a church which Augustus Welby Pugin had built at Ramsgate was placed at their disposal. By 1860 a monastery had been erected and full conventual life established. It became a priory in 1880 and in 1896 an abbey. A course of time, in addition to serving several neighbouring missions, the community embarked on work in New Zealand, where Dom Edmund Luck, a Ramsgate monk, was made Bishop of Auckland. They also undertook work in Bengal in 1874, but this has since been relinquished to the secular clergy.

(c) The Belgian Province began in 1858 with the affiliation to Subiaco of the eleventh-century Abbey of Termonde. Affligem followed in 1870, and since then two new foundations have been made in Belgium, and quite recently missionary work has been undertaken in the Tropics. Some have been at Béth fixes in the Cameroons in 1874, and Béth fixes in the Cameroons in 1874, and

(d) The French Province, perhaps the most numerous and flourishing in the congregation, dates from 1859. Jean-Baptiste Murat, a parish priest and founder of a society of diocesan missionaries, became a monk at Subiaco. After his profession there in 1849, he returned to France with two companions and settled at Pierre-qui-Vire, a lonely spot amid the forests of Avalon, which a most austere form of Benedictine life was established. After his death in 1854, it had grown to be a highly centralised monastery, gradually taking the Cassinian P. O. congregation and became the mother-house of the French province. New foundations were made at Béth fixes (1859), Saint-Remi-sur-Loire, the ancient Fleury (1866), Oklahoma, Indian Territory, U. S. A., with an Apostolic vicariate attached (1874), Bello (1875), Kerbeneau (1888), Encalet (1891), Nîne-Diose, Argentina (1899), and Jerusalem (1901). In 1888 the French Government annexed Pierre-qui-Vire and expelled the community by force; some of them, however, were able to regain possession of their monastery. In 1892 they sought refuge in England, where in 1882 they acquired the site of the old Cistercian Abbey of Buckfast, in Devonshire. Here they are gradually rebuilding the abbey on its original foundations. The “Association Laws” of 190 3 again disconcerted the Cassinian congregation, the monks of Pierre-qui-Vire finding a temporary home in Belgium, those of Bello and Encalet going to Spain, and Kerbeneau to South Wales, whilst those of Béth fixes and Saint-Remi, being engaged in parochial work, obtained their own house and have remained in France.

(e) The Spanish Province dates from 1862, the year in which the ancient Abbey of Montserrat, founded in the ninth century, was affiliated to the Cassinese Congregation. The original Spanish congregation, which ceased to exist in 1835, is dealt with separately. Other old monasteries which had been restored, St. Clodio in 1880, Vitvaneira in 1883, and Samos in 1888, were, in 1893, joined with Montserrat to form the Spanish province. Since then new foundations have been made in Madrid (1890), Los Cabos (1900), and Solsona (1901), besides one at Manila (Philippines) in 1895. This province also includes the Abbey of New Nursia in Western Australia, founded in 1846 by two exiled French monks, and a community at Gubbio, who, after the general suppression in 1835 had taken up their residence at La Cava in Italy. Seeing no hope of a return
to Spain they had volunteered for foreign mission work and were sent to Australia in 1846. Their names were Joseph Serra and Rudesind Salvado. They settled amongst the aboriginal inhabitants at a place some seventy miles north of Perth, which they called New Nurnia in honour of St. Benedict's birthplace, and there worked as pioneers of civilization and culture, and these were their labours were crowned with success and their abbey gradually became the centre from which a number of outgoing mission stations were established. Dom Serra became coadjutor to the Bishop of Perth in 1844 and the establishment was made a province under the See of Victoria in 1849, though he still remained superior of New Nurnia, which was made an abbey in 1867 with a diocese attached. It had been aggregated to the Italian province of the congregation in 1864, but was transferred to the Spanish province on its formation in 1893. The monks own vast tracts of bushland around their monastery and they rear horses, sheep, and cattle on a large scale. The community includes a number of aboriginal converts among them.

(4) The Bursfeld Union.—Although more fully dealt with in a separate article, something must be said here about this congregation. Formed in 1430, it included all the principal monasteries of Germany, and at the height of its prosperity numbered one hundred and eighty-two houses, of which sixty were, in 1516, inhabited by women. It flourished until the Protestant Reformation, which with the religious wars that followed entirely obliterated it, and most of its monasteries passed into Lutheran hands. In 1528 the few remaining representatives of the congregation, having recovered a right to some of their possessions, offered seven monasteries to the newly reassembled English congregation, on condition that the task of getting rid of the Lutheran occupants should devolve upon the English monks, whilst the monasteries should be restored to the Bursfeld congregation in the event of its ever requiring them. No advantage was taken of this offer except with regard to two houses—Rinteln, which was used as a seminary for a few years by the English Benedictines, and Lambpring, which continued as an abbey of English monks from 1644 to 1892. No other monasteries of the Bursfeld Union were ever restored to Benedictine use. (See Bursfeld.)

(5) The Spanish Congregation.—There were originally two distinct congregations in Spain, that of the "Claustrales" or of Tarragona, formed in 1336, and that of Valladolid, organised in 1489. At the time of the general suppression in 1835, the former comprised sixteen abbeys, and the latter fifty, besides one or two priories in Peru and Mexico. Belonging to the Claustrales were Our Lady's Abbey, Villavieja, St. Stephen's, Rivas del Sil, founded in the sixteenth century, and St. Peter's, Cardena, which claimed to be the oldest in Spain. The Valladolid congregation had St. Benedict's, Valladolid (founded 1390), for its mother-house, and amongst its houses were St. Martin's, Compostella (ninth century); St. Benedict's, Sahagun, the largest in Spain; St. Vincent's, Salamanca, famous for its university; Our Lady of St. John; and others. Of the sixty-six monasteries suppressed in 1835, five have been restored, viz., Montserrat (1844), St. Olidio (1880), Villaveina (1883), and Samos (1888) by the Cassinese P. O. congregation, and Silos (1880) by the French monks from Ligueul. Of the rest sixty-six, thirteen are now occupied by other religious orders, two or three are used as barracks, two as prisons, one as a diocesan seminary, a few have been converted into municipal buildings or private residences, and others.

(6) The Portuguese Congregation.—In the sixteenth century the monasteries of Portugal were all held by Benedictine abbots and canons, and were in a very unsatisfactory state as regards discipline. A reform was initiated in 1558 in the Abbey of St. Thiro, monks from Spain being introduced for the purpose. After much difficulty the leaders succeeded in spreading their reform to two or three other houses, and these were united with the Benedictine congregation by Pius V in 1566. The first general chapter was held at Tibaes in 1568 and a president elected. The congregation eventually comprised all the monasteries of Portugal and continued in a flourishing state until the whole of the religious houses in the early part of the nineteenth century, when its existence came to an abrupt end. Only one Benedictine monastery in Portugal has since been restored—that of Cucujães, originally founded in 1091. Its resuscitation in 1875 came about in this way: to evade the law forbidding their reception of novices, the Brazilian Benedictines had sent some of their subjects to Rome for study and training in the monastery of St. Paul's, where they were professed at 1870. The Brazilian government refused them permission to return to that country, they settle in Portugal and obtained possession of the old monastery of Cucujães. After twenty years of somewhat isolated existence there, unable to re-establish the Portuguese congregation, the monastery of St. Paul's, which had received its first Benedictines from Portugal, became in turn the means of restoring the Benedictine life in that country.

(7) The Brazilian Congregation.—The first Benedictines to settle in Brazil came from Portugal in 1581. They established the following monasteries: St. Sebastian, Bahia (1581); Our Lady of Montserrat, Rio de Janeiro (1589); St. Benedict, Olinda (1640); the Assumption, São Paulo (1640); Our Lady's, Pará (1641); Our Lady's, Brotas (1650); Our Lady's, near Bahia (1658); and four priories dependent on São Paulo. All these remained subject to the Portuguese superiors until 1827, when in consequence of the separation of Brazil from the Kingdom of Portugal, an independent Brazilian congregation was erected by Leo XII, consisting of the above eleven houses, with the Abbot of Bahia as its president. A decree of the Brazilian government in 1855 forbade the further reception of novices, and the result was that when the empire came to an end in 1889, the entire congregation numbered twelve members, of whom eight were abbes of over seventy years of age. The abbot-general appealed for help to the pope, who applied to the Beuronese congregation for volunteers. In 1866 a small colony of Beuronese monks having spent some time in Portugal learning the language, set out for Brazil and took possession of the abandoned Abbey of Olinda. The divine office was resumed, mission work in the neighbourhood commenced, and a school of alumini (pupils destined for the monastic state) established. Two new abbeys have also been added to the congregation: Quixadá, founded in 1900, and St. André at Bruges (Belgium) in 1901, for the reception and training of subjects for Brazil. In 1903 Rio de Janeiro was made the mother-house of the congregation and the residence of the abbot-general.

(8) The Swiss Congregation.—The earliest monasteries in Switzerland were founded from Luxeuil by the disciples of Columbanus, amongst whom was St. Gall, who established the celebrated abbey after 607. After the death of St. Gall the Benedictine Rule had been accepted in most, if not in all of them. Some of these monasteries still exist and their communities can boast of an unbroken continuity from those early days. The various monasteries of Switzerland were formed by the Swiss congregation in 1602, through...
the efforts of Augustine, Abbot of Einsiedeln. The political disturbances at the end of the eighteenth century had extinguished the life of which five still continue and constitute the entire congregation at the present day. They are as follows: (a) Dissentis, founded in 612; plundered and destroyed by fire in 1799; restored 1800. (b) Einsiedeln, founded 634, the Swiss-American congregation has sprung. (c) Muri, founded 1027; suppressed 1841; but restored at Gries (Tyrol) 1845. (d) Engelberg, founded 1082. (e) Maria Stein, founded 1085; the community was disbanded in 1798, but reassembled six years later again and suppressed in 1875, when the members went to Delle in France; expelled thence in 1902, they moved to Dürenberg in Austria, and in 1906 settled at Bregenz. The sixth abbey was Rheinau, founded 775, which was suppressed in 1862; its monks, being unable to resume conventual life, were received into other monasteries of the congregation.

(9) The Congregation of St.-Vannes.—To counteract the evils resulting from the practice of bestowing ecclesiastical benefices upon secular persons in communes rife with dissension, Dom Didier de la Cour, Prior of the Abbey of St.-Vannes in Lorraine, inaugurated in 1598 a strict disciplinary reform with the full approbation of the commendatory abbott, the Bishop of Verdun. Other monasteries followed suit and the reform was introduced into all the houses of Alsace and Lorraine, as well as many in different parts of France. A congregation numbering about forty houses, under the presidency of the Prior of St.-Vannes, was formed and the Abbot of St.-Vannes took the title of Pope in 1604. On account of the difficulties arising from the direction of the French monasteries by a superior residing in another kingdom, a separate congregation—that of St.-Maur—was organized in 1821 for the monasteries in France, whilst that of St.-Vannes was restricted to those situated in Lorraine. The latter continued with undiminished fervour until suppressed by the French Revolution, but its privileges were handed on by Gregory XVI in 1837 to the newly founded Gallican congregation, which was declared to be its true successor, though not enjoying actual continuity with it.

(10) The Congregation of St.-Maur.—The French monasteries which had embraced the reform of St.-Vannes were in 1821 formed into a separate congregation, that of St.-Maur, the houses of which eventually numbered one hundred and eighty houses, i.e. all in France except those of the Clunyic congregation. The reform was introduced mainly through the instrumentality of Dom Laurent Bénard and quickly spread through France. Saint-Germain-des-Prés at Paris became the mother-house, and the superior of this abbey was always the president. The constitution was modelled on that of the congregation of St. Justina of Padua and it was a genuine return to the primitive austerity of conventual observance. It became chiefly celebrated for the literary achievements of its members, amongst whom it counted Mabillon, Montfaoucon, d’Achery, Martine, and many others equally famous for their erudition and industry. In 1790 the Revolution suppressed all its monasteries and the monks were dispersed. The superior general and two others suffered in the massacre at the Carmes, 2 September, 1792. Others sought safety in flight and were received into Lampsing, and abbeys of Switzerland and America. Number of the survivors endeavoured to restore their congregation at Solemes in 1817, but the attempt was not successful, and the congregation died out, leaving behind it a fame unrivalled in the annals of monastic history. (See Mauriste.

(11) The Congregation of St. Placid.—This congregation was also an outcome of the reform instituted at St.-Vannes. The Abbey of St. Placid was founded about 706 for canons regular but had became Benedictine in 817, was the first in the Low Countries to embrace the reform. To facilitate its introduction, monks were sent from St.-Vannes in 1618 to initiate the stricter observance of vows from within the community as well as from the diocese, the Bishop of Liège, the revival of discipline gradually gained the supremacy and before long other monasteries, including St. Denis in Hainsault, St. Adrian, Afflighem, St. Peter’s at Ghent, and others followed suit. These were formed into a new congregation (c. 1650) which was approved by Pope Urban VIII, and existed until the Revolution. Two abbeys of this congregation, Termode and Afflighem, have since been reformed and affiliated to the Belgian province of the Cistercian P. O. congregation.

(12) The Austrian Congregations.—For many centuries the monasteries of Austria maintained their individual independence and their abbots acquired positions of much political power and dignity, which, although diminished, are still such as are enjoyed by no other Benedictine abbeys. The example of reform set by the congregation of St. Justina in the fifteenth century exercised an influence upon the Austrian monasteries. Beginning about the year 1200 (reform about 1089), the reform was extended to other houses, and in 1400 a union of those that had adopted it was proposed. Sixteen abbeys were present at a meeting held in 1470, but for some reason this union of abbeys was never carried out. In 1630 it was proposed to unite this congregation, those of Bursfeld and Bavaria, and all the houses that were still independent, into one general federation, and a meeting was held at Ratisbon to discuss the scheme. The Swedish invasion, however, put an end to the plan and the only result was the formation of another small congregation of nine abbeys, with that of St. Peter’s, Salzburg, at its head. These two congregations, Melk and Salzburg, lasted until towards the end of the eighteenth century, when the Austrian constitution (1798) had been abrogated, and in 1808 the houses that had been suppressed were finally restored. The Emperor Francis I, however, restored several of them between the years 1809 and 1816, and in 1890 those that had survived, some twenty in number, were formed into two new congregations under the titles of the Immaculate Conception and St. Joseph, respectively. The former comprises ten houses under the presidency of the Abbot of Ottweig, and the latter seven, with the Abbot of Salzburg at its head. The congregation of the Immaculate Conception, in which are Kremsmünster, dating from 777, St. Paul’s in Carinthia, and the Scote monastery at Vienna, includes none of later date than the twelfth century; whilst in the province of St. Joseph there are Salzburg (before 700), Michaelbeuern (785), four others of the eleventh century, and only one of recent foundation, Innsbruck (1904).

(13) The Bavarian Congregation.—A reform initiated amongst the monks of Bavaria, based upon the Tridentine decrees, caused the erection of this congregation in 1684. It then consisted of eighteen houses which flourished until the general suppression at the beginning of the nineteenth century. Beginning in 1890, the pious King Ludwig I restored the abbeys of Mitten and Ottobeuern.
of Marseilles to Italy. The Fathers at Paris have been allowed to remain, in consideration of the important literary and historical work on which they are engaged. This congregation has endeavoured to carry on the work of the Maurists, and numbers many well-known writers amongst its members. The Abbot of Solesmes is the superior general, to which position he has been twice re-elected.

(16) The Congregation of Beuron.—This congregation was founded by Dom Maurus Wolter, who, whilst a seminary professor, was fired with the desire of restoring the Benedictine Order in Germany. He went to St. Paul’s, Rome, where he was joined by his two brothers, and all were professed in 1856, one dying soon after. The two survivors, Maurus and Placid, set out in 1860, with a sum of £40 and the pope’s blessing, to reconquer Germany for St. Benedict. In 1863, through the influence of the Princess Katharina von Hohenzollern, they obtained possession of the old Abbey of Beuron, near Sigmaringen, which had been originally founded in 777, but was destroyed in the tenth century by Hungarian invaders and later restored as a house of canons regular; it had been unoccupied since 1805. Dom Maurus became the first abbot of Beuron and superior of the congregation. In 1872 a colony was sent to Belgium to found the Abbey of Maredsous, of which Dom Placid was first abbot. The community of Beuron were banished in 1875 by the “May Laws” of the Prussian Government and found a temporary home in an old Savite monastery in the Tyrol. Whilst there their numbers increased sufficiently to make new foundations at Erdington, England, in 1876, Prague in 1880, and Seeka, Styria, in 1883. In 1887 Beuron was restored to them, and since then new houses have been established at Maria Laach, Germany (1892), Louvain, and Billerbeck, Belgium (1899 and 1901), and in 1905 the Portuguese monastery of Cujuíjás was added to the congregation. The founder died in 1900, and his brother, Dom Placid Wolter, succeeded him as Arch-abbot of Beuron.

(17) The American Cassinese Congregation.—Nothing very definite can be said with regard to the first Benedictines in North America. There were probably settlements amongst the Eskimo from Iceland, by way of Greenland, but these must have disap-
peared at an early date. In 1493 a monk from Montserrat accompanied Columbus on his voyage of discovery and became vicar-Apostolic of the West Indies, but his stay was short, and he returned to Spain. During the seventeenth and eighteenth centuries one or two English monks, and at least one of the Maurist congregation, worked on the American mission; and at the time of the French Revolution negotiations had been commenced by Bishop Carroll, first Bishop of Baltimore, for a settlement of English Benedictines in his diocese, which, however, came to nothing. The Benedictine Order was first established permanently in America by Dom Boniface Wimmer, of the Abbey of Metten, in Bavaria. A number of Bavarians had emigrated to America, and it was suggested that their spiritual wants in the new country should be attended to by Bavarian priests. Dom Wimmer and a few companions accordingly set out in 1846, and on their arrival in America they acquired the church, a house, and

Newark, New Jersey, founded 1857, with a school of 100 boys; Maryhill Abbey, Belmar, North Carolina, founded 1855, the abbot of which is also vicar-Apostolic of North Carolina; attached to the abbey are two colleges and a school, with over 200 students; St. Procopius's Abbey, Chicago, founded 1887, with a school of 50 boys and an orphanage attached; St. Leo's Abbey, Pasco County, Florida, founded 1889; this abbey has a dependent priory in Cuba; St. Bernard's Abbey, Cullman County, Alabama, founded 1891, with a school of over 100 boys; St. Peter's Priory, established in Illinois in 1882 and transferred to Muenster, Saskatchewan, N. W. T., in 1903; St. Martin's Priory, Lacey, the State of Washington, founded 1895.

(18) The Swiss American Congregation.—In 1854 two monks from Einsiedeln in Switzerland came to America and founded the monastery of St. Meinrad, in Indiana, serving the mission and conducting a small school for boys. It became a priory in 1865.

some land belonging to the small mission of St. Vincent, Beatty, Pennsylvania, which had been founded some time previously by a Franciscan missionary. Here they set to work, establishing conventual life, as far as was possible under the circumstances, and applying themselves assiduously to the work of the mission. Reinforced by more monks from Bavaria and their poverty relieved by some munificent donations, they accepted additional outlying missions and established a large college. In 1855 St. Vincent's, which had already founded two dependent priories, was made an abbey and the mother-house of a new congregation, Dom Wimmer being appointed first abbot and president. Besides St. Vincent's Arch-Abbey, the following foundations have been made: St. John's Abbey, Collegeville, Minnesota, founded 1856, mainly through the generosity of King Ludwig I of Bavaria; connected with the abbey is a large college for boys, with an attendance of over 300; St. Benedict's Abbey, Atchison, Kansas, founded 1857, said to possess the finest Benedictine church in America, built in the style of the Rhenish churches of the tenth and eleventh centuries; there is in connexion a school with 150 boys; St. Mary's Abbey, and in 1870 was made an abbey and the centre of the congregation which was canonically erected at the same time. The first abbot, Dom Martin Marty, became, in 1879, first Vicar Apostolic of Dakota, where he had some years previously inaugurated mission work amongst the Indians. The following new foundations were made: Conception Abbey, Conception, Missouri (1873), the abbey of this abbey being president of the congregation; New Subiaco Abbey, Spieleville, Arkansas (1875); St. Benedict's Abbey, Mount Angel, Oregon (1882); St. Joseph's Abbey, Covington, Louisiana (1889); St. Mary's Abbey, Richmond, North Dakota (1899); St. Gall's Priory, Devil's Lake (1893), the last two communities subject to the same abbot. To all these monasteries are attached numerous missions, in which the monks exercise the cure of souls. They also have several seminaries and colleges.

(19) The Congregation of St. Ottilien.—This congregation, specially established for the work of foreign missions, was commenced in 1884 in the Abbey of St. Ottilien, in Bavaria, under the title of the "Congregation of the Sacred Heart". It was not then Benedictine, but in 1897 was affiliated to the Cassinese
congregation and in 1904 formally incorporated into the Benedictine Order. The Abbey of St. Canisius is the superior general and the Beuronese Abbey of Seckau the apostolic visitor. This congregation has been largely recruited from the congregation of Beuron, and its tradition of culture, began to influence it. In 1901 it established a cell at Wipfeld, in Bavaria, and it has also ten mission stations in Central Africa, one of its members being Vicar Apostolic of Zanzibar. In 1905, by a bishop, two monks, two lay brothers, and two nuns, was consecrated, and the Faith at the hands of the Central African natives.

(20) Independent Abbeys.—Besides the above congregations there also are two independent abbeys, which belong to no congregation, but are immediately subject to the Holy See: (a) The Abbey of Port Augustus, Scotland. Founded in 1786, as a priory of the English congregation, mainly through the munificence of Lord Lovat, its first community was drawn from the other houses of that body. It was intended partly to continue the community of St. Denis and Adrian, originally of Lampsing, which had been dispersed since 1841, and of which there were only one or two surviving members; and partly to preserve continuity with the Scottish monasteries that had been destroyed or badly hamstrung by the parts of Germany and Austria, and of which there was, likewise, only one survivor—Father Anselm Robertson, professed at St. James’s, Ratisbon, in 1845. These monks took up residence with the new community and assisted in the clothing of the first novice received for Port Augustus. In order that its members might be exempt from the external mission work with which the English Benedictines are specially charged, the monastery was, in 1859, separated from the English community by the pope and was allowed to remain an independent abbey, directly subject to the pope. A monk of the Beuron congregation, Dom Leo Line, was at the same time appointed its first abbot. The Beuronese constitutions were adopted, but these have since been replaced by new constitutions. Of late years the community has undertaken the spiritual care of three parishes in the vicinity of the abbey.

(b) St. Anselm’s Abbey and International Benedictine College, Rome. This was originally founded in 1837 by the College of Benedictines of the Cassinese congregation but later transferred to the Cassinese congregation. It was also established in 1846; in 1846, it was revived as a small scale by the Abbot of St. Paul’s, and reconstituted in 1860 as a college and university for Benedictines from all parts of the world by Benedict XIV, who at his own expense erected the present building. In 1900 the abbey church was consecrated, in the presence of a great gathering of abbots from all over the world, by Cardinal Rampolla, acting as representative of the pope. St. Anselm’s is presided over by Abbot Hildebrand de Hemptinne (who is also Abbot of Maredsous) with the title of “Abbot Primate” of the whole order. It has power to grant degrees in theology, philosophy, and canon law, and both professional and lay students from all congregations of the order. There is accommodation for about one hundred students, but the full number in residence at one time has not yet exceeded sixty.

II. LAY BROTHERS, OBLATES, CONFRATRES, AND NUNNATUS

(1) Lay Brothers.—Up to the seventeenth century, there was no distinct order of Benedictine lay brothers, but there was a common rule for all members of the religious life who were not monks, priests, or deacons. In the eighteenth century, the rule was revised and a new one was made between the clerical and the lay brethren. All were on an equal footing in the community and at first comparatively few seem to have been advanced to the priesthood. St. Benedict himself was originally a lay brother, and it is said that he was not a priest. A monk not in sacred orders was always considered as eligible as a priest for any office in the community, even that of abbot, though for purposes of convenience some of the monks were usually ordained for the service of the altar; and until literary and scholastic work, which could only be undertaken by men of some education and culture, began to be undertaken, a place of manual labour, all shared alike in the daily round of religious and domestic duties. St. John Gualbert, the founder of Vallombrosa, was the first to introduce the system of lay brethren, by drawing a line of distinction between the monks who were clerics and those who were not. The latter were not allowed in choir and no vote in chapter; neither were they bound to the daily recitation of the breviary Office as were the choir monks. Lay brothers were encouraged to take up the more menial work of the monastery, and all those duties that involved intercourse with the outside world, in order that the choir brethren might be free to devote themselves entirely to prayer and other occupations proper to their clerical vocation. The system spread rapidly to all branches of the order and was imitated by almost every other religious order. At the present day there is hardly a congregation, Benedictine or otherwise, that has not its lay brethren, and even amongst numerous orders of nuns a similar distinction is observed, either between the choir nuns and those that are not or, between those that have a strict enclosure and those that are not so enclosed. The habit worn by the lay brethren is usually a modification of that of the choir monks, sometimes differing from it in colour as well as in shape; and the vows of the lay brethren are in most congregations only simple, or renewable periodically, in contrast with the solemn vows for life taken by the choir religious. In some communities at the present time the lay brothers equal and even outnumber the priests, especially in those, like Beuron or New Mers, where farming and agriculture are carried out on a large scale.

(2) Oblates.—This term was formerly applied to children offered by their parents in a solemn way to a monastery, a dedication by which they were considered to have embraced the monastic state. The custom led to many abuses in the Middle Ages, because oblates sometimes abandoned the religious life and returned to the world, whilst still looked upon as professed religious. The Church, therefore, in the twelfth century, forbade the admission of lay children in this way, and the term oblate has since been taken to mean persons, either lay or cleric, who voluntarily attach themselves to some monastery or order without taking the vows of religion. They wear the habit and share all the privileges and exercises of the community they join, but they retain dominion over their property and are free to leave at any time. They usually make a promise of obedience to the superior, which binds them as long as they remain in the monastery, but it only partakes of the nature of a mutual agreement and has none of the properties of a vow or solemn contract.

(3) Confratres.—A custom sprang up in the Middle Ages of uniting lay people to a religious community by formal aggregation, through which they participated in all the prayers and good works of the monks, and though living in the world, they could always feel that they were connected in a special way with some religious house or order. There seem to have been Benedictine confratres as early as the ninth century. The practice was widely adopted, and most every other order and was developed by the mendicants in the thirteenth century into what are now called “third orders”. It was peculiar to Benedictine confratres that they were always aggregated to the particular monastery of the fatherhouse and not to the whole order in general, as is the case with others. The Benedictines have numbered...
kings and emperors and many distinguished persons amongst their confrères, and there is hardly a monastery of the present day which has not some lay people connected with it by this spiritual bond of union.

(4) Nuns.—Nothing very definite can be said as to the first nuns living under the Rule of St. Benedict. St. Gregory the Great certainly tells us that St. Benedict’s sister, Scholastica, presided over such a community of religious women who were established in a monastery situated about five miles from his Abbey of Monte Cassino; but whether that was merely an isolated instance, or whether it may be legitimately regarded as the foundation of the female department of the order, is at least an open question. We do not even know what rule these nuns followed, though we may conjecture that they were under St. Benedict’s spiritual direction and that whatever rule he gave them probably differed but little, except perhaps in minor details, from that for monks which has come down to us bearing his name. It seems tolerably certain, at any rate, that as St. Benedict’s Rule began to be diffused abroad, women as well as men formed themselves into communities in order to live a religious life according to its principles and a few others of the Benedictine monks went there also; we find monasteries being established for nuns. Nunneries were founded in Gaul by Sts. Cesaris and Aurelian of Arles, St. Martin of Tours, and St. Colombanus of Luxeuil, and up to the sixth century the rules for nuns in most general use were those of St. Cesaris and St. Colombanus, portions of which are still extant. These were, however, eventually supplanted by that of St. Agnès of Montmartre, and a number of the earliest nunneries to make the change were Poitiers, Chelles, Remiremont, and Faremoutier. Mabillon assigns the beginning of the change to the year 620, though more probably the Benedictine Rule was not received in its entirety at once. The Duke of the Franks, only combined with the other rules then in force. Remiremont became for women what Luxeuil was for men, the centre from which sprang a numerous spiritual family, and though later on it was converted into a convent of noble cannonesses, instead of nuns properly so called, a modified form of the Benedictine Rule was still observed there. St. Benedict’s Rule was widely propagated by Charlemagne and his son, Louis the Pious, and the Council of Aix-la-Chapelle in 817 enforced its general observance in all the nunneries of the empire. The Abbey of Notre Dame de Ronceray, at Angers, founded in 1028 by Fulke, Count of Anjou, was one of the most influential convents in France in the Middle Ages, and had under its jurisdiction a large number of dependent priories.

The earliest convents for women in England were at Folkestone, founded 630, and St. Mildred’s in Thanet, established 670, and it is probable that under the influence of the successors of St. Augustine’s monks at Canterbury and elsewhere, these nunneries observed the Benedictine Rule; but this is far from being certain. Other important Anglo-Saxon convents were: Ely, founded by St. Etheldreda in 673, Barking (673), Winborne (713), Wilton (800), Ramsey, Hants (867), and Amesbury (980). In Northumbria, Whitby (657) and Coldingham (673) were the chief houses of nuns. St. Hilda was the most celebrated of the abbesses of Whitby, and it was at Whitby that the synod of 664, at which the King of Northumbria, Oswiu, defined the rules of the English Church, was held. Most of these convents were destroyed by Danish invaders during the ninth and tenth centuries, but some were subsequently restored and many others were founded in England after the Norman conquest.

The first nuns in Germany came from England in the eighth century, having been brought over by St. Boniface to assist him in his work of conversion and to provide a means of education for their own sex amongst the newly evangelized Teutonic races. Sts. Lioba, Thecla, and Winburga were the earliest of these pioneers, and for them and their companions, who were chiefly from Wimborne, St. Boniface established many convents throughout the countries in which he preached. In other parts of Europe nunneries sprang up as rapidly as the abbeys for men, and in the Middle Ages they were almost, if not quite, as numerous. In later medieval times the names of St. Gertrude, called the “Great”, and her sister St. Mechtilde, who flourished in the thirteenth century, are among the most famous of the Benedictine nuns of Germany. In Italy the convents seem to have been very numerous during the Middle Ages. In the thirteenth century were founded in which the reform of Vallombrosa was adopted, but none of these now exist. There were also convents belonging to the reforms of Camaldoli and Mont Olivet, of which a few still survive.

Except in the Bursfeld Union, which included houses of both sexes, and in the Cistercian reform, where the nuns were always under the Abbots of Clairvaux, and a few others of small standing, the congregational system was never applied to the houses of women in an organized way. The convents were generally either under the exclusive direction of some particular abbey, through the influence of which they had been established, or else, especially when founded by lay people, they were subject to the jurisdiction of the bishop of the diocese in which they were situated. These two conditions of existence have survived to the present day; there are also a few which, having first existed over two hundred and fifty to the second category.

Early in the twelfth century France was the scene of a somewhat remarkable phase in the history of the Benedictine nuns. Robert of Arbrissel, formerly Abbot of Fontenay, a chapter of Canons, in 1099 taught that the Benedictine monks should be always be chosen from the outside world, as such a one would have more practical knowledge of affairs and capacity for administration than one trained in the cloister. Many noble ladies and royal princesses of France are reckoned among the abbesses of Fontevrault. (See Fontevrault.)

Excepting at Fontevrault the nuns seem at first not to have been strictly enclosed, as now, but were free to leave the cloister whenever some special duty occasion might demand it, as in the case of the English nuns who were held in Germany for active missionary work. This freedom with regard to enclosure gave rise, in course of time,
...to grave scandals, and the Councils of Constance (1414), Basel (1431), and Trent (1545), amongst others, regulated that all the professed and observant orders of nuns should observe strict enclosure, and this has continued to the present time as the normal rule of a Benedictine convent.

The Protestant Reformation in the sixteenth century affected the nuns as well as the monks. Throughout north-western Europe the Benedictine institutions were obliterated. In England the convents were suppressed and the nunns turned adrift. In Germany, Denmark, and Scandinavia the Lutherans acquired most of the nunneries and ejected their inmates. The wars of religion in France also had a disastrous effect upon the convents of that country, already much ensnared by the evil consequences of the prevailing practice of commendam. The last few centuries, however, have witnessed a widespread revival of the Benedictine life for nuns as well as for men. In France, especially, during the seventeenth and eighteenth centuries, there sprang up several new congregations of Benedictine nuns, or reforms were instituted among those already existing. These were not strictly congregations in the technical sense, but rather unions or groups of houses which adopted a uniform observance, though the individual convents still remained for the most part subject to their respective bishops. Mention may be made of the reforms of Montmartre, Beauvais, Val-de-Grace, and Donat, and those of the Perpetual Adoration founded at Paris in 1654 and Valdose in 1701. The French Revolution suppressed all these convents, but many have since been restored and fresh foundations added to their number.

The first convent for English clergy in the Reformation was founded at Brussels in 1558; and another was established at Cambrai in 1623 under the direction of the English Benedictine Fathers of Douai, from which a filiation was made at Paris in 1652. At Ghent in 1624 a convent was founded under Jesuit guidance, and established daughter-houses at Boulogne in 1652, Ypres in 1665, and Dunkirk in 1682. All these communities, except that of Ypres, were expelled at the French Revolution and escaped to England. That of Cambrai is now at Stanbrook and still remains a member of the English congregation under the jurisdiction of its abbot-president. The Brussels community is now at East Bergholt, and the Paris nuns at Colwich, whence an offshoot has been planted at Atherstone (1842). Those of Ghent are now at Oulton; Boulmer, having combined, are settled at Teignmouth. The convent of Ypres alone remains at the place of its original foundation, having survived the tumultuous times of the Revolution. There are also small Benedictine convents of more recent date: at Rocheter, St. Mary's Minster (Thanet), Ventnor, Dumfries, and Tenby, and one at Princeton, originally a French community founded at Montargis in 1630, but driven to England in 1792, and now almost exclusively English. The nunns of Stanbrook, Oulton, Princeton, Ventnor, and Dumfries conduct boarding-schools for the higher education of young ladies, and those of Teignmouth, Colwich, Atherstone, and Dunmow have undertaken the work of perpetual adoration.

In Austria many of the medieval convents have remained undisturbed, and likewise a few in Switzerland. In Belgium there are seven dating from the seventeenth century, and in Germany fourteen, established mostly during the last half century. In Italy, where at one time they were very numerous, there still remain, in spite of recent suppressions, eighty-five Benedictine convents dating from the Middle Ages, with practices of commendam, and has three convents of modern date, and Poland one, at Warsaw, founded in 1887. The convents of Spain numbered thirty at the time of the suppressions of 1835. The nuns were then robbed of all their possessions, but managed to preserve their corporate existence, though in great poverty and with reduced numbers. Ten of the old convents have since been restored, and eleven new ones founded. It is a peculiarity of the Spanish convents that their abbesses, who are elected triennially, receive no solemn blessing, as elsewhere, nor do they make use of any abbatial insignia.

Benedictine life in America may be said to be in a flourishing condition. There are thirty-four convents with nearly two thousand nuns, all of which have been founded since 1852; the last and the first establishment was at St. Mary's, Pennsylvania, where Abbot Wimmer settled some German nuns from Eichstätt in 1852; this is still one of the most important convents in the United States, and from it many filiations have been made. The first Benedictine convent at St. Joseph, Minnesota, founded in 1857, is the largest Benedictine convent in America. Other important houses are at Allegheny (Pennsylvania), Atchison (Kansas), Chicago (2), Covington (Kentucky), Duluth (Minnesota), La Crosse (Wisconsin), Ferdinand (Indiana), Mount Angel (Oregon), Newark (New Jersey), New Orleans (Louisiana), Shaker Creek (Arkansas), and Yankton (South Dakota). The nuns are chiefly occupied with the work of education, which comprises elementary schools as well as boarding schools for secondary education. All the American convents are subject to the bishops of their respective dioceses.

III. Influence and Work of the Order.—The influence exercised by the Order of St. Benedict has manifested itself in three principal ways: (1) the conversion of the Teutonic races and other missionary works; (2) the civilization of northwestern Europe; (3) educational work and the cultivation of literature and the arts, the forming of libraries, etc.

(1) Missionary Work of the Order.—At the time of St. Benedict's death (c. 543) the only countries of Western Europe which had been Christianized were Italy, Spain, Gaul, and parts of the British Isles. The remaining countries all received the Gospel during the next few centuries, either wholly or partially through the preaching of the Benedictines. Beginning with St. Augustine's arrival in England in 597, the missionary work of the order can be easily traced. The companions of St. Augustine, who is usually styled the "Apostle of the English", planted the Faith anew throughout the country whence it had been driven out nearly two centuries previously by the Anglo-Saxons and other heathen invaders. St. Augustine and St. Lawrence at Canterbury, St. Eata at Minster, St. Paulinus at York were Benedictine pioneers, and their labours were afterwards supplemented by other monks who, though not strictly Benedictine, were at least assisted by the black monks in establishing the Faith. Thus St. Edmund established-Warboys, St. Chad the Midlands, and St. Felix East Anglia,
whilst the Celtic monks from Iona settled at Lindisfarne, whence the work of St. Paulinus in Northumbria was continued by St. Aidan, St. Cuthbert, and many others. In 716 England sent forth Winfrid, afterwards called Boniface, a Benedictine monk trained at Exeter, who preached the faith mainly in Frisia, Thuringia, Thuringia, and Bavaria, and, finally, being made Archbishop of Ments (Mainz), became the Apostle of central Germany. At Fulda he placed a Bavarian convert named Sturm at the head of a monastery he founded there in 744, from which the monastery of Prussia and what is now Austria. From Corbie, in Picardy, one of the most famous monasteries in France, St. Anarj set out in 827 for Denmark, Sweden, and Norway, in each of which countries he founded many monasteries and firmly planted the Benedictine Rule. These in turn spread the Faith and monasticism through Iceland and Greenland. For a short time Friesland was the scene of the labours of St. Wilfrid during a temporal banishment from England in 676, and the work he began there was continued and extended to Holland by the English monks Willibrord and Swithbert. Christianity was first preached in Bavaria by Eustace and Aglais, monks from Luxeuil, early in the seventh century; their work was continued by St. Reitan, who founded the monastery of St. Emmeram at Salzburg, and firmly established by St. Boniface about 739. So rapidly did the Faith spread in this country that between the years 740 and 780 no less than twenty-nine Benedictine abbeys were founded there.

Another phase of Benedictine influence may be found in the work of those monks who, from the sixth to the twelfth century, so frequently acted as the chosen counsellors of kings, and whose wise advice and counsel the state had much to do with the political history of most of the countries of Europe during that period.

In more recent times the missionary spirit has manifested itself anew amongst the Benedictines. During the penal times the Catholic Church in England was kept alive in great measure by the Benedictine missionaries from abroad, not a few of whom shed their blood for the Faith. Still more recently Australia has been indebted to the order for both its Catholicity and its hierarchy. The English congregation sent some of its earliest missionaries, as well as its first prelates, in the persons of Archbishop Polding, Archbishop Ullathorne, and others during the first half of the nineteenth century. Later on, the Spanish monks, DD. Serra and Salvado, arrived and successfully evangelized the western portion of the continent from New Nurnia as a centre. Mention must also be made of the numerous missions amongst the North American Indians by the monks of the Swiss-American congregation from St. Meinrad's abbey, Indiana; and those of the American-Cassinese congregation in various parts of the United States, from St. Vincent's Arch-Abbey, Beatty, Pennsylvania. Apostolic work was also done by the English Fathers of the Cassinese Congregation amongst the Hindus in Western Bengal, and amongst the Moors in New Zealand; and French monks of the same congregation laboured in the Apostolic vicariate of the Indian Territory, U. S. A., from the head-quarters at the Sacred Heart Abbey, Oklahoma. In Canada the Syro-Cassinese Congregation, taken (1883) missionary work amongst the natives in the Diocese of Kandy, the bishop of which is a member of the order; and still more recently the congregation of St. Ottillien, expressly established to preach the Gospel amongst the Jews, has established missions amongst the native tribes of Central Africa, where the seeds of the Faith have already been watered by the blood of its first martyrs.

(2) Civilizing Influence of the Order.—Christianity and civilization go hand in hand, and hence we naturally look to North-Western Europe for the fruits of the labours of the Benedictine missionaries. St. Benedict himself began by converting and civilizing the barbarians who overrun Italy in the sixth century, the best of whom came and learned the Gospel principles at Monte Cassino. Previous to the institution of monasticism in his time, man had been consumed with slavery and servitude, but St. Benedict and his followers taught in the West that lesson of free labour which had first been inculcated by the fathers of the desert. Wherever the monks went, those who were not employed in preaching felled the ground; thus whilst some sowed in pegan souls the seeds of the Christian Faith, others transformed barren wastes and virgin forests into fruitful fields and verdant meadows. This principle of labour was a powerful instrument in the hands of the monastic pioneers, for it attracted to them the common people who learned from the monasteries thus reared as from object lessons the secrets of organized work, agriculture, the arts and sciences, and the principles of true government. Neander (Collect. Hist.) points out that the monks from the labours of the monks were employed ungrudgingly for the relief of the distressed, and that in times of famine many thousands were saved from starvation by the charitable foresight of the monks. The accounts of the beginnings of abbey life after abbey present the same features with remarkable regularity. Not only were the marshes drained, sterile plains rendered fertile, and wild beasts tamed or driven away, but the bandits and outlaws who infested many of the great highways and forests had to stay either within the limits of the monastery or to find their evil ways by the industrious and unselfish monks. Around many of the greater monasteries towns grew up which have since become famous in history; Monte Cassino in Italy and Peterborough and St. Alban's in England are examples. Large-hearted abbots, eager to advance the interests of their poorer neighbours, often voluntarily expended considerable annual sums on the building and repairing of bridges, the making of roads, &c., and everywhere exercised a benign influence directed only towards improving the condition of the social and material life of the people amongst whom they found themselves. This spirit, so prevalent during the ages of faith, has been successfully emulated by the monks of later times, of which no more striking instances in our own day can be cited than the wonderful influence for good amongst the aboriginal inhabitants of Western Australia possessed by the Spanish Benedictines of New Nurnia, and the great industrial and agricultural work done amongst the native tribes of South Africa by the Trappists at Mariamhill and their numerous mission stations in Natal.

(3) Educational Work and the Cultivation of Literature.—The work of education and the cultivation of literature have always been looked upon as belonging by right to the Benedictine Order, and in early days of the order it was the custom to receive children in the monasteries that they might be educated by the monks. At first such children were always destined for the monastic state, and St. Benedict legislated in his Rule for their solemn dedication by their parents to this service. St. Maur are examples from St. Benedict's own day and amongst others may be instanced the English saint, Bede, who entered the monastery of Jarrow in his seventh year. The education of these children has been the sign mission of the order, and the great monastic schools. Although St. Benedict urged upon his monks the duty of systematic read-
ing, it was Cassiodorus, the quondam minister of the Gothic kings, who about the year 538 gave the first real impetus to monastic learning at Viviera (Vivar-
ium) in Calabria. He made his monastery a Christian academy, collected a great number of manuscripts, and produced books of instruction for the monastic discip-
les. The liberal arts and the study of the Holy Scriptures were given great attention, and a monastic school was established which became the pattern after which many others were subsequently modeled.

In England St. Augustine and his monks opened schools wherever they settled. Up to that time the tradition of the cloister had been opposed to the study of profane literature, but St. Augustine introduced the classics into the English schools, and St. The-
dore, who became Archbishop of Canterbury in 608, added still further developments. St. Benedict Biscop, who returned to England with Archbishop Theodore after some years abroad, presided over his school at Canterbury for two years and then, going north, transplanted the new educational system to Wearmouth and Jarrow, whence it spread to Archbishop Egbert’s school at York, which was one of the most famous in England in the eighth century. There Alcuin taught the seven sciences of the “trivium” which have been written, arithmetic, gram-
mar, and logic, arithmetic, music, geometry, and astronomy. (See ARTS, THE SEVEN LIBERAL.) Later on King Alfred, St. Dunstan, and St. Ethel-
wold did much to foster learning in England, sub-
stituting monks for secular canons in several cathed-
ral and greatly improving the monastic schools. Ramsey Abbey, founded by St. Oswald of Worcester, proved the reputation of being the most learned of the English monasteries. Gloucester, Abingdon, St. Albans, and Westminster were also famous in their day.

In France Charlemagne inaugurated a great re-
vival in the world of letters and stimulated the monks of his empire to study, as an essential of their state. To further this end he brought over from England in 782 Alcuin and several of the best scholars of York, to whom he entrusted the direction of the academy established at the royal court, as well as various other schools which he caused to be started in different parts of the empire. Mabillon gives a list of twenty-
seven returning schools in France in the time of Charlemagne (Acta Sanctorum O. S. B., see IV, pref., 184). Those of Paris, Tours, and Lyons eventually developed into universities. In Nor-
mandy, later on, Bec became a great scholastic centre under Lanfranc and St. Anselm, and through them gave a fresh impetus to the English schools. Cluny also took its share in the work and became in turn the custodian and fosterer of learning in France.

In Germany St. Boniface opened a school in every monastery he founded, not only for the younger monks, but also for the benefit of outside scholars. Early in the ninth century two monks of Fulda were sent to Tours by their abbot to study under Alcuin, and through them the revival of learning gradually spread to other houses. One of the two, Rabanus Maurus, became later abbot of Fulda, the other, Becsan sekundus-
cus or head of the school there, later abbot, and finally Archbishop of Mainz. He was the author of many books, one of which, his “De Institutione Clericorum”, is a valuable treatise on the faith and rule of life. In many monasteries of the thirteenth century the study of the Holy Scriptures was reserved for the select few. In 1305, St. Boniface opened a hall and sent some of his monks there to study for degrees.

Besides being the chief educational centres during the Middle Ages, the monasteries were, moreover, the workshops where precious manuscripts were collected, preserved, and multiplied. To the monas-
tic transcribers the world is indebted for most of its ancient literature, not only the Scriptures and the writings of the Fathers, but those of the classical authors also. (Numerous examples are cited in Newman, Essay on the Development of Christian Scholarship, 215.) The monastic scriptoria were the book-
manufactories before the invention of printing, and rare MSS. were often circulated amongst the monas-
teries, each one transcribing copies before passing them on to the original. The desire to reproduce the original was still further increased by the copying was often merely mechanical and no sign of real scholarship, and the pride taken by the monast:
ery in the number and beauty of its MSS. sometimes rather that of the collector than of the scholar, yet the result is the same as far as postrity is concerned. The Indian library founded at the Lhasa of the ancient writings which, but for their industry, would undoubtedly have been lost to us. The copy-
BENEDICTINE

BENEDICTINE

8th of Fontanelle, Rheims, and Corbie were especially noted for the beauty of their manuscript, and the number of different MSS. transcribed by some of their monks was often very large.

Full particulars are given by Ziegelmüller (Hist. Lit. O. S. B., I) of the most important medieval Benedictine Libraries. The following are some of the MSS. among them: England: Canterbury, founded by St. Augustine, enlarged by Lanfranc and St. Anselm, containing, according to a catalogue of the thirteenth century, 698 volumes; Durham, catalogues printed by the Surtees Society (VI, 1836); Whitby, catalogue printed in 1789; still existing; Wearmouth; Croyland, burnt in 1091, containing 700 volumes; Peterborough. In France: Fleury, MSS. deposited in the town library of Orleans, 1793; Corbie, 400 of the most valuable MSS., removed to Saint-Germain-des-Pres, Paris, 1639, the remainder, partly to the National Library, Paris (1794), and partly to the town library of Amiens; Saint-Germain-des-Prés; Cluny, MSS. dispersed by the Huguenots, except a few which were destroyed at the Revolution; Auxerre, Dijon, Montserrat, the majority of the MSS. still existing; Valladolid; Salamanca; Silos, library still existing; Madrid. In Switzerland: Reichenau, destroyed in the seventeenth century; St. Gall, dating from 816, still existing; Einsiedeln, still existing. In Germany: Fulda, dated 816; dedicated to Charlemagne and Rabanus Maurus, with 400 copies under Abbot Sturm, and containing, in 1561, 774 volumes; New Corbie, MSS. removed to the University of Marburg in 1811; Hirsau, dating from 837; St. Blaise. In Austria and Bavaria: Salzburg, founded in the sixteenth century, and containing 60,000 volumes; Kremmenstuber, of the eleventh century, with 50,000 volumes; Admont, the eleventh century, 80,000 volumes; Melk, the eleventh century, 60,000 volumes; Lambach, the eleventh century; Garsten; Muri. In Italy: Monte Cassino, three times destroyed, by the Lombards in the sixth century, by the Saracens, and by fire in the ninth, but each time restored and still existing; Bobbio, famous for its palimpsests, of which a tenth-century catalogue is now in the Ambrosian Library, Milan, printed by Muratori (Antiq. Ital. Med. Aev., III); Pomposa, with an eleventh-century catalogue printed by Montfaucon (Dianium Italicam, c. xxii).

Besides preserving the writings of the ancient authors who wrote into the chronicles of their day, and much of the history of the Middle Ages was written in the cloister. English history is especially fortunate in this respect, the monastic chroniclers including St. Bede, Ordericus Vitalis, William of Malmesbury, Florence of Worcester, Simeon of Durham, Matthew Paris, and Eadmer of Canterbury. The rise of the scholastics, for the most part outside the Benedictine Order, in later medieval times, seems to have checked, or at any rate relegated to the background, both the literary and the educational activity of the black monks, whilst the introduction of the art of printing rendered superfluous the copying of MSS. by hand; at the same time it is worth noticing that many of the earliest printing presses were set up in Benedictine cloisters, e. g. by Caesarius at Westminster, and by some authorities the invention of movable types is also ascribed to the sons of St. Benedict.

The most notable revival of learning in post-Reformation times was that effected by the congregration of the Maur in France in the sixteenth century. Diligent and profound study in all departments of ecclesiastical literature was one of the professed objects of this reform, and a congregation that produced such men of letters as Mabillon, Montfaucon, Aubery, M Mord, Garnier, Ruinart, Martène, Sainte-Marthe, and Durand needs no further eulogy than a reference to their literary achievements. Their editions of the Greek and Latin Fathers and their numerous historical, theological, archaeological, and critical works are sufficient evidence of their industry. They were not less successful in the conduct of the schools they established, of which those at Sorèze, Beaumur, Auxerre, Beaumont-le-Roger, Angley were the most important. (See MAURISTS.)

The arts, sciences, and utilitarian crafts also found a home in the Benedictine cloister from the earliest times. The monks of St. Gall and Monte Cassino excelled in inlay, embroidery, mosaic work, and the latter community are credited with having invented the art of painting on glass. A contemporary life of St. Dunstan states that he was famous for his "writing, painting, moulting in wax, carving of wood and bone, and for work in gold, silver, iron, and brass". Richard of Wallingford at St. Alban's and Peter Lightfoot at Glastonbury were well-known fourteenth-century clockmakers; a clock by the latter, formerly in Wells cathedral, is still to be seen in the South Kensington Museum.

In modern times the monks of Beuron have established a school of art where painting and design, especially in the form of polychromatic decoration, have been brought to a high stage of perfection. The printing press of Solesmes and Ligugé (both institutes established by the Lateran decree of 1833) has produced much excellent typographical work, whilst the study and restoration of the traditional plainchant of the Church in the same monasteries, under D. Pothier and Mocquereau, is of world-wide reputation. Embroidery and vestment-making are crafts in which many communities of nuns excel, and others, like Stanbrook, maintain a printing office with considerable success.

IV. PRESENT CONDITION OF THE ORDER.-Development and Reform.-A brief sketch of the constitution and government of the order is necessary for a proper understanding of its present organization. According to St. Benedict's idea, each monastery constituted a separate, independent, autonomous family, the members of which elected their own superior. The abbots, therefore, of the different houses were equal in rank, but each was the actual head of his own community and held his office for life. The necessities of the times, however, the need for mutual support, the establishment of daughter-monasteries, and possibly the ambition of the superiors, all combined in course of time to bring about a modification of this ideal. Although foreshadowed by the Aachen (Aix-la-Chapelle) capitula of 817 under St. Benedict of Aniane, the actual results of which died out with their originator, the first real departure from the Benedictine ideal, subjecting the superiors of different houses to one central authority, was made by Cluny in the tenth century. The plan of the Cluniac congregation was that of one grand central monastery with a number of dependents, the superiors of which were subordinate to the Abbot of Cluny and held office only during his pleasure; the autonomy of the individual communities was destroyed so far, even, that no monk could be professed in any house except by permission of the Abbot of Cluny, and all were obliged usually to spend some years at Cluny itself. But notwithstanding the extent of this departure from Benedictine tradition in the seventh century, the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac See of the Congregation of the Cluniac
The example of Cluny produced imitators and many new unions of monasteries subject to a central abbey resulted. The Lateran Council of 1215, perceiving the good points of the system as well as its dangers, set itself to strike the mean between the two. The risks of an ever-widening breach between the original abbot and a chapter of the monasteries which had adopted the Cluniac ideas, were to be minimized, whilst at the same time uniformity of observance and the mutual strength resulting therefrom, were to be fostered. The council decreed that the same order of clergy should be assigned to monasteries, whether they were attached to a chapter or to an abbot. The attempt was made towards carrying out the proposals of 1215. Meanwhile certain Italian reforms had produced a number of independent congregations outside the order, differing from each other in organization and constitution. The departures from Benedictine principles was carried a stage further. Even in the Cluniac congregation the power of the Abbot of Cluny was, after the twelfth century, somewhat curtailed by the institution of chapters and definitory. The Sylvesterines (1231) preserved the supremacy of abbots and recognized the advantages of a representative chapter, though its chief superior was something more than a mere primus inter parres. The Celestines (1274) adopted a system of two superiors in each house. The Ottovian (1319) marked the further step of development by instituting an abbott-general with jurisdiction over all the other abbots as well as their communities. The general chapter nominated the officials of all the houses; the monks belonged to no one monastery in particular, but to the whole congregation; and by thus destroying all community rights, and placing all power in the hands of a small committee, the Ottovian congregation approached the organization of all the lesser Dominicans and Jesuits, with their highly centralized systems of government. The congregation of St. Justina of Padua was modelled on similar lines, though afterwards considerably modified, and some centuries later St. Vanne and St. Maur followed in its wake. The Spanish congregation of Valladolid, too, with its abbot-general, and with superiors who were not perpetual and chosen by the general chapter, must be classed with those that represent the line of departure from earlier Benedictine tradition; as must also the resuscitated English congregation of the seventeenth century, which inherited its constitution from that of Spain. In these two latter congregations, however, there were some modifications from the original ideal less marked than in those previously enumerated.

On the other side, as representing those that preserved the traditional autonomy and family spirit in the individual houses, we have the Bursfeld Union which, in the fifteenth century, made hundreds of monasteries in Germany subject to the provisions of the Bull "Benedicta". The Austrian, Bavarian, and Swiss congregations of the same period followed out the same idea, as do also almost all of the more modern congregations, and by the levelling up of their order to the status of government have been revived in the English congregation. In this way the true Benedictine ideal was restored, whilst by means of general chapters, at which every monastery of the congregation was represented, and by the periodical visitations made by the presidents or others elected for that duty, uniform observance and regular discipline were preserved. The presidents were elected by the chapter for a term of years. The office was merely presidential, not that of a superior general or abbas abbatum.

Present System of Government.—All the congregations of more recent formation have been constituted, in the same manner, by constitutions that represent the normal and traditional form of government in the order. Uniformity in the various congregations is further secured by what are called Constitutions. These are a series of declarations on the holy Rule, defining its interpretation and application, to which are added other regulations on points of discipline and practice not provided for by St. Benedict. The constitutions must be approved at Rome, after which they have binding force upon the congregation for which they are intended. The capitula of Aachen and the Conciliabulum Benedicti were the earliest examples of such constitutions. Amongst others may be mentioned the "Statutes" of Lanfranc, the "Discipline of Farfa", the "Ordo" of Bernard of Cluny, and the "Constitutiones" of St. William of Herschbach. The last is based on the constitution of Farfa, as shown by Hergott in "Vetus Disciplina Monastica", Paris, 1726.) Since the thirteenth century every congregation has had its own set of constitutions, in which the principles of the Rule are adapted to the particular work of the congregation to which they apply. Each congregation is composed of a certain number of monasteries, the abbeys of which, with other officials and elected representatives, form the general chapter, which exercises legislative and executive authority over the whole body. The power possessed by it is strictly limited and defined in the constitutions. The meetings of the chapter are held usually every two, three, or four years and are presided over by one of the members elected to that office by the rest. Whilst the office of abbot is usually for life, that of the president is generally only for a term of years and the person holding it is not in all cases eligible for continuous re-election. Each president, either by himself or in conjunction with one or more specially elected visitors, holds canonical jurisdiction in the particular community, by this means the chapter is kept informed of the spiritual and temporal condition of each monastery, and discipline is maintained according to the constitutions.

The Abbot Primate.—In order the better to bind together the various congregations that constitute the order at the present day, Pope Leo XIII, in 1893, appointed a nominal head over the whole federation, with the title of Abbot Primate. The traditional autonomy of each congregation, and still further of each house, is interfered with in the least possible degree by this appointment, for, as the title itself indicates, the office is in its nature different from that of the general of an order. Apart from matters explicitly devolved upon by the constitution with regard to the other abbots is to be understood rather from the analogy of a primate in a hierarchy than from that of the general of an order like the Dominicans or Jesuits.

Methods of Recruiting.—The recruiting of the various monasteries of the order differs according to the nature and scope of the influence exerted by each individual house. Those that have schools attached to them naturally draw their members more or less from these schools. The English congregation is recruited very largely from the clergy attending its monasteries; and other congregations are similarly recruited. Some educate and train in their
monasteries a number of alumni, or pupils provisionally intended for the monastic state, who though not in any way bound to do so, if showing any promise of vocation, are encouraged to receive the habit on reaching the canonical age.

A candidate for admission is usually kept as a postulant for at least some weeks in order that the community seeks to join may be a suitable person to be admitted to the probationary stage. Having been accepted as such, he is "clothed" as a novices, receiving the religious habit and a religious name, and being placed under the care of the novice-master. According to the Rule he is to be trained and tested during his period of noviceship, and canon law requires that for the most part the novice is to be kept apart from the rest of the community. For this reason the novices' quarters are generally placed, if possible, in a different part of the monastery from those occupied by the professed monks. The canonical novitiate lasts one year, at the end of which, if satisfactory, the novice may be admitted to simple vows, and at the conclusion of another three years, unless rejected for grave reasons, be admitted to solemn vows of "Stability, Conversion of Manners, and Obedience." (Rule of St. Benedict.)

Habit.—With slight modifications in shape in some congregations the habit of the order consists of a tunic, confined at the waist by a girdle of leather or a cord, over the tunic, the width of the shoulders reaching to the knees or ground, and a hood to cover the head. In choir, at chapter, and at certain other ceremonial times, a long full gown with large flowing sleeves, called a "cowl," is worn over the ordinary habit. The colour is not specified in the Rule but it is conjectured that the earliest Benedictines wore white or grey, as being the natural colour of undyed wool. For many centuries, however, black has been the prevailing colour, hence the term "black monk" has come to signify a Benedictine not belonging to one of those separate congregations which has adopted a distinctive colour, e.g. the Camaldolese, Cistercians, and Olivetans, who wear white, or the Sylvestrines, whose habit is blue. The only differences in colour within the Benedictine federation are those of the monks of Monte Vergine, who though now belonging to the Cassinese congregation of Primitive Observance, still retain the white habit adopted by their founder in the twelfth century, and those of the congregation of St. Otilien, who wear a red girdle to signify their special missionary character.

Present Work of the Order.—Parochial work is undertaken by the following congregations: Cassinese, English, Swiss, Bavarian, Gallican, American-Cassinese, Swiss-American, Beuronese, Cassinese P. O. Austrian (both), Hungarian, and the Abbey of Fort Augustus. In the majority of these congregations the missions are attached to certain abbeys and the monks serving them are under the almost exclusive control of their own monastic superiors; in others the monks only supply the place of the secular clergy and are, therefore, for the time being, under their respective diocesan bishops.

The work of education is common to all congregations of the order. It takes the form in different places of seminaries for ecclesiastical studies, schools, and gymnasium for secondary education not strictly ecclesiastical, or of colleges for a higher or university course. In Austria and Bavaria many of the government lycées or gymnasium are entrusted to the care of the monks. In England and the United States the schools rank high amongst the educational establishments of those countries, and compete successfully with the non-Catholic schools of a similar class. Those of the American Cassinese congregation have already been enumerated; they include three seminaries, fourteen schools and colleges, and an orphanage, with a total of nearly two thousand students. The Swiss American congregation carries on scholastic work at five of its abbeys. St. Meinrad's, besides the seminary, there is a commercial college at Spielleville (Arkansas) and Mount Angel (Oregon) are seminaries; and at Conception, Spielleville, Covington (Louisiana), and Mount Angel are colleges. The English Benedictines have large and flourishing colleges attached to each of their abbeys, and belonging to Downside are also two other smaller schools, one a "grammar school" at Ealing, London, and the other a preparatory school recently established at Frome, Wiltshire, England.

Foreign Missionary Work.—Besides the congregation of St. Otilien, which exists specially for the purpose of foreign missionary work, and has ten mission stations in the Apostolic Vicariate of Zanzibar, a few others are also represented in the foreign mission field. Both American congregations labour amongst the Indians, in Saskatchewan (N. W. T., Canada), Dakota, Vancouver's Island, and elsewhere. The Cassinese P. O. congregation has missions in the Apostolic Vicariate of the Indian Territory (U. S. A.) and in Argentina, under the monasteries of the French province, in New Zealand under the English province, in Western Australia (Diocese of New Norcia and Apostolic Vicariate of Kimberley) and in the Philippines under the Spanish province, and the Belgian province has quite lately made a foundation in the Transvaal, South Africa. The Brazilian congregation has several missions in Brazil, which are under the direction of the Abbé of Rio de Janeiro, who is also a bishop. In the island of Mauritius the Bishop of Port Louis is generally an English Benedictine. Mention has already been made of the work of the Sylvestrine Benedictines in Ceylon and of the Cistercians in Natal, South Africa.

St. Benedict Bishop (England), d. 690; founder of Wearmouth and Jarrow, St. Cildert (France), d. 694; founder of Jumièges. St. Benedict of Anianæ (France), d. 821; reformer of monasteries under Charlemagne; presided at the synod of abbots, Aachen (Aix-la-Chapelle), 817. St. Dunstan (England), d. 988; Abbot of Glastonbury (c. 945), and afterwards Archbishop of Canterbury (961); reformer of English monasteries. St. Berno (France), d. 927; founder and first Abbé of Clairvaux (France), d. 942. St. Edouard Eudes (France), b. 879, d. 942; second Abbé of Cluny, St. Aymerd (France), d. 965; third Abbé of Cluny. St. Majolus or Maleul (France), d. 906, d. 994; fourth Abbé of Cluny; Otto II desired to make him pope in 974 but he resisted. St. Odilo (France), d. 1048; fifth Abbé of Cluny. Bernard of Cluny (France), d. 1109; famous in connexion with the eleventh-century "Ordo Cluniacensis" which bears his name. Peter the Venerable (France), d. 1156; ninth Abbé of Cluny; employed by several popes in important affairs of the Church. St. Romuald (Italy), b. 956, d. 1026; founder of the Camaldolese congregation (1009). Herluin (France), d. 1077; founder of Bec (1040). St. Robert of Molesme (France), b. 1018, d. 1110; founder and Abbé of Molesme (1075); joint-founder and first Abbé of Citeaux (1098). St. Alberic (France), d. 1109; joint-founder and second Abbé of Citeaux. St. Stephen Harding (England), d. 1134; joint-founder and third Abbé of Citeaux. St. Bernard (France), b. 1091, d. 1153; joint-founder of Citeaux with St. Stephen Harding, and first Abbot of Citeaux (1113); founder of Clairvaux (1115); wrote many spiritual and theological works; was a statesman and advisor of kings, and a Doctor of the Church; he preached the Second Crusade throughout Europe (1146). St. Willigis of Herschau (Germany), c. 1090; author of "Constitutions of Herschau". St. John Guibert (Italy), b. 999, d. 1073; founder of Vallombrosa (1039). St. Stephen or Etienne (France), d. 1124; founder of Grammont (1078). Bl. Robert of Arbrissel (France), d. 1116; founder of Fontevrault (1099). St. William (Italy), d. 1142; founder of Monte Vergine (1119). St. Sylvestro (Italy), b. 1177, d. 1267; founder of the Sylvesterines (1231). St. Bernard Fioleny (Italy), d. 1272, d. 1348; founder of the Filomena (1315). St. Barbo (Italy), d. 1443; first a canon regular, then Abbot of St. Justina of Padua and founder of the congregation of the same name (1409). Didier de la Cour (France), b. 1550, d. 1623; founder of the Bourgogne (1581). St. Bernard of Clairval (France), b. 1573, d. 1620; Prior of Cluny College, Paris, and founder of the Maurist congregation (1615). José Serra (Spain), b. 1811, died c. 1880; Coadjutor Bishop of Perth, Australia (1848); and Rudesind Salgado (Spain), b. 1814, d. 1900; Bishop of Port Victoria (1849); founders of New Nursia, Australia. Prosper Guéranger (France), b. 1805, d. 1875; founder of the Gallican congregation (1837); restored Solennes (1837); well known as a liturgical writer. Jean-Baptiste Muuard (France), b. 1809, d. 1845; founder of Pierre-Vieup of the French province of the Cassinese Congregation of Primitive Observance (1850). Maurus Wolter (Germany), b. 1825, d. 1900; founder of the Beuronese congregation (1860); Abbot of Beuron (1830). Pietro Caraffa (Italy), d. 1878; founder and first Abbé-General of Cassinese congregation of Primitive Observance (1851). Boniface Wimmer (Bavaria), b. 1809, d. 1887; founder of American Cassinese congregation (1855). Martin Marty (Switzerland), b. 1834, d. 1886; founder of Cassinese congregation (1870); Abbot of St. Meinrad's, Indiana (1870); Vicar Apostolic of Dakota (1879). Jerome Vaughan (Englend), b. 1841, d. 1896; founder of Fort Augustus Abbey (1878). Gerard van Calcoe

- 1. Under Benedictine Mother: 9 251
- 2. Under Bishops: 253 7,156

---

The foregoing tables, which are taken from the "Album Benedictinum" of 1906, give a grand aggregate of 684 monasteries, with 22,099 religious of both sexes. The statistics for missions and churches served include those churches and missions over which the monasteries exercise the right of patronage, as well as those actually served by monks.

**V. BENEDICTINES OF SPECIAL DISTINCTION.** The following lists are not intended to be in any way exhaustive; they merely profess to include some of the more famous members of the order. The names are classified according to the particular sphere of work in which they are most celebrated, but although many of them might therefore have a just claim to be included in more than one of the different classes given, when the same individual was distinguished in several different departments of work, from considerations of space and for the avoidance of unnecessary repetition, his name has been inserted only under one head. The lists are arranged more or less chronologically, except where some connecting features seem to call for special grouping. To most of the names of the country to which the individual belonged is added in parenthesis.

**Abbeys and Congregations, Reformers, etc.:** St. Erkenwald (England), d. 693; Bishop of London; founder of Chertsey and Barking abbey.
Benedictine congregation. Fernand Cabrol (France), b. 1855; Abbott of Farnborough (Gallican congregation). Jean Besse (France), b. 1861; a monk of the Germain Morin Congregation, b. 1861. John Chapman, of the Beuronese congregation, b. 1865. Edward Cuthbert Butler (England), b. 1858; Abbott of Downside (1906).

Bishops, Monks, Martyrs, etc.—St. Laurence (Italy), b. 619; came to England with St. Augustine (597), whom he succeeded as Archbishop of Canterbury (604). St. Mellitus (Ireland), d. 690; a Roman monk, sent to England with other monks to assist St. Augustine (601); founder of St. Paul’s, London, and first Bishop of London (604); Archbishop of Canterbury (615). St. Justus (Italy), b. 627; came to England (601); first Bishop of Rochester (604) and afterwards Archbishop of Canterbury (624). St. Paulinus of York (Italy), b. 644; came to England (601); first Bishop of York (625); Bishop of Rochester (633). St. Odo (England), d. 961; Archbishop of Canterbury. St. Elphee or Élaufhe (England), d. 1012; Archbishop of Canterbury (1006); killed by the Danes. St. Oswald (England). d. 992; nephew of St. Odo of Canterbury; Bishop of Worcester (959); Archbishop of York (972). St. Bertin (France), b. 597, d. 709; Abbé of Saint-Omer. St. Botolph (England), b. 655; abbot. St. Wilfrid, born c. 634, d. 709; Bishop of York. St. Cuthbert, d. 687; Bishop of Lindisfarne. St. John of Beverley, d. 721; Bishop of Hexham. St. Swithin, d. 862; Bishop of Winchester. St. Ethelwold, d. 939; Bishop of Winchester. St. Æthelred, d. 990; Bishop of Winchester. St. Ælred, b. 1109, d. 1166; Abbé of Rievaulx, Yorkshire. St. Thomas of Canterbury or Thomas Becket, born c. 1117, martyred 1170; Chancellor of England (1155); Archbishop of Canterbury (1162). St. Edmund Riel, d. 1240; Archbishop of Canterbury (1234); died in exile. Suger (France), b. 1081, d. 1151; Abbé of St. Denis and Regent of France. Bl. Richard Whiting, abbot of Glastonbury, Bl. Roger James, and Bl. John Thorne (Monks of Glastonbury). Bl. Hugh Faringdon, Abbé of Reading, Bl. William Eynon, and Bl. John Rugg, monks of Reading; and Bl. John Beche, Abbé of Colchester; all executed (1539) for denying the supremacy of Henry VIII. John Grace, a novice of the Augustinian Order, d. 1558; last Abbé of Westminister; died in prison. Sigebert Buckley, born c. 1517, d. 1610; a monk of Westminster; the link between the old and new English congregations. Ven. John Roberts, b. 1575; martyred 1616; founder of St. Gregory’s Priory, Morpeth. William Gifford, b. 1592; professor of theology at Reims (1582); Dean of Lille (1697); a monk at Dieulouard (1609); Abbé of Reims (1622). Leander of St. Martin (John Jones), b. 1575, d. 1636; President of the...
in, congregation and Prior of St. Gregory's, Douai, Philip Ellis, b. 1683, d. 1726; Vicar Apostolic of the Western District (1688); transferred to Segni, Italy (1707); Charles Wesley, b. 1722, d. 1777; Vicar Apostolic of the Western District (1754); a Doctor of the Sorbonne and F. R. S. William Placid Morris, b. 1794, d. 1872; a monk of Downside; Vicar Apostolic of Mauritius (1802), John Bede Folding, b. 1794, d. 1872; a monk of Downside, Vicar Apostolic of Mauritius (1802); of W. Augustin the first Bishop of Fremantle in Australia (1834); first Archbishop of Sydney (1851). William Bernard Ullathorne, b. 1806, d. 1888; a monk of Downside; Vicar Apostolic of the Western District (1840); transferred to Birmingham (1849); Charles de指南, b. 1834, d. 1883; a monk of Downside; Cathedral Prior of Belmont (1863); coadjutor to Archbishop Folding (1872); succeeded as Archbishop of Sydney (1877). Cardinal Sanfelice (Italy), b. 1834, d. 1867; Archibishop of Naples; formerly Abbot of La Cava. Joseph Pothen (France), b. 1835; inquisitor of the Solesmes school of plainchant; Abbot of Fontanella (1898). André Mocquereau (France), b. 1849; Prior of Solesmes and successor to Dom Pothen as leader of the school. John Cuthbert Egerton (England), b. 1850; Bishop of the Carthusians, Superior General and Coadjutor Bishop of Newport (1873); succeeded as Bishop (1881). Benedetto Bonazzi (Italy), b. 1840; Abbot of La Cava (1894); Archbishop of Benevento (1902). Domenico Serafini (Italy), b. 1852; Abbot General of the Carthusians (1888); Observant General (1888); Archbishop of Spoleto (1900). Hildebrand de Hempinon (Belgium), b. 1849; Abbot Primate of the order; Abbot of Maredsous (1890); nominated Abbot Primate by Leo XIII (1893). Surn., niece of Chevalier, sister to St. Benedict. Among English Benedictine nuns, the most celebrated are: St. Etheldreda, d. 679; Abbess of Ely. St. Ethelburga, died c. 670; Abbess of Barking. St. Hilda, d. 680; Abbess of Whitby. St. Werburgh, d. 699; Abbess of Chester. St. Mildred, seventh century; Abbess in Thetan. St. Walburga, d. 779; a nun of Wimborne; sister to St. William and Winnibald; went to Germany with Sts. Lioba and Thecla to assist St. Boniface c. 740. St. Thecla, eighth century; a nun of Wimborne; Abbess of Kiltingen; died in Germany; St. Lioba, d. 779; a nun of Wimborne; cousin to St. Boniface; Abbess of Bischofsheim; died in Germany. Among other Benedictine saints are: St. Hildegard (Germany), b. 1096, d. 1178; Abbess of Mount St. Bernard, founded by her (known as Meinardus); founded by Pope Adrian de Petro in the eighteenth century, in communion with the Holy See; this is now reckoned amongst the non-federated congregations of the order. (See Humiliat, Merchtarist.)

Quasi-Benedictine Foundations.—1. Military Orders.—Hietoy enumerates several military orders as having been based upon that of St. Benedict or in some way originating from it. Though founded especially for military objects, as for instance the defence of the holy places at Jerusalem, when not through the influence of corruption and irregularities crept in, and after an ineffectual attempt at reformation, Pope Pius V suppressed the order in 1571. Mention must also be made of the more modern Armenian Benedictine congregations (known as Meinardus), founded by Pope Benedict XIII in the sixteenth century, in communion with the Holy See; this is now reckoned amongst the non-federated congregations of the order. (See Humiliat, Merchtarist.)

Quasi-Benedictine Foundations.—2. Benedictine Congregations.—The varicous reforms, beginning with Cluniac in the tenth century and extending to the Olivetans of the fourteenth, have been enumerated in the first part of this article and are described in greater detail in separate articles, under their respective titles. To these must be added the Order of the Humiliati, founded in the twelfth century by certain nobles of Lombardy who, having rebelled against the Emperor Henry V, were taken captive by him into Germany. They commenced the practice of works of piety and penance, and were for their "humility" allowed to return to Lombardy. The order was definitely established in 1134 under the guidance of St. Bernard, who placed it under the Benedictine Rule. It flourished for some centuries and had ninety-four monasteries, but through the influence of corruption and irregularities crept in, and after an ineffectual attempt at reformation, Pope Pius V suppressed the order in 1571. Mention must also be made of the more modern Armenian Benedictine congregations (known as Meinardus), founded by Pope Benedict XIII in the sixteenth century, in communion with the Holy See; this is now reckoned amongst the non-federated congregations of the order. (See Humiliat, Merchtarist.)
the reader is referred to separate articles. (a) The Knights Templars, founded in 1118. St. Bernard of Clairvaux drew up their rule, and they always regarded the Cistercians as their brethren. For this reason they adopted a white dress, to which they added a red cross. The order was suppressed in 1312 in Spain, and hence: (b) The Knights of Calatrava, founded in 1158 to assist in protecting Spain against the Moorish invasions. The Knights of Calatrava owed their origin to the abbot and monks of the Cistercian monastery of Fitero. The general chapter of the order was divided up into a rule of life and exempt from general supervision over them. The black hood and short scapular which they wore denoted their connexion with Citeaux. The order possessed fifty-six commanderies, chiefly in Andalusia. The Nuus of Calatrava were established c. 1219. They were cloistered, observing the rule of the Cistercian nuns and wearing a similar habit, but they were under the jurisdiction of the Grand Master of the knights. (c) Knights of Alcántara, or of San Julian del Pereyro, in Castille, founded about the same time and for the same purpose as the Knights of Calatrava. They adopted a mitigated form of St. Benedict's Rule, to which certain observances borrowed from Calatrava were added. They also used the black hood and abbreviated scapular, which, in fine, formed an order with that of Calatrava, but the scheme failed of execution. They possessed thirty-seven commanderies. (d) Knights of Montesa, founded 1316, an offshoot from Calatrava, instituted by ten knights of that order who placed themselves under the abbot of Citeaux instead of their own Grand Master. (e) Knights of St. George of Alfama, founded in 1201; united to the Order of Montesa in 1399.

In Portugal there were three orders, also founded for purposes of defence against the Moors:—(f) The Knights of Avis, founded 1147; they observed the Benedictine Rule, under the direction of the abbots of Citeaux and Clairvaux, and had forty commanderies. (g) The Knights of St. Michael's Wing, founded 1167; the name was taken in honour of the archangel whose visible assistance secured a victory against the Moors for King Alphonso I of Portugal. The rule was drawn up by the Cistercian Abbot of Alcobaza. They were never very numerous, and the order did not lose supremacy in Portugal in the modern period. (h) The Order of Christ, reared upon the ruins of the Templars about 1317; it became very numerous and wealthy. It adopted the Rule of St. Benedict and the constitutions of Citeaux, and possessed 450 commanderies. In 1550 the office of grand master of this order, as well as that of Avis, was united to the crown. (i) The Monks of the Order of Christ. In 1567 a stricter life was instituted in the convent of Thomar, the principal house of the Order of Christ, under this title, where the full monastic life was observed, with a habit and vows similar to those of the Cistercians, though the monks were under the jurisdiction of the grand master of the Knights. This order now exists as one of the noble orders of knighthood, similar to those of the Order of St. John and the Order of Malta. (j) In Savoy there were the two orders: (k) the Knights of St. Maurice, and (l) those of St. Lasarus, which were united in 1572. They observed the Cistercian rule and the object of their existence was the defence of the Catholic faith against the inroads of the Protestant Reformation. Their earlier houses were in Savoy; their two principal houses were at Turin and Nice. In Switzerland also the Abbots of St. Gall at one time suppressed the military Order of the Bear, which Frederick II had instituted in 1213.

The order of the Knights of St. Luke, founded in 1312, was a hospital order. The order of the Brothers Hospitallers of Burgos originated in a hospital attached to a convent of Cistercian nuns in that town. There were a dozen Cistercian lay brothers who assisted the nuns in the care of the hospital, and these, in 1474, formed themselves into a new order intended to be independent of Citeaux. They met with much opposition, and, irregularities having been detected in them, they were suppressed in 1537 and placed under the abbess of the convent.

(3) Oblates.—The Oblates of St. Frances of Rome, called also Collatines, were a congregation of pious women, founded in 1425 and approved as an order in 1433. They first observed the constitutions of the Carthusian Tertiaries, but this was soon changed for that of St. Benedict. The order consisted chiefly of noble Roman ladies, who lived a semi-religious life and devoted themselves to works of piety and charity. They made no solemn vows, neither were they strictly enclosed, nor forbidden to enjoy the use of their possessions. They were at first under the direction of the Olivetan Benedictines, but after the death of their foundress, in 1440, they became independent.

(4) Orders of Canonesses.—Information is but scanty concerning the chapters of noble canonesses, which were fairly numerous in Lorraine, Flanders, and Germany in medieval times. It seems certain, however, that many of them were originally communities of nuns of one or another, renounced their solemn vows and assumed the state of canonesses, whilst still observing some form of the Benedictine Rule. The membership of almost all these chapters was restricted to women of noble, and in some cases of royal descent. In many also, whilst the cloistered life was generally secular, that is, not under vows of religion, and therefore free to leave and marry, the abbesses retained the character and state of religious superiors, and as such were solemnly professed as Benedictine nuns. The following list of houses is probably not complete:—Maison de la Paix, founded 1673; Mont des Arts, founded 1739; Choisy-le-Roi, founded 1819; and Ver-en-Val, founded 1830.

In Germany: Cologne, 1591; Homburg and Strasburg, of the seventh century; Andlau, founded 1276; and Minalbey, of the eighth century; Obermünster, Niedermünster, and Essent. of the ninth century. In Flanders: Malines, 1143; Bruges, 1176; and Brussels, founded 1210, of the seventh century; and Denain, 764. The members of the following houses in Germany having renounced their solemn vows and become canonesses in the sixteenth century, abandoned also the Catholic Faith and accepted the Protestant religion: Gandersheim, Herford, Queldlinburg, Gernrode, etc.

THE ASCENSION OF JESUS CHRIST

FROM THE BENEDICTIONAL OF ST. ETHELWOLD, ABOUT A.D. 975. LIBRARY OF THE DUKE OF DEVONSHIRE
In Rome the principle obtains that the only portion of the service which is to be regarded as strictly liturgical is the singing of the "Tantum ergo" and the celebrating of the Benediction which immediately follows. This idea is emphasized by the fact that in many Roman churches the celebrant, vested in cope and preceded by thurifer, acolytes, etc., only makes his entry into the sanctuary just before the "Tantum ergo" is begun. Previously to it the blessing of the altar is exposed, informally so as to speak, by a priest in cotta and stole; and then choir and congregation are left to sing litanies and canticles, or to say prayers and devotions as the occasion may demand, the whole service being of a very casual nature.

In English-speaking countries the service generally begins with the entry of the priest and his assistants in procession and with the singing of the "O Salutaris Hostia" as soon as the Blessed Sacrament is taken out of the tabernacle. Indeed in England the singing of the "O Salutaris" is followed by the "Ritus servandus", the code of procedure approved by a former synod of the Province of Westminster. On the other hand, the Litany of Our Lady, though usually printed after the "O Salutaris" and very generally sung at Benediction, is not in the form of obligation. It may be said that further solemnity is often given to the service by the presence of deacon and subdeacon in dalmatics. When the bishop of the diocese officiates he uses mitre and crozier in the procession to the altar, and makes the blessing over the people three times in giving the benediction. On the other hand, a very informal sort of service is permitted, where the means for carrying out a more elaborate rite are not available. The priest, wearing cotta and stole, simply opens the tabernacle door. Prayers and devotions are said or sung, and then the priest blesses those present with the veiled chalice or ciborium before the tabernacle door is again closed.

The permission, general or special, of the bishop of the diocese is necessary for services where Benediction is given with the monstrance.

HISTORY OF THE DEVOTION. It is easy to recognize in our ordinary Benediction service, the traces of two distinct elements. There is of course in the first place the direct veneration of the Blessed Sacrament, which appears in the exposition, blessing, "Tantum ergo", etc. But besides this we note the almost invariable presence of what at first sight seems an incongruous element, that of the litany of Loreto, or of popular hymns in honour of Our Lady. Tracing our present devotion to its origin we find that these two features are derived from different sources. The idea of exposing the Blessed Sacrament for veneration in a monstrance appears to have been first evolved at the end of the thirteenth or the beginning of the fourteenth century. When the elevation of the Host at Mass was introduced in the early years of the thirteenth century, probably as a form of protest against the theological views of Peter the Chanter, the idea by degrees took firm hold of the popular mind that special virtue and merit were attached to the act of looking at the Blessed Sacrament. To such extremes did this prepossession go, that the seeing of the Host at the moment of the elevation was judged to be the most vital part of attendance at Mass. In certain churches in Spain a screen of black velvet was hung up behind the altar in order that the priest's hands and the Host might be more easily seen from afar; in others strict injunctions were given to the thurifer that he should on no account allow the smoke of the thurible to obstruct the view of the Host. Indeed, we find that when men were dying and were unable on account of vomiting or any other cause to receive Holy Viaticum, the Blessed Sacrament was brought to them and held up before them to look at. Indeed, a virtual prohibition of this practice stands.
to this day amongst the rubries of the "Rituale Romanum".

Under the influence of this idea, the Blessed Sacra-
ment in the processions which became common after
the institution of the feast of Corpus Christi in 1249,
came by degrees to be carried in transparent vessels,
reposing its own presence. Moreover, as the custom
grew up, especially in Germany, of keeping
the Blessed Sacrament continually exposed to view
in churches. It was forbidden by many synods,
but a sort of compromise was arrived at through
the construction of the Sakramentshäuschen of which
so many examples still exist in central Europe.
These tabernacles, of great height and imposing
appearance, were erected in the most conspicuous part
of the church, and there the Blessed Sacrament was
reserved in a sanctuary behind a metal door of
lattice-work which allowed a more or less free view
of the interior. It was thus that the practice de-
veloped, though partly kept in check by synodal
decrees, of adding solemnity to any function, even
the Mass itself, by exposing the Blessed Sacrament
during it.

Turning now to our second element, we find that
from the beginning of the thirteenth century, a
custom prevailed among the confraternities and
guilds which were established at that period in great
numbers, singing canticles at evening of the
day before a statue of Our Lady. These canticles
were called Laude and were often composed in the
vulgar tongue, becoming in the hands of such poets
as the Franciscan Giosacone da Todi, one of the
greatest poets of the Italian language, and helped to
develop a native Italian literature. Confraternities were formed
for the express purpose of singing these canticles
and their members were called Laudei. It was
such a company of Laudesi that brought together the
seven holy foundresses who, in the first half of the
thirteenth century, established the Order of Servites,
or Servants of Mary. Although the laude hardly
flourished outside Italy, where both the language
and the character of the people lent themselves
readily to the composition of innumerable canticles,
the idea of an evening service of a popular character
sung before the statue of Our Lady, spread through-
out Europe. In particular, the "Salve Regina",
as a special devotion of the Servites, Dominicans, Car-
melites, and other orders, was consecrated by usage
to the Virgin, and was found sung, often by choirs of
boys, for whom a special endowment was provided, as
a separate evening service. In France, this service was
commonly known as a Salut, in the Low Countries as the
Lief, in the Church of England and Germany, simply as the Salve.

Now it seems certain that our present Benediction
service has resulted from the general adoption of
this evening singing of canticles before the statue of
Our Lady, enhanced as it often came to be in the
course of the sixteenth and seventeenth centuries
by the exposition of the Blessed Sacrament, which
was employed at first only as an adjunct to lend it
additional solemnity. The blessing at the close
seems to have been added simply because the cus-
tom gained ground of making the sign of the cross
over the people. Moreover, the Blessed Sacrament
was replaced in the tabernacle after a procession or
after being carried to the sick or any kind of an ex-
position. But in the course of the seventeenth cen-
tury, we find numberless bequests for Salute in French
will-books to be sung. Moreover, the Blessed Sacrament
was kept exposed during the whole time of the Salut.

The development of which is too intricate to be
given here in further detail, may be investigated
in the works mentioned below.

To the Rev. V. De Bucq, theollandist, belongs the merit
of having first called attention to the true history of this
devotion. See Precis Historiques (Brussels, 1872), xxx, 50-70.

Benedictus, Jacobus de. See Stabat Mater.

Benedict Levita (of Mains), or Benedict the
Deacon, is the name given to himself by the author
of a forged collection of capitularies which appeared
in the ninth century. The collection belongs to the
group of pseudo-Isidorian forgeries that includes
the pseudo-Isidorian recension of the Spanish collection
of canons, the so-called "capitula Anglirani", and the collection of false decrets of the pseudo-
Isidore. The name Benedict is, without doubt, an
assumed one; the statement that he had been a
deacon in the Church of Mainz and that the collec-
tion had been made from the archepiscopal archives
has also been declared by the pseudo-Isidore to
have come from the collection. The name of the
author Autgar (825-847) is clearly also untrue. Nothing
is known concerning the real author. On internal
evidence it may be accepted that these forged
capitularies were composed in the western part of
the Frankish empire and not at Mainz; the grounds
for this belief are, especially, the opposition shown to
the institution of "choreepiscopi", and further the
circumstance that the collection was first used and
found readiest acceptance among the Western
Churches. The idea that the whole collection was
made by Autgar (825-847) is clearly also untrue. Another
clue is offered by "Addita-
mentum" IV in which the forged pseudo-Isidorian
decrets have evidently been used. But the way in
which these decrets are employed by Benedict
shows that the pseudo-Isidorian collection has not
yet reached its completed form. The latest date for
the appearance of this collection of canons may,
therefore, be given as from 848 to 850. The time of
composition cannot be more exactly determined;
but it is somewhere between the years 847-853.

The author represents his collection as the con-
tinuation and completion of the collection of genuine
capitularies in four books, "Capitularia regum Franci-
corum", produced in 827 by Ansegisus, Abbot of
Fontanelle. He divides it into three books which he
denominates as "librum primum" and "librum secun-
dum". Three other writings precede the first book;
a prologue in verse, a prologue, and a treatise on
the origin and contents of the collection, and the aforesaid
metrical panegyric on the rulers of the Carlovingian
empire, which begins at a most remarkable period,
with the sons of Louis the Pious. Four supple-
mentary writings (additamenta) are annexed to the
last book; (I) The Aachen capitulary of 817 concern-
ing the monasteries; (II) the report of the bishops
(Ann. i, 829) to the Emperor Louis the Pious; (III)
about some genuine capitularies and a large number
of forged ones, just as in the main body of the collec-
tion; (IV) a large number (170) of extracts taken from various sources, among which are also forgeries of the Pseudo-Isidore. The work of Abbé Anesiarius was taken as a model for the collection. As to the sources of the collection, about one-fourth of them were taken from capitulums or royal decrees customary in the Frankish Empire; in fact, the genuine materials used by the author surpass sometimes those used by Anesiarius. Most of the pretended capitulums are, however, not genuine. Among the genuine sources, from which the larger portion of them are drawn, are: the Holy Scriptures; the decrees of councils; papal decrees; the collection of Irish canons; the ordinances of the Roman law, the "leges Visigothorum" and "Baluwariorum"; the "Libri Penitentials" or penitential books; the writings of the Church Fathers, and letters of bishops. He repeats himself frequently; a number of chapters are duplicated literally or nearly word for word. The chief aim of the forger was to enable the Church to maintain its independence in face of the assaults of the secular power. The author stands for the contemporary movement in favour of ecclesiastical reform, and in opposition to the rule of the Church by the laity. The first two editions (Tilius, Paris, 1548, and Pitchoos, Paris, 1588) are innumerable; the edition of the author is found in Baluze, Capitularia regum Francorum (Paris, 1677), I, col. 801–1232, and in Pertz, Monumenta Germaniae Hist.: Leges, II (Hanover, 1837), 2, 39–158 (cf. Migne, P. L., CXXVII, col. 699–912). E. Seckel is preparing a critical edition for the Monument. Germ. Hist.: Capitularia, III.

J. P. KIRSCH.

Benedict of Aniane, Saint, b. about 745–750; d. at Corneliusmünster, 11 February, 821. Benedict, originally known as Witos, son of the Goth, Aigulf, Count of Maguelone in Southern France, was educated at the Frankish court of Pepin, and entered the royal service. He took part in the Italian campaign of Charlemagne (773), after which he left his royal master and made his way into the monastery of St. Severanus (Saint-Seine). He gave himself most zealously to practices of asceticism, and learned to value the Rule of St. Benedict as the best foundation for the monastic life. Returning home in 779, he established on his own lands, in the vicinity of Aniane's old monastic settlement, which soon developed into a great monastery, under the name of Aniane, and became the model and centre of the monastic reform in France, introduced by Louis the Pious. The emperor's chief adviser was Benedict, and the general adoption of the Rule of St. Benedict in the monasteries of the Empire was the most important step towards the reform. Benedict took a prominent part in the synodes held in Aachen in 816 and 817, the results of which were embodied in the important prescriptions for the restoration of monastic discipline, dated 10 July, 817; he was the enthusiastic leader of these assemblies, and he himself reformed many monasteries on the lines laid down in the ordinances promulgated there. In order to have in the vicinity of his royal residence, at Lotharingia, in 814 he founded a new monastery on the stream near Aachen, the Abbey of Corneliusmünster, which was to be an exemplar for all other abbeys, and to be under the guidance of Benedict. In the dogmatic controversy over Adoptionism, under the leadership of the monk Affile, in ink, legel, or a few miles from Rome and two from Subiaco. It stands on the crest of a ridge which rises rapidly
from the valley to the higher range of mountains, and seen from the lower ground the village has the appearance of a fortress. As St. Gregory’s account indicates, and is confirmed by remains of the old town and by the inscriptions found in the neighbourhood, Enfide was a place of greater importance than is the present town. At Enfide Benedict worked his first miracle by restoring to perfect condition an earth wall which the chief of the place had accidentally broken. The notoriety which his miracle brought upon Benedict drove him to escape still farther from social life, and “he fled secretly from his nurse and sought the more retired district of the town.” His purpose of life had been modified. He had left Rome to escape the evils of a great city; he now determined to be poor and to live by his own work. “For God’s sake he deliberately chose the hardships of life and the weariness of labour” (ibid., xxxvi). A short distance from Enfide is the entrance to a narrow, gloomy valley, penetrating the mountains and leading directly to Subiaco. Crossing the Anio and turning to the right, the path rises along the left face of the ravine and soon reaches the site of Nero’s villa, where a stone wall built its length in one end of the middle of the lake; across the valley were ruins of the Roman baths, of which a few great arches and detached masses of wall still stand. Rising from the mole upon twenty-five low arches, the fountain that had to be raised, to which can be added the bridge from the vila to the baths, under which the waters of the middle lake poured in a wide fall into the lake below. The ruins of these vast buildings, and the wide sheet of falling water closed up the entrance of the valley to St. Benedict as he came from Enfide; to-day the narrow valley lies open before us, closed only by the far-off mountains. The path continues to ascend, and the side of the ravine, on which it runs, becomes steeper, until we reach a cave above which the mountain now rises almost perpendicularly; while on the right hand it strikes in a rapid descent down to where, in St. Benedict’s day, five hundred feet below, lay the blue waters of the lake. The cave has a large triangular-shaped opening and is about ten feet deep. On his way from Enfide Benedict had met a monk named Romanus, whose monastery was on the mountain above the cliff overhanging the cave. Romanus had discussed with Benedict the purpose which had brought him to Subiaco, and had given him the monk’s habit. By the advice of Benedict he departed to live as a hermit and after three years, unknown to men, lived in this cave above the lake. St. Gregory tells us little of these years. He now speaks of Benedict no longer as a youth (puer), but as a man (vir) of God. Romanus, he twice tells us, served the saint in every way he could. The monk apparently visited him frequently, and on fixed days brought him food. During these three years of solitude, broken only by occasional communications with the outer world and by the visits of Romanus, he matured both in mind and character, in knowledge of himself and of his fellow-man, and at the same time he became not merely known to, but secured the respect of, those about him; so much so that on the death of the abbot of a monastery in the neighbourhood (identified by some with Vico Varro), the community came to him and begged him to become its abbot. Benedict was acquainted with the life and discipline of the monastery, and knew that “their manners were diverse from his and therefore that they would never agree together; yet, at last, by such gentle entreaty, he gave his consent” (ibid., iii). The experiment failed; the monks tried to poison him, and he returned to his cave. From this time his miracles seem to have become frequent, and many people, attracted by his sanctity and character, came to Subiaco to be under his guidance. For them he built in the valley twelve monasteries, in each of which he placed a superior with twelve monks. In his thirteenth he lived with a few, such as he thought would more profit and be better instructed by his own presence” (ibid., iii). He remained, however, the father or abbot of all. With the establishment of these monasteries began the schools for children; and amongst the first to be brought were Maurus and Placid. The remainder of Benedict’s life was spent in realizing the ideal of monasticism which he has left us drawn out in his Rule, and before we follow the story of his life as it has been modified, it is written for laymen, not for clerics. The saint’s purpose was not to institute an order of clerics with clerical duties and offices, but an organization and a set of rules for the domestic life of such laymen as are capable of the type of life presented in the Gospel. “My words,” he says, “are addressed to thee, whoever thou art, that, renouncing thine own will, dost put on the strong and bright armour of obedience in order to fight for the Lord Christ as he is commanded by his rule.” Later, the Church imposed the clerical state upon Benedictines, and with the state came a preponderance of clerical and sacerdotal duties, but the impress of the lay origin of the Benedictines has remained, and is perhaps the source of some of the characteristics which mark them off from later orders. 2. Another characteristic feature of the saint’s Rule is its view of work. His so-called order was not established to carry on any particular work or to meet any special crisis in the Church, as has been the case with other monastic orders. Benedict’s work of monks was only a means to goodness of life. The great disciplinary force for human nature is work; idleness is its ruin. The purpose of his Rule was to bring men “back to God by the labour of obedience, by the study of the divine law, and by the practice of that religious obedience”. Work was the first condition of all growth in goodness. It was in order that his own life might be “warred with labours for God’s sake” that St. Benedict left Enfide for the cave at Subiaco. It is necessary, comments St. Gregory, that God’s elect should at the beginning, when life and temptations are strong in them, “be warred with labour and pains”. In the regeneration of human nature in the order of discipline, even prayer comes after work, for grace meets with no co-operation in the soul and heart of an idler. When the Goth “gave over the world” and went to Subiaco, St. Benedict gave him a bill-hook and set him to clear away briers for the making of a garden. “Ecel labora!” go and work. Work is not, as the civilization of the time taught, the condition of man as a man, but the condition of man, necessary for his well-being as a man, and essential for him as a Christian. 3. The religious life, as conceived by St. Benedict, is essentially social. Life apart from one’s fellows, the life of a hermit, is to be avoided. It is possible only for a few, and these few must have reached an advanced stage of self-discipline while living with others (Rule, 1). The Rule, therefore, is entirely occupied with regulating the life of a community of men who live and work and pray and eat.
together, and this not merely for a course of training, but as a permanent element of life at its best. The Rule conceives the superiors as always present and in constant touch with every member of the household, and the necessary relationship of the inferior to the superior, which is best described as patriarchal, or paternal (ibid., ii, iii, ixiv). The superior is the head of a family; all are the permanent members of a household. Hence, too, much of the spiritual teaching of the Rule is concealed under legislation which appears to be intended to regulate the external arrangements of the household (ibid., xxi, xxxi, xxxiv, xlii). So intimately connected with domestic life is the whole framework and teaching of the Rule that a Benedictine may be more truly said to enter or join a particular household than to join an order. The social character of Benedictine life has found expression in a fixed type for monasteries and in the kind of works which Benedictines undertake, and it is secured by an absolute communism in possessions (ibid., xxxii, xxxiv, iv, iv), by the rigorous suppression of all differences of worldly rank—"no one of noble birth may [for that reason] be put before him that was formerly a slave" (ibid., ii), and by the enforced presence of everyone at the routine duties of the household. The one who is to be clothed in a white robe forbidden by the Rule, it was no part of St. Benedict's conception of monastic life that his monks, as a body, should strip themselves of all wealth and live upon the alms of the charitable; rather his purpose was to restrict the requirements of the individual to what was necessary and simple, and to secure that the use and administration of the corporate possessions should be in strict accord with the teaching of the Gospel. The Benedictine ideal of poverty is quite different from the Franciscan. The Benedictine takes no explicit vow of poverty; he only vows obedience according to the Rule. The Rule allows all that is necessary to each individual, together with sufficient and varied clothing, abundant food (excluding only the flesh of quadrupeds), wine, and ample sleep (ibid., xxxix, vi, xli, iv). Possessions could be held in common, they might be large, but they were to be administered for the furtherance of the work of the community and for the benefit of others. While the individual monk was allowed to have one relationship to himself, to give alms, not to be compelled to seek them. It was to relieve the poor, to clothe the naked, to visit the sick, to bury the dead, to help the afflicted (ibid., iv), to entertain all strangers (ibid., iii). The poor carer was Benedict's secret of help to pay their debts (Dial. St. Greg., xxvii); they came for food (ibid., xxi, xxxvii).

5. St. Benedict originated a form of government which is deserving of study. It is contained in chapters ii, iii, xxxi, iv, xv of the Rule and in certain pregnant phrases scattered through other chapters. As with the Rule itself, so also his scheme of government is intended not for an order but for a single community. He presupposes that the community have bound themselves, by their promise of stability, to spend their lives together as brethren under the Rule. The superior is then elected by a free and universal suffrage. The government may be described as a monachy, with the Rule as its constitution. Within the four corners of the Rule everything is left to the discretion of the superior. This discretion is checked by religion (Rule, ii), by open debate with the community on all important matters, and with its representative elders in smaller concerns (ibid., iii). The reality of these checks upon the willfulness of the ruler can be appreciated only when it is remembered that the Rule and the monastic way of life, as a whole, were inspired by the single purpose of carrying out the conception of life taught in the Gospel, and that the relations of the members of the community to one another and to the abbot, and of the abbot to them, were elevated and spiritualized by a mysticism which set before itself the acceptance of the teachings of the Sermon on the Mount as real and for the community, which is best described as patriarchal, or paternal (ibid., li, lii, lixiv).

6. (a) When a Christian household, a community, has been organized by the willing acceptance of its social duties and responsibilities, by obedience to an authority, and, further, is under the continuous discipline of work and self-denial, the next step in its regeneration is the members of the household who return to God is prayer. The Rule deals directly and explicitly only with public prayer. For this Benedict assigns the Psalms and Canticles, with readings from the Scriptures and Fathers. He devotes seven chapters out of the seventy-three of his rule to regulating this public prayer, and it is characteristic of the freedom of his Rule and of the "moderation" of the saint, that he concludes his very careful directions by saying that if any superior does not like his arrangement he is free to make another; this only he says he will insist on, that the whole Psalter shall be said in the course of a week. The practice of the holy Fathers, he adds, was resolutely "to say in a single day what I pray we tepid monks may say in seven" (ibid., lii). On the other hand, he checks indiscreet zeal by laying down the general rule "that prayer made in common must always be short" (ibid., xx). It is very difficult to reduce St. Benedict's teaching on prayer to a system, for this reason, that in his conception of the character, prayer is coextensive with the whole life, and life is not complete at any point unless penetrated by prayer.

(b) The form of prayer which thus covers the whole of our waking hours, St. Benedict calls the first degree of humility. It consists in realizing the presence of God (ibid., vii). The first step begins when the spiritual is joined to the merely human, or, as the saint expresses it, it is the first step in a ladder, the rungs of which rest at one end in the body and at the other in the soul. The ability to exercise this form of prayer is fostered by that care of the "heart" on which the saint so often insists; and the heart is saved from the dissipation that would result from social intercourse by the habit of mind which sees in God "Himself who is served in very deed as Christ Himself." (ibid., xxxvi.) "Let all guests that come be received as Christ" (ibid., iii). "Whether we be slaves or freemen, we are all one in Christ and bear an equal rank in the service of Our Lord" (ibid., lii). Secondly, there is private prayer. This is short and to be said at intervals, at night and at seven distinct hours during the day, so that, when possible, there shall be no great interval without a call to formal, vocal, public prayer (ibid., xvi). The position which St. Benedict gave to public, common prayer can be best described by saying that he established it as the centre of the common life to which he bound his monks. It was the consecration, not only of the individual, but of the whole community that was signified by the daily public acts of faith and of praise and adoration of the Creator; and this public worship of God, the opus Dei, was to form the chief work of his monks, and to be the source from which all other works took their inspiration, their direction, and their strength.

(d) Lastly, there is private prayer, for which the saint does not legislate. It follows individual gifts —"If anyone wishes to pray in private, let him go quietly into the oratory and pray, not with a loud voice, but with tears and fervour of heart" (ibid., lii). "Our prayer ought to be in union with and purity of heart, except it be perchance prolonged by the inspiration of divine grace" (ibid., xx). But if St. Benedict gives no further directions on private
prayer, it is because the whole condition and mode of life secured by the Rule, and the character formed by its observance, lead naturally to the higher states of prayer. As the saint writes: "Whoever, therefore, thou art that hastenest to thy heavenly country, fulfill by the help of Christ this little Rule which we have written for beginners; and then at length thou shalt arrive, under God’s protection, at the lofty summits of doctrine and virtue of which we have spoken above" (ibid., lxxiii). For guidance in these higher states the saint refers to the Fathers, Basil and Cassian.

From this short examination of the Rule and its system of prayer, it will be obvious that to describe the Benedictine as a contemplative order is misleading, if the word is used in its modern technical sense as excluding active work; the "contemplative" is a form of life framed for different circumstances and with a different object from St. Benedict’s. The Rule, including its system of prayer and public psalmody, is meant for every class of mind and every degree of learning. It is framed not only for the educated and for souls advanced in perfection, but it organizes and directs a complete life which is adapted for simple folk and for sinners, for the observance of the Commandments and for the beginnings of goodness. "We have written this Rule," writes St. Benedict, "that by observing it in monasteries, we may shew ourselves to have some degree of goodness in life and a beginning of holiness. But for him who would hasten to the perfection of religion there are the teachings of the holy Fathers, the following whereof bringeth a man to the height of perfection" (ibid., lxxiii). Before leaving the subject of prayer it will be well to point out again that by ordering the public recitation and singing of the Psalter, St. Benedict was not putting upon his monks a distinctly clerical obligation. The Psalter was the common form of prayer of all Christians; we must not read into his Rule characteristics which a later age and discipline have made inseparable from the public recitation of the Divine Office.

We can now take up again the story of Benedict’s life. How long he remained at Subiaco we do not know. Abbot Toebi conjectures it was until the year 529. Of these years St. Gregory is content to tell no more than a few stories descriptive of the life of the monks, and of the character and government of St. Benedict. The latter was making his first attempt to realize in these twelve monasteries his conception of the monastic life. We can fill in many of the details from the Rule. By his own experiment and his knowledge of the history of monasticism the saint had learnt that the regeneration of the individual, except in abnormal cases, is not reached by the path of solitude, nor by that of austerity, but by the beaten track of man’s social instinct, with its necessary conditions of obedience and work; and that neither the body nor the mind can be safely overstrained in the effort to avoid evil (ibid., lxxiv). Thus at Subiaco we find no solitary, no conventual hermits, no great austerities, but men living together in organized communities for the purpose of leading good lives, doing such work as came to their hand—carrying water up the steep mountain-side, doing the other household work, raising the twelve cloisters, clearing the ground, making gardens, teaching children, preaching to the country people, reading and studying at least four hours a day, receiving strangers, accepting and training new-comers, attending the regular hours of prayer, reciting and chanting the Psalter. The life at Subiaco and the character of St. Benedict attracted many to the new monasteries, and with their increasing numbers and growing influence came the inevitable jealousy and persecution, which culminated with a vile attempt of a neighbouring priest to scandalize the monks by an exhibition of naked women, dancing in the courtyard of the saint’s monastery (Dial. St. Greg., viii). To save his followers from further persecution Benedict left Subiaco and went to Monte Cassino.

Upon the crest of Monte Cassino "there was an ancient chapel in which the foolish and simple country people, according to the custom of the old
gentiles, worshipped the god Apollo. Round about it likewise upon all sides there were woods for the service of devils, in which, even to that very time, the mad multitudes of infidels did offer most wicked sacrifices. The man of God, when hit by death, beat in pieces the idol, overthrew the altar, set fire on the woods, and in the temple of Apollo built the oratory of St. Martin: and where the altar of the same Apollo was, he made an oratory of St. John: and by his continual praying he brought the temple down, dweling in those parts to embrace the faith of Christ" (Rule, viii). On this spot the saint built his monastery. His experience at Subiaco had led him to alter his plans, and now, instead of building several houses with a small community in each, he kept all his monks in one monastery and provided for its government by appointing a prior and deans (Rule, xvi, xxi). We find no trace in his Rule, which was most probably written at Monte Cassino, of the view which guided him when he built the twelve small monasteries at Subiaco. The life which we have witnessed at Subiaco was renewed at Monte Cassino, but the change in the situation and local conditions brought a corresponding modification in the work undertaken by the monks. Subiaco was a retired and easy place in the mountains of central Italy. Monte Cassino was on one of the great highways to the south of Italy, and at a great distance from Capua. This brought the new monastery into more frequent communication with the outside world. It soon became a centre of influence in a district in which there was a large population, with several dioceses and other monasteries. Abbot Tosti, following others, made the saint’s death in the same year. Just before his death we hear for the first time of his sister Scholastica. “She had been dedicated from her infancy to Our Lord, and used to come once a year to visit her brother. To whom the man of God went not far from the gate to a place that did belong to the abbey, there to give her entertainment” (ibid., xxxiii). They met for the last three days before Scholastica’s death, on a day “when the sky was so clear that no cloud was to be seen”. The sister begged her brother to stay the night, “but by no persuasion would he agree unto that, saying that he might not by any means tarry all night out of his abbey...” The nun receiving this denial of her brother, joining her hands together, laid them upon the table; and so, bowing down her head upon them, she made her prayers to Almighty God, and lifting her head from the table, there fell suddenly such a tempest of lightning and thundering, and such abundance of rain, that neither venerable Bennet nor his monks that were with him, could put their head out of door” (ibid., xxxiii). Three days later, “Benedict beheld the soul of his sister, which was departed from her body, in the likeness of a dove, to ascend into heaven: who rejoicing much to see her great glory, with hymns and lauds gave thanks to Almighty God, and did impart the news of this her death to his monks whom also he sent presently to bring her corpse to his abbey, to have it buried in that grave which he had provided for himself” (ibid., xxxiv).

It would seem to have been about this time that St. Benedict had that wonderful vision in which he came as near to seeing God as is possible for man in this life. St. Gregory and St. Bonaventure say that Benedict saw God and in that vision of God saw the whole world. St. Thomas will not allow that this could have been. Urban VIII, however, does not hesitate to say that "the saint merited, whilst..."
still in this mortal life, to see God Himself and in God all that is below Him”. If he did not see the Creator, he saw that light which is in the Creator, and in that light, as St. Gregory says, “saw the whole world gathered together as it were under one beam of the sun. At the same time he saw the soul of the Bishop of Capua, who was crucified by angels to heaven” (ibid., xxxix). Once more the hidden things of God were shown to him, and he warned his brethren, both those that lived daily with him and those that dwelt far off” of his approaching death. “Six months before he left this world he gave orders to have his sepulchre opened, and forthwith falling into an ague, he began with burning heat to wax faint; and when as the sickness daily increased, upon the sixth day he commanded his monks to carry him into the oratory, where he did arm himself receiving the Body and Blood of Our Saviour Christ; and having his weak body holden up between the hands of his disciples, he stood with his own hands lifted up to heaven; and as he was in that manner praying, he gave up the ghost” (ibid., xcv). He was buried in the seventh crypt in the church of St. Fortunatus, near Fleury. Abbot Tosti, in his life of St. Benedict, discusses the question at length (chap. xi) and decides the controversy in favour of Monte Cassino.

Perhaps the most striking characteristics in St. Benedict are his deep and wide human feeling and his moderation. The former reveals itself in the many anecdotes recorded by St. Gregory. We see it in his sympathy and care for the simplest of his monks; his hastening to the help of the poor Goth who had lost his own cell; spending the hours of the day in prayer in the mountain to save his monks the labour of carrying water, and to remove from their lives a “just cause of grumbling”; staying three days in a monastery to help to induce one of the monks to “remain quietly at his prayers as the others did”, instead of going forth from the chapel and wandering about “buying himself with some earthly and transitory things”. He lets the crow from the neighbouring woods come daily when all are at dinner to be fed by himself. His mind is always on the ascent of Valentinian; sitting in his cell he knows that Placid has fallen into the lake; he foresees the accident to the builders and sends a warning to them; in spirit and some kind of real presence he is with the monks “eating and refreshing themselves” on their journey, with his friend Valentinian on his way to the monastery, with the monk taking a present from the nuns, with the new community at Terracina. Throughout St. Gregory’s narrative he is always the same quiet, gentle, dignified, strong, peace-loving man who by the sublime power of sympathy becomes the centre of the lives and interests of all about him. We see him with his monks in the church, at their reading, sometimes in the fields, but more commonly in his cell, where frequent messengers find him “weeping silently in his knees” and in the night hours standing at “the window of his cell in the tower, offering up his prayers to God”; and often, as Totila found him, sitting outside the door of his cell, or “before the gate of the monastery reading upon a book”. He has his own portrait in his ideal picture of an abbot (Rule, lixiv):

“It beseecheth the abbot to be ever doing some good for his brethren rather than to be presetting over them. He must, therefore, be learned in the law, as his may be in their moe to bring forth to the things new and old; he must be chaste, sober, and merciful, ever preferring mercy to justice, that he himself may obtain mercy. Let him hate sin and love the brethren. And even in his corrections, let him act with prudence, and not go too far, lest while he seeketh too eagerly to scrape off the dust, the vessel be broken. Let him keep his own frailty ever before his eyes, and remember that the bruised ox must be gentle; and let him, bearing in mind that he should suffer vices to grow up; but that prudently and with charity he should cut them off, in the way he shall see best for each, as we have already said; and let him study rather to be loved than feared, that the blame of the not exacting nor obstinate, not jealous nor prone to suspicion, or else he will never be at rest. In all his commands, whether spiritual or temporal, let him be prudent and considerate. In the works which he imposeth, let him be discreet and moderate, bearing in mind the discretion of holy Jacob, when he said: ‘If I cause my flocks to be overdriven, they will all perish in one day’. Taking, then, such testimonies as are borne by these and the like words to discretion, the mother of virtues, let him so temper and things, that the breaking may by this we do not strive after, and the weak nothing at which to take alarm.”

Hugh Edmund Ford.

Benedict of Peterborough, abbot and writer, place and date of birth unknown; d. 1193. He was educated at Oxford, and was appointed in 1174 chancellor to Richard, Archbishop of Canterbury, and in 1175 became Prior of Christ Church, Canterbury. As Abbot of Peterborough from 1177 to his death in 1193, he was a learned and able executive. He restored the abbey finances to a sound basis, and was active till his death in completing and beautifying the buildings. Through his personal favour the abbot secured many rights and privileges. He has been sometimes confounded with Benedict of Sansetun, later Bishop of Rochester, vice-chancellor during the absence of King Richard. He had the library enriched by transcriptions of standard works in theology, exegesis, law, science, and poetry. He wrote a history of Becket’s “Passion”, preserved in part in the work on Becket known as “Quadrilogus”, and also, a first-hand account of Becket’s “Miracles” (Robertson, “Materials for the History of Thomas Becket”, Rolls Series, 1876). He was formerly regarded as the author of “Gesta Henrici II”, which Stubbs would identify with the lost “Triolumna” of Richard Fitz-Neal, author of the “Dialogues de Sciacicensi”.

Benedict of San Philadelphia (or Benedict the Moor), Saint, b. at San Philadelphia on the coast of Fradello, a village of the Diocese of Messina in Sicily, in 1526; d. 4 April, 1589. The parents of St. Benedict were slaves from Ethiopia who were, nevertheless, pious Christians. On account of their faithfulness, they may not bring their child to the faith. From his earliest years Benedict was very religious and while still very young he joined a newly formed
association of hermits. When Pope Pius IV dissolved this association, Benedict, called from his origin Ethiopia or Niger, entered the Reformed Recollects of the Franciscan Order. Owing to his virtues he was made superior of the monastery of San Domenico at Palermo three years before his entrance, although he was only a lay brother. He reformed the monastery and ruled it with great success until his death. He was pronounced Blessed in 1743 and was canonized in 1807. His feast is celebrated 3 April.

J. P. KIRSCH.

Benedictus (CANTICLE OF ZACHARY). The, given in Luke, I, 68-79, is one of the three great canticles in the opening chapters of this Gospel, the other two being the Magnificat and Nunc dimittis. The Benedictus was the song of thanksgiving uttered by Zachary on the occasion of the birth of his son, St. John Baptist. It is Jewish in form, but Christian in sentiment. The local colouring and nationalistic character of the first half are so noticeable that Loisy has conjectured that it existed previously as a simple psalm, which Zachary adopted, adding the whole to it. The thought, easily discernible. (Revue d’histoire et de lit. relig. May-June, 1903, p. 289.) There are, however, grave objections to this view, and an opposite theory has been put forth, that the Benedictus was composed with special reference to the name of Elizabeth, Zachary, and John, for Elizabeth, Justusurandum quad aurum; Zachary, Memorari (testamenti sui sancti); and John, Ad fociandam misericordiam.

The whole canticle naturally falls into two parts. The first (verses 68-75) is a song of thanksgiving for the realization of the Messianic hopes of the Jewish nation; but to such realization is given a characteristically Christian tone. As of old, in the family of David, there was power to defend the nation against their enemies, now again that of which they had been so long deprived, and for which they had been yearning, was to be restored to them, but in a higher and spiritual sense. The horn is a sign of power, and the “horn of salvation” signified the power of delivering or “a mighty deliverance”. While the Jewish hope of God, and the Bishops of the Church, they had continually sighed for the time when the House of David was to be their deliverer. The deliverance was now at hand, and was pointed to by Zachary as the fulfilment of God’s Oath to Abraham; but in the meantime it was destined for the sake of worldly power, but that ‘we may serve him without fear, in holiness and justice all our days’.

The second part of the canticle is an address by Zachary to his own son, who was to take so important a part in the scheme of the Redemption; for he was to be a prophet, and to preach the remission of sins before the coming of the Orient, or Dawn, from on high. The prophecy that he was to “go before the face of the Lord to prepare his ways” (v. 78) was of course an allusion to the well-known words of Isaiah (xi, 3) which St. John himself afterwards applied to his own mission (John, i, 23); and which all the three Synoptics adopt (Matt., iii, 3; Mark, i, 2; Luke, iii, 4).

It is probably due to the first part of the canticle, as a matter of course, that it was adopted by the Roman Church that it finds an appropriate place in the office of the Church every morning at Lauds. It is believed to have been first introduced by St. Benedict (Beaume, i, 255). According to Durandus, the allusion to Christ coming under the figure of the rising sun had also some early connection with the Church in various other liturgical offices, notably at a funeral, at the moment of interment, when words of thanksgiving for the Redemption are specially in place as an expression of Christian hope.

BERNARD WARD.

Benedictus Polonus, a medieval Friar Minor missionary and traveller (c. 1245) companion of Giovanni da Piancappi, and author of the brief chronicle “De Itinere Fratrum Minorum ad Tartaros”, concerning the first Franciscan missions to the land of the Tartars. This work is also apparently to Wadding and Sbaralea, the literary biographer of the order. It was first published by D’Avesac in the “Recueil de Voyages” (Paris, 1839, IV, 774-779). Of the “Chronicle” of Glassberger in “Analecta Franciscana” (II, 71). The report of Benedictus is important for the curious letter of the Great Khan to Innocent IV.

THOMAS J. SHAHAN.

Benefice (Lat. Beneficium, a benefit).—Popularly the term benefice is often understood to denote either certain property destined for the support of ministers of religion, or a spiritual office or function, such as the care of souls, but in the strict sense it signifies a right, i.e., the right of the Church to a cleric to receive ecclesiastical revenues on account of the performance of some spiritual service. Four characteristics are essential to every benefice: (a) the right to revenue from church property; the beneficed cleric being the usufructuary and not the proprietor of the source of his support; (b) a twofold perpetuity, objective and subjective, inasmuch as the source of income must be permanently established and at the same time the appointment to the benefice must be for life, and not subject to retirement, save for the causes and in the cases specified by law; (c) a formal decree of ecclesiastical authority giving to certain funds or property the character or title of a benefice; (d) an annexed office or spiritual function of some kind, such as the care of souls, the exercise of jurisdiction, the celebration of Mass or the recitation of the Divine Office. This last mentioned element is fundamental, since a benefice exists only for the sake of securing the performance of duties connected with the work of the Church. On the other hand, it is clear that they who serve the altar should live by the altar. In fact, as Innocent III declares, the sole purpose of the foundation of benefices was to enable the church to have at her command clerics who might devote themselves to works of religious relief.

HISTORY.—The need which benefices are intended to meet was in the earlier centuries of the life of the Church satisfied in other ways. From the beginning, the clergy was supported by the liberality of the faithful, but originally all offerings were transmitted to the bishop, who in turn charged of their administration and distribution. Usually the mass of donations was divided into four portions, of which one went to the support of the bishop, another to the maintenance of the clergy, a third to the repair and construction of churches, and a fourth to the relief of the needy and afflicted. Under this system even those clerics who ministered in rural parishes were obliged to send the oblations received in their churches to the bishop, to swell the common fund and to be submitted to the ordinary rule of allotment. The inconvenience attending this method, especially because the offerings were frequently in kind, increased with the growth of the Church, particularly because the multiplication of country parishes. Moreover the Church came to possess considerable real property. Under these circumstances it became early in the tenth century in some places the practice of allowing some of the clergy to retain for themselves and for their churches the
gifts which they had received or even the income from property which the Church had acquired. The latter form of grant, in connexion with lands or permanent endowments, was known as precario, a name which indicates its unstable tenure; on the death of the possessor the source of his revenue reverts to the common property, and could not serve for the support of a cleric unless devoted anew to this purpose by a formal act of ecclesiastical authority. Though these precarios were in the beginning contrary to the canons, circumstances justified their increasing employment, and thus paved the way for the recognition of the modern benefice.

All that was needed to transform the precario into benefices, was to do away with the need of a new episcopal decree assigning the income from certain lands or other property to the support of a priest on the occurrence of a vacancy, and to recognize in the source of income a perpetual foundation for this specific purpose. When this was done and the incumbent was given permanency in office, the benevolence came into being as a unit with a more rapid growth, its beginning dating from the sixth century and its universal adoption being delayed until the eleventh century. Since the usucrurt allowed to clerics resembled the grants of land which sovereigns were accustomed to make to distinguished themselves by military or political service, and which the Church was at times compelled to concede to powerful lay lords in order to secure necessary protection in troubled times, it was natural that the term benefice which had been applied before to these grants, should be employed to denote the similar practice in regard to ecclesiastics. Wherever the common law of the Church holds sway the establishment of benefices is the rule. In more than one country a system developed by centuries of internal tribunal before administration of secularization, but if the usurping government makes a pretense of compensation by stipends to the clergy, such stipends are regarded by the Church as benefice revenue, and those who receive them retain the status of beneficed clerics. In the United States benefices are almost unknown. A solitary example in New Orleans figured as a notable exception in the decree of the Second Plenary Council. A few parochial benefices are found in the province of San Francisco, and there is good reason for believing that these instances of benefices, are in marked contrast with the general organization of the Church in the United States. In England, also, benefices are the exception, but in Canada they are more common (Gignac, Compend. Jur. Eccl., Quebec, 1906). The beneficiary system plays an important part in the discipline of the evangelical churches on the continent of Europe, and of the State church of England. In 1900, out of 22,800 clergy at work in the Anglican Church, 13,872 were beneficed. (For benefices or "livings" in the Anglican Church see Phillimore, "Ecclesiastical Law"; Idem, "Book of Church Law", London, 1899, 227; ibid. the Benefice Act of 1898. For the Evangelical Church in Germany see "Kirchenrecht", Berlin, 1869 sqq; Friedberg, "Leyhrbuch des Kirchenrechts", 4th ed., 1895; Real Enc. f. Prot. Theol. und Kirche, 3d ed., 1897, II, 596.)

DIVISION.—Benefices are divided into simple and double; major and minor; elective, prescriptive, and by appointment and by law; perpetual and conditional; perpetual and regular. Simple benefices are those which involve only the duty of reciting the Divine Office or of celebrating Mass. Double benefices imply the care of souls or jurisdiction in the diocese and in the parishes, or a combination of the duties of priest and bishop, if they be episcopal or super-episcopal in rank, are styled major benefices. A benefice is elective when the appointing authority may collate only after some ecclesiastical body has named the future incumbent; prescriptive when such nomination belongs to a patron; collative when the bishop or other superior appoints independently of any election or presentation. The church property and the residential benefices is based upon the fact that in some cases the canons or articles of foundation impose the obligation of residence in the locality of the benefice while in other cases no such obligation is annexed. Manual benefices are not benefices in the strict sense, since the right to the appointment to them are revocable at the will of the collating authority. A legal presumption exists that all benefices are secular, but those which exist in churches or houses of religious orders or which by custom or by the will of the founder have been appropriated to religious are known as regular benefices. This last distinction has at times a special importance because of the rule requiring that secular benefices be conferred only on secular clerics, secular benefices.

CREATION.—Benefices can be created only by ecclesiastical authority, since the right to revenue which they suppose is always necessarily connected with some spiritual function, and is therefore reckoned among canons who have spiritual power by the Church. The competent authority may be the pope or a bishop or one possessing quasi-episcopal authority, it being always understood that the pope has exclusive control of all major benefices. A benefice must be conferred in a church or at an altar, under the title of some saint or mystery, and with the annexed obligation of rendering some spiritual service. Since the idea of compensation is always implied, a sufficient endowment must in every case be guaranteed, the amount varying with the character of the benefice, the bounty of the ecclesiastical or lay founder, and the nature of the services which are to be rendered. In some countries, as in Austria, the consent of the civil authorities is a necessary preliminary to the creation of a benefice.

MODIFICATION.—A benefice once erected is understood to be perpetual, but the law must and does provide for circumstances which may require an alteration of the status of a benefice by union or division, or even its entire suppression or extinction. The law, of course, varies; sometimes, by reason of a diminution of revenue, it becomes necessary to unite two or more benefices. This union may be effected in two ways, either so that an entirely new individual entity is brought into being, or so that the original titles remain, but are conferred on one cleric instead of several. In this latter case a distinction has to be made between a union in which both benefices retain their legal autonomy and a union in which one benefice is made legally dependent on the other. The pope alone can unite major benefices; minor benefices are subject in this respect to episcopal authority, with very few exceptions. A bishop is not allowed to proceed to the union of benefices unless such action be justified by reasons of necessity or of advantage, and unless a hearing be first granted to interested persons. If there be one, and the cathedral chapter are the only parties whose consent, as distinguished from mere opinion, is required. The division of benefices, which is most frequently verified in connexion with parishes, is authorized when the incumbent is in the account of a whole; if he is not, it is necessary that the requirements of his office, even with the help of such auxiliaries as the law allows. The formalities are generally the same as for a union. The term "dismemberment" is frequently employed as a synonym for division, function which is performed by a benefice by which a part of the goods or revenues of one
BENEFICE

benefice is given perpetually to another benefice or to some other ecclesiastical entity. In this case no new benefice is set up, and the act in question is in reality simply an alienation of church property, and is therefore governed by the rules applicable to alienation. Diamination is also used at times to signify the sale or transfer of benefices, while the word descendent is used to signify the descent of benefices from one parish and its incorporation in another, which may be effected for sufficient reason.

The extinction of benefices occurs when both the benefice and the church to which it is attached are utterly destroyed or cease completely to have any connection with the civil state or its inhabitants. The past when certain countries were overrun by infidels or heretics, and in more recent times on the occasion of acts of usurpation by the civil power. Suppression differs from extinction in that it simply terminates the existence of a benefice, leaving intact the church and any other benefices which may be connected with it. Suppression involves a diminution of religious service, and is consequently regarded as odious in law. Nevertheless a bishop may be persuaded to consent to an archiepiscopal concession which would result in the benefice being suppressed, and at times such action is rendered necessary by a considerable depreciation in the value of the benefice property or by the departure of the population to whose spiritual needs the benefice was intended to minister. Suppression is not infrequently the result of destitution. In such cases the practice is not to consent to absolute suppression, at least of the religious service depending on the benefice, but simply to the exoneration of the patron and his renunciation of the jus patronatus.

Collation.—The collation or granting of benefices may be ordinary or extraordinary, free or necessary. The distinction between ordinary and extraordinary collation is based upon the fact that while ordinarily major benefices are disposed of by the pope and minor benefices by the bishop, it occasionally happens that this rule suffers an exception in so far as it relates to bishops, either because of a special provision of the law in favour of the pope or of some other authority, or because, on the failure of the bishop to act, the right to appoint devolves on his superior. These exceptions are known as extraordinary collations. From the eleventh century, extraordinary collations by the pope became more and more common, usually taking the form of mandata de providendo, littera expectativa, and reservations.

The title of benefice is forbidden to be communicated to the cleric named therein a right to a benefice already vacant in the diocese of the bishop to whom the mandate was directed. Littera expectativa were similar papal interventions in regard to diocesan benefices, but affected benefices not yet vacant, the recipient of the letter being given a claim on a benefice as soon as it should be available for the disposal of the bishop. These two methods of extraordinary collation were not productive of happy results; they proved to be prejudicial to episcopal authority; they were taken advantage of by unworthy aspirants for ecclesiastical offices; and at times they were fraudulently obtained and offered for sale. Hence their repudiation by the Council of Trent (Sess. XXIV, cap. II, De Tit. Red). This same condemnation of Trent was not, however, to say, a limitation of any papal prerogative; its sole purpose being to forestall possible abuses on the part of petitioners for favours from the Holy See. Reservations are still in operation, and consist in this, that the pope reserves to himself the direction of the benefices, and of the diocesan benefices. After serving for centuries as a cause of much controversy, they were finally regulated by laws defining accurately the instances in which collation was to be reserved to the pope. One of the most important restrictions of this nature is contained in the ninth rule of the Apostolic Chambery (see Roman Curia), which provides that those diocesan benefices which fall vacant during the six alternate months beginning with February, to a person residing in the Church for some reason or other, be presented to the pope; for example, the first dignities in chapters in the Province of Quebec and canons in England; but Italy is the only country in which they are in full operation. Apart from cases provided for in the rules, a benefice may never be granted of the right of extraordinary collation. A collation, whether made by the pope or by a bishop, is said to be free when it is not conditioned by any act of an elector or of a patron; necessary when it follows election or nomination by competent persons or presentation by patrons. In many countries, concordats have secured to the representatives of civil authority an important part in appointments to benefices. Thus in Bavaria the king nominates to certain archiepiscopal and diocesan sees; and similar right has been granted to the Emperor of Austria and to the King of Portugal; in Hanover the chapter, before proceeding to the election of a bishop, must allow the Government to cancel the names of those candidates whom it judges unacceptable. Secular intervention in the matter of benefices has come about consequent from the royal nomination of the King of Portugal to the governmental exequatur required by Italian law. The interests of religion are safeguarded by the canonical requirement that in every case the candidate must be confirmed by ecclesiastical authority before he can lawfully begin his incumbency. (For abuses in the collation of benefices, see Patronage, Comminatory Ablute, Investitures.)

Condition of Collation.—In order that benefices may be the more easily fulfilled by the candidate, the candidate must be confirmed by ecclesiastical authority before he can lawfully begin his incumbency. (For abuses in the collation of benefices, see Patronage, Comminatory Ablute, Investitures.)

Benefice

Benefice

Benefice

Benefice
Council of Trent a simple benefice could lawfully be conferred on a cleric as early as his seventh year, but since that council the recipient of a simple benefice must be in his fourteenth year, and for double benefices the age of twenty-four years completed is always required. A greater maturity is demanded for certain offices, viz., thirty years for the episcopate, and forty years for the post of canon penitentiary. (c) Character.—The appointee must be of legitimate birth and of good reputation, and free from cenure and irregularity. (d) Relative wadiness.—In the case of the election of men to the highest offices, whether for candidates for a bishopric or for a parish, the co- lator must appoint the most worthy, i.e., the one who possesses in the highest degree the qualities necessary for a successful discharge of the duties connected with the benefice in question. The same rule applies to prelacies with quasi episcopiscopal jurisdiction, to the canon theologian and to the canon penitentiary. As to other benefices authorities differ, the preferable opinion maintaining that in all cases the most worthy is to be chosen. (e) Science.—According to a law of Trent (Sess. VII, c. xiii, De ref.) no one can be collated to a benefice unless his fitness has been demonstrated in an examination conducted by the ordinary. In the case of parochial benefices, this examination must take the form of a concursus. (See Concursus.) For ordination, there are conditions, in theology or in canon law is demanded, as evidence of requisite learning; a bishop must be a doctor or a licentiate in canon law or in theology, or have the public testimony of a university as to his fitness to teach others; an archdeacon also must be a doctor or a licentiate in canon law or in theology; and similar qualifications are demanded for other offices. The Holy See, is, at the present time, insisting that the law concerning degrees be faithfully observed. (f) Requirement.—These may be postponed by the articles of foundation or by secular law. Founders of benefices are given a great deal of liberty in attaching conditions to the act of collation, provided that these conditions be approved by ecclesiastical authority. In consequence, it happens at times that only members of a certain family or citizens of some town or city are eligible, or even, in some few instances, persons of noble birth. More onerous, and not always acceptable to the church, is the interference of civil authorities in the matter of benefices only in that person destined to be acceptable to the Government, or a citizen, or a native, or one who swears fidelity to the Government at the time of appointment, or who receives the royal exequatur, can hope to be collated. In Portugal and in Bavaria, the permission of the Government is necessary for ordination, and without this permission, which is given after an examination by secular authorities, a cleric is incapacitated for benefices in these two kingdoms. The Bavarian law also contains the curious provision that no subject is to enter the German College at Rome so long as it is conducted by the Fathers of the Society of Jesus, or by any similar order, and that all who contravene this ordinance are to be considered as personas non gratis to the Government and excluded from all benefices and posts at its disposal. OBLIGATIONS.—All beneficed clerics are bound to make a profession of faith within two months from the date of taking possession, to perform faithfully the duties pertaining to their charge, to recite the canonical hours, and if the benefice be of a kind, to reside in the place in which their benefice is located. Violation of the law of residence is punished by loss of revenues during the time of absence, and if persisted in, by privation. The law states that the corpse of the incumbent of a benefice is perpetual, in the sense that it can be terminated only by death or for causes specified in the law. It is provided in the law that in the event of certain acts vacancy shall occur ipso facto; as when the incumbent marries or attempts marriage, when he takes solemn vows in a religious order, when he violates the canon forbidding plurality, when he fails to receive within the prescribed time the necessary ordination, or when he is guilty of any crime to which penalty of deprivation is expressly attached. In other cases deprivation follows a judicial process, instituted in virtue of laws authorising the bishop to annul the annul the benefice. A bishop is allowed seven years to remove a cleric; if he does not so remove him, the bishop has the right to resign his benefice provided the resignation be offered freely and for just reasons, and be accepted by a competent superior, and he may also, with certain conditions, exchange benefices with another diocese. REVENUES.—The holder of a benefice is not the owner of the foundation from which he derives his support; he occupies in reference to it the position of a tutor or guardian who must defend its interests. His chief duty is to maintain it as a perpetual means of support for ministers of religion. Its fruits or revenues, however, belong to him, but with the obligation of devoting to pious causes, and especially to the relief of the poor, all that is not needed for his own support. Formerly, this superfluous revenue could not be taken of at the will of the holder, but custom has long since authorized such testamentary disposal, provided it be made in favour of pious causes or of the poor. In fact, in most places on account of the difficulty of distinguishing a cleric's patrimonial property from his beneficiary revenue, the right is recognized to dispose freely of all property. (See Jesu Spoli.)

John T. Creagh.

Benefit of Clergy, the exemption from the juris- diction of the secular courts, which in England, in the Middle Ages, was accorded to clergymen. This exemption included all who were tonsured and wore the ecclesiastical dress, and was shared in by monks and nuns. In Saxony days ecclesiastical and civil cases were decided in shire and hundred courts, where the bishop sat side by side with the ealdorman or sheriff. From the days of the Conqueror ecclesiastical courts were held distinct from the secular courts. Gratian (cap. xlvii, 11° pars Dec., Causa XI, i) sums up the privilege of the clergy thus: "From the above it is to be understood that a clergyman is not to be brought before the public courts; neither in a civil nor in a criminal case, unless perhaps the bishop should not wish to decide the civil case, or unless he should, in a criminal case, degrade him". William forbade his judges and ministers and every layman to meddle with the laws regarding the bishop. These privileges were subsequently extended by the Norman kings, though their tendency to arbitrariness caused them in special cases to seek to override them. They were at the root of the controversy between Henry II and St. Thomas Becket. The Controversy of the Church and State, pp. 78, 79.
the ecclesiastical court, and, if found guilty, to be degraded and returned for punishment to the lay court. St. Thomas objected, in the name of the Church law, to the first accusation in the lay court. Fitzstephen (Materials III, 47, quoted in Pollock and Maitland, History of English Law) says of the accused: "The bishop had been moved by no written, nor were there any such customs in the Kingdom". The author of the "Legata Henrici" (ibid.) says plainly that no accusation, be it grave crime, be it for light offence, is to be brought against any person before his clerk and before his bishop (Lods. Hen. I, 57, § 9). When a clerk was brought before a lay court, he proved his claim to benefit of clergy by reading, and he was turned over to the ecclesiastical court, as only the clergy were generally able to read. This gave rise to the extension of the benefit of clergy to all who could read. By statute in the reign of Edward III (25 Edw. III, c. 4) it was enacted that all manner of clerks, secular and religious, should enjoy the privilege of Holy Church for all treasons and felonies, except those immediately affecting the majesty. This privilege was applicable also to all who could read. In the reign of Henry VII a distinction was drawn between persons actually in Holy orders and those who in other respects secular, were able to read, by which the latter were only to be imprisoned, and kept only once, and on receiving it were to be branded on the left thumb with a hot iron in order to afford evidence against them on a future occasion. Henry VIII (28 Hen. VIII, c. i, § 32, Hen. VIII, c. iii, § 8) had even the clergy branded for the first time, but later abolished this, and excepted atrocious crimes, murder, poisoning, burglary, highway robbery, and sacrilege from benefit of clergy (1 Edw. VI, c. xii § 10), but peers of the realm were to be discharged for the same crimes. Murder, murder and poisoning, even though unable to read. After a layman was burnt on the hand, a clerk discharged on reading, a peer without either burning or penalty, they were delivered to the ordinary to be dealt with according to the ecclesiastical canons. The clerical authorities instituted a kind of purgation. The party was required to take an oath of innocence, twelve compurgators were called to testify to their belief in the falsehood of the charges. Afterwards he brought forward witnesses who, unless he placed his hands on the judge, the culprit was degraded if a clerk, and all were compelled to do penance. Many escaped by perjury and leniency; hence steps were taken in the more atrocious crimes to annul the privilege. Later this privilege was allowed only after conviction for men who claimed it because able to read, and then they knelt to the court praying for their clergy and (18 Elizabeth, c. vii, § 2) the party was burnt on the hand, and discharged without any interference of the Church to annul his conviction. The judges were empowered (18 Elizabeth, c. vii) to direct the prisoner to be imprisoned for a year or a shorter period. Women in the reign of William and Mary were admitted to the privileges of men in clergyable felonies, on praying the benefit of the statute (2 and 4 Will. and M. c. ix, § 8). The idle ceremony of reading was abolished by 5 Anne c. vi, and all before entitled were now admitted to its benefit. Branding was abolished and the offenders could be committed to a house of correction for six to twelve months, but not been previously c. xxiii provides for felonious thefts the transportation of offenders to America for seven years.) The privilege of benefit of clergy was entirely abolished in England in 1827, by Statutes 7 and 8 Geo. IV, c. 43 and c. 44. But by Act of Congress of 30 April, 1790, it was taken away in the federal courts of the United States.

Traces of it are found in some courts of different states, but it has been practically outlawed by statute or by adjudication. It is now universally obsolete in English and American law. 

BENEDICT, JEREMIAH, a Friar Minor Capuchin and historical writer, d. in 1774. He belonged to the Province of Piedmont in Italy, and left two valuable historical treatises. The first, entitled "Chronica et critica historiae saeae et profanae" (Rome, 1766), deals with various astronomical questions and the religious rites and ceremonies of ancient peoples, and was written with a view to facilitate the study of Sacred Scripture. In the second work, entitled "Privilegiolum. S. Petri vindiciens" (Rome, 1766–70), he gives a history of the primacy of the Roman Pontiff.

Stephen M. Donovian.

Benevento (Beneventana), Archdiocese of.—Benevento, the ancient Beneventum, the principal city of the province of the same name in Campania, was situated on the River Calore, and had a population of 25,000. It was founded at a very early period by the Samnites, who named it Maleventum. In 275 B.C. the Romans, having conquered Pyrrhus not far from there, took possession of the city and changed its name to the present form. In 238 B.C. a Roman colony was established at Beneventum, which was enlarged and beautified by Augustus and other emperors. The arch of Trajan (porta aerea), entirely of Parian marble, still bears eloquent witness to the munificence of that, century (Ann. 13). It was destroyed and burned by Titus, King of the Goths, but was rebuilt in 589 by Lombard King Autharich, and made the seat of a duky. In 1047 it fell into the hands of the Normans, who, however, were forced to relinquish it by Emperor Henry III in 1053.

The city, with the surrounding territory, was then turned over to Pope Leo IX, a relative of the emperor, in payment of the annual tribute rendered the Holy See by the Church of Bamberg; but shortly afterwards it was reoccupied by the Normans. The pope then sent a force under count Euphrasius with the army "ut saltem humano terreore resipiscerent, qui divinae iudicis minime formidant" (that those who fear not the judgments of God may at least repent through human dread; Ep. VII ad Constanit. Mon. Marian.). The opposing forces met at the Battle of Narni, and after a severe struggle the papal troops were put to flight, and the pope himself was forced to retire to Civitella. There Leo wrought more by word of mouth than the arms of all his soldiers had been able to accomplish. The Norman leaders swore fealty to the sovereign pontiff, conducted him back to Benevento with great honour, and continued from that time forward the most devoted and loyal champions of the Holy See. This warlike expedition of Leo IX called forth the severe criticism of St. Peter Damian. Thenceforward Benevento was a part of the territory of the Holy See, which was always represented there by a delegate. From 1769 to 1774 it was in the possession of Ferdinand I of Naples, and in 1806 Napoleon made Talleyrand Duke of Benevento. In 1814 it again came under the jurisdiction of Bourbon, and from 1838 to 1841 Joachim Pecchi, later Leo XIII, was civil delegate to this part of the papal state in the heart of the Kingdom of Naples, and won great praise for his wise administration and his stern repression of banditage. In 1860 Benevento became part of the Kingdom of Italy. Most noted among the citizens of Benevento during ancient times are: Papianus, the
jurisconsult, and Arbilius, the grammarians; Popes Felix IV, Victor III (Dauferio), and Gregory VIII (Alberto di Morra) who were natives of Benevento; Cardinal Pietro Morra, Giovanni da Castrocielo, Dino- nio Lorio, Nicolò Cecia, Camillo Domenico, Gennaro de Simone, Bartolommeo Faoco, and Carlo Badalamenti.

Benevento is the seat of an archdiocese, which has as suffragans the Dioceses of Alife, Ariano, Ascoli, and Cerignola, Avellino, Boiano, Bovino, Larino, Lucera, San Severo, Sant’ Agata de’ Goti, Telesio, and Termoli. According to local tradition, the Christian Faith was first preached there by St. Potitus, at the command of St. Peter the Apostle. At a later period, during the persecution of Diocletian, we find mention as bishop of this city St. Januarius, who together with Prisculius, his deacon, and two laymen, was imprisoned and beheaded at Possaule in 305. His relics are preserved in the Cathedral of Naples, which also contains the remains of St. Agrippinus who was Bishop of Benevento. In 929 Benevento was raised to the dignity of a metropolitan see.

The cathedral, founded at a very early period, was rebuilt in 1692, after being destroyed in the earthquake of 1688. The interior, divided into five naves, has fifty-four marble columns, which furnish a magnificent perspective. Mention should also be made of the very beautiful altar near the high altar, given by a sculptor named Nicola. Of special historical interest is the so-called “altar of peace”, erected in memory of the peace concluded at Benevento between Clement VII and Charles V, after the famous sack of Rome (1527). The façade is entirely of a yellowish marble; the great central door is of bronze, by Byzantine workmanship, brought from Constantinople in the twelfth century. In the spacious vestibule are the tombs of the Lombard dukes. The bell tower, containing the entire series of the ancient monuments, was begun by Bishop Capo di Ferro (1254). The church of St. Sophia, in form a great rotunda, is also deserving of mention. It dates back to the Lombard epoch, if indeed it is not a pagan temple converted into a church. The cupola is particularly remarkable, being set upon six antique Corinthian columns. The church of Santa Maria delle Grazie is held in great veneration; adjoining it is a monastery, the abode first of Benedictines, but since 1450 of monks of the Minor Observance. The small church of Sant’Ondine with a crypt said to have been brought from Greece by St. Artses, niece of Narses, general of the army of Justinian.

A number of councils were held at Benevento: those of 1059, 1061, and 1087, in the last of which Victor III excommunicated Guibert, the Antipope, and 1091, in which the excommunication was renewed, and a number of disciplinary canons formulated; that of 1108 against lay investitures; those of 1113 and 1117, the latter against the Antipope Burdinus; others in 1119, 1314, 1470, 1545, recorded by Harduin, in the seventh volume of his collection of the Councils. In the following centuries the Archbishops of Benevento frequently held provincial synods. Gian Battista Poppa (1643) and Vincenzo Maria Orsini, O. P. (1686), later Pope Benedict XIII, did much to restore and beautify the churches of the city.

Among the bishops famous in the history of the Church of Benevento, passing over some saints of uncertain date, are: St. Marcius (533), St. Zeno (543), St. Barbatus (695), who had a golden serpent, and the head which, cutting off the head, melted and made into a sacred pot which was preserved up to the time of the French invasion in 1799; Arnaldo, a Franciscan monk (1533); Gaspare Colonna, generous in the decoration of churches, who, at the time of the capture of Rome, Boniface IV, was imprisoned with the others, but quickly released; Giovanni della Casa, a distinguished writer and Italian orator (1544); Cardinal Giacomo Savelli (1560), founder of the seminary; Cardinal Pompeo Arrigoni (1607); Cardinal Sinibaldo Doria (1731) who suffered much from the intrigues of Nicolò Cecia, administrator under the above-mentioned Archbishop Orsini. Doria founded a great library, subsequently enlarged by Pius VI, Banditi in 1775; Cardinal Domenico Spinocci (1796); Cardinal Camillo Siciliano di Rende (1879).

The Archdiocese of Benevento has a population of 550,500 Catholics, with 138 parishes, 400 churches and chapels, 389 regular priests, 70 priests belonging to religious orders, 350 seminarists, 40 lay brothers, and 120 members of female religious orders.

Bengtsson, Jöns Oxenstierna (Joanne Benedicti), Archbishop of Upsala, Sweden, b. 1417; d. in 1467. He was a member of the illustrious Oxenstierna family, various representatives of which had already become prominent in the public life of Sweden. At the time of his appointment to the archbishopric (1448) Benedicti, a man of learned and erudite tastes, was chapter of Upsala. He asked the Council of Baule for a confirmation of his election, and he had himself consecrated (30 June, 1448) by his suffragans, the day after they had crowned Karl Knutsen Bonde as king. On 1 July, Archbishop Bengtsson crowned the queen. The confirmation of his appointment by Pope Nicholas V did not reach him until the ensuing year.

The importance of Archbishop Bengtsson is attested by the fact that the ecclesiastical states of his pastoral visitations show that he was not unmindful of the spiritual welfare of those under his care. In 1457, as Archbishop of Upsala, he received from pope the title of Primate of Sweden; the Archbishops of Lund, however, were permitted to retain their title of Primate of the Church of Sweden. The life of Archbishop Bengtsson fell in Sweden's most troublous days. By the Union of Calmar (1397) the three kingdoms of Sweden, Denmark, and Norway, while preserving their individual independence, were made in her to be acted upon, the foreign affairs of all three were to be regulated as those of a united country. The advantages of this union were lost sight of on the death of its promoter, Queen Margaret (1412). Her successor, Erik of Pomerania, had a change of front. Under his reign in Sweden a spirit of discontent, which, after successive revolutions and the election of Karl Knutson as viceroy (1439), resulted in the deposeing of Erik. His successor, Christopher of Bavaria, died in 1448. In Sweden, which was torn by the strife between the partisans of a national kingdom and those of a government in union with Denmark and Norway, the national party elected Karl Knutson as king. A few months later Christian I became King of Denmark, and two years afterwards also King of Norway. Meanwhile consecrated in Sweden. As King Karl Knutson, to escape from money troubles, increased taxes and confiscated church property, dissatisfaction spread among clergy and people, and Archbishop Bengtsson placed himself at the head of the Opposition. Fearing to enter his cathedral, he laid aside his pontifical insignia, took up helmet, breastplate, and sword, and announced his intention not to resume his pontifical robes until Karl Knutson should be banished and the crown prince restored to the duchy. He thereupon returned to Denmark and was formally recognized King
of Sweden, and crowned at Stockholm by Archbishop Bengtson.

General discontent soon followed; especially when Christian, on a journey to his heir to his uncle Duke Adolf of Holstein, found himself in great financial straits. To meet his obligations, he levied enormous taxes, even in Sweden, without exempting ecclesiastics, religious foundations, or the moneys collected by papal mandate. To defray the expenses of a crusade he compelled the nobles to surrender the lands of Christian I in Finland, the archbishop held the regency of Sweden; seeing the people in revolt against him and the heavy imposts, he took up their cause and suspended the collection of taxes. The king compelled his despair by arresting the archbishop and sending him to Denmark. A revolution broke out afresh in Sweden, Karl Knutsson was recalled to the throne, and Christian I, to recover the country, became reconciled with his prisoner.

Bengtson went at once to Sweden, where he roused the people against King Karl Knutsson, whom he excommunicated. The archbishop succeeded finally in bringing about Knutsson’s abdication, and the recognition of Christian I once more as King of Sweden. In reality, however, the archbishop held the reins of power and administered affairs as though he were the actual sovereign. He was unable to sustain this rôle. Discontented factions combined against him, and, in 1496, elected Erik Axelsson Tott as regent, whereupon Archbishop Bengtson was imprisoned. Discontents continued, and the king of the Swedish party, Knutsson, once more took the place of the king who represented the union of the three countries. The archbishop found an asylum with his friend Magnus Gren, on the island he named 15 December 1467, “poor and exiled, regretted by no one, hated by many, and feared by all.”

The key to the political activity of Bengtsson is to be found in the ambition that was a part of his character—ambition for his family and his country. There was a strong antagonism between the great Oxenstierna family, to which the archbishop belonged, and the Bondes family, of which the king, supported by the national party, was a member. Magnussen says that the archbishop, “resenting the pride and the leading men of Sweden, before the Union of Calmar, had in general failed to respect the clergy and the property of the Church. In a union of Sweden with Denmark and Norway, he foresaw a limitation of the power of the Swedish nobles; in his character—ambition for his family and his country. Such curtailment would be a safeguard to the temporalities of the Church.

E. A. WANG.

BENIGNUS, BENEN, SAINTE, date of birth unknown; d. 467, son of Senenen, an Irish chieftain in that part of Ireland which is now County Meath. He was baptized by St. Patrick, and became his favourite disciple and his coadjutor in the See of Armagh (450). His gentle and lovable disposition suggested the name Benen, which has been Latinized as Benignus. He followed his master in all his travels, and assisted him in his missionary labours, giving especial attention to the formation of chorall services. From his musical acquirements he was known as “Patrick’s psalm-singer”, and he drew thousands of souls to Christ by his sweet voice. St. Benignus is said not only to have assisted in compiling the great Irish code, the Breviary, or Senchus Mor. He is supposed to have written materials for the “Psalter of Cashel”, and the “Book of Rights”. He was present at the famous synod which passed the canon recognizing “the See of the Apostle Peter” as the final court of appeal in difficult cases, which canon is to be found in the See of Armagh. St. Benignus resigned his coadjutorship in 467 and died at the close of the same year. His feast is celebrated on the 9th of November. Most authorities have identified St. Patrick’s psalm-singer with the St. Benignus who founded Kilbannon, near Duan, but it is certain, from Trehican’s collections in the Book of Armagh, that St. Benignus of Armagh and St. Benignus of Kilbannon were two distinct persons. The former is described as son of Senenen of County Meath, whilst the latter was son of Lugna of Connaught, yet both were contemporaries. St. Benignus of Kilbannon had a famous monastery, where St. Jariath was educated, and he also presided over Drumleise. His sister, Mathona, was Abbess of Tirellir.

CARMANS, Nova Legenda Angliae (1518), fol. 38, for the oldest lives of the saint; see also HARDY, Descriptive Catalogue, vol. 1, p. 30; WARE-HARMS, Anecdotes of the Irish Saints, p. 111; O’HANLON, Lives of Irish Saints (6 November, XI); WHITLEY STOKES (ed.), Tripartite Life of St. Patrick, Rolls Series (London, 1827, in index a. v. BENEN, BENIGNUS; Bibl. Hibernica, 1st. 2 (1898), 172, 1322; FORBES in Dict. of Christ. Biog., 1, 312. The very ancient Laebnor-georc or Book of Rights, said to have been compiled by BENIGNUS was edited by O’DONOVAN for the Celtic Society (Dublin, 1847). BENIGNUS is also said to have been the original compiler of the Psalter of Cashel (see Cashel).

W. H. GRATTON FLOOD.

Benignus of Dijon, Saint, MARTYR, honoured as the patron saint and first herald of Christianity of Dijon (Divio), an old city in the territory of the Gallic tribe of the Lingonnes (civitas Lingonum, Langres). It is an historical fact that Benignus suffered martyrdom in a persecution of the third century and was publicly honoured as a martyr. His feast was celebrated on 1 November as a minor feast under this date in the so-called Martyrology of St. Jerome (ed. Roesi-Duchesne; cf. Acta SS., November, II, 138). Early in the sixth century no particulars concerning the person and life of Benignus were known at Dijon. According to the Gregorian calendar, the church reverenced his grave; but Bishop Gregory of Langres (507-539 or 540) wished to put an end to this veneration, because he believed the grave to belong to a heathen. Having learned in a vision at night
that the burial spot was that of the holy martyr Benignus, he had the tomb in which the sarcophagus lay and the church built above it. About this date there was a sudden appearance of Acts of the martyrdom of the saint, which were brought to Dijon by a pilgrim on the way to Italy (Gregor. Tur., De gloria martyrum, I, ii; Migne, P. L., LXXI, 782). These facts have no historical basis; associating the then St. Polycarp of Smyrna, has sent Benignus as a missionary to Dijon, there he had laboured as a priest and had finally died a martyr. For some unknown reason his death is placed in the persecution under Aurelian (270-275). The author did not notice that he was sending a martyrdom under Aurelian are chronologically irreconcilable. Duchesne has proved that these "Acts" belong to a whole group of legends which arose in the early years of the sixth century and were intended to describe the beginnings of Christianity in the cities of that region (Besançon, Autun, Langres, Valence). They are all falsifications by the same hand and possess no historical value.

**J. P. KIRCHMAN.**

**Benin, Vicariate Apostolic of the Coast of (Olé Benini),** includes an extensive negro country and the former kingdom of Western Equatorial Africa, in Upper Guinea, on the Bight of Benin, or Gulf of Guinea. In 1860 a mission was founded in the former Kingdom of Dahomey, but as this was disliked by the inhabitants the title was changed to "Vicariate of the Coast of Benin". The mission of Dahomey was separated from Benin in 1882 and made a Prefecture Apostolic, in 1901 a Vicariate Apostolic. On 10 May, 1894, the Niger mission was also cut off. Since the latter date the Vicariate of the Coast of Benin has been bounded by Dahomey, the Niger, and the Bight of Benin; it includes the British colony of Lagos (Southern Nigeria), the native Kingdom of Porto Novo (under French protection) and the native kingdoms of Yorka, Isebou, Ibadan, etc.

The region is rich in vegetable resources. Cotton is indigenous and is woven by the women. Among the pagan blacks human sacrifices are frequent; enormous forms of human sacrifices are practiced by the natives. The coast is indented with estuaries, some of considerable breadth and studded with islands. Behind the flat shores plateaux rise to heights of 2000 and 3000 feet. There is an extensive traffic in salt, palm oil, and other staples. The area is about 55,985 square miles, about one-half of which belongs to Great Britain; the population in 1901 numbered 1,500,000, and there were in the territory about 308 Europeans. The appointment of a vicar Apostolic dates from 1891; the residence is at Lagos, which in 1901 had a population of 41,847, of whom 233 were Europeans. The vicar Apostolic is chosen from the members of the Society for African missions of Lyons to which the mission has been entrusted. The development of this mission has been greater than that of Dahomey, as the British Government grants the missionaries greater freedom for their spiritual labours and gives subsidies to the mission schools when this course furthers British interests. The first converts among the blacks were ex-slaves returned to their homes; a large number were chrismated by one of their own race, known as "Padre Antonio", who kept alive the Faith till the arrival of the Fathers from Lyons (Louvet, 291). The missionaries number 26 regular clergy and 1 lay brother; they have charge of about 15,000 Catholics. The chief stations are: Lagos, situated on an island at the mouth of the Ogun, and known as the "African Liverpool", formerly the capital of Dahomey; Ibadan, on a branch of the river Ogun; and Iyani and Ibarot, Ibowon. Less important and more regularly served are Ebo, Meta, Bada-gri, Ibokaté, Awé, Ijala. The vicariate has a number of flourishing schools with 2,059 pupils, of whom 800 are in the school at Lagos. There are 28 catechists. Orphans' homes and hospitals have also been founded. A promising agricultural school exists at Teco. The principal hospital is the one conducted at Abeokuta by Father Coquard, commonly called Dr. Coquard; he is consulted as a physician as far as Lagos, a town of 10,000 souls, and even in the interior. The King of Akeri, the head of the federation of Abeokuta, grants a subsidy to the hospital and, although a heathen, is present with his followers at the chief festivals of the Catholic mission. The mission territory includes three large cities: Abeokuta, Ilorin, and Ibadan. Constrained to defend themselves against raids from Dahomey, the native blacks have gathered in Abeokuta, on the left bank of the Ogun, in large numbers, variously estimated from 150,000 to 200,000, and have surrounded the city, or Ogbomò, with a wall twenty-four feet in circuit. Ibadan has a reputed population of 150,000 and Ilorin 60,000 to 80,000. As yet no Catholic missions have been established in them.

**ALBERT BATTANDIER,**

**Benito, Marcus. See MIES.**

**Benjamin (Heb. בְּנֵית, bīnīṯīṯ, "son of the right hand").** (1) The youngest son of Jacob born of Rachel. His original name was Ben-oni (Heb. בֶּן עָנָי, "son of my sorrow"), given to him by his mother just before she died in childbirth, but was changed to Benjamin by Jacob (Gen., xxxv, 18). He was the favourite of Laban and grandson of Benjamin (Judg., vii, 10). One of the sons of Herem who married a foreign wife in the days of Esdras (I Esdras, x, 32). (4) One of those who took part in the rebuilding of the walls of Jerusalem at the time of Nehemiah (II Esdras, iii, 23; cf. xii, 33). (5) The name of a gate in the northern wall of Jerusalem (Jer., xxxvii, 12; Zach., xiv, 10). It is not mentioned by Nehemiah in his enumeration of the gates of Jerusalem (II Esdras, iii). (8) The name of the northern gate of the Temple, where Jeremiah was imprisoned (Jer., xx, 2; xxxvii, 14). It was the same as "watch-gate" (II Esdras, xii, 38) and as the one spoken of in Jeremiah (viii, 3, 5, 16; ix, 2). (7) Name of eastern gate of the ideal Jerusalem as drawn by Eschel (Eschel., xlviii, 32). (8) Name of one of the twelve tribes of Israel which during the exodus journeyed to the west of the Jordan, and according to a second census 45,600 (Num., i, 36; xxvi, 41). The territory assigned to it is defined in Josue, xviii, 11 sqq. It was about twenty-five miles in length and twelve in breadth, and was bounded on the north by Ephraim, on the east by..."
the Jordan, on the south by Juda, and on the west by Dan. The nature of the territory was conducive to breed a race of hearty warriors such as the Benjamites too are depicted by Jacob as "a ravenous wolf, in the morning he shall divide the prey, and in the evening shall divide the spoil" (Gen., xxix, 27). During the period of the Judges the tribe was well known, for on account of a crime committed within its territory (Jud., xix-xcii). It was from this tribe that Saul, the first king of Israel, came, and in the evening shall divide the spoil." After the death of Saul the tribe of Benjamin remained loyal to his son, Ishobod (II Sam., vii, 9 sq.), until David became king of all Israel (II Sam., v, 1-5). At the time of the revolt from Rehoboam the tribes of Benjamin, Juda, and Simeon remained true and formed the Kingdom of Juda (III Kings, xii, 21), which also constituted the nucleus of the restored nation. St. Paul glories in belonging to the tribe of Benjamin (Philadelphia, iii, 6).

P. X. E. ALEXER.

Benkert, Franz Georg, a German theologian and historical writer, b. 25 September, 1790, at Nordheim, near the mountain district of Rhön, Germany; d. 20 May, 1859, at Coburg. After finishing his studies at the gymnasium in Münnerstadt he studied theology and was ordained priest in 1816. He was first a curate at Gaureßheim and, in 1821, was made vicar of the theological seminary at Würzburg. While holding these positions Benkert continued his studies. In 1823 he received a doctorate, having offered the dissertation "De Duplìci Missà Catechumenorum et Fidelium". From 1823 to 1833 he had the position of principal, and in 1838 he was made a cathedral canon and cathedral dean.

At that time, in common with the ecclesiastics of other dioceses, the clergy of the Diocese of Würzburg suffered greatly from the religious disease of the age, "Josephism", and were inclined to a sickly and ever increasing rationalism. The destructive effects of these rationalistic tendencies showed themselves everywhere in the life of the Church. Even when acting as vicar-general Benkert showed himself devoted to the religious cause of the Church and the people of the Church and to cultivate in them an interest in, and a knowledge of, the religious life. In 1837 he founded the periodical "Der Religionsfreund für Katholiken mit Beiträgen religiös gesinnter Männer". He issued the periodical in the desire to increase the influence of his efforts and also to win over the unconverted clergy.

The periodical appeared in six volumes, 1822-26. It attracted much attention and was copied in France in the "Ani de la Religion". In connexion with O. J. Saffenreveter he issued, 1828-40, a continuation of this, his first, periodical, entitled "Allgemeiner Religions- und Kirchenfreund und Kirchenkorrespondent, eine theologische und kirchenhistorische Zeitschrift". At the same time he published, 1823-34, a periodical entitled: "Athenaasia, eine theologische Zeitschrift, besonders für die gesamte Pastoral, Kirchegeschichte, auch für Pädagogik". This appeared in sixteen volumes. He continued the same publication from 1835 to 1840 in connexion with J. M. Dörz. As Benkert was more apt to be swayed by his zeal for the right than by prudence, he made many enemies, especially among the older clergy. He therefore severed his connexion with this periodical in 1840, and devoted himself to the study of the history of his native district. His historical writings have only a local interest. A larger and more important work which he undertook on the Rhön was never completed.

Patriicus Schlag, 491

Benno, Saint, Bishop of Meissen, b., as is given in biographies written after his lifetime, about 1010; d., probably, 16 June, 1106. He is said to have been the son of a Count Frederick von Waldenburg (Bingenstein) and to have been educated in the famous St. Bernard of Hildesheim. But these statements and the date of his birth cannot be proved to be historically correct. It is, however, certain that he was a canon of Goslar about the middle of the eleventh century, and that he became Bishop of Meissen in 1066. At that time the great struggle between the Emperor Henry IV and the pope over investiture, which involved the independence of the Church, was raging. Benno took part in the revolt of the Saxons against Henry (1075). In 1075 he was taken prisoner by the emperor, who was then victorious, and kept in prison for a year. As later, he upheld the party of Pope Gregory VII he was deposed at the synod of Mainz, 1085, by the prelates belonging to the imperial party and Felix, a partisan of the emperor, received the bishopric. Three years later Benno recognized the Antipope Wibert (Clement III) and obtained his see again; at a later date, however, he separated himself from his schismatical party and recognized Urban II (1088-99) as the rightful pope. The authorities of the eleventh century contain no further information as to his life.

The Diocese of Meissen extended towards the east as far as the River Bober and included Upper and Lower Lusatia, which were inhabited by Slavs. According to later tradition, Benno spent a number of years of his life to missions among these heathen tribes. He was reputed to be the founder of the cathedral of Meissen and in after-ages was the most venerated bishop of the diocese. He was canonized by Pope Adrian VI (1522) "Excellentissimus Dominus" in Bullarium Romanum, Turin ed., VI, 18 sqq.), and his relics were, with great solemnity, exposed for veneration, 16 May, 1524. Luther took this occasion to publish his lampoon "Wider den neuen Abgott und alten Teufel, der zu Meissen soll erhoben werden". After Saxony had adopted Protestantism Duke Albert V of Bavaria had the relics of the saintly bishop transferred to Munich and placed in the church of Our Lady (now the cathedral). Since this time Benno had been the patron saint of Munich; his feast is celebrated by the women of Munich. He is shown with a fish and a key; according to a legend he gave the key of the cathedral of Meissen, when starting on his journey to Rome, to one of the canons with the command to throw it into the Elbe as soon as Henry had been put to death. Should be excommunicated by his father, the saint, after Benno's return a large fish was caught in the Elbe and the key was found hanging to one of its fins, so that the bishop received it again.

Acts 35, June, 113, 14 sqq. contains the Epitome Vetus and the Vita by Egenhart; the Vita is first published at Leipz, 1515, and claims to be founded on an older life which has been lost, but this is disputed with good reason; Lander, Kritik der Quellen zur Geschichte des hl. Benno, in the publications of the Historical Society of the city of Meissen (1884), I, 3, pp. 75-83; ibid., Bischof Benno von Meissen (in op. cit. (1886), I, 5, pp. 3-38; (1888), II, 2, pp. 90-144; Denker, Aktenstücke zur Geschichte der Würzburger Bischofe (Würzburg, 1886), 131 sqq.; Sieficraft, Ossinigium Benonii eius vitae et actuum iuridarum (Münch, 1765); Chrambe, Apologia Benonii contra S. Benno vindicatim (Munich, 1793); MacMT, Gesch. der Bischofe des Hochstiftes Meissen (Dresden, 1856); Wint, St. Benno und Bischof Meissen (Dresden, 1896); Kleen, Der hl. Benno (Munich, 1904).

J. P. Kirsch.

Benno II, Bishop of Osnabriick, b. at Lüningen in Swabia; d. 27 July, 1088, in the Benedictine monastery of Iburg near Osnabrück. His parents sent him at an early age to the monastic school of Osnabriick where the learning was so important that the headmaster of Reichenau was then teaching. Having completed his education and made a pilgrimage to the Holy Land, he taught for some time at Speyer in Rhinen Bavaria. On account of his skill in architecture he
was made imperial architect by Emperor Henry III and, as such, supervised the construction of numerous castles and churches in the empire. When the Rhine, which flowed close to the Cathedral of Speyer, threatened to undermine the foundation of that building, Benno saved the majestic structure by changing the course of the river. In 1047 he became teacher at the Benedictine school of Goslar (Hanover) and, shortly after, was made head master of the cathedral school at Hildesheim. In 1061 he accompanied the Bishop of that see, on their winter's Hungarian campaign and upon his return was made provost of the Cathedral of Hildesheim and archbishop at Goslar.

In 1069 Benno was consecrated Bishop of Osnabrück, then vacant through the death of Benno I. During the conflict between Gregory VII and Henry IV, Benno for a long time sided with the emperor. When, at the Synod of Worms, in 1076, Gregory VII was deposed, Benno, like most other German bishops, signed the formula of deposition and incurred ecclesiastical excommunication. With some other well-meaning excommunicated bishops, Benno hastened to Italy, where the pope freed them from the ban at Canossa, before Henry himself arrived there to feign repentance. After the emperor's second excommunication, Benno tried to bring about a reconciliation, but, seeing the insincerity of the emperor, gave up in despair and retired to the monastery of Iburg, which he had founded in 1070. In a little house near the monastery he lived according to the rule of the monks during the week, while on Sundays and holidays he assisted at his cathedral in Osnabrück. Benno's piety and justice made him much beloved by his flock. Strunck (Westphalia Sancta, Paderborn, 1855) and Heitemayer (Die Heiligen Deutschlands, Berlin, 1889) include him in the list of saints. Kerler (Die Patronate der Heiligen, Ulm, 1905) says that he is invoked against grasshoppers, because he once dispersed them by his prayers.

**BYEYEL, WILLIAM DEVELYN.**

**Benthamism.**—Jeremy Bentham, an English jurist and reformer, b. at Houndeditch, London, 15 February, 1748; d. in London 6 June, 1832, was of middle-class parentage. After passing through Westminster school he went to Oxford, where he took his Bachelor's degree in 1763 and his Master's degree in 1776. He qualified for the Bar, but soon, disgusted with what he called the "Demon of Chicanery," he abandoned the practice of law and devoted himself to the study of philosophers then in fashion, notably Locke, Hume, Montesquieu, Helvétius, Boccazzi, and Barrington. Under the influence of these writers, he entered upon work proved to be a lifelong and fruitful career of speculation upon the principles of legislation and government. His first work was the Abolition of the Punishment of Certain Crimes (1777), which reflected the ideas of the French Revolution. He was not the construction of theories or the establishment of abstract principles. He first attacked specific abuses in the English system of penal legislation. In tracing these abuses to their sources he was led to investigate the ultimate principles of law; and subsequently he undertook to construct a complete science of legislation. In like manner, his efforts to lay bare the evils existing in the legislative machinery carried him on to assail the defects of the British Constitution.

He published anonymously, in 1776, his first noticeable work, "A Fragment on Government" in the preface of which he formulated his celebrated utilitarian principle, "the greatest happiness of the greatest number," which he borrowed from the French and applied it to utilitarian and patriotic ends. This work, which he makes of this principle that characterizes Bentham among philosophers. By it exclusively he would estimate the value of juridical, political, social, ethical, and religious systems and institutions; does utility justify the order existing? Bentham's "An Introduction to the Principles of Morals and Legislation," appeared. It is the only important one that was published by himself alone; all the others

**BENEFIT**

While applying himself to his astronomical studies he taught the emperor the use of the reflecting telescope. Among his numerous works were: (1) A large map of the world (twelve and a half by six and a half feet), to which he added valuable astronomical and cartographic data; (2) A topographical treatise on the Empire and surrounding country, engraved on copper, though at the outset he was as little versed in this art as were his Chinese collaborators, whom he had chosen from the best wood-engravers in the country; (3) Bishop of that see, on the wars of the Emperor and surrounding country, engraved on copper, though at the outset he was as little versed in this art as were his Chinese collaborators, whom he had chosen from the best wood-engravers in the country; (4) Father Benoit's immediate desired Father Benoit to print further copies. This required new presses for these delicately wrought French plates, new methods of wetting paper, distributing ink, etc. The result was successful, even rivalling the work done in France, but it was Father Benoit's last service. He died of apoplexy, ripe in religious and apostolic virtues. The emperor said of him, "This was a good man and generous in his service"; a missionary remarked, on hearing this, that, with the words said of a Tatar or Chinese, he was added to a long line of descendants. Father Benoit was the author of many letters preserved in the "Letters édifiantes," he translated into Chinese "The Imitation of Christ", while in the "Mémoires sur les Chinois" are many memoirs, descriptions, and sketches ascribed to him, but unsigned.

**MICHAIL OTT.**

**BENEFIT.** Michel, b. at Autun (or Dijon), France, 8 October, 1715; d. at Peking, 23 October, 1774, a Jesuit scientist, for thirty years in the service of Kien Lung, Emperor of China. He studied at Dijon and at the Jesuit college at Paris, and entered the Novitiate at Nancy, 15 March, 1737. After three years of renewed treattises he was granted his desire of the Chinese mission, but before his departure completed his astronomical studies at Paris under De l'île, de la Caille, and Le Monnier, who attached much importance to his later correspondence. On his arrival at Peking in 1774 (or 1775), a persecution was raging against the missionaries in the provinces; still, as their scientific ability made them indispensable to the government, Father Benoit was retained at court and entrusted with the task of designing and carrying out a great system of decorative fountains in the royal gardens. He spent many years in this work, for which he evinced rare talent. He built European houses within the enclosure of these gardens, and by his skill in the study of architecture, he constructed a curious water clock. The Manchus characterize the twelve hours of their day (twenty-four hours, European time) by twelve animals of different species. On two sides of a large triangle of water, each of the twelve signs of the zodiac were represented by a figure of these animals, through the mouths of each of which successively, for two hours, was forced a jet of water by some ingenious mechanical device.
were compiled with more or less co-operation from his following and the Dominicans. E. Dunlop, hence, to secure for Bentham, at the beginning of the nineteenth century, international fame as a legal and social reformer by arranging Bentham's writings and publishing them in French. About this period he was engaged in many philanthropic schemes, the most notable of which was the foundation of the British prison system. This undertaking, though aided by the British Government, proved a failure. After the peace of 1815, when the codification of laws was occupying a large place in the attention of statesmen, Bentham's Monographs were consulted, by jurists of Russia, Spain, Germany, and some South American countries. He also exerted an influence upon legislation in the United States, notably Pennsylvania and Louisiana. In England his ideas of political reform were taken up by the leaders of the rising radicalism, Coblett, George Grote, the two Mills, and others. With them, in 1823, he established the "Westminster Review" as the organ of the party. He maintained a correspondence with many prominent men of his day, including Madison and Webster, of the United States.

Bentham attacked the Established Church as a factor in the general system of abuse, and from the Church he passed, characteristically, to the Catechism, then to the New Testament, and finally to Religion itself. In "The Analysis of Religion," published by George-Grote under the pseudonym of Philip Beauchamp, he applies the utilitarian test to religion, and finds religion wanting. True to this same principle in ethics, Bentham maintained happiness to be the sole end of conduct; pleasure and pain, the discriminating norm of right and wrong; and he reduced moral obligation to the mere sanction inherent in the pleasant or painful results of action.

The patriarch of utilitarianism, as Bentham has been called, was an upright character and simple in his manner of thought. His bent of mind was for the abstract, and he was singularly deficient in the wisdom of the practical man of the world. Nevertheless, circumstances turned him to grapple with intensely practical problems; and, with the help of his followers, he has wielded on political development and philosophic thought in England a powerful influence which is far from exhausted. The spread of his ideas contributed signally to the carrying of Catholic Emancipation in 1829 and the beneficent policies of 1832. At the same time they helped to open the way in English ethical and theological speculation for the positivism and agnosticism of the last half of the nineteenth century. One of his principal works, "Deontology, or the Science of Morality," was published after the author's death by his disciple Sir J. Bowring, who also edited Bentham's collected works in eleven volumes (1838-43). This edition has not been superseded.

A good edition of the "Fragment on Government" was issued by the Claydon Press in 1891.

James J. Fox.

Bentivoglio, family of, originally from the castle of that name in the neighbourhood of Bologna, Italy, and by a branch of the Holy Red, at Watford; the convent chapel, at Brainsbury; the chapel of Beaumont College, Old Windsor; St. Anne's Cathedral, Leeds; and St. Mary's, Cadogan Place, Chelsea. He was also responsible for the baptistery, font, and monument at St. Francis, Norwich.

BENTLEY

Heart chapel in the church of the Jesuit Fathers at Farm Street, and the decoration at Carlton Town Hall. It is a stock certificate. In 1840, he was commissioned to build the chapel at Westminster, and at once started for Italy to make a careful study of the various great basilicas, and the mosaic work at Ravenna. He devoted himself with great concentration, his life model, producing the most remarkable ecclesiastical building erected in England since the Reformation, and receiving high praise all over Europe on his extraordinary success.

He was a person of brisk, reserved manner, but friendly and reliable to those who really knew him. He had the strongest dislike to the pretense of show drawings and to the system of architectural competition and, being a man wholly lacking in self-assurance, and reticent in conversation, was never as well known in general circles as he deserved to be. His great characteristics as an architect were his careful attention to detail, his solicitude that all the fittings should be in perfect harmony with the building, and the sparing use he made of iron. He was awarded the gold medal of the Institute of Architects in February, 1902, but when he received it, as on the 1st of March he was seized with paralysis and died the following morning. He was present at the trial of acoustic qualities made in his cathedral, but was not spared to see its formal dedication. He was buried at Mortlake.

GEORGE CHARLES WILLIAMSON.

Bentley (alias Benett), William, an English Jesuit priest b. in Cheshire, 1609; d. 30 October, 1692. He entered the Society of Jesus 7 September, 1630, was sent to the English mission in 1640, and laboured there with great zeal and success for forty-two years. He was then arrested, at the instigation of a nobleman to whose sisters he was administering the sacraments, and was taken to Leicester gaol. No one in those parts being willing to bear witness against him, Bentley was at once transferred to Derby, where he was tried and sentenced to death at the spring assizes of 1682. His execution was delayed for unknown reasons, and on the accession of James II he was released. He was re-arrested, however, tried, and condemned after the Revolution, but the sentence remained suspended, and in 1682 he died in Leicester gaol.

SYDNEY F. SMITH.

Benziiger, Aloisius. See Quilon, Diocese of.

Benziiger, Joseph Charles, founder of the Catholic publishing house that bears his name, b. at Einsiedeln, Switzerland, 1762; d. there, 1841. In 1792 he started a small business in religious articles, but he soon felt the effects of the French Revolution. The French invasion forced him to take flight with his family, and for about a year they resided at Feldkirch, Austria, where his eldest son, Charles, was born. In 1800 they returned to Einsiedeln, which had been devastated by pillage and army requisitions. All Mr. Benziiger's modest fortune was gone, but with redoubled efforts he set about regaining his losses, and started in business as a bookseller. He was made president of the county, and his credit and personal financial sacrifices proved of great help, especially during the famine of 1817. In 1833, Charles and Nicholas Benziiger, his sons, assumed the firm name of "Charles and Nicholas Benziiger Brothers", and two years later, in addition to their book publishing business began the lithographing of religious pictures, as well as the colouring of them by hand, before the introduction of chromolithography.

Charles Benziiger, son of the founder, b. 1790, d. 1873, a man of unusual strength and energy, who was educated by a Jesuit priest, a good companion and especially to the literary end of the business. In 1840 the "Einsiedler Kalender" was founded; it is still published and furnishes an interesting illustration of the development of the art of printing. "The Pilgrim", a popular Catholic periodical established at the same time, lasted only ten years. Charles, too, took an active part in public life, and showed moderation and energy as President of the Canton of Schwyz. His health failed and in 1860 he retired from business, his brother Nicholas Benziiger, brother of the preceding, b. 1808, d. 1884, who took charge of the technical part of the business, proved himself a pioneer, introducing to the mountain village of Einsiedeln a series of improved trades methods as they appeared from time to time in the great centres of Europe and America. Under his guidance the work of book-binding, which was formerly carried on in the family home, was systematized. In 1844 the old hand-press was superseded by the first power press. Stereotyping was introduced in 1847. In 1856 steel and copper printing in 1858 electric typ fixed. In 1853, a house was opened in New York. By this time the two brothers had built up a business in Catholic books and prints that was known the world over. They also took an active part in charitable work, and started a fund for a hospital, which has since been erected.

On the retirement of Charles and Nicholas Benziiger (1860) the business was continued by Charles, Martin, and J. N. Adelrich, sons of the former, and Nicholas, Adelrich, and Louis, sons of the latter. Under this third generation, the different branches of the business were still further developed, chromolithography and other modern printing methods being added. In 1867, the "Alte and Neu Welt", the first illustrated popular Catholic German magazine on a large scale, was begun, and then appeared a number of illustrated family books of devout reading and a series of school books, including a Bible history in twelve languages, together with prayer books by well-known authors. Between 1880 and 1885 a fourth generation succeeded to the business, and the firm name was changed to Benziiger and Company.

The house of Benziiger Brothers in the United States was established in New York in 1853 by the Swiss house, but its development did not begin until 1880 when J. N. Adelrich Benziiger (d. 1878) and Louis Benziiger (d. 1896) took charge. In 1860, a house was opened in Cincinnati and in 1887 one in Chicago. The publishing of English Catholic books was vigorously undertaken, and to-day the catalogue covers the field of devotional, educational, and juvenile literature, besides works of a theological character. Since 1864 the firm has manufactured sacred vessels and church furniture. The American firm of Benziiger Brothers is now independent of the Swiss house. The Holy See conferred on the firm the title "Printers to the Holy Apostolic See" in 1867, and "The Pontifical Institute of Christian Art" in 1888.

THOMAS F. MEYER.

Benzoni, Girolamo, b. at Milan about 1519. He went to America in 1541 and successively visited the Antilles and the Isthmus, Guatemala, and the west coast of South America. He returned to Spain and there died. The work is the best that had ever been written on the subject, and nothing is known. Some hints in his book suggest that his main purpose in the New World was commerce, which he often had to carry on with difficulty, as trading by foreigners in the Spanish colonies was not looked upon with favour by the Span-
ard. Benzoni, while not unsuccessful in what he undertook, conceived an inveterate hatred of the Spanish people and Government and in return for the protection given him and for favours which he was compelled reluctantly to acknowledge, wrote and published a book of distortions and accusations against Spain, which is still read or quoted about the countries he visited, but abounds in errors and often in intentional misstatements. What Benzoni states about the Antilles is a clumsy rehash of Las Casas. His reports on the conquests of Miro and Perni bristle with errors.

The book of Benzoni "Historia del Mundo Nuevo", published at Venice in 1565. He dedicated it to Pope Pius IV. It was at the time when the controversy concerning the treatment of the Indians was boisterous, and a work, written by one who had just returned from the New World after a stay of fifteen years, could not fail to attract attention. In writing it, no standard of criticism was applied; this was not in the spirit of the times. The ultra-philanthropists found Benzoni a welcome auxiliary, and foreign nations, all more or less leagued against Spain for the sake of supplanting its mastery of the Indies, eagerly adopted his extreme statements and sweeping accusations. Several editions were published in rapid succession; translations were made into English, and rifled in another language. Internally, the book has small merit, except in as far as it presents and describes facts witnessed by the author. Even these are not always faithfully reported. It might be called a controversial document because of its violent partiality and hostility. It does not notice mitigating circumstances, and ignores what is good when it does not suit the author. Benzoni writes sometimes like a disappointed trader, and always as a man of limited education and very narrow views. His "Historia del Mundo Nuevo" (Venice, 1565) was (Venice, 1565) was (Venice, 1565) translated into French by Eustace Vignon, 1579. Aside from the annotations which are often trivial and as partial as the book itself, the English translation, "History of the New World by Girolamo Benzoni" (London, 1887), by the Hakluyt Society, is certainly the best.  
AD. F. BANDIERI.

Beogh, Abbot of Bangor. See Lough Dearg of St. Patrick’s Purgatory.

Bequest, Religious. See LEGACIES.

Beragh, Saint, of Ternonbarry, d. 695; a disciple of St. Kevin and a celebrated Irish saint, whose memory is still fresh in County Roscommon. He was the tribe of Cineal Dobhtha, or O’Hannley of Doonee Hanley, to which also belong the MacCollidh family. Most of the funds he used was spent in the Church of Elliph, and he built his church at Cluain Cinorpe since known as Ternonbarry or Kilbarry. His sister, St. Midea, was abbess of a nunnery at Bumlin (Stokestown), of which she is venerated as patroness on 22 February. Her ancient conventional church and graveyard are still to be seen. Under the title of "Beragh of Cluain Cinorpe" St. Beragh is honoured in several martyrlogies, and his holy life attracted pilgrims to Kilbarry from all parts of Ireland. The MacCollidh family, whose name was anglicised to Cox in the early years of the seventeenth century, were hereditary custodians of St. Beragh’s crosier, and were barons, or lay abbots, of Kilbarry. The crosier is now in the Dublin Museum. In 1590, Dr. M. F. Cox of Dublin, the lineal representative of the MacCollidhs, unmoved by any value of his ancestors’ title, legally confirmed the present Catholic Church of Whitehall, near Kilbarry. St. Beragh’s oratory at Cluain Cinorpe was replaced by a fine damhlaing (stone church), built by MacCollidh and O’Hanley in 1610, and acquired the name of St. Beragh’s Church, that is, St. Beragh’s Church of St. Beragh. Some authorities give his feast as 11 February, but most martyrlogists assign him II.—31

15 February. Kilbrack Church, County Dublin, was also called after this saint, as in his early days he spent some time there and performed many miracles, duly recorded in his life. His bell was long preserved at the Abbey of Glendalough, but has disappeared since the sixteenth century. W. H. GRATIAN FLOOD.

Berard of Carbo (or Beraldus), Saint, Friar Minor and martyr; d. 16 January, 1220. Of the noble family of Leopardi, and a native of Carbo in Umbria, Berard was received into the Franciscan Order by the Seraphic Patriarch himself, in 1213. He was well versed in Arabic, an eloquent preacher, and was chosen by St. Francis, together with two other priests, Peter and Otho, and two lay-brothers, Accursius and Adjutus, to evangelize the infidels of the East. On the conclusion of the Second General Chapter in 1219, St. Francis believed that the time had then come for the religious of his order to extend their apostolic labours beyond the Italian peninsula and Northern Europe; and, choosing for this purpose the other religious the greater part of Syria and Egypt, he allotted to Berard and his companions the missions of Morocco. The five missionaries set sail from Italy, and after sojourning some time in Spain and Portugal finally arrived in the Kingdom of Morocco. Their open preaching of the Gospel there and their bold denunciation of the religion of Mahomet soon caused them to be apprehended and cast into prison. Having vainly endeavoured to persuade them to abandon the true religion, the Moorish king had them all opened their heads with his scimitar, and thus were offered to God the first fruits of the blood of the Friars Minor. Berard and his companions were canonized by Sixtus V, in 1681. The feast of the martyrs of Morocco is kept in the order on the 16th of January.

STEPHEN M. DONOVAN.

Berardi, Carlo Sèbastiano, a canonist, b. at Oneglia, Italy, 26 August, 1719; d. 1768. Having studied theology at Saluzzo under the Friars, Berardi was promoted to the Chair of Law at Turin, where he devoted himself to the study of law at Turin, paying particular attention to canonical jurisprudence. In 1749 he was appointed prefect of the law-faculty of the University of Turin, while from 1754 till his death he was professor of canon law in the same institution.

Berardi’s works are: (1) "Gratiani canonum genuini ab apocrypsis discreti, corrupti ad emendatorum codicum fidem exacti, difficiliores commodà interpretatione illustrati" (4 vols. quarto, Turin, 1752—57; Venice, 1777, 1783). Richter (in Proleg. ad Gratiani Decretum) says of this work that one knows not whether to admire more the knowledge or diligence evidenced in it, while all unanimously declare that, as a critical exposition of Gratian’s Decretum, it is surpassed by Antonio Agostino’s Bononius’ work alone. The great advantage of this, that it sets forth the original authorities of the Decretum, though carelessness is apparent at times in the author’s endeavours to distinguish genuine sources from those that are spurious. Berardi, however, is occasionally hypercritical, a commendation of this work by an unslanted writer, published at Venice, 1778, is entitled, "Compendium
Commentariorum Caroli Sebastiani Berardi in Canones Gratiani. (2) "De Varis Sacrorum Canonum Collectionibus ante Gratianum", published together with his first work. (3) "Commentaria in Juris Eclecticismi Universam" in four vols. quarto, Turin, 1716; two vols. octavo, Venice, 1778, 1780, 1847. This is an excellent treatise from the viewpoint both of theory and practice. (4) "Institutioe Juris Ecclesiasticorum" (2 vols. Turin, 1769), a work that is to be read with caution.

A. B. MEYER.

Berault-Bercastel, ANTOINE HENRI DE, a writer of church history, b. 22 November, 1720, at Brie, Lorrain; d. about 1794 at Noyon, France. At an early age he entered the Society of Jesus, but left it after his ordination to the priesthood. He was made parish priest of Ommerville and later a canon of Noyon. His most important work is entitled "Histoire de l'église" and was issued at Paris, 1778-90, with twenty-four volumes. The history gives a circumstantial account of the Church from the time of its founding up to the year 1721. It is not so much intended for students as investigators as for educated Christians, and especially for those priests whose professional cares do not allow them time to carry on higher studies. On account of its general usefulness his work has had a large circulation; in spite of many defects, especially in the later volumes, it has often been republished, as at Maastricht (1780-91), at Toulouse (1811). It has also been translated into foreign languages; it was published in Italian at Venice (1793), and in German at Vienna (1784). Victor Reschius is supposed to have issued it in a condensed form. Instances are the edition of Guillon (Besançon, and Paris, 1820-21), that of Peller de la Croix (Ghent, 1829-33), and that of Robiano (Lyons and Paris, 1835 and 1842). The best edition, with a continuation up to 1844, was edited by Henron (Paris, 1844). The best condensed edition was edited by Gams (Innsbruck, 1854-60).

Hüter, Nomenclator, III, 347.

PATRICIUS SCHLAGER.

Bercharius (Berchus), SAINT, Abbot of Hautvillers in Champagne, b. 636; d. 28 March, Nivo, France. Descended from a distinguished Aquitanian family, he received his instruction from St. Nivard (Nivo), Archbishop of Reims, under whose charge he advanced rapidly in virtue and learning. Believing himself to be not worthy to undertake the office of a bishop, he went to the monastery of Luxeuil under St. Walbert, and by his humble and faithful performance of duty soon excelled his fellow-novices. Upon his return to Reims he induced St. Nivard to erect the cloister of Hautvillers, of which Bercharius himself became the first abbot. Who had resolved to pray and meditate he also instructed his brethren to lead a contemplative life. Ever zealous for the propagation of the Faith, he founded two cloisters in the Diocese of Châlons-sur-Marne, the one (Puisy or Moutier-en-Der) for men, the other (Pellonnier, Pelourcen Monastenum) for women. These institutions he enriched by donations of valuable relics, procured a journey to Rome and the Holy Land.

The monk Daguin, provoked by a reprimand from Bercharius, stabbed him during the night. No word of complaint or sorrow did he utter when the murderer was led before him; but he gloried in exhorting the transgressor to penance and in requesting him to make a pilgrimage to Rome to obtain pardon and absolution. Daguin left the monastery never to return, and of his days passed his saint succumbed to his wound, a martyr not for the Faith, indeed, but for charity and justice. His remains were preserved at Moutier-en-Der until the suppression of religious orders at the close of the eighteenth century. The commemoration of his name occurs in the martyrology on the 16th of October.

Boutton, XV, 228; Ades, Vita S. Berchariusi Stratis, X. 481; Barlazar Dieringer.

Bercheur (Berchoire, Berchier), PIERRE, a learned French Benedictine, b. 1290 at St. Pierre du Chemin (Vendée); d. 1362 at Paris. He joined the Order of St. Benedict at Mâlezeiz, later lived at Avignon for a period of twelve years with Cardinal Alberic de Praetis, Bishop of Avignon, and in 1354 was made prior of St. Eligius at Paris. He was an eloquent preacher and a voluminous homiletical writer. His most important work is the "Repertorium morale", for the use of preachers, a kind of Bibliico-moral dictionary, in which the principal words of Scripture are arranged alphabetically and moral reflections attached thereto. It appeared some time before 1555 and was dedicated to Cardinal de Prati. The "Repertorium" proved to be one of the most popular books of its kind and was frequently printed—first at Rome in 1477, and again in 1505, 1550, Lyons (1517), Paris (1521), Venice (1589), Antwerp (1609), etc. A French translation by Richard Leblanc appeared at Paris in 1584. Other works of Bercheur are: "Reductorium morale" to the Sacred Scriptures in thirty-four books, a series of short books of the Bible, printed at Strasbourg in 1474, Bâle (1515), Lyons (1536); "Inductorium morale biblicum"; sixteen books on God and the world; and a French translation (the earliest) of Livy, made about 1350 at the request of King John the Good—published at Paris in 1514 in three volumes. His "Inductorium morale biblicum", commentaries, discourses, letters, and other treatises, have never been printed. Editions of his collected works appeared at Lyons (1520), Venice (1589, 1631), Cologne (1650, 1669), etc.

THOMAS ZEDRICH.

Berchmans, Saint John. See JOHN BERCHMANS, SAINT.

Berchold (Berchold), Blessed, Abbot of the Benedictine Monastery of Engelberg in Switzerland; date of birth unknown; d. 3 November, 1197. Before becoming abbot he was a monk at Engelberg and a favourite of the local abbot, Jacob Fromon. When Fromon was on the point of dying he advised his monks to elect the pious Berchold as his successor. Accordingly, after Fromon's death, which occurred 27 March, 1178, Berchold was chosen abbot. Following in Fromon's footsteps, he made an effort to maintain strict monastic discipline, the importance of which he inculcated by his own example. Nor did he neglect, at the same time, to encourage his monks in the pursuit of Divine and human knowledge. By his order they reproduced many old writings, some of which are still extant in the library of Engelberg. The more learned monks were encouraged to write original works. When Abbot Burchard openly taught that the souls of the just had gone to heaven before the Resurrection of Christ, Berchold himself wrote "Apologia contra errorem Burchardi Abbatis S. Joannis in Thurhali seu Vallis Turinae", in which he shows himself not only well versed in Holy Scriptures and the writings of the Fathers, but also a master in theological knowledge and dialectical skill. Abbot Burchard became convinced of his error and died a saintly death. Though especially mindful of the spiritual and intellectual advancement of his monks, Berch-
BEREA

BERENGIUS
 terrified did not omit to provide also for the temporal welfare of Engelberg. He procured for his monastery many feudal privileges, among which was the right to levy tithes upon the churches of Stans and Buchs, which were under his jurisdiction. The contemporaneous annals of Engelberg, which are published in “Mon. Germ. Hist., SS.,” XVIII, 280, relate that Berchtold founded the church of St. Martin of Engelberg, Friedrich Barbarossa. Later chronicles state that, through his blessing, the lake near Stanzstad was stocked with fish, and that shortly before his death he three times changed water into wine. He is generally represented in the act of blessing fish. His image, with the headdress which Lafrance received in Rome whither he had gone to take part in a council. The letter was read in this council (1050); Berengarius was condemned, and was ordered to appear at a council which was to be held the same year at Vercelli. King Henry I being titular Abbot of St. Martin of Tours, Berengarius had permission to go to the council. It is probable that at this time the conferences of Brionne and Chartres were held in which Berengarius unsuccessfully defended his opinions. (Cf. Durand of Troarn, Liber de Avelliis et Sanguiniis Christi, xxxii, later part; Juv. of CXLIX, 1422.) The king, for reasons which are not exactly known, ordered Berengarius to be imprisoned, and at the Council of Vercelli (1050) his doctrine was examined and condemned.

The imprisonment, however, did not last long. The Bishop of Angers, Eusebius Bruno, was his disciplo and supporter, and the Count of Anjou, Geoffrey Martel, his protector. The following year, by order of Henry I, a national synod was held in Paris to judge Berengarius and Eusebius Bruno; neither was present, and the synod condemned them.

At the Council of Tours (1055), presided over by the papal legate Hildebrand, Berengarius signed a profession of faith wherein he confessed that after consecration the bread and wine are truly the body and blood of Christ in the Holy Eucharist. (Mansi, XIX, 900.) On his return, however, Berengarius attacked this formula. Eusebius Bruno abandoned him, and the Count of Anjou, Geoffrey the Bearded, vigorously opposed him. Berengarius appealed to Pope Alexander II, who, though he intervened in his behalf, asked him to renounce his erroneous opinions. This Berengarius contemptuously refused to do. He then wrote his “De Sacra Coen. adversus Lanfrancum Liber Posterior,” the first book of which—now lost—had been written against the Council of Rome held in 1059. He was again condemned in the Councils of Poitiers (1075), and of St. Maxent (1076), and in 1078, by order of Pope Gregory VII, he came to Rome, and in a council held in St. John Lateran signed a profession of faith affirming the conversion of the bread and wine into the body and blood of Christ. The following year, in a council held in the same place Berengarius signed a formula affirming the same doctrine in a more explicit way. Gregory VII then recommended him to the bishops of Tours and Angers, forbidding that any penalty should be inflicted on him or that anyone should call him a heretic. Berengarius, on his return, again attacked the formula he had signed, but as a consequence of the Council of Bordeaux (1080) he made a final retraction. He then retired into solitude on the island of St. Cosme, where he died in union with the Church.

DOCTRINES AND THEIR CONDEMNATION.—Accord ing to some of his contemporaries, Berengarius held erroneous opinions on the spiritual power, marriage, the baptism of children, and other points of doctrine. (Bernold of Constance, De Berengarii heresiarum damnatione multiplici in P. L., CXLV, 1456; Guitmond, De Corporis et Sanguinis Christi veritate in Eucharistia, P. L., CXLIX, 1429, 1480.) Berengarius’s fundamental doctrine concerns the Holy Eucharist.

In order to understand his opinion, we must observe that, in philosophy, Berengarius had rationalistic tendencies and was a nominalist. Even in the study of the questions of faith, he held that reason
BERENGARIUS

is the best guide. Reason, however, is dependent upon and is limited by sense-perception. Authority, therefore, is not conclusive; we must reason according to the data of our senses. There is no doubt that Berengarius denied transubstantiation (we mean the substantial conversion expressed by the word; the word itself was used for the first time by Hildebrand of Lavardin); it is not absolutely certain that he denied the Real Presence, though he certainly held faltering regarding it. Is the body of Christ present in the Eucharist, and in what manner? On this question the authorities appealed to by Berengarius are, besides Scotus Eriegena, St. Jerome, St. Ambrose, and St. Augustine. These fathers taught that the Sacrament of the Altar is the figure, the sign, the token of the body and blood of the Lord. These terms, in their mind, apply directly to what is external and sensible in the Holy Eucharist and do not, in any way, imply the negation of the real presence of the true body of Christ. (St. Aug. Serm. 143, n. 3; Gerbert, Libelli De Corp. et Sang. Domini, n. 4, P. L., CXXXIX, 177.) For Berengarius the body and the blood of Christ are really present in the Holy Eucharist; but this presence is an intellectual or spiritual presence. The substance of the bread and wine can always be distinguished in their nature, but by consecration they become spiritually the very body and blood of Christ. This spiritual body and blood of Christ is the res sacra mentum; the bread and wine are the sign, the sign broken, sacramentum.

Such is the doctrine of Berengarius in his various discussions, letters, and writings up to the Council of Rome in 1059. (Migne P. L., CXLII, 1327; CI., 66; Martène and Durand, TheSSaurus Novus Anect dotorurn, Paris, 1717, IV.) At this council, Berengarius signed a profession of faith affirming that the bread and wine after consecration are not only a sign, but the true body and blood of Christ which can be perceived in a sensible and real manner. (Lafrance, De Corp. et Sang. Domini, ii, in P. L., CL, 410.) As already said, Berengarius retracted this confession. He maintained that the bread and wine, without any change in their nature, become by consecration the sacrament of the body and blood of Christ, a memorial of the body crucified and of the passion of the cross, the body of Christ as it is in heaven; for how could the body of Christ which is now in heaven, necessarily limited by space, be in another place, on several altars, and in numerous hosts? Yet the bread and wine are the sign of the actual and real presence of the body and blood of Christ. (De Sacra Cenà; Lafrance, op. cit.)

In the two councils of Lateran (1078 and 1079) Berengarius accepts and signs this profession of faith that "after the consecration, the bread is the true body of Christ, the very body born of the Virgin";—that "the bread and wine on the altar, by the mystery of the sacred prayer and words of our Redeemer, are substantially converted into the very flesh and blood of our Lord Jesus Christ, true and living body." (Martène et Durand, op. cit., IV, 103; Densinger, Enchiridion, Würzburg, 1900, n. 298.) In his exposition of this profession of faith, written after the council, Berengarius again clearly denies transubstantiation. He declares that, at the Last Supper, by virtue of the Lord's blessing, the bread and wine, keeping their natural properties, received a power of sanctification and became the sacrament of His body and blood; that the bread and wine on the altar are the very body of Christ, His true and human body. (Martène et Durand, op. cit., IV, 107.) From this moment on, the Eucharist begins to change, to become present, to be the host after the consecration in the Holy Sacrifice of the Most High.

There is no complete edition of the works of Berengarius. Only one volume has been published by Visher in Berlin (1834) containing the second part of his "De Sacra Cenà", unless the work of Archbishop Turonensis opusculum Super tantum tam inedita quam edita, I, De Sacra Cenà adversus Lanfrancum liber posterior". Others of his opinions and writings are to be found in the works quoted above and in P. L., CL, 63, 66; H. Sudendorf, "Berengarius Turonensis oder eine Namensung ihm betreffender Briefe" (Hamburg, 1850).

De Rote, Vita, Her. et Passi. Berengarii Archidioecatis Angers (Angers, 1850); Schwane, Dogmengesch. der
BERGER, Pierre (Peter of Poitiers, Petrus Scholasticus), a French writer who flourished about the middle of the 12th century. From the second name we may, perhaps, infer that Poitiers was his native place. He was a disciple of Abelard, and is celebrated chiefly for his vigorous defence of his master in a letter which he addressed to St. Bernard after Abelard's condemnation at the Council of Soissons in 1141. Later on he wandered through the Cevennes Mountains, hunted, he tells us, not by wild beasts, but by the Christian faithful of the Diocese of Mende, who apparently took sides with St. Bernard. Those attacks were the occasion of a letter which he directed to the Bishop of Mende, and in which he retracted all that he had said against "the man of God." He is also the author of a letter of Bérenger's against the monks of the Grand Chartreux (Contra Carthusienses). Finally, we find mention of a treatise, now lost, in which he discussed the doctrine of the Incarnation. The three letters are published by Migne (P. L., CLXVIII, 1837 sqq.). That addressed to St. Bernard, while not wanting in grace and elegance of style, is altogether too intertemperate in tone to deserve serious consideration as an historical document. In it occurs the well-known description of an informal meeting of the bishops at the Council of Soissons. If we are to believe Pierre, the prelates were primed in a most disgraceful manner in St. Bernard's interests, and the condemnation of Abelard was decided before the council actually opened. Even if the author of this story had not afterwards excused it on the ground that it was the work of an unconsiderate youth, overcome by the ardour of his devotion to his teacher, the violent tone of the letter itself would be enough to condemn it. In the letter to the Bishop of Mende Pierre would recall all that he had written against St. Bernard were it possible to suppress all the copies of the letter, and begs that what he wrote be taken as a jest. He goes even farther when he says that his more mature judgment condemned, not by St. Bernard, but by Abelard—not, indeed, because they are untrue, but because they are unsafe. The invective against the Carthusians pays high tribute to the rule of the order, but finds fault with the probity of the members of the order to indulged in malicious gossip. Pierre exhibited many of the traits of his master. He was by nature a lover of contention, totally devoid of respect for the prestige of either person or institution. His sole merit was the undeniable vivacity and brilliancy of his style and his unusually extensive acquaintance with the poets of classical antiquity. He professed his devotion to Catholic dogma and apparently maintained that Abelard, though he had spoken of matters of faith in a manner novel and unsafe, had not been guilty of formal heresy and should be treated with the respect to which his love of Catholic truth, as he saw it, entitled him.

WILLIAM TURNER.

BERENICE, a titular see of Egypt which was situated at the end of Major Syrtes where Bengazi stands to-day. Its old name was Euesperides, or Hesperides, for which Ptolemy III Evergetes substituted Berenice in honour of his wife (Droysen, Geschichte des Hellenismus, III, 2, 331). Like other cities of Crete, it passed into the hands of a Jewish colony, so it became early an important Christian centre. Dionysius of Alexandria (264–282) wrote a letter to its bishop, Ammonius (Eusebius, H. E. VII, 26), who is also spoken of in the "Apology of Smyrna to the Emperor" (Cotelier, Monum., 4, 25; Grant, I, 385; Migne, P. L., LXV, 119). Daces was present at the Council of Nicaea in 325 (H. Gelzer, Patrum Nicen. nomina, 219). In 394, Probalis followed to Constantinople the Patriarch of Alexandria, and greechus (Mansi, III, 552). The city was destroyed by Justinian (Procopius, De aedif. VI, 2). It is mentioned with the wrong spelling "Berennes," by Hierocles (733, 3) and by Georgius Cyprius (n. 794) among the bishoprics of the Lybian Pentapolis, but is omitted by the later Notitia." It must have disappeared, like so many other sees, at the time of the Arab invasion in the seventh century.

LEQTUS, Oriens Chr., II, 623–626; CHM. Series episcop. c. 462.

L. PETIT.

Beretta. See BIRETTA.

BERGAMO, DIOCESE OF.—The city, called by the ancients Bergonum, is capital of the province of that name in Lombardy, and contains 45,000 inhabitants. It is said to be of Etruscan foundation. During the anarchy that reigned in Italy in the eleventh century, Bergamo set itself up as a commune, and as such joined the various leagues of Lombard communes formed to resist the power of the German emperors. At a later period, however, a number of powerful families succeeded each other in the mastery of the city, e.g., the Turriani, the Visconti, and the Suardi. From 1797 to 1859 Bergamo passed through all the political vicissitudes of Northern Italy. It has always been a city of great industrial and commercial importance. The neighbouring territory is rich in minerals, chiefly iron; there are also extensive quarries of choice marble. Among the celebrities of Bergamo are the poet, Bernardo Tasso, father of Torquato; the Jesuit Maffei, known for his history of Italian literature; Dominici, the musical composer; Cardinal Angelo Mai, etc. Bergamo is the see of a bishop, suffragan to the Archbishop of Milan; the diocese contains a population of 430,000. Legend traces the beginnings of Christianity in this city back to St. Ambrose, a fact not altogether to have ordained St. Narsus who became first Bishop of Bergamo. More trustworthy is the account of the martyrdom of St. Alexander, said to have been tribute of the Theban Legion. Whatever the value of the details of the legend, the fact has been proved that long before DIOCLETIAN proclaimed the great persecution in 303, both GALERIUS and Maximinian in the West inaugurated, on their own responsibility, a crusade against Christianity and sought particularly to remove all Christians from the armies (Allard, La pers. de Diocletien, I, 101–104). St. Alexander was one of the victims of this persecution, and his martyrdom may well have taken place in 287. To this martyr was dedicated the first cathedral of the city, richly endowed by the Lombard king, Grimoaldus. In 1561 was destroyed by the Venetians on account of its adaptability to the purposes of a fortress, and the church of San Vincenzo was raised to the dignity of a cathedral under the title of San Simeon. This is a magnificent church adorned with a cupola of unusual size, rebuilt in 1689 after the designs of Carlo Fontana. It contains paintings by Prevaliti, Tiepolo, Ferrari, Moroni, Palma il Giovine, and Colleghetti who decorated the interior of
BERGER

cuple of the fourteenth century; likewise base-
collies of Fano, of exquisite workmanship. Worthy of special note is the octagonal baptistery
formed of eight pieces of rosso antico (old red mar-
ble), the work of Giovanni da Campione, originally
placed in the church of Santa Maria Maggiore, the
most beautiful of the churches of Bergamo. It
contains two stained glass windows, the one
interior to the window of the Sacrament by
Cavagna, Procaccini, Luca Giordano, Ciro Ferri, etc.
Remarkable also are the tombs of Cardinal Longo,
of the Alessandri, and of Bartolommeo Colleoni, the
last a work of the sculptor Amedeo. The church of
tombs with paintings by Titian, Angela Kauffmann, and Giuseppe Crespi. Other
churches are those of San Alessandro in Colonna, with a beautiful "Last Supper" by Calligariro; San Ales-
andro della Croce, adorned by Palma il Vecchio, Bramantino, and others; San Andrea with paintings
of Pavolozzo and Moretto; San Grata; San Bartolo-
meo; Santa Maria del Sepolcro with a wonderful
picture of St. Sigismund, the masterpiece of Pre-
vitali. Among the shrines of the church may be
mentioned that of the Blessed Virgin della Mad-
busa, formed by a great natural cavern, extending
between three and four hundred feet into Monte
Albenza, not far from the Jura Pass. Within recent
times Bergamo has become the centre of important
and far-reaching Catholic movements of a popular
character.

The diocese contains 350 parishes, 512 churches,
chapels, and oratories, 1,157 secular and 58 regular
eremony, 800 seminarists, 84 lay brothers, 478 mem-
ers of female religious orders, 8 schools for boys,
34 for girls, and a population of 450,000.

MUTTO, Sacra storica di Bergamo (1616); GERRINO, Sinopse
ecclesiastica (1794); LUNT, Codex diplomaticus curialis et
ecclesiae bergomensis (1784).

U. BENIGNI.

BERINGTON

Bergier, NICOLAS-SYLVESTRE, French theologian,
b. 31, December 1715 at Darney in Lorraine; d.
at Versailles, 9 April, 1790. After a course of theology in
the University of Besançon, he received the degree of
doctor, was ordained priest, and went to Paris to
finish his studies. Returning to Besançon in 1748,
he was given charge of a parish and later became
president of the college of the city, which had for-
merly been under the direction of the Jesuits. In
1769 the Archbishop of Paris, M. de Beaumot, appoin-
ted him to the mission beyond the Rhine, and there-
forth Bergier resided at Paris. A pious priest and
an energetic student, he devoted a great part of his
time to writing in defence of religion. He agreed
to correct certain articles of the "Encyclopédie" but
found himself obliged to write entirely original
articles which then formed the "Dictionnaire de
théoLogie" as a part of the "Encyclopédie".

The works of Bergier are in the fields of apologetics
and theology, except "Les éléments primitifs des langu’es" (Besançon, 1764) and "L’origine des dieux
du paganisme" (Paris, 1767). Among his apo-
getical and theological works, the most important are:
"Le déisme refu té par lui-même" (Paris, 1765);
"La certitude des preuves du christianisme"
(Paris, 1767, also published in Migne’s "Démonstra-
tions évangéliques", XI); "Réponses aux Conseils
raisonnables de Voltaire" (Paris, 1771, also in Migne,
ibid.); "Apologie de la religion chrétienne"—against
d’Holbach’s "Christianisme dévoilé" (Paris, 1769);
"Réfutation des principaux articles du dictionnaire
philosophique" (Besançon, 1767); "Examen du cer-
éalisme" enceinte (Paris, 1771); "Traité historique et dogmatique de la vraie
religion" (Paris, 1780, and 8 vols. 8vo., 1820).
The "Dictionnaire théologique" has been often edited,
especially by Gouset in 8 vols. (Besançon, 1838)
and Migne (Paris, 1839). Some of his writings con-
cerning divorce, the question of the mercy of God,
and the origin of evil, and one volume of sermons
were published after his death. Though on certain
points, as on the questions of grace and the super-
natural necessity of revelation, the doctrine of
Bergier lacks precision and completeness, the value
of his theological and apologetical work cannot be
denied.

Notice historique, as an introduction to the Dictionnaire
théologique, ed. by Migne (Paris, 1850); JANNET in Kirchen-
hütten, 1888; HERRICK, Nomenclature watermarks, 1888, III; DUBLANT in Dict. de théol., cath., s. v.

G. M. SAUVAGE.

Bergomensis PETRUS, See PETER OF BERGAMO.

Bergton, CHARLES, titular Bishop of Hiero-
Cesaras, b. at Stock, Essex, England, 1748; d. 8 June,
1798. His life is a continued story of disappointed
hopes and expectations. At thirteen he was sent to
the English College at Douai, where his abilities at
once showed themselves; but he never applied
himself to his work. His progress was so unsatis-
factory that four years later he was removed and
sent to St. Gregory’s Seminary, Paris. According
the ablest of his contemporaries, he was destined to
little better at Paris than at Douai, though he suc-
ceded at last in taking his doctorate at the Sorbonne
in 1776. On his return to England, he became
chaplain at Ingestre Hall, a few miles from his
birthplace. After travelling for two years with the
Rev. Mr. Giffard of the Mission, Bergton was
appointed coadjutor to Bishop Thomas Talbot, Vicar Apostolic of the Midland District, becoming at the same time titular Bishop of Hiero-Cesaras.

The Midland District, one of the four into which
for ecclesiastical purposes England was then di-
vided, was at that time the stronghold of "Cis-
alpine" opinions. With these Charles Bergton
was in full sympathy, in consequence of which, in
1797, he was elected a member of the committee,
who were then agitating for the repeal of the
Penal Laws, for which end they were unfortu-
nately willing to minimise some of their Catholic
principles. Two other ecclesiastics were elected at
the same time, the Rev. Joseph Wilkes, O. B. B., and
Bishop James Talbot, Vicar Apostolic of the London
District, though the latter’s appointment was
merely nominal, for he never attended the meetings.
Bergton took a leading part in the disputes which
followed between the Committee and the bishops,
and often, when he was not in sympathy with the
former, he exerted a restraining influence on them,
and was ever trying to bring about an understand-
ing between the two contending parties. Never-
theless, he did not scruple to sign his name to the
most extreme documents which appeared in the
official publications of the Committee known as the
"Blue Books", and he defended the oath intended
to be imposed by the legislature on Catholics, which
was afterwards condemned by the Holy See. In
the midst of these disputes Bishop James Talbot
died, and endeavours were made by the Committee
to secure the appointment of Bergton in his place,
so that he might reside in London and exert the in-
fluence attached to the position. These endeavours
failed, and Dr. Douglas was appointed Vicar Apos-
tolic. Some of the more extreme laymen, however,
maintained that they had a right to choose their
own bishop, and called upon the Catholic body to
disavow the prelate appointed by Rome, and to
rally round Bergton; but on this occasion the latter
wished to be left alone, and declared that he would
in no way be concerned in anything on which he refused to have anything to do with these
machinations, by which action he practically put
an end to them.

Bishop Thomas Talbot died in 1796, and Charles
Bergton succeeded as Vicar Apostolic of the Mid-
land District. Again he appeared to have a career.
BERINGTON

Before him. Before giving him his special faculties, however, Rome called upon him to withdraw his subscription. Book after book was sent for, and he demurred, being still under "Cisalpine" influence. At length, through the intervention of Monsignor Erskine, who was living in England as an informal papal envoy, Berington was induced to sign the necessary renunciation, on 11 October, 1797. After some delay due to the disturbed state of the Bank of England, his books were sent, but they never reached him, for he died suddenly of apoplexy while riding home from Sedgley Park.

BERISBA

Joseph, one of the best known Catholic writers of his day, b. at Winsley, in Herefordshire, 16 January, 1743; d. at Buckland, 1 December, 1827. He was educated at the English College at Douai, showing such talent and originality of mind that after his ordination to the priesthood he was appointed professor of the chair of philosophy in the University. In this position his inclination towards liberal opinions became apparent, and his theses prepared for the exhibition of his pupils, created such a stir that he thought it prudent to resign. On his return to England, he occupied several positions in different dioceses, and obtained leave to proceed with his studies. From 1776 to 1782 he was chaplain to Mr. Thomas Stapleton, of Carlton, Yorkshire, acting at the same time as tutor to his son, with whom he afterwards travelled around Europe. We next find him at Oscott, then a lonely country mission, where his cousin, Charles Berington, who had been appointed coadjutor bishop, joined him. Both the Berringtons were of the same cast of mind; both were favourers of the committee appointed to represent the Catholics in their struggle for emancipation, which gained for itself an unfortunate notoriety for its liberalizing principles, and the generally anti-episcopal tendency of its action. The Midland District was the chief centre of these opinions, and fifteen of the clergy of Staffordshire formed themselves into an association of which Joseph Berington was the leader, the primary object being to stand by their bishop, Thomas Talbot, who was partly on that side. Afterwards, however, they were led into another action, especially in taking up the case of Francis Welsh, who had been suspended by his bishop in consequence of his action on the committee, which laid them open to criticism.

Joseph Berington was by this time becoming well known as an author with an attractive style of writing, but of very advanced views. His "State and Behaviour of English Catholics" (1780) contained more than one passage of doubtful orthodoxy; his "History of Abelard" (1784) brought into prominence the same philosophical tendencies which he had before manifested at Douai; and his "Reflections," addressed to Rev. J. Hawkins, an apostate priest (1785 and 1788), were much criticized; while perhaps more than all, the "Memoirs of Pansani," which he edited with an Introduction and Supplement (1789), gave him the reputation of being a disloyal Catholic. Under these circumstances, when Sir John Throckmorton of Buckland in Berkshire, appointed Berington his chaplain, Dr. Douglass, Bishop of the London District (in which Buckland was situated), refused to give him faculties, till in 1795 a new provost was appointed, which the bishop considered satisfactory. A year or two later, Dr. Douglass again suspended him, until he signed a further declaration in 1801.

Berington passed the remainder of his life at Buckland, where he wrote the most extensive of all his works, "The Literary History of the Middle Ages" (1811). He published many other books, but in a different manner. Some of his works (mentioned in the text) are: "Present State of Cath." (1787); "Rights of Dissenters" (1789); "Henry II, Richard and John" (1790); "Examination of Events termed Miraculous" (1796); "Gother's Prayers" (1800); "Faith of Catholics" (1813); "Decline and Fall of Cath. Relig. in Eng." (1815), a reprint of Memoirs of Pansani); numerous letters and pamphlets and many other works in MS.

BERISBA

Humphrey, Confessor (c. 1558) of whom the only extant account occurs in the MS. marked "F," compiled during the seventeenth century by Father Christopher Grene. This MS. which is now at the English College in Rome has been partly printed in Foley's Reports (III). Of Humphrey Berisford it is stated that he was a gentleman of the county of Derby, whose father, an esquire, was a Protestant. The account continues: "He studied at Douay about two years. Returning from thence, his father employed him about his suit in law, and having once a suit against one, who fearing to be cast by his means, accused him before the judge for a recusant. When the cause should have been heard the judge examined him. He constantly professed his faith. Then the judge offered both favour to his cause and money, but he would but only say he would go to their church; which he utterly refused. Therefore he was committed to prison where he remained seven [blank in original] then died a prisoner.". Gillow conjectures that the missing word was "years", and states that he died in Derby Gaol about 1558. To this day nothing can with certainty be added. The "Douay Diaries" mention one "Beresford" among other "sons of men of position" (nobilitum filii) among leaving the college in November, 1570. On 31 May, 1577, he is spoken of as a returning student, but he was not alluded to as clarus adolescens. But this young man cannot be certainly identified with Humphrey Berisford as there were at this time other Catholics of the same name, three of whom, James, Oswald, and Frederick Beresford, were prisoners in the Poultry Counter in London, in this very year.

BERISBA (BERISBA OF VERRIBA), a titular see of Pontus Polemoniacus, in Asia Minor which Kiepert and Ramesy have rightly identified with the modern village of Bauclus or Bolus, south-west of Tokat. In the time of St. Basil it was included in the Diocese of Ibara, as appears from letters LXXXVI and LXXXVII of the great bishop, but soon after became an independent bishopric in Armenia Prima, with which its superiority in importance and jurisdiction was so great, that the ancient text changed before place under 458, when its bishop, Maximianus (written wrongly Auxentius), subscribed with his colleagues of Armenia Prima the synodal letter to the Emperor Leo (Manii, XII, 587-588). Hierocles, at the beginning of the sixth century.
BERSTAIN

BERLAND

does not treat it as an independent city; but it is
discourse such as Justinian in a Novella of 536,
amongst the Armenians. It must be remembered that this emperor, when creating the province of Armenia Quart in 536, gave to Armenia Prima the name of Armenia Secunda, without altering, however, the established ecclesiastical organization, so that Berstain remained sufficiently
under Sebaste in. Among its bishops may be
mentioned Thomas, who was present at the fifth
council of Nicaea in 553 (Manol, IX, 175), and
another at the sixth in 680 (ibid., XI, 676). It
appears still later in the Notitiae Episcopatum
as a suffragan of Sebaste. In 1749, in the annals of the
sometimes Belesis, sometimes Belelis, Belelis,
and Kupelos are merely palaeographical
mistakes. Berissa was a Latin bishopric as late as the fifteenth
century, when Paul II appointed the Franciscan
Libertus de Broehun to succeed the deceased bishop,
John (Wadding, Annales Minorum, VI, 708).

BERSTAIN Y MARTIN DE SOUSA, JOSE MARIANO,
Mexican bibliographer, b. in Puebla, Mexico, 22 May,
1756; d. at Mexico, 23 March, 1817. He went to
Spain and spent some time in the family of the
former Bishop of Puebla, then Archbishop of Toledo.
Becoming (1811) an aide Archdeacon of the
Metropolitan church of Mexico (1813), and
was afterwards its Dean. Berstain was a secular
priest who had made thorough studies at Mexico
and perfected them in Spain under the most favour-
able circumstances. He wrote a number of treatises,
some of them on economic subjects, but hardly any
were published, the manuscripts being mostly lost
through carelessness in sending them to Europe.
His great work is the "Biblioteca hispano-americana
septentrional," the last part of which was published
after his death. For this he used as a basis for the
"Biblioteca mexicana" of Bishop Juan José de Egui-
ara y Eguren of which only the first volume (as far as
"J") appeared in print. Berstain at first intended
to republish Egiaira, completing the alphabet by
means of sketches and notes left by the author, but,
as he proceeded to carry out the idea, he found
that it would be preferable to compose an independ-
ent bibliography, incorporating in it the material
Eguira had collected. The "Biblioteca de Beris-
tain is, as far as the most complete work on the
subject that exists, but it contains many errors in
names and dates. Still, if we take into account the
time when he wrote, and the great obstacles he had
to overcome in the shape of distance from sources
and their frequent inaccessibility, it must be con-
sidered a monumental work and, up to this day, the
principal source of knowledge of the bibliography
of Mexico and Central America.

Berlage, Anton, dogmatic theologian, b. 21 De-
ember, 1805, at Münter, Westphalia; d. there, 6
January, 1868. He studied philosophy and
theology in the same city, after completing his course
at the Gymnasium, and proceeded to the University
of Bonn in 1826. Esser, at Münter, and especially
Hermes, at Bonn, led him to such speculations in
theology as would have proved detrimental, had he
not attended his studies at Tübingen, during 1829
and 1830, under Drey, Hirscher, and Möhler, who
influence him by their historie method, thus saving
him from the danger of philosophical systems then
prevalent in Germany. He graduated as Doctor
of Theology at the University of Munich while yet a
deacon, and soon after began his long career as pro-

essor in the Academy of Münster, his native town,
where he taught until his death. In 1832 he was
ordained priest without ever having taken a course
in any ecclesiastical seminary. His first book,
"Apologistik der Kirche," was published in 1835,
and favourably noticed by Protestant critics. He
was appointed, first, associate professor, then pro-

fessor, lecturing on apologetics and moral theo-

logy, but he ultimately restricted himself to dog-

matics. His influence on the theological faculty of
the Academy was so marked that its spirit may be said
to have been his. He became Dean of the
faculty in 1849. The most famous of his disciples and
others, established the fame of his Alma Mater,
celling less in speculation than in argument and in
positive exposition of dogma. Kühn numbers him
among those who discussed theological matters
philosophically, while Köpfner regards him as be-
thong to the Tübingen school. Brück, in his
history of the Catholic Church in the nineteenth
century, declares, "Berlage's writings excel in cor-
correct expression of dogmatic principles, in eignage
of language, and in clearness of diction." Those
who have been his pupils say that as a lecturer he
was concise, direct, and refined. He garnered the
fruit of his studies in seven volumes, "Katholische
Dogmatik," published 1838-44.

BERLAND, Pierre, Archbishop of Bordeaux, b. 1375 in Médoc; d. 1457 at Bordeaux. Being of
humble extraction, it was only through the liberality
of friends that he was able to study the humanities
at Bordeaux and canon law at Toulouse. Ordained
priest, he was, first, secretary to the bishop of
Bordeaux, then canon of St. Andrew's, and after-
wards pastor of Soliac. In 1430 he was made Arch-
 bishop of Bordeaux. During his incumbency, he
took a great interest in educational matters, founded
the University of Bordeaux, endowed St. Raphael's
College with twelve scholarships for indigent students,
and in general won the character of a highly cul
tured and saintly prelate. His position as archbishop
was most delicate. During the Hundred Years' War,
and in the province of Guienne, he had charge for
134 years of the English Crown. On the other hand,
the conduct of the English toward Joan of Arc, mar-
tyred shortly after Berland's preferment, coupled
with the ambition of Henry VI, who had himself
solemnly crowned King of France at Paris, could not
meet the approval of the worthy archbishop. Twice
he went north in an endeavour to bring his suserain
to greater moderation. Having failed in this, he
transferred his allegiance to Charles VII, King of
France, and was instrumental in bringing about the
submission of the whole province to the French
Crown, and with it the termination of the Hundred
Years' War. Berland, old and infirm, resigned his
see in 1457 and died shortly afterwards, vener-
ated by his people. His remains were laid at rest in
the vault of the cathedral, and his name is yet honoured
at Bordeaux. The tower he caused to be built at
St. Andrew's church in 1440, is called in his honour
"Pey Berland" or "Père Berland" even to this day.
Louis XI had obtained from Sixtus IV the ap-
pointment of a commission with a view to the
building of a tower of the cathedral, but when it fell through at
that prince's death. This fact, coupled with the vener-
ation of the people, accounts for the appellation
"Bienheureux Berland" by which he is known.

derdam, 1740); Comptes-rendus des travaux de la commission des
monuments historiques de la Gironde (Paris, 1863).

J. F. SOLLIER
BERLANGA.

BERLANGA, FRAY TOMÁS DE, Bishop of Panama, b. at Berlanga in Spain, date uncertain; d. there 8 August, 1551. He was professed at the convent of San Francisco, 10 March, 1500, in the Dominican Order, and in time was elected prior of the convent on the Island of Hispaniola (Santo Domingo). The Dominicans of Hispaniola then depended on the province of Andalusia, but Berlanga obtained at Rome, in 1524, the establishement of a separate province under the name of Santa Cruz, of which he was made provincial in 1530. From Santo Domingo he claimed the newly founded province of Santiago de México as being under his jurisdiction, and as such it was by the Holy See given to him by the chapter of Santo Domingo de Betcanzoe. About the same time he was proposed for the Bishopric of Panama, and went thither. His vast and indefinite diocese embraced everything discovered, and to be discovered, on the South-American west coast, from which but a few years previous had come the news of the discovery of Peru by Pizarro. When, therefore, the Spanish crown began to notice signs of trouble between Pizarro and Almagro, about their respective territorial limits, it sent Bishop Berlanga to Peru with instructions to arbitrate the whole question at issue. At the same time the Spanish monarch, the Emperor Charles V, by a decree (cédula) dated 19 July, 1534, ordered Berlanga to make a report on the condition and prospects of Peru and the Indies. Berlanga paid an advisory visit to Peru. The arbitration failed. Pizarro had (perhaps because he had been secretly informed of the bishop's mission) settled for the time being with Almagro and sent him off to Chile, so that no communication from him was had; a royal rescript ordered him to return home in a month, and his arbitrator was thereby practically vacated, and he returned to his see, refusing all advances made to him by Pizarro. The latter displayed considerable feeling, complaining that, as long as the conquest was in doubt, he had been left alone, but that now that it had been achieved "a step-father had been sent to him." Berlanga sent to the crown a description of what he saw, a brief and unvarnished report from the standpoint of a cool-headed observer. His mission was well intended, but practically impossible. Pizarro had artfully removed the other party to the proposed arbitration, and Berlanga was too honest to yield to insinuations of a one-sided investigation. Of the gifts tendered he accepted for himself a dozen silver spoons valued at twelve ducats, 600 pesos for his use in religion, and 300 pesos for the church of the Dominicans in Nicaragua. After promoting the construction of the convent of Santo Domingo at Lima, Berlanga returned, in 1537, to Spain where he died in his native town.

Otteido, Historia general, etc. (Madrid, 1850, etc.); Cirié, Crónica del Perú; Vélez, Historiadores primitivos de Indias, II, and especially the third part: Guerra de los Salinas, 1540, unpub. work: Memorias de Indias (important set by Berlanga); Dávila Padilla, Historia de la fundación y decadencia de la provincia de Santo Domingo (2d ed. Buenos Aires, 1625); Herrera, Historia general, (2d ed., Antwerp, 1729, etc.); Anon., Conquista y población del Perú en Historiadores primitivos de Indias, III, 1748; Anon., Relaciones geográficas de Indias (1885), I, Introduction. Téllez de la Espada, in the same introduction, mentions the report by Berlanga. Relación de la calidad de la tierra, pueblos y población del Perú (dated February 3, 1538, printed on page 41 of the Introduction); libro primo de Guth (Lima, 1888).

AD. F. BANDELLIER.

Berlin, capital of the German Empire and of the Kingdom of Prussia, and residence of the German Emperor and Prussian King. It is situated in the heart of the Mark of Brandenburg, and straddles the river Spree, which forms its entrance into the Havel. The city covers an area of 2425 square miles and has, 1 December, 1905, 2,040,148 inhabitants, not including the population of the suburbs which are virtually parts of the city. Of the inhabitants of Berlin 222,546 are Catholics; 1,895,251 are Protestants; 98,893 Jews, and 22,036 belong to other denominations.

History.—The present city of Berlin has grown out of two settlements of the Wends at Kölln, lying on an island in the Spree, and Berlin, opposite, on the right bank of the Spree. Kölln is mentioned for the first time in an official document dated 1237; Berlin, in 1244. Even at this date both places possessed the collegiate church of Brandenburg, but were not of any importance to other cities of the Mark. A number of old churches, which are still among the most important ones of the city, testify to the active religious life prevalent at this early date, as, the church of St. Mary, erected by the Elector of Brandenburg, the church of St. Nicholas; the church of the Grey Monastery (Kirche des grauen Klosters), a Gothic edifice built at the end of the thirteenth century. Altogether there were about eighteen church-buildings in Berlin before the Reformation. It was not until the two towns were united into one community, in 1307, that the place grew to be of some importance. In the tumultuous times which prevailed in the Mark of Brandenburg during the fourteenth century, Berlin and Frankfurt-on-the-Oder became the leaders of the Wends against the Jews, and joined the Hanseatic League. When the Emperor Charles IV obtained the Mark from the house of Wittelsbach, Berlin rose against him, but was defeated and compelled to open its gates to the emperor. The Thirty Years' War, initiated by the election of Frederick I of Hohenzollern who made his entry into the city in 1415. When the Elector Frederick II again separated the two cities and erected a fortified castle between Berlin and Kölln, on the site of the present royal residence, the inhabitants, under the leadership of Berndt Ryke, revolted, stormed the house in which the elector was accustomed to live when in Berlin, and destroyed the public records. Frederick conquered the rebels and took from the city its jurisdiction and other privileges. In 1451 the castle was completed; Elector John Casimir chose it for his usual residence, which greatly increased the importance of Berlin. The Reformation found ready acceptance in Berlin, and after the death of the Elector Joachim I (see BRANDENBURG) it triumphed over the old Faith. The nobility living in the neighbourhood of Berlin accepted the new doctrine at Teltow, April, 1539, and the Elector Joachim II, in the same year, followed their example. On the 2d of November the first celebration of the Lord's Supper according to the Lutheran Rite was held in Berlin, and the church of the Elector was later transformed into a Protestant cathedral. In 1540 the new church ritual for the Mark was settled and printed at Berlin. The Reformation in a short time gained a complete ascendancy, the monasteries were suppressed, and the Franciscan Father Petrus (d. 1571) was the last Catholic priest in Berlin until the coming of the Dominicans about one hundred and fifty years later.

The city suffered greatly during the Thirty Years War, its population sinking to 40,000. Infected from the inmates by the plague. It suffered from the injuries inflicted by this war during the reign of Frederick William, the Great Elector, grew in size, and was surrounded by new fortifications. Immigrants from the Low Countries and French Huguenots, who sought many branches of industry, increased the number of inhabitants to 20,000. Frederick I made Berlin the royal residence and adorned it with many fine buildings, the most famous architect and sculptor of the time being Schletter. In 1709 the Berlin University, one of the five divisions of the city which had gradually grown up. In 1696 he founded the Academy of Fine Arts, and in 1700 the Academy of Sciences, of which Leibnitz was the first president. Berlin suffered greatly during the Seven Years' War, in the course of which it was
seized and plundered in 1757 by the Austrians, and in 1760 by the Russians; but under the wise rule of Frederick the Great (Frederick II) it rapidly recovered from the damage done to it and became an important centre of commerce, industry, and intellectual life. The number of inhabitants increased to 115,000. Frederick II also spent large sums of money in beautifying the royal city. Under Frederick William III there was a temporary check to its development during the era of the Napoleonic ascendancy. In 1808 the city acquired the right of self-government to a limited degree, and in 1808 the University of Berlin was founded. During the French occupation, which followed the downfall of Napoleon a new development of the city began and its artistic embellishment by Schinkel, Rauch, Schadow, and others made rapid progress. In 1838 the first railway, from Berlin to Potsdam, was opened; the railway traffic increased the industrial importance of the city, and in 1844 the first large industrial exhibition of the German States belonging to the customs-union was held here. On the 15th of March, 1848, a revolution broke out; more than 1500 barricades were erected, 27 streets were barricaded, in counters between the soldiers and the populace occurred; on the 18th of March a bloody struggle took place in the streets of Berlin in which the soldiers were victorious, but they afterwards withdrew from the city at the order of the king. In 1871 Berlin became the capital of the new German Empire, and on 31 March 1871, 13 June to 13 July, 1878, were held the sessions of the Berlin Congress; since this date Berlin has developed into a great metropolis; it has become the most important industrial city of the European continent, the most important railway centre, and one of the chief commercial cities of the empire.

For about one hundred and fifty years after the Reformation Catholicism was suppressed in Berlin; public Catholic church services were forbidden; Mass could be said only in the private chapels of the Catholic embassies. As late as 1833 the elector was obliged to promise the Protestant diet that he would not allow private or public Catholic church services. In order to be able to raise troops more easily in Catholic districts Frederick William I in 1720 gave the first permission for the holding of public Catholic church services in a private house in Berlin; soon after this the first Catholic chapel was fitted up. The pastoral care was exercised by Dominicans from Halberstadt; the Church of Peace particularly benefited in his labours. The conquest of Catholic Silesia by Frederick the Great drew many Catholics to Berlin, and the church of St. Hedwig was built for the Catholic community (1741-79). Frederick the Great giving the ground. He also built a small church at the home for disabled soldiers, for the Catholic pensioners. The addition of large Catholic territories in consequence of the partition of Poland, the secularization of 1802-03, and that of 1815 by the Vienna Congress likewise increased the number of Catholics in Berlin, but it was not until 1848 that they obtained more freedom. Since then the growth of the Catholic population has kept pace with the development of the municipality. Under Frederick the Great the Catholic population was about 5,000; in 1870, 107,000 inhabitants; in 1817 there were 156,670 Protestants to 6,157 Catholics; in 1843, 16,453 Catholics to 328,253 Protestants; in 1853, 19,075 Catholics; 1871, 51,517; 1885, 99,579; 1900, 188,440 Catholics in Berlin proper. Church buildings did not increase in size and number in the same ratio, and the difference continues to be continually greater. With the aid of the whole of Catholic Germany a number of Catholic churches was erected in the decade beginning with 1890 to meet this want, but the construction of new church buildings in the city and suburbs of Berlin is still one of the most important needs of Catholicism in the capital of the German Empire.

STATISTICS.—Ecclesiastically, Berlin belongs to the Delegation of the Mark of Brandenburg, which is under a delegate of the Prince-Bishop of Breslau; the delegate is the Provost of St. Hedwig's in Berlin. The archiepiscopalate of Berlin embraces the whole of Berlin with the exception of Prignitz (2,686 Catholics), and includes also the suburbs called Treptow, Stratall, Schönberg, and a part of Charlottenburg (as far as the parish of St. Matthiæs); the Catholics in the presbyterate number 31,397; 235 priests and 5 military chaplains, 31 assistant clergy, 7 priests in other positions, and 15 living in community—altogether 66 priests, of whom 26 do not come from the Diocese of Breslau. The archepiscopalate is divided for the cure of souls into 14 districts consisting of 9 parishes and 6 vicariates; in 1907 another vicariate was in process of erection. The Catholic soldiers are formed into 5 church communities or parishes; Berlin is also the seat of the Catholic field-provostship for the Prussian army and the imperial navy. In 1907 Berlin had 5 Catholic churches, 19 parochial churches and chapels, 4 church schools, 1 evening school, and 2 evening classes; these with the private chapels made 31 church edifices; 1 church building and 1 chapel were then in process of construction. With the exception of the church of St. Hedwig and the church in the home for invalid soldiers, all of the Catholic church buildings of Berlin were erected in more recent times. The principal churches are: St. Hedwig (1747-73—see above); in the style of the Pantheon at Rome; St. Michael, the first Catholic church in Berlin (1766-74); in the style of St. Sebastian, the largest Catholic church of Berlin (1890-93) in Gothic style, tower 269 feet high; St. Paul, a Dominican church (1892-93) in Gothic style; St. Matthew, a Gothic building (1888-95), tower 302 feet high; St. Pius (1893-94), rather tasteless Gothic; St. John, the second Catholic garrison church and one of the largest church buildings of Berlin (1894-97), in Romanesque style; church of the Heart of Jesus (Herz-Jesukirche), Romanesque style (1897-98).

SCHOOLS.—There has been no public Catholic higher school for boys in Berlin since the struggle between the Catholic Church and the State (Kulturkampf) swept away the Catholic Progymnasium; there is, however, a private higher school for boys with about 130 pupils. The Catholic boys who attend the state and city high-schools are divided, for purposes of religious instruction, into twelve groups of four sections each. There are 3 higher Catholic schools for girls; two of these prepare teachers, and one is conducted by the Ursulines and includes a conservatory of music. There are 30 Catholic schools for primary instruction, attended by over 20,000 Catholic children, namely the parish school of St. Hedwig and 29 Catholic town-district schools.

RELIGIOUS INSTITUTIONS.—The male orders in Berlin are: Dominicans, 1 house with 10 priests and 7 brothers; the Poor Brothers of St. Francis, 1 house with 17 brothers who carry on an orphan asylum for boys. The female orders and congregations in Berlin proper had, in 1907, 18 'more edificating' and 18 'more spiritual' institutions. A house with 37 inmates, carry on a boarding-school for girls, a higher school for girls united to a private seminary for teachers and a conservatory of music; the Sisters of St. Charles Borromeo, a house with 270 members; the Sisters of St. Joseph, having 300 members; the Sisters of St. John of God, 1 house with 138 inmates; the Community of St. Joseph, which has an average of 530 patients and 160 con-
valescents; Dominican nuns, 4 houses with 95 sisters, carry on the St. Katharina Home, which includes a day-nursery and home for women servants, the St. Anny Home, and the St. Martin's Women's Home, a nursery for small children, a home for women servants, and an institution of visiting nurses for the sick and poor, the Maria-Victoria Sanatorium, a hospital and institution for visiting-nurses for the sick and poor, and the St. Vincent Ferrer Home, a dispensary and school for the deaf and dumb and the sick and poor, and a dispensary for women servants; the Grey Sisters, 7 houses with 137 sisters, have in charge 4 dispensaries and homes for visiting-nurses, St. Joseph's Hospital, and the St. Afra Home, which includes a rescue and orphan asylum, a home for women servants, and a church; these sisters are also the nurses in 2 garrison hospitals. The Sisters of St. Mary, 58 sisters in 4 houses, 1 of which is in Berlin-Rixdorf, conduct the Hospital of St. Mary, 3 houses for visiting-nurses, and a house for children where housekeeping is taught, and a house for training orphan asylums. For housing orphans, crippled, or blind children, is conducted by ladies, not professed religious, who lead a kind of conventual life. Taking these and other Catholic institutions together, there are in Berlin proper 4 Catholic hospitals, 12 dispensaries and homes for visiting-nurses, 4 institutions for the recovery of women, and 12 institutions for the care of small children, 9 day-nurseries, 5 homes for children of school-age, 3 hospices for young men, 6 hospices, or boarding-homes, for ladies—for self-supporting women who are bookkeepers, telephone employees, and the like—3 homes for girls who are out of employment, a housekeeping and needlework school, 3 orphan asylums and institutions for first communicants, 1 rescue home for girls.

ASSOCIATIONS.—There is much activity among the Catholic societies of Berlin. In 1907 the religious associations were: 21 brotherhoods and confraternities of the Rosary; 9 societies of the Childhod of Jesus; 8 societies of Christian mothers; 7 confraternities of the Holy Family; 7 altar societies for the sick and infirm; 11 St. Catherine's Bureaucrats' societies; 9 societies for collecting funds, especially for the Boniface associations; 12 sodalities of the B. V. M., 10 youths' or St. Aloysius sodalities. Among the local charitable associations are: the Catholic charity organization of Berlin and its suburbs, an association of the Catholic Beneficent institution board of directors, and societies of Berlin and its environs; Societies of St. Vincent de Paul, including 16 conferences for men and 16 conferences for women; the St. Hedwig's women's association; the society of the B. V. M., for the protection of girls; 4 societies for the care of lying-in women; the Catholic burial association; the society for the care of the Catholic deaf and dumb of Berlin, its environs, and the whole delegation. The most important associations in ranks of voluntary calling are: the Catholic Journeymen's Union, having a building of its own; the Catholic Apprentices' Union; the Master-Workmen's Union; 13 Catholic workmen's unions, with about 2800 working-men members, which belong to the Catholic organization of Berlin; 12 associations having 1500 members, which belong to the Berlin district organization, and are composed of working-men, unmarried, and married women; the unions of the organized Catholic Workmen's associations (25); the Christian unions, 32 groups with over 400 members each; the Catholic benevolent men's society with 400 members; 2 societies of Catholic male and female teachers; 9 associations of Catholic students; 2 Philister societies. Among the political associations should be named: the People's Union of Catholic Germany with about 4000 members; 13 organized groups in Berlin proper of the Centre Party; the Windthorst Union. Besides these there are some 20 singing, and church-choir, societies, and about 25 social societies. The most important of the 6 Catholic papers are: "The Germania", and the "Märkische Zeitung".

BERLIOZ, Hector, French composer, b. at La Côte Saint-André, near Grenoble, 11 December, 1803; d. at Paris, 8 March, 1869. His father, a physician, wished Hector to follow his own profession, and for that purpose sent him to the Medical School in Paris. Young Berlioz soon changed the dissecting room for the library of the Conservatoire, where he sought to acquaint himself with the scores of the masters of music. Heretofore his musical studies had been confined to a rudimentary knowledge of the flute and of the guitar. After studying harmony with Lesueur for a few months, Berlioz composed a mass, which was performed in the church of St. Roch. Being admitted to the Conservatoire in 1822, he became not only for his great talent, but also for his rebellion against academic traditions. For the pure classicism of Cherubini, the head of the school, he had no respect, nor did he ever learn to understand and appreciate Palestrina, Handel, or Bach. Bent on giving expression to his teeming ideas in his own fashion, Berlioz, like the romanticists in literature, proceeded by violating or ignoring every established rule. As a consequence he never fully mastered the various forms of composition. With his "Fantastic Symphony", a cantata called "La mort de Sardanapale" which won for him the "Prix de Rome" (carrying with it a five years' pension), and a number of lesser works, Berlioz laid the foundation of the new school of composition which is known as the school of programme music. It is the endeavour of composers of this school to express by means of music definite ideas and moods and even to relate definite events. Although Berlioz has written a number of works on liturgical texts, hardly any of them have the liturgical character. His "Requiem", an enormous orchestra, four military bands, and organ, suggests Michelangelo in its gigantic conception. While it strikes terror into the heart of the hearer, it does not inspire devotion. A "Te Deum" is built on equally large scale, and is more notable for its pomp and splendour than for its prayerfulness. Although Berlioz was a child of his time and in his music gave expression to every passion of man, he did not lose the Catholic sense, as is shown by the attraction liturgical texts had for him, and also by numerous other traits. Thus in his "Darnation de Faust" he sends Faust to eternal perdition accompanied by most gruesome music, instead of ultimately saving him in accordance with the pantheistic creed of Goethe. Berlioz is one of the most striking examples of modern subjectivism, and the numerous works he has left behind—symphonies with and without chorus, operas, an oratorio, "The Childhood of Christ", songs, choruses, etc.—give us an idea of what he might have been had he remained faithful to Catholic ideals.

BERNAL, AGUSTINO, Spanish theologian, b. at Magallon in Aragon in 1587; d. at Saragossa, 13 Sep-
BERNARD

tember, 1842. He entered the Society of Jesus in 1803 when sixteen years old. Being a finished classical scholar he taught humanities and rhetoric with success. The greater part of his life, however, he spent as professor of philosophy and theology at Saragossa, where he died. He was a man of rare innocence and candor of soul; so great was his love of prayer that it would be hard to say to which he devoted more time, to meditation or to study. He was looked upon by many as one of the most learned men of his age. His published works are: "Disputaciones de los Divinos Verbi Incarnations" (Saragossa, 1638); "Disputaciones de los Sacramentos" (example, in the Eucharistia et Ordine" (Lyons, 1651) a posthumous work.

SOUTHWELL, Bibliotheca, 93; HUNTER, Nomenclator, 380.
TIMOTHY B. BARRNET.

Bernard (or Barnard), Saint, Archbishop of Vienne, France, b. in 778; d. at Vienne, 23 January, 842. His parents, who lived near Lyons and had large possessions, gave him an excellent education, and Bernard, in obedience to the paternal wish, married and became a military officer under Charlemagne. After seven years as a soldier the death of his father and mother recalled him. Dividing his property into three parts, one for the Church, one for the poor, and one for his children, he retired to the wilderness of Ambronay, where there was a poor monastery. Bernard bought the monastery, enlarged it, and became one of its inmates. Upon the death of the abbot he was elected (804) to the vacant position. In 810 he was chosen Archbishop of Vienne to succeed Volfern, but it was only upon the command of Pope Leo III and of Charlemagne that he accepted the honour. He was consecrated by Leidrad, Archbishop of Lyons, and distinguished himself by his learning. He took part in drawing up the Capitularies of Charlemagne and aided Agobard in a work upon Jewish superstitions. Bernard was a member of the Council of Paris (824) convoked by Louis the Pious, at the request of Eugenius II, in the hope of bringing about an agreement between the Church of France and that of the East as to the devotion to be paid to images. Bernard took an unfortunate position in the quarrels between Louis the Pious and his sons over the partition of the empire between the three sons of the marriage by which the monarch had agreed. Like Agobard of Lyons, Bernard sided with the oldest son, Lothair, and was one of the prelates who deposed the emperor at Compiegne and condemned him to make a public penance. Louis soon regained his authority and another council of bishops annulling the action of the one of Compiegne. Agobard and Bernard were deposed, but the sentence of deposition was never carried out, owing to the intervention of Lothair, who had been reconciled to his father. From this time on, the archbishop devoted himself entirely to the duties of his pastoral office. Towards the end of his life he loved to retire to a solitary spot on the banks of the Isere where stands to-day the town of Romans which owes its origin to him. On the approach of death he had himself removed to Vienne. He is honoured in Dauphiny as the patron saint of agricultural labourers.

A. FOURNET.

BERNARD, ALEXIS-XYSTE, Bishop of St. Hyacinth, P. Q., Canada, b. at Belceli, P. Q., 29 December, 1847. He made his classical and theological studies under the Sulpician Fathers in Montreal, and was ordained priest 1 October, 1871. After a year as curate he became successively President of Sorel College, Canon of the Cathedral, Archdeacon, Secretary for the diocese, Vicar-General, Provost of the Chapter, and Prothonotary Apostolic. After the death of Bishop Moreau, in 1901, Mgr. Bernard was continued in the office of Vicar-General by Bishop Decelles, and, when the latter died, in 1905, was elected Vicar-Capitular. The Institute of the Sisters of St. Joseph, owning to their organization a unique formation as a teaching body, is, besides "Systol Decree" and a summary of the "Clerical Conferences", he edited the "Pastoral Letters" of the bishops of the diocese, in nine volumes. He declined the See of St. Hyacinth on the plea of his endeared health, but was consecrated from Pope Pius X a peremptory order to accept. He was consecrated 15 February, 1906.

Bernard Carvajal. See CARVAJAL.

Bernard Circa. See BERNARD OF PAVIA.

BERNARD, CLAUDE, a French ecclesiastic known as "the poor priest" (le pauvre prêtre), b. at Dijon, 23 December, 1558; d. in Paris, 28 March, 1641. His career was a distinguished one, and he was successively offices of honour and responsibility. Young Bernard was educated at the Jesuit college of Dôle and was remarked for his brilliant imagination and wit. Pierre Le Camus Bishop of Belley urged him to enter the priesthood, but feeling the life of a poor gentleman was more suitable to him he preferred the life of a poor gentleman to that of a poor priest. Shortly afterwards he went to Paris as a protégé M. de Bellegarde, Governor of Bourgogne. For a while the social life of the capital attracted him; gradually, however, some disappointments, together with the death of an intimate friend who was killed in a duel, brought about a decided change in his mode of life and led up to his entrance into the priesthood. He was ordained by the above-mentioned Bishop Le Camus, and invited to his first Mass the poor of the city, distributing to them all his possessions, and, later on, an inheritance of 400,000 livres, or about eighty thousand dollars. Henceforth Bernard devoted himself to the service of the poor, and delighted in the name of "the poor priest". The poor, the sick, and the prisoners were his special care; he fed, nursed, consoled, and instructed them with more than motherly tenderness. This life of self-sacrifice seemed rather to increase his personal charms. Wealthy and distinguished persons sought his company, and upwards of five hundred and fifty of his modest table contributed abundantly to his charities. His kindly wit never deserted him. When Cardinal Richelieu once pressed upon him the acceptance of some favours he replied that he would be pleased if stronger boards were placed in the tumbril, or cart, on which the condemned were taken to execution. "It is a pity," said he, "that the constant dread of falling through the vehicle should distract our attention from God!" Bernard's methods were characterized by some as odd and reprehensible. He continued, however, to enjoy the friendship and admiration of saintly priests like Bourdolle, Olier, and St. Vincent de Paul, and he is a great justification of his character and sacerdotal ministry. In the history of charity he bears a striking resemblance to St. Francis of Assisi and St. Vincent de Paul, and his beatification has often been urged by the royal court and by the clergy of France. He founded at Paris, for the education of poor candidates for the priesthood, the seminary of the Trenceaque, which still exists, and that popularize the beautiful prayer to the Blessed Virgin known as the Memorare, sometimes attributed to him, but certainly of an earlier date.

The life of Bernard has been written by GAUFFRE, 630; LAVITTIER, 1070; SIEZ, 1108; BON, 1324; II, 244; ROYBRAHÉ, Histoire de l'Eglise (Paris, 1835, pp. 261-263.}

CHARLES B. SCHMIDT.
Bernard, Claude—French physiologist, b. 12 July, 1813 at Saint Julien near Villefranche, France; d. at Paris, 10 February, 1878. His father was the proprietor of a vineyard and an early education, which was begun by the village curé and continued at the Jesuit college at Villefranche. Going to Lyons to continue his studies, he became instead a pharmacist's apprentice. While here, his literary ambitions led him to write a comedy, "La Rose du Rhône", which was put on the stage. Encouraged by its reception, he wrote a five act drama and setting out in 1834 for Paris, submitted it to Saint Marc Girardin, the well-known critic. The latter found evidence of literary ability in the young author's work, but advised him to study medicine as a more certain means of securing a livelihood than literature. Bernard followed this counsel, which proved the turning point in his career, and the play "Arthur de Bretagne" was not published until long after his death in 1886.

Bernard devoted himself particularly to anatomy and physiology but, being of a retiring disposition and somewhat awkward in manner, he did not impress his professors or fellow students with the power of which he was later to give proof. In 1839, he was appointed intern at Magendie, professor of medicine at the Collège de France, and one of the physicians of the Hôtel Dieu, noticing his skill in dissection, soon made him his préparateur, or lecture assistant. This latter appointment, in spite of many disadvantages, proved a fortunate one, and Bernard soon began the researches in physiology which made him famous. His first important work was a study of the pancreas and its functions. This was followed by the discovery of the glycogenic function of the liver—perhaps his most noteworthy achievement, particularly on account of its bearing on current views in biology. It had been supposed by biologists that the animal, unlike the plant, could not build up complex compounds within itself, but could only utilize those furnished by the plant such as carbohydrates, proteins, etc., resolving them into constituents suited to its own needs. Bernard undertook the task of tracing out the various transformations of food stuffs within the animal organism, beginning with the carbohydrates; and he not only found, contrary to the accepted view, that sugar was formed in the liver, but he was also able to trace a substance from the hepatic tissue which, though not sugar, was converted by fermentation into dextrose. He made a special study of its properties and called it "glycogen".

Bernard did not pursue his investigations in this field any farther, but took up the study of the influence of the nervous system on animal heat. This led to the discovery of the vaso-motor system. He found that severing the cervical sympathetic on one side of the neck of a rabbit caused a sensible rise in the temperature of the affected region. He performed experiments on the sub-maxillary and other glands showed, as he announced to the Académie des Sciences, in 1855, that when the gland is actively secreting, the venous blood issuing from it is red. Two sets of nerves control the action of the gland, stimulation of the chorda tympani making the venous blood red, while stimulation of the sympathetic causes it to become pale red. Bernard was thus able to formulate the statement: "the sympathetic nerve is the constrictor of the blood vessels; the chorda tympani are their dilator", and it may be said with truth that all subsequent work on the vaso-motor system has been based on these researches. The physiological effects of poisons, particularly curare and carbon monoxide, also engaged Bernard's attention. He found that the former—an arrow poison employed by South American Indians—rendered the motor nerves inactive, while the sensory and central nervous system remained intact. His analysis of the action of the latter showed that it instantly replaces the oxygen of the red blood corpuscles, while it cannot of itself be subsequently replaced by oxygen.

In 1855 Bernard succeeded Magendie as professor at the Collège de France, having been appointed his deputy as early as 1847. In 1862 his health failed and it was not until 1870 that he fully recovered. In his later years he made the acquaintance of his pupils, invited by him and established two well-equipped laboratories for one at the Sorbonne, the other at the Musée d'Histoire Naturelle. In 1867 the emperor made him a member of the Senate, and in 1866 he was admitted to the Académie des Sciences. He devoted himself to scientific work and the revision of his published lectures until shortly before his death. He received a public funeral, at the expense of the State, from the Cathedral of Notre Dame, being the first Frenchman of science to be thus honoured. A statue was erected in his honour in 1886 in the court of the Collège de France, and also, in 1894, in the court of the Faculty of Medicine at Lyons. Bernard's chief contribution to physiological literature, apart from his original papers presented to various societies, are his "Leçons" in seventeen volumes, upon various topics in physiology. These comprise his lecture courses which were reported by his students and revised by himself.

Foster, Claude Bernard (New York, 1889); Walsh, Makers of Modern Medicine (New York, 1887). HENRY M. BROCK.

Bernard Guidonis, Inquisitor of Toulouse against the Albigeenses and Bishop of Lodève, b. at Royères (Limousin) in 1261; d. at Laurois (Héraut), 30 December, 1331. He was one of the most prolific writers of the Middle Ages. He enkindled the Latin American Convent at Limoges, and made his profession in 1280. Ten years later he was made Prior of Albi, and subsequently at Carcassonne, at Castres, and at Limoges. In recompense for his services as Inquisitor he was made Bishop of Tuy in Galicia, by Pope John XXII, and a year later Bishop of Lodève. In spite of his manifold occupations he wrote numerous works of great importance such as: "Fleurs des chroniques", which is a universal chronicle from the beginning of the world to 1333, "Chronique de 1332", "Chronique des rois de France", "Catalogue des Évêques de Limoges", "Traité sur les saints du Limousin", "Traité sur l'histoire de l'abbaye de St. Augustin de Limoges", "Chronique des Fiers de Grandmont" (as far as 1318), "Chronique des Templiers", "Chronique des évêques de Toulouse" (as far as 1327), "Sanctoral ou Miroir des saints", "Vie des saints", "Traité sur les soixante-douze disciples et sur les apôtres", "Traité sur l'époque de la célébration des conciles", "Chronique historique des rois de Navarre et de Domrains", "Pratique de l'inquisition". This last is practically his most important work. It is an exposition of the prerogatives and duties of the inquisitor; its

won his diploma and is venerated in St. Petri in the

cathedral of Bologna, and was also named chaplan

at Popes Innocent IV and Alexander IV, by

whom he was employed in solving questions of weight.

According to the inscription on his tombstone he

was Chancellor of the University of Bologna. This

Bernard found ample scope for his literary activity in

his chosen branch, canon law. From glosses, summaries,

and similar works, which had appeared on the Decretals of Gregory IX and other collections,

he completed, just before his death, a work on the

Cistercian Decretals. This, together with his last

work, his production and thorough grasp of the

subject, won for him the admiration of his contem-

poraries; so that he was styled "Glossator," and

his work, commonly known as "Glossa Ordinar-

ia," became the fruitful source of later glosses,

which were printed with Gregory's collection.

Bernard was careful to note what he had taken

from others, while his own comments were signed "Bern."

The Glossa Ordinaria" was given to the press in

the thirteenth century. In 1460, the edition of 1460.

by Father Hilarin Felder of Lucerne, O. M. Cap., "Liber de

Laudibus" etc. Rome, 1897). Bernard also wrote the

life of blessed Christopher of Cahors, in the "Chronica

XXVII. Generalium" (ed. Qua-

ricchi, 1897, 161-173) and is very probably the author of the ""Speculum Disciplinae" and of the "Epistola

ad Scandam Novitium," erroneously attributed to

St. Bonaventure (See Bonav, Opera Omnia ed.

Quaracchi, 1898, VIII, 583 sqq. and 663 sqq.).

BERNARD OF BONSE, FRIAR MINOR AND CHRONICLER,

A native of Aquitaine, date of birth uncertain; he

belonged to the custody of Caen and was secretary

to St. Bonaventure. He took up the pen after the

Seraphic Doctor, he tells us, to gather the ears the

latter had dropped from his sheaf, lest anything of

so great a memory as that of St. Francis might

perish. His "Liber de Laudibus Beatissimi Francisco"

compiled about 1290, besides some of the earlier

legends, contains brief and valuable information

about the companions of St. Francis and the

foundation of the three Franciscan Orders, and is

the only thirteenth-century document which

supplements the biography of St. Francis. About

1297-1300 he compiled a catalogue of the heroes, general up to his time, which is also a source of much

importance for the study of Franciscan history.

Critical editions of both these works have been

published by the Fr. Minor of Quaracchi In Anaeata

Francisca, III (1897), 966-971 and by Father

Hilarin Felder of Lucerne, O. M. Cap., "Liber de

Laudibus," etc. Rome, 1897). Bernard also wrote the

life of Blessed Christopher of Cahors, in the "Chronica

XXVII. Generalium" (ed. Qua-

ricchi, 1897, 161-173) and is very probably the author of the ""Speculum Disciplinae" and of the "Epistola

ad Scandam Novitium," erroneously attributed to

St. Bonaventure (See Bonav, Opera Omnia ed.

Quaracchi, 1898, VIII, 583 sqq. and 663 sqq.).

BERNARD OF BOLONA, FRIAR MINOR CAPUCHIN AND SCOTTISH

THEOLOGIAN, born at Bolona, December 17, 1701; d.

19 February, 1768. In 1717 he entered the Capu-

chln Order and some years later died successively

the offices of professor of moral and dogmatic

theology and several times held positions of

responsibility. Perhaps the best known of Bernard

of Bologna's writings is the "Monologus Scriptorum

De O. Min. S. Francisce Cap.," a work which resembles

Wadding's well-known "Scriptores Ord. Min."

It was published at Venice in 1747, and an appendix

appeared at Rome in 1852. Besides this work

Bernard wrote an elementary treatise on philoso-

phy, entitled "Institutio Philosophica praemittenda theologica," (Venice, 1766),

and a treatise on dogmatic theology, "Institutio

Theologiae," (Venice, 1748). He is also the author of a "De Piarasium S. Scripturae," composed for the

use of a number of theathers and authors.

HURTS, Nomenclator, III, 6.

BERNARD OF BOTONE, generally called PARMA D'IS,

FROM his birthplace, Parmo in Italy, a noted canonist

of the thirteenth century; death of birth unknown;

d. 1263, or, according to Hurter, 24 March, 1266.

STEPHAN M. DONOVAN.

BERNARD OF CLAIRVAUX, SAINT, b. in 1090, at

Fontaines, near Dijon, France; d. at Clairvaux,

21 August, 1153. His parents were Rosemard, Lord

of Fontaines, and Alethe of Montrond, both belonging

to the highest nobility of Burgundy. Bernard, the

third of a family of seven children, six of whom were

sons, was educated with particular care, because

while yet unborn, a devout man had foretold his

great destiny. At the age of nine years, Bernard

was sent to a much renowned school at Chartres-on-

Seine, kept by the secular Canons of Saint-Vorles.

He had a great taste for literature and devoted him-

self for some time to poetry. His success in his

studies won the admiration of his masters, and his

growth in virtue was no less marked. Bernard's

great desire was to excel in literature in order to

take up the study of Sacred Scripture, which later

on became, as it were, his own tongue. "Piety was his

all," says Bossuet. He had a special devotion to the

Blessed Virgin, and there is no one who speaks

more sublimely of the Queen of Heaven. Bernard

was scarcely nineteen years of age when his mother

died. During his youth, he did not escape trying

temptations, but his virtue triumphed over them,

in many instances in a heroic manner, and from

the time he thought of retiring from the world and living

a life of solitude and prayer.

St. Robert, Abbot of Mol餐es, had founded, in

1098, the monastery of Citeaux, about four leagues

from Dijon, with the purpose of restoring the Rule

of St. Benedict in all its purity. In 1110 the Abbot

of Mol餐es, left the government of the new abbey

to St. Alberic, who died in the year 1110. St. Stephen

had just succeeded him (1113) as third Abbot of

Citeaux, when Bernard with thirty young noblemen

of Burgundy, sought admission into the order. Three

duction au Corpus Juris Canonicus, Paris, 1864; SCHULTE, Die Geschichten der Quellen und Text der kanonischen

Rechte, Stuttgart, 1875-80), II, 114-117.

ANDREW B. MEEHAN.
APPARITION OF THE B. VIRGIN TO ST. BERNARD—FILIPPO LIPPI
BADIA, FLORENCE
years later, St. Stephen sent the young Bernard, at the head of a band of monks, the third to leave Citeaux, to found a new house at Vallée d'Abesinte, or Valley of Bitterness, in the Diocese of Langres. This Bernard named Claire Valle, or Clairvaux, on the 25th of June, 1115, and the names of Bernard and Clairvaux thence become inseparable. During the absence of the Bishop of Langres, Bernard was blessed as abbot by William of Champeaux, Bishop of Châlons-sur-Marne, who saw in him the predominating man, servum Dei. From that moment a strong friendship sprang up between the abbott and the bishop, who was professor of theology at Notre Dame, of Paris, and the founder of the cloister of St. Victor. The beginnings of Clairvaux were trying and painful. The regime was so austere that Bernard's health was impaired by it, and only the influence of his friend William of Champeaux, and the authority of the General Chapter could make him mitigate his

susterities. The monastery, however, made rapid progress. Disciples flocked to it in great numbers, desirous of putting themselves under the direction of Bernard. His father, the aged Tesceil, and all his brothers entered Clairvaux as religious, leaving only Humbeline, his sister, in the world, and she, with the consent of her husband, soon took the veil in the Benedictine Convent of Jilly. Clairvaux becoming too small for the religious who crowded there, it was necessary to send out bands to found new houses. In 1118, the monastery of the Three Fountains was founded in the Diocese of Châlons; in 1119, that of Fontenay in the Diocese of Autun (now Dijon) and in 1121, that of Foigny, near Veirins, in the Diocese of Lain (now Soisson). Notwithstanding this prosperity, the Abbot of Clairvaux had his trials. During an absence from Clairvaux, the Grand Prior of Cluny, Bernard of Uxua, sent by the Prince of Priors, to use the expression of Bernard, went to Clairvaux and enticed away the abbot's cousin, Robert of Châlillon. This was the occasion of the longest, and most touching of Bernard's letters.

In the year 1119, Bernard was present at the first general chapter of the order convoked by Stephen of Citeaux. Though not yet thirty years old, Bernard was listened to with the greatest attention and respect, especially when he developed his thoughts upon the revival of the primitive spirit of regularity and fervour in all the monastic orders. It was this general chapter that gave definitive form to the constitutions of the order and the regulations of the Charter of Charity — the so-called Rule of Citeaux — confirmed 23 December, 1119. In 1120 Bernard composed his first work "De Gradibus Superbise et Humilitatis" and his homilies which he entitled "De Laudibus Mariae". The monks of Cluny had not seen, with satisfaction, those of Citeaux take the first place among the religious orders for regularity and fervour. For this reason there was a temptation on the part of the "Black Monks" to make it appear that the rules of the new order were impracticable. At the solicitation of William of St. Thierry, Bernard defended himself by publishing his "Apology" which is divided into two parts. In the first he proves himself innocent of the invectives against Cluny, which had been attributed to him, and in the second he gives the reasons for his attack upon Cluny and abuses. He protested his profound esteem for the Benedictines of Cluny whom he declares he loves equally as well as the other religious orders. Peter the Venerable, Abbot of Cluny, answered the Abbot of Clairvaux without wounding charity in the least, and assured him of his great admiration and sincere friendship. In the meantime Cluny established a reform, and Suger himself, the minister of Louis le Gros, and Abbot of St. Denis, was converted by the apology of Bernard. He hastened to terminate his worldly life and restore discipline in his monastery. The zeal of Bernard did not stop here; it extended to the bishops, the clergy, and the faithful and remarkable conversions of persons engaged in worldly pursuits were among the fruits of his labours. Bernard's letter to the Archbishop of Sens is a real treatise "De Officiis Episcoporum". About the same time he wrote his work on "Grace and Free Will".

In the year 1125, Bernard assisted at the Council of Troyes, which had been convened by Pope Honorius II, and was presided over by Cardinal Matthew, the Bishop of Albano. The purpose of this council was to settle certain disputes of the bishops of Paris, and regulate other matters of the Church of France. The bishops made Bernard secretary of the council, and charged him with drawing up the synodal statutes. After the council, the Bishop of Verdun was deposed. There then arose against Bernard unjust reproaches and he was denounced even in Rome, as a monk who meddled with matters that did not concern him. Cardinal Harmeric, on behalf of the pope, wrote Bernard a sharp letter of remonstrance. "It is not fitting", he said "that noisy and troublesome frogs should come out of their marshes to trouble the Holy See and the cardinals". Bernard answered the letter by saying that, if he had assisted at the council, it was because he had been dragged to it, as it were, by force. "Now illustrious Harmeric", he added, "if you so wished, who would have been more capable of freeing me from the necessity of assisting the council than yourself? Forbidden those noisy troublesome frogs to come out of their holes, to leave their marshes. . . . Then your friend will no longer be exposed to the accusations of pride and presumption". This letter made a great impression upon the cardinal, and justified its author both in his eyes and before the Holy See. Bernard thus gained his wish, and Bernard traced the outlines of the Rule of the Knights Templars who soon became the ideal of the French nobility. Bernard praises it in his "De Laudibus Novae Militiae".
BERNARD

The influence of the Abbot of Clairvaux was soon felt in provincial affairs. He defended the rights of the Church by the election of two popes, Innocent II and Anacletus II. Innocent II having been banished from Rome by Anacletus took refuge in France. King Louis le Gros convened a national council of the French bishops at Etampes, and Bernard, summoned thither by consent of the bishops, was sent as a judge between the rival popes. He decided in favour of Innocent II, caused him to be recognized by all the great Catholic powers, went with him into Italy, calmed the troubles that agitated the country, reconciled Pisa with Genoa, and Milan with the pope and Lothaire. According to the desire of the latter, the pope went to Liège to consult with the emperor upon the best means to be taken for his return to Rome, for it was there that Lothaire was to receive the imperial crown from the pope. Pope Urban returned to France, paid a visit to the Abbey of St. Denis, and then to Clairvaux where his reception was of a simple and purely religious character. The whole pontifical court was touched by the saintly demeanour of the abbot, for even most of the non-common fishes were found for the pope, and instead of wine, the juice of herbs was served for drink, says an annalist of Citeaux. It was not a table feast that was served to the pope and his followers, but a feast of virtues. The same year Bernard was again at the Council of Reims at the side of Innocent II, whose oracle he was; and then in Aquitaine where he succeeded for the time in detaching William, Count of Poitiers, from the cause of Anacletus.

In 1132, Bernard accompanied Innocent II into Italy, and at Cluny the pope abolished the abbeys which Clairvaux used to pay to this celebrated abbey — an action which gave rise to a quarrel between the "White Monks" and the "Black Monks" which lasted twenty years. In the month of May the pope, supported by the army of Lothaire, entered Rome, but Lothaire, feeling himself too weak to resist the partisans of Anacletus, retired beyond the Alps, and Innocent sought refuge in Pisa in September, 1133. In the meantime the abbots had returned to Bernard and the pope, and in the art of peacemaking which he had commenced in 1130. Towards the end of 1134, he made a second journey into Aquitaine, where William X had relapsed into schism. This would have died out of itself if William could have been detached from the cause of Gerard, who had usurped the See of Bordeaux and retained that of Angoulême. Bernard invited William to the Mass which he celebrated in the Church of La Couture. At the moment of the Communion, placing the Sacred Host upon the paten, he went to the door of the church where William was, and pointing to the Host, he adjured the Duke not to despise God as he did His servants. William yielded and the schism ended. Bernard went again to Italy, where Roger of Sicily was endeavouring to withdraw the Pisans from their allegiance to Innocent. He recalled the city of Milan, which had been deceived and misled by the ambitious prelate Anselm, Archbishop of Milan, to obedience to the pope, refused the Archbishopric of Milan, and returned finally to Clairvaux.

In 1137 he was again required to leave his solitude by order of the pope to put an end to the quarrel between Lothaire and Roger of Sicily. At the conference held at Palermo, Bernard succeeded in convincing Roger of the rights of Innocent II and in silencing Peter of Pisa who sustained Anacletus. The latter died of grief and disappointment in 1138, and returned to the schism. Returning to Clairvaux, Bernard occupied himself in sending bands of monks from his too-crowded monastery into Germany, Sweden, England, Ireland, Portugal, Switzerland, and Italy. Some of these, at the command of Innocent II, took possession of Three Fountains Abbey, which was under the judgment of the rival popes. When Eugenius III was chosen, Bernard resumed his commentary on the "Canticle of Canticles", assisted in 1139, at the Second General Lateran Council and the Tenth (Ecumenical, in which the surviving adherents of the schism were definitively condemned. About the same time, Bernard was visited at Clairvaux by St. Malachi, metropolitan of the Church in Ireland, and a very close friendship was formed between them. St. Malachi would gladly have taken the Cistercian habit, but the sovereign pontiff would not give his permission. He died, however, at Clairvaux in 1148.

In the year 1140, we find Bernard engaged in other matters which disturbed the peace of the Church. In the remembrance of the 26th of September, the feast of philosophy and theology, dominated by the passion for discussion and a spirit of independence which had introduced itself into political and religious questions, became a veritable public arena, with no other motive than that of ambition. This exaltation of human reason and rationalism found an ardent and powerful adherent in Abelard, the most eloquent and learned man of the age after Bernard. "The history of the calamities and the refutation of his doctrine by St. Bernard", says Ratisbonne, "form the greatest episode of the twelfth century." Abelard's treatise on the Trinity had been condemned in 1121, and he himself had thrown his book into the fire. But in 1139 he advocated new errors. Bernard, informed of this by William of St. Thierry, wrote to Abelard who answered in an insulting manner. Bernard then denounced him to the pope who caused a general council to be held at Sens. Abelard asked for a public discussion with Bernard; the latter showed his opponent's errors with such clearness and force of logic that he was unable to make any reply, and was obliged to retract all his innovations. The pope confirmed the judgment of the council, Abelard submitted without resistance, and retired to Cluny to live under Peter the Venerable, where he died two years later.

Innocent II died in 1143. His two successors, Celestin II and Lucius, reigned only a short time, and then Bernard saw one of his disciples, Bernard of Pisa, Abbot of Three Fountains, and known thereafter as Eugenius III, raised to the Chair of St. Peter. Bernard sent him, at his own request, various instructions which compose the "Book of Consideration", the predominating idea of which is that the reformation of the Church ought to commence with the sanctity of its head. Temporal matters are merely accessories; the principal are piety, meditation, or consideration, which ought to precede action. The book contains a most beautiful page on the papacy, and has always been greatly esteemed by the sovereign pontiffs, many of whom used it for their ordinary reading.

A flattering letter came at this time from the East. Edessa had fallen into the hands of the Turks, and Jerusalem and Antioch were threatened with similar disaster. Deputations of the bishops of Armenia solicited aid from the pope, and the King of France also sent ambassadors. The pope commissioned
Bernard to preach a new Crusade and granted the same indulgences for it which Urban II had accorded to the first. A parliament was convoked at Veselary in Burgundy in 1134, and Bernard preached before the assembly. The King, Louis le Jeune, Queen Eleanor, and the counts of these states, prostrated themselves at the feet of the Abbot of Clairvaux to receive the cross. The saint was obliged to use portions of his habit to make crosses to satisfy the zeal and ardor of the multitude who wished to take part in the Crusade. Bernard passed into Germany, and the miracles which multiplied amidst the universal success of the Crusade contributed to the success of his mission. The Emperor Conrad and his nephew Frederick Barbarossa, received the pilgrims’ cross from the hand of Bernard, and Pope Eugenius, to encourage the enterprise, came in person to France. It was on the occasion of this visit, 1147, that a council was held at Paris, at which the errors of Gilbert de la Porèse, Bishop of Poitiers, were examined. He advanced among other absurdities that the essence and the attributes of God are not God, that the properties of the Persons of the Trinity are not the persons themselves, in fine that the Divine Nature did not become incarnate. The discussion was warm on both sides. The decision was left for the papal court, which was held the following year (1148), and in which Eon de l’Etoile was one of the judges. Bernard was chosen by the council to draw up a profession of faith directly opposed to that of Gilbert, who concluded by stating to the French: “If you believe and assert differently than I have done I am willing to believe and speak as you do”. The consequence of this declaration was that the pope condemned the assertions of Gilbert without denouncing him personally. After the council the pope paid a visit to Clairvaux, where he rewarded the abbot, and was induced to realize the prosperity of which Bernard was the soul.

The last years of Bernard’s life were saddened by the failure of the Crusade he had preached, the entire responsibility for which was thrown upon him. He had accredited the enterprise by miracles, but he had not guaranteed its success against the misconduct and perfidy of those who participated in it. Lack of discipline and the over-confidence of the Germans prevented the two armies from crossing the Rhin and meeting, while the young Prince, who had insisted on going to the Holy Land, was captured and Queen Eleanor, and finally the avarice and evident treason of the Christian nobles of Syria, who prevented the capture of Damascus, appear to have been the cause of disaster. Bernard considered it his duty to send an apology to the pope, and it is inserted in the second part of the “Book of Consideration”. There he explains how, with the crusaders as with the Hebrew people, in whose favour the Lord had multiplied His prodigies, their sins were the cause of their misfortunes and miseries. The death of his contemporaries served as a warning to Bernard of his own approaching end. The first two to die was Suger (1152), of whom the Abbot wrote to Eugenius III: “If there are any precious vases adorning the palace of the King of Kings it is the soul of the Venerable Suger of St. Denis”. Then followed the Emperor of Germany, and his son Henry died the same year. From the beginning of the year 1153, Bernard felt his death approaching. The passing of Pope Eugenius had struck the fatal blow by taking from him, and the root of the present, the power and consoler. Bernard died in the sixty-third year of his age, after forty years spent in the cloister. He founded one hundred and sixty-three monasteries in different parts of Europe; at his death they numbered three hundred and forty-two. He was the first to confer the title of Doctor on the cloisters of the saints and was canonised by Alexander III, 18 January, 1174. Pope Pius VIII bestowed on him the title of Doctor of the Church. The Cistercians honour him as only the founders of orders are honoured, because of the wonderful and widespread activity which he gave to the Order of Citeaux.

The works of St. Bernard are as follows: “De Gravibus Superibentibus”, his first treatise on the Gospel “Missus est” (1120); “Apology to William of St. Thierry” against the claims of the monks of Cluny; “On the Conversation of Clerics”, a book addressed to the young ecclesiastics of Paris (1122); “Laudibus Nove Militiae”, addressed to Hughes de Payns, first Grand Master and Prior of the Knights Templars (1129). This is a eulogy of the military order instituted in 1118, and an exhortation to the knights to conduct themselves with courage in their several stations. “De amore Dei”, wherein St. Bernard denounces the manner of loving God without measure and gives the different degrees of this love; “Book of Precepts and Dispositions” (1131), which contains answers to questions upon certain points of the Rule of St. Benedict from which the abbot can, or cannot, dispense; “De Gratia et Libero Arbitrio” in which the Catholic dogmas of grace and free will is proved according to the principles of St. Augustine; “Book of Consideration”, addressed to Pope Eugenius III; “De Officis Episcoporum”, addressed to Reymond, Bishop. His sermons are also numerous: “On Psalm XC, ‘Qui habitat’” (about 1125); “On the Canticle of Canticles”. St. Bernard explained in eighty-six sermons only the two first chapters of the Canticle of Canticles and the first verse of the third chapter. There are also eighty-six “Sermons for the Whole Year”; his “Letters” number 530. Many other letters, treatises, etc., falsely attributed to him are found among his works, such as the “L’Echelle du Clioire”, which is the work of Guigue, Prior of La Grande Chartreuse, his “Lectures”, “Meditations”, “Edification de la Maison Intérieure”, etc.

Works of St. Bernard, ed. MARILLO, 2 Vols. fol. (1667, 1690), the latter edition forming the basis of M. Laplace and Hodges, tr. (London, 1889); in Migne, P. L. This contains three lives of the saint: Vita Prima by William of St. Thierry, ERARD DE BONNEVAL, and GREGORY OF AUVERGNE; Vita Secunda by ALAIN AUVERGNE; and Vita Bernardi by John l’ERMIT. Besides these there are in the same edition the Liber Miraculorum of Herbert, the Eroldium Magnum Citerior and the Chronicon Claravallense (Paris, 1839–40, 4 Vols. fol., Milan, 1892, 3 vols., complete in one volume); Life of St. Bernard (1842); HÜFFER, Der heilige Bernard von Clairvaux (Münster, 1868); NEUMANN, "Bernard von Clairvaux" (Gotha, 1869); ABBE VANDAMM, “Le vrai Bernard, Oriole (1877), who also published a life (Paris, 1895–97).

M. GILDAS.

Bernard of Cluny (or of Morlaix), a Benedictine monk of the first half of the twelfth century, poet, satirist, and hymn-writer, author of the famous verses “On the Contemplation of the World”. His parentage, native land, and education are hidden in obscurity. The sixteenth-century writer John Pits (Scriptores Anglice, Sec. XII) says that he was of English birth. His hymns are called Morlanciata, which title most writers have interpreted to mean that he was a native of Morlaix in Brittany, though some credit him to Mursles near Fuy in Bearn. A writer in the “Journal of Theological Studies” (1877), VII, 354–365, says that he belonged to the family of the Seigneurs of Montpellier in Languedoc, and was born at Murles, a possession of this distinguished family; also that he was at first a monk of St. Sauveur d’Aniane, whence he entered Cluny after Abbot Pontius, to which he became Prior. When he was a monk at Cluny in the time of Peter the Venerable (1122–56), for his famous poem is dedicated to that abbot. It may have been written about 1140. He left some sermons and is said to be the author of certain monastic regulations, known as “Conventuals Cluniacensia” (Hergront, Vetus Discipl. Monast., Paris, 1726; Albers, Consuet. Cluniac. antiquiores, Monte Cassino, 1906), also of a
dialogue (Colloquium) on the Trinity. The "De Contemptu Mundi" contains about 3,000 verses, and is for the most part a very bitter satire against the moral disarray of the poet's time. It spares no one; priests, nuns, bishops, monks, and even Rome itself are mercilessly scoured for their shortcomings. For this reason it was first printed by Matthias Flacius as one of his testes veritatis, or without delay, the day of the poet's death, in the medieval Church (Varia poemata de corrupto ecclesiae statu, Basle, 1557), and was often reprinted by Protestants in the course of the seventeenth and eighteenth centuries. Its complete Latin text is found in the edition of Coxe Wright (An Historical Account of Poets of the Twelfth Century. London, 1872). This Christian Juvenal does not proceed in an orderly manner against the vices and follies of his age. It has been well said that he seems to eddy about two main points: the transitory character of all material pleasures and the permanency of spiritual joys. Bernard of Cluny is indeed a lyrical writer, swept from one theme to another by the intense force of ascetic meditation and by the majestic power of his own verse, in which there lingers yet a certain fervor in imitation of poetical mysticism. His highest wrought pictures of heaven and hell were probably known to Dante; the roasting cold, the freezing fire, the devouring worm, the fiery floods, and again the glorious idyl of the Golden Age and the splendors of the Heavenly Kingdom, are carried in a majestic hymn (or alternately in Dante's genius. The enormity of sin, the charm of virtue, the torture of an evil conscience, the sweetness of a God-fearing life alternate with heaven and hell as the themes of the majestic dithyramb. Nor does he dwell in generalities; he returns himself again to the wickedness of woman (one of the most frequent themes of the sex), the evils of war, money, learning, perjury, soothsaying, etc.; this master of an elegant, forceful, and abundant latinity cannot find words strong enough to convey his prophetic rage at the moral apostasy of his generation, in almost none of whom does he find spiritual soundness. Youthful and simoniacal bishops, oppressive agents of ecclesiastical corporations, the officers of the Curia, papal legates, and the pope himself are treated with less severity than in Dante or in the sculptures of medieval cathedrals. Only those who do not know the utter frankness of certain medieval moralists could borrow scandal from his verses. It may be said that the medieval times were not the chronicler the blacker his colours. the early half of the twelfth century saw the appearance of several new factors of secularism unknown to an earlier and more simply religious time: the increase of commerce and industry resultant from the Crusades, the growing independence of medieval cities, the secularization of Benedictine life, the development of pageantry and luxury in a hitherto rude feudal world, the reaction from the terrific conflict of State and Church in the latter half of the eleventh century. The story of the poet as a reformist is to be found in a deeply religious and even mystical soul at the first dawning consciousness of a new order of human ideals and aspirations. The turbid and irregular flow of his denunciation is halted occasionally by an attempt to entitle the middle of the thirteenth century, called Compostellanus from the fact that he passed the period of his life at Compostella. He was known also as Brigantius from his birthplace in Galicia, Spain; later of Monte Mirato. Bernard was chaplain to Innocent IV, a noted canonist, at whose exhortation he wrote a work entitled "Apparatus," or commentary on the five books of the Decretals of Gregory IX. The "Margarita" was published in Paris, 1516. Bernard was the first to write a commentary on the constitutions of Innocent IV (not published). A third work, entitled "Causus seu Notitiae" or "Operum Decretalium," which was intended as a complete and practical commentary, but which owing to the author's death, did not go beyond title sixth of the first book, consequently not published.
Bernard of Luxembourg, Dominican theologian, controversialist, and Inquisitor of the Archdioceses of Cologne, Mains, and Trier; b. at Strassen near Cologne; d. at Cologne, 5 October, 1535. He studied at the latter place where he entered the Order of Preachers, received the baccalaureate at Louvain, 1499, and was appointed Master of Students at Cologne, 1505, 1506. In 1507 he became Regent of Studies at Louvain; fellow of the college of Doctors at Cologne, in 1518; and served twice as Prior of Cologne. As the author of the "Catalogus hereticorum", he has been described as somewhat lacking in critical judgment; but he was otherwise a safe and indefatigable defender of the Faith against the heretics of his time. His important works are: "Catalogus hereticorum omnium", etc. (Erfurt, 1522; Cologne, 1523; Paris, 1524); "Concilium generale malignantium", etc. (1528); "D. ordinibus militariibus", etc. (Cologne, 1527). 

J. R. VOLO.

Bernard of Menthon, Saint, b. in 923, probably in the castle Menthon near Annecy, in Savoy; d. at Novara, 1008. He was descended from a rich, noble family and received a thorough education. He refused to enter an honourable marriage proposed by his father and decided to devote himself to the service of the Church. Placing himself under the direction of Peter, Archdeacon of Aosta, under whose guidance he rapidly progressed, Bernard was ordained priest and on account of his learning and virtue was made Archdeacon of Aosta (964), having charge of the government of the diocese under the bishop. Seeing the ignorance and idolatry still prevailing among the people of the Alps, he resolved to devote himself to their conversion. For forty-two years he continued to preach the Gospel to these people and carried the light of faith even into many cantons of Lombardy, effecting numerous conversions and working many miracles.

For another reason, however, Bernard's name will forever be famous in history. Since the most ancient times there was a path across the Pennine Alps leading from the valley of Aosta to the Swiss canton of Valais, over what is now the pass of the Great St. Bernard. This pass is covered with perpetual snow from seven to eight feet deep, and drifts sometimes accumulate to the height of forty feet. Though the pass was extremely dangerous, especially in the springtime on account of avalanches, yet it was often used by French and German pilgrims on their way to Rome. For the convenience and protection of travellers St. Bernard founded a monastery and hospice at the highest point of the pass, 8,000 feet above sea-level, in the year 902. A few years later he established another hospice on the Little St. Bernard, a mountain of the Graian Alps, 7,076 feet above sea-level. Both were placed in charge of Augustinian monks after pontifical approval had been obtained by him during a visit to Rome. These hospices are renowned for the generous hospitality extended to all travellers over the Great and Little St. Bernard, so called in honour of the founder of these charitable institutions. At all seasons of the year, but especially during heavy snow-storms, the heroic monks accompanied by their well-trained dogs, go out in search of victims who may have succumbed to the severity of the weather. They offer food, clothing, and shelter to the unfortunate travellers and take care of the dead. They depend on gifts and collections for sustenance. At present, the order consists of about forty members, the majority of whom live at the hospice while some have charge of neighbouring parishes.

The last act of St. Bernard's life was the reconcilia-
tion of two noblemen whose strife threatened a fatal issue. He was interred in the cloister of St. Lawrence. Venerable as a saint from the twelfth century, in the manner of Pietro Piccolpasso (Acer, Novara, Brescia), he was not canonised until 1681, by Innocent XI. His feast is celebrated on the 15th of June.

Barnabas Dieringer.

Bernard of Pavia, a noted canonist, provost of the cathedral chapter of Pavia, and, in 1190, promoted to the Bishopric of Faenza, became Bishop of Pavia in 1188; d. 18 September, 1213. About 1190 he compiled a work entitled "Breviarium Extravagantium" to complete and bring down to his own day Gratian's "Decretum". Bernard quotes authorities in an abbreviated form; hence the title. With the exception of a small fragment of a letter of St. Gregory the Great, he took nothing from Gratian. Later decrees and a few fragments of Roman and German civil law are found in the work. The "Breviarium" soon found favour in the University of Bologna, and from the time of Tancred (c. 1180) "Compiato Prima" became the first collection of canon law after Gratian's—while other collections are styled "Compiatio Secunda", "Tertia", etc.

The "Breviarium" is divided into five books, the books into 152 titles, the titles into 912 chapters, the chronological order being observed as far as possible. The first book treatises of persons who exercise ecclesiastical jurisdiction, the second of civil judicial processes, the third of matters pertaining to clerics and regulars, the fourth of the high order, the fifth of ecclesiastical crimes and criminal procedure. While no rubrics are prefixed to the books of Bernard, his titles and chapters have their own peculiar inscriptions. The "Breviarium" was published in a work entitled "Antique Collectiones Decretalium cum Ant. Augustini, Episcopi Hierdinensis, notis" (Lerida, 1576; Paris, 1690); also in the work: "Ant. Augustini Opera" (Luca, 1765; 4 vols.) Joseph Anthony de Rieger, a professor in the University of Prague (d. 1765) published an incomplete edition of the "Breviarium" (Freiburg, 1775) in which he attempted to harmonize Bernard's work with the Decretals of Gregory IX.

Bernard wrote a "Summa Decretalium", a compendium of his "Breviarium", which for a long time constituted the chief text-book of the schools and was used by Cafarce (Ratisbon, 1830). Bernard's first work was entitled: "Summa de Mattionio", which was followed by another: "Summa de Electone". Both are short treatises (see Laspeyres, op. cit., 287-323). His last work, begun in Faenza and finished after he became Bishop of Pavia, bears the title, "Casus Decretalium", part of which Laspeyres edited. Bernard also wrote a glossary on his "Breviarium", a life of St. Lanfranc, Bishop of Ticeo, and commentaries on Ecclesiasticalus and the Canons of Canons. 

Andrew B. Meehan.

Bernard Tolomeo, Saint, founder of the congregation of the Blessed Virgin of Monte Oliveto, b. at Siena in Tuscany in 1272; d. in 1348. He received at baptism the name of Giovanni, but took that of Bernard, and was admitted into the Congregation of Clairvaux. He was educated by his uncle, Christopher Tolomeo, a Dominican, and desired to enter the religious life, but his father's opposition prevented, and he continued his studies in secular surroundings. After a course in philosophy and mathematics he devoted himself to the study of civil and canon law and of theology. For a time Bernard served in the armies of Rudolph of Hapsburg. After his return to Siena he was appointed by the city to the highest positions in the town government. While thus occupied he was struck with blindness. Having recovered his sight through the intervention of the Blessed Virgin, he retired (1513) to a solitary spot about ten miles from Siena, where he led a life of the greatest austerity.

The fame of his virtues soon attracted many visitors, and Bernard was accused of heresy. He went to Avignon and cleared himself of this charge before Pope John XXII. After his return he founded the congregation of the Blessed Virgin of Monte Oliveto, giving it the Rule of St. Benedict. The purpose of the new religious institute was a special devotion to the Blessed Virgin. Guido, Bishop of Arezzo, within whose diocese the congregation was formed, confirmed its constitutions (1310), and many favours were granted by Popes John XXII, Clement VI (1344), and Gregory XI. Upon the appearance of the pest in the district of Arezzo, Bernard and his monks devoted themselves, at the risk of their own lives, to the care of the sick without distinction of rank or condition. After having ruled the religious body he had founded for twenty-seven years, Bernard died, at the age of seventy-six. His death was followed by many miracles and the congregation became a nursery of saints. In 1654 the Congregation of Cardinals decreed that the Blessed Bernard Tolomeo was deserving of veneration among the saints. In the Roman Martyrology he is commemorated on 21 August.

Bernardin de Picony. See Piconio (A Piconio).

Bernardine of Feltre, Blessed, Friar Minor and missionary, b. at Feltre, Italy, in 1439 and d. at Pavia, 28 September, 1494. He belonged to the noble family of Tomitano and was the eldest of nine children. In 1456 St. James of the Marches preached the Lenten course at Padua, and inspired to enter the Franciscan order, Bernardine was clothed with the habit of the Friars Minor in May of that same year. He completed successfully his studies at Mantua and was ordained priest in 1463. Cured miraculously of an impediment in his speech, Bernardine began the long and fruitful apostolate which has caused one to be ranked as one of the most successful of the missionaries of the fifteenth century. Every city of note and every province from Lombardy in the north to Sardinia and the provinces of the south became successively the scene of his missionary labours; and the fruits of his apostolate were both marvellous and enduring. Bernardine, however, will be best remembered in history in connexion with the monti di pieta of which he was the reorganizer, and, in a certain sense, the founder. The word mona which literally means an accumulation of wealth or money, now called capital, seems to have been a generic term used in the fifteenth century to signify lending-houses in general; and hence the montes pietatis or monti di pieta were a species of charitable lending-houses not, perhaps, unlike our modern pawnbroker establishments, but possessing, of course, none of the sinister features of the latter. As originally instituted the monti di pieta were intended as a timely and effectual remedy for the evils occasioned by the usury then practiced by the Jews upon the people, both in Italy and in other parts of Christendom. The project was first seen in organizing them and in founding them in places where they had not previously existed affords an explanation of the fact that he is generally represented carrying in his hand a monte di pieta, that is, a little green hill composed of three mounds and on
the top either a cross or a standard with the inscription: Curam illius habe. As an author Bernardine has left us little if anything of importance, but it is interesting to note that the authorship of the well-known Anima Christi has as often as not been ascribed to him. Bernardine, however, that the Anima Christi was composed sometime before the birth of Blessed Bernardine disproves any claim that he might have of being his author. As in the case of St. Ignatius, Bernardine also made frequent use of it and recommended it to his brethren. The feast of Blessed Bernardine is kept in the Order of Friars Minor on the 28th of September. (See Monti di Pietà.)

Bernardine of Fossa, Blessed, of the Order of Friars Minor, historian and ascetical writer, b. at Fossa, in the Diocese of Aquila, Italy, in 1420; d. at Aquila, 27 November, 1503. Blessed Bernardine belonged to the ancient and noble family of the Amicis, and was descended from the family of St. James of the Marches who was then preaching a course of Lenten sermons at Perugia. From the time of his entrance into religion, Bernardine never ceased to advance in religious perfection, and the success which crowned his missionary labours throughout Italy, as well as in Dalmatia and Bosnia, was due in part to the eminent sanctity of his life. Bernardine fulfilled the office of provincial of the province of St. Bernardine and of the province of Dalmatia and Bosnia, and would have been chosen Bishop of Aquila had not his humility forbidden him to accept this dignity. His cult was approved by Leo XII, 26 March, 1828. His feast is kept in the Franciscan Order on the 7th of November. The writings of Blessed Bernardine include several sermons and divers ascetical and historical treatises. One of these is "Chronicon Fratrum Minorum Observantium," which describes the establishment of the beneficent loan societies, known as Monti di Pietà. But Bernardine's watchword, like that of St. Francis, was "Pace." On foot he traversed the length and breadth of Italy persevering in his mission to reconcile the mutual hatred of Guelphs and Ghibellines. At Crema, as a result of his preaching, the political exiles were recalled and even reinstated in their confiscated possessions. Everywhere Bernardine persuaded the cities to take down the arms of their warring factions from the church and palace walls and to inscribe there, instead, the initials I. H. S. He thus gave a new impulse and a tangible form to the devotion to the Holy Name of Jesus which was ever a favourite topic with him and which he regarded as a potent means of rekindling popular fervour. He used to hold a board in front of him while preaching, with the sacred monogram painted on it in the midst of rays and afterwards expose it for veneration. This monogram he appears to have received the habit of a painting in 1424. At Bologna Bernardine induced a card-painter, who had been ruined by his sermons against gambling, to make a living by designing these tablets, and such was the desire to possess them that the man soon realised a small fortune. It is said that Bernardine desired to have another of his sermons published; this request was acceded to by Bernardine, who perhaps rather than account of it—Bernardine had to suffer both opposition and persecution. He was accused of heresy, the
tablets he had used to promote devotion to the Holy Name being made the basis of a clever attack by the adherents of the Dominican, Manfred of Vercelli, whose false preaching about Antichrist Bernardine had combated. The saint was charged with having introduced a profane, new devotion which was dangerous to the people to the pope, and he was cited to appear before the pope. This was in 1427. Martin V received Bernardine coldly and forbade him to preach or exhibit his tablets until his conduct had been examined. The saint humbly submitted, his sermons and writings being handed over to a commission for a judicial trial. The latter took place at St. Peter's in presence of the pope, 8 June, St. John Capistran having charge of the saint's defence. The malice and futility of the charges against Bernardine were so completely demonstrated that the pope not only justified and commended the saint's teaching, but urged him to preach in Rome. Martin V subsequently approved Bernardine's election as Bishop of Siena. The saint, however, declined this honour as well as the See of Fiesole and Urbino, in 1428 and 1435, respectively, saying playfully that all Italy was already his diocese. After the accession of Eugene IV Bernardine's enemies renewed their accusations against him, but the pope by a Bull, 7 July, 1439, annulled all the proceedings and thus reduced the saint's calumniators to silence, nor does the question seem to have been reopened during the Council of Basel as some have asserted. The vindication of Bernardine's teaching was speedily ratified by the feast of the Triumph of the Holy Name, conceded to the Friars Minor in 1530 and extended to the Universal Church in 1722.

In 1433 Bernardine accompanied the Emperor Sigismund to Rome for the latter's coronation. Soon after he withdrew to Capriola to compose a series of sermons. He resumed his missionary labours in 1436, but was forced to abandon them in 1438 on his election as Vicar-General of the Observants throughout Italy. Bernardine had laboured strenuously to spread this branch of the Friars Minor from the outset of his religious life, but it is erroneous to style him its founder since the origin of the Observants may be traced back to the middle of the fourteenth century. Although not the immediate founder of this reform, Bernardine became to the Observants what Francis was to the principal support and indefatigable propagator. Some idea of his zeal may be gathered from the fact that, instead of the one hundred and thirty Friars constituting the Observance in Italy at Bernardine's reception into the order, it counted over four thousand before his death. In addition to the number he received into the order, Bernardine himself founded, or reformed, at least three hundred convents of Friars. Not content with extending his religious family at home, Bernardine sent missionaries to different parts of the Orient and it was largely through his efforts that so many ambassadors from different schismatic nations attended the Council of Florence in which we find the saint addressing the assembled Fathers in Greek. Having in 1442 persuaded the pope to appoint a mission of Friars Minor to preach in the East, this saint might give himself more undividedly to preaching, Bernardine resumed his missionary labours. Although a Bull was issued by Eugene IV, 26 May, 1443, charging Bernardine to preach the indulgence for the Franciscan heroes in the East, this was never done so. There is, moreover, no good reason to believe that the saint ever preached outside Italy, and the missionary journey to Palestine mentioned by one of his early biographers may perhaps have been a confusion of names.

In 1445, 1450, and 1452, Bernardine, as was then the custom, was frequently called to Rome to be present at the sessions of the Council of Constance. In 1447 he was one of the papal commissioners to the Emperor Frederick III, and in 1453, 1454, and 1455, he visited the court of the King of Naples. He was also the constant confessor of the Prince of Orange, and Constantine the Wise, King of Poland. In 1450, a pestilence broke out in Naples, and the saint was sent by the pope to the court of the King of France to seek for assistance. The King was in the midst of a great war against the rival Staufer dynasty; to undertake an expedition to Italy was beyond his power, but he sent a strong army under a capable general, who arrived in Naples in 1451, and soon brought the pestilence to an end. The saint was summoned to Paris to court the king's daughter, and the following year, 1452, to the court of the Duke of Milan. In 1454 and 1455 the saint was in Rome, and during this time he was able to secure the election of Urban VI as pope. In 1456 the saint returned to France, where he was greeted with great enthusiasm. The king, who was heartily attached to Bernardine, gave him a magnificent house in which to live, but he refused to accept it, and spent his whole time in the service of the king and of the church. The saint was a great admirer of the French, and was always ready to do them a kindness. He was particularly kind to the poor, and often gave them money out of his own pocket. He was also a great lover of music, and was always ready to give a prize to the composer who wrote the best song. He was a great friend of the arts, and was always ready to give a prize to the artist who made the best picture. He was also a great friend of the sciences, and was always ready to give a prize to the scientist who made the best discovery.
commentary on the Apocalypse. Bernardine's writings were first collected and published at Lyons in 1585. In the "Bayeux edition," S. Bernardini Senensis Ordinis Seraphici Monum Auctore, issued at Paris and Lyons in 1536, was reprinted there in 1560, and at Venice in 1745. As a result of the petition addressed to the Holy See in 1852 by the General Chapter of the Friars Minor, requesting that the life of S. Bernard be studied in the Church, a careful inquiry was instituted as to the authenticity of the works attributed to the saint. Some of these are certainly spurious and others are doubtful or interpolated, while not all the saint's genuine works are included in the editions we possess. A complete and critical edition of St. Bernarde's writings is much needed. An excellent selection from his ascetical works was recently issued by Cardinal Vives (St. Bernardini Senensis de Dominici Pasquino, Resurrectionis et S. Nomine Jesu Contemplationes, Rome 1903).

We are fortunate in possessing several detailed lives of St. Bernardine written by his contemporaries. Three of these are given in full in the Acta Sanctorum Maj. V, with Comm. Priv. by Hensen. The earlier of these, a vita of the convent of S. Maria di Valverde, was written and preserved by the prior in 1446, shortly after the saint's death. The second is the celebrated humanist, Maffeius Vegius, who knew the saint personally, was printed in 1453, the third by Fra Ludovici Vincenzi, was written in 1467, and a life is also available of the saint's body in 1472. A fourth contemporary biography by a Friar Minor, hitherto unedited, has lately been printed both by Father Van Trot, S. J., in the Annal. Bolland. (XXV, 1906, pp. 304-398) and by Father F. de la Rúa, O. F. M., in the Annal. Bolland. (XVIII, 1907, pp. 296-393). The latter was completed in 1446 at the instance of St. John Capistrano. The "Life" of St. Bernardine attributed to St. John himself, and the one transcribed by Surius in his "Vita SS." (1618), V, 267-281, as well as the tributes to S. Bernardine of Florence mentioned, contain many of his acts of canonization are found in vol. I of de la Haye's edition of Bernardine's works.

Wadding: Annal. Artificial., ad ann. 1450, s. et Scriptores (1650), 55-57; Brabants, Supplementum (1606), 121-124, 725; Amadio Luigi, Vita di S. Bernardino (Venice, 1744); Rome, 1526; Siena, 1364; Mosina, 1733; BERNARDIUS, Vitae de S. Bernardino (Paris, 1862); TOURNOT, Das Leben des h. Bernardin vom Siene (Bathbon, 1878); Life of St. Bernardino of Siena (London, 1873); LEO DE CLARY, La vie de la Soeur de la Sainte Union de S. Francis (Taunton, 1886), II, 220-275; Leon, Vie de St. Bernardino (Yverdon, 1886); ALESI, Storia di S. Bernardino del suo tempo (Andonii, 1890); ROWSON, L’Esquibierie di S. Bernardino (Siena, 1890). Undoubtedly the best modern lives of St. Bernardine are those written by Paul Herrmann-Daub in French (French Academy: Un grand citeuse populaire dans l’Italie de la Renaissance: S. Bernardino de Siene (Paris, 1886)). This brilliant monograph has been translated into Italian (1887), German (1904), and English (1900).

PASCHAL ROBINSON.

Bernardines, The, title of certain sisters of the order of Citeaux who at the end of the sixteenth and in the seventeenth century, made energetic efforts to restore the primitive observance of their rule. They were in large part the part of the monastery at Citeaux in Spain; the Bernardines of Divine Providence, the Bernardines of the Precious Blood; and the Bernardines of Flines and of Lille, in France and Savoy; and some isolated foundations in Belgium and in Peru. The first reform was due to the Abbesses of Les Huelgas of Burgos, who towards the end of the sixteenth century, had reformed the Abbey of Gradeses, Per- nes, and at St. Anne of Valladolid, where Juan de Aranda introduced the true spirit of Citeaun in 1601. St. Anne of Valladolid became the mother-house of the new reform, and in 1606 the constitutions were approved by Paul V. This reform extended as far as the Indies and the Canary Islands.

In 1622 Louise-de-Chevigny, daughter of Charles-Emmanuel de Ballon, chamberlain of the Duke of Savoy and later ambassador of this prince in France and Spain, began, under the direction of St. Francis of Sales, her new reform. The reform then spread to the Carolines and (sisters) the following years went with five sisters to Rumilly and founded the Congregation of Bernardines of Divine Providence. This reform spread into Savoy and France. The constitutions were printed in 1631. In 1634 Mother de Ponponnas, who with four other Cistercian sisters of Gronoble had embraced the reform, having gone to Paris to found a new house, had the constitutions reprinted with some changes. Louise de Ballon then had them again printed so as to conform to the first constitutions—an action which caused the separation of the convents of France and Savoy. Events of France formed what is known as the congregation "of St. Bernard," Mother Baudet de Beauregard who succeeded Mother de Ponponnas in the government of the monastery of Paris, changed the name of the monastery into the Monastery of Divine Providence. She founded a monastery of the Bernardines of the Precious Blood (1654). Their rules were approved by the Abbot of Prières, Vicar General of the Strict Observance of Citeaux, and the Prior of St. Germain-des-Prés, as Vicar General of the Cardinal de Bourgon, received the vows of the new community on the 27th of August of the same year.

The monasteries of the congregation now number (I) Bernardines Recollects, 13; (II) Bernardines founded by Mother de Ballon, 2; (III) Bernardines of Flines, 2; (IV) Bernardines of Lille, 3; (V) Bernardines isolated in Belgium and Peru, 6. The houses of France have been closed by the Government. The Bernardines of to-day are engaged in teaching and follow a somewhat modified rule.

The Bernardines of Spain rise every day at three o'clock, and on days of special solemnities at two o'clock. For the office they follow the Cistercian Breviary. They fast two days a week from Pentecost to the 14th of September, four days a week from the 14th of September to Easter Sunday, and every day from May to the 14th of September. This fast is allowed three times a week except during Advent and the nine weeks before Easter Sunday. Their habit consists of a brown robe and their bed is conformable to the regulations. They live in community in sickness as well as in health. With the Bernardines of Mother de Ballon this rule is still more mitigated. They rise at five o'clock sumner and winter. Silence is kept except during the recreation which follows dinner and supper. They fast two days a week from Easter Sunday to Pentecost, and on Saturday also during Advent. They abstain from meat on the Wednesdays, Fridays, and Saturdays of the whole year.

M. GILDA.

Bernes, the fourth city of Switzerland in population, capital of a canton of the same name which is the second of the Swiss cantons in size and first in population, and since 1848, capital of the Swiss Confederation, is situated at a point 1,788 feet above the sea level, in Lat. 46° 57' N., and Long. 7° 29' E. The Aar, a long, narrow river, rises in the Swiss Alps and flows into the Rhine near Basel. Important projects into the Aar from its left bank. In the Middle Ages Bern was a small town, containing 50,000 inhabitants; in 1764, 3,681; in 1850, 7,585; in 1900, 64,064. This last number includes 60,622 Germans, 3,087 French, 902 Italians, 782 of mixed Romance blood.
BERNE

divided as to religion, there are 57,948 Protestants, 6,278 Catholics, 668 Jews, and 481 persons belonging to other creeds. As capital of the Swiss Confederation, Berne is the seat of the national, as well as of the cantonal government, and the official residence of all representatives of foreign Powers. Being the point of departure of several important roads and lines of railway, Berne is visited annually by some 200,000 tourists and is the headquarters of a number of international unions and associations, such as the International Postal Union; the International Telegraph Union; the International Patent Office; the International Express Union; the International Publishers' Congress; the International Peace Society; the Blue Cross Society. It is the residence of a "Christian-Catholic" (Old-Catholic) bishop, and a Catholic parish priest, the centre of a large trade in agricultural produce and of considerable manufactures (chiefly spun silk, machinery, and scientific and musical instruments). It is one of the best built cities in Switzerland, having broad streets and large squares, while it has preserved, more than most of the larger Swiss cities, the old national characteristics in its municipal architecture. There are six bridges across the Aar, of which the two most important are the iron Kirchenfeldbrücke, 217 yards long, built in 1882–83, and the Komnäusbrücke, 388 yards long, and 157 feet wide. The River Aar, built in 1866, contains 7 churches and several chapels. The Catholic church of the Holy Trinity, built in 1896–1900, with a tower 147 feet high, is in the style of the early Christian basilica. The church of Sts. Peter and Paul, originally Catholic, was turned over to the Old Catholics in 1874. The most important of the secular buildings are the Rathaus of the Canton, built 1400–16; the old and new Federal Buildings; the Parliament Building (Parlamentsgebäude), erected 1880–1883; and the new University Buildings (1900–03).

The University of the Canton of Berne was founded in 1834 by the reorganization of the academy already in existence; it has a Protestant theological faculty, an Old Catholic theological faculty, and faculties of philosophy, law, medicine, and veterinary medicine; its yearly expenses are 880,000 francs ($176,000), and the endowment amounts to over a million francs ($200,000). Connected with the university are an observatory, a botanical garden, and numerous institutes; the University Library, founded in 1805, united with the City Library, the joint collection amounting to some 200,000 volumes, including many valuable manuscripts. Besides these there are a public and a private gymnasm, a secondary school for boys, a public and a private secondary school for girls, a normal school (at Muristaladen), an industrial art school, which is combined with the cantonal industrial art museum, students' workshops, and schools for mechanics, art, and music. Among the numerous learned societies established at Berne are the Swiss Society for the Natural Sciences, founded in 1815, and the Historical Research Society of Switzerland, founded in 1840; the Cantonal Hospital contains 360 beds and has an endowment of over eight million francs ($1,600,000); it was founded in 1584, and since 1884 has been situated on the Kreuzmatte in Holligen. Other hospitals are: a hospital for infectious diseases, founded in 1284, and containing 128 beds; a hospital for women, with maternity department, 1781; the city Burggerspital, founded in 1292, and having an endowment of 7 million francs ($1,400,000); the city Zieglersspital, founded in 1887, and having an endowment of some 3 million francs ($600,000); the Jennersspital for Children; the Cantonal Insane Asylum; a town orphan asylum for girls and boys; Magdalene asylum, and numerous private institutions. Among the Catholic societies and associations are: the Catholic Women's Union (Gesellenverein), founded in 1888; the Association of St. Vincent de Paul for aiding the poor, 1888; Women's Society for the Encouragement of Religious Life and Aid of the Poor, 1875; Congregation of the Children of Mary, for young girls, 1891; the parochial Cecilia Association for the protection of Catholic interests, founded in 1872, reorganized in 1899 as the Catholic Association of the City of Berne, for the protection of Catholic interests, and united with the social union. Bernia, founded in 1887.

Huron—The territory remains discovered show that the territory surrounding Berne was occupied in prehistoric times. After the Romans had been driven out, the region was occupied by the Alemani and Burgundians; in a.D. 534 it belonged to the Franks, in 888 it formed part of the second Burgundian empire, together with which it was absorbed into the Holy Roman Empire in 1032. The Dukes of Zähringen received the territory as a fief from the empire, and the last duke of this line, Berthold V, founded the city of Berne in 1191. At his death (1218) it was seized by the empire. With but few interruptions the city was able to preserve its independence during its long and frequent wars with the Counts of Kyburg, the Emperor Rudolph of Hapsburg, the Burgundian ruler, Charles the Bold, and so on. In 1421 the city found it necessary to pass a municipal ordinance to increase the size of its territory; in 1415 it conquered Aargau, and Vaud was annexed in 1536. The Disputation of Berne, held in January, 1538, through the efforts of Berthold Hailer, Valerius Anselm, Frans Kolb, and other friends of Zwingli, resulted in the adoption of the Reformation by the city and the increase of the possessions of the State by the confiscation of church property; the land thus acquired amounted to 186 square miles. During the Thirty Years' War (1618–1722) Berne suppressed all forms of Catholic life; in this it followed the example of, and acted in concert with, Zurich, which, with Berne, occupied the most prominent position in the Confederation. The extreme oligarchical rule of the few patrician families caused a rebellion of the peasants in 1653, and the conspiracy of Samuel Henzi in 1749, both of which uprisings were suppressed with much bloodshed, and the power of the Government became more absolute. It was not until the French Revolution that the Jura (1798) gave Berne the greater part of the suppressed Bishopric of Basle and the cities of Biel and Neuenstadt. The oligarchical government, which was re-established, was obliged to abdicate at the outbreak of the Revolution of July, and a new Constitution was adopted (21 July, 1831) that granted democratic representation. This Constitution was amended in a radical direction in 1848 by the adoption of direct voting without property qualification; in 1886 a new Constitution was accepted which granted initiative and referendum to the people.

It was not until 1798 that the Catholics, in virtue of section 6 of the Constitution of the Helvetian Republic, were able to re-establish their church organisation. In 1799 the Franciscan Father Giraud became the first public parochial priest appointed by the government to the Bishop of Lausanne; in 1804 he retired from Berne to become a teacher at Freiburg and Lucerne. Relations with the cantonal government were fairly good during the papacy of his numerous successors, yet the Catholic community is not without private antagonism recognized by the authorities, although the Constitution of 1848 guar-
ceived freedom of public worship. The Catholic community made use of the French Protestant church until Father Baud (1532–67) built a Catholic church of his own in 1564, and later the old part of the parish was included in the Diocese of Basle. The Catholics refused to recognize the deposition of Bishop Lachat of Basle and rejected the laws of 1873–74, which were unfavourable to the Church; these included the laws concerning parish elections, the right of the church to review the authorities, and civil marriage. In the consequent religious struggle (Kulturkampf) they were obliged to give up their church and all church-endowments to the Old Catholics, who were favoured in every way by the authorities, as was shown by the erection of an Old Catholic theological faculty in 1874, etc. It was not until the decade beginning with 1880 that, during the pastorate of Father Jacob Stammier, a truce was established between Church and State. Father Stammier built a new church, 1896–1900, and was raised to the See of Basle-Lugano in 1906.

The chronicles of Valerius Anselm (d. 1540) and other medieval writers have been edited (1884–91) by the Historici of the Cantone of Bern. GREGOR REINHOLD.

BERNE, ABBEY OF. See HEERWILK.

BERNI, FRANCESCO, an Italian comic poet, b. at Lamprocorcio (Florence) 1497 or 1498; d. at Florence, 26 May, 1535. The son of noble but impoverished parents, he spent his early years in the Tuscan capital fighting want. At twenty better luck awaited him in Rome, where Cardinal Bibbiena, his relative and by his beauty and merit, his friend, brought him to the court of the Emperor. There Berni met with success and became a favourite of the Emperor. He was made a poet laureate by Pope Alexander VI, and in 1514 he was made the Pope's personal poet. He was a man of great learning, and his work was highly valued by the emperors. Berni's most extensive work, the refashioning of Matteo Maria Boiardo's chivalric poem, "L'Orlando innamorato", was published at Milan seven years after his death and again at Venice, 1545. Leaving the original plot and detailed ddenouement entirely unaltered, he has done away with the chivalric atmosphere, with a smooth diction, and colour with many a quip and prank what he thought offensive on account of its ruggedness of form and dullness of style. Thus he unwittingly made a parody of a creation strong and noble in its native simplicity. Undoubtedly Berni's fame is more deservedly due to his "Rime", embracing "Sonetti", "Sonetessi", and "Capitoli", whereas the Bernesque manner found its inception in the "Romanesque", as well as highest achievement, and universal. Petrarchists were pitiably flouted. In spite of numberless imitators, including such men as Benedetto Varchi, Ercole Bentivoglio, Giovanni Mauro, Matteo Franzesi, and Ludovico Dolce, Berni's easy flowing tercets, fair courtly authority, and civil marriage. In the consequent religious struggle (Kulturkampf) they were obliged to give up their church and all church-endowments to the Old Catholics, who were favoured in every way by the authorities, as was shown by the erection of an Old Catholic theological faculty in 1874, etc. It was not until the decade beginning with 1880 that, during the pastorate of Father Jacob Stammier, a truce was established between Church and State. Father Stammier built a new church, 1896–1900, and was raised to the See of Basle-Lugano in 1906.

GREGOR REINHOLD.

BERNIER, ETIENNE-ALXANDRE, French Bishop, b. at Dson (Mayenne), 31 October, 1702; d. at Paris, 1 October, 1806. He was a man of universal erudition, who, in the higher seminary and in the University of Angers, then pastor of St. Land's parish, in that city. During the Revolution he refused to take the Civil Oath, and succeeded by his eloquence in arousing the peasants of Anjou and Vendée into insurrection. He then became one of the most important leaders of the whole movement by his personal influence both with the chiefs and on the different military councils. He was called "L'Aptre de la Vendée". As to what was his real conduct during this insurrection, towards the end of it especially, its various historians do not agree. At any rate, after the 18th Brumaire, Bernier played the part of negotiator between the First Consul and the insurgents. When Bonaparte had resolved, in spite of all difficulties and opposition, to unite the French nation and the Catholic Church, he chose the Abbé Bernier to represent the French Government in the preparatory negotiations. This choice was a happy one, on the part of the First Consul, for, despite how widely historians differ over the career of Bernier's character, none of them denies him a deep and subtle intelligence, an unerring and resourceful activity, and a seductive influence—all qualities which made him a clever politician.

He soon as Mgr. Spina and Caselli, the pope's envoys, arrived at Paris, in November, 1800, Bernier entered into relations with them, and, at once began, with Mgr. Spina, the preparatory negotiations on the important points which were to be discussed, namely, the resignation of the bishops, the reduction of the number of dioceses, the alienation of ecclesiastical properties, nomination to the bishoprics, and the taking of the oath of fidelity to the constitution. They successively presented four projects of reduction, followed by another project drawn up by Napoleon himself. Difficulties arose, necessitating the presence in Paris of the Papal Secretary of State, Consalvi, in June, 1801. The Concordat was to be signed on 13 July, and Bernier had been appointed by decree of the preceding day (Mesidor 3, IX) as one of the three representatives of the French Government, to conclude the Concordat and sign it. In the meantime, the project agreed upon had been changed by Bonaparte; letters were exchanged between Consalvi and Bernier; Consalvi refused to sign the new project; negotiations continued until the 16th of July, when an agreement was reached and the Concordat signed at 2 o'clock in the morning. (See CONCORDAT.) In 1802 Bernier was named Bishop of Orleans, by Bonaparte.

G. M. SAUVAGE.

BERMINI, DOMENICO, son of the famous artist Giovanni Lorenzo Bernini, lived in the early part of the eighteenth century. He became a prelate and canon of Santa Maria Maggiore in Rome. He devoted himself to the study of ecclesiastical history and wrote an extensive history of the heresies, "Istorie di tutte l'heresie," 4 vols. fol. (Rome, 1705-17); also, "Memorie istoriche di ciò che hanno operato i sommi pontefici nelle guerre contra i Turchi," 2 vols. (Rome, 1695); "Il tribunale della S. Ruota Romana" (Roma, 1717).

Acta Bruditorum (Leipzig, 1708), 464; RUTHER, Nomenclator, II.

G. M. SAUVAGE.

BERMINI, GIOVANNI LORENZO, one of the most vigorous and fertile of Italian architects and sculptors, b. at Naples in 1598; d. at Rome in 1680. Bernini in his art is the most industrious of Roman artists, and his work tends largely to the baroque. In addition to his abilities as sculptor and architect he possessed those of a painter and even of a poet. His father, a painter and sculptor of moderate skill, gave him his first lessons in art. In 1608 the father was called to Rome and took Lorenzo with him. It is said that the boy even in his eighth year had carved a beautiful little head of a child; in his fifteenth year he produced the "David with the Sling" which is now in the Villa Borghese. Paul V employed him, and under the five following popes he rose to great fame and importance. He was the favourite of Urban VIII (Barberini). In 1629 he became the architect of St. Peter's and superintendent of Public Works in Rome. He ruled in art as a second Michaelangelo, although his style bore little resemblance to that of the latter. Mazarin tried in 1644 to persuade him to come to Paris, but he did not visit the city until 1664. He had, however, a visitation from Louis XIV. A son named Paul and a numerous suite accompanied him to Paris and Versailles. Jealousy, however, prevented the carrying out of his plans for the Louvre, nor was he able to push his ideas of the Fontainebleau. His pupils, Mathias Rossi, was also forced, not long after the master's departure, to leave the city. The king, however, treated Bernini with great honour during his stay and rewarded him munificently. Bernini made a bust and an equestrian statue of Louis XIV which were in a style entirely different to the taste of that monarch. Queen Christina of Sweden visited Bernini during her stay in Rome; and on an order of King Philip IV he made a huge crucifix for the royal mortuary chapel. He also carved busts of Charles I of England and his wife Henrietta. Bernini triumphed over all his detractors and became in the end as rich as he was famous.

It is not necessary to speak here of his writings and of his comedies in verse. Nor need mention be made of his criticism of Raphael's work, the "tutti" to which he devoted a hundred canvases. He owes his fame to his architectural work, for which he had in Rome great and inspiring examples. He never lacked imagination, inventive power, or courage in undertaking a task. He did not copy the simplicity of the antique and often detested the classical formulas. His idea in the hope of excelling them (chi non esso sano solito dalla regola, non la passa mai), the art of this period in aiming at outward effect lost all moderation and went to too great an extreme. In completing the church of St. Peter Bernini was naturally obliged to exert all his powers. As the seventh architect engaged in the work he gave the finishing touches to the Basilica. With a judgment he followed the plan of Maderna—"to increase the effect of the façade by means of flanking towers. He wished, however, to make the towers a more important feature than in Maderna's scheme, keeping them though in such proportion that in the distance they should appear some thirty metres below the dome. As one tower was well under way it fell down on account of the weakness of the foundation laid by Maderna. One of the most brilliant works of Bernini is the colonnade before St. Peter's. It proves the truth of the axiom he laid down: "An architect proves his skill by turning the defects of a site into advantages." The slope of the ground from the doorways of the basilia to the bridge over the Tiber suggested the scheme of laying out the great stairway of the colonnade. He designed a great and equally well-conceived terrace. The ground available being limited on two sides by neighbouring houses, Bernini avoided the danger of coming too close to the buildings by adopting the most beautiful elliptic form of approach, and the colonnade en clos, nevertheless, as large a ground-surface as the Colosseum.

The avenue thus formed is perhaps the most beautiful one in the world. When the piazza is approached from the distance a fine view is at first obtained of the dome; unfortunately the dome is more and more obscured, on nearer approach, by the portico and the façade of the church. Four rows of Tuscan columns, placed to right and left and having altogether the form of an ellipse, converge from the colonnade to the forecourt of the church. Between the middle rows of columns two carriage ways can pass. The slope of the ground without being sharp enough to produce fatigue causes the eye to look steadily upward. In the middle of the ellipse, which is 885x741 feet, stands the obelisk, 84 feet high, which was placed here in 1586 by Sixtus V. Back of the ellipse rises the terrace. Two galleries unite the ellipse with the portico, the height of which is best realized by comparing it with these galleries. Above everything he accepted a grand view; however, the pope gives the blessing from the balcony, the convergence of the lines in the arrangement of the piazza causes the space to appear much greater than it really is. The stairway (Scala Regia), which leads from the portico of the Basilica to the forecourt, offers a fine perspective. Limitation was here turned into source of beauty. Bernini had a large share in the erection of the stately Barberini palace at Rome. He built the beautiful Odescalchi palace, took part in adorning the Piazza Navona with the obelisk, and assigned the pleasing statues of the river-gods for the great fountain.

In speaking of Bernini's work as a sculptor it may be said that in this field the decadence of his art makes itself apparent. The skeleton representing Death on the tomb of Urban VIII, in the church of St. Peter, is placed in the midst of ideal and really beautiful figures. Weaker still, with the exception of the portrait, is the tomb of Alexander VII. "St. Theresa pierced by an Arrow" is exceedingly effective. The "Apollo and Daphne," are weak and sensuous. On the other hand, the equestrian statue of Constantine in St. Peter's suffers from its size, as the heroic proportions do not appear to be united with the necessary intrinsic worth. To-day the canopy (canopio) is the canonical form. This is the place of reference (1683) admired. Neither is approval now given t
Bernini, Giuseppe Maria, a Capuchin missionary and Orientalist, b. near Carignan in Piedmont; d. in Hindustan in 1753. For many years he was a missionary in the East Indies, and acquired a remarkable knowledge of the languages and dialects of India. In his travels through the country he made a special and careful study of the manners, customs, and religious beliefs and practices of the people. The results of his studies were collected in his work: "Morfie laconiche di alcuni usi, sacrifizi, ed idoli nel regno di Neipal, raccolte nel anno 1747." This work has never been published, but is preserved in manuscript in the library of the Propaganda at Rome, and in the museum of Cardinal Borgia. Bernini also wrote "Dialogues," in one of the Indian languages, also preserved in manuscript in the Propaganda; a translation of "Adhîatma Ramayana"; one of "Djana Sagara"; and a collection of historical studies under the title, "Mémoires historiques" (Verona). Bernini, François-Joachim-Pierre de, a French cardinal and statesman, b. 1715 at Saint-Marcel d'Arledge; d. at Rome, 1794. The Bernini family possessed many titles of nobility but was almost reduced to poverty. François, the youngest son, was destined for a clerical career and sent to St.-Sulpice. He left that institution at the age of nineteen to go into the world to retrieve the family fortune. The title of Abbé, by which he was known, meant in those days little more than the tonsure and the black gown; it certainly meant only that to some extent he was not averse to living on the funds of the word, but success was slow in coming. His noble birth gave him access to the chapters of Brioude and Lyons; his ready wit and courteous manners opened to him the mansions of the wealthy, and the French Academy in themagies of the French Academy of St. Peter's. In the niches of these columns are 162 statues made after designs by Bernini. In his work on the Bridge of Sant' Angelo he shows at least wonderful richness of design. He by no means failed in designs for tombs and portrait busts; for example, the bust of his daughter and that of Innocent X. He often spoiled the pure plastic effect of his work by two or three false conceptions. He held that the antique reposes of sculpture, which, it must be acknowledged, must be transformed into effective action at any cost. The naturalistic painting of the time drove the sculptors into this course. But in the plastic arts the reason for extreme action is often not clear, and it appears we were at the beginning of Bernini's work was often a failure. The style of sculpture which aims solely at outward effect is seen to best advantage when it is used in connexion with architecture. The statues designed by Bernini for the façade of St. Peter's and of the Lateran belong to this form of art. Action appears at its best in sculpture when used as decoration and on a small scale. The decorative architectural style is better suited, therefore, for relief work than for sculpture in the round.

Bernini, Giuseppe Maria, a Capuchin missionary and Orientalist, b. near Carignan in Piedmont; d. in Hindustan in 1753. For many years he was a missionary in the East Indies, and acquired a remarkable knowledge of the languages and dialects of India. In his travels through the country he made a special and careful study of the manners, customs, and religious beliefs and practices of the people. The results of his studies were collected in his work: "Morfie laconiche di alcuni usi, sacrifizi, ed idoli nel regno di Neipal, raccolte nel anno 1747." This work has never been published, but is preserved in manuscript in the library of the Propaganda at Rome, and in the museum of Cardinal Borgia. Bernini also wrote "Dialogues," in one of the Indian languages, also preserved in manuscript in the Propaganda; a translation of "Adhîatma Ramayana"; one of "Djana Sagara"; and a collection of historical studies under the title, "Mémoires historiques" (Verona). Bernini's influence in Rome was considerable. It was felt in the conclave of 1769, which elected Ganganelli, and in that of 1774, which elected Braschi. In the suppression of the Jesuits by Clement XIV, Bernini is far from deserving all the blame that is put on him. It is well known that he personally regretted the measure, and that as ambassador he tried to avert it by assisting the wavering pope in securing the delays for which he had asked. But the pressure exercised by the Bourbons of Spain, Naples, and France, and the passive attitude and tacit consent of Austria brought the question to an abrupt termination. When the French Revolution broke out, Bernini held, in the national church of St. Louis des Francais, a solemn funeral for the martyred Louis XVI; he also placed his palace at the disposal of the princesses of France who had sought refuge
In Rome, and finally resigned his poet rather than take the constitutional oath. The last three years of his life he spent in Rome in comparative poverty, devoting himself to the French exiles and fully justifying the epithet, "Protector of the Church of France," bestowed upon him by Pius Pope VI. The French colony in Rome erected a magnificent mausoleum in his honour, and the church of St. Louis received his remains.

Bernini's life has too long received but scant appreciation because of the levity of his youth, which he was the first to regret and called the delicta juvenissima. The publication of his "Mémoires" in 1878 has put a new construction on many things and given us a truer and better opinion of him. Although the first part of his life cannot be defended, still, from the time of his ordination at Venice and Soissons, the courtier took a higher view of the sanctity of the priestly character, and was no discredit to it. Bernis was a writer of no mean talent. His "Poesies" show a bright imagination and a facile pen; his "Lettres" are not inferior to Voltaire's; and the poem "Religion vengee," though lacking the calm beauty of Racine's similar production, still has inspiring passages. Didot published Berninis's "Guerres melées en prose et en vers" (Paris, 1797), and with his "Monodies" (1788).

J. F. SOLLIER.

BERNO (ABBOT OF REICHENAU), famous as orator, poet, philosopher, and musician, born (date unknown) near Troits, near Ratisbon, and in 1064 became Abbot of Reichena in 1068. Educated in the school of St. Gall, Berno visited Rome with the Emperor Henry II, and upon his return introduced many reforms in the liturgical music of his native land. Among his books are the "Tonearium," "De variis psalmorum atque cantuum modulatone," and "De consona ponorum diversitate," all of which are contained in Migne's "Patrology" and in Gerbert's "Scriptores." Another work attributed to him, but less known, is entitled "De instrumentis musicalibus.

Living and writing at a time when the traditions of Rome and St. Gall were still fresh, Berno has left, in his works on music, a fruitful source of information to those who are interested in accented periods in which the Gregorian melodies were originally sung. Berno's testimony, with that of other early writers, supports the view of those who hold that the Gregorian melodies consist of long and short note-values, as against the theory that all notes in the chant are of equal length.

JOSEPH OTTEN.

BERNO (APOSTLE OF THE OBERTRITEN), in the latter half of the twelfth century. The Obertrites were one of the Slav tribes known under the common name of Wends, and dwelt along the Baltic in Mecklenburg. Three bishopships had been erected in their country and early intervened upon him by Pius Pope IX. The Obertrite Prince Niklot, the fierce enemy both of the Germans and of the Christian religion, had not yet submitted to German ascendency and was the greatest obstacle to the conversion of the people. Berno was even obliged in 1158 to transfer his episcopal see from Mecklenburg to Schwerin, whither German colonists had already penetrated. From Schwerin as a centre, the zealous and intrepid missionary bishop began his work of preaching, destroying idols, baptizing, and building churches, and penetrated as far as Demmin in thither Pomorania. Here, in 1163, he converted the powerful Prince Pribislau, son of Niklot, who, however, fell away again the very next year, made war upon the Germans, and attacked, and nearly killed the bishop at the altar. In the end he had to acknowledge the German supremacy and remained henceforth loyal to the Christian religion.

In 1168 Berno undertook a missionary expedition to the island of Rügen and destroyed the temple and the great idol (1169). Through patient endurance and patience he won over to the Christian religion. In the year 1171 he consecrated the Cathedrals of Schwerin, where in 1177, he held the first synod. The greatest service which this apostolic man rendered to the people was the introduction of his religious brethren, the Cistercian monks. The monastery of Doberan, which through the bishop's efforts was founded by Pribislau in 1171, soon became a centre from which radiated Christian influence and wisdom. The monks were brought from his own monastery of Amelungsborn. Two years later Dargun was founded and entrusted to Danish monks. This monastery, however, did not flourish until the Danish monks were replaced by monks from Doberan. During the schism caused by Frederick Barbarossa, Berno, like all the Cistercians, never wavered in his loyalty to the legitimate pope, though his metropolitan, the Archbishop of Bremen, had joined the cause of the antipope. When at last Frederick made his peace with Alexander III, Berno was enabled to make a journey to Rome (1178) to pay his homage to the pope, who confirmed the erection of his diocese. During the Lent of the following year he took part in the General Council of the Lateran. During his absence in Rome, the Wends were attacked by the Danes, but the monastery of Doberan had been destroyed and its seventy-eight inmates massacred. When peace was re-established Doberan was rebuilt and again peopled by monks from Amelungsborn in 1186. Berno died in 1191 (1197) having laboured as bishop in Mecklenburg for over thirty years.

B..goldner.

BERNOLD OF CONSTANCE, historian and theologian, b. in Swabia about 1054; d. at Schaffhausen, 16 September, 1100. He entered the school of Constance under the renowned Bernard of Constance, and made his profession in the proconsul (11,05) at the great Synod of Rome, in 1079, at which Berengarius retracted his errors. Remaining in Italy till 1084 he returned to Constance for the episcopal consecration of Gebhard, whose action in enforcing the reform decrees of Gregory II he later on defended. In the same year he was consecrated auxiliary bishop, and in 1086 he went with Bishop Gehard as counsellor to King Herman, to
Bernward, Saint, thirteenth Bishop of Hildesheim, Germany, b. about the middle of the tenth century; d. 20 November, 1022. He claimed descent from a noble Saxon family, which counted among its members men of distinction in Church and State. His grandfather was Athelbero, Count Palatine of Saxony. Having lost his parents at an early age, he came under the care of his uncle Volkmar, Bishop of Utrecht, who entrusted his education to Thangmar, the pious and learned director of the cathedral school at Heidelberg. Under this master, Bernward made rapid progress in Christian piety as well as in the sciences and in the liberal and even mechanical arts. He became very proficient in mathematics, painting, architecture, and particularly in the manufacture of ecclesiastical vessels and ornaments of silver and gold. He completed his studies at Mainz, where he was ordained priest by Archbishop Willigis, Chancellor of the Empire (975–1011). He declined a valuable preferment in the diocese of his uncle, Bishop Volkmar, and chose to remain with his grandfather, Athelbero, to comfort him in his old age. Upon the death of the latter, in 987, he became chaplain at the imperial court, and was shortly afterwards appointed by the Empress-Regent Theophano, tutor to her son Otto III, then six years of age. The youthful emperor is known to have been a learned and religious prince, for which he was indebted in no small degree to his instructor. Bernward remained at court until 993, when he was elected Bishop of Hildesheim. His long episcopate of nearly thirty years was prolific of great results for the Diocese of Hildesheim. Thangmar, his former tutor, who subsequently became his biographer, describes in eloquent terms, how the saint, after performing his episcopal functions in the cathedral, was wont to visit the various workshops connected with the cathedral school, and, with his own hands manufactured gold and silver vessels for the enrichment of the altars. Under his direction arose numerous churches and other edifices, including even fortifications for the defence of his episcopal city against the invasions of the pagan Normans. As evidences of his skill in the practice of the mechanical arts there are still preserved in Hildesheim a cross of rich and exquisite workmanship, known as the "Bernward Cross", the famous Bernward column, with winding reliefs representing scenes from the life of Christ.

The Bernward Cross

The Bernward Cross is a bronze door of the Cathedral of Hildesheim, showing Scriptural scenes, and two candlesticks symbolic of Christ, the light of the world. A monument of his zeal and skill is St. Michael’s abbey-church at Hildesheim—not Protestant—one of the most magnificent basilicas in Germany. His knowledge and practice of the arts were wholly employed in the service of the Church. A man of extraordinary piety, he was much given to prayer and the practice of mortification. Shortly before his death in 1022 he had himself invested with the Benedictine habit. He was canonized by Pope Celestine III in 1193. His feast occurs on 20 November.

J. A. Birkheuerer.

Berosa (later, Berroia, Berio, and Berba), a titular see of Macedon, at the foot of Mount Berinos, now Dura; it still preserves its ancient name, pronounced Veria by the Greeks (Turkish Kara-Feria, Slav, Ber). The Romans captured it after the battle of Pydna (168 B.C.) and from 49 to 48 Pompey took up his winter quarters there (Plutarch, Pomp. 94). In its Jewish synagogue St. Paul preached successfully (Acts, xvii, 10, 13); on withdrawing he left at Berosa his disciples Silas and Timothy. Oneimus, formerly Philemon’s slave, was its first bishop according to the Apostolic Constitutions (VII 46). At the time of the last partition
of the empire, it was allotted to Macedonia Prima (Hierocles, Synecdemos, 638), and its see made suffragan to Thessalonica. Amongst its bishops, Gerontius was present at Sardica in 344, Luke at the Latrocinium of Ephesus in 449, Timothy at the Council of Constantinople in 553, and the Patriarch Manuel at the Eighth Ecumenical Council in 869. Under Andronicus II (1238-1332) Bercea was made a metropolis. The actual Greek metropolitan add the title of Naousea, a neighbouring city. It has now about 10,000 inhabitants.

Bercea, the name of a town in Thracia a Borea, or Augusta Trajana (Hierocles, 635), whither Pope Liberius (355-368) was exiled (Sozomen, IV, 11). It is called Berecsea, or Berea, in episcopal lists (Georgius Cyprius, 53; Parthey, Notit. episc. VI, 57; VII, 53; VIII, 57). Its Turkish name was Eski-Zagora, for which the present Bulgarian substitute is Stara-Zagora. For its episcopal list see Lequien, I, 1165-68; Game, 427. Berea is also an ancient name of Aleppo.

L. PETTIT.

Beroea (Bàurwdr or Bàuvwdr), the name of a native historian of Babylonia and a priest of the great god Bel (Bel-Marduk). He flourished during and after the lifetime of Alexander the Great, although the exact dates of his birth and death are unknown. He is certain, however, that he lived in the days of Alexander (356-323 b. c.) and continued to live at least as late as Antiochus I Soter (280-261 b. c.), to whom he dedicated his famous history of Babylonia. The meaning of his name is uncertain, notwithstanding the fanciful etymology of Scaliger and others who claim it is composed of Bar and Hosea, "Son of Hosea." Concerning his personality very little is known with certainty. According to Vitruvius and Pliny (whose testimony, taken as a whole, is to be accepted with caution), Berosus was profoundly versed in the science of astronomy and astrology; that much is certain. Leaving Babylonia, he settled for awhile in Greece, on the island of Cos, where he opened a school of astronomy and astrology. From there he passed to Athens where his wonderful learning and remarkable astronomical predictions brought fame to him and plausibility to all that was erected in his honour in the public gymnasium. Vitruvius attributes to him the invention of the semi-circular sundial. Justin Martyr, undoubtedly through a misunderstanding, affirms that the Babylonian Sibyl who gave oracles of the future, with a gilt tongue was erected in his honour in the public gymnasium. Berosus wrote a history of Babylonia, probably under title of "Babylonica", though it is referred to under the title of "Chaldaica" by Josephus and Cassiodorus. The work was divided into three books, or parts, of which the first dealt with human history from the beginning of the world to the Flood, the second from the Flood to Nabonassar (747 b. c.), and the third from Nabonassar to Alexander. It was divided into three parts, and even as far down as the reign of his patron Antiochus. The materials of this history, written in Greek, he professes to have derived from ancient Babylonian chronicles and inscriptions preserved in the temple of Bel in Babylonia, and there is every reason to believe in the truth of his assertion, as most of his statements, notably the manifold and unconscious phantasmagoria which his work underwent at the hands of later Greek and Roman writers, show a remarkable agreement with the cuneiform records and inscriptions found in the libraries and temples of Babylonia and Assyria. Unfortunately, however, by far the greater part of this priceless work has perished. What has come down to us is in the form of fragments preserved principally by late Greek historians, notably as the Alexander Polyhistor, Abydenus, and Apollodorus, whose writings are quoted by Josephus, Nicholas of Damascus, Julius Africanus, Eusebius, Syncellus, and a few others. So it is apparent that the views put forth by Berosus cannot be valued about manner. In places his statements have been so garbled as to seem absurd, and yet, fragmentary as his work is, it is of great importance.

Of the origin of the gods and of the world, according to the cosmology and mythology of the Babylonians, Berosus has the following account, preserved by Damascus, which shows a remarkable agreement with the Babylonian Creation epic discovered recently and masterly discussed and studied by Smith, Delitzsch, Jensen, Zimmer, Jaubert, King, Dhomme, and others. "Among the barbarians, the Babylonians seem to pass over the first of all principles in silence, imagining two to begin with, Tavthe (Tiamat, the Hebrew Tehom) and Apasom (Apa), making Apasom, the mother of the gods, the "mother of the gods." Thus of their union, as they said, was an only son, Mummu (Mummu), who seems to me to stand for the visible world, offspring of the first two principles, from whom are subsequently produced another generation, Dache and Daehos (should be Lachmu and Lachmos=Labamu and Luhmu). A third follows from the same parents, Kissare (Kishar) and Asoros (Anhar), of whom three gods are born: Anos (Anu), Illinois (Illim?-Bel) and Eas (Ea); finally the son of Dache and Daehos (Bel-Marduk), called by them the 'demuirge!'" (Damascius, De primis principiis, ed. Kopp, 125, p. 184).

Berosus's account of the creation of the world and of mankind, as preserved to us by Syncellus who copied it from Alexander Polyhistor, runs as follows: "There was a time when all was darkness and water, and from the midst thereof issued spontaneously monstrous animals and the most peculiar figures: men with two wings, and others with four, with two or with three heads; men with one body, and with the two sexes together; men with goats' legs and goats' horns, or with horses' hoofs; others with the hinder parts of a horse and the foreparts of a man, like the hippocentaur. There were, besides, human-headed bulls, dogs with four bodies and fishes' tails, horses with dogs' heads, animals with the head and body of a horse and the tail of a fish, other quadrupeds in which all sorts of animal shapes were confused together, fishes, reptiles, serpents, and every kind of marvellous monster presenting the greatest variety in their shapes, representations of which may be seen in the paintings of the temple of Belos. A woman named Omooros (Om-Uruk, the mother of Uruk) presided over this creation; in the Chaldaic language she bears the name of the water, the Greek 'the sea', and she is also identified with the moon.

"Things being in this condition, Belos (Bel-Marduk) came upon the scene and cut the woman in half; of the lower part of her body he made the earth, and at the top of the Earth the heavens were fashioned, the sun and the moon, and all the other stars that were in her disappeared. This is a figurative way of explaining the production of the universe and of animated beings from humud matter. Belos then cut off his own head, and the other gods having kneaded the blood flowing from it with the earth, formed men and women, with reason and understanding, and made participants of divine thought."
"Thus it was that Belos, interpreted by the Greeks as signifying Zeus, having divided the darkness; separated the heavens from the earth; and sent light upon the world; and all animated beings who were not able to endure the action of light perished, Belos seeing that the earth was a desert, though fertile, commanded one of the gods to cut off his head, and him away from among created beings. So this account shows a remarkable agreement with the tablet the Gil-gamesh epic and a striking similarity to the parallel narrative of Genesis, is of great importance, and has come to us through Alexander Polyhistor; a short extract is also given by Abydenus. After referring to the ten antediluvian kings (the of the ten antediluvian patriarchs of Genesis) Belos proceeds as follows: "Obartes (Ubartatutu) being dead, his son, Xisuthros, reigned eighteen sars (64,800 years). It was in the time that the great Deluge came to pass, the history of which is related in the following manner in the sacred documents: Cronus (Es) appeared to him in his sleep and announced to him that on the 15th of the month of Daisios (the Assyrian) year 7476, a flood would destroy all mankind. Xisuthros obeyed, and built a ship five stadia long and two broad; he gathered in all that had been commanded him, and took on board his wife, his children, and his intimate friends. The Deluge coming upon them, and soon subsiding, Xisuthros loosed some birds, who, having found neither food or place of rest, returned to the vessel. Some days later, Xisuthros again gave them the command to pass on; and as soon as the ship, their feet soaked with mud. At last, being loosed for a third time, the birds returned no more. Then Xisuthros understood that the earth was bare; he made an opening in the roof of the ship and found that it had gone aground upon a mountain. Then he came down with his wife, his daughter and his pilot, worshipped the Earth, raised an altar and sacrificed thereon to the gods; at this moment he disappeared with those who bore him company.

"Notwithstanding, those who remained in the ship, not seeing Xisuthros return, also descended to the ground and began to look for him, calling him by name. They never saw Xisuthros again, but a voice from heaven made itself heard, bidding them be patient with the gods, and ordered them to dig up the writings buried at Sippara, in order to transmit them to men. It added that the country where they then were was Armenia. After hearing the voice they sacrificed to the gods, and returned on foot to Babylonia. A portion of Xisuthros' ship, which finally went aground in Armenia, is still found in the Gordyean Mountains in Armenia, and pilgrims bring away asphaltum from there in the belief that they use it against witchcraft. As to the companions of Xisuthros, they arrived in Babylon, dug up the writings buried at Sippara, founded a number of cities, built temples, and restored Babylon".

The chronology of the chronology of Babylonia, according to Berosus, was as follows: The first period, reaching from the Creation to the Flood, is said to have included ten reigns of 432,000 years. Some of these names of these antediluvian kings have been found also in the cuneiform inscriptions. The second period includes eighteen antediluvian kings, 34,080 years, which bring us down to about 2500 B.C. The third period includes eight Median kings who, towards 2500 B.C. must have invaded Babylonia. These are followed by eleven other monarchs, the record of the duration of whose reigns is lost. The fifth period includes forty-nine Chaldean kings and 458 years. The end of this period brings us down to about 2000 B.C. The sixth period includes nine Arabian kings with 245 years. This so-called Arabian dynasty is identical with the so-called Semitic dynasty, to which Hammurabi belonged. The seventh period includes forty-five kings and 526 years. The succeeding periods of Berosus' chronology are lost, up to the period of Nabonassar whose era commenced 7476 B.C. The history of this period, which reaches the reign of Alexander the Great, is well known to us from the cuneiform inscriptions. The conclusions of the fragment have been made by Richter (Leipzig, 1856); MÜLLE, Fragmenta Historiica Graecorum (2 vols. Paris, 1865); COST., Ancient Fragmenta (London, 1862). The best and most exhaustive study on Berosus and his history is that of the late Catholic Assyriologist DE ERMONT; Essai de Comprendre le Fragment de Bérose (Paris, 1871). For the best text of Berosus see EBERHARD, SCHÖNER ed., with GUTHELM's comment. See also SMITH, Dictionary of Greek and Roman Biography and Mythology, a. v.; ROGERS, History of Babylonia and Assyria (New York, 1901). GABRIEL OUSIANI.

Beroth (Berith), a city in Chanaan, one of the confederation of cities under the headship of Gabaaon (Gibeon), whose territory was invaded by the Israelites under Josue (Jos., ix.). Its inhabitants, together with those of three neighbouring cities, in order to save themselves from extermination, went to Josue in the disguise of travellers from afar and begged mercy; the Israelites entered into a league with them, but when the deception was discovered made them hewers of wood and drawers of water for themselves. Their city was afterwards assigned to the tribe of Benjamin (Jos., xviii., 25), but it seems to have remained Chanaanite till the monarchy, as it was only "reckoned" among the cities of Benjamin (II Kings, iv., 2). Later the Berothites fled to Gathaim (iv., 3), probably at the time Saul sought to slay the Gabaeonites (Gibeonites, II Kings, xxi., 2), with whom the Berothites seem to have been reckoned (Jos., ix., 3, 17). Two descendants of these Berothites slew Ishbosheth, the son of Saul, claimant to his throne and rival of David; they brought his head to David, who punished them with death (II Kings, iv.,). Probably revenge on Saul for his injury to their fathers was one of their motives, for blood feud was regarded as a duty. Naharai, armour-bearer of Joab, David's great general, was a Berothite (II Kings, vi., 14), and it was David's desire that of Beroth among the returned exiles (I Eiad., ii., 25; II Eiad., vii., 29), though these were more probably Israelites.

Beroth is usually identified with El-Bireh, a town of 800 inhabitants, about 9 miles north of Jerusalem, near which is an abundance of water (Beroth-
Berrettini, Pietro (called Pietro da Cortona), a distinguished Italian painter, architect, and writer, b. at Cortona, in Tuscany, 1 November, 1596; d. at Rome, 16 May, 1669. He studied first under his uncle, Filippo Berrettini, and then at Florence under Andrea Commodi. At the age of fifteen he left that city for Rome, and entered the studio of Baccio Ciarpi, a Florentine painter. There he applied himself to the study of the works of Raphael, Michelangelo, and Polidoro, to that of the antique sculptures and notably of the bas-reliefs of the column of Trajan. While still very young he attracted the attention of Cardinal Sacchetti, who became his protector, and for whom were painted the first two of his works, “The Battles of Alexander and Darius” and “The Rape of Europa.” Upon Pope Urban VIII gave him the order to decorate a chapel of the church of Santa Bibiana. Such was his success there that he received the commission to paint what proved to be his most celebrated work, the ceiling of the great hall of the Barberini Palace, representing, in allegory, the history of that family. He then designed some mosaics for the dome of St. Peter’s. After a trip through Lombardy and a sojourn at Venice, he went to Florence, where the Grand Duke Ferdinand II employed him to decorate the Pitti Palace. There he painted several important frescoes, but left without completing the series, angered by the actions of jealous rivals. The compositions included “Clemency of Alexander to the Family of Darius” “The Birth of the Deified Venus,” “The Continence of Cyrus,” and “The Firmness of Poseenna.” The work was completed by his pupil Ciro Ferri. On his return to Rome Berrettini received many important commissions, acquiring a great reputation. He executed a number of frescoes in churches, as well as easel pictures. He became wealthy, and Pope Alexander VII created him a Chevalier of the Order of the Golden Spur. His principal pupils were Francesco Romanelli, Ferri, Testa, Giordano, and Magnasco. He is buried in the church of San Martino, of which he was archbishop, and to which he left a large sum of money.

Augustus Van Cleef.

Berruguete, Alonso, for his mastery of the arts of painting, sculpture, and architecture, sometimes called the Spanish Michelangelo, b. at Paredes de Nava, in Castile, about 1490; d. at Toledo, 1561. He was the second son of the painter, Pedro Berruguete, who was his first instructor. His family, however, chose for his profession and obtained for him an official position at Valladolid, the title of which he held for years, probably long after he had devoted himself to art. In 1527, when the family of Michelangelo led him to Italy after his father’s death and he entered the school of that great master in Florence and had among his friends Andrea del Sarto and Bandinelli. In the competition with Leonardo he made a copy of Buonarroti’s great cartoon of Pisa. According to his history, he refused to follow the master in the Vatican, he was one of the sculptors chosen by Bramante to compete in making a copy of the Laocoon to be cast in bronze, Sansovino, however, being the winner. On his return to Florence, he was engaged by the nuns of Cerimonio to finish an altarpiece left unfinished at his death by Filippo Lippi. After a long residence in Italy, Berruguete, in 1529, went back to Spain, where he was greatly honoured by Charles V, who appointed him a chamberlain, and court painter and sculptor, and gave him much work to do at Madrid, at the Palace of El Prado, and at the Alhambra. With Philip II, however, he remained a rich man, married a lady of quality and bought the lordship of Ventosa near Valladolid. After his return to Spain, the artist lived for some time at Saragossa, where he made an altar and a tomb for the church of Santa Engracia. At Valladolid he executed many works for churches and monasteries, notable among which is the high altar of the Church of San Benito el Real, belonging to the convent of the Benedictines, on which he spent six years. Berruguete worked with Felipe de Vigia on the sculptures of the cathedral at Toledo. There also, in the hospital of St. John the Baptist, is one of his finest works, executed when he was nearly eighty years of age, the monument of its founder, the Cardinal Archbishop Juan de Pávera. In 1553, Berruguete was to be in the cathedral of Palencia and in the church of Ventosa; his best work in bronze and marble in the cathedral and other buildings of Toledo.

Augustus Van Cleef.

Berreuter, Isaac-Joseph, b. at Rouen, 7 November, 1581; d. at Paris, 18 February, 1758. He entered the Society of Jesus in 1607. His great work is a “History of the People of God,” published in three parts. The first of these parts bears the title “Histoire du peuple de Dieu depuis son origine jusqu’à la venue du Messie” (7 vols., Paris, 1728). A revised and augmented edition of this was published at Paris in 1733. Next followed (Paris, 1734) a supplement, containing the continuation of the prophecies of the Old Testament, the History of Job, maps necessary for understanding the sacred history, etc. By 1736 seven editions of the work had been issued. It was translated into German, Spanish, Italian, and Polish. The second part of the “History” was published, also at Paris, in 1735: “Histoire du peuple de Dieu depuis sa naissance du Messie jusqu’au fin de la Synagogue.” In 1754 and 1755, he revised and added to the above, and in 1755, at Paris, still another edition (4 vols.). The latter contained five questions: (1) On Christ, the object of the Scriptures; (2) On Christ, the Son of God; (3) On Christ, the Son of Man; (4) On Christ, the founder of a new religion; (5) On the Presentation of Christ in the Temple and the Purification of the B. V. M. According to de Backer, this second part of the History was published without the knowledge, and against the will, of the superiors of the Jesuit house in Paris. Berreuter put his name to only a small number of copies of this publication. The third part of the work has the title, “Histoire du peuple de Dieu, ou paraphrase des Epitres des Apotres” (2 vols., Lyons, 1757).

The work, as its various parts appeared, aroused a great burrow and some bitter controversy. Written in a brilliant, very rhetorical and lively style, it was, nevertheless, deservedly criticized. Serious fault was found with the author for giving to portions of the sacred narrative the air of romance rather than of sober history. The facts as described, wrote he, was considered unbecoming in a Christian writer, and offensive to the Christian reader. Some propositions put forward by him were construed as favouring Nestorianism. But above all Berreuter was blamed for following a singular and paradoxical line of argument. For these reasons the work was condemned by many.
BERRYER

BERRYER

bishop of France, by the superiors of the society, by the Sorbonne, and by the Parliament of Paris. The first part was put on the Index, 27 May, 1732; the second part, 3 December, 1754, and by a Brief of Benedict XIV. 17 February, 1758; the third part 24 April, 1768, and by a Brief of Clement XIII, 2 December, 1768. See "Institut des nobiliss., Romae, 1900, 62." A corrected edition of the first part, approved by the Roman censors, was published at Besançon in 1826.

JOSIAH M. WOODS.

BERRYER, PIERRE-AANTOINE, French advocate, orator, and statesman, son of Pierre-Nicolas Berryer, an advocate, b. at Paris, 4 January, 1790; d. at Augerville, 29 November, 1868. A pupil of the Collège de Jullly, which the Oratorians had re-opened in 1769, Berryer, after having believed himself favoured with an ecclesiastical vocation, eventually concentrated himself to the forensic career. "Leaving college to become "of the Bar," he employed his Bonapartist sentiments in certain verses upon Marie Louise which he wrote in 1810; but eighteen months' study of the reports of the Constituent Assembly, under the guidance of Bonnemart, a former member of the assembly, by the advice of Berryer, in 1812, and a monarchist he remained to the end of his days. He always maintained the principle that "the king is not the head of a party"; he took the view that France was not antagonistic to the king personally, or to the king's right, but to the monarchist party, and it was always Berryer's idiosyncrasy to be independent with respect to that party. He distinguished himself at the beginning of the Restoration by assisting his father and the elder Duroc in the Moniteur against the government, and by his share in the defence of two generals, Debeille and Cambronne, compromised in the Hundred Days. Debeille, condemned to death, had his punishment commuted to ten years' imprisonment, after an application made by Berryer to the Duc d'Angoulême; Cambronne was acquitted, and Berryer, accused of having in his speech for the defence, maintained the right of insurrection, defended himself victoriously. In 1818 he defended General Canuel, and in 1820 General Donnadieu, both charged with exaggerating the importance and the number of the assistants they had suppressed. These interventions of Berryer were very displeasing to the Decazes ministry; but the young advocate, having thus combated the spirit of reprisals against the old Napoleonic army, which the restoration was developing, next directed his energies to opposing a certain shade of liberalism which seemed to him dangerous to monarchist principles. In 1830, in order to supply the property qualification needed to legalize his election as Deputy for the Department of Haute-Marne, his friends purchased for him the estate of Augerville, in Loiret. His first parliamentary speech (9 March, 1830) was in defence of the Crown and the Polignac Ministry against the address of the two hundred and twenty-one, which he considered sedacious. On hearing this speech Royer-Collard remarked, "There is a Power" (Voilà une puissance).

Under the July Monarchy Berryer was one of the most formidable members of the opposition. After vainly endeavouring to dissuade the Duchesse de Berry from making her accession to centimes, bourse, to the guineas, he himself arrested as an accomplice, but was acquitted by the jury. He then entered upon a campaign for the liberation of the duchess, and defended Chateaubriand against the charge of complicity. Returned by various constituencies in successive general elections he was the idol of both Legitimists and Republicans. His political life interfered so much with his law practice that in order to live he was obliged to sell his estate of Angerville; Legitimists and Republicans united, in 1836, to buy it back for him. He continued to advocate every measure calculated to limit the arbitrary power of the central government—jury trials for press offences, nominations of mayors by the commune, abolition of property qualification. The speech was long famous with which, in 1834, he defeated the treaty according to the United States tardy compensation for vessels confiscated by Napoleon. He was of counsel for the defence in the case of Louis Bonaparte's Boulanger attempt, in 1840; defended the Republican Ledru- Rollin in 1841, in a series of four addresses to the Chamber; in 1844 gloried in the "Belgrave Square Pilgrimage" which, with four other Legitimists, he made to the Comte de Chambord. Elected by the Department of Bouches-du-Rhône to the Constituent Assembly of 1848, and to the Legislative of 1849, Berryer voted with the Right, but without supporting any of the intrigues of Louis Bonaparte. After the 2d of December 1851, he returned to his practice at the Bar; in 1858 for an article suspected of advocating for France the liberties of England, had Berryer for his advocate. Monarchist to the end, he exerted himself as a private individual to reconcile the Houses of Bourbon and Orléans. In 1860, moreover, in the recall of Berryer, in 1812, and a monarchist he remained to the end of his days. He always maintained the principle that "the king is not the head of a party"; he took the view that France was not antagonistic to the king personally, or to the king's right, but to the monarchist party, and it was always Berryer's idiosyncrasy to be independent with respect to that party. He distinguished himself at the beginning of the Restoration by assisting his father and the elder Duroc in the Moniteur against the government, and by his share in the defence of two generals, Debeille and Cambronne, compromised in the Hundred Days. Debeille, condemned to death, had his punishment commuted to ten years' imprisonment, after an application made by Berryer to the Duc d'Angoulême; Cambronne was acquitted, and Berryer, accused of having in his speech for the defence, maintained the right of insurrection, defended himself victoriously. In 1818 he defended General Canuel, and in 1820 General Donnadieu, both charged with exaggerating the importance and the number of the assistants they had suppressed. These interventions of Berryer were very displeasing to the Decazes ministry; but the young advocate, having thus combated the spirit of reprisals against the old Napoleonic army, which the restoration was developing, next directed his energies to opposing a certain shade of liberalism which seemed to him dangerous to monarchist principles. In 1830, in order to supply the property qualification needed to legalize his election as Deputy for the Department of Haute-Marne, his friends purchased for him the estate of Augerville, in Loiret. His first parliamentary speech (9 March, 1830) was in defence of the Crown and the Polignac Ministry against the address of the two hundred and twenty-one, which he considered sedacious. On hearing this speech Royer-Collard remarked, "There is a Power" (Voilà une puissance).

Under the July Monarchy Berryer was one of the most formidable members of the opposition. After vainly endeavouring to dissuade the Duchesse de Berry from making her accession to centimes, bourse, to the guineas, he himself arrested as an accomplice, but was acquitted by the jury. He then entered upon a campaign for the liberation of the duchess, and defended Chateaubriand against the charge of complicity. Returned by various constituencies in successive general elections he was the idol of both Legitimists and Republicans. His political life interfered so much
Bersabee (de saevius) of the lower clergy. The return of Ber-
urray to the practice of his religious duties, under the
influence of his friend, Père de Ravanign, S. J., was
the signal of his fruitful activity in behalf of
the Church.
Berruyer never wrote his discourses; he meditated
before speaking. Even his apparent improvisations
were deceptive: "The extempore speaker," he used
to say, "has repeated the same thing, himself
twenty or a hundred times." During the Restora-
tion his lectures on eloquence at the "Société des
Bonnes Études" were attended by such men as
Montalembert and Lacordaire. He was admired by
all for his sincerity and the absence of oratorical
artifice. There was something astounding in the
suddenness with which, after a moment of apparent
attention, he was wont to crush his opponent's ar-
gument. "If I could act as M. Berruyer speaks!"
said the actress Rachel, moved by his natural and
spontaneous eloquence. On another occasion when
Berruyer was speaking against Jules Favrè, the latter
referred to him as "my sublime adversary." Berruyer,

Georges Goyau.

Bersabea (Bersabeia) or Bersabea, a town on the
southern extremity of Palestine, one of the most
familiar geographical names. With nowhere known
account of the occasion which gave rise to the name.
In the first, it was bestowed by Abraham, when, after
a conflict between his herdsmen and those of King
Abimelech as to the ownership of a well, he con-
cluded a covenant with the king, who was accom-
panied by his captain, Phicol. In the second, it was
bestowed many years later by Isaac when, after a
conflict between his herdsmen and those of King
Abimelech as to the ownership of a well, he con-
cluded a covenant with the king, who was accom-
panied by his captain, Phicol. Other points in the
two accounts are parallel also, though there are
many differences. The traditional opinion regards
them as not two, but one of all oratories with
which befell the two patriarchs, surprising in certain
details, perhaps, yet not remarkable for the essential
facts which are such as might easily occur. The
modern critical opinion considers that the same
tradition became attached to two different names
and was embodied in two different documents (the
Elohist and the Jahvistic; see articles: ABRAHAM,
GENESIS, PENTATEUCH). "Doubtless, history repeats
itself," says Prof. Sayce (Early Hebrew History, 64);
"disputes about the possession of wells in a desert
land can frequently recur发布时间的, and kings of the same name may have followed one
another on the throne of Gerar. But what does not
seem very possible is that each of these kings should
have had a "chief captain of his host" called by the
strange name of Beraeb, and that some of them should
have taken the wife of the patriarch, believing her
to be his sister; or that Bersabea should
behave have received the same name from the
oaths sworn over it. The differences of detail are
regarded by the older criticism as due to traditions,
which it was supposed that two distinct facts are related, by
critics as variations that "would naturally arise from
the fluctuation of tradition." (Driver, Genesis, 255.)

Bersabea, the village that grew up around the
wells at this spot, is identified with the present
Ber es-Saba which is twenty-eight miles south-west
of Hebron, on the road to Egypt. The country
surrounding it, known as the desert of Bersabea,
is a soil that is said to be naturally very fertile, needing
only irrigation to make it productive; the few cul-
tivated plots in the valley give rise to the names
of "waters of" and "wells of." In the spring, sheep, goats, and camels
find there a rich pasture land. Three wells may be
seen there to-day, one of which, however, is dry.
The largest is believed to have been dug by Abraham
(Gen. xxiv. 19, xxxvi. 8, and xxv. 26-33); another is of
the same size. The third is said to be a solidly con-
structed piece of masonry, about thirty-
hundred feet deep; it still furnishes abundant sweet
water. The climate of Bersabea, though very hot,
is regarded as healthy. The highest altitude is
950 feet above the Mediterranean. At this day, the
desert presents a picture of the same pastoral,
patriarchal life that we see in Genesis (Conder, Palestine,
52-65). Bersabea, with the desert around, is
the cradle of the Hebrew race and connected with
memories of Agar and Ismael (Gen. xxiii., of Abraham
(ib.), of Isaac (xxvi.), of Jacob who was born there,
and his sons (xxvii., xlvii.,) of the sons of Samuel
(I. K., viii, 2), of Eliezer (III. K., iii.), and of Amos,
who denounced its idolatry (v. 5, viii, 14). It formed,
at first, part of the territory of Judah (Jos. xvi. 28)
and later (Josh. xvi. 28) and finally, the lot which
was allotted to the Levites (Jude. 1). Its site
was a halting-place on the road to Egypt made
well known to all. After the Exile, it again became
a centre for the Jews (II. Esd. xx, 27), and in the days
of the empire had a Roman garrison. It was most
favourably situated for trade; the caravans came
and went. The hermits flocked there. For a time, it was
an episcopal see. Extensive ruins of dwellings and public edifices,
mostly of Roman days, still remain.

JOHN F. FEMLON.

BETHA. — Of the various holy women bearing the name of Bertha, five are more particularly worthy of notice. 1. BERTHA, Queen of Kent, d. 612. She was a Frankish princess, daughter of Charibert and the pious Ingoberta. In marrying the pagan King Ethelbert of Kent, she brought her chaplain Liudhard with her, and restored a Christian church in Canterbury which had been closed and destroyed by pagans, dedicating it to St. Martin. The present St. Martin's at Canterbury occupies the same site. St. Augustine, who was sent by Gregory the Great to preach the Gospel in England in 596, no doubt owed much of his favourable reception to the influence of Bertha. St. Gregory in 601 addressed to her a letter of thanks, which is still preserved. It is printed in Haddan and Stubbes, III, 17. Ethelbert himself was baptized on Whitsunday in 597, and Canterbury became the mother-church of England. Bertha was sometimes styled "Saint", but there is no clear evidence of cultus. (See, on this point, the poems of Reginald of Canterbury in the "Neuse Archiv", xiii.) Fuller accounts of Bertha will be found in Lingard, "Anglo-Saxon Church", 1792; Wall, Nat. Biol. Plummer, "Feud", 1880; and R. W. Hope, "Christianity in St. Martin's".

II. ST. BERTHA, virgin and martyr, Abbess of Vaux-d'Or, near Avenay, Reims, d. about 690. She was the wife of St. Gumbert, Lord of Champenois, a nobleman of royal blood. He built a nunnery for his wife and her maids at Avenay, and retired himself to a monastery on the coast, where he was soon afterwards put to death by pagan marauders. When the people of Avenay suffered from lack of water, St. Peter appeared to Bertha and showed her a field where there was a good spring. This she bought for a pound of silver. It became a holy well which cured diseases and supplied both her own nuns and the hamlet of Avenay with water. Bertha was martyred by Gumbert's relatives, who were indignant at the distribution of his money to the poor. Whether the abbey founded at Avenay followed the Benedictine or the Columban Rule, does not seem certain even to Mabillon. The whole legend is in fact very late and unreliable. St. Bertha's feast is on the 1st of May. (See Acta SS. for that day.)

III. BERTHA of Blangy in Artois, d. about 725. She was the daughter of Rigobert, Count of the Palace under Clovis II, and married Siegfried, a relation of the king. After twenty years, when he died, she determined to found a nunnery. Two buildings, she constructed; the second, being in a vision guided her to another spot, and after many difficulties a nunnery was built, which she entered with her two elder daughters, Deotila and Gertrude. A still later legend represents this Gertrude as much persecuted by the attentions of a great noble, Roger, who wished to marry her by force, but she was saved from his violence by her mother's firm courage and trust in God. Some time before her death Bertha is said to have resigned her office of abbess and to have shut herself up in a little cell built against the church wall. But the whole story of Bertha, as Mabillon and the Hollandists agree, is of very late date and historically worthless. Her feast is kept on the 4th of July. (See Acta SS. for that day, and Decobert, "Ste. Berthe et son Abbaye de Blangy", 4th ed., 1844.)

IV. BLESSED BERTHA DE BARD, abbess, b. in Florence, date uncertain; d. 24 March, 1163. She was the daughter of Lothario di Ugo, Count of Vernio, and is ordinarily called Bertha de Bardi, but the name of her own family prevailed. She landed in England as part of the order of Vallombrosa, a branch of the Benedictines, at Florence, but she was soon sent to govern and reform a convent of the order at Cavriglia in Valdarno, where she lived famous for miracles until her death. (See Acta SS. for that day, and Soldani, "Vita di S. Bertha", Florence, 1731.)

V. BLESSED BERTHA DE MARRY, d. 1247. She was a Cistercian nun, who became the first abbess of a convent which was founded by Count William of Flanders, in 1227 at Marquette or Marchet, near Lille. She died on 18 July, and is briefly noticed on that day in the Acta SS. Bertha is called Blessed by the Cistercian chronicler, Henriques, but the evidence of earlier witnesses is more decisive. (DUNBAR: Dictionary of Saintly Women (London, 1904); CHERVALIER: Répertoire des sources historiques: Bio-Bibliographie (Paris, 1902).)

HERBERT THURSTON.

Bertther, GUILLAUME-FRANÇOIS, a Jesuit professor and writer, b. at Issoudun, 1704; d. at Bourges, 1752. He taught philosophy at Rennes and Rouen, and theology at Paris. From 1745 to 1762 he was editor of the "Mémories de Trévoux", and because of his powerful opposition to the infidel "encyclopédistes" was bitterly attacked, notably by Voltaire. Between 1745 and 1749 he published volumes XIII to XVIII of the history of the French Church (1320-1559). The previous volumes had been prepared by Fathers Molevauges (I-VII), Fontenelle (IX), and part of XI, and Bnuyonn (end of XI and XII). In 1762, when the Society of Jesus was suppressed in France, the Dauphin appointed him tutor of his sons and librarian of the court library, but two years later his position at court became so disgraceable that he left France and spent the following ten years in Germany. On his return, in 1774, he retired to Bourges. These years of retirement were spent in study and writing. After his death several of his works were published by Father de Querbeuf: (1) A translation of the Psalms with notes (8 vols.); this was often reprinted. (2) Five volumes on Isis. (3) Five volumes of "Réflexions Spirituelles".

De Querbeuf in Fragmenta eruditarum, præfate; Sommervogel, SS. de la c. de J., 1377 with complete bibliography; BRUCKER in Dict. de théol. cath., s. v.

JOHN CORBETT.

Berthold, Bishop, Apostle of the Livonians, killed 24 July, 1198, in a crusade against the pagan Livonians who threatened destruction to all Christians that lived in their territory. He was previously Bishop of the Cistercian monastery of St. Paul at Hanover. At the death of Meinhard, the first Bishop of Livonia (c. 1195), Archbishop Hartwig of Bremen, to whose province belonged the newly converted countries along the eastern shores of the Baltic Sea, appointed Abbot Berthold successor. It seems very probable that, as Damberger asserts in his "Synchronistische Geschichte der Kirche und der Welt im Mittelalter", when Meinhard came to Bremen in 1186 to obtain help in his apostolic labours in Livonia, Berthold joined the band of missionaries who accompanied him thither. On this assumption, Berthold had been working ten years as a missionary among the Livonians when he became their second bishop and was, therefore, well acquainted with his field of labour. The Livonian pagans were fanatically opposed to Christianity. Berthold's predecessor, assisted by merchants from Bremen and Lübeck and a few converted natives, had built fortifications along the River Düna, where the Christians held their religious services and set them against the fury of the pagans. Following in the footsteps of his predecessor, Berthold tried to gain their confidence and good will by kindness. At first they appeared to become less hostile, but soon their old hatred revived. When Berthold attempted to bless the Christian cemetery at Holm, their pagan fanaticism broke loose in all its fury and they decided either to burn the bishop together...
with his church at Holm or to drown him in the Düna. The Christians fled to their strongholds at Uzkull and Holm, while the bishop escaped in a ship to Lübeck.

Pope Celestine III, shortly before his death, was preparing to send a fleet of crusaders to protect the Baltic coast of the Baltic Provinces of the Holy Roman Empire. His successor, Innocent III, continued the work. Berthold gained the financial assistance of Archbishop Hartwig of Magdeburg and many merchants of Bremen and Lübeck. In a short time a large fleet was ready for departure well equipped and loaded with guns and munitions. It was to settle permanently in Livonia. It put to sea at Lübeck and crossed the Baltic, entering the River Düna from what is now called the Gulf of Riga. Near the mouth of the Düna the German peasants landed with the purpose of making their homes in the vicinity, and laid the foundations of the city Riga, at present one of the most important commercial seaports in Russia. Berthold, accompanied by the crusaders, sailed up the river as far as Jeltzas, where the Livonians gathered with the intention of attacking the fleet. Having vainly attempted to come to a peaceful agreement with them, Berthold and his companions sailed some distance down the river, with theLivonian's eager pursuit. Finally, the priests agreed to a suspension of hostilities to give time for collecting larger forces. At the first opportunity, however, they fell upon the Christians who ventured outside their fortifications, and hostilities were resumed. The crusaders were victorious, but Berthold's horse became intractable and galloped into the midst of the fleeing Livonians. A pagan by the name of Ymant thrust his lance into Berthold's back, inflicting a wound that caused speedy death. The bishop's body was buried by the crusaders at Uzkull, where it was transferred to Riga by Bishop Albert of Apeldorn, archbishop of Bremen, who had appointed Berthold's successor. Soon after the death of Berthold many of the vanquished pagans came to the crusaders, expressing their regret at the unhappy occurrence and asked to be baptized. The final conversion of Livonia was effected by Bishop Albert, who was assisted in his apostolic labours by the newly founded Order of the Brothers of the Sword which in 1237 was placed under the Teutonic Order.

MICHAEL OTT.

Berthold of Chiemsee, a German bishop and theological writer, b. 1465 at Salzburg, Austria; d. 19 July, 1543, at Salzburg (duchy of Salzburg). His real name was Berthold Pürstinger, frequently called Firstinger; but he is generally known as Berthold of Chiemsee, from his episcopal see, situated on one of the islands of the Bavarian lake of Chiemsee. We have but little information regarding his early life. He was licentiate in civil, and doctor in ecclesiastical law, and in 1495 he appears as the Master of the Archibishop of Salzburg, and in 1508 was appointed Bishop of Chiemsee. During his episcopal career (1508–25), he resided at Salzburg, in the quality of coadjutor to the archbishop of the latter place.

Berthold was twice conspicuously used his influence with the Archbishop of Salzburg in behalf of the unfortunate: in 1511 in favour of the Salzburg town-councillors who had been condemned for high treason, and again in 1524 in the interest of the rebellious peasants. He was present at the Provincial Council of Salzburg (1521), and also took an active part in 1522 in that of Mühldorf (Bavaria), which was convened to devise means of stemming the tide of Lutheran progress. Soon after, he resigned his bishopric (1526) and retired to the monastery of Raitenhaslach on the Austro-Bavarian frontier. In 1528, or 1529, he removed to Saalfelden, where he found (1533) a hospital with a church for infirm priests. He died here and was buried in the parish church.

After his resignation of his episcopal functions Berthold devoted his time to literary pursuits. At the suggestion of Matthew Lang, the Cardinal Archbishop of Salzburg (1519–40), he wrote his "Theologia," a work in which he took up the question of the doctrine of the Holy Ghost (1528) and translated it afterwards into Latin (Augsburg, 1531). Earnestness in the suppression of abuses and mildness in his dealings with others were characteristic traits of Berthold, and they appear also in his works; his "Theologia" does not bear the bitterly polemical stamp of similar contemporaneous writings. The work does not seem to have been in great demand, as neither the original nor the translation was reprinted until Reitnermeier re-edited the work (1852).

The contents of the book in its Latin original is valuable from both a linguistic and theological point of view. Linguistically, it proves that Luther was not the only able exponent of religious doctrines in the vernacular; theologically, it exhibits the character of Catholic teaching at that period.

The other writings of Berthold are (1) "Tewzech Rational", a treatise on the Mass; (2) "Religepuchel", a defence of the Catholic doctrine and practice of Communion under one kind, against the Reformers; (3) "Onus Ecclesiae" or "Burden of the Church" (Landshut, 1524) is also generally attributed to him. It is a fearless exposition, from a Catholic point of view, of the abuses then prevalent in the Church. The book occasioned much comment and was reprinted twice in 1531, at Cologne and probably at Augsburg, and again in 1529 without indication of place.

N. A. WEBER.

Berthold of Henneberg, Archbishop and Elector of Mainz, b. 1441; d. 21 December, 1504. Having completed his education at the University of Erfurt, he became coadjutor of Cologne in 1464. Three years later he came to the imperial court of Frederick III. He was chosen Archbishop of Mainz in 1484 and consecrated 20 May, 1485. When in 1496 Maximilian I was elected Roman King, to rule in union with his father, Frederick III, Berthold, as imperial chancellor, obtained the right of having all royal documents submitted to him for signature. Being heart and soul for a political reform of the tottering empire, he used all his influence to bring about a change in its constitution. How Berthold wished to reform the empire may be gathered from the programme submitted to the emperor at the diet of Worms in 1495. All state affairs were to be managed by an imperial council (Reichsrat) consisting of seventeen members. The councillors were to be chosen by the electors and the estates, while the emperor was to appoint the president of the council. The emperor, of course, justly rejected such a programme which would have changed the empire into an oligarchy, with the emperor a mere figurehead.

Berthold's ecclesiastical reforms, on the other hand, which were even more pressing than political changes, were accompanied with great success. He encouraged and urged the reformation of the clergy and the religious orders, which was already
in progress, and was especially solicitous for a better education of the clergy. He courageously resisted the heretical tendencies of many humanists and, though friends disposed towards the heretical ones, scathingly rebuked others. To guard against impure literature he established in his diocese, on 4 January, 1486, a censorship of the press, which was the first in history. Berthold had long been disturbed by many intransigent and envious men who endeavored to rob him of the honours which Rome upon Germany and the improprieties that often accompanied the preaching of indulgences, and shortly before his death he respectfully submitted these grievances of the German nation to Pope Pius II, who just succeeded Alexander VI. He is buried in the Cathedral of Mainz, is, where a magnificent monument perpetuates his memory.

Michael Ott.

Berthold of Ratibon, a Franciscan of the monastery of that city and the most powerful preacher of repentance in the thirteenth century, b. about 1200 at Ratibon, d. 1246 at Augsburg.

He was probably a member of a well-to-do middle class family of Ratibon named Sachs. The excellence of his literary training is proved by his sermons which show more than common acquaintance with the ancient classics. From his knowledge of the usages of secular life, it may be inferred that he was a man of mature age before he entered the monastery. The first fixed date in Berthold's life is 1246, when the papal legate appointed him bishop of Augsburg inspectors of the convent of Niedermarch, a proof of the high regard in which Berthold was then held. One of his contemporaries, the Abbot of Niederaltaich, who is a reliable historian, speaks in 1250 of the great reputation that Berthold had in Bavaria as a preacher. Four years later the missionary trips of this preacher extended as far as the valley of the Rhine, Alsace, and Switzerland. During the next ten years Berthold's apostolic labors led him eastward into Austria, Moravia, Bohemia, and Silesia. In 1253 Pope Urban IV appointed him to preach the Crusade and Albert the Great consecrated him apostolic legate.

When speaking to Slavonic audiences Berthold naturally employed an interpreter, just as St. Bernard, in his day, made use of an interpreter in Germany. Notwithstanding any difficulties that might arise as to the delivery of these words, there was an extraordinary power of attraction over his hearers so that the churches were not able to hold the great crowds of plain people who came from all quarters to his services, and he was often obliged to preach in the open air. When this was the case, a pulpit was generally arranged under the spreading branches of a linden tree. Long after his day "Berthold's linden" was to be seen at Glätz. About 1270 he seems to have returned to Ratibon where he remained the rest of his life. The Franciscan mar¬
ylogy includes his name among the blessed of the order, and his remains form the most precious relic among the treasures of the cathedral at Ratibon. The poets and chroniclers of his time made frequent reference to Berthold. He was called "sweet Brother Berthold," "the beloved of God and man," "a second Elias," "the teacher of the nations"; all of these expressions are proofs of the high esteem in which his activities were held. The secret of the preacher's success lay partly in the saintliness of his life, though partly disposed in the language of humble life. He became the great master, it may be said, the classic of homely speech, and this rank has been maintained by his sermons to the present day. One of his two popular dis

Courses on the Last Judgment became a favourite book of the people under the title "The Valley of Josaphat.

There is no doubt that Brother Berthold preached in German. For a long time, however, scholars disagreed as to how his sermons had been preserved. It is now generally accepted that the sermons were often written down afterwards in Latin, frequently by the same Franciscan who compiled them and who was often the disciple of the author. The sermons, as they may be called, partly German, partly Latin, at times in the language in which they were delivered, are what have been handed down to posterity. The discourses thus preserved are of the greatest importance for the history of the development of the literature of homiletics; they are of equal value as rich sources for determining the condition of education and culture in the thirteenth century. It is difficult, therefore, to understand how this greatest of German preachers to the poor could have been forgotten for centuries. It was not until some of Brother Berthold's sermons were published in 1824 that attention was called to the eloquent Franciscan. Since this date, the enthusiasm for Berthold has grown steadily so that he has become a favourite, both of scholars and of the public.

N. Scheid.

Berthold of Reichenau, a Benedictine monk and chronicler of the celebrated Abbey of Reichenau on the Lake of Constance; d. probably in 1088. He was a disciple and friend of the learned Hermannus Contractus. When Hermann saw death approaching, he entrusted to Berthold all the wax tablets that contained the writings which he had not yet committed to parchment and commissioned Berthold to pursue them and, after careful revision, to copy them on parchment. Berthold promised to do so but, being the dying master to continue the famous world-chronicle, begun by Hermann, which in chronological order related the history of the world from the birth of Christ to 1054, the year in which Hermann died. To the continuation of this work Berthold dedicated the first fifty years of his life. He then devoted the next forty years to the completion of the work and added the years until 1159 to it. The Chronicle of the monastery of Reichenau is divided into two parts, the previous hundred years of the life of St. Matthew and the last fifty years of the life of the monk who was the continuator of the work of Hermannus Contractus. As long as the Chronicle of Reichenau was not completed to the end of the eleventh century, it was considered the continuation of the Chronicle of the Abbot Hermannus Contractus of Reichenau. N. Scheid.

The Chronicle, as far as it was written by Berthold, comprises a concise and impartial history of the troublesome times immediately preceding the accession of Gregory VII and probably also of the early reign of this great pontiff. It is reprinted to the year 1080, with an introduction by Pertz, in "Mun. Germ. Hist.: Script. V, 264-326.

The original text of Berthold is no longer in ex

istence and all the existing copies have been compiled from various manuscripts found in the monasteries of St. Gall, St. Blaise, Muri, and Engelberg. The chronicle was continued by Bernold to the year 1100, and to others by the year 1175. From various passages in Berthold's chronicle it appears that, for a certain period, at least, he was connected with the abbey of Parma, as the legitimate occupant of the papal throne; but he soon noticed his mistake and from the year 1070, or even earlier, acknowledged Alexander II as the true pope. Bernold remarks in his chronicle under the year 1075 that Berthold, an excellent teacher who was very well versed in Holy Scripture, died at an advanced age on the 12th of March.

Michael Ott.

Berti, Giovanni Lorenzo, an Italian theologian, b. 28 May, 1606, at Sarravossa, Tuscany; d. 26 March, 1766, at Pisa, at least parents were of the lower classes. At the age of fifteen he entered the Augustinian order, and preached with success before he had attained his twenty-third year. He subsequently occupied important offices in his order, i. e. those of general secretary, prior of the papal palace, and finally (1748) became professor of ecclesiastical history at Pisa. He suffered in 1702, a stroke of apoplexy which was repeated and eventually caused his death. His literary career was an agitated one. By order of Father Schiaffinati, his Superior General, he wrote the extensive work “De Theologia Disciplina” (Rome, 1739—45), an exposition of the philosophical teaching of St. Augustine. The work, which appeared in several editions, was vehemently attacked by d’Isse de Saléon (who was successively Bishop of Agen, 1730—35, Bishop of Rodes, 1735—46, and Archbishop of Vienne, 1747—51) and by Languët de Gergy, Archbishop of Sens (1718—53). They censured Berti of Jansenism. In answer, the latter published: (1) “Augustinianum Systema de Gratia” (Rome, 1747; Munich, 1750); (2) “In Opusculum” (Leghorn, 1750). The accusations against Berti were renewed by the Counter-reformation authorities. Berti, in his “In Opusculum” (1740—58) had his book examined and found its teaching sound. Besides other works published in this controversy, Berti wrote: (1) “Commentarius de Rebus gestis S. Augustini” (Venice, 1750); (2) “S. Augustini Quaestionum de Scientiis, .tio” (Pisa, 1756); (3) “De Heresibus Trium Priorum Sceolorum” (Basano, 1769); (4) “Historia Ecclesiastica” (Florence, 1753), an ecclesiastical history, which he later published in an abridged form (Pisa, 1760), and which, thus shortened, was frequently re-edited (recently at Turin, 1892).

Bertino, Saint, Abbot of St. Omer, b. near Constanza 615; d. about 709. At an early age he entered the monastery of Luxeuil in France where, under the austere Rule of St. Columban, he prepared himself for his missionary career. About the year 663 he set out, in company with two conferees, Mummolin and Ebertram, for the extreme northern part of France in order to assist his friend and kinsman, Bishop St. Omer, in the evangelization of the Morini. This country, now the Department Pas-de-Calais, was then a vast marshland, and the dwellers hid themselves in hillycolds, and overgrown with seaweed and bulrushes. On one of these hillocks, Bertin and his companions built a small house whence they went out daily to preach the word of God among the natives, most of whom were still heathens. Gradually some converted heathens joined the little band of missionaries and a larger monastery had to be built. A tract of land called Sithiu had been donated to the monastery by a converted nobleman, and Omerus, who had turned this whole tract over to the missionaries, who selected a suitable place on it for their new monastery. But the community grew so rapidly that in a short time this monastery also became too small and another was built where the city of St. Omer now stands. Shortly after Bertin's death it received the name of St. Bertin. Mummolin, perhaps because he was the oldest of the missionaries, was abbot of the two monasteries until he succeeded the deceased St. Eligius as Bishop of Noyon, about the year 659. Bertin then became abbot.

The fame of Bertin's learning and sanctity was so great that in a short time more than 150 monks lived under his rule, among them St. Winhoch and his three companions who had come from Brittany to join Bertin. The testament leaves a lasting memory to the monastery, as in his will he provided for a number of monks. When the church which was built under the direction of Bertin collapsed, the community transferred to the present site, and spent the remainder of his life preparing for a happy death. Bertin began to be venerated as a saint soon after his death. His feast is celebrated on 5 September. In medieval times the Abbey of St. Bertin was famous as a centre of sanctity and learning.

The "Annals Bertiniani" (830—882; Mon. Germ. Hist.: Script., I, 419—515) are important for the contemporary history of the West Frankish Kingdom. The abbey church, now in ruins, was one of the finest fourteenth-century Gothic churches and later times its library, archives, and art-treasures were renowned both in and out of France. The monks were expelled in 1791 and in 1799 the abbey and its church were sold at auction. The valuable charters of the abbey are published in Guerard, "Cartulaire de l'abbaye de St. Bertin." (Paris, 1841; appendix by Morand, lbid., 1861). The list of abbots is given in "Gallia Christiana nova," III, 485 sqq. See Laplance, "Abbes de St. Bertin." (St. Omer, 1854—55).

BERTAND

use, and in 649 Bishop Stephen attended the Roman council concerning the Monothelitians. This city had much to suffer from the Lombarde, and in 665 or 670, while the people were assembled in the cathedral for the ceremonies of Holy Saturday, it was suddenly attacked by King Grimkoald, who pillaged it and burnt it. The Bishop and the clergy were seized. The city was restored by King Rollo (Diss. Hist. Lang., V, x). By the famous donation of Pepin, Forlimpopoli with the other cities of the exarchate and the Pentapolis was made a part of the patrimony of St. Peter. In 1073 during the episcopate of Pietro, St. Peter Damian went to Forlimpopoli to consecrate a church dedicated to St. Vincent. It is thought he had delivered a sermon on St. Rufillus, which Vecchiazzani, an historian of this city, claims to have discovered at Rimini in the Library of St. Jerom. But this is very doubtful. Among the successive bishops, Ubertello (1214) and Taddeo (1285) were noted for their beneficence and their efforts for the preservation of peace. During the fourteenth century Romagna was at the mercy of petty tyrants and Forlimpopoli was ruled by the Ubertello. In 1357 the city received the title of being a franchise as a means of enforcing his commands as sovereign, and sent Cardinal Albornoz to Forlimpopoli (1358). Francesco II, of the Urtzelli family, however, when the cardinal had left, burned the statue of the pope in this church square and was guilty of great cruelty towards the clergy.

In 1360 Albornos took the city by force, obliged the inhabitants to abandon it, and razed it to the ground. The episcopal see was then transferred to Bertinoro, and the bishop, Roberto del Besian, an Augustinian, took with him the relics of St. Rufillus. Forlimpopoli was gradually rebuilt, and Leo XII restored it to the rank of a city. The bishop, however, remained at Bertinoro. In 1377 Roberto was succeeded by Bishop Teobaldo, who received from Urban VI the civil authority over Bertinoro and Cesena, and by virtue of his authority fought against the bodies of mercenaries recruited by the Antipope Clement VII, by whom he was made prisoner. Bishop Ventura degli Abati was highly praised by Martin V for his learning and piety. Tommaso Caselli, a Dominican (1544), was an able theologian; Gianandrea Caigari (1550), formerly nuncio to Poland, restored the Cathedral of Santa Caterina. Giovanni della Robbia (1624), a Dominican, established a girls' school for the students, six degrees for the farmers, and two for the fine arts. In 1803 Pope Pius VII was obliged to suppress the Diocese of Bertinoro which, however, was re-established in 1817. From 1824 to 1859 it was united to the Diocese of Sarsina. In the Diocese of Bertinoro St. Ivo della Sedia, a celebrated church of Foligno, in Romanesque style, which inspired one of the most beautiful cities of Carducci.

The diocese contains 63 parishes, 93 churches, chapels, and oratories, 92 secular priests, 78 regulars, 70 seminary students, 5 lay brothers, 90 members of female religious orders, 1 school for boys, and 5 for girls, and a population of 32,500.

U. BENIGNI.

Berttonio, Ludovico, an Italian missionary, b. 1552 at Rocca Contrada near Ancona; d. at Lima, Peru, 3 August, 1625. He entered the Society of Jesus in 1575. Sent to Peru six years later, he laboured principally among the Aymar Indians of Southern Peru. He attached himself to the Aymar language, and spent his whole life on the Aymar language. His earliest publications on that idiom appeared under the title "Arte breve de la lengua aymara para introducir el Arte grande de la misma lengua" (Rome, 1603), also "Arte y gramatica muy copiosa de la lengua aymara" etc. This grammar was established by the Jesuits at the Indian mission of Juli in Southwestern Peru. Berttonio had the following works printed there, all in the year 1712:

- "Arte de la lengua aymara con una selva de frases en la misma lengua y su declaracion en romance"
- "Vocabulario de la lengua aymara" (first and second part); "Confessionario muy copioso en dos lenguas, aymara y español"; "Libro de la vida y milagros de Ntro Señor Jesucristo en dos lenguas, aymara y romance, traducido del que recopiló el Licenciado Alonso de Villegas" etc.

The publications by Father Berttonio being as rare as they are important, Platzmann has published in facsimile the "Arte y gramatica" of 1603 and the "Libro de la vida y milagros" of 1712. Ballivian in a pamphlet conclusively refutes the slur cast by Sir Clemente Markham on Berttonio, that the latter invented the name "Aymara".

Bertrand, Saint Louis. See Louis Bertrand, Saint.

Bertrand, Pierre (1) a French Cardinal, theologian, and canonist, b. 1280 at Annanoy in Vivarais; d. 1348 or 1349 at the Priory of Montaud, near Avignon. His noble parentage is known to us through the manuscript memoirs of a certain Claude de Bertrand, a星星 of the sixteenth century (Discours généalogique de la noble maison de Bertrand et de leur alliance avec celle de Colombier). The legal profession seems to have been the first aim of his education. He succeeded in studying and taught law in the Universities of Avignon, Montpellier, Orleans, and Paris. Prized as one of the best lawyers of his day, he soon reached high positions in the Parliament of Paris, the King's Council, and the Queen's Chancery. His infinitive calling lay, however, in another direction, and he became a priest. His priestly career was no less brilliant than his legal success. We find him in rapid succession Dean of Puy-en-Valais, Bishop of Nevers, Bishop of Autun. In 1381 Pope John XXII made him a cardinal in recognition of many services rendered to the Church. Among these services are to be reckoned several charitable institutions founded at Annanoy, and the Collège d'Autun, or Collège Cardinal, established in Paris on behalf of fifteen scholars, six for the clergy and nine for the fine arts. Bertrand's best title to recognition is, however, his defence of the rights of the Church both by word of mouth and also with his pen. Fournier, in his "Opalilas du moyen-âge" (Paris, 1880), points out that the beginning of the Bertrandian dynasty, a strong tendency of the State towards curtailing the Church's traditional rights. In 1329 took place the famous "Conférence de Vincennes", where Pierre de Cugnieres, speaking for Philippe de Valois, bitterly complained of undue extension of ecclesiastical privileges (e. g., the ordination of clerics for the sole purpose of enjoying the privilegium fori; causa des œuvres, or widow's causes drawn to ecclesiastical courts; the free use of censures to enforce the Church's privileges; appeals to the Church from the decision of civil courts, etc.). Pierre Bertrand, then Bishop of Autun, was the principal spokesman of the clergy. He replied in a spirit of conciliation to all charges bearing on minor points, but strongly upheld what he considered the essential rights of the Church. Polabie, in his "Unam Sanctam" of Boniface VIII, summed up his plea in four statements: (1) the secular power is from God; (2) yet, it is not by itself sufficient for the government of the people, for which spiritual jurisdiction is also required; (3) although nothing prevents the two powers being held by one and the same hands; (4) still, whether in the same or different
nands, they stand in a certain relation of subordinate
ship, the spiritual power being the higher of the two. His views are to be found in "Libelli adversus Petrum de Compergus" and "De Tribu et seu juris-
dictum," published in Paris in 1496 and 1584
respectively, and later inserted in volume XIV
of the "Magna Bibilotheca Veterum Patrum" (Cologne,
1618). Many other writings of Cardinal Bertrand
(apological, canonical, pastoral) have not been pub-
lished and are reported to be in the Vatican
Library.
(2) BERTRAND, PIERRE, DE COLOMBIER (also known as
BERTHAND PIERRE), a French cardinal, nephew of the
foregoing, whose name he adopted, b. in 1276, at
Colombier, in Vivarais; d. in 1364 at the priory of
Montaud, near Avignon. Like his uncle, he studied
law and occupied important positions in the Par-
lement of Paris. Ordained priest, he soon rose to
distinction, became Bishop of Nevers, then of Autun,
later of Arras, and was made cardinal by Clement VI,
1344. His career as a cardinal was a distinguished
one. The popes at Avignon used him as their trusted
agent in many delicate missions, notably for the
termination of the war between France and England
and for the election of Charles of Bohemia to the
imperial throne. He met little success in his endeav-
our to stop the Hundred Years' War, but brought
about the desired election of Charles IV, and, having
in the meantime become Dean of the Sacred College,
was naturally chosen by Innocent VI to go to Rome
and crown the new emperor. Cardinal de Colombier
left no writings. The Celestine monks of Colombier
and Montaud, whose benefactor he was, held his
and his uncle's memory in great veneration. We are
indebted to them for many biographical details
on the two Cardinals.

BERTULF, SAINT, Abbot of Bobbio, date of birth
unknown; d. 639 or 640. He was the son of a pagan
nobleman in Austrasia and a near relative of St.
Arnulf, Bishop of Meso, whose pious example had
such an influence on Bertulf that he became a Chris-
tian and in 620 entered the monastery of Corbie.
A few years later he became acquainted with Abbot
Attales, who had come to Luxeuil on a visit, and,
with permission of Abbot Eustace of Luxeuil, joined
Attales's community at Bobbio in Italy. Upon
the death of Abbot Attales in 627, Bertulf was chosen
by the monks of Bobbio as their abbot. Like his holy
predecessor, he insisted on the observance of the
austric rule introduced by St. Columban, the founder
of Bobbio, and preached fearlessly against Arianism,
which had gained a firm foothold in Italy under the
Lombard kings. When the Bishop of Tortona endeavoured
to bring Bobbio under his own juris-
diction, Bertulf hastened to Rome, where Pope
Honorius received him kindly and granted the
monastery entire exemption from episcopal jurisdic-
tion. Jonas, a monk of Bobbio, who accompanied
Bertulf on his journey to Rome, relates that, while
returning to his monastery, Bertulf was attacked by
a deadly fever, and cured miraculously by St.
Peter. The same author ascribes a few other
miracles to the prayers of St. Bertulf. Most martyr-
ologies give him the title of saint. His feast is cele-
brated on 19 August.

The first source for Bertulf's biographies is a short life
written by the above-mentioned monk, Jonas of Bobbio:
MARILLON, Acta SS. O.S.B., nov. II, 160; and the Bolland-
musen, Acta SS., Aug., III, 167, and some other pub-
lished works.

MICHAEL OTTI.
BERVANGER

BESANÇON

senet, has said: "He wrote the books at his leisure and weighed each word", and the biographer adds very justly that the reader is rewarded for his trouble, for "it is impossible to read them without feeling oneself filled with love for our Saviour Jesus Christ.

A. M. P. INGOUL.

BERVANGER, MARTIN DE, a French priest, founder of charitable institutions; b. at Sarrelouis, 15 May, 1795; d. at Paris, 1865. After being for some time assistant pastor in his native city, he took part, in 1822, in the foundation of the Association Royale de Saint-Joseph, and later of the Œuvre de Saint-Henri. These two institutions were destined to give to workingmen free instruction and professional training. To reach this end more effectively, he founded, in 1827, a boarding-school where, besides manual training, poor boys could receive intellectual, religious, and moral education. This is the Œuvre de Saint-Nicolas. In the beginning only seven children were in the establishment, but it soon developed and was transferred from its poor quarters in the Rue de la Banque to a better location in the Rue Vaugirard. At the time of the Revolution of 1830, the first two institutions disappeared, but the Institution Saint-Nicolas remained. It had many difficulties to overcome; the resources were insufficient; proper instructors could not always be found; suspicions of political intrigues were entertained by the Government, which led to various vexatious inquiries. De Bervanger succeeded in overcoming all obstacles, and the institution became more and more prosperous. Soon a branch establishment was opened at Aix-la-Chapelle, under the direction of De Bervanger turned over the institution to Cardinal Morlot, Archbishop of Paris, who gave the direction of it to the Christian Brothers. It has since been enlarged. De Bervanger wrote the "Règle de l'Œuvre de Saint-Nicolas" (1853).

Dictionnaire de pédagogie (Paris, 1887), i, pt. i, 180.

C. A. DUBRAY.

BESANÇON (Vesontio), Archidiocese of, coextensive with the departments of Doubs, Haute-Saône, and the district of Belfort. From the 12th to the 18th century, Besançon was a military city, and was divided into three distinct districts: one around the citadel, one around the church of St. Claude, and one around the church of the Same. The Concordat of 1802 gave the Diocese of Besançon to all those districts which, in 1822, constituted the Diocese of St.-Claude. In 1806, Besançon was given jurisdiction over the three parishes of the principality of Neuchâtel (Switzerland) which fell under the control of the See of Lauzanne in 1814. In 1870, after the annexation of Alsace-Lorraine by Germany, the district of Belfort was withdrawn from the See of Strasbourg and attached to that of Besançon. The metropolitan jurisdiction of Besançon also underwent singular changes. In 1802 its suffragans were the Bishops of Dijon, Autun, Mâcon, Nancy, and Strasbourg. Under the Restoration, Dijon and Autun were withdrawn from Besançon, the latter becoming the metropolitan of the dioceses of Neuchâtel and Besançon, which was called Besançon-Lorraine. In 1857, after the German conquest, the churches of Mâcon and Strasbourg were under the direct control of the Holy See.

Local legends attribute the evangelization of Besançon to St. Ferroli and Ferjeux, sent thither by St. Ildefonsus. Ducommun has proved that these legends belong to a chain of narratives forged in the first half of the sixth century and of which the "passion" of St. Benignus of Dijon was the initial link. The catalogue of the early bishops of Besançon is doubtless not correct, but it gives an idea of the care of the sick in their homes at Besançon and in Vesoul. 1 house of retreat in Besançon and 1 in Vesoul; 1 house of correction in Besançon and 1 in Vesoul; 2 hospitals and hospices in Besançon and 1 in Vesoul. Part of the Cathedral of St. Jean at Besançon were erected as early as the eleventh century

In 1899 the following institutions were to be found in the diocese: 15 infant schools in Besançon and 35 in Vesoul; 1 deaf-mute institute in Besançon; 3 girls' orphanages in Besançon and 3 in Vesoul; 2 protectorates in Besançon; 1 house of correction in Besançon and 1 in Vesoul; 2 hospitals and hospices in Besançon and 1 in Vesoul; 2 orphanages for the care of the sick in their homes at Besançon and 8 in Vesoul; 1 house of retreat in Besançon and 1 in Vesoul.
Vesoul; 3 homes for the aged in Besançon; 1 infant asylum, 1 boys' orphanage, and 4 gratuitous industrial schools in Vesoul, all conducted by nuns; 1 deaf-mute institute and 1 boys' orphanage in Besançon, conducted by brothers.

In 1900 the province had the following religious orders, Mén: Capuchins, Eudistes, and Marianists at Besançon, and Trappists at Notre Dame de la Grâce de Dieu. Women (purely local orders): Sisters of Charity of Besançon, nursing and teaching, founded in 1769; Sisters of the Divine Providence of France-le-Château, teaching, founded in 1750; the Daughters of St. James, nursing sisters with a mother-house at Besançon. At the close of 1905 the Archdiocese of Besançon had 657,773 inhabitants, 60 parishes, 814 successor parishes (mission churches), and 97 curates.

Gallicia christiana (1860), XV, 1, 322; Instrumenta, 1-124; Richard, Histoire des diocèses de Besançon et de Saint-Clairs (Besançon, 1847-50); Bertrand, Histoire de l'évêché de Besançon et du département du Doubs (Besançon, 1892); Bédir, Etude sur l'évêque holographe du cardinal Mabieu, archevêque de Besançon (Besançon, 1890); Duchêne, Pèges épiscopaux, 1; Chavallier, Topobd., 336-334.

GEORGES GOYAU.

Besançon, Jerome Lamy, O.S.B., b. at Lins, 1726; d. 1781. For twenty-four years he taught Scripture at Salzburg. He published the following works: "Introductio in Vetus Testamentum" (2 vols., Stett., 1765); "Introductio in sancta quatuor Evangelia" (Venice, 1775); "Introductio in Acta Apostolorum" (Paris, 1775); "Passio et Myrrha", a commentary on the Passion (Stett., 1766); "Die sieben Bupegmale" (Salzburg, 1776).

PARROT in V., Dict. de la Bible.

JOHN CORBETT.

Bescheher, Theodore, Jesuit missionary in Canada, b. at Châlons-sur-Marne, 25 May, 1630; d. at Reims, 4 February, 1677. He entered the Society of Jesus at Nancy, 24 May, 1647, studied philosophy and theology at Pont-à-Mousson, taught humanities and rhetoric for seven years in various colleges in France, and after his third year of probation came to Canada in 1665. From Quebec, where he was stationed for three years after his arrival, he set out on an embassy to the Mohawks, and to the Dutch at Albany, but a sudden outbreak of Indian hostilities compelled him to turn back. In 1670-71, however, he made a missionary journey to the Iroquois. In 1672, he returned to Quebec, becoming superior of the Canadian missions in 1680, and retaining that office until at least 1687. A year later he was prefect of classes in the College of Quebec and in 1689 returned to France, where he acted as procurator for the missions. During his stay in Canada he was for sixteen years the spiritual director of the Ursulines at Quebec, and their annals describe him as "a man of distinguished merit and a director of great wisdom and experience.

EDWARD P. SPILLANE.

Beschi, Costanzo Giuseppe, b. at Castiglione in the Venetian Republic, 1680; d. at Manapar c. 1746. He entered the Society of Jesus in 1698, and went to the Madura mission in 1710, during nearly forty years of apostolic life proving himself a worthy successor to the founder of the Madura Mission, the celebrated Roberto de' Nobili. Once he barely escaped suffering death for the Christian religion. Though primarily a missionary and always at the head of a district, he is better known as one of the classical writers of Tamil literature. No sooner had he arrived in India than he began the study of Tamil, skrit, Telugu, and especially of Tamil. Thanks to his genius and indefatigable industry, he mastered the Tamil grammar in five years, and for the next twenty years made so thorough a study of the whole field of Tamil literature that the native men of letters bowed to him as their master. He composed a grammar of High Tamil, and was the first to write a grammar of Low Tamil (the common dialect) which still remains the foundation of scientific Tamil philology. He is also the compiler of several Tamil dictionaries, among them the quadruple lexicon containing words, synonyms, categories of words and rhymes; Tamil-Latin and Latin-Tamil-Portuguese dictionary. He wrote several ascetical books in Tamil, especially doctrinal instructions for the use of the native catechists; also controversial tracts against the Danish Lutheran missionaries who sought to gain a foothold in the Madura Mission. Beschi is, however, best known as a Tamil poet. In a poem of 1100 stanzas, "Kittāri ammalle saritiram", he sings the praises of the martyr St. Quiteria (not St. Catherine, as some writers have mistakenly asserted). His greatest poetical work is the "Tēmbāvani" ("The Unfading Garland"), one of the Tamil classics. This Tamil "Divina Commedia" is divided into thirty-six cantos, containing 3,615 stanzas. "It is", says Baumgartner, "the noblest epic poem in honour of St. Joseph written in any language, East or West. Its languages of Southern India Beschi produced a poem which for richness and beauty of language, for easy elegance of metre, popular treatment, and true poetical conception and execution, is the peer of the native classics; in nobility of thought and subject-matter, it is as superior to them as the harmonious civilization of Christianity rises above the confused philosophical dreams and ridiculous fables of idolatry." Another poem "Paramartaguru Kadey" (the adventure of the Guru Paramarta), in which he delightfully satire on the foolish and conceited ignorance of the native guru (heavenly teachers), is the most entertaining book in Tamil literature, bubbling over with wit and humour. Beschi himself translated it into Latin. It has also been translated into English, French, German, Italian, and Canarese. Grasse and Babington, editors respectively of the German and English translations, seem to be ignorant both of Beschi's authorship of the book and of his great importance in the literature of the Iroquois, and in the mention of his name. The tradition that he was at one time prime minister to a native raja is not sufficiently authenticated. In 1744 he was rector of the Mission of Manapar, where he died. His monastery lies to this day at Indore, in the State of Indore, Sommervogel, Bibliothèque de la c. de J., I, col. 1402-09, s. v.; Bertrand, La Mission du Madur, IV, 342-375; Jean Le Madur, (Tourai, 1864). I, 157-163, in "Vierteljahrsschrift für Buchartz, Geschichte der Welitliteratur" (Freiburg in Br., 1897), II, 345-384.

B. GILDER.

Bessleel, (Beslผล, in the shadow of God). I. The son of Uri and grandson of Hur of the tribe of Judah (Ex., xxxii, 2; xxvii, 30). II. A man of the tribe of Judah (Ex., i, 5). Being naturally endowed with a certain originality of invention, he was expressly called by God to be the chief architect of the tabernacle and its many appurtenances (Ex., xxxii, 2 sqq.). To him more entrusted the preparation of the holy incense, the priestly vestments, and finally the building of the ark and of the furniture for court and tabernacle. Special Divine gifts were also given to him and his assistants, especially Ooliab, for the proper execution of their office (Ex., xxxi, 3-6; xxv, 35-36; xxxvi, 1).

II. One of the sons of Phahath-Moab who married a foreigner in the days of Esdras (I Esdras, x, 30).

F. X. E. ALBERT.

Besoigne, Jerôme, a Jansenist writer, b. at Paris,
1688; d. 1763. Ordained in 1715, he received the doctorate of the Sorbonne three years later. He was also assistant principal of the College of Plessis, but his defence of Jansenism and his opposition to the Bull "Unigenitus" obliged him to resign the post. In 1729, the Sorbonne erased him from the list of Doctors, and in 1731, he was exiled from Paris. During the following year he was allowed to return. He wrote a "History of the Abbey of Port Royal" (6 vols.), and "Lives of the Four Bishops engaged in the case of Port Royal". He also wrote a two works on Scripture: "Concorde des livres de la Sagesse" (Paris, 1737), reprinted in Migne's "Cursus Completus" (XVIII) and "Morale des Apôtres ou concorde des épîtres de saint Paul et des épîtres canoniques du N. T." (Paris, 1747) on the Gospels, with a list of his Jansenistic writings; "Rer. in Dict. de la Bible."

JOHN CORBET.

Besoldus, Christopher, a German jurist and publicist, b. of Protestant parents in 1577 at Tübingen, Württemberg; d. 15 September, 1638 at Ingolstadt, Bavaria. He studied jurisprudence and graduated as Doctor of Law in 1598; and in 1610 became a canon of Carlstadt. Talented in his profession, he was held in high regard as a teacher, and his counsel was frequently sought in juridical questions by the civil administration. His studies extended beyond his specialty; he acquired the knowledge of nine languages and studied the writings of the Fathers, and of the medieval mystics. His inclination towards the Catholic religion grew with his knowledge of it. He was publicly converted at Heilbronn in 1635. Two years later, he accepted the chair of Roman Law at the University of Ingolstadt. He was considering the offering of a professorship at the University of Bologna, tendered him by Pope Urban VIII, when he died. On his death-bed he conjured his wife to embrace the Catholic faith; three months later she was received into the Church with her eight-year-old daughter. The nobleness of character and erudition of Besoldus have been recognized even by his opponents, although an attempt was made to ascribe his conversion to interester motives. His works are very numerous. His publication of three volumes of dogmatic titles and seven of homilies were given credit, because their contents tended to prove that the immediate dependency of the Würtemberg monasteries on the Empire (Reichsimmunitätsleit) implied for the local dukes the obligation of restoring the confiscated religious property. There is effective evidence of the great regard in which he held the Greek scholar. In 1449 he made him Bishop of Ulazzara and in the same year conferred on him the suburbanicarian See of Sabina, for which that of Frascati was shortly after substituted. In the following year he was sent as papal legate to Bologna, a city torn by constant factional quarrels. In the Brief of appointment of 26 February, 1450, the pope says he is sending Besoldus tamquam angelum pacis, and expresses the hope that with his experience and presence he may be able to govern the city in peace.

Bessarion, Johannes (or Basilius), Cardinal, b. at Trebizond, 1389, or according to others, 1395, but most probably in 1403; d. at Ravenna 18 November, 1472. He pursued the Scriptural studies of his predecessors, and as a consequence he wrote on the history of the causes of the Thirty Years War. "Ueber die Wiederaufnahme der Katholischen Kirche an allem Welt und der Katholischen Kirche in der Zeit der Reformationskriege" (Stuttgart, 1867); "Der Staat der Kirche in den Weltgefechten" (1868), 1, 432 sqq.; STROMER-DREY in Kirchenlex., II, 526-528.

N. A. WEBER.
stringent legislation he sought to curb immediate liberties; if he reigned and received many of the city, among them that of San Luca. By his prudent and far-seeing administration and his absolute impartiality he won the confidence of the citizens of Bologna, so that on his departure they honoured his memory in an inscription; and ever afterwards, in the nobility and in the people, in the Holy See, they had recourse to his intervention.

While Bessarion was legate in Bologna, Cardinal Stefano Porcaro was in banishment in that city, being assigned one hundred ducats in addition to the annual pension of three hundred for the support of his apostolic see. As the pope, Porcaro succeeded in eluding Bessarion’s vigilance and escaping to Rome. Bessarion did not delay in apprising the pope of his flight. The rest is well known. In 1453 Nicholas V died; and in the conclusion following his death, Bessarion was all but chosen to succeed him; however, Calixtus III was finally elected. Constantine had just fallen into the hands of the Turks and the Byzantine Empire had been destroyed. Thereupon Bessarion used all his influence with Francesco Foscari, the Doge of Venice, as with the new pope, to persuade them to take up the offensive against the invading barbarians. Not confining his efforts to words, at the cost of heavy pecuniary sacrifices he furthered the cause of the crusade. His zeal was still more prominent in his election as Pope Pius II in 1458, and in a special manner to him. In the congress of Mantua, convened by the pope in 1459 for the purpose of forming a league of all Christian princes against the Turks, Bessarion took a most active part, not justified, however, by results. The love of his native land impelled him to accept the commission given him by the pope to attend two German diets held the following year, one on the 2nd of March at Nuremberg, the other on the 25th of the same month at Worms, each of which, however, had any practical result. At the command of the pope he went to Vienna to induce the emperor to assist with arms and supplies Matthias Corvinus, the young King of Hungary. After a long wait the German leaders, 17 September, asked for another delay, and only the express wish of Pius II kept Bessarion in Germany for a whole year, pleading the cause of the Christians of the Orient. Internal discord among the German leaders prevented them from reaching any decision concerning the crusade, and Bessarion returned they were dissuaded, but they rewarded him for his labours the pope bestowed on him the commendatory Abbey of Grotta-Ferrata, a lay benefice, which became a centre of learned pursuits. Shortly afterwards, on the death of Cardinal Icardo, metropolitan of Kiew and Patriarch of Constantinople, Bessarion received the patriarchal title.

In 1463 Pius II once more sent him to Venice to win that republic over to the cause of the crusade which the pope, on his own initiative, wished to organize. Long, serious discussions ensued, and at last, in September of the same year, the republic signed a treaty of alliance with Matthias Corvinus, and on 20 October the crusade was solemnly proclaimed. The results hoped for, however, were not entirely achieved. During the pontificate of Paul II who continued the crusade, Bessarion withdrew from active affairs and devoted himself entirely to study, cultivating the friendship of many Greek and Italian scientists then in Rome, and engaging in learned discussions with them. Thus he won the title of Latinate. In his hospital founded in 1470 when Paul II desired to organize a new crusade, Bessarion wrote the letter “De Bello Turcis iterendo”. Sextus IV, who approved the plans of his predecessor, sent Bessarion once more as legate to the King of France, the Duke of Burgundy, and the King of England to settle the discord which had arisen between the first two, and to induce the last to mediate in the great controversy against the enemy of Christianity. On 20 April, 1472, he left Rome—but was received in an unfriendly manner both in Burgundy and at Paris so that he was forced to return to report the complete failure of his mission. The disappointment, the discomfiture of travelling, and his great aversion to have on his strength. At Ravenna he was obliged to interrupt his journey; there his death occurred at the Abbey of St. John the Evangelist, 18 November, 1472. His body was taken to Rome and interred in a tomb which had been ordered at the convent of the Conventual Minorites, close by the Basilica of the Twelve Holy Apostles. A simple sarcophagus, on which is inscribed a Greek distich of his own composition, contains his remains.

All the aspirations of Bessarion, which was more than great, were unique, were absorbed by three ideas: the union of the Oriental Church with the Latin, the rescue of Greek lands from the Musulman yoke, and the triumph of classic literature and philosophy, especially the Greek. If the first two was only partly achieved in a way, temporary, the third was certainly fulfilled to a more complete degree than perhaps Bessarion himself had dared hope. His labours in that direction had lasting success. By his translations of Xenophon’s “Memorabilia”, Aristotle’s “Politics” and “Nicomachean Ethics”, he paved the way for a more exact knowledge of the real thought of the Stagirite. His part in the reconciliation of Platonism and Aristotelianism has already been mentioned. In this contest of intelligence, he wrote the works “In eulogiumum Platonis” against George of Trebisond, who in his translation of the Laws of Plato had sharply criticised their author, exalting Aristotle instead. In the fifth book of his work, Bessarion, in turn, enumerates the faults of translation and the errors in the commentary of George. At a tremendous outlay, he gathered together a library of eight hundred codices of Greek MSS., and still at his own expense had many others copied by men of letters. After 1464 he gave these treasures to the Republic of Venice with which he had always been in the greatest sympathy. These codices formed the nucleus of the famous “Bibliotheca Sancti Marii”.

The greater part of Bessarion’s works are to be found in P. PLAT. CLXI. Concerning Bessarion. At BLANCHET, De vita et rebus passis Bessarione (Rome, 1777); WOLFG. V. GÖRTZ, Bessarioni biographiae et quaedam a cathedrae archiepiscopi Jena (Jena, 1874); VASTR. LE CARD. B. (Paris, 1878); SADOVY, Bessarion de nicèse au conseil de Ferrare (Florence and St. Petersburg, 1880); BOCHOL, Bessarion (Leipzig, 1897). U. BENIGNI.

Bessel, Johann Franz (in religion Gottfried), Benedictine, abbot, and historian, b. 5 September, 1672, at Buchen, in the Grand-duchy of Baden; d. at Göttweig, 22 January, 1749. He made his course in the humanities at Aschaffenburg, Würzburg, and Bamberg, and in 1690 entered the University of Salzburg, conducted by the Benedictines, where he specialized in philosophy, also attending lectures on theology and jurisprudence. Attracted by the learning and piety of his teachers, he resolved to become a religious and entered the Order at Göttweig on the Danube, Lower Austria, 15 June, 1692. After making his vows (21 June, 1693), he completed his theological course at Vienna, was ordained (21 March, 1696), and on 23 May was granted the degree of Doctor of Theology, being shortly afterwards appointed to the first Administration of the famous and Order in the monastery of Seligenstadt on the Main. In 1699 he was summoned to the electoral court of Mainz by Archbishop Lothar Franz von Schönborn, who immediately sent him to Rome to study the curial practices of the Rota in a two years’ course in law, he obtained the degree
of Doctor Juris Utriusque, and on his return to Mains (1703) he was appointed vicar-general and supreme judge of the whole archdiocese by his benefactor. He was also employed on various diplomatic missions, as, for instance, to the court of Brunswick-Wolfenbüttel in connexion with the conversion of Duke Anton Ulrich. He was twice married, firstly to Christiane, daughter of the first Abbot of Stuttgart; secondly to Agatha Christine, later the wife of Emperor Charles VI. He made three journeys to Rome to settle differences between the pope and the emperor concerning the limits of the province of Comacchio. On 7 February, 1714, he was elected Abbot of Göttingen, and from this time on he was a centre of learning. He added to the rare Hebrew, Greek, and Roman coins and bracteates collections of copper-plate engravings (over 20,000), minerals, shells, and paintings. By the expenditure of princely sums he enriched himself with thousands of volumes, chiefly on historical subjects, as well as in curiosities and MSS. Himself a thorough scholar, he encouraged among his religious all undertakings of a scientific or artistic nature. When the abbey was attacked by fire, he guarded it by judicious management, means sufficient to rebuild it on a more splendid scale.

Personally, Abbot Beste was a retiring religious, presenting to all a shining example of monastic piety and virtue. Besides several comparatively important works, such as "Margarita pretiosa", "Curiae Romanae praxis", and "Austrie ritus", he published (Vienna, 1732) two letters of St. Augustine to Opgatius, Bishop of Mileve, which had been until then unknown. He was erroneously credited with the authorship of "Quinquaginta Romano-catholicum fidem omnibus alias praefertendi motiva" (Mainz, 1708), a controversial work written originally in Latin, but translated into almost every European tongue. The work which brought him lasting renown and a place in the records of the science of history is entitled "Chronicon Gottwicense, tomus prodromus" (Tegernsee, 1732). Not, as might be thought, a history of the abbey, this single volume is a comprehensive work on German diplomatic, treating long and short letters and archives, original documentary evidence, diplomas of German emperors and kings, and inscriptions and seals, illustrated with maps and engravings on copper. The author also discusses medieval geography, as well as the royal palaces (Pfalzen) and the numerous districts of Germany. Great learning and clear critical acumen distinguish this work, which marked an epoch in the history of German diplomatics, and has served as the basis of all later works on the same subject.

**Beste, Henry-Digby, miscellaneous author, b. at Lincoln, England, 21 October, 1708; d. at Brighton, 23 March, 1740. He himself orize either Ch. Henry Beste, D.D., prebendary of Lincoln Cathedral. His mother, Magdalen, daughter and heiress of Kenelm Digby, Esq., of North Luffenham in Rutland, claimed to be the representative of the extinct male line of "Lich" or "Litchfield" or the "Mort Emphor" of the Mr. Esquire Digby. His father dying in 1732, Henry was sent two years later by his mother to Oxford. He became a commener of Magdalen College, where he took his B.A. degree in 1738 and his M.A. in 1781. He was afterwards elected to a fellowship, which he resigned when his mother petitioned for the return of his mother. In September, 1791, he took deacon's orders in the Anglican Church, and a little later retired to Lincoln, displaying great activity there as a preacher. Doubts about the spiritual authority of the Established Church sprang up in his mind, which were strengthened by intercourse with the Abbé Beaumont, then in charge of the small Catholic community at Lincoln. He received into the Catholic Church by Rev. Mr. Hodgson, Vicar-General of the London district, 26 May, 1798. In 1800, he married Sarah, daughter of Edward Sealy, Esq., and was the father of the well-known author, John Richard Digby Beste. His first book, "A Short Account of the Quakers," was briefly defended against the Philosophers and Republicans of France" (octavo, 1793), and in the same year a discourse on "Priestly Abolition" which was republished in 1874. It is interesting that this latter work anticipated some of the Tractarian arguments and met with the warm commendation of the chief members of the University of Oxford in 1794. After his conversion Beste was an occasional contributor to Catholic periodicals. He also travelled abroad and was in France in 1828 when he was inquired into by some account of the Conversion of the Author to the Catholic Faith" (octavo). Two years later he wrote a similar book on his stay in Italy. Ten years after his death appeared his last work, entitled "Poverty and the Baronet's Family, a Catholic Story" (12mo, 1846).

**EDWARD P. SPILLANE.**

**Bestiaries, medieval books on animals, in which the real or fabulous characteristics of actually existent or imaginary animals (such as the griffin, dragon, siren, unicorn, etc.) were figuratively treated as religious symbols of Christ, the devil, the virtues and vices. The origins of a symbolism of this character, taken from nature, are to be sought in antiquity and above all in the ancient East. Eastern literature, as well as the Greco-Roman literature dependent on it, ascribed to certain animals, whether fabulous or real (the lion, the tiger, the snake, the eagle), a certain connexion with the animal or the god, and made a corresponding religious use of them. This is exemplified in the Oriental and especially Egyptian worship of animals. Many reminiscences of this animal symbolism are encountered in the Old Testament. From the earliest period Christian fancy interpreted these animals according to the symbolism of the Old Testament, and so depicted them in Christian art. Thus, for example, in the Catacombs some are symbolic of what is good, e. g. the lamb or sheep representing the soul or the believer, the dove the soul, the phoenix Christ or immortality, and the peacock immortality; others symbolic of what is bad, e. g. the serpent representing the devil; still others, especially in later times, are to be interpreted in various senses; thus the lion may be assimilated either to Christ or the devil. An early compilation of such allegorical interpretations of the nature of plants and animals, made up partly from antique materials, is still extant in the "Physiologus", the much copied and much used "natural history" of the second century. In the later bestiaries. Similar compilations are the "Libri figuratus" of Eucherius, some parts of the "Libri origium" of Idaire, parts of the writings of Bede and Rabanus, and the treatise long ascribed to the second-century Melito of Sardes, and known as "Clavis" or "The Key", which appeared in the present form towards the eleventh century. Later
Bestiaries obtained much valuable material from the "Libri moralis" of Gregory the Great. The medieval bestiaries are more or less exact translations or imitations of the "Physiologus"; e.g., the bestiary of St. Cuthbert, in the 11th Free by T. Wright (London, 1841), and two bestiaries of the thirteenth century, one by Pierre de Picardy, the other by Guillaume of Normandy published by Hippeau (Caen, 1852). The bestiary appears in its complete development in Richard de Fournival's "Bestiaire d'Amour," written in the fourteenth century and published by Hippeau (Paris, 1860), in the treatise "De animalibus" attributed to Bl. Albertus Magnus, in the "Tractatus de bestiis et aliis rebus," supposed to have been written by Hugo of St. Victor, above all in the "Speculum naturae" of Vincent of Beauvais.

The influence of the symbolism of the bestiaries is plainly seen in the various forms of medieval intellectual life. It was evident in the sermon and also in the liturgy as shown by the symbolic use of the bee in the blessing of Easter candles and the blessing of wine on the feast of St. John as a preventive of poisoning from snake-bites. The metrical animal fables, particularly, exhibit the widespread taste for the philosophy of the bestiary. The influence of the symbolism of the bestiaries is still more manifest in medieval scripture, both Romanesque and Gothic. Though the use of animal subjects in the oldest Irish and Merovingian art has apparently no deeper aim than the enjoyment of grotesque forms, yet animal emblem appears from the earliest date as an element of Romanesque art, especially in miniature and sculpture, in both of which it often exhibits a close dependence on the bestiaries. (See ANIMALS IN CHRISTIAN ART; SYMBOLOPERII.)

Joseph Bauer.

Betanzos, Fray Domingo, a Dominican missionary, d. at Valladolid, Sept., 1549. One of the most illustrious Dominicans of the sixteenth century in America. A native of Leon in Spain, he first studied jurisprudence at Salamanca, then became a Benedictine and lived as a hermit on the Island of Ponza for five years. He then joined the Dominicans who had established themselves on the Island of Hispaniola (Santo Domingo) in 1540. Betanzos went there four years later. In 1516 he, with another Dominican, wrote a violent letter to Las Casas on the rapid disappearance of the Indians of the Antilles, indulging in the grossest exaggerations about the numbers of the aboriginal population (which they had no means of knowing, even approximately), and the excesses purported to have been committed by the Spaniards. In 1526, Betanzos went to Mexico and founded the Dominican province of Santo de Mexico. Hardly had it been established when Fray Tomás de Berlanga set forth a claim to it belonging to his newly founded province of Santa Cruz with the provincial seat at Santo Domingo. Betanzos went to Spain in 1531 and obtained from the Holy See the independence of his foundation. He also established the Dominican Province of San Ildefonso, which included the whole country of As, Mexico in 1535, at once organized missions among three Indian linguistic stocks: Nahuatl (Aztec, or Mexican), Mixteco, and Zapoteco. He returned to Spain in 1549, and died in September of the same year at Valladolid. The Bishop of Guatemala was tendered to Betanzos, but he declined it. While, in his letter of 1516, he acquiesced in the extreme views of his brethren of the order on the question of Indian policy, in the "Opinion" (Parcer) given by him in 1541, and approximately repeated in 1543, just as the unfortunate "New Laws" regarding the Indies were to be promulgated under the influence of Las Casas, he assumed an entirely different attitude. He gave his opinion in a sense diametrically opposed to the measures Las Casas pressed upon the Government. This is significant, coming from a member of the same order and of almost equal rank. Betanzos was an intimate friend of the most distinguished Franciscans of Mexico—Archbishop Zumárraga, Motolinia, and others, who did not harmonize with Las Casas in his extreme tendencies. He is credited with the authorship of an addition to the "Doctrina" of Fray Pedro de Córdova which appeared in 1544, and possibly in 1560, but this is not yet fully established.

Ycazaloca, Colección de documentos para la Historia de México (Mexico, 1868), 1.; Domingo de Betanzos, Parcer: Documentos inéditos de las Indias: VII; Lista de los documentos de las Casas: Mendieta, Historia eclesiástica indiana, 1500-1599 (Mexico, 1870); Veit, Historia de la Provincia de San Vicente de Chiquito y Guatemala en el Orden de Santo Domingo (Madrid, 1872); the same book is also under the title of "El libro de las Indias Occidentales y particular de la gobernación de Chiquitos y Guatemala: Gil González Dávila, Testamento eclesiástico de la pri- mera visita de las Indias Occidentales," in Mexico (1649); Diccionario de Historia y Geografía (Madrid, 1865), 1.

Ad. F. Bandelier.

Betanzos, Fray Pedro de, a Franciscan missionary, b. at Betanzos in Galicia; d. at Chomes, Nicaragua, 1570. He was one of the earliest Franciscan missionaries to Guatemala, and founder of the Church in Nicaragua. He is said to have acquired, in eight years, the use of fourteen Indian languages, including the Nahuatl. It is certain that he possessed an extraordinary gift for linguistics since in one year he mastered the three principal languages of Central America: Quiché, Kakchiquel, and Zutuhli, speaking them as perfectly as the Indians themselves. It was during this time, and on account of his writings, that the controversy began between the Franciscans and Dominicans over the use of the Indian term "Caborvi." He insisted that they were not synonymous and always wrote "Dios," even in Indian idioms. The Dominicans on the other hand kept up the native term "Caborvi." The Franciscans were right, since the aborigines had not a conception of monothelitism, which points to "Caborvi," but to a not a personal supreme Deity, but the spiritual essence which all Indians believe to pervade the world, localizing and individualizing at will; an animistic idea underlying Indian fetishism. Betanzos was one of the authors of the famous "Tesor de las Indias," and entitled, "Arte, Vocabulario y Doctrina Cristiana en Lengua de Guatemala." It is probably the book printed in Mexico previous to 1553 and ascribed to the "Franciscan Fathers," and also to Bishop Marroquín of Guatemala. No copy of it, however, is known to exist. It is the earliest work printed in any of the languages of Guatemala.

Casual mention of Fray Pedro de Betanzos is found in Ycazaloca, Colección de documentos para la Historia de México: in which an edition of the Colección y Doctrina is mentioned (Mexico, 1858); and in a reprint of (Guatemala, 1749). The title of the 1566 edition in Colección de documentos de los indios de Guatemala: of the 1737 print, Doctrina Cristiana en lengua de los indios del país, and while the former is in the Biblioteca Marroquín, the latter has for its authors Fray Juan de Torres and Fray Pedro de Betanzos. The biographical data are found in Hernández, Biblioteca, español-americanos, (Mexico, 1816), 1.; in who in turn obtained them from Vasquez, Crónica de la Provincia del Ilmo. Nombre de Jesus de San Vicente de Chiquito y Guatemala (Guatemala, 1714-16); Sotomayor, Monografía de autores, etc. (New York, 1881), copies Berin- thống, Historia de las lenguas indigenas de América, under the title of Las lenguas indígenas: Latinas, (London, 1858). On the controversy over the use of the word: "Dios" and "Caborvi", and in the book of the provincia de las Sierras de Chiquito y Guatemala (Madrid, 1619).

Ad. F. Bandelier.

Betanzos, Juan de.—Unfortunately very little is
known as yet of this official, who has left such valuable works on the Indian traditions and language of Peru. He was a Spaniard by birth and came to Peru at an early day. Whether or not he was still on the Island of Santo Domingo in 1539, as notary or scribe, is uncertain. He was at Cusco in 1542 and officiated as quasi-Interpreter at the investigation of Indian historical traditions ordered by Vaca de Castro. (See Pusz.) Even then he had acquired a solid acquaintance with the Quichua idiom. He married an Indian girl of the Inca tribe and composed the first catechism known to us in the Quichua language. The manuscript is now in the National Archives at Lima. In 1551 he finished his book entitled “Suma y Narración de los Incas &c” (dedicating it to the viceroy Antonio de Mendoza), one of the most important sources for ancient Peruvian history. Unfortunately only a part of this work is still known to exist. It embodies the earliest accounts of Indian traditions from Bolivia and extreme southern Peru, and as they were gathered by Betanzos within less than fifteen years after the landing of Pizarro, they can hardly be much tainted with contact with Europeans. Of the life of Betanzos, after 1551, practically nothing is known.

Betanzos, Suma y Narración de los Incas que los Indios llamaron Capacuna (1551, published by Jiménez de la Espada, Madrid, 1880); Espada, Tres Relaciones de Antigüedades peruanas (Madrid, 1878, introduction); García, El Orígen de los Incas (Father García owned the complete manuscript of Betanzos as late as 1907); Espada, Una Antigüedad peruana (Madrid, 1892). The report on the Inca oil bears the title “Llamaronis sobre la Descendencia y Gobierno de los Incas, and is dated 1542; Bandelier, Aborigenal Myths and Traditions concerning the Island of Tilcaza (1804, Am. Anthropologist, VI, No. 2); Himes, The Cross of Caravaca (ibid., VI, No. 5); Mendiburu, Diccionario, etc. (Lima, 1904), II.

**Bethabara.** See Bethany beyond the Jordan.

**Bethany (Be'asha),** a village of Palestine, fifteen furlongs, or one mile and three-quarters, east of Jerusalem, at the base of the south-eastern slope which they suppose to have been at some distance from the house of Martha and Mary in the village. Zanocchia (La Palestine d‘aujourd‘hui, 1899, I, 445 sq.) places the site of the ancient village of Bethany higher up on the south-eastern slope of the Mount of Olives, not far from the accepted site of Bethphage, and near that of the Ascension. It is quite certain that the present village formed about the traditional tomb of Lazarus, which is in a cave in the village. The identification of this cave as the tomb of Lazarus is merely possible; it has no strong intrinsic or extrinsic authority. The site of the ancient village may not precisely coincide with the present one, but there is every reason to believe that it was in this general location. St. Jerome testifies: “Bethany is a village at the second milestone from Aelia (Jerusalem), on the slope of the Mount of Olives, where the Saviour raised Lazarus to life, to which event the church now there bears witness” (Onom. ed. Lagarde 108, 3).

In the early ages this church was called the “La
The reading “Bethabara” came into the codices on the authority of Origen.

A. E. BRENN.

Betharan, a city of the Amorrites in the valley-plain east of the Jordan, about twelve miles from Jericho (Num., xxxi, 36; Jos., xii, 27). It was re-built by the tribe of Gad and later fortified by Herod Antipas, who named it Livias in honour of the wife of Augustus. As she was later called Julia, Livias perhaps speaks of the city as Julias. Having been burnt at the fall of Jerusalem, it was restored by the Christians and became a bishopric. The site is identified by some with Tell el Rameh, six miles east of the Jordan, by others with Tell Tama.

Bethdaghan, name of two cities in Palestine. (1) A city (Jos., xv, 41) of the tribe of Judah, “in the plains,” that is, the territory below Joppa between the mountains and the Mediterranean. Its site is uncertain. (2) A city (Jos., xix, 27) of Aser near Zebulun, supposed to be Tell el-Ouk, south-east of Afula.

For references and conjectures see HAGEN, Lex. Biblioth., s. v.

JOHN CORBETT.

Bethel (בְּתֵל, “house of God”), an ancient Canaanitish town, twelve miles north of Jerusalem, not far from Silo on the way to Sichem. The primitive name was Luz. Abram twice offered sacrifice east of Bethel (Gen., xii, 8; xiii, 3). In these passages the name of Bethel is used by anticipation, as it was given to the town by Jacob after his vision (Gen., xxvii, 19). When the Israelites entered the promised land, Bethel was allotted to the tribe of Benjamin, but it was taken and occupied by the Ephraimites (Judges, i, 22–26). It was a place of importance in the sub-historic period. Here the Israelites in the days of the Judges were wont to consult the Lord (Judges, xx, 18, 26; xxxi, 2; the phrase “in Silo” added in these texts by the Vulgate is a mistake) and the Ark of the Covenant was probably here for a time. Samuel was wont to judge in Bethel every year. After the division of the kingdom, Jeroboam placed the seat of the golden calf and introduced the Egyptian worship of Apis. This continued until Israel was led captive to Assyria (IV K., x, 29) and was frequently denounced by the Prophets. Osee prophesied Amos. Shortly before his assumption, Eilias visited Bethel, where there was a school of prophets (IV K., ii, 2, 3); the boys from the town mocked Eiliseus on his return and were destroyed by bears (ibid., 28). One of the persons who had been carried away captive was allowed to return somewhat later and dwelt in Bethel to teach the people (IV K., xvii, 28). Great confusion of idolatrous worship sprung up, until Josias finally destroyed the altar and the high place there (IV K., xxiii, 15). After the Captivity, the Benjaminites returned to Bethel. In the time of the Maccabees, it was fortified by Bucchides. There is no mention of Bethel in the New Testament, but Josephus records that it was taken by Vespasian (Bell. Jud., IV, ix, 9). Eusebius mentions the place as a city returned to Bethel. In the time of the Maccabees, it was fortified by Bucchides. There is no mention of Bethel in the New Testament, but Josephus records that it was taken by Vespasian (Bell. Jud., IV, ix, 9). Eusebius mentions the place as a city.

JOHN CORBETT.

Bethlehem, a titular see of Palestine. The early name of the city was Ephraata; afterwards Bethlehem.
VIEW OF BETHLEHEM
INTERIOR OF THE CHURCH OF THE NATIVITY, BETHLEHEM
Bethlehem.—The old Hebrew name beth lehem, meaning "house of bread", has survived till the present day. In its Arabic form, however, bêt lahám, it means "house of meat". Several scholars (Smith, Hist. Geog. of the Holy Land, 1906, 318. n. 2) hold that the name is connected with Lakhmu, one of the divinities in the Babylonian Creation myth and that Bethlehem was a sacred shrine of that god in ancient times. This is possible, but there is no actual evidence in favour of the conjecture. Two cities of the name are known from Sacred Scripture: I. Bethle-
eme is mentioned in Jos., xix, 15, as one of the twelve cities belonging to the tribe of Zabulon. It is but a small town, poorly built, and of no great importance (Buhl, Geog. des alten Palästina, 1896, 215), a little less than seven miles south-west of Sapphöris (Saffürteh) and seven miles north-west of Nazareth, the home of Our Lord. Critics do not agree among themselves whether the Bethlehem described in Judges, xii, 5, 10, as the home of Abesan (Ibzan), one of the minor judges, is the same as that of Jos., xix, 15, or Bethlehem of Juda. A large number if not the majority of modern commentators, are in favour of Bethlehem of Zabulon. But ancient tradition (Josephus, Antiq., V, vii, 13; cf. also Moore, Judges, Int. Crit. Com.) made Abesan spring from Bethlehem of Juda and the view is ably defended by Father Lagrange in his commentary (Smith, op. cit.; Hogg, Encyc. Bib., IV, 5389). In any case the importance of that city was never great. But the efforts of some modern critics have made it more famous. Unable to accept as historical the narratives of Our Lord's birth in Bethlehem of Juda, these scholars would place the Nativity in Bethlehem of Zabulon, referred to in the Talmud (Megilla, 70 a) as Bethlehem seriyah, which is regarded as equivalent to nöörîyah, i. e. Bethlehem of Nazareth (of Galilee), a certainly remarkable combination of two names so well known from the Gospels (Réville, Jésus de Nazareth, 2nd ed., Paris, 1906, I, 360).

II. Bethlehem of Judæa [so the Greek text of Matt., ii, 1, erroneously corrected by St. Jerome to Bethlehem of Juda, thinking that the Evangelist had in his original text conformed to the Old Testament usage (Judges, xvii, 7, xix, 1; I Kings (Sam.), xvii, 12)], is much more celebrated than its northern namesake as the birthplace of David, and above all, of Our Lord. The city, which numbers now about 10,000 inhabitants, almost exclusively Christians, is situated five miles south of Jerusalem at a very short distance from the highroad from Jerusalem to Hebron, in the midst of a most beautiful country (Buhl, op. cit., 19), which contrasts favourably with the neighbourhood of...
Bethlehem

Jerusalem. At an altitude of 2,350 feet it spreads out between the Wadi el Hrobe in the North and "the Wall," the line of the ancient city of David, visible in the southeast, a detail to be remembered in reading the beautiful story of Ruth the Moabitess, the scene of which is Bethlehem (Smith, op. cit.). The main resources of Bethlehem are agriculture and the production of vegetables; the city is also the market-place of the peasants and bedouins of the neighbourhood.

According to Gen., xxxv, 16, 19; xlviii, 7, Bethlehem was associated with the patriarchal history. The sepulchre of Rachel, or Qubbet Râhil (Rachel's tomb), as it is called now, about one mile north of Bethlehem, still shown to the pilgrim and venerated by Christians, Mohammedans, and Jews, is referred to again in I Kings (Sam.), x, 2, and Matt., ii, 16-18; cf. Jer., xxxi, 15. As an examination of these passages shows, the tradition presents some obscurities, and critics question the correctness of the gloss (Gen., xxxv, 19) which identifies Ephratha with Bethlehem, supposing it the result of a confusion between Bethlehem-Ephratha (Ruth, iv, 11; Mich., y, 21); Bethel, and Bethlem, one of the places and another otherwise unknown, or assume two different traditions regarding Rachel's sepulchre. (cf. commentaries: Driver in Haast, "Dict. of the Bible", IV, 193; a; Buhl, op. cit., 156, 159; Bädeker-Benzinger, "Palastina und Syrien", 1904, 91.) Bethlehem is the scene of two events in the gospel, one in Judges 18, and another in the life of the Levite who went to Michus (xvii, 7 sqq.) and of the young woman (xix, 1 sqq.) whose death caused the expedition against the tribe of Benjamin. In the Old Testament, however, it is connected especially with the great King David (I Kings, xvi, 1 and passim), whose name is given to the three cisterns (Bi 'Ar Dâ 'ad), found north-west of the town, not far from the tomb of Rachel. A tradition not older than the end of the fifteenth century, according to Bädeker-Benzinger (p. 91), sees therein the cistern referred to in II Kings, xxiii, 14 sqq. and I Par. (Chron.), xi, 16 sqq. Later the city was fortified by Roboam (II Par., xi, 6), and I Esd. (Ezra), ii, 21 sqq. [cf. II Esd. (Nehem.), vii, 26] informs us of the return of 123 Bethlehmites from the Captivity.

In the New Testament, we have, with the exception of John, vii, 42, references to Bethlehem only in Matt., ii, and Luke, ii, whose narratives of the birth of the Saviour in the city of David have rendered it most dear to Christians. Many modern critics, however, reject the tradition of Bethlehem as the birthplace of Jesus (see thousands of Judah) (Schmidt, The Prophet of Nazareth, 1905, 246) by attacking the historical value of the Gospel narratives. Some place Our Lord's birth at Nazareth, called His xwvps in the Gospels (Mark, vi, 1, and parall.; cf. i, 9; ii, 24, etc.); this is done by almost all those who deny the historicity of the Infancy, endeavouring to explain our narratives as a legend arisen from the Jewish tradition that the Messiah had to be born in Bethlehem, occasions by Michael, y, 9 (1). (cf. Targum; also John, vii, 42; Strassu, Life of Christ, tr. Eliot, from the 4th Germ. edit., 1840, § 32, end, § 39; Usener in "Encyc. Bib.", iii, 3346-47; Schmidt, op. cit., 243, 246; Weiss in "Die Schriften des N. T."., Göttingen, 1906, i, 1, pp. 46, 221-223, 393-395.) Others more seldom give the explanation already mentioned.

This question, which is one of the larger problems connected with the narratives of Matt. and Luke, cannot be discussed here. [See besides the lives of Jesus and many of the Gospels. The first four Gospels, Matthew, Mark, Luke, and John, are the classical texts for the study of Jesus; they are the primary sources for the study of the early church and its development. The Gospels are written in Greek and are believed to have been written by inspired apostles or their immediate followers. The Gospels are divided into four books: Matthew, Mark, Luke, and John. The Gospels are known as the Synoptic Gospels because they share many similarities in their stories.]

Bethlehemites. —I. Military commanders. There were two military commanders in charge, or to Our Lady of Bethlehem, and the emperor of Bethlehemites. Mattathias, the father of the first, in his "Graeco-Harald, Bruxelles, 1849," in which he mentions that...
authorized them to open a house in a suburb of Cambridge (1257); but he leaves us in complete ignorance as to their founder, where they originated, and their history. We only know that their habit was similar to that of the Dominicans and that a red star, whose five rays resembled those of the Lamentation over the breast of their cape. This was in commemoration of the star that appeared to the Magi and led them to Bethlehem. Nothing further is known of this military order. There was an order of knights whose members wore a red star on their costume and who might have been called Bethlehemites because of having a house in Bethlehem at the time of the Crusades; this was the Military Order of Crusaders of the Red Star (Ordo militaris crucigerorum cum rubis stellis). They came from Palestine to Bohemia in 1217, and Blessed Agnes of Bohemia confided two hospitals to their charge. They have since remained in that country where they devote themselves to the care of the sick, to education, and to the various works of the ecclesiastical ministry.

After the taking of Constantinople by the Turks (1453), Pius II founded under the patronage of Our Lady of Bethlehem an order of knights for the defense of the Island of Lemnos which Cardinal Louis, Patriarch of Aquileia, had recaptured from Mohammedans. The island was to be used to hold the slave trắng that were to oppose the attacks of the Moslems by way of the Aegean Sea and the Hellespont. The order was composed of brother-knights and priests governed by an elective grand-master. The white costume worn by the members was decorated with a red cross and the rule prescribed for them was very similar to that of the Knights of St. John of Jerusalem. The pope installed this community 18 January, 1459, and, that their needs might be supplied, turned over to them the property and revenues of the Order of St. Lazarus of the Château des Bretons, of Bologna, of the Holy Sepulchre, of Santo Spirito in Sassia, of St. Mary of the Crossed Friars, and of St. James of Lucca, all of which were suppressed for this purpose. Pius II alluded in a Bull to this foundation and the bravery of its knights, but the second capture of Lemnos by the Turks rendered the institution useless. Thus the order of Our Lady of Bethlehem was suppressed almost as soon as founded and those orders whose hopes the pope had transmitted to it were re-established.

II. The hospitaler Bethlehemites, or Belemites, were founded by the Ven. Pedro de Betancourt. A descendant of the celebrated Juan de Betancourt, who with the Bethelites helped to conquer the Canary Islands for Henry III of Spain, Pedro was born at Villaflora on the Island of Teneriffe in 1619. From childhood he led a pious, austere life and in 1650 left family and country, thus carrying out his desire of going to the West Indies. During the往返 from year he reached Guatemala, the capital of New Spain, where he intended to prepare for the priesthood that later he might go forth and evangelize Japan. However, three years of unsuccessful study at a Jesuit college led him to abandon this plan and after holding the position of sacristan for a while in a church dedicated to the Blessed Virgin, he rented a house in a suburb of the city called Calvary, and there taught reading and catechism to poor children. But this charitable work did not provide an adequate revenue for his house.于是 he directed his efforts to the extension of the community and the formation of a mission in Ceylon and to the opening of an orphanage in the midst of the poor. After his return to America, this religious founded the Hospital of St. Francis Xavier in Mexico and those of Chacopoyas, Cajamarca, and Trujillo, going back to Spain in 1662 after the conquest of Guam. After a few years in Madrid, he was appointed at Lima in 1662 and was then establishing at Lima and afterwards solicited permission to establish them in Peru where they were very favourably received by the viceroys whom he had recommended them. Doctor Antoine d'Avila gave them the Hospital of Notre Dame du Carmel which he was then establishing at Lima and afterwards solicited the approval of the Holy See. In 1672 Brother Roderick de la Cruz obtained the confirmation of this establishment by the King of Spain and it was also through his efforts that the Congregation of the Capuchins was founded. One of these was soon undertaken by Brother Anthony of the Cross who sent two of his community to Peru where they were very favourably received by the viceroys whom he had recommended them. Doctor Antoine d'Avila gave them the Hospital of Notre Dame du Carmel which he was then establishing at Lima and afterwards solicited permission to establish them in Peru. In 1662 the King of Spain confirmed the establishment of the hospital of Lima and the Congregation of the Capuchins was founded. The Council of the Indies assigned the hospital of Lima an income of 3,000 crowns. The Bethlehemites, because of making only simple vows, remained under diocesan jurisdiction from which they were distinguished, however, by being exempt from the obligation that their congregation might be converted into a regular province. The Spanish court did not approve this plan and at first the Holy See was not
favourable to it, but due chiefly to the influence of Cardinal Mellini, former nuncio at Madrid, Roderick of the Cross at length overcame all difficulties and in the Bull of 26 March, 1657, Innocent XI authorised these religious to make the three solemn vows according to the rule of St. Augustine and to have a superior general, and granted them all the privileges of the Augustinian friars and convents. Later, Clement XI renewed this authorization and those favours, adding thereto the privileges of the mendicant orders, of the Regular Clerks, of the Ministers of the Sick, and of the Hospitalers of Charity of St. Hippolytus (1707).

Meanwhile the order was multiplying its foundations in Latin America and was established in Aréquipa, Cusco, Santiago de Cuba, Puebla, Guadalajara, Guayaquil, Dajaka, Vera Cruz, Havana, Santiago de Chile, Buenos Ayres, and Guatemala la Nueva. A school for poor children was connected with every hospital and the pious, devoted lives of these religious won then esteem and gratitude. They were especially admired during the plague of 1736, a fact unanimously acknowledged by the writers who describe the condition of Latin America in the eighteenth century. But this did not prevent their suppression, as well as that of all other religious, in 1826. At that time their superior-general resided in Mexico and the Bethlehemites were scattered throughout two provinces, that of Peru including twenty-two houses and that of New Spain, eleven. To the ordinary religious vows they added that of caring for the sick even at the risk of their own lives. In 1888 Brother Anthony of the Cross, with the help of a pious woman, Marie Anne del Gualdo, founded at Guatemala a community of Bethlehemite nuns and a hospital exclusively for women. These nuns were cloistered and observed the same rule as the men and they, too, were suppressed in 1820.

J. M. BESEK.

Bethsaida.—I. A Cytta, or perhaps two cities, on the shore of the Lake of Genesareth, the frequent scene of Christ’s preaching and miracles (Matt., xi, 21; Luke x, 21, 43); II. In the Vulgate, a Pool in Jerusalem, also called Bethsaida (John, v, 2).—III. A TITULAR SEE.

I. THE CYTTA. (Gr. βηθσαία; Aram. ביתה שְׁאָה, "house, or place, of fishing"). The old writers, up to the sixteenth century, knew of but one Bethsaida, though they do not seem to have always indicated the same site. Since then it has been a much debated question whether there were not two places of this name: one east of the Jordan; the other west, near Capharnaum. A Bethsaida, which the Teutarch Philo enlarged into a city and named Julias, after the daughter of Augustus, existed east of the river, near where it enters the lake (Josephus, Ant., XVIII, ii, 1; Bell. Jud., II, ix, 1; III, x, 7; Vita, 72). Near this Bethsaida took place the feeding of the five thousand, and (Luke, x, 11) the healing of the blind man (Mark, viii, 22). Whether another is to be admitted, depends on two questions on which the controversy mainly turns: whether Julias, though belonging politically to Gaulonitis, was connected with the region of Galilee (John, xii, 21) and whether, in Mark, vi, 45, and John, vi, 17, a direct crossing from the eastern to the western shore is intended. The negative view seems to be gaining ground. In the supposition of two Bethsaidas, the western would be the home of Peter, Andrew, and Philip (John, i, 44; xii, 21), and the Bethsaida of Matt., x, 21 and Luke, x, 13. Julias is identified by many with Tæll; but, as this is somewhat too far up the river to answer Josephus’s description, others prefer El-Araj, close to the shore, or Meə’diyyeh farther east. The partisans of a western Bethsaida are much divided on its site. Ain-Tibgha and Khân Minyeh are most favoured.

II. THE POOL. (Gr. βηθσαία, βηθσαίαν, βηθσαίδα.)—Bethsaida is supported by most Gr. MSS., still Bethatha may be the true reading and Bethesa a corruption, as Bethesa most probably is. Bethesa probably=אֱלֹהִי מִiblings (House of Mercy). The etymology of Bethatha is uncertain. This pool had five porches in which the sick lay "waiting for the moving of the waters" (John, v, 3) and most likely steps led down to it. Here the Saviour cured a man "that had been eight and thirty years under his infirmity". The Vulgate and most of the Fathers call it a “sheep pool” (παρακατ, probatios), but the Greek text of John, v, 2, is commonly un-

derstood to mean that it was situated near the sheep gate. This would place it north of the temple area. The early writers speak of it as a double pool, the fifth portico running between the two basins, but give no details as to its location. From the sixth to the thirteenth century, it is mentioned as being near the present church of St. Anne. Just west of this church an old double pool was discovered some years ago, which, is there is little doubt, the pool spoken of by medieval writers, and probably the old pool of Bethesa. Since the fourteenth century Birkit I-arm in, north-east of the temple area, is pointed out as Bethesa. Others prefer the Fountain of the Virgin (‘Ain Sitti Mariam, or ‘Ain Umm ed-Dereb) because of its intermittent flow, or the pool of Sloc, which, being fed by the preceding, shares its intermittency. Lastly, some advocate Hammâm esh-Shifâ (Bath of Health), west of the temple area, because of its name.

III. THE TITULAR SEE.—It is uncertain at what period Bethsaida, the former of the two cities (Julias) mentioned under I. became a titular see depending on Scythopolis. There was in the region of Nineveh another Bethsaida, with a Jacobite titular bishop in 1278.

I.—In favour of the hypothesis of two cities of the same name, ROBINSON, Bibl. Researches (London, 1856), II, 405; III, 388; ERLAND, Palæstina (Utrecht, 1714), 653, 669; GUILLAUME, (Paris, 1830), 1, 328; EWING in Nordens, Dict. of the Bible, VAN KASTEREN in Rev. Bibl., III, 65 sqq. Is
Bethshan ( Heb. בֵּית-שָׁם, בֵּית שָּׁם, "place of rest"), a city within Issachar, but assigned to Manasseh (Jos., xvii, 11; I Par., vii, 29); later Scythopolis, now the village Beisan, three miles west of the Jordan. Because of its strength the Israelites could not take it at the time of the conquest (Jos., xvii, 16; Judges, i, 27), and when the Philistines hung up the bodies of Saul and his three sons on its walls after the battle of Geboe (II Kings, xxi, 12), it was probably still in the hands of the Chanaanites. Under Solomon it was the centre of the tenth of the twelve districts, and the capital of its subdistrict (ibid., x, 26). About the beginning of the third century B.C. it was named Scythopolis, probably because Scythians had settled there. After paying tribute to the Ptolemies, it passed under Syrian rule in 198 B.C., and in 107 fell into the hands of John Hyrcanus. Pompey took it from Antipater and the Jews, and in 63 B.C. it was made a city of the first class and one of the chief towns of Decapolis. In Christian times it became an episcopal and later a metropolitan see.

BETHSHAN, James. See BEATON, James.

Betrothal (Lat. sponsalia), the giving of one's troth—that is, one's true faith or promise. Betrothal, in the Catholic Church, is a deliberate and free, mutual, true promise, externally expressed, of future marriage between determinate and fit persons. It is a promise, compact, or agreement—not merely an intention; and, like all contracts, it must be entered into with deliberation proportionate to the obligation which it begets; it must be free from force, substantial error, and grave fear. The promise given must be mutual; a promise on the part of one only, with acceptance by the other, does not constitute a contract. The contracts, must be true, or sincere, not feigned; it must be given with the intention of binding oneself, and this intention must be expressed verbally, by writing, or by action, in person or by proxy. Lastly, this contract, like matrimony, can exist only between two definite persons whose capacity is recognized by the Church; that is, between whom there is no matrimonial impediment, either as regards the licitness or validity of the contract. The betrothal is a promise of future marriage, and hence it differs from the marriage contract itself, which deals with that state as in the present.

F. BECHTEL.

BECHTEL, F.

BETROTHAL

Betrothals and Weddings.-Formal betrothals are not customary in the United States, or in English-speaking countries generally, as it is among certain nations, where the ceremony is sometimes solemn (before ecclesiastical witnesses) and sometimes private (made at home before the family or friends as witnesses). Among English-speaking peoples the betrothal, if it occurs, is generally without the presence of a third party. In Spain (S. C. C., 31 January, 1898; 11 April, 1903) and in Latin America (see text of Decretum, Pl. Amer., Lat., p. 259, in note 1) a betrothal compact is considered invalid by the Church unless written documents pass between the contracting parties. This practice obtains in other countries also, but its observance is not necessary to validate the agreement.

F. BECHTEL.
of the second effect. It is sometimes stated that a betrothal does not bind in English-speaking countries. This is incorrect, to say the least. There is no exception in the Anglo-Saxon law of the contracts arising from the gift of the bride, or to the impediment begotten thereby. Engagements very frequently, though not always, are rather proposals of marriage than promises as explained above, and in them an essential element of the betrothal is wanting (Sabetti, Theol. Mor., n. 838, qu. 30; Kenrick, Theol. Mor., nos. 23, 37).

Dissolution.—A betrothal may be dissolved (1) by the mutual and free consent of the contracting parties. (2) By a dimirient impediment, which subsequently arises between said parties. In this case the innocent party is released from his or her obligation, but not the one through whose fault the impediment arose. The latter may be held to the contract, if the impediment be such that the Church can dispense from it. (3) By a valid marriage entered into with a third person. (4) By protracted delay on the part of either of the contracting parties in fulfilling the agreement to marry, in which case the innocent party is released from his obligation. (5) By one of the contracting parties choosing a higher state of perfection, as for example by solemn profession in a religious order, by the reception of major orders, etc. (6) By any notable change in body or soul or worldly state of one of the parties, or of any grave or remote cause which if it had happened or been known before the betrothal would have prevented it. To these may be added the impossibility of contracting matrimony, and a dispensation granted by the pope for just causes.

Procurement for Breach of Promise.—In case of refusal to complete the contract by marriage an action before the diocesan court is permissible. Bishops, however, are counseled not ordinarily to enforce marriage in such cases, as generally it would prove unhappy. In English-speaking countries these matters are, as a rule, taken into the civil courts, where the only remedy is a breach-of-promise suit, the penalty being a fine. In the United States, before the civil law, betrothal has only the moral force of a mutual promise, and betrothal in England was once a legal bar to matrimony with another; at present the only legal remedy for the violation of the betrothal is an action for breach of promise.

History.—Jewish and Roman laws and customs must have influenced the early practice of the Church and its law with respect to betrothal, and consequently of betrothal, were based in a great measure on the supposition that it was a purchase. In the law of Moses there are certain provisions respecting the state of the virgin who is betrothed, but nothing particularly referring to the act of betrothal. Selden's "Uxor Hebraica" gives the schedule of later Hebrew contracts of betrothal. Where the contract was in writing, it was written out by the man before witnesses and delivered to the woman, who must know its importance. Rome, on the other hand, at the beginning of the Christian Era, had ceased to consider marriage as a wife-purchase. Marriage, and still more betrothal, was a purely civil compact, verbally concluded. Under later Roman law, which constituted a basis for the modern civil legislation, betrothal was looked upon simply as a contract of future marriage, stronger indeed than the engagement, since to enter into a second betrothal compact was held to be as infamous as bigamy itself. No legal forms were prescribed for at this time. In betrothal, but the contract was generally accompanied by the man's sending to the woman the iron betrothal ring (annulus promus). As the Empire grew in importance, so did the betrothal contract, while at the same time its obligations were more frequently disregarded. Hence the practice of giving earnest-money, or pledges of fidelity (arrebat), came into prominence; another event was the betrothal gift, or the part of the dowry paid by the parties, one upon the other. The kiss, the joining of hands, and the attestations of witnesses were other elements introduced. Even in England formal engagements of this kind were common down to the time of the Reformation. Promises as explained above, and in them an essential element of the betrothal is wanting (Sabetti, Theol. Mor., n. 838, qu. 30; Kenrick, Theol. Mor., nos. 23, 37).

The Church, at the beginning of the third century at the latest, recognized betrothal as a perfectly valid act. In the fourth century, in Africa at least, according to the testimony of St. Augustine (Sermo viii, 18; Sermo xxxvii, 7; Sermo cccxxxiv, 4, etc.), espousals were contracted in writing, the instrument (tabula), signed by the bishop being publicly read. At the same time the dowry, if any, was given or nuptial gifts were exchanged. Pope Benedict I (573-577), writing to the Patriarch of Gran, declares that it is connubial intercourse that makes two one, that mere betrothal would not prevent a man from entering into wedlock with the sister of his betrothed. This question of relations then, arising from the betrothal contract was mooted even at that early period. Gregory the Great (690-730) allowed a woman who was betrothed to dissolve her engagement in order to enter a convent (Bulla VI, 5). An barbarian influence, however, began to affect the Empire, the betrothal took on more the semblance of wife-purchase.

At the end of the ninth century betrothal had become a very frequent subject of Church legislation. From a reply of Pope Nicholas to the Bulgarians in 860 (Responsa ad Consulta Bulgorum, c. iii) it is apparent that the preliminaries of the marriage in the Church were: (1) The betrothal or espousal; the expression of consent by the contracting parties, and the consent also of their parents, or guardians, to the projected marriage. (2) The subbathorio, or delivery of the ring by the man to the woman by way of an earnest, or pledge. (3) The documentary transfer, by the man to the woman, of the dowry, in the presence of witnesses. The marriage was to follow immediately, or after an interval more or less protracted. These rites are still recognized in modern uses. The ceremony of betrothal is found in a measure in the present nuptial service. There is a declaration of consent, which, since the marriage follows immediately after, is de presenti. The placing of the ring on the finger of the bride by the bridegroom is the subbathorio, while in marries places transferring of the dowry is represented by a medal or coin—a relic of Salic law and of wife-purchase. (See Martine, De Antiq. Eccl. Ritibus, i, ix, a. 3, n. 4, speaking of a ritual of the Church of Reims.)

Andrew B. Meekan.

Betrothal Ring. See Ring.

Bettiah, Prefecture Apostolic of, in northern India, includes as part of its jurisdiction the entire native state of Nepal, which has an area of more than 59,000 square miles and a population of about 5,000,000. The kingdom extends north by Tibet; on the east, by the Ghagra; on the south, by the Ganges; and on the west, approximately, by the Kusah.

In 1738 Father Joseph of Carignano, a Capuchin, on his way to the missions of Nepal and Tibet, arrived at Bettiah; this compact but important place, was the former kingdom. The Queen of Bettiah, being grievously sick, was cured by him; in return, she allowed him to preach the Gospel. The Nepal war of 1709 obliged the Christians to retire southwards.
to the neighbourhood of Bettiah. In 1883 Father Alexander of Albano opened an orphanage at Chaknai; but, as the number of Italian missionaries was falling off, this district, then a portion of the Albonian benefice, was transferred to the Capuchins of the Province of Northern Tyrol. By a decree of 20 April, 1892, this country was made an independent prefecture, suffragan to the See of Agra; the districts of Bettiah, Champaran, Tisrool, Manpur, Dharpargar, and part of those of Bhagalpur and Monghyr were assigned to it. Propaganda added, 19 May, 1893, the whole of Nepal, a territory wider than the whole of the original prefecture, and which extends to the borders of Tibet. Nepal thus became separated from the Diocese of Allahbad; it can scarcely be said, however, to have ever been evangelized, seeing that within its 59,000 square miles Rampur is the only station.

Generally speaking, missionary activity in this prefecture has been concentrated in the Bettiah district. According to the latest statistics of the Capuchin missions, the prefecture numbers 13,000,000 inhabitants, of whom only 3,633 are Catholics. Nearly all the Europeans (220) are Anglicans. In 1889 the mission had only three stations; there are now 12 stations, including missions or chapels. The principal stations are Bettiah (the residence of the Prefect Apostolic, Ilarione da Abelt), Chohore, Chankin, Latonah, Somastipore, Dharbanga, Someur, Rampur (in Nepal), and Ramnagar. The minor stations are Manpur, Sonepore, Champa, and Hipore. The mission is administered by 14 Capuchin priests, aided by 8 lay brothers. There are also 20 Sisters of the Holy Cross (Kreuzschwestern) from Switzerland; 35 schools, with 854 pupils; and 10 orphanages, with 493 orphans.

ALBERT BATTANDIER.

Betting.—A bet may be defined as the backing of an affirmation or forecast by offering to forfeit, in case of an adverse issue, a sum of money or article of value to one who, by accepting, maintains the opposite side and backs his opinion by a corresponding stipulation. Although there are no Federal statutes in the United States on this matter, many of the States make it a penal offence when the bet is upon a horse race, or an election, or a game of hazard. Betting contracts are also frequently made void. Similarly in Great Britain betting in streets and public places, and the keeping of betting houses are forbidden by law, and wagering contracts are null and void. Such betting is just as much a gamble as those which are used to keep within the bounds of decency the dangerous habit of gambling, and the many evils which are usually associated with it. Although betting is to be discouraged as being fraught with danger, and although it may be morally wrong, still in particular cases it is not necessarily so. I may give the money of which I have the free disposal to another, so there is nothing in sound morals to prevent me from entering into a contract with another to hand over to him a sum of money if an assertion be found to be true, or if a certain event come to pass, with the stipulation that he is to do the same in my favour if the event be otherwise. This may be an innocent form of recreation, or a ready way of settling a dispute. However, the practice is very liable to abuse, and that it may be morally justifiable theologians require the following conditions: The parties must have the free disposal of what they stake, and both must bind themselves to stand by the event and pay in case of loss. Welching a bet on Liberty of Peace, if both parties understand the matter of the bet in the same sense, and it must be uncertain for them both. If, however, one has absolutely certain evidence of the truth of his contention, and says so to the other party, he is not precluded from betting if the latter remains obstinate. If a bet fulfils these conditions and the object of it is honest, so that the bet is not an incentive to sin, it will be a valid contract, and therefore validly binding upon both parties, and therefore also duties that we are bound in conscience to pay if they fulfil the conditions just laid down. It follows that the avowal of the professional bookmaker need not be morally wrong. It is quite possible to keep the moral law and at the same time so to arrange one's bets with different people that, though in all probability there will be some loss, still there will be gain on the whole. (See Gambling.)

BEUGNOT, Auguste-Arthur, Count, French historian and statesman, b. at Bar-sur-Aube, 25 March, 1797; d. at Paris, 15 March, 1865. He was a son of Jacques-Claude Beugnot, who was a Deputy in the Legislative Body of 1791, Minister of Finance to Jerome, King of Westphalia in 1807, Minister of the Interior under the Provisional Government of 1814, and Postmaster General in 1815. At the age of twenty-one Auguste-Arthur Beugnot made known his ability as an historian at the University of Geneva by the prize of the Académie des Inscriptions (1818) for the best essay on the institutions of St. Louis. The competitions of 1822 and 1831 led to his work on "The Jews of the West" and his "History of the Destruction of Paganism in the West", in consequence of which he was elected to the Académie des Inscriptions. To the general public the latter of these two works was more especially known; it was placed on the Index, and has lost its vogue since the appearance of Sceck's treatise on the same subject.

The learned, however, attach a higher value to the works of Beugnot on the Middle Ages; his editions of the "Assize of Jerusalem" (1841-43), of Beaumanoir's book of the "Customs of Beauvaisis" (1842), and of the "Olim", or ancient registers of the Parliament of Paris (1839-48). These editions are of great value for the history of feudal and customary law, and of juridical procedure. The name of Beugnot, lastly, is associated with the voluminous publication of the "Historians of the Crusades", which began in a memoir written by him in 1854. Beugnot entered politics in 1841 as a Peer of France, was Deputy for Haute-Marne in the Chamber of 1849, and under the Empire went into a retirement which lasted until his death.

The Villemin educational plan of 1844, to subject the heads of independent institutions to the jurisdiction of the university, and to impose upon their pupils the obligation of making their studies in rhetoric and philosophy in certain prescribed establishments, was opposed by Beugnot on liberal principles, whilst others opposed it on religious grounds. This project was withdrawn in January, 1845, its author having become demented. Beugnot, who had destroyed the draft of a speech in support of the Villemin programme, was welcomed by the Catholics as a labourer entering the vineyard at the eleventh hour. In 1845 he advocated the claim of the bishops, as of all other citizens, to the right of petition. In his pamphlet, "L'Etat theologien", he made it clear that the attacks on the Jesuits were neither more nor less than attempts to destroy the liberty of association, and the Jesuits empowered him to treat with Guizot in their name at the time of the negotiations between France and the Holy See in regard to the dispersion of the Society. As drafter of the Law of 1848, he was anxious to prevent the return of the bill to the Council of State, 7 November, 1849, and in the decisive debate (14 January to 15 March, 1850) he vigorously seconded the efforts of Montalembert, Paris,
BEVAN, GEORGES GOYA.

BEVEN, Saint, Abbot of Cymnog, d. 660(?), was, according to the "Buochu Bevou", born in Powis-land and, after education and ordination in the monastery of Bangor, in North Wales, became an active missionary, Crown, King of Gwynedd, being his generous benefactor. Cadwallan, Cadvan's son and successor, deposed Bevou about some land, and on the saint demanding justice proved obstinate. Thereupon, Cadwallan's cousin Gweddescant, in repartition, "gave to God and Bevou forever his township", where the saint founded the Abbey of Cymnog Fawr (Carnarvonshire).

Bevou became the guardian and restorer life of his niece, the virgin St. Winefrid, whose clients still obtain marvellous favours at Holywell (Pembrokeshire). He was relentless with hardened sinners, but full of compassion to those in distress. Before his death "on the seventh day after Easter" he had a wondrous vision. Eleven churches bearing St. Bevou's name, with various relics and local usages, with the far-reaching missionary zeal. He is commemorated on the 21st of April.

REXX, Lives of Cambro-British Saints (1853); the Buochu Bevou found in this work gives a succinct basis of names and dates. — M. MENZIES, St. Winefrid, February, 1896, 256; STURRY, Councils, 1, 160; Dict. Nat. Biog., IV, 444.

PATRICK BYAN.

BEVERLEY MINISTER, a collegiate church at Beverley, capital of the East Riding of Yorkshire, served by a chapter of secular canons until the Reformation. The foundation owes its origin to St. John of Beverley early in the eighth century, when the locality was a clearing in the forest of Deira (Indrawood), afterwards known as Beverise (A. S. Beverie), a name partly derived from the colonists who were beavers in the river Hull. St. John here founded a community of monks and another of nuns, but traditions as to the existence of an earlier church are legendary and untrustworthy. Later the saint, having resigned his See of York, retired here and lived (73), his shrines being in the minister. After the destruction of the monastery by the Danes, a chapter of secular canons was founded by King Athelstan in gratitude for his victory at Brunanburh (877), as he had visited the shrine on his march north. It remained a popular place of pilgrimage through the vicissitudes of Danish and Norman invasions. Few particulars about the early history of the church are known, but a fire in 1188 destroyed the greater part of it, and the present Gothic minster, rivaling the great cathedrals in beauty, dates from that time. The west front in particular is unsurpassed as a specimen of the Perpendicular style. The choir and double transepts were built early in the thirteenth century; while the present nave replaced the Norman nave a century later. Throughout the Middle Ages the shrine was frequented by pilgrims, and the charters of its liberties were renewed by successive monarchs. "Its banner was placed on the standard at the "battle of the Standard" (1138), and it was further honoured after the victory of Agincourt, which was won on the feast of the translation of St. John (25 October, 1415), and was attributed by Henry V to that saint's intercession (Lyndwode, "Provinciale", II, "Anglicanae"). The minister was originally served by a chancellor, precentor, sacrist, nine canons, nine vicars-chaplains, and several brethren, but in time several chanters priests and minor officials were added. The temporalities were administered by a provost, who was not necessarily a member of the chapter. The former office was held by many noted Englishmen, including St. Thomas Becket and John de Thoresby, afterwards Cardinal. Blessed John Fisher is believed to have received his first education at the grammar school attached to the minster. The chapter being secular, the minster escaped the ruin that fell on the monasteries under Henry VIII, but was dissolved in 1547 under the "Colleges and Chantryes Act of Edward VI. The seventy-seven secular officials thus dispossessed were reduced by a vicar and three assistants reduced, under Elisabeth, to a vicar and one curate. Gradually the minster fell into decay until, in 1713, a restoration became necessary to save it from ruin. This was successfully executed, and as a result of further work in 1866 and subsequent years it still remains one of the most remarkable Gothic churches in England.

BERYERINCK, LAWRENCE, Belgian theologian and ecclesiastical writer, b. at Antwerp, April, 1578; d. at the same place, 22 June, 1627. The son of a noted pharmacist, he prepared at Louvain for the same profession but, deciding to enter the priesthood, he was ordained June, 1602. While a theological student he taught poetry and retailed the poetry of Vaulx and as pastor of Herent was professor of philosophy at a nearby seminary of canons regular. In 1605 he came to the ecclesiastical seminary of Antwerp, taught philosophy and theology and later became superior. In 1608 he was canon, censor, and theologian at the church of Antwerp; in 1614 he was made protonotary. Beyerinck was an exemplary priest, a gifted rhetorician, orator, and administrator, and an indefatigable worker. Besides seminary and diocesan work he was engaged continually in preaching and writing. His works are mainly encyclopedic; his knowledge more extensive than profound. He wrote, e.g. a second volume (Antwerp, 1611) of the "Opus Chronographicae orbis universi a mundi exordio usque ad annum MDXXI" first volume to year 1572 by Oppen; a collection of lives of popes, rulers, and illustrious men; and the "Magnum Theatrum Vitae Humane hoc est Rerum Divinarum Humanarumque syntagma Catholicum Philosophicum Historicum Dogmaticum", etc. (Cologne, 1631, 7 vols; Venice, 1707, 8 vols). It is an encyclopaedia of the subjects arranged in alphabetical order. Its scope ranges from profound theological dissertations to merest trivialities. Much of its vast material was gathered by others, but to Beyerinck belongs the credit of giving the work form. His number of other publications are listed in the works referred to in the appended bibliography. His works are "Museum Aurea in Magnum Theatrum (Cologne, 1631)", I. ed. — POPPEM, Bibliotheca Sacra (Brussels, 1729), 804-806; Biog. univ. (Paris, 1811), IV, 426.

JOHN B. PETERSON.

MANCHI AND NERI. See FLORENCE.

BIANCHI, GIOVANNI ANTONIO, Friar Minor and theologian, b. at Lucca, 2 October, 1668; d. at Rome, 18 January, 1768. At the age of seventeen he entered the Franciscan Order and was elected to the office of Provincial of the Roman Province, and for a number of years was professor of philosophy and theology. During these years of professorship, he no doubt acquired much of the extensive and accurate acquire with ecclesiastical forms displayed in the productions of his later life. He possessed a memory of such range and tenacity that he was considered a prodigy by the many students and scholars who came to visit him in his convent cell. Bianchi was held in high esteem by the Roman Curia and by Clement XI, whose successor, Bene-
dict XIV, appointed him consultant of the Holy Office.

It was perhaps at the instance of Clement XII that Bianchi composed his scholarly and exhaustive defence of the rights and privileges of the Roman Pontiff, which had been attacked by the Neapolitan lawyer, Pietro Giannone, in the latter’s “Storia civile del regno di Napoli”. Bianchi’s work which was entitled “Della pedestà e della polizia della chiesa, trattati due contro le nuove opinioni di Pietro Giannone” appeared in Rome in six volumes between the years 1745 and 1751. In the first treatise (2 vols.) Bianchi defends the indirect power of the Roman Pontiff over temporal sovereigns; while he lucidly and soberly defends the right of the pope, as regards the external laws and government of the Church, in the second treatise, which comprises the remaining four volumes. Amid the storm of controversial literature provoked by the treatise of the Dominican theologian, Daniele Concina, “De Speculaculis Theatralibus”, Bianchi’s “Sui visti e sui difetti del moderno teatro e sul modo di correggerli ed emendarli” appeared at Rome in 1753. In this he contends with Scipio Maffeii against Concina for the lawfulness, within certain limits, of modern theatrical devices. He had a number of the learned and his preoccupations, Bianchi found time to indulge his predilection for poetry and tragic writing, and his compositions in this field, though of minor importance, show him to be an accomplished master of his own native Tuscan, which he often used to express his thought in a more simple and direct fashion.

BiANCHINI, GIUSEPPE, Italian Oratorian. Biblical, historical, and liturgical scholar, b. at Verona, 1704; d. in Rome, 1764. Clement XII and Benedict XIV, who highly appreciated his learning, entrusted him with several scientific labours. Bianchi had contemplated a large work on the texts of the Sacred Scriptures, “Vindicatio Canonum Sacramentorum Vulgatus Latinae Editionis”, which was to comprise several volumes, but only the first, in which, among other things, are to be found fragments of the “Hexapla” (cod. Chssianus), was published (Rome, 1740). Much more important is his “Evangeliorum quadruplex latinae versionis antiquae”, etc., 2 vols. (Rome, 1740). Among his historical labours may be mentioned the fourth volume which Bianchi added to the publication of his uncle, Francesco Bianchini, “Anastasis bibliothecarli Vite Rom. Pontif.” (Rome, 1735); he also published the “Demonstratio historice ecclesiasticum quadruplex” (Rome, 1722–24). The theological work of Bianchi is “Liturgia antiqua hispanica, gotica, isidoriana, mozarabica, toletana mixta” (Rome, 1746). He also undertook the edition of the works of Bl. Thomasius (Tomasi), but only one volume was issued (Rome, 1741).

STEPHEN M. DONOVAN.

Bianchi, FRANCESCO, a student of the natural sciences, and an historian, b. at Verona, Northern Italy, 13 December, 1682; d. at Rome, 2 March, 1725. At first he devoted himself to the study of mathematics, physics, and astronomy; later he also took a course in theology. In 1699 he was advanced to deaconship, but never became a priest. In 1684 he transferred his residence to Rome, where he found at once a protector in Cardinal Pietro Ottoboni, of whose library he became custodian. When the cardinal became Pope Alexander VIII (1689–91) he still extended his favours to Bianchini; after Alexander’s death, his nephew, also Cardinal Pietro Ottoboni, lodged the scholar in his own palace. Bianchini received also many honours and commissions; he was in the proceedings of the Oxford University, he was elected president of the society devoted to the study of historical antiquities; he was made secretary of the commission for the reform of the calendar and he was sent to Paris with the cardinal’s hat destined for Rohan Soubise. During this journey he was received everywhere with consideration by the learned. The University of Oxford furnished the expenses of his sojourn in England. Benedict XIII (1723–30) appointed him historiographer of the synod held at the Lateran, Rome (1723). He was a member of many learned academies in Italy and elsewhere. He was distinguished for “a great purity of life and an exceeding modesty of mind”, as the canons of St. Mary Major expressed it in his epitaph. His chief works are: “Two Dissertations of the Calendar and the Calendar of the months of February and March, by Giuseppe Bianchini (Rome, 1735).” Besides the text of the lives of the popes the work contains learned introductions, various readings of the manuscripts, copious notes by himself and others, and several documents relative to the history of the popes. It was republished in Migne, P. L., CXXVII–CXXVIII.

FRANCIS J. SCHAEPFER.

Bianchini (Bianchini), GIUSEPPE, Italian Oratorian. Biblical, historical, and liturgical scholar, b. at Verona, 1704; d. in Rome, 1764. Clement XII and Benedict XIV, who highly appreciated his learning, entrusted him with several scientific labours. Bianchi had contemplated a large work on the texts of the Sacred Scriptures, “Vindicatio Canonum Sacramentorum Vulgatus Latinae Editionis”, which was to comprise several volumes, but only the first, in which, among other things, are to be found fragments of the “Hexapla” (cod. Chssianus), was published (Rome, 1740). Much more important is his “Evangeliorum quadruplex latinae versionis antiquae”, etc., 2 vols. (Rome, 1740). Among his historical labours may be mentioned the fourth volume which Bianchi added to the publication of his uncle, Francesco Bianchini, “Anastasii bibliothecarli Vite Rom. Pontif.” (Rome, 1735); he also published the “Demonstratio historice ecclesiasticum quadruplex” (Rome, 1722–24). The theological work of Bianchi is “Liturgia antiqua hispanica, gotica, isidoriana, mozarabica, toletana mixta” (Rome, 1746). He also undertook the edition of the works of Bl. Thomasius (Tomasi), but only one volume was issued (Rome, 1741).

R. BUTIN.

Bianconi, CHARLES, merchant and philanthropist, b. 26 September, 1785, in the duchy of Milan; d. near Clonmel, Ireland, 22 September, 1875. At an early age he was sent to Ireland, as apprentice to an Italian printer, became a distinguished and wealthy merchant, and was the first to establish (1815–58) throughout the island a system of rapid and cheap transportation of persons and of government mail. He was an intimate friend of O’Connell, a promoter of Catholic Emancipation, a benefactor of many Catholic charities, and a practical friend of the Catholic University at Dublin. The English postmaster general in his Report for 1867 said that “no living man has ever done more than he for the benefit of the sister kingdom”. In the development of his vast transportation system he displayed extraordinary energy and energy, and did much to improve the condition of his adopted country, while he promoted in a remarkable way its social relations. His residence at Longfield, near Clonmel, was a centre of hospitality, and a source of much practical activity for the general welfare of his country.

O’Riain, Charles Bianconi (Dublin, 1906), and Bianconi’s life by his daughter, Mrs. Morgan John O’Connell (Dublin, 1885).

THOMAS J. SHAHAN.

Biard, PIÈRE, Jesuit missionary, b. at Grenoble, France, 1567; d. at Avignon, 17 November, 1622. In 1608 he was called from a chair of Scholastic theology and Hebrew at Lyons by Father Cotin, the king’s confessor and preacher, to take charge of the Jesuit mission in Acadia. As de Monte, the founder of Acadia, was a Calvinist, a large number of the colonists were also of that religion, vehement opposition was made to the appointment of Biard and his companion, Edmond Masse, as missionaries. Through the interposition of the Marquis de Guercheville, who purchased the vessel that was bringing out supplies, the Jesuits, after three years of waiting, were enabled to obtain passage by becoming part owners of the ship and cargo. They left France, 21 January, 1611, and arrived on Pentecost Day.
BIBBIANA 542

22 May, at Port Royal. They met with but little success. The predecessor of the missionaries, a secular priest named Josue Flesche, had baptized indiscriminately. This the Jesuits refused to do. The colonists, moreover, remained hostile, and viewed as an insult the enterprise. As a result, the enterprise was a failure. Madame de Guerccheville, who had succeeded de Monts as proprietor, finally sent out another vessel under La Sausaye, and ordered him to stop at Port Royal, and, taking the two Jesuits; found a colony elsewhere. Obeying instructions, La Sausaye sailed over to what is now Bar Harbor. The new establishment was called Saint Sauveur. This was in 1613. It was hardly begun when Samuel Argall came up from Virginia, plundered the colony, and took Argall and another Jesuit with four colonists to Jamestown where only the authority of Argall prevented them from being hanged. Another expedition was fitted out to complete the destruction of Saint Sauveur and Port Royal, and the two Jesuits were compelled to accompany the marauders.

Everything was ruined and Biard and his companions were made to appear as if they had instigated the attack. They sailed off with the attacking party who intended to return with them to the English colony, where they would probably have been executed, but the ship on which they were the prisoners was driven by storms across the ocean. Frequently they were on the point of being thrown overboard, but when the ship was compelled to enter the Port of Fayal in the Azores, Biard and his companions consented to remain in the hold lest their discovery should entail the death of their captor. A second time, upon entering Milford Haven, in Wales, the captain having no papers, and being in a French ship, was on the point of being hanged as a pirate. But Father Biard saved him by explaining the situation to the captain. The missionary was then sent to France, where he had to meet a storm of abuse because of the suspicion that he had helped in the destruction of Port Royal. Champlain, however, vindicated him. He never returned to Canada, but resumed his work as professor of theology, and afterwards became famous as a missionary in the south of France, and towards the end of his life was made military chaplain in the armies of the king. Lescarbot, who was unfriendly to the Jesuit missionaries, speaks of him in flattering terms.

T. J. Campbell.

Bibiana (Bernardo Dozizi) an Italian Cardinal and comic writer, known best by the name of the town Bibiana, where he was born 4 Aug., 1470; d. at Rome, 9 Nov., 1520. His obscure parentage did not prevent him from securing a literary training at the hands of the best scholars and from associating with the most conspicuous men that Florence could boast. A jovial temper and racy Tuscan wit enhancing the charm of good looks and courtly manners soon made him the protector as well as the boon companion of Giovanni del Medici's merry hours. When the Medici were banished and sorrow followed mirth (Nov., 1494) it was seen that a gay man of the world could become a brave and steadfast friend. Not long after, the election of Julius II and many honours at the Roman court were to be his. In 1513 his strenuous exertions on behalf of his lifelong patron secured the election of Giovanni dei Medici to the pontifical throne. Such services Leo X repaid by bestowing on him the purple robe, appointing him his treasurer and chamberlain, with many important missions, among them a legation to France (1518). Later on, the cardinal's strong sympathies for France lost him Leo's confidence. The story, however, that he was poisoned, in spite of Giovio and Grassi's reports, has absolutely no foundation. (Pastor, Geschichte der Päpste, IV, Part I, Leo X.) As cardinal he steadily extended a generous patronage to art. From Raphael, whose devotion he shivered, we have his best likeness. His literary fame is mainly connected with the first good comedy written in Italian prose, "La Calandra" (also known as "Il Calandro" and "La Calandria"), a distinctly juvenile production, probably given for the first time at Urbino, about 1507, and very elaborately performed at Rome, seven years later, in the presence of Leo X and Isabella Gonzaga d'Este, Marchioness of Mantua. Though marred by many banishes by Julius II, and though built upon the plot of Plautus's "Menencluli," it possessed the features of modern comedy and won plaudits for its sparkling wit and fine characterization. Ariosto and Machiavelli imitated him in this path. The latest edition of "La Calandra" is in the "Teatro Italiano Antico" (Florence, 1888).

Bernardo Cardinal Bibiana

Bibiana, Saint.—The earliest mention in an authentic historical authority of St. Bibiana (Bibiana), a Roman female martyr, occurs in the "Libri Pontifici," where in the biography of Pope Simplicius (468-483) it is stated that this pope "consecrated a basilica of the holy martyr Bibiana, which contained the body, near the "palatium Licinianum."" (ed. Duchesne, I, 249). This basilica still exists. In the fifth century, therefore, the body remains of St. Bibiana rested within the city walls. We have no further historical particulars concerning the martyr or the circumstances of her death; neither do we know why she was buried in the city itself. In later times a legend sprang up concerning her, connected with the Acts of the martyrdom of St. John and Paul and has no historical claim to belief. According to this legend, Bibiana was the daughter of a former prefect, Flavianus, who was banished by Julian the Apostate. Dafrosa, the wife of Flavianus, and his two daughters, Demetria and Bibiana, were also persecuted by Julian. Dafrosa and Demetria died a natural death and were buried by Bibiana in their own house; but Bibiana was tortured and died as the result of the sufferings. Two days after her death the priest named John buried Bibiana near her mother and sister in her home, the house being later turned into a church. It is evident that the legend seeks to explain in this way the origin of the church and the tradition that it is the church of the above-mentioned confessors. The account contained in the martyrologies of the ninth century is drawn from the legend.
Bible, The, a collection of writings which the Church of God has solemnly recognized as inspired. The name is derived from the Greek expression τὰ βίβλια (the books), which came into use in the early centuries of Christianity to denote the whole sacred volume. In the Latin of the Middle Ages, the neuter plural form Bibliæ (gen. bibliorum) gradually came to be regarded as a feminine singular noun (biblia, gen. bibliæ), in which singular form the word has passed into the languages of the Western world. It means "The Book," by way of eminence, and therefore well sets forth the sacred character of our inspired literature. Its most important equivalents are: "the Divine Library" (Bibliotheca Divina), "the Holy Scripture," "the Books," "the Holy Scriptures"—terms which are derived from expressions found in the Bible itself; and "the Old and New Testament," in which collective title, "the Old Testament" designates the sacred books written before the coming of Our Lord, and "the New Testament" denotes the inspired writings composed since the coming of Christ.

It is a fact of history that in the time of Christ the Jews were in possession of sacred books, which differed widely from one another in subject, style, origin and scope, and it is also a fact that they regarded all such writings as invested with a character which distinguished them from all other books. This was the Divine authority of every one of these books, and the seal of approval of each book was the belief of the Jews was confirmed by Our Lord and His Apostles; for they supposed its truth in their teaching, used it as a foundation of their doctrine, and intimately connected with it the religious system of which they were the founders. The books thus approved were handed down to the Christian Church as the written record of Divine revelation before the coming of Christ. The truths of Christian revelation were made known to the Apostles either by Christ Himself or by the Holy Ghost. They constitute what is called the Thirty-nine Articles in the Church of England, the number of these books, including the Psalter, was forty-six, the number added since the Apostolic Age. Some of the truths were committed to writing under the inspiration of the Holy Ghost and have been handed down to us in the books of the New Testament. Written originally to individual Churches or persons, to meet particular necessities, and accommodated as they all were to particular and existing circumstances, these books were gradually received by the universal Church as inspired, and with the sacred books of the Jews constitute the Bible.

In one respect, therefore, the Bible is a twofold literature, made up of two distinct collections which correspond with two successive and unequal periods of time in the history of man. The older of these collections, mostly written in Hebrew, corresponds with the many centuries during which the Jewish people enjoyed a national existence, and forms the Hebrew, or Old Testament, literature; the more recent collection, begun not long after Our Lord's ascension, and made up of Greek writings, is the Early Christian, or New Testament, literature, held in the deepest respect, the Biblical literature is pre-eminently one. Its two sets of writings are most closely connected with regard to doctrines revealed, facts recorded, customs described, and even expressions used. Above all, both collections have one and the same religious purpose, one and the same inspired character. They form the two parts of a great organic whole the centre of which is the person and mission of Christ. The same Spirit exercised His mysterious hidden influence on the writings of both Testaments, and made of the works of those who lived before Our Lord an active and steady preparation for the New Testament dispensation. He was to introduce, and of the works of those who wrote after Him a real continuation and striking fulfilment of the old Covenant.

The Bible, as the inspired record of revelation, contains the word of God; that is, it contains those revealed truths which the Holy Ghost purposed to be transmitted in writing. However, all revealed truths are not contained in the Bible (see Tradition); neither is every truth in the Bible revealed, if by revelation is meant the manifestation of hidden truths which could not otherwise be known. Much of the Scripture came to its writers through the channels of ordinary knowledge, but its sacred character and Divine authority are not limited to those parts which contain revelation strictly so termed. The only restriction is the use of the word of God. The primary author is the Holy Ghost, or, as it is commonly expressed, the human authors wrote under the influence of Divine inspiration. It was declared by the Vatican Council (Sess. III, c. ii) that the sacred and canonical character of Scripture would not be affected by saying that the books were composed by human diligence and then approved by the Church, or that they contained revelation without error. They are sacred and canonical "because, having been written by inspiration of the Holy Ghost, they have God for their author, and as such have been handed down to the Church." The inERRANCY of the Bible follows as a consequence of this Divine authorship. Wherever the sacred writer makes a statement as his own, that statement is the Word of God and is true, whatever be the subject-matter of the statement. It will be seen, therefore, that though the inspiration of any writer and the sacred character of his work be antecedent to its recognition by the Church yet we are dependent upon the Church for our knowledge of the existence of this inspiration. She is the appointed witness and guardian of revelation. From her alone we know what books belong to the Bible. At the Council of Trent she enumerated the books which must be considered "as sacred and canonical". The number of the books is seventy-three, forty-five in the Old Testament and twenty-seven in the New. Protestant copies usually lack the seven books (viz. Tobias, Judith, Wisdom, Ecclesiasticus, Baruch, and I, II Machabees) and parts of books (viz. Esther, x, 4–xvi, 24, and Daniel, i–ii, 4–xvii, 42) which are not found in the Jewish editions of the Old Testament.

The Bible is plainly a literature, that is, an important collection of writings which were not composed at one and did not proceed from one hand, but were spread over a considerable period of time and are traceable to different authors of varying literary excellence. As a literature, too, the Bible bears throughout the distinct impress of the circumstances of place and time, methods of composition, etc., in which its various parts came into existence, and of these circumstances careful account must be taken, in the interests of accurate scriptural interpretation. As a literature, our sacred books have been transcribed during many centuries by all manner of copies; the ignorance and carelessness of many of whom they still bear witness in the shape of numerous textual errors, which, however, but seldom interfere seriously with the primitive reading of any important dogmatic or moral passage of Holy Writ.

In respect of antiquity, the Biblical literature belongs to the same group of ancient literature as the
BIBLE

literary collections of Greece, Rome, China, Persia, and India. Its second part, the New Testament, completed about A.D. 100, is indeed far more recent than the four last named literatures, and is somewhat posterior to the Augustan age of the Latin language, but it is older by ten centuries than our earliest modern literature. As regards the Old Testament, most of its contents were gradually written within the nine centuries which preceded the Christian era, so that its composition is generally regarded as contemporary with that of the great literary works of Greece, China, Persia, and India. The Bible resembles these various and ancient literatures in another respect. Like them it is fragmentary, i.e. made up of the remains of a larger literature. Of this we have abundant proofs concerning the books of the Old Testament, since the Hebrew Scriptures themselves repeatedly refer us to more ancient and complete works as composed by Jewish annalists, prophets, wise men, poets, and so on (cf. Numbers, xxxi, 14; Judges, x, 13; Kings, i, 18; Paralip., xxix, 29; 1 Mach., xvi, 24; etc.). Statements tending to prove the same fragmentary character of the early Christian Church, which has come down to us are indeed much less numerous, but not altogether wanting (cf. Luke, i, 1-3; Colossians, iv, 16; 1 Corinthians, v, 9). But, however ancient and fragmentary, it is not to be supposed that the Biblical literature contains only few, and those monstrous and factitious, literary productions. In point of fact its contents exhibit nearly all the literary forms met with in our Western literatures together with others peculiarly Eastern, but none the less beautiful. It is also a well-known fact that the Bible is so replete with pieces of transcendent literary beauty that the greatest orators and writers of the last four centuries have most willingly turned to our sacred books as pre-eminently worthy of admiration, study, and imitation. Of course the widest and deepest infatuation that has ever been, and ever will be, exercised upon the minds and hearts of men remains due to the fact that, while all the other literatures are but man's productions, the Bible is indeed "inspired of God" and, as such, especially "profitable to teach, to reprove, to correct, to instruct in justice" (2 Timothy, iii, 16).

Bible Societies. See Protestant Bible Societies, established for the purpose of publishing and propagating the Bible in all parts of the world, and the logical outcome of the principle: "The Bible, and the Bible alone is the religion of Protestants." Precisely to what extent that theological formula is held true even by the staunchest evangelicals, may be a matter of dispute, but the consistent and heroic efforts of the Bible societies to provide a version of the sacred text in every tongue and to supply the ends of the earth with Bibles, can scarcely be explained unless Chillingworth's famous formula be true that historically at a cost of a cost of the Bible is an indispensable means of salvation. Nevertheless, it is remarkable that the societies for the world-wide propagation of the Bible, like the Protestant missionary societies, are a late outgrowth of Protestantism. It is well known that the sects did not seriously bestir themselves about mission work until two hundred years after the Reformation, and historically the Bible societies are an appendix and a consequence of the missionary organizations. Some efforts were made to provide a systematic dissemination of Bibles as early as the time of Charles I of England, and before the formation of Bible societies on a scale of widespread activity, there existed a number of organizations which by the Bible distribution a feature of their work. Among them were, (1) The Society for Promoting Christian Knowledge (1698), which spread copies of Holy Writ in England, Wales, India, and Arabia; (2) The Society of the Propagation of the Gospel in Foreign Parts (1701), which devoted a large share of its attention to the American Colonies; (5) The Scottish Society for Propagating Christian Knowledge among the Poor (1750); (3) The Naval and Military Bible Society (1780). The foundation of these and similar societies was but an indication of the desire of literature to do battle against the religious apathy, and, indeed, infidelity of the English people in the eighteenth century. In the fourteenth century brought with it the foundation of numerous missionary societies, and this enthusiasm for Christianity resulted in the foundation of the most far-reaching Bible societies, The British and Foreign Bible Society, 7 March, 1804. The first impulse to the formation of this organization was given by a group of Nonconformist ministers and laymen, but when completed, the society included an equal number of members of the Established Church and of the various sects. Its avowed purpose was "to encourage the wider circulation of the Bible without note or comment".

At present, the British and Foreign Society is supervised by an executive committee of 30 laymen, 15 from the Church of England, 15 dissenters, and 6 foreign members who must reside in or near London. The growth and work of this society have been extraordinary. It controls, according to the latest statistics (1906) almost 8,000 auxiliary societies; 5,729 in Great Britain and 2,224 abroad. Translations of the sacred text number about 380. Its operations in India have been particularly thorough, but in every country where its agencies are established, its work can only be measured in vast figures. It dispenses annually the largest number of Bibles of all the Bible churches and the National Bible Society of Scotland, the names of which sufficiently designate their field of labour.

On the Continent, Count Canstein founded a German Bible Society in 1710. The American Bible Society was established at New York (1816), Berlin (1806), Saxon (1813), and Schleswig-Holstein (1826). The Berlin society was united with the Prussian Bible Society in 1814. The Danish Bible Society dates from 1814, the Russian from 1812, a Bible society was founded in Finland possession of the society; 300 in the Netherlands 1813, one in Malta in 1817, and one in Paris 1818.

In America, we find the Continental Congress impressed with the scarcity of Bibles that in 1777 passed a resolution calling for the purchase of 20,000 copies. Facilities were not at hand for the
fulfilment of such a work, and it was not done. But in 1782, Congress commenced the publication of the Bible which had just been made in Philadelphia. The Bibles issued by the American Bible Society in 1831, and the American Bible Society's Bibles issued in 1832, were not united with the American Bible Society until 1816. This society has been active in the United States and in other countries, both in America and in Europe, and has maintained correspondence in Norway, Sweden, Russia, Finland, Germany, Switzerland, France, Spain, Italy, and Austria. In these countries, it is said, the American Bible Society has been operating for more than fifty years with the Methodist Episcopal Church in Bremen, Germany, and in that time and place has assisted in the publication of over a million volumes of Scripture. The American Society has extended its efforts into the Levant, a regular agency being established in Constantinople. It works in conjunction with the Paris mission, in Syria, Mesopotamia, Egypt, and the Sudan. In these countries alone, it has distributed over 3,000,000 volumes during the past half-century. All told, the copies of the Bible, or parts of the Bible distributed by the American Bible Society for one year, ended 31st Dec., 1889, were 2,236,755, and during the ninety years of its work it has disposed of 78,509,329 volumes.

After being duly impressed by these figures and those of the still more prolific British Society, the Catholic reader may ask questions whether the amount of good done is, after all, to be measured by the number of volumes distributed. A considerable number of Protestant missionaries have already answered the question negatively, and if we may judge from many letters from ministers in the mission field, there is a growing feeling among thinking Protestants that the promiscuous distribution of the Bible "without note or comment" is a doubtful means of propagating Christian doctrine. Even as a means of proselytism, the scattering of Bibles seems not to produce the expected results. A missionary on the Malay peninsula, among others, complains that although thousands of Bibles were distributed, it was, so far as he could learn, "with scarcely any perceptible benefit." He "did not hear of a single instance of the dissemination of the Scriptures." The natives of the mission countries are, according to reports, eager to obtain books from the societies, but agents and missionaries and bishops have reported that in many cases the volumes were used for vulgar and profane purposes. Indeed, the reckless distribution of the Scriptures in too many cases becomes an occasion for the profanation of the written Word, rather than for the growth of religion. Instances of abuse of the Bible could be collected freely from the letters of missionaries, Catholic and non-Catholic alike.

But for deeper reasons than this, the attitude of the Church toward the Bible societies is one of unmistakable opposition. Believing herself to be the divinely appointed custodian and interpreter of Holy Writ, she cannot without turning traitor to herself, approve the distribution of Scripture "without note or comment". The fundamental fallacy of private interpretation of the Scriptures is presupposed by the Bible societies. It is the impelling motive that lies behind the societies' in the Colossians' violation of one of the first principles of the Catholic Faith—a principle arrived at through observation as well as by revelation—the insufficiency of the Scriptures alone to convey the greater number of a sure knowledge of faith and morals. Consequently, the Council of Trent, in its fourth session, after expressly condemning all interpretations of the sacred text which were not in harmony with the To the Church, orders all Catholic publishers to see to it that their editions of the Bible have the approval of the bishop. Besides this and other regulations concerning Bible-reading in general, which have several acts of the popes directed explicitly against the Bible societies, perhaps the most notable of these is contained in the Encyclical "Ubi Primum" of Leo XII, dated 5 May, 1824, and Pius IX's Encyclical "Qui Pluribus", of 19 November, 1846. Pius VII in 1829 and Gregory XVI in 1831, both spoke in similar terms of the bishops, who are the most striking words on the subject from Leo XII and Pius IX. To quote the former (loc. cit.): "You are aware, venerable brothers, that a certain Bible Society is impudently spreading throughout the world, which, despising the traditions of the holy Fathers and the decree of the Council of Trent, is endeavouring to translate, or rather to pervert the Scriptures into the vernacular of all nations. It is to be feared that by false interpretation, the divine truth in the Gospel of Christ will be one day completely, or at least partly, obscured, and that the devil will be allowed to imbue these translations with his own spirit. The Pope therefore urges the bishops to admonish their flocks that owing to human temerity, more harm than good may come from indiscriminate Bible-reading. Pius IX says (loc. cit.): "These crafty Bible Societies, which renew the ancient grace of the Pharisees of old, and are not satisfied only with the study of the Bible, but also with the thrusting of their Bibles upon all men, even the unlearned,—their Bibles, which have been translated against the laws of the Church, and often contain false explanations of the text. Thus, the divine traditions, the teaching of the fathers, and the authority of the Catholic Church are rejected, and everyone in his own way interprets the words of the Lord, and distorts their meaning, thereby falling into miserable errors".

Thus are given the chief reasons of the opposition of the Church. Furthermore, it can scarcely be denied that the Bible societies, by invading the Catholic countries and endeavouring to foist the Protestant versions upon a Catholic people, have stirred up much discord, and have laid themselves open to the charge of degrading the Sacred Scriptures. The societies are shown to be the agents of proselytism. Still in almost all the books and pamphlets which are written to show the results of Bible propagandism, na"ive complaints are made by the writers that the Catholic priests and people do not like the New Testament, and that the missionaries have ingeniously contrived to win the minds of their people. The societies do not offer to supply Catholics with Catholic Bibles, fortified with the ecclesiastical Impresimatur, and supplied with the necessary notes of explanation. If such an offer were refused, there might be some pretext for the complaints of the societies, but so long as they follow their present course, it must be evident that they have small ground for wonder if the authorities of the Church oppose them. The true attitude of the Church towards the popular use of the Scriptures is shown by the establishment of the Societate di San Germonino, for the translation and diffusion of the Gospels and other parts of the Bible among the Italian peoples.

There have been many dissensions and some schisms among the members of the Bible societies themselves. At the very foundation of the British and Foreign Bible Society Bishop Marsh, consistently with the principles of the Church of England, objected to the printing of the text, "without note or comment", and recommended the use of the Book of Common Prayer. The objection was, of course, overruled. In 1831, the British and Foreign Bible Society decided to demand belief in the Trinity as a requisite to membership. This led to a schism
and the foundation of the Trinitarian Bible Society. Another sectarian society originating from a doctrinal difference, is the Bible Tract Society, a body composed of Baptists who were dissatisfied because the original society's Bibles did not translate the texts which relate to baptism by words that would signify immersion. Again, from the American Bible Society there has been anachronism of some sort, and this, as in England, over the translation of *sabbath*. This dissident body, founded in 1837, is called The American and Foreign Bible Society. This organization in turn experienced a succession, the most influential forming the American Bible Union, in 1850.

Bible Versions. See Versions of the Bible.

Bibles, Picture.—In the Middle Ages the Church made use of pictures as a means of instruction, to supplement the knowledge acquired by reading only. For books only existed in manuscript form and, being costly, were beyond the reach of most people. Besides, it had been possible for the multitude to come into the possession of books, they could not have read them, since in those rude times, education was the privilege of few. In fact, hardly anyone could read, outside the ranks of the clergy and the monks. So frescoes of scenes from the Old and New Testaments, stained-glass windows, and the like were set up in the churches, because, as the Synod of Arles (1025) said: "The illiterate contemplate, and cannot quite "read" the paintings, even though they have never learnt to read, could not discern in writing." Especially did the Church make use of pictures to spread abroad a knowledge of the events recorded in the Bible and of the mutual connection between the leading facts of the Old and New Testaments, whether as type and antitype, or as prophecy and fulfilment. For this purpose the picture Bibles of the Middle Ages were copied and put in circulation. The most important of the picture Bibles of the Middle Ages is the one which has survived in that variety of styles the "Bible Moralisée", the "Bible Historiée", the "Bible Allégorisée" and sometimes "Émblèmes Bibliques". It is a work of the thirteenth century, and from the copies that still survive there is no doubt that it existed in at least two editions, like to one another in the choice and order of the Biblical texts used, but differing in the allegorical and moral deductions drawn from these passages. The few remarks to be made here about the "Bible Moralisée" will be made in connexion with copies of the first and second modifications which have come down to us.

The copy of the first edition, to which reference has been made, is one of the most sumptuous illustrated MSS. preserved to us from the Middle Ages. Unfortunately, it no longer exists in the form of a single volume, nor is it kept in one place. It has been split into three parts kept in three different libraries. The first part, consisting of 224 leaves, is in the Bodleian Library at Oxford. The second part of 222 leaves is in the National Library in Paris; and the third part, made up of 178 leaves, is kept in the monastery of the Cistercians of the Abbey of la Trappe.

The leaves of the third part are missing, so that it ought to contain 184 leaves. When complete and bound together, therefore, the whole volume consisted of 630 leaves, written and illustrated on one side only. This Bible, as indeed all the picture Bibles of the Middle Ages, did not contain the full text of the Bible. Short passages only were cited, and these not in any given order. But the object of the writer seems to have been chiefly to make the texts cited the basis of moral and allegorical teaching, in the manner so common in those days. In the Psalter he was content with copying out the verse of each psalm, and when dealing with the Gospels he did not quote from each evangelist separately, but made use of a kind of confused distillation of all four combined. An attempt was made to establish a connexion between the events recorded in the Testament and those recorded in the New, even when there does not seem to be any very obvious connexion between them. Thus the sleep of Adam, recorded in the beginning of Genesis, is said to prefigure the death of Christ; and Abraham sending his servant with rich presents to seek a wife for his son is a type of the Eternal Father giving the Gospels to the Apostles to prepare the union of His Son with the Church.

The entire work contains about 5,000 illustrations. The pictures are arranged in two parallel columns on each page, each column having its own legend and pictures. Parallel to the pictures and alternating with them are two other narrower columns, with four legends each, one legend to each picture; the legends consisting alternately of Biblical texts and moral and allegorical applications. The pictures represent the subjects of the Biblical texts and the applications of them. In the MS. copy of the "Bible Moralisée", now under consideration, the illustrations are executed with the greatest skill. The painting is said to be one of the best specimens of thirteenth-century work, and the MS. was all probability prepared for someone in the highest rank of life. A specimen of the second edition of the "Bible Moralisée" is to be found in the National Library in Paris (MS. Françoise No. 167). Whilst it is identical with the copy which has just been examined in the selection and order of the Biblical passages, it differs from it in the greater simplicity and brevity of the moral and allegorical teaching based on them. Another important Bible, intended to instruct by means of pictures, was that which has been called the "Bible Historiée toute figurée". It was a work of the end of the thirteenth or the beginning of the fourteenth century. In general outline and plan it resembles the class of Bible which has gone before, but it differs from it in the selection of Biblical passages and in the allegorical and moral interpretations from them. Coming to the life of Our Lord, the author of the "Bible Historiée toute figurée" dispensed with a written text altogether, and contented himself with writing over the pictures depicting scenes of Our Saviour's life, a brief explanatory legend. Many specimens of this Bible have come down to us, but we select part of one preserved in the National Library in Paris (MS. Françoise No. 9561) for a brief description. In this MS. 128 pages are taken up with the Old Testament. Of these the earlier ones are divided horizontally in the centre, and it is the upper part of the page that contains the picture illustrative of some Old Testament event. The lower part represents a corresponding scene from the New Testament. Further on in the volume, three pictures appear in the upper part of the page, and three below. Seventy-six pages at the end of the volume are devoted to depicting the lives of Jesus Christ and the Blessed Virgin.

It must not be supposed that these were the only Bibles of this class that existed in the Middle Ages. On the contrary, from the great number of copies that have survived to our own day we may guess how wide their circulation must have been. We have a MS. existing in the British Museum (addit. 1577) entitled "Figures de la Bible" consisting of
pictures illustrating events in the Bible with short descriptive text. This is of the end of the thirteenth, or the beginning of the fourteenth, century. Of the same age is the "Biblia Pauperum," which is preserved in the same library, and, as the name implies, has a metrical text. But we have specimens of manuscript illustrated Bibles of earlier date. Such is the Bible preserved in the library of St. Paul's, beside the walls of Rome; that of the Amiens Library (MS. 108), and that of the Royal Library of The Hague (MS. 69). So numerous are the surviving relics of such Bibles, back even so far as the eleventh and twelfth centuries, that it may be safely asserted that the Church made a systematic effort to teach the Scriptures in those days by means of illustrated Bibles.

**Single Illustrated Books of the Bible.**—The Bibles that have come under notice so far illustrate the entire Scriptures. But what was done for the Bible in full was also done for its various parts. Numerous beautifully illustrated psalters have come down to us, some of them going as far back as the ninth century, as, for instance, the Psalter of the University of Utrecht. One thing that comes out clearly in this study of the history of the art of Bibles is that a very large proportion of them were executed by artists working in England. So, too, the book of Job and the Apocalypse were copied separately and adorned with numerous illustrations. But we have no reason to expect the Gospels to have been specially favoured field for the medieval artists who devoted their time to picture-painting.

**Biblia Pauperum.**—A class of illustrated Bibles to which no allusion has been made, but which had a wide circulation especially in the fifteenth century was the "Biblia Pauperum." As its name indicates, it was especially intended for the poor and ignorant, and some say that it was used for purposes of preaching by the mendicant orders. It existed at first in manuscript (indeed a manuscript copy is still in existence in the library of the British Museum); but at an early period it was reproduced by xylography, then coming into use in Europe. As a consequence the Biblia Pauperum was published and sold at a much cheaper rate than the earlier picture Bibles. The general characteristics of this Bible are the same as those of the earlier picture Bibles. The pictures are generally placed only on one side of the page, and are framed in a kind of triptych of architectural design. In the centre is a scene, and at either side another scene, and it typical events from the Old Testament. Above and below the central picture are busts of four noted prophets or other famous characters of the Old Testament. In the corners of the picture are the legends. The number of these pictures in the "Biblia Pauperum" was usually from forty to fifty.

Picture Bibles of the Middle Ages did not exhaust the resources of Christians in illustration of the Bible. Since the fifteenth century a host of artistic geniuses has been corresponding to the events in literature live in colour before our eyes. Most noted amongst them were Michelangelo and Raphael; the former chiefly famous for his Pietà and the frescoes in the Sistine Chapel; the latter for the fifty-two pictures forming the Vatican and known as "Raphael's Bible", and still more for the seven cartoons illustrating events in the New Testament. Perhaps no sacred picture has been so often copied as "The Last Supper" of Leonardo da Vinci painted in the refectory of the Dominican convent in Milan. Well known also are the "Forty Pools of St. Peter in the Temple" in Vienna, and Rubens's numerous Bible pictures, to be found in the Louvre, Brussels, Vienna, Munich, and London, but chiefly at Antwerp, where are his "Descent from the Cross".

**Crucifixion**, and **Adoration of the Magi**, the most famous of his works. These are but a few out of a number of illustrious names too numerous to mention here, and including Botticelli, Carracci, Holman Hunt, Leighton, Murillo, Veronese, Tintoretto, and Watts. To study the works of the great Bible-illuminators is not so difficult as might be supposed. For a year a great number of collections of Bible prints are made, containing reproductions of the most famous paintings. In the first half of the last century Julius Schnorr collected together 180 designs called his "Bible Pictures, or Scripture History"; and another series of 240 pictures was published in 1880 by George Wigg, in which are reprinted by permission of Daniel's "Bible Gallery". Hodges and Stoughton have published excellent volumes reproducing some of the pictures of the greatest masters. Such are "The Old Testament in Art" (2 parts); "The Gospels in Art"; "The Apostles in Art", and "Bethlehem to Olivet", this latter being made up of modern pictures. The Society for the Promotion of Christian Knowledge has not been behindhand, but has issued amongst other publications a volume on Art Pictures from the Old Testament" with ninety illustrations on the Gospels, and also a volume on illustrations from the works of the great masters of the fourteenth, fifteenth, and sixteenth centuries.

**Biblia Magna.** See La Haye. **Biblia Maxima.** See La Haye.

**Biblia Pauperum (Bible of the Poor)** a collection of pictures representing scenes from Our Lord's life with the corresponding prophetic types. The series commonly consists of forty or fifty pages. The page is divided into nine sections. The four corners are used for explanatory texts. The central pictures represent scenes from Our Lord's life, arranged chronologically. Above and below these are scenes of prophets and other typical figures from the Old Testament. It is thus a concordance of the Old and the New Testaments in which is gathered together the common tradition of the Church on the types and figures of the Old Testament, as taught by the liturgy and the Fathers. Hence they are sometimes called "typical Vetus Testamenti atque antitypis Novi Testamenti" or "Historia Christi in Figuris." An interesting reproduction and description of a page on the Blessed Sacrament is given in Vigouroux, "Dictionnaire de La Bible," s. v. The invention of these picture-books is ascribed to St. Ansgar, Bishop of Bremen. This is stated in a note added to a copy at Hanover and in the cathedral at Bremen there are remains of pictures, corresponding to the copies; each side, are scenes from the "Biblia Pauperum" does not seem to have been primitive. It was added by a later hand to a MS. in the Wollfenbittel library; the MS. was thus catalogued, and the name became common. It is uncertain why they were so called. Perhaps it was because of the ancient saying that pictures were the Bible of the poor, that is, of the uneducated. Some think that the name came from their use by the mendicant orders as books of instruction. Others suppose that the term means inexpensive; manuscript Bibles had been beyond the means of most people; when the art of printing from engraved blocks was introduced these picture-books were among the first printed and gained a wide circulation. We have no definite information as to the purpose for which
these books were intended. Probably it was for religious instruction; perhaps also to serve as models for artists. It is certain that they exercised a great influence in spreading a knowledge of the mysteries of Faith, affording themes for preachers and artists. As Christianity spread, and Swabia, the entire series of pictures is reproduced in stained glass.

Only a few manuscript copies of the "Biblia Pauperum" are extant; they come from the school of John van Eyck (1386-1460). The block-book, or xylographic depictions, appeared early in the fifteenth century, and Sotheby counts seven editions made from these wooden slabs. Only one side of the paper was printed, two sheets being pasted together to make a leaf. Five copies are in the Bibliothèque Nationale: four have forty plates; one copy is coloured by hand; the fifth has fifty plates. The first edition from movable types was printed by Pister at Bamberg in 1462. The earlier editions have Latin texts; later they were printed in the vernacular. A German "Armenbibel" was published in 1470, and at Paris in 1503, A. Vérard published "Les Figures du Vieil Testament et du Nouveau". In some of the printed editions the original arrangement of pictures and texts was modified. In the latter half of the fifteenth century, these books were very popular. As improved methods made it possible to issue the whole Bible with illustrations, the "Biblia" fell into disuse and disappeared. Several facsimile reproductions have appeared with historical and bibliographical introductions notably by Berjeau (1859); Camesina and Heider (Vienna, 1869); Unwin (London, 1884), with introduction by Dean Stanley; Einzel (Vienna, 1890); Laib and Schwarz (1892) and P. Heitz (1902).

JOHN CORBETT.

Biblical Antiquities.—This department of archaeology has been variously defined and classified. Some scholars have included in it even Biblical chronology, geography, and natural history, but wrongly so, as these three branches of Biblical science belong rather to external evidence, up history, proper. Archaeology, properly speaking, is the science of antiquities, and of those antiquities only which belong more closely to the inner life and environment of a nation, such as their monumental records, the sources of their history, their domestic, social, religious, and political life, as well as their manners and customs. Hence, history proper, geography, and natural history must be excluded from the domain of archaeology. So also the study of monumental records and inscriptions and of their historical interpretation must be left either to the historian, or to the sciences of epigraphy and numismatics. Accordingly, Biblical Archaeology may be appropriately defined as: the science of I. DOMESTIC, or SOCIAL, II. POLITICAL, and III. SACRED, ANTICUITIES of the Hebrew nation.

Our principal sources of information are: (a) The Old Testament writings; (b) the archaeological discoveries made in Syria and Palestine; (c) the Assyro-Babylonian, Egyptian, and Canaanitish monuments; (d) the New Testament writings; (e) the writings of the first historians, Josephus, the family books of Josephus, and the Jewish Talmuds; (f) comparative study of Semitic religions, customs, and institutions.

I. DOMESTIC ANTICUITIES.—(1) Family and clan.—The Old Testament books present us the Hebrews as having been in throughout two stages of development: the pastoral and the agricultural. The stories of the Patriarchs, Abraham, Isaac, and Jacob, picture them as dwelling in tents and constantly moving from one pasture-ground to another. In course of time tents merged into huts, huts into houses, and these into settlements, villages, and cities, surrounded by cornfields, vineyards, oliveyards, and gardens. In forests and woods became a favorite mode of early monady and afterwards, when, with few exceptions, they gave way to commerce and trade. As among all nations of antiquity, a coalition of various members, or branches, of the same family constituted a clan in which a man who had married into the family to have antedated the family. A coalition of clans formed a tribe which was governed by its own chiefs or leaders. Some of the Hebrew clans at the time of the settlement in Canaan seem to have been organized, some to have been broken up and wholly or partially incorporated with other clans. A man's standing in his clan was so important that if he was cast out he became ipso facto an outlaw, unless, indeed, some other clan could be found to receive him. After the settlement, the Hebrew clan-system changed somewhat and slowly degenerated till the time of the monarchy, when it fell into the background and became absorbed by the more complicated system of national and monarchical government.

Marriage and the constitution of the family.—In ancient Hebrew times the family, as a social organization, and as compared with the clan, must have held a secondary place. Comparative Semitic analogy and Biblical evidences seem to indicate that among the early Hebrews, as among other early Semitic nations, man lived under a patriarchate system, i.e. kinship was constituted by utterine ties, and descent was reckoned through female lines; the father's relation to his children being, if not ignored, certainly of little or no importance. Hence a man's wife were the relatives of his wife, not those of his father; and consequently all hereditary property descended in the female line. The position of woman during the early Hebrew period, although inferior to what it became later, was not as low and insignificant as many are inclined to believe. Many episodes in the lives of women like Sarah, Rebekka, Rachel, Deborah, Mary the sister of Moses, Delilah, Jephthah's daughter, and others are sufficient evidence. The duties of a woman, such as and such as befits her sex and station, were always physical; but not morally. The work in and about the house devolved upon her, even to the pitching of the tent, as also the work of the field with the men at certain seasons. The position of the man as father and as the head of the household was of course superior to that of the wife; upon him devolved the duty and care of the training of the children, when they had reached a certain age, as also the offering of sacrifices, which necessarily included the slaughtering of domestic animals, and the conduct of all devotional and ritualistic services. To these must be added the duty of maintaining the family, which presupposes a multitude of physical and moral obligations and hardships.

Polygamy was an acknowledged form of marriage in the patriarchal and post-patriarchal period, although in later times it was considerably restricted. The Mosaic law everywhere requires a distinction to be made between the first wife and those taken in addition to her. Marriage between near relatives was common, owing to a desire to preserve, as was the case, the tribal family, which was subordinate to the clan, the whole social life of the people, marriage, and even property rights were under the surveillance of the same. Hence a woman was to marry within the same clan; but if she chose another clan, she must be brought up in the clan, and even upon such terms as the clan might permit by its customs or by its action in a particular case. So.
also, a woman might be allowed, where compen-
sation was made, to marry and leave her clan, or she
might contract through her father or other male
relative with a man of another clan provided she
received compensation for the parents of the
clan. This marriage-form, known to scholars under
the term of Sadaq-marriage, was undoubtedly
practised by the ancient Hebrews, as positive
indications of its existence are found in the Book of
Judges and particularly in the case of Jerubbaal,
Samson, and others. The fact itself that Hebrew
harlots who received into their tents or dwellings
men of other clans, and who bore children to their
own clan, were not looked upon with much disfavour
is a sure indication of the existence of the Sadaq-
marriage among the Hebrews. One thing is
certain, however, that no matter how similar the
marriage customs of the ancient Hebrews may have
been to those of the early Arabs, the marriage tie
among the former was much stronger than, and never
could be as loose as, among the latter. Another form of
Hebrew marriage was the so-called levirate type
(from the Lat. tieri, i. e. brother-in-law), i. e. the
marriage between a widow, whose husband had died
childless, and her brother-in-law. She was, in fact,
not permitted to marry a stranger, unless the survi-
viving brother’s formality was omitted. The
levirate marriage was intended, first, to prevent
the extinction of the name of the deceased childless
brother; and secondly, to retain the property within
the same tribe and family. The first-born son of such
a union took the name of the deceased uncle instead
of that of his father, and succeeded to his estate.
If there were no brother of the deceased husband alive,
then the next of kin was supposed to marry the widow,
as we find in the case of Ruth’s relative who yielded
his right to Boaz, according to the laws of Moses.
If a man was forbidden to remarry a divorced wife,
if she had married again and become a widow, or
had been divorced from her second husband. Israel-
ites were not forbidden to intermarry with any
foreigners except the seven Cannaithian nations;
besides Moses’ marriage to a Midianitie, and afterwards
to a Cushite, woman and that of David to a princess
of Geshur were not against the Mosaic law. The
high-priest was to marry a virgin of his own people,
and in the time of Eschiel even an ordinary priest
could marry a widow, unless she were the widow of
a priest.

Betrothal was mostly a matter of business to be
transacted by the parents and near family friends.
A distinction between betrothal and marriage is
made in the marriage laws of the Hebrews. It was
looked upon as more than a promise to marry; it
was in fact its initial act, and created a bond which
could be dissolved only by death or by legal divorce.
Faithlessness to this vow of marriage was regarded
and punished as adultery. Betrothal actually took
place after a down payment had been agreed upon. As
a rule, it was given to the parents of the bride, though
sometimes to an elder brother. Marriage contracts ap-
pear to have been mostly oral, and made in the pres-
cence of witnesses. The earliest account of a written
one is found in the Book of Tobit (D. V. Tobias).
The wedding festivities lasted ordinarily seven days,
and on the day of the wedding the bridegroom,
richly dressed and crowned, went in procession to
the bride’s house to take her away from her father.
The bride, similarly robed, was led away amid the
blessings of her parents and friends. The bridal
procession not infrequently took place at night,
in the blaze of torches and with the accompaniment
of songs, dancing, and the highest expressions of
joy.

Adultery was punished by death, through stoning
of both participants. A man suspecting his wife of
unfaithfulness might subject her to a terrible
ordeals which it was thought, no guilty wife could
well pass through without betraying her guilt.
Divorce among the ancient Hebrews was as frequent
as among any other civilized nation of antiquity.
It was attempted only to restrict and to regu-
late it. Any "unseemly thing" was ground for
divorce, as also was barrenness. The wife, however,
was not allowed to separate herself from her husband
for any reason; in the case of her husband’s adultery,
be as well as the other guilty party, as we have seen,
would be punished with death. The punishment
of concubines, which differs widely from polygamy,
as also was practised by the Hebrews. A concubine
was less than a wife, but more than an ordinary
mistress, and her rights were jealously
guarded in the Mosaic Code. The children born of
such a union were in no case considered as illegitimate.
The principal distinction between a legal wife and a
concubine consisted in the latter’s social and domestic
inferiority. Concubines were not infrequently either
handmaids of the wife, or captives taken in war
or purchased of their fathers. Canaanitish and other
foreign women or slaves could in no case be taken
as concubines. The seducer of an unbetrothed
maid was compelled either to marry her or to pay
her father a heavy fine. In later times, ordinary
harlotry was punished, and if the harlotry was
that of a daughter of a priest she was burnt. Idolatrous
harlotry and sodomy were severely punished.
The domestic and social life of the Hebrews was
frugal and simple. They indulged very little in
public games and diversions. Hunting and fishing
were looked upon as necessities of life. Slavery was
extensively practised, and slaves were either Hebrews
or foreigners. The Mosaic law is against any kind
of involuntary slavery, and no Hebrew slave was
allowed to be sold to foreigners. An Israelitish
slave was to be set free after five or six years servitude
and not without some compensation, unless he were
willing to serve another term. As was natural,
Hebrew slaves were more kindly treated by their
Hebrew masters than were foreign ones, who were
either captives in war or purchased.

(3) Death and burial.—The principal sicknesses
and diseases mentioned in the Old Testament are:
interrim, bilious, and inflammatory fevers;
dysentery produced by sunstroke, inflammation of
the head, fits, apoplectic fits, paralysis,
flammation of the eyes, hemorrhages, epilepsy,
diarrhoea, dropsey, various kinds of skin eruptions,
scabies, and the various forms of leprosy. To these
must be added some psychical diseases, such as
madness, melancholy, etc., and also various forms
of demoniacal possession. No explicit mention of
professional physicians and surgeons is made in the
Old Testament.

In case of death the body was washed and
wrapped in a linen cloth and, if financial circum-
stances allowed, anointed with sweet-smelling spices
and ointments. Embalming was neither a general
nor a common practice. Burial took place, usually,
on the day of the person’s death. The dead body
was never burnt, but interred, unless for some par-
ticular reason, as in the case of Saul and his sons.
Mourning customs were various, such as wearing
sackcloths, scattering dust and ashes on the head,
beating the breast, plucking and pulling out the hair
and the beard, throwing oneself upon the earth;
rending the garments, going about baredfooted,
veiling the face, and in some cases abstaining from
eating and drinking for a short time. The usual
period of mourning lasted seven days. With few
exceptions the bodies were interred outside of the
villages, either in caves or in tumuli or barrows. Persons
of high social and financial standing were publicly
mourned, and their bodies placed in sepulchres
hewn in rock.

II.—35
Food and meals.—The principal articles of food among the ancient Hebrews can be easily summarized from the interesting description of the land of Canaan occurring in the Book of Deuteronomy, where it is said (Deut. vii. 22): "There shall no man lack in thee, a lard of fat, honey and oil, vine and fig trees, and pomegranates; a land of oil olive, and honey; a land wherein thou shalt eat bread without scarceness, thou shalt not lack any thing in it." The meals were under ordinary circumstances, as the description, and the table was more rich with fish, milk, fruit, and vegetables than with meat. Animal food in general was in favour with the people at large, but the Mosaic law restricted its use to almost the minimum. Animal food, however, of a more approved sort, or other foods, or other holy uses could only be eaten under specific conditions. In the eleventh chapter of Leviticus and the fourteenth of Deuteronomy, a list is given of a large class of animals which were looked upon as ceremonially unfit to be eaten. Animals, furthermore, were classified as pure and impure, or clean and unclean, and the complicated legislation of the Pentateuch concerning the use of these is partly based on sanitary, partly fanciful, and partly ceremonial grounds. The evening meal was the principal meal of the Hebrews, and if knives or other like instruments were used in the preparation of the meals, they were not used at the table. Hands were washed before and after meals. Neither prayer, nor grace, nor blessing seems to have been proffered before, during, or after the meal. Men and women used saucers, spoons, and other table usages and customs of the ancient Hebrews may reasonably be supposed to have been like those of modern Palestine.

Dress and ornaments.—The materials for clothing were principally cotton, linen, and wool; silk is once, or never, mentioned in the Old Testament. The wearing of a mixed fabric of wool and linen was forbidden by the Mosaic law. So, also, either sex was forbidden to wear the garments proper to the opposite sex. The outer garment of men consisted of loose, flowing robes, which were of various types and forms. On the four corners of this outer robe a fringe, or tassel, was attached. The undergarment, which was the same for both sexes, consisted, generally, of a sleeveless tunic or frock of any material desired, and reached to the knees or ankles. That of the woman was longer and of richer material. The tunic was fastened at the waist with a girdle. The fold made by the girdle served at the same time as a pocket. A second tunic and the shawl, which was a kind of shawl, or cloak, and the also in use, the outer garment of the Hebrew women differed slightly from that of the men, and no detailed description of it is found in the Bible. It was undoubtedly richer and more ornamented than that of the other sex. The most accepted colour for ordinary garments was white, and the art of bleaching cloth was from very early times known and practised by the Hebrews. In later times, the purple, scarlet, and vermilion colours were extensively used, as well as the black, red, yellow, and green. Girdles were worn by both sexes, and golden girdles were not used often. Men covered the head with some kind of a turban, or cap, although it is doubtful whether its use was universal in pre-Mosaic and Mosaic times. In ancient times women did not wear veils, but probably covered their heads with kerchiefs, or mantles. Sandals were in general use, but not among the poorer classes, or among the farmers and shepherds. Worthy of notice is the ceremony mentioned in Deut., xxv, 9, according to which if a man refuses to marry the daughter of his brother, who had died childless, "Then shall his brother's wife be a Levite, and go in unto his house, and play the maidservant of his house, and it shall be unto him as if he had taken him in the presence of the elders, and loose his shoe from off his foot, and spit in [or before] his face, and he shall answer and say, So shall it be done unto the man that will not build up his brother's house."

The drawing of off the shoe evidently indicated the surrender of the rights which the law gave the man to marry his brother's widow. Likewise the modern Levite used to cut the hair of the bridegroom as a sign of his bridegroom's acceptance. The wedded pair leaving the parental house appears to have a like symbolic significance; the parents and family friends thereby symbolically renounced their right to the daughter or son in favour of the husband and wife. Olive, dates, and figs were extensively used by both men and women, but more so by the latter. Prosperous men always carried a staff and a seal. All these ornamental articles, however, were more indulged in by the Egyptians, Syrians, or Assyrians, permitted for use by the Hebrews. Hebrew women wore also cauluses, anklets, and ankle-chains, scent-bottles, and decorated purses, or satchels. Perfumery was also indulged in; and extensive use was made of pigments as applied to the eyelids and eyebrows by women. Tattooing of the face, arms, chest, and hands was in all probability practised by the Hebrews, although it was to a certain extent incompatible with certain Mosaic prescriptions.

Pastoral and agricultural life.—According to the Biblical records, tillage the ground and the rearing of cattle and sheep were the first and earliest occupations of men. In Patriarchal times the latter was in greater favour, while in the later Hebrew period the first prevailed over the second. This transition from the pastoral to the agricultural, or settled, life was a natural consequence of the settlement in Canaan, but at no time did the two occupations exclude each other. Both, in fact, were important, indispensable, and necessary. The sheep was a common article of commerce, both as an article of food and as wool-producer, besides its constant use as a sacrificial animal. Sheep's milk was also a favourite article. Rama also, with from two to as many as eight horns, are not infrequently mentioned. Goats are frequently mentioned, and cows and oxen were utilized for milk and butter and for tilling the ground. Horses and camels were imported from Arabia. Poultry and hens are not once mentioned in the Old Testament. The ass was a common and useful animal for transportation, but the mule is not mentioned in the Bible prior to the time of the monarchy. The life of the Hebrew and Eastern shepherds in general was by no means easy or uneventful. Jacob, in fact, in reproaching his father-in-law, Laban, says: "Thou hast dealt very well with me, and hast kept promise with me." (Gen., xxxvi, 40); and of his own pastoral life and its perils David tells us that "there came a lion, and a bear, and took a lamb out of the flock: and I went out after him, and smote him, and delivered it out of his mouth." (1 Sam. D. V. I Kings, xvii, 34, 35). The shepherd's duties were to lead out the flock to pasture, watch them, supply them with water, go after the straying ones, and bring them all safely back to the fold at night. These formed his riches, trade, occupation, and sustenance.

Agriculture is the natural product of settled life. Nevertheless we read of Isaac that during the prevalence of a famine in Palestine he cultivated land in the vicinity of Gerar, which produced a hundredfold (Gen., xxvi, 12). The Mosaic law recognizes land as the principal possession of the Hebrew, and its cultivation as their chief business. Hence every Hebrew family was to have its own piece of ground, which could not be alienated, except for limited periods. Such family estates were carefully surveyed; and it was regarded as one of the most flagrant of crimes when the land was divided among so many yokes, that is, such portions as a yoke of oxen could plough in a single day. The value of the land was according to its yield in grain.
Irrigation was practised to a certain extent in Palestine, though not carried to the same extent as in Assyria, Babylonia, and Egypt. The chief dependence for moisture was on the dew and the drenching rains of the rainy season. The climate of Palestine was harsher. The shorter summers and longer winters. In modern times the valleys and the plains have greatly deteriorated in fertility. The ground was ordinarily fertilized by the ashes of burnt straw and stubble, the chaff left after threshing, and the direct application of dung. According to the Mosaic law, every tillable land should enjoy on each seventh year a sabbath, or a rest. The year in question is called the Sabbath Year, in which the field was not to be tilled. The object of this prescription was to heighten the natural fertility of the soil. What grew spontaneously in that year was to be not alone for the owner, but, on equal terms, for the poor, for strangers and for cattle. It is doubtful, however, whether this law was scrupulously observed in later Hebrew times. The most widely cultivated grains were wheat and barley, as well as spelt and millet. Of plants and vegetables the principal were grape-vines, olive-trees, nuts, apples, figs, pomegranates, beans, lentils, onions, melons, cucumbers, etc. The season for ploughing and cultivating the ground extended from March to July. In the Mosaic code ploughing is prescribed from April or May to September. The plough was similar to our modern one. It was ordinarily drawn by two oxen, cows or asses, never, however, by an ass and an ox together. It was also forbidden under penalty of confiscation to sow the same field with two kinds of seeds. The beginning of the harvest was signalized by bringing a sheaf of new grain (presumably barley) into the sanctuary and waving it before the Lord. The grain was generally cut with the sickle, and sometimes pulled up by the roots. Fields and fruit- or-orchards were not to be gleaned by their owners, as this privilege was given to the poor and strangers, as in the case of Ruth. The threshing and winnowing were performed in the open field, the first by means of cattle yoked together, the other by shovels and fans.

(7) Commerce.—The Hebrew people of old times were not inclined towards commerce and did not indulge in it. This is probably due partly to the geographical position of Palestine and partly to its position in respect of quantity and value. The commerce of ancient Egypt would seem to have offered the most natural highway to connect the opulent commercial nations of Egypt, Syria, Phoenicia, Assyria, and Babylonia, nevertheless, it lacked a sea-coast. Hence the Israelites remained essentially agricultural. The trade of the Levites was carried on chiefly in the mutual exchange of products among themselves. At the time of David and Solomon, caravans from Egypt, Arabia, and Syria were not infrequently sent to Palestine and vice versa. The ships which Solomon is said to have sent to transport the lands were built and manned by the Phoenicians. But even this revival of commercial spirit among the Hebrews was short-lived, for it ended with the life of Solomon. Solomon's commercial activities have been also greatly misunderstood and exaggerated. A faint revival of the Solomonic commercial spirit was inaugurated by King Jehoshaphat, of whom we read that he made "ships of Tarshish to go to Ophir for gold: but they went not; for the ships were broken at Eziongeber" [1 Kin. V. 31]. During and after the Babylonian Captivity the Hebrews were compelled by circumstances to resort to trade and commerce, as they had come into constant contact with their Babylonian brethren and with the numerous Syro-Phoenician and Arabian tribes and colonies. The Judean in the first instance. This well withstood the test, even though in his work against Apion, he says: "We neither inhabit a maritime country, nor do we delight in merchandise, nor in such a mixture with other men as arises from it."

Previous to the Babylonian Captivity, coined money does not seem to have circulated among the Hebrews, although a few references in Isaiah and Jeremiah give the idea that it was being used. Silver and gold were bought and exchanged by weight and value. The talent, the shekel, the kesithah, and the maneh (mina) are late Hebrew terms and of Babylonian origin. After the Exile, and especially during the Persian, Greek, and Roman dominations, coined money became quite common in Palestine, such as the quadrans, the asarian, the denarius, the drachma, the stater, the didrachma, etc.

During the time of the monarchy and afterwards, such trades and occupations as woodworking, metalworking, stoneworking, tanning, and weaving were thoroughly in evidence among the most industrious class of the Israelites, but the Chosen People cannot be said to have attained considerable skill and success in these directions.

(8) Science, arts, etc.—At no time can the Hebrews be said to have developed a liking for the study of history, astronomy, astrology, geometry, arithmetic, grammar, and physical science in general. The Book of Job, Proverbs, and the many parables which were written in the form of poetry and popular notions, mostly drawn from observations of everyday life and happenings, while others are, to a great extent, due to the Babylonian influence and civilization which, from very early times, and especially during and after the Captivity, seems to have invaded the entire literary and social life of the Hebrews. Hence the Hebrew astronomical system, their calendar, constellations, sacred numbers, names of the months, solar and lunar months, etc., are of Babylonian origin. The Book of Job no less than the early chapters of Genesis show the traces of this same Babylonian influence.

As the Tell-el-Amarna letters have conclusively shown, the art of writing must have been known in Canaan and among the ancient Hebrews as early as the Mosaic age, and even earlier. Whether, however, this art was utilized by them to any great extent, is another question. Hebrew literature is one of the most venerable and valuable literary productions of the ancient East; and, although in some respects, especially in the variety far inferior to that of the Assyro-Babylonians and Egyptians, nevertheless, in loftiness of ideas, sublimity of thoughts, and standard of morals and ethics, it is infinitely superior to them.

The art of music, both vocal and instrumental, occupies a high position in the Bible. Previous to the time of David, the music of the Hebrews seems to have been of the simplest character, as direct efforts to cultivate music among them appear first in connexion with the schools of the prophets, founded by Samuel. Under David's direction not less than four thousand musicians, i. e. more than the tenth part of the tribe of Levi, praised the Lord with "instruments" in the service of the temple. A select body of two hundred and eighty-eight trained musicians led this chorus of voices, one person being placed as leader over a section consisting of twelve singers. Heman, Asaph, and Ethan were among the most famous of these leaders. Men and women were associated together in the choir. In later Hebrew times the art of music developed still further till it reached its highest form under Hezekiah and Josiah. The Hebrew musical instruments were, like those of other nations of antiquity, chiefly of three kinds, viz: stringed instruments, wind instruments, and such as were beaten or shaken to produce a musical sound. The first class includes the harp and the psaltery (also rendered "viol", "dulcimer" etc.), the sackbut (Lat. Sambucus). To the second belong
the flute, the pipe (Lat. flauta), and the trumpet. To the last belong the tabret, or timbrel, the castanets, and the cymbals.

In mechanical arts, the Israelites were far behind the Canaanites and Assyro-Babylonian neighbours. The author of I Samuel (D. V. 1 Kings) gives a sorry but true picture of the times preceding the activity of Samuel as follows: "Now there was no smith found throughout all the land of Israel . . . but all the men of war went down to the Philistines to sharpen every man his share, and his couler, and his axe, and his mattock." In the times of Solomon, however, as it appears in connexion with the building of the temple, conditions materially improved. Of the artisan classes, those working in wood and metals were always, perhaps, the most numerous in Israel. Among the former were carpenters, cabinet-makers, wood-carvers, manufacturers of wagons, of baskets, of various household utensils, including the distaff and the loom, and of the tools used in agriculture, such as ploughs, yokes, threshing-machines, goads, and winnowing-shovels. Workers in metals mentioned in the Bible are gold- and silversmiths and workers in brass and iron. Some of the tools of which they made use were the anvil, the hammer, the hammering-board, the faying-board, the hammer, and the tongs. Among the various products of these Hebrew metal-workers are settings for precious stones, gilding, axes, saws, sickles, knives, swords, spear-heads, fetters, chains, bolts, nails, hooks, penstocks, pans for cooking purposes, ploughshares, and the wheels of threshing-instruments. Copper or bronze was also used in manufacturing some of these articles. Other artisans mentioned in the Bible are: stone-masons, brick- and tile-makers, engravers, apothecaries, perfumers, bakers, tanners, fullers, spinners, weavers, and potters. Most of these trades and mechanical arts, however, came into prominence during the reign of Solomon and his successors.

II. POLITICAL ANTICUITY.—(1) Civil administration.—It has been truly said that law as law was unknown in early Israel. The customs of the clans and the conduct of the elders or of the most influential members of the tribe were looked upon as the standards of law and morality. Lawfulness was a matter of custom more or less ancient and more or less pronounced; and penalisation was equally a matter of custom. When custom failed in a specific case, judgment could be rendered and new precedents might be made which in process of time would crystallise into customs. Hence the old tribal system and the primitive Semitic laws, which were in early Israel and Arabia, knew no legislative authority; and no single person or group of persons was ever acknowledged as having power to make laws or to render judgment. Of course prominent individuals or families within the tribe enjoyed certain privileges in acknowledgment of which they performed certain duties. In many cases they were called upon to settle differences, but they had no judicial powers and, if their decision did not satisfy the litigants, they had the right not only to impose but to enforce obedience, much less to inflict punishment. Within the tribe all men are on a footing of equality, and under a communicative system petty offences are unreasonable. Serious misdemeanour is punished by expulsion; the offender is excluded from the protection of his kinmen, and the penalty is sufficiently severe to prevent it being a common occurrence. The man who is wronged must take the first step in gaining redress; and when it happens that the whole tribe is aroused by the persecution of any exception, the offence is fundamentally regarded as a violation of the tribe's honour, rather than as a personal injury to the family of the sufferer. This condition of affairs, however, does not necessarily imply a condition of utter lawlessness. On the contrary, tribal customs formed practically a law of binding character, although they were not regarded as law in the proper sense of the term.

That such was the prevalent social condition of the ancient Hebrews in the patriarchal period is quite certain. The few recorded incidents in the lives of Abraham, Isaac, and Jacob furnish ample illustration of the peaceful and contented life the Hebrews in Egypt and the comparatively advanced civilisation with which they there came in contact, as well as their settlement in Canaan, might be expected to have influenced their old tribal system of law and justice. Nevertheless, the authentic historical records of Israel's national formation and even the legislation of the Book of the Covenant, which is undoubtedly the oldest Hebrew code of laws, when carefully examined, utterly fail to show any such remarkable advance in the administration of law and justice over the old nomadic tribal system. It is true, that as Dr. Bensinger remarks, "before the monarchy Israel had attained a certain degree of unity in matters of law; not in the sense that it possessed a written law common to all the tribes, or as a uniform form of organisation, the fanning of the legal system; but in the sense that along with a common God it had a community of custom and of feeling in matters of law, which community of feeling can be traced back very far. 'It is not so done in Israel' and 'Folly in Israel, which ought not to be spoken of the proper expressions reaching back to quite early times'. Nevertheless, law as law, with legislative power and authority, or a uniform system of legal procedure with courts and professional judges, were unknown in the earlier period of Israelitish history. A study of the different Hebrew terms for judge clearly shows that a professional class of judges and, consequently, duly constituted courts did not exist in Israel till the first period of the monarchy, and even later. The shokterim were primarily subordinate military officials, who were employed partly in the maintenance of civil order and military discipline. It was not until post-Exilic times that the term was applied to one with judicial power. Mehohek (primarily from hakah, to cut in", "to inscribe", "to decide", etc.). The first, second, and subsequent, are judicial, i.e., to be just, "right", "courage", etc., are originally commander or ruler. The shophethim (Lat. sutses; Assyrian sapatu), from which the "Book of Judges" takes its title, were not judges, but champions and deliverers. Hence, in Hosea (D. V. Osea), vii, 7, and Mic. viii, 11, 10, and 2, we find "the judges," "the judges," "the judges," and "the judges of the Phoenician cities and colonies were called "kings" by the Greeks. Other terms, such as palit, qasa (the meaning of which is rather obscure, primarily mean "umpire" in general, "chief", and " petty ruler". The only Hebrew word which, properly speaking, means "judge", in its etymology and historical significance, is daganim (found in all Semitic languages: Arab. daqada; Aramaic dagnada; Assyrian da-a-ru or da-a-ru, etc.). Although the very terms are not found in legal judgments, or in legal transactions, "to compensate", "to govern", and "to rule", we have sufficient warrant to believe that it meant, from the very earliest times, "to decide", and "to render decision". In the Old Testament, however, the word rarely occurs. In I Sam. (D. V., I Kings), xxiv, 15, it is even questionable whether it belongs to the original text, and it is only in post-Exilic times that the word meant "professional judge".

What was the polity of the Hebrew tribes prior to the time of Moses was not difficult to describe. Atributley serious crimes were punished by the people in accordance with their own laws, with the exception that they were sometimes punished in the way they were committed. They were independent
princes. They acknowledged no subjection, and owed no allegiance to any sovereign. They formed alliances with other princes. They treated with kings on a footing of equality. They maintained a brotherly, equalitarian title of "brother," the title which the chief of the tribes had in war, and repelled force by force. They were the priests who appointed festivals, and offered sacrifices. They had the power of disinherit ing their children, of sending them away from home without assigning any reason, and even of murdering them as their superiors.

The twelve sons of Jacob ruled their respective families with the same authority. But when their descendants had become numerous enough to form tribes, each tribe acknowledged a prince as its ruler. This office, it is likely, was at first hereditary in the oldest son, but afterwards became elective. When the tribes increased to such an extent as to embrace a great number of separate households, the less powerful ones united with their stronger relatives, and acknowledged them as their superiors. In this way, there arose a sub-division of the tribes into collections of households. Such a collection was technically called a family, a clan, a house of fathers, or a thousand. This last appellation was not given because each of these sub-divisions contained just a thousand persons, or a thousand households, but in the nature of things, the number must have varied, and in point of fact, it is manifest from the history, that it did. As the tribes had their princes, so these clans, families, or households had their respective chiefs, who were called heads of houses of fathers, heads of thousands, and sometimes simply heads. Harrington designates these two classes of officers phylarchs, or governors of tribes, and patriarchs, or governors of families. Both, while the Israelites were yet in Egypt, were comprehended under the general title of elders. Whether this name was a title of honour, like that of shikhan (the aged) among the Arabs, and of that of senator among the Romans, or whether it is to be understood, according to its etymology, as denoting persons actually advanced in years, is uncertain. These princes of tribes and heads of thousands, the elders of Israel, were the rulers of the people, while they remained still subject to the power of the Pharaohs, and constituted a kind of 'imperium in imperio'. Of course they had none of the ordinary lordly privileges, but governed by custom, reason, and the principles of natural justice. They watched over and provided for the general good of the community, while the affairs of each individual household continued under the authority of the father. It may be supposed, only those cases which concerned the fathers of families themselves would come under the cognizance and supervision of the elders.

During their wanderings through the Desert the Hebrew tribes had no occasion to introduce any radical change in this form of government, for they had to contend with constant difficulties of a social, moral, and religious character. And, although numerically superior to many Canaanitish tribes, they were, nevertheless, always lacking in military discipline, and were constantly moving from place to place. Realizing the necessity of defending themselves against the predatory tribes and rivals for the possession of fertile lands and oases, they soon developed a military spirit, which is the strongest external political tie. The administration of justice in ancient Israel in the Mosaic age, and for a long time after, was in the hands of the elders, the local judges, and, somewhat later, the priests and the Levites, joined afterwards by the "quadragesimals." The former heads of the families and clans under the tribal system, had undoubtedly ample jurisdiction concerning family affairs, disputes about conjugal relations, inheritances, the division of property, the appointment of the goel or upholder of the family, and the settlement of blood-revenge. The local judges, as we have remarked, were not what this English word signifies, but arbitrators and advisers in settling disputes which could not be settled by the elders, and very often they had to decide cases of appeal from the ordinary bench of elders at the city gates. They were, as a rule, taken from the body of the elders of the city, and later on from the most chaste and capable of the officers of the army. The third class consisted of priests, and later on of prophets. They were appealed to in all difficult cases, their authority and influence being undoubtedly very strong. To appeal to a priest was to appeal to God Himself, for the priesthood was universally acknowledged as the official representative of Yahweh. His decisions were regarded as "directions," and as such they were of an advisory character, thus constituting the oracle of the Hebrews. As originally each family group had its own priest, resort was naturally had to him for light on practical difficulties, not so much the settling of disputes as pointing out the safe, judicious, or righteous way for the individuals of the household in embarrassment. In the same time, appealed to, not so much as official representatives of Yahweh as from the fact that they were regarded as men eminent in wisdom and spiritual authority. From the eighth century downwards the authority of the priests was greatly overshadowed by that of the prophets, who managed the destinies of the whole nation with an almost unlimited authority and assertiveness, proclaiming themselves as the messengers of Yahweh and the mouthpieces of His orders. A single judicial centre for the whole nation was never attained till the period of the monarchy. During the period of the Judges several leading judicial centres existed, such as Shiloh, Bethel, Gilgal, Mizpah, Ramah, etc.

Whether Hebrew judges held their office for life is not altogether certain, although the presumption is that they did. It is likewise uncertain whether any salary or compensation was attached to the office. In the case of the Ten Judges, no revenues were appropriated for them, except, perhaps, a larger share of the spoils taken in war; and in case of judgment over death cases the value of presents was quite common. This at first may have been a kind of testimonial of gratitude and respect, but it afterwards degenerated into mere bribery and corruption.

Whether the office of princes of tribes, chiefs, military officers, elders, and judges was hereditary or elective, is not easy to determine. Both systems may have been according to the different circumstances; but that in the majority of cases it was hereditary, admits of no doubt, for such was the prevailing custom in the ancient East and, to a certain extent, is so even in our own days.

No external sign of honour seems to have been attached to the dignity of judges and elders in Israel. Whether they were without pay is uncertain, although the passage in the Song of Deborah relating to those "who ride on white assest and sit in judgment" probably refers to the princes of the tribes, chiefs, elders, and judges in their respective capacities of military commanders, magistrates, and moral arbiters and judges. In the present day, the "quaedis," or chief judges and magistrates, have the distinctive privilege of riding either on mules or white assest, as against the military officers and civil governors who must ride on horses. That the office of chief magistrate in ancient Israel is quite certain. In the whole Pentateuchal legislation allusion to such an institution is absolutely wanting. The supreme authority
of the Hebrew community was in Yahweh. Moses, strictly speaking, was but the viceroy of Yahweh, and the same, to a certain extent, may also be said of Josiah. Their successors, the judges, were rather military commanders than judges or magistrates in the strict sense. With the beginning of the monarchy, the civil as well as the military power began to be centralized, as far as possible, in the person of the king. But the Pentateuchal legislation as a whole is decidedly adverse to the idea of concentrating all power in the person of the king, or in that of any individual, and it is not improbable that the writer of Deut., xviii, was influenced by Israel's historical experience under the monarchy.

Allusions to the administration of law and justice in the old Book of the Covenant are extremely meagre and utterly fail to give us any clear (or even vague) reference to legal procedure, judges, courts, or to any system of administration of justice. It is true that the Book of the Covenant contains statutes and judgments, apparently enacted by some authoritative power; for such an authority must be assumed, otherwise there would be no meaning in the punishment of death, seven times prescribed, and the avenging on the body of the guilty person the wrong he had done. Still, as Kautzsch rightly remarks, we are wholly in the dark as to the circle from which the Book of the Covenant proceeded, and, above all, as to the public authority by which scrupulous obedience was ensured. And, emphatically as justice and impartiality in legal cases is insisted on (xxiii, ff.), there is not a single indication as to who was authorized to pronounce sentence or to supervise the execution of the verdict. In two cases, however, viz., in Exodus, xxvi and xxvii, in which the case is complicated and the law doubtful, the Book of the Covenant insists that the parties should present themselves "before God" (Elahim): in the first case probably to perform a symbolic act which will have legal effect, and in the second probably to obtain an oracle. The Septuagint seems to have understood the sense of the phrase before God in its most obvious meaning, rendering it "before the tribunal of God", i.e. that the matter is to be referred to the judgment of God, presumably in the sanctuary or before the priest. Rabbinical tradition, however, as early as the time of St. Jerome, took the word Elahim (God) as a plural, i.e. "gods", and the word used here for a singular from the fact that, on account of the sacredness of their office, and the place where their decisions were rendered (often in the temple or at some sacred shrine) the judges were called "gods". The rabbinical interpretation which has been followed by the majority of ancient and modern commentators, ingenious though it be, is nevertheless erroneous; for, considering the fact that the two cases referred to were such as no judge could decide with any certainty or probability, and in which only a delay of intervention would bring about a satisfactory solution, we may assume that the rabbinical interpretation is untenable. This conclusion has been admirably vindicated by the Code of Hammurabi, where, in several cases in which the doubt is such as to make the crudest statutes known to us, and any judicial decision untrustworthy, the decision is left to God Himself. Hence, in all such cases Hammurabi decrees that the litigants should present themselves "before God", and swear by His name, i.e. as if God were present. The expression before God by Hammurabi is only the same as that used in the two passages of Exodus referred to, and the cases in which the expression is applied are analogous. But in the Code of Hammurabi, "to appear before God" is the same as "to swear by the name of God", or "to take a solemn oath"; hence, in the two passages of Exodus, to appear before Elohim does not mean to appear before judges, as some commentators are wont to say, but place or sanctuary where the presence of the deity was more sensibly felt. By taking an oath the man in question constitutes God as the judge before whom he protests his innocence and affirms his rights. God is thereby called upon to avenge him upon the guilty one, and the Deity, Bel, nor Marduk, nor any other particular god, but is the Deity in its almost abstract form—He who is considered to be everywhere and to know everything. Hence the rabbinical interpretation, followed till the discovery of the Code of Hammurabi by the majority of commentators, may be confidently dismissed.

The legislation of Deuteronomy, on the other hand, which is in the main considerably later than that of the Book of the Covenant, furnishes us with more abundant details concerning the administration of law and justice in Israel. These are contained mainly in xvi, 18-20; xvii, 8-13, and 14-20; xix, 15-20, and xxv, 1-4. From II Chronicles (D. V. Paralipomenon) we learn that King Jehoshaphat had a legal council consisting of thirty judges, who sat in a court of justice, where priests and lay judges participated in the administration of justice each in their own sphere, and that he appointed judges in all cities of Judah. Details are lacking, but in its broader and modern sense the phrase before God by Jehoshaphat agrees remarkably with the system prescribed in Deuteronomy, xvii, 8-13. Even in this case it is doubtful whether these judges and tribunals could in any satisfactory measure compare with the Babylonian legal system of the time of Hammurabi. In Ezechiel's time (and this brings us down to the sixth century B. C.) the priests seem to have absorbed all administrative power, while the author of I Chronicles, evidently influenced by Ezechiel or Deuteronomy, tells us that David had appointed 6,000 Levites as judges, which is quite inadmissible. In the post-Exilic times, and during the Greek and Roman periods, reference is made to professional judges, local courts, and tribunals in all the cities of Israel, which was undoubtedly due to Babylonian, Persian, Greek, and Roman influences.

Judicial or legal procedure was very simple in early Israel. In Exodus, xxvii, 22, we are told that the elders appointed by Moses at Horeb were to judge the people simply "judging all cases" (xxviii, 2, cf. Exodus, xviii, 19 sqq.), we read that Moses rendered judgments before the tabernacle of Yahweh, where he sat with Aaron and the princes or elders of the congregation to teach statutes and give judgments. According to Deuteronomy, xxi, 18; xxvi, 15; and xxv, 7 (cf. Prov., xxii, 22; Amos, v, 11, 15; and Ruth, iv, 1, etc.), the judges in the cities had their seat at the gate, which was the thoroughfare of the public, or in the public squares of the city, where the markets were held, or in some other open place. Even the supreme judges administered justice in public; Deborah, for instance, under a palm-tree, and the kings at the gate, or in the court, of the royal palace. Solomon is said to have erected a porch, or hall of judgment, in Jerusalem, for his own royal court of justice, and it seems impossible to question that in later times the princes of Judah exercised judgment in a chamber of the royal palace. Jeremiah himself, when accused by the priests and false prophets, was judged by the princes of the people, who were his judges, and he was thrown into the king's house into the temple to judge at the entrance of the new gate before the assembled people. The litigants, viz., the plaintiff and the defendant, appeared personally before the elders, and presented their complaints orally. The accused, if not present, could be summoned to appear. Advocates are
unknown in the Old Testament, for the plaintiff was supposed to look after his own case if he desired satisfactory judgment. Litigants were also at liberty to appeal to a man of the plaintiff's choosing as a witness to the case, but the judge, however, was not appealing to the judge. The judge was held bound to hear and examine the case closely and conscientiously, his chief method of inquiry being the examination of the testimony of the witnesses. The accusations of the father against his rebellious child needed no support of witness. In other cases, however, especially criminal cases, not fewer than two or three witnesses were absolutely required. In all probability the testimony of slaves, children under age, and women was not accepted, as is expressly forbidden in Deut. 19:15. and the Talmud, although not mentioned in the Old Testament. Witnesses were thoroughly examined, and, as in the Code of Hammurabi, false witnesses were punished according to the lex talionis, viz., by inflicting the precise kind of punishment the false witness had intended to bring upon his victim by his falsehood. Witnesses do not seem to have been put on oath, but when the nature of the case was such as to make it impossible to have or to produce witnesses, as in a case of theft, the oath was then administered to the accused, and this act of the accused was considered a confessor of guilt, and of the guilty party was a practical impossibility, Yahweh was looked to for the accomplishment of the task.

The Law affixes no civil punishment for perjury, it being considered a profanation of Yahweh's name and threatens it with divine punishment. It must be noted, however, that in all cases in which an oath was taken before a judgment-seat it consisted merely of an adjuration addressed by the judge and responded to by the accused sworn with an Amen.

"Only in common life did the person swearing himself utter the oath, either: 'So Yahweh do to me, and more also', or 'God [Elohim] do so to me', etc., or 'as Yahweh liveth'. But in such cases the name of Yahweh was probably avoided, and the oath was taken by the life (soul) of the man, to whom one wished to protest by oath. In later times, it became common, especially among the Pharisæes, to swear by heaven, by the earth, by the temple, the holy city, and by one's own head.

The verdict, or the sentence, was pronounced orally, although from Job, xii, 16; and Isaiah, xx, 1, it appears that in some cases the sentence may have been given in written form. The sentence was to be executed without delay. Punishment was accorded to individuals and thousands, even to the nations, through stoning by the whole congregation or the people of the city, the witnesses being required to put their hands first to the execution of the guilty.

The practice of ordeals as means for ascertaining the truth, or obtaining a confession of guilt, was by no means unknown in Israel, although Josephus expressly tells us that torture and the bastinado for this purpose were first introduced into Israel by the Herodians. The most important one is the so-called " ordeal of jealousy", prescribed in Numbers, vi, 31, in the case of a woman suspected of adultery which cannot be legally proved. For this purpose the husband of the suspected woman would bring her to the priest; he must also bring with him an offering of barley meal, which is called "a meal-offering of jealousy, a meat-offering of memorial bringing guilt to remembrance." The priest brings the woman before Yahweh, makes her take an oath of purgation, and then gives her to drink a potion described as "the water of bitterness that causeth the curse", consisting of holy water and the ashes of the turtledove, which has been mingled, and into which the written words of the oath have been washed. If the woman be guilty the potion proves harmful; if innocent, harmless; in the latter case, moreover, the woman becomes fruitful.

The existence, at least at certain periods, of corruption and delay, with the adducements of justice in Israel, and especially among the priests, need hardly be insisted on. The example of the two sons of Eli, notorious for their greed, is well known. Micah, Isaiah, Hosea, Zephaniah, Jeremiah, and Malachi freely and vehemently accuse the Hebrew judges of uniformness, injustice, respect of persons, briberies, and dishonesty in their legal decisions.

(2) The army.—While in Egypt, the Hebrews lived a peaceful pastoral life under the supreme control of the Pharaohs. During their forty-years wandering in the desert, that is, in the wilderness, they had to struggle to make their way through the hills and under every green tree; and they were overthrown by their enemies, and forced to live in the wilderness. Here they were face to face with the old settled Canaanite tribes and nations, such as the Philistines, the Amorites, the Moabites, the Ammonites, the Jebusites, the Hivites, the Perizzites, and many others, whom they had to fight, and exterminate. "Ye shall utterly destroy", was the command of Yahweh, "all the places wherein the nations which ye shall possess serve their gods, even on the mountains and on the hills, and under every green tree: and ye shall overthrow their altars, and break their pillars, and burn their groves with fire; and ye shall hew down the graven images of their gods, and destroy the names of them out of that place." (Deut. xii, 2, 3.) Hence the question of the establishment and organization of an army became a necessity, and it is morally certain that in their first wars every available Hebrew fighter took part. From the time of David down to the late monarchical period a regular army was established and organized. From Num., i, 3, it appears that the whole male population over twenty years of age, if capable of bearing arms, were liable to military duty. At the time of the Judges, it is certain that the Israelite army was composed wholly of infantry, as David was the first to use horses and chariots for military purposes, and it was Solomon who first established a distinct cavalry army. In the middle days of the monarchy the Hebrews could raise an army of one hundred and eighty thousand men [I Kings (D. V. III Kings), xii, 21], and on some occasions twice and even three times as many [see II Chronicles (D. V. Paralip.), xxiii, 3, and xiv, 8]. These figures, however, need be greatly lowered, as they are due probably to a copyist's error. The army was divided into hundreds and thousands, and the captains of hundreds and captains of thousands, if on their arrival by septs or clans they were not thus organized. It is certain, however, that in point of armament and military organization and discipline the Hebrew army was greatly inferior to either the Egyptian or the Assyrian. Before undertaking any military operation, Yahweh was consulted through a prophet or through the Urim and Thummim, and sacrifices were offered just as in Homer's times. This custom, however, was practised by all nations of antiquity. From many Biblical passages [such as Judges, vii, 16; I Sam. (D. V. Kings), xi, 11; II Sam. (D. V. Kings), xviii, 2; I Kings (D. V. III Kings), xx, 27; and II Macc., viii, 22, et seq.] it clearly appears that the attacking Israelitish army was usually divided into ten, or twelve divisions, one in the centre and two on the flanks. Isaiah refers even to the "wings" of the army (viii, 8). A column advancing to conflict was preceded by two ranks of spearmen; next to these was a rank of bowmen, and behind them came the slingers. Spies were posted out in front of the army, and the strength of the enemy, while night-attacks, with skillfully divided forces, were not infrequent. The beginning of the battle was signaled by the blast of a trumpet,
accompanied by the shouts of the combatants. The Ark with its epahod was considered indispensable. It was borne before the army, who, as it was taken up, clapped their hands, and let the enemies be scattered, and let them that hate Thee flee before Thee'. The principal equipment for war was the helmet, shield, and other defensive armour, the bow, the sling, the sword, the spear, the javelin, and other instruments which must have been common to Oriental nations, although not explicitly mentioned in the Bible.

III. SACRED ANTIOQUITIEs.—Some of the Hebrew festivals are originally of historical character, i. e. are commemorative of some great historical event in the life of the Hebrew nation; while others are primarily religious, or of ethico-religious significance. To the first category belong the Feast of Passover, the Feast of Pentecost, and the Feast of Tabernacles, and other minor ones mentioned below, such as the Feast of Purim, etc. To the second class belong the Sabbath, the New Moon, the Feast of Trumpets, the SABBATICAL Year and the Year of Jubilee. The former were more properly called festivals; the latter, sacred seasons. The latter are lunar; the former are solar—based on the lunar and solar systems respectively. The principal feature of the three historical festivals consisted in making a pilgrimage, or a visit to the Temple, as prescribed in Exodus, xxiii, 14, 17: "Three times in the year shalt thou make pilgrimage unto me, three times in the year shall all the men appear before Yahweh, the God of Israel."

The Passover (whence our Pascha), with which the Feast of the Unleavened Bread is closely connected and almost identical, although originally distinct from it, constituted the opening festival of the Jewish ecclesiastical year, and was celebrated on the 14th of Nisan (Abib), which month approximately corresponds to our April. It was instituted in commemoration of the Exodus from Egypt, when the Angel of Death went forth to destroy the first-born of the Egyptians, passing over (whence Passover), however, the houses of the Hebrews, on the lintels of whose doors the blood of a lamb had been sprinkled. The Passover Festival was celebrated as follows: An unblemished male lamb a year old (called the paschal lamb) was to be selected by each family in Israel. It was to be killed on the evening of the fourteenth day and consumed the same night. The flesh was to be roasted, not eaten raw, or boiled, and not a bone of the animal was to be broken. A portion of the bitter herbs might be used, but nothing more; and whatever portions were not needed for food were to be destroyed the same night by burning. Hence, on the evening of the thirteenth day of Nisan, all leaven was scrupulously removed from the Jewish houses. The fourteenth day was thus regarded as a holiday, on which all servile work was suspended. In later Hebrew times, however, the Passover Festival was somewhat modified.

The Feast of the Pentecost, also called the Feast of Weeks, the Day of Firstfruits, etc., was celebrated on the fiftieth day after the Passover, i. e. on or about the 8th of Siwan, the third month of the Jewish ecclesiastical year. It lasted a single day, and it marked the completion of the corn harvest. According to later Jewish traditions, the Feast of Pentecost was also instituted in commemoration of the giving of the Law to Moses. It is mentioned in the Bible for the first time in the second Book of Maccabees. With the Feast of Pentecost the ceremonial quotient of the Day of Atonement was completed. The characteristic ritual of this festival consisted in offering and waving to Yahweh in his Temple two leavened loaves of wheaten flour, together with a sin offering, burnt offering, and peace offering, and its object was to offer to Yahweh the firstfruits of the harvest, and to thank Him for it.

The Feast of Tabernacles, or Booths, was observed for seven days, i. e. from the 15th to the 22nd of Tisri (the seventh month of the Jewish year, approximately corresponding to our October), following closely upon the Day of Atonement. It marked the completion of the fruit-harvest (which included the wine and wine-harvest), and, hence, it commemorated the forty-years' wandering in the wilderness, when all the Hebrew tribes and families, for lack of houses and buildings, lived in tents and booths. "The sacrifices at this feast were far more numerous than at any other. On each of the seven days the one kid of the other sex, and two rams and fourteen lambs as a burnt-offering. Also seventy bullocks were offered on the seventh day, beginning with thirteen on the first day and diminishing by one each day, until on the seventh day seven were offered. After the seven days a solemn day of 'holy convocation' was observed which marked the conclusion, not only of the feast of Tabernacles, but of the whole cycle of the festal year. On this day one bullock, one ram, and seven lambs were offered as a burnt offering, and a goat for the offering." The apocryphal Biblical allusion to this feast is found in I (D. V. III) Kings, viii, 2, and xii, 32.

Besides these three great festivals, certain minor ones were observed by the Hebrews: The word Purim is probably of Persian origin (from the word Pardiagn, or Pardiqun), and the feast so named was instituted to commemorate the overthrow of Haman, the triumph of Mordecai, and the escape of the Jews from utter destruction in the time of Esther. It was celebrated on the 14th and 15th day of Adar (the twelfth and last month of the Jewish Year).—The Feast of the Dedication of the Temple was instituted in 164 B. C. by Judas Maccabees, when the Temple, which had been desecrated by Antiochus Epiphanes, was once more purified and rededicated to the service of Yahweh. It commenced on the 25th of Chislew, the ninth month of the Jewish year (corresponding to our December), and lasted for eight days. It was a feast of universal and unbounded joy, delight, and happiness, as was also the Feast of the Wood Offering; The Reading of the Law; Feast of Nicanor; of the Captured Fortress; of Baskets, etc.

The sacred seasons, or religious festivals, are primarily a development of the institution of the lunar and solar system of the Calendar. It has been often remarked, and with good reason, that in all the Hebrew Religious Festivals the sacred number seven is the dominating factor. "Every 7th day was a Sabbath. Every seventh month was a sacred month. Every seventh year was a Sabbatical year. Seven times seven was the year of Jubilee. The Feast of the Passover, with the Feast of the Unleavened Bread, began fourteen days (2x7) after the beginning of the month, and lasted seven days. The Feast of Pentecost was seven times seven days after the Feast of the Passover. The Feast of Tabernacles began fourteen days (2x7) after the beginning of the month and lasted seven days. The seventh month was marked by (1) the Feast of Trumpets on the first day, (2) the Feast of Atonement on the tenth day, (3) Feast of Tabernacles from the fifteenth day to the twenty-first. The days of the "Holy Convocation" were seven in number—two at the Passover, one at Pentecost, one at the Feast of Trumpets, one at the Day of Atonement, and one on the day following, the eighth day." The institution of the Hebrew Sabbath may be traced in its origin to the early Babylonians who, according to the majority of Assyriologists, seem
to have been its originators, although among the Hebrews it developed on altogether different lines. It was celebrated on the 7th, 14th, 21st, and 28th day of the lunar month. It is doubtful whether it was known and observed in patriarchal and pre-Mosaic times, but in those early days the Hebrews were divided into two tribes—the old institution of the Sabbath, connects it with the seventh day of the Creation period, on which God is said to have rested. By the ancient Babylonians it was looked upon as an unlucky day, on which it was taboo to do any public work, and consequently was a day of rest.

The New Moon Festival consisted in celebrating the reappearance of the moon, and as such it was universally practised by all Semitic nations. Hence, in all probability, it was an acknowledged pre-Mosaic institution. On this day the law enjoined only the offering of special sacrifices and the blowing of trumpets. Abstinence from work was not obligatory. On the day of the new moon of the seventh month the festival in question was more solemnly and more elaborately celebrated. After the Babylonian exile, however, the festival assumed a new character, similar to that of the New Year Celebration.

The Feast of Trumpets is the New Moon Festival of the seventh, or Sabbatical, month of the year.

The Second Coming of Jesus, S.J. (Rome) in every seventh year, and it fields were not to be tilled.

The Year of Jubilee occurred every fifty years, i.e., at the end of seven Sabbatical years, just as Pentecost occurred on the fiftieth day after the Passover Festival. It was primarily the emancipation of the Hebrew slaves and the return of mortgaged property to its hereditary owners.

The great Hebrew Fast Festival was the "Day of Atonement", or Yom Kippur. It was celebrated on the tenth day of the seventh month, on which day atonement was offered for the sins and uncleanliness of the people of Israel as a whole, and for the purification of the temple in all its parts and appurtenances. It is significant that the earliest mention of it in the Bible occurs in such post-Exilic writings as Zechariah (D. V. Zach.), iii, 9; Nehemiah, vii, 73; ix, 38; and Sirach, 1, 5 sqq. A ceremony connected with the Day of Atonement is the so-called For Azael. It consisted in sending into the wilderness the remaining goat (the "emissary goat"), the members of the kohanim, having first been placed symbolically upon its head.

Treatises on Biblical Archeology by Jahn (Vienna, 1817); Rost (Leipzig, 1853); De Wette (Leipzig, 1853); Erdwal (Gottingen, 1860); Hanberger (Munich, 1869); Romer (Berlin, 1857); Klinker (Stuttgart, 1884); Schoen (Freiburg, 1885); and, among English works are Keil, Manual of Biblical Archeology (two vols., Edinburgh, 1867); Bunsen, Biblical Archeology (Philadelphia, 1856); Penrose, Early Hebrew Life (London, 1868); Day, The Social Life of the Hebrews in the Semite Series (New York, 1861); Trimble, The Blood Covenant; Jd., The Second Covenant; Jd., The Salt Covenant; various articles in Sueton, Dictionary of the Bible; Krivoy, Biblical Cyclopedia; Violebus, Dict. de la Bible; Beza, Home, Dict. of the Bible and Jewish Encyclopedia. BIBLICAL COMMISSION, The, a committee of cardinals at Rome, who, with the assistance of consultants, have to secure the observance of the prescriptions contained in the Encyclical "Providentissimus Deus" for the "Regimes in Secunda sedis Sedis," and the interpretation of Scripture. Its official name is "Commissio Pontificia de re biblica." It was formally established by the Apostolic letter of Leo XIII. "Vigilantissim," 30 October, 1902.

Constitution.—The Commission was first appointed in August, 1901, with three cardinal members and twelve consultants. After the formal establishment of the Roman Curia, twelve new consultors were added to the list. There is no limitation to the number of consultants.

In June, 1907, the Commission was made up of five cardinal, Rampolla, Satolli, Merry del Val, Segnas, and Vives y Tuto. The consultants were forty-three: Amelli, O.S.B. (Rome), Balestet, O.S.A. (Rome), Barbenewer (Munich), Cesereto, Cong. Orat. (Genoa), Ceriani (Milan), Chauvin (Laval), Corney, S.J. (Rome), Delattre, S.J. (Tronchiennes), Dussard (Cologne), Eiser, O.P. (Rome), Fillon, P.P.S. (Paris), Fleming, O.F.M. (England), Fracanzan, Perugia, Genocchi, M.S.C. (Rome), Giambotti, S.J. (Rome), Gonfalonier (Florence), Granan (Washington), Guterbock (Fulda), Hofer (Freiburg im Br.), Hopf (Rome), van Hoonacker (Louvain), von Hummelau (S.J. (Valkenburg), Janssens, O.S.B., Second Secretary (Rome), Torio (Palencia), Kaulen (Bonn), Lagrange, O.P. (Jerusalem), Lamy (Louvain), Legrand (Angers), Lépicier, S.M. (Rome), Lepidi, O.P. (Rome), Lesestre (Paris), Mangenot (Paris), Menet (Paris), Molas (Paris), O.F.M. (Rome), Nikel (Breslau), Poels (Washington), Prat, S.J. (Rome), B. Schaefer (Vienna), Schei, O.P. (Paris), Talamo (Rome), Vigouroux, P.P.S., First Secretary (Rome), and Weiss (Braunberg).

Method of Procedure.—The Commission is constituted on the lines of an ordinary Roman Congregation. The consultants in Rome hold meetings twice a month, at which the secretaries preside. The result of their deliberations are presented by the secretaries to the cardinal, who, after consultation with the consultors, and after a second meeting, on the second and fourth Sundays. It belongs to the cardinals to propose the questions for the study of the Commission and they alone have a vote in determining the answers. They may sanction or modify the judgments of the consultants, or send back the entire question for further study, or may commission one or other consultant to make a special report. After the meeting, the secretaries report to the Holy Father, who may ratify the decision or remand the question for further consideration. The secretaries sent by consultants who live at a distance from Rome are read at the meetings of the consultants, when relevant to the subject under discussion.

Scope of the Commission.—It is the duty of the Commission: (1) to protect and defend the integrity of the Catholic faith in all questions concerning the Sacred Scripture; (2) to extend the study of the Sacred Scriptures, and further the progress of exposition of the Sacred Books, taking account of all recent discoveries; (3) to decide controversies on grave questions which may arise among Catholic scholars; (4) to give answers to Catholics throughout the world who may consult the Commission; (5) to see that the Vatican Library is properly furnished with codices and necessary books; (6) to publish studies on Scripture as occasion may demand. It was the wish of Leo XIII that a periodical bulletin of Biblical studies should be published at Rome, and a committee was set up for this purpose. Biblical studies established. Lack of funds has made such an establishment impossible for the present, but the idea has not been abandoned. To the Commission has been entrusted the awarding of an annual prize, founded by Lord Braybrooke, for the best Biblical topic. In April, 1907, the Commission, with the approval of the sovereign pontiff, invited the Benedictine Order to undertake a collection of the variant readings of the Latin Vulgate as a remote preparation for a thoroughly amended edition.

Biblical Commission. Since the decision of October 23, 1904, Pius X promised the Commission to confer the degrees of Licentiate and Doctor in the faculty of
Sacred Scripture on priests who, having previously attained the doctorate in theology, should pass successful examinations, oral and written, in matter determined by the Commission. The Commission has at least five consultors. Examinations have since been held twice a year, in June and November. The official announcements of the Commission are communicated to the "Revue Biblique", which is not, however, the official organ of the Commission. (See "Revue Biblique", 1905, p. 448.)

Decisions of the Commission.—Four important decisions on disputed Biblical questions have been issued by the Commission: (1) On the occurrence in Scripture of "implicit citations", i.e. quotations from a book not mentioned or not even known; (2) On the historical character of certain narratives. It is not lawful to question the historical character of books hitherto regarded as historical, unless in a case where the sense of the Church is not opposed and where, subject to her judgment, it is proved by solid arguments that the text as stated is not contrary to the sacred writings; (3) On the Mosaic authorship of the Pentateuch. This has not been disproved by critical arguments. Mosaic authorship, however, need not imply that Moses wrote with his own hand or dictated all of it; the books may have been composed by scribes, adopted, set as history and given the name of Moses. Divine inspiration and the work approved as principal and inspired author. It is consistent also with the use by Moses of documents, oral or written, and does not exclude the presence of such additions or imperfections in the present text as would leave it substantially and essentially the work of Moses (27 June, 1906). (4) On the authorship and historical character of the Fourth Gospel. It is historically certain that St. John wrote it. The Gospel is an historical document, narrating the actual facts and speeches of Our Lord's life (29 May, 1907).

Authority of its Decisions.—The Commission through formed like a Congregation is not a Congregation but seemingly of lower rank. Its decisions are approved by the pope and published by its command. Such an approval, when given in forma communi, does not change the nature of the decisions as emanating from a Congregation or Commission, nor does it make them specifically pontifical acts; much less does it imply an exercise of the pope's personal infallibility, inasmuch as the pope's acts are infallible or unchangeable, though they must be received with obedience and interior assent, by which we judge that the doctrine proposed is safe and to be accepted because of the authority by which it is presented. These decisions are not the opinions of a private assembly, but an official directive norm; to question them publicly would be lacking in respect and obedience to legitimate authority. We are not hindered from private study of the reasons on which they are based, and if some scholar should find solid arguments against a decision they should be set before the Commission.

JOHN CORBETT.

Bibliotheca Veterum Patrum. See Fathers of the Church.

Bickerdike, Robert, VENERABLE, martyr, a Yorkshire layman, b. at Low Hall, near Knaresborough (date unknown), but residing at York; d. 5 August (or 8 October), 1585. Arrested for giving a priest, Ven. John Boste, a glass of ale, he was also accused of having entertained him with dainties. He was acquitted, but Judge Rhodes, determined to have his blood, had him removed from the city gaol to the Castle and tried once more at the Lammes Assizes on the same charge. He was then condemned. One of his offences was that, when the old Farmeringleby was being dragged on the hurdle to execution, hearing a minister's wife say, "Let us go into the Tolbooth and we shall see the traitorly chief come over on the hurdle", he said, "No; no thief, but as true as thou art". These words were supposed to be the cause of his death. He is commemorated at:

Bridgewater, Concertatio (Tier, 1589): Morris, The Catholics of York under Elizabeth (London, 1891); CHALMERS, Memoirs of the PILGRIM MEN. BEDE CAMPLI.

Bicknor, Alexander, Archbishop of Dublin, date of birth unknown; d. 1549. As his surname suggests he came from a family of Kent, England. He was elected Archbishop of Dublin in 1510, being at that time Prebendary of Maynooth and Treasurer of Ireland. This selection was, however, not confirmed by the College of cardinals, and set asisihistor F(23 June, 1905). (See Mosaic authorship of the Pentateuch. This has not been disproved by critical arguments. Mosaic authorship, however, need not imply that Moses wrote with his own hand or dictated all of it; the books may have been composed by scribes, adopted, set as history and given the name of Moses. Divine inspiration and the work approved as principal and inspired author. It is consistent also with the use by Moses of documents, oral or written, and does not exclude the presence of such additions or imperfections in the present text as would leave it substantially and essentially the work of Moses (27 June, 1906). (4) On the authorship and historical character of the Fourth Gospel. It is historically certain that St. John wrote it. The Gospel is an historical document, narrating the actual facts and speeches of Our Lord's life (29 May, 1907).

Authority of its Decisions.—The Commission through formed like a Congregation is not a Congregation but seemingly of lower rank. Its decisions are approved by the pope and published by its command. Such an approval, when given in forma communi, does not change the nature of the decisions as emanating from a Congregation or Commission, nor does it make them specifically pontifical acts; much less does it imply an exercise of the pope's personal infallibility, inasmuch as the pope's acts are infallible or unchangeable, though they must be received with obedience and interior assent, by which we judge that the doctrine proposed is safe and to be accepted because of the authority by which it is presented. We are not hindered from private study of the reasons on which they are based, and if some scholar should find solid arguments against a decision they should be set before the Commission.

JOHN CORBETT.
1624, he was called to Rome where he fulfilled the duties of theologian and censor of books till his death. From an early age Bidermann distinguished himself in many branches of learning. Such was his reputation for scholarship, that the famous Matthew Rader, a pupil of Dillingen, celibate in Latin, composed a Latin poem, in which he spoke of him as another Aquinas, Aristotle, Cicero, and Maro. Besides numerous volumes of dramas, epigrams, biographical sketches, etc., Bidermann wrote many books on philosophy and theology. Amongst the best-known of these are: "Theses Theologicae" (1620), "Sponsalia" (1621), "Positentiae Sacramentum" (1621), "Matrimonii Impedimenta" (1621), "Censurae" (1622), "Regulatiae" (1622), "Suffragii" (1623), "Jesu Christi Status Triplex, Mortalis, Immortalis, Sacramentalis" (1623); "Concilia" (1624); "Prolusiones Theologicae quibus Pontificis Romae dignitas adversus bresim propugnata est" (1624); "Eleemosynae" (1625); "Gratia" (1625); "Agnosticon libri tres pro miraculis" (1626).

R. H. TIERNEY.

Biel, Gabriel, called "the last of the Scholastics", b. at Speyer, Germany, c. 1425; d. at Tübingen, 1470. Biel was one of the great predecessors, but also a great teacher. While still a young man, he was noted as a preacher in the cathedral of Mainz, of which he was vicar. Later he became superior of the "Clerics of the Common Life" at Bätzbach, and in 1470 was appointed professor of the church in Urach. At this period he co-operated with Count Eberhard of Württemberg in founding the University of Tübingen. Appointed in 1484 the first professor of theology in the new institution, he continued the most celebrated member of its faculty until his death. Though he was almost sixty years of age when he began to teach, Biel's work, both as professor and as writer, reflected the highest honour on the young university. His first publication, on the Canon of the Mass, is of permanent interest and value. His second and most important work is a commentary on the "Sentences" of Peter Lombard. In this he calls Occam his master, but the last three books show him more Scotist than Nominalist. Scheeben describes him as "one of the best of the Nominalists, clear, exact, and more positive as well as more loyal to the orthodox tradition of any of the others" (Dogmatik, no. 1073). The historian Janssen declares that he was one of the few Nominalists who erected a theological system without incurring the charge of unorthodoxy. (Cf. Geschichte der philosophischen und theologischen Wissenschaft in Deutschland, I, 17). It is true, he did not introduce anything new or extraordinary, but his theological writings were repeatedly brought into the discussions of the Council of Trent.

Living as he did in a transition period, Biel exhibits characteristics of two intellectual eras. According to some, he was a Scholastic who expounded Aristotle rather than the Scriptures; according to others, he defended freer theological teaching, and opposed the ancient constitution of the Church and the authority of the pope. As a matter of fact, he acknowledged the supremacy and supreme power of the Roman Pontiff, but in his own books, as in those of other theologians of his time, maintained the superiority of general councils, at least to the extent that they could compel the pope's resignation. And he displayed no more theological freedom than has been claimed and exercised by some of the strictest theologians. Among the opinions defended by Biel concerning matters controverted in his day, the following are worthy of mention: (a) That all ecclesiastical jurisdiction, even that of bishops, is derived either immediately or mediately from the pope. In this connexion it is to be noted that his defence of the episcopal claims of Dietrich von Ysenburg won him the thanks of Pius II. (b) That the power of absolving is inherent in sacerdotal orders, and that only the matter, i.e. the persons to be absolved, can be conceded or withheld by the ordinary. (c) That the minister of baptism need have no more specific intention than that of doing what the faithful, that is, the Church, intends. (d) That the State may not compel Jews, or heathens, or their children to receive baptism. (e) And that the Contractus Trinitas is morally lawful. All of these opinions have since become the prevailing theological doctrine. The subject on which Biel held the most progressive views is political economy. Roscher, who with Schnolzer introduced him to modern students of economics, declares that Biel's grasp of economics enabled him not only to understand the work of his predecessors, but to go far beyond them. (Cf. Geschichte der Nationalökonomik in Deutschland, 21 sqq.) According to Biel, the just price of a commodity is determined chiefly by human needs, by its scarcity, and by the difficulty of producing it. His enumeration includes all the factors that govern a market price, and is more complete and reasonable than any made by his predecessors. (Cf. Garnier, L'idée du juste prix, 72.) The same author maintains that concerning the occupation of the merchant or trader, Biel is more advanced than other writers of the same period. It is clear from Biel's work, on the "golden Buch", in which he stigmatizes the debasing of coinage by princes as dishonest exploitation of the people. In the same work he severely condemns those rulers who curtailed the popular rights of fairs and markets, and who imposed new burdens of taxation, as well as the rich sportsmen who encroached upon the lands of the peasantry. His works are: "Sacri canonicis Missae expositio resolutissimae literalis et mysticae" (Brixen, 1576); "Sacri iuxta textum, et abridgmentum" of the above, "expositionis canonis Missae" (Antwerp, 1565); "Sermones" (Brixen, 1583), on the Sundays and festivals of the Christian year, with a disquisition on the plague and a defence of the authority of the pope; "Collectorium sive epitome in magistri sententiarum libros IV" (Brixen, 1574); "Tractatus de potestate et utilitate monetae".

JOHN A. RYAN.

BIELLA. Diocese of.—The city of Biella, the see of the diocese of that name, is an important industrial centre (anciently called Bugella) of Piedmont, Italy, in the province of Novara. The diocese contains about 200,000 inhabitants, and is in close communion with the Archdiocese of Vercelli. Until 1772 Biella had no bishop, but was under the jurisdiction of the Archdiocese of Vercelli. In that year
Clement XI, yielding to the desire of King Charles Emmanuel III of Sardinia, established the Diocese of Biella by the Bull “Precipua”. The first bishop was Giulio Cesare Vianello, formerly Archbishop of Sassari in Sardinia. In 1503 Napoleon suppressed the diocese, which again followed the fortunes of Verceil, but was re-established in 1817 by Pius VII who appointed as bishop the Minor Observantine, Bernardino Ballato. It is difficult to determine when the Gospel was first preached at Biella; certainly, it was before it reached Verceil. According to the opinion of Fedele Savoi, S.J., the latter city received the Faith in the second half of the third century from Milan.

In the shrine of Maria Santissima d’Oropa, situated on a lofty mountain near Biella, the diocese preserves a memorial of St. Eusebius, the great Bishop of Verceil, who was banished to the Orient by Emperor Constantius for his courageous defence of Catholic truth against Arianism. St. Eusebius, according to tradition, upon his return from the East, is said to have brought three pictures of the Madonna painted on cedar wood, one of which, the image of Oropa, he placed in a small oratory he had built. In the tenth century the chapel was placed in charge of the Benedictines. The latter having abandoned the place, Oropa was made over, in the eighteenth century, to the chapter of the collegiate church, now the Cathedral of Biella, to which it has since belonged. In the sixteenth century, the inhabitants of Biella, in thanksgiving for their deliverance from the plague, built a stately church over the chapel. By the end of the eighteenth century, the shrine of Oropa draws many devout pilgrims.

Among the religious edifices of the city of Biella, the most notable is the Gothic cathedral, built in 1402. Its beautiful choir is by Galliari. The baptistery, in the form of a small temple, is said to be an ancient Roman temple.

Bielski (or Wolski), Marciniak, a Polish chronicler, b. of noble parentage on the patrimonial estate of Biela (whence the family name), in the province of Sieradz, Poland, in 1495; d. there, 1575; the name Wolski is derived from his estate at Wola. One of two Polish writers, of the same name, he was the first to use the Polish language, hence his designation as the father of Poland. He was educated in the University of Cracow, founded by Casimir the Great in 1364, and spent some time with the military governor of that city. He served in the army in the wars against the Wallachians and Tatares, and participated in the battle of Obertyn (Galicja), 1531. He ranks among Poland’s great writers, and the development of historical studies in that country is due to his extensive writings. He is the author of numerous works: “Żywoty Filozofów” (Lives of the Philosophers, 1534); “Kronika Świata” (Universal Chronicle, 1550-64), from the earliest time down to his day, divided into six periods, was the first important universal history published in the national idiom, and the first attempt at a comprehensive history of Poland, from 550 to 1580; in honor of Pope Pius V, 1554-64; and, according to the Greek science of warfare, in eight parts, contains valuable data about the Polish army, and kindred subjects. After the demise of Bielski several satirical poems were published: “Seym Małgorzata” (Mid May Diet, 1580), descriptive of the degradation of Hungary, and an appeal to his countrymen to emulate a higher standard of life: “Seym Niewieścici” (Woman’s Council, 1586-85), analytical of the then existing political conditions in Poland: “Sen Maiowy” (Dream of a Hermit, 1588); “Komedia Justina y Konstantyecz” (Comedy of Justinian and Constantine, 1567).

Bielinski, Izydor, Kierownik Archiwum (Warsaw, 1890-70); Bolewski, Collection of Histories (Warsaw, 1704); Izydor, Martin Bielski, G. (Warsaw, 1794); Szeroki, Chronicle of Poland (Warsaw, 1851); Szyrejewski, Chronicles of Poland (Cracow, 1697); Twarowski, Chronicles of Poland (Cracow, 1832-66).

Biennium Canoniciorum. See Schools.

Bienville, Jean-Baptiste le Moyne, Sieur de, French Governor of Louisiana and founder of New Orleans, b. in Montreal, Canada, 24 February, 1680; d. in Paris, 7 March, 1767. His father, Charles le Moyne de Bienville, settled in Canada in 1640; had three brothers, Iberville, Serényi, and Châteauguay, likewise distinguished themselves in the early history of Louisiana. In 1688-99, Bienville accompanied his brother Iberville in an expedition despatched from France to explore the territory near the mouth of the Mississippi. They founded a settlement at old Biloxi, where in 1700 Bienville became commandant, and, after Iberville’s death in 1706, governor of the colony.

It was believed in France that Louisiana presented a rich field for enterprise and speculation and a grant with exclusive privileges was obtained by Antoine Crozat for fifteen years. In 1712 Crozat appointed M. la Mothe Cadillac, governor, and M. de Bienville lieutenant-governor. But Cadillac dying in 1715, Bienville once more assumed the reins of government. In 1716, he conducted an expedition against the Natchez Indians, and having brought them to terms, finished the fort "Rosalie" which had been commenced by his brother, Iberville, a few years before. In 1717 Bienville, the governor, arrived in the colony, bringing with him the decoration of the Cross of St. Louis for Bienville. In the meantime, Crozat, failing to realize the great profits he had expected, abandoned the whole enterprise and surrendered his charter to the king in 1717. Another company was at once formed and Bienville received a new commission as governor of the province. He now removed to the headquarters from Biloxi, Mobile, and St. Louis, and moved to New Orleans. The Mississippi River was first explored by Robert Cavelier de La Salle in 1682; he ascended it as far as the Ohio, and in 1718 selected the site for a new settlement, which he named New Orleans. He left fifty persons there to clear the land and build some houses, but it was not till 1722 that it became the seat of government.

Experiments had shown Bienville that the fertile soil of the lower Mississippi, as well as the climate, was well adapted to the cultivation of sugar, cotton, tobacco, and rice, and that Europeans were not fitted for field-work in the burning suns of Louisiana. For they sickened and died. The first plantation of any extent was therefore commenced with Negroes imported from Guinea. In 1719, the province became involved in hostilities with the Spaniards in consequence of the war with France and Spain. The French Governor was a real menace to the enemy, and sent detachments to prevent the Spaniards from making inroads into upper Louisiana, and the country bordering on the Rio Grande.

When peace was restored, immigrants began to arrive in great numbers from France and Germany. In the autumn of 1726, the French fleet out of which the two ships of the French fleet had been detached, out of the charge of several officers, arrived in New Orleans. A New Orleans post office and post road were established and the first mail was despatched. The making of military roads was then begun, and the fortifications were improved. In 1726-27 the province was divided into seven Military districts, each under a commandant. The province was divided into seven Military districts, each under a commandant. In 1726-27 the province was divided into seven Military districts, each under a commandant. In 1726-27 the province was divided into seven Military districts, each under a commandant.
expedition in 1739 met with better success. This campaign closed his military and official career in the colony. He returned to France under a cloud of censure from the Government, after having faithfully served more than 30 years. He was buried with military honours in the cemetery of Montmartre.

E. P. Spillane.

BIGAMY (IN CANON LAW).—According to the strict meaning, the word should signify the marrying of a second after the death of the first wife, in contradistinction to polygamy, which is having two simultaneous wives. The present usage in criminal law of applying the term bigamy to that which is more strictly called polygamy is, according to Blackstone (Lib. IV, n. 168), a corruption of the true meaning of bigamy. Canonically viewed, bigamy denotes (a) the condition of a man married to two real or interpretative wives in succession, and as a consequence (b) his unfitness to receive, or exercise after reception, tonsure, minor and sacred orders. This unfitness gives rise to the theory which is an impeachment inherent and not delineated, therefore transferred in violation of it are valid but illicit. This irregularity is not a punishment, medicinal nor punitive, as there is no sin nor fault of any kind in a man marrying a second wife after the death of his first, or a third after the death of his second; it is a bar against his receiving or exercising any ecclesiastical order or dignity.

Origin.—This irregularity is not annexed to bigamy by either the natural or Mosaic law. It has its true origin in the apostolic injunction of St. Paul: It behoveth, therefore, a bishop to be blameless, the husband of one wife (1 Tim., iii, 2); "Let deacons be the husbands of one wife" (loc. cit., 12) and, "the husband of one wife" (Tit., i, 6). By these words the Apostle does not enjoin marriage on bishops and deacons [Sts. Paul, Titus, and Timothy were celibates as were, according to Tertullian ("Monogamy", iv, in "Ante Nicene Fathers", Amer. Ed.) all the Apostles with exception of St. Peter], but he forbids bigamists to be admitted to Sacred orders. Owing to the small number of those presided over by the Church, the Apostles found it impossible to supply celibates for bishops, priests, and deacons and were forced to admit married men to Sacred orders. Blamelessness of life, however, was required, and since iteration of deacons was condoned by the Apostles and that of people as a strong presumption of incontinency it was deemed that should the bishop-elect (priest or deacon-elect) be a married man, he must have had only one wife, and further, that after his ordination he should live apart from her. St. Epiphanius (Her. lxiv, 4) and St. Jerome (Epist. Contra Vigiliantium, I) assert that such was the general custom of the Church. This practice of celibacy before or after ordination was universal in all the Churches of the West until the end of the VIth yr. a. D. 700 when in the Synod of Trullo consecration was made to Greek priests to cohabit with the wives they had married before ordination. They were forbidden, however, to marry again under penalty of absolute deposition from the ministry. In the French law of 2016, that is, in the case of clerics or clergy in minor orders, for the simple reason that those orders were not then instituted. The Apostolic Canons (fourth century), which extended the Pauline prohibition to all grades of the sacred orders, by orders, not to be equally and sacredly. Vestiges of a lax discipline on this point are to be met with in France (I Council of Orange, c. xxv) and in Spain (Council of Toledo, cc. iii and iv). The Church of Rome, on the contrary, strictly followed the Apostolic canons. This is evident from the decrees of the Sovereign Pontiffs Innocent 1 (401-417), Hilary (461-468), Gregory I (590-604), Celestine III (1191-1198), and John XXIII (1410-1415). Gregory IX (1227-1271) further decreed that bigamists should be deprived of every clerical privilege and the right to wear the clerical garb and tonsure under penalty of excommunication. The Council of Trent finally forbade bigamists to exercise functions attached to the sacred order, even though these functions were, on account of the necessity of the times, allowed to be performed by laymen (Sess. XXIII, c. xvi, de Reform.). The reason for the existence of this irregularity is twofold: moral and mystical. The moral reason, which was that of the Orientals and some Latin Fathers, is the presumed inconstancy on the part of the bigamist and his consequent unfitness to discharge efficiently the office of the priesthood among a people who looked with great suspicion upon a bigamist and held him in little or no esteem. The mystical reason, which was and is the primary reason of the Western Church (it admits the moral reason, but as secondary to the mystical) is the defect in the perfect resemblance of the second marriage to the great type of Christian marriage, that is, the marriage of Christ with the Church. This union— the union of one husband (Christ) with one spouse (the Church) without spot or blemish. Second marriages destroy the unity of one husband wish one virgin wife, and cause a dividing of one flesh with two bodies, instead of cementing the union of two bodies in one, according to Genesis, ii, 24, "They shall be two [one husband, one wife] in one flesh." This division of one body with two, instead of union with one body, is the bed-rock of this irregularity. This defect in the perfect resemblance of the second marriage (real or interpretative) to the great type of marriage gives rise to the irregularity, and to the name by which it is known, "ex defectu sacramenti". It is not proper that one who has received a sacrament defective in its resemblance to its exemplar should become a dispenser of sacraments to others.

Division.—In the first centuries there was only one kind of bigamy called true, or real, or proper. A second kind, called interpretative or fictitious, was afterwards added. This second kind, called similar, was introduced by the scholastics (Devoti, cau. univ., II, p. 206). Durandus was the first to use the term "similitudinaria" (Specul., pars. I, de dispens. Juxta, n. 6). Since then it has been called by the moderns, real, interpretative, and similar. Many canonists of this century and last hold that similar bigamy should not be included under the irregularity "ex bigamia." Another division is made, but there is no unanimity concerning it, i. e. bigamy "ex defectu sacramenti" (by reason of defective sacrament) and bigamy "ex delicto" (by reason of guilt). D'Annibale (Summ. Theol., Pars. I, n. 417 and 418, note 11 fourth edit.) holds that similar bigamists and not a false interpreters of bigamists are irregular, and not "ex defectu sacramentii." St. Augustine (lib. VII, de Irregul., n. 436) and very many others, as well as the National Synode of the Syrians (an. 1588, p. 173. edit. 1899) and of the Copio (Caire, an. 1898, p. 142), classes all three kinds of bigamists as irregular "ex defectu sacramentii." Since, too, it is a species of a man who has really or interpretatively contracted and consummated two valid or two invalid marriages, or one valid and the other invalid, or one real, and the other a spiritual marriage. Two things are essential to every kind of bigamy—valid or invalid—adulterous connexions or concubinage do not enter into the question at all; (2) carnal knowledge by which the parties legally
BIGAMY
562
BIGAMY

married become one flesh, and without which there is neither bigamy nor irregularity. Real bigamy demands two valid and legal and consented marriages with a virgin; therefore, two real wives one after the other. It is indifferent whether or not the marriages took place before or after baptism, or one before and the other after; the second successive marriage imperfectly symbolizes the "great Sacrament of Christ in the Church" (Ephes., v. 32, and the irregularity is present (Pope Innocent I, Decret., can. 13, dist. 34). There is, therefore, no real bigamy (a) if either or both marriages are invalid, (b) if either or both have not been consummated, (c) if either or both women have not been virgins, or if one of them is valid and consummated, and the other a mere betrothal followed by carnal union.

Interpretative bigamy is the state of a man who has not as a matter of fact had two legal wives in succession, but whose matrimonial ventures--whether one or two--are accompanied with such circumstances as to warrant the law by a legal fiction to hold him as a bigamist and irregular. It is to be remembered that the laws which govern fictitious (similar and interpretative) bigamy must be strictly construed. There are two reasons: (1) a "ion of law and therefore does not hold unless in those cases expressly mentioned in the law (Fagmanus, cap. In Frensen., n. 23, de Probat.), Pope Benedict XIV well remarked (Pope Ad vivam, 15 February, 1753, par. 15), "It is the sole right of the legislator, and beyond the power of any private author or doctor, to draw legal conclusion from a fiction of law. Many, therefore, of the ablest canonists of recent years (e.g. D'Annibale, Gaspari, Lanza, Wernz, Lombardi, Ballerini-Palmieri), as also the national synods of the Copts and Syrians, restrict real and interpretative bigamies to the case where a man marries either two valid and legal wives, or a widow, or a corrupt woman, or knows his wife carnally after she has been corrupted by a third party.

Interpretative bigamy is threefold:-

(1) When a man contracts and consummated only one, and that a valid marriage, or weds one wife to whom he is united in one flesh, yet the circumstances are such that the law considers two marriages and two wives. Of this class there are three cases: (a) When a single man marries a widow already made one flesh with a former husband (Decretal Greg., Lib. II, cap. iii); (b) Two husbands and has divided her flesh with two instead of being cemented to one only. Her marriage to the second husband is defective in its resemblance to the marriage symbol—union of Christ with the Church; the second husband is not the only husband of the one wife who herself should have been the wife of only one husband. As the wife in this case has had two real husbands, so, by fiction of law, her husband is considered to have had two interpretative wives. (b) When he marries an unmarried woman, already by a third party contracted (Pope Hilary, Synod, Rom. Cap. ii, Dist. XXXIV, c. ix, Decret.). Here again is a division of flesh with two instead of union with one, and hence the defect, and, as a consequence, the irregularity. (c) When he carnally knows his own wife after she has committed adultery; or has been forcibly oppressed (Decretum, c. xi; c. xii). The husband in this case is not barred from orders unless the adultery of the wife whom he as a layman has married was conclusively proved; nevertheless, in this case, as in cases (a) and (b), ignorance on the part of the party (i.e., of the woman or of her husband) would not except him from bigamy and irregularity, since there is here question of an irregularity ex defectu sacramenti and not ex delicto. The defect is present irrespective of his knowledge.

(2) When he marries once, but the marriage is invalid, (a) is the second order without a widow—marriage invalid on account of diriment impediment of S. Orders—and is carnally joined to her, is an interpretative bigamist and irregular (Cap. VII, Tit. XXI, De Big.). Pope Innocent (loc. cit.) says that although this cleric is not a real bigamist, yet with him, as with a real bigamist, it would be not lawful to dispense as the husband of a widow, not because of the defect in the sacrament, but on account of the marital intention joined with carnal union. Although not expressed in the above canon, yet it is common that the clergy who marries a woman corrupted by a third party is a bigamist and irregular. He would not be irregular if he married a woman seduced by himself and known by no other man (Solmals., Tit. XXI, De Bigan., n. 6). Civil marriage will suffice in this case, even where the Tridentine law is published (S. U. 1., December 22, 1880). (b) Invalid by reason of a pre-existing marriage bond (ligamen), as, for instance, where the man marries a woman who has been divorced, repudiated, or rejected by a former husband, who has because the marriage is defective, the woman having shared her body with two, and hence he who married her is irregular for the above-mentioned reason (Lib. I, Tit. XXI, C. i; Dist. XXXIV, Can. xv). (c) If the marriage is invalid by reason of a clerical dispensation other than order and ligamen, the more prominent opinion holds that the irregularity is incurred. Fagmanus (Comment., Cap. iv, De Big., n. 45) asserts that the prelates of the Rota, to whom the case was officially referred by the pope, decided that a cleric in minor orders who contracted and consummated an invalid marriage with a widow was an interpretative bigamist and irregular and stood in need of dispensation, and that Pope Urban, upon the strength of that decision, granted dispensation. Many of the best canonists of a day (e.g. D'Annibale and Gaspari) hold the contrary. The case is not expressed in law, they say, and is a legal fiction which at all times is dangerous and is totally unwarranted if the two cases differ in every respect, as do these; the one being in major, and the other in minor orders; the one in bad faith and the other in good faith. Yet, after all is said pro and con, it still remains true that the proximate cause of the irregularity in the law cited is identical with that of the second case, to wit, marital intercourse with a woman. (3) When a marriage twice and either or both marriages are invalid, as (a) he who having contracted and consummated a marriage with a virgin, upon her death received Sacred orders, and afterwards, without any deception on his part, contracts and consummated a sacrilegious and invalid marriage with a virgin or widow, becomes an interpretative bigamist and irregular, not because of any defect in the sacrament in the second marriage, which is no marriage and no sacrament, but because of the marital intent followed by consummation by means of which the necessary division of his body with two has been effected (Innocent III, cap. iii, iv, De Big.). Should the cleric feign, rather than honestly intend, the second marriage, in order to accomplish the carnal union, some are of the opinion that he does not incur the irregularity, the marital intent required by the Innocentian law not being verified; others more commonly affirm that irregularity is contracted. The reason given by the affirmers is that the Innocentian marital intent is not so much the intention to contract a valid or the intention to contract and consummate, an intention that is always presumed to be present in such cases. External marriages are always supposed to be free and voluntary.
Simulation is never presumed, but must, on the contrary, be demonstrated. (b) Should the first marriage before receiving Sacred orders be invalid on account of any diriment impediment (e.g., consanguinity), the second (alleged), though not annulled by the law as stated in the law, the general opinion, with a few exceptions, is that he is an interpretative bigamist and irregular. In answer to their opponents, the affirmata say that the marriage mentioned (Cap. iv, De Big.) may have been invalid, as there is no certainty that it was valid, in which case the argument from one species to another would be legitimate. (c) Should both marriages be invalid, some assert there is no interpretative bigamy or irregularity. Others hold that the law for containing a matrimonial monophasus (Vol. VII, n. 455; Suarez., Disp. XLIX, Sect. II, n. 11) teach as the most common and notable opinion that there is present the marital intent with the carnal consummation which alone suffices to induce the irregularity. Canonists differ in opinion as to the case where two invalid marriages were contracted and consummated in good faith. The most common and probable opinion is that irregularity is contracted, for the reason that it is not the guilt of the desire, but the intention to contract a second and another with the same reason that is the reason of the irregularity as laid down by Innocent III (Cap. 4, De Big.). By almost common consent the irregularity is said to be contracted by the cleric tonsured or in minor orders or laymen who, after having contracted and consummated a marriage, whether valid or invalid, is said to contract a marriage invalid on account of a known impediment and afterwards, whether his wife be living or dead, contracts and consummates another marriage even with a virgin. There is present in the case a division of flesh and the marital intent necessary to produce friction.

Similar Bigamy is nowhere clearly and expressly stated in the law. It owes its existence to the almost universal and constant teaching of canonists and theologians since the time of Durandus. Similar bigamy is twofold: (1) When a religious who has been solemnly professed in a religious order approved by the Church, marries a virgin and carnally knows her as such. (2) When a cleric in Sacred orders, in violation of the law of celibacy, contracts and consummates a marriage with a virgin. This form of bigamy presupposes only one carnal marriage and a spiritual marriage, which are interpretatively considered two marriages, and each putative husband is considered to have two interpretative wives. The carnal marriages are invalid by reason of the diriment impediment, and the spiritual marriage, respectively, are not comprehended under the law, stripping them of every clerical privilege, and the use of tonsure and clerical garb, and this out of respect to their sacred character. Clerics in minor orders whose marriages were invalid are not comprehended under the Tridentine law. Clerics in Sacred orders and religious clerics, who, by virtue of the law of celibacy and religious profession, are spiritually wedded to the clerical and religious states respectively, are not comprehended under the law, stripping them of every clerical privilege and the use of tonsure and clerical garb, and this out of respect to their sacred character. Clerics on the other hand, in minor orders are not wedded to the clerical state; hence they come under the law. Bishop without prejudice. Sacred orders on a bigamist are by the Third Council of Arles (Dist. LV, Can. 2) suspended from saying Mass for one year, and by the decretal law (Lib. 1, Tit. 21, Cap. ii) were deprived of the power of giving to others the orders they had conferred on a bigamist. Since the constitution “Apostolici Sedis”, the only punishment is that which the Holy Father may deem fit to impose upon the bishop violating the canons.

Dispensation.—This irregularity is removed neither by baptism nor religious solemn profession, but by dispensation. The pope, and he alone, can dispense with this prohibition to receive orders. He can dispense with a mere ecclesiastical law, such as is the Pauline injunction, although it is of Apostolic origin. Pope Lucius III, when granting a dispensation in face of St. Paul’s prohibition, did, however, grant it to Nicholas de Tudeschis, a celebrated canonist, better known as Abbas Panormitanus (Glossa, ad verb. Fiac, C. Lector, XVIII, Dist. XXXIV). Dispensations in cases of one who marries not without a wilful and exorbitantly difficult to obtain (Lib. I, Tit. 9, De Renunt. Sec. Persone). Worthy of note is the fact that the dispensation does not affect the defect in
the sacrament, but the unfitness arising therefrom is removed. It is the universal opinion of to-day, with some exceptions, that it has been done in the past, that the pope alone can dispense all bigamists, real and interpretative, as regards minor as well as Sacred orders, and the collation and use of the simple, as of great, benefices. The reason is evident: bishops cannot dispense in the laws of their subjects from the will of the General Council. Some canonists claim that bishops, by virtue of the Council of Trent (Sess. XXIV, C. 6, Def Ref), can dispense with interpretative bigamy arising from occult guilt. D'Annibale (loc. cit.) on this point well remarks that it is exceedingly rare and difficult entering into the case of a marriage while a former one remains undisolved (Bishop, Commentaries on the Law of Statutory Crimes, § 577) "the crime of having two wives or husbands at once" (Murray, New Dict., s. v.) or two or more wives or husbands (Century Dict., s. v.). Bigamy, being "a species of poligamy" (Stephen, New Commentaries, IV, 82), may be designated by the latter word (Bishop, op. cit.); for Sir Edward Coke defines "poligamy" to be one "qui duas vel pluripes duxit uxores" (6th Inst., XXVII). But its very generality in use in English statutes, particularly in bigamy in many instances the word of more ready reference (Russell, A Treatise on Crimes, 659).

Bigamy as defined is classed by jurists among those acts injurious to public morality by which the public good is injured, and which may therefore properly be made criminal. The crime consists, according to French law (Carpentier, Codes et lois; Code penal, 340, note) "in the fact of the celebration of the second marriage before dissolution of the first", or, to quote an American authority, in the "prostitution of a solemn ceremony which the law allows to be applied only to a legitimate union", involving "an outrage on public decency and morals" and "a public scandal" (Bishop, op. cit.). And so Boswell quotes Dr. Samuel Johnson, commenting on Luther's allowing the Landgrave of Hesse two wives with the consent of his wife with whom he was first married, thus: "There was no harm in this, so far as she was only concerned, because volentis non fit injuria. But it was an offence against the general order of society, and against the law of the Gospel, by which one man and one woman are to be united.

Although among many nations plurality of wives or polygamy has been legally recognized, yet the East has been against such a thing. The Orientals, civilized people polygamy is almost unknown or even prohibited (Westermann, The History of Human Marriage, 435), and where tolerated, bigamy is its usual form, as was the case among the Hebrews (op. cit., 430). In the earlier days of Babylon, bigamy is said to have been the exception and monogamy the prevailing practice (Johns, Babylonian and Assyrian Laws, 134). The Assyrian kings appear to have been monogamists, the kings of ancient Egypt seem to have had only one wife, and the general opinion of the latter nation is the same (Westermann, 432, 442, 447). The law of China prohibits taking of a second wife during lifetime of the first (Westermann, 445). Mohammed, when allowing his followers four wives, is said to have sought to restrict what he felt himself unable to abolish. And he is said to have been of opinion that, although an unlimited number of wives might live together in harmony, this among so few as four would be impossible. Events seem to have proved the correctness of his judgment, for "the quarrel...and a contentious spirit between wife and wife or husband and each other" (Colquhoun, Summary etc., § 575) are said to have brought about the monogamy usual among modern Mohammedans. Of those in India ninety-five per cent are monogamists, and it is said that in Persia...
two per cent only have a plurality of wives (Westermarke, "The Turks", writing about the Moslem Moslem Montagu from Adrianople, in 1777, concerning the Turks, "their law permits them four wives; but there is no instance of a man of quality that makes use of his liberty or of a woman of rank that would suffer it") (Works, I, 160). The ancient Romans were the first to make bigamy a crime. According to the time of the Emperor Justinian (527-565) the illegality of bigamy was firmly established: "Duas uxorres eodem tempore habere non licet" and "eadem diubus nupta esse non potest" are the expressions of the Institutes (Lib. I, tit. x, vol. 6, 7).

The law of England is thus laid down by an authority supposed to be of the time of Edward I (1272-1307), the king, "who", remarks Sir William Blackstone, "had justly been styled our English Justinian" (Commentaries, IV, 425): "It has sometimes been that a man from wickedness has married several women, all living at the same time; but Holy Church says that of such women none but the first is his lawful wife; wherefore, the law regards the secondly as false wives" (Britton, Lib. V, 11).

While the earlier ecclesiastical concept is that of absolute death, or by judgment of a court of competent jurisdiction, a subsequent marriage is, by English common law, a mere nullity and void (Kent, Commentaries on American Law, Part IV, 80; Bishop, New Commentaries on Criminal Law, 1837). Length of absence and no error as to survival of the absent can render valid the second ceremony. But in defining bigamy as a crime, statutes have been more indulgent. Notwithstanding what we have quoted from the authority of the thirteenth century, there seems to have been no English statute defining and punishing bigamy as a crime until the year 1604, English law being in this respect more backward than the law of Scotland, which so early pronounced bigamy a crime (Bell, Dict. and Digest of the Laws of Scotland, s. v.). By an English statute of 1604, upon which later English laws and laws in the United States have been modeled, any married person who should marry within England or Wales, the former husband or wife being living, became guilty of felony. But the statute did not extend to persons whose husband or wife remained continually "beyond the seas by the space of seven years" (Blackstone). The word "will" or "shall" absent himself or herself the one from the other by the space of seven years together in any parts within his or her dominions, the one of them not knowing the other to be living within that time. The statute thus established an arbitrary period of absence as exempting from criminality a second marriage. That absence within England should justify the second marriage, the one marrying was required to be ignorant of the survival of the absent husband or wife; but respecting absence "beyond the seas" we are told by Blackstone, "Where either party hath been continually abroad for seven years whether the party in England hath notice of the other's being living or no" (Commentaries, Bk. IV, 194), there can be no felony under the statute. The statute, not otherwise providing, and its violation being made a felony, men prosecuted thereunder were, according to the general law of the period, entitled to "benefit of clergy" (Coke, sup.), subject to which, conviction under the statute was not to be adjudged a felony. The statute of 1861, now in force, exempts from punishment a second marriage only where there has been continual absence of seven years, and the person marrying shall not know the absent husband or wife "to be living within that time". Those guilty under the statute are liable to penal servitude of not more than seven nor less than three years or to imprisonment of not more than three years. The new statute punishes against a crime within the statute, if committed by a British subject, wherever the offence may be committed. The French "Code pénal" provides the punishment of "travaux forcé à temps" for a person who, being married, shall contract another marriage before dissolution of the former and that the punishment provided is a fine of not more than five hundred dollars and not more than five years' imprisonment. The Constitution of the United States declares that "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof" (Constitution, Amendments, Art. 1). The question has accordingly been whether legal legislation, as has just been quoted may not violate the Constitution in the instance of an adherent to a religion of which bigamy is claimed to be a tenet. But the Supreme Court of the United States, speaking by Mr. Justice Field, held that "the free exercise of religion may be, it must be subordinate to the criminal laws of the country, passed with reference to actions regarded by general consent as properly the subject of punitive legislation", that "bigamy and polygamy are crimes by the laws of all civilized and Christian countries"; few crimes being more pernicious to the best interests of society", and therefore "that to call their advocacy a tenet of religion is to offend the common sense of mankind". Freemen of all kinds of religion ought not, in the opinion of the Court, to be construed to mean toleration of crime (Davis v. Reason, United States Reports, CXXXIII, 333, 341, 342, 345). Alien polygamists are, by a United States Statute excluded from admission to the United States. The statute of various States of the Union contain laws modeled upon, and with provisions more or less similar to, those of the English law of 1604, and defining bigamy, or in the statutes of some States, polygamy, as a crime. Formerly, by the Virginia (United States Statutes, 389), the law of Tennessee, the law of North Carolina (Kent, Commentaries, Part IV, 79, note d), bigamy was punished by death. Now its punishment in Virginia is imprisonment of not more than eight nor less than three years (Code, § 3781), and in North Carolina of not more than ten years nor less than four months (Revisal, § 3361). In the State of New York the punishment is not more than five years' imprisonment, and the period of absence excusing second marriage is fixed at five years, the former husband or wife having been absent from the one race marrying "without being known by him or her within that time to be living and believed by him or her to be dead" (Birdseye, Revised Statutes, 306). Divorce (unless for fault of the party remarrying), due permission of Court, or annulment of the previous marriage, or sentence to life imprisonment of the former husband or wife also excuses the remarriage. Absence, therefore, not dissolving a previous marriage, on proof that a husband or wife who had been supposed to be dead is in fact living, the second marriage may be valid. The law will not sanction bigamy by recognizing the two marriages to be simultaneously valid. According to the law of New York, the earlier marriage ceases to be binding until one of the three parties to the two marriages procures a judgment pronouncing the second marriage void (New York Court
of Appeals Reports, CXIV, 120; Birdseay, op. cit., 1042; cf. Bishop, New Commentaries).

The Second Code of the Babylonian King Hammurabi (about 2250 b.c.), in its regulations respecting bigamy affords some interesting comparisons with modern legislation on the same subject. By that ancient statute a wife "has no blame" who remarries after her husband has been taken captive, "if there was not maintenance in his house" (§ 134). But "if there was maintenance in his house", the captive's wife who remarries "shall be prosecuted and shall be doomed" (§ 135).

Another section resembles a provision of an existing New Testament statute. By that statute, if the second marriage be annulled because the former husband or wife is living, children of this marriage are deemed to be "legitimate children of the parent who at the time of the marriage was competent to contract" (Birdseay, Revised Commentaries, 903). In like manner this code of four thousand years ago ordains that if, in the instance of the woman who "has no blame", there be children of her second marriage, she shall return to her first husband if "he return and regain his city", but the children shall follow their own father." As to re-marriage of a widow, the statute, "If the widow of a man who "has left his city and fled" might re-marry and "because he hated his city and fled" the fugitive returning was not allowed to reclaim his wife (§ 136).

In the Code of Hammurabi, the poet has made double marriage the subject of his poem "Enoch Arden". We may notice how carefully the poet causes a period to elapse longer than the seven years mentioned in the English Statute:

... ten years

Since Enoch left his hearth and native land Fled forward, and no news of Enoch came, before his wife listens to the argument, which, however, the poet is not so unpoetical as to reinforce by quoting the statute:

It is beyond all hope, against all chance, That he who left you ten years ago Should still be living.

And, like the woman pronounced blameless by the old Babylonian Code, for whom "there was not maintenance", Enoch's wife was "poor and wanting help" when she consented to the remarriage which Enoch, acting contrary to all seeming hope of chance, after having been so long "cast away and lost", ratified in his self-effacing prayer for strength "not to tell her, never to let her know"—cf. Hammurabi, Code, § 135.

CHARLES W. SLOANE.

Bécig (Binius, Bignueus), Marguerin de la, French theologian and patrologist, b. about 1546 at Bernières-le-Patry, Normandy; d. about 1605. He studied at the College of Caen, and at the Sorbonne in Paris where he received the degree of Doctor. He was named canon of his native Diocese of Bayeux, and, later, dean of the church of Mans. At the Provincial Council of Rouen, in 1581, he sustained the rights of his cathedral chapter against Bernard de St. Francois, Bishop of Bayeux, and provoked an unfortunate conflict with the latter which ended in de la Bigne's resignation from his canonry. He resumed, then, at the Sorbonne the patristic studies in which he had been long engaged. He had early perceived that Protestant misquotation and misinterpretation of the texts was due to Catholic interests and resolved to collect and edit the available documents of the Fathers. He published in 1575 his "Sacra Bibliotheca Sanctorum Patrum" (Paris, 8 vols.; additional volume in 1579; later editions, Paris, 1588; Lyons, 27 vols., 1677; Cologne, 1694). It contains the writings, some complete, some fragmentary, of our two hundred Fathers, many published for the first time. Particular care was given to the elucidation of texts corrupted by heretics. This work was the pioneer in the field of the study of patristic theology (comp. "Statuta Synodalium Parisiensium Episcoporum, Galonis Adonis et Williemi; item Decreta Petri et Galteri, Senenmius Episcoporum" (Paris, 1578); and an edition of St. Isidore of Seville (Paris, 1560), in which for the first time the latter's works were gathered in one work.

JOHN B. PETERSON.

Billart, Marie-Rose-Julie. See Julie BILLART, BLESSED.

Billick (Steinberger, Lat. Lalonus, Lapicida), Eberhard, German theologian and opponent of the Reformation, b. 1499 or 1500 at Cologne; d. there, 12 January, 1557. Of a family which gave a number of prominent men to the Carmelites of Cologne, Eberhard entered the Carmelite Order in 1513, took his vows in 1514, became priest and master of students in 1528, and reader of divinity in 1530; he matriculated at the University of Cologne in 1528, was made Prior of Cassel, 1531, Prior of Cologne, 1536–42, received his licentiate and doctorate of divinity, 1540 and in 1542 was appointed Provincial of the province of Lower Germany. He retained this dignity until his death, for, although nominated auxiliary Bishop of Cologne, he did not live to be consecrated. Billick's activity on behalf of his order was successful; he enrolled numerous candidates, improved the plan of studies, saved several monasteries from destruction, re-established others, and reformed both his own province and that of Upper Germany. His chief importance, however, lies in his dealings with the Archbishop of Cologne. If Cologne remained true to the Catholic cause the merit is principally due to the provincial of the Carmelites. As the leader of the lower clergy he protested against the heretical tendencies of Archbishop Hermann von Wied, who since 1536 had favoured the Reformers. Von Wied was excommunicated in 1544, gave up the province in 1547, and died in 1552. It was Billick's exposure of the archbishop's breach of faith that led to the latter's deposition. Writing against Buco, Billick drew upon himself the ire of Luther and Melancthon. He took part in the Thirty-Three Diet (Ratisbon, 1541 and 1546, and Augsburg, 1547, and as theologian accompanied the new Archbishop of Cologne to the Council of Trent, 1551.

CHARLES W. SLOANE.

Billon, Dominico, Der Karmeliten-Evangelist, in B. Fröbiger in Br., 1901), contains his life, a complete bibliography, list of his writings and a calendar of his correspondence.

B. ZIMMERMANN.
BILLY

Billy, (Billy) Jacques de, a French patrician scholar, theologian, jurist, linguist, and Benedictine abbot, b. 1555 at Guise in Picardy; d. 25 December, 1581 at Paris. He began his studies at Paris, completed a course of philosophy and theology before he was eighteen years of age, and then, at the request of his parents went to Orléans and later to Poitiers to study jurisprudence. But having no inclination for law, he devoted himself to his theological studies. The early death of his parents (Louis de Billy, of an old French family originally from Ile-de-France, and Marie de Brichanteau) gave him the opportunity he desired of pursuing unhampered his favourite studies. With the withdrawal of his former tutor, the honours of the doctorate were conferred upon him in 1729. In 1732 he again preached a course at Liége, adding to his fame as a preacher. He was elevated to the office of Prior of Revin for three successive terms until, in 1741, he was re-elected prior to this office. In 1746 he began and in five years completed his celebrated and monumental work, the "Summa Summae S. Thomae, sive compendium theologie" (Liége, 1754).

Billuart's work is characterised by a facile style, copious treatment, and fearless exposition; by well planned logical arrangements and frequently clear-cut distinctions. It ranks among the leading commentaries on St. Thomas. It is esteemed for its annexed historical essays, the materials for which are drawn largely from the ecclesiastical history of Natalis Alexander, O. F. S. In his moral science Billuart favours a moderate probabilism, in which position, however, he no longer commands a very great following outside of his own school. Generally speaking, Billuart stands forth as a theologian of authority. He is one of the foremost writers who have shed lustre on the school of the Angelic Doctor. In his polemical writings, Billuart was a devoted member of his order and a keen disciple of St. Thomas, zealous for the integrity of the saint's accepted teachings. Dignified in bearing, he was gentle to those around him. He was unremarking in his severe treatment of popular vices, much given to devotion to the Blessed Sacrament.

His principal works, besides those mentioned, are the following: "Supplementum jursu theologise" (Liége, 1759); "De mente ecclesiae catholica circa accidentia eucharistica" (Liége, 1718); "Le thomisme venitien" (Paris, 1721); "De accidentia et actione unigenitus" (Brussels, 1720); "Lettre à MM. les docteurs de la faculte de theologie de l'universite de Douai" (1723); "Examen critique des reflexions sur le bref de notre S. Père le pape Benoit XIII" (1725); "Le thomisme triomphant par le bref Démessis presse de Benoit XIII"; "Réponses à M. Stiévenard, qui se plaint de certaines incitations de Mgr. de Fénélon"; "Avis à M. Stiévenard sur la seconde Apologie pour Mgr. Fénélon"; "Justification de l'avis"; "Apologie du thomisme triomphant" (Liége, 1731); "Réponse à l'auteur d'un libelle" (1734); "Apologie...contre l'Histoire du bain....compose par M. de Duchenne" (Duchenne, 1738); "Sermons du R. P. C. R. Billuart", edited by Abbé Lelivré (2 vols., Paris, 1846).

THOMAS OEMSTRA.

Bilocatio. (Latin, twice, and location.)

I. The question whether the same finite being, especially a body, can be at once in two (bilocatio) or more (replication, multilocatio) totally different places grew out of the Catholic doctrine on the Eucharist. According to this Christ is truly, really, and substantially present in every consecrated Host wheresoeber located. In the endeavour to connect this fact of faith with the other conceptions of the Catholic mind theologians make the following distinctions: (1) The place of a body is the surface of the body or bodies immediately surrounding and in contact with the consecrated Host. (2) A physical being is in loco, i.e., in its place, in a place commensurably (circumscriptively) inasmuch as the individual portions of its exterior surfaces answer singly to the corresponding portions of the immediately enveloping surfaces of the body or bodies that constitute its Host. (3) A being is in loco, i.e., in its place when it is entirely in every porion of the space it occupies. This is the mode of location proper to unembodied spirits and to the human soul in the organism whereof it is the "substantial form," i.e., the actualizing and vitalizing principle. A spirit cannot, of course, be in loco circumscriptively since, having no integral parts, it cannot be in external contact with the surrounding dimensions. It may be said, therefore, to locate itself by its spiritual activity (will) and rather to occupy than to be occupied by place, and consequently to be virtually rather than formally in loco. Such a mode of location cannot be natural to a physical body. Whether it can be so absolutely, supernaturally, miraculously, by an interference on the part of Omnipotence will be considered below. (4) A mixt or non-mixt mode of location would be that of a being which is circumscriptively in one place (as is Christ in heaven), and definitively (sacramentally) elsewhere (as is Christ in the consecrated Host).

II. That bilocation (multilocatio) is physically impossible as well as contrary to the conditions of matter as present known to us, is the practically unanimous teaching of Catholic philosophers in accordance with universal experience and natural science. As to the absolute or metaphysical impossibility, that is, whether bilocation involves an intrinsic contradiction, so that by no exertion even of Omnipotence could the same body be at once in wholly different places—to this question the foregoing distinctions are pertinent. (1) Catholic philosophers maintain that there is no absolute impossibility in the same body being at the same time at two places circumscriptively as well as definitively. (2) The basis of this opinion is that local extension is not essential to material substance. The latter is and remains what it is wheresoever located. Local extension is consequent on a naturally universal, but still not essentially necessary, property of material substance. It is the immediate resultant of the "quantity" inherent in a body's material composition and consists in a contactual relation of the body with the circumambient surfaces. Being a resultant of quantity it cannot be increased in its actualization; at least such suspension involves no absolute impossibility and may therefore be effected by Omnipotent agency. Should, therefore, God choose to deprive a body of its extensional relation to its place and thus, so to speak, delocalize the material substance, the latter would be quasi spiritualized and would thus, besides its natural circumscriptive location, be expected to its place and consequently multiple location; for in this case the obstacle to bilocation, viz., actual local extension, would have been removed. Replication does not involve multiplication of the body's substance but only the multiplication of its local relations to local surfaces and bodies. The existence of its substance in one place is contradicted only by non-existence in that same place, but says nothing per se about existence or non-existence elsewhere. (2) If mixed replication involves definite local relations, the replication of the body or its portion thereof does not. (3) Regarding the absolute possibility of a body being present circumscriptively in more than one place, St. Thomas, Vasquez, Silv. Maurus, and many others deny such possibility. The instances of bilocation narrated in lives of the saints can be explained, they hold, by phantasmal replications or by aerial materializations. Scotus, Bellarmino, Suárez, Delugo, Franselini, and many others defend the possibility of circumscriptive replication. Their arguments as well as the various subtle questions that arise will be considered in the next book. The whole subject will be found in works cited below.

F. P. SIEGFRIED.

Bination, the offering up of the Holy Sacrifice of the Mass twice on the same day by the same celebrant. It is believed by some (Magani, L'Antica Liturgia Romana, Pt. I, p. 296, Pt. II, p. 187) that even from Apostolic times private Masses were celebrated whenever convenient. Be this as it may, it is certain that in the first years of Christianly public Masses were offered on Sundays only; later, on Wednesdays and Fridays also (Tertullian, De Oratione, xiv). To these days Saturday was added, especially in the East (St. Basil, Ep., ccxxix). St. Augustine, who died in 430, assures us (Ep. lv) that while, in his time, Mass was celebrated only on Sundays in some places, in others on Saturdays and Sundays, it was nevertheless in many places customary to have the Holy Sacrifice daily (St. August., Sermo Iviii, De Ort. Domin.), as in Africa (St. August., op. cit.), in Spain (St. Ambrose, Sermon Iv), in Constantinople (St. John Chrysost., Ep. ad Ephesios), as well as elsewhere. The daily Mass became universal about the close of the sixth century. Nay more, it was not long before priests began to celebrate the Holy Sacrifice two, three, or more times daily, according to their own desire, till the sacred canons (Gratian, De Consecr., dist. i, can. lili) put a limit to their devotion in this regard, and Alexander II (d. 1073) decreed that a priest should be content with saying Mass once a day, Mass was consecrated only on Sundays in some places, more—more—for the dead. Notwithstanding this legislation, the practice continued of celebrating oftener on some of the greater feasts: thus on the first of January one Mass was said of the Octave of the Nativity of Christ, another in honour of the Blessed Virgin; three Masses were said by bishops on Holy Thursday, in one of which sinners were reconciled to the Church, a second for the Consecration of the Oils, and a third in keeping with the feast; two Masses were said on the Vigil of the Ascension, as also on Good Friday; Mass was consecrated on Easter, and three also on the Nativity of St. John Baptist. On the feast of St. Peter and Paul the pope said one Mass in the basilica of St. Peter and a second in that of St. Paul. Finally,
abolishing all these customs, Pope Innocent III (d. 1216) prescribed that a simple priest should say but one Mass daily, except on Christmas, when he might offer the Holy Sacrifice three times; while Honorius III (d. 1227) extended this legislation to all priests. When a priest is the minister of both the Eastern and Western Church, from which no one may recede without grave sin.

It must be noted, nevertheless, that the Church has found it advisable under certain conditions to modify her discipline in this regard. Thus moral theology permits a priest to say two Masses on Sundays and Holy Days of obligation, in case of necessity, when, namely, a number of the faithful would otherwise be deprived of the opportunity of hearing Mass. This would be verified, for example, were a priest in charge of two parishes or missions with no other celebrant available, or were the church too small to accommodate at one time all the parishioners (see Bull, "Declarasit", of Benedict XIV, Bullarium IV, 32 sqq., Oct. 15, 1746; Leo XIII, Litt. Apost. "Trans Oceanum", Apr. 4, 1897). The ordinary of the diocese, however, is to judge, in these and similar cases, of the necessity of bining. For similar causes, the gravity of which is not quite so apparent, Rome grants to priests of missionary countries the privilege of saying two Masses (three in Mexico, and in other countries, see Code of Canon Law, Forma S. Sedis, XIII, 240, XXIX, 96) on Sundays and Holy Days of obligation, under conditions practically the same as stated above (see Bull "Apostolicum ministerium", of Benedict XIV, for the Anglican Missions, Mar. 30, 1723, Bullarium, X, 197 sqq.; Conc. Plen. Bait. III, Tit. III, cap. 1; Acta et Deedea Conc. Plen. America Latinne, no. 348 sqq.; Putzer, "Commentarium in Facultates Apost. ", no. 159 sqq.). As regards permission to binate, theologians are agreed in their position. All agree that the people would not in this way be deprived of the spiritual bread, and it is therefore a grave offense for a priest to be deprived of the privilege of saying Mass, as this would break the fast prescribed. A celebrant who is to say two Masses in the same church uses the same chalice for both, not purifying it at the first Mass. If the second Mass is to be said in a different church, the celebrant immediately after the last Gospel of the first Mass returns to the centre of the altar, consumes whatever drops of the Precious Blood may still remain in the chalice, and then purifies the chalice with water only. This water, which is poured from the chalice into a glass on the altar, is consumed together with the second chalice of a subsequent Mass, or emptied into the sacrament. It might even be given to a lay person who is in the state of grace and fasting, as is done with the water in which the priest's fingers are cleansed, when Holy Communion is given to the sick. The chalice thus purified at the end of the first Mass may be used for the second Mass, or not, as the celebrant may see fit.

Pope Benedict XIV (d. 1758) conceded to all priets and seculars, of the kingdom of Spain and Portugal the privilege of saying three Masses on All Souls' Day (2 Nov.). This privilege still holds for all places which belonged to one or other of these kingdoms at the time when it was granted. The ordinary stipend is allowed for one only of these masses, the other two must be offered for all the souls of purgatory.
was translated into English (London, 1636); "Vie de St. Aldegonde" was published in English at Paris (1632); "Purgatory Surveyed," a translation by Father Ashley (London, 1638), was brought out again by Father Andrews (London, 1874): "The Rice Man Saved by the Golden Gate of Heaven; Motives and Power of Almsgiving" (Paris, 1627) is dedicated to his mother, who was still living at the age of eighty-five (Latin, Italian, and German translations of this work were published); "Mary, God's Masterpiece" (Paris, 1634) had six editions. Two years later, he published a work which was received with the greatest enthusiasm: "How Should Religious Superiors Govern?" Twelve editions of this were published in French, three in Latin, three in Italian, and one in German. "Divine Favours Granted to St. Joseph," (Paris, 1639) was translated into English (London, 1890). Father Binet's works are marked by a clear, graceful style and quite an original turn of thought; they abound in apt quotations from Scripture and the Fathers; although written 200 years ago, they still furnish both pleasant and profitable reading. Father Binet was the school-fellow and lifelong friend of St. Francis de Sales, whose cheerful spirituality his own work so much resembles.

P. H. KELLY.

Binet, Jacques-Philippe-Marie, French mathematician and astronomer, b. at Rennes, in Brittany, 2 February, 1786; d. in Paris, 12 May, 1856. After two years of study at the École Polytechnique, he was appointed, in 1806, student-engineer in the government arsenals. He was soon promoted to the rank of professor, and the next year was appointed to teach at the Lycée Napoléon. He then became, at the École Polytechnique, successively, répétiteur of descriptive geometry, examiner, professor of mechanics, and inspecteur-général of studies. In 1823, he succeeded Delambre in the chair of astronomy at the Collège de France. Because of his intense devotion to the cause of Charles X., the Government of July, 1830, removed him from the École Polytechnique, although it allowed him to retain his professorship at the Collège de France. He had been made a member of the Société Philomatique, in 1812. In 1843, he was elected to succeed Lacroix in the Académie des Sciences, of which he was a most active member and had become president at the time of his death. Binet was a man of modest manner and a devout Catholic.

To mathematics, mechanics, and astronomy, Binet contributed many valuable articles on a great variety of topics. These articles were published in the "Bulletin de la Société philomatique," in the "Comptes rendus de l'Académie des sciences," in the "Journal des Mathématiques" (Liouville) and, chiefly, in the "Journal de l'École polytechnique." He also rewrote, to a large extent, the second volume of the "Mécanique analytique" of Lagrange for the edition of 1816. A few of his principal articles are: "Mémoire sur la théorie des axes conjugués et des moments d'inertie des corps," enunciating the principle sometimes called Binet's Theorem (Lecons de math., IX, 1813); "Mémoire sur la détermination analytique d'une sphère tangent à quatre autres sphères" (ibid., X, 1815); "Mémoire sur la détermination des orbites des planètes et des comètes" (ibid., XIII, 1831); "Mémoire sur les intégrales définies eulériennes et sur leur application à la théorie des suites ainsi qu'à l'évaluation des fonctions des grands nombres" (ibid., XVI, 1839; Paris, 1840); "Mémoire sur les inégalités séculaires du mouvement des planètes" (Journal de Math., V, 1840); "Mémoire sur la formation d'une classe très étendue d'équations récioproques renfermant un nombre quelconque de variables" (Paris, 1843).

P. H. LEBER.

Binius, Severin, historian and critic, b. in 1573 in the village of Randerath, Western Germany; d. 14 February, 1641. He made his studies at the gymnasium of St. Lawrence, in Cologne, and later taught in the same school for a time. After his admission to the priesthood he obtained the degree of Doctor of Divinity from the University of Cologne, where he taught general ecclesiastical history and ecclesiastical discipline, eventually becoming (1627-30) Rector Magnificus of the university. Binius was successively canon in two chapter-churches of Cologne and finally in the cathedral. In 1631 he was made counsellor and vicar-general of the archdiocese, a promotion due to his learning and one which was amply justified by his ability in managing the affairs of the archdiocese. Besides his many ordinary occupations he was active in the ecclesiastical ministry; he was also very charitable towards the poor, especially to needy students.

The reputation of Binius is owing chiefly to his edition of the "Cantica sacra" of the Church. The previous collections by Jacques Merlin, Peter Crabb, and Lorenzo Surius appeared incomplete to him, lacking as they did explanatory notes. With the help of other scholars he prepared a new edition of the "Cantica sacra" in four volumes (Cologne, 1608) under the title "Concilia generalia et provincialia." It gives only the Latin text, and contains the acts of the councils, the decretal letters, and the lives of the popes. Binius added copious explanatory notes, drawn largely from the "Ecclesiastical Annals" of Baronius. A second edition, considerably enlarged and containing also the Greek text, appeared at Cologne in 1618. In 1639 a third edition in nine volumes appeared at Paris, in preparation for which extensive use was made of the collection of councils published at Rome from 1608 to 1612. Binius also prepared an edition of the ecclesiastical histories of Eusebius, Sozocrates, Theodoret, Sozomen, and Eustathius.

Kubelius, in Köhler's (Freiburg, 1887) II: HUNTER, Necrologe (Innsbruck, 1921); HOFER, Consistoriarch, (Freiburg, 1972); I: HARTMANN, Bibl. Colon. (Freiburg, 1747). 565.

FRANCIS J. SCHAEFER.

Binterim, Anton Joseph, b. at Düsseldorf, 19 September, 1779; d. at Bilb, 17 May, 1855; a theologian of repute and for fifty years parish-priest of Bilb. He attended the Jesuit school in his native town, and then entered the Franciscan Order at Düsseldorf, 8 May, 1796. After his studies at Duren and Aachen (Aix-la-Chapelle), he was ordained priest at Cologne, 19 September, 1802. On the suppression (1803) of the Franciscan monastery to which he was attached, he was forced to retire from the religious life; in the usual manner he was appointed pastor of Bilb, 21 June, 1805, and administered the parish until his death. Father Binterim was the author of numerous theological treatises in defence of the Church against the attacks of the rationalists of the day, some of which centered from ancient ecclesiastical and literary sources. His many successes in controversy gained him numerous enemies and particularly the hatred of the partisans of Hermes who accused him of unlawful intrigue with Rome, evil transactions with the Jesuits, and treasonable practices against the pope. For this reason, after a period of imprisonment for six months in the citadel of Wesel, Father Binterim wrote indefatigably against the existing evil of mixed marriages and
Biogenesis and Abiogenesis.—According to their Greek derivation these two terms refer to the origin of life. Biogenesis is the theory that life originates only from pre-existing life; whilst the theory of abiogenesis implies that life may also spring from inorganic matter as such.

Some philosophers maintain that life existed prior to inorganic matter. Thus Fechner considers the stars and the universe as conscious organic beings of a higher order, which in the course of time differentiated themselves to organisms of an inferior kind. W. Preyer imagines the present world of organisms as a last remnant of gigantic primeval organisms, whose death, per chance, was luminous iron-vapour, whose blood was the carbonic acid; that is to say, a whole series of conditions—a fantastic conception which offers no solution of the problem. Others, again, as Liebig, Helmholtz, W. Thompson, E. Dubois-Reymond, assume the transference of small living germs from other cosmic globes to our cooling earth by means of meteorites—an evasion of the question at issue, with the additional difficulties arising from the nature of meteorites. Lastly, others admit that life must have originated somewhere and at some time, since our earth and all the celestial spheres were once in a state of fusion, incapable of sustaining living germs. But here opinions diverge. Those who deny a special directive principle assert that matter and energy as such are sufficient to account for life. Vitalism, which may be considered the most radical, maintain that life is generated from living beings only; its origin must ultimately be sought in a creative act of God, who endowed matter with a force sui generis that directed the material energies toward the formation and development of the first organism. Hence, there is an evident difference between abiogenesis and biogenesis. Let us examine which view harmonizes best with the facts actually observed.

A most careful and universal research has proved beyond a prudent doubt that all visible organisms arise only from germs of the same kind and never from inorganic matter. Omne vivum ex vivo. However, the conditions of the experiment may be varied, provided the receptacles and materials are free from living germs, results always verify Pasteur's well-known aphorism: La génération spontanée est une chimère. The attempts of J. B. Burks to produce small living cells from inorganic matter in the means of radium were unsuccessful; the radiobes produced were merely bursting gas bubbles of microscopic size. Similarly, Pflüger's cyanic acid, which he compared to half-living molecules, is but a dead chemical compound. The formation of cells by a process of crystallization, as was assumed by the founders of the cell-theory, has likewise proved unfounded. In short, Virchow's statement, Omnis cellula ex cellula, has become an axiom of biology. Now, it is a principle universally acknowledged that the laws derived from present observations of nature are applicable also to past phenomena. How, then, can the defenders of abiogenesis uphold their theory in the face of contrary facts?—Two explanations are offered. Many authors, such as Huxley, E. Rayfield, Verworn, W. Rampl, give the geographical, historical, and apologetic subjects, such as matrimonial questions; the use of Latin in the arch ritual; the discussion as to whether St. Peter was ever in Rome, or was Bishop of Rome; the Monita Secreta of the Jesuits (Düsseldorf, 1833), an old myth revamped in Northern Germany; the sale of Hosts in Germany and France (2d ed., Düsseldorf, 1822). 

Ketten in Archeologia, II, 949.

William Devlin.
compounds into correlated structures, and to make them active organisms.

Matter, then, can never die, even not under the most favourable circumstances, produce either living cell, nor plant; or, in other words, such that life owes its origin to God, the Creator of matter and energy.

H. MUCKERMANN.

**Biology** (from *bios*, life, and *λόγος*, reason, account, reasoning) may be defined as the science on life and living organisms. It is essentially a science of observation and experiment and comprises the study of the structure, origin, development, functions, and relation to environment of plants and animals, discussing at the same time the cause of these phenomena. Biology is obviously divided into zoology (ψίνθ, "animal") and botany (BOTÁNICA, "herb"), according as the organism is either an animal or a plant. The biology of man is called anatomy (ANATOMIA), i.e., "that which, as it concerns man's body, is a subdivision of zoology. The science of insects is called entomology (ENTOMOLOGIA, "insect"). Biology is not a science of yesterday, but is as old as the human race. Its main development, however, took place during the last centuries. As a result of this development a great number of daughter-sciences have sprung into existence, each commanding its own more or less distinct field of research, and all united again to approach more and more the nature of life and to give us a clearer and more comprehensive idea of the variety and causes of vital phenomena.

An organism, be it plant or animal, may be considered under a threefold aspect: either in its structure, or in its functions, or in its development. And the science of biology is divided, correspondingly.

I. BRANCHES AND SUBDIVISIONS. — The science which describes the structure of organisms is called morphology (μορφή, "shape"). This may be either external or internal, and either simply descriptive or functional. But in every case morphology concerns itself only with structure, in so far as this is a definite arrangement of matter.

**External morphology** treats of the size and shape of external parts and organs. Its chief purposes are, first, the identification of plants and animals according to certain external characters, and secondly, to facilitate the study of the functions of the various organs which it describes. It is practically the same as systematic biology, which treats of the kingdoms, classes, orders, families, genera, species, and varieties of organisms.

**Internal morphology** studies the interior structure of organisms and their parts; that is, organs, tissues, and cells. Accordingly it is subdivided into anatomy (Δυναμική), "cut up", dealing with the gross structure of organisms, histology (λέοντα, "web"), with the minute structure of the tissues, and cytology (κύτος, "cell"), with that of the cells, which are the ultimate structural and functional units of life.

Secondly, there are two sciences which refer to the functions, or activities, of organisms, according as these are performed by the single parts of the organism or by the organism as a whole. The latter science is called biodynamics; the former physiology. Both physiology and biomics not only describe and compare, but also inquire into the proximate causes of living organism activities, and hence intimately related to physics and chemistry, and at the same time are of paramount importance for the philosophy of life and of plant and animal activity. **Bionomics** (sometimes called **ecology**) observes how an organism acts with regard to its environment; that is, it describes the modes of nutrition, dwelling-place (οἰκοσ), propagation, care of offspring, peculiar relation to other organisms (phytogeny, zoogeny), geographical and geological distribution, and so forth. **Physiology** explains in detail how the single organs, tissues, and cells discharge their manifold functions, how a muscle contracts, how a gland pours out its secretion, and whether such functions are due to physical and chemical forces, whether and how far they are subject to a special directive.

Thirdly, the several biological sciences which describe the development of organisms are comprised under the general name of **morphogenesis** (μορφή and γονέω, "origin"), or biogenesis. The two branches of morphogenesis are **ontogeny** (οντός, "being") and phylogeny (φυλός, "race", "stock"). The former traces the gradual development of a single individual from the egg to the perfect being; the latter, that of the so-called "systematic species" from its ultimate ancestor, from which it is supposed to have been derived by evolution. **Embryology** is a special branch of ontogeny, and describes the gradual differentiation of the fertilized ovum and its development into the structure peculiar to the particular organism.

Supplementary to the biological sciences above enumerated is the science of **paleontology**, which describes the fossil forms of plants and animals buried and petrified in the sands and clays of the earth; the sciences of pathology, teratology, and numerous others, which pertain rather to medicine, cannot be considered here.

II. THE HISTORICAL DEVELOPMENT of the biological sciences may aptly be divided into four great periods; the first centering around Aristotle, Galen, and Albertus Magnus; the second commencing with Vesalius; the third, with Linnaeus; the last with the theory of the cell, established by Schwann.

First period. — Aristotle (384-322 B.C.) laid the foundations upon which the magnificent edifice of biology has been constructed. His works, "De historiæ animalium", "De partibus animalium", and "De generatione animalium", contain the first scientific attempt to classify animals and to explain their various morphologies. Aristotle enumerates in his works about 500 kinds of animals. He distinguished groups (γένος) from species (είδος), divided all animals into animals with blood (μέλαμα) and animals without blood (ἄμαμα), and again into eight principal groups, and finally into many sub-divisions. The morphology still maintained, at least in a corresponding form in our own days. He also knew many physiological facts, and made several discoveries in biomics which were rediscovered only in the nineteenth century. The influence of the great Stagirite upon posterity was very great, and for nearly 2,000 years most students of biology were more or less satisfied, like the younger Pliny, to study and commentate the works of Aristotle. In morphology and physiology, however, there was a considerable advancement made by Claudius Galen, who was born in 131. Galen was a Greek by birth and later on a well-known physician in Rome. He was the first to define physiology as the science which explains the functions of the single parts (μαρτυρίου) of an organism. Together with Aristotle's works Galen's morphological and physiological teachings reigned supreme in all the schools of the Middle Ages till the time of Vesalius. Only among the princes of Scholastic philosophy were there any who stepped out of the narrow circle of anatomy and physiology to study and interpret anew the living book of nature. We refer here mainly to the Dominican, Blessed Albertus Magnus (1193-1280) and to his pupils.
Biology

Thomas of Châtimpère and Vincent of Beauvais. Blessed Albertus wrote seven books on plants and twenty-eight on animals. Of the latter works, some are based on original measurements, the others contain many new and accurate observations which today are becoming more and more highly appreciated by scientists.

The second period began with the Belgian anatomist Andre Wever, b. at Brussels, 1 January, 1515. Vesalius was the first who dared to oppose energetically the authority of Galen in certain anatomical questions and to insist that in such matters not the method of interpretation, but that of dissection, is important. Even before his death, he was one of the first of its kind and, like Borelli's book, exercised an important influence on future investigations. The most valuable idea of the "Ortus medicinae" is the explanation of digestion by fermentative processes. Perhaps the most influential of van Helmont's intellectual descendants was Franz de la Boë, or Franciscus Sylvius, professor of medicine at Leyden from 1658 till his death in 1672. Sylvius was the teacher of such brilliant men as Steno and Regner de Graaff, to whom we owe several important discoveries. Without making any great discoveries himself, succeeded in directing the attention of physiologists, much more than van Helmont had done, to the importance of chemistry for the solution of biological problems. Thus he became the founder of a school which, in opposition to the intero-physical school of Borelli's followers, attempted to explain all vital processes by mere chemistry.

The work of Malpighi both closes this second period in the history of biology and opens out the era of modern biology. Marcello Malpighi was born at Crevalcore near Bologna, in 1628, the year in which Harvey published his essay on the circulation of the blood. He did more for the general advancement of biology than any other scientist since the days of Vesalius. With the Englishman Nehemiah Grew, he laid the foundation of vegetable morphology. His work on the silkworm argues him a remarkable anatomist, and his description of the development of the hen's egg entitles him to be considered the first embryologist. But his most important work consists in the discovery of the capillaries and the airspaces in the lungs, and of the structure of glands and glandular organs. During the greater part of his splendid career Malpighi was professor of medicine at Bologna. In 1691 Pope Innocent XII. made him a cardinal, to be the papal representative to the Republic; Malpighi complied with the invitation, and died at Rome, 28 November, 1694. A great part of Malpighi's success was due to the fact that the microscope, one of the most important scientific instruments of modern times, had just been invented. It is noteworthy that nearly all the great pioneers of biological progress during this second period were devoted Catholics. The Church never hampered these great scientists, so long as they proceeded by way of exact demonstration. Malpighi's work was in the province of his own province, but left them perfectly free in their investigations. The exceptional ecclesiastics who assumed an unfriendly attitude towards scientific enlightenment may well be excused when we consider, as a mere physiologist. But how very few of us today will be disposed to bring the microscope to the individual mind, and, moreover, how easily any novel idea may be misinterpreted as conflicting with religious truth. But the most determined opponents of biological innovations were indeed not ecclesiastics at all, but the university professors of biology who found it hard to give up the ancient traditions of their lifelong study.

Third period.—Of Linnaeus (Karl von Linne) it has been said that he found natural science a chase and left it a cosmos. The son of a Protestant minis-
During the same period of the eighteenth century the science of physiology made considerable progress through the work of Hermann Boerhaave (1668-1738), who was for a long time professor of medicine at Leyden. He was an adherent neither of the extreme chemical nor of the extreme physical school, but tried to reconcile both doctrines. As his title indicates, the work, "Institutiones Medicae," first appeared in 1708. A similar position as to the causes of physiological phenomena was assumed by George Ernest von Stahl (1660-1734), famous in the annals of chemistry for his phlogiston theory. Stahl's disciples included Robert Fludd, Albrecht von Haller (1708-77), who united in his voluminous work, "Elementa Physiologiae corporis humani," all the theories and discoveries known to his time, and grouped them in a new manner, so that his book may be called the first modern textbook of physiology. About the time when Haller died Antoine-Lavosier (who was guillotined by the Convention in 1794) added to the sum of physiological knowledge by solving the problem of oxidation and respiration.

Fourth period.—Meanwhile another important discovery had been made which gradually inaugurated the fourth and most splendid period of biology, the chief activities of which centre about the structure and functions of the cell, and about individual and species fixation. During this period innumerable progress has been made in biromics, paleontology, morphology, physiology, and, indeed, all biological sciences. The fact has already been alluded to that, towards the close of the sixteenth century, a native of Holland, Zachary Janssen, had invented the microscope, which, after it had been considerably improved by Francesco Fontana, of Naples, and Cornelis van Drebell, of Holland, was used by Malpighi, Jan Swammerdam (1627-80) of Amsterdam, the Englishmen Hooke and Crew, and by Antonius von Leeuwenhoek (1632-1723), the famous discoverer of the infusorians. Robert Hooke (1635-1702) was the first to represent in his "Micrographia" a group of cells which he had discovered with his microscope in plants; but Malpighi and Crew are generally credited with having discovered the cell. About a century later Kaspar Friedrich Wolff published his important "Theoria generationis" (1759), which clearly shows that he must have observed cells in plants as well as in animals. All this, however, was but preliminary; the field was fairly opened only when, in the years 1838 and 1839, the botanist Schleiden and, especially, the zoologist Schwann, established the first theory of the cell: that the cell is the ultimate structural and functional unit of life. Theodor Schwann was born at Neus, near Cologne, in 1810 and became professor of anatomy at Louvain in 1839, and at Liége in 1848, and died in 1882. He was a faithful Catholic throughout his life. Schwann's theory was further developed by F. Leydig (1857), by M. Schultz (1861), and by a host of such eminent scientists of the present generation, as J. Reinke, O. Hertwig, Waldeyer, Edmund B. Wilson, and many others. The name histology (see definitions at beginning of this article) was introduced by K. Meyer in 1819, whilst John B. Carney, who died in 1829, was the first Catholic priest and professor at Louvain, in the acknowledged author and able promoter of cytology.

Together with cytology there came into prominence the science of ontogeny which has led many biologists of to-day back to a vitalistic conception of the phenomena of life. In 1892, Stahl, a supporter of E. Haeckel's biogenetic law, to which it also gave the deathblow. According to Haeckel's theory, ontogeny is said to be a short and rapid repetition of phylogeny. The first to trace the entire development of all the tissues from the germ cells was Schwann.
The question: whether the embryo was formed in the egg and originated by a simple evolution; or whether it had to be developed by an entirely new formation, or epigenesis; was mainly solved by the theory of Georges Cuvier, Jean-Baptiste-Pierre-Antoine de Monet de Lamarck, and numerous co-workers. The science of physiology began when Lamarck, the founder of the modern theory of descent, controverted the immutability of species on scientific grounds.

The Chevalier de Lamarck (Jean-Baptiste-Pierre-Antoine de Monet de Lamarck) was born in 1744. At the age of forty-nine he became professor of the zoology of invertebrates in the Jardin des Plantes at Paris. His theory of evolution was fully explained for the first time in his "Philosophie zoologique" and later in his "Histoire naturelle des animaux sans vertèbres". During the last seventeen years of his life Lamarck was blind and lived in extreme poverty. The last two volumes of his "Histoire naturelle" he dictated to an affectionate daughter, who remained at her father's side till his death in 1829.

During its first period of energetic development the theory of evolution, as proposed by Lamarck and, in a modified form, by Saint-Hilaire, failed to supersede the theory of the constancy of species, which was also advocated by leading naturalists. Indeed, were the facts known at that time in any way sufficient to ensure its acceptance. However, after Charles Darwin had published his "Origin of Species", in 1859, the new science progressed with the greatest rapidity, and at the present day there are but few prominent naturalists who do not contribute their share to phylogeny. At the same time it has gone through a considerable intrinsic development, mainly with respect to the rise and decline of the theory of natural selection as the chief factor in the development of species. Charles Darwin was born at Shrewsbury in 1809. He studied at the universities of Edinburgh and Cambridge, from 1831 to 1836 accompanied an English scientific expedition on board the "Beagle", and passed the rest of his life in the village of Downe, Kent, where he produced the numerous works which had such an indelible influence on his age. Among Darwin's fellow-workers Alfred Russel Wallace (b. 1822) occupies the first place, since he was the co-discoverer of the principle of survival of the fittest and in other respects indulged admirable work in the interest of biological sciences.

Together with phylogeny the science of palaeontology, founded by Cuvier, developed mainly through the influence and personal activity of such men as Joachim Barrande (1799-1883), Jean-Baptiste-Julien d'Omalius d'Halloy (1783-1875), James Dwight Dana (1813-95), Oswald Heer (1809-83), and many more. The most influential of the naturalists were at the same time faithful Christians, the first two being Catholics. Still more impressive than the progress of palaeontology is that of systematic biology and biornomics, branches to which a thousand more scientific have devoted the entire energy of their lives. The result of all this scientific activity is apparent in the immense collections preserved in the museums of Washington, London, New York, and other large cities, and in the simple fact that the systematic species scientifically described amount to more than one thousand by the present classification system of classification was perfected in many ways, especially by the botanists A. L. von Jussieu (1779), A. P. Decandelle (1813), and by the zoologists Cuvier, C. T. E. von Siebold (1848), and R. Leuckart (1847). The greatest of modern morphologists since the time of Albrecht von Haller are Richard Owen (1817-92), the comparative anatomist, Johann Müller, the father of German medicine, and Claude Bernard, the prince of physiologists. Müller was b. 14 July, 1801, at Coblenz, and d. 28 April, 1858, as professor of anatomy and physiology in the University of Berlin. He was the teacher of such well-known men as Virchow, Emil DuBois-Reymond, Helmholts, Schwann, Lieberkühn, M. Schultz, Remak, Reichert, all of whom have done magnificent work in various departments of biology. Müller was chiefly an experimental physiologist, and published a vast amount of material described with great accuracy. At the same time he defended with energy the existence of a special vital force, which directs the various physical and chemical forces for the attainment of specific structures and functions. In the present generation biologists are gradually returning to Müller's views, which for a time they had more or less completely abandoned. The great physiologist lived all his life, as he died, a faithful Catholic. The same may almost be said of his contemporary in France, Claude Bernard, b. 1813, at St-Julien-d'Exon, and d. 1882, of his in the University of Paris, and in 1880, Bernard's main discoveries refer to the phenomena of nervous inhibition and internal glandular secretion. For a time he yielded to the materialistic philosophy of his age, but he soon abandoned it, perhaps through the influence of his friend Pasteur.

Louis Pasteur (d. 28 September, 1895), the father of preventive medicine, was probably the most gifted and influential biologist of the nineteenth century. His discoveries, which are inscribed on his tomb, in the Institut Pasteur, at Paris, extend from 1848 to 1884, and relate to the nature of fermentations, to the minutest organisms and to the phenomena of abigeneis, to the diseases of silkworms, to the propagation of diseases by microbes, and above all to the supreme importance principle of experimental immunity to pathogenic bacteria. Pasteur was a model Catholic, the most ideal scientist known in the history of biology.

Many more prominent biologists, such as Raman y Cajal, Wundt, Brooks, Strassburger, Wasmann, etc., have accomplished admirable work in the interest of biological sciences.

FOSTER, Lectures on the History of Physiology during the 19th, 17th, and 18th Century (Cambridge, 1903); Linsinger, Geschichte der reinsten Wissenschaft (Freiburg, 1903); WARMANN, Die moderne Biologie und die Entwicklungslehre (Göttingen, 1897); DAB, Modern Medicine (New York, 1907); OSBORN, From the Greeks to Darwin (New York, 1895).
of all subsequent dictionaries of Roman archaeology and antiquities. His works, which were edited after his death by his sons, include "Romae Inscriptionum Libri Tres" (1842), dedicated to Pope Eugenius IV, a valuable study of the ancient monuments of Rome, the first attempt at a topographical description of the city, giving also a complete list of the principal Christian churches and chapels, when and by whom built, etc.; "Roma Triumphantis Libri Decem" (1842), dedicated to Pius II; a study of the institutions and customs of the ancient Romans; "Italia Illustrata" (1747), a description of Italy in fourteen regions with an accurate list of the cities, etc. Biondo's last and most precious work in his long life was a treatise in a great work entitled "Historiarum ab Inclinatione Romanorum Imperii, Decades III, Libri XXXI" (Venice, 1483), covering the period from the fall of the Roman Empire to the author's own time (1440). The work was divided into decades, but Biondo's death prevented him from completing the vast undertaking after he had written three decades and the first book of the fourth. BIOT

Jean-Baptiste, physicist and mathematician, b. in France, 21 April, 1774; d. there, 3 February, 1862. He studied law first at the College of Louis-le-Grand; in 1793 he joined the artillery of the Army of the North, but soon left the service to enter the Ecole Polytechnique. After going to Beauvais as a professor in the central school of that city, he returned to Paris, in 1800, to occupy, at the age of 26, the chair of mathematical physics in the Collège de France. He had the distinction of ultimately belonging to three of the classes of the Institute; in 1803 he was admitted to the Academy of Sciences; in 1814, to the Academy of Inscriptions and Belles-Lettres; and in 1856, to the French Academy. After beginning his career as a mathematician and astronomer, he was assigned to the section of geometry in the Academy of Sciences. Among the interesting incidents in his career may be cited his ascension in a balloon with General Lusignac in 1804. They rose to a height of 13,000 feet for the purpose of studying the magnetic, electrical, and chemical condition of the atmosphere at various elevations.

Biot was actively engaged in the various branches of science of his time. He invented the quadrant of a meridian, for the purpose of standardizing the length of the new unit, the meter. As a member of the Bureau of Longitudes he went, in 1806, with young Arago, to Fontenay, in the Balearic Islands, to resume the measurement of a degree of the meridian, interrupted by the death of Mechain. In 1808 he determined, with Mathieu, the length of the seconds pendulum at Bordeaux and Dunkirk. In 1817 he went to Scotland and the Shetland Islands to verify the geodetic operations of the English under Colonel Mudge. In 1824 he returned to Italy, Sicily, and Spain, in order to correct some of the observations of the year 1808. He contributed more than 250 memoirs to various societies and periodicals. This enormous work covers the entire field of experimental and mathematical physics, as well as ancient and modern astronomy. He was the champion of the corpuscular theory of light which he extended to some most ingenious explanations of the very complex phenomena of polarization of light, discovered by his colleague Biot, by crystalline bodies and applied these laws to the analysis of saccharine solutions. His fame rests chiefly on his work in polarization and double refraction of light.

Regular habits of study and recreation kept him in good health and led to a ripe old age. His mental attitude may be indicated by his opposition to the opening meetings of the Academy; he feared the influence of the vulgar public upon the scientific tone of the Institute. Since he was brought up in the turbulent times of the Revolution, it is not surprising to find him among the insurgents, in 1795, attempting to overthrow the authority of the government. After the Revolution, he succeeded at first in prevailing on the Institute not to vote for Bonaparte's election to the throne. He protested against the introduction of purely political matters into the deliberations of a scientific body. His religious views became more pronounced as he advanced in years. He died after he had received the Sacrament of Confirmation at the hands of his own priest.

The more elaborate works of Biot are: "Traité de géométrie analytique", 1802 (5th ed., 1834), "Traité de physique expérimentale et mathématique", 4 vols., 1818; "Précis de physique", 2 vols., 1817; "Traité d'astronomie physique", 6 vols. with atlas, 1830; "Mélanges scientifiques et littéraires", 3 vols., 1855. The last is a compilation of a great many of his critiques, biographies, etc. Proc., Am. Acad of Arts and Sciences, 1862, VI; STAINES, Nouveaux Landis (Paris, 1879), 11.

WILLIAM FOX.

BIRDS

In Symbolism)—Many kinds of birds are used in Christian symbolism. The eagle is the symbol of Christ, as it is said to have seen the Dove; it stood for the Third Person of the Blessed Trinity, for when Jesus was baptized the Holy Ghost descended in bodily shape as a dove upon Him (Luke, iii, 22). It was also used as a symbol of peace, because a dove brought to Noe a branch of an olive-tree as a sign that the deluge of wrath was at an end. In early Christian art the Apostles and the faithful were generally represented as doves, the first because they were the instruments of the Holy Ghost, carrying peace to the world; the second because in their baptism they received the gift of reconciliation, entering with the dove (the Holy Ghost) into the Ark of God, the Church. Sometimes in symbolical writing it stands for rest: Who will give me wings like a dove, and I will be at rest?—(Ps., liv, 7); often for simplicity, innocence, or love; (Matt., x, 18); Open to me, my sister, my love, my dove, my undefiled; One is my dove, my perfect one. (Cant., v, 2; vi, 5.) The Eagle is a symbol of Christ and His Divine nature, of regeneration by baptism, the Holy Ghost, and the Church. "Eagle" is a word included in the list. As the eagle can gaze upon the shining orb of the sun with steadfast eyes, so can Christ gaze undazzled upon the refugent glory of God the Father. Dante refers to the strong eye of the eagle (Parad., i, 47, 48):—

I saw Beatrice turn'd, and on the sun Gazing, as never eagle fix'd his ken.

—It was a popular delusion among the ancients that the eagle could renew its youth by plunging three times into a spring of pure water, a belief alluded to by David: Thy youth shall be renewed like the eagle's (Ps., ciii, 5), hence the primitive Christians, and later the medieval symbolizers, used the eagle as a sign of baptism, the well-spring of salvation, in whose water the neophyte was dipped three times, in the name of the Father, the Son, and the Holy Ghost, in order to wash from his soul the old man of sin and put on the youth of a child of light. This bird was used as the emblem of St. John, because in his Gospel St. John dwells particularly upon the Divinity of the Son, and on any conception of the unfinishing eye of an eagle the highest truths.

The Pelican is a symbol of the atonement and the Redeemer. It was supposed to wound itself in order to feed its young with its blood and to bring to life those who were dead—the "pelican who stricketh..."
blood out of its owne bodye to do others good” (Lylly, Euphues). Allusion is made to this belief in “Hamlet” (act iv):—

To his good friend thus wide I'le ope my arms
And, like the kind, life-rendering pelican,
Repeat them with my blood.

Therefore it was deemed a fitting symbol of the Saviour, the nostro pelicano of Dante, who shed His blood in order to give eternal life to the children of men. Skelton in his “Armorie of Birds” says:—

Then sayd the Pellycan:
When my byrdys be slayne
With my blouds I them reverve.
Scripture doth record
The same dyd our Lord
And rose from deth to lyve.

The Pelican is a symbol of the Resurrection and of eternity. According to legend this mythical bird could never die; on attaining its five-hundredth year it committed itself to the flames of a funeral pyre, only to rise reborn from its own ashes. Dante used it as a symbol of the souls of the damned (Inf., xxiv, 197–208).

The Peacock in Byzantine and early Romanesque art was used to signify the Resurrection, because its flesh was thought to be incorruptible. (St. Augustine, City of God, xxv, c. iv.) It was also a symbol of the Church, as a symbol of the Jews, of confession and penance. The Cock is a symbol of vigilance, and also an emblem of St. Peter. The Vulture has always typified greed. Many other birds were used during the Middle Ages for symbolic and ecclesiastical purposes; while the painters of these centuries developed the symbolism of each one of these emblems to a degree that now seems far-fetched and often obscure, nevertheless, they made it clear that religious instruction can be gained from birds and even from the common things of life.

Carnt Coleman.

Biretta, a square cap with three ridges or peaks on its upper surface, now commonly worn by clerics of all grades from cardinals downwards. The use of such a cap was prescribed by the doctors both as solemn Masses and in other ecclesiastical functions. Etymologically, the word biretta is Italian in origin and would more correctly be written beretta (cf. however the French barette and the Spanish bireta). It probably comes from bire, a rough cloak with a hood, from the Greek ephebe, flame-coloured, and the biretta may originally have meant the hood. We hear of the biretta in the tenth century, but, like most other questions of costume, the history is extremely perplexed. The wearing of any head-covering other than hood or cowl, on state occasions within doors seems to have originally been a distinction reserved for the privileged few. The constitutions of Cardinal Ottoboni issued by him for England in 1298 forbid the wearing of caps vulgarly called “coyphes” (cf. the coif of the serjeant-at-law) to clerics, except when on journeys. In church and when in the presence of their superiors their heads are to remain uncovered. From this law the higher graduates of the universities were excepted, thus Giovanni d’Andreis, in his gloss on the Clementine Decretals (1320) gives as the insignia of the Doctorate the cathedra (chair) and the biretta.

At first the biretta was a kind of skull cap with a small tuft, but it developed into a soft round cap easily indented by the fingers when it was put on and off, and it acquired in this way the rudimentary outline of its present three peaks. We may find such a cap delineated in many drawings of the fifteenth century, one of which, representing university dignitaries at the Council of Constance, who are described in the accompanying text as birredati, is here reproduced.

The same kind of cap is worn by the cardinals sitting in conclave and depicted in the same contemporary series of drawings, as also by preachers addressing the assembly. The privilege of wearing some such head-dress was extended in the course of the sixteenth century to the lower grades of the clergy, and after a while the chief distinction became one of colour, the cardinals always wearing red birettas, and bishops violet. The shape during the sixteenth and seventeenth centuries was everywhere considerably modified, and, though the question is very complicated, there seems no probable reason to reject the identification, proposed by several modern writers, of the old doctor’s biretum with the square college cap, popularly known as the “mortar-board”, of the modern English universities.

The college cap and ecclesiastical biretta have probably developed from the same original, but along different lines. Even at the present day birettas vary considerably in shape. Those worn by the French, German, and Spanish clergy as a rule have four peaks instead of three; while Roman custom prescribes that a cardinal’s biretta should have no tassel.

As regards usage in wearing the biretta, the reader must be referred for details to some of the works mentioned in the bibliography. It may be said in general that the biretta is worn in processions and when seated, as also when the priest is performing any act of jurisdiction, e.g. reconciling a convert. It was formerly the rule that a priest should always wear it in giving absolution in confession, and it is probable that the ancient usage which requires an English judge...
to assume the "black cap" in pronouncing sentence of death is identical in origin.

HERBERT THURSTON.

Birgida, Birgit, Birgitta. See BRIDGET, SAINT.

Birinus (Birin), Saint, Confessor, first Bishop of Dorchester (558), and of not Dorchester, the capital of Dorsetshire), and Apostle of Wessex; date of birth unknown; d. 3 December, 650, at his sea and was buried in his own church there. Later (880) his remains were deposed by Bishop Heada in the cathedral at Winchester, where finally (9 September, 972) Bishop Ethwold enshrined them in silver and gold. According to Bede, Birinus came to Britain on the advice of Pope Monarus I (625–638), having been consecrated by Ambrose at Genoa. He promised "to sow the seed of the holy faith in all parts beyond the English", but on his arrival (634) found the West Saxons so pagan that he decided to devote his ministry to them. God blessed his zeal by the conversion of his chief opponent, King Cynegils, and of his son Gwicel's, son Cuthred (639). Cynegils' daughter (Cynegils' daughter) was also baptized, and Oswulf, the holy King of Northumbria, who had come to Cynegils in suit of her hand, was sponsor to her father and wished her. Doubtless, his presence helped Birinus much in his first spiritual conquests. Immediately after this, Oswald and Cynegils gave him Dorce, or Dorchester, the capital of Wessex, for his see, where "he built and consecrated many churches and by his labours called many to the Lord".

Birinus had great devotion for the Body of Our Lord, as is shown in the account of his walking on the sea to procure the corporal given him by Pope Honorius, wherein he ever carried the Blessed Eucharist. Field strangely disposes of this miracle and others as "illegal or fabricated", after all, however, that their chroniclers had some common source of information lost to us now. Many miracles took place at the discovery of Birinus' relics, and Huntingdon among others speaks of "the great number of the sick present". He is another instance where the devotion to him in the Established Church, due probably to the connexion of the royal family with Cerdic, a side branch of whose stock was Cynegils. Field enumerates many modern Protestant memorials. The Catholics of Dorchester honoured their patron, in, 1849, with a beautiful chapel.

Bede, Hist. Eccl., III, vii; IV, xii; Butler, Lives of the Saints, II; Bliss, The Church in England (London, 1892), 37; Montalembert, Monks of the West, XI, 2; Field, Saint Birinus, The Apostle of Wessex (London and New York, 1902); Hardy, Christopher Wren, the Architect (London, 1905); Giles, Six Old English Chronicles (London, 1896); Hadrian and Gesta, Councils, III.

CHARLES L. KIMBALL.

Birkowski, Farian, Polish preacher, b. at Lemberg, 1566; d. at Cracow, 1636. He completed his studies at the University of Cracow, where he also began to teach philosophy in 1587. After having taught there for five years he entered the Dominican Order (1592), and devoted himself for some time to a deeper study of theology. Thereupon he began his career as a preacher in the church of the Holy Trinity at Cracow, and in the province of Posen. During fourteen years his fame as a preacher drew immense crowds. Sigismund III was much attached to him and often consulted him on matters temporal and spiritual. He induced Birkowski to follow the court when it was transferred to Warsaw. He also appointed him court-preacher to his son Wladislaw, and in 1611 and 1615 against Turkey, Russia, and Walscher, the Druze, took a prominent part, and some of his best sermons were delivered to the soldiers. Two years before his death he retired to his monastery and never left it save to preach on some great occasion or in behalf of charity. Birkowski is considered one of the last of the Dominican preachers.

His contemporaries spoke of him as the "Sarmanian Chrysologus", and posterity has not found anyone superior to him in purity of diction in the sixteenth century. He used Scripture quotations very often, though he also quoted from other poets. He is considered a master of the art of preaching. His controversial and polemical works are numerous, and some of his best sermons were published. They are three volumes of sermons on Sundays and Holy Days, besides panegyrics on St. Joseph, Sigismund III, his wife Charlotte, and sermons on the Blessed Virgin delivered in camp.

THOS. M. SCHWERTNER.

Birmingham, Diocese of (Birmingham, Birmingham, ).—One of the thirteen dioceses erected by the Apostolic Letter of Pius IX, 27 September, 1860, which restored a hierarchy to the Catholic Church in England. It comprises the counties of Staffordshire, Worcestershire, Warwickshire, and the part of the county of Oxfordshire, including the city of Oxford. It was erected by the Apostolic Constitution "Aeterni Patris" (13 December, 1850), which takes its name from the municipal city of Birmingham, the largest town of the four counties. Previously to 1850, these same four counties were included, first in the Midland, then in the Central, Diocese or province, which was governed by vicars-Apostolic since 1860, of whom by far the most illustrious was Bishop Milner (1803–26)—a man equally learned in polemics, ecclesiastical history, and sacred archeology. To his untiring energies and unwavering front against a strongly organized schismatic opposition, the Church in England owes its present stability and its solid ecclesiastical unity. Under Milner, whose episcopal residence was at Wolverhampton (Staffordshire), this vicariate became the starting-point and then the centre of the Catholic Movement, or Revival, in the last century (1800–50). Its prominence as well as its lustre was due not merely to its central position, but chiefly to Milner's brilliant talents, his magnetic influence, and clear foresight. Its two educational establishments, Walsingham College and Mary's College, Oscott, Birmingham—presided over and staffed by exceptionally able men, lent their aid also to this great movement by supplying a zealous body of clergy and a leisly thoroughly grounded in Catholic principles. When, later, on, the Oxford movement led to so many conversions, Oscott College became the rallying point for the Catholic forces, inasmuch as its then president, Bishop Wiseman (1840–17), was the acknowledged leader and interpreter. To Oscott John Henry Newman had come from Littlemore after his reception into the Church, and many other distinguished converts besides.

The last vicar-Apostolic of this henceforth historic vicariate was William Bernard Ullathorne, O.S.B., who was consecrated 21 June, 1846. After ruling the Western Vicariate for a short time he was consecrated to the Central District, to become the first Bishop of the newly created See of Birmingham. Next to Wiseman, he had done most to promote the restoration of the hierarchy. On 27 October, 1850, Bishop Ullathorne was enthroned in St. Chad's Cathedral, Birmingham. On the 27th of that month, he preached his celebrated sermon "Christ on the Water", second only to the "Second Spring" delivered at the First Provincial Synod of Westminster at Oscott.
(July, 1852). The cathedral and bishop's house had been erected in Bishop Walsh's vicariate (21 June, 1849) from designs drawn by Augustus Welby Pugin, the foremost promoter of the revival of Gothic architecture, who, through the munificence of John, 16th Earl of Shrewsbury, equipped the diocese with many ecclesiastical buildings. Over the high altar of St Chad's Cathedral rest the relics of its patron which had been enshrined till the Reformation in Lichfield Cathedral. On 24 June, 1852, the cathedral chapter, consisting of 50 canons, was duly erected, to which three honorary canons have since been added. The first and third provosts, respectively, were Mgr. Woodall, D.D., and Dr. Northcote, both presidents of Oscott. The first diocesan synod was held 9 and 10 November, 1853, since which time there have been thirteen other synods (1853-1906). In 1873, owing to refusal to renew the lease, Sedlesky Park School was transferred to St. Willfrid's, Cotton, Staffordshire, formerly the residence of Father Faber and the Oratorians. In the October of the same year St. Bernard's Diocesan Seminary was opened at Otton, Warwickshire, of which the first rector was the Rev. Edward Isley, successively canon and bishop-ordinary (December 4, 1879).

In July, 1867, Bishop Ullathorne resigned, becoming Bishop of Calcutta, and was succeeded by his auxiliary, Mgr. Oscott, where he died 21 March, 1889. Two persons stand forth conspicuous in the history of the Birmingham diocese whose relations with Bishop Ullathorne were exceptionally close, Cardinal Newman and Mother Margaret Hallahan. The former lived and died at the oratory, Edgbaston, Birmingham, and the new basilica opened 9 October, 1906, will perpetuate his memory. The latter was the foundress of the English Congregation of Nuns of the Third Order of St. Dominic, who have convents and hospitals at St. Michael's, Selly, notable shrines at Selly, and St. Chad's, granddaughter of Mother Margaret. The large number of communities of women who have found a home in this diocese attracted by the personality of Bishop Ullathorne include Benedictines (2 abbeys, 3 priories), Poor Clares, Little Sisters of the Poor, Sisters of Mercy and of St. Paul—the latter introduced from Chartres by Mother Genevieve Dupuis. Another religious force, specially characteristic of the diocese, has been the unusual number of Town Hall, Birmingham, which for at least 20 years, has been presided over by eminent Catholics, and have tended to keep the clergy and laity in touch with one another. Mention, too, must be made of John Hardman of Birmingham, whose firm has done so much in promoting ecclesiastic art and the making of such works and whose benefactions to the cathedral choir have enabled it to reach a standard of excellence in church music which places it first among Catholic choirs. On 17 February, 1888, Dr. Isley became the second Bishop of Birmingham, and at once took in hand the difficult task of protecting and rescuing the destitute Catholic children of the diocese. St. Edward's Home for homeless boys was opened at Coleshill (Warwickshire), 6 November, 1906, with branch houses for boys situated, in various parts of the city, besides a Home for Working Boys and a Night Refuge, both in Birmingham. In July, 1889, Oscott College was closed to lay students and reopened as a Central Seminary for ecclesiastics only. The progress of Catholicism since 1850 is gauged by a comparison of a 1904, with the 1850 census, and is quite astounding: clergy, 124 and 297; churches, 82 and 189; religious communities, 19 and 97.

JOHN CARSWELL.

Birnbaum, Heinrich (also known as De Prato, the latinized form of his German name), a pious and learned Carthusian monk, b. in 1403; d. 19 February, 1473. Little is known of him before his entrance into the Carthusian monastery at Cologne on 14 March, 1455, at the age of 32 years. On account of his edifying example in the observance of the rule and his extensive scriptural and theological learning he was highly esteemed by his confrères, and as early as 1438, only three years after his entrance into the order, he became prior of the monastery of Mont Saint André at Tournaï (Doornik) in Belgium. The desire to reform the Carthusian orders, which animated many great men of the fifteenth century, had also penetrated the soul of Birnbaum. Being a true reformer, he soon succeeded, by the irresistible force of his own pious example, in abolishing the few abuses that had found admittance into the various monasteries over which he became prior, and in restoring the austere monastic discipline established by the founder St. Bruno. After holding the position of prior at Mont Saint André for eleven years, he was active in the same office successively at Wesel in Rhenish Prussia, until 1457; at Rettel in Lorraine, until 1459; at Trier, until 1461; and at Diest in Belgium, until 1463. In 1463 he was appointed prior at Liège, but ill health forced him to resign this position and retire to the Carthusian monastery at Cologne, where he had spent the first days of his monastic life. The remaining ten years of his life Birnbaum spent in writing several ascetic works and in preparing for a happy death. There were with him at that time in the Carthusian monastery of Cologne among the most learned men of his time such as Hermann Appeldorn (d. 1472), Hermann Greffken (d. 1480), Heinrich von Dissen (d. 1484), and Werner Rolfenk (d. 1502). Birnbaum wrote for the instruction and direction of the members of his order a number of works, of which, however, have not yet been put in print, also: "Defensio pro Immaculato Conceptu B. M. V.", and "Excerpta ex malo granato cum nonnullis conjunctis". He has often been confounded with his uncle of the same name, one of the most learned jurists of the fifteenth century, who was for some time prior of St. Kunibert's at Cologne, and who died in 1439. See "Le Grand Dictionnaire Historique" (Amsterdam, 1898), III, 138; also Jecher, "Gesammten Lexicon", II, 1389.

MICHAEL OTT.

Birth. The Defect of (Illegitimacy), a canonical impediment to ordination. When used in this connection, the word illegitimus has, in canon law, a well-defined meaning, which is "natural wedlock". Illegitimate birth is an impediment to the reception of orders, and inhibits the exercise of the functions of orders already received. It is a canonical impediment, because established and laid down in the canon law, and it impedes entering the clerical state. This prohibition does not touch the validity of orders, but makes the reception of them
BIRTHA

Illicit. It extends to first tonsure. The inhibition that is set up is restricted to the functions that belong exclusively to the clergy. In the early ages of the Church no law prevented the ordination of illegitimates. They were, then, sometimes, debarred from ordination, but only because of a real or supposed depravity of life. Pope Urban II (1088-99) prohibited the ordination of the illegitimate offspring of clerics, unless they became members of approved religious orders. The Council of Piacenza, under Paschal II (1099-1118), extended this prohibition to all persons of illegitimate birth. These regulations were later approved by other popes and councils. (1) A decree laid down in the Decretals of Gregory IX (I, X) mentions only the offspring of clerics and those begotten in fornication. But in the sixth book of the Decretals all persons of illegitimate birth are expressly included. These may be ranged in the following classes: (1) Natural illegitimates, or the offspring of parents who at the time of the birth or conception of such offspring, were capable of contracting Christian marriage. (2) Spurious illegitimates, or those born of a known mother and an unknown father—unknown because the mother had carnal relations with several men. (3) Adulterous illegitimates, those begotten of parents, one or both of whom, at the time of the conception and birth of such offspring, were lawfully married to a third person. (4) Incestuous illegitimates, or parents whose offspring can be accounted for on the ground of consanguinity or affinity. (5) Sacrelious illegitimates, or the offspring of parents who are restrained from marriage because of the impediment of Holy orders or solemn religious vows. The practice of this day also holds as illegitimates abandoned children or illegitimate orphans. Legitimacy may not be presumed nor established by negative proof. Positive documentary evidence must be adduced.

The law of illegitimacy directly debar all the foregoing classes of persons from promotion to orders, and the exercise of the functions proper to the orders already received; and it indirectly prevents such persons from obtaining a benefit. Directly, also, it prevents them from obtaining certain benefices, for the Council of Trent (Sess. 25, c. 15 de ref.) decreed that the illegitimate children of clerics should be incapacitated from obtaining any kind of a benefice in the Church where their fathers held one; from rendering any service in said church; and from receiving any pensions on the revenues of the patronage of benefices. The law is established and laid down as a punishment for the person to whom it is applied. It safeguards the honour and dignity of Holy orders. The clerical state which has the dispensing of the mysteries of God must be beyond reproach. No stain should be upon it, no blame possible. Therefore the Church raises the barrier of illegitimacy before the entrance to the priesthood. Thus the crime of the parents is held up to just reprobation, and is condemned even in the lives of their offspring. The danger of the father’s incontinence being continued in the life of the son is greatly lessened, for strong indications of purity of life must be given before the door of God’s ministry can be opened.

The defect of illegitimate birth may be cured in four ways: (1) By the subsequent marriage of the parents; (2) By a rescript of the pope; (3) By religious profession; (4) By a dispensation. (1) The subsequent marriage of the parents of an illegitimate has, by a fiction of law, a retroactive power which carries the marriage back to the time of the birth of the offspring and excuses it with lawful legitimacy. (2) The fiction of law may produce this effect, the parents, at the time of the conception or, at least, at the birth of such offspring, must have been capable of contracting lawful marriage. Therefore, this mode of legitimation is applicable only to natural illegitimates. And these, though legitimized by the subsequent marriage of the parents, or even by an Apostolic dispensation, are still deprived of the dignity of the cardinalate. (2) A rescript of the pope confers legitimacy in so far as it is required for spiritual affairs throughout the universal Church. (3) Religious profession in an approved order cures the defect of legitimacy. Religious profession here consists in the taking of the solemn religious vows; but the simple vows taken after the novitiate in some orders produce a like effect. This mode of legitimation only renders illegitimates capable of ordination. It cannot be extended to those in religious congregations. Hence, illegitimates thus legitimized are still debarred from the position of abbots; and women of illegitimate birth, for like reasons, cannot hold the position of abbesses or priors. (4) A dispensation granted by a lawful superior removes the defect of illegitimate birth, but only for some express purpose. It is not a mode of absolute legitimation. The purposes for which it is granted must be specified; as for promotion to minor orders, to major orders, to a specified benefice.

A dispensation of this kind runs counter to the common law. It is of strict interpretation, and therefore cannot be extended from like to like or from greater to less, unless the one is included in, and presupposes, the other. Such is the case when the dispensation is to be granted to receive Holy orders. Such orders require a title, and this title is, in canon law, a benefice. The pope is the lawful superior for the universal Church, and as such he can dispense in all cases where a dispensation is possible. Bishops and other prelates having quasi-episcopate jurisdiction can dispense their own subjects, in this matter, for first tonsure, minor orders, or a simple benefice; but not for major orders, even though the illegitimacy be occult. This episcopal, or quasi-episcopal, jurisdiction does not extend to a benefice which was immediately possessed by the father of the person seeking the dispensation, nor to a benefice which by custom or privilege requires its possessor to be in major orders.

BIRTHA, a titular see of Orshaene, probably identical with Birejik (Zegma) on the left bank of the Euphrates, c. 62 miles west of Orfa (Edessa), and 96 miles north of Aleppo. Birtha (Armenian, Bītd, "castle") is spoken of as a castle by ancient authors (Hierocles, 716, 2). There was also a see called by the Greeks Macedonopolis, the foundation of the city being attributed by legend to Alexander the Great (Amm. Marcell., XX, vii, 17). That Macedonopolis and Birtha are one see is proved by the subscriptions at the Council of Nicea, where we see that "Macedonopolis" in Greek and Arabic lists corresponds with Macedonopolis in Greek and Latin lists (Gelzer, Patrum Niconorum nomina, 242). The true name of the bishop present at the council is Maraes, not Marcus. Daniel, Bishop of Macedonopolis, is said to have been expelled from Chalcedon (451). From the sixth century only the name Birtha survives (Georgius Cyprius, n. 889). Emperor Anastasius, after his victories over the Persians in 595, entrusted Sergius, Bishop of Birtha, with the work of repairing the city of Aegypt, ed., The Chronicon of Eusebius, I, xciii, xcvii. The undertaking that was completed by Justinian (Procop., De edificiis, Just., II, 4). The oldest "Tacticon" of the Patriarchate of Antioch, issued under Anastasius I (599) places Birtha first among the suffragane
BISACIA

Sees of Edessa (Kerameus, ed., Ἀνδρέας Μανώλης, lxxv); the name is written Bëpöv in a later redaction (lxxd., lxxix), and Vëch in an old Latin translation (Tobler and Molinier, Itineraria Hierosolymitana, I, 322). Edessa was destroyed by Timour-Leng in the fourteenth century. Birejik is to-day the chief town of a cosa in the vilayet of Aleppo with 10,000 inhabitants, including 1,500 Christians, all Armenians, one-half of whom are Catholics.

Biskra. At the present day, Biskra speaks of birthas on the Tigris in Southern Mesopotamia and of another in Arabia on the Euphrates below the Euphrates. The site of the first is unknown, the latter is at Ed-Deir (River, Erdkunde, XI, 691), but perhaps both are identical or nearly so (cf. I. LAQUEUR, Oriens Cristianus, II, 965; O. CONWAY, La Turquie d’Asie, II, 265-266; G. C. C. OPRYSKO, ed. GELEG, 154; G. GAMBINO, Series Episcoporum, 627).

L. PETIT.

Bisaccia. See SAN'T ANGELO DE LOMBARDI.

Bisarchio, Diocese of, situated in Sardinia, in the province of Sassari, district of Nuoro, and suffragan to the Archdiocese of Sassari. The episcopal residence, however, is at Ossiari. Nothing is known as to the early history of Christianity in either the city or Diocese of Bisarchio. The first bishop mentioned is Costantino Madrone (c. 1102), who was succeeded in 1116 by Bishop Pietro. The bishop's residence was formerly several times, since to Girelza, and again to Arderi. In 1503, at the death of Francesco Calcerando, bishop of this see, Bisarchio was incorporated into the Diocese of Alghero. The diocese was re-established by Pius VII in his Bull of 9 March, 1803, and became a diocese in 1810; Giannantonio Asesi, who in 1819 was promoted to the archiepipiscopal See of Oristano, his native place. The episcopal residence was then definitely transferred to Ossiari. The cathedral, built in 1153, is well planned.

The Diocese of Bisarchio contains 24 parishes, 116 churches, chapels, and oratories, 78 secular priests, 25 seminarians, and a population of 40,000.

CAPPENELLI, La Chiesa d’Italia (Venice, 1844); Annuario scol. (Rome, 1860).

U. BENIGNI.

Bisacgilia. See Trani and Barletta.

Bishop (A. S. BISAC, Biscope, Ger. Bischof) is from Gr. τιμός (τιμή) an over or through Lat. episcopus; It. vescovo; O. Fr. vescue; Fr. évêque. See Murray, "New Eng. Dict." (Oxford, 1888, I, 878), the title of an ecclesiastical dignitary who possesses the fullness of the priesthood to rule a diocese as its chief pastor or shepherd. Giannantonio Asesi, who in 1819 was promoted to the archiepiscopal See of Oristano, his native place. The episcopal residence was then definitely transferred to Ossiari. The cathedral, built in 1153, is well planned.

Bishop (A. S. BISAC, Biscope, Ger. Bischof) from Gr. τιμός (τιμή) an over or through Lat. episcopus; It. vescovo; O. Fr. vescue; Fr. évêque. See Murray, "New Eng. Dict." (Oxford, 1888, I, 878), the title of an ecclesiastical dignitary who possesses the fullness of the priesthood to rule a diocese as its chief pastor or shepherd. Giannantonio Asesi, who in 1819 was promoted to the archiepiscopal See of Oristano, his native place. The episcopal residence was then definitively transferred to Ossiari. The cathedral, built in 1153, is well planned.

In the hierarchy of order they possess powers superior to those of priests and deacons; in the hierarchy of jurisdiction, by Christ's will, they are appointed for the government of one portion of the faithful of the Church, under the direction and authority of the sovereign pontiff, who can determine and restrain their powers, but not annihilate them. They are the successors of the Apostles, though they do not possess all the prerogatives of the latter. (Council of Trent, Sess. XXIII, ch. iv; can. vii. See COLLEGE, APOSTOLIC.) The episcopate is monarchical. By the will of Christ, the supreme authority in a diocese does not belong to a college of priests or of bishops, but it resides in the single personality of the chief. The subject will be treated under five heads: I. Historical Origin; II. Present Legislation; III. Rights and Powers of the Bishop; IV. Obligations of the Bishop; V. Non-Catholic use.

I. HISTORICAL ORIGIN.—The historical origin of the episcopate is much controverted; very diverse hypotheses have been proposed to explain the texts of the inspired writings and of the Apostolic Fathers relating to the primitive ecclesiastical hierarchy. They are most easily found in the work of von Dunin-Borkowski, on the latest researches concerning the origin of the episcopate (Die neueren Forschungen über die Anfänge des Bistums, 1870). The Apostolic and consequently the Divine origin of the monarchical episcopate has always been contested but especially so since Protestantism put forward the doctrine of a universal Christian priesthood, rationalistic, dissociative, pietistic, even by some of the most earnest and virtuous writers, even those who belong to the Anglican Church, reject the Apostolic institution of the episcopate; many of them relegate its origin to the second century. Loning attempts to prove that originally there were several different organizations of the Christian communities were administered by a body of presbyters, others by a college of bishops, others again by a single bishop. It is the last named form of organization, he declares, which has prevailed (Gemeindeverfassung des Apostelchristentums, Halle, 1889). Holtizmann thinks that the primitive organization of the churches was that of the Jewish synagogue; that a college of presbyters or bishops (synonymous words) governed the Judeo-Christian communities; that later this organization was adopted by the Gentile churches. The distant century one of these presbytery-bishops became the ruling bishop. The cause of this lay in the need of unity, which manifested itself when the second century heresies began to appear. (Pastoralbriehe, Leipzig, 1850.) Hatch, on the other hand, believed that the origin of the episcopate was in the organization of certain Greek religious associations, in which one meets with tetrarchia (superintendents) charged with the financial administration. The primitive Christian communities were administered by a college of deacons; those of the presbyters who administered the finances were called bishops. In the large towns, the whole financial administration was centralized in the hands of one such officer, who soon became the ruling bishop (The Organization of the Early Christian Churches, Oxford, 1881). According to Harnack (whose theory has varied several times), it was those who had received the special gifts known as the charismata (charlocks), above all the gift of public speech, who possessed all authority in the primitive community. In addition to these two groups of presbyters and deacons who possess neither authority nor disciplinary power, who were charged solely with certain functions relative to administration and Divine worship. The members of the community itself were divided into two classes: the presbyteroi (συμβολικοί) and the young (παιδία). A college of presbyters was established at an early date at Jerusalem and in Palestine, but elsewhere not before the second century; its members were chosen from among the presbyteroi, and in its hands lay all authority and disciplinary power. Once established, it was from this college of presbyters that deacons and bishops were chosen. When those officials who had been endowed with the charismatic gifts had passed away, the community delegated the office of presbyter to the men of the community. At a later date, the Christians realized the advantages to be derived from entrusting the supreme direction to a single bishop. However, as late as the year 140, the organization of the various communities was still widely divergent. The monarchical episcopate corresponds to the need of doctrinal unity, which made itself felt at the time of the crisis caused by the Gnostic heresies. (Von Dunin-Borkowski, 100-101.)

J. B. Lightfoot, who may be regarded as an authoritative representative of the Anglican Church, has a less radical view than Holtizmann. He says, had no organization, but was very soon conscious of the necessity of organizing. At first the apostles appointed deacons; later, in imitation

II.—37
of the organization of the synagogue, they appointed presbyters, sometimes called bishops in the Gentile churches. The duties of the presbyters were twofold: they were both rulers and instructors of the congregation. In the Apostolic age, however, traces of Nicholas, as high priest, properly so called, are few and indistinct. This episcopate was not formed from the Apostolic order through the localization of the universal authority of the Apostles, but from the presbyterial (by elevation). The title of bishop originally common to all came at length to be restricted to the chief among them. Within the period compassed by the Apostolic writings, James, the brother of the Lord, can alone claim to be regarded as a bishop in the later and more special sense of the term. On the other hand, though especially prominent in the Church of Jerusalem, he appears in the Acts as a member of a body. As late as the year 70, no distinct signs of episcopal government had yet appeared in Gentile Christendom. During the last three decades of the first century, however, during the lifetime of the last surviving Apostle, St. John, the episcopal office was established in Asia Minor. St. John was cognizant of the position of St. James at Jerusalem. When, therefore, he found in Asia Minor manifold irregularities and threatening symptoms of disruption, he not unnaturally sought to meet them by the introduction of a pro-office to the organization, which had been signally blessed and had proved effectual in holding together the mother-church of Jerusalem amid dangers no less serious. The existence of a council or college necessarily supposes a presidency of some kind, whether this presidency be assumed by each member in turn, or lodged in the hands of a single person. It was only necessary, therefore, to give permanence, definiteness, stability to an office the term of which was limited to the life of the person holding it. There is no reason to suppose that any direct ordinance was issued to the churches by St. John. The evident utility and even pressing need of such an office, sanctioned by the most venerated name in Christendom, would be sufficient to secure its wide though gradual reception. The earliest bishops, however, did not hold the position of independent supremacy which was and is occupied by their later representatives. This development is most conveniently grasped in connexion with three great names: Ignatius, Irenaeus, and Tatian. So far as Irenaeus is concerned, the advancement towards the supremacy ultimately attained. By Ignatius the bishop is regarded as the centre of unity; to Irenaeus he is the depository of primitive truth; to Cyprian, he is the absolute vicegerent of Christ in things spiritual (Lichtfoot, The Christian Ministry, 181-209, in his commentary on St. Paul’s Epistle to the Philippians, London, 1896).

Catholic writers agree in recognizing the Apostolic origin of the episcopate, but are much divided as to the meaning of the terms which designate the hierarchy in the New Testament writings and the Apostolic Fathers. One may even ask if originally these terms had a clearly defined significance (Bruders, Die Verfassung der Kirche bis zum Jahre 175, Mainz, 1804). There is greater unanimity when an attempt is made to explain why some churches are found without presbyters, others without bishops, others again where the heads of the community are called sometimes bishops, sometimes presbyters. This disagreement increases when the question comes up for interpretation of the presbyters of other personages exercising a certain fixed authority in the early Christian communities. The following facts may be regarded as fully established: (1) To some extent, in this early period, the words bishop and presbyter (diakonos) were synonymous. (See the principal interpretations in the article: COLLEGE, APOSTOLIC.) (2) These terms may designate either simple priests (A. Michea, Les origines de l’épiscopat, Louvain, 1900, 218 sqq.) or bishops possessing the full powers of their order. (Batifol, Etudes d’histoire et de théologie positive, Paris, 1902, 266 sqq.; Duchesne, Histoire ancienne de l’église, Paris, 1866, 94.) (3) In each community the authority may devolve upon one or a college of presbyter-bishops. This does not mean that the episcopate, in the actual sense of the term, may have been plural, because in each church the college of presbyter-bishops did not exercise an independent supreme power; it was subject to the Apostles or to their delegates. The latter were bishops in the actual sense of the term, but they did not possess fixed sees nor had they a special title (Batifol, 270). Since they were essentially itinerant, they confided to the care of some of the better educated and highly respected neophytes the fixed necessary functions relating to the daily life of the community. (4) Sooner or later the missionaries had to leave the young communities to themselves, whether on their direction fell entirely upon those local authorities who thus represented them. (5) This local superior authority, which was of Apostolic origin, was conferred by the Apostles upon a monarchical bishop, such as is understood by the term to-day. This is pricted first by the example of churches established by St. Peter, such as Rome, one of the Twelve Apostles, held the first place, and afterwards by those communities in Asia Minor of which Ignatius speaks, and where, at the beginning of the second century the monarchical episcopate existed, for Ignatius does not write as though the institution were a new one. (6) In other communities, it is true, no mention is made of a monarchical episcopate until the middle of the second century. We do not wish to reject the opinion of those who believe that the local bishops could have exercised supreme authority, and so from the second century the episcopate, that is to say, of an authority superior to that of the college of the presbyter-bishops. The reasons which some writers allege, in order to explain why, for example, in the Epistle of Polycarp no mention is made of a bishop, are very plausible. The best evidence, however, for the existence at this early date of a monarchical episcopate is the fact that nowhere in the latter half of the second century is the least trace to be found of a change of organization. Such a change would have happened by the middle of the second century. The second century documents the least trace of a protest against so important a change. If the monarchical episcopate began only in the middle of the second century, it is impossible to comprehend how at the end of the second century the episcopal lists of several important bishoprics give the suco-saeion of monarchical bishops as far back as the first century. This was generally known and admitted. Such, for instance, was the case at Rome. (7) This theory, it must be carefully noted, does not contradict the historical texts. According to these documents, there was a college of presbyters or of bishops who administered several churches, but which had a president, who was none other than the monarchical bishop. Although the power of the latter had existed from the beginning it became gradually more conspicuous. The part played by these bishops on the one hand, and the part played by their auxiliaries, on the other, was very important one in the earlier days of the Christian Church; nevertheless it did not exclude the existence of a monarchical episcopate (Duchesne, 89-95).

During the first three centuries, the entire religious headship of the diocesan centre around the person of the bishop. The priests and deacons were his auxiliaries, but they worked under the immediate direction of
the bishop. In large cities, however, like Rome, it was soon found necessary to hand over permanently to the priests and deacons certain definite functions. Moreover, as a result of the spread of Christianity outside Palestine, the bishop gradually lost much of the control he had over the clergy, and the bishop was left to others to administer the administration of a portion of the diocesan territory. In the East, at first bishoprics were created in all districts where there was a considerable number of Christians. But this system presented great inconveniences. To distant or rural localities, therefore, the Church sent bishops, who were only the delegates of the bishop of the city, and who did not possess the right of exercising the most important powers of a bishop. The bishop then became only a metropolitan or rural bishop. Later on, they were replaced by priests (Gillman, Das Institut der Chorbischöfe im Orient, Munich, 1903). The establishment of parishes from the fourth and the fifth century onward gradually freed the bishops from many of their original charges; they reserved for themselves only the most important affairs, i.e. those which concerned the whole diocese and those which belonged to the cathedral church. However, above all other affairs the bishops retained the right of supervision and supreme direction. When the Emperor Constantine, in “Kirchenkampf” in the Empire, now Christian, granted bishops other powers. They were exclusively empowered to take cognizance of the misdeemours of clerics, and every law suit entered into against the latter had to be brought before the bishop’s court. The Emperor Constantine even permitted all Christians to carry their lawsuits before the bishop, but this right was withdrawn at the end of the fourth century. Nevertheless, they continued to act as arbitrators, which office the earliest Church laws assigned to that end. It is the part of the Roman Empire that the bishops as arbitrators became powerful. The master was permitted to legally emancipate his slave in the bishop’s presence; the latter had also the power to remove young girls from immoral houses where their parents or masters had placed them, and to restore them to liberty. Newly born infants abandoned by their parents were legally adjudged to those who sheltered them, but to avoid abuses it was required that the bishop should certify that the child was a foundling. The Roman law allowed the bishops the right to visit prisons at their discretion for the purpose of improving the condition of prisoners and of ascertaining whether the rules in favour of the latter were observed. The bishops possessed great influence within the Church. The bishop, although in the Eastern Church these intimate relations between Church and State led to Caesarpapism, the bishops of the West preserved in a great measure their independence of the Empire (Löning, Geschichte des deutschen Kirchenrechts, Strassburg, 1876, I, 243–331; Troplong, De l’Influence du christianisme sur le droit civil des Romains, Paris, 1842, new ed., 1902).

The authority of the bishop was even greater after the barbarian invasions; among the Germanic peoples he soon became an influential and powerful personage. He inspired confidence and commanded respect. He was beloved, for he protected the young and the weak, he was the friend of the poor, was accustomed to intercede on behalf of the victims of injustice, and especially on behalf of orphans and women. Through him, the great centres of administration, the bishop, the real master of the episcopal city. The only functionaries whose authority was comparable with that of the bishop were the dukes and counts, representatives of the king. In certain districts the pre-episcopate of the bishops was occasionally exercised within the bishopric, and in some cities the bishop became also count. In France, as a general rule, this state of affairs did not continue, but in Germany many bishops became temporal lords or princes. Finally, the bishop acquired an extensive civil jurisdiction not only over his clergy but also over the laity of his diocese (Violet, Histoire des institutions politiques de la France, Paris, 1890, I, 380–409). Such an exalted position had its difficulties. One of the gravest was the interference of the lay authority in the election of bishops. Until the sixth century, the clergy and the people elected the bishop on condition that the election should be approved by the neighbouring bishops. Undoubtedly, the Christian emperors sometimes intervened in those elections, but outside the imperial cities only, and generally in the case of disagreement as to the proper person.

As a rule they contented themselves with exercising an influence on the electors. But from the beginning of the sixth century, this attitude was modified. In the East, the clergy and the primates, or chief citizens, nominated three candidates from whom the metropolitan chose the bishop. At a later date, the bishops of the ecclesiastical province assumed the exclusive right of nominating the candidates. In the West, the kings intervened in these elections, notably in Spain and Gaul, and sometimes assumed the right of direct nomination (Funk, ‘Die Bischofswahl im christlichen Altertum und im Anfang des Mittelalters’, in ‘Berliner Geschichts-Untersuchungen’, Paderborn, 1897, I, 23–39; Imbert de la Tour, ‘Les élections épiscopales dans l’ancienne France’, Paris, 1890). This interference of princes and emperors lasted until the quarrel about investitures, which was especially violent in Germany where from the ninth to the eleventh centuries abbots and bishops had become real temporal princes. (See INVESTITURE.) The Second Lateran Council (1139) handed over to the chapter of the cathedral church the sole right of choosing the bishop. This legislation was sanctioned by the Decretals (Decretum Gratiani, P. I., Dist. lixiii, ch. xxxv; ch. iii. De causis possessionis et proprietatis, X, II, xlii; ch. liv, De electione et electi potestate, X, I, vi; Friedberg, Corpus Juris Canonici, Leipzig, 1879–81, I, 247, II, 95, 278). The bishops of the Middle Ages acquired much temporal power, but this was accompanied by a corresponding diminution of their spiritual authority. By the exercise of the prerogative of the priory the Holy See reserved to itself all the most important affairs, the so-called cause majores, and for instance the canonisation of saints (ch. i, De reliquis, X, III, xlv; Friedberg, II, 650); the permission to venerate publicly newly discovered relics, the absolution of certain grave sins, etc. Appeals to the pope against the judicial decisions of the bishops were more and more frequent. The religious orders and the chapters of cathedral and collegiate churches obtained exemption from episcopal authority. The cathedral chapter obtained a very considerable influence in the administration of the diocese. The pope reserved also to himself the nomination to many ecclesiastical benefices (C. Lux. Constitutionum apostolicae de generali beneficiorum reservatione collectio et interpretatio, Breslau, 1904). He also claimed the right to nominate the bishops, but in the German Concordat of 1801 he granted that the right of electing them, while in that of 1516 he permitted the King of France to nominate the bishops of that nation. Subsequently the Council of Trent defined the rights of the bishop and remedies the abuses which had come into existence in the administration of dioceses and the conduct of bishops. The council granted them the exclusive right of publishing indulgences; it also imposed upon them the obligation of residence in their dioceses, the duty of receiving the poor and extending charity, of conferring admission to the episcopate, of erecting seminaries, of convoking annual diocesan synods, of assisting at provincial synods, and of visiting their dioceses. It also forbade them to cumulate benefices, etc. The same council
diminished exemptions from episcopal authority, and delegated to the bishops some of the rights which in the past the Holy See had reserved to itself. Subsequent pontifical acts completed the Tridentine legislation, which is still valid. Protestantism and at a later date the French Revolution destroyed all remaining exemptions of the bishops. All rights free to consecrate themselves with greater earnestness to the duties of their spiritual ministry.

II. PRESENT LEGISLATION.—Two classes of bishops must be distinguished, not with regard to the power of order, for all bishops receive the fullness of the priesthood, but with regard to the power of jurisdiction: the diocesan bishop and the titular bishop or, as he was called before 1882, the episcopus in partibus infidelium. The former is here considered. Those belonging to the second class cannot perform any episcopal function without the authorization of the diocesan bishop; for as titular bishops they have no ordinary jurisdiction. They can, however, act as auxiliary bishops, i.e., they may be appointed by the pope to assist a diocesan bishop in the exercise of duties not deriving from the episcopal order but entailing no power of jurisdiction. (See AUXILIARY BISHOP.) Such a bishop is also called vicarius in pontificiatus. i.e., a representative in certain ceremonial acts proper to the diocesan bishop, sometimes suffragan bishop, sometimes suffragan of the province. In the proper sense of the term, however, the suffragan bishop is the diocesan bishop in his relations with the metropolitan of the ecclesiastical province to which he belongs, while the bishop who is independent of any metropolitan is called a titular bishop and is a suffragan of the province. The titular bishop may also be coadjutor bishop when he is appointed to assist an ordinary bishop in the administration of the diocese. Sometimes he is incorrectly called auxiliary bishop. He possesses some powers of jurisdiction determined by the letter of the apostolic constitutions. Often also, in missionary countries, the coadjutor bishop is named cum jure successioni, i.e., with the right of succession; on the death of the diocesan bishop he enters on the ordinary administration of the diocese (Taunton, The Law of the Church, London, 1906, 55, 204, 617).

The Council of Trent determined the conditions to be fulfilled by candidates for the episcopate, of which the following are the principal: birth in lawful wedlock, free from any defect in mind, purity of personal morals, and good reputation. The candidate must also be fully thirty years of age and have been not less than six months in Holy orders. He ought also to have the theological degree of Doctor at least and a licentiate in theology or canon law or else have the testimony of a public academy or seat of learning (or, if he be a religious, of the highest authority of his order) that he is fit to teach others (c. vii, De electione et electo ponte, X, 1; iv, Friedberg, II, 31, Council of Trent, Sess. X, XII, De reg. ii). The Holy Office is charged with the examination of persons called to the episcopate, with the exception of the territories subject to the Congregation of the Propaganda or to the Congregation of Extraordinary Ecclesiastical Affairs, or to those countries where the same sees of bishops is governed by special laws and concordats ("Motu proprio" of Pope Pius X, 17 December, 1903; "Acta sanctorum Sedis, 1904, XXXVI, 385). We have said that the Decretals recognize the right of the chapter to elect the bishop. This right has been long withdrawn and is no longer in force. In virtue of the second rule of the Papal Chancery the choice of bishops belongs exclusively to the pope (Walter, Fontes juris ecclesiastici antiqui et hodierni, Bonn, 1801, 463). Exceptions to this rule: the bishops of Munich. In the exception of some episcopal sees, in Bavaria, in Spain, in Portugal and in Peru, the Government presents to the sovereign pontiff the candidates for the episcopate. It was so in France, and in several South American Republics before the rupture or denunciation of the concordats between these states and the Apostolic See. By the cession of these concordats several states of the Bishopric were reduced to the status of a territorial prelacy, the pontifical nomination of bishops; this does not, however, prevent the Government in several South American Republics from recommending candidates to the sovereign pontiff. The cathedral chapter is authorized to elect the bishop in several dioceses, but Austria, Prussia, and in some States of Germany, notably in the ecclesiastical province of the Upper Rhine. The action of the electors, however, is not entirely free. For example, they may not choose persons distant to the Government (Letter of the Cardinal Secretary of State to the Chapters of Germany, 20 July 1900; Canoniste Contemporain, 1901, XXIV, 727).

Elsewhere the pope himself nominates bishops, but in Italy the Government insists that they obtain the royal exequatur before taking possession of the see. The vacant episcopal order is generally not filled if the pope permits the "recommendation" of the candidate, but this does not rule out the sovereign pontiff, who has the power to choose the new bishop from persons not included in the list of recommended candidates. In the provinces of France, the cathedral select by a majority of votes, at three successive ballots, three candidates for the vacant episcopal see. Their names, arranged in alphabetical order, are transmitted to the Propaganda and to the archbishop of the province, or to the bishop of the suffragan of the province, if the question is one of the election of an archbishop. The bishops of the province discuss the merits of the candidates and transmit their observations to the Propaganda. Since 1874 the bishops are empowered, if they so desire, to propose other names for the choice of the Holy See, and a decision of the Propaganda (25 April, 3 May, 1904) confirms this practice (Instruction of Propaganda, 21 April, 1822: "Collectaneae S. C. de Propaganda Fide", Rome, 1893, no. 42; Taunton, 87-88). Analogous enactments are in force in Ireland. The canons of the cathedral and all the parish priests free from censure and in actual and peaceful possession of their parish or united parishes, choose in a single ballot three ecclesiastics. The names of the three best chosen are then transmitted to the Holy See. If a second number of votes is announced and forwarded to the Propaganda and to the archbishop of the province. The archbishop and the bishops of the province give the Holy See their opinion on the candidates. If they judge that none of the candidates is capable of fulfilling the episcopal functions, a new recommendation is to be made. If it is a question of the nomination of a coadjutor bishop with the right of succession the same rules are followed, but the presidency of the electoral meeting, instead of being given to the metropolitan, his delegate, or the senior bishop of the province, belongs to the bishop who asks for the coadjutor (Instruction of Propaganda, 17 September, 1829, and 25 April, 1835; "Collectaneae", nos. 40 and 41).

In Scotland, when there is a vacancy other than that of the bishop of the see, the archbishop of Edinburgh and Glasgow choose by a triple ballot the three candidates. The names of these latter are communicated to the Holy See together with the votes which have been obtained at the election. At the time a new bishop has obtained a majority of the vote of the diocese assembled under the presidency of the
archbishop or the senior bishop of the province, and choose three candidates, the first *diligensius*, the second *diligens*, and the third *diligens*. Their names are sent to the Propaganda and to the council of the province; the archbishop and the bishops of the province examine the merits of the candidates proposed by the clergy and in their turn, by a secret ballot propose three candidates. If they choose other candidates than those designated by the pope, this indicates their reasons to the Propaganda. In the case of the nomination of a coadjutor with right of succession, the meeting of the clergy is presided over by the bishop who demands a coadjutor. If it concerns the cardinals, the Synod of Bishops of the diocese; if all the dioceses from whose territory the new diocese was formed and all the irremovable rectors of the new diocese choose the three candidates of the clergy. Finally, if it is a matter of replacing an archbishop or of giving him a coadjutor with right of succession, all the metropolitans of the United States are consulted by the Propaganda (Decree of Propaganda, 21 January, 1891, modified by that of 21 September, 1888; Collectanea, no. 43). In Canada by a decree of 2 December, 1862, the Church still follows the rules laid down by the Synod of Bishops for the United States (Collectanea, no. 43; Collectio Lacionis, Freiburg, 1875, III, 684, 685). Every three years the bishops must communicate to the Propaganda and to the metropolitan the names of the clergy who thereupon are elected as priests. In addition, each bishop must designate in a secret letter three ecclesiastics whom he believes worthy to succeed him. When a vacancy occurs, all the bishops of the province indicate to the archbishop or to the senior bishop the priests whom they consider worthy of the episcopal office. The bishops then discuss in a meeting the merits of each of the priests recommended, and proceed to the nomination of the candidates by secret vote. The acts of the assembly are transmitted to the Propaganda. In Australia, a method similar to that in use in the United States is followed. Two differences, however, are to be noted: first, the bishops still signify, every three years, to the metropolitan and to the Propaganda the names of the priests whom they consider worthy of the episcopal office. Secondly, when the name of a coadjutor bishop is in question, the presidency over the assembly of consultors and irremovable rectors belongs not to the bishop who demands a coadjutor, but to the metropolitan or to the bishop dependent, if the bishop is of the Church of Rome. The decree of 19 May, 1866, modified by the decree of 1 May, 1887; Collectanea, no. 44).

Whatever the manner of his nomination, the bishop possesses no power until his nomination has been confirmed by the Holy See, whether in consistory or by pontifical letters. Moreover, he is forbidden to enter on the administration of his diocese before taking possession of his see by communicating to the cathedral chapter the letters Apostolic of his nomination (Const. *Apostolicae Sedis*, 12 October, 1870, V. I, p. 106). In the meantime, even before his consecration, the new bishop is entitled in his diocese to all rights of jurisdiction. He is required to make the prescribed profession of faith in the first provincial synod held after his elevation (Council of Trent, SESSION XXII, DE FIDE, CH. II). Before consecration, the bishop must take an oath of fidelity to the Holy See. (For the formula of this oath for the bishops of the United States of America see *Acta et Decreta conc., Plen. Bact., III*, Baltimore, 1896, Appendix, for the dioceses of the United States. *Acta Sanctorum*, 18 April, 1897; *Acta Sanctae Sedis*, 1896-97, XXIX, 659). Episcopal consecration has the effect of giving to the bishop the full powers of Order. (See Holy Orders.)

III. RIGHTS AND POWERS OF THE BISHOP.—The bishop possesses, as already stated, the powers of order and jurisdiction. The power of order comes to him through episcopal consecration, but the exercise of this right depends on his powers of jurisdiction. The sacerdotal ordination performed by the pope is necessary but not sufficient for a bishop to be valid but would be illicit. However, the bishops of South America have the privilege of being consecrated by one bishop assisted by two or three priests, if it prove difficult for them to obtain three bishops. (Council of Trent, Sess. XXII, De Ord., Ch. 4). The ordination by *Papae* of the diocese of Rome to 18 April, 1897; *Acta Sanctorum*, 1896-97, XXIX, 659). Episcopal consecration has the effect of giving to the bishop the full powers of Order. (See Holy Orders.)

The bishop possesses the power to ordain a deacon, presbyter, and bishop. The bishop's power to ordain a deacon. The bishop is the only ordinary minister of the Sacrament of Confirmation (Council of Trent, Sess. XXIII, can. vii). Ecclesiastical law has reserved certain benefices and consecrations to him; e.g., those which are performed with holy oil. The following functions are reserved to the bishop: the dedication of a church, the consecration of an altar, of chalices and patens, and generally of the articles serving for the celebration of Holy Mass, the reconciliation of a desecrated church, the benediction of bells, the benediction of an abbot, the benediction of the holy oils, etc. A bishop is forbidden to exercise the *Pontificatus*, i.e., to perform episcopal functions in another diocese without the consent of the ordinary, i.e., the proper bishop (Council of Trent, Sess. VI, De ref., ch. vi).

Besides the power of order, bishops possess that of jurisdiction; they have the right to prescribe for the faithful the rules which the latter must follow in order to obtain eternal salvation. The power of jurisdiction includes that of the bishop to establish in the Church whose mission it is to direct the faithful in the way of salvation. The bishops have then in their dioceses an ordinary jurisdiction, limited, however, by the rights that the pope can reserve to himself in virtue of his primacy. But this jurisdiction is independent of the will and consent of the faithful, and even of the clergy. In certain important matters, however, the bishop must at times seek the advice, at other times the consent, of the cathedral chapter. In certain countries, where chapter members are not established, the bishop is bound to consult in some specified cases the *consultores clericorum* or *diocesan consultors* (Third Council of Baltimore, nos. 17-22, 33, 179). On the other hand, certain classes of persons, especially the regulars properly so called, are exempt from episcopal authority, and certain matters are removed from the bishop's jurisdiction. Moreover, he has no power against the will of a superior authority, i.e., the pope, the councils, whether general, plenary, or provincial. The bishop possesses the right to exercise through "delegated" jurisdiction which is accorded to him either by law, whether written or established by custom, or by grant of the sovereign pontiff through the Roman Congregations. The last named jurisdiction he exercises in the name of the Apostolic
BISHOP

See (see below). Certain writers attribute to the bishop a third kind of jurisdiction which they call "quasi-ordinary" jurisdiction, but there are wide discrepancies as to the definition of this kind of jurisdiction. Several writers (such as Wernz, II, 10; Bargilliat, "Præfect. jur. can.", Paris, 1900, I, 164; and among the older canonists, Bouix, "De principi. juris canonici", Paris, 1852, 530) think that this distinction is useless, the jurisdiction known as quasi-ordinary is nothing else than an ordinary or delegated jurisdiction granted by written or by custom.

It is a controverted question whether the bishops hold their jurisdiction directly from God or from the sovereign pontiff. The latter opinion, however, is still not admitted by most of the Council of Baltimore, the present day (1841). The bishops are more in conformity with the monarchical constitution of the Church, which seems to demand that there should be no power in the Church not emanating immediately from the sovereign pontiff. Authors who hold the contrary opinion say that it is due to the episcopal consecration that bishops receive from God their power of jurisdiction. But habitually before their consecration the bishops have already all powers of jurisdiction over their dioceses (Bargilliat, I, 44, n. 5). Another question also discussed with respect to the power of the pope, or teaching authority, is a consequence of the power of ordination or of jurisdiction (Sägmuller, Lehrbuch des katholischen Kirchenrechts, Freiburg, 1900-04, 24-25). Whatever the conclusion, teaching authority will here be ranked among the powers of jurisdiction. The authority of the bishop and his governing authority (potestas regiminis) will now be successively considered, the latter comprising the legislative, dispensative, judicial, coercive, and administrative powers.

A. Teaching Authority.—Bishops have the right to teach Christian doctrine (Matt., xxviii, 19; Council of Trent, Sess. XXIV, De ref., ch. iv; Encyclical of Leo XIII, "Sapientiae Christianae", 10 January, 1890; "Acta Sanctorum", 1890, XXII, 386). At the same time, the obligation of instructing the faithful either personally or, if hindered, through other ecclesiastics is incumbent upon them. They are bound also to see that in the parish churches the parish priests fulfill the requirements of preaching and teaching which the Council of Trent imposes upon them (Sess. V, De ref., ch. ii; Sess. XXV, De ref., ch. iv). The bishop must also superintend the teaching of Christian doctrine in the seminaries, as well as in secondary and primary schools (Conc. Balt. III, nos. 194 sqq.; Const. "Romanos pontificem", 8 August, 1862, n. 12). Appropriate care is necessary of this right of superintendence, and because of the intimate relations which exist between instruction and education, the bishop is empowered to forbid attendance at uncanonical schools, at least in those districts where Catholic schools exist, and where attendance at the former schools is dangerous. In virtue of the same right he will very often be bound to erect Catholic schools or favour their establishment (Third Council of Baltimore, nos. 194-213). No one is allowed to preach Christian doctrine without the consent of the bishop, or at least without his knowledge if it is a question of exempt religious preaching in their own churches (Council of Trent, Sess. V, De ref., ch. ii; Sess. XXIV, De ref., ch. iv). The bishop has power to supervise writings published or read in his diocese; works regarding the sacred sciences are subject to his approbation; he may forbid the reading of dangerous books and newspapers. He exercises a special control over the publications of the secular clergy, who are bound to consult him before undertaking the direction of newspapers or of publishers. In matters of discipline of the clergy (Council of Leo XIII, "Officiorum et muneron", 25 January, 1897; Vermeersch, "De prohibitio et censuris librorum", 4th ed., Rome, 1906), he has the right of special supervision over the manuals used in educational establishments, and as far as possible he will encourage the publication of good books and oppose the others. His power is also one of the points of the Third Council of Baltimore (nos. 201, 220, 221, 225, 228). The bishop is the Inquisitor natus or protector of the faith for his diocese. He has not, it is true, the right to define, outside an ecumenical council, controverted questions with regard to faith and morals, but when a heated discussion arises in his diocese, he can impose silence upon the parties concerned while awaiting a decision from the Holy See. If anyone, however, denies a point of doctrine defined by the Church, even though it be an exempt religious, the bishop will have the power to condemn him (see Third Council of Baltimore, Sess. XXIV, De ref., ch. iii). He must likewise guard the faithful of his diocese against dangerous societies condemned by the Holy See (Third Council of Baltimore, nos. 224-255).

B. Governing Authority.—(1) Legislative Power.—The bishop can enact for his diocese those laws which he considers conducive to the general good. Though he is not bound to convok a synod for this purpose his legislative power is not absolute. He cannot legislate in praemunire jus commune, i.e., enact a law contrary to the general law of the Church, enacted by custom, or to the decisions of general, plenary, or provincial councils. This is on the principle that an inferior cannot act contrary to the will of his superiors (ch. ii, De electione et electi potestate", I, iii, in the interpretation of regiminis). The bishop can only enact laws justa jus commune, i.e., he can urge the observance of provisions of the common ecclesiastical law by penalizing the violation of the same (ch. ii, De constitutionibus, VI, I, ii; Friedberg, II, 987).

He can determine the common ecclesiastical law, i.e., he can permit or forbid that which the common law neither forbids nor permits with certitude, and can apply to the particular needs of his diocese the general enactments of the pontifical laws. Many writers say that the bishop has also the power to enact laws prater jus commune, i.e., to regulate those matters concerning which the common ecclesiastical law is silent, or at least particular points unforeseen by the common law. In any case, if the bishop wishes to add to the enactments of the common law (and the same principle is valid when it is a question of applying to the needs of his own diocese a general law of the Church), he must take care to make no enactments on matters which the common law, in the intention of the supreme legislator, has completely regulated. If the bishop, however, acts within his common jurisdiction, he can act in the interest of the Church and the common law. Thus, e.g., the bishop cannot introduce new irregularities. In his diocesan legislation the bishop must not go beyond the purpose intended by the common ecclesiastical law. Thus, the latter forbids the clergy to take part in games of chance (ludi aleatorii), the aim of the law being to condemn the love of lucre and to avoid scandal; at the same time the bishop cannot forbid in private houses other games, which are not games of chance. On the other hand, if it be a matter concerning which the common law is silent, the bishop may take all necessary measures to prevent and put an end to abuses and to maintain ecclesiastical discipline. He must abstain, however, from imposing on his clergy extraordinary charges and obligations, and from unusual innovations. The legislative power of the bishop prater jus commune, is, therefore, far from being absolute (Chayea-Bouuaert, De canonicae cleri secularis obedientiat, Louvain, 1904, 69-77). Canonical writers discuss the right of the bishop to abrogate a local custom contrary to the common ecclesiastical law. He probably has not the right, provided that the custom be juridical, i.e., a reasonable one and legitimately prescribed. As this custom obtains only because of pontifical con-
sent, it does not belong to the bishop to act contrary to the will of the pope. The power of granting dispensations is correlative to the right to grant them. The bishop may, therefore, dispense with regard to all diocesan laws. He may also dispense, in particular cases only, from the laws of provincial and plenary synod; any dispensation from these laws would be next to impossible, if it were not necessary on all such occasions to convok a fresh provincial or plenary synod. The bishop, however, cannot dispense from enactments that relate directly to himself, and impose obligations upon him, or from enactments that accord rights to a third party. The bishop cannot dispense from laws made by the sovereign chief. To this there are, however, some exceptions. In certain matters, the written law or custom has granted this right to the bishop. He may also dispense from such laws in virtue of an expressly delegated power, or even sometimes in virtue of the consent, presumed or tacit, of the sovereign pontiff. These cases in reality are determined by custom. Canonical writers also admit that a bishop may grant a dispensation, when there is a doubt whether a dispensation is required, and he will require a consultum. The bishop may also dispense whether any dispensation at all is requisite (Bargili-1, I, 488-491).

(2) Judicial Power.—This power is exercised in two ways: without legal apparatus (extra judicium) or with legal apparatus (judicium). If the bishop is judge in the first instance in all trials, civil and criminal, that pertain to the ecclesiastical tribunal, unless the persons be exempt from his authority, or the matters reserved for other judges; such, e., are the process of canonization reserved to the pope or the misdemeanours of a vicar-general, which fall under the cognizance of the archbishop. (Ch. vii, De officio judicis ordinarii, VI, I, xvi; Friedberg, II, 988; Council of Trent, Session XXIX, De ref., ch. xx.) In ecclesiastical trials he must conform to the general or special provisions of the law. (For matrimonial trials see “Instructio de judiciis ecclesiasticis circa causas matrimoniales” in “Acta et decreta Concilii Plenarii Baltimorensis III”, Appendix, 262; for trials of ecclesiastics see the Instruction of the Propaganda, “Cum Magnopere”, which reproduces substantially the Instruction of the Congregation of Bishops and Regulars of 11 June, 1880, op. cit., 287; see also S. Smith, “New procedure in criminal and disciplinary causes of ecclesiastics”, 303, 1919). The ecclesiastical judicial power which he exercises extra judicium both in foro externo (publicly) and in foro interno (in conscience). He has the power to absolve his subjects from all sins and censures not reserved to the Holy See. Moreover, the absolution from a censure inflicted by an ecclesiastical judge is always reserved to the latter or to his superiors (Bull, “Sacramentum Penitentiae”, 1 June, 1741 in “Benedicti XTV, Bul- latarium Venetiae, 1775, I, 22; Const. “Apostolice Sedis” I, Collectanea S. C. P., 1002). On the other hand, the bishop may reserve to himself absolution from certain sins (Council of Trent, Session XIV, “De postimn.”; ch. vii; Third Plenary Council of Baltimore, nos. 124, 127).

(3) Coercive Power.—The right to punish is a necessary correlative of the right to assure. Formerly the bishop could and did inflict even corporal punishments and fines. These are no longer customary, even for ecclesiastics. The usual penalties for the laity are censures; for ecclesiastics, religious exercises, confinement for a time in a monastery (This is the Council of the Apostolic See, 592), degradation to an office of less importance (privato officiis ecclesiasticis), and censures, especially suspension. The bishop may inflict suspension ex informati conscienti, i.e. on his personal responsibility, and without observing any legal formality, but in cases foreseen by the law (Instruction of Propaganda, 20 October, 1884; Conc. Balt. III, Appendix, 298). If the coercive power of the bishop belongs also to the right of issuing certain commands (praecepta), i.e. of imposing on a particular ecclesiastical special obligations sanctioned by certain penalties (Constitution, “Cum Magnopere” nos. 4 and 8). He has also the lawful powers to remove the bishop, and to inflict on him. Bishops can also grant indulgences: cardinals 200, archbishops 100, and bishops, 50 days’ indulgence (Decree of Congregation of Indulgences, 28 Au gust, 1903; Acta Sanctae Sedis, XXXVI, 318).

(4) Administrative Power.—The matters to which the administrative powers of the bishop ordinaries can only be briefly indicated here: (a) The foremost is the supreme direction of the clergy. At the present day, generally speaking, it might be said that the bishop has the right to retain in his diocese a priest to whom he has entrusted ecclesiastical functions and given the means of subsistence (Claeys-Bouausert, 200-244). In case of necessity or great utility, e.g. given a scarcity of priests, the bishop may compel an ecclesiastical to accept ecclesiastical functions, and if he will require a pontifical indulgence to be granted him the curia anumurum, or cure of souls. Ecclesiastics ordained titulus missionis (see HOLY ORDERS, MISSIONS) take upon themselves special obligations in this matter. (See Instruction of Propaganda, 20 August, 1897, and this bishop’s Decree, Conc. Plen. Balt. III, Appendix, 204-211; decree “De seminariomum alumniis” 22 December, 1905; “Acta Sanctae Sedis”, 1910, XXXVIII, 407.) The bishop may also nominate to the benefices and ecclesiastical functions of his own diocese. Certain nominations, however, are reserved to the Holy See, and in several countries the right of patronage still exists. (b) The bishop, moreover, intervenes in the administration of ecclesiastical property. No alienation whatever of ecclesiastical goods is possible without his consent, and he exercises supreme supervision over their administration. (c) He has a special right of intervention in all matters relating to Divine worship and to the sacraments; he authorizes and supervises the printing of liturgical books, regulates public worship, processions, exposition of the Blessed Sacrament, celebration of the Holy Mass, celebration of Mass twice on the same day by the same priest (see BINATION), and exorcisms; his consent is required for the erection of churches and oratories; he, on the death of the bishop, nomination of the relics of saints and of those who have been beatified; he exercises supervision over statues and images exposed for the veneration of the faithful; he publishes indulgences, etc. But in all these matters his power is not unlimited; he must conform to the enactments of the canon law.

Bishops have also a “delegated jurisdiction”, which they exercise in the name of the Holy See; this power is granted to them a jure or ab homine. Ecclesiastical law frequently accords to bishops delegated powers; but it would be wrong to say, for instance, that every power of dispensation granted by a general law of the Church is a delegated one. Such power is perhaps quite as often an ordinary power. But when the law accords a power of jurisdic tion to the bishop, when the bishop acts, “in actu positus, it is a delegated power that he receives. (See, for example, Council of Trent, sess. V, De ref., ch. i, sess. VI, De ref., ch. iii; sess. VII, De ref., ch. vi, viii, xiv, etc.) Writers do not agree as to the nature of the power accorded to the bishop also as delegate. Some hold that it is a power of jurisdic tion delegatus. Some maintain that in this case the bishop has at the same time both ordinary and delegated power, but only relative to such persons as are subject to his jurisdiction (Reifenstuel, Jus canonicum universalis,Paris,1904, I, 8, xix, 37); others contend
that in this case the bishop has ordinary jurisdiction with regard to his subjects, and only a delegated one with regard to those who are exempt (Rheims, 1855, I, 178; Scherer, Handbuch des Kirchenrechtes, Graz, 1886, I, 421, note 36); others again maintain that the bishop has the same time both an ordinary and a delegated power over his subjects, and a delegated power over those who are exempt (Werm's II, 516); finally, others are in this formula only a means of removing any obstacles which might prevent the bishop from using the power accorded to him (Santi, Prelect. jur. can., New York, 1898, I, 299). The delegated powers ab homine are at the present of the faculties do not forbid it (Holy Office, 16 December, 1898; Acta Sanctae Sedis, 1898-99, XXXII, 627, 702; 1898-99, XXXXI, 120; 1900-01, XXXIII, 225). As a general rule the bishop can subdelegate these powers, provided that the faculties do not forbid it (Holy Office, 18 December, 1898; Acta Sanctae Sedis, 1898-99, XXXXI, 635). For further information see Putzer-Konings, "Commentarium in facultates apostolicas" (5th ed., New York, 1898). On the other hand, the bishop can always ask the Holy See for such delegations of powers as are necessary in the administration of his diocese. The bishop is also the ordinary and habitual executor of the dispensations which the Holy See grants in foro externo, i.e. for public use or application.

IV. Obligations of the Bishop.—In describing the rights of bishops we have already in great measure indicated what their obligations are. All their efforts must aim at preserving the true faith and a high moral tone among the people; they attain this end by good example, by preaching, by daily solicitude for the good administration of the diocese, and by prayer. Bishops, in effect, are bound by the Divine law to implore the help of God for the faithful committed to their care. Canon law has determined the obligations of the bishop and the obligations of the hierarchy in the celebration of Mass for the faithful of their dioceses (missa pro gregi) every Sunday, on the feast days of obligation and on the abrogated feast days (Const. Leo XIII “In supremum”, 16 June, 1882; “Collectaneae, S. C. P.”, no. 112). The bishop is bound to take special care of the education of youth and of the training of his clergy; he must exercise continual vigilance over the latter and assist them with his counsels. The Church has imposed as special obligations upon bishops the canonical visitation of the dioceses and the holding of an annual diocesan synod. The bishop is bound to visit each year the greater part of his diocese, either personally or, if prevented, through his delegates. This visit will permit him to administer the Sacrament of Confirmation (Council of Trent, Sect. XXIV, De ref., ch. iii). The Third Plenary Council of Baltimore grants the bishop three years for making this visitation (Acta et decreta, no. 14). The Council of Trent ordered that an annual diocesan synod should be held in every diocese (De la Sacrae Confirmationis, 168). In the synod that is present, the Holy See no longer urges the strict observance of this legislation (Santi, Prelect. Jur. can., I, 360). The Third Council of Baltimore decreed that the bishop should take counsel with the diocesan consultants whenever he wished to convocate a synod (Acta et decreta, no. 20). It is then unnecessary for the synod to assemble every year. How- ever, the bishops of the United States have been of opinion that these synods should be rather frequent and dispense the bishop from the observation of the formalities difficult to fulfill, e.g. the convoaking of all ecclesiastics who ought to be present at the synod (Letter of Propaganda to the Bishop of Milwaukee, July 26, 1883, De la Sacrae Confirmationis, S. C. P., no. 117). It is evident, finally, that the bishop cannot fulfill the duties of his office unless he observes the law of residence. The bishop is obliged to reside in his diocese and it is proper that he should be in the condition of his diocese, which he cannot be if he is not resident. He cannot be absent from his diocese for more than three months, except for grave reason approved of by the Holy See (Council of Trent, Sess. VI, De ref., ch. i; Sess. XXIII, De ref., ch. i; Benedict XIV, “Ad universae christiani”, 3 September, 1746; Letters of Propaganda, 24 April and 24 August, 1861; “Collectaneae, S. C. P.”, nos. 103, 105).

The bishop has also obligations regarding the Holy See. Throughout his entire administration he must conform to the general legislation of the Church and to the special legislation of this See. The special obligations are incumbent upon him: he must pay the Visitation ad limina Apostolorum, and present the Relatio de statu dioecesis, i.e. he must visit the shrines of St. Peter and St. Paul at Rome and present a report on the condition of his diocese to the Holy See. The bishop must visit the Holy See at least every three years, and if he resides in certain dioceses, every year, e.g. the dioceses of Paschal II (1099-1118), only metropolitans were bound to pay this visit. The Decretals imposed this obligation upon bishops whose consecration the pope reserved to himself (C. iv, “De electione et electo episcopo”, X, 1, vi; “De magistratibus et obedientia”, X, 1, xxxii; c. iv, “De jurejurando”, X, II, xxiv; Friedberg, II, 49, 201, 360). It has become general since the fifteenth century, and Sixtus definitively ruled in favour of this obligation (Bull, “Romanus Pontifex”, 20 December, 1585; “Bullarum amplissima collectio”, ed. Coquelines, Rome, 1747, IV, 173). According to this Bull the bishops of Italy and the neighboring islands, of Dalmatia and Greece, must make the visit ad limina every three years; those of Germany, France, Spain, England, Portugal, Belgium, Bohemia, Hungary, Poland, and the islands of the Mediterranean Sea every four years; those of other parts of Europe, of North Africa, and the isles of the Atlantic Ocean situated to the east of the New World, every five years; those of other parts of Europe, of North Africa, and the isles of the Atlantic Ocean situated to the east of the New World, every ten years, and in Ireland, in virtue of a privilege of 10 May, 1631, are bound to pay this visit only every ten years. Even in the case of more recently erected sees the years are counted from 20 December, 1585, date of the aforesaid Bull (Instruction of Propaganda, 1 June, 1877; “Collectaneae, S. C. P.”, no. 110). The bishops must pay this visit personally and for this purpose are allowed to absent themselves from their dioceses: the bishops of Italy for four months, other bishops for seven months. The Holy See sometimes dispenses a bishop from the obligation of paying this visit personally, and permits him to send, as his delegate, a priest of his diocese, especially one of those who have been promoted to a high office (dignitates), or a priest of the diocese sojourning at Rome, or even the agent of the bishop in that city, if an ecclesiastic. While this visit, as stated above, ought to be paid the third, fifth, or tenth year, the rule suffers frequent exceptions in practice (Werm's II, 914). The Visitation Luminus includes a visit to the tombs of St. Peter and St. Paul, an audience with the Holy Father, and a written report in which the bishop ought to present to the Congregation of the Council (Congregatio specialis super statu ecclesiasticum also called Concilium) according to the formula of
BISHOP

6. The bishops held the privilege of assembling in synod and of representing their pastoral concerns to the papal authorities. This was of great importance to the church in the 16th century, when the council of Trent was established to address the issues of the Reformation. The synod of 1619, for example, was attended by bishops from all over Europe, including England, and was a significant event in the history of the church.

7. The bishopric of Rome was a powerful position, and the bishops were often involved in political affairs as well. The pontiffs, or popes, were also bishops and held the highest position in the church hierarchy. The role of the pope as the Bishop of Rome was recognized by the Council of Chalcedon in 451.

10. The bishopric of Rome was a powerful position, and the bishops were often involved in political affairs as well. The pontiffs, or popes, were also bishops and held the highest position in the church hierarchy. The role of the pope as the Bishop of Rome was recognized by the Council of Chalcedon in 451.
referred to, Rome recognized their jurisdiction. On the restoration of the hierarchy in 1850, when diocesan chapter men were erected, the "Old Chapter" did not dissolve, but continued in its name, and as the "Old Brotherhood of the Secular Clergy" it exists to-day, a lasting memorial to the work of the first vicar Apostolic. An oil painting of Bishop hangs at Archbishop's House, Westminster, London, a print of which appeared in the "Catholic Directory" for 1810. The works of Bishop are: "A Reformation of a Catholicke Deformed, in answer to W. Perkins" (1604; Part II, 1607); "Answer to Mr. Perkins's Advertisement" (1607); "Reproof of Dr. Abbott's Defence of a Catholicke Deformed" (1608); "Disproof of Dr. Abbott's Counterproofs" (1614); "De".

Bisumus, a tomb large enough to contain two bodies. The ordinary tombs (locis) in the galleries of the Roman catacombs contained one body. It sometimes happened, however, that a space large enough to contain two bodies was excavated. Such a double grave is referred to in inscriptions as locus bisumus. An inscription from the catacomb of St. Caesarius, for instance, informs us that a certain Boniface, who died at the age of twenty-three years and two months, was interred in a double grave which had been prepared for himself and for his father (Bonifacius, quia vivit annis XXXII et II (menus) es, positum in bisumum in pace, sibi et patre). A four-century inscription tells of two ladies who had purchased, for their future interment, a bisumus in a "new crypt" which contained the body of a Saint:

IN CRYP TA NOBA RETRO SAN CTUS EMERYM VIVAS BALE RRA ET SENIAE MERUM IN V BOS M AB APRONE ET A BIAORE

Like so many pious but rather superstitious persons of that age "Balerra" and "Sabina" wished to be buried in the closest proximity to a martyr, retro sanctos, a privilege which, as we learn from another inscription, "many desire but few receive" (quod multi cupiunt et rari accipunt).

Blackburne, Robert, an English Catholic who suffered imprisonment in the closing years of the seventeenth, and during the earlier half of the eighteenth, centuries, d. 1748; was a son of Richard Blackburne, of Thistleton, Lancaster. The Blackburnes were of the most ancient and respected Catholic families in that county. Robert Blackburne was arrested in 1685 on suspicion of being connected with what was known as the Lancashire Plot. He was never brought to trial, although kept in prison for fifty-three years. The case was more than once brought to the attention of Parliament, but nothing was done for his relief. He was never tried or released, and finally died in prison, as stated in his name.

THOMAS GAPPNET T TAPP.

Blackfoot, Tribe. —This form of fasting, the most rigorous in the history of church legislation, was marked by austerity regarding the quantity and quality of food permitted on fasting days as well as the time wherein such food might be legitimately taken.

In the first place more than one meal was strictly prohibited. At this meal flesh meat, eggs, butter, cheese, and milk were interdicted (Gregory I, Decretals IV, cap. vi; Trullan Synod, Canon i). Besides these restrictions abstinence from wine, especially during Lent, was enjoined (Thomasin, Traité des jeûnes de l'Eglise, II, vii). Furthermore, during Holy Week the fare consisted of bread, salt, herbs, and water (Laymann, Theologia Moralis, Tr. VIII; De observatione jejuniorum, 1). Finally, this meal was not allowed until sunset. St. Ambrose (De Elia et jejunio, sermon viii, in Psalm CXVIII , St. Chrysostom (Homil. iv in Genesis), St. Basil (Oratio I, de jejunio) furnish unequivocal testimony concerning the three characteristics of the black fast. The keynote of their teaching is sounded by St. Bernard (Sermon. iii, No. 1, De Quadragesima), when he says "hitherto we have fasted only until noon" (3 p.m.) "whereas, now" (during Lent) "kings and princes, clergy and laity, rich and poor will fast until evening". It is quite certain that the days of Lent (Muller, Theologia Moralis, II, Lib. II, Tr. ii, § 165) as well as those preceding ordination were marked by the black fast. This regime continued until the tenth century when the custom of taking the only meal of the day at three o'clock was introduced (Thomasin, loc. cit.). In the fourteenth century the hour of taking this meal was changed to noon-day (Muller, loc. cit.). Shortly afterwards the practice of taking a collation in the evening began to gain ground (Thomasin, op. cit., II, xi). Finally, the custom of taking a crust of bread and some coffee in the morning was introduced in the early part of the nineteenth century. During the past fifty years, owing to ever changing circumstances of time and place, the Church has gradually relaxed the severity of penitential requirements, so that now little more than a vestige of former rigour obtains.

J. D. O'NEILL.

Blackfoot Indians, an important tribe of the Northern Plains, constituting the westernmost extension of the great Algonquin stock. Instead of being a compact people with a head chief and central government, they are properly a confederacy of three sub-tribes speaking the same language, namely: Slisika or Blackfoot proper; Kaina (Keena), or Blood; Pikiun, or Piegan, each of which sub-tribe is again subdivided into bands, to the number of some fifty in all. In close alliance with them are the Atsina, or Grosventres, a branch of the more southern Arapahoe, and the Sarsi, a detached band of the Beaver Indians farther to the north. As is usually the case with Indian etymologies, the origin of the name is disputed. One tradition ascribes it to the blackening of their moccasins from the ashes of prairie fires on their first arrival in their present country. It may have come, however, from the former wearing of a black cap and distinguishing certain southern tribes. The name is also that of a prominent war-society among tribes of the Plains.

As indicated by linguistic affinity, the Blackfoot
are immigrants from the East. About one hundred years ago, and until gathered upon reservations, they lived in immense tepees stretching from the southern headwaters of the Missouri, in Montana, almost to the North Saskatchewan, in Canada, and from about 105° W. longitude to the base of the Rocky Mountains. They are now settled on three reservations in the Province of Alberta, Canada, and one in Montana U. S., being about equally divided between the two governments. The Assins are also now settled in Montana, while the Sessis are in Alberta.

Most of the early estimates of Blackfoot population have been now by far the best. The estimate made by Mackenzie (about the year 1790) of 2250 to 2550 warriors, or perhaps 8500 souls, is probably very near the truth for that period. In 1840, 1837, 1858, 1867, and 1869, they suffered great losses by smallpox. In 1884–86 some 600 on the Montana reservation died of starvation in consequence of a simultaneous failure of the buffalo and reduction of rations. In addition to these wholesale losses, they suffered a continual wasting from wars with the surrounding tribes—Cree, Assiniboine, Sioux, Flatheads, Kutenai, Nez Perce, etc., as well as by the smallpox. In 1870, the same number was counted as in 1861.

In their culture the Blackfeet were a typical Plains tribe, living in skin tipis, roving from place to place without permanent habitation, without pottery, basketry, or canoes, having no agriculture except for the planting of a native tobacco, and depending almost entirely upon the buffalo for subsistence. Their traditions go back a time when they had no horses, hunting the buffalo on foot by means of drive ways constructed of loose stones; but as early as 1800 they had many horses taken from the southern tribes, and later became noted for their great herds. They procured guns and horses about the same time, and were thus enabled to extend their incursions successfully over wide areas. While generally friendly to the Hudson's Bay Company traders, who were in the earlier period, it is not hostile towards Americans, although never regularly at war with the government. Upon ceremonial occasions each of the three principal tribes camped in a great circle, as usual among the Plains tribes; the tipis of each band occupying a definite section of the circle, with the "medicine lodge," or ceremonial sacred structure, in the centre of the circle. The assimilation that these smaller bands constituted exogamic clans seems consistent with Plains Indian custom. There was also a military society consisting of special bands or societies, formed from boys in training to the retired veterans who acted as advisers and directors of the rites. Each of these orders had its distinctive uniform and equipment, songs and dance, and took charge of some special ceremonial. Among these, one an "The Devil's Dance"—exemplifying Buchanan's views with much bitterness, and another a vigorous defense of Queen Mary, published in Paris (nominally in Edinburgh) after her death. Other works by him were a book of pious meditations in verse and verse and an ascetic commentary on the Book of Psalms.

Blais, Andrew. See Rimouski, Diocese of.

Blaise (Blasius), Saint, bishop and martyr. The ninth-century martyrologies of Europe in their lists, which are accompanied by historical notices, give on 15 February the name of St. Blasius, Bishop of Sebaste and martyr. The Greek synaxaria mention him on 14 February. In the oldest known recension of the so-called martyrlogy of St. Jerome the name of St. Blasius does not appear; it is only in the later, enlarged catalogues that he is mentioned. The historical notices concerning him in the above-mentioned martyrologies and synaxaria rest on the legendary Acts. All the statements agree that St. Blasius was Bishop of Sebaste in Armenia and most of the accounts place his martyrdom in the reign of Licinius (about 310). As these reports may rest on traditions which are bound up with the veneration of the saint in the Church liturgy, they are not to be absolutely rejected. It can perhaps be assumed that St. Blasius was a bishop and that he suffered martyrdom at the beginning of the fourth century. All the particular concerns his life and martyrtry which are purely legendary and have no claim to historical worth. There are besides various recensions of the text of the Acta. According to the legend Blasius was a physician at Sebaste before he was raised to the episcopal see. At the time of the persecution under Licinius he was taken prisoner at the command of the governor, Agrioclaus. The hunters of the governor found him in the wilderness in a cave to which he had retired and while in prison he performed wonderful cures; a boy who had broken a bone in his throat and was in danger of choking to death. After suffering various forms of torture St. Blasius was beheaded; the Acts relate also the martyrdom of seven women. The veneration of the Oriental saint was brought at an early date into Europe, as is shown by the relics in the historical martyrologies of the ninth century, and the Latin election of the legend of St. Blasius; so that Blasius became one of the most popular saints of the Middle Ages. The actual reason for the unusual veneration is not yet been found. Probably some ground was that according to the legend he was a physician and wonderful cures were ascribed to him; for this reason the faithful sought his help and intercession when ill. Numberless churches and altars were dedicated to him and many localities (Taranto, Ragusa, the Abbey of St. Blasius in the Black Forest, etc.) claimed to possess some of his relics. He was also one of the Forty-Two Holy Martyrs. In many places on the day of his feast the blessing of St. Blasius is given: two candles are consecrated, generally by the bishop or a priest in a crossed position by a priest over the heads of the faithful or the people are touched on the throat with them. In other places oil is consecrated in which the wick of a small candle is dipped and the throats of those present are touched with the wick. At the same time the following blessing is given: “Per intercessionem S. Blasii liberet te Deus a malo gutteris et a quo quis alio malo” (May God at the intercession of St. Blasius preserve you from throat troubles and all other ailments is added: “in nomine Patris et Filii et Spiritus’ and the priest makes the sign of the cross over the faithful. In the Latin Church his feast falls on 3 February, in the Oriental Churches on 11 February. He is represented holding two crossed candles in his hand (the Blessing of St. Blasius), or in a cave surrounded by wild beasts, as he was found by the hunters of the governor.

Blade, Anthony, fifth Bishop, and first Archbishop of New Orleans, La., U. S. A., b. at Surry, near Lyone, France, 11 Oct., 1792; d. at New Orleans, 20 June, 1860. He was one of the first ecclesiastical students after the restoration of the Church in France, and was ordained priest on 22 July, 1816, by Bishop Dubourg of New Orleans, in the Seminary at Lyons, during a visit of that prelate in search of help and volunteers for the American mission. He arrived in New Orleans, September, 1817, landing at Annapolis, Md., with several young seminarians, and was entertained until the end of October by Charles Carroll at Carrollton. He then went with Bishop Dubourg to New Orleans and for nearly fifteen years led the arduous life of a missionary in the wide field of the see, purely legendary and have no claim to historical worth. There are besides various recensions of the text of the Acta. According to the legend Blasius was a physician at Sebaste before he was raised to the episcopal see. At the time of the persecution under Licinius he was taken prisoner at the command of the governor, Agrioclaus. The hunters of the governor found him in the wilderness in a cave to which he had retired and while in prison he performed wonderful cures; a boy who had broken a bone in his throat and was in danger of choking to death. Blanc, Le. See Le Blanc.

Blanchard (Duchesse), Jean-Baptiste, a French Jesuit. In some cases, he is called, 1731, as Tourtevan in the department of Ardennes; d. 15 June, 1797. In 1746 he entered the Society of Jesus, and later was professor at Metz, Verdun, and Pont-l’Abbé. At the time of the suppression of the Society he changed his name of Duchesse to that of Blanchard, under which his works were published.
He left the order, however, in 1762, before it was suppressed, retired to Belgium, and for seven years remained near Namur, occupied with pedagogical questions. "Le temple des Muses fabulistes" (Liège, 1776, 2 vols.) and "L'Ecole des mourus" (Namur and Paris, 1775, 2 vols.). The latter work was first published without the author's name under the title, "Le poète des mourus, ou les maximes de la sagesse," (1771) and later was republished several times with the title "Maximes de l'honnête homme, ou le poète des mourus". Blanchard's main work was published after his death by Bruyset: "Préceptes pour l'éducation des deux sexes à l'usage des familles chrétiennes" (Lyons, 1803, 2 vols.).

Useful rules are given for the formation of the intellect, feelings, and will. Good pronunciation and reading are insisted on. Blanchard rightly rejects the principle of negative education advocated by Rousseau. It would be very harmful to wait for the time when reason is developed in order to make the child exercise it; on the contrary, it must be developed by proper exercise and under proper guidance. To start for a long journey, he says, the traveller does not wait till the sun is high in the sky, but rather profits by the first rays of an apostolic light, in order to make the child a good education.

Blanche, Gustave, Edist. See GOLF OF ST. LAWRENCE, VICARIATE APOTOLIC OF.

Blanchet, François Norbert, missionary and first Archbishop of Oregon City, U. S. A., son of Pierre Blanchet, a Canadian farmer, b. 30 September, 1795, near Saint-Pierre, Rivière du Sud, Province of Quebec; d. 18 June, 1883, at Portland, Oregon. After three years in the village school he went in 1810, with his brother Augustin Magloire, later the first Bishop of Neasqually, to the Seminary of Quebec, where he was ordained priest 18 July, 1819. He was stationed at the cathedral for a year and was then sent to Richibucto, New Brunswick, as pastor of the Micmac Indians and Acadian settlers, among whom he spent seven years of missionary apprenticeship, enduring poverty, isolation, and innumerable hardships. In 1827 he was recalled to Montreal and appointed pastor of St. Joseph de Souranges, a parish of 3,200 souls. In 1832, Blanchet attended the synod so fearlessly that the Protostanes of the place presented him with a testimonial. In 1837 he was appointed vicar-general by Archbishop Signay for the Oregon mission, a vast region or empire, as he was well aware; 3 May, 1838, accompanied by the Rev. Moderat Donders with the annual express of the Hudson's Bay Company. The journey from Lachute to Fort Vancouver a distance of about 5,000 miles, was made in canoes, by portages, in barges, on horseback, and in light boats. It took them nine days to cross the Rocky Mountains, on the summit of which, at three o'clock in the morning of 18 October Father Blanchet celebrated Mass. They arrived at Fort Vancouver on 24 November. The territory assigned to the two priests embraced about 375,000 square miles, it extended from California to Alaska and from the Rocky Mountains to the Pacific Ocean.

For four years they laboured alone, going from settlement to settlement, facing every peril of a wild country, recalling the scattered faithful to the practice of the religion and instructing the aborigines. Then two other priests from Canada, the Revs. A. Langlois and Z. Bédos, came to their assistance. In 1844 they were reinforced by the great missionary, Father De Smet, with four other Jesuit priests, three lay brothers, and six Sisters of Notre Dame de Namur. The immense territory of the Oregon mission was made an Apostolic vicariate 1 December, 1843; Father Blanchet was named its first vicar Apostolic and titular Bishop of Philadelphia. The letters from Rome arrived in August, 1844. To receive episcopal consecration he started for Canada 5 December, boarded a steamer on the Columbia River, touched at Honolulu, doubled Cape Horn, landed at Dover, England, went by rail to Liverpool, took a vessel to Boston and thence proceeded by rail to Montreal, a journey of 22,000 miles. He was consecrated by Bishop Bourget in the Cathedral of Montreal 25 July, 1845. Later he returned to Europe, visiting Rome, France, Belgium, Germany, and Austria in the interests of his diocese. He gathered together six secular priests, four Jesuit priests, three lay brothers, and seven Sisters of Notre Dame. They sailed from Feucht 22 February, 1847, and reached the Columbia River on 12 August. The bishop was translated to the See of Dras in letters of May 4, 1844, to avoid the confusion of his former title with that of Philadelphia, U. S. A. The Vicariate was erected into a province 24 July, 1846. Bishop Blanchet was made Archbishop of Oregon City, his brother Magloire became Bishop of Walla Walla, and Father DeMers Bishop of Vancouver's Island.

The archbishop was indefatigable. He summoned his first provincial council in 1848; attended the First Plenary Council of Baltimore in 1852; went in 1855 to South America and collected for two years in Chile, Peru, and Bolivia; returned to Canada in 1859 and took back to Oregon 31 priests, sisters, and servants. He attended the Second Plenary Council of Baltimore in 1866; celebrated, 19 July, 1869, the golden jubilee of his ordination, and in the following October set out for Rome to assist at the Vatican Council, where he voted for the definition of the dogmas of Papal Infallibility. He was still in the city 26 September, 1870, when the temporal power of the papacy was overthrown. When Bishop Seghers was made coadjutor in 1879 he retired to the hospital of the Sisters of Providence at Portland. He wrote the story of the Oregon mission (Historical sketches of
Catholicity in Oregon) in a series of papers published in the "Catholic Sentinel" of that city. In 1830 he resigned and was appointed titular Archbishop of Amida. He consecrated three bishops—Demers, D'Herbeors, and Seghers. He found on the Pacific coast a wilderness, spiritual as well as material; he left the island to his successors a Christian province. His name will be forever illustrous in the history of the Church in America as the first archbishop of the North-west and the Apostle of Oregon.

Blanchet, Augustin Magloire, brother of preceding, first Bishop of Walla Walla—Nicquauly, of preceding, Washington, U. S. A., b, 22 August, 1797, on his father's farm near the village of Saint-Pierre, Rivière du Sud, Canada; d. 28 February, 1857, at Fort Vancouver, Washington. After attending the village school for three years, he was sent to Quebec, with his brother François, to study for the priesthood. He was ordained 3 June, 1821. After a twelvemonth as assistant pastor at St. Gervais, he was sent as missionary to the Isles de la Madeleine, and later to the coast of Alaska. He returned, however, to the coast of Canada and the Gulf provinces. Then he was recalled to the vicariate Apostolic of Montreal and was successively pastor of four parishes, in one of which he was the successor of his elder brother. In 1846 he was appointed to the Vicariate of the Dakotas. In 1852 he was appointed Bishop of the new Diocese of Walla Walla in what is now the State of Washington. He was consecrated 27 September, 1846. In the following spring he set out overland for his distant see with one priest, Rev. J. A. B. Brouillet, and two students. At Pittsburgh he declared his intention to become a citizen of the United States. At St. Louis the party was increased by Father Richard, two deacons and Brother Blanchet, all members of the Order of Mary Immaculate. Walla Walla was reached on 5 September, 1847. The Bishop located at The Dalles and thence multiplied his apostolic labours throughout the vast territory under his care. He endured the many hardships of a pioneer country and braved all the perils of a region infested with wild beasts and still more savage men. He was full of zeal. He established missions; he built churches; he founded academies and colleges; he started schools for the Indians; he begged for priests in Canada and abroad; he obtained sisters to open hospitals and other institutions.

In 1850 the See of Walla Walla was suppressed and that of Nicquauly was erected in its stead, with headquarters at Fort Vancouver. The bishop built there a cathedral of logs, and a house for himself out of the sash timber used in its construction. In 1852 he started the Plenary Council of Baltimore, but, on account of infirmities, he was unable to go to Rome for the Vatican Council. In 1879, after thirty-two years of arduous service in Washington, he resigned his see and was named titular Bishop of Iborla. Worn out with labours, he spent his last eight years in prayer and suffering. His peaceful death was a fitting close for his life of sacrifice. He is revered as the Apostle of Washington.

Blandina, Saint, virgin and martyr.—She belongs to the band of martyrs of Lyons who, after some of their number had endured the most frightful tortures, were in 1770, at the behest of the empress of Marcus Aurelius (177) and concerning whose death we have the touching report sent by the Church of Lyons to the Churches of Asia Minor (Eusebius, Hist. ecoL, V, 2). The fanaticism of the heathen populace in Lyons had been excited against the Christians so that the latter, when they ventured to show themselves publicly, were harassed and ill-treated. When the trial took place, the tribunals were held under the chilarch, a military commander, and the duumvir, a civil magistrate, threw a number of Christians, who confessed their faith, into prison. When thelegate returned, the imprisoned believers were brought to trial. Among them was Blandina, a slave, who had been taken into custody along with her master, also a Christian. Her companions greatly feared that on account of her bodily frailty she might not remain steadfast under torture. But although the legate caused her to be tortured in a horrible manner, so that even the executioners became exhausted "as they did not know what more they could do to her", still she remained faithful and repeated to every question "I am a Christian and we commit no wrongdoing," through fear of tortures to a slave who testified against his masters that the Christians when assembled committed those scandalous acts of which they were accused by the heathen mob, and the legate desired to wring confession of this misconduct from the Christians. In his address to the legate stated that those who held to their Christian belief were to be executed and those who denied their faith were to be released; Blandina was, therefore, with a number of companions subjected to new tortures in the amphitheatre at the time of the public games. She was bound to a stake and wild beasts were set on her. They did not, however, touch her. After this for a number of days she was led into the arena to see the sufferings of her companions. Finally, as the last of the martyrs, she was scourged, placed on a red-hot grate, enclosed in a net and thrown before a wild steer who tossed her into the air with his horns, and at last killed with a dagger. Her feast is celebrated 2 June.

J. P. KIRCH.

Blane (or Blaan), Saint, Bishop and Confessor in Scotland, b. on the island of Bute, date unknown; d. 590. His feast is kept on 10 August. He was a nephew of St. Cuthnan, and was educated in Ireland under Sts. Comgall and Kenneth; he became a monk, went to Scotland, and eventually was bishop among the Picts. Several miracles were attributed to him; among them was the restoration of a dead boy to life. The Aberdeen Breivary gives these and other details of the saint's life, which are rejected, however, by the Bollandists. There can be no doubt that devotion to St. Blane was, from early times, popular in Scotland. His monastery became the site of the Cathedral of Dunblane. There was a church of St. Blane in Dumfries and another at Kilbann. The year of the saint's death is variously given as 446, 590, and 1000; 446 (Butler, Lives of the Saints) is evidently incorrect; the Bollandists, following the Pope's, "Kalender of Scottish Saints" (Paris, 1558), in Dempster, "Menologia Scotorum" (Bonn, 1622), and in the "Acta SS.", seems to have kept in by confusing St. Kenneth, whose disciple Blane was, with a Kenneth who was King of Scotland, A.D. 1000. The highest authorities say the saint died 590. The ruins of his church at Kingarth, Bute, where his remains were buried, are still standing and form an object of great interest to antiquarians; the bell of his monastery is preserved at Dunblane.

BLASPHEMY

Blarer of Warrantree. See St. Gall, Abbey of.

Blasendorf. See Fogarum, Diocese of.

Blasphemy (Gr. ἄφθαρτος, "to injure", and φήμη, "reputation") signifies etymologically gross irreverence or vilification of the person or object of citizens.

In this broad sense the term is used by Bacon when in his "Advancement of Learning" he speaks of "blasphemy against learning." St. Paul tells of being blasphemed (1 Cor., iv. 18) and the Latin Vulg. says, "the word blasphemer to designate abusive language directed either against God or against individuals (1 Cor., x. 30; Tit., iii. 2).

I. MEANING.—While etymologically blasphemy may denote the derogation of the honour due to a creature as well as of that belonging to God, in its strict acceptance it is used only in the latter sense. Hence it has been defined by Suarez as "any word of malice or reproach or contumely pronounced against God" (De Relig., tract. iii, lib. i, cap. iv, n. 1). It is to be noted that this definition is (1) that blasphemy is set down as a word, for ordinarily it is expressed in speech, though it may be committed in thought or in act. Being primarily a sin of the tongue, it will be seen to be opposed directly to the religion of God and not to the saints at large (II Kings, xxii, 21; I Par., xx, 7) or against individuals (1 Cor., x, 30; Tit., iii, 2).

THE PENALTIES ATTACHED TO BLASPHEMY.—In the Old Law the blasphemer was punished by death. So God appointed on the occasion of the blasphemy of Saulmish's son: "The man that curseth His God, shall bear his sin: And he that blasphemeth the name of the Lord, dying let him die: all the multitude shall stone him, whether he be a native or a stranger. He that blasphemeth the name of the Lord, dying let him die", (Lev., xxiv, 15-16). Upon hearing blasphemous words the authors of the Law were wont to demand of the offender to rend their clothes (IV Kings, xviii, 37, xix, 1; Matt., xxvi, 65).

Among the Athenians blasphemy was actionable and according to Plutarch, Alcibiades was made to suffer the confiscation of his goods for ridiculing the rites of Ceres and Proserpine (Plutarch, Alcibiades). Among the ancient Romans blasphemy was punishable, though not by death (Manutius, "De Legibus Romanis", quoted by Disney, "A View of Ancient Laws against Immorality and Profaneness", p. 220).

In the time of Justinian the courts of the empire gave judgments against this sin. In a constitution of A. D. 538 the people are called upon to abstain from blasphemy, which provokes God to anger. The prefect of the city is commanded to apprehend all such as shall persist in their offence after this admonition and put them to death, that so the city and the empire may not suffer because of their impiety (Auth. Col., Tit, vii, 7 November). Among the Visigoths, anyone blaspheming the name of Christ or expressing contempt of the Trinity had his head shorn, was subjected to a hundred stripes, and suffered perpetual imprisonment in chains (I. Wisigoth., lib. XII, tit. iii, l. 2).

Among the Franks, according to a law enacted at the Diet of Aachen, A. D. 818, this sin was a capital offence. In the Gospels blasphemy is described as one of "the things that defile a man" (Matt., xv, 20; Mark, vii, 21-23).

Medieval canon law punished the blasphemer most severely. By a decree of the thirteenth century one convicted of blasphemy was compelled to stand at the door of the church for seven Sundays attired in the Mass for seven Sundays, and on the last of these days, divested of cloak and shoes, he was to appear with a rope about his neck. Obligations of fasting and almsgiving were likewise imposed under heaviest penalties (Decret., lib. V, tit. xxv, 2). The discipline was inscribed upon Pius V in his Constitution "Cum primum apostolatus" (1610). A-
acording to the law herein laid down, the layman found guilty of blasphemy was fined. The fine was increased upon his second offence, and upon his third he was sentenced to death. If unable to pay, he was put to death. If unable to pay, the first conviction condemned to stand before the door of the church, his hands tied behind him. For the second offence he was flogged, and for the third his tongue was pierced, and he was sentenced to the galleys. The blasphemous cleric, if possessed of a benefice, lost upon his first conviction a year's income; upon his second he was deprived of his benefice and exiled. If enjoying no benefice, he was first subjected to a fine and bodily punishment; on repeating the offence he was imprisoned, and still persisting, he was excommunicated and condemned to the galleys.

**BLASPHEMY IN CIVIL LAW.**—Blasphemy cognizable by common law is defined by Blackstone to be "denying the being or providence of God, contumelious reproaches of our Saviour Jesus Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule". In the United States we find many penal statutes against blasphemy, which have been declared unconstitutional as not subversive of the freedom of speech or liberty of the press (Am. and Eng. Ency. Law, vol. IV, 382). In the American ditch, however, it is said that "Christians are not being recognized by law therefore blasphemy against God and profane ridicule of Christ or the Holy Scriptures are punishable at common law". Accordingly where one uttered the following words "Jesus Christ was a bastard and his mother was a whore" it was held to be a public offence, punishable by the common law. The defendant found guilty by the common plea of the blasphemy above quoted was sentenced to imprisonment for three months and to pay a fine of five hundred dollars.

**Blastares, Matthew,** a monk of the Order of St. Basil, living in the fourteenth century, who supplied aide, to the study of theology and canon public law. Through the labors of John the Scholastic, Photius, Zonaras, Balsamon, and others the Greek Church possessed some collections of laws and commentaries. There was, however, need of a more comprehensive work and one better adapted to the needs of the time. It appeared about 1335, in the "Syntagma" of Blastares, a collection of ecclesiastical constitutions in alphabetical order, written in Greek. The full title might be translated into Latin thus: "Syntagma alphabeticum rerum omnium, quae in sacris divinisque canonibus comprehenduntur, elaboratum pariter et compositum per minimum ex hieromonachis Matthaeum Blastarem". The collection, which contains a long preface, is arranged alphabetically by means of the initial letters of the word, which indicate the subject-matter of each chapter; several chapters are thus found under one letter. For example under the Greek Π: Thoughts concerning dependence in reference to matrimony, concerning marriages permitted and prohibited. Under Δ: Thoughts on last testaments, deacons, justices, ecclesiastical trials, etc.

In each chapter the author first gives the law of the Church on the subject and then, if there be any in the civil law also, setting forth the sense other than the exact wording of either, and containing himself with noting where the constitutions referred to may be found. The "Syntagma", commonly called 'Nomocanon or, by metaphor, τυχόνωσιν (run-ders), soon became extensively employed, and is still used in the Greek Church, as it is evidenced by the fact that an edition of the work in six volumes was published in Athens from 1848 to 1866, under the auspices of the Holy Synod. This edition bears the title: Συντάγμα τῶν τε Θείων καὶ λατρευτῶν κανώνων. This work is also found in the Synodicon of Beveridge (P. G. CXLIV, CXLV) published at Oxford in 1672. There are also attributed to Blastares a tract on the subject of the canon of a church established by Goar in Greek and Latin, one on the offices of the Church of Constantinople, the other on the court. His "Syntagma", like other medieval law-books of the Greeks, breathes a spirit inimical to the Roman Church.

A. B. MEEHAN.

**Blathmac, Saint,** a distinguished Irish monk, b. in Ireland about 750. He suffered martyrdom in Iona, about 835. He is fortunate in having had his biography written by Strabo, Benedictine Abbot of Rotcheman (824-840) and this biog¬

Myrdom has been handed down through the ages. Strabo's life of this saint is in Latin hexameters, and is to be found in Maseoinga's "Florilegium Insulae Sanctorum" (Paris, 1824). A scion of a noble family, publicly showed a religious vocation, was at an early age enrolled in the noble army of martyrs, a wish which was afterwards fulfilled. His name was latinized "Florentius" (from the fact of the Irish word Blath meaning a flower), and as a religious, he was most exemplary, finally becoming abbot. In 824 he joined the community of Columban monks at Iona, and not long afterwards the Danes ravaged the island. One morning, as he was celebrating Mass, the Scandi¬vian rovers entered the monastic church and put the monks to death. St. Blathmac refused to point out the shrine of St. Columba, which was really the object of plunder, and he was hacked to pieces on the altar step. His body was afterwards reverently interred where the scene of martyrdom took place, and numerous miracles are claimed to have been wrought through his intercession. The date of his death is given by the "Annals of Ulster" as 825, although Mabillon places it thirty-six years earlier. generous to the poor. He was buried in St. Augus-
tine's Cemetery, S. Boston.

FRENCH J. BLINKENSPER was b. in Dublin, 19 April, 1818; d. in Philadelphia, Pennsylvania, 5 November, 1890. He studied at Georgetown College, Washing-
ton, D. C., entered the Society of Jesus in 1834, and
was ordained by Archbishop Echeleston 26 July, 1846. He was President of Holy Cross College, Massa-
chematics, from 1854–57, which he rebuilt after
its destruction by fire. He was also pastor at Fred-
erick, Maryland, St. Joseph's Church, Philadelphia,
and was stationed at various times in the Jesuit
colleges at Worcester, Georgetown, and Philadelphia.

CATHERINE BLINKENSPER, b. in Dublin, 18 April, 1816; d. at Emmitsburg, Maryland. She entered
the Sisters of Charity at the latter place in May, 1831,
at the age of fifteen. She took the name of Euphemia
with the religious habit and was stationed suc-
cessively at St. Joseph's School, New York, St. Peter's
School, Baltimore, St. Mary's Asylum in the same
city, and in 1855, at the mother-house, as assistant.
During the Civil War she was entrusted with the
fifteen mission of directing the institutions of
the province of Charity in the South; she also
used the stay of the Sisters in their arduous labours; in 1866
she was appointed visitatrix of the community, which she
continued to direct until her death.

BLESS

BLESSED.

See HEAVN.

BLESSED, THE.—There are at present two ways
in which the Church allows public worship to be paid
to those who have lived in the fame of sanctity or died
due as martyrs. Of these some are beatified, others
are canonised. (See BEATIFICATION AND CANO-
nIZATION.) Beatification is a permission for public
worship restricted to certain places and certain acts.
In the more recent discipline of the Church, the
pope alone can beatify, though formerly bishops
could grant the honour of beatification to those of
the faithful who had shed their blood for Christ or
lived lives of heroic virtue. All those permissions
for public worship which in the early ages of the
Church were granted to particular churches and
spread thence with the sanction of other bishops
to other congregations, to be finally made a matter
of precept for the universal Church by the Roman
pope, constituted beatification in the strict sense of the
word. It was only beatification while the cult, of the martyr for instance, was
restricted to the place where he had suffered, but
came canonization when it was received in the
entire Church. The difference between canoniza-
tion and beatification lies in the presence or absence
of two elements which are found united in canoniza-
tion and either separate or entirely absent from
beatification, though generally only one is lacking.
These elements are: (1) the precept regarding public
worship, and (2) its extension to the whole Church.
In exceptional cases one or other of these is wanting;
sometimes the cult of the beatified is not only
permitted but enjoined, though not for the universal
Church, and in other instances it is permitted for
the whole Church but not enjoined. The case of
St. Rose of Lima is an instance of the occurrence of
both elements, though that did not of itself suffice
for her canonization, as one of the elements was not
really complete. When Clement X chose her as
protector of all American Indians and the Indies, and
by the same act allowed her cultus in the
entire Church, it was clearly a case where a cultus
was enjoined in America and merely allowed for
the remainder of the Church.

The nature of beatification makes it evident that
the worship of the blessed is restricted to certain
places and persons, and may be given only after permission. Such permission is usually granted to those persons or places which have in some way been connected with the blessed. In the case of a religious, it is granted to the members of the order or congregation to which he belonged; if a canon of a church, then to the chapter; if a chaplain, to the parish; if a martyr, a bishop, or resident of some place for a long period, the concession is made to the place of his martyrdom or to his see or to the place that he adorned with his virtues. In some cases the place of death is included. And in all these instances it may be that the mass is said at the chapel or to the mother church, or to the church in which his body lies, or it may be extended to the whole city or diocese. With Benedict XIV (De canonisatione de SS. Lib. IV, part. II, cap. i, n. 12) we may add that such graces are affixed to the day on which the blessed died or to some other determined day. When this cultus is allowed to certain persons or places it is still further restricted with respect to the manner in which it is to be given, and not all acts of worship with the churches of which they are a part, nor all the bishops, or other prelates, may be allowed to be paid canonized saints may be used in the worship of the beatified. Benedict XIV (loc. cit., c. ii) treats the question at length and with regard to the inquiry as to whether a votive Mass may be said of the blessed in places where a cultus has been granted, or in the negative against Castropalo and Del Bene. His opinion has since been confirmed by the decree of Alexander VII of 27 September, 1669, in which decree the pope settled many questions regarding the worship of the blessed. It may be remarked that ordinarily votive Masses cannot be said in honour of the blessed, though for several centuries they have been said in virtue of special indulgences. The oldest indulgences of this kind are those of the Convent of Forli, 25 January, 1526, to celebrate the Mass of Blessed James Salomonio "as often during the year as their devotion may move them to do so." Besides this indulgences there is another granted by Alexander VII at the request of Ferdinand Gonzaga, Prince of Castiglione, on 22 May, 1662, "to celebrate votive masses in honour of Blessed Aloysius (Gonzaga) in the collegiate mother church of the town of Castiglione during the year". And this indulgence, a few months afterwards, was extended so as to cover the months of May and June. To this, at the request of the pope, was added in the following year the privilege to be celebrated in the church of the Regular Clerics of the Society of Jesus during the year on days not impeded by the rubrics: Alexander VII further ordered that images of the blessed should not be exposed in any church, sanctuary, or oratory whatever, and especially in those in which Mass or other Divine services are held, without previous consultation with the Holy See. This rule is of such strict interpretation that in virtue of the granting of this indulgence of the pope it cannot be presumed that permission is had to place the images of the blessed upon the altars. They may be placed upon the walls of the church only. However, an indulgences permitting a contrary use is not of altogether rare occurrence in the recent discipline of the Church, and it is to be remarked that even in the times of Alexander VII a decree of the Congregation of Rites of 17 April, 1600, declared that the concession of an indulgence to the Mass and Office of a blessed implied permission to place his picture or statue upon the altar in the same church. And the pope also decided that the names of the blessed should be entered in no catalogue except those proper to the persons who had received permission to honour them with cultus and a Mass and Office. He ruled too that no prayers should be said in the blessed in public except those granted and approved by the Holy See and that their relics should not be carried in procession. It must, however, be observed here in passing that Alexander VII, as he especially declares in his decree, did not intend to do away with any cultus that had been rendered to the blessed with the common consent of the Church, or from the time of the fathers of the Church, or from the time of the blessed, or from the time of the saints, or even one which had been tolerated by the Holy See and the different ordinaries for more than a hundred years. In addition to all this, we have other decrees of the Congregations of Rites, such as: that the names of the blessed are not to be inscribed upon the altars, nor are neither altars nor churches be dedicated to them; that they may not be chosen as local patrons. It must not be forgotten that exceptions may be made by indulgence in these cases. Recently, to quote an instance, Pius X at the request of the English bishops, in the matter of the English martyrs whom Leo XIII had beatified, granted, that in each diocese an altar might be erected to each of the nine principal martyrs whose names are mentioned in the decree, and that each of these churches or churches, designated by the bishop, Beatification is an entirely different matter from canonization, and is but a step to it, being in no wise an irrevocable decision of ecclesiastical authority. The observation is that Benedict XIV then goes on to say that the altars which are blessed are not to be given the title of altar; further that the distinctive signs which ecclesiastical use has made c.s. mary in regard to statues and pictures of alsm cannot be used in the case of blessed, who are not to be represented with the aureola, but with rays above (op. cit., Lib. I, c. xxxvii). To conclude, we may observe that in the cultus of the blessed great attention must be given to the indulgence by which each specific instance determines, according to the wishes of the sovereign pontiff, the restrictions which are to be imposed on the acts of worship. This, matter, and very justly so, has been made the subject of special legislation on the part of the Congregation of Rites which decreed on 5 October, 1852, that no one could go beyond the limits set by the words of the indulgence of the Holy See in regard to beatification. The solemnities of beatification cannot be compared with those of canonization. They are briefly as follows: On the day on which beatification takes place Mass is said in St. Peter's in presence of the entire Congregation of Rites. After Mass, the secretary of the Congregation reads the pope's decree, on the conclusion of which the painting of the newly beatified, which stands over the altar, is uncovered and the Mass is finished. About the hour of Vesper the Holy Father goes down the basilica to venerate the new blessed. After the beatification permission is granted to celebrate solemn tridums, and by a special decree Mass and Office are allowed to be said yearly on a fixed day, but with restrictions as to place, and it is permitted to insert the name in the special martyrologies. The expenses of a beatification from the first steps to its conclusion approximate 100,000 lire ($20,000). (See BEATIFICATION AND CANONIZATION.) For bibliography see beatification and canonization. CAMILLUS BECCARI.

Blessed Sacrament, Congregation of the, an enclosed congregation and a reform of the Dominican Order devoted to the perpetual adoration of the Blessed Sacrament. It was founded in the face of obstacles by Father Adam, a French Dominican, whose canonization was stopped by the French Revolution. Born in 1601 at Paris, he entered the Order of Friars Preachers in the Rue St. Honoré, in 1622, and was in due time made master of novices first in his own monastery and afterwards at Avignon (1634). While at the
latter place (1639) he began to lay the foundation of the institute he desired to establish, but it was not till twenty years later (1669) that, after great difficulty, the first house was opened at Marseilles for the three ladies whom the saintly founder had begun to train at Avignon. The Bishop of Marseilles gave them the habit the following year, approved the rule and constitutions: Father Le Quien was drawn up, and erected them into a simple congregation. It was not till after the death of the founder, who lived to see another foundation made at Bollène, that the constitutions were approved by Pope Innocent XII (1693), who authorized the nuns to take solemn vows and bound them to enclosure. This was the first congregation instituted for the perpetual adoration of the Blessed Sacrament; it is not an austere one, but the degree of perfection put before the members by the founder is very high. The original mother-house at Marseilles was suppressed at the French Revolution, when the nuns were dispersed, but it was reopened in 1816; the Bollène house suffered more severely. Thirteen of the nuns endured martyrdom under the Commune; their cause of beatification is now before the Holy See; the remainder of the Bollène community returned to their convent and resumed their work of perpetual adoration in 1892. The Bollène nuns sent three of their number with one lay sister, under the Reversion to England, to found a house at Cannington (1863), a community which was afterwards moved to Taunton in Somersetshire, where it has since remained. There is also a house at Oxford, and another near Newport. After Father Le Quien's death foundations were made to the south of France, and after the French Revolution other houses were founded in the same locality. Since then a house has been established in Normandy, from which another convent has been opened at Stal in Belgium. There are no houses of this congregation in America.

Falott, Vie du Père Antoine Le Quien (1847); Steele, Convents of Great Britain (St. Louis, 1902), 117; Francesc W. M. Steele.

Blessed Sacrament, Sisters of the, one of the most recent congregations of religious women in the Catholic Church and one of entirely American origin, founded by Miss Katharina Drechsel at Philadelphia, Pa., in 1889, for missionary work among the Indians and coloured people of the United States. Their work was largely conducted by the Holy See was given to the congregation in July, 1907.

The Third Plenary Council of Baltimore gave a new impetus to missionary work among the coloured and Indian races and as one of the results of its recommendations, Right Reverend James O'Conner, Bishop of Omaha, acting in conjunction with Miss Katharina Drechsel, daughter of the late Francis A. Drechsel of Philadelphia, decided with the approval of the Most Reverend P. J. Ryan, Archbishop of Philadelphia, to form a new congregation of religious women devoted exclusively to missionary work among these two races. For some years previous to this step, Miss Drechsel had been very active in re-establishing and supporting schools in many of the Indian reservations. The greater portion of the income which they obtained for her and her superiors was found in maintaining and furthering these missionary projects. At this period a survey of the field of work revealed about 250,000 Indians neglected, if not practically abandoned, and over nine millions of negroes still struggling through the aftermath of slavery.

The piteous condition of these two races decided Miss Drechsel to devote both her fortune and her life to them. With the approval of high church authorities in the United States she gathered around her young women imbued with the same ideals, and thus founded, towards the close of 1889, the nucleus of the new community. In order to be well grounded in the principles of the religious life, the first members made a two years' novitiate with the Sisters of Mercy. After this, they continued their period of preparation in the old Drexel homestead, Torresdale, near Philadelphia. Early in 1892 a mother-house and novitiate were opened at Maud, Pennsylvania, adjoining which was erected a manual training and boarding school for coloured boys and girls.

The distinctive spirit of this institute is the consecration of its members, body and soul, to the service of Jesus Christ ever present in the Holy Eucharist. His Eucharistic life is to be the inspiration of the entire varied activity of the sisters. Besides the vows usual in all religious communities, the sisters pledge themselves to work exclusively for the spiritual and temporal welfare of the Indian and coloured races. By their rule, the Sisters of the Blessed Sacrament may (1) undertake all kinds of educational works; (2) they may care for orphans or spiritually or corporally destitute children; (3) they may attend the sick by visiting them in their homes or by conducting hospitals; (4) they may shelter destitute and deserving women; (5) they may visit and instruct inmates of prisons and reformatories; (6) they may establish and conduct homes for the aged; (7) they may establish schools and classes outside their own houses, visit the poor in order to look after their religious welfare and also to teach them habits of good living, neatness, and thrift—in short, to make them self-sustaining men and women.

The sisterhood now numbers one hundred and twelve members. In 1894, St. Catherine's boarding and industrial school for Pueblo Indians was opened at Santa Fé, New Mexico; in 1898, the Institute of St. Francis de Sales, Rock Castle, Va., a boarding academy and industrial school was opened for the training of Southern coloured girls; in 1902, St. Michael's Mission, Arizona, for the education of Navajo Indians, a boarding and industrial school, was completed and opened. The Academy of the Immaculate Mother, Nashville, Tenn., was opened in 1905. In this school girls are also trained to become teachers, while others not desiring to teach may take a full course of domestic science and dressmaking. In 1906, the sisters commenced work at Carlisle, Pa., by instructing the Indian pupils of the Government School, and conducting a day school for coloured children.

Sister Mercedes.

Blessing.—In its widest acceptance this word has a variety of meanings in the sacred writings:

(1) It is taken in a sense that is synonymous with praise; thus the Psalmist, "I will bless the Lord at all times, his praise shall be always in my mouth."
BLESSING

(Ps. xxxiii, 1). (2) It is used to express a wish or desire that all good fortune, especially a spiritual or supernatural kind, may go with the person or thing, as when David says: "Blessed art thou, and it shall be well with thee" (Ps. cxvii, 2). (3) It signifies the consecration or dedication of a person or thing to some sacred purpose; "Christ took bread, and blessed, and broke" (Matt., xxvi, 26).

(4) Finally, it is employed to designate a gift; so Naaman addresses Elisha: "I beseech thee therefore to take a blessing of thy servant" (II Kings, vi, 14). It is also used with an almost significant it as the present purpose to deal. Coming, then, to its strictly liturgical and restricted sense, blessing may be described as a rite, consisting of a ceremony and prayers performed in the name and with the authority of the Church by a duly qualified minister, by which persons or things are sanctified or dedicated to Divine service, or by which certain marks of Divine favour are invoked upon them. The following aspects of the subject will be discussed: (I) Antiquity; (II) Minister; (III) Objects; (IV) Efficacy; and (V) Rite employed in administering.

I. Antiquity.—The custom of giving blessings goes back to the very earliest times. In the morning of Creation, on the completion of each day's work, God blessed the living creatures that came from him, giving them dominion over him, and blessing them (Gen., i, 28). Nor was it the privilege of Moses alone to fill the earth (Gen., i, 28). When Noe emerged from the Ark, he received God's benediction (Gen., ix, 1), and this he transmitted through his sons, Sem and Japheth, to posterity. The pageant of the Old Testament testify abundantly to the great extent to which the practice of blessing prevailed in the patriarchal ages. The head of each tribe and family seemed to be privileged to bestow it with a special unction and fruitfulness, and the practice was extended over the whole people to administer it to the people. "Thus shall ye bless the children of Israel . . . and the Lord will turn His countenance and give them peace" (Num., vi, 23-26). That great value was attributed to blessings is seen from the stratagem adopted by Rebecca to secure Jacob's blessing for her favourite son. In general estimation it was regarded as a mark of Divine complacency and as a sure way to secure God's bounteouness, peace, and protection. The New Dispensation saw the adoption of this rite by the Lord and His people, and thus it went on to be venerated, ennobled, and consecrated by such high and holy usage, it came at a very early stage in the Church's history to assume definite and concrete shape as the chief among her sacraments.

II. Minister.—Since, then, blessings, in the sense in which they are being considered, are entirely of ecclesiastical institution, the Church has the power to determine who shall have the right and duty to confer them. This she has done by entrusting their administration to those who are in sacerdotal orders. The solitary case in which one inferior to a priest is empowered to bless, is where the deacon blesses the paschal candle in the ceremonies of Holy Saturday. This exception is more apparent than real. For in the instance referred to the deacon acts by way of a deputy, and, moreover, employs the grains of incense already blessed by the celebrant. Priests, then, are the ordinary ministers of blessings, and this is only in the fitness of things, since they are ordained, as the words of the Pontifical run, ut quasi nuncius sanctae Maiestatis Dei et tertius inter homines, quasi episcopus, quasi conventualis consecratur. (That whatever they bless may be blessed, and whatever they consecrate shall be consecrated). When, therefore, laymen and women are represented as blessing objects, it is because that in an act the priest will on their part, a wish or desire for another's spiritual or temporal prosperity, an appeal to God which has nothing to recommend it but the wish of personal sanctity. The ordinary greetings and salutations that take place between Christians and Catholics, leavened by mutual wishes for a share of heavenly grace, must not be confounded with the liturgical Consecration of an object. We are taught that the angels are divided into hierarchies or orders, each having its own role to play in the economy of creation. Similarly the Church recognizes different orders or grades among her ministers, assigning to some higher functions than to others. The working out of this is seen in the case of conferring blessings. For while it is true that a priest can ordinarily give them, some blessings are reserved to the Supreme Pontiff, some to bishops, and some to parish priests and religious. The first class is not large. The pope reserves to himself the right to bless the pallium for archbishops, Agnus Deis, the Golden Rose, the Royal Sword, and also to give that benediction of persons to which an indulgence of some days is attached. He may, and in the case of the last mentioned often does, depute others to give these. To bishops belongs the privilege of blessing abbots at their installation, priests at their ordination, and virgins at their consecration; of blessing churches, cemeteries, oratories, and all articles for use in connexion with the altar; such as the sacred vessels, vestments and books, sacred vessels, soldiers, arms, and swords; and of imparting all blessings for which Holy Oils are required. Some of these may, on delegation, be performed by inferiors. Of the blessings which priests are generally empowered to grant, some are restricted to those who have external jurisdiction, like rectors or parish priests, and others are the exclusive prerogative of persons belonging to a religious order. There is, too, by which an inferior cannot bless a surpliced priest, but the one who celebrates, in his presence. The priest, for instance, who says Mass at which a bishop presides is not to give the final blessing without permission from the prelate. For this curious custom authors cite a text from the Epistle to the Hebrews: "And without all contradiction that which is less is blessed by that which is greater" (vii, 7). It would seem an overstraining of the passage to say that it affords an argument for maintaining that an inferior minister cannot bless one who is his superior in rank or dignity, for the text can have no common usage, or means that the inferior by the fact that he blesses is the greater, since he acts as the representative of God.

III. Objects.—The range of objects that come under the influence of the Church's blessing is as comprehensive as the spiritual and temporal interests of her children. All the lower creatures have been made to serve man and minister to his needs. As nothing, then, should be left undone to enhance their utility towards this end, they are placed in a special way under the direct providence of God. Every creature of God is good . . . , as St. Paul says, for it is sanctified by the word of God and prayer" (I Tim., iv, 4-5). There is also the reflection that the effects of the Fall extended to the inanimate objects of creation, marring in a manner the original aim of their existence and making them, in the hands of evil spirits, ready instruments for the perpetuation of iniquity. In the Epistle to the Romans St. Paul describes inanimate nature, bleeched the primitive innocence, in its sinning awaiting its deliverance from bondage. "The expectation of the creature waiteth for the revelation of the Sons of God. For the creature was made subject to vanity, not willingly, but by reason of him who presided over it in the foolishness of sin. From this it will be easily seen how reasonable is the anxiety of the Church that the things which
we use in daily life and particularly in the service of religion, should be rescued from contaminating influences and endowed with a potency for good. The principal liturgical blessings recognized and sanctioned by the Church are contained in the Roman Ritual and the Pontifical. The Miracles, before the blessing given at the Veil of Mary, contain only those blessings associated with the great functions incident to certain days of the year, such as the blessing of palms and ashes. In the Pontifical are found the blessings that are performed de jure by bishops, such as the solemn blessing of persons already referred to, the forms for blessing kings, emperors, and princes at their coronation, and those before mentioned as of episcopal prerogative.

The great treasury of ecclesiastical blessings is the Roman Ritual. (1) Formulas for blessing persons. First comes a blessing for pilgrims to the Holy Land, on their departure and return, containing beautiful prayers and apt allusions to the Magi journeying through the Arabian desert under the guidance of the Star, to Abraham leaving his country and going to the distant land of Canaan, to the Angel companion of the younger Tobias, and, finally, an appeal to God to prove to the wayfarers a solace on their journey, a shade from summer heats, a shelter in storm, and a haven of rest. (2) Blessings for living persons. (a) In addition to the blessings already mentioned for altar purposes, the Roman Ritual has formulas for blessing crosses, images of Our Lord, of the Blessed Virgin and saints, church organs, processionals, banners, new bells for church uses and for other purposes, dress and cinctures woven in honour of Our Lady and of other saints, monstrances, reliquaries, vessels for Holy Oils, church ornaments, clerical habits, medals, pictures, and crosses for the Stations of the Cross. And the cressets, candles, the Triageon of the Holy Trinity, the different scapulars of Our Lady, of Our Lord, of the Blessed Trinity, of St. Joseph, St. Michael the Archangel, and other saints. Most of the objects just enumerated, as for instance, rosaries and scapulars, receive what is called an indulgenced blessing, that is to say, by the pious employment and use of them persons are enabled to gain an indulgence. (b) The following articles of food have benedictions assigned to them: pascchal lamb, eggs, oil, wine, bread, cheese, butter, dripping, salt, and water which is used as an antidote to rabies. There is also a form for everything that may be eaten. The fruits of the earth, such as grapes, corn, and the garnered harvest, seeds that are put into the earth, wine and the vintage, herbs and grasses, may all in fitting and appropriate language be “sanctified by the word of God and prayer”.

(c) The lower animals which minister to the reasonable requirements of the human family may have blessings invoked upon them in the formulary of the Ritual. The blessing of horses that afford such examples of industry to man, horses and oxen broken to the yoke, and other beasts of burden are included in the formularies of the Ritual. The blessing of dogs is a most humane and beneficent blessing strength and health to bear his burden and, if attacked by sickness or plague, to obtain deliverance. (d) The Ritual has blessings for houses and schools and for the laying of their foundation stones; for stables for the lower animals and every other building of any description for which no special formula is at hand. There is also a special blessing for the bridal chamber. (e) Lastly, inanimate things that have the equable and even conveniences of society may receive from the stamp of her blessing before they are sent on their way to do their appointed tasks. Such, for instance, are new ships, new railways with trains and carriages, new bridges, fountains, wells, corn-mills, limekilns, smelting-furnaces, telegraphs, steam engines, machines for producing electricity. The many serious accidents that occur explain the concern of the Church for those whose lives are exposed to danger from these various sources.

IV. Efficacy.—The inquiry will be confined to the blessings approved of by the Church. As has been said, the value of a blessing given by a private person in his own name will be commensurate with his acceptability, before God by reason of his individual merits and sanctity. A blessing, on the other hand, imparted with the sanction of the Church has all the weight of authority that attaches to the voice of her who is the well-beloved spouse of Christ, pleading on behalf of her children. The whole efficacy, therefore, of the Church’s benediction as a help to the faithful is derived from the prayers and invocations of the Church made in her name by her ministers. Blessings may be divided into two classes, viz: invocative and constitutive. The former are those in which the Divine benignity is invoked on persons or things, to bring down upon them some temporal or spiritual good, without changing their former condition. Of this kind are the blessings given to children, and of the latter are those that add to them something because they permanently depute persons or things to Divine service by imparting to them some sacred character, by which they assume a new and distinct spiritual relationship. Such are the blessings given to religious at their profession, and to churches and choirs by their consecration. In this case a certain abiding quality of sacredness is conferred in virtue of which the persons or things blessed become inviolably sacred, so that they cannot be divested of their religious character or be turned to other uses, like the other blessings of an intermediate sort, by which things are rendered special instruments of salvation without at the same time becoming irrevocably sacred, such as blessed salt, candles, etc. Blessings are not sacraments; they are not of Divine institution; they do not confer sanctifying grace; and they do not produce their effects in virtue of the rite itself, or ex ore operato. They are sacramentals and, as such, produce the following specific effects: (1) Excitation of pious emotions and affections of the heart and, by means of these benedictions, the mitigation of venial sin and of the temporal punishment due to it; (2) freedom from power of evil spirits; (3) preservation and restoration of bodily health; (4) various other benefits, temporal or spiritual. All these effects are not necessarily inherent in any one blessing; some are caused by one formula, and others by another, according to the intentions of the Church. Neither are these effects to be regarded as infallibly produced, except in so far as the imperation of the Church has also been read and the blessing itself. The operation, therefore, in which the faithful regard blessings has no taint of superstition, since it depends altogether on the Church’s suffrages offered to God that the persons using the things blessed may derive from them the spiritual advantage of the natural advantages. Instances are alleged in the lives of the saints where miracles have been wrought
by the blessings of holy men and women. There is no reason to limit the miraculous interference of God to the early ages of the Church's history, and the Church never accepts these wonderful occurrences unless the evidence in accord with their authenticity is absolutely unimpeachable.

V. RITE EMPLOYED.—Before a minister proceeds to impart any blessing he should first satisfy himself that it is one which he is duly qualified to give, either by his ordinary, or delegated powers. He should next use the prescribed rite. As a rule, for the simple blessings of the Ritual, a soutane, surplice, and stole of the requisite colour will be sufficient. A clerk should be at hand to carry the Holy Water or incense if required, or to prepare a lighted candle. The blessings are ordinarily given in a church; but, if necessary, they can be lawfully administered elsewhere according to the exigencies of place or other circumstances or privileges, and without any sacred vestment.

PATRICK MORRISSEY.

Blessing, Apostolic, the solemn blessing (urbi et orbis) which, before 1870, the Holy Father himself gave from the loggias of the following churches: of St. Peter's, on Maundy Thursday and Easter; of the Lateran, on Ascension Day; and of Santa Maria Maggiore, on the feast of the Assumption of the B. V. M. He often delegated to a College of Cardinals the power to give this blessing in answer to petitions from princes, at the close of missions, and on such occasions. This power was restricted by Clement X, 3 September, 1672, to patriarchs, primates, archbishops, and bishops, who petition the Apostolic See for it; they can give the Apostolic blessing on Easter Sunday and on some other feasts. Prelates who have the use of the pontificalia and jurisdiction over a certain territory can give it only once a year. A certain formula is prescribed. The superiors of certain religious orders, especially the Franciscan, are given twice a year in the churches of their own order; they must use a formula and ask permission of the ordinary (20 August, 1783). The faculty is occasionally granted to particular priests, regular or secular, to give the Apostolic blessing upon return from Rome, at the close of missions or retreats; in this case no solemn rite is required. The Apostolic blessing is a sacramental with which is granted a plenary indulgence (under the usual conditions), but no absolution from canonical censures. During a jubilee this blessing cannot be given. A special feature of this blessing is the Apostolic benediction in articulo mortis. This blessing is given to those who are in danger of death by priests who possess the required faculty. A formula is prescribed by Benedict XIV; to gain the indulgence it is necessary to receive the sacraments, to invoke the name of Jesus, and to be resigned to the will of God. In missionary countries the bishops can subordinate every priest to grant this indulgence (5 April, 1772). It is not suspended by a jubilee.

Blessing, Pastoral, Diocese of, coextensive with the civil department of Loir-et-Cher and a suffragan of Paris. On 1 July, 1697, Innozenz XII canonically erected the Bishopric of Blois, that territory having theretofore been dependent on the Diocese of Chartres. Prior to the Revolution, the Diocese of Blois was the center of the Cistercian monasteries in the Diocese of Orléans, and the Basilique to that of Mans. The Concordat of 1802 gave Loir-et-

Cher to the Diocese of Orléans, and in 1822 the Diocese of Blois was re-established. Monsieur de Thémines, who was Bishop of Blois in 1776 and died in exile in 1829, was one of the most obstinate opponents of the Concordat. St. Clovis, Bishop of Chartres under Clovis, is a patron of Blois; his relics were preserved by a miracle.

Owing to the proximity of the monasteries of Misy and Marmoutier, Blois counts among its saints a number of monks; Lubinus, Bishop of Chartres in the sixth century; Laumer, a Bishop of Blois in the Diocese of Chartres (d. about 590), whose body was transported to Blois, at the time of the Norman invasions, by fugitive monks, who founded in that city the Abbey of St. Laumer; St. Desodatus, the anchorite, also called St. Did (sixth century), who assured Clovis of the victory at Vouillé (507), the solitaries Victor and Leonardus; and Aiguilphus (seventh century), a native of Blois and Abbot of Lerins, who was assassinated. Peter of Blois, who came from the Abbey of St. Laumer, was conspicuous in the twelfth century for his defence of St. Thomas Becket and for encouraging devotion to the Blessed Virgin. The Venerable Charles of Blois, killed in 1364 at the Battle of Auray, was the son of Guy, Count of Blois. The Benedictines had several great abbeys in this diocese, one at Selles-sur-Loing as early as the sixth century by the hermit, St. Eusius, and another at Pontlevoy, now a college. The monastery of the Blessed Trinity at Vendôme, dedicated in 1640, was also quite celebrated. The Oratorians Jean Morin and Jérôme Vigerie, learned ecclesiastics of the seventeenth century, were natives of Blois.

At the close of the year 1905, the Diocese of Blois had a population of 275,538; 28 parishes, 266 mission churches, and 8 curacies with subventions from the State. According to the latest statistics, the following institutions are to be found in the diocese: 48 infant schools conducted by sisters; 2 orphanages where farming is taught, conducted by the Fères de St. François Régis and the Sœurs du Protecteur de St. Joseph; 7 girls' orphanages conducted by sisters; 1 house of refuge for young women, conducted by the Religieuses de Notre Dame de la Charité; 5 patronages at Blois; 1 patronage at Romorantin; 8 hospitals and hospices conducted by sisters; 5 houses of retreat conducted by sisters who care for the sick in their homes; and 9 homes for the aged conducted by sisters.

In 1900 the following congregations were represented in the diocese: the Capuchins at Blois and in Romorantin, the Redemptorists at Anjou, and the Congregations of the Sisters of Our Lady of Providence, with mother-house at Blois, who have charge of orphan asylums. The most frequent place of pilgrimage is Notre Dame de Villehueton at Saint Amand. Others are Notre Dame de Nanteuil at Montrichard, Notre Dame des Aydes at Blois, and Notre Dame des Blanches at Pontlevoy, a sanctuary built at the end of the tenth century by Gilduin, opponent of Foulques Nerra.

Blood Indians, a group of North American aborigines that form part of the blackfoot tribe, which with the Arapahoes and Cheyennes, constitute the Western division of the great Algonquin family. (See Blackfoot Indians.) The Blood Indian (Këna) group is now subdivided into several branches, or clans, the most important of which is (1) the In-poyex (Standing-buffaloes), which is sub-divided into (a) Keay-etàpin (Bear people), (b) Noto-sotixàna (All-tall-people), (c) Mami-shoy-in (Fish-eaters), (d) Aayàm-ikxà (Closely-camped), (e) Aká-poxà (Many-children), (f) Apikà (Scabby). Other clans of the group are (2) the Six-immmóxak (Black-elsks), (3) Aká-na-xam (Many-scabbed-mouths), and (4) the Teix-sokáxà (Buffalo-costs).

The language of the Blood Indians is like that of the other two groups of the Blackfeet, with but few and unimportant peculiarities. It is called Blackfoot, and is classed as one of the branches of the Algonquin, though it possesses only a very limited number of words in common with the other branches of the same family. The aboriginal name, Këna, might, it seems, be translated as the country over which the hunting is in fact altogether lost, and no one, even among these people themselves, could now give a satisfactory interpretation of it. In the sign language, the gesture for Këna is made by rapidly passing the right hand, palm downward, in front of the mouth, of which gesture the exact signification is also lost.

In the year 1822 the Bloods were supposed to number about 1800 souls; they now number not more than 1200. The former of these estimates may have been exaggerated, and it was difficult at that time to obtain statistics of mortality, but it is undoubtedly true that the numbers of these people have considerably diminished in the last twenty-five years, and that they are still, slowly, but steadily, diminishing. The country over which the hunting is in fact altogether lost, and no one, even among these people themselves, could now give a satisfactory interpretation of it. In the sign language, the gesture for Këna is made by rapidly passing the right hand, palm downward, in front of the mouth, of which gesture the exact signification is also lost.

The progress of Christianity has been slow. Unfortunately, the example of many of the whites has not been of a nature to attract the Indians to the white man's religion; yet there is a goodly number (about 35) of young Catholic families, mostly made up of the boys and girls educated in the Catholic schools. Besides, most of the children are baptized Catholics when young, and when these children grow up the number of Catholic families will increase. There are also a few Protestant families. At the present time there are two Catholic priests on the Blood Reserve, with a neat little church, a residence, and a boarding school conducted by seven Sisters with some forty pupils. Children are also sent to the industrial school, which is established at a place about 100 miles distant from the Reserve, and is open to all the Blackfeet tribes. On the reserve is a hospital conducted by Sisters of Charity for the exclusive benefit of the Indians, an institution which was probably unique of its kind at the time of its foundation, in 1839. Polygamy has been almost entirely eradicated, yet the bulk of the adult population—over thirty years of age—is still, as it was before, unhappily not thoroughly accustomed to Catholic practices only in a very limited number of cases. One most remarkable case of this kind was that of Chief Red-Crow (Mik-ahekstos), who was converted and lived the life of a practical Catholic for several years preceding his death, which occurred in the 1860's.

The progress of civilization among the Bloods during the last twenty-five years may be regarded as marvellous in the extreme. At first they were trained to become farmers; but this occupation was not to their liking, and little progress was made.
For the last twelve years, therefore, a new policy has been adopted which has proved to be the right one. In pursuance of this later policy, the Indians have been set to ranching and cattle-raising—a congenial occupation. Many of them now have work of their own, and are self-supporting. Noteworthy progress has also been achieved in their dress, housing, preparation of food, treatment of wives, and, generally, in their ideas of social relations; so much so that the Blood Indian of to-day may be considered an entirely different being from his predecessors of twenty-five years ago.

Blosius (of de Blois), Francois-Louis, a Benedictine abbot and spiritual writer, b. at Donstienne, near Liége, Flanders, 1506; d. at Lissies, 1556. His parents were nobles of Rainsault, his father being Sieur of Junigny. He became page to the Archduke Charles (afterwards Emperor Charles V) but entered the Abbey of Lissies when only fourteen. Whilst still a novice he was sent to study at the University of Louvain, whence he was recalled in 1527 to become coadjutor to the Abbot, Gilles Gippus, his nomination as such being confirmed by a Bull of Pope Paul III. Three years later, in 1530, he succeeded Gippus as thirty-fourth Abbot of Lissies, and received ordination and the abbatial blessing in the same year. His first care was the cultivation in his abbey of a true monastic spirit and strict discipline, which had somewhat declined under his predecessors. He had hardly settled down to the work of reform before Flanders was immersed in war owing to its invasion by Francis I of France, which occurred in 1537. Lissies, being on the frontier, became a scene of continued pillage, and the abbot was compelled to move to the priory of Ath, in the interior, but most of his monks, being opposed to his reform, either elected to remain at Lissies or else went to other laxer monasteries. The abbot, however, with three monks, retired to Ath and there he at once restored the primitive observance of the rule. In spite of opposition the reform gained ground and numbers increased rapidly. When a return to Lissies became possible, in 1546, the reform was accepted by those that had remained there and was confirmed by a Bull of Pope Paul III. Blosius next began a restoration and enlargement of the abbey buildings, which were only completed after his death. In 1556 Charles V offered him the Archbishopric of Cambrai and the abbacy of Tournai, both of which he refused in order that he might remain at Lissies. In personal character he was distinguished for his gentleness, his generosity to the poor, his love of chastity, and his devotion to the Mother of God. He was a diligent student, especially of the Scriptures, the works of the Fathers, and the mystical writers of the 13th to 16th centuries. His own writings were numerous, the chief being "Speculum Monachorum", written in Latin, translated into French 1726, and into English 1872 (Mirror for Monks, by Sir John Coleridge), "Entrées spirituelles", and "Instructions spirituelles et pensées consolantes". His complete works were first published at Louvain in 1568 and have been reprinted many times. In English editions, besides the "Mirror for Monks", there are "A Book of Spiritual Instruction" (London, 1900) and "Comfort for the Faint-hearted" (London, 1902), both translated by Father Bertrand Wilberforce, O.P.

G. Cythien Alston.

Blissen, Heinrich, b. at Cologne or Bonn, Germany, in 1526; d. at Graz, 24 April, 1586. He entered the Society of Jesus, and St. Ignatius, appreciating his logic and his knowledge of theology, sent him with eleven other Jesuits to Bohemia to combat heresy there, and to sustain a public disputation with the disciples of Luther and Hus. Though only twenty-five years of age, he acquitted himself with honour, and in 1560 he became professor of theology and Hebrew at the Jesuit college at Prague. Still maintaining his controversies with the heretics of Bohemia, he published a collection of theses: "De ciborum defectu atque jejunio" (Prague, 1559). To continue his work of public lecturing he gave a Sunday course of polemics to the clergy and laity. Appointed rector of the college at Prague in 1561, he was transferred in 1570 to the college at Graz where he vigorously continued his lectures on theology. Attacked by the Jesuites concerning the Church, he published a defence of his theses: "Defensio argumentorum theologiorum de verâ et sacrosanctâ Christi, quam habitet in terris, Ecclesiâ militantâ" (Ingolstadt, 1577). His last and principal work "De uno gnomique sacre eucharistiae synaxea solubriter percipiendo ritu ac usui" was published (Ingolstadt, 1585) when he was provincial of Austria.

M. De Moreira.

Blyth, Francis, English Carmelite, reviser of the Douay Bible, born c. 1705; d. in London, 11 December, 1772. Though born of Protestant parents, he joined the Catholic Church while yet a youth, and entered the Carmelites novitiate at Modena in 1723, taking the name Simon Stock of the Blessed Trinity. Having obtained his habit, he was sent to Paris on account of a defect in vision, he proceeded to Malta for a course of studies, and after ordination returned to England, in November, 1730, where he first served a mission in Wiltshire. In 1741 he became assistant chaplain, and in 1756 chaplain major to the Portuguese embassy in London, where he remained until his death. From 1742 till 1755, he was also Vicer Provincial of the English Carmelites. While in London, he assumed the name of Courtney. At the chapel of the various embassies he was recognized as places of worship for Catholics, the chaplains held a position not unlike that of parish priests, and Father Blyth distinguished himself by his eloquent and zealous preaching. The first ambassador under whom Father Blyth served was Don Sebastiano José de Carvalho e Melo, afterwards Marquez de Pombal (1739-45), whom he was, at a later period, accused of having aided in high-handed proceedings against the Jesuits. He indignantly protested against the calumnies. Blyth was buried in the Convent of St. Mary's, Westminster. He was noted for great literary attainments and author of many works, a memorial was raised there in his honour. His chief labour was the revision, in conjunction
with Bishop Challoner, of the so-called Douay Bible; while adhering closely to the text of the Vulgate, the revisers sacrificed the energetic language of the older translators for a much less exegetical which frequently lacks dignity. His other works include: two expositions of the Penitential Psalms and other portions of Holy Scripture, sermons, and controversial writings.

B. Zimmerman.

Boast, John. See TruthEmus.

Bobadilla, Nicolaus, b. at Valencia, Spain, 1511; d. at Loreto, Italy, 21 September, 1560. After having taught philosophy in his native country, he went to Paris to acquire a more perfect knowledge of Greek and Latin. Here he met Ignatius of Loyola, joined him in his plans and was among the first seven followers of the saint to consecrate themselves to God in the Society of Jesus, at Montmartrc, 15 August, 1534. Hereafter Bobadilla's career was a very active one, as a most zealous worker in the cause of the Catholic Faith. While serving the sick in the camp of the army of Charles V about Ratisbon, he himself caught the plague. Here too, about this time, 1546, as he was returning from the camp to the city he was waylaid by assassins and severely wounded. At another time he barely escaped with his life from an attempt to poison him.

By order of the Sovereign Pontiff Paul III, Bobadilla took a prominent part in the Diet of Nuremberg, 1543, and of Speyer, 1543, as well as in that of Ratisbon, 1546. Shortly after this an incident occurred which forced him to leave Germany. In 1548, the "Investiture of Augsburg" was published by the Emperor Charles V. It was a tentative document intended to suggest a basis of agreement between Catholics and Protestants until their religious differences could be definitely settled. But as it seemed in the eyes of many Catholics to go too far, and in the eyes of many Protestants not far enough, it satisfied neither party. Bobadilla opposed it in speech and in writing, and so vigorously, that although he was highly esteemed in the imperial court, he was obliged, by the Emperor's order, to retire from Germany. He was the most popular preacher, as is evidenced by the fact that he delivered sermons in seventy-seven archiepiscopal and bishoprics in Italy, Germany, and Dalmatia.

The writings of Bobadilla cover a wide range of topics. Among the more important are: several chapters of Genesis and other portions of the Old and New Testament; annotations on the Gospels; treatises on predication, the sacraments and their use, against the Lutherans, cases of conscience; a defence of the Council of Trent against Melanchthon and Calvin, etc. The last survivor of the seven first companions of Ignatius of Loyola, Bobadilla took part in the election of four generals of the Society of Jesus.

Bobbio, Abbey and Diocese of.—The diocese (Ebovium, or Bovium; Diocesis Bovensia, or Bobia, of ancient writers) or the See of Bobbio, is conterminous with the civil district of Bobbio. This district is situated in the Province of Pavia and contains, besides Bobbio, its chief town, only two small villages and eighteen communes. The diocese was suppressed from 1803 to 1817, during which time it was annexed to the archbishopric of Pavia, then to Casale. Pius VII re-established it in 1818. The population, entirely Catholic, is (1897) about 30,000. There are 52 parishes and 105 churches or chapels, served by 80 secular priests. The cathedral chapter consists of a provost, archpriest, and ten canons. In the diocesan seminary there are at present 40 students. Under Bishop Gennusa, the congregation of priests was annexed to the title of Oblates of St. Alphonsus Liguori. They devote themselves especially to hearing confessions in prisons and hospitals, as well as to spreading good literature among the people. Bobbio also possesses a Congregation of Daughters of Mary, popularly known as Gnaniemne.

History.—The origin of the See of Bobbio, indeed of the town itself, is due to the establishment of a monastery here by the Irish saint, Columban, in 614 near the Lombards, with the help of the citizens of northern Italy under their leader Albin in 568. A half-Arian, half-heathen horde, wherever they passed all the horrors of wanton destruction and cruelty marked their track. But at length the new barbarian ruler, Agilulf, became less hostile and by degrees even not unfavourably disposed towards the Catholic Faith. Queen Theodelinda, whom he married in 590, was a fervent Catholic; she had wonderful influence over her consort, and at last he was converted by the preaching of Columban. From the day of his baptism Agilulf richly contributed to the See for the conversion of his subjects, and for this purpose gave St. Columban a ruined church and devastated district known as Ebovium, which, before the Lombards seized it, had formed part of the Patriarchate of St. Peter. Columban had set his heart on this secluded place, for while intent on instructing the Lombards he chose solitude for his monks and himself. By the side of this little church, which was dedicated to St. Peter, soon arose the walls of an abbey. Here the nucleus of what was perhaps the most celebrated library in Italy was formed by the MSS. which Columban had bought from Ireland and the treasures of which he himself was the author.

The sainted founder of Bobbio was soon afterwards laid to rest (23 November, 615), but his crosier passed into worthy hands. The names of St. Attafa (627) and St. Bertulf (640) will live forever in ecclesiastical history. Both were conspicuous for holiness and learning, and both inherited Columban's apostolic spirit. It was indeed sorely needed, for a reaction towards Arianism set in, which became formidable under the Arian king, Rothari (636-652). Arioald, the immediate predecessor of Rothari, who became a Catholic, had before his conversion caused St. Bladulf, a monk of Bobbio, to be assassinated, whereupon Bladulf went to Rome, founded a monastery at Cassino. It is said that Attafa restored Bladulf to life and delivered Arioald from a diabolical possession, the punishment of his crime; and that this twofold miracle led to Arioald's conversion. In 628, when St. Bertulf made a pilgrimage to Rome, Hono- rius I exempted Bobbio from episcopal jurisdiction, thus making the abbey immediately subject to the Holy See. Under the next abbot, Bobolen, the rule of St. Benedict was introduced. At first its observance was optional, but in course of time it superseded the more austere rule hitherto in use, and Bobbio joined the Congregation of Monte Cassino. In 643, at the request of Rothari and Queen Gundelberga, Pope Theodore I granted to the Abbot of Bobbio the use of the mitre and other pontificals. It has even been asserted that Bobbio was, if not earlier, at least as early as the seventh century, but according to the best authorities (Ugheilli, Gama, and others) the See of Bobbio was not founded till four centuries later, although recent investigation has shown that the name of its first bishop really was Peter Aldus (Savini 1834).

From the seventh century on, in the midst of widespread turmoil and ignorance, Bobbio remained a home of piety and culture. Through the efforts
of St. Columban's disciples, increasing numbers of the Lombards were received into the Church. But during the first half of the seventh century, the large tract of country lying between Turin and Venice, and Milan, was in a confused and disturbed state; and even idolatry was not unknown. In fact not until the reign of the usurper Grimoald (663–673), himself a convert, was the bulk of the nation brought into the Church. But from this period, Arrianism disappeared, and in the sixth century, the Church of Bobbio was established. The historians of the abbey maintained, as one of its chief glories the prominent part which it took in the final contest with this heresy. Theodendina's nephew, the pious Abbot Arribert (653–663), restored all the lands of Bobbio which belonged by right to the Prince of the Apostles. Arribert II also gladly confirmed this restitution to John VII in 707. The unruly Lombards soon dispossessed the pope, but in 758 Alstulf was compelled by Pepin to give up the lands. In 774 Charlemagne made liberal grants to the abbey. In 1153 Frederick Barbarossa confirmed by two charters various rights and possessions. Thus it came to pass that the abbots were for centuries entrusted with a large administration of temporalities. The fame of Bobbio reached the shores of Ireland, and at the memory of the Abbey was dear to the hero of St. Cummian. Bobolino's successor was St. Congall who had resigned his see in Ireland in order to become a monk of Bobbio; St. Cummian who did the same died in the abbey about 739 (Holder-Egger in Mon. Germ. Hist.); and the learned St. Dungal (d. after 827) bequeathed to the abbey his valuable library, consisting of some seventy volumes, among which was the famous "Antiphonary of Bangor". A tenth-century catalogue, published by Muratori, shows that at that period every branch of knowledge, divine and human, was represented in this library. Many of the books have been lost, but the rest have long since been dispersed and are still reckoned among the chief treasures of the later collections which possess them. In 1616 Cardinal Federigo Borromeo took for the Ambrosian Library of Milan eighty-six volumes, including the famous "Bobbio Missal", written about 911, the "Antiphonary of Bangor", and the palimpsesta of Ulfilas' Gothic version of the Bible. Twenty-six volumes were given, in 1618, to Paul V for the Vatican Library. Many of the books which are preserved in the Royal Archives, there were seventy-one in the University Library until the disastrous fire of 26 January, 1904. As scholars of later ages have owed a great deal to the Bobbino MSS., so, too, did the literature of the 16th century. For example, who was afterwards Pope Sylvester II, became Abbot of Bobbio in 982; and with the aid of the numerous ancient treatises which he found there he composed his celebrated work on geometry. And indeed it appears that at a time when Greek was almost unknown in western Europe, the Irish monks of Bobbio read Aristotle and Democritus in the original tongue.

In the year 1014, the Emperor Henry II, on the occasion of his coronation in Rome, obtained from Benedict VIII the erection of Bobbio as a see. Peter Aldus, its first bishop, had been Abbot of Bobbio since 999, and his episcopal successors for a long time lived in the abbey, where many of them had been monks. According to Ughelli and others, Bobbio was made a suffragan see of Genoa in 1123; but Savio finds this subdivision mentioned for the first time in a Bull of Alexander III, dated 14 April, 1161. From time to time disputes arose between the bishop and the monks, and in 1199 Innocent III intervened. Genoa and Milan, who were in a confused and temporals, and empowering the bishop to depose an abbot if within a certain time he did not obey. Bobbio's greatest bishops have been (1) Blessed Albert (1184), who was translated to the Patriarchal See of Jerusalem and died a martyr at Acre in 1214; (2) the learned canonist Giovanni de Mondani (1477–82), whose remains were found incorrupt in 1614; and (3) Virgilio Tindale (1740–46), whose cause has been introduced. St. Columban's abbey and church were taken from the Benedictines by the French soldiers in 1803; what remains of the abbey is now used as a municipal school, and the church, where the relics of St. Columban, Attala, Bertulf, Cummian, and others, is now a parish church, served by secular priests. The altars and the sarcophagi in the crypt present beautiful specimens of the interlaced ornamentation which is characteristic of Irish art. In the Cathedral of Bobbio there is a beautiful tabernacle in the Ravenna style.

Boccaccino, Boccaccio, an eminent Italian painter, b. at Cremona, 1490, and d. probably in 1625 rather than in 1518, the date usually given. He studied, it is thought, with followers of Mantegna, at Ferrara, and was a pupil or fellow-student of Domenico Panetti. At Cremona he painted in fresco on the face of Agostino Baglioni, bishop of Cremona, in the Cathedral. The assistant Benvenuto Garofalo, who left him and went to Rome. The master followed and painted a "Coronation of the Virgin" in Santa Maria in Trastevere. This, however, was so ridiculed by the public, who were heard of Angi's, that the people had the hardihood to criticise Michael Angelo, that the disappointed artist returned to Cremona where, among his most appreciated Works, is a frieze in the cathedral, showing the "Birth of the Virgin" and other subjects from the life of Our Lady, which considered Boccaccio as the best modern among the ancients and the best ancient among the moderns, compares his work with his productions with that of Perugino, treating it as inferior in some qualities while superior in others.

The works of Boccaccinno possess much charm, and a number of them greatly resemble those of Perugino. This is notably so in his "Marriage of the Virgin" and "The Madonna with St. Vincent and St. Anthony" in the church of San Vincenzo in Cremona. His style is the work of the greater painter. Among Boccaccino's works in the cathedral at Cremona, in addition to those already spoken of, are: "The Appearance of the Angel to Joachim"; "The Meeting of Joachim and Anne"; "The Holy Family in the Stable"; "The Illing with the Doctors"; and "Christ with the four Patron Saints of Cremona". At the Academy in Venice is his much admired "Marriage of St. Cath-
BOCCACCIO and Arcite which Chaucer used for his "Knight's Tale".

The "Filiostrato", written in the same year and likewise in ottoare rima, tells of the love of Troilus for Crisydes. The subject may have been suggested by Boccaccio's translation of the lines of the Ferrara Pintore as a "Death of the Virgin". Light grey eyes outlined with a dark rim are characteristic of the pictures of Boccaccio.

BOCCACCIO, CAMILLO, a short-lived but brilliant painter, b. at Cremona, 1512; d. 1546, is one of the most brilliant pupils of Baccio Baldini, to whom he succeeded, taking care, it is pointed out, to avoid the errors into which his father's self-esteem had led him. He early showed both originality and strength, and his work has been considered to approach that of Correggio, notably his "Four Evangelists" in the niches of the cupola of San Sigismondo near Cremona, which are thoroughly in the Correggio style and were painted when the artist was only twenty-six. Camillo Boccaccio is thought by Lanni to be the greatest artist of the Cremonese school. Two of his works at Cremona are "The Raising of Lazarus" and the "Adulteresses before Christ", surrounded by fiesole showing many angels.

AUGUSTUS VAN CLEEF.

BOCCACCIO, GIOVANNI, Italian novelist, b. in Paris, 1315; d. in Certaldo, 21 December, 1375. His father, a merchant from Certaldo and a man of some prominence in Florence, had gone into business in Paris. Shortly afterwards the elder Boccaccio deserted Gianna, the mother of Giovanni, and brought the boy to Florence, where he put him to school until he was ten years old, when he took him into his own household and gave him his own household and gave him his own time to study law. But he gave himself up almost entirely to literature, and became intimately acquainted with some of the most prominent men and women of the court of Anjou. It is supposed that it was in 1347 that he saw for the first time Maria d'Aquino, a married woman and natural daughter of King Robert. She was the inspiration of his earlier works, and the heroine of whom he tells under the name of Fiammetta. In 1340 we find him back in Florence; on the death of his father in 1343 he came into his fortune. He held certain public offices in Florence and was entrusted with diplomatic missions to Padua, the Romagna, Avignon, and elsewhere. After 1350 began his friendship with Petrarch, which lasted until the latter's death in 1374. In spite of his advanced age and the political dissensions in Florence which afflicted him sorely, he began, in 1373, his course of lectures in that city on the poems of Dante. He died two years later at his ancestral home in Certaldo.

The earliest, longest, and perhaps the weakest of Boccaccio's works is the "Filocolo", written between 1338 and 1340; it is a version of the story, widespread in the Middle Ages, of Fidore and Blanchefleur, and contains a curious confusion of pagan myths and Christian legend. The "Amato", written in the two following years, is an allegorical novel, telling, among other love-adventures, the sad story of the life of Boccaccio's mother. The "Amorosa Visione", in praise of love, dates from about the year 1353, and the close analysis of allegory that underlies the letter of the verses form an acrostic of the initials and one ballata. The "Teside", probably of the year 1341, is the first artistic work in ottoare rima. It contains many imitations of antiquity, and was widely read in the sixteenth century. Tasso thought so highly of it that he annotated it. The subject is the story of Palemon and his famous Boccaccio, 607
tion, but, like Shakespeare, whatever he borrowed he made his own and living, by placing the adventures in the lives of his contemporaries. The indecency which is the greatest blot on the "Decameron", but to which it undoubtedly owes not a little of its celebrity, is greater than it is to be found elsewhere in medieval literature, and is due as much to the time and the circle in which the work was written as to the temperament of the author. He himself in his later years expressed deep repentance for the too free works of his youth; moreover, his jibes and anecdotes at the expense of clerics did not at all detract from his belief in the teachings of the Church. Boccaccio's character was by no means a despicable one. He was a steadfast friend, a son who felt tenderly for his mother and never forgave his father for having abandoned her. He speaks with affection of his daughters who had died in childhood; it is not known who their mother was. He was a scholar of the first rank for his time, a man of independent character, and a good patriot.

No autograph copy of the "Decameron" exists, but there are three manuscript copies dating from the fourteenth century. The first edition was not printed until 1470 in Venice, and since then numerous editions have appeared, but there is as yet no critical edition. Of the modern editions P. Fanfani's is considered the best. For other editions see the list of the Decameron by Landau, Die Quellen des Dekameron (Stuttgart, 1884); for Boccaccio's life and works, see, generally, Landau, Geschichte der Literatur des Mittelalters (Stuttgart, 1887); Cassirer, Grundzüge der Geschichte der Literatur (Berlin, 1887); see also Ferrarri, Bibliografia Boccacciana (Florence, 1888).

Joseph Dunn.

Böcken (Böckern), Placidus, a German Benedictine, canonist, and Vice-Chancellor of the University of Salzburg, b. at Munich, in Bavaria, 13 July, 1690; d. at Salzburg, 9 February, 1752. He entered the Order of St. Benedict at an early age, made his religious profession at the Abbey of St. Peter, Salzburg, in 1706, and was ordained to the priesthood in 1711. In 1729 he became Doctor of Canon and Civil Law (1715), he was sent to Rome and on his return was chosen, in 1721, to succeed the noted canonist Benedict Sekmier, as professor of canon law at the Benedictine University of Salzburg, where he remained for a period of twenty years. He proved himself a brilliant jurist, and an exceptionally gifted teacher. In 1729 he was appointed vice-chancellor of the university. He was also attached to the theological faculties of Salzburg and Fulda, was secretary of the university, and a valued ecclesiastical counselor of four successive archbishops in the See of Salzburg and of the Prince-Abbot of Fulda. Eventually he appears to have incurred the displeasure of Archbishop Leopold of Salzburg, and in consequence of repeated friction resigned his position in 1741. He was then made pastor of Dornbach, a suburb of Vienna, and, two years later, superior of Maria-Plain near Salzburg, where he spent the last nine years of his life as confessor to the many pilgrims frequenting that famous shrine.

"Boccaccio in Jus Canoniciun universum", which Böcken published at Salzburg (1735-39), and dedicated to his friend and patron the Prince-Abbot of Fulda, is his most important work. He had previously (1722-28) issued a number of separate treatises on the five main topics of the Decameron, all written with great lucidity and care; these, now thoroughly revised and supplemented, were incorporated in his larger work, to the third volume of which, in an appendix, he also added a lengthy disquisition "De prescriptionibus". A reprint of the "Commentarius" appeared at Paris in 1776. Böcken's work, like that of the Salzburg canonists generally, is of definite value. Böcken held rather extreme views on the subject of the veneration of saints, and maintained that the special veneration and invocation of the saints, particularly of the Blessed Virgin Mary, is absolutely necessary for salvation. A sermon which he preached on this subject in 1740 precipitated an exordium and discussion of the veneratio antiqua between the members of the "Old School" and the "New School" of theology, between the Sycomomphi and the Illuminati as they were called. The sermon appeared also in print, with annotations wherein Böcken characterized as erroneous the contrary opinion of Muratori. Chronicon novus, monasterii S. Patri, 674-677; BATTY, Klosterverzeichnisse (1880), 357 sqq.; BRETZ, Hist. Univ. Salzburgiensi, 400; EBERHARDT, Hist. des ord. O. B. (Augustin), 1754), III, 484, 485.

Thomas Oestreich.

Bocking (or Bokkyng), Edward, English Benedictine, b. of East Anglian parentage, end of fifteenth century; d. 20 April, 1534. He graduated B. D. at Oxford, in 1513, and D. D. in 1518, was for some time at Cambridge, and in 1524 was made a canon at Canterbury 1526. When Elizabeth Barton, "The Holy Maid of Kent", commenced her alleged Divine revelations, Bocking, with another monk, was sent to examine and report upon their authenticity, and he is said to have induced her to declare herself an inspired emissary for the overthrow of Protestantism and the prevention of the divorce of Queen Catherine. To further this scheme he had her removed to the Convent of St. Sepulchre at Canterbury. There was the old nun's chief instigator in the continuance of her career of deception. His share in the affair, though it cannot be excused, must be ascribed to a mistaken zeal for the preservation of the ancient Faith. After the divorce of Queen Catherine and Henry's marriage to Anne Boleyn in 1553, Cromwell had Elizabeth Barton arrested, together with Bocking and others. Bocking confessed the imposture and, with his accomplices, did public penance at Paul's Cross. He and six others were hanged at Tyburn.

G. Cyprian Allston.

Bodenstein. See KARLSBAD, ANDREAS RUDOLF.

Boedy, John, VENERABLE, martyr, b. at Wells, Somerset, 1549; d. at Andover, Wiltz., 2 November, 1583. He studied at Winchester and New College, Oxford, of which he became a Fellow in 1568. In June, 1576, he was deprived, with seven other Fellows, by the Visitor, Horne, Protestant Bishop of Winchester. Next year he went to Douay College to study civil law, returned to England in February, 1578, and probably married. Arrested in 1580, he was kept in iron shackles in Winchester gaol, and was condemned in April, 1583, together with John Slade, a schoolmaster, for maintaining the old religion, and denying the Royal Supremacy. There was apparently a feeling that this sentence was unjust and illegal, and they were actually tried and condemned again at Andover, 19 August, 1583, on the same indictment. Executed at Andover, 2 November, 1583, he was buried with due ceremony in the Capuchin church at Andover, and the martyr's name is commemorated in the church by a memorial tablet. After
his second trial, he wrote from prison to Dr. Humphrey: "We consider that iron for this cause borne on earth shall surmount gold and precious stones in Heaven. That is our mark, that is our desire. In the mean season we are threatened daily, and do look still when the hurdle shall be brought to the door. I beseech you, God's sake, that we not only put to death the gold we have obtained, but make for our own with our joy, and our perseverance unto the end. . . . From our school of patience the 16th September, 1583." At his martyrdom, Bodey kissed the balter, saying, "O blessed chain, the sweetest chain and richest that ever earth and heaven did contain, I shall be bound and taken away hereafter by the holy martyrs; you shall die for treason, exclaimed, "You may make the hearing of a blessed Mass treason, or the saying of an Ave Maria treason . . . but I have committed no treason, although, indeed, I suffer the punishment due to treason". He exhorted the people to obey Queen Elizabeth and died saying, "Jesus, Jesus, eae mihi Jesus". His mother made a great feast upon the occasion of her son's happy death, to which she invited her neighbours, rejoicing at his death as his marriage before the hour was happily and eternally espoused to the Lamb.

BODIN.

Bédin, Jean, b. at Angers, 1520, probably of Jewish origin; d. at Lyon, 1596. He studied and taught law at Toulouse, where in 1559 he pronounced his "Oratio de instituto in republica juventute", on the public instruction of youth. At the age of forty, he went to Paris, his name being still obscure. By his "Methodus et falsa cognition" (1566) he laid the foundation of the philosophy of history, and set forth his theory of the effect of climate on society and government, likewise his theory of progress, both of which were later expanded in "La République". In his "Réponse aux paradoxes de M. de Malestroit, touchant le fait des monnaies et l'achèvement de toutes choses" (1568), he developed his thesis on the necessity of free trade. The "République" in six books (French, 1577; Latin, 1580) was written to defend the principles of autonomy and to support the idea of a commonwealth. Bodin represents a reaction against Machiavelli in the field of moral and political science. Unlike Cujas and the "Romanist" jurists, who confined themselves to the observation of Greek and Roman antiquity, he drew upon the modern history of Germany, England, Spain, and Italy. His theory of the influence of climates foreshadows that of Montesquieu. Bodin collects carefully numerous small facts, definite and concrete information; daily experience and the observation of current events are the sources of his almost "scientific" researches concerning the laws of political life. It is somewhat surprising to note that as early as 1580 this thoughtful writer wrote a work (La Démonomanie des Sorcières) to demonstrate the existence of sorcerers and the legitimacy of their condemnation, on the basis of "experience" and respect for res judicata or the reliability of the courts. This belief in witchcraft rests on the same arguments as his theory of civil government.

In 1576 this somewhat puzzling man was chosen a deputy of the Third Estate (tiers état) to the States-General of Blois where he championed the cause of the Reformers, thereby incurring the royal displeasure. Fourteen years later (1590) as Attorney-General at Laon, he sided with the "Gitan" who recommended the citizens to do likewise, and finally went over to Henry IV. This superstitious believer in sorcery left in manuscript a work known as "Collatione Heptaplomeris" which propounds a certain rationalistic spiritualism. Though a 'civil magistrate and a partisan of the Ligue, his writings exhibit him as one of the earliest advocates of the theory of religious toleration. Brunetière assigns Bodin a place in French literature beside Henri Estienne and Amyot; at a time when men looked to antiquity for guidance only in the domain of good taste, all three showed that from the same source could be drawn lessons in history, politics, and morality.

Though Bodin had never abandoned the Catholic religion, and was buried in the Franciscan Church at Lyon, his writings often betray an un-Catholic temper, when they are not more or less openly hostile to the existing ecclesiastical order. In religion he inclines to an abstract theism. In keeping with the Gallican legists of France he champions the absolute supremacy of the State, though he bases it on the Divine will and the natural law; his ideal prince is not an impious and unjust ruler of the Machiavelli type. All the works of Bodin were published posthumously in 1590. From 1699 on the edition of 1690 continues the prohibition of his "Universe nature theatrum", Catholic theologians, like Pasquier have noted and refuted in the "République" certain errors and anti-Christian subtleties. "Judge by his writings," says Tousmaux (Diet. de théol. cath., II, 918), "he was a bizarre, inelegant, and superficial man."

Bodilian Codex. See Mas. of the Bible.

Bodone, a titular see of Albania. The name is a diacritical form of Dodone, in Epirus, near Janina at the foot of Mount Tomaros, or Tamaros, the present Oltisika (C. Carapanos, Dodone et ses ruines, Paris, 1878). At an early date a Christian church was built here on the site of the temple of Zeus. Theodorus, a Bishop of Dodone, was present at Ephesus, in 431; Philotheus appeared at Chalcedon in 451; Uranius, in 485, signed the letter of the bishops of Epirus Vetus to Emperor Leo; Philippus in 516 subscribed a synodal report of the bishops of Epirus to Pope Hormisdas; Constantius, on the invitation of John to the See of Nicopolis, the metropolis of the province (Hieredes, Synecodomos, 651, 5). When Naupactus was substituted for Nicopolis about the end of the tenth century, Dodone was the first suffragan see; the "Nova Tactica" (Georgius Cyriacus, ed. Gelser, 1683) has Molofus; but this is an error for Bodonitza, a form derived from Bodone (Parthey, Notit. episcop., App. 48). In fact the later "Notitiae" wrote only Bounditza (ibid., III, 524), or Bonitza (ibid., X, 416, XIII, 467). John, Bishop of Bonditza, issued a synodal act in 1076. The present name is Bonitza. When the Greek residential bishopric disappeared is unknown; the Roman curia used for a long time the forms Bonduna and Bodonensis, and a decree of 1894 directed this see to be suppressed at the death of its titular.

Body, Spiritual. See Resurrection.

Bode (also BODUS and BODTHUS). Hector, chronicler and one of the founders of the University of Aberdeen, b. at Dundee c. 1465; d. 1536. At
Paris he was a student, then Bachelor of Divinity, and finally a professor at the College of Montaigu, which had been founded on the principles of monastic poverty and severe routine by Jean Standone of Brabant, at one time rector of the university. At the college, Boeche formed a lasting friendship with Erasmus. From about 1495, Boeche was zealously aiding Wm. Elphinstone, the learned Bishop of Aberdeen, in carrying out the work of a Bull of Alexander VI, obtained at the request of James IV, chartering a university with all faculties in the city of Aberdeen. Finally, in 1505, having received help from various sources, they founded the now famous church of St. Nicholas, later known as King's College, and regular teaching took the place of the occasional lectures of the canons. The organization was modelled upon that of the Universities of Paris and Orléans. The foundation was to support, on mesne stipends, four doctors in the respective faculties, two teaching masters, five student masters, thirteen poor scholars, eight chaplains, and four choristers. Boeche was principal and read lectures on divinity and on medicine. History was not regularly taught, but both Elphinstone and Boeche made up for the defect. In 1527, Boeche received a pension of £50 Scots, and, from 1529 to 1534, a like amount, to be paid annually until he should obtain a benefit of 100 marks Scots. Besides his principality, he held the offices of Canon of St. Mary's and Rector of Tornay.

Boeche published at Paris, 1522, "Lives of the Bishops of Murthlack and Aberdeen", about a third of which is devoted to Elphinstone (d. 1514). In 1527 appeared, also at Paris, his "Scolorum Historiae" in seventeen books. Boeche was preceded in the field of published Scottish history only by the learned work of Mair. The Scottish translation of this work by Bellenden, in 1536, was later used by Holinshed and thus indirectly by Shakespeare. As a historian, Boeche has been praised for elegance, patriotism, and love of freedom; and most severely arraigned, even by contemporaries, for his credulity in the matter of historic origins. His literary honesty, attacked in his own day, has more recently been defended. The impetus which he gave to historical studies at Aberdeen has been of lasting effect.

BELLENDEN (1821).

J. VINCENT CROMWELL.

Boeiri (Boehier), PETRUS, a French Benedictine canonist and bishop, d. during the first quarter of the fourteenth century at Laredorte, department of Aude, canton of Peyriac Minervola; d. probably 1366. Of his early life nothing is known. An 1350, when he is first mentioned, Boeiri was Abbot of St. Chilian (St.-Anianus, Herault) in the small Diocese of Saint-Pons de Tomieres (Sandri Pontii Tomirieram) which at that time formed a part of the Metropolitan Province of Narbonne. Having been elected to the see at the Diocese of Avignon, he appointed Bishop of Orvieto, 16 Nov., 1364. A few years later (7 Oct., 1370) he was transferred by the same pontiff to the See of Vaison, near Avignon in France. But in 1371, shortly after Urban's death, he returned to Orvieto and remained in possession of that see until 28 June, 1379, when he was deprived of his bishopric by Urban VI for having espoused the cause of the Antipope Robert of Orso, whose reign at Avignon as Clement VII. Upon his deposition, he withdrew to France, into the See of Charlie, in the capacity of ambassador to the pontifical court at Avignon. (Duchesne, Liber Pontificale, II, 27-28.) However, 31 August, 1387, Clement VII likewise deposed him from his episcopal office and entrusted the temporal and spiritual administration of Orvieto to Thomas de Jarnie, Bishop of Grasse. Boeiri died shortly afterwards. He was the author of two commentaries on the Rule of St. Benedict; in one, written when he was Abbot of St. Chilian, he deals with the Rule from the point of view of the canonist; in the other, written in the Sacra Specie at Subiaco when he was Bishop of Orvieto, he deals with it more from the point of view of the ascetic. He dedicated the later commentary to Charles V, King of France. He also wrote a commentary on the Constitution "Pastor bonus" of Benedict XII; "Speculum Monachorum"; "De Medicis locutor St. Nicolai Pontificis" (an annotated copy of the "Liber Pontificialis", like-wise dedicated to Charles V); and began at Rouen in 1379 a treatise on the question of calling a general council with a view to ending the deplorable schism then distracting the Church. This treatise remained unfinished. With the exception of "In Regulam S. P. Benedicti Commentarium" (ed. Dom Leone Allodi, Subiaco, Rome), and "Nota in Damasi Pontificale" Boeiri's works have never been printed.

THOMAS OESTREICH.

Borromian Codex. See Ms. of the Bible; Le LONG, Jacques.

Boethius, ANICIUS MANLIUS SEVERINUS, Roman statesman and philosopher, often styled "the last of the Romans", famous by tradit. as the author of the "Consolation" of a martyr, b. at Rome in 480; d. at Pavia in 524 or 525. Descended from a consular family, he was left an orphan at an early age and was educated by the pious and noble-minded Symmachus, whose daughter, Rusticana, he married. As early as 507 he was known as a learned man, and as such was entrusted by King Theodoric with several important missions. He enjoyed the confidence of the king, and as a patrician of Rome was looked up to by the representatives of the Roman nobility. When, however, his enemies accused him of disloyalty to the Ostrogothic king, alleging that he plotted to restore "Roman liberty", and added the accusation of "sacilege" (the practice of astrology), neither his noble birth nor his great popularity availed him. He was carried in chains to prison, and executed at his own request, by order of Theodoric. During his imprisonment, he reflected on the instability of the favour of princes and the inconstancy of the devotion of his friends. These reflections suggested to him the theme of his best-known philosophical work, the "De Consolatione Philosophiae".

Tradition began very early to represent Boethius as a martyr for the Christian Faith. It was believed that among the accusations brought against him was devotion to the Catholic cause, which at that time his enemies accused him of disloyalty to the Ostrogothic king. In the eighth century this tradition had assumed definite shape, and in many places Boethius was honoured as a martyr, and his feast observed on the twenty-third of October. In recent times, criticism of the Boethian works has been extreme, and there have not been wanting critics who asserted that Boethius was not a Christian at all, or that, if he was, he abjured the Faith before his death. The foundation for this opinion is the fact that in the "Consolations of Philosophy", no mention is made of Christ, the sacraments, or the Church. A saner view, which seems at the present time to be prevalent among scholars, is that Boethius was a Christian and remained a Christian to the end.

That he was a Christian is proved by his theological
tracts, some of which, as we shall see, are undoubtedly genuine. That he remained a Christian is the obvious inference from the ascertained fact of his continued association with Symmachus; and if the "Consolations of Philosophy" bears no trace of Christian influence, the explanation is at hand in the fact that it is an entirely artificial exercise, a philosophical burlesque, in which, according to the ideas of method which prevailed at the time, Christian feeling and Christian thought had no proper place. Besides, even if we disregard certain allusions which seem to interpret in a Christian sense, there are passages in the treatise which seem plainly to hint that, after philosophy has poured out all her consola-
tions for the benefit of the prisoner, there are more potent remedies (validiora remedia) to which he may have recourse. There can be no reasonable doubt, then, that Boethius died a Christian, though it is not easy to show from documentary sources that he died a martyr for the Catholic Faith. The absence of documentary evidence does not, however, prevent us from giving his death the color of truth. The local cult of Boethius at Pavia was sanctioned when, in 1883, the Sacred Congrega-
tion of Rites confirmed the custom prevailing in that diocese of honouring St. Severinus Boethius, on the 23rd of October.

The science of mathematics and the theory of music Boethius contributed the "De Institutione Arithmetica Libri II", "De Institutione Musicae Libri V", and "Geometria Euclidis a Boethio in Latinum translate". The last-mentioned work is found in various MSS. of the eleventh and twelfth centuries. There is also found among the MSS. a work "De Geometria", which, in its extant form, is considered to be a ninth- or tenth-century elaboration of a work of Boethius. How far the work is genuine, and to what extent interpolations have crept in, is a question of more than ordinary interest for the stu-
dent of general history, for on the answer to this question depends the determination of the date of the first use of Arabic numerals in Western Europe.

Boethius' philosophical works include: (a) transla-
tions from the Greek, e.g. of Aristotle's logical treatises (with commentaries) and of Porphyry's "Isagoge" (with commentaries); (b) commentaries on Porphyry's "Isagoge", translated by Marcius Victorinus, and on Cicero's "Topica"; (c) original works in the categories of Logic, Syllogism, Categorics, "Introductio ad Syllogismos Categoricos", "De Divisiones" (of doubtful authenticity), and "De Differentiae Topicae". These exercised very great influence on the development of medieval terminology, method, and doctrine, especially in logic. In fact, the development, down to the beginning of the twelfth century, depended entirely on Boethius for their knowledge of Aristotle's doctrines. They adopted his definitions and made them current in the schools; for instance, the definitions of "person", "eternity".

The theological works of Boethius include: "De Trinitate"; two short treatises (opuscula) addressed to John the Descon (afterwards Pope John I); "Liber contra Eutychen et Nestorium"; and "De Fide Catholica" (generally regarded as apocryphal, although the only argument against its genuineness is the lack of manuscript authority). These were much studied in the early Middle Ages, as is testified by the number of glosses found in the MSS. as far back as the ninth century (e.g. glosses by John Eriugena and Remi of Auxerre). The theologians of the Middle Ages generally they appealed as the genuine works of the Christian martyr, Boethius. In modern times, those who denied that Boethius was a Christian were, of course, obliged to reject all the opuscula as apocryphal. However, the publica-
tion of the so-called "Anedonten Holderi" (ed. by Urban, Leipzig, 1887) brought to light a new argument for their genuineness. For it is now proved that certainly to have known which works of Boethius were genuine, when he wrote "[Boethii] scripsit librum de Sancta Trinitate et capita quaedam dogmatica et librum contra Nestorium", he settled the question as far as four of the treatises are concerned. Boethius' best-known work is the "Consolations of Philosophy" written during his imprisonment—"by far the most interesting example of prison literature the world has ever seen." It is a dialogue between the Prince of Arts and Boethius, in which the Queen of Sciences strives to console the fallen states-
man. The main argument of the discourse is the transitoriness and unreality of all earthly greatness and the superior desirability of the things of the mind. There are evident traces of the influence of the Neo-Platonists, especially of Proclus, and little, if anything, that can be said to reflect Christian influences. The recourse to Stoicism, especially to the doctrines of Seneca, was inevitable, considering the nature of the theme. It does astonish the modern reader, although not surprise the medieval student, that Boethius, a Christian, and, as everyone in the Middle Ages believed, a Christian martyr, should have failed, in his moment of trial and mental stress to refer to the actual Christian sources of consolation. The medieval student of Boethius understood better than we do that a strictly formal dialogue on the consolation of philosophy should adhere rigorously to the realm of "natural truth" and leave out of consideration the lesson to be derived from the moral maxims of Christianity—"supernatural truth".

The work takes up many problems of metaphysics as well as of ethics. It treats of the Being and Nature of God, of providence and fate, of the origin of the universe, and of the freedom of the will. In medieval times, it became one of the most popular and influen-
tial philosophical books, a favourite study of statesmen, poets, and historians, as well as of philoso-
phers and theologians. It was translated into Anglo-Saxon by King Alfred the Great, and into Old German by Notker Teutonicus; its influence may be traced in Beowulf and in Chaucer, in Anglo-
Norman and Provençal popular poetry, in the first specimens of Italian verse, as well as in the "Divina Commedia". The important part which it played in Dante's mental struggle after his exile can be described in the "Convito", where, strange to say, it is referred to as "a book not known to many". "Echoes of it and citations from it occur frequently in the "Divina Commedia". For instance, the lines which Tennyson paraphrases by "a sorrow-crown of sorrow" are themselves at least a haunting memory of Boethius "In omni adversitate fortunae infeliciissima genua est infortunii suae felicem" (De Consol. Phil., II, Pros. IV). That the "De Consolatione" was a favourite study of the theolo-
gians as well as of the poets is evidenced by the numer-
ous imitations under the title "De Consolatione Theologiae" which were widely read during the later Middle Ages. The complete works of Boethius were first published at Venice in 1497; the best edition is in P. L. LXXIII, LXV. A good edition of the "De Consolatione" is that of Peiper in Teubner Collection, where are also to be found the commentaries on ARISTOTLE, ed. MEIBERG.

Bogadines. See FRANCISCANS.

Bogomil, a Neo-Manichean sect, found in the
later Middle Ages at Constantinople and in the
Balkan States. Doctrinal Principles.—The admis-
sion of a twofold creative principle, one good,
the other evil, formed the basis of the doctrinal
system of the Bogomil, as of all Manichaean sects.
Others, however, taught that man had dualized and
confused these two principles, but their teaching in its
fuller development was less dualistic. God the Father,
according to them, had a human appearance but
was incorporeal. He had two sons, the first-born,
Satanael, and the younger, Jesus Christ or Michael.
Satanael, though seated at the right hand of the
Father and endowed with creative power, rebelled
and was, with some of the angels, his followers,
cast out of heaven. He created a second heaven
and a second earth, and formed man out of earth
and water. Being unable to give him a living
spirit, he besought the Father to bestow life on this
new creation, which would be their common prop-
erty. God consented and thus man is the pro-
duction of two creators. Eva, created in a similar
manner, was seduced by Satanael. In punish-
ment of this sin, Satanael lost his creative
power, but retained sway over his own creation
and strove successfully for the ruin of man. To
save mankind, God sent his second son, Jesus,
who starved the right ear of Mary and took
from her the semblance of a human body; indeed,
everything material in Him was merely appearance.
Jesus vanquished Satanael, who lost his divine
name El, and was henceforth called Satan. His
place in heaven was now occupied by his conqueror.
The Holy Ghost was sent forth, but dwells only
in the Bogomil. Both He and Jesus will ultimately
be absorbed by the Father, the only surviving
person in God. The sect rejected the Old Testa-
ment, except the Psalter and the Prophetic books.
Instead of baptism, it was admitted only a spiritual
baptism; it denied the Real Presence in the
Eucharist, condemned marriage, rejected images,
and prohibited the eating of meat.

History.—The name of the Bogomil has been
traced by some to Bog Milti (God have mercy), a
formula of prayer believed to have been in fre-
frequent use among them; others have sought its
origin in Bogomil (beloved of God), which is also
said to have been the name of a prominent repre-
sentative of the sect in the tenth century. Other
names were also applied to the members of the
sect by its adversaries; but they called them-
selves Christians. The Bogomil probably de-
veloped from the Euchites and, although they
existed previously, became prominent in the twelfth
century. They are first mentioned by name in
1115 at Philippopolis (European Turkey). More
definite knowledge regarding them was obtained
when their leader Basil, monk and physician, who
had surrounded himself with twelve apostles, be-
came known at Constantinople to the emperor
Alexius I, Comnenus (1081-1118). The latter
cleverly obtained from Basil a frank exposition of
the doctrine of the sect. Having received this
information, he demanded from the leader and
those of his followers who could be seized a re-
traction of their errors. Some complied with
this demand and were released; others remained
obstinate and died in prison. Basil alone was
condemned to death (1115) and burned. Vigorous
as the repression was, it did not suppress the In-
crease of the sect. In 1140, the Patriarch Germanus
of Constantinople (1147). The Patriarch Germanus
(1221-39) continued to combat the pernicious
practices of the sect; in 1143, two bishops of Cappadocia
were deposed for embracing its tenets; and the favour
extended to one of its adherents, the monk Niphon,
captain of the fleet of Commas, Patriarch Nicetas
of Constantinople (1147). The Patriarch Germanus
(1221-39) continued to combat the pernicious
doctrines; new condemnations were issued by the
synods of Constantinople in 1316 and 1325.
The Bogomil, however, remained until the conquest
of the Balkan States by the Musulmans in the
fourteenth and fifteenth centuries.

BOGOTA

Bohemia (Germ. Bohmen, or formerly Böheim; Lat. Bohemia or Bojaehumen), a cisleithian (i. e. west of the River Leitha) crown province of the Austro-

N. A. WEBER.

Bogotá (Bogotennia), Archdiocese of Santa Fé de Bogotá.—The city of Bogotá, capital of the republic of Colombia, is situated on a plateau 8700 feet above
the sea level, at the western base of the Guadalupe
and Monserratt mountains, in the eastern cordilleras
of the Andes. High mountains surround this plateau
on all sides except to the southwest, where the river Pancha cuts its way to Magdalena, forming, a few
miles from the city, the falls of Tequendama 475 feet
in height. Two other rivers, the S. Francisco and the S. Augustino, divide the city. Bogotá was founded by the S. Augustino and Carlos III, in 1538
and 1548 respectively. In 1568, the capital of Nueva Grenada, which was then a viceroyal province, and in 1819, when Colombia became independent of Spain, Bogotá was made the capital of the new republic. Bogotá is a quaint city, its lack of easy communication with other foreign
cities having perpetuated its ancient Spanish char-
acter. Though the capital of the republic, it has a
population of only 100,000 inhabitants.

The Archdiocese of Bogotá, the primatial see of
Colombia, was created by Pope Pius IV in 1564.
At first it had six suffragan sees, on account of the
tremendous growth of the population of the diocese.
Pope Leo XIII, in 1902, separated the bishopric of
Medellin from it, and erected it into a province.
The actual suffragan sees of Bogotá are: Antioquia
(Antiquoquia), which was erected a bishopric by
Pius VII, 31 August, 1804, re-elected by Pope Leo
XII, 19 January, 1829, suppressed in 1868, and
re-established by Pius IX, 29 January, 1873. This
bishopric contains 211,000 Catholics, 69 Protestants,
35 secular priests, and 80 churches and chapels.
Jesuits (Bojanienia), of which no accurate statistics
can be given, as the diocese has only lately been
created. It was formerly, with the bishopric of
Garon, suffragan to the see of Tolima, and at the
extinction of this see was assigned to the Metropolitan
see of Bogotá. It has for its limits the provinces of
North and Central Colombia. Nueva Pamplona
(Nea-Pampileonienis), erected into a bishopric by
Gregory XVI, 25 September, 1835. It contains
260,000 Catholics, 8 secular priests, 7 regular priests,
and 46 churches and chapels. Socorro (de Succursa),
erected as a bishopric by Pope Leo XIII, 20 March,
1895, contains 230,000 Catholics. Tunja (Tunjuan-
seis), erected as a bishopric in July, 1850, by Pope
Leo XIII, contains 350,000 Catholics, 10,000 pages,
50 churches, and 159 chapels.

The religious orders of men represented in
the Archdiocese of Bogotá are: Jesuits, Franciscans,
Augustinians, Salesians, and the Brothers of the
Christian Doctrine. Those for women are: Sisters of
Charity, of the Visitations, and of the Sacred
Sisters of the Good Shepherd, Salesians, Dominicans, Carmelites, and the Little
Sisters of the Poor. Most of these orders, especially
those for men, have charge of the schools and colleges.
There are in the archdiocese 1 seminary, 30 colleges
and academies, 150 schools, and 18 hospitals.

Konservations-Lett. 1, 1896; Battermann, Missionspost Cath.
M. DE MOREIRA.
BOHEMIA

hunigian Monarchy, which until 1526 was an independent kingdom.

PHYSICAL CHARACTERISTICS.—Bohemia has an area of 20,058 square miles. It is bounded on the north-west by Saxony, on the north-east by Prussian Silesia, on the south-east by Moravia and the Grand Duchy of Bavaria, on the south by the province of Upper Austria, and on the south-west by Bavaria. It is enclosed on three sides by mountain ranges, namely: the Bohemian Forest (Böhmerwald), the Ore mountains (Erzgebirge), and the Sudetic mountains. The highest peaks of these ranges seldom rise above 4,923 feet. On the fourth, or south-eastern, border Bohemia is separated from Moravia by a moderately high range called the Bohemian-Moravian highlands (about 1,988 feet high). The country resembles the flat bottom of a trough with a depression towards the north. The average height above sea-level is 1,460 feet. Bohemia is drained by the Elbe, which rises in the Isergebirge, a range of the Sudetic mountain system. After receiving the waters of the Moldau, a stream from the south, the Elbe flows for a distance of 152 miles through Bohemia at Tetschen near the most northern point of the country. Besides the Moldau, which may be called the most important river of Bohemia, the chief tributaries of the Elbe are the Iser and the Labe.

Geologically the country forms the so-called Bohemian system of mountain ranges, the spurs of which run into Moravia and Silesia. The greater part consists of old crystalline rocks; in the south gneiss predominates, in the north the formation is chiefly cretaceous sandstone, with tertiary deposits due to the action of water from the south. This part of the country also shows volcanic action, as in the Bohemian mineral springs. The climate is moderate and, with the exception of the mountain districts, shows great variations of temperature. The mean temperature of the year is about 46.4° Fahrenheit. Bohemia has much mineral wealth; it is especially rich in silver, tin, lead, semi-precious stones, such as Bohemian garnet, hard coal, and lignite.

POPULATION.—According to the last census (31 December, 1900), Bohemia has a population of 6,318,697. It is one of the most thickly settled provinces of the monarchy, having 315 inhabitants to the square mile, 33 per cent above the average for the empire, and the Germans 36 per cent. The Germans live chiefly near the boundaries of the country, especially near the northern and north-western boundaries.

NATIONAL HISTORY.—Bohemia (home of the Bohemian language) owes its name to the Boii, a Celtic people which occupied the country in prehistoric times. About 78 B.C. the land was occupied by a Suevic people, the Marcomanni, while the related tribes of the Quadi settled in Moravia and that part of Hungary adjoining Moravia. Some years after the birth of Christ, Marobud, King of the Marcomanni, united the German tribes as far as the North Sea and the Baltic to form a great confederation which menaced the Roman Empire. When the Marcomanni and the Quadi left Bohemia and Moravia in the sixth century, there came in from the north-east a Slavonic people which was soon to appear in history under the general name of Cechi (Czechs). Before the close of the sixth century this Slavonic people came under the domination of the Avars of Hungary. But early in the seventh century they regained their independence with the aid of the Frankish Saxon, whom the Czechs elected as their king. In 796, Bohemia paid tribute to Charlemagne. Eighty years later Borziwio, Grand Duke of the Cechs (Czechs), seems to have been tributary to Swatopolk, King of the West Slavs. The church followed the break-up of the Empire of Great Mo-

Bohemia.

Procopius the Great, and Procopius the Less, upon Mount Tabor, and from 1419 to 1434 they made marauding expeditions from that point in all directions. The army of Sigismund, in the Fifth Crusade, accomplished nothing. An agreement was finally made with the moderate Utraquists (called Calvinists) in 1433. By this agreement, which is called "the Compacta of Basle," or "of Prague," the cup was granted to the laity; at the same time the teaching of the Church as to the Real Presence of Christ under each form was insisted upon. From the descendants of the radical Taborites sprang later the Bohemian and Moravian Brethren.

A great number of parishes and other cures of souls had been obliterated during the Hussite wars; in those which still remained there was a woeful lack of priests, especially for the German population. It was, therefore, easy for Protestantism to make rapid advances, especially as it was looked on with favour by both the nobility and the people. Desertion of the Church was accompanied by treason against the hereditary dynasty. In 1547, a large part of the population took sides with the League of Smalkald, and in 1618 Bohemia was the starting point of the Thirty Years' War which brought such terrible disasters upon the whole of Germany. During this war the population of Bohemia fell from three millions to eight hundred thousand. The Hapsburg dynasty finally gained the victory. The nobility were punished for their treason, either by execution or by banishment, with confiscation of property; the rebellious cities lost their freedom; the common people either emigrated or returned to the Catholic Faith. In 1655, the See of Leitmeritz was founded; in 1644 the Emperor Ferdinand IV erected a new bishopric at Konigratz, to take the place of Letimischl, which had disappeared during the Hussite wars. Finally, in 1734, the Emperor Joseph II made the new Bishopric of Budweis out of the southern part of the Archdiocese of Prague.

Present State of Dioceses.—Bohemia is divided ecclesiastically as follows: The Archdiocese of Prague includes the north-western and central parts of the country, the Diocese of Leitmeritz embraces the northern part, the Diocese of Konigratz takes in the eastern part, and the Diocese of Budweis the southern part of the country. In addition to its share of the territory of Bohemia, the Archdiocese of Prague also includes the countship (Grafschaft) of Glats in Prussian Silesia.

Religious Orders.—There are in the archdiocese 14 orders for men, having 36 houses; the total number of members of the orders is 704, of these 416 are priests, 135 are clerics preparing for the priesthood, and 153 are lay brothers. Special mention should be made of the Benedictines at Frenhausen, of the Jesuits in Prague, and of the Premonstratensians at Tepl. There are also 21 orders for women, with 1,517 members. The Diocese of Leitmeritz has 13 orders for men, with 31 houses. The members of these orders include 136 priests, 1 clerics preparing for the priesthood, and 49 lay brothers. The Cistercian Abbey of Osegg and the Jesuit college at Mariasheim are worthy of special mention. There are 10 orders for women, with 62 houses and 651 members. The Diocese of Konigratz has 9 orders for men, with 88 priests; and 8 orders for women, with 442 members. The Diocese of Budweis has 13 orders for men, in 32 houses; these orders include 131 regular priests; the orders for women are 7, with 419 members. The Cistercian Monastery of Hohenfurt, founded in 1259, should be mentioned in connexion with this diocese.

Educational and Charitable Institutions.—In the Archdiocese of Prague there are: 1 seminary for priests, 1 private gymnasium, 3 homes for university students preparing for the priesthood, 82 hospitals, homes for the poor, orphanages, etc., over 200 endowments for the aid of the poor, and 34 associations of St. Vincent de Paul. In the Diocese of Leitmeritz there are: 1 theological school, 1 high school for boys, 5 homes for university students preparing for the priesthood, 11 Catholic primary schools, 2 grammar-schools, 8 boarding-schools, 18 industrial and advanced schools, 20 orphanages, 7 asylums for children, 14 kindergartens, 20 crèches, and over 130 homes for the poor, hospitals, etc., as well as 13 Conferences of St. Vincent de Paul. In the Diocese of Konigratz there are: 1 theological school, 1 seminary for priests, 1 boys' seminary, 7 boarding-schools for girls, 2 training-schools for women teachers, 10 other schools for girls and young women, 21 institutions for the care of children, 4 orphanages, hospitals, etc., over St. Vincent de Paul, and numerous endowments for the aid of the poor. In the Diocese of Budweis, besides 1 theological school and 1 seminary for priests, there are under ecclesiastical control: 1 boys' seminary, 1 home for university students preparing for the priesthood, 12 girls' schools, 23 kindergartens, 7 boarding-schools, about 140 stipends for students, 99 hospitals, homes for the aged and the poor, and 8 conferences of St. Vincent de Paul.

Relations of Church and State.—Since the last years of the reign of Maria Theresa and es-
BOHEMIA

especially since the time of Joseph II, the Catholic Church in Austria has suffered from state interference. According to existing laws, the State at present guarantees to the recognized denominations freedom from molestation in the management of their internal affairs. The State avoids every interference in the field of ecclesiastical discipline, but it also claims that the religious associations, like all other associations, are subject to the general state laws in their "outward legal relations". The sore point in this condition of things is this: that the State assumes for itself the right to define the boundary between internal and external legal relations. At present state control shows itself in the appointment of ecclesiastical officials, in the co-operation of the State in determining and collecting church dues and taxes, in measures for the protection of the property of the Church, and in a certain supervision of the church press, which is hardly perceptible. The legal position of the Catholic Church in Austria rests on the Imperial Patent of 8 April, 1861, and the law of 12 July, 1874.

Incorporation of Churches.—In the Archdiocese of Prague there are 32 parishes incorporated with the Premonstratensian foundation at Tepl, the other orders in the diocese have 28 parishes incorporated with the Dominicans. The Cistercians at Oesse control 11 parishes, the other orders for men, 12; in the Diocese of Kéniggritz there are 10 parishes united with the Benedictine houses, and 6 with the Premonstratensians; in the Diocese of Budweis the Monastery of Höhenfurt controls 16 parishes, the other orders have 13 incorporated with their foundations.

Taxation of Churches.—Churches, public chapels, and cemeteries are exempt from the income-tax, ground- and dwelling-tax.

Plan of the Army.—Theological students are exempt, both in war and in peace, from all forms of military service, from military training, exercise with weapons, and reserve service; but after they have been ordained they can be called upon to serve as army chaplains in case of the mobilization of the whole army. Parish priests are exempt from paying the direct and the local taxes, and from jury duty. Parish priests have the right to accept an election to community and district councils. The installed ecclesiastics have the right of legal residence in that community in which they live permanently. Without regard to the actual payment of taxes they are entitled to vote for the local boards, for the provincial diet and for the imperial parliament (Reichstag); as a rule they are included in the first class of the electoral body. Only one-third of the fees of a parish priest can be attached for debt; besides this, his income cannot be reduced below 1,800 kronen ($320), nor the income of a retired priest below 1,000 kronen ($200). According to the law of 1898, which was intended to equalize clerical salaries, the salary of a parish priest at Prague was set at 2,400 kronen ($450); in the suburbs, up to a distance of over nine miles from the city walls, with over 5,000 inhabitants, at 1,800 kronen ($360); in other places at 1,600 kronen ($320) or 1,400 kronen ($280). In Prague the salary of an assistant priest was set at 800 kronen ($160) or 700 kronen ($140).

Marriage and Divorce Law.—For Catholics, residing in Prague, 25 May, 1868, with which the second main section of the civil code, treating of the law of marriage, came again into force. According to this anyone can enter into a marriage contract when there is no legal impediment. Apart from the exceptions arising from the duties of certain positions and those due to the army laws, these impediments rest on: (1) lack of consent; (2) lack of ability for the married state; and (3) lack of the necessary formalities. Under the first head are (a) impediments from inability to give consent, as mental disease (violent mania, lunacy, imbecility); minority, and control of guardians, (b) impediments resting on lack of actual consent, as compulsion through well-grounded fear, seduction, mistake in the identity of the future consort, pregnancy of the woman before marriage by another person. Under (2) belong (a) impediments from incapacity for impediment from the lack of moral ability, such as an unexpressed sentence of imprisonment for felony; a still existing previous marriage; consecration to Holy orders, or a solemn vow of celibacy; difference in religion (e.g. the marriage of a Christian and a non-Christian); relationship in the ascending and descending line, or close family connexion (as brothers and sisters, cousins, uncle and niece, aunt and nephew); degrees of affinity parallel to the forbidden degrees of consanguinity; adultery proved before the contracting parties, or murder or attempted murder of a consort. In (3) are (a) the impediments arising from the lack of publication of the bans, and (b) those from lack of the prescribed formalities of a marriage contract. Lastly, the civil law adds to these the impediments, enacted by the Catholic Church (for Catholics), of participation in the cause of divorce, and the impediment caused by the lack of a certificate of birth. A temporary impediment exists for widows, who are not allowed, as a rule, to marry again before the expiration of six months after the death of the husband. Some of these ecclesiastical impediments to marriage can be set aside; others are irremovable. Among the latter are all those which would give an appearance of guilt to a marriage contract or the circumstances. Dispensation from these impediments are granted by the civil authorities. Catholic married couples can be separated from bed and board. A dissolution of the bond of marriage does not take place; that is, no married Catholic, either husband or wife, can enter upon a new valid marriage before the death of the consort.

Testamentary Laws.—A secular cleric has the right to free disposal of his property both in life and at death. The clergy has testamentary control over those objects which belong to his office, and which by law descend to his successor, such as mitres, vestments intended to be worn during Mass, etc. In consequence of the vow of poverty, members of religious orders are incapable of inheriting or disposing of property. Large legacies to a church, a religious or charitable foundation, or a public institution must be announced at once by the court to the governor or president of the province. A half-yearly list of smaller legacies must be sent to these authorities. Legacies for the benefit of the poor, those intended for religious or charitable foundations, for churches, schools, parishes, public institutions, or other religious and benevolent purposes must be paid over or secured before the heirs can inherit the property.

Burial Laws.—Old graveyards are ordinarily regarded as dependencies of the parish church, and as such are considered, even by the Law of 8 April, 1870, as being ecclesiastical institutions. But in sanitary regards the graveyards are controlled by the police regulations of the community. Denominational cemeteries can be enlarged or laid out anew. For this, however, the consent of the civil authorities and of the parties interested is necessary, although the community refuses to enlarge the cemetery, the
responsible for providing a proper burial-place falls on the civil community. But a parish community or a church vestry cannot be compelled by the authorities to enlarge or lay out a church cemetery. If in the same community both a town cemetery and a Catholic cemetery exist, the burial of the dead in the public cemetery is not obligatory, but every Catholic has the right to bury the members of his family in the Catholic cemetery. When a Catholic cemetery serves also for the burial of non-Catholics, a part of the cemetery is to be set apart specifically and exclusively under the care of the non-Catholic community. Where a part of a Catholic cemetery is used for non-Catholic burial without the formal separation of the parts, the non-Catholic clergyman must follow the regulations of the law; he may conduct the burial with prayer and benediction, but there can be no singing nor address.

Bohemian Brethren (Moravian Brethren, or Unitas Fratrum).—Definition, and Doctrinal Position.—Bohemian Brethren, Moravian Brethren are the current popular designations of the Unitas Fratrum founded in Bohemia in 1457, renewed by Count Zinzendorf in 1722, and still active in our own day. Placing life before creeds, the Moravian Church seeks not to separate the living church from the life of individuals, but rather to constitute of regenerated men and women, while it affords a common meeting-point for Christians who apprehend dogmas variously. Personal faith in the crucified Saviour constitutes the chief foundation for the fellowship thus established. Scripture is the only rule of faith, but “nothing is posited as to the mode of inspiration, for this partakes of the mysteries which it has not pleased God to reveal”. The Trinity, the Fall, Original Sin, and “Total Depravity” are admitted, but “discussion about them is shunned”. The fourfold kingdom of God manifested in the life of the church is foundational. There are no sections. The church is one, the centre of Moravian belief and practice. Justification by faith alone and the necessity of regeneration “are posited as facts of personal experience”. Sanctifying grace, the need of prayer, and other public means of grace, a complete ritual, a strict discipline, “the orders of the ministry with no conception of the functions of the episcopate”, i.e. bishops ordain, but the episcopal office implies no further ruling or administrative power (see Zinzendorf, Bp. Zinzendorf), Baptism and the Lord’s Supper as the only sacraments, and the common Christian eschatology: Resurrection, Judgment, Heaven, Hell; such are the tenets from which Moravians are expected not to depart, whilst they are allowed to speculate about them on Scriptural lines with entire liberty.

History of the Ancient Unitas Fratrum (1457-1722).—The Bohemian Brethren are a link in a chain of sects beginning with Wycliff (1324-84) and coming down to the present day. The ideas of the Englishman found proper soil in Bohemia, but with Hus and Wycliff’s successors it proved a better soil for their growth than England. Both Wycliff and Hus were moved by a sincere desire to reform the Church of their times; both failed and, without intending it, became the fathers of new heretical bodies—the Lollards and the Hussites. The former were persecuted out of existence in Eng-
confers the hope of eternal salvation. The rich were requested to abandon their wealth and worldly pomp and to live in voluntary poverty. The brethren were to give up the practice of professions for the benefit of the Brotherhood. Anyone not observing the brotherhood of faith and practice was to be separated from the community.

Meanwhile the persecution continued. The Utraquists (Catholicoes) priests refused to accept the Sacrament to the Brethren. These, therefore, were forced to constitute a priesthood of their own belief. A bishop and a number of priests were chosen by lot, and the separation from the Utraquists became an accomplishment. The breach between the Austrian Waldenses, who was believed to have received consecration from a real bishop, gave episcopal orders to the ex-parish priest, Michael, and Michael consecrated his friend, Matthias, bishop and ordained several priests. The new Bishop Matthias of Kunwald then reordained his consecrator, to make him a true priest of the Brotherhood. This happened in 1467 at the synod of Lhotka, near Reichenau, where also those present were rebaptized. The breach with both Catholics and Utraquists was now completed, and the Brethren began to be called Smalkalds by the common people. The original object of the Sacrament of the Lord's Supper was again prevented by the rigid morals of the Lutherans in Bohemia and Moravia. Augustus pleaded for stricter church discipline, but Luther dismissed him, saying: "Be you the apostle of the Bohemians, I will be the apostle of the Germans as circumstances direct. We will do the same here." (1452). Soon afterwards the Bohemian Estates were requested to join Charles V in his war against the Smalkaldic league. Catholics and old Utraquists obeyed, but the Bohemian Protestants, having met in the house of Brother Kostka, established a kind of provisional government composed of eight members, four of whom belonged to the Brotherhood, and appointed a general to lead the armed rebels into Saxony against the emperor. Charles's victory over the Lutherans in 1547 brought no change. The Brethren had no choice but to submit to their king, Ferdinand I. The Brethren, who had been the chief instigators of the rebellion, were now doomed to extinction. John Augustus and his associate, Jacob Bilek, were cast into the dungeon. Later, in 1575, the stirring of the people throughout the whole kingdom; those who refused to submit were exiled. Many took refuge in Poland and Prussia (1578); those who remained in the country joined, at least pro forma, the Utraquist party. Owing to Maximilian II's leniency and to Protestant propensities, the number of Brethren declined in the following years. Ferdinand II, after his victory over the rebellious Bohemians at the White Mountain near Prague (1620), after 1620, offered them the choice between Catholicism and exile. Many Brethren emigrated to Hungary, others joined the greater number from Poland. Others settled in Liassa (now in Prussian Posen). Even to this day there are in that district seven communities calling themselves Brethren, although their confession of faith is the Helvetic. In Prussian Silesia there are also three communities of Brethren claiming descent from the Bohemian Brotherhood.

**THE BOHEMIAN BRETHREN AND ENGLAND.**—During the reign of Maximilian II and Rudolph II the Bohemian Brethren enjoyed a period of prosperity which allowed the brethren to convert to the Utraquists in conference at Prague. The Brethren sent a few rude, unlettered fellows to give answers to the questions of the preachers. The king regarded this as an insult and ordered all the meetings of all the brethren to be burnt, and the recalcitrants to be imprisoned (1508).

The Brethren now began to look for foreign sympathy. Erasmus complimented them on their knowledge of faith, but refused to commit himself further. Luther objected to their doctrine on the Eucharist, and they were forced to promise not to baptize, to the belief in seven sacraments. In the year 1528, as a last resort, they invited the famous Martin Luther to the brotherhood. He was invited by his English friends to assist in improving the state and administration of the universities, then under consideration in Parliament. The outbreak of the Civil War brought all these plans to naught,
and Comenius returned to Germany in 1642. His influence in England allowed him to set on foot several collections for his severely persecuted church in Poland: the first three were failures, but the fourth, authorized by Cromwell, produced £5,900, of which approximately £4,700 was sent to Poland, and £1,200 was in 1658-59. Intercourse with the Anglican Church was kept up uninterruptedly until the remnants of the ancient Brotherhood had dwindled away and been swallowed up by other Evangelical confessions. Then the renewed Brotherhood was established in England and it benefited by the memory of former friendly relations.

**History of the Renewed Brotherhood.** — Persecution from without and dissension within welleighed brought about the total extinction of the Bohemian Brethren. The small but faithful remnant was, however, destined to blossom into a new and vigorous religious body under the name of Moravian Brethren. The founder and moulder of this second *Unitas Fratrum* was the pious and practical Count Zinzendorf (b. 1700, d. 1760). In 1722 the Lutheran Pastor Rothe, of Berthelsdorf in Upper Lusatia, introduced to the Count, from whom he held his living, a Moravian carpenter named Christian David. This man had been deputed by his co-religionists to look out for a concession of land where they could freely print their religion. Zinzendorf was acquainted with the history and the tenets of the Bohemian Brethren, but in his charity, he granted them the desired land, on the slopes of the Hutberg in the pariah of Berthelsdorf. In a short time emigrants from Moravia founded there a colony, called Herrnhut. The colonists worshipped at the Lutheran parish church. Two years later, there arrived from Zschenthal in Moravia five young men fully conscious of being true members of the old "Bohemian Brethren." At once Zinzendorf recognized the skilfulness of his own Zinzendorf and his friends. The count was not slow in perceiving that the colonists, all simple labourers and craftsmen, were more concerned with church discipline and Christian rules of life than with dogma. Accordingly he set about elaborating a constitution for a community of which religion should be the chief concern and bond of union. He left Dresden and, with the pastor's leave, began to work as a lay catechist among the Brethren at Herrnhut. The community met for their religious services in the cellars of the Brethren, either chosen by lot or elected by the assembly, acted as minister. In 1731 they seceded from the parish church and added to their usual services the celebration of the Lord's Supper. They were divided in "choirs" according to age, sex, and calling; each choir was ruled by elders (male and female), pastors, and administrators chosen among its members. The female choirs were distinguished by their dresses. Widows, unmarried young men, and young women formed separate choirs under the supervision of elders. Everything at Herrnhut was controlled by the College of Elders, even matrimony, subject to the sanction of the lot. Provision was made for the poor and the sick, for prayer meetings, and for the education of children. Zinzendorf administered the property accruing to the community from donations. Great care was given to the education of the young, Zinzendorf being anxious to raise a generation that would perpetuate his work. The organization of the renewed Brotherhood was complete in the year 1732. Not only the doctrine of the Brethren that any human being can, through the grace of God, become a saint but that, since the Fall he has no power whatever left to help himself. (2) The doctrine of the Divinity of Christ: that God, the Creator of all things, was manifested in the flesh, and reconciled us to Himself; that He is before all things and that in Him all things consist. (3) The doctrine of justification and satisfaction made for us by Jesus Christ: that He was delivered for our offences and raised again for our justification and that by His merits alone we receive freely the forgiveness of sin, faith, and eternal salvation. (4) The doctrine of the Holy Spirit and the operation of His grace: that it is He who worketh in us conviction of possessions in the West Indies and in Greenland for the field of his labours. His first missionaries were sent out in 1732 and 1733. Feeding, however, that as a simple layman he could not well confer missionary powers, he took orders at Tübingen in 1734 and was consecrated a bishop of the Reformed court-preacher Jablonsky of Berlin, in whose family the Moravian episcopacy, originated in 1467 by a validly ordained Waldensian bishop, had been—or was said to have been—preserved. Persecution was not long in coming. The orthodox Lutherans of the Brethren's interest enemies. The Imperial Government in Vienna strongly objected to their propaganda in Bohemia, which caused Austrian subjects to emigrate and sawed discontent in the country. Under imperial pressure the King of Saxony banished Zinzendorf for ever. The zealous count put his exile to good use. During the ten years (1737-47) of his absence from Saxony he founded congregations in Holland, England, Ireland, America; new ones also arose in Germany at Herrenhag, Neuwied, Gnadenfrei, Gnadenberg, and Neusatz. Zinzendorf showed a special predilection for the London establishment. In 1750 he fixed his residence in the English capital and from there ruled the whole "Unity of Brethren." But in 1758 he returned to Germany and remained the centre of the whole administration. To the present day the "Provincial Board of Elders for Germany" occupies Zinzendorf's own house at Berthelsdorf. The finishing touch of the new church system is the liberty enjoyed by those who join it to retain the Lutheran, the Reformed, or the Moravian Confession to which they belonged, and to be placed under the rule of Elders of the same religion. This peculiar feature shows the founder's disregard for dogmas and the great value he attached to the religious community. However much, in this and in other points, he copied the Catholic Church, yet he was to the end a faithful adherent of the Augsburg Confession and obtained from the Consistory in Dresden an official acknowledgment that the Moravian Brethren were followers of the same faith. He also succeeded after a long struggle in securing for the Brotherhood recognition as a separate church. Wherever he found it, he died in 1760, his work and his spirit lived on in the strongly organized body of the "Unity of Brethren." No material changes have taken place since. In 1775 the Brethren, assembled in a synod at Barby, adopted the following statement of principles:
sin, faith in Jesus, and purpose in heart. (5) The doctrine of the fruits of faith: that faith must evidence itself by willing obedience to the commandments of God, from love and gratitude."

Faith in the Redemption and entire surrender of self to Christ (with Whom in 1741 a spiritual covenant was made) are held to be the very essence of religion. The children were brought up by casting of lots as the final sanction in case of marriage (until 1820), in the election of superiors (until 1899), etc. Zinzendorf ruled as bishop over all the communities, both in Europe and America, but since his death the episcopal office has remained a mere title. In 1857 the British and American Unity became independent; the only bond of union being now the General Synod held once every ten years.

The Moravians in England.—The beginnings of the Brethren's Church in England are an interesting chapter in the commerce of thought between Germany and that country. The German dynasty on the English throne had attracted a strong colony of their countrymen; towards the middle of the eighteenth century London alone numbered from 400 to 1000 Moravians, and other Moravian congregations in Britain were so numerous that these would naturally be in sympathy with the Brethren. But the "Religious Societies" founded by Doctor Smithies, curate of St. Giles, and Dr. Hornec, of the Lower Palatinate, together with the writings of the famous birthright and father of Moravian nationality (1742) and the studies of the eighteenth century—had prepared the minds of many Englishmen for stronger spiritual food than that offered by the established religion. Hornec was a German Pietist, and William Law, in his "Serious Call", sets up a standard of perfection little short of Catholic monasticism. John Wesley, who confesses that he was stimulated into activity by William Law, at first sought satisfaction of his spiritual cravings in the Moravian Brotherhood. He, with three other Oxford Methodists, met the Moravian Bishop Nitschmann and twenty Brethren at Gravesend, where they were waiting for the vessel that was to carry them all to Georgia (1736). The Englishmen were favourably impressed with the religious fervour of the Germans, and a fruitful friendship sprang up between them. As early as 1732 Zinzendorf had sent to England a deputation headed by the Moravian Johann Töltcheg "to tell such as were not blinded by their lusts, but whose eyes God had opened, what God had wrought." Countess Sophie von Fugger, resident at Linlithgow, used her influence in their behalf, but was unable to counteract the opposition of the Lutheran court-chaplain Ziegenhagen. The embassy had little or no result. Other visits followed at intervals, most of them by missionaries and emigrants on their way to America. On the occasion of such a visit Zinzendorf himself induced some young people to form a society for the reading of the Bible, mutual edification, abstinence from theological controversy, brotherly love, etc. It was the first step towards the realization of the religious society in England. The next step was Peter Boheler's zealous preaching to the "religious societies" and the working classes.

It was Boheler who founded the religious society in Fetter Lane of which John Wesley became a member, and for which he framed most of the rules; it seems also due to the influence of Boheler that John and Charles Wesley "found conversion" (June, 1738), yet not a conversion exactly of the Moravian type. A visit of John Wesley to the German brethren made it clear to them that the Brotherhood had no room for two men like Zinzendorf, both being busy with the leaders of men, but having little else in common. Little by little Wesley became estranged from the Brethren, and his former friendship turned to open hostility (12 November, 1741, according to Wesley's Journal). At a meeting in Fetter Lane Wesley accused the Brethren of holding false doctrines and left the hall exclaiming: "Let those who agree with me follow me." Some eighteen or nineteen of the members went out after him, the rest called upon the Brethren to be their leaders. Thus a religious society of the Church of England became a society of the Brethren. After their rupture with Wesley the Brethren began their own mission in the British Isles, and England. Professor Spangenberg organized the young church with rare talent, and its activity spread far and wide in the provinces, even to Scotland and Ireland, but their success was greatest in Yorkshire. They also came in for some persecution from people who still confused them with the Methodists. The legal status of the Brotherhood was now to be determined. They did not wish to be classed as Dissenters, which would at once have severed them from the Anglican Church, and, on the other hand, the Anglican Church disowned them because they neither had Anglican orders nor did they use the Book of Common Prayer. Archbishop Potter would grant them no more than the toleration accorded to foreign Protestants. To obtain a license under the Act of 1791 for a Church of England, Spangenberg and Spangenberg decided on "Moravian Brethren, formerly of the Anglican Communion". This name implied a new denomination and led to the immediate formation of the first congregation of Brethren of England. Zinzendorf, the friend of the English nationality (1742), greatly objected to the name of Moravians being given to his Brethren whom he considered as an ecclesiola in ecclesias, a select small church within a greater one, which might exist in almost any denomination. The proposed designation, "Old Lutheran Protestants", was distasteful to English members. They resolutely clung to the names "United Brethren" and "Moravians" as their official and popular designations, and the "Bill for encouraging the people known by the name of Moravians, or Unitas Fratrum or United Brethren to settle in His Majesty's colonies", passed in 1749, gives official sanction to the old name, recognizes that the Brethren belonged to an "ancient Protestant and Episcopal Church", and maintains their connexion with Germany.

Beginnings of the Moravian Church in America.—In 1734 Zinzendorf obtained for thirty families of banished Schwenkfelders (adherents of Kaspar von Schwenkfeld) a home in Georgia which had just been carved out of the Carolina grant "to encourage the insensible, and encourage persons fleeing from religious persecution". These exiles, however, found it preferable to join an older colony in Pennsylvania. The Brethren now conceived the plan of securing for themselves in Georgia a home of refuge in time of persecution. The governor general, Oglethorpe, granted them 500 acres, and Spangenberg, the negotiator, received a present of 50 acres for himself, a part of the site on which the city of Savannah now stands. The first eleven immigrants reached Savannah 17 April, 1734, led by Spangenberg. Bishop Nitschmann brought over another twenty, 7 February, 1736. The work of evangelizing and colonizing was at once vigorously taken in hand and carried on with more courage than success. The climate, wars, enmities from within and without, checked the growth and cramped the organisation of the Brotherhood.

Present Condition of the Moravian Body.—The outcome of their faithful struggles during 175 years is shown in the subjunctive statistics, and may be read in detail in the "Transactions of the Moravian Historical Society," Vol VI:

Statistics for America (from "The Moravian," 13 March, 1907).—On the 1st of January, 1907, there were in the five northern districts of America 96 congregations with 13,859 communicants, 1,194 noncommunicants, and 5,816 children; a total membership
of 20,339; an increase of 228 over the previous year. In Sunday schools there were 9,666 pupils under 1,156 officers and teachers, a total membership of 10,822, against 11,012 in the preceding year, implying a loss of 187. Receipts from all sources: 31 December, 1904 $1,415,517; 31 December, 1903, $1,406,890. Expenses exactly balance receipts. In the Southern Province of America there were on the 1st of January, 1907, 3,703 communicants, 320 non-communicants, 1,519 children; total, 5,452. Sunday schools contained 3,822 pupils, 226 officers and teachers; total attendance 5,301. Total membership in both provinces: 26,211 against 25,877 in 1906—an increase of 334.

In Great Britain and Ireland, the Moravian Church numbered on the 31st of December, 1906, 41 congregations, with a total membership of 5,345; an increase of 211 on 1905; 5,072 pupils attended Sunday schools, with 508 teachers; there were also 213 pupils, with 5 teachers, in 5 day schools, and 305 scholars, with 38 teachers, in 5 boarding schools.

The German Province, 31 December, 1906, had 25 congregations, with a total membership of 7,988, of whom 5,795 were communicants; 50 missionary centres ministered to about 70,000 persons (the "Dispaerei").

The Mission Fields of the Moravians: In North America, the first leader, begin 1777: Alaska, 1888; California, 1890.—In Central America, Mosquito Coast, 1849.—In South America, Surinam, 1735, Demerara, 1878.—In the West Indies, Jamaica, 1754; St. Thomas, 1732; St. Jan, 1754; St. Croix, 1740; Antigua, 1756; St. Kitts, 1777; Barbadoes, 1765; Tobago, 1790; Trinidad, 1830.—In Africa, Cape Colony, East and West, 1736; German East Africa, 1891.—In Asia, West Himalaya, 1853; Jerusalem, Leper House, 1867.—In Australasia, Victoria, 1849; North Queensland, 1871. The work is carried on by 470 missionaries of whom 76 are natives. Bohemia and Moravia and also counted among the mission fields. The mission work there, like that of the foreign missions, is a joint undertaking of all the Provinces of the Church. In December, 1906, the total membership was 864; income (of which £111 was from the British Province), £1,781, 16/4; outlay, £1,991, 10/9.

J. WILHELM.

Bohemians of the United States, etc. A traveller who has seen the natural beauties of Bohemia, its vast resources, and the thrift of its people, will, no doubt, be surprised at the comparatively great number of persons who have emigrated to the United States of America. The causes for this are political, religious, and economic. Religious dis-contents at the beginning of the seventeenth century induced many to leave their native country and even to cross the ocean. The religious revolution stirred up by the preachings and teachings of John Hus gave birth to several national movements. The suppression of which, after the battle of White Mountain near Prague (1620), caused many to emigrate to other countries and several even as far as America. Of the latter Augustyn Heßman (d. 1692) and Frederick Filip (d. 1702) are the most important from a historical standpoint. Heßman must have been a man of good education, for Governor Stuyvesant, of New Amsterdam, entrusted him with many important missions. He made the first map of the State of Maryland, of which one copy is still preserved in the Library of Congress, and another at Richmond in the archives of the State of Virginia. Heßman always publicly professed his nationality. The second of these Bohemian emigrants, Filip, or Philips as he is commonly known, was likewise a man of prominence and his descendents played no small part in the development of New Amsterdam. He was buried in the cemetery of Sleepy Hollow, near Tarrytown, N.Y., in 1686, with other Bohemians of similar religious convictions, emigrated to this country at the same time. Their families either died out, or, as is more probable, were entirely assimilated by the American people, and they are left no trace. Of late years emigration from Bohemia has been chiefly caused by political conditions. Many Bohemian patriots, especially during the stormy year of 1848, sought refuge beyond the sea to evade the consequences of patriotic zeal, as the courts showed little mercy to those accused of political crimes. A similar state of affairs existed later on when the reign of the Austrian Government passed into the hands of the enemies of Bohemia, who punished every patriotic act as high treason to Austria. These political conditions, coupled with the Austro-Prussian war of 1866, in which Bohemia suffered great loss of life and property, forced many to seek their fortunes in the land of freedom. The greater number of emigrants, however, came to this country on account of poverty, which was the result of the failure of the Government to interest itself in the welfare of certain parts of Bohemia, especially the southern and eastern parts, where, for lack of industry, the people were forced to depend for their livelihood, almost exclusively, on the fruits of the fields. This poverty was increased by overtaxation and frequent failures of crops. It was precisely these parts of Bohemia that sent thousands of their best citizens to America about 1870, and are sending a still greater number at the present time.

It is not easy to give the exact number of Bohemian immigrants to the United States, as the Immigration Bureau up to the year 1881 enrolled all immigrants that came from any province of Austria as Austrians, and even after 1881, many Bohemians were listed as Austrians. As later immigration reports in which Bohemians were entered separately show that one-third of all immigrants from Austria came from Bohemia, the total number of Bohemians who came to this country before 1881 may be estimated approximately. It must be stated, however, that after 1886, Bohemia, Moravia and Silesia, Austrian provinces in which the Bohemian language is spoken, were enrolled as Bohemians. Taking all these facts into consideration, it is safe to give the number of foreign born Bohemians in the United States as 225,000. The number of American-born Bohemians is about 310,000, making the total Bohemian population of the United States about 522,000. It is worthy of note that these figures are almost equally divided between males and females, which shows that the Bohemian immigrants have come to this country to stay. Statistics prove that only a very small number of Bohemians return to their native country to live. In 1906, 12,938 Bohemian immigrants were received, eclipsing the record of 8,408 of 1905. The report of the Commissioner of Immigration shows only two per cent of Bohemian immigrants illiterate, as compared with four per cent of Germans and still higher proportions for other nations. The following table gives the approximate Bohemian population according to states:—

<table>
<thead>
<tr>
<th>State</th>
<th>Number of Foreign born Bohemians</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illinois</td>
<td>115,000</td>

Of the larger cities Chicago has a Bohemian population of about 100,000; New York, 40,000; Cleveland, 40,000; Baltimore, 8,600; Omaha, 8,600; Milwaukee, 5,500; St. Paul, 8,000; and St. Louis, 8,000.

Bohemian immigrants have attained the greatest degree of success. It is here that we can best see the great share they have in building up the United States. The majority of the people from rural districts, accustomed to hard labor, and ever willing to undergo the hardships of pioneer life, the Bohemians have attained an honorable place amongst the Western farmers. There is a saying amongst the Western farmers that if anyone can wrest crops from the soil, it is the Bohemian farmer. About half of the Bohemian immigrants have cast their lot with farming communities.

Societies.—Amongst the great number of Bohemians in this country, there is no one organization uniting them into one national body. This may be explained by the fact that they are divided into two strongly antagonistic camps: Catholics and atheists or free-thinkers. The latter are chiefly those who have apostatized from the faith of their fathers. Only an insignificant percentage of Bohemians are adherents of Protestant sects, though Protestants have expressed great labors and have organized amongst the Bohemians. The two camps are entirely separate, each with its own fraternal organizations. The Catholics have the following fraternal or benevolent organizations: The First Bohemian Roman Catholic Union for children (Pramí Římsko-Katolické Ústřední Židovské), founded in 1877 at St. Louis, has a membership of 11,505; the Catholic Workman (Katolický Dělník), founded in 1891, 3,225; the Bohemian Roman Catholic Central Union of the State of Wisconsin (Česká Římsko-Katolické Ústřední Jednota ve Státu Wisconsin) founded in 1888, 1,380; the Bohemian Catholic Union of the State of Texas (Katolická Jednota Texaska), founded in 1889, 1,800; the Western Bohemian Catholic Union (Česká Římsko-Katolické Jednota), founded in 1898, 3,500; the Bohemian Catholic Union of Cleveland (Česká Římsko-Katolická Jednota ve Cleveland, O.), founded in 1899, 1,800; the Bohemian Catholic Central Union of American Women (Ústřední Jednota Žen Amerických) established in 1890, 14,100; the Bohemian Catholic Union of Women of The State of Texas (Česká Římsko-Katolická Jednota Žen ve Státu Texas) likewise a large membership. All these organizations are thoroughly Catholic in spirit, and not only practise benevolence and charity towards their members but have been the right hand of the clergy in building Catholic churches and schools and in fostering the spirit of religion amongst their countrymen.

Opposed to these Catholic organizations are the fraternal organizations of the freethinking Bohemians. The strongest of these is the Bohemian Slavic Benevolent Society (Česko-Slovanská Podporující Společnost), established at St. Louis in 1864. This organization is chiefly responsible for the loss of faith amongst many Bohemians of this country, having enticed thousands of well-meaning people to join its ranks under the pretext of strict neutrality in religious matters. By association with free-thinkers, and under other evil influences, thousands grew lukewarm in the performance of their religious duties and finally lost their faith entirely. This organization is atheistic in spirit and propagates atheism amongst its members. A similar tendency is exercised by the gymnastics societies, commonly called the Sokol (tumblers); by the Western Benevolent Society (Západní Česko Bratrská Jednota), which has a membership of about 7,000; by the Society of Bohemian Ladies (Jednota Českých Dám), with a membership of about 15,000, as well as several minor organizations of the same type.

Schools.—Wherever it is possible Bohemian Catholics endeavour to build a school. Love of their faith as well as love of their native tongue impels them to send their children to school. It is owing to the desire of Bohemian parents that their children learn at least to read and write the language of their parents. Experience shows that without such schools children are soon estranged to the language and lose many of the good characteristics of their parents. The number of Bohemian Catholic parochial schools in this country is seventy-five, with a total attendance of about 14,000. There is also an institution of higher education, St. Procopius College at Lisle, Illinois, founded and conducted by the Bohemian Benevolent Order. The object of this institution is not only to train candidates for the priesthood, but to give young men in general such an education as to enable them to become leaders of their people in the various walks of life.

Press.—The first and for a long time the only Bohemian Catholic newspaper published in the United States, was the "Hlás" (Voice) of St. Louis, published semi-weekly. After its establishment in 1873 it was edited and managed for many years by its venerable founder, Monsignor Joseph Hessson, pastor of St. John's Church, St. Louis, who gave it a special prestige among the Bohemian Catholics of the United States. In the year 1890 the "Přítel Dítěte" (Friend of Children) was established in Chicago, a weekly periodical, and, as its name implies, intended to aid children. The "Vědecko-Religioská Listy" (Agricultural News), established in 1898, which appears twice a month. All of these papers are published by the Bohemian Benedictine Order of Chicago. In addition, there are the following Bohemian Catholic papers: "Nový Domov" (The New Home), a weekly publication of Hallettville, Texas; "Vlastenece" (Patriots) published weekly at La Crosse, Wisconsin; the "Měšťan Věstník", published by the Redemptorist Fathers of New York once a month. All of these publications are doing inestimable service in the cause of religion.

The freethinking press is no less powerful. Four Bohemian dailies are ex professo hostile to religion, while two others, though posing as neutral and independent papers, are in reality anti-religious in their sympathies and tendencies. Three Bohemian dailies are published in Chicago, one in New York, and two in Cleveland. There are in addition 12 weeklies, ten weeklies, and several smaller publications.

Communities and Churches.—There are three Bohemian religious communities in the United States.
The first and oldest, the Bohemian Benedictine Order of Chicago was founded in 1841 by the Right Rev. Boniface Wimmer, O.S.B., first Abbot of St. Vincent's, Beauty, Pennsylvania. This apostolic man, perceiving the great dearth of priests among the Bohemians in the United States, invited Bohemian young men to his abbey, educated them free of charge, and fitted them for exercising the ministry amongst their own countrymen. At his request the pope granted permission for the establishment of an independent or canonical Bohemian priory, in St. Procopius Priory of Chicago, which in 1894 was raised by His Holiness Leo XIII. to the dignity of an abbey; the Right Rev. John Nepomuk Jeger, O. S. B., was elected the first abbot. The Bohemian Benedictine Fathers have charge of three Bohemian and two Slovak congregations in the city of Chicago, amongst them the congregation of St. Procopius, the largest Bohemian parish in the United States, with a membership of about 10,000. They have likewise a large modern printing plant in which four leading Bohemian Catholic newspapers are printed. The order has 13 priests, 3 clerics, 3 novices, and 10 lay-brothers. The second purely Bohemian religious community is that of the Bohemian Benedictine Sisters of the Sacred Heart at Chicago, established in 1894. These sisters are also in charge of St. Joseph's Orphanage at Lisle, Illinois. A second Bohemian orphanage is to be established at St. Louis, in connexion with St. John's church, the oldest Bohemian parish in the United States. The Bohemian Benedictine Sisters have at present 27 sisters, 7 novices, and 1 candidate, and teach in several Bohemian schools. Besides these two exclusively Bohemian religious communities we have the Bohemian Redemptorist Fathers of New York and Baltimore, who do not, however, form independent communities, but are directly under the provincial who is at the head of all Redemptorist communities belonging to the Eastern province. They are in charge of the church of Mary Help, New York City, which has four Bohemian priests, and of St. Wenceslaus Church, Baltimore, which has three.

They are in the United States 38 Bohemian Catholic churches with resident pastors and about 129 missions; many of the missions, however, are attended from churches of different nationalities. The number of Bohemian priests in the United States is 208; 35 minister to non-Bohemian parishes, 30 of them to Slovak congregations.

DISTINGUISHED REPRESENTATIVES.—The name of the Very Rev. Monsignor Joseph Hessoun (b. 1830; d. 4 July, 1906), late pastor of the church of St. John Nepomuk, St. Louis, is held in grateful remembrance by the Bohemian Catholic people of the United States. Born at Vrécovice, Bohemia, he came to the United States in 1865, eleven years after his ordination, and up to his death worked with untiring zeal among his people. The fruits of his labours were felt by Bohemians throughout the country. He not only encouraged them to persevere by his editorials in the "Hlas", but he often sacrificed his time to assist in the building of Catholic churches. Furthermore, he did everything that lay in his power to procure priests for his people. Whenever necessary he visited the Bohemian parishes without Bohemian priests. In his old age he was unselfishly called to do the work. And other Bohemian priests who have laboured with untiring zeal for the salvation of the Bohemians in this country must be mentioned the Rev. William Čoks, Vicar-General of Omaha, b. at Černovír, Moravia; d. 1902; the Father J. J., of Chicago, the oldest Bohemian missioner; the Right Rev. John Nepomuk Jeger, Abbot of the Bohemian Benedictine Order of Chicago; the Rev. Wenceslaus Kocářík, O. S. B., of Chicago; the Rev. John Vršek of Omaha, a Bohemian poet of great ability and merit. Above all there is the noble pioneer of Bohemian priests on the soil of the new world, the saintly John Nepomuk Neumann, fourth Bishop of Philadelphia, b. at Prachatitz, Bohemia, 1811; d. 1860.

The Bohemians all over the world are renowned for their musical gifts. In Bohemian churches of this country church music has attained a high degree of excellence, especially noticeable by the congregational singing in the larger churches. Not a few Bohemian priests are finished musicians. The feasts of the national patrons, those of St. John Nepomuk and St. Wenceslaus, the first Christian Prince of Bohemia, are celebrated with special pomp, according to the usages of Bohemia. Good Friday is likewise observed with a solemnity unusual in this country.

The Resurrection of Our Lord is celebrated with great pomp in the evening of Holy Saturday, wherever possible in the open air.

The Diocese of Chicago, in the province of Benevento, Italy, suffragan to the Archbishopric of Benevento. The city, situated at the foot of Monte Matese, occupies the site of the ancient Roman colony of Boianium, or Bobrianum. Cappelletti has demonstrated the error of Ugelli (1844, p. 241) who thought he recognized a bishop of this see in a certain Laurentius at the beginning of the sixth century. The see, however, is decidedly ancient. Its first recorded bishop is Adalberto (1071). Others worthy of note are: Poliziano (1215) who consecrated the cathedral; Giovanni (1226), who decorated the façade at his own expense, as recorded in an inscription; Silvio Pandoli (1489), who restored the work of Giovanni; Cardinals Franciceto Orsini (1519) and Carlo Carafa (1572), who adorned the cathedral with costly furnishings; Celestino Bruni (1633), a distinguished theologian and preacher. After the death of Bishop Nicolò Rosetti (elected in 1774), differences between the Holy See and the court of Naples prevented the appointment of a successor until 1850, when Giuseppi Ricci was appointed. The most notable sacred edifice is the cathedral, dedicated to St. Bartholomew the Apostle. The diocese has a population of 90,300, with 33 parishes, 134 churches and chapels, 173 secular priests, 19 religious and 62 seminarians. CAPPELLETI, Le chiese d'Italia (Venice, 1844). XIX, 194; BATTANDIER, Ann. pont. cath. (Paris, 1907).

Boiardo, Matteo Maria, an Italian poet, b. about 1454, at, or near, Scandiano (Reggio-Emilia); d. at Reggio, 20 December, 1494. The son of Guido
admitted as counsellor-at-law (December, 1868), he never practised and his father having died leaving him enough to satisfy his wants, he devoted himself entirely to poetry. He was then twenty-one years old. Four years later he published his first original poem: "Adieux d'un poète à la ville de Paris"; immediately after this he published six others: "Les embarras de Paris", "La satire à Molière", "Le repas ridicule", "La noblesse", and two others of minor importance. In these satires not only did Boileau parody and attack such writers as Cotin, Chapelain, and Le Voyer, but he also developed the practical capabilities of the French language. Prose, in the hands of such writers as Descartes and Pascal, had proved itself a flexible instrument of expression, while with the exception of Malherbe, there had been no system in French versification. 

Enfin Malherbe vint et, le premier en France, Fit sentir dans les vers une juste cadence. 

Above all, these satires inaugurated in France a systematic literary criticism for art's sake, where previously criticism had been nothing but the expression of envy or anger. Indeed, in these imitations of Juvenal and Horace, one recognizes a judge of his own masters, who judged them by a higher standard than his own. And by this time, cycles the Count of Scandiano added a gorgeous superstructure of his own. As the plot is not woven around a single pivotal action, the inextricable maze of most cunningly contrived episodes must be linked, first, with the quest of beautiful Angelica by love-smitten Orlando and the other enamoured knights, then with the defence of Albacra by Angelica's father, the King of Cathay, against the beleaguerings of Tartars, and, finally, with the Moors' siege of Paris and their struggle with Charlemagne's army. The work is a study in manner; a lack of fineness and clarity of rhythmic deficiencies, formed a magnificent work of art, echoing from every ottava the poet's ardent devotion to Love and Loyalty, shedding warmth and sunshine wherever the lapse of ages had rendered the legends colourless and cold, and opening a path which Ariosto and Tasso were soon to tread. Still, the poem, after sixteen editions, was not to be republished for nearly three centuries. Francesco Berni's rifacimento, or re-casting of "L'Orlando" appeared in 1642, and from that date till 1850, when Panizzi revised it, 60 editions were published under the name of the original poet. A similar fate had befallen the count's "Rime" (Scandiano, 1499), which Panizzi's edition (London, 1835), snatched from oblivion. In his youth Boiardo had been a successful imitator of Petrarch's love-letters. Evidence of his more severe attainments is furnished in an "Istoria Imperiale," some versions from Nepos, Apuleius, Herodotus, Xenophon, etc., and by his Latin Elegies. A comedy, "Il Timone" (1457), adds little to his credit. See BERNI. 

SOLETTI, Le Poesie volgari e latine di Matteo Maria Boiardo (Bologna, 1894); SOLETTI, Orlando Furioso di Ariosto, ed. ANTONIO FANZIO (London, 1850); FERRARI, CANAPIERI, AND OTHERS, Studi su Matteo Maria Boiardo (Bologna, 1894); TAMPONI, "Boiardo" e il vero e il falso, in "Le Storie di Dante" (Rome 1866); and other works, which are covered in the chapter on Boiardo in the dictionary voce di Dante (1926). Ugo Foscolo's views on the poet are found in Q. REV., v. 52, 527; and LEON HUNT in "Stories from the Italian Poets" (London, 1846). Akroyd (New York, 1854) and Riem (Edinburgh, 1823) have published fragmentary translations of Berni's recanti. 

EDOARDO SAN GIOVANNI.

Boi, Bernardo. See Buil, Bernardo.

Boileau-Despréaux, Nicholas, French poet, b. at Paris, March 15, 1638; d. there, March 17, 1711. He was educated at the college of Boisgeloup, and was at first destined to enter the Church, but soon abandoned the study of theology, and, to please his father, prepared himself for the Bar. Though

M. DE MOREIRA.
which Sisters of the Holy Names, from Portland, Oregon, took charge. Father J. M. Cataldo, S.J., made unsuccessful advances to the Nez Perces in 1867. Recalled by them in 1872, he soon baptized three hundred of these fierce warriors. In 1875, Father Gaszoli drew many to the faith by his remarkable medical skill. Interrupted by the Nez Perces in 1877, the work was faithfully carried on, Archbishop Segers' visits in 1879–83 having given it a new impetus. The Holy See, 3 March, 1888, established Idaho as a vicariate Apostolic and placed it in charge of the Right Rev. Louis Lootens who was consecrated Titular Bishop of San Francico 9 August, 1888. Born in Bruges, Belgium, 17 March, 1827, he emigrated to Victoria in 1852, and spent nine years as a missionary in Vancouver Island and six in California. The new vicar Apostolic reached Idaho in January, 1889, and took up his abode at Granite Creek. In 1870 the first Catholic church was erected in the capital by Fathers Measpli and Poulin, on a site donated by John A. O'Farrell, Col. A. St. Clair, commander of Fort Boise, being the priests' first and last compensation for their labors. It was subsequently dedicated, however, when it was burned down. Bishop Lootens resigned 16 July, 1875, and died 13 January, 1898. He was succeeded by the second vicar Apostolic, the Right Rev. Alphonse Joseph Glorieux, who was consecrated Titular Bishop of Apollonia, 19 April, 1885. He found in his territory about 2,500 Catholics with ten churches attended by two secular and several Jesuit priests. When Boise was made an episcopal see he was transferred thither as its first bishop, 26 August, 1889. The diocese has fifty-four churches and chapels, 34 priests, 7 academies, and 5 parochial schools, with 950 pupils; 2 industrial and reform schools with 150 inmates; 3 hospitals and a Catholic population of about 16,000, mostly of Irish and German racial afliliations, a sprinkling of Canadians, and 4,000 Indians. On 11 November, 1906, the cornerstone of a fine cathedral was laid near the new episcopal residence. Among the pioneer priests who did splendid missionary work here were Fathers L. Verhass, E. Nattin, F. Hartleb, W. Hendrickx, and C. Van der Donckt, the last being the first priest ordained for Idaho in 1887, and stationed at pocatello since June, 1888. The academies and parochial schools are conducted respectively by the Sisters of the Holy Names, and the Sisters of Charity, of Providence, of St. Benedict, and of the Immaculate Heart of Mary.

Boisgelin, Jean de Dieu-Raymond de Cucé de, French prelate and cardinal, b. of an ancient family at Rennes in Brittany, 27 February, 1732; d. 22 August, 1804. Destined from his early youth to the ecclesiastical state, he achieved remarkable success in his studies. The death of his elder brother made him the head of his family, but, giving up his birthright, he consecrated his life to the priesthood. After making Vicar-General of Pontoise, he was in 1765 raised to the Bishopric of Lavaur, and in 1770 to the archiepiscopal See of Aix in Provence. In this last position he won for himself the name of skilful administrator and princely benefactor. Provence owes to him the dignity of a causal beacon to the beginning of the French Revolution, Aix was threatened with violence and famine, the archbishop by his firmness, great ascendancy, wisdom, and generosity, proved its saviour. The mob had pillaged the public libraries, and had mastered the person of the King, the authority; Boisgelin assembled the magistrates, chief citizens, and merchants, dispelled their fears, and prevailed upon these men to procure for Aix an abundant supply of grain, towards the payment of which he himself contributed more than one hundred thousand livres. He issued a pastoral letter to his clergy, asking them to urge the people to restore to the granaries the grain they had carried away. Where law had failed, religion and piety triumphed. The people obeyed zealously, flocking to the cathedral, expressed in touching terms their gratitude to the bishop who was so absolutely devoted to their welfare.

Boisgelin was elected to represent the higher clergy of his province at the States-General, 1789. In that famous assembly his practical political wisdom and moderation appeared on many occasions; he voted, in the name of the clergy, for the union of the three orders, the abolition of feudal rights, and offered 400,000 livres to the public treasury; but he opposed the abolition of tithes and the confiscation of church property. His piety and eloquence made him the recognized leader and spokesman of thirty bishops, his colleagues in the assembly. He spoke the language of liberty and of that religion with equal eloquence; he would have the clergy citizens, share in the maintenance of the government, with his political rights as indestructible as his natural and civic rights. The majority of the assembly voted for the civil constitution, a constitution subversive of the government of the Church, and of its discipline, a constitution that denied the supreme jurisdiction of the pope, subjected ecclesiastics to the civil power, and decreed that all the members of the clergy, beginning with those in the assembly, should take the oath of allegiance to the constitution, under penalty of exile and the forfeiture of their salaries. This legislation placed the clergy between two evils, aischism and dishonour on one side, dire poverty, exile, if not death, on the other. Boldly and firmly Boisgelin rose to champion the cause of the Church: "Let the law", he exclaimed in the assembly, "leave us our honour and liberty; take back your salaries." It was he who wrote the famous "Exposition of Principles", signed by all except four of the bishops of France, condemning the Civil Constitution of the Clergy; it was he who in the name of his colleagues corresponded during the two succeeding years of this letter, dated 3 May, 1791, proposed to the bishops to lay their resignations at the feet of Pius VI; in 1801 he effectively made to Pius VII the sacrifice not accepted by Pius VI. When persecutions drove him out of France he went to England. In his answer to a letter from Edmund Burke in which the orator expressed his admiration for the spirit of disinterestedness and dignity of character of the French episcopacy, he complains that he is expelled from France in the name of that liberty he had in perfect faith contributed to establish, and under whose protection he hoped to end his days.

Boisgelin returned to France when Napoleon restored peace to the Church and to France by his Concordat, 15 July, 1801. In 1802 he was raised to the archiepiscopal See of Tours and soon after created cardinal. Boisgelin who had displayed administrative qualities of a high order at Aix, was no less remarkable for his literary and oratorical talents. Simplicity, grace, and pathos characterized his eloquence. In his name, his duties, and in the interests of the French Academy. His works include: "Collection de diverses pièces en vers"(1783); "L'art de juger d'après l'analogie des idées" (1789); "Considérations sur la paix publique adressées aux chefs de la Révolution" (1791); "Exposition des princi eps.
Boisile Saint, superior of Melrose Abbey, d. 664. Almost all that is known of St. Boisile is learnt from Bede (Eccles. Hist., IV, xxviii, and Vita Cuthbertii). He derived his information from Sigfrid, a merchant of the Yorkshire place. Bede says he was born at Melsor in Northumbria but no further information is available. His feast is celebrated at Boisile on the 664th of St. Cuthbert, but it is plain that the master was worthy of the disciple. Contemporaries were deeply impressed with Boisile's supernatural intimations. When Cuthbert presented himself at Melrose, Boisile exclaimed "Behold a servant of the Lord", and he obtained leave from Abbot Eata to receive him into the community at once. When in the great pestilence of 664 Cuthbert was struck down, Boisile declared he would certainly recover. Somewhat later Boisile himself, as he had foretold three years before, fell a victim to this terrible epidemic, but before the end came he predicted that Cuthbert would become a bishop and would effect great things for the Church. After his death Boisile appended a visit to his former disciple Bishop Egbert. He is believed, on somewhat dubious authority, to have written certain theological works, but they have not been preserved. St. Boswell's, Roxburghshire, commemorates his name. His relics, like those of St. Bede, were carried off to Durham in the eleventh century by the priest Elfred. In the early Calendars his day is assigned to 23 February, but the Bollandists treat of him on 9 September.

Boisile, the Diocese of (Bassisdicensis) lies within the Dutch province of Brabant, and is suffragan of Utrecht. The city of Boisile-le-Duc (a'Herzogenbosch, or Herzogenbusch—Slees Duits) was founded in 1184, but the surrounding territory was included in the Diocese of Liége until 12 March, 1561. At that time, and in order to check the spread of Protestantism, Pius IV raised it to the dignity of a see, and made it suffragan to Mechlin. The first bishop was the illustrious theologian Francis Sonnium (1562–69), afterwards transferred to the See of Antwerp. His successors suffered not a little amidst the political disorders and the disastrous wars of the last quarter of the sixteenth century. When a long siege the city was captured by Prince Frederic Henry (14 Sept., 1629) and held in the name of the States-General, the sixth bishop, Michael Ophorius, was obliged to abandon his see, which he did in a solemn procession, surrounded by his clergy, and bearing with him a famous miraculous statue of the Blessed Virgin which he placed in safety at Brussels.

Joseph de Bargaigne (1638–47) was really little more than bishop in name. He was unable to assert his right to the office, and lived an exile from the see to which he was deeply attached, but which he held in the power of Dutch Calvinists. By the Treaty of Westphalia (1648) the entire territory of Boisile-le-Duc was recognized as a permanent conquest of the seventeen united provinces, and made directly subject to their jurisdiction, i. e. to the States-General. The persecution of the Catholic religion was forbidden by law, and the pertinent decrees were applied with all possible rigour in the hope of extirpating the ancient Faith. Catholic priests, however, continued secretly their ministry of preaching and their administration of the sacraments, while their flocks met with invincible patience the storm of persecution. The diocese became a simple mission, governed by a vicar-Apostolic, nearly always, however, a titular bishop.

Boisile-le-Duc was administered in this fashion until 1815. Napoleon had tried (1810) to create another diocese under that name, inclusive of the territory known as Bouches du Rhine, and had even obtained a titular for the new see in the person of the imperial courtier, Monsieur Van Camp, but the latter was deprived of all good titles by the arbitrary acts of the emperor and was doomed to failure. A similar failure awaited the attempt, authorized by the Concordat of 27 August, 1827, to divide all Holland into two large dioceses, Amsterdam and Boisile-le-Duc. The ancient see was finally revived by Pius IX on the occasion of the restoration of the hierarchy in Holland, where, since 1848, the revised constitution has assured to Catholics full political and religious liberty. Together with three other Dutch sees, Boisile-le-Duc was re-established by the pontifical Brief of 4 March, 1853, and with its former limits, and was made suffragan to Utrecht. The Right Rev. Jan Zwyssen, a native of the diocese and its most illustrious son, hitherto vicar-Apostolic, was the first bishop of the re-established see, though temporarily he was known as administrator-Apostolic, since he was already Archbishop of Utrecht, with which office he was to unite the government of Boisile-le-Duc.

In 1865 the first provincial synod was held there, the decrees of which form the actual ecclesiastical discipline in all the dioceses of Holland, and exhibit Archbishop Zwyssen as the true organizer of the ecclesiastical order in that country. In 1868 he was allowed to resign the archiepiscopal See of Utrecht. Thenceforth, until his death in 1877, he devoted himself to the administration of his beloved See of Boisile-le-Duc. He was succeeded by the Right Rev. Adrian Godschalk, who died in 1890, leaving the see to be filled by Bishop William van den Ven. The cathedral of Boisile-le-Duc, dedicated to St. John the Evangelist, is the finest monument of medieval Gothic in the possession of the Catholics of Holland. Although it was almost completely destroyed in the confiscation of 1419, it had again suffered notable decay in succeeding centuries. A thorough restoration of the edifice, however, was later begun. Boisile-le-Duc had a collegiate chapter as early as 1300, which was made a cathedral chapter in 1715. The above-mentioned miraculous statue of the Blessed Virgin has been restored to the cathedral and is once more the object of general devotion. There are two diocesan seminaries, one at St. Michiels-Gestel for diocesan priests and the other at Haaren for philosophical and theological studies. The diocese includes 451,670 Catholics, 260 parishes, 626 priests, 143 charitable institutions, and 476 free (Catholic) schools.

GILBERT BROM.

Boismenu, [Origin of Boismenu, a Norman name, is uncertain. It is supposed to be derived from Bois Menu, or "Wood of Men," the"
to be contradicted by the friar's own statement that his was in the vicinity of a "private black [canon]" which Mr. Sydney Lee (Dict. Nat. Biogr., V, 314) identifies with a famous house of Augustinian canons at Bokenham, now Old Buckenham, Norfolk. Bokenham may or may not have got some early schooling from these "black canonis", but he certainly spent five years as a young man in Italy, chiefly at Venice, making frequent pilgrimages to the great Italian centres of devotional life, Rome, of course, among them. His long residence in Italy, in a generation to which the memory of Petrarch (d. 1374) was still fresh, and have been in it something of liberal education. Bokenham is known to have read both Cicero and Ovid—classical accomplishments not by any means a matter-of-course with young Englishmen destined to the ecclesiastical state in those days. Lydgate (d. 1451) was among his contemporaries; Gower (d. 1402) and Chaucer (d. 1400) had been living in England in his boyhood, and had demonstrated the splendid possibilities of a language which for more than three centuries had been a mere rustic vernacular. His admission to the Order of Hermit-Friars of St. Augustine whatever the exact date, certainly fell within the period of that order's greatest intellectual activity in England, when Dr. John Lowe (d., Bishop of Rochester, 1436) was making such valuable additions to the great Austin-Friars library in London. Bokenham actually became a professed religious in the Augustinian convent at Stoke Clare, Suffolk.

His writings were chiefly religious in theme and feeling. A "Dialogue" (printed in vol. VI of Dugdale's "Monasticon"), on the genealogy of a great Suffolk family, is attributed to Bokenham on internal evidence. The "Lyrms of Seyntys" he compiled chiefly from the "Legenda Aurea" of Jacobus à Voragine. These are the lives of twelve female saints, with an account of the legendary "11,000 virgins". Though valuable in a devotional sense, the "Lyrms of Seyntys" cannot be very seriously considered by modern hagiographers; but as illustrating the evolution of English literature, their historical value is inestimable. The language, described by its author as "of Sutholke speche", is forced into the exotic form of old English. This work, preserved among the Arundel MSS. in the British Museum, was printed for the Roxburgh Club in 1835; but Horstmann's edition (vol. I of Kölbing's "Altengische Bibliothek") had appeared at Heilbronn two years earlier. Bokenham's later works of religious humility are curiously illustrated by his using the names of several contemporary ladies of high rank as nomes de plume to cover his own authorship.

E. MACPHERSON.

Bolenan, Conrad von (Joseph Bispoff), a German novelist, son of a rich merchant, b. 9 August, 1828, at Niedergöslach, a village of the Palatinate. He entered the Latin school at Blieskastel, the seminary at Speyer, and in 1849 entered the University of Munich to study theology. Ordained priest in 1852 he was appointed assistant pastor at the cathedral. Two years later he became pastor at Kirchheim Bolenan, whence his pen name "Conrad von Carasch". The following year he was transferred to Börrstadt and three years later to Berghausen. During this time he wrote his first four works: "A Wedding Trip", "Queen Bertha", "Historical Tales of Frederick II", and "Gustav Adolf". In 1870 he resigned his parish and devoted himself exclusively to literary work, and lived in strict retirement at Speyer. He published numerous novels of which the most noteworthy are: "Canossa", "Trowel or Cross", "Night of St. Bartholomew", "Seven Fools", "Crusade of Wambold", "Talliermagne", "Otto the Great", "Pillar of Truth". His novels and romances, though not all of equal worth, are written for the people, brilliant in conception, simple in style. He fearlessly defends the Catholic standpont and supports his position by frequent use of satire. In discussing questions of the day his criticisms are often severe and unjust. His works are widely read and have been translated into English and other European languages.

The Catholic World, XVII, 308; Kleyer, Katholische Erzähler, 131.

B. DIERINGER.

Boleslaw. See Poland.

Bolgeni, Giovanni Vincenzo, theologian and controversialist, b. at Bergamo, Italy, 22 January, 1733; d. at Rome, 3 May, 1811. He entered the Society of Jesus, 31 October, 1747, taught philosophy and theology with marked success at Macerata and was a member of the Society when it was suppressed by Clement XIV. Henceforth he devoted himself to controversy and in recognition of his signal services against Jansenism and Josephinism, Pius VI appointed him "Theologian-Penitentiary". His name was deprived by Pius VII on account of the Jocobin principles he tolerated and advocated during the occupation of Rome by Napoleon I.

Of Bolgeni's theological writings, the best known and at the same time the least important was his "Della carità o amor di Dio" (Rome, 1758). In it he endeavoured to refute the Dominican, de Rubeis, by demonstrating that the theological virtue of charity essentially consists in loving God as He is good to us and not as He shows unmerited goodness. This position won for him misrepresentation at the hands of Teofilo Cristiani, fictitious author of "Letters theologico-critica sull'amore di Dio" (1791) and opposition from his former Jesuit comrades, Massarelli (1790-91), Regonzi (1791), Cortes (1790-92), Chantre y Herrera (1790-92) and Gentilini (1803). Against Cristiani he successfully disposed of the charge that he held purely servile fear a sufficient motive for attrition, but the arguments of his other adversaries he met at first with more subtlety than precision, but later with silence. He not only withstood the searching criticism of his doctrine contained in Palestrina's "idea genuina della carità o amor di Dio" (1808). In addition to his original work he contributed to the controversy, with the same result, with the following works: "Commentaria in dissertazione di officio de morali sopra gli atti umani" (Cremona, 1816; Orvieto, 1853), together with a treatise on usury, published under his name but probably not written by him, appeared after his death. The defence of probablisti aroused a storm of controversy, and among the noted anti-probablisti who engaged in the discussion may be mentioned the Bishop of Assisi (1798), Agapito de Palestina, O. Min. Ref. (1799). Cajarina Maria de Fulgori (1798), Canon John Trinch of the Cathedral of Tivoli (1800), and Francisco de Monforte (1808). Against "Il Bolgennso Confutato" a "digression on the necessity of confessing all mortal sins, whether certain or doubtful, just as they are in conscience."
The remaining productions of Bolgeni are chiefly devoted to attacks on Jansenism, Josephanism, and Jacobinism. Not long after the suppression of the Society of Jesus he entered the lists with the Society's traditional enemy, Jansenism, by publishing "Essame della vera idea della Santa Sede" (Macerata, 1786; Fermo, 1792), a polemic against the Jansenist doctrines contained in "La Vera Idea della Santa Sede" by Pietro Tamburini, a celebrated professor of the University of Pavia. Several replies to the criticisms of Tamburini and to the censures of the Archpriest, published in rapid succession. In 1787, he wrote "Stato de' bambini morti senza batteismo", and in it scored the rigid doctrine of Guadagnini that infants dying without baptism are doomed to the torments of Hell. This controversy over, he devoted his pen to defending the juridical powers of the hierarchy, cataloguing the errors of the day, and combating the principles of Josephinism in Austria and of the Revolution in France. His publications at this period were: "Fatti domatissimi osia dell' infallibilità della Chiesa nel decidere sulla dottrina buona o perversa" (1786); "Saggio storico da servire di preservativo contro gli errori correnti" (1789); "L'episcopato osia della potestà di governare la Chiesa" (1789). These literary labours led to his appointment by Pius VI as Theologian-Potentary, and in this capacity he issued a defence of "L'episcopato" (Rome, 1791), and "Dissertazione sulla giurisdizione ecclesiastica" (Rome, 1791), a refutation of George Sardis's contention that the powers of orders and jurisdiction were identical. About the same time he renewed his attacks on Guadagnini and Tamburini, refuting the former's state-defying proclivities in "L'Economia della Fede Cristiana" (Brescia, 1790), and the latter's anti-ecclesiasticism in "Problema se i Gianesi siano Giacobini" (Rome, 1794). "L'Economia della Fede Cristiana" was of such merit that it was incorporated by Migne in his "Démonstrations Evangeliques", vol. XVIII.

The last phase of Bolgeni's life is to say the least a strange one. After Napoleon I had seized Rome, Bolgeni, with well-nigh unintelligible inconsistency, favoured the anti-regal oath of allegiance imposed by the conqueror. This change of front he defended vigorously and subtly, but vainly. He was obliged to make a retractation in the presence of the cardinals assembled at Vienna for the election of a pope; "Ritirazione di Gio. Vincenzo Bolgeni diretto a Mons. Illmo. e Rmo. Vicegerente di Roma". His writings during this unfortunate stage of his career were: "Parere sul giuramento civico" (Rome, 1798); "Sentimenti de' professori della università del Collegio Romano sopra il giuramento prescritto dalla Rep. Romana" (Rome, an. VII); "Sentimenti sul giuramento civico" (Rome, an. VII); "Metamorfosi del dott. Gio. Marchetti, da penitenziere mutato in penitente" (1800); "Parere ... sull'alleanza de' beni ecclesiastici"; "Scherimenti" to confirm the preceding. After his death a work was edited, believed by some to be from his pen, "Dei limiti delle due potestà ecclesiastica e secolare" (Florence, 1849), and it was put on the Index deorum corrugiat. It is most probably unauthentic.

J. T. LANGAN.

Bolivia, a South American republic which lies between longitudes west of Greenwich 57° 30' and 74°, and latitudes 8° and 22° 50' south. These figures are, however, still subject to treaty changes.

AREA, POPULATION, ETC.—The republic covers an area of 702,767 sq. miles (1,822,334 sq. kilometers) and ranks as third in size among the South American countries. In 1895 its population was estimated at 1,816,271, or a little more than five persons to every two square miles. Of these, 231,968 are reported as whites; 484,611 as mestizos, and 792,850 as Indians. Besides these, there were about 4,000 negroes, and the residue are of unascertained origin. The proportion of Catholics to non-Catholics is approximately as seventy-two to one. All these figures are to be taken with reserve, since the efforts at serious statistics are but very recent.

Since the close of the war with Chile in 1881, Bolivia has had no sea-coast. It is bounded on the west, north-west, and north by Peru; on the north-east and east by Brazil; on the south-east by Paraguay; on the south by the Argentine Republic, and on the south-west by Chile. Its communications with the outer world were still defective in 1905. A line of steamers on Lake Titicaca then plied between the Peruvian port of Puno and the Bolivian of Huaqui, and stage lines, between La Paz and the Chilian frontier. On the east side of the Andes, in the Basin of the Amazon, rivers, which are often interrupted in their upper course by rapids (cochuesas), afford the only means of transit. Bolivia had two short railroad lines of its own, besides the Chilian line to Oruro, of which the terminus is upon Bolivian soil. The two Bolivian railroads were trunk-lines, with an aggregate length of sixty-five miles. Work was, however, progressing on several other newly begun lines. Bolivia is divided into nine departments and a "National Territory of Colonies", the area of which covers somewhat less than one-third of the whole surface of the republic, while its population is only one-sixth of the whole. Of the nine departments, La Paz is the most populous. Since 1890 the national capital has been La Paz de Ayacucho, with a population of 59,014 souls, situated in this department. Next to La Paz in importance is Cochabamba with 21,886 inhabitants. Sucre and Potosí are reported with 20,900 each, and Santa Cruz de la Sierra with 16,000, while the im-
portant mining centre of Oruro has a little over
15,000 inhabitants.

Natural Features and Resources. — The southwestern third of the country lies at a great altitude above the Pacific Ocean. The Puna, or table-land comprised within the Departments of La Paz, Oruro, and Potosí, has an average elevation of nearly 13,000 feet. Two lofty mountain ranges form natural breakwaters to Bolivia: in the West, the Coast Cordillera (Chilian frontier) and, in the East, the Bolivian chain, consisting of the Andes of Carabaya and Apolobamba towards the North, and the Royal Cordillera or central Bolivian range, with its southern ramifications and prolongations to the Argentine lines. The mountainous section of Bolivia has no important rivers. Its drainage is in the North to Lake Titicaca, which itself empties to the South into the Lago (Lake) Poopó, which has no visible outlet. Towards the East mountain streams descend abruptly into the Basin of the Amazon. But the mountainous section has the two largest, and also most elevated lakes of South America: Titicaca,

12,500 feet above sea-level, 138 miles long from north-west to south-east, and of varying width, and Poopó, farther South. The eastern two-thirds of Bolivia, that section lying towards the Atlantic, is traversed by mighty streams (e.g. the Beni and Mamoré) and their affluents, all of which rise in the central Bolivian chain. Bolivia has properly but two seasons: winter, corresponding in time to summer and part of fall and spring in the Northern Hemisphere, and summer embracing the rest of the year.

The mineral resources of this republic are known to be very important, but as yet they have been only superficially prospected. Difficulty of access to the country, unsettled political conditions in former times, and cumbersome, primitive transportation have been the main cause of this backwardness. The upper regions of the Amazonian Basin are known to contain coal, but there attention has been given chiefly to the vegetable resources, the India rubber tree having rendered possible the establishment of a highly important and growing industry. The same section, also, produces both coffee and sugar, and to-day the coca shrub is a staple, while calisaya bark is returning into favour. The highlands in the departments of La Paz, Oruro, Potosí, parts of Cochabamba and Tarija abound in a variety of valuable ores. Gold is not generally distributed, and is extracted mainly by "placer" mining, as for instance at Chuquisaguillo, near La Paz. In the first half of the nineteenth century the Tipuaní district, so difficult of access, was productive of gold of great fineness, and in quantities very considerable for that time, and the Tipuaní mines are even now far from exhausted. Quartz gold is worked at Araca. Silver is very plentiful, and is extensively extracted in places. Native copper is mined at Corocoro, where it crops out in veins of unusual richness and width, but other copper ores are found in abundance also. Of late it has been established that Bolivia is probably one of the countries in the world, where tin (cassiterite) is most abundant, and the same may be said of bismuth. While on the eastern slope of the Andes the existence of gold and other mineral wealth has been proved, the attention of prospectors and miners has been turned chiefly towards the mountains themselves. The processes of mining and treatment of the ores are still, in many places, rudimentary and primitive, but with the influx of foreign capital and the introduction of machinery, conditions are rapidly improving. On the shores of Lake Titicaca bituminous coal is found both east and west of that lake. Besides mining, the chief industry of the mountain region is agriculture. As this branch is almost entirely in the hands of the Indians, it will be treated in connexion with the ethnography of Bolivia.

The Amazon Basin and its forests, as well as open spaces with high grass, are full of animal life. The large rivers, as everywhere in tropical South America, teem with fish, crocodiles, snakes, and other amphibia, and the manatee also occurs. Aquatic birds, parrots, etc., are abundant. The fauna of the mountain districts is more in evidence, but much poorer in species and individuals, than in the adjacent countries. The llama and its congeners, the alpacas, vicuñas, and guanaco, belong to the Bolivian fauna. The llamas and alpacas are domesticated by the Indian. Beasts of prey are not numerous and are found only within the limits of arboreal vegetation. Lower down the great ant-eater is occasionally seen, the puma and the bear (Ureus onatus). In southern Bolivia, as well as in the eastern sections, the American ostrich occurs, and a tiny armadillo has its home in the cold, arid Puna.
south of Lake Titicaca. Over the highest peaks soars the condor.

GOVERNMENT, THE CHURCH, AND EDUCATION.—Bolivia, then the Spanish colony of Alto Peru, or Upper Peru, declared its intention to achieve political independence on 12 June, 1809, and actually became an autonomous republic 6 August, 1825, taking its name in honour of Simon Bolivar, its founder. The Constitution under which the republic is now governed dates from 28 October, 1880, and aims at a "unitarian republican" polity. Under this Constitution the legislative power is vested in a Congress which comprises a Chamber of Deputies and a Senate, the former body consisting of 72 members elected by direct popular vote for terms of four years, the latter of 16 members also elected by direct popular vote, but for terms of six years. The executive power is vested in a president, elected by direct popular vote for a term of four years. The president, however, can exercise his authority only through his Cabinet, which consists of five Ministros de Estado, jointly responsible with him for all his official acts. Under this chief executive the civil government is carried on by prefects of Departments, appointed by it and directly responsible to it, and they in turn have under their jurisdiction sub-prefects and Corregidores for the subdivisions of Departments. The population of the republic was 7,928,730 Bolivianos (1 Boliviano = $0.422 in United States currency).

By Article 2 of the Constitution of Bolivia, "The State recognizes and supports the Roman Apostolic Catholic Religion, the public exercise of any other worship being prohibited, except in the colonies, where it is tolerated." For the support of Catholic worship in general the State pays the sum of 182,027 bolivianos ($78,815 U.S. currency), besides 14,000 bolivianos ($6,908) for missions to the aboriginal tribes. There is one archbishopric, Sucre, or Charcas, formerly La Plata, with 146 parishes, three colleges of the Propagation of the Faith, and five monasteries. The suffragan bishoprics are: La Paz, with 102 parishes, and 6 monasteries; Cochabamba, with 89 parishes and 4 convents, and Santa Cruz, divided into 73 parishes. Both La Paz and Santa Cruz were erected into bishoprics in 1605, the Archbishopric of Charcas was founded 1606, and the Diocese of Cochabamba in 1847. Efforts are kept up to gather the unsettled tribes of the Amazon Basin into permanent settlements (reductions), a very slow and difficult task.

The legal status of marriage is thus summed up in Art. 99 of the Civil Code of Bolivia: "Matrimony being in the Republic of Bolivia, the sacrament, the formalities necessary for its celebration will be the same as those which the Council of Trent and the Church have designated." Bolivian law recognizes no divorce permitting re-marriage, and all questions arising between husband and wife can be decided only by the ecclesiastical tribunal.

ETHNOGRAPHY.—The comparatively small proportion of whites among the Bolivian population makes of the Indian the numerically preponderant stock. The mestizos, while not disclaiming their partly white origin, sometimes stand, in the council and among the lower classes in towns and cities, but slightly higher than the aborigines, being distinguished from the latter mostly by the fact that they wear European costume. Of the Indians several linguistic groups are found in the republic. The Quichua and the Aymaré are the two large tribes may, perhaps be about equally numerous. The Quichua occupy southern Bolivia and the Andean districts adjacent to Lake Titicaca on the East; the Aymarés hold the upper valleys of the Andes, the West, and the centre.Physiologically, no great difference in type exists. They are, first of all, husbandmen, in fact they control agriculture. Nearly all agricultural lands being held by whites or mestizos, who do not themselves cultivate, but prefer to live in settlements following some trade or commerce, the Indians, who are settled everywhere, take care of the fields. This they do, either in a kind of serfdom, living on the property and performing, also, some personal services for the proprietors, or, as Indian communities settled near the land, they have a tacit lease of it. The Indians organised in communities according to their primitive customs control the land, through their labour, virtually more than the owners, and thus remain a power in the republic, since they are the feeders of the people. Their serfdom is much more apparent than real, for the masters depend upon them for sustenance. Some of the high regions are potatoes, quinoa, oca, etc., as well as maize in districts suitable for its growth, with coarse beans (hacab) and barley, the last two being of European origin. The Indians raise cattle for themselves and sometimes for the landowners. All their farming is done in a primitive and very slovenly way. Next to agriculture, transportation and personal service in housework are also in the hands of the Indians. In fact their silent influence pervades the whole of public and private life; their industrial methods are obsolete, and they resist improvement with the greatest tenacity.

As the Indian has maintained his primitive organisation with few changes, he might form a State within the State, and thus become a grave danger to the whites. But as he never had any conception of a State, being, moreover, divided into autonomous or independent tribes, that danger is much diminished. Neither the Aymarés nor the Quichua could coalesce to form a homogeneous body. This they have shown ever since the Spanish occupation, and during the most alarming of their attempted uprisings, such as that of 1781. They would like to return to their primitive condition of barbarism, but feel that, despite their vast superiority of number, they are virtually powerless. In addition to these two principal Indian groups, the mountain districts still shelter the Uros, feeble remnants of a once powerful people of the Amazonian type dwelling among rushes and reeds, and comparatively little known. Of the white population of Bolivia little need be said that is not applicable II.—40
generally to the whites in other South American countries. They differ of course from the inhabitants of less mountainous countries in the latter they have the general characteristics common to all mountaineers.

(For special information on the individual dioceses, aboriginal tribes, languages, etc., of Bolivia, see articles under separate headings.)
