</tr>
<tr>
<td>a. v.</td>
<td>Under the corresponding title (Lat. sub voc)</td>
</tr>
<tr>
<td>tom.</td>
<td>volume (Lat. tomus)</td>
</tr>
</tbody>
</table>
TABLES OF ABBREVIATIONS.

tr. translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.

tr., tract. tractate.
v. see (Lat. vide).
Ven. Venerable.

II.—ABBREVIATIONS OF TITLES.

Acta SS. Acta Sanctorum (Bollandists).

Hast., Dict. of the Bible Hastings (ed.), A Dictionary of the Bible.
Kirchenlex. Wetzer and Welte, Kirchenlexicon.
P. G. Migne (ed.), Patres Graeci.
Vig., Dict. de la Bible. Vigouroux (ed.), Dictionnaire de la Bible.

NOTES I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers to the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

NOTES II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologiae" (not to "Summa Philosophiae"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2 um" refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

NOTES III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiastes is indicated by Eccl., to distinguish it from Ecclesiastes (Eccles.). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parenthesis.

THE
CATHOLIC ENCYCLOPEDIA

ASSISI OF JERUSALEM—The significance of the
word assise in this connexion is derived from the
French verb assisoir, whose past participle is assis. 
Aisoor means "to sit", "to place one on a
seat". Hence the idea of putting something
into its place, determining it to something. Thus
assise came to mean an enactment, a statute.
Assize is the English form of the word, and used
in the plural, assises, it denotes a court. The
"Assizes of Jerusalem" (les assises de Jerusalem)
are the code of laws enacted by the Crusaders
for the government of the Kingdom of Jerusalem.
They are a collection of legal regulations for the courts
of the Latin Kingdom of Jerusalem and Cyprus.
Thus we have the "Assizes of Antioch", the "Assizes
of Rumania", legal regulations for the Latin prin-
cipality of Antioch and for the Latin Empire of
Constantinople. It is erroneous to ascribe the
"Assizes of Jerusalem" to Godfrey de Bouillon
on the presumption that as he was King of Jerusalem
he enacted its laws. The "Assizes of Jerusalem" were
compiled in the thirteenth century, not in the
eleventh; not in Jerusalem, but after its fall; not
by any ruler, but by several jurists. Not even the
names of these are all known, though two of them
were the well-known John of Ibelin, who composed,
before 1265, the "Livre des Assises de la Cour des
Barons", and Philippe de Navarre, who, about the
middle of the thirteenth century, compiled the
"Livre de forme de plaint en la Haute Cour".

There are nine treatises in the "Assises of Jeru-
salem", and they concern themselves with two kinds
of law: Feudal Law, to which the Upper Court of
Barons was amenable; and Common Law, which was
applied to the Court of the Burseuses. The latter
is the elder of the two and was drawn up before the
fall of Jerusalem. It deals with questions of civil
law, such as contracts, marriage, and property, and
touches on some which fall within the province of
special courts, such as the "Ecclesiastical Court"
for canonical points, the "Cour de la Fende" for
commerce, and the "Cour de la Mer" for admiralty
cases. It deals rather with what the law enjoins in
these several fields than with determining penalties
for transgressions. The celebrated "Livre de la Haute
Cour" of Ibelin was adopted, after revision (1359),
as the official code of the Court of Cyprus, which
kingdom succeeded to the title and regulations of
Jerusalem. We possess only the official text of
this, which is not much older than the works of
French lawyers of Rouen and Orléans. But the
superiority of the "Assises of Jerusalem" is that it
reflects the genuine character of feudal law, whereas
the works of the French feudalists betray something
of the royal influence which affected those sections
after the revival of the Roman law. No other work
delves so insistently on the rights of the vassal
towards his lord, no other throws such a light on the
resolution of a disputed point by an appeal to arms.
its challenge, its champions, its value as evidence.
In brief, the "Assizes of Jerusalem" give us a faith-
ful and vivid picture of the part played by the law
in the Latin Kingdom of Jerusalem.

law.

CH. MOELLER.

ASSMAYER, Ignaz, an Austrian musician, b. at
Salzburg, 11 February, 1790; d. in Vienna, 31 August,
1862. He studied under Brunmayr and Michael
Haydn, and later, when he went to Vienna, he re-
ceived further instruction from Eybler. In 1808
he was organist at St. Peter's in his native town;
and here he wrote his oratorio "Die Sündfluth"
(The Deluge) and his cantata "Worte der Weihe".
Some time after his removal to Vienna, in 1815, he
became choirmaster at the Schotten-Kirche, and in
1825 was appointed imperial organist. After hav-
ing served eight years as vice-choirmaster, he re-
ceived in 1846 the appointment of second choir-
master to the Court, as successor to Weigl. His
principal oratorios, "Das Gelübde", "Saul und
David", and "Sauls Tod", were repeatedly per-
formed by the Tonkünstler-Societät, of which he
was conductor for fifteen years. He also wrote fif-
teen masses, two requiems, a Te Deum, and various
smaller church pieces. Of these two oratorios, one
mass, the requiem, and Te Deum, and furthermore
sixty secular compositions, comprising symphonies,
ouvertures, pastorales, etc., were published. As to
his style Grove calls it correct and fluent, but want-
ing in both invention and force.

ASSOCIATION, RIGHT OF VOLUNTARY.—I. THE
LEGAL RIGHT. A voluntary association means
any group of individuals freely united for the purs-
uit of a common end. It differs, therefore, from
a necessary association inasmuch as its members
are not under legal compulsion to become associated.
The principal instances of a necessary association
are a conscript military body and civil society, or
the State; the concept of voluntary association covers
organizations as diverse as a manufacturing corpora-
tion and a religious sodality. The legal right of
voluntary association—the attitude of civil authority
on bodies of this nature—has varied in different
ages and still varies in different countries. Under
the rule of Solon the Athenians seem to have been
free to institute such societies as they pleased, so
long as their action did not conflict with the public
law. The multitude of societies and public gatherings for the celebration of religious festivals and the carrying on of games, or other forms of public recreation and pleasure, which flourished for so many centuries throughout ancient Greece, indicates that a considerable measure of freedom of association was quite general in that country.

The authorities in that country were less liberal. No private association could be formed without a special decree of the senate or of the emperor. And yet voluntary societies or corporations were numerous from the earliest days of the Republic. There existed collegia for the proper performance of religious rites, collegia to provide public amusements, collegia of a political nature, collegia in charge of cemeteries, and collegia made up of workers in the various trades and occupations. In Judea the Pharisees and Sadducees—though these were schools, or sects, rather than organized associations—and the Essenes were not seriously interfered with by the Roman governors. With the union of Church and State in 325 there came naturally an era of freedom and prosperity for associations of a religious nature, especially for the religious orders. During the period of political chaos that followed the fall of the Empire, liberty of association was as extensive as could be expected among populations whose civil rulers were not sufficiently powerful either to prevent or to punish voluntary unions. Indeed, the "minor, obscure, isolated, and incoherent societies", to use the words of Guizot, that erected themselves on the ruins of the old political organization and became in time the feudal system, were essentially private associations.

As the needs, culture, and outlook of men extended, there sprung into being a great number and variety of associations, religious, charitable, educational, and industrial. Instances are the great religious orders, the societies for the relief of poverty and sickness, the universities, and the guilds which arose and flourished between the tenth and the fourteenth centuries. All of these associations were instituted either under the active direction of the Church, or with her warm encouragement, and as a rule without any serious opposition on the part of the civil power. Some of them, in fact, performed important political functions; others secured a measure of social peace that the civil authorities could not achieve. Up to a certain extent they constituted a considerable check to the exercise of arbitrary power by sovereigns. Thus, the merchant and craft guilds governed trade and industry with a series of regulations that had all the force of law and which were in effect legal statutes. These were instituted to enforce the "Truce of God", helped greatly to lessen petty warfare between different lords and different sections of the same country; while "the monarch was... hemmed in on all sides... by universities, corporations, brotherhoods, monastic orders; by franchises and privileges of all kinds, which in greater or less degree existed all over Europe".

With the rise and extension of political absolutism in most of the countries of Europe in the seventeenth century, freedom of association was greatly restricted. It was frequently subjected to unreasonable conditions in the last century, and it is still withheld by some governments. From 1820 to 1824 labour unions were absolutely prohibited in France. Up to that time associations consisting of more than twenty persons could not be formed in France without authorization by a public official whose power in the matter was almost arbitrary. At present, authorization is required in the case of associations composed of Frenchmen and foreigners; associations whose supreme head resides outside of France; and associations whose members live in common. Owing partly to the terms of the law that has been in force since the year 1901 non-industrial associations of more than twenty persons could not be formed in France without authorization by a public official whose power in the matter was almost arbitrary. At present, authorization is required in the case of associations composed of Frenchmen and foreigners; associations whose
Since the individual is dependent upon so many other individuals for many of those material goods that are indispensable to him, he must frequently combine with those of his neighbours who are similarly placed if he would successfully resist the tendency of modern forces to overlook and override the mere individual. A large proportion of the members of the industrial community cannot make adequate provision for the needs that follow in the train of misfortune and old age unless they utilize such agencies as the mutual benefit society, the insurance company, or the savings bank. Working-men find it impossible to obtain just wages or reasonable conditions of employment without the trade union. On the other hand, goods could not be produced or distributed in sufficient quantities except through the medium of associations. Manufacturing, trade, transportation, and finance necessarily fall more and more under the control of partnerships and stock companies.

Turning now from the consideration of these material needs, we find that association plays a no less important part in the religious, moral, intellectual, and social life of man.

Men cannot give God due worship except in a public, social way. This implies at least the universal Church and the parish, and ordinarily it supposes devotional and other associations, such as sodalities, study circles, and work clubs, that are erected and maintained by pious souls who wish to secure the life of perfection described by the evangelical counsels must become organized in such a way that they can lead a common life. In every community there are persons who wish to do effective work on behalf of good morals, charity, and social reform of various kinds. Hence we have purity leagues, associated charities, temperance societies, ethical culture societies, social settlements. Since large numbers of parents prefer private and religious schools for the education of their children, the need arises for associations whose purpose is educational. Literary and scientific associations are necessary to promote original research, deeper study, and wider culture. Good government, especially in a republic, is impossible without political associations which strive vigilantly and constantly for the removal of abuses and the enactment of just laws.

In the purely social order men desire to enroll themselves in clubs, "secret" societies, amusement associations, or other groups of which they are a part for the sake of human contentment and human happiness. Many of the forms of association just enumerated are absolutely necessary to right human life; none of them is entirely useless. Finally, voluntary associations are capable of discharging many of the tasks that otherwise would devolve upon the State. This was an important feature of their activity in the Middle Ages, and it is very desirable to-day when the functions of government are constantly increasing. Chief among the organizations capable of taking the State's place are educational, charitable work, industry, and commerce, and the improvement of the working classes. In so far as these can perform their several tasks on reasonable terms and without injury to the State or to any class of its citizens, the public welfare is better served by them than it would be if they were undertaken by the Government. Individual liberty and initiative have a larger scope, individual initiative is more readily called into action, and the danger of Government despotism is greatly lessened.

The right of voluntary association is, therefore, a natural right. It is an endowment of man's nature, not a privilege conferred by civil society. It arises out of his deepest needs, is an indispensable means to reasonable life and normal self-development. And it extends even to those associations that are not in themselves necessary for these ends, that is, so long as the associations do not contravene good morals or the public weal. For the State has no right to prohibit any individual action, be it ever so unnecessary, which is, from the public point of view, harmless. Although it is not essential to his personal development that the individual should become a member of an association that can do him neither good nor harm, it is essential to his happiness and his self-respect that he should not be prevented from doing so by the State. The moment that the State begins to practise coercion of this kind it violates individual rights. The general right of voluntary association is well stated by Pope Leo XIII in the encyclical, "Rerum Novarum": "To enter into private societies is a natural right of man, and the State must protect natural rights, not destroy them. If it forbids its citizens to form associations, it contradicts the very principle of its own existence; for both they and it exist in virtue of the same principle, namely, the natural propensity of man to live in society."

Nor is the State justified in prohibiting voluntary associations on the ground that they may become inimical to public welfare. An institution should not be utterly condemned because it is liable to abuse; otherwise an end must be made of all institutions of all sorts conducted by human hands. The State has ample power to protect itself against all the abuses to which liberty of association is liable. It can forbid societies that aim at objects contrary to good morals or the public welfare, lay down such reasonable restrictions as are required to define the proper spheres of the various associations, punish those societies that go beyond their legitimate fields, and, in extreme cases, dissolve any particular organization that proves itself to be incorrigible. Through these measures the State can provide for the welfare of all the security that is worth having; any further interference with individual liberty would be a greater social evil than the one that is sought to be remedied. The formality of legal authorization, or registration, is not in itself unreasonable, but it ought not to be accompanied by unreasonable conditions. The procedure ought to be such that any society formed in accordance with the appropriate law of association could demand authorization, or registration, as a civil right, instead of being compelled to seek it as a favor of an official class who have the arbitrary power to grant or refuse it at their own discretion.

The difference between these two methods is the difference between the reign of law and the reign of official caprice; between constitutional liberty and bureaucratic despotism. Precisely this sort of arbitrary power is at present exercised by French officials over religious congregations. The result is that Frenchmen and Frenchwomen who wish to live in associations of this nature are denied the right to do so. Speaking generally of religious congregations, we might equally say that the words of Pope Leo XIII, that they have "the sanction of the law of nature", that is, the same natural right to exist on reasonable conditions as any other morally lawful association, and, "on the religious side they rightly claim to be responsible to the Church alone". When the State refuses them the right to exist it violates not merely the natural moral law but the supernatural Divine law. For these associations are an integral part of the life of the Church, and as such, lie within her proper sphere. Within this sphere she is independent of the State; independent as one sovereign civil power is of another. Abuses that may grow out of religious associations can be met by the State in the ways outlined above. Treasonable acts can be punished; excessive accumulation of property can be prevented; in fact, every
action, circumstance, or tendency that constitutes a real danger to the public welfare can be successfully dealt with by other methods than that of denying these associations the right of existence.

J. A. RYAN.

Association of Ideas; (1) a principle in psychology to account for the succession of mental states, (2) the basis of a philosophy known as Associationism. The fact of the association of ideas was noted by some of the earliest philosophers; Aristotle (De mem. et rem., 2) indicates the three laws of association which have been the basis of nearly all later enumerations. St. Thomas, in his commentary on Aristotle, accepts and illustrates them at some length. Hamilton (Notes on Reid) gives considerable credit to the Spanish Humanist, Vives (1492–1540), for his treatment of the subject. An association of ideas is not, therefore, a discovery of English psychology, as has often been asserted.

It is, however, true, that the principle of association of ideas received in English psychology an interpretation never given to it elsewhere. The name is derived from Locke who placed it at the head of one of the chapters of his "Essay," but used only it to explain peculiarities of character. Applied to mental states in general, the name is too restricted, since ideas, even in the English sense, are only cognitive processes. The association theory was held by Hobbes, Berkeley, Hume, and Hamilton; but it received its widest interpretation at the hands of the Associationists, Hartley, Priestley, James Mill, John Stuart Mill, Bain, and Spencer. They regarded it as a principle capable of explaining all mental phenomena. For them it is in the subjective world what the principle of gravitation is in the physical world. Association of ideas, though variously explained, is accepted by all modern psychologists. Sulley, Maudely, James, Höffding, Münsterberg, Ebbinghaus, Ziehen, Taine, Ribot, Luys, and many others accept it more or less in the spirit of the Associationists.

The traditional laws of association, based on Aristotle's Simuliac, Compendia, Contiguity in time or space. In the course of time efforts were made to reduce them to more fundamental laws. Contrast has been resolved into similarity and contiguity. Contrast, to recall one other, suppose generic similarity, as white recalls black. Yet this alone will not suffice, since this gives us no reason for the fact that white recalls black in preference to green or blue; hence experience, based on the fact that nature works in contrasts, is called into aid. Spencer Höffding, and others try to reduce all the laws of association to that of similarity. While Words and his school believe that all can be reduced to experience and hence to contiguity. Bain, who has analyzed the laws of association most thoroughly, holds both similarity and contiguity to be elementary principles. To these he adds certain laws of compound association. Mental states easily recall one another when they have several points of contact. And in fact, considering the complexity of mental life, it would seem probable that simple associations, by similarity or contiguity alone, never occur. Besides these primary laws of association, various secondary laws are enumerated, such as the laws of frequency, vividness, nearness, emotional congruity, etc. These determine the firmness of the association, and consequently the preference given to one state over another. In the recall. Association of ideas is a fact of everyday experience which inspires an interest for the laws of psychology; yet it must be remembered that the laws of association offer no ultimate explanation of the facts observed. In accounting for the facts of association we must, in the first place, reject as insufficient the purely physical theory proposed by Ribot, Richet, Hesse, and Carpentier, which assumes that who seek an explanation exclusively in the association of brain-processes. Psychology thus becomes a chapter of physiology and mechanics. Aside from the fact that this theory can give no satisfactory explanation of association by similarity which implies a distinctly mental factor, it neglects evident facts of consciousness. Consciousness tells us that in reminiscence we can voluntarily direct the sequence of our mental states, and it is in this that voluntary recall differs from the succession of images and feelings in dream and delirium. Besides, one brain-process may excite another, but this is not yet a state of consciousness.

Equally unsatisfactory is the theory of the spiritualist, who would have us believe that association is the operation of a self-acting, self-controlled, self-conscious organism, but is wholly mental. Thus Hamilton says that all physiological theories are too contemptible for serious criticism. Reid and Bowne reject all traces of perception left in the brain substructure, "The association of ideas is due to a concomitant oscillation of the brain elements, but considers them quite secondary and as exercising no influence on memory and recall. Like the purely physical theory, this also fails to explain the facts of consciousness and experience. In the various brain-centres, the facts of mental disease in consequence of injury to the brain, the dependence of memory on the physical condition of the central organ, etc. have in this theory no rational meaning. We must, then, seek an explanation in a theory that does justice to both the mental and the physical side of the phenomena. A mere psychophysical parallelism, proposed by some, will not, however, suffice, as it offers no explanation, but is a mere restatement of the problem. The Scholastic doctrine, that the subject of sensory activity is neither the body alone nor the soul alone, but the unitary being comprising of body and soul, offers the best solution. As sense perception is not purely physiological nor purely mental, but proceeds from the combined activity of the two, so the association of ideas is not devoid of its physiological basis, and even in making use of the spiritual ideas which it has already acquired, the intellect has need of images stored in the brain. It requires these organic processes in the production of its abstract ideas. In its basis, the association of ideas is physiological, and it is more than this, as it does not follow the necessary laws of matter. The higher faculties of the mind can command and direct the process. The Scholastic theory does justice to the fact of the dependence of mental activities upon the organization and yet adheres to the facts that are will attested by consciousness and experience.

English Associationism, while claiming to be neither idealistic nor materialistic, and disavowing metaphysics, has erected the principle of association into a meta-physical law of all mental activity. James Mill enunciated the principle of indissoluble associations: Sensations or ideas occurring together frequently, and never apart, suggest one another with irresistible force, so that we combine them necessarily. This principle is employed to explain necessary judgments and meta-
ASSOCIATION

of the Faith; Apostleship of Prayer, known also as the League of the Sacred Heart of Jesus; Holy Childhood League; Priests' Eucharistic League; Ciacillien- verein, an association especially developed in Germany for the advancement of religious music.

ASSUMPTION

ASSUMERUS, the name of two different persons in the Bible:—1. In I Esdr., iv, 6, and Esth., i, 17, it corresponds to the Hebrew Ḡadšuwróths, and the Sept. Ἀσσυρία (in Esth. Ἀράπης), and denotes Assyria, or its king. In 1, the King of Persia, who has come also the admission of a soul-substance that attends, discriminates, judges, and reasons; but as they have not come to this conclusion, the soul is for them a 'train of thoughts,' a 'stream of consciousness,' or some other series vested in metaphorical language. Association of ideas can never explain necessary judgments, conclusions drawn from premises, moral ideas and laws; these have their causes deeper in the nature of things.

EDMUND J. WIRTH.

Association of Priests, see Holy Family.

Assumption, see Holy Family.

Association, Pious.—Under this term are comprehended all those organizations approved and acknowledged by Church authority, which have been instituted, especially in recent times, for the advancement of various works of piety and charity. Other terms used with the same meaning are: pious union, pious work, league, society, etc. Pious associations are distinguished, on the one hand, from ordinary societies composed of Catholics by having an explicitly religious purpose, by enjoying indulgences and other spiritual benefits, and by possessing ecclesiastical approbation. They are distinguished, on the other hand, from confraternities and sodalities. The latter distinction is not determined by the name and is not always apparent. In general, pious associations have simpler rules than confraternities; they do not require canonical erection, and though they have the approbation of authority, they are not subject to as strict legislation as confraternities; they have no fixed term of probation for new members, no elaborate ritual, no special costumes; they are not obliged to meet for common religious practices, and, as a rule, they make the help of others more prominent. Some differences, only that of canonical erection seems essential. Some authorities, however, declare that practices in common constitute the trait which distinguishes a confraternity from a pious association.

Some well-known pious associations are: Society of St. Vincent de Paul; Society of the Propagation of the Faith; Apostleship of Prayer, known also as the League of the Sacred Heart of Jesus; Holy Childhood League; Priests' Eucharistic League; Ciacillien- verein, an association especially developed in Germany for the advancement of religious music.
dynasty. It was made first the royal residence of Sargon, and afterwards became the rival of Nineveh. Its site is represented by the modern Khorsabad. (5) Arbailu, or Arbela, famous in Greek and Persian annals as one of the victories of Alexander the Great over the formidable army of Darius, King of Persia and Babylon (331 B.C.). (6) Nasibina, or Nisibis, famous in the annals of Nestorian Christianity. (7) Harran, well known for the worship of Sin, the moon-god. (8) Inugu-Bel, corresponds to the modern Tell-Balawat. (9) Tarbis, corresponding to the modern Sherif Khan. The sites and ruins of all these cities have been explored.

**Sources of Assyro-Babylonian History.**—These may be grouped as: (1) the Old Testament; (2) the Greek, Latin, and Oriental writers; and (3) the monumental records and remains of the Assyrians and Babylonians themselves.

In the first division belong the Fourth (in Authorized Version, Second) Book of Kings, Paralipomenon (Chronicles), the writings of the prophets Isaiah, Nahum, Jeremiah, Jonas, Ezechieil, and Daniel, as well as the Iaconic but extremely valuable fragments of information contained in Genesis, x., xi., and xiv. To the second group of sources belong the Chaldean, Persian and historical Berosus, who lived in the days of Alexander the Great (356-323 B.C.) and continued to live at least as late as Antiochus I, Soter (280-261 B.C.). He wrote in Greek a great work on Babylonian history, under the title of "History of the Chaldeans." This valuable work, which was based on contemporary Babylonian monuments and inscriptions, has unfortunately perished, and only a few excerpts from it have been preserved in later Greek and Latin writers. Then we have the writings of Polyhistor, Ctesias, Herodotus, Abondos, Apollodorus, Alexander of Memphis, Josephus, Georgius Syncellus, Diodorus Siculus, Eusebius, and others. With the exception of Berosus, the information derived from all the above-mentioned historians is mostly legendary and unreliable, and even their quotations from Berosus are to be used with caution. This is especially true in the case of Ctesias, who lived in the Persian court in Babylonia. To the third category belong the numerous contemporary monuments and inscriptions discovered in the last fifty years in Assyria, Elam, and Egypt, which form an excellent and a most authoritative collection of historical documents.

For the chronology of Assyria we have some very valuable means of information. These are (1) the "Eponym Tables," which cover the entire period from the reign of Ramman-nirari II (911-890 B.C.) down to that of Ashurbanipal (669-625 B.C.). The eponyms, or limmu, were like the eponymous archons at Athens and the consuls at Rome. They were officers, or governors, whose term of office lasted but one year, to which year they gave their name; so that if any event was to be recorded, or a contract drawn in the year, e.g. 763 B.C., the number of the year would not be mentioned, but instead we are told that such and such an event took place in the year of Pur-Shagli, who was the limmu, or governor, in that year. (2) Another source is found in the chronological notices scattered throughout the historical inscriptions, such as Sennacherib's inscriptions on the palaces which he built at Nimrud and Nineveh, and in the inscriptions of his predecessors, Tiglath-pileser (Douay Version, Theglathphalasar) reigned about 418 years before him, i.e. about 1107 B.C.; or that of Tiglath-pileser himself, who tells us that he rebuilt the temple of Anu and Ramman, which sixty years previously had been the King of Assyur-

Assur-dan must have reigned about the years 1170 or 1180 B.C. So also Sennacherib tells us that a seal of King Tukulti-Ninib I had been brought from Assyria to Babylon, where after 690 years he found it. As there is no other chronological source to be found in the genealogies of the kings, which they give of themselves and of their ancestors and predecessors. (4) Further valuable help may be obtained from the so-called "Synchonistic History" of Babylonia and Assyria, which consists of a brief summary of the relations between the two countries from the earliest times in regard to their respective boundary lines. The usefulness of this document consists mainly in the fact that it gives the list of many Babylonian and Assyrian kings who ruled over their respective countries contemporaneously.

**Assyro-Babylonian Exploration.**—As late as 1849, Sir Henry Layard, the foremost pioneer of Assyro-Babylonian explorations, in the preface to his classical work entitled Nineveh and Its Remains, wrote: "The possession of a collection of a few cylinders and gems preserved elsewhere, a case, hardly three feet square, in the British Museum, enclosed all that remained not only of the great city, Nineveh, but of Babylon itself. At that time few indeed would have had the present writer imagine that within fifty years the exploration of Assyria and Babylonia would have given us the most primitive literature of the ancient world. What fifty years ago belonged to the world of dreams is at the present time a striking reality; for we are now in possession of the priceless libraries of the ancient Assyrians and Babylonians, of their historical annals, civil and military records, State archives, diplomatic correspondences, textbooks and school exercises, grammars and dictionaries, hymns, bank accounts and business transactions, laws and contracts, and an extensive collection of geographical, astronomical, mythological, magical, and astrological texts and inscriptions. These precious monuments are actually scattered in all the public and private museums and libraries of the world, and in the hands of private collectors. The total number of tablets, cylinders, and cuneiform inscriptions so far discovered is approximately estimated at more than three hundred thousand, which, if published, would easily cover 400 octavo volumes of 400 pages each. Unfortunately, only about one-fifth of all the inscriptions have been published so far; but even this contains more than eight times as much literature as is contained in the Old Testament. The British Museum alone has published 440 folio, and over 700 quarto, pages, and about one-half as much more has appeared in various archaeological publications. The British Museum has more than 40,000 cuneiform tablets, the Louvre more than 10,000, the Imperial Museum of Berlin more than 7,000, that of the University of Pennsylvania more than 2,000, and that of Constantinople thousands more, awaiting the patient toil of our Assyriologists. The period of time covered by these documents is more surprising than their number. They occur from prehistoric times, or about 5000 B.C., Beavian, in the oldest century before the Christian Era. But this is not all, for, according to the unanimous opinion of all modern Assyriologists, by far the largest part of the Assyro-Babylonian literature and inscriptions are still buried under the fertile soil of these wonderful regions, which have preserved in their subterranean vaults the treasures of antiquity, awaiting future explorers and decipherers. As has already been remarked, the meagre and often unreliable information concerning Assyria and
Babylonia which has come down to us through the Persian, Greek, Latin, and Arabic writers—historians and geographers—has contributed little or nothing to the advancement of our knowledge of these wonderful countries. The early European travellers in the region of the Tigris and Euphrates valleys, but that the real founders and pioneers of Assyro-Babylonian explorations are Émile Botta (1842–45), Sir Henry Austen Layard (1840–52), Victor Place (1851–55), H. Rassam (1850, 1878–82), Loftus (1859), Jules Oppert, Freznel and Thomas (1851–59). It means that Assyrians, men of consorts, but syllables, open or closed, simple or compound, and ideas or words, such as ka, bar, til, zikhu, etc. These same characters may also have both a syllabic and an ideographic value, and nearly always more than one syllable value and as many as five or six; so that a sign like the following may be read syllabarily as ud, ut, u, tum, bir, par, pir, lah; and ideographically as 3 a mu, ‘day’; piqû, ‘white’; Shama, he Sungod, etc. The shape of these signs is that of a wedge, hence the name cuneiform (from the Latin cuneus, “a wedge”). The wedges, arranged singly or in groups, either are called “ideograms” and stand for complete ideas, or they stand for syllables. In course of time the same ideographic signs came to have also the phonetic value of syllables, without losing, however, their primitive ideographic value, as can be seen from the example quoted above. This naturally caused a great difficulty and embarrassment even to the Assyriologists, and it is to this day that the principle obstacle to the correct and final reading of many cuneiform words and inscriptions. To remedy this great inconvenience, the Assyriologists themselves placed other characters (called determinatives) before one of these signs in order to determine their use and value in certain particular cases and sentences. Before all names of gods, for example, either a sign meaning “divine being” was prefixed, or a syllabic character (phonetic complement), which indicated the proper phonetic value with which the word in question should end was added after it. In spite of these and other devices, many signs and collocations of signs have so many possible syllabic values as to render exactness in the reading very difficult. There are about five hundred of these different signs used to represent words or syllables. Their origin is still a subject of discussion among scholars. The prevailing theory is that they were originally picture-signs, representing the ideas to be conveyed; but at present only about sixty of these 500 signs are written, and certainty traced back to their original picture-meanings.

According to the majority of Assyriologists, the cuneiform system of writing originated with the Sumerians, the primitive non-Semitic inhabitants of Babylonia, from whom it was borrowed by the Semitic Babylonians and Assyrians for their own language. In the same way the Greeks
adopted the Semitic Phoenician alphabet, and the Germans adopted the Latin. The Semitic language of the Semites, or Babylonia was, therefore, written in Semitic characters, just as Hebrew can be written in English letters, or Turkish in Armenian, or Arabic in Syriac (Kurkhînî). This same cuneiform system of writing was afterwards adopted by the Medians, Persians, Medesians, and Persians, ancient Armenia, and then by the Assyrians. Hence the name of cuneiform writings may be distinguished. The "Persian" style, which is a direct, but simplified, derivative of the Babylonian, was introduced in the times of the Achaemenians. "Instead of a corner of as many as ten to fifteen wedges to make one sign, we have in the Persian style never more than five, and frequently only three; and instead of writing words by syllables, sounds alone were employed, and the syllabary of several hundred signs reduced to forty-two, while the ideographic style was fractionally abolished." The second style of cuneiform, generally known as "Median," or "Median," is, again, a slight modification of the "Persian." Besides these two, there is a third language (spoken in the north-western district of Mesopotamia between the Euphrates and the Orontes), known as 'Mitanni,' the exact status of which has not been clearly ascertained, but which has been adapted to cuneiform characters. A fourth variety, found on tablets from Cappadocia, represents again a modification of the ordinary writing of Babylon. In the inscriptions of Mitanni, the writing is a mixture of ideographs and syllables, just as in Mesopotamia, while the so-called 'Cappadocian' tablets are written in a corrupt Babylonian, corresponding in degree to the 'corrupt' forms that the signs take on. In Mesopotamia itself quite a number of signs exist, some due to local influences, others the result of changes that took place in the course of time. In the oldest period known, that is, from 4000 to 3000 B.C., the writing is linear rather than wedge-shaped. The linear writing is the modification that the original pictures underwent in being adapted for engraving on stone; the wedges are the modification natural to the use of clay, though when once the wedges became the standard method, the greater frequency with which clay, as against stone, came to be used led to an imitation of the wedges by those who cut the characters on stone. In consequence, there developed two varieties of wedge-writing: the one that may be termed lapidary, used for inscriptions, boundary records, and such legal documents as were prepared with special care; the other cursive, occurring only on legal and commercial clay tablets, and becoming more frequent as we approach the latest period of Babylonian writing, which extends to within a few decades of our era. In Assyria, finally, a special variety of cuneiform developed that is easily distinguished from the Babylonian by its greater neatness and the more vertical position of its wedges" (Jastrow, The Religion of Babylonia and Assyria, Boston, 1898, p. 20).

The material on which the Assyro-Babylonians wrote their inscriptions was sometimes stone or metal, but usually clay of a fine quality most abundant in Babylonia, whence the use spread all over Western Asia. The clay was very carefully prepared, sometimes ground to an exceeding fineness, moistened, and moulded into various forms, ordinarily into a tablet whose average size is about six by two and one-half inches in superficial area by one inch in thickness (the curvature) outwards, the surface thus prepared, and while still soft, the characters were impressed with a stylus, the writing often standing in columns, and carried over upon the back and sides of the tablet. The clay was quite frequently moulded also into cones and barrel-shaped cylinders, having from six to ten sides on which writing could be inscribed. These tablets were then dried in the sun, or, in the case of small tablets, were baked without changing its practical indestructibility, unless the tablet itself was shattered" (G. S. Goodspeed, History of the Babylonians and Assyrians, p. 28).

Unlike all other Semitic systems of writing (except the Ethiopic, which is an adaptation of the Greek), the use of the six wedge-shaped signs was left to right in horizontal lines, although in some very early inscriptions the lines run vertically from top to bottom like the Chinese. These two facts evidence the non-Semitic origin of the cuneiform system of writing and its direct proportion to the immense and hitherto unsuspected influence exercised by the Assyro-Babylonian religion, civilization, and literature upon the origin and gradual development of the literature and the religious and social institutions of the ancient Hebrews. This Babylonian influence, indeed, can be parallely traced in its different manifestations through all Western Asia, many centuries before that conquest of Palestine by the twelve Israelitish tribes which put an end to the Canaanitic dominion and supremacy. The triumph of Assyriology, occurring in recent years, must be regarded as a triumph of Biblical exegesis and criticism, not in the sense that it has strikingly confirmed the strict veracity of the Biblical narratives, or that it has demonstrated the fallacies of the "higher criticism," as Sayce, Hommel, and others have contended, but in the sense that it has opened a new and certain path whereby we can study the writings of the Old Testament with their correct historical background, and trace them through their successive evolutions and transformations. Assyriology, in fact, has given us such excellent and unexpected results as to completely revolutionize our former exegetical methods and conclusions. The study, it is true, has been often abused by ultra-radical and enthusiastic Assyriologists and critics. These have sought to build up groundless theories and illogical conclusions; they have forced the texts to say what they do not say, and to support conclusions which they do not support; but such an abuse, which is due to a perfectly natural enthusiasm and scientific ardour, can never vitiate the real and permanent official heroic and discursive searches, which have demonstrably provided sources of the first importance for the study of the Old Testament. These few abuses can be discerned and in due time corrected by a more temperate and judicious criticism. If the value of Assyriology in its bearing upon the Old Testament has been too often exaggerated, the exaggeration is at least partly excusable, considering the comparatively recent date of these researches and their startling results in the way of discovery. On the other hand, that school of critics and theologians which disregards the genuine merits and the great value of Assyriological researches for the interpretation of the Old Testament is open to the double charge of unfairness and ignorance.
Calah, and Reen between Nineveh and Calah".

Till quite recently the most commonly accepted interpretation of this passage was that Assur left Babylon, where Nimrod (Nimrod) the terrible was reigning, and settled in Assyria, where he built the cities of Nineveh, Rehoboth, Chale (Calah), and Reen. But, however, those who wrote it, on which is mainly based the Vulgate version, is abandoned in favour of the more probable one, according to which Nimrod himself, the beginning of whose kingdom was Babylon (Babel), Arach (Erech), Acchat (Ancath), and Chalanne (Calneh), in Southern Babylonia, is in the foreground. In this case being a geographical name, i.e. Assyria, and not ethnographical or personal, and there he built the four above-mentioned cities and founded the Assyrian colony. Whichever of these interpretations be held as correct, one thing is certain: that the Assyrians are not only Semites, but in all probability an offshoot of the Semitic Babylonians, or a Babylonian colony; although, on account of their apparently purer Semitic blood, they have been called Semites, in some schools of Semitic migration from Arabia (c. 3000-2500 B.C.), migrated and settled in Assyria. The first Assyrian rulers known to us bore the title of Ishshakku (probably Ishshakku, who was certainly subject to some outside power, presumably that of Babylon. Some of the earliest of these Ishshaki known to us are Ishmi-Dagan and his son Shamshi-Adad I (or Shamshi-Ramman). The exact date of these two princes is uncertain, although we may with reasonable certainty place them about 1840-1800 B.C. Other Ishshaki are Igur-Kapkapu, Shamshi-Adad II, Khallu, and Irshum. The two cities of Nineveh and Assur were certainly in existence at the time of Hammurabi (c. 1800 B.C.), for in one of his letters he makes mention of them. It is significant, however, that in the long inscription (300 lines) of Agumakrime, one of the Kassite rulers of Babylonia (c. 1650 B.C.), in which he enumerates the various countries over which his rule extended, no mention is made of Assyria. Hence, it is probable that the beginning of an independent Assyrian kingdom may be placed towards the seventh century B.C. According to an inscription of King Esarhaddon (681-688 B.C.), the first Assyrian Ishshakku to assume the title of Assurshakku, was at the time of the Assyrian conquest by Rages, written in archaic Babylonian, was found by Father Scheil. His date, however, cannot be determined.

Towards the fifteenth century B.C., we find Egypt's supremacy extended over Syria and the Mesopotamian valley; and in one of the royal inscriptions of Thothmes III of Egypt (1480-27 B.C.), we find Assyria among his tributary nations. From the Tel-el-Amarna letters also we know that diplomatic negotiations and correspondence were frequent among the rulers of Assyria, Babylonia, Syria, Mitanni, and the Egyptian Pharaohs, especially Amenhotep IV. Towards this same period we find also the Kings of Assyria standing on an equal footing with those of Babylonia, and successfully contesting with the latter for the boundary-lines of their kingdom. About 1450 B.C. Assur-shur-nishnu was King of Assyria. He settled the boundary-lines of his kingdom with his contemporary Karindash, King of Babylonia. The same treaty was concluded by his successors, Assur and Burnabuashir I, King of Babylon. Puvar-Assur was succeeded by Assur-nadin-Elge, who is mentioned by his successor, Assur-uballit, in one of his letters to Amenhotep IV, King of Egypt, as his father and predecessor. During most of the long reign of Assur-uballit, the relations between Assyria and Babylonia continued friendly, but towards the end of that reign the first open conflict between the two sister-countries broke out. The cause of the conflict was as follows: Assur-uballit, in sign of friendship, had given his daughter, Muballit-sheera, for wife to the King of Babylonia. The son born of this union, Khubilie, was subsequently, by the name of Assur-Charbe by name, succeeded his father on the throne, but was soon slain by a certain Nazi-bugash (or Suzigash), the head of the discontented Kassite party, who ascended the throne in his stead. To avenge the death of his grandson the aged and vale of monarch, Assur-Charbe, went in his capacity as a Nazi-bugash, and set the son of Kudashman-Charbe, who was still very young, on the throne of Babylonia, as Kurigalzu II. However, towards the latter part of his reign (c. 1380 B.C.), Kurigalzu II became hostile to Assyria; in consequence of which Belnirari, Assur-uballit's successor on the throne of Assyria, made war against him and defeated him at the city of Sughu, annexing the northern part of Babylonia to Assyria. Belnirari was succeeded by his son, Puidi-muballit, who undertook several successful military expeditions to the east and south-east of Assyria and built various temples, and of whom we possess few, but important, inscriptions. His successor was Ramman-nirari, who not only strengthened Assyria's new-conquered territories of his two predecessors, but also made an exploit and defeated Nazi-Maruttash, King of Babylon, the successor of Kurigalzu II, adding a considerable Babylonian territory to the newly arisen, but powerful, Assyrian Empire.

Towards the end of the fourteenth century B.C. (about 1330-20 B.C.) Ramman-nirari was succeeded by his son Shalmaneser I. During, or about the time of this ruler, the once powerful Egyptian supremacy over Syria and Mesopotamia, thanks to the brilliant military rule of his predecessor, Pharaoh Amenophis III, a numerous horde of tribes in Northern Syria and Asia Minor, was successfully withstood and confined in the Nile Valley. With the Egyptian pressure thus removed from Mesopotamia, and the accession of Shalmaneser I, an ambitious and energetic monarch, to the throne of Assyria, the Assyrian Empire began to extend its power westwards. Following the course of the Tigris, Shalmaneser I marched northwards and subjugated many northern tribes; then, turning westwards, invaded part of north-eastern Syria and conquered the Arae, the chief city of Western Mesopotamia. From there he marched against the land of Musri, in Northern Arabia, adding a considerable territory to his empire. For strategic reasons he transferred the seat of his kingdom from the city of Assur to that of Kalhi (the Chale, or Calah, of Genesis), forty miles to the north, on the eastern bank of the Tigris, and eighteen miles south of Nineveh. Shalmaneser I was succeeded by his son Tukulti-Ninib (c. 1290 B.C.), whose records and inscriptions have been collected and edited by L. W. King of the British Museum. He was a valiant warrior and conqueror, for he not only preserved the integrity of the empire but also extended it towards the north and north-west. He invaded and conquered Babylonia, where he established the seat of his government for fully seven years, during which he became obnoxious to the Babylonians, who plotted and rebelled against him, proclaiming a certain Ramman-shur-usur king in his stead. The Assyrians themselves also became dissatisfied on account of his treasurers, whose exploitation was slain by his own nobles, who proclaimed his son, Assur-nashir-pal, king in his stead. After the death of this prince, two kings, Assur-narrara and Nabudanay by name, reigned over Assyria, of whom, however, we know nothing. Towards 1210-1200 B.C. we find Bel-Kudur-usur and his successor,
AS SYRIA

Ninib-pal-Eshara, reigning over Assyria. These, however, were attacked and defeated by the Babylonians, who thus regained possession of a considerable part of their former territory. The next Assyrian king was Assur-dan, Ninib-pal-Eshara's son. He avenged his father's defeat by invading Babylonia and capturing the cities of Zaban, Irri, and Akarsallu. In 1160 B.C., Assur-dan was succeeded by his son, Mutakki-Nusku; and in 1140 B.C., by the latter's son Assur-resh-ishi, who subjugated the peoples of Ahlami, Lullumi, Kuti (or Guti), and other countries, and administered a crushing defeat to his rival and contemporary, Nabuchodonosor (Nebuchadnezzar) I, King of Babylon.

About 1120-10 B.C. Assur-resh-ishi was succeeded by his son, Tiglath-pileser I, one of the greatest Assyrian monarchs, under whose reign of only ten years duration Assyria rose to the apex of its military success and glory. He has left us a very detailed and circumstantial account of his military achievements, written on four octagonal cylinders which he placed at the four corners of the temple built by him to the god Ramman. According to these, he undertook, in the first five years of his reign, several successful expeditions against Awan, the Shubari, against the Hittites, and into the mountains of Zagros, against the people of Nairi and their twenty-three kings, who were chased by him as far north as Lake Van in Armenia; against the people of Musri in Northern Arabia, and against the Arameans, or Syrians. "In all", he tells us, "forty-two countries and their kings, from beyond the Lower Zab, from the border of the distant mountains as far as the farther side of the Euphrates, up to the left end of Hatin [Hatina]; and as far as the upper part of the setting sun [i.e., Lake Van], from the beginning of my sovereignty until my fifth year, has my hand conquered. I carried away their possessions, burned their cities with fire, demanded from their hostages tribute and contributions, and laid on them the heavy yoke of my rule." He crossed the Euphrates several times, and even reached the Mediterranean, upon the waters of which he embarked. He also invaded Babylonia, inflicting a heavy blow on the Babylonian king, Marduk-nadin-apla and his army, and capturing several important cities, such as Dur-Kurigalzu, Sippar, Babylon, and Opis. He pushed his triumphal march even as far as Elam. Tiglath-pileser I was also a daring hunter, for in one of his campaigns, he tells us, he killed no fewer than over twelve thousand wild beasts and over one hundred with spears while in his chariot, caught four elephants alive, and killed ten in his chariot. He kept at the city of Assur a park of animals suitable for the chase. At Nineveh he had a botanical garden, in which he planted specimens of foreign trees gathered during his campaigns. He built also many temples, palaces, and canals. It may be of interest to add that his reign coincides with that of Helin (Elil), one of the ten judges who ruled over Israel prior to the establishment of the monarchy. At the time of Tiglath-pileser's death, Assyria was enjoying a period of tranquillity, which did not last, however, very long; for we find his two sons and successors, Assur-bel-Kala and Shamshi-Ramman, seeking offensive and defensive alliances with the Egyptians.

From about 1070 to 950 B.C., a gap of more than one hundred years presents itself in the history of Assyria. But from 950 B.C. down to the fall of Nineveh and the overthrow of the Assyrian Empire (605 B.C.) the history of Assyria is very completely represented by the documents. Tiglath-pileser II was king over Assyria. In 930 B.C. he was succeeded by his son, Assur-dan II, and about 910 B.C. by the latter's son, Ramman-nirari II, who, in 890, was succeeded by his son, Tukulti-Ninib II. The last two monarchs appear to have undertaken several successful expeditions against Babylonia and the regions north of Assyria. Tukulti-Ninib's successor was Assur-nasir-pal (885-860 B.C.), with whose accession to the throne began a long career of victory that placed Assyria at the head of the great powers of that age. He was a great conqueror, soldier, organizer, hunter, and builder, but also cruel. In his eleven military campaigns he invaded, subdued, and conquered, after a series of devastations and raids, all the regions north, south, east, and west of Assyria, from the mountains of Armenia down to Babylonia, and from the mountains of Kutha (Kieh, and of Karkemish and Karashah or Kar-lyah) to the Mediterranean. He crossed the Euphrates and the Orontes, penetrated into the Lebanon region, attacked Karkemish, the capital of the Hittites, invaded Syria, and compelled the cities of the Mediterranean coast (such as Tyre, Sidon, Byblos, and Arad) to pay tribute. But the chief interest in the history of Assur-nasir-pal lies in the fact that it was in his reign that Assyria first came into touch with Israel. In his expedition against Karkemish and Syria, which took place in 878 B.C., Assur-nasir-pal marched against the kingdom of Muziku, called the kingdom of Israel, by the other inhabitants because of Sargon—nearly 150 years—the land of Israel is frequently mentioned as the "land of Omri"; and Jehu, a later King of Israel, but not of the dynasty of Amri, is also called the "son of Omri". This seems to show that the land of Israel was known to the Assyrians as the land of that king who happened to be reigning when they were first brought into political relations with it, and we know that this king was Amri, for in 878, the year of Assur-nasir-pal's expedition to Syria, he had been king over Israel for some nine years.

Assur-nasir-pal was succeeded by his son, Shalmaneser II, who in the sixth year of his reign (854 B.C.) made an expedition to the West with the object of subduing Damascus. In this memorable campaign he came into direct touch with Israel and their king Achab (Ahab), who happened to be one of the allies of Benhadad, King of Damascus. In describing this expedition the Assyrian monarch goes on to say that he approached Karkar, a town to the west of Damascus; that he sent a messenger to Inshilu, who was his chief officer; and that he took a large train of Oxen and packed his baggage in them. "I desolated and destroyed, I burnt it: 1,200 chariots, 1,200 horsemen, 20,000 men of Birgid of Damascus; 700 chariots, 700 horsemen, 10,000 men of Inshilu of Hamath; 2,000 chariots, 10,000 men of Ahab of Israel... these twelve kings [i.e., Inshilu] took to his assistance. To offer battle they marched against me. With the noble might which Assur, the Lord, granted, with the powerful weapons which Nergal, who walks before me, gave, I fought with them, from Karkar into Gilzan I smote them. Of their soldiers I slew 14,000."—The Old Testament is silent on the presence of Ahab in the battle of Karkar, which took place in the same year in which Ahab died fighting in the battle of Ramoth Gilead (III Kings, xxii).

Seven years after the event Jehu was proclaimed king over Israel, and one of his first acts was to pay tribute to Shalmaneser II. This incident is commemorated in the latter's well-known "black obelisk", in the British Museum, in which Jehu himself, "the son of Omri", is sculptured as paying tribute to the king. In another inscription the same thing is recorded the same fact, saying: "At that time I received the tribute of the Tyrians, Sidonians, and Jehu the son of Omri." This act of homage took
ASSEYRIA

place in 542 B.C., in the eighteenth year of Shalmaneser’s reign.

After Shalmaneser II came his son Shamshi-Ramm-an II (824-823 B.C.), who, in order to quell the rebellion caused by his elder son, Assur-durin-pal, undertook four campaigns. He also fought and defeated the Babylonian King, Marduk-balassu-ibni, and his powerful army. Shamshi-Ramm-an II was succeeded by his son, Ramman-nirari III (812-806 B.C.). This king undertook several expeditions against Media, Armenia, the land of Nairi, and the region around Lake Urmi, and subjugated all the conquered, including Assyrian, Babylonian, Philistine, and the “land of Omri”, i.e. Israel. The chief object of this expedition was to subdue Damascus, which he did by compelling Mar’l, its king, to pay a heavy tribute in silver, gold, copper, and iron, besides quantities of cloth and furniture. Joshaia (Jehoshua) was then king over Israel, and he was welcomed with open arms Ramman-nirari’s advance, inasmuch as this monarch’s conquest of Damascus relieved Israel from the heavy yoke of the Syrians. Ramman-nirari III also claimed sovereignty over Babylonia, and an inscription states that the king of Emar, Adad-nirari, and he reigned from 812 to 783 B.C. In one of his inscriptions, which are unfortunately scarce and laconic, he mentions the name of his wife, Samuramam, which is the only Assyrian or Babylonian woman so far discovered with any names, resembling that of the famous legendary queen, Semiramis. The personal identity of the two queens, however, is not admissible. Ramman-nirari III was succeeded by Shalmaneser III (783-773 B.C.), and the latter in turn was succeeded by Shalmaneser III (755-754 B.C.), who in turn was followed by Assur-bani-pal II (754-745 B.C.). Of these three kings we know little, as no adequate inscriptions of their reigns have come down to us.

In the year 745 B.C., Tiglath-pileser III (in the Douay Version, Thelahphalasar) seized the throne of Assyria, at Nineveh. He is said to have begun life as a gardener, to have distinguished himself as a soldier, and to have been elevated to the throne by the army. He was a most capable monarch, enterprising, energetic, wise, and daring. His military ability saved the Assyrian Empire from the utter ruin and decay which had begun to threaten its existence, and for this he is fitly spoken of as the founder of the Second Assyrian Empire. Tiglath-pileser’s methods differed from those of his predecessors, in that his dealings were more conciliatory. He organized the empire and divided it into provinces, each of which had to pay a fixed tribute to the exchequer. He was thus able to extend Assyrian supremacy over almost all of Western Asia, from Armenia to Egypt, and from Persia to the Mediterranean. During his reign Assyria came into close contact with the Hebrews, as is shown by his own inscriptions, as well as by the Old Testament records, where he is mentioned under the name of Phul (Pul). In the Assyrian inscriptions his name occurs only as that of Tiglath-pileser, but in the “List of Babylonian Kings” he is also called Pul, which settles its identity with the Phul, or Pul, of the Bible. He reigned for eighteen years (745-727 B.C.). In his annals he mentions the pay of his tribute to the king of the kings, amongst whom is “Menahem of Samaria”... a fact confirmed by IV Kings, xv, 19, 20. During his reign, Achaia was King of Judah. This prince, having been hard pressed and harassed by Resin (Resin) of Damascus, and Phases (Fekah) of Israel, entered into connection with Tiglath-pileser (Thelahphalasar), who, nothing loath, marched westward and attacked Resin, whom he overthrew and shut up in Damascus. Two years later, the city surrendered, Resin was slain, and the inhabitants were carried away captives (IV Kings, xvi, 7, 8, 9). Meanwhile Israel also was overrun by the Assyrian monarch, the country reduced to the condition of a desert, and the trans-Jordanic tribes subdued. At the same time the Philistines, the Edomites, the Arabians, and many other tribes were subdued; and after the fall of Damascus, Tiglath-pileser held a durbar which was attended by many princes, amongst whom was Achaia himself. His next expedition to Palestine was in 734, the objective this time being Gaza, an important town on the sea-coast. Achaia hastened to make, or, rather, to renew, his submission to the Assyrian monarch; as we find his name mentioned again in several of Tiglath-pileser’s inscriptions. In 733 the Assyrian monarch carried off the population from large portions of the Kingdom of Israel, sparing, however, the capital, Samaria. Tiglath-pileser was the first Assyrian king to come into contact with the Kingdom of Judah, and also the first Assyrian monarch to begin on a large scale the system of transplanting peoples from one country to another, with the object of breaking down their national spirit, unity, and independence. According to many modern Biblical scholars, it was Tiglath-pileser who, in the days of Jonas (Jonah) preached in Nineveh, although others prefer to locate the date of this Hebrew prophet a century later, i.e. in the reign of Asshurbanipal (see below).

Tiglath-pileser III was succeeded by his son (?), Shalmaneser IV, who reigned but five years (727-722 B.C.). No historical inscriptions relating to this king have as yet been found. Nevertheless, the “Babylonian Chronicle” (which gives a list of the principal events occurring in Babylonia and Assyria between 744 and 688 B.C.) has the following statement: “On the 25th of Thiet (December-January) Shalmaneser (in D. V. Salmanaasar) ascended the throne of Assyria, and the city of Shamara’s (Samaria) was destroyed. In the fifth year of his reign he died in the month of Thiet...” The Assyrian “Eponym Canon” (see above) also informs us that the first two years of Shalmaneser’s reign passed without an expedition, but in the remaining three his armies were engaged. In what direction the armies of Shalmaneser (Salmanaasar) were engaged, the “Canon” does not say, but the “Babylonian Chronicle” (quoted above) and the Old Testament (IV Kings, xviii) explicitly point to Palestine, and particularly to Samaria, the capital of the Israelitish Kingdom. Of this, the Assyrian monarch’s reign, Oses (Othoas) King of Israel, together with the King of Tyre, rebelled against Assyria; and in order to crush the rebellion the Assyrian monarch marched against both kings and laid siege to their capitals. The Biblical account (Douay Version, IV Kings, xvii, 5 sq.) of this expedition is as follows: “Against him came up Salmanaasar king of the Assyrians, and Oses became his servant, and paid him tribute. And when the king of the Assyrians found that Oses endeavours to rebel had sent messengers to Sus the king of Egypt, that he might not pay tribute to the king of the Assyrians, as he had done every year, he besieged him, bound him, and cast him into prison. And he went through all the land: and going up to Samaria, he besieged it three years. And in the fifth year of the king of the Assyrians took Samaria, and carried Israel away to Assyria; and he placed them in Hala and Habor by the river of Gozan, in the cities of the Medes.”—See also the parallel account in IV Kings, xviii, 9-11, which is one and the same as that here given. The question of whether the Biblical account (Thelahphalasar) is historical or legendary is a question, whether Shalmaneser himself or his successor conquered Samaria; while, from the Assyrian inscriptions, it appears that Shalmaneser died, or was murdered, before he could personally carry his victory to an end. He was succeeded by Sargon II.
Sargon, a man of commanding ability, was, notwithstanding his claim to royal ancestry, in all probability a usurper. He is one of the greatest figures in the history of the ancient world. He was the founder of the famous Sargontid dynasty, which held sway in Assyria for more than a century, i.e., until the fall of Nineveh and the overthrow of the Assyrian Empire. He himself reigned for seventeen years (722–705 B.C.) and proved a most successful warrior and organizer. In every battle he was victor, and in every difficulty a man of resource. He was also a great builder and patron of the arts. His greatest work was the building of Dur-Sharrukin, or the Castle of Sargon, the modern Khorsabad, which was thoroughly explored by Layard. It was a large city, situated about ten miles from Niniveh, and capable of accommodating 80,000 inhabitants. His palace there was a wonder of architecture, panelled in alabaster, adorned with sculpture, and inscribed with the records of his exploits.

In the same year in which he ascended the throne, Samaria fell (722 B.C.), and the Kingdom of Israel was brought to an end. “In the beginning of my reign,” he tells us in his annals, “and in the first year of my reign... Samaria I besieged and conquered, and 200,000 inhabitants... I restored it again and made it as before. People from all lands, my prisoners, I settled there. My officials I set over them as governors. Tribute and tax I laid on them, as on the Assyrians.” Sargon’s second campaign was against the Elamites, whom he subdued. From Elam he marched westward, laid Hamath in ruins, and afterwards utterly defeated the combined forces of the Philistines and the Egyptians, at Raphia. He made Hanun King of Ammon and took 200,000 inhabitants captive, with very rich booty, into Assyria. Two years later, he attacked Karkemish, the capital of the Hittites, and conquered it, capturing its king, officers, and treasure, and deporting them to Assyria. He then for fully six years harassed, and finally subdued, all the northern and north-western tribes of Kurdistan, of Armenia (Urartu, or Ararat), and of Cilicia: the Mannai, the Mushki, the Kummukhi, the Medii, the Kamman, the Gagum, the Samali, and many others who lived in those wild and inaccessible regions. Soon after this he subdued several Arabian tribes and, afterwards, the Medians, with their forty-two chiefs, or princes.

During the first eleven years of Sargon’s reign, the Kingdom of Judah remained peacefully subject to Assyria. But in his second year (711 B.C., however, Ezechias (Hezekiah), King of Judah, partly influenced by Merodach-baladan, of Babylon, and partly by promises of help from Egypt, rebelled against the Assyrian monarch, and in this revolt he was heartily joined by the Phcenicians, the Philistines, the Moabites, and the Ammonites. Sargon was ever quick to act; he collected a powerful army, marched against the rebels, and dealt them a crushing blow. The fact is recorded in Isaiah, xx, 1, where the name of Sargon is expressly mentioned as that of the invader and conqueror.

With Palestine and the West pacified and subdued, Sargon, ever energetic and prompt, turned his attention to Babylonia, where Merodach-baladan was ruling. The Babylonian army was easily routed, and Merodach-baladan himself was overcome by Sargon and fled in terror to Beth-Yakin, his ancestral stronghold. Sargon entered Babylonia in triumph, and in the following year he pursued the fleeing king, stormed the city of Beth-Yakin, deported its people, and compelled all the Babylonians and Elamites to pay him tribute. He captured Nineveh in 705, in the flower of his age and at the zenith of his glory, Sargon was assassinated. He was succeeded by his son, Sennacherib (705 to 681 B.C.), whose name is so well known to Bible students. He was an exceptionally cruel, arrogant, revengeful, and despotic ruler, but, at the same time, a monarch of enviable ability.
Sennacherib, enraged and revengeful, resolved to storm and destroy the city. But in that same night the whole Assyrian army, gathered under the walls of Jerusalem, was stricken by the angel of the Lord, who slew one hundred and eighty-five thousand men, and the third of all the Assyrian soldiers. At the sight of this terrible calamity, Sennacherib, in terror and confusion, departed and returned to Assyria. The Assyrian and the Biblical accounts are prima facie conflicting, but many more or less plausible solutions have been suggested. In the first place there must be and express, if to be found in Sennacherib's own annals mention of, or allusion to, any reverse he may have suffered; such allusions would be clearly incompatible with the monarch's pride, as well as with the purpose of annals inscribed only to record his exploits and victories. In the second place, it is not improbable that Sennacherib undertook two different campaigns against Juda: in the first, to which his annals refer, he contended himself with exacting and receiving submission and tribute from the remnant of Shalmaneser of Shalmaneser's army; but in a later expedition, which he does not mention, he insisted on the surrender of Jerusalem, and in this latter expedition he met with the awful disaster. It is to this expedition that the Biblical account refers. Hence, there is no real contradiction between the two accounts. The same word is used both for the two different events. Furthermore, the disaster which overtook the Assyrian army may have been, after all, quite a natural one. It may have been a sudden attack of the plague, a disease to which oriental armies, from their utter neglect of sanitation, are extremely subject, and before which they quickly succumb. Josephus explicitly affirms that it was a flagellum prodigiosum (Antiq. Jud., X, 1, n. 5); while, according to an Egyptian tradition preserved to us by Herodotus (Lib. II, cxxx), Sennacherib's army was attacked and consumed by a kind of poisonous wild mite which suddenly broke into the Assyrian camp, completely demoralizing the army. At any rate Sennacherib's campaign came to an abrupt end, and he was forced to retreat to Nineveh. It is noteworthy, however, that for the rest of his life Sennacherib undertook no more military expeditions to the West, or to Palestine. This fact, interpreted in the light of the Assyrian monuments, would be the result of the complete submission of Syria and Palestine; while, in the light of the Biblical narrative it would signify that Sennacherib, after his disastrous defeat, dared not attack Palestine again.

While laying siege to Jerusalem, Sennacherib received the disquieting news of Merodach-baladan's sudden appearance in Babylonia. A portion of the Assyrian army was despatched any his ally to Babylonia against the restless and indomitable foe of Assyria. In a fierce battle, Merodach-baladan was for the third time defeated and compelled to flee to Elam, where, worn and broken down by age and misfortunes, he ended his troubless life; but in the meantime Hisadi and Asshur-nadin-shum, the eldest son of Sennacherib, was appointed king over Babylonians. After his return from the West, and after the final defeat of Merodach-baladan, Sennacherib began lengthy and active preparations for an effective expedition against Babylonia, which was very rebellious and restless. The expedition was as unique in its methods as it was audacious in its conception. With a powerful army and navy, he moved southward and, in a terrible battle near Khalulu, utterly routed the Chaldees, and allowed him to Babylonians and executed their two chiefs, Nergal-uesib and Nineveh: Elam was ravaged, "the smoke of burning towns obscuring the heavens". He next attacked Babylon, which was stormed, sacked, burnt, flooded, and so mercilessly punished that it was reduced to a mass of ruins, and almost obliterated. On his return to Assyria, Sennacherib appears to have spent the last years of his reign in building his magnificent palace at Nineveh, and in embellishing the city with temples, palaces, gardens, arsenals, and fortifications. After a long, stormy, and glorious reign, the greatest of the Assyrians, the ruler of the world, died of his own sons (681 b.c.). The Bible tells us that "as he [Sennacherib] was worshiping in the temple of Nergal his god, Adramelech and Sarasar his sons slew him with the sword, and they fled into the land of the Armenians, and Esarhaddon [Esarhaddon] his son reigned in his stead" (IV Kings, xix, 37). The "Babylonian Chronicle", however, has "On 20 Thebet [December–January] Sennacherib, King of Assyria, was slain by his son in a rebellion . . . years reigned Sennacherib in Assyria. From 20 Thebet to 2 Adar [March–April] was the rebellion in Assyria maintained. On 18 Adar his son, Esarhaddon, ascended the throne of Assyria." If the murderer of Sennacherib was, as the "Babylonian Chronicle" tells us, one of his own sons, no son of Sennacherib by the name of Asshur-bani-pal, was elected king in the Assyrian monuments; and while the Biblical narrative seems to indicate that the murder took place in Nineveh, on the other hand an inscription of Assurbanipal, Sennacherib's grandson, clearly affirms that the tragedy took place in Babylon, in the temple of Marduk, in which Nersach or Nisrok, is probably a corruption.

Sennacherib was succeeded by his younger son, Esarhaddon, who reigned from 681 to 668 B.C. At the time of his father's death, Esarhaddon was in Armenia with the Assyrian army, but on hearing the sad news he promptly set out for Nineveh, first to avenge his father's death by punishing the perpetrators of the crime, and then to ascend the throne. On his way home he met the assassins and their army near Cappadocia, and in a decisive battle he routed them with tremendous loss, thus becoming the sole and undisputed lord of Assyria. Esarhaddons' first campaign was against Babylonia, where a fresh revolt, caused by the son of the late Merodach-baladan, had broken out. The pretender was easily defeated and compelled to flee to Elam. Esarhaddon, unlike his father, determined to build up Babylon and to restore its ruined temples, palaces, and walls. He gave back to the people their property, which had been taken away from them as spoils of war during Sennacherib's campaign, and succeeded in restoring peace and harmony among the people. He determined, furthermore, to make Babylon his residence for part of the year, thus restoring its ancient splendour and religious supremacy. Esarhaddon's second campaign was directed against the West, i.e. Asia, where a fresh rebellion, having for its centre the great maritime city of Sidon, had broken out. He captured the city and completely destroyed it, ordering a new city, with the name of Kar-Esarhaddon, to be built on its ruins. The King of Sidon was beheaded, and the surrounding country devastated. Twenty-two Syrian princes, among them Manasses, King of Judah, surrendered and submitted to Esarhaddon. Scarcely, however, had he retired when these same princes, including Manasses, revolted. But the great Esarhaddon utterly crushed the rebellion, taking numerous cities, captives, and treasures, and ordering Manasses to be carried to Babylon, where the king was then residing. A few years later Esarhaddon had mercy on Manasses, and allowed him to return to his own country. In a third campaign, Esarhaddon blockaded the impregnable Tyre, and set out to conquer Egypt, which he successfully accomplished by defeating its king, Tirhakah. In order to effectively establish Assyrian supremacy over Egypt, he divided the country into twenty provinces, and over each of them he appointed a governor; sometimes a native, sometimes an
A Syriac. He exacted heavy annual tribute from every one of these twenty provinces, and returned in triumph to Assyria. "As for Tarqu [Tirhakah], King of Egypt and Cush, who was under the curse of their great divinity, from Jehoshaphath [Jehoshaphat], his royal city—a march of fifteen days—every day without exception I killed his warriors in great number, and as for him, five times with the point of the spear I struck him with a deadly stroke. Memphis, his royal city, in half a day I burnt, I smote, and scaling, I besieged, I conquered, I tore down, I destroyed, I burned with fire, and the wife of his palace, his palace women, Ushannahuru, his own son and the rest of his sons, his daughters, his property finished at that number, without number, I carried away as spoil to Assyria. I tore up the root of Cush from Egypt, a single one— even to the suppliant—I did not leave behind Over all Egypt I appointed kings, prefects, governors, grain-inspectors, mayors, and secretaries. Instituted regular offerings to Ishtar and the great gods, my lords, for all time. I placed on them the tribute and taxes of my lordship, regularly and without fail." Esarhaddon also invaded Arabia, penetrating to its very centre, through hundreds of Arabian lands which no other Assyrian monarch had penetrated before. Another important campaign was that directed against the Cimmerians, near the Caucasus, and against many other tribes, in Armenia, Cappadocia, Cilicia, Asia Minor, and Media. The monarch's last expedition was a second campaign against Egypt. Before leaving Assyria, however, i.e. in the month of Iyyar (April–May), 665 B.C., as if forecasting future events, he constituted his son Assurbanipal co-regent and successor to the throne, leaving to his other son, Shamash-shum-ukin, Babylonia. But, while on his way to Egypt, he fell sick, and on the 10th of Marsheschan (October), in the year 668, he died.

Esarhaddon was a truly remarkable ruler. Unlike his father, he was religious, generous, forgiving, less harsh and cruel, and very diplomatic. He ruled the various conquered countries with wisdom and toleration, while he established a rigorous system of administration. A great temple-builder and lover of art, he has left us many records and inscriptions. In Nineveh he rebuilt the temple of Asshur, and in Babylonia, the temple at Ukuk, Sibitti, Dur-Ilu, Borsippa, and others, in all about thirty. In Nineveh he erected for himself a magnificent palace and arsenal, and at Kalkhi (Calah; Douay, Chale) another of smaller dimensions, which was still unfinished at the time of his death. Assurbanipal, Esarhaddon's successor, was undoubtedly the greatest of all Assyrian monarchs. For generalship, military conquests, diplomacy, love of splendour and luxury, and passion for the arts and letters, he has neither superior nor equal in the annals of that empire. To him we owe the greatest part of our knowledge of Assyro-Babylonian history, religion, literature, art, and civilization. Endowed with a rare taste for letters, he caused all the most important historical, religious, mythological, legal, astronomical, mathematical, grammatical, and lexicographical texts and inscriptions known to his day to be copied and placed in a magnificent library which he built in his own palace. "Tens of thousands of clay tablets systematically arranged on shelves for easy consultation, books, and other archives, the choicest religious, historical, and scientific literature of the Babylonia-Assyrian world. Under the inspiration of the king's literary zeal, scribes copied and translated the ancient sacred classics of primitive Babylonia for this library, so that from this remains, can merely the details of the government and administration of the Assyria of his time, but the life and thought of the far distant Babylonian world." (G. H. Goodspeed, Hist. of the Babylonians and Assyrians, pp. 315, 316.) Of this library, which must have contained over forty thousand clay tablets, a part was as far as M bird, but a part has been destroyed, and part yet remains to be explored. Here G. Smith first discovered the famous Babylonian accounts of the Creation of the Deluge in which we find so many striking similarities with the parallels in the Biblical stories. Assurbanipal was also a great temple-builder—in Nineveh, Arbela, Tarshish, Babylon, Eshurippa, Sippar, Nippur, and Uruk. He fortified Nineveh, repaired, enlarged, and embellished Sennacherib's palace, and built shrines to its exons, a palace of remarkable beauty. This he adorned with numerous magnificent statues, sculptures, bas-reliefs, inscriptions, and treasures. Assyrian art, especially sculpture and architecture, reached during his reign its golden age and its classical perfection, while Assyrian power and supremacy against Assuxus increased to its height; for with Assurbanipal's death Assyrian power and glory sank into the deepest gloom, and perished, presumably, to rise no more.

Assurbanipal's military campaigns were very numerous. He invaded the land of the Medes, destroyed the Medes, and killed their king, and his first move was against Egypt, which he subdued, penetrating as far as Memphis and Thebes. On his way back, he exacted tribute from the Syrian and Phoenician kings, among whom was Manasses of Judas, who is expressly mentioned in one of the king's inscriptions. He forced Tyre to surrender, and subdued the Kings of Arvad, of Tabal, and of Cilicia. In 655, he marched against Babylon and drove away from it a newly organized, but powerful coalition of Elamites, Chaldeans, and Arameans. He afterwards marched into the very heart of Elam, as far as Susa, and in a decisive battle he shattered the Elamite forces. In 625, Shamsash-shum-ukin, Assurbanipal's brother, who had been appointed by his father King of Babylonia, and who had till then worked in complete harmony with his brother, rebelled against Assurbanipal. To this he was openly and secretly incited by many Babylonian, Elamite, and Arabian chiefs. Assurbanipal, however, was quick to act. He marched against Babylon, shut off all the rebels in their own fortresses, and forced them to a complete surrender. His brother set fire to his own palace and threw himself into the flames. The cities and fortresses were captured, the rebels slain, and Elam completely devastated. Temples, palaces, royal tombs, and shrines were destroyed. Treasures and booty were taken and carried away to Assyria, and several thousands of people, as well as all the princes of the royal family, were executed, so that, a few years later, Elam disappeared for ever from history. In another campaign, Assurbanipal advanced against Arabia and subdued the Kedarenes the Nabateans, and a dozen other Arabian tribes, as far as Damascus. His attention was next attracted to Armenia, Cappadocia, Media, and the northwestern and north-eastern regions. In all these he established his supremacy, so that from 640 till 626, the year of Assurbanipal's death, Assyria was at peace. However, most scholars incline to believe that during the last years of the monarch's reign the Assyrian Empire began to decay. Assurbanipal's official dispatch to Nebuchadrezzar in the Old Testament (I Esdras, iv, 10) under the name of Asenaphar, or, better, Ashenappar (Ahinappeb) in connexion with his deportation of many troublesome populations into Samaria. He is probably alluded to by the Second Isaiah and Nahum, in connexion with restoration of the Kingdom of Elam and Arabia. According to G. Brunengo, S.J. (Nabuchodnossor di Giuditta, Rome, 1886) and other scholars.
Astaroth (AstarTE). See Phoenicia.

Astrisk (Gr. ἀστήρ, a star).—This is a utensil for the Mass according to the Greek Rite, which is not used in the Roman Rite at all. It is a curved band, or armlet, of silver or gold which crosses each other at right angles and thus forms a double arch. It is used to place over the amnos, or particles of blessed bread, when spread out upon the paten during the proskomide and earlier part of the Greek Mass, so as to prevent the veil from coming in contact with these blessed but unconsecrated particles of bread in carrying the paten from the prothesis to the altar, or while it is standing at either place. It is laid aside after the Creed and is not ordinarily used again during the Mass. The asterisk and incensing it says, “And the asterisk came forth and stood over where the child was.” Then he puts it over the particles of bread upon the paten, and proceeds to cover it with the various veils and at conclusion of the proskomide, begins the elevation of the Mass.

GABRIEL OUBRANI.

Astaroth is the Nabuchodonosor (Nebuchadnezzar) of the Book of Daniel, who identify him with the Assyrian monarch of that name, and he is a character of the apocryphal books of Daniel and the Apocrypha. In view, however, of the conflicting characters of the legendary Sardanapalus and the Astarte of the cuneiform inscriptions, this last identification seems impossible. Besides, Assur-pani was not the last king of Assyria, as Sardanapalus is supposed to be.

Astarte was succeeded by his two sons, Assur-etil-enili and Sin-sharrishkun. Of their respective reigns and their exploits we know nothing, except that in their days Assur was the power of the region. All the foreign provinces—Egypt, Phoenicia, Chaldea, Syria, Arabia, Armenia, Media, Babylonia, and Elam—broke away from Assyria, when the degenerate and feeble successors of the valiant Astarte proved unable to cope with the situation. They had probably abandoned themselves to effeminate luxury and debaucheries, caring little or nothing for military glory. In the meanwhile Nabopolassar, King of Babylon, and Cyaxares, King of Media, formed a family and political alliance, and, gaining his father's kingdom, married to the former's son, Nabuchodonosor (Nebuchadnezzar). At the head of a powerful army, these two kings together marched against Nineveh and laid siege to it for fully two years, after which the city surrendered and was completely destroyed and demolished (906 B.C.), and Assyria became a province of Babylonia and Media.

RELIGION AND CIVILIZATION.—The religion and civilization of Assyria were almost identical with those of Babylonia, the former having been derived from the later and developed along the same lines. For, although the Assyrians made notable contributions to architecture, art, science, and literature, these were with them essentially a Babylonian importation. Assyrian temples and palaces were modelled upon those of Babylonia, although in the building-material stone was far more liberally employed. In sculptural decorations and in statuary more richness and originality were displayed by the Assyrians than by the Babylonians. It seems to have been a peculiar attribute of Assyrian monarchs to build colossal palaces, adorned with gigantic statues and an infinite variety of bas-reliefs and inscriptions showing their warlike exploits. Assurbanipal's library shows that Assyrian religious literature was not only an imitation of that of Babylonia, but also equally lucid and abstract. An examination of the religions of the two countries proves that the Assyrians adopted Babylonian doctrines, cults, and rites, with such slight modifications as were called for by the conditions prevailing in the two countries. The chief difference in the Assyrian pantheon, compared with that of Babylonia, is that, while in Semitic times the principal god of the latter was Marduk, that of the former was Assur. The principal deities of both countries are: the three chief gods, Anu, the god of the heavenly expanse; Bel, the earth god and creator of mankind; and Ea, the god of humanity par excellence, and of the water. Next comes Ishtar, the mother of mankind and the consort of Bel; Sin, first-born son of Bel, the father of wisdom, personified in the moon; Shamash, the god of light; Marduk, the hero of the heavenly and earthly spirits; Nergal, chief of the nether world and of the subterranean demons, and god of pestilence and fevers; Marduk, originally a solar deity, conqueror of storms, and afterwards creator of mankind; the god of Semitic Babylon—Adad, or Ramman, the god of storms, thunder, and lightning; Nebo, the god of wisdom, to whom the art of writing and the sciences are ascribed; Gurr-Nusku, or, simply, Nusku, the god of fire, as driving away demons and evil spirits; Assur, the consort of Belit, and the supreme god of Assyria. Besides these there were other minor deities. I. ANDREW J. SHIPMAN.

II.—2
Asterius, name of several prominent persons in early Christian history.—(1) Asterius of Petra, a bishop of Arabia, ill-treated by the Arian faction at the Council of Sardica (343) for withdrawing from the Arianism and returning to the Orthodoxy. When he was recalled in 362 by the edict of Julian that restored all the banished bishops, he took part in the Council of Alexandria (362), called, among other reasons, for the purpose of healing the Meletian schism that was rending the Church of Antioch. He was one of the bearers of the letter addressed by the council to the stubborn Lucifer of Cagliari and the other bishops then at Antioch. These peaceful measures were, however, rendered useless by Lucifer's precipitancy in the matter of assigning a successor to Meletius of Antioch, whereby the schism gained a new lease of life.—(2) Asterius of Amasea in Pontus (c. 400). The only fact in his life that is known is related by himself, vis. his education by the Syrian monk Gotius between his youth to a schoolmaster of Antioch and thus acquired an excellent education and great fame among both Greeks and Romans. The extant writings of Asterius are twenty-one homilies, scriptural and panegyrical in content. The two on penance and on the life of the Virgin are among the best. The former was addressed to St. Gregory of Nyssa (Bardenhewer, Patrologie, 1901, 267). A life of his predecessor, St. Basil, is ascribed to Asterius (Acta SS., 26 April). His works (P. G., XI) are described by Tillemont (Mém., X, 409). He was a student of Demosthenes and an orator of repute. Lightfoot says (Dict. of Christ. Biogr., I, 178) that he has six sermons display "no incomparable skill in rhetoric, great power of expression, and great earnestness of moral conviction; some passages are even strikingly eloquent." The homilies of Asterius, like those of Zeno of Verona, offer no little valuable material to the Christian archeologist. Le Buc in Acta SS., 20 Oct. (Paris, 1883), XII, 330–334.—(3) Asterius of Cappadocia, a Greek sophist, a friend of Arius, and also his fellow student in the school of Lucian of Antioch. St. Athanasius quotes more than once from a pro-Arian work of this writer. He wrote commentaries on the Epistle to the Romans, the Gospels, the Psalms, and "many other works" (Jerome, De Vir. Ill., c. xcv), all of which have perished. Zahl (Mönch, Aus dem Altertum, A. A. L., 1890, p. 25) lists his work (25) annotated as "sermons" and "sermon-speeches."—(4) Asterius, a Roman senator mentioned by Eusebius (Hist. Eccl., VII, 16) as a Christian distinguished for faith and charity. Rufinus says that he suffered martyrdom at Cesarea in Palestine in 260. It is added as 292, § 81, 1. 10.—(5) Asterius Urbanus, a Montanist writer of the latter part of the second century, referred to in Eusebius (Hist. Eccl., V, 16, 17); his work was probably a compilation of the pseudo-prophetic utterances of his sect and of his female companions Priscilla and Maximilla.

Astronomy, name of several English Catholics of prominence.—Sir Arthur, member of an ancient and knightly family, an able military officer in the army of Charles I, governor of Oxford for the king, and later governor of York and Upper Dronfield, in his absence Sir John was killed 10 September, 1649, at the siege of that town by the forces of Oliver Cromwell; his brains were dashed out with his wooden leg during the massacre that followed the capture (D. Murphy, Cromwell in Ireland, Dublin, 1897, p. 99).—Herbert, an English poet, b. at Chelsea, 1614, third son of Walter, first Lord Aston of Forfar, whom he accompanied to Madrid on his second embassy in 1635, author of "Tixall Poetry, Collected by the Hon. Herbert Aston, 1659" (ed. with notes and illustrations by Arthur Clifford, Esq., Edinburgh, 1813, 4to).—Walter, father of the preceding and son of Sir Edward Aston, of Tixall in Staffordshire, educated under the direction of Sir Edward Coke, sent as one of the two ambassadors to Spain (1619) to negotiate the affairs of the Catholic Queen (1. Prince of Wales, and the Infanta, daughter of Philip III. He became a convert to the Catholic Faith on this occasion, and on his return to England was made Lord of Forfar (Scotland). He had a decided taste for literature, and was the patron of Drayton, who addressed to him (1641) his "First Princely," and in his "Polybolion" praises the Aston’s "ancient seat" of Tixall.—William, b. 22 April, 1735, educated at St.-Omer, entered the Society of Jesus in 1751, and taught for several years in the Society’s colleges of St.-Omer, Watten, and Bruges, until the suppression in 1773; d. at Liége, 15 March, 1800, as canon of the cathedral. Among his writings are "Lettres Ultramontaines" and "Le Cosmopolite".

Thomas J. Shahan.

Asthogia (ASTRIGIA AUGUSTA), DIOCESE OF, suffragan of Valladolid in Spain, dates, it is said, from the third century. It was the principal church of the Asturias in 344, after a long eclipse was again an episcopal see in 477, and exhibits since 841 a regular succession of bishops. It was at different times a suffragan of Braga and of Santiago. It includes the whole province of Leon, and counts 300,115 Catholics, 900 parishes, and as many parish churches, 451 chapels, and 1,185 priests (1882).—Orbis Terr. Cath. (Freiburg, 1890), 47; Gams, Series ep. 5–9; Flores, Episcopatus (1792), XVI, 71; 515; Minos, Bibl. Hist. Ep. (1858) 40.

Thomas J. Shahan.

Astronomy, See SABISM.

Astronomy, the supposed science which determines the influence of the stars, especially of the five older planets, on the fate of man (astrologia judiciaria; mundane, or judicial astrology); or on the changes of weather (astrologia naturae; natural astrology) according to certain fixed rules dependent upon the controlling position of the stars (constellations and aspects) at the time under consideration. Judicial astrology—the more important branch of the art—it was depended for its predictions upon the positions of the planets in the "twelve houses" at the moment of the birth of a human being. The calculations necessary to settle these positions were called casting the horoscope or the diagram of the heavens (schema orii) at the nativity. Starting with the point that a rising just at the moment of birth, the celestial equator was divided into twelve equal parts, six above and six below the horizon, and circles were drawn through these points and the intersecting points of the horizon and the meridian. In the heavens were divided into twelve signs. The first house (horoscopos) begins with the point of the ecliptic that is just rising (ascendant). The twelve
houses are divided into cardinal houses, also called
anguli, succeeding houses (successentes, anaphora)
and declining or cadent houses (cadentes, cataphora). The
texts symbolize respectively: life, personal
property, consanguinity, riches and children and
wealth, marriage, the profession of one's livelihood
and inheritance, intellect and disposition (also long
journeys), position in life and dignities, friends and
success, enemies and misfortune. In the horoscope
these symbolic meanings are considered in their
relation to the newly born. A Lunan parameter thus
sums up the meaning of the twelve houses:
Vita, lucrum, fratres, genitor, nati, valeuto,
Uxor, mors, sapiens, regnas, benefactaque, demon.
The position of the planets and the sun and moon in
the twelve houses at the moment of birth is decisive.
The planets vary as to meaning. They are divided
into day-stars (Saturn, Jupiter, and also the sun)
and night-stars (the moon, Mars, and Venus); Mer-
cury belongs both to day and night. The sun, Jupiter,
and Mars are masculine; the moon and Venus are
geminate. Mercury and Venus belong to both classes.
Jupiter (fortuna major) and Venus (fortuna minor)
are good planets; Saturn (infortuna major) and Mars
(infortuna minor) are malign planets. The sun,
moon, and Mercury have a mixed character. Each
of the planets is a sign of an antinomy: Classical antinomy
of sun and moon, ruled a day of the week; hence the names
still used to designate the various days. Judicial astro-
ology also took into consideration the position of
the sun in the zodiac at the moment of birth; the
signs of the zodiac also had a special astrological signif-
cance in respect to the weal and woe of the new-
born, particularly his bodily health. In medical
astrology every sign of the zodiac ruled some special
part of the body, as for example: Aries, the Ram
(The Bull) or the Esau (Zita) to the intestines.
Jewish astrology postulates the acceptance of the earth as the centre of the solar
system. Natural astrology predicts the weather from the positions of the planets, especially the moon.
Many of its theories are not to be rejected a priori,
since the question of the moon's meteorological in-
fluence still awaits a solution which must depend
upon the progress of human knowledge as to ether
waves and cognate matters.

History.—The history of astrology is an im-
portant chapter on astrology or on the development of civil-
ization; it goes back to the early days of the human
cace. The unchangeable, harmonious course of the
heavenly bodies, the profound impression made on
the soul of man by the power of such heavenly phenomena
belies the feeling of dissatisfaction on the part of man
that the giver of daylight—always this probably sug-
gested, in the early ages of the human race, the ques-
tion whether the fate of man was not dependent on
these manifestations or on the development of Divine power. Ast-
rology was, therefore, the foster-sister of astronomy, the science of the investigation of the heavens. From
the start astrology was employed for the needs and
benefit of daily life; the astronomers were astrologers
only incidentally and in so far as astronomy assisted
astrology in the functions which the latter had to perform in connexion with religious worship. Ac-
cording to the belief of the early civilized races of the
East, the stars were the source and at the same
time the heralds of everything that happened, and the
right to study the "godlike science" of astrology was
therefore so complex that not even the priests in
Mesopotamia and Egypt, the oldest centres of civiliza-
tion known to us in the East. The most
ancient dwellers on the Euphrates the Akkad-
Sumerians were believers in judicial astrology, which
was closely interwoven with their worship of the stars.
The Babylonians and Assyrians, who were the chief
exponents of astrology in antiquity. The Babylonians
and Assyrians developed astrology, especially jur-
dicial, to the status of a science, and thus arrived
in pure astronomical knowledge by a circuitous
course through the labyrinth of astrological pro-
dictions. The Assyro-Babylonian priests (Chaldeans)
and their work in the interpretation of dreams is
considered the greatest of all antiquity. In its origin Chaldaic astrology also goes back to the
worship of the stars; this is proved by the religious
symbolism of the most ancient cuneiform texts of the
zodiac. The oldest astrological document extant
is the work called "Namar-Bel" (Illumination of
Bel) composed for King Sargon I (end of the third millennium B.C.) and contained in the cuneiform li-
brary of King Asurbanipal (668-626 B.C.). It in-
cludes astronomical observations and calculations of solar and lunar eclipses combined with astrological
predictions, to which the interpretation of dreams
already belonged. Even in the time of Chaldean,
which should be called Assyrian, astrology, the five
planets, together with the sun and moon, were di-
vided according to their character and their position
in the zodiac as well as according to their position in
the twelve houses. As star of the sun, Saturn was
the great planet and ruler of the heavens. The
weather, as far back as this time, was predicted from
the colour of the planets and from their rising and
setting at what was looked as the time of the high
priest of the temple of Bel at Babylon, as the oldest
writer on astrology; and according to Vitruvius
Berosus founded a school of astrology at Cos. Seneca
says that a Greek translation, made by Berosus,
of the "Namar-Bel" astronomy of the library of Asurbanipal
was known to classical antiquity.
The Egyptians and Hindus were as zealous astro-
logers as the nations on the Euphrates and Tigris.
The dependence of the early Egyptian star (sun) wor-
ship on that of the Hebrews is beyond question. Chaldaic influences belongs to the still unsettled ques-
tion of the origin of early Egyptian civilization. But
undoubtedly the priests of the Pharaohs were the
disciples in astrology of the old Chaldean priests.
The mysterious Taath (Thoth), the Hermes Tris-
megistus of antiquity, was regarded as the earliest
teacher of astrology in Egypt. He is reputed to have
laid the foundation of astrology in the "Hermetic Books"; the division of the zodiac into the twelve
signs is also due to him. In classic antiquity many
in India ascribed to the planets the same influence
were ascribed to this mythical founder of Egyptian
astrology. The astrological rule of reckoning named
after him "Trutina Hermetis" made it possible to
calculate the position of the stars at the time of con-
ception of the child and from them he calculated the
fate of the child. The Egyptians developed astrology to
a condition from which it varies but little to-day. The
hours of the day and night received special planets
as their rulers, and high and low stood under the de-
terminative influence of the stars which proclaimed
through the priestly caste the coming fate of the
land and its inhabitants. It is significant that in
ancient Egypt astronomy, as well as astrology, was
brought to an undoubtedly high state of cultivation.
The astounding and daring theories of the world found
in the Egyptian texts, which permit us to infer that
their authors were even acquainted with the helio-
centric conception of the universe, are based entirely
on astrologico-theosophic views. The astrology of the ancient inhabitants of India was similar, though
there are only so complicated that not even the
Brahmins, who were the chief Prophet of the stars.
Even to-day, the Hindus, especially the Brahmins,
are considered the best au
ASTROLOGY

Theories on astrology and the most skillful casters of horoscopes.

India influenced and aided the development of astrology in ancient China; both India and Mesopotamia that of the Medes and Persians. The Assyro-Babylonian and Egyptian priests were the teachers of the Greek astrologers. Both of these priestly castes were called Chaldeans, and this name remained the designation of all astrologers and astronomers in classic antiquity and in the period following. It speaks well for the sound sense of the early Greek philosophers that they separated the genuine astronomical hypotheses and facts from the confused mass of erroneous astrological teaching which the Egyptian priests had confided to them. At the same time it was through the old Hellenic philosophers that the astrological secrets of the Oriental priestly castes reached the profane world. The earliest mention of the art of astrological prediction in early classical literature is found in the "Prometheus Vinctus" of Eschylus (line 486 sqq.)—a comparatively late date. The often quoted lines of the Odyssey (Bk. XVIII, 136 sqq.) have nothing to do with astrology. Astrology was probably cultivated as an occult science by the Pythagorean school which maintained the exclusiveness of a caste. The teaching of Pythagoras on the "numbers" of the stars and the supposed astrological hypotheses of the Egyptian priests. It is a striking fact that Greek astrology began to flourish when the glory of the early classical civilization had begun to wane. It was in the age of Euripides, who refers to astrological predictions in a little comedy, that the belief in astrology began to grow popular in Greece. After the overthrow of the Assyro-Babylonian Empire, the priests of those regions found refuge in Greece and spread their astrological teaching by word of mouth and writing. In this way astrology lost the character of occult science. Astronomy and astrology remained closely united, and both sciences were represented by the so-called Chaldeans, Mathematicii, and Genethliacae. Astrology proper, from the time of Posidonius, was called 

Astrology soon permeated the entire philosophical conception of nature among the Greeks. The rapidly growing command in religious worship. Plato was obliged to take astrology into consideration as a "philosophical doctrine", and his greatest disciple, Aristotle, was the first to separate the science of astrology from that of astronomy, which was reserved for the phenomena of the atmosphere. The Stoics who encouraged all forms of divination were active promoters of astronomy. The more plainly the influence of Oriental teaching manifested itself in Greek civilization, and the more confused the political conditions and religious ideas of the Greek States became, the greater was the influence of astrologers in public, and the more mischievous their activity in private life. Every professional astronomer was at the same time an astrologer. Eudoxus of Cnidos, the author of the theory of concentric spheres, was perhaps the first to write in Greek on purely astrological topics, being led to select this subject by his studies in Egypt. Most of the Greek astronomers known to us followed in his footsteps, as for instance, Geminus of Ctesiphon. The most important work on astronomy and astrology Εισαγωγη εις τα Φαινομενα (Introduction to Phenomena) was commented on even by Hipparchus. About 270 B.C. the poet Aratus of Soli in his didactic poem, "Phenomena", enunciated the theorems of astrology called "Diosemeis", which was appended to the former, he interprets the rules of judicial and natural astrology that refer to the various changes of the stars. The poem of Aratus was greatly admired by both the Greeks and the Romans; Cicero translated it into Latin, and Hyginus, Ovid's friend, wrote a commentary on it. In this age astrology was as highly developed as in its second period of prosperity, at the beginning of the whole domain of medicine. In the Alexandria school of medicine, astrological prognostic, diagnosis, and hygiene soon covered with their rank growths the inherited scientific teachings that had been tested by practice. In this way "astrological" cures grew in favour. These forms of the art of healing are not without interest both for the history of suggestion and for that of human error. The diseases of the more important bodily organs were diagnosed according to the influence of the sign of the zodiac at the time, and a medicine supposed to either heal or aggravate, or was wholly inoperative. In the division of the zodiac according to its medical effect on the different parts of the body the first sign taken was the Ram (Aries), which ruled the head, and the last of the series was the Fish (Pisces) which cured disordered ailments of the feet. As the appetite of the Greeks for the mysterious wisdom of astrology grew keener, the Egyptian and Chaldean astrologers continually drew out still more mystical, but, at the same time, more dubious treasures from their inexhaustible store-house. The newly founded city of Alexandria, where the later Hellenic culture flourished, was a centre for all astrologers and practitioners of the occult arts. From time to time books appeared here, explaining to their开户 about the secrets of Egyptian civilization, which contained the secret knowledge pertaining to astrological and mystical subjects. These writings seemed to meet the aspirations of ordinary men for the ideal, but all they offered was a chaotic mess of theories concerning astrology and divination, and the less they were understood the more they were applauded. In the Renaissance these pseudo-scientific works of antiquity were eagerly studied. It suffices here to mention the books of Nechopeo-Petosiris which were believed to be actually attesting a commanding position in ancient Egyptian authority on astrology but which, probably, were written in Alexandria about 150 B.C. About this same time, in all probability, Manetho, an Egyptian priest and traveller repeatedly mentioned by Plutarch, wrote "On Astrology". In it he meets the exigencies which arose, each degree of the heavens in late Egyptian astrology was assigned to some special human activity and some one disease. Besides this, the "heavenly spheres", which play so important a part in the history of astronomy, were increased to 64, and even a higher number, and from astrological calculations made from the complicated movements of these spheres the fate both of men and nations was predicted. Thus arose in late classic times the epikers barbaricae (foreign sphere) which in the Middle Ages also had a controlling influence over astrology.

It was to be expected that the sober-minded, practical Romans would soon be dissatisfied with the mystical and enigmatical doctrines of Alexandrian astrology, at the moment astrology was the most interesting and the most chieflly activity of the Chaldeans who had entered Italy along with Greek culture. In the year 139 B.C. the Pretor Cneius Cornelius Hispiatus drove all astrologers out of Italy; but they returned, for even in the Roman era, and in the Middle Ages latterly, they undertook without the aid and advice of augurs and auspices. It is only necessary to recall the greatest man of ancient Rome, Julius Caesar. Cicero, who in
his younger days had busied himself with astrology, was antagonistic to it in his work "De Divinatione." The Emperor Augustus, on the other hand, believed in astrology and protected it. The first Roman work on astrology was written by him; it is "De Astronomia," written about 45 B.C. by Marcus Manilius, who was probably a Chaldean by birth. In five books this poem gives an outline of the astrology of the zodiac and constellations. The fifth book is devoted to the sphere barbabancus. It is a curious fact that the poem does not take up the astrology of the planets. In spite of repeated attempts to suppress it, as in the reigns of Claudius and Vespasian, astrology maintained itself in the Roman Empire as one of the leading forms of culture. The lower the Romans sank in religion and morals the more astrology became entwined with all action and belief. Under Tiberius and Nero the two astrologers named Thraexyllus, who were father and son, held high political positions. The most distinguished astronomer of antiquity, Claudius Ptolemy, was also a famous astrologer. His "Opus Quadrupartitum, seu de apotelesmatibus et judiciis astrorum, libri IV" is one of the chief treatises on astrology of earlier times and is a detailed account of astrological teachings. This work occupied a most important place in the medieval astronomy, which the same author's "Almagest" (also called "Almagest"), held in the science of astronomy before the appearance of the Copernican theory. It is a striking fact that Ptolemy sought, in the second book of the "Opus Quadrupartitum," to bring the physiological and bodily differences of the various nations into relation with the physical conditions of their native lands, and to make these differences, in their turn, depend on the positions of the stars. The Roman astrologers wrote their manuals in imitation of Ptolemy, but with the addition of mystic phantasies and predictions. After the death of Marcus Aurelius, the Chaldeans were always important personages at the imperial court. As late as the time of Constantine the Great the imperial notary Julius Firmicus Maternus, who later became a Christian, wrote on "Mathematics, or the power and the influence of the stars" books which were the chief authority in astrology until the Renaissance. With the overthrow of the old Roman Empire and the victory of Christians, it lost its importance in the theory of Christian civilization in the West. The last known astronomer of the old world was Johannes Laurentius (sometimes called Lydus), of Philadelphia in Lydia, who lived A.D. 490-565.

CHRISTIANITY.—From the start the Christian Church strongly opposed the false teachings of astrology. The Fathers energetically demanded the expulsion of the Chaldeans who did so much harm to the State and the citizens by employing a fantastic mysticism to play upon the irremediable impulses of the common people, keeping their heathen conceptions alive, and fostering a soul- perplexing cult which, with its fatalistic tendencies, created difficulties in the discernment of right and wrong and weakened the moral foundations of all human conduct. There was no room in the early Christian Church for followers of this pseudo-science. The noted mathematician Aquila Ponticus was expelled from the Christian communion, about the year 120, on account of his astrological heresies. The early Christians were the first to condemn astrologers as their bitterest and, unfortunately, their too powerful enemies; and the astrologers probably did their part in stirring up the cruel persecutions of the Christians. As Christianity spread, the astrologers lost their influence, and gradually sank to the position of mere quacks. The conversion of Constantine the Great put an end to the importance of this so-called science, which for five hundred years had ruled the public life of Rome. In 321 Constantine issued an edict threatening all Chaldeans, Magi, and their followers with death. Astrology now disappeared for centuries in the Christian parts of Western Europe. Only the Arabians retained the knowledge. The Moors had conquered the Iberian peninsula, accepted this dubious inheritance from the wisdom of classic times, and among the Arabs it became an incentive to pure astronomical research. Arabian and Jewish scholars were the representatives of astrology in the Middle Ages, while both Church and State in Christian countries rejected and persecuted this false doctrine and its heathen tendencies. Unfortunately, at the same time the development of astronomy was checked, excepting so far as it was needed to establish certain necessary astronomical principles and to calculate the date of Easter. Yet early Christian legend distinguished between astronomy and astrology by ascribing the introduction of the former to the good angels and to Abraham, while the latter was ascribed to Cham. In particular, S. Augustine ("De civitate Dei," VIII, xix, and in other places) fought against astrology and sought to prevent its amalgamation with pure natural science. Once more the East prepared a second period of prosperity for astrology. A Thabit ibn Qurra, who had been driven into Western Europe, busied themselves with astrological questions, being stimulated thereto by the Talmud. Jewish scholars had, moreover, a knowledge of the most important works of classic times on astronomy and they became the teachers of the Arabs. These latter, after the rapid spread of Mohammedanism in Western Asia and North Africa, and their defeat in Western Europe by Charles Martel, began to develop a civilization of their own. The new scientific books which appeared in Arabic after the time of the Talmud, that is, the books called the "Sefer Zohar" and the "Sefer Yezirah" (Book of Creation), are full of rules of divination dealing especially with astrological meanings and calculations. The high reputation of the Talmud and the Cabala among the Jews in the Middle Ages explains their fondness for astrological speculations; but at a very early date, it should be noted, they distinguished between "astrology," the "science of reading the stars," and astrology, the "science of divination." Caliph Harun-al-Rashid, was, like his son, the famous Harun-al-Rashid, a promoter of learning. He was the first caliph to call Jewish scholars around him in order to develop the study of the mathematical sciences, especially astronomy, in his empire. In the year 772 he invited Isaac ben Tarik and established for him a school at Bagdad a school for the study of astronomy and astrology which soon had a high reputation; among those trained here was Alchindi (Alkindi), a noted astronomer. It was one of Alchindi's pupils, Abu Nasser (Abu Masar), from Balkh in Chorassan, born about the year 805, whom the Middle Ages regarded as the greatest of Arabian astrologers. Astrology being regarded by the caliphs as the practical application of astronomy, all the more important Arabic and Jewish astronomers who were attached to that court, or who taught in the Moorish schools were also astrologers. Among the noteworthy Jewish astrologers may be mentioned Sahl ben Bishr al-Israel (about 820); Rabban al-Taiban, the well-known cabbalist and Talmudic scholar; Shabbathai Donnay; and Ezra, a late writer, who wrote a commentary on the astronomy of the "Sefer Yezirah" which Western Europe later regarded as a standard work; and, lastly, the Jewish lyric poet and mathematician Abraham ibn Ezra. Among the noted Arabic astrologers were al-Masawaih, Abulphoghet, Al-fragius, and others. The Arabo-Judaic astrology of the Middle Ages pursued the path indicated by Ptolemy, and his teachings were apparently the in-
movable foundation of all astronomical and astro-
logical activity. At the same time the "Opus Quad-
ripartitum" of the great Alexandrian was corrupted
with Talmudic subtleties and overlaid with mystical
and allegorical meanings, which were taken chiefly
from the Jewish post-Talmudic belief concerning
demons. This degradation of astrology is not sur-
prising if we bear in mind the strong tendency of all
Semitic races to fatalism and their blind belief in
an inevitable destiny, a belief which entails spiritual
demoralization. The result was that every con-
ceivable pursuit of mankind, every disease, and indeed
every nation had a special "heavenly regent", a
constellation of definitely assigned position from the
course of which the most daring prophecies were
deducted.

Up to the time of the Crusades, Christian countries
in general were spared any trouble from a degenerate
astrology. Only natural astrology, the correctness
of which the peasant thought he had recognized by
experience, secured a firm footing in spite of the
prohibition of Church and State. But the gradually
increasing influence of Arabic learning upon the civi-
lization of the West, which reached its highest point
at the time of the crusades, was unavoidably followed
by the spread of the false theories of astrology. This
was a natural result of the amalgamation of the
teachings of pure religion with astrology as the
Mohammedan seats of learning. The spread of astro-
ology was also furthered by the Jewish scholars
living in Christian lands, for they considered astrology
as a necessary part of their cabalistic and Talmudic
studies. The celebrated didactic poem, "Imago
Mundi", written by Gautier de Metz in 1245, has
a whole chapter on astrology. Pierre d'Ailly, the noted
French theologian and astronomer, wrote several
treatises on the subject. The public importance of
astrology grew as the internal dissensions of the Church
increased and the papal prestige was temporarily declined.
Towards the close of the Middle Ages nearly every
petty prince, as well as every ruler of importance,
had his court astrologer, upon whose ambiguous ut-
terances the weal and woe of the whole country often
depended. Such a person was Angelo Catto, the
astrologer of Louis XI of France. The revival of
classical learning brought with it a second period of
prosperity for astrology. Among the civilized peoples
of the Renaissance period, so profoundly stirred by the
return of the spirit of religious, political, and scientific,
the astrological teachings which had come to
light with other treasures of ancient Hellenic learn-
ning found many ardent disciples. The romantic
trend of the age and its highly cultivated sensuality
were in harmony with the ambition of the New World
in a position far higher than any it had attained
in its former period of prosperity. The forerunners of
Humanism busied themselves with astrology, and
but few of them perceived the dangerous psychological
effect of its teachings upon the masses. Towards
the end of the thirteenth century the Florentines
employed Guido Bonatti as their official astrologer,
and, although Florence then stood alone in this
respect, it was scarcely a hundred years later when
astrology had entered in earnest upon its triumphant
career, and a Cacop d'Aiscot was already its devoted
disciple. In Petrarch's day the questionable ac-
tivity of the astrologers at the Italian courts had made
such progress that this clear-sighted Humanist (De
remed. utr. fortun. I, iii, sqq; Epist. rer. famil. III,
8 sqq.; Paul. vesp. 1 sqq.) was unable to find
representatives with the keenest weapons of his wit,
though without success, and even without any follow-
ing except the weak objections of Villani and the
still more ineffectual polemics of Salutato in his did-
actic poem "De facto et fortuna". Emperors and
popes were unmercifully assailed by the astrologers.
Charles IV and V, and Popes Sixtus IV, Julius II,
Leo X, and Paul III. When these rulers lived astro-
logy was, so to say, the regulator of official life;
it is a fact characteristic of the age, that at the papal
and imperial courts ambassadors were not received
in audience until the court astrologer had been con-
sulted. Regiomontanus, the distinguished Bavarian
mathematician, who had aspired to the same position
at the Munich court, which he so strongly denied at
that time on assumed the character of a bread-winning
profession, and as such was not beneath the dignity
of so lofty an intellect as Kepler. Thus had astrology
once more become the foster-mother of all astron-
omy. In the judgment of the men of the Renais-
sance—and this was the age of a Nicholas Coperni-
cus—the most profound astronomical researches and
theories were only profitable in so far as they aided in
the development of astrology. Among the zealous
patrons of the art were the Medici. Catharine de'
Medici made astrology popular in France. She erected
an astrological observatory for herself near Paris,
and her court astrologer was the celebrated "magician"
Michel de Notredame (Nostradamus) who in 1558
published his principal work on astrology—a work
still regarded as authoritative among the followers
of his art. Another well-known man was Lucas
Gauricus, the court astrologer of Popes Leo X and
Clement VII, who published a large number of as-
trological treatises. In Germany Johann Stöffer,
professor at the Universities of Rostock and Halle,
Delden, and, above all, Philip Melanchthon were
zealous and distinguished defenders of astrology.
In Pico della Mirandola's (Adversus Astrologos libri
xii) and Paolo Toscanelli astrology encountered its
first successful opponent; later in the Renaissance
Johann Fischart and the Franciscan Nasi were among
its opponents. (Cf. Philognesius, Practica Prati-
carum, Ingolstadt, 1571.)

Gabotto's charming essay, "L'astrologia nel qua-
trntennio", in "Rivista di filosofia scientifica" VII,
375 sq., gives much information concerning astrology
in the fifteenth century. A. Graf's "La fatalità nelle
credenze del medio evo" (in "Nuovo Antologia, 3d
series, XXVIII, 201, sqq.) is also of value for
astrology at the turning point of the Middle Ages.
Some of the late Roman astrologers, among whom
was probably Firmicus Maternus, thought to reform
astrology by idealizing it and raising its moral tone.
The same purpose animated Paolo Toscanelli, called
Maestro Fagollo, a physician greatly respected for
his knowledge of the secrets of nature as well as of the
artistic circle which gathered around Brother Am-
brosio Camaldulensis in the Monastery of The Angels.
There were special professors of astrology, besides
those for astronomy, at the Universities of Pavia,
Bologna, and Padua, where much information concerning astrology
in the period of Leo X, while at times these astrologers
outranked the astronomers. The three intellectual
centres of astrology in the most brilliant period of
the Renaissance were Bologna, Milan, and Mantua.
The work of J. A. Campanus, published at Rome
in 1495, and often commented on, namely, "Oratio
initio studii Perugiae habita", throws a clear light
on the lack of comprehension shown by the Church
Fathers in their attitude towards pagan fatalism.
Among other things it is here said: "Quanquam
accepimus astrologiam, aut millibus saeculis, aut
tem, aut insaniem, sed forte saepe ad sidem religionemque pro-
pension, negat quicquam vel boni vel mali astrorum
necessitate contingere".

In the Renaissance, religion, also, was subordinated
to the dictates of astrology. Not only was it an
astronomical epoch of the world for each religion was
widely believed by Italian astrologers of the timo,
who obtained the theory from Arabo-Judaic sources.
Thus it was said that the conjunction of Jupiter with
Saturn permitted the rise of the Hebrew-Judaic
state; the conjunction of Jupiter with Mercury was
the end of the Chaldaic religion; of Jupiter with the sun, the Egy-
tian religion; of Jupiter with Venus, Mohammedanism; and of Jupiter with Mercury, Christianity. At some of these conjunctions, the religion of Christ might appear upon the conjunction of Jupiter with the moon. Extraordinary examples of the glorification of astrology in Italy during the Renaissance are the frescoes painted by Miretto in the Sala della Ragione at Pavia, and the frescoes in Borsè’s summer palace at Florentia. Local astrology is not in itself in opposition to the antagonism to astrology, was not, until his prime, entirely free from its taint. In this connection his relations with the famous astrologer, Mayno de Maynere, are significant. (Cf. Raja, Giorn. stor., X, 10, 47). Even the victorious progress of the Copernican system could not at once destroy confidence in astrology. The greatest astronomers were still obliged to devote their time to making astrological predictions at princely courts for the sake of gain; Tycho Brahe made such calculations for the Emperor Rudolph II, and Kepler himself, the most distinguished astronomer of the age, was the imperial court astrologer. Kepler was also obliged to cast horoscopes for Wallenstein, as was to be expected when the influence of the alchemist and astrologer Giambattista Zeno, the Seni of Schiller’s “Wallenstein”. The influence of the Copernican theory, the war of enlightened minds against pseudo-prophetic wisdom, and the increasing perception of the moral and political harm wrought by the astrological cult, at last brought about a decline in the fortunes of astrology, and that precisely in Wallenstein’s time. At the same period astrological tracts were still being written by the most celebrated of English astrologers, William Lilly of Disseworth, Leicestershire, who received a pension of £100 from Cromwell’s council of state, and who, in spite of some awkward incidents, had no little political influence with Charles II. Among his works was a frequently republished “Christian Astrology”. Shakespeare (in King Lear) and Milton were acquainted with and advocated astrological theories, and Robert Fludd was a representative of the art at the royal court. Francis Bacon, it is true, sought to win adherents for a purified and reformed astrology in order to destroy the existing form of the art. It was Jonathan Swift who in his clever satire, “Prediction for the Year 1708 by Isaac Bickerstaff, Esq.”, which deserves to be read even at the present day, gave the deathblow to the belief of English society in astrology. The last astrologer of note was Charles de Cordemoy, Count of Mazarin, who issued “Astrologia Gallica” (1661). The greatly misunderstood Swiss naturalist Theophrastus Paracelsus was an opponent of astrology, and not its advocate, as was formerly inferred from writings erroneously attributed to him. The rapid growth of experimental investigation in the natural sciences in those countries which had been almost ruined, socially and politically, by the Thirty Years War completely banished the astrological parasites from society. Once more astrology fell to the level of a vulgar superstition, cutting a sorry figure among the classes that still had faith in the occult arts. The peasant held fast to his belief in natural astrology, and to this belief the progress of the art of printing and the spread of popular education was largely. For not only were there disseminated among the rural poor “farmer’s almanacs”, which contained information substantiated by the peasant’s own experience, but the printing-presses also supplied the peasant with a great mass of cheap and easily understood books containing much fantastic astrological nonsense.

The remarkable physical discoveries of recent decades, in combination with the growing desire for an elevated philosophico-religious conception of the world and the intensified sensitivity of the modern cultured man—all these together have caused astrology to emerge from its hiding place among pauper superstitions. The religious ideas, which should, perhaps, not be entirely rejected, are not introducing astrology into society. This is especially true of judicial astrology, which, however, by its constant encouragement of fatalistic views unsettles the belief in a Divine Providence. At present justified by many learned writers, To put forward the theory of ether waves as an argument for astrological assertions is not in accord with the methods of sober science. Judicial astrology, therefore, can claim a place only in the history of human error, while, however, as an historical fact, it reflects much light upon the shadowy labyrinth of the human soul.

Astrology among the Ancient Jews.—The Bible is free from any base admixture of astrological delusions. There is no reason for dragging the passage Joseph x, 12, into historico-astrological discussions; the facts there related—the standing still of the sun in the valley of Gabaon and of the moon in the valley of Ajalon—are of purely astronomical interest. Only a few indications in the Old Testament suggest that, notwithstanding the Divinitization of the sun (Ex., x, 18; Deut., xviii, 10, etc.), the Jews, especially after they were exposed to the influence of Egyptian and Babylonian errors, may have practised astrology in secret, along with other superstitions. The Prophets condemned the person of soothsayers and diviners of dreams (Jer., xxix, 8; Zach., x, 1–2), among whom astrologers were included. Thus in the Book of Wisdom (xiii, 1–2) it is said: “All men are vain . . . who . . . have imagined either . . . the swift air, or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world.” The Book of Job, a writing of importance in the history of astronomy and star nomenclature, is also free from astrological fatalism. But to this fatalism the Jews had a natural predisposition, and when Hellenism gained a footing in the Holy Land it was accompanied by the spread of astrology, largely among the learned, the “philosophers”, at whom even in an earlier age the passage in Wisdom had probably been aimed. Again, Issaia (xlvi, 13–14) derides the Babylonian astrologers (“Let now the astrologers stand and save thee, they that gazed at the stars . . . . Behold they are as stubble, fire hath burnt them”), and Jeremiah exclaims (x, 2): “Be not afraid of the signs of heaven, with the heaven’s fear!”

After the Exile, however, astrology spread so rapidly, above all among the educated classes of Israel, that as early as the Hellenistic era a Jewish astrological literature existed, which showed a strong Persico-Chaldean influence. The prophets had been keen opponents of astrology and of a relapse into fatalism. If, when they were prophesying of the great events to come, the contemplation of nature, and especially of the stars, filled them with sympathy and enthusiasm, by reason of their poetic inspiration and power of divination, this had nothing to do with astrology. On the other hand it does not appear impossible that in Daniel’s time some exiled Jews practised astrology. Judging from Daniel, v, 7, it is possible that Daniel himself was of high rank among the astrologers of the Babylonian court. After the Exile an attempt was made to separate astrology from sorcery and forbidden magical arts, by denying a direct Biblical prohibition of astrology and by pretending to find encouragement for such speculation in the character that the characteristic fact that in ancient Israel astrology received no direct encouragement, but that its spread was associated with the relapse of many Jews into the old Semitic star-worship which was aided by Persico-Chaldean influence. For this Jeremias
is a witness (vii, 18; xix, 13; xlv, 17-19, 25). Coincident with the spread of astrology in old Israel and the decline of the nation was the diffusion of demonology. The Jewish prayers to the planets, in the form in which they are preserved with others in Onkelos (fol. 277b), shows that the time when Hellenism first flourished in the East, namely, the third and second centuries b. c. In these prayers special angels and demons are assigned to the different planets; the greatest and most powerful planet, Saturn, having only one angel, Ketura; Sun, Mercury, and Jupiter four, while the planetary demons regulated the destiny of men.

The most notable witness for astrological superstitions in the era of the decadence of Israel is the apocryphal "Book of the Secrets of Henoch", which, notwithstanding its perplexing phantasmata, is a rich treasure-house of information concerning cosmological and purely astronomical problems in the Hellenic East. The author of "Henoch" is said by a Samaritan writer to be the discoverer of astronomy, and the book contains valuable explanations in regard to astronomy and astrology at the time of the Machabean dynasty. The evidences for astrological demonology in ancient Israel, when the nation was affected by Hellenism and Babylonian decadence, are a latter part of the "Secrets of Henoch"—the "Book of the Course of the Lights of Heaven"—as also previously in the fourth section which treats of Henoch's wanderings "through the secret places of the world". This latter is perhaps the archetype of Dante's "Divine Comedy". According to the "Book of Henoch", the human race derived its knowledge of astrology and "lunar sorceries", together with all other forms of magic, from the seven or eight spirits from whom come the chief sins of mankind (Henoch, 1, 8). It is also clearly pointed out that the "Book of the Secrets of Henoch" must be regarded as a witness to Jewish national prophecy. It does not betray the ascendancy of Hellenism in any such degree as do the verses of the "Sibylline Oracles", which were recorded in the old Ionic dialect during the reign of Ptolemy Phusso (145-112 b. c.) by Jewish scholars in Egypt, and probably at a later date in the Holy Land itself.

The astrological demonology of the Jews was continually derived from Babylon and the Sasanian system, and formed in turn the basis for the astrology of certain neo-Platonic sects. Together with the Parsee astrology, it was the foundation of the astrological demonology of the Gnostics and Priscillianists. The influence of Hellenistic Judaism is also plainly visible in the philosophic system of the Harranites, or Sabians. It is only necessary to mention here the high honour paid by the Sabians to the seven planetary gods who regulate the fate of man. According to the belief of the Sabians every planet is inhabited by a spirit as star-soul, and the decipherers of the figures of the conjunction and opposition of the planets made the prediction of future destiny possible. Other elements of late Judaic astrology were adopted by the earliest known Christian astrologer, the Neoplatonist, Theophrastus of Alexandria. The Christian astrologer, Ptolemy of Alexandria, in his "Astronomia fragilis", reflects the ideas and methods of his time. The book of astrology, "Arabian Nights", is also based on the works of the Hellenistic astrologers.

The Babylonians, chiefly in relation to medical astrology, distinguished between a spherical method of calculation (from the point of view of the observer to the stars, i.e. subjectively), and a cosmical method (from the point of view of the stars, i.e. objectively). The former was used in the prognosis deduced from the observation of the twelve houses

Astronomy. (From Gr. αστρονομία, stari; μετρείν, to distribute), a science of prehistoric antiquity, originating in the elementary needs of mankind. It is divided into two main branches, distinguished as astronomy and astrophysics; the former concerned with determining the places of the heavenly bodies, the latter, with the investigation of their chemical and physical structure. But the division is quite recent, and the possibility of separating the stopped short at fixing the apparent positions of objects on the sphere. Nor was any attempt made to rationalize the observed facts until the Greeks laboriously built up a speculative system, which was finally discarded. Interest in the ingenuity of the vast and cosmological theory. Descriptive astronomy, meanwhile, took its rise from the invention of the telescope, and the facilities thus afforded for the close scrutiny of the denizens of the sky; while practical astronomy gained continually in refinement with the improvement of optical and mechanical arts. At the present time, astrophysics may be said to have absorbed descriptive astronomy, and astrometry necessarily includes practical research. But mathematical astronomy, graced with the law of gravitation, keeps its place apart, though depending for the perfecting of its theories and the widening of its scope upon advances along the old, and explorations in new, directions.

Prehistoric Astronomy. — Formal systems of astronomical knowledge were early established by the Chinese, Indians, Egyptians, and Babylonians. The Chinese were acquainted, probably in the third millennium b. c., with the cycle of nineteen years (rediscovered in 632 n. c. by Meton at Athens), by which means the dates of eclipses and the waxing and waning of the solar and lunar hours were harmonized; they recorded cometary apparitions, observed eclipses, and employed effective measuring apparatus. Greek astronomical methods were introduced at Pekin by Jesus mis-
five planets, besides sharing the common movement, described variously conditioned orbits round the same centre. The body of doctrine it inculcated made part of the universal stock of knowledge until the sixteenth century. The formidable task of demonstrating its falsity, and of replacing it with a system corresponding to the actual conditions of the world, was undertaken by an active and exemplary ecclesiastic, Nicholas Copernicus, Canon of Frauenburg (1473–1543). The treatise in which it was accomplished, entitled "De Revolutionibus Orbium Coelestium," became the light of astronomy, and the beacon to the discoveries of the new world, was beset with the protection of the Holy See for the new and philosophically persuasive views which it propounded. Denounced as impious by Luther and Melanchthon, they were, in fact, favourably received at Rome until theological discredit was brought upon them by the wild speculations of Giordano Bruno (1548–1600), and the imprudent utterances of Galileo Galilei (1564–1642).

Descriptive Astronomy.—Descriptive astronomy may be said to have originated with the invention of the telescope by Hans Lippershey in 1608. Its application to the scrutiny of the heavenly bodies, by Galileo and others, led at once to a crowd of striking discoveries. Jupiter's satellites, the phases of its moons, the mountains of the moon, the very structure of the sun, Saturn's unique appendages, all descried with a little instrument resembling a unicoelic opera-glass, formed, each in its way, a significant and surprising revelation; and the perception of the stellar composition of the Milky Way represented the first step in sidereal exploration. Johann Kepler (1571–1630) invented in 1611, and Father Scheiner of Ingolstadt (1575–1650) first employed, the modern refracting telescope; and the farther course of discovery led closely to a development of its powers. Christian Huygens (1629–95) resolved, in 1656, the anax of Saturn into a ring, divided into two by Giovanni Domenico Cassini (1625–1712) in 1675. Titan, the largest of Saturn's moons, was detected by Huygens in 1655, and four additional members of the family by Cassini before 1684. The Andromeda nebula was brought to notice by Simon Marius in 1612, the Orion nebula by J. B. Cysatus, a Swiss Jesuit, in 1618; and some few variable and multiple stars were recognized.

The theoretical, however, far outweighed the practical achievements of the seventeenth century. Kepler published the first two of his "Three Laws" in 1609, the third in 1619. The import of these great generalizations is: (1) that the planets describe ellipses of which the sun occupies one focus; (2) that the straight line joining each planet with the sun (its radius vector) sweeps out equal areas in equal times; (3) that the squares of the planetary periods are severally proportional to the cubes of their mean distances from the sun. The geometrical plan of movement in the solar system was thus laid down with marvellous intuition. But it was reserved for Sir Isaac Newton (1643–1727) to expound its significance by showing that the same universal principle will regulate celestial revolutions, and compel heavy bodies to fall towards the earth's surface. The law of gravity, published in 1687 in "Philosophie Naturalis Principia Mathematica" is to the following effect: every particle of matter attracts every other with a force directly proportional to the product of their masses and inversely proportional to the squares of their distances apart. Its validity was tested by comparing the amount of the moon's orbital deflection in a second with the rate at which an apple (say) drops in an orchard. Allowance was made for the difference in the two velocities proved to tally perfectly; and the identity of terrestrial gravity with the force controlling the revolutions of the heavenly bodies was definitively established. But this was only a beginning. The colossal work remained to be accomplished of calculating the consequences of the law, in the minute details of its working, and of comparing them with the heavens. It was carried forward, first by Jacob Hermann and others, and after the relations of the planets to the light, by Euler, Clairaut, d'Alembert, Lagrange, and Laplace. Urbain Leverrier (1811–77) inherited from these men of genius a task never likely to be completed; and the intricacies of lunar theory have been shown, by means of the relations of the light of the planets, by Hansen and Delaunay, of Professors Hill and Newcomb, and many more, to be fraught with issues of unexpected and varied interest.

Discoveries in the Solar System.—The extraordinary improvement of reflecting telescopes by Sir William Herschel (1738–1822) opened a fresh epoch of discovery. His recognition of the planet Uranus (13 March, 1781) as a non-stellar object marked the first enlargement of the bounds assigned to the two solar systems. Uranus moons, Oberon and Titania, were detected by him 11 January, 1787, and the innermost Saturnian pair, Enceladus and Mimas, 28 August and 17 September of the same year. Saturn was, in 1806, known to possess ten satellites. Hyperion was discovered by William C. Herschel in 1805, at the observatory at Slough, in England, at the age of 20; with the spectroscope by H. D. H. Cabanis, 16 September, 1848, and Professor W. H. Pickering, of the same establishment, discovered by laborious photographic researches, Phebe in 1898, and Themis in 1905. In point of fact, an infinite number of satellites are agglomerated in the rings of Saturn. Their constitution by separately revolving, small bodies, theoretically demonstrated by J. Clerk Maxwell in 1857, was spectroscopically confirmed by the late Professor Keeler in 1895. The system of moons and satellites of Jupiter is one of the richest in the system; and the compositions and movements of the moons have been determined by Bond, 15 November, 1859. The discovery of the planet Neptune, 23 September, 1846, was a mathematical, not an observational feat. Leverrier and Adams independently divined the existence of a massive body, revolving outside Uranus, and exercising over its movements disturbances the analysis of which led to its capture. Its solitary moon was noted by William Lassell of Liverpool in October, 1848; and he added, in 1851, two inner satellites to the remarkable system of Uranus. With the great Washburn refractor, 26 inches in diameter, Professor Asaph Hall discerned, 15 and 16 August, 1877, Deimos and Phobos, the swiftly circling moonlets of Mars; the Lick 36-inch enabled Professor Barnard to perceive, 9 September, 1892, the evasive inner satellite of Jupiter; and two exteriors were detected by Bond on the same planet were photographically detected by Professor Perrin in 1904–05. The distances of the planets are visibly regulated by a method. They increase by an ordered progression, announced by Titius of Wittenberg in 1772, and since designated as "Bode's Law." But their succession was quickly seen to be interrupted by a huge gap between the orbits of Mars and Jupiter; and the conjecture was hazarded that here a new planet might be found to reside. Two new asteroids were discovered, at the Palermo, 1 January, 1801, by Giuseppe Piazzi, a Theatre monk (1746–1826); Pallas, in 1802 by Olfers (1758–1840), and Juno and Vesta in 1804 and 1807, by Harding and Olbers respectively. The discovery was promptly repeated, and the asteroid family was found to be reinforced with companions, the known number of which now approximates to 600, and may be indefinitely increased. Their discovery has been immensely facilitated by Professor Max Wolf's invention of the method of visual photometry, which makes it possible to discriminate them from stars through the effects of their motion on sensitive plates.
The solar system, as at present known, consists of our interior planets, Mercury, Venus, the Earth, and Mars; four exterior, and relatively colossal in size, are included, Saturn, Uranus, Neptune, and Pluto. A diffuse crowd of pygmy globes called asteroids, or minor planets, and an outlying array of comets with their attendant meteor-systems. All the planets rotate on their axes, though in very different periods of revolution. That of Mercury was determined by Signor Schiaparelli of Milan in 1899 to be 22 days, the identical time of his revolution round the sun, and Venus was, in the following year, shown by him to be, in all likelihood, similarly conditioned, the common period of rotation and circulation being, in her case, 223 days. This implies that both hemispheres always turn towards the sun, as the moon does towards the earth; nor can we doubt that the friction of tidal waves was, on the three bodies, the agency by which the observed synchronism was brought about. All the planets travel round the sun from west to east, or counter clockwise, and most of the satellites move in the same direction round their primaries. But there are exceptions. Phoebe, Saturn’s remotest moon, circulates oppositely to the other members of the system. Some of the moons of Mars have their plane of movement inclined at more than a right angle to the elliptic; and the satellite of Neptune travels quite definitely backward. These anomalies are of profound import to theories of planetary origin. The “canals” of Mars were recognized by Schiaparelli in August, 1877, and he caught sight of some of them duplicated two years later. Their photographic registration at the Lowell observatory in 1905 proves them to be no optical illusion, but their nature remains unexplained.

Comets and Meteors.—The predicted return of Halley’s comet in 1759 afforded the first proof that bodies of this kind are permanently attached to the sun. They accompany its march through space, traversing, in either direction indifferently, highly eccentric orbits inclined at all possible angles to the elliptic. They are accordingly subject to violent, even subversive disturbances from the great planets. Jupiter, in particular, sways the movements of a group of over thirty “captured” comets, which have had their periods perturbed, and their primitive velocities reduced by his influence. Schiaparelli announced in 1866 that the August shooting-stars, or Perseids, pursue the same orbit with a bright comet visible in 1802; and equally striking accordance was discovered between the Leonid, Lyrid, and Andromeda meteor-swarms and the comet-brilliance seen afterwards established by Leverrier and Weiss. The obvious inference is that comets are the disintegration-products of their cometary fellow-travellers. A theory of comets’ tails, based upon the varying efficacy of electrical repulsion upon chemically different kinds of matter, was announced by Theodor Bréddikhine of Moscow in 1882, and gave a satisfactory account of the appearances it was invented to explain. Lastly, however, the authority of Arthaus of Stockholm has lent vogue to a “light-pressure” hypothesis, according to which, cometary appendages are formed of particles driven from the sun by the mechanical stress of his radiation. But the singular and rapid changes photographically recorded as taking place in the tails of comets, remain unassociated with any known cause.

Sidereal Astronomy.—Sir William Herschel’s discovery, in 1802, of binary stars, imperfectly anticipated by Father Christian Mayer in 1779, was one of the most striking achievements; in the same year he was able to demonstrate that the force of gravity to include sidereal regions; and the relations it intimated have since proved to be much more widely prevalent than could have been imagined beforehand. Mutually circling stars exist in such profusion as probably to amount to one in three or four of those unaccompanied. They are of limited range, confined to the systems in which they are being exceedingly close and rapid, while others describe, in millennial periods, vastly extended orbits. Many, too, comprise three or more members; and the multiple stars thus constituted merge, by progressive increments of complexity, into actual clusters, globular and irregular. The latter class is exemplified by the Pleiades and the Hyades, by the Beehive cluster in Cancer, just visible to the naked eye, and by the double cluster in Perseus, which makes a splendid show with an opera-glass. Globular clusters are the densest of the class, of which more than one hundred have been catalogued. The scale on which these marvellous systems are constructed remains conjectural, since their distances from the earth are entirely unknown. Variable stars are met with in the utmost diversity. Some are temporary apparitions, which spring up from invisibility often to an astonishing pitch of splendour, then sink back more slowly to quiescence. Nova Persei, which blazed 22 February, 1901, and was photographically studied by Father Sidgwick at Siding Spring, is the recent instance of the phenomenon. Stars, the vicissitudes of which are comprised in cycles of seven to twenty months, or more, are called “long-period variables”. About 400 had been recorded down to 1906. They not uncommonly attain the maximum to 1,000 times their minimum brightness. Mira, the “wonderful” star in the Whale, discovered by David Fabricius in 1596, is the exemplar of the class. The fluctuations of “short-period variables” take place in a few days, with far more punctuality. A certain proportion of them are “eclipsing stars” (about 35 have so far been recognized as such), which owe their regularly recurring failures of light to the interposition of large satellites. Algol in Perseus, the variations of which were perceived by Montanari in 1669, is the best-known specimen. Hundreds of rapid variables have been recently detected among the components of globular clusters; but their course of change is of a totally different nature from that of eclipsing stars. Edmund Halley (1656-1742), the second Astronomer Royal, announced in 1718 that the stars, far from being fixed, move onward, each on its own account, across the sky. He arrived at this conclusion by comparing modern with antique observations; and the singular “proper motions” now elucidate the portentous velocity of 250 miles a second, is one of these “runaway” stars. The sun’s pace of about 12 miles a second, seems, by comparison, extremely sedate; and it is probably only half the average stellar speed. The apex of the sun’s wander may point towards which its movement at present tends, is located by the best recent investigations near the bright star Vega.

Distances of the Sun and Stars.—The distances of the heavenly bodies can only be determined by the method of parallax, extended in other words, their apparent changes of position when seen from different points of view. That of the sun is simply the angle subtended at his distance
by the earth's semi-diameter. Efforts were made with indifferent success to fix its value by the aid of the transits of Venus in the eighteenth and nineteenth centuries. The absence of proved more efficient auxiliaries; and through the mediation of Iris, Sappho, and Victoria, in 1888–89, Sir David Gill assigned to the great unit of space a length of 92,800,000 miles, which the photographic measures of Eros, in 1900–01, bid fair to ratify. The stars, however, being so distant that the only reliable means of detecting their perspective displacements is by observing them at intervals of six months, from opposite extremities of a base-line nearly 180,000 miles in extent. Thus, the annual parallax of a star means the angle under which the semi-diameter of the earth's orbit would be seen if viewed from its situation. This angle is in all cases, extremely minute, and in most cases, altogether evanescent; so that, from only about eighty stars (as at present known), the terrestrial orbit would appear to have sensible dimensions. Our nearest stellar neighbour is the splendid southern binary, α Centauri; yet its distance is such that light needs four and one-third years to perform the journey thence. Thomas Henderson (1794–1844) announced his detection of its third member in 1839, just as Bessel of Königsberg (1784–1846) had obtained a similar, but smaller result for an insignificant double star designated 61 Cygni.

Celestial Photography.—The second half of the nineteenth century was signalized by a revolutionary change in the methods and purposes of astronomy. Experiments in lunar photography, begun in 1840 by J. W. Draper of New York, were continued in the fifties by W. C. Bond, Warren de la Rue, and Lewis M. Rutherfurd. The first daguerreotype of the sun was secured at Paris in 1845, and traces of the solar corona appeared on a sensitized plate exposed at Königsberg during the total eclipse of 28 July, 1851. But the epoch of effective solar photography opened with the Spanish eclipse of 18 July, 1860, when the pictures successfully obtained by Father Angelo Secchi, S.J., and Warren de la Rue demonstrated the solar status of the crimson protuberances by rendering manifest the advance of the moon in front of them. At subsequent eclipses, the same workers published pictures of the first dark figures of the corona; and its importance was enhanced when A. C. Ranyard pointed out, in 1879, the correspondence of changes in its form with the alternations of solar disturbance. The eleven-year periodicity of sun-spots was thus established by Piazzi, Thaddeus, and De Sesse; and among the numerous associated phenomena of change, none are better ascertained than those affecting the shape of the silvery aureola seen to encompass the sun when the moon cuts off the glare of direct sunlight. At spot maxima the aureola spreads its beamy radiance round the disc. But at times of minimum, it consists mainly of two great wings, extended in the sun's equatorial plane. A multitude of photographs, taken during the eclipses of 1886, 1900, 1901, and 1905, attest with certainty the punctual recurrence of these unexplained vicissitudes. The fundamental condition for the progress of sidereal photography is the use of long exposures; since most of the objects to be delineated emit light so feebly that its chemical effects must accumulate before they become sensible. But long exposures were impracticable until Sir William Huggins, in 1876, adopted the dry-plate process; and this date, accordingly, marks the beginning of the widespread serviceableness of the camera to astronomy. In the practice of photography, the result depends largely on the telescope. Halley described in 1716 six nebulae, which he held to be composed of a lucid medium collected from space. The Abbé Lacaille (1713–62) brought back with him from the Cape, in 1754, a list of forty-two such objects; and Charles Messier (1730–1817) enumerated, in 1781, 103 nebulae and clusters. But this harvest was scanty indeed compared with the avalanche of Herschel's explorations. Between 1786 and 1802 he compiled the 2,500 nebulae in the Royal Society catalogues; he distinguished their special forms, classified them in order of brightness, and elaborated a theory of stellar development from nebulae, illustrated by an extended instant of progressive transformation. The next considerable step towards a closer acquaintance with nebulae was made by Lord Rosse in 1845, when the prodigious light-grasp of his six-foot reflector afforded him the discovery of the great "Whirlpool" in Andromeda. This and the magnification of the entire class of spiral nebulae, the large prevalence of which has been one of the revelations of photography. The superiority in nebula-portraiture of the chemical to the eye-and-hand method was strikingly manifested in a photograph of the Orion nebula taken by Dr. A. A. Common, 30 January, 1883. Its efficacy for discovery became evident through the disclosure, on plates exposed by Paul and Prosper Henry, and by Isaac Roberts in 1855–86, of complex nebulous formations in the Pleiades, and in the recent discovery of a spiral nebula in the constellation of Eridanus by Professor Keeler (1857–1900) estimated at 120,000 the number of nebulae which the Crossley reflector of the Lick observatory would be capable of resolving in both hemispheres with an hour's exposure, while telephotographically constructed outfits are using up to 10,000. But it is through the combination of photography with spectroscopy, constituting the spectrographic mode of research, that astrophysics has achieved its most signal triumphs.

Asteropeka.—The fundamental principle of spectrum analysis, enunciated by Gustav Kirchhoff (1824–87) in 1859, depends upon the equivalence of emission and absorption. This means that, if white light be transmitted through glowing vapours, they arrest just those minute sections of it with which they themselves shine. And if the source of the white light be hotter than the arresting vapour, there results a prismatic spectrum, interrupted by dark lines, distinctive of the chemical nature of the substance originating them. Now this is exactly the case of the sun's radiations. After dismissing the emanating from their photospheres is found, when dispersed into a spectrum, to be crossed by numerous dusky rays indicating absorption by gaseous strata, to the composition of which Kirchhoff's principle applies the Abbé Lacaille and Sir John Herschel in the latter part of the century, as prominent solar constituents, sodium, iron magnesium, calcium, and chromium; hydrogen was recognized by A. J. Angström (1814–74); helium by Sir Norman Lockyer in 1868; and about forty elementary substances are now known with approximate certainty to be common to the earth and sun. The chemistry of the stars is strictly analogous to that of the sun, although their spectra exhibit diversities symptomatic of a considerable variety in physical state. Father Angelo Secchi, S.J. (1818–79), who made these diversities in 1863–67 a classification of the stars into four orders, still regarded as fundamental, and supplied by Dr. Vogel in 1874 with an evolutionary interpretation, according to which, differences of spectral type are associated with various stages of process from nebulous and inchoate towards a compact condition. Since 1879, when Sir William Huggins secured impressions of an extended range of ultra-violet white star light, stellar spectra have been mostly studied photographically; but the work has been not only extensive and permanent, but also more complete than those obtainable by visual means. The same eminent investigator discovered, in 1864, the bright-line spectra of certain classes of nebulae, by which they were known.
to be of gaseous composition, and recognized, as of carbonaceous origin, the typical coloured bands of the cometary spectrum, noted four years previously, though without specific identification, by G. B. Delafontaine (1822–74) at Florence.

Doppler's principle, by which light alters in re-frangibility through the end-on motion of its source, was first made effective for astronomical research by Huggins in 1868. The criterion of velocity, with this apparatus, is given by the shifting of spectral lines from their standard places; and the method was raised to a high grade of accuracy through Dr. Vogel's adaptation, in 1888, of photography to its requirements. It has since proved extraordinarily fruitful. Its employment enabled Dr. Vogel to demonstrate the reality of Algol's eclipses, by showing that the star revolved round an obscure companion in the identical period of light-change; and the first discoveries of non-eclipsing spectroscopic binaries were made at Harvard College in 1889. These interesting systems cannot be sharply distinguished from telescopic double stars, which are, indeed, believed to have developed from them under the influence of tidal friction; their periods vary from a few hours to several months; and their components are of such unequal luminosity that only one leaves any legible impression on the sensitive plate. Their known number amounted, in 1905, to 140; and it may be indefinitely augmented. It probably includes all short-period variables, even those escape eclipses; though the connection between their duplicity and luminous variations remains unexplained. The photography in daylight of solar prominences was attempted by Professor Young of Princeton in 1870, and the subject was prosecuted by Dr. Braun, S.J., in 1872. No genuine success was, however, achieved until 1891, when Professor Hale of Chicago and M. Deelandres at Paris independently built up pictures of those objects out of the calcium-ray in their dispersed light, sifted through a double slit on to moving photographic plates. Professor Hale's invention of the "spectroheliograph" enables him, moreover, to delineate the sun's disc in any selected quality of its light, with the result of disclosing vast masses of calcium and hydrosulphuretum piled up at various heights above the solar surface.

SIDEREAL CONSTRUCTION.—The investigation of the structure of the sidereal heavens was the leading object of William Herschel's career. The magnitude of the task, however, which he attempted single-handed, would have seemed an impossible one, and he would have been deterred by the hope of laying bare some hidden springs of the sidereal mechanism. The prospect is indeed remote that the whole of its intricacies will ever be penetrated by science. We only perceive that the stars form a collection of prodigious, but limited, extent, showing strongly concentric tendencies towards the plane of the Milky Way. Nor can the nebula be supposed to form a separate scheme. The elements of their motions, physical and geometrical, with stars excludes that supposition. Stars and nebula belong to the same system, if such the sidereal world may properly be called in the absence of any sufficient evidence of its being in a state of dynamical equilibrium. We cannot be sure that it has yet reached the definitive term appointed for it by its Creator. Suggestive hints, on the contrary, of the instability and evanescence of the heavens are, in very truth, the changing vesture of Him whose "years cannot fail."

AUGNE M. CLERKE.

ASTRONOMY IN THE BIBLE.—No systematic observations of the heavenly bodies were made by the Jews. Astral worship was rife in Palestine, and they could hardly have attended closely to its objects without yielding to its seductions. Astronomy was, under these circumstances, ineradicable from astrology, and the anathemas of the prophets were not carelessly uttered. As the most glorious works of the Almighty, the celestial luminaries were indeed celebrated in the Scriptures in passages thrilling with rapture; but the appeal to them for practical purposes was reduced to a minimum. Even the regulation of times and seasons was largely empirical. The Jews used a lunar year. It began, for religious purposes, with the new moon next after the spring equinox, and consisted normally of twelve months, or 354 days. The Jewish calendar, however, depended upon the course of the sun, since the festivals it appointed were in part agricultural celebrations. Some process of adjustment had then to be resorted to, and the obvious choice was the intercalary, month whenever the discrepancy between the ripening of the crops and the fixed dates of the commemorative feasts became glaringly apparent. Before the time of Solomon, the Jews appear to have begun their year in the autumn; but under the custom of the Romans for civil purposes, in the fifth century B.C., was adopted in the systematized religious calendar of the fourth century of our era. Both the ritual and the civil day commenced in the evening, about half an hour after sunset. Its subdivisions were left indeterminate. The Old Testament makes no mention of what we call hours; and it refers to the measurement of time, if at all, only in the narrative of the miracle wrought by Israel in connection with the sundial of Ahas (IV Kings, xx, 11). In the New Testament, the process of counting four night-watches had superseded the antique triple division, and the day, as among the Greeks, consists of twelve equal parts. These are the "temporary hours" which still survive in the liturgy of the Church. Since they spanned the interval from sunrise to sunset, they corresponded with the season of the year, from 49 to 71 minutes. Corresponding nocturnal hours, too, seem to have been partially used in the time of the Apostles (Acts, xxiii, 23).

As has been expected, the Sacred Books convey no theory of celestial appearances. The descriptive phrases used in them are conform to the elementary ideas naturally presenting themselves.
to a primitive people. Thus, the earth figures as an indefinitely extended circular disk, lying between the realm of light above and the abyss of darkness beneath. The word firmamentum, by which the Hebrew rahok (א穰ק) is translated in the Vulgate, expresses the ideation of a great wall or border dividing the "upper waters" from the seas, springs, and rivers far below. Through the agency of the flood-gates, however, the waters sustained by the firmament were, in due measure, distributed over the earth. The first visibility after sunset of the crescent moon determined the beginning of each month; and this was the only appeal to the skies made for the purposes of the Jewish ritual. Eclipse of the sun and moon are perhaps vaguely referred to among the signs of doom enumerated by the Prophets Joel and Amos, who may easily have enhanced their imagery from personal experience, since modern calculations show solar totalities to have been visible in Palestine in the years 531, 824, and 763 b.c., and the moon reddened by immersion in the earth's shadow is not an uncommon sight in any part of the world. But the passages in question cannot be literally associated with mere passing phenomena. The prophets aimed at something higher than intimidation. An express warning against ignoble panic was indeed uttered by Jeremia in the words: "Be not afraid of the signs of heaven, which the heathens fear" (x, 2). The stellar vault, conceived to be situated above the firmament, is compared by Isaias to a tent stretched out by the Most High. The "host of heaven," a frequently recurring Scriptural expression, has both a general and a specific meaning. It designates, in some passages, the entire array of stars; in others it particularly applies to the sun, moon, planets, and certain selected stars, the worship of which was introduced from Babylon into the western countries. Venus and Saturn are the only planets expressly mentioned in the Old Testament. Isaias (xiv, 12) apostrophizes the Babylonian Empire under the unmistakable type of He- lal (Lucifer in the Vulgate), "son of the morning," and Saturn is no less certainly represented by the star Kasisim, adored by the reprobat Israelites in the desert (Amos, v, 26). The same word (interpreted to mean "steadfast") frequently designates, in the Babylonian inscriptions, the slow-moving planet Saturn. By the distance of the star by the prophet, is an alternative appellation for Ninib, who, as a Babylonian planet-god, was merged with Saturn. The ancient Syrians and Arabs, too, called Saturn Kasisim, the corresponding term in the Syriac language being Kasis. The other planets are individualized in the Bible only by implication. The worship of gods connected with them is denounced, but without any manifest intention of referring to the heavenly bodies. Thus, Gad and Mens (Isaias, lv, 11) are, no doubt, the "greater and the lesser Fortunes," typified throughout the East by Jupiter and Venus; Neba, the tutelary deity of Borsippa (Isaias, xlvi, 1), shone in the sky as Mercury, and Nepoli, transplanted from Assyria to Kutha (IV Kings, xvii, 30), as Mars.

The etymology of the names of the stars is frequently explained, in the Book of Job, in a way that is often ambiguous. The word, which occurs twice in the Book of Job (ix, 9; xxxvii, 31), is treated in the Septuagint version as equivalent to Pleiades. The expression is found in the common Greek language and throughout Syrian literature; it is supported by etymological evidences, the Hebrew term being obviously related to the Arabic root kum (accumulate), and to the Assyrian kanu (to bind); while the "chains of Kimah", referred to in the sacred text, not inapropos figure the coercive power imparting unity to a multiple object. The associated constellation is doubtless that of the Seven, the first of the passages in Job where it figures, the Septuagint gives Herper; in the second, the Vulgate quite irrelevantly inserts Arcturus; Karsten Niebuhr (1753-1815) understood Keseli to mean Sirius; Thomas Hyde (1636-1703) held that it indicated Canopus. Now, keseli signifies in Hebrew "foolish", or "impious", adjectives expressive of the stupid criminality which belongs to the legendary character of giants; and the stars of Orion irresistibly suggest a huge figure striding across the sky. The Arabs accordingly named the constellation Al-gebbar, "the giant", the Syriac equivalent being Gabbara, "a strong man"; and Keseli is actually translated Gabbara in the old Syriac version of the Bible known as the Peshitta. We may then safely admit that Kimah and Keseli did actually designate the Pleiades and Orion. But further interpretations are considerably more obscure. In the Book of Job—the most distinctively astronomical part of the Bible—mention is made, with other stars, of Ash and Ayish, figures found frequently in the East, but of little known. Its signification remains an enigma. The Vulgate and Septuagint inconsistently render it "Arcturus" and "Hesperus". Aben Ezra (1092-1167), however, the learned Rabbi of Toledo, gave such strong reasons for holding Ash, or Ayish, to mean the Bear, that the opinion, though probably erroneous, is still prevalent. It was chiefly governed on the phonetic resemblance between ash and the Arabic na'ash, "a bier", applied to the four stars of the constellation. Many, interpreting the three stars as mourners, under the title of bened na'ash, "daughters of the dead", But Job, too, speaks of the "children of Ayish", and the inference seems irresistible that the same star-group was similarly referred to in both cases. Yet there is large room for doubt. Modern philologists do not admit the alleged connection of Ayish with na'ash, nor is any funeral association apparent in the Book of Job. On the other hand, Professor Schiaparelli draws attention to the fact that ash denotes "moth" in the Old Testament, and that the three stars, three days old, are winged to the east, and their triangular shape by the doubly aligned stars of the Hyades. Now Ayish in the Peshitta is translated Irytha, a constellation mentioned by St. Ephrem and other Syrian writers, and Schiaparelli's learned opinion is that in the Syrian and Arabic and Syriac literature makes it reasonably certain that Irytha authentically signifies Aldebaran, the great red star in the head of the Bull, with its children, the rainy Hyades. It is true that Ayish, Ewald, and other scholars have adopted Capella and the Kites as representatives of Irytha, and therefore of "Ayish and her children"; but the view involves many incongruities. The glory of the sky adverted to in the Book of Job include a sidereal landscape vaguely described as "the chambers [i. e. penetralia] of the south". The phrase, according to Schiaparelli, refers to some assembly of brilliant stars, rising 20 degrees at most above the southern horizon in Palestine about the year 750 B. C. (assumed as the date of the Patriarch Job), and, taking account of the change of objects during the passage of the star-pageant formed by the Ship, the Cross, and the Centaur meets the required conditions. Sirius, although at the date in question it culminated at an altitude of 41 degrees, may possibly have been thought of as belonging to the chambers of the south; the removing of objects was not, in the Bible, to be ignored in the Bible. Job opposes to the "chambers of the south", as the source of cold, an
Asterism named Mezarim (xxxvii, 9). Both the Vulgate and the Septuagint render this word by Arcturus, evidently in mistake (the blunder is not uncommon) for Arctos. The Great Bear circled in those days much more closely round the pole than it now does; its typical northern character survives in the Latin word *septentrix* (from *septem* trones, the seven star-namely, as the ... from the dual form of *mezarim*, that the Jews, like the Phrygians, were acquainted with the Little, as well as with the Great, Bear. He identifies the word as the plural, or dual, of *mizrah*, "a winnowing-fan", an instrument figured by the seven stars of the Wain; quite as accurately as the Lady of the Chinese or the Dipper of popular American parlance.

Perhaps the most baffling riddle in Biblical star-nomenclature is that presented by the word *Mazzaroth*, or *Mazzaloth* (Job, xxxviii, 31, 32; IV Kings, xxxii, 5), usually, though not unanimously, admitted to be phonetic variants. As to their signification, opinions are hopelessly divergent. The authors of the Septuagint transcribed, without translating, the ambiguous expression; the Vulgate gives for its equivalent the word *Arctus*, the Bear, that is, the Book of Kings. St. John Chrysostom adopted the latter meaning, noting, however, that many of his contemporaries interpreted *Mazzaroth* as Sirius. But this idea soon lost vogue, while the zodiacal explanation of the *Chiasmus* of the Apocalypse current in the first sight, extremely plausible. Long before the Exodus the Twelve Signs were established in Ephrastian regions much as we know them now. Although never worshipped in a primary sense, they may well have been held sacred as the abodes of deities. The Assyrian *mazallu* (sometimes written *mannezu*), "station", occurs in the Babylonian Creation tablets with the import "mansions of the gods"; and the word appears to be etymologically akin to *Mazaroq*, which in biblical Hebrew signifies primarily the Signs of the Zodiac, secondarily the planets. The lunar Zodiac, too, suggests itself in this connection. The twenty-eight "mansions of the moon" (*menazil al-kamar*) were the leading feature of Arabic sky lore, and they subverted astrological purposes among many Oriental peoples. They might, accordingly, have belonged to the apparatus of superstition used by the soothsayers who were extirpated in Judah, together with the worship of the *Mazzaroth*, by King Josias, about the year 621 B.C. In no other period could they have fitted in with the form of expression met with in the Book of Job (xxxviii, 32). Speaking in the person of the Almighty, the Patriarch asks, "Canst thou bring forth Mazzaroth in its time?"—clearly in allusion to periodical phenomena, such as the brilliant visibility of Lucifer, or Heesperus. Professor Schiaparelli then recurs to the Vulgate rendering of this passage. He recognizes in *Mazzaroth* the planet Venus in her double aspect of morning and evening star, pointing out that the luminary description is the Book of Kings, with the sun and moon, and the "host of heaven," must evidently be next in brightness to the chief light-givers. Further, the sun, moon, and Venus constitute the great astronomical triad of Babylonia, the sculptured representations of which frequently include the "host of heaven" typified by a crowd of fantastic animal-divinities. And since the astral worship anathematised by the prophets of Israel was unquestionably of Ephrastian origin, the designation of *Mazzaroth* as a "numbered member of the Babylonian triad is a valuable link in the chain of Messianic prophecy and an object of extreme difficulty. Notwithstanding the scepticism of recent commentators, it appears fairly certain that the "fugitive serpent" of Job, xxvi, 13 (colluber tortuosa in the Vulgate) does really stand for the circumpolar reptile. The Ephraimian con-

Astruos. Paul-Thérèse-David d', a French cardinal, b. at Tournus (Var) in 1772; d. 29 September, 1851. He was a nephew of Portals, a minister of Napoleon, and as such was engaged in the formulation of the Concordat of 1801. On its conclusion he was made vicar general of Archbishop (later Cardinal) Bellay, of Paris, and after the latter's death (1808) administered the diocese until the nomination of Cardinal Maury. He received, and was accused of pronounced members (10 June, 1809), excommunicating Napoleon. For this act he was imprisoned at Vincennes until 1814, After the Restoration he became Bishop of Bayonne, and in 1830 Archbishop of Toulouse. At the request of Louis Napoleon he created him cardinal, in 1850. He wrote "La vérité catholique démontrée; ou, Lettre aux Protestants d'Orthez" (2 v. 8°, Toulouse, 1833). He was one of the earliest opponents of Lamennais, against whom he wrote "Censure de divers écrits de La Mennais et de ses disciples par plusieurs évêques de France, et lettres des mêmes évêques au souverain pontife, Grégoire XVI", etc. (Toulouse, 1835).

Astruc, Jean, b. at Sauves, 19 March, 1854; d. at Paris, 5 May, 1766. He was the son of a converted Protestant minister. After he had taught medicine at Montpellier, he became a member of the Medical Faculty at Paris. His medical writings, however numerous, are now forgotten, but he is cultivated by him as once was by him. He has secured for him a permanent reputation. This book was entitled: "Conjuctions sur les méritoires originaux dont il parle par Moyse s'est servi pour composer le livre de la Génesis. Avec des remarques qui appuient ou qui éclaircissent ses conjectures" (Brussel).
Astruc himself did not intend to deny the Mosaic authorship of Genesis; but his work created an era in Biblical inquiry, occasioning the modern critical theories.

Atahuallpa, properly Atau-huallpa (etymology usually given as from hualpá, the name of some indigenous bird), son of the Inca war chief Huayna Capac and an Indian woman from Quito hence (descent being in the female line) not an Inca, but an Indian of Ecuador. The protracted wars, during which the Incas overpowered the Ecuadorian tribes, having brought about the permanent lodgment of Incas war parties in Ecuador, led to intermarriages with women of that country, and the formation of a new tribe composed of Incas men with women from Quito. Collusions ensued between this tribe and the descendants of Inca women. The Atahuallpa figure, leader of the former, whilst the latter recognized Huascar, duly elected war chief at Cuzco. Atahuallpa acted with great cruelty, nearly exterminating such Ecuadorian tribes as resisted. He finally prevailed, and sent his warriors southward along the backbones of the mountains, against Cuzco. When Pizarro landed at Tumbes (northern Peruvian coast) in 1532, the Quito people had already overthrown the Inca tribe at Cuzco, taken the settlement, and committed the most horrible cruelties, chiefly against the keepers of ancient traditions whom they attempted to exterminate, so as to wipe out the remembrance of the past of Cuzco and begin a new era. Atahuallpa himself was raised off a prosperous tribe by a war of power at Caxamarca. There he availed the whites, whom he despised. The Spaniards found Caxamarca deserted, and the warriors of Atahuallpa camping three miles from the place. Pizarro recognized that a trap had been set for him, and prepared for the worst.

The evening of the 16th of November, 1532, Atahuallpa entered the square of Caxamarca with a great retinue of men carrying their weapons concealed. They packed the court densely. Pizarro had placed on the roof of the building his artillery (two pedreros) that could not be pointed except horizontally. The Spaniards thronged into the square, a Dominican friar, Fray Vicente Valverde, was sent by Pizarro to inform Atahuallpa, through an interpreter, of the motives of the Spaniards' appearance in the country. This embassy was received with scorn, and the friar, seeing the Indians ready to begin hostilities, warned Pizarro. His action has been unjustly criticised; Valverde did what was his imperative duty under the circumstances. Then, not waiting for the Indians to attack, the Spaniards took the offensive. The sound of the cannon, the ketry, and the sight of the horses frightened the Incas so that they fled in dismay, leaving Atahuallpa a prisoner in the hands of Pizarro, who treated him with proper regard. The stories of a terrible slaughter of the Indians are inordinate exaggerations. While a prisoner, Atahuallpa caused the greater portion of the gold and silver at Cuzco to be turned over to the Spaniards, at the same time he had Huascar murdered, and laid plans for surprising the Spaniards and having them massacred. When the newly discovered Pizarro had him executed, on the 29th of August, 1633. The execution was not unjustifiable. Atahuallpa, at the time of his death, was about thirty years of age.

Atavimiento. See ATAVISM.

Atavism [Lat., atavus, a great-grandfather's grandfather, an ancestor].—Duchesne introduced the word to designate those cases in which species revert spontaneously to what are presumed long-lost characteristics. Atavistic characters are used by most authors in the same sense. I. The term atavism is employed to express the reappearance of characters, physical or psychical, in the individual, or in the race, which are supposed to have been possessed at one time by remote ancestors. Very often these suddenly appearing characters are of the monstrous type, e. g. the three-toed horse. The appearance of such a monster is looked upon as a harking back to Tertiary times, when the ancestor of the modern horse possessed three toes. The three-toed condition of the monstrous horse is spoken of as atavistic. The employment of the term in connection with teratology is often abused; for many cases of so-called atavistic monstrosities have little
ATHBASCA
so do with lost characters, e.g. the possession by man of supernumerary fingers and toes.

II. Atavism is also used to express the tendency to revert to one of the parent varieties or species in the case of a hybrid; this is the atavism of breeders. Crossed breeds of sheep, for example, show a constant tendency to revert to one of the original breeds from which the cross was formed. De Vries distinguishes this kind of atavism as vicinism (Lat. vicinus, neighbour), and says that it "indicates the sporting of a variety under the influence of others in its immediate environment.

III. Atavism is employed by a certain school of evolutionistic psychologists to express traits in the individual, especially the child, that are assumed to be, as it were, reminiscences of past conditions of the human race or its progenitors. A child by its untruthfulness simply gives expression to a state that long since was normal to mankind. Also in the child's fondness for splashing about in water is exhibited a recrudescence of a habit that was quite natural to its aquatic ancestors; this latter is called what is termed atavism. Many such instances are known, but they hardly need to be said that they are in many instances highly fantastic. Atavism is commonly supposed to be a proof of the evolution of plants and animals, including man. Characters that were once remote from each other, it has been latent for thousands of generations suddenly reappear, and thus give a clue to those sources to which the present living forms are to be traced back.

That a character may lie dormant for several generations and then reappear, admits of no doubt; even ordinary observation tells us that a grandchild may resemble its grandparent more than either of its immediate parents. But the sudden appearance of a tailed man, for instance, cannot be said to prove the descent of man from tailed forms. Granting that man has descended from such forms, the phenomenon is more intelligible than it would be if no such connexion admitted. But the proving force of atavism is not direct, because teratological phenomena are so difficult to interpret, and admit of several explanations. Darwin, pointing to the large canine teeth possessed by some men as a case of atavism, remarks: "He who rejects with scorn the belief that the shape of his own canines, and their occasional great development in other men, are due to our early forefathers having been provided with these formidable weapons, will probably reveal, by sneering, the line of his own descent."

Atavism is appealed to by modern criminologists to explain certain moral aberrations, that are looked upon as having been at one time normal to the race. Accepting the doctrine that man has, by slow progress, come up to his present civilized state from brute conditions, all that is brutish in the conduct of criminals (also of the insane), is explained by atavism. According to this theory degeneracy is a case of atavism. The explanation offered for the sudden reappearance of remote ancestral characters is so intimately connected with the whole question of heredity that it is impossible to do more than indicate that most writers on heredity seek this explanation in the transmission of a generation of unmodified heredity-bearing parts, gemmules (Darwin); pangenes (De Vries); determinants (Weismann). (See HEREDITY.)

ATHBASCA, VICARIATE APOSTOLIC OF (North-west Territories)—Suffragan of Saint Boniface; erected 8 April, 1862, by Pius IX. Bounded on the north by the Vicariate of Mackenzie; on the east and southeast by the Vicariate of Saskatchewan; on the south by 55° N. lat.; on the west by the Rocky Mountains. The first vicar Apostolic was Bishop Henri Faraud, O.M.I., b. at Gigondas, France, 17 March, 1828; d. at Saint Boniface, 8 March, 1847; elected 8 May, 1862; consecrated at Tours, France, 30 Nov., 1864, titular Bishop of Anamur. He was succeeded by Bishop Emile Grouard, O.M.I., titular Bishop of Ibora; b. at Bixel, Mans., 2 Feb., 1836; ordained at Cheriaville, 3 May, 1862, elected Bishop of Ibora, 18 Oct., 1890; consecrated at Saint Boniface, 1 Aug., 1891; and appointed vicar Apostolic. The Oblates of Mary Immaculate serve all the missions of Athbasca. There are 11 stations, 23 priests, 26 Sœurs de la Providence, 6 Sœurs Grises. Catholics, about 5,000. (See SAINT BONIFACE.)

Le Canada Ecclésiastique (1907); Battandier, Ann. pont. can., 1907.

JOHN J. A'BECKET.

Anthasian Creed, The, one of the symbols of the Faith approved by the Church and given a place in her liturgy, is a short, clear exposition of the doctrines of the Trinity and the Incarnation, with a passing reference to several other dogmas. Unlike most creeds, after it is once learned, it deals almost exclusively with these two fundamental truths, which it states and restates in terse and varied forms so as to bring out unmistakably the trinity of Persons in God, and the twofold nature in the one Divine Person of Jesus Christ. At various points the author calls attention to the penalty incurred by those who refuse to accept any of the articles therein set down. The following is the Marques of Bute's English translation of the text of the Creed:

Whosoever will be saved, before all things it is necessary that he hold the Catholic Faith. Which Faith except everyone do keep whole and undefiled, without doubt he shall perish everlastingly. And the Catholic Faith is this, that we worship one God in Trinity and Trinity in Unity. Neither confounding the Persons, nor dividing the Substance. For there is one Person of the Father, another of the Son, and another of the Holy Ghost. But the Godhead of the Father, of the Son, and of the Holy Ghost, is all One Godhead. And therefore the Son is God, and the Holy Ghost is God. And yet they are not Three Gods, but One God. So likewise the Father is God, and the Son is God, and the Holy Ghost is God. And yet they are not Three Gods, but One God. So likewise the Father is Lord, and the Son is Lord, and the Holy Ghost is Lord. And yet they are not Three Lords but One Lord. For, like as we are compelled by the Christian religion to acknowledge the divinity of one God and Lord, so are we forbidden by the Catholic Religion to say, there be Three Gods or Three Lords. The Father is made of none, neither created, nor begotten. The Son is of the Father alone; not made, nor created, but begotten. The Holy Ghost is of the Father, and of the Son...
neither made, nor created, nor begotten, but proceeding.

So there is One Father, not Three Fathers; one Son, not Three Sons; One Holy Ghost, not Three Holy Ghosts. And in this Trinity none is afore or after Other, None is greater or less than Another, but the whole Three Persons are Co-eternal together, and Co-equal in all things, and Co-evident, and Co-present. And in this Trinity is the Unity in Trinity, and the Trinity in Unity is to be worshipped. He therefore that will be saved, must thus think of the Trinity.

Furthermore, it is necessary to everlasting Salvation, that he also believe rightly the Incarnation of our Lord Jesus Christ. For the Right Faith is, that we believe and confess, that our Lord Jesus Christ, the Son of God, is God and Man.

God, of the substance of the Father, begotten before the worlds; and Man, of the substance of His mother, born into the world. Perfect God and Perfect Man, of a reasonable Soul and human Flesh subsisting. Equal to the Father as touching His Godhead, and inferior to the Father as touching His Manhood. Who, although He be God and Man, yet He is not two, but One Christ. One, not by conversion of the Godhead into Flesh, but by taking of the Manhood into God. One altogether, not by confusion of substance, but by Unity of Person. For as the reasonable soul and flesh is one Man, so God and Man is one Christ. Who suffered for our salvation, bore our sins in His own body, was scourged for us, was delivered into Hell, rose again from the third day from the dead. He ascended into Heaven, He sitteth on the right hand of the Father, God Almighty, from whence He shall come to judge the quick and the dead. At whose coming all men shall rise again with their bodies, and shall give account for their own works. And they that have done good shall go into life everlasting, and they that have done evil into everlasting fire. This is the Catholic Faith, which except a man believe faithfully and firmly, he cannot be saved.

For the past two hundred years the authorship of this summary of Catholic Faith and the time of its appearance have furnished an interesting problem to ecclesiastical antiquarians. Until the seventeenth century, the "Quicunque vult"; as it is sometimes called from its opening words, was thought to be the composition of the great Archbishop of Alexandria whose name it bears. In the year 1644, Gerard Voss, in his "De Tribus Symbolis", gave weighty probability to the opinion that St. Athanasius was not its author. His reasons may be reduced to the two following: first, no early writer of authority speaks of it as the work of this doctor; and secondly, its language and structure point to a Western, rather than to an Alexandrian, origin. Most modern scholars agree in admitting the strength of these reasons, and hence this view is the one generally received to-day. Whether the Creed can be ascribed to St. Athanasius or not, and most probably it cannot, it undoubtedly owes its existence to Athanasian influences, for the expressions and doctrinal colouring exhibit too marked a correspondence, in subject-matter and in phraseology, with the literature of the latter half of the fourth century and especially with the writings of the saint, to be merely accidental. These internal evidences are sufficiently and justly to confirm that it grew out of several provincial synods, chiefly that of Alexandria, held about the year 361, and presided over by St. Athanasius. It should be said, however, that these arguments have failed to shake the conviction of the Church. For the Church refuses to give it an earlier origin than the fifth century.

An elaborate attempt was made in England, in 1871, by E. C. Fouches to assign the Creed to the ninth century. From a passing remark in a letter written by Alcuin he constructed the following remarkable piece of fiction. The Emperor Charlemagne, he says, wished to consolidate the Western Empire by a religious, as well as a political, separation from the East. To this end he suppressed the Nicene Creed, dear to the Oriental Church, and substituted a formulary composed by Paulinus of Aquileia, with whose approval and that of Alcuin, a distinguished scholar of the time, he ensured its universal acceptance by the Councils of the name of St. Athanasius. This gratuitous attack upon the reputation of men whom every worthy historian regards as incapable of such a fraud, added to the undoubted proofs of the Creed's having been in use long before the ninth century, leaves this theory without any foundation.

Who, then, is the author? The results of recent inquiry make it highly probable that the Creed first saw the light in the fourth century, during the life of the great Eastern patriarch, or shortly after his death. It has been attributed by different writers variously to St. Hilary, to St. Vincent of Lérins, to Eusebius of Vercelli, to Vigilius, and to others. It is not easy to avoid the force of objections to all these hypotheses, since they were men of world-wide reputation, and hence any document, especially one of such importance as a profession of faith, coming from them would have met with almost immediate recognition. Now, no allusions to the authorship of the Creed, and few even to its existence, are to be found in the literature of the Church for over two hundred years after their time. We have referred to a like silence in proof of a non-Athanasian authorship. It seems to be similarly available in the case of any of the four names mentioned above. St. Athanasius, according to Father Sidney Smith, S.J., whose evidence just-quoted renders plausible, the author of this Creed must have been some obscure bishop or theologian who composed it, in the first instance, for purely local use in some provincial diocese. Not coming from an author of wide reputation, it would have attracted little attention. As it became better known, it would have been more widely adopted, and the compactness and the lucidity of its statements would have contributed to make it the right formulary of the Church.

As the "damatory" or "minatory clauses", are the pronouncements contained in the symbol, of the penalties which will follow the rejection of what is there proposed for our belief. It opens with one of them: "Whosoever will be saved, before all things it is necessary that he hold the Catholic Faith". The same is expressed in the verses beginning: "Furthermore, it is necessary" etc., and "For the right Faith is" etc., and finally in the concluding verse: "This is the Catholic Faith, which except a man believe faithfully and firmly, he cannot be saved". Just as the Creed states in a very plain and precise way what the Catholic Faith is concerning the important doctrines of the Trinity and the Incarnation, so it asserts with equal plainness and precision what will happen to the man who do not believe faithfully and firmly in the Catholic truths. They are but the credal equivalent of Our Lord's words: "He that believeth not shall be condemned", and apply, as is evident, only to the culpable and the willful rejection of Christ's words and teachings. The author of the Athanasian Creed recognized this as it was originally intended, as revealed word of God, under the stern penalties here threatened, is so intolerable to a powerful
class in the Anglican Church; that frequent attempts have been made to eliminate the Creed from the public service of that Church. The Upper House of Convocation of Canterbury has already affirmed that these clauses, in their prima facie meaning, go beyond what is taught by the Scripture. In view of the words of Our Lord quoted above, there should be nothing startling in the statement of our duty to believe what we know is the testimony and teaching of Christ, nor in the serious sin we commit in wilfully refusing to accept it. Nor should one be surprised that the line be drawn in this case against those who actively infest with those who culpably persist in their sin. It is just this last that the dammatory clauses proclaim. From a dogmatic standpoint, the merely historical question of the authorship of the Creed, or of the time it made its appearance, is of secondary consideration. The fact alone that it is approved by the Church as expressing its mind on the fundamental truths with which it deals, is all we need to know.

JAMES J. SULLIVAN.

Athanasius, Saint, Bishop of Alexandria; Confessor and Doctor of the Church; born c. 296; d. 2 May, 373. [No accepted emblem has been assigned to him in the history of Western art; and his career, in spite of its picturesque diversity and extraordinary wealth of detail, seems to have furnished little, if any, material for distinctive illustration. Mrs. Jamesson tells us that according to the Greek formula, "He was of the race of the Egyptians, and was the first to wear a white beard" (Sacred and Legendary Art, I, 339.) Athanasius was the greatest champion of Catholic belief on the subject of the Incarnation that the Church ever has known and in his lifetime earned the characteristic title of "Father of Orthodoxy", by which he has been distinguished ever since. While the chronology of his career still remains for the most part a hopelessly involved problem, the fullest material for an account of the main achievements of his life will be found in his collected writings and in the contemporary records of his time. He was born, it would seem, in Alexandria, most probably between the years 296 and 298. An earlier date, 293, is sometimes assigned as the more certain year of his birth, and is supported apparently by the authority of the "Optic Fragment" (published by Dr. O. von Lamm in the Mémoires de l'académie impériale des sciences de S. Pétersburgo, 1888) and corroborated by the undoubted maturity of judgment revealed in the two treatises attributed to him. He is not, however, speaking as a witness at first hand of the persecution which had broken out under Maximian in 303; for in referring to the events of this period he makes no direct appeal to his own personal recollections, but falls back, rather, on tradition. Such reserve would scarcely be intelligible, if, on the hypothesis of the earlier date, the Saint had been then a boy fully ten years old. Beside what is taught by the Scripture. In view of the words of Our Lord quoted above, there should be nothing startling in the statement of our duty to believe what we know is the testimony and teaching of Christ, nor in the serious sin we commit in wilfully refusing to accept it. Nor should one be surprised that the line be drawn in this case against those who actively infest with those who culpably persist in their sin. It is just this last that the dammatory clauses proclaim. From a dogmatic standpoint, the merely historical question of the authorship of the Creed, or of the time it made its appearance, is of secondary consideration. The fact alone that it is approved by the Church as expressing its mind on the fundamental truths with which it deals, is all we need to know.

JAMES J. SULLIVAN.
in the See of Alexandria. While Alexander was waiting for his guests to arrive, he stood by a window, watching a group of boys at play on the seashore below the house. He had not observed them long before he discovered that they were imitating, evidently with no thought of irreverence, the elaborate ritual of infant baptism. (Chateaubriand’s “Christianity and Mankind”, London, 1854, VI, 465; Denzinger, “Ritus Orientalium” in verb.; Butler’s “Ancient Coptic Churches”, II, 263 et seq.; “Baptême chez les Coptes”, “Diot. Thél. Cath.”, Col. 244, 245). He therefore sent for the children and had them brought into his presence. In the investigation that followed it was discovered that one of the boys, who was no other than the future Primate of Alexandria, had acted the part of bishop, and in that character had actually baptized several of his companions in the course of their play. Alexander, who seems to have been unaccountably puzzled over the answers he received to his inquiries, determined to make-believe-baptisms as genuine; and decided that Athanasius and his playfellows should go into trial of baptism to see if they were fit themselves for an ecclesiastical career. The Bollandists deal gravely with this story; and writers as difficult to satisfy as Archdeacon Farrar and the late Dean Stanley are ready to accept it as bearing on its face every indication of truth. (Chateaubriand’s “Lives of the Fathers” and the Stanley, “East. Ch.”, 264). But whether in its present form, or in the modified version to be found in Socrates (I, xv), which omits all reference to the baptism and says that the game was “an imitation of the ceremony, and the order of consecrated persons”, the tale raises a number of chronological difficulties and suggests even graver questions.

Perhaps a not impossible explanation of its origin may be found in the theory that it was one of the many floating myths set in motion by popular imagination to account for the marked bias towards an ecclesiastical career which seems to have characterized the early boyhood of the future champion of the Faith. Sozomen speaks of his “fitness for the priesthood”, and calls attention to the significant circumstance that he was “from his tenderest years practically self-taught.” “Not long after this”, adds the same authority, the Bishop Alexander “invited Athanasius to be his commissary and secretary. He had been well educated, and was versed in grammatical, poetic, and had already some knowledge of the sacred books, and before reaching the episcopate, given proof to those who dwelt with him of his wisdom and acumen” (Soz., II, xvii). That “wisdom and acumen” manifested themselves in a various environment. While still a levite under Alexander’s care, he seems to have been brought for a while into close relations with some of the solitaries of the Egyptian desert, and in particular with the great St. Anthony, whose life he is said to have written. The evidence both of the intimacy and for the authorship of the life in question has been questioned, chiefly by non-Catholic writers, on the ground that the famous “Vita” shows signs of interpolation. Whatever we may think of the arguments on the subject, it is impossible to deny that the monastic idea appealed powerfully to the young clerk, and that he himself in after-years was not only at home when duty or accident threw him among the solitaries, but was so monastically self-disciplined in his habits as to be spoken of as an “ascetic” (Apol. c. Arian, vii. 12). This usage of the word would have a definiteness of connotation not easily determinable to-day. (See ASCETICISM.)

It is not surprising that one who was called to fill so large a place in the history of his time should have impressed the very form and feature of his personality to be aptly likened to his contemporaries. St. Gregory Nazianzen is not the only writer who has described him for us (Orat. xxi, 8). A contemptuous phrase of the Emperor Julian’s (“Epist.”, li) serves unintentionally to corroborate the picture drawn by kindlier observers. He was slightly below the middle height, spare in build, but well-knit, and intensely energetic. He had a peculiar gaiety of character which sometimes, indeed, even in auburn hair, a small but sensitively mobile mouth, an aquiline nose, and eyes of intense but kindly brilliancy. He had a ready wit, was quick in intuition, easy and affable in manner, pleasant in conversation, keen and subtle, somewhat too unassuming in debate. (Besides the references already cited, see the detailed description given in the January “Mémoires” quoted in the Bollandist life. Julian the Apostate, in the letter alluded to above, seems at the diminutiveness of his person—μικρόν ὄψιν, ἀλλ’ ἐν αὐτῶν εἰσῆλθε, he writes.) In addition to these qualities, he was conspicuous for two others to which even his enemies bore unwilling testimony. He was endowed with a sense of humour that could be as mordant—we had almost said as sardonic—so it seemed, that the still smile which sometimes crept over his face, that his courage was of the sort that never faltered, even in the most disheartening hour of defeat. There is one other note in this highly gifted and many-sided personality to which everything else in his nature was necessarily modified, and that was his keen, almost in view, if we would possess the key to his character and writing and understand the extraordinary significance of his career in the history of the Christian Church. He was by instinct neither a liberal nor a conservative in theology. Indeed the term is not applicable to a singular inappropriateness as applied to a temperament like his. From first to last he cared greatly for one thing and one thing only; that one thing was the integrity of his Catholic creed. The religion he engendered in him was obviously—considering the traits by which we have tried to depict him—a personal and passionate and consuming sort. It began and ended in devotion to the Divinity of Jesus Christ. He was scarcely out of his teens, and certainly not in more than deacon’s orders, when he published two treatises, in which his mind seemed to strike the key-note of all its riper after-utterances on the subject of the Catholic Faith. The “Contra Gentes” and the “Oratio de Incarnatione” to give them the Latin appellations by which they are more commonly cited—were written in the very year of his consecration. In the year 373 St. Jerome (De Viris Illustrib.) refers to them under a common title, as “Adversum Gentes Duo Libri”, thus leaving his readers to gather the impression, which an analysis of the contents of both books certainly seems to justify, that the two treatises are in reality one. As a plea for the Christian position, addressed chiefly to both Gentiles and Jews, the young deacon’s apology, while undoubtedly reminiscent in methods and ideas of Origen and the earlier Alexandrians, is, nevertheless, strongly individual and almost pictorial in tone. Though it deals with the Incarnation, it is silent on most of those ulterior problems in defence of which Athanasius was so soon to be summoned by the force of events and the fervour of his own faith to the most elevated of his duties. The work contains no explicit discussion of the nature of the Word’s Sonship, for instance; no attempt to draw out the character of Our Lord’s relation to the Father; nothing, in short, of those Christological questions upon which the dispute with Arius was to turn. The latter was written in Latin, hence in the Meletian troubles which broke out during the
episcopate of St. Peter, and whose teachings had succeeded in making dangerous headway, even among "the consecrated virgins" of St. Mark's see (Epiph. Haer., Ixix; Soc. Hist. Eccl., I, vi), accused Bishop Alexander of Sabellianism. Arius, who seems to have played the most import, the point in his teaching was at length deposed (Apol. c. Ar., vi) in a synod consisting of more than one hundred bishops of Egypt and Libya (Deposito Ar., 3). The condemned herearch withdrew first to Palestine and afterwards to Bithynia, where, under the protection of Eusebius of Nicomedia and his other "Culianists", he was able to increase his already remarkable influence, while his friends were endeavouring to prepare a way for his forcible reinstatement as priest of the Alexandrian Church. Athanasius, though only in deson's orders, must have taken no subordinate part in these events. He was the trusted secretary and adviser of Alexander, and his name appears in the list of those who signed the encyclical letter subsequently issued by the primate and his colleagues to offset the growing prestige of the new teaching, and the momentum it was beginning to acquire from the ostentatious patronage extended to the deposed Arius by the Eusebian faction. Indeed, it is to this party and to the leverage it was able to exercise at the emperor's court that Arius owed the importance of Arianism as a political, rather than a religious, movement seems primarily to be due.

The heresy, of course, had its supposedly philosophic basis, which has been ascribed by authors ancien and modern, to the most opposite sources. St. Epiphanius characterizes it as a kind of revived Aristotelianism (Haer., lvxvi and lxvxi); and the view is practically held by Socrates (Hist. Eccl., II, xxxv), Theodoret (Haer. Fab., IV, iii), and St. Basil (Adv. Eunom., I, ix). On the other hand, a number of the most critical readers (e.g. I, viii, 2) has no hesitation in deriving it from Plato; Newman in turn (Arians of the Fourth Cent., 4 ed., 109) sees in it the influence of Jewish prejudices rationalized by the aid of Aristotelian ideas; while Robertson (Sel. Writ. and Let. of Ath. Proleg., 27) observes that the "common theology", which was invariably opposed to it, "borrowed its philosophical principles and method from the Platonists." These apparently conflicting statements can be no easily settled; and thought the fact is that the prestige of Arianism never lay in its ideas. From whatever school it may have been logically derived, the sect, as a sect, was crucified and nurtured in intrigue. Save in some few instances, which can be accounted for on quite other grounds, its prophets relied more upon curial influence than upon piety, or Scriptural knowledge, or dialectics.

That must be borne constantly in mind, if we would not move distractedly through the bewildering maze of events that make up the life of Athanasius for the next half century. It is his peculiar merit that he not only saw the drift of things from the very beginning, but was confident of the issue down to the last (Apol. c. Ar., c.). His insight and courage proved almost as efficient a bulwark to the Church as any system of the orthodox party did his singularity and lucid grasp of traditional Catholic belief. His opportunity came in the year 325, when the Emperor Constantine, in the hope of putting an end to the scandalous debates that were disturbing the peace of the Church, met the prelates of the entire Catholic world in council at Nicea.

The great council convoked at this Juncture was something more than a pivotal event in the history of Christianity. It's sudden, and, in one sense, almost unparalleled adoption of a quasi-philosophic and progressive line of thought is the peculiar character of orthodox belief in the Person of the historic Christ, by defining Him to be identical in substance, or co-essential, with the Father, together with its confident appeal to the emperor to lend the sanction of his authority to the decree and pronouncements by which it hoped to safeguard this more explicit profession of the ancient Faith, had consequences of the profoundest and most far-reaching import to the world of politics as well. By the official promulgation of the term homousion, theological speculation received a fresh but subtle impetus which made itself felt long after Athanasius and his supporters had passed away; while the appeal of the secular arm inaugurated a policy which endured practically without change of scope down to the publication of the Vatican decrees in our own time. In one sense, and that a very deep and vital one, both the definition and the policy were inevitable. It was inevitable in the order of religious ideas that any break in logical continuity should be met by inquiry and protest. It was just as inevitable that the protest, to be effective, should receive some countenance from a power which up to that moment had affected to regulate all the graver circumstances of life (cf. Harnack, Hist. Dog., III, 146, note; Buchanan's tr.). As Newman has remarked: "The Church could not meet together in one, without entering into a sort of negotiation with the powers that be; whose judgment is the touchstone of individuals both as individuals and as a body, if possible, to dispel" (Arians of the Fourth Cent., 4 ed., 241).

Athanasius, though not yet in priest's orders, accompanied Alexander to the council in the character of secretary and theological adviser. He was not, of course, the originator of the famous homousion. The term had been proposed in a non-obvious and illegitimate sense by Paul of Samosata to the Fathers at Antioch, and had been rejected by them as sounding of materialistic conceptions of the Godhead (cf. Newman, "De Syn., &c." 3 ed., 178; cf. also "De Syn." 9, ch. 1; Petav. "De Trin.", IV, v, § 3; Robertson, "Sel. Writ. and Let. Athan. Proleg." 1, 30 sqq.).

It may even be questioned whether, if left to his own logical instincts, Athanasius would have suggested an orthodox revival of the term at all ("De Decretis", 19; "Orat. c. Ar.", ii, 32; "Ad Monachos", 2). His writings, composed during the forty-six critical years of his episcopate, show a very sparing use of the term (Arians of the Fourth Cent., 4 ed., 236) reminds us, "the authentic account of the proceedings" that took place was not extant, there is nevertheless abundant evidence in support of the common view that it had been unexpectedly forced upon the notice of the bishops, Arian and orthodox, in the great synod by Constantine's proposal to accept the creed submitted by Eusebius of Cesarea, with the addition of the homousion, as a safeguard against possible vagueness. The suggestion had in all probability come from Hosius (cf. "Epist. Eusebii", in the appendix to the "De Decretis", § 4; Soc., "Hist. Eccl.", I, viii; III, vii; Theod., "Hist. Eccl.", I, Athan.; "Arians of the Fourth Cent.", 6, n. 42; ἐστο τῷ τῷ ἐν Νίκαιᾳ παρέχων ἔλεγεν, says the saint, quoting his opponents); but Athanasius, in common with the rest, was not loath to accept it, for the duty of Christian orthodoxy, he took the term as expressive of the traditional sense in which the Church had always held Jesus Christ to be the Son of God. The conspicuous abilities displayed in the Nicean debates and the character for courage and sincerity he won on all sides made him youthful but sensible heretic henceforth a marked man ("De Trin.", Orat., 21). His life could not be lived in a corner. Five months after the close of the council the Prince of Alexandria died; and Athanasius, quite as much in recognition of his talents, it would appear, was, in deference to the wishes of the deceased prelate, chosen to succeed him. His election, in spite of his extreme youth and the opposition...
of a remnant of the Arian and Meletian factions in the Alexandrian Church, was welcomed by all classes among the laity ("Apol. c. Arian", vi; Soc., "Hist. Eccl.", II, xvii, xxi, xxii).

The opening years of the saint's rule were occupied with the wonted episcopal routine of a fourth-century Egypto-Ethiopian bishop. Ecclesiastical correspondence, preaching and the yearly round of church functions consumed the bulk of his time. The only noteworthy events of which antiquity furnishes at least probable data are connected with the episcopal efforts which he made to provide a hierarchy for the newly planted church in Egypt (Abyssinia) in the person of St. Frumentius (Rufinus I, ix; Soc., xix; Soz., II, xxiv), and the friendship which appears to have begun about this time between himself and the monks of St. Pachomius. But the seeds of disaster which the saint's piety had unfiinchingly planted at Nicea were beginning to bear a disquieting crop at last. Already events were happening at Constantinople which were soon to make him the most important figure of his time. Emperor Theodosius, who had been driven from office and had been banished by the Emperor Constantine for his part in the earlier Arian controversies, had been recalled from exile. After an adroit campaign of intrigue, carried on chiefly through the instrumentality of the imperial household, the smooth-mannered prelate so far prevailed over Constantine as to induce him to order the recall of Arian likewise from exile. He himself sent a characteristic letter to the youthful Primate of Alexandria, in which he bade his favour for the condemned heresarch, who was described as a man whose opinions had been misrepresented. These events must have happened some time after the close of the year 330. Finally the emperor himself was persuaded to write to Athanasius, urging that all those who were willing to submit to the definition of Nicea should be re-admitted to ecclesiastical communion. This Athanasius stoutly refused to do, alleging that there could be no fellowship between the Church and one who denied the Divinity of Christ.

The Bishop of Nicomedia thereupon brought various ecclesiastical and political charges against Athanasius, which, though unostensibly refuted at their first hearing, were afterwards refurbished and made to do service at nearly every stage of his subsequent trial. Most of these were very definite, to wit: that he had not reached the canonical age at the time of his consecration; that he had imposed a linen tax upon the provinces; that his officers had, with his connivance and authority, profaned the Sacred Mysteries in the case of an alleged priest named Iachyras; and lastly that he had put one Arsenius to death and afterwards dismembered the body for purposes of magic. The nature of the charges and the method of supporting them were vividly characteristic of the age. The curious student will find them set forth in picturesque detail in the second part of the Saint's "Apologia", or "Defense against the Arians", written long after the events themselves, about the year 350, when the retraction of Ursacius and Valens made their publication triumphantly opportune. The whole unhappy story at this distance of time reads in parts more like a specimen of late Greek romance than the account of an inquisition gravely conducted by a synod of Christian prelates with the idea of getting at the truth of a series of odious accusations brought against them by their enemies. The emperor's order after protracted delays extending over a period of thirty months (Soz., II, xxi). Athanasius finally consented to meet the charges brought against him by appearing before a synod of prelates at Tyre in the year 356. Fifty of his suffragans went with him to vindicate his good name; but the complexion of the ruling party in the synod made it evident that justice to the accused was the last thing that was thought of. It can hardly be wondered at, that Athanasius should have refused to be tried by such a court. He, therefore, suddenly withdrew from Tyre, escaping in a boat with some faithful friends and followers. He then went to contact and made up his mind to present himself to the emperor. The circumstances in which the saint and the great catechumen met were dramatic enough. Constantine was returning from a hunt, when Athanasius unexpectedly stepped into the middle of the road and demanded a hearing. The emperor could hardly believe his eyes, and it needed the assurance of one of the attendants to convince him that the petitioner was not an impostor, but none other than the great Bishop of Alexandria himself. "Give me", said the prelate, "a just tribunal, or allow me to meet my accusers face to face in your presence." His request was granted. An order was peremptorily sent to the bishops, who had tried Athanasius and, of course, condemned him in his absence, to release him. When the order reached them, they were on their way to the great feast of the dedication of Constantine's new church at Jerusalem. It naturally caused some consternation; but the more influential members of the Eusebian faction never lacked either courage or resourcefulness. The bishop was arrested at his word; and the old charges were renewed in the hearing of the emperor himself. Athanasius was condemned to go into exile at Trèves, where he was received with the utmost kindness by the saintly Bishop Maximinus and the emperor's eldest son, Constantine. He began his journey probably in the month of February, 336, and arrived on the banks of the Moselle in the late autumn of the same year. His exile lasted nearly two years and a half. The bishop was free to submit to his wishes, to go to him during all that time. It was not the least eloquent testimony to the essential worth of his character that he could inspire such faith. Constantine's treatment of Athanasius at this crisis in his fortunes has always been difficult to understand. Affecting, on the one hand, a show of indignation, as if he really believed in the political charge brought against the saint, he, on the other, refused to appoint a successor to the Alexandrian See, a thing which he might in consistency have been obliged to do had he taken it seriously that he was carrying through by the Eusebians at Tyre. Meanwhile events of the greatest importance had taken place. Arius had died amid startlingly dramatic circumstances at Constantinople in 336; and the death of Constantine himself had followed, on the 22nd of May the year after. Some three weeks later the younger Constantine invited the exiled primate to return to his see; and by the end of November of the same year Athanasius was once more established in his episcopal see. His return was the occasion of great rejoicing. The people, as he himself tells us, ran in crowds to see his face; the churches were given over to a kind of jubilee; thanksgivings were offered up everywhere; and clergy and laity accounted the day the happiest in their lives. But already trouble was brewing in a quarter from which the saint might reasonably have expected it. The Eusebian faction, who from this time forth loom large as the disturbers of his peace, managed to win over to their side the weak-minded Emperor Constantinus to whom the Picts had been empress at their bidding; and that followed on the death of Constantine. The old charges were refurbished with a graver ecclesiastical accusation added by way of rider. Athanasius had ignored the decision of a duly authorized synod. He had referred to it as without the common approval of the ecclesiastical authority (Apol. c. Ar., loc. cit.). It
the year 340, after the failure of the Eusebian malcontents to secure the appointment of an Arian candidate of dubious reputation named Pistus, the notorious Gregory of Cappodocia was forcibly induced into the Alexandrian See, and Athanasius was banished. In two weeks he set out for Rome to lay his case before the Church at large. He had made his appeal to Pope Julius, who took up his cause with a whole-heartedness that never wavered down to the day of that holy pontiff's death. The pope summoned a synod of bishops in Rome, in which he interceded for Athanasius, and in the detailed examination of the entire case, the primate's innocence was proclaimed to the Christian world.

Meanwhile the Eusebian party had met at Antioch and passed a series of decrees framed for the sole purpose of preventing the saint's return to his see. Three years were passed at Rome, during which time the idea of the cenobitical life, as Athanasius had seen it practised in the deserts of Egypt, was preached to the clergy of the West (St. Jerome, Epistle xxxvii, 5). Two years after the Roman synod had published its decision, Athanasius was summoned to Milan by the Emperor Constans, who laid before him the plan which Constantius had formed for a great reunion of the bishops of both the Eastern and Western Churches. Now began a time of extraordinary activity for the Saint. Early in 337 he found the undaunted exile in Gaul, whither he had gone to consult the saintly Hosius, the great champion of orthodoxy in the West. The two together set out for the Council of Sardica which had been summoned in defiance to the Roman pontiff's wishes. This great gathering of prelates the case of Athanasius was taken up once more; and once more was his innocence reaffirmed. Two conciliar letters were prepared, one to the clergy and faithful of Alexandria, the other to the bishops of Libya and Egypt, by which the will of the Council was made known. Meanwhile the Eusebian party had gone to Philipopolis, where they issued an anathema against Athanasius and his supporters. The persecution against the orthodox party broke out with renewed vigour, and Constantius was induced to prepare drastic measures against Athanasius and the priests who were devoted to him. Orders were given that if the Saint attempted to re-enter his see, he should be put to death. Athanasius, accordingly, withdrew from Rome to Perugia, where he celebrated the Easter festival of the year 344. After that he set out for Aquileia in obedience to a friendly summons from Constanza, to whom Italy had fallen in the division of the empire that followed on the death of Constantine. Meanwhile an unexpected event had taken place which made the return of Athanasius to his see less difficult than it had seemed for many months. Gregory of Cappadocia had died (probably by violence) in June, 345. The embassy which had been sent by the bishops of Sardica to the Emperor Constantius, and which had at first met with the most insulting treatment, now received a favourable hearing. Constantius was induced to reconsider his decision, owing to a threatening letter from the Pope and the uncertain condition of affairs on the Persian border, and he accordingly made up his mind to yield. But three separate letters were needed to overcome the natural hesitation of Athanasius. He passed rapidly from Aquileia to Trèves, from Trèves to Rome, and from Rome by the maritime route to Athens, though descried, in July he met Constantius. He was accorded a gracious interview by the vacillating Emperor, and sent back to his see in triumph, where he began his memorable ten years' reign, which lasted down to the third council which was sent to him by the Emperor; but the intrigues of the Eusebian, or Cour, party were soon renewed. Pope Julius had died in the month of April, 352, and Liberius had succeeded him as Sovereign Pontiff. For two years Liberius had been favourable to the cause of Athanasius; but driven at last into exile, he was induced to sign an ambiguous formula, from which the great word "homoousion" had been studiously omitted. In 355 a council was held at Milanmore in spite of the vigorous opposition of a handful of loyal prelates among the Western bishops, a fourth condemnation of Athanasius was announced to the world. With his friends scattered, the saintly Holy One, in exile, in Rome, and in the East, believing in Arian formulas, Athanasius could hardly hope to escape. On the night of 8 February, 356, while engaged in services in the Church of St. Thomas, a band of armed men burst in to secure his arrest (Apol. de Fug., 24). It was the beginning of his third exile.

Through the influence of the Eusebian faction at Constantinople, an Arian bishop, George of Cappadocia, was now appointed to rule the see of Alexandria. Athanasius, after remaining some days in the neighbourhood of the city, finally withdrew into the deserts of upper Egypt, where he remained for a period of six years, living the life of the monks and devoting himself in his enforced leisure to the composition of that group of writings which has been the result in the "Apology to Constantius", the "Apology for his Flight", the "Letter to the Monks", and the "History of the Arians". Legend has naturally been busy with this period of the Saint's career; and we may find in the "Life of_Pachomius" a collection of tales brimful of incidents, and enlivened by the recital of "deathless escapes in the breach." But by the close of the year 360 a change was apparent in the complexion of the anti-Nicene party. The Arians no longer presented an unbroken front to the orthodox. The Emperor Constantius, who had been the cause of so much trouble, died 4 November, 361, and was succeeded by Julian. The proclamation of the new prince's accession was the signal for a pagan outbreak against the still dominant Arian faction in Alexandria. George, the usurping Bishop, was flung into prison and murdered amid circumstances of great cruelty, 24 December (Hist. Aech., VI). An obscure presbyter of the name of Pistus was immediately chosen by the Arians to succeed him, when fresh news arrived that the Christian empire had been put forth by Julian (Hist. Aech., VIII) permitting the exiled bishops of the "Galileans" to return to their "towns and provinces". Athanasius received a summons from his own flock, and he accordingly re-entered his episcopal capital on 22 February, 362. With characteristic energy he set to work to re-establish the somewhat shattered fortunes of the orthodox party and to purge the theological atmosphere of uncertainty. To clear up the misunderstandings that had arisen in the course of the previous years, an attempt was made to determine still further the significance of the Nicene formulas. In the meanwhile, Julian, who seems to have become suddenly jealous of the influence that Athanasius was exercising at Alexandria, addressed an order to Ecdicius, the Prefect of Egypt, peremptorily commanding the expulsion of the restored primate, on the ground that he had never been included in the imperial act of clemency. The edict was communicated to the bishop by Pythiodorus Trico, the "Confessor" of the "Churchianum" (xxxv) as a "philosopher", seems to have behaved with brutal insolence. On 23 October the people gathered about the prescribed bishop to protest against the emperor's decree; but the saint urged his followers to submit, in the name of the Bishop; but the intrigues of the Eusebian, or Cour, party were soon renewed. Pope Julius had
his brief career 26 June, 363; and Athanasius returned in secret to Alexandria, where he soon received a document from the new emperor, Jovian, reinstating him once more in his episcopal functions. His first act was to convene a council which reaffirmed the terms of the Nicene Creed. Early in September he set out for Antioch, bearing a formal letter, in which the pronouncements of this council had been embodied. At Antioch he had an interview with the new emperor, who received him graciously and even asked him to prepare an exposition of the orthodox faith. But in the following February Jovian died; and in October, 364, Athanasius was once more an exile.

With the turn of circumstances that handed over to Valens the control of the East this article has nothing to do; but the accession of that emperor gave a fresh lease of life to the Arian party. He issued a decree banishing the bishops who had been deposed by Constantius, but who had been permitted by Jovian to return to their sees. The news created the greatest commotion in the city of Alexandria itself, and the prefect, in order to prevent a serious outbreak, gave public assurance that the very special case of Athanasius would be laid before the emperor. But the saint seems to have divined what was preparing in secret against him. He quietly withdrew from Antioch, and on 23 October, as he tells us, found himself in a country house outside the city. It was during this period that he is said to have spent four months in hiding in his father's tomb (Soz., "Hist. Eccl.", VI, xii; Soc., "Hist. Eccl.", IV, xii). Valens, who seems to have sincerely dreaded the possible consequences of a popular outbreak, gave orders within a very few weeks for the return of Athanasius to his see. And now began that last brief period of comparative repose which unexpectedly terminated his struggle. In the very early days, characteristically enough, in emphasizing the view of the Incarnation which had been defined at Nicea and which has been substantially the faith of the Christian Church from its earliest pronouncement in Scripture down to its last utterance through the lips of Pius X in our own times. "Let what was confessed by the Fathers of Nicea prevail," he wrote to a philosopher-friend and correspondent in the closing years of his life (Epist. 1xxi, ad Max.). That that confession did at last possess the sturdy, unbroken and variously qualified that followed upon that of Nicea was due, humanly speaking, more to his laborious witness than to that of any other champion in the long teachers' roll of Catholicism. By one of those inexplicable ironies that meet us everywhere in human history, this man, who had endured exile so often, and risked life itself in defence of what he believed to be the first and most essential truth of the Catholic creed, died not by violence or in hiding, but peacefully in his own bed, surrounded by his clergy and mourned by the faithful of the see he had served so well. His feast in the Roman Calendar is kept on the anniversary of his death.

All the essential materials for the Saint's biography are to be found in his writings, especially in those written in the year 350, when the Apologia contra Arianos was composed. Supplementary information will be found in St. Epiphanius, Hist., loc. cit.; St. Gregory of Nazianzus, Ort. 80; also Rufinus, Socrates, Sozomen, and Theodoret. The most important of the fragmentary sources preserved is the Apologia a Dionysio against Manuel in the Maffei in 1738, and inserted by Gallandi in Bibliotheca Patrum, 1789, and the Chronicon Achacotanum, or Index to Eusebius. Let these be our data for the chronological scheme. All the foregoing sources are included in Migne, P.G. and P. P. 46, 1, 2, and assertion in Acts 23, 17. The most important authorities in English are: Newman, Arius of the Fourth Century, and Saint Athanasius; Bright, Decision of the Council of Constantinople; Roberton, Life of Protagoras in the Select Writings and Letters of Saint Athanasius, London, 1883; and Nicene and Post-Nicene Fathers, 2d ed. (New York, 1893); Gwatkin, Studies of Athanasius (2d ed., Cambridge, 1900); Möhler, Athanasius der Große; Herzens, Athanasius, Hesperus.

Cornelius Clifford.
which could in any sense justify an atheistic position, for even materialism, however advanced it might be, or agnosticism, could do no more than provide an inadequate theocratic basis for a negative form of atheism. Pantheism, which must not be confused with materialism, in some of its forms can be placed also in this division, as categorically denying the existence of a personal God of the world. A second form in which atheism may be held and taught, as indeed it has been, is based either upon the lack of physical data for theism or upon the limited nature of the intelligence of man. This second form may be termed negative atheism; and may be further viewed as cosmological or psychological, according as it is motivated, on the one hand, by a consideration of the paucity of actual data available for the arguments proving the existence of a super-sensible and spiritual God, or, what amounts to the same thing, the attributing of all cosmic change and development to the self-contained potentials of an eternal matter; or, on the other hand, by an empiric or theoretic estimate of the powers of reason working upon the data furnished by sense-perception. From this point of view, if atheism proceeds, it issues in agnosticism or materialism; although the agnostic is, perhaps, better classed under this head than the materialist. For the former, professing a state of nescience, more properly belongs to this group, which makes the neglect, rather than explain, nature without a God. Moreover, the agnostic may be a theist, if he admits the existence of a being behind and beyond nature, even while he asserts that such a being is both unprovable and unknowable. The materialist belongs to this type so long as he merely neglects, and does not exclude from his system, the existence of God. So, too, does the positivist, regarding theological and metaphysical speculation as mere passing stages of thought, in which the human mind has been journeying towards positive, or related empirical, knowledge. Indeed any system of thought or school of philosophy that simply omits the existence of God from the sum total of natural knowledge, whether the individual as a matter of fact believes in Him or not, can be classed in this division of atheism, in which, strictly speaking, no positive assertion or denial is made as to the ultimate fact of His being.

There are two systems of practical or moral atheism which call for attention. They are based upon the first, Theodorus, and the second system of positive moral atheism, in which human actions would neither be right nor wrong, good nor evil, with reference to God, would naturally follow from the profession of positive theoretical atheism; and it is significant of those to whom such a form of atheistic atheism is sometimes attributed, that for the sanction of moral actions they introduce such abstract ideas as those of duty, the social instinct, or humanity. There seems to be no particular reason why they should have recourse to such sanctions, since the morality of an action can hardly be derived from its performance as a duty, which in turn can be called and known as a "duty" only because it refers to an action that is morally good. Indeed an attempt of the idea of duty leads to a reformation of the principle in whose support it is invoked, and points to the necessity of a theistic interpretation of nature for its own justification. The second system of negative practical or moral atheism may be referred to the second type of theoretic atheism. It is pointed to, however, that it is not necessary that a lawgiver does not exist, but because the human intelligence is incapable of so relating them. It must not be forgotten, however, that either negative theoretic atheism or negative practical atheism is, as a system, strictly speaking compatible with belief in a God; and much confusion is often caused by the inaccurate use of the terms, belief, knowledge, opinion, etc.

Lastly, a third type is generally, though perhaps wrongly, included in moral atheism. "Practical atheism is not a kind of thought or opinion, but a mode of life" (R. Flint, Anti-theistic Theories, Lect. I). This is more correctly called, as it is described, godlessness in conduct, quite irrespective of any theory of philosophy, or morals, or of religious faith. It will be noticed that, although we have included agnosticism, materialism, and pantheism, among the types of atheism, strictly speaking, this latter does not necessarily include any one of the former. A man may be an agnostic simply, or an agnostic who is also an atheist. He may be a scientific materialist and no more, or he may combine atheism with his materialism. It does not necessarily follow, because the natural cognoscibility of a personal First Cause is denied, that His existence is called in question: nor, when matter is called upon to explain itself, that God is critically denied. On the other hand, pantheism, while destroying the extra-mundane character of God, yet necessarily does not deny the existence of a supreme entity, but rather affirms such as the sum of all existence and the cause of all phenomena whether of thought or of matter. Consequently, while it would be unjust to class agnostics, materialists, or pantheists, as atheists, it cannot be denied that atheism is clearly perceived to be implied in certain phases of all these systems. There are so many shades and gradations of thought by which one form of a philosophy merges into another, so much the more necessity is there for the individual to be classed by himself as atheist or theist. Indeed, more upon his own assertion or direct teaching than by reason of any supposed implication in the system he advocates must this classification be made. And if it is correct to consider the subject from this point of view, it is surprising to find what an exceedingly small number the supposed atheist ranks dwindle. In company with Socrates, nearly all the reputed Greek atheists strenuously repudiated the charge of teaching that there were no gods. Even Bion, who, according to Diogenes Laertius (Life of Aristippus, XIII, Bohn's tr.), adopted the scandalous moral teaching of the Diogenes an arch atheist, when put to the test and was asked if he had insulted, and when he came to die demonstrated in practice what he had denied in theory. As Laertius says in his "Life of Bion", he "who never once said, 'I have sinned but spare me'—Then did this atheist shrink and give his neck To an old woman to hang charms upon; And bound his arms with magic amulets; With laurel branches blocked his doors and windows, Ready to do and venture anything Rather than die."

Epicurus, the founder of that school of physics which limited all causes to purely natural ones and consequently implied, if he did not actually assert, atheism, is spoken of as a man whose "piety towards the gods and (whose) opinion of the character of those gods who are not atheists quite unspeakable" (ib., Life of Epicurus, V). And though Lucretius Carus speaks of the downfall of popular religion which he wished to bring about (De Rerum Natura, I, 79-80), yet, in his own opinion (loc. cit., Epicurus, XXVII), he states plainly a true theistic position: "For there are gods: for our knowledge of them is indistinct. But they are not of the character which people in general attribute to them." Indeed, this one citation perfectly illustrates the fundamental historic meaning of the term, atheism.
Athenagoras, a Christian apologist of the second century of whom no more is known than that he was an Athenian philosopher and a convert to Christianity. Of his writings there have been preserved but two genuine pieces:—his "Apology" or "Embassy for the Christians" and a "Treatise on the Resurrection". The only allusion to him in early Christian literature is a few quotations from his "Apology" in a fragment of Methodius of Olympus (d. 312) and the untrustworthy biographical details in the fragments of the "Christian History" of Philip of Side (c. 425). It may be that his treatises, circulating anonymously, were for a time considered as the work of another apologist. His writings bear witness to his erudition and culture, his power as a philosopher and rhetorician, his keen appreciation of the intellectual temper of his age, and his tact and delicacy in dealing with persons and things. The "Apology", the date of which is fixed by internal evidence as late as 176 or 177, was not, as the title "Embassy" (proopela) has suggested, an oral defence of Christianity, but a carefully written plea for justice to the Christians made by a philosopher, on philosophical grounds, to the Emperors Marcus Aurelius and his son Commodus, conquerors, "but above all, philosophers". He first complains of the illogical and unjust discrimination against the Christians and of the calumnies they suffer (i–iii), and then meets the charge of atheism (iv). He establishes the principle of monotheism, citing pagan poets and philosophers in support of the very doctrines for which Christians are condemned (v–vi), and demonstrates the superiority of the Christian belief in God to that of pagans (vi–vii). This first strongly reasoned demonstration of the unity of God in Christian literature is supplemented by an able exposition of the Trinity (x). Assuming then the defensive, the apologist justifies the Christian abstinence from wine (xii–xiii) and from marriage (xiii–xiv) on grounds of its absurdity and incontinency, quoting at length the pagan poets and philosophers in support of his contention (xv–xxx). Finally, he meets the charges of immorality by producing the Cynic Alcibiades and the inviolable sanctity of the marriage bond. The charge of cannibalism is refuted by showing the
high regard for human life which leads the Christian to detest the crime of abortion (xxxii—xxxvi). The treatise on the "Resurrection of the Body", the first complete exposition of the doctrine in Christian literature, was written later than the "Apology", to which it may be considered as an appendix. Athenagoras' stay in Athens defends the best that contemporary philosophy could adduce. After meeting the objections common to his time (i), he demonstrates the possibility of a resurrection in view either of the power of the Creator (ii) or of the nature of our bodies. To exercise such powers is neither unworthy of God nor unjust to other creatures (ix—xi). He shows that the nature and end of man demand a perpetuation of the life of body and soul.

JOHN B. PETERSON.

Athens, a small island town in the country of Ith- way, Ireland, anciently called Athnere, from AthnΛ- Risk, the king's ford, or the abode of the king. It was the first town established by the Anglo-Norman invaders of Connaught, and at a remote period became a place of importance. A Dominican monastery was completed there in 1226, a site granted by Meyler de Bermingham. In time it became extensive and wealthy and was used as the chief burial place of the Earls of Ulster and the principal families of the adjoining territory. Indulgences for the benefit of the monastery were granted by Pope Innocent. The church was burned in 1423, and in 1427 two subordinate houses were established. In 1445 Pope Eugenius IV renewed the decree of Pope Martin V to encourage the repairing of the church, at which time there were thirty inmates in the monastery. A Franciscan friary was also founded there in 1464 by Thomas, Earl of Kildare, and chapels erected by his wife and the Earls of Desmond and O'Tully. The place was sacked in 1577 during the Elizabethan wars, and repaired in 1585. The northern Irish burned the town in 1596 but left it uninhabited. The Dominican establishment was revived in 1644 as a university, the town, however, never regained its ancient prestige. The Cromwellian period ruined the ecclesiastical buildings, of which the tower and east window remained in good condition to tell of the ancient extent and beauty of the foundation. The Board of Works in 1893 made extensive repairs to the ruins to preserve them.

LEWIS, "Topographical Dictionary of Ireland" (Dublin, 1839).

ATHENS, CHRISTIAN.—Christianity was first preached in Athens by St. Paul. He came to Athens from Berea of Macedonia, coming probably by water and landing in the Peiraeus, the harbour of Athens. This was about the year 53. Having arrived at Athens, he at once sent for Silas and Timotheos who had remained behind in Berea. While awaiting the coming of these he tarried in Athens, viewing the idolatrous city, and frequenting the synagogue; for there were already Jews in Athens. He also frequently met and talked with the men of Athens, telling them of the new truths which he was promulgating. Finally, at the Aereopagus, he spoke to them the sermon which is preserved in the seventeenth chapter of the Acts. The Acts mention, however, that a few believed in Paul's teaching. Amongst these were Dionysios, a member of the Areopagite court, and Damaris, or Thamar possibly, who may have been a Jewess. A tradition asserts that St. Paul wrote from Athens his two letters to the Christians of Thessalonika. Even if this be so, his stay in Athens did not last more than three months. He then departed by sea, and went to Korinth by way of Kephrenes, its eastern harbour. It seems that a Christian community was rapidly formed, although for a considerable time it did not possess a numerous membership. The commoner tradition names the Areopagite as the first head of the church at Athens. Another tradition, however, gives this honour to Hierocles the Thesmothete. The successors of the first bishop were not all Athenians by lineage. They are catalogued as Narkissos, Publius, and Quadratus. Narkissos is stated to have come from Palestine, and Publius from Malta. In some lists Narkissos is omitted. Quadratus is revered for having contributed to early Christian literature by writing an apology, which he addressed to the Emperor Hadrian. The Empress Sabina, on the occasion of Hadrian's visit to Athens. Another Athenian who defended Christianity in writing at a somewhat later time was Aristides. His apology was directed to the Emperor Marcus Aurelius. Athenagoras also wrote an apology early in the first century. There must have been a considerable community of Christians in Athens, for Hygeinos, Bishop of Rome, is said to have written a letter to the community in the year 139. It is probable that the early Church of Athens did not have many martyrs, although Dionysios himself graces the martyrs' list. Under Decius, we find recorded in the catalogue of martyrs the names of Herakleios, Benedimos, Pavlinos, and Leonides with his followers, the holy woman Charissa, and her companions. One reason why the Christians of Athens were so few. Besides, the spirit of the Athenian pagans and philosophers was not one of blood; and it is probable that the persecutions in Athens were rather of the social and scholastic kind. This would account for the writings of the apologists who thus would defend themselves by weapons similar to those which their opponents used. The philosophers of the Athenian schools did not indeed admire Christianity, as they understood it; nevertheless there is some ground for believing that amongst the teachers who occupied official and literary positions in Athens there later was at least one who was a Christian, Prohresios, the sophist. Be this as it may, it is certain that the teaching of the philosophers was not rude anti-Christian. Otherwise the presence of Christians amongst the students could not be understood. Sixtus II, or Xystos, who suffered martyrdom in Rome about A.D. 258, also may have studied in Athens and is called "the son of an Athenian philosopher". But the most noted men who frequented the schools were Basil from Kassarea, and Gregory from Nazianzos, about the middle of the fourth century. These schools of philosophy kept paganism alive for four centuries, but by the fifth century the ancient religion of Eleusis and Mysteries had practically succumbed. Under the Council of Nicaea there was present a bishop from Athens. In 529 the schools of philosophy were closed.

From that date Christianity had no rival in Athens. Down to the time of Constantine, and later, there were no large Christian temples in Athens. Like the Jews, whose congregations in pagan Athens were small and unpretentious, the first Christians did erect sumptuous temples. With their worship they did not associate splendour of temple and sanctuary as indispensable. In the time of Basil and Gregory, two were surely numerous church edifices in Athens, but they were not spacious temples. They are called
Likewise many monasteries were founded, both in Athens itself and in the country of Attika, especially on the slopes of the surrounding mountains of Hy- meteis, and Pentelikos, and Parnes. A complete list of the Bishops of Athens could not be made. But as time goes on, and seals and manuscripts and inscriptions are deciphered, the list of names will grow. Photos, Bishop of Athens, was present at the Council of Nikaea in 325. Bishop Modestus was at the Coun-
cil of Ephesos in 431. John, Bishop of Athens, was amongst the Fathers who signed the Acts of the Sixth Ecumenical Council. He was present as “Leg-
ate of the Apostolic See of ancient Rome”. From these data we can see that the Parthenon a number of other
names and dates are already known. In these gra-
fiti we read names of bishops prior to the exaltation of Athens to the rank of an archbishopric, then the names of archbishops, and finally those of metropoli-
tans. The time of the elevation of this see to an
archbishopric cannot yet be fixed. Gregory II, who was pastor of the Athenians during the first patriarchate of Photios, bore the title of bishop. But it is not known whether or not he was the first who had this title. The Akropolis and the Erechtheion were well preserved in the eyes of the Greeks, and even towards the archbishops received the higher title of
metropolitan. Niketas who took part in the Eighth
Ecumenical Council under Basil the Macedonian,
which closed 28 February, 870, and who signed the
Acta, was Bishop of the last century. Niketas,
metropolitan of Athens", on his seals, or leaden bulls,
simply places the inscription "Niketas, Bishop of
Athens". Amongst the signatures to the acts of
this council, that of Niketas stands twenty-second in
order. But in a full assembly of metropolitans he
would not rank so high. According to the list
made by Emperor Leon the Wise (886-911), a list
intended to show the relative rank of each ecclesi-
sastical dignity under the Patriarch of Constantin-
ople, the Metropolitan of Athens is relegated to
the twenty-eighth place. Just what sees were under
the Archbishop of Athens prior to Photios is not
easy to discover. After the changes brought about
by Photios and his successors, the sees that were
suffrangu to Athens varied in number from time to
time. But in general it may be stated that all of
Attika belonged directly to the Archbishop of Athens,
after the abolishing of the See of Marathon, about
the middle of the nineteenth century. And under Athens
were, besides other bishops, the Sees of Evripus,
Aleria, Kerameikos, Diapiaea, Pchis, and Koroneia in
Beotia; Andros, Skiros, Syros, and Seriphos of the
islands; and,
later, Keos and Aligina.

From Photios down to the Franks the Metropol-
tians of Athens were all of the Greek rite, naturally.
Likewise their sympathies were rather with Constanti-
tinople than with older Rome. Their metropolitan
church continued to be the ancient Parthenon. It
seems that the residence of the bishops was on the
Akropolis, in the great Portals, or Propylees, and that
in these Propylees they had a private episcopal
chapel. In these days education was not held in
very general esteem in Athens. No special erudition
characterized the clergy. Even the inscriptions
which decorated the seals and bulls of bishops and ab-
bes were not of the style of ecclesiastical archi-
tecture which had been developed else-
where, and had become prevalent throughout
so much of the empire. From about the end of
the eighth century they erected new churches more fre-
cquent in the Empire. The Bishop of
Athens, gave some impulse to this tendency. As
years went on, Athens and the surrounding villages
of Attika, and the fields were filled with churches,
many of them veritable gems of Byzantine comeli-
ness. The churches which were built in Athens and
vicinity during the Middle Ages numbered hundreds.
Athens.

A provincial town, exercising no influence on the world at large, and almost unheard of in the politics of the day, the Empire was taken to its way to Sicily in 662 spent the winter in Athens; and after his victories over the Bulgarians in 1018, Basil II visited this city to celebrate his triumphs. When, under Constantine, the Empire was divided into governmental dioceses, these relations which had been due to the Church and the State caused the ecclesiastical divisions to be often identical with the civil. By this system all of Achacia, wherein was Athens, was included within the Diocese of Eastern Illyria, of which Theissalonika was the capital. The archbishops of Thessalonika were under the direct jurisdiction of the Bishop of Rome. And so it remained until the reign of Leo the Isavarian. This emperor, incensed at Pope Gregory III, because of his strong opposition to Leo's iconoclastic passion, retorted against the pope by transferring these countries of the Illyrian diocese from the jurisdiction of the Bishop of Rome to that of the See of Constantinople. This occurred in the year 732. In his great struggle between the iconoclasts and the supporters of the icon, he had the Athenians placed themselves on the side of iconoclasm. While accepting without any recorded protest their transference to the jurisdiction of the Eastern patriarch, they retained the images in their churches and continued to venerate them. All the other Greeks who stood with them were the iconoclasts, who were then called Haladikoi, or Helladists, were opposed to the iconoclasts. And their opposition was so determined that they fitted out an expedition and maned a fleet, intending to attack Constantinople, depose Leo, and place their leader, Kosmas, on the throne. In this expedition, in which the Athenians doubtless had an important part, assistance was given by the inhabitants of the Kyklad islands, who probably furnished most of the ships. The attempt, however, was futile. The fleet was easily destroyed by the imperial ships in April, 727. The mutual bitterness which was evident in Constantinople by the contending parties of Photians and Anti-Photians was reflected here in Athens. Gregory II was archbishop when Ignatios was restored to his throne as Patriarch of Constantinople. Ignatios deposed him as being an adherent of Photios. His successor, Kosmas, was also later deposed. Then Niketas, a Byzantine, came to Athens as archbishop with the title of metropolitan. This Niketas was the father of Ignatios. His successor, Anastasios, was a follower of Photios. Sabbas, who succeeded Anastasios, was likewise a Photian and was one of those who signed the acts of the synod which closed in May, 889, by which Photios was again recognized as patriarch. A bull of his still exists, whereon he designates himself as "Metropolitan of Athens".

Throughout the East there was a peculiar type of Panagia-Icon, copies of which might be seen in monasteries and churches in many places. This was the Panagia Gorgoepekoos. This Panagia Gorgoepekoos seems to have been originally an Athenian icon, and was probably identical with an icon which was called the Panagia Athenoctissa. The Athenoctissa was the Madonna of the church in the Parthenon. This icon is mentioned by Michael Akominatos.

After the conquest of the Byzantine Empire by the Europeans of the Fourth Crusade, in the parliament which followed, Athens and the rest of Greece was given to the Bishop of Thessalonika. Boniface gave Athens to one of his followers, Otho de la Roche. At their coming to Athens the Franks found it small and insignificant. They chose Thebes to be the seat of civil power rather than Athens. Thebes was a more important trade centre than was Athens. Athens, however, was considered important enough to be continued as an archbishopric. In it was the seat with the other larger cities of Greece, such as Thebes, within de la Roche's dominion, and Patras and Korinth in the Morea. The conquest of Greece was accomplished in 1204 and 1205. The first Latin archbishop introduced the Latin rite into the cathedral, the Parthenon, in the year 1206. This was Archbishop Berard. Thus after a lapse of centuries from the time of Leo the Isavrian, Greece and Athens were again placed under the jurisdiction of the Bishop of Rome. During the Frankish rule there were with the papacy two parties of the Latin Rite, and were of Western lineage. Likewise the canons of the cathedral, in the Parthenon, were of Latin Rite, and were Franks. Their number was fixed by Cardinal Benedict, papal legate in Thessalonika, by order of Pope Innocent III. But the ritual of the common priests was not disturbed. The people continued to enjoy their own rites, celebrated by Greek priests in the Greek language. These Greek priests had, however, at least outwardly, the guides of the rite of the Latin church. Amongst the sees which were suffragan to the Archbishop of Athens were those of Chalkis, Thermopylae (or Bodonites) Davleia, Avlon, Zorkon, Karysos, Koroneia, Andros, Skypoes, Kea, and Megara. The last bishop of the Greek Rite was the learned Michael Akominatos, who retired to the Island of Keos after the destruction of the cathedral legate of the pope in Thessalonika to impetrate certain favours for those formerly under his charge who wished to adhere to the Greek form of worship. In Keos he lived as a monk in the monastery of St. John the Baptist. To support the Latin archbishop, and the canons, and the cathedral church, a number of possessions were given to him. Amongst these was the monastic property of Kessariani, and the island of Belbina, which Pope Innocent III gave to the Archbishop of Athens in 1208. The Frankish cavaliers lived in splendour in Thebes and Athens. The dignitaries of the Church lived in ease. Along with the coming of the Franks and the Latin Church there came also Latin monks. The Cistercians established themselves near Athens in 1208 in the beautiful monastery of Daphne, which previously was in the possession of Greek Basilian Fathers. The Franciscans were the most active religious order in Greece during this period. There were also Dominican convents.

In the year 1311 another great change came over Athens. The Franks were defeated by the Catalans in the swamps of the Kephisos in Boiotia. Athens, with Thebes, became their possession. Under their sway, which lasted more than seventy-five years, the higher dignitaries of the Church continued naturally to be Latinos. In these days there were fourteen suffragan sees under the Archbishopric of Athens, and at the cathedral there were eleven or twelve canons. In 1357 another change overtook Athens. The Catalan possession came under the ownership of the Acciajoli, Florentines who had risen to eminence as bankers. The Acciajoli retained possession of Athens until driven out by Osman Pasha, who in June of 1456 entered the city and, in 1458, took possession of the Akropolis for his Sultan Mohammed II. The only notable change in ecclesiastical matters under the Acciajoli was that they permitted two archbishops to reside in Athens, a Greek dignitary for the Catholics of the Greek Rite, and a Latin for the busineses in Greek jurisdiction. The Greeks of Athens from Roman jurisdiction was again a fact. The Latin archbishop lived in the Castro, that is, on the Akropolis, and the Greek prelate had his residence in the lower city. Franco Acciajoli was the last Duke of Athens. The last
Latin archbishop was Nicholas Prouticus. He died in 1483. After his death Rome continued to appoint titular Latin archbishops to the See of Athens. Under Turkish domination the Church and all its property again became Greek. All the suffragan sees were again filled by Greek bishops, and the monastery of Parthenon, occupied by Greek monks until 1483, was used as a private chapel. They lived elsewhere at times, however, for Father Babin mentions Archbishop Anthimos as living near the church of St. Dionysios, which was at the foot of the Areopagus Hill. In Turkish times, as previously, the sees under Athens were not always the same in number. Nor were they all identical with those that had been under the Latin archbishops. Some of them were Koroneia, Salona, Bodonitsa, Davleia, Evripus, Oreos, Karystos, Forthmos, Andrino, Strymon, and Skiros.

Amongst the religious orders that lived in Athens under Turkish rule were the Franciscans. They were there as early as 1538. But they had already been in Greece under the Franks. The Franciscans are to be mentioned with the Dominicans, but even the Western Europeans who sent students to Athens and other places in the East for the purpose of studying the language and literature of the Greeks. Another fact to the credit of the Franciscans of Athens is that, although not primarily interested in antiquities, they fruitfully contributed to the awakening of our interest in such studies. There appeared in Paris in the second half of the seventeenth century, a book by Guillet or de la Guillery, which is entirely based on uniform sources received from the Franciscans of Athens. It sketches the first plan of modern Athens. Considering how suspicious the Turks were of any kind of description of their possessions and castles, it was quite a feat for the Franciscans to have made so good a plan as they did. It was published by Guillet in his book, "Athènes, anciennes et nouvelles" 1675. In those days the Capuchins had a comfortable monastery in Athens, which they built on ground bought from the Turks in 1658, behind the oratory monument of Lysikrates. The monks also added to their little library in this monastery many a traveller found hospitality. It was destroyed by fire in 1821, and the site is now owned by the French Government. The Jesuits were also active in Athens. They came in 1645. It must be noted that it was Father Babin, a Jesuit, who wrote the first careful account of the modern condition of the ruins of ancient Athens. He did this in a letter to the Abbé Pécel, canon of Lyons. This letter was written 8 October, 1672. It was published with a commentary by Spon in 1674 under the title of "Relation de l'état présent de la ville d' Athènes". The Jesuits finally withdrew from Athens, leaving the entire field to the Franciscans. The Franciscans remained until the beginning of the war of the revolution. In the time of Babin and Spon there were about two hundred churches and chapels, all of the Greek Rite, except the chapels in the monasteries of the western monks. With the war of the insurrection, in 1821, ends the history of the older Church of Athens. A new Latin archbishopric has again its residence in Athens. Since 1833 the Church of the Greek Rite has undergone serious changes of jurisdiction, for it no longer recognizes the leadership of the Patriarch of Constantinople, but is a national autocephalous church.

GREEK archbishops were Nicholas Prouticus. He died in 1483. After his death Rome continued to appoint titular Latin archbishops to the See of Athens. Under Turkish domination the Church and all its property again became Greek. All the suffragan sees were again filled by Greek bishops, and the monastery of Parthenon, occupied by Greek monks until 1483, was used as a private chapel. They lived elsewhere at times, however, for Father Babin mentions Archbishop Anthimos as living near the church of St. Dionysios, which was at the foot of the Areopagus Hill. In Turkish times, as previously, the sees under Athens were not always the same in number. Nor were they all identical with those that had been under the Latin archbishops. Some of them were Koroneia, Salona, Bodonitsa, Davleia, Evripus, Oreos, Karystos, Forthmos, Andrino, Strymon, and Skiros.

Amongst the religious orders that lived in Athens under Turkish rule were the Franciscans. They were there as early as 1538. But they had already been in Greece under the Franks. The Franciscans are to be mentioned with the Dominicans, but even the Western Europeans who sent students to Athens and other places in the East for the purpose of studying the language and literature of the Greeks. Another fact to the credit of the Franciscans of Athens is that, although not primarily interested in antiquities, they fruitfully contributed to the awakening of our interest in such studies. There appeared in Paris in the second half of the seventeenth century, a book by Guillet or de la Guillery, which is entirely based on uniform sources received from the Franciscans of Athens. It sketches the first plan of modern Athens. Considering how suspicious the Turks were of any kind of description of their possessions and castles, it was quite a feat for the Franciscans to have made so good a plan as they did. It was published by Guillet in his book, "Athènes, anciennes et nouvelles" 1675. In those days the Capuchins had a comfortable monastery in Athens, which they built on ground bought from the Turks in 1658, behind the oratory monument of Lysikrates. The monks also added to their little library in this monastery many a traveller found hospitality. It was destroyed by fire in 1821, and the site is now owned by the French Government. The Jesuits were also active in Athens. They came in 1645. It must be noted that it was Father Babin, a Jesuit, who wrote the first careful account of the modern condition of the ruins of ancient Athens. He did this in a letter to the Abbé Pécel, canon of Lyons. This letter was written 8 October, 1672. It was published with a commentary by Spon in 1674 under the title of "Relation de l'état présent de la ville d’Athènes". The Jesuits finally withdrew from Athens, leaving the entire field to the Franciscans. The Franciscans remained until the beginning of the war of the revolution. In the time of Babin and Spon there were about two hundred churches and chapels, all of the Greek Rite, except the chapels in the monasteries of the western monks. With the war of the insurrection, in 1821, ends the history of the older Church of Athens. A new Latin archbishopric has again its residence in Athens. Since 1833 the Church of the Greek Rite has undergone serious changes of jurisdiction, for it no longer recognizes the leadership of the Patriarch of Constantinople, but is a national autocephalous church.

ATHENS, MODERN DIOCESE OF.—The Greeks have long regarded their religion as a national affair. This motion is so deep-rooted that they cannot understand how a citizen can well be a true Greek if he gives his allegiance to any religion which is not that of the Greek Church. At the present time the majority of Catholics who live within the Diocese of Athens are therefore foreigners, or of foreign descent. Of the foreigners who are Catholics, the greater part are of Italian nationality. Most of those who are of foreign descent have come into Athens and other parts of this diocese from the islands of the Aegean and Ionian seas. The Catholics of these islands are largely descendants of the Western conquerors who held possession of the islands for two or three centuries, or even longer, beginning with the time of the Crusades. These are people of Genoese and Genoese descent. In these islands some of the native Greeks, on account of the higher social and political standing of the foreign element, accepted the Catholic Faith and obedience. From these converted Greeks some of the Diocese of Athens are now descended. On three or four of the islands, outside of the Diocese of Athens, there are many such Catholics who are pure Greeks, being descended from converts to Catholicism in the time of the foreign feudal government. These Catholics from the islands are the nucleus of the future prosperity of Catholicism in Greece, for gradually they are identifying themselves with the good of the country and its worthier ideals. Although they are still conscious of their foreign extraction, or former foreign sympathies, they now feel that their residence of centuries in Greek territory has made them Greeks. The real foreign element is made up of those Catholics who have migrated into Greece since it has become a free country. These are chiefly Italians and Maltese. These have been settled in Athens by the Government on the railroads and other public works, or to live as fishermen or boatmen in the larger seaport towns. The exact number of Catholics cannot easily be estimated. Possibly in the entire Diocese of Athens there are about 10,000, or even a fourth attend church regularly. From amongst the members of the Greek Church no converts are made to Catholicity. At least, they are extremely rare. It is against the positive and explicit law of the State for any other church to make proselytes from the established Greek or Orthodox Church. In the first National Assembly, which was held at Epidavros in 1822, it was declared that the Orthodox Church is the State Church. This declaration was repeated in the Assembly at Trossev in 1827. Such has been the strict law of the State, all other Christians being severely prohibited. The Greek Catholic Church is perfectly free, is fairly treated, and highly respected.

Otho of Bavaria, the first king of regenerated Greece, was a Modern. In his reign the Catholics were few. But arrangements were made that the Catholics could have a place of worship wherever they existed in sufficient numbers. After Athens became the seat of government, in 1834, an abandoned Turkish mosque was given to the Catholics as a place of worship. It is still in use and is tended chiefly by Maltese and Italians who live in
and around the Old Market, near the Tower of the Winds. Mass is said there on Sundays and Holy Days by the archbishop or a priest. In Athens, in the early part of the 19th century, 1876, an archbishopric was established in Athens. Those who have occupied this see are Archbishops Marangos, Zaffino, De Angelis, and Delianis. De Angelis was an Italian; Zaffino a native of Greece; all the other archbishops were born in the Aegean Islands. Within the Diocese of Athens there are now eight churches. Of these two are in Athens, and there is one in each of the towns of Peireeves (the harbour of Athens); Patre, the chief town of the Peloponnesos; Voloce, the seaport of Cephalonia; Lavron (the custos of Acits); Heralkleion, a Bavarian settlement in Attika; and Navplion in the Argolid. Most of the Catholics, however, are concentrated at Athens, Peireeves, and Patre.

Of the two churches in Athens, one is the ancient mosque which Otho donated to the Catholics, and the other is the cathedral of St. Dionysios. It is a stone structure in basilica style, with a portico front supported by marble columns. The interior is divided into three naves separated from each other by rows of columns, with a Venetian marble. The apse is also frescoed. This cathedral was built with money sent from abroad, especially from Rome. Besides the regular parishes there are missions here and there. Some years ago there were missions at Kalamata, Pyrgos, and Kalamaki. The only considerable one at present is within the Diocese of Athens, there are at present eleven priests engaged in parochial work: four at the cathedral in Athens, two at Patre, one at each of the churches of Peireeves, Lavron, Voloce, Heralkleion, and Navplion. All of them are secular priests.

French sisters conduct schools for girls in Athens and at the Peireeves, and Italian sisters have schools for girls at Patre. They have boarders as well as day scholars. In the town of the Peireeves there is a good school for boys conducted by French Salesian Fathers. Boarders and day scholars are accommodated, and both classical and commercial courses are given. But the most important school of the diocese is the Leonteon of Athens, founded by Pope Leo XIII., to supply ordinary and theological education for all Greek-speaking Catholics. It embraces a preparatory department, an intermediate or "hellenic" school, a gymnasium or college, and an ecclesiastical seminary. The average number of pupils and students for the past five years is about 175. The faculty consists of both priests and laymen. In its character as seminary, the Leonteon receives students from other dioceses as well as from that of Athens. Previous to the establishment of the Leonteon, candidates for the priesthood were educated chiefly in the Propaganda, at Rome, and in a diocesan seminary which existed in the Aegean town of Syra. The seminary at Syra has been closed, and it is now intended that all clerical training be given in the Leonteon and the Propaganda.

The only publication of note for the Catholics of the diocese is the "Harmonia," a periodical devoted to Catholic interests. The "Harmonia" is supported chiefly by a subsidy from Rome. One does not expect to find a large number of noted scholars in so small a Catholic community. But all the clergy are men of wide education. Every one of them, with other accomplishments, speaks two or three other languages as well as the vernacular Greek of the country. Amongst the laymen special mention should be made of the brothers Kyparissos Stephanos and Spyridon Kyparissos. Kyparissos was a famous historian a writer whose fame extended far beyond the confines of Greece, was made a professor in the National University. His brother Klon, an anthropologist and explorer, engaged in special historical, archeological, and anthropological researches, became director of the Anthropological Museum of Athens. There are in Greece no Uniat Greek Catholics. All are of the Latin Rite. This is because most of these Catholics are from the West, either by descent or by birth, and they have kept their own Western rite. It might be better for Catholicism in Greece if the Catholics were to adopt the native rite, and to have their liturgy in the liturgical language of the country. But many of the Catholics of Athens would never willingly accept such a change, which they would regard rather from a national than from a religious point of view, and would consider a denial of their Italian, or other Western, origin.

athias, joseph, b. in spain, probably in cordova, at the beginning of the seventeenth century; d. at amsterdam, 12 may, 1700. in 1661 and 1667 he issued two editions of the hebrew bible. though carefully printed, they contain a number of mistakes in the vowel points and the accents. but as they were based on the earlier editions compared with the best manuscripts, they were the foundation of all the subsequent editions. the copious marginal notes added by jean de lesuden, professor at utrecht, are of little value. the 1667 edition was bitterly attacked by the protestant savant, samuel denmaret; athias answered the charges in a work whose title begins: "cæcus de coloribus". he published, also, some other works of importance, such as the "tikkun sepher torah", or the "order of the book of the law", and a judaico-german translation of the bible. the latter involved athias in a competition with uri phoebus, a question that has been discussed but cannot be fully cleared up at this late date.

athos, mount.—athos is a small tongue of land that projects into the aegean sea, being the easternmost of the three strips in which the great mountainous peninsula of chaleidion ends. it is almost cut off from the mainland, to which it is bound only by a narrow isthmus dotted with lakes and swamps

monastery of esphigmenon, mount athos

interpersed with alluvial plains. it has been well called "a greece in miniature", because of the varied contour of its coasts, deep bays and inlets, bold cliffs and promontories, steep wooded slopes, and valleys winding inland. several cities existed here in pre-christian antiquity, and a sanctuary of zeus (jupiter) is said to have stood on the mountain. the isthmus was famous for the canal (3,950 feet in length) which xerxes had dug across it, in order to avoid the perilous turning of the limestone peak immemorially known as mount athos, in which the small peninsula ends, and which rises to a height of some 6,000 feet. from the summit of this peak on a clear day
are visible the coasts of Macedonia and Thrace, even the entire Ägean from Mount Olympus in Thessaly to Mount Ida in Asia Minor. It is the mountain that the architect Dinocrates offered to turn into a statue of Alexander the Great with a city in one hand and in the other a peacefully fledded Greece. (Merkos) Greek tradition designated it as the "high mountain" from which Satan tempted Our Lord. Its chief modern interest lies in the fact that at least from the beginning of the Middle Ages it has been the home of a little monastic republic that still retains almost unimpaired the economic and social unity of a thousand years ago by the Christian emperors of Constantinople. In 1005 the many fortified monasteries and hermitages of Athos contained 7,553 monks (including their numerous male dependents), members of the Orthodox Greek Church: Greeks, 3,207; Russians, 3,615; Bulgarians, 340; Rumanians, 258; Georgians, 53; Servians, 18; other nationalities 32. The principal monasteries bear the following names: Laura, Iviron, Vatopedi, Chilandarion, St. Dionysiou, Coutsoloumoul, Pantokrator, Xiropotamos, Zographou, Docheiarion, Caracalla, Philotheos, Simopetra, St. Paul, Stauronceta, Xenophon, Gregoriou, Esphigmenou, St. Pantaleimon, St. Anna (Rossicon), and Karyeas. ASYTHOS. THE ORIGINS OF MONASTIC LIFE ON MOUNT ATHOS. In the fourth century, when Christianity was spreading, and monks sought its lonely recesses during the fourth and fifth centuries, and were numerous in the ninth century at the time of the first certain attempts at monastic organization. The nearest episcopal see was that of Hierissus, and in conformity with ancient law and usage its bishop claimed jurisdiction over the monks of the little peninsula. In 885 Emperor Basil the Macedonian emancipated them from the jurisdiction of the monastery of St. Colobos near Hierissus, and allotted to them Mount Athos as their possession. After the split of the two principal monasteries, Xiropotamos, was built and adopted the rule of St. Basil. Saracen pirates disturbed the monks in the ninth and tenth centuries, but imperial generosity always came to the aid of this domestic "holy land" of the Greeks. About 900 a far-reaching reform was introduced by the Anatolian monk Athanasius of Trebizond, later known as Athonis. With several companions from Asia Minor he founded the seashore the monastery since known as Laura, which was the model of the monastic life for ages to come. Eventually the new settlement was accepted as a model. With the help of the imperial authority of John Tzimiseke (969-976) all opposition was set aside and the conoibic or community life imposed on the hermits scattered in the valleys and forests. Athanasius was made abbot, general or superior (Protos) of the fifty-eight monastic communities then on the mountain. From this period date the monasteries known as Iviron (Ibierians), Vatopedi, and Esphigmenon. At this time, also, there arose a cause of internal conflict which has never been removed. Hitherto only one nationality, the Greek, was represented among the monks. Henceforth Slavic faith and generosity, and later on Slavic interests, had to be considered. The newly converted Bulgarians were admitted and others into the recently opened monasteries; before long their princes in the Balkan Peninsula began to find independent houses for Slavic monks. In this way arose during the reign of Alexius I (1081-1118) the so-called "bloc" monasteries of Chilandarion, Karyeas, and Zographou. These Byzantine emperors never ceased to manifest their interest in the little monastic republic and even profited politically by the universal esteem that the religious brotherhood enjoyed throughout the Christian world. In 1046, Constantine Monomachos regulated the domestic government of the monasteries, the administration of their temporal possessions, and their commercial activity. By the imperial document (typicon) which he issued, women are forbidden the peninsula, a prohibition so strictly observed since that time that even the Turkish apa, or official, who resides at Karaouly (in the monastery) has been refused admission. About the year 1100 the monasteries of Mount Athos were 180 in number, and sheltered 700 monks, with their dependents. At this time there came into general use the term Hagion Oros (Holy Mountain, (nameof the, Moni Sante). Alexius I decreed that all the monks were to be freed from all subjection to the Patriarch of Constantinople, and placed them under his immediate protection. They still depended, however, on the neighbouring Bishop of Hierissus for the ordination of their priests and deacons. Alexius I also chose to be buried on the Holy Mountain among the brethren (1118). A century later, after the capture of Constantinople (1204), the Latin Crusaders abused the monks, who thereupon appealed to Innocent III; he took them under his protection and in his letters (xiii, 40; xvi, 168) paid a tribute to their monastic virtues. However, with the restoration of Greek political supremacy the monks returned (1313) to their old allegiance to Constantinople. ASYTHOS. ASYTHOS. LIFE ON MOUNT ATHOS. It is perhaps the fact that individual hermits sought their lonely recesses during the fourth century, and were numerous in the eighth century at the time of the first certain attempts at monastic organization. The nearest episcopal see was that of Hierissus, and in conformity with ancient law and usage its bishop claimed jurisdiction over the monks of the little peninsula. In 885 Emperor Basil the Macedonian emancipated them from the jurisdiction of the monastery of St. Colobos near Hierissus, and allotted to them Mount Athos as their possession. The Turkish Government is represented by an agent at Karyes, the diminutive capital of the peninsula and the landing-place for visitors. A detachment of Christian soldiers is usually stationed there, and no one may land without permission of the monastic authorities. The monks have also an agent at Saloniki and another at Constantinople. Almost the only source of contention among them is the rivalry between the Greeks, inheritors of old traditions and customs, and the Russians of the great monastery of Rossikon (St. Anna), representative of the wealth, power, and interests of their church and country, and generously supported from St. Petersburg. In its present form the constitution of the monasteries dates from 1783.

MONASTIC LIFE.—Each of the twenty great monasteries (twenty-one, including Karyes) possesses its own large church and numerous chapels within and without its enclosure, which is strongly fortified, recalling the feudal burghs of the Middle Ages. The high walls and strong towers are reminders of the troubled times of the fourteenth and fifteenth centuries when corsairs abounded and self-defence was imperative. All of the great monasteries are on the Holy Mountain proper, and are most picturesquely situated from sea to summit, amid dense masses of oak, pine, and chestnut, or on inaccessible crags. To each of these monasteries is attached a certain number of minor monasteries (ektur, asceteria), small monastic settlements (kathara), and hermitages (skalia, cella). Every monastic habitation must be affiliated to one or the other of the great monasteries and is subject to its direction or supervision. All monasteries are dedicated to the Mother of God, the larger ones under some special title. The ancient Greek Rule of St. Basil is still followed by all. In the observance of the Rule, however, the greater monasteries are divided into two classes, some following strictly the coenobitic life, while others permit a larger personal freedom. The latter are called "chorh rhythmic"; in them the monks have a right of personal ownership and a certain share in the government of the monastery (Council of Elders); they take their meals apart, and are subject to less severe regulations. In the former, known as "coeno-

ATINSON

Atkinson, James, Catholic confessor, tortured to death in Bredewell prison in 1595. His pathetic and romantic story tells us nothing of his early life, but he is found in the Bredewell prison, one of the worst in London, and delivered over to Topcliffe, the notorious priest-hunter, who was trying to wring out from him, by torture, evidence on which he might accuse his master, Mr. Robert Barnes, who then held Mapledurham House, of having entertained priests, and in particular the future martyr, Venerable John Jones, O. S. F. Yielding to torment, Atkinson acceded his master of having done so, but shortly after repeated, and was lost in despair, knowing on the one hand that Topcliffe would torture him again, perhaps unto death, and on the other fearing that no priest could possibly come to confess and absolve him before his conflict. Unknown to him, however, a Jesuit Father happened to be in the same prison. This was Father William Baldwin (or Bawden), a man who afterwards filled important positions in his order. He had been arrested on suspicion while on shipboard, and had assumed the part of an Italian merchant unacquainted with the language on which he might, and with such success that he was on the point of being exchanged for an English officer who had been captured by the Spaniards on board the Dainty. Atkinson’s despair put Father Baldwin into a quandary. It was evident that he was not being asked to 1595. To suggest to such a one in English, and much more to own him that he was a priest, would be to endanger his life. So he tried to comfort him, at first through a fellow-prisoner who knew Latin, and finally offered to bring him a priest. The poor sufferer’s joy was so great that the missionary ventured to creep to his bedside that night and tell him that he was a priest. Then Atkinson held back, either out of suspicion or because, as he said, he was not prepared. Father Baldwin came in the next night the penitent made his confession with evident content, was soon again tortured, and died shortly after the torture. Atkinson’s case has been proposed for Beatification, but evidence for his final perseverance, though very necessary, is naturally hard to find.

Croll, Missionary Priests (1864). II, 189; Dodd, Church History (Tiersley ed.), III, ap. 204; Foley, Records of the Office of the Treasurer of the Chancery’s accounts for 1594, roll 196b.

J. H. Follen.

Atkinson, Nicholas, priest and martyr, is probably to be identified with Venerable Thomas Atkinson, Dodd, who mentions the taking place at York in 1610, does not mention Thomas at all; yet all the facts which he relates of the one are certainly true of the other, while there is no corroboration for Dodd’s date of Nicholas’s martyrdom. It seems probable, however, that there was an old Marian priest named Nicholas, or “Ninny”, Atkinson (Gillow, 85).

Dodd, Church History, II, 376.

J. H. Follen.

Atkinson, Paul of St. Francis,—One of the notable confessors of the English Church during the age which succeeded the persecution of blood. Having been condemned to perpetual imprisonment for his priesthood, about the year 1699, he died in confinement after having borne its pains for more than thirty years. He was of a Yorkshire family and was called Matthew in baptism. He joined the English Franciscan Convent at Denton in 1573, and had served with distinction on the English mission for twelve years, when he was betrayed by a maidservant for the 100 reward. One governor of his prison, Hurst Castle on the Solent, allowed him to walk outside the prison walls; but complaint was made of this and the leave was revoked.

J. H. Pollen.

Atkinson, Sarah, philanthropist and biographer, b. at Athlene, Ireland, 13 October, 1823; d. Dublin, 8 July, 1893. She was the eldest daughter of John and Anne Gaynor, who lived on the western bank of the Shannon, in that part of Athlene which is in the County Roscommon. At the age of fifteen, she removed with her family to Dublin, where her education was completed. At twenty-five, she married Dr. George Atkinson, part proprietor of the "Freeman's Journal." The loss of her only child in his fourth year so deeply affected Mrs. Atkinson that she resolved to spend the rest of her life in charitable and other good works. With her friend, Mrs. Ellen Woodlock, she interested herself in the female paupers of the South Dublin Union, and opened a home to which many were transferred and were made useful members of society. Her house in Drumcondra soon became the rendezvous for the charitably disposed. It was even more a literary salon. Here she prepared her life of Mary Aikenhead which Mr. J. Lecky has well referred to, and here she wrote her many valuable essays. For many years she translated into English the French "Annas of the Propagation of the Faith." Much of her time was devoted to visiting the hospitals and poor people's masses, and to other beneficent purposes. To her is largely due the success of the Children's Hospital, Temple Street, Dublin. The management of the Sodality of the Children of Mary, attached to the Church of St. Francis Xavier, was one of her particular pleasures. To the Hospice for the Dying, at Harold's Cross, she was a constant benefactress. Even her writings were made to serve the great objects of her life. In Duffy's "Hibernian Magazine," 1860-64, "The Month," 1864-65, "The Nation," 1869-70, the "Freeman's Journal," 1871, and in the "Irish Monthly," after its inception, are to be found many important essays by her, chiefly biographical and historical. Some of her earliest and longest essays appeared in the "Irish Quarterly Review"; the best of them are included in her volume of "Essays" (Dublin, 1865). Her "Life of Mary Aikenhead," modestly published with her initial only, appeared in 1789, and is one of the best Catholic biographies in English. Her "Essays" include complete and learned dissertations on such divergent subjects as "St. Walafrid's Life and Visions," "The Generation of the Devil," "The Dittrando," "Devorgilla," "Eugene O'Curry," "Irish Wool and Woollens," "St. Bridget," and excellent biographies of the sculptors John Henry Foley and John Hogan, the best accounts yet written of those great artists. Indeed most of these essays are the best studies we have on the various subjects. Her "Citizen Saint" (St. Catherine of Siena) occupies a hundred pages, and is a most able summary.

McDermott's, in the Freeman's Journal files (Dublin, July, 1789, 1790); and preatory memoir in the Essays, Tynan, Irish Independent, files (Dublin, July, 1882); The Irish Monthly (Dublin, November, 1883)—a full list of her writings.

D. J. O'Donoghue.

Atkinson, Thomas, V., martyred at York, 11 March, 1616. He was b. in the East Riding of Yorkshire, was ordained priest at Reims, and returned to his native country in 1588. We are told that he was unwearied in visiting the sick, especially in the ear, and was so well known that he could not safely travel by day. He always went afoot until, having broken his leg, he had to ride a horse. At the age of seventy he was betrayed, and carried to York with his host, Mr. Vavasour of Willough, and some members of his family. A pair of bands, and the form of an indolence were found upon him, and he was condemned to be hanged, drawn, and quartered. He suffered "with wonderful patience, courage, and constancy, and signs of great comfort."

Patrick Ryan.

Atom. (Gr. a privative, and τάχυς, cut; indivisible). Primarily, the smallest particle of matter which can exist; the ultimate and smallest division of matter; in physics, sometimes the smallest particle to which a substance can theoretically be reduced; in chemistry, the smallest particle of matter that can exist in combination with other atoms building up or constituting molecules. Two opposite doctrines of the constitution of matter were held by the ancient philosophers. One was that matter was infinitely divisible without losing its distinctive and individual properties. This is the doctrine of continuity or homeoeamony. Anaxagoras is given as the founder of this view of the constitution of things. According to it any substance, such as wood or water, can by no process of subdivision, however far it might be carried, be made to be anything but a mass of wood or water. Infinite subdivision would not reach its limit of divisibility. Democritus and others held that there were ultimate particles of matter which were indivisible, and that these were the atoms. This is the doctrine of atomism, upheld by Epicurus, and enlarged on by Lucretius in his "De Rerum Naturali." The early atomists held that the atoms were not in contact, but that voids existed between them, claiming that otherwise motion would be impossible. Among the moderns, Descartes and Spinoza adhered to continuity. Leibnitz upheld atomism, and Boscovich went to the last extreme of the theory, and defined atoms as centres of force, deriving them from the attributes of matter.

Molecule and Atom. Modern science holds that matter is not infinitely divisible; that there is an ultimate particle of every substance. If this particle is broken up, that particular form of matter will be destroyed. This particle is the molecule. It is composed of another division of matter called the atom. Generally, probably always, a molecule consists of several atoms. The atoms unite to form molecules and cannot exist except as constituents of molecules. If a molecule of any substance were broken up, the substance would be changed, and its constituent atoms would go to form or to enter into some other molecule or molecules. There is a tendency to consider the molecule of modern science as identical with the atom of the old philosophers; but the modern atomic theory has given the molecule a different status from that of the old-time atom. Atom, as used in natural science, has a specific meaning based upon the theory of chemistry. This meaning is modified by recent work in the field of radio-activity, but the following will serve as a definition. It is the smallest particle of an element which can exist in a compound. An atom cannot exist alone as such. Atoms combine with each other to form molecules. The molecule is the smallest particle of matter which can exist without losing its distinctive properties. It corresponds pretty closely to the old Bepicurean atom. The modern atom is an entirely new conception. Chemistry teaches that the thousands of forms of matter upon the earth, almost infinite in variety, can be resolved into about eight or nine substances, this being the number of possessing definite spectra. These substances are called elements. The metals, iron, gold, silver, and others, sulphur, and carbon are familiar examples of elements. A mass of an element is made up of a collection of molecules. Each molecule of an element is made up of atoms. Elements combine to form compound substances of various
numbers of atoms in the molecule. Water is an example of a compound substance, or chemical compound. Its molecule contains three atoms; two atoms of hydrogen, and one atom of oxygen. If a quantity of these two elements were mixed, the result would be the molecule of the water of the two. But if heat, or some other adequate cause were made to act, chemical action would follow, and the molecules, splitting up, would combine atom with atom. Part of a molecule of oxygen—one atom—would combine with part of two molecules of hydrogen—two atoms—to form the molecule of water. Each water molecule contains one atom of oxygen and two atoms of hydrogen. The splitting-up of the elemental molecules into atoms is synchronous with their combining into molecules, so that an atom never exists alone. The molecules of the elements, oxygen and hydrogen, have disappeared, and in their places are molecules of water. There are about eighty kinds of atoms known, one kind for each element, and out of these the material world is made.

Invariability of Composition.—The invariability of composition by weight of chemical compounds is a fundamental law of chemistry. Thus water under all conditions consists of 88.876% of oxygen and 11.114% of hydrogen. This establishes a relation between the weights of the atoms of hydrogen and oxygen in the water molecule, which is 1:8. Oxygen and hydrogen are gaseous under ordinary conditions. If water is decomposed, and the gases are collected and measured, there will always be two volumes of hydrogen to one of oxygen. This illustrates another fundamental law—the invariability of composition by gaseous volume of chemical compounds. From the composition by volume of water its molecule is taken as composed of two atoms of hydrogen and one of oxygen, on the assumption that in a given volume of any gas there is the same number of molecules. As there are two atoms in the molecules of both of these elements, the above may be put in a more popular way thus: the atoms of hydrogen and oxygen occupy the same space. The ratio spoken of above, of 1:8, is therefore the ratio of two atoms of hydrogen to one of oxygen. It follows that the ratio of one atom of hydrogen to one atom of oxygen is 1:16. The numbers 1 and 16 thus obtained, are the atomic weights of hydrogen and oxygen respectively. Strictly speaking they are not weights at all, only numbers expressing the relation of weights. Atomic weights are determined for all the elements, based on several considerations, such as those outlined for the atoms of oxygen and hydrogen. Thus the term atom indicates not only the constituents of molecules, but has a quantitative meaning, the proportional part of the element which enters into compounds. The sum of the weights of the atoms in a molecule is the molecular weight of the substance. Thus the molecular weight of water is the sum of the weights of two hydrogen atoms, which is two, and of one oxygen atom, which is sixteen, a total of eighteen. If we divide the molecular weight by the individual weights of the atoms of any element in its molecule, it will give the proportion of the element in the compound. Taking water again, if we divide its molecular weight, 18, into the weight of the atom of hydrogen in its molecule, 2, we obtain the fraction 9/1, which expresses the proportion of oxygen in water.

The same process gives the proportion of oxygen in water as 8/1.

Every element has its own atomic weight, and the invariability of chemical composition by weight is based on the invariability of atomic weights of the elements. Tables of the atomic weights of the elements are given in all chemical text-books. The relations of the atomic weights to each other are several. The atom of lowest weight is the hydrogen atom. It is usually taken as one, which is very nearly its exact value if oxygen is taken as sixteen. On this basis one quarter of gold and any other element will have the weight of the atom of gold, and the rest of the whole numbers. This indicates a remarkable simplicity of relationship of weights, which is carried out by the close approach of the rest of the elements to the same condition, as regards their atomic weights. The range of the atomic weights is a narrow one. The weight of gold is 0.00127 times 16; that of hydrogen is 0.000000000000175. The latter is the heaviest of all. Between these all the other atomic weights lie. Many of the elements resemble each other in their chemical relations. It might appear that those nearest to each other in atomic weight should be of similar properties. This is not the case. If the elements are written down in the order of their atomic weights, beginning with the lightest and ending with the heaviest, it will be found that the position of an element in the series will indicate pretty clearly its properties. The elements will be found to be so arranged in the list that any element will be related as regards its chemical properties to the element eight places removed from it. This relationship may be thus expressed: the properties of an element are a periodic function of its atomic weight.

Mendeleyev’s Table.—This relation is called Mendeleyev’s Law, from one of two chemists who independently developed it. The elements, may, as before said, be written down in the order of their atomic weights, but in eight vertical columns. Along the top line the eight elements of lightest atomic weights are written in the order of their weights, followed on the second line by the next eight, also in the order of their atomic weights. Arranged in this way, the table brings the elements eight atomic weights apart, into vertical columns. It will be found that all the elements in any vertical column are of similar chemical properties. When Mendeleyev made out his table it was supposed that several elements were as yet undiscovered. The table also brought out clearly certain numerical relations of the atomic weights. These together with other factors caused him to leave blank spaces in his table, which none of the known elements could fill. For these places hypothetical elements were assumed, and atomic weights were stated by him. One by one these elements have been discovered, so that Mendeleyev’s Law predicted the existence of elements later to be discovered. These discoveries of predicted elements constitute one of the greatest triumphs of chemical science. Up to within a very recent period the atom was treated as the smallest division of matter, although the possibility of the transmutation of the elements in some way, or in some degree, has long been considered a possibility. It was conjectured that all the elements might be composed of some one substance, for which a name, protyle, meaning first material, was coined. This seemed to conflict with the accepted definition of the atom, as the ultimate element in its order or preceding it. The idea rested in abeyance, as there was little ground for building up a theory to include it. Recent discoveries have resuscitated this never quite abandoned theory; protyle seems to have been discovered, and the atom has ceased to hold its place as the ultimate in the world of matter.

Corpuscles.—The most recent theory holds that the atom is composite, and is built up of still minute particles, called corpuscles. As far as the ordinary processes of chemistry are concerned the atom remains of the utmost importance. It brings the field of radio-activity, largely physical and partly chemical, to prove that the atom, built up of
Elements vary in the saturating power of their atoms. The saturating power is called atomicity or valency. Some elements have the valency of one, are monads. A monad can saturate a monad. Others are termed dyads, have a valency of two, two monads being required to saturate one dyad, while one dyad can saturate another dyad. Valencies run on through triads, tetrad, pentad, hexad, heptad, and octad, designating valencies of three, four, five, six, seven, and eight respectively.

Atomism, [a privative and résumé to cut, i.e. indivisible] is the system of those who hold that all bodies are composed of minute, indivisible particles of matter called atoms. We must distinguish between (1) atomism as a philosophy and (2) atomism as a theory of science.

Atomism as a philosophy originated with Leucippus. Democritus (b. 460 B.C.), his disciple, is generally considered the father of atomism, as practically nothing is known of Leucippus. The theory of Democritus may be summed up in the following propositions: [omitted for brevity.]

3. There is no purpose or design in nature, so that as so all is ruled by chance. All activity is reduced to local motion. The formation of the universe is due to the fact that the larger atoms fall faster, and by striking against the smaller ones combine with them; thus the whole universe is the result of the fortuitous concourse of atoms. Countless worlds are formed simultaneously and successively. Epicurus (342–270 B.C.) adopted the theory of Democritus, but corrected the blunder, pointed out by Aristotle, that larger atoms fall faster than smaller ones in vacuo. He substituted a power in the atoms to decline a little from the line of fall. Atomism is defended by Lucretius Carus (95–51 B.C.) in his poem,”De Rerum Naturā.” With the exception of a few alchemists in the Middle Ages, we find no representatives of atomism until Gassendi (1592–1655) renewed the atomism of Epicurus. Gassendi tried to harmonize atomism with Christian teaching by postulating atoms finite in number and created by God. With the application of atomism to the sciences, philosophic groupings are characteristic of the number, and subject to periodic reappearance as the number is increased. This reappearance of groupings is exactly comparable to the phenomena of the periodic law. It is the reappearance of similar properties at periodic intervals. The corporcular theory also accounts for the variation of the elements in atomic weight. Corpuscles are supposed to be all alike, so that the weight of an atom would depend on how many corpuscles were required to form it. Thus an atom of oxygen would contain sixteen times as many corpuscles as would an atom of hydrogen, weighing only one-sixteenth as much. The weight of an atom of hydrogen has been approximately calculated as expressed by the decimal, 34 preceded by thirteen ciphers. From the facts observed before him: that elements combine in definite and multiple proportions. The discovery in the same year by Gay-Lussac of the law that gases under the same pressure and temperature have equal volumes was at the same time a confirmation and an atom determining atomic weights. Avogadro's law (1811) that equal volumes under equal conditions of pressure and temperature have an equal number of molecules, and the law of Petit and Dulong that the product of the specific heat and the atomic weight of an element gives a constant number were further confirmations and aids. The atomic
theory was soon applied to physics, and is to-day the basis of most of the sciences. Its main outlines are: Matter is not continuous but atomically constituted. An atom is the smallest particle of matter that can enter into a chemical reaction. Atoms of like nature constitute elements, those of unlike nature constitute compounds. The elements known to-day are about 76 in number and differ from one another in weight and chemical properties (p. 54).

Atoms combine to form molecules, which are the smallest quantities of matter that can exist in a free state, whether of an element or a compound. One can believe that the atom retains its individuality in the molecule whilst others consider the molecule homogeneous throughout. The theoretic formulas of structure of Frankland suppose them to remain. The spaces between the atoms are filled with an imponderable matter called ether. Upon the nature of ether the greatest differences of opinion exist. The adoption by scientists of Maxwell’s theory of light seems to render the ether-hypothesis with its many contradictions superfluous. At all events it is quite independent of the atomic theory.

The results obtained by the Hungarian Lenard, the English physicist J. J. Thomson, and many others, by means of electric discharges in rarified gases, the discovery of Hertzian waves, a better understanding of the electrostatics and electrodynamics by Madame Curie have made necessary a modification of the atomic theory of matter. The atom, hitherto considered solid and indivisible, is now believed to break up into ions or electrons. This new theory, however, must not be considered as opposed to the atomic theory; it comes rather as an extension of it. In chemistry, the principal field of the atomic theory, the atom will still remain as the chemically indivisible unit. The hypothesis of subatomic as well as molecular entities, introduced by Spencer as early as 1872 (“Contemporary Rev.”, June, 1872) and defended by Crookes in 1886.

The physico-chemical theory of atomism, though not a demonstrated truth, offers a satisfactory explanation of a great number of phenomena, and will, no doubt, remain essentially the same, no matter how it may be modified in its details. In chemistry, it does not stop arbitrarily in the division of matter, but stops at chemical division. If another science demands a further division, or if philosophy must penetrate below the atomics, that is not the concern of chemistry. Science has no interest in defending the indivisible atom of Democritus.

Scholastic philosophy finds nothing in the scientific theory of atomism which it cannot harmonise with its principles, though it must reject the mechanical explanation, often proposed in the name of science, which looks upon the atom as an absolutely inert mass, devoid of all activities and properties. Scholastic philosophers find in the different physical and chemical properties of the elements an indication of specifically different natures. Chemical changes are for them substantial changes, and chemical formulas indicate the mode in which the elements react on one another in the production of the compound. They are not a representation of the molecular idea built up of unchangeable atoms. Some would accept even this latter view and admit that there are no substantial changes in inanimate nature (Guterres). This view can also be harmonised more easily than from the facts of chemistry. Thus, a generalization, either in the materialistic sense, that all matter is homogeneous, or in the scholastic sense, that all elements can be changed into one another, is in the present state of science.

EDMUND J. WIRTH.

Atonement. Day of—The rites to be observed on the Day of Atonement [Hebrew יֵשָׁעְיָא תְמֵאָרָי לֵשָׁעְיָא תְמֵאָרָי], also known as Yom Hattikvah, Vultur, Dies Expiationis, and Dies Reconciliationis, were set forth in the sixteenth chapter of Leviticus (cf. Exodus, xxx, 10; Leviticus, xxiii, 27-31, xxv, 9; Numbers, xxix, 7-11). It was a most solemn fast, on which no food could be taken throughout the whole day, and all servile works were forbidden. It was kept on the nineteenth day of the seventh month, Tischi, which falls in September—October. The sacrifices included a calf, a ram, and seven lambs (Numbers, xxix, 8-11). But the distinctive ceremony of the day was the offering of the two goats. He [Aaron] shall make the two buck-goats to stand before the Lord, in the door of the tabernacle of the testimony: and casting lots upon them both, one to be offered to the Lord, and the other to be the emissary-goat: That whose lot fell to be offered to the Lord, let him offer for the living; But of the goat that is to be offered for sin, he shall make his sin offering: And it was to be the emissary-goat he shall present alive before the Lord, that he may pour out prayers upon him, and let him go into the wilderness... After he hath cleansed the sanctuary, and the tabernacle, and the altar, let him offer the living goat: And putting both hands upon his head, let him confess all the iniquities of the children of Israel, and all their offences and sins, and praying that they may light on his head, he shall turn him out by a man ready to destroy (Leviticus xvi, 8-20).

The general meaning of the ceremony is sufficiently shown in the text. But the details present some difficulty. The Vulgate caper emissarius, "emissary goat," represents the obscure Hebrew word, בִּנְיָא (Azazel), which occurs nowhere else in the Bible. Various attempts have been made to interpret its meaning. Some have taken it in the literal sense of the name of a place; the goat away used to throw it over a precipice, since its return was thought to forbid evil. Others, with better reason, take it for the name of an evil spirit; and in fact a spirit of this name is mentioned in the Apocryphal "Book of Enoch," and later in Jewish literature. On this interpretation, which, though by no means new, finds favour with modern critics, the idea of the ceremony would seem to be that the sins were sent back to the evil spirit to whose influence they owed their origin. It has been noted that somewhat similar rites of expiation have prevailed among heathen nations. And modern critics, who refer the above passages to the Priestly Code, and to a post-Ezra date, are disposed to regard the sending of the goat to Azazel as an adaptation of a pre-existing ceremonial. The significant ceremony observed on this solemn Day of Atonement does but give a greater prominence to that need of satisfaction and expiation which was present in all the ordinary sin-offerings. And all these sacrifices for sin, as we learn from the history of Hebraism, were figures of the great Sacrifice to come. In like manner these Jewish rites of atonement speak to us of the Cross of Christ, and of the propitiatory Sacrifice which is daily renewed in a bloodless manner on the Eucharistic Altar.
shadow the common commemoration of the saints and the faithful departed in our liturgies (Die Liturgien der orthodox-katholischen Kirche des Morgen-landes, 252).

The subject is treated by the commentators on Leviticus, notably Calmet and A Lapine, who give the interpretation of the term. A more exhaustive treatment will be found in Spencer's "Sacred Ritual, De Lagopus Hebraicus, Enarrationem," Ritualismus, III, Diss. 8, cf. De Hiero Laemus, a. e. quod est praeceptum explicandum (Hamburg, 1752). For references to the subject, see the articles on Day of Atonement, and Assai, by D'Iverno and Watts in Dictionary of the Bible. In the "Encyclopaedia Biblica" (The Day of Atonement deals with the Day of Atonement.

W. H. Kent.

Atonement, DOCTRINE OF THE.—The word atonement, which is almost the only theological term of English origin, has a curious history. The verb "atone", from the adverbial phrase "at one" (M. E. at oon), at first meant to reconcile, or make "at one"; from this it came to denote the action by which such reconciliation was effected, e. g. satisfaction for an offence or an injury. Hence, in Catholic theology, the Atonement is the satisfaction of Christ, whereby God and the world are reconciled or made to be at one. "For God indeed was in Christ reconciling the world to himself" (II Cor., v, 19). The Catholic doctrine on this subject is set forth in the Second Epistle of St. Paul to the Corinthians and also in the Epistle to the Hebrews. Having shown the insufficiency of Nature, and of the Mosaic Law, the Council continues: "Whence it came to pass, that the heavenly Father, the Father of mercies and the God of all comfort (II Cor., i, 3), when that blessed fulness of the time was come (Gal., iv, 4) sent unto men Jesus Christ, His own Son, who had been, both before the Law and during the time of the Law, to many of the holy fathers announced and promised, that He might both redeem the Jews, who were under the Law and that the Gentiles who followed not after justice might attain to justice, and that all men might receive the adoption of sons. Him God hath proposed as a propitiator, through faith in His blood (Rom., iii, 23), for our sins, and not for our sins only, but also for those of the whole world (I John, ii, 2)." More than twelve centuries before this, the same dogma was proclaimed in the words of the Nirene Creed, "who for us men and for our salvation, came down, took flesh, was made man; and suffered. And all that is necessary to salvation is contained in the pages of the New Testament. For instance, in the words of Our Lord, "Even as the son of man is not come to be ministered unto, but to minister, and to give His life a redemption for many" (Mark, x, 45). Paul, writing to the Ephesians, says: "Who hath well pleased the Father that all fulness should dwell; and through him to reconcile all things unto himself, making peace through the blood of his cross, both as to the things that are on earth, and the things that are in heaven." (Coloss., i, 19, 20).

The great doctrine thus laid down in the beginning was further unfolded and brought out into clearer light by the work of the Fathers and theologians. And it may be noted that in this instance the development is chiefly due to Catholic speculation on the mystery, and not, as in the case of other doctrines, to controversy with heretics. At first we have the central fact made known in the Apostolic preaching, that mankind was fallen and was raised up and redeemed from sin by the blood of Christ. But it remained for the pious speculation of Fathers and theologians to enter into the meaning of this great truth, to inquire into the state of fallen man, and to ask how Christ accomplished His work of Redemption, by whatever names or figures it may be described, that work is the reversal of all the blotting out, of sin, the deliverance from bondage, the reconciliation of mankind with God. And it is brought to pass by the Incarnation, by the life, the sufferings, and the death of the Divine Redeemer. All this may be summed up in the word Atonement. This is, so to say, the starting point. And herein all are indeed at one. But, when it was attempted to give a more precise view of the nature of the Redemption and the manner of its accomplishment, theological speculation took different courses, some of which were suggested by the various names and figures under which this ineffable mystery is adumbrated in Holy Scripture. Without pretending to give a full history of this development, we include some of the main lines on which the doctrine was developed, and touch on the more important theories put forward in explanation of the Atonement.

(a) In any view, the Atonement is founded on the Divine Incarnation. By this great mystery, the Eternal Word took to Himself the nature of man and, being both God and man, became the Mediator between God and men. From this, we have one of the first and most profound forms of theological speculation on the Atonement, the theory which is sometimes described as Mystical Redemption. Instead of seeking a solution in legal figures, some of the great Greek Fathers were content to dwell on the fundamental fact of the Divine Incarnation. By the union of the Word and man, the whole nature of man all mankind was lifted up and, so to say, deified. "He was made man," says St. Athanasius, "that we might be made gods" (De Incarnatione Verbi, 64). "His flesh was saved, and made free the first of all, being made the body of the Word, then we, being concorcorporeal therewith, are saved by the same" (Orat., II, Contra Arianos, lxi). And again, "For the presence of the Saviour in the flesh was the price of death, and the saving of the whole creation" (Ep. ad Adelphium, vi). In like manner St. Gregory of Nazianzus proves the integrity of the Sacred Humanity by the argument, "That which was not assumed is not healed; but that which is united to God is saved." (Ὁ τὸς ἐν λόγῳ ἐναρέθησαν, ἐξήρεθον δὲ τὴν ζωὴν τῷ θεῷ, τῷ καὶ σώζεται). This speculation of the Greek Fathers undoubtedly contains a profound truth which is sometimes forgotten by later authors who are more intent on framing juridical theories of ransom and satisfaction. But it is obvious that this account of the matter is incomplete, and leaves a number of controversial points to be remembered, moreover, that the Fathers themselves do not put this forward as a full explanation. For while many of their utterances might seem to imply that the Redemption was actually accomplished by the Body of Christ in its human nature, it is clear from other passages that they do not lose sight of the atoning sacrifice. The Incarnation is, indeed, the source and the foundation of the Atonement, and these profound thinkers have, so to say, grasped the cause and its effects as one vast whole. Hence they look on to the result before staying to consider the means by which it was accomplished.

(b) But something more on this matter had already been taught in the preaching of the Apostles and in the pages of the New Testament. The restoration of fallen man was the work of the Incarnate Word. "God was in Christ reconciling the world to himself" (II Cor., v, 19). But the peace of that reconciliation was accomplished by the death of the Divine Redeemer, "making peace through the blood of His cross" (Coloss., i, 20). This redemption by death is another mystery, and some of the Fathers in the first ages are led to speculate on its meaning, and to construct a theory in explanation of its words and figures. Holy Scripture help to guide the current of theological thought. Sin is represented as a state of bondage or servitude, and fallen man is delivered by being
redeemed, or bought with a price. "For you are bought with a great price" (I Cor., vi. 20). "Thou art worthy, O Lord, to take the book, and to open the seals thereof; because thou wast slain, and hast redeemed us to God, in thy blood" (Apoc., v. 9). Looked at in this light, the Atonement appears as the sacrifice of the Almighty, His own Son, to ransom us from our sin. This view is already developed in the second century. "The mighty Word and true Man reasonably redeeming us by His blood, gave Himself a ransom for those who had been brought into bondage. And since the Almighty passed over us, and, whereas we belonged by nature to God Almighty, alienated us against nature and made us His own disciples, the Word of God, being mighty in all things, and failing not in His justice, dealt justly even with the Apostle himself, buying back from it the things which were His own" (Irenaeus, Adversus Haereses, V., i). And St. Augustine says in well-known words: "Men were held captive under the devil, and served the demons, but they were redeemed from captivity. For they could not have redeemed themselves. The Redeemer came, and gave the price; He poured forth His blood and bought the whole world. Do you ask what He bought? See what He gave, and find what He bought. His blood is the price. What price is this? What is its worth? What but the whole world? What but all nations?" (Enarratio in Psalm cxxv, n. 5).

It cannot be questioned that this theory also contains a true principle. For it is founded on the express words of Scripture, and is supported by many of the greatest of the early Fathers and later theologians. But unfortunately, at first, and for a long period of theological history, this truth was somewhat obscured by a strange confusion, which would have arisen, were it not for the natural tendency to take a figure too literally, and to apply it in details which were not contemplated by those who first made use of it. It must not be forgotten that the account of our deliverance from sin is set forth in figures. Conquest, captivity, and ransom are familiar facts of human history. Man, having yielded to the temptations of Satan, was like to one overcome in battle. Sin, again, is likened to a state of slavery. And man was set free by the sliedding of Christ's precious Blood. (Here I gladly and truly recall the fact if it had not been so described in Scripture) the redemption of a captive by the payment of a ransom. But, however useful and illuminating in their proper place, figures of this kind are perilous in the hands of those who press them too far, and forget that they are figures. This is what happened here. When a captive is ransomed the price is naturally paid to the conqueror by whom he is held in bondage. Hence, if this figure were taken and interpreted literally in all its details, it would seem that the price of man's ransom must be paid to Satan. The notion is certainly startling, if not revolting. Even if grave reasons pointed in this direction, we might well shrink from drawing the conclusion. And this is in fact so far from being the case that it seems hard to find any rational explanation of such a payment, or any right on which it could be founded. Yet, strange to say, the bold flight of theological speculation was not checked by these misgivings. In the above-cited passage of St. Irenaeus, we read that the God "deceased" had even with Our Aposmarsis i[. e. Satan], buying back from it the things which were His own". This curious notion, apparently first mooted by St. Irenaeus, was taken up by Origen in the next century, and found such support that it played a considerable part in the history of theology. In the hands of some of the later Fathers and medieval writers, it takes various forms, and some of its more repulsive features are softened or modified. But the strange notion of some right, or claim, on the part of Satan is still present. A protest was raised by St. Gregory of Nazianzus in the fourth century, as might be expected from that most accurate reader of Scripture, and from that master, who so often used to criticise the teaching of Abelard had met it with unanswerable arguments that its power was finally broken. It makes a belated appearance in the pages of Peter Lombard. (c) But it is not only in connexion with the theory of ransom, with the unjust claim of rights, on the part of Satan. Some of the Fathers set the matter in a different aspect. Fallen man, it was said, was justly under the dominion of the devil, in punishment for sin. But when Satan brought suffering and death on the sinless Saviour, he abused his power and exceeded his right, so that he was now justly deprived of his dominion over the captives. This explanation is found especially in the sermons of St. Leo and the "Moralis" of St. Gregory the Great. Closely allied to this explanation is the popular "mousetrap metaphor" of St. Augustine. In this daring figure of speech, the Cross is regarded as the trap in which the bait is set and the enemy is caught. "The Redeemer came and the deceiver was overcome. What did our Redeemer do to our enemies? In payment for us He set the trap, His Cross, with His blood for bait. He [Satan] could indeed shed that blood; but he deserved not to drink it. By shedding the blood of One who was not his debtor, he was forced to release his debtors" (Serm. cxxx, § 2).

(d) These views retained their force well into the Middle Ages. But the appearance of St. Anselm's "Cur Deus Homo?" made a new epoch in the theology of the Atonement. It may be said, indeed, that this book marked the dawn of that great intellectual and doctrinal development. There are not many works, even among those of the greatest teachers, that can compare in this respect with the treatise of St. Anselm. And, with few exceptions, the books that have done as much to influence and guide the growth of theology are the outcome of some great struggle with heresy; while others, again, only summarize the theological learning of the age. But this little book is at once purely pacific and eminently original. Nor could any dogmatic treatise well be more remarkable in this respect than St. Anselm's "Cur Deus Homo?". And when one considers the dialogue between the great archbishop and his disciple Bosco. There is no parade of learning, and but little in the way of appeal to authorities. The disciple asks and the master answers; and both alike face the great problem before them fearlessly, but at the same time with all due reverence and modesty. Anselm says at the outset that he will not so much show his disciple the truth he needs, as seek it along with him; and that when he says anything that is not confirmed by higher authority, it must be taken as tentative, and provisional. He adds that, though he may in some measure meet the question, one who is wiser could do it better; and that, whatever man may know or say on this subject, there will always remain deeper reasons that are beyond him. In the same spirit he concludes the whole treatise by submitting it to reasonable correction at the hands of others.

It may be safely said that this is precisely what has come to pass. For the theory put forward by St. Anselm had by this time been dissected by theologians, and confirmed by the testimony of truth. In contrast to some of the other views already noticed, this theory is remarkably clear and symmetrical. And it is certainly more agreeable to the heart than any other. It presupposes the notion of purchase money paid to Satan. Anselm's answer to the question is simply the need of satis-
Atonement

faction for sin. No sin, as he views the matter, can be forgiven without satisfaction. A debt to Divine justice has been incurred; and that debt must needs be paid. But man could not make this satisfaction for himself; the debt is something far greater than he is capable of paying. The Son of God was the only one who could offer to God is already due on other titles. The suggestion that some innocent man, or angel, might possibly pay the debt incurred by sinners is rejected, on the ground that in any case this would put the sinner under obligation to his deliverer, and he would thus become the servant of a mere creature. The only way in which the satisfaction could be made, and men could be set free from sin, was by the coming of a Redeemer who is both God and man. His death makes full satisfaction to the Divine Justice, for it is something greater than all the sins of all mankind. Many side questions are incidentally treated in the dialogue between Anselm and Boso. But this is the substance of the answer given to the great question, “Our Deus Homo?” Some modern writers have suggested that this notion of deliverance by means of satisfaction may have a German origin. For in the old Teutonic laws, a criminal might pay the wergild instead of undergoing punishment. But this custom was not peculiar to the Germans, for we may see from the Cohortation of Alain de Rivière has pointed out, there is no need to have recourse to this explanation. For the notion of satisfaction for sin was already present in the whole system of ecclesiastical penance, though it had been left for Anselm to use it in illustration of the doctrine of the Atonement. It may be added that the same idea underlies the old Jewish “sin-offerings” as well as the similar rites that are found in many ancient religions. It is specially prominent in the rites and prayers used on the Day of Atonement. And this, it may be added, is now the ordinary acceptance of the word; to “stone” is to give satisfaction, or make amends, for an offence or an injury.

(e) Whatever may be the reason, it is clear that this doctrine was attracting special attention in the age of St. Anselm. His own work bears witness that it was undertaken at the urgent request of others who wished to have so much new light on this mystery. To some extent, the solution offered by Anselm seems to have satisfied these desires, though, in one important respect, by other deeper part of his theory, the absolute necessity of Redemption and of satisfaction for sin, was discarded by later theologians, and found few defenders. But meanwhile, within a few years of the appearance of the “Cur Deus homo?” another theory which had been advanced by Abelard. In common with St. Anselm, Abelard utterly rejected the old, and then still prevailing, notion that the devil had some sort of right over fallen man, who could only be justly delivered by means of a ransom paid to his capror. Against this he very rightly urges, with Anselm, that Satan was clearly guilty of injustice in the matter and could have no right to anything but punishment. But, on the other hand, Abelard was unable to accept Anselm’s view that an equiva- lent satisfaction for sin was necessary, and that this debt could only be paid by the death of the Divine Redeemer. He insists that God could have pardoned us without requiring satisfaction. And, in his view, the reason for the Incarnation and the death of God for man was not the punishment of the whole world. By other means could men be so effectually turned from sin and moved to love God. Abelard’s teaching on this point, as on others, was vehemently attacked by St. Bernard. But it should be borne in mind that some of the arguments urged in condemnation of Abelard’s position by St. Bernard also, not to speak of later Catholic theology.

In St. Bernard’s eyes it seemed that Abelard, in denying the rights of Satan, denied the “Sacrament of Redemption” and regarded the teaching and example of Christ as the sole benefit of the Incarnation. But, as Mr. Oxenham observes, “he had not said so, and he distinctly asserts in his ‘Apology’ that ‘it is the Son of God who, to deliver us from the bondage of sin and yoke of the Devil, and to open to us by His death the gate of eternal life.’ And St. Bernard himself, in this his Epistle, distinctly denies any absolute necessity for the method of redemption chosen, and suggests a reason for it not so very unlike Abelard’s. Perhaps that method is the best, whereby in a land of forgetfulness and sloth we might be more powerfully and vividly reminded of our fall, through the great and so manifold sufferings of Him who repaired it.” Elsewhere, when not speaking controversially, he says still more plainly: ‘Could not the Creator have restored His work without that difficulty? He could; but He preferred to do it at His own cost, lest any further occasion should be given for that most and most odious vice of ingratitude in man’ (Bern., Serm. xi, in Cant.). What is this but to say, with Abelard, that ‘He chose the Incarnation as the most effectual method for eliciting His creature’s love?’” (The Catholic Doctrine of the Atonement, 85, 86.)

(f) Although this, as the Church authorities of St. Bernard was thus against them, the views of St. Anselm and Abelard, the two men who in different ways were the fathers of Scholasticism, shaped the course of later medieval theology. The strange notion of the rights of Satan, against which they both protested, now disappears from the pages of our theologians. For the rest, the view which ultimately prevailed may be regarded as a combination of the opinions of Anselm and Abelard. In spite of the objections urged by the latter writer, Anselm’s doctrine of satisfaction was adopted as the basis of the argument. But St. Thomas, in harmony with the other medieval masters agree with Abelard in rejecting the notion that this full satisfaction for sin was absolutely necessary. At the most, they are willing to admit a hypothetical or conditional necessity for the Redemption by the death of Christ. The restoration of fallen man was a work of God’s free mercy and benevolence. And, even on the hypothesis that the loss was to be repaired, this might have been brought about in many and various ways. The sin which was caused freely, was to be caused imperfection at all, or some lesser satisfaction, however imperfect in itself, might have been accepted as sufficient. But on the hypothesis that God had chosen to restore mankind, and at the same time, to require satisfaction for the sin committed, it was possible, perhaps, that man could do no more than to hope for deliverance, nothing less than the Atonement made by one who was God as well as man could suffice as satisfaction for the offence against the Divine Majesty. And in this case Anselm’s argument will hold good. Mankind cannot be restored unless God becomes man to save them.

In reference to many points of detail the Schoolmen, here as elsewhere, adopted divergent views. One of the chief questions at issue was the intrinsic adequacy of the satisfaction offered by Christ. On this point, the majority, with St. Thomas, at their head, maintained that, by reason of the infinite dignity of the Divine Person, the least action or suffering of Christ had an infinite value, so that in itself it would suffice as an adequate satisfaction for the sins of all men. On the other hand, disputed this intrinsic infinitude, and ascribed the all-sufficiency of the satisfaction to the Divine acceptance. As this acceptance was grounded on the infinite dignity of the Divine Person, the difference was not so great as might appear at first sight. But, on this point, the simpler teaching of St. Thomas is more generally accepted by later theologians. Apart from this
question, the divergent views of the two schools on the primary motive of the Incarnation naturally have some effect on the Thomist and Scotist theology of the Atonement. On looking back at the various theories noticed so far, it will be seen that they are not, for the most part, mutually exclusive, but may be freely and harmoniously united, so that they all help to bring out different aspects of that great doctrine which cannot find adequate expression in any human theory. And in point of fact it will generally be found that the chief Fathers and Schoolmen, though they may at times lay more stress on one, will not for their own, do not lose sight of the other explanations.

Thus the Greek Fathers, who delight in speculating on the Mystical Redemption by the Incarnation, do not omit to speak also of our salvation by the shedding of blood. Origen, who lays most stress on the deliverance by payment of a ransom, does not forget to dwell on the need of a sacrifice for sin. St. Anselm, again, in his "Meditations," supplements the teaching set forth in his "De Deus Homo." Abelard, who may be taken to make the Atonement consist in nothing more than the constraining example of Divine Love, has spoken also of our salvation by the Sacrifice of the Cross, in passages to which his critics do not attach sufficient importance. And, as we have seen, his successors, St. Bernard, teaches all three; realism really and truly valuable in the theory which he condemned. Most, if not all, of these theories had perils of their own, if they were isolated and exaggerated. But in the Catholic Church there was ever a safeguard against these dangers of distortion. As Mr. Oxenham says very finely, "The perpetual priesthood of Christ in heaven, which occupies a prominent place in nearly all the writings we have examined, is even more emphatically insisted upon by Origen. And this deserves to be remembered, because it is a part of the doctrine which has been almost or altogether dropped out of many Protestant expositions of the Atonement, whereas those most inclining among Catholics to a merely juridical view of the subject have never been able to forget the present and living reality of a sacrifice constantly kept before their eyes, as it were, in the worship which reflects on earth the unfailing liturgy of heaven" (p. 38).

The reality of these dangers and the importance of this safeguard may be seen if we return to the history of this doctrine, as given in the last chapter. As we have seen, its earlier development owed comparatively little to the stress of controversy with heretics. And the revolution of the sixteenth century was no exception to this rule. For the Atonement was not one of the subjects directly disputed between the Reformers and their Catholic opponents. But from its close connexion with the cardinal question of Justification, this doctrine assumed a very special prominence and importance in Protestant theology and practical preaching. Mark Pattison tells us in his "Memoirs" that he came to Oxford with his "home Puritan religion almost narrowed to two points, fear of God's wrath and faith in the doctrine of the Atonement." And his case was possibly no exception among Protestants' theologians. In their general conception of the Atonement the Reformers and their followers happily preserved the Catholic doctrine, at least in its main lines. And in their explanation of the merit of Christ's sufferings and death we may see the influence of St. Thomas and the Schoolmen. But, as might be expected from the isolation of the doctrine and the loss of other portions of Catholic teaching, the truth thus preserved was sometimes insensibly obscured or distorted. It will be enough to note here the presence of two mistaken tendencies. (1) The first is indicated in the above words of Pattison in which the Atonement is specially connected with the thought of the wrath of God. It is true of course that sin incurs the anger of the Just Judge, and that this is averted when the debt due to Divine Justice is paid by satisfaction. But it must not be thought that God is only moved to mercy and reconciled to us, the third, in the explanation of the Reconciliation is expressly rejected by St. Augustine (In Joannis, Tract. cx, § 6). God's merciful love is the cause, not the result of that satisfaction. (2) The second mistake is the tendency to treat the Passion of Christ as being literally a sacrifice of the Son of God. The Roman Catholic exposition of the Atonement is a distorted view of the truth that His Atoning Sacrifice took the place of our punishment, and that He took upon Himself the sufferings and death that were due to our sins.

This view of the Atonement naturally provoked a reaction. Thus the Socinians were led to reject the notion of vicarious suffering and satisfaction as inconsistent with God's justice and mercy. And in their eyes the work of Christ consisted simply in teaching and in teaching them to think of God's relations to the juridical conception of the Atonement led to like results in the later system of Swedenborg. More recently Albrecht Ritschl, who has paid special attention to this subject, has formulated a new view in his "Dogmengeschichte" of the Atonement. He states that the concept of the Atonement is moral and spiritual, rather than juridical; and his system is distinguished by the fact that he lays stress on the relation of Christ to the whole Christian community. We cannot stay to examine these new systems in detail. But it may be observed that the truth which they contain is really found in the Catholic theology of the Atonement. That great doctrine has been faintly set forth in figures taken from man's laws and customs. It is represented as the payment of a price, or a ransom; or as the offering of satisfaction for a debt. But we can never rest in these material figures as though they were literal and adequate. As both Abelard and Bernard remind us, the Atonement is the work of love. It is essentially a sacrifice, the one supreme sacrifice of which the rest were but types and figures. And, as St. Augustine teaches us, the outward rite of sacrifice is the sacrament, or sacred sign, of the invisible sacrifice of the heart. It was by this inward sacrifice of obedience unto death in the perfect obedience of His life for His friends, that Christ paid the debt to justice, and taught us by His example, and drew all things to Himself; it was by this that He brought our Atonement and Reconciliation with God, "making peace through the blood of His Cross."
ATTAINER

ATRI, Diocese of. See Civita di Penne.

Atrius, a titular see of Lower Egypt (Atrhibites) and episcopal list (326-479) is given in Gams (p. 461).

Laudi, Orane Christ. (1740), II, 553-556.

Atrium.—I. An open place or court before a church. It consisted of a large quadrangle with colonnaded walks on its four sides forming a portico or cloister. It was situated between the porch or vestibule and the body of the church. In the center of the atrium was a fountain or well, where the worshippers washed their hands before entering the church. A remnant of this custom still survives in the use of the holy-water font, or basin, usually placed near the inner entrances of churches in those that were not intended to advance farther, and more particularly the first class of penitents, stood to receive the prayers of the faithful as they went into the church. It was also used as a burying-ground, at first only for distinguished persons, but afterwards for all believers. The covered portion next the church was called the narthex and was the place for penitents. The basilicas at Ravenna seem usually to have had a closed narthex; while those of Rome were open to the West. A mosaic in S. Apollinaris Nuovo, Ravenna, shows a church closed by curtains. The atrium existed in some of the largest of the early Christian churches, such as St. Peter's at Rome in the fourth century, and Sancta Sophia at Constantinople, in the sixth. In the residences (palatia, domus) of the principal Christian, or those that were accorded with the highest rank, the Christian emperors were most likely to be found first worshipped, there was a threefold division: first, on entering, a court called the atrium; then, farther in, another colonnaded court called the peristyle; and then the tablinum, where the altar was probably placed, and services conducted. (See Banister.)

So large a fore-court to a church required an area of land costly and difficult to obtain in a large city. For this reason the old Roman atrium survived only occasionally in Eastern and Western churches. Typical examples may be seen in the churches of St. Clement, at Rome, and St. Ambrose, at Milan; also in the seventh-century churches of Novara and Parenzo.

II. In secular architecture the atrium was the principal entrance-hall and apartment in a Roman house, and formed the reception-room. It was lighted by an opening in the roof, called the compluvium, the roof sloping so as to throw the rain-water into a cistern in the floor called the impluvium. In large houses it was surrounded by a colonnade.

THOMAS H. POOLE.

Attainer.—A Bill of Attainder may be defined to be an Act of Parliament for putting a man to death or for otherwise punishing him without trial in the usual form. Thus by a legislative act a man is put in the same position as if he had been convicted after a regular trial. It is an act whereby the judicature of the entire Parliament is exercised, and may be contrasted with the proceeding by impeachment in which the accusation, presented by the Commons acting as a grand jury of the whole realm, is tried by the Lords, exercising at once the functions of a high court of justice and of a jury. In a strictly technical sense, it may be said that a Bill of Attainder is a legislative sentence of death without a trial, and that a Bill of Pains and Penalties is such an act inflicting a milder punishment. In the popular sense, however, the term "Bill of Attainder" embraces both classes of acts, and in that sense it is used in the cases of Queen Caroline, the United States, the Supreme Court has declared in Fletcher v. Peck, 6 Cranch, 138, that "A bill of attainder may affect the life of an individual, or may confiscate his property, or both." Such a bill deals with the merits of a particular criminal, his penalties, more or less severe, ex post facto, without trial in the usual form. While bills of attainder were used in England as early as 1321 in the procedure employed by Parliament in the treatment of the Depensers (1 St. tr. pp. 23, 38), it was not until the period of passion engendered by the civil war that the summary power of Parliament to punish criminals by statute was for the first time perverted and abused. This was it that this procedure was not, not only against the living, but sometimes against the dead, the main object in the latter case being, of course, the confiscation of the estate of the attained person. In the flush of victory which followed the battle of Towton, Edward IV obtained the freedom of a sweeping bill of attainder through which the crown was enriched by forfeiture of the estates of fourteen lords and more than a hundred knights and esquires. In the seventeenth year of that reign was passed the Act of Attainder of the Duke of Clarence in which, after an oratorical preface setting out at length the offences imputed to him, it is enacted "that the said George Duke of Clarence be convicted, and attainted of high treason." Then followed the appointment of the Duke of Buckingham as grand steward for that occasion of execution. It is a remarkable fact that during a period of one hundred and sixty-two years (1459-1821) there is no record of a parliamentary impeachment either in the rolls of Parliament or in the Lords' journal. After the impeachment of Lord Stanley in 1446, ascending his troops to the battle of Blore Heath, there was not another impeachment until that of Sir Giles Monson and Sir Francis Mitchell in 1621. During the interval, covering a little more than the reigns of the house of Tudor, enemies of the State were disposed of either by bills of attainder, by trials in the Star Chamber, or by trials for treason in the courts of common law. In the reign of Henry VIII Bills of Attainder were often used instead of impeachments, as in the cases of Wolsey, for treason, Queen Katharine Howard, the Duke of Norfolk, and the Earl of Surrey. During that reign religious persecution was carried on rather through the legal machinery devised for the punishment of high treason as defined by the Act of Supremacy than by bills of attainder. By the Act of Supremacy, the King was declared Head of the Church with "the title and style thereof"; by the penal act which followed as a corollary thereto, it was declared that any attempt to deprive him of the dignity, title, or name of his royal estate should constitute high treason. In the special act providing the amended oaths, it was possible to call upon anyone to declare his belief in the validity of the new title, and a failure to do so was sufficient evidence of guilt. By that legal machinery were dashed to pieces the Charterhouse monks of London, who are admitted on every hand to have been the noblest and purest of all churchmen. Even Froude admits that they were "gallant men, whose high forms, in the sunset of the old faith, and transfigured on the horizon, tinged with the light of its dying glory." The legal proceedings through which the Bishop of Rochester and Sir Thomas More were brought to the block were but a repetition of what had been gone through with in the case of the Carthusians. After the Tudor time the most remarkable bills of attainder are those that were directed against Lord Strafford, Lord Danby, the Duke of Monmouth, and Sir John Fenwick. As instances of bills of pains and penalties, references may be made to those against Bishop Atterbury and the Act of 1803, in the case of the introduction in the House of Lords of a bill of pains and penalties, providing for the dissolution of her marriage with the King, upon the ground of adultery,
and for her degradation. When the charges contained in the preamble came on to be heard, Brougham and Denman, by their bold and brilliant defence of the Queen, so aroused popular sympathy in her favour, by holding her up as a deserted and persecuted wife, that the ministry deemed it wise to drop the bill after the majority in its favour in the Lords had dwindled to nine. Reference is made to this case as an illustration of the nature of the procedure upon such bills. "The proceedings of parliament in passing bills of attainder, and of pain and penalty, do not vary from those adopted in regard to other bills. They may be introduced in either house, but ordinarily commence in the House of Lords: they pass through the same stages; and when agreed to by both houses they receive the royal assent in the usual form. But the parties who are subjected to these proceedings are admitted to defend themselves by counsel and witnesses, before both houses; and the solemnity of the proceedings would cause measures to be taken to enforce the attendance of members upon their service in parliament" (May, Parl. Practice, 744). It thus appears that, in its modern form, procedure by attainder admits the right of proof and argument. Entirely apart from the judicature of Parliament, attainder is defined by the common law of England to be the state of a person being deprived of all title to any property, or of being rendered incapable of holding any office, by the death sentence. Such sentence was, however, not followed by attainder. The consequences of attainder were: first, forfeiture; second, corruption of blood. The extent of the forfeitures depended upon the nature of the crime for which the criminal was convicted. It was generally by corruption of blood, "both upwards and downwards," the attainted person could neither inherit nor transmit lands. Grotius (c 85, 4, 1, could not be called as a witness in any court. The doctrine of attainder has, however, ceased to be of much practical importance since 1334 and 34 Vict., c. 23, wherein it was provided that henceforth no confession, verdict, inquest, conviction, proceeding of or from all such attainders or falso-de-see shall cause any attainted or corruption of blood, or any forfeiture or ejectment.

HANNIS TAYLOR.

Attention. See Consciousness.

Atticus, Patriarch of Constantinople (406–425), b. at Sebaste in Armenia; d. 425. He was educated in the vicinity of his native town by Macedonian monks, whose mode of life and errors he embraced. When still young he went to Constantinople, abjured his heretical tenets, and was raised to the priesthood. He and another ambitious priest, Arscarius, were the chief accusers of St. Chrysostom in the notorious Council of the Oak, which condemned (405) 8 for empire. On the death of the intruder Arscarius, he succeeded him in the See of Constantinople, and at first strove hard, with the help of the civil power, to detach the faithful from the communion of their lawful bishop. Even after the death of St. Chrysostom, they continued to avoid his own spiritual ministrations, he re-inserted the name of his holy predecessor in the diptychs of the churches. This change of attitude and his charity to the poor gradually made him less unpopular, and he at length consented to be himself recognised as patriarch by Innocent I. Inte
upon enlarging the prerogatives of his see, he obtained from Theodosius the Younger two consecrations which placed Bithynia and Ilyryia under his jurisdiction. Rome resisted these encroachments, and the consecrations, thanks to the intervention of Honorius, were revoked. On this occasion Maximus com- bined the irregularity of his promotion by his zeal in the cause of orthodoxy. He drove the Mes- salians from Pamphilus, and his opposition to the Pelagians caused him to be praised by Celestine I as "a true successor of St. Chrysostom."  

A. J. B. Vulebret

Attigny, COUNCIL OF. - In 765, St. Chrodegang of Meix and thirty-seven other bishops mutually promised in an assembly held at the royal residence of Attigny near Vouziers (Ardennes) that after the death of each the survivors would cause the psalter to be said one hundred times and would have one hundred masses celebrated for the repose of the soul of the departed. Each one would also say thirty masses for the same intention. In 785, Charlemagne held a council at Attigny. Widukind and Aboin, two deacons, presented themselves for instruction and were baptized. In 822, Pope Paschal I was present at a Council of Attigny, convened for the reconciliation of the Emperor Louis the Pious with his three younger brothers, Hugo, Drogo, and Theodoric, whom he had caused to be violently tortured and whom he had intended to put to death. In the council he confessed publicly his wrong-doing; also the violence practised by him on his nephew, Bernard, King of Italy, and his brother, the Abbot Adelard Wals, and proposed to perform public penance in imitation of the Emperor Theodosius I. He also exhibited an earnest desire to correct abuses arising from the negligence of the bishops and the nobles, and confirmed the rule (Aquisquis Regula) that the Council of Aachen had drawn up (816) for canons and monks. In 870, thirty bishops and six archbishops met at Attigny, to pass judgment on Karlmann, the king's son, made an ecclesiastic at an early age, and accused by his father of conspiring against his life and throne. He was deprived of his title and imprisoned at Sens. In the council of 875, Hinencmar, Bishop of Lons, appealed to the pope from his uncle, Hinencmar, Archbishop of Reims. 

J. J. SHAHAN

Attila, king and general of the Hun, d. 453. Succeeding in 433 to the kingship of Scythian hordes disorganized and enfeebled by internal discord, Attila soon made of his subjects a compact and formidable people, the terror of Europe and Asia. An unsuccessful campaign in Persia, followed by the victory of the Sarmatian sect of the Huns in 441 by an invasion of the Eastern Roman Empire, the success of which emboldened Attila to invade the West. He passed unhindered through Austria and Germany, across the Rhine into Gaul, plundering it and devastating all in his path with a ferocity unexampled in the records of barbarian invasions, and compelling those he overcame to augment his mighty army. In 451 he met on the Plains of Châlons by the allied Romans under Aetius and the Visigoths under Theodoric and Thiorismond, who overcame the Huns and avenged the peril that menaced Western civilization. Turning then to Italy, Attila, in the spring of 452, laid waste Aquileia and many Lombard cities, and was approaching Rome, when the Valentinian III had fled before him, when he was struck down by an assassin. His death was the most influential member of whom was Pope Leo I, which dissuaded Attila from sacking the city. Attila died shortly after. Catholic interest in Attila centers chiefly in his relations with those bishops of France and Italy who restrained the Hunnish leader in his devastating fury. The moral power of these bishops, and particularly of the pope, during the dissolution of the empire, is evidenced as well by the confidence in which the faithful looked to them for succour against the terrible invader as by the influence they sometimes exerted in staying that invader's destroying hand. St. Agnan of Orleans sustained the courage of his people and hastened the reinforcements that saved his apparently doomed city; at Troyes, St. Lupus prevailed upon Attila to spare the province of Champagne, and gave himself as a hostage while the Hunnish army remained in Gaul; when Rome seemed destined to meet the fate of the Lombard cities which Attila had pillaged, it was Pope Leo the Great who, by his eloquence and commanding personality, overawed the conqueror and saved the city. The terror which for centuries after clung to the name of Attila, "the Scourge of God," as he came to be called, and the gratitude of the people to their deliverers combined in time to encumber medieval hagiography with legends of saints reputed to have overcome Attila by their imposing presence, or stayed his progress by their prayers. But these fictions serve to emphasize the import of the facts which inspired them.

It is difficult to appreciate how widespread must have been that sentiment expressed in the recently discovered appeal of Eusebius of Dorylein to Pope Leo I: "Curavit desuper et ab exordio consuetudine apostolica iniquas perferebat defensiones...et humili jacentis erigere, secundum possibilitatem quam habetis" [see Harnack, "History of Dogma" (Boston, 1903), II, 165]. National pride, too, came in time to invest the person of Attila with a halo of fiction. Most responsibility for the legends of the Hunnish leader, who is diversely depicted, according as the vanity of nations would represent Attila as a friend who had contributed to their greatness or as a foe to whose superhuman strength it had been no discredit to surrender. Of these legends the best known is the story of Etzel (Attila) in the "Nibelungenlied."

Attiret, JEAN DENIS, painter, b. at Dole, France, 31 July, 1702; d. at Pekin, 8 December, 1768. He made serious artistic studies in Rome and after returning to his native country achieved considerable reputation as a portrait painter. He entered the Jesuit novitiate in a lay brother's habit but left some specimens of his work in the Cathedral of Avignon and the Sodality chapel which he painted while a novice. The Jesuits had many of their men in China employed as painters. Attiret joined them in 1737 and was easily the superior of all. He was honoured with the title of painter to the Sodality in his studio daily and finally made him a mandarin in spite of the brother's unwillingness to accept the honour. As all the work was done not for art but for the sake of pleasing the emperor, every suggestion he made was carefully basined. To oil was not agreeable, so sableules and distemper were resolved to. The Emperor did not like shading, for he thought it

John B. Peterson

ATTIRET
was a blot, so that disappeared. It all ended in Attiret becoming altogether Chinese in his tastes and his methods, so that he no longer painted like a European. He made portraits of all the distinguished court personages, but most of his work was done on glass or silk and represented trees, and fruits, and fishes, and animals, etc. When, however, Vesalius emperiorially beaten back the Tatars, he ordered the battles to be painted. Four Jesuit brothers, among whom was Attiret, made sixteen tableaux, which were engraved in France in 1774. When the collection arrived from France, however, Attiret was dead. The emperor manifested great concern at his loss, bore the expenses of the obsequies, and sent a special representative to show his sorrow at the tomb. Attiret is credited with at least 200 portraits.

Atto, a faithful follower of Gregory VII in his conflict with the simoniac clergy, b. probably at Milan, made Cardinal of San Marco, assisted (1079) at the Berengarius council in the papal court of that year, and signed the decree of the synod of 1081. He may have been Bishop of Preneste. Cardinal Mai published under his name (SS. Vet. nova colli., VI, 2, 80 sqq.), from a Vatican manuscript, a "Brevarium Cumunum", or miscellaneous collection of moral and canonical decrees, genuine and forged, from Pope Clement I to Gregory the Great. It deals particularly with clerical rights and duties, ecclesiastical acts, the administration of the sacerdotium, censures, jurisdiction, etc. Other cardinalates of the name are mentioned in the mention of the (eighteenth-century) "Diatriba de Attonibus" published by Cardinal Mai (op. cit.; cf. P.L., CXXXIV, 902).

Bruck in Kirchenlex., I, 1556, 1567.

Atto of Pistoia, b. at Badajos in Spain, 1070; d. 22 May, 1155. He became Abbot of Vallombrosa (Tuscany) in 1105, and in 1135 was made Bishop of Pistoia. He wrote lives of St. John Gualbert and of St. Bernard of Vallombrosa, Bishop of Parma. In 1152, in response to Pistoia certain relics of James of Compostella. His correspondence on that occasion is found in Ughelli, "Italia Sacra", VII, 296.

Atto of Vercelli, a learned theologian and canonist of the tenth century, son of the Viscount Aldegarius, and Bishop of Vercelli (924-961). In 933 he became Grand Chancellor of Lothaire II, King of France, and obtained from the royal gratitude donations and privileges for his see of Vercelli (Ughelli, Italia Sacra, IV, 760). Several of his writings were first published by the Benedictine D'Achery (1855-77) in his "Spielegium" VIII, 1-137; 2d ed., 1723, I, 401-442, e. g. "Epistola de Libellis de proceribus ecclesiasticis", and "Canones rursus statuataque Vercellensis ecclesie". A complete edition was executed by Baronez del Signoro, in two folio volumes (Vercelli, 1768; P. L., CXXXIV, 27-834), inclusive of his lengthy commentary on the Epistles of St. Paul. In 1852 Cardinal Mai published his "Atto di Vercelli", or "Polypticum", or "Perpendicular", an abridgment of moral philosophy, "written in a mysterious and enigmatic way". In his history of early medieval literature Ebert transfers to some Spaniard the authorship of this book. J. Hacke defends the traditional view (Realecyk.f. prot. Theol., II, 214). His "Canones" are in great part a compilation of earlier ecclesiastical legislation, including the False Decretals. They contain, also, certain provisions of his own and are of value for the study of the contemporary ecclesiastical life and manners in Northern Italy. He is sometimes known as Atto II; an earlier homonymous Bishop of Vercelli flourished about the middle of the eighth century.

THOMAS J. SHAHAN.

Attracta (or Araght), Saint, a contemporary of St. Patrick from whom she received the veil. She is known as the foundress of several churches in the counties of Galway and Sligo, Ireland. Colgan's account of her life is based on that written by Augustine Magraadin in the last years of the fourteenth century, and abounds in improbable statements. However, the fact of St. Attracta receiving the veil from St. Patrick is corroborated by Tirechán, in the "Book of Armagh", as is evident from the following passage in the "Documenta de S. Patricio" (ed. Edmund Hogg, S.J.): "Et ecclesiam posuit in cella Adracht, filium Talain, natum ex manu Patricii." A native of the County Sligo, she resolved to devote herself to God, but being opposed by her parents, fled to South Connacht and made her first foundation at Drumconnell, near Boyle, County Roscommon, whence she removed to Greaghaighe, or Coolavin, County Sligo. At Killaragh, St. Attracta established a hospice for travellers, which existed as late as 1539. Her fame was so great that numerous places were named after her, e. g. Killaragh (Cill Attracta), Toberarragh, Cloghan Aragh, etc., and a large village of Killaragh up around her oratory at Killaragh in Coolavin. Colgan gives an account of the Cross of St. Attracta which was famed during the Middle Ages, and of which the O'Mochain family were hereditary keepers. A striking confirmation of the existence of this relic in the early years of the fifteenth century is afforded by an entry in the "Calendar of Papal Letters" (VI, 451), from which we learn that in 1413 the cross and cup of St. Attracta (Crux ac Cuphas Aracht) were then worshipped in the church of Killaragh, diocese of Achonry. By an indent of 28 July, 1804, Pius IX authorized the office and Mass of St. Attracta, which had lapsed into desuetude, to be again celebrated in the Irish Church. The feast of St. Attracta, on August, is given special honour in the Diocese of Achonry, of which she is the patroness. The prayers and proper lessons for her Office were drawn up by Cardinal Moran.

W. H. GRATTAN FLOOD.

Attributes, Divine.—In order to form a more systematic idea of God, and, as far as possible, to unfold the implications of the truth, God is All-Perfect, this infinite Perfection is viewed, successively, under various aspects, each of which is treated as a separate perfection and characteristic inherent to the Divine Substance, or Essence. A certain group of these, of paramount import, is called the Divine Attributes.

I. KNOWLEDGE OF GOD MEDIATE AND SYNTHETIC.—Our natural knowledge of God is acquired by discursive reasoning and by the data of introspection, "For the invisible things of Him, from the creation of the world, are clearly seen, being understood by the things that are made; His eternal power also, and Divinity" (St. Paul, Rom., i, 20). Created things manifest as a glass, darkly,
the powers and perfections of the Creator. But these refracted images of Him in finite things cannot furnish grounds for any adequate idea of the Infinite Being. Hence, in constructing a synthetic idea of God, before one can apply to the Divinity any concept or term expressing a perfection found in created beings, it must be subjected to rigorous correction. The profound disparity between the Divine perfection and the intimations of it presented in the world-copy may be broadly laid down under two heads. (1) Number.—The perfections of creatures are innumerable, the Divine perfection is one. (2) Diversity.—Created perfections are infinite, the perfections of God are singularly simple. The Divine perfection is uniform, simple. It is not a totality of various perfections; absolutely simple, the Divine perfection answers to every idea of actual or conceivable perfection, without being determined to the particular mode of any. Hence, when any attribute expressing modes characteristic of the world of being that falls within the range of our experience is applied to God its signification ceases to be identical with that which it has in every other case. This is not to say that the concept of a perfect being, the concept of the infinite, exists independently of the finite world. (See Analogy.)

II. SOURCE OF OUR NATURAL KNOWLEDGE OF GOD.—To correct, as far as possible, the inadequate character of the concepts through which we must formulate our idea of God, the first step is to distinguish created perfection into two kinds, viz., mixed perfections and pure perfections. A pure perfection is one whose exact concept does not include any note formally expressive of defect or limitation; the content of the idea is entirely positive. The idea of a perfect being, the idea of the Divine, involves no proposition of the form which exists between the finite being and its infinite analogue. In philosophical phrase, this use of terms is called analogical predication, in contradistinction to universal, in which a word is predicated of all the more general subjects in precisely the same sense. (See Analogy.)

IV. DEDUCTIVE DEVELOPMENT.—Having established the existence of God from metaphysical, physical, and moral arguments, the theologian selects some one of the attributes which these proofs authorize him to predicate, or directly connote, along with what is positive in the perfection, some privation or deficiency. Examples of the former are power, truthfulness, will; as an instance of the latter, materiality may be offered. For, though the reality that belongs to matter is, of course, a participation of existence and activity, yet the concept of it connotes the imperfections of that particular kind of existence which is composite and subject to disintegration. Again, power is pure perfection for, as Catholic philosophy teaches, though the finite nature of human personality comes into play in the awakening of self-consciousness, yet limitation is not an essential constituent of personality. All terms that stand for pure perfections are predicated analogically of God, and are designated attributes in the wide sense of the word. When terms which signify mixed perfections are predicated of God, the analogy becomes so faint that the locution is a mere metaphor.

III. INDUCTIVE DEVELOPMENT OF ATTRIBUTES.—The elaboration of the idea of God is carried on along three converging lines: (1) The positive way of causality.—In virtue of the principle that whatever excellence is contained in an effect is represented in the efficiency of the cause, reason affirms that each created being is a reflection of the corresponding Divine analogue in the first cause. Hence, from the existence of an intelligent being, man, in the cosmos, we rightly infer that God is intelligent, that is to say, His infinite perfection is supersubstantial to all other operations of intellect. (2) The negative way. If the perfections are called attributes, the only imperfections are directly on the Infinity of God, then, focusing the attention not upon the positive content of any created perfection, but upon the fact that, because it is finite it is determined in kind and limited in degree, we may say that in God there is not intelligence exactly as we know it. Again, since there is no imperfection in God, every concept of defect, privation, and limitation must be negated of God. Many negative names, it is true, are applied to God; as wisdom, for instance, He is said to be immutable, uncaused, infinite. It should, however, be carefully observed that some attributes, which, from the etymological point of view, are negative, convey, nevertheless, a positive meaning. Failure to perceive this obvious truth has been responsible for much empty dogmatism on the subject. (3) The way of the figurative and symbolic. The idea of the finite excellences, being derived from the concept of the Divine, and only derived from the concept of the Divine, is, in its application to God, expanded without limit. God not only possesses every excellence discoverable in creation, but He also possesses it infinitely. To emphasize the transcendency of the Divine perfection, in some expressions an abstract noun is substituted for the corresponding adjective; as, God is Intelligence; or, again, some word of intensive, or exclusive, force is joined to the attribute; as, God alone is good, God is goodness itself, God is all-powerful, or supremely powerful.

V. ESSENCE AND ATTRIBUTES.—Transcendentally one, absolutely free from composition, the Divine Being is not divided into parts, or compounded of material substrates in which qualities or any other modal determinations inhere. The reality to which the various attributes are ascribed is one and indivisible. "Quae justitia," says St. Augustine, "ipsa bonitas; quae bonitas, ipsa beatitudinem." In this respect, the relation of the attributes to the Divine nature might be illustrated by the various reflections of one and the same object from a concave, a convex, and a plane mirror. Nevertheless, to systematize the idea of God, and to draw out the rich content of the knowledge resulting from the proofs of God's existence, some primary attribute may be chosen as representing one aspect of the Divine perfection from which the others may be rigorously deduced. This results in a logical scheme in which the derivative attributes, or perfections, stand towards one another in a relation somewhat similar to that of the essence and the various properties and qualities in a material substance. In this arrangement the primary perfection is termed the metaphysical essence, the others are called attributes. Many eminent theologians stress the conception of pure actuality (actus purus) from which simplicity and infinity are directly de-
Attributes

Gilbert de la Porre, who maintained a real, ontological distinction between the Divine Essence and the attributes. His opinion was condemned by the Council of Reims (1148). St. Thomas definitively expressed the doctrine which, after some controversies between Scotists and Thomists upon minor points and comprehensive function between Divinity and everything else, all other distinctions are implicitly expressed. Whether, and in what way, the distinctions between the attributes and the metaphysical essence, and among the attributes themselves, have an ontological basis in the Divine nature itself, was a subject which divided Nominalists and Realists, Thomists and Scotists, in the age of Scholasticism (cf. Vacant, Dict. de théol. cathol., I, 2230–34).

VI. Division of Attributes.—Taking as the basis of classification the ways by which the attributes are developed, they are divided into positive and negative. Among the negative attributes are simplicity, infinity, immutability. The chief positive attributes are unity, truth, goodness, omnipotence, omniscience, distinctness, and will, personality. Some authors divide them into incommunicable and communicable. The former class comprises those which belong to God alone (e.g., all-wise, self-existent, omnipotent) to the latter belong those which are peculiar, exceptable, creatures; as good, just, intelligent. Again, the divine nature may be considered either as static, or as the source of activity; hence another division into quiescent and active. Finally, some perfections involve a relation to things distinct from God, while others do not; and from this standpoint theologians divide the attributes into absolute and relative. The various classifications adopted by modern Protestant theologians are due partly to the results of philosophical speculation, partly to new conceptions of the nature of religion. Schleiermacher, e.g., derives the attributes of God from our threefold consciousness of absolute dependence, of sin, and of grace. Others, with Lipsius, distinguish the metaphysical attributes from the psychological and the ethical. A simpler division groups omnipotence, omnipresence, eternity, omniscience, and unity as the metaphysical predicates, justice and goodness as the moral attributes. The fundamental attribute is, according to Ritschl, love; according to Professor de Wette, power. These writers center about the idea of God as a personal being.

VII. Revelation.—The supernatural knowledge of God given in revelation is apprehended through the medium of conceptions that belong to natural knowledge. Therefore, the same principles of attribution that govern the one hold good also for the other.

VIII. Historical Development.—In the fourth century Aetius and Eunomius maintained that, because the Divine nature is simple, excluding all composition or multiplicity, the various terms and names applied to God are to be considered synonymous. Otherwise they would erroneously imply composition in God. This opinion was combated by St. Cyril of Alexandria, St. Basil, and St. Gregory of Nyssa (In Eunom., P. G., XLI). The principle of attribution received more precise statement at the hands of St. Augustine, in his investigations of the conditions of intellectual knowledge (De Genes. et Nativ. II, 42, 2). It is in these writings that we find the ideas of the Nominalists and the Scotists, though they were followed by Neo-Platonism, transmitted through the works of the Pseudo-Dionysius, contributed to bring into closer relief the analogous character of the divine and human nature. The Nominalists revived the views of Eunomius, and the opposition of the Realists was carried to the other extreme by

Attributes

dued. Most modern authors fix on asseity (Aseitas; σείζα from "σείζ" = "himself"), or self-existence; for the reason that, while all other existences are derived from, and depend on, God, He possesses in Himself, absolutely and independently, the entire reason of His uncaused, infinite Being. In this, the most profound and comprehensive function between Divinity and everything else, all other distinctions are implicitly expressed. Whether, and in what way, the distinctions between the attributes and the metaphysical essence, and among the attributes themselves, have an ontological basis in the Divine nature itself, was a subject which divided Nominalists and Realists, Thomists and Scotists, in the age of Scholasticism (cf. Vacant, Dict. de théol. cathol., I, 2230–34).

VI. Division of Attributes.—Taking as the basis of classification the ways by which the attributes are developed, they are divided into positive and negative. Among the negative attributes are simplicity, infinity, immutability. The chief positive attributes are unity, truth, goodness, omnipotence, omniscience, distinctness, and personability. Some authors divide them into incommunicable and communicable. The former class comprises those which belong to God alone (e.g., all-wise, self-existent, omnipotent) to the latter belong those which are peculiar, exceptable, creatures; as good, just, intelligent. Again, the divine nature may be considered either as static, or as the source of activity; hence another division into quiescent and active. Finally, some perfections involve a relation to things distinct from God, while others do not; and from this standpoint theologians divide the attributes into absolute and relative. ATTENTION

JAMES J. FOX.

Attrition, or Imperfect Contrition (Lat. attentio, "to wear away by rubbing"; p. part. attitu).—The Council of Trent (Sess. XIV, Chap. iv) has defined contrition as "a sorrow for one's sin committed, with a firm purpose of not sinning in the future." This sort of sin may arise from various motives, may be prompted by various causes. If the detestation of sin arise from the love of God, Who has been grievously offended, then contrition is termed perfect; if it arise from any other motive, such as loss of heaven, fear of hell, or the heinousness of guilt, then it is termed imperfect contrition, or attrition. That there exists such a disposition of soul as attraction, and that it is a goodly thing; an impulse of the Spirit of God, is the clear teaching of the Council of Trent (Sess. XIV, iv). "And as to that imperfect contrition which is called attraction, because it is commonly conceived either from the consideration of the turpitude of sin, or from the fear of the punishment of hell, or from the hope of pardon, or from the hope of glory, it is customary to call it attraction; for as with the hope of pardon, it excludes the wish to sin, it not only does not make man a hypocrite and a greater sinner, but that it is even a gift of God, and an impulse of the Holy Spirit, who does not indeed as yet dwell in the penitent, but who only moves him; whereby the penitent, being assisted, prepares a way for himself unto justice, and although this attraction cannot of itself, without the Sacrament of Penance, conduct the sinner to justification, yet does it dispose him to receive the grace of God in the Sacrament of Penance. CONSORTED WITH fear, the Ninivites at the preaching of Jonah did fearful penance and obtained mercy from the Lord." Wherefore anent attrition, the council in Canon v, Sess. XIV, declares: "If any man assert that attrition... is not a true and a profitable sorrow; that it does not prepare the soul for grace, but that it makes a man a hypocrite, yea, even a greater sinner, let him be anathema." This doctrine of the council is in accord with the teaching of the Old and the New Testament. The Old Testament writers praise without hesitation that fear of God which is really "the beginning of wisdom" (Ps. ex). One of the commonest forms of expression found in the Hebrew scriptures is the "exhortation to the fear of the Lord" (Eccles., i, 13; ii, 19 sqq.). We are told that "without fear there is no justice as a judge" (ibid., i, 28; ii, 1; ii, 19). In this fear there is "confidence of strength" and it is "a fountain of life" (Prov. xiv, 26, 27); and the Psalmist prays (Ps. cxviii, 120): "Pierce thou my flesh with thy fear: for I am afraid of thy judgments.

NEW TESTAMENT.—Even when the law of fear had given way to the law of love, Christ does not hesitate to inculcate that we must "fear him who can destroy both soul and body into hell" (Matt., x, 28). Christ, in his moral exhortation and example, while in Jerusalem, typical of the final destruction of the world, was intended by Jesus to strike terror into the hearts of those who heard, and those who read; nor can one doubt that the last great judgment as portrayed by Matthew, xxv, 31 sqq., must have been directed against a multitude of perfect or partial contrition, from sin by reason of God's awful judgments. The Apostle appears not less insistent when he exhorts us to work out "our salvation in fear and trembling" lest the anger of God come upon us (Phil., ii, 12). The earliest days of Christianity have spoken of fear of God's punishment as a godly virtue that makes for salvation. Clement of Alex-

andria (Strom., VII) speaks of righteousness which comes of love and righteousness arising from fear, and in the Strom., II, ch. vii, he speaks at length on the utility of fear, and answers objections brought forward against his position. The most striking sequence is the one wherein he says, "In this Scripture it is therefore shown to be reasonable, from which arises repentance of previous sins", etc. St. Basil (4th interrogation on the Rule) speaks of the fear of God and of His judgments, and he asserts that for those who are beginning a life of pieté "exhortation based on fear is of greatest utility;" and the man asserting, "The fear of God is the beginning of wisdom" (P. G., XXXI). St. John Chrysostom may be quoted in the same sense (P. G., XLIX, 154). St. Ambrose, in the fifteenth sermon on the Psalm cxviii, speaks at large on godly fear which begets charity begets love: Hunc timorem sequitur charitas (P. L., xv, 1424), and his disciple, St. Augustine, treats fully the godliness of fear as a motive to repentance. In the 161st of his sermons (P. L., XXXVIII, 582 sqq.) he speaks of refraining from sin for fear of God's judgments, and he asks: "Dare I say such fear is wrong?" He replies that he dare not, for the Lord Christ urging men to refrain from wrongdoing suggested the motive of fear. "Fear not those who kill the body, etc." (Matt., x, 28). St. Gregory the Great has been subject to much dispute, but the general doctrine of the godliness of fear is here propounded, and the difficulty, if aught there be, touches the other question hereinafter treated anent "Initial Love." The word itself, attrition, is of medieval origin. Father Palmieri (De Penit., 345) asserts, on the authority of Aloysius Mingarelli, that the word is thrice found in the works of Alanus of Lille, who died at an advanced age in the year 1203; but its use in the scholium is contentious. It was introduced by Alexander of Hales, and Blessed Albert. Even with these men its meaning was not so precise as in after years; though they all agreed that of itself it did not suffice to justify the sinner in God's sight. (See the Scholastic traditions in article Absolution, and Palmieri, loc. cit.). This fear is godly, since it excludes not only the will to sin, but also the affection for sin. There would perhaps have been little difficulty on this point if the distinction were kept in mind between that fear which is an act of memory, which together with fear of heart, and that fear known as servitut servitatis, which though it makes man refrain from performing the sinful act, leaves the will to sin and the affection thereto.

ATTENTION IN THE SACRAMENT OF Penance.—The Church not only regards the godliness of fear as a motive to repentance, but expressly defines that attrition, though it justifies not without the Sacrament of Penance, nevertheless disposes the sinner to receive grace in the sacrament itself (Sess. XIV, iv). This particular phase of the doctrine of contrition in penance is first taught with clearness by the Schoolmen of the twelfth century, and particularly by St. Thomas, who gathered into a united whole the jarring opinions of his predecessors (See the Scholas-
tic commentaries on the Bible and the works of St. Thomas). He followed the Lombards who insisted on perfect contrition, after St. Thomas there was little division in the schools up to the time of the Council of Trent. At the council there was some opposition to a clear definition, some of the Fathers insisting on the perfect contrition on the grounds that for this reason the decree was couched as above, leaving it still possible to doubt whether attrition was a proximate, or only a remote, disposition for justification in the sacrament. To-day the common teaching is that the essential condition is the sufficiency of attrition (Vacant, Diet. de théol., col. 2246-47). And this would seem reasonable.
ATTUSA

because it is the clear teaching of the Church that perfect contrition justifies the sinner even without the Sacrament of Penance. If perfect contrition, then, were always necessary, why did Christ institute a particular sacrament, since justification would always have been attained by the sacrament of the Eucharist? If contrition is sufficient for justification in the Sacrament of Penance, then there seems no reason to deny its sufficiency when there is question of remitting sin through baptism, for the reason given above will apply equally in this place. The question here arises as to the sufficiency of contrition when one receives a sacrament of the living in mortal sin, of which sin he is not conscious, will contrition with the sacrament suffice unto justification? The answer is generally given in the affirmative.

CONDITIONS.—That contrition may make for justification, it must be interior, supernatural, universal, and sovereign. (See Conditions in article Contrition.) Interior, for the Council of Trent requires that it should exclude the will to sin. Supernatural, for Innocent XI condemned the proposition, "Probabilis est sufficiere attonterion naturalem modo honestam". Universal, for the motives of contrition (fear of hell, loss of heaven, etc.) are of such a nature as toembre on all conscience and to take in all the ordinary motives of contrition (fear of hell, etc.) make one hate sin above all other evil. It has been questioned whether this would be true if the motive were fear of temporal punishments (Genicot, T. 11, n. 274; Billot, De Penit., 159 sq.) The Reformers denied the honesty and godliness of contrition, and held that it simply made a hypocrite. (Bull of Leo X, Exsurge Domine, prop. VI; Council of Trent, Ses. XIV, can. iv.) They were followed by Balsus, Jansen, and others, who taught that fear was a selfish motive, and charity was bad, since it proceeded not from the love of God, but love of self (see prop. 7, 14, 15, condemned by Alexander VIII, 7, December, 1660; also 44, 61, 62, condemned by Clement X, "Unigenitus", 8 September, 1717. Also Bull of Pius VI, "Auctorem Fidei", prop. 25.

Catholic writers in the seventeenth century questioned, whether contrition must of necessity be accompanied at least by the beginning of the love of God, and, that granted, whether such love was not as absolute a condition of God for his own sake, or whether it might not be that love termed concupiscens, or love of God because He is our great good. Some held that in every real act of contrition there must be the beginning of love; others denied categorically this position, excusing only that sorrow which excludes affection for sin, and hope of pardon; others insisted that there must be at least a beginning of that love which has been termed above concupiscens; while still others exact only that love which begets hope. On these opinions see Vacant, Dict. de thél., a. v. Attraction, cols. 2252, 2253, 2254, etc.

On the controversy, particularly in Belgium, see Döllinger and Reusch (Dict., col. 2219). The controversy waxed so warm that Alexander VII issued a decretal, 6 May, 1667, in which he declares his distress at the most scandalously bitter disputes waged by certain scholastic theologians as to whether the act of attraction which is conceived through fear of hell, but excludes the will of sinning and counts on obtaining the mercy of recovering grace through the Sacrament, suffices for the act of love of God, and then "enjoins on all of whatever rank, under pain of incurring the severest ecclesiastical penalties, not to presume in future when discussing the aforesaid act of attraction to brand with any malice, suspicion, censure, reproach, either one or the other of the two opinions; thus denying the necessity of some sort of love of God [negantem necessitatem aliqua dilectionis Dei] in the attraction conceived through fear of hell, which today (1667) seems the one more generally held by scholastic theologians, or that affirming the necessity of the said love, until something shall have been determined in the Sacrament of Penance, even included not the beginning of love. The censure late sententias was omitted in the "Apostolica Sedis". On the formula, "Ex attrito fit contritus", cf. Vacant, Dict. de thél., col. 2256 sqq.

EDWARD J. HANNA.

Avtud, a titular see of Phrygia in Asia Minor, whose episcopal list (431-579) is given in Gaes (446). Lequien, Oriens Christ., (1740), 1, 825-826; Sarras, Dict. of Greek and Roman Geogr., 1, 336.

Aubardé, Jean-Michel-D'astorg, canon regular, and Vicar Capitular of Pamiers, b. 1639; d. 4 August, 1692. He was educated at Toulouse (France), entered the Seminary of Pamiers in 1662, and was made a canon regular, who formed the cathedral chapter of that diocese. After the death of the bishop, Francois Caulet, Aubardé was chosen vicar capitular. As administrator of the diocese, he took up and carried vigorously the resistance of Caulet to the royal demands in the matter of the Congregation of the canons, who refused to recognize royal nominations to local ecclesiastical benefices, and excommunicated the canons appointed by the king, when they attempted to exercise their office. He was arrested by royal order, and imprisoned for six years at Casen, where he died. His courageous resistance is remarkable at a time when ecclesiastical servility in France had reached its acme. B. Jungmann remarks (in Herder, K. L., 1657) that the well-known Jansenistic rigorism of Caulet and his clergy was partly responsible for their stubborn defiance of Louis XIV; they rightly feared that the nominees of the king would not belong to their faction.

Quein, L'Assemblee du clerge de France, 1689.

THOMAS J. SHARAN.

Auberont, Jean-Antoine d', of Bois-le-Duc, theologian, d. 22 November, 1686. He joined the Dominicans in 1633, taught philosophy and theology in several convents of his order, was made doctor of theology at Louvain in 1652, and president of the local Dominican college in 1653. His theological writings are mostly in defence of his master, Paul Le Moyne (1682) and against the Gallican teachings of the Declaration of 1682. Shortly before his death he defended against Paprock St. Thomas of Aquin's authorship of the Mass for Corpus Christi.

Quitter-Echard, SS. O.P., II, 700; Vacant, Dict. de thél., Cah., I, 2203.

THOMAS J. SHARAN.

Abury, Joseph, Jesuit missionary in Canada, b. at Gisors in Normandy, 10 May, 1673; d. at St. Francois, Canada, 2 July, 1755. At the age of seventeen he entered the Society of Jesus, and after four years studied in Paris. He arrived in Canada in 1694 and completed his studies at Quebec, where he was also instructor for five years, and where he was ordained in 1700. Assigned to the Abnaki mission, he added the mission of Medocote on the St. John River, which appears to have been abandoned by the Franciscans about a year earlier. In 1708 he was given charge of the Abnaki reduction at St. Francois, and exercised the apostolate in that single mission for nearly half a century. Aubiry is said to have been a linguist, but unfortunately has numerous MSS. with
the mission registers, were destroyed by fire in 1759. He also wrote several memorials in opposition to the claims of the English in Acadia, and sent them to the French Government, urging that the boundaries between the French and English possessions should be determined by mutual agreement. To these memorials he added a map, giving the boundaries as defined by the treaty of Utrecht. His plan, however, was not accepted. These valuable documents are still preserved in the Paris archives. Chateaubriand introduces the life-story of Father Aubery in the character of the missionary in his "Atala".

Edward F. Spillane.

Aubignac, François Hédelin, Abbé d', grammarien, poète, prêtre, archéologue, philosophe, b. at Paris, 4 August, 1604; d. at Nemours, 27 July, 1676. He took his name from an abbey that was granted him. After completing his classical and theological studies, he was appointed by Cardinal Richelieu instructor to the latter's nephew, the young Duc de Fransonos, to whose grace he owed a pension of 4,000 livres. This appointment, as well as his own inclination, led him to make it his aim to live and to write, especially to the classics. He was drawn into the controversy between the ancients under the leadership of Boileau, and the moderns under Perrault, his philological views being used by the latter for the support of his cause. The drama had a special attraction for d'Aubignac, who wrote not only a tragedy, "Zénobie", but also a work entitled "Pratique du Théâtre".

The Abbé interests modern scholars chiefly because of his attitude on what is known as the Homeric Question: of the first to doubt the existence of Homer; he even propounded the theory that the Iliad is made up of a number of independent ballads gathered and put together by a compiler not very much later than the supposed date of Homer, whom he took to be Lycurgus. This first compilation, however, was not final, as the poem continued to be handed down by the recitation of rhapsodists who again divided the work into separate songs, Pissistratus making the final reduction. These views were based partly on statements of the Greek historians partly on reasons drawn from the poem itself. D'Aubignac dwelt on the impossibility of transmitting so long a poem without the aid of writing, which he, as did Wolfl, believed to be unknown to Homer. He drew arguments from the construction of the epic, its lack of unity and its multiplicity of themes, the quarrel of Achilles being treated of in only a few books. The name Iliad he considered a monogram, since Troy is not the subject of the story. The Iliad, he contended, has no suitable ending; the reader's curiosity remains unsatisfied. It contains many cantos that might be omitted, not only without detriment but with positive advantage to the action of the story. Besides these general considerations, he adduced numerous details which constitute flaws in the poem as we possess it, but which would be entirely justified in separate ballads. In short, there are few objections made to the Iliad by modern scholars on aesthetic and rhetorical grounds which are not touched upon by the French humanist. The arguments against a single author, drawn from the character of the text, the homogeneity of the mixture of the dialects and the like, d'Aubignac could not present, because linguistic studies in his day had not advanced sufficiently to enable him to appreciate the "Homeric Question" from this point of view. Through the occasions set forth in writing his opinions on Homer, it was only shortly before his death that he wrote an extended work on the theme, entitled "Conjugations académiques, ou dissertation sur l'Iliade". He died before he was able to make the final revision, and it was not published until 1715, forty years after his death. The work was known to Wolf, and although Wolf participated in many of his own views he does him scant justice. A German critic declares that d'Aubignac's arguments are substantially as strong as Wolf's, in some respects stronger, and that if Wolf's "Prolegomena" produced greater and more lasting results, this is due less to the character of his arguments than to the greater skill with which they are set forth.

Charles G. Herbermann.

Aubiné, Jean-Henri Merle d'. See Reformation.

Aubusson. Pierre d', Grand Master of the Order of St. John of Jerusalem, b. 1423; d. 1503. He made his first campaigns against the Turks, and fought next under the French Dauphin in a war against the Swiss (1441). It was on his return from this last expedition that he obtained from Charles VII permission to join the Hospitallers. Then, to avoid the scandal of being found Castellan of Rhodes, he soon after became captain-general of the city, which had been the seat of the order since 1309, and was now the chief obstacle to Ottoman supremacy in the Medi-terranean. He raised Mahomet II, the sultan, to his feet and submitted to him. He addressed a letter to the Grand Master, foresaw the sultan's design, and lost no time in making what preparations he could for the defence. A letter to the houses of his order brought him whatever men and money they could spare. Additional sums came from SisExactly IV and Louis XI, together with some of the bravest soldiers of Italy and France. Yet with all his exertions he was able to muster no more than 450 knights and 2,000 auxiliaries. The Turkish armament, which appeared before Rhodes 23 May, 1480, was overwhelmingly superior in numbers, and was furnished with the best artillery then obtainable. But the example of d'Aubusson's good right arm, and his omnipresence, made heroes of all the defenders. After three months of almost incessant fighting, which cost him 25,000 of his best warriors, the Turkish commander was forced to raise the siege. For this brilliant achievement d'Aubusson received a cardinal's hat, and was revered by all Christendom as the Shield of the Church. In his subsequent efforts to form a league that would drive the Turks from Constantinople, he failed.

Auch (Augusta Auscorum), Archidiocease of, comprises the Department of Gers in France. Before the Revolution it had ten suffragan sees: Acqis (Dax) and Aire, afterwards united as the Diocese of Aire; Lectoure, later united with the Archdiocese of Auch; Cousiers, afterwards united with the Diocese of Pamiers; Oloron, Lescar, and Bayonne later united as the Diocese of Bayonne; Bazas, afterwards united with the Archdiocese of Bordeaux; Comminges, united later with the Archdiocese of Toulouse; and Tarbes. Up to 1789 the Archdiocese of Auch included the Archdiocese of Lodz and Lombez of Toulouse; then the suffragans of Auch were Aire, Tarbes, and
and Bayonne. A local tradition that dates back to the beginning of the twelfth century tells us that Taurine, fifth Bishop of Eauze (Blusa), abandoned his episcopal city, which had been destroyed by the Vandals, and transferred his see to Auch. Eauze, in fact, probably remained a metropolitan see till about the middle of the ninth century, at which time, owing to the invasions of the Northmen, it was re-united to the Diocese of Auch, which had existed since the fifth century at least and then became an archdiocese. The first Bishop of Auch known by history is the poet, St. Orientius (first half of the fifth century), in honour of whom a famous abbey was founded in the seventh century. Cardinal Melchior de Polignac, author of the "Anti-Lucrecie," was Archbishop of Auch from 1725 to 1741. The cathedral of Sainte Marie, a Gothic structure with a Byzantine façade, is, in spite of this incongruity, very imposing; its fifteenth-century windows are said to be the most beautiful in France. The ancient episcopal sees of Condom and Lombez had a monastic origin. Bossuet was non-resident Bishop of Condom for two years (1666-71). At the end of the year 1886, the population of Auch was 27,998 inhabiting 27,448 houses; 29 parishes, 478 succursal or mission churches, and 61 vicarates.

Georges Goyau.

Auch, Councils of. In 1668 a council of Auch decreed that, with a few exceptions, all churches should pay to the Cathedral of Auch one quarter of their tithes. At a council held in 1077 (near Clivegampopulania) William, Archbishop of Auch, was deposed by the legate of Gregory VII. In 1276 a council was held at Auch in defence of ecclesiastical jurisdiction and immunities. In 1851 a provincial council of Auch drew up a number of decrees concerning faith and doctrine, the hierarchy, public worship, and ecumenical studies.

Auckland, Diocese of, comprises the Provincial District of Auckland (New Zealand), with its islets, and the Kermadec Group. Area, 21,605 square miles. On Trinity Sunday, 1836, the Vicariate Apostolic of Eastern New Zealand was erected by Pope Gregory XVI. The Abbé Jean Baptiste François Pompallier was chosen as its first vicar. The territory under his jurisdiction comprised all New Zealand, the present Vicariates Apostolic of Fiji, Central Pacific, British New Guinea, Dutch New Guinea, New Pomerania, (part of) Gilbert Islands, New Caledonia, Navigators' Islands, New Hebrides, and the Prefectures Apostolic of North Solomon Islands and Northern New Guinea. The new vicar was consecrated in Rome, 30 June, and sailed from Havre, 24 December, 1836, accompanied by the Marist Fathers Servant and Bataillon (Lyon), Chanel and Bret (Belley), and three lay-brothers. Father Bret died on the voyage. Father Bataillon (afterwards Vicar Apostolic of Central Oceania) was left at Wallis Island, and Father Chanel (Blessed Peter Chanel, Protomartyr of Australasia) at Futuna. Dr. Pompallier and Father Servant reached Hokianga (Auckland Province) 10 January, 1838, and were provided for by an Irish Catholic, Thomas Poynton. At this time the Church was the white Catholics in all New Zealand. Other Marist Fathers arrived in 1839 and subsequent years. The missions to the aborigines (Maoris) became very successful, despite grave calamities propagated by Wesleyan trader-missionaries. By April, 1846, about 5,000 had been baptized, "and there were about five or six times as many catechumens." In 1845 Dr. Pompallier changed his headquarters to Auckland. In 1848 Auckland and Wellington were erected into sees. The Marist Fathers were withdrawn to the Wellington diocese in 1850. The Rev. James McDonald then became the principal missionary to the Auckland Maoris. Meanwhile, the Kermadec Islands were paralyzed by the series of native wars between 1843 and 1860. They were taken up in the Auckland diocese by the Mill Hill Fathers, in 1886. The Ladies of Mercy were introduced in 1859. In 1882 Dr. Pompallier went to France, resigned, and died in 1870. He was succeeded by Dr. Thomas William Croke (1870-74), afterwards Archbishop of Cashel. After five years, Father Walter Bishop Stein, S.J., was appointed to Auckland (1879-81). He was succeeded by Dr. John Edmund Lack, O.S.B. (1882-96). The Right Rev. George Michael Lenihan, consecrated 15 November, 1896, succeeded him.

Statistics.—At the census of 1901 the white population of the Auckland Provincial District was 213,291. Of these 211,233 were Catholic, 21,233 were non-Catholics. The official estimate of the total white population of the Auckland Provincial District, 31 December, 1906, was 211,233; Catholic population of Auckland Diocesan District (which is coterminous with the Diocese of Auckland if the Kermadec Islands be included), 32,272; population of the Kermadec Islands, five, all non-Catholics. According to "New Zealand Statistics, 1904," p. 503, there were in the Auckland Provincial District, at the close of 1904, 37 Catholic schools, with 96 teachers and 2,933 pupils. The following were the ecclesiastical statistics for April, 1906: secular clergy, 26; Mill Hill Fathers, for native population, 9; for whites and natives, 7; Catholic Maoris, about 5,000; parochial districts, 29; churches, 79; Religious Brothers, Marists, 12; Sisters of Mercy, 97; Sisters of St. Joseph, 36; Sisters of the Mission, 30; Little Sisters of the Poor, 8; colleges and high schools, 13; parochial schools, 25; orphanages, 2; home for the aged poor, 1; hospital, 1; children in Catholic schools, 2,600.

to have more devotion towards one sacred image than towards another. Civil rulers have the right of making impediments diriment of matrimony and of dispensing from them. Bishops are not bound to make an oath of obedience to the pope before their consecration. All religious orders should live under the same discipline that they prescribe; clerics should have only one altar; the liturgy should be in the vernacular, and only one Mass should be celebrated on Sundays. Leopold caused a national synod to be held at Florence in 1787, but he did not find the other bishops as pliant as Scipio de' Ricci. Nevertheless he continued assuming all ecclesiastical authority, prohibited all appeals to the pope, and even appointed bishops, to whom the pope of course refused canonical institution. Finally, the Bull "Auctorem Fidei" was published, in which eighty-five articles taken from the Synod of Pistoia were catalogued and condemned. After the publication of the Bull, Scipio de' Ricci submitted. In 1805 he took occasion of the presence of Pius VII in Florence, on his way to Rome from his exile in France, to ask in person an interview and an audience. He died repentant, 1810, in the Dominican convent of San Marco at Florence.

M. O'RIORDAN.

Audians. See Anthropomorphism.

Audiences, Pontifical, the receptions given by the pope to cardinals, sovereigns, princes, ambassadors, and other persons, ecclesiastical or lay, having business, or interest in favor in the Church, as an important part of the pope's daily duties. Bishops of every rite in communion with the Holy See, and from every nation, come to Rome, not only to venerate the tombs of the Apostles, but also to consult the supreme pastor of the Church. The master of the chamber (Maestro di Camera), whose office corresponds to that of grand chamberlain in royal courts, is the personage to whom all requests for an audience with the pope are made, even those which the ambassadors and other members of the Diplomatic Corps present through the cardinal secretary of state. He is one of the four Palatine Prelates who are in frequent relations with the pope, and his office is regarded as leading to the cardinale. The pope receives every day the cardinal prefect or spiritual ruler of the majority of the congregations. At these audiences decrees are signed or counsel given by the pope, and hence, by their very nature, they are of no slight importance to the practical work of the Church. Prelates connected with other institutions either in Rome or abroad, generals and procurators of religious orders, are also received at regular intervals and on stated days. The days and hours of regular audiences are specified on a printed form which is distributed to all cardinals and persons whose duty and privilege it is to have such audience. This printed form is changed every six months, as the hours of audience vary according to the season. Audiences to sovereigns or princes travelling under their own names and titles are invested with special ceremonies. When the pope consecrates, the spiritual ruler of the church is notified beforehand by the secretary of state of the proximate arrival in Rome of a sovereign, went, accompanied by the secretary of ceremonial, several miles beyond the city gates to meet him. Returning to Rome, he notified the pope of the event, and invested the sovereign to acquaint him with the day and hour of the pontifical audience. Sovereigns of the highest rank, being considered as equal to the pope, sit near him during audience, under the same baldachin or canopy. The attendance of guards and chamberlains and court officials is always doubled when such audiences are given. In the ordinary audiences given to priests and lay persons the general practice is that they present a letter of recommendation from the bishop of their diocese, which is presented to the rector of the national college in Rome of the country from which they come. The rector procures from the master of the chamber the necessary card of admission. Amongst the instructions printed on this card are those regulating the dress to be worn on such occasion: for priests the cassock with a large black mantle (ferraiolone), such as Roman secular priests wear; for lay men, evening dress with white cravat; for ladies, a black dress with black lace veil on the head. On these occasions it is forbidden to present to the pope for his signature written requests for indulgences, faculties, privileges, or the like. Since the election of Pope Pius X there has been some concession in the matter of dress for the laity in public audience; apparently, in view of the fact that every "man of good-will", non-Catholic as well as Catholic, who desires to see the pope may have his wish fulfilled. This has increased the number of persons received in audience, but it has lessened the regulations for the latter. Variations on various aspects of the tendencies of the time, which distinguished the audiences of Leo XIII and of the latter years of Pius IX, and which were statements that awakened profound interest.

P. L. CONNELLA.

Audiffredi, Giovanni Battista, b. at Scorgio, near Nice, in 1754; d. at Rome, 19 March, 1799. He entered the Dominican Order, and soon attracted attention by his taste for books and his talent for the exact sciences. After being occupied in various houses as professor and bibliographer, he was at length transferred to the Dominican house of studies (S. Maria sopra Minerva), and was placed in charge (1765) of the great Bibliotheca Casanatensis, founded in 1700 by Cardinal Girolamo Casanata. Audiffredi published a bibliographical work in four folio volumes entitled "Catalogus bibliothecae Casanatensis librorum typis jetitum" (Rome, 1761-1768). The work remains unfinished, not proceeding beyond the letter L, and contains a list of his own publications. Similar works were the "Catalogus historico-criticus Romanarum editionum seculi XV" (Rome, 1785, quarto), and the "Catalogus historico-criticus editionum Italianarum seculi XV" (ibid., 1794), which was to give an account of books printed in twenty-six Italian cities. Audiffredi did not live to complete the work. The first part, extending to the letter G, contains a short biography of the author, introduced by the publisher. Audiffredi's position enabled him to become an expert antiquarian, and he found time to cultivate his mathematical talent and to devote himself to astronomy. He built a small observatory, and at intervals busied himself with observation. The eighteenth century was much occupied with the problem of solar parallax. In 1761 and 1769 transits of Venus were observed, and Audiffredi contributed to the work in his publication, "Phenomena celestia et regna terrae," in which "Detectatio Dadei Ruffii" (anagram for Audiffredi). The predicted reappearance in the middle of the century of Halley's comet intensified scientific interest in cometic orbits. The epoch was favoured with a number of brilliant objects of this kind, and that of 1769 distinguished itself by its great nucleus and by the tail which stretched over more than half
the sky. Audiffredi took observations of the positions of the comet and published his results under the title, "Description de la comète de 1769" (1770). A general taste and capacity for the natural sciences distinguished this learned Dominican, but, like that of many savants, Audiffredi's life was one of retirement and obscurity.

H. DE LAZER.

Audin, J.-M. VINCENT, b. at Lyons in 1703; d. in Paris, 21 February, 1851. He first studied theology in the seminary of Argentière, and afterwards pursued the study of law. He passed his law examination but never practised his profession, having decided to enter on a literary career. His first publications were: "La lanterne magique" (1811); "Blanc, bleu et rouge" (1814); "Tableau historique des événements qui se sont accomplis depuis le retour de Bonaparte jusqu'au rétablissement de Louis XVIII" (1815). He also contributed to the "Journal de Lyon" founded by Ballanche. He soon left his native city and settled in Paris where he opened a bookstore and at the same time was active with his pen. He first published articles of a political cast, and historical tales in the style of the time, such as "Michel Morin et la Ligue"; "Florence ou la Religieuse"; "Le Régicide", and others. He then took as his first work of history being "La Concordat entre Léon X et Françoise Ier" (1821), which is, for the most part, a translation of that document. This was followed by his "Histoire de la St. Barthélemy" (2 vols., 1826). These two works were fairly well received although some slanting critics accused him of being too favourable to the Protestants. Audin publicly defended himself against this imputation, and asserted his firm belief in the doctrines of the Catholic Church. He now began his most important work, the history of the Protestant Reformation, which he published from 1839 to 1842 in four books, as follows: (1) "Histoire de la vie, des ouvrages et de la doctrine de Luther" (2 vols., Paris, 1839; 2d ed., 3 vols., 1850); (2) "Histoire de la vie, des ouvrages et de la doctrine de Calvin" (2 vols., 1841; 2d ed., 1851); (3) "Histoire de Léon X et de son siècle" (2 vols., 1844; 2d ed., 1851); (4) "Histoire de Henri VIII et du schisme d'Angleterre" (2 vols., 1847; 2d ed., 1862). The author claims to have based his statements upon researches made in the archives of various European cities, especially in the archives of the Vatican. The work shows that this assertion cannot be accepted in its entirety. The volumes are written in a romantic manner, and contain many particulars which sober criticism has long proved to be false. Dollinger says of the work on Luther: "Audin's work is written with an extraordinary, and at times almost naive ignorance of Luther's writings and contemporary literature, and of the general condition of Germany at that period" (Kirchenlex., a. v. Luther).

La Grande Encyclopédie, IV, 611.

J. P. KIRSCH.

Audizio, GUOGILMMO, b. at Brn, Piedmont, Italy, 1801; d. in Rome, 27 September, 1882. He was professor of sacred eloquence in the episcopal seminary of a. appointed presiding officer of the Academy of Superga (Turin) by King Charles Albert, but was expelled from this office because he was opposed to the religious politics of the Piedmontese Government. He then went to Rome, where Pius IX appointed him professor of natural and popular rights in the Roman University, and Canon of the Vatican Basilica.

Audizio was a pious and charitable priest, and spent large sums in benevolent works. He was an excellent teacher of sacred eloquence, and his manual on the subject was translated into many languages and frequently quoted approvingly. He also devoted himself to historical studies, especially in illustration of the pedantry, bringing to them absolutely good intentions, assiduous industry, and much just and acute observation, such as was not then common in the circle which surrounded him. Nevertheless these historical labours had no great intrinsic value, especially at a time when so large a number of documents were being published. For this reason they are no longer sought after by students.

Audizio had no deep insight into theology and law, and often displayed deplorable lapses on these subjects in his writings and his lectures. At the time of the Vatican Council he was accused of Gnosticism on account of the great grief of his patron Pius IX, and his work on political and religious society in the nineteenth century was condemned by the Church. Audizio, however, was profoundly Catholic in feeling, and not only did he fully submit to the condemnation of his book, but he warmly protested against the accusation of heterodoxy and disobedience. He was a fervent upholder of papal and Catholic rights against the political liberalism of Piedmont. He was one of the founders of the Catholic University of Turin and was a member of the "Armonia" of Turin. It was for this reason that he fell a victim to the anti-clerical influence which had deprived him of his post at Superga.

But in Rome Audizio united himself with that clique of several Italian ecclesiastics (such as M. Ch. Lefranci) who advocated reforms and concessions not always just and often premature, and who professed doctrines of little weight, sometimes false, often inexact. In this environment Audizio compromised himself, but his figure remains that of an extremely religious and charitable priest and of an eager student devoted to the Holy See and to the Church. Some pages of his works on the popes still merit consultation.

The works of Audizio are: "Lerzioni di Eloquenza Sacra" (several editions); "Juris Natural et Gentium Publici Fundamenta" (Rome, 1824); "Idea storica della diplomazia ecclesiastica" (Rome, 1864); "Storia religiosa e civile dei papi" (5 vols., Rome, 1860); "Sistema politica e religiosa di Federico II e di Pietro della Vigna" (1860); "Della società politica e religiosa rispetto al secolo XIX" (Florence, 1876), condemned by decree of the Holy Office, April, 1877; "Vita di Pio IX".

Nuova Enciclopedia Italiana (Suppl. I, 1889); Voce della Verità (Rome, 20 September, 1882).

U. BENVENI.

Auditor, the designation of certain officials of the Roman Curia, whose duty it is to hear (Lat. audire) and examine the causes submitted to the pope. They cannot, however, give a decision unless they receive delegated jurisdiction. They are, therefore, not judges in the strict sense of the term. These officials have been part of the Roman Curia since the Middle Ages. Amongst the principal dignitaries bearing this title are: (1) Auditor Papae. This official was at first the adviser of the pope in consistorial and theological matters, but he afterwards received also judicial power in civil and criminal cases. Since 1831, however, his duties are restricted to certain ecclesiastical affairs, such as assisting at the examinations of episcopal candidates for Italy and the transmission of the papacy, bringing to them absolutely special commission from the pope. He could also take cognizance of all cases of civil, criminal, and mixed jurisdiction in the States of the Church. Nearly all these and similar powers have now been withdrawn, and the tribunal of the Camera Apostolica is at present limited almost entirely to ex-
Audran, the family name of four generations of distinguished French artists, natives of Paris and Lyons, which included eight prominent engravers and two painters. They flourished in the seventeenth and eighteenth centuries, and some of their productions rank among the finest examples of the art of the business.

Charles, b. in Paris, 1594; d. 1674, was the elder of two brothers, some say cousins (the other being Claude the First), who attained reputation as engravers. Charles, who reached by far the greater eminence, after receiving some instruction in drawing, went as a young man to Rome to study further the engraver's art, and while there produced some plates which attracted attention. He engraved in pure line, and took the work of Cornelius Bloemart, with whom he studied, as his model. On his return from Italy the engraver lived for some years in Lyons before settling in Paris. Among his two hundred or more plates are several original portraits, including one of Henry II, Prince of Condé, and reproductions of works by Titian, the Caracci, Domenichino, Palma the Younger, Albano and Lesueur.

Claude the First, b. in Paris, 1597; d. at Lyons 1677, studied with Charles, but in his portrait and allegorical plates, which were not many and adopted a somewhat different manner, he became professor of engraving in the Academy of Lyons, and left, to perpetuate his branch of the family and its artistic reputation, three sons: Germain, Claude the Second, and Gérard, the last of whom became the most famous artist among the Audrains.

Germain, the eldest son of Claude the First, b. at Lyons, 1631; d. 1710, was a pupil of his uncle Charles and worked both in Paris and Lyons. Among his plates are portraits of Richelieu and Charles Emmanuel of Savoy (the latter after F. de la Monce), landscapes after Poussin, and families and ornamental designs, after Lebrun among others. His four sons were Claude the Third, Benoit the Elder, Jean, and Louis.

Claude the Second, son of Claude the First, b. at Lyons, 1639; d. in Paris, 1684, was the first painter in the family. After receiving instruction in drawing from his uncle Charles, he went to study painting in Rome. On his return to Paris he entered the studio of the celebrated historical painter Charles Lebrun, on whose style he formed his own. Audran was Lebrun's assistant in the manufacture of his works, of the "Battle of Arbelo" and the "Passage of the Granicus". He painted in fresco with much skill, under the direction of his master, the grand gallery of the Tuilleries, the great staircase at Versailles, and the gallery near the main stair-case of the Luxembourg, under the supervision of the enlightened patron of art, Prime Minister Colbert.

Gérard, third son of Claude the First, b. at Lyons, 1640; d. in Paris, 1703, went to Paris, after being taught engraving by his father and his uncle, to receive instruction from the painter Lebrun, who gave him some of his paintings to reproduce. He worked in Paris four years, and in 1655 went to Lyons, in the expectation that, when he was sufficiently advanced, he might become a pupil of Carlo Maratta. He etched as well as engraved, and produced in Rome some plates—notably, a portrait of Pope Clement IX which brought him much admiration. At the suggestion of Colbert, Louis XIV sent for the artist and made him a pensioner in the Académie de France at Rome. In 1671, when he returned to Paris, he was made a member of the Academy of Painting. His first productions of Gérard Audran were stiff and dry, and his subsequent original and vigorously brilliant style is credited to the councils of Maratta, Ciro Ferri, and, notably, of his lifelong friend Lebrun. A second visit to Rome was made, where he was signed the plate after "The Four Cardinal Virtues", by Domenichino, which is in the church of the Carlo ai Catinari. Among the original productions of this famous engraver and the portrait of the Rospigliosi Pope, already alluded to, those of Samuele Sorbieri, Andrea Argoli of Padua, the Capuchin Benoit Langlois, the Bishop of Angers Henri Arnaud, and the sculptor Francois du Questen, called Fiamingo, "Wisdom and Abundance above two Genii", and the vignette, "St. Paul preaching at Athens". Particularly esteemed among the plates of Gérard Audran are two after cartoons of Raphael "The death of Ananias" and "Paul and Barnabas at Cyprus", "The Bronze Serpent", "The Feast of the Gods", by Domenichino and "Coriolanus" after Poussin. Among the other painters whose works he reproduced are Titian, Rubens, Giulio Romano, Annibale Caracci, Pietro da Cortona, Guercino, Guido Reni, Palma the Younger, Lanfranco, Mignard, Coypel, Lesueur, Bourguignon, Lafage, and Girardon. He was at times assisted by his nephews, Benoit the Elder and Jean. In 1683 Gérard published a work called "The Proportions of the Human Body measured by the Figures of Antiquity", which has been translated into English.

Claude the Third, son of Germain, and the second painter of the family, b. at Lyons, 1558; d. in Paris, 1734, was notable as being the master of the famous Watteau. He studied with his father as well as under his uncle, Germain and Claude the Second. Chosen cabinet painter to the king, he was also for nearly thirty years keeper of the palace of the Luxembourg, where he died. He executed considerable work in oil and fresco in various royal residences.

Benoit the Elder, third son of Germain, b. at Lyons, 1601; d. 1721, in the vicinity of Sena, was first taught the family art by his father and then by his uncle Gérard. He made an excellent reputation by his reproduction of portraits and historical works. Among his best productions are "Athenes", after Poussin, and "The Bronze Serpent", after Lebrun. He became a Member of the Academy and engraver to the king.

Jean, fourth son of Germain, b. at Lyons, 1667; d. 1756, became, next to his celebrated uncle Gérard, the first genius of the family. He was the first in order, first under his father and then with his uncle. He had already distinguished himself at the early age of twenty. He was rewarded for his subsequent successes by being made (1707) engraver to the king, with the rent of the last apartments. This was followed next year by membership in the Academy. Jean Audran worked until
He was eighty. His masterpiece is considered to be "The Rack of the Sabines," after Poussin. Among his plates are portraits after Gobert—those of Louis XV, Vandyke, Coypel, Largillière, Rigaud, Trevisani, and Vivien—and compositions after, among others, Raphael, Rubens, the Caracci, Guido Reni, Domenichino, Pietro da Cortona, Albinoni, Maratta, Philippe de la Hire, Poussin, and Nattier. His son was Benoît the Younger.

Louis, the youngest son of German, b. at Lyons, 1670; d. in Paris, c. 1712, studied with his father and his uncle Gérard. He assisted his brothers, and did many original plates. A work of his to be noted is "The Seven Acts of Mercy," after Bourdon.

Benoît the Younger, b. in Paris, 1698; d. in the same place, 1772, was the last of the remarkable family to have any historical importance artistically. He was a pupil of his father and did plates after, among others, Veronese, Poussin, Watteau, Lancret, and Natoire.

Prosper Gabriel, a grandson of Jean, b. in Paris, 1744; d. 1819; he studied with his uncle, Benoît the Younger, and etched some heads. He gave up art for the law and became professor of Hebrew in the Collège de France.

DUPRÉ, Les Audrées; BRYAN, Dictionary of Painters and Engravers.

AGUSTUS VAN CLEEF.

Auenbrugger (or von Auenbrugg), Leopold, an Austrian physician, b. 19 Nov., 1722; d. 17 May, 1807. He was the inventor of percussion in physical diagnosis and is considered one of the small group of men to whose original genius modern medicine owes its present position. He was a native of Graz in Styria, an Austrian province. His father, a hotel-keeper, gave his son every opportunity for an excellent preliminary education in his native town and then sent him to Vienna to complete his studies at the university. He was graduated as a physician at the age of twenty-two and then entered the Spanish Military Hospital of Vienna where he spent ten years. His observations and experimental studies enabled him to discover that by tapping on the chest with the finger much important information with regard to diseased conditions within the chest might be obtained.

Ordinarily, the lungs when percussed, give a sound like a drum over which a heavy cloth has been placed. When the lung is consolidated, as in pneumonia, the sound produced by the tapping of the finger is the same as when the fleshy part of the thigh is tapped. Auenbrugger found that the area over the heart gave a modified, dull sound, and that in this way the limits of heart-dullness could be determined. This gave the first definite information with regard to pathological changes in the heart. During his ten years of patient study, Auenbrugger confirmed these observations by comparison with post-mortem specimens, and besides made a number of experimental researches on dead bodies. He injected fluid into the pleural cavity, and showed that it was perfectly possible by percussion to tell exactly the limits of the fluid present, and thus to decide when and where efforts should be made for its removal.

His later studies during this ten-year period were devoted to tuberculosis. He pointed out how to detect cavities of the lungs, and how their location and size might be determined by percussion. He also recognized that information with regard to the condition of the lung in the living might be obtained by placing the hand on the chest and noting the vibration, or fremitus, produced by the voice and the breath. These observations were published in a little book now considered one of the most important class of medical titles running, "A New Discovery that Enables the Physician from the Percussion of the Human Thorax to Detect the Diseases Hidden Within the Chest."

Like most medical discoveries, Auenbrugger's method of diagnosis at first met with neglect. Before his death, however, it had aroused the attention of Laennec, who, following up the ideas suggested by Auenbrugger, discovered auscultation. Since then, Auenbrugger has been considered one of the great founders of modern medicine. He lived to a happy old age, especially noted for his cordial relations with the younger members of his profession, and for his kindness to the poor and the suffering from tuberculosis. He is sometimes said to have died in the typhus epidemic of 1798, but the burial register of the parish church in Vienna, of which he had been for half a century a faithful member, shows that he did not die until 1807.

JAMES J. WALSH.

AUFSEES, JOSEF BERNHARD von, canon of Bamberg and Würzburg, b. 28 March, 1671, on the family estate of Mengersdorf; d. 2 April, 1754. He was baptized a Lutheran, but educated (1683-90) as a Catholic through the efforts of his uncle Carl Sigmund, canon of Bamberg and Würzburg. He was soon advanced to the same dignity in both churches, was provost of Bamberg in 1725, and held other offices of distinction in both cities. After 1728 he devoted the revenues of his benefices to the establishment of a house of studies at Bamberg: in 1728 he bestowed upon it the sum of 400,000 gulden (about $200,000). This Aufsees Seminary, or Institute, was destined for the reception of poor boys from the Dioceses of Bamberg and Würzburg. They were to be supported there during the entire time of their studies at the public academies. He originally intended to place the Jesuits in charge, but by his last will (17 February, 1738) turned it over to the care of the cathedral chapters of Bamberg and Würzburg. It was opened in 1741, and continued its beneficent career until the beginning of the nineteenth century, when the secularization of the property of the ecclesiastical principalities took place. The edifice was used as a hospital for incurables, and the revenues applied in part to scholarships (Stipendien), King Ludwig I reopened it as a house of studies (Königliches Studienseminar) under governmental supervision. The directeur and the president, who are now appointed from Government appoints holders of the 42 free places and the 20 places for youths who pay, also the officers of the institute, and administers its revenues.

THOMAS J. SHAHAN.

Auger, Edmund, b. 1550, near Troyes; d. at Como, Italy, 31 January, 1591, one of the great figures in the stormy times in France, when the Calvinists were striving to get possession of the throne. He entered the Society of Jesus while still living, and was regarded as one of the most eloquent men of his time. Mathieu calls him the "Chrysostom of France". Wherever he went, throngs flocked to hear him, and the heretics themselves were always eager to be present, captivated as they were by the charm of his wisdom and the delicacy of his courtesy in their regard. His entrance into France as a priest was in the city of Valence, where the bishop had just apostatized, and the Calvinists were then in possession. The efforts of Auger to address the people were followed by his being seized, sentenced to be burned to death. While standing on the pyre, he harangued...
the multitude, and so won their good will that they asked for his deliverance. Viret, especially, the chief orator of the Calvinists, wished to have a public discussion with him to convert him. Auger was consequently sent to prison for the night, but the Catholics rescued him before the conference took place. We find him afterwards in Lyons, during a pestilence, devoting himself to the plague-stricken. When the pest had ceased, in consequence of a vow he made, the authorities, in gratitude, established a college of the Society to which Auger asked, much to their astonishment, that the children of the Calvinists might be admitted. His whole life was one of activity in preaching and administering the responsible offices of Provincial, Rector, etc. that were entrusted to him. He was present in at least two battles, and was remarkable for his influence over the soldiers. He was finally made confessor of King Henry III, the first Jesuit to have that troublesome charge put upon him. The difficulty of his position was increased by the fact that the League was just then being formed by the Catholic succession. Its principles and methods were thought to trench on the royal prerogatives; but Sixtus V was in favour of it. Several Jesuits, notably the Provincial, Mathieu, who was deposed by Acquaviva, were its staunch upholders. Auger's position was intolerable. Loyal to the king, he was detested by the leagues, who at Lyons, the city that he had saved, threatened to throw him into the Rhone. They compromised by expelling him from the city. The general commanded him to relinquish the post of confessor, but the king secured the pope's order for him to stay. Finally, Auger prevailed on the monarch to release him, and he withdrew to Como in Italy, where he died. Shortly afterwards Henry was assassinated. Like Canisius in Germany, Auger published a Catechism for France. It appeared at first in Latin, and later he published it in Greek. He wrote a work on the Blessed Eucharist, instructions for soldiers, translations, some literary compositions, and also drew up the statutes for congregations, especially one in which the king was interested, called the Congregation of Penitents. There is a letter by him called "Spiritual Sugar," though he did not give it that title. He had written an address to the people of Toulouse to console them in the distress brought on by the calamities of the civil war. It so took the popular fancy that the authorities of the city published it under this curious caption.

T. J. CAMPBELL. AUGSBERG

Augsburg, or Augila, a titular see of Cyrenaica in Northern Africa. It was situated in an oasis in the Libyan desert which is still one of the chief stations (Aydjela, Aoudjila) on the caravan route from Cairo to Fezzan. Its forests of date-palms were famous in the time of Herodotus (IV, 172); they still crown the three small hills that rise out of an unbroken desert of red sand which in the near vicinity is strongly impregnated with salts of soda. The Moslem population is now about 10,000 and is governed by an official of the Bey of Tripoli who draws from the oasis an annual revenue of $12,000.

Augsburg, Confession of. See Confessions of Faith, Protestant.

Augsburg, Diocese of, in the Kingdom of Bavaria, Germany, suffragan of the Archdiocese of Munich-Freising, embracing the entire government district of Swabia and Neuburg, the western part of the government district of Upper Bavaria, and a small part of the government district of Central Franconia.

I. History. (1) Early Period.—The present city of Augsburg appears in Strabo as Damnina, a stronghold of the Liguri; in 14 v. c. it became a Roman colony known as Augusta Vindelicorum, received the rights of a city from Hadrian and soon became of great importance as an arsenal and the point of junction of several important trade routes. The beginnings of Christianity within the limits of the present diocese are shrouded in obscurity; its teachings were probably brought thither by soldiers or merchants. According to the acts of the martyrdom of St. Afa, who with her handmaids suffered at the stake for Christ, there existed in Augsburg, early in the fourth century, a Christian community under Bishop Narcissus; St. Dionysius, uncle of St. Afa, is mentioned as his successor.

(2) Medieval Period.—Nothing authentic is known about the history of the Augsburg Church during the centuries immediately succeeding, but it survived the collapse of Roman power in Germany and the turbulence of the great migrations. It is true that two catalogues of the Bishops of Augsburg, dating from the eleventh and twelfth centuries, mention several bishops of this primitive period, but the first whose record has received indubitable historical corroboration is St. Wiktierp (or Wichtpert) who was bishop about 768 or 769. He took part in several synods convened by St. Boniface in Germany; in company with St. Magnus, he founded the monastery of Füssen; and with St. Boniface he dedicated the monastery at Benediktbeuren. Under either St. Wiktierp or his successor, Tasso (or Tosso), about whom little is known, many monasteries were established, e.g. Wessobrunn, Ellwangen, Polling, Ottobeuren. At this time, also, the see, hitherto suffragan to the Patriarchate of Aquileia, was placed among the suffragan sees of the newly founded Archdiocese of Mainz (746) St. Sintpert (c. 810), hitherto Abbot of the monastery of Murbach, and a relative of Charlemagne, remo-
vated many churches and monasteries laid waste in the wars of the Franks and Bavarians, and during the early years of the Avanti, the Cathedral of Augsburg in honour of the Most Blessed Virgin; and obtained from the Emperor Charlemagne an exact definition of his diocesan limits. His jurisdiction extended at that time from the Iliric estuary to the Ljubelj, north of the Danube to the Alps, and south to the spine of the Alps. Moreover, various estates and villages in the valley of the Danube, and in the Tyrol, belonged to the diocese. Among the bishops of the following period a certain number are of exceptional importance, either on account of the offices they filled in the Empire, or for their personal qualifications; thus Witgar (887–87), Chancellor and Archdeacon of Louis the German; Adalbero (887–910), of the line of the Counts of Dillingen, confidant and friend of Emperor Arnulf, who entrusted Adalbero with the education of his son, the German King Louis the Child, distinguished for generosity to the monasteries. The See of Augsburg reached the period of its greatest splendour under St. Ulrich (923–973); he raised the standard of training and discipline, and established the present great schools and the establishment of new ones, and by canonical visitations and synods; he provided for the poor, and rebuilt decayed churches and monasteries. During the excursion of the Hungarians and Magyars into the Church of Augsburg (955), the courage of the citizens, compelled the Hungarians to withdraw, and contributed much to the decisive victory on the Lechfeld (955). He built churches in honour of St. Afra and St. John, founded the monastery of St. Stephen for Benedictine monks, and undertook three pilgrimages to Rome. The diocese suffered much during the episcopate of his successor, Henry I (973–982), for he sided with the foes of Emperor Otto II, and remained for several months in prison. After his liberation he renounced his former views and bequeathed to his church his possessions at Gelsenhausen. The diocese attained great splendour under Bishop Bruno (1006–29), brother of Emperor Henry II; he restored a number of ruined monasteries, founded the church and college of St. Maurice, placed Benedictine monks in the collegiate church of St. Afra, and added to the episcopal possessions by the gift of his own inheritance of Straubing. Under Bishop Henry II (1047–63), the guardian of Henry IV, the diocese secured the right of coinage and was enriched by many donations. Of Emperor (from 1047), 1063–77) the cathedral was dedicated (1065), and the canonicate and church of St. Peter and St. Felicitas were built. During the last years of this episcopate occurred the quarrel of Emperor Henry IV with the papacy in which Embrico took the imperial side and only temporarily yielded to the papal legate. The struggle continued under his successors; four anti-bishops were set up in opposition to Siegfried II (1077–96). Hermann, Count von Vohburg (1096 or 1097–1132) supported with treachery and cunning his claim to the see he had purchased, violently persecuted the Abbot of St. Afra, and expelled him from the city. Only after the conclusion of the Concordat of Worms (1122) did Hermann obtain the confirmation of the pope and relief from excommunication. The political disturbances of the time, the quarrels between the popes and the German emperors reacted on the Church of Augsburg. There were short periods of rest, during which ecclesiastical life received a forward impulse, as, for instance, under Bishop Walther II, Count Palatine von Dillingen (1125–1151), who, however, the disturbances of the diocese were again consolidated and increased by his own inheritance; under Udalskalk (1184–1202), who with great ceremony placed the recently discovered bones of St. Ulrich in the new church of Sts. Ulrich and Afra. These days of peace alternated with periods of conflict into which the Bishops of Augsburg were drawn, often against their will, in their capacity as Princes of the Empire and the leaders of the bishops accordingly suffered decline. Under Sibo von Lechfeld (1227–47) monasteries of the newly founded mendicant orders were first established in Augsburg. A celebrated member of the Franciscans was David von Michelau, the Dominican, Albertus Magnus, an Augustinian of Lauring. Additional causes of conflict were the troubles that arose between the Bishops of Augsburg and the city authorities. During the struggles between the popes and emperors, Augsburg, like other large cities throughout the Holy Roman Empire, attained enormous wealth, owing to the industrial and commercial activity of the citizens. From time to time efforts were made to restrict as much as possible the ancient civil rights of the bishops and their stewards, and even to abrogate them entirely. From a state of discontent the citizens passed from open violence to law under the Bishop Hartmann von Dillingen (1248–86), and wrung from the bishops many municipal liberties and advantages. A characteristic instance is the confirmation by Emperor Rudolph of Habsburg at the Imperial Diet of Aachen (1257), that the bishop of Augsburg should be registered in the imperial or municipal register, containing the ancient customs, episcopal and municipal rights, etc., specified in detail; on the same occasion Augsburg was recognized as a Free City of the Empire. Hartmann bequeathed to his Church his lands, including the town and castle of Dillingen. Peace reigned under the succeeding bishops, of whom Frederick I (1309–31) acquired for his see the castle and stronghold of Füssen; Ulrich II, von Schöneck (1331–37), and Henry III (1357–49) remained faithful to Emperor Louis the Bavarian; Markward I, von Rundbeck (1348–65), again redeemed the mortgaged property of the diocese, and by the favour of Emperor Charles IV was made Patriarch of Aquileia (1365). New dissections between the Bishop and the city arose under Burkhard von Ellerbach (1373–1404), whose accession was marked by grave discord growing out of the overthrow of the Patrizier, or aristocratic government, and the rise in municipal power of the crafts or guilds. Irritated by Burkhard's support of the nobility in their struggle with the Swabian cities, the inhabitants of Augsburg plundered the dwellings of the canons, drove some of the clergy from the city (1381), destroyed, after a short interval of respite (1388), the episcopal stronghold, and the castle, and burned the Church to the ground; the church remained most completely independent of the bishop. Burkhard proceeded with great energy against the heresy of the Wycliffites who had gained a foothold in Augsburg, and condemned to the stake five persons who refused to abjure. After the death of Eberhard II (1404–13), a quarrel arose in 1413 because the city of Augsburg declined to recognize the lawful Bishop, Anselm von Nenningen (1413–23), and set up in opposition Friedrich von Grafeneck who had been presented by Emperor Sigismund. This trouble was settled by Pope Martin V, who compelled both bishops to resign, and on his own authority replaced them by Peter von Schauenberg, Canon of Bamberg and Würzburg (1423–69).

Peter was endowed by the Pope with extraordinary facilities, marvellous to the eyes of the times in Germany. He worked with zeal and energy for the reformation of his diocese, held synods and made episcopal visitations in order to raise the decadent moral and intellectual life of the clergy; he restored the discipline and renewed the fallen splendour of his monasteries, canons and churches. He completed the rebuilding of the cathedral in Gothic style, consecrated it in 1431, and in 1457 laid the cornerstone of the new church of Sts. Ulrich and Afra. Succeeding prelates carried on the reformation of the diocese with no less solicitude and zeal.
Among them were Johann II, Count of Werdenberg (1469-96), tutor to the emperor’s son, afterwards Emperor Maximilian I, who convened a synod in Dillingen, and encouraged the recently invented art of printing. Benedictus von Zeller (1505-17), a great friend and benefactor of monasteries and of the poor, and patron of the arts and sciences. During the episcopate of these bishops Augsburg acquired, through the industry of its citizens, a world-wide importance. Some members of its guilds, e.g. the Fuggers and the Welser were the greatest merchants of their time; they lent large sums of money to the emperors and princes of Germany, conducted the financial enterprises of the papacy, and even extended their operations to the newly discovered continent of America. Among the citizens of Augsburg famous at that time in literature and art were the humanist Conrad Peutinger; the brothers Bernard and Conrad Adelmann von Adelmannsfelden; Matthias Lang, secretary to Emperor Frederick III; and later Car- danus, Sallustino a Bologna, Adam Schaller. The painters Holbein the elder, Burgkmair and others. With wealth, however, came a spirit of worldliness and cupidity. Pride and a super-refinement of culture furnished the rank soil in which the impending religious revolution was to find abundant nourishment.

(3) Reformation Period.—The Reformation brought disaster to the Diocese of Augsburg. It included 1,050 parishes with more than 500,000 inhabitants. Leipzig, the central point of churches to promote eight collegiate foundations, forty-six monasteries for men, and thirty-eight convents for women. Luther, who was summoned to vindicate himself in the presence of the papal legate before the Reichstag, at Augsburg (1518), found enthusiastic adherents in this diocese among the secular and regular clergy, but especially among the Carmelites, in whose con- vent of St. Anne he dwelt; he also found favour among the city councillors, burghers, and tradesmen. Bishop Christopher von Stadion (1517-43) did all in his power to arrest the spread of the new teachings; he called learned men to the pulpit of the cathedral, among others Urbanus Rhei- gius, who, however, soon went over to Luther; he convened a synod at Dillingen, at which it was forbidden to read Luther’s writings; he banished and temporized; theBonjour Leopold of Saxony (1512) against Luther; he forbade the Car- melites, who were spreading the new doctrine, to preach; he warned the magistrates of Augsburg, Memmingen, and other places not to tolerate the reformers, and he adopted other similar measures. Despite all this, the followers of Luther obtained the upper hand in the city council, and by 1524, various Catholic ecclesiastical usages, notably the observance of fasts, had been abolished in Augsburg. The apostate priests, many of whom, after Luther’s ex- ample, had taken wives, were deprived of the city council, and the Catholics were denied the right of preaching. The Anabaptists also gained a strong following and added fuel to the fire of the Peasants’ War, in which many monasteries, institutions, and castles were pillaged. The regular clergy was dissolved. The suppression of the Anabaptists, which was carried out from 1530, at which the so-called Augsburg Confession was delivered to Emperor Charles V in the chapel of the episcopal palace, the emperor issued an edict according to which all innovations were to be abol- ished, and Catholics reinstated in their rights and properties. The Emperor, however, in opposition, recalled (1531) the Protestant preachers who had been expropriated, suppressed Catholic services in all churches except the cathedral (1534), and in 1537 joined the League of Smalkald. At the beginning of this year a decree of the council was made, forbidding everywhere the celebration of Mass, preaching, and all ecclesiastical ceremonies, and giving to the Catholic and the emperor an absolute control over the city. An overwhelming majority of both secular and regular clergy chose banishment; the bishop withdrew with the cathedral chapter to Dillingen, whence he addressed the emperor and the emperor an appeal for the redress of his grievances. In the city of Augsburg the Catholic churches were seized by Lutherans and Zwinglians; at the command of the council pictures were removed, and in the instruction of Bucer and others the popular iconoclasia followed, resulting in the destruction of many splendid monuments of art and antiquity. The greatest intolerance was exercised towards the Catholics who had remained in the city; their schools were dissolved; parents were compelled to send their children to Lutheran institutions; it was even forbidden to hear Mass outside the city under severe penalties.

Under Otto Truchsess von Waldburg (1493-72) the first signs of improvement were noted in the attitude towards Catholics. Salient among the outstanding measures of the council (1546) between the emperor and the League of Smalkald, Augsburg, as a member of the league, took up arms against Charles V, and Bishop Otto Truchsess von Waldburg in opposition to the plenipotentiary of the emperor, however, concluded peace with Charles V, and Bishop Otto Truchsess von Waldburg, who had been created cardinal, returned to the city with the cathedral chapter, followed shortly afterwards by the emperor. At the Diet held at Augsburg in 1548 the so-called “Augsburg Interim” was arranged. After a temporary occupation of the city and the suppression of Catholic services by the Elector, Prince Maurice of Saxony (1552), the “Religious Peace of Augsburg” was concluded at the Diet of 1555; it was followed by a long period of peace. The disturbances of the Reformation were more disastrous in their results throughout the diocese and adjoining lands than within the immediate precincts of Augsburg. Thus, after many perturbations and temporary reassertions of the Catholic religion, the Protestants finally gained the upper hand in Württemberg, Oettingen, Neuburg, the free cities of Nördlingen, Memmingen, Kaufbeuren, Dinkelsbühl, Donauworth, Ulm, in the ecclesiastical territory of Feuchtwangen and elsewhere. Altogether during these years of religious warfare the Diocese of Augsburg lost to the Reformation about 250 parishes, 24 monasteries, and over 500 benefices. Although the religious upheaval brought with it a great loss of worldly possessions, it was not without beneficial effect on the religious life of the diocese. Bishop Christopher von Stadion, while trying to protect Catholicism from the inroads of the Reformation, had sought to strengthen and revive ecclesiastical discipline, which had sadly declined, among both the secular and regular clergy. This was done more energetically by Bishop Otto Truchsess, who achieved a fruitful counter-reformation. By frequent visitations he sought to become familiar with existing evils, and by means of diocesan synods and a vigorous enforcement of the church’s own statutes endeavored to remedy these conditions. He advanced the cause of education by founding schools; he summoned the Jesuit to his diocese, among others Blessed
AUGSBURG 76

Peter Canisius, who from 1549, in the capacity of cathedral preacher, confessor, and catechist, exercised a remarkably fruitful and efficacious ministry. In 1554 he founded a seminar, in Dillingen for the training of priests, obtained from the pope (1554) a decree raising it to the rank of a university, and in 1554 gave the direction of the new university to the Jesuits, for whom he had built a college in Dillingen. It is due to the untiring labors of those Pius Gal. that much larger portions of the diocese were not lost to the Church. Under the immediate successors of Otto the revival instituted by him progressed rapidly, and many excellent decrees were formulated. Under Ignatius von Loyola (1516-91) a first boarding school (alumnae) was founded in Dillingen, colleges were established by the Jesuits in Landshut, and, through the bounty of the Fugger family, in Augsburg (1580). Heinrich von Knöringen, made bishop at the early age of twenty-eight, took especial interest in the University and the Seminary of Dillingen, both of which he enriched with many endowments; he convened several synods, converted Duke Wolfgang of Neuburg to Catholicism, and during his long episcopate (1598-1640) reconciled many Protestant clerics to the Catholic faith, being in this office of special importance to the Jesuits, for whom he founded establishments in Neuburg, Memmingen, and Kaufbeuren. By means of the Edict of Restitution of Emperor Ferdinand II (1629), vigorously and even too energetically prosecuted by the bishop, the Thirty Years' War first accomplished an almost complete restoration of the former possessions of the Diocese of Augsburg. The occupation of Augsburg by Gustavus Adolphus of Sweden (1632) restored temporarily the ban on the administration of the Protestant religious orders of the city of the imperial troops (1635) the Catholics were hard pressed and were forced to give up all they had gained by the Edict of Restitution. Finally, the Treaty of Westphalia (1648) established equality between Catholics and Protestants, and was followed by a long period of internal peace. On account of the losses entailed on the diocese by the treaty, a solemn protest was laid before the imperial chancery by Bishop Sigmund Franz, Archduke of Austria (1646-63). This bishop, on account of his youth, ruled the diocese through administrators, and later resigned his office. His successor, Johann Christoph von Freiberg (1668-90), was particularly desirous of liquidating the heavy burden of debt borne by the chapter, but was nevertheless generous toward the many monastic orders. His successor, Alexander Sigmund (1690-1737), son of the Palatine Elector, guarded the purity of doctrine in liturgical books and prayer books. Johann Friedrich von Stauffenberg (1737-40) founded the Seminary of Meiningen and introduced missions among the people. Joseph, Landgrave of Hesse-Darmstadt (1740-48) exhume with great ceremony the bones of St. Ulrich and instituted an investigation into the life of Crescentius Hoss of Kaufbeuren, who died in the odium of sanctity. Klemens Wenzelslaus, Prince of Saxony and Archbishop of Main, (1768-1812), made excellent disciplinary regulations, and took measures for their execution; after the suppression of the Society of Jesus he afforded its members protection and employment in his diocese; he made a vigorous resistance to the division of lands by secular infidelity, and was honored by a visit from Pope Pius VI (1782).

(4) French Revolution and Secularization.—During this episcopate began the world-wide upheaval inaugurated by the French Revolution. It was desecrated by Bishop Otto, who had a large number of monasteries in Germany, and to bring about the fall of Augsburg from the dignity of a principality of the Empire. In 1802, by act of the Delegation of the Imperial Diet (Richtenreputationsreze), the territory of the Diocese of Augsburg was given to the Elector of Bavaria, who took possession 1 December, 1802. The cathedral chapter, together with forty canonicals, nine minor colleges, twenty-five abbies, thirty-four monasteries of the mendicant orders, and two convents were the victims of this act of secularization. Unfortunately, owing to the inconsiderate conduct of the commissioners appointed by the Bavarian government, many valuable artistic treasures, valuable books, and documents were destroyed. For five years after the death of the last bishop of princely rank (1812) the episcopal see remained vacant; the parts of the diocese lying outside Bavaria were annexed to it and annexed to other dioceses. It was not until 1817 that the Concordat between the Holy See and the Bavarian government reconstructed the Diocese of Augsburg, and made it subject to the Metropolitan of Munich- Freising. In 1816, the territory subject to the ecclesiastical authority of Augsburg was increased by the addition of sections of the suppressed See of Constance, and the present limits were then defined. (5) The Nineteenth Century.—As the new bishop, Franz Karl von Hohenlőhe-Schillingfürst, died in office, and was succeeded by Joseph Maria von Fraunberg was soon called to the archiepiscopal See of Bamberg, there devoted upon their successors the important task of rearranging the external conditions and reanimating religious life, which had suffered severely. The bishop, Marquard von Rechberg (1816-36) was successful in his endeavours to further the interests of souls, to raise the standard of popular education through the medium of numerous ordinations and frequent visitations. He assigned the administration of the diocese to the clergy and to the monks of the Benedictine Abbey of St. Stephen in Augsburg, founded by King Ludwig (1834). Petrus von Richards (1837-55) displayed energy and persistent zeal in promoting the interests of his diocese and the Catholic Church in general, and encouraged the giving of missions to the people, the establishment of many religious institutions for the care of the sick and for educational purposes, and carefully superintended the training of the clergy. The same spirit characterized the labours of the succeeding bishops: Michael von Deulin (1856-58), who after a short episcopate was raised to the Archbishops of Bamberg; Franz Xaver von Dinkel (1858-94), under whom both seminaries and the deaf and dumb asylum were established in Dillingen, and who maintained a strict system of discipline; Michael von Hotzel (1895-1902) whose episcopate was marked by the attention paid to social and intellectual pursuits, and the number of missions given among the people as well as by the solemn celebration of the beatification of the pius nun Crescentia Hoss. He was succeeded by Maximilian von Limp, b. at Nesselwang, 8 March, 1842; ordained priest, 22 July, 1865; appointed bishop, 18 March, 1902, consecrated, 20 July, 1902.

II. RELIGIOUS STATISTICS.—According to the census of 1 December, 1900, the Diocese of Augsburg contained 777,988 Catholics and about 100,000 of other beliefs; at present there are about 818,074 Catholics. Socially, the population is chiefly of the middle class; recently, however, on account of the rapid growth of the industrial population of Augsburg, in Lechhausen, Memmingen, and other places, the working classes are increasing in numbers. Leaving out of consideration the larger cities, in which the various denominations are well represented, it may be said that the southern half of the diocese, and the whole of the territories of Bavaria (Barbarossa proper), are almost entirely Catholic, while in the northern part a mixture of creeds predominates. That small portion of Mittelfranken (Central Franconia) which belongs to the diocese is overwhelmingly...
ingy Protestant. The relations between the various religious denominations are in general friendly and peaceable. For the work of sacred ministry the dio-

cese is divided into 40 deaneries (1 city deanery at Augsburg, and 39 rural deaneries), with 862 parish churches, 31 parochial curacies, 16 curacies, 226 bene-

dictions. The diocesan synod is held annually. In general each parish is complete and independent, but in the mountainous southern section there are many parishes to which are attached from twenty to a hundred dependent churches (Pfarr- und Pfarrgemeinden). The cathedral chapter consists of the provost of the cathedral, a dean of the cathedral, 8 canons, and 6 vicars. In 1907 the clergy of the diocese numbered 1,439: 815 parish priests and paroch-

cial curates, 49 parochial vicars, 11 curates, 73 beneficed clerergymen, 53 vicars of benefices, 180 chaplains and assistant priests, 94 prebendaries and clerical professors (not including the professors of the Benedictine Abbey of St. Stephen in Augsburg); 74 priests temporarily stationed in the diocese, 95 regulars, 40 priests engaged in other dioceses or on missions, and 100 members of the following establishments: Benedictines, 3 (Augs-

burg, Andechs, Ottobeuren), with 33 priests, 6 clerics, 56 lay brothers; Mission Society of St. Benedict, 1 (St. Ottilien), with 36 priests (12 at present outside the Province of Augsburg), 117 lay brothers, 3, with 7 priests and 22 lay brothers; Capuchins, 5, with 28 priests, 18 clerics, and 37 lay brothers; Brothers of Mercy, 6, with 4 priests and 54 lay brothers. Altogether there are 18 establishments conducted by the male orders, with 108 priests, 55 clerics, and 286 lay brothers. For more numerous are the female orders and religious congregations; they number 226 establishments and branches, with 2,815 members. They are: Sisters of Mercy of St. Vincent de Paul, 55 houses, with 362 sisters; Franciscans, with their mother houses at Augsburg, Dil-

lingen, Kaufbeuren, and Mindelheim, 71 establishments, with 735 sisters; Arme Franziskanerinnen with mother-house at Mallsdorf, 34 establishments, with 171 sisters; Englische Fräulein (English Ladies), 11 convents with 311 ladies, 160 lay sisters, and 43 novices; Dominican nuns, 11 convents with 271 choir sisters, 17 lay sisters, and 36 novices; Poor School Sisters, 21 foundations with 166 sisters, Elisabeth-

erinnen (Sisters of St. Elizabeth), 4 foundations with 5 priests; Missionaries of the Holy Redeemer with their mother-house at Ober-

bronn in Alsace, 61 foundations with 24 sisters; Cis-

tercian nuns, 1 convent with 29 choir nuns, 15 lay sisters, and 2 novices; Mission Sisters of St. Benedict, 1 convent with 65 sisters and 9 novices; Sisters of St. Joseph of Ursberg, 7 foundations with 231 sisters and 92 novices.

III. EDUCATION. As the primary schools in Bavaria are the property of the local civic corporation and under State control, there are no parochial schools in the strict sense of the word. According to the Bavarian Constitution of 1818 nothing more is assured to the Church than the direction of religious instruction and the surveillance of religious life in the school. The exercise of this right in 1,074 primary schools of the Diocese of Augsburg, by means of 6 ecclesiastical county (Besirck) school-inspectors and 50 ecclesiasti-

cal district school-inspectors. However, in many of the girls' schools (Mädchenschulen) the direction of studies is confined entirely to religious societies under the control of the diocese. The diocesan school inspectors have charge of the studies in 19 schools, the Franciscans in 35, the Dominicans in 11, the Sisters of St. Joseph of Ursberg in 3; the English Ladies are excellent teachers for the higher educa-

tion of women, and conduct 11 institutes for girls. For the training of the clergy, the Theological Seminary and the Diocesan Seminary for ecclesiastics at Dil-

lingen; the Diocesan Seminary for boys at Dillingen; St. Stephen's Catholic House of Studies at Augsburg, under the direction of the Benedictines, which in-

cudes a Lyceum, a classical Gymnasium, a royal seminary of studies and an institute for higher education; there are besides about forty students of the University of Munich and attend the courses of the University. The state, or communal, institutions of higher education for boys number 28 in the Diocese of Augs-

burg: 5 gymnasia, 1 Realgymnasium, 1 seminary of studies, 5 Progymnasien, 2 Latin schools, 7 Klosteraus-, 3 agricultural winter schools, 1 Realschule with Latin, 1 normal school, and 2 preparatory schools. We must also mention the Cassianum in Donauwörth, a Catholic institute of pedagogy, which includes a training-school, a publishing house for books and periodicals, a printing press, and other appurtenances. In all of these institutions Catholic instruction is given to Catholic students by Catholic clergymen.

IV. CHARITABLE INSTITUTIONS. The charitable institutions of the diocese are for the most part the property of the civic or diocesan authority, or local associations; they are administered, mostly by religious communities to whom is also confided the care of the sick, or orphans, and of the aged. There are 37 hospitals, 24 infirmaries, 12 orphanages, 2 for children, 3 institutions for the deaf and dumb, 12 houses for the poor and orphans, 3 poorhouses. 1 hospital for priests, 1 home for invalids, 5 institutions for servants under the patronage of the Blessed Virgin (Marienansälen), 1 House of St. Anne (Annaanstalt) for the factory girls in Augsburg, 1 House of St. Elisabeth for incurables, 5 institutions for various other purposes (e.g. the Kneippanum in Wörishofen). One Catholic institution of Augsburg deserves special mention: the Fuggers' orphanage (Ulrich, Georg, and Jakob) of the Fuggers. It consists of an extensive block of 53 houses with 106 apartments; in accordance with the conditions of the foundation these must be let at a very small rent to indigent people. It is a noble and durable memorial of the spirit of Christian charity that abounded in the Catholic Middle Ages. In recent times other works of Christian charity have been inaugurated. The good priest and superintendent of studies (Regens), Father Wagner of Dillingen, es-

tablished many of the religious schools for the blind; Father Ringeisen, parish priest of Ursberg, estab-

lished there the Sisters of St. Joseph for the exercise of every form of charity. For aged and infirm priests there exists a fund with 1,277 subscribers and a reserve of 1,550,000 marks ($397,500). There is also an association for the support of infirm priests, with 792 members and a fund of 26,000 marks ($6,500). Prominent among the numerous social-political and religious associations of the diocese are 16 Catholic apprentices' unions (Lehrjahrvereine), the local union in Augsburg maintaining its own home for apprentices; 49 Catholic journeymen's unions (Geiesservereine), 4 Unions of St. Joseph; 52 Catholic workingmen's unions; 19 Catholic students' clubs; 3 Catholic clubs for working women, with 504 members; 7 Catholic "Patronages" for working people; the Ulrich-union for the support of seminarians; the Men's Catholic Association, the Christian Peasants' League; the Cecilian Club; St. Mary's Protectory for girls; the Young Women's Association, and the Association of Catholic Motto Schools. The numerous societies furnish abundant evidence of the vigorous religious life of the dio-

cese. Such pilgrimages are those of the Holy Cross (11 May) and to the tomb of St. Ulrich at Augsburg (4 July). There are also processions to the holy mountain of Andechs during the rogation days, and to the mole hill (1000 feet), 8 miles from Augsburg, where cholera (1854). Other pilgrimages are those to the
relics of St. Rasso at Grafrath, to the church of the Holy Sepulchre (Unserer Herrn Ruh) near Friedberg, and to Maria Siebenreich.

V. ART AND MONUMENTS.— Among the ecclesiastical monuments of the Diocese of Augsburg the cathedral holds first place. It was begun in the Roman style in 994, dedicated 1010, and remodeled, 1331-1431, into a Gothic church with five towers and the main choir with its circle of chapels was added. The tower was increased in height in 1488–89 and 1564. Among the innumerable art treasures of the cathedral may be mentioned the vestments of St. Ulrich; the four altars with paintings by the elder Holbein illustrating the life of St. Ulrich and St. Virgil in the doors of the left lateral nave, adorned with remarkable reliefs, and dating from the first half of the eleventh century; the ancient stained windows, some of which go back to the eleventh and twelfth centuries; the interesting tombs and slabs of the fourteenth and succeeding centuries, both in the cathedral itself and in the adjoining cloister, and many other objects of value and interest. The church of Sts. Ulrich and Afra, built 1467–1594, in particular contains the tomb of the, stone sarcophagus of St. Afra, the Fugger chapel with the memorial to Hans Fugger, and three magnificient altars in rococo style. The Late Gothic church of the Holy Cross was renovated, early in the eighteenth century, in florid Roman rococo style, and is a favourite place of pilgrimage. Among the chief ecclesiastical edifices outside the city of Augsburg are the Romanesque basilicas of Altenstadt, Ursberg, Thierhaupten; the Gothic churches of Kaisheim, Dinkelsbühl, Donauwöhr, Landsberg; the Augustinian church of Arling, and the remains of the restored and ornamented in sumptuous barocco or rococo style. VI by Schnider; vol. I has not appeared in print); HÖPF, Pfarreistatistik des Bistums Augsburg (Augsburg, 1850—60); BAUERMANN, Geschichte Augsburgs (Kempten, 1880—90); many original manuscripts in the Zeitschrift des Historischen Vereins für Schlesien und Neuburg (Augsburg, 1847—99); Jorenblatt des Historischen Vereins für Schlesien und Neuburg (Augsburg, 1847—99); for the history of the fine arts in Augsburg see PLÖTZ, Die Bildwerke an den Emporen der Augsburger Dom (Stuttgart, 1855); BÜFF, Augsburg in der Bekenntnisszeit (Bamberg, 1853); KEMP, Alt-Augsburg (100 plates, Berlin, 1888); SCHRODER, Die Domkirche zu Augsburg (Augsburg, 1900); FREYTAG, Die Sonntagskirche in Augsburg (Augsburg, 1900); WIED-LIEBENGUTH, Das Jahrhundert 1860 in der Augsburger Kunst (Munich, 1901); RITTER, Augsburg (Leipzig, 1905).

JOSEPH LINS.

Augsburg, Religious Peace of. See REFORMATION.

Augsburg, Synods Of.—From the time of St. Boniface (d. 754), especially during periods of earnest revival of religious and ecclesiastical life, synods were frequently convened by the bishops of Germany, and convened by those of imperial authority or of provinces. As the German bishops were, on the one hand, princes of the empire, and the emperor was, on the other, the superior protector of the Roman Church, these synods came to have little im-

portance in the general ecclesiastical and political development of Western Christendom. Two general imperial synods were held in Augsburg. The first, convened in August, 932, through the efforts of Emperor Otto the Great, provided for the reform of abuses in civil and ecclesiastical life. Frederick, Archbishop of Mainz, presided, and three archbishops and twenty bishops of Germany and northern Italy took part. Eleven canons were promulgated concerning ecclesiastical life and other matters of church discipline. A similar synod, convened by Anno, Archbishop of Cologne (27 October, 1062), was occupied with the internal conditions of the empire and the attitude of the Church of Germany toward the schemes of a new crusade, during the reign of Alexander II. The diocesan synods of Augsburg correspond as a rule with the synodal system as carried out in other parts of Germany. We find in this diocese, as elsewhere in Germany, the synodi per villas, convened under the influence of the Carolingian capitularies. They were visitation-synods, held by the bishop assisted by the archdeacon and the local lord or baron (Gaugraf). Their purpose was inquisitorial and judicial. After the first period of St. Ulrich (743), and in close relation to the system of provincial councils, diocesan synods were held at stated times, chiefly in connection with matters of ecclesiastical administration (legalizing of important grants and privileges, etc.), and the settlement of disputes. After the thirteenth century these diocesan synods lost their character of legislative; decrees were issued regulating the lives of both ecclesiastics and laymen, and church discipline was secured by the publication of diocesan statutes. The earliest extant are of Bishop Friedrich (1309—31). These diocesan synods fell into decay during the course of the fourteenth century.

In consequence of decrees of the Council of Basle the synods of the Diocese of Augsburg rose again to importance, so that after the middle of the fifteenth century they were once more frequently held, as for example: by the able Bishop Peter von Schauenburg (1424—69) and his successor, Johann von Werdenburg, also by Friedrich von Zollern (1469) and Heinrich von Liechtenau (1506). The two Bishops Christopher of Stadion (1517—43) and Otto Truchsess of Waldburg (1543—73) made use of diocesan synods (1517, 1520, 1543 in Dillingen, and 1536 in Augsburg) for the purpose of checking the progress of the Reformation through the imperial jurisdiction. In the case of Emperor Charles V there were but few ecclesiastical assemblies of this kind; as early as 1567, the synod of that year, convened for the purpose of carrying out the reforms instituted by the Council of Trent, shows signs of the decline of the synod as a diocesan institution. The Bishops of Augsburg were, moreover, not only the ecclesiastical superiors of their diocese, but after the tenth century possessed the Regalia, the right of holding and administering royal fiefs with concurrent jurisdiction. This right of coinage was obtained by St. Ulrich. At a later period disputes were frequent between the bishops and the civic authorities, which culminated in an agreement (1399) by which the city was made practically independent of the episcopal authority.

J. P. KIRSCH.

Augsury. See DIVINATION.

Augsut, a titular see of Cilicia in Asia Minor, whose episcopal list (363—434) is given in Gams (435). Several cities bore the same name in Roman antiquity, some of which are yet flourishing, e. g. Augusta.
Augsburg (Auch in Southern France); Augusta Batavorum (Leyden in Holland); Augusta Asturica (Astorga in Spain); Augusta Frigatia (Aosta in Northern Italy); Augusta Emerita (Mérida in Spain); Augusta Rauracorum (August in Switzerland); Augustus Suevorum (Soissons in France); Augusta Tarraconorum (Tarragona in Italy); Augusta Treviri (Trier in Germany); Augusta Trinobanti (London); Augusta Vindeliciorum (Augsburg in Bavaria).

In 1748, G. Gottfried, II, 578-810; Smith, Dict. of Greek and Roman Geogr., I, 338.

THOMAS J. SHAHAN.

Augustus von Alfeld (Alveldt, or Alvedia Gren), one of the earliest and most aggressive opponents of Luther, b. in the village of Alfeld, near Hildesheim, from which he took his surname; d. probably in 1502. Nothing is known of his parentage, youth, and early training. He first comes into prominence as a Franciscan of the Regular Observance, belonging to the Saxon Province of the Holy Cross. The absence of his name on the matriculation roster of the philosophical and theological universities of Erfurt, Rostock, Leipzig, and Wittenberg, usually frequented by the members of the above-named province, leaves the presumption that he made his studies in one of the monastic schools. At the solicitation of Adolf of Brandenburg, Bishop of Bremen, in 1520, he was elected Lector of Holy Writ at Leipzig, where he entered the theological arena to controvert the Lutheran heresy (Mencken, Scriptores rer. Ger., II, 50). On 20 January, 1521, he presided at the public theological disputation held at Weimar, between Lange, Mechel, and the Franciscans, on the merit of monastic vows and life (Kopp, Kleinere Nachlese nützlicher Urkunden zur Erläuterung der Reformationsgeschichte, II, 514, Leipzig, 1727), the result of which has not been handed down, though it called forth a satirical poem at the time (ib., 520). In 1523 he became Guardian of the monastery at Halle, in which position he is said to have found in 1528. In 1529 he was elected Provincial of the Saxon Province of the Holy Cross.

Afeld was a man of fine linguistic attainments, a fluent Latinist, familiar with the ancient classics, conversant with Greek and Hebrew, and well acquainted with the humanistic writings of his day. His theology was that of medieval scholasticism, in which he thought the church had not left the church, and unpinned in combating the novel, and to the theologically disciplined mind contradictory, assertions' (Otto, Johannes Cochleus, 132, Breslau, 1878). At Holy Writ he expressed much attention and thought to the Bible, so that he could state that "from my childhood I have devoted my time and life to it" (Super Apostolica Sede, etc., iii a). In the textual studies of the Greek and Hebrew versions, the translation of Erasmus, the exegitical writings of Faber Stapulensis (Levitre d'Etaples) and the Complutensians, he shows a keen, analytical mind and sound judgment. His memory and reputation, however, rest on his polemical activity and writings. The latter are marred at times by a tone of bitterness and sarcasm that detract from their intrinsic worth and gave his opponents, notably Lonicer, Luther's amanuensis (Biblia nova Alvedensis Wittenbergae Anno MDXX) opportunity to censure the catalogued epithets flung at Luther (Cyprian, Nützliche Urkunden, in 1520, from the Furtherer des Reformationsgeschichte, II, 158). If it be remembered that Luther calls him bos Lipsicus (De Wette, Briefe, Sendschreiben, etc., I, 446); asinus (op. cit., 451, 453, 533); Liptensius onager (op. cit., 446); Lipsianus (op. cit., 471, 475, 542), merely to single out a few controversial amenities, his literary style may be measurably condescended.

LEMMENS, Pater Augustinus von Alfeld (Freiburg, 1899); Floss.

Augustine, Rule of Saint. The title, Rule of St. Augustine, has been applied to each of the following documents: (1) Letter cxxi addressed to a community of women; (2) Sermons ccxl and ccxliv, entitled "De vitae et moribus clericensu suorum"; (3) a portion of the Rule drawn up for clerks or Consoritum monachorum; (4) a Rule known as Regula secunda; and (5) another Rule called: "De vita eremiti ad sororem liber." The last is a treatise on eremitical life by Blessed Eired, Abbot of Rievaulx, England, who died in 1166 and, as the two preceding rules are of unknown authorship, it follows that none but Letter cxxi and Sermons ccxl and ccxlv were written by St. Augustine. Letter cxxi is addressed to nuns in a monastery that had been governed by the sister of St. Augustine, and in which his cousin and niece lived. His object in writing it was merely to quiet troubles incident to the nomination of a new superior, and meanwhile he took occasion to expiate upon some of the virtues and practices essential to the religious life. He dwells upon chastity, poverty, obedience, detachment from the world, the appointment of labour, the mutual duties of superiors and brethren, and the "proviso" that all prayer in common, fasting and abstinence proportionate to the strength of the individual, care of the sick, silence, reading during meals, etc. In his two sermons "De vitae et moribus clericiorum suorum" Augustine seeks to dispel the suspicions harboured by the faithful of Hippo against the clergy leading a monastic life with him in his episcopal residence. The perusal of these sermons discloses the fact that the bishop and his priests observed strict poverty and conform to the example of the Apostles and early Christians by using their money in common. This was called the Apostolic Rule. St. Augustine, however, dilated upon the religious life and its obligations on other occasions. Aurelius, Bishop of Carthage, was greatly disturbed by the conduct of monks who indulged in idleness under pretext of contemplation, and at his request St. Augustine published a treatise entitled "De opere monachorum" wherein he proves by the authority of the Bible, the example of the Apostles, and even the exigencies of life, that the Papal regulations do not lead to great happiness, and that the spiritual gains of poverty, humility, and obedience are not to be used for the sake of the world. In several of his letters and sermons is to be found a useful supplement to his teaching on the monastic life and the duties it imposes. These are easy of access in the Benedictine Constitution, where they are treated more fully and under the words: monachi, monaches, monasterium, monastica vita, sanctimoniales.

The letter written by St. Augustine to the nuns at Hippo (425), for the purpose of restoring harmony in their community, deals with the reform of certain phases of monasticism as it is understood by him. This document, to be sure, contains no such clear, minute prescriptions as are found in the Benedictine Rule, because no complete rule was ever written prior to the time of St. Benedict; nevertheless, the Bishop of Hippo is a law-giver and his letter is to be read weekly, that the nuns may guard against or repent any infringement of it. He considers poverty the foundation of the religious life, but attaches no less importance to fraternal charity, which consists in living in peace and concord. The superior, in particular, is recommended to practise this virtue although not, of course, to the extreme of omitting to chastise the guilty. However, St. Augustine leaves her free to determine the nature and duration of the punishment imposed, in case of her privilege even to expel nuns that have become incorrigible. The superior shares the duties of her office with certain members of her community, one
Augustine of whom has charge of the sick, another of the cellar, another of the wardrobe, while still another is custodian of the books which she is authorized to dispose of. He caused the nuns to make their own habits, which consist of a dress, a cincture and a veil. Prayer, in common, occupies an important place in their life, being said in the chapel at stated hours and according to prescribed forms, and comprising hymns, psalms, and readings. Certain prayers are usually recited by the sisters, especially indicated, are chanted; but as St. Augustine enters into no minute details it is to be supposed that each monastery conformed to the liturgy of the diocese in which it is situated. Those sisters desiring to lead a more retired life lived in the Hermitages, where they devoted themselves to private devotions. The section of the Rule that applies to eating, although severe in some respects, is by no means strict beyond observance and the Bishop of Hippo tempers it most discreetly. Fasting and abstinence are recommended only in proportion to the physical strength of the individual, and when the saint speaks of obligatory fasting he specifies that such as are unable to wait for the evening or ninth hour meal may eat at noon. The nuns partake of very frugal fare and, in all probability, ate little more. However, this does not preclude the participation of the most tender care and solicitude, and certain concessions are made in favour of those who, before entering religion, led lives of luxury. During meals some instructive matter is to be read aloud to introduce the sainted discourse. Although the rules contains but few precepts, it dwells at great length upon religious virtues and the ascetic life, this being characteristic of all primitive rules. In his sermons oevii and oeviii the saint discourses on the monastic observance of the vow of poverty. Before making their profession the nuns divest themselves of all their goods, their monastery being responsible for supplying their wants, and whatever they may earn or receive is turned over to a common fund, the monasteries having the right of possession. In his treatise, "De opere monachorum", he inculcates the necessity of labour, without, however, subjecting it to any rule, the gaining of one's livelihood rendering it indispensable. Monks of course, devoted to the ecclesiastical ministry observe, ipso facto, the precept of labour, from which observance the inferior monastics are legitimately dispensed. These, then, are the most important monastic prescriptions found in the rule and writings of St. Augustine.

Monastic Life of St. Augustine.—Augustine was at first standing out unmistakably in the reading of his life and works. Although a priest and bishop, he knew how to combine the practices of the religious life with the duties of his office, and his episcopal house in Hippo was for himself and some of his clerics, a veritable monastery. Several of his friends and disciples elevated to the episcopacy imitated his example, among them Alypius at Tagaste, Possidius at Calama, Profuturus and Fortunatus at Cirta, Evodius at Uzalis, and Boniface at Carthage. There were still other monks who were priests and who excelled the ministry outside of the episcopal cities. All monks did not live in these episcopal monasteries; the majority were laymen whose communities, although under the authority of the bishops, were entirely distinct from those of the clergy. There were religious who lived in complete isolation, belonging to no community and having no legitimate superior; indeed, some wandered aimlessly about, at the risk of gaining disedification by their vagabondage. The fanatics known as Circumcelliones were renowned for the rigour of their devotion, and St. Augustine often censured their way of living.

The religious life of the Bishop of Hippo was, for a long time, a matter of dispute between the Canons Regular and the Hermits of St. Augustine, each of these two families claiming him exclusively as its own. It was not so much the establishing of an historical fact as the settling of a claim of precedence that was at issue, and this dispute cannot be in the right, the quarrel would have continued indefinitely had not Pope Sixtus IV put an end to it by his Bull "Summum silientium" (1484). The silence thus imposed, however, was not perpetual, and in the seventeenth and eighteenth centuries numerous controversies were, especially indicated, are chanted; but as St. Augustine enters into no minute details it is to be supposed that each monastery conformed to the liturgy of the diocese in which it is situated. Those sisters desiring to lead a more retired life lived in the Hermitages, but all to no avail. Pierre de Saint-Trond, Prior of the Canons Regular of St. Martin of Louvain, tells the story of these quarrels in the preface to his "Examen Testamenti S. Augustini" (Louvain, 1550) followed by Gabriel Bertin de Neuville and Le Large upholds the thesis of the Canons; Gandolfo, Lupus, Giles of the Presentation, and Noris sustain that of the Hermits. The Bollandists uphold their opinion. St. Augustine followed the monastic or religious life as it was known to his contemporaries, and neither he nor they even thought of establishing among those who had embraced it any distinction whatever as to congregations or orders. This idea was conceived in a subsequent epoch, hence St. Augustine cannot be said to have so influenced the world of monasticism. He made laws for the monks and nuns of Roman Africa, it is true, and he helped to increase their numbers, while they, in turn, revered him as their father, but they cannot be classed as members of any special monastic family.

St. Augustine and Monasticism.—When we consider Augustine's great prestige, it is easy to understand why his writings should have so influenced the development of Western monachism. His Letter viii was read and re-read by St. Benedict, who borrowed several important texts from it for insertion in his own rule. St. Benedict's chapter on the labour of monks is manifestly inspired by the treatise "De opere monachorum", that has done so much towards furnishing an accurate statement of the doctrine commonly accepted in religious orders. The teaching concerning religious poverty is clearly formulated in the sermons "De vita et moribus clericorum suorum" and the authorship of these two works is sufficient to earn for the Bishop of Hippo the title of Patriarch of monks and religious. The influence of Augustine, however, was nowhere stronger than in southern Gaul in the fifth and sixth centuries. Lérins and the monks of that school were familiar with Augustine's monastic writings, which, together with those of Cassianus, were the mine from which the principles of monasticism were drawn. St. Cassianus, Archbishop of Arles, the great organizer of religious life in that section, chose some of the most interesting articles of his rule for monks from St. Augustine, and in his rule for nuns quoted at length from Letter cxxi. Sts. Augustine and Cassianus were animated by the same spirit which passed from the Archbishop of Arles to St. Aurelian, one of his successors, and, like him, a monastic lawgiver. Augustine's influence also extended to women's monasteries in Gaul, where the Rule of Cassianus was adopted either wholly or in part, as, for example, at Sainte-Croix of Poitiers, Juxamontier of Besançon, and Chamalières near Clermont.

But it was not always enough merely to adopt the teachings of Augustine and to quote him; the author of the regula Tarnentensis (an unknown monastery in the Rhone valley) introduced into his work the entire text of the letter addressed to the nuns, having previously adapted it to a community of men by removing slight grammatical inaccuracies which were surely made in other monasteries in the sixth or seventh centuries, and in his "Codex regularum" St. Benedict of Aniane published a text similarly modified. For want of exact information we cannot
say in which monasteries this was done, and whether they were numerous. Letter ccxi, which has thus become the Rule of St. Augustine, certainly constitutes the germinal name of "Rules of the Fathers" and used by the founders of monasteries as a basis for the practices of the religious life. It does not seem to have been adopted by the regular communities of canons or canons regular to be organized in the eighth and ninth centuries. The rule given them by St. Chrodegang, Bishop of Metz (742–766), is almost entirely drawn from that of St. Benedict, and no more decided traces of Augustine influence are to be found in it than in the decisians of the Council of Augustine of 911, which may be considered the real constitution that the character of the future missionary was formed. Chance is said to have furnished the opportunity for the enterprise which was destined to link his name for all time with that of his friend and patron, St. Gregory, as the "true beginner" of one of the most important Churches in Christendom and the medium by which the authority of the Roman See was established over men of the English-speaking race. It is unnecessary to dwell here upon Bede's well-known version of Gregory's casual encounter with English slaves in the Roman market place (H. E. II, i), which is treated under Gregory the Great (q. v.). Some five years after his elevation to the Roman See (590) Gregory began to look about him for ways and means to carry out the dream of his earlier days. He naturally turned to the community he had ruled more than a decade of years before in the monastery on the Caen Hill. Out of these he selected a company of about forty and designated Augustine, at that time Prior of St. Andrew's, to be their representa- tive. The appointment was made about 597. About a year later, seems to have been of a somewhat indeterminate character; but from this time forward until his death in 604 it is to Augustine as "strengthened by the confirmation of the blessed Father Greg- orius (Bede, H. E., I, xxv) that English, as distinguished from British, Christianity owes its primary inspiration.

The event which afforded Pope Gregory the opportunity he had so long desired of carrying out his great missionary plan in the English lands happened in the year 595 or 596. A rumour had reached Rome that the pagan inhabitants of Britain were ready to embrace the Faith in great numbers, if only preachers could be found to instruct them. The first plan which seems to have occurred to the pontiff was to take measures for the purchase of English captive boys of seventeen years of age and upwards. These he would have brought up in the Catholic Faith with the idea of ordaining them and sending them back in due time as apostles to their own people. He accordingly wrote to Candidus, a prebendary entrusted with the administration of a small estate belonging to the monastery of the Roman Church in Gaul, asking him to secure the revenues and set them aside for this purpose. (Greg., Epp., VI, vii in Migne, P. L., LXXVII.) It is possible, not only to date the occurrence of these events, but also to indicate the particular quarter of Britain from which the rumour had come. Ethelbert became King of Kent in 595 or 596, and in less than twenty years he succeeded in establishing an overlordship that extended to the borders of the country of the West Saxons eastward to the sea and as far north as the Humber and the Trent. The Saxons of Middlesex and of Essex, together with the men of East Anglia and of Mercia, were thus brought to acknowledge him as Bretward, and he acquired a political importance which began to be felt by the Frankish princes on the other side of the Channel. Charibert of Paris gave him his daughter Bertha in marriage, stipulating, as part of the nuptial agreement, that she should be allowed the free exercise of her religion. The condition was accepted (Bede, H. E., I, xxv) and Luidhard, a Frankish bishop, accompanied the princess to her new home in Canterbury, where the ruined church of St. Martin, situated a short distance beyond the walls, and dating from Roman times, was set apart for her use (Bede, H. E., I, xxvi). The date of this marriage, so important in its results to the future fortunes of Western Christianity, is of course largely a matter of conjecture; but from the evidence fur-

Augustine of Canterbury, Saint, first Archbishop of Canterbury, Apostle of the English; date of birth unknown, and dating him, it is necessary to assume that he was probably a Roman of the better class, and that early in life he became a monk in the fa-
nished by one or two scattered remarks in St. Gregory's letters (Epp., VI) and from the circumstances which attended the emergence of the kingdom of the Jutes to a position of prominence in the British of this period, we may safely assume that it had taken place a few years before the plan of sending Augustine and his companions suggested itself to the pope.

The pope was obliged to complain of the lack of episcopal zeal among Æthelberht's Christian neighbours. Whether we are to understand the phrase vicinia (Greg., Epp., VI) as referring to Gaulish prelates or to the Celtic bishops of northern and western Britain, the fact remains that neither Bertha's piety, nor Luithard's preaching, nor Æthelberht's toleration, nor the supposedly robust faith of British or Gaulish neighbouring peoples was found adequate to so obvious an opportunity until a Roman pontiff, distracted with the cares of a world supposed to be hastening to its eclipse, first exhorted forty Benedictines of Italian blood to the enterprise. The itinerary seems to have been speedily, if vaguely, prepared; the little company set out upon their long journey in the month of June, 596. They were armed with letters to the bishops and Christian princes of the countries through which they were likely to pass, and they were further recommended to provide with Frankish interpreters before setting foot in Britain itself. Discouragement, however, appears early to have overtaken them on their way. Tales of the uncouth islanders to whom they were going chilled their enthusiasm, and some of their number actually proposed that they should draw back. Augustine so far compromised with the waverers that he agreed to return in person to Pope Gregory and lay before him plainly the difficulties which they might be compelled to encounter. The band of missionaries waited for him in the neighborhood of Aix-Provence, where Gregory, however, raised the drooping spirits of Augustine and sent him back without delay to his faint-hearted brethren, armed with more precise, and as it appeared, more convincing authority.

Augustine was named abbot of the missionaries (Bede, H. E., I, xxiii) and was furnished with fresh letters in which the pope made kindly acknowledgment of the aid thus far offered by Protasius, Bishop of Aix-en-Provence, by Stephen, Abbot of Lérins, and by many lay official men of the Benedictine series. Arigius [Greg., Epp., VI (indic. xiv) num. 62 sqq.; sc. 3, 4, 5 of the Benedictine series]. Augustine must have reached Aix on his return journey some time in August; for Gregory's message of encouragement to the pope bears the date of July the twenty-third, 596. Whatever may have been the real source of the passing discouragement no more delays are recorded. The missionaries pushed on through Gaul, passing up through the valley of the Rhone to Arles on their way to Vienne and Autun, and thence northward, by one of several alternative routes which it is impossible now to fix with accuracy, until they came to Paris. Here, in all probability, they passed the winter months; and here, too, as is not unlikely, considering the relations that existed between the family of the regent Hrothgar, and that of the Archbishop of Paris, the services of the local presbyters suggested as interpreters in the pope's letters to Theodoric and Theodenbert and to Brunicilda, Queen of the Franks.

In the spring of the following year they were ready to embark. The name of the port at which they took ship has not been recorded. Paris itself was at this time a place of some mercantile importance; and it is not improbable that they directed their steps thither to find a suitable vessel in which they could complete the last and not least hazardous portion of their journey. It is true that we know for certain that the landing somewhere on the Isle of Thanet (Bede, H. E., I, xxv) and that they waited there in obedience to King Æthelberht's orders until arrangements could be made for a formal interview. The king replied to their messengers that he would come in person from Canterbury, which was less than a dozen miles away. It is not easy to decide at this date between the four spots mentioned as the plan of sending Augustine and his companions first set foot. The Boarded Groat, Stonar, Ebbsfleet, and Richborough— the last named, if the present course of the Stour has not altered in thirty centuries, then forms a part of the mainland which has its defences. The curious in such matters may consult the special literature on the subject cited at the close of this article. The promised interview between the king and the missionaries took place within a few days. It was held in the open air, sub dio, says Bede (H. E., I, xxv), on a level spot, probably under a spreading oak in deference to the king's dread of Augustine's possible incantations. His fear, however, was dispelled by the native grace of manner and the kindly personality of his chief guest who addressed him through an interpreter. The message told "how the compassionate Jesus had redeemed a world of sin by His own agony and opened the Kingdom of Heaven to all who would believe" (Edfric, ap. Haddan and Stubbs, III, ii). The king's answer, "they themselves with Frankish faith, prophetic of the religious after-timer of his race. "Your words and promises are very fair" he is said to have replied, "but as they are new to us and of uncertain import, I cannot assent to them and give up what I have long held in common with the whole English nation. But since you have come as strangers from so great a distance, and, as I take it, are anxious to have us also share in what you conceive to be both excellent and true, we will not interfere with you, but receive you, rather, in kind hospitality and take care to provide you with all necessary refreshment and entertainment. Moreover, we make no objection to your winning as many converts as you can to your creed" (Bede, H. E., I, xxv.)

The king more than made good his words. He invited the missionaries to take up their abode in the royal capital of Canterbury, then a barbarous and half-ruined metropolis, built by the Kentish folk upon the site of the old Roman military town of Durovernum. In spite of the squalid character of the city, the monks must have made an impressive picture as they drew near the abode of the king, at the King's Street facing the north", a detail preserved in William Thorne's (c. 1337) "Chronicle of the Abbots of St. Augustine's Canterbury," p. 1759, assigned them for a dwelling. The striking circumstances of their approach seem to have lingered long in popular remembrance; for Bede, writing fully a century and a third after the event, is at pains to describe how they came in characteristic Roman fashion (more suum) bearing "the holy cross together with a picture of the Sover- eign King. Our Lord Jesus Christ and chanting in unison this litany", as they advanced: "We beseech thee, O Lord, in the fulness of thy pity that Thine anger and Thy wrath be turned away from this city and from Thy holy house, because we have sinned: for it is in Thy sight that many "Rogation" litanies then beginning to be familiar in the churches of Gaul and possibly not unknown also at Rome. (Martène, "De antiquis Ecclesiae ritibus", 1764, III, 189; Bede, H. E., I, xx, Joannes Hyginus, "De Vita Gregorii", II, 17 in Missale, P. L., LXXV; Durandus, "Liber generalis", II, 4.) The building set apart for their use must have been fairly large to afford shelter to a community numbering fairly fully. It stood in the Stable Gate, not far from the ruins of an old heathen temple; and certainly, in those days, an entrance to the parish church of St. Alphage approximately marked the site (Chr. Aug. Abb., 1759). Hence Augus-
time and his companions seem to have established without delay the ordinary routine of the Benedictine rule as practised at the close of the sixth century; and to it they seem to have added in a quiet way the apostolic ministry of preaching. The church dedicated to St. Mary Major on the Tiber, which up to this time had been set apart for the convenience of Bishop Luidhard and Queen Bertha's followers many years before was also thrown open to them until the king should permit a more highly organized attempt at evangelization. The evident sincerity of the missionaries, their single-mindedness, their courage under trial, and, above all, the disinterested character of Augustine himself and the unworlly note of his doctrine made a profound impression on the mind of the king. He asked to be instructed and his baptism was appointed to take place at Pentecost. Whether the queen and her Frankish bishop had any real hand in the process of this comparatively sudden conversion, it is impossible to say. St. Gregory's letter written to Bertha herself, when the news of the king's baptism had reached Rome, would lead us to infer, that, while little or nothing had been done before Augustine's arrival, afterwards there was an endeavour on the part of the queen to make up for past remissness. The pope writes: 'Et quoniam, Deo volente, aptum nunc tempus est, quod, instructus et animosum, con spiravit praecipui... Augmento positis quod neglectum est reparare'. [Greg., Epp., XI (indic., iv), 29.] The remissness does seem to have been atoned for, when we take into account the Christian activity associated with the names of this royal pair during the next few months.

Æthelberht's conversion naturally gave a great impetus to the enterprise of Augustine and his companions. Augustine himself determined to act at once upon the provisional instructions he had received from Pope Gregory. He crossed over to Gaul and spent some six or seven weeks at the court of Virgilius, the Metropolitan of Arles. Returning almost immediately to Kent, he made preparations for that more active and open form of propaganda for which Æthelberht's public baptism had prepared a way. It is characteristic of the spirit which actuated Augustine and his companions that no attempt was made to secure converts on a large scale by the employment of force. Bede tells us that it was part of the king's uniform policy 'to compel no man to embrace Christianity', that he instructed his kinsmen and courtiers 'from more than one of his extant letters what the pope thought of a method so strangely at variance with the teaching of the Gospels. On Christmas Day, 597, more than ten thousand persons were baptized by the first Archbishop of the English. The great earnestness which probably took place in the waters of the Swale, not far from the mouth of the Medway. News of these extraordinary events was at once dispatched to the pope, who wrote in turn to express his joy to his friend Eulogius, Bishop of Alexandria, to Augustine himself, and to the king and queen. (Epp., VIII, xxxvi; XI, xviii; ibid., lxvi; Bede, H. E., I, xxxi, xxxii.) Augustine's message to Gregory was carried by Lawrence the Presbyter, afterwards Archbishop of Canterbury, and Peter one of the original colony of missionary monks. They were instructed to ask for more Gospel labourers, and, if we may trust Bede's account in this particular and the curious group of letters embodied in his narrative, they bore with them a list of dubia, or questions, bearing upon several points of discipline and ritual, with regard to which Augustine had asked the pope's advice.

The genuineness of the document or libellus, as Bede calls it (H. E., II, i), in which the pope is alleged to have answered the doubts of the new archbishop has not been seriously called in question; though scholars have not been free from the influence of Bishop Boniface, writing in the second quarter of the eighth century, urges, viz. that no trace of it could be found in the official collection of St. Gregory's correspondence preserved in the registry of the Roman Church. (Haddan and Stubbs, III, 336; Dudden, "Gregory the Great," II, 130, note; Mason, "Mission of St. Augustine," preface, pp. viii and ix; Duchesne, "Origines," 3d ed., p. 99.) The two questions which are the most important of which are those that touch upon local differences of ritual, the question of jurisdiction, and the perpetually recurring problem of marriage relationships. "Why" Augustine had asked "since the faith is one, should there be different usages in different churches; one way of saying Mass in the Roman Church, for instance, and another in the Church of Gaul?" The pope's reply is, that while "Augustine is not to forget; the Church in which he has been brought up"; he is at liberty to adopt from the usage of other Churches whatever is most likely to prove pleasing to Almighty God. "For institutions", he adds, "are not to be loved for the sake of places; but places, rather, for the sake of institutions". With regard to the delicate question of jurisdiction Augustine is informed that he is to exercise no authority over the churches of Gaul; but that "all the bishops of Britain are entrusted to him, to the end that the unlearned may be instructed, the wavering strengthened by persuasion and the perverse restrained by authority". Epp., XI (indic., iv), 64; Bede, H. E., I, xxvii.) Augustine seized the first convenient opportunity to carry out the graver provisions of this last enactment. He had already received the pallium on the return of Peter and Lawrence from Rome on 601. The original band of missionaries had also been reinforced by fresh recruits, among whom "the first and most distinguished", as Bede notes, "were Mellitus, Justus, Paulinus, and Rufinianus". Of these Rufinianus was afterwards chosen abbot of the monastery established by Augustine in honour of St. Peter outside the eastern gate of the Kentish capital. Mellitus became the first English Bishop of London; Justus was appointed to the see of Rochester, and Paulinus became Metropolitan of York.

Æthelberht, as Bretwalda, allowed his wider territory to be mapped out into dioceses, and engaged himself in Augustine's behalf to bring about a meeting with the Celtic bishops of Southern Britain. The conference took place in Malmesbury Abbey, on the borders of the Severn, at a spot long described in popular legend as Austin's Oak. (Bede, H. E., II, ii.) Nothing came of this attempt to introduce ecclesiastical uniformity. Augustine seems to have been willing enough to yield certain points; but the three important issues would not be compromised. He based his claim on an unconditional surrender on the Easter controversy; on the mode of administering the Sacrament of Baptism; and on the duty of taking active measures in concert with him for the evangelization of the Saxon conquerors. The Celtic bishops refused to yield, and the meeting was broken up. A second conference was afterwards planned at which only seven of the British bishops convened. They were accompanied this time by a group of their "most learned men " headed by Dintho, the abbot of the celebrated nunnery of Eynsford, and the enthusiasm which the pope had so nobly sown in the English people was reaped. The result was, if anything, more discouraging than before. Accusations of unworthy motives were freely bandied on both sides. Augustine's Roman regard for form, together with his punctiliousness for personal precedence, found the Irish representatives, gave umbrage to the Celts. They denounced the Archbishop for his pride, and retired behind their mountains. As they were on the point of withdrawing, they heard the only angry threat that is recorded of the saint: "If ye will not have peace with the brethren, ye shall have war among yourselves". The rest of the story is well known; ye shall not preach the word of life to the English, ye shall suffer the punishment of death at their hands".
Augustine

Popular imagination, some ten years afterwards, saw a terrible fulfilment of the prophecy in the butchery of the Bangor monks at the hands of Æthelfrid the Destroyer in the great battle won by him at Chester in 616.

These efforts towards Catholic unity with the Celtic bishops and the constitution of a well-defined hierarchy for the Saxon Church are the last recorded acts of the saint’s life. His death fell in the same year as a very early tradition (which can be traced back to Theodore of Tarsus) says that his father and patron, Pope Gregory, Thorn, however, who attempts always to give the Canterbury version of these legends, asserts—somewhat inaccurately, it would appear, if his coincidences be rigorously tested—that it took place in 605. He was buried, in true Roman fashion, outside the walls of the Kentish cathedral in a grave dug by the side of the great Roman road which then ran from Deal to Canterbury over St. Martin’s Hill and near the unfinished abbey church which he had begun in honour of Sta. Peter and Paul, and which was afterwards to be dedicated to his memory. When the monastery was completed, his relics were translated to a tomb prepared for them in the north porch. A modern hospital is said to occupy the site of his last resting place. Stanley, “Martyrdom and Canterbury” (1906), 35; Hasted’s date for the Roman Calendar is kept on 28 May; but in the proper of the English office it occurs two days earlier, the true anniversary of his death.

Augustine of Hippo, Saint, Doctor of the Church, b. 13 November, 354; d. 28 August, 430; “a philosophical and theological genius of the first order, dominating, like a pyramid, antiquity and the succeeding ages.... Compared with the great philosophers of past centuries and modern times, he is the one dominating mind among the theological world, the first, and such has been his influence that none of the Fathers, Scholastics, or Reformers has surmounted it.”—The extraordinary part played by the great Bishop of Hippo, and thus eulogized by Philip Schaff in his “History of the Christian Church,” accounts for the length of this article treating I. His Life; II. His Works; III. His Function as a Doctor of the Church; IV. His System of Grace; V. Augustinianism in History.

I. His Life.—Augustine’s life is unfolded to us in documents of unrivalled richness, and of no great character of ancient times have we information comparable to that contained in the “Confessions,” which relate the touching story of his soul, the “Retractions,” which give the history of his mind, and the “Life of Augustine,” written by his friend Possidius, telling of the saint’s apostolate. We will confine ourselves to sketching the three periods of this great life: (1) the young wanderer’s gradual return to the Faith; (2) the doctrinal development of his philosophy, and his episcopal activities; and (3) the full development of his activities upon the episcopal throne of Hippo.

(1) Augustine was born at Tagaste, now Souk-Ahmar, about 60 miles from Bona (ancient Hippo Regius), and at that time a small free city of consular Numidia which had recently been converted from Donatism. Although eminently respectable, his family was not rich, and the influence of the curiales of the city, was still aawan. However, the admirable virtues that made Monica the ideal of Christian mothers at length brought her husband the grace of baptism and of a holy death, about the year 371. Augustine received a Christian education. He studiously imitated his father and enrolled among the catechumens. Once, when very ill, he asked for baptism, but, all danger being soon passed, he deferred receiving the sacrament, thus yielding to a deplorable custom of the times. His association with “men of prayer” left three great ideas deeply engraved upon his soul: a Divine Providence, the future life with terrible sanctions, and, above all, Christ the Saviour. “From my tenderest infancy, I had in a manner sucked with my mother’s milk that name of my Saviour, Thy Son; I kept it in the recesses of my heart; and all that presented itself to me without that Divine Name, though it might be elegant, well written, and even replete with truth, did not altogether carry me away” (Confessions, I, iv).

But a great intellectual and moral crisis stifled for a time all these Christian sentiments. The heart was the first point of attack. Patricius, proud of his son’s success in the schools of Tagaste and Madaura, determined to send him to Carthage to prepare for a religious career. But, unfortunately, it was almost a year and several months to collect the necessary means, and Augustine had to spend his sixteenth year at Tagaste in an idleness which was fatal to his virtue; he gave himself up to pleasure with all the vileness of an ardent nature. At first he prayed, but without the sincere desire of being heard, and when he reached Carthage, towards the end of the year 370, every circumstance tended to draw him from his true course: the many seductions of the great city that was still half pagan, the licentiousness of other students, the theatre, the intoxication of his literary successes, and a proud desire always to be first, even in evil. Before long he was obliged to confess to Monica that he had formed a sinful liaison with the person who bore him a son (372), “the son of his dearness”—an entanglement he only broke himself at Milan after fifteen years of its thraldom. Two extremities are to be avoided in the appreciation of this crisis. Some, like Monmas, misled perhaps by the tone of grief in the “Confessions,” have exaggerated it, while others, like E. Loofs, have underrated them. However, it may be said that, even in his fall, Augustine maintained a certain dignity and felt a compunction which does him honour, and that, from the age of nineteen, he had a genuine desire to break the chain. In fact, in 375, an entirely new inclination manifested itself in his life, brought about by the reading of Cicero’s “Hortensius” whence he inherited a love of the wisdom which Cicero so eloquently praises. Then,forward Augustine looked upon the vanities of life, the world, the goods of this world, and, finally, the world, as is said of the man who had become a Persian. This man, however, in 376, was the first to break down the Church. The “Confessions” alone prove that the seats of Augustinianism, Augustinianism in 376 to 378, is an entanglement which he only broke himself at Milan after fifteen years of its thraldom.
Augustine himself tells us that he was enticed by the promises of a free philosophy unbridled by faith; by the boisterous rhetoric of the Manicheans, who claimed to have discovered contradictions in the Holy Writ, either directly or indirectly, all, by the hope of finding in their doctrine a scientific explanation of nature and its most mysterious phenomena. Augustine's inquiring mind was enthusiastic for the natural sciences, and the Manicheans would have been delighted to present him with his own Faustus, their doctor. Moreover, being tortured by the problem of the origin of evil, Augustine, in default of solving it, acknowledged a conflict of two principles. And then, again, there was a very good reason, even apart from the misgivings resulting from a doctrine which denied liberty and the commission of crime to a foreign principle.

Once won over to this sect, Augustine devoted himself to it with all the ardor of his character; he read all its books, adopted, and defended all its opinions. His furious proselytism drew into error his friend Alypius and Romanianus, his Mecenas of Tagaste, the friend of his father who was defraying the expenses of Augustine's studies. It was during this period that Christianity's literary faculties reached their full development, and he was still a student at Carthage when he embraced error. His studies ended, he should in due course have entered the forum litigiosum, but he preferred the commerce of letters and basidim tells us that he returned to Tagaste to "teach grammar". The young professor captivated his pupils, one of whom, Alypius, hardly younger than his master, loathed to leave him, after following him into error, was afterwards baptized with him at Milan, eventually becoming Bishop of Tagaste, his native city. But Monica deeply deplored Augustine's heresy and would not have received him into her home or at her table but for the advice of a saintly bishop, who declared that "the son of so many tears could not perish". Soon afterwards Augustine went to Carthage, where he continued to teach rhetoric. His talents shone to even better advantage on this wider stage, and by an indefatigable pursuit of the liberal arts his intellect attained its full maturity. Having taken part in a poetic tournament, he carried off the prize, and the Proconsul Vindicianus publicly conferred upon him the corona agonistica. It was at this moment of literary intoxication, when he had just completed his first work on aesthetics, now lost, that he began to read the sacred books. Augustine was in his first fervour, the teachings of Mani had been far from quieting his restlessness, and although he has been accused of becoming a priest of the sect, he was never initiated or numbered among the "elect", but remained an "auditor"—the lowest degree in the hierarchy. He himself gives the reason for his disenchchantment. First of all there was the fearful depravity of Manichean philosophy—"They destroy everything and build up nothing"; then, the dreadful immorality in contrast with their affectation of virtue, that is, the pretense of living in controversy with the Catholics, to whose Scriptural arguments their only reply was: "The Scriptures have been falsified". But, worse of all, he did not find science among them—science in the more modern sense of the word—that knowledge of the universe and its laws which they had promised him. When he questioned them concerning the movements of the stars, none of them could answer him. "Wait for Faustus", they said, "he will explain everything to you". Faustus of Miletus, the celebrated Manichean bishop, was visited and questioned him, and discovered in his responses the vulgar rhetorician, the utter stranger to all scientific culture. The spell was broken, and, although Augustine did not immediately abandon the sect, his mind rejected Manichean doctrines. The illusion had lasted nine years.

But the religious crisis of this great soul was only to be resolved in Italy, under the influence of Ambrose. In 383 Augustine, at the age of twenty-nine, yielded to the irresistible attraction which Italy had for him, but his mother suspected his departure and was so reluctant to be separated from him that he resorted to a subterfuge and made up an excuse to remain in Rome for the night. He had only just arrived in Rome when he was taken seriously ill; upon recovering he opened a school of rhetoric, but, disgusted by the tricks of his pupils, who shamelessly defrauded him of their fees, he applied for a vacant professorship resulting from a doctrine which denied liberty and the commission of crime to a foreign principle.

Having visited Bishop Ambrose, the fascination of that saint's kindness induced him to become a regular attendant at his preachings. However, before embracing the Faith, Augustine underwent a three years' struggle during which his mind passed through several distinct phases. At first he turned towards the philosophy of the Academicians, with its pessimistic scepticism; then neo-Platonic philosophy inspired him with genuine enthusiasm. In Milan he had seen certain things in the philosophy of Plotinus, and, more especially, of Plotinus, before the hope of finding the truth dawned upon him. Once more he began to dream that he and his friends might lead a life dedicated to the search for it, a life purified of all vulgar aspirations after honour, power, and pleasure, and with celibacy for its rule (Confessions, VI). But it was only a dream; his passions still enslaved him. Monica, who had joined her son at Milan, prevailed upon him to become betrothed, but his affianced bride was not young, and although Augustine disapproved the marriage of Adeodatus, her place was soon filled by another. Thus did he pass through one last period of struggle and anguish. Finally, through the reading of the Holy Scriptures light penetrated his mind. Soon he possessed the certainty that Jesus Christ is the only way to truth and salvation. After that, resistance came only from the heart. An interview with Simplicianus, the future successor of St. Ambrose, who told Augustine the story of the conversion of the celebrated neo-Platonic rhetorician, Victorinus (Confessions, V, III, i, ii), prepared the way for the grand stroke of grace which, at the age of thirty-three, smote him to the ground in the garden at Milan (September, 386).

A few days later Augustine, being ill, took advantage of being recommended by his friend for state service, went with Monica, Adeodatus, and his friends to Cassisiacum, the country estate of Vercundus, there to devote himself to the pursuit of true philosophy which, for him, was now inseparable from Christianity.

(2) (From 386 to 395)—Augustine gradually became acquainted with Christian doctrine, and in his mind the fusion of Platonic philosophy with revealed dogmas was taking place. The law that governed this change of thought has of late years been frequently misinterpreted. The transition was important to be precisely defined. The solitudo Cassisiacum realized a long-cherished dream. In his books "Against the Academicians", Augustine has described the ideal serenity of this existence, enjoyed for the education of his young friends, now by literary readings in common, now by philosophical conferences to which he sometimes invited Monica, and the accounts of which, compiled by a secretary, have supplied the foundation of the "Dialogues". Licentio, in his "Letters", continues on religious and delightful philosophical mornings and evenings, at which Augustine was wont to evolve the most elevating discussions from the most commonplace incidents. The favourite topics at their conferences
Augustine

were truth, certainty (Against the Academicians), true happiness in philosophy (On a Happy Life), the Providential order of the world and the problem of evil (On Order) and finally God and the soul (Solliloquies, On the Immortality of the Soul).

Here arises the curious question propounded by many critics to Augustine: Was Augustine right when he wrote these "Dialogues" at Cassiciacum?—Until now no one had doubted it; historians, relying upon the "Confessions", had all believed that Augustine's retirement to the villa had for its twofold object the improvement of his health and his preparation for baptism. But certain critics nowadays claim to have discovered a radical opposition between the philosophical "Dialogues" composed in this retirement and the state of soul described in the "Confessions": According to Harnack, in writing the "Confessions" Augustine must have projected upon the reclus of 386 the sentiments of the bishop of 400. Others go farther and maintain that the reclus of the Milanese villa could not have been at heart a Christian, but a Platonist; and that the scene in the "Dialogues" is a conversion to the light of philosophy, the genuinely Christian phase beginning only in 390. But this interpretation of the "Dialogues" cannot withstand the test of facts and texts. It is admitted that Augustine received baptism afteruster, 383, and that there was for him a meaningless ceremony? So too, how can it be admitted that the scene in the garden, the example of the recluses, the reading of St. Paul, the conversion of Victorinus, Augustine's ecstasies in reading the Psalms with Monica were all involved after the fact? Again, as it was in 388 that Augustine wrote his beautiful apology "On the Holiness of the Catholic Church", how is it conceivable that he was not yet a Christian at that date? To settle the argument, however, it is only necessary to read the "Dialogues" themselves. They are certainly a purely philosophical work—a work of youth, too, not without some pretension, as Augustine ingeniously acknowledges (Confessions, I, x); nevertheless, they contain the entire history of his Christian formation. As early as 386, the first work written at Cassiciacum reveals to us the great underlying motive of his researches. The object of his philosophy is to give authority the support of reason, and "for him the great authority, that which dominates all others, is from within, not from without, the author is the authority of Christ"; and if he loves the Platonic it is because he counts on finding among them interpretations always in harmony with his faith (Against the Academicians, III, c. x). To be sure such confidence was excessive, but it remains evident that in these "Dialogues" it is a Christian, and not a Platonist, that speaks. He reveals to us the intimate details of his conversion, the argument that convinced him (the life and conquests of the Apostles), his progress in the Faith at the school of St. Paul (ibid., II, ii), his delightful conferences with his friends on the Divinity of Jesus Christ, the wonderful transformations worked in his soul by faith, even to that victory of his over the intellectual pride which his Platonic studies had aroused in him (Dialogues) themselves. Through all this, in the calm of his passions and the great resolution to choose wisdom for his only spouse (Solliloquies, I, x).

It is now easy to appreciate at its true value the influence of neo-Platonicism upon the mind of the great African Doctor. It would be impossible, as it was read to the reader, not to deny the existence of this influence; to be convinced, it suffices to glance at the passages from Plotinus and from Augustine arranged in parallel columns by M. Grandgeorge (Saint Augustin et le Neoplatonisme, 1898, pp. 277 and 299). The exaggeration of this influence to pretend that it at any time sacrificed the Gospel to Plato. The same learned critic thus wisely concludes his study: "So long, therefore, as his philosophy agrees with his religious doctrines, St. Augustine is frankly neo-Platonist; as soon as a contradiction arises, he never hesitates to subordinate his philosophy to religion. But a Christian through and through; and the philosophical questions that occupied his mind constantly found themselves more and more relegated to the background" (op. cit., 155). But the method was a dangerous one; in thus seeking to compromise between the two schools, he was too easily to find Christianity in Plato, or Platonism in the Gospel. More than once, in his "Retractions" and elsewhere, he acknowledges that he has not always shunned this danger. Thus he had imagined that in Platonism he discovered the entire doctrine of the Word and the whole prologue of St. John. He likewise disavowed a good number of neo-Platonic theories which had at first muddled him—the cosmological thesis of the universal soul, which makes the world one immense animal—the Platonic doctrine of the soul for all or a distinct soul for each? But on the other hand, he had always reproached the Platonists, as Schaff very properly remarks (Saint Augustine, New York, 1886, p. 51), with being ignorant of, or rejecting, all the most holy mysteries of the Christian religion, "first, the great mystery, the Word made flesh; and then love, resting on the basis of humility". They also ignore grace, he says, giving sublime precepts of morality without any help towards realizing them. Was this divine grace that Augustine sought in Christian baptism. Towards the beginning of Lent, 387, he went to Milan and, with Adeodatus and Alypius, took his place among the competentes, being baptized by Ambrose on Easter Day, or at least during Easter-tide. The tradition maintaining that the Te Deum was sung on the reception of the bishop and the neophyte alternately is groundless. (See Te Deum, The.) Nevertheless this legend is certainly expressive of the joy of the Church upon receiving as her son him who was to be her most illustrious doctor. It was at this time that Augustine, Alypius, and Evodius resolved to retire to solitude in Africa. Augustine undoubtedly remained at Milan until towards autumn, continuing his works: "On the Immortality of the Soul" and "On Music": he had to cease writing, for if he was not yet a Christian, he was at least a pious Christian. When Monica was summoned from this life. In all literature there are no pages of more exquisite sentiment than the story of her saintly death and Augustine's grief (Confessions, IX). Augustine remained several months in Rome, chiefly engaged in refuting Manichaeism. He sailed for Africa after the death of the tyrant Maximus (August, 388) and after a short sojourn in Carthage, returned to his native Tagaste. Immediately upon arriving there, he wished to carry out his idea of a perfect life; and began by selling all his goods and giving the proceeds to the poor. Then he and his friends withdrew to his estate, which had already been alienated, there to lead a common life in poverty, prayer, and the study of sacred letters. Book of the LXXXIII Questions in the fruit of his research, the treatise, in which he also wrote "De Genesi contra Manichaeos", "De Magistro", and, "De Vera Religionibus".

Augustine did not think of entering the priesthood, and, through fear of the episcopacy, he even fled from Carthage. He had been summoned to Hippo by a friend whose soul's salvation was at stake, he was praying in a church when the people suddenly gathered about him, cheered him, and begged Valerius, the bishop, to raise him to the episcopate. He was, first of all, a Christian; Augustine was obliged to yield to their entreaties,
and was ordained in 391. The new priest looked upon his ordination as an additional reason for resuming religious life at Tagaste, and so fully did Valerius approve that he put some church property at Augustine’s disposal, thus enabling him to establish a monastery—the second that he had founded. His priestly ministry of five years was admirably fruitful, Valerius had bidden him preach, in spite of the deplorable custom which in Africa reserved that ministry to bishops. Augustine combated heresy, especially Manichaeism, and his success was prodigious. Fortunatus, one of their great doctors, whom Augustine had challenged in public conference, was so humiliated by his defeat that he fled from Hippo. Augustine also abolished the abuse of holding banquets in the chapels of the martyrs. He took part, 3 October, 393, in the Plenary Council of Africa, presided over by Aurelius, Bishop of Carthage, and, at the request of the bishops, was obliged to deliver a discourse which, in its completed form, afterwards became the treatise “De Fide et Symbolo”.

(3) (From 396 to 430).—Enfeebled by old age, Valerius, Bishop of Hippo, obtained the authorship of Aurelius, Primate of Africa, to associate Augustine with himself as coadjutor. Augustine had to resign himself to consecration at the hands of Majorius, Primate of Numidia. He was then forty-two and was to occupy the See of Hippo for thirty-four years. The new Bishop understood well how to combine the exercise of his pastoral duties with the austerity of religious life, and although he left his convent, his episcopal residence became a monastery where he lived a community life with his clergy, who bound themselves to observe religious poverty. Was it an order of regular clerics or of monks that he thus founded?—This is a question often asked, but we feel that Augustine gave but little thought to such distinctions. Be that as it may, the episcopal house of Hippo became a veritable nursery which supplied the founders of the monasteries that were soon spread all over Africa and the bishops who occupied the neighbouring sees. Possidius (Vita S. Augusti, xxi) enumerates ten of the saint’s friends and disciples who were promoted to the episcopacy. Thus it was that Augustine earned the title of patron of the religious, and renovator of the clerical, life in Africa.

St. Augustine on the Sea-shore (Picturishib)
the Manicheans are an inexhaustible storehouse of arguments in this still living controversy. In this the Jansenists maintained that Augustine was unconsciously a Pelagian and that he afterwards acknowledged the loss of liberty through the sin of Adam. Modern critics, doubtless univalent with Augustine's complicated system and his terminology, have given much favor to the theory of the "Revue d'histoire et de littérature religieuses" (1859, p. 447), M. Margival exhibits St. Augustine as the victim of metaphysical pessimism unconsciously imbied from Manichean doctrines. "Never", says he, "will the Oriental idea of the necessity and the eternity of evil have a more zealous defender than this bishop". Nothing is more opposed to the facts. Augustine acknowledges that he had not yet understood how the first good inclination of the will is a gift of God (Retractations, I, xxiii, n. 3); but it should be remembered that he never retracted his leading theories on liberty, never modified his opinion upon what constitutes its essential condition, that is to say, the full power of choosing or of deciding. Who will dare to say that in revising his own work it was an imposition for him to lack either clearness of perception or sincerity?

(b) The Donatist Controversy and the Theory of the Church.—The Donatist schism was the last episode in the Montanist and Novatian controversies which had already involved the Church from its infancy. While the East was discussing under varying aspects the Divine and Christological problem of the Word, the West, doubtless because of its more practical genius, took up the moral question of sin in all its forms; it was the general problem of the purity of the Church: could the sinner be pardoned, and remain in her bosom? In Africa the question especially concerned the holiness of the hierarchy. The bishops of Numidia, who, in 312, had refused to accept as valid the consecration of Caecilian, Bishop of Carthage, by a traditor, had inaugurated the schism and at the same time proposed these grave questions: Do the hierarchical powers depend upon the moral worthiness of the priest? How can the holiness of the Church be compatible with the unworthiness of its ministers? At the time of Augustine's arrival in Hippo, the schism had attained immense proportions, having become identified with political tendencies—perhaps with a national movement against Roman domination. In the West the church is called the court of an emperor in arms and a center of anti-social revenge which the emperors had to combat by strict laws. The strange sect known as "Soldiers of Christ", and called by Catholics Circumcelliones (brigands, vagrants), resembled the revolutionary sects of the Middle Ages in point of fanatic destructive—a fact that must not be lost sight of, if the severe legislation of the emperors is to be properly appreciated.

The history of Augustine's struggles with the Donatists is also that of his change of opinion on the employment of rigorous measures against the heretics; and the Church in Africa, of whose councils he had been the very soul, followed him in the change. This change of views is solemnly attested by the Bishop of Hippo himself, especially in his Letters, xcvii. 1-17 (403) and xcviii. 15 (403). In the beginning, it was by conferences and a friendly controversy that he sought to re-establish unity. He inspired various conciliatory measures of the African councils, and sent ambassadors to the Donatists to invite them to the Synod of Hippo (403). The Donatists met these advances at first with silence, then with insults, and lastly with such violence that Possidius, Bishop of Calamet, Augustine's friend, escaped death only by flight, the Bishop of Bagala was left covered with horrible wounds, and the life of the Bishop of Hippo himself was several times attempted (Letter lxxviii. to Jerome in the name of the Bishop). This madness of the Circumcelliones required harsh repression, and Augustine, witnessing the many conversions that resulted therefrom, therefore approved rigid laws. However, this important restriction must be pointed out: that St. Augustine himself might be a Pelagian, his writings were not communicated to the Donats, Vos rogamus ne occidatis (Letter 92 to the Proconsul Donatus). But the bishops still favoured a conference with the schismatics, and in 410 an edict issued by Honorius put an end to the refusal of the Donats. A solemn conference took place at Carthage, in June, 411, in presence of 286 Catholic, and 279 Donatist bishops. The Donatist spokesmen were Petilian of Constantine, Primin of Carthage, and Emeritus of Csesarea; the Catholic orators, Aurelius and Augustine. On the historic question then at issue, the Bishop of Hippo proved the innocence of Cæcilian and his successor Felix, and in the dogmatic debate he established the Catholic thesis that the Church, as long as it is upon earth, can, without losing its holiness, tolerate sinners so long as it finds a place for their reform. In the name of the emperor the Proconsul Marcellinus sanctioned the victory of the Catholics on all points. Little by little Donatism died out, to disappear with the coming of the Vandals.

The subsequent history of Augustine is a subject second to the doctrine of grace. Frequently did Augustine develop his doctrine on the Church that, according to Specht, "he deserves to be named the Doctor of the Church as well as the "Doctor of Grace"; and Möhler (Dogmatik, 351) is not afraid to write: "For depth of feeling and power of expression nothing written on the Church since St. Paul's time, is comparable to the works of St. Augustine". He has corrected, perfected, and even excelled the beautiful pages of St. Cyprian on the Divine institution of the Church, its authority, its essential marks, and its mission in the economy of grace and the administration of the sacraments. The Protestant critics, Dorner, Binde- mann, Böhringer and especially Reuter, loudly proclaim, and sometimes even exaggerate, this rôle of the Doctor of Hippo; and while Harnack does not quite agree with them in every respect he does not hesitate to say (History of Dogma, II, c. iii): "It is one of the points upon which Augustine specially affirms and strengthens the Catholic doctrine. He was the first [1] to transform the authority of the Church into an ultimate, to give it an absolute, to make it an integral part of the practical religion the gift of a doctrine of the Church." He was not the first, for Dorner acknowledges (Augustinus, 88) that Optatus of Mileve had expressed the basis of the same doctrines. Augustine, however, deepened, systematized, and completed the work of St. Cyprian and Optatus. But it is impossible here to go into detail. (See Specht, Die Lehre von der Kirche nach dem hl. Augustinus, Paderborn, 1892.)

(c) The Pelagian Controversy and the Doctor of Grace.—The close of the struggle against the Donatists also coincided with the beginning of a very grave theological dispute which not only was to demand Augustine's unremitting attention up to the time of his death, but was to become an eternal problem for individuals and for the Church. Farther than shall attempt to summarize Augustine's system; here we need only indicate the phases of the controversy. Africa, where Pelagius and his disciple Celsiust had sought refuge after the taking of Rome by Alaric, was the principal centre of the first Pelagian disturbance. The Church was forced to urge this new party of condemned Pelagians for their attacks upon the doctrine of original sin. Among other books directed against them by Augustine was his famous "De natura et gratia". Thanks to his activity the condemnation of these innovators, who had succeeded in deceiving a synod convened at Dioscoris in Palmes.
tise, was reiterated by councils held later at Carthage and Milet and confirmed by Pope Innocent I (417). A second period of Pelagian intrigues developed at Rome, but Pope Zosimus, whom the stratagems of Pelagius had for a moment deluded, being enlightened by Augustine, pronounced the solemn condemnation of these heretics in 418. Thenceforth the combat was conducted in writing under Julian of Eclanum, who assumed the leadership of the party and attacked Augustine. About 426 there entered the lists a school which afterwards acquired the name of Semipelagian, the first members being monks of Hadrumetum in Africa, who were followed by others from Marseilles, led by Cassian, the celebrated abbot of Saint-Victor. Unable to admit the absolute gratuitousness of predestination, they sought a middle course between Augustine and Pelagius, and maintained that grace must be given to those who merit it and denied to others; hence godwill has the precedence, it desires, it asks, and God rewards. Informed of their views by Prosper of Aquitaine, the holy Doctor once more expounded, in De Predestinatione Sanctorum, how even these first desires for salvation are due to the grace of God, which therefore absolutely controls our predestination.

(d) Struggles against Arianism and Closing Years.—In 426 the holy Bishop of Hippo, at the age of seventy-two, wishing to spare his episcopal city the turmoil of an election after his death, caused both clergy and people to acclaim the choice of the descan Erasius as his auxiliary and successor, and transferred to him the administration of externals. Augustine might then have enjoyed some rest had Africa not been agitated by the undeserved disgrace and the revolt of Count Boniface (427). The Goths, sent by the Emperor Flavius to oppose Boniface and the Vandals, whom the latter summoned to his assistance, were all Arians. Maximinus, an Arian bishop, entered Hippo with the imperial troops. The holy Doctor defended the Faith at a public conference (428) and in various writings. Being deeply grieved at the devastation of Africa, he laboured to effect a reconciliation between Count Boniface and the empress. Peace was indeed re-established, but not with Genseric, the Vandal king. Boniface, sent by the emperor, returned to Hippo, where the bishops had already fled for protection and this well fortified city was to suffer the horrors of an eighteen months' siege. Endeavouring to control his anguish, Augustine continued to refute Julian of Eclanum; but early in the siege he was stricken with a fever and was to be a fatal illness, and, after three months of admirable patience and fervent prayer, departed from this land of exile, in the seventy-sixth year of his age.

II. His Works.—Augustine was one of the most prolific geniuses that humanity has ever known, and is admired not only for the number of his works, but also for the variety of subjects, which traverse the whole realm of thought. The form in which he casts his work exercises a very powerful attraction on the reader. In his writings is a marvellous suppliance of expression and his marvellous gift of describing interior things, of painting the various states of the soul and the facts of the spiritual world. His latinity bears the stamp of his age. In general, he is noble and chaste; but, says the same author, "in his sermons and other popular writings he purposely drops to the language of the people." A detailed analysis is impossible here. We shall merely indicate his principal writings and the date (often approximative) of their composition.

(a) The "Confessions" (towards A.D. 400) are, in the Biblical sense of the word confiteri, not an avowal or an account, but the praise of a soul that admires the action of God within itself. Of all the works of the great man, none has more universally read and admired, none has caused more salutary tears to flow. Neither in respect of penetrating analysis of the most complex impressions of the soul, nor communicative feeling, nor elevation of sentiment, nor depth of philosophical subtlety, there is a book like it in all literature. (b) The "Retractions" (towards the end of his life, 426-428) are a revision of the works of the saint in chronological order, explaining the occasion and dominant idea of each. They are a guide of inestimable price for seizing the progress of Augustine's thought. (c) The "Letters", amounting in the Benedictine collection to 270 (53 of them from Augustine's correspondents), are a treasure of the greatest value, for the knowledge of his life, influence and even his doctrine.

(2) Philosophy.—These writings for the most part composed in the villa of Cassiaca, from his conversion to his baptism (386-387), continue the autobiography of the saint by initiating us into the researches and Platonic hesitations of his mind. There is less freedom in them than in the Confessions. They are literary essays, writings whose simplicity is the same of art and elegance. Nowhere is the style of Augustine so chastened, nowhere is his language so pure. Their dialogue form shows that they were inspired by Pisto and Cicero. The chief ones are: "Contra Academicos" (the most important of all); "De Beatà Vita"; "De Ordine"; the two books of "Soliloquies", which must be distinguished from the "Soliloquies" and "Meditations" which are certainly not authentic; "De Immortalitate Animae"; "De Magistro"; and a dialogue between Augustine and his son Adeodatus; and six curious books (the sixth especially) on Music.

(3) General Apology.—(a) In the "City of God" (begun in 413, but the books XX–XXII are of 426) Augustine answers the pagans, who attributed the fall of Rome (410) to the abolition of pagan worship. Considering this problem of Divine Providence with regard to the Roman Empire, he widens the horizon still more and in a burst of genius he creates the cosmology of history. In dialogue with its "City of God", he claims that the pagans have only one which goes back to the beginning and leads humanity to its final term. "The City of God" is considered as the most important work of the great bishop. The other works are of less importance. In "The Confessions", belongs to general literature and appeals to every soul. The "Confessions" are theology which has been lived in the soul, and the history of God's action on individuals, while "The City of God" is theology framed in the history of humanity, and explaining the action of God in the world. (b) Other apologetic writings, like the "De Verà Religione" (a little masterpiece composed at Tagaste, 389-391), "De Utilitate Credendi" (391), "Liber de Deo rerumque non cognitor" (419), and "Letter CXX to Consentius" constitute Augustine the great theologian of the Faith, and of its relations to reason. "He is the first of the Fathers", says Harnack (Dogmengeschichte, III, 97) "who felt the need of forcing his faith to reason". And indeed he, who so repeatedly affirms that faith precedes the intelligent apprehension of the truths of revelation— he is who marks out with greater clearness of definition and more precisely than anyone else the function of the reason in preceding and verifying the witness's claim to credence has been mounted on the mind's act of adhesion. (Letter to Consentius, n. 3, 8, etc.) What would not have been the stupification of Augustine if anyone had told him that
faith must close its eyes to the proofs of the divine testimony, under the penalty of its becoming science!—Or if one had spoken to him of faith in authority giving its assent, without examining any motive which might prove the value of the testimony!—It surely cannot be possible for the human mind to accept testimony without known motives for such acceptance, any more than for any testimony, even when learnedly sifted out, to give the science—the inward view—of the object.

(4) Controversies with Heretics.—(a) Against the Manichaeans: “De Morbus Ecclesiae Catholicae et de Morbis Manichaeorum Libri Duo” (before 392); “Acts of the Dispute with Fortunatus the Manichaeus” (392); “Acts of the Conference with Felix” (404); “De Libero Arbitrio”—very important on the origin of evil; various writings “Contra Adimantium”; against the Epistle of Mani (the foundation); against Faustus (about 400); against Secundinus (405), etc. (b) Against the Donatists: “Psalmus contra partem Donati” (about 385), a purely rhythmic song for popular use; the oldest example of its kind; "Epistola ad Parmenianum" (400); “De Baptismo contra Donatistas” (about 400), one of the most important pieces in this controversy; “Contra littersas Parmenianum”; “Contra Cremonianum”, etc.—a good number, related to this debate. (c) Against the Pelagians, in chronological order, they have: 412, “De peccatorum meriti et remissione” (On merit and forgiveness); same year, “De spiritu et littera” (On the spirit and the letter); 415, “De Perfectione justitiae hominis”—important for understanding Pelagian incoherency; 417, “De G (d) Against the Semi- Pelagians: “De correcptione et gratia” (427); “De predestinatione Sanctorum” (428); “De Dono Perseverantiae” (429). (e) Against Arianism: “Contra sermum Arianorum” (418) and “Collationum Maximino Arianorum episcopo” (the celebrated conference of Hippo in 428).

(5) Scriptural Exegesis.—Augustine in the “De Doctrinâ Christianâ” (begun in 397 and ended in 420) gives us a genuine treatise of exegesis, historically the first of its kind, written after the same method. Several times he attempted a commentary on Genesis. The great work “De Genesi ad litteram” was composed from 401 to 415. The “Enarrationes in Psalmos” are a masterpiece of popular eloquence, with a swing and a warmth to them which are inimitable. On the New Testament: the “De Sermone Dei in Monte” (during his priestly ministry) is especially noteworthy; “De Consensu Evangelistarum (Harmony of the Gospels)—400; Homilies on St. John” (416) generally classed among the chief works of Augustine; the “Exposition of the Epistle to the Galatians” (324), etc. The most remarkable of his Biblical works illustrates either a theory of exegesis (one generally approved) which delights in finding mystical or spiritual interpretations, or the style of preaching which is founded on that view. His strictly exegetical work is far from equalling in scientific value that of St. Jerome. His knowledge of the Biblical languages was insufficient: he read Greek with difficulty; as for Latin, he is said that he can gather from the recent studies of Schanz and Rottmann and that he was familiar with Punic, a language allied to Hebrew. Moreover, the two grand qualities of his genius—ardent feeling and prodigious subtlety—carried him away into interpretations that were violent or more ingenious than solid.

But the hermeneutics of Augustine merit great praise, especially for their insistence upon the law of extreme prudence in determining the meaning of Scripture: We must be on our guard against giving interpretations which are hazardous or opposed to science, and so exposing the word of God to the ridicule of unbelievers. (De Genesii ad litteram, I, xix, xx, especially n. 39). An admission of well-ordered liberty appears in his thesis on the simultaneous creation of the universe, and the gradual development of the world under the action of the natural forces which were placed in it. Cer- tainly, Augustine did not produce an organized universe as we see it now. But, in the beginning, God created all the elements of the world in a confused and nebulous mass (The word is Augustinian’s—Neblulosius species apparit; “De Genesi ad litteram,” I, n. 27), and in this mass were the mysterious gers (rationes seminales) of the future beings which were to develop themselves, when favorable circumstances should permit. Is Augustine, therefore, an Evolutionist?—If we mean that he has the idea that grand things were created out of the forces of nature, and that other thinkers had of the forces of nature and the plasticity of beings, it is an incontestable fact; and from this point of view Father Zahm (Bible, Science, and Faith, pp. 58-66, French tr.) properly felicitates him on having been the precursor of modern thought. But we mean that he admitted in matter a power of differentiation and of gradual transformation, passing from the homogeneous to the heterogeneous, the most formal texts force us to recognize that Augustine proclaimed the fixity of species, and did not admit that “from one identical primitive principle, or from one germ, different realities can issue”. This judgment of the Abbé Martin in his very searching study on this subject (S. Augustin, p. 314) must correct the conclusion of Father Zahm. “The element of this corporeal world have also their well defined force, and their proper quality, from which depends what each one of them can or cannot do, and what reality ought or ought not to issue from each one of them. Hence it is that from a grain of wheat a bean cannot issue, nor wheat from a bean, nor a man from a beast, nor a beast from a man” (De Genesi ad litter., IX, n. 32).

(6) Dogmatic and Moral, Exposition.—(a) The fifteen books “De Trinitate”, on which he worked for fifteen years, from 400 to 416, are the most important, demonstrating after a certain manner. The last books on the analogies which the mystery of the Trinity have with our soul are much discussed. The saintly author himself declares that they are only analogous and are far-fetched and very obscure. (b) The “Enchiridion”, or handbook, on Faith, Hope, and Love, composed, in 421, at the request of a pious Roman, Laurentius, is an admirable synthesis of Augustine’s theology, reduced to the three theological virtues. Father Faure has given us a learned commentary of it, and Harnack a detailed analysis (Hist. of dogmas, III, 205, 221). (c) Several volumes of miscellaneous questions, among which “Ad Simplicianum” (397) has been especially noted. (d) Numberless writings of his five practical or homiletic: the five on “Continens”, “Marriage”, and “Holy Widowhood”, one on “Patience”, another on “Prayer for the Dead” (421).

(7) Pastoral and Preaching.—The theory of preaching and religious instruction of the people.—The people are given in the “De Oratore Rutiliano” and in the fourth book “De Doctrina Christiana”. The oratorical work alone is of vast extent. Besides the Scriptural homilies, the Benediciones have collected 363 sermons which are certainly authentic; the brevity of these sermons, hagiographic, often revised by Augustine himself. If
the Doctor in him predominate over the orator, if he possesses less of colour, of opulence, of actuality, and of Oriental charm than St. John Chrysostom, we find, on the other hand, a more nervous logic, bolder comparisons, greater elevation and greater power of thought and feeling outside of this method of emotion and his daring leaps into dialogue-form, he attains the irresistible power of the Greek orator. The oratorical merit of Augustine has recently been placed in strong relief by Rottmann in "Jahrbuch" 1896, p. 894; and H. Pope, O. P., in "The Ecclesiastical Review", Sept., 1906.

Editions of St. Augustine's works.—The best edition of his complete works is that of the Benedictine, seven tomes in four folio volumes (Paris, 1679-1700). It has been often reprinted, e.g. by Gaume (Paris, 1836-39), in seven octavo volumes, and by Migne, P. L., XXXII-XLVII. The last volume of the Migne reprint contains a number of important earlier studies on St. Augustine—Vives, Noris, Merlin, particularly the literary history of the editions of Augustine from Schönenm's "Bibl. hist. lit. patrum Lat." (Leipzig, 1794). For critical remarks on the Benedictine, or Maurist, edition, see R. Kukula and O. Rottmann in the reports of the Vienna Academy of 1894, 1895, and 1896. An edition of St. Augustine has been appearing in the "Corpus Scriptorum Ecclesiasticorum Latinorum" of the Vienna Academy—the "Confessiones" by P. Knoll (XXXIII.), the "De Civitate Dei", by E. Hoffmann (XI.), etc. The principal tractates of St. Augustine are also found in the collection of H. Hurter, "SS. SS. Opuscula selecta" (Innsbruck, 1866 sqq.).—English translations.—Dr. Pusey's "Library of the Fathers" (Oxford, 1839-55) contains translations of many works of St. Augustine—the "Confessions", the "City of God", the "Enchiridion in mortalitate" in the collection of J. Racke, the "Homilies on John". It is well supplemented by the "Augustinian Library" of Marcus Dods (Edinburgh, 1872-76, 15 vols., 8vo), which contains a great number of translations, from the pens of Cunningham, Findlay, Saltoun, Holmes, Wallis, and others—the "City of God", the "Confessions", the Anti-Donatist, Anti-Pelagian, and Anti-Manichean works, "On the Trinity", "Sermone on the Mount", "Harmony of the Gospels", "On Christian Doctrine", "Enchiridion in mortalitate", the "Faith", and the "Creda et spera of Augustine the Ignorant". These volumes, enriched with other translations and introductory discourses, were reprinted under the editorial direction of Philip Schaff (New York, 1866-88, 8 vols.). Dr. Pusey's translation of the "Confessions", he says himself, is a revision of the version of W. Watts (London, 1650), with addition of a lengthy prefase and notes; the same translation, reprinted at Boston (1843), and then reputed anonymous, furnished Dr. W. G. T. Sheed (Andover, 1860) with the text for his "Augustine and Monasticism", in his essay "The City of God". S. L. Vives, "De Civitate Dei" bears the title: "Of the City of God with the learned comments of Jo. L. Vives, English first by J. H. (caley), London, 1610". There is a German (Catholic) translation of several works of St. Augustine in the "Kempten Bibliothek der Kirchenkunde" (1871-79, 8 vols.).

III. His FUNCTION AS A DOCTOR OF THE CHURCH.—When the critics endeavour to determine Augustine's place in the history of the Church and of civilization, there can be no question of exterior or political influence, of thought and sentiment, in his nature and his life. As Reuter justly observes, Augustine was bishop of a third-rate city and had scarcely any direct control over politics, and Harnack adds that perhaps he had not the qualifications of a statesman. If Augustine occupies a place apart in the history of humanity, Eucken and men of his calibre agree that it is as a thinker, his influence being far more potent than that of the great creators, and a most potent in the orientation of Western thought. It is now universally conceded that, in the intellectual field, this influence is unruled even by that of Thomas Aquinas, and Augustine's teaching marks a distinct epoch in the history of thought. The better to emphasize this important fact we shall try to determine: (1) the rank and degree of influence that must be ascribed to Augustine; (2) the nature, or the elements, of his doctrinal influence; (3) the general qualities of his doctrine; and (4) the character of his genius.

(1) The greatest of the Doctors.—It is first of all a remarkable fact that the great critics, Protestant as well as Catholic, are almost unanimous in placing St. Augustine in the foremost rank of Doctors and proclaiming him to be the greatest of the Fathers. Such, indeed, was also the opinion of his contemporaries, judging from their expressions of enthusiasm gathered by the Bollandists. The popes attributed such exceptional authority to the Doctor of Hippo that even of late 8s. Augustine has been the subject of theological controversies. Peter the Venerable accurately summarized the general sentiment of the Middle Ages when he ranked Augustine immediately after the Apostles; and in modern times Bossuet, whose piety was most like that of Augustine, assigns him the first place among the Doctors, nor does he simply call him "the incomparable Augustine", but "the Eagle of Doctors", "the Doctor of Doctors". If the Jansenistic abuse of his works and perhaps the exaggerations of certain Catholics, as well as the attack on the person of Richard Bérard, seemed to some minds, the general opinion has not varied. In the nineteenth century Stöckl expressed the thought of all when he said, "Augustine has justly been called the greatest Doctor of the Catholic world.

And the admiration of Protestant critics is not less enthusiastic. More than this, it would seem as if they had in these latter days been quite specially fascinated by the great figure of Augustine, so deeply and so assiduously have they studied him (Binde- mmann, G. Harnack, Eucken, Schell, and so on) and all of them agree with Harnack when he says: "Where, in the history of the West, is there to be found a man who, in point of influence, can be compared with him?" Luther and Calvin were content to treat Augustine with a little less reverence than they did the other Fathers, but their descendants do him full justice, although recognizing him as the Father of Roman Catholicism. According to Binde- mmann, "Augustine is a star of extraordinary brilliancy in the firmament of the Church. Since the Apostles he has been unsurpassed". In his "History of the Church" Dr. Kurtz calls Augustine "the greatest, the most powerful of all the Fathers, him from whom proceeds all the doctrinal and ecclesiastical development of the West, and to whom each recurring era of the Church have each in equal measure derived their strength and light" (J. L. Eucken, "Augustine", 1871-79, 8 vols., p. 87).

The English writer, G. H. Schaff himself (Saint Augustine, Melanchthon and Neander, p. 98) is of the same opinion: "While of most of the great men in the history of the Church are claimed either by the Catholic or by the Protestant confession, and their influence is therefore confined to a very limited sphere, Augustine enjoys from both a respect equally profound and enduring". Rudolf Eucken is bolder still, when he says: "On the ground of Christianity proper a single philosopher has appeared and that is Augustine." The English writer, G. H. Schaff, is even more precipitate of the extent and perpetuity of this extraordinary influence: "The whole life of the medieval
Church was framed on lines which he has suggested: its religious orders claimed him as their patron; its mysticism wore a sympathetic tone in his teaching; its polity was to some extent the actualization of his picture of the Christian Church; it was in its various parts a carrying out of ideas which he cherished and diffused. Nor does his influence end with the decline of his own leadership: we shall see presently how closely his language was akin to that of Descartes, who gave the first impulse to and defined the special character of modern philosophy. And after having established that the doctrine of St. Augustine was at the bottom of all the struggles between Jansenists and Catholics in the Church of France, between Armenians and Calvinists on the side of the Reformers, he adds: "And once more in our own land when a reaction arose against rationalism and Erastianism it was to the African Doctor that men turned with enthusiasm: Dr. Pusey's edition of the Confessions was among the first-fruits of the Oxford Movement".

But Adolf Harnack is the one who has oftentimes emphasized the unique role of the Doctor of Hippo. He has placed Augustine's place in the history of the world as reformer of Christian piety and his influence as Doctor of the Church. In his study of the "Confessions" he comes back to it: "No man since Paul is comparable to him"—with the exception of Augustine, he adds—"even to-day we live by Augustine, by his thought and his spirit; it is said that we are the sons of the Renaissance and the Reformation, but both one and the other depend upon him".

(2) Nature and different aspects of his doctrinal influence.—This influence is so varied and so complex that it is difficult to consider under all its different aspects. First of all, in his writings the great bishop collects and condenses the intellectual treasures of the old world and transmits them to the new. Harnack goes so far as to say: "It would seem that the miserable existence of the Roman empire in the West was prolonged until then, only to permit Augustine's influence to be exercised on universal history". It was in order to fulfill this enormous task that Providence brought him into contact with the three worlds whose thought he was to transmit: with the Roman and Latin world in the midst of which he lived, with the Oriental world partially revealed to him through the study of Manicheism, and with the world of ideas of the time. Augustine was a great man of his age, a great personality of his time.

In philosophy he was initiated into the whole content and all the subtleties of the various schools, without, however, giving his allegiance to any one of them. In theology it was he who acquainted the Latin Church with the great dogmatic work accomplished in the East during the fourth century and at the beginning of the fifth; he popularized the results of it by giving them the more exact and precise form of the Latin genius.

To synthesis of the past, Augustine adds the incomparable wealth of his own thought, and he may be said to have been the most powerful instrument of Providence in development and advance of dogma. Here the danger has been not in denying, but in exaggerating, this advance. Augustine's dogmatic mission (in a larger sphere and apart from inspiration) recalls that of Paul in the preaching of the Gospel. It has also been subject to the same attacks and occasioned the same vagaries of criticism. Just as it was sought to make of Paulinism the real source of Christianity, so as we know it, so Augustine sought to make of Augustineism the real source of Christianity. As we know it, Augustine had already in the Church some sort of syncretism of the ideas of Paul and of neo-Patonism which was a deviation from ancient Christianity, fortunate according to some, but according to others utterly deplorable. These fantasies do not survive the reading of the texts, but Harnack himself shows in Augustine the heir to the tradition that preceded him. Still, on the other hand, his share of invention and originality in the development of dogma must not be ignored, although here and there, on special questions, human weaknesses crop out. He realized, better than any of the Fathers, the progress so well expressed by Vincent of Lérins, his contemporary, in a page that some have turned against him.

In general, all Christian dogmatism are indebted to him for new theories that better justify and explain revelation, new views, and greater clearness and precision. The many struggles with which he was identified, together with the speculative turn of his mind, brought almost every question within the scope of his research. Even his way of stating problems so left his impress upon them that there is no problem, one might almost say, in considering which the theologian does not feel the study of Augustine's thought to be an imperative obligation. Certain dogmas in particular he so amply developed, so skillfully combined, so skillfully derived from truths from their envelope of tradition, that many of these dogmas (wrongly, in our opinion) have been set down as "Augustinianism". Augustine was not their inventor, he was only the first to put them in a somewhat matured form, to compare them with the Atonement, Grace, and Predestination. Schaff (op. cit., 97) has very properly said: "His appearance in the history of dogma forms a distinct epoch, especially as regards anthropological and soteriological doctrines, which have become far more developed and more generally accepted, and that have been extended and applied to all the needs of the Church. And these developments, which have been due to his thought and his spirit, have been of the first importance for the Church's future, and have brought to a greater clearness and precision, than they had ever had before in the consciousness of the Church". But he is not only the Doctor of Grace, he is also the Doctor of the Church: his twenty years' conflict with Donatism led to a complete exposition of the dogmas of the Church, the great work and mystical Body of Christ, and true Kingdom of God, of its part in salvation and of the intimate efficacy of its sacraments. It is on this point, as the very centre of Augustinian theology, that Reuter has concentrated the "Augustinianische Studien" which, according to Harnack, are the most learned of recent studies on St. Augustine. Manichean controversies also led him to state clearly the great questions of the Divine Being and of the nature of the Logos, and the Platonic clement of the problem of Good, or of good principles of all things. Lastly, the very idiosyncrasy of his genius and the practical, supernatural, and Divine imprint left upon all his intellectual speculations have made him the Doctor of Charity.

Another step forward due to the works of Augustine is in the language of theology, for, if he did not create it, he at least contributed towards its definite settlement. It is indebted to him for a great number of epigrammatic formulae, as significant as they are terse, afterwards singled out and adopted by Scholasticism. Besides, as Latin was more concise and less fluid in its forms than Greek, it was wonderfully well suited to the work. Augustine made it the dogmatic language par excellence, and Anselm, Thomas, Aquinas, and others have followed his lead. At times he has even been credited with the pseudo-Athanasian creed which is undoubtedly of later date, but those critics were not mistaken who traced its inspiration to the formulae in "De Trinitate", and that system that was certain that Augustine was certainly familiar with Augustine and drew upon his works. It is unquestionably this gift of concise expression, as well as his charity, that has so often caused the celebrated saying to be attributed to him: "In essentials unity, in non-essentials liberty, in all things charity".
Augustine stands forth, too, as the great inspirer of religious thought in the West. A single volume would not be sufficient to contain the full account of his influence on posterity; here we shall merely call attention to its principal manifestations.

It is, in the first place, a fact of paramount importance that, with St. Augustine, the centre of dogmatic and ecclesiastical thought shifted from the East to the West. Hence, from this view-point again, he makes an epoch in the history of dogma. The critics maintain that up to his time the most powerful influence was exerted by the Greek Church; the East having been the classic land of theology, the great workshop for the elaboration of dogma. From the time of Augustine, the predominating influence seems to emanate from the West, and the practical, realistic spirit of the Latin race supplants the speculative and idealistic spirit of Greece and the East. Another fact, no less salient, is that it was the Doctor of Hippo who, in the bosom of the Church, inspired the two seemingly antagonistic movements, Scholasticism and Mysticism. From Gregory the Great to the Fathers of Trent, Augustine's theological authority, indeed, the only law of the modern writers, dominated all thinking and is appealed to alike by the Scholastics Anselm, Peter Lombard, and Thomas Aquinas, and by Bernard, Hugh of St. Victor, and Tauler, exponents of Mysticism, all of whom were nourished upon his writings and nourished by his spirit. Faith in the dogma of the Virgin and of the Eucharist, the two dogmas of open times is well known. Attempts to monopolize Augustine and to make him an ante-Reformation reformer, were certainly not wanting. Of course Luther had to admit that he did not find in Augustine and in his doctrine, the ground for the Reformation. The same held true of all Protestantism; and Schaff tells us that he consoled himself with excluding (op. cit., p. 100): "Augustine has often erred, he is not to be trusted. Although good and holy, he was yet lacking in true faith and in the spirit. In general, the Reformers did not so exactly fall into line, and for a long time it was customary to oppose the great name of Augustine to Catholicism. Article 20 of the Confession of Augsburg dares to ascribe to him justification without works, and Melancthon invokes his authority in his "Apologia Confessionis." In the last thirty or forty years all has been changed, and the best Protestant critics now vie with one another in proclaiming the essentially Catholic character of Augustinian doctrine. In fact they go to extremes when they claim him to be the founder of Catholicism. It is thus that H. Reuter concludes his very important studies on the Doctor of Hippo: "I consider Augustine the founder of Roman Catholicism in the West. . . . This is no new discovery, as W. Schrage has already pointed out, but it is a long way recognized by Neander, Julius Kostlin, Dorner, Schmidt, . . . et cetera." Then, as to whether Evangelicalism is to be found in Augustine, he says: "Formerly this point was reasoned out very differently from what it is nowadays. . . . The phrases so much in use from 1530 to 1670: "Augustine is the Father of evangelical Protestantism and Pelagius is the Father of Catholicism," are now rarely met with. They have since been acknowledged to be untenable, although they contain a particula veri". Philip Schaff reaches the same conclusion; and Dorner says, "It is erroneous to ascribe to Augustine the ideas that inspired the Reformation." No one, however, has put this idea in a stronger light than Harnack. Quite recently, in his 14th lesson on "The Evangelical Church," he emphasized the idea that the Church by three elements, the third of which is Augustinianism, the thought and the piety of St. Augustine. In fact Augustine has exerted over the whole inner life of the Church, religious life and religious thought, an absolutely decisive influence. And again he says, "In the fifth century, the Church inherited the Roman Empire, she had within her a man of extraordinarily deep and powerful genius: from him she took her ideas, and to this present hour she has been unable to break away from them." In his "History of Dogma" (English tr.,
The character of his genius.—We have now to ascertain what is the dominating quality which accounts for his fascinating influence upon posterity. One after another the critics have considered the various aspects of this great genius. Some have been particularly impressed by the depth and originality of his conceptions, and for these Auguste is the great sower of the ideas by which future minds are moulded. Others, like Jung, have praised in him the marvellous harmony of all the mind's higher qualities, or, again, the universality and the compass of his doctrine. "In the great African Doctor", says the Rev. J. A. Zahm (Bible, Science and Faith, Fr. tr., p. 56), "we seem to have found the restraining logic of Plato, the deep scientific conceptions of Aristotle, the knowledge and intellectual suppleness of Origen, the grace and eloquence of Basil and Chrysostom. Whether we consider him as philosopher, as theologian, or as exegist . . . he still appears admirable . . . the unquestioned Master. . . ." (op. cit., p. 97) admirably above all "such a rare union of the speculative talent of the Greek and of the practical spirit of the Latin Church as he alone possessed".

In all these opinions there is a great measure of truth; nevertheless we believe that the dominating characteristic of Auguste is the profoundness and the universality of his influence. The secret of his influence are to be found in his heart—"a heart that penetrates the most exalted speculations of a profound mind and animates them with the most ardent feeling. It is at bottom only the traditional and general estimate of the saint that we express; for he has always been represented with a heart for his emblem, just as Thomas Aquinas with a sun. Mgr. Bougaud thus interpreted this symbol: "Never did man unite in one and the same soul such stern rigour of logic with such tenderness of heart". This is also the opinion of Harnack, Böhringer, Nourisson, Storz, and others. Great intellectual admiringly fused with an enlightened mysticism is Auguste's distinguishing characteristic. Truth is not for him only an object of contemplation; it is a good that must be loved and lived by. What constitutes Auguste's genius is his marvellous gift of embracing truth with all the fibres of his soul; not with the heart alone, for the heart does not think; not with the mind only, for the mind grasps only the abstract or, at worst, lifeless truth. Auguste seeks the living truth, and even when he is combating certain Platonic ideas he is of the family of Plato, not of Aristotle. He belongs indubitably to all ages because he is in the Church of Christ, with the papacy, and concludes his index: "The history of Catholicism is the history of the progressive elimination of Augustinism". The singular aptitude of these critics for supposing the existence of flagrant contradictions in a genius like Auguste is not so astonishing when we remember that, with Reuter, they justify this theory by the reflection: "In whom are to be found more frequent contradictions than in Luther?" But their theories are based upon a false interpretation of Auguste's opinion, which is frequently misconstrued by those who are not sufficiently familiar with his language and terminology.

(4) The character of his genius.—We have now to ascertain what is the dominating quality which accounts for his fascinating influence upon posterity. One after another the critics have considered the various aspects of this great genius. Some have been particularly impressed by the depth and originality of his conceptions, and for these Auguste is the great sower of the ideas by which future minds are moulded. Others, like Jung, have praised in him the marvellous harmony of all the mind's higher qualities, or, again, the universality and the compass of his doctrine. "In the great African Doctor", says the Rev. J. A. Zahm (Bible, Science and Faith, Fr. tr., p. 56), "we seem to have found the restraining logic of Plato, the deep scientific conceptions of Aristotle, the knowledge and intellectual suppleness of Origen, the grace and eloquence of Basil and Chrysostom. Whether we consider him as philosopher, as theologian, or as exegist . . . he still appears admirable . . . the unquestioned Master . . . the profoundness and the universality of his influence. The secret of his influence are to be found in his heart—"a heart that penetrates the most exalted speculations of a profound mind and animates them with the most ardent feeling. It is at bottom only the traditional and general estimate of the saint that we express; for he has always been represented with a heart for his emblem, just as Thomas Aquinas with a sun. Mgr. Bougaud thus interpreted this symbol: "Never did man unite in one and the same soul such stern rigour of logic with such tenderness of heart". This is also the opinion of Harnack, Böhringer, Nourisson, Storz, and others. Great intellectual admiringly fused with an enlightened mysticism is Auguste's distinguishing characteristic. Truth is not for him only an object of contemplation; it is a good that must be loved and lived by. What constitutes Auguste's genius is his marvellous gift of embracing truth with all the fibres of his soul; not with the heart alone, for the heart does not think; not with the mind only, for the mind grasps only the abstract or, at worst, lifeless truth. Auguste seeks the living truth, and even when he is combating certain Platonic ideas he is of the family of Plato, not of Aristotle. He belongs indubitably to all ages because he is in the Church of Christ, with the papacy, and concludes his index: "The history of Catholicism is the history of the progressive elimination of Augustinism". The singular aptitude of these critics for supposing the existence of flagrant contradictions in a genius like Auguste is not so astonishing when we remember that, with Reuter, they justify this theory by the reflection: "In whom are to be found more frequent contradictions than in Luther?" But their theories are based upon a false interpretation of Auguste's opinion, which is frequently misconstrued by those who are not sufficiently familiar with his language and terminology.
thinker ever caused so many and such salutary tears to flow. This characteristic of Augustine's genius explains his doctrinal work. Christian dogmas are considered in relation to the soul and the great duties of Christian life, rather than to themselves and in a speculative fashion. In his division of theology in the "Enchiridion", which at first sight seems so strange. He assembles all Christian doctrine in the three theological virtues, considering in the mysteries the different activities of the soul. He live by faith. In the Incarnation, he assigns the greatest part to the moral side, to the triumph of humility. For this reason, also, Augustine's work bears an imprint, until then unknown, of living personality peeping out everywhere. He inaugurates that literature in which the author's individuality reveals itself in the most abstract matters, the "Confessions" being an inimitable example of it. It is in this connexion that Harnack admires the African Doctor's gift of psychological observation and a captivating faculty for portraying his penetrating observations. This talent, he says, is the secret of Augustine's originality and greatness. Again, it is this same characteristic that distinguishes him from the other Doctors and gives him his own special temperament. The practical side of a question, to which Augustine often arrives, he does not rise to the same heights, nor moves the heart as deeply as does his disciple of Milan. Jerome is a more learned exegetist, better equipped in respect of Scriptural erudition; he is even purer in his style; but, despite his impetuous ardour, he is less animated, never striking, than his correspondent of Hippo. Athanasius, too, is subtle in the metaphysical analysis of dogma, but he does not appeal to the heart and take hold of the soul like the African Doctor. Origen played the part of initiator in the Eastern Church, just as Augustine did in the Western, but his influence, unfortunate in more ways than one, was exercised rather in the sphere of speculative intelligence, while that of Augustine, owing to the qualities of his heart, extended far beyond the realm of theology. Bossuet, who of all geniuses most closely resembles Augustine by his elevation and his universality, is his superior in the skillfulness and artistic finish of his works, but he has not the alluring tenderness of soul; and if Augustine founds the downward identification of Thomas Aquinas. On the other hand, without the clear, definite idea of dogma, mysticism founders as soon as reason awakes and discovers the emptiness of metaphors; this is always the fate of vague piety, whether it recognizes Christ or not, whether it be exulted by Schleiermacher, Sabatier, or their disciples. But to Augustine's genius, at once enlightened and ardent, the whole soul is accessible, and the whole Church, both teachers and taught, is penetrated by a tenderness and a grace which, however, is far more sympathetic than any other critic, admires and despises Augustine's influence over all the life of Christian people. If Thomas Aquinas is the Doctor of the Schools, Augustine is, according to Harnack, the inspirer and restorer of Christian piety. If Thomas, besides having formed Thomas himself, inspires the inner life of the Church and is the soul of all the great reforms effected within its pale. In his "Essence of Christianity" (14th lesson, 1900, p. 161) he teaches that only the piety of Augustine. "His living has been necessarily relived in the course of the fifteen bled years that have followed. Even to our days interior and living piety among Catholics, as well as the mode of its expression, has been essentially Augustinian: the soul is permeated by his sentiment, it feels as he felt and rethinks his thoughts. It is his all; it is all in him; his influence is felt by no means among the worst. And even those to whom dogma is but a relic of the past proclaim that Augustine's influence will live forever."

This genuine emotion is also the veil that hides certain faults from the reader. "We are oblivious of them. Says Eucken: "Never could Augustine have exercised all the influence he has exerted if it had not been that, in spite of the rhetorical artifice of his utterance, absolute sincerity reigned in the inmost recesses of his soul". His frequent repetitions are excused because they are the expression of his deep feeling. Schaff says: "His books, with all the faults and repetitions of isolated parts, are a spontaneous outflow from the marvellous treasures of his highly-gifted mind and his truly pious heart". (St. Augustine, p. 96.)

But we must also acknowledge that his passion is the source of exaggerations and at times of errors that are fraught with real danger for the inattentive or badly disposed reader. Out of sheer love for Augustine, we sometimes justify all he wrote, to admire all, and to proclaim him infallible, but nothing could be more detrimental to his glory than such excess of praise. The reaction already referred to arises partly from this. We must recognise that the passion for truth sometimes fixes its attention too much upon one side of a complex question; his too absolute formulae, lacking qualification, false in appearance now in one sense now in another. "The oratorical temperament that was in such a high degree", says Becker, "is extremely imitated in the "Auguste d'histori" (the "Histoire de l'Eglise", 1902, p. 379), "the kind of exaltation that betrays his rich imagination and his loving soul, are not the most reliable in philosophical speculations". Such is the origin of the contradictions alleged against him and of the errors ascribed to him by the predestinarians of all ages. Here we see the rôle of the more frigid minds of Scholasticism. Thomas Aquinas was a necessary corrective to Augustine. He is less great, less original, and, above all, less animated; but the calm didactism of his intellectual genius enabled him to mitigate Augustine's exaggerations with rigorous criticism, to impart exactitude and precision to his terms—in one word, to prepare a dictionary with which the African Doctor may be read without danger.

IV. His System of Grace.—It is unquestionably in the great Doctor's solution of the eternal problem of freedom and grace—of the part taken by God and by man in the affair of salvation—that his thought stands forth as most personal, most powerful, and most disputed. Most personal, for he was the first of all to synthesize the great theories of the Fall, grace, and free will; and moreover it is he who, to reconcile them all, has furnished us with a profound explanation which is in very truth his, and of which we find no trace in his predecessors. Most disputed, also. Like St. Paul, whose teachings he develops, he has often been quoted, often not understood. His statements have experienced a development, and are interpreted in diverse senses. It has not been grasped, not only by the opponents of liberty, but by the Re
formers of the sixteenth century, but even to-day, by Protestant critics the most opposed to the cruel predestinationism of Calvin and Luther, who father that doctrine on St. Augustine. A technical study would of man here be sufficient to enunciate the most salient thoughts, to enable the reader to find his bearings.

(1) It is regarded as incontestable to-day that the system of Augustine was complete in his mind from the year 397—that is, from the beginning of his episcopate, when he wrote his famous CARMONVITARIUM. Of Simplician. It is to this book that Augustine, in his last years, refers the Semipelagians for the explanation of his real thought. This important fact, to which for a long time no attention was paid, has been recognized by Neander and established by Gangan, and also by recent critics, such as Loofs, Reuter, Turmel, Jules Martin (see also Cunningham, St. Austin, 1886, pp. 80 and 175).

It will not, therefore, be possible to deny the authority of these texts on the pretext that Augustine in his old age adopted a system more antagonistic to liberty.

(2) The system of Pelagius can to-day be better understood than heretofore. Pelagianism doubtless denied original sin, and the immortality and integrity of Adam; in a word, the whole supernatural order of things. But the idea of human nature, which was of stoic origin, was nothing else than the complete “emanation” of human liberty with regard to God, and its limitless power for good and evil. It depended on man to attain by himself, without the grace of God, a stoic impeccability and even insensibility, or the absolute control of his passions. It was scarcely suspected, even up to our time, what frightful rigorism resulted from this exaggeration of the powers of liberty. Since perfection was possible, it was of obligation. There was no longer any distinction between precepts and counsels. Whatever was good was a duty. There was no longer any distinction between mortal and venial sin. Every useless word merited hell, and even excluded from the Church the children of God. All this has been established by hitherto unedited documents which Caspari has published (Briefe, Abhandlungen, und Predigten, Christiana, 1890).

(3) The system of St. Augustine in opposition to these three fundamental principles: (a) God is absolute Master, by His grace, of all the determinations of the will; (b) man remains free, under the action of grace; (c) the reconciliation of these two truths rests on the manner of the Divine government.

(a) The first principle, viz., that of the absolute sovereignty of God over the will, the emancipation of Pelagius, has not always been understood in its entire significance. We think that numberless texts of the holy Doctor signify that not only does every meritorious act require supernatural grace, but also that every act of virtue, even of infidels, should be ascribed to a gift of God, not indeed to a supernatural grace (as Baus and the Jansenists pretend), but to a specially efficacious providence which has prepared this good movement of the actation (1, 8, 8). The theologians very wisely remark, that the will cannot accomplish that act of natural virtue, but it is a fact that without this providential benefit it would not.

Many misunderstandings have arisen because this principle has not been comprehended, and in particular the great medieval theology, which adopted it and made it the basis of its system of liberty, has not been justly appreciated. But many have been afraid of these affirmations which are so sweeping, because they have not grasped the nature of God’s gift of freedominstantly i.e., its momentary influence exercised, for instance, by eloquence (the orator can do no more than present motives), by meditation, or by good reading. What a power over the will would not a man possess who, at his own pleasure, at any moment, and in the most striking manner, present this or the other motives of action?—But such is God’s privilege. St. Augustine has remarked that man is not the master of his first thoughts: he can exert an influence on the course of his reflections, but he himself cannot determine the images he sees, and, consequently, the motives which present themselves to his mind. Now, as chance is only a word, it is God who determines at His pleasure these first perceptions of men.
Augustine

sider by the prepared providential action of exterior causes, or interiorly by a Divine illumination given to the soul. — Let us take one last step with Augustine: Not only does God send at His pleasure those attractive motives which inspire the will with its determinations, but, before choosing between these illuminations of the natural and the supernatural, the will itself desires what the Apostle says that the Apostle all freedom, will make to each of them. Thus, in the Divine knowledge, there is for each created will an indefinite series of motives which de facto (but very freely) win the consent to what is good. God, therefore, at His own leisure, bestows His gifts and graces on us, if we wish, or let Peter go down to perdition. No freedom, as a matter of fact, will resist what He has planned, although it always keeps the power of going to perdition. Consequently, it is God alone, in His perfect independence, who determines, by the choice of such a motive or such an inspiration (of which He knows the future influence), whether the will is going to decide for good or for evil. Hence, the man who has acted well must thank God for having endowed him with that inspiration which has foreordained to be efficacious, while that favour has been denied to another. A fortiori, every one of the elect owes it to the Divine goodness alone that he has received a series of graces which God saw to be infallibly, though freely, bound up with final perseverance. It is the grace which God has given to the Church, which always maintains the two principles of the absolute dependence of the will and of freedom, has not yet adopted as its own this reconciliation of the two extremes. We may ask where and how God knows the effect of these graces. Augustine has always affirmed the fact; he has never inquired about the mode; and it is here that Molinism has added to and developed his thoughts, in attempting to answer this question. But can the thinker, who created and maintains the design and programme of salvation, and which is so logically concatenated, be accused of fatalism and Manichaeism?

It remains to be shown that our interpretation exactly reproduces the thought of the great Doctor. The texts (indicated in Vacant's "Dict. de théologie catholique", I, col. 2590 seq.) are too numerous and too long to be reproduced here. But there is one work of Augustine, dating from the year 397, in which he clearly explains his thought: — a work which he not only did not disavow later on, but to which in many cases he referred, or at least to which he referred to the words of his readers who were troubled by his constant affirmation of grace. For example, to the monks of Adrumetum who thought that liberty was irascible with this affirmation, he addressed a copy of this book "De Diversis questionibus ad Simplicianum", feeling sure that their doubts would be disipated. There, in fact, he formulates his thoughts with great clearness. Simplician had asked how he should understand the Epistle to the Romans ix, on the predestination of Jacob and Esau. Augustine first lays down the fundamental principle of St. Paul, that every good will comes from grace, so that no man can take glory to himself for his merits, and this grace is so sure of its results that human liberty will never in reality resist it, although it has the power to do so. Then he affirms that this efficacious grace is not necessary for us to be able to act well, but because, in fact, without it we would not wish to act well. From that arises the great difficulty: How does the power of resisting grace fit in with the certain knowledge of God? If God predestined, then it is replied: There are many ways of inviting faith. Souls being differently disposed, God knows what invitation will be accepted, what other will not be accepted. Only those are the elect for whom God chooses the invitation which is foreordained to be efficacious, but God could have reverted them all: "Cujus autem misericur, sie cum vocat, quomodous siti congruen us vocanten non resputant" (op. cit., I, q. ii, n. 2; 12, 13).

Is there in this a vestige of an irresistible grace or of that impulse against which it is impossible to fight, forcing some to good, and others to sin and hell? It cannot be too often repeated that this is not an idea thrown off in passing, but a fundamental explanation which if not so considered by God's part in the possibility of grasping anything of his doctrine; but if it is seized Augustine entertains no feelings of uneasiness on the score of freedom. In fact he supposes freedom everywhere, and reveres incessantly the right of God's part within predestination, directs it, and assures its infallible result. In the "De Dono perseverantiae" (xvii, n. 42), written at the end of his life, he explains the whole of predestination by the choice of the vocation which is foreseen as efficacious. Thus is explained the chief part attributed to that external providence which prepares, by ill health, by warnings, etc., the good thoughts which it knows will bring about good resolutions. Finally, this explanation alone harmonizes with the moral and social attributes to victorious grace. Nowadays does Augustine represent it as an irresistible impulse impressed by the stronger on the weaker. It is always an appeal, an invitation which attracts and seeks to persuade. He describes this attraction, which is without violence, of the beautiful fruit of daily life, the fruit of dainties, for the grace of the Church, which always maintains the two principles of the absolute dependence of the will and of freedom, is not yet adopted as its own this reconciliation of the two extremes. We may ask where and how God knows the effect of these graces. Augustine has always affirmed the fact; he has never inquired about the mode; and it is here that Molinism has added to and developed his thoughts, in attempting to answer this question. But can the thinker, who created and maintains the design and programme of salvation, and which is so logically concatenated, be accused of fatalism and Manichaeism?

The Augustinian predestination presents no new difficulty if one has understood the function of this Divine knowledge in the choice of graces. The problem is reduced to this: Does God in his creative decree and, before any act of human liberty, determine the one by an immutable choice (a fortiori)? — Must the elect during eternity thank God only for having rewarded their merits, or must they also thank Him for having, prior to any merit on their part, chosen them to the meriting of this reward? One system, that of the Semipelagians, decides in favour of man: God predestines to salvation all alike, and gives to all an equal measure of grace; human liberty alone decides whether one is lost or saved; from which we must logically conclude (and they really inculcated it) that the number of the elect is fixed or certain except in the case of the Predestinationists (the Semipelagians falsely ascribed this view to the Doctor of Hippo), affirms not only a privileged choice of the elect by God, but at the same time (a) the predestination of the reprobate to hell and (b) the absolute powerlessness of one or the other to escape from the irresistible impulse which drugs them either to good or to evil. This is the system of Calvin.

Between these two extreme opinions Augustine formulated (not invented) the Catholic dogma, which affirms these two truths at the same time: (a) the eternal choice of the elect by God is very real, very gratuitous, and constitutes the grace of graces; (b) but this decree does not destroy the Divine will to save all men, which, moreover, is not realized except by the human liberty that leaves to the elect full power to fall and to the non-elect full power to rise. Here is how the theory of St. Augustine, already explained, forces us to conceive of the Divine decree: Before all decision to create the world, the a priori knowledge of God includes not only different series of graces, and different series of graces, which He can prepare for each soul, along with the consent or refusal which would follow in each circumstance, and that in millions and millions of possible combinations. Thus He sees that if Peter had received such another grace, he would not have been converted; and if on
the contrary such another Divine appeal had been heard in the heart of Judas, he would have done penance and been saved. Thus, for each man in particular there are in the thought of God, limitless possible histories, some histories of virtue and salvation, others of crime and damnation; and God will be the judge of whether such a series of graces, and in determining the future history and final destiny of each soul. And this is precisely what He does when, among all possible worlds, by an absolutely free act, He decides to realize the actual world with its circle of existences, with all the graces which in fact have been and will be distributed until the end of the world, and consequently with all the elect and all the reprobate who God foresaw would be in it if de facto He created it.

Now in the Divine decree, according to Augustine, and according to the Catholic Faith on this point, which has been formulated by him, the two elements pointed out above appear: (a) The certain and gratuitous choice of the elect—God decreeing, according to Augustine, to create the world and to give it such a series of graces with such a concatenation of circumstances as should bring about freely, but infallibly, such and such results (for example, the despair of Judas and the repentance of Peter), decides, at the same time, whether he has placed the citizens of the future heavenly Jerusalem. The choice is immutable; the list closed. It is evident, indeed, that only those of whom God knows beforehand that they will wish to co-operate with the grace decreed by Him will be saved. It is a gratuitous choice, the gift of gifts, in virtue of which even our merits are a gratuitous benefit, a gift which precedes all our merits. No one, in fact, is able to merit this election. God could, among other possible worlds, have chosen other series of graces which would have brought about other results. He saw combinations in which Peter would have been impenitent and Judas converted. It is therefore prior to any merit of Peter, or any fault of Judas, that God decided to give them the graces which saved Peter and not Judas. God does not wish to give paradise gratuitously to any one; but He gives very gratuitously to Peter the graces with which He knows Peter will be saved. —Mysterious choice! Not that it interferes with liberty, but because to this question: Why did not God, seeing the circle of existences which He will save, give it to him? Faith can only answer, with Augustine: O Mystery! O Altitude! (De Spiritu et litterâ, xxxiv, n. 60.).—(b) But this decree includes also the second element of the Catholic dogmas: the very sincere will of God to give to all men the power of saving themselves and the power of damning themselves. According to Augustine, God, in his creative decree, has expressly excluded every order of things in which grace would deprive man of his liberty, every situation in which man would not have the power to resist sin, and thus Augustine brushes aside that predestinationism which has been attributed to him. Listen to him speaking to the Manichéans: “All can be saved if they wish”; and in his “Retractions” (I, x), far from correcting this assertion, he confirms it emphatically: “It is true, entirely true, that all men can, if they wish”. But he always goes back to the providential preparation. In his sermon he says to all: “It depends on you to be elect” (In Ps. cxx, n. 11, etc.). “Who are the elect? Those who believe in Christ. But, you will say, according to Augustine, the lists of the elect and reprobate are closed. Now if the non-elect can gain heaven, if all the elect can be lost, why should not some pass from one list to the other? You forget the previous exposition of Augustine: When God made His plan, He knew infallibly, before His choice, what would be the response of the wills of men to His graces. If, then, the lists are definitive, if no one will pass from one series to the other, it is not because anyone cannot (on the contrary, all can), it is because God knew with infallible knowledge that no one would wish to. Thus I cannot effect that God should destine me to another series of graces than that to which He has fixed me, but with the grace which He gave me if I save myself it will not be because I am not able, but because I do not wish to.

Such are the two essential elements of Augustinian and Catholic predestination. This is the dogma which is common to all theologians, and formulated by all theologians: predestination in its entirety is absolutely gratuitous (ante merito). We have to insist on this, because many have seen in this immutable and gratuitous choice only a hard thesis peculiar to St. Augustine, whereas it is pure dogma (barring the mode of conciliation, which the Church still leaves free). With that established, the long debates of theologians on special predestination to glory ante or post merita are far from having the importance that some attach to them. (For a fuller treatment of this subtle problem see the “Dict. de théol. cath., I, coll. 2402 sqq.” I do not think St. Augustine entered that debate; in his time, only dogma was in question. But it does not seem historically permissible to maintain, as many writers have, that Augustine first introduced the notion of a system of predestination in his City of God, chapters 416 (In Joan. evang., tract. xii, n. 12), and that afterwards, towards 418, he shifted his ground and went to the extreme of harsh assertion, amounting even to predestinationism. We repeat, the facts absolutely refute this view. The ancient texts, even of 397, are as affirmative and as categorical as those of his last years, as critics like Loofs and Reuter have shown. If, therefore, it is shown that at that time he inclined to the milder opinion, there is no reason to think that other sermons or texts have brought about other results. He saw combinations in which Peter would have been impenitent and Judas converted. It is therefore prior to any merit of Peter, or any fault of Judas, that God decided to give them the graces which saved Peter and not Judas. God does not wish to give paradise gratuitously to any one; but He gives very gratuitously to Peter the graces with which He knows Peter will be saved.)

(5) The part which Augustine had in the doctrine of Original Sin has been brought to light and determined only recently.

In the first place, it is no longer possible to maintain seriously, as was formerly the fashion (even among certain Catholics, like Richard Simon), that Augustine invented in the Church the hitherto unknown doctrine of original sin, or at least was the first to introduce the idea of punishment and sin. Dornert himself (Augustinus, p. 140) disposed of this asser- tion, which is saved Judaism. In the explanation of the primal fall Augustine distinguished, with greater insistence and clearness than his predecessors, the punishment and the sin—the chastisement which strips the children of Adam of all the original privileges—and the fault, which consists in this, that the crime of Adam, the cause of the fall is, without having been committed personally by his children, nevertheless in a certain measure imputed to them, in virtue of the moral union established by God between the head of the human family and his descendents.

To pretend that in this matter Augustine was an innovator, and that before him the Fathers affirmed the punishment of the sin of Adam in his sons, but did not speak of the fault, is a historical error now proved to demonstration. We may discuss the thought of this or that pre-Augustinian Father, but, taking them as a whole, there is no room for doubt. The Protestant R. Seeberg (Lehrbuch der Dogmengeschichte, I, p. 266), after the example of his colleagues, refers to Peter the Latin Father, but referring to Tertullian, Commodian, St. Cyprian, and St. Ambrose. The expressions, fault, sin, stain (culpa, peccatum, macula) are repeated in a way to dispel all doubt. The truth is that original sin, while being sin, is of a nature essentially different from other faults, and it is not a personal act of the will of the children of Adam, in order to be responsible for the fault of their father.
which is morally imputed to them. Consequently, the Fathers—the Greeks especially—have insisted on its remote and afflicting character, which is in evidence, while Augustine was led by the polemics of the Pelagians (and only by them) to lay emphasis on the moral aspect of the fault of the human race in its first father.

With regard to Adam's state before the fall Augustine not only affirmed, against Pelagius, the gifts of immortality, impassibility, integrity, freedom from error, and, above all, the sanctifying grace of Divine adoption, but he emphasized its absolutely grand and supernatural character. When considering the matter historically and de facto, it was only the sin of Adam that inflicted death on us—Augustine repeats it again and again—because God had safeguarded us against the law of our nature. But de jure neither immortality nor the other graces were our due, and Augustine recognized this in affirming that God could have made the condition in which we were actually born the primitive condition of our first parents. That assertion alone is the very reverse of Jansenism. It is, moreover, finally confirmed in the "Rerum Tractations" (I, ix, n. 6).

(6) Does this mean that we must praise everything in St. Augustine's explanation of grace?—Certainly not. And we shall note the improvements made in the explanation, through the original Augustine. Some exaggerations have been abandoned, as, for instance, the condemnation to hell of children dying without baptism. Obscure and ambiguous formulæ have been eliminated. We must say frankly that Augustine's literary method of emphasizing his thought by exaggerated expressions, issuing in troublesome paradoxes, has often obscured his doctrine, aroused opposition in many minds, or led them into error. Also, it is above all important, in order to comprehend his doctrine, to compile an Augustinian dictionary, not a priori, but after an objective study of his texts. The work would be long and laborious, but how many prejudices it would dispel!

The Protestant historian Ph. Schaff (St. Augustine, p. 1052) writes: "The great genius of the African Church, from whom the Middle Ages and the Reformation have received an impulse alike powerful, though in different directions, has not yet fulfilled the work marked out for him in the counsels of Divine Wisdom. The two antagonistic sections of Western Christendom, and encourages the hope that a time may come when the injustice and bitterness of strife will be forgiven and forgotten, and the discords of the past be drowned forever in the sweet harmonies of perfect knowledge and perfect love". May this dream be realized!

V. AUGUSTINISM IN HISTORY.—The influence of the Doctor of Hippo has been so exceptional in the Church, that, after having indicated its general characteristics (see above), it is proper to indicate the principal phases of the historical development of his doctrine. The word Augustinism designates at times the entire group of philosophical doctrines of Augustine, at other times, it is restricted to his system of grace. Hence, (1) philosophical Augustinism; (2) theological Augustinism; (3) Augustinian laws which governed the mitigation of Augustinism.

(1) Philosophical Augustinism.—In the history of philosophical Augustinism we may distinguish three very distinct phases. First, the period of its most exclusive triumph in the West, up to the thirteenth century. During this period, which was marked by the invasion of the barbarians, but which were nevertheless burdened with the responsibility of safeguarding the sciences of the future, we may say that Augustine was the Great Master of the West. He was absolutely without a rival, or if there was one, it was one of his disciples, Gregory the Great, who, after being formed in his school, popularized his theories. The history of Platonicism on the Christian schools of the East, was that of Augustine in the West, with the difference, however, that the Bishop of Hippo was better able to detach the truths of Platonicism from the dreams of Oriental imagination. Hence the current of Platonic ideas was started which will never cease to act upon Western thought. This influence shows itself in various ways. It is found in the compilers of this period, who are so numerous and so well deserving of recognition—such as Isidore, Bede, Alcuin—who created the world of the Middle Ages as did the preachers of the sixth century, and notably St. Cæsarius. In the controversy, especially in the great disputes of the ninth and twelfth centuries on the validity of Simoniaca or the ordination of the text of Augustine plays the principal part. Carl Mihl has published on this point a very interesting study:

"Die Stellung Augustins in der Publizistik des Gregorianischen Kirchenrechts" (Leipzig, 1888). In the pre-Thomistic period of Scholasticism, then in process of formation, namely, from Anselm to Grosseteste, in the Great, Augustine is the great inspier of all the masters, such as Anselm, Abelard, Hugo of St. Victor, who is called by his contemporaries, another Augustine, or even the soul of Augustine. And it is proper to remark, with Coninx (Salis), that from the time of Anselm the cult of Augustinian ideas exercised an enormous influence on English thought in the Middle Ages. As regards Peter Lombard, his Sentences are little else than an effort to synthesize the Augustinian theories.

While they do not form a system as rigidly bound together as Thomism, yet Father Mandonnet (in his learned study of Siger de Brabant and M. de Wulf (on Gilles de Lesoins) have been able to group these theories together. And here let us present a summary sketch of those theses regarded in the thirteenth century as Augustinian, and over which the battle was fought. First, the fusion of theology and philosophy; the preference given to Plato over Aristotle—the latter representing rationalism, which was mistrusted, whilst the idealism of Plato exerted a strong attraction—wisdom regarded rather as the philosophy of the Good than the philosophy of the True. As a consequence, the disciples of Augustine always have a pronounced tinge of mysticism, while the disciples of St. Thomas have been more readily assimilated to the accepted intellectualism. In psychology, the illuminating and immediate action of God is the origin of our intellectual knowledge (at times it is pure ontologism); and the faculties of the soul are made substantially identical with the soul itself. They are its functions, and not distinct entities (a thesis which was to keep its own partisans in the Scholasticism of the future and to be adopted by Descartes); the soul is a substance even without the body, so that after death, it is truly a person. In cosmology, besides the celebrated thesis of rationes seminales, which some have recently attempted to interpret in favour of evolutionism, Augustinism admitted the multiplicity of substantial forms in compound beings, especially in man. But especially in ethics, the impossibility of creating a rational, essentially temporal character of every creature which is subject to change, we have one of the ideas of Augustine which his disciples defended with greater constancy and, it would appear, with greater success.

A second period of very active struggles came in the thirteenth century during which the school of Jordan was recognized. Renan (Averyros, p. 259) and others believed that the war against Thomism, which was just then beginning, was caused by the infatuation of the Franciscans for Av roius; but if the Franciscan Order showed itself on the whole opposed to
St. Thomas, it was simply from a certain horror at philosophical innovations and at the neglect of Augustinianism. The doctrinal revolution brought about by Albert the Great and Thomas Aquinas in favour of Aristotle startled the old School of Augustinianism among the Dominicans as well as among the Franciscans; especially the latter, who were the disciples of the eminent Augustinian doctor, St. Bonaventure. This will explain the condemnations, hitherto little understood, of many propositions of St. Thomas Aquinas three years after his death, on the 7th of March, 1277, by the Bishop of Paris, and on the 14th of March, 1277, by the Archbishop of Canterbury, Robert Kilwardby, a Dominican. The Augustinian school represented tradition; Thomism, progress. The censure of 1277 was the last victory of a too rigid Augustinianism. The happy fusion of the two methods in the two orders of Franciscans and Dominicans little by little brought about an agreement on certain points without excluding differences on others which were yet obscure (as, for instance, the unity or the multiplicity of forms), at the same time that it afforded for progress, the latter, who wished the condemnation of the propositions of St. Thomas Aquinas three years after his death, on the 7th of March, 1277, by the Bishop of Paris, and on the 14th of March, 1277, by the Archbishop of Canterbury, Robert Kilwardby, a Dominican. The Augustinian school represented tradition; Thomism, progress. The censure of 1277 was the last victory of a too rigid Augustinianism. The happy fusion of the two methods in the two orders of Franciscans and Dominicans little by little brought about an agreement on certain points without excluding differences on others which were yet obscure (as, for instance, the unity or the multiplicity of forms), at the same time that it afforded for progress, the latter, who wished the withdrawal of the condemnations of Paris (14 February, 1325). Moreover, the wisdom or the moderation of the new school contributed powerfully to its triumph. Albert the Great and St. Thomas, few schoolmen of the twelfth or thirteenth century, had been reported to be, placed themselves in his school, and while modifying certain theories, took on the way into their system the doctrine of the African bishop. How many articles in the "Summa" of St. Thomas have no other object than to incorporate in theology this or the other theory which was cherished by St. Augustine (to take only one example, that of exemplar ideas in God). Hence, there was no longer any school strictly Augustinian, because every school was such as had eliminated certain special points and retained the same veneration for the master.

From the third period of the fifteenth century to our days we see less of the special progress of philosophical Augustinianism than certain tendencies of an exaggerated revival of Platonism. In the fifteenth century Bessarion (1472) and Marsilio Ficino (1499) used Augustine's name for the purpose of elevating Plato in the Church and excluding Aristotle. In the seventeenth century, it is impossible to deny certain resemblances between Cartesianism and the philosophy of St. Augustine. Malebranche was wrong in ascribing his own ontological theory to the great Doctor, as were also many of his successors in the nineteenth century.

(2) Theological Augustinianism.—The history of Augustine's system of grace seems to blend almost indistinguishably with the progressive developments of this dogma. Here it must suffice, first, to enumerate the principal phases; secondly, to trace the general laws of development which mitigated Augustinianism in the Church.

After the death of Augustine, a whole century of fierce contests (430-529) ended in the triumph of moderate Augustinianism. In vain had Pope St. Celestine (431) sanctioned the teachings of the Doctor of Hippo. The Semipelagians of the south of France could not understand the prediction of God for the elect, and in order to attack the works of St. Augustine they made use of the occasionally exaggerated formulæ of St. Fulgentius, or of the real errors of certain isolated predestinationists, as, for example, Lupus of Toulouse, condemned by the Council of Aries (475). Happily, Prosper of Aquitaine, by his moderation, and also the unknown author of "De Vocatione omnium gentium", by his consoling thesis on the appeal addressed to all, opened the way to an agreement. And finally, St. Celsarius of Arles obtained from Pope Felix IV a series of Capitula which were solemnly promulgated at Orange, and gave their consecration to the triumph of Augustinianism (530). In the ninth century, a new victory was gained over the predestinationism of Gottschalk in the assemblies of Savonnieres and Toucy (859-860). The doctrine of the Divine will to save all men and the gratitude of the individual towards God, who has opened the public teaching of the Church. In the Middle Ages these two truths are developed by the great Doctors of the Church. Faithful to the principles of Augustinianism, they place in especial relief his theory on Divine Providence, which prepares at its pleasure the determination of this will by exterior events and interior inspirations.

In the fourteenth century a strong current of predestinationism is evident. To-day it is admitted that the origin of this tendency goes back to Thomas Bradwardin, a celebrated professor of Oxford, who died Archbishop of Canterbury (1349), and whom the best critics, along with Loofs and Harnack, recognize to have been the inspirer of Wyclif himself. His book "De causal Dei contra Pelagium" gave rise to the discussion of the "party of predestination", a word which, it had been thought, was invented by Banes in the sixteenth century. In spite of the opposition of theologians, the idea of absolute determinism in the name of St. Augustine was adopted by Wyclif (1324-97), who formulated his views in the "De praestantia hominum et de evil for the rest. He fancied that he found in the Augustinian doctrine the strange conception which became for him a central doctrine that overthrew all morality and all ecclesiastical, and even civil, government. According as one is predestined or not, everything changes its nature. The same sins are mortal in the non-elect which are venial in the predestined. The same acts of virtue are meritorious in the predestined, even if he be actually a wicked man, and whereby all eliminated certain special points and retained the same veneration for the master.

From the third period of the fifteenth century to our days we see less of the special progress of philosophical Augustinianism than certain tendencies of an exaggerated revival of Platonism. In the fifteenth century Bessarion (1472) and Marsilio Ficino (1499) used Augustine's name for the purpose of elevating Plato in the Church and excluding Aristotle. In the seventeenth century, it is impossible to deny certain resemblances between Cartesianism and the philosophy of St. Augustine. Malebranche was wrong in ascribing his own ontological theory to the great Doctor, as were also many of his successors in the nineteenth century.

(2) Theological Augustinianism.—The history of Augustine's system of grace seems to blend almost indistinguishably with the progressive developments of this dogma. Here it must suffice, first, to enumerate the principal phases; secondly, to trace the general laws of development which mitigated Augustinianism in the Church.

After the death of Augustine, a whole century of fierce contests (430-529) ended in the triumph of moderate Augustinianism. In vain had Pope St. Celestine (431) sanctioned the teachings of the Doctor of Hippo. The Semipelagians of the south of France could not understand the prediction of God for the elect, and in order to attack the works of St. Augustine they made use of the occasionally exaggerated formulæ of St. Fulgentius, or of the real errors of certain isolated predestinationists, as, for example, Lupus of Toulouse, condemned by the Council of Aries (475). Happily, Prosper of Aquitaine, by his moderation, and also the unknown author of "De Vocatione omnium gentium", by his consoling thesis on the appeal addressed to all, opened the way to an agreement. And finally, St. Celsarius of Arles obtained from Pope Felix IV a series of Capitula which were solemnly promulgated at Orange, and gave their consecration to the triumph of Augustinianism (530). In the ninth century, a new victory was gained over the predestinationism of G...
to compare with the Council of Trent in the matter of moderation, Arminianism triumphed over the Calvinistic thesis.

We must note here that even Protestant critics, who deplored the doctrine’s honour, held in the latter times vindicated Augustine from the false interpretations of Calvin. Dorner, in his “Gesch. der prot. Thologie”, had already shown the instinctive repugnance of Anglican theologians to the horrible theories of Calvin. W. Cunningham (Saint Austin, p. 284, note 1) has shown to the complete doctrinal opposition on fundamental points which exists between the Doctor of Hippo and the French Reformers. In the first place, as regards the state of human nature, which, is, according to Calvin, totally depraved, for Catholics it is very difficult to grasp the Protestant conception of original sin which, for Calvin and Luther, is not, as for us, the moral degradation and the stain imprinted on the soul of every son of Adam by the fault of the father which is imputable to each member of the family. It is not the deprivation of grace and of all other supernatural gifts; it is not even concupiscence, understood in the ordinary sense of the word, as the struggle of base and selfish instincts against the virtuous tendencies of the soul; it is a profound subversion of human nature; it is the physical alteration of the very substance of our soul. Our faculties, understanding, and will, if not entirely destroyed, are at least mutilated, powerless, and chained to evil. For the Reformers, original sin is not a sin, it is a sin, and the permanent sin, living in us and causing a continual stream of new sins to spring from our nature, which is radically corrupt and evil. For, as our being is evil, every act of ours is equally evil. Thus, the Protestant theologians do not ordi-

narily speak of the sins of mankind, but only of the sin, which makes us what we are and defies every thing. Hence arose the paradox of Luther: that even in an act of perfect charity a man sins mortally, because he acts with a vitiated nature. Hence that other paradox: that this sin can never be effaced, but remains entire, even after justification, although it will not be any longer imputed; to efface it, it would be necessary to modify physically this human being which is sin. Calvin, without going so far as Luther, had nevertheless insisted on this total corruption. “Le peccare da cui non si può trappolare which no engines can shake”, says he (Institution II, r. 19), “that the mind of man is so entirely alienated from the righteousness of God that he cannot con-

ceive, desire, or design anything but what is weak, deformed, foul, impure, indescribable, that his heart is so thoroughly pervaded by sin that it can breathe out nothing but corruption and rottenness; that if some men occasionally make a show of goodness, their mind is ever interwoven with hypocrisy and deceit, their soul inwardly bound with the letters of wickedness”. “Now”, says Cunningham, “this doctrine, whatever there may be to be said for it, is not the doctrine of Saint Austin. He held that sin is the defect of a good nature which remains ele-

ments of goodness, even in its most diseased and corrupted state, and he gives no countenance, what-

ever to this modern opinion of total depravity”. It is the same with Calvin’s affirmation of the ir-

resistible action of God on the will. Cunningham shows that these doctrines are irreconcilable with liberty and that if they have been developed, the Saint Austin is careful to attempt to harmonize the benefits in God’s omnipotence with human responsibility” (St. Austin, p. 86). The Council of Trent was there-

fore faithful to the true spirit of the African Doctor and therewith the doctrine of predestination was the doctrine of the Church, by its definitions against the two op-

posite excesses. Against Pelagianism it reaffirmed original sin and the absolute necessity of grace (Sess. VI, can. 2); against Protestant predestinationism it proclaimed the freedom of man, with his double power of resisting grace (posse dissentire si velit—

Sess. VI, can. 4) and of doing good or evil, even before embracing the Faith of Christ.

In the seventeenth century Jansenism adopted, while modifying it, the Protestant conception of original sin and the state of fallen man. No more than Luther did the Jansenists admit the two orders, natural and supernatural. All the gifts which Adam received—immunity from sin and the sanctifying grace—are absolutely required by the nature of man. Original sin is, therefore, again regarded as a profound alteration of human nature.

From which the Jansenists conclude that the key to St. Augustine’s system is to be found in the essential difference of the Divine government and of grace, before and after the Fall of Adam. Before the Fall Adam enjoyed complete liberty, and grace gave him the power of resisting or obeying; after the Fall there was no longer in man liberty properly so called; there was only spontaneity (libertas a coactione, and not libertas a necessitate). Grace, or delection in the good, is essentially efficacious, and necessarily victorious once it is superior in degree to the opposite concupiscence. The struggle, which was prolonged for two centuries, led to a main mediation of the Doctor of Hippo and prepared the way for the definite triumph of Augustinism, but of an Augustinism mitigated in accordance with laws which we must now indicate.

(3) Laws which governed the mitigation of Au-

gustinism.—In spite of what Protestant critics may have said, the Church has always been faithful to the fundamental principles defended by Augustine against the Pelagians and Semi-pelagians, on original sin, the necessity and gratuity of grace, the absolute dependence on God for salvation. Nevertheless, great progress was made along the line of gradual mitigation. For it cannot be denied that the doctrine formulated at Trent, and taught by all our theologians, produces an impression of greater suavity and greater clarity than this or that passage in the works of St. Augustine. The causes of this softening down, and the successive phases of this progress were as follows:—

First, theologians began to distinguish more clearly between the natural order and the supernatural, and hence the Fall of Adam no longer appeared as a corruption of human nature in its constituent parts; it is the loss of the whole order of supernatural elevation. St. Thomas (Summa, I, q. xxv, a. 1) formulates the great law of the proph-
evation, in guilty Adam’s children, of all the fac-

ulties in their essential integrity: “Sin (even original) neither takes away nor diminishes the natural endom-

wments”. Thus the most rigorist Thomists, Alvarez, Lemos, Contenson, agree with the great Doctor that the sin of Adam has not enfeebled (intrinsecus) the natural moral forces of humanity.

Secondly, such consoling and fundamental truths as God’s desire to save all men, and the redeeming death of Christ which was really offered and accepted for all peoples and all individuals—these truths, which Augustinian never denied, but which he left too much in the background and as it were hidden under the terrible formules of the doctrine of predestination, have been placed in the full light, and not only for theologians, but have at last entered into the ordinary teaching of theology. Thus our Doctors, without detracting in the least from the sovereignty and justice of God, have risen to the highest idea of His goodness: that God so sincerely desires the salvation of all men that He gives absolutely to all, immediately or mediately, the means necessary for salvation, and always with the desire that man should consent to employ those
means. No one falls into hell except by his own fault. Even infidels will be accountable for their infidelity. St. Thomas expresses the thought of all when he says: 'It is the common teaching that if a man, in spite of the barbary of God, really does what lies in his power, God will reveal to him what is necessary for salvation, either by interior inspirations or by sending him a preacher of the Faith' (In Lib. II Sententiarum, dist. 25, Q. viii, a. 4, ad. 4em). We must not disseemble the fact that this law changes the whole aspect of Divine Providence, and that St. Augustine had left it too much in the shade, insisting only upon the other aspect of the problem: namely, that God, while making a sufficing appeal to all, is nevertheless bound to choose always that appeal which shall in fact be efficacious and shall be accepted, provided that the refusal of consent be due to the obstinacy of the sinner's will and not to its lack of power. Thus the Doctors most eagerly approved the axiom, Facienti quod in se est Deus non denegat gratiam—God does not refuse grace to one who does what he can.

Thirdly, from principles taught by Augustine consequences have been drawn which are clearly de- rived from them, but which are not stated in them. Thus it is incontestably a principle of St. Augustine that no one sins in an act which he cannot avoid—"Quis enim peccat in eo quod caveri non potest?" This passage from "De libero arbitrio" (III, xviii, n. 60) may anterior to the year 418; but far from re- tracking it he approves and explains it, in 415, in the "De nat. et grati.", xlv, n. 80. From that pregnant principle theologians have concluded, first, that grace sufficient to conquer temptations never fails anyone, even an infidel; then, against the Jansenists, they have added that, to deserve its name of sufficient grace, it ought to give a real power which is complete, even relatively to the actual difficulties. No doubt theologians have groped about, hesitated, even denied; but to-day there are very few who would dare not to recognize in St. Augustine the affirmation of the possibility of not sinning.

Fourthly, certain secondary assertions, which encumbered, but did not make part of the dogma, have been lopped off from the doctrine of Augustine. Thus the Church, which, with Augustine, has always denied entrance into Heaven to unbaptized children, has not adopted the severity of the great Doctor in condemning such children to bodily pains, however slight. And little by little the milder teaching of St. Thomas has prevailed in the Church, to be vindicated against unjust censure when Pius VI condemned the pseudo-synod of Pistoja. At last Augustine's obscure formule were abandoned or corrected, so as to avoid regrettable confusions. Thus the expressions which seemed to identify original sin with concupiscence have given way to clearer formule without departing from the real meaning which Augustine sought to express.

Discussion, however, is not yet ended within the Church. On most of those points which concern especially the doctrine of the human action in the origin which is uncertain, but which have always been regarded, at least since Pope Hormidas, as expressing the faith of the Church. Now these extracts from African councils and pontifical decisions end with this re- formulation: "As the liberal grace prevails, it must be found and difficult, and which have given rise to these controversies, we do not think it necessary to impose the solution of them".—In presence of these documents emanating from so high a source, ought we to say that the Church has adopted all the teachings of St. Molina and the dogmas that he is never per- mission to depart from that teaching? Three answers have been given: (a) For some, the authority of St. Augustine is absolute and irrefragable. The
AUGUSTINE

Augustine went so far as to formulate, with Haver- 
mans, this proposition, condemned by Alexander VIII (7 
December, 1690): "ubi quis invenit doctrinam in Augus- 
tinio clare fundatam, illam absoluta potest 
tenere, et omnia illud absurdo doctum sibi 
bullam" (Where one has found a doctrine clearly 
based on St. Augustine, he can hold and teach it 
absolutely, without referring to any pontifical Bull).

This is inadmissible. None of the pontifical appro-
approaches has a meaning so absolute, and the context 
make an express reservation for the profound and 
difficult questions. The popes themselves have 
permitted a departure from the thought of St. Augustine 
in the matter of the lot of children dying without 
baptism, and the question of the filioque, etc. (Fideil, 
August 1794).

(b) Others again have concluded that the eulogies 
in question are merely vague formulæ leaving full 
liberty to withdraw from St. Augustine and to blame 
him on every point. Thus Launoy, Richard Simon, 
and others have maintained that Augustine had been 
in error on the very gist of the problem, and had 
really taught predensationism. But that would 
imply that for fifteen centuries the Church took as 
it guide an adversary of its faith. (c) We must 
conclude, with the greater number of theologians, that 
Augustine's real opinion was the one that we know 
about, however, with reserves and wise limitations. 

In the capital questions which constitute the faith 
of the Church in those matters the Doctor of Hippo 
is truly the authoritative witness of tradition; for 
example, on the existence of original sin, the necessity 
of grace, at least for every salutary act; the 
 gratuitousness of the gift of God which precedes all 
merit of man because it is the cause of it; the predilection 
for the elect and, on the other hand, the liberty of 
man for his transgressions. But the secondary problems, 
concerning the mode rather than the fact, are left by the 
Church to the prudent study of theologians. Thus all 
schools unite in a great respect for the assertions of St. 
Augustine.

At present this attitude of fidelity and respect is 
all the more remarkable as Protestants, who were 
formerly so bitter in defending the predestation of 
Calvin, are to-day almost unanimous in rejecting what 
they themselves called "the boldest defiance ever given 
to reason and conscience" (Grétillet, "Dogmatique", 
III, p. 290). Schleiermacher, it is true, maintains 
it, but he adds to it the Originist theory of universal 
salvation by the final restoration of all creatures, and 
he is followed by this Farrar, Lobstein, Pfister, and 
others. The Calvinist dogma is to-day, especially in 
England, where it is abandoned for the most part by 
pure Pelagianism (Beyschlag). But among 
Protestant critics the best are drawing near to the 
Catholic interpretation of St. Augustine, as, for 
example, Grétillet, in Switzerland, and Stevens, 
Bruce, and Mosley (On the Augustinian Doctrine 
of Predestination), in England. Sanday (Romans, p. 50) 
also declares the mystery to be unfathomable for 
man yet solved by God. "And so our solution of 
the problem of Free-will, and of the problems of 
history and of individual salvation, must finally lie 
in the full acceptance and realization of what is 
implied by the infinity and the omniscience of God".

These concluding words recall the true system of 
Augustine and permit us to hope that at least on 
this question there may be a union of the two Churches 
in which we must finally rest.

WORKS ON THE LIFE OF ST. AUGUSTINE.—The chief original 
works are his own Confessio and his life (Vita S. Aurelii 
Augustini), granted to him by Sixtus V, in XI of the 
dactyline edition (P. L., XXXII); for learned illustration 
of the text of Possidius see the Editio Critica (Scolar) 
and Stillingf. (in Acta Sanctorum, VII.) Among the 
biographies of the saint the following are worthy of mention: 
V. Fillion, "Le gouv. de la Ville de Paris" (Paris, 1853); 
H. de M. Eignahan, "Storia di S. Augustin" (Alsat., Hauteriv. di S. Augustin, au vie, see ouvr. ou sabelle (Paris, 1845-46); Bindemann,

Der M. Augustin (Berlin, Leipzig, Greifswald, 1844-49); 
Borriart, The Life of St. Augustine. Bishop, Confessor, and 
Doctor of the Church (Philadelphia, 1851); Laboura de St. 
Augustine (Dublin and London, 1880); Collette, 
Augustin, a Sketch of His Life and Writings as Affecting His 
Conversions with Rome (London, 1877); Consoli, 
Melanchthon, Neander (New York, 1880); Spalding, The 
Life of St. Augustine (New York, 1880); Cunningham, 
St. Austin and His Place in the History of Christian Thought (London, 1885); Burton, St. Augustus: 
Historical Study (Dublin, 1880); Skeen, Recent Writings on St. 
Augustine, an Essay on the Life, Works, and Theology (Paderborn, 1898), from the notes of Raucher, an excellent 
study, see Rottmann, Hist. Jahrh. (1888), 500-509; Von 
Brock, The Life and Works of St. Augustine (Mainz, 1893); 
Wittchen, I, 1669-78; Loos in Reuss, Gellschaft, 34 ed., 
1897; Donner, the Secularisation of Knowledge (Edinburgh, 1883); Farrar, Lives of the Fathers 
(London, 1899), II, 286-460; De Pressensie in Dict. of 
Chris-
Augustinians

Augustinians Canons and Canonesses. See Canons and Canonesses, Regular.

Augustinians of the Assumption, or Assumptionists.—This congregation had its origin in the College of the Assumption, established in Nimes, France, in 1843, by the Rev. Emmanuel d'Alzon vicar-general of that diocese, some account of whose life and work is given at the end of this article. Although it was organized in 1847, the members did not take their first vows until 1850; they took their public vows at Christmas of the next year. A second house was established in Paris, and they continued their work there, encouraged by the Holy See. The congregation was formally approved by a brief of 26 November, 1864. The chief objects of the congregation are to combat the spirit of irreligion in Europe and the spread of schism in the East. To this end the Assumptionists have devoted themselves to the work of Catholic higher and secondary education, to the spread of truth by means of the Press, to the conduct of pilgrimages, and to missionary work in the East. In addition to their college at Nimes they established Apostolic schools where poor students were trained for the priesthood and to themselves. They established "La Bonne Presse," which issued periodicals, pamphlets, and books in great numbers, the chief publication, "La Croix," appearing simultaneously in several different cities. Their activities provoked the resentment of the French Government, and in 1900 the congregation was suppressed within French territory, this action being based on the charge that they were accumulating a fund to be used in a royalist movement to overthrow the republic. Many of the Assumptionists left France after this, but some remained as secular priests under the authority of various bishops. At the time of their suppression the Assumptionists maintained twenty Apostolic schools which in twenty-five years gave more than 500 priests to the secular clergy. These schools have been closed, but the congregation has taken up the work in other quarters. Similar schools have been established in Italy, Belgium, England, and the United States.

"La Bonne Presse" was purchased at the time of the suppression by Paul Peron-Vrain, a wealthy manufacturer of Lisle, and all its publications have been continued without any change of policy. Much of the good accomplished by the Assumptionists was effected through this medium. They entered into competition with the irreligious press in family circles, in work-shops, and places where workmen congregate, with excellent results. The Catholic papers edited by them have a greater circulation than many famous non-Christian papers. Until recently no popular Catholic paper has reached a degree of circulation equal to that of "La Croix" or of "Le Pèlerin". These two papers are issued at the rate of five million per week; Saturday alone is increased to four million copies. To this must be added the circulation of 600,000 copies of "The Lives of the Saints", 70,000 of the "Les Contemporains", besides the many copies of the "Revue scientifique" of the Canadian provinces. The activities of "Les Échos de l'Orient", the "Petit Journal", and many others. In Chile, where these Fathers have been for thirteen years, they publish in Spanish "Echoes from the Sanctuary of Lourdes". In their journalistic work they were aided by the Oblate Sisters of the Assumption, an order established by them to assist in their Oriental missions, but whose activities are not confined to that field. Until the suppression they directed the women's sections in the publishing rooms of the "Christian Press" as well as the hospital and orphan asylums.

Among other works carried on by the Assumptionists in France prior to their suppression was that of the "Assistance of Our Lady of Salvation", a society devoted to prayer, almsgiving, and setting a good example for the reformation of the working classes. This society was established by them in 1836, and it succeeded in drawing the higher classes of society more closely to the workingmen. It encouraged everywhere social prayer, and social and national expiation, and discouraged human respect, social apostasy, and isolation in piety. It raised funds to convey workmen, pilgrims, paupers, and sick poor to Lourdes, to the number of a thousand each year; it was zealous in the cause of workmen's clubs, and of Catholic schools, and was active in the movement in favour of the keeping of Sunday as a day of rest. Another field of missionary labour was found among the Newfoundland fishermen. Every year 12,000 or 15,000 fishermen leave the coasts of France, Belgium, and Ireland, to go to the Banks of Newfoundland for codfish. The Protestantists have long maintained a flotilla of hospital ships, with which they go to the aid of these unfortunate men and, while ministering to their material needs, draw their souls to heresy. The Assumptionists found here a field for their activity unequalled. They not only established Catholic sailors into a committee and have been encouraged to equip two Catholic hospital ships, which now succour the unfortunate fishermen. The vessels have already been wrecked twice, but have been replaced, and the Assumptionists have continued their labours.

The Assumptionists have been active missionaries in the Orient, where at the present time 300 of the congregation, Fathers and Brothers, and nearly 600 Sisters are engaged. Their labours have taken them from the Balkans to the Dead Sea. They have established there twenty-two permanent residences, thirty regular missionary stations, and fifteen institutions entrusted to the Oblates of the Assumption. In the schools in Turkey in Europe and Turkey in Asia the Assumptionists have 2,500 scholars. Here the Oblates have opened a hospital, an orphanage, and nine gratuitous dispensaries, where they care for about 30,000 sick every year.

Of the twenty-two public churches of the congregation in the East the First, by the best living, and near them the Offices are held in the rites of the Orient (Greek, or Slav). These rites the Assumptionists have embraced to render the teaching of the Gospel more fruitful. The Orientals, whether from love of their legitimate traditions, or from ignorance, make of the...
exterior form of the rites a question of supreme importance. Called in 1862 to work for the conversion of the Bulgarians to Catholicism, one of the Augustinian fathers founded in the Turkish quarter of Adrianople, and in Karagatch the European quarter, a residence with a Slav church and a Latin church, a hospital, three schools and a Bulgarian seminary of the Greek rite. The Slav Missionaries, in this quarter, thirty-one men receive their maintenance and are prepared for the office of the sacred ministry. A similar work is being done at Philippopolis, the cradle of the Oriental missions of the Augustinians. There is also a primary school, attended by 200 scholars, and an educational institute for 15 former students of the Order, who hold important official positions in Eastern Rumelia. The Augustinians have also churches and schools of different rites at Yambol and Varna.

At the instance of Cardinal Vincenzo Vannutelli, when he was Apostolic delegate, the Augustinians went to Constantinople and established themselves in the Turkish quarter at Koun-Kapou. The animosity of the Turks and the jealousy of the Greeks and Armenians caused the new missionaries to be very badly treated, and prevented them from establishing anything on their building at night, doing their masonry, carpentry and painting themselves. By this stratagem they constructed their church of Anastasia, the first church consecrated to Catholic worship in this quarter of Adrianople. When this church was consecrated, the schism of the schismatics, was consecrated to the Greek Rite and dedicated by the Apostolic delegate himself. The congregation possesses other Greek churches at Kadikoi (Chalcedon), on the Asiatic bank of the Bosporus, and at Gallipoli. In order to prepare a native clergy, the Augustinians have opened at Stamboul (Constantinople) a petit séminaire, where sixty young men are instructed in the Greek Rite. At Kadikoi, in the great Leonine seminary, they follow with the ordinary theological course special lessons in preparation for the pastoral ministry. They are also given instructions in liturgy, history, canon law and in the Greek, Turkish, and Slav languages. At the day of its opening this seminary had thirty scholars and eight professors. At Stamboul, as at Kadikoi, there are flourishing schools for boys and girls, with more than 700 scholars in attendance. They do not suffice for receiving all the scholars who present themselves. To the labours of teaching are united those of the apostolate, in behalf of the natives as well as the Greeks. In Stamboul, the priests preach and hear confessions in Italian, French, German, Greek, and Turkish. In the various houses established throughout the empire at least ten living languages are spoken. Greeks, Latins, and Orientals unite for the conferences of St. Vincent de Paul, and the Sisters visit and care for the sick to the number of 10,000 annually.

Their knowledge of the Oriental languages has been of great service to the Augustinian Fathers in their journalistic labours. Twelve of the Fathers who are the most skilled in these studies write in the Oriental Review. They have their special bulletin, "Les Echos de l'Orient," which circulates among Greeks and Orientals. Because of the Oriental love of splendour in external worship the feast of St. John is celebrated with great pomp. With the consent of the authorities, and under the protection of a corps of soldiers, the processions of the Blessed Sacrament are conducted through all the streets around Santa Sophia. The Catholic funerals solemnised with reverential pomp are witnessed by the Augustinian natives. In 1890 the Congregation of the Propaganda confided to the Augustinians the territory in Asia Minor extending from Brussa to Angora. It practically embraces the ancient Bithynia. Already six residences have been established there; in the city of Brussa, with its population of 100,000, they have established a large college and two churches, in the towns of Eski-Chesir, Ismid, Sultan Esochor, Koniah (Teonium), Fanaraki have each a residence for the priests with a public church; the Oblate Sisters are also established in these places. At Jerusalem the Augustinians have proposed the Holy City of Our Lady of France for the reception of pilgrims, annexed to which is a scholasticate of forty religious. They have established there also the Society of the Croisé of Purgatory, and they have a church in which to receive the Latin pilgrims. The Eucharistic Congress at Jerusalem in 1893 was held in the Hospitelry of Our Lady of France.

Emmanuel-Joseph-Marie-Maurice d'Alzon, founder and first Superior General of the Augustinians of the Assumption was born at Le Vigan, France, 30 August, 1810, and died at Nimes, 21 November, 1880. He was a member of a noble family, and, being an only son, encountered strong opposition when he decided to enter the clerical state. He studied at the seminary of Montpellier and later followed the ordained profession in Rome, where he was ordained priest on 16 June 1834. On his return to France the next year he was appointed Vicar-General of the Diocese of Nîmes, which position he held for forty-five years, serving under four bishops. Among his earliest notable services was the establishment at Nîmes in 1839 of the College of the Assumption, for the education of the children of the aristocracy. This college later became the cradle of his congregation. He was associated with Guéranger, Louis Veuillot, and other champions of the Catholic cause in "With the enseignement chrétien," which he founded and directed, he restored the Christian spirit in classical studies. To combat Protestantism in southern France he established the Association of St. Francis de Sales. He also suggested the idea of the ecclesiastical caravan, formed by the priests at Nîmes, who by request of Mgr. Plantier came to Rome to visit the sovereign pontiff. This was the beginning of the great French pilgrimages called the national pilgrimages, the directors of which were for many years the religious of the order founded by Père d'Alzon. By his "alumnats," or Apostolic schools, he supplied the education of the poor children called to the priesthood, who, owing to lack of means, could not be admitted to the seminaries. The Fathers of the Assumption opened fifteen of these homes in France in which there are more than 500 priests to the secular clergy. To sustain this work of charity, Père d'Alzon founded the Association of Our Lady of Vocations, enriched with numerous indulgences, by Pius IX and Leo XIII.

The brotherhood, by a decree of the Holy See, has been canonically established in the chapel of the College of Nîmes, and has received the approbation of many bishops. Père d'Alzon was much esteemed by the Popes Gregory XVI and Pius IX. The latter in 1868 sent him to Constantinople to found in the East the missions of the Congregation of the Assumption. More than once he was proposed for the episcopate, but he always declined the honour, preferring to devote himself to the work of his congregation.

Thomas Gaffney Taaffe.

Augustinus, Antonius, historian of canon law and Archbishop of Tarragona in Spain, b. at Saragossa 28 Feb., 1517, of a distinguished family; d. at Tarragona, 31 May, 1586. After finishing his studies at Alcalá and Salamanca, he went to Bologna (1536), where he was admitted to the University of Bologna in 1537. In the latter place he examined the famous "Codex Florentinus" of the Pandects and made the acquaintance of such learned men of the new historical school as Andrea Alea, to whom he owed a confirmation of his pronounced bent towards a positive and critical
Augustinus treatment of the ancient materials of canonical jurisprudence. In 1541 he took his degree of Doctor of Civil and Canon Law and in 1544, at the request of the Emperor Charles V, he was made Auditor of the Rota by Paul III. In 1555 he was sent by Paul IV to England, with a message of congratulations to Queen Mary. His success in the mission led to his appointment as Bishop of Alife in 1556. In 1566 he was made Bishop of Allow in the Kingdom of Naples, and in 1561 was transferred to Lodi in his native Spain. He assisted during three years at the Council of Trent and urged ardently the reform of the clergy. "It is our fault", he said in the council, "that so great an agitation has arisen in France and Germany. We must begin with the reformation of the clergy. It is your business, O Fathers, to save by your decrees the common weal of the Church that is now threatened." In 1576 he was promoted by Gregory XIII to the archiepiscopal See of Tarragona.

Augustinus is one of the foremost figures of the Catholic Counter-Reformation that set in with so much vigour and success in the latter half of the sixteenth century. His chosen field of work was the field of the original sources of ecclesiastical law both papal and conciliar. The basis of the medieval canon law was the "Decretum" of Gratian, a useful codification of the middle of the twelfth century, the ecclesiastical laws of the schools and the universities, of the popes and academic authority, but never formally approved by the popes as church legislation. Its materials, never hitherto critically illustrated as to their prominence and form, and often badly corrupted as to their text, stood in need of judicious sifting and elucidation. It was to this task that the young Augustinus addressed himself from 1538 to 1543. In the latter year he published at Venice the first critical study on Gratian, "Emendationum et Opinionum libri IV", the result of four years' labour at the text of the papal and conciliar law of Bologna. This text remained his life-long study; towards the close of his career, after important services rendered during ten years to the "Correctores Roman" in their edition of Gratian (Rome, 1582), he finished his own magisterial examination of the work; it was not, however, published until after his death, "De Emendatione Gratiani dialogi (30) libri II" (Tarragona, 1587).

Other important publications of the sources of civil and ecclesiastical law occupied his pen. Thus he published in 1567 an edition of the Byzantine imperial constitutions, in 1576 his "IV Antiqve Collectiones Decretalium", in 1582 a treatise on the "Penitential Canons" together with a "PENITENTIALE Romanum" discovered by him. From 1537 to the end of his career, he sought canvas for the necessary patronage, papal or regal, to enable him to publish the hitherto unpublished Greek text of the ancient ecclesiastical councils, and for that purpose examined many archives in Italy and Germany; the fruits of his labours were reaped at a later date by others. Among the more valuable of his posthumous publications, and appealing strongly to modern historical tastes, is a critical examination of several early medieval collections of canon law that served as original material for the "Decretum" of Gratian. This work, that Massen and von Scherer speak of with respect, is entitled "De quibusdam veteribus Canonum Ecclesiasticorum Collectionibus Judicium et censura", and was published at Rome (1611) with the second and third parts of his "Juris Pontificii Veteris Epitome" (to Innocent VIII and Gregory XIII), the first part of which appeared at Tarragona in 1587. It contains biographical and text-critical notes on a number of collections of ecclesiastical laws, from the sixth to the twelfth century. In this work he treats progressively of the pseudo-Isidorian Decretals, of Lugo, 359 to 809, Legien, Oriens Christi, (1740), II, 727-728, 1. 845-885 Augustus, Dio*' (see Senn.)

Augustinus-Verein. The, an association organised in 1878 to promote the interests of the Catholic press, particularly the daily press, of Germany. The society proposes to attain its end (1) by giving its moral support to the establishment of Catholic papers; (2) by furnishing trustworthy information and authentic news to the daily papers; (3) by training Catholic journalists, and giving assistance to the members of the profession in need of it; (4) by representing the interests of the profession; (5) by securing positions and giving information and assistance in all matters connected with journalism, free of charge; and finally (6) by endeavouring to bring about the harmonious co-operation of Catholic publishers, as well as uniformity in treating the question of the day. The lack of organization on the part of the Catholic Press first became obvious at an early stage of the Kulturkampf; several unsuccessful attempts were made to supply the deficiency, among others the formation of a society of publishers. The steps that were taken towards effective organization at Würzburg; at subsequent gatherings plans were matured, and at Düsseldorf, 15 May, 1878, a programme was drawn up which is substantially followed out in the present Augustinus-Verein. Düsseldorf became the centre of the Verein, which, now that it has spread throughout Germany, is divided into ten groups, corresponding to geographical divisions, each, to a large extent autonomous. A general assembly is held annually. The Verein "has its own organ, the Augustinbalt", published at Krefeld. It also conducts a literary bureau, a beneficial society, a parliamentary correspondence association of the Centre Party, in Berlin, and an employment agency. In 1904 the society had a regular membership of 850, in addition to the associate membership.

Köck in Buchsbecker, Kirchlich, Handl.: Miiller in Kirchen.
Augustus.—The name by which CAIUS JULIUS CAESAR OCTAVIANUS, the first Roman Emperor, in whom the history of the world is so largely known, is b. at Rome, 62 b. c.; d. a. d. 14; it is the title which he received from the Senate 27 b. c., in gratitude for the restoration of some privileges of which that body had been deprived. The name was afterward assumed by all his successors. Augustus belonged to the gens Octavia, which was related to Caius Octavius, a praetor. He was the grandson of (Caius) Julius Caesar, and was named in the latter's will as his principal heir. After the murder of Julius Caesar, the young Octavius proclaimed himself the son of Jupiter and received the surname Octavianus; and in the same year he entered into a pact with Antony and Lepidus by which it was agreed that for five years they would control the affairs of Rome. This (second) Triumvirate (tremervi reipublicae constituenda) so apportioned the power that Lepidus occupied Spain, Antony, Gaul; and Augustus, Africa, Sicily, and Sardinia. The first concerted move of the Triumvirate was to proceed against the murderers of Caesar and the party of the Senate under the leadership of Brutus and Cassius. A crushing defeat was won by Antony and Lepidus at the Battle of Philippi (42 b. c.), after which the fate of Rome rested practically in the hands of two men. Lepidus, always treated with neglect, sought to obtain Sicily for himself, but Augustus soon won over his troops, and, on his submission, sent him to Rome where he spent the rest of his life as pontifex maximus.

A new division of the territory of the Republic between Antony and Augustus resulted, by which the former took the East and the latter the West. When Antony put away his wife Octavia, the sister of Augustus, through infatuation for Cleopatra, civil war again ensued, whose real cause is doubtless to be sought in the conflicting interests of both, and the long-standing antagonism between the East and the West. The followers of Antony were routed in the naval battle of Actium (31 b. c.), and Augustus was left, to all intents and purposes, the master of the Roman world. He succeeded in bringing peace to the long-distracted Republic, and by his moderation in dealing with the senate, his munificence to the people, and his sagacity and generosity to the people, he strengthened his position and became, in fact, if not in name, the first Emperor of Rome. His policy of preserving intact the republican forms of administration and of avoiding all semblance of absolute power or monarchy did not diminish his authority or weaken his control. Whatever may be said in regard to the general character of his administration and his policy of centralisation, it cannot be denied that he succeeded effectually in strengthening and consolidating the loosely organized Roman state into a close and well-knit whole. He was a patron of art, letters, and science, and devoted large sums of money to the embellishment and enlargement of Rome. It was his well-known boast that he "found it of brick and left it of marble." Under his management, industry and commerce increased. Security and rapidity of intercourse were obtained by means of many new highways. He undertook to remove by legislation the disorder and confusion in life and morals brought about, in great measure, by the civil wars; and in consequence, the most sanctum sanctorum. Severe laws were made for the purpose of encouraging marriages and increasing the birth-rate. The immorality of the games and the theatres was curbed, and new laws introduced to regulate the status of freedmen and slaves. The changes wrought by Augustus in the administration of Rome, and his policy in the Orient are of especial significance to what is commonly called Christianity. The most important event of his reign was the birth of Christ (25 D. U. C. ii, 1) in Palestine. The details of Christ's life on earth, from His birth to His death, were very closely interwoven with the purposes and methods pursued by Augustus. The Emperor died in the seventeenth year of his age, 12 (27) B. C. of the Alamanum. In the year of the death of Actium, he received into his favour Herod the Great, confirmed him in his title of King of the Jews, and granted him the territory between Galilee and the Trachonitis, thereby winning the gratitude and devotion of Herod and his house. After the death of Herod (750, a. u. c.), Augustus divided his kingdom between his sons. One of them, Archelaus, was eventually banished, and his territory, together with Idumea and Samaria, were added to the province of Syria (750, a. u. c.). On this occasion, Augustus caused a census of the province to be taken by the legate, Sulpicius Quirinius, the circumstances of which are of great importance for the right calculation of the birth of Christ. See ROMAN EMPIRE; Livy.

The chief sources for the life of Augustus are the Latin writers, TACITUS, TACITUS, VELLEIUS PATERCULUS, and Dion (in his Epitome and Promptuarii). See also R. NICHOLAS OF DAMASCUS, DIO CEANIUS, and PLUTARCH. See also his official biography, the famous Monumentum Augusti, set by MEMMUNUS (1507), of which a Latin version has been [in Philadelphia, 1881], with Tr. PATRICK J. HEALY.

Aemulry, variously written AMBRY, or AMBRYE, is a derivative through the French of the classical armariurn, or medieval Latin armarius. Its original meaning was a cupboard and it has never lost this more general sense, but even in classical Latin it had acquired in addition the special signification of a cupboard for holding books. This limited meaning was widely prevalent in the Middle Ages, and in the tenth-century rule of Cluny the library is called armarium and the official who had charge of it armarius, while by an arrangement which was long and widely observed both in Benedictine and in other monastic houses, the librarian, or librarius, was usually identical with the precentor. In Elfric's Anglo-Saxon glossary, compiled at the beginning of the eleventh century, the Anglo-Saxon word bochard (book-board, i. e. library), is interpreted bibelotaex se armarium se archium. Similarly it was a common practice in religious houses, which met us as early as 1170, that claustrum sine armario est quasi castrum sine armamentario (a monastery without a library is like a fortress without an arsenal). Besides this, owing to the number of cupboards and presses needed for storing vestments, church plate, etc., the word armarium was also not infrequently used for the sacrists, though this may also be due to the fact that the books were themselves in many cases kept in the sacristy. In German the word armel, a derivative of armarium, has the meaning of sacristy.

HERBERT THURSTON.

AUNARIUS (or AUNARCHIUS), Saint, Bishop of
Aurea in France, b. 573, d. 605. Being of noble birth, he was brought up in the royal court, but evinced a desire to enter the clerical state, which was ordained to by St. Syagrius of Autun, and eventually was made Bishop of Auxerre. His administration is notable for certain important disciplinary measures that throw light on the religious and moral life of the Merovingian church. He instituted coadjutors in the bishopric and assigned them to daily in the chief centres of population, by rotation, and on the first day of each month in the larger towns and monasteries. He enforced a regular daily attendance at the Divine Office on the part both of regular and secular clergy. He held (581 or 585) an important council of four bishops, five priests, and four deacons, for the restoration of ecclesiastical discipline and the suppression of popular pagan superstitions, and caused the lives of his predecessors Amator and Germanus to be written. He was buried at Auxerre, where he has always been held in veneration. His remains were later enclosed in a golden chest, but were partially dispersed by the Huguenots in 1567. A portion, however, was placed in the hollow pillar of a crypt, and saved. He died 25 September.

Butler, Lives of the Saints, 25 September; Pèrens, in Acta SS., VII, September, 79-97; Cochard, Les Saints de l’Église d’Orléans (1878), 279-277; Mann, Y. 967-988; Thomas J. Shahan.

Aurea (Golden), a title given to certain works and documents: Bullæ, the charter of Emperor Charles IV, establishing (10 January, 1356), in union with the estates of the empire, the law of future imperial elections. Catena, a collection of scriptural commentaries made by St. Thomas Aquinas. Legenda, a collection of lives of saints (legendæ) by Jacopo da Voragine, Archbishop of Genoa in the thirteenth century. Summa Hostiennae, also Summa Hostienni, a famous exposition on the principal parts of the Decretals of Gregory IX, by Henricus de Segusio, Cardinal of Ostia (d. 1271). Tabula, an index to the “Summa Theologicæ” of St. Thomas Aquinas prepared by Pietro da Bergamo.

Aurelian (Lucius Domitius Aurelianus), Roman Emperor, 270-275, b. of humble parents, near Sirmium in Pannonia, 9 September, 214; d. 275. At the age of twenty he entered the military service, in which, because of exceptional ability and remarkable bodily strength, his advancement was rapid. On the death of Claudius he was proclaimed Emperor by the army at Sirmium, and became sole master of the Roman dominions on the suicide of his rival Quintillus, the candidate of the Senate. When Aurelian assumed the reins of government the Roman world was divided into three sections: the Gallo-Roman Empire, established by Postumus, comprising Gaul and Britain; the kingdom of Palmyra, which held sway over the entire Orient, including Egypt and the greater part of Asia Minor, and the Roman Empire, restricted to Italy, Africa, the Danubian Provinces, Greece, and Bithynia. On the upper Danube, Rhetia and Northern Italy were overrun by the Juthungi, while the Vandals were preparing to invade Pannonia. The internal affairs of Rome were equally deplorable. The anarchy of the legions and the frequent revolutions in preceding reigns had shattered the central authority; the treasury was empty and the monetary system ruined. With no support but that afforded by the army of the Danube, Aurelian undertook to restore the material and moral unity of the Empire, and to introduce whatever reforms were necessary to give it stability. Enormous as this project was, in view of the whole, he succeeded in accomplishing it in less than five years. When he died, the frontiers were all restored and strongly defended, the unity of the Empire was established, the administration was reorganized, the finances of the Empire placed on a sound footing, and the monetary system thoroughly revised. His scheme for the complete unification of the Empire led him to attempt to establish the worship of the sun as the supreme god of Rome." During the early years of his reign Aurelian exhibited remarkable justice and tolerance towards the Christians. In 272, when he had gained possession of Antioch, after defeating Zenobia in several battles, he appealed to the Christians to decide whether the "Church building" in Antioch belonged to the orthodox bishop Domnus, or to the party represented by the favourite of Zenobia, Paul of Samosate, who had been deposed by the synod of seven archbishops, before. His decision, probably on the Edict of Gallienus, was that the property belonged to those who were in union with the bishops of Italy and of the city of Rome (Eus., Hist. Eccl., VII, xxvii-xxx). As this act was based on political motives, it cannot be construed into one of friendliness for the Christians. As soon as he was at liberty to carry out his schemes for internal reform Aurelian revived the policy of his predecessor Valerian, threatened to rescind the Edict of Gallienus, and commenced persecution of the followers of Christ. The exact date of the inauguration of this policy is not known. It is likely, however, that an edict was issued in the summer of 276 and dispatched to the governors of the provinces, but Aurelian did not act on it. Tradition refers to his reign a large number of Acta Martyrum, none of which is considered to be authentic (Dom Butler, "Journal of Theological Studies", 1906, VII, 306). His biographer, Vopiscus, says (c. xx) that he once reproached the Roman Senate for neglecting to consult the Sibylline Books in an hour of imminent peril. "It would seem," he said, "as if you were holding your meetings in a church of the Christians instead of in a temple of all the gods"; from which statement it has been rightly inferred that "the decline of the old faith was caused by the progress of the new, and that the buildings then used for the worship of the Christians were becoming more and more conspicuous." Patrick J. Healy.

Aureliopolis, a titular see of Lydia in Asia Minor, whose episcopal list (325-787) is given in Gams (p. 447).

Laurent, Oriens Christ. (1740), I, 895-966; III, 959-962.

Aurelius, Archbishop of Carthage from 388 to 423. From the time of St. Cyprian, Carthage was one of the foremost sees in Christendom. Its bishop, though not formally bearing the title of Primate, confirmed the episcopal nominations in all the provinces of Africa, convoked and presided at the plenary councils, which were held almost yearly, and signed the synodal letters in the name of all the participants. Such a post Aurelius occupied with distinction at a time when Africa held the intellectual life of the Church and the success of repentant Donatists was conspicuous in the synodal acts of his own church, and in the plenary councils over which he presided he consistently upheld the same moderate policy. But when the Donatists resorted to rebellion and wholesale mur-
Aurelius Antoninus, Marcus, Roman Emperor, A.D. 161-180, b. at Rome, 26 April, 121; d. 17 March, 180. His father died while Marcus was yet a boy, and he was adopted by his grandfather, Annus Verus. In the first pages of his "Meditations," 1 and later in his "Saturnalia," 2 inclusive of his "Live," can be seen the influence of his education by near relatives and by tutors of distinction; diligence, gratitude, and hardiness seem to have been his chief characteristics. From his earliest years he enjoyed the friendship and patronage of the Emperor Antoninus Pius, who, later, became the Emperor Marcus, known later as the Emperor Lucius Verus. In honour of his adopted father he changed his name from M. Elius Aurelius Verus to M. Aurelius Antoninus. By the will of Hadrian he espoused Faustina, the daughter of Antoninus Pius. He was raised to the consulship in 180, and in 147 received the "tribunician power." (See Roman Emperor.) In all the later years of the life of Antoninus Pius, Marcus was his constant companion and adviser. On the death of the former (3 March, 161) Marcus was immediately acknowledged as emperor by the Senate. Actting entirely on his own initiative, he at once promoted his adopted brother Lucius Verus to the position of colleague, with equal rights as emperor. With the accession of Marcus the great "Pax Romana" that made the era of the Augustus a model of peace for the human race, came to an end, and with his reign the glory of the old Rome vanished. Younger peoples, untainted by the vices of civilization, and knowing nothing of the injustice which comes from over-refinement and over-indulgence, were preparing to struggle for the lead in the direction of human destiny. Marcus was scarcely seated on the throne when the Picts commenced to threaten in Britain the recently erected Wall of Antoninus. The Chatti and Chauci attempted to cross the Rhine and the upper Mosel; but the attacks were easily repelled. Not so with the outbreak in the Orient, which commenced in 161 and did not cease until 166. The destruction of an entire legion (XXII "Deiotariana") at Alectros aroused the emperors to the gravity of the situation. Lucius Verus took command of the troops in 162 and, through the valour and skill of his lieutenants in a war known officially as the "Bellum Armeniacum et Parthicum," waged over the wide area of Syria, Cappadocia, Armenia, Mesopotamia, and Media, was able to effect a brilliant triumph in 166. For a people so long accustomed to peace as the Romans were, this war was well nigh fatal. It taxed all their resources, and the withdrawal of the legions from the Danubian frontier gave an opportunity to the Teutonic tribes to penetrate into a rich and tempting territory. People with strange-sounding names, the Marcomanni, Vasates, Hermannuti, Quadi, Suevi, Jasgoes, Vandals, collected along the Danube, crossed the Black Sea, and became the advance-guard of the great migration known as the "Wandering of the Nations," which four centuries later culminated in the overthrow of the Western Empire. The war against these invaders commenced in 165, when the emperor was assumed such threatening proportions as to demand the presence of both emperors at the front. Lucius Verus died in 169, and Marcus was left to carry on the war alone. His difficulties were immensely increased by the devastation wrought by the plague carried westward by the returning legions of Verus, by famine and earthquakes, and by inundations which destroyed the vast granaries of Rome and their contents. In the panic and terror caused by these events the people resorted to the extremes of superstition to win back the favour of the deities and to deliver the empire. Strange rites of expiation and sacrifices were resorted to, victims were slain by thousands, and the assistance of the gods of the Orient sought for as well as those of the ancient Roman gods. During the war with the Quadri in 174 there took place the famous incident of the Thundering Legion ("Legio Fulminatrix, Fulminea, Fulminata") which has been a cause of frequent controversy between Christian and non-Christian writers. The battle was surrounded by enemies, with no chance of escape, when a storm burst. The rain poured down in refreshing showers on the Romans, while the enemy were scattered with lightning and hail. The parched and famishing Romans received the saving drops first on their faces and parched throats, and afterwards in their helmets and shields, to refresh their horses. Marcus obtained a glorious victory as a result of this extraordinary event, and his enemies were hopelessly overthrown. That such an event really did happen is attested both by pagan and Christian writers. The former attribute the occurrence either to magic (Dion Cassius, LXXI, 8-10) or to the prayers of the emperor (Capitolinus, "Vita Marci,"

XXXI, Themistius, "Orat. XV, ad Theod."

Claudian, "De Sext. Cont. Fin."); Pliny the Younger, "Hist. Ecl.", V, 5; Tertullian, "Apol.", v; ad Scap. c. iv), and soon there grew up a legend to the effect that in consequence of this miracle the emperor put a stop to the persecution of the Christians (cf. Euseb. and Tert. opp. cit.). It must be conceded that the testimony of Claudius Apollinaris (see Smith and Wace, "Dict. of Christ. Biogr.", I, 132-133) is the most valuable of all that we possess, as he wrote within a few years of the event, and that all credit must be given to the prayers of the Christians, though it does not necessarily follow that we should accept the elaborate detail of the story as given by Tertullian and later writers (Allard, op. cit. infra, pp. 377, 378; Renan, "Marc-Aurel" (6th ed., Paris, 1891), XVII, pp. 272-273; F. de Smedt, "Principes de la critique hist.", 1889, p. 133). The last years of the reign of Marcus were saddened by the appearance of a usurper, Avidius Cassius, in the Orient, and by the consciousness that the empire was to fall into unworthy hands when his son Commodus ascended to the throne. Marcus died at Carthage or Sirmium in Pannonia. The chief authorities for his life are Julius Capitolinus, "Vita Marci Antonini Philosophe" (SS. Hist. Aug. IV); Dion Cassius, "Epitome of Xiphilinos"; Herodian; Fronto; "Epitelles" and Aulus Gallius "Noctes Attice."
Marcus Aurelius was one of the best men of heathen antiquity. Apropos of the Antonines the judicious Montesquieu says that, if we set aside for a moment the contempt of the Christian world, we should not lose the life of this emperor without a softened feeling of emotion. Niebuhr calls him the noblest character of his time, and M. Martha, the historian of the Roman moralists, says that in Marcus Aurelius he finds the heraldry of Heaven. He was proud, draws nearer to a Christianity which it pretended or which it despised, and is ready to fling itself into the arms of the Unknown God. On the other hand, the warm eulogies which many writers have heaped on Marcus Aurelius as a ruler and as a man seem excessive and overdrawn. It is true that the most marked trait in his character was his devotion to philosophy and letters, but it was a curse to mankind that "he was a Stoic first and then a ruler". His diletantism rendered him utterly unfitted for the practical affairs of a large empire in a time of stress. He was more concerned with realizing in his own life (to say the truth, a stainless one) the Stoic ideal of perfection, than he was with the pressing duties of his office. His physical infirmity and his mental disease became a disease in his mind, and cut him off from the truths of practical life. He was steeped in the grossest superstition; he surrounded himself with charlatans and magician, and took with seriousness even the knavery of Alexander of Abonoe. In the highest offices of the government, he sometimes conferred on his philosophic teachers, whose lectures he attended even after he became emperor. In the midst of the Parthian war he found time to keep a kind of private diary, his famous Meditations, or twelve short books of detached thoughts and sayings in which he gave over to posterity the results of a rigorous self-examination. With the exception of a few letters discovered among the works of Fronto (M. Corn. Frontonis Reliquiae, Berlin, 1816) this history of his inner life is the only work which we have from his pen. The style is utterly without merit and distinction, apparently a matter of pride, for he tells us he had learned to abstain from rhetoric, and poetry, and fine writing. Though a Stoic deeply rooted in the principles developed by Seneca and Epictetus, Aurelius cannot be said to have any consistent system of philosophy. It might be said, perhaps, in justice to this "seeker after righteousness", that his faults were the faults of his philosophy: he placed the highest respect for human nature naturally inclined towards evil, and remained to be constantly kept in check. Only once does he refer to Christianity (Medit., XI, iii), a spiritual regenerative force that was visibly increasing its activity, and then only to brand the Christians with the reproach of obstinacy (against), the highest social crime in the eyes of Roman authority. He seems also (ibid.) to look on Christian martyrdom as devoid of the serenity and calm that should accompany the death of the wise man. For the position adopted by the emperors and the reactions of the pagans see Abercius of Hierapolis, and Melito of Sardis.

In his dealings with the Christians Marcus Aurelius went a step further than any of his predecessors. The content of his rescript to Pliny, by which it was ordered that the Christians should not be sought out; it was enough to denounce their guilt, legal, hence their guilt should be forthcoming. [For the much-disputed rescript "Ad conventum Asia" (Eus., Hist. Eccl., IV, xiii), see Antoninus Pius]. It is clear that during the reign of Aurelius the comparative leniency of the legislation of Trajan gave way to a more severe temper. In Southern Gaul, at least, an imperial rescript inaugurated an entirely new and much more violent era of persecution (Eus., Hist. Eccl., V, i, 45). In Asia Minor and in Syria the blood of Christians flowed in torrents (Allard, op. cit. infra, pp. 375, 376, 388, 389). In general the recrudescence of persecution seems to have come immediately through the local fanaticism of the people or the influence of the insanes otaries of terrified and demoralized city mobs. If any general imperial edict was issued, it has not survived. It seems more probable that the "new decree" mentioned by Eusebius (Hist. Eccl., IV, xxvi, 5) were local ordinances of municipal authorities or provincial governors: as is true of the emperor, he maintained against the Christians the existing legislation, though it has been argued that the imperial edict (Digesta, XLVIII, xxix, 30) against those who terrify by superstition "the ficke minds of men" was directed against the Christian society. Duchesne says (Hist. Ancienne de l'Eglise, Paris, 1906, p. 210) that for such obscure sects the emperor would not condescend to interfere with the laws of the empire. It is clear, however, from the notice given by Eusebius, that in connection with the "In Origen. Contra Celsum", VIII, 169; Melito, in Eus. "Hist. Eccl.", IV, xxvi; Atenagora, "Legatio pro Christianis", that throughout the empire an active pursuit of the Christians was now undertaken. Many changes in the pontifical organization and discipline date, at least in embryo, from this reign.

Another significant fact, pointing to the growing numbers and influence of the Christians, and the increasing distrust on the part of the imperial authorities and the cultured classes, is that an active literary propaganda, emanating from the imperial surroundings, was commenced at this period. The Cynic philosopher Crescens (see Justin Martyr) took part in a public dispute with St. Justin in Rome. Ponto, the presbyter and known friend of Marcus Aurelius, denounced the followers of the new religion in a formal discourse (Min. Felix, "Octavius", cc. ix, xxxi) and the satirist Lucian of Samosata turned the shafts of his wit against them as a party of parasites whose number was equal to the sum total of the period, and of the widespread knowledge of Christian beliefs and practices which prevailed among the pagans is needed than the contemporary "True Word" of Celsus (see Origen), a work in which were collected all the calamities of pagan malice and all the arguments, set forth with the skill of the trained rhetorician, which the philosophy and experience of the pagan world could muster against the new creed. The earnestness and frequency with which the Christians were reproved by the emperors and bishops see Abercius of Hierapolis, and Melito of Sardis.

From such and so many causes it is not surprising that Christian blood flowed freely in all parts of the empire. The excited populace saw in the misery and bloodshed of the period a proof that the gods were displeased with the Christians; consequently, they threw on the latter all blame for the incredible public calamities. Whether it was famine or pestilence, drought or floods, the cry was the same (Tertull., "Apologism", V, xii): Christianos ad leonem (Throw the
Christians to the lion.) The pages of the Apologists show how frequently the Christians were condemned to death and how often they had to endure, and these vague and general references are confirmed by some contemporary "Acta" of unquestionable authority, in which the harrowing scenes are described in all their gruesome details. Among them are the "Acta" of Justin and his companions who suffered at Lyons, and all the martyr-credos such as Carpue, Papyrus, and Agathons, who were put to death in Asia Minor, of the Scillitan Martyrs in Numidia, and the touching Letters of the Churches of Lyons and Vienne (Eus., Hist. Eccl., V, i-v) in which is contained the description of the funeral of Blanida and her companions at Lyons. Incidentally, this document throws much light on the character and extent of the persecution of the Christians in Southern Gaul, and on the share of the emperor therein.

The Roman histories of Gibbon, Durbuy, and Menival deal at length with his personal history: Schiller, Geschichte der römischen Kaiserzeit (1839); Allard, Histoire des persécutions pendant les premières siècles (2d ed., Paris, 1862). See also: Renan, Marc-Aurèle et la fin du monde antique (1860); Dil, Roman Society from Nero to Marcus Aurelius (London, 1904), 506-511, and passim; Farner, Marcus Aurelius in Seekers after God (London, 1860). His Méditations have been translated into English by George Long (London, 1862); cf. also De Champagny, Les Césars des Antoniniens (Paris, 1903); Dargente-Petroni, Marc-Aurèle dans ses rapports avec le christianisme (Paris, 1867).

Patrick J. Healy.

Aureola. See Nimbus.

Aureolius (Aureolus, d'Auriol, Oriol), Petrus, a Franciscan philosopher and theologian, called on account of his eloquence Doctor Facundus, b. 1260 at Toulouse (or Verberie-sur-Oise); d. 10 January, 1322 (Denifle; other dates assigned are 1330 and 1345). He entered the Order of Friars Minor, studied at Toulouse, taught theology there and at Paris and became (1319) provincial of his order (Province of Aquitaine). John XXII appointed him Archbishop of Aix (1321). He defended the doctrine of the Immaculate Conception in a public disputation at Toulouse (1314), in his "De Conceptione Maris Virginis" and "Decretum collatorum" (reply to opponents of the doctrine), in his "Sermone" and in his commentary on St. Bernard's teaching. His other principal works are the commentary on the "Sentences" of Peter Lombard (Rome, 1596-1605), "Quodlibeta", and "Breviarium Bibliorum", an introduction to the works of the Doctors of the Church, which appeared in numerous editions at Venice, Paris, and Louvain. A new edition by Seeboeck was published at Quaeraci in 1896. In philosophy Aureoli was a Conceptualist and a forerunner of Ockham. He criticized the doctrine of St. Thomas and defended, though not in all points, the views of Scotus. His writings on the Immaculate Conception were published by Petrus de Alva in the "Monumenta Seraphica Imm. Concept." in Hister, Nomenclator, H. 463; Stanonik in Der Katholik, (1882); J. Weis, Thomas von Aquin, III, 180-244; Uberweg-Heineke, Geschichte der Philosophie (6th ed.), II, 360. E. A. Pace.

Aureus Codex. See Codex.

Auricular Confession. See Confession.

Auriville, the site of the Mohawk village, Montgomery Co., New York, U. S. A., in which Father Isaac Jogues and his companions, Goupil and Lalande, were put to death for the Faith by the Indians. It is on the south bank of the Mohawk, about forty miles west of Albany. Aureus was the name of the last Mohawk who lived there, and from this the present designation was formed. It was known among the Indians as Osserenonen, also Kandawaga and Caughnawaga, the latter being also given to the settlement on the St. Lawrence opposite Lachine which was established for the Iroquois captives who wanted to withdraw from the corruption of their pagan kinmen. To the village on the Mohawk Jogues and Goupil were brought in 1642 as prisoners, and in 1646, Jogues again, with Lalande. In 1644 Bressani was tortured there, and later on Poncet. In 1655-56-57 Le Mouyne came as a Jesuit missionary to Goupil and Ambron, and in the punitive expedition of the Marquis de Tracy a permanent mission was established (1667). There Father Boniface, James de Lambeville, Fremin Bruyas, Pierron, and others laboured until 1684, and then departed. The last child of the last girl, Tegakwitha, was born there. From it she escaped to Canada. While the missionaries were in control of Osserenonen and the adjacent Indian towns, the Mohawk converts were remarkable for their exact Christian life, and in many instances for their exalted piety.

The exact location of this village, which is so intimately associated with the establishment of Christianity in New York, was for a time a subject of considerable dispute. The Jesuit missionary, Thomas Shea, whose knowledge of the history of the early mission was so profound, at first favoured the view that the old village was on the other side of the Mohawk at what is now Tribes Hill. More thorough investigations, however, aided by the confirmations of Gen. J. S. Clarke of Auburn, who had a good knowledge of Indian sites both in New York and Huronia is indisputable, have shown finally that the present Auriville is the exact place in which Father Jogues and his companions suffered death. The basic evidence is the fact that, up to the time of their destruction by de Tracy, the villages were certainly on the south side of the Mohawk and west of the Schoharie—as is clear from contemporary maps, and from Jogues's, Bressani's, and Poncet's letters. Joliet, one of the most accurate cartographers of the time, puts the village of Osserenonen at the junction of the Schoharie and Mohawk. To further particularize it, Jogues said the village was on the top of the hill, a quarter of a league from the river. The ravine in which Goupil's body was found is also specified by Jogues, and he speaks of a watercourse and an island uniting there—a feature still remaining. The distances from Andagaron and Tionontague given by Father Jogues also fix the exact locality.

Satisfied that the precise spot had been determined, the Rev. Joseph Loyzance, S. J., who was at that time parish priest of St. Joseph's, Troy, N. Y., and who had all his life been an ardent student of the lives of the early missionaries. Father Loyzance erected a small shrine on the hill, under the title of Our Lady of Martyrs, and he was the first to lead a number of pilgrims to the place, on the 15th of August of that year, which was the anniversary of the first arrival of Father Jogues as an Iroquois captive. Four thousand people went from Albany and Troy on that day. Other parishes subsequently adopted the practice of visiting Auriville during the summer. Frequently there are as many as four or five thousand people present. The grounds have been since extended beyond the original limits, for the purpose of keeping the surroundings free from undesirable buildings. Many of the pilgrims come fasting and receive Holy Communion at the shrine. The entire day is passed in religious exercises, but anything which could in the least savour of any public cult of the dead was purposely avoided. The anticipation of the Church's official action would seriously interfere with the cause of their canonization, which is now under consideration at Quebec. The present buildings on the site are only of a temporary nature. If the Church pronounces on the
reality of the martyrdom of the three missionaries, more suitable edifices will be erected.

T. J. CAMPBELL

Aurispa, Giovanni, a famous Italian humanist and collector of Greek manuscripts, b. about 1369 at Noto, in Sicily; d. at Ferrara in 1459. It is not known where he was born. In 1418 he went to Constantinople to learn Greek and to collect codices. So industrious was he that he was accused to the Greek emperor of despoiling the city of books. He returned to Venice in 1423 with 238 volumes of classical authors, purchased at Constantinople. Among his treasures were the celebrated "Codex Laurentianus" (seven plays of Sophocles, six of Æschylus, Apollonius's "Argonautica") of the tenth century, the Ilid, Demosthenes, Plato, Xenophon, etc. The next year Aurispa went to Bologna, where he became professor of Greek at the university. As a teacher he was not very successful. Thence he was invited to Florence, where he also held the chair of Greek. Later he went to Ferrara. In 1441 he was appointed secretary to Pope Eugene IV. Six years later, Grazia V reappointed him to the same post. Besides being a tireless collector of manuscripts, Aurispa was a poet of some merit. His published works include letters, epigrams, and an elegy. VOGEL, "Die Wiederbelebung des klassischen Alterthums" (Berlin, 1899); BARBOTTI, "Biografia documentata di Giovanni Aurispa" (Noto, 1890).

EDMUND BURKE

Aurora Lucia Buttilat.—This is one of the so-called Ambrosian hymns, but its author is unknown. It has been revised and separated into three hymns for the Roman Breviary. The first sixteen lines form the hymn for Lauds from Low Sunday to the Ascension, and the revised form, Aurora Calum Purpurat. There are many English versions in use among Protestants. Dr. J. M. Neale's translation begins "Dawn purples all the east with light". The hymn "Tristes Erant Apostoli" (lines 17-32 of the original text) is like the second Mass of the Breviary and Evangelia for paschal time at the first and second Vespers and Matins. This hymn has also been translated into English. The Gregorian melody is in the third mode and may be found in the "Vesperale Romanum". Lines 33 to the end of the ancient hymn form "Pascuale Munde Gaumum", the hymn at Lauds in the Common of Apostles in paschal time. Among the English versions, besides Dr. Neale's, are those of J. A. Johnston in his "English Hymnal" (1852), "With sparkling rays morn decks the sky", E. Caswall, "Lyra Catholica" (1849), "The dawn was purpling o'er the sky"; J. D. Chambers, "Lauda Sion" (1857), "Light's very morn its beams displays".

BLOESMANN, "Geschichte der Brieffrei" (Freiburg, 1895); JULIAN, "Disc. de Hymnologia" (New York, 1893).

JOSEPH OTTEN

Auscula Fili, a letter addressed 5 December, 1301, by Pope Boniface VIII to Philip the Fair, King of France. Philip was at enmity with the pope. Under pretext of his royal rights, he conferred benefices, and appointed bishops to see, regardless of papal authority. He drove from their sees those bishops who, in opposition to his will, remained faithful to the pope. This letter is couched in the classic terms. It points out the pope, the king who brought to his kingdom, to Church and State; invites him to do penance and to mend his ways. It was unheeded by the king, and was followed by the famous bull Unam Sanctam. This bull, in turn, was found in the Bullarium Magnum (Luxemburg, 1730). IX, 12. 9.; cf. Hefele-Knöpfler, "Concilia geschicht" (Freiburg, 1890), VI, 624-633.

Aulonius, Decimus Magnus, a professor and poet b. about A. D. 310; d., probably, about A. D. 394. The son of a physician of Bordeaux, he studied first in that city, then at Toulouse under Magnus Arborius. The latter having gone to teach in Constantinople, Aulonius returned to Bordeaux, where he became professor of grammar, and later on of rhetoric. Between 364 and 368, Valentinian I invited him to Trier to teach grammar. In 368 and 369 Aulonius accompanied the emperor on the expedition against the Alemanni, and received a young Swabian, Bissula, as his share of the booty. The emperors overwhelmed him with honours, and made him first Prefect of the Gauls, then Prefect of the West, conjointly with his son Hesperiuss (between August, 378, and July, 379). In 379 he became consul. After the assassination of Gratian, his benefactor (383), Aulonius moved to Bordeaux, where he lived among many admiring pupils, and wrote a great deal. He died, it is said, lived through almost the whole of the fourth century. The writings of Aulonius are generally short, and they form a miscellaneous collection which is divided into two groups:

1. OCCASIONAL WORKS. (1) "Epigrames": short poems on different subjects, often translated from the Greek Anthology. (2) "Parentalia": thirty eulogies on deceased relatives, with some occasional expressions of personal sentiment (about 379). (3) "Commemoratio professoris", a collection like the preceding, giving an idea of a university in the fourth century (after 380). (4) "Mosella": a description of the River Moselle and the country through which it flows, written while traveling from Bingen to Trier (c. 371). This poem has a certain local and archaological interest. (5) "Charmings" poems relating to Bissula (after 368). (6) Many brief poems, which Aulonius called elegooues or "Epylius"; paschal-time prayers (365); "Epicodion": dirge on his father's death (d. 378); advice to his grandson (about 360); "Cupids actio"; a description of a painting in a dining-room at Trier, which represented Cupid as tormented in hell by the women who pursued him on earth, etc. (7) "Gratianum actio dicta domino Gratianio Augusto", in which Aulonius speaks of Cupid that he despises the company of such a brilliant mind, and tries to lead the saint back to worldly life at Rome. This correspondence lays before us two ideals of life; it expresses in clear colours the views which at the time were in conflict with each other, and divided society. (10) "Praefationes": prefaces and envois to poems.

II. SCHOOL EXERCISES AND FRAGMENTS. — These are chiefly mnemonic verses, "Res Cesaris", on the Roman Consular annals; "Consular anales"; "Eulogies on cities, beginning with Rome and ending with Bordeaux (after 388); "Eloges", a collection of mnemonic verses, treating of the trees, the months, the calendar, weights, etc.; "Periokes" (Contents), prose headings for the Iliad and the Odyssey. It is doubt-

AUSTRAlia

ful whether Ausonius wrote those, but they were at least the work of a member of the circle to which he belonged; short poems on the labours of Hercules; on the Muses; on ethical subjects (translations of Greek originals, inspired by Pythagorean philosophy). Of other works, he lectured by the professor; Epitaphs, eulogies on dead heroes of the Trojan War, modelled after the Greek, and epitaphs on Nobe, Diogenes, etc., translated from the Greek; Epitaphs, various pieces, among others an enigma on the number three, a diversion of a courtier forced to go to war (368); "Cento nuptialis" (an ingenious conceit of the same origin, the result of a wager made with Valentinian), extracts from Virgil, the conclusion of which (consurgam matrimonio) is not very refined (368); "Technopoegeum", a collection of verses in which ends a monosyllable; the authenticity of the Consul Ausonius' prayer, written in rapius verse (verse composed successively of words of one, two, three, four, five syllables and so on) is doubtful; "Ludus septem septimium"; this product of the seven ages is a kind of scholastic drama, in which, after a prologue, each sage recites a proverb; at the end, they invite the audience to applaud. It is a document interesting for the history of pedagogy and also for the medieval dramas. To appreciate Ausonius justly must be borne in mind that he represents the professor of the fourth century. Some of his works, therefore, written for the school and in the spirit of the school, frequently translations from the Greek, are unimportant. A version to whom any subject could appeal (the more difficult and the less poetical it was, the better), Ausonius knew by heart the works of his predecessors, but by his taste and metrical peculiarities showed himself a disciple rather of the poets of the neo-school (neoterici, poetic innovators of the time of the Constantinian emperors). At the end of the Latin work the letters to Paulinus of Nola are an exception to the whole, which is almost void of ideas. Ausonius' attitude in regard to Christianity should be explained in the same way. The paganism of his works is the paganism of the schools, and, if one would base on that the doubt that he was a Christian, inversely, his literary manner of treating mythology should make it questionable whether he was a pagan. But the pastoral prayer, and still more, the prayer of St. Epiphanius, should make us regard him as a pagan. An orthodox Christian in his prayers, he was a pagan in the class-room. Hence his works, which are class-room productions, may very naturally seem pagan. It is said that after the edict of Julian (362) Ausonius had to give up teaching; but there is nothing in the text, nor is there any reason to believe, to the contrary, as Julian died the following year. It is supposed that, like some of his contemporaries, Ausonius remained a catechumen for a long time. It is possible that he was not baptized until the time when we lose all trace of him, in the last silent and obscure days of his old age.

LEJAY.

AUSTIN, John, an English lawyer and writer, b. 143 at Waltham, Norfolk, d. London, 1669. He was a fellow of St. John's College, Cambridge, and of Lincoln's Inn, and about 1640 embraced the Catholic faith. He was highly esteemed in his profession and was looked on as a master of English style. His time was entirely devoted to books and legal opinions. He is the author of "Homilies" (1656); "Victoria" (1651); pamphlets as the antiquary Blount, Christopher Davenport (Franciscus a Santa Clara), John Sergeant, and II.—8

others. Among his writings are: "The Christian Moderator; or Persecution for Religion condemned by the Light of Nature, by the Law of God, the Evidence of our own Principles, but not by the Practice of our Commissioners for Sequestrations—In Four Parts" (London, 1697, 18mo.). It was published under the pseudonym of William Birchley, and in it he frequently disclaims the pope’s deposing power. "In this work, Austin assuming the disguise of an independent, shows that Catholics did not really hold the odious doctrines vulgarly attributed to them, and makes an energetic appeal to the independents to extend to the adherents of the persecuted church such rights and privileges as were granted to other religious bodies" (Dict. of Nat. Biogr., II, 264). "The Catholic's Plea; or An Explanation of the Roman Catholic Belief, Concerning their Church, Manner of Worship, Justification, Civil Government, Together with a Catalogue of all the Penal Statutes against Popish Recusants, All which is humbly submitted to serious consideration, By a Catholic Gentleman" (London, 1656, 18mo.), also under the pseudonym of William Birchley; "Reflections upon the Oaths of Supremacy and Allegiance; or, the Christian Moderator, The Fourth Part, By a Catholic Gentleman, an obedient son of the Church and loyal subject of his just king" (London, 1658, 18mo.). A 'Punctual Answer to Doctor John Tillotson's book called 'The Rule of Faith'" (unfinished); "Devo- tions, First Part: In the Ancient Way of Offices, With Psalms, Hymns, and Prayers for every Day in the Week, and every Holiday in the Year". It is not known when and where the first edition appeared; the second, a quarto, was printed at Edinburgh, 1789, and contains a life of the author, presumably by Dodd. This work was adapted to the uses of the Anglican Church in Hock's "Concordance of the Old and New Testaments", etc. (London, 1766), and has been often reprinted as a stock book under the title of Hicks's Devotions. "Devo- tions, Second Part, The Four Gospels in one, broken into Lessons, with Responsories, To be used with the Offices, Printed Anno Domini, 1675" (2 vols., Paris, 12mo.), a posthumous work, divided into short chapters with a verse and prayer at the end of each. The prayers, says Gillow, "gave rise to offence under the impression that they favoured Blackie's doctrine concerning the middle stage of the results of this the work was not republished". A third part of the "Devotions" was never printed; it contained, according to the author's own statement "Prayers for all occasions framed by an intimate friend according to his (Austin's) directions, and overlooked himself". He also wrote pamphlets against the divines who sat in the West- minster Assembly.

AUSTIN Friars. See CANONS AND CANONIES, REGULAR.

Australia (also known as New Holland till about 1817) is politically the world's greatest islandcontinent. Politically, the mainland, with the adjoining island of Tasmania, forms the Commonwealth of Australia. This is under the British Crown and comprises of the following colonies: New South Wales (1788); Queensland (1859); New Zealand (1866); Victoria (1851); and South Australia (1856); and Western Australia (1829); and the island of Tasmania (1856). The Commonwealth covers an area of 2,800,632 square miles. It is, territorially, about one-fourth
smaller than Europe, one-sixth larger than the United States (excluding Alaska), over once and a half the size of the Indian Empire, more than fourteen times larger than Germany or France, and about twenty-five times larger than in many parts of British India. In the census of 1901 the population of the six States was as follows: New South Wales, 1,359,943; Western Australia, 182,553; Victoria, 1,201,341; Queensland, 503,266; South Australia, 362,604; Tasmania, 172,475. This gave the Commonwealth in 1901 a total popula-
tion of 3,962,333, the official estimate of the total population for December, 1905, was 4,002,893.

I. THE CONVICT SYSTEM.—The north and west coastes of Australia figure in the maps of Spanish and Portuguese navigators as far back as about the year 1530. But it was the War of American independ-ence that led to the settling of the white man on the shores of the great lone continent. At that time, and until the nineteenth century was well advanced, the maxim of Paley and of others of his school, that crime is most effectually prevented by a dread of capital punishment, held almost complete control of the legislative mind in Great Britain. “By 1809,” says a legal authority in the “National History of England” (IV, 309), “more than six hundred different offences had been made capital—a state of laws unparalleled in the worst periods of Roman or Oriental despotism.” Transportation was the ordi-
mary commutation of, or substitute for, the slip-knot of the hangman. From 1718 to 1776 British con-
viicts had been sent in considerable numbers annually, under contractors, into servitude on the American mainland. The traffic was stopped by the War of Indepen-
dence. At the close of the struggle the British prisons and, later on, the prison-hulks overflowed. The colony of New South Wales (till 1826 synonymous with the whole Australian mainland) was established as a convict settlement by an Order in Council dated 6 December, 1785. On 13 May, 1787, “the first fleet”, provisioned for two years, left England, with 1,030 souls on board, of whom 696 were convicts. They reached Botany Bay on 20 January, 1788. They abandoned it after a few days because of its shallow waters, and laid the foun-
dations of Sydney on the shores of the noble and spacious harbour to which they gave the name of Port Jackson. The men who founded Sydney and the birth of which “may have been the work of convicts”, says Davitt, “but they were not neces-
sarily ‘criminals’, such as we are familiar with to-day. Some account must be taken of what con-
stituted a crime in those transportation days, and of the injustice of being unjustly and unfeel-
ingly for comparatively trivial offences” (Life and Progress in Australasia, 193–194).

Within the next decade, the ranks of the original convict population were swelled by a greatly percent-
age of the 1,300 unoffending Catholic peasants from the North and West of Ireland who were seized and deported by “Satanides” Carthampton and the Ulster maestigates during the Orange reign of terror in 1795–96, “without sentence”, as Lecky says, “without trial, without even the colour of legality” (Ireland in the Eighteenth Century, III, 417). England in the Eight-
teenth Century, VIII, 250). After the insurrection of 1798, “a stream of Irish political prisoners was poured into the penal settlement of Botany Bay, and they played some part in the early history of the Australian colonies, and especially of Australian Catholicism” (Lecky, England in the Eighteenth Century, VIII, 250). In his “Catholic Mission in Australia” (1836), Dr. Ullathorne says of those early Irish political convicts: “Ignorance or violation of religious duties, the knowledge of criminal life, were scarcely to any extent recognizable features in this unhappy class of Irish political pris-
oners. On the contrary, the deepest and purest sentiments of piety, a thorough comprehension of religious responsibility, and an almost impregnable simplicity of manner, were their distinctive virtues on their first consignment to the guardianship of the penal system.” The government of the penal residence in the most depraved penal settle-
ments was unable to extinguish these noble character-
istics.” During the first three decades of the nineteenth century the convict population was not-
ably increased by the addition of many who had taken part in the agitation of the quartering, tithes, the Charter and Reform movements, the Combination Laws, and the Corn Laws. During the first fifty years and more of the Australian penal settlements, convictions and sentences of deporta-
tion were matters of fearful facility. For no provi-
sion was made for the defence of prisoners unable to procure it for themselves; the right of defence throughout the entire trial was not recognized till 1837; jurors were allowed to act as witnesses; and, belonging, as they generally did, to “the classes”, they were too prone to convict, and judges to trans-
port, especially during periods of popular ferment, on weak or worthless evidence, or on the mere pre-
sumption of guilt (See National History of England, 17, 310).

Convictism endured in New South Wales from its first foundation in 1788 till 1840. Tasmania re-
mained a penal colony till 1853. Transportation to Norfolk Island ceased in 1855. Moreton Bay (in the present State of Queensland) became a convict station in 1824 and remained one till 1859. Western Aus-
tralia began as a penal settlement in 1826. It con-
tinued as such for only a very brief space. Owing to the dearth of free labour, convicts (among whom was the gifted John Boyle O’Reilly, a political prisoner) were reintroduced from 1849 till 1868, when the last shadow of “the system” was lifted from Australia. Two noted Catholic ecclesiastics (Dr. Ullathorne and Dr. Wilborn, first Bishop of Hobart) took a prominent and honoured part in the long, slow movement which led to the abol-
tion of the convict system in New South Wales, Tasmanina, and Norfolk Island. Almost from the dawn of the colonization of New South Wales and Tasmania, voluntary settlers went thither, at first as sluggards, but in a steady stream when the ad-
ventures of the military rule ceased (1824) and when free selection and assisted immigration were planks in the policy of the young Australian colonies. The first free settlers came to Queensland (known till its separation from New South Wales in 1859 as the Northern Colonies—New South Wales) in 1824, just in advance of the convicts; to Victoria (known till its separation in 1851 as the Port Phillip District of New South Wales) in 1835, and to South Australia in 1836. The gold discoveries of the fifties brought a great influx of population, chiefly to Victoria and New South Wales. Events have moved rapidly since then. The widened influences of religion, the influx of new blood, the development of resources, pros-
perity, education, and the play of free institutions have combined to rid the southern lands of the traces of a penal system which, within living memory, threatened so much permanent evil to the moral, social, and political progress of Australia. The dead past has buried its dead.

The reforms of the criminal formed no part of the convict system in Australia. “The body”, says Bonwick, “rather than the soul, absorbed the attention of the governor” (First Twenty Years of Australia, 218). “Vengeance and cruelty”, says Erskine, “were its watchwords; the long tradition formed no part of its scheme.” (Constitutional History of England, III, 401). For the convict, it was a beast-of-burden life, embittered by the lash, the iron.
ball, the punishment-cell, the prison-hulk, the chain-
gang, and the "hell"." "The 'whipping-houses' of the
Mississippi," says Dilke, "had their parallel in New
South Wales; a look or word would cause the hurry-
ing of a servant to the post or the forge, as a pre-
liminary to a month in a chain-gang on the roads" (Dilke,
Great Britain, 8th ed., 374). Matters were even
worse in the convict "hells" of New Norfolk (estab-
lished in 1788), and of Port Arthur and Macquarie
Harbour in Tasmania. In 1835 Dr. Ullathorne went
to New Norfolk to prepare thirty-nine supposed
conspirators for an abrupt passage into eternity.
Twenty-six of the condemned men were reprieved.
They wept bitterly on receiving the news, "whilst
they deemed to die, without exception, dropped on
their knees and with dry eyes thanked God they
were to suffer a worse. 'By the abuse of power such as
manifested extraordinary fervour and repentance' they
received their sentence on their knees "as the will
of God", and on the morning of their execution
they fell down in the dust and, in the warmth of the
sun, prostrated the very earth beneath them peace" (Ullathorne in Moran, op. cit., 164).

For a long period Australian officials and ex-officials
were to all intents and purposes a great "ring" of
spirit-dealers. Rum became the medium of com-
merce, just as tobacco, and maize, and leaden bullets
were in the early days of New England (History of
The act of building the first Protestant church in Aus-
tralia (at Sydney) was, as the pastor's balance sheet
shows, in part paid in rum (op. cit., II, 66). "Rum-
smuggling, rum-colonization, rum-shipping, was
their guards" (José, History of Australia, 21), and
the moral depravity that grew up under the system
is described by Dr. Ullathorne as "too frightful even
for the imagination of other lands" (Moran, op. cit.,
p. 8-11, and "Historical Records of New South
Wales, II and III, passim"). The Irish Catholic con-
vincs—"most of whom", says Ullathorne (in Moran,
or. cit., 152-153), "were transported for the infringe-
ment of penal laws and for agrarian offences and mi-
nions of the sacred mining (the same eyewitness)
ally dreaded the depravity of the prison hells of the
system. Irish Catholic female convicts were also saved to a notable extent by their
robust faith from the profligacy which, almost as a
matter of course, overwhelm.th the fortunes of
other countries (McCarthy, History of Our Own
Times, ed. 1887, 1, 467; Ullathorne, in Moran, 157-
158). Long before, similar testimony was given by
John Thomas Bigge, after he had spent three years
(1819-22) in Australia as Special Commissioner from
the British Government to investigate the working
of the transportation system. In his final report
(dated 6 May, 1822) he said: "The convicts em-
barked in Ireland generally arrive in New South
Wales in a very healthy state, and are found to be
more obedient and more sensible of kind treatment
during the passage than any other class. Their
separation from their native country is observed to
make a stronger impression upon their minds, both
on their departure and during the voyage;"

II. Period of Persecution.—The influence of religious
bias was almost altogether banished, and the convicts more
conspicuous a civil than a religious function-
ary. Methodism (then a branch of the Anglican
Establishment) made a feeble beginning in Australia in
1813; Presbyterianism in 1823; other Protestant
denominations at later dates (Bonwick, First
Twenty Years of Australia, 240). In 1836, when
Dr. Ullathorne wrote his pamphlets, The Catholic
Establishment in Australasia, and Dealing with
disobedience, for drunkenness, for every trivial fault,
the punishment was "the lash!—the lash!—the lash!"
(Dr. Ullathorne, in Cardinal Moran's History of the
Catholic Church in Australasia, 158). And the "cat"
was made an instrument of torture (Dilke, Greater
Britain, 8th ed., 374). Matters were even
worse in the convict "hells" of New Norfolk (estab-
lished in 1788), and of Port Arthur and Macquarie
Harbour in Tasmania. In 1835 Dr. Ullathorne went
to New Norfolk to prepare thirty-nine supposed
conspirators for an abrupt passage into eternity.
Twenty-six of the condemned men were reprieved.
They wept bitterly on receiving the news, "whilst
they deemed to die, without exception, dropped on
their knees and with dry eyes thanked God they
were to suffer a worse. 'By the abuse of power such as
manifested extraordinary fervour and repentance' they
received their sentence on their knees "as the will
of God", and on the morning of their execution
they fell down in the dust and, in the warmth of the
sun, prostrated the very earth beneath them peace" (Ullathorne in Moran, op. cit., 164).

For a long period Australian officials and ex-officials
were to all intents and purposes a great "ring" of
spirit-dealers. Rum became the medium of com-
merce, just as tobacco, and maize, and leaden bullets
were in the early days of New England (History of
The act of building the first Protestant church in Aus-
tralia (at Sydney) was, as the pastor's balance sheet

was made an instrument of torture (Dilke, Greater
Britain, 8th ed., 374). Matters were even
worse in the convict "hells" of New Norfolk (estab-
lished in 1788), and of Port Arthur and Macquarie
Harbour in Tasmania. In 1835 Dr. Ullathorne went
to New Norfolk to prepare thirty-nine supposed
conspirators for an abrupt passage into eternity.
Fiction.—Daniel E. Deniehy, lawyer, statesman, journalist, will be best remembered for his clever skit, "How I Became Attorney-General of Barataria," which was famous in its day, and is still as readable as ever. James Francis Hogan published an Australian version of "Te College of the Ghosts," and sketched. Ambrose Pratt is the author of "The Great Push Experiment," "Franks, Dulcissis," and "Three Years with Thunderbolt." Among other Australian Catholic writers of fiction whose work has appeared in book form are the following: Miss Tennyson, Roderick Quinn, Laura Archer (a collection of Queensland tales), F. M. Korner (pen name, "George Garnet"), a Loretto nun (author of "I Never Knew"), the Rev. P. Hickey ("Innissalai"). "Australian Wonderland" is a cleverly written book for children, in which two sisters (one of them a Sister of Mercy) collaborated. Newspaper and periodical literature has also been enriched with some excellent work in fiction by Australian Catholic writers.

Poetry.—Among the poetical Irish singers, "Eva" of the Nation (Mrs. Kevin O'Doherty) and "Thomaisne", are now (1907) passing the evening of their lives in humble retirement in Queensland. Roderick Flanagan (the historian of New South Wales) published in his day a volume of verse. Victor, the book of a gifted and prolific verse-writer, but his only published work is "At Dawn and Dusk." John Farrell, for a time editor of the Sydney Daily Telegraph, was the author of "How He Died, and Other Poems." In 1897 he wrote a "Jubilee Ode" which was pronounced to be finer than Kipling's "Recessional" as a piece of national stock-taking. Roderick Quinn has written "The Higher Tide," and "The Circling Hearths"; Edwin J. Brady, a poet of the sea and wharfside, "The Way of Many Waters"; Bernard O'Keeffe, "Downward and Darraweet from the Silent Land"; Cornusius of the "Feast of the Bunya, An Aboriginal Ballad," with a preface containing curious historical, legendary and etiological lore regarding the Queensland blacks; the Rev. W. Kelly, S.J., three convent dramas in blank verse; J. Hood, "Land of the Ferris"; John B. O'Hara, "Songs of the South" (2d series); "Sonnets, Odes, and Lyricoe"; the Rev. M. Watson, S.J., a series of seven handsomely illustrated Christmas booklets in verse which have gone through many editions. Volumes of poetry have also been published by Marion Miller ("Songs from the Hills"), and Rena Wallace ("A Bush Girl's Songs"). Some meritorious work by Australian Catholic poetical writers (including various odes, etc., by the Rev. J. O'Keeffe) is unfortunately not apparent.

Catholic Journalism. In Australia had a long and torrid road to travel before it reached assured success. Beginning with "The Chronicle" (founded in Sydney, in 1836), the way was strewn with failures, which, however, helped to form the steps leading others to better. The existing Catholic newspapers and periodicals of Australia, with their dates of foundation, are: Weekly: Sydney, N. S. W., "The Freeman's Journal" (the oldest existing newspaper in Australia, founded and first edited by Archdeacon McEnroe in 1830); and "The Catholic Press" (1885); Melbourne, Victoria, "The Advocate" (1868), "The Tribune" (1900); Brisbane, Queensland, "The Australian" (founded by Dr. O'Quinn in 1878), "The Age" (1892); Adelaide, South Australia, "The Southern Cross" (founded by Father J. J. Woods, "The W. W. Record" (1874); Launceston, Tasmania, "The Monitor" (founded in 1894 by amalgamating "The Catholic Standard" of Hobart, and "The Morning Star" of Launceston).—Monthly: Melbourne, "The Australian Messenger" (1887); "The Austral Light" (an ecclesiastical monthly, founded by the Daughters of Our Lady).—Quarterly and Annual: "The Australasian Catholic Record" (founded by Cardinal Moran, in Sydney, in 1894); "The Madonna" (Melbourne, 1897); "The Garland of St. Joseph" (1906). A useful "Catholic Almanac and Family Annual" is published for the Diocese of Maitland. Illustrated scholastic annuals are also issued by most of the Catholic religious colleges of colonial Australia, and drawn by artists for schools for girls.—In size, literary quality, successful management, and influence, the Catholic newspapers and magazines of Australia easily outrival the rest of the religious press in the Commonwealth. Many Australian Catholic schools are recognized for their literary, and scientific history of Australia were, for a time at least, associated with the religious or secular press of the country. Among them may be mentioned: Sir Charles Gavan Duffy; the Right Hon. William Bede Dalley, P.C., Q.C.; the Hon. John Hubert Plunkett, Q.C., M.L.C.; Sir Roger Therry; Richard Sullivan (brother of A. M. and T. D. Sullivan); Judges Therry, Real, Power, O'Connor, Casey, Heydon, and Quinlan; the Hon. Edward Butler, Q.C., M.L.C., and his brother, Thomas Butler; E. W. Sullivan; Sir John O'Shanassy, K.C.M.G.; the Hon. Sir Patrick Jennings, K.C.M.G., LL.D., M.L.C.; Edward Whitty, the brilliant Anglo-Irishman, who ended his days in Melbourne; William A. Duncan, C.M.G.; Roderick Flanagan; Daniel E. Deniehy; Philip Mennell, F.R.G.S.; John Knoblock, "The First Ten Years of Australia" (1906); Robert Inglis, "Julian E. Tenison Woods; the Hon. J. V. O'Loghlen; the Hon. HughMahon; J. F. Hogan; Benjamin Hoare; Roderick and P. E. Quinn; F. J. Bloomfield; Ambrose Pratt; Helen K. Jerome; John Hughes, K.C.O.G.; John Gavan Duffy; Frank Leverrier (the leading Catholic scientist); Kenneth McDonall;—Nicholson; Frank and Martin Donohoe; Ernest Hohen; C. Brennan; T. Courtney; and others. Phil May first won fame as a caricaturist in the columns of an illustrated weekly published in Sydney. A number of able laymen, clerical writers are also well-known in the Catholic newspapers and periodicals of Australia.

The Australian Handbook (various dates); the Year-Books of the various States; Coghlan, Wealth and Progress of New South Wales (various dates); and The Seven Colonies of Australasia (various dates): Acts of Deeds of the Australian Primary Synods of 1885 and 1895; Historical Records of New South Wales; Bennett, South Australian Almanac (1840); Kenny, The Catholic Church in Australia to the Year 1840; Flanagan, History of New South Wales (1862); Therry, New South Wales and Victoria (1853); The National Historical Records of England (1877); May, Coghill, The History of Australia (1882); Epitome of the Official History of New South Wales and New Zealand (1885); The First Twenty Years of Australia (1883); Ferguson, History of Tasmania (1884); Dike, Greater Britain (1885); McCarthy, Our Own Times (1893); Coghlan, History of Australia (1888); Sutherland, History of Australia (1888); Lumboltz, among Connoban (1890); Hutcheson, Australia for Australasia (1892); Rennolds, the Australian Aborigines (1892); Australian Biography (1892); Britton, History of New South Wales (from the Records, 1840); The Church in Australia; Heath, Australian Dictionary of Dates (1897); Bayntt, Life and Progress in Australia (1898); Coghlan, the Seven Colonies of Australasia from 1851 to 1899 (1900); Jones, History of Australia (1901); Coghlan and Eyre, Progress of Australasia in the Nineteenth Century (1903); Howitt, The Native Tribes of South-East Australia (1904); Spencer and Gillen, The Native Tribes of Central Australia (1904); Bennett, States of Australia and New Zealand (1905); The Australian Catholic Directory for 1904.

AUSTREMONIUS 121 AUSTRO-HUNGARIAN

cured as patron at Montreuil in the department of Pas-de-Calais.

RANBEEK, The Benedictine Calendar (London, 1806); VACANCY, VIE de S. Ouen (Paris, 1903); 208–210; BRADLERS, Heiligem-Lexikon (Augsburg, 1888), 1, 363.

MICHAEL OTT.

Austremonius, Saint, Apostle and Bishop of Auvergne (c. 314). All that is certainly known of Austremonius is deduced from a few brief sentences in the writings of St. Gregory of Tours' (Hist. Franc., I, xxx, and De Glorioi Confessorum, c. xxvii.) Past works and this author has seen seven bishops sent from Rome into Gaul about the middle of the third century; he laboured in Auvergne and is said to have been the first Bishop of Clermont. But from a study of the episcopal lists as given by St. Gregory himself, St. Austremonius could hardly have antedated the commencement of the fourth century, since his third successor died in 385. It is more likely, therefore, that he was the contemporary of the three Bishops of Aquitaine who attended the Council of Arles in 314. He was not a martyr. His cult began at the third council of Braga when Cantius, a deacon, saw a vision of angels about his neglected tomb at Issoire on the Couse. His body was afterwards translated to Voulie, and in 761 to the Abbey of Mauzac. Towards the middle of the tenth century the city of Clermont was given to St. Yvoine, near Issoire, and about 900 was returned to Issoire, the original place of burial.

AUSTRIA. See AUSTRO-HUNGARIAN MONARCHY.

Austro-Hungarian Monarchy, The. — By this name is designated the European monarchy whose dominions lay to the west of the River Danube and to the west of the Rhine. The average density of its population is, approximately, 185 to the square mile. The monarchy holds sway over: (a) the kingdoms and provinces represented in the Austrian Parliament, or Reichsrat, which have together an area of 119,685 sq. km. and a population of 26,696,812; (b) the provinces of the Hungarian Crown which have a total area of 127,204 sq. m. (329,581 sq. km.) and a population of 19,885,465; (c) Bohemia and Herzegovina, with an area of 19,678 sq. m. (51,029 sq. km.) and a population of 1,737,000; (d) the Transylvania, and Minor Transylvania, 3,376,000; (f) Slovenia, 1,193,000; (g) Andalucia, 1,727,000. In the south of the empire is a great variety of races. In the Austrian corner they are Germans, 1,717,000; Czechs, 5,955,000; Poles, 4,259,000; Ruthenians, 3,376,000; Slovenes, 1,193,000; Italians and Ladinians, 727,000. In the north the population is composed of: Magyars, 9,190,000; Rumunians, 2,597,000; Germans, 2,139,000; Slovaks, 2,055,000; Croats, 1,058,000; Serbs, 855,000; Hungarians, 445,000. The inhabitants of Boesia and Herzegovina are Servo-Croatian.

The capitals of the three main divisions are: Austria, Vienna, with 1,675,000 inhabitants; Hungary, Budapest, with 732,000 inhabitants; Boesia and Herzegovina, Sarajevo, with 38,000 inhabitants.

The only strip of coast land in Austria-Hungary lies on the Adriatic and has a length of 1,366 miles (2,200 km.). The countries which border on Austria-Hungary are: Italy, Switzerland, the principalities of Liechtenstein, Bavaria, Saxony, Prussia, Russia, Rumania, Servia, Turkey, and Montenegro.

Barlasz Hucslay. — The Austro-Hungarian Monarchy was created by the union of the German, Slavonic, and Hungarian provinces which now lie within its territory. This union took place in 1526. Upon the death of Louis II of Hungary and Bohemia at the battle of Mohacs, in 1526, Bohemia and Hungary were united to the Austrian possessions of Ferdinand I, of the Hapsburg family. This union was in accordance with the law of succession as well as the result of a free choice. Up to 1526 each of these three divisions of the present empire had its own separate religious history.

A. Early Christianity. — The Romans in the time of Augustus took possession of those provinces of the present Austria-Hungary which lie south of the Danube. In the course of time they built roads, fortified cities, tilled the land, and converted the inhabitants to Christianity. The cities of Aquileia and Salona, episcopal sees from the middle of the first century, were centres for Christianity for Noricum and Pannonia. In 294 the emperor Diocletian was born there. Later the workmen were thrown from the marble bridges of Sirmium (Mitrovits) into the Save and drowned. During the persecution of the Christians under the Emperor Diocletian, in 304, the soldier Florianus was thrown into the Enns at Lauriacum (Lorch). The house of Augustinian canons, at St. Florian, in Upper Austria, now stands on the spot where the body of this saint was buried. A tradition gives the same date for the martyrdom of the two bishops Victorinus of Petovia (Pettau in Southern Styria) and Zosimus of Petovia (Pettau), who met their deaths at the hands of the same Roman soldier. The story is probably spurious, but the site of Sirmium was the birthplace of the beloved saint, Kulpa empties into the Save. Even at this period Christianity must have had a large number of adherents in these districts, for already an established organisation is found here. The bishops of Noricum were under the control of the Patriarch of Aquileia, while Pannonia was subject to the Metropolitan of Sirmium.

The last representative of Christian culture among the Roman inhabitants of the Danube district is St. Severinus. The story of his life, by his pupil Eugippi, is the only work that exists of the early Christian history of the Danubian provinces during the last years of Roman occupation. Severinus settled near the present city of Vienna, built a monastery for himself and his companions, and led so austere a life that even in winter, when the Danube was frozen, he walked up and down over the ice barefoot. His journeys upon the frozen river were errands of consolation to the despairing provincials, who saw themselves threatened on all sides by bands of marauding barbarians. In these journeys Severinus travelled as far as Castra Batava (Passau), and inland from the river up to Juvavum (Salzburg). God had granted him the gift of prophecy. When Odoackar (Odoacer), King of the Heruli, set out on his march against Rome, he cast his eyes upon the saint and asked for his blessing. Severinus spoke prophetically: "Go forward, my son. To-day thou art still clad in the worthless skins of animals, but soon shalt thou make gifts from the treasures of Italy." After Odoackar had overthrown the Roman Empire of the West, Severinus had made himself master of the Danubian provinces, and invited Severinus to ask from him some favour. Severinus only asked the pardon of one who had been condemned to banishment. The Alamannic king, Gibold, also visited him in Castra Batava, and the saint begged as a personal grace that the king cease from ravaging the Roman territory. His usual
salutation was “Sit nomen Domini benedictum”, corresponding to our “Praise be to Jesus”. When Severinus lay dying the sons of his disciples prevented their praying; he himself began to recite the last psalm, and with the closing words of this psalm, “Omni spiritus laudet Dominum”, he passed away (c. 650 AD). He was buried in a birch coffin in the region, taking the body of the saint with them, and returned to Italy. Here he was buried with suitable honour in the castle of Luculanium, near Naples.

B. The Middle Ages.—During the period of migrations which followed the fall of the Roman Empire, Austria was the fighting-ground of the barbaric hordes which poured through it. Vindobona disappeared from the face of the earth; Pannonia was entirely laid waste by the Avars, a people related to the Huns. The same fate befell Styria, Carinthia, and Carniola, desolated by the Slovenes, who now took possession of those provinces. The land lying on the upper Drave has since borne the name of “Pustertal” (from the Slovenic pust, “waste”).

The Bavarians, the Serbs, and the Germans added to the Save. The Croats are the first-born sons of the Church among the Slavs. They were converted, about the year 650, by Roman priests. The Bajuvarians (Bavarians), a people from the West, spread throughout the whole of Upper Austria. The bishop of Rupert, Bishop of Worms, baptized the Bavarian duke, Theodo, at Regensburg (Ratisbon) and became the Apostle of the Austrian Bajuvari. He travelled and preached nearly as far as Lauriacum, settled in Salzburg, and there erected a see and founded the monastery of St. Peter (c. 700). St. Peter’s is the oldest Benedictine monastery which has had a continuous existence down to our own times, Monte Cassino having been repeatedly destroyed and restored. The Bavarian duke Tassilo founded the Benedictine monastery of Mondsee (748) and Kremmenzeller (777). The Bishops of Salzburg brought the Christian Faith and German customs to the Slavs. A quarrel broke out, however, between the Carinthians and the Patriarch of Aquileia. Charlemagne raised the Carinthian see of Salzburg to an archbishopric in 798, settled the dispute with Aquileia by making the bishops of the two provinces, and in 805 established the border territories known as the Mark of Friuli and the East Mark.

Moravia was won to Christianity by two brothers, Methodius and Constantine, Greek monks from Thessalonica, known in history as the Apostles of the Slavs. Constantine invented the Glagolitic alphabet, translated the Bible into Slavic, and composed the liturgy in that language. But, as Salzburg and Passau laid claim to the region in which the brothers worked, complaint was made against them by the German ecclesiastics. St. Hadrian II, however, authorized the liturgy in the Slavic language. Constantine remained at Rome in a monastery and took the name of Cyril, while Methodius, after many fruitful labours as Archbishop of Pannonia and Moravia, died 6 April, 883, at Velehrad, on the River March. The Apostles of the Slavs are now (pursuant to a decree of Leo XIII) commemorated throughout the Catholic Church on the 5th day of July. The Latin Liturgy was reintroduced in Moravia by Cyril in 896. The see was restored and soon after his death the Magyars overthrew the empire of Great Moravia (906). When Moravia is again heard of in history (founding of the bishopric of Olomütz, 863), it is a province of Bohemia.

Moravia was reintroduced into Bohemia from Moravia. Of the Slavic tribes, which at the end of the fifth century controlled the interior of Bohemia
study. While on their way, they were obliged to spend a night in the open and fell to speaking of the future. Each wished to become a bishop, and each vowed that, if ever a bishop, he would found a monastery. One, Gebhard, became Archbishop of Salzburg and later the Abbot of the famous St. Gallen; another, Adalbert, Bishop of Würzburg, founded the monastery of Lambach; while the third, St. Altmann of Passau, founded Göttweig for twelve canons under the Rule of St. Augustine. The canons at Göttweig were replaced after the lapse of ten years by Benedictines from St. Blasien in the Black Forest, and another, Thiemo, Archbishop of Salzburg, was the leader. The archbishop met the death of a martyr, and Ida was made a prisoner. Leopold erected a church on the Kahlenberg and founded the monasteries Klosterneuburg and Heiligenkreuz. His wife, Agnes, widow of the Hohenstaufen Duke Frederick, bore him eighteen children. Their third son, Otto, studied at Paris, entered the Cistercian monastery of Morimond, became Bishop of Freising, and wrote a chronicle, "Der Duasimus Feudibelli," with a preface by the German Emperor. By reason of these two works he is the most noted German historian of the Middle Ages.

After a hard struggle, the saintly King Ladislaus (d. 1058) succeeded in regulating the ecclesiastical and civil affairs of Hungary. He founded the Bishopric of Grosswardein and summoned the dignitaries of the Church and the State to a diet at Szabolcs. This diet is often called a synod, on account of the many decisions arrived at in church matters. The pope ordered the archbishops and the bishops of Hungary to be summoned to the concordat, and the whole of Hungary was commanded to keep Sunday and fast-days and to abstain from immorality. Ladislaus conquered Croatia, whose duke, Zvonimir, had received from a legate of Gregory VII at Salona (1076) a banner, sword, crown, and sceptre, with the title of King, in return for which he had sworn fealty to the pope.

Henry II, Jasomirgott, was the first Duke of Austria. He built a residence for himself at Vienna (Am Hof), in which was the Pantheon chapel, and founded a hospital which could be restored to its glory from St. Jacob's at Regensburg. Octavian Wolzner, an architect from Cracow, erected for the new duke the church of St. Stephen, to which the parish of St. Peter was added. Leopold V, the Virtuous, son of Henry II, took part in the Third Crusade and fought so bravely that, as we are told, his arm was stained blood red, and only the part under the sword belt remained white. However, Richard the Lion-hearted tore down the Austrian banner at the storming of Ascalon and the enraged duke went home at once. While he was away by the Rhine, Richard was seized at Erdburg, and held a prisoner by the duke at Dürnstein. Crusaders being under the protection of the pope, Celestine III put Leopold V under the ban. To this the duke paid no attention; but when he fell with his horse, at Gras, broke a leg, and found himself near death, his conscience smote him; he sent for Albert III, Archbishop of Salzburg, who was in the neighbourhood, and received absolution from him. Frederick I, the eldest son of Leopold V, ran away from Prague and dined with his father. The reign of his brother, Leopold VI, the Glorious, was a brilliant one. He too went on a crusade and endeavoured first to capture Damietta, the key to Jerusalem, but was obliged to return home without having accomplished anything. He married a Byzantine princess and was made a prince by the emperors. His marriage was arranged with much relation with marriage by the emperor of Greece and the church of St. Michael. The church was intended for the benefit of the duke's attendants, retainers, servants, and the townpeople who settled around the castle. The scheme to form a bishopric at Vienna was not carried out, but Eberhard of Passau founded bishops at Seckau and Lavant, for Styria and Carinthia. Leopold's son and successor, Frederick II, the last of the Babenberg line, was knighted with much religious pomp at the feast of the Purification of the Virgin, 1292, in the castle church. Bishop Gebhard of Passau presented the consecrated sword to the duke, two hundred young nobles receiving knighthood at the same time. After the ceremony the young duke rode at the head of the newly made knights to Penzing, where jousts were held.

Within a short space of time the national dynasties of the countries under discussion died out in the male lines: the Babenberg Dynasty (Austria) in 1246, the Arpadian (Hungary) in 1301, and the Premysladian (Bohemia) in 1306. In 1362 the German Emperor, Rudolph of Hapsburg, gave Austria in fief to his son Albrecht. To Austria and Styria the dukedom of the Hapsburg line soon added Carinthia, Carniola, the Tyrol, and the Mark of the Wends. The rulers of this line are deserving of great praise for their aid in developing church life in this time. I have already stated that I founded the church (Hofburg) in the castle of Duke Rudolph IV in 1359 laid the corner-stone of the Gothic reconstruction of the church of St. Stephen. A hundred and fifty years elapsed before the great tower of the church was completed. With the consent of the pope the same duke founded the University of Vienna in 1365. The university was modelled on the one at Paris and possessed great privileges (freedom from taxation, right of administering justice). Whether it was separated from Eugenius IV and set up Felix V as antipope, the theological faculty of the university, of which at that time the celebrated Thomas Eberndorfer of Haselbach was a member, sided with the antipope. But the papal legate, John Carvajal, and Zenesis Sylvius Piccolomini, the emperor's governmental secretary, prevailed upon Frederick III to espouse the cause of Eugenius and to sign the Concordat of Vienna (1448). The concordat provided that the annates and the confirmation dues to the pope that the bishops shall have the right to appoint to the canonicries in the unenewed months, and that the filling of ecclesiastical vacancies at Rome should be reserved to him. The concordat was gradually accepted by all of the German rulers, and up to the present time the relations between the German Church and the papacy are regulated by its provisions. In 1452 Frederick was crowned emperor at Rome, being the last emperor to be crowned in that city. In his reign the Bishopric of Laibach (1439), Vienna, and Wiener-Neustadt (both the latter in 1469) were founded. During this period a great many monastic houses were founded in Austria, especially by the more recently established orders: Carthusian houses were founded at Mauerbach, Gaming, Aschau; Franciscan ab Vienna, Klosterneuburg, St. Pölten, Maria Enzersdorf, Puppening; Dominican at Graz and Retsa.

Under the Luxembourg line Bohemia attained a high degree of material and spiritual prosperity. Charles IV, before his reign began, succeeded in making Prague raised to the rank of a metropolis (1344) and in this way made the country ecclesiastically independent of Germany. Charles had been a student at Paris, and immediately upon ascending the throne he founded the University of Prague (1348), the first university in Germany. Maria, his eldest daughter, married Peter Parler from Schwäbisch-Gmünd began the erection of the stately Cathedral of St.
Vitus which is now nearing completion. Parler also erected the Teynkirche (Teyn church) in Prague, and the church of St. Barbara in Kuttenberg, while Matthias of Anras built the fortress-castle of Karlstein. The crown jewels of Bohemia were preserved in the sumptuous chapel at Karlstein. But Bohemia had not had the light it had from the days of the learned King Wenzel (Wenceslaus), son of Charles IV, had no control of his temper, and began a quarrel with the archbishop. The archbishop's vicar-general, John of Ponuk (St. John Nepomucene), refused to tell what he heard of a heresy. He was first tortured and then, gagged and bound, was thrown at night into the River Moldau. At this time the first signs appeared in Bohemia of a religious agitation which was destined to bring the greatest sorrow both to Bohemia and to the adjoining countries. Jerome of Prague had become acquainted with the writings of Wyclif at Oxford. He returned home, bringing the teachings of Wyclif with him, and communicated them to his friend Hus. Hus came from Hnusets near Prahatsk. He was the child of a peasant, and had been a professor of philosophy at the University of Prague, preacher in the Bohemian language at the Bethlehem chapel, and confessor to Queen Sophia. A complaint was brought in the university against Hus on account of his teaching. Of the twenty-nine Bohemians (Hebrews and Bohemians), which had votes in the affairs of the university, only the Bohemians voted for Hus. Hus then turned a personal into a national affair. King Wenzel issued a command that henceforth the Bohemians should have three votes, and the other "Nations" only one vote. Upon this 5,000 students and the German professors withdrew and founded the University of Leipzig. The university was now simply a national one, and Hus without interference taught the theology demanding at the church council only of the elect; no man is a temporal ruler, no man is a bishop, if he be in mortal sin; the papal dignity is an outcome of the imperial power; obedience to the church is the invention of men. Hus was suspended by Archbishop Zibko; he appealed to the pope (Alexander V) and then to Jesus Christ. John XXIII placed Hus under the ban, Prague under an interdict, and called the Council of Constance. The Emperor Sigismund gave Hus a safe-conduct which protected him from acts of violence on the part of the Germans through whose territory he must pass, but not from the verdict of the council. Hus was repeatedly examined before the council, but would not retract his opinions; the members of the council, therefore, unanimously condemned his errors and delivered him to the secular power, by which, in accordance with the law of the land at the time, he was condemned to death at the stake (1415). Jerome of Prague suffered the same death the next year. While at Constance Hus sanctioned the receiving of the sacrament in both kinds which had been introduced by Master Jacob of Mies (Calixtines). As a former monk, John of Sela, was leading a procession a stone was thrown at him from a window of the town hall. The throng, led by the knight John Ziska of Trocnov, attacked the town hall and threw the judge, the burgomaster, and several members of the town council out of the window into the street, where they were killed by the fall. This is known in history as the "First Defense of Prague". King Wenzel was so excited by the news that he relinquished his crown. The Hussites were called to the city and mountain which they named Tabor. The capable leaders were led by John Ziska and Procopius the Great, who was also called the "Shaven" (Hoby) because he had been a monk. After Ziska's death the extreme radicals took the name of "Orphans" because no one was worthy to take Ziska's place. They were finally conquered, and an agreement, called the Concordata (Treaty of Lodi), was made with the moderate party (1436). The Compactata provided: that in Bohemia everyone who demanded it should receive Holy Communion under both kinds; mortal sins should be punished, but only by the legal authorities; the Word of God should be freely expounded by clergy appointed for the purpose; ecclesiastics should manage their property according to the rules of the church. After this, Hussite lived on in the "Bohemian Brethren", who elected a bishop at Lhota near Reichenau (1467), and were finally carried into the current of the Reformation.

In Hungary Christian culture flourished during the reign of the House of Anjou. Louis the Great founded universities at Altofen and Fünfkirchen, and built the fine cathedral at Kassau. When Constantine was captured by the Turks (29 May, 1453), a cry of horror resounded throughout Europe, and the pope sent forth John Capiotran to preach a crusade. The saintly monk came with an immense following from Italy to Germany, Bohemia, and Hungary. The Hungarians could not hold his hearers. A stone pulpit with a statue of the saintly Capiotran stands on the east side of St. Stephen's Cathedral, Vienna. A hundred thousand people crowded the square and the roofs of the houses to hear him. This was the more remarkable because Capiotran preached in Latin. Yet all who saw and heard him were moved to their innermost souls. The Turks, in 1456, tried to capture Belgrad, the key to Hungary. The papal legate, John Capiotran assembled an army which John Hunyady was able to defeat, at Belgrad, a Turkish army much more numerous. This was called the "Battle of the Three Johns": Hunyady and Capiotran died shortly afterwards from camp fever. Hunyady's son had been educated by John Vites, Bishop of Grossewarden, afterwards Archbishop of Gran. This prelate instilled such a love of learning into his pupil that when the latter ascended the throne as Matthias Corvinus, he gathered learned men about him, re-established the university, and founded a new university at Pressburg. Thirty copyists were kept busy at Ofen transcribing the Greek and Latin classics. The volumes, which were beautifully illuminated and handsomely bound, were known as "secular power books."

C. Modern Times.—If in analysing church history Christian antiquity is taken to represent the period of the life and labours of the Church among the peoples influenced by Greek and Roman civilization, and the Middle Ages the period of the Church's life and labours among the Germans through whose territory it came into contact with them, then the modern period of history must be taken as that in which the influence of the Church began to extend throughout the whole world. Modern times would, according to this theory, begin with the discovery of the New World. But if the beginning of the modern era is made, as it usually is, to coincide with the Reformation, then it is further marked by the rise of that monarchy which was formed by the union of the Austrian, Bohemian, and Austrian-Hungarian provinces under the Hapsburgs in 1526.

Ferdinand of Hapsburg, the ruler of the German-Austrian crown provinces, had married, at Linz, Anna of Hungary and Bohemia. When Anna's brother, Louis II, was killed in the desperate battle of Mohacs (1526), Ferdinand of Austria succeeded by right of inheritance and election as King of Bohemia.
and Hungary. The new doctrine taught at Wittenberg was soon brought into the Austrian provinces. Miners were the first to spread the new teaching. Noble families frequently sent their sons to German universities, and even to Wittenberg, and these students who had studied the new faith, even brought Protestant preachers with them. The constant danger from the Turks in Austria was exceedingly opportune for the new religious movement. One of the first preachers of the new doctrine in Vienna was Paul of Spretzen (Speratus), a Swabian, who had been driven out of Salzburg on account of his Lutheran views. The new doctrine entered Hungary and Transylvania through merchants who brought Lutheran books with them, and it took hold, more especially, among the German population of the Zimmer region and among the Saxons of Transylvania. Mátyás Biro, known as Devay, from the place of his origin, Deva in Transylvania, has been called "the Luther of Hungary". Most of the Hungarian bishops had fallen at the battle of Mohács, and the subsequent disputes concerning the succession to the throne distracted the monarchy. For these reasons the new doctrines spread rapidly, and Devay was able to bring over to it such noble families as the Bathyany and Boessky. It was then that Count George Zezschewitsch, the Protestant convert, published his book, "Lutheranismus und die evangelischen Kirchen" (German faith), Lutheranism Nemes hit (German faith), and Catholicism Igaz hit (Right faith). Equal success accompanied the preaching of John Gross of Cronstadt in Transylvania, despite the efforts of George Zezschewitsch to check him. Zezschewitsch (also called, after his mother, Martinuzzi) was prior of the Pauline monastery at Szenstochov near Cracow, and governed Transylvania as guardian of John Sigismund Zápolya. Gross added Honter to his name in memory of his daughter Eleanor by an older husband (in the Transylvanian dialect he was called Horner). In order to secure the crown for her son, John Sigismund Zápolya, his mother, Isabella, was obliged to sanction the decisions of the diet which met at Thorenburg (Torda) near Klausenburg. These granted to adherents of the Augsburg Confession equal rights with the Catholics. In Bohemia and Moravia, Lutheranism first found adherents among the Germans and especially among the sect of the Utraquists. Just as the Hapsburgs were opposed to this, so was the Church at the time of that Christianity against the advance of Islam, also it proved itself by its constancy and zeal to be the support of the Faith against the religious innovations. Pope Pius IV conceded the cup to the laity in Masses. As in the Protestant communities, the regulations, however, withdrawn by St. Pius V. Ferdinand I sought in many ways to be of aid: by his mandates, by the inspection of convents and parishes, by his care in selecting competent ecclesiastics, by the introduction of the newly established Society of Jesus, and by proposals which were sent to the Council of Trent in support of reforms. The mandates of Ferdinand were of little use, but the inspections and the enforcement of the decisions of the Council of Trent had effect. The Bishops of Vienna, Fabri of Szelecske, and of Trattendorf and the Archbishops of Graz (Nausea, horror, disgust) were unusual men. The unblushing zeal both preached on Sundays and the months in the Cathedral of St. Stephen and took part in the religious movement by the publication of tracts. The attacks that were made in a rude rhyme of the day:

Tausend Menschen ständen da
Vor dem Bischof Nausea,
Er dem Pfarrer zu aller Zeit
Mit der Wange Weid
Daß, wo der Bischof Nausea
Sich, als's wost er, fehlt sein Stock!

Nausea provinces the Jesuits were the
most important factor in the defence of the Faith
and the elevation of Christian life. Ferdinand I obtained from St. Ignatius the founding of a Jesuit college in Vienna. The first two Jesuits came to Vienna in 1561. They were followed, the next year, by St. Peter Canisius, who, in the meantime, had even brought Protestant preachers with them. The order, or the authority, was appointed the abandoned Carmelite monastery Am Hof, obtained two chairs in the theological faculty, and founded a gymnasia with a theological seminary attached. St. Peter Canisius was named court preacher, and for a time was admin-
istrator of the Diocese of Vienna. He still in-
fuences the present day through his "Summa
Doctrine Christianae"; an abridgment of which, called the catechism of Canisius, is still in use. A few years later the Jesuits founded at Prague a
gymnasia, a theological school, and a university, for philosophical and theological studies, which in
contradistinction to the "Carolinum" was called the "Clementinum". They also founded schools at Inns-
bruck and at Tynau. The tutor and court preacher of Maximilian II, Ferdinand's eldest son, was Sebas-
tian Pfauser, a man of Protestant tendencies. It was feared that Maximilian would embrace the new
creed, but the papal nuncio, Bishop Hosius of Ern-
land, pointed out to him those inconsistencies in the new faith which proved fatal. Maximilian II gave permission to lords and knights to follow the Augsburg Confession in their own castles, cities, and villages. David Chytrius of Rostock
drew up for the Protestants a form of church service.
In Bohemia the Evangelicals united with the Bohemian and Moravian Brethren, and called the new agreement the "Bohemian Confession". They had a consistory of fifteen to which the Evangelical
clergy were subordinate. Maximilian's position in
the part of Hungary continued to be difficult, and one, because he frequently quarrelled with the political
schemes under the cloak of a struggle for religious
freedom. His brother Charles was master of the
inner Austrian provinces, Styria, Carinthia, Carniola, and Görz. He summoned the Jesuits to Graz and,
in the religious pacification of Brück, granted the
free exercise of religion at Graz, Klagenfurt, Laibach, and Judenburg. In return he demanded that the
Protestants should leave him and his coreligionists
undisturbed in their faith, rights, and estates;
but the emperor's brother, Ferdinand, who was
obliged to leave the cities, market towns, and
estates under the personal rule of the archduke.
In order to counterbalance the endowed schools of the Styrian provinces the Archduke Charles founded a University of Graz (Grazing) in honor of his son Ferdinand (later the Emperor Ferdinand II) was educated at Ingolstadt, and while there he declared, "I would rather give up all land and people
and go away in nothing but a shirt than sanction
what might be injurious to religion". When he became ruler he showed the first Governmenters who
cleared the land of these preachers (ranter).
The bishop George Stobäus of Lavant and Martin
Brenner of Seekau (the Hammer of the Heretics)
were at the head of these, who regularly commissioned.
First, the churches in this province were closed.
At the distribution of provinces Archduke Ferdin-
and, husband of Philippina Welser had received the Tyrol. The diet of 1570 decided the religious position of that province. The governor, Jacob of Scherensbach, declared firmly that the land and the people of the Catholics would be contrary to the customs
and ordinances of the land and, further, that it would be fohy to render religion, the strongest tie which binds
hearts together. All classes agreed with him.
Maximilian II, Maximilian of Bavaria, lived in the Hradchán at Prague, where he carried on his studies in alchemy and art. The Archduchy of Austria was ruled by his brother Ernst.
AUSTRO-HUNGARIAN

was aided by Melchior Kheis, who brought about the counter-reformation in Austria. Kheis was the choice of Protestant parents; his father had been a baker in Vienna. He was educated by the court preacher, George Scherer. From the time of Scherer until the suspension of the order the court preachers were chosen in unbroken succession from the Jesuits. Kheis became Provost of St. Stephen's, Chancellor of Bohemia, and Bishop of Vienna. During the reigns of Ernst and his brother Matthias, Kheis was all powerful. Rudolph II having shut himself up in Prague, the members of the Hapsburg family chose the Archduke Matthias to be their head. The Bohemian clergy to Rudolph II, but wrung from him a rescript (Majestätsbrief) in 1609. This confirmed the Bohemian Census, granted the Protestants permission to use the university, and gave them the right to choose a consistory; it also allowed the three temporal estates of lords, knights, and cities having chartered rights to build Protestant churches and schools. Contrary to the provisions of this agreement, subjects of the Archbishop of Prague built a Protestant church at Klostergrab, and subjects of the Abbot of Breunau did the same at Breunau. At the orders of the Emperor Matthias supported them the result was (1620) the "Second Defenestration of Prague" with which the Thirty Years War began. The Elector Palatine Frederick V, the head of the Protestant lines of Germany and of the Netherlands, was elected King of Bohemia. The cathedral was altered to suit Calvinistic church services. The altars were demolished, the pictures destroyed, and Scultetus, the court preacher, arranged a church service. No ruler ever began to reign under more distressing conditions than Ferdinand II. The insurgents under Thurn stood before the gates of Vienna; those unfriendly to Catholicism within the city made common cause with the enemy. Ferdin- mund, however, never lost courage. Kheis, Bishop of Vienna, proved to be too weak and was therefore confined first in the castle of Ambras and then in the castle of Sant' Angelo at Rome. He lived to have the satisfaction of being restored in state to his diocese. He founded in Vienna the Himmelsföront- kloster, which commemorates the beautiful legend of the truant nun whose place as doorkeeper was taken during her absence by the Blessed Virgin.

After the battle of the White Mountain, Ferdinand took severe measures against the disturbers of the peace. In order to control the country, he finally rescript, which had been the source of so much trouble, was annulled. A new constitution was published which, among other provisions, made the clergy the highest estate of the land. The emperor was obliged to give Upper Austria in pledge to Bavaria as security for the cost of the war. The cruelties of the Bavarian troops and Ferdinand's order, requiring the people either to leave the country or to return to the old belief, led to a peasant revolt under the leadership of Stephen Fadinger, the proprietor of a farm not far from St. Agatha, which was carried on until Fadinger died of a wound at Linz. The Catholic was now again the dominant religion and the Protestants retired into the little-frequented mountain districts. In Hungary the Government could not accomplish so much. However, Peter Pázmán laboured with success against the spread of the new religious doctrines. Pázmán was born at Grosswardein (Nagy Várad) of Calvinistic parents. At sixteen he changed his creed, then entered the Society of Jesus and studied at Rome. At Rome Bellarmine and Vasquez were among his teachers. When professor at Graz he published the "Imitation Christi". He finally returned to Hungary, became Primate, and gained great influence for the Church through his eloquence, the gentleness of his character, and his strong patriotic feeling. He brought about the return of fifty noble families to the mother church and was the author of the first Catholic polemic in the Hungarian language, a "Guide to Catholic Truth". He founded at Tyrnau a university which was later transferred to Budapest, and also the Hungarian College at Rome. Believing that the preservation of religion requires worthy clergy, he founded the Institutum (Pszemáneum) for the training and instruction of clergy for all the dioceses of Hungary. Ferdinand II called Pázmán his friend. This emperor raised the bishops of Vienna to the rank of prince-bishops (1623). In 1630 it came to an end in the Peace of Westphalia, and the diplomats played with religious establishments and monasteries as boys play with nuts, and invented the term "secularization to express the secular appropriation of the Church's estates, the Hapsburg princes were not willing to commit Austria to such a policy. At this crisis the Hapsburg Dynasty obeyed the directions of Providence. Had the house of Hapsburg then come forward as champions of the new doctrine which originated at Wittenberg, it would have been too late, for the shattered imperial power in Germany and give to the crown of the Holy Roman Empire a lustre far exceeding that of any other European diadem. But reverence for God and Holy Church had greater weight with the em- pire, when the Thirty Years War ended. In the hundred and twenty years they battled with the storms in which the so-called Reformation had stirred up, while the armies of Islam attacked Vienna and the edge of the Ottoman Empire was pushed forward as far as Raab. The Ottomans even dared to come away in from the West, bringing calamity to his train, and the war cry of the Osmanli was heard within the imperial citadel, the rulers of Austria still trusted in God. Innocent XI sent subsidies, and the saintly Father Marco D'Ardino aroused Christian enthusiasm by preaching a crusade. The feast of the Holy Name of Mary is a reminder that on the 12th of September, 1633, the power of Islam was forever broken before the walls of Vienna, and that the inheritance of St. Stephen was then freed from the Turkish yoke.

God sent the rulers of Austria to do His work, and that they did it is an honour exceeding that of the quickly fading garlands which victory twines about the victor's chariot. During this period the Piarist and Ursuline orders were active in the work of education; the works of Cotton, Erasmus, Mäurer, Gunther, and others, were driven out of the country. Charles VI raised Vienna in 1722 to an archbishopric. While France at this time pointed with pride and reverence to its famous divines, the great preacher of Vienna was the always clever, but often eccentric, Augustus, Father Abraham a Sancta Clara, whose family name was Ulrich Mgerle. For example, preaching on the feast of the conversion of St. Paul (Paul), he announced as his theme Gauli, Mauli, and Fauli. Gauli he interpreted to mean pride and sensuality (Gaul, "head"); Mauli, drunkenness, and wrangling (Maul, "mouth"); Fauli, indolence (aul, "lazy").

The fifty years preceding the French Revolution are known in history as the period of the "Enlightiment". The Habsburg emperor believed that by enlightenment, in their sense of the word, a cure could be found for the evils of the time, and a means of promoting the happiness of mankind. Men were led more and more away from the influence of the Church. Vice and immorality were rampant, and only the claims of a refined sensuality deemed worthy of consideration. The new ideas made their way into Austria, and that country became the birthplace of Josephism, so called from the Emperor Joseph II,
whose policy and legislation embodied these ideas. Maria Theresa forbade the sale of the book written by some of its priests, and was resented by some of the secular clergy. Urged by her council, Maria Theresa issued the "Placitum regium," made a stole-tale ordinance and obtained from Benedict XIV a reduction of the feast days. By this last regulation all the Apostles are commemorated on the 29th of May, and St. Peter and St. Paul on the 29th of June, in the Mass and Breviary on the feast of St. Stephen. The empress also abolished the convent prisons, and ordered that passages in the Breviary lessons for the feast of St. Gregory VII which were opposed to the interests of the clergy or a regular order, might be covered over with paper. She also put a stop to public excommunications and public penances. The last public penance (1769) was that of a merchant at Fyrawart in Lower Austria who had strut an ecclesiastic. He stood for an hour at the church door holding a black candle. When Clement XIV suppressed the Society of Jesus, the Archbishop of Vienna, Cardinal Migazzi, sought to save that order in Austria. "If the members of the order should be scattered, it would not be easy to fill their places, it would cost much expense and trouble, the exhibitions to the sovereign, to the theologians, at which these priests had left their work if they were forced to abandon it." Just twenty years later Migazzi begged the Emperor Francis II to re-establish the order. "It is possible to Your Majesty," he said, "to make the Jesuits the most powerful body in the state. It was certainly an unprejudiced witness, did not hesitate to say that but for the suppression of the Jesuits France would never have suffered from the Revolution, which brought such terrible results in its train. Three months before the death of Your Majesty's grandmother I heard her say, 'Oh, if I had only followed your advice and had availed myself of your statement!' After the suppression of the Jesuits their property was converted into a fund for the aid of students, and the whole system of education was remodelled from top to bottom. Rautenstrauch, Abbot of Braunau, drew up a new scheme for a theological course, in which there should be "no squabbles of schools and scholastic chaos". Father Gratian Marx, of the Congregation of the Fious Schools, planned a Realgymnasium (high school without Greek) with five classes, which proved very successful. The common schools, which Maria Theresa had called a political necessity, were reorganized by Abbot John Ignaz Felbiger of Sagen in Frussian Silesia, each parish having its own school, so that there are now to be found in Austria a normal school with an institute for training teachers was connected. Felbiger wrote the necessary school books. The school at Kaplitz in southern Bohemia, under the supervision of the parish priest, Ferdinand Kindermann, was noted as a model school.

In ten years Joseph II published 6,200 laws, court regulations, and ordinances. Even those measures which were good and appropriate in themselves generally bore the evidences of precipitancy. His first ordinances were directed against the government of the Catholic Church and aroused discontent by their interference with the affairs of the Church. The acceptance of papal decrees without the sanction of the Government was forbidden. The bishops were forbidden to apply for, or make use of, the quinquennial faculties of the Holy See, on the ground that they had full authority to act for themselves. On the other hand, they were not allowed to issue papal formularies, or to ordain men without the consent of the Government. The Government soon began to close those monasteries which were not occupied with the spiritual care of a community, teaching, or nursing, and all the brotherhoods were suspended. About 738 religious houses were closed; 13 in Vienna alone; 51 in Lower Austria. The property of these conventual institutions was turned into a fund for church expenses, which, to its discredit, was used, not so much by the several provinces. In Lower Austria alone 251 new parishes were formed. Much discontent was caused by the appointment of an "ecclesiastical court commission" which issued a number of arbitrary regulations concerning public worship: only the Mass was to be celebrated in churches at the altars; in parish churches, during the seasons of fasting, only two fast-day services, on Wednesday and Friday, were to be celebrated; afternoons, devotions, the Litany of Loreto, and the Rosary were forbidden; the Mass was not to be celebrated in a parish church upon the occasion of a death, but not upon the anniversary; it was forbidden to expose the Blessed Sacrament in a monstrance, the ciborium must be used instead; only when the Host was displayed could more than six candles be placed on the altar. A special regulation forbade the dressing of statues of the Virgin and ordered that the bodies of the dead should be buried in sacks and covered with quicklime. Further ordinances forbade the illumination and ornamentation of sacred vessels, the painting of pictures, the introduction of The Edict of Toleration (1781) granted the private exercise of their religion to Lutherans and Calvinists. The marriage law of 1783 runs: "Marriage in itself is regarded as a purely civil contract. Both this contract and the privileges and rights originating from it are entirely dependent for their character and force on the secular laws of the land." In 1783, also, all schools, episcopal and monastic, for the training of the clergy were abolished, and general seminaries were founded at Vienna, Budapest, Pavia, and Louvain, with branches at Graz, Olmütz, Prague, Innsbruck, Freiburg, and Pressburg. This measure was intended to check the influence of the bishops in the training of ecclesiastics, and to obtain devoted servants of the State. The Minister of State, Van Swieten, took care that the new schools were supplied with suitable teachers and superintendents.

The first lodge of Freemasons, "Zu den drei Kanonen", was formed at Vienna in 1742; a lodge called "Zu den gekrönten Sternen und zur Redlichkeit" was formed soon after at Prague. Joseph II, however, had no alliance with Freemasons. "I know little about their secrets", he said, "as I never had the curiosity to take part in their mummeries". Still, his words, "The Freemason societies increase every moment and in the present situation are liable to show the rapid growth of the order. Although many of the representatives of the Church failed to meet the new tendencies with force and courage, the Prince-Archbishop of Vienna, Cardinal Migazzi, attacked them boldly. He wrote vigorously and defended the Church with energy. He was well supported by the Primate of Hungary, Count Joseph Bathythnyi, and in the lower provinces by the Cardinal Count von Frankenbein. But their efforts were in vain; the movement continued to grow. In 1782, when the Holy Roman Emperor, Joseph II, felt it necessary to take some action, and he resolved to visit Vienna. This visit (1782) was very opportune for the emperor and the leaders of the new tendency in the empire. Eybel issued the libellous pamphlet, "Was ist der Papst?" The value of the pamphlet literature of the Josephinist movement is not in proportion to its amount. The roads traversed by the papal cortège were lined with the faithful who were eager to obtain the blessing of the Holy Father. The emperor met them on the 17th of March. The two heads of the Christian world entered the imperial city. The emperor showed the pope every attention, but his chancellor of state, Prince Kaunitz, was less considerate. At Easter the pope celebrated High Mass in the church of St. Stephen
and afterwards blessed, from the balcony of the church facing Am Hof, the vast throng which filled the square. But the object of the people's visit was not a religious one, although it may be said that the Josephinist fanaticism began to give place to a more sober mood. When the Holy Father left Vienna, 22 April, after a stay of just one month, the emperor accompanied him as far as Maribrunn. Here, after prayer in the church, the two parted. The next year the emperor visited Rome, where the Spanish ambassador, Azara, and Cardinal Bernis are said to have had a moderating effect upon him. There was no break with the Curia.

One work of lasting value which this emperor undertook was in connexion with diocesan boundaries. He took from the Diocese of Passau that part which lies in Austria and formed with it the See of Lins; the episcopal residence was transferred from Wiener-Neustadt to St. Polten, Bregenz was made the seat of a vicar-general, and a bishopric was founded at Leoben. The worst blunder committed by Joseph II in his later years was his obstinate adherence, in spite of the warnings of Cardinal Frankenberg, to the scheme of erecting a general seminary at Louvain. Van der Stede, in his work entitled "Descouverte des abus," was one of the few Catholic priests who had committed themselves unreservedly to the "Enlightenment" movement. Maria Theresa had dismissed him from his position as teacher of church history, and one of his books was to be found in print as evidence of church history. The career of Aurelius Fessler is a still more distressing example of the influence of the new spirit. Fessler was born in Hungary and came to Vienna as a Capuchin monk. There he became acquainted with Eybel, and as an offset to Eybel's "Was ist der Papst?" issued "Was ist der Kaiser?". Appointed professor of theology at Lemberg, he entered the Freemason lodge "Phönix sur runden Tafel", but was soon obliged to leave Lemberg "on account of debt and frivolous demeanour unsuited to his calling". He became a Lutheran, established himself in Berlin as legal counsellor in ecclesiastical and school cases, got a divorce in order to marry again, and accepted a professorship in the academy at St. Petersburg. Obliged to leave this position in a year's time "on account of atheistical opinions", he succeeded in becoming an Evangelical bishop, and died at St. Petersburg. His "Reminiscences of My Seventy Years' Pilgrimage" presents a melancholy picture of long and weary wanderings. A return of Joseph III. was expected, but the results of his return were contrary to what was expected. Shortly after his death the emperor transferred to the bishops the supervision of religious instruction (1808) and the censorship of theological works (1814). Repeated commands to officials required them to attend Sunday church-services. A university with university degrees was founded for university students. Two days before his death the emperor directed his successor to "complete the work he had begun in reforming those laws, principles, and methods of managing church affairs which had been introduced since 1780".

The Archbishops of Vienna acted in a manner worthy of their high office. Migazzi's successor, in 1803, was Sigismund Anton Count Hohenwarth, the instructor of the emperor, and a pasteur zealous
for souls, who devoted himself especially to the theological schools. After him came Vincenz Eduard Hofbauer, who, gaining a good reputation as a theorist in pedagogics and as a moral teacher. An important part in arousing the Church was taken by the following court preachers of that period: Vincenz Durnaut, who prepared an Old Testament history; Printz, author of a compendium of religious knowledge; and Johann Hengst, who prepared a method of spiritual directions. In 1816 the emperor established the advanced school for secular clergy at St. Augustine, and the founder of the Vienna "Theologische Zeitschrift"; Vincenz Eduard Milde was the author of a textbook of the general theory on which he collaborated with Michael Leonard, who published "Christian Doctrines" in four parts and textbooks for grammar schools; Johann Pletz, who continued Printz's periodical and published "Dogmatic Sermons"; Job, confessor to the queen mother, Caroline Augusta; Albert Schlöfl, who produced "Meditations upon the Entire Gospel for Ecclesiastics and Priests", a work still fruitful. The priests whom the emperor received into Austria after the secularization of theabbies in the empire were also very active. Thirty-five monks who came from St. Stephen in Carinthia pursued serious studies; twenty-five from Wiblingen entered Austrian abbies. Among these were Sebastian Zangerl, who, "praying, working, and bravely fighting", bequeathed his diocese of Seckau to the Tyrolese ecclesiastics. Gregor Thomas Ziegler, who, while professor of dogmatics at Vienna, wrote "On Theological Rationalism", "Foundation of the Catholic Faith" and a "Life of Job". Their efforts were aided by the confessors Frederick von Schlegel and Zacharias Werner. Metternich was Schlegel's patron. Schlegel's lectures on modern history and on ancient and modern literature, delivered at Vienna, had a beneficial effect, and the "Konkordien", which he founded, advocated Catholic interests. Werner's conversion was finally affected by the confession of St. Peter. In reading the "Imitation of Christ" his eye happened to fall on the only words of Peter contained in the work (I., III., II. 1). He called the "Imitation of Christ" the "pith of all books". (Tele, tele.) During the sessions of the Congress he preached at Vienna with such intense feeling that at times he wept as he recited with remorse his youthful errors. For a while Hohenwarth entertained him in his palace and Dalberg gave him a gold pen which he presented to the queen mother, in the name of the pope, in July of the same year, seven days after preaching a notable sermon on the feast of the Epiphany, in 1823, was buried at Maria Enzersdorf beside Blessed Clement Maria Hofbauer. Hofbauer was a man of saintly character and prayerful life who, as confessor and preacher, exercised an extraordinary influence over many and was a source of light and instruction for Vienna and Austria. He was born at Tassits in Moravia, entered the Redemptorist Order at Rome as its first German member, and was active in the order at Warsaw. He suffered for the Faith, being imprisoned in the fortress of Kustrin, and coming to Vienna was appointed assistant to the rector of the Italian church through the influence of Archbishop Hohenwarth. He was finally made confessor to the Ursulines. Without noisy effort he produced deep effects. Among his penitents were: Adam von Müller, court councillor and author, whose last words were "Only those facts are worthy of notice which the Catholic Church recognizes as true"; Schlegel; Zacharias Werner; the Princess Jablonowska and Princess Brzezich; Prince Potocky; the Prince of the marquises of the Archbishops of Vienna and other archbishops; and the Ministry: "What are the Relations of Church and State?" An Answer by the bishops of Bohemia"; memorial of the Archbishopric of Salzburg to the Imperial Diet; memorial of the Archdiocese of Vienna to the Diet; memorial of the bishops of the Archbishopric of Salzburg to the imperial diet at Kremsier. All these brochures sought the independence of the Church, the breaking of her fetters so that she might be free to raise her hand to bless.

II.—9
As the appeals of individual bishops and dioceses had little effect, the minister of the interior, Count Stadion, summoned the Austrian bishops to Vienna in order to obtain a unanimous expression of their wishes. Hungary and the Lombardo-Venetian provinces were not included, as they were not yet pacified. The conference was to be held at the palace of the Archbishop on 29 April to 20 June, 1849, in the archiepiscopal palace. Sixty sittings were held. Schwarzenberg, the "German cardinal", presided, and the lately consecrated Bishop Rauser was secretary. Hungary was represented by the Bishop of Pécs, Scitesky. Among the theologians were Court Councillor Zenner, of Vienna; Professor Kutscher, of Olmütz; Canon Tarnoczky, of Salzburg; Canon Wiery, of Lavant; Professor Fessler, of Brixen; Canon Jablinsky, of Tarnow; and Canon Ranolzer of Pécs. The voluminous memorial presented to the Government by the conference, discussed, regulated instruction: "All school instruction of Catholic children must be in accordance with the teachings of the Catholic Church; the bishops are to have charge of religious training; professors of theology are to be chosen from men whom the bishop holds to be most suited to the position: only Catholics [are] to be found at the head of the schools] set aside for Catholic children; the bishops are to select the religious text-books". The bishops have the right to condemn books injurious to religion and morals, and to forbid Catholics reading them (Art. 9). The ecclesiastical judge decides matrimo-nial suits of an ecclesiastical character (Art. 10). The Holy See does not forbid ecclesiastics who have committed misdemeanours and crimes to be brought before the secular courts (Art. 14). The emperor, in exercising the Apostolic prerogative, inherited from his ancestors, of nominating the bishops to be canonically confirmed by the Holy See, will in the future, as in the past, avail himself of the advice of the bishops, especially of the bishops of the archdiocese in which the vacant see lies (Art. 19). In all dioceses the Holy See has the right to fix the highest dignity. The emperor still appoints all other dignitaries and the canons of the cathedral (Art. 22). The Holy Father empowers the emperor and his successors to present to all canonsaries and parishes the right and duty of presenting the endowment fund for religious or educational foundations, but in such cases the appointee must be one of three candidates nominated by the bishop as suitable for the position (Art. 25). The bishops have the right to bring religious orders into their dioceses (Art. 28). The estates which form the endowment fund for religious and educational foundations are the property of the Church and are managed in its name, the bishops having the supervision of affairs; the emperor is to aid in making up what is lacking in the fund (Art. 31). The Concordat was intended to be binding upon the entire monarchy, and to be carried out with uniformity in all parts. Thun, therefore, in the emperor's name, called the bishops of the entire empire to Vienna. On the 6th of April, 1856, the inhabitants of the imperial city saw 66 princes of the Church enter the Cathedral of St. Stephen in state. These ecclesiastics represented the Latin, Greek, and Oriental Rites; among them were German, Hungarian, Bohemian, Austrian, and the clergy consecrated by the pro-nuncio, Cardinal Viale Prelé. The assembly presented to the Government proposals, requests, and resolutions concerning schools, marriage, church estates, appointment to ecclesiastical benefices, monasteries, patronage of living. The closing session was held 17 June. The emperor received the bishops in a farewell audience. On this occasion Cardinal Schwarzenberg said: "After God, our hope and trust rest on Your Majesty's piety, wisdom, and justice. When we have reached our dioceses we shall strive most zealously to extend the benefits of the agreement in all directions". In order to make the Concordat effectual, the bishops held synods in their dioceses: at Graz, 1858; Vienna, 1858; Prague, 1860; Kalocsa, 1863. Fresh life showed itself in every measure. It has been acknowledged that schools of all grades accomplished great things under the Concordat. The primary schools were excellently arranged, a course of study which is still in force was drawn up for the gymnasia, and the University of Vienna gained new strength under Thun, the author of the Concordat. In 1855 the Institute for Research in Austrian history was formed. Famous members of the medical faculty of the university were the professors: Skodra (pneumonia and auscultation); Hokiński (pathological anatomy); Stanislaw Geyer (pathology); Boertz, and Billroth, the last named being the leading sur
geen of the century. Upon Rauscher’s suggestion, the number of professors in the department of dogmatic theology of the University of Vienna was increased, in order to ensure a more extended course in this branch. The men called were, Father Philip Guidi, O.P., and Father Clemens Schneider, S.J., both from Rome. The lectures were obligatory ones, the entire life of the four-year course, and were intended also for priests desirous of instruction. The successful development of art during this period is shown in the church of Alter- chenfeld in Vienna, which was consecrated in 1861. This church was built by the architect John George Müller, and was decorated with a series of mural paintings by Joseph Führich, professor at the Academy of Fine Arts in Vienna. These paintings combine art and true dogma most admirably, and Führich is in them a veritable teacher of the Faith. He was born at Krazau in Bohemia, studied art first at the academy in Prague, afterwards for two years at Rome, and coming to Vienna passed forty-two studious and fruitful years there (d. 1863). Among the largest religious paintings the most famous are: The Pater- noster; the Way of the Cross, in the church of St. John on the Frater, Vienna, copies of which can be found in all parts of the world; the Way to Bethlehem; illustrations of the Psalter and the Imitation of Christ in the Religious Seminary. The manner in which Führich developed his scheme of thought in the series of pictures in the Alterchenfeld church is extremely impressive. Pictures in churches, according to his view, are not merely decorative; through the senses they must unfold to the spirit that inner life of faith which finds its full development in the church. In the vestibule of the church, six pictures portray the work of creation, and a seventh sets forth the rest of the Creator on the Sabbath. The paintings on the two side altars represent the Church of the Old Testament, which kept alive the longing for salvation and proclaimed its coming. The paintings of the middle aisle portray the fulfillment of the promise by scenes from the life of Christ. Between the historical pictures are placed intervals the figure of the Saviour with appropriate historical emblems, such as Christ as a gardener, with a hoe on the shoulder. This is followed by a picture of the owner of the vineyard commanding the gardener to cut down the unfruitful trees. The paintings on the two side altars are allegorical pictures of the transferring of the office of shepherd to Peter; Christ the wayfarer, followed by a representation of the man who fell among thieves; Christ the sower, followed by the approaching harvester with his sickle. These paintings, with those representing the Sermon on the Mount, decorate the church as far as the pulpit. The high altar is adorned with a picture of the Most Holy Trinity. The conception running through the whole series of paintings, from those in the vestibule to that of the high altar, is that the paradise lost by the first human beings is offered to us again by the second Adam in the new heaven.

At this moment of renewed energy in the church, Augustine, among the bishops who had excited the envy of little Capppodiacia at the time of the three great Cappodocians. Among these Austrian bishops were: Cardinal Schwarzenberg (d. 1885) and Cardinal Rauscher (d. 1875; life by Wolfsgruber); Francis Joseph Rudigier, Bishop of Linz (d. 1879; life by Meiser); Joseph Fessler, Bishop of St. Polten (d. 1872; life by Erdinger); Peter B. Zwerger, Prince-Bishop of Seckau (d. 1893; life by Oer). The description of this period would not be complete without the mention of the German in preacher and most fruitful German theologian of the nine-
filled the modest position of sacriest of St. Rupert, the old church in Vienna; after a life spent in philosophical study he died in 1876 (life by Knoodt). Günther’s chief works are: "Vorschule zur spekulativen Theologie des Christentums"; "Peregrins Gstaum"; "Süd- und Nordlicher am Horizont spekulativer Theologie"; "Janusköpfe für Philosophie und Theologie"; "Möhler"; "Thomas a Scrupulis, zur Transfiguration der Persönlichkeits Pantheismen neuster Zeit"; "Die Justes-Milleux in der deutschen Philosophie gegenwärtiger Zeit"; "Eurythesus und Hierakies"; "Lydia (a philosophical annual, in collaboration with Veetius). Honestly intending to defend faith against the philosophical dogmatics which are constantly arising in modern times, Günther fell into the mistake of making the mysteries of faith dependent on their recognition by the understanding, so that knowledge was substituted for faith. A learned war broke out in Germany, in which Günther’s position was damaged by the vagaries of his followers, and at the end of five years’ examination the Congregation of the Index condemned his writings. The first claim made by the author was the honesty of opinion which had characterized his action from the start. The verdict of the Congregation of the Index was sent to him 23 January, 1857; on 10 February he handed Cardinal Rauscher his submission, to be awarded to the Pope by Cardinal Andrea, Prefect of the Congregation of the Index. The thought which consoled Gunther in these days of trial was that God demanded of every man the sacrifice of his Isaac, and that this sacrifice was what he now made to God.

Goethe says that the subject of profoundest interest in the history of the world is the battle of disbelief against faith. This is still more true of the history of the Church. In 1860 Austria became a constitutional monarchy, and in the same year the foundations of a representative government were laid. The Imperial Parliament was to consist of a House of Peers, to which the archbishops and prince-bishop were to belong, and a House of Deputies. During the first session of the Parliament, Maager, a Protestant deputy, attacked the Concordat and demanded its revision. Upon this the members of the episcopal house in the Upper House and some other bishops met and prepared a memorial which was sent to the emperor. "Of all the party cries," it ran, "which are now to have use in our country, none has so much prominence at present as the word toleration. True toleration is exercised by the Catholic Church, while the harshest intolerance is practised on all sides against the Catholic Church. All its ordinances and institutions are slandered and mistrusted, and every exhibition of Catholic conviction is overwhelmed with scorn and derision. The events just noted were merely the forerunners of a terrible storm which broke after the disastrous war of 1866. In July of the next year, Deputy Herbet moved the preparation of a bill to destroy the Concordat and demanded its revision. A conference of twenty-four bishops was held at Vienna, and a second memorial was sent to the emperor which contained the following: "A party has arisen which has chosen this time of distress for an attack on the religion to which Your Majesty, the Imperial family, and a great majority of the inhabitants of the land belong. We are in the presence of a spectacle which causes the emotions to the plea of necessity, the hearers to fill Austria’s sons with shame rather than with anxiety. Marriage without the blessing of the Church, schools without religion were demanded. In order to obtain suitable teachers for these schools it was proposed to found for the training of teachers institutions where contempt for all that is holy should be instilled. It was not possible, however, to resist the general pressure. On 21st October, 1867, the new fundamental laws received the imperial approval. The first granted full freedom of faith and conscience and freedom in scientific opinion. The second declared: "All jurisdiction in the state is exercised in the name of the emperor". Consequently, the State’s ecclesiastical successor of Guilielmo. They were obliged to resign their professorships, and their places have not yet been filled.

During this same period the dual constitution was sanctioned, by which the Austro-Hungarian Monarchy as it now exists, was formed "of two distinct co-ordinate States having the same constitutional, legal, and administrative rights". After a long struggle the emperor signed, 25 May, 1868, the laws concerning marriage, schools, and the status of the several denominations. The first of these laws raises the civil marriage obligatory, and makes the civil marriage obligatory, and takes from the Church the judicial power pro foro externo in matrimonial suits. The law concerning schools takes from the bishop any control of the management as well as the right of the father of a child to send it to an official school committee of the district and town, of which committee ecclesiastics can be chosen members. The bishops select the books used by the catechists and instructors in religious doctrine. The third law grants everyone the right to choose his own religion on attaining the age of fourteen years, but a child between seven and fourteen years of age cannot change his or her religion even at the wish of the parents. As these laws infringed the Concordat in essentials, a special extraordinary court was called at Rome, 22 June, at which the pope declared: "Leges auctoritatis Nostrâ apostolick reprombus, damnumus et decreta ipsa irrita prorus nulliusque roboris fuisse ac fore declarum." ("By Our Apostolic authority we reproduce and condemn these laws, and declare that their purport was, and shall be, wholly invalid and of no force.") The bishops upon this issued pastoral. The joint letter of 3 June issued by the Bohemian bishops to the clergy and their joint pastoral of 24 June were received by the bishops, mostly without incidents, on the ground that they were a disturbance of the public peace, and suppressed. Penal proceedings were not brought against Cardinal Schwarzenberg, but Bishop Francis Joseph Rudiger, of Linz, was prosecuted for his pastoral of 7 September: "On account of the misdemeanour committed in the pastoral letter"—of calling the law of 24 May a lie—he was brought before the Supreme Court, found guilty by the jury, and condemned to fourteen days’ imprisonment with costs. The pastoral was ordered to be destroyed. Next day the emperor in a decree remitted the punishment and its legal consequences. The bishops disagreed as to whether the clergy should permit themselves to be chosen members of the school committees, but Rauscher and Schwarzenberg, who were for the permission, carried their point.

The definition of the pope’s inapplicability afforded von Stremayr, the Austrian Minister of Instruction, a pretext to demand the abrogation of the Concordat, and these abrogating parties, had received from the definition a new character, which invalidated the original agreement. Beust, the Minister of Foreign Affairs, addressed to Palomba a note which declared: "The Concordat exists no longer; it is annulled." The abrogation of the Concordat produced a gap in religious legis-
AUSTRO-HUNGARIAN

To remedy this four bills were introduced, January, 1874, for regulating the legal status of the Church, for the support of religion, the legal status of monasteries, and the recognition of new religious societies. The pope expressed, on the 7th of March, his grief at the attack on the rights of the Church, implied in the assertion that the same power in all matters concerning the external life belonged to the Romans. The bishops assembled again at Vienna and sent this statement to the Ministry and the Upper House: "We repeat that we are ready to agree to the demands which the State makes on us in the bill concerning the legal status of the Church. The demands are in harmony with the Concordat concerning these matters. We cannot and will not acquiesce in a proposition the consummation of which would endanger the welfare of the Church."

One of the chief causes of the scarcity of priests which now began to be marked was the new law of national defence. By this law youths in their twentieth year during their course at a gymnasium were subject to military duty. The bishops again and again besought for reconsideration of the provisions of this law. But they found, for the third time, that no magical address except appeal in individual cases to the indulgence of the emperor. When the bills reached the upper house the bishops defended themselves bravely. Rauscher closed his address of April with these words: "If I point to no other, I consider it necessary to conceal its real aim, and have unmasked its hate against God and eternal truth. But Providence has set a natural limit to all things. The destruction of Christianity is impossible, but Austria may be destroyed if the war against religion is not checked in good time." Yet, for all this, the first two bills became law, 7 May, 1874. Among other things, the law concerning the legal status of the Church declares that: In order to obtain any ecclesiastical appointment or living, a candidate's record of past conduct must be blameless when judged by the standard of the civil law (§ 1); if the Government finds that an ecclesiastical regulation respecting a public church service is not consistent with the public interest, the Government shall then forbid it (§ 17); the total number of Catholics living in the district of a parish form the parish community (§ 35); in order to cover the expenses of a parish a tax is to be levied on its members (§ 36); the ministry of public worship and instruction is authorized to oversee the maintenance of the bishops for two other church institutions (§ 38); the ministry of public worship and instruction is to take care that the ecclesiastical journals do not go beyond the sphere of their proper activity (§ 60). The law concerning contributions to the fund for the support of religion declares that: Assessments shall be made on incumbents of living and the communities of the regular orders for the fund for the support of religion in order to meet the expenses of Catholic worship and especially in order to increase the incomes of pastors which have been until now very insufficient (§ 1); the amount of the assessments shall be fixed every ten years for the next ten years (§ 9); and they were to be "one-half of one per cent on amounts up to 10,000 florins [$4,000], one and a half per cent on amounts from 10,000 florins to 20,000 florins [$4,000 to $8,000], and 10 per cent on all amounts over 90,000 florins [$30,000]." The law (signed 20 May) in regard to the bishopric pension is noteworthy for "acceptance in full" the principle of religious equality.

Since the passage of these three laws no further enactments have so far been made, with regard to the status of the various denominations in Austria. In the year following their passage Cardinal Rauscher died (24 Nov., 1875). It was due to his wise moderation and caution that Austria escaped the evil of a Kulturkampf (religious conflict) at 1874. von Stremayr offered four projects for bills in the House of Deputies, one of which dealt with the legal status of monastic communities. Rauscher said that it "bore on its forehead unusual marks of mistrust, arbitrariness, and harshness. According to its provisions, a man in the possession of the time being would be sufficient to sweep from the earth a monastic house which had existed for a thousand years and to enforce the sequestration of its property. The bill reached the Upper House by the middle of the year. 1876. Count Schwarzenberg succeeded, by means of a memorial of the Austrian archbishops and bishops, in inducing the emperor not to sign it, and the bill has not yet become law.

The parliamentary election of 1879 increased the number of conservative members so that the Right (Hohenwart) Party was in the majority. In 1882, the Karl Ferdinand University, at Prague, was divided into a German and a Czech university. Cardinal Schwarzenberg, however, would not give up his right of naming the theological faculty. He wrote to the minister, Conrad von Eybesfeld: The Church does not wish the separation of the nations, but their union in one body, the head of which is Christ. She dedicates the blessings of her activity to all nations, she recognizes the right of nations to independence, she respects and supports the demands of a people for its own language and its own form of instruction. But the Church cannot give to the claims of nationality the first place, they must always be for her a secondary interest. The theological faculty must impress this idea upon their pupils and must not, therefore, drive them apart. They should not deepen and embitter the national differences by a separation; they should strive rather to compose these differences. This duty is above all necessary among the various nationalities of Bohemia. In this country it is a special duty of the priesthood to seek to soothe and unify." The separation took place, however, directly after Schwarzenberg's death.

An amendment to the school law which somewhat improved matters was laid before the Upper House in 1883. This amendment was the result of numerous memorials from the bishops to the Government and much effort of other kinds. During the debate on the amendment Cardinal Schwarzenberg said: I wish to bring to the notice of the House an amendment which I think will increase the value of the amendment and are ready to work for its passage. But this does not justify the presumption that we consider the amendment as remedying all defects of the school laws, and that our votes are a corroboration of those laws. Only a denominational system of common schools can satisfy the claims of the Church and of the Christian community. The present system is unsatisfactory. While we now give our support, we reserve the right to press our just demands by way of legislation in the future." The law was passed and went into effect.

Cardinal Schwarzenberg had presided over every meeting of the Austrian bishops since 1849, and had always fulfilled faithfully the duties of the cardinalate. At the meeting of the bishops at Vienna in 1885 he was in a feeble state of health. He died on the 27th of March. The following day he appeared, although unfit to attend. He was not able to be present again and died of pneumonia 27 March.

A bill called the Prince Alfred Liechtenstein school bill was introduced in October, 1885. It was in-
tended to give the Church greater power over the schools. But while the bishops pressed the demand of “Catholic schools for Catholic children”, the social-democratic convention which met the same year at Hainburg, took its stand upon “common schools for religious teaching”, the separation of Church and State, religious belief is a private matter”. Gregr, of the Young Czech party, also declared in behalf of his party associates: “A Liechtenstein has come again to dig a grave for the Bohemian nation, the grave of ignorance and demoralization.

This state of affairs may be attributed to an act happened after the battle of the White Mountain (1620). Against such opposition the bill could not be carried. In 1891 Leo XIII regulated the meetings of the Austrian bishops in a manner which has proved fruitful in blessings. A meeting is to be held in Vienna every year. These meetings are either special or general. At these special meetings committees prepare elaborate and exact reports which are laid before the general assembly that meets at least once every five years. These assemblies of the bishops decide the course of the Church. The Austrian bishops feel and act as a unit, as a harmonious episcopacy. Schwarzenberg’s successor, Cardinal Count Schönborn, died in 1899. Cardinal Grusch, Auxiliary Bishop of Vienna, follows him at the head of the episcopacy. In reviewing the action of the bishops in their conferences since this time, it is clear that the matter which has chiefly occupied their attention has been the schools of every grade. In all their memorials to state officials, and in all their pastoral to the faithful, one thought continually appears like a veil of gold: a child should learn in school the duties of a Christian and a citizen. This end can be realized only when religion is made the central point of education from the first to the last degree. Education ends on the proper and religious training. For this reason the bishops sought (1897, 1898) to obtain the consent of the ministry to an increase in the time given to religious instruction in the primary and secondary schools. Prizes were offered for the preparation of a Bible (1898). Two catechisms, a larger and a smaller one, were prepared after eight years’ work. These were accepted by the bishops in 1897 and issued with explanatory directions. During this period religious instruction in the middle schools was renewed and religious exercises were again introduced. Religious societies (Sodalities of the Blessed Virgin Mary) were organized in 1897 and 1902. Religious instruction was introduced into the Sunday industrial schools (1898). Proposals were made as to the education of teachers of religion in the middle and normal schools (1901). The preparation of a correct textbook of psychology was urged (1894). Prizes were offered for textbooks on religion (1897). The bishops succeeded in obtaining a systematized course in philosophy for the theological schools (1892); they obtained, further, a rearrangement of theological studies and examinations. (Discussions must be suitable for publication and three examinations are obligatory for a doctorate.) They complained of the spirit prevalent at the University (1901) and of the indifference of the student-societies composed of faithful Catholic students (1901).

During the reign of Maria Theresa an educational fund was created from confiscated property of the Jesuits. Under Joseph II a religious fund was created from confiscated property of the Jesuits. But Joseph II acknowledged that the State was bound to pay the expenses of Catholic worship, for which the church revenues did not suffice. The salary of parish priests was fixed at 400 florins ($100), that of a curate at 200 florins ($50). The annual pension was made 200 florins ($50). These sums remained unchanged for one hundred years, although the cost of living and the value of money had varied. The speech from the throne in 1871 and 1879 referred to the improvement of the material condition of the clergy as an object of solicitude on the part of the Government, and since 1872 state subventions have been granted to the clergy of Austria. In order to obtain the money for this subvention, a tax for the maintenance of the religious fund was created in 1874. But although a sum reaching ten per cent of the capital fund was demanded every ten years, few priests received from the assistance amounting to more than 20 florins ($5) per year. This tax was called an “advance” to the fund for the support of religion in the different provinces, the debts of the provinces grew every year, and the entire religious fund was in danger of being used up. The bishops, therefore, sent repeated appeals to the Government, praying for a suitable increase of the salaries of the clergy. In 1903 they agreed to demand for active pastors: (a) for curates a minimum salary of 1,000 crowns ($200); for pastors of second-class parishes 1,600 crowns ($320); for parish priests without curates, 2,000 crowns ($400); for parish priests with curates, 2,200 crowns ($440); (b) four retroactive decennial allowances to be reckoned from the date of the grant; the first allowance to be 100 crowns ($20), the second, 150 crowns ($30), the third, 200 crowns ($40), and the fourth, 250 crowns ($50), in all 850 crowns ($170). (c) Surplus of money destined for pastoral salaries is not to be drawn upon for the pensions of retired clergy. For retired curates the bishops suggested a minimum pension of 100 crowns for curates, and of 1,900 crowns ($380) for parish priests. In 1891 and 1894 the bishop requested from the Minister of Worship an exact list of all the debts due by the religious fund in the hands of the Government and of all pious foundations. In 1891 and 1897 they elaborated the expenses which every religious society had to meet: the cost of religious literature, the payment of teachers, the rent of buildings, and the like. After a ten years’ trial (1895) the bishops pointed out the hardship of the tax on the religious fund, and pointed out where amendment should be made. The bishops repeatedly discussed (1895, 1896, 1900) the law which promised the formation of parishes. The difficult question of the patronage of livings was also taken up (1899). The Christian character of the family life, the education of the young, the duty of voting (“Vote, vote right”) were of special interest to the bishops in their pastoral letters (1891, 1901). The bishops discussed the question of founding and supporting a daily religious newspaper (1891, 1892). They assured the Holy Father of their agreement with his letter to Cardinal Gilibert, Archbishop of Paris, concerning the disrespectful utterances of Catholic papers about ecclesiastical authorities. They discussed uniform action in carrying out the Apostolic constitution “Officiorum ac munerationum” as applied to Catholic newspapers (1898).

As in our day large results are only obtained by association, the bishops have especially encouraged the formation of workingmen’s unions, of Gesellenvereine, the St. Boniface Society (March, 1901), the Holy Childhood Society, and benevolent societies (November, 1897). In these days much that is useful has been done by means of the newspapers. In 1891 they encouraged lectures on Freemasonry (1897), complained of the destructive tendencies which are undoing the strength and force of Austria, and condemned the bad press, “the dangerous foe of faith” (December, 1897).

In 1897 a movement was set on foot which ten years before would have been held to be impossible. Its name, the Los von Rom, is an insult to Catholics, its existence a mortal blow to Austrians. Every now and then articles appear in the daily papers employed to rob Catholics of their confidence in their priests, of their attachment to the holy sacraments, and even
to the Church. These ribald foes spread desolation over a good part of God’s vineyard in Austria. The “Free from Rome” movement will remain a disgraceful stain, but not in the history of the Catholic Church. Filled with a sense of the sacredness of their duty as bishops and Austrians, the episcopacy was unshakable, those in pastures new, the implement and its schemes (1899, 1901). They addressed an earnest memorial to the emperor on the subject (1901), as well as one to Körber, the head of the ministry (November, 1902).

The bishops delivered on creation and funeral addresses by non-Catholic clergymen in Catholic cemeteries; in 1898 they drew up a form of reconciliation for duellists and their seconds. They exhorted Catholics “to observe faithfully the ordinances against duelling, whether issued by God, the Church, or the State”.

After due deliberations, they also adopted resolutions on the position of catechists and the admission of catechets: into the ecclesiastical organisation and arranged the manner in which erring ecclesiastics “should be led back to the true fold of God by their fellow-clergymen”. In 1891 they issued regulations concerning the social activity of the clergy, and in 1901 concerning clerical conventions and legal societies.

The bishops sided the several religious communities endowed over the religious orders. In 1889 the relation of the bishops to the election and consecration of the abbots of new religious foundations was defined. In 1891, the pope granted permission to the strictly cloistered orders of women (Ursulines) to attend university lectures. The Austrian bishops celebrated the diamond jubilee of the consecration of Leo XIII to the priesthood and the golden jubilee of his consecration to the episcopacy by joint letters and a veneration of the Holy Father and by joint pastoral to the faithful. In these letters, they did not fail to express their regret on the subject of the so-called Roman question, of the offensive Giordano Bruno celebration, and of the 25th anniversary of the taking of Rome. In 1903 they sent a magnificent letter of congratulation to the Holy Father, Pius X.

We must go back five hundred years in the history of Austria to find another ruler who reigned fifty years. On the centennial anniversary, 2 December, 1898, of the reign of the Emperor Francis Joseph, the Austrian bishops, in a happy coincidence, paid a dedication to the emperor. In the dedication they say: “The mysterious counsels of God have ordained that Your Majesty should spend this day in sorrow. [Empress Elizabeth was assassinated 10 September.] We all suffer with our gracious emperor and ruler. But our grief cannot silence our gratitude; our gratitude to our Lord God who has preserved Your Majesty for us, our gratitude to Your Majesty for fifty years of strong and fatherly protection, for fifty years of self-sacrificing love, for fifty years of exemplary devotion to Your Majesty’s exalted but arduous calling.”

Since 1851 all the provinces of the Austrian Crown have been under one uniform government. Since 1867, however, Hungary has been an independent kingdom, consisting of Hungary and the Transylvanian Turks with the rest. During the battle over the Concordat which raged in 1867, the Hungarian bishops did not appeal to the Concordat, for fear that the agitation might spread to Hungary. In point of fact, however, they held fast to the Concordat. For 18 years, from 1867 to 1886, the bishops were the leaders of the Hungarian State. The bishops of 1866-91, preserved the peace of the Church in the kingdom. There was a conflict, however, respecting the laws concerning baptism. A law of 1868 enacted that in the case of mixed marriages the boys should be baptized according to the faith of the father, the girls according to that of the mother, even if this were contrary to the desire of the parents. But, when parents so requested, Catholic priests baptized those children who according to the law should be brought up non-Catholic. This practice was called Weglaufen. Even when, in 1879, the criminal code made the conferring of baptism under such circumstances a punishable offense, the practice continued. Beside this, they were repeatedly acquitted by the court of last resort in the suits which were brought against them by the Protestant pastors. In 1890 “denunciation” of such baptisms was dropped by the Holy See, and the law was thus subsided. Augustine von Roskovány, Bishop of Neutra, was the most learned man among the Hungarian bishops of this time. Von Roskovány was Doctor of Philosophy and Theology, secretary to Ladislaus Pfyker, Archbishop of Emlau, and died in 1892. His works are important authorities: “De Matrimonii mixtis” (7 vols.); “Monumenta pro independentiæ ponteficiæ eccles. ab imperio civilî” (13 vols.); “Cellibatus et Breviarium” (2 vols.); “Beata Virgo Maria in suo Conceptu immaculata” (2 vols.); “De sacris opibus Pontificis et Cent Princes civilis et monimentis omnium saeculorum” (16 vols.); “Matrimonium in ecclesiis Catholicæ potestati ecclesiasticæ subjectum” (4 vols.); “Supplementa ad Collectiones Monumentorum et Literatur” (10 vols.); “Die Anordnungen des Concordats” (6 vols.).

In 1893 the Hungarian Parliament began to meddle with religion. The head of the ministry, Wekerle, introduced three bills enacting that returns of marriages, births, and deaths should be made by a civil registrar; that the Jewish religion should be legally recognized, that permission should be given for its free exercise, and the right to enter or leave the Jewish faith should be granted. These bills were soon followed by others for the amendment of the marriage laws (civil marriage made compulsory) concerning mixed marriages. The first three bills, and they became law. Baron Desiderius Banffy was made the head of the ministry, January, 1895. In order to prevent the passage of the two remaining bills by Banffy, the papal nuncio, Agliardi, went to Hungary. But the Hungarian Parliament declared that such interference in the internal affairs of Hungary would not be permitted. Count Kalnoky, the Minister of Foreign Affairs, who had supported the nuncio, was replaced by Count Agass, Ouluch. The bill for civil marriage was passed, and Cardinal and recalled to Rome. The road was now clear. Count Ferdinand Zichy formed the Catholic people’s party in opposition to Banffy’s aims; but without avail. The two bills became law. The Lutz amendment on pulpitums could not be passed during the lifetime of the prime, Simor, but after his death it was adopted (1899).

Article 24 of the Diet of 1790 guaranteed to the Protestants of Hungary the entire control of the affairs of their religion. The Government has hardly any power in regard to either their churches, their schools, or religious foundations. Since 1848 the Catholics have been endeavouring to obtain autonomy. The Catholic congress of 1870 prepared a bill to this end. The Catholic Autonomy Association, consisting of the bishops, the elected members, clerical and lay, exist to represent the Church in regard to the faithful, on the one hand, and the Government, on the other, in all questions of schools, of church property, and especially (since the minister of public worship might be a non-Catholic) to advise the emperor on the exercise of his prerogative of nominating bishops. It is plain that the advantage or disadvantage to the Church of autonomy would depend on the composition of the commission. For this reason a commission such as the one desired was not formed but was rejected by the bishops, and Zichy’s motion, made
on occasion of the Catholic congress of 1897, did not receive government approval. In order to strengthen the claim for autonomy, the bishops, with the exception of Bishop Count Maylath, and the heads of the orders, in 1903, accepted three propositions. These are: that the right to present to bishoprics shall not be taken away; that the heads of the department of the ministry of religion shall be consulted; that the school system shall remain unaltered; that the fund for the support of religion shall be controlled by the minister of instruction. In 1906 the turning-point in the history of the autonomy question was reached, in the sense from the throne. The Minister of Public worship and Instruction, Count Albert Appony, has already requested the priimate to state the position of the bishops in regard to autonomy, so that the bill may be properly prepared.

**Ecclesiastical Organization.** The Catholic Church in Austria-Hungary is administered on the system of archiepiscopal provinces with suffragan dioceses, as follows:—

(a) In the territories represented in the Imperial (Austrian) Parliament there are seven archiepiscopal provinces in the Latin Rite, viz., Greek and Armenian Rites. These provinces comprise in the aggregate 34 sees. Archdiocese of Vienna (bishops 1498, prince-bishopric 1631, prince-archbishopric 1722), with suffragan dioceses of St. Hipolytus; transferred from Wiener-Neustadt, 1784 and Lins (founded 1784). Archdiocese of Salzburg (founded c. 700, archbishopric 800), with suffragan dioceses of Trent (founded in second century), Brizen (transferred from Säben in tenth century) with the general vicariate of Felst. kireh for Vorarlberg. Gurk (belonging to Klagenfurt, founded 1071), Seckau (belonging to Graz, founded 1219), and Lavant (belonging to Marburg, founded 1228). Archdiocese of Prague (973-1344 subject to Mainz, 1344 archbishopric), with suffragan dioceses of Prague (founded 1295), Kolin, Hradec, (or Regina Hradeces), founded 1684, and Leitmeritz (founded 1665). Archdiocese of Olomütz (founded 1063, archbishopric 1777), with suffragan diocese of Brunn (founded 1777). Archdiocese of Görl (transferred from Aquileia 1751), with suffragan dioceses of Lai- bach (founded 1461), Triest and Capo d'Istria, Parenzo and Pola (founded sixth century), Veggia (founded 990). Archdiocese of Zara (Jadera, founded fourth century, archbishopric 1146), with suffragan dioceses of Zara (founded 1295), Spalato and Motovun (founded 1260). Archdiocese of Pula (Pharsus, founded in twelfth century), Cattaro (founded in eleventh century), Ragusa (founded 990). Archdiocese of Lemberg (Leopold, Latin Rite; transferred from Hale (142), with suffragan dioceses of Tarnów (founded 1783, transferred to Tyniec, then to Bohemia, 1816), and Przemysl (founded 1340). The Prince-Bishopric of Cracow (founded about 700) is subject directly to the Holy See. The Catholics in Silesia are under the jurisdiction of the Prince-Bishop of Breslau, who has a vicar-general at Teschen and a summer residence at Johannesberg. The county of Glatz belongs to Prague. Lemberg, Greek-Ruthenian Rite (united in 1597, became an archbishopric in 1808), with suffragan dioceses of Sambor, Kremnitz (subsequently Lemberg since 1818), and Stanislavove (founded 1882). Lemberg, Armenian Rite, was founded 1387.

(b) In Hungary there are four archiepiscopal dioceses of the Latin Rite, with 17 suffragan dioceses; and one archiepiscopal of the Greek Rite, with six suffragan dioceses. Together with the See Archdiocese of Esztergom (Strigium, Gr., founded 1000), the incumbent of which is Primate of Hungary and ex-officio Legate (Legatus Natus), with suffragan dioceses of Nyíra (founded 1029), Város (Vacum, Wartenberg, founded in 1760), Ecclesiæi, and Szilávits (Jan-

## AUTHENTIC

### AUTHORITY

**Authenticity of the Bible.**—The authenticity or authority of Holy Writ is twofold on account of its twofold authorship. First, it is the work of God, which make up the Bible are authentic because they enjoy all the human authority that is naturally due to their respective authors. Second, they possess a higher authenticity, because invested with a Divine, supernatural authority through the Divine inspiration under which they were written, God wishes them to be read and believed. Biblical authenticity in its first sense must naturally be considered in the articles on the several books of Sacred Scripture; in its second sense, it springs from Biblical inspiration, for which see INSCRIPTION.

**VIGOURoux, Manuel biblique (Paris, 1901), I, 223-225; MAIZELLE, De Viris Illustribus Infusis (Rome, 1879), 554, 555.**

**Authority,** Civil, the moral power of command, supported (when need be) by physical coercion, which the State exercises over its members. We shall consider here the nature, sources, limits, divisions, origin, and the true and false theories of authority. Authority is as great a problem as man's knowledge of God. Biblical authenticity in its first sense must naturally be considered in the articles on the several books of Sacred Scripture; in its second sense, it springs from Biblical inspiration, for which see INSCRIPTION.

**K. WOLFGRUBER.**

**Authentic.**—The term is used in two senses. It is applied first to a book or document whose contents are invested with a special authority, in virtue of which they are always lived in an authentic sense; it is used as a synonym for "genuine", and therefore means that a work really emanates from the author to whom it is ascribed. The article VULGATE explains the first sense of the word; the articles on the single books of Sacred Scripture illustrate the second.

**F. X. E. ALBERT.**
governed by that custom of society which crystallizes into law.

And as it is natural to the individual, so it is natural also for the family to unite with others. Society is not the fruit of a short act. The individual is not self-sufficient, neither is the family. The family grows and then multiplies. We have a society of families; and that society grown great, and controlled as it needs to be by physical coercion, which the State exercises over its constituent members. Civil authority is of God, not by any revelation or positive institution, but by the mere fact that God is the Author of Nature, and Nature imperatively requires civil authority to be set up and obeyed. Nature cannot tolerate insubordination, nor anarchy either. And what Nature absolutely requires, or absolutely refuses as incompatible with her well-being, God commands, or God forbids. God then forbids anarchy; and in forbidding anarchy He enjoins submission to authority. In this sense, God is at the back of every State. And in consequence, the governments of the State within the sphere of its competence. "Let every soul be subject to higher powers: for there is no power but from God: and those that are, are ordained of God. Wherefore be subject of necessity, not only for wrath, but also for conscience sake. ... For they are the ministers of God, ..." (Rom. xiii, 1, 5, 6).

Obedience, being a practical thing and not a speculation, cannot abstract from the concrete facts of the case; it is paid to the powers that be, to the authority actually in possession. Obedience is as disobedience; men are never disobedient except to the government of the day. But there are limits to civil obedience, and to the competence of civil authority. As domestic obedience is not to be carried to the extent of rebellion against the civil power, so neither is the State to be obeyed as against God. It is not within the competence of the State to command anything and everything. The State cannot command what God could not command, for instance, idolatry. The authority of the State is absolute, that is to say, for it is in its own sphere, and subordinate to no other authority within that sphere. But the authority of the State is not arbitrary; it is not available for the carrying out of every whim and caprice. Arbitrary government is irrational government. The development of government is gradual. The government of God Himself is not arbitrary; as St. Thomas says: "God is not offended by us except at what we do against our own good" (Contra Gentiles, III, 122). The arbitrary use of authority is called tyranny. Such is the tyranny of an absolute monarch, of a council, of a class, or of a majority. The liberty of the subject is based on the doctrine that the State is not omnipotent. Legally omnipotent every State must be, but not morally. A legal enactment may be immoral, and then it cannot in conscience be obeyed; or it may be ultra vires, beyond the competence of the authority that enacts it, in which case compliance with the law is not a matter of obedience, but of prudence. In either case the law is tyrannical, and "a tyrannical law, not being according to reason, is not, absolutely speaking, a law, but rather a perversion of law," (St. Thomas, Summa Theol., 1* 2* q. 92, art. 1, ad 4). Man is not all citizen. He is a member, a part of the State, and something else besides. Man is limited by the limits of the family, to the extent of his whole self, all that he is and all that he has" (St. Thomas, Summa Theol., 1* 2* q. 21, art. 4, ad 3). To say nothing of his eternal interests in his relations with his Maker, man has even in this life his domestic interests in the bosom of his family, his intellectual and artistic interests, none of which can be called political interests. Social and political life is the human life of man as a servant of the State in his every action. The State, the majority, or the despot, may demand of the individual more than he is bound to give. Were human society a conventional arrangement, were man, being perfectly well off in isolation from his fellows, to agree by way of contract to live in community with them, then we could assign no antecedent limits to civil authority. Civil authority would be simply what was bargained for and prescribed in the arbitrary compact which made civil society. As it is, civil authority is a natural means to a natural end, and is checked by that end, in accordance with the Aristotelian principle that "the end in view sets limits to the means" (Aristotle, Politics, I, 9). The immediate end of civil authority is well set forth by Suarez (De legibus, III, xi, 7) as "the natural happiness of the perfect, or self-sufficient, human community, and the happiness of individuals as they are members of such a community, that they may live therein peaceably and justly, with a sufficiency of goods for the preservation of life and the sustenance of body, and with so much moral rectitude as is necessary for this external peace and happiness". Happiness is an attribute of individuals. Individuals are not made happy by authority, but authority secures to them that tranquillity, that free hand for helping themselves, that restful enjoyment of their own just winnings, which is one of the conditions of happiness. Nor does authority make men virtuous, except according to that rough-hewn, outline virtue, which is called "social virtue", and consists mainly of justice. When the ancients spoke of "virtue" being the concern of the State, they meant justice and efficiency. Neither the virtue nor the happiness of individuals is cared for by the State except "as they are members of the civil community". In this respect, civil differs from domestic, or paternal, authority. The father cares for the members of his household one by one, singly and individually. The State cares for its members collectively, and for the individual only in his collective aspect. Hence it follows that the power thus acquired is the peculiar property of the family. A man is hanged for the common good of the rest, never for his own good.

This, then, is one measure of authority, the end which the State has in view. Another is the stage at which any given nation, or any civil authority, or any political development has arrived. For there is not one measure of authority common to all States. As the State develops, it grows in unity, and greater unity means an ampler measure of central authority. There is far more authority in the England of to-day than in the England of the Heptarchy. There was more authority in an Anglo-Saxon kingdom than in a horde of savages. In early civil societies there is no legislative authority, and no law, but only immemorial custom. There is little judicial authority, but injured men, or their families after their death, right their own wrongs, murder is restrained, not by judge, jury, and executioner, but by blood-feud. On the other hand, in highly civilized societies, especially those of a democratic character, the will of the people continually thrusts new functions upon government, such as education, the care of public health, the carrying of letters, the sending of telegrams. The recognition of this fact has been called "the principle of voluntary control". By it civil authority may limit its actions to the extent of its essential limits. Like other principles, "the principle of voluntary control" may be pushed too far. Pushed to the limit, it would involve Socialism.
AUTHORITY

Authority, though varying in amount, is as universal as man is everywhere. Man cannot live except under authority, as he cannot live out of civil society. It is by no convention, compact, or contract, that authority takes hold of him. It is a necessity of his nature. But while civil authority, or government, is universal and distributial, the distinction of authority, otherwise called the form of government, or the constitution of the State, is a human convention, varying in various countries, and in the same country at different periods of its history. It is scarcely too much to say that there are as many various distributions of civil authority, or as many various forms of government, as there are varieties of vertebrate animals. They are classified as monarchies, aristocracies, democracies; but no two monarchies are quite alike, nor two democracies. Thus a democracy may be direct, as in ancient Athens, or representative, as in the United States. The monarchy of Edward VII is different from that of George III.

The one point fixed by nature, and by God, is that there must be authority everywhere, and that the sentiment for the time being, and such a form, be under that form obeyed; for since there is no actual authority in the country except under that form, to refuse to obey that is to refuse authority simply, and to revert to anarchy, which is against nature: just as a man having nothing but bread and cheese under pretence that he much prefers mutton, condemns himself to starvation, which again is unnatural. But we must beware of saying of any particular form of authority, monarchy for example, or democracy either, what is true only of authority in the abstract, namely, that all nations are bound to live under it, and that never under any pretence can it be subverted. A country, once monarchical, is not eternally bound to monarchical; and circumstances are conceivable under which a republic might pass into monarchy, as Rome did under Augustus, mith to its advantage. Authority rules by Divine right under whatsoever form it is established. No one form of government is more sacred and inviolate than another. Change of persons holding office is usually provided in the constitution, sometimes by rotation, sometimes by vote of the legislative assembly. No monarchical constitution provides for the change of the person of the monarch otherwise than by death or resignation. Change of a system of government is constitutional, but, as history shows, as often as not, it is brought about unconstitutionally. When the change is complete, the new government rules by right of accomplished fact. There must be authority in the country, and theirs is the only authority available.

DIVISIONS.—The progress of civilization subdivides authority into legislative, judicial, and executive, and the latter again into civil and military. The king, or president, is chief of the executive. Authority, ancient or modern, is such and such a thing, and local, the latter emanating from the former and subordinate to it.

ORIGIN.—The question of the origin of authority seems first to have been raised by the Roman lawyers. In their hands it assumed the concrete form of the origin of the imperial power. This power they argued to reside primarily in the Roman people; the people, however, did not exercise nor retain it, but transferred it by some implicit lex regia, or king-making ordinance, in the matter of the crown and the state, irrevocably to each successive emperor at his accession. With the advent of Christianity, St. Paul's doctrine came into prominence, that authority is of God; yet in no clear way was it made out how it came of God until St. Thomas Aquinas showed that it was of God inasmuch as it was an essential of the human nature which God has created, according to the doctrine of Aristotle above expounded. When St. Thomas arose, some churchmen had shown a disposition to cry down the civil power. They could not deny that it was of God, but they regarded it as one of the consequences of the sin of Adam, and argued that, but for the Fall, man would have lived from commerce and industry, the legend of Romulus, and the asylums that he opened for robbers. States, they said, usually have their origin in rapine and injustice. Others insisted the pope with the plenitude of secular as well as spiritual authority, by the gift of Christ, and argued that kings regained only as his viceregents, even in civil matters. The Aristotelianism of St. Thomas was opposed to all this. On the other hand, the imperial and royal party made a pope of the king or emperor; the civil ruler was as much an institution of Christ as the pope himself, and, like the pope, enjoyed a God-given authority, no portion of which could validly be taken from him. This is the doctrine of "the divine right of kings". According to it, in its rigour, in a State of nature monarchical, monarchy is forever the only lawful government, and as such, the monarch, to be communicated by him, to such as he may select for the time being to share his power. This "divine right of kings" (very different from the doctrine that all authority, whether of king or pope, has its first cause from God and the Catholic Church. At the Reformation it assumed a form exceedingly hostile to Catholicism, monarchs like Henry VIII, and James I, of England, claiming the fullness of spiritual as well as of civil authority, and this in such inalienable possession that no jot or title of prerogative could ever pass away from the Crown. Against these monstrous pretensions were fought the battles of Marston Moor and Naseby.

Against the same pretensions another more pacific warfare was waged by Francis Suarez, S.J. Suarez argued against James I that spiritual authority is not vested in the Crown, and that even civil authority is not the immediate gift of God to the king, but is given by God to the people collectively, and by them bestowed on the monarch, according to the theory of the Roman lawyers above mentioned, and according to Aristotle and St. Thomas Authority, he asserted, is an attribute of a multitude assembled to form a State. By nature they must form a State, and a State be one, and therefore, is natural to mankind collectively; and whatever is natural, and rational, and indispensable for human progress, is an ordinance of God. Authority must be, and God will have it to be; but there is no such natural necessity of authority being all centred in one person. Authority is a Divine institution, but kings are a human invention. The saying is a platitude in our time; three centuries ago, when Suarez wrote, it was a bold and startling pronouncement. Suarez saved his loyalty by the concession that the people having bestowed the supreme power on His Majesty's ancestors ages ago, their posterity could not now resume it, but it must descend, like an heirloom, from the king to the king's son for all time. This concession was not everywhere borne in mind by posterity. Indeed it would appear a restriction on the development of a State for the distribution of authority to be thus fixed forever. In England at any rate the restriction has been broken through, and the king is not what he was in Stuart times. In the most of the Protestant countries of Europe the king is now the head of the law and of the Church. Indeed it would appear a restriction on the development of a State for the distribution of authority to be thus fixed forever. In England at any rate the restriction has been broken through, and the king is not what he was in Stuart times. In the most of the Protestant countries of Europe the king is now the head of the law and of the Church.
in England, Jean Jacques Rousseau in France. Hobbes was a philosopher, Rousseau a rhetorician. Whoever knows Hobbes well can have little to learn from Rousseau. Hobbes is rigidly logical; such inconsistencies as appear in him come from a certain timidity in speaking out, and a humility that appears more as hypocrisy. Rousseau, although he speaks boldly, makes no pretence at orthodoxy, and frequently contradicts himself. His brilliant style won him the ear of Europe; he popularized Hobbes. To the philosopher, Rousseau is contemptible, but Hobbes is an antagonist worthy of any man's steel. The following is a statement of Rousseau's belief that it is a grievous misfortune of Hobbes's principles conclusions which Hobbes was afraid to formulate. Hobbes made of the king a despot; Rousseau showed that, on Hobbesian principles, a king is no better than the people's bailiff, unless indeed, by military force or otherwise, he can prevent the people from assembling and decreing his deposition. Hobbes starts, and Rousseau after him, by contradicting Aristotle. According to Aristotle, man is "by nature a State-making animal." And if an individual may not thrive at all, develop into the family man, and the family man into the citizen; and wherever there is a city, or a nation, there must be self-government, or, in other words, civil authority, whether vested in one or in many. Authority is the very breath of man's nature and the condition of his progress because of his capacities. Anarchy are fatal to human progress. Effort, without which man cannot thrive, though it be an effort, and not an initial endowment passively received, Aristotle calls "natural." The State-making effort is "natural" to man; so is authority "natural," and, as such, of God, adds Thomas Aquinas. But Hobbes took "natural" in quite another sense. That he held to be "natural" which man is, antecedently to all effort and arrangement on his part to make himself better, his philosophy states, with the Calvinism of his day, and he took it that man is of himself "desperately wicked." What was natural, then, was bad, bad on the whole. Reason being an original endowment of man, Hobbes allowed reason to be natural. He allowed also, with Plato, that wickedness is irrational, by which concession Hobbes is marked off from a celebrated theory stated at the beginning of the second book of Plato's Republic, to which theory in other respects it bears a strong resemblance; the theory being that right by nature is the interest of the majority, and only by convention becomes the interest of the State. This allowing of wickedness to be against reason is a weak point in the logic of Hobbes. But Hobbes would have it that reason is by nature utterly unable to contend with wickedness, that it is overborne by, and made subservient to, passion, and so is degraded into cunning, man becoming more wicked by his possession of reason. Of himself, in his "state of nature," Hobbesian man is a savage, solitary, sensual, and selfish. When two human beings meet, the natural impulse of each is to lord it over the other. By force, if he is strong, by stratagem, if he is weak, every man seeks to kill or enslave every other man that he meets. Man's life in this state of nature, says Hobbes, is "nasty, brutish, and short." It would be, in an English ten, and in most other places. But Rousseau's imagination carried him to the Pacific Isles; he became enamoured of "the noble savage." He fell in with Hobbes's notion of the "natural," as being what man is and has antecedently to all civil intercourse. But the "natural" man, as he called himself, was curiously free from Calvinistic bias, and believed enthusiastically in the primitive, unmade, natural goodness of man. In Hobbes's view, though not in Rousseau's, man had every reason to get under the protection of the government. This was done by a pact, or convention, of every man with all the rest of mankind, to give up solitude with its charms, its independence, and its liberty of preying upon neighbours, and to live in society, the social body thus formed having all the rights of the individuals contributing to form it. This compact of man with man to quit solitude and live in society, is a second nature, and a difficult thing to imagine, as called by Rousseau, "The Social Contract." The body formed by it, commonly called the State, Hobbes termed "The Leviathan," upon the text of Job, xli, 24, "there is no power upon earth that can be compared with him. . . ."

And the State of the State is omnipotent, containing in its one self absolutely all the rights of the citizens who compose it. The wielder of this tremendous power is the General Will, measured against which the will of the individual citizen is not only powerless, but absolutely non-existent. The individual gave up his will when he made the Social Contract. "No rights against the State," is a fundamental principle with Hobbes and Rousseau. To live in the State at all means compliance with every decree of the General Will. But, if he be given the chance, the individual will not be a slave; he will not be "wretched." It is the very nature of man to struggle against his calumny and to render his life tolerable, and, by the simple expedient of never calling them together, the Single Person may incapacitate the people from ever resuming the power which is only theirs when they are all assembled. The General Will in that case is the will of the Single Person. Hobbes's location of the General Will is not lacking in clearness. But Rousseau would have the sovereign authority to be the inalienable right of the multitude—hence called the "Soeverign People." They may, if they will, employ a king, or even it is of their own Majesty, in Rousseau's phrase, is "Prince" not "Soeverign," and at stated times, without his calling them together, the Sovereign People must meet and decide, first, whether they will continue to support a throne at all; secondly, whether the throne shall further be filled by the present occupant. Rousseau's location is also clear, so long as it is understood that the General Will is simply the will of the numerical majority of the Sovereign People. Such a General Will is ascertained by a fair and impartial count of the votes, and only by a convention becomes the interest of the State. Personally they detest the measure, but with their "Real Will" they approve it. Thus, as Rousseau says, they remain as free as the wild man in the woods, obey none but themselves, and follow their own will everywhere.

But a canker-worm lies at the root of this, as of all ultra-democratic doctrines. All originate in a manifestly false supposition, that one man is as good as another. In other words, the public authority. Intelegence must guide the counsels of the State, not the predominant Will, which may be no better than caprice. But intelligence is not necessarily attached to majorities. Rousseau himself falters in presence of this awkward truth, and re-states the General Will, at least in theory, as the public will, and not the majority will, and the individual will has ceased to exist by the Compact. The public authority of the State, not the will of the majority, but of the whole 20,000 together; for though 5,000 persons detest the proposal, such detestation lies only in the individual will, sometimes called the "casual will" and the individual will has ceased to exist by the Compact.
better. Rousseau's theory contemplates "a people of gods," so he assures us. Such a people would scarce require any government. The ideal, sylvan creatures whom his imagination brings together to form the Social Contract, if not all very intelligent, may be supposed to be all good listeners to intelligent teaching; and thus Intelligence will govern the masses. But the voice of the majority will be an ideally Real Will. Government is an easy matter on such optimistic presuppositions. The eye, however, glances back upon Hobbes' ruffian primeval, "brutish and nasty". Hobbes' view of human nature must check the theory of Rousseau. Both views are extreme, and the truth lies between them. The democratic rule of a numerical majority is not of universal application. One has to consider the character of the people, and peoples vary. If in one age or place the people approximate to the character of "a people of gods," or angels, in another country or another time, they may be more like devils. "Force, devoid of counsel, of its own bulk comes to a crash," says Horace (Odes, III, 4). That is the democratic Will, Rousseau, with Hobbes, may say. Force to guide, starts from a false supposition, that the natural state of man is savage solitude, not civil society; he proceeds through the false medium of the "Social Contract", false because society is not a thing of convention; false again, because out of all knowledge, and the evidence of history; and he is apt to end in the tyranny of a brute majority, trampling upon the rights and consciences of individuals; or again in anarchy, his disciples putting too literal a construction upon the promise that henceforth no man shall obey any other than himself.

The doctrines of Rousseau have not escaped the censure of the Church. Rousseau may be recognized in the following propositions, condemned in the Syllabus of Pius IX: 'The State is the source and origin of all rights, and all rights are unlimited and absolute' (n. 39): "Authority is nothing else than numbers, and a sum of material forces" (n. 60): "It is allowable to refuse obedience to lawful princes, and even to rebel against them" (n. 63). Leo XIII, not content with condemning, teaches positive doctrine against Rousseau; to wit: the Aristotelian and Thomist doctrine already stated. Thus the Encyclical "Immortale Dei," of November, 1888: "Man's natural instinct moves him to live in civil society; for he can not, if dwelling apart, provide himself with the means of developing his faculties. Hence it is Divinely ordained that he should be born into the society and company of men, as well domestic as civil. Only civil society can ensure perfect self-sufficiency of life [an Aristotelian term]. But since no society can hold together unless there be some one over all, impelling individuals efficaciously and harmoniously to one common purpose, a ruling authority becomes a necessity for every civil commonwealth; and this authority, no less than society itself, is natural, and therefore has God for its author. Hence it follows that public power of itself cannot be otherwise than of God."

In the theory of Hobbes and Rousseau, Authority is the outcome of contract, not between people and prince, but of every man with every other man to relinquish solitude and its rights, and live in civil society. Rousseau is instant in pronouncing that between people and prince there can be no contract, but the prince is a tenant at will, who may be turned out of dwelling by force, or without that, that the Sovereign People assemble to vote upon him. But there is another theory of contract, centuries older than Hobbes, a theory greatly cherished by Locke and the English Whigs, who found in it the justification of the expulsion of James II in 1688. In this theory, the contract is said to lie between the people and their ruler; the ruler is to be obeyed so long as he fulfils certain conditions known as "the constitution". If he violates the constitution, he forfeits his authority and the people may cast him out. Thus ruler and subject are two "high contracting parties". The ruler has no superiority of status, but of contract only. On this it is to be observed, in order to vindicate the doctrine, that such a contract is a thing, and therefore is not to be taken for granted; but evidence in each particular case should be forthcoming of the contract having been made on those terms as a fact of history. Secondly, this asserted contract is the issue of those who believe that Job declared of old: "... in judgment. There is none that may be able to reprove both, and to put his hand between both" (Job, ix, 32, 33). The contract cannot be enforced at law, for lack of a judge; in case of dispute, each party pronounces in his own favour, and they are like to fight it out. The result is civil war, as between Charles I and his Parliament. But really ruler and subjects are not two "high contracting parties", as two nations are. The theory is prejudicial to the unity of the State, and countenances revolution. The theory was brought up to meet that delicate inquiry, "What is to be done when Government abuses its authority?" On which see "Moral Philosophy" (Stonyhurst Series), 338-343. (F. Newman, "Aristotle, Political"

Joseph Ricketty.

Authority, Ecclesiastical. See Church; Pope; Hierarchy.

Authority, Paternal. See Obedience; Parents.

Authorized Version. The name given to the English translation of the Bible produced by the Commission appointed by James I, and in consequence often spoken of as King James's Bible'. It is the first English Bible in which the King and his Catholics. In order to understand its origin and history, a brief survey is necessary of the earlier English translations of the Scriptures. From very early times portions of the Bible have been translated into English. It is well known that Venerable Bede was finishing a translation of St. John's Gospel on his death-bed. But the history of the English Bible as a whole does not go back nearly so far; it dates from the so-called Wycliff, Version, believed to have been completed about the year 1380. The translation was made from the Vulgate and it then existed, that is before the Sixtine and Clementine revisions, and was well and accurately done. Abbot Gaspout contends confidently (The Old English Bible, 102 sqq.) that it was in reality of Catholic origin, and not due to Wycliff at all; at any rate it seems fairly certain that he had no share in any part of it except the Gospels, even if he had in these; and there is evidence that copies of the whole were in the hands of good Catholics, and were read by them. The very fact that Wycliff undertook its chief importance from the use made of it by Wycliff and the Lollards, and it is in this connexion that it is chiefly remembered. During the progress of the Reformation a number of English versions appeared, translated for the most part not from the Vulgate, but from the original Hebrew and Greek.
Of these the most famous were Tyndale's Bible (1525); Coverdale's Bible (1535); Matthew's Bible (1540); and the "Great Bible" (1539), the second and subsequent editions of which were known as Cranmer's Bible; the Geneva Bible (1557-60); and the Bishops' Bible (1568). The art of printing being by this time known, copies of all these were widely distributed, and of the present day there is much good and patient work in them, none will deny; but they were marred by the perversion of many passages, due to the theological biases of the translators; and they were used on all sides to serve the cause of error.

In order to counteract the evil effects of these versions, the Catholics determined to produce one of their own. Many of them were then living at various centres on the Continent, having been forced to leave England on account of the Penal Laws, and the work was undertaken by the members of Allen's College, at Douai, in Flanders, which was for a time transferred to Reims. The result was the Reims New Testament (1582) and the Douay Bible (1609-10). The translation was made from the Vulgate, and the whole, as Caron, was afterwards set in Latin form, and so full of Latinisms as to be in places hardly intelligible. Indeed, a few years later, Dr. William Fulke, a well-known Puritan controversialist, brought out a book in which the text of the Bishops' Bible and the Reims Testament were printed in parallel columns, with the sole purpose of discreditting the latter.

In this he did not altogether succeed, and it is now generally conceded that the Douay Bible contained much excellent and scholarly work, its very faults being due to over-zeal. In the meantime the Protestants were becoming dissatisfied with their own versions, and soon after his accession King James I appointed a commission of revision—the only practical outcome of the celebrated Hampton Court Conference. The commissioners, who numbered forty-seven, were divided into six companies, two of which sat at Oxford, Cambridge, and Westminster, respectively; each company undertook a definite portion of the Bible, and its work was afterwards revised by a select committee chosen from the whole body. The instructions for their procedure were, to take the Bishops' Bible, which was in use in the churches, as their basis, correcting it by a comparison with the Hebrew and Greek texts. They were also given a list of other English versions which could be consulted. The commissioners co-operated, and completed their work in 1607, and completed their labours in the short period of two years and nine months, the result being what is now known as the "Authorized Version".

Although at first somewhat slow in gaining general acceptance, the Authorized Version has since become famous as a masterpiece of English literature. The first edition appeared in 1611, soon after the Douay Bible, and nearly thirty years after the Reims Testament; and although this latter was not one of the versions named in the instructions to the revisers, it is understood that it had considerable influence on them (see Preface to Revised Version, i, 2. Also, J. G. Caletom, "Reims and the English Bible").

This Authorized Version was printed in the usual form of chapters and verses, and before each chapter a summary of its contents was prefixed. No other extraneous matter was permitted, except some marginal explanations of the meaning of certain Greek or Hebrew words, and a number of cross-references at the end of the pages. At the beginning was placed a dedication to King James and a short "Address to the Reader". Books such as Ecclesiastics, and Machabees, and Tobias, which are considered by Protestants to be apocryphal, were of course omitted. Although it was stated on the title-page that the Authorized Version was "appended to be read in the Churches", in fact it came into use only gradually. For the Epistles and Gospels, it did not displace the Bishops' Version until the revision of the Liturgy in 1661; and for the Psalms, that version has been retained to the present day; for it was found that the people were so accustomed to singing it that any change would have been inadvisable. Correctors were made, from time to time, in the successive editions of the Authorized Version, in the notes and references, as well as even in the text. A system of chronology based chiefly on the calculations of Archbishop Ussher was first inserted in 1701; but in many later editions both the dates and many, or even all, of the references or verbal notes have been omitted.

It is generally admitted that the Authorized Version was in almost every respect a great improvement on any of its predecessors. So much was this the case that when Bishop Challoner made his revision of the Douay Bible (1749-52), which is now commonly in use among English-speaking Catholics, it did not scruple to borrow largely from it. Indeed, Cardinal Newman gives it as his opinion (Tracts Theol. and Eccles., 373) that Challoner's revision was even nearer to the Authorized Version than to the original Douay, "not in grammatical structure, but in phraseology and diction". Nevertheless, there are traces of controversial prejudice, as for example, in the angel's salutation to the Blessed Virgin Mary, the words "highly favoured" being a very imperfect rendering of the original. In such cases, needless to say, the challenge of the sacrifice now, while in the Authorized Version the names of persons and places were usually given in an anglicised form already in use, derived from the Hebrew spelling. Challoner nearly always kept the Vulgate names, which come originally from the Septuagint. It is partly due to this that the Authorized Version has an unfamiliar sound to Catholic ears. The Authorized Version remained in undisputed possession for the greater part of three centuries, and became part of the life of the people. In the latter half of the nineteenth century, however, it began to be considered that the progress of science called for a new version which should embrace the results of modern research. The work was set on foot by Convocation in 1870, and a Committee was formed, in which the bishops were represented by a revising committee of nine. The Revised Version (1881-84). The Revised Version has never received any definite ecclesiastical sanction, nor has it been officially introduced into church use. It has made its way simply on its merits. But although at the present day it is much used by students, for the general public (non-Catholic) the Authorized Version still holds its ground, and shows no sign of losing its popularity.

Autocephal (Gr., autokephalos, independent), a designation in early Christian times of certain bishops who were subject to no one; the name, however, was not always used in the same sense. In certain Eastern countries, for example, it was applied to bishops who did not pay submission to any supreme authority. Thus in the East, the bishop of Jerusalem was described as an autocephalous bishop, in contradistinction to the Cypriote bishops, who, under the Dodecanese patriarch, were subject to the metropolitan of Constantinople. In the West, the title was applied at times to the bishops of Rome, who, as the centre of the Christian Church, were independent of all other sees. In the Middle Ages, the term was generally confined to the bishops of Christendom, who were in communion with the pope. In the sixteenth century, the title was claimed by the Protestant reformers for their bishops. But the title is now employed for certain Oriental bishops in the Patriarchates.
of Constantinople, Alexandria, and Antioch, who were subject directly to the patriarch of the civil (imperial) diocese to which they belonged, and who owed no obedience to their immediate metropolitans; they were not unlike the modern "exempt" bishops immediately subject to the Apostolic See. The most ancient of these seems to be the bishop of "Notitia" of Leo the Wise, where they are entitled archbishops and metropolitans, though they had no suffragans. Occasionally priests were called "autocephali", e.g. the clergy of a patriarchal diocese (see Bos., Hist. Eccl., VI, 21, and Eus., Hist. Eccl., V, 23, with the note of Valesius, also Bishop, Exemption, Ravena.)

One of the most absurd of these is the "Ecclesiastical History of the Captivity of the Ark". These autos sacramentales produced a great effect on the people. From time immemorial, allegory of every kind had powerfully appealed to them, and these autos took a strong hold on the popular fancy during the days of the Church, during religious festivals, with their music and their splendour, coupled with the fact that they were given at the public expense and with the sanction of the Church. In 1765, their public representation was forbidden by Charles III, but the habits of centuries could not be so easily overcome, and for many years afterward they continued to be presented in some of the smaller towns.

VENTURA FUENTES.

Aupert, AMBROSE, an early medieval writer and abbott of the Benedictine Order, b. in France, early in the eight century; d. after an abbacy of little more than a year at his monastery of St. Vinçens on the Velturino, near Piacenza, Italy, 778 or 779. Aupert, if forgotten to-day, was not without a name in his own century. Charlemagne made use of his talents; Pope Stephen IV protected him; and the monastery where he spent many years, and of which he died abbot, is famous among the great monasteries of Italy. He has sometimes been confused with another Aupert who was Abbot of Monte Cassino in the next century, and who left a collection of sermons besides a spiritual treatise. His chief work is "Expugatio in Apocalipsin" (P. L., XXXV, col. 2147-52).

FRANCIS P. HAYVEY.

Autran, JOSÉPH, a French poet, b. at Marseilles 20 June, 1813; d. in the same city, 6 March, 1877. He pursued his classical studies in the Jesuit college of Aix. His father, however, having met with reverses, Autran, obliged to earn his own living, accepted a position as teacher in a local seminary. Thus engaged, he published the first work which drew attention to his merits as a poet; this was an ode written on the occasion of Lamartine's departure for the Holy Land. Le Départ pour l'Orient was followed (1833) by a collection of poems entitled "La mer", remarkable for descriptive power and the charms of its versification. The favour with which it was received led him to publish a second series of the same subject, "Les Poèmes de la mer", which appeared in 1852. Meanwhile, he had written another volume of lyrics, "L'Harmonie,", which served to increase his popularity as a singer; also a prose work, "Italie et la Semaine sainte à Rome" (1841), the fruit of a voyage to the Eternal City. The French conquest of Algiers suggested the subject of an epic poem, "Milliard" (published in 1842. In 1848 "La Fille d'Achille", a tragedy in five acts, shared with Emile Augier's "Gabrielle" the Prix Montyon awarded by the French Academy. This was followed by: "Labourcours et Solitaire" (1845), "La Marie Confesse" (1856), "Enuzma", "La Copine", and "L'Envy", "Épitres rustiques"; "Le poème des beaux jours" (1852), "Le Cyclope", a drama after Euripides (1860); "Les Paroles de Salomon"; "Sonnet Caprices" (1873); "La Legende des Paladins" (1875). In 1868 Autran was elected a member of the French Academy to succeed Poulet. In his later years he was stricken with blindness. Autran, though
not a poet of the first rank, is a writer whose noble sentiment, chasté imagination, and religious feeling unite to lend his works a certain freshness. All his works are remarkable for their purity of expression, the music of their rhythm, and a profound feeling for the beauties of nature.

Jean le Barb.

Auten (Augustodunum), Diocese of, comprises the entire Department of Saône et Loire in France. It was suffragan to the Archdiocese of Lyons under the old regime. The sees of Chalon-sur-Saône and Mâcon were united to Auxerre after the Revolution, and it then became suffragan to Beaucaire (1802), afterwards to Lyons (1822). Christian teaching reached Autun at a very early period, as we know from the famous Greek inscription of Pectorius which dates from the third century. It was founded in 1839 in the cemetery of St. Peter l'Estreier at Autun, and bears testimony to the antiquity and efficacy of baptism and the sacramental words of the Holy Eucharist. Local recensions of the "Passion" of St. Martin of Autun exhibit St. Polycarpon on the eve of the procession of Septimius Severus, assigning to St. Irenæus two priests and a deacon (Sts. Benignus, Andochius, and Thyrsus), all three of whom departed for Autun. St. Benignus goes on to Langres, while the others remain at Autun. According to this legendary cycle, which dates from about the first half of the sixth century, it was not then believed at Autun that the city was an episcopal see in the time of St. Irenæus (c. 140-c. 211). St. Ambr., whom Autun tradition designates as its first bishop, probably occupied the see about 250. The first bishop known to history is St. Reticius, an ecclesiastical writer, and contemporary of the Emperor Constantine (306-337). The Bishop of Autun enjoys the right of wearing the pallium, in virtue of a privilege accorded to the see in 590 by St. Gregory the Great (590-604). In the Merovingian period two Bishops of Autun figured prominently in political affairs; St. Syagrius, bishop during the second half of the sixth century, a contemporary of St. Germanus, Bishop of Paris (see Diocese of Autun), and St. Leonarius (Léger), bishop from 663 to 680, celebrated on account of his conflict with Ebroin and put to death by order of Thierry III. Charles Maurice de Talleyrand-Périgord, the future diplomat, was Bishop of Autun from 1788 to 1790, when he resigned, on the last day of this see, appoin... 1852 (d. 1906), was Cardinal Perraud, member of the French Academy. In 670, an important council was held at Autun for the purpose of regulating the discipline of the Benedictine monasteries. The present cathedral of Autun dates from the eleventh and twelfth centuries, and was formerly the chapel of the Dukes of Burgundy; their palace was the actual episcopal residence. In the Diocese of Autun are yet to be seen the ruins of the Benedictine Abbey of St. Benignus, and the great church of Cluny, to which 1,200 monasteries were subject, and which gave to the Church the great pope, Gregory VII (1073-85). Gelasius II (1118-19) died at Cluny, and there also held the conclave that elected Calixtus II (1119-24) to the See of Rome. The Council of Constance (1414-18), and II, 174-182 (Paris, 1894 and 1900); CHEVALIER, Topo-bibl. (Paris, 1894-99), 300-372.

Aucetius, name of several early Christian personages.—Auctetius of Milan, native of Capadocia, ordained (344) to the priesthood by Gregory, the intruded Bishop of Alexandria. After the banishment of Dionysius of Milan in 355, Auctetius was made bishop of that see through Arian intrigue, though ignorant of the Latin tongue. Some of the principal Western bishops attempted, but in vain, to bring him to accept the Nicene Creed. He was publicly accused at Milan, in 364, by St. Hilary of Poitiers, and convicted of error in a dispute held in that city by order of the Emperor Valentinian. His submission was only apparent, however, and he remained powerful enough to compel the departure of St. Hilary from Milan. In 359 he forced many bishops of Illyricum to sign the creed of Rimini. Though St. Athanasius procured his condemnation by Pope Damasus at a Roman synod (369), he retained possession of the see until his death, which occurred in 377, and was succeeded by St. Ambrose. —Auctetius, Junius, originally Mercurinus, a Scythian, and a disciple of Ulfilas, or Wulfila, of whose life and death he wrote an account that the Arian bishop, Maximinus, included (383) in a work directed against St. Ambrose, and the Synod of Aquileia, 381. This favourite of Justina was the anti-bishop set up in Milan by the Arians, on the occasion of the election of Ambrose. He challenged the latter in 386 to a public dispute in which the judges were to be the court favourities of the Arian empress; he also demanded for the Arians the use of the Basilica Portiana. The refusal to surrender this church brought about a siege of the edifice, in which Ambrose and a multitude of his faithful Milanese had to defend the Heart of Christ in the Visitation Convent at Paray-le-Monial, founded in 1644, and now the object of frequent pilgrimages. At the end of the year 1905 the Diocese of Autun contained 618,227 inhabitants, 65 parishes, 488 seigneuries, or auxiliary churches, and a number of places of pilgrimage. The church built in 1890 to the Virgin of the 697-7
Auxerre was an Arian; his patronage of the heretical Arians (Philostorgius, Hist. Eccl., V, 1, 2), points to this.

THOMAS J. SHAHAN.

Auxerre, Councils Of.—In 585 (or 578) a Council of Auxerre held under St. Anachararius formulated four canons, closely related in context to canons of the contemporary Councils of Lyon and Macon. They are important as illustrating life and manners among the newly-converted Teutonic tribes and the Gallo-Romans of the time. Many of the canons are directed against remnants of heathen barbarism and superstitions. They witness to the persistence in the early Middle Ages in France of certain ancient Christian customs. The canons of the council of 605 or 697 are concerned chiefly with the Divine Office and eclesiastical ceremonies.

THOMAS J. SHAHAN.

Auxerre, Diocese and School of. See Sens.

Auxiliary Bishop, a bishop deputed to a diocese who, capable of governing and administering his diocese, is unable to perform the pontifical duties; or whose diocese is so extensive that it requires the labours of more than one; or whose episcopal see has been attached to a royal court, or is occupied by a protracted absence at court. According to the present ecclesiastical discipline no bishop can be consecrated without title to a certain and distinct diocese which he governs either actually or potentially. Actual government requires residence, potential does not. Hence, there are two principal classes of bishops, the resident, or diocesan or, local, or ordinary; and the non-residential, or titular. Diocesan bishops have and exercise (de jure) full power of order and jurisdiction, in and over the diocese committed to their exclusive care by the pope. Titulars, as such, have not, and do not exercise, power of order and jurisdiction, in and over their titular sees. All actual jurisdiction in titular sees is vested in himself, and exercises through the Sacred Congregation of Propaganda. The jurisdiction of a diocesan is ordinary. Should a titular perform a jurisdictional function, he uses delegated jurisdiction.

Titular bishops are those who have been appointed by the Holy See to a see or diocese which, in former times, had been canonically established and possessed cathedral church, clergy, and laity, but at present, on account of pagan occupation and government, has neither clergy nor people. It is essential that the titular diocese did exist, and did cease to exist through death or defection of clergy and faithful, or pagan settlement and government. No vestige of titulars, as defined, appears until the close of the thirteenth century. Evidently the host of wandering bishops without title or see—missionary, regency, or exiled bishops—of whom historians make mention, cannot be classed with our titulars, who did not come into existence until the greater part of the East had passed under pagan rule, and the destruction or defection of the Christian flock and the death of their shepherds ensued. The episcopal succession in those dioceses was maintained as long as a hope remained of their rehabilitation, and their bishops were hospitably received, and frequently used by the dioceses as auxiliaries or vicars in pontifical functions in their respective dioceses. Eclesiastical authority placed some of them in temporary charge of vacant Western dioceses, on condition of their immediate return to their own sees when possible. Others were given the spiritual care of dioceses by civil princes who, avaricious of the episcopal revenues, prevented the appointment of a diocesan bishop. In the fourteenth century, the grant of numbers of bishops without occupation, and their invasion of the rights and privileges of the diocesan brought about necessary legislation. Clement V (I, iii de elect. V, Clem.) prohibited the election and consecration of any cleric, without papal license, to any of those vacant sees (eine cleru poytique).

The first mention of titular bishops occurs in the Lateran decree (sees. 9 de Cardinalibus), wherein Leo X permits the creation of titulars whom the cardinal-bishops may use as suffragans, or auxiliaries, in their temporal sees, dioceses. Afterwards this privilege was extended for various reasons, principal among which were (a) to preserve from oblivion the memory of those once venerable and important, but now desolate, sees; (b) that the pope might have at hand efficient and capable ecclesiastics (without care of dioceses) in the discharge of the numerous and important ecclesiastical duties of the Apostolic ministry in and outside of the Roman Curia; (c) that suffragans might be given to bishops impelled by reason of infirmity, partial or entire, or of the great extent of their dioceses, or forced by the protracted absence from performing their episcopal duties. Pius V, after the Council of Trent, decreed that suffragans were not to be given to Cardinals, and to those bishops to whom it was customary to grant or give a fixed salary to support the dignity of the auxiliary. He also decreed that such auxiliary should not, without papal permission, exercise the pontifical functions in any other diocese, save in that of the diocesan to whom he had been given. Gradually it was extended to other bishops who had solid reasons for assistance. The appointment of all titulars is reserved exclusively to the Holy See (Clement, ut supra). Present usage requires an auxiliary, suffragan, and temporary coadjutor (used indiscriminately to mean almost the same office) to be also a titular bishop, yet the former antedate the latter by many centuries. They come down to us from Apostolic times; thus Linus and Cletus were vicars, or auxiliaries, to St. Peter at Rome; Ammianus, to St. Mark of Alexandria; Alexander, to Narcissus (aged 116 years) of Jerusalem; St. Gregory, the theologian, auxiliary in pontificates of St. Gregory, Bishop of Nazianzus; St. Augustine, coadjutor of Valerius of Hippo; so likewise those of the rural bishops (eparchepoi), who in former times, were given dioceses impeded from performance of their episcopal duties by old age, or bodily infirmity, or sickness, protracted and incurable, such as loss of speech, blindness, paralysis, and insanity. A coadjutor to an insane bishop has full jurisdiction, and can exercise all episcopal duties, with the sole exception of disposing of ecclesiastical properties. There are coadjutors in temporalis, or in spiritualis, or in both temporals and spirituals. The first kind must not be a bishop; since these dioceses are also temporary and perpetual; the first has no succession, the latter has, and is called coadjutor with right of succession. Coadjutors with right of succession rarely are granted, and only when urgent necessity and an evident utility are superadded to
the above reasons; and then they must be made known to, and approved as such, by the pope. It is now the practice to force a perpetual coadjutor upon an unwilling diocesan, although the pope can do so. Such perpetual coadjutor cannot mix in the ecclesiastical administration, nor do anything he is told or permitted by the diocesan. Some of the Fathers of the Vatican Council proposed that, in the future, auxiliary bishops should be appointed instead of perpetual coadjutors. A coadjutor is granted to aid a diocesan in order and jurisdiction as far as is needed; the auxiliary is deputed to aid only in function of order. He may be made vicar-general, and then, by virtue of that office, he has power of jurisdiction. Since auxiliaryship, or temporary coadjutorship, is neither a title nor prelature, but an office, it is temporary, and ceases at the death, or suspension, or resignation, of the diocesan. The Holy See, for valid reasons, in the fifteenth century established permanent auxiliaries in Prussia, Poland, Spain, and Portugal. Pius VII (16 July, 1821, Constit. De salute animar) confirmed those offices in Germany, etc. In these countries the office of auxiliary does not die with the diocesan, but continues under his successors. The auxiliary, sede vacante, however, cannot perform functions spiritually. Successors to such offices are not given the same, but an entirely different, titular see. Perpetual coadjutorship is irrevocable, and its holder succeeds immediately to the vacant see; no further collation or election is necessary. Office of auxiliary, etc., is revocable at will of pope and diocesan; that of the perpetual coadjutor cannot be taken away unless for canonical causes. Auxiliaries and temporary coadjutors are appointed by the Holy Father at the request of the bishop in need of assistance. The pope (or in position of the Sacred Congregation of the Council, or of Propaganda) as a rule appoints the clergyman named by orator. The election or nomination for perpetual coadjutors is governed by the law for election or nomination (sede vacante) of a new diocesan. The same disposition of mind and body is required for auxiliary, etc., as for a diocesan bishop. They must be thirty years complete, and have spent six months in Sacred orders prior to elevation to the episcopate, yet in the case of the auxiliaries, the most worthy has no rights over the majority. For perpetual coadjutorship most worthy is demanded.

Rights and duties of auxiliaries must be considered from a twofold standpoint: i.e. titulars of a diocese, and auxiliaries of diocesan bishops. By right of consecration, titular auxiliary may not licitly, without permission of the residential, perform all the functions annexed to the episcopal order by Divine and ecclesiastical law. The Church could, but does not, require the diocesan’s permission, for the validity of the latter functions. Having no actual jurisdiction, he cannot without express consent and permission of the ordinary perform pontifical functions in the city or diocese, nor can he do so, sede vacante, even with the permission of the chapter. Possessing only potential jurisdiction in his titular see, he cannot (a) hear, or grant faculties to hear, confession of a visiting subject from his titular see; (b) confirm or ordain him; (c) send a priest to preach, or to perform any priestly functions, in his titular see; (d) absolve, or grant faculty to a diocesan to absolve, a member of his household; (e) assist at the marriage of a titular subject, a visitor where the Tridentine holds; (f) ordain his familiar of three years’ standing, nor grant indulgences. Should at any time clergy or laity sufficiently number, he lose the mind in his diocese, and no representative of the Holy See have supervision over it, he can immediately, without any other collation of the benefice, take possession of his titular church. He then ceases to be titular and becomes diocesan. He may, and according to some must, be invited to General Councils, and once there he has decisive vote. A few were present at the Council of Trent and quite a number at the Vatican Council. Each diocesan bishop has the right to take part in Provincial Councils, he may be invited to do so, but has no decisive vote, unless by unanimous consent and permission of the Provincial Fathers. He can wear everywhere the prelatical dress and ring (the sign of his spiritual union with his titular see), and use the pontifical vestments, ornaments, and insignia, when, by permission of the ordinary, he performs pontifical functions. In general councils and every meeting of bishops where the local prelate is not present, in Rome, and outside of Rome, the titular auxiliary, etc., takes precedence of all bishops (except assistant bishops at pontifical throne) of later consecration. In provincial councils, however, all suffragans outrank all titulars without regard to date of consecration. Titular auxiliaries, as well as diocesans, are obliged to receive episcopal consecration within three months from confirmation, unless this is morally impossible; to make profession of faith and take oath of loyalty and fidelity to the Roman Pontiff, and to go to the Holy See when summoned by it. The diocesan is a member of the spiritual union with his see, he cannot be elected, but only postulated, for another diocese. Only the Holy Father can dissolve the spiritual union with the titular see. An auxiliary never has the title of a titular archiepiscopal see; but a diocesan auxiliary or a diocesan titular auxiliary often has. The titular archbishop-coadjutor is not bound to petition for the pallium or the use of it. Titular auxiliary is not bound (a) to make visit ad limina Apostolorum (some say he is); (b) to reside in his titular see, or in the cathedral city of the diocese in which he holds the office of auxiliary (the place of his residence is regulated by the diocesan); (c) to say Mass for the people. The criminal and important causes relating to auxiliary bishops are reserved to the Holy See, those of lesser moment to the Congregation of Bishops and Regulars. By virtue of the office of auxiliary he has a perpetual right to a pension suitable to maintain the episcopal dignity. This is to be paid by the diocesan from the diocesan revenues. The amount of pension and the mode of obtaining is generally specified in the Apostolic Letters of appointment. He can hold any benefice he had before and acquire a new one after his consecration, as the office of auxiliary is not a benefice. The bishop who appoints can validate. There are exceptions, viz. throne, cappa magna, mozzetta, and rochet worn without mantelletta, and crozier, pontifical ornaments, and titles, as does the diocesan. He can and must use the prelatical dress, as in the Roman Curia, to wit: rochet over the purple surtane with purple mantelletta, in his attendance in the cathedral, where he has precedence over all other canons and dignitaries, as to choir stall and functions. When he is celebrate in pontifical functions, the canons must assist, but in the usual canonical dress, except ministers in sacred vestments. Not all the canons are bound to meet him at the church door, as he enters to celebrate pontifical Mass. During the ceremony he is assisted by a canon as assistant priest, and deacon, and sub-deacon in sacred vestments. He has no assistants unless he requests assistants, nor to the seventh candlestick, nor to the usual reverences of the canons at Kyrie, etc., nor the use of the throne or crosier unless by special permission. He uses the faldstool. He has a special position of the diocesan, and when he officiates at ordinations, consecrations, and other pontifical functions, during which the rules of the Pontifical demand its use.
AUXILIUS

(Ceremon. Epi., I, xvi; Decret. Bracharen. Sept. 1697.) It is proper, however, that he impart the episcopal last blessing. He cannot bless publicly the people as he wends his way through the city. If he has no other anointer than two or at least one of nuns without express permission and command of the local prelate. Canons are bound to kiss the auxiliary's hand when he gives them Holy Communion on Holy Thursday, and assist him in consecrating Holy Oils, conferring Holy orders, and in all sacred functions in his absence in which he is not himself the officium in the performances for his diocese. If he be a canon, he is subject, as the other cathedral canons, to diocesan law and the penalties attached to its violation. If the diocesan and the auxiliary assist simultaneously at Mass, the sub-deacon must not give the latter the pacex before the canon-assistante at the throne have received it from the bishop-ordinary. When the diocesan assists at Mass, or Vespres, the auxiliary must leave his stall and join the other canons in making the prescribed reverences before the Kyrie, Gloria, etc. Should the celebrant be the diocesan, assisted by the chapter in sacred vestments, the auxiliary can wear a cope and a linen mitre (with consent of the local), which latter he must take off and put on by himself. It is expedient that he wear his cope twice during the Mass, as he cannot use a faldistorium and pontifical vestments without consent of his diocesan.

AUXILIUS of Naples, the name (possibly fictitious, according to Hefele), is the author of a series of remarkable writings (P. L., CXXIX, 1054 sqq.) that deal with the controversies concerning the succession and fate of Pope Formosus (891–896), and especially the validity of the orders conferred by him. The name of one of two sons who helped him in procuring the material for his poems. These poems are metrical versions of stories from the New Testament and consist of a "Life of Jesus", "Antichrist", "The Gifts of the Holy Ghost", "The Last Judgment", and "John the Baptist". They are preserved in two manuscripts, one at Verona, the other at Göttingen. The "John the Baptist" is found only in the latter manuscript. Ava's authorship of this poem, as well as that of the "Life of Jesus" has been questioned, but hardly on sufficient grounds. The poems are naive in tone and display deeply religious sentiments, but, except for occasional passages, they are destitute of poetic merit. Their technique is often crude, and language takes the place of rhyme and alliteration being not infrequent. The chief source from which Ava drew her material was the New Testament, but she also made use of older German poems, and possibly other writings such as the Apocryphal Gospel of the Infancy of the Saviour by the Pseudo-Matthew.

AVA, a German poetess, the first woman known to have written in German and probably identical with a recluse of that name who died in Austria in the vicinity of Melk, a.d. 1127. Almost nothing is known of her life or personality. She herself tells in a passage in her work that she had chosen the fate of two sons who helped her in procuring the material for her poems. These poems are metrical versions of stories from the New Testament and consist of a "Life of Jesus", "Antichrist", "The Gifts of the Holy Ghost", "The Last Judgment", and "John the Baptist". They are preserved in two manuscripts, one at Verona, the other at Göttingen. The "John the Baptist" is found only in the latter manuscript. Ava's authorship of this poem, as well as that of the "Life of Jesus" has been questioned, but hardly on sufficient grounds. The poems are naive in tone and display deeply religious sentiments, but, except for occasional passages, they are destitute of poetic merit. Their technique is often crude, and language takes the place of rhyme and alliteration being not infrequent. The chief source from which Ava drew her material was the New Testament, but she also made use of older German poems, and possibly other writings such as the Apocryphal Gospel of the Infancy of the Saviour by the Pseudo-Matthew.

The poems have been edited by SMITH, Geschichte des II. und 19 Jahrhunderts (Vienna, 1849), 227 sqq., and by PIPER in Zeitchrift für deutsche Philologie, 18, 192 sqq., and further information may be obtained from the Geschichte der A.A. (Budapest, 1880); PIPER, Die geistliche Erbauung des Mittelalters, part i, in KÜCHENMANN'S Deutsche National Literatur.

ARTHUR F. J. REMY.
AVANCI, NICOLA, chiefly known as an ascetical writer, b. in the Tyrol, 1612; d. 6 December, 1688. He entered the Society of Jesus in 1677, and for some years held the chair of rhetoric and philosophy at Graz, and subsequently that of theology at Vienna. He was for a time Rector of the College of Pavia, Vicar of Graz, Provincial of the Austrian Province, Visitor of Bohemia, and at his death Assistant for the German Provinces of the Society. In the midst of these onerous duties he found time to publish works on philosophy, theology, and sacred literature, none of which have ever by any means gained much popularity, though it contains much additional matter drawn from the works of other authors. But these meditations, in their simple as well as their extended form, have assisted many most efficaciously in the difficult task of daily meditation. They were also the author of sermons, orations, and a large number of dramas, suitable for presentation by college students. For a complete list of his works see Sommervogel, I. In English we have the "Meditations on the Life and Doctrines of Jesus Christ," translated from the original Latin of the Rev. John E. Zollner, with a preface by T. E. Bazillette, and with a preface by the Rev. G. Porter, 8.J. (London, 1875, 2 vols.). Another edition was issued in the Quarterly series by the Rev. H. J. Coleridge, S.J., in 1883.

EDWARD P. SPILLANE.

AVARICE (from Lat. avareus, "greedy"; "to crave") is the inordinate love for riches. Its special malice, broadly speaking, lies in that it makes the getting and keeping of money, possessions, and the like, a purpose in itself to live for. It does not see that these things are valuable only as instruments for the conduct of a rational and harmonious life, due regard to the uses to which they are applied in the condition in which one is placed. It is called a capital vice because it has as its object that for the gaining or holding of which many other sins are committed. It is more to be dreaded in that it often obstructs justice by perverting it into the pretext of making a decent provision for the future. In so far as avarice is an incentive to injustice in the acquiring and retaining of wealth, it is frequently a grievous sin. In itself, however, and in so far as it implies simply an excessive desire of, or pleasure in, riches, it is commonly not a capital sin.

JOSEPH F. DELANTY.

AVATAR, an Anglicized form of the Sanskrit, avatāra, "descent," from the root ā- → "pass" (cf. Latin in-treare), and the preposition avan, "down". The word is used, in a technical sense, in the Hindu religion to denote the descent upon earth of a portion of the essence of a god, which then assumes some coarser material form, be it animal, monster, or man. Such descents are ascribed in the mythology of Hindosim to various gods, but those ascribed to Vishnu are by far the most important. They are believed to have taken place at different ages of the world, and to have consisted of different proportions of the essence of Vishnu. Their number is variously stated, ranging from ten to twenty-eight, finally becoming indefinitely numerous. Any remarkable man is liable to be regarded as a more or less perfect avatar of Vishnu, and the consequence—one of the worst features of Hinduism—has been the offering of divine homage to men, especially the founders of religious sects and their successors.

The ten most famous avatars are: (1) The Fish, whose story is told in the Svetashe Brāhmaṇa of how Manu was saved from the Deluge by a great fish, which foretold him of the danger, commanded him to build a boat, and finally towed this boat to a mountain top. The Purānas afterwards declare that this fish was an avatar of Vishnu. (2) The Tortoise, Kārma. Vishnu in this form offers his back as the pivot on which Mount Mandara, weighed down with the weight of the universe, is supported, with its various valuable objects from the ocean of milk. (3) The Boar, Varāha. Like the first, this avatar is concerned with the rescue of the earth from a flood, the boar raising it from the water in which it had been submerged. (4) The Man-lion, Matsya. Vishnu in this form-delivered the world from a demon, who had obtained from Brahma the boon, that he should be slain neither by a god, a man, nor an animal. (5) The Dwarf, Vāmana. The world having fallen under the possession of another demon, Vishnu, in the form of a dwarf, begged for as much of it as he could cover in three steps. His request was granted, but, from the Rig-Veda on, the most prominent thing in connexion with Vishnu (originally a sun-god), was that in three strides he traverses the universe. Two strides were not sufficient for the redemption of heaven and earth, compassion inspires him to leave the nether regions to the demon he has duped. (6) Rāma with the axe, Parasu-rāma. In the form of a hero, Rāma, armed with an axe, Vishnu destroys the Kārtiyayás, or Kaurav caste, the enemies of the Brahmás. (7) Rāma, the great hero of the Hindu Odyssey, the Rāma yana, who is made into an avatar of Vishnu. (8) Krsna, the Indian Hercules, as he is styled by Westerns, the most popular hero of India, is the most perfect avatar of Vishnu. (9) Buddha, a curious result of the triumph of Hinduism over Buddhism. In one version it is explained that Vishnu's purpose was to destroy the wicked by leading them into a false religion. (10) Kalki. Vishnu in this form destroys the world, when the world is wholly depraved, destroys utterly the wicked, and restores the happy conditions of the Age of Virtue.

The importance of this theory of avatars to Hinduism is the way in which it has contributed to the wonderful adaptability of that religion. In the Buddha avatar the fact is particularly patent, but, in the Rāma and Krsna avatars also, we clearly have the adoption into Hinduism of the cults of these heroes. It is a mere guess that similar compromises are found in some theistic forms of the Fish, Boar, and Tortoise avatars, and the same might be said of an attempt to see in the Man-lion and Dwarf avatars, traces of the aboriginal religions. The resemblance of these avatars to the doctrine of the Incarnation is most superficial; as much as the theory of the avatars has a sufficient basis in Hindu philosophy, and several points of contact with the earlier mythology. It is unnecessary to suppose with Weber (Indische Studien, ii. 169) that it is the result of an imitation of this dogma. For bibliography see HINDUISM.

GEORGE MELVILLE BOLLING.

AVAOUGE, PIERRE DU BOIS, BARON de, d. 1664, was sixth Governor General of Canada. Born of French stock in Béarn, served in the French army forty years; travelled in Persia, Russia, Poland, and Sweden, and took part in all the campaigns in Germany. This familiarity with camp life made his naturally eccentric character rough and unsociable as well. In 1661, he was chosen for Governor General of Canada, and d'Argenson made him a baron and governor. While the war was in progress, and arrived in Quebec on 31 August of that year. Utterly averse to pomp and ceremony, he refused the honours which the people of Canada wished to show him, and set out at once for Montreal, in order to visit the church of his order and the seat of the country. The result was embodied in a report which he sent to Colbert and the great Condé, wherein he advises
It is one of the four Antiphons of the Blessed Virgin sung in the Divine Office in turn throughout the year, and is assigned thus from Compline of 2 February (even when the 24th of February is transferred) to Holy Thursday exclusively. It comprises two stanzas of four lines each, followed by its own versicle and response and prayer. Its date of composition is uncertain, but the conjecture of Stella (Inst. Liturg., Rome, 1886) that it antedates the fourth century seems to be without any warrant of external or internal evidence. It is found in the St. Alban's Book of the twelfth century; in a Munich MS. thought by Daniel to be of the thirteenth; in a Sarum Breviary of the fourteenth; and in York and Roman Breviaries of the fifteenth. Th. Bernard [Le Bréviaire (Paris, 1887), II, 454 sqq.] says it was introduced into the Divine Office by Clement VI in the fourteenth century. He gives a commentary, and thinks he can perceive in it elements of the "noble assents ... aspirations of many doctors, such as St. Athanasius, St. Ephrem, St. Ildopheusius".

Said during Septuagesima, Lent, Passiontide, the time, namely, of preparation for Easter, it recalls the part Mary had in the drama of the reopening of the door to man and salvation. In it, she is Queen of Angels. Its opening line was sometimes quoted as the first line of hymns and sequences in the fourteenth and fifteenth centuries (cf. Dreves and Blume, Analecta Hymnica, I, 94; X, 103; XXX, 233; XXXII, 43; XLVI, 136) where, however, had no other relation with the Antiphon, being sometimes meditations on the Ave Maria, sometimes distinct poetical compositions, for example:

Ave regina coelorum,
Pia virge tenella,
Maria (virgo), flos florum
Christi (que) clausa cella.
Gaudia, que pecatorum
Dira tuli bella,
and so on, throughout the whole of the Angelical Salutation down to ventris tu, where the poem ends (MS. of fourteenth century) (loc. cit., XLVI, 136).

Or, as a distinct hymn:

Ave, regina coelorum,
Ave, decus angelorum,
Ave, gaudium sanctorum,
Ave, solis regia,

in a MS. of the fifteenth century (loc. cit., XL, 98).

The Ave Regina has been translated by Caswall, "Luxa Catholica" (London, 1840, 1873, 1884; New York, 1851), whose version is used in the "Manual of Prayers" (Baltimore, 77; "Hail, O Queen of Heaven enthroned"; also by Beste, "Church Hymns" (1849): "Hail, thou mighty Queen of Heaven".

The version in the Marques of Bute's "Breviaire" (Edinburgh, 1879, 177) begins: "Hail, O Mary, Queen of Heaven". Schlosser [Die Kirche in ihren Liedern (Freiburg, 1863), I, 251] gives a translation into German in the same metre. The plainsong melody in the 6th tone has also a simpler setting ["Manuale Missale Officii" (Rome and Tournai, 1903), 100, 103].

H. T. HENRY.

Avellana Collection. See Canons, Collections of Ancient.

Avellino, Diocese of.—An Italian diocese in the Province of Naples, suffragan to Benevento. Avellino was founded by St. Sabinus, martyr, in the beginning of the second century. The list of the Bishops begins from 1124. The Diocese of Frigento, whose list is from 1080 to 1455, was united with that of Avellino from 9 May, 1466, until 27 June, 1818, when it was suppressed. Avellino was vacant from 1782 to 1792. It has 118,649 Catholics; 41 parishes, 243
secular priests, 11 regulars, 80 seminarians, 90 churches and chapels.

[...]

Atermpace (Men Badsha, or Ibn Badja, called by the Scholastics Aven-Pace and Averpace), Arabian philosopher, physician, astronomer, mathematician, and poet, b. at Saragossa towards the end of the eleventh cent.; d. at Fez, 1138: In 1119 he was at Seville, where he wrote several treatises on logic. Later, he went to Granada and to Africa. He was, according to Arabian accounts, poisoned by rival physicians. He wrote treatises on mathematics, medicine, and philosophy, and commented on Aristotle's works, notably on the "Physics", "Meteorology", "De Generatione et Corruptione", portions of "Historiae Animalium" and "De Partibus Animalium".

His works on philosophy included logical treatises, a work "On the Soul", "The Hermits Guide" (Munk translates the title "Regime du Solitaire"). "On the Union of the Intellect with Man", and a "Valedictory Letter" (cited in Latin as "Epistola de Discusso" and "Epistola Expeditionis"). Averpace's logical treatises are said to exist in MSS. in the Bodleian Library. His other writings are either lost or still undiscovered. Fortunately, however, a Jewish writer of the fourteenth century, Moses of Narbonne, has left us an account of "The Hermits Guide", which supplements Averroes' unsatisfactory allusions to that work, and enables us to describe the doctrines it contains. The aim of the treatise is to show how man (the hermit) may, by the development of his own powers of mind, attain a union with the Active Intellect. (See Arabian School of Philosophy.) Averroes distinguishes two kinds of action: animal action, which is a product of the animal soul, and human action, which is a product of the human soul, that is of free will and reflection. The man who smashes a stone because it has hurt him performs an animal action; but he who smashes the stone so that it will not injure others performs a human action. Now, the first step in the moral education of the hermit is to teach himself to be ruled by will and reason, so that his actions may all be human. That, however, is only the first step. Having attained it, the hermit must strive to higher perfection, so that his actions may become divine. He must strive to come in contact with the spiritual forms, which ascend in increasing degrees of incorporeity from the ideas of the individual soul up to the Actual Intellect itself, above which are only the final and celestial bodies, that is to say, spiritual substances which, while they have an important cosmic function, have no relation to moral excellence in man. Through ideas, therefore, to the ideas of ideas, through these to abstract ideas of things, and through these last, to the pure form of the Active Intellect—this, according to Averpace, is the way to perfection. The mind which has come into contact with the Active Intellect becomes itself an intellect, the Acquired Intellect (Intelectus Adeptus). It is in relation to this last point that the Schoolmen, notably Albert the Great and St. Thomas Aquinas, mention Averpace and his teaching. Their acquaintance with the author of "The Hermits Guide" was made, probably, through his disciple and admirer, though certain passages in the "Contraria Gentiles" would justify the surmise that St. Thomas had perhaps a firsthand acquaintance with the "Epistola Expeditionis".

(Mainz, 1855), II, 88 sqq.

William Turner.
Averroes professed the greatest esteem for Aristotle. The word of the Stagirite was for him the highest and firmest authority in matters of science and philosophy. In this exaggerated veneration for the philosopher he went farther than any of the Schoolmen. Indeed, in the later stages of Scholastic philosophy it was the Averroists and not the followers of Aquinas who began to place such scrupulous servitude to the authority of a master, glorified in the title of "Aristotle's monkey". Averroes advocated the principle of twofold truth, maintaining that religion has one sphere and philosophy another. He said, "I have not let loose the unlettered multitude; philosophy for the chosen few. Religion teaches by signs and symbols; philosophy presents the truth itself. In the mind, therefore, of the truly enlightened, philosophy supersedes religion. But, though the philosopher sees that what is true in theology is false in philosophy, he should not on that account condemn religious instruction, because he would thereby deprive the multitude of the only means which it has of attaining a (symbolical) knowledge of the truth. Averroes' philosophy once more became the subject of Aristoteleanism tinged with neo-Platonism. In it we find the doctrine of the eternity of matter as a positive principle of being; the concept of a multitude of spirits ranged hierarchically between God and man, and the idea that the wisest and the best person is Providence in the commonly accepted sense; the doctrine that each of the heavenly spheres is animated; the notion of emanation or extraction, as a substitute for creation; and, finally, the glorification of (rational) mystical knowledge as the ultimate aspiration of the human soul—in a word, all the distinctively neo-Platonic elements which the Arabians added to pure Aristoteleanism.

What is peculiar in Averroes' interpretation of Aristotle is the meaning he gives to the Aristotelian doctrine of the Active and Passive Intellect. His predecessor, Avicenna, taught that, while the Active Intellect is universal and separate, the Passive Intellect is individual and inherent in the soul. Averroes holds that both the Active and the Passive Intellect are separate from the individual soul and are universal, that is, one in all men. He thinks that Alexander of Aphrodisias was wrong in reducing the Passive Intellect to a mere disposition, and that the "other Commentators" (perhaps Themistius and Theophrastus) were wrong in describing it as an individual soul with a disposition; he maintained that it is, rather, a disposition in us, but belonging to an intellect outside us. The terms Passive, Possible, Material are successively used by Averroes to designate this species of intellect, which, in ultimate analysis, if we proceed from the dispositions of which he speaks, is the Active Intellect itself. In other words, the same intellect which, when in the act of actually abstracting intelligible species is called active, is called passive, possible, or material so far as it is acted upon, is potential, and furnishes that out of which ideas are fabricated. Besides, Averroes speaks of the Acquired Intellect (intellectus acquisitus, adeptus), by which he means the individual mind in communication with the Active Intellect. Thus, while the Active Intellect is numerically one, there are as many acquired intellects as there are individual souls with which the Active Intellect has come in contact. (The Scholastics speak of continuatio of the universal with the individual mind, translating literally the Arabic word which expresses this truth in matters of the like.)

The sun, for instance, while it is and remains one source of light, may be said to be multiplied and to become many sources of light, in so far as it illuminates many bodies from which its light is distributed; so it is with the universal mind and the individual minds which come in contact with it.

The weakness of this doctrine, as a psychological explanation of the origin of knowledge, is its failure to take account of the facts of consciousness, which, as the Scholastics were not slow to point out, indicate that not merely an individual disposition but an active individual principle enters into the action which one expresses by the words "I think". Another weakness of the doctrine of monopsychism, or the doctrine that there is but one mind, a weakness at least in the eyes of the Scholastics, is that it leaves unanswered the question of the immortality of the individual soul. Indeed, Averroes openly admitted his inability to hold on philosophically grounds the doctrine of individual immortality, being content to maintain it as a religious tenet. Averroes' greatest influence was as a commentator. His doctrines had a varying fortune in the Christian schools; at first they secured a certain amount of adherence, then, gradually, their incompatibility with Christian teaching became apparent, and, finally, owing to the revolt of the Renaissance from everything Scholastic, they secured once more a temporary hearing. His commentaries, however, had immediate and lasting success. St. Thomas Aquinas used the "Grand Commentary" of Averroes as his model, being, apparently, the first Scholastic to adopt that style of exposition; and though he rebuked his earlier devoted special treatises to that purpose, he always spoke of the Arabian commentator as one who had, indeed, perverted the Peripatetic tradition, but whose words, nevertheless, should be treated with respect and consideration. The same may be said of Dante in his references to him. It was after the time of St. Thomas and Dante that Averroes came to be represented as "the arch-enemy of the faith".

WILLIAM TURNER.
AVESTA

(ancient Persia) that the Vedas do in India. The designation Zend-Avesta, which is often employed to denote the sacred code, is not strictly correct. It owes its origin to a mistaken inversion of the Pahlavi designation Avestāk u Zend, a term which probably means "Text and Commentary"; for the word Zend, the Avestā, has no literal meaning of "explanation", and even in the Avesta is applied to the exegetical matter in the text. It is similarly used by the Parsee priests to denote the Pahlavi version and commentary, but not the original scriptures. Whether the term Avestāk, which is the Pahlavi form of the word Zend, has any sense of "wisdom", "law", is not absolutely certain. Some scholars interpret it as "wisdom", "knowledge".

Little was known concerning the religion and customs of ancient Persia before the Avesta was brought to Europe in the eighteenth century. From the allusions in Greek and Roman writers, like Herodotus, Plutarch, Pliny, others, it had long been surmised that such a body of scriptures existed. Scattered allusions in Arabic and Syriac writers and scholars' convictions, such as attempts to extract from these references was vague and meagre. The first scholar to make the language and the contents of the sacred books of the Parsees known to Europe was a young Frenchman, Anquetil du Perron, who settled in 1754 went to India for this very purpose. His enthusiasm and drive overcame the many obstacles he encountered on his journey to Hindustan and the difficulties he met during his stay in Surat. Success at last crowned his efforts, and on his return in 1771 he was able to give to the world the first translation of the Avesta. From the moment of its publication a bitter controversy arose concerning the authenticity of the work. Some scholars, like Sir William Jones, declared that it was a clumsy forgery of modern Parsee priests. The question was not settled until the advance made in the study of Sanskrit and comparative philology decided the matter and vindicated the genuineness of the scriptures and the value of Anquetil's work, although his translation, as a first attempt, was necessarily imperfect in many respects.

CONTENT AND DIVISIONS.—Originally, the sacred scriptures of the Parsees were of far greater extent than would appear from the Avesta in the form in which we now possess it. Only a relatively small part of the original has been preserved, and that is collected from several manuscripts, since no single codex contains all the texts now known. In its present form, therefore, the Avesta is a compilation from various sources, and its different parts date from different periods and vary widely in character. Tradition tells us that the Zoroastrian scriptures consisted originally of twenty-one naṣkas (books); but only one of these, the Vendidad, had been completely preserved. The loss of the sacred books is attributed by the followers of Zoroaster to the invasion of Alexander, "the accursed Iskandar," as they call him, who burned the palace library at Persepolis, thus destroying one archetype copy of the text, and threw the other into the river near Samarkand, according to the statement of the Pahlavi records (Dinkard, bk. III, West, "Sacred Books of the East", XXXVII, pp. xxx, xxxi; and Shatrūṭā-i Airān, 2–5). For wellnigh five hundred years after the Macedonian invasion the Parsee scriptures remained in a scattered condition, not being preserved until the great Zoroastrian revival under the Sassanian dynasty (A. D. 226–651), when the texts were again collected, codified, translated into Pahlavi, and interpreted. A beginning in this direction had already been made under the last of the Parthian kings, but the grand final reduction took place in Sassanian times, under Shahpūhar II (309–379). Our present Avesta is essentially the work of this redaction, although important sections of the text have been lost since then, especially after the Arabs conquered Persia. This conquest (637–651) was fatal to the Iranian religion, and the Assured Zend-Avesta, Zoroastrianism, and Mohammedanism and the Avesta by the Koran. As already mentioned, great portions of the scriptures have since disappeared entirely; out of the original twenty-one naṣkas, the nineteenth alone (the Vendidad) has survived. Portions of other naṣkas are preserved, but their present meaning, the Yasna and Visperad, or have come down to us as scattered fragments in Pahlavi works, or have been rendered into Pahlavi, like the Bāndahāsh (Book of Creation) and the Shagāta-īa-Shagāta (Treatise on the Lawful and Unlawful). In this way we are able to make good some of the losses of the old scriptures; enough has been said, however, to explain the lack of coherence noticeable in certain parts of the Avestan code.

The Avesta is divided into five books; the first book, the Yasna, is divided into five sections, relating to the ritual, hymns of praise, the liturgy, and the law. These sections are: (1) the Yasna, including the Gāthās, or hymns; (2) Visperad; (3) Yashts; (4) minor texts, such as the Nāyikshas (favorite prayers in daily use among the Parsees); (5) Vendidad. Of these, the Yasna are some independent fragments preserved in Pahlavi books (Hadkhāt Nask, etc.). The main divisions, when taken together, again fall into two groups, the one liturgical, comprising Vendidad, Visperad and Yasna, or the Avesta proper, the other general, called Khorda Avesta (Abridged Avesta) and comprising the minor texts and the Yashts. A brief characterization of the five divisions will now be given.

(1) The Yasna (lit. "sacrifice"), "sacrifice," "worship", the chief liturgical portions of the sacred canon. It consists principally of prayers and hymns used in the ritual, and is divided into seventy-two āhāiti (chapters), symbolized by the seventy-two strands of the kuškti, or sacred girdle with which the young Zoroastrian is invested on his being received into the Church. The middle third of the Yasna (Ya. 28–53), however, is not directly connected with the ritual, but contains the Gāthās, the holy psalms, songs which preserved the metrical compositions of Z. It has been preserved intact. This is the oldest portion of the Avesta and descends directly from the prophet and his disciples. These canticles are metric in their structure and are composed in the so-called Gāthā-idiom, a more archaic form of language than is used in the rest of the Avesta. There are seventeen of these hymns, grouped into five divisions, each group taking its name from the opening words; thus Ahumāziti, Uštanati, etc. Inserted in the midst of the Gāthās is the Yasna Hapatibâthi (the Seven-chapter Yasna) consisting of prayers and hymns in honour of the Supreme Deity, Ahura Mazda, the Angels, Fire, Water, and Earth. This selection also shows a more archaic type of language, and stands next to the Gāthās in point of antiquity. Its structure, though hallowed down in prose, may once have been metrical.

(2) The Visperad (wsep ratahā, "all the lords") is really a short liturgy, very similar in style and form to the Yasna, which it supplements in a briefer form. It is only by means of the fact that it contains invocations to "all the lords".

(3) The Yashts (yesht, "worship by praise"), of which there are twenty-one, are hymns in honour of various divinities. These hymns are for the most part metrical in structure, and they show considerable poetic merit in certain instances,
The Avesta is a collection of religious texts that form the basis of Zoroastrianism. It contains scriptures, hymns, and legal codes that are central to Zoroastrian religious practice. The Avesta is considered one of the oldest religious texts in the world and is particularly significant for its role in the evolution of Zoroastrianism.

The Avesta is divided into several sections, each with its own unique characteristics and significance. The Zend Avesta, which is the oldest and most important part of the Avesta, contains the sacred texts of Zoroastrianism, including the Gathas, which are the earliest compositions of the prophet Zarathushtra. The Gathas form the heart of the Avesta and are considered to be the foundation of Zoroastrian belief.

The Avesta also contains a number of other important works, such as the Avesta Yek (One Avesta), the Avesta Sham (Seven Avesta), and the Avesta Sabz (Green Avesta). These works are important for their role in the development of Zoroastrian theology and the transmission of Zoroastrian teachings.

The Avesta is written in an ancient form of Old Persian, which is a dialect of Avestan, an ancient Iranian language. The language of the Avesta is also notable for its use of Middle Persian words and phrases, which are believed to reflect the influence of other Iranian cultures on Zoroastrianism.

The Avesta is not only a religious text, but it also serves as a historical document, providing insights into the social and cultural context of the Achaemenid Empire and the Persian Empire. The Avesta is also an important source for the study of ancient Iran and its cultural development.

In summary, the Avesta is a significant and complex text that is central to the religious and cultural heritage of Zoroastrianism. Its importance cannot be overstated, as it serves as a foundational text for the religion and provides valuable insights into the history and culture of ancient Iran.
nians stormed Balkh. This account of the prophet's death is given, at least, by Firdausi.

Under the kings of the Achemenian line, the religion of Zoroaster became one of the great religions of the ancient East. But it shared the fate of the Persian monarchy; it was shattered, though not overthrown, by the conquest of Alexander and fell consequently into neglect under the Seleucids and Parthian dynasties. With the accession of the Sassanian dynasty it met with a great revival. The kings of the house of Sassan were zealous believers and did everything in their power to spread the faith as a national creed, so that its prosperity rose again to the zenith. Sectarian marauding and heresy to be sure, the heresy of Mazdak for a moment imperilled the union of the Zoroastrian Church and State, and Manicheism, menace of early Christian orthodoxy, also threatened the ascendency of the Iranian national faith, which was really its parent. These dangers, however, were only temporary and of minor importance as compared with the Arab conquest, which followed in the seventh century (651) and dealt the fatal blow from which Zoroastrianism never recovered. The victorious followers of Mohammed carried on their proselytizing campaign with relentless vigour. The few Zoroastrians who stood firmly by their faith were oppressed and persecuted. Some renounced, and were scattered throughout their native land, but the majority took refuge in India, where their descendants, the Parsees, are found even at the present day. About 10,000 are here and there throughout Persia, chiefly at Yazd and Kirman, but the bulk of the Zoroastrians, upwards of 90,000 souls, constitute a prosperous community in India, especially at Bombay.

The standard edition of the Avesta texts is that of GOLDSCHMIDT (Stuttgart, 1885-96). A French tr. by DARMESTETER appears in volues du musée Guimet (Paris, 1862-95); XXII, XXIV, and an English tr. by DARMESTETER and MILLS in The Sacred Books of the East, ed. MAX MÜLLER (Oxford, 1883-97), IV, XXIII, XXXI. Another French tr. was made by DE HARLES (2 ed. Paris, 1881).—The Pahlavi texts have been translated by W. VYR, in The Sacred Books of the East, V., VI, XXXIII, XLVII. —A good grammar for a study of the Avestan language is that of JACKSON (Stuttgart, 1892); an excellent dictionary of that of HAVELHOFF, Dictionary of the Avestan Language (Stuttgart, 1892); an English tr. of the Avestan texts, besides the above, is that of J. and W. F. WILLIAMSON, Zoroastrianism, 2 vols. (Ed. SPIEGEL, Berlin, 1866); JACKSON, Zoroaster, the Prophet of Ancient Iran (New York, 1895).

A. F. J. REMY.

Avesta, THE, THEORETICAL ASPECTS OF.—I. GOD.—The name of the Supreme God of the Avestic system is Ahura Mazda (in the Achemenian royal inscriptions, Atramazda), which probably signifies the All-Wise Lord. This divine name was later modified into the Pahlavi form Ahriman, the modern Persian Ormuzd (Greek Ormuzd). Hence the name of Mazdaism commonly applied to the Avestic religion. Ahura Mazda is a pure spirit; His chief attributes are eternity, wisdom, truth, goodness, majesty, power. He is the Creator (the eternal, ultimate, active, all good creator)—not, however, of Evil, or evil beings. He is the supreme Lawgiver, the Ruler of moral good, and the Punisher of moral evil. He dwells in Eternal Light; in the later literature light is spoken of as the clothing of Ahura Mazda or even His 'body', i.e. His essence. It is the manifestation of His presence, the highest form of the Old Testament ה' הנע. In this same patristic (Pahlavi) literature we find frequent enumerations of the attributes of Ahura Mazda; thus these are said to be 'omniscience, omnipotence, all-supremacy, all-splendour, all-wealth, all-happiness.' He is the Only Lord and God of the good Creations'.

II. DUALISM.—It has been remarked above that Ahura Mazda is the Creator of all good creatures. This at once indicates the specific and characteristic feature of the Avestic theology generally known as "dualism". At a later stage of development, which has ever been the main stumbling-block of religious systems, was solved in the Zoroastrian Reform by the trenchant, if illogical, device of two separate creators and creations: one good, the other evil, the latter opposed to Ahura Mazda, or Ormuzd, is His "spirit", a "later creation", called the "Evil Spirit"). He is conceived as existing quite independently of Ahura Mazda, apparently from eternity, but destined to destruction at the end of time. Evil by nature and in every detail the exact opposite of Ahura Mazda; in the Gathas says (Ys. xiv, 2, Jackson's translation):—

Now shall I preach of the World's two primal Spirits, The Holier one of which did thus address the Evil: Neither do our minds, our teachings, nor our conceptions, Nor our beliefs, nor words, nor do our deeds in sooth, Nor yet our consciences, nor souls agree in aught. It is here to be remarked that the specific name of Ahura Mazda in Avesta is Only. The word Spentomainyu, the Holy Spirit, and Ahura Mazda and Spentomainyu are used as synonyms throughout the Avesta. The obviously illogical doctrine of two separate and supreme creators eventually led to certain philosophical attempts to reduce the doubleity to a single monism in the Avesta, but these, in throwing back the Divine Unity to an anterior stage in which Zrvan Akaara, "illimitable time", becomes the single, indifferent, primordial source from which both spirits proceed. Another solution was sought in attributing two spirits (functions or faculties) to Ahura Mazda himself, his Spentomainyu, and his Atro Mainyu, or his creative and destructive spirit—an idea probably borrowed from Indian philosophy. This seems the favourite doctrine of the modern Parsees of Bombay, as may be seen in Mr. Navroji Maneckji Kanga's article in the "Babylonian and Oriental Record" for May, 1900 (VIII, 224-28), and it is claimed to be strictly founded on teaching of the Gathas; but, although such a development of thought was inevitable in the necessary attempt to reconcile a real monothelism with the Zoroastrian dualism, these theories cannot really be called Avestic at all, except in so far as Zrvan Akaara is an Avestic term. They are "patristic" or "scholastic".

The result of the dualistic conception of the universe is that of a continuous great warfare that has been going on even from the beginning between two hostile worlds or camps. All creatures belong to one or another of these camps, not only sentient and inanimate beings, like the spirits and man, but also the animal and even the vegetable worlds. All dangerous, noxious, poisonous animals and plants are evil by their very creation and nature. (We see here the primal germ of Manicheism. Mâni was a heretic of the Mazdean faith (A.D. 258). This "heresy" was often represented in the Pahlavi religious books, together with Judaism and Christianity.) Hence—sharp contrast to the Hindu aśvina, a characteristic tenet of Buddhism, which prohibits the killing of any creature, even the smallest and most noxious insect—to kill as many as possible of the Khrifastras, or noxious creatures on the Evil Spirit (such as wolves, serpents, snakes, locusts, intestinal worms, ants), is one of the most meritorious of religious actions. This great warfare, both spiritual and material, will go on to the end of time. It is to end with Zrvan Akaara. The final defeat of the spirits of evil (apparently of Evil, including Atro Mainyu himself. Such at least is the teaching in the later "patristic" literature.

III. ANGELOLOGY.—Dualism in its widest sense
seems to be an inherent and ineradicable tendency of the Iranian mind. Almost everything is conceived in pairs or doubles. Hence the constant reference to the "Two Worlds", the spiritual and the material. The worship of the "good" or the "bad" spirit, the good or the evil creation, is highly developed in the Avesta and subsequent literature. Around Ahura Mazda is a whole hierarchy of spirits, corresponding very closely with our "angels". There is, however, the notable fact that the spiritual system by which many of these creature-spirits are demonstrably old Aryan nature-deities who have been skilfully transformed into angels, and so fitted into a monotheistic framework, frequently enough, in hymns and other passages, by the simple interpolation of the epithet "Zadadita" (created by Mazda) before their names. Of the good spirits who surround Ahura, the most important are the Amesha Spentas ("Holy Immortals" or "Imperial Saints") generally reckoned as six (though Ahura Mazda himself is frequently included among them, and they are then called seven). These are the characteristic genii of the Gāthās, and their very names show that they are merely personified attributes of the Creator Himself. They are: Vohu Manah (Good Mind), Asha (Desiring Holiness), Khshathra Vairya (Desirable Sovereignty), Spenta Armanit (Holy Piety, a female spirit), Haurovatit (Health), and Amerotit (Immortality). In the Younger Avesta and later traditional literature these evident personifications, whose very names are but abstract nouns, become more and more concrete personages or genii, with varying functions; most of all Vohu Manah (Vohuman) rises to a position of unique importance. Dr. L. H. Gray, however, argues, in a very striking article, that even these are evolutions of original naturalistic deities [Archiv für Religionswissenschaft (Leipzig, 1904), VII, 345-372]. In later patristic literature Vohu Manah is conceived as the "Son of the Creator" and identified with the Alexandrine Abyos. (See Cusaret, Philosophy of the Mazdayasni Religion, 42-90.) Asha, also (the equivalent of the Sanskrit Rta=Dharma), is the Divine Law, Right, Sanctity (cf. Ps. cxviii), and occupies a most conspicuous position throughout the Avesta.

Despite the Amesha Spentas, there are a few other archangels whose rank is scarcely less, if it does not sometimes exceed theirs. Such is Sraosha ("Obedience"—i.e. to the Divine Law). With him are associated, in a trio, Rashnu (Right, Justice), and Mithra. This last is perhaps the most characteristic, as Cusaret tells, "Dieu du sacrifice et du culte de l'angelologie. Undoubtedly in origin (like the Vedic Mitra) a Sun-deity of the primitive Aryan nature-worship, he has been taken over into the Avesta system as the Spirit of Light and Truth—the favourite and typical virtue of the Iranian race, as testified even by the Greek historians. So important is his position that he is constantly linked with Ahura Mazda himself, apparently almost as an equal, in a manner recalling some of the divine couples of the Vedas. It is well known how in later times the Mithra cult became a regular religion and spread from Persia all over the Roman Empire, even into Britain. [See, especially, Cumont's great work, "Monuments relatifs au culte de Mithra" (Paris, 1895).] Nor must mention be omitted of Atar, the Genius of Fire, on account of the particular importance and sanctity attached to fire as a symbol of the divinity and its conspicuous use in the cult (which has given rise to the entirely erroneous conception of Zoroastrianism as "Fire-worship", and of the Arabic Fire worshipers, or "Firesiders". The Atar, the god of the moon, the sacred Haoma plant (Skt. Soma), and other natural elements all have their special spirits. But particular mention must be made of the enigmatical Fravashis, the origin and nature of whom is still uncertain. Some writers (especially Bôd-Remy, "La vie future" (Paris, 1901)) have seen in them the spirits of the departed, like the dī namas, or the Hindu pithra. But, as a matter of fact, their primal conception seems to approach nearest to the pre-existent tēchu of Plato. Every living creature has its own Fravashi, existing before its creation; nay in some cases inseminate being, and, according to some, Amu Mazda himself, have their Fravashis. They play an important rôle in both the psychology and the ritual cult of Mazdaism.

Face to face with the hierarchy of celestial spirits is a diabolical one, that of the dātas (demons, Dahailvi and Mod. Persian dis, or der) and dūnas of the Evil Spirit. They fill exactly the places of the devils in Christian and Jewish theology. Chief of them is Aka Manah (Pahlavi Akmān, "Evil Mind"), the direct opponent of Volu Manah. Perhaps the most frequently mentioned of all is Aška, the Demon of Wrath or Violence, whose name has come down to us in the Asmodeus (Aškha dānu) of the Book of Tobias (iii, 8). The Pāitrīkās are female spirits of seductive but malignant nature, who are familiar to us under the popular form of the Peris of later Persian poetry and legend.

IV. MAN.—In the midst of the secular warfare that has gone on from the beginning between the two hosts of Good and Evil stands Man. Man is the creature of the Good Spirit, but endowed with a free will and power of choice, able to place himself on the side of Ahura Mazda or on that of Anro Mainyus. The former has given him, through His prophet Zarathushtra (Zoroaster) His Divine revelation and law (daena). According as man obeys or disobeys this divine law his future lot will be decided; by it he will be judged at his death. The whole ethical system is based upon this great principle, as in the Christian theology. Moral good, righteousness, sanctity (asha) is according to the Divine will and decrees; Man by his free will conforms to, or transgresses, these. The Evil Spirit and his innumerable hosts tempt Man to deny or transgress the Divine law, as he tempted Zoroaster himself, promising him as reward the sovereignty of the whole world.—"No!" replied the Prophet, "I will not renounce, evil, if society and life should be exchanged!" [Vendidad, 24, 25, 26]. It is well to emphasize this basis of Avestic moral theology, because it at once marks off the Avesta system from the fatalistic systems of India with their karma and innate pessimism. [See Cusaret, "Idée du sacrifice dans l'ancienne Iranologie" (Fribourg, 1898).] A characteristic note of Iranian religious philosophy is its essential optimism; if there is human sin, there is also repentance and expiation. In the later Pahlavi religious literature there is a proper confession of sin (patō) and a developed casuistry. Asceticism, however, finds no place therein.

Divine worship, with elaborate ritual, is an essential duty of man towards his Creator. There is indeed no animal sacrifice; the leading rites are the offering of the quasi-divine haoma (the fermented juice of the sacred plant, a species of Asclepius), the exact counterpart of the Vedic soma-sacrifice; the care of the Sacred Fire; the chanting of the ritual hymns and prayers, and passages of the Sacred Books (Avesta). The moral teaching is closely akin to our own. Stress is constantly laid on the necessity of goodness in thought, word, and deed (humata, hākhīta, haurhta) as opposed to evil thought, word, and deed (dushmatā, dushhākhīta, dushhaurhta). Note the emphasis recognition of sin in thought. Virtues and vices are enumerated and estimated as such in Christian ethics. Special value is attributed to the virtues of religion, truthfulness, purity, and generosity to the
poor. Horsery, untruthfulness, perjury, sexual sins, violence, tyranny are specially reprobated. Zo-roaster's reform being social as well as religious, agriculture and farming are raised to the rank of religious duties and regarded as spiritually meritorious. The same will account for the exaggerated importance, almost sanctity, attached to the dog. On the other hand, the one repulsive feature of Avestic morality is the glorification, as a religious meritorious act, of the Kwaetma-datha, which is nothing else than intermarriage between the nearest of kin, even brothers and sisters. In later times this practice was tempered down to marriage between cousins, and now is entirely repudiated by the modern Parsees.

V. ESchatology.—After death the disembodied soul hovers around the corpse for three days. Then it sets off across the Cirovat bridge to meet its judgment and final doom in the world beyond the grave. The three judges of souls are Mithra, Sraoeha, and Darius and the other Achaemenid Kings of Persia (549-336 B.C.). From the cuneiform inscriptions of these sovereigns (in the Old Persian language, a sister dialect of the Avestic Zend) we know pretty well what their religion was. They proclaim themselves Mazdaans (Aramazdya, Darius, Behlamart Colub, Artaxerxes 1st); they follow the good way (patha, rastan); man must invoke and praise, Hutm; he hates sin, especially falsehood, which is denounced as the chief of sins, also insubordination and despotism. Inferior spirits are associated with Him, “clan gods”, and particularly Mithra and Anahita. Yet, with all these close similarities, we must hesitate to consider the two religious systems as identical. For in the Achaemenid inscriptions there is absolutely no trace of the dualism which is the characteristic and prevailing feature of the Avesta, and not allusory whatever to the great prophet Zoroaster, or to the revelation of which he was the mouthpiece. The exact relation between the two systems remains enigmatical.

SUMMARY.—“The highest religious result to which human reason unaided by revelation, can attain”, is the deliberate verdict of a learned Jesuit theologian (Father Ernest Hull, S.J., in “Bombay Examiner”, 28 March, 1903). This estimate does not appear exaggerated. The Avesta system may be best defined as monotheism modified by a physical and moral dualism, with an ethical system based on a Divinely revealed moral code and human free will. As it is now followed by the living descendants of its first votaries, the Parsees of India, it is virtually the same as it appears in the Avesta itself, except that its monotheism is more rigid and determined, and that it has shed such objectionable practices as the Khvattak-das (Kwaetma-datha) and seeks to explain them away. A great revival in the knowledge of the old sacred languages (Zend and Pahlavi), which had become almost forgotten, has taken place during the past half-century under the stimulus of European scholarship, whose results have been widely adopted and assimilated. The religious cult is scrupulously maintained as of old. The ancient traditional and essentially characteristic national views of truth, and handed generosity flourish exceedingly in the small, but highly intelligent, community.

L. C. C. ASTARELLI.

Avicebron, SALOMO BEN JEHUH, BEN GABRIEL (or GABIRO), whom the Scholastics, taking him for an Arab, called Avicebron (this form occurs in the oldest MSS.; the later MSS. have Avecebron, Avicenbon, Avicebron, Avicebron, etc.); a Jewish religious poet, moralist, and philosopher, b. at Malaga in 1020 or 1021, d. at Saragossa, 1104; born at Saragossa, where he spent the remainder of his life, devoting himself to moral and intellectual philosophy, and writing religious poetry. His principal philosophical work, written in Arabic, was translated into Hebrew in the thirteenth century by Palaquera, and entitled "Mekor Chaim" [the fountain of life] (see Littman, ed. with French translation by Munk, "Mélanges" etc., (Paris, 1857)], and into Latin in the twelfth century by Johannes Hispanus and Dominicus Gun-
AVICENNA 157

AVICENNA

disillusioned (edited by Bäumker, Münster, 1895) under the
title "Fons Vite,". His poems were published by Munk ("Mélanges", etc., Paris, 1857), and a He- biv trilingual edition of his Arabic works, by Alphonse and Lunéville, 1840). Avicenne's philosophy united the
traditional neo-Platonic doctrines with the reli-
gious teaching of the Old Testament. From the
neo-Platonists, whom he knew chiefly through such
authors as Vitalis and the "Liber de Causis" (see ARABIAN SCHOOL OF
PHILOSOPHY), he derived the doctrine of emanation,
namely: that there emanated from God, in the first
place, the Universal Intelligence, that from the Univer-
sal Intelligence there emanated the World-Soul, and
that from the World-Soul there emanated Nature, which
is the immediate principle of productivity of
material things. From the same neo-Platonic sources
he derived the doctrine that matter is of itself
wholly inert and merely the occasion which is made
use of by the Infinite Agent to produce natural
effects (Occasionalism). On the other hand, he drew
from Biblical sources the doctrine that the Supreme
Principle in the production of the Universe was not the
Thought of God, but the Divine Will, which, in second
place, created the World-Soul, etc. By thus attempting to combine Jewish religious doctrine with neo-Platonism, the doctrine of creation with the notion of emanation, he introduced into his
philosophy elements which are logically incom-
parable.

His most celebrated doctrine, however, the one by
which he was best known to the Christian philoso-

phers of the Middle Ages, was that of the univers-
ity of matter. All created things, he taught, are
composed of matter and form. God alone is pure
actuality. Everything else, even the highest among
the angels, is made up of matter (not merely potency,
but matter like that of terrestrial bodies) and form,
just as man is composed of body and soul. The
matter, however, of angelic bodies, while it is like
terrestrial matter, is of a purer kind and is called
spiritual matter. In other words, there are no cre-
ated "separate substances", as the Schoolmen called
them. Between the pure spirituality of God and the
erde corporeal nature of terrestrial bodies there med-
iate certain activities, which he divided into three
forms, and which range in ascending scale of spiritual-materiality from the
soul of man to the highest angelic nature.

This doctrine is mentioned by almost all the great scho-
lastics, and referred to them by the "Fons Vite" for
instance, by Albert the Great (Sermo 184, 1st ed.,
vol. 2, p. 162); by H. H. M. E. B. L. L. (De Anima, art. 6; Opusculum De Subst. Separatis, pagis,)
and Duns Scotos (De Rer. Princip. VIII. 4).

But, while the first two, in common with the other
Dominican teachers, refuted the author of "Fons
Vite" on this point, the last mentioned, together
with Alexander of Hales and others of the Francis-

scol School, adopted his doctrine as part of their
theory of the angelic nature.

William Turner.

Avicenna (Abn Ali Al Hosain Ibn Abdallah Ibn Sina, called by the Latins AVICENNA), Arabian
physician and philosopher, b. at Kharrainthin, in
the province of Bokhara, 980; d. at Hamadan, in
Northern Persia, 1037. From an autobiographical
sketch in his book "On the Soul", above all this,
he was very precocious; at the age of ten he
knew the Koran by heart; before he was sixteen
he had mastered what was to be learned of physics,
mathematics, logic, and metaphysics; at the age of
sixteen he began the study and practice of medicine;
and before he had completed his twenty-first year he
wrote his famous "Canon" of medical science, which
was to become the principal authority in medical schools both in Europe
and in Asia. He served successively several Persian
potentates as physician and adviser, travelling with
them from place to place, and despite the habits of
their life, found time to write a great deal, and
much time to literary labours, as is testified by the
hundreds volumes which he wrote. Our authority
for the foregoing facts is the "Life of Avicenna",
based on his autobiography, written by his disciple
Jorjani (Somanus), and published in the early Latin
editions of his works. Besides the medical "Canon", he
wrote voluminous commentaries on Aristotle's
works and two great encyclopedias entitled "Al
Schefa" or "Al Chila" (i.e. healing) and "Al
Nadja" (i.e. deliverance). The "Canon" and portions
of the encyclopedias were translated into Latin
as early as the twelfth century, by Gerard of
Cremona, Dominicus Gundissalinus, and John
Avenhast; they were published at Venice, 1493-95.
The complete Arabic texts are said to be in MS.
in the Bodleian Library at Oxford. The "Al
Nadja" and the "Al Schefa" was published in Rome,
1593. Avicenna's philosophy, like that of his predecessors among the
Arabians, is Aristotelianism mingled with Neo-Platonism, an exposition of A-
ristotle's teaching in the later works of Themistius, Simplicius, and other neo-Platonists. His Logic is divided into nine parts, of which the
first is an introduction after the manner of Porphyry's
"Isagoge"; then follow the six parts corresponding to the six treatises composing the "Organon"; the
seventh and ninth parts consist respectively of treatises
on rhetoric and poetry. Avicenna devoted special
attention to definition, the logic of representation,
as he styles it, and also to the classification of sciences.
Philosophy, he says, which is the general name for
scientific knowledge, includes speculative and practi-
cal philosophy. Speculative philosophy is divided into the inferior science (physics), and middle science
(mathematics), and the superior science (metaphysics including theology). Practical philosophy (which
considers man as an individual): economics (which
considers man as a member of domestic society); and
politics (which considers man as a member of civil society). These
divisions are important on account of their influence on the arrangement of sciences in the medium age.
Avicenna's philosophy of Aristotle, particularly the introduction of Aristotle's works. A favourite principle of
Avicenna, which is quoted not only by Averroes but
also by the Schoolmen, and especially by Albert the
Great, was intellectus in forma est universalitatem,
that is, the universality of our ideas is the result of
the activity of the mind itself. The principle, how-
ever, is to be understood in the realistic, not in the
nominalistic sense. Avicenna's meaning is that,
while there are differences and resemblances among
ideas, each independently of the manner in which insti-
tution of things in the category of individuality,
generic universality, specific universality, and so
forth, is the work of the mind. Avicenna's physical
drawings show him in the light of a faithful follower
of Aristotle, who has nothing of the teaching of his master. Similarly, in psychology,
he reproduces Aristotle's doctrines, borrowing occa-
sionally an explanation, or an illustration, from
Alfarabi. On one point, however, he is at pains
to set the true meaning, as he understands it, of
Aristotle's doctrine, above all the doctrine of the
Commentators. That point is the question of the
Active and Passive Intellect. (See ARABIAN SCHOOL
OF PHILOSOPHY.) He teaches that the latter is the
individual mind in the state of potency with regard to
knowledge, and that the former is the impersonal mind in the state of actual and perennial thought. In order that the mind acquire ideas, the Passive Intellect must come into contact with the Active Intellect. Avicenna, however, insists most emphatically that a contact of that kind does not interfere with the independent substantiality of the Passive Intellect, and does not imply that it is merged with the Active. He holds that the individual mind retains its individuality and that, because it is spiritual and immaterial, it is endowed with personal immortality. At the same time, he is enough of a mystic to maintain that certain choice souls are capable of arriving at a very special kind of union with the Universal, Active, Intellect, and of attaining thereby the gift of prophecy. Metaphysics he defines as the science of supernatural (ultra-)physical being and of God. It is, as Aristotle says, the theological science. It treats of the existence of God, which is proved from the necessity of a First Cause; it treats of the Providence of God, which, as all the Abrahamic taught, is restricted to the universal laws of nature, the Divine Agency being too exalted to deal with singular and contingent events; it treats of the eternity of mediators between God and material things, all of which emanated from God, the Source of all sources, and Principle of all principles. The first emanation from God is the world of ideas. This is made up of pure forms, free from change, corruption, imperfection, and is the intelligible world of Plato, and is, in fact, a Platonic concept. Next to the world of ideas is the world of souls, made up of forms which are, indeed, intelligible, but not entirely separated from matter. It is these souls that animate and energize the heavenly spheres. Next to the world of souls is the world of physical forces, which are more or less completely embedded in terrestrial matter and obey its laws; they are, however, to some extent amenable to the power of intelligence in so far as they may be influenced by magic art. Lastly comes the world of corporeal matter; this, according to the Neo-Platonic conception which dominates Avicenna's thought in this theory of emanation, is of itself wholly inert, not capable of acting but merely of being acted upon (Con amore). In this hierarchically arranged scheme of beings, the Active Intellect, which, as was pointed out above, plays a necessary rôle in the genesis of human knowledge, belongs to the world of Ideas, and is of the same nature as the spirits which animate the heavenly spheres. From all this it is apparent that Avicenna's cosmology is based upon the conception of the Arabian Aristotelians as neo-Platonic interpreters of Aristotle. There remain two other doctrines of a general metaphysical nature which exhibit him in the character of an original, or rather an Arabian, and not a neo-Platonic, interpreter. The first is his division of being into three classes: (a) what is merely possible, including all sublunary things; (b) what is itself merely possible but endowed by the First Cause with necessity; such are the ideas that rule them; (c) what is itself necessary, namely, the First Cause. This classification is mentioned and refuted by Averroes. The second doctrine, to which also Averroes alludes, is a fairly outspoken system of pantheism, which Avicenna's is to be separated from the later, entitled "Philosophia Orientalis". The Scholastics, apparently, know nothing of the special work on pantheism; they were, however, aware of the pantheistic tendencies of Avicenna's other works on philosophy, and were, accordingly, reluctant to turn the term Avicenna into a prop for Averroes. (Boston, 1863). WILLIAM TURNER.

Avignon. —Cty. —Avignon, written in the form of Avinio in the ancient texts and inscriptions, takes its name from the House, or Clan, Avennius [d’Arbois de Jubainville, "Recherches sur l’origine de la propriété foncière et des noms des lieux habités en Franche-Comté (Paris, 1812)]] who were the founders of the city. According to legend, the soil, which was especially fertile, became the centre of a prosperous community. Under the Roman occupation, it was one of the most flourishing cities of Gaul (Narbonensis; later, and still later, Arles); during the first centuries of the Christian era, it belonged in turn to the Goths, the Burgundians, the Ostrogoths, and to the Frankish kings of Austrasia. In 736 it fell into the hands of the Saracens, who were driven out by Charles Martel. Boso having been proclaimed King of Provence, or of Arles, by the Synod of Mântua, at the death of Louis the Stammerer (878), Avignon ceased to belong to the Frankish kings. In 1033, when Conrad II fell heir to the Kingdom of Arles, Avignon passed to the empire. The French kings, however, being at a distance from the city on the Rhone, it is skin to the two latter divided their rights in regard to it, while the Count of Forcalquier resigned any that he possessed to the bishops and consuls in 1135. During the crusades against the Albigensians the citizens refused to open the gates of Avignon to Louis VIII and the legate, but captured after a three-months' siege (10 June—13 September, 1226) and were forced to pull down the ramparts and fill up the moat of their city. Philip the Fair, who had inherited from his father all the rights of Alphonse de Poitiers, last Count of Toulouse, made them over to Charles II, King of Naples and Count of Provence (1290); it was on the strength of this donation that Queen Joan sold the city to Clement VI for 80,000 florins (9 June, 1348).

Avignon, which at the beginning of the fourteenth century was a town of no great importance, underwent a wonderful development during the residence there of nine popes, Clement V—Benedict XIII, inclusively. To the north and south of the rock of the Doms, partly on the site of the former Palace, which had been occupied by John XXII, rose the new Palace of the Popes, in the form of an imposing fortress made up of towers, linked one to another, and named as follows: De la Campana, de Trouilhailles, de la Glacière, de Saint-Jean, des Saints-Anges (Benedict XII), de la Gâche, de la Gardere-Neuve (Clement VI), de Saint-Laurent (Innocent VI). The Palace of the Popes belongs, by its severe architecture, to the Gothic art of the South of France; other noble examples are to be seen in the churches of St. Didier, St. Peter, and St. Agricola, in the Clorot Tower, and in the fortifications built between 1349 and 1368 for a distance of some three miles, and flanked by thirty-nine towers, all of which were erected or restored by popes, cardinals, and great dignitaries of the court and in memory of the frescoes which adorn the interiors of the papal palace and of the churches of Avignon was entrusted almost exclusively to artists from Sienna. The popes were followed to Avignon by agents (factores) of the great Italian banking-houses, who settled there as intermediaries between the Apostolic Chamber and its debtors, living in the most prosperous quarters of the city, which was known as the Exchange. A crowd of traders of all kinds brought to market the
products necessary to the maintenance of a numerous court and of the visitors who flocked to it; grain and wine from Provence, from the south of France, the Roussillon, and the country round Lyons. Fish was brought from places as distant as Brittany; cloth, rich stuffs, from Flanders. The government of the city, in the service of the Pope, was conducted by the Cardinals, who ruled in a great many cases as if they were independent princes, a power which was increased by the growing discontent of the people. The city was at length divided into two parties, the Papists and the Guelphs, the latter of whom were finally defeated in 1532, after a long and bloody war.

The city was then divided into two parts, the French and the Spanish, the former being governed by a council of twelve, elected by the people, and the latter by a council of sixty, appointed by the King of Spain. The city was finally captured by the French in 1552, after a long and bloody siege, and the inhabitants were obliged to pay a large indemnity to the King of France. The city was then governed by a council of forty, elected by the people, and the King of France appointed a governor to administer the affairs of the city. The city was finally annexed to France in 1624, after a long and bloody war, and the inhabitants were obliged to pay a large indemnity to the King of France. The city was finally governed by a council of sixty, elected by the people, and the King of France appointed a governor to administer the affairs of the city.

AVILA

ecclesiastical property were severely threatened; unclaimed legacies were allotted to pious uses; the bishops were urged to mutual support; the individual churches were taxed for the support of the papal legate; and ecclesiastics were forbidden to convolve the civil courts against their bishops. The Council of 1279 was concerned with the protection of the rights, privileges, and immunities of the clergy. Provision was made also for the protection of those who had promised to join the Crusade ordered by Gregory X, but had failed to go. It was also decreed that to hear confessions, besides the permission of his ordinary or bishop, a monk must also have that of his prior. In the Council of 1282 ten canons were published, among them one urging the people to frequent more regularly the parochial churches, and to be present in their own parish churches at least on Sundays and feast days. The temporalities of the Church and ecclesiastical jurisdiction occupied the attention of the Council of 1327. The seventy-nine canons of the Council of 1337 are renewed from earlier councils, and emphasize the duty of Easter Communion in one’s own parish church, and of attendance on Saturday for benefited persons and ecclesiastics, in honour of the Blessed Virgin, a practice begun three centuries earlier on the occasion of the Truce of God, but no longer universal. The Council of 1457 was held by Cardinal de Foix, Archbishop of Arles and legate of Avignon, a Franciscan. His principal purpose was to promote the doctrine of the Immaculate Conception, in the sense of the declaration of the Council of Basle. It was forbidden to preach the contrary doctrine. Sixty-four disciplinary decrees were also published, in keeping with the legislation of other councils. A similar number of decrees were published in 1497 by a council presided over by Archbishop Francesco Tarpugi (afterwards Cardinal). The sponsors of the newly confirmed, it was decreed, were not obliged to make presents to them or to their parents. Before the relics of the saints two candles were to be kept lighted at all times. Disciplinary measures occupied the attention of the Council of 1509. The Council of 1596 was called for the purpose of furthering the observance of the decrees of the Council of Trent (1545-63), and for a similar purpose the Council of 1609. The Councils of 1604 and 1725 formulated disciplinary decrees; the latter proclaimed the duty of adhering to the Bull of Clement XI against the "Reflections morales" of Quesnel. The Council of 1846 published, in ten chapters, a number of decrees concerning faith and discipline.

THOMAS J. SHAHAN.

UNIVERSITY OF AVIGNON (1303-1792), developed from the already existing schools of the city, was formally constituted in 1303, by a Bull of Boniface VIII. With Boniface, King Charles II of Naples should be considered as one of its first great promoters and benefactors. The faculty of law, both civil and ecclesiastical, existed for some time almost exclusively, and always remained the most important department of the university. Pope John XXIII erected (1413) a faculty of theology, the reformation of which was lengthy and difficult, especially in the sixteenth and seventeenth centuries. The Bishop, since 1475 Archbishop of Avignon was chancellor of the university. The vicar of Avignon, a bishop, represented the civil power (in this case the pope) and was chiefly a judicial officer, ranking higher than the Primicerius (Rector). The latter was elected by the Doctors of Law, to whom, in 1508, were added four theologians and, in 1754, two Doctors of Medicine. The pope, spiritual head and, after 1348, temporal ruler of Avignon, exercised in this double capacity great influence over the affairs of the university. John XXIII granted it (1413) extensive privileges, such as special university jurisdiction and exemption from taxes. Political, geographical, and educational circumstances forced the university, during the later period of its existence, to look to Paris rather than to Rome for favour and protection. It disappeared gradually during the French Revolution, and ceased to exist in 1792.

N. A. WEBER.

AVILA (ABULA), DIocese OF, a suffragan of Valadolid in Spain. Its episcopal succession dates at least from the fourth century and claims an Apostolic origin. Suppressed in the course of the ninth, it was re-established early in the twelfth century, after

the expulsion of the Moors, and was a suffragan of Mérida until 1120; then of Compostella until 1557. The Catholic population is 189,926. There are 360 priests, 339 parishes, and about 500 churches and chapels. Avila is historically one of the most important cities in the medieval and modern history of Spain. In the fourth century the arch-bishopric of Poeciliani was Bishop of Avila, and in later times many saints had Avila as their home, among them St. Teresa and St. John of Avila, the "Apostle of Andalucia". It was once one of the most flourishing cities of Spain, but its population has dwindled to 7,000. Its Moorish castle and ancient eleventh-century cathedral are monumental relics of the past.

AVILA

University of AVILA (1550-1807).—Under the patronage of Queen Isabella, the Dominicans established (1504) chairs of philosophy and theology in their College of St. Thomas at Avila, Spain. About 1550 the Bishop of Burgos, Juan Pascual, raised the college to university rank. Gregory XIII, at the request of Philip II, ratified the nuncio’s action by the Bull “In Apostolatus culmine,” April 4, 1576. Innocent X, in 1645, approved the statutes of the university; and it stood to-day in great repute in arts, theology, medicine, and law. Its work, however, was mainly theological. Though it enjoyed the favour of the Spanish sovereigns, especially of Charles II, it never attracted a large number of students. It had no endowment, but depended upon tuition fees. As a result, it began to decline during the eighteenth century, and it was suppressed, along with several other minor universities, in 1807.

E. A. PACE.

AVILA, FRANCISCO DE, curate or vicar in the province of Huarocho of Peru, later curate at Huánuco, finally Canon of the Church of La Plata (now Sucre), in Bolivia. Born in Peru as a founding (quomodo erat, he says, sed ea quondam) of the province of Huarocho, Lima, and Huánuco, of which unfortunately only the first six chapters are known to exist and have been translated into English. It is, even in its incomplete form, an invaluable contribution to the knowledge of the Peruvian Indians and their primitive lore. The most important reports from Huarocho in eastern Peru, of which published MS. is extant. Such writings mitigate the charges which the destruction of other objects of primitive worship has called forth against the Church. AGA, PABLO JOSÉ.

RENO DE, b. at Avila of the Kings, in 1546, and named after the place of his Pascua, in the same province, 6 or 1625. He was of a distinguished family more eminent for his saintsness, his virtues, and his success as a preacher. He received the ecclesiastical studies and received at the great University of Salamanca. He was consecrated bishop and held, at first, the See of Murcia, Jaen in Andalucia, Badajos, in 1615, and, seven years later, Astorga, where he remained until his death. He was a professor of St. Thomas. The following of his in Spanish are worthy of note: "De la Orden Due to the Bodies and Relics of the Virgin," 1611; "Sermons" (Basea, 1615); "Sermóns y Disputas," from the Latin (Madrid, 1553), and, in manuscript, the Lives of St. Thomas.

WILLIAM DEVILIN.

St. THERESE ECHIUS, SAINT, a distin-

gent of Vieques, in Gaul, from 940 to

1000, his death is placed by some as early as 923. He was prominent close to the Emperor's illustrious persons, and in which he was hereditary. In difficult times for the Catholic Faith and Roman culture in Southern Gaul, Avitus exercised a favourable influence. He pursued with earnestness and success the extinction of the Arian heresy in the barbarian kingdom of Burgundy, and, in 528, raised the confidence of King Gundobad, and converted his son, King Sigismond (516–523). He was also a zealous opponent of Semipelagianism, and of the Acacian Schism at Constantinople. Like his contemporary, Ennodius of Aquileia, he was jubilant in the authority of the Apostolic See as the chief bulwark of religious unity and the incipient Christian civilization. "If the pope," he says, "is rejected, it follows that not one bishop, but the whole episcopate threatens to fall" (St. papa urbis vocatur in dubium, episcopatus subditur, non episcopus, vocatur.—Ep. xxxiv, ed. Peiper). The literary fame of Avitus rests on a poem of 2,552 hexameters, in five books, dealing with the Scriptural narrative of Original Sin, Expulsion from Paradise, the Deluge, the Crossing of the Red Sea. The first three books offer a certain dramatic unity; in them are told the preliminaries of the great disaster, the catastrophe itself, and the consequences. The fourth and fifth books deal with the Deluge and the Crossing of the Red Sea. Avitus dates the first book familiarly with the Scriptural events, and exhibits well their beauty, sequence, and significance. He is one of the last masters of the art of rhetoric as taught in the schools of Gaul in the fourth and fifth centuries. Ebert says that none of the ancient Christian poets treated more successfully the poetic elements of the Bible. His poetic diction, though abounding in archaisms and rhythmic redundancy, is pure and select, and the laws of metre are well observed. It is said that MITON made use of his paraphrase of Scripture in the preparation of "Paradise Lost." He wrote also 666 hexameters "De virginitate" or "De consolatorâ castitatis laude" for the comfort of his friend Fucina, a nun. His prose works include "Contra Eutychianam Hæresin libri II," written in 512 or 513, and also about eighty-seven letters that are of considerable importance for the ecclesiastical and political history of the years 499–518. Among them is the famous letter to Clovis on the occasion of his baptism. There was once extant a collection of his homilies, but they have perished with the Charters and some fragments and excerpts. In recent times Juliennet has demonstrated (Questions mérovingiennes, Paris, 1885) that Avitus is not the author of the "Dialogi cum Gundobado Rege," a defence of the Catholic Faith against the Arians, but merely one of the representations of the Colloquy of Lyons in 443, and first published by d'Achery (1661) in his "Spicilegium" (V, 110–116). It is a forgery of the Oratorian, Jerome Viguier, who also forged the letter of Pope Symmachus (13 Oct., 501) to Avitus. The works of Avitus are found in Migne, P. L., LIX, 191–398. There are two recent editions: one by R. Peiper (in Mon. Germ. Hist.: Auct. Antiq., VI, Berlin, 1883), the other by U. Chevalier (Lyons, 1890).

WILLIAM DEVILIN.

V. AVIS

AVIS, ORDER OF, a military body of Portuguese knights.—The Kingdom of Portugal, founded in 1139, was not only contemporaneous with the Crusades but conducted operations closely related to the Emperor's illustrious persons, and in which he was hereditary. In difficult times for the Catholic Faith and Roman culture in Southern Gaul, Avitus exercised a favourable influence. He pursued with earnestness and success the extinction of the Arian heresy in the barbarian kingdom of Burgundy, and, in 528, raised the confidence of King Gundobad, and converted his son, King Sigismond (516–523). He was also a zealous opponent of Semipelagianism, and of the Acacian Schism at Constantinople. Like his contemporary, Ennodius of Aquileia, he was jubilant in the authority of the Apostolic See as the chief bulwark of religious unity and the incipient Christian civilization. "If the pope," he says, "is rejected, it follows that not one bishop, but the whole episcopate threatens to fall" (St. papa urbis vocatur in dubium, episcopatus subditur, non episcopus, vocatur.—Ep. xxxiv, ed. AVRIL

was not ended. This accounts for the favour with which military orders were regarded beyond the Pyrenees as well as in Spain; for in them the vow of fighting against the infidels was perpetual, like other monastic vows. Knights Templars were found in Portugal as early as 1128, and received a grant from Queen Teresa in the year of the Council of Troyes, which was the formal and early statutes. A native order of this kind sprang up in Portugal about 1146. Affonso, the first king, gave it the town of Evora, captured from the Moors in 1211, and the Knights were first called "Brothers of Santa Maria of Evora". Pedro Henriquez, an illegitimate son of his father, was the first grand master. After the conquest of Aviz the military castle erected there became the mother-house of the order, and they were then called "Knights of St. Benedict of Aviz", since they adopted the Benedictine rule in 1162, as modified by John Zirlo, one of the earliest Cistercian abbots of Portugal. Like the Knights of Calatrava in Castile, the Knights of Portugal were indebted to the Cistercians for their rule and their habit—a white mantle with a green fleur-de-lis cross. The Knights of Calatrava also surrendered some of their places in Portugal to them on condition that the Knights of Aviz should be subject to the visitation of their grand master. Hence the Knights of Aviz were sometimes regarded as a branch of the Calatravan Order, although they never ceased to have a Portuguese grand master, dependent on temporaries on the Portuguese king. At the accession of King Ferdinand (1583) war broke out between Castile and Portugal. When João I, who had been grand master of the Knights of Aviz, ascended the throne of Portugal, he forbade the knights to submit to Castilian authority, and consequently, when Gonçalvo de Guzman came to Aviz as Visitor, the knights, while according him hospitality, refused to recognize him as a superior. Guzman protested, and the point remained an object of contention until the Council of Baale (1431), when Portugal was declared to be in the wrong. But the right of the Calatravans was never exercised, and the next grand master of the Knights of Aviz, Rodrigo de Sequirol, continued to assert supreme authority over them.

The mission of the military orders in Portugal seemed to fail after the overthrow of Moesiern domination, but the Portuguese expeditions across the sea opened up a new field for them. The first landings of Europeans in Africa, the conquest of Ceuta by King João I (1415), the attacks upon Tanger under John's son Duarte (1437), were also crusades, inspired by a religious zeal, and sanctioned by similar papal Bulls. The Knights of Aviz and the Knights of Christ, acions of the Knights Templars, achieved deeds of valour, the former under the Infante Fernando, the latter under Henrique, brother of King Duarte. Fernando displayed a no less heroic forbearance during his six years' captivity in Portugal as well as among the Moors, a long martyrdom which after his death placed him among the Blessed (Acta SS., 5 June). This splendid enthusiasm did not last. Soon the whole nation became affected by the wealth that poured in, and the Crusade in Africa degenerated into mere mercantile enterprise;

the pontifical Bulls were made a vulgar means of raising money, and after the grand mastership of the order (1531) had been vested in the king in perpetuity, he availed himself of its income to reward any kind of service in the army or the fleet. If the wealth of the Knights of Aviz was not as great as that of the Knights of Christ, it was still quite large, drawn as it was from some forty-three commanderies. The religious spirit of the knights vanished, and they withdrew from their clerical brothers who continued along the conventual life. They were dispensed from their vow of celibacy by Alexander VI (1492), who tolerated their marriage to prevent scandalous consolations. Julius II (1551) again imposed their repressive laws of their own property. Nobility of birth remained the chief requirement of aspirants to the mantle, a requirement confirmed by a decree of 1604. Queen Maria I, supported by Pope Pius VI (1 August 1780), attempted a last reformation and failed. Finally, the military orders were suppressed by Dom Pedro, after the downfall of the Miguelet usurpation (1834).

AVRANCHES, DioceSE OF. See Coutances.

AVRANCHES, Council of.—In 1172 (Sept., 27-28) a council was held at Avranches in France, apropos of the troubles caused in the English Church by the murder of St. Thomas Becket. Henry II, King of England, after due penance, was absolved from the censures incurred by the assassination of the holy prelate, and swore fidelity to Alexander III in the person of his legate. It was forbidden to confer on children benefices that carried with them the cure of souls, or on the children of priests the churches of their fathers. Each parish was required to have an assistant (vicarius) and the Advent fast was commended to all who could observe it, especially to ecclesiastics.

THOMAS J. SHARP.

AVRIL, PHILIPPE, Jesuit, b. at Angouleme, France, 16 September, 1654; d. in a shipwreck in 1698. He was professor of philosophy and mathematics at Paris when he was summoned to the missions of China. Following the instructions of Father Verbiest, then at Pekin, he attempted an overland journey, and travelled for six years through Kurdistan, Armenia, Astrakhan, Persia, and other countries of the East. Arriving at Moscow, he was refused permission to pass through Tatary, and was sent by the Government to Poland, from whence he made his way to Constantinople and from there to the States. Though exhausted by harrassments he set out again on a vessel, which was lost at sea. He has left interesting and valuable accounts of his long wanderings.

T. J. CAMPBELL.
AXUM (AUXUM), a titular metropolitan see of ancient Christian Ethiopia. Its episcopal list, from about the middle of the fourth century to 650, is found in Gams (p. 462). Modern Axum is the capital of the Abyssinian province of Tigré, and nestles in a bowl, or valley, beneath a lofty peak of the Adowa mountains, at 7,545 feet above the level of the sea. Beneath it is a vast plain in which arise several streams from the Nile. "The features of the place," says a recent traveller, "are very marked; firstly one comes across the large sacred enclosure, nearly a mile in circumference, thickly planted with trees and reeds, in the centre of which rises the cathedral, surrounded by the monastic buildings and the residence of the Etchige, or bishop. This enclosure occupies nearly the whole of the entrance to the valley; beyond it on the hill slopes are the houses of the inhabitants, whilst running up the valley is the long line of stupendous obelisks and beyond is the ancient tank or reservoir from which the inhabitants still get their water supply" (Bent, The Sacred City of the Ethiopians).

The city is of great antiquity, and was, together with Adiye (Adoua on the coast) known to the Greeks and Romans as the chief centre of trade, with the interior of Africa, for gold-dust, ivory, leather, hides, and aromatics. The population is mainly mixed Ethiopian (negroid) and Arab origin, and is probably descended in great measure, from an Arab colony settled on the coast at a very remote period. The numerous Himyaric (Arabic) inscriptions in the vicinity exhibit the influence of Arabia; similarly the stone monuments which their evidences of sun and star worship. Moreover, it is well known that in the sixth century of our era the Kings of Abyssinia, then and long after resident at Axum, extended their sway over the Sabaean and Himyarite (Homerite) tribes of Yemen on the opposite Arabian shore. Greek influences are also traceable in the architecture of Axum and from a very early date, probably from the days of the Poles and Egypt. In other words, this "sacred city of the Ethiopians" has been from time immemorial an outpost of ancient civilization against the mass of African barbarism. Axum became a Christian city in the time of St. Athanasius of Alexandria, who consecrated its first bishop, St. Frumentius, still honoured as the great patron of Abyssinia; since which time (c. 330) the Abyssinian Church has remained in close dependency on the Church of Alexandria, but has maintained from Egypt its chief ecclesiastical officer, the Abouna. There is still extant (P. G., XXV, 635) a famous letter of the Emperor Constantius (337-361) to Aizanes, the King of Axum, asking him to send Frumentius to Alexandria to receive the Arian doctrine from the heretical successor, centred in the place of Athanasius. The other principal ecclesiastics resident at Axum are the above mentioned Etchige (Etchague), or principal bishop, always a native; the Nebrid, a kind of archdeacon or head of the priesthood and rector of the cathedral; the Mij Kanaat, or judge in ecclesiastical matters, together with monks and priests of various grades. There are also many persons known as deferae, described as "lay assistants to the clergy, acting as singers and performers in all the church ceremonies; the scribes, advocates, and doctors of Abyssinia and the most instructed and intelligent people of the land" (Bent, op. cit., 161).

Axum claims to hold in the inner recesses of its cathedral the original Tables of the Law and the tabout, or Ark of the Covenant that the Abyssinians say was brought from Jerusalem to their ancient fortress of Ava by Menelek, the son of Solomon, and the Queen of Sheba, and transferred later to Axum. The palace of that famous Queen is also shown at Axum. Until 1538 Axum was both the civil and religious centre of Abyssinia. In that year, it was captured by Mohammed, Prince of Leffia, since which time the Negus resides at Gondar. The cathedral is a fine edifice, and was built in the sixteenth century during the period of Portuguese influence in Abyssinia, but on the substructure of a very ancient Christian church. It has a flat roof and battlements, and there is a corridor outside where the priests dance and sing. Around the cathedral are many large shade-trees beneath which are built smaller churches or treasuries, in which are stored valuables of all kinds. Its sacred enclosure is not only the centre of ecclesiastical life, but also one of the most honoured sanctuaries in Abyssinia, where any criminal can find shelter by ringing the bell in the porch and declaring three times in a loud voice his intention of claiming asylum. The people enjoy a condition of peace and tranquility unknown elsewhere in Abyssinia (Bent, 163).

Very interesting are the numerous stone pedestals that once bore metal statues of the pre-Christian kings of Axum, memorials of victory, and the stone monoliths and obelisks, fallen or standing, estimated by Bent at about fifty. The latter form a consecutive series from very rude unhewn stones up to the highly finished and decorated obelisks, and it is highly probable that we have here the growth and development of the obelisk side by side" (Bent, 132). The only standing obelisk of the decorated kind, highly carved with shem doors and beam ends, in imitation of a many-storied edifice, is nine stories high, and ends with a semi-circular light, which is still to be seen a representation of the solar disk. "In other words," says Mr. Bent (p. 185) "we have before us a perfect representation of the Beth-el House of God terminating in the firmament, in which the Sabaean sun-god is supposed to be seated upon the Altar for animal sacrifices were fitted to the bases of these obelisks; several of them are still visible. Mounds and rubbish heaps are scattered about the sacred enclosure at Axum that doubtless contain many objects of profane and ecclesiastical interest.
Near the cathedral is a square enclosure with a pillar at each of its angles, and in the centre twelve stones that Abyssinian tradition says were for the twelve judges of the old testament. Priest John the Greek, who probably had the benefit of ancient triumphal thrones of the Kings of Axum. Among the valuable Ethiopic manuscripts found in Abyssinia in modern times is the Book of Axum, or Abyssinian Chronicles, brought back by the traveller Bruce. In 1803 the English traveller, Salt, discovered at Axum a bilingual inscription in Greek and Ghees (the religious language of Abyssinia) of which only the Greek (thirty-one lines) remains. It refers to the exploits of King Aezanes, already mentioned. In 1833 the German traveller, Dornsteng, discovered two other Ghees inscriptions, referring to the deeds of a monarch of Axum in the sixth century. These Ghees inscriptions are valuable for the history of the Semitic alphabet. Some Greek coins, older than the fourth century have been found there, also Ethiopic coins of a somewhat later date, bearing the title, "Negus al Khum", or King of the Title.

Ayer, or Guamanga, Diocese of.—A Peruvian diocese, suffragan to Lima. The See of Guamanga was erected by Paul V, 20 July, 1609, was vacant from 1821 to 1838, when it was transferred to Ayacucho. It has 200,610 Catholics; 96 parishes, 120 schools, 1140 priests, 212 churches or chapels. Battande, Ann. Pont. Cath., 1907.

Ayacucho, or Guamanga, Diocese of.—A Spanish Franciscan of the seventeenth century, and (while time and place of his birth and death are not known as yet, his memorable deeds having been overlooked and neglected until now) one of the most deserving and energetic characters of the end of that century in New Spain or Mexico. He became successively Visitor of the Province of the Holy Evangel of New Mexico, and its Procurator at Madrid; also Commissary of the Inquisition in New Spain. The decline in useful activity among the regular orders in Mexico, which began about the middle of the seventeenth century, being taken as a pretext by the secular authorities for despoothing the regulars of their missions, Ayetá became one of the most fervent defenders of the Franciscans, and he worked against the aggressiveness of the temporal powers. Three books are known to have been published by him, all without date and place; an "Apología del orden de San Francisco en América," which is supposed to have appeared about 1690; "Defensa de la provincia del Santo Evangelio de México sobre la retención de los curatos y doctrinas"; and "Ultimo recurso de la provincia de San José de Yucatan sobre depajo de parroquias". Ayetá investigated in person the most remote missions, especially those of New Mexico, and he was the first to warn the authorities of the storms preparing among the Pueblo Indians. His report, from 1678, in which he exposed the defenceless condition of the New Mexican colony as against the wild Indians, and the dangerous impression which it had made upon the Indian tribes, induced the authorities of New Spain to reinforce the garrison at Santa Fe, but it was too late. The Pueblos broke out on the tenth of August, 1680, and for fourteen years New Mexico was lost to Spain. Ayetá hurried to El Paso, and when the fugitives from the North reached that post, to the number of twenty thousand, with famished and atteneduated persons, Ayetá was the first to tender them the needed relief in food and clothing. He was a man of superior mind and indomitable energy, entirely devoted to his task and to his order.

(Mexico, 1680).—BANDIELER, History of the colonization and des misiones del Senorío de Chihuahua (Mexico, 1844); BANDIELER, Auxiliar de las indios, Annuario del Instituto de Indios de la Universidad de Mexico, 1848; and BANDIELER, Documentary History of the Zulu Tribe, in Journal Am. Arch., No. 1.

Ad. F. Bandelier.

Ayllón, Luis Vázquez de, the Spanish discoverer of Chesapeake Bay, and the navigators who tried to find a north-west passage from Europe to Asia, date of birth uncertain; d. 18 October, 1526. He was a member of the Superior Council in San Domingo. He sent an expedition to Florida under Francisco Gordillo, who, in June, 1521, landed in lat. 33° 39', somewhere near Cape Fear in North Carolina. In quest of the north-west passage, Ayllón came up from Hispaniola in 1524, and tried the James River and Chesapeake Bay. He received from Charles V a grant of the land he had discovered. and, in 1526, founded the town of San Miguel de Guaduante, not far from the site of the city of Jamestown, built by the English fifty years later. The employment of negro slaves in this work is perhaps the first instance of negro slave-labour in the present territory. After the death of Ayllón died of ship fever, and of the colony of 600 souls he had brought with him only 150 survivors made their way back to Hispaniola.

Edward P. Spillane.

Aylward, James Ambrrose, Dominican, theologian and poet, b. at Leeds, 4 April, 1813; d. at Hinckley (England), 5 October, 1872. He was educated at the Dominican priory of Hinckley, entered the Order of St. Dominic, was ordained priest in 1836, became provincial in 1830, first Prior of Woodchester in 1834, and provincial a second time in 1836. He composed several pious manuals for the use of his community and "A Novena for the Holy Season of Advent" gathered from the prophecies, anthems, etc., of the Roman Missal and Breviary (Derby, 1849). He revised (London, 1887) a "St. Catherine of Sienna", translated from the Italian by the Dominican Father John Fen (Louvain, 1609), also an English translation of Father Chocarne's "Inner Life of Lourdes" (Dublin, 1867). His essays "On the Mystical Elements in Religion, and on Ancient and Modern Spirituality" were edited posthumously by Cardinal Manning (London, 1874). Father Aylward's principal monument is his translation of Latin hymns, most of which he contributed to "The Catholic Weekly Instructor". In his "Annus Sanctus" (London, 1834) Orbey Shelley has reprinted many of them. He says of Father Aylward that he was a "cultured and talented priest of varied powers and gifts."

Thomas J. Shahan.

Ayamará, also Ayamara (etymology unknown as yet), a numerous tribe of sedentary Indians inhabiting the northern sections of Bolivia, part of the eastern declivities of the Andes of that republic, and the sections of Peru bordering upon Lake Titicaca, except its northern extremity, which is inhabited by Quechua-speaking Indians. It is not safe as yet to give their numbers, since white blood has been liberally introduced during three centuries, while on the eastern slopes, in the so-called Yungas, mixtur-
with negroes has been frequent. Still there are
certainly several hundred thousands of them, count-
ing in such mestizos (Cholos) as live according to
Indian customs. The name "Aymará" rather ap-
pplies to the language, which seems allied to the
Quechua, or prevailing Indian idiom of the Peruvian
mountains and of the southern part of the Bolivian
highlands. The Aymará are chiefly mountain-dwellers,
inhabiting the elevated table land, or Puna, between
the eastern Cordillera and the volcanic coast chain.
Limited agriculture, the raising of potatoes and
corn, and tindos of queñua (Chenopodium quinoa),
raise in the few places where it will thrive at the
general altitude of over 12,000 feet of the table
land. The raising of the llama and alpaca and of
some cattle and donkeys, are their chief occupations,
also service in the cities as journey-
men, and on the lake-shore as
stevedores. They live in tribal commu-
nities (estancias), autonom-
ous, and with executive officers (consul and a
alcaldes) whom they choose after the indica-
tions of their chief medi-
cine-men, to be afterwards con-
formed by the
 civil authorities of Bolivia. Dur-
ation of office is
six months. They pay a per
 capita tax, are
 not subject to
 military duty in
 theory, and are
 seldom required to perform any
Indians, while apparently indigent, possess no
little wealth, chiefly in coin. Some of them are
also artisans. They are nominally Catholics, but
possess a remnant of ancient spirituality, its
rituals and ceremonies, cunningly hidden from outs-
iders. In appearance stolid and humble, they are
in fact a cruel, treacherous stock, averse to every
attempt at progress, hostile to the whites, par-
ticularly to foreigners. But they sometimes make
good house servants. They were first visited by the
Spaniards in the last days of 1533, whom they re-
ceived well, owing to their hatred of the Inca tribe
of Cuzco. The latter had overrun most of the Lake
territory in the course of the fifteenth century and
established themselves on the Islands of Titicaca
and Koati (see articles) and at Copacabana on the
mainland. The relations between the Kollas—as the
Quichus call the Aymará to this day (see KOLLO)—
and the Incas were not friendly. The Spaniards
were at first treated with hospitality, as ancestors
in British America, and although these were
assassinated, they returned in greater numbers the western and
southwestern Aymará rose in arms and had to be
repressed by force. During the civil wars (1538 to
1564) the Aymará remained passive and suffered
(lie the rest of the Peruvian Indians) from the
consequences. Uprisings of extirpation, as the
Spaniards began in 1529, and local disturbances
(in many of which the Indians were at fault) con-
tinued. In 1780 a general uprising began among the
Aymará of western Bolivia, but there was no
concerted action, and although there were Peruvian
massacres, and the investment of La Paz by the
Aymará almost ended in the capture of that city,
the Indians were finally subdued in 1782. Since
then they have remained comparatively quiet.
While a necessary and important element as land-
tillers and freighters, journeymen and house servants,
they would be, on account of their numbers, a steady
help. But it is not for unity of effort for united efforts, their adherence to primitive cus-
toms preventing any submission to a common leader.
With the coming introduction of railways in Bolivia, the
Aymará will have to submit, and modify their
habits and customs.
The earliest and best description of the northern and
central Aymará is found in the Relationes per Sua Maestà,
written by Father Inigo Martínez, for the Jesuits, in 1584, by Father Francisco
Pizarro and officers, and published (in Italian) by Ramusio
in vol. III (1565).—Relación del viaje del Cuzco, 1580 (Madrid,
by JIMÉNEZ DE LA ESPADA); Chula, Parte primera de la crónica
del Perú (Antwerp, 1555); Segunda Parte (Madrid); Juan
Baptist Lesne, Sacy et Mouton de La Incas, 1551 (recent
publication at Madrid); GARCILASO DE LA VEGA, Comen-
sarios reales de los Incas (Lisbon, 1609); OVIEDO, Historia,
genral y natural de las Indias (Madrid, 1650); HERNÁN,
Historia general de los Hechos de los Castellanos en las islas
y Tierra firme del Mar Oceano (1722, etc.); ANIELLO,
Historia del Perú (Lima, without date)—this history was
written in 1561.—BERNABE COBO, Historia del Nuevo Mundo,
(Lima, 1646, Seville, 1669). Of later works see Pérou et Bolivie (Paris, 1880) and to the works of Dr. Min-
DEUTHER. Aymará edidom appears first in literature

Arte de la Lengua Aymará (1583, 1. A very rare work on the Aymará language and seldom consulted, is Tomás RUBIO, Arte de la Lengua Aymará (Lima, 1816).

AD. F. BANDELLIER.

Aymérica of Piacenza, a learned Dominican. b. at Piacenza, Italy; d. at Bologna, 19 August, 1327.
Soon after his entrance into the Lombard province of the Dominican Order, he went to pursue his studies at Milan, where he formed a close friend-
ship with Niccolò Boccasini, later pope under the name of Benedict XI (1303–04). After teaching philosophy and theology for twenty-four years he
was elected Provincial of Greece. In this capacity he travelled to the Chapter General of Toulouse in
May, 1304, where a successor to Bernard de Jusix
was to be elected, but just before the session announced his office and vote, with the consent of the
pope. That this act of humility was the cause of his election to the master generalship of the order is
the unanimous verdict of all its chroniclers. His
first care was to regulate studies in those provinces
where the opposition of the Franciscans to intel-
lectual pursuits had been most felt. He definitely
determined the qualification for degrees in the
order. Oriental languages were no less encouraged
by him than natural sciences. In 1309 Clement IV
enjoined on Aymérica who was on his way to the
chapter of Saragossa in Spain, to examine into the
matters brought against the Templars. He found
little to complain of. In 1310 he was summoned to
the Council of Vienne to take part in the process of
the Templars. In the meantime, however, he
resigned his office, and thus avoided the displeasure of
Clement IV, whose policy he perhaps deplored.
At the same time, as he candidly avowed, he was
saved from acting against the dictates of his con-
science. He is the reputed author of a treatise
against the heretics of his day, and of works on moral,
dogmatic, and scholastic questions, none of which
are known to have been published. His works are
prized by Montfaucon, "... still it can be con-
noted that the codex appears to have been
old when given to Aymeric”. As a man of letters Aymeric was in close touch with the learned men of his time. Antonio Crescenzi of Bologna completed his famous “De Re Rustica” at the repeated solicitation of Aymeric, by whom it was corrected before the author presented it to Charles II of Sicily. The letters of Aymeric are found in “Litterae Encyclopaedicae Magistriorum Generalium Ord. Præd.” (ed. Reichert, Rome, 1814) and in the 5th volume of the “Monumenta Hist. Fratr. Præd.” (181-202).

THOMAS M. SCHWERTNER.

AZARIA, Félix de, a Spanish naturalist, b. at Barbules in Aragon, 18 May, 1746; d. 1811. He first embraced the military career as an engineer, distinguished himself in various expeditions, and rose to the rank of Brigadier General in the Spanish Army. He was appointed member of the Spanish commission sent to South America, in 1781, to settle the question of limits between the Portuguese and Spanish colonies. He remained in South America till 1801. While there he turned his attention to the study of mammals, less as an anatomist or physiologist than as an observer of the life and habits of quadrupeds. He added a large number of statements obtained by hearsay, were not always favourably criticized, but to-day the perspicacity of Azaria as a student of the life of South American mammals is generally acknowledged. He also extended his investigations to birds. Before leaving South America he sent to Paris (then Spanish Ambassador at Paris) many notes and observations of a zoological nature, which Moreau de Saint-Méry published at Paris in 1801 under the title of “Essai sur l’histoire naturelle des quadrupédés du Paraguay”. In 1802 there appeared at Madrid “Apuntamientos para la Historia natural de los cuadrúpedos del Paraguay y Río de la Plata”. In the same year Azaria published “Apuntamientos para la Historia de los pájaros del Paraguay y Río de la Plata”. In 1809 there appeared at Paris under his name “Voyage dans l’Amérique méridionale depuis 1781 jusqu’en 1801”. In the latter work he criticizes the Jesuit methods of organizing and educating the Indians, showing that he completely failed to understand the nature of the American aborigines. While an efficient soldier and good engineer, as well as shrewd observer of animal life, was incapable of understanding the character of the Indian, and of grasping the only method by which the Indian could slowly but surely be civilized.

Geografía física y estética de las provincias del Paraguay y misión de Guaranis, compuesta en el año 1790 (Montevideo, 1904, with portrait and biography by Schüller); Técnicas para la Reconstrucción (St. Gall, 1846). 1st. Fauna peruana; 2d. Fauna ecuadoriana; 3d. Fauna boliviana; 4th, Das Thierleben (3d ed.); and the works of Azaria were enumerated in articles.

AD. F. BANDELIER.

AZARIA, Aristaces, a Catholic Armenian abbot and archbishop, b. at Constantinople, 18 July, 1782; d. at Vienna, 6 May, 1854. He was sent at the age of fifteen to the College of the Propaganda in Rome, but his studies were interrupted (1798) by the French invasion. Having taken refuge among the Machitarists of Triest, they entered their order in 1801, and in the same year was ordained priest. The authorities of the ephemeral Kingdom of Illyria confiscated (1810) the property of his convent, and, after vain attempts to obtain restitution, the monks settled in Vienna, where they lived in the instruction of Armenian youth and the revenue of a printing-press. Azaria was henceforth active as a missionary among his compatriots and a servant of the Holy See. In 1826 he was made general abbot of the community, and in 1827 was raised to the (titular) dignity of Archbishop of Cessarea. Under him the Machitarist community in Vienna prospered, its library was increased, a bookstore added to the printing-press, and an abundant religious literature created, in Armenian and in German. He opened houses of his community in Rome, Triest, and Stamboul, founded the Armenian journal “Europa”, established an academy for the literary and political improvement of his people, and obtained from the Pasha (1830) the creation of an independent Catholic Armenian patriarchate. He wrote several (mostly anonymous) works, among them “De Vita Comuni Perpetui Religiosorum Utriusque Sexus”, in which he criticizes the condition of many Austrian religious houses, and “Die Erziehung im Geiste des Christenthums” (Vienna, 1839). After a visit to Rome (1850) in the interest of monastic reform, he returned to Vienna (1852) where he died after the celebration of his golden jubilee.

HERGENRÖTH in Kirchenle., 1, 1768.

THOMAS J. SHAHAM.

AZARIAS, Brother (Patrick Francis Mullaney), educator, essayist, littérateur, b. near Killenaule, County Tipperary, Ireland, 20 June, 1847. His education began at home, and after the removal of his family to Deerfield, N. Y., U. S. A., was continued in the union school of that place, and subsequently in the Christian Brothers’ Academy at Utica. Believing himself called to the life of a religious teacher, he entered the novitiate of the Brothers of the Christian Schools, in New York City, on the 24th of February 1862. He taught in Albany, New York City, and Philadelphia until 1866, when he was called to the professorship of mathematics and natural science in Rock Hill College, Ellicott City, Md. Gradually his interests were diverted from mathematics and were absorbed by literature and philosophy, which, with pedagogy, continued to hold him until the end of his career. From 1879 to 1886 he was President of Rock Hill College. Then followed two years of research in European libraries, chiefly those of Paris and London. On his return to the United States, he became professor of literature in De La Salle Institute, New York City, and remained such till his death at the Catholic Summer School, Plattsburgh, 20 August, 1893. The funeral services held in St. Patrick’s Cathedral, New York City, gave ample testimony to his widespread influence and to the esteem in which he was held.

The secret of his success is to be found in his deep reverence for the apostolate of teaching, a reverence which found expression beyond the walls of the class room. He was a frequent contributor to the “Catholic World”, the “American Catholic Quarterly Review”, and the “American Ecclesiastical Review”, and his name appears in the files of the “Educational Review” and of the “International Journal of Ethics”. His lectures bore the stamp of culture and scholarship. The most notable are these:—

“The Psychological Aspects of Education”, delivered before the Regents’ Convocation, University of the

Azevedo, Luiz de, Ethiopic missionary and scholar, b., according to the more probable narration of Franco (Imagem da Vertudo em o Noviciado de Coimbra, 359-61), at Caramedo Montenegro, in the Diocese of Braga, Portugal, in 1572; d. in Ethiopia in 1634. He became a Jesuit in 1588, and sailed for the Indies in 1592. In 1605 he began his missionary labours in Ethiopia, where he remained until his death. Azevedo was called the Apostle of the Abyssinians, and is justly reckoned as one of the Doctors of the Church of Ethiopia, to which he claimed many schismatic. He translated into Chaldaic the commentaries of Father Toleiatus on the Epistle of St. Paul to the Romans, and the Book of the Psalms of Francis Ribiers, on the Book of the Hebrews; the "Canonical Hours," the "Office of the Blessed Virgin Mary," and other works. He is the author of a grammar of the Ethiopian language, and translated into the same tongue the New Testament, a Portuguese catechism, instructions on the Apostles' Creed, and other books of the same nature.

Sommervogel, Biblioth., VIII, 73; Teixeira, Hist. da Biblioth.; Alta, 206, 515, 527; Verga, Relaciones G., 44; Joseph M. Woods.

Azor, Juan, b. at Lorca, province of Murcia, Southern Spain, in 1535; entered the Society of Jesus, 18 March, 1559; d. in Rome, 19 February, 1603. He was professor of philosophy and later of theology, of dogmatic and moral, at Placentia, Alcalá, and Rome, and was a member of the first commission appointed by the Father General Acquaviva to draw up the "Ratio Studiorum." Father Azor was a man of wide and solid learning, deeply versed in Greek. He devoted himself not only to his special branch of theological science. His chief title to general remembrance rests on his classical work on moral theology, in three folio volumes: "Institutionum Moraliae, in quibus universae ques-

The following chapters are concerned with the spiritual sense of three great masterpieces, "The Imitation of Christ," the "Divina Commedia," and the "In Memoriam," each of which, to quote his own words, "expresses a distinct social and intellectual force." This volume is among the most admired of his writings for thought, style, and method.

Of his minor works the most charming is "Mary, Queen of May," which he wrote for the "Ave Maria." It exhales the faith and trust of a devout client, and reveals those finer qualities of head and heart which bound Brother Azearias so firmly to his order and won him so many friends. After his death Critic of his contributions to periodicals were gathered and published in three volumes, viz. "Essays Educational," "Essays Philosophical," and "Essays Miscellaneous." (1869). The first of these includes the lectures delivered at the Catholic Summer School, just before his death; the second reprints as its most notable paper the lecture on "Aristotle and the Christian Church," adding thereto the "Nature and Synthetic Principle of Philosophy", the "Symbolism of the Cosmo", "Psychological Aspects of Education," and "Ethical Aspects of the Papal Encyclical on Capital and Labor." The remaining numbers two are literary in subject, and the third is also found in "Phases of Thought and Criticism."
tions ad conscientiam recte aut prave factorum pertinentes breviter tractantur pars 1mae, the first volume of which appeared at Rome in 1600, the sec-
on six years later, and the last in all the Continental seats of learning, and was honoured by a special Brief of Clement VIII. Numerous editions were brought out at Brescia, Venice, Lyons, Cologne, Ingolstadt, Paris, Cremona, and Rome. The work continued to hold its lofty position during the suc-
ceeding centuries, was strongly recommended by Bossuet in his synodal statutes, and was held in highest regard by that master in moral theology, St. Alphonsus Liguori. Gury speaks of Father Azor as "a moderationi Praestabilior, in wisdom, in depth of learning and in gravity of judgment taking deservedly high rank among theologians". There are extant in MS. other works by Father Azor; in Rome, in the Jesuit archives, a commentary on the Canticle of Canticles; at Wurzburg, an exposition of the Psalms, and at Alcalá several theological treatises on parts of the "Summa" of St. Thomas.

SOMMERVOGEL, Bds. de la comp. de J.; HURTER, Nomen-
ciator, I, 252.

ARThUR J. McCaFFRAT.

AZORES (Portuguese Açores, "Paloena"), an archi-
pelago situated in that tract of the Atlantic Ocean which is known to mariners as the Sargasso Sea. The islands lie, approximately, from S. E. to N. W., in the middle of the quadrangles of the 37th and 40th parallels of north latitude and the 24th and 32d meridians of west longitude. Their distribution may be considered as forming three sub-
groups: the relatively large islands of São Miguel and Santa Maria, to the extreme south-east; Fayal, Pico, São Jorge, Terceira, and Graciosa about midway; Terce-
ira being about 880 geographical (1012 English) miles from the Portuguese coast; Flores and Corvo on the extreme north-west. These nine islands, aggregating in area about 922 square miles, vary greatly in size, from São Miguel, with an area of 285, to Corvo, with an area of not more than 5 square miles. The For-
miga and other tiny islets throughout the archipelago are of no importance except as perils to navigation.

Physically, the Azores are in general characterized by the bold and irregular conformation usually found in islands of volcanic origin. The snow-capped volcano which is the predominating feature of Pico rises to a height of 8500 feet; the Vara, in São Miguel, is more than 5500 feet; but the craters of the Sete Cidades volcano, also in São Miguel, is said to be more than 866 feet above the sea level. The volcanic character of these islands is also unmistakably shown by the recurrence in their mountain-formations of more or less extinct craters (locally called caldeiras— "kettles"), one of which, the Caldeira of Graciosa, forms a steaming lake of pitch. Almost all the islands contain mineral springs, the best known of which are in São Miguel, Terceira, Graciosa, and Flores. As might be expected, the Azores are specially subject to earthquakes; in 1522 the city of Vila Franca, in São Miguel, was destroyed, when it is said, 6000 of its inhabitants, by an earthquake, and another earthquake, in June, 1811, is memorable for the birth, about two miles off the coast of São Miguel, of the little island which was named Sabrina afte the month in which it was born. The like was reported, the phenomenon. The climate, though mild and equable, is extremely humid, the number of rainy days in the year averaging about 183, or not far from 50 per cent, and producing a rainfall estimated at very nearly 98 inches; snow is not found, except on the highest mountains; the recorded mini-
mum temperature is about 39 F., the maximum only 81 F. (very exceptionally as high as 86 F.), and the mean for all seasons 63 F.

HISTORY.—The existence of this archipelago was not generally known to the inhabitants of Europe before the fifteenth century of our era, although there is evidence that Phenician, Scandinavian, and Arab navigators visited these shores. In 1432 the Portuguese, Gonçalo Velho Cabral, dis-
covered the island of Santa Maria, and by the year 1457 all the islands had been visited by either Portuguese or Flemish explorers, none of whom found any aboriginal inhabitants, wild or domesticated reptiles. In 1466 Affonso V of Portugal granted to the Duchess Isabel of Burgundy, his aunt, some sort of feudal privilege in the Açores, in consequence of which the colonists for some time were mostly Flemings, and the Portuguese themselves in these days called the islands As Ilhas Fluminicas (the Flemish Islands). The first Portuguese colonies of any importance in the Açores were those of São Miguel, and Terceira, and at the end of the fifteenth century a certain number of the Moors, driven from Granada by Ferdinand and Isabella, took refuge in the islands.

It was not until 1534 that the ecclesiastical organ-
ization of the Açores was effected. Until then they had been under the jurisdiction of the Grand Prior of the Order of Christ. The decree dated 5 November, 1534, immediately after that pontiff's accession to the Apostolic See, formed a diocese with its metropolis at Angra do Heroísmo. In the island of Terceira, to include the whole of the archipelago formed, then 200 miles, to that of Funchal, but in 1547 it was removed from this jurisdiction and placed under that of the then Archiepiscopal (now Patriarchal) See of Lisbon. From 1580 to 1640 the Açores, like the rest of the Portuguese dominions, had to submit to the rule of Spain, and during that period the neighbouring waters were the scene of many hard fights between the Spanish and the English sea-rovers. The commercial prosperity of the islands declined after the recovery of Portuguese independence and the accession of the House of Braganza in 1640. The city of Angra at-
tained some slight historical notoriety in 1662, when Affonso VI, deposed by his brother Dom Pedro, was imprisoned there. Material prosperity began to be restored in the Açores immediately after the period of the French invasion of the Peninsula and the flight of João IV to Brazil (1807), when the former restrictions of commerce were removed. In the Portuguese revolution of 1828-33, the Açorean popula-
tions took a decided stand against the absolutist policies of the king; at the same time the inhabitants are on a legislative and fiscal equality with those of the Portuguese mainland, being regularly represented in the Cortes at Lisbon. The total population of the archipelago in the year 1900 was 256,291 (i.e. 277.9 and Arxan navigators visiting the island at different periods, including the production of wine. Most of the wine produced in the archipelago comes from the island of Pico, and, under the name of Fayal wine, derived from the port whence it was shipped, used to be famous in bygone days. The area exclusively de-
the Nahua1 linguistic stock which occupied aboriginal Mexico, in more or less contiguous groups, at the beginning of the sixteenth century, when the Spaniards first came into contact with them. The Mexico proper held only a group of islands about the centre of Lake Texcoco, and one or more settlements on the shore. In 1519 the tribe numbered about thirty thousand souls of all ages and sexes, and was able to put into the field eight thousand warriors. By far the greater part of the population was concentrated in the central settlement called Temoctitlan (from teotl, "stone", now Teotihuacan, "place", or "site"), which was founded, as is generally admitted, about the year A. D. 1325. Until their settlement upon the lake, the history of the Mexican tribe is uncertain. Data, in the shape of picture-writings, are fragmentary. As such, they were executed in the sixteenth century by Indians, under the impulse of the viceroys or of ecclesiastics. These documents record constant shifting of the tribe from points which are as yet undetermined, like Aztlán (the land of the Heron) and Chicomostoc (Seven Caves). These places are by most authorities located north of Mexico, and some colour is given to the assumption by the relationship traced between the Nahua1 language of Mexico and Nica- raguan and the Shoshonean idioms of the American north-west.

The Mexicans were the last of the Nahua1-speaking Indians to reach the shore of the great Lake of Mexico. They found the valley occupied by several tribes of the same stock, and were received by these tribes in a friendly spirit. In the intrusive distinction made among these tribes for a number of years, and exposed to great sufferings, the feeble remnants of the Mexicans finally sought refuge on some sandy patches that protruded into the middle of the lake, and here they found, if not absolute, at least comparative, security. While in the beginning they had to subsist on aquatic food (fish and insects), they began to slowly increase in numbers. There being little space for tillage, they imitated a device in use among the tribe of Chalcó; the construction of rafts which they covered with soil, and thus secured vegetable diet. Timber being obtainable only on the mainland, they resorted to adobe for the construction of shelters, and a settlement was gradually built up which gave promise of stability. Soon after their establishment in the lake the Tlaltelolco tribe was divided into two groups; one of these was Tenochtitlan, the other bore the name of Tlaltelolco. Each of them having its own government, hostilities became inevitable, resulting in the defeat of the Tlaltelolco people. For some time after the last battle, they were held in a kind of servitude, until mutual recentment commenced to wear off. The overthrow of Tlaltelolco took place at the beginning of the fifteenth century, which is as near a date as we venture to assign, too close precision in dates previous the conquest not being advisable as yet.

In the meantime, the other tribes speaking the Nahua1 idiom, who were established on the mainland (Tecuaco, Tlacopan, Atzcapozalco, Xochimilco, Chalcó, etc.), alternately at peace and at war with each other, had not paid much heed to the Mexicans. About the time of the overthrow of Tlaltelolco, the Tecapanecs of Atzcapozalco obtained decidedly the upper hand and exacted tribute and servitude of their neighbours. They finally attempted to overrun the Aztecs also, but the latter, after a short time, but the latter, directed by their war-chief, Motecuzoma Ihuicamina, and his colleague, the Chihuacohtli Tlacaelel, formed an alliance with the tribes of Tecuaco and defeated the Tecapanecs, retaining them to a measure in their former valley. Out of this alliance arose, in the middle of the fifteenth century, a formal league between the Mexicans, the tribe of Tecuaco, and that of Tlacopan.
offensive and defensive, after the manner of the
"League of the Iroquois". The events preceding the
two great revolts of 1517 and 1520, which followed the
death of Ahuitzotl, are too involved and confused to
be properly summed up here. It is enough to say
that both the Acolhuas and the Mixtecas were involved
in the dispute, and that in the end the Acolhuas
prevailed. The Mixtecas, on the other hand, were
materially benefited by the struggle, for they
were able to extend their influence into the
areas of the Popocapan in the south, and even
as far as the Mixteca Pueblos in the north. The
Acolhuas, on the other hand, were forced to
retreat into the mountains, and to rely on their
own resources for survival. The result of this
conflict was a strengthening of the Mixteca
power, and a weakening of the Acolhua
position. The Mixtecas continued to expand
their influence, while the Acolhua were
forced to retreat further into the mountains.

The Acolhuas, in turn, turned their attention to
the other tribes of the region. They were
particularly interested in the tribes of the
Valle de Oaxaca, which were located in the
northwest of the region. The Acolhuas
attacked these tribes, and were able to
conquer them with relative ease. The
Acolhuas were able to establish a
network of alliances with the various
tribes of the region, and were able to
maintain their position as the dominant
power in the region. The Mixtecas, on

with cloth and ornaments. To the idols human victims were sacrificed in various ways, and, relatively, in large numbers, although it is scarcely possible that more than hundreds—not thousands as reported—should have been slaughtered annually. The victims were obtained in warfare, and also formed part of the tribute imposed upon conquered tribes. Aside from these cruel executions, the Shamans subjected their own persons to not less cruel tortures and to severe penance.

A certain education was given to the male youth in special buildings connected with the houses of worship and called Telpuchcalli (Houses of the Youth). That education consisted in the rehearsal of ancient songs and the use of trances. For counting, and for the preservation of historic memories, as also for tribute, pictographs, executed on a thin paste of maguey fibre spread over delicate pieces of tanned hide, were sometimes used. These paintings could indicate numbers (by dots and symbols), names (figures related to the meaning of the word), dates (dots and signs), and events (one or more human figures in action). Besides, they had two distinct calendars, the origin of which seems very ancient. Their great cycle was of fifty-two years subdivided into four periods, of thirteen years each. The years were named Teochli (Rabbit), Acal (Reed), Tecpatl (Flint), and Calli (House), and these four names were repeated thirteen times in the great cycle. The month consisted of twenty days, named and figured after the same method. They had also a ritual calendar, of twenty periods of thirteen days each, and for ceremonial purposes only. Their numeration went from one to twenty, from twenty to four hundred, eight thousand being the highest figure having a symbol (Xypulli, a bag, or sack). Their knowledge of heavenly bodies was limited, they knew the bisextile, and used a rude correction, but had no astronomical instruments. Neither had they any conception of the angle as a means of measuring. Dress and adornment were elaborate, in official functions; otherwise, the costume was simple, of cotton, with sandals and without trousers. The head was bare, except in the case of chiefs and some of the Shamans. Ornaments were of gold, silver, and bright stones, mostly turquoise, the stones being esteemed for colour or brilliancy only. Gold was obtained as tribute, also silver. They knew how to fuse the metals by means of the blowpipe. They used copper and an accidental bronze, but no iron. Obsidian played an important part, being the material for edged tools and mirrors. They had no currency, gold and silver were only for ceremonial and personal decoration.

The buildings of Tenochtitlan were of adobe (sun-dried bricks). The houses were mostly low, but wide; the places of worship small and dingy chapels, erected on the tops of huge altars. moulds of earth encased in stone work. These moulds (teo-calli, houses of the gods, or spirits) occupied the centre of the settlement, and contained some sculptures remarkable for size and elaborateness. The teo-calli were also citadels to the otherwise unprotected pueblos. The several causeways built from Tenochtitlan to the mainland, were very creditable achievements. Tenure of lands was communal, without private ownership, each clan holding a certain area, distributed for use among its members. Agricultural implements were provided by the State. Village was of secondary importance to a tribe essentially lacustrine, and which relied chiefly upon warfare for its subsistence. Together with their confederates of Teczuo and Tlacopan, the ancient Mexicans, or Aztecs, lived by preying on their enemy, plundering or levying tribute. They had no thought of founding a state or nationalities. Commerce was carried on, even with tribes that were hostile, and it sometimes gave a welcome pretext for aggression. Of domestic quadrupeds they had only a species of the domestic dog. Like all Indian towns, Tenochtitlan had a large central market-place (franquiz), the extent and resources of which have been considerably exaggerated, as well as most other features of so-called Indian civilization.

But while the more recent works of Roberton, History of America, and Freerott, History of the Conquest of Mexico, are most favorably known and have a large circulation, the sources should be consulted critically. As an accumulation of references to original sources, Hubert H. Bancroft, Native Races of the Pacific States (New York, 1876), and History of the Pacific States are very valuable. Eye-witnesses of the conquest like Hernando Cortés, Cartas de Relación, and the sources in tlamoso are of great importance, but should be treated with circumspection as interested reporters. Important also are Gevino Fernao Landa y Vasén, Historia general y moral de las Indias, III (1853); Francisco López de Gomara, conquistador de México, Segunda Parte de la Crónica general de los Indios (1564); besides, for the history of the Aztecs, or Mexicans, and their degree of culture, the work of ecclesiastics and missionaries; the household of Mina; Cerrón de Mendieta, Historia eclesiástica indiana, also of Juan de Torquemada, Monarquía indiana (1729); and first rank: Camargo, Compendio de la historia de los indios de México (1892); Zurita and Pomar, Nuevo colección de documentos para la historia de México (Mexico, 1840); and Samuel Badin, Historia general de las cosas de Nueva España (Mexico, 1826), deserve careful attention. Lastly we refer to Father Diego Durán, Historia de los indios de Nueva España (Mexico, 1867); to Tresomoco, Crónica mexicana (Mexico, 1878); and to the so-called Codices Rurmes, written by the Jesuit Juan de Torab, and printed, in the same volume as the work of Tresomoco, Fernando de Alba, Filosofóchol, Relaciones históricas and his Historia de los Chichimecas, antiguos Reyes de Tetzoco (both in Lord Kinrossborough's Antiquities of Mexico) also belong to the same period, the sixteenth century, and were also published much later. In the eighteenth century, Vértia y Echeverria wrote a compendious Historia antigua de México (1800), and Claveria has written Historia de México, of which many editions and translations have appeared. The voluminous collections entitled: Colección de documentos indios del Archivo de Indias, and Colección de documentos para la historia de España, contain many documents of great interest. All these sources should be treated with great caution and make use of from a specifically ethnological standpoint. They are all valuable, but suffer from the failings of all knowledge, and from the inevitable shortcomings of the personal elements. Literature on the New World began to be issued very soon after the introduction of the printing press in Mexico, that is, after 1535-36.

Azymes (Gr. ἁζῶν, without leaves; Heb. marcoh), unfermented cakes used by the Jews in their various sacrifices and religious rites (Ex., xxix, 2, 23; Num., vi, 15, 17, 19; Lev., ii, 4; vi, 16-17; vii, 12; viii, 2, 26), as commanded by the Law (Ex.,
The use was also prescribed for the Feast of the Passover (Ex. xii, 8, 15; xiii, 5, 6, 7; Num., ix, 11; Deut. xvi, 3, 5; John xii, 1), on account of which they could be prepared, they were also made in ordinary life for unexpected guests (Gen., xviii, 6; Judges, vi, 19–21, etc.) and in times of necessity, e.g., at the time of the Exodus (Ex., xii, 34, 35), whence the name, "the month of unleavened bread" (Deut. xvi, 14). The unleavened bread is the type of sincerity and truth. Unleavened cakes were especially used for the Feast of Azymes, also called the "solemn feast" (Num., xxviii, 17). This festival was instituted to commemorate the deliverance of the Egyptian bondmen (Ex. xii, 17; xiii, 3–10). Its observance began on the fifteenth of Abib, or Nisan, "the month of new corn", and continued seven days, the first and last of which were specially solemn (Ex., xii, 15–18; xiii, 7; Lev., xxii, 6–8, etc.). No other but unleavened bread was allowed during the whole feast. Although originally distinct, the Feast of Azymes and the Feast of the Passover are often treated as one and the same (Deut., xvi, 16; Matt., xxvi, 17; Mark, xiv, 1; Luke, xxii, 7).

Green, The Hebrew Feasts (New York, 1889); Schulte, Old Testament Theology, tr. (Edinburgh, 1905).

F. X. E. Albert.

Asymites (a privative and Nax, leaven), a term of reproach used by the schismatic Greeks since the eleventh century against the Latins, who, together with the Armenians and the Maronites, celebrate the Holy Eucharist with unleavened bread. Since reviling is apt to beget reviling, some few Latin controversialists have retorted by assailing the Greeks as "Fermentarians" and "Prozymites". There was, however, but little cause for bitterness on the Latin side, as the Western Church has always maintained the validity of consecration with either leavened or unleavened bread. Whether the bread which Our Lord took and blessed at the Last Supper was leavened or unleavened, is another question. Regarding the usage of the primitive Church, our knowledge is so scant, and the testimonies so apparently contradictory, that many theologians have pronounced the problem incapable of solution.

Certainly it is that in the ninth century the use of unleavened bread had become universal and obligatory in the West, while the Greeks, desirous of emphasizing the distinction between the Jewish and the Christian elements of the Eucharist, when Renan has expressed that Photius, so alert in picking flaws in the Latin Liturgy, made no use of a point of attack which occupies so prominent a place in the polemics of the later schismatics. The obvious explanation is that Photius was shrewd and learned enough to see that the position of the Latins could not successfully be assailed. Two centuries later, the quarrel with Rome was resumed by a patriarch who was troubled with no learned scruples. As a visible symbol of Catholic unity, it had been the custom to maintain Greek churches and monasteries in Rome and some of Latin Rite in Constantinople. In 1053, Michael Cerularius ordered all the Latin churches in the Byzantine capital to be closed, and the Latin monks to be expelled. He declared that the silent rupture with the past, he advanced the novel tenet that the unleavened oblation of the "Franks" was not a valid Mass; and one of his chaplains, Constantine by name, with a fanaticism worthy of a Celvinist, tore the consecrated Host under the declaration of war with the Pope, and the West was drawn up by his chief lieutenant, Leo of Achrida, Metropolitan of the Bulgarians. It was in the form of a letter addressed to John, Bishop of Trani, in Apulia, at the time subject to the Byzantine emperor, and by decree of Leo the Isaurian attached to the Eastern Patriarchate. John was commanded to have the letter translated into Latin and communicated to the Greek patriarch and the Western bishops. This was done by the learned Benedictine, Cardinal Humbert, who happened to be present in Trani when the letter arrived. Baronius has preserved the Latin version; Cardinal Hergenrörther was so fortunate as to discover the original Greek text (Cursus Ill, Will, Anita de Schulte, 51, etc.). It is a curious sample of Greek logic. The love of God and a feeling of friendship impelled the writers to admonish the Bishops, clergy, monks and laymen of the Franks, and the Most Reverend Pope himself, concerning their azymes and Hebathas, which were unleavened, as being Jewish observances and instituted by Moses. But our Pasch is Christ. The Lord, indeed, obeyed the law by first celebrating the legal pasch; but, as we learn from the Gospel, he subsequently instituted the new pasch. He took bread, etc., that is, a thing full of life and spirit and heat. You call bread panis; we call it arto (ἀρτος). This from airō (ἀερίω), to raise, signifies a something elevated, lifted up, being raised and warmed by the fire, and salt; the azymes, on the contrary, are lifeless as a stone or baked clay, fit only to symbolize affliction and suffering. But our Pasch is replete with joy; it elevates us from the earth to heaven even as the leaven raises and warms the bread", etc. This etymological manipulation of azymes from our juridical discussion as valuable in the controversy as Melachthon's discovery that the Greek for "penance" is melanōia. The Latin divines found an abundance of passages in Scripture where unleavened bread is designated as arto. Cardinal Humbert remembered immediately the places where the unleavened loaves of proposition are called artoi. If the writers of the letter had been familiar with the Septuagint, they would have recalled the aorite anzymous of Ex., xxix, 2.

To Cerularius the exegetical merit of the controversy was of minor importance. He had found an effective battle-cry, well calculated to infuse into the breasts of his unreasoning partisans that hatred and defiance of the Latins which filled his own breast. The flour and water wafers of the "Franks" were not bread; their sacrifices were invalid; they were Jews, not Christians. Their lifeless bread could only symbolize a soulless Christ; therefore, they had clearly fallen into the heresy of Apollinaris. By arts like these, the unfortunate Greeks were seduced from their orthodoxy to this heresy, and the Church of the East, which was precipitated which centuries have not yet healed. It is interesting to notice that this question of azymes, which brought forth a cloud of virulent pamphlets and made a deeper impression on the popular imagination than the abstruse controversy of the Filioque, caused little or no discussion among the theologians at the Councils of Lyons and Florence. At the latter-Council the Greeks admitted the Latin contention that the consecration of the elements was equally valid with leavened and unleavened bread; it was decreed that the priests of either rite should conform to the custom of their respective Church. Modern Russians have claimed for their nation the dubious honor of having opened this crusade against the Latins; but in justification described to Leontius, Bishop of Kiev, who lived a century earlier than Cerularius and in which all the well-known arguments of the Greeks are rehearsed, are judged to have proceeded from a later pen.

James P. Loughlin.
Baader, Franz Xaver von, German philosopher, was born at Munich, 1765; d. at the same place, 25 May, 1841.

I. The idealistic stream of German philosophy which started with Kant and culminated in two divergent branches, in Hegel and Schopenhauer, emanated from the side of opposing currents of empirical realism setting back from Herbart, and on the other a partly reactionary, and yet partly concurrent movement originating in certain Catholic thinkers. Prominent among the latter was Baader.

Having entered the University of Ingolstadt at sixteen and taken his doctorate at nineteen, he continued his medical studies two years longer at Vienna and then assisted his father, who was court physician. He soon gave this up, however, for mining engineering and after considerable travel in Germany he spent about five years in England (1791-96), where he became acquainted with the mysticism of Böhme and with the extremely opposite empiricism of Hume and Hartley. The work of William Godwin, "Enquiry concerning Political Justice," not only called his attention to moral and social questions but also led him to German philosophy, especially to that of Kant.

Baader had a temperamental sympathy for the German Protestant mystic Böhme, but for Kant's philosophy, especially its ethical autonomism, viz.: that human reason alone and apart from God is the primary source of the supreme rule of conduct, he had nothing but disgust. This he called "devil's morality" and fiercely declares that were Satan visibly to reappear on earth it would be in the garb of a professor of moral philosophy. For the English sceptics he had both a natural and an acquired aversion. Reared and educated as a Catholic, though holding some decidedly un-Catholic notions, he could find no satisfaction in reason divorced from faith. Passing through Hamburg on his return from England he met Jacoby, with whom he long lived in close friendship. Schelling likewise counted him as a friend and owed to him some of the mystical trend of his system. On his return to Germany Baader was made Superintendent of the Bavarian mines and was subsequently raised to the nobility for his services. He was awarded a prize of 12,000 guineas given by the Austrian Government for an important discovery relating to the use of Glauber salts instead of potash in the manufacture of glass. Retiring from business in 1820 he soon afterwards published his "Fragmenta Cognitionis" (1822-25), and at the opening of the University of Munich, in 1826, he was appointed professor of speculative theology. His philosophico-religious lectures (published as "Speculative Dogmatik", 1827-38) attracted much attention. In 1838, however, a ministerial order prohibiting laymen from lecturing on such subjects obliged him to restrict himself to anthropology. Vigorous in body and in mind he pursued his intellectual work until his final illness.

II. Baader's "Tag und Studien Bücher" (Diary), printed in the first volume of his works, affords an insight into the vicissitudes of his mind and the development of his ideals. It was primarily to his early religious training under his domestic tutor, Salz, and later under the Bishop of Munich, that he owed the convictions with which he combated the prevailing rationalism by appealing to innate experience and the subjective necessity of faith. Religious reading supplemented by prayer strengthened his natural tendency towards mysticism. Then, too, his eagerness to comprehend Christianity more thoroughly than the rationalistic theology succeeded in doing—the hope of finding the key, as he says, to the world of mind by putting himself in direct correspondence with the ideal—drew him, in an age poor in positive thought, towards a mental structure which had combated, if not successfully, at least with earnestness and good intent, both the German and the French rationalism. Saint-Martin's "Philoelosophie inconnu," which fell into his hands in 1787, carried him back to Böhme and thence to the whole theosophic tradition which this German mystic had given to the modern world—to Paracelsus, Meister Eckhart, Erigena, the Cabbala, and the earlier Gnostics. He encountered on his way back to the past a tangible theology, notably in the works of St. Thomas upon which he comments in his Diary, but also in the Fathers and especially in the Bible.

Since, however, it was alien doctrine which had led him to the Catholic, the authority of the latter remained more or less confounded with that of the former. Moreover, his study of the English empiricists and of Kant's rationalism gave a critical cast to his thought if it did not add to his ideas. In placing theonic speculations at the basis of his physical and moral ideas, and in seeking from mysticism an answer to the riddles of the universe, he thought to reach a solution of the fundamental problems of his time and realize the dream of his youth—a religious philosophy. Joining the contemplations of mysticism to the exactness of criticism he endeavoured to justify the appeal to both. Mysticism was to fructify criticism and criticism authorize mysticism. He aimed thus at opposing the negative with a positive rationalism. The transcendental truths (metaphysical, and especially theological concepts declared unknowable by Kant) were to find their justification and verification in the human, but at the same time Divinely impressed, consciousness. Reason and feeling separated by Kant were reunited by Baader. Jacoby's appeal to emotion for the certitude of transcendental truth Baader saw to be, at best, but a negative, an irrational, escape, while Fichte, by making such truth the creation of the Ego, failed to account for the Ego itself. The Hegelian logomachy of the Ego and the non-Ego could no more satisfy Baader than could Schelling's assertion of the absolute identity of subject and object. He had always, from the start, the sterility of Schelling's principle and had confuted its pantheism.

Baader's aim was a theistic philosophy which would embrace the worlds of nature and of spirit and afford at once a metaphysical solution of the problem of knowledge (science) and an understanding of the Christian idea and the Divine activity as manifested by revelation. Whatever be thought of this ambitious endeavour, and the Catholic student must recognize its variance both with philosophy and theology, Baader's system surpasses both in depth and in breadth all the other philosophies of his time. He owes this pre-eminence not only to a deeper penetration, but likewise to a broader survey which embraced and estimated many of the facts and truths of Christianity and the system of the catachresis, but unfortunately the false mysticism derived from Böhme led him into a fanciful interpretation of the mysteries of faith, while his attempt at rationalizing those mysteries was often hardly less bizarre. His system, therefore, if it may so be called, had the misfortune,
on the one hand, of being ignored because of its purpose to synthesize Christian faith and revive the old philosophy and theology; and, on the other, of being rejected because it disfigured Christian teaching by its rationalizing spirit. It consequently may be said to have exercised an influence, rather than an extensive and definitive, influence on the movement of thought. English sensism having resulted logically in scepticism, and Kant's critical effort to save some certainty by purely subjective scrutiny having hopelessly lost the mission in its own spinning, Baader saw that the only salvation lay in a return to the traditional line of philosophy which had been broken off by Descartes. Unfortunately in resuming that line Baader unwound some of its essential strands and inwove others of less consistent fibre wherewith the remaining threads would not cohere. But in this very harking back to a saner past Baader was influential in hastening the healthier revival which was more definitely effected by his countrymen Kleutgen and Stöckl. Moreover, in so far as Baader opposed the prevailing rationalism and defended Christian truth, his influence is declared by so unprejudiced a writer as Robert Adamson to have extended beyond the precincts of Baader's Church. Rothe's "Theologische Ethik" is thoroughly impressed with his spirit, and no other, Müller's "Christ. Lehre von der Sünde" and MartinSEN's "Christ. Dogmatik" show evident marks of his influence.

III. It is extremely difficult to give any satisfactory conception of Baader's system within narrow limits. Baader was a most fertile writer but threw out his thoughts in aphorisms, some of which indeed he subsequently collected, but most of which received their development in reviews and personal correspondences. Even his two principal works, "Fragmenta Cognitionis" and "Speculative Dogmatik", are really mosaics and one has to seek long before discovering any unifying principles. Moreover, he moves in leaps; his style lacks coherence and order. A suggestive expression, a Latin or French quotation gives an unlocked-for turn to a discourse. The reader is knocked about from one side to another. Now he may be driven from logic to metaphysics and again from theology to physical philosophy. The author's ideas often run into those of other thinkers of his line of thought. Added to this is the uncertainty of his terminology, his equivocal and often bizarre use, or abuse, of words and the reading of Baader becomes no easy occupation. A summary of his system may be given as follows:

Baader's knowledge is a recreation in God's knowledge. The latter necessarily compensates the former which is therefore always con-scientia. Our knowledge is a gift, something received, and in this respect is faith which is therefore a voluntary acceptance of the known object from God's knowing in us and hence proceeds from the will. This, however, is preceded by an involuntary subjection, a necessitated desire—Nemo vult nisi vides. We experience the Indwelling Presence soliciting us to faith. Faith however, in turn, becomes the basis of knowledge in which again faith reaches its completion. Faith is thus as necessary for knowledge as knowledge is for faith. Now the content of faith is expressed by technical formulae in religious tradition. Hence as philosophy is necessarily connected with the subjective part of man, it is likewise connected with that of tradition. Only thus can it begin and develop. Hence all science, all philosophy, is religious. Natural theology, natural ethics, etc., strictly speaking, are impossible. Philosophy arose only when religious tradition called for it and then likewise became itself, but it thus led to its own dissolution.

(2) But faith is not simply a gift (Gabe); it is also a responsibility (Aufgabe). It must be developed by reason, penetrated, vivified, and freed from the possibility of doubt. It is not memory, nor a mere relic of the past. It must cast off the temporary but retain the abiding; be permanent but progressive. Mysteries are not impenetrable, but only concealed. "Credo sensum habens" and "Deum esse non creditor sed scitur" are twin truths. The whole content of religion must be reduced to exact science. There is no closed truth just as there is no closed virtue. Science proceeds from faith, but faith is developed and recast by science.

The hopeless confusion here manifest between knowledge as a natural or purely rational process, and faith, in the Catholic sense of a supernatural virtue, finds a parallel in Baader's ethics. With him the true, i.e. religious, and hence Christian, ethics knows that God Who gives the law also fulfills it in us, so that from being a burden it ceases to be a law. Fallen man has not the power to restore himself; hereditary sin, the seed of the Serpent, hinders him in this. Still he retains the "Idea", the seed of the woman, i.e. reeducation. This possibility is actualized by God's becoming man, and thus realizing the moral law in "the Man", the Saviour, Who by overcoming temptation has destroyed evil at its source and among the others. MULLER's "Christl. Dogmatik" shows evident marks of his influence.
cal representation of the proletariat, and some well-grounded objections to unlimited industrial competition and free trade. On the whole, his sociology is the wisest, strongest, sanest, and most practical part of his whole system, just as his technical theology is the weakest, the most bizarre, unusual, and impossible idea in all his stream, hence much more improbably be found in the fact that in the former the best elements of his own mind and character were free to assert themselves, while in his theology they seem almost throughout to be under the spell of Böhme whose fanciful mysticism bore him away to a realm of the unworldly and abstract. As from the text, 7; 7—present experience in the body, and such is sometimes honoured by acts of the foulest sensuality. Whether or not this idea sprang from, and led to the monotheistic conception of a supreme deity, the Lord of Heaven, of whom the various Baals would be so many manifestations, we shall leave to scholars to decide. Some deem that the Bible favours this view, for its language frequently seems to imply the belief in a Baal par excellence.

BAAL-WORSHIP AMONG THE GENTILES. —The evidence is hardly of such weight as to justify us in speaking of a worship of Baal. The Baal-worship so often alluded to and described in Holy Writ might, perhaps be better styled Çid-worship, moon-worship, or Etchid-worship, depending on the circumstances and according to places and circumstances. Many of the practices mentioned were most probably common to the worship of all the Baals; a few others are certainly specific.

A custom common among Semitic peoples should be noticed here. Moved, most likely, by the desire to secure the protection of the local Baal for their children, the Semites always showed a preference for names compounded with that of the deity; those of Hadrubal (A'ārû Bā'dî), Hamnibal (Hannî Bā'dî), Baltasar, or Belahazar (Ben-ar-lahash), became famous in history. Scores of such names belonging to different nationalities are recorded in the Bible, in ancient writers, and in inscriptions.

The worship of Baal was performed in the sacred precincts of the high places so numerous throughout the country (Num., xxii. 41; xxxii. 52; Deut., xii. 2, etc.) or in temples like those of Samaria (III Kings, xxvi. 32; IV Kings, x, 21-27) and Jerusalem (IV Kings, xi, 18), even on the terrace roofs of the houses (IV Kings, xx, 12; Jer., xvi. 13). The furniture of these sanctuaries probably varied with the Baals honoured there. Near the altar, which existed everywhere (Judges, vi, 25; III Kings, xvii, 26; IV Kings, xi, 18; Jer., xi, 13, etc.), might be found, according to the particular place, either an image of the deity (Hadad was symbolized by a calf), or the bureiôn (i.e. sacred stone, regularly cone-shaped in Channa'a) supposed to have been originally intended to represent the world, abode of the god; of the hâmînîn (very possibly sun-pillars; Lev., xxvi. 30; II Par., xxxiv. 4, etc.), and the 'asâhîm (wrongly interpreted "grove") in our Bibles; Judges, vi, 25; III Kings, xiv, 23; IV Kings, xvii, 10; Jer., xvi, 2, etc.), a sacred pole, sometimes, possibly, a tree, the original signification of which is far from clear, to other with native or commemorative stele (mâçèbôth, usually mistranslated "images"), more or less ornamented. There incense and perfumes were burned (IV Kings, xxiii. 5; Jer., vii, 9, xi, 13, and according to the other authorities; xxiv. 4) and sacrifices of oxen and other animals offered up to the Baal; we hear even (Jer., vii, 31; xix, 5; xxiii, 35; II Par., xxxvii, 8) that children of both sexes were not infrequently burned in sacrifice to Melek (D. V. Moëch, A. V. Moëch), and II Par., xxvii, 3 (perhaps amongst the young princes).
BAAL

176

to this stern deity. In several shrines long trains of priests, distributed into several classes (II Kings, xvii, 19; IV Kings, x, 19; xxiii, 5; Soph., i, 4, etc.) and clad in special attire (IV Kings, x, 22) performed the sacred functions: they prayed, shouted to the Baal, led dances around the altar, and in their frenzies poured out the true blood of the victims with true spears and lances, till they were all covered with blood" (III Kings, xviii, 26-28). In the meantime the lay worshippers also prayed, kneeling, and paid their homage by kissing the images or symbols of the Baal (III Kings, xix, 18; Os. xxi, 23), in honour of the Baal as male principle of reproduction, and of his mate Asherah (D. V. Astartide, A. V. Ashtaroth).

BAAL-WORSHIP AMONG THE ISRAELITES.—Nothing could be more fatal to a spiritual faith than this sensual religion. In fact, no sooner had the Israelites, coming forth from the wilderness, been brought into contact with the Baal-worshipers of those tribes beyond the gulf of the Medesians, and the attractions of the licentious worship offered to the Moabish deity (probably Chamos), easily seduced from their allegiance to Yahweh (Num., xxv, 1-9). Herodotus, Cynoecus, and name of Baal, was a dark spot on the early history of Israel (Os., ix, 10; Ps. cv (in the Hebr. cvi), 28). The terrible punishment inflicted upon the guilty sobered for a while the minds of the Hebrews. How long the impression lasted we are hardly able to tell; but thus we know, that when they had settled in the Promised Land, the Israelites, again forsaking the One True God, paid their homage to the deities of their Chanaanite neighbours (Judges, ii, 11, 13, etc.). Even then they would not, or could not, get rid of their seduction; Gehedon's father, for instance, albeit his faith in his Baal seems to have been somewhat lukewarm (Judges, vi, 31), had erected an idolatrous altar in Ephra (Judges, vi, 25). 'And the Lord, being angry against Israel, delivered them into the hands of their enemies that dwelt round about'. Mesopotamians, Madianites, Amalecites, Ammonites, and, above all, Philistines, were successively the providential avengers of God's disregarded rights.

During the warlike reigns of Saul and David, the Israelites were largely thought of in the shape of Yahweh's yoke; such also was, apparently, the situation under Solomon's rule, although the example given by this prince must have told deplorably upon his subjects. After the division of his empire, the Northern Kingdom, first led by its rulers to an unlawful worship of Yahweh, sank speedily into the grossest Chanaanite superstitions. This was the more easy because certain customs, it seems, brought about confusion in the crowded minds of the uneducated portion of the people. Names like Eebal (I Par., viii, 33; ix, 39), Meribbaal (I Par., vii, 34; ix, 40), Baalida (I Par., xiv, 7), given by Saul, Jonathan, and David to their sons, suggest that Yahweh was possibly spoken of as Baal. The fact has been disputed, but the existence of such a name as Baalia (i.e., "Yahweh is Baal", I Par., xii, 5) and the affirmation of Osee (ii, 16) are arguments that cannot be slighted. True, the word was used later on only in reference to idolatrous worship, and even deemed so obnoxious that bābahāth, the shame, was given to the multitude of such proper names, thus giving, for instance, such offensive forms as Elioda (II Kings, v, 16), Yerubbehāth (II Kings, xi, 21, Hebr.), Laboeth (II Kings, ii, 10) and elsewhere, Miphoseth (II Kings, ix, 6; xxi, 8); but none of these names were due to a spirit which did not prevail until centuries after the age with which we shall presently deal.

Achab's accession to the throne of Israel inaugurated a new era, that of the official worship. Married to a Sidonian princess, Jezebel, the king erected to the Baal of her native city (Cid, or Melkart) a temple (III Kings, xvi, 31, 32) in which a numerous body of priests officiated (III Kings, xvii, 19). To what extent that kingdom fell with him the Bible is silent. When the kingdom fell Elies relates in III Kings, xix, 10, 14: 'The children of Israel have forsaken thy covenant: they have thrown down thy altars, they have slain thy prophets with the sword. There remained to the king seven thousand men, men of valour and of knows had not been bowcd before Baal (III Kings, xix, 18). Ochozias, son of Achab and Jezebel, followed in his parents' footsteps (III Kings, xxii, 5), and although Joram, his brother and successor, took away the māgubōd set up by his father, the Baal-worship was not stamped out of Samaria (IV Kings, iii, 2, 3) until its adherents were slaughtered, and its temple destroyed at the command of Jehu (IV Kings, x, 18-28). Violent as this repression was, it hardly survived the prince who had undertaken it. The annals of the reigns of his successors witness to the religious corruption again prevailing; and the author of IV Kings could sum up this sad history in the following few words: 'They forsook all the precepts of the Lord their God: and made to themselves two molten gods, and erected an altar unto them, and also consecrated their sons, and their daughters through fire: and they gave themselves to divinations, and sooth-sayings: and they delivered themselves up to do evil before the Lord, to provoke him. And the Lord was very angry with Israel, and removed them from his sight... and Israel was carried away out of their land to Assyria, unto this day' (IV Kings, xvii, 16-18, 23).

The temple was then not the only temple of Judah fared no better. There, also, the princes, far from checking the drift of the people to idolatry, were their instigators and abettors. Established by Joram (IV Kings, vii, 18), probably at the suggestion of Athaliah his wife, who was the daughter of Achab and Jezebel, the Phoenician worship was continued by Ochozias (IV Kings, viii, 27). We know from IV Kings, x, 18, that a temple had been dedicated to Baal (very likely the Baal honoured in Samaria) in the Holy City, either by one of these princes or by Athaliah. At the death of Athaliah, 'the house of the Lord was in the holy place', but under Zedekiah and Josiah, faithful people, and its furniture broken to pieces (IV Kings, x, 18; II Par., xxiii, 17). If this reaction did not crush utterly the Baal-worship in Judah, it left very little of it afloat, since, for over a century, no case of idolatry is recorded by the Chronicler. In the reign of Achar, however, we find the evil not only flourishing again, but countenanced by public authority. But a change had taken place in Judah's idolatry; instead of the Sidonian Baal, Melek Mo'loch, the cruel deity of the Ammonites, had become the people's favourite (II Par., xxviii, 2; 4 Kings, xvi, 3, 4). His barbarous rites, rooted out by Ezechias, appeared again with the support of Mannaess, by whose influence the Assyro-Babylonian astral deities were added to the Pantheon of the Jewish idolaters (IV Kings, xxii, 3). The meritorious efforts of Josia (IV Kings, xxiii, 4, 5) produced no lasting results, and after his death the various superstitions in vogue held sway until "the Lord cast out from his face Judah and Jerusalem" (IV Kings, xxiii, 22, 27; xxiv, 1). The Babylonian invasions dealt to the Baal-worship in Palestine a deadly blow. At the restoration Israel shall be Yahweh's people, and He their God (Ezech., xiv, 11), and Baal will become altogether a thing of the past.

Baalbek. See PAULICIANS.

Babel occurs in the Vulgate only in Gen., xi, 9; the form Babylon is found in Bar., i, 1, 4; ii, 22; vi, 1–3; I Mach., vi, 4; II Mach., viii, 20; everywhere else the Vulgate uses the form Babylon. The word is derived from the Babylonian bâb-ilu, meaning "gate of God." Gen., xi, 9 suggests a different meaning based on the derivation of the name from the Hebrew word bâdîl, to confound. The city of Babylon had various names among its inhabitants, e.g. Ka-dingir, Bâbi-dingir, Tîtir, Shu-an-na, etc. The prophets call it "daughter of the Chaldeans" (Is., xiv, 1), and Sesach or Sesac (Jer., xxv, 26; li, 41), a word variously explained by commentators.

It was built on the site of the modern village of Hille. According to Herodotus, a double or perhaps a triple wall, 50 cubits in width and 200 cubits in height, surrounded the town, and there were a square of 120 stadia. The square of the interior wall was 90 stadia long and 300 stadia in circumference. Both the Bible and the cuneiform inscriptions assign a very great age to the city, and the Biblical data (Gen., xi, 1–9) concern the material of the walls are verified by the testimony of the ruins. "Let us make brick, and bake them with fire. And they had brick instead of stones, and slime instead of mortar."

The ancient city possessed marvellous temples, splendid palaces, and curious gardens. Among the temples, two deserve particular attention; the temple of Bel Merodach, on the eastern bank of the Euphrates, and E-zida, the temple of Nebo, west of the river. The ruins of these sanctuaries are probably identical with those of Bâbil and Biras Nimrûd, though opinions differ concerning Bâbil. The buildings were pyramidal in form and rose in several, usually seven, step-like sections. The storied tower of Biras Nimrûd counts seven of these quadrangular platforms painted in seven colours, black, white, yellow, green, scarlet, silver, and purple, dedicated to the stellar gods, Adar (Saturn), Ištar (Venus), Merodach (Jupiter), Nebo (Mercury), Nergal (Mars), Sin (the Moon), Shamash (the Sun).

It has been learned in the excavations at Nippur that the pyramidal tower of ziggyurat did not constitute the whole of the Babylonian Temples. This latter had an inner and an outer court, both nearly square and nearly of the same dimensions; the tower occupied about one-third of the area of the inner court, and near to it stood the temple proper where the sacrifices were offered. We may infer from the discoveries made in Nippur and in Sippara that a library and a school will be found to have been connected with the Babylonian temples. In the light of these discoveries the story of the Tower of Babel (Gen., xi, 4) assumes a new importance, whether we identify its remains with the ruins of Biras Nimrûd or with those of the Bel temple at Nippur, or again with those of Bâbil. No doubt, it was its temples not less than its royal palaces and its hanging gardens that rendered the city of Babylon "the glory and might of kings ever since the days of the famous place of the Chaldeans" (Is., xiv, 19).

We meet with the city at the earliest dawn of history, and it flourishes, in spite of its temporary reverses, till it is finally destroyed by Seleucus Nicator; even then Jews kept on inhabiting some of the flights of Babel. At this last period the country was given up to the roaming tribes of Arabs, in accordance with the words of the prophet:}

II—12
BABENSTUBER, Ludwig, a German philosopher and theologian, vice-chancellor of the University of Salzburg; b. 1860 at Teining in Bavaria; d. 5 April, 1726, at the Benedictine monastery of Ettal. Having completed his early studies he entered the novitiate of the Order of St. Benedict, at Ettal in 1681, made his religious profession in 1682, and thereafter devoted the greater part of his life to teaching. At first he had great difficulty in gaining in his students any sense of the value of the Scriptures, but by his untiring application and industry he shortly acquired so vast a store of knowledge, that he soon came to be regarded as one of the most learned men of his day — vir consummate in omni generi doctrinae et probabilitatis, as he is styled in Dom Egger's "Ideas ordinis Hierarchico-Benedictini", and in the "History of the University of Salzburg".

Until 1890 Babenstuber was Director of the scholiastic of his order at Salzburg, taught philosophy there from 1890 to 1893, and then went to Schleierh to teach theology in the monastery of the canons regular.

Returning to Salzburg in 1895, he took up successively the professorships of moral theology, dogmatic theology, and exegesis, in the celebrated Benedictine university of that city. He remained at Salzburg for twenty-two years, during which period he held the office of vice-rector for three years, and that of vice-chancellor of the university for six. In 1717 he returned to his monastery at Ettal, where he spent the remainder of his days. In dogmatic theology Babenstuber was a pronounced Thomist; in moral, a vigorous defender of probabilism. He maintained, among other things, that a single author, if he were beyond contradiction (omni exceptione malae voluntatis), with his own authority, render an opinion probable, even against general opinion. In matters of faith, however, he rejected the principle of probabilism absolutely. In one of his disquisitions he had also stated that it was allowable to celebrate Mass privately on Maundy Thursday 1774, but before his "Ethics Supernaturalis" had issued from the press, he learned that the Roman tribunals forbade it, and so he promptly corrected that assertion. Babenstuber's published works include a wide range of subjects, mainly philosophical and theological. The most important are: "Econom. et Philosoph. Thoscetica" (4 vols., Salzburg, 1704); "Ethics Supernaturalis" (Augsburg, 1718).

Babinet, Jacques, French physicist, b. at Lusignan, Vienne, 5 March, 1794; d. at Paris, 21 October, 1872. He began his studies at the Lycée Napoléon.

There he became a pupil of Binet, whose influence caused him to abandon the study of law, for which his family had destined him, and to devote himself to the study of mathematics. He entered the Polytechnic School, which he left in 1812 to enter the Military School at Metz. For some time he was attached to the Fifth Regiment of Artillery, but at the Restoration he left the army and began to teach.

He was professor of mathematics at Fontenay-le-Comte, then of mathematics at Polytechnic School at the Lyceé Saint-Louis. From 1825 to 1828 he delivered a course of lectures on meteorology; in 1838 he succeeded Savary at the Collège de France; and in 1840 he was elected to the Academy of Sciences.

Babinet's scientific fame rests on his work in optics, although his contributions to science include the other branches of physics and mechanics. He improved the valves of the air-pump, attaching a very high vacuum; he constructed a hygrometer and a sphygmometer, and invented the Babinet compensation; a double quartz wedge used in the study of elliptically polarized light. "Babinet's theorem" deals with the diffraction of light. He must, however, be chiefly remembered as a great popularizer of science, an excellent writer and a clear lecturer, and as the writer of popular scientific articles. He fully recognized the limitations of physical science, while his sincere faith showed itself especially at the end, when he passed away with touching resignation, beloved by all for his kindliness.

Babinet's contributions to the "Revue des Deux Mondes" and to the "Journal des Débats" and his lectures on observational science before the Polytechnic Association were collected in eight volumes: "Etudes et lectures sur l'observation" (1855–66). His other serious works include: "Résumé complet de la physique" (Paris, 1825); "Expériences pour vérifier celles de M. Trelvelyan" (Paris, 1835). The following four monographs are published in the "Memoirs of the Société Philomathique": "Sur la masse de la planète Mercure" (1825); "Sur la couleur des réseaux" (1829); "Sur la détermination du magnétisme terrestre" (1829); "Sur la cause du retard qui ébranle la lumière dans les milieux réfringents" (1839).

BABBINGTON, Anthony. See Mary Queen of Scots.

Babylas, Bishop and Martyr.—He was the successor of Zebinus as Bishop of Antioch in the reign of the Emperor Gordianus (238–244), being the twelfth bishop of this oriental metropolis. During the Decian persecution (250) he made an unwavering confession of faith and was thrown into prison where he died from his sufferings. He was, therefore, venerated as a martyr. St. John Chrysostom and the "Acts of the Martyrs" relate further concerning him, that Babylas once refused an emperor, on account of his wrongdoing, permission to enter the church and had ordered him to take his place among the penitents. Chrysostom does not give the name of the emperor; the Acts mention Numerianus. It is more probably Philip the Arabian (244–249) of whom Eusebius (Hist. eccl., VI, xxxiv) reports that a bishop would not let him enter the gathering of Christians at the Easter vigil. The burial-place of St. Babylas became very celebrated. The Cessian Gallus built a new church in honour of the holy martyr at Daphne, a suburb of Antioch, and the bones of the saint were transferred to it. When the Arians, this Justin the Arian, broke the image of Apollo at the temple to this god which was near by, he received no answer because of the proximity of the saint. He, therefore, had the sarcophagus of the martyr taken back to its original place of burial.
In the Middle Ages the bones of Babylons were carried to Cremona. The Latin Church keeps its feast on 24 January, the Greek Church on 4 September.

Babylon. The burial sites of the capital are Eridu, Xor South, Kish and Xis; P. J. KIRKINS, Hist. c. x., cxxx; THEODOR WUNN, Hist. c. c., cxxx; JOANNA CHRESTOMATIE, Bull. c. c., cxxx; F. M. Babylon. The burial title of a Latin archbishopric, also of a Chaldean patriarchate and of a Syrian archbishopric. See BABYLON.

Babylonia. In treating of the history, character, and influence of this ancient empire, it is difficult not to speak at the same time of its sister, or rather daughter, country, Assyria. This northern neighbor and colony of Babylon remained to the last of the same race and language and of almost the same religion and civilization as that of the country from which it emigrated. The political fortunes of both countries for more than a thousand years were closely interwoven with another; in fact, for many centuries they formed one political unit. The reader is therefore referred to the article ASSYRIA for the sources of Assyro-Babylonian history; for the story of exploration, language, and writing; for its value in Old Testament exegesis, and for much of Babylonian history during the period of Assyrian supremacy.

Geography. The country lies diagonally from north-west to south-east, between 30 and 33 N. lat. and 44 and 48 E. long., or from the present city of Baghdad to the Persian Gulf, from the slopes of Khuzistan on the east to the Arabian Desert on the west, and is substantially contained between the Rivers Euphrates and Tigris, though to the west a narrow strip of cultivation on the right bank of the Euphrates must be added. Its total length is some 300 miles, its greatest width about 125 miles; about 23,000 square miles in all, or the size of Holland and Belgium together. Like those two countries, its soil is largely formed by the alluvial deposits of two great rivers. A most remarkable feature of Babylonian geography is the fact that to the north the existence of the Euphrates and Tigris entered into the history of the region at a rate of a mile in seventy years, while in the past, though still in historic times, it reeded as much as a mile in thirty years. In the early period of Babylonian history the river system of the country must have extended much farther northward, and it is probable that the Persian Gulf never reached its present position at the rate of a mile in seventy years, while in the past, though still in historic times, it reeded as much as a mile in thirty years. In the early period of Babylonian history the river system of the country must have extended much farther northward, and it is probable that the Persian Gulf never reached its present position at the rate of a mile in seventy years, while in the past, though still in historic times, it reeded as much as a mile in thirty years.

The towns of ancient Babylonia were the following: southernmost, (1) Eridu, Semitic corruption of the old name of Brittapsk, "good city", at present the mound of Abu-Sharain; and (2) Ur, Abraham's birthplace, about twenty-five miles north-east of Eridu, at present Mughrir. Both of these towns lay west of the Euphrates. East of the Euphrates, the southernmost town was (3) Larsa, the Biblical Eshnunna (Gen., xiv; in Vulg. and D. V. unfortunately rendered Ponsusius), at present Senkere; (4) Erech, the Biblical Ararat (Gen., x, 10), fifteen miles north-west of Larsa, is at present Warks; and eight miles north-east of the modern Shatara was (5) Sheepura, or otherwise Lagash, now Tellah. Sheepura was one of Babylon's most ancient cities, though not mentioned in the Bible; probably "Bajrantis" (the urmia-raven), from the sacred emblem of its godess and sanguinary, Nin-Girshu, or Nin-Suniga, which for a score of centuries was an important political centre, and prob-
BABYLONIA

abstly gave its name to Southern Babylonia—Singir, Shumer, or, in Gen., x, 10, Sennaar. (6) Gishban (read also Giš-huḫak), a small city a little north of Shurpuia, at present the mounds of Ishkâh, is of importance only in the very earliest history of Babylonia. (7) The site of the important city of Ešnunna (read also Niuru) has not yet been determined, but it was probably situated a little north of Ereh. (8) Calneh, or Nippur (in D. V., Gen., x, 10, Calanne), at present Nuffar, was a great religious centre, with its Bel temple, unrivalled in antiquity and magnificence. (9) It is possible that it was Mecca for the Semitic Babylonians. Recent American excavations have made its name as famous as French excavations made that of Tellu or Shurpuia. (8) In North Babylonia we have again, southernmost, the city of Kish, probably the Biblical Cush (Gen., x, 8); its ruins are under the present mound El-Öhêmîr, eight miles east of Hillâ. (10) A little distance to the north-west lay Kutha, the present Tellu Ibrahim, the city whence the Babylonian colonists of Samaria were taken (IV Kings, xxvii, 30), and which played a great rôle in Northern Babylonia before the Amorite dynasty. (11) The site of Agade, i. e., Akkad (Gen., x, 10), the name of whose kings was dreaded in Cyprus and in Sinai in 3800 B.C., is unfortunately unknown, but it must have been not far off. (12) It is said that this was one of the quarters of that city, which was scarcely thirty miles north of Babylon and which, as early as 1851, was identified, through British excavations, with the present Abu-Habbâ. (13) Lastly, Babylon, with its twin-city Borsippa, though probably founded as early as 3800 B.C., played an insignificant rôle in the country's history until, under Hammurabi, about 2300 B.C., it entered on that career of empire which it maintained for almost 2000 years, so that its name now stands for a country and a civilization which was of hoary antiquity before Babylon rose to power and even before a brick of Babylon was laid.

EARLY HISTORY.—At the dawn of history in the middle of the fifth millennium before Christ we find in the Euphrates Valley a number of city-states, or rather city-monarchies, in rivalry with one another and in such a condition of culture and progress, that this valley has been called the cradle of civilization, not only of the Semitic world, but most likely also of Egypt. The people dwelling in this valley were certainly not all of one race; they differed in type and language. The people who dwelt in the central part of the valley were probably of Mongolian ancestry, they are styled Sumerians, or inhabitants of Sumer, Kurg, Senaar. They invented the cuneiform script, built the oldest cities, and brought the country to a great height of peaceful prosperity. They were gradually overcome, dispossessed, and absorbed by a new race that entered the plain between the two rivers, the Semites, who pressed on them from the north from the kingdom of Akkad. The Semitic invaders, however, eagerly adopted, improved, and widely spread the civilization of the race they had conquered. Although a number of arguments converge into an irrefragable proof that the Sumerians were the aboriginal inhabitants of Babylonia, we have no historical records of the time when they were the sole occupants of the Euphrates Valley; at the dawn of history we find both races in possession of the land and to a certain extent mixed, though the Semite was predominant in the North while the Semitic maintained himself for centuries in the South. Whence these Semites came cannot be decided, and probably all that will ever be known is that, after a nomadic existence in mountainous districts in the East, they found a plain in the lands of Sennaar and dwelt in it (Gen., xi, 2). The first city was Eridu, on the Persian Gulf, where their earliest myths represent the first man, Adapa, or Adamu (Adam?), spending his time in fishing, and where the sea-god taught them the elements of civilization. It is certain, however, that they possessed a considerable amount of culture even before entering the Babylonian plain; for, coeval with the first foundations of their oldest temples, they possessed the cuneiform script, which can be described as a cursive hand developed out of picture-signs by centuries of primeval culture. From whence the Semitic race invaded Babylonia, and what was its origin, we know not, but it must be noted that the language they spoke, though clearly and thoroughly Semitic, is yet so strikingly different from all other Semitic languages that it stands in a catego-

HEAD OF A SUMERIAN, GURRAK EPOCH, FOUND IN TELLÔ

by of its own. In that guise, Manishtusu, we possess a mace-head, as a sign of his royalty, and a stele, or obelisk, in archaic cuneiforms and Semitic Babylonian. Somewhat later Mesilim, the King of Kish, retrieved the defeat of his predecessor; and we have more of his fragments. Another probable name of a King of Kish is Urumuš, or Aluhashshid, though some make him King of Akkad. Whereas our information concerning the dynasty of Kish is exceedingly fragmentary, we are some-

what better informed about the rulers of Shurpuia. About 4500 B.C. we find Urkagina reigning there and, somewhat later, Lugal (lugal, "great man"), i. e., "prince", or "king") Shuggur. Then, after an interval, we are acquainted with a succession of no fewer than seven Kings of Shurpuia: Garsar, Gindu, Ur-Nin, Akur-gal, Eannatum I, Entemens and Eannatum II—which last king must have reigned about 4000 B.C. De Sarsseck found at Tellô a temple-wall some of the bricks of which bore the clear legend of Ur-Nin, thus leaving on record this king's building activity. Thanks to the famous stele of the vultures, now in the Louvre, to some clay slates in the British Museum, and a cone found at Shurpuia, we have an idea of the warlike propensities of Eannatum I, who subdued the people of Gishban by a crushing defeat, and after them the Sumerian lords of copper, who revolted. He also carried the Semitic lords of corn, and appointed over that city his own viceroy, "who placed his yoke on the land of Elam", "and of Gisgal", and who is represented as braving with
his club toes whose heads are protruding out of the opening of a bag in which they are bound.

That, notwithstanding these scenes of bloodshed, it was an age of art and culture can be evidently shown by such finds as that of a superb silver vase of Entemena, Eannatum’s son and successor, and, as crown-prince, general of his army. After Eannatum II the history of Shuruppak is a blank, until we find the name of Lugal Ushumgal, when, however, the city has for a time lost its independence, for this ruler was the vassal of Sargon I of Akkad, about 3500 B.C.

ARCHAIC BABYLONIAN INSCRIPTION TO SUN GOD BY
SARGON I, ABOUT 3500 B.C.

Yet, some six centuries afterwards, when the dynasty of Akkad had ceased to be, the patesia, or high-priests, of Shuruppak were still men of renown. A long inscription on the back of a statue tells us of the vast building achievements of Ur-Bau about the year 3300; and the name of his son and successor, Nammahani. About two centuries later we find Gudea, one of the most famous rulers the city ever possessed. Excavations at Tellah have laid bare the colossal walls of his great palace and have shown us how, both by land and sea, he brought his materials from vast distances, while his architecture and sculpture show perfect art and refinement, and we incidentally learn that he conquered the district of Anshan in Elam. After Gudea, we are acquainted with the names of four more rulers of Shuruppak, but in these subsequent reigns the city seems to have quickly sunk into political insignificance. Another Sumerian dynasty was that of Erech, or Gishan. About 4000 B.C. a certain Lugal Zaggis, son of the Patesi of Gishan, who became King of Erech, proudly styled himself King of the World, as Eannakhshan and Aluhasard had done, claimed to rule from the Persian Gulf to the Mediterranean, and praises the supreme god Enlil, or Bel, of Nippur, who “granted him the dominion of all from the rising of the sun to the setting thereof and caused the countries to dwell in peace.” Yet to us it seems but a rushlight of glory; for after his son Lugal-Kisali the Kingdom of Erech disappears in the night of the past. The same may be said of the dynasty of Agade. Ittibael’s son, Sargon I, suddenly stands before us as a giant figure in history about 3600 B.C. He was a monarch proud of his race and language, for his inscriptions were in his Semitic mother-tongue, not in the Sumerian, like those of previous kings. He is rightly called the first founder of a Semitic empire. Under him flourished Semitic language, literature, art, and architecture. He established his dominion in Suza, the capital of Elam, subdued Syria and Palestine in three campaigns, set up an image of himself on the Syrian coast, as a monument of his triumphs, and welded his conquests into one empire. Naram-Sin, his son, even extended his father’s conquests, invading the Sinal Peninsula and, apparently, Cyprus, where a seal-cylinder was found on which he receives homage as a god. On inscriptions of that date first occurs mention of the city of God’s Gate, or Babylon (Bab-ilu) sometimes Bab-ilu, whence the Greek Baibulos), then written ideographically Ke-Dungi.

After Bingani, Nannartum’s successor, the Sumerian successes were temporarily eclipsed; Egypt occupied Sinai, Elam became again independent, and in Babylonia itself the Sumerian element reasserted itself. We find a dynasty of Ur in prominence. This city seems at two different periods to have exercised a heimon over the Euphrates Valley or part of it. First under Urgur and Dungi I, about 3400 B.C. Urgur assumed the title of King of Sumer and Akkad, thus making the first attempt to unite North and South Babylonia into a political unit, and inaugurating a royal style which was borne perhaps longer than the title of any other dignity since the world was made. Ur predominates, for the second time, about 2800 B.C., under Dungi II, Gun gunu, Bur-Sin, Gimil-Sin, and Ine Sin, whose buildings and fortifications are found in many cities of Babylonia, and probably in that of Ur is as yet so obscure that some scholars (Thurun-Dingir, Hulprecht, Bezd) accept but two dynasties, others (Rogers) three, others (Hugo Radau) four. The supremacy of Ur is followed, about 2500 B.C., by that of (N) Lisan, apparently an important city, as its rulers style themselves Shepherds, or Gracious Lords, of Lisan, and place this title after that of King of Ur, Eridu, Erech, and Nippur. Six rulers of Lisan are known: Ishigarra, Libit-Ishar, Bur-Sin II, Ur-Nina, Ishme-Dagan, and Eannatum. The last of the city-kings was that of Larsa, about 2300 B.C., with its sovereign Siniddimmur-Adad, Chedornachundi, Chedorisomar, Chedornabug, and Eri-Aku. The composition of these royal names with the exception of the Tartan or the Elamite name Argish, they did not belong to a native dynasty, whether Sumerian or Semitic. One of the earliest Elamite invaders of Babylonia was Rim-Amun, who obtained such a foothold on Babylonian soil that the year of his reign was used to date contract tablets, a sure sign that he was at least king de facto. Chedornachundi invaded Babylonia about the year 2225, reached Erech, plundered its temples, and captured the city-goddess; but whether he established a permanent rule, remains doubtful. Somewhat later Chedorisomar (Kudur-Lagham, a Sumerian name of an Elamite deity), known to us from the Bible, seems to have been more successful. Not only does he appear as overlord of Babylonia, but he carried his conquest as far west as Palestine. Chedornabug was originally Prince of Emnabul, or western Elam, but obtained dominion over Babylonia and rebuilt the temple at Ur. His son Rim-Sin, or Eri-Aku, considered himself so well established on Babylonian territory that he affected the ancient titles, Exalter of Ur, King of Larse, King of Sumer and Akkad. Yet he was the least of the city-kings, and a new order of things began with the rise of Babylon.

THE FIRST EMPIRE.—The dynasty which laid the foundation of Babylon’s greatness is sometimes called the Arabian. It certainly was West-Semitic and almost certainly Amorite. The Babylonians called it the dynasty of Babylon, for, though foreign in origin, it may have had its actual home in that city, which it gratefully and proudly remembered. It lasted for 296 years and saw the greatest glory of the old empire as perhaps the Golden Age of the Third Dynasty of the ancient world. The names of its monarchs are: Sumu-abi (15 years), Sumu-la-ilu (35), Zabin (14), Apil-Sin (18), Sin-muballit (30); Hammurabi (35), Samsu-iluna (35), Anshu (25), Ammi-titans (25), Ammisaduga (22), Samsu-titans (31). Under the first five kings Babylon was still only the mightiest
amongst several rival cities, but the sixth king, Hammurabi, who succeeded in beating down all opposition, obtained absolute rule of Northern and Southern Babylonia and drove out the Elamite invaders. Babylonia henceforward formed but one state and was well on the way to empire. The empire apparently flowered on the third or second day of the reign of Hammurabi. The second ruler strengthened his capital with large fortifications; the third ruler was apparently in danger of a native pretender or foreign rival called Immuru; only the fourth ruler was definitely styled king. Hammurabi himself, however, had his own son succeed him and his reign acknowledged the suzerainty of Elam. This Hammurabi is one of the most gigantic figures of the world's history, to be named with Alexander, Caesar, or Napoleon, but best compared to a Charlemagne, a conqueror and a lawyer, whose powerful genius formed a lasting empire out of chaos, and whose beneficent influence continued for ages throughout an area almost as large as Europe. Doubtless a dozen centuries later Assyrian kings were to make greater conquests than he, but whereas they were giant destroyers he was a giant builder. His large public and private correspondence gives us an insight into his multitudinous cares, his minute attention to details, his constitutional methods. (See "The Letters and Inscriptions of Hammurabi," by W. King; London, 1898, 3 vols.). His famous code of justice and civil law throws light on his genius as legislator and judge. The stèle on which these laws are inscribed was found at Susa by M. de Morgan and the Dominican friar Scheil, and first published and translated by the latter in 1802. This astounding find, giving us, in 3638 short lines, 282 laws and regulations affecting the whole range of public and private life, is unequalled even in the marvellous history of Babylonian research. From no other document can a man obtain, and with accurate estimate of Babylonian civilization be formed from this code. (For a complete English translation see T. G. Pinches, op. cit. infra, pp. 487-519.)

Whereas the Assyrian Kings loved to fill the boastful records of their reigns with ghastly descriptions of battle and war, so that we possess the minutest details of their military campaigns, the genius of Babylon, on the contrary, was one of peace, and culture, and progress. The building of temples, the adornment of cities, the digging of canals, the making of rivers, the building of fortresses, the records breathe, or affect to breathe, all serene tranquillity; warlike exploits are but mentioned by the way, hence we have, even in the case of the two greatest Babylonian conquerors, Hammurabi and Nabuchodonosor II., but scanty information of their deeds of arms. "I dig the canal Hammurabi, the blessing of men, which bringeth the water of the overflow unto the land of Sumer and Akkad. Its banks on both sides I made arable land; much seed I scattered upon it. Lasting water I provided for the land of Sumer and Akkad. The land of Sumer and Akkad, its separated peoples I united, with blessings and abundance I endowed them, in peaceful dwellings I made them to live"—such is the style of Hammurabi. The inscription on the king's statue in the temple of Anu, "I am the king of the land, I am the strong ruler, I am the strong man of the land, I plant the gods Marduk and Zarpanit, the most sacred national idols, which had evidently been captured by the enemy. The next king of whom we have any knowledge is Karaindash (1450 B.C.), who settled the boundary between his kingdom, Nineveh, to the ancient land of Ashur-bel-nisheushu of Assyria. From the Tell-el-etharna tablets we conclude that in 1400 B.C., Babylon

he to the Westland previous to the 31st year of his reign. Of Hammurabi's immediate successors we know nothing except that they reigned in peaceful prosperity. That trade prospered, and temples were built, is all we can say.

The Amorite dynasty was succeeded by a series of eleven kings which may well be designated as the Unknown Dynasty, which has received a number of names: Ura-Assur, Uru-ku, Shish-ku. Whether it was Semite or not is not certain; the years of reign are given in the "King-List", but they are surprisingly long in 10,500 years. There is great doubt is cast on the correctness of these dates, but the very existence of this dynasty is doubted or rejected by some scholars (as Hommel). It is indeed remarkable that the kings should be eleven in number, like those of the Amorite dynasty, and that we should nowhere find a distinct evidence of their existence; yet these premises hardly suffice to prove that so early a document as the "King-List" made the unpardonable mistake of ascribing nearly four centuries of rule to a dynasty which in reality was contemporaneous, nay identical, with the Amorite monarchs. Their names are certainly very puzzling, but it has been suggested that these were not proper names, but names of the city-quarters from which they originated. Should this dynasty have a more legitimate existence, their kings would be native rulers, and succeeded the Amorites without any break of national and political life. Owing to the questionable reality of this dynasty, the chronology of the previous one varies greatly; hence it arises, for instance, that Hammurabi's date is given as 1772-17 in Hastings' "Dictionary of the Bible", while the majority of scholars would place him about 2150 B.C., or a little earlier; nor are indications wanting to show that, whether the "Unknown Dynasty" be fictitious or not, the latter date is approximately right.

In the third place comes the Kassite dynasty, thirty-six kings, for 576 years. The tablet with this list is unfortunately mutilated, but almost all the nineteen missing names can with some exactness be supplied from other sources, such as the Assyrian synchronous history and the correspondence with Egypt. This dynasty was a foreign one, but its place of origin is not easy to ascertain. In their own official designation they style themselves kings of Kardunia, and the air products of the earth of Kardunia. In later times Bel of Kardunia was called Kudur-Nabu, and his son Hammurabi was called Bel of Kardunia. This Kudurrash has been tentatively identified with South Elam. Information about the Kassite period is obtained but sparingly. We possess an Assyrian copy of an inscription of Agum-Rakrime, perhaps the seventh king of this dynasty: he styles himself: "King of Kasshu and Akkad, King of the broad land of Babylon, who caused much people to settle in the land of Ashumak, King of Padan and Alvan, King of the land of Gutu, wide extended peoples, a king who rules the four quarters of the world". The extent of territory thus under dominion of the Babylonian monarch is wider than even that under the Amorite dynasty; but in the royal title, which is altogether unusual in its composition, we have, in the name Gutu, which possibly occurs in few generations later, however, the old style and title is resumed, and Babylon again stands first; the foreign conquerors were evidently conquered by the peaceful conquest of superior Babylonian civilization. This Agum-Rakrime with all his wide dominions had his own gods, and while to the Semitic gods Marduk, the king was a subject of the gods Marduk and Aššur, the god of Babylon, the king was a subject of the god Marduk, and of the local god Aššur-bel-nisheushu of Assyria. From the Tell-el-etharna tablets we conclude that in 1400 B.C., Babylon
annexed the Mesopotamian provinces of Assyria, and when Sinsharshishkun, the last King of Assyria, tried to cut off his return and threatened Babylon, Nabopolassar called in the aid of the Manda, nomadic tribes of Kurdistan, somewhat incorrectly identified with the Medes. Though Nabopolassar no doubt contributed his share to the eventual complete destruction of Nineveh (606 B.C.) by these Manda barbarians, he apparently did not in person co-operate in the taking of the city, nor share the booty, but used the opportunity to firmly establish his throne in Babylon. Though Semites, the Chaideans belonged to a race perfectly distinct, Babylonians proper, and were foreigners in the Euphrates Valley. They were settlers from Arabia, who had invaded Babylonia from the South. Their stronghold was the district known as the Seelands. During the Assyrian supremacy the combined forces of Babylon and Assyria had kept them in check, but, owing probably to the powerful Assyrian atrocities in Babylon, the citizens had begun to look towards their former enemies for help, and the Chaldean power grew apace in Babylon till, in Nabopolassar, it assumed the reins of government, and thus imperceptibly a foreign race succeeded the ancient inhabitants. The city remained the same, but its nationality changed. Nabopolassar must have been a strong, beneficent ruler, engaged in rebuilding temples and digging canals, like his predecessors, and yet maintaining his hold over the conquered provinces. The Egyptians, who had learnt of the weakness of Assyria, had already, three years before the fall of Nineveh, crossed the frontiers with a mighty army under Necho II, in the hope of sharing in the dismemberment of the Assyrian Empire. How Josias of Juda, trying to bar his way, was slain at Megiddo is known from IV Kings, xxiii., 29. Meanwhile Nínive was taken, and Necho, resting satisfied with the conquest of the Syrian provinces, proceeded no further. A few years later, however, he marched a colossal army from Egypt to the Euphrates in hopes of annexing part of Mesopotamia. He was met by the Babylonian army at Carchemish, the ancient Hittite capital, where he wished to cross the Euphrates. Nabopolassar, being prevented by ill health and advancing age, had sent his son Nebuchadnezzar, and put him in command. The Egyptians were utterly routed in this great battle, which is considered one of the most important in history (604 B.C.). Nebuchadnezzar pursued the enemy to the borders of Egypt, where he received the news of his father's death. He hastened back to Babylon, was received without opposition, and began, in 604 B.C., the forty-two years of his most glorious reign. By the end of his reign, Babylonia governed Syria, Palestine, and parts of Asia Minor. The Chaldean dynasty was then firmly established in the Sumerian Empire, and the great work of re-establishing the power of Babylon was accomplished.
of Jerusalem the Prophet, Jehoiakim refused tribute, i.e., rebelled against Babylon. At first Nabuchodonosor II began a small war against Jerusalem; then, in 597 B.C., he dispatched a considerable army, and after a while began the siege in person. Jehoiakim, however, son of Jehoiakim, who as a lad of eighteen had succeeded his father, succeeded in containing the siege, and the workers in iron were carried away and made to form a colony on a canal near Nippur (the River Chobar mentioned in Ezechiel, i, 1), and Zedekias was substituted for Jehoiakim as vassal King of Judah.

Some ten years later Nabuchodonosor once more found himself in Palestine. Hophra, King of Egypt, who had succeeded Necho II in 589 B.C., had by secret agents tried to combine all the Syrian States in a conspiracy against Babylon. Edom, Moab, Ammon, Tyre, and Sidon had entered into the coalition; and at last even Judah had joined, and Zedekias, against the advice of Jeremiah, broke his oath of allegiance to the Chaldeans. A Babylonian army began to surround Jerusalem in 587 B.C. They were unable to take the city by storm and intended to subdue it by starvation. Pharaoh Hophra entered by Hyrcania to help the besieged. The Babylonians raised the siege to drive the Egyptians back; they then returned to Jerusalem and continued the siege in grim earnest. On July the 9th, 586 B.C., they poured in through a breach in the wall on the city by storm. They captured the flying Zedekias and brought him before Nabuchodonosor at Riblah, where his children were slain before him and his eyes blinded. The city was destroyed, and the temple transported and carried to Babylon. A vast number of the population was deported to some districts in Babylonia, a miserable remnant only was allowed to remain under a Jewish governor, Godolias. When this governor was slain by a Jewish faction under Ishmael, a fraoction of the remnant, fearing Nabuchodonosor’s wrath, emigrated to Egypt, forcibly taking Jeremiah the Prophet with them.

Babylon’s expedition to Judea thus ended in leaving it a devastated, depopulated, ruined district. Nabuchodonosor now turned his arms against Tyre. After Egypt this city had probably been the main spring of the coalition against Babylon. The punishment intended for Tyre was the same as that of Jerusalem, but Nabuchodonosor did not succeed as he did with the capital of Judea. The position of Tyre was more superior; upon it Jerusalem depended. The Babylonians had no fleet; therefore, as long as the sea remained open, Tyre was impregnable. The Chaldeans lay before Tyre thirteen years (585-572), but did not succeed in taking it. Ethobaal II, its king, seems to have come to terms with the King of Babylon, fearing, no doubt, the slow but sure destruction of Tyrian inland trade; at least we have evidence, from a contract-tablet dated in Tyre, that Nabuchodonosor at the end of his reign was recognized as suzerain of the city. Notwithstanding the little success against Tyre, Nabuchodonosor Neeked Egypt in 587. He entered the very heart of the country, ravaged and pillaged as he chose, apparently without opposition, and returned laden with booty through the Syrian Provinces. But no permanent Egyptian occupation by Babylon was the result.

Thus Nabuchodonosor the Chaldean showed himself a capable military ruler, yet as a Babylonian monarch, following the custom of his predecessors, he gave the arts of state, the arts of war, the arts of government the vast building operations which made Babylon a city (for those days) impregnable, which adorned the capital with palaces, and the famous “procession road,” and Gate of Ishtar, and which restored and beautified a great number of temples in different towns of Babylonia. Of Nabuchodonosor’s madness (Daniel, iv, 26-34) no Babylonian record has as yet been found. A number of ingenious suggestions have been made on this subject, one of the best of which is Professor Hommel’s substitution of Nabu-nâd for Nabu-chodonosor, but the matter had better stand over till we possess more information on this period. Of the prophet Daniel we find no certain mention of Babylonia, but there can be no doubt that the state of Babylonia, name, Babata (Baballas-usur), is, unfortunatley a very common one. We know of at least fourteenth persons of that time called Balatsu and seven called Babata, both of which names may be abbreviations of Babattar, or “Protect His Life.” The etymology of Sidrach and Misach is unknown, but Abednego and Arioch (Abdeno and Eriak) are well known. Professor J. Oppert found the base of a great statue near a mound called Durar, east of Babylon, and this may have belonged to the golden image erected “in the plain of Dura of the province of Babylon” (Dan., iii, 1). In 561 B.C., Nabuchodonosor was succeeded by Evil-Merodach (IV Kings, xxxv, 27), who released Joachin of Judah and raised him above the other vassal kings at Babylon, but the Chaldean power replaced the old rule and they accused him of reigning lawlessly and extravagantly. After less than three years he was assassinated by Neriglissar (Nergal-usur), his brother-in-law, who is possibly the Nergalsharzzer present in the taking of Tyre (Jer. xxxi, 1); Neriglissar was after four years succeeded by his son Labasi-Marduk, no more than a child, who reigned nine months and was assassinated.

The conspirators selected Nabonidus (Nabu-nâd) to the throne. He was the last King of Babylon (555-539 B.C.). He was a royal antiquarian rather than a ruling king. From their foundations he rebuilt the great Shamash temple in Sippar and the Sin temple in Harran, and in his reign the city walls of Babylon “were curiously built with burnt brick and bitumen.” But he resided in Tema, shunned the capital, offended the provincial towns by transporting their gods to Shu-anna, and alienated the priesthood of Babylon by what they would call misdirected piety. To us his antiquarian research after first foundation-stones of the temples he rebuilt is of the greatest importance. He tells us that the foundation-stone of the Shamash temple laid by Naram Sin had not been seen for 3200 years, which, roughly speaking, gives us 3800 B.C., for Sargon of Akkad, Naram Sin’s successor, mentions it; upon its Jereboam II built. The Babylonians had no fleet; therefore, as long as the sea remained open, Tyre was impregnable. The Chaldeans lay before Tyre thirteen years (585-572), but did not succeed in taking it. Ethobaal II, its king, seems to have come to terms with the King of Babylon, fearing, no doubt, the slow but sure destruction of Tyrian inland trade; at least we have evidence, from a contract-tablet dated in Tyre, that Nabuchodonosor at the end of his reign was recognized as suzerain of the city. Notwithstanding the little success against Tyre, Nabuchodonosor Neeked Egypt in 587. He entered the very heart of the country, ravaged and pillaged as he chose, apparently without opposition, and returned laden with booty through the Syrian Provinces. But no permanent Egyptian occupation by Babylon was the result.

Thus Nabuchodonosor the Chaldean showed himself a capable military ruler, yet as a Babylonian monarch, following the custom of his predecessors, he gave the arts of state, the arts of war, the arts of government the vast building operations which made Babylon a city (for those days) impregnable, which adorned the capital with palaces, and the famous “procession road,” and Gate of Ishtar, and which restored and beautified a great number of temples in different towns of Babylonia. Of Nabuchodonosor’s
the third place in the kingdom (i. e. after Nabonidad and Baltassar). That same night Baltassar was slain and the Semitic Empire of Babylon came to an end, for the ex-King Nabonidad spent the rest of his life in Carmania.

In one sense Babylonian history ends here, and Persian history begins, yet a few words are needed on the return of the Jewish captives after their seventy years of exile. It has long been supposed that Cyrus, professing the Mazdean religion, was a strict monotheist and released the Jews out of sympathy for their fair king. However, the historian unconsciously an instrument in God's hands, and the permission for the Jews to return was merely given out of political sagacity and a wish for popularity in his new domains. At least we possess inscriptions of him in which he is most profuse in his homage to the Babylonian Pantheon. As Nabonidad had outraged the religious sentiments of his subjects by collecting all their gods in Shu-anna, Cyrus pursued an opposite policy and returned all these gods to their own worshippers; and, the Jews having no idolatry, he returned their sacred vessels, which Baltasar had profaned, and gave a grant for the rebuilding of their Temple. The very phraseology of the decree given in I Esdras, 5, 1 sqq., referring to "the Lord God of Heaven" shows his respectful attitude, if not sincere belief. There was an echo to it in the consciousness of the Persians. There was no spot on the earth where such a variety of tongues and dialects was heard as in Babylonia, where Akkadians, Sumerians, and Amorites, Elamites, Kassites, Sittites, Juitites, and perhaps Hittites met and left their mark on the language; where Assyrian or Semitic Babylonian itself only very gradually displaced the older non-Semitic tongue, and where for many centuries the people were at least bilingual. It was the spot where Turanian, Semitic, and Indo-Germanic tongues met. Yet there remain in the national consciousness the memory that the first settlers in the Babylonian plain spoke one language. "They removed from the East," as the Bible says and all recent research suggests. When we read, "The earth was of one tongue," we need not take this word in its widest sense, for the same word is often translated "the land." Philology may or may not prove the unity of all human speech, and man's descent from a single set of parents seems to postulate original unity of language; but in any case the Bible does not here use the term in the sense that even recent research suggests that a vast variety of tongues existed previous to the foundations of Babylon. We need not further refer to Gen., x, 5, 1, 31, "In their kindreds and tongues and countries and nations"; and Gen., x, 10, where Babylon is represented as almost coeval with Arach, Achad, and Calanne, and posterior to Gomer, Magog, Elam, Arphaxad, so that the original division of languages cannot have taken place at Babylon. What historical fact lies behind the account of the building of the Tower of Babel is difficult to ascertain. Of course any real attempt to reach heaven by a tower is out of the question. The mountains of Elam were too close by, to tell them that a few yards more or less were of no importance; and perhaps it was difficult to get in touch with the sky. But the wish to have a raising-point in the plain is only too natural. It is a striking fact that most Babylonian cities possessed a ziggurat (a stage, or temple-tower), and these bore very significant Sumerian names, as, for instance, at Nippur, Dur-anki, "Link of heaven and earth"; or the summit of which reaches to heaven, and the foundation of which is laid in the bright deep"; or, at Babylon, Esgala, "House of the High Head", the more ancient designation of which was Etemenanki, "House of the Foundation of Heaven and Earth"; or Eshda, at Borippa, by its name, "House of the Seven Spheres of Heaven and Earth." The remains of Eshda, at present Bīr Nimrūd, are tradition-
shows the early intercourse between Babylonia and the Amorite land, or Palestine. In Channaah Abraham's claim is explained, that he is a descendant of Chedoraisher, notes the importance and influence, or perhaps even authority. Several centuries later, when Palestine was no longer part of the Babylonian Empire, Abd-Ifba, the King of Jerusalem, in his intercourse with his over-lord in Babylon, can only here refer to the god of Pharaoh, but Babylonian, the universal language of the day. Even when passing into Egypt, Abraham remained under Semitic rule, for the Hyskos reigned there.

(6) Considering that the progenitor of the Hebrew race was a Babylonian, and that Babylonian culture remained paramount in Western Asia for more than 1000 years, the most astounding feature of the Hebrew Scriptures is the almost complete absence of Babylonian religious ideas, the more so as Babylonian religion, though Oriental polytheism, possessed a refinement, a nobility of thought, and a piety, which are often admirable. The Babylonian account of creation, though often compared with the Biblical one, differs from it on main and essential points for instance, it states that the world was created by a god who, for a time, lived in the abyss; that the waters, the wag, and the abyss wedded together, begot the universe; Mars, the conqueror of chaos, shapes and orders all things; but this is the mythological garb of evolution as operations of a Deity and the first and only cause of the existence of all things; the gods themselves are but the outcome of pre-existent, apparently eternal, forces; they are not cause, but effect. (c) It makes the present world the outcome of a great war; it is the story of Resistance and Struggle, which is the exact opposite of the Biblical account. (d) It does not arrange the things created into groups or classes, which is one of the main features of the story in Genesis. (c) The work of creation is not divided into a number of days—the principal literary characteristic of the Biblical account. The Babylonian mythology possesses something analogous to the Biblical Garden of Eden. But though they apparently possessed the word Edina, not only as meaning "the Plain," but also as geographical name, their garden of delight is placed in Erebu, where "a dark vine grew; it was made a glorious place, planted beside the abyss. In the glorious house, which is like a forest, its shadow extends; no man enters its midst. In its interior is the Sun-god Tammur, Beh "the Nations", king of the two rivers, "nations", is a clerical error for Gutum or Guti, a neighbouring state which plays an important rôle throughout Babylonian history. Of Kudur-ahummal, King of the Land of Elam, it is said that he 'descended on', and 'exercised sovereignty in Babylon the city of Kar-Duniash'. We have documentary evidence that Eriaku's father Kudurmabug, King of Elam, and after him Hammurabi of Babylon, claimed authority over Palestine the land of Martu. This Biblical passage, therefore, which was once described as bristling with impossibilities, has so far only received confirmation from Babylonian documents.

(5) According to Gen., xi, 28 and 31, Abraham was a Babylonian from the city of Ur. It is remarkable that Urabam (in the name of the town occurs in the eponym list for 677 n. c., and Abduram, a similar name, on a contract-tablet in the reign of Apil-Sin, thus showing that Abram was a Babylonian in use long before and after the date of the Patriarch. His father removed from Ur to Harran, from the old centre of the Babylonian power, then the Talmudic tradition makes Terah an idolater, and his religion may have had to do with his emigration. No excavations have as yet taken place at Harran, and Abraham's ancestry remains obscure. Aberamu of Apil-Sin's reign had a son Sha-Amurri, which fact
the former is so intimately bound up with Babylonian
syphony, that the inspired character of the Hebrew
account is the better appreciated by the contrast.

RELIGION.—The Babylonian Pantheon arose out of
a gradual amalgamation of the local deities of the
earby states of Sumer and Akkad. And Babylonian
mythology is mainly the projection into the
heavenly sphere of the earthly fortunes of the early
centuries of civilization in the Euphrates valley.
Babylonian religion, therefore, is largely Semitic,
without doubt modified by Semitic influence.
Babylon, the last bearing the mark of its
whole country under this metropolis, the city-god
Marduk, whose name does not occur on any inscrip-
tion previous to Hammurabi, leaps to the foreground.
The Babylonian theologians not only gave him a
place in the Pantheon, but in the Epos "Enuma
Elishe" it is related how, as reward for slaying
the Dragon of Chaos, the great god's, his father's,
bequested upon Marduk their own names and titles.
Marduk gradually outshone the other deities that
were looked upon as mere manifestations of Marduk,
whose name became almost a synonym for God.
And though Babylon, never a Monotheist, mono-
theism, their ideas sometimes seem to come
near it. Unlike the Assyrians, the Babylonians
never possessed a female deity of such standing in the
Pantheon as Ishtar of Nineveh or Arbela. In the
Second Empire, Nebo, the city-god of Borsippa, over
against Babylon, rises to prominence and wins
honours almost equal to those of Marduk, and the
two cities have two almost inseparable gods. Judg-
ing from the continual invocation of the gods in every
conceivable detail of life, and the continual acknowl-
dedgment of dependence on them, and the anxious
humble prayers that are still extant, the Babylonians
were as a nation pre-eminent in piety.

CIVILIZATION.—It is impossible in this article to
give an idea of the astounding culture which had
developed in the Euphrates Valley, the cradle of
civilization, even as early as 2300 B. C. A perusal of
the article HAMMURABI, and a careful reading of his
code of laws will give us a clear insight in the Baby-
onian world of four thousand years ago. The ethical
litany of the Shurupu tablets contains an examination
of conscience more detailed than the so-called
"Negative" confessions in the Egyptian Book of the
Dead and fills us with admiration for the moral
level of the Babylonian world. Though polygamists,
the Babylonians raised but one woman to the
status of wife, and women possessed considerable
rights and freedom of action. Marriage settlements
protected the married, and the unmarried managed
their own estates. On the other hand, they pos-
sessed an institution analogous to vestal virgins at
Rome. These female votaries had a privileged posi-
tion in Babylonian society; we know, however, of no
such dire penalty for their unfaithfulness as the
Roman law inflicted. A votary could even enter
into nominal marriage, if she gave her husband a
pledge as Sarah gave Abraham. According to Law 110
of Hammurabi, however, "if a votary who dwells
not in a cloister open a wine-house or enter a wine-
house for drink, that female they shall burn". On
the other hand (Law 127), "if a man has caused the
finger to be pointed against a votary and has not
justified it, they shall set that man before the judges
and mark his forehead". The dark side of Baby-
onian society is seen in the strange enactment: "If
the child of a courtesan or of a public woman come
to know his father's house and despise his foster-
parents and go to his father's house, they shall tear
out his eyes". The repeated coupling of the words
"votive or public woman" and the minute and indul-
gent legislation of which they are the objects
make us fear that the virtue of chastity was never
prized in Babylon. Although originally only a provi-
dent, prosperous agricultural people, the Babylonians
seem to have developed a great commercial talent;
and well might some Assyrian Napoleon have re-
ferred to his Southern Neighbors as " foreign shopkeepers". In 1893 Dr. Hilprecht found 730
tablets twenty feet underground in a ruined building at
Nippur, which proved to be the banking archives
of the firm Narsu and Sons, signed, sealed, and
dated about 400 B. C. We also possess a deed of
purchase by Manishtusu, a merchant, about 500
B. C., in archaic Babylonian, which in accuracy and
minuteness of detail in moneys and values would

BRICK OF KURIALDU KING OF BABYLON (ABOUT 1400
B. C.), BRITISH MUSEUM

Mongolian origin in the very names of its gods and
in the sacred dead languages in which they were
addressed. The tutelary spirit of a locality extended
his power with the political power of his adherents;
when the citizens of one city entered into political
relations with the citizens of another, popular imagi-
nation soon created the relation of father and son,
brother and sister, or man and wife, between their
respective gods. The Babylonian Trinity of Anu,
Bel, and Ea is the result of later speculation, dividing
the divine power into that which rules in heaven,
that which rules on earth, and that which rules under
the earth. Ea was originally the god of Eridu on the
Persian Gulf and therefore the god of the ocean and
the waters below. Bel was originally the chief
spirit (in Sumerian En-ki, the older designation of
Bel, which is Semitic for "chief" or "lord") of
Nippur, one of the oldest, possibly the oldest, centre
of civilization after Eridu. Anu's local cult is as yet
uncertain; Ezech has been suggested; we know that
Gudea erected a temple to him; he always remained
a shadowy personality. Although nominal head of the
Pantheon, he had in later days no temple dedi-
cated to him except one, and that he shared with
Hadad. Sin, the moon, was the god of Ur; Shamash,
the sun, was the god of Larsa and Sippar; when the
two towns of Girsu and Urukazaga were united into
the one city of Lagash, the two respective local
deities, Nin-Girsu and Bau, became man and wife, to
whom Gudea brought wedding presents. With the
rise of Babylon and the political unification of the
compare well with a modern balance sheet that has passed the chartered accountants. Proofs are not lacking of the commercial talents of the Babylonians during the thirty-five centuries between these dates.

LITERATURE.—Vast as is the matted web of Babylonian inscriptions, equally varied are their contents. The great majority no doubt of the 300,000 tablets hitherto unearthed deal with business matters rather than with matters literary; contracts, marriage settlements, cedars, surveys, letters, orders for goods or acknowledgments of their receipt, official communications between magistrates and civil or military governors, names, titles, and dates on foundation stones, private correspondence, and so on. Still a fair percentage has a right to be strictly classed as "literature" or "belles-lettres". We must moreover constantly keep in mind that only about one-fifth of the total number of these tablets have been published, and that any description of their literature must as yet be fragmentary and tentative. It is convenient to classify as follows: (1) the Epos; (2) the Psalm; (3) the Historical Narrative.

(1) The Epos.—(a) The so-called "Seven Tablets of Creation", because written on a very thin tablet in the Kouyunjik Library. Happily the lacuna can here and there be filled up by fragments of duplicates found elsewhere. Borrowing an expression from the early Teuton literature, this might be called the "saga of the primeval chaos". Assyrian scribes called it by its first words "Enuma Elish" ("When on high") as the Jews called Genesis "Bereishith" (in the beginning). Although it contains an account of the world's origin, as above contrasted with the account given in the Bible, it is not so much a cosmogony as the story of the heroic deeds of the god Marduk, in his struggle with the Dragon of Chaos. Though the youngest of the gods, Marduk is charged by them to fight Tiamtu and the gods on her side. He wins a glorious victory; he takes the tablets of fate from Kigu, her husband; he splits open her skull, hews asunder the channels of her blood and makes the north wind carry it away to hidden places. He divides the corpse of the great Dragon and with one half makes a covering for the heavens and thus fixes the waters above the firmament. He then sets about fashioning the universe, and the stars, and the moon; he forms man: "Let me gather my blood and let me set up a man, let me make then men dwelling on the earth." When Marduk has finished his work, he is acclaimed by all the gods with joy and given the name of El. The gods are apparently eager to bestow their own titles upon him. The aim of the poem clearly is to explain how Marduk, the local god of as modern a city as Babylon, had displaced the deities of the older Babylonian cities, "the gods his fathers".

(b) The great national epic of Gilgamesh, which probably had in Babylonian literature some such place as the Odyssey or the Æneid amongst the Greeks and Romans. It consists of twelve chapters or cantos. It opens with the words of the hero himself (He who saw everything). The number of extant tablets is considerable, but unfortunately they are all very fragmentary and with exception of the eleventh chapter the text is very imperfect and shows as yet huge lacune. Gilgamesh was King of Erech the Walled. When the story begins, the city and its temples are in a ruinous state. Some great calamity has fallen upon them. Erech has been besieged for three years till Gilgamesh shows interest in its behalf. Gilgamesh has yearned for a companion, and the goddess Arum makes Es-bani, the warrior; "covered with hair was all his body and he had tresses like a woman, his hair grew thick as corn; though a woman, he was a man of might in battle". They entice him into the city of Erech by the charms of a woman called Samulbat; he lives there and becomes a fast friend of Gilgamesh. Gilgamesh and Es-bani set out in quest of adventure, travel through forests, and arrive at the palace of a great queen. Gilgamesh cuts off the head of Humbabe, the Elamite king. Ishtar the goddess falls in love with him and asks him in marriage. But Gilgamesh scornfully reminds her of her treatment of former lovers. Ishtar in anger returns to heaven and revenges herself by sending a divine bull against Gilgamesh and Es-bani. This animal is overcome and slain to the great joy of the city of Erech. Warning dreams are sent to Gilgamesh and his friend Es-bani dies, and Gilgamesh sets out on a quest to find the elixir of life to strive for the underworld. After endless adventures our hero reaches in a ship the waters of death and converses with Pir-napitum, the Babylonian Noe, who tells him the story of the flood, which fills up the eleventh chapter and the whole of the twelfth chapter. The flood gives to Gilgamesh the plant of rejuvenescence but he loses it again on his way back to Erech. In the last chapter Gilgamesh succeeds in calling up the spirit of Es-bani, who gives a vivid portrayal of life after death. It is a very short one; but those who had joined in their heart, but where the blessed lying upon a couch, drink pure water." Though weird in the extreme and to our eyes a mixture of the grotesque with the sublime, this epos contains descriptive passages of unmistakable power. A few lines as example: "At the break of dawn in the morning there arose from the foundation of heaven a dark cloud. The Storm god thundered within it and Nebo and Marduk went before it. Then went the heralds over mountain and plain. Urgamba dragged the anchors loose, the Annunnak raised their torches, with their flashing they lighted the earth. The roar of the Storm god reached to the heavens and everything bright turned into darkness." (c) The Adapa-Legend, a sort of "Paradise Lost", probably based on Kish legend, but written down during the first millennium B.C., as it is found not only in the Ninib library, but even among the Amarna tablets in Egypt. It relates how Adapa, the wise man or Atrachasis, the purveyor to the sanctuary of Ea, is deceived, through the envy of En. Anu, the Supreme God, invites him to Paradise, offers him the food and drink of immortality, but Adapa, mistakenly thinking it poison, refuses, and loses life everlasting. Anu scornfully says: "Take him and bring him back to his earth." (d) Ishtar's descent into Hades, here and there bearing a strange resemblance to the story of Orpheus and Eurydice. Orpheus descends from Orfeo to sing songs of the most sublime themes in the music of Dante's Inferno. The goddess of Erech goes:

To the land whence no one ever retorneth,
To the house of gloom where dwelleth Irkallas,
To the house which one enters but nevermore leaveth,
On the way where there is no retracing of footsteps.
To the house which one enters, and daylight all the more.

On an Amarna tablet we find a description ghostly and a glimpse of death and a wedding in a hell.

(c) Likewise fragments of legendary tales about the earliest Babylonian kings have come down to us. One of the most remarkable is that in which Sargon of Akkad, born of a vestal maiden of high degree,
Bacchus. Bishop of Corinth, whom Eusebius mentions among the prominent second-century churchmen (H. E. V. xxii), is known only by the part he took in supporting Pope Victor I in the Quar- todeciman controversy. When that pope, determining to have the Roman pastoral computation universally accepted, wrote and secured the co-operation of influential churches, many synods were held and their presiding bishops wrote to Victor, all, with the exception of the Asians, in support of his design. Among them was Bacchus. According to a ninth-century writer (c. xiii in Hardouin, Acta Concil. V. 1495) he had held a provincial synod, about 195, with eighteen other bishops; and St. Jerome attests that his letter, qualified as elegament liberum, was written in the name of the bishops of Achaea (De vir. ill., c. xiv). Eusebius, however, who had perhaps the letter, distinguishes from the other epistles by saying that it was written in Bacchus’s own name (loc. cit. xxiii). It might be that Bacchus held a synod, but in writing gave his letter a personal rather than a collective form. No text of the letter is extant. The passage above referred to containing the only available data.
BACHRIUS

190

BAUX

JOHN B. PETERSON.

Bachiorius, an early fifteenth-century writer, known only through two treatises which warrant the conjecture that he was a monk, possibly an abbot, in Spain. The first of these writings, entitled by Gennadius "Liber de Fide" is an apologetical letter to the pope in which Bachiorius, like many another monk coming to Rome from Spain at the time, vindicates his faith against the suspicions of a heretic whom he supposed to be in the council of Constance which were baseless. He had resided in heretical lands. He points out that he left his country because of its errors (whence some conclude that he was exiled) and makes a profession of faith that witnesses to his thorough orthodoxy. The second, entitled "Ad Januarium liber de reparanda of tione lapsi", is an appeal to an abbot, Januarius, to mitigate his severity towards an incontinent monk whale repentant was excluded from the monastery. The letter breathes a beautiful spirit of prudence and charity like the first in Latin with scriptural texts and allusions. The theory of Bachiorius's identity by the Spanish bishop Peregrinus seems untenable.

JOHN B. PETERSON.

Bachmann (AMONICA), Paul, Catholic theological controversialist, b. at Chemnitz, Saxony, about 1466. His biographical data are very meagre. Nothing is known of his youth, and very little of his life, before his appearance as an opponent of the Lutheran movement. He entered the Order of Cîteaux at the convent of Altenzelle on the Mulde. He seems to have been employed as professor in the Cistercian house of studies newly founded at Leipzig. Here he won the degree of Master of Arts. He was made procurator and finally, in 1522, Abbot of Altenzelle, in succession to Abbot Martin (1493–1522). At the outbreak of Lutheranism, Bachmann sprang into prominence as one of its most energetic opponents. He was one of the distinguished group of scholars composed of Cochlaeus, Emser, Peter Forst, and Augustin von Alveldt, who, under the direction of John of Schleinitz, Bishop of Meissen, fought the movement in Saxony. Bachmann gave special attention to the refutation of the casuistical and in defence of the veneration of the saints. While he was not wholly successful in preventing defection from the ranks of his own order, he at least hindered the secularization of his own monastery of Altenzelle during his lifetime. His vigorous defence of orthodoxy engaged him in a war of pamphlets with the reformers, in which his own contributions yield little in bitterness of tone and coarseness of language to those of his antagonists. In a contemporaneous satire entitled "Finis, et utile vivere Lutheranis" (Strobel, Opuscula quaedam satirica et ludicae tempore Reform. scripta, Fasc. 1, 1784, 49 sqq.) written in the style of the "Epistula ob secularorum virum", Bachmann is very severely handled. A letter is there ascribed to him over the signature "Humilis frater Paulus Hamniculus, indigius Abatissi Monstri Cellensis in Mismia". Besides his controversial pamphlets Bachmann's writings comprise hymns and devotional works in prose and verse.

Studien in Kirchenlexicon, I, 1829.

MATTHIAS LEIMKUHLER.

Backer, Augustin de, bibliographer, b. at Antwerp, Belgium, July 18, 1809; d. at Liége, 1 Dec., 1873. He was educated at the Jesuit Colleges of Saint-Nicholas, Beauregard, Saint-Aecheul, and Friebourg. In 1835 he was received into the Society of Jesus by the General, Father Roothaan, who sent him to Nivelles, in Belgium, for his novitiate. He taught three years in the College of Namur, and in 1840 began in Louvain his studies for the priesthood. At an early age his vocation as a bibliographer began to manifest itself. While yet a student he made a collection of Belgian books and planned a work that would give the history of the printing art in Europe. In order to acquire the necessary information for this compilation, he visited from 1831 to 1834 the principal libraries in Belgium and twice those of Paris, thus unwittingly preparing himself for his future labours. While working on the incomplete "Bibliotheca Scriptorum Societatis Jesus" published in 1676 by Father Nathaniel Southwell (Bacon), and he resolved to undertake the work that will ever remain the monument of his laborious life. "La bibliothèque des écrivains de la Compagnie de Jesus": This colossal work Father de Backer, with the assistance of his brother Aloysius, published in a series of seven quarto volumes in the years 1855–61, and followed this up in 1869–76 with a new edition in three volumes with the names of 11,000 Jesuit authors. The changes and improvements of this edition are so marked as to make it practically a new work. Besides an introductory sketch of the author, there are recorded under each title the editions, translations, and criticisms as well as the works in reference. Father de Backer died while engaged on the third volume of the new edition, but the work was completed by his brother. Another collaborator in the second edition was Charles Sommervogel, whose own magnificent "Bibliography of the Society of Jesus" in eleven folio volumes was made possible by the gigantic labours of the two de Backers.

VAN TRICHT, La Bibliothèque des écrivains de la c. et le d. de Augustin de Backer (Louvain, 1870); SOMMROVGEL, J. HUGHES, Loyola and the Educational System of the Jesuits (New York, 1882).

EDWARD P. SPIELMAN.

Backx, Peter Hubert Evermod, b. 10 December, 1805, at Tilburg, Holland; d. 28 October, 1888. Ordained priest 17 March, 1832, he may be considered the second founder of the Northern Alby of Tongerloo (Province of Antwerp, Belgium), which was established in 1128, or eight years after the foundation of the Premonstratensian Order by St. Norbert. It had to suffer much from the Protestants during the secularisation of the ecclesiastical life. One of the fatal blows was struck by the French Republic, which, on 6 December, 1796, expelled the religious, confiscated the abbey, and sold it to the highest bidder. At that time Tongerloo was at the height of its prosperity. After the suppression of the Jesuits, the abbey and community of Tongerloo had made all arrangements for the continuation of the "Acta Sanctorum" and the "Anales Belgica" of the Bollandists, and four of its canons were co-operating with two of the former Bollandists in this gigantic publication. The catalogue of the Abbey of Tongerloo, made in 1796, gives the names of one hundred and nineteen priests and professed scholastics and of six novices. A large number of these lived in the abbey, others were attached to parishes belonging to it. Some were completing their theological studies in Rome or at the University of Louvain, one was President of St. Norbert's College in Rome, another was president of the college of the same name at Louvain. Under the French Republic and again, after the battle of Waterloo, during the reign of William I, King of the Netherlands, the expelled and dispersed religious were not allowed to form a new community, but better times came with the creation of Belgium as a separate kingdom, in 1830. Only sixteen of the one hundred and twenty-five religious
BACON, JOHN (JOHANNES ANOLICUS, JOHANNES DE BACONTHORPE), an English Carmelite and theologian, b. towards the end of the thirteenth century at the place in the county of Norfolk whence he derives his name; d. in London, 1696. He is not to be confounded with Francis de Bachone, the Spanish Carmelite, reader of divinity in Paris from 1362, Proctor General, 1366, doctor, 1369, Provincial of Catalonia (d. circa 1390), doctor subtilissim. John Bacon, surnamed doctor nostrae salutaris, was born at Sutterly, Norfolk, studied at Oxford and Paris, was bachelor previous to 1321, and master in 1325. From 1329 till 1333 he was Provincial of England; the remainder of his life was consecrated to study. He possessed a penetrating mind, and wrote on all the subjects belonging to the ordinary course of studies. His writings comprised more than one hundred and twenty volumes, but are for the greater part lost. The most celebrated among them were those on the Gospels, especially St. Matthew, on St. Paul, and the commentary on the "Sentences," which was printed in 1510 at Milan, and for a time became the textbook in the Carmelite Order. Bacon follows Averroes in preference to St. Thomas with whom he dissented on many points. He adopted a like, 1516, pronounced himself in accord with the "raising doctrine," which, as the act of the "raising" was elevated by Alonzo X, the causally in the external intellect, in the order of generation and perfection the first subject is the individual substance; although the external object is in itself incomplete, the intellect is required to render it ultimately intelligible; the conformity of the thing thought with the external object constitutes the truth. The final cause of all things is God; but although the first object of our knowledge be the Divine essence, Bacon does not admit that this knowledge comes to us by the light of our natural reason; it is, in his opinion, a supernatural gift of grace.

BACON, NATHANIEL, better known under the assumed name of SOUTHWELL, a Jesuit priest and bibliographer, b. in the county of Norfolk, England, in 1561; d. at Rome, 2 Dec., 1676. He received his early training at St. Omers, entered the English College at Rome in 1617, and after his ordination to the priesthood in 1622 was sent to labour on the English mission. Two years later he entered the Jesuit novitiate, but shortly after was transferred to the Roman Province, where he discharged the duties of procurator and minister of the English College. Appointed in 1647 Secretary to the General of the Society of Jesus, Father Vincent Caraffa, he dis...
played such talent for business that he was retained as Secretary by the four succeeding Generals of the Order. Upon his retirement from this office in 1668 he was knighted by King Charles II and his former master, King James I. He died in 1672 in London. His work, "The History of the World," was published in 1676.

Until 1607, when James I had reigned nearly four years, he had advanced no further in office than to be given the reversion of the post of Registrar of the Star Chamber. But in 1607, he became Solicitor General. Then, until his fall, he advanced rapidly. The Attorney-Generalship was given to him in 1613. He became successively a member of the Privy Council (1619), Lord Keeper of the Great Seal (1617), Lord Chancellor (1620), and Brushed aside with the title of Baron Verulam (1618) and made Viscount St. Albans (1621). Suddenly he fell. He was accused, as Chancellor, of taking bribes. To this charge he pleaded guilty, was deposed, and declared not guilty, and was indicted for accepting employment in the State. He was excluded from both Parliament and Court, fined £40,000, and sentenced to imprisonment in the Tower during the king's pleasure. In time, all his sentence was remitted.

His death occurred five years later. On his way to dine at Highgate, he alighted from his carriage, purchased, killed, and stuffed a hen with snow in order to observe the retarding effect of cold upon putrefaction. He caught a chill which set up bronchitis and pneumonia. A week later he died in the house of the Dean of Arundel, and was buried, according to his wish, at St. Alban's in the church of St. Michael.

The philosophy of Lord Bacon is too fragmentary to lend itself to criticism other than discursive, too fragmentary even for the most indulgent, to form the basis of any line of comment, too full of symbolic expression to be exactly and briefly set down. It is rather of the nature of a method than a system and it is a method that is incomplete. Few attempts at giving a new direction to the pursuit of truth have been more overrated; few the butt of such vigorous criticism. It might be said that Bacon suffered most in it from falling into the very pitfalls that he indicated as dangerous to others. His confidence in his own powers was colossal. Few men could have written as he did in the "Novum Organum". "The die is cast, the book is written, to be read either now or by posterity—I care not which; it may wait a century for a reader, as God has waited 6000 years for an observer." His misconstruction and minimizing of the work of the old philosophers—except, perhaps, Democritus—is as startling as his ignorance of the contemporary science of his day, or as the application he makes of his own principles; for the incontinent rules of induction (their use already exemplified in Hartley's "Two Treatises") of more exact expression in Mill's Canons, should have prevented some, at least, of his cruder scientific views. With all his signalizing of the insidious dangers of the Idola, he could not altogether rid his understanding of the preoccupations caused by them, even in the presentation of his Inductive Method. These celebrated phantoms of the mind, of which we must be at pains to rid ourselves, are four in number: the Idola Tribus (preoccupations common to mankind); the Idola Specus (belonging to the individual); the Idola Fori (things of which we are conscious in the common speech of the market-places); the Idola Theatri (consisting of the received dogmata of philosophers that take possession of the mind by reason of a presumed authority). Still, the fact that he pointed them out and laid stress upon the danger is an advance. His lists, to be, of facts, his confused congeries of instances, point the way to a scientific examination of Nature. Their contents are to be treated by (1) agreement, (2) disagreement, and (3) accommodation. This was the inspiration of their use in the method of agreement and difference, taken together with that of Concomitant Variations. What is not brought into sufficient prominence is the extremely useful part played by guesswork and hypotheses in the generalization and
grouping of facts and instances; but this is scarcely to be wondred at, since Bacon, though he does allow a certain process by which inductions might be readily produced from facts by an almost mechanical or mathematical process.

Interesting to the scholastic philosopher is his treatment of the problem of the formal cause. There are the usual four causes, the formal and final belonging, in Bacon's scheme, to metaphysical investigation; the efficient and material to physical. The aim of the author of the "Novum Organum" was to banish final causes from the scope of science. His"efficient cause to physical science throws light upon his abrupt separation of philosophy and theology (vide infra). With regard to the formal cause of being, our author is peculiarly inconsistent. He uses the term in a succession of different suppositions, yet that his true meaning is effectively obscured in the varying uses of the word. But, from a passage in the "De Augmentis," it may be inferred that he treated of what is known to the scholastic as forma accidentalis. The formality, density, heat, cold, of which the essences, upheld by matter, of all creatures do consist, are proposed for investigation—not the "forma" of substances. It will be noted that he makes the essences consist of these "formae" successively by matter, a view that, with slight modifications, is to be found in several more modern systems.

Bacon's object was avowedly a practical one. Given the inductive knowledge of the "form", we ought to be able to produce the logically consequent quality in matter. He conceived it a possibility to juggle with the "formas" in much the same sense as the alchemist of earlier days hoped to transmute essences. His own positive contributions to the advancement of science were meagre in the extreme. No philosopher goes to his works for guidance, no scientist for information. Indeed, Dr. Whewell says that no scientific discovery has ever been made by Bacon's method. The gaps in his system were never bridged by those promised processes that were to render it complete. But it would be a mark of superficial consideration and historical inaccuracy to label the method that he advanced wholly jejune or useless. As a matter of fact, he called attention to the dangerous neglect of accurate observation that was the reproach of the later scholastics; and he gave an indubitable impetus to the history of science. He did little himself to raise science to the position of dignity it now occupies, at least indicated the path upon which it should proceed. But in creating the method of induction he abased that of deduction; and without a single general principle as a basis, any philosophy, systematic or mathematical, is open to the charge of inconsequence.

Bacon's position in regard to revelation is well known. Reason can attain no positive knowledge of God. This must come by faith alone. Religion is above reason, but is not opposed by it. On the contrary, it is the office of reason to meet the objections and refute the arguments that are urged against the truths of revelation. Whether Bacon was really a rationalist or a believer has been disputed. As a statesman, he was an Anglican and Erastian. As a philosopher, religion does not come within his purview. But there are passages in his writings that show a decidedly reverent and religious spirit, especially in some of the "Essays." Let us see what are contained in the following list. The dates given are those of publication.

(1) "Advancement of Learning," 1605. (This was expanded and translated into Latin and edited by Rawley as "Opera F. Barone de Verulamio."

(2) "De Sapientia Veterrum," 1609 (done into English by Sir A. Saggers, Knight, as "The Wisdom of the Ancients," 1610--1619).

(3) "Essays; Religious Meditations (in Latin); Places of perswasion and disswassion; of the Colours of Good and Evil" (a fragment), 1579.

In the second edition (1598) the Meditations are in English. In the third edition (1607) the first six essays are in the same language as those in the second (1612) 38; in the third (1625) 58.

(4) "Historia Ventorum; (Part III of the "Instructicus Magna");" 1622.

(5) "Historia Vitae et Mortis; (2nd Title of Part III, I. M.);" 1623.

(6) "New Atlantis (published by Rawley), 1627; "(7) "Novum Organum; (Distributio, Opus);" "Paraceve;" "Catalogues;" 1620. (The plan of the whole "Instructicus Magna" is laid down in the preface.)

(8) "Sylva Sylvarum; (published by Rawley), 1627. The chief editions of Bacon's works were made by Rawley (1627-57); Tenison (1670); Stephens (1734). "Complete editions" by Blackbourne (1730); Mallet (1740); Birch (1763); Montague (1834); Spedding, Ellis, and Heath (1857-83).

(9) "Bacon, Bacon and Essays; (London, 1877); DIXON in British Authors, vol. CXLIX; Personal History of Lord Bacon (Leipzig, 1841); SPEDDING, An Account of the Life and Times of Francis Bacon (Boston, 1876); PEAKE, Francis Bacon (London, 1857); NICHOL IN Philosophical Classics (Edinburgh, 1881-82); FRANCIS BACON; Francis Bacon (Edinburgh, London, 1901)

1) DE MARTINS, Essai de la Philosophie de Bacon (Paris, 1836); DODDIE in MANNING, Essays on Religion and Literature, 3d Series, Place in the Modern World; Essays on Bacon (London, 1865-74); WHETWELL, Philosophy of Discovery; London, Cambridge, 1860; for Bacon's classification of the sciences, Fray, Philosoplie as Intemta Scholastica (Edinburgh, London, 1804); FISCHER, Franz Baro von Verulam, 1806; Rechaphilosophie und die Zzehent der Logikerwissenschaft; Nachfolger.—The British Museum catalogue has some pages devoted to works on the Bacon-Shakespeare controversy.

FRANCIS AVELING.

Bacca, Diocece of. See Kalocza.

Badajoz, Diocece of (Facens).—The Latin name Pax, or Civitas Paxentis, was given to this district because it was thought to be the Pax Julia or Pax Augusta of the Romans. But it is now certain that the Pax of the Roman period is the city of Beja, in Portugal, not far from Badajoz, and that the latter name is of Arabic origin. The bishopric was erected in 1225, shortly after it was reconquered from the Moors by King Alfonso IX of Leon. Its first bishop was Don Pedro Perez, appointed by Alfonso X, the Wise, and from that time it has had an uninterrupted succession of bishops. The diocese, which is suffragan to Seville, is bounded on the north by the Diocese of Cordoba; on the east by those of Toledo, Ciudad Real, and Cordova; on the south by the Archdiocese of Seville, and on the west by Portugal. It is composed of 136 parishes, divided into 13 vicariates, which in ancient times numbered 18, with approximately half a million souls. The cathedral has a chapter composed of 5 prelates, 13 canons, 16 beneficed clerics (formerly called mediocarioneros), besides the chaplains and other personnel necessary for the proper carrying out of Divine worship. There is a diocesan seminary, under good instructors, for the education of aspirants to the priesthood, also colleges in the city of Badajoz and in Zafra, conducted by the Regular Priests of the Heart of Mary, and several religious communities in other cities. The Poor Clares and the Franciscans, as Almadenules; the discalced Franciscans, Carmelites, and Sisters of St. Anne at Badajoz, and the Augustinians, Carmelites, and Poor Clares elsewhere, making in all 19 communities of cloistered nuns, besides 3 communities of Sisters of Charity who assist the sick at Badajoz, and Franciscans at the Alcarraceras. There are schools for primary and religious instruction in all the parishes.

The diocesan territory of Badajoz comprises almost all of the civil province of the same name, which lies between the meridians 4° 36' 12" and 7° 8' west of
Greenwich, and between 37° 90' and 39° 30' north latitude, with an area of 7,143 square miles. Several rivers, among them the famous Guadiana (the Flumen Anas of the ancients), flow through this province, and the Madrid-Cáceres-Lisbon railroad traverses it. The climate of this district is very fertile, and yields all kinds of cereals, wine, and oil, also cork, the manufacture of which is practically the only industry of this section. The climate is hot and unhealthy, intermittent and infectious fevers being very prevalent. This part of Spain was first inhabited by the Vettones and Veturi, descendants of the Celts, and was called Vettonia. When the Romans divided Parther Spain (Hispania Ulterior) into various provinces, Badajoz was made a part of the province of Lusitania, whose capital, Mérida (Emerita Augusta), became at the same time the metropolitan see. When the Arabs obtained possession of this territory, Mérida was annexed to the Emirate of Cordova, and ceased to be a bishopric. The city of Mérida is now included in the Diocese of Badajoz. The Kings of Leon and Castile conquered this section and gave to the part which is now Badajoz and Cáceres the name of Extremadura (Extrema Duri), meaning, the region on the opposite side of the River Douro, which had for a long time been the dividing line between Moors and Christians.

Hernán Cortés, the conqueror of Mexico, was a native of Medellin in the province and Bishopric of Badajoz. Massons, Archbishop of Mérida, and Paul the Deacon (Paulus Diaconus Eboracensis) may also be mentioned among the distinguished natives of this district; of whom the former took part in the Council of Toledo, and the latter is known as the author of "De vita et miraculis Patrum Eremiticium". See also Sagasta. See also Histories, Year-books, and Ecclesiastical Guides of Spain.

**TIÑO LÓPEZ.**

**BADEN.**

**GRAND DUCY OF.** Situated in the southwestern part of the German Empire, bounded by Switzerland, Alsace, the Palatinate, Hesse, Bavaria, and Wurttemberg, covering an area of 5,283 square miles. According to the census of 1 December, 1905, the population numbered 2,010,728, including 1,348,511 Catholics, 762,826 Evangelicals, 8,096 Old Catholics, 2,060 Lutherans, 2,828 Reformed, 2,157 of various denominations, 7,447 Jews, and 7,300 others of various religious persuasions.

I. HISTORY. (a) The Middle Ages.—The present Grand duchy has been formed from the territories of various ecclesiastical and secular rulers. At the beginning of the Christian Era the Baden of to-day was a part of the so-called tithe lands (apri decumates) which were protected by a wall against the barbarian Germans. From this point the Alemanni made repeated incursions into the Roman territory, and after the death of the Emperor Aurelius Probus (282) they took possession of the southern part of the tithe lands. The victories of 496 and 536 made the Franks masters of this region, and Pepin the Short set aside the old form of government by tribal division, and introduced the form of organization of the Frankish Empire. The rise of the Frankish power brought Christianity into the province. The southern part of the country received the Faith about 610 from St. Columbanus and his pupil St. Gall, who preached for a hundred years. All the religious life of St. Pirmin, St. Trudbert, and St. Willibald was labouring in the Breisgau, and St. Kilian in the north-eastern part of the territory. The valley of the Rhine was evangelized from Mainz. Much of the credit for having converted the land belongs to the many monasteries that were founded in it. All the forces of the Heiligenkreuz, Honau near Kehl, St. Trudert, Ettal, Gengenbach, Schwarzwald, St. Michael near Heidelberg, Petershausen near Constance, and St. Blasien, also monasteries for women, as Stäckingen, Waldkirch, Sulzburg, and others.

Under the weak rule of the last Carolingians and after the extinction of the dynasty, the old form of government was not re-established. The only powerful kings like Otto I, Henry II, and Henry III were able to maintain their authority. The natural allies of the kings against the dukes of the different tribes were the ecclesiastical authorities, the bishops and clergy, who thereby obtained great influence and large possessions. Ecclesiastically the territory of the present Baden was divided into six dioceses: Constance, Speyer, Strasbourg, Worms, Mainz, and Würzburg; moreover the Bishops of Bamberg were wealthy landed proprietors, Henry II having bestowed on them Crown-lands in the Oreusen, as well as placing the abbey of Ettal, Ettlingen, St. Blasien, in particular, became possessed of large temporalities. Among secular rulers great prominence was attained by Count Berthold (d. 1075), who claimed descent from the old Alamannian dukes and in 1061 became Duke of Carinthia and Margrave of Verona. In the struggle between the papacy and Emperor Henry IV, Berthold remained faithful to the young Henry, youngest of his three sons, Salomon, was Bishop of Constance (1084-1110), and the other two, Berthold II (d. 1111) and Berthold I (d. 1074), were the ancestors of the dukes and margraves of the Zähringen line. The ducal line of descendants were removed in 1111 from the Empire a part of Burgundy and central and western Switzerland, with Zürich as capital. Of these rulers Berthold II founded Freiburg in the Breisgau, Berthold IV, Freiburg in Switzerland, and Berthold V, Berne. At the death of Berthold V in 1218 this branch of the family became extinct. See also History, Year-books, and Ecclesiastical Guides of Spain.

**FRIEDRICH ZÖLLER.**
In the large attendance at the Universities of Heidelberg and Freiburg, in the intermediate schools to which it was all parts of the principality won a high reputation, in the diffusion of the art of printing, etc. On account of the undeniable abuses which had crept into ecclesiastical life, many fell under the influence of certain intellectual movements which prepared the way for the Reformation, such as secret religious societies and the Pseudo-mystics, the Hussites, the Flagellants, and especially Humanism, which was in great favour at the court of the Electors Palatine.

(b) From the Reformation to the formation of the present State. - The first impulse to revolutionary religious ideas in Baden came from Luther himself, who in 1518 spent some time in Heidelberg, where he appeared as a public speaker and soon gained adherents. The Reformation took firm root in the Countship of Wertheim, in Vondage (1530) in the Countship of Hanau-Lichtenberg (1545), and in the electoral Palatinate (1546). The territories under ecclesiastical rulers and the House of Hapsburg remained true to the Catholic Faith. The progress of the Reformation in the Margravate of Baden was far more rapid. The Count Charles of Baden (1475-1527) had in 1503 united all the family territory, but the division in 1533 between his two sons Bernhard III and Ernest separated the Margravate into two parts which were not reunited until 1538. The Lutheran Church of the duchy of Baden-Durlach, a part of the population of Baden-Baden had already adopted the new teachings, but at the death of Bernhard III (1538), Duke Albert V of Bavaria, the guardian of Bernhard's son, Philip II, brought the country back to the Catholic Faith. Philip himself (1569-88), who had been educated by the Jesuits at Ingolstadt, was a vigorous opponent of the new teaching.

The Baden-Durlach branch of the family laid claim to Baden-Baden during the reign of Philip's successor, Edward Fortunatus (1588-1600), occupied a part of the country until 1622, and introduced the Reformation. Margrave William (1622-77), however, after many reverses, succeeded with the aid of the Catholic party in the Empire in gaining the undisputed mastery of the margravate. Aided is an especial manner by the Jesuits and Capuchins, for whom he established houses, he brought the Protestant part of the country back to the Catholic Faith and its supremacy was not affected even by the reconciliation to the Church of James III, third son of Charles II (1553-77) soon established the Reformation in his domains. After this time the Protestant religion remained dominant in the land of Baden-Durlach and its supremacy was not affected even by the reconciliation to the Church of James III, third son of Charles II, as James's death followed soon upon his conversion (1600). The most noted of the Baden-Durlach rulers were: Frederick V (1622-59), who founded many schools; Frederick VI (1659-77), who dominated among the six duchies of the Empire; Charles William (1700-38), who in 1715 established the present capital of Karlsruhe, greatly improved the finances and the administration of justice, and zealously promoted the interests of the schools. His grandson, Charles Frederick (1738-1811), during his long reign introduced salutary reforms to his territory, thus raising the country from the level of a petty principality to the rank of one of the greater central states of the German Empire. The extinction of the Baden-Baden branch greatly increased his possessions, which were still further enlarged by the political changes resulting from the French Revolution. In 1798 Charles Frederick was forced to surrender to France his possessions on the left bank of the Rhine, but was amply compensated by the Imperial Delegates' Enactment (1806). He received the Diocese of Constance, part of the Rhine Palatinate, and the whole left bank of the river, including the cities of Heidelberg, Mannheim, etc., part of the Dioceses of Strasburg and Speyer, eleven religious houses and abbeys, and seven cities of the empire. By the Peace of Pressburg (1805), and the accession of Baden to the Confederation of the Rhine (1806), Baden was still further enlarged by the former possessions of Austria in the Breisgau, the city of Constance, and other territories, whereby substantially the present boundaries were established. On 13 August, 1806, Baden was proclaimed a Grand duchy. The uniform of the duchy in the campaigns of Napoleon resulted in heavy loss of life and property.

(c) Recent History. - In 1818 Grand Duke Charles (1811-18), the successor of Charles Frederick, gave up the idea of forming a confederated German State and a Landtag, however, came into conflict with the government of Grand Duke Louis (1818-30), who had been trained in the ideas of absolutism, and was able at times to rule almost despotically. Despite the introduction of many timely reforms during the reign of Grand Duke Leopold (1830-52), there were often bitter contentions between the Government and the representatives of the people. In the course of these difficulties, the opponents of the Government became constantly more inflamed until a leading party of opposition was formed, which, influenced by the prevailing political tendencies, gave evidence of a strong inclination towards radical principles. Radicalism obtained a strong footing not only in the Landtag, but also throughout the country. The revolutionary movement of 1848, which began in France, found, therefore, in Baden a most favourable soil. Although the Government granted many of the demands of the people for more liberal administration, outbreaks occurred. In the autumn of 1848, the troops were sent to Rastatt and Karlsruhe brought victory to the Revolutionists. In May, 1849, the insurgents took possession of Karlsruhe, proclaimed a republic, and established a provisional government. It was only through the aid of Prussia and the German Confederation that the revolution in Baden was repressed, and the Grand duke could re-establish, his authority. Severe punishment was meted out to the guilty, especially to the mutinous soldiers.

II. ECCLESIASTICAL CONFLICTS. - During the reign of Grand Duke Louis (1822-1841), Frederick held the regency until 1856, when he himself succeeded to the title, the Government and the representatives of the Catholic Church, who had been at odds for a long time, came into open conflict. The revolutions of the Napoleonic period had shaken the organisation of the Church in Germany to its very foundations. In the modern Grand duchy of Baden, as it existed at the beginning of the nineteenth century, two-thirds of the population professed the Catholic religion. They constituted 72 parishes divided among six dioceses (Constance, Strasburg, Speyer, Worms, Mainz, and Würzburg). A reconstruction of ecclesiastical affairs was manifestly necessary and was made, so far as the State was concerned, by the organisation decrees of 1803.
and the constitutional decrees of 1807, regulating the position of the State with regard to the Church. Although the first of these decrees guaranteed to Catholics a continuance of their diocesan system, the free exercise of their religion, and the possession and use of church property, shortly after their promulgation a number of monasteries and monastery institutions were entirely abolished, others confiscated, and still others converted into secular educational institutions. In place of being organized into dioceses as formerly, Catholics were placed under two vicariates apostolical (Mainz and Trier). A board of bishops was appointed for the administration of the temporal affairs of the Church, first known as the Catholic Kirchensektion (Church Section), and later as the Catholic Oberkirchenrat (Supreme Ecclesiastical Council). Despite the personal good will of Grand Duke Charles Frederick, the spirit of these decrees was unfavourable to the Catholic Church; the rights of the State were unduly extended, to the prejudice of the Church. Worse than the ordinances themselves was the way in which they were put into execution by the officials of the Church, who treated the Catholic Church with open hostility. The unjust treatment of Catholics in the new Grand duchy and the indignities put upon them were so pronounced that even Napoleon, as Protector of the Confederation of the Rhine, took notice of the Government. In Baden (February and March, 1810) it protested against it. Unfortunately a large part of the Catholic clergy, who had either been reared in the tenets of Josephinism, or had fallen into the religious indifference of the times, failed to rally to the necessary defence of the rights of the Church. Even the highest ecclesiastical dignitaries of the land, as, for example, Vicar-General Wessenberg, favoured the tenets of Febronianism and warmly encouraged the project of a German National Church independent of Rome. This state of affairs made for years the negotiations which had been begun with the Holy See for the reorganisation of the Church in Baden. Finally the Bull "Provida soleresque" (16 August, 1821) established the province of the Upper Rhine (Oberrheinische Kirchenprovinz), defined the boundaries of the five dioceses therein comprised (Freiburg, Fulda, Limburg, Mainz, and Rottenburg), and assigned Freiburg as the seat of the metropolitan. In Baden, by the order of the Grand duke, the candidate for the archiepiscopal see was elected by free vozes. The candidate was an ecclesiastic of the old school, Wallender, a proponent of the apostolic see in Freiburg, was condemned by the pope as canonically invalid. It was only after lengthy negotiations that an agreement was reached; and on 11 April, 1827, Leo XII promulgated the Bull of erection "Ad Dominici gregia custodiam"; on 16 October, 1827, the deed of foundation was signed; and on 21 October the first archbishop, Bernhard Boll, was consecrated and installed. Nevertheless a satisfactory adjustment of affairs had not yet been found. The deed of foundation contained many provisions contrary to the spirit of the papal Bull. In marked contrast to the agreement made with Rome was the church law passed by the Government 30 January, 1830. True, it ensures to Catholics the free profession of faith and the exercise of religion, but, on the other hand, to the State is given an undue amount of power over the Church; all orders and enactments of any importance proceeding from spiritual authorities must, according to this law, be submitted to the approval of the civil powers; it even decreed that the general nature issued by the Church, although concerning matters purely spiritual, must be first inspected by the public authorities. It subjects papal Bulls, Briefs, and dispensations to the pace of the sovereign, does away with the canonical courts and appeal, grants to clergy and laity, by a usurpation of spiritual authority, recourse to the civil courts, instead of the higher ecclesiastical courts, etc. The pope as well as the archbishop entered a protest against the provisions of this law, so permeated with the spirit of a national church, but without success. Although the first archbishops, Bernhard Boll (1807–36) and Franz Reding (1836–42), acceded to the wishes of the Government as far as their position as Catholic prelates permitted, all their remonstrances against the interference of the State and their appeals for a more liberal treatment of the Church were useless. On the contrary, the Government openly favoured movements of a rationalistic and irreligious nature, even on the part of professors of theology in the University of Freiburg; it allowed the just demands of the archbishop for adequate disciplinary powers to pass unnoticed, gave protection to unworthy clergy and those who had been insubordinate to their ecclesiastical superiors, almost entirely excluded the co-operation of the Church in the management of Catholic schools and in the administration of Catholic church property, but permitted the Jesuits to hold missions among the people and allowed the archbishop greater freedom in the administration of church discipline. The change, however, was not of long duration; soon the old system of state guardianship was again in force. The occupation of the Upper Rhine also came into conflict with their respective governments in securing freedom for the Catholic Church. To obtain unity of action Archbishop Vicari, in compliance with the regulations of the plenary council of the German Catholic episcopate held at Würzburg (1848) summoned his suffragans to Freiburg in the spring of 1851. In a memorial addressed to their respective sovereigns, they demanded the privilege of training their priests and appointing them without outside interference, the free exercise of their profession, and laymen, and the privilege of conducting Catholic schools, of establishing religious societies and associations, and of administering church property without hindrance. Having waited in vain for a reply from the Government, the bishops addressed a reminder to the authorities (February, 1852), renewing the demand for the abolition of the state supremacy. Not until 5 March, 1853, did they receive a decision; this contained trivial concessions, but it was adverse on the principal points. The old system of state tutelage was to remain unconditional in force. Thereupon the five bishops reconvened (April, 1853) in Freiburg and embodied their demands in a second memorial dated 18 June, setting forth the inequity of the concessions granted 5 March, and reserving to themselves the right of taking further measures. While four of the bishops received from their respective authorities more or less far-reaching concessions, a bitter struggle was precipitated in Baden. Meanwhile the occurrence in Baden had increased the estrangement to an open rupture between the civil authorities and the archbishop. After the death of Grand Duke Leopold (24 April, 1852), the Government, i. e. the Oberkirchenrat, which in 1849 had taken the place of the Kirchensektion, ordered the archbishop to have services held for the deceased
sovereign. In conformity with the laws of the Church, the archbishop prohibited the celebration of requiem Masses for Protestant princes and ordered other appropriate services instead. The authorities, however, persisted in their demand, declared the services ordered by the archbishop inadequate, and attempted to depose the pastors and perform Masses in defiance of the archiepiscopal mandate. Only about sixty out of the 800 priests complied, whereupon the archbishop decreed that the clergy who had disregarded his command should, in expiation, attend certain exercises of five days conducted by the Jesuit Father Roh, at the theological seminary of St. Peter. Although the civil authorities promised their protection to those priests who should resist this sentence, the clergy to a man obeyed the order of the archbishop, ensuring him a victory so complete as to give him the power of resistance in further conflicts.

In response to the second memorial from the bishops of the province of the Upper Rhine, the representatives of the State of Baden refused to make any exception to the Concordat. The archbishop then informed the Government that he would take steps to secure the rights that were his, but were unjustly withheld by the civil authorities. He held competitive examinations for parish appointments and for admission into the theological seminary, presenting his commissioner; he filled parishes to which the Government could not establish a canonical right of patronage, demanded from the Oberkirchenrat an administration of church property strictly in accordance with canon law, threatening excommunication in case of disobedience. Thereupon the Government placed the official actions of the archbishop under police surveillance, banished the Jesuits from Freiburg, and threatened the clergy who submitted to the Church with the loss of their patronage and civil punishment. Two priests of Karlsruhe and Freiburg, who had proclaimed the sentence of excommunication pronounced upon the Oberkirchenrat by the archbishop, were actually placed under arrest. On still more unwarrantable interference by the Government, the archbishop issued a circular letter to be read from the pulpits, ordering an independent administration of ecclesiastical institutions without regard for civil mandates, and prohibiting the clergy from having any connexion with state officials. The excommunication was made effective, and an investigation against civil authority, forbade its promulgation in the churches and attempted to seize all copies of the letter, in some cases succeeding by force. A judicial inquiry was instituted against the archbishop (15 May, 1854), charging him with disturbing and endangering the public peace. On 22 May he was placed under arrest, and confined to his room under a guard of gendarmes until 31 May. At the command of the archbishop the diocesan court continued to transact all business, and sent a dispatch to Rome asking to be allowed to retain the supervision for the administration of the diocese. All churches were to be draped in mourning, church bells were silenced, altars were stripped of their adornments, and everywhere the faithful assembled for public prayer. The pope, in a note dated 8 June, addressed to the civil authorities of Baden, took the archbishop under his protection. The Government then proposed to enter into negotiations with the Holy See, and a peaceful arrangement was made, which created a tolerable understanding. The opposition of the archbishop and clergy were stopped, and gradually the way was opened for amicable relations between the civil authorities and the archbishop.

The lengthy negotiations with Rome were brought to a close by the signing of the Concordat of 8 June, 1859, which went far towards meeting the just claims of the Church and accorded practically all the demands of the archbishop, in particular the right of appointment to parishes, the supervision of religious instruction, participation in the management of church property, the right of decision in questions concerning marriage, etc. Thereupon the Liberals in Detmold secretly revolted against the Concordat; everywhere meetings of protest were held, resulting in 1861 in the dismissal of the Conservative and the formation of a Liberal ministry. The latter, on 29 October, without consulting the Holy See, arbitrarily declared the Concordat null and void and substituted a new law adverse to the Church, which received the approbation of the Landtag. On 20 November, 1861, the Government and the archbishop came to an agreement concerning the filling of benefices and the administration of church property.

After a short respite, new conflicts arose between the two authorities with reference to the school system (1864). The Government, now entirely under the control of the Liberals, proposed a bill for a new educational law which would greatly reduce the influence of the Church on education, conceding to the Church only the supervision of religious instruction. Although Catholic clergy exerted every effort to bring about the failure of this scheme, and the archbishop in a pastoral letter opposed it, the bill was passed. Somewhat aggravated by the opposition of the Catholic population expressed in numerous mass-meetings and addresses to the duke was completely disregarded. The Liberals, who were in the majority in the Landtag, and had control of the Government, hesitated at nothing to make still more practically effective their principles of hostility to the Church. In 1867 the Government instituted state examinations for theological students; to be held before a civil commissioner on the authority of the duke. In this way, the opposition, which had protested, and forbade the theological students to submit to this examination. As a result the clergy in the parishes subject to the appointment of the Grand duke received, instead of their stipends and appointments as pastors, only those of parish administrators. After the death of the archbishop (15 April, 1868), the Government, by refusing to consider seven out of eight candidates, made the choice of an archbishop practically impossible, and the see remained vacant for eighteen years. In 1809 civil authority assumed the control of the Jesuit institutions not purely ecclesiastical, but devoted to education or to charity, were secularized, withdrawn from the control of the Church, and large endowments left for Catholic purposes were thus alienated from their appointed use. In 1872 the members of religious orders and congregations were forbidden to give elementary instruction, to assist in the work of the ministry, or to conduct missions. In 1873 the Old Catholics were placed on an equal footing with the Catholic Church; several Catholic churches were closed, and several monastic educational institutions were suppressed. Not until after the retirement of the Liberal minister, Jolly, the soul of the anti-Catholic legislation, i.e. since 1876, were measures taken for the re-establishment of peace with the Catholic Church. In 1880 state examinations for theological students were dispensed with;
In 1882 the archiepiscopal see was filled by the appointment of Johann Baptist Freiherr zu Schöneck, who ruled until 1888; his successors were Johann Christian von Kleeberg until 1896; George Ignaz Komp, who died as archbishop elect on the journey to his see (1896), and Thomas Nörber from 1896. In 1888 the boarding schools for boys and the seminaries were reopened, and many of the religious orders were once more allowed to preach.

Meanwhile the political development of Baden had been undisturbed. In 1866, it is true, the Grand Duke had been forced against his will to fight on the side of Austria and the German Confederation against Prussia; but as early as 28 July he arranged a truce and proclaimed his withdrawal from the German Confederation. On 17 August he concluded peace, and an offensive and defensive alliance with Prussia. The military forces of Baden were organized on Prussian lines, and when, in 1870, Baden openly took sides with Prussia, they fought with distinction in many battles. On 25 November Baden entered the North German Confederation, which was strengthened by the accession of the other South German States to it. The German Empire (1871) being inaugurated, administration was now conducted along Liberal lines. The Liberal majority of the Chamber was not disturbed until 1893. In 1904 a more impartial election law was introduced. The Government, however, still holds to its Liberal tendencies and refuses the just demands of Catholics for the admission of religious orders of men. Unfriendliness towards the Catholic Church seems again to be gaining ground, as is shown by ordinances requiring an investigation among the whole body of the Catholic clergy on account of alleged abuses of electoral influence and other charges.

III. State and Church in Baden.—The relations between the Catholic Church and the Government are not entirely satisfactory, as is evident from the historical account, the State often exercising an excessive control. According to the legislation now in force, the Roman Catholic Church in Baden possesses the right of a public corporation, with the privilege of public worship and the formation of religious societies. The Church conducts its affairs freely and independently. The clergy are not restricted in their communication with ecclesiastical superiors. The highest spiritual authority of Catholic Baden is the Archbishop of Freiburg, who is also Bishop of the province. He is a member of the First Chamber of Baden, ranks immediately after the ministers of state, and enjoys the title of Excellency. Ecclesiastical offices are filled by the church authorities, but are granted only to those who are citizens of Baden and can give proof of having had a general scientific training. No exemption from a regular three years' course at a German university is granted to anyone who has completed the same course at a Jesuit institution. Every priest on entering the work of the ministry in Baden must take the constitutional oath. The public exercise of church functions is permitted to priests coming from outside of Baden only under certain conditions. Without government authorization no religious order may be brought into Baden, nor may a foundation be made by an order already established. Moreover, this authorization is subject to revocation. The holding of missions and the work of the ministry by members of religious orders are in general forbidden, unless in case of extreme necessity. By legislation of the German Empire (1871) the obligation of civic oath was introduced, the duty of military service on the part of Catholic theological students abolished, and the Society of Jesus and what the laws call "cognate" orders and congregations excluded from the German Empire.

Church Property.—The property of the archiepiscopal board, the cathedral chapter, the metropolitan church, and the seminaries, is held, the immediate control of the archbishop or the chapter, are managed by the archbishop and the chapter without interference; that under royal chapters by the chapters themselves under the supervision of the ordinary; local property of a separate parish, is administered by a parish council under the presidency of the clergy, the members being chosen for a period of six years from the Catholics of the parish. The property of the ecclesiastical institutions of a district is managed by a commission, half the members being chosen by the Government, and half by the archbishop from the Catholics of the district. The intercalary fund (that is to say, the fiscal department for the collection, management, and lawful expenditure of the incomes of vacant benefices in the Grand Duchy of Baden) is administered by a council known as the Catholic Oberstiftungsrat, consisting of a president and six members, under the joint supervision of the archbishop and the Government. The members are elected for a term of six years by the Catholics of the parish, and half by the archbishop. All must meet the approval of both. The president must also be selected and named with the consent of both. The Oberstiftungsrat also supervises the administration of the charitable foundations of the Catholic Church and of all benefices, occupied or vacant.

Local associations of the members belonging to the churches recognized in Baden have, as parishes, the rights of public corporations. For the defrayal of common expenses, associations, for example, the maintenance and repair of parish churches and rectories, the purchase and care of the necessary church furniture, and the salaries of the under employé of the church, the parish can assess certain taxes on its members. There is, in addition, a general church assessment for the common needs of the Catholic Church of Baden, e. g. the expenses of the highest ecclesiastical authorities, the establishment of new church offices, etc. The execution of parochial rights and duties is vested in the parish meeting; in those parishes numbering eighty or more members, the parish is represented by an elective council. The resolution of the parish meeting or parochial council determining the church assessment is subject to the approval of the State. To become legally effective, all acts of the Oberstiftungsrat, by reorganization, dissolution, partition, or reunion, needs the sanction of the civil authorities. The administration of ecclesiastical foundations (Stiftungen) is also entirely subject to state supervision. All gifts and bequests in favour of existing foundations, likewise the establishment of new and independent ones, require the approval of the State. Churches, chapels, hospitals, and other public foundations devoted to the care of the poor and orphans, and to similar charitable purposes, are exempt from the income tax. Homes for the care of the sick and the support of the poor, as well as public educational institutions, are exempt from the income tax on the capital invested. The taxable values of rectories are exempt from any parish assessment.

Church and School.—The public educational system is under the direction of the State, the highest authority being the Obererschulrat (Supreme Educational Council), which is directly subject to the Minister of the Interior. The highest ecclesiastical superiors may deal with the matter of the religious instruction of the Obererschulrat whenever there is question of religious instruction and its place in the plan of studies. In the public schools instruction is given simultaneously to all children of school age, regardless of creed, with the exception of religious instruc-
The local supervision over the public schools, as well as the supervision of all local school funds, including religious foundations, is entrusted to the town council; at the same time each of the creeds represented in the community is represented by its pastor. In the appointment of teachers to public schools all possible respect is had for the religious belief of the children; in schools attended by children only one creed is taught, and the choice of that creed. Religious instruction is provided and supervised by the respective churches and congregations. They may be assisted in this by teachers.

The general plan of religious instruction is laid out by the bishop, but the system and methods are determined by the lay superintendents, or by their deputies. The establishment of private educational institutions is permitted, but only under certain conditions; these establishments are under state supervision; from time to time the school authorities visit them and hold examinations. Ecclesiastical corporations and institutions may found educational establishments only on the passage of a special law. Members of religious orders or of religious congregations that resemble orders are forbidden to teach in any educational institution in the Grand Duchy; there are but few exceptions to this rule, each of which is revocable at will. Churches are authorized to maintain institutions for the theological and practical training of young men for the priesthood, and to conduct schools at Congregational Seminaries for pastors, who frequent the gymnasium or the university with the intention of preparing themselves for the ecclesiastical state.

IV. STATISTICS.—Baden, with the Hohenzollern territories belonging to Prussia, forms the Archdiocese of Freiburg. The strong mixture of creeds throughout Baden is a result of the earlier territorial dismemberment described above. According to the census of 1905, in 34 of the 53 judicial districts, the Catholics are in the majority. They are especially strong in the north-east (the Tauber valley), the farther Odenwald, and the southern half of Baden. Even here, however, predominantly Protestant districts are to be found, e. g. Kehl, Lahr, Emmendingen, the Margravate of Sulzbach as far as Basle, and the valley of the Wiesent as far up as Schwäbisch Hall; in addition to the districts just mentioned, the country on both sides of the Neckar and the Lower Rhine are overwhelmingly Protestant. Ecclesiastically, Baden is divided into 3 city chapters and 36 rural chapters, and is distinguished by its many ecclesiastical foundations. Churches, parishes, and benefices, and 250 assistants. The cathedral parish of Freiburg and the parish of St. Peter are exempted from the above-mentioned chapter system. Besides this, there are 5 military and 3 institutional chaplaincies. At the beginning of 1907 Baden had 1,260 Catholic priests, 1,583 pastors, assistants, and chaplains. Of the 1187 ecclesiastical benefices of Baden, 295 are in the gift of the Grand duke as patron; 264 are left to the free collation of the archbishop; 145 are filled through presentations by noblemen, landowners, and citizens; 44 are filled by the ordinary, or called lerni, i. e. the archbishop proposes to the Grand duke three candidates for a benefice, and the latter selects one for canonical institution. In the case of 9 benefices, the right of presentation is alternate; in 47 cases it is disputed or unknown. The salary of pastors and beneficed clergy is derived from the temporalities of the living; the income of poorly equipped parishes is supplemented by an annual state appropriation which sometimes amounts to $50,000. Owners and trustees of religious foundations and congregations are prohibited from making any foundations in the Grand Duchy of Baden. In proportion to the population, the number of orders and congregations of women is small, and new foundations are vigorously opposed by the Government. The following teaching orders are represented: the Sisters of the Holy Sepulchre in Baden-Baden, the Dominicans in Fuldisch, the Sisters of Saint Vincent de Paul in Schiltach, the Sisters of St. Joseph in Offenburg near Baden-Baden, the Ursulines in Villingen (with a branch in Breisach); there are in all 5 orders for the education of girls. The following congregations for the education of boys are represented in Baden: the Sisters of St. Vincent de Paul, with mother-house at Freiburg, the Sisters of St. Francis, with mother-house at Gengenbach, the Sisters of the Holy Cross from Ingenbohl in Switzerland, and with mother-house in Heidelberg, near instance. In addition there are in Baden the Vincentian Sisters from the mother-house at Straubing, Sisters of the Most Holy Saviour (the so-called Niederbronn Sisters), from the mother-house at Oberbronn, Alsace, Franciscan Sisters from the mother-house at Mullersdorf, Bavaria, Josephite Sisters from St. Marx (Alsace), also Sisters of the Holy Cross from the mother-house at Straubing.

Education.—As explained above, the school system is entirely under the direction of the State; consequently there are but few exceptions to the rule. The schools are divided into primary and secondary. The training of the Catholic clergy there are the archiepiscopal seminary (Priesterseminar) at St. Peter, the home (Konvikt) for theological students at Freiburg, and 4 gymnasial boarding schools at Freiburg and other places. Tauberbischofsheim. At the state university (Freiburg) there is a faculty of Catholic theology numbering 11 professors; the number of theological students during the summer semester of 1907 was 226. The 62 Government intermediate schools of Baden (17 classical gymnasium, 3 "real", 4 preparatory, 7 higher gymnasium; 23 Realschulen, 8 high schools) recorded an attendance in 1905 of 5,157 Catholic students. In 17 of the Government intermediate schools religious instruction is given by 26 specially appointed priests (Religionslehrer); in the others religious instruction is cared for by the local clergy. Of the 11 private intermediate schools for boys, the Institute and School of Monighorn Lender in Sassen (Propalministerium and Realchule) is Catholic in character; in 1905 it had 493 Catholic students, and 8 priests as religious instructors. The 7 government high schools for girls had in 1905 an attendance of 964 Catholic students. Of the 33 private intermediate schools for girls attended by 1,457 Catholic girls, 5 are in charge of the Sisters, and 16 have attendance of 1,132. The Catholic periodicals now published in Baden number 25.

Charitable Institutions.—In Baden there are 254 institutions for the care of the sick, with 13,800 beds; about 100 of these hospitals, gymnasia, etc., are directed, or are actually served, by Catholic orders and congregations. The Diocese of Freiburg contains 3 orphanages (Riegel, Gurtweil, and Walldürn); in the village of Herthen there is a large institution for the care of imbeciles, with about 400 inmates, under the direction of the Sisters of the Holy Cross. In Heiterheim there is a large institution for the reclamation of girls, directed by a Catholic sisterhood. The Baden non-sectarian Red Cross Society, to which many Catholics belong, has 34 relief-centres for men, with about 5,500 members, and 333 unions for women, with 57,600 members; the association maintains 75 stations with about 470 employés. There are in Baden 13 Catholic homes for servant girls.

Catholic Societies.—Concerning these societies there are no adequate statistics available; however, the People’s Union (Volkverein) for Catholic Germany, with 27,100 members, Catholic working men’s unions (150), Catholic journeymen’s unions (53), apprentices’ unions and clubs for young men (35), and St. Joseph’s unions (2). Freiburg is the
centre of the associated charities (Charitativerband) of Catholic Germany. The chief religious societies and confraternities are: the Archconfraternity of the Most Holy Sacrament of the Altar, the Most Pure Heart of Jesus, the Most Holy Name of Mary, the League of Prayer for Germany, the Association of the Holy Family, the Association of the Holy Childhood of Jesus, the Boniface Society, the Ludwig Mission Society, St. Michael's Society, the Societies of St. Vincent de Paul for men and women, and others.

The most important Catholic church edifices are the cathedrals of Freiburg and Constance, the churches of Uebenringen and Breisach, and those of Baden-Baden, Salem, St. Blasien, Reichenau, Gengenbach, Bronnbach, Schwarzach, Ladenburg, Neustadt, Karlsruhe.

A complete bibliography is to be found in Kienitz and Wagner, Badische Bibliothek (Karlsruhe, 1897 and 1900). The most important work on the teaching of ecclesiastical history are: Schöpper, Historia Zwingri-Badelins (2 vols. v. 1840 and 1843); Bader, Die katholische Kirche im Großenbund (1873); Joos, Lausanne, Betriebsreglement der Geschichte der oberrheinischen Kirchenprovinz (Tübingen, 1803); Offizelle Aktenstücke über die Kriegen und Schafen im Großenbund (Karlsruhe, 1804-75); Weinhöfer, Geschichte bis zum Ende des Mittelalters (Tübingen, 1803); Bamberger, Geschichtsquellen der Main- und Sporn, Badisches Staatarchiv (Karlsruhe, 1868); Friedberg, Der Staat und die katholische Kirche im Großenbund (Baden, 1874); Löscher, Die Ausbreitung des Christentums im südlichen Baden (Heidelberg, 1875); Das Große Bund (1885); Badische Geschichte der kirchenpolitischen Gesetze und Verordnungen der römisch-katholische Kirche in Bayern (Karlsruhe, 1888); Weinschloß, Geschichte (Karlsruhe, 1890); Heine, Gesetze die katholische Kirche im Baden betreffend (Freiburg, 1890); Gesetze der kirchlichen Politik der Kirche im Grosserbund (Freiburg, 1891); Heine, Drei kirchlichen Ereignisse, Verordnungen und Bekanntmachungen der Erzdiözese Freiburg (2 vols. v. 1897, 1899); Müller, Badesische Geschichte (2 vols. v. 1898, 1899); Mölln, Badesche Geschichte (Berlin, 1899-1902), I-IV; Foster and Witten, Beispiele der kirchlichen Zeitungen von Baden und Hohenzollern (2 vols. v. 1898, 1899); Knigge, Topographisches Wörterbuch des Grosserbunds Baden (2d ed., 2 vols., Heidelberg, 1903-05); Gönner and Sercier, Das kirchensammlerrecht im Grosserbund Baden (Stuttgart, 1904); Zeitschrift für Geschichte des Oberhains (Karlsruhe, 1854-60); I-XXXV, Id., new series (Karlsruhe, 1860-94, Heidelberg, 1903-05, seq.); I-XXI.

The most important historical periodicals are: Zeitschrift für Geschichte des Oberhains (Karlsruhe since 1850); Freiburger Diözesanarchiv (Freiburg, since 1865); Alemania (Bonn, 1873 seq.; since 1860 in Freiburg).

JOSEPH LINS.

Badia, Tommaso, Cardinal, author, papal legate, b. at Modena, 1483; d. at Rome, 6 September, 1547. He entered the Dominican Order in his native city, soon excelled all his brethren in learning, and taught theology successively at Ferrara, Venice, and Rome. When Sylvestro de Prierias was sent on a mission to the princes of Italy, Badia was chosen to fill, temporarily, the office of Master of the Sacred Palace, to which he succeeded permanently, probably in 1523. He was put on the commission which drew up the list of abuses to be reformed in the Council of Trent. He took part in the Diet of Worms (1540), not only as disputant, but also as theologian of Cardinal Contarini. On his return to Italy Paul III created him cardinal, and though selected as one of the legates to preside at Trent he was retained at Rome to examine the veracity and disciplinarian measures drawn up in the sessions of the council. It was on his favourable recommendation and approval of its constitutions that Paul III confirmed the Society of Jesus. At his own desire he was buried in the Minerva beside Cardinal Contarini. He is the author of several theological treatises, as well as works on Divine Providence, the immortality of the soul and several treatises against Luther, none of which have been published.

Owen and Echard, SS. O. P., II, 132; Touron, Hommes Illust., IV, 116-121; Heffele-Herbenrother, Concilem., IX, 944; Dittwich, Gesaporo Contarini (Braunau, 1883); L. Paston, Die Correspondenca des Kardinals Contarini in Hist. Jahrbuch, 1, 521-392; 473-500, passim. Thos. M. SCHWERTNER.

Badin, Stephen Theodore, the first Catholic priest ordained within the limits of the original thirteen States of the Union, pioneer missionary of Kentucky, b. at Orleans, France, 17 July, 1708; d. at Cincinnati, Ohio, 21 April, 1853. Educated at Marville College, Paris, he was the first to introduce the Seminary of his native city in 1789. He was sub-deacon when the seminary was closed by the revolutionary government, in 1791, and sailed from Bordeaux for the American mission in November of the same year, with the Rev. B. J. Flaged and J. B. Dauphine, both destined in God’s providence to wear the mitre in Kentucky. They arrived in Philadelphia on the 26th of March, 1792, and were welcomed at Baltimore by Bishop Carroll on the 28th. Stephen T. Badin pursued his theological studies with the Sulpicians and was ordained a priest by Bishop Carroll, 28 May, 1793. His was the first ordination in the United States. After a few months spent at Georgetown to perfect himself in English, Father Badin was appointed to the Mission of Kentucky. He remained there for the rest of his life. He was ordained Bishop of the Diocese of Bardine, 3 September, 1793, travelled on foot as far as Pittsburgh, and by flat boat down the Ohio, landing at Limestone (Maysville), Ky., where they found twenty Catholic families. They walked sixty-four miles to Lexington, and on the Feast Day of Advent, 1793, Father Badin said his first Mass in Kentucky at the house of Denis McCarthy.

He settled at White Sulphur, Scott County, sixteen miles from Lexington, and for about eighteen months attended this church and neighbouring missions. In April, 1794, he accompanied one who resided in Bardstown, left for New Orleans, and Father Badin was now alone in the Kentucky mission. For fourteen years he attended to the spiritual wants of the various Catholic settlements, scattered over an extent of more than 120 miles, forming new congregations, building churches, never missing an appointment. To visit his missions regularly he had to live in the saddle, and it is estimated that he rode more than 100,000 miles during his ministry of forty years. For many years he was alone; it was only in July, 1806, that he received permanent help, when the Rev. Charles Nerinckx came to take the larger part of the burden from his shoulders. They lived together at St. Stephen’s, on Pottington Creek, which was still their head-quarters on the arrival, in 1811, of Bishop Flaget, whom Father Badin had suggested and urged as first Bishop of Bardstown. Difficulties about the holding of church property soon arose between the bishop and Father Badin, without, however, interfering with the reverence of the latter for the bishop and the bishop’s friendship for him. Together they went to Baltimore in 1812 to submit the controversy to Archbishop Carroll. It was not settled. They returned to Kentucky in April, 1813, and Father Badin resumed his missionary duties and accompanied his bishop on many pastoral journeys, until 1819. The Rev. J. B. David had been appointed coadjutor in 1817, but persistently refused to accept the honour. Father Badin, believing that this selection would put an end to the controversy about church property, and be for the good of the diocese, which he was the founder, left for France in the spring of 1819. The consecration of Bishop David in September of that year, and unjust suspicions about his disposition of church properties caused him to remain abroad. In 1820 he accepted the parish of Millaney and Marreill-en-Gault, about forty miles from Orleans. He continued, however, to take the greatest interest in the Kentucky mis-
sac, insisted on his loyalty to Bishop Flaget, and helped constantly and generously to secure gifts in money and valuable church furniture for the missions. In 1822 he published in Paris a "Statement of the Missions in Kentucky", with the same purpose in view.

Father Badin returned to America in 1828. After spending one year on the Michilimackinac mission, he went back to Kentucky in 1829. The next year he offered his services to Bishop Fenwick of Cincinnati, and took charge of the Pottawatomie Indians at St. Joseph's River. Miss Campau of Detroit, an expert Indian linguist, acted as interpreter and teacher, until Father Badin's place was taken in 1836. Having returned to Cincinnati in that year, he wrote for the "Catholic Telegraph" a series of controversial "Letters to an Episcopalian Friend". In 1837 he went to Bardstown, Ky., was appointed vicar-general, and continued to visit the various missions. In 1841 he removed to Louisville with the bishop's household. In that year he conveyed a great deal of church property (notably that of Portland, near Louisville) to the bishop, and a farm to the Very Rev. E. Sorin of Notre Dame, Indiana.

On the 25th of May, 1843, Father Badin celebrated the golden jubilee of his priesthood, at Lexington, where he had offered up the Holy Sacrifice of the Mass for the first time in Kentucky. In September, 1844, he accepted from the bishop of Chicago the guardianship of the French settlement at Bourbons Grove, Kankakee County, Illinois. In the winter of 1848 he was again in Kentucky, and Bishop Cojdorjutor Spalding welcomed him to the episcopal household. About two years later he became the guest of Bishop Purrell at Cincinnati, and eventually died at the archbishop's residence. His body lay undisturbed in the cathedral crypt for over fifty years. In 1904 Archbishop Elder permitted its removal to the University of Notre Dame, Indiana.

Father Badin's writings are: "Etat des missions du Kentucky" (Paris, 1822), tr. in the "U. S. Cath. Miscellanies" for December, 1824, and in the "Catholic World", September, 1875; "Carmen Sacrum", a Latin poem composed on the arrival of Bishop Flaget in Kentucky, June, 1811, translated into English by Colonel Theodore O'Hara of Frankfort, Ky., author of the "Bivouac of the Dead"; "Episcopedium", Latin poem composed on the occasion of the death of Col. Joe Davis at the Battle of Tippecanoe, 7 November, 1811, presented by Doctor Ballagh, of New York (Louisville, 1844); "Sanctissima Trinitatis Laudes et Invocatio" (Louisville, 1843), also the original text and tr. in Webb's "The Centenary of Catholicity in Kentucky" (Louisville, 1844); "Letters to an Episcopalian Friend"—three controversial articles on the Church and the Eucharist (published in the "Catholic Telegraph" of Cincinnati, 1836).

Spalding, Sketches of the Early Catholic Missions of Kentucky (Louisville, 1844); In the Life of Bishop Flaget (Louisville, 1852); Life of Rev. Co. Nebrinck (Cincinnati, 1880); Weyn, Centenary of Catholicity in Kentucky (Louisville, 1884).
BAUMER, SUTHER, historian of the Breviairy and one of the most scholarly patrologists of the nine-teenth century. On 5 March, 1845 at Lachenberg near Kaiserswerth (Rheine); d. at Freiburg 12 Au-
sung, 1894. He made his university studies at Bonn
and Tubingen; in 1865 he entered the Benedictine
Abbey of Beuron, then newly founded, and was or-
dained in 1869. The larger part of his life, from 1875-85,
were spent at Maredous Abbey in Belgium and at Er-
vington in England; in the latter year he returned to
Beuron. Dom Baumser was long the chief ad
eriser of the printing house of Desclée, Lefebvre
and associates at Tournai, for all editions of the
Missal, Breviary, Ritual, Pontifical, and of the li-
turgical works. He contributed to leading reviews
a number of valuable essays, e. g. on the Stowe
Missal (the oldest liturgical record of the Irish
Church) in the "Zeitschrift fur kath. Theologie"
(1892), on the author of the "Micrologus" (an im-
portant medieval liturgical treatise) in "Neues
Archiv" (1893), on the "Sacramentarium Gelas-
ianum" in the "Historisches Jahrbuch" (1893). He
also wrote a life of Mabillon (1892) and a treatise
on the history and content of the Apostles' Creed
(1893). His most important work is the classical
history of the Roman Breviary "Geschichte des
Brevis" (Freiburg, 1895; French tr., R. Brion,
Paris, 1905). In this work he condensed the labours
and observations of eminent students of the Breviary
and the best critical results of the modern
school of historical liturgists.

Allg. deutsche Biographie, XLVI, 297, and the biographical
appendixes to the German and French texts of
his history of the Breviary.

THOMAS J. SHAHAN.

BAGAMOYO, VICARIATE APOLSTIC OF, in German
East Africa, separated by a pontifical Decree of
11 May, 1906, from the Vicariate Apostolic of North-
ern Zanzibar. The Catholics number 14,725 (in all
German East Africa there are about 6,700,000 na-
tives, most of whom belong to mixed tribes of the
Bantu race). The mission is cared for by the Congre-
gation of the Holy Ghost and the Immaculate Heart
of Mary (52) and by the Trappists (8), aided by two
congregations of women: Filles de Marie (7), and
Sisters of the Precious Blood, formerly Trappistines
(28). The first vicar Apostolic, Rt. Rev. Fr.
Zxver Vogt, of the Congregation of the Holy Ghost,
was elected 25 July, 1906. There are 15 churches
and chapels, 15 stations with medical services, 3 or
orphans, 6 industrial, or trade, and agricultural,
schools, 71 schools with 7,574 native pupils, 2 leper
stations, and 2 hospitals. The vicar Apostolic re-
sides at Bagamoyo, a small seaport town near the
mouth of Kigangi, opposite the Island of Zanzibar,
and the centre of the telegraph and cable systems
of the colony. (See Africa.)

MISSIONES CATHOLICAS (Propaganda, Rome, 1907), 427; States-
man's Year-Book (London, 1907), 22, 225, 226; Heli-
opr's Gazetteer (Philadelphia, 1906), 146, 711, 2047.

THOMAS J. SHAHAN.

BAGDAD.—This city was founded on the Tigris by
the second Abbaside Caliph Abou Giafar al Mansur
(762 or 764) and named by him Medinet es-Salam,
or City of Salvation; Bagdad is a popular name
and to many "Garden of March", a Man of Allah. During
five centuries it was the rich and brilliant
capital of the famous Arabian Empire. Houlagou,
a grandson of Genghis Khan, entered it in 1262; it
afterwards became a possession of the Kara Koyouli
Turks, conquered by the Mongol Chingis Khan in
1261, and in 1278 fell into the hands of the Persians who,
except for a short interval in the sixteenth century, ruled over
it until 1638, when Sultan Murad made it definitively a
city of the Ottoman Empire. It is now the chief
town of a vilayet, or district, of the same name, and
has lost much of its former importance, though it
still remains the most important city of Asiatic
Turkey, after Damascus and Smyrna, and a great tem-
poral seat of the patriarchs. It exports tex-
tile fabrics, gold and silverware, horses, dates, etc.
There are many beautiful mosques in the city, and
the ruins of its ancient walls are still visible. The
climate is hot; fevers are frequent, and the plague
has appeared several times. In the population, tak-
ing all the surrounding country, are said to be about
145,000; of these 86,000 are Musulmans, mostly
Arab Sunnites and Persian Shiites; 52,000 are Jews,
and 7,000 Christians. Turkish statistics, however,
are usually very uncertain. The Christians are di-
vided into folk, or 2,500 Armenian (800 are in the
Church of the Apostles), 1,000 Catholics and 100 Protestants), 100 Greeks
(50 Catholics); 1,600 (3,000?) Chaldeans; 1,200
Syrians; and 500 Latins.

In 1638, after the Turkish conquest, owing to the
previous kindness of the Abbass the Great, Urban VIII
created, at the expense of a pious French lady, a
Latin bishopric for the Catholics in Persia, under the
title of Babylon, the old city being then (though
erroneously) identified with Bagdad. For a long
time the last bishop of this title, when they came to
the East, resided at Hamadân, in Persia, and for
various reasons there were often no bishops, but only
vicars Apostolic. It was only in 1742 that Père
Joseph-Marie de Jesus, a Carmelite, was allowed
to reside in Bagdad, and in this he was followed by
an archbishop, with Ispahan as a suffragan see,
till 1874; the archbishop, Monsignor Tricho, was
appointed Apostolic Delegate for the Catholics of
Oriental rites. He resigned this office in 1850, and
until his death, in 1857, there were special delegates
of the last of whom, Monsignor Altmayer, succeeded
him and reunited both titles, as did his successor,
Monsignor Jean Drure. We must here, moreover,
notice that the Latin Archbishop of Bagdad, accord-
ing to the decree of Urban VIII, must always be of
French nationality.

The limits of the ecclesiastical province extend as
far as Assyr, Mesopotamia, and the territories of
Bassorah and Amida, with about 2,000 Latin faith-
ful, mostly foreigners. It includes three Apostolic
prefectures: Bagdad, Mardin, and Mossul. The Pre-
fecture of Bagdad is governed by French Discalced
Carmelites, who have at Bagdad a large and beauti-
ful college, an elementary school, a dispensary, and
stations at Bassorah, Amarih, and Bushire, with
the latter 3 under a vicar Apostolic and 20 priests
and 4 chapels. French Sisters of the Presentation of
Tours conduct an important school for girls and
an orphan's institute. For the Prefectures of Mardin
(French Capuchins) and Mossul (French Dominicans),
see articles under those titles.

The Apostolic Delegation of Bagdad, for Mesopo-
tamia, Kurdistan, and Armenia Minor, is, as appears
from its official appellation, more extensive than
the Latin archbishopric. It embraces 5 Armenian dio-
ceses, with 40 priests and about 12,000 faithful; 8 Syrian dio-
ceses, with 80 priests and about 12,000 faithful; 9 Chaldean dio-
ceses, with 160 priests and about 40,000 faithful.
Since the foundation of the Chaldean patriarchate
by Innocent XI in 1651, after the conversion of a
saintly man named Naum (or Neulam), the Chaldean patriarch bears
the title of Babylon, i.e. Bagdad. His residence
was first at Diarbekir, then at Bagdad (since about
1838), and is now at Mossul. A Syrian archbishopric
was also erected in 1862, with the same title of Baby-
on, and in 1874, the titular resides, or is author-
ized to reside, at Bagdad.

According to Bar-Hebræus ("Chronicon Ecol.", ed. Lamy, II, 236), Elias, the Greek Patriarch of
Antioch, in 910 re-established at Bagdad the ancient
residence of the Orthodox Catholics which had been
unoccupied since the Nestorian Schism (432). The
Bagot, JEAN, theologian, b. at Rennes, in France, 9 July, 1691, d. at Paris, 23 August, 1764. He entered the Society of Jesus 1 July, 1611, taught belles-lettres for many years in various colleges of France, philosophy for five years, theology for thirteen years, and became theologian to the general of the society. In 1647 he published the first part of his work "Apologeticus Fidelis" entitled "Institutio Theologica de vera Religione." In 1645 the second part, "Demonstration dogmatum Christianorum," appeared, and in 1646 "Dissertationes theologicae" on the Sacrament of Penance. In his "Avis aux Catholiques," he attacked the new doctorate according to him as "Lettre sur la conformité de St. Augustin." In 1653 his "Libertatis et gratiae defensio" was published.

In 1655 Rousse, Curé of Saint Roch (or Marseille, the Curé of St. Paul's), published a little work entitled "De l'obligeance des fidèles de se confesser à leur curé, suivant le chapitre 21 du concile general de Latran." Père Bagot answered this in his "Défense du droit épiscopal et de la liberté des fidèles," which he afterwards translated into Latin. A controversy arose, in which various ecclesiastics, including Mgr. de Marca, Archbishop of Toulouse, took sides against Bagot. The work was referred to the faculty of theology at Paris, which censured some of the propositions. Bagot, however, defended his doctrine before this assembly with the result that the censure was removed. He answered his opponents in the "Réponse du P. Bagot." On his return from Rome he devoted the remaining years of his life to the congregation of the Blessed Virgin, and died superior of the professed house at Paris.

Augustus Van Cleef.
sometime after 1625, Bagshaw was at St. John's College, Cambridge, in 1596, was graduated B. A. at Jesus College, Oxford, 1597, and probably became a Fellow of that college in the same year. As a Fellow he was a party to the expulsion from the college of the afterwards famous Jesuit, Father Parsons. At proceeding M. A. in 1576, Bagshaw was still a zealous Protestant. His administration as Principal of Grozeste House (1579) was unpopular and brief. In 1582, in France, he became a Catholic and was ordained a priest. Going to Rome with the permission of Cardinal Allen, he entered the English College. It is said by Bullen, that he was expelled by Cardinal Richelieu for his quarrelsome temper and unpopularity. Foley's list of students of the English College does not contain his name. Later, at Paris he proceeded doctor of divinity and doctor of the Sorbonne, though afterwards he was dubbed by his Jesuit opponents doctor erratricus, doctor per saltum. On his return to England he was imprisoned (1587) in the Tower of London, under the statute of 27th of Elizabeth, an act against Jesuits and Seminarists. (The text of this law is in Hardy and Gee.) With a number of other priests out of the more than 400 labouring in England, he was imprisoned in Wobbech Castle, 1593.

There now came to a head a factional division among the labourers on the English mission. There were two original sources of difference: the existence of Spanish faction, headed by the Jesuits, and the Jesuits' control of the English College at Rome (Cf. Dodd and Tierney; Lingard). The partisan feelings aroused found vent in two controversies in which Bagshaw was prominent, if not first, on the side of the Jesuits and their friends. The earlier dispute, arbitrated after nine months, arose from the vigorous opposition of Bagshaw and the elder clergy to the introduction of a religious rule among the thirty-three priests in Wobbech Castle. Later, when, partly for the purpose of consolidating English Catholic sentiment in favour of a Catholic successor to Elizabeth, Cardinal Cajetan placed at the head of the English Mission, as archpriest, Father George Blackwell, with instructions to consult the Jesuit provincial on matters of importance (Lingard VIII, v.), Bagshaw headed a party of protest, which, on being disciplined, appealed, with the secret aid of Elizabeth's government, to Rome. Their appeal was in part successful, though the appointment was confirmed.

Bagshaw, after his liberation, resided abroad, and is described in Daniel Fearlety's "Transubstantiation Exploded" as having been Rector of Ave Maria College. This work was published in 1638, and contained notes of a public disputation with Bagshaw. His death and burial, at Paris, occurred after 1625. He may have written in part "A true Relation of the Faction begun at Wisbieh by Father Edmond, alias Weston, a Jesuit, 1585, and continued since by Father Walley, alias Garnet, the Provincial of the Jesuits in England, and by Father Parsons in Rome" (1601); "Relatio Compendiosa Turbarum quas Jesuitas Angli una cum D. Georgio Blackwello, Archipresbytero, Sacerdotibus Seminariorum, Populis Catholico conceivere", etc. (Rouen, 1601).

Bagshaw was also author of "A true relation of the factions begun at Wisby, by Father Edmond, alias Weston, a Jesuit, 1585, and continued since by Father Walley, alias Garnet, the Provincial of the Jesuits in England, and by Father Parsons in Rome" (1601). He also wrote "Relatio Compendiosa Turbarum quas Jesuitas Angli una cum D. Georgio Blackwello, Archipresbytero, Sacerdotibus Seminariorum, Populis Catholico conceivere", etc. (Rouen, 1601).

Bahama Islands. The, or Lucayos, the most northerly group of the West Indies, are a chain of coral islands lying between 21° 42’ and 27° 34’ N. lat., and 72° 40’ and 79° 5’ W. long., composed of twenty-five permanently inhabited islands and an immense number of cays and rocks. The group lies to the east of Southern Florida, and is separated from it by the Gulf Stream; and to the north of Cuba, from which it is separated by the Old Bahama Channel. As to the name, nothing definite seems to be known of the origin of Bahama. It is undoubtedly of aboriginal origin, while Lucayos is evidently the Spanish Los Cayos, the Cays. The following are the principal islands and their area, and their population according to the census of 1901.—

Total 4,500 55,000

Of the total population, about 80 per cent are of African negro descent; less than ten per cent are whites, mostly of English and Scotch descent through Loyalists from the American Colonies; and the rest are coloured or mixed. Slavery was abolished, 1 August, 1834; the number of slaves was 10,086 and the owners received compensation at the rate of £12.14.4 per head. New Providence, on which Nassau, the capital, is situated, the only island having a safe harbour, with eighteen feet of water, is the principal island. Owing to its salubrious climate, Nassau is a favourite winter resort for American tourists. The average temperature for the four winter months is 71°F.

Political Status and Exports.—Politically the Bahamas are a British Colony, being governed by a Governor and an Executive Council of eight members, a Legislative Council of nine members appointed by the Crown, and an elective legislative assembly of twenty-nine members. The islands are of coral formation, thus differing completely in their geological structure from the other West India Islands as well as from the adjacent mainland of Florida. Soil and vegetation are sparse. The chief exports are sponge, tortoise shell, ambergris, pink pearls, and shells gathered in the shallow waters of the Bahama Banks, Sisal fibre, pine-apples, grapefruit, oranges, and various other tropical fruits.
BAHAMA

205

History.—Historically the islands are of interest, because one of them, San Salvador (see SAN SALVADOR, THE LANDFALL OF COLUMBUS), was the first land in the New World discovered by Columbus, 12 October, 1492. The Spanish ever made a permanent settlement in the Bahamas, but shortly after the discovery they carried off many aborigines to the mines of San Domingo, and ere long the whole population, never perhaps very large, seems to have disappeared. The statement made in some of the recent guide books, that 40,000 souls were supposed to have been carried to the mines of Hispaniola by the Spaniards, is evidently overdrawn. Had the Bahamas ever been so thickly populated, there would remain the evidence of ruins of buildings or of soil cultivation. There are few if any fruit trees whose introduction cannot be traced, and there are no food-animals on the islands. Whatever population there was, must, therefore, have subsisted on fish or conch, and even on a very scanty diet.

There is nothing to warrant the supposition that the Bahamas ever had more than a very sparse aboriginal population. So little is known of the original inhabitants that they cannot be definitely classified. They may have been of Carib stock or of the race that peopled the Lesser Antilles. The fact that they were very mild-mannered, and not cannibalistic, favours the opinion that they were kin to the Seminoles of Florida. Excepting a few skulls, stone idols, and implements, a few of which are to be seen in the public library at Nassau, there are no aboriginal remains, and there are no ruins of any description, a fact which points to a North American, rather than to a West Indian, or Central American, origin.

In 1578 Queen Elizabeth conferred upon Sir Gilbert Humphrey all lands not already occupied by some Christian power, and finding the Bahamas neglected, he annexed them; but no settlement was established. The enmity existing between England and Spain afforded adventurers, chiefly English and French, an excuse to make them a vantage ground from which they could levy depredations on Spanish shipping and from and to the New World, and the natural formation of the Bahamas furnished them an excellent hiding place. During the seventeenth century the islands were the rendezvous of the famous buccaneers. When, at the treaty of Ryswick, in 1697, comparative peace was restored among the European nations, England withdrew her protection of the buccaneers, and some returned to more peaceful avocations (thus Morgan, a chief among them, retired to Jamaica, and subsequently was appointed governor of that island), while many of the buccaneers raised the black flag of piracy against all nations, and made the Bahamas a by-word for lawlessness and crime. In 1718, England began the extermination of piracy, and soon established law and order. Since then England has been in almost undisturbed possession. On 2 March, 1776, Captain Hopkins, in command of the first American Navy, took possession of Nassau, in quest of ammunition, and on 17 March departed, carrying with him Governor Brown. In 1781 the Spanish possession was ceded to England, and possession was regained. At the treaty of Paris, in 1783, the Bahamas reverted to England. During the early Spanish possession and depopulation nothing was done for religion, and the periods of buccaneer and pirate rule precluded religious activity. With English rule came gradually the Church of England, and in the first years of the nineteenth century, the Methodists, Baptists, and Presbyterians made foundations in Nassau. In 1861 the Bahama Church was made a bishopric of the Church of England. The inhabitants of the Bahamas are all nominally Christians, and claim allegiance to some one of the denominations named. The Baptists, served almost exclusively by native preaching, are numerically the strongest. There are no reliable religious statistics.

Catholic Church in the Bahamas.—Though there existed a tradition of ruins of "religious" buildings being still visible in 1803 on Cat Island (probably dating from the temporary Spanish occupation of 1781–83), there is no evidence of any Catholic priest ever having visited the Bahamas until 1845, when a Father Duquesney, on a voyage from Jamaica to Charleston, S. C., U. S. A. made a stay of six weeks at Nassau, and held services in a private house with perhaps a few Catholic Cubans or Haitians present. In 1863 Rev. J. W. Cummings of New York, and in 1865 a Rev. T. Byrne spent each a few weeks in Nassau, and conducted services. Beginning with 1866, the Rev. Dr. Northrop made several visits, and the Bahamas were recognized in the public prints as belonging ecclesiastically to Charleston, S. C. In 1883 Bishop H. P. Northrop of that diocese paid a short visit. At his request the Propaganda, in a letter dated 23 July, 1885, established the Archbishop of New York to look after the spiritual interests of the Bahamas, and since that date they have been under the jurisdiction of the Archbishop of New York.

In February, 1885, the Rev. C. G. O'Keeffe of New York, while visiting Nassau, organized the few Catholics, with the result that on 25 August, 1885, the cornerstone of the first Catholic Church in the Bahamas was laid by Georgina Ayle-Curran, wife of Surgeon Major M. A. Corrigan of New York. Father O'Keeffe, to whom belongs the honour of establishing the first Catholic Church in the Bahamas, remained in charge till 1889. In October, 1889, Rev. D. P. O'Flynn came to Nassau with four Sisters of Charity from Mount St. Vincent, New York, who at once opened a free school for coloured children, and a select school. In June, 1890, Rev. D. P. O'Flynn was succeeded by Rev. B. J. Reilly. In February, 1891, the Rev. C. Prentice Schreiner, O.S. B., of St. John's Abbey, Minnesota, took charge of the mission, and since 1894, two other Benedictine Fathers have been associated with him in the work. In 1893 a new mission was opened at Salvador Point, Andros Island, and in 1897, the Sacred Heart mission was opened in the eastern portion of the city of Nassau. There are, therefore, at present St. Francis Xavier's Church, and Sacred Heart Chapel in Nassau, with each of which is connected a free school, taught by the Sisters of Charity, and an Academy by the same sisters. At St. Saviour's Mission, Andros Island, there is a free school taught by a lay teacher. The statistics of the mission for 1906 are as follows: 1 church and 2 chapels; 3 Benedictine Fathers, the superior of the mission bearing the title of Vicar Forane of the Bahamas; 9 Sisters of Charity; 1
academy; 3 free schools with an attendance of 470 pupils. Total Catholic population 360.

Turks and Caicos Islands, situated to the north of Haiti, belonging geographically to the Bahama group and separated from the other Bahamas in 1848, and made a political dependency of Jamaica. There is no Catholic population. Grand Turk, whose one industry is salt-making, is the seat of the commissioner. It is occasionally visited by priests from Jamaica.

The last named is the most complete and reliable; Leiten, *In Sunny Isles* (1897).

*Bailey, Thomas*, controversialist, died c. 1657. He was son of Bishop Bailey of Bangor and was educated as an Anglican at Magdalen College, Cambridge, where he graduated B.A., in 1627, and M.A., in 1631. After ordination he was appointed Sub-Dean of Wells (1638). During the civil wars he retired to Oxford where he proceeded D.D. in 1643. He was a staunch Royalist and after the battle of Naseby was for a time in the king’s retinue at Raglan Castle. Subsequently through the help of the Marquess of Worcester, who was a Catholic, he travelled abroad and thus became acquainted with Catholic life, which led to his conversion. On his return he published a work of strong royalist tendencies to prove the divine right of Episcopacy; this book gave offence to Cromwell’s government and resulted in his arrest and imprisonment in Newgate. While a prisoner he wrote another book called *Herba parietis* (The Wall-flower), in allusion to his captive state. After his release he retired to Italy, where he obtained employment in the household of Cardinal Ottoboni at Ferrara. He died shortly before the Restoration, probably in the cardinal’s employ, although Anthony A Wood repeats a rumour that he died at Bologna as a common soldier. Among the works published in his name is a life of Blessed John Fisher, which has given rise to some difficulty, for it was discovered by Dr. Bailey in nearly a century before. Bailey published it with additions which the martyr’s latest biographer, Rev. T. Bridgitt, describes as “nothing but verbiage and blunders”. He adds that some of the additions “are palpably false and have brought discredit upon Hall”. It was suggested by Dodd that Bailey’s name was added without his knowledge by the bookseller, but if the preface signed T. B. be genuine he certainly claimed authorship, a fact which does not enhance his reputation. His authorship was contested by the rev. T. Webster: “Certamen Religiosum” (London, 1649), an account of the conference concerning religion between Charles I and the Marquess of Worcester; answered by L’Estrange, Cartwright, and Heylyn; “The Royal Charter granted unto Kings by God Himself” (London, 1610, 1656, 1680); “Herba parietis” (London, 1650); “The End to Controversie” (Douai, 1654); “Golden Aposthegis of Charles I and Henry, Marquess of Worcester” (London, 1690). Bailey also completed and published *Aelius’s Apology* (London, 1870). The book mentioned in Walton’s “Life of Bishop Sanderson” as “Dr. Bailey’s Challenge” may be a separate work but more probably is merely a reference to one of the above.

EDWIN BURTON.

*Baillargeron, Charles-François*, a French-Catholic bishop, b. 26 April, 1798, at Ile-aux-Grues, P. Q.; d. 13 October, 1870. He studied theology at the Seminary of Quebec, where he taught rhetoric. Ordained in 1822, he was successively chaplain at St. Roch, pastor of St François, Isle of Orleans, of the joint parishes of L’Ange-Gardien and Chateauguich. While rector of Notre Dame de Quebec, he died of typhus fever during three visitations of cholera (1832, 1834, 1849), and the horrors of typhus (1847), assisting many Irish orphans. He was made Bishop of Tloa and coadjutor to Archbishop Turgeon of Quebec, 28 February, 1851, being the first Canadian bishop since the conquest appointed without the interposition of the British Crown. He became administrator in 1855 and succeeded as Archbishop of Quebec, 26 August, 1867. He attended the Vatican Council. He published a French translation with commentary of the *Catholic Dictionary* (2 ed., 1865), lauded by Pius IX, “Receuil d’Ordonnance” (1859), and over thirty important Pastoral Letters, besides many other official documents.

*Baillargeron, Mgr., Baillargeron (Quebec, 1870); Legros, Eloge de Mgr. C.-F. Baillargeron (ibid., 1871); Tèru, Les Évêques de Quebec (ibid., 1896).

LIONEL LINDSAY.

*Baillot, Adrien*, French author, b. 1649 at Neuville en Hes, near Beauvais, France; d. at Paris, 1706. His parents were poor but the pious dwellers of La Garde, struck by the boy’s piety and alertness of mind, took him into their monastery and then had him admitted to the College of Beauvais, where, at the close of his studies, he became teacher of humanities. Ordained priest in 1767, he served for a time as curate of Lardieu and was then made canon of Beaumont, but neither pastoral nor canonical functions satisfied him. At the end of four years his love of learning took him to Paris, where he secured the place of librarian to the celebrated de Lamoignon. An insatiable reader and a rigid ascetic, he spent his life in the seclusion of study and austerity. In a comparatively short time he had made an analytical catalogue, in thirty-two folios, of Lamoignon’s library. The great mass of erudition thus acquired passed into his invariable bookcase, and may be divided into three groups: (1) *Erudition*, (2) *History*, (3) *Religion*. To the first group belong: “Jugements des savants sur les principaux ouvrages des auteurs” (1685); “Des auteurs déguisés” (1690); “Des enfants célèbres” (1688). With the exception of the last, which still attracts by its curiousness, these books are now almost forgotten, both because they are incomplete and because they have been more than replaced by the works of such writers as Bruneau, Quérard, Barbier, etc. Baillot’s criticisms were not accepted by all. Ménage, who thought himself ill-treated, wrote the “Anti-Baillot” to which Baillot replied by “Des aîtres personneselles” (1682). La Monnoie published a revised edition of all the foregoing books, to which he joined by way of introduction an “Abrégé de la vie de M. Bailbot” (Paris, 1722; Amsterdam, 1725). To the second group belong: “Histoire de Hollande” (1690); “Vie de Descartes” (1692); “Vie de Godfrey Hermant” (1693); “Vie de Riche” (1693); “Vie de l’Écrivain de Théorie du Droit Civil” (1694); “Philippe le Bel” (1718), etc. The author shows too much sympathy for the Jansenist Hermant and the Gallican Richer. His life of Descartes is replete with interesting but rather garbled information. Lelong
BAILLOQUET

thought so well of the "History of the Conflict between Boniface VIII and Philippe le Bel" that he edited it (Paris, 1718).

To the third and by far the most important group belong: "Dévotion à la Vierge et le culte qui lui est dû" (Paris, 1694; Tournai, 1712). The avowed purpose of Benedict le Stié (Paris, II, xvi, 8) calls him a man with an intemperate mind and an ever-ready disposition to impeach even the best attested facts.

The Bollandist Stilling (Acta SS., V, 458, 458) says of him, apropos of Bl. Louis Allemand: "I desire not to detract from the services rendered to the Church, and often I am tempted to mention the nombre of their virtues and qualities, as near as possible."

Other Bollandists reproach him for not keeping the rules he had so well laid down in his "Jugements," and find him frequently at fault, now by excess of criticism, now by excess of credulity. Eusebius is almost the only writer who finds favour with Baillet. All the other writers of hagiology are held by him in suspicion and almost in contempt. That frame of mind could not yield good results. "Some French critics in sacred biography," says Alban Butler, in the introduction to his "Lives of the Saints." have tintured their works with a false and pernicious leaven, and, under the name of criticism, established scepticism." That sentence applies in a measure to Baillet. His contemporaries were not mistaken as to the origin of that pernicious leaven. The Bishop of Gap, Berger de Malissol, in prohibiting the work in his diocese, wrote: "That book on a great many points of dogma and discipline savour of the sentiments not only of Jansenism but also of the so-called reformers."

La MOYNIQUE, Abridge de la vie de M. Baillet (Amsterdam, 1728); HUNTER, Nomenclator (Innsbruck, 1802); MORE, Diction de biographie chrétienne (Paris, 1858).

J. F. SOLLIER.

BAILLOQUET, PIERRE, missionary among the Indians of Canada, b. in 1612, at Saintes, France; d. in the Ottawa missions, 7 June, 1692. He entered the Society of Jesus at Bordeaux, 20 November, 1631, and after ordination was sent as a missionary to Canada. He arrived at Quebec in the summer of 1647, and for forty-five years laboured and suffered among the savage tribes that roamed the vast territory extending from Acadia in the east to the lands of the Illinois in the far west. The hardships and privations he endured are well nigh incredible. According to the "Relations" he frequently had "the earth for bed and mattress, and strips of bark for a palace, which was filled less with air than with odours, and dust to meath in during the time of being tomahawked or burned at the stake by the savages. When almost eighty years of age and stricken with grievous infirmity, he dragged himself across the snow for leagues to go to the huts of those who were unable to come to him. He died in his eighty-seventh year, having been sixty-one years in the religious life.

DE GUILHEMY, Mémoires de la c. de J., Assistance de France, i, 711; TETIAT, Jésuit Relations, LXII, 70.

E. P. SPILLANE.

BAILLY, THOMAS, a Catholic clergyman, b. in Yorkshire, England; d. at Douai, France, 7 October, 1591. He was a student at Clare Hall, Cambridge, where he obtained the degree of Bachelor of Arts in 1546. Soon after he became a Fellow of that house, receiving the degree of Master of Arts in 1549. In 1554 he was appointed Provost. In the following year he subscribed to the Roman Catholic Articles. About November, 1557, he was appointed Master of Clare Hall and was given the degree of Bachelor of Divinity in 1558. In the same year Queen Elizabeth ascended the throne and efforts were made by the Protestant party to gain recruits to the ranks of Baily, refused to conform to the new religion. As a consequence he was deprived of his Mastership. He next visited Louvain, where he remained until 30 January, 1576, during the interval receiving the degree of Doctor of Divinity. From Louvain he went to Douai at the invitation of Doctor Allen (afterwards Cardinal), during whose absence he usually filled the position of President of the English College both at Douai and Reims. He finally left Reims, 27 January, 1589, returning to Douai, where he held the position of Dean, and on 22 January, 1590, was appointed to the see of Paris. He became a cardinal in 1591. He died at Douai.

THOMAS GAFFNEY TALPAFE.

BAINBRIDGE, CHRISTOPHER, Archbishop of York, and Cardinal, b. at Hilton, near Appleby, in Westmoreland, probably 1464; d. at Rome, 14 July, 1514. He proceeded to Oxford, entered Queen's College, of which he became provost in or before 1495, being about that time admitted LL.D.; he became later a liberal benefactor to his college. He held a number of benefices, including the treasurership of the Diocese of London, on Henry VIII's presentation, the Master of the Rolls, a post he held till his elevation to the See of Durham, which took place in 1507, nominated thereto by the king, who restored the temporalities of the see to him. He was consecrated on 1 December by Pope Julius II. This see was, after his death, being translated to York the next year by a papal Bull dated 20 September, 1508. In 1509 he was sent by Henry VIII as his ambassador to Rome. Julius II created him a cardinal on 10 March, 1511, giving him the title of St. Peter's, in reward for negotiating Henry's adherence to the Catholic Church of France, for which country he felt a strong antipathy all his life. As cardinal he was commissioned by Julius to lead a military expedition against Ferrara, which he successfully besieged. He endeavoured to secure from Pope Leo X the bestowal on Henry of the title of "Most Christian King" which Louis of France had forfeited by waging war against the pope; but the peace of 1514 made this project abortive. Bainbridge was poisoned by an Italian priest named Rinaldo de Modena, who acted as his steward or bursar, in revenge for a blow which the cardinal, a man of violent temper, had given him. It was hinted that the crime was perpetrated at the instigation of Sylvester de Giglis, Bishop of Worcester, the resident English ambassador at Rome, but de Giglis exonerated himself. Bainbridge was buried in the English Hospice, now known as the English College, Rome. He was a stout upholder of Henry's interests at the Curia.

HENRY N. BIRT.

BAINES, PETER AUGUSTINE, titular Bishop of Siga, one of the most striking figures among English Cath-
Baines. Ralph, Bishop of Lichfield and Coventry, England, b. at Knowshtorp, Yorks, date of birth uncertain; d. 11th Nov., 1559. Educated at St. John's College, Cambridge, he was ordained priest at Ely, 1519. Rector of Hardwicke in Cambridgeshire until 1544 when he went to Paris where he became Professor of Hebrew. In 1553 he returned to England and was consecrated Bishop of Lichfield and Coventry, 18 November, 1554. He vigorously opposed the Reformers and was one of the eight defenders of Catholic doctrine at the Westminster Conference 1558–59. On the accession of Elizabeth he was deprived of his bishopric (21 June, 1559) and committed to the care of Grindal, Protestant Bishop of London, thus becoming one of the eleven imprisoned bishops. The recent researches of the Rev. G. Philips (op. cit., inf.), who has exhaustively treated the question of the imprisonment of these bishops, prove that, though normally a guest, he was in fact a strict prisoner. His imprisonment lasted until 18 November, 1559, when, as Pitts writes, he "died an illustrious Confessor of the Lord." He wrote "Prima Rudimenta in lingua Hebraica" (Paris, 1550); "Compendium Michei, hoc est, De absolutionia beneficiorum" (Paris, 1554); "In Proverbia Salomonis" (Paris, 1555).
to distinguish him from eight other saints of the same name—the affix nor meaning “the Great.” He wrote a life of his master, and some Irish poems, which are now lost, but which were seen by St. Adamnan. He only ruled Iona three years, as his death took place in the year. Recesson and Knox, s. Elia, and the Church, p. 9, N. (London, 1898); Phillips, Extinction of the Ancient Hierarchies (London, 1905).

EDWIN BURTON.

Baini, Abate Giuseppe, b. in Rome, 21 October, 1775; d. there 21 May, 1844. Baini made his first musical studies under the direction of his uncle Lorenzo Baini, a distinguished disciple of the Roman School, who introduced him into the spirit and true style of Palestina. A famous period of his life was the period when he joined the clergy of the Roman Basilica, through whom he was admitted into the choir of the Sistine Chapel as a bass singer. In 1818 Baini was unanimously elected director of the famous choir, a position which he held till his death.

While Baini has left a considerable number of compositions (notably a ten-voiced "Miserece" which is still performed, alternately with those of Allegri and Bax, during Holy Week, by the Sistine Chapel choir), all of which are written in the style of the great period of classic polyphony, his great lifetime work was his "Memorie storico-critiche della vita e delle opere di Giosuè Pierluigi da Palestrina" (1528). Through the translation into German of this work by Kandel, we have the life and labours of Palestrina's school and period became more accessible and were a powerful influence in the revival and restoration of liturgical music which was about to take its beginning. The publication of Palestrina's complete works was one of the results of Baini's biography of the master. Baini lived so completely in the great musical past that he had but scant sympathy with, or understanding for, modern developments of the art. Besides the biography of Palestrina he has left a study on the theory of the art of the ancients under the title: "Saggio sopra l'identità di ritmi musicali e poesia"; an unfinished history of the Sistine Chapel choir; and other essays of a critical or theoretic character.

AMMANN, Geschichte der Musik (Leipzig, 1881); EMMAN, Musik Lex. (Leipzig, 1900).

JOSEPH OTTEN.

Baiethen, Saint, of Iona, an Irish monk, specially selected by St. Columba as one of the band of missionaries who sailed for Britain in A.D. 563, the son of Brenaron, he was an ardent disciple of St. Columba, and was appointed Abbot of Tiree Island, a monastery founded by St. Columba. St. Adamnan, in recording the death of St. Columba, states that the Apostle of Iona, as he was transcribing the fifty-third Psalm, were: "I must stop here, let Baithen write what follows". Baithen had been looking on as the most likely successor to St. Columba, and so it happened that on the death of that great apostle, in 596, the monks unanimously confirmed the choice of their founder. St. Baithen was in high esteem as a wise counsellor, and his advice was sought by many Irish saints, including St. Fintan Munua of Taghmon.

St. Adamnan (Eunan), the biographer of St. Columba, tells many interesting incidents in the life of St. Baithen, but the mere fact of being the immediate successor of St. Columba, by the express wish of that apostle, is almost sufficient to attest his worth. The "MartYROLOGY OF DONEGAL" records the two following anecdotes. When St. Baithen partook of food, before each morsel he invariably recited "Deus in adjutorium meum intende". Also, "when he worked in the fields, gathering in the corn along with the monks, he used to hold up one hand to heaven, beseeching God, and with the other hand he gathered the corn". St. Baithen of Iona is generally known as Baithen Mor, or

W. H. GRATTAN FLOOD.

Baius (or de Bay), Michel, theologian and author of a system known as Baianism, was b. at Melun in Hainaut, 1613, and d. at Louvain 16 September, 1681. Though poor, he was successively, or at least in the various colleges of the Louvain University, a complete course of studies, including humanities, philosophy, and theology. His first appointment, immediately after his ordination, was as principal of the Standon College, 1541. Three years later he was given the chair of philosophy which he retained till 1550. In that year he took the degree of Doctor of Theology, was made President of the College Adrien and also substitute to the professor of Holy Scripture, then absent at the Council of Trent, the full professorship following two years later at the titular's death. Baius had very early formed a close friendship with John Hessels. While the three leaders of the university: Tapper, Chancellor; Ravestein, Professor of Theology; and Hesselus, Professor of Holy Scripture, were at the Council of Trent, Baius and Hessels profited by their absence to give vent to long cherished ideas and introduce new methods and new doctrines. On his return from Trent, in 1552, Chancellor Tapper found Baius in his house talking with Cardinal de Granvelle, Archbishop of Mechlin, to interfere. Granvelle succeeded in quieting the innovators for awhile, but Tapper's death, in 1559, became the signal of fresh disturbances. At the request of the Franciscans, the Sorbonne of Paris had issued eighteen propositions embodying the main innovations of Baius and Hessels. Baius answered the censure in a memoir now lost, and the controversy only increased in acridity. Pope Pius IV, through Cardinal Granvelle, imposed silence upon both Baius and the Franciscans, without, however, rendering any doctrinal decision. When the sessions of the Council of Trent were resumed, in 1561, Baius and Hessels were selected to represent the university at Trent. The papal legate, Commendone, objected to the choice of the university, but Cardinal de Granvelle thought that the two innovators' presence at Trent would be good both for them and for the university. In 1563 he sent them to Trent, not, however, as delegates of the university, but as theologians of the King of Spain. Just before leaving for Trent Baius had published his first tracts. Unfortunately, the contents of those tracts were not within the programme of the last three sessions of the Council of Trent, and no public discussion of the disputed points took place. It is known, however, that Baius' and Hessels' views were diametrically opposed to the Counter-Reformation, and that the Catholic king's prestige alone saved them from formal condemnation.

II. — 14
Baius returned to Louvain in 1564 and the same year published new tracts which, with the addition of another series, were collected in "Opuscula omnia", in 1566, the year of Heselius' death. It is likely that Heselius collaborated with Baius in these "Opuscula". Their defence rested now on Baius alone, and it was not altogether fortunate. As an impostor, chancellor, it was high time to call a halt, and informed Rome, requesting decisive action; 1 October, 1567, Pope Pius V signed the Bull, "Ex omnibus affectionibus", in which were to be found a number of condemned propositions, but without Baius' name. According to the usage of the Roman Chancery, the papal document was without punctuation, divisions, or numbers. Again, as had been done before in several instances, the objectionable propositions were not censured severally, but to the whole series were applied various "notes", from "heretical" down to "offensive". Moreover, not only was Baius' name not mentioned, but for obvious reasons of prudence in those days, so near the Reformation, the text itself was too likely to be made use of or occasion to many quibbles on the part of the said:ists: What was the exact number of propositions?—76, 79, or 80?—Were they, or were they not, Baius' propositions?—Why had not a copy of the Bull been given to the Pope on whose house it was supposed to reflect? In the famous sentence, "quasi quisdam sententiae stricto coram nobis examine ponderatarum quamquam nonnullae aliquo pacto sustineri possent in rigore et proprio verborum sensu ab assertoribus ictus", reticence, censorship, damnatus, was the comma Pianum to be placed after intendit or after possent, the meaning being reversed according as the comma came after the one or the other word? Nevertheless Baius did not stoop to these evasions at first, but when the papal Bull (1567) was brought to the university and read to the faculty, he subscribed with the other professors. Meanwhile, the text of the Bull having been divulged by some indiscreet person, Baius began to find fault with it and wrote to or for, the pope two lengthy apologies, in vindication, he said, not so much of himself as of St. Augustine. The tone of the apologies was respectful in appearance rather than in reality. By a Brief, dated 1569, Pius V answered that the case had been maturely examined and finally adjudged, and dismissed the accusation. After much struggle, wherein he stooped to the ridiculous evasion of the comma Pianum and the practical stultification of a papal act, Baius abjured to Morillon, de Granvelle's vicar-general, all the errors condemned in the Bull, but was not then and there required to sign his recantation. The absence of that formality contributed later to revive the discussions. In 1570, at Rave-stein's death, Baius became dean of the faculty. Then rumour went abroad that the new dean was by no means in accord with orthodox teaching. Followers and adversaries suggested a clear pronouncement. It came under the title of the "Explicatio articulorum", in which Baius averred that, of the many condemned propositions, some were false and justly censured, some only ill expressed, while still others, if to the understanding hereof the Scholastics, were yet the genuine sayings of the Fathers; at any rate, with more than forty of the seventy-nine articles he claimed to have nothing whatever to do. Baius, after two recantations, was simply required, with the text of the Bull, to sign, solemnly published at Louvain, and subscribed by the whole faculty. Baius accepted it again. His apparent magnanimity even won him sympathy and preferments; he was in quick succession made Chancellor of Louvain, Dean of St. Peter's Collegiate Church, and "conservator" of the, Lieve and colleges. Thus was peace restored, but only for a while.

Certain inconsiderate views of the master regarding the authority of the Holy See, and even of the Council of Trent, and, on the part of his disciples, the ill-disguised hope that Gregory XIII might declare void all that had been done by his predecessor, bade fair to reopen the whole question. Pope Gregory had succeeded, 1572, to "Provisionis nostrae" (1579), confirmed the preceding papal acts and the Jesuit Toletus was commissioned to receive and bring to the pope the final abjuration of Baius. We have it under the name of "Confessio Minoris Positio". It reads, in part: "I am convinced that the condemnation of all those propositions is just and lawful. I confess that very many (plurimas) of these propositions are in my books, and in the sense in which they are condemned. I renounce them all and resolve never more to teach or defend any of them." Despite this recantation, Baius' errors had sunk too deep into his mind not to occasionally crop up in rash tenets. Up to the last few years of his life sad contests were raised by, or around, him, and nothing short of the official adhesion by the university of a compact body of doctrine could quell those contests. Baius died in the Church, to which his studiousness, attainments, and piety did honour, but whose doctrinal unity his rashness came near to infringing. The evil seed he had sown bore bitter fruit later on in the errors of Jansenism.

His System.—Baius' system has been conveniently called Baianism, as a more objective name for it would be difficult to find. It is contained in a system of opuscula, or pamphlets: "On Free Will", "Justice and Justification"; "Sacrifice"; "Meditative Works"; "Man's Original Integrity and the Merits of the Wicked"; "The Sacraments"; "The Form of Baptism"; "Original Sin"; "Charity"; "Indulgences"; "Prayers for the Dead". All these pamphlets are in "M. Baius opuscula theologica" (Louvain, 1566). The Maurist Gerberon gave a more complete edition: "M. Baii opera cum bullis pontificum et aliis ad ipsius causam spectantibus" (Cologne, 1666). This edition was put on the Index in 1697 on account of its second part, or "Baiana", in which the editor gives useful information about, but shows too much sympathy for, Baius. The gist of Baianism is also found in the 79 propositions censured by Pius V (Denzinger, N. 3156). Of these 79 propositions, 56 are easily identified in Baius' printed works, and the remaining 23—"tales quae vulgo circumferrentur"—says an old manuscript copy of the Bull "Ex omnibus"—represent the oral teaching of the Baianists. In the present "Man's Original Integrity" Baius says: "What was in the beginning, the integrity natural to man? Without that question one can understand neither the first corruption of nature (by original sin) nor its reparation by the grace of Christ." Those words give us the sequence of Baianism: (1) the state of innocent nature; (2) the state of fallen nature; (3) the state of redeemed nature.

(1) State of Innocent Nature.—From the fact, so strongly asserted by the Fathers, of the actual constitution of man, that the grace of the first man, Adam, infers their necessary connexion or even practical identity. In his view, primitive innocence was not supernatural, at least in the ordinary acceptance of that word, but due to, and demanded by, the normal condition (the Bull will, if possible, remain in the state of salvation). And that primitive state, natural to man, included among its necessary requirements destination to heaven, immunity from ignorance, suffering, and death, and the inherent power of merit. None of these was, nor could rightly be, given separately or in a manner inconsistent with another. This was the state of man's natural innocence.

(2) State of Fallen Nature.—The downfall of man's
is not, and cannot be, according to Bausus, the mere forfeiting of gratuitous or supernatural gifts, but some positive evil reaching deep into our very nature. That evil is original sin. By original sin Bausus understands, instead of a simple privation of grace, having itself its own existence and service independent of the laws of heredity and developed according to the laws of physical and psychical growth. It is a sin or moral evil by itself, even in irresponsible children, and that outside of all relation to a will, be it original or personal. What, then, becomes of human liberty as a source of moral responsibility? Bausus does not think it necessary that, in order to be moral agents, we should be free from internal determinism, but only from external compulsion. From so tainted a source, Redemption apart, only tainted actions can flow. They may sometimes appear virtuous, but it is only an appearance (vitia virtutes imitantia). In truth all human actions, not purified by Redemption, are vices pure and simple and damning vices at that (vitia sunt et damna

(3) State of Redeemed Nature.—The gifts of primitive innocence, forfeited by original sin, are restored by Jesus Christ. Then and then only do they become graces, not, indeed, on account of their supernaturality but because they are positive unworthiness. Aided by grace, the redeemed can perform virtuous actions and acquire merits for heaven. Does that entail a higher status, an inner renovation or sanctifying grace?—Bausus does not consider it necessary. Moral action, whether called justice, or charity, or obedience to the law, is the sole instrument of justification and sanctification. The rôle of grace consists exclusively in keeping concupiscence under control, and in thus enabling us to perform moral actions and fulfill the law. True, Bausus speaks of the remission of sins as necessary for justification, but this is only a fictio sursa; in fact, a catechumen before baptism, or a penitent before absolution may, by simply keeping the precepts, have more charity than certain so-called just men. If the catechumen and penitent are not styled just, it is only in deference to Holy Scripture, which requires for complete justice both newness of life (i.e., moral action) and pardon of sin (i.e., of the resitum, or liability to punishment). To grant the grace of remission of sins and the remission of the sacraments of the dead, baptism and penance
. With regard to the sacraments of the living, the Eucharist—the only one on which Bausus expressed his views—has no other sacrificial value than that of being a good moral action drawing us close to God.

A mere glance at the above sketch cannot fail to reveal a strange mixture of Pelagianism, Calvinism, and even Socinianism. Bausus is a Pelagian in his concept of the primitive state of man. He is a Calvinist in his presentation of the downfall. He is more than a Lutheran and little short of the Socinian in his theory of Redemption. Critics know that all these errors were in a manner harmonized in Bausus' mind, but they are not agreed as to what may have been his character, but a mere concretio thortis. The rational nature's love is either vicious desire, with its attachment to the world, which St. John forebode, or that praiseworthy charity which is poured forth in our hearts by the Holy Spirit, and through which God is love). Others see it in a wrong analysis of moral尼斯, and people of the old school. For a more precise determination of the Catholic doctrine, and of the meaning of the Council of Trent, the consensus Catholicorum theologorum. That consensus was voiced with no un-
certainty by such universities as Paris, Salamanca, Alcala, and Louvain itself, and by such theologians as Cunerus Petri (d. 1580—"De Gratiis"), Cologne, 1583; Suarez (d. 1617—"De gratia Dei" in Op. Omn., VII, Paris, 1587); Bellarmine (d. 1622—"De gratia Dei," 3 vols. in fol., Rome, 1621); Ripalda (d. 1648—"Adversus Baiam et Baianos," Paris, 1872); Staysaert (d. 1701—"In propositiones damnatas assertiones," Louvain, 1753); Tournely (d. 1729—"De Gratia Christi," Paris, 1729); Caspul (d. 1753—"Quid est hominis ed." Scheeben, Mainz, 1862). It should not, however, be omitted here that, even apart from Jansenism, which is a direct offshoot of Baianism, some traces of Baius' confused ideas about the natural and the supernatural were to be found here and there in the history of theology. The Augustinian School, represented by such able men as Noris, Bellelli, and Bert, adopted, though with qualifications, the idea of man's natural aspiration to the possession of God and beatific vision in heaven. The standard work of that school, "Vindiciae Augustinianae," was even once denounced to the Holy See, but no censure ensued. More recently Stattler, Hernes, Günther, Hirscher, and Kuhn evolved a notion of the supernatural which is akin to that of Baius. While admitting relatively superficially that they denied that the partaking of Divine nature and the adoption to eternal life differ essentially from our natural moral life. That theory was successfully opposed by Kleutgen and seems now to have died out. The new French theory of "immanence," according to which man partakes of the supernatural, may also have some kinship with Baianism, but it can only be mentioned here as it is yet the centre of rather fervid discussions. Matulewicz, Doctrina Russourum de statu iustitias originale," (Cracow, 1893), says that modern Russian theology embodies in great measure the condemned views of Baius.

Cath. Quart. (1882), 577.

J. F. SOLIER.

BAKER, CHARLES, VENERABLE (rect., according to its own entry in the English College Diary, David Henry Lewis), an English Jesuit martyr, b. in Monmouthshire in 1616; d. at Usk, 27 August, 1679. His father, Michael Lewis, was a lax Catholic, after whom he was converted; his mother, Margaret Pitchard, was a very devout Catholic. David was brought up as a Protestant, and educated at the Royal Grammar School at Abergavenny, of which his father was the head master. In his sixteenth year, he spent three months in Paris as companion to a son of Earl Rivers, and there was received into the Church by a Father Talbot, S. J. On returning to England, he remained with his parents till their death and then, having a desire for the priesthood, went to London, and there he was admitted as an alumni to the English College, 3 November, 1638. He was ordained priest in 1642, and entered the novitiate of the Society at St. Andrea, 16 April, 1644. In 1647 he was sent to the English mission, but was captured by the Royalists, and after his return to England, he was returned to the Church College, 3 November, 1638. He was ordained priest in 1642, and entered the novitiate of the Society at St. Andrea, 16 April, 1644. In 1647 he was sent to the English mission, but was captured by the Royalists, and after his return to England, he was assigned to the South Wales District, where he laboured zealously for twenty-eight years. It is told of him that to avoid the persecutors, he used to take long and dangerous journies at night, that he might be able to visit the faithful under cover of darkness, and that his devotedness for him the title of Father of the Poor.

In the summer of 1678, Titus Oates came forward with his pretended revelations, and Parliament in a frenzy of bigotry offered fresh rewards for the discovery and arrest of priests and Jesuits. Father David was one of the victims. A bigoted Calvinesque, Dr. Arnold, who had hitherto professed friendship for him, caused him to be arrested at Llantarnam in Monmouthshire, 17 November, 1678. He was carried in a sort of triumphal procession to Abergavenny, where, in allusion to one article of Oates's fabrications, he was shown to the people as "the pretended Bishop of Llandaff." He was then committed for trial, and meanwhile imprisoned, first at Monmouth and then at Usk. The trial came off at Monmouth 28 March, 1679. It was impossible to connect Father David with the pretended Popish Plot, so he was charged under the Statute of 27 Elizabeth, which made it high treason to take orders abroad in the Church of Rome and afterwards to return to England and say Mass. The trial was not too fairly conducted, and the witnesses were of a worthless class. Still the breach of the law was undeniable, and he was condemned to undergo some barbarous penalties which the law prescribed. For the moment, indeed, he was reprieved, and was taken up to London to be confronted with Oates and his accusers, but he persisted in his denial, and it was hoped he would come to save his life either by apostasy or by inculpating some others in the Plot. But this hope proving vain, he was sent back to Monmouthshire, and his sentence was carried out at Usk. The cause of his beatification was introduced, under the name of "David Lewis alias Charles Baker" by the Decree of 4 December, 1886.

SYDNEY F. SMITH.

BAKER, DAVID AUGUSTINE, a well-known Benedictine mystic and an ascetic writer, b. at Abergroenby, England, 9 December, 1575; d. of the plague in London, 9 August, 1641. His father was William Baker, steward to Lord Abergavenny, his mother, a daughter of Lewis ap John (alias Wallis), Vicar of Abergavenny. He was educated at Christ's Hospital and at Broadgate's Hall, Pembroke College, Oxford, afterwards becoming a member of Clifford's Inn, and Member of the Middle Temple. At Oxford he lost his faith in the existence of God, but after sombre years of being in extreme peril of death, he escaped by what appeared to him a miracle. Following up the light of the spirit, he was led to the threshold of the Catholic Church, and was received into its fold. In 1603 he joined the Benedictine Order at Padua, but ill-health obliged him to postpone his religious profession, and he returned home to find his father dead. Having reconciled him to the Church and assisted him in his last moments, Father Baker hastened to settle his own worldly affairs and to return to the cloister. He was professed by...
the Italian Fathers in England as a member of the Cassinese Congregation, but subsequently aggregated to the English Congregation. At the desire of his superiors he now devoted his time and the ample means which he had inherited, to investigating and refuting the errors started by the Александрian Benedictine congregation in England was dependent on that of Cluny, founded in 910. He was immensely helped in his studies and researches for this purpose by the Cottonian Library which contained so many of the spoils of the old Benedictine monasteries in England, and which its generous founder placed entirely at his disposal. In collaboration with Father Jones and Father Clement Reyner he embodied the fruit of these researches in the volume entitled "Apostolatus Benedictinorum in Anglîa". At Sir Robert Cotton's Father Baker came into contact with the antiquary, William Camden, and with other learned men of his day. In 1624 he was sent to the newly established convent of Benedictine nuns at Cambrai, not as chaplain, but to aid in forming the spiritual character of the religious. Here he remained for about nine years, during which time he wrote many of his ascetical treatises, an abstract of which is contained in the valuable work "Sancia Sophia" compiled by Father Serenus Cressey. In 1633 he removed to Douai, where he wrote his long treatise on the English mission, but he was nearly worn out with his austerities before the order came for him to proceed to the battle-field. During his short sojourn in London, Father Baker was forced frequently to change his abode in order to avoid the pursuers who were on his track. It was not, however, as a martyr that he was to end his days, but as a victim of the plague to which he succumbed in the sixty-sixth year of his age. Of upwards of thirty treatises chiefly on spiritual matters written by Father Baker, three are to be found at Downside, Ampthorpe, Stanbrook, and other Benedictine monasteries in England. An adequate biography of this master of the ascetic life is still a desideratum.

J. M. STONE.

Baker, Francis Asbury, priest of the Congregation of St. Paul the Apostle, b. Baltimore, Md., U. S. A., 30 March, 1820; d. 4 April, 1865. Father Baker was a son of Dr. Samuel Baker, a physician of note, who was graduated from Dickinson College in 1839. His parents, whom he lost early in life, had been Methodists, but their surviving children joined the Episcopal Church. He took orders in that communion, and was ordained a presbyter in September, 1840. His career promised to be not only successful but brilliant. Possessed of many mental gifts, he had, moreover, refinement, wealth, and an engaging personality; he was deeply pious, thoroughly consecrated to his chosen work. He was assigned as an assistant at St. Paul's Episcopal Church, Baltimore, and six years later was named rector of St. Luke's Church in the same city. He took rank at once as an eloquent preacher.

The Oxford Movement coincided with the years of his preparation and early ministry, and its influence was deeply felt by him. His sympathies, like those of many distinguished men, were not possible that an intelligent and sincere man like Baker could remain unmoved amid the awakening and the return to Catholic principles which the study of primitive and primitive thelogy caused. The severance of intimate ties cost him much, but he obeyed the call and in April, 1853, made his profession of faith. Attracted to the religious state, he entered the Redemptorist Order, was ordained priest in the Cathedral of Baltimore, 21 September, 1856, and began forthwith a laborious but most fruitful career as a missionary. The Redemptorists had inaugurated in 1831 the work of giving missions to the English-speaking Catholics of the United States, and the flood of immigration, then at its height, made the work exhausting and continuous. The missionary band included Fathers Hecker, Walworth, Hewitt, and Deshon, all converts and all Americans, an unusually strong and varied combination, and to them Father Baker proved a welcome acquisition. He brought to his work the zeal of an apostle, a matured and persuasive eloquence, and the attraction of a character at once magnetic and saintly. Nor are these the words of mere eulogy. The recollection of the generation which listened to him, the judgment of competent critics, the numerous conversions, the abiding impressions he effected, the evidences which his printed sermons display of oratorical gifts—all entitle Father Baker to a high place among Catholic preachers.

In his sermons we find a blending of argumentation with appeal, a diction at once forceful and finished, and an apt and abundant use of Holy Scripture, which, combining with his earnest and dignified delivery, gave to his message a powerful effect. Leaving the Redemptorists with Fathers Hecker, Walworth, Hewitt, and Deshon, for the purpose of organizing a special missionary company for the Society for England, he was joined by Father Baker, and with the labour of founding the Paulist Institute. It was he who gave the impulse and established the tradition of trilingual exactitude and ceremonial splendor which have continued to be a characteristic of that community. He died of typhoid pneumonia contracted in ministering to the sick.

MICHAEL PAUL SMITH.

Baker City, Diocese of, comprises Wasco, Klamath, Lake, Sherman, Gilliam, Wheeler, Morrow, Grant, Union, Crook, Umatilla, Wallowa, Baker, Harney, and Malheur counties in the State of Oregon, U. S. A., an area of 65,683 square miles. It was established in 1903. The first rector of the Church of the Immaculate Heart of Mary, Portland, Oregon, and editor of the "Catholic Sentinel" was named its first bishop and consecrated 25 August of that year. The diocese has a Catholic population estimated at about 4,000, whose spiritual needs are cared for by ten diocesan and seven Franciscan and Jesuit priests. The Sisters of St. Francis, St. Dominic, and the Most Holy Name of Jesus and Mary conduct five schools and academies. At the Umatilla Indian reservation there are more than 10 Catholic Indians attended by the Jesuit fathers of the Rocky Mountain Mission, two Brothers of Christian Instruction, and eight Sisters of St. Francis. There are 13 churches and 36 mission stations in the diocese.

Bishop O'Reilly was born 4 January, 1862, at St. John, New Brunswick, Canada, and educated at the Christian Brothers' school of St. John and at St. Joseph's College, Memramcook. He made his theological studies at the Grand Seminary, Montreal, and was ordained priest at Portland 29 June, 1890. He was then appointed to the parochial charge of St. Joseph at Tegardive, and in February, 1894, was made rector of the Church of the Immaculate Heart of Mary, Portland.

THOMAS F. MEEHAN.
for Hungary but also for the neighbouring countries, and granted to him most ample faculties. After his return to Hungary in 1514 Bakócz made preparations at once for the crusade, and soon an army of about 100,000 soldiers was gathered under the leadership of George Dózsa. Unfortunately the nobles were opposed to the enterprise, and the whole matter ended in a civil war between them and the crusaders, in which the nobility remained victorious. After the death of King Ladislaus II in 1516 the influence of Bakócz ceased almost completely; the last years of his life were spent more in retirement. He was a man of the world, very ambitious, and not always tender in the choice of the means to an end. But of his large fortune, and through his influential position, he provided in a princely manner for the members of his family. Owing to the great power so long wielded by him, he made many enemies among his own countrymen, whose opposition triumphed in the end. With all that his personal conduct was blameless; not even a shadow of suspicion was cast upon his character by his enemies. He was deeply religious, and had a special devotion to the Blessed Virgin, in whose chapel he was interred. The Eucharistic council held in the Cathedral of Eral, and built one near that of Gran. In the latter, a magnificent structure of the Renaissance, his remains found their last resting place.

Bakunin, Michael. See Socialism.

Balaam.—The derivation of the name is uncertain. Dr. Neubauer would connect it with the god Ammon of Ammi, as though the Makbalm had belonged to a people whose god or lord was Ammon or Ammi. It is certainly remarkable that Balaam is said (Num., xxii, 5) to come from “the land of the children of Ammon” (D. V. reads “Ammon”).

The Narrative.—The story of Balaam is contained in Numbers, chapters xxiii-xxiv; xxxi, 8-16; Deut., xxiii, 4; Josue, xiii, 22; and xxiv, 9-10. There are also references to him in Nehemiah, xiii, 2; Mishnae, vi, 5; II Peter, ii, 15; Jude, 11; and Apoc., ii, 14. Balaam, King of Moab, alarmed at Israel’s victories over the Amorrites, sent messengers with presents to Balaam, son of Beor, who dwelt in Pethor (the Piru of the cuneiform texts) to induce him to come and curse Israel. For in those early times, men attached great importance to a curse, as, for instance, that of a great king, and Balaam had a special reputation in this matter. “I know,” said Balaam to him through his messengers, “that he whom thou shalt bless is blessed, and he whom thou shalt curse is cursed.” When the messengers had delivered their message, Balaam consulted the Lord as to whether he should go or stay, and being refused permission to go, in the morning he gave a negative answer to the ambassadors. Nothing daunted, Balaam sent another embassy, composed of men of high rank, princes with directions to offer Balaam anything he liked, provided only he would come and curse Israel. Again Balaam consulted the Lord and obtained permission to go, on condition that he undertook to do what God commanded. In view of what follows, some commentators think that this leave was extorted by importunity, and that Balaam was actuated in making his request by mercenary motives, and had fully made up his mind to curse Israel.

The next morning Balaam saddled his ass and set out with the princes of Moab. On the way, the ass manifested every sign of alarm; it swerved suddenly from the path, crushed Balaam’s leg against a wall and finally sank to the ground under him, so that
Balaam cruelly beat it and even threatened it with death. Then the ass was endowed by God with the power of speech, and usurped its master with his cruelty towards it. At the same time Balaam's eyes were opened and he saw the cause of the ass's strange conduct. The angel was standing in the way with drawn sword to bar his path. The angel bid Balaam stand still and under the influence of "the spirit of God", said to him: "Behold, I have received commandment to bless. And he hath blessed, and I cannot reverse it." Neither bless nor curse, exclaimed Balaam. But he resolved to try the prophet once more, and accordingly took him to the top of Mount Phugor which looks towards the wilderness. Here sacrifices were offered, and Balaam went up. "Behold under the influence of "the spirit of God", broke forth into the beautiful eulogy of Israel which begins with the words: "How beautiful are thy tabernacles, O Jacob, and thy tents, O Israel! Filled with anger, Balaam dismissed Balaam from his house. But before departing, the prophet delivered his fourth pronouncement on the glorious future of Israel and the fate of its enemies. His vision, too, piercing beyond the earthly Kingdom of Israel, seems to have dimly seen the Messianic reign to come. I see him", he said. "but not now; I behold him, but not nigh: there shall come forth a star out of Jacob, and a sceptre shall rise out of Israel", etc. Balaam and Balaam separated, but before returning to his own country, Balaam sojourned with the Midianites. There he seems to have instigated his hosts to send Midianite and Moabitite women among the Israelites to seduce them from their allegiance to Jehovah (Num., xxxi, 16). This was while the children of Israel were dwelling at Sittim, and no doubt is closely connected with the troubles and disorder over Beel-phégor, told of in the twenty-fifth chapter of Numbers. The punishment inflicted by God on the Israelites was signal. A plague fell upon them, and carried off 24,000 (verses 15, 16). Not till Balaam escape. He was slain, together with the five kings of Midian, in the war waged by Israel against that nation related in the thirty-first chapter of Numbers.

Conservative View.—The usual traditional, or conservative, view of the episode of Balaam is that it represents the story of an extraordinary event. The supernatural plays an important part in it, but it is contended that the credibility of the narrative requires only a belief in the miraculous, and that the acceptance of many of the most important parts of the narrative is not absolutely necessary. The episode of the speaking ass is strange; but no stranger than the story of the speaking serpent in Paradise. The future is foretold by Balaam; but so it is by the great prophets of Israel. A question is discussed as to what Balaam was. Was he a prophet in the true sense of the word, or a soothsayer? It does not seem possible to say that he was a prophet in the same sense as Isaiah or any of the great prophets of Israel. On the other hand, in Numbers 22, he is said to have spoken under the influence of "the spirit of God". Indeed, throughout his connexion with Balaam, he seems to have acted under the influence of God's spirit. But when his state of mind is considered, his actions may be explained as having belonged to the order of the prophets. St. Thomas calls him "a prophet of the devil". Scripture does not call him a prophet, but a diviner, and Balaam approached him with the price of divination. Moreover, the way in which he joined Balaam in idolatrous worship seems to preclude the idea of his being a genuine servant of Jehovah. Prophecy is a gift given for the good of others. Balaam was used for the good of Israel.

Critical View.—Modern critics take a different view of the episode, in conformity with their general conclusions as to the Hexateuch. For them the narrative of Numbers, chapters xxi, xxii, and xxiv, is part of the prophetic history. That is, in these chapters there is no trace of the priestly writer, P. But though to him is assigned the passage Numbers 22:13-18, which contains an account of the crime and punishment of Zambri and Cozbi. Though critics are unanimous that chapters xxii, xxiii, and xxiv are the work of the two writers called the Jahvist and the Elohist, they do not find it easy to apportion that part of Numbers between the two authors. Indeed, the only point on which they are agreed is that chapter xxii belongs to the Elohist, with the exception of verses 22-35, which they assign to the Jahvist. But the authors agree on the episode of the ass, and critics say that it destroys the sequence of the narrative. Thus in verse 20 Balaam gets leave from God to go with the princes of Moab; but in verse 22 God is angry with him, apparently because of his going. Though this apparent inconsistency has been variously explained by conservative commentators, critics argue from it and other similar instances, that the episode of the ass (verses 22-35) has been skillfully fitted into the rest of the chapter, but is really the work of another writer; and that the whole of Numbers 22:13-35 continues at verse 36. Further proofs of dual authorship are often far from clear. Thus, there is said to be a duplication in xxii, 3: "And the Moabites were in great fear of him, and were not able to sustain his assault." Surely this is weak in the extreme. Does not the natural tendency of the Jewish writer to parallelisms sufficiently explain it?

The reference to historical events in Balaam's fourth prophecy leads most critical writers to fix the date of its composition not earlier than David's reign. David's Moabitic war is said to be the war referred to in Num., xxiv, 17. But, putting aside the gift of prophecy, we know that writings of this kind, like the Psalms, are often retouched in ages later than that of the composition of the most, therefore, it seems legitimate to conclude that this passage shows signs of having been expanded and re-edited at a period.

J. A. HOWLETT.

Balaam, a titular see of Syria. The city of this name, a colony of Aradus (Strabo, XVI, 753), was placed by Stoebras in Phoenicia, though it belongs rather to Syria. Its first known bishop was present at the Council of Nicea in 325
Balboa, VASCO NÚÑEZ DE, discoverer of the Pacific Ocean from the west coast of Central America, b. in Spain, 1475, either at Badajoz or at Jerez de los Caballeros; d. at Darién in Central America in 1500 with Rodrigo de Bastidas and thence, in secret, with Martín Fernández de Enciso to Cartagena. The story that he got aboard either in an empty barrel or wrapped up in a sail may be true. He soon assumed an important part of the command of the expedition, and settled Darien in 1509. Then he proclaimed himself governor, and sent both Enciso and Nicolea away. From Darien he undertook, with a few followers, the hazardous journey across the Isthmus that led to the discovery of the Pacific Ocean. 23 September, 1513, and established beyond all doubt the continental nature of America. The appointment in 1514 of Pedrarias Dávila (see ARIAS DE ÁVILA) as governor of the region discovered and partly occupied by Balboa, and his appearance on the coast of Darien with a large armament, at once gave rise to trouble. Arias was an aged man of mediocre attainments, jealous, deceitful, and vindictive. Balboa was generous, careless, and over-confident in the merits of his achievements, and was no match for the intrigues that forthwith began against him. To mask his sinister designs Arias gave one of his daughters to Balboa in marriage. The latter was allowed to continue his explorations while Arias and the Licenciate Cesar de Espinosa were only tightening noose of true and false testimony and building up cover of the inevitable Residencia. The Crown gave Balboa the title of Adelantado of the South Sea, Governor of Coyba and of what subsequently became the district of Panama, but Arias and his agents understood how to reduce these titles to empty honours. Quevedo, Bishop of Castilla del Oro, was Balboa's sincere friend and assisted him, but with Quevedo's departure for Spain the case was lost. Fearful lest the bishop's appeal for his friend might result against Arias and his party, the Residencia was at once converted into criminal proceedings, death sentence hastily pronounced, and Balboa beheaded for high treason in 1517 at Darien. One of the main pretences for the sentence was Balboa's action towards Enciso and Nicolea. Balboa has been credited by most authors with having been first to hear of Peru. This is incorrect. In his few attempts at exploring the coast of southern Panama he heard only of Indian tribes of northern or northwestern Colombia.

Notes:

Lequien, Orients Christ., II, 923. From that time to the sixth century the names of three others are known. At the latter date it was a suffragan of Apamea, the metropolis of Syria Secunda. When Justinian established a new civil province, Théodoria, with its capital at Apamea, the see of Apamea was united with it, but continued to depend eclesiastically on Apamea, till it obtained the status of an exempt bishopric. This was its condition in the tenth century, when it was directly subject to the Patriarch of Antioch. The Crusaders created a Latin diocese of which it was the seat, but also known as Apamea, 1200 (Lequien, III, 1189); the river near by it served as a boundary between the Kingdom of Jerusalem and the principality of Antioch. The Franks called it Valsania according to the Greek pronunciation, the Mussulmans Balinosa. Owing to the unsafe conditions of the country the Latin bishop lived at Margat, a neighbouring castle of the Hospitalers. Balanea, to-day called Banias, is a little village at the foot of the hill of Qesal el-Marqab, between Tartous (Tartos) and Latakia (Laodicea); it is the nucleus of the kaimakam of the district. It numbers about 1,550 inhabitants, 1,200 Maronites, and 230 non-Catholic Christians; they cultivate chiefly onions, olive-trees, and very good tobacco. The roadstead is excellent, but is visited only by small boats.

S. VAILÉE.

Balbinus, SAINT.—Memorials of a St. Balbinus are to be found at Rome in three different spots which are connected with the early Christian antiquities of that city. In the purely legendary account of the martyrdom of St. Alexander (Acta SS., Maii, I, 367 sqq.) mention is made of a tribune Quirinus who died a martyr and was buried in the catacomb of Prætextatus on the Via Appia. His grave was regarded with great veneration and is referred to in the old itinerares (guides for pilgrims) of the Roman catacombs. Tradition said that his daughter Balbina, who had been baptised by St. Alexander and had passed her life unmarried, was buried after death near her father in the same catacomb. The feast of St. Balbinus is celebrated 31 March. Usuardus speaks of her in his martyrology; his account of St. Balbina rests on the record of the martyrdom of St. Alexander and another Balbina whose name was given to a catacomb (ccm. Balbinas) which lay between the Via Appia and the Via Ardeatina not far from the little church called Domine quo vadis. Over this cemetery a basilica was erected in the fourth century by the Emperor Constantius in honour of the little church in the city itself the old title of St. Balbina, first mentioned in an epitaph of the sixth century and in the signatures to a Roman council (593) of the time of Pope Gregory I. This church was erected in a large ancient hall. Its titular saint is supposed to be identical with the St. Balbina who was buried in the catacomb of Prætextatus whose bones together with those of her father were brought here at a later time. It is not certain, however, that the two names refer to the same person.

Balbinus, BOLESLAVUS, a Jesuit historian of Bohemia, b. 4 December, 1621, at Königgrätz, of an ancient noble family; d. 29 November, 1688, at Prague. His entire life was devoted to collecting and editing the materials of Bohemian history, and his researches have often been of great importance. He wrote over thirty works, the most important of which is a "Miscellanea Historicarum regni Bohemiarum" or "Miscellany of Bohemian history" (6 vols., Prague, 1679-87) in which he described the chief historical events of his native land, its natural history, the genealogies of its nobles, lives of prominent Bohemians, etc. He wrote also in Latin an "Apology of the Holy See and the Sacraments," published in 1615, and another in 1651. Balbinus was the first to edit the ancient vernacular chronicle known as the "Life of St. Ludmilla and Martyrdom of St. Wenceslaus," a new edition of which was published in 1902 by Dr. Pekár and is in his Latin being edited by R. Klenicky. It is an old manuscript known as the "oldest sacraicus," written in Bohemia and by a Bohemian. Balbinus wrote also "De archipsicopia Bohemica" (Prague, 1682) and "Bohemia Sancta, sive de sancta Bohemiae, Moraviae, Slovenia, Luxatiae" (ibid., 1682). Sommervogel, Bibli des erir., de la e de J._n., 15, n. 1, LITTOY, The Historians of Bohemia (London, 1905).

BALDACHINA
S. LORENZO, ROME
CHURCH OF S. PRASSDE
ST. PAUL OUTSIDE THE WALLS, ROME
CHURCH OF SANTA MARIA IN TRASTEVERE, ROME
Baldachinum

Duke Ferdinand of Austria, who, in 1522, designated his Bishop of Gurk, and sent him to Rome on a congratulatory embassy to the pontificate of Adrian VI. It was a part of his mission also to induce the pope to proclaim a crusade against the Turk. The address which he made on being received by the pope in a public audience, 9 February, 1523, was delivered in extravagant rhetoric, but when it was printed it was considered a marvel of eloquence. Balbus remained in Rome for some time, and was there consecrated Bishop of Gurk, 25 March, 1523. As a bishop, he enacted many wholesome and timely canons, and had the preservation of church discipline sincerely at heart, but he was frequently absent from his diocese. From one of his letters we learn that in the time of Clement VII he lived at Rome for some years in the papal palace and was much in the confidence of that pontiff. In 1530, though quite an old man, he accompanied Charles V to Bologna to attend the emperor's coronation. At Bologna he wrote his best known work, "De coronatione principi", which, on account of the views it contains on the relation of Church and State, was condemned on the Index, 23 July, 1511. It was read and admired by many of the most learned in all the works of this, the poetical, oratorical, and politico-moral writings were edited by Joseph von Retzer (Vienna, 1791-93, 2 vols.). His poems, in part coarse and indecent, are of no particular merit.

Baldachin of the Altar, a dome-like canopy in wood, stone, or metal, erected over the high altar of larger churches, generally supported on four columns, though sometimes suspended by chains from the roof. Other forms will be noted in tracing the cause of its history. The name is late medieval, baldacchino, from Baldoccio, Italian form of Baghdad whence came the precious cloths of which in their later development these canopies were made. It was called earlier ciborium, from the Greek κίβωλον (the globular seed-pod of the lotus, used as a drinking-cup) because of the similarity of its dome top to an inverted cup. The early history of the baldachin in Italy is obscure, but it was one of the archbishop's desires to give to the primitive altar table a more dignified and beautiful architectural setting. The arcosolium altars of the catacombs perhaps foreshadow this tendency. With the construction or adaptation of the larger church edifices of the fourth century, the baldachin became their architectural centre, emphasizing the importance of the sacrificial table as the centre of Christian worship. Thus, while the altar retained its primitive simplicity of form and proportions, the baldachin gave it the architectural importance which its surroundings demanded. By its dais-like effect, it designated the altar as a throne of honour. It served also the practical purpose of supporting, between its columns, the altar-curtains, while from its roof were suspended lamps, with richly ornamented crowns, and other altar decorations. The summit was mounted by the altar-cross. The earliest reference to the baldachin is found in the "Liber Pontificalis" (ed. Duchesne, I, 172, 191, 233, 235) which described the Paschum arcaedium given by Constantine the Great in 335 to the cathedral of Sylvester I (314-335) and replaced, after the ravages of Alaric's Gothic hordes, by another erected during the pontificate of Sixtus III (432-440). The oldest representation in art is the early sixth-century mosaic in the church of St. George in Thessalo-
nica; while the oldest actual specimen is that in the church of St. Apollinare in Classe at Ravena (c. 810). The use of the baldachinum was general up to the twelfth century, when it yielded to the growing importance of the reliquary as an adjunct to the altar, sometimes disappearing altogether, sometimes taking the form of a canopy over the relic-casket. With the placing of the altar against the wall, the baldachinum took the form of a projecting dais canopy (v. Altar-Canopy under Altar: In Liturgy) or became the ciborium-like superstructure of the tabernacle or central tower of the altar. Italy was less affected by this evolution than were the centres of Gothic art, and the use of the older form is common there to-day. The most magnificent baldachinum in the world is that in St. Peter’s in Rome designed by Bernini for Pope Urban VIII.

John B. Peterson.

Balde, Jacob, a German poet, b. 4 January, 1604, in the Imperial free town of Ensisheim in Upper Alsace; d. at Neuburg, 9 August, 1668. He studied the classics and rhetoric in the Jesuit college of his native town, philosophy and law at the University of Ingolstadt, where on 1 July, 1624, he was admitted into the Society of Jesus. Having undergone the usual ascetical and literary training he taught classics and rhetoric in the colleges of Munich and Innsbruck, and in his leisure hours composed the Latin mock-heroic poem “Batrachomyomachia” (The Battle of the Frogs and the Mice). After completing his theological studies at Ingolstadt, where he was ordained priest in 1633, he was appointed professor of eloquence in the university. Called to Munich a few years later to educate the sons of Duke Albert, he soon after received the office of court preacher to the elector Maximilian. Owing to failing health he was, in 1654, sent to Neuburg on the Danube, where he became the intimate friend and adviser of the Count Palatine Philipp Wilhelm. Here he died. The poetical works of Balde are marked by a brilliant imagination, noble thoughts, wit and humour, strength and tenderness of feeling, great learning, love of nature, and knowledge of the human heart. His mastery of classical Latin was such that he wielded it with astonishing power and originality, and he used the ancient metres and poetical forms with consummate ease and skill. His poetical themes are the world and religion, friendship and fatherland, art and letters. His patriotic accents, says Herder, have made him a German poet for all time. He witnessed the horrors of the Thirty Years War, and the devastation and disruption of his country, and while lamenting the fate of Germany, sought to re-awaken in the hearts of the people the old national spirit.

Balde was above all a lyric poet, many of his odes to the Virgin Mother of God being of surpassing beauty, but he has also written epic and pastoral poems, satires, elegies, and dramas. During his lifetime he was acclaimed “the German Horace”, but soon after his death he fell into neglect, until Herder, towards the end of the eighteenth century, by his translation of many of Balde’s lyrics, published in the periodical “Terpsichore”, revived the poet’s memory and the fame of his genius among scholars. Balde, however, could never have become a popular poet in the wider sense of the word, as nearly all his works were written in Latin, which was in his time the international language of the cultured classes, whereas German was too unwieldy and crude a vehicle of poetical expression. Balde’s poetry is not faultless; he occasionally offends against good taste, burdens his verses with mythological lore, and does not always keep his luxuriat imagination under control. The only complete edition of his works was published in eight volumes at Munich in 1729.

B. Gulden.

Balderic (Baudry), a monk of Liège, a writer and teacher of the twelfth century, b. date unknown, at Florennes in Belgium; d. about 1150. He was a Benedictine novice at the court of Pope Eugenius III, and he accompanied him to France when the machinations of Arnold of Brescia compelled the pontiff to leave Rome. At a synod held in Paris in 1147, Balderic became acquainted with Albero, the Archbishop of Trier, who induced him to found a cathedral school in Trier. As long as Albero lived, Balderic remained his friend and adviser, and, after his death, wrote his biography, which is remarkable for its classical Latin. It is published in Mon. Germ.: Script., VIII, 243 sqq., and in P. L., CLIV, 1307 sqq.

Michael Ott.

Balderic, or Baudry, Bishop of Dol in France, chronicler, b. about 1050; d. 7 January, 1130. After a brilliant course of studies at the famous school at Angers, he entered the Abbey of Bourgueil in Anjou, where he became abbot in 1079. In 1107 he received from Pascal II the pallium of Bishop of Dol. He assisted at all the councils held in his day, went several times to Rome, and left an account of a journey to England. He exercised considerable activity in reforming monasteries, and during the last years of his life were spent in retirement. He is remembered as the author of important or interesting contributions to history, poetry, and hagiography.
BALDI

Baldini's most valuable work is his "Historie Hieroelmitane librī IV", an account of the First Crusade, based in part on the testimony of eye-witnesses as they went along. When Baldinucci reached the Abbot Peter of Maillezais, who had accompanied the Crusaders. Among his other works are poems on the conquest of England and on the reign of Philip I; lives, in Latin, of his friend Robertus de Brunssele (published by the Bollandists under 26 Feb.), of St. Valerian (published by Bouquet, Hist. Eccl. de France), and of St. Hugh of Rouen (published by Da Montier, "Neustria Pia"); finally a letter to the monks of Fécamp which contains some valuable material relating to Breton manners, and to English and Norman monasteries (Duchesne and Bouquet, Historiens de France).

Histoire Litteraire de la France, VIII, 400; MOLINIER, Sources de l'art de France.

J. V. CROWNE.

BALDOVINETTI

Baldi, Bernardino, an Italian poet and savant, b. at Urbino, 5 June, 1553; d. at the same place, 10 October, 1617. After being initiated into higher mathematics by his fellow-townsmen Commandino, he went to Padua (1573) and Rome (1576), where he managed to acquire a wide erudition, scientific, classical, Biblical, Arabic, and Persian were among the languages he learned. Having subsequently taken orders, he was made Abbot of Guastalla (Mantua) by Prince Ferrante Gonzaga. In spite of many wanderings, entailing long-protracted absences, he retained the abbacy until 1600, when his native city claimed him for the rest of his life. Cardinal Cinzio Aldobrandini, the nephew of Clement VIII, and Franceso Maria della Rovere, Duke of Urbino, were proud of his friendship. The latter entrusted him with an embassy to Venice in 1612. Baldi's poetical laurels were mainly earned by "Il Nauclus", a didactic poem closely following the "Georgics" in finely polished blank verse (1576). To this were added nineteen "Elogie miste" (1653), "L'invenzione del boscoletto de navigare", miscellaneous short poems (1590), and the "Epigrammi" (1614). An attempt at introducing fourteen and eighteen syllable lines in "Lauro" (1600) and "Il Diluvio Universale" (1604), met with utter failure. In addition to his Latin poems and several polygot pamphlets ("De Apologia" (1583), in the dialogues, a well-known "Descrizione del palazzo ducale d'Urbino" (1587), the biographies of Fedrigo, second Duke, and Guidobaldo I, of Urbino, a curious biographical work on Italian and foreign contemporaries, two Latin treatises on Vitruvius, numerous letters and translations from the Targum Onkelos, the Arabic Psalms, Aratus, Museus, Hero of Alexandria, Aristotle, etc. The unconstrained elegance of his diction gives him a foremost rank as a prose-writer. A standard edition of his best writings is that of Ugolini and Polidori (Florence, 1859).

As to the sources of La Nauclus, see SCACCHINI, Viornale storico della letteratura italiana (1867), XI, 960-969; as to the Epigrammi, Proprieti, EDOARDO SAN GIOVANNI.

BERNARDO. See Bernard of Paya.

Baldinucci, Anthony, Blessed, b. 19 June, 1665, at Florence; d. 6 November, 1717. He entered the Society of Jesus 21 April, 1681, and was ordained priest 23 October, 1695. After his third year of probation he began his missionary career at Monte S. Angelo. The first of his labours was the town of Frascati and Viterbo, in which, with the exception of some more distant places, he laboured for the rest of his life. His methods of preaching were of the most unusual and startling character. Splendid processions were organized which proceeded from various parts of the country to the place where the mission was being given. Many of the people wore crowns of thorns and scourged themselves as they went along. When Baldinucci reached the place, he frequently carried a cross, and was loaded down with heavy chains. He often walked up and down among the people scourging himself to blood. The exercises were usually brought to a close by the burning in public of all the images (manticores), etc. He always carried with him a miraculous picture of the Madonna which was borne before him as he proceeded from place to place. The propagation of devotion to the Blessed Virgin was one of his special aims. To keep order among the vast throngs who flocked to hear him, he always employed a number of laymen whom he called deputati. They were not unfrequently men of very bad lives whom he chose purposely in order to conciliate and convert them. His work among the clergy was marked by great prudence and success. Though his preaching was incessant, he found time to write two courses of Lenten Sermons, to gather materials for many more, compose hundreds of discourses, and carry on an immense correspondence. The effect of his apostolic work on the common people of the towns where he laboured was stupendous. At times, when approaching a city, he found crowds covering the walls awaiting his arrival. His peculiar methods are explainable as those best adapted to his surroundings and times. After twenty years of active life, at the age of fifty-two. He was already canonized in public estimation, but, although the official ecclesiastical process was begun in 1733, the decree of his beatification was issued only on 23 April, 1863.

T. J. CAMPBELL.

Baldinetti, Alessio, a notable Florentine painter, b. in Florence, 14 October, 1427; d. there, 29 August, 1499. His father was a wealthy merchant, but leaving the paternal business he registered himself, at the age of twenty-one, as a member of the Academy of Saint Luke. He called himself a pupil of Paolo Uccelli, and, according to Vasari, was the master of the famous Ghirlandajo. He experimented much with colours in fresco and oil, but his remaining works are badly preserved. He had the reputation of being the ablest worker in his day. Baldinetti assisted Andrea del Castagno and Domenico Veneziano in the frescoes, since destroyed, of Santa Maria Nuova in Florence. Among his works which remain is a large fresco of "The Adoration of the Shepherds" in the cloisters of Santa Annunziata. He is the designer for the portrait of Dante by Domenico del Michelino in the duomo. The large panel painting of "The Holy Trinity Adored by Saints Gualberto and Benedetto", now in the Academy at Florence, was executed for the church of Santa Trinità in that city. He painted on the walls of the choir of that edifice scenes, not now extant, from the Old Testament, containing numerous portraits of his contemporaries. In the chapel of San Miniato, Florence, are frescoes of angels, prophets, and evangelists. The same edifice also contains an "Annunciation". In the galleries of the Uffizi are an "Enthroned Virgin and Child with Saints", and a most decorative and quaintly graceful "Annunciation". His work is seen himself in the gallery at Bergamo and Ghirlandajo painted it near his own in his frescoes in Santa Maria Novella, Florence.

AUGUSTUS VAN CLEEF.
Baldred, Saint, (1) a Celtic Bishop of Strathclyde, b. about 643; d. at Aldhame, Haddingtonshire, about 607. He is said to have been the immediate successor of the great St. Kentigern, or Mungo, the founder of the See of Glasgow, Scotland. Lord of the manor of Kentigern, he was of Irish ancestry, but is reckoned as a British saint, inasmuch as Strathclyde was part of Britain. The chronology of the period when he flourished is somewhat obscure, but the best authorities on Scottish history agree that St. Baldred was born towards the middle of the sixth century. Previous to his consecration, St. Baldred had laboured for many years in Strathclyde, and had founded numerous houses for monks as also for holy virgins in addition to the churches of Aldhame, Tyingulham and Preston Kirk. Owing to the disturbed state of the kingdom, he was forced after a short rule to retire from the spiritual government of the Strathclyde Britons as also happened to his predecessor. His feast is observed on 6 March. (2) Baldred, or Baltherhus, a holy hermit-priest of the eighth century, who has been confounded with the preceding Scottish saint. According to Simeon of Durham and Hovendes, the date of his death is given as 756. Turgot of Durham is more explicit, and he tells us that "after Baldred, the priest, died "in the seventeenth year of the episcopate of Cynulf", that is 756, or on the 6 March, 757. This Baldred is associated with the See of Lindisfarne, and was an Englishman. Numerous miracles are ascribed to him, and his feast is given as 6 March.

To add to the confusion, some writers have imagined that this Baldred is identical with Bilfrit, or Bilfrid, a hermit goldsmith, whose exquisite work may yet be seen in the British Museum on the cover of a Book of Gospels, generally known as the Gospels of Cuthbert. This cover was made during the rule of Bishops EADFRED and Ethelwold of Lindisfarne, 698 to 740. The relics of St. Bilfrid were discovered by Aelfrid, and were placed, with those of St. Baldred, in St. Cuthbert's shrine at Durham, but were subsequently transferred to the shrine of St. Bede in 1104.

Baldung, Hans, known as Grien or Grün, from his fondness for brilliant green, both in his own costume and in his pictures, a vigorous artist, sought the eyes of distinguished painter, engraver, and draughtsman on wood, b. at Gmünd, Swabia, about 1476; d. at Strasbourg, 1545. Baldung was a lifelong friend of Dürer and received a look of the latter's hair when he died. Dürer influenced Baldung's work, as did Matthias Grünewald and Martin Schongauer. His portraits, when unsigned, have at times passed as the work of that greater master, Dürer. An exceptional draughtsman and a good colourist, Baldung's work is full of original and fertile imagination. He is thought to have worked with Dürer at Nuremberg for two years, assisting him and painting under his eye the copies of "Adam and Eve" now in the Pitti Gallery at Florence. He became a citizen of Strasbourg in 1508, and was made senator the year of his death.

Baldung spent seven years at Freiburg in the Breisgau, where, in a monastery, is found his most famous work, an altar piece, the central portion showing "The Coronation of the Virgin"; the wings bearing scenes from the history of the Life of Our Lady. Two altar pieces in the Convent of Lichenthal, near Baden-Baden, are assumed to be his earliest works. Baldung's paint-
the Bavarian, and contributed largely to his final success. In the conflict between Louis and Pope John XXII, which was equally disastrous to Church and Empire, Baldwin also sided with Louis, and for this reason did not receive the papal approbation when the Cathedral Chapter of Mains postulated the archbishop (1328, 1329, 1330). Upon the death, in 1328, of Matthias, whom the pope had appointed Archbishop of Mains, to succeed Aichspalter, Baldwin was again postulated as archbishop by the Cathedral Chapter of Mains, took possession of the archdioecese, and administered it until his death (1328-37), despite the protests of the pope, who had appointed Henry Virneburg to the position. On the 16th of July, 1338, he took an important part in the meeting of the imperial electors at Renne, near Coblenz, where they protested against all papal interference in the election of the emperors and decided that the emperor elected by them could exercise his imperial authority without the approbation of the pope. When Clement VI renewed the excommunication of the emperor (1348) and the pope of the time was happy that Charles IV, a grandnephew of Baldwin, would receive the imperial crown, Baldwin finally abandoned the Bavarian and at a meeting at Renne (11 July, 1348) prevailed upon the other electors to declare Louis deposed and elect Charles IV emperor. Baldwin crowned the new emperor at Aachen, 26 July, 1349.

Within his own diocese Baldwin successfully fought against the many robber-barons who at that time infested Europe. He destroyed their strongholds and forced the barons to submit to the laws or leave his domain. He promoted commerce by erecting the bridge which still spans the River Moselle at Coblenz. Numerous churches in various parts of the diocese were built by him, and many others were restored. The synods which he convoked. But Baldwin, the bishop, dwindles beside Baldwin, the soldier and statesman. During the forty-six years of his reign (1308-54) the destinies of the German Empire were largely guided by the powerful hands of this prelate-prince. He was a shrewd diplomat and a brave soldier, but above all he was a member of the house of Luxembourg, and its aggrandizement was the mainspring of his political activities. The Avignonese popes, John XXII and Clement VI, may have complained in regard to the imperial office, but there is no justification for Baldwin's siding with Louis the Bavarian even after that emperor was deservedly excommunicated. There may have been palliating circumstances as to his administration of the Archdiocese of Mainz in opposition to the pope's command, but, as a subject of the pope, he should have submitted. He was the author of the so-called "Baldenheim", a collection of documents relating to the possessions and privileges of 'Trier', together with a series of pictures bearing on Henry's expedition to Rome, which was republished at Berlin in 1881. His remains lie in the Cathedral of Trier.

THE BAVARIAN.

Baldwin (also Baudoine), Francis, a celebrated jurist, b. 1 January, 1520 at Arras, then part of the German Empire; d. 24 October, 1573, at Paris. He was sent in his early youth to Louvain, where he studied jurisprudence with great success. At the end of his studies he came to the court of the Emperor Charles V (1519-56) at Brussels. He subsequently travelled extensively, appearing at Paris and Geneva several times and teaching successively at Bourges (1549-56), Strasbourg, Heidelberg, Douai, Paris, and Angers. The assertion of his sevenfold change of religion from Catholicism to Calvinism and from Calvinism to Catholicism is absurd and discouraging. But it is certain that, in the earlier part of his life, he exhibited toward the Calvinistic system a friendliness incompatible with sound Catholic convictions. This attitude for some time recommended him to the papal authorities for the settlement of religious questions interesting both Catholics and Protestants. His attachment to the Faith gradually grew stronger, however, and beginning with the year 1560, he made a serious study of ecclesiastical questions, successfully defending the Catholic religion against Calvin. He died a devout Catholic in the arms of the celebrated Spanish Jesuit, Malonatus.

Baldwin was a very prolific writer on juridical and ecclesiastical topics. Among his works are: "Constantinus Magnus" (Baze, 1556; Strasbourg, 1612); "De sancto felicio octavio" (Heidelberg, 1584); "De sancto felicio"; "S. Optati Libri Sex de Schismate Donatistarum" (Paris, 1563); "Discours sur le fait de la Réforme" (Paris, 1564).

Baldwin, Hommes Illustres (Paris, 1754), XXVIII, 255-277; Risse, Convertites (Freiburg, 1860), II, 176-187; Schumrrell, Der Reichsheirz de F. Baldiniu (1894).

N. A. WEber.

The Baldwin of Canterbury, thirty-ninth Archbishop, a native of Exeter, date of birth unknown; d. 19 Nov., 1190. He was ordained priest and made archdeacon by Barholomew, Bishop of Exeter. He subsequently became a Cistercian monk at the Abbey of Ford, in Devonshire, and within a year was made Abbot of Ford. In 1180 he was promoted to the Bishopric of Worcester and in the same year was elected to the primatial see by the bishops of the province. The election was disputed by the monks of Canterbury, who chose first the Abbot of Battle, then Theobald, Cardinal-Bishop of Ostia. King Henry II interfered. Baldwin, who, according to Gervase, refused to accept the archbishopric unless he was elected by the monks, was installed, and an arrangement was entered into by which, in the future, the bishops' elections were to be confirmed by the monks. He was several times engaged in disputes with the Canterbury monks, necessitating the further interference of King Richard and of the Holy See. The prior, norrells, whom he had nominated, was deposed; but his right to appoint the priors was acknowledged.

Baldwin acted as legate in Wales, where he held a visitation in 1187, and in 1188 preached the Crusade, after having himself taken the cross on hearing the news of the loss of Jerusalem. In 1190 he set out for the Holy Land, in company with Hubert, Bishop of Salisbury, and others, providing at his own costs two hundred knights and three hundred retainers. While there he acted as viceregent of the patriarch. Giraldus Cambrensis describes him as gentle, kindly disposed, learned, and religious. He died during the siege of Acre, leaving all he possessed for the relief of the Holy Land and naming Bishop Hubert as his executor. His works (to be found in the "Bibliothees Patrum Cistercienis", V) are "De Compendiione Fidei"; "De Sacramento Altaris". There are also some discourses and a penitential in MS. preserved in the Lambeth Library.

FRANCIS AVELING.

Baleares, a group in the western part of the Mediterranean belonging to Spain and consist-
BALES

ing of four larger islands, Majorca, Minorca, Ivisa, and Formentera, and eleven smaller islands of rocky formation. Politically they form the Balearic province, and on 31 December, 1900, had an area of 1396 square miles and a population of 311,649, almost exclusively Catholic. The capital is Palma. The oriens of these islands were of Iberian stock, and were famous in antiquity as sailors. In the seventh century B.C. they were subjugated by the Carthaginians; in 206 B.C., the city of Mahon was built by Hannibal's brother Maglo and called after his name. 123-122 B.C., the Roman consul Quintus Cecilius Metelius conquered the islands and founded the cities of Palma and Pollentia. The Romans were succeeded in the sovereignty of the islands by the Vandals (426) under Genericus as leader; during the reign of Justinian they were subject to Byzantine authority. Charlemagne incorporated them for a while with the Frankish empire, but in 798 they fell into the hands of the Arabs. About 1230 James I (Jaime) of Aragon gained possession of the islands and confirmed the sovereignty on his third son, who transmitted it to his descendants; he formed the independent kingdom of Majorca, a secondo geniture of Aragon, at the latter date being reunited to the Crown. In the war of the Spanish Succession Minorca was occupied by the English (1756), retained with the exception of the interval (1756-63), in their possession until the Peace of Versailles (1783) the islands were ceded back to Spain.

Christianity reached the Balearic Isles among as early as the Spanish nominative. As early as the fourth century mention is made of Bishops of Minorca and in the fifth century of Bishops of Majorca and Ivisa. During the period of Arabian rule these sees were suppressed, and the islands were placed under the Bishop of Barcelona. After the expulsion of the Moors a see was re-established on the isle of Majorca (1237), in direct dependence on the Holy See; and in 1238 Raymond de Corella was made first bishop. The diocese, which has been ruled by fifty-two bishops up to the present time, was made subject to the Archbishop of Valencia in 1492; in 1782 Ivisa, and in 1795 Minorca were erected into separate sees. In 1851 Ivisa was reunited with Majorca. The Balearic Isles are at present divided into two dioceeses subject to the ecclesiastical province of Valencia: Majorca (Dioecesis Majoricensis et Mauretaniae), with Palma as the see, and Minorca (Dioecesis Minoricensis), with Ciutadella as the see.

The Diocese of Majorca, exclusive of Ivisa, embraces the islands of Majorca, Cabrera, and Coimbras; in 1906 it contained a population of 478,463, divided into 8 archipresbyterates, 39 parishes and (at the beginning of 1907) 47 mission churches; 704 priests, including 60 who are not residing in the diocese; 318 churches and oratories. The cathedral chapter consists of 5 prebendaries, 4 officials, and 7 canons. The training of young men for the priesthood is provided for in the seminario conciliar in Palma which has 12 professors and 145 students. In 1907 the diocese contained 33 houses of religious orders conducted by 13 religious congregations of men and 5 of women. Of St. Augustine there is 1; Mercedarians 1; Tertiaries regular of St. Francis 3; Mission Priests of St. Vincent de Paul 1; Oratorians of St. Philip Neri 2; Brothers of the Christian Schools 4; Redemptorists 5; Missionaries of the Most Sacred Heart 2; Religious of the Holy Ghost 4; Benedictines 4; Brothers of Mercy 4; and 149 foundations conducted by twenty-five orders and congregations of women: Poor Clares, Dominicans, Hieronymites, Carmelites, Augustinians, Sisters of Mercy, Little Sisters of the Poor, Sorores de Fatrocinio, etc. Among the monasteries of men in the diocese may be noted the Monastery of St. Minta de la Llor, an enormous edifice built in Gothic style, begun during the reign of James I and not completed until 1610; in 1608 the cathedral was raised to the rank of a minor basilica. The most frequented places of pilgrimage are the shrines of San Salvador, Nostra Señora de Lluch, and the Santuario del Puig de Polenzas.

The Diocese of Minorca, united with Majorca, but in reality ruled by its own vicar-capitular, contains 28,000 Catholics, 22 parishes, 26 churches and chapels, about 50 priests, and 1 seminary.

The Diocese of Minorca embraces the islands of that name and of Minorca, 25,000 Catholics, 23 parishes, 26 churches and chapels, about 102 seculars and 6 regular priests, an episcopal seminary, at Ciudadela, an Instituto de segunda enseñanza at Mahon, 35 primary schools, 3 benevolent institutions conducted by the Sisters of Mercy, viz.: a hospital and a foundling asylum.

The cathedral church which was built in 1287 on the site of a mosque, and having been partially destroyed in 1628, was restored in 1719. In 1795 it was raised to the rank of a cathedral.

JOSEPH LINS.

BALES (or BAYLIS, alias EVERS), CHRISTOPHER, VENERABLE, priest and martyr, b. at Consicille near Darlington, County Durham, England, about 1564; executed 4 March, 1590. He entered the English College at Rome, 1 October, 1583, but owing to ill-health was sent to the College at Reims, where he was ordained 28 March, 1588. Sent to England 2 November, 1588, he was soon arrested, racked, and tortured by Topcliffe, and hung up by the hands for twenty-four hours at a time; he bore all most patiently. At length he was tried and condemned for big treason, on the charge of having been ordained beyond seas and coming to England to exercise his office. He asked Judge Anderson whether St. Augustine, Apostle of the English, was also a traitor. The judge said no, but that the act had since been made treason by law. He was executed, "about Easter", in Fleet Street opposite Fetter Lane. On the gibbet was set a placard: "For treason and favouring foreign invasion". He spoke to the people from the ladder, showing them that his only "treason" was in his priesthood. On the same day Venerable Nicholas Horner suffered. Smithfield for having made Bailes a jerkin, and Venerable Alexander Blake in Gray's Inn Lane for lodging him in his house.

BEDR CARR.

Ball, MOTHER FRANCES MARY TERESE, b. in Dublin 9 January, 1794; d. 19 May, 1861; foundress of the Irish Branch of the Institute of the Blessed Virgin Mary (see INSTITUTE OF MARY, IRISH). She was a daughter of John Ball and Mabel Cline. Born in the age of nine years, Frances was sent to the convent school at the Bar, York, England, conducted by the English Ladies of the Institute of the Blessed Virgin Mary. She remained here until the death of her father in 1855, and then spent some time with her mother at home. In 1814, under the direction of Dr. Daniel Mcllroy, Archbishop of Dublin, Frances returned to York and entered the novitiate of the Institute of the Blessed Virgin Mary. There she received her religious training, and made her profession in 1816, taking, in religion, the name of Mary Teresa. Recalled by Archbishop Murray, she re-

turned to Dublin with two novices, in 1821, to es-
tablish the Irish Branch of the Institute of the Blessed
Virgin Mary on the 3rd of March, 1903. He erected
mission and school-extension the chief work of his
episcopate. The Sisters of St. Joseph of Cluny were
introduced; convents, primary and high schools, and
churches (over twenty in two years to March, 1907)
were established; and many new members of the
sisterhood which now has members in many
countries.

(London, 1881).

EDWIN DUBY.

Ballarat, Diocese of, one of the three suffragan
dioceses of the ecclesiastical province of Melbourne,
Australia. It comprises that part of the State of
Victoria which is bounded on the east by the 144th
meridian E. longitude, the north by the Loddon to the
River Murray; on the south by the Lower Murray; and
on the west by South Australia; and on the south
by the Southern Ocean.

Henry.—Victoria (known till 1851 as the Port
Phillip District of New South Wales) was first per-
sonally colonised by Europeans in 1802. The rich pastoral
resources of the Ballarat district were occupied in 1838.
For thirteen years thereafter the site of Ballarat was
but a picturesque pastoral scene. In 1851 the Port
Phillip District was formed into a separate colony under
the name of Victoria. It was a period of severe com-
mercial depression, and many of the colonists pre-
pared to set out for the newly discovered goldfields
of Ophir, in New South Wales. On 29 June, 1851, the
first profitable goldfield in Victoria was discovered at
Clunes, in Harcourt, and an Irish Catholic miner,
who had been on the Sacramento in '49. The hopes
of the colonists rose; ebbed again as Clunes proved
a passing disappointment; then came in with a rush
when, in August, rich gold was struck at Ballarat.
Many of the little eight-feet-square claims were mar-
vellously rich, lined with "jewelers' shops" and
"pockets" of gold. Ballarat became at a bound the
richest goldfield in the world, and forty thousand
people were soon encamped upon it. Rich fields were
discovered in quick succession at Mount Alexander,
Bendigo, and other places. Victoria became the modern Transylvania; there ensued a great rush of
population to her shores; and she became, and long
remained, the most populous of the Australian col-
onies. At Ballarat, through the lost battle of the
Europeans for the instinctive man, 1854 ultimately
won a victory over the exasperating old system of
mining licences and "digger huts".

Bishop Godd of Melbourne made strenuous efforts
to cope with the conditions created by the sudden
expansion of population. The first priest appointed
to Ballarat was the Rev. Patrick Dunne, most of
whose flock in Coburg had stamped to the gold-
fields. Father Dunne lived in a calico hut, slept on
a slab of gumtree bark, and had for his first church a
canvas tent. For some years afterwards a few priests
attended to the spiritual wants of what now num-
bers the Diocese of Ballarat. It was formed in
1874 out of the See of Melbourne. Its first bishop
was the Right Rev. Michael O'Connor, a Dublin
diocesan. He was consecrated in Rome on the 7th May,
1854. He died in Melbourne on the 20th December of the
same year. He introduced the Christian Brothers, the Sisters of Mercy, and the Loreto nuns, and after a fruitful episcopate
died on the 14th February, 1883. His successor was the
Rev. James Moore, consecrated 27 April, 1884.
Dr. Moore opened the successful boys' college
at Ballarat, and introduced the Redemptorist Fathers
and the Sisters of Nazareth, of St. Joseph, and of
St. Brigid. He was skilled in finance, was a builder
with big ideals, and at his death, 26 June, 1904, left
Ballarat one of the best equipped dioceses in Aus-
tralia. He was succeeded by the Right Rev. Joseph
Liggins, who was translated from the See of Rock-
hampton on the 3rd of March, 1903. He erected
mission and school-extension the chief work of his
episcopate. The Sisters of St. Joseph of Cluny were
introduced; convents, primary and high schools, and
churches (over twenty in two years to March, 1907)
were established; and many new members of the
sisterhood which now has members in many
countries.

RELIGIOUS STATISTICS.—In March, 1907, there were:
parochial districts, 29; churches, 145; secular priests,
62; regular priests, 10; religious brothers, 17; nuns, 230;
convents, 18; college (boys), 1; superior day schools
(boys) 2; boarding schools (girls), 10; superior day
schools (girls), 9; primary schools, 57; home for aged
poor, 1; orphanage, 1; children in Catholic schools,
4,900; Catholic population, 59,488.

ney, s. d.); JONES, History of Australian Catholics (Sydney, 1901); WITHEY, History of Ballarat (2d ed., Ballarat, 1887); Mis-
sal of the Catholic Church (Propaganda, Rome, 1907) 698.

HENRY W. CLERY.

Ballerini, Girolamo and Pietro, celebrated theologians and canonists, the sons of a distinguished
surgon of Verona. A rare intellectual sympathy
bound these brothers together and led them to
assist each other in the preparation and composition
of their many works. Girolamo was born at Verona
20 January, 1702, and died 28 April, 1781. After
finishing his course in the Jesuit college of his native
city he entered the seminary and was ordained a
secular priest. In the pursuit of his favourite his-
torical studies he soon came to appreciate the valu-
able labours of the learned Cardinal Norisi, also of
Verona, and a brought out (1729-33) a complete
dition of his works. The scholarship of the editors
is best seen in the fourth volume, especially in their
dissertations against Garnerius, and in their study
of the early days of the Patriarchate of Aquileia.
They also published (1733) an edition of the writings
of Matteo Giberti Bishop of Verona, and in 1739
a critical edition of the sermons of St. Zeno of Verona.
Pietro, b. 7 September, 1698; d. 28 March, 1769,
after completing his studies both at college and the
seminary was chosen as a professor in the school in
Verona. Here he began his long and notable
literary career in 1724, when he prepared for his
pupils a treatise on the method of study taught and
followed by St. Augustine. Some passages in this
work gave serious offence to the school of absolute
Probabilists, and for some years Pietro was en-
gaged in a lively dispute with them, defending his
principles of Probabiliorism in three volumes.
Shortly afterwards he turned his attention to the
much debated question of usurpation and threw his
influence against the claims of the Lateran. To
sustain his argument in this controversy he prepared
(1740) an edition of the "Summa" of St. An-
toninus which he sent to Pope Benedict XIV, and
also (1774) one of the "Summa" of St. Raymond
of Pennafort. During this same year he published
"La Dottrina della Chiesa Cattolica circa l'usura", in
which he condemned all forms of usury. This
exceptional literary activity made the name of the
Ballerini brothers famous throughout Italy, and in
1748 Peter was chosen as a regent to serve as its
canonist in Rome in a dispute over the Patriarchate of
Aquileia. His conspicuous talent on this mission attracted the attention of Pope Bene-
dict XIV, who commissioned him to prepare an
dition of St. Leo's works in refutation of the de-
fective one published by Quaselin.
After almost nine years of labour in which he enjoyed free access to all the libraries of Rome, Pietro brought out his monumental work in three volumes (Rome, 1753-57) reproducing the entire edition of Quesnel together with elaborate refutations and additions (Migne, F. L., LIX-LVI). The third volume is a profound study of the canons, together with some very unknown versions of Greek canons. He also published two valuable works (against Febronius) on papal power, "De vi ac ratione Primatus Romanorum Pontificum" (Verona, 1760), and "De poesitae ecclesiasticë Summorum Pontificum et Conciliorum generalium" (Verona, 1765).

LEO F. O'NEIL

Ballina, Diocese of. See Killala.

Balliol, John. See Oxford.

Ballon, Louise Blanche. See Sisters of Providence and Reformed Bernardines.

Balmes (Balma), Henry (also called Hugh) a Franciscan theologian, born at Geneva, date uncertain; d. 23 February, 1439. He entered the Order of Friars Minor in the province of Burgundy. He was a man of exceptional worth according to the testimony of St. Colette, whose confessor he was. Possessing an intimate knowledge of his penitent's life, he wrote a brief account of her marvellous gifts. This saint, however, on hearing of its existence, caused it to be destroyed. Among his other writings is one on "Theologia Mystica" which was attributed to St. Bonaventure and is to be found in many editions of the latter's works, but the editors of the latest edition (Quaracchi, 1898, Vol. VIII, p. cxii), following Sbarassia, have restored it to its rightful owner.

ANDREW EGAN.

Balmes, Jaime Luciano, philosopher and publicist, b. at Vich, Spain, 28 August, 1810; d. there, 9 July, 1848. His parents enriched him with no material wealth, but he owed to them a firm, balanced temperament, a thorough education, and, probably to his father, a marvellous memory. If to these endowments we add a penetrating intellect, an instinctive sense of right method, an absorbing passion for knowledge, an unfainting though noble ambition, an indomitable determination, a pure life—wherein no unruly sensuousness seems to have ever clouded the spirit—and abundant opportunities for mental development, we may be prepared to accept every thing that looks so much like an extravagance on the part of his biographers, that with his sixteenth year, having passed through the schools of Vich, he had completed the seminary course, including philosophy and elementary theology. The next stage of his education was completed at the University of Cervera, where after seven years he received his licentiate in 1833. Later on, he stood for the dignity of Magistral of Vich, contesting for the position with his former teacher, Dr. Soler. Returning to Cervera after his ordination to the priesthood he held a position as an assistant professor and pursued the study of civil and canon law. He shortly afterwards received the doctorate in canon law. In 1843 he became a professor in law. Quesnel had published a collection of canons from a codex which he believed to have been in use under Popes Innocent I, Zozimus, and Leo the Great. Besides disproving this, Pietro brought out in an improved form earlier Latin editions of the canons, together with some very unknown versions of Greek canons. He also published two valuable works (against Febronius) on papal power, "De vi ac ratione Primatus Romanorum Pontificum" (Verona, 1760), and "De poesitae ecclesiasticë Summorum Pontificum et Conciliorum generalium" (Verona, 1765).

Jaime Luciano BALMES

This was followed by a translation, with Spanish introduction, of the maxims of St. Francis de Sales (1840). He was now famous as a Protestant compared with Catholicism but suspended the work for fifteen days to compose "La Religion demonstrado al alcance de los niños" a work of advanced instruction for children which rapidly spread throughout Spain and Spanish America and translated into English. Elected a member of the Academy of Barcelona (1841), he wrote his inaugural dissertation on "Originality", an essay which exemplifies the predominant trait of his author's mind. Having completed his reply to Guizot's "Civilization in Europe", he published it at Barcelona (1844) under the title "El Protestantismo comparado con el Catolicismo en sus relaciones con la civilización Europea". The work was at once translated into French and subsequently into Italian, German, and English, and extended the fame of Balmes throughout the world. This work, which for its wealth of fact and critical insight would alone have taxed the resources of a longer life than that which was allotted to Balmes, left to its author the title of an extraordinary and hardly less magnitude and significance. During the bombardment of Barcelona by Espartero, Balmes, going away unwillingly with his friends, took refuge in a country house with no other books than his breviary, "The Imitation", and the Bible, and while the cannon roared in his ears the philosopher, repeating the experience of Archimedes at the siege of Syracuse, composed the "El Criterio" (The Criterion, New York, 1878; The Art of Thinking, Dublin, 1882), a thoroughly practical guide on method in the pursuit of knowledge. It seems incredible that the work could have been produced as it was within a month. Shortly after Balmes became associated with two friends, Roca y Cornet and Ferrer y Subirana, in editing "La Civilización", a widely influential Latin weekly of which one of his most powerful, because sympathetic, papers—that on O'Connell. In 1843 Balmes withdrew from the editorship to found in Barcelona a review of his own, "La Sociedad". It contained a mass of important papers meeting the serious political, and various exigencies of the time. "La Sociedad" was reprinted at Barcelona in 1851. It was through its pages that the greater part of a notable work, subsequently completed by the author, was issued—"Cartas a un eséptico" (Letters to a Sceptic, Dublin, 1875).

About the date of the appearance of "El Prote-
Balmes was called to Madrid where he established a newspaper "El Pensamiento de la Nación" in the interests of politics and religion. Its special purpose was the advocacy of the marriage of Isabella II with the eldest son of Don Carlos, a union which appeared to Balmes to offer the most effective solution of the existing political problems of Spain. He even proposed to the Don Carlos and succeeded in persuading the latter to renounce his title of king in favour of the Count of Montemor. Unfortunately, the plan which might have spared his country many misfortunes failed through the treachery of Germany. Despite his cherished design came to naught when Isabella married her cousin Don Francisco de Asís, suspended the publication of "El Pensamiento" notwithstanding the remonstrance of friend and foe, for the journal had, through the impress of his mind and character and literary power, come to mark an epoch in the history of the Spanish press. Balmes now retired from the political arena to devote the closing years of a life all too short to the publication of his "fundamental" philosophy in Spain and translated into English by Henry F. Brownson, with an introduction by his father Dr. Orestes A. Brownson (New York, 1864). It is an exposition of the philosophy of St. Thomas in view of the intellectual conditions of the nineteenth century. His biographer, Dr. Soler, speaks of this work as "the most stupendous variety of knowledge which it manifests and the richness of its mental treasures, appears a collection of libraries, a mine of science, for there is no department of human knowledge that he does not comprehend, the principle of life in brutes to be naturally imperishable."

These, however, are but accidental and relatively unimportant divergencies from the permanent body of the traditional philosophy—the system which receives in his "Filosofía fundamental" a fresh interpretation and a further development in answer to the intellectual conditions of his day; for it was an habitual conviction with Balmes that the philosopher's business is not merely to rethink and restate, but to reshape and develop. While the book just mentioned reflects the mature mind of the author, the work that most fully manifests his personality, his mental, moral, and religious character, and his social and political ideals, together with the range and accuracy of his learning—the work, therefore, that is likeliest to endure—"El Protestantismo comparado". Though conceived originally as a reply to Guizot's "History of Civilization", it is much more than a critique or a polemic. It is really a philosophy of history—or rather of Christianity—combining profound insight and critical analysis with wide erudition. It searches for the basic principles of Catholicism and of Protestantism, and summons the evidence of history concerning the comparative influence exercised by the former and the latter in the formation of human life—intellectual, moral, social, and political. The side on which the author's sympathies lie is frankly indicated by him, while he appeals to the historical data in justification. It should be read in the Spanish to be fully estimated; for the English translation, though accurate and scholarly, can hardly be expected to reflect all the light of the original.

For the rest, the general position of Balmes among his compatriots may be summed up in the words of one of the leading Spanish journals, "El Heraldo", at the time of his death. "Balmes ap-
peared, like Chateaubriand, on the last day of the revolution of his country to demand from it an account of its excesses, and to claim for ancient institutions their forgotten rights. Both mounted on the wings of genius to a height so elevated above the passions of party that all entertained respect and veneration for them. One and the other brought as they went to their work a ferment which they combusted generally prevailing opinions and prejudices, all good citizens wove for them well-earned crowns and loved them with enthusiasm. Besides the works mentioned above, a collection of fragments of his works were issued and of his death under the title "Escritos postumos" (Barcelona, 1850); also "Poesias postumas" (ib.), and "Escritos politicos" (ib.).

VIII, iii; Banezera, Balsam (Vich, 1883).

F. P. Siegfried.

Balsam, an oily, resinous, and odoriferous substance, which flows spontaneously or by incision from certain plants and which the Church mixes with olive oil for use as chrism. Balsams are very widely distributed throughout the plant kingdom, being particularly abundant in the pine family, but the name is generally restricted in the present day to resin which in addition to a volatile oil contain benzoic and cinnamic acid. Among the true balsams are the Balm of Gilead, or Mubin, which is cultivated in Arabia, Egypt, Syria, etc., and is extremely costly; the copaiva balsam, and those of Peru and Tolu—all three found chiefly in South America. The term balsam, however, is also applied to many pharmaceutical preparations and resinous substances which possess a balsamic odour.

The practice of the Church of using balsam, as mentioned above, is very ancient, going back possibly to Apostolic times. (See Christ.) The scarcity and high price of other perfumes has obliged the Latin Church to be content with balsam alone in the mixture of holy chrism; but in the East, where the climate is more favourable than ours to the growth of these plants, the Church uses no less than thirty-six species of precious perfumes, according to the Eastern Church, oil which makes the most excellent fragrance. The Latin Church does not insist on the quantity or the quality of the balsam to be used; any substance commonly known as a balsam may be utilized, and such a quantity as will give its odour to the oil is sufficient. This mingling of the balsam with the oil is intended to convey, by outward sign, the good odour of Christ, of whom it is written (Cantic., i, 3): "We will run after thee to the odour of thy ointments." It typifies also the odour of good works, the thought which ought to inspire those who receive the sacramente; and it symbolizes an innocent life and the gifts of the Holy Spirit.

The balsam is blessed by the bishop at the Mass which he solemnly celebrates on Holy Thursday and is poured into the oil after he has administered Holy Communion to the faithful. The cruets of balsam is brought by a subdeacon to the assistant priest, who, in turn places it on a table in the sanctuary before the bishop. The latter blesses the balsam, reciting over it the three prayers found in the Roman Pontifical. The fragrant oil is then poured into the croos of a favoured branch that gives us the priestlyunction. Later he mixes the balsam with a little oil on a patent and pours it into the chrismon with a suitable invocation: "May this mixture of liquors be to those who shall be anointed with it, a propitiation and a salutary protection for ever and ever. Amen." In the early ages the pope, without using any form, as appears from the Roman Pontifical, poured the balsam into the oil, which contained the Mass (Ordo Romanus, X, n. 3; P. L., LXXVIII 1010), but the blessing took place after the Communion of the pope, and before that of the clergy and the faithful (Duchesme, Christian Worship, 2d Eng. ed., 1839, p. 306). From that time on, to that of the Roman Pontifical, the pope blesses the balsam and oil during the Mass. In the Church of Soissons in France, at one time, the "Veni Creator" was sung before the mingling of the substances was issued and other.
On comparing the inscriptions with the other accounts we find that they substantially agree with the statement by Berosus, but that they considerably differ from what is recorded by Herodotus, Xenophon, and in the Book of Daniel. (1) The inscriptions do not mention the siege of Babylon recorded by Herodotus and Xenophon. Cyrus says that Berosus had general the text "without fighting".

(2) Nabonidus (555–538 B.C.), and not Baltasar, as is stated in Daniel, was the last king of Babylon. Baltasar, or Bel-sarras-usur, was the son of Nabonidus. Nor does Nabonidus or Baltasar appear as a descendent of Nabuchodonosor. Nabonidus was the son of Nebaladhsu-ik-bi, and was a usurper of the throne.

The family of Nabuchodonosor had come to an end in the person of Evi-Merodach, who had been murdered by Nergal-sharzer, his sister's husband. The controversy occasioned by these differences between the conservative and modern schools of thought has not yet reached a conclusion. Scholars from the other school still maintain the historical accuracy of the Book of Daniel, and explain the alleged discrepancies with Nabonidus' great ingenuity, evi- dently a corruption of Nabonidus, and calls the queen, grandmother (γυναῖκα) of the king. He adheres to the Septuagint rendering in making the reword held out to Daniel to have been a third portion of the kingdom, not of the title, third ruler in the king- dom. Rabbinical tradition has preserved nothing of historical value.

The cuneiform inscriptions have thrown a new light on the person of Baltasar and the capture of Babylon. There is the name Baltasar in the inscription of Nabonidus containing a prayer for his son: "And for Bel-sarras-usur my eldest son, the offspring of my body, the awe of thy great divinity fix thou firmly in his heart that he may never fall into sin." (Diodorus Siculus, V, 17, 3) It can hardly be supposed that Bel-sarras-usur is the same as Belshazzar, or Baltasar. Dr. Strassmaier has published three inscriptions which mention certain business transactions of Bel-sarras-usur. They are the lease of a house, the purchase of wool, and the loan of a sum of money. They are dated respectively the fifth, eleventh, and twelfth year of Nabonidus. Of greater importance is the analytical tablet on which is engraved an inscription by Cyrus summarizing the more memorable events of the reign of Nabonidus and the Babylonians' revolt under Belshazzar. The first portion of the tablet states that in the sixth year of Nabonidus, Astyages (Istuveg) was defeated by Cyrus, and that from the seventh till the eleventh year Nabonidus resided in Tema (a western suburb of Babylon) whilst the king's son was with the army in Arcad, or Northern Babylonia. After this a lacuna occurs, owing to the tablet being broken. In the second portion of the inscription we find Nabonidus himself at the head of his army in Arcad near Sippur. The events narrated occur in the seventeenth, fifth, and last year of the king's reign. "In the month of Tammuz [June] Cyrus gave battle to the army of Arcad. The men of Arcad broke into revolt. On the 14th day the garrison of Sippur was taken without fighting. Nabonidus flies. On the 16th day Gobryas and Gabdatis, the two generals of Cyrus (Cyr. v, 3), entered Babylon; and the army of Cyrus entered Babylon without a battle. Afterwards he takes Nabonidus and puts him into fetters in Babylon. On the 3rd day of Marchesan [October] Cyrus entered Babylon (Sayce, Fresh Light, p. 163), and Astyages (Istuveg) flew out of Babylon. In addition to this tablet we have the Cyrus cylinder published by Sir Henry Rawlinson in 1880. Cyrus pronounces a eulogy upon his military exploits and assigns his triumph to the intervention of the gods. Nabonidus had incurred their wrath by removing their images from the local shrines and bringing them to Babylon.

**BALTASAR.** See MAGI.
Baltimore, Archdiocese of, senior see of the United States of America, established a diocese 6 April, 1789; at an archdiocese 8 April, 1808; embraces all that part of the State of Maryland west of the Chesapeake Bay (6,442 square miles) including also the District of Columbia (64 square miles), making in all 6,505 square miles. The entire population of this diocese, 1,273,000, including 255,000, are principally of English, Irish, and German descent. There are also Polish, Lithuanian, Bohemian, and Italian congregations, and six churches exclusively for coloured people, four in Baltimore, two in Washington. (See Washington and District of Columbia.)

I. Colonial Period.—(a) Politico-Religious Beginnings.—Catholic Maryland, the first colony in the New World where religious toleration was established, was planned by George Calvert (first Lord Baltimore), a Catholic convert; founded by his son Cecil Calvert (second Lord Baltimore), and named for a Catholic queen, Henrietta Maria, wife of Charles I of England. Except for the period of Ingle's Rebellion (1645-47), its government was controlled by Catholics through the influence of the first lord, Calvert (25 March, 1634) until after 1649, when the Assembly passed the famous act of religious toleration. The first three Lords Baltimore, George, Cecilius, and Charles, were Catholics. The last three, Benedict, Cecilius, and Charles, were Protestants. Puritans who had been given an asylum in Maryland rebelled and seized the government (1652-58) and Catholics were excluded from the administration of the province and restrained in the exercise of the faith; but heresy Baltimore again obtained control (1658), religious liberty was restored until 1692.

Taking advantage of Protestant disturbance in the colony, William of Orange, King of England, declared the Proprietary's claim forfeited, made Maryland a royal province, and sent over Copley, the first royal governor (1692). The Anglican Church was then made the established church of Maryland, every colonist being taxed for its support. In 1702, religious liberty was extended to all Christians except Catholics. Catholics were forbidden to instruct their children in their religion or to send them out of the colony for such instruction (1715). Priests were forbidden to exercise their functions and Catholic children could be taken from a Catholic parent, and the mother of a minor Catholic, and the clergy were permitted to perform their duties in the chapels of private families (9 December, 1704). Thus originated the manor chapels, and the so-called "Priests' Maes-Houses". The apostacy of Benedict Leonard Calvert (1713) was a cruel blow to the persecuted Catholics. In 1716 an oath was exacted of office-holders renouncing their belief in Transubstantiation. An act disfranchising Catholics followed (1718). Charles Carroll, father of the Signer, went to France (1752) for the purpose of obtaining a grant of land on the Arkansas River for his persecuted brethren. This plan, however, failed. To extirpate Catholicity an attempt was made to pass a bill confiscating the property of the clergy (3 May, 1754, Lower House Journal in MSS., Maryland Historical Society, Baltimore). The measure failed, and the Proprietary and the clergy were permitted to remain. The Maryland Act of Toleration was finally (1774) passed, and the Catholic Church was established and made the established church of Maryland in 1797. The Jesuits were expelled from the province in 1775.

(b) The First Missions.—In the first colony brought over by the Ark and the Dove (25 March, 1634) were three Jesuits, Fathers Andrew White and John Althan, and a lay brother, Thomas Gervase (White, Relatio Itineris in Marylandiam, Baltimore, 1874; Cottrell, A History of the Society of Jesus in Maryland, 1837; Treacy, Old Catholic Maryland, Swedesboro, N. J., 1889; Hughes, Hist. of S. J. in N. America, 1907). The following year another priest and lay brother arrived. Fathers Philip Fisher (real name Thomas Copley) and John Knolles landed in 1637. In 1642 the Roman Congregation of the Propaganda, at Lord Baltimore's request, sent to Maryland two secular priests, Fathers Gilmett and Territ. Two Franciscans arrived in 1673, one of whom was Father Masseus Massey of Santa Barbara, a truly apostolic man. There were not more than six Franciscans at any time on the missions in Maryland. Their missions ceased with the death of Father Haddock in 1720. In 1716 two Scotch Recollects (Franciscans) came to the Eastern Shore of Maryland. The title "Apostle of Maryland" belonged to Andrew White, S. J., whose zeal was boundless. During Ingle's Rebellion (1645-47) Fathers White and Fisher were taken in chains to England where the former died. Father Fisher returned to Maryland in 1648, dying the 1st of April, 1649. He died on the verge of success alone on the mission. Fourteen years after the first colony landed nearly all the natives south of what is now Washington had embraced the Faith, living in peaceful happy intercourse with the settlers. Father White said Mass in the wigwam of the tribe in his wigwam on the Potomac River. A chapel farther down the stream replaced the wigwam which was in turn succeeded by St. Thomas's Manor church built in 1798 by the Rev. Charles Sewell, S. J. St. Ignatius was the glorious result of the wisdom and zeal of the first Jesuit missionaries of Maryland (B. U. Campbell, in U. S. Cath. Hist. Magazine, Baltimore; Calvert Papers, Maryland Hist. Society, 1889-91; Treacy, op. cit.; The Catholic Cabinet, St. Louis, 1843-45; The Religious Cabinet, Baltimore, 1842). In accordance with Lord Baltimore's instructions, a church was built in the early days at St. Mary's, the capital of the province. William Bretton and his wife, Temperance, in 1661 deeded the ground for the chapel of St. Ignatius and the cemetery at Newtown. New owner was the Manor Anne Innisbrook. In 1767 a Catholic college was opened by Father Foster, S. J., and Mr. Thomas Hothersall, a scholar. In 1697 We find a brick chapel at St. Mary's; frame chapels at St. Ingoes, Newtown, Port Tobacco, Newport, Father Hobar's chapel (Franciscan) near Newport, one on the Boarman estate, and one at Duncester in Talbot County. During this period (1634-1700) there were about thirty-five Jesuits in the missions of Maryland, all of whom with two or three exceptions were English. They were men of apostolic zeal and disinterestedness. The mission at Pocomoke, in Cecil County was founded by Father Mansell (1706), the priests of this mission carrying the Faith into Delaware. St. Inigoes house was established in 1708 and later a chapel was added. Hickory Mission, from which the diocese is supplied, having been established in 1720, and St. Joseph's Chapel, Deer Creek (the Rev. John Biggs, Jr.), in 1742. We find the Rev. Benedict Neale at Priest's Ford, Harford County, in 1747. St. Ignatius's Church, Hickory, was established (1790s to the present). In 1755, 900 Catholic Acadian refugees settled in Maryland, but the Catholics were forbidden to give them hospitality. Many of them lost the Faith, but some of their descendants still preserve the Faith for which their fathers suffered. An unfinished house in Baltimore (north-west corner of Calvert and Fayette
Streets) was used by them as a chapel. A Catholic school was established in Baltimore (1757) by Mary Annes, but was closed on account of the violent persecution of Protestant clergymen. The historic Whitemarsh mission was founded in 1760 by the Rev. John Lewis. Frederick Chapel (St. John's) was built by Father Williams, S.J.; the church was built in 1800 by the Rev. John Dubois, at that time the only priest in Frederick. The parish was removed to Whitemarsh about 1820, and to Frederick in 1833, whence in 1903 it was finally removed to St. Andrews-on-the-Hudson, near Poughkeepsie, New York.

In 1669, the Catholic population numbered 2,000; in 1708 it was 2,079 in a population of 40,000; in 1755 about 7,000. In 1766, the following missions were attended by Jesuits: St. Inigoes, Newtown, Port Tobacco, Whitemarsh, Deer Creek, Fredericktown, Queenstown, Bohemia, and Baltimore. The twenty Jesuits and their dependents in Maryland numbered 130. The order's suppression (1773) remained at their posts. The first priest born in Maryland was the Rev. Robert Brooks (1663). His four brothers also became priests. Conspicuous for unselfish zeal at this period was the Rev. Francis Hunter, whose father, the Rev. Father George Thorold labored in Maryland (1700-42). The clergy was, in general, self-supporting. (Treaty, op. cit.; Extracts from Letters of Missionaries, Baltimore, 1877; Shea, Life and Times of Archbishop Carroll, New York, 1888.)

(c) The Catholic Colonists.—The Catholic population, mostly rural, was generous to the Church and hospitable to the priests. We find many deeds and bequests for ecclesiastical purposes in the early records. Enduring one hundred years of persecution from the Protestants to whom they had offered asylum, proscribed, disfranchised, offered peace and emolument in exchange for apostasy, the Catholics generally continued faithful, and it is inspiring to read the list of Catholic names that survived the dark ages and that are still in evidence on the Catholic roll of honor.—Brent, Lee, Fenwick, Boarman, Sewell, Lowe, Gardiner, Carroll, Neal, Jenkins, Diggles, Bowing, Edelin, Matthews, Lancaster, Stonestreet, Boone, Mattingly, Brooks, Hunter, Childs, Semmes, Little, Queen, Hill, Gwynn, Wheeler, Elder, McAtee, Pye, Miles, Abell, Camailer, Smith, Plowden, Freeman, Maddox, Greenwell, Floyd, Drury, Mudd, Hamilton, Clark, Payne, Brock, Walton, Doyle, Darnall. During the American Revolution, Catholics, with very rare exceptions, sided with the patriots; Maryland's best Catholic names are to be found on the rolls of the Continental army, both as officers and privates. The most prominent and influential citizen of Maryland during this epoch was Charles Carroll of Carrolton, one of the signers of the Declaration of Independence. At this time only Maryland, Pennsylvania, Virginia, and Delaware had removed the disabilities against Catholics. The National Convention (Philadelphia, 1787) granted religious liberty to all. (McSherry, Hist. of Maryland, Baltimore, 1882; Scharf, Hist. of Maryland, Baltimore, 1879.)

II. AMERICAN PERIOD.—Such were the conditions in Maryland when the first bishop was appointed. Speaking of this period in 1790 Bishop Carroll said of the Catholics of Baltimore (1789) he had arrived. In 1787, the Rev. Peter Moseley died leaving about 600 communicants on the Eastern Shore, where he had laboured twenty-two years. At this time there was only one other priest stationed there. The next year the veteran John Lewis died, being the last of the Superiors of the order.

The church began to recover from this scandal only after thirty years of the war. Catholic Americans were subject spiritually to English Catholic superiors (as vicars apostolic or priests), until 6 September, 1665, when Innocent XI appointed Dr. John Leyburn, Vicar-Apostolic of all England. The British Colonies in America remained under the jurisdiction of Dr. Leyburn and his successors, Bishops Grafton, Chater, and Lewis, Vicar-General of the Vicar Apostolic of London. This mission was attended by the Revs. John Carroll, John Ashton, Charles Sewell, Bernard Diderick, Sylvester Boarman, and Leonard Neale. It resulted in a petition asking for the appointment of the Rev. John Lewis as Superior, with quasi-episcopal faculties. At this time the French Minister to the United States schemed to make the missions of the United States subject to France. Benjamin Franklin, United States representative to France, met Dr. Lewis and was instructed by Congress, at first supported this intrigue. Congress, however, informed Franklin that the project was one "without the jurisdiction and power of Congress, who have no authority to permit or refuse it." The American priests resisted for seven years, and in 1786 the Act of 1784 was passed, and the Secretary of State nominated Dr. Carroll as Vicar-General of the newly established diocese. By this act a result the appointment of the Rev. John Carroll as Superior of the missions of the United States, with power to administer confirmation, was ratified (9 June, 1784). He received the decree appointing him Prefect Apostolic 26 November, 1784. At this time, there were, according to Dr. Carroll, 15,800 Catholics in Maryland (of whom 3,000 were negroes); 7,000 Catholics in Pennsylvania; 200 in Virginia; 1,500 in New York. In 1782 the total population of Maryland was 254,000. There were nineteen priests in Maryland and five in Pennsylvania. Dr. Carroll made his first visitation in Maryland in 1785, and administered confirmation. About this time he took up his residence in Baltimore, where the Rev. Charles Sewell was pastor. In 1788, the clergy petitioned for the appointment of a bishop. Their request was granted. They were permitted to determine whether the bishop should be merely titular, or should have a see in the United States—and to choose the place for, as well as to elect the occupant of the see.

The Election of Bishop Carroll.—Twenty-four priests assembled at Whitemarsh. Twenty-three voted for Dr. Carroll, who was, accordingly, appointed first Bishop of Baltimore, subject to the Roman Congregation of the Propaganda. Dr. Carroll was consecrated in the chapel of Lulworth Castle, England, 15 August, 1790, the consecrator being the Right Rev. Charles Walmesley, Senior Vicar Apostolic of England. Before leaving England, Dr. Carroll arranged with the Superiors of the Eastern Jesuits to establish an ecclesiastical seminary in Baltimore at their own expense. Accordingly, the superior, the Rev. Francis Nagot with three priests and five seminarians arrived at Baltimore in July, 1791. The "One Mile Tavern" and four acres of land were purchased and on 18 July, St. Mary's Seminary was opened.

(a) Progres of Catholicism.—The next year the Revs. J. B. David and B. J. Flaget, afterwards Bishops of Bardstown (Louisville), Kentucky, with Mr. Stephen Badin who was the first priest ordained in the United States in Baltimore (1789) arrived. In 1794, the Rev. Peter Moseley le
nal Maryland missions. In 1789 Georgetown College was founded. A frame church was erected at West-
minster (1789), succeeded by Christ Church (1800), under the late Rev. Joseph Durheim. Port Royal of Baltimore included all the territory east of the Mississippi, except Florida; in this vast territory there were churches at Baltimore, New York (1785), Boston (1788), Charleston (1788); in Maryland at St. Paul's, St. John's, the Westernport, Port Tobacco, Rock Creek, Annapolis, White Marsh, Bohemia, Tuckahoe, Deer Creek, Frederick, Westminster; in Pennsylvania, at Philadelphia, Lancaster, Conewago, Goshenhop-
pin; in Delaware, at Coffee Run, also at Vinneennes, Kaskasia, Cahoon, and Prairie Grove. A Carmelite community was established at Port To-
bacco under Mother Frances Dickinson. The nuns remained there until 1831, when twenty-four sisters under Mother Angela Mudd removed to Baltimore. In 1791, the first diocesan synod in the United States was opened at the bishop's house in Baltimore. Twenty-two priests and the bishop were present. At this synod the oratory collections were inaugu-
rated. Between 1791 and 1798 seventeen French priests arrived, some of whom became famous in the history of the United States, as John Neumann (1791), Benedict Flaget, J. B. David, Ambrose Marechal (1792), William DuBourg, and John Moran-
ville (1794), and John LeFevre Cheverus (1796). Until this time the burden of the missions of Maryland had been borne by the Jesuits. From 1700 to 1805 about ninety Jesuits had laboured on the mission, of whom about sixty were English, sixteen Americans, and the rest German, Irish, Welsh, Belgian, and French. They were apostolic men who devoted their lives without earthly reward to the service of their vineyard. In 1792, Catholics in the eastern section of Balti-
more, finding it inconvenient to attend the pro-cathedral, asked for a priest and a room in the third story of a house, corner of Fleet and Bond Streets, where the first Mass was said by Bishop Carroll. This congregation numbered about twelve persons. The Rev. Antoine Garnier, from St. Mary's Seminary, visited them twice weekly until 17 December, 1795, when the Rev. John Floyd took charge. The first church was erected on Apple Alley near Wolfe Street. Father Floyd dying in 1797, Father Garnier was again made pastor until 1803, when the Rev. Michael Cody succeeded him. Dying within the year, his place was taken by the Rev. John Moravanville, through whose means St. Paul's Church (between Light and Bank Streets) was opened 10 July, 1804. It was dedicated 29 November, 1807, being then the most imposing church in the diocese. Father Moran-
ville died in 1824, and was succeeded by the Rev. Nicholas Kearney (d. 1840), the Rev. John Dolan (d. 1870), and the Rev. John T. Gaitely (d. 1892). In 1898 the old church was replaced by the present hands-
some Gothic edifice. St. Patrick's School, begun by Father Moravanville, preceded all public schools in Baltimore. The earliest German Catholic congrega-
tion was established on 17 February, 1801, for the first time for Divine service in a house near Centre Market. About 1800 Father Reuter, a priest in charge of the German Catholics, fomented a schism amongst them. They built a church where St. Al-
phonsus's existed, expelled the Rev. Joseph Zuechel. In 1802, on the List's, and defied the bishop, who carried the case to the courts, which decided in his favour (1805). Arch-
bishop Eccleston confirmed the church to the Redemp-
torists in 1840. The corner-stone of the new church was laid 1842, and the Church of St. Al-
phonsus's. This church is distinguished for two pastors whose reputation for sanctity entitles them to special mention, the Venerable John N. Neumann (Bishop of Philadelphia, 1852-60), the process of whose beatification is still pending in Rome (Berger, Life of Right Rev. John N. Neumann, D.D., New York, 1884); and the Rev. Francis X. Seelos who died in 1867, the first steps towards whose canoniza-
tion were taken in 1882. The Life of Rev. F. X. Seelos, New York, 1887). St. Joseph's, Emmits-
burg, was founded in 1793, by the Rev. Matthew Ryan. The Revs. John Dubois and Simon Brune were afterwards pastors of this church. The first baptismal record of St. Mary's Church, Baltimore, was entered in 1793. Father David, the first pastor, was transferred to Georgetown in 1804. In 1794, the first church was built in Hagerstown, attended by the Rev. D. Cahill. About 1795, a log church was erected. Mary Roche, built by the Rev. D. Cahill, was substituted in 1838. It was replaced by the present church (St. Patrick's) in 1849 by the Rev. O. L. Obermeyer, and consecrated in 1883. St. Joseph's, Taneytown, was built by Mr. Brooks (1796). Its first pastor was the well-known Russian nobleman and convert, Father Demetrius A. Gallatin. It was soon seen that a coadjutor for the diocese was desirable in case of the bishop's death, and the Rev. Lawrence Grossel, a German priest of Phila-
delphia, was appointed to that office. This zealous and devoted pastor died 17 January, 1851. A native of Maryland, was selected, and was consecrated 7 December, 1800, at the Baltimore pro-cathedral. A notable event at this time was the marriage of Jerome Bonaparte, brother of Napoleon, to Miss Patterson, a niece of Jesuits. More, Bishop Carroll officiating (24 December, 1803). (b) Educational Institutions.—As already stated Georgetown College was opened by the Jesuit Fathers in 1791. (Centennial Hist. of Georgetown College, Washington, 1891.) In 1803 the faculty of St. Mary's Seminary instituted an ungraded preparatory college course which continued until 1852, when Loyola College was opened. During this period it numbered among its students many who afterwards became prominent; among others Robert Walsh, A. B. Roman, the Latrobe's, the Carrolls, the Jenkins, the Foley's, S. Eccleston, J. Chanche, E. F. Chatard, T. I. White, S. T. Wallis, Robert McLane, C. C. Biddle, Reverdy John-
son, Oden Bowie, Leo Knott, Christopher Johnson. At one time (1859-60) it had 207 students. In the meantime an attempt was made to separate the college from the seminary, and in 1807 Father Nagot estab-
lished a college at Pigeon Hills, Pennsylvania, but in 1808, the sixteen students were transferred to a new insti-
tution begun at Emmitsburg by the Rev. John Du-
bois, and in 1814 the Seminary of St. Mary's, the College of St. Mary's. It gave to the Church one cardinal (McCloskey), five archbishops, twenty-one bishops, and five hundred priests. To carry out a design long entertained by the Sulpicians, St. Charles College, a petit séminaire, was begun and built on land donated by Charles Carroll of Carrollton. The cornerstone was laid in 1831, but owing to the lack of funds the college was not opened until 1848. The Rev. O. L. Jenkins was its first president, with one instructor and four students, but at his death (1869) there were thirteen in attendance. It was made separate from the priests among its alumni. Since 1853, St. Mary's Seminary has been exclusively a grand séminaire, with philosophy and theology courses. The memories of the devoted priests who during more than a century have taught and competed the Church in the midst of deep piety, are cherished with loving reverence by the numerous clergy they have taught. The alumni roll of St. Mary's contains the names of one cardinal, 30 bishops, 1,400 priests (Centennial History of St. Mary's Seminary, Baltimore, 1891). The Society of Jesus was re-established in 1895 (1905) with the Rev. Robert Molyneux as superior. In 1808, Mrs. Elizabeth Ann Seton, a convert from Episcopalianism, went from New York to Baltimore and lived with some companions next to St. Mary's
BALTIMORE

1. OLD ST. PATRICK'S  2. CORPUS CHRISTI CHURCH (JENKINS MEMORIAL)  3. ST. MARY'S SEMINARY
Seminary. A convert, the Rev. Samuel S. Cooper, having given Mrs. Seton and her nine companions a lot at Emmitsburg, they founded there (1810) the Academy of St. Joseph. In 1812, the community was established under the rules of the Sisters of Charity and Mrs. Seton was elected mother superior. In 1823, bishop of Baltimore, a religious community of fifty sisters (White, "Life of E. A. Seton", New York, 1863; Seton, "Memoir Letters and Journal of Elizabeth Seton"); New York, 1869; De Barbary, "Elizabeth Seton"), 2 vols., Paris, 1881; Sadlier, New York, s. d.]. The community remained independent until 1850, when the sisters applied themselves with the Sisters of Charity of France, adopting the French costume. Thirty-one sisters in the Diocese of New York preferred to continue under the old rule and organized a separate body. During the Civil War (1862-65), 140 Sisters of Charity gave their services on the field and in the hospitals. The following notable institutions have been founded in the Diocese from the mother house at Emmitsburg: St. Mary’s Orphan Asylum (1817); Mt. Hope Retreat (1819); St. John’s University (1859), St. Joseph’s Hospital (1853); St. Agnes’s Hospital (1863). (c) The Baltimore Cathedral.—The acquisition of Louisiana by the United States increased the labours of Bishop Carroll. In 1805, the Holy See made him Apostolic Delegate at the province of Louisiana. Until this time the bishop had officiated at St. Peter’s Church, built about 1770, at the corner of Northeast and Forrest Streets. The Rev. Bernard Diderick, a Belgian priest, attended the church monthly from 1775-82. The Rev. Charles Sewell of St. Mary’s County was the first resident pastor. Persuaded by Dr. DuBourg, the bishop and trustees decided (1800) to erect the new cathedral on the present site. The corner-stone was laid July 7, 1806, by Bishop Carroll. The work was resumed by the Rev. Francis Beaton. He died (1809) before the church was finished. His successor was the Rev. Enoch Fenwick (d. 1827), to whose untiring zeal was due the completion of the church in 1821. During the building of the church the congregation had grown so large that the Sulpicians opened to the public the chapel of St. Mary’s Seminary, then newly dedicated (1808). For half a century it continued to be the principal church of the cathedral. On May 31, 1821, the cathedral was dedicated by Archbishop Marshch. The bishop marked that although the church was not yet complete, and faithfully watched over the erection of the edifice was Benjamin H. Latrobe, a Protestant gentleman, and a devoted friend of Archbishop Carroll. He was engaged at the same time in building the National Capitol. The high altar of the cathedral was a gift to Archbishop Marshall from his pupils in Marseilles. The imposing portico of the building was added in 1863, under the direction of the architect, Eben Faxon. The cathedral was consecrated 25 May, 1876, by Archbishop Bayley. During Cardinal Gibbons’s administration, a central sanctuary was erected (1879); the sanctuary was extended (1888); two altars, gifts of Mrs. Michael Jenkins and James Sloan, were added, and the altar rail in memory of William Bogge donated (1866). There are few edifices in the United States as rich in historical memories as the Baltimore Cathedral. Within its walls have been held three plenary councils (1852, 1866, 1884), ten provincial councils, and nine diocesan synods; three cardinals have been invested, Gibbons, Hughes, and Gibbons, and Cardinal Gibbons was conferred the pallium. Twenty-five bishops have been consecrated, and 644 priests have been ordained by Cardinal Gibbons alone. The bishops consecrated in the cathedral were: B. J. Fenwick (1825), Dubois (1826), Whitefield (1828), Purcell (1833), Echolston (1834), Chanche (1841), Whelan (1843), Tyler (1844), Elder (1857), Barry (1857), Verot (1858), Becker (1868), Gibbons (1868), Thomas Foley (1870), Hayes (1873), Northing (1882), Glorieux (1885), Curtis (1886), Haid (1888), John Foley (1888), Chapel (1891), Donahue (1894), Allen (1897), Granjon (1900), Conaty (1901). In the chapel built by Cardinal Gibbons under the high altar reposes the ashes of Carroll, Marshch, Whelan, Eccleston, Keene and Spalding. Besides those already mentioned many distinguished clergymen have been associated with the cathedral; Revs. Roger Smith, Charles C. Pice, Charles J. White, first editor of "The Catholic Mirror," John Hickey, S.S.P.H., Presbyter Thomas Beckey, Thomas Foley, Thomas S. Lee, A. A. Curtis, P. J. Donahue, and C. F. Thomas. The cathedral parish has always counted among its members a great number of distinguished persons. Among its pewholders have been Charles Carroll of Carrollton, Chief Justice Taney, David William, Luke Tiernan, Thomas Sim Lee; Thomas C. Jenkins, E. Austin Jenkins, Alfred Jenkins, William George Read, John Hillen, Patrick Bennett, Basil Elder, John Walsh, Solomon Hillen, John and Richard Cameron, Dr. Peter Chatard, Abraham White, Jerome Bonnot, Courne Gurney, Byers, Mark Jenkins, Basil Spalding, Judge Parkin Scott, Philip Laurensen, M. Benzinger, Thomas D. Doherty, Col. John N. Bonaparte, William Kennedy, Robert Barry, Columbus O’Donnell, John Murphy. In recent years the following have found their resting place in the United States, Hon. Charles J. Bonaparte, Michael Jenkins, Joseph Jenkins, Dr. Felix Jenkins, George Jenkins, the Misses Jenkins, Mr. and the Misses Andrews, the Misses Gardiner, William Bogge, Daniel Foley, Mrs. and the Misses Maclachlan, W. R. Cromwell, Mrs. John S. Gittings, Major N. S. Hill, Richard and Allen MacSherry, Charles G. Nicholson, Miss Emily Harper, C. D. Kenny, A. Leo Knott, J. M. Littig, the Drs. Milholland, Robert Rennert, Robert S. Jenkins, Henry Barlow, the Misses Abell, Mrs. Alice Caughey, Messrs. Shriver, Joseph Turner, Mrs. Van Bibber, Owen Daly, Alexander Yearley, Harry Benzinger, James R. Wheeler, Charles Tiernan, Judge Charles Heinliser, Drs. Chatard, Drs. O’Donovan, Dr. Charles Grindall, Messrs. and the Misses Boone, Edgar Gans, Captain Billups, Messrs. Key, F. Dammann, Mrs. J. I. Griffiss, and Victor Baughman. Indeed the roll-call of the cathedral parsonians contains the names of the most distinguished Catholics of their time. It is worthy of note that the trustees’ charter and the building continued at the cathedral for over one hundred years, there has never been any serious disagreement between the clergy and laity. The archiepiscopal residence was built during Dr. Whitfield’s administration, and the two wings were added in 1865 by Bishop William Kennedy. (d) Division of the Diocese.—In compliance with Bishop Carroll’s request for a division of his diocese, Pius VII (8 April, 1808) issued the Bulls creating four new sees, naming the Rev. Richard L. Concannon, a Dominican; the Rev. Philip Egans, a Franciscan for Philadelphia; the Rev. John Cheverus for Boston, and the Rev. Benedict Joseph Flaget, Sulpician, for Bardstown. At the same time Baltimore was made the metropolitan see with Dr. Carroll as the first archbishop. Dr. Concannon, consecrated in Rome (1808), died at Naples (1810) when about to sail. Dr. Egans and Dr. Cheverus were consecrated at Baltimore in the pro-cathedral (1810) and Dr. Flaget at St. Patrick’s the same year. The palace of the Archbishop was in St. Peter’s, Baltimore, 18 August, 1811. At this time there were in the United States about seventy priests and eighty churches. Maryland, Virginia, the District of Columbia, the Carolinas, what is now Alabama, Mississippi, Louisiana, and Florida were still under the jurisdiction of Baltimore, and is 1811 the
Holy See added some of the Danish and Dutch West Indies. At this period occurred the interference of Archbishop Troy and other Irish bishops in American affairs. Archbishop Whiting (of Alt. Carroll, his successor, 664–668). Dr. Carroll's protest at Rome was rendered ineffectual, owing to the representations of the Dominican Fathers Harold, who had hastened the death of Bishop Egan of Philadelphia, and afterward called against the Archbishop the support of the Irish prelates. Worn out with the struggle, he died 3 December, 1815.

III. Successors of Archbishop Carroll. (a) Leonard Neale. — Archbishop Carroll was succeeded by Leonard Neale, a native of Maryland. The Poor Clares (Mother Mary de la Marché and two others) had already opened an academy in 1801 at Georgetown, with Miss Alice Lalor as assistant teacher. These nuns returned to Europe after the death of the abbess; Miss Lalor continued the academy. Archbishop Neale erected the community of teachers into a house of the Order of the Visitation 28 December, 1817. Archbishop Neale died 17 June, at Georgetown, and was buried in the convent chapel.

(b) Ambrose Maréchal. — Archbishop Maréchal was born at Tournai, and joined the Company of St. Sulpice. He had already refused the See of Philadelphia (1818), but finally consented to become Archbishop Neale's coadjutor. He was consecrated at St. Peter's, Baltimore, 14 December, 1817, by Bishop Cheverus. In 1820, in the conjoint petition of the diocese, which comprised Maryland, Virginia, the Carolinas, Georgia, and the territory west of Georgia to the Mississippi, there were then, according to his estimate, 100,000 Catholics. About 10,000 were in Baltimore, having increased to that figure from 500 in 1792. In one year there were 2,000 communications in the seminary chapel alone. There were fifty-two priests, principally French and American born. The Diocese of Baltimore at this time (1819) mourned the loss of Thomas Sim Lee, twice governor, and Maryland's representative in the Convention which ratified the Constitution. In 1820, two schismatic priests, aided by intriguing Irish prelates, succeeded in having Patrick Kelly secretly appointed to the See of Richmond and John England to that of Charleston. Thus, without the archbishop's knowledge or consent, New York, Philadelphia, Richmond, and Charleston were given for bishops utter strangers, bound by oath of allegiance to England, then at variance with the United States. The Diocese of Baltimore was thus divided into three parts, Maryland and the District of Columbia on the Atlantic, and a thousand miles off Alabama and Mississippi, with Richmond and Charleston between. Archbishop Maréchal, while at Rome, (1821) obtained for the provincial bishops the right to recommend candidates for vacant sees. Mississippi was erected into a Vicariate Apostolic with Dr. Dubourg as Vicar Apostolic; Alabama and Florida were attached to the Vicariate Apostolic of Mobile (1825). In 1822, Bishop Kelly returned to Ireland, and Archbishop Maréchal was appointed Administrator of the Diocese of Richmond. The archbishop died 29 January, 1828.

(c) James Whitfield. — He was succeeded by James Whitfield, an Englishman by birth. His consecration by Bishop Flaget took place 25 May, 1825, in the cathedrals of Shes, Life and Times of Abn. Carroll, in the District of Columbia about 7,000 in a population of 33,000. There were fifty-two priests in the diocese. Out of his private fortune, Archbishop Whitfield built St. James's Church, Baltimore (1839). It was first used by English-speaking Catholics, who, finding it too small for their increasing numbers, commenced the erection of St. Vincent's Church (1841). About the same time the German congregation of St. Anthony's (Sagt) built there the first of their order in the United States. Several other churches were established by the Redemptorists. In 1845, they founded St. Michael's, a small church on the corner of Pratt and Regester Streets; the present church on the corner of Lombard and Wolfe Streets was commenced in 1857. Its congregation is now one of the largest in the city. The Redemptorists also founded Holy Cross parish, the corner-stone of the church being laid in 1858. Since 1869, the secular clergy have been in charge. The church was begun (1870) by the Redemptorists; in 1874, they transferred it to the Benedictines. Rev. Meinrad Jeggie, O.S.B., was rector from 1878 to 1896. The new church was commenced in 1902. St. Wenceslaus's, St. Stanislaus's, and the other churches of the congregations in Baltimore. The Redemptorists took charge of it in 1882. A new church and school were commenced in 1903. In 1873 they began the Sacred Heart Church (Canton).

The Maryland Province of the Society of Jesus was formally established in 1833, with Father William McSherry, a Virginian, as first provincial. The Second Provincial Council met at the cathedral, Baltimore, 20 October, 1833. Besides Archbishop Whitfield, there were present Bishops David, England, Rosati, Fenwick (Boston), Dubois, Portier, F. F. Kenrick, Reese, Purcell. Bishop Flaget was absent; the Jesuits, Sulpicians, and Dominicans were represented. A Roman Ritual adapted to the wants of this country was ordered to be prepared. Rev. Samuel Eccleston elected coadjutor, was consecrated in the cathedral 14 September, 1834, by Archbishop Whitfield, who died the following October.

(d) Samuel Eccleston. — Archbishop Eccleston, a native of Maryland, a convert and a Sulpician, was consecrated coadjutor and the Diocesan of Baltimore. During his administration the anti-Catholic sentiment began to lose its violence and the tide of conversions set in. In 1834 there were within the jurisdiction of Baltimore (Maryland, Virginia, and District of Columbia) 70 churches and 69 priests. There were only 327 priests in the whole United States. The Visitation Nuns from Georgetown established a house in Baltimore (1837) with Mother Juliana Matthews as superior. Mother Annastasia Coombes established another Visitation monastery at Frederick in 1846. The Diocesan was established (Mt. de Sales) at Catonsville, under Mother Cecilia Brooks.

The Third Provincial Council was held in the cathedral, 1837. It was attended by the archbishop, and thirty-three priests convened, including Bishop Flaget, the two Fenwicks (Boston and Cincinnati), English, Cheverus, and Rev. Adelbert Matthew, representing Philadelphia. (See Baltimore, The Provincial Council of). To carry out the council's decrees, a synod, attended by thirty-five priests, was held 31 October, 1831. There were at this time in Maryland about 80,000 Catholics in a population of 407,000;
Dioceses of Richmond and Natches, thus freeing the archbishop from the administration of Richmond. The St. Vincent de Paul Society was established in the diocese (1840) and the Young Catholic Friends' Society in 1848. In 1842, the corner-stone of Calvert Hall was laid on the site of the pro-cathedral (Saratoga Street). The present imposing building was opened 1857. Calvert Hall Academy was purchased by the Christian Brothers (1857) and Rock Hill College incorporated 1865.

The Fifth Provincial Council was held in the cathedral, May, 1843. It was attended by seventeen bishops. At this time there were 90,000 Catholics, 38 churches, 70 parochial schools, three colleges, two academies for boys, six for girls, five orphan asylums, and ten free schools. The total population of Maryland in 1840 was 466,292. The Sixth Provincial Council met at the cathedral, 10 May, 1846. Twenty-three bishops were present and four religious orders were represented. "The Blessed Virgin Mary Conceived Without Sin" was chosen as patroness of the Province. Sisters of Notre Dame (mother-house of Eastern Province on Alasquith Street) came to Baltimore in 1847. The "Provincial House of Canons Regular of St. Mary" was established 22 September, 1873. The Seventh Provincial Council met at the cathedral, May, 1849. Archbishop Eccleston, in pursuance of the council's decision, issued a pastoral letter reviving the Pastoral Care of the Provinces of Maryland and Pennsylvania. Pius IX was then in exile at Gaeta, to attend. The Archbishops of Baltimore and St. Louis and twenty-three bishops were present; seven religious orders were represented. The council recommended New Orleans, Cincinnati, and New York as metropolitan sees, also the creation of the Sees of Savannah, Wheeling, and St. Paul. The fathers petitioned for the definition of the Immaculate Conception. One of their decrees forbade priests officiating at marriages where a minister had officiated or intended to do so. The Province of Baltimore now comprised the Dioceses of Philadelphia, Pittsburgh, Richmond, Wheeling, Charleston, and Savannah.

About this time Rev. John Hickey established a precedent by refusing to testify in court concerning stolen property restored through a penitent. The court sustained him. During Archbishop Eccleston's time, besides those mentioned above, several other churches were erected. The corner-stone of St. Joseph's was laid in 1839. In 1849, it was given to the seminary but returned to the diocesan clergy in 1860. The new church was begun 1899. It was dedicated 1863, consecrated 1879. The diocese of St. Joseph, which began in 1843, was consecrated in 1879 under Rev. Edward McColgan, V.G., its first pastor. The Sisters of Mercy came to St. Peter's from Pittsburg in 1855; Mother Catherine Wyame was firstsuperiress. They afterwards opened Mt. St. Agnes (1867) of which Mother de Chantal Diggles was firstsuperiress; they also have charge of the City Hospital. St. Augustine's (Elkridge) was founded 1845. Its first pastor was Rev. B. Pio; the present beautiful church is the gift of Mr. C. D. Kenny (1902). St. Charles Borromeo (Pikesville) was commenced 16 July, 1848, by Father White. The present imposing Romanesque edifice was dedicated 12 March, 1890. The Immaculate Conception parish was organized in 1850 with Rev. Mark Anthony, O.F.M., as its first pastor. The church was dedicated in 1858, during the pastorate of Rev. Joseph Guisminiani, C.M. Archbishop Eccleston died at Georgetown, 22 April, 1851, and was buried in Baltimore. At this time there were in the diocese (Maryland and District of Columbia) 83 churches and chapels, 197 parishes, 238 school houses, 42 free schools, and 23 charitable institutions; Catholic population 100,000. Rev. H. B. Coskery was administrator until the following August, when Dr. Francis P. Kenrick, Coadjutor-Bishop of Philadelphia, was elevated to the See of Baltimore.

(e) Francis Patrick Kenrick.—Archbishop Kenrick convoked the First Plenary Council of Baltimore, 2 May, 1852. (See 1st Plenary Council of.) To carry out the council's decrees a synod was called (June, 1853), attended by 35 diocesan and 17 regular priests. At this synod parochial rights and limits were defined. The Eighth Provincial Council met in the Baltimore Cathedral, 5 May, 1855. Eight bishops were represented. It revised ecclesiastical collections, and established a rule for the cathedralmen. Col. B. U. Campbell, a Maryland Catholic, who by his contributions laid the foundation for the history of the Church in the United States, died about this time. The number of Catholics in Baltimore numbered 81,000, and had 13 churches, while in the entire diocese (Maryland and the District of Columbia) there were 99 churches and 160 chapels, 130 priests, and a population of 120,000. The Forty Hours' Devotion was established in the diocese (1858). In 1858 the Ninth Provincial Council was held in the cathedral; 8 bishops were present and 6 religious orders were represented. At the Council's request the Holy See granted to Archbishop of Baltimore the right of appointing, by the prelates of the United States, even though he be the senior archbishop. The petition of the Fathers of this Council for a perpetual dispensation from the Saturday abstinence was granted. In 1862, the Baltimore Association of Catholic Women, Philadelphia, Pittsburgh, Charleston, Savannah, Richmond, Wheeling, Charleston, and the Vicariate Apostolic of Florida. In the Diocese of Baltimore there were 124 churches and chapels; 170 priests, 36 free schools, 35 charitable institutions; Catholic population 150,000.

A synod was convened (1863) at which the version of the Bible revised by the archbishop was adopted as the one to be used in the diocese. Under Archbishop Kenrick, the following churches were built in Baltimore: St. John's in 1853, with Rev. J. B. McManus as first pastor. The present church was opened in 1856. The church of St. Ignatius Loyola was consecrated 15 August, 1856. Rev. John Early, S.J., was its first pastor and founder of Loyola College on Holladay Street (1832); in 1855 the present college was opened on Calvert Street (Hist. Sketch of Loyola College, Baltimore, 1902). Many distinguished citizens claim it as their Alma Mater. St. Bridget's Church (Canton) was dedicated 1854 and was built by Rev. James Dolan out of his private means, as were also St. Mary's, Govanstown, and the Dolan Orphans' Home. Rev. John Constance was first pastor of St. Bridget's. New churches were begun in Kent County, Long Green, and Clarksville during 1855. Archbishop Kenrick died 6 July, 1863, and Very Rev. H. B. Coskery, a native of Maryland, again became administrator. He had been appointed Bishop of Portland in 1854, but had returned the Bulls.

Coloured Catholics.—During his administration St. Francis Xavier's Church for negroes was dedicated (1864). Its first pastor was Father Michael O'Connor. It was put in charge of the Josephites (1871) from Mill Hill College, England, brought to Baltimore by Rev. Herbert Vaughan. These missionaries came to minister to the Catholic negroes of the South and to train their Catholic masters—16,000 of them in the State at the time of the emancipation. From St. Francis sprung St. Monica's, St. Peter Claver's (1889), and St. Barnabas's (1907), all churches for coloured people. As early as 1828 the Sepulchrian Father Jacques Joubert founded at New Orleans St. Peter Claver's, the Orleans Orphanage. They conduct at present St. Francis's Academy and Orphanage, and in Washington St. Cyprian's Parochial School and Academy. St. Joseph's Seminary was opened in Baltimore by the Josephites (1888) with three white and one coloured student.
Epiphany Apostolic College, its preparatory seminary, was opened in 1889 by Rev. Dominic Manley. In 1881 St. Elizabeth’s Home for coloured children was established in Baltimore by Mother Winifred and three English Sisters of St. Francis. Their convent on Maryland Avenue was bought for $500, being a gift to the order from Mrs. E. Austin Jenkins. (f) Martin John Spalding.—At Archbishop Kenrick’s death the United States Government attempted to interfere in the selection of an archbishop, but failed. The National Records, Baltimore, 1906, p. 46; Shaver, Hist. of Cath. Ch. in U. S., 1844-66, New York, 1889-92, p. 393; and the Rev. Martin John Spalding, Bishop of Louisville, was elected 23 May, 1864. Archbishop Spalding invited the Sisters of the Good Shepherd from Louisville (1864) to come to Baltimore, and established them in a house given by Mrs. Emily Macavail. Their work is the reformation of fallen women and the preservation of young girls. At this time (1864) the Church lost one of its foremost members, Roger B. Taney, Chief Justice of the United States. The Tenth Provincial Council was opened in the cathedral, 25 April, 1869; 14 prelates were present. The Second Plenary Council of Baltimore met 7 October, 1866, in the cathedral. It recommended the establishment of the Apostolic Vicariate of Florida. St. Mary’s College for Boys, erected on land donated by Mrs. Emily Macavail, was opened in 1866, and placed in charge of the Xaverian Brothers from Belgium. Mt. St. Joseph’s College, begun (1876) as an aid to the Xaverian Novitate, has now 40 novices and 150 students. St. James’s Home (Baltimore) further the work of the Industrial School by securing positions for, and boarding, older boys. It has about 70 boarders. A somewhat unusual event took place 16 August, 1868, when Revs. James Gibbons and Thomas Becker were consecrated together in the cathedral by Archbishop Spalding. Woodstock College, the seminary of the Jesuit Fathers, was opened in 1869; Father Angelo Baraczi was its first rector. Since then many standard treatises on theology, philosophy, and science have been published by its professors, the best known being the works of Mazzella, De Augustinis, Sabetti, Mass, Piccirelli, and Settini. In 1868 John T. Stephanini and Charles Long, Passionist Fathers, were appointed to St. Agnes’s Church, Catonsville. The Passionist novitate, Joseph was consecrated. Joseph was consecrated as its first rector. It was destroyed by fire in 1883 and a new monastery was built in 1886. The Little Sisters of the Poor were established in Baltimore, 6 April, 1869. Since then 5,082 old people and 8,803 orphans have been given care by St. Mary’s. Foley, who had been at the cathedral for twenty-two years, was consecrated Administrator of Chicago in 1870. Archbishop Spalding died 7 February, 1872. During his administration the churches built in Baltimore were: St. Martin’s (Fulton Avenue) cornerstone-laid in 1865, Rev. John Foley, first pastor; St. Mary’s, Star of the Sea founded in 1869, by Rev. Peter McCoy, The Sisters of St. Joseph came to this parish in 1875. After Archbishop Spalding’s death, very Rev. John Dougherty administered the diocese until the installation of Bishop Bayley. (g) James Roosevelt Bayley.—Archbishop Bayley had been an Episcopalian minister in New York, became a Catholic, a priest, and at the time of his elevation to Baltimore, was Bishop of Newark. Philadelphia, 1868, to 1876. The jurisdiction of Baltimore was thus limited to the Sees of Baltimore, Charleston, Richmond, Wheeling, Savannah, Wilmington, St. Augustine (created 1870), and the Vicariate of North Carolina. There were in the diocese in 1870, 160 churches and chapels; 230 priests; 903 religious; and 37,000 communicants. In one year the archbishop confirmed two hundred times. Of the 6,405 persons confirmed, 847 were converted. The Eighth Provincial Synod opened in Baltimore, 27 August, 1875; 93 priests and representatives of 8 religious communities were present. St. Ann’s (York Road) built by Capt. William Kenney and his wife, was dedicated in 1874, Rev. William A. Bannin, third Bishop of Baltimore and Father Neumann established themselves in the diocese (1875) in the Monastery of St. Peter and Paul, Cumberland. In 1882, it was made the seminary of the order; 59 priests have been ordained there. Previous to this, the Redemptorists, Rev. John N. Neumann, had built the church of St. Peter and Paul on the site of Fort Cumberland (1848). In 1886, the Carmelites succeeded the Redemptorists and remained until 1875, when the Capuchin Fathers took charge. When the Redemptorists left Cumberland, they established (1867) their house of studies at Ilchester (Hist. of the Redemptorists at Annapolis, Ilchester, 1904). St. Catherine’s Normal Institute for training Catholic teachers was established in Baltimore (1875) by Sisters of the Holy Cross. They have schools also attached to the churches of St. Patrick and St. Pius. The latter church was begun by Archbishop Bayley, its erection being made possible by a generous donation of Mr. Columbus O’Donnell. It was dedicated in 1879, with Rev. L. S. Malloy first pastor. The right Rev. Joseph Schloyer, Bishop of Richmond, was made coadjutor with right of succession 20 May, 1877. Archbishop Bayley died the following October. (h) James Gibbons.—Archbishop Gibbons is the only Archbishop of Baltimore born in that city. The Third Plenary Council met in the cathedral 1 November, 1884—being the largest council held outside of Rome since the Council of Trent. The eucheta was conferred upon Cardinal Gibbons 7 June, 1886, and the following March he was invested in Rome and took possession of his titular church, Santa Maria in Trastevere. He was confirmed by Archbishop Hawes, consecrated in Baltimore September, 1886, 115 priests attending; 8 religious orders were represented. The Catholic University of America was instituted in 1887, and the Archbishop of Baltimore was named, ex officio, the Chancellor. (See CATHOLIC UNIVERSITY OF AMERICA.) The centenary of the diocese was celebrated November, 1889. There were present Cardinals Gibbons and Tuscherer; Mgr. Batolli, representative of the pope, 8 archbishops, 75 bishops, 18 monsignors; and about 10,000 priests, from all over the United States, Ireland, and Ireland were represented. On that occasion leading Catholic laymen took part in a Catholic Congress (Hughes, Proceedings of Catholic Congress, Detroit, 1880) and there was a procession of 30,000 marchers with Mgr. J. A. MattANGER in the cardinal’s Silver Jubilee was celebrated. Nearly every see in the United States was represented; there were also present representatives of the Holy Father, and of the episcopate of England, Ireland, Canada, and Oceania. Bishop A. A. Curtis was consecrated in the cathedral November, 1896, and Bishop P. J. Donahue in 1894. 29 April, 1906, the centenary of the laying of the corner-stone of the cathedral was celebrated. There were present the cardinal, the apostolic delegate, Most Rev. Diomede Falconio, 9 archbishops, 50 bishops, and about 800 priests. Among the late additions to the diocese are the Mission Helpers and the Sisters of Divine Providence. The Mission Helpers opened a house in Baltimore in 1890; it was canonically organized, 5 November, 1892, the same day they were observed in Kentucky (Atlas) were established in the diocese in 1892, having charge of the household interests of the Catholic University, St. Mary’s Seminary, and the cardinal’s residence. The churches built during Cardinal Gibbons’s administration, in addition to those mentioned in the text, are: Holy Rosary, dedicated 6 October, 1878; St. Paul’s founded in 1899 (the present imposing church was erected in 1903); St. Gregory’s by
sence of a donation of Mr. Patrick McKenna (1894); St. Stanislaus's (Polish), founded in 1880 and taken over in 1906 by the Franciscans; Corpus Christi; built through the munificence of the sons and daughters of Mr. Thomas C. Jenkins, in memory of their parents, and dedicated 1 January, 1891; St. Leo's (Italian), begun in 1890, by Rev. J. L. Andreas. During the administration of Cardinal Gibbons 35 new churches have been erected in the diocese. At present there are 211 priests of the diocese and 273 of religious orders. There are 128 churches with resident pastors and 126 chapels. In Baltimore there are 44 (24 built during the administration of Cardinal Gibbons). Church of the Gesu in Washington (10 built in the same period). There are three universities, 11 seminaries, 13 colleges and academies, 95 parochial schools with 21,711 pupils, and 7 industrial schools. The Catholic population is at present about 255,000. The increase (1906) was 10,611, of whom 800 were converts.

Owing to the disinterested spirit of its archbishops, the Archdiocese of Baltimore, the Mother Church of the United States, has been subdivided until, in extent of territory, it is one of the smallest. Yet it yields to none in numbers concerning any part of the people. Whenever called upon by the voice of religion its children have responded in a manner beyond their proportionate share. In support of the Catholic University, it is surpassed by none in proportion to its population. (No. vii) In the diocese of the United States the Catholic homes of Baltimore have welcomed the visitors to their hospitality. Probably no diocese has been so enriched by private donations for churches and institutions. The growth of the Catholic population is due not to natural increase, secondly to immigration, and thirdly to conversion. The large proportion of conversions must be attributed in a great measure to the personal popularity of its present archbishop, Cardinal Gibbons, and the influence of his convert-making book, "The Faith of Our Fathers".

Baltimore, LORDS. See CALVERT.

Baltimore, PLenary COUNCIL OF. — While the ecclesiastical province of Baltimore comprised the whole territory of the American Republic, the provincial council held in that city sufficed for the church government of the country. When, however, several ecclesiastical provinces had been formed, plenary councils became necessary for the fostering of common discipline. As a consequence, the Fathers of the Seventh Provincial Council of Baltimore requested the Holy See to sanction the holding of a plenary synod. The petition was granted and the provincial council took place in 1870 as Apostolic Delegate to convene and preside over the council.

I. THE FIRST PLenary COUNCIL OF BALTIMORE was solemnly opened on 9 May, 1852. Its sessions were attended by sixty-one bishops from thirty-five suffragan dioceses. The Bishop of Monterey, California, was also present, although his diocese, lately separated from Mexico, had not yet been incorporated with any American province. Another prelate in attendance was the Bishop of Toronto, Canada. The religious orders and congregations were represented by the mitred Abbot of St. Mary of La Trappe and by the superiors of the Augustinians, Dominicans, Benedictines, Franciscans, Vincentians, and Sulpicians. The last solemn session was held on the 20th of May. The decrees were as follows: (No. i) The Fathers profess their allegiance to the pope as the divinely constituted head of the Church, whose office it is to confide the Holy Scriptures in the Faith. They also declare their belief in the entire Catholic Faith as explained by the ecumenical councils and the constitutions of the Roman pontiffs. (No. ii) The enactments of the seven provincial councils of the United States are obligatory for all the dioceses of the United States. (No. iii) The Roman Ritual, adopted by the First Council of Baltimore, is to be observed in all dioceses, and all are forbidden to introduce customs or rites foreign to the Roman usage. Sacred ceremonies are not to be employed in the burial of Catholics whose bodies are deposited in sectarian cemeteries; or even in public cemeteries, if there be Catholic cemeteries at hand. (No. iv) The Baltimore "Ceremonial" is to be used all through the country. (No. v) Bishops are to observe the regulations concerning ecclesiastical residence. Bishops are exhorted to choose confessors from among their clergy and to ask their advice in the government of the diocese. A monthly meeting of these consultors to discuss diocesan affairs is praiseworthy. (No. vi) Bishops are to confer with the congregations of their diocese at least once a year. (No. vii) The clergy are excommunicated for participating in any diocesan ceremony which is not approved by the Holy See. (No. viii) Bishops should appoint confessor for books relating to religion. (No. ix) European priests desiring to be received into an American diocese must have been tonsured from their former bishops and the consent of the ordinary here. (No. x) Our quasi-parishes should have well-defined limits, and the jurisdiction and privileges of pastors should be indicated by the bishops. The ordinary can change these limits and it is his right to appoint the incumbents. (No. xi) After the next Easter, matrimonial banns must be published, and bishops should dispense with this only for grave reasons. (No. xii) Pastors themselves should teach Christian doctrine to the young and ignorant. (No. xiii) Bishops are exhorted to have a Catholic school in every parish and the teachers should be paid from the parochial funds. (No. xiv) An ecclesiastical seminary should be erected in each province. (No. xv) The bishops or their delegates should demand every account rendered to the diocesan archives of Mary. (No. xvi) The administration of church funds from those who administer them, whether laymen or clerics. (No. xvi) Laymen are not to take any part in the administration of church affairs without the free consent of the bishop.

If they usurp any such authority and divert church goods to their own use or in any way frustrate the will of the donors; or if they, even under cover of the civil law, endeavour to wrest from the bishop's hands what has been confided to his care, then such laymen by that very fact fall under the censures constituted by the Council of Trent against usurpers of ecclesiastical goods. (No. xviii) When the title to a church is in the bishop's name, pastors are warned not to appoint trustees or permit them to be elected without the bishop's authority. (No. xvii) Benediction of the Blessed Sacrament is not to be permitted in the dioceses in the manner prescribed by the Baltimore "Ceremonial". (No. xix) Bishops should use their influence with the civil authorities to prevent anyone in the army or navy from being obliged to attend a religious service repugnant to the constitution of their country. (No. xx) A Society for the Propagation of the Faith, similar to that in France, should be fostered and extended. (No. xxi) The faithful are exhorted to enter into a society of prayer for the conversion of non-Catholics. (No. xxii) A petition should be addressed to the Holy See asking for extraordinary faculties concerning...
matrimonial cases and the power, also, of delegating such faculties. (No. xxiii) Permission to use the short formula in the baptism of adults is to be requested of the Holy See, either for perpetuity or for twenty years. (No. xxiv) The sixth decree of the Seventh Provincial Council of Baltimore is to be observed, and the seventh (temere) marry before a Protestant minister. Priests should give no benediction to those whom they know to intend to remarry before a preacher, or who, having done so, show no signs of penitence. (No. xxv) The decrees are binding as soon as they are published by the Archbishop of Baltimore after their revision and approval by the Holy See.

In sending the pope's approval of these decrees, the prefect of the Propaganda exhorted the bishops to add the feasts of the Circumcision of Our Lord and the Immaculate Conception B. V. M. to the festivals already observed. He added that although some diversity as to fasts and feasts is found in the American dioceses, still it is not desirable to lessen the number in those places where they are in accord with the discipline of the universal Church, because fewer feasts are observed in other American dioceses. The bishops are not to labour for conformity among the dioceses in customs that are foreign to the discipline of the Church, for it is more important that the national Church be introduced. The cardinal prefaced added that the Holy See tolerated relaxations of the common law of the Church for grave reasons, but such derogations were not to be confirmed and extended, but rather every effort was to be made to bring about the observance of the universal discipline. As to the method of adult baptism, the Holy See extended the dispensations to use the short formula for another five years. A letter from Cardinal-Prefect Franzoni, added to the acts of the council, tends to demand this money from the Mexican Government, and under the sanction of Spanish law for the support of the Californian missionaries. For years they had received none of this money and the late revolutions made any hope of reparation unlikely. However, as it is reported that the civil power in California intends to demand this money from the Mexican treasury for public purposes, he desired to know what effort the American bishops thought it desirable to make in the premises. The outcome of the whole discussion was the sending of a letter on the subject to the Archbishop of Mexico. We may add here that this money was later recovered and employed for the Church in California. (See California, sub-title History.)

II. The Second Plenary Council was presided over by the Bishop of Baltimore as Delegate Apostolic. It was opened on the 7th of October and closed on 21 October, 1886. The acts note that, at the last solemn session, Andrew Johnson, President of the United States, was among the auditors. The decrees of this council were signed by seven archbishops, bishop of the bishoprics in question, and two abbots. The decrees are divided into fourteen titles and subdivided into chapters.

Title I. Concerning the Orthodox Faith and Present Errors, declares the Catholic doctrine (cap. i) on Divine revelation and the one Church of Christ; (ii) the nature and necessity of faith; (iii) the Holy Scripture; (iv) the Holy Trinity; (v) the future life; (vi) the pious invocation and veneration of the B. V. Mary and the saints. (vii) The seventh chapter in which the present errors are discussed treats of (a) the dimensions among the Protestant sects and of zeal for their conversion. (b) Indifference. The Fathers of the Church deplore the indifferent spirit as much as other offenses. (c) The spirit of modernism is as good as another provided one be honest and just to his neighbour. They call this a plague, spreading under the guise of charity and benevolence. (c) Unitarianism and Universalism. These theories, the first denying the divinity of Christ and the other denying eternal punishment, are rejected as a denial of the supernatural in religion. (d) Transcendentalism and Pantheism. These are the systems of men, who having dethroned God, make a deity of man. (e) Abuse of magnetism. The faithful are warned that magnetism is often employed for superstitious and illicit purposes, namely, to forecast the future by means of female "mediums". (f) The hallucinations and dangers of spiritism. There is little reason to doubt that some of the phenomena of spiritism are the work of Satan. It is noteworthy that the leaders of this system deny either implicitly or explicitly the divinity of Christ and the supernatural in religion.

Title II. Concerning the Hierarchy and the Government of the Church. This chapter (cap. i) is divided into four parts: (i) of the Roman Pontiff; (ii) of the hierarchy teaching and ruling; (iii) of provincial councils, which ought to be held every three years; (iv) of diocesan synods, in which the bishop alone is legislator and judge. This chapter also treats of quarterly conferences for the discussion of theological questions by the clergy. (v) The officials of the bishop are considered in this chapter. Besides the diocesan consultors and the vicar-general, the bishop should appoint vicars forane or rural deans who are to preside at clerical conferences, to watch the discipline of ecclesiastics, and to report annually to the bishop on the state of their districts. Other officials mentioned are the secretary, chancellor, notary, and procurator for temporal affairs. Synodal examiners and judges for the criminal cases of clerics are also to be constituted. The latter, by delegation of the bishops, hold courts of the first instance and they should follow a judicial method closely approximating that prescribed by the Council of Trent.

Title III. Concerning Ecclesiastical Persons, is divided into seven chapters. (cap. i) Of metropolitan. (ii) Of bishops; they are to make a visitation of their dioceses frequently; they should provide support for aged and infirm priests; before death they should appoint an administrator who should secure for their dioceses. If this has not been done, the metropolitan is to make the appointment, or if it be a question of the metropolitan church itself, then the senior suffragan bishop constitutes an administrator until the Holy See can provide. The administrator cannot make innovations in the administration of the diocese. (iii) Of the election of bishops. A method for episcopal nominations to American sees is given, as also the requisite qualifications for candidates. (iv) Of priests exercising the sacred ministry. When several priests of one church, one only may be a pastor. Priests should often preach to their people; they must not marry or baptize the faithful of other dioceses. Although our missions are not canonical parishes, yet it is the desire of the bishops to conform them as much as possible to the discipline of the universal Church in this matter. It is desired that a pastor should have less than one church, accurate limits for their districts should be assigned. When in these decrees the terms "parish" or "parochial rights" are used, the bishops have no intention of thereby indicating that the pastoral administration of the people should always be appointed to a parish unless he has made an examination before the bishop and two priests, and has
Baltimore.  This does not apply between ten and fourteen years of age.

(7) Of the Schedules of Lay Property and of the Best Method of Securing Church Property and of Civil Sanctions. - The last-mentioned bill should be referred to the Finance Committee of the House. Whether for the sake of expediency or for the sake of expediency, it is recommended that the bill beawaived.

(8) Of the Consideration of the Act. - The considerations are to be followed.

(9) Of the Consideration of the Act to the Bishop. - The consideration of the Act already referred to the Bishop should be referred to the Committee on the Bishop. No minutes of the Bishop's action are to be taken.

(10) Of the Consideration of the Act to the Archbishop. - The consideration of the Act already referred to the Archbishop should be referred to the Committee on the Archbishop. No minutes of the Archbishop's action are to be taken.

(11) Of the Consideration of the Act to the Pope. - The consideration of the Act already referred to the Pope should be referred to the Committee on the Pope. No minutes of the Pope's action are to be taken.

(12) Of the Consideration of the Act to the King. - The consideration of the Act already referred to the King should be referred to the Committee on the King. No minutes of the King's action are to be taken.

(13) Of the Consideration of the Act to the Senate of the Kingdom. - The consideration of the Act already referred to the Senate of the Kingdom should be referred to the Committee on the Senate of the Kingdom. No minutes of the Senate of the Kingdom's action are to be taken.

(14) Of the Consideration of the Act to the House of Commons. - The consideration of the Act already referred to the House of Commons should be referred to the Committee on the House of Commons. No minutes of the House of Commons' action are to be taken.

(15) Of the Consideration of the Act to the Bishop of the Diocese. - The consideration of the Act already referred to the Bishop of the Diocese should be referred to the Committee on the Bishop of the Diocese. No minutes of the Bishop of the Diocese's action are to be taken.

(16) Of the Consideration of the Act to the Archbishop of the Province. - The consideration of the Act already referred to the Archbishop of the Province should be referred to the Committee on the Archbishop of the Province. No minutes of the Archbishop of the Province's action are to be taken.

(17) Of the Consideration of the Act to the Pope of the Church. - The consideration of the Act already referred to the Pope of the Church should be referred to the Committee on the Pope of the Church. No minutes of the Pope of the Church's action are to be taken.

(18) Of the Consideration of the Act to the King of the World. - The consideration of the Act already referred to the King of the World should be referred to the Committee on the King of the World. No minutes of the King of the World's action are to be taken.

(19) Of the Consideration of the Act to the Senate of the World. - The consideration of the Act already referred to the Senate of the World should be referred to the Committee on the Senate of the World. No minutes of the Senate of the World's action are to be taken.

(20) Of the Consideration of the Act to the House of Commons of the World. - The consideration of the Act already referred to the House of Commons of the World should be referred to the Committee on the House of Commons of the World. No minutes of the House of Commons of the World's action are to be taken.

(21) Of the Consideration of the Act to the Bishop of the Kingdom. - The consideration of the Act already referred to the Bishop of the Kingdom should be referred to the Committee on the Bishop of the Kingdom. No minutes of the Bishop of the Kingdom's action are to be taken.

(22) Of the Consideration of the Act to the Archbishop of the Province of the Kingdom. - The consideration of the Act already referred to the Archbishop of the Province of the Kingdom should be referred to the Committee on the Archbishop of the Province of the Kingdom. No minutes of the Archbishop of the Province of the Kingdom's action are to be taken.

(23) Of the Consideration of the Act to the Pope of the Church of the Kingdom. - The consideration of the Act already referred to the Pope of the Church of the Kingdom should be referred to the Committee on the Pope of the Church of the Kingdom. No minutes of the Pope of the Church of the Kingdom's action are to be taken.

(24) Of the Consideration of the Act to the King of the World of the Kingdom. - The consideration of the Act already referred to the King of the World of the Kingdom should be referred to the Committee on the King of the World of the Kingdom. No minutes of the King of the World of the Kingdom's action are to be taken.

(25) Of the Consideration of the Act to the Senate of the World of the Kingdom. - The consideration of the Act already referred to the Senate of the World of the Kingdom should be referred to the Committee on the Senate of the World of the Kingdom. No minutes of the Senate of the World of the Kingdom's action are to be taken.

(26) Of the Consideration of the Act to the House of Commons of the World of the Kingdom. - The consideration of the Act already referred to the House of Commons of the World of the Kingdom should be referred to the Committee on the House of Commons of the World of the Kingdom. No minutes of the House of Commons of the World of the Kingdom's action are to be taken.

(27) Of the Consideration of the Act to the Bishop of the Province of the Kingdom of the World. - The consideration of the Act already referred to the Bishop of the Province of the Kingdom of the World should be referred to the Committee on the Bishop of the Province of the Kingdom of the World. No minutes of the Bishop of the Province of the Kingdom of the World's action are to be taken.

(28) Of the Consideration of the Act to the Archbishop of the Province of the Kingdom of the World of the Kingdom. - The consideration of the Act already referred to the Archbishop of the Province of the Kingdom of the World of the Kingdom should be referred to the Committee on the Archbishop of the Province of the Kingdom of the World of the Kingdom. No minutes of the Archbishop of the Province of the Kingdom of the World of the Kingdom's action are to be taken.

(29) Of the Consideration of the Act to the Pope of the Church of the Kingdom of the World of the Kingdom. - The consideration of the Act already referred to the Pope of the Church of the Kingdom of the World of the Kingdom should be referred to the Committee on the Pope of the Church of the Kingdom of the World of the Kingdom. No minutes of the Pope of the Church of the Kingdom of the World of the Kingdom's action are to be taken.

(30) Of the Consideration of the Act to the King of the World of the Kingdom of the World. - The consideration of the Act already referred to the King of the World of the Kingdom of the World should be referred to the Committee on the King of the World of the Kingdom of the World. No minutes of the King of the World of the Kingdom of the World's action are to be taken.

(31) Of the Consideration of the Act to the Senate of the World of the Kingdom of the World. - The consideration of the Act already referred to the Senate of the World of the Kingdom of the World should be referred to the Committee on the Senate of the World of the Kingdom of the World. No minutes of the Senate of the World of the Kingdom of the World's action are to be taken.

(32) Of the Consideration of the Act to the House of Commons of the World of the Kingdom of the World. - The consideration of the Act already referred to the House of Commons of the World of the Kingdom of the World should be referred to the Committee on the House of Commons of the World of the Kingdom of the World. No minutes of the House of Commons of the World of the Kingdom of the World's action are to be taken.

(33) Of the Consideration of the Act to the Bishop of the Province of the Kingdom of the World of the World. - The consideration of the Act already referred to the Bishop of the Province of the Kingdom of the World of the World should be referred to the Committee on the Bishop of the Province of the Kingdom of the World of the World. No minutes of the Bishop of the Province of the Kingdom of the World of the World's action are to be taken.

(34) Of the Consideration of the Act to the Archbishop of the Province of the Kingdom of the World of the World of the Kingdom. - The consideration of the Act already referred to the Archbishop of the Province of the Kingdom of the World of the World of the Kingdom should be referred to the Committee on the Archbishop of the Province of the Kingdom of the World of the World of the Kingdom. No minutes of the Archbishop of the Province of the Kingdom of the World of the World of the Kingdom's action are to be taken.

(35) Of the Consideration of the Act to the Pope of the Church of the Kingdom of the World of the World of the Kingdom. - The consideration of the Act already referred to the Pope of the Church of the Kingdom of the World of the World of the Kingdom should be referred to the Committee on the Pope of the Church of the Kingdom of the World of the World of the Kingdom. No minutes of the Pope of the Church of the Kingdom of the World of the World of the Kingdom's action are to be taken.

(36) Of the Consideration of the Act to the King of the World of the Kingdom of the World of the World. - The consideration of the Act already referred to the King of the World of the Kingdom of the World of the World should be referred to the Committee on the King of the World of the Kingdom of the World of the World. No minutes of the King of the World of the Kingdom of the World of the World's action are to be taken.

(37) Of the Consideration of the Act to the Senate of the World of the World of the Kingdom of the World. - The consideration of the Act already referred to the Senate of the World of the World of the Kingdom of the World should be referred to the Committee on the Senate of the World of the World of the Kingdom of the World. No minutes of the Senate of the World of the World of the Kingdom of the World's action are to be taken.

(38) Of the Consideration of the Act to the House of Commons of the World of the World of the Kingdom of the World. - The consideration of the Act already referred to the House of Commons of the World of the World of the Kingdom of the World should be referred to the Committee on the House of Commons of the World of the World of the Kingdom of the World. No minutes of the House of Commons of the World of the World of the Kingdom of the World's action are to be taken.

(39) Of the Consideration of the Act to the Bishop of the Province of the World of the World of the Kingdom of the World. - The consideration of the Act already referred to the Bishop of the Province of the World of the World of the Kingdom of the World should be referred to the Committee on the Bishop of the Province of the World of the World of the Kingdom of the World. No minutes of the Bishop of the Province of the World of the World of the Kingdom of the World's action are to be taken.

(40) Of the Consideration of the Act to the Archbishop of the Province of the World of the World of the Kingdom of the World of the Kingdom. - The consideration of the Act already referred to the Archbishop of the Province of the World of the World of the Kingdom of the World of the Kingdom should be referred to the Committee on the Archbishop of the Province of the World of the World of the Kingdom of the World of the Kingdom. No minutes of the Archbishop of the Province of the World of the World of the Kingdom of the World of the Kingdom's action are to be taken.

(41) Of the Consideration of the Act to the Pope of the Church of the World of the World of the Kingdom of the World of the World. - The consideration of the Act already referred to the Pope of the Church of the World of the World of the Kingdom of the World of the World should be referred to the Committee on the Pope of the Church of the World of the World of the Kingdom of the World of the World. No minutes of the Pope of the Church of the World of the World of the Kingdom of the World of the World's action are to be taken.
to faith. (ii) Of the dissemination of good books. (iii) Prayer books should not be published until officially approved. (iv) Newcomers are frequenters. (v) Of the inquisitors. The examination for irremovable rectorships must take place before the bishop or vicar-general and three examiners. Candidates must reply to questions in dogmatic and moral theology, liturgy, and canon law. They are also to give a specimen of catechetical exposition and of preaching. The qualifications of the candidates are also to be weighed in forming a judgment. The bishop is to give the vacant rectorship only to a candidate who has received the approving votes of the examiners. (vii) Of the dioceses. (viii) Of clerical life and manners. Priests should make a spiritual retreat once every year, or at least every two years. They are exhorted to give themselves to study. They are to avoid all conduct that can afford even the suspicion of evil. They are not to bring an action against another cleric before a civil tribunal about temporal matters without written permission of the bishop. As to ecclesiastical affairs, they are to remember that judgment pertains only to the church authorities. (ix) Of diocesan and regulars. The provisions of the papal constitution "Romanos Pontifices" are extended to the United States. This constitution treats of the exemption of regulars from episcopal jurisdiction; of what concerns their ministry in a diocese; and of their temporal possessions. All controversies on these subjects are to be referred to the prefect of the Propaganda. Bishops are to recur to him also in matters concerning institutes of simple vows that are not diocesan but have their own superior-general. Diocesan Institutes, even having a rule approved by the Holy See, are entirely subject to the jurisdiction of the ordinary. Bishops are to see that the laws of enclosure (claustration) are observed. Regulations are laid down for the ordinary and extraordinary commendatory and religious brotherhoods, whose members are forbidden to aspire to the priesthood, may not, after leaving such congregation, be ordained for any diocese without a dispensation from Rome.

Title iii, Of Divine Worship. (i) Of celebrating Mass twice on the same day. (ii) Of conformity in fasts and feasts. In future in all dioceses of this country there are to be the following six feasts of obligation and no others: The Immaculate Conception, Christmas, Circumcision of Our Lord (New Year's Day), Ascension, Assumption, and All Saints' Day. No new dispositions are made as to fast days. (iii) Of the Lord's Day. The faithful are to be exhorted to observe it properly. (iv) Of sacred music. Profane music is forbidden: sacred music must accord with the sacredness of time and place. Psalms are not to be curtailed at Vespers. The Mass must not be interrupted by the length of the choir-singing.

Title iv, Of the Sacraments. (i) Of the baptism of converts. The ritual prescribed for their reception into the Church is to be observed. (ii) Of marriage. Catholics who marry before a secular minister are excommunicated. Mixed marriages are not to be contracted unless promises are given that the Catholic party is in no danger of perversity, and will strive to convert the non-Catholic party. Also that all
the children born of the union are to be brought up Catholics. No dispensation from these promises can be known.

Title v, Of the Education of Clerics.—(i) Preparatory seminaries should be instituted. The pupils should be taught Christian Doctrine, English, and at least one other language according to the necessity of the diocese. They must learn to speak and write Latin. Greek is also to be taught. The usual branches of profane learning, not omitting the natural sciences, as well as music and the Gregorian chant are to be part of the curriculum. (ii) Of the greater seminaries. Judgment must be exercised in admitting aspirants to the priesthood and they must be zealously formed to virtue and learning. Two years are to be devoted to a philosophical and four to a theological course. The faculty of theology is to embrace dogmatic and moral theology, Biblical exegesis, church history, canon law, liturgy and sacred eloquence. Great care must be taken in the selection of spiritual directors and professors for the students. Examinations are to be held semi-annually or annually in the presence of the bishop or vicar-general and the examiner is to test the clerics’ knowledge and ability to spend their vacations in a manner becoming the clerical profession. The temporal and spiritual administration of the seminary belongs principally to the bishop; he is to be aided by two commissions, one for spirituals and one for temporal affairs, appointed by the principal seminary or university. The Fathers consider the times ripe for creating a Catholic university, and for this purpose they appoint a commission. The university is to be entirely under the management of the local clergy. (iii) After completing their studies, the students should, however, continue to send some of their subjects to Rome, Louvain, and Innsbruck, as the new university is intended for postgraduate theological studies. (iv) Of the examinations of the junior clergy. For five years after ordination, priests must make an annual examination in Scripture, dogmatic and moral theology, canon law, church history, and liturgy. (v) Of theological conferences. All priests having care of souls must attend ecclesiastical meetings for the discussion of questions of doctrine and discipline. These conferences are to be held four times a year in urban and twice a year in rural districts.

Title vi, Of the Education of Catholic Youth, treats of (i) Catholic schools, especially parochial, viz., of the introduction of religion and the means to establish them. Parents must send their children to such schools unless the bishop should judge the reason for sending them elsewhere to be sufficient. Ways and means are also considered for making the parochial schools more efficient. It is desirable that these schools be free. (ii) Every effort must be made to have suitable schools of higher education for Catholic youth.

Title vii, Of Christian Doctrine.—(i) Of the office of preaching. (ii) A commission is appointed to prepare a catechism for general use. When published it is to be obligatory. (iii) Of prayer books. (iv) Of books and newspapers. While objectionable writings are to be condemned, Catholics should oppose them also by orthodox newspapers and books.

Title viii, Of Zeal for Souls.—(i) Immigrants should be instructed by priests of their own language. (ii) A commission is appointed to aid the missions among Indians and Negroes. (iii) Censures against secret vows must be removed. If Rome has not condemned a particular society by name, it will belong only to a commission consisting of the archbishops of the country to decide whether it falls under the laws of forbidden organizations or not. If they cannot agree, the matter is to be referred to Rome. On the other hand, Catholic societies, especially those of temperance, are to be encouraged.

Title ix, Of Church Property.—(i) The Church’s right to hold property. (ii) The bishop is the guardian and supreme administrator of all diocesan property. (iii) Priests are diligently to guard parochial property under the direction of the bishop. If they do not insist that their salary at the proper time, they are supposed to have renounced their right to it. (iv) In choosing lay trustees only those members of the congregation have a voice, who, being twenty-one years of age, have fulfilled the parochial precept, have paid for a seat in the church during the past year, have sent their children to Catholic schools and belong to no prohibited society. The pastor is ex officio president of the board of trustees. (v) In all churches some seats must be set aside for the poor. Abuses incident to picnics, excursions, and fairs are to be guarded against. Bulls are not to be given for religious purposes. It is a detestable abuse to refuse the sacraments to those who will not contribute to collections. Bishops are to determine the stipend proper for ecclesiastical ministries. Foreign priests or religious cannot be well paid in a diocese without the consent of the ordinary.

Title x, Of Ecclesiastical Trials.—(i) Every diocese is to have an episcopal tribunal. (ii) Its officials for disciplinary cases are to be a judge, fiscal procurator or diocesan attorney, and a chancellor. To those may be added an auditor, a notary, and apparatus. For matrimonial cases the officials are to be an auditor, defender of the marriage tie, and a notary. The interested parties may also employ advocates. The bishops should, however, continue to send some of their subjects to Rome, Louvain, and Innsbruck, as the new university is intended for postgraduate theological studies. (iv) Of the examinations of the junior clergy. For five years after ordination, priests must make an annual examination in Scripture, dogmatic and moral theology, canon law, church history, and liturgy. (v) Of theological conferences. All priests having care of souls must attend ecclesiastical meetings for the discussion of questions of doctrine and discipline. These conferences are to be held four times a year in urban and twice a year in rural districts.

Title xi, Of Ecclesiastical Sepulture.—Cemeteries should be properly cared for.

Title xii. The decrees of this council are binding as soon as they are promulgated by the Delegate Apostolic. At the request of the Fathers, the Holy See permitted the celebration in the United States of the feasts of St. Philip of Jesus, St. Turibius, and St. Francis Solano. It also granted to the bishops, under certain conditions, the power of alienating church goods without previously referring each case to Rome. The Fathers of this council signed the postulation of the cause of the beatification of Isaac Jogues and Rene Goupil, martyrs of the Society of Jesus, and of Catherine Tekakwita, an Iroquois virgin. This Third Plenary Council exhibits the actual canon law of the Church in the United States.

Acta et Decreta Conc. Plen. I (Baltimore, 1853); Acta et Decreta Conc. Plen. II (Baltimore, 1868); Smith, Notes on Plenary Council (New York, 1874); Decreta Conc. Plen. III (Baltimore, 1894); Nelles, Commentariorum in Conc. Plen. III (Innsbruck, 1898).

WILLIAM H. W. FANNING.

Baltimore, Provincial Councils of.—These councils have a unique importance for the Church in the United States, inasmuch as the earlier ones legislated for practically the whole territory of the Republic, and furnished many of the ecclesiastics who formed the later provincial councils of the country. This article touches on only those parts of the legislation which may seem in any way to individualize the discipline of the Church in the United States or depict the peculiar needs and difficulties of its nascent period.

I. The First Provincial Council was held in 1829 and was attended by one archbishop and four bishops. Its decrees refer to the enactments of two previous conventions which may be summarized briefly. Bishop Carroll's Diocesan Synod of 1791 decreed: (No. 3) The ceremonies of baptism shall not be
supplied for converted heretics who had been previously validly baptized. (No. 4) As a rule children are not confirmed before the age of seven. (No. 5) The offerings of the faithful are to be divided into three parts: for the support of the pastor, the relief of the poor, and the sustentation of the church. (No. 11) The faithful are to be warned that the absolution of priests not approved by the bishop is invalid. (No. 15) None are to be married until they know the Christian Doctrine. Slaves, however, need know only the principal truths, if more cannot be acquired. (No. 16) In mixed marriages the non-Catholic must promise before witnesses to bring up the children of the union of the union of the faith of the church. Hymns and prayers in the vernacular are to be encouraged at evening services. (No. 20) Catholics may work on days of obligation owing to the circumstances of place, but they must wear Mass if possible. (No. 23) The rich are to be warned that they sin grievously if, through their parsimony, pastors cannot be sustained and multiplied. (No. 24) When there is question of refusing Christian burial, the bishop must be consulted beforehand when possible. The second series of enactments referred to are those regulating ecclesiastical discipline sanctioned by the common consent of the Archbishop of Baltimore and the other American bishops in 1810. The main articles are: (No. 2) Regulars should not be withdrawn from pastoral work without the consent of the bishops, if their authors have deemed it necessary to the existence or prosperity of their missions. (No. 3) The Douay version of the Bible is to be used. (No. 5) Baptism must be conferred in the church where possible. (No. 6) If no sponsors can be obtained, the infant must be a catechism. (No. 9) The faithful are to be warned against improper theatres, dances, and novels. (No. 10) Freemasons cannot be admitted to the sacraments. Besides ordering the publication of these decrees along with their own synodal enactments, the fathers of the First Provincial Council decreed: (No. 1) Priests should labour in any mission assigned to them by the bishops. (No. 5) Owing to the abuses of lay trustees all future churches should be consigned to the property rights and ecclesiastical courts. In addition to their decrees, the bishops asked and obtained from Rome permission to use for adults the formula of infant baptism; to consecrate baptismal water with the form approved for the missionaries of Peru, and to extend the time for fulfilling the precept, i.e. from the first Sunday of Lent to Trinity Sunday. II. The Second Council, held in 1833, was attended by one archbishop and nine bishops. The main decrees were: (No. 3) A delimitation of the American dioceses to be made. (No. 4) A method of selecting bishops, which a later Council (Prov. VII) modified. (No. 5) Recommending the entrusting to the Jesuits of the Indian missions in the West, as also (No. 6) the missions among former American slaves, repatriated in Liberia, Africa, to the same fathers. (No. 8) Bishops are exhorted to erect ecclesiastical seminaries. III. The Third Council in 1837 was composed of one archbishop and eight bishops. Its decrees enacted: (No. 4) Ecclesiastical property is to be secured by the best means the civil law affords. (No. 6) Ecclesiastics should not bring ecclesiastical cases before the civil tribunals. (No. 7) Priests are prohibited from borrowing money from the laity. (No. 8) Pastors are warned against permitting unsuitable music at Divine worship. (No. 9) The two days following Easter and Pentecost are to be days of obligation no longer. (No. 10) Weddings are to be done by fast and abstinence. IV. The Fourth Council in 1840 issued decrees signed by one archbishop and twelve bishops as follows: (No. 1) In mixed marriages no sacred rites or vestments are to be used. (No. 5) Temperance societies are recommended to the faithful. (No. 6) Priests are to see that those frequenting public schools do not use the Protestant version of the Bible or sing sectarian hymns. They must also employ their influence against the introduction of such practices into the public schools. (No. 8) Bishops are to give the people a list of the priests to hold it in their name. Among those attending this council was the Bishop of Nancy and Toul, France, to whom the fathers granted a right to a decisive vote. A letter of consolation was sent by the fathers to the bishops of Poland, and another of thanks to the moderators of the Leopold Institute of Vienna, Austria. V. In 1843, the Fifth Council was attended by one archbishop and sixteen bishops. Among its enactments were: (No. 2) Bishops may not deliver orations in churches. (No. 4) It is not expedient that the Tridentine decrees concerning clandestine matrimony be extended to places where they have not been already promulgated. (No. 5) Priests are to be obliged to observe the law of residence. (No. 6) Priests may not borrow money for church uses without written permission of the bishop. VI. The Sixth Council (one archbishop and twenty-two bishops attending) in 1846, decreed: (No. 1) that the Blessed Virgin Mary conceived without sin is chosen as the patron of the United States. (No. 2) Priests ordained titulus missae may not enter a religious order without permission of their ordinaries. (No. 3) The Canons concerning the proclaiming of the banns of matrimony are to be observed. At the request of the fathers the Holy See sanctioned a formula to be used by the bishops in taking the oath at their consecration. VII. In 1849 two archbishops and twenty-three bishops held the Seventh Council. The main decrees were: (No. 2) The Holy See is to be informed that the fathers think it opportune to define as a dogma the Immaculate Conception of the Blessed Virgin Mary. (No. 3) A change in the election of bishops is introduced. (No. 5) Bishops are not to give an exeat at the request of a priest unless it be certain that another bishop will receive him. (No. 6) Priests are to be asked to assist at the marriages of those who have already had a ceremony performed by a Protestant minister, or who intend to have such ceremony performed. (No. 7) A national council should be held in Baltimore in 1850, by Apostolic Authority. The fathers moreover petitioned the Holy See to raise New Orleans, Cincinnati, and New York to metropolitan dignity and to make a new limitation of the Provinces of Baltimore and St. Louis. They desired likewise that Baltimore should be declared the seat of the National Father of the Republic. The pope granted the first part of the petition, but deferred acting on the question of the primacy. VIII. The Eighth Council was assembled in 1855. One archbishop and seven bishops or their represe-
he was also rector of the university. In 1717, he was general censor of books at Rome, and later rector of Châlons. He was also rector of Châlon. He left several works of some value to the Christian apologist, notably: (1) “Réponse à l'histoire des oracles de M. de Fontenelle”, a critical treatise on the oracles of paganism, in refutation of Van Dale's theory and defence of the Fathers of the Church (Strasbourg, 1707), followed in 1708 by "Suite de la réponse à l'histoire des oracles". (2) “Défense des S. Péres accusés de platonisme” (Paris, 1711); this is a refutation of "Platonisme dévoilé", a work of the Protestant minister Sourvenier de Condorcet, an advocate of the philosophy paléenne" (Strasbourg, 1719). (4) "La religion chrétienne prouvée par l'accomplissement des prophéties de l'Ancien et du Nouveau Testament suivant la methode des SS. Péres" (Paris, 1725). (5) "Défense des prophéties de la religion chrétienne" (Paris, 1737). To these may be added a further oration on the Most Rev. Peter Creagh, Archbishop of Dublin (Strasbourg, 1705), the "Acts of St. Balaam, Martyr", and the "Life of St. Febronius, Virgin and Martyr" (Dijon, 1720 and 1721). SOURMAYEUX, in Dict. du théol., c. v. ii., 126, Bibl. de la c. de J., I, 806-860; VIII, 1736.

MARK J. MCNEAL.

Baluze, Jean, a French cardinal, b. probably c. 1421, in Poitou; d. 5 October, 1491, at Ripapransone (Province of Ancona) to which the Blessed Sacrament to be kept in chapels of religious communities not subject to the law of enclosure. All of these petitions were granted by the Holy See. That concerning the Archbishop of Baltimore granted to him, as ruler of the mother-church of the United States, an honorary pre-eminence, to consist in his taking precedence of any other archbishop in the country, without regard to promotion or consecration, and in his having the place of honour in all councils and conventions. The fathers also sent to Rome an inquiry as to the nature of the vows (solemn or simple) of religious women, especially of Visitations Nurses in the United States, an answer to which was deferred to a later time (1864). The question was also discussed as to whether Archbishop Kenrick's version of the Bible should be approved for general use. It was finally decided to wait for Dr. John Henry Newman's expected version, and then to determine along with the bishops of other English-speaking countries on the reception of X. In 1869, the Tenth Council enacted decrees that were signed by one archbishop, twelve bishops, and one abbess. Among these decrees we note: (No. 5) Bishops are exorted to establish missions and schools for the negroes of their dioceses. (No. 7) Priests are to be appointed to aid the bishops in administering the temporal concerns of the diocese. They are also to supervise the spiritual and material affairs of religious women. At the request of the fathers, the Holy See extended for five years the privilege of using the short formula in the baptism of adults.

BALUZE

But his end was near; he died in 1491 and was buried at Rome. He had attained numerous dignities and amplexus wealth, but disburdened the Church.

Fonozet, Jean Baluze (Paris, 1886); Pastor, Gesch. der Päpste (Freiburg, 1904), 4th ed., II, 372-378; tr. IV, 103-106 (London, 1894).

N. A. WEBER.

Baluze, Etienne, a French scholar and historian, b. at Tulle, 24 December, 1630; d. in Paris, 28 July, 1718. His education was commenced at the Jesuit college of his native town, where he distinguished himself by his intelligence, his constant devotion to study, and his prodigious memory. Obtaining a scholarship on the recommendation of his professors, he completed his classical courses at the College of St. Martial, which had been founded at Toulouse, in the fourteenth century, by Pope Innocent VI for twenty Limousin students. Resolved to devote himself to the study of literature and history, Baluze set to work with great zeal, perseverance, and success. Critical and painstaking in the investigation of facts, he undertook to study the origins of the French nation, its customs, laws, and institutions, using for this purpose only genuine documents, records instead of fanciful legends and fabulous stories, thus introducing a scientific spirit into historical research, philology, and chronology.

At the age of twenty-two he wrote a remarkable work, "De la fable Frisonus," a criticism. A Jesuit, Father Frison, had just published a book, "Gallica purpurata," containing the lives of the French cardinals, which met with great success until Baluze gave out (1652) his "Anti-Frizonus" in which he pointed out and corrected many errors. In 1654, Pierre de Marca, Archbishop of Toulouse, one of the greatest French scholars in the seventeenth century, appointed Baluze his secretary. Upon the death of his patron, in June, 1662, Baluze published the "Marca Hispanica," a remarkable historical and geographical description of Catalonia. This work made him known to Colbert, who appointed him his librarian, a position he held for thirty years, many years, which is after Colbert's death. The excellent collection of manuscripts and books which was found in the latter's library was the fruit of his care and advice. His own collection was also very important; it comprised about 1100 printed books, 957 manuscripts, more than 500 charters, and seven cases full of various documents. Baluze is to be ranked among the foremost beneficiaries of literature who employed their time and knowledge in collecting from all sources ancient manuscripts, valuable books, and state papers. He annotated them with valuable comments, being very well acquainted with profane and ecclesiastical history as well as with canon law, both ancient and modern.

The number of works Baluze published is considerable; we shall mention the most important among them: (1) "Marli Mercatoria opera" (1684), collated with manuscripts and enriched with notes illustrative of the history of the Middle Ages. (2) "Regum Francorum capitularia" (1677). This collection contains several capitularies never published before. Baluze corrected them with great accuracy and in his preface gave an account of the original documents and the authority of the several collections of the capitularies. (3) "Epistole Innocentii Papae III" (1682); not a complete collection, as Baluze was refused the use of the letters preserved in the Vatican. (4) "Conciliorum nova collectio," containing all the synods in the eight centuries, from the founding of the city (900), to the episcopate of Daniel de Saint-Auclair (1702). The history of Tulle is divided into three books, the first dealing with the counts, the second with the abbots, and the third with the bishops.

In 1670, Baluze was appointed professor of canon law at the Collège de France, of which he became director in 1707, with a pension awarded by the king. But he soon felt the uncertainty of worldly favours. Being engaged to write the history of his own family, he began to work in the cardinal's disgrace. Baluze was accused of having used spurious papers in his patron's interest. Consequently he received a lettre de cachet ordering him to retire to Lyons. Being expelled from the university and deprived of his personal fortune, he wandered from Rouen to Blois, from Blois to Tours, and later to Orléans, where he lived until 1713. After the peace of Utrecht, the family of Cardinal de Bouillon recovered the king, and Baluze was recalled, but never again employed as a professor or as a Director of the Collège de France. He lived far from Paris and was engaged in publishing St. Cyprian's works at the time of his death. Baluze, together with Luc de Buchery, Father Frison, and Father Simon, gathered an immense quantity of rare materials which the historians of the nineteenth century, such as Siamoni, Guizot, Augustin and Amédée Thirry, Michelet, Henri Martin, Fustel de Coulanges, Father Francois, and Dr. Sallé, used in their works on history.

JEAN LE BAHs.

BAMBERG, Archidiocese of, in the kingdom of Bavaria, embraces almost the whole of the presidency of Upper Franconia, the northern part of the
Middle Franconia (in particular the cities of Nuremberg, Fürth, Ansbach, and Erlangen), parts of Lower Franconia, of the Upper Palatinate, and of the Diocese of Cologne, up to the days of 1 December, 1900, the archdiocese then contained 379,442 Catholics; in 1907 the Catholics numbered 410,000, and members of other denominations 730,000. Bamberg as an ecclesiastical province includes, besides the Archdiocese of Bamberg, the bishoprics of Würzburg, Eichstätt, and Speyer, all of Bavaria.

History. In the early centuries the region afterwards included in the Diocese of Bamberg was inhabited for the most part by Slavs; the knowledge of Christianity was brought to these people by missionaries, the monks of the Benedictine Abbey of Fulda, and the land was under the spiritual authority of the Diocese of Würzburg. The Emperor Henry II and his pious wife Kunigunde decided to erect a separate bishopric at Bamberg, which was a family inheritance. The emperor's purpose in this was to make the Diocese of Würzburg less unwieldy in size and to give Christianity a firmer footing in the districts of Franconia. In 1008, after long negotiations with the Bishop of Eichstätt, Bamberg and its territory were ceded portions of their dioceses, the boundaries of the new diocese were defined, and John XVIII granted the papal confirmation in the same year. The new cathedral was consecrated 6 May, 1012, and in 1017 Henry II founded on Mount St. Michael, near Bamberg, a Benedictine abbey for the training of the clergy. The emperor and his wife gave large temporal possessions to the new diocese, and it received many privileges out of which grew the secular power of the bishops (cf. Weber in "Historisches Jahrbuch der Gürresseelschaft" for 1896, 342-345 and 617-639). Pope Benedict VIII during his visit to Bamberg (1020) placed the diocese in direct dependence on the Holy See. In 1248 and 1260 the see obtained large portions of the estates of the Counts of Meran, partly through purchase and partly through the appropriation of extinguished feuds. The old Bishopric of Bamberg was composed of an unbroken territory extending from Schloesselfeld in a north-easterly direction to the Franconian Forest, and presented a vast addition in the counties of Carinthia and Salzburg in the Nordgau (the present Upper Palatinate), in Thuringia, and on the Danube. By the changes resulting from the Reformation the territory of this see was reduced nearly one half in extent; in 1768 the possessions and jurisdictions situated in the secularized counties were sold and let to private individuals; the secularization of church lands took place (1802) the diocese covered 1276 square miles and had a population of 207,000 souls.

Up to this period the Diocese of Bamberg had been ruled by 63 bishops. The first eight were appointed by the German emperors; after this they were chosen by the clergy and people jointly; still later they were elected by the cathedral chapter. On several occasions, when the election was disputed, the appointment was made by the emperor. In 1777, 1783, Eberhard I (1007-40), chancellor to Henry II, greatly increased the possessions of the diocese; Suidger (1040-46) became pope under the name of Clement II; Hartwig (1047-58) defended the rights of his see against Henry the Bearded. According to the bulls of the pope in 1053; Adalbert (1053-57) was followed by Günther (1057-65) who held the first synod of Bamberg (1058). Günther died at Odenberg (Sopron) in Hungary, while on a crusade. Hermann (1065-75) acquired the Prince-Bishopric of Schleswig; according to the papacy he took the side of the empire. He was charged with obtaining his election by simony and deposed. Rupert (1075-1102), as partisan of Henry IV, was a member of the pseudo-Synod of Brixen which declared Pope Gregory VII to be deposed; on this account the bishop was excommunicated. During his episcopate Rupert did much for the Thurinian part of the country. During the interregnum St. Otto I (1102-39), the Apostle of the Prussians and Pomeranians, had a large share in the reconciliation of the pope and the emperor by the Concordat of Worms; he founded numerous churches and monasteries and during a famine showed large-hearted generosity to his subjects. Of his immediate successors were men of less distinction: Egilbert (1139-46), who had been Patriarch of Aquileia; Eberhard II of Otelingen (1146-70) who with great pomp celebrated, in 1147, the canonization of Henry II. Eberhard increased in an unseemly manner the territory of the diocese, but, being a partisan of Frederick I, he was for a time under sentence of excommunication. He succeeded by Hermann II, of Aursch (1170-77). Otto II, of Andechs (1177-96), rebuilt in 1181 the cathedral, which had been burned. Otto II understood how to remain loyal both to the emperor and the pope. Thiemo (1196-1202) obtained in 1200 the canonization of the Empress Kunigunde, joint foundress with the emperor Henry II of the see; Conrad, Duke of Silesia (1201-03), did not take part in the unsuccessful crusade to Palestine, but, in spite of his warlike disposition he was zealous in promoting the spiritual life of his clergy. Poppo I, Count of Andechs (1237-42), soon retired from his office; Henry I of Bilstein (1242-61) received from the emperor the title of Prince-Bishop for himself and his successors, as well as numerous rights of sovereignty. Thenceforth the Bishops of Bamberg had ecclesiastical precedence directly after the archbishops. Their power was encroached on, however, from two directions; on the one side by the cathedral canons, the so-called Brothers of St. George, who abandoned the vita communis during the episcopate of Bishop Berthold of Leiningen (1257-59), and developed in addition estates in the Duchies of Carinthia and Salzburg in the Nordgau (the present Upper Palatinate), in Thuringia, and on the Danube. By the changes resulting from the Reformation the territory of this see was reduced nearly one half in extent; in 1768 the possessions and jurisdictions situated in the secularized counties were sold and let to private individuals; the secularization of church lands took place (1802) the diocese covered 1276 square miles and had a population of 207,000 souls.

Bamberg which declared Pope Gregory VII to be deposed; on this account the bishop was excommunicated. During his episcopate Rupert did much for the Thurinian part of the country. During the interregnum St. Otto I (1102-39), the Apostle of the Prussians and Pomeranians, had a large share in the reconciliation of the pope and the emperor by the Concordat of Worms; he founded numerous churches and monasteries and during a famine showed large-hearted generosity to his subjects. Up to this period the Diocese of Bamberg had been ruled by 63 bishops. The first eight were appointed by the German emperors; after this they were chosen by the clergy and people jointly; still later they were elected by the cathedral chapter. On several occasions, when the election was disputed, the appointment was made by the emperor. In 1777, 1783, Eberhard I (1007-40), chancellor to Henry II, greatly increased the possessions of the diocese; Suidger (1040-46) became pope under the name of Clement II; Hartwig (1047-58) defended the rights of his see against Henry the Bearded. According to the bulls of the pope in 1053; Adalbert (1053-57) was followed by Günther (1057-65) who held the first synod of Bamberg (1058). Günther died at Odenberg (Sopron) in Hungary, while on a crusade. Hermann (1065-75) acquired the Prince-Bishopric of Schleswig; according to the papacy he took the side of the empire. He was charged with obtaining his election by simony and deposed. Rupert (1075-1102), as partisan of Henry IV, was a member of the pseudo-Synod of
and ecclesiastical authorities; in 1348 he had a registrar (urbanium) drawn up all the estates and rights belonging to the see. Johann III of Bamberger (1353–63) was granted the right of coinage and re-established the disordered finances of the see. Frederick II of Trubendingen (1364–68) was followed by Louis, Margrave of Meissen (1368–74), who soon became Elector of Mainz. Lampricht of Brunn (1375–98), Bishop of Worms, introduced new taxes in order to reduce the indebtedness of the see. This led to a revolt of the citizens of Bamberg, and the bishop was put to flight in 1379; in 1380 he conquered the city and imposed heavy penalties. George I Zobel of Giebelstadt (1398–1417), who was called the Elector, and Albert Otho of Brandenburg (1412–21), settled a quarrel of many years’ standing with the Burgrave of Nuremberg and protected the Jews living in the diocese. Frederick III of Auesse (1421–31), one of the most religious princes of his age, convened a synod in order to restore ecclesiastical discipline and to check the avarice and immorality of the clergy; the opposition to these reforms, especially that of the cathedral canons, forced him to resign the see (d. 1440). Anthony of Rotenhain (1440–46) was unable to do much good, and the bad condition of the episcopal finances of the bishopric; in 1440 the citizens of Bamberg forced him to flee, but he soon afterwards took the city by storm and executed a number of the citizens. The diocese was several times devastated by the Hussites. More pleasant times followed George of Schauenburg (1456–75), an able ruler, restored ecclesiastical discipline among the people, clergy, and monasteries, and encouraged the newly discovered art of printing (the printer Pfister had a press at Bamberg as early as 1460). Philip of Henneberg (1475–87) continued the labours of his predecessor, redeemed a large number of the estates mortgaged by Anthony of Rotenhain to the Jews, and in 1478 drove the Jews out of the diocese. Henry III Gross of Trockau (1487–1501) was an energetic organizer and issued a number of laws; in 1491 he held a synod. Veiit I Truchsess of Pommersfelden (1501–03) and George II Marchalk of Ebnet (1503–05) had very brief reigns.

The period of the Reformation was an unfortunate one for the diocese. Luther’s doctrines very soon found entrance into its territory. The fourth bishop, George III Schenk of Limburg (1502–22), did much to encourage art and the erection of churches, but he showed himself weak in his opposition to the religious innovations and allowed the writings of the Reformers to be printed in the diocese. Luther’s doctrines also found friends and well-wishers in the cathedral chapter. Weigand of Redwitz (1522–56) desired to make a stand against the progress of the Reformation, but was prevented by political and social conflicts. In 1524 the peasants, excited by the preaching of evangelical freedom by the adherents of the new teachings, revolted in several places and refused to pay tithes. The city of Bamberg also rebelled against the bishop; the citizens called on the peasants for aid, plundered the episcopal palace, the houses of the canons and clergy, the monasteries, and a large number of estates in the open country which belonged to the nobles and clergy. George von Truchsess, commander of the army of theBrandenburg Confederation, restored order; a number of the revolutionary leaders were executed, a heavy punishment was inflicted on the city of Bamberg, and the nobles who had suffered loss received unnecessarily large compensation. In spite of the bishop’s zeal for souls, the Reformation spread more rapidly in the diocese than in Brandenburg, a footing, especially in Nuremberg and in the Franconian possessions of the Electors of Brandenburg. This period was followed by an era of calm during the episcopates of George IV Fuchs von Rugheim (1556–61), Veit II of Wurzburg (1561–77), John George I Zobel of Giebelstadt (1577–80), Martin von Eyb (1580–83); none of these men, however, were able to overcome the disorders and reduce the debts of the see. The cathedral chapter was chiefly responsible for the troubles under which the diocese suffered; their nepotism, simony, avoidance of ordination to the priesthood, and, in many cases, their evil lives (concubinage was common) prevented reform. Ernst von Mengenfeld (1582–91) tried to enfeeble the moral decay of clergy and people; in 1585 he founded a seminary in Bamberg for the training of priests; he also did much to improve the material welfare of the people. Nathan von Thüngen (1591–1601), bishop of Augsburg, made great efforts to promote the counter-Reformation; he provided for the education of the clergy, enlarged the ecclesiastical seminary, and re-established the Catholic religion in his territory in accordance with the then accepted principles of law. A less successful episcopate was that of John Philip von Gebseattl (1599–1609), during whose reign the pest desolated the diocese. John Gottfried von Aeschhausen (1609–22), who, after 1617, was also Bishop of Würzburg, took energetic measures against the Jesuits, to whom he gave the house and church of the Carmelites; he put the Jesuits in charge of the ecclesiastical seminary and made them the cathedral preachers. In this way the bishop insured the reform of his clergy and the opposition of the Jesuits to the Catholicism. There is recorded in his memory which also rests on that of his successor: the toleration and encouragement of trials for witchcraft.

Many misfortunes befell the diocese during the Thirty Years War; among these were the devastations, impost, spoilage, and devastation. In 1632 Bamberg was conquered by the Swedes, and in 1633 was obliged to recognize Bernard of Weimar as its ruler. Bishop John George II Fuchs von Dornheim (1623–33) died in Carinthia far away from his see. Franz von Hatzfeld (1633–42) was not able to enter his diocese until 1635. Melchior Otto Voit of Salzburg (1642–53) changed the gymnasium into a university in 1647; his successors, Philip Valentine Voit von Reineck (1655–72), Philip von Dernbach (1672–83), Marquard Sebastian Schenk von Stauffenberg (1683–93), followed his example in encouraging the spiritual activity of the Jesuits and other orders, in the improvement of schools, and in reducing the indebtedness of the diocese. A time of great prosperity was the period of the two Count Vincenz von Schönborn-Buchheim (1679–1709), and Frederick Charles (1729–46). After 1695 the former of these two bishops, Lothair Franz, was also Elector of Mainz; he built the princely palace (now a royal residence), a large college for the Jesuits, as well as several castles, and was a great patron of art and learning; the latter, Frederick Charles, added faculties of law and medicine to the university and adorned the city with numerous public buildings. On account of his pupil eloquence his contemporaries gave him the name of the German Flurey. The reigns of the next bishops, John Philip Anthony von Frankenstein (1746–53) and Franz Conrad, Count von Stadion (1753–57), were also peaceful. During the administration of Adam Frederick, Count von Seinsheim (1757–79), the diocese suffered greatly from the Seven Years War; during its progress the Prussians ravaged and plundered the region, levied contributions on the inhabitants, and carried off church treasures. When pestilence and famine followed the other miseries of war the bishop showed great liberality in helping the people. Albert Ludwig von Erthal (1779–95), who was at the same time Bishop of Würzburg, was another prelate who aimed to promote the welfare of the diocese; he issued wise laws, tried to equalize the burdens of taxation, founded charitable institutions (the general hospital
BAMBERG, among them), and raised the standard of the clergy. But although personally religious, in the political relations of the Church he yielded in a measure to the prevailing tendencies of the 17th century. As the last Prince-Bishop of Bamberg in 1799, he took refuge at Prague from the French invasion, and in 1799 at Saalfeld. He had just returned, in 1802, when Bavaria seized his principality. In 1803 the delegates of the empire formally enacted the secularisation of Bamberg, and allotted it to be a possession of the Elector of Bavaria. All the provostships and monasteries were then suppressed; the university was changed into the still extant lyceum, and the prince-bishop was pensioned.

Upon the death of von Buseck (1805) George Charles von Fchenbach, Bishop of Würzburg, administered the affairs of the diocese until 1808. After this the see remained vacant for ten years; the ecclesiastical government was carried on by a vicariate-general, consisting of a president and eight counselors. The Concordat agreed upon between Bavaria and Rome in 1817 brought in a new era. Bamberg was made an archbishopric with boundaries as given at the Peace of Vienna. The privileges and properties of Count Joseph von Stubenberg, previously Prince-Bishop of Eichstätt, took possession of the archiepiscopal see of Bamberg in 1818 and administered both dioceses until his death in 1824. Bishop von Stubenberg employed the unoccupied property in work which he thought would be the interest of the Catholic Church. He was succeeded by (1824-42) Joseph Maria, Freiherr von Frenberg, who had been Bishop of Augsburg, 1822-58; Boniface Caspar von Urban, 1858-75; Michael von Deinlein, who founded a seminary for boys and encouraged Catholic associations and missions among the people, 1875-90; Frederick von Schreiber, and (1890-1904) Joseph von Schork, a noted pupilator. Archbishop von Schork promoted missions (Volkmissionen) among the people, as well as charitable and social organizations among clergy and laity. Frederick Philip von Abert (b. at Münnerstadt, 1 May, 1852) was appointed Archbishop, 30 January, 1905.

Ecclesiastical Statistics.—The Diocese of Bamberg is divided into the archiepiscopal com-missariat of the city of Bamberg and 20 rural deaneries. The diocesan year-book for 1906 gives: 194 parishes and dependent stations; 35 curacies; 113 chaplaincies; 58 benefices; 583 churches and chapels; 486 schoolteachers; 2,932 Catholic altars; 22 Catholic parochial schools; 29 Catholic district school inspectors; 39 local school inspectors. The cathedral chapter is composed of 1 provost, 6 deans, 10 canons, 1 honorary canon, and six curates. The secular priests have a clerical association (Padus Ottomannus) with 320 members and a home for invalid priests; the association has also a retiring fund (Emerentia) of 92,200. There are 7 houses of male orders, with 90 members, 4: Franciscan with 17 priests and 29 brothers; 1 of Caelced Carmelites with 5 priests, 3 clerics, and 7 brothers; 1 of Conventual Minorites, with 5 priests, 5 brothers, and 3 novices; 1 of Brothers of Charity, with 2 priests, 11 brothers, and three novices. The archiepiscopal deanery comprises a large number of houses of the female orders and congregations: 1 convent of the Discalced Carmelites of St. Francis (Fürstenfeld) with 223 inmates; 13 houses of the Poor School-Sisters, with 123 inmates; 3 houses of the Franciscan Sisters, with 11 inmates, from the mother-house of Maria-Stern at Augsburg; 8 houses of the Tertiary Sisters of St. Francis, from Mallersdorf; 1 of Servite Sisters, from the convent of Dillingen with 43 inmates; 5 houses of the Sisters of Charity of St. Vincent de Paul with 55 inmates; 17 houses in 10 localities containing 107 inmates, of the Sisters of the Most Holy Saviour from the mother-house at Oberbronn, with 107 inmates; 12 houses, with 32 inmates, of the Daughters of the Holy Redeemer from the mother-house at Würzburg; 26 houses of the Sisters of Oberzell; making a total of 55 houses with 640 female religious. For the training of the clergy there are an archiepiscopal seminary for priests (50 students) and an archiepiscopal seminary for 5 pupils. The students and graduates of the seminary (Priestseminary) are educated at the Royal Lyceum, which has philosophical and theological faculties and 9 clerical professors; the pupils of the seminary for boys' school (Knabenseminary) attend the two gymnasium of Bamberg in each of which an ecclesiastical acts as religious instructor (Religiöse Lehrer). The clergy have also charge of the von Außesee seminary and home for Catholic students. The Franciscans have at Bamberg a seminary for students at the gymnasium who wish to enter the order after completing their studies. Of the female congregations, the English Ladies conduct 3 Academies and boarding-schools for girls, and 7 primary schools; the other congregations conduct common schools, housekeeping and industrial schools, and orphanages. The diocese have some 90 charitable institutions under their care, among these are: 15 almshouses and infirmaries; 12 hospitals; 22 chéres; 15 centres for obtaining visiting nurses; 1 insane asylum; 4 homes for poor and aged; 17 orphanages. Among the Catholic societies in the diocese may be mentioned: 50 Associations for Workingmen and Mechanics; 14 Journeymen's Associations (Gesellenvereine); 7 Apprentices' Societies; 1 Workingwomen's and 1 Shopgirls' Association; the Ludwig-Missiak Association; the St. Joseph's Association; the Christian Family Association; the Society of Christian Mothers; the Catholic Men's Society, the People's Union for Catholic Germany, etc.

The most important ecclesiastical building of the diocese is the cathedral. The edifice erected by the Emperor Henry II, the Saint, was destroyed by fire in 1081; the new cathedral, built by St. Otto of Bamberg, was consecrated in 1111, and in the thirteenth century received its present late-Romanesque form. It is about 300 feet long, 92 feet wide, and the four towers are each about 266 feet high. Among the finest of its monuments is that to Emperor Henry II and his Empress Kunigunde, considered the masterpiece of the sculptor Tilman Riemenschneider. Among other noteworthy buildings are the cathedral library, the twelfth-century church of the former Benedictine abbey of St. Michael and the upper parish church, a Gothic building dating from 1387. Among the noted churches of the diocese are those of the Fourteen Martyrs, Goseweinsteine, and Mariawhein—places of pilgrimage; the Gothic church of Our Lady at Nuremberg, and the churches of the former abbeys of Banz and Ebrach.

JOSEPH LINS.

BANANAS (A. V. Benaisah; Kenrick, Banalah; Heb. דְּבָשׁ, also דִּבָשׁ, "Jehovah hath built up"—Gesenius; Gr. Βανάζα, Banaias, Banaia, Banaisa), the name of several men mentioned in the Bible. The orthography varies, but the component elements of the various forms are the same.

The most famous of all who bore the name was "the son of Joia, the priest," the "most valiant among the thirty"—"captain of the third company for the third month" (I Par., xxvii, 5, 6). The meaning of the text is not clear; he seems to have been a priest and one of the principal officers at court. "Joia, the son of Banaia" (I Par., xxvii, 34) may be a false reading, in which the names have been interchanged. Banaia is credited with three notable exploits that required strength and courage: (a) He killed two lions, or perhaps brave warriors of Moab ("two lion-like champions of Moab"—Gesenius, s. v. by "lion" and Lat. The Heb. edition is merely literated, leaving the meaning doubtful); (b) he descended into a pit and there killed a lion; (c) he also vanquished and put to death an Egyptian hero of extraordinary size and great strength (II K., xx, 20); (c) he vanquished and put to death an Egyptian hero of extraordinary size and great strength (II K., xx, 20). He is called "Cethethi and Pheletiti," or "the king's guards"—D. V., footnote (II K., viii, 18; I Par., xvii, 17), or "Cethethites" and "Pheletithes" (II K., xx, 23).

The D. V. describes him as "the first among the thirty, but yet to the first three he was not added: Dives and his brothers were not numbered" (I Par., xi, 25). In II K., xxii, 23, the Heb. text gives the same history, but the Gr. and the Lat. versions cause confusion by notable variations. The A. V. reads: "Behold, he was honourable among the thirty, but attained not to the first three: and David set him over his guard" (I Chron., xi, 25). This is from the Heb., but "guard" may be questioned (Gesenius renders the word by "a hearing, audience"). "The first among the thirty" (D. V.) is far from being exact (Joe., Ant., vii, 12).

Banaia supported Solomon's title to the throne against the ambitious intrigues of Adonias (III K., i, 32—38, 44), whom, by Solomon's command, he afterwards put to death (III K., ii, 25). He also executed and succeeded him as general of the army (III K., ii, 34, 35); likewise Semai for having disobeyed Solomon (III K., ii, 46). For some Rabbinic literature, see JEW, ENCYC. S. V.

JOHN J. TIERNEY.

BANCI, Louis, b. at Valence, 1628; d. at Avignon, 1685. When very young he entered the Dominican Order at Avignon. Even before his ordination to the priesthood he was a noted lector of philosophy. He afterwards taught theology at Avignon. He was remarkable for his subtle intellect and prodigious memory. He was the first to receive the appointment to the chair of theology in the University of Avignon, (1642) and this chair he held till his death. He was elected several times Dean of the Theological Faculty and always presided at the public defence of the theses of the candidates for academic degrees. He also was Synodal Examiner of the Diocese of Avignon, and Prefect of the Avignon legation. He wrote: "Moralis D. Thomae, Doctoris Angelici ex omnibus ipsius operibus deprecatorius" (Avignon, 1677; Venice, 1723, 1757, 1758, 1780); and "Brevia universae theologicae cursus" (Avignon, 1684—92). As the author died before the work was finished by Joseph Patin, O. P. From the last tome was expunged a thesis maintaining as "probable the salvation of unbaptized infants by the faith of their parents. The unpublished manuscripts of "Opus integrum de Castitate" and "Opus de veritate solius religionis Christianae" were left with the Dominicans at Avignon.

BANDOLI, Matteo. See CASTELNUOVO DI SCRIVIA.

BANDOLI, Matteo, b. at Castelnovo di Scrivia in Piedmont, Italy, in 1480; d. Bishop of Agen, France, in 1563. He entered the Order of St. Dominic; but his life and writings bear slight trace of a religious character (3 Vols. Lyons, 1564-65; V, 1, 14, 1573). He is best known however as a translator and number. These tales show very considerable literary skill. But they are of no credit to the churchman. In many cases they are perverse descriptions of horrors and wickedness. Many of them were translated into English by Painter, and furnished themes to the dramatists of the Elizabethan period. It is by this means, most likely, that Shakespeare learned the story of Romeo and Juliet. The story of "Parisina" told by Bandello was later taken up by Byron. The tales contained in the second volume of the "Tesor dell' Illustrati Italiani," Paris, 1847. Some were translated by Roscoe, in "Italian Novellists," III (London, 1825). BANDONI, Giovanni. See BEITRÄGE ZUR GESCH. DER DALM. NOVELLE (1872); SYMONES, ROMANZI IN ITALIA; DILLO, ORT. DER PROSPER PICTORI, MARIA GRACHI ANTIQUITAS, 1892; SPAMONIO, "GIOVANNI BANDONI o le novelle" (Nola, 1896).

BANDOZI. See ALEXANDER III.

BANDURI, Anselmo, archiologist and numismatist, b. 1671 at Raguza, off the coast of Dalmatia, d. at Paris, 4 January, 1743. He joined the Benedictines at an early age, in Naples, and was eventually sent to Florence, then a flourishing centre of higher studies. Here he made the acquaintance of the famous Benedictine scholar Montfaucon, then travelling in Italy, in search of manuscripts for his edition of the works of St. John Chrysostom. Banduri rendered him valuable services and in return was recommended to Duke Cosmo III as a proper titular for the chair of ecclesiastical history in the University of Pavia. It was only suggested that the young Benedictine be sent to Paris for a period of preparation, and especially to acquire a sound critical sense. After a short sojourn at Rome, Banduri arrived at Paris in 1702 and entered the Abbey of Saint Germain-des-Prés, as a pensioner of the Grand Duke of Tuscany. He soon became an apt disciple of the French Maurists and began an edition of the anti-iconoclastic writings of Nicephorus of Constantinople, of the writings of Theodore of Mopsuestia, and of other Greek ecclesiastical authors. Banduri never published these works, though as late as 1722 he announced, near at hand, their appearance in four folio volumes. In the meantime, he was attracted by the rich treasures of Byzantine manuscript and other material in the Bibliothèque Royale and the Bibliothèque Colbert. In 1711 he published at Paris his "Imperium Orientale, sive Antiquitates Constantinopolitanae," etc., a documentary illustrated work on the Byzantine Empire, based on medieval Greek manuscripts, some of which were then first made known. He also defended himself successfully against Cassimir Oudin, an ex-Premonstratensian, whose attacks were made on a second-hand knowledge of Banduri's work. In 1718 he published, also at Paris, a two folio volumes on the imperial coinage from Trajan to the last of the Tetrarchs (169-165). "Numismata Imperatorum Romanorum"; the "Trajan to the Last of the Augustos" (supplement by Tanini, Rome, 1791). Of this work Father Eckehl, S.J., prince of numism
nators, says (Doctrina Nummorum I, evii) that it contains few important contributions. At the same time, he remarks that the bibliography of the subject that Banduri prefixed to this work under the title of “Biblia thea nummorum sive au
torum qui de re nummorum scripserunt,” reprinted by Fabricius (Hamburg, 1719). In 1715 Banduri was in charge of a civil and religious audience at the University of Innsbruck, where he published, among other works, a Catalogue of Inscriptions, and in 1724 was appointed librarian to the Duke of Orleans; he had in vain solicited a similar office at Florence on the death of the famous Magliabechi.

Fairez in Monde, des lettres, et belles lettres, XVI, 438.

MAURICE M. HARRETT.

Bañez (originally and more properly Vanez and sometimes, but erroneously, Bañez), Domingo, a Spanish Dominican theologian, b. 29 February, 1522, at Medina del Campo, Old Castle; d. there 22 October, 1604. The qualifying Moundragomensis, attached to his name, seems to be a patronymic after his father, John Bañez of Mondragon, Guipuzcoa. At fifteen he began to study philosophy at the University of Oñate, and after three years left for the Dominican habit at St. Stephen’s Convent, and made his profession 3 May, 1547. During a year’s review of the liberal arts and later, he had the afterwards distinguished Bartolomé Medina as a fellow student, and he wrote with the latter a work on Theology under the title of Monologus, a book in two parts, one of which is signed Moneforo Cano (1548–51), Diego de Chaves (1551), and Pedro Sotomayo (1550–51) he studied theology, laying the foundations of the erudition, and adopting the sciences which later made him eminent as a theology, and an expounder and defender of Thomistic doctrine. He never began teaching, and under Donnigo Soto, as prior and regent, he held various professorships for ten years. He was master of students, explaining the “Summa” to the younger brethren for five years, and, with equal success, he wrote, with marked success of professors who were sick, or who for other reasons were absent from their chairs at the university. In the custom, sometimes competitive, examinations before advancement, he is said easily to have carried off all honours. He taught at the Dominican University of Avila from 1561 to 1566. About 1567 he was assigned to a chair of theology at Alcalá, the ancient Complutum. It appears that he was at Salamanca again in 1572 and 1573, but during the four scholastic years 1573–77 he lived in Valladolid, later, a house of higher studies where the best students of the Castilian province were prepared for a scholastic career. Elected Prior of Toro, he went instead to Salamanca to compete for the chair of Durandus, left vacant by Medina’s promotion to the chief professorship. He occupied this position from 1577 to 1580. After Medina’s death (30 December, 1580) he appeared again as competitor for the first chair of the university. The outcome was an academic triumph for Bañez, and he was duly installed in his new position amid the acclamation of professors and students. There he laboured for nearly twenty years. His name acquired extraordinary authority, and the leading schools of orthodox Spain referred to him as the proclariusiam jubant—the brightest light of their country.

In another way, Bañez in his prime was rendering memorable service to the Church, as director and con-

fessor of St. Teresa (1515–82). Her own words mark him as the spiritual adviser who was most relied upon as the ‘luminous’ light of her heroic work of the Carmelite reform. “To the Father Master Fra Dominic Bañez, who is now in Valladolid as Rector of the College of St. Gregory, I confessed for six years, and, whenever I had occasion to do so, communicated with him by letter. . . . All that is written and told, she communicated to him, who is the person with whom I had, and still have, the most frequent communication, and whose Life of St. Teresa of Jesus, by himself,” (tr. by David Lewis, 3d ed., London, 1904, Relation VII, 448, 450.) Of the first foundation of the reform, St. Joseph’s Monastery at Avila, she wrote that Bañez alone saved it from the destruction resolved upon in an assembly of civil and religious authorities at the time of the Inquisition. He continued to work with the Congregation, and in 1570 was appointed confessor to St. Teresa, and held the position through the remainder of her life (Acta S. Theresiae, Aug., ch. xxxvi, 336 sqq.). He did not then know the saint, but “from that time forth he was in one of her most faithful friends, strict and even severe, as became a wise director who had a great saint for his penitent.” He testifies, in the preface of her testament, that he was clear and sharp with her, while she herself was the more desirous of his counsel the more he humbled her, and the less he seemed to esteem her (op. cit., p. xxxvi). He looked for the proof of her love of God in her truthfulness, obedience, mortification, patience, and charity towards her persecutors, while he avowed that no one was more inercedulous than himself as to her visions and revelations. In this his mastery of the spiritual life was shown to be as scientific as it was wholesome and practical. It was his personal experience that, in writings of St. Teresa, he had to admit her sanctity after her death. Fra Bañez had no external help in the applause of the many, and he had to judge her book as a theologian and the saint as one of his ordinary penitents. When he thus wrote like a man whose whole life he re-

spent, as he himself tells us, in lecturing and disputing” (ibid.).

As the schoolman, the lecturer, and academic disputant, Bañez stands forth as a figure of unprec-

dented distinction in scholastic Spain. In his time discussion was rife, and disquieting tendencies counter to the beaten paths of Augustinian and Thomas manifested themselves. The great controversy, with whose beginnings his name is prominently asso-
ciated, goes back to a learned debate in 1562. Francisco Zumel, of the Order of Mercy, was moderator. Prudentius Montemayor, a Jesuit, argued that Christ did not die freely, and consequently suffered death without merit, if the Father had given him a command to die. Bañez asked what the consequences would have been if the Father had given command not only as to the substance of the act of death, but also as to its circumstances. Prud-

dentius responded that in that case there remained neither liberty nor merit. Louis de Leon, an Augustinian, sided with Cardinal Gonsalez de Gayangos, and discussion was taken up by the masters in attendance and carried to the kindred subjects of predetermination and justification. Other formal disquisitions ensued, and strong feeling was manifested. Juan de Santa Cruz, a Hieronymite, felt constrained to refer the matter to the Inquisition (5 February), and to his deposition he appended sixteen propositions covering the doctrines in controversy. Leon declared that he had only defended the theses for the sake of argument. His chief thought was to prevent them from being qualified as heretical. Notwithstanding these and further admissions, he was forbidden to teach, publicly or privately, the sixteen propositions as reviewed and proscribed.

In 1568, Luis Molina, a Jesuit, brought out, at Lebón, his celebrated "Concordia libri arbitrii cum gratia domini", bearing the censura, or sanction, of a Dominican, Bartolomeo Ferreiro, and, drafted to the Inquisitor General of Portugal, Cardinal Albert of Austria; but a sentiment against its appearance in the Catholic world. The writings, and examination of some of the interdicted propositions. The cardinal, advised of this, stopped its sale, and requested Bañez and probably some others to examine it. Three months later, Bañez gave his opinion that six of the forbidden propositions appeared in the "Concordia". Molina was asked to defend himself, and his answers
to the objections and to some other observations were added as an appendix, with which, sanctioned anew (25 and 30 August, 1589), the work was permitted to circulate. It was regarded as an epoch-making study, and many Fathers of the Society of Jesus rallied to its defence. From Valladolid, where the Jesuits had just taken possession of the Belorado, the schools of Salamanca, public disputations for and against its teaching on grace, the contention spread over all Spain. The intervention of the Inquisition was again sought, and by the authority of this high tribunal the litigants were required to present their respective positions and clariﬁcation. The number of theologians was consulted as to the merits of the strife. The matter was referred however, by the papal nuncio to Rome, 15 August, 1594, and all dispute was to cease until a decision was rendered. In the meantime, to offset his Dominican and other critics, Molina brought counter accusations against Bañez and Zunzel. The latter submitted his defence in three parts, all fully endorsed by Bañez, 7 July, 1596. The Dominican position was set forth about the same time by Bañez and the text of his book presented a separate answer to the charges. But the presiding ofﬁcer of the Inquisition desired these eight books to be reduced to one, and Bañez, together with Pedro Herrera and Didacus Alvarez, was invited to work. About the work, about which Alvarez presented their joint product under the title: “Apologia fratrum predicatorem in provinciæ Hispánicae sacre theologike professorum, adversus novas quasdam assertiones cujusdam doctoris Ludovici Molinae imaginem, dubitatum at Rome, 1585,” it is noteworthy that this work was signed and ratified by twenty-two masters and professors of theology. To it was added a tract on the intrinsic efﬁcacy of Divine grace. Nearly two years later, 28 October, 1597, Bañez resumed the case in a new summary and petitioned the pope to permit the Dominican schools to take up their teaching again on the disputed questions. This was the “Libelli supplex Clementi VIII oblatus pro impræandâ immunitate lege silenter utrique litigantium partì impositâ” published at Salamanca. An answer to the “Libelli” was conveyed in a letter of Cardinal Madruzzi, 25 February, 1598, written in the name of the pope, to the nuncio in Spain: “Inform the Fathers of the Order of Preachers that His Holiness, moved with the prohibition against them the faculty freely to teach and discuss, as they did in the past, the subject-matter of duxitius divina gratia et eorum efﬁcacia, conformably to the doctrine of St. Thomas; and likewise the Fathers of the Society, namely, that they also may teach and discuss the same subject-matter, always holding, however, to sound Catholic doctrine” (Serry, Hist. Cong. de Aux., I, XXVI.). This pronouncement practically ended whatever personal participation Bañez had in the famous controversy.

It has been contended that Bañez was at least virtually the founder of present-day Thomism, especially in so far as it includes the theories of physical premonition, the intrinsic efﬁcacy of grace, and predestination irrespective of foreseen merit. To any reader of Bañez, it is evident that he would have made such a declaration with a strenuous denial. Fidelity to St. Thomas was his strongest characteristic. “By not so much as a finger-nail’s breadth, even in lesser things”, he was wont to say, “have I ever departed from his teaching three words”. He was the ﬁrst for special animadversion the views in which his professors and associates dissent even lightly from the opinions of the Angelic Doctor. “In and throughout all things, I determined to follow St. Thomas, as he followed the Fathers” was another of his favourite assertions for the defence of the controversial teaching could brook no doctrinal novelty, particularly if it claimed the sanction of St. Thomas’s name. In the voluminous literature on the De Auxilia and related controversies, the cardinal tenets of Thomism are ascribed by its opponents to a varied origin. The Rev. G. Schneman, S. J., (Controversiarum de divina gratiae liberisque arbitrarii Concordia v. 1882, p. 153) and the Rev. Father Regnou, S. J. (Bañez et Molina, Paris, 1883) and the Rev. Father Baudier, S. J. (in the Revue des Sciences Écclésiastiques, Amiens, 1887, p. 153) are probably the foremost modern writers who designate the Thomists as Banneziens. But against them appears a fortress, prelates and cardinals who reject that they were either Thomists themselves or authorities for other opinions. Suarez, for instance (Op. omn., XI, ed. Vivès, Paris, 1886; Opusc., I, Lib. III, De Auxilia, vii), credits Medina with the ﬁrst intimations of physical premonition and elsewhere (Op. omn., XI, 50; Opusc. I, Lib. I, De Conc. Dei, xi, n. 6) admits that St. Thomas himself once taught it. Toletus (Comment. in 8 Lib. Aristotelis, Venice, 1573, Lib. II, c. iii, q. 8) and Pererius (Frem. de Disquisit. Magaricum, Lib. VI, 1, 6) to each other and to Leandro the chaplain of the Council of Trent, which was the work (1566) of three Dominican theologians. (For Delrio see Goudin, Philosophia (Civita Vecchia, 1660), IV, pt. IV, 392, Disp. 2, q. 3, § 2.) The Rev. Victor Frie, S. J., gives four months of the time the Rev. Instituto de Cooperazione Dei cum omnî naturâ créatâ presentim liberâ; Responsio ad R. P. Dummermuth, O. P., Paris, 1893) that whilst Medina and Pedro Soto (1551) taught physical predestination, the origin of the doctrine was Francis Victoria (see, e.g., (d. 1546). The Dominicans Ferraresi (1578), Cajetan (1507), and Giovanni Capreolus (d. 1436) are also accredited Thomists in the estimation of such authorities as the Jesuit Becanus (Summa Theol. Schol. Mainz, 1612), De Deo, xviii, no 14) and Azorius (Institut. Moral. Romae, 1600—11), Lib. I, xxi, n. 7) and the theologians of Coimbras (Comment. in 8 libros Phys., Lib. II, q. 13, a 1). Molina, strangely enough, cites the doctrine of a “certain disciple of St. Thomas”—supposedly Bañez—as differing only in words from the teaching of Scotus, instead of agreeing with that of Aquinas (Concordia (Paris, 1876), q. 14, a. 13, Disp. 50). These striking divergences of opinion of which only a few have been cited would seem to indicate that the attempt to father the Thomism was made by the founder himself. The Defensor Dei Thomsone, A. M. Dummermuth, O.P., Louvain and Paris, 1895, also Card. Zglaera, Summa Phil. (Paris, 1898), II, 525.

The development of Thomistic terminology in the Dominican school was mainly due to this exigency, not only of the stand taken against Molina, and the forbidden propositions already mentioned, but of the more important defence against the attacks and aberrations of the Reformers. The “predetermination” and “predestination” of Bañez and his contemporaries, who included others besides Dominicans, emphasized, on the part of God’s knowledge and providence, a priority to, and independence of, future free acts, which, in the Cathaïno-Molinist theories, seemed to them less clearly to fall under the causality connotations as they were interpreted by St. Thomas himself. (Comment, de divinis nominibus, Lect. iii.) The words “physical premonition” were meant to exclude, first a merely moral impulse and, secondly, a concurrence of the Divine causality with the causality of the other causes. That such terms, far from doing violence to the teachings of their great leader, are their true expression, has, of course, been an unvaried tenet of the Thomistic school. One of the presenting ofﬁcers of the Congregation De Auxilia, Cardinal Madruzzi, speaking of the teaching of Bañez: “His teaching seems to be deduced from the princ-
John R. VOLL

BANGOR. See MYSOR.

Bangor, Antiphonary of, an ancient Latin manuscript, supposed to have been originally written at Bangor (Ireland).

The codex, found by Muratori in the Ambrosian Library at Milan, and named by him the "Antiphonary of Bangor" ("Antiphonarium Benchorensis"), was brought to Milan from Bobbio by many other books. Muratori (in his "Materiale di Bibliografia," 1740) states that Bobbio founded the Ambrosian Library in 609. Bobbio, which is situated in a gorce of the Apennines thirty-seven miles north-east of Genoa, was founded by St. Columbanus, a disciple of St. Columgal, founder of the famous monastery at Bangor, on the south side of Belfast Lough in the county of Down. St. Columbanus died at Bobbio and was buried there in 615. This establishes at once a connexion between Bobbio and Bangor, and an examination of the contents of the codex placed it beyond all doubt that it was originally compiled in Bangor and brought thence to Bobbio, not, however, in the time of St. Columbanus. There is in the col. 897 a hymn entitled "ymnum sancti: Complii abbatiae noster," and he is referred to it as "noster patrior Complii sancti." Again there is a list of fifteen abbots, beginning with Comgal and ending with Cronanus who died in 691; the date of the compilation, therefore, may be referred to 680-691. Muratori, however, is careful to state in his preface that the codex, though very old, and in part mutilated, may have been a copy made at Bobbio, by some of the local monks there, from the original service book. It is often, as regards its lectionary, the form of the letters, and the dotted ornamentation of the capital letters, in "the Scottic style," but this, of course, may have been done by Gaelic monks at Bobbio. The actual bearer of the codex from Bangor is generally supposed and stated to have been St. Dungal, who left Ireland early in the ninth century, acquired great celebrity on the Continent, and probably retired to Bobbio towards the close of his life. He bequeathed his books to "the blessed Columbanus," i.e., to his monastery at Bobbio. The antiphonary, however, cannot be found with it. It was named in the catalogue of the books bequeathed by Dungal, as given by Muratori (Antiquitates Italicae Medii Aevi, Milan, 1740, III, 817-824). Here only a summary can be given of the contents of the codex to which the name "Antiphonary of Bangor" is to be not very applicable: (1) six canticles; (2) twelve metrical hymns; (3) sixty-nine collects for use at the canonical hours; (4) special collects; (5) seventy anthems, or versicles; (6) the Creed; (7) the Pater Noster. The most famous item in this context is the venerable Eucharistic hymn "Sancti venite Christi corpus sumite," which is not found in any other ancient text. It was sung at the Communion of the clergy and is headed, "Ymnnum quando comonicanet sacerdotes." A text of the hymn from the old MS. of Bobbio, with a literal translation, is given in "Essays on the Discipline and Constitution of the Early Irish Church," (p. 166) by Cardinal Moran, who refers to it as that "golden fragment of our ancient Irish Liturgy." The Creed in this codex differs in its wording from all other forms known to exist. It is in substance the original Creed of Nicea. It does not contain the ex Patre Filique proculit, but merely states the homousia of the three Persons of the Holy Trinity.

Arthur UA Cleirigh.

Bangor (Bangorium, Bangoriensis), Diocese of, anciently known as Bægæ, situated in Carnarvonshire on the Menai Straits, must be distinguished from Bangor Iseeod also in Wales, and the celebrated Irish monastery of Bangor in County Down. The foundation of the see is traditionally ascribed to St. Daniel or Deiniol (d. 584?) who is stated to have been consecrated by St. Dubricius, or, according to others, St. David. Some writers place his death in 544, others in 554, while the tenth century "Annales Cambriae," (De promellus Anglicus, 1743) does not allow that there were any bishops at all before the coming of the Normans. In 1092 Hervey, a cleric in the court of William Rufus, was consecrated Bishop of Bangor and in the same year was present in that capacity at the
in the assertion of his rights, with the result that bloodshed ensued, and he finally had to take refuge in England, where he was translated to the See of Ely in 1108. The cathedral had been destroyed by the Normans in 1071, but was subsequently rebuilt, though no trace of Norman work remains in the present structure. Anian (1267-1305), who, as Bishop of Bangor, baptized Edward II took the chief part in rebuilding the cathedral. He also drew up the "Missale in usum Ecclesiae Banchorensis" and the "Pontifical" which represent the liturgical books of "the use of Bangor". It again suffered severely in the wars between the English and Welsh during the reign of Henry III, and in 1402 was entirely burnt down by Owen Glendower. There could hardly have been a vigorous diocesan life, for the cathedral and episcopal residence lay in ruins for nearly a century. At length in 1496, a vigorous administrator became bishop in the person of Henry Deane, prior of the Austin canons at Llanthony near Gloucester. He immediately began to rebuild the ruined choir and his work still exists. Besides restoring his cathedral, he was active in regaining the possessions of the see which had been annexed by the more powerful men in the neighbourhood. Unfortunately for Bangor after four years' rule he was in 1500 translated first to Salisbury, and afterwards to Canterbury. He is said to have left his crosier and mitre, both of which are now in Bangor cathedral, to his successor, on condition that he should proceed with the rebuilding.

But neither of the next two bishops, Thomas Pigot, Abbot of Chertsey (1500-03), and John Penny (1504-08), did anything for the fabric. On the translation of Bishop Penny to Carlisle, Bangor was entrusted to Thomas Skevington, or Pape (1509-33), who of all its bishops did most for it. He was Abbot of Beaulieu in Hampshire, and though he did not reside in his see, he showed practical interest in his diocese by completing the cathedral. He rebuilt the entire nave and tower, and presented four bells which were afterwards sold by the first "reforming" bishop. He also rebuilt the episcopal residence. He died in 1533, and after the short episcopates of John Capon (1534-39) and John Bird (1539-41), was followed by Arthur Bulkeley, who resided in the diocese indeed, but who is accused of having neglected it in his own interests. According to the Anglican historian, Godwin, he was struck blind while watching the cathedral bells, which he had sold, being shipped off. But this story is questioned by Brown Willis, the historian of the Welsh cathedrals. Bulkeley died in 1553, and was succeeded by William Glyns (1553-58) the last Catholic bishop.

Since the Reformation the cathedral has continued to serve the Anglican bishops in its old capacity, while also doing duty as the parish church of the town. It is the "gules and argent" of all the cathedrals in England or Wales, being an embattled cruciform structure resembling a good-sized parish church. The diocese consisted of the whole of Anglesea and Carnarvonshire, with the greater part of Merionethshire was removed to the counties Denbigh and Montgomery. There were three archdeaconries, Bangor, Anglesea, and Merioneth. The arms of the see were gules, a bend, or gouty de poix between two mullets, argent.

EDWIN BURTON.

BANGOR, HERMIT OF. See COMGALL, St.

BANGOR ABBEY. — The name of two famous monastic establishments in Ireland and Wales.

(1) The Irish Abbey of Bangor was situated in the County Down, on the southern shore of Belfast Lough. The Irish name of the place is "Bonn," from the Irish word bean, a horn. According to Keating, a king of Leinster once had cattle killed there, the horns being scattered round, hence the name. The place was also called the Vale of Angles, because, says Jocelin, St. Patrick once rested there and saw the valley filled with angels. The founder of the abbey was St. Comgall, born in Antrim in 517, and educated at Cloneneagh and Clonmacnoise. The spirit of monasticism was strong in Ireland to the north of the Lee, and the better to serve God, and with this object Comgall retired to a lonely island. The persuasions of his friends drew him from his retreat; later on he founded the monastery of Bangor, in 559. Under his rule, which was rigid, prayer and fasting were incessant. But these austerities attracted rather than repelled; crowds came to share his penances and his vigils; they also came for learning, for Bangor soon became the greatest monastic school in Ulster. Within the extensive rampart which enclosed its monastic grounds the buildings were expounded, theology and logic taught, and geometry, and arithmetic, and music; the beauties of the pegan classics were appreciated, and two at least of its students wrote good Latin verse. Such was its rapid rise that its pupils soon went forth to found new monasteries, and when, in 601, St. Comgall died, 3,000 monks looked up for light and guidance to the Abbot of Bangor.

With the Danes came a disastrous change. Easily accessible from the sea, Bangor invited attack, and in 824 these pirates plundered it, killed 900 of its monks, treated with indignity the relics of St. Comgall, and then carried away his shrine. A succession of abbots continued, but they were abotts only in name. The lands passed into the hands of laymen, the buildings crumbled, and when St. Malachy, in the twelfth century, became Abbot of Bangor he had to build everything anew. The impress of his seal might have had lasting results had he concluded in this position. But he was promoted to the See of Down, and Bangor remained in a state of desolation. When, after the Dissolution of the Monasteries in the reign of Henry VIII. of England, it was given by James I to James Hamilton, created Viscount Clandeboye, an irregular sur
cession of Catholic abbots was still kept up, the last being Abbot MacCormick, who lived in France, but returning the Reign of the Pope, found a refuge at Maynooth College and died there in the early years of the nineteenth century.

Among the Abbes of Bangor few acquired fame, but many of the students did. Findchuch has his life written in the Book of Lismore; Lusanus founded 100, and Marhagh founded the great School of Lismore. From Bangor Columbanus and Gall crossed the sea, the former to found Luxeuil and Bobbio, the latter to evangelize Switzerland. In the ninth century a Bangor student, Dungal, defended the Church’s interests, and John’s last miracle was performed there. The present town of Bangor is a thriving little place, popular as a seaside resort. Local tradition has it that some ruined walls near the Protestant church mark the site of the ancient abbey; nothing else is left of the palace hallowed by the prayers and penances of St. Malachy and St. Comgall.

(2) The Welsh Abbey of Bangor was situated in Flintshire, not far from Chester, and in the Middle Ages was often confounded with Bangor in Carnarvonshire, which was an episcopal see. The earliest written record of its foundation and its founder’s name are equally uncertain. With great confidence and evident conviction, Montaletemb claims that its founder was St. Itud, or Iltud. But some allowance must be made for French partiality, for Itud was an Angloroman name, and the Welsh may have developed the “Lives of the Cambro-British Saints”; they have been carefully edited by Mr. Rees; and though it is stated that he was an Armoricam, and had been a soldier, and married, before he became a monk, it is not said that he was connected with Bangor. It is more probable that the abbey was founded by Dunawd, a Welshman, whence it was often called Bangor Dunawd. And if St. Deiniol was the son of Dunawd, as it is said, this would fix the foundation of the Flintshire abbey at about the beginning of the sixth century, for Bangor in Carnarvonshire was founded by St. Deiniol in 514. It would also dispose of the assertion that Pelagius, the heretic, was at one time its abbot, for he died long before. It is certain that Bangor was the greatest monastic establishment in Wales, having 2,000 monks. The Angles and Saxons had then conquered Britain and had treated the Britons with great severity. A remnant of these latter found refuge in Wales, where they brooded over their wrongs, and, but for considerable numbers, the Gospel to their conquerors. When St. Augustine came to England, in the last years of the sixth century, he visited the Britons in Wales. Their moral condition was then bad; they clung to the old mode of celebrating Easter, and some errors of doctrine had also crept into their creed. He had a conference with delegates from Bangor, but they refused to co-operate with him in the work of converting the still unconverted English. In punishment, he predicted that, as they refused to preach the way of life to the English, they would at the hands of these same English suffer death. And this came to pass in 603 when Ethelfrid of Northumbria defeated the Britons near Chester. Hearing that the monks of Bangor were praying for his enemies, he turned aside from the battle and put 1,200 of them to death. Extensive ruins of this abbey still remained in the twelfth century, but in Uscher’s time, in the seventeenth century, these ruins had all but disappeared. On the site of the abbey now stands the small town of Bangor-on-the-Dee.

BANIAS. See CEZAREA PHILIPP.E.

BANIM. JOHN and MICHAEL.—JOHN, poet, dramatist, novelist, b. 3 April, 1708, at Kilkenny, Ireland; d. 31 August, 1842. His father, following the double occupation of farmer and storekeeper, was in easy circumstances. John’s talent for literature was early noticed; at ten he wrote some verses and a tale of considerable length. After a preparatory training in private schools he entered Kilkenny College in 1810. Having a taste for painting and drawing he went to Dublin in 1813 to study art. In two years he was back in Kilkenny, became a drawing teacher, and fell desperately in love with one of his pupils, a girl two years his junior. The girl’s father refused his consent, with the result that in two months she died of a broken heart. Her lover almost followed her example. An entire disregard of self at the time is charged upon him. He caused paralysis and left him a victim of spinal disease, which afflicted him almost incessantly and finally caused his death. At the end of a year he set out for Dublin with a literary career in view. It was not long before he made his reputation in the literary world. At only twenty-three years old, he wrote the tragedy “Damon and Pythias”, which was played at Covent Garden with Macready and Charles Kemble in the principal parts. After his marriage, which took place during a visit to his parents, he planned with his brother Michael, “The Tales of the O’Hara Family”. These were to be written in collaboration, each brother to submit his work to the other for revision. As a result, it is impossible to distinguish from internal evidence the work of each. Their ambition was to do for Ireland what Scott, by his Waverley Novels, had done for Scotland—to make their countrymen known with their national traits and national customs and to give a true picture of the Irish character with its bright lights and deep shadows. To London, where he lived for a while, Banim went in 1822 “without friends and with little money to seek his fortune”. The next ten years were a fruitful season, during which he contributed frequently to various periodicals, and produced a considerable number of essays, verses, and novels. But always at the expense of “wringing, agonizing, burning pain”. Writing of this period to his brother, he says: “Of more than twenty known volumes I have written, and treble their quantity in periodicals, no three pages have been penned free from bodily pain”. The little crumbs of comfort he received he generously shared with his countryman, Gerald Griffin, who wrote of his early struggles in London: “What would I have done if I had not found Banim?” In 1829 John Banim was ordered to France in the hope that he might repair his shattered health, but the journey was of no avail. In a few years a stroke of paralysis “deprived him of the use of his limbs and brains”. In 1835 he returned to Kilkenny by slow stages. Dublin and his native city showed him signal honour by demonstrations that moved him deeply. A public appeal for assistance met with such generous response that his financial troubles were ended. The Government, in recognition of his literary work, granted him a pension of £150, and an additional sum of £40 a year for the education of his daughter. His last work was the revision of a story which he had inspired and encouraged his brother to write, “Father Connell”, the picture of his beloved parish priest of Kilkenny. He died in his own Windgap Cottage, just outside

Banjaluca, a novelist, was co-worker with his brother John, b. at Kilkenny, Ireland, 5 August, 1796; d. 30 August, 1874. At sixteen he began the study of law, but soon abandoned it because of business reverses which befell his father. He took upon himself his father's burden and re-established his parents in the circumstances. The little leisure he had in business cares allowed him to make the most of by gathering material for "The Tales of the O'Hara Family". At the urgent request of John, he contributed several of the stories, his first, "Crohoores of the Billhook", being perhaps the most popular of all. But Michael generously kept himself in the background in order to let his younger-brother have all the honour of their joint production. Out of twenty-four volumes he wrote thirteen. Unlike John, however, he was influenced by the circumstances of his countrymen, educationally and economically.

After serving for many years as postmaster of Kilkenny, he died at the age of seventy-eight at Bootstown, not far from Dublin. The principal works of Michael Banim are: "Crohoores of the Billhook", "The Ghost Hunter", "Father Connell", and "The Croppy", a tale of 1798.

The Banims may be justly called the first national novelists of Ireland. They knew their countrymen not as the strange, grotesque caricatures too often portrayed in fiction, but as members of the great human family with noble impulses and generous traits. Their work, however, is not always free from patriotic bias. Their Irishmen have their faults. Though naturally sympathetic, tender-hearted, and forgiving, these typical Celts could become stern, bitter, and revengeful. Ignorance, poverty, and cruelty are shown to exist among the peasantry. But the reader cannot fail to see the cause of all this— the natural working out of religious persecution and political oppression. Criticism has been directed against some of their writings as "harrowing", and "impure". The latter criticism is unfortunately justified; John admitted and regretted it, and Michael stood by preventing one "Nowlans", from being reprinted. As to the "harrowing" elements, which are certainly conspicuous, the brothers answered: "We paint from a people of a land among whom, for the last six centuries, national provocations have never ceased to keep alive the strongest and often the worst passions of our nature". It may be added that, besides their desire to give a true picture of their country, still crippled and prostrate from the effects of the Penal Laws, they were undoubtedly influenced by the Romantic movement, then at its height. A recent edition of the works of the Banims, in ten volumes, which gives a life of John Banim, appeared in New York, 1896.

MURRAY, Life of John Banim (London, 1897); READ, Cabinet of Irish Literature (London, 1901); The Nation and The Freeman's Journal, file; KNOW, Irish Life and Irish Fiction (New York, 1903); Dict. of Nat. Biog.

M. J. FLAHERTY.

Banjaluca, Diocese of, in Western Bosnia, includes some of the most beautiful portions of the province, as the ancient Roman "Laudunium". By the Bull "Ex hac augusta", 5 July, 1851, restoring the Catholic hierarchy in Bosnia, Leo XIII created one archiepiscopal and three episcopal sees, Banjaluca being the first in precedence among the latter. It includes 4 deaneries, 32 parishes, and more than 80,000 faithful. Its first bishop, Mihan Mar- ković, O. S. F., was consecrated 4 May, 1884, but only as Apostolic administrator. His first cathedral was a half-ruined shed, but he afterwards acquired a church near his residence. At present (1907) most of the parishes are held by Franciscans. In the year 1869 was founded at Mariaestern an abbey of Trappists which has already sent out two monastic colonies, to Josephinoburzel and to Marienburg in Bosnia, and another to Zara in Dalmatia. There are hospitals and schools conducted by Sisters of Charity and Sisters of the Precious Blood. In 1900 Banjaluca and Bi-hatch also became a diocese for the so-called Orthodox population, the Metropolitan residing at Banjaluka.

Leoni XIII Acts (Rome, 1882), 288-312; Missiones Catholicae (Rome, 1897), 92-103; Missiones Catholicae (Propaganda, Rome, 1907), 106.

L. PETIT.

Bankruptcy, Civil Aspect of.—Bankruptcy (La banqueroute; earlier English terms, bankruptship, bankrupt- rupcy) in civil jurisprudence as well as in popular signification is the fact of becoming, or the state of being, a bankrupt. In the statute of 1705, 4 Anne, c. XVII, as printed in the same edition, and in the London edition, adopts the present spelling. Being derived from bankrupt, as insolv. principis is, "property of the insolvent", the t of the latter t has been suggested to be an instance of erroneous spelling (Murray, Dict., a. v. "Bankruptcy"). Etymologically, bankruptcy has been said to be made up of the Latin words bancus, "table", and ruptus, "broken", denoting "the wreck or breakup of a trader's business" (Murray, Dict., loc. cit.), "whose shop or place of trade is broken up or gone" (Wharton, Law Lexicon, a. v. "Bankrupt").

Statutory mention of the word bankruptcy seems to be earlier than that of the word bankruptcy, and is first to be found in the title of the English statute of 1542, "against such persons as make bankrupt", a translation, perhaps, of the French "gui font banque route". (Blackstone, Commentaries, Bk. II, c. xxxi, p. 472, Note e). This statute recites that some "persons craftily obtaining into their hands great substance of other men's goods" either flee to parts unknown or keep their houses, not paying "their debts and duties", but consuming "the substance obtained by credit of other men for their own use and pleasure, or the store of such goods, or the rateabley of such persons' assets among their creditors this statute provides a summary method which, to quote Blackstone, is "extra judicial", "allowed merely for the benefit of commerce" (II Commentaries, 477). We learn, however, from the recitals of a statute of 1570 that, notwithstanding the law of 1542 "made against bankrupts", "those kind of persons have and do still increase". And therefore a new definition is made of a debtor who "shall be reputed, deemed and taken for a bankrupt", and subjected to an "extra-judicial" method. Such a debtor, it is enacted, must be a native-born subject or denizen who, being a "merchant or other person using or exercising the trade of merchandise", or seeking his or her trade or living by buying and selling, shall have been guilty of certain specified fraud and concealment. The assets of such a debtor may, pursuant to this statute, be divided rateably among those of the creditors who are native-born subjects. Thus the limitation of the meaning suggested by the explanation cited of its Latin etymology was partially reserved, and thereafter a trader only could be adjudged a bankrupt in England. Debtors who were not traders, and whose means were inadequate to payment of their debts in ordinary course of business were known as insolvents. But statutory def-
nions of persons to be deemed occupied in trade became very comprehensive. Yet with special regard, apparently, for "noblemen, gentlemen and persons of quality" investing in the "East India Company or Guiney Company" and certain other enterprisers in the United States, and traders within any "statutes for bankrupts" is, by a statute of 1662, expressly spared to persons putting in money in these stocks. The circumstance of occupation is, under the present English Bankruptcy Act, inmaterial. Aliens and debtors had been brought within the law by a statute of the year 1623.

By the law of Scotland bankruptcy is not limited to any particular occupation. But according to Scotch law insolvency, that is, inability to pay debts or fulfill obligations, does not become bankruptcy until, in manner determined by statute, this incapacity is publicly acknowledged, and is thus, as expressed in the statute, "notour". The purpose of the English Statutes of 1542 and 1570 did not extend beyond distribution of the bankrupt's property among his creditors. Right of recourse against the debtor by ordinary process of law for any remaining indebtedness these statutes expressly preserved. But by the statute of 1705 a bankrupt, duly surrendering all his effects, and paying over the law, might obtain his discharge from liability for debts theretofore contracted. And more modern statutes permit a debtor himself to institute proceedings in bankruptcy. The Scotch law now permits a "notour bankrupt" to apply for what is termed a decree of cessio bonorum, by which he may be discharged from his debts.

The Constitution of the United States (Art. I, § 6) confers upon Congress power to establish uniform laws on the subject of bankruptcies throughout the United States. Under this provision Congress may disregard any distinction between bankruptcy and insolvency laws, of which laws Chief Justice Marshall remarks (Wheaton's Reports, IV, 194) that the line of partition between them is not so distinctly marked as to enable any person to say with positive precision what belongs exclusively to the one and not to the other class of laws. Originally, however, insolvency laws and bankruptcy laws were prompted by opposite motives; that of an insolvent for a reorganization of his affairs, and of insolvency laws was the relief of insolvent debtors, by affording them a remedy against imprisonment and, in ancient Rome, other penalties. On the contrary, the motive of bankruptcy laws was, as stated before, to place the bankrupt himself in a remedy against dishonest debtors who might possibly not be insolvent, but whose conduct while indebted was deemed to be such as to entitle his creditors to the summary relief which the law "made against 'bankrupts'" afforded. English as well as Roman insolvency laws contemplated the cases of debtors whom ordinary process of law could reach, but the operation of the English statute of 1542 is limited to debtors who make bankrupt and against whom such process was ineffectual, and the statute of 1570 is further limited to traders. The court afterwards established, in the reign of George III, for cases of insolvency was "the Court for relief of insolvent debtors"; but bankrupt laws, remarks Sir Edward Coke, are to be construed "as much at large legal economist, in which under certain circumstances a solvent debtor may by the United States law be pronounced a bankrupt.

Congress has passed four bankruptcy laws; the Act passed 4 April, 1800, which was repealed by Act of 19 December, 1808; the Act of 19 August, 1841, repealed by Act of 3 March, 1843; the Act passed 2 March, 1807, and repealed 7 June, 1878, and the Act of 1 July, 1898, yet (1907) in force.

At the time of the adoption of the United States Constitution a suggestion was rejected that the power of Congress concerning bankruptcy should be confined to merchants and traders. Yet by the Act of 1800 only a merchant or other person resident in the United States, and "continually using the trade of merchandise by buying and selling in gross, or by retail, or dealing in exchange or as a banker, broker, factor, underwriter, or marine insurer" could be adjudged a bankrupt. Voluntary bankruptcy is not mentioned in the Act of 1800, but by the Act of 1841 "all persons" residing in any State, District, or Territory of the United States owing debts not incurred through defalcation as a public officer or in a fiduciary capacity might apply to become voluntary bankrupts. Involuntary bankruptcy was still restricted to merchants and certain other classes of business men. The Act of 1867 provided for both voluntary and involuntary bankruptcy without regard to the debtor's occupation. By the Act of 1866, the several District Courts of the United States, the Supreme Court of the District of Columbia, the District Courts of the several Territories, and the United States Courts in the Indian Territory and the District of Alaska are made courts of bankruptcy. A person is within this Act insolvent whose proper
ty (exclusive of property wrongfully conveyed, transferred, concealed, or removed) is at a fair valuation insufficient to pay his debts. Any natural person or unincorporated company or business corporation as defined in the Act, and owing at least one thousand dollars (except certain natural persons as specified), may be adjudged an involuntary bankrupt. Proceedings in involuntary bankruptcy are to be instituted by petition filed within four months after an act of bankruptcy. Such an act consists in conveying, transferring, concealing, or removing, or permitting to be conveyed or transferred, any of the debtor's property with intent to hinder, delay, or defraud his creditors or any of them; or in transferring while insolvent any property with intent to prefer a creditor or creditors; or in suffering or permitting, while insolvent, any creditor to obtain a preference through legal proceedings or in not having such preference vacated or discharged. So a general assignment for benefit of creditors and certain proceedings under Insolvent Laws, or application of a referee, for the purpose of a voluntary bankruptcy. On the other hand, "any qualified person", namely, any person who owes debts provable in bankruptcy (except a corporation) "may file a petition to be adjudged a voluntary bankrupt". The courts are to be divided among the creditors, and the court of bankruptcy is empowered to grant him a discharge, that is, a "release... from all of his debts which are provable in bankruptcy, except such as are excepted by this Act".

The power conferred on Congress by the Constitution does not wholly remove the several States of the Union from passing bankruptcy laws. A State may enact such laws conclusive as to the rights of its own citizens, provided such laws do not impair the obligation of contracts within the means of the Constitutions, nor conflicts with an existing Act of Congress establishing a uniform system of bankruptcy.

So far we have considered our subject from a legal point of view. From the point of view of the economic regulator, it is necessary to know what laws are of great importance. For cost of production of goods includes risk of bad debts, and therefore laws lessening this risk decrease the cost of production. John Stuart Mill concludes that most cases of individual insolvency are the result of an accident. But the occurrence of many business failures in a community at any period is a warning or symptom of "the politico-economic disease" which econo-
Bankruptcy, Moral Aspect of.—Bankruptcy must be considered not only from the legal but also from the moral point of view; for sound mo- rality prescribes that debts must be paid. But a man who becomes bankrupt proclaims his in- ability to pay his debts in full as they become due. Such an acknowledgment does not now entail the penalty of slavery or of imprisonment as of old; the law takes possession of his property and disposes of it as it sees fit. He must be able to pay all to pay his creditors in full, there is an end of the matter, justice and conscience are satisfied. If, however, as is usually the case, the creditors only receive a portion of what is due to them, they have not disposed of the bonds, and if he is the voluntary cause of that loss, he is morally to blame as the cause of injustice to his neighbour. There is no moral blame attributable to a man who through misfortune and by no fault of his own has become bankrupt and unable to pay his debts. But if bankruptcy has been brought about by the debtor’s own fault, he must be con- demned in the court of morals, even if he escape without punishment in a court of law. Bankruptcy may be the result of one’s own fault in a great variety of ways. Living beyond one’s means, negligence or imprudence in the conduct of business, spending in betting and gambling money which is due to creditors are frequent causes of debtors appearing in the bankruptcy court. All which cause termite strategy and moral guilt, in proportion to the bankruptcy’s ad- vertence to their probable consequences, and the voluntariness of his action.

Breaches of the moral law are also committed in a great variety of ways in connexion with the bankruptcy itself. The benefit of the law is ex- tended to the bankrupt debtor if he faithfully complies with all its just requirements. To do this then is a matter of conscience. He is bound to make the law which was violated is, to surrender it all for the benefit of his creditors. He may indeed retain what the law allows him to re- tain, but nothing else, unless the law makes no provision at all for him, and the result of surrendering everything would be to reduce himself and those dependent on him to destitution. Such a result, however, must not be readily presumed in the case of modern bankruptcy which is humane in its treatment of the unfortunate debtor and makes what provision is necessary for him. It is obvious that it is against Nature and against justice for an insolvent debtor to trans- fer some of his property to his wife or to a friend, who will keep it for him till the storm blows over, so that the creditors cannot get at it. In the same way a debtor is guilty of dishonesty and fraud if he hide or remove some of his property, or if he allow a fictitious debt to be proved against the estate.

Loss is caused the creditors and injustice is com- missioned by an insolvent debtor who continues to trade after the time when he fully recognizes that he is insolvent, and that there is no reasonable hope of recovering himself. He may continue to pay what debts he can as they become due if payment is demanded by his creditors, and he may make current payments for value received. But if in contemplation of bankruptcy he pays some creditor in full with a view to giving that creditor a preference over the others, he becomes guilty of a fraudulent preference. Bankruptcy law indeed has described the principle that no one shall be paid in full, but it lays down that the rest must be paid ratably among the creditors without favour to any. If a bankrupt through favour pays a creditor in full, while the others have in consequence been satisfied with less, he is guilty of fraud. This is not only the case if such payment is made after the petition in bankruptcy
BANNs

as been presented, but also if it is done within a certain period, fixed by law, before the presentation of the petition. In Great Britain this period is three months, in the United States it is four months previous to the adjudication. Laws forbidding such preferential payments are just, and they should be observed. If they have been violated, and the last resort is the ecclesiastical courts, such payments may be recovered by the trustees in bankruptcy or the official receiver. However, although fraudulent preferences are contrary to positive law, it is not clear that they are against natural justice so as to impose on the guilty parties an obligation in conscience from any order of the court to make restitution. The question is disputed among theologians, and some maintain that no obligation to make restitution can be imposed, apart from a positive order of the court, inasmuch as after all the preferred creditor has only got what belonged to him.

If the conduct of the bankrupt with reference to his bankruptcy has been such as the law requires, the court grants him a discharge; otherwise he will be charged with disabilities as an unexcused bankrupt. Some special debts and obligations are not affected by the discharge, and even with regard to those which it does affect, the question arises whether an absolute discharge extinguishes the debt, or merely suspends it (Cap. xi., c. v), and ceased only when, in the fifth and succeeding centuries, owing to the development of the parochial system, it became the duty of the parish priest to prevent invalid or illicit marriages, in which case the marriage might be null and void. Reputable parishioners (Capitula Caroli imp. ad an. 802, ed. Boretius in Mon. Germ. Hist.: Leges, i, 98.) The publication in the church of the names of persons intending marriage seems to have originated in France about the end of the sixteenth century, and was already a custom of the Gallican Church in 1215, when Innocent III mentions it in a letter to the Bishop of Beauvais (c. 27, x, iv, 1). In the same year the Fourth Lateran Council made it a general ecclesiastical law (c. 3, x, De clandest. desponsat., iv, 3.) The Council of Trent confirmed this law, and specified to a certain extent the manner of its execution. It must be noted that by the council's own special act its marriage decree "Tametsi", with its provision for the bans (see CLANDESTINSITY), is binding only in those parishes in which it has been severally promulgated; hence, when such formal promulgation is lacking the obligation of proclaiming the bans rests not on the Tridentine law, but on the earlier Lateran canon, also on local or particular ecclesiastical legislation. In England the First Council of Westminster provided (xxii, 2) that the law of publishing in the church the bans of marriage must be observed, but made no provision for the manner and time of introducing the practice (Taunton). In the United States the Sixth Provincial Council of Baltimore recommended the bishops of the province to introduce the law of the bans as laid down by the Council of Lateran and Trent (justa mensum concilii Lateranensis et Tridentini). The First Plenary Council of Baltimore (1852) decreed (no. 38) that after Easter of 1853 the bans should everywhere be published, and dispensation given only for very grave reasons. The Second Plenary Council (1866) confirmed the above (nos. 331-338) and declared the law a very useful one and already received by custom (sudum disciplina jam usus recepta). According to Zetelli (Apparatus juris eccl., 403), at least one publication should be made in those regions and parishes in which the marriage decree of the Council of Trent has been published; if Tomaszek remarks (p. 146, n. 14) that the pre-Tridentine or Lateran law demanded no more than one publication. It is of some interest to note that by a decree of the Sacred Congregation of the Inquisition (14 June, 1703) the French missionaries in Canada were obliged to publish the bans for their savage converts.

BANNs

T. SLATER.

Banns of Marriage (Lat. bannum, pl. banna, from an Old English verb, bannan, to summon), in which are published the names of persons contemplating marriage. Its object is to discover any impediments to a proposed marriage incidentally, it makes known to all duly interested in the latter the fact of its near celebration. The subject will be treated under the following heads: I. History; II. Tridentine Legislation; III. The Mode of Publication; IV. Denunciation of Impediments; V. Sanctions; VI. Dispensation from Banns; VII. Non-Catholic Usage; VIII. Civil Law.

I. History.—From the beginning of Christian society the marriage of its members was looked on as a public religious act, subject to ecclesiastical control (Tertull., "De monog.", c. xi; "De pudicitia", c. iv). The obligation of making known to the bishop all proposed marriages dates as far back as the beginning of the second century (Tertull., "De monog.", c. v), and ceased only when, in the fifth and succeeding centuries, owing to the development of the parochial system, it became the duty of the parish priest to prevent invalid or illicit marriages, in which case the marriage might be null and void. Reputable parishioners (Capitula Caroli imp. ad an. 802, ed. Boretius in Mon. Germ. Hist.: Leges, i, 98.) The publication in the church of the names of persons intending marriage seems to have originated in France about the end of the sixteenth century, and was already a custom of the Gallican Church in 1215, when Innocent III mentions it in a letter to the Bishop of Beauvais (c. 27, x, iv, 1). In the same year the Fourth Lateran Council made it a general ecclesiastical law (c. 3, x, De clandest. desponsat., iv, 3.) The Council of Trent confirmed this law, and specified to a certain extent the manner of its execution. It must be noted that by the council's own special act its marriage decree "Tametsi", with its provision for the bans (see CLANDESTINSITY), is binding only in those parishes in which it has been severally promulgated; hence, when such formal promulgation is lacking the obligation of proclaiming the bans rests not on the Tridentine law, but on the earlier Lateran canon, also on local or particular ecclesiastical legislation. In England the First Council of Westminster provided (xxii, 2) that the law of publishing in the church the bans of marriage must be observed, but made no provision for the manner and time of introducing the practice (Taunton). In the United States the Sixth Provincial Council of Baltimore recommended the bishops of the province to introduce the law of the bans as laid down by the Councils of Lateran and Trent (justa mensum concilii Lateranensis et Tridentini). The First Plenary Council of Baltimore (1852) decreed (no. 38) that after Easter of 1853 the bans should everywhere be published, and dispensation given only for very grave reasons. The Second Plenary Council (1866) confirmed the above (nos. 331-338) and declared the law a very useful one and already received by custom (sudum disciplina jam usus recepta). According to Zetelli (Apparatus juris eccl., 403), at least one publication should be made in those regions and parishes in which the marriage decree of the Council of Trent has been published; if Tomaszek remarks (p. 146, n. 14) that the pre-Tridentine or Lateran law demanded no more than one publication. It is of some interest to note that by a decree of the Sacred Congregation of the Inquisition (14 June, 1703) the French missionaries in Canada were obliged to publish the bans for their savage converts.
II. TRIDENTINE LEGISLATION.—In order to check the increase of clandestine marriages, the Council of Trent decreed (Sess. XXIV, De ref. matr., c. i) that before the celebration of any marriage the names of the contracting parties should be announced publicly three times in the church during the solemn Office of Mass by their own priests, or by a priest on three consecutive Holy Days (Waterthorp, The Canons and Decrees of the Sacred and Ecumenical Council of Trent, London, 1848, 196 sqq.). Such publication, of course, can be made only at the request of the parties themselves, and after they are aware of their mutual free consent. Moreover, the parish priest cannot refuse to publish the banns except for reasons stated in the canon law. If the contracting parties refuse to consent to the publication of the banns, the parish priest cannot assist at their marriage, and where the Tridentine legislation does not obtain he is bound to warn them not to attempt marriage elsewhere. In course of time this Tridentine decree has given occasion to more specific interpretation, regularly and primarily applicable, where the decree has been promulgated

Among the more important authentic decisions are the following: The proper (own) parish priest of persons intending marriage is he in whose parish both (or one of the contracting parties has a true domicile, i.e. a fixed residence or one that can be legally construed as such. When both parties permanently reside in the same parish no difficulty can arise as to the parish priest whose right and duty it is to publish the banns. But it may happen that one party resides in another parish, or that both parties have each more than one domicile or quasi-domicile, in which case the publication of the banns should occur, regularly speaking, in every parish where at the time of the marriage the parties reside. The quasi-domicile or quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.) It may be noted here that while in general a quasi-domicile is acquired by actual residence in a place with the intention of remaining there the greater part of the year, in England and in the United States the law presumes a quasi-domicile from one month's residence of either party in the place of the marriage. (S. Congr. Inv. to the bishops of England and the United States, 7 June, 1867; see also its decree of 5 May, 1858, Sec. 2 of the same).

The case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.) In the case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.)

In Germany and Austria this is also customary in some places and in such cases the feast days (dies festi) may be Sundays or other feasts of obligation. Custom has in many places exempted Christmas, Easter, and Pentecost. It is also customary to some places to proclaim the banns on suppressed feast days, also when there occasions a considerable attendance of people in the church. (S. Congr. Inv., 25 October, 1868; 29 April, 1823). The banns are published regularly at the parish or principal Mass, though the publication may occur at any other Mass on the prescribed days, nor is it required that such publication be repeated at more than one Mass on the aforesaid days. By a rescript of the Congregation of Propaganda the Roman Catholic Apostolic Church of India were permitted to publish the banns in places where it is provided that the banns shall not be published on two immediately consecutive feast days; similarly that the marriage shall not take place on the day of the last publication (particularly if it is the only day on which the contracting party lives within the jurisdiction). Ecclesiastical law does not forbid the marriage on the day of the third publication. The period for which the publication of the banns is valid depends on local ecclesiastical authority and custom. The Roman Ritual (Tit. vii, n. 11) fixes a limit of two months, but leaves the bishop free to act as prudence dictates. The Second Provincial Council of Quebec (1863) established a period of two months. In practice the period varies from six weeks to six months. It may be added that the marriages of members of royal houses (matrimonium principum) are by custom exempted from publication of the banns.

III. MODE OF PUBLICATION.—The parish priest or his representative (vicar, curate) announces in an accessible place a public notice, called the public information, for each of the contracting parties the baptismal and family name, names of parents, place of birth or residence, age, condition (single or previously married, and according to the Roman Ritual, loc. cit., n. 13, the name of the woman's former husband). It should also be stated whether the actual proclamation is the first, second, or third, and whether there will be a dispensation from further publications. The priest adds that a serious obligation rests on every one to reveal to him any known impediment to the proposed marriage. The priest, if he thinks fit, is expected to keep a record or register of all publications of banns made by him, also the certificates of publications made at his request in other parishes, the fact and consequences of which he is entitled to know.

IV. DENUNCIATION OF IMPEDIMENTS.—Whoever is morally certain either by his own knowledge or through reliable persons, of an impediment (e.g. consanguinity, affinity, previous marriage) to an intended marriage, is in conscience bound to reveal it to the parish priest (9 November, 1958) provides that anywhere a mere residence of six months shall constitute a quasi-domicile. In the case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.) In the case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.)

In Germany and Austria this is also customary in some places and in such cases the feast days (dies festi) may be Sundays or other feasts of obligation. Custom has in many places exempted Christmas, Easter, and Pentecost. It is also customary in some places to proclaim the banns on suppressed feast days, also when there occasions a considerable attendance of people in the church. (S. Congr. Inv., 25 October, 1868; 29 April, 1823). The banns are published regularly at the parish or principal Mass, though the publication may occur at any other Mass on the prescribed days, nor is it required that such publication be repeated at more than one Mass on the aforesaid days. By a rescript of the Congregation of Propaganda the Roman Catholic Apostolic Church of India were permitted to publish the banns in places where it is provided that the banns shall not be published on two immediately consecutive feast days; similarly that the marriage shall not take place on the day of the last publication (particularly if it is the only day on which the contracting party lives within the jurisdiction). Ecclesiastical law does not forbid the marriage on the day of the third publication. The period for which the publication of the banns is valid depends on local ecclesiastical authority and custom. The Roman Ritual (Tit. vii, n. 11) fixes a limit of two months, but leaves the bishop free to act as prudence dictates. The Second Provincial Council of Quebec (1863) established a period of two months. In practice the period varies from six weeks to six months. It may be added that the marriages of members of royal houses (matrimonium principum) are by custom exempted from publication of the banns.

III. MODE OF PUBLICATION.—The parish priest or his representative (vicar, curate) announces in an accessible place a public notice, called the public information, for each of the contracting parties the baptismal and family name, names of parents, place of birth or residence, age, condition (single or previously married, and according to the Roman Ritual, loc. cit., n. 13, the name of the woman's former husband). It should also be stated whether the actual proclamation is the first, second, or third, and whether there will be a dispensation from further publications. The priest adds that a serious obligation rests on every one to reveal to him any known impediment to the proposed marriage. The priest, if he thinks fit, is expected to keep a record or register of all publications of banns made by him, also the certificates of publications made at his request in other parishes, the fact and consequences of which he is entitled to know.

IV. DENUNCIATION OF IMPEDIMENTS.—Whoever is morally certain either by his own knowledge or through reliable persons, of an impediment (e.g. consanguinity, affinity, previous marriage) to an intended marriage, is in conscience bound to reveal it to the parish priest (9 November, 1958) provides that anywhere a mere residence of six months shall constitute a quasi-domicile. In the case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.) In the case of unsettled persons possessed of no domicile (sect) the banns are published (with episcopal permission) where the quasi-domicile, quasi-domicile. (See Domicile, PARISH PRIEST, MARRIAGE.)
and he may also punish similarly the witnesses to the marriage. Should later on an impediment be discovered that renders the marriage null and void, they cannot hope, by the strict letter of the law, to obtain a dispensation, nor can they hope to have their marriage annulled. The priest considers the legitimacy of their children. The bishop is empowered by the law to inflict on the offending parish priest, besides other punishments, three years' suspension from his office; it is worth noting that a similar sanction was meted out by the fourteenth century canon law of England (Lindwood's Provinciale, Oxford ed., 1679, p. 271).

VI. Dispensation from Banns.—The Council of Trent allows the bishop to dispense with the publication of the banns, provided there be a sufficient reason; one such is indicated by the Council itself, i.e., fear of a malicious thwarting of the intended marriage. The vicar-general, vicar capitular, and administrator of a diocese may also dispense from the banns. In case the contracting parties belong to different dioceses, the permission of one bishop (usually the one in whose diocese the marriage takes place) is held sufficient by many canonists. In some countries, as in Bavaria, a mutual understanding to this effect exists. The bishop may also allow the dispensation to be made to the parties in absentia, as in two publications. In many dioceses the parish priest is specially authorized to dispense from the banns for death-bed marriages; elsewhere this authority is delegated to the dean or the more centrally located parish priest. The parish priest may himself decide that the obligation of asking a dispensation no longer exists for him, i.e., in cases of urgent necessity when, on the one hand, he cannot reach the bishop and, on the other, the reasons are such that the latter would be bound to grant the dispensation. In all cases where the double publication is dispensed with, the contracting parties are regularly required to take the oath before the bishop (Juramentum de statu libero) that they are not previously betrothed or married, and that they know of no impediment to their marriage (Clement X, Cum Altiss, 21 August, 1670; Ballerini-Palmieri, VI, 716-718).

By a decision of the Congregation of the Inquisition (8 August, 1900) the bishop may delegate to the parish priest the performance of this duty. The banns are always published, that is, in the public cemetery (Stegmüller, 489) and secret marriages i.e., regularly performed in the church, but behind closed doors, and the record of which, together with the pertinent baptisms, is kept in a special book in the corresponding diocese (Ballerini-Palmieri, op. cit., VI, 778). Dispensation from all the banns is regularly granted only for a very urgent reason; less urgent reasons suffice for a dispensation from two publications or from one. Among the reasons recognized by the law, other than that mentioned by the Council of Trent, are: notable difference of age, or condition of life; peril of the good name of either party; the approach of Advent or Lent. When marriage cannot be solemnized; notable temporal or spiritual detriment; imminent departure of the bridegroom or bride. The priest usually charges a fee to cover the clerical expenses; it being forbidden to make any charge for the dispensation itself (S. Cong. of Propaganda to the bishops of Ireland, 12 February, 1821; cf. its decree of 1750; also the Encyclical Letter Ex auditibus S. Cong. Prop. Fid., Rome, 1803, 1221). At times the parish priest collects a fee for the publication of the banns (von Scherer, 147); it is reckoned as one of his jurors stoles, or casual sources of revenue.

VII. Non-Catholic Usage.—The Orthodox Greek Church dispenses the banns in similar cases on the other hand, for every marriage the Greek priest requires regularly a special permission of the bishop; at Constantinople and in other archiepiscopal churches this permission is granted through the Chartophylax. As the presence of the priest is essential to the validity of a Greek marriage, clandestine unions are practically impossible. (For the Uniat Greeks in the Turkish Empire see the fifteenth-century canon law of England (Lindwood's Provinciale, Oxford ed., 1679, p. 271).) In the Church of England the publication of the banns is a normal preliminary of marriage, both by ecclesiastical law and, as explained below, by civil statute. The Book of Common Prayer directs that the banns of all who are to be married shall be published on at least eleven Sundays or Holy Days during the time of the morning service or of evening service (if there be no morning service) immediately after the second lesson. The form of publication is analogous to Catholic usage, and if the parties reside in different parishes, the banns must be published in both.

VIII. The Civil Law of Banns.—In several European countries the civil law insists by its own authority on the publication of banns; in Austria, for instance, all marriages must be registered in at least one public register. In the parishes of both contracting parties, are declared invalid by the Civil Code (Vering, 626, note 23; Von Scherer, 161). In England, until 1753, there was no statutory publication of the banns; in that year was passed a marriage act, known as Lord Hardwicke's Act (26 Geo. II, c. xxxiii), which provided, among other essentials, that in the future the true names of all persons intending marriage should be published in the church, otherwise the marriage would be null and void. It was, however, expressly provided that the act should not apply across the seas; hence it never became a part of the English Common Law as received in the United States. The actual civil legislation in England dates mostly from the reign of George IV and William IV, and relieves Catholics and Dissenters from the obligation of having their banns published in the churches of the Established Church, as was the case after the passing of Lord Hardwicke's Act, though in other respects, and with considerable modifications, it is similar to the practice in the Church of England; in substance it is the Tridentine decree. According to actual English statute legislation, a marriage in the Church of England is invalid without a previous due publication of the banns to the license from the parish register; this licence is granted only within the church of the parish in which one of the parties shall have resided for fifteen days before the marriage. The true names of the parties must be published in an audible voice on three successive Sundays at the morning service after the second lesson, in the church of the parish in which the parties dwell, or with the bishop's consent, in a public chapel. The officiating clergyman is entitled to demand seven days' notice of the intended publication, with the names of the parties, place of abode, and the time and place the parties have fixed, but at the dissent of parents or guardians renders null and void the publication of the banns of minors. The banns or licence are valid for a period of three months only. It is to be noted that the omission of the banns or licence is thenullity and the marriage is null and void. In Scotland and Ireland, as the law is known and willful. Non-Anglicans (Jews and Quakers excepted, as otherwise provided for) are freed from the obligations of banns or ecclesiastical license, but they must give notice to the registrar of the district within which the parties have fixed, or fail to have one appointed. The notice is published in a marriage notice book open to public inspection at all seasonable times, and thereafter suspended for
twenty-one days in some conspicuous place in the registrar's office, and accompanied by a declaration as to the absence of impediments, necessary consent of parents or guardians, etc. ("Encyclopedia of the Laws of England", London, 1897, I, 1-3; "American Law Dictionary", 2d ed., Philadelphia, 1901, XIX, 1190-93; Philimore, "Ecclesiastical Law of the Church of England", 2d ed., London, 1895, II, 580 sqq.). For the publication of banns in the (Protestant) churches of Ireland and Scotland see W. P. Eversley, "The Law of the Domestic Relations", London, 1885, in passes verbatim. In the United States a license to marry must be obtained by the contracting parties; in Delaware and Ohio publication of the banns is equivalent to a license (H. J. Desmond, The Church and the Law, Chicago, 1898, 86). In all the provinces of the Dominions of Canada, publication of the banns is required in default of a license to marry. In the Province of Quebec, in default of a license issued to non-Catholics, the publication of the banns is required on three Sundays or Holy Days with reasonable intervals, at morning service, or if none, at an evening service. If the parties belong to different churches, these publications must take place in each church. They must contain the names, surnames, qualities or occupation and domicile of the parties to be married, and whether either of age or not. The surnames, occupations, and domicile of their fathers and mothers, and the name of the former husband or wife. A certificate of due publication of the banns is also required before the marriage, and mention is made of it in the Act of Marriage; this certificate must be signed by the person who published the banns, and must contain all the above details stated in the banns themselves. This certificate is not required if the banns were published by the same person who performed the marriage. If the actual domicile of six months in the place of publication, the latter must occur in the place of last domicile in Lower Canada, or if out of Canada the officer must ascertain that no legal impediment exists. If the parties are under the authority of others the publication must take place in the domicile of such authority (R. S. Weir, The Civil Code of Lower Canada, Montreal, 1898, Nos. 57, 58, 130-134). In France the civil code prescribes the publication on two distinct Sundays of the names, occupations, surnames, and names of parents of persons intending to marry. The marriage cannot take place until three days after the second publication; if a year is allowed to elapse there must be a fresh publication of the banns. Marriages contracted abroad between French subjects, or between a French subject and a foreigner, but according to foreign law, are recognized in France. The publication of the banns, however, cannot be omitted under pain of invalidating the marriage.

Banquet, Eucharistic. See Eucharist, Symbolism of.

Bapt, John, Jesuit missionary and educator, b. at Le Roché, Fribourg, Switzerland, 17 December, 1815; d. at Mount Hope, Maryland, U. S. A., 2 November, 1887. At twelve he began his studies at the college of Fribourg, and on 30 September, 1835, entered the novitiate of the Society of Jesus. He was ordained priest, 31 December, 1842, after the usual course of studies abroad. He arrived in New York in 1848 and, though ignorant of both English and Indian, was sent to minister to the Indians at Old Town, Maine. The inhabitants received him with every demonstration of joy, but he found them in every deplorable manner condition. They had been without a priest for twenty years, and he laboured zealously for their reformation. He founded several temperance societies in Maine. In 1850 he left Old Town for Eastport. His work immediately began to attract attention, both for its results among Catholics and the number of converts who were brought into the Church. As his missions covered a large extent of territory, he became generally known through the State. When the Know-Nothing excitement broke out he was at Ellsworth. Besides being disliked as a Catholic priest, he was particularly obnoxious because of his efforts to establish a Catholic school there. On 3 June his house was attacked, and on 6 June, 1854, in pursuance of an order of the Town Council, which he had directed, also the Mexican War, he was dragged out of the residence of one of his people, was tarred and feathered, and ridden on a rail to the woods outside the town, and ordered to leave the neighborhood. Some accounts have it that there was an attempt to burn him to death, which, for some reason other, was prevented. He recovered from his injuries and continued his work. The outrage at Ellsworth met with general condemnation. Father Bapté built the first church at Bangor, which was dedicated in 1838. The parties had an actual domicile of six months in the place of publication, the latter must occur in the place of last domicile in Lower Canada, or if out of Canada the officer must ascertain that no legal impediment exists. If the parties are under the authority of others the publication must take place in the domicile of such authority (R. S. Weir, The Civil Code of Lower Canada, Montreal, 1898, Nos. 57, 58, 130-134). In France the civil code prescribes the publication on two distinct Sundays of the names, occupations, surnames, and names of parents of persons intending to marry. The marriage cannot take place until three days after the second publication; if a year is allowed to elapse there must be a fresh publication of the banns. Marriages contracted abroad between French subjects, or between a French subject and a foreigner, but according to foreign law, are recognized in France. The publication of the banns, however, cannot be omitted under pain of invalidating the marriage.

Baptism, one of the Seven Sacraments of the Christian Church, frequently called the "door of sacrament", the "door of the sacraments", and the "door of the Church".

I. Authoritative Statement of Doctrine.—At the outset we think it advisable to give two documents which express clearly the mind of the Church on the subject of baptism. They are valuable, also, as containing a summary of the main points to be considered in the treatment of this important matter. Baptism is defined positively in the one and negatively in the other. (a) The positive document is that commonly designated as "The Decretals of the Armenians" in the Bull "Exultate Deo" of Pope Eugene IV. It is often referred to as a decree of the Council of Florence. While it is not necessary to hold this decree to be a dogmatic definition of the matter in hand, and much less an undertaking a practical instruction, emanating from the Holy See, and as such, has full authenticity in a canonical sense, that is, it is authoritative. The decree speaks thus of Baptism: "Holy Baptism holds the first place among the sacraments, because it is the door of the spiritual life: for by it every individual is made members of Christ and incorporated with the Church. And since through the first man death entered into
all, unless we be born again of water and the Holy Ghost, we cannot enter into the kingdom of Heaven, as Truth Himself has told us. The matter of this sacrament is true and natural water; and it is indifferent whether it be cold or hot. The form is: I baptize thee in the name of the Father and of the Son and of the Holy Ghost. We do not, however, deny that the words: Let this servant of Christ be baptized in the name of the Father and of the Son and of the Holy Ghost; or This person is baptized by name in the name of the Father and of the Son and of the Holy Ghost, constitute true baptism; because since the principal cause from which baptism has its efficacy is the Holy Trinity, and the instrumental cause is the minister who confers the sacrament exteriorly, then if the act exercised by the minister be expressed, together with the invocation of the Holy Trinity, the sacrament is perfect. The minister of this sacrament is the priest, to whom it belongs to baptize, by reason of his office. In case of necessity, however, not only a priest or deacon, but even a lacon or woman, nay, even a pagan or heretic can baptize, provided he observes the form used by the Church, and intends to perform what the Church performs. The effect of this sacrament is the remission of all sin, original and actual, likewise of all sin, original or actual, of the faithful, washed away by the blood of Christ; and it is therefore the death and resurrection of the soul, that is, the remission of all sins, with the grace of the Holy Spirit poured upon the body. Many other terms have been used as descriptive synonyms for baptism both in the Bible and Christian antiquity, as the laver of regeneration, illumination, the seal of God, the water of eternal life, the sacrament of the Trinity, etc. (cf. Bingham, Antiq. Eccl., IV). In English, the term christen is familiarly used for baptism. As, however, the former word signifies only the effect of baptism, that is, to make one a Christian, but not the manner and act, moralists hold that "I christen" could probably not be substituted validly for "I baptize" in conferring the sacrament (Sabbetti, n. 657; Lehmkuhl, n. 68; Amer. Eccl. Rev., V, 1).

III. DEFINITION.—The Roman Catechism (Ad parochos, De bap. 2, 2, 5) defines baptism thus: Baptism is the sacrament of regeneration by water in the word (per aquam in verbo). St. Thomas Aquinas (III, Q. lxvi, a. 1) gives this definition: "Baptism is the external ablution of the body, performed with the prescribed form of words." Later theologians generally distinguish between the verbal metaphysical act and the metaphysical essence of this sacrament. By the former they understand the formula expressing the action of ablution and the utterance of the invocation of the Trinity; by the latter, the definition: "Sacrament of regeneration.`" The former is the washing with water (matter), accompanied by the invocation of the Holy Trinity (form). Baptism is, therefore, the sacrament by which we are born again of water and the Holy Ghost, that is, by which we receive a new and spiritual life, the dignity of adoption as sons of God and heirs of God's kingdom.

IV. TYPES.—Having considered the Christian
meaning of the term “baptism”, we now turn our attention to the various rites which were its forerunners before the New Dispensation. Types of this sacrament are to be found among the Jews and Gentiles, as in the Mosaic system the Old Law was taken by circumcision, which is called by some of the Fathers “the laver of blood” to distinguish it from “the laver of water”. By the rite of circumcision, the recipient was incorporated into the people of God and made a partaker in the Messianic promises. The laver was born out of the return and he was reckoned among the children of Abraham, the father of all believers. Other forerunners of baptism were the numerous purifications prescribed in the Mosaic dispensation for legal uncleannesses. The symbolism of an outward washing to cleanse an invisible blemish was made very familiar to the Jews by their sacred ceremonies. But in addition to these more direct types, both the New Testament writers and the Fathers of the Church find many mysterious forewarningsof baptism. Thus St. Paul (1 Cor., x) adduces the passage of Israel through the Red Sea, and St. Peter (1 Pet., iii) the Deluge, as types of the purification to be found in Christian baptism. Other foreshadowings of the sacrament are found by the Fathers. The baptism of Noah, but in the Jordan, and the brooding of the Spirit of God over the waters, in the rivers of Paradise, in the blood of the Paschal Lamb, during Old Testament times, and in the pool of Bethsaida, and in the healing of the dumb and the blind in the New Testament.

How natural and expressive the symbolism of exterior washing to indicate interior purification was recognized to be, is plain from the practice also of the heathen systems of religion. The use of lustral water is found among the Babylonians, Assyrians, Egyptians, Greeks, Romans, Hindus, and others. A closer resemblance to Christian baptism is found in a form of Jewish baptism, to be bestowed on proselytes, given in the Babylonian Talmud (Dollinger, First Age of the Church). But above all must be considered the baptism of St. John the Precursor. John baptized with water (Mark, i) and it was a baptism of penance for the remission of sins (Luke, iii). While, then, the symbolism of the sacrament instituted by Christ was not new, the efficacy which He joined to it is that which differentiates it from all its types. John’s baptism did not produce grace, as he himself testifies (Matt., iii) when he declares that he is not the Messiah whose baptism is to confer the Holy Ghost. Moreover, it was not John’s baptism that remitted sin, but the penance that accompanied it (Matt., xii). Augustine, in De Civitate Dei (Donat., V) “a remission of sins in hope”. As to the nature of the Precursor’s baptism, St. Thomas (III, Q. xxxviii, a. 1) declares: “The baptism of John was not a sacrament of itself, but a certain sacramental as it were, preparing the way (dispensas) for the baptism of Christ.” Durandus calls it a sacrament, indeed, but of the Old Law, and St. Bonaventure places it as a medium between the Old and New Dispensations. It is of Catholic faith that the Precursor’s was essentially different in its effects from the baptism of Christ. It is also to be noted that those who had previously received John’s baptism had to receive later the Christian baptism (Acts, xix).

SECTION OF THE SACRAMENT.—That Christ instituted the Sacrament of Baptism is unquestionable. Rationalists, like Harnack (Dogmengeschichte, I, 68), dispute it, only by arbitrarily ruling out the texts which prove it. Christ not only commands His Disciples (Matt., xxviii, 19) to baptize and gives them the power, but the sacramental system of the absolute necessity of baptism (John, iii): “Unless a man be born again of water and the Holy Ghost, he cannot enter into the Kingdom of God.” Moreover, from the general doctrine of the Church on the sacraments, we know that the efficacy attached to them is derivable only from the institution of the Redeemer. When, however, we come to the question to whose hands in the celestial system the Old Law was taken by circumcision, which is called by some of the Fathers “the laver of blood” to distinguish it from “the laver of water”. By the rite of circumcision, the recipient was incorporated into the people of God and made a partaker in the Messianic promises. The laver was born out of the return and he was reckoned among the children of Abraham, the father of all believers. Other forerunners of baptism were the numerous purifications prescribed in the Mosaic dispensation for legal uncleannesses. The symbolism of an outward washing to cleanse an invisible blemish was made very familiar to the Jews by their sacred ceremonies. But in addition to these more direct types, both the New Testament writers and the Fathers of the Church find many mysterious forewarningsof baptism. Thus St. Paul (1 Cor., x) adduces the passage of Israel through the Red Sea, and St. Peter (1 Pet., iii) the Deluge, as types of the purification to be found in Christian baptism. Other foreshadowings of the sacrament are found by the Fathers. The baptism of Noah, but in the Jordan, and the brooding of the Spirit of God over the waters, in the rivers of Paradise, in the blood of the Paschal Lamb, during Old Testament times, and in the pool of Bethsaida, and in the healing of the dumb and the blind in the New Testament.

How natural and expressive the symbolism of exterior washing to indicate interior purification was recognized to be, is plain from the practice also of the heathen systems of religion. The use of lustral water is found among the Babylonians, Assyrians, Egyptians, Greeks, Romans, Hindus, and others. A closer resemblance to Christian baptism is found in a form of Jewish baptism, to be bestowed on proselytes, given in the Babylonian Talmud (Dollinger, First Age of the Church). But above all must be considered the baptism of St. John the Precursor. John baptized with water (Mark, i) and it was a baptism of penance for the remission of sins (Luke, iii). While, then, the symbolism of the sacrament instituted by Christ was not new, the efficacy which He joined to it is that which differentiates it from all its types. John’s baptism did not produce grace, as he himself testifies (Matt., iii) when he declares that he is not the Messiah whose baptism is to confer the Holy Ghost. Moreover, it was not John’s baptism that remitted sin, but the penance that accompanied it (Matt., xii). Augustine, in De Civitate Dei (Donat., V) “a remission of sins in hope”. As to the nature of the Precursor’s baptism, St. Thomas (III, Q. xxxviii, a. 1) declares: “The baptism of John was not a sacrament of itself, but a certain sacramental as it were, preparing the way (dispensas) for the baptism of Christ.” Durandus calls it a sacrament, indeed, but of the Old Law, and St. Bonaventure places it as a medium between the Old and New Dispensations. It is of Catholic faith that the Precursor’s was essentially different in its effects from the baptism of Christ. It is also to be noted that those who had previously received John’s baptism had to receive later the Christian baptism (Acts, xix).

SECTION OF THE SACRAMENT.—That Christ instituted the Sacrament of Baptism is unquestionable. Rationalists, like Harnack (Dogmengeschichte, I, 68), dispute it, only by arbitrarily ruling out the texts which prove it. Christ not only commands His Disciples (Matt., xxviii, 19) to baptize and gives them the power, but the sacramental system of the absolute necessity of baptism (John, iii): “Unless a man be born again of water and the Holy Ghost, he cannot enter into the Kingdom of God.” More
Passion. That this was an essentially different rite from John the Precursor’s baptism seems plain, because the baptism of Christ is always preferred to that of John, and the latter himself states the reason: “I baptize with water . . . [Christ] baptizeth with the Holy Ghost” (John, i). In the baptism given by the Baptist his conceptions were taken for granted, and he was to have all the requisites of a sacrament of the New Law: (1) the external rite, (2) the institution of Christ, for they baptized by His command and mission, and (3) the conferring of grace, for they bestowed the Holy Ghost (John, i). In the second place, the Apostles received other sacraments from Christ, before His Passion, as the Holy Eucharist at the Last Supper, and Holy orders (Conc. Trid., Sess. XXVI, c. i). Now as baptism has always been held as the door of the Church and the necessary condition for the reception of any other sacrament, it follows that the Apostles must have received Christian baptism before the Last Supper. This argument is used by St. Augustine (Ep. cxilii, al. xlviv) and certainly seems valid. To suppose that the first pastors of the Church received water which was melted ice, snow, or hail before they had received baptism, is an opinion with no foundation in Scripture or tradition and devoid of verisimilitude. The Scriptures nowhere state that Christ Himself conferred baptism, but an ancient author, on the other hand, I. E., St. Alex. Strom., III) declares that He baptized the Apostle Peter only, and that the latter baptized Andrew, James, and John, and they the other Apostles.

VI. MATTER AND FORM OF THE SACRAMENT.—(1) Matter. In all sacraments we treat of the matter and form. It is also usual to distinguish the remote matter and the proximate matter. In the case of baptism, the remote matter is natural and true water. We shall consider this aspect of the question first. (a) It is of fact that true and natural water is the remote matter of baptism. In addition to the authorities already cited, we may also mention the Fourth Council of the Lateran (c. i). Some of the early Fathers, as Tertullian (De Bapt., i) and St. Augustine (Adv. Haer., xlvi and lix) enumerate heretics who rejected water entirely as a constituent of baptism. Such were the Gaianes, Manichaeans, Seleucians, and Hermians. In the Middle Ages, the Wakenians are said to have held the same tenet (Ewald, Contra Waldens., vi). Some of the sixteenth century heretics also reject the matter of this sacrament, declared that when water could not he had, any liquid could be used in its place. So Luther (Tischr., xvii) and Beza (Ep., ii, ad Toll.). It was in consequence of this teaching of the thirteenth of the Tridentine canons were framed. Calvin held that the water used in baptism was simply symbolic of the Blood of Christ (Instit., IV, xiv). As a rule, however, those sects which believe in baptism at the present time, recognize water as the necessary matter of the sacrament. Scripture is so positive in its statement as to the use of true and natural water for baptism that it is difficult to see why it should ever be called in question. Not only have we the explicit words of Christ (John, iii, v), “Unless a man be born again of water”, etc., but also in the Acts (Acts, xi, 20), and St. Paul (Acts, x, 47) passages that preclude any metaphorical interpretation. Thus (Acts, x, 47) St. Peter says, “Can any man forbid water, that these should not be baptized?” The baptism of the Church is narrated in the Acts, and the Church holds that all those in verse 36 we read: “They came to a certain water; and the eunuch said: See, here is water: what doth hinder me from being baptized?” Equally positive is the testimony of Christian tradition. Tertullian (de Bapt., ii, 15) and Sulpicius Severus (de Bapt., ii, 11) are from the writings of the Fathers. Justin Martyr (Apol., I) describes the ceremony of baptism and declares: “Then they are led by us to where there is water . . . and then they are laved in the water.” St. Augustine positively declares that there is no baptism without water (Tr. xv in Joan.).

The remote matter of baptism, then, is water, and this taken in its usual meaning. Theologians have held that what matters is the water, not the water from which it is obtained. To declare water is valid baptismal material, whether it be water of the sea, or fountain, or well, or marsh; whether it be clear or turbid; fresh or salty; hot or cold; coloured or uncoloured. Water derived from melted ice, snow, or hail is also valid. Water derived from melted ice, snow, or hail be not melted, they do not come under the designation water. Dew, sulphur or mineral water, and that which is derived from steam are also valid matter for this sacrament. As to a mixture of water and some other material, it is held as proper matter, provided the water certainly predominates; and the mixture would still be called water. Invalid matter is every liquid that is not usually designated true water. Such are oil, saliva, wine, tears, milk, sweat, beer, soup, the juice of fruits, and any mixture containing water which men would no longer call water. When it is doubtful whether a liquid could really be called water, it is not permissible to use it for baptism except in case of absolute necessity when no certain valid matter can be obtained. If water be not available, there is no chance with an invalid liquid. There is a response of Pope Gregory IX to the Archbishop of Trondheim in Norway where beer (or mead) had been employed for baptism. The pontiff says: “Since according to the Gospel teaching, a man must be born again of water and the Holy Ghost, those not to be considered validly baptized who have been baptized with beer” (censis). It is true that a statement declaring wine to be valid matter of baptism is attributed to Pope Sixtus II, but the document has little authority (Labbe, Conc., VI). Those who have held that “water” in the Gospel text is to be taken metaphorically, appeal to the words of the Precursor (Matt., iii), “He shall baptize you in the Holy Ghost and fire”. As “fire” must certainly be only a figure of speech here, so must “water” in the other texts. To this objection, it may be replied that the Christian Church, or at least the Apostles themselves, must have understood what was prescribed to be taken literally and what figuratively. The New Testament and church practice both show that water was the necessity of baptism, while they certainly did require water. Outside of the insignificant sects of Seleucians and Hermians, not even heretics took the word “fire” in this text in its literal meaning. We may remark, however, that some of the Fathers, as St. John Damascene (Orth. Fid., IV, ix), concede this statement of the Baptist to have a literal fulfillment in the Pentecostal fiery tongues. They do not refer it, however, literally to baptism. That water alone is the necessary matter of this sacrament depends, of course, on the will of Him Who instituted it, although theologians discover many reasons why it should have been chosen in preference to other liquors. The most obvious of these is that water cleanses and purifies more perfectly than the others, and hence the symbolism is more natural. (b) The proximate matter of baptism is the ablution performed with water. The very word “baptize”, as we have seen, means a washing. Three forms of ablution have prevailed among Christians, and the Church holds that all three fully fulfil the requisite signification of the baptismal laving. These forms are immersion, infusion, and aspersion. The most ancient form usually employed was unquestionably immersion. This is not only the form of all the ancient rituals of both the Latin and Oriental Churches, but it can also be gathered from the Epistles of St. Paul,
who speaks of baptism as a bath (Ephes., v. 26; Rom., vi. 4; Tit., iii, 5). In the Latin Church, immersion is not valid until the twelfth century. After that time it is found in some places even as late as the sixteenth century. Infusion and aspersion, however, were growing common in the thirteenth century and gradually prevailed in the Western Church. It is known and have remained in use, though not always in the sense of plunging the candidate’s entire body below the water. Billuart (De Bapt., I, iii) says that commonly the catechumen is placed in the font, and then water is poured upon him. This is not held to be the act of baptism of Goar in this statement. Although, as we have said, immersion was the form of baptism that generally prevailed in the early ages, it must not thereby be inferred that the other forms of infusion and aspersion were not also employed and held to be valid. In the case of the sick or dying, immersion was impossible and the sacrament was then conferred by one of the other forms. This was so well recognized that infusion or aspersion received the name of the baptism of the sick (baptismum infirmitatis). St. Cyprian (Ep. lxxvi) declares this form to be valid. From the canons of various early councils we know that candidates for Holy orders who had been baptized by this method seem to have regarded as regular, but this was on account of the culpable negligence supposed to be manifest in the delaying baptism in the deathbed of the sick. That such persons, however, were not to be rebaptized is an evidence that the Church held their baptism to be valid. It is also pointed out that the circumstances under which St. Paul (Acts, xvii) baptized his jailor and all his household seem to preclude the use of immersion. Moreover, the acts of the early martyrs frequently refer to baptizing in prisons where infusion or aspersion was certainly employed.

By the present authorized ritual of the Latin Church, baptism must be performed by a bishop or the head of the candidate. Moralist, however, state that in case of necessity, the baptism would probably be valid if the water were applied to any other principal part of the body, as the breast or shoulder. In this case, however, conditional baptism would have to be administered if the person survived (St. Alph., no. 107). In like manner they consider as probably valid the baptism of an infant in its mother’s womb, provided the water, by means of an instrument, would actually flow upon the child. Strictly speaking, however, this is not the case, conditionally, if the child survives its birth (Lehmkuh, n. 61). It is to be noted that it is not sufficient for the water to merely touch the candidate; it must also flow, otherwise there would seem to be no real ablation. At best, such a baptism would be considered doubtful. If the water touches only the hair, the sacrament has probably been validly conferred, though in practice the safer course must be followed. If only the clothes of the person have received the baptism, the baptism is undoubtedly void. The water to be employed in solemn baptism should also be consecrated for the purpose, but of this we shall treat in another section of this article. It is necessary in baptizing to make use of a threefold ablation and confessing this ablation, by or in the name of the Roman rite. This necessarily refers, however, to the lictory, not to the validity of the ceremony, as St. Thomas (III, Q. lxvi, a. 8) and other theologians expressly state. The threefold immersion is unquestionably very ancient in the Church and is mentioned by Tertullian (De cor. milit., iii), St. Basil (De Sp. S., xxvii), St. Jerome (Dial. Contra Luc., viii), and many other early writers. Its object is, of course, to honour the three Persons of the Holy Trinity. In the church it is confessed that the threefold ablation was not considered necessary to the validity of the sacrament, however, in place of the seventh-century Fourth Council of Toledo (833) approved the single ablation in baptism, as a protest against the false trinitarian theories of the Arians, who seem to have given to the threefold immersion a significance which made it imply three natures in the Holy Trinity. To insist on the single immersion, however, was by no means customary. In the East and among the Eastern Catholics, the Spanish Catholics adopted the single ablation and this method had the approval of Pope Gregory the Great (I, Ep. xili). The Eastern heretics used only one immersion and their baptism was termed monophitic. For the Fifth Lateran Council (can. vii) not to be on account of the single ablation, but apparently because they baptized in the death of Christ. The authority of this canon is moreover, doubtless at best.

(2) Form. — The requisite and sole valid form of baptism is: “I baptize thee (or This person is baptized) in the name of the Father and of the Son and of the Holy Ghost.” This was the form given by Christ to His Disciples in the twenty-eighth chapter of St. Matthew’s Gospel, as far as St. Thomas is concerned. The expression of the invocation of the three Persons of the Trinity and the expression of the nature of the action performed. For the Latin usage: “I baptize thee”, etc., we have the authority of the Council of Trent (Sess. VII, can. iv) and of the Council of Florence (Dipl. 1551). Nevertheless, it seems to be the constant practice of the whole Western Church. The Latin also recognize as valid the form used by the Greeks: “This servant of Christ is baptized”, etc. The Florentine decree acknowledges the validity of this form and it is moreover recognized by the Bull of Leo X, “Accepiimus nuper”, and of Clement VII, “Provisionis nostrae”. Substantially, the Latin and Greek forms are the same, and the Latin Church has never rebaptized Orientalis on their return to unity. At one time the Western theologians disputed the Greek form, because they doubted the validity of the imperative or imperative formula: “Let this person be baptized” (baptizetur). As a matter of fact, however, the Greeks use the indicative, or enunciative, formula: “This person is baptized” (baptei, baptizetur). This is unquestionable from their Euchologias, and from the testimony of Arcadius (apud Cat., tit. ii, cap. i), of Goar (Rit. Graec. Illust.), of Martene (De Ant. Eccl. Rit., I) and of the theologico comprehends of the schismatical Russians. St. Photius (In trident. synod. cap. 2) to be interpreted, and the Armenians, Pope Eugene IV uses baptizetur, according to the ordinary version of this decree, but Labbe, in his edition of the Council of Florence seems to consider it a corrupt reading, for in the margin be prints baptismur. It has been suggested by Goar that the resemblance between baptei and baptismetur is responsible for the mistake. The correct translation is, of course, baptismetur.

In administering this sacrament, it is absolutely necessary to use the word “baptize” or its equivalent (Alex. VIII, Prop. damn., xxvii), otherwise the ceremony is invalid. This had already been decreed by Alexander III (Cap. Si quis, I, x, De Bap.), and it is confirmed by the Florentine decree. It has been the custom in the Latin and Greek Churches to make use of words expressing the act performed. St. Thomas (III, Q. lxvi, a. 5) says that since an ablation may be employed for many purposes, it is necessary that in baptism the meaning of the ablation be determined by the words of the act. E.g., if one says “I baptize thee in the name of the Father”, etc., would not be sufficient by themselves to determine the sacramental nature of the ablation. St. Paul (Coloss., iii) exhorts us to do all things in the name of God, and consequently an ablation could be performed in any manner for the restoration of health. Therefore it is that in the form
of this sacrament, the act of baptism must be expressed, and the matter and form be united to leave doubts of the meaning of the ceremony. In addition, there is a necessity that baptism itself, or its equivalent, is also obligatory to mention the separate persons of the Holy Trinity. This is the command of Christ to His Disciples, and as the sacrament has its efficacy from Him Who instituted it, we cannot omit anything that He laid the foundation. It is more certain than that this has been the general understanding and practice of the Church. Tertullian tells us (De Bapt., xiii) “the law of baptism (sine pede) has been imposed and the form prescribed.” Le, the natural meaning of the name Father, Son, and Holy Ghost (St. Justin Martyr (Apol., i) testifies to the practice of his time. St. Ambrose (De Myst., IV) declares: “Unless a person has been baptized in the name of the Father and the Son and of the Holy Ghost, he cannot obtain the remission of his sins” St. Cyprian (Ad Jubaian) rejecting the validity of baptism given in the name of Christ only, affirms that the naming of all the persons of the Trinity was commanded by the Lord (in plen et adumbrat Trinitate). The most probable evidences of this are: St. Jerome (IV, in Matt., Origen (De Princ., i, ii), St. Athanasius (Or. iv, Contr. Ar.), St. Augustine (De Bapt., vi, 23). It is not, of course, absolutely necessary that the common names Father, Son, and Holy Ghost be used, for the names of Jesus Christ may be formed by words that are equivalent or synonymous. But a distinct naming of the Divine persons is required and the form: “I baptize thee in the name of the Holy Trinity” would be of more doubtfull validity. The singular form in the name “Jesus”, “names”, is also to be employed, as it expresses the unity of the Divine nature. When, through ignorance, an accidental, not substantial, change has been made in the form (in nomine patris for Patria), the baptism is to be held valid.

The mind of the Church as to the necessity of observing the trinitarian formula in this sacrament has been clearly shown by her treatment of baptism conferred by heretics. Any ceremony that did not observe this form has been declared invalid. The Moniani was baptized in the name of the Father and the Son and Montanists and Frisciila (St. Basil, Ep. I, Ad Amphil.). As a consequence, the Council of Laodicea ordered their rebaptism. The Arians at the time of the Council of Nicea do not seem to have understood the Trinity in baptismal form and did not order their rebaptism. When, then, St. Athanasius (Or. ii, Contr. Ar.) and St. Jerome (Contr. Lucif.) declare the Arians to have baptized in the name of the Creator and creatures, they must either refer to their doctrine or to a later changing of the sacramental form. It is well known that the latter was the case with the Spanish Arians and that consequently, from the sect were rebaptized. The Anomoeans, a branch of the Arians, baptized with the form: “in the name of the uncreated God and in the name of the named God and in the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as не the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii). Other Arian sects such as the Eunomians and Aetians, baptized “in the death of Christ.” Converts from Sabellianism or one who was not baptized by the spiritual baptism used as the name of the Sanctifying Spirit, procreated by the created Son” (Epiphanius, Hær., lxxxvii).
the same pontiff's reply to the Bulgarians (Resp. 15) on another occasion when they consulted him on a practical case. They inquired whether certain persons, who were baptized as infants, but who, as adults, took baptism a second time, could be a Greek priest, had conferred baptism? Pope Nicholas replies that the baptism is to be held valid if "they were baptized in the name of the supreme and undivided Trinity." Here the pope does not give baptism in the name of Christ only as an alternative. More, he raises the question of the validity of a baptism in which something else had been added to the prescribed form, as "and in the name of the Blessed Virgin Mary." They reply that such baptism would be invalid, if the minister intended thereby to attribute the same efficacy to the added name as to the names of the Three Divine Persons. If, however, it was done through a mistaken piety only, it would not interfere with the validity (S. Alph., n. 111).

VII. CONDITIONAL BAPTISM.—From the foregoing it is evident that not all baptism administered by heretics or schismatics is invalid. On the contrary, if the proper matter and form be used and the one conferring the sacrament really "intends to perform what the Church performs" then such baptism is undeniably valid. This is also authoritatively stated in the decree for the Armenians and the canons of the Council of Trent already given. The question becomes a practical one when a convert to the Faith have to be dealt with. If there were one authorized mode of baptism among the sects, and if the necessity and true significance of the sacrament were uniformly taught and put in practice among them, there would be little difficulty as to the status of converts from the sects. But there is no such unity of teaching and practice among them, and consequently the particular case of each convert must be examined into when there is question of his reception into the Church. For not only are there religious denominations in which baptism is in all probability not validly administered, but there are those also which have a ritual sufficient indeed for validity, but in practice the likelihood of their members having received baptism validly is more than doubtful. As a consequence converts must be dealt with differently. If it be evident that a convert was validly baptized in heresy, the sacrament is not repeated, but the ceremonies which had been omitted in such baptism are to be supplied, unless the bishop, for sufficient reasons, judges that they can be dispensed with. (For the United States, see Conc. Provi. Balt., I.) If it be uncertain whether the convert's baptism was valid or not, then he is to be baptized conditionally. In such cases the ritual is: "If thou art not yet baptized, then I baptize thee in the name," etc. The First Synod of Westminster, England, directs that adult converts are to be baptized not publicly but privately with holy water (i. e. not the consecrated baptismal water) and without the usual ceremonies (Decr. xvi). Practically, converts in the United States are almost invariably baptized either absolutely or conditionally, but baptism administered by heretics is held to be invalid, but because it is generally impossible to discover whether they had ever been properly baptized. Even in cases where a ceremony had certainly been performed, the validity of baptism will generally remain, on account of either the intention of the administrator or the mode of administration. Still each case must be examined into (S. C. Inquis., 20 Nov., 1878) lest the sacrament be sacrilegiously repeated.

As to the baptism of the various sects, Sabetti (no. 662) states that the Oriental Churches and the "Old Catholics" generally administer baptism accurately; the Socinians and Quakers do not baptize at all; the Baptists use the rite only for adults, and the efficacy of their baptism has been called in question owing to the separation of the matter and the form, for the latter is pronounced before the immer- sion. Methodists, Presbyterians, and Universalists deny the necessity of baptism, and hence the presumption is that they do not administer it accurately; the Methodists and Presbyterians baptize by aspersio or sprinkling, and it may be reasonably doubted whether the water has touched the body under all circumstances. Episcopalians often baptize by aspersio, and though such a method is undoubtedly valid if properly employed, yet in practice it is quite possible that the sprinkled water may not touch the skin. Sabetti also notes that ministers of the same sect do not everywhere follow a uniform method of baptizing. The practical method of recognizing heretics with the Church is as follows:—If baptism be conferred absolutely, the convert is to make no abjuration or profession of faith, nor is he to receive the Sacrament of Holy Communion, because the sacrament of regeneration is his past offensives. If his baptism is to be conditional, he must first make an abjuration of his errors, or a profession of faith, then receive the conditional baptism, and lastly make a sacramental confession following, or be relieved of the former baptism was judged to be certainly valid, he is only to make the abjuration or the profession of faith and receive absolution from the censures he may have incurred (Excerpta Rit. Rom., 1878). The abjuration or profession of faith prescribed is the Creed of Pius IV, translated into the vernacular. In the case of conditional baptism, the confession may precede the administration of the rite and the conditional absolution be imparted after the baptism. This is often done as a matter of fact, as the confession is an excellent preparation for the reception of the sacrament (De Herdi, VI, viii; Sabetti, no. 725).

VIII. REBAPTISM.—To complete the consideration of this subject, it is necessary to consider the controversy that raged around this point in the ancient Church. In Africa and Asia Minor the custom had been introduced in the early part of the third century of rebaptizing all converts from heresy. As far as we can see, this practice first arose in Africa owing to decrees of a Synod of Carthage held probably between 218 and 222; while in Asia Minor it seems to have had its origin at the Synod of Iconium, celebrated between 230 and 235. The controversy on rebaptism was especially connected with the names of Pope St. Stephen and of St. Cyprian of Carthage. The latter was the main champion of the practice of rebaptizing. The pope, however, absolutely condemned the practice and ordered the converts to the Church should receive only the imposition of hands in penitentiam. In this celebrated controversy it is to be noted that Pope Stephen declares that he is upholding the primitive custom when he declares for the validity of baptism conferred by heretics. Cyprian, on the contrary, implicitly affirms that antiquity is against his own practice, but stoutly maintains that it is more in accordance with an enlightened study of the subject. The tradition against him he declares to be "a human and unlawful tradition". Without English predecessors, St. Firmilian, could show that rebaptism was older than the century in which they were living. The contemporaneous but anonymous author of the book "De Rebaptismate" says that the ordinances of
Pope Stephen, forbidding the rebaptism of converts, or, in accordance with antiquity and ecclesiastical tradition, and are consecrated as an ancient, memorable, and solemn observance of all the saints and of all the faithful. St. Augustine believes that the custom of not rebaptizing is an Apostolic tradition, and that the doctrine of the Church of Carthage introduced rebaptism against the Divine law (canonem), against the rule of the universal Church, and against the custom and institutions of the ancients. By Pope Stephen's decision, he continued, antiquity was retained and novelty was reprobated. He thought that this was the custom of the ancients. It is true that the so-called Apostolic Canons (xiv and xlv) speak of the non-validity of baptism conferred by heretics, but Dollinger says that these canons are comparatively recent, and De Marco points out that St. Cyprian would have appealed to them had they been in existence before the controversy. Pope St. Stephen, therefore, upheld a doctrine already ancient in the third century when he declared against the rebaptism of heretics, and decided that the sacrament was null. According to his teaching, baptism had been valid. This has been the law of the Church ever since. The whole controversy on rebaptism is exhaustively treated by Hefele in the first volume of his history of church councils.

Baptism is merely a ceremonial observance distinguishing a twofold necessity, which they call a necessity of means (medii) and a necessity of precept (preceptum). The first (medii) indicates a thing to be done that if, wanting (though incausally), salvation cannot be attained. The second (preceptum), it had when a thing is indeed so necessary that it may not be omitted voluntarily without sin; yet, ignorance of the precept or inability to fulfil it, excuses one from its observance. Baptism is held to be necessary both necessitate medii and preceptum. This doctrine is taught in the second precept of the [Second] Commandment of the Law. In John, iii, He declares: "If any man be born again of water and the Holy Ghost, he cannot enter into the kingdom of God." Christ makes no exception to this law and it is therefore general in its application, embracing both adults and infants. It is consequently not merely a necessity of precept but also a necessity of means. This is the sense in which it has always been understood by the Church, and the Council of Trent (Sess. IV, cap. vi) teaches that justifications cannot be obtained, since the promulgation of the Gospel, without the sacrament of baptism, is the desire thereof (in votu). In the seventh session, it declares (can. v) anathema upon anyone who says that baptism is not necessary for salvation. We have rendered votum by "desire" for want of a better word. The council does not mean by votum a simple desire of receiving baptism or even a resolution to do so. It means by votum an act of perfect charity or contrition, including, at least implicitly, the will to do all things necessary for salvation and thus especially to receive baptism. The absolute necessity of this sacrament is often insisted on by the Fathers of the Church, especially when they speak of infant baptism. Thus St. Irenaeus (II, xxii): "Christ came to save all who are reborn through Him to God, in his kingdom and his wisdom (θητημεν a preeres)." St. Augustine (III, De Anima) says: "If you wish to be a Catholic, do not believe, nor say, nor teach, that infants die before baptism can obtain the remission of original sin." A still stronger passage from the same doctor (Ep. xxviii, Ad Hieron.) reads: "The election (παλιατιστησις) is to be endured in Christ when they depart this life without the participation of His Sacrament (Baptism), both oppos the Apostolic preaching and condemns the whole Church which hastens to baptize infants, who are not properly beavested, not of necessity, they can not possibly be vivified in Christ." St. Ambrose (II De Abraham, c. xi) speaking of the necessity of baptism, says: "No one is excepted, not the infant, not the one hindered by any necessity." In the Pelagian controversy we find similarly strong pronouncements on the part of the Councils of Carthage and Milevis, and of Pope Innocent I. It is a belief of the Church that baptism as a means to salvation that, as was already noted by St. Augustine, she committed the power of baptism in certain contingencies even to laymen and women. When it is said that baptism is also necessary by the necessity of precept, it is of course understood that they and none other are capable of receiving a precept, viz. adults. The necessity in this case is shown by the command of Christ to His Apostles (Matt., xxvi): "Go and teach all nations, baptizing them," etc. Since the Apostles are commanded to baptize, the nations are commanded to receive baptism.

The necessity of baptism has been called in question by some of the Reformers or their immediate forerunners. It was denied by Wycliff, Bucer, and Cranmer. Calvin did not as such contemn it, but he contended that the infants of believing parents were sanctified in the womb and thus freed from original sin without baptism. The Socinians teach that baptism is a ceremonial observance, a profession of Christian faith and a rite which each one is free to receive or neglect. An argument against the absolute necessity of baptism has been sought in the text of Scripture: "Except ye eat the flesh of the Son of man and drink his blood, ye shall not have life in you" (John, vi). Here, they say, is a parallel to the text: "Unless a man be born again of water". Yet every one admits that the Eucharist is not necessary as a means but only as a precept. The reply to this is obvious. In the first instance, Christ addresses His Disciples in the second person, to Himself; in the second, He speaks in the third person and without any distinction whatever. Another favourite text is that of St. Paul (i Cor., vii): "The unbelieving husband is sanctified by the believing wife; and the unbelieving wife is sanctified by the believing husband; otherwise your children should be unclean; but now they are holy." Unfortunately for the strength of this argument, the context shows that the Apostle in this passage is not treating of regenerating or sanctifying grace at all, but answering certain questions propounded by him by the Corinthians on the validity of marriages between heathens and believers. The validity of such marriages is proved from the fact that children born of them are legitimate, not spurious. As far as the term "sanctified" is concerned, it can, at most, mean that the believing husband or wife may convert the unbelieving party and thus become an occasion of their sanctification. A certain statement in the funeral oration of St. Ambrose over the Emperor Valentinian II has been brought forward as a proof that the Church offered sacrifices and prayers for catechumens who died before baptism. There is not a vestige of such a custom to be found anywhere. St. Ambrose may have done so for the soul of the catechumen Valentinian, but this would not be a solitary instance (cf. Ambrose, de cœr. a pecca).
completed. It is true that some Catholic writers (as Cajetan, Durandus, Bial, Gerson, Toletus, Kise) have held that infants may be saved by an act of desire on the part of their parents, which is applied to them by some external sign, such as prayer or the invocation of the Holy Trinity; but Pius V, by expounding the baptism of infants expressed in the author’s commentary on St. Thomas, manifested his judgment that such a theory was not agreeable to the Church’s belief.

X. SUBSTITUTE FOR THE SACRAMENT.—The Fathers and theologians frequently divide baptism into three kinds: the baptism of water (aqua or fluminis), the baptism of fire (flaminis), and the baptism of blood (sanguinis). However, only the first is a real sacrament. The latter two are denominated baptism only analogically, inasmuch as they supply the principal effect of baptism, namely, the grace which remits sins. It is the teaching of the Catholic Church that when the baptism of water becomes a physical or moral impossibility, eternal life may be obtained by the baptism of desire or the baptism of blood. The baptism of desire consists in the perfect contrition of heart, and every act of perfect charity or pure love of God which contains, at least implicitly, a desire (spermatum) of baptism. The Latin word flamen is used because Flamen is a name for the priest who has special office given to him to love God and to conceive penitence for sin. The “baptism of the Holy Ghost” is a term employed in the third century by the anonymous author of the book “De Rebaptismate.” The efficacy of this baptism of desire to supply the place of the baptism of water, as to its principal effect, is proved from the words of Christ. After He had declared the necessity of baptism (John, iii), He promised justifying grace for acts of charity or perfect contrition (John, xvi). “If any one loves me, he will keep my word, and my Father will love him, and we will come to him, and make our abode with him.” Since these texts declare that justifying grace is bestowed on account of acts of perfect charity or contrition, it is evident that these acts supply the place of baptism as to its principal effect, the remission of sins. This doctrine is set forth clearly by the Council of Trent. In the fourteenth session (cap. iv) the Council declared: “That that man is perfectly justified by grace, who has obtained the perfection of charity, and reconciles man to God, before the Sacrament of Penance is received. In the fourth chapter of the sixth session, in speaking of the necessity of baptism, it says that men cannot obtain original justice “except by the laver of regeneration or its desire” (voto). The same doctrine is taught by Pope Innocent III (cap. Debitum, iv, De Bapt.), and the contrary propositions are condemned by Popes Pius V and Gregory XII, in proscribing the 31st and 33rd propositions of Bains.

We have already alluded to the funeral oration pronounced by St. Ambrose over the Emperor Valentinian II, a catechumen. The doctrine of the baptism of desire is here clearly set forth. St. Ambrose asks: “Did he not obtain the grace which he desired? Did he not obtain what he asked for? Certainly he obtained it because he asked for it.” St. Augustine (IV, De Bapt., xxii) and St. Bernard (Ep. lxxvii, ad H. de S. Victore) likewise discourse in the same sense concerning the baptism of desire. If baptism be, as of desired by Cajetan, the universal law of baptism made by Christ (John, iii), the answer is that the lawgiver has made an exception (John, xiv) in favour of those who have the baptism of desire. Neither would it be a consequence of this doctrine that the justifying grace of baptism would thereby be dispensed from seeking after the baptism of water when the latter became a possibility. For, as has already been explained the baptismis flaminis contains the votum of receiving the baptismis aquae. It is true that some of the Fathers of the Church assign severely those who content themselves with the desire of receiving the sacrament of regeneration, but they are speaking of catechumens. From the author’s commentary on St. Thomas, it is to be noted that only adults are capable of receiving the baptism of desire.

(2) The baptism of blood (baptismis sanguinis) is the obtaining of the grace of regeneration by suffering martyrdom for the faith of Christ. The term “laver of blood” (lavacrum sanguinis) is used by Tertullian (De Bapt., xvi) to distinguish this species of regeneration from the “laver of water” (lavocram aquae). “We have a second laver,” he says “which is one and the same [with the first], namely the laver of blood.” St. Cyprian (Ep. lxxxii) speaks of “the most glorious and greatest baptism of blood” (sanguinis baptismis). St. Augustine (De Civ. Dei, XIII, vii) says: “When any one for the confession of Christ without having received the laver of baptism may obtain, for the remission of their sins as if they had been washed in the sacred font of baptism.” The Church grounds her belief in the efficacy of the baptism of blood on the fact that Christ makes a general statement of the fact to those who say that he is the true chapter of St. Matthew: “Every one therefore that shall confess me before men, I will also confess him before my Father who is in heaven.” (v. 32); and: “He that shall lose his life for me shall find it.” (v. 39).

It is pointed out that these texts are so broadly worded as to include even infants, especially the latter text. That the former text also applies to them, has been constantly maintained by the Fathers, who declare that if infants cannot confess Christ with their lips, they still have faith, and St. Bonaventure (Valent., ii) speaks of the infants slaughtered by Herod as martyrs, and this has been the constant teaching of the Church. Another evidence of the mind of the Church as to the efficacy of the baptism of blood is found in the fact that she never prays for martyrs. Her opinion is well voiced by St. Augustine (Tr. lxiv in Joan.): “He does an injury to a martyr who prays for him.” This shows that martyrdom is believed to remit all sin and all punishment due to sin. Later theologians commonly maintain that the hymn of the Church is that the blood of the martyrs is applied independently of an act of charity or perfect contrition, and, as it were, ex opere operato, though, of course, they must have attrition for past sins. The reason is that if perfect charity, or contrition, were required in martyrdom, the distinction between the baptism of blood and the baptism of desire would be a useless one. Moreover, as it must be conceded that infant martyrs are justified without an act of charity, of which they are incapable, there is no solid reason for denying them the same privilege to adults (Cl. Suarez, De Bapt., disp. xxxix).”

XI. UNBAPTIZED INFANTS.—The fate of infants who die without baptism must be briefly considered here. The Catholic teaching is uncompromising on this point, that all who depart this life without baptism, be it of water, or blood, or desire, are perpetually excluded from the vision of God. This teaching is grounded, as we have seen, on Scripture and tradition, and the decrees of the Church. Moreover, that those who die in original sin, without ever having contracted a contrary condition, are thus left out of the business of heaven is stated explicitly in the Confession of Faith of the Eastern Emperor Michael Palæologus, which had been proposed to him by Pope Clement IV in 1297, and which he accepted in the presence of Gregory X. In the last paragraph of the Decree of Union of the Greeks, in the Bull "Existentur Cordi!" of Pope
Eugene IV, in the Profession of Faith prescribed for the Greeks by Pope Gregory XIII, and in that authorized for the Orientals by Urban VIII and Benedict XIV. Catholic theologians are unanimous, consequently that infants dying without baptism, are excluded from the beatific vision; but as to the exact state of these souls in the next world they are not agreed. In speaking of souls who have failed to attain salvation, theologians distinguish the pain of loss (pena damnationis), the pain of the beatific vision, and the pain of sense (pena sensus). While it is certain that unbaptized infants must endure the pain of loss, it is not at all certain that they are subject to the pain of sense. St. Augustine (De Pecc. et Mer., i, xvi) held that they would not be exempt from the pain of sense, but at the same time he thought it would be of the mildest form. On the other hand, St. Gregory Nazianzen (Or. in S. Bapt.) expresses the belief that such infants would suffer only the pain of loss. Sfrondati (Mod. Preedest., 1, i) declares that while they are certainly excluded from heaven, yet they are not deprived of natural happiness. This opinion seemed so objectionable to some French bishops that they asked the judgment of the Holy See upon the matter. Pope Innocent XI replied that they had been examined and approved by a commission of theologians, but no sentence seems ever to have been passed upon it.

Since the twelfth century, the opinion of the majority of theologians has been that unbaptized infants do not suffer the pain of sense. This has not the certain authority of a decree, but it has been so long taught by St. Thomas Aquinas, Scotus, St. Bonaventure, Peter Lombard, and others, and is now the common teaching in the schools. It accords with the wording of a decree of Pope Innocent III (III Deer., xiii, 3): "The punishment of original sin is the deprivation of the vision of God; of actual sin, the eternal pains of hell." Infants, of course, cannot be guilty of actual sin. As to the theory of some writers that infants may be saved also from the pain of loss by the faith of their parents, it is sufficiently evident that it is not in accord with the mind of the Church. It has been urged that, under the law of nature and the Mosaic dispensation, children could be saved by the act of their parents and that consequently the same should be even more easy of attainment under the law of grace, because the power of faith has not been diminished but increased. But this ignores the fact that infants are 'not said to be deprived of justification in the New Law through any decrease in the power of faith, but because of the promulgation of the dispensation without baptism which did not exist before the New Dispensation. Nor does this make the case of infants worse than it was before the Christian Church was instituted. While it works a hardship for some, it has undoubtedly improved the condition of most. Supernatural faith is now much more diffused than it was before the coming of Christ, and more infants are now saved by baptism than were justified formerly by the active faith of their parents. Moreover, baptism can more readily be applied to infants than the rite of circumcision, and by the ancient law this had to be deferred till the eighth day after birth, while baptism can be bestowed upon infants immediately after they are born, and in case of necessity even in their mother's womb. Finally it must be borne in mind that baptism is the gift of the grace of God, the grace of heaven. The vision of God is not something to which human beings have a natural claim. It is a free gift of the Creator who can make what conditions He chooses for imparting it or withholding it. No injustice is involved when an undue privilege is not conferred upon an unbeliever, but is the reward of an unmerited human race of an unearned right to heaven. Through the Divine mercy this bar to the enjoyment of God is removed by baptism; but if baptism be not conferred, original sin remains, and the unregenerated soul, having no claim on heaven, is not unjustly excluded from it.

As to the question, whether in addition to freedom from the pain of sense, unbaptized infants enjoy any positive happiness in the next world, theologians are not agreed, nor is there any pronouncement of the Church on the subject. Many, following St. Thomas (De Malo, v, q. v, a. 3), declare that these infants are not burdened by the pain of the beatific vision, for they have knowledge of it, and hence are not sensible of their privation; or because, knowing it, their will is entirely conformed to God's will, and they are conscious that they have missed an undue privilege through no fault of their own. In addition to this freedom from regret at the loss of heaven, these infants may also enjoy some positive happiness. St. Thomas (In II Sent., dist. XXXIII, Q. ii, a. 5) says: "Although unbaptized infants are separated from God as far as glory is concerned, yet they are not separated from Him entirely. Rather are they joined to Him by a participation of natural goods; and so they may even rejoice in Him by natural consideration and love." Again (a. 2) he says: "They will rejoice in this, that they will share in the bliss of the blessed who come into existence after the Fall, and who are saved by the meritorious intercession of Christ." While the opinion, then, that unbaptized infants may enjoy a natural knowledge and love of God and rejoice in it, is perfectly tenable, and indeed the more common opinion of the schools at present, yet it does not seem that this would necessarily be the unanimous consent of the Fathers of the Church, or from a favourable pronouncement of ecclesiastical authority.

We may add here some brief remarks on the discipline of the Church in regard to unbaptized persons. As baptism is the door of the Church, the unbaptized are entirely without its pale. As a consequence: (1) Such persons, by the ordinary law of the Church, may not be buried in consecrated ground. This includes the infants of even Catholic parents. The reason of this regulation is given by Pope Innocent III (Deer., III, XXVIII, xii): "It has been decreed by the sacred canons that we are to have no communion with those who are dead, if we have not communicated with them while alive." By a decree, however, of the Second Plenary Council of Baltimore (No. 390), catechumens may receive ecclesiastical sepulture. This council also decrees (No. 389) that the custom of burying the unbaptized relatives of Catholics in the family sepulchres may be tolerated. (2) A Catholic may not marry an unbaptized person, and the children of such marriages may not exist before the natural law, because in such unions the Catholic party and the offspring of the marriage would, in most cases, be exposed to the loss of faith. The invalidity of such marriage, however, is a consequence only of positive law. For, in the beginning of Christianity, unions between the baptized and unbaptized were frequent, and they were certainly held valid. When, then, circumstances arise where the danger of perversion for the Catholic party is removed, it may be licensed. But always requires guarantees from the non-Catholic party that there will be no interference with the spiritual rights of the partner of the union. (See IMPEDIMENTS OF MATRIMONY.) In general, we may say that the Church does not require baptism from unbaptized persons, as they are entirely without her pale. She makes laws concerning them only in so far as they hold relations with the subjects of the Church.

XII. EFFECTS OF BAPTISM.—This sacrament is the door of the Church of Christ and the entrance into a new life. We are reborn from the state of slaves of sin into the freedom of the Sons of God. Baptism incorporates us with Christ's mystical body and makes us partakers of all the privileges flowing
from the redemptive act of the Church’s Divine Founder.

The principal effects of baptism are:

(1) The remission of original and actual.
This is plainly contained in Holy Writ. Thus we read (Acts, ii, 38): “Be baptized every one of you in the name of Jesus Christ, for the remission of your sins; and you shall receive the Holy Ghost. For the promise is to you and to your children and to all that are far off, as many as the Lord our God shall call.”
We read also in the second-twenty chapter of the Acts of the Apostles (v. 16): “Be baptized, and wash away thy sins.” St. Paul in the fifth chapter of his Epistle to the Ephesians beautifully represents the church as being baptized (v. 25 sq.): “Christ loved the Church, and delivered Himself up for: that he might sanctify it, cleansing it by the laver of water in the word of life: that he might present it to Himself a glorious Church, not having spot or wrinkle, or any such thing; but that it should be holy and without blemish.” The prophecy of Escheciel (xxxvi, 25) has also been understood of baptism: “I will pour upon you clean water, and you shall be cleansed from all your filthiness” (inaquaminibus), where the word is unquestionably applied to a moral defection. This is also the prevailing teaching of the Church. In the profession of faith prescribed by Pope Innocent III for the Waldensians in 1210, we read: “We believe that all sins are remitted in baptism, both original sin and those which have been committed since baptism.” The Council of Trent (Sess. V., can. v) anathematizes whosoever denies that the grace of Christ which is conferred in baptism does not remit the guilt of original sin, or asserts that everything which can truly and properly be called sin is not thereby taken away. The same is taught by the Fathers. St. Justin Martyr (Apol., I., ixvi) declares that in baptism we are created anew, that is, consequently, free from all stain of sin. St. Ambrose (De Myst., iii) says of baptism: “This is the water in which the flesh is submerged that all carnal sin may be washed away. Every transgression is there buried.” Tortullian (De Bapt., vii) writes: “Baptism is a carnal act in as much as we are submerged in the water; but the effect is spiritual, for we are freed from our sins.”

The words of Origem (In Gen., xiii) are classic: “If you transgress, you write unto yourself the handwriting [chirographum] of sin. But, behold, when you have once approached to the cross of Christ and to the grace of baptism, your handwriting is affixed to the Cross and is blotted out.”
It is needless to multiply testimonies from the early ages of the Church. It is a point on which the Fathers are unanimous, and telling quotations might also be made from St. Cyprian, Clement of Alexandria, St. Hilary, St. Cyril of Jerusalem, St. Basil, St. Gregory Nazianzen, and others.

(2) But baptism not only washes away sin, it also remits the punishment of sin. This was the plain teaching of the primitive Church. We read in the Clement of Alexandria (Pedagogy, i) of baptism: “It is called a laver because we are washed from our sins; it is called grace, because by it the punishments which are due to sin are remitted.” St. Jerome (Ep. lxix) writes: “After the pardon (indulguntiam) of sins, there is no manner of fault to be feared.” And St. Augustine (De Pecce. et Mer., II., xxxviii) says plainly: “If immediately [after baptism] there follows the departure from this life, there will be absolutely nothing that a man must answer for (quod obscurum hominem item, for he will have been freed from the punishment that befell him.” In perfect accord with the early doctrine, the Florentine decree states: “No satisfaction is to be enjoined upon the baptized for past sins; and if they die before any sin, they will immediately attain to the kingdom of heaven and to the vision of God.” In like manner the Council of Trent (Sess. V.) teaches: “There is no cause of damnation in those who have been truly buried with Christ by baptism. Nothing whatever will delay their entrance into heaven.”

(3) Another effect of baptism is the infusion of sanctifying grace and supernatural gifts and virtues. It is this sanctifying grace which renders men the adopted sons of God and confers the right to heavenly glory. The doctrine on this subject is found in the seventh chapter on justification in the sixth session of the Council of Trent. Many of the Fathers of the Church also enlarge upon this subject (as St. Cyprian, St. Jerome, Clement of Alexandria, and others), though not in the technical language of later ecclesiastical decrees.

(4) Theologians likewise teach that baptism gives man the right to those special graces which are necessary for attaining the end for which the sacrament was instituted and for enabling him to fulfill the baptismal promises. This doctrine of the schools, which claims for every sacrament those graces which are peculiar and diverse according to the end and object of the sacrament, was already enunciated by St. Tertullian (De Resurrectione) and St. Ambrose.

It is developed by St. Thomas Aquinas (III, Q. lxii, a. 2). Pope Eugene IV repeats this doctrine in the decree for the Armenians. In treating of the grace bestowed by baptism, we presume that the recipient of the sacrament puts no obstacle (obex) in the way of sacramental grace. In an infant, of course, this would be impossible, and as a consequence, the infant receives at once all the baptismal grace. It is otherwise in the case of an adult, for in such a one it is necessary that the requisite dispositions of the soul be present. The Council of Trent (Sess. VI., c. vi) states that each one receives grace according to his disposition and co-operation. We are not to confound an obstacle (obex) to the sacrament itself with an obstacle to the sacramental grace. In the first case, there is implied a defect in the matter or form, or a lack of the requisite intention on the part of minister or recipient, and then the sacrament would be simply null. But even if all these essential requisites for constituting the sacrament be present, there can still be an obstacle put in the way of the sacramental grace, inasmuch as an adult might receive baptism with improper motives or without real determination for sin. In that case the person would indeed be validly baptized, but he would not participate in the sacramental grace. If, however, at a later time he renounced baptism, the obstacle which he had received would be removed and he would obtain the grace which he had failed to receive when the sacrament was conferred upon him. In such a case the sacrament is said to revive and there could be no question of rebaptism.

(5) Finally, baptism, once validly conferred, can never be repeated. The Fathers (St. Ambrose, Chrysostom, and others) so understand the words of St. Paul (Heb., vi, 4), and this has been the constant teaching of the Church from the earliest times. On this account, baptism is said to impress an ineffaceable character on the soul, which the Trinitarian Fathers call a spiritual and indelible mark. That baptism (as well as Confirmation and Holy Orders) is not altogether a character, that is to say, a mark which a character, is defined expressly by the Council of Trent (Sess. VII., can. ix). St. Cyril (Prep. in Cat.) calls baptism a “holy and indelible seal,” and Clement of Alexandria (De Div. Serv., xiii), “the seal of the Lord.” St. Augustine compares this character or mark impressed upon the Christian soul with the character militaris impressed upon soldiers in the imperial service. St. Thomas treats of the nature of this indelible seal, or character, in the Summa (III, Q. lxii, a. 2).
The early leaders of the so-called Reformation held very different doctrines from those of Christian antiquity on the effects of baptism. Luther (De Baptism., Bk. III, ch. ii) held that infants who die without baptism make the sacrifice of the lamb in heaven as their substitute. Calvin, in his Institutes, held that the sacrament made the baptized certain of the perpetual grace of adoption. Others declared that while the calling to mind of one's baptism would free him from sins committed after it; others, again, that transgressions of the Divine law, although sins in themselves, were not, of themselves, as such, sins of those who had been baptized. The teachings of the Church, as expounded in the Council of Trent, hold that the faith of the Church and the baptism of the infant provide him with grace. The decrees of the Council of Trent, drawn up in opposition to the then prevailing errors, bear witness to the many strange and novel theories broached by various exponents of the ancient Protestant theology.

XIII. MINISTER OF THE SACRAMENT.—The Church distinguishes between the ordinary and the extraordinary minister of baptism. A distinction is also made as to the mode of administration. Solemn baptism is that which is conferred with all the rites and ceremonies prescribed by the Church, and private baptism is that which may be administered at any time or place according to the exigencies of necessity. At one time solemn and public baptism was practiced in the Church during the paschal season and Whitsun-tide. The Orientals administered it likewise at the Epiphany.

(a) The ordinary minister of solemn baptism is the bishop and the priest. By delegation, a deacon may confer the sacrament solemnly as an extraordinary minister. Bishops are said to be ordinary ministers because they are the successors of the Apostles who received directly the Divine command: "Go and teach all nations, baptizing them in the name of the Father and of the Son and of the Holy Ghost." Priests are also ordinary ministers because by their office and sacred orders they are pastors of souls and administrators of the sacraments, and hence the Florentine decrees declare: "The minister of this Sacrament is the priest, to whom it belongs to administer baptism by reason of his office." As, however, bishops are superior to priests by the Divine law, the solemn administration of this sacrament was at one time reserved to the bishops, and a priest never administered this sacrament in the presence of a bishop without permission of the said bishop. St. Jerome (Contra Lucif., ix) witnesses to the same usage in his days: "Without chiasm and the command of the bishop, neither priest nor deacon has the right of conferring baptism." Deacons are only extraordinary ministers of solemn baptism, as by their office they are assistants to the priestly order. St. Isidore of Seville (De Eccl. Off., ii, 25) says: "It is plain that baptism is to be conferred by priests only, and it is not lawful even for deacons to administer it, except from the chiasm of a bishop or priest." That deacons were, however, ministers of this sacrament by delegation is evident from the quotations adduced. In the service of ordination of a deacon, the bishop says to the candidate: "It belongs to you as a deacon to baptize and to preach." Philip the deacon is mentioned in Holy Writ (Acts, viii) as conferring baptism, presumably by delegation of the Apostles. It is to be noted that though every priest, in virtue of his ordination, is the ordinary minister of baptism, yet he is not always the principal minister unless he has jurisdiction. Hence the Roman Ritual declares: "The legitimate minister of baptism is the parish priest, or any other priest delegated by the parish priest or the bishop of the place." The Second Plenary Council of Baltimore adds: "Priests are deserving of grave reprehension who rashly baptize infants of another parish or of another dioce.

(b) In case of necessity, baptism can be administered lawfully and validly by any person whatsoever who observes the essential conditions, whether this person be a Catholic layman or any other man or woman, heretic or schismatic, infidel or Jew. The essential conditions are that the person pour water upon the one to be baptized, at the same time pronouncing the words: "I baptize thee in the name of the Father and of the Son and of the Holy Ghost." Moreover, he must thereby intend really to baptize the person, or technically, he must intend to perform the rite of baptism when he administers the sacrament. The Roman Ritual adds that, even in conferring baptism in cases of necessity, there is an order of preference to be followed as to the minister. This order is: if a priest be present, he is to be preferred to a deacon, a deacon to a subdeacon, a cleric to a layman, and a man to a woman, unless modesty should require (as in cases of childbirth) that no other than the female be the minister, or again, unless the female should understand better the method of baptism. The Ritual also says that the father of another should not baptize his own child, except in danger of death when no one else is at hand who could administer the sacrament. Pastors are also directed by the Ritual to teach the faithful, and especially midwives, the proper method of baptism. When such private baptism is administered, the other ceremonies of the rite are supplied later by a priest, if the recipient of the sacrament survives.

This right of any person whatsoever to baptize in case of necessity is in accord with the constant tradition and practice of the Church. Tertullian (De Bapt., viii) says, speaking of laymen who have an opportunity to administer baptism: "He will be guilty of the loss of a soul, if he neglects to confer what he freely can." St. Jerome (Adv. Lucif., ix): "In case of necessity, we know that it is also allowable for a layman (to baptize) for baptism is a work which he ought to be given." The Fourth Council of the Lateran (casp. Firmiter) decrees: "The Sacrament of Baptism ... no matter by whom conferred is available to salvation." St. Isidore of Seville (can. Romanus de cons., iv) declares: "The Spirit of God administers the grace of baptism, although it be a pagan who does the baptizing." Pope Nicholas I teaches the Bulgarians (Resp. 104) that baptism by a Jew or a pagan is valid. Owing to the fact that women are admitted to the jurisdiction of the Church, the question necessarily arose concerning their ability to bestow valid baptism. Tertullian (De Bapt., xvii) strongly opposes the administration of this sacrament by women, but he does not declare it invalid. St. Ambrose (Ep. viii) says: "In like manner, it is not lawful for a woman to baptize." But he says: "Not even the power of baptizing has been granted to them," but he is speaking of solemn baptism, which is a function of the priesthood. Similar expressions may be found in the writings of other Fathers, but only when they are opposing the erroneous doctrine of female bishops. The Church, however, is plain. Pope Urban II (c. Super quibus, xxx, 4) writes: "It
As true baptism if a woman in case of necessity baptizes a child in the name of the Trinity." The Florentine decree for the Armenians says explicitly: "In case of necessity, not only a priest or a deacon, even if a layman or woman, may even a pagan or heathen, according to the main reason for this extension of power as to the administration of baptism is of course that the Church has understood from the beginning that this was the will of Christ. St. Thomas (III, Q. lxvii, a. 3) says that owing to the absolute necessity of baptism for the salvation of souls committed to the mercy of God, it wishes all to be saved, that the means of obtaining this sacrament should be put, as far as possible, within the reach of all; and as for that reason the matter of the sacrament was made of common water, which can most easily be had, so in like manner it was only proper that every man should be made its minister. Finally, it is to be noted that, by the law of the Church, the person administering baptism, even in cases of necessity, contracts a spiritual relationship with the child and its parents. This relationship constitutes an impediment that would make a subsequent marriage with any of them null and void unless a dispensation were obtained beforehand. See AFFINITIES.

IV. RECEIPT OR BAPTISM.—Every living human being, not yet baptized, is the subject of this sacrament.

1. As regards adults there is no difficulty or controversy. Christ's command excepts no one when He bids the Apostles teach all nations and baptize them.

2. Infant baptism has, however, been the subject of much dispute. The Waldenses and Cathari, and later the Anabaptists, rejected the doctrine that infants are capable of receiving valid baptism, and some still hold the same view at the present day. The Catholic Church, however, maintains absolutely that the law of Christ applies as well to infants as to adults. When the Redeemer declares (John, iii) that it is necessary to be born again of water and the Holy Ghost in order to enter the Kingdom of God, His words may be justly understood to mean that He includes all who are capable of having a right to this kingdom. Now, He has asserted such a right even for those who are not adults, when He says (Matt., xix, 14): "Children and forbid them not to come to me: for the kingdom of heaven is for such." It has been objected that this latter text does not refer to infants, as much as Christ says "to come to me." In the parallel passage in St. Luke (xviii, 15), however, the text holds the reverse opinion. "And they brought unto him also infants, that he might touch them"; and then follow the words cited from St. Matthew. In the Greek text, the words βρεφος and πρωτευσιος refer to infants in arms. Moreover, St. Paul (Coloss., ii) says that baptism in the New Law has taken the place of circumcision in the Old. It was especially to infants that the rite of circumcision was applied by Divine precept. If it be said that there is no example of the baptism of infants to be found in Holy Writ, we may answer that infants are included in such phrases as: "She was baptized and her household" (Acts, xvi, 15); "Himself was baptized, and all his house immediately" (Acts, xvi, 33); "I baptized the household of Stephanas" (1 Cor., i, 16).

The doctrine of infant baptism in antiquity as to the necessity of infant baptism is clear from the very beginning. We have given many striking quotations on this subject already, in dealing with the necessity of baptism. A few, therefore, will suffice here. Origen (in cap. vi, Ep. ad Rom.) declares: "The Church received the custom of infant baptism from the beginning of Christianity. Baptism is the traditional inheritance of the Church. And infant baptism also to infants." St. Augustine (Serm. xi, De Verb Apost.) says of infant baptism: "This the Church always had, always held; this she received from the faith of our ancestors; this she perseveringly guards even to the end." St. Cyprian (Ep. ad Fidum) writes: "From baptism and from grace . . . must not be kept the infant who, because recently born, has not sinned. And as for the head of the infant from Adam, it has contracted the contagion of the ancient death in its first nativity; and it comes to receive the remission of sins more easily on this very account that not its own, but another's sins are forgiven it." St. Cyril of Alexandria (Ep. Carth. in 253) reprove the opinion that the baptism of infants should be delayed until the eighth day after birth. The Council of Milevis in 416 anathematizes whoever says that infants lately born are not to be baptized. The Council of Trent solemnly defines the doctrine of infant baptism (Sess. VII, can. xiii). It also condemns (can. xiv) the opinion of Erasmus that those who had been baptized in infancy, should be left free to ratify or reject the baptismal promises after they had become adult. Theologians also call attention to the fact that as God sincerely wishes all men to be saved, He does not exclude infants, for whom baptism of either water or blood is the only means possible. The doctrines also of the universality of original sin and of the all-sufficiency of Christ are stated so plainly and absolutely in Scripture as to leave no solid reason for denying that infants are included as well as adults.

To the objection that baptism requires faith, theologians reply that adults must have faith, infants receive habitual faith, which it infused into them in the sacrament of regeneration. As to actual faith, they believe on the faith of another; as St. Augustine (De Verb. Apost., xiv, xviii) beautifully says: "He believes by another, who has sinned by another," and the infant is obliged to fulfill them in proportion to its age and capacity, as is the case with all laws. Christ, it is true, prescribed instruction and actual faith for adults as necessary for baptism (Matt., xxviii; Mark, xvi); but in His general law on the necessity of the sacrament (John, iii) He makes absolutely no restriction as to the subject of baptism; and consequently while infants are included in the law, they cannot be required to fulfill conditions that are impossible for them because they lack the capacity for the validity of infant baptism. Tertullian (De Bap., xlviii) desired that the sacrament not be conferred upon them until they have attained the use of reason, on account of the danger of profaning their baptism and of the youths among the abominations of pagan vice. In like manner, St. Gregory Nazianzen (Or. xl, De Bap.) thought that baptism, unless there was danger of death, should be deferred until the child was three years old, for then it could hear and respond at the ceremonies. Such opinions, however, were shared by few, and they contain no denial of the validity of infant baptism. It is true that the Council of Nicea (can. vi) declares that an infant cannot be baptized in its mother's womb, but it was teaching only that neither the baptism of the mother nor her faith is confounded in the child by baptism; the infant in the womb cannot reach the body of the child. When, however, this seems possible, even with the aid of an instrument, Benedict XIV (Syn. Dixiee, vii, 5) declares that midwives should be instructed to confer conditional baptism. The Ritual further says that even a pregnant woman may baptize the head of the infant the sacrament is to be administered absolutely; but if it can be poured only on some other
part of the body, baptism is indeed to be conferred, but it must be conditionally repeated in case the child survives its birth. It is to be noted that in these last two cases, the rubric of the Ritual supposes that the infant has partly emerged from the womb. For if the fetus was entirely enclosed, baptism is to be renounced and another administered. In the case of death of the mother, the fetus is to be immediately extracted and baptized, should there be any life in it. Infants have been taken alive from the womb even forty-eight hours after the mother's death (Dub. Rev., no. 87). After the Cesarean incision has been performed, the fetus may be conditionally baptized before extraction if possible; if the sacrament is administered after its removal from the womb the baptism is to be absolute, provided it is certain that life remains. If after extraction it is doubtful whether it be still alive, it is to be baptized under the condition: "If thou art alive." Physicians, mothers, and midwives ought to be reminded of the grave obligation of administering baptism under these circumstances (Coppena, Lect., VI). It is to be borne in mind that, according to opinion among the learned, the fetus is animated by a human soul from the very beginning of its conception (O'Kane, III, 18, etc.). In cases of parturition where the issue is a mass that is not certainly animated by human soul, it is to be baptized conditionally: "If thou art a man".

(4) The perpetually insane, who have never had the use of reason, are in the same category as infants in what relates to the conferring of baptism, and consequently the sacrament is valid if administered. If at one time they had been sane, baptism bestowed upon them during their insanity would be probably invalid unless they had shown a desire for it before losing their reason. Moralist teach that, in practice, the latter class may always be baptized conditionally, when it is uncertain whether or not they had ever asked for baptism (Sabetti, no. 661). In this connexion it is to be remarked that, according to many writers, anyone who has a wish to receive all things necessary to salvation, has at the same time an implicit desire for baptism, and that a more specific desire is not absolutely necessary.

(5) Foundlings are to be baptized conditionally, if there is no means of finding out whether they have been validly baptized or not. If a note has been left with them before they were found that the parents had been revocably baptized, the more common opinion is that it should nevertheless be given conditional baptism, unless circumstances should make it plain that baptism had undoubtedly been conferred (Sabetti, no. 662, 4). "The manner (n. 214) says that the same rule is to be followed when midwives or other lay persons have baptized infants in case of necessity.

(6) The question is also discussed as to whether the infant children of Jews or infidels may be baptized against the will of their parents. To the general query, the answer is a decided negative, because such a baptism would violate the natural rights of parents, and the infant would later be exposed to the danger of perversion. We say this, of course, only in regard to the liceity of such a baptism, for if it were actually administered it would undoubtedly be valid. St. Thomas (III, Q. lviii, a. 10) is very express in denying the lawfulness of imparting such baptism, and this has been the constant judgment of the Holy See, as is evident from various decrees of the Sacred Congregation and of the Holy Office (II Bullari). We say the answer is negative to the general question, because particular circumstances may require a different response. For it would undoubtedly be licit to impart such baptism if the children were in danger of dying at death; or if they had been rescued from the parental care and there was no likelihood of their returning to it; or if they were perpetually insane; or if one of the parents were to consent to the baptism; or finally, if, after the death of the father, the paternal grandfather would be willing, even though the mother objected. If the children were, however, not infants, but had the use of reason and were sufficiently instructed, they should be heard and a reasonable course was to be followed (Sabetti, no. 662). In the celebrated case of the Jewish child, Edgar Mortara, Pius IX indeed ordered that he should be brought up as a Catholic, even against the will of his parents, but baptism had already been administered to him some years before when in danger of death.

(7) As to children of Protestants in the United States, Kenrick (no. 28) and Sabetti (no. 662, 2) declare that it is not licit to baptize them against the will of their parents; for their baptism would violate parental right, expose them to the danger of perversion, and be contrary to the practice of the Church. Kenrick also strongly condemns nurses who baptize the children of Protestants unless they are in danger of death. Should a priest baptize the child of non-Catholic parents if they themselves desire it? He certainly can do so if there is reason to hope that the child will be brought up a Catholic (Conc. Prov. Balt., I, decr. x). An even greater security for the Catholic education of such child would be the promise of one or both parents that they themselves will embrace the Faith.

(9) Concerning baptism for the dead, a curious and difficult passage in St. Paul's Epistle has given rise to some controversy. The Apostle says: "If therefore what shall they do that are baptized for the dead, if the dead rise not again at all? Why then are they baptized for them?" (I Cor., xv, 29). There seems to be no question here of any such absurd custom as conferring baptism on corpses, as was practised later by some heretical sects. It has been conjectured that this otherwise unknown usage of the Corinthians consisted in some living person receiving a symbolic baptism as representing another who had died with the desire of becoming a Christian, but had been prevented from realizing his wish for baptism by an unforeseen death. Those who give this explanation say that St. Paul merely refers to this custom of the Corinthians as an argumentum ad hominem, when discussing the resurrection of the dead, without applying the same argument to ourselves. Archbishop MacEvilly in his exposition of the Epistles of St. Paul, holds a different opinion. He paraphrases St. Paul's text as follows: "Another argument in favour of the resurrection. If the dead will not arise, what means the promise of baptism for the resurrection of the dead, made at baptism? Why are we all baptized with a profession of our faith in their resurrection?" The archbishop comments as follows: "It is almost impossible to glean anything like certainty as to the meaning of these very abstruse words, from the host of interpretations that have been hazarded regarding them (see Calmet's Dissertation on the matter). In the first place, every interpretation referring the words 'baptized', or 'dead' to either erroneous or evil practices, which men might have errored to corrupt their belief in the doctrine of the resurrection, should be rejected; as it appears by no means likely that the Apostle would ground an argument, even though it were what the logicians call an argumentum ad hominem, on a vicious or unproven hypothesis. A system of reasoning would be quite inconclusive. Hence, the words should not be referred to either the Clinics, baptized at the hour of death, or to the vicarious baptisms in use among the Jews, for their departed friends who had been renegades. The interpretation adopted in the paraphrase makes the words refer to the Sacrament of Baptism, which
all were obliged to approach with faith in the resurrection of the dead, as a necessary condition. "Credo in resurrectionem mortuum." This interpretation—the one adopted by St. Chrysostom—has the advantage of giving the words 'baptised' and 'dead' their literal significance, because it is in it, that the word resurrection is introduced. But, it is understood from the entire context, and is warranted by a reference to other passages of Scripture. For, from the Epistle of the Hebrews (vi, 2) it appears that a knowledge of the faith of the resurrection was one of the elementary points of instruction required for adult baptism; and hence the Scriptures themselves furnish the ground for the introduction of the word. There is another probable interpretation, which understands the words 'baptism' and 'dead' in a metaphorical sense, and refers them to the sufferings which the Apostles and heralds of salvation underwent to preach the Gospel to the infidels, dead to grace and spiritual life, with the hope of making them sharers in the glory of a happy resurrection. The word 'baptism' is employed in this sense in Scripture, even by our divine Redeemer Himself.—"I have a baptism wherewith to be baptised," etc. And the word 'dead' is employed in several parts of the New Testament to designate those who, though physically alive, are morally dead by grace or justice. In the Greek, the words 'for the dead,' ὅπως τοις νεκροῖς, that is, on account of, or, in behalf of the dead, would serve to confirm, in some degree, this latter interpretation. These appear to be the most probable of the interpretations of this passage; each, no doubt, has its difficulties. The meaning of the words was known to the Corinthians at the time of the Apostles. All that can be known of their meaning at this remote period, cannot exceed the bounds of probable conjecture (loc. cit., chap. xv; cf. also Cornely in Eph. Conc.).

XV. Adjuncts of Baptism.—(1) Baptistry.—According to the canons of the Church, baptism except in case of necessity is to be administered in churches (Conc. Prov. Bilt., I, Decree 16). The Roman Ritual says: "Churches in which there is a baptismal font, or where there is a baptistery close to the church." The term "baptistery" is commonly used for the space set aside for the conferring of baptism. In like manner the Greeks use θερματονομα for the same purpose. A man of the 5th century, a disciple of St. Cyril, speaks of baptism as an "illumination." The words of the Ritual just cited, however, mean by "baptistery," a separate building constructed for the purpose of administering baptism. Such buildings have been erected at the East and at West, at Pisa, Florence, and other places. In such baptisteries, besides the font, altars were also built; and here the baptism was conferred. As a rule, however, the church itself contains a raised-off space containing the baptismal font. Anciently fonts were attached only to cathedral churches; but at the present day, nearly every parish church has a font. This is the sense of the Baltimore decree above cited. The Second Plenary Council of Baltimore declared, however, that if missionaries judge that the great difficulties in introducing an infant to the reason for baptizing in a private house, then they are to administer the sacrament with all the prescribed rites. The ordinary law of the Church is that when private baptism is conferred, the remaining ceremony is to be administered in the church itself. The Ritual also directs that the font be of solid material, so that the baptismal water may be safely kept in it. A railing is to surround the font, and a representation of St. John baptizing Christ above it. The cover over the font, usually contains the holy oils used in baptism, and this cover must be under lock and key, according to the Ritual.

(2) Baptismal Water.—In speaking of the matter of baptism, we stated that true, natural water is all that is required for its validity. In administering solemn baptism, however, the Church prescribes that the water used should have been consecrated on Holy Saturday or on the eve of Pentecost. For the consecration of the sacrament, therefore, the priest is obliged to use consecrated water. This custom is so ancient that we cannot discover its origin. It is found in the most ancient liturgies of the Latine and Greek Churches and is mentioned in the Apostolic Constitutions (VII, 4). The solemnity of its consecration is striking and symbolic. After signing the water with the cross, the priest divides it with his hand and casts it to the four corners of the earth. This signifies the baptismizing of all the nations. Then he breathes upon the water and immerses the paschal candle in it. Next he pours into the water, first the oil of catechumens and then the sacred chism, and lastly both holy oils together, pronouncing appropriate prayers. But what if during the year, the supply of consecrated water should be insufficient? In that case, the Ritual declares that the priest may add common water to what remains, but only in less quantity. If the consecrated water appears putrid, the priest must examine whether or not it is really so, for the appearance may be caused by the nature of the water. If it has really become putrid, the font is to be renovated and fresh water to be blessed by a form given in the Ritual. In the United States, the Holy See has sanctioned a short formula for the consecration of baptismal water (Conc. Plen. Bilt, III, 2).

(3) Holy Oils.—In baptism, the priest uses the oil of catechumens, which is olive oil, and chism, the latter being a mixture of balsam and oil. The oils are consecrated by the bishop on Maundy Thursday. The anointing in baptism is recorded by St. Justin, St. John Chrysostom, and others. Pope Innocent I declares that the chism is to be applied to the crown of the head, not to the forehead, for the latter is reserved to bishops. The same may be found in the Sacramentaries of St. Gregory and St. Gelasius (Marténe, I, 1). In the Greek Rite the oil of catechumens is blessed by the priest during the baptismal ceremony.

(4) Sponsors.—When infants are solemnly baptized, persons assist at the ceremony to make promises. The designation of the identity of the sponsors comes from antiquity and is witnessed to by Tertullian, St. Basil, St. Augustine, and others. Such persons are designated sponsors, orantes, suceptores, fidjussores, and patrini. The English term godfather, as at Tyre, Ancyra, and elsewhere, is used. These sponsors, in default of the child’s parents, are obliged to instruct it concerning faith and morals. One sponsor is sufficient and not more than two are allowed. In the latter case, one should be male and the other female. The object of these restrictions is the fact that the sponsor contracts a spiritual relationship to the child and its parents which would be an impediment to marriage. Sponsors must themselves be baptized persons having the use of reason and they must have been designated sponsors; or if not, they must be under the age of 15. In the case of baptism they must physically touch the child either personally or by proxy. They are required, moreover, to have the intention of really assuming the obligations of godparenthood. It is desirable that they should have been the house of baptism, or at least be present. Certain persons are prohibited from acting as sponsors. They are: members of religious orders, married persons in respect to each other, or parents to their children, and in general those who are obnoxious on account of their personal life, excommunication, or who are members of condemned secret societies, or public sinners (Sabetti, n, 663). Sponsors are also used in the solemn baptism.
BAPTISM

of adults. They are never necessary in private baptisms.

(5) Baptismal Name.—From the earliest times (Martène, De Ant. Ec. Rit., I, i), names were given in baptism. The priest is directed to see that obscene, fabulous, and ridiculous names, or those of heathen gods or of infidel men be not imposed. On the contrary, the sponsors during each repetition of the rubric. This rubric is not a rigorous precept, but it is an instruction to the priest to do what he can in the matter. If parents are unreasonably obstinate, the priest may add a saint's name to the one inscribed upon the baptismal register.

(6) Baptismal Robe.—In the primitive Church, a white robe was worn by the newly baptized for a certain period after the ceremony (St. Ambrose, De Myst. c. vii). As solemn baptisms usually took place on the eve of Easter or the octave of Pentecost, the white garments became associated with those festivals. Thus Saccatum in Albis and Dominica in Albis received their names from the custom of putting on at that time the baptismal robe which had been worn since the previous vigil of Easter. It is thought that the expression “Receive this white garment” (sacramentum luce) lighted the tradition, also derived its appellation from the white garments of the newly baptized. In our present ritual, a white veil is placed momentarily on the head of the catechumen as a substitute for the baptismal robe.

XVI. CEREMONIES OF BAPTISM.—The rites that accompany the baptismal ablution are as ancient as they are beautiful. The writings of the early Fathers and the antique liturgies show that most of them are derived from Apostolic times. The infant is brought to the door of the church by the sponsors, where it is met by the priest. After the godparents have asked faith from the Church of God in the child’s name, the priest breathes upon its face and exorcises the evil spirit. St. Augustine (Ep. excv, Ad Sixtum) makes use of the Apostolic practice of exorcising to prove the existence of original sin. Then the infant’s forehead and breast are signed with the cross, the symbol of redemption. Next follows the imposition of hands, a custom certainly as old as the Apostles. Some blessed salt is now placed in the mouth of the child. “When salt,” says the Catechism of the Council of Trent, “is put into the mouth of the person to be baptized, it evidently imports that, by the doctrine of faith and the gift of grace, he should be delivered from Satan’s dominion. It is another form of good works, and be delighted with the food of divine wisdom.” Placing his stole over the child, the priest introduces it into the church, and on the way to the font the sponsors make a profession of faith for the infant. The priest now touches the ears and nostrils of the child with spittle. The symbolic meaning is thus explained (Cat. C. Trid.): “His nostrils and ears are next touched with spittle and he is immediately sent to the baptismal font, that, as sight was restored to the blind man mentioned in the Gospel, whom the Lord, after having spread clay over his eyes, commanded to wash them in the waters of Siloë; so also we may understand that the efficacy of the sacred ablution is such as to bring light to the mind to discern heavenly truth.”

The catechumen now stands before the font, as the representation of Satan, with his pomps, his pomps, and he is anointed with the oil of catechumens on the breast and between the shoulders: “On the breast, that by the gift of the Holy Ghost, he may cast off error and ignorance and may receive the grace of faith, he anoints it with the holy anointing oil; on the shoulders, that by the grace of the Holy Spirit, he may shake off negligence and temper and engage in the performance of good works; for, faith without works is dead” (James, ii, 26), says the Jasenum.

The infant now, through its sponsors, makes a declaration of faith and asks for baptism. The priest, having meantime changed his violet stole for a white one, then administers the threelfold ablution, making the sign of the cross three times with the stream of water he pours on the head of the child, saying at the same time: “. . . N...N...N, I baptize thee in the name of the Father and of the Son and of the Holy Ghost.” The ablution of the infant is followed by the immersion, or at least touch it. If the baptism be given by immersion, the priest dips the back part of the head three times into the water in the form of a cross, pronouncing the sacramental words. The crown of the child’s head is now anointed with chrism, “to give him to understand that from that day he is united as a member to Christ, his head, and engrafted on His body; and therefore he is called a Christian from Christ, but Christ from chrism” (Catech.). A white veil is now put on the infant’s head with the words: “Receive this white garment, which mayest thou carry without stain before the judgment seat of Our Lord Jesus Christ, that thou mayest have eternal life. Amen.” Then a lighted candle is placed in the catechumen’s hand, the priest says, exorcizing him: “Receive this burning light, by baptism so as to be without blame. Observe the commandments of God; that, when Our Lord shall come to His nuptials, thou mayest meet Him together with all the Saints and mayest have life everlasting and live for evermore.” The new Christian is then bidden to go in peace.

In the baptism of adults, all the essential ceremonies are the same as for infants. There are, however, some impressive additions. The priest wears two cope over his or his vestments, and he should be attended by a number of clerics or at least by two. While the catechumen waits outside the church door, the priest recites some prayers at the altar. Then he proceeds to the place where the candidate is, and asks him the questions and performs the exorcisms almost as prescribed in the ritual for infants. Before administering the blessed salt, however, he requires the catechumen to make an explicit renunciation of the form of error to which he had formerly adhered, and he is then signed with the cross on the brow, ears, eyes, nostrils, mouth, breast, and between the shoulders. Afterwards, the candidate, on bended knees, recites three several times the Lord’s Prayer, and a cross is made on his forehead, first by the godfather and then by the priest. After this, taking him by the hand, the priest draws him in the altar and he adores prostrate and then rising he recites the Apostles’ Creed and the Lord’s Prayer. The other ceremonies are practically the same as for infants. It is to be noted that owing to the difficulty of carrying out with proper splendor the ritual for baptized adults, the bishops of the United States obtained permission from the Holy See to make use of the ceremonial of infant baptism instead. This general dispensation lasted until 1857, when the ordinary law of the Church went into force. (See BALTIMORES, COUNCILS OF.) Some American dioceses, however, obtained individual permissions to continue the use of the ritual for infants when administering adult baptism.

XVII. METAPHORICAL BAPTISM.—The name “baptism” is sometimes applied improperly to other ceremonies.

(1) Baptism of Fire. —This name has been given to the blessing of bells, at least in France, since the eleventh century. It is derived from the washing of the bell with holy water by the bishop, before he places the bell upon the altar, in the presence of the people. The ceremony is called the washing of the bell because the bells of the church are held to be the bells of the church. The name comes from the fact that, when the bell is blessed, it is then said to be inscribed with the name of the person to whom it is given. The name is also given to the act of plunging a rod into the fire of the altar, which is supposed to purify the person so plunge.

Baptism by Heretics. See Baptism.

Baptismal Font, a basin or vase, serving as a receptacle for baptismal water in which the candidate for baptism is immersed, or over which he is washed, in the ceremony of Christian initiation. In the Christian churches, it is a stone basin, though metal or wood are used, supported on a pedestal or columns at a convenient height for receiving the water which is poured over the head of the person baptized, a form which marks the simplicity and grandeur illuming in the history of the mode of conferring baptism.

ARCHEOLOGY.—In the Apostolic Age, as in Jewish times (John, iii, 23), baptism was administered without special fonts, at the seaside or in streams or pools of water (Acts, vii, 38; Tertullian refers to St. Peter’s baptizing in the Tiber (De bapt., iv); similarly, in later periods of evangelization, missionaries baptized in rivers as is narrated by Jerome (Letter to Pope Damasus, iii, 2) when entering the land by Bede (Hist. Eccl., I, xiv-xvi). Indoor baptism, however, was not uncommon (Acts, i, 18; xvi, 33) and, for the sake of both privacy and solemnity, came to be the rule; while reverence for the rite itself and for the water, which came in time to acquire a special consecration, led to the building of a special basin or font for the baptismal ceremony and, at a later period, for the preservation of the water. With the establishment of distinctively Christian places of worship this font became one of their important adjuncts. In the East it took the form of a pool or cistern, similar to those of the baths, often larger, and deep enough to permit total immersion. Whence it was called καλύμματα (swimming-baths), a name which in its Latin equivalent, natatorium, was also used in the West, as was the term piscina with its apt allusion to birth and life in the waters (Tertullian, De bapt., i; St. Augustine, De c. Donat., III, i). The name font (a spring of water) was also in early use and came to prevail.

During the tenth century a font was erected over a crypt or catacombs, cisterns hewn from the tufa in the floor of baptismal chapels. (See BAPTISTERY.) Examples are to be found in the Ostrich Cemetery, where in a small shallow basin in the floor a spring wells up in the Cemetery of Pontianus, where an oblong reservoir, about eighteen square feet in surface area and three feet in depth, is yet filled with water (Marucchi, Architettura cristiana, II, 83; a species of St. Felicitas (ibid., 304); and of St. Priscilla, which in 1901 was found a basin of particular interest on account of its period. It took the form of a basin which was either entirely below the level of the baptismal floor or was partially raised above it by a low curb of masonry, over which the neophytes passed by steps, in going down into the water; to the ascent and descent, as well as to the number of steps, this involved, there was often attached a mystical significance (Isidore of Seville, De divin. off. II, xxv).

These fonts were either circular or octagonal in form and rarely hexagonal or square; a few were in the form of a cross (Gregory of Tours, Miracles, I, 28); but the typical form in the East than in the West, while an occasional sarcophagus-shaped font was suggested, perhaps by the allusion to baptism in Romans, vi, 4. In size fonts varied, but as a rule they were large enough for the simultaneous baptism of a few catechumens. One font points to the continued prevalence of but partial immersion down to the eighth century. Water was provided either by natural springs or by pipes leading into the basins, though there are many examples where the basin was entirely below the level of the fonts, the heads of the neophytes. Drain pipes conducted the water into the earth or into a nearby stream after

The ceremony. These early fonts were lined and paved with marble or other decorative stone and were often highly ornamented, featuring mosaics or painted scenes. The font of Benoît in the West was one of the most elaborate, with a golden lamb and seven silver stages from whose mouths gushed water from the Claudian aqueduct; the golden lamb was flanked by statues of the Saviour and of St. John the Baptist. From the centre of the font ran a porphyry column bearing a golden lamp in which, during the ceremony, a burning oil of fragrant odour. This font was despoiled by the barbarian invaders, but its general design may be seen in the present day structure.

The passing of the period of adult conversion to Christianity and the growing prevalence of infant baptism with a consequent frequency of administration determined a change in the structure of the fonts. Instead of a basin below the floor level, walls of marble were built up to a height of three or four feet, the basin being below the child and its opening; or a font hewn from solid stone rested on the chapel floor. Immersion of children had come to be the rule, and as the practice was adopted too in the case of adults, the fonts were sometimes large enough for this rite to be performed. With the thirteenth century, however, simple infusion came by degrees to be adopted, and with its general use, the font became smaller and more shallow, and was raised from the floor on piers or columns. The older type of font continued to find favour in Italy, but in the Northern countries the winter chill of the waters hastened the general use of infusion, and as this rite required for each person baptized but a small quantity of water, the font generally took the simple form and small dimensions it has to-day.

CIVIL LAW AND LITURGY. The Church's legislation kept pace with this development. Early enactments urged stone as the regular material, though metal was permitted. With the erection of fonts for the continual preservation of the water reverence and cleanliness became the Church's chief concern; the font, if not of impermeable stone, must be lined with metal; it must be used exclusively for baptism, and to guard it against profanation, securely covered and locked. Frequency of thirteenth-century legislation on this point throughout the Empire shows the prevalence of a passing superstitious belief in the magical efficacy of the font and its waters. The constitutions of Bishop Poore of Sarum (Salisbury, c. 1217) and of St. Edmond of Canterbury (1236) condemned the abuse in England as did the Councils of Tours (1238), Trier (1238), Friburz (1243), and Breslau (1248), on the Continent. The cover was enacting in the name of cleanliness and decoration as well, and, besides a close-fitting, clothed lid, there was demanded in many dioceses an outer dome-like cover, sometimes highly ornamental and draped with a canopy or veil. The repugnance to continued repetition of baptism over a font whose water was to last for ten months, was overcome by providing two compartments, one to contain the baptismal equipment, and the other to receive the dippings and drain them into the sanctuarium, a provision embodied by Benedict XIII in his still authoritative "Memoria Rituum" (Tit. vi, cap. ii, § 5, 9). The Roman Ritual (Tit. i, cap. i, § 8) orders that the font should be in the church or in a nearby baptistery, within a walled enclosure and secured by lock and key; of a substantial material fit to hold water; of becoming shape and ornamentation and so covered as to exclude anything unclean (cf. Council II Baly, § 294-297). As models of diocesan legislation concerning fonts are cited the synodal acts of St. Charles Borromeo (Acta Eccl. Mediolan., Paris, 1643, 58-63) and those of Benedict XIII, when Archbishop of Benevento (Collectio Lacinii, I, 69 sq.).

Two important liturgical functions centre at the font, the baptismal rite itself, and the blessing of the font. The earliest allusion to such a blessing is by Tertullian who, in his Rim., designates it as sanctification of the water by the invocation of God (De bapt., iv). St. Cyprian speaks of its being purified and sanctified by the priest (Ep. ix., Ad Jan.); St. Basil considered the blessing, already of long-standing practice in his day, as of Apostolic institution (De Spiritu Sancto, ch. 11.); St. Ambrose also prefixed a ceremonial blessing, including blessings, exorcism, and invocations (De myst., iii., 14-20). The oldest extant rite is that of the Apostolic Constitutions (VII, xiii.), an extended prayer in Eucharistic form. The blessing of the font is henceforward an important feature of the sacramentaries and ordinals, which contain nearly all the features of the present rite. It served as the preliminary to baptism, which was solemnized on the vigil of Easter and Pentecost; and notwithstanding the increasing frequency of its being omitted. With the thirteenth century, however, simple infusion came by degrees to be adopted, and with its general use, the font became smaller and more shallow, and was raised from the floor on piers or columns. The older type of font continued to find favour in Italy, but in the Northern countries the winter chill of the waters hastened the general use of infusion, and as this rite required for each person baptized but a small quantity of water, the font generally took the simple form and small dimensions it has to-day.

John B. Peterbon.
church, in the presence of the bishop. The form of this renunciation as found in the Apostolic Constitution *Contraremonstrum* is as follows: "Let therefore the candidate for baptism declare thus in his renunciation: 'I renounce Satan and his works and his pomps and his worship and his angels and his inventions and all things that stand in opposition to thee, O Christ, and in thee, O Christ.'" And another, renunciation of himself in his consacration say: 'And I associate myself to Christ and believe and am baptized into one unbegotten being,' etc.

Where there was a baptistery the renunciations were made in the *apartatus*, the vestibule or ante-room, as distinguished from the *evdρος αὐλή*, the inner room where the baptism itself was administered. The catechumen, standing with his face to the West, which symbolized the abode of darkness, and stretching out his hand, or sometimes spitting out in defiance and abhorrence of the devil, was wont to make this abjuration. It was also customary after this for the candidate for baptism to make an explicit promise of obedience to Christ. This was called by the Greeks ουρανός εύπροσδόκησις. St. Justin Martyr testifies that baptism was only administered to those who, together with their profession of faith, made a promise or vow that they would live in conformity with the Chris.

This pagan rite the church subsequently employed for baptism. In this declaration of attachment to Christ the person to be baptized turned towards the East as towards the region of light.

The practice of renewing the baptismal promise is more or less widespread. This is done under circumstances of special solemnity such as at the closing exercises of a mission, after the administration of First Communion to children, or the conferring of the Sacrament of Confirmation. It is thus intended as a way of reaffirming one's loyalty to the obligations over by membership in the Christian Church.

Baptism, the separate building in which the Sacrament of Baptism was once solemnly administered, or that portion of a church edifice later apart for the same purpose. In ancient times the term was applied to a basin, pool, or other place for bathing. The Latin term *baptisterium* was also applied to the vessel or tank which contained the water for baptism, and in the Early Church denoted in different the baptismal font and the building or chapel in which it was enshrined. There is no means of knowing when the first baptisteries were built; but both their name and form seem borrowed from pagan sources. They resemble in arrangement the basins in the *thermae*, and the fact that Pliny, in speaking of the latter, twice uses the word *bap-

tisteria* seems to point to this derivation. The term was also applied to the bath in the circular chamber of the baths at Pompeii and to the tank in the triangular court of suburban villas. The earliest extant type of baptisterium is found in the catacomb chambers in which were the baptismal-pools. (See Baptismal Font.) These rooms were sometimes spacious; that in the Roman catacomb of Priscilla adjoins another larger cubicula used perhaps for the adjutants of the baptismal rite; that of the Pontian cemetery bears traces of sixth-century mural decoration, a beautiful *cruce gemmate* with other Christian symbols being yet visible. With the construction of edifices for Christian worship a special building was erected for the baptismal ceremonies. Ordinarily circular or polygonal, it contained in the centre the font; a circular ambulatory gave room for the ministers and witnesses who, with the neophytes, were numerous at the Easter and Pentecost solemnities; radiating from the structure were rooms for the candidates, and sometimes a chapel with altar for the Eucharistic service following baptism (cf. Baptism), as may be seen in the Lateran baptistery.

The building sometimes joined, but was generally adjacent to, the cathedral or church edifice later enlarged, and was usually situated near the atrium or
forecourt. Immersion gradually gave way to in-
fusion, though in the South the custom ofimmersing
children in the baptisteries persisted long after the
north had commenced infusion in the small bap-
tistical chaps. When separate baptisteries were no
longer needed, the font was usually attached to that
part of the church which was set apart for and con-
tained the baptistical font. The font was sometimes
placed in a separate chapel or compartment, some-
times in an inclosure formed by a railing or open
screen, and often the font stands alone, either
in the vestibule of the church, or in an arm of the
transept, or at the western extremity of one of the
aisles, and occasionally in the floor chamber of
the western tower.

The modern baptistery is merely that part of the
church set apart for baptism. According to the
Roman Ritual, it should be raised off; it should have
a gate fastened by a lock; and should be adorned, if
possible, with a picture of the baptism of Christ by
St. John. It is convenient that it should contain a
chapel with two compartments, one for the holy oils,
the other for the salt, candle, etc. used in baptism.
The form of the early baptisteries seems to have
been derived from the Roman circular temples of
tombs. And in adopting the plans, the early Chris-
tians observed this. In the circular or polygonal
columns, which in Roman examples were generally
used in a decorative way, were now used to support
the walls carrying the domes. To cover a large area
with one roof was difficult; but by the addition of an
 aisle in one story, round a moderate-sized circular
tomb, the inner walls could be replaced by columns
in the lower half, which gave such buildings as these
early baptisteries.

The earliest existing baptistery is that of the
Lateran, to have been constructed in its original
form under Constantine. Throughout the Roman
world round or polygonal baptisteries seem to have
been constantly employed from the fourth century
onwards. In many places the Italians have pre-
served the separate building for baptism, while north
of the Alps the practice generally prevailed of ad-
ministering the rite in the churches. The construc-
tion of the baptistery of the Lateran is interesting
because of a direct adaptation of the cylindrical
system of the basilicas to a concentric plan. The inner
chapel is surrounded by a single shafted, upward-
straight entablature of which a second story of
columns is superimposed. The original character of
the ceiling and the roof cannot now be determined,
but the weak supports were hardly adapted to bear
a very heavy superstructure. Although mortuary
monuments were generally built as simple
cylindrical halls, without surrounding passages, other
examples of the two modes of extension are not
lacking.

The arrangement of the baptistery requires but
brief notice. A flight of steps descended into the
round or polygonal font (piscina or fons), which was
sunken beneath the level of the floor, and sometimes
raised a little above it by a breastwork of stone. The
font was surrounded by a row of columns which
supported curtains to insure the most perfect privacy
and decency during the immersion. The columns
were united occasionally by archivoltas, more fre-
quently by architraves adorned by metrical inscrip-
tions; the eight distichs in the Lateran baptistery
were applied to the fourth century.
The baptistery of Pisa, designed by Dioti Salvi in
1153, is circular, 129 feet in diameter, with en-
circling aisle in two stories. Built of marble, it is
surrounded externally on the lower story by half
colonnades; and died in the form of a Steeple,
which is an open arcade in two heights, supported
by small detached shafts. It was not completed til
1278, and has Gothic additions of the fourteenth
century, in consequence of which it is not easy to
ascertain what the original external design really
was. The structure is crowned by an outer hemi-
spherical dome, through which penetrates a conical
dome 60 feet in diameter over the central space,
and supported on four pillars and eight columns.
Thus, if there were another internal hemispherical
cupola, it would resemble the constructive dome of
St. Paul, London. This baptistery bears remarkable
similarity to the church of San Donato (ninth cen-
tury) at Zara, in Dalmatia, which has a space only
30 feet in diameter. The baptistery at Asti, if examined with those of San Antonio, will give
a very complete idea of Lombardic architecture in
the beginning of the eleventh century. More or less
interesting examples of baptisteries exist at Biella,
Brindisi, Cremona, Galliano, near Milan, Gravedona,
Monte Sant' Angelo, Padua, Parma, Pianora, Pistoia,
Spalato, Verona, and Volterra. There are very few
examples in Italy of circular or polygonal buildings
of any class belonging to the Gothic age. Bap-
tisteries had passed out of fashion. One such build-
ing, at Parma, commenced in 1196, deserves to be
quoted, not certainly for its beauty, but as illustrat-
ing those false principles of design shown in build-
ings of this age in Italy. In later Romanesque and
Gothic periods, in Italy, where the churches were not
derived from a combination of a circular Eastern
church with a Western rectangular nave, as in France,
but were correct copies of the Roman basilica, the
baptistery always stands alone. In Germany, the
earlier baptistery was joined to the square church
and formed a western apse. The only examples in
England are at Cranbrook and Canterbury; the lat-
ter, however, is supposed to have been originally
part of the Treasury. It is not known at what time
this baptistery became attached to the cathedral.
The change was made in the time of Rome the first
elsewhere. A late example of a separate baptistery,
which, although small, is very beautiful in design,
is in a court alongside the cathedral at Bergamo.
This may be regarded as a connecting link between
large buildings and fonts.

BAPTISTINES.—I. Hermits of St. John the Baptist.
II. Missionaries of St. John the Baptist. III. Sister-
hood of St. John the Baptist.

I. The Congregation of the Hermits of St. John the
Baptist of France was founded about 1630 by Brother
Michel de Saint-Sabine who reformed and united the
hermits of various dioceses. He established for each
diocese a visitor who was aided by four majors and a
secretary. The bishop received the religious when
they took the habit and made their profession, and the
brothers in a diocese met together once a year. The
pious reformer gave the congregation a collection of
statutes which regulated their mode of life. The
first bishops to make these statutes obligatory in
their dioceses were the Bishop of Metz (1630), and
the Bishop of Cambrai (1634). Brother Michel de Saint-
Sabine who had a great reputation for virtue carried this
reform into the Dioceses of Vienne, Lyone, Geneva,
Le Puy, and Langres. The Bishop of Langres, Louis-
Armand de Simiane de Gardes, added in 1680, for
the hermits in his diocese, several ordinances to those
of Brother Michel. He established four visitors,
one for each division of the diocese and the brothers
wore a white habit to distinguish them from vagrant
and lax hermits. Brother Jean-Baptiste went to the
Diocese of Angers to found the hermitage of Gar
24 De-
agree, 1691.

II. The congregation of missionary priests of St.
John the Baptist, called Baptistines, was founded by a
Genoese, Domenico Oliveri. He began by uniting several zealous priests with himself for the evangelization of the people of the cities and country. His plan of forming from this company an association the members of which should devote their time especially to missions was encouraged by Cardinal Spinola and the most important results were derived from St. Benedict XIV. The pope confirmed the new congregation in his Brief of 23 September, 1755, and placed it under the control of the Cardinal Prefect of the Propaganda. The institute had a house and an ordinary at Rome near the church of St. Isidoro, and the members held missions in the different churches of the city and in the surrounding country. The Propaganda, realizing their zeal and virtue, wished to employ them in distant missions. A number of them were, therefore, sent to Bulgaria, Macedonia, and Greece; some became bishops. Foreign missions did not absorb all their activity, for a number were employed in the service of the Church in Italy, two, Father Imperiali and Father Spinelli becoming cardinals. The only vows imposed by the pious custom of the Jesuits was the promise of fidelity, obedience, and readiness to go to missions to which the members should be sent by the Propaganda. Oliveri died at Genoa in the odour of sanctity, 13 June, 1766. His society disappeared during the troubles which overwhelmed Italy at the end of the eighteenth century.

III. The Baptistines, or hermit sisters of St. John the Baptist, had as their founder Giovanna Maria Baptista Solimani. In 1730, when she was forty-two years old, she gathered her first companions together at Mongilane, not far from Genoa. The congregation intended to lead a life of penitence in imitation of the precursor of Christ and under his patronage. All the choir sisters, therefore, added to their names in religion a Matrona of their illustrious model. The Capuchin, Father Athanasius, aided them by his advice during the drawing up of their constitutions. Soon after, Providence gave them the direction of the saintly priest Oliveri, the cause of whose canonization has been introduced. Shortly after taking Oliveri as their director the congregation settled in the city of Genoa. Their founder soon went to Rome to obtain the confirmation of the Holy See; through the aid of the Barnabites, Mario Maccabei, the approbation of Benedict XV was given in 1744. Two years later, 20 March, 1746, the Archbishop of Genoa received the religious profession of Giovanna Solimani and her twelve companions. Soon after this, Mother Solimani was elected abbess and governed the house until her death, 8 April, 1785. In 1755 the congregation had sent a colony to Rome which founded a convent near the church of San Nicolà da Tolentino. Houses were also founded in some of the other cities of Italy. The congregation drew its members from among the young girls and widows who were admitted into their houses as lay sisters. Tertiaries took care of their churches and gathered the alms of which they had need. A rigorous cloister was observed. The sisters rose at midnight for Matins, slept in their clothes, went bare-footed, and observed a continual abstinence; their whole life was of extreme austerity. Several convents of this congregation still exist in Italy.

II. History.—(1) The Baptists in the British Isles. Persons rejecting infant baptism are frequently mentioned in English history in the sixteenth century. We learn of their presence in the island through the persecutions they endured. Early as 1535 ten Anabaptists were put to death, and the persecution continued throughout that century. The victims seem to have been mostly Dutch and German refugees. What influence they exerted in spreading their views is not known, but, as a necessary result, Baptist principles became more and more prominent, less of an unacceptable novelty in the eyes of Englishmen. The first Baptist congregations were organized in the beginning of the seventeenth century. Almost at the very outset the denomination divided into "Separatists," or "General Baptists," so named because of their belief in the universal
character of Christ's redemption, and "Calvinistic" or particular Baptists, who maintained that Christ's atonement was intended for the elect alone. The origin of the General Baptists is connected with the name of John Smyth (d. 1612), pastor of a church at Gainsborough, Lincolnshire, which had separated from the Church of England. About 1606, pastor and church were persecuted and driven from their church. Smyth was appointed pastor of a church in London, where they formed the second English congregation. In 1609, Smyth, owing possibly in some measure to Mennonite influence, rejected infant baptism, although he retained adult baptism. In this he was supported by his church. Some members of the congregation returned to England (1611 or 1612) under the leadership of Helyws (c. 1550-1616) and formed in London the nucleus of the first Baptist community. Persecution had abated, and they do not seem to have been molested. In 1626 there were in different parts of England five General Baptist churches; by 1644, they had increased, it is said, to forty-seven; and by 1660 the membership of the body had reached about 20,000. It was between 1640 and 1660 that the General Baptists began their independent origins, a new mode of baptism. They were persecuted by Charles II (1660-85); but the Act of Toleration (1689) brought relief and recognized the Baptists as the third dissenting denomination (Presbyterians, Independents, and Baptists). Dissenting ideas spread among the General Baptists, and by 1750, many, perhaps the majority of them, had become Unitarians. As a result of the great Wesleyan revival of the second half of the eighteenth century, new religious activity manifested itself among the General Baptists.

Dan Taylor (1738-1816) organized the orthodox portion of them into the New Connexion of the General Baptists. The latter appellation soon disappeared, as the 'Old Connexion', or unorthodox party, gradually merged into the Unitarian denomination. In 1816, the General Baptists established a missionary society. Their doctrinal differences with the Particular Baptists gradually disappeared in the course of the nineteenth century, and the two bodies united in 1891.

The Particular Baptists originated shortly after the General Baptists. Their first congregation was organized in 1635 by former members of a London Separatist Church who seceded and were received by the General Baptists. In 1638 another Particular Baptist Congregation was formed. The opinion then began to be held that immersion alone was real baptism. Richard Blunt was sent to the Netherlands to be duly immersed. On his return he baptised the others, and thus the first Baptist church in the full meaning of the term was constituted in 1641. In 1644 there were seven Particular Baptist churches in London. They drew up a confession of faith (1644) which was republished in 1646. The Particular Baptists now rapidly increased in numbers and influence. Some of them held prominent positions under Cromwell. With the latter's army Baptists came to Ireland, where the denomination never recovered. In Scotland, where it took firm root only after 1750 and adopted some peculiar practices, Wales proved a more fruitful soil. A church was founded at or near Swansea in 1649. In the time of the Commonwealth (1649-60), churches multiplied owing to the persecution of Vane (1617-70); and the number of the Baptists, all Calvinistic, is to-day comparatively large in Wales and Monmouthshire. One of the prominent men who suffered persecution for the Baptist cause under Charles II was John Bunyan (1628-88), the author of "The Pilgrim's Progress". In the first part of the eighteenth century the Particular Baptists endured their own, causing by their successive emphasis of the Calvinistic element in their teaching, which made them condemn missionary activity and border on fatalism. The Wesleyan revival brought about a reaction against the deadening influence of ultra-Calvinism. Andrew Fuller (1754-1815) and Robert Hall (1784-1807) reacted against the views of the General Baptists. The Baptist Home Mission Society was formed in 1779. In 1792 the foundation of the Baptist Missionary Society at Kettering, Northamptonshire, inaugurated the work of missions to the heathen. In this undertaking, William Carey (1761-1834) was the prime mover. Perhaps the most eminent Baptist preacher of the nineteenth century in England was C. H. Spurgeon (1834-92), whose sermons were published weekly and had a large circulation. In recent years, the Baptists created a "Twentieth Century Fund," to be expended in furthering the interests of the denomination.

(2) The Baptists in the United States.—The first Baptist Church in the United States did not spring historically from the English Baptist churches, but was founded by Roger Williams (c. 1600-83). Williams was a minister of the Church of England, who, owing to his separatist views, fled to America in search of religious freedom. He landed at Boston (February, 1631), and shortly after his arrival he made his home at Salem. Certain opinions, e.g. his denial of the right of the secular power to punish purely religious offences and his denunciation of the charter of the Massachusetts Colony as worthless, brought him into conflict with the civil authorities. He was summoned before the General Court in Boston and refusing to retract, was banished (October, 1635). He left the colony and purchased from the Narragansett Indians a tract of land. Other colonists soon joined him, and the settlement which he founded first in the United States to be established on the principle of complete religious liberty, became the city of Providence. In 1639 Williams repudiated the value of the baptism he had received in infancy, and was baptized by Ezekiel Holliman, a former member of the Salem church. Williams then baptized Holliman with ten others, thus constituting the first Baptist church in the New World. A second church was founded shortly after (c. 1644) at Newport, Rhode Island, of which John Clarke (1659-70) was the pastor. After the English took the island from 1642 onward, Baptists, because of their religious views, came into conflict with the local authorities. A law was passed against them in 1644. In spite of this, we find at Rehoboth, in 1649, Baptists who began to hold regular meetings. In 1663 John Myles, who had emigrated with his Baptist church from Swansea, Wales, settled in the same place and most writers date the establishment of the first Baptist church in Massachusetts from the time of his arrival. The community removed in 1667 to a new site near the Rhode Island settlement, which they called Swansea. The first Baptist church in Boston was established in 1685, and the organization of the first one in Maine, then part of Massachusetts, was completed in 1682. The members of the latter, on account of the persecution to which they were still subjected, removed in 1684 to Charleston, South Carolina, and founded the first Baptist church in the South. The church of Groton (1705) was the first in Connecticut, where there were four in existence by the beginning of the celebrated revival known as the Great Awakening (1740).

During the period of these foundations in New England, Baptists appeared also in New York State, at least as early as 1656. The exact date of the establishment of the first church there is not ascertainable, but it was very probably at the beginning.
of the eighteenth century. From 1684 on, churches also appeared in Pennsylvania, New Jersey, and Delaware. Cold Spring, Bucks Co., had the first one in Pennsylvania (1684); and Middletown heads the list in New Jersey (1693). A congregation was organized at Poughkeepsie in 1688 at Lower Dublin, a part of Philadelphia. The latter churches were to exert very considerable influence in shaping the doctrinal system of the largest part of American Baptists. Philadelphia became a centre of Baptist activity and organization. Down to about the year 1700 it seemed as if the majority of American Baptists would belong to the General or Arminian branch. Many of the earliest churches were of that type. But only Particular Baptist congregations were established in and about Philadelphia, and these, through the foundation of the Philadelphia Association in 1707, which fostered mutual intercourse among them, became a strong central organization about which other Baptist churches rallied. As a result, we see to-day the large number of Particular (Regular) Baptists. Until the Great Awakening, however, which gave new impetus to their activity, they increased but slowly. Since that time their progress has not been seriously checked, not even by the Revolution. True, the academy of Hopewell, New Jersey, an educational institution, established in 1756, disappeared during the war; but Rhode Island College, chartered in 1764, survived it and became Brown University in 1804. Other educational institutions, to mention only the earlier ones, were founded at the beginning of the nineteenth century: Waterville (now Colby) College, Maine, in 1818; Colgate University, Hamilton, New York, in 1820; and in 1821, Columbian College at Washington (now the undenominational George Washington University).

Organized mission work was also undertaken about the same time. In 1814 "The General Missionary Convention of the Baptist Denomination in the United States of America for Foreign Missions" was established at Philadelphia. It split in 1845 and formed the "American Baptist Missionary Union" for the North, with present head-quarters at Boston, and the "Southern Baptist Convention", with headquarters at Richmond (Virginia), and Atlanta (Georgia), for foreign and home missions respectively. In 1834 the "Swedish Baptist Missionary Society" was founded, intended primarily for the Western States, was organized in New York where it still has its headquarters. In 1824, the "Baptist General Tract Society" was formed at Washington, removed to Philadelphia in 1826, and in 1840 became the "American Baptist Publication Society". The Regular Baptists divided in 1845, not indeed doctrinally, but organizationally, on the question of slavery. Since that time, attempts at reunion having remained fruitless; they exist in three bodies: Northern, Southern, and Coloured. The Northern Baptists constituted 17 May, 1907, at Washington, a representative body, called the "Northern Baptist Convention", whose object is "to give expression to the sentiment of its constituency upon matters of denominational importance at general conventions". Governor Hughes of New York was elected president of the new organization.

(3) The Baptists in Other Countries.—(a) America. The earliest Baptist church in the Dominion of Canada was organized at Niagara in 1860, Nova Scotia, by the Rev. Ebenezer Moulton of New England. This church, like many of the earlier ones, was composed of Baptists and Congregationalists. The influx of settlers from New England and Scotland and the work of zealous evangelists, such as Theodore Seth Hurlbutt, who laboured in these parts from 1795 to 1855, soon increased the number of Baptists in the country. The end of the eighteenth century was marked by a period of revivals, which prepared the formation of the "Association of the Baptist churches of Nova Scotia and New Brunswick" in 1800. In 1815, a missionary society was formed, and the work of organization in every line of usefulness was carried on. The number of Baptist churches increased rapidly, and by the year 1880, there were 1500 in Nova Scotia, 200 in New Brunswick, and 800 in Prince Edward Island. The number of members increased from 5000 in 1825 to 20,000 in 1875. The influence of the Baptist sentinel has been felt throughout the Dominion, and the Baptist churches have made a valuable contribution to the education and religious life of the province.

In 1826, the Baptist Sunday School Union was formed, and in 1830, the Baptist Association was established. The Baptist Sunday School Union, under the leadership of Dr. Alexander Grant, grew into a powerful educational body, and the Baptist Association has been an influential force in the religious life of the province. The Baptists have been active in the work of missionary societies, and have sent out missionaries to work among the Indians and other native peoples. The Baptists have also been prominent in the development of the Baptist churches in other parts of the world, and have been active in the work of education and religious work among the immigrants in the United States.

The Baptists in Canada have been active in the work of education, and have founded many schools, colleges, and universities. They have been active in the work of missions, and have sent out missionaries to work among the peoples of the world. The Baptists have been active in the work of social and charitable work, and have founded many hospitals, orphanages, and other institutions for the relief of the poor and the sick. The Baptists have been active in the work of politics, and have taken an active part in the political life of the country.

The Baptists have been active in the work of religious instruction, and have founded many Sunday schools and Sunday school unions. They have been active in the work of evangelism, and have sent out missionaries to work among the peoples of the world. South Africa, of missionary origin. The Negro Baptists of the United States had an early date missionaries in this field. Two coloured men, Lott Carey, and John Turtle, and Thaddeus C. South, set sail in 1829 for Liberia, where the first church was organized in 1831. To-day we find Baptist missions in various parts of Africa.

III. Minor Baptist Bodies.—Side by side with the larger body of Baptists, several sects exist. They are few in number in the United States.

(1) The Baptist Church of Christ originated in Tennessee, about 1808, and spread to several other Southern States. Its doctrine is a mild form of Calvinism, with belief in a general atonement and admission to baptism, as a religious ordinance. [Communicates, 8, 254 according to Dr. H. K. Carroll, the acknowledged authority, whose statistics, published in "The Christian Advocate" (New York, 17 January, 1907, p. 98), we shall quote for these sects.]

(2) The Campbellites, Disciples of Christ, or Christians, date back as a distinct religious body to the early part of the nineteenth century. They are the outgrowth of that movement which manifested itself simultaneously in some of the religious denominations in the United States in favour of the Bible, infant baptism, feet-washing, and the Lord's Supper. (4, 175, 286; 5, 205.)

(3) The Dunkards (from the German Dunken, to dip), German Baptists, or Brethren, were founded about 1708 in Germany by Alexander Mack. Between 1719 and 1729 they all emigrated to the United States and settled mostly in Pennsylvania. They are found to-day in many parts of the Union, but divisions have taken place among them. They practise threefold immersion, hold their communion service, which is preceded by the agape, in the evening, and seek to be excessively simple and unostentatious in their social intercourse, dress, etc. (Membership, 121, 194.)

(4) The Free Will Baptists correspond in doctrine and practice to the English General Baptists, but originated in the United States. They exist in two distinct bodies. The older was founded in North Carolina and constituted an association in 1729. Many of its members subsequently joined the Regular Baptists. Those who did not unite became known as the "Free Willers" and later as the "Original Free Will Baptists," and are found in the two Carolinas. The larger body of the Free Will Baptists is a part of the British and American Church, and J. W. Randall organized the first church at New Durham in 1780. The denomination spread throughout New England and the West, and was joined in 1841 by the "Free-Communion Baptists" of New York (increase, 56 churches and 2,500 members). It maintains several colleges and academies, and has changed its official name to "Free Baptist". The American General Baptists are in substantial doctrinal agreement with the Free Will Baptists. (Membership: Original Free Will Baptists, 12,000; Free Will Baptists, 8,200; German Brethren, 20,547.)

(5) The Old Two-Seed-in-the-Spirit Predestinarian Baptists are Manichean in doctrine, holding that there are two seeds, one good and one of evil. The doctrine is credited to Daniel Parker, who laboured in different parts of the Union in the first half of the nineteenth century (12,851 communicants).

(6) The Primitive Baptists, also called Old-School, Anti-Mission, and Hard-Shell, Baptists constitute a sect which is opposed to missions, Sunday schools, and in general to human religious influences. They arose about 1855 (156,000 communicants).

(7) The foundation of the Separate and of the United Baptists was the result, either immediate or mediate, of the attitude taken by some Baptists toward the Whitefield revival movement of the eighteenth century (Separate Baptist, 6,479; United Baptists, 12,209).

(8) The Seventh-Day Baptists differ from the tenets of the Baptists generally only in their observance of the seventh day of the week as the Sabbath of the Lord. They appeared in England in the latter part of the sixteenth century under the name of "Sabbatarian Baptists." Their first church in this country was organized at Newport, R. I., in 1671. In 1818 the name Seventh Day Baptists was adopted (Communicates, 8, 493).

(9) The Six-principle Baptists are a small sect and date from the seventeenth century. They are so called from the six doctrines of their creed, contained in Heb., vi. 1-2: (a) Repentance from dead works; (b) Faith toward God; (c) The doctrine of Baptism; (d) The imposition of hands; (e) The resurrection of the dead; (f) Eternal judgment. "(858 communicants.)

(10) The Winebrenerians or Church of God were founded by John Winebrenner (1797-1860) in Pennsylvania, where their chief strength still lies. The first congregation was established in 1829. The Winebrenerians admit three Divine ordinances: baptism, feet-washing, and the Lord's Supper (4,175 communicants).

IV. Statistics.—According to the American Baptist Year-Book, published annually at Philadelphia, there were in 1907, not including the minor Baptist sects, 8,736,263 Baptists in the world. They had 55,505 churches and 38,216 ordained ministers. The denomination counted 4,374,014 members in North America; 4,812,653 in the United States, with church property worth $109,960,610; and 117,842 in Canada. South America has 1,078,618; Africa, 564,670 (434,751 in Great Britain, 44,656 in Sweden, 33,790 in Germany, 24,132 in Russia); Asia, 155,969; Australasia, 24,402; and Africa, 12,743. The statistic statement of Dr. H. K. Carroll, already referred to above, credits the Regular Baptists together with eleven branch denominations in the United States for 1906 with a membership of 5,140,770, 54,666 churches and 38,010 ministers; Regular Baptists, North, 1,115,222; South, 1,339,563; Coloured, 1,779,69.

The divisions in the bibliography correspond to the divisions of the article.

BAR, CONFEDERATION OF. See Poland.

BARAC (Heb. Baraq, lightning), the deliverer of the Israelites from the power of the Canaanites under the judge, Othniel.

Abarim of Cedars in Nephtali (Judges, iv, 6) and probably belonged to the tribe of Issachar (v, 15). When, after the death of the Judge Aod, "the children of Israel again did evil in the sight of the Lord."
BARADEUS 282

BARAGA

(iv 1), they were delivered into the hands of the Chanaanite King Jabin of Asor who grievously oppressed them. In the meantime the prophetess Debors of Mount Ephraim, between Rama and Bethel, instigated Barac, manifestly a leading captain of the time, to assemble 10,000 men of the tribes of Nephtali and Zabulon (iv, 6; cf. v, 14) and to take the field against Sisara, the general of Jabin. Barac assembles the warriors at Cedes, moves to Mount Tabor, and by a rush down the mountain surprises the Chanaanites (iv, 10, 12, 14; cf. v, 15, 19, 21). The panic-stricken army of Sisara is attacked, routed, pursued, and finally cut to pieces (iv 16). Sisara seeks refuge in the tent of Jabel, the wife of Haber, the Ginit, where he meets with a treacherous end (iv, 21; cf. v, 26). This signal victory of Barac, which put an end to the power and oppression of Jabin, and which was followed by a period of forty years' rest, is commemorated in the triumphal ode of Debbors and Barac (v). For the various accounts of Barac's exploits which critics detect in Judges, iv, and v, see Judges, Book of.

F. X. E. ALBERT.

BARADEUS, JACOB, a Syrian Monophysite bishop born at Tella, towards the end of the fifth or the beginning of the sixth century, died in 578. He was the son of Theophilus bar Manu, a priest of Tella, and hence his real name was Jacob bar Theophilus; the surname Bûrde'ânû, corrupted into Baradeus, was derived from the coarse horse-cloth bûrâd'îša which he usually wore. After receiving a good education he became a monk in the monastery of Pesleth, and a disciple of Severus, the head of the Monophysites. In the first half of the sixth century, Monophysitism, weakened by internal dissensions and by the opposition of the Emperor Justinian, was on the verge of disappearing, especially when its leader Severus died, 538. Probably through the influence of the Empress Theodora, Baradeus was made Bishop of Edessa in 543, and henceforth devoted all his energies to the defence of Monophysitism. Through his untiring activity he breathed a new life into what seemed a mere expiring faction. At the cost of great hardships, he went around ordaining priests and deacons and strengthening his convictions. There exists a profession of faith addressed to him by the abbots of the province of Arabia, with 137 signatures (see Lamy, in "Actes du XIe Congrès des Orientalistes", § 4, Paris, 1897) showing that he was the undisputed leader in Monophysitism, because not his incumbrance but the Monophysites were, and still are, called after his name, Jacobites. Baradeus has left very little in writing: a liturgy, and a few letters.

The main source for the life of Baradeus is JOHN OF EMREUX, Ecclesiastical History, the third part of which has been published by Curror (Oxford, 1888), and Lives of the Oriental Saints, Land ed. in his Ascendice Syriac, II, 249-257; DEVAL, Littérature Syriac (3d ed., Paris, 1900); KLEIN, Jacobus Baradus (Leyden, 1882).

R. BUTIN.

BARAGA, FREDERICK, first Bishop of Marquette, Michigan, U. S. A., b. 29 June, 1879, at Malavas, in the parish of Dobernize in the Austrian Duchedom of Carniola; d. at Marquette, Mich., 19 January, 1888. He was baptized on the very day of his birth, in the parish church of Dobernize, by the names of Irenicus Frederic, the first of which, however, he never used, retaining only the second. His parents, Johann Nepomuc Baraga and Maria Katharina Josefa (née de Jenčić), had five children, of whom Frederic was the sixth. Frederic never was a Jesuit, but his mother inherited after her father's death the estate of Malavas, besides a vast fortune. They were God-fearing and pious, and strove, while they survived, to give a good education to their children. His mother died in 1888, and his father in 1812, and Frederic spent his boyhood in the house of Dr. George Dolinar, a layman, professor in the diocesan college of Ljubljana, at Laibach.

In 1816 young Frederic Baraga entered the University of Vienna, studied law, and graduated in 1821, but soon turned his thoughts to the clerical state, and entered the seminary of Laibach, which so far as his wanderings, He was ordained priest 21 September, 1823, at Laibach, and laboured with great zeal and success as assistant in St. Martin's parish, near Kainburg, and at Meltlak, in Lower Carniola. On the 29th of October, 1830, he left his native land for the United States to spend the rest of his life in the Indian missionary field. After a journey of two months, he landed in New York on the 31st of December, 1830. He then proceeded to Cincinnati, Ohio, where he arrived 18 January, 1831. He was most kindly received by the Rt. Rev. Edward Fenwick, Bishop of Cincinnati, and during the winter and spring months laboured among the German Catholics of that city and elsewhere. On the 28th of May, 1831, he arrived at Arbre Croche, now Harbor Springs, his first Indian mission. There he laboured with apostolic zeal at the conversion of the Ottawas during two years and four months, during which time he baptized 547 Indian adults and children. He was succeeded in 1833 by Rev. F. Saenderl, Superior of the Redemptorists in the United States. On or about the 8th of September, 1833, Baraga left Arbre Croche to find a new Indian mission at Grand River, Mich. He arrived at his destination (now Grand Rapids, Mich.) on the 23d of September. He immediately began the building of a combination church, school, and pastoral residence, which was very poor, owing to the deficiency of funds. There he laboured most piously, though not as successfully as at Arbre Croche, until February, 1835, when he was succeeded by Father Andrew Vasquezky, a Hungarian priest. Baraga himself estimated the number of his converts at about two hundred, but Bishop Rees estimated the number of Indian converts in his diocese in 1834 at three thousand, with twelve churches or chapels. Baraga's next Indian mission was among the Chippewas at La Pointe, Wisconsin, where he arrived 27 July, 1835. There he laboured successfully for about eight years, baptizing 981 Indians and whites. In 1843 he founded the L'Anse Indian mission in Michigan, arriving there on the 24th of October. For ten years he laboured in this vast mission, being for many years the only Catholic priest in Upper Michigan. He attended not only to the Indians, but also to the whites of the vast territory, as the discovery of iron and copper drew many German, French, and English-speaking Catholics to the Northern Peninsula of Michigan. Truly incredible were his labours and labours of Baraga at this period of his life. On the 29th of July, 1853, the Northern Peninsula of Michigan was detached from the Diocese of Detroit and erected into a vicariate Apostolic, and Baraga was appointed its first bishop. He was consecrated in the cathedral

THE RIGHT REV. FREDERICK BARAGA

BARAGA
BARAT

of Cincinnati by Archbishop Purcell, Bishop Ler- fere of Detroit and Bishop Henri of Milwaukee dicating as assistant consecrators. Shortly after his consecration the episcopal see of Milwaukee and Bishop Baraga issued two circulares to his people, one in Chippewa and the other in English. His jurisdiction ex- tended not only to the whole Northern Peninsula of Michigan, but also to a large part of the Lower Peninsula to Northern Wisconsin, and to the North Shore of Lake Superior. He laboured in this vast extent of territory for fifteen years, travelling almost incessantly, from the opening to the close of navigation year after year. On the 23d of October, 1835, by Apostolic authority he transferred his See from Saint Mary's, Marquette, to Marquette, where he died at the age of seventy years.

Bishop Baraga will always rank with the foremost authors in American Indian literature. He com- posed the first known Chippewa grammar. This was a truly Herculean task, for he had to establish after long and close observation and deep study all the rules of the Chippewa grammar. This grammar has gone through three editions. In his preface to his Chippewa dictionary, printed in Chippewa, he wrote: "This is, to the best of my knowledge, the first Dictionary of the Otschipewi language ever pub- lished. The compilation of it has cost me several years of assiduous labour." This dictionary has also passed through several editions. Both grammar and dictionary are most highly prized and constantly used by Indian missionaries and others. His Indian prayer book and works of instruction are much read by both Indians and their pastors. Baraga always wrote in a very simple and clear style. His writings are admirably adapted to the limited capacity of his Indian readers, and can be understood even by ignorant Indian children. His "Dušna Taka", a prayer book in Slovenian, his own native language, passed through ten editions, the last, in 1905, with 84,000 copies. This alone is a proof of its great popularity and usefulness.

In addition to the "Theoretical and Practical Grammar of the Otschipewi [Chippewa] Language" (Detroit, 1850), the Chippewa dictionary, and the "Dušna Taka" mentioned above, the published works of Bishop Baraga include: "Veneration and Imitation of the Blessed Mother of God", in Slovenian (1830); "Animie-Misinaigam", an Ottawa prayer book; "Jesus o Bimadwimim" (The Life of Jesus), in Ottawa (Paris, 1857); "On the manners and customs of the Indians" in Slovenian (Laibach, 1837); "Gagkwewe-Misinaigam", a sermon-book, in Chippewa (1839 and 1859); "Zlata Jabelka"—"Golden Apples" (Laibach, 1837); "Kagije Debewinian"—"Eternal Truths"; "Nanagatawedamoo-Misinaigam"—Instruc- tions on the Commandments and sacraments.

No Indian missionary of modern times was more beloved and revered by both Indians and whites than Baraga. He loved his Indians with a warm- hearted devotion which they reciprocated. Men of all classes in society, Catholics and non-Catholics, revered him as an ideal man, Christian, and bishop. Michigan has named after him one of her counties, several towns, and post offices, and his name has been given to one of the principal streets of Mar- quette. In his native country he is, if possible, even more popular than in America. His life, pub- lished in Slovenian, in 1906, has already (1907) reached a sale of 85,000 copies. That life might be summed up in one phrase: Saintliness in action.

CHRYSOSTOM VERWYST.

Barat, Madeleine-Sophie, Venerable, foundress of the Society of the Sacred Heart, b. at Joigny, Burgundy, 12 December, 1779; d. in Paris, 24 May, 1856. She was the youngest child of Jacques Barat, a coal-digger and coal-broker, and his wife, Madeleine Foué, and received baptism the morning after her birth, her brother Louis, aged eleven, being chosen godfather. It was to this brother that she owed the exceptional education which fitted her for her life- work. While her mother found her an apt pupil in technical matters, her brother taught her the sciences of mind and heart; and when, at the age of twenty- two, he returned as professor to the seminary at Joigny, he taught her his sister Latin, Greek, history, natural science, Spanish, and Italian. Soon she took delight in reading the classics in the original, and surpassed her brother's pupils at the seminary. After the Reign of Terror, Louis called Sophie to Paris, to train her for the religious life, for which she longed. When he had joined the Fathers of the Faith, a band of fervent priests, united in the hope of becoming members of the Society of Jesus on its restoration, he one day spoke of his sister to Father Varin, to whom he had been bequeathed by the saintly Léonor de Tounery the plan of founding a society in France, to consecrate itself to the Sacred Heart of Jesus, to prayer and sacrifice, and destined to do for girls what the restored Society of Jesus would do for boys. Father Varin had vainly sought a fitting instrument to begin this work; he now found one in this modest, retiring girl of twenty. He unfolded the project, which seemed to satisfy all her aspirations, and she bowed before his authorita- tive declaration that this was for her the will of God. With three companions she made her first consecra- tion, 21 November, 1800, the date which marks the foundation of the Society of the Sacred Heart. In September, 1801, the first convent was opened at Amiens, and thither Sophie went to help in the work of teaching. It was impossible yet to assume the name "Society of the Sacred Heart", lest a political significance be attached to it; its members were known as Dames de la Foi or de l'Instruction Chrétienne. Father Varin allowed Sophie to make her vows, 7 June, 1802, with Geneviève Dehayes.

The community and school were increasing, and a parochial school had just been added, when it became evident to Father Varin that Mademoiselle Loque, who had hitherto acted as superior, lacked the quali- ties requisite for the office, and Sophie, although the youngest, was named superior (1802). Her first act was to kneel and kiss the feet of each of her sisters. Such was ever the spirit of her rule. On 23 July, 1804, found her at Sainte-Marie-d'en-Haut, near Grenoble, receiving a community of Visitation nuns into her institute. One of them, Philippine Duchesne, was later to introduce the society into America. Grenoble was the first of some eighty foundations which Mother Barat was to make, not only in France, but in North America (1818), Italy (1828), Switzerland (1830), Belgium (1834), Algiers (1841). England (1842), Ireland (1842), Spain (1846), Holland (1846), Germany (1861), United States (1853) Austria (1853), Poland (1857).

Mother Barat was elected superior-general in January, 1806, by a majority of one vote only, for the influence of an ambitious priest, chaplain at Amiens, wellnigh wrecked the nascent institute. Prolonged prayer, silent suffering, tact, respect, charity, were the only means she used to oppose his designs. With Father Varin, now a Jesuit, she elaborated constitutions and rules drafted on the stock of the Institute of St. Ignatius. These rules were received with joy in all the houses he accepted; but Mother Barat’s wisdom and humility soon won submission even here. In 1818 she sent Mother Duchesne, with four companions, to the New World; her strong and holy hand was ever
BARAT

ready to support and guide this first missionary of the Society. She called all the superiors together at Paris in 1620, to provide a uniform course of studies for their schools. These studies were to be solid and serious, to fit the pupils to become intelligent wives and devoted mothers; to give that cultivation of mind, that formation of character, which go to make up a true worth, and that was to be stamped and sealed with strong religious principles and devotion to the Sacred Heart.

Foundations multiplied, and Mother Barat, seeing the necessity of a stronger guarantee of unity, sought it in union with Rome. The solemn approbation was granted somewhat sooner than usual, and on a memoir drawn up by the foundress and presented to Leo XII in May, 1826. The decree of approbation was promulgated in December. The society being now fully organized and sealed by Rome's approval, for forty years Mother Barat journeyed from convent to convent, wrote many thousand letters, and assembled general congregations, so as to preserve its original spirit. The Paris school gained European repute; Rome counted three establishments, asked for only one by the successive pontiffs. At Lyons Mother Barat founded the Congregation of the Children of Mary for former pupils and other ladies. In the same year (1822), she began at Turin the work of retreats for ladies of the world, an apostolate since then followed by many imitators. Numerous foundations brought Mother Barat into personal contact with all classes. We find her crossing and recrossing France, Switzerland, Italy, often on the eve of revolutions; now the centre of a society of emigrés whose intellectual gifts, high social position, and moral worth are seldom found united; now sought out by cardinals and Roman princesses during her visits to her Roman houses; at another time, speaking on matters educational with Madame de Genlis; or again, exercising that supernatural ascendency which aroused the admiration of such men as Bishop Fraysinus, Doctor Récamier, and Duc de Rohan.

These exterior labours were far from absorbing all Mother Barat's time or energies; they coexisted with a life of ever-increasing holiness and continual prayer, for the real secret of her influence lay in her habitual seclusion from the outside world, in the strong religious formation of her daughters which this seclusion made possible, and in the enlightened, profound, and supernatural views on education which she communicated to the religious engaged in her schools. She worked by and through them all, and thus reached out to the ends of the earth. In spite of herself, she attracted and charmed all who approached her. New foundations she always entrusted to other hands; for, like all great rulers, she had the twofold gift of intuition in the choice of persons fitted for office, and trust of those in responsible posts, allowing them much freedom of action in details, guiding them only by her counsels and usually from afar. Prelates who now and then ventured to attribute to her the successes of the Society, saw that instead of pleasing, they distressed her exceedingly.

Beloved by her daughters, venerated by princes and pontiffs, yet ever lowly of heart, Mother Barat died at the mother-house in Paris, on Ascension Day, 1852, aged 70, after four years of illness. She was buried at Cluny, the house of novitiate, where her body was found intact in 1893. In 1879 she was declared Venerable, and the process of beatification introduced.

ALICE POWER.

Bourges during the first quarter of the seventeenth century; d. in 1706 at Paris. He began his studies at Tours, and completed them at Paris under the instruction in the Mazarin College. There, he came under the influence of Richard Simon, the famous Orientalist and Biblical scholar. The greater part of his published work was done in collaboration with other scholars. With Père Bordes he made a posthumous work of Thomasin, "Glossarium universalis hebraicum" (Paris, 1697), and aided J. B. Duhamel in the publication of his Bible (Paris, 1706). At the time of his death he was engaged on a French translation of Schabat's "Rabbinical Library". His critical opinions, and much curiosity literature, the formation that he had acquired, were published posthumously under the title, "Nouvelle bibliothèque choisie" (Amsterdam, 1714, 2 vols.).

RENZ B. GOODWIN.

Barba, ALVARO ALONSO, a secular priest of whom Nicolás Antonio (Bibliotheca hispana nova, 1786) says: "Beticus ex oppido Lepe, apud Potosí"; hence of Andalusian origin. By Lepe and Potosí, Lipes in western Bolivia might be indicated. He lived at Potosí during the period when its silver-mines were most productive, and he seems to have had close relations among the Spanish residents and mine-owners had nearly reached the climax. Father Barba, in the midst of a turmoil of sensuality, divided his time between his sacerdotal duties and a close study of the ores of this region and their treatment. There he lived, and died, since 1670, a complete revolution in the treatment of silver-ores, through the application of quicksilver, and a number of improvements followed, of which Barba had knowledge. In 1640 he published, at Madrid, a book entitled "Arte de los Metales", which, though properly metallurgical and of out of date, is still of value as the earliest work on South American ores and minerals. Many of its indications are well worthy the attention of miners and prospectors. This is especially the case in regard to mineral localities in Bolivia. The book was republished in Spanish in 1729, in 1770 and, recently, in Chile. There is a French translation from 1751 and one also in English. PIMEUX, Epitom., etc., (1735), ii, NICOLÁS ANTONIO, BIBLIO., HISP., NOVA (Madrid, 1786), HIST.-SOC., etc., (Lima, 1876), ii; RELACIONES GEOGRÁFICOS DE INDÍAS (Madrid, 1885), ii, APPENDIX IV.

AD. F. BANDELLIER.

Barbadoes. See GUIANA.

Barbalissos, a titular see of Mesopotamia. It was a city in Provincia Augusta Euphratensis, where the Equites Dalmatae Ilicranti kept garrison (Notit. Dignit. Orientis, ed. Boecking, 88, 389). Justinian raised anew its walls (Procop. De edificise, ii, 19; Malalas, Chronograph., XVIII, in Migne, P. G., XVII, 678). At an early date it was a suffragan of Hierapolis, a metropolis in the Patriarchate of Antioch. Its bishop Antonius was present at the Council of Nicea (325); two other bishops, Aquillus and Marininus, are known between 431 and 451 (Lequien, ii, 949). The see is still mentioned in the sixth century. From 793 to 1042 five Jacobite bishops are known bearing this title (Revue de l'Orient chrétien, VI, 192). Its site is marked by the ruins at Qala' at Balis, which partly retains the old name, south of Meseke, on the road from Aleppo to Soura, where the Euphrates turns suddenly to the east. The spellings Barbarissos and Barbarisso in later "Notitiae" are wrong; so is Barbaricus campus inProcopius (De bello Persico, ii, 99). Lequien (i, 407) wrongly gives Barbalissus as synonymous with Barbalissus, another bishop in Cappadocia, known only in 1143.

S. VAILHÉ.

BARBARA

Barbara, Saint, Virgin and Martyr.—There is no
Barbarigo, Giovanni Francesco, Italian Cardinal, nephew of Blessed Gregorio Barbarigo (1625–90), b. in 1655 at Venice, entered the diplomatic service and was twice sent as representative of the Venetian Republic to the court of King Louis XIV of France. Later he entered the ecclesiastical state and became prioriarius of the church of St. Mark at Amiens. In 1697 he was appointed by Innocent XII Bishop of Verona, was transferred to Brescia in 1714, created cardinal 1720, and in 1723 became a successor of his uncle in the See of Padua. He was a zealous prelate, promoted the cause of beatification sometimes alone, and lent his encouragement to the production of literary works. To his suggestion was due the inception of the ecclesiastical history of Verona, and the works of St. Zeno, Bishop of Verona (362–380), were reprinted at his expense (Padua, 1710–45). 

Barbarossa. See Frederick I.

Barbastro (Barbastrum and Civitas Barbastrensis), Diocese of, suffragan of the Spanish province of Huesca. The city (originally, perhaps, Bergidum or Bergiduna) is at the junction of the rivers Cinca and Vero. In the time of the Romans it was a part of the province of Hispania Tarraconensis (or Tarraconetor), afterwards called Tarraconensis. It was taken by the Arabs, under the leadership of Muza (711), and the name Barbaschiter given to it, from which the name Barabastrum, according to the generally accepted opinion, is derived. It was held by the Saracens until about the year 1063, when it was retaken by Don Sancho Ramírez, King of Aragon. The Arabs once more obtained possession, but Aragón IV, Count of Urgell, reconquered it, and after a third Arab conquest it was restored to Spain, in 1101, by Pedro I, King of Aragon, who, with the pope's consent, constituted it an episcopal see, transferring the see from the ancient city of Roda to Barbastro. The first bishop, Ponzio, went to Rome to obtain the pope's permission for this transfer. Many provincial and diocesan councils have been held in the see. The Cartulary of Spain has met there occasionally, and during one of its sessions, King Ramiro, called the Monk, abdicated the crown (1134).

The diocese is bounded on the north by the Pyrenees, on the east and south by the Diocese of Lérida, and on the west by those of Huesca and Yaca. It is a suffragan of Saragossa and is composed of 154 parishes under the supervision of ten archpriests, or vicars. The population is about 240,000. The clergy number about 220, and there are 231 churches

reference to St. Barbara contained in the authentic early historical authorities for Christian antiquity, neither does her name appear in the original recension of St. Jerome’s martyrology. Veneration of the saint was common, but not as intense as in the seventh century. At about this date there were in existence legendary Acts of her martyrdom which were inserted in the collection of Symeon Metaphrastes and were used as well by the authors (Ado, Usuard, etc.) of the enlarged martyrologies compiled during the ninth century in Western Europe. According to these narratives, which are essentially the same, Barbara was the daughter of a rich heathen named Diocorus. She was carefully guarded by her father who shut her up in a tower in order to preserve her from the outside world. An offer of marriage which was received through him she rejected. Before going on a journey her father commanded that a bath-house be erected for her use near her dwelling, and during his absence Barbara had three windows put in it, as a symbol of the Holy Trinity, instead of the two originally intended. When her father returned she acknowledged herself to be a Christian; upon this she was ill-treated by him and dragged before the prefect of the province, Martinianus, who had his son strangled and the daughter burnt to death by beheading. The father himself carried out the death-sentence, but in punishment for this he was struck by lightning on the way home and his body consumed. Another Christian named Juliana succeeded the saint in the martyrdom at St. Mark’s. A pious man called Valentinus buried the bodies of the saints; at this grave the sick were healed and the pilgrims who came to pray received aid and consolation. The emperor in whose reign the martyrdom is placed attributed the victory to Maximianus; owing to the purely legendary character of the accounts of the martyrdom, there is no good basis for the investigations made at an earlier date in order to ascertain whether Maximinianus Thrax (235–238), or Maximianus or Maximianus Daza (of the Diocletian persecutions), is meant.

The traditions vary as to the place of martyrdom, two different opinions being expressed: Symeon Metaphrastes and the Latin legend given by Mom- bricius make Heliopolis in Egypt the site of the martyrdom, while other authorities, to which Baronius subscribes more weight, give Nicomedia. In the “Martyrologium Romanum parvum” (about 700), the oldest martyrology of the Latin Church in which her name occurs, it is said: “In Tuscia Barbarae virginitas et stasius tenebantur...” (and others, while later additions to the martyrlogies of St. Jerome and Bede say: “Romae Barbarae virginis” or “apud Antiochiam passio S. Barbarae virg.”). These various statements prove, however, only the local adaptation of the veneration of the sainty martyr concerning whom there is no genuine historical tradition. It is certain that before the ninth century she was publicly venerated both in the East and in the West, and that she was very popular with the Christian populace. The legend that her father was struck by lightning caused her, probably, to be regarded by the common people as the patron saint in time of danger from thunder-storms and fire, and later, by analogy, as the protector of artillerymen and miners. She was also called upon as intercessor of the Sacraments of Penance and Holy Eucharist at the hour of death. An occurrence of the year 1448 did much to further the spread of the veneration of the saint. A man named Henry Kock was nearly burnt to death in a fire at Buxheim, in Bavaria, to which he had always shown great devotion. She aided him to escape from the burning house and kept him alive until he could receive the last sacraments. A similar circumstance is related in an addition to the “Legenda aures”. In the Greek and present Roman calendars the feast of St. Barbara falls on 4 December, while the martyrlogies of the ninth century, with exception of Rabanus Maurus, place it on 16 December. St. Barbara has often been depicted in art; she is represented standing by a tower with three windows, carrying the palm of a martyr in her hand; often she holds a chalice and sacramental wafer; sometimes cannon are displayed near her.
177 chapels. The diocese was annexed to Huesca in the sixteenth century, but was afterwards made independent and remained so until the Concordat of 1851, which annexed it once more to Huesca, preserving its name and administration. It is administered at present by the titular Bishop of Claudiopolis, Don Justo Vives, who is presbyter of San Blas. Among its bishops, Ramón II, who is venerated as a saint, and the above-mentioned Ramiro, called the Monk, a prince of the royal house of Aragon, deserve special mention.

Bartolomé and Luperco Argensola, historians and classical Spanish writers, were born in Barbastro. Bartolomé is the author of the "Historia de las Molucas," "Anales de Aragón," and "Regla de Perfección"; Luperco wrote three tragedies, "Isabel," "Jebé," and "Alejandro," and some poems published with others written by his brother Bartolomé. The cathedral, the episcopal palace, the seminary, and the college of the Clerks Regular of the Pious Schools, or Piarsites, are among the most noted buildings in the city. Besides the seminary for the education of young ecclesiastics, there are, in the diocese, various communities of both sexes devoted to a contemplative life and the education of the young. The Piarsites, the Sons of the Immaculate Heart of Mary, the Poor Clares, and the Capuchin nuns, are well known in the city. The Benedictines and the Trappists in the town of Pueyo, and the Discalced Carmelites in Graus and Salas-Altas. There are schools in all the towns of the diocese.

Tito López.

Barbelin, Félix-Joseph, styled the "Apostle of Philadelphia", b. at Lundeville, Province of Lorraine, France, 30 May, 1808; d. in Philadelphia, 8 June, 1869. He was the oldest of six children, of whom five became religious, his youngest brother Ignace-Xavier being the founder of the Apostolic School at Amiens. He received his early training at the home of a reverend grand-uncle, and made his philosophical and theological studies in a seminary of which another grand-uncle was president. He entered the Society of Jesus, 7 January, 1831, at Whitemarsh, Maryland, U. S. A., and for some years was stationed at Georgetown College, D. C., as disciplinarian and teacher of French. In 1836 he became assistant pastor of Holy Trinity Church at Georgetown, and in 1838 was transferred to Philadelphia, thereafter the scene of his apostolate. For more than a quarter of a century he was pastor of Old St. Joseph's, Willing's Alley, which became, mainly during his term of office, the centre from which radiated Catholic influences throughout the city and diocese. His zeal was untiring. He founded St. Joseph's Hospital in his adopted city, and was the first to establish sodalities for men and women and for the young who were always the objects of his fatherly solicitude. In 1852 he was appointed the first President of St. Joseph's College. His many good works brought him into conflict with most of the Catholics of the city, while his charity towards all and particularly his love of children and devotion to their interests made him an object of veneration to Catholics and Protestants alike. His memory is still held in benediction.

His life was written by ELEANOR C. DONNELLY (Philadelphia, 1880); Woodstock Letters, IV, 108; V, 81. EDWARD P. SPILLANE.

Barcelo and Barbelites. See Gnostics.

Barber Family, The.—Daniel Barber, soldier of the Revolution, Episcopalian minister and convert, b. at Simsbury, Connecticut, U. S. A., 2 October, 1756; d. at Saint Inigoes, Maryland, 1834. The conversion of the Barber family, despite the prejudices of a Puritan education and environment, was one of the most notable and far-reaching in its results of any recorded in the early annals of the Church in New England. Daniel Barber has left a "History of My Own Times" (Washington, 1827), in which he relates the tale of his father, Daniel, a Nonconformist Dissenter of strict Puritanic rule and he continued in that sect until his twenty-seventh year, when he joined the Episcopalians. Previous to this he had served two terms as a soldier in the Continental army. In his thirtieth year he was ordained a minister of the Episcopalian Church at Schenectady, New York. He married Chloe Case, daughter of Judge Owen of Simsbury, Connecticut, and about 1787, with his wife, his three sons, and a daughter, moved to Claremont, New Hampshire. He exercised the duties of the ministry for thirty years without doubt concerning the soundness of his ordination, when one day the chance reading of a Catholic book opened up for him the whole issue of the validity of Anglican orders, by impugning Barker's ancient father, and this doubt was further increased by a visit for conference to the famous Bishop Cheverus, then a priest in Boston, and the inability of his Episcopalian associates to offer any satisfactory refutation of the arguments advanced by the Pontiff's envoy. For this visit to Boston Father Cheverus gave him a number of Catholic books, which he and the other members of his family read eagerly.

In 1807, at the instance of his parent, he baptized Fanny, daughter of General Ethan Allen, who subsequently became a convert and died as a member of the convent of the Hôtel-Dieu, Montreal. A visit he made there greatly impressed him, and Miss Allen's change of faith indirectly had much to do with his own conversion. The books-Father Cheverus gave him, and he not only studied them but also gave them to his wife and children. His son, Virgil Horace, who was a minister in charge of an Episcopalian academy at Fairfield, near Utica, New York, was specially attracted by these books when with his wife he visited his father, and he took Miller's "End of Controversy" back to New York. This visit resulted in the conversion of both husband and wife in 1817. The following year Virgil returned to Claremont from New York, taking with him Father Charles French, a Dominican who was officiating at St. Peter's church, and was married to a week in Daniel Barber's house preaching and saying Mass, with the result that he had seven converts, including Mrs. Daniel Barber and her children, Mrs. Noah Tyler, who was Daniel Barber's sister, and her oldest daughter Rosetta. Mrs. Tyler was the mother of William Tyler, first Bishop of Hartford, Connecticut. Her husband and six other children were subsequently converted, and four of the daughters became Sisters of Charity.

Mrs. Daniel Barber was a woman of great strength of mind and resolution. She died in her seventy-ninth year, 8 February, 1825. Her husband was not baptized with her, but on the fifteenth of November, 1818, gave up his place as minister of the Episcopalian parish of Claremont. He then went to visit friends in Maryland and Washington, where he took the final step and entered the Church. He spent the rest of his life, after the death of his wife, in Maryland and Pennsylvania, near his son Virgil, and he died in 1834 at the house of the Society of Jesus at Saint Inigoes, Maryland, where he was buried. The sermon printed at Washington, "Catholic Writings and Piety Explained and Recommended in Sundry Letters..." (1821), and "History of My Own Times", give interesting details of his life and show how greatly he was affected in his convictions and earnestly desires of knowing the truth and disposed to embrace it when found.
Barbieri, Giovanni, called from his squinting, "Il Guerino"; a famous painter of religious subjects, b. at Cento, near Bologna, 2 February, 1591; d. at Bologna, 22 December, 1665. His parents were in very humble circumstances. It is related that he gave such early indication of his great talents that before he reached the age of ten he had painted on the front wall of his home a figure of the Virgin. His first instructor was Bartolommeo Bonazzi, and when sixteen he entered the school of Benedetto Gennari, the elder, at Cento. As a youth he had studied with great admiration a famous painting of Ludovico Carracci at the convent of the Capuchins at Cento, which had much influence on his work. Father Mirandola, head of the convent, took Barbieri under his protection, had him taught, and secured him commissions.

After spending some time in Bologna, where he studied with Cremonini and Gennari, the young painter went to Venice, and in 1610 he came to Rome, where he lived for the three years following at the hotel of Adeodato degli Orsini, prince of Palma. At Ferrara he painted the portrait of the legate, Cardinal Jacopo Serra, who made him a chevalier. On the invitation of Cardinal Ludovisi, later Pope Gregory XV, he went to Rome. When in 1615 he did the "Aurora" at the house of Ludovisi, and his celebrated painting of St. Peter in the Capitol. After the death of his paternal patron, Barbieri, refusing the invitations of James I to go to England and of Louis XIII to visit France, returned to Cento and established there an academy which was much frequented by foreigners as well as native painters. He painted the portraits of the Duke of Modena, and after the death of Guido, whose style he imitated, he settled at Bologna, where he died, leaving much wealth.

Augustus Van Cleef.

Barbo, Peter. See Paul II.

Barbosa, Agostino, a noted canonist, b. at Guimarães, Portugal, in 1569; consecrated in Rome, 22 March, 1649. Bishop of Urgel, in Otranto, Italy, he died seven months later. Having studied canon law in his native land, he went to Rome. Being without books, his astounding memory served him instead. Sanctity and affability won for him entrance into the libraries. He passed long hours reading sedulously and memorizing without effort, so that returning to his room he was able to put in writing the fruits of the day's labour. About 1632 he went to Madrid, where he applied himself to writing and fulfilled various duties connected to him till 1648.

Among Barbosa's many writings, all of which evidence intimate acquaintance with authors, sources, and controverted questions, we mention the following: "Pastoralis Solicitudinis, sive de Officio et Potestate Episcopi Tripartita Descriptio" (Rome, 1621; Lyons, 1629; in folio, 1641, 1650, etc.). A similar work relating to parish priests was published in Rome in 1632, Lyons, 1634, Geneva, 1662, Venice, 1705, in quarto. "Variae Juris Tractationes" (in folio, Lyons, 1631 and 1644; Strasburg, 1652). "Jus Ecclesiasticum Univeris Libri III" (Lyons, 1633, 1645, 1718). All the canonical works of Barbosa were published at Lyons, 1657-75, in 19 vols. in quarto, 16 vols. in folio, and again, 1698-1716, 20 vols. in quarto, 18 vols. in folio.

Andrew B. Meekan.
Barbosa-Machado, Ignacio, a Portuguese historian, b. at Lisbon in 1688; d. in 1734. He pursued his studies at the University of Coimbra, was later sent to Brazil as a magistrate, and after the death of his wife entered the ecclesiastical state. He has left a 'History of Brazil', the earliest and the most authentic of which is "Historia de las cosas que se han de Poder de las Indias", by John Machado. The society of historicists, the most distinguished of which is "Fastos Políticos de Portugal", (Lisbon, 1745), dealing with the history of Portugal and Brazil. He was a brother of the more famous Diego Machado Barbosa (1728-1800), also a priest in a monastery, and author of a notable monument of Portuguese literature, "Historia de Portugal", (Lisbon, 1741-59).

V. Fuentes.

Barbour, John, Scottish ecclesiastic and author of "The Bruce", a historical poem in the early Scottish or Northern English dialect, b. about 1320; d. 1395. He was already Archdeacon of Aberdeen in 1357, an honour not likely to have been attained much before his fortieth year. At various times, 1357, 1364, 1365, 1368, he obtained, originally at the request of King David of Scotland, passports from the King of England for travel to Oxford or to France, presumably for the purpose of special study or research, or for the renewal of old college associations. The son of his supporter is by the Bishop of Aberdeen one of the commissioners to meet at Edinburgh and confer on the ransom from England of David II, captured at Neville's Cross, 1346. In 1373, and occasionally in later years, he was one of the authors of the exchequer. In 1378, as a reward for his patriotic poem, he was assigned, from the royal rents payable by the city, a perpetual pension of twenty shillings, and in 1388, an additional royal pension for the life of £10 Scots from the customs of Aberdeen. He received also from the king £10 in 1384, £15 in 1386, and £10 in 1390. In addition to his salary, he enjoyed the revenue of a prebend and a considerable income as archdeacon. His pension of twenty shillings left him as a foundation for masses for himself and his parents, to be said by all the priests at the cathedral on the Wednesday after Low Sunday. As Jamieson shows, the pension was not bequeathed to a hospital, but probably reverted to the Crown at the Reformation. The copy of the documentamounted to a considerable sum to the Church of Scotland, which was then in a position to support Barbour in his retirement.

When a mere youth he entered the Dominican Order and made his philosophic and theological studies in its schools. He afterwards taught philosophy and theology with great success at Milan, Ferrara, and Bologna. At the age of sixty he was prior of the Cremona Convent. Exhibiting extraordinary intellectual powers, and expressing his deep thoughts in eloquent speech and finished writing, he merited and received the esteem of his learned contemporaries, notably of Pico della Mirandola. Many of his writings were lost at an early date. The following have been printed frequently: (1) "Quaestio de super divina sapientia Aristotelis" (principal edition, Lyons, 1579); (2) "Divinae Epitome quae sunt in IV libros sententiarum a borealium" (principal edition, Pavia, 1522). The place and date of (3) "In libros predicabilium et predicamentorum expositio" are unknown.

Quintus and Ercolanus, Scriptores Ordinis Predicatorum, I, 270.

Arthur L. McAdam.

Barca, a titular see of Cyrenaica in Northern Africa. According to most archæologists it was situated at Medinet el Merjda, but according to Graham (Roman Africa) at Tolomita, or Tolimeita. After being often destroyed and restored, it became, during the Roman period, a mere borough (Marquardt, Staatsverwaltung, I, 459), but was, nevertheless, the site of a bishopric. Its bishop, Zopyrus (Zephyrus is a mistake), was present at the Council of Nicaea in 325 (Gelas, Patrologia Latina, 221). The subscriptiones at Ephesus (431) and Chalcedon (451) give the names of two other bishops, Zenobius and Theodorus. The see must have disappeared when the Arabs conquered the Pentapolis in 643 (Butler, The Arab Conquest of Egypt, 430), Launard, Ortes Christ, II, 226; Gama, Series Basilicae, 232, 322.

L. Petit.

Barcelona (Barcino), Diocese of, one of the suffragans of the Archdiocese of Tarragona. The city of this name is the capital of Catalonia and of the province of Barcelona, which is also an archdiocese, and is the largest city of north-eastern Spain, and is familiarly known as the "Queen of the Mediterranean".

Douglas in Spain while on his way to the Holy Land with the heart of Bruce. It pictures such events as Bannockburn, the siege of Berwick, the expedition to Ireland, and the wanderings of the king, and sketches the characters of Stewart, Randolph, Bruce, and Douglas. The narrative is given as a series of scenes, of which the power and idealism are not equalled by any other. The last few pages describe the encounters of the lovers, the fates of the two heroes, the tenderness of the true soldier, for anachronisms of grim humour or sharp dialogue, for digressions on necromancy and astrology, and for learned allusions are not claimed, but the few that are included are not lacking. The narrative, which Barbour called a romance, is regarded as being in essential points a faithful history, and was received by generations of readers. Scott used some of its material in "Castle Dangerous", "The Lord of the Isles", and "Tales of a Grandfather". The principal editions of "The Bruce" are those of Pinkerton (Edinburgh, 1790; Jamieson (Edinburgh, 1820); Cosmo Innes (Edinburgh), and, according to more modern requirements of scholarship, that of Professor Skeat for the "Early English Text Society", and the "Early Scottish Text Society". Some fragments on the tale of Troy, and a long poem on the lives of the saints formerly attributed to Barbour are no longer thought to be his work.

Mackay, Hector, Pensee, Feuille in Scottish Poetry; Lantier, Music and Poetry.

J. Vincent Crowne.

Barbus, Paulus, Italian philosopher and theologian, b. at Soneino, Lombardy, and hence known also by the name of Sonecias which appears at the head of his books; d. at Cremona, 4 August, 1694. When a mere youth he entered the Dominican Order and made his philosophic and theological studies in its schools. He afterwards taught philosophy and theology with great success at Milan, Ferrara, and Bologna. At the age of sixty he was prior of the Cremona Convent. Exhibiting extraordinary intellectual powers, and expressing his deep thoughts in eloquent speech and finished writing, he merited and received the esteem of his learned contemporaries, notably of Pico della Mirandola. Many of his writings were lost at an early date. The following have been printed frequently: (1) "Questio se super divina sapientia Aristotelis" (principal edition, Lyons, 1579); (2) "Divinae Epitome quae sunt in IV libros sententiarum a borealium" (principal edition, Pavia, 1522). The place and date of (3) "In libros predicabilium et predicamentorum expositio" are unknown.

Quintus and Ercolanus, Scriptores Ordinis Predicatorum, I, 270.
History.—Barcelona is one of the most ancient cities of Spain, and the most important after the capital. Founded by Hamilcar in the ancient region of Laetana, it was in the possession of the Carthaginians until they were driven out of Spain, when it passed under the power of the Romans, who favoured it with many privileges. Julia Augusta Faventia in recognition of the support given him in his struggle with Pompey; later he made it a Roman colony and gave it the jus Latii, which conferred on the inhabitants, although still subject to Hispania Tarraconensis, the full privileges of Roman citizenship. The city remained unimportant until Ataulf, King of the Visigoths, chose it for his residence (415). Later it passed successively into the hands of the Arabs (713) and the Franks (801). Finally, Willilfrid the Hairy declared his independence and gave the Spanish March, or the Marca Hispanica, as the Franks had called it, the name of the County of Barcelona. It remained under the independent government of its own counts until the marriage of Petronilla, daughter of Ramiro I, Duke of Vasconia, with the Count of Barcelona (1137) united Aragon and Catalonia. After 1164, when Petronilla resigned in favour of her son Alfonso, the two states formed but one kingdom.

Barcelona, being situated on the shores of the Mediterranean and on the military road between Spain and France, was comparatively easy of access, and the Gospel was preached there by the immediate disciples of the Apostles. The See of Barcelona, unlike most very ancient sees, whose origins are obscure, has preserved catalogues of its bishops from Apostolic times, and although all the names given cannot be admitted as authentic, the greater number are handed down in all the catalogues. In the twelfth century the diocese was restored by Ramon Berengar, Count of Barcelona, since which time the succession of bishops has been uninterrupted.

In the long line of bishops we find many illustrious names. St. Severus, a native of the city, was martyred by Daciarius in the reign of Diocletian. St. Pacianus (360-390) is famous for the clearness and spirituality of his doctrinal writings; in chapter cvi of his “De Scriptoribus Ecclesiasticis”, St. Jerome praises the chaste life of Pacianus, his eloquence, and his writings on baptism and penance, also those against heretics, particularly the Novatians. St. Olibrius, noted for the great purity of his life, was the first metropolitan of this province. Bishop Urquinaona was revered for his great charity; one of the handsomest plazas of Barcelona is still called by his name. Among the saints of this diocese are: the famous virgin, St. Eulalia, a martyr of the third century, whose relics are preserved in a rich shrine in the crypt of the cathedral; Sts. Juliana and Sempronia, virgins and martyrs; the African saints, Cuenpas and Felix, martyred in the city of Barcelona; St. Raymund of Pennafort, founder of the Order of Mercy for the Redemption of Captives, confessor of Gregory IX (1227-41), and compiler of the famous “Decretals”, in which he collected the scattered decrees of popes and councils.

Councils of Barcelona.—Many councils and assemblies were held in Barcelona, and provincial councils in the Visigothic period. The first (c. 540), at which the metropolitan and six bishops assisted, promulgated ten canons, ordaining that the Misere were should be said before the Canticle; that in the Vespers and Matins the benediction should be in Latin; that the people touching the hair long or shave their beards; that penitents should wear the hair short, put on a religious garb, and devote their time to prayer; that the “beatific benediction” should be given to the sick so that the body of the dead may be fastened. The decrees of the Council of Chalcedon (451) with regard to monks should be observed. At the Second Provincial Council (c. 599), attended by the metropolitan and twelve bishops, four canons were promulgated, the first and second prohibiting any fee for Holy orders and for the chiroon used for Confirmation; the third and fourth condemning the observation of the canons referring to those awaiting Holy orders, and excommunicating those who, after having made a vow of chastity and changed their secular dress for the religious garb, should contract a carnal marriage, even if a woman had been forced by violence, unless she immediately separated from the one who had violated her; a similar excommunication was also pronounced on those who married after they had received the “blessing of penance” (benedictio peneitentiae), i.e. penitents who had taken an additional vow of continency. Other councils were also held there: that of 1125, presided over by St. Ol-
conceals the jasper steps that lead to the sanctuary. The façade La Piedad, composed of graceful pointed arches, is one of the purest examples of Spanish Gothic. The church of St. Severus unites in its façade all the architectural charwoman of the fifteenth century in which it was built; its main tabernacle is noted for the rich carving of its pointed arches; its chapel of St. Eulalia is exceedingly delicate and beautiful. The church of Santa Ana has two pictures by Joan de Burgil. The mosque church of Santa María del Mar is also a beautiful specimen of Gothic architecture. Santa Maria del Pino has the most spacious and lofty nave of all the Gothic churches in Barcelona. The church of Sts. Justo and Pastor was the first dedicated to the worship of the true God in Barcelona. Judging from its present appearance, the unfinished Temple Expiatorio de la Sagrada Familia, built from the alms of the faithful, will be the finest ecclesiastical edifice in Barcelona. The famous sanctuary of Monserrat is outside the city. Apart from its antiquity and religious interest, it is remarkable for its wealth of precious stones, and for the beautiful chapels representing the mysteries of the Rosary; all these are modern and are an evidence of the piety of the faithful. The Diocese of Barcelona also possesses a great value in many parish documents, saved from the Almodovar conquest under Almanzor (1184–98), are preserved, as well as the priceless books called Exemplaria, wherein are chronicled ecclesiastical functions, oaths of kings, and other notable events, which make them the best source of information for the history of Catalonia.

Charity and Education.—It would be difficult to find in Spain another city where Christian charity is manifested in more ways than in Barcelona. Besides many general and private hospitals in the city, there exist a multitude of asylums for all classes of persons maintained by religious congregations and pious associations. Notable among them is the girls’ orphan asylum of San José de la Montaña. The asylum and maternity home (casa de lactancia) of Bressol, for the children of labourers, takes care annually of 1,200 healthy and 2,300 sick children. The asylum of La Sagrada Familia cares for about 300 children of working mothers. The asylum of La Madre de Dios del Carmen of Hostalrada, besides sheltering about 600 children and old persons, has a pious association especially for arranging marriages between persons who have been living together illegally, and legitimizing the children; in one year it procured 120 such marriages. The asylum of Daltva of the city of Reus receives annually 94,234 poor, and provides sleeping accommodations for 20,000 poor annually. The house of the Good Shepherd shelters about 300 young women rescued from houses of ill fame. The asylum of the Visitación assists young women who are in want, and in the nineteen years of its existence has preserved the purity and virtue of more than 3,000 young women. There are between forty and fifty other institutions for charitable purposes, among them the Durán asylum for incorrigible boys. Two have for their object the distribution of food and the serving of meals to working-men; one distributed 117,125 free rations in one year, and the other fed about 300 working-men daily. The Montes Pi de la Fila of Nuestra Señora de la Esperanza, of Barcelona, of Santa Madrona, and of Nuestra Señora de Monserrat, are societies for the aid of female domestics and working-men. An association of fathers of families has in one year prevented the publication of 45,000 obscene books and pamphlets.

In addition to the diocesan seminary, there are Christian Doctrine classes attended by 6,000 children, and Sunday Schools, supervised by 161 young ladies, where over 2,000 women receive instruction, and are thus prevented from attending public dance-halls. Connected with each of the asylums before mentioned is one or more schools; the religious orders conduct schools by 12,000 boys and girls. There are 8 colleges, under the Jesuits, the Piarists, and other religious orders.

A number of Catholic periodicals are published in the diocese: the “Boletín Eclesiástico de la Diócesis”, “Revista Popular”, founded and directed by Dr. Sarda y Sallan, author of “La Semana”, “Liberalismo Es Pecado”, which has been translated into many languages; the “Comentarios Scholares”, published by the diocesan seminary students; “Anales del culto a San José”; the “Mensaje del Niño Jesús de Praga”; “Anales de Nuestra Señora del Sagrado Corazón”; “La Montaña de San José”, official organ of the association; “El Boletín Salesiano”; “Las Misiones Católicas”; “La Horgina de Oro”; “La Revista Social”; and “Los Estudios Franciscanos.” “El Correo Católico” is the only strictly Catholic newspaper. It has the blessing of the sovereign pontiff, and counts many of the clergy among its contributors.

Statistics.—There are 231 parishes, 13 archipresbyterates, 1,150 secular priests, 350 regular clergy, and 89 religious communities. The population, nearly all Catholic, was 1,054,531.

TIRSO LÓPEZ.

Barcelona, University of.—This was an outgrowth of the ecclesiastical schools founded in the eleventh century. To these were added gradually the chairs held by the Dominicans in their conven and those established in the Academia by the Kings of Aragon. In 1430, the town council of Barcelona took measures for the founding of a Studium Generale in order to prevent the migration of their young men to Lerida and to the foreign universities of Paris, Toulouse, and Bologna. But the university as such dates from 1450, the year in which its charter was granted by Alfonso V of Aragon and confirmed by the Bull “Constitutus in Speculo” of Pope Nicholas V. The pope conferred upon the new university all the privileges enjoyed by the University of Toulouse and authorized it to accept thecanon and civil law, arts, and medicine. The young institution had to struggle with all sorts of difficulties. For nearly a century it had no buildings adapted to its purposes. In 1544, however, it entered upon a new era, with suitable structures and equipment, and in 1567 it received the richly endowed priory of St. Ann, formerly held by the Order of St. John. The teaching of grammar and rhetoric was entrusted to the Jesuits (1570) and the diocesan seminary to the Hierarchy with the support of the Faculty, 1714 the Faculties, with the exception of that of medicine, were transferred to Cervera. By royal decree of Charles III, a college of surgery was established in Barcelona in 1764. The Faculties returned to Cervera in 1783, and in 1787 the new university was formally inaugurated. It withstood the disturbances that occurred in 1840 and 1856, passed under State control in 1857, and was provided with additional buildings (1863–73). At present it has five Faculties: philosophy and letters, law, science, medicine, and pharmacy, with 66 professors, 420 lecturers, and 1,900 students. The Archives of the Crown of Aragon, founded in 1346, contain 3,759,314 documents, and the library about 2,000 manuscripts.
land with special affection. In 1615 a volume of his poems appeared in London.

In England Barclay received occasional help from the king and the Earl of Salisbury, and won the friendship of Isaac Casaubon, Richard Hakluyt, and especially, in 1606, of du Peirese, an attaché of the French Embassy and a patron of learning. In 1615 Barclay, at the invitation of Paul V, went to Rome, where he was welcomed by Bellarmine and pensioned by the pope. Perhaps to prove his Catholic loyalty he published in 1617 his "Parenesis ad Sectarios." Completing in July, 1621, his Latin novel "Ar genius", he died in the following month. The facts as to the removal of his monument and inscription from St. Onofrio have been perhaps permanently obscured by partisan dispute. His friend Ralph Thorie published an elegy in 1621. Barclay was admired by his contemporaries for his honesty, his rare courtesy, and a conversational charm that owed something to grave irony. His varied learning and talents made him a formidable opponent.

The most important of Barclay's writings, the "Ar genius", published by du Peirese at Paris, 1621, has been admired by Richelieu, Leibnitz, Jonson, Grotius, Pope, Cowper, Dissraeli, and Coleridge. This work is a long romance which introduces the following personages of interest. All were in debt, it was indebted, in whole or in part, Fénélon's "Télémaque", du Ruyer's tragic-comedy "Argéns et Poliarque", Calderon's "Argéns y Poliarca", an Italian play "Argènide", by de Guryles, and a German play by Christian Wysen, 1694. The "Ar genius" was soon translated into French, Spanish, and German. English translations appeared as follows: by Kingsmill Long, London, 1626; by Sir Robert Le Gryse and Thomas May, London, 1629, and in 1772, under the title of "The Phoenix", by Clara Reeve. Ben Jonson in 1623 entered a translation at Stationers' Hall. There have been translations into Italian, Dutch, Greek, Hungarian, Polish, Swedish, and Icelandic. An English translation, by Thomas May, of the fourth part of the "Satyricon" under the title of "The Mirror for Minda", was printed in London, 1653.

Portraits of Barclay may be found in the first edition of the "Argéns", in the volume of 1629 of Le Gryse and May, and in the later work of Collignon. For his "Glossary in Dict. Nat. Abridg'd" see Cut- n. s. v.; HALLER, Life of John Barclay (Edinburgh, 1780); and for his "Institutio Latina Dissertatio in Argéns" (Paris, 1874); DUPONTO, L'Argéns de Jean Barclay (Paris, 1875); DUKAR, Bibliographie du Saty- ricon (Paris, 1865). Note C. B. (Paris, 1892); N. A. (Paris, 1892); Revue de l'Académie de J. B. (Paris, 1901); IDEM, Notes Hist., et Bibliogra- phiques sur l'Argéns de J. B. (Paris, 1902); SCHEID, Barclay's Ar genius—with bibliography and key (Munich, 1903).

J. V. CROWNE.

Barclay, William, Scottish Jurist, b. 1546; d. at Angers, France, 3 July, 1608. He was of a good Aberdeen family, and studied first at Aberdeen University and later, having emigrated to France like so many of the Catholic youth of Scotland at that time, under eminent teachers at Paris and Bourges. On his graduation in 1578, on the recommendation of his uncle, Edmund Hay, first rector of the newly founded University of Pont à Mousson, he was appointed to the chair of civil law there by the Duke of Lorraine, who made him also dean of the faculty of law and a councillor of the estate. Three years later he married Anne de Malleville, a lady of an honourable Lorraine family. Barclay published in 1600 his largest work, "De Regno et Regali potestate," in defence of the rights of kings, against Buchanan and other writers. The doctrines laid down in this book, which was dedicated to Henry IV, are discussed at length by Locke in his "Civil Government." After twenty-five years' tenure of his professorship, Barclay resigned his chair in 1603 and returned to England, where the
BARCO

new monarch, James I, was inclined to welcome with favour one who had so learnedly asserted the views on the Divine right of kings which he himself held. Barclay's fidelity, however, to the Catholic religion stood in the way of his advancement, and, rejecting the opportunity of a baronage in the next generation that he renounced his faith, he returned to France. An offer was immediately made to the renowned jurist to accept the professorship of law in the University of Angers, which had been vacant for some years. In 1665 he published at Paris an abridgment of the Passus of James I. Barclay mentions in this work his intention to write a book about the king, but he never lived to publish it. He was buried at the Cordeliers Church at Angers. His most famous work, "De Potestate Papae," presented against the Apostolic authority over kings in temporal matters, appeared in 1609, with a preface written by his son. Cardinal Bellarmine published a rejoinder to it. (See Barclay, John.)

BARCO Cantorenses, MARTIN DEL, b. 1535, at Logroño, in the Diocese of Plasencia of Estremadura (Spain); died c. 1602. He became a secular priest and in 1572 accompanied, as chaplain, the expedition of Juan Ortiz de Zárate to the Río de La Plata. For twenty-four years he followed the vicissitudes of Spanish exploration in the Argentine with undaunted courage, and was made archdeacon of the church of Paraguay. In 1582 he went to Lima and acted as secretary to the third council held in that city. He returned to Europe where his finishing his poetical work, known as "La Argentina," which he dedicated to the Viceroy of Portugal (for Philip III of Spain). It appeared in 1602. Soon after, de Barco del Terra, poet laureate of the Argentine, is slimmer, like that of all the epics composed about his time on American subjects. It is a work of ponderous rhyme. But its historical value is considerable. He describes nearly a quarter of a century of Spanish efforts in the Argentine and adjacent countries, and he was closely an eyewitness, and thus fills a considerable blank in our knowledge of the history of that period, otherwise but little known. He also alludes to the English pirates committed by Drake and Cavendish, and to the appearance in the southern hemisphere of his time on American subjects. It is a work of ponderous rhyme. But its historical value is considerable. He describes nearly a quarter of a century of Spanish efforts in the Argentine and adjacent countries, and he was closely an eyewitness, and thus fills a considerable blank in our knowledge of the history of that period, otherwise but little known. He also alludes to the English pirates committed by Drake and Cavendish, and to the appearance in the southern hemisphere of the Viceroy Toledo. Several of the violent earthquakes of the time are also mentioned and described, though not always with correctness in regard to dates.

BARES, MARTIN DE, a French theologian of the Jansenist School, b. at Bayonne, 1600; d. at St. Cyran, 1678. He was a nephew of du Vergier de Hauranne, Abbot of St. Cyran, who sent him to Belgium to be taught by Jansen. When he returned to France he served for a time as tutor to the son of Argenteau, who died in 1644 and left him his uncle at the Abbey of St. Cyran. He did much to improve the abbey; new buildings were erected, the library much increased, and the strictest rule enforced. Unlike many commentators of his day who scarcely ever saw the abbots over whom they held authority, Barro became an active member of St. Cyran, was ordained priest 1647, and gave himself up to the rigid asceticism preached by his sect. His friendship with du Vergier and Arnauld and, through them, with Port-Royal soon brought him to the front in the debates of Jansenism. He collaborated with du Vergier in the "Petrus Aurelius" and with Arnauld in the book on "Frequent Communion." Of his own treatise on the "Fourth Commandment" to this Church and some on the then much-mooted questions of grace and predestination. To the first class belong (1) "De l'autorité de St. Pierre et de St. Paul" (1645). (2) "Grandeur de l'Eglise de Rome qui repose sur l'autorité de St. Pierre et de St. Paul" (1645). (3) "Réfutations sur quelques objections que l'on a formées contre la grandeur de l'Eglise de Rome" (1646). These three books were written in support of an assertion contained in the book "On Frequent Communion," namely: "St. Peter and St. Paul are the two heads of the Roman Church and the two are one." This theory of dual church authority, implying an equality of the two apostles, was condemned as heretical by Pope Innocent X, in 1674 (Denninger, Enchiridion, 965).

To the second class belong (1) A cause en Sirmond's "Prædestinatus" (1644). (2) "Quæsit saneti Augustini et demonstratio eius auctoritatis in ecclesiâ?" (1650). Barro holds that a proposition clearly found on St. Augustine can be absolutely accepted and taught, regardless of the exposition of the African Doctor's authority was, from the beginning of the controversy, the main prop of the Jansenists who read in St. Augustine what they pleased and then claimed immunity from the authority of the Church. This error was condemned by Pope Alexander VIII, 1690 (Cf. Denninger, no. 1187). (3) "Exposition de la foi de l'Eglise romaine touchant la grâce et la prédétermination" (1694). This book was written at the request of the Jansenist Bishop of Aleth, Pavillon, and may be looked upon as the official expression of Jansenism. It was condemned by the Holy Office, 1697, and again 1704, when it was published with the "Instructions sur la grâce" of Antoine Arnauld.

BARD, HENRY, BARON BROMLET AND VISCOUNT BELLAMONT, an English soldier and diplomat, b. 1604; d. 1660. He was the son of the Reverend George Bard, Vicar of Staines, Middlesex, England, a representative of an old Norfolk family. He was educated at Eton, and in 1622 entered King's College, Cambridge, where he met his future wife and a fellowship. Before this date he had travelled considerably, having visited Paris, and journeyed on foot through France, Italy, Turkey, Palestine, and Egypt. It is alleged that during his sojourn in the last country he surreptitiously got possession of a copy of the Koran which was the property of one of the moesques, and which he appropriated and afterwards presented to his college.

Bard's habits of life were expensive, the liberality and generosity of his wealthy brother, Maximilian, enabling him to indulge them. His accomplishments included the knowledge of several languages and, coupled with his experience as a traveller and a wide knowledge of men and events, served to commend him to Charles I, with whom he became a favourite, and whose policies he supported. In the Civil War he sustained as a strong partisan. He was one of the earliest to take up arms in the king's behalf, obtaining through the queen a colonel's commission. He distinguished himself at York, and at the battle of Cheriton Down, was severely wounded, lost an arm, and was taken prisoner. In May of 1646 he received his discharge and on again joining the king received the reversionary grant of the office of Governor of the
BARDESANES and Bardesanites.—Bardesanes (Bar-Dēsen), a Syrian Gnostic or, more correctly, a Syrian poet, astrologer, and philosopher, b. 11 July, 154 (164), at Edessa, of wealthy Persian, or Parthian, parent; d. 222, at Edessa. To indicate the city of his birth his parents called him "Son of the Dāsān," the river on which Edessa is situated. On account of his foreign extraction he is sometimes referred to as "the Parthian" (by Julius Africanus), or "the Babylonian" (by Porphyry); and, on account of his later important activity in Armenia, "the Armenian" (by Hippolytus). His pagan parents, Nabama' and Nah-sarm, must have been people of rank, for their son was educated with the crown-prince of the Oeso-Hecatomatian kingdom, at the court of Abgar Manu VIII. Julius Africanus says that he saw Bardesanes, with bow and arrow, mark the outline of a boy's face with his arrows on a shield which the boy held in front of him. Porphyry, however, states (Eus., H. E., IV, xxv, 2; Epiphanius, H. E., LVII, i; Theodoretus, H. E., fab. 1, xxii). (c) A "Book of Psalms", 150 in number, in imitation of David's Psalter (St. Ephrem, Serm. adv. haer., iii). These psalms became famous in the history of Edessa; the words and melodies lived for generations on the lips of the people. Only, when St. Ephrem composed hymns in the same pentasyllabic metre and had them sung to the same tunes as the psalms of Bardesanes, these latter gradually lost favour. We probably possess a few of Bardesanes' hymns in the Gnostic "Acts of Thomas"; the "Hymn on the Soul"; the "Escapous of Wisdom"; the consecratory prayer at Baptism and at Holy Communion. Of these, however, only the "Hymn on the Soul" is generally acknowledged as an original by Bardesanes which he himself composed. Though marred by many obscurities, the beauty of this hymn on the soul is very striking. The soul is sent from its heavenly home to the earth, symbolized by Egypt, to obtain the pearl of great price. In Egypt it forgets for a while its royal parentage and glorious destiny. It is reminded thereof by a letter from home, succeeds in snatching the pearl from the Serpent, and, once more clothed in a rayment of light, it returns to receive its rank and glory in the kingdom of its father. (d) Astrologico-theological treatises, in which his peculiar tenets were expounded. They are referred to by St. Ephrem, and amongst them was a treatise on light and darkness. A fragment of an astronomical work by Bardesanes was preserved by George, Bishop of the Arab Christians, and republiced by him in "De mensibus et l'astrologue" etc. (Paris, 1899). (e) A "History of Armenia", Moses of Chorene (History of G. A., II, 66) states that Bardesanes, "having taken refuge in the fortress of Ani, read there the temple records in the old Armenian script and added to these what he had the events of his own time. He wrote all in Syriac, but his book was afterwards translated into Greek." Though the correctness of this statement is not quite above suspicion, it probably has a foundation in fact. (f) "An Account of India". Bardesanes obtained his information from the Hindo.
BARDSTOWN 294

 ambassador to the Emperor Elagabalus. A few extracts are preserved by Porphry and Stobaeus (Langlois, Fragm. hist. grec. V, ixvii sqq.). "Book of the Laws of the Countries". This famous dialogue, the oldest remnant not only of Bardeleanite learning, but even of Syriac literature, if we except the version of Hor. W. F. E. Wauwretz, is not by Bardeleanus himself, but by a certain Philip, his disciple. The more speaker, however, in the dialogue is Bardeanes, and we have no reason to doubt that what is put in his mouth correctly represents his teaching. Excerpts of this work are extant in Greek in Euseb. (Pep. Ev., VI, x, 6 sqq.) and in Syriac in the "Question et Réponse" of the "Reconstructions" of Pseudo-Clement, IX, 19 sqq. A complete Syriac text was first published from a sixth- or seventh-century MS. in the British Museum, by Cureton, in his "Spicilegium Syriacum" (London, 1855), and recently by Nau. It is disputed whether the original was in Syriac or in Greek; Nau is decidedly and rightly in favour of the former. Against a questioning disciple called Abida, Bardeanes seeks to show that man's actions are not entirely necessary, but that the outcome of individual actions is conditioned by the position of the stars at the birth of the individual and from that movement and life take their source; but that darkness is dead, ignorant, feeble, rigid, and soulless, without activity and discrimination; and they hold that the evil within them is the outcome of their nature and is without the cooperation of evil forces (Haarck, Gr. (Halle, 1850), I, 293).

August 3, 807, Nau, Bardstane, "l'astrologue, la livre de lais des pays" (Paris, 1880); "Dictionnaire de théol. et de philos." (Paris, 1898); H. Wehner, Gesch. der alt. Lit. (Freiburg, 1902), I, 337 sqq.; Lexer, Bardane von Eudesen (Halle, 1864); v. Plessen, "Die letzten Gnostiker" (Leipzig, 1864); Hirt in Dict. of Christ. Biog., s. v.; Schöpfer in Kuchenhehr, s. v.

J. P. ARENDSEN

BARDSTOWN. See LOUISVILLE.

Bar Hebrewus (Abu'l Faraj), a Jacobite Syrian grammarian, physician, Biblical commentator, historian and theologian, was born at Maragha, Persia, 1286. He was the son of a Jewish physician, Aaron, a convert to the Jacobite faith; hence his surname of Bar 'Ebrayä (Bar Hebrewus), "Son of the Hebrew". Under the care of his father he began as a boy (a teneria unguiculita) the study of medicine and of many other branches of knowledge, which he pursued as a youth at Antioch and Tripoli, and which he never abandoned until his death. In 1260, he was with the Bishop of Seleucia and the Jacobite Patriarch Ignatius II, and in the following year was transferred to the See of Laodicea. He was placed over the Diocese of Aleppo by Dionysius (1252) and finally was made Primate, or Maphrian, of the East by Ignatius III (1264). His episcopal duties did not interfere with his studies; he took advantage of the numerous visitations, which he had to make throughout his vast province, to consult the libraries and converse with the learned men whom he happened to meet. Thus he gradually accumulated an immense erudition, became familiar with almost all branches of secular and religious knowledge, and in many cases thoroughly mastered the bibliography of the various subjects which he undertook to treat. How he could have devoted so much time to such a systematic study, in spite of all the vicissitudes incident to the Mongol invasion, is almost beyond comprehension. The main claim of Bar Hebrewus to our gratitude is not, however, in his original productions, but rather in his having preserved and systematized the scattered works of the ancients, either by way of condensation or by way of direct reproduction. Both on account of his virtues and of his science, Bar Hebrewus was respected by all, and his death was mourned not only by men of his own faith, but also by the Nestorians and the Armenians. He was buried at the convent of Mar
Matthew, near Mosul. He has left us an autobiography, to be found in Assemani, "Biblioth. Oriental."
II, 248-263; the account of his death (ibid.) was written by his own brother, Bar Sauma. The works of Bar Hebraeus are:

1. ENCYCLOPÆDIE PHILOSOPHICAL.—(1) His great encyclopedic work is his Hiwthā Ḥkhmēthā, "The Cream of Science", which deals with almost every branch of human knowledge, and comprises the whole Aristotelian discipline, after Avicenna and other Arab writers. This work, so far, has not been published, with the exception of one chapter, by Margoliouth, in "Analecta Orientalia ad poetam Aristotelam" (London, 1887), 114-139. The rest is to be found only in MSS., preserved at Florence, Oxford, London, and elsewhere. (2) Tīghrāth Tīghrāthā, "Commerce of Commerces", a résumé of the preceding, also unpublished. (3) Khābbād dē-Hābābbādā, "Book of the Pupils of the Eyes"; compendium of logic and dialectics. (4) Khābbād dē-Sewrāb Saphā, "Book of the Speech of Wisdom"; compendium of physics and metaphysics.

To these should be added a few translations of Arabic works into Syriac, as well as some treatises written directly in Arabic.

II. BIBLICAL.—The most important work of Bar Hebraeus is his Edāt, "Storehouse of Secrets", a commentary on the entire Bible, both doctrinal and critical. Before giving his doctrinal exposition of a passage, he first considers its critical state. Although he uses the Feshito as a basis, he knows that it is not perfect, and therefore controls it by the Greek, the Septuagint, the Greek versions of Symmachus, Theodotion, Aquila, by the Oriental versions, Armenian and Coptic, and finally by other Syriac translations, Heraclian, Philoxenian and especially Syriac Epistola. The work of Bar Hebraeus is of prime importance for the recovery of these versions and more specially of the Hexapla of Origen, of which the Syro-Hexapla is a translation by Paul of Tella. His exegetical and doctrinal portions are taken from the Greek Fathers and previous Syriac Jacobite theologians. No complete edition of the work has yet been issued, but many individual books have been published at different times. (See bibliography at end of article.)

III. HISTORICAL.—Bar Hebraeus has left a large historical dictionary of "Chronicon", in which he considers the history from the Creation down to his own day. It is divided into two portions: the first deals with political and civil history and is known as the "Chronicon Syriacum"; the second, the Ecclesiastical History, begins with Aaron and treats in a first section of the history of the Western Syrian Church and the Patriarchs of Antioch, while a second section is devoted to the Eastern Church, the Nestorian Patriarchs, and the Jacobite Maphrians. Bar Hebraeus utilized almost all that had been written before him. The best edition of the "Chronicon Syriacum" is that of Bedjan, "Gregorii Barhebræi Chronicum Syriacum" (Paris, 1890). The best edition of the "Chronicon Ecclesiasticum" is that of Abbeles and Lamy (3 vols., Louvain, 1862-77). The "Chronicon Syriacum" was rendered into Arabic by Bar Hebraeus himself under the name of "History of Dynasties"; the latest and best edition of this work is that of Salhani (Beirut, 1890).

IV. THEOLOGICAL.—The theology of Bar Hebraeus was a Monophysite. He probably, however, thought that the differences between Catholics, Nestorians, and the rest were of a theological, but not of a dogmatical nature, and that they did not affect the common faith; hence, he did not consider others as being heretics, but only as holding a different opinion or at least by the Nestorians and the Armenians. In this field, we have from him Menārāth Qudāthā, "Lamp of the Sanctuary", and the Kēbbād dē-Zidār, "Book of the Rays", a summary of the first. These works have not been published and exist in manuscript in Paris, Berlin, London, Oxford, Rome. Ascetical and moral theology were also treated by Bar Hebraeus, and we have Kēbbād dē-Yūnād, "Book of the Dove", an ascetical guide. Both have been edited by Bedjan in "Ethicon seu Moralis Gregorii Barhebræi" (Paris and Leipzig, 1889). The "Book of the Dove" was issued simultaneously by Cardacli (Rome, 1898). Bar Hebraeus codified the juridical texts of the Jacobites, in a collection called Kēbbād dē-Hūyādī, "Book of Directions", edited by Bedjan, "Barhebræi Nomocanon" (Paris, 1898). A Latin translation is to be found in Mai, "Scriptorius Veter. Nova Collectio", vol. X.

Bar Hebraeus has left besides many other works. On grammatical subjects we have the "Book of Splendours" and "Book of the Spark", both edited by Martin, "Eseres grammaticales de Aboul Faraj dit Barhebræus" (2 vols., Paris, 1872); also works on mathematics, astronomy, cosmography, medicine, some of which have been published, but others exist only in manuscripts.

The most editors of Bar Hebraeus' works also give in their introductions some valuable biographical and bibliographical data on the author, as well as bibliographical lists of his works. See especially:

1. KLEINMANN, Synagoge Grammatik (Berlin, 1893), 138 sqq.; DUVAL, op. cit. 81, 82; GÖTTERBERGER, op. cit. 752 sqq. should be added GÖTTERBERGER in Zeitschr. f. d. Alttest. Wis- senschaft (1901), 101-144. The "Storehouse of Secrets", for which see DUVAL, loc. cit.; GÖTTER- BERGER, op. cit. 62-71.

2. For the Chronicon, see list of sources in ASSEMANI, op. cit. 313 sqq.

3. (Theological) ASSEMANI, op. cit., 284 sqq.; DUVAL, op. cit., 235 sqq.

R. BUNIN.

Bar, Archidioecese OF, is situated in the province of the same name, in Apulia, Southern Italy. The city of Bar is the principal city in the province, with a population of about 65,000. It is located on a peninsula which extends into the Adriatic. Anciently called Barium, it fell into the power of the Romans after the war with Pyrrhus, retaining, however, its autonomy. Being a seaport facing the Orient, Christianity must have reached Bar at an early date. According to a local tradition, St. Peter himself preached the Gospel there and consecrated the first bishop. History, however, is silent as to the beginning of Christianity in this city.

The first known Bishop of Bar was Gerasimus, who, in 347, assisted at the Council of Sardica. In 530 Bishop Peter held the title of Metropolitan under Epiphanius, Patriarch of Constantinople. In 780 Bishop Leonius was present at the Seventh Ecumenical Council, the Second of Nicea. In the ninth century the Saracen raids waste Apulia, destroyed the city of Canosa (Canusium) and captured Bar. In 841, however, the Byzantine army reconquered Bar, and in 844 St. Angelarius, Bishop of Canosa, then in ruins, brought to Bar the relics of Sts. Rufinus, Memorus, Sabinus, which he had brought from Rome. Pope Sergius II conferred on him the title of Bishop of the two dioceses of Bar and Canosa, a title which the Archbishops of Bar retain to the present time. In 933 Pope John XI granted the Bishops of Bar the use of the pallium. It seems that the Bishops were no longer independent on the Patriarch of Constantinople until the tenth century. Giovanni II (962) was able to withdraw from this influence, refusing to accept the
prescriptions of the patriarch concerning liturgical points. All connexor was finally severed in the eleventh century, and Bari became a direct dependency of Rome. Archbishop Bisanio (1025) obtained from the pope the privilege of consecrating his suffragan see, which he began to enjoy in the cathedral, which was continued by his successors, Niccolò (1035), Andrea (1062), and Elia (1089), the last-named a member of the Benedictine Order.

In 1067 some Bari sailors, on their return from the East, brought with them the relics of St. Nicholas, Bishop of Mira, for which Roger, Duke of Apulia, built a splendid church; this became the object of great veneration and of innumerable pilgrimages. About this time Urban II, being in Apulia, went to Bari to venerate the relics of the holy wonder-worker and to consecrate the basilica. Here also he held a council, attended by 188 bishops, to consider the reunion of the Greeks with the Church of Rome. St. Anselm of Canterbury distinguished himself at this council by his learned defence of the procession of the Holy Ghost and the use of unleavened bread for the Holy Eucharist. Another council had been held at Bari in 1064, presided over by Arnoldo, Vicar of Alexander II. Of the later provincial councils that of 1067 is worthy of mention. In the reorganization of the dioceses of the southern part of Italy, beginning of the nineteenth century, the Diocese of Bitetto was suppressed and made a part of the Diocese of Bari. The suffragan sees under Bari are: Conversano, Rufo, and Bitonto.

The most celebrated religious edifice of Bari is the church of San Niccolò, one of the most beautiful examples of Norman architecture. It consists of an upper and a lower church, both richly adorned with precious marbles. The cathedral, dedicated to the Assumption, is likewise remarkable for the two high bell towers with which it is flanked.

The most celebrated Archbishops of Bari, in addition to those already mentioned, are: Romualdo Grisoni (1280), distinguished for his restorations of churches; Bartolomeo Pignano (1377), later Pope Urban VI, who, however, never saw this see; Ascacio Gesualdo (1613), who gave a wonderful example of charity in the earthquake of 1632; Diego Sersale (1638), who at his own expense rebuilt the cathedral, the episcopal palace, and the seminary; the Dominicans of the Franciscans of Bagnara (1894), who died in the odor of sanctity.

The Diocese of Bari contains a population of 300,400. It contains 7 rural deaneries, 33 parishes, 260 churches, chapels, and oratories, 250 secular priests, 110 seminarians, and clerics. On the clergy, 134 members of female congregations, 45 schools for boys, 35 for girls.

Barillon, EMILE. See Malacca, Diocease of.

Barjesus (Gr. Δαβίδ), a false prophet found in the company of the Proconsul Sergius Paulus by St. Paul and Barnabas during their stay at Paphos in Cyprus (Acts, xiii, 6-12). Because of his opposition to the Proconsul's conversion to Christianity, Barjesus was struck blind by St. Paul. He was also called Elymas (Arab, 'ālim, i. e. "wise"), which St. Luke translated by "magician" (Acts, xiii, 8).

F. X. E. ALBERT.

Bar-Kephia, Moses, one of the most celebrated Jacobite bishops and writers of the ninth century, b. at Balad, about the year 813; d. at the age of ninety, in 898. A bishop of a Jacobite Syriac writer, is preserved in one of the Vatican manuscripts, extracts from which are given by Assemani in his "Bibliotheca Orientalis" (II, 218 sq.). He was a monk and afterwards became bishop of three cities, Beth-Rammah, Beth-Kionya, and Moesoul on the Tigris, assuming the name of Severus. For ten years he was the patriarchal "Periposites," or visitor, of the Diocese of Tigris, where, by his wise administration of the patriarchate, acquired a great fame and reputation. He was buried in the monastery of St. Sergius, situated on the Tigris, near his native city.

The works of Moses Bar-Kephia are very numerous, and deal with the Church, the Holy Scriptures, ecclesiastical, philosophical, controversial, exegetical, and liturgical subjects. The principal are: (1) A Commentary on the Old and New Testaments, often quoted by Bar Hebraeus, and most of it still extant in manuscript form; (2) a treatise on predetermination and free will, preserved in a MS. in the British Museum (Add. 14,731); (3) a commentary on Aristotle's "Dialectics", mentioned by Bar Hebraeus; (4) a commentary on the Hexameron in five books, preserved in the Bibliothèque Nationale at Paris (Syry. 241), a passage of which is translated into French by Aléd Nau in his "Bibl. d'Ant. et d'Astrolog." (Paris, 1889), p. 50; (5) a "Tractatus de Paradisco", in three parts, dedicated to his friend Ignatius. [The Syriac original of this work is lost, but a Latin version of it was published by Maasius (Antwerp, 1640), under the title "Tractatus de Trinitate et Trinitas"]; (6) A treatise on the soul, in forty chapters, with a supplementary essay on the utility of offering prayers and sacrifices for the dead. [This treatise is preserved in the Vatican Library; a German translation of it is given by O. Braun in his "Moses Bar-Kephia und sein Buch von der Seele" (Freiburg, 1841).] (7) A "Tractatus de sectis", or, "Libcr dissertationum adversus heresies" (see Assemani, B. O. II, 57); (8) a treatise on the Sacraments; (9) a commentary on the Liturgy; (10) A "Sacramental History." His other works comprise discourses, homilies, and a commentary on the writings of St. Gregory of Nyssa.

GABRIEL OUBARANI.

Barworth (alias Lampert). Mark, Venerable, priest and martyr, b. about 1572, in Lincolnshire; executed at Tyburn 27 February, 1601; he was educated at Oxford, and converted to the Faith at Douai in 1594, by Father George, a Flemish Jesuit. In 1596 Barworth went to Rome and thence to Valladolid, to be ordained. On returning, he planned to return to England and thrown into Newgate, where he lay six months, and was then transferred to Bridewell. Here he wrote an appeal to Cecil, signed "George Barkworth." At his examinations he behaved with extraordinary fearlessness and rectitude. He having been condemned he was thrown into "Limbo," the horrible underground dungeon at Newgate, where he remained "very cheerful" till his death.

Barworth suffered at Tyburn with Ven. Roger Francis, S.J., on 18 November, 1601. It was the first Tuesday in Lent, a bitterly cold day. He sang his way to the Tyburn, the Paschal Anthem: "Hic dies quam fecit Dominus exultemus et letemur in ea."
On his arrival he kissed the robe of Mrs. Lyne, who was already dead, saying: "Ah, sister, thou hast got the start of us, but we will follow thee as quickly as we may"; and told the people: "I am come here to be, being a Catholic, a priest, and a religious man, belonging to the Order of the St. Benedictine monks. This was my wish and desire that England was converted". He was tall and burly of figure, gay and cheerful in disposition. He suffered in the Benedictine habit, under which he wore a hair-shirt. It was noticed that his knees were, like St. James, hardened by constant inselination. These were tied, not only to one of his legs, after the quartering, called out to the ministers: "Which of you Gospellers can show such a knee!"

Barkworth's devotion to the Benedictines Ordained to his suffering much from the hands of the superiors of the Valladolid College. These sufferings are probably much exaggerated, however, by the anti-Jesuit writers Watson, Barneye, and Bell.

BEDE CAMM.

BARISAEM, MONK OF GEACE. See HERSYCHASM.

Barisaem and Josaphat, the principal characters of a legend of a Christian antiquity, which was a favourite subject of writers in the Middle Ages. The story is substantially as follows: Many inhabitants of India had been converted by the Apostle St. Thomas, than was leading Christian lives. In the third or fourth century King Abenener (Avenader) persecuted the Church. The astrologers had foretold that his son Josaphat would one day become a Christian. To prevent this the prince was kept in close confinement. But, in spite of all precautions, Barisaem, the servant of the ruler, met him and brought him to the true Faith. Abenener tried his best to pervert Josaphat, but, not succeeding, he shared the government with him. Later Abenener himself became a Christian, and, adhibiting the throne, became a hermit. Josaphat governed alone for a time, then resigned, went into the desert, found his former teacher Barisaem, and with him spent his remaining years in holiness. Years after their death, the bodies were brought to India and their grave became renowned by miracles. Barisaem and Josaphat found a place in the Roman Martyrology (27 November), and into the Greek Calendar (26 August). Vincent of Beauvais, in the thirteenth century, had given the story in his "Speculum Historiale". It is also found in an abbreviated form in the "Golden Legend" of Jacobus de Voragine of the same century.

The story is a Christianized version of one of the legends of Buddha, as even the name Josaphat would seem to show. This is said to be a corruption of the original Josaphat, which is again corrupted from the Middle Persian Buddha (Buddhist). Still it is of historical value, since it contains the "Apology" presented by the Athenian philosopher Aristides to the Emperor Adrian (or Antoninus Pius). The Greek text of the legend, written probably by a monk of the Sabbbas monastery near Jerusalem at the beginning of the seventh century, was first published by Boisdon in his "Aesecta Graeca" (Paris, 1832), IV, and is reproduced in Migne, P. G., XCVI, among the works of St. Josaphat. The legend cannot, however, have been the work of the great David of Canterbury, as was proved by Zotenberg in "Notices sur le livre de Barisâm et Josaphat" (Paris, 1886) and by Hambel in "Verhandel. des 7 internat. Orientalien Conferences", Semin. Section (Vienna, 1888). Another version of the Greek was made by Choraphaelos (Athens, 1884). From the original Greek a German translation was made by F. Liebrecht (Münster, 1847). Latin translations (Migne, P. L., LXXXI), were made in the twelfth century and used for nearly all the European languages, in prose, verse and in miracle plays. Among them is prominent the German epic by Rüdbeckia, the "Barisâm" of the eighteenth century (Königsberg, 1818, and somewhere later at Leipzig). From the German an Icelandic and a Swedish version were made in the fifteenth century. At Manila the legend appeared in the Tagalas language of the Philippines. In the East it exists in Syriac, Arabic, Ethiopic, Armenian, Persian, and Hindustani. It is noted to one of his legs, after the quartering, called out to the ministers: "Which of you Gospellers can show such a knee!"

BARLETTA.

BARLETTE, GABRIEL (sometimes called BARLETT, DE BAROLO, BARBULOS), preacher, b., according to some, in the Neapolitan territory (c. 1420); he took his name, or, according to others, at Aquino; d. sometime after 1480. Little is known of his life other than that he was a Dominican and probably a pupil of St. Antoninus. All his contemporaries held him in high esteem as a preacher. He was generically proposed, even during his lifetime, as the model orator. After his death his fame did not diminish, if the popular saying which Altamura has preserved for us be a criterion. Throughout Italy it was the common saying: Nesci proprdoci qui nescit barullos. His sermons two sermons were printed in Brixen in 1497, and have been reprinted very frequently since. Echard says that no less than thirteen editions appeared in eighty years. The best edition is that of Venice (1577), in two volumes.

In form his sermons are nothing else than the ordinary homily on the virtues and vices of life. He spares none of the foibles and weaknesses of his contemporaries, and in his denunciations passages of eloquent and biting sarcasm are often met with. At the same time he expresses his contempt for the faith in the vernacular, whilst we know them in the Latin alone. Thus they have suffered many changes and alterations. But up to the seventeenth century there was no question of the authorship. They show the signs of the times and are not unworthy of the name. Hence, scholars generally accept them as authentic.

QUINTIUS EICHARD, Scriptores Ord. Pred., i, 444, append. 232; TIRABOSCHI, Storia del Teatro Liturgico e Musicale in Paulus in Literarische Beilage der Kölner Volkszeitung (1904), No. 10.

THOS. M. SCHWERTNER.
Barletta, Diocese of. See Trani and Barletta.

Barlings, Abbey of, located about six miles E.N.E. of Lincoln, England, founded in 1154 in honour of Our Lady by Ralph de Haye who had given some lands to the Abbot of Newhouse (also in Lincolnshire, the first abbey of the Norbertine Order erected in England, founded in 1143) with the request to send a colony of White Canons to Barlings. The abbey was afterwards removed to Ongar, another locality in the same township, where it was dissolved by Henry VIII in 1537. Much information concerning the Abbey of Barlings, as well as concerning other Norbertine abbeys in England, may be derived from Bishop Redman’s “Register of Visitations”, preserved in the Bodleian Library at Oxford, and lately published in three volumes by Abbot Gasquet under the title of “Collectanea Anglo-Frenonstratensis.” This register contains various documents, lists of White Canons in each abbey, notes and remarks made at the time of each visitation, during a period of about thirty-five years that Redman was visitor of all the Norbertine abbeys and priories in England for the Abbot-General of the Order of Prémontré. Richard Redman was Abbot of the Norbertine Abbey of Shap in Westmoreland when he became visitor, and he held the same capacity when he successively became Bishop of St. Asaph in 1472, of Exeter in 1495, and of Ely in 1501. He died 24 August, 1503.

This register records no fewer than nine visitations of Barlings Abbey made by Redman. The various lists found therein give the names of about eighteen canons at each visitation. The names of nineteen abbots are known; the first abbot was called Adam (1154), the last Matthew Mackarel (1532-37) who is said to have been one of the leaders of the Pilgrimage of Grace in Lincolnshire. The supposed countrymen of Abbot Mackarel, like that of other heads of religious houses, gave Henry VIII the opportunity of laying hands upon the Abbey of Barlings and of placing it under the law of attainer. The abbey church, 300 feet in length, was defaced, the lead torn from the roofs, and melted down under the special direction of Cromwell. Abbot Mackarel, some of his religious, and many of the clergy and laity were taken to Lincoln, and some of these were afterwards sent to the Tower in London. Those in Lincoln, among whom there were four canons of Barlings, were tried 6 November, 1537, and ordered for immediate execution. Towards the end of March, Abbot Matthew Mackarel, one of his canons and some others were tried in London before Chancellor Oudeley, found guilty, and condemned to be hanged and quartered. At the time of the dissolution the abbey and its possessions were granted to Charles, Duke of Suffolk. An arch and part of a wall are the only remains. The Right Rev. Martin Geudens, of Corpus Christi Priory, Manchester, was named Titular Abbot of Barlings, 7 May, 1898, and blessed 17 September, of the same year.

MARTIN GEUDENS.

Barlow, Alexander Barlow, third son of Sir Alexander Barlow of Barlow Hall, near Manchester, England, and Mary Breerton, whose father and date of birth uncertain; d. at Douai, 19 Sept., 1656. The martyr, Ven. Edward Barlow, was his younger brother and was educated with him at the English College, Douai. Wishing to become a Benedictine, he joined the Spanish congregation, being professed at Cuenca, Nueva Extremadura, in 1603. Ordained priest in 1608 he became Doctor of Divinity at Salamanca. In 1611 he went to St. Gregory’s, Douai, where he was made prior in 1614, and, two years later, professor of theology at St. Vaast’s College, an office which he held for forty years. Weldon says: “He formed almost all the bishops, abbots, and professors that flourished in those parts for some time after. He was esteemed the first or chief of the scholastic divines or casuists of his time, and in knowledge of the canon law in- deed, to no one of his time or of his age before.” The circle of his friends included Bellarmine and other contemporary scholars.

He more than once refused the dignity of abbott and bishop, “and it was thought he would have refused that of cardinal, which was said to have been preparing for him.” From 1621 to 1629 he was President-General of the English Congregation. In 1633 he became titular Cathedral-Priest of Canterbury. Beyond a circular letter to the English Benedictines about their relations to the vicar Apostolic, allusions of his writings, of which the whole, although written in 1624, attributes to him a book called “The Enemies of God.” Weldon adds that after his death a bishop offered the Benedictines of Douai an establishment if they would give him Father Rudesind’s
BARNABAS, EPISTLE ATTRIBUTED TO.— Authorities for the Text and Editions.—There is a triple tradition of the Greek text of this document. Up to 1843 eight manuscripts of the Epistle of Barnabas were known to be in Western libraries. These manuscripts were all derived from a common source, and so one of them contained chapters i-7a. Since then two complete manuscripts of the text have been discovered that are independent of each other and of the preceding group of texts, namely: the famous Codex Vaticanus and the Codex Sinaiticus. These, which the Epistle of Barnabas and the “Pastor” follow the books of the New Testament, and the Jerusalem Codex (eleventh century), which includes the Didache. There is also an old Latin version of the first seventeen chapters which is, perhaps, the result of a lost text in its thought center (Codex Antonio, Q., I, 39). This version is a very free one and can hardly serve for the restoration of the text. The same is true of the citations from the epistle in the writings of Clement of Alexandria, of Origen, and others. The best authority for the text is the Codex Sinaiticus. The Epistle of Barnabas has been edited among the works of the Apostolic Fathers. The two chief editions are: Gebhard and Harnack, “Barnabas Epistulae” in “Patrum Apostoliconorum Opera” (Leipzig, 1876), I, II, and Funk, “Patres Apostolici” (Tübingen, 1901). I. Use can also be made of the edition of Sharpe, “St. Barnabas' Epistle in Greek with Translation” (London, 1880), as well as that of Lightfoot, ed. Harmer, “The Apostolic Fathers” (London, 1899), and of Vizzini, “Patres Apostolici” (Rome, 1902), III.

Contents.—The Epistle of Barnabas contains no clue to its author nor to those for whom it was intended. Its aim is to impart to its readers the perfect wisdom (gnosis), that is an exact knowledge of the things to come. As a rule, the writer, it is believed, wrote in the latter part of the first century. The first part (ch. i-v, 4) is hortatory; in the evil days that are now at hand in which the end of the world and the Judgment shall appear, the faithful, freed from the bonds of the Jewish ceremonial law, are to practise the virtues and to flee from sin. The second part (ch. v, 5-xvii) is more speculative, although it tends, owing to the nature of the argument, to establish the freedom of Christians in respect to the Mosaic regulations. The author wishes to make his readers comprehend the real nature of the Old Testament. He shows how the ordinances of the Law should be understood as referring allegorically to the Christian virtues and institutions, and he concludes to make plain by a series of prophetic conclusions, which are often similar, how the Old Testament prefigures Christ, His Passion, His Church, etc. Before concluding (ch. xxi) the author repeats and enlarges the exhortations of the first part of the epistle by borrowing from another source. He describes the two ways, the way of light and that of darkness (xxviii-xx). Use of Allegory.—The epistle is characterised by the use of exaggerated allegory. In this particular the writer goes far beyond St. Paul the author of the Epistle to the Hebrews, and St. Ignatius. Not content with regarding the history and institutions of the Jews as prototypes of Christianity, he casts aside completely the transitory historical character of the old religion. According to many scholars he teaches that it was never intended that the precepts of the Law should be observed in their literal form. That the Jews never understood, that circumcision was the work of the Devil, etc.; thus he represents a unique point of view in the struggle against Judaism. It might be said more exactly that he condemns the exercise of worship among the Jews in its entirety because, in his opinion, the Jews did not know how to rise to the great and typical meaning which God had mainly had in view in giving them the Law. It is this purely material observance of the ceremonial ordinances, of which the literal fulfilment was not sufficient, that the author holds to be the work of the Devil, and, according to him, the Jews never received the Divine covenant because they never understood its nature (ch. vii, 3, 11; ix, 7; x, 10; xiv).

Intext.—The Epistle of Barnabas is not a polemic. The author takes no sides in the dispute, he touches on different points that had relations to the doctrines of the Gnostics, still he has no knowledge of these latter. The perfectly composed manner in which he expounds the wisdom he desires to impart shows that another, heretical wisdom (gnosis) is the object of his intentions. In every word in which he speaks of the Old Testament would not be explicable if he had known the wrong use that a Basilides or a Marcion could make of it. Besides, there was nothing in the Judaizing theories to alarm his faith. He speaks of Judaism only in the abstract, and nothing in the letter excites the suspicion that the members of his flock had been exposed to the peril of falling again under the yoke of the Law. No clear situation is described in the letter. In short, it should be regarded rather as the peaceful speculations of a catechist and not as the cries of alarm of a pastor. Consequently, it cannot be admitted that the author may have wished to take part in the struggle against the Judaizers either at Jerusalem (Di Pauli) or at Rome (Völter).

Date.—This abstract discussion of Judaism is the sign of an epoch when the Judaizing controversies were already a thing of the past in the main body of the Church. In settling the date of the letter reference is often made to verses 5-5 of chapter four, where it is believed the author refers to the prophecy of Daniel (Dan., vii, 7, seq.) in the succession of the Roman Emperors of his time. Starting from this, some critics place the composition of the epistle in the reign of Vespasian (Weissacher, Lightfoot), others in the reign of Domitian (Wieseler), and still others in the reign of Nerva (Bardenhewer, Funk). But there is nothing to prove that the author considers the prophecy to be already accomplished. Besides, he might have taken the words of the prophecy to mean a series of kingdoms instead of a line of kings. It is necessary, therefore, to fall back, with Schürrer and Harnack, on verses 3-5 of chapter xvi. Reference is here made to the command given by Adrian in A.D. 130 for the reconstruction, in honour of Jupiter, of the Temple at Jerusalem, which had been destroyed by Titus. Adrian had also forbidden the Jews to practise circumcision. The writer of the letter makes allusion to this (ch. ix, 4). The epistle must, consequently, have been written in A.D. 130-131.

General Characteristics.—In what befell Jerusalem and the Temple the author saw the refutation by events of the errors of the Jews, or rather of the Ebionites, for it is the latter that he has in mind whenever his language grows more definite (ch. iv, 4, 6; v, 6; xii, 10; xvi, 1). His flock are not in danger
BARNABAS

300

BARNABAS

of falling into these errors. Therefore he never attacks them directly. He simply takes advantage of the opportunity that occurrences offer him to give his opinions as to the position and nature of Judaism and its Law. Hence the epistle, in its general character, is more like a treatise or a homily than a letter. However, the epistolary form is not entirely fictitious. The author is not writing to Christians in general, but to a particular church in which he has exercised the office of a διάκονος and from which he finds himself separated (ch. i, 2, 4; xxii, 7, 9). From a natural point of view the Epistle of Barnabas has no merit. The style is tedious, poor in expression, deficient in clearness, in elegance, and in correctness. The author's logic is weak, and his matter is not under his control; from this fact arise the numerous digressions. These digressions, however, afford no reason for doubting the integrity of the letter, or for regarding it as interpolations either entire chapters (Schenkel, Heydecker, Völker), or a consecutive number of verses or parts of verses in each chapter (Weisse), Wheler recently thought that he had discovered, the arrangement of the epistle, an adherence to the laws of the Semitic strophe. But the phenomena noted are found in all authors who work out their thought without being able to subordinate the argument to the rules of literary art.

From the dogmatic point of view the chief importance of the epistle is in its relation to the history of the Canon of the Scriptures. It cites, in fact, the Gospel of St. Matthew as Scripture (ch. iv, 14), and even recognizes as in the Canon of the Sacred Books (γραμματικος), along with the collection of Jewish writings, a collection of Christian ones (ch. v, 2), the contents of which, however, cannot be determined. The author regards several apocryphal books as belonging to the Old Testament (chap. iv, 3; xvi, 5). In his Christology, his soteriology and his doctrine concerning justification the author develops the ideas of Paul with originality. It has been wrongly said that he regards the pre-existent Christ as only a spirit in the image of God. Without explicitly asserting the consubstantiality and the true sonship, he evidently acknowledges the Divine nature of Christ from before the Creation. The eschatological descriptions are decidedly moderate. He is proportionate, but he in spirit he simply expresses a vague belief that the end is approaching.

Nationality of the Author.—History of the Epistle.—The extremely allegorical character of the exegesis leads to the supposition that the author of the letter was an Alexandrian. His way of constantly placing himself and his readers in opposition to the Jews makes it impossible to believe that either he or the larger part of his readers were of Jewish origin. Besides, he is not always familiar with the Mosaisms (cf. ch. vii). The history of the epistle confirms its Alexandrine origin. Up to the fourth century only the Alexandrians were acquainted with it, and in their Church the epistle attained to the honour of being publicly read. The manner in which Clement of Alexandria and Origens refer to the letter gives confirmation to the belief that, about the year A.D. 200, even in Alexandria the Epistle of Barnabas was not regarded by every one as an inspired writing.

BARNABAS 301 BARNABAS
to the Gentile world and to designate for the work Barnabas and Paul. They accordingly departed, after the imposition of hands, with John Mark as helper. Cyprus, the native land of Barnabas, was first evangelized, and then they crossed over to Asia Minor. Here, at Perge in Pamphylia, the first stopping place, John Mark left them, for what reason his friend St. Luke does not state, though Paul looked on the act as a rebuke. The two men, pressing into the interior of a rather wild country, preached at Antioch of Pisidia, Iconium, Lystra, at Derbe, and other cities. At every step they met with opposition and even violent persecution from the Gentiles and Jews against them. The most striking incident of the journey was an encounter with the superstitious populace took Paul, who had just cured a lame man, for Hermes (MERCURY) because he was the chief speaker', and Barnabas for Jupiter, and were about to sacrifice a bullock to them when prevented by the Apostles. Mobs, they were soon persuaded by the Jews to turn and attack the Apostles and wounded St. Paul almost fatally. Despite opposition and persecution, Paul and Barnabas made many converts on this journey and Barnabas is celebrated as the founder of many churches, ordaining presbyters and placing them over the faithful, so that they felt, on again reaching Antioch in Syria, that God had "opened a door of faith to the Gentiles" (Acts, xiii, 13—xiv, 27; see note above). Barnabas and Paul had been for "no small time" at Antioch, when they were threatened with the undoing of their work and the stopping of its further progress. Preachers came from Jerusalem with the gospel that circumcision was necessary for salvation, even for the Gentiles. The Apostles of the Gentiles, perceiving at once that this doctrine would be fatal to their work, went up to Jerusalem to combat it; the older Apostles received them kindly and at what is called the Council of Jerusalem (dated variously from A.D. 47 to 51) granted a decision in their favour as well as a hearty commendation of their work (Acts, xiv,—xv, 30; see articles JERUSALEM, COUNCIL OF; PETER, SAINT). On their return to Antioch, they resumed their preaching for a short time. St. Peter came down and associated freely with the Gentiles, eating with them. This displeased some disciples of James; in their opinion, Peter's act was unlawful, as against the Mosaic law. Upon their remonstrances, Peter yielded, apparently through fear of them, and refused to eat any longer with the Gentiles. Barnabas followed his example. Paul considered that they "walked not uprightly according to the truth of the gospel" and upbraided them before the whole church (Gal., ii, 11—15). Paul seems to have carried his point. Shortly afterwards, he and Barnabas decided to revisit their missions. Barnabas wished to take John Mark along once more, but on account of the previous defection Paul objected. A sharp contention ensuing, the Apostles agreed to separate. Paul was probably somewhat indignant at the attitude recently taken by Barnabas, which might prove a prejudice to their work. Barnabas sailed with John Mark to Cyprus, while Paul took Silas and revisited the churches of Asia Minor. It is believed by some that the church of Antioch, by its God-speed to Paul, showed its approval of his attitude; this inference, however, is not certain (Acts, xv, 35—41).

Little is known of the subsequent career of Barnabas. He was still living and labouring as an Apostle in 58 (Acts xiv, 28). The whole life of Barnabas, as we learn which he led, he, too, like Paul, earned his own living, though on an equality with the other Apostles. The reference indicates also that the friendship between the two was unimpaired. When Paul was a prisoner in Rome (61—63), John Mark was attached to him as a disciple, which is regarded as an indication that Barnabas was no longer living (Col., iv, 10). This seems probable. Various traditions represent him as the first Bishop of Milan, as preaching at Alexandria and at Rome, whose fourth (7) bishop, St. Clement, he is said to have converted, and as having suffered martyrdom in Cyprus. The traditions are all late and untrustworthy. With the exception of St. Paul and certain of the Twelve, Barnabas appears to have been the most esteemed man of the first Christian generation. St. Luke, breaking his habit of reserve, speaks of him with affection, "for he was a good man, full of the Holy Ghost and of faith". His title to glory comes not only from his kindliness of heart, journey perils and activity, and his missionary labours, but also from his readiness to lay aside his Jewish prejudices, in this anticipating certain of the Twelve; from his large-hearted welcome of the Gentiles, and from his early perception of Paul's worth, to which the Christian Church is indebted, in large part at least, for its great Apostle. His tenderness towards John Mark seems to have had its reward in the valuable services later rendered by him to the Church. The feast of St. Barnabas is kept on 11 June.

Barnabas of Terni (Interamna), Friar Minor and missionary, d. 1474 (or 1477). He belonged to the noble family of the Manassels and was a man of great learning, being Doctor of Medicine and well versed in letters and philosophy. Despising the honours and vanities of the world, he entered the Order of Friars Minor in the Umbria province of the order and practised, with unusual fervour, every virtue of the religious life. After devoting himself assiduously to the study of theology, Barnabas began to preach with wonderful success, but a severe illness obliged him to abandon this work. Although gifted with the grace of prayer and contemplation in an eminente degree, he was almost continually employed in the discharge of duties of importance, for which his prudence, kindness, and affability well fitted him. By word and example he proved himself a zealous promoter of that branch of the order known as the Observance. He died at the bequething of the Carceri on Mount Subiaco at an advanced age and his remains were deposited there in the Chapel of St. Mary Magdalen. He is commemorated in the Franciscan martyrology on 17 February. To Barnabas belongs the honour of having established the first society of "moni di pieta", or charitable loan-institutions, designed to protect poor people against the outrageous usury of the Jews. After consulting his fellow religious Fortunatus Coppoli, who had been an eminent jurisconsult, and with the generous co-operation of the wealthy Perugians, Barnabas established the first moni di pieta in their city in 1462. Violent opposition ensued, but Barnabas and Fortunatus prevailed over their enemies at a public disputation. Barnabas next extended his work to other cities; it was enthusiastically taken up by several others. It was later extended by aries, and, in their day, the moni di pieta wonderfully improved the social conditions of Italy. (See BERNARDINE OF PEITUL.)

THOMAS PLESSMANN
Barnabites, the popular name of a religious order founded in 1535 by Pope Paul III, of Regular Clerics of St. Paul (Clerici Regulares Sanctorum Pauli). This institute was founded by three Italian noblemen: St. Anton Maria Zaccaria (canonized by Leo XIII, 27 March, 1904), Don Domenico della Vida, and Don Giacomo Morigia, the last two of Milan. Second in seniority of the orders of regular clerics (the Theatines being first), the foundation of the Barnabites as a congregation dates from the year 1530. Clement VII, by the bull Dudum felicis recordationis, 28 July, 1535, and "Pastoralis officii cura," 29 November, 1543, exempted them from the jurisdiction of their dioceses. Lastly, the bulls of Julius III, "Rationi congruit," and "Ad hoc nos Deus praevaluere," dated respectively 22 February and 11 August, 1550, confirmed and augmented the existing privileges of the institute, which, from being a congregation, thenceforward became a religious order in the strict canonical sense, its members, however, still adhering to the custom of calling it "the Congregation".

The popular name Barnabites came naturally to the Congregation through its association with the church of St. Barnabas, Milan, which came into its possession within the earliest years of the foundation of the institute, which was at first peculiarly Milanese. St. Charles Borromeo, Archbishop of Milan, presided, in 1579, as Cardinal Protectore, over the commission which determined once for all the constitution of the house in Milan, and the community was further held at Milan until the reign of Alexander VII (1655-67), who ordered them to convene in Rome. Innocent XI (1676-89), however, finally decreed that the general chapters of the Barnabites should assemble in Rome and Milan alternately. These assemblies of the congregation of Milan, the apostolic legation, and the election of a new general, whose term of office is limited to that period, only one re-election being allowed to each incumbent of the office. The members of the order make, in addition to the three regular vows of poverty, chastity, and obedience, a vow never to strive for any office or position of dignity, or to accept such otherwise than under a command of the Holy See. The scope of their special vocation, besides preaching in general, catechizing, hearing confessions, giving missions, ministrations in hospitals and prisons, and the education of youth, includes also a particular devotion to the thorough study and exposition of St. Paul's Epistles. Their habit is the black soutane (tunica talaris) which formed the usual garb of Milanese secular priests in the time of St. Charles Borromeo.

Spread of the Order.—The Congregation has never failed of the holy object for which it was instituted: to revive the ecclesiastical spirit and zeal for souls among the clergy. Church history records the substantial assistance which that saint received from them in his great work of reforming the Diocese of Milan; his biographies make mention of his affection for them and of the satisfaction which he took in sojournings at their house of St. Barnabas. St. Francis of Sales, who loved to call himself a Barnabite, invited the Congregation into his diocese, to establish colleges at Annecy and at Thonon; while the Barnabite Guérin was his confessor and later, having succeeded him in the See of Geneva, was conspicuous for the zeal with which he promoted his canonization. The Barnabites, who take a holy pride in the title of episcoporum adjuncti, have constantly cultivated the meek and gentle spirit of St. Francis of Sales in their relations with ecclesiastical authorities, the diocesan clergy, and members of other religious orders. Though never very extensive, the spreading of the order in Europe began very soon after its foundation. Then their charities of action were in Italy, France, Spain, Portugal, and, by Pope Gregory XIII, at the solicitation of the sovereign Order of St. John of Jerusalem, sent Barnabite Fathers to Malta, and in 1610 Henry IV of France obtained their services in defence of Catholicism in France, whence they spread to Flanders, Germany, and other parts of the neighboring kingdom.

Foreign Missions.—In 1718, when Clement XI sent Monsignor Mezzabarba to the Emperor of China to attempt a settlement of the famous question of the Chinese Rites, His Holiness attached five Barnabites to the special mission. No substantial result was obtained, but when the rest of the party left the country, one member of the order, Father Ferrari, remained in China, taking up his residence first at Peking and then at Canton, where he sowed the first seed of that work of the Holy Inquisition with which the name of the French Bishop Forbin-Janson is justly associated. From that time until 1738 the companions of Father Ferrari preached the Gospel in China, and with the emperor Ch'eng-chi, who died in 1735, Father Ferrari was for sixteen years vicar Apostolic. The Holy See meanwhile desiring a real Barnabite mission in Ava and Pegu, the order willingly assumed that duty, and the mission was maintained until 1832, when the inability to supply labourers for this field, the consequence of Napoleon's suppression of the religious orders, necessitated its transfer to the Paris Society of Foreign Missions. An account of what the Barnabites accomplished in Ava and Pegu may be found in Cardinal Wiseman's translation (published by the Asiatic Society of Sauerz's 'Religione del regno Birmano'. The Regular Clerics of St. Paul also kept missionaries, for some time, in Scandinavia. Their missions are now established in Brazil.

Saints and other distinguished members of the Congregation.—Besides its canonized Saints Anton Maria Zaccaria and Alexander Sauli, and Blessed Xavier M. Bianchi (d. 1815) who was known as the Thaumaturgus of Naples, the Barnabite Order glories in a number of Venerables, among whom have been several religious distinguished for their austere purity and devoted to their reward while yet young. Upon them were extraordinary graces, such as miracles and visions, undeniably vouchsafed to members of the order, it is not expedient here to insist; Alfonso Paleotti, however, who in 1591 succeeded his cousin, Cardinal Gabriel Paleotti, in the Archiepiscopie of Bologna, relates in his autobiography that when he was praying for light and help in the government of his archdiocese, a holy man who was commonly called il Vidente, on account of his gift of visions, told him, as a message from the Blessed Virgin, that he ought to send for the Barnabites and make them penitentiarii, because they had a great devotion for her, were her faithful servants, and she would assist them in drawing souls to the practice of daily Communion.

Learning, the pursuit of which the Barnabites regard as a great preservative of religious observance, has always been cultivated among them in all its branches. To cite only a few names, the order has been distinguished in theology by Rotarius, Poszobonielli, and Maderini; in Biblical science by Corio and Vercellone; in ecclesiastical history by Tortorelli, whose "Annales Sacri" are regarded as an intro
duction to those of Baronius; in liturgiology by Gavantus; in archaeology by Caronni, whose work receives praise in Eckel’s "Doctrina nummorum veterum"; Cortenova, who illustrated the antiquities of Friuli and Aquileia; Delle Torre, who restored the Forum Julii of Cividale; Ungarelli the Egyptologist, friend of Orlando di Bovio and interested in the Vedas of the Roman obelisk; and Benzi, who elucidated the inscription of Vercelli. Among the names of Barnabites who have been eminent in philosophy are those of Baranzano, the friend of Galileo and of Francis Bacon, whose volume is dedicated to him. From the theory of the "Novus Ordo" of Cardinal Gerardi and of Pini, the author of "Protologia"; among those eminent in physical and mathematical science, Friti, Cavalletti, Denza, founder of the Italian Meteorological Society and first director of the Vatican Observatory, and Bertelli, the seismologist. To the Barnabite architect Binaghi is due the restoration of the Escolar towards the close of the sixteenth century, whilst the Barnabite Mazenta was the architect both of the Cathedral of Bologna and of the fortifications of Leghorn. His name is linked with the names of many Barnabites who have become famous in literature, and the order has given to the Catholic Church more than fifty bishops and these six members of the Sacred College: Caddini, Fontana, Gerdil, Lamberti, Pizzillo, and Giazzolo. In 1586 Count Schouvaloff, a distinguished Russian convert, joined the Barnabite Congregation, and died in 1859. It was his ardent desire that his brethren might do something for the reunion of Christendom. With this object the order has added an Association of MASSES, and by the Brief "Apostum super Nobis" dated 30 April, 1872, Pius IX granted a plenary indulgence to all who should assist at the Mass for the reunion of Christendom. This Mass is observed, moreover, granted to the general of the order faculties for extending the like privilege to any other church in which a monthly Mass for the same intention should be said upon the day appointed by the ordinary. This privilege is freely extended by the general to all bishops who may desire it.

Barocco (Barocco). Fedezardo, called Fiore d'Ur- bino, a distinguished painter and engraver, b. at Urbino, 1526; d. at the same place, 30 September, 1612. His father, who was Ambrogio Barocci, a sculptor, of a Milanese family, gave him his first art lessons. He then studied drawing with Francesco Manzocchi of Foligno. His uncle, the architect Bartolommeo Genga, deciding that Federigo must become an artist, placed him with the eminent Venetian painter, Bassano. He then spent some time in the service of Duke Guidobaldo II at Urbino. On Franco's departure Barocci went to his uncle's house at Pesaro, and while studying perspective with him, copied some pictures of Titian in the ducal gallery. When twenty he went to Rome and spent his time chiefly in the study of the works of his great teacher, Raphael. On his return to Urbino, Barocci copied the pastels of Correggio, and painted some pictures which brought him much reputation. His subjects were chiefly religious, and included some large altar- pieces, which he matched for the church of S. Marterpeus, "The Pardon of San Francesco d'Assisi," which is at Urbino, and "The Annunciation," which is at Loretto.

Returning to Rome, where Guido della Rovere was one of his patrons, the artist, together with Federigo Zuccaro, received from Pope Pius the commission to decorate the little palace of the church of Santa Maria in Vallicella with frescoes. It is said that he was poisoned at a banquet given him by some painters jealous of his success. From this he never recovered, for four years was unable to work at all, and for the rest of his life but a few hours a day. After three years at Perugia, and a short visit to Firenze, Barocci returned to end his long life of eighty-four years at Urbino, dying of apoplexy. In the Louvre are his "Circumcision," "The Virgin and Child Jesus adored by St. Anthony and St. Lucy," and "St. Catherine," in the London National Gallery a "Holy Family"; at Urbino a "Last Supper" and "St. Sebastian"; at the cathedral in Perugia a "Descent from the Cross"; at Ravenna "The Martyrdom of St. Vitalis"; at Naples a "Holy Family"; and at Rome a "Last Supper" and "Christ and Magdalen."
Baron Vincent, a Dominican theologian and preacher b. at Martres, in the department of the Haute-Garonne, France, 17 May, 1604; d. in Paris, 21 January 1674. At the age of seventeen he passed from the college of the Jesuits in Toulouse to the Dominican convent of St. Thomas in the same city. There he made his religious profession, 16 May, 1622, completed his course in philosophy and theology, and taught those branches. As early as 1634 he was first professor in his convent and conventional doctor in the University of Toulouse. Rare erudition, depth of thought, and clearness of exposition earned for him the reputation of being one of the leading theologians of France. While discharging his professorial duties he delivered courses of Lenten sermons in the principal churches of Toulouse, Avignon, and other cities of Southern France. Upon the invitation of the bishops of Langue-doc he preached throughout their dioceses for ten years, reviving the faith of Catholics, elevating their morals, and combating the errors of the Calvinists, with whose ministers he frequently joined in open debate, sometimes in their public synods. He published an abridgment of these controversies under the title "L'hérésie convaincue" (Paris, 1665). Of his sermons to Catholic congregations we have only those preached at Paris in 1658 and 1659 (Paris, 1660), doctrinal discourses and panegyrics possessing much intellectual merit, composed in the forced style and manner of his age. In the pulpit Father Baron was always a teacher; but while intent upon developing the minds of his hearers he won their hearts by his uninterestedness, sincerity, and charity. From 1653 to 1659 he filled the office of prior in the convents of Toulouse (twice), Rhodes, Castres, Albi, Avignon, and in the general novitiate in Paris, always promoting the reforms in study and religious observance in France by Séverin Michaux, published in the first years of the century. In 1660, having declined the office of provincial in the Province of Toulouse, he was sent by the master-general of his order to make a canonical visitation of the Portuguese convents. On his return to Paris he devoted himself during the remaining fourteen years of his life to the composition of theological works.

His most important productions were written to satisfy the desire expressed by Pope Alexander VII to the Dominicans assembled in a general chapter at Rome in 1656, that they should publish a course in moral theology conformable to the doctrine of St. Thomas, and thus correct the laxity of morals encouraged by the earlier editions. These works were: (1) "Theologia Moralis adv. laxiores probabilistas pars prior" (Paris, 1665); (2) "Manuuctiones ad Moralem Theologiam pars altera" (Paris, 1665); (3) "Theologia moralis Summa bipartita" (Paris, 1667). In these works, while condemning opinions that seemed too lax, and censoring others that appeared to be too rigorous, he defended the system of Probabilism. With the famous critic Jean de Launoit he was long in controversy as to the "Summa Theologica" of St. Thomas Aquinas, the authenticity of which he ably defended, although he did not demonstrate it, as later writers have done. The manuscript of a work entitled "Apologia pro sacrâ congregatio Indicia" having been published with alterations made by a stranger, which brought upon it the condemnation of the Sacred Congregation, he promised a new edition, which was embodied in his "SS. Augustini et Thomae vesra et una mens de libertate humanâ" (Paris, 1666). Another valuable work is his "Libri V apologeticorum pro religione, utraque theologae, moribus ac iuribus Ord. Pred. (Paris, 1666). At the time of his death he was engaged in a complete course in theology to be entitled "D. Thomae sui Interpretes". From this work, but half completed and never published, the one bearing the same title by Antoninus Mascollé, O.P., is entirely distinct.

Arthur L. McMahon.

Baronius, Cesare, Venerable, Cardinal and ecclesiastical historian, b. at Sora in the Kingdom of Naples, 30 August, 1538; d. at Rome, 30 June, 1607; author of "Annales Ecclesiastici", a work which marked an epoch in historiography and merited for its author, after Eusebius, the title of a Father of Ecclesiastical History.

Baronius was descended from the Neapolitan branch of a once powerful family, whose name, de Barone, was changed by Cesare himself to the Roman form, Baronii. His parents, humble citizens of Sora in the Sabines, some sixty miles east of Rome, could bestow no ancestral wealth and power upon their only son. He was, however, to possess qualities which better proclaim nobility—a certain religious spirit, a charity to which self-sacrifice was painfully repugnant, a firmness of will tempered in humble obedience, and a keenness and vigour of mind scrupulously dedicated to the cause of truth. These qualities distinguished Baronius as a peer in sanctity and scholarship among many saintly and learned contemporaries. He inherited his more vigorous traits of character from his father, Camillo, a worldly and ambitious man, whose strong will and tenacity of purpose were one day to clash with like qualities.
as his equally determined son. To the influence of his pious and charitable mother, Portia Phebonis, whose devotion to Cesare’s religious interests was intensified, the boy, under the considered his miraculous departure from death, ina spurious tender qualities and childlike simplicity of faith. To this latter was due his vivid realization of God’s guidance, vouchsafed often in visions and dreams. Baronius received his early education from the intellectual parents and in the family of the Verdi. His intense love of study and intellectual maturity encouraged his father to send him, at the age of eighteen, to the school of law at Naples. There, after a few months, the confusion due to the Protes- tant war for Italian dominion compelled him to remove to Rome, where, in 1557, he became a pupil of Cesare Costa, a master in civil and canon law.

He was there but a short time when he met one who was potentially to influence his destiny and determine, even to details, his career and occupations. It was Philip Neri, a priest remarkable for his sanctity and for the spirit of piety and charity with which he inspired a little group of priests and laymen whom he had formed into a confraternity of canonists, and who became known as the Carit. The importance of this meeting cannot be overestimated; a Baronius the world might have had, but the Baronius of history is the creature of St. Philip Neri. He was impressed by the serious law of life of San Girolamo et aliae. He was not without finding in him a responsive subject, enrolled him in his little band. This did not prevent Baronius from continuing the studies for which he came to Rome, but in all else his surrender of self to Philip’s guidance was spontaneous and complete. He was not without sacrifices. In token of renunciation he burned a volume of his own Italian verse in the composition of which he had shown marked proficiency; the same fate befell his doctorate diploma. For three years, in his zeal, he yearned to become a Capuchin friar, but Philip restrained him. More distressing still was the bitter antagonism of his father, who saw in all this but folly and the frustration of his paternal ambition. He feared, too, the extinction of his family, whose hope for a brilliant revival was cen- tered in him. What he did in truth was to cut off his scanty allowance and Cesare was forced to live on the hospitality of one of Philip’s friends. For six years Baronius led a semi-religious life in the community of San Girolamo, the style of living for arranging the business, the church office, he received direction in study and spiritual exercise, and at his bidding gave all his spare time to the work among the sick and poor. During 1588 Philip assigned to him the important of preaching at the conferences given often in the church of San Girolamo. In 1569 he received priestly ordination and resolved his lot with Philip’s little band, but so intense was the sedum for the religious life that he had already the vows of poverty, chastity, humility and obedience to Philip as to a superior. Of his will he was to be the yielding instrument for yet twenty-five years. That time was to be given to the preparation for his work on ecclesiastical history, about which Baronius’ life-interest henceforth centres.

The credit of its conception belongs to Philip, as Baronius testifies with filial devotion in the “Annals”. The time shared keenly in the distress and dismay caused in Catholic circles by the publication of the “Chronicae et Commentaria” of Magdeburg (Ecclesiastica Historia: 16th cent.). He devoted his energies towards the promotion of Catholic literature, and by 1584, a quarter of a century since he began his preparation, Baronius had the work well under way, when his patience suffered a new

Church had departed from primitive teaching and practices, in contrast to the consonance thither of the Reformed Church. It was conceived in 1552 by Mathias Flacch Francisci (Flacchi dell’Ivryc), and the collaboration of several Lutheran preachers and the co-operation of evangelical princes and other wealthy Protestants, was hurriedly completed. Its thirteen volumes dealt each with a century of the Christian Era, whence the name “Centurists” applied. Though the work had the great merit of being the pioneer in the field of modernized church history, and displayed considerable critical spirit, its unscrupulously partisan colouring of Lutheran claims and its misrepresentations of Catholic history predestined it to be ephemeral, at least. It is of interest only as a sunken landmark in the field of historical literature, and as the stimulus of Baronius’s genius. The publication of its initial volumes, however, at a time when its polemical value made it acceptable to Protestants, provided the Reformers with a most formidable weapon of attack on the Catholic Church. It did much harm. The feasibility of a counter attack appealed to Catholic scholars, but nothing adequate was provided, for the science of history was still a thing of the future. The founder was as yet unknown, and knew very little of history. It was in that youth that St. Philip Neri discerned a possible David who would rout the Philistines of Magdeburg. He forthwith directed Baronius to devote his conferences and pastoral visits to the history of the Church. Baronius was disconcerted. History had no attraction for him. His youthful zeal would rather vent itself in the fiery moral confreries which he had creditably given during the preceding year. But he obeyed, and within three years summarily covered the field of church history in his conferences and developed a keen interest in historical studies. Twice he gave the course before his ordination to the priesthood, and five times again did he repeat it during the following twenty-three years, perfecting his work with each succeeding series. The early historians and the Fathers became his familiares. The libraries of Rome yielded to his diligent quest a host of unpublished documents. Monuments, coins, and inscriptions told him unsuspected stories. He spoke and wrote asif he had lived among the ancients. His wonderful correspondents did for him elsewhere, and the name of Baronius came to be known over Europe as a synonym for unprecedented historical penetration, power of research, and zeal for verification. Philip’s disciples must have gone the world over. The knowledge he had gained must have been made known to Baronius before 1569, but despite the importance of the work, he was compelled by his master to share in all the exercises of the now growing Oratory. At the church of San Giovanni dei Fiorentini, which he served from 1564 to 1575, he had his part in the parish ministrations and took his turn in the menial domestic services. “Barbarus coquus perpetuus” was the legend he playfully inscribed in the Oratory kitchen, where he often received distinguished visitors. To the many mortifications imposed by Philip he added generously, and thereby provoked the digestive disorders that often racked his body in life and ultimately precipitated his death. Despite all obstacles, he prodigious capacity for hard work, contentment with but four or five hours of sleep a night, made possible an amazing progress in his researches. After the canonical foundation of the Oratory (15 July, 1575) he took up his residence at Santa Maria in Vallicella, definitive home of the new congregation, and led the same busy life. In the same year plans were matured for the publication of the new church history, and by 1584, a quarter of a century since he began his preparation, Baronius had the work well under way, when his patience suffered a new
trial. Gregory XIII confided to him the revision of the Roman Martyrology. The work was necessary because of confusion in feast-days due to the Gregorian calendar-reform (1582); besides, it was an opportune time to correct the many errors of copyists long accumulating in the Martyrology. Baroni was very able in his wide research, and Baroni was also the only liturgist who could do this important work. His annotations and corrections were published in 1586, and in a second edition he corrected several errors which he was charged to have overlooked in the first (Martyrologium Romanum, cum Notationibus Casarius Editionis, 1600). The difficulties which beset Baroni in the publication of the "Annals" were many and annoying. He prepared his manuscript unaided, writing and rewriting every page with his own hand. His brother Oratorians at Rome could lend him no assistance. Those at Naples, who helped him in revising his copy, were scarcely competent and almost exasperated by their dilatoriness and unexciting judgment. The proofs he read himself. His printers, in the scarcity of their art, were neither prompt nor painstaking. In the spring of 1588 the first volume appeared and was universally acclaimed for its surprising wealth of information, its splendid erudition, and its timely vindication of papal claims. The "Centuriae" developed. The most notable work of the highest and most distinguished canonist and civil author complimented the author; but more gratifying still was the truly phenomenal sale the book secured and the immediate demand for its translation into the principal European languages. It was Baroni's intention to produce a volume every year; but the second was not ready until early in 1590. The next four appeared yearly. The seventh late in 1590, the other five at still longer intervals, up to 1607, when, just before his death, he completed the twelfth volume, which he had foreseen as a vision would be the extent of his work. It brought the history down to 1198, the year of the accession of Innocent III. Baroni's student life during the twenty years of publication was even more disturbed than formerly. His growing reputation brought heavy penalties to one of his humility. Three successive popes would have made him a bishop. In 1593 he became superior of the Oratory, succeeding the aged Philip, on whose death, in 1596, he was re-elected for another triennial term. In 1595 Clement VIII, whose policy was monarchic, put pressure on the Oratory, and, on 5 June, 1596, created him cardinal. Baroni bitterly regretted his removal from the Oratory to reside at the Vatican, or even away from Rome when the papal court was absent from the city, a circumstance doubly distressing as it prevented active work on the "Annals". In 1597 Clement paid the highest possible tribute to his erudition by naming him Librarian of the Vatican. This office, together with the charge of the newly founded Vatican press and his duties in the Congregations, left him still less time for his "Annals". Troubles he had of another order. His zeal for the liberties of the Church had early invited the disfavour of Philip II of Spain, who, because he was the strongest Catholic sovereign in Europe, to use his influence in the papacy. He incurred Philip's further displeasure by supporting the cause of his enemy, the excommunicate Henry IV of France, whose abolution Baroni warmly advocated. The "Annals" were condemned by the Spanish Inquisition. Later, under Philip III, who was pro-Sicilian in the Sicilian Monarchy, proving the prior claim of the papacy to that of Spain in the sovereignty of Sicily and Naples, he provoked the bitter hostility of both Philip II and Philip III. He found solace, however, in the thought that the theses of Spain were never over the long possibility of his being made pope. This hope was severely tried in the two conclaves of 1605. Baroni was the choice of a majority of the cardinals and, despite Spanish opposition, might have been elected had he not turned his diplomacy to encompass his own defeat. Thirty-seven votes out of a necessary forty in the first conclave and a violent attempt to precipitate and to deter in the second attest the esteem in which he was held. In the spring of 1607 Baroni returned to the Oratory, for a vision had warned him that his sixty-ninth year would be his last, and he had reached the portended last volume of the "Annals". Soon, felicitously ill, he was removed to a hospice. Concerning the end, he returned to Rome, where he died 30 June, 1607. His tomb is at the left of the high altar in the church of Santa Maria in Vallicella (Chiesa Nuova). Cardinal Baroni left a reputation for profound sanctity which led Benedict XIV to proclaim him "Venerable" (12 January, 1745). The restorations which he made in his titular church of Sts. Nereus and Achilleus and in St. Gregory's on the Caelian Hill remain as a real and into eternity. But the "Annals" constitute the most conspicuous and enduring monument of his genius and devotion to the Church. For three centuries they have been the inspiration of students of history and an inexhaustible mine of knowledge for all who treat so completely the epoch with which they deal. Nowhere are there to be found collected so many important documents. Unbiased scholars recognize in them the foundation-stone of true historical science, and in their author the qualities of the model historian: indefatigable diligence in research, passion for verification, accuracy of judgment, and unwavering loyalty to truth. Even in the bitter controversies which the early volumes aroused, Baroni's most scholarly critics acknowledged his thoroughness and honesty; but the truth is not implied that his work was faultless or final. Master though he was, Baroni was a pioneer. Gifted with a critical spirit which was, to say the least, much keener than that of his contemporaries, his exercise of it was tentative and timid. Yet he stimulated a spirit of criticism which would infallibly advance the science of history far beyond the reaches attainable by himself. With this wider vision his successors have been enabled to subject the "Annals" to no little corrective criticism. His fault, not that of the age, was that he drew limited his resources in dealing with Oriental questions. Despite his care, he cited many documents as authentic which a more enlightened criticism has rejected as apocryphal. His most serious defects were incident to the very accuracy he essayed in casting his history in the strictly formalistic form. The attempt to assign to each successive year its own events involved him in numerous chronological errors. Baroni himself recognized the possibility of this and made many corrections in his second edition (Mainz, 1801-05); and later it was by his allies, and not by enemies, that the most thorough efforts at chronological revision were made, a point seemingly lost on those who refer to Pagi's "refutation" of Baroni's errors. One has but to recall the diversity of opinion in matters of chronology among the chief exponents of historical science to-day to find palliation for the mistakes of that science's founder. Whatever must be said in justice to Baroni, it remains true that the present-day value of his work is to be measured in the light of these facts, and it is to the critical spirit on which the "Annals" rest that the student will profitably refer, bearing always in mind that the mistakes of Baroni affect but little the value of the precious legacy his industry and genius handed down to later historians. The most authoritative work on the "Annals" is Pagi: "Critica historico-chronologica in Annalibus", etc.
BARRONIUS

To the original twelve volumes of the "Annales" there have been added continuations in the style of Barionius. The most worthy are those of the three Oratorians: Raynaldus, abbot of the continuators, who with material accumulated by Barionius carried the history to the year 1565 (Rome, 1646-77, 9 vols.); Taderchi, who continued it thence to 1751 (Rome, 1728-37, 3 vols.); and August Theiner, to 1583 (Rome, 1856). Less notable are the continuations of the Polish Dominicans, Bozius, 1198 to 1571 (Cologne, 1621-30, 9 vols.); and the Swedish bishop, Sponde, 1198 to 1647 (Paris, 1650). There is a good study of the work of the continuators by Mansi in the Bar-le-Duc edition of Barionius, XX, pp. iii-xi. Many epitomes of the work have been made, the best being that of Sponde (Cologne, 1699, 2 vols.). As an exemplar of recent scientific working of a small portion of the field covered by Barionius may be cited, Rauschen, "Jahrzehnte der Christlichen Kirche unter dem Kaiser Theodosius dem Grossen. Versuch einer Erschließung des Johannes Euch. und der historischen Forschung für die Jahre 375-935" (Freiburg im Br. 1897). The best editions of Barionius are those of Lucca (1738-9, 38 vols.) and Bar-le-Duc (1864-83, 37 vols.); the former contains the continuations of Raynard and Taderchi, the latter is preceded by an account of his life enriched by the notes of Archbishop Mansi; the latter contains what is best in the former and the editorial additions of Father Theiner, whose continuation was to be included. Publication was suspended with the history of the year 1571. Barionius put himself in the wrong when he wished to give place to the "Annales". His life of St. Gregory Nazianzen is in Acta SS., XV, 371-427. Materials for the life of Barionius are found in an unfinished Life of St. Gregory, preserved in the Roman Oratory; the extant correpondeence etc. has been gathered by Aldericius, Jus Pastoralis Barionii. Epistola, Orationes, etc. (Rome, 1759-70, 3 vols.); recent discoveries by Laerem, De Casaris Baroni Literaturum Commercio Distribua (Freiburg im Br. 1868), by broder (Lucis) based largely on Du Boc, and the references Barionius makes to his work in the Annales are by Reodoch in his Epistola; Bardin (Vienna, 1718); and Rieux (Rome, 1745); Sabella, Vita del Venerabile Card. Ces. Barionio (Rome, 1862); Le Febvre, Vie de Card. Barionius (Douai, 1868); Kern, Life of St. Chares Card. Barionius (London, 1888); Capelle-Faton, Pope of St. Philip Neri (London, 1882, II, 310-321; III, 1, 525-530). The long and harasing negotiations which Napoleon carried on with Pope Pius VII, while the latter was virtually a prisoner at Savoy, and the fall of Napoleon, the archtob took his seat in the Chamber of Peers under Louis XVIII, and of the government of the "Hundred Days", which followed on the return of Napoleon from Elba, he still retained his political position. On the second restoration of the Bourbons, however, he was obliged to resign, and from this time till his death, which occurred in the following year, he confined himself entirely to the administration of his archdiocese. It has left behind him a number of fragments, especially relatifs à l'histoire ecclésiastique des premières années du XIXe siècle (Paris, 1814); and a posthumous work, published by his brother: "Défense des libertés de l'égliise gallicane et de l'assemblée de l'ecclésiastique de France tenue en 1682, ou refutation de plusieurs ouvrages publiés récemment en Angleterre sur l'inaffaibliture du Pape" (Paris, 1817).

JOHN B. PETERSON.

Barrand, Louis-Mathias, Count de, Archbishop of Tours, France, b. 26 April, 1746, at Grenoble; d. 7 June, 1816, at Paris. He was educated for the priesthood at the seminary of St. Sulpice, in Paris, and after ordination was made secretary, then coadjutor, and in 1790, success to the bishop of Troyes. In 1791, he refused to take the oath to the civil constitution of the clergy, and withdrew from France to Constance in Switzerland and later to England. In 1801 he returned home, and was appointed by Pius VII papal legate between France and the Holy See, to govern the Diocese of Meaux, and in 1805 was promoted to the Archbishopric of Tours. During the long and harasing negotiations which Napoleon carried on with Pope Pius VII, while the latter was virtually a prisoner at Savoy, and the fall of Napoleon, the archbishop took his seat in the Chamber of Peers under Louis XVIII, and of the government of the "Hundred Days", which followed on the return of Napoleon from Elba, he still retained his political position. On the second restoration of the Bourbons, however, he was obliged to resign, and from this time till his death, which occurred in the following year, he confined himself entirely to the administration of his archdiocese. It has left behind him a number of fragments, especially relatifs à l'histoire ecclésiastique des premières années du XIXe siècle (Paris, 1814); and a posthumous work, published by his brother: "Défense des libertés de l'égliise gallicane et de l'assemblée de l'ecclésiastique de France tenue en 1682, ou refutation de plusieurs ouvrages publiés récemment en Angleterre sur l'inaffaibliture du Pape" (Paris, 1817).

ROHRBACHER, Histoire universelle de l'église catholique (Paris, 1883); Driezen, Histoire des rapports de l'église et de l'état en France de 1789 à 1870 (Paris, 1888); Baudelocque, Quatre cent ans de concordat (Paris, 1900); Saint-Jure, L'Histoire du concordat de 1801 (Paris, 1897); Sicard, L'ancien clergé de France, les évêques pendant la révolution (Paris, 1903).

EDWARD A. GILLIGAN.

Barrande, Joachim, French paleontologist, b. at Sangues (Haute-Loire), 11 August, 1799; d. at Frodeshoff, near Vienna, 5 October, 1883. He was educated at the Ecole Polytechnique in Paris and was selected by Charles X to be the tutor of his grand-son, the Duc de Bordeaux, also known as the Count de Chambord. When the king abdicated in 1830 he accompanied the royal family to England and Scotland and finally to Prague, where he passed the last years of his life on terms of intimate friendship with the duke, who, after the death of the king, took up his residence at Frodeshoff, and he acted also as the administrator of his property. Barrande's interest was early awakened in the fossil remains of his country and their distribution in the various strata. The
field was a new one for until the date of his first publication scarcely any attention had been paid to stratigraphical geology and paleontology in Bohemia. During the summers of 1840–50 he made preliminary surveys on foot of the Silurian district, an area of about 140 sq. m. mi. This was the beginning of his extensive investigations on the Silurian formations of Bohemia. Quarries were opened and workmen engaged to search for fossils, and for forty-three years he devoted his time and resources to the vast undertaking and especially to describing, naming, and figuring the abundant specimens and fossils thus discovered. The results of his labors are contained in his great work—"Système silurien du centre de la Bohême—which stands almost unrivalled in paleontological literature" (von Zittel). The first volume was published in 1852 and at the time of his death twenty-two large quarto volumes with 1160 plates had appeared. Barrande was also the author of "Colonne dans le bassin silurien de la Bohème" (1860); "Documents sur la faune primordiale et le système taconique en Amérique" (1861); "Représentation de colonies de la Bohème dans le bassin silurien du nord-ouest de la France" (1863); "Céphalopodes—Etudes générales". His private life was simple and uneventful. He carried on a correspondence with the leading geologists of other countries, some of which he published in Prague. He left no biographies or biographs and he bequeathed his library and valuable collection of fossils to the Natural History Museum at Prague.

**Barran:** (or Barrara), Jacinto, b. at Lima, Peru, early in the seventeenth century; d. there, 22 Nov., 1704. When, in the seventeenth century, the different religious orders appointed historiographers or official chroniclers of the work done in their several American provinces, the Jesuits selected Father Ignacio Arboitó for their Peruvian missions, but as his account was not accepted Father Jacinto Barrara was appointed in his stead. His fame was principally as a preacher, and two volumes of his "Sermones" were published, one at Madrid in 1678, the other at Lima in 1679. In the latter year he finished this voluminous history of the Society of Jesus in Peru, which is still at Lima in private hands, and comprises 1,350 pages of manuscript. Its title is: "Historia de las fundaciones de los colegios y casas de la Compañía de Jesus, con la noticia de las vidas y virtudes religiosas de algunos varones ilustres que en ella trabajaron." No allusions are made in that chronicle to any other events than those of a religious or ecclesiastical nature. In addition to the "Sermones," a "Panegirico" pronounced by him in 1699 on the beatification of St. Rose of Lima, was also printed.

**Barra,** Antoine-Léopold, Sieur de la, tenth French Governor-General of Canada, b. at Paris in 1622; d. in 1690. De la Barre was made a councillor of the Parlement (High Court) in 1649, master of requests in 1653, and was Intendant of Paris during the civil war. After this he successively held other offices until he became Intendant of Bourbonnais in 1663. There he formed a company called "Compagnie de la France équinoxiale" to colonize Guiana, and obtained the lieutenant-governorship of that part of America. He sailed from Rochelle in 1664 with the Marquis de Tracy, who had been appointed viceroy of the French possessions in America. After establishing himself at Cayenne, which de Tracy had taken from the Dutch, de la Barre returned to France in the autumn of the same year, and while there published an account of his mission and his hopes for the future of Guiana, under the title of "La Description de la France équinoxiale." Soon after, he was appointed to Guiana and the French Antilles. In 1671 he was made captain of a man-of-war; in the same year he published the "Journal du voyage du sieur de la Barre en la Terre ferme et île de Cayenne." De la Barre was appointed Governor-General of Canada to those territories which were now covered Quebec early in October, 1682. He received wise and detailed instructions for his guidance in the government of the colony and was especially directed to prevent the disorders caused by the traders and to keep them from fraudulent practices. De la Barre was already old and was animated more by the love of money than by the desire to advance the interests of the colony. He was induced by some of the traders to join in various enterprises. Instead of devoting himself to the organization of the internal affairs of the colony he allowed his advisers to dispatch a trading expedition to Hudson Bay and aided them in sending clandestine trading parties to Albany, to the region of the Mississippi, and the West. In 1684, under pretext of overawing the Iroquois, he took a large body of ill-equipped men from Fort Frontenac and at the head of Lake Ontario. The troops were in reality intended to be an escort to a trading expedition in which he was interested. Sickness broke out among his soldiers, and he was obliged to make a disgraceful treaty with the Iroquois. De la Barre gave the Iroquois unrestricted rights in the region extending towards the country of the Illinois Indians, which de la Salle at that time was on the point of winning for France in spite of all the obstacles that the governor put in his way. Louis XIV heard of the disastrous expedition to Fort Frontenac and recalled de la Barre (10 March, 1685), who did not leave Quebec, however, until the arrival of his successor, the Marquis de Denonville, in October, 1685. In 1687 de la Barre was again appointed Governor of Cayenne and died three years later.

**Barreiros,** Baltasar, a Portuguese Jesuit, missionary, b. at Lisbon, 1531; d. 1612, on the mission in Angola, south-west coast of Africa, during his life's labours. His literary works consist chiefly of "Relations" written to the superiors of the Society of Jesus, describing the condition of the province with regard to both its political and spiritual aspects. He has recounted in detail the victory of the Spaniards, led by Paul de Morales, over an army of native negroes in the year 1583. Accounts of the conversation of pagan tribes and the baptisms of native kings as well as treaties on the manners and customs of the people are the principal subjects of his writings.

**Barrétos,** López de, a Spanish Dominican bishop, patriot, and diplomat, b. at Medina del Campo, Kingdom of Leon 1582; d. at Cuenca, 21 May, 1582. He was of a wealthy and powerful family, and after receiving a liberal education in the University of Salamanca, entered the Dominican Order, in his native town, when about eighteen years of age. After his religious profession, he was again sent to Salamanca, on a mission to the Indies, where he showed extraordinary talent and love for study. He soon became known as one of the greatest theologians of Spain, and was appointed to the first chair of theology in that famous university. In 1433,
John II of Castile and Leon called him to his court, to be his confessor and tutor to the heir presumptive, afterwards Henry IV. Because of his ability and prudence, he was then made Grand Chancellor of State and Inquisitor General. He became successively, in 1435, Señor of boys, in 1439, of Cuenca, 1444. Later he refused the Archbishopric of Compostella. John II, in his last will and testament, 1454, also named him tutor to Prince Alphon- sus, a younger son. By his wise counsel and eminent statesmanship, he rendered his king and country conspicuous service. He also did much in the way of religious reformation and works of charity, and was a liberal patron of learning. His name frequently appears in the Spanish history of those troublous times. His writings comprise a treatise on the sacraments, a compendium of moral theology; a commentary on a part of the "Book of Decreats" (all in Latin), and several Spanish manuscripts on ecclesiastical matters and doctrinal subjects.

VICTOR F. O'DONELLI.

BARRIO, JEAN DE LA. See FEUILLANTS.

BARTOS, JOAO DE, historian, b. in Portugal, 1496; d. 20 October, 1570. Of his early youth little is known. In 1522, he went to Mina in Portuguese Africa, and seaport of the Casa da India, and Ceuta (African possessions) in 1525, and again in 1532. Here he cultivated his literary inclinations and attached himself to the Crown of Portugal by other ties than those of a faithful subordinate and accountant. At the age of twenty-four, he published a romance of the Emperor Clarimundo, a legendary ancestor of the kings of Portugal. In 1539, when Brazil had begun to be looked upon as an important accession to Portuguese colonial pos-sessions, he obtained a grant of fifty leagues along the coast of Brazil and equipped an expedition to occupy it. Ten vessels with nine hundred men, under command of Aires da Cunha, set sail for Brazil, but were wrecked at the bar of the Maranhão, and nearly everybody perished. Two sons of Barros were in the expedition, but their fate is not given. This brought Barros almost to the verge of poverty. He thereafter clung to historic studies, protected and favoured by the king, at whose instigation he wrote his classical work, "Asia," considered of value as a fine piece of Portuguese literature and information it afforded. Besides giving an account of discovery and conquest, it touches frequently upon the earliest attempts at Christianization by the Portuguese in their African and Asiatic possessions, the founding of churches, etc. The first decade appeared in 1532. Only three have been fully published. A fourth, of somewhat questionable authenticity, has been partly printed.

On the life of BARTOS, see DE FERIA, Vida de Joao de Barros (Lisbon, 1778); SILVA, Diccionario bibliografico portu-gues (Lisbon, 1859), III; Biografia universal (Paris, 1854), I, Ad. F. BANDELIER.

BARTOW, JOHN, priest, descended from a family of stanch Catholic yeomen, b. 13 May, 1735, at Westby-in-the-Fylde, Lancashire; d. 12 February, 1811, at Cloughton, Lancashire. His uncle, Father Edward Barrow, S.J., had been serving the mission at Westby Hall in 1717 when he was outlawed as a papist priest and his goods forfeited. This was in 1728, after a course of seven years at the English College in Rome, was impressed at Portsmouth and served five years in the navy. Deserting at Dunkirk, he was acquitted by the court-martial through pretense. He sufficiently understood no language but Italian. In 1761, after escorting two young women from London to the Convent of the Poor Clares at Gravelines, where his sister was a nun, he resumed his studies at Douai, and was ordained there 27 June, 1766. After a short stay in London at the house in Red Lion Square occupied by the parents of Bishop Milner, he set out on horseback for Cloughton in Lancashire. At Almaine, he temporarily attached to the Hall, the seat of the ancient family of Brockholes, he remained from the time of his arrival, in July, 1766, until his death. He was buried at the adjoining mission of New House.

Father Barrow was a man of notable courage, will, and industry. He was a master of French and Italian, wrote elegant Latin and forcible English. "He may sometimes have shown but scant courtesy to the wishes or commands of his own bishop, but he insisted that everybody else should be adscant and deferential to ecclesiastical authority" (Gillow). He enlarged the parish church of Cloughton, in 1794, improved the roads as township overseer, made wise reinvestments of the fund for the secular clergy, and negotiated with Sir Edward Smythe for the acquisition by exchange of the land for Ushaw College. Though his name is on the list of Douai writers, no description of his writings is recorded. It is likely that he contributed to the Catholic Committee controversy. Gillow's quotations from unpublished letters would indicate he was a gentle opponent. In a letter preserved at Cloughton the Cardinal Secretary of State praises warmly Father Barrow's Catholic loyalty and his zeal for the cause of the Holy See.

J. V. CROWE.

BARTOW, WILLIAM, VENERABLE (alias WARING, alias HARCOURT), an English Jesuit martyr, b. in Lancashire, in 1609; d. 30 July 1679. He took his studies at the Jesuit College, St. Omer's, and entered the Society at Watten in 1632. He was sent to the English mission in 1644 and worked on the London District for thirty-five years, becoming, in the beginning of 1678, its superior. In May of that year he was arrested and committed to Newgate on the charge of complicity in the Oates Plot. The trial, in which he had as fellow-prisoners his colleagues, Fathers Thomas Whitbread, John Fenwick, John Newman, and Anthony Tupper, commenced 15 February, 1679, and is famous, or rather infamous in English history. Lord Chief Justice Srocks presided, and Oates, Bedloe, and Dugdale were the principal witnesses for the Crown. The prisoners were charged with having conspired to kill the king and subvert the Protestant religion. They made a brave defence, and by the testimony of their own witnesses and their cross-examinations of their accusers proved clearly that the latter were guilty of wholesale perjury. But Scroggs laid down the two monstrous principles that (1) as the witnesses against them had recently received the royal pardon, none of their undeniable previous misdemeanours could be legally admitted as impairing the value of their testimony; and (2) that no Catholic witness was to be believed, as it was presumed that he had received a dispensation to lie. Moreover, he obstructed the defence in every way by his brutal and constant interruptions. Accordingly, Father Barrow and the others, though manifestly innocent, were found guilty, and condemned to undergo the punishment of high treason. John Newman, who had been arrested 20 June, 1679. By the papal decree of 4 December, 1886, this martyr's cause was introduced under the name of "William Harcourt."

S YDNEY F. SMITH.
Barruel, Augustin, controversialist and publicist, b. at Villeneuve de Berg (Ardèche), 2 October, 1741; d. at Paris, 5 October, 1820. He entered the Society of Jesus in 1756 and taught grammar at Toulouse in 1762. The storm against the Jesuits in his native country occupied in college work in Moravia and Bohemia until the suppression of the order in 1773. He then returned to France and his first literary work appeared in 1774: "Ode sur le glorieux avènement de Louis Auguste au trône". That same year he became a member of the "Améthyste littéraire". The next year his first important work was "Les Héliennes, ou Lettres Provinciales philosophiques" (Amsterdam, 1781). The seventh edition of the work (Paris, 1839) contains a sketch of the author. Of these letters, the seventy-sixth is considered the most brilliant. His book provoked a controversy with M. Giraud-Soulavie, and the replies and counter-replies were many.

In the meantime, national affairs in France were growing more and more turbulent, but Barruel continued his literary activity, which from now on occupied itself specially with public questions. In 1789 appeared "Lettres sur le Divorce", a refutation of a book by Henet. From 1788 to 1792 he edited the famous "Journal Ecclésiastique" founded by Drouyn de Lhuys in 1760. In this periodical was published Barruel's "La Conduite du S. Siège envers la France", a vigorous defence of Pope Pius VI. He likewise wrote a number of pamphlets against the civil oath demanded from ecclesiastics and against the new civil constitution during 1790 and 1791. He afterwards gathered into one "Collection Ecclésiastique", all the works relative to the clergy and civil constitution. The ninth volume of this collection was published in 1793.

The spirit of the French Revolution had in the meantime (1792) forced Barruel to seek refuge in England, where he became almoner to the refugee Prince de Conti. Here he wrote in 1793 his well-known "Histoire du Clergé pendant la Révolution Française". He dedicated the work to the English nation in recognition of the hospitality it had shown towards the unfortunate French ecclesiastics. It has been translated into German, Italian, Spanish, Polish, and English. The English version went through several editions and did much to strengthen the position of the English in the opinion of French ecclesiastical principles. An American edition of the work appeared at Burlington in 1824. While in London, Barruel published an English work: "A Dissertation on Ecclesiastical Jurisdiction in the Catholic Church" (1794). But none of his works attracted so much attention as his "Mémoires pour servir à l'histoire du Jacobinisme" (London, 1797-98). It appeared in an English dress: "Memoirs of the History of Jacobinism and Freemasonry of Barruel", translated into English by the Hon. Robert Clifford" (London, 1798) in four volumes. This important work is an endeavour to account for the French Revolution by a study of the anti-Christian and anti-social principles of the secret societies and encyclopedic philosophers. Owing to its translation into every modern language it was everywhere read and commented upon. A sharp criticism in the "Monthly Review", brought forth a reply from Barruel, who greatly increased the circulation of his book by issuing an abridgment of it in 1798. The Freemasons of France, England, and England, and elsewhere, made use of his assertions and a voluminous literature was the consequence. While some are of the opinion that Barruel's work attributes to the secret societies many evil deeds for which they are not responsible, all admit it is the foundation of the principles and logical consequences flowing from them is the work of a powerful mind. Barruel, indeed, seems to have been the first to portray clearly the necessary consequences to civil governments, to the Church, and to social order that must result from the atheistic oath-bound associations which had acquired such tremendous power on the continent of Europe.

In the fall of 1794, when he was sixty-three, Barruel was enabled to return to France. He fully accepted and persuaded many other clergymen to accept the new political order of things in his native country and he wrote several books to defend his opinions. When the Concordat was made in 1801 between Pius VII (at the request of Napoleon I), "Aménitè liturgique de l'ordre des cérémonies de la liturgie des Églises de France" (1802), and "Droit religieux...". His last important controversy was a defence of the Holy See in its deposition of the French bishops, which had been necessitated by the new order of things in France, established by the Concordat. His book appeared also in English: "The Papal Power, or an historical essay on the temporal power of the Pope" (London, 1803). Many attacked the work, but as usual the author did not suffer an antagonist to go unanswered. His new book involved him in a very extended controversy for his work was translated into all the principal European languages. His friends and foes alike became involved in a wordy war. Blanchard published in London no less than three refutations. His works are erroneously attributed to Barruel, "L'Histoire du Clergé protestant en France" (1801) and "Découverte Importante sur le système de la Constitution du Clergé, décrété par l'Assemblée nationale". The many articles Barruel contributed to journals and his many published letters are not touched on here. He had promised to compose two works which never appeared, viz: "Histoire des Sociétés Secrètes au Moyen-Age" and "Dissertation sur la Croisade contre les Albigeois". In regard to the latter work, Barruel stated that his object would be to defend the Church against the charge of having deposed kings and having freed their subjects from the oath of allegiance. He contended that objections on this score arose only from an ignorance of history. During the whole course of a life of multiplied activity, Barruel was ever the wakeful apostle and unwearyed defender of Christian truth and of the rights of the Church. At the time of his death, he was engaged on a refutation of the philosophical system of Kant, but never completed his work.

William H. W. Fanning.

Batty. See Giraldbus Cambrensis.

Barry, John, captain in the United States navy, b. at Tacumshane, County Wexford, Ireland, in 1745; d. at Philadelphia, 15 September, 1803. At an early age Barry was sent to sea. He arrived at Philadelphia when he was fifteen years old, and made that city his home to the time of his death. He was employed in the West Indian trade and commanded several vessels until December, 1774, when he sailed from Philadelphia, as captain of a fine large ship The Black Prince, bound for Bristol, England, returning to Philadelphia 13 October, 1775, the day the Continental Congress, then in session, there authorized the purchase of two armed vessels for the beginning of the Continental Navy. Barry immediately volunteered his services, and he was assigned to the command of the first vessel purchased, the "Lexington". His commission was dated 7 December, 1775, the first issued by the Marine Committee of the Continental Congress. On 22 December, 1775, Ezek Hopkins was appointed. Principles and duties of the Navy—but Barry was in command of the "Lexington" from his appoint-
ment until October, 1776, when he was assigned to the "Effingham", 38 guns, then building in Philadelphia. During that time he performed efficient service in the Delaware Bay. On 31 March, 1776, he put to sea, eluding the British man-of-war "Roebuck" on guard in Delaware Bay, and on 7 April fell in with the "Edward", a tender of the British man-of-war "Liverpool", and after a sharp engagement captured her; but not before the British forces then in control of Philadelphia. She had been sunk, by order of Washington and the Naval Board, in the Delaware for some time previously and then raised only to be destroyed by the enemy. In December, 1776, Barry, owing to the blockade of his ship in the Delaware by the English, with a company of volunteers joined the army under Washington and took part in the battles of Trenton and Princeton. He was aide to General Cadwallader and special aid to General Washington, who held him in high esteem. Returning to his command, he carried out many gallant and daring boat expeditions on the Delaware, successfully annoying and capturing vessels laden with supplies for the British army. In 1778 he was ordered to command the "Raleigh", 32 guns, and sailed from Boston 25th September, 1778. On the 27th he fell in with two British frigates, the "Experiment", 50 guns, and "Unicorn", 22 guns, and after a gallant and unequal engagement Barry ran his ship ashore and set her on fire, escaping with most of his crew. Being without a Continental command Barry accepted, 18 February, 1779, command of the privateer "Delaware", 12 guns, and during the cruise captured the British sloop of war "Harlem", 14 guns. In November, 1780, he was ordered to command the "Alexander", 36 guns, at Boston, in which he sailed to France, 11th February, 1781, with Col. John Laurens, special commissioner to the French Government. On the return trip he captured the brig "Mars", 22 guns, and the brig "Minerva", 10 guns. On 28th May he fell in with the "Atlanta", 15 guns, and the "Trespassery", 14 guns, and after a very sharp fight of three hours they struck their colours. In this fight Barry was severely wounded in the shoulder by a grape shot. On 23 December, 1781, he sailed from Boston for France with the Marquis de Lafayette as passenger, accompanied by the flames of the New London 13 May, 1782, sailed, 4 August, 1782, on the most successful of the war; the prizes he captured sold for more than $200,000. Returning by way of the West and Havana, on 10 March, 1783, he fell in with the "Sybille", 38 guns, and after a fight of forty-five minutes she held off ample injured and joined two other ships which he had been in company. This was the last encounter of the Revolutionary war at sea. Peace was declared 11 April, 1783, the "Alliance" was sold, and the country was without a navy. The United States navy was permanently organized by Act of Congress, 27 March, 1794. Six captains were appointed by President Washington, "by and with the consent of the Senate"; and Barry headed the list. His commission, signed by George Washington, President, was dated 22 February, 1797 and appointed him captain in the navy "to take rank from the 4th day of June, 1794"—"Registered No. I". He was thus made officially the ranking officer of the United States Navy. He superintended the building of the frigate "United States", 44 guns, and cruised in her with other vessels under his command. In 1801 the navy was reduced to a peace basis; nine captains were retained Barry being at the head of the list. His sea service was ended, and being in poor health he remained at this home in Philadelphia until his death. Barry has often been referred to as "Commodore"; there was no such grade in the United States Navy until 17 July, 1862. Captain was the highest grade before that date, although the non-official title of commodore was generally applied to a captain while in command of two or more vessels. Barry was married twice, both times to Protestants who subsequently became converts to the Catholic faith. His first wife died in 1771, and on 7 July 1777 he married Sarah Austin who survived him. She died 13 November, 1831. Both his wives were buried with him in the graveyard of St. Mary's Church, Philadelphia. There was no issue from either marriage. His epitaph was written by Dr. Benjamin Rush, a signer of the Declaration of Independence. A statue and fountain were erected to his memory in 1876, in Fairmount Park, Philadelphia, by the Catholic Total Abstinence Union of America. A portrait (copy of original by Gilbert Stuart) was presented to the city of Philadelphia by the Friendly Sons of St. Patrick, 18 March, 1895, to be placed in its "penitence" Hall. In 1906 Congress passed a bill appropriating $50,000 for the erection of a monument in Washington to the memory of Captain John Barry; and 16 March, 1907, a bronze statue of him was erected in Independence Square, Philadelphia, by the Friendly Sons of St. Patrick.

JOHN BARRY, U.S.N.

JOHN FUREY.

Barry, John, second Bishop of Savannah, Georgia, U. S. A.; b. 1799 in the parish of Oylegate, Co. Wexford, Ireland; d. in Paris 19 November, 1859. He was accepted as an ecclesiastical student by
BARRY

312

Bishop England, and was ordained priest at Charles-
town, S. C., 24 September, 1825. After ministering for
several years in Georgia, in 1834, while State he opened
the first Catholic day school at Savannah, he was
made Vicar-General of the Diocese of Charleston
and superior of the seminary in 1844, while still re-
taining charge of the parish at Augusta, Georgia. In
1853 he was appointed Vicar-General of Savannah,
under Bishop Cutoff, and when, in 1854, that
prelate died of yellow fever, he was named admin-
istrator of the diocese, and as such attended the
Eighth Provincial Council of Baltimore, in May,
1855. He was then appointed to the vacant see and
was installed at Savannah 22 November, 1855. He
ruled the diocese with energy and was especially
notable during his missionary labours for his charity
and zeal in several yellow-fever epidemics. Ill health
forcing him to make a visit (July, 1859) to Europe,
he died at the house of the Brothers of St. John of
God, in Paris, 19 November, 1859, having lost his
reason some time before his death. His body was
brought back to Savannah for burial, in September,
1865.

THOMAS F. MEEHAN.

BARTHELEY, PATRICK, horticulturist, b. near Belfast,
Ireland, May 16; d. at Rochester, New York, U.
S. A., 23 June, 1890. After teaching for a while
in his native land, he emigrated to America in 1836
and was employed by a nurseryman at Flushing,
Long Island. In 1849 he became a partner in the
same business with George Ellwanger at Rochester,
New York. The firm took the lead in importing from
abroad or developing by culture improved
varieties of flowering plants and fruits, hardy exotics,
and introducing to cultivation wild species of shade
trees. Their nurseries developed into the largest
in the country. Barry wrote extensively on subjects
connected with horticulture and floriculture, and
edited "The Genera Farmor" from 1844 to 1852,
and "The Horticulturist" from 1852 to 1854. His
published works include a "Treatise on the
Fruit Garden" (New York, 1851; new ed. 1872)

Cyc. of Am. Biol. (New York, 1900).

THOMAS F. MEEHAN.

BARTHELY, JEAN-JACQUES, a celebrated French
numismatologist and writer, b. at Vassis (Provence)
1716; d. in Paris, 1795. He began his classical
studies at the College of the Oratory in Marseilles,
took up philosophy and theology at the Jesuits' 
college, and finally attended the seminary of the
Lazarists, where he devoted most of his time to
Oriental languages. He soon became renowned for
his scholarship and earnestness in learned researches,
in which he rivalled the Humanists of the Renais-
sance. Having completed his course, he received
the tonsure and wore the ecclesiastical habit without
taking Holy orders. For several years he lived in
his lonely residence at Aubagne, near Marseilles,
developing himself entirely to numerate the works
of direction of his friend, M. Cary of Marseilles.
1744, he went to Paris and became secretary to M.
Boze, keeper of the medals at the King's Library;
and three years later he was elected to the Acad.
Inscriptions and Belles-Lettres. In 1756 M. de Boze
M. de Boze and remained in the post,

On his way, he gathered a large number of
and conceived the idea of the book. It
is famous, "Voyage du Jeune Anaxagore,
Greece vers le milieu du 1Ve siècle avant
". This book, begun in 1756, was not
complete in 1778, and was a description of
Hellenic civilization, institutions, art, philosophy, and literature, appealing to
by reason of its charming narratives and
ures. In successive reprints and
tions (London, 1790, 1800), it still
Recent archaeological discoveries of
the book remains a very successful and
correct knowledge of Greek life.
From the time of Barthély's death,

BARRY

312

BARTHELEY

1721 was ordained priest. Christoph von Hutten,
Prince-Bishop of Würzburg, sent him, in 1725, to
the University of Würzburg, where he became president of the
university (1728) professor of canon law at the
university. Other ecclesiastical and academic hon-
ours, among them that of Doctor of Laws, conferred by
the university (1754) were conferred upon him. He
took an active part in settling the controversy
occasioned by the erection of the new Diocese of
Fulda (1732). His chief importance, however,
attained in his capacity as jurist in his capacity as
jurist. In his capacity as jurist, the work in that
side was appreciated by both Catholics and Pro-
estants, and his lectures were circulated at various
schools. He broke with the traditional method
in canonical science, being one of the first to adopt
the historico-critical treatment in Germany. His
efforts to distinguish between the essentials and
nonessentials in Catholic doctrines, and his attribu-
tion of excessive power to the State in its relations
with the Church caused his opinions to be denounced
at Rome as unorthodox. In his promemoria loops
(1753) he submitted his views on this topic to his
former teacher, Benedict XIV, and obtained a
favourable decision. His works, apart from what
was written in the Fulda controversy, as "De
Pallio" (1753), deal principally with the relations
between Church and State, especially in Germany.
Several of them are found in the "Opuscula juridica
varii argumenti" (Würzburg, 1765, 1771).

N. A. WEBER.

BARTHELEY, THOMAS FRANCIS. See CHATHAM, DIOCESE
OF.

BARTHEL, JOHANN CASPAR, a German canonist,
b. 10 June, 1697, at Kitzingen, Bavaria; d. 8 April,
1771. He was the son of a fisherman, attended the
school of his native place, and from 1709 to 1715
studied at the Jesuit College at Würzburg. In 1715
he entered the seminary of the latter city and in

the Duke of Choiseul had been his patron and had given him many pensions and benefices. After the fall of his friend (1770), Barthélémy followed him into exile at Chanteloup, near Amboise, where unlike the cloîtres de cour he was busily engaged in pollishing his elaborate literary productions. He was elected to the French Academy in 1734 by the "Voyage du jeune Anacharsis". Barthélémy has left a number of essays on Oriental languages and archeology, originally read before the Academy of Inscriptions and Belles-Lettres; "Les amours de Carye et de Polydore", a novel illustrating ancient manners; "Un voyage en Italie"; and "Mémoires" of his life. His works were edited by Villeneuve (1821).

Bartholi, Francesco della Rossa, Friar Minor and chronicler, died c. 1272. Little is known of his life save what may be gathered from his own writings. A native of Assisi, he is found in 1312 as a student in Perugia, and in 1316 at Cologne, whence he returned to Umbria bearing many relics, including those of St. Louis, King of France, given him by the latter's daughter, Princess Blanche, who had become a Poor Clare. In 1320 and in 1326, he was lector of theology at the Portiuncula, in 1332 guardian of Assisi, and in 1334 was the Custos of the Convento. He appears to have lived to a great age. He was acquainted with Marino of Assisi, Blessed John of La Verna, Alvarus Pelagius and other well-known Franciscans. Whether he is to be identified with Francesco Rubia, who is mentioned among the partisans of Michael de Cesena, or with the Francesco de Assisio who was long imprisoned at Florence on a charge of heresy is a matter of conjecture. Although Bartholi wrote several works including a history of the Passion, he is best known for his "Travels of the Blessed Maria de Portiuncula" composed about 1335. He spent many of his later years in retouching and completing this treatise, which is of great importance for the history of the origin and evolution of the indulgence, in so far as it contains a complete collection of the ecclesiastical information and legends then obtained in the subject. It was first published by Paul Sabatier with a wealth of critical apparatus in the "Collection d'Études" (Paris, 1900, Vol. III). (See Portiuncula.)

Bartholomew a Martyr. See Bartholomew of Braga.

Bartholomew Anglicus, Franciscan encyclopedist of the thirteenth century. An Englishman by birth he had been professor of theology at the University of Paris, when, in 1224 or 1225, he entered the newly established Order of St. Francis in company with several other of the Dominicans, the Prior of the College of Hales, and E. of Faversham, and two other professors of the same faculty. He continued his lectures in the dosage school till 1231, when he was sent to Magdeburg in Germany. He was succeeded by his illustrous son, Richard of Hales (q. v.), who, by being a member of the university, raised thus the school of the Franciscans to the dignity of a school of the university. The date of Bartholomew's death is unknown. He was formerly identified with a later Franciscan and Englishman, Bartholomew of Glanvill, or Glanvilia, who died about 1360, and to him the famous work "De proprietatibus rerum" was ascribed. Recent researches place beyond doubt the authorship of the work in question must be attributed to the Magdeburg professor of 1231.

"De proprietatibus rerum" is an encyclopaedia of all the sciences of that time: theology, philosophy, medicine, astronomy, chronology, zoology, botany, geography, mineralogy, are the subjects treated in the nineteen books of this work. We have in it the first important encyclopedia of the Middle Ages and the first in which the works of Greek, Arabian, and Jewish naturalists and medical writers, which had been translated into Latin shortly before, were laid under contribution. Aristotle, Hippocrates, Theophrastus, the Jew Isaac Medicus, the Arabian Haly, and other celebrities are quoted. To Bartholomew must be given that honour which has been accorded until recently to the Dominican, Vincent of La Vies, whose work exceeds by ten times the 400-page folio volume of Bartholomew. Like the later "Speculum universale" of Vincent, the "De proprietatibus rerum" enjoyed unbounded popularity. References to this are the many manuscripts. There is hardly a large library in Europe which has not manuscript copies of it, the National Library at Paris possessing as many as eighteen. Very many editions appeared in print, at least fourteen before the year 1500, and one as late as 1601 at Frankfurt. By being translated and thus made accessible to the laity, the encyclopaedia of Bartholomew exercised a greater influence on medieval thought than that of Vincent. Of the latter's work the "Speculum historiale," was translated, but Bartholomew's work went further afield, in French, two in Belgian, one in English, and one in Spanish prior to 1500. The work of Bartholomew, though not fulfilling modern requirements of natural sciences, remains a valuable source of information to the student of medieval times.

Delisle in Historie litt. de la France (Paris, 1888), XXX, 352 sqq.; FELDER, Geschichte der Studien im Franziskanerorden (Freiburg, 1904), 243, 368 sqq.

John M. Lenhart.

Bartholomew, Saint, one of the Twelve Apostles, mentioned sixth in the three Gospels (Matt., x, 3; Mark, iii, 18; Luke, vi, 14), and seventh in the list of Acts (i, 13). The name (Bartolomeo) means "son of Taimai" (or Tholmai), which was an ancient Hebrew name, borne, e.g. by the King of Gezuur whose daughter was a wife of David (II Kings, iii, 2). This shows, at least, that Bartholomew was of Hebrew descent; it may have been his genuine proper name or simply added to distinguish him as the son of Taimai. Outside the instances referred to, no other mention of the name occurs in the New Testament. Nothing further is known of him for certain. Many scholars, however, identify him with Nathanael (John, i, 45—51; xxi, 2). The reasons for this are that Bartholomew is not the proper name of the Apostle; that the name never occurs in the Fourth Gospel, while Nathanael is not mentioned in the synoptics; that Bartholomew's name is coupled with Philip's in the lists of Matthew and Luke, and found next to it in Mark, which agrees well with the fact shown by St. Victor that Philip was an old friend of Nathanael's and brought him to Jesus. It is even suggested that Nathanael, mentioned with the call of several Apostles, seems to mark him for the apostolate, especially since the rather full and beautiful narrative leads one to expect some important development; that Nathanael was of Galilee where Jesus had most :: not all, of twelve; finally, that on the occasion of the appear
Bartholomew, Apostle of Armenia, also called Bar-tholomaeus Parvus (the Little), b. at Bologna, year not known; d. 16 August, 1333. Nothing certain has been preserved as to his family. At the end of the thirteenth century, while still young, he entered the monastery of his native town, and became a monk of his native town, and became a monk of invention. Pope John XXII sent to Armenia, and received him his see the city of Maraga, lying east of Lake Urmiah. Accompanied by several companions the new missionary bishop arrived (1318-20) in the territory assigned to him. He studied the Armenian language, built a monastery for his brethren of the order, and with the aid of these began his apostolic labours. He met with such success that large numbers of heathen and Mohammedans were converted and many schismatic Armenians were brought into Catholic unity. The bishop, on the death of his brethren, left the diocese and devoted himself to the education of his son, Dom Antonio, who was entering the ecclesiastical state. He devoted two years to this task. In 1558, against his own wishes and desires, and only out of obedience to his provincial, Luis of Granada, he accepted the appointment to the archiepiscopal See of Braga, for which he had been chosen by Queen Catherine, and in 1559 received episcopal consecration. With true apostolic zeal he devoted himself to the duties of his new office.

On the resumption of the General Council of Trent in 1561, Bartholomew repaired to the council and took part in the last sessions. He was highly esteemed among the Fathers of the council both on account of his theological learning and the holiness of his life, and he exercised great influence in the discussion of the decrees on the reform of ecclesiastical life. On the conclusion of the council he returned, in February, 1564, to his see, and in 1566 held an important provincial synod in which excellent decrees were passed for the restoration of ecclesiastical discipline and the elevation of the clergy and people (Concilium provinciale Bracarense quum
Braga, 1567). The archbishop now devoted himself most zealously to the task of carrying out the reforms of the Council of Trent as well as the decrees of the civil law at Bologna, where he himself became a judge. After repeated requests, having received, on 20 February, 1582, permission to resign his see, he withdrew to the monastery of his order at Viana, to spend the remainder of his life in solitude for the end. In 1845 Gregory XVI declared him Venerable. In the interests of a truly Christian life and the promotion of ecclesiastical discipline, he wrote: "Compendium spiritualis doctrinae ex variis sanct. Patrum sententiae magna ex parte collectum," (Lisbon, 1592); "Stimulus pastorial ex gravissimis habitat. Patrum sententias concinnatus, in quo agitur de vita et moribus episcoporum alliormque praelatorum," (Rome, 1594; published at the instance of St. Charles Borromeo); "Deatechismo ou Doutrina christiana" (Lisbon, 1592). All these writings have been frequently republished and translated into several languages. A collective edition is: "Opera omnia cura et studio Malachzie d'Inquinbert, archiep. Theodos."

J. P. KIRSCH.

Bartolomew of Bragança, b. about 1200; d. 1 July, 1271. He made his studies at Padua, receiving there the habit of the Dominican Order from the hands of St. Dominic. According to Leander, author of the oldest life of Bartholomew, he was made master of the sacred palace in 1235, during the pontificate of Gregory IX; but there is no mention of this event in his last testament, where he expressly states the important positions held by him. He was appointed to the See of Nemonium, in Cyprus, 1248, and invested with the title of archbishop by the neapoleonic town, for he was certainly a monk of that city. In his refutation of Agarenus, he calls himself several times "the monk of Edessa." The time in which he flourished is also doubtful; it is certain, however, that it was after the Mohammedan conquest of Syria, and the controversy concerning the sacred images which began in 725. There is a work of his written in Greek, which he directed against one Agarenus, a Mohammedan. The beginning of the refutation is lost; the title, given by Le Moyne (Varia Sacra, 1665), is "Elusius et Confutatio Agareni." This work may be read in the Migne collection, P. G., CXIII, 1381-1448. This treatise, as it now stands, opens with a statement of the objections of Mohammedans against the Trinity, among which are the arguments against the Blessed Trinity, of the Incarnation, and of the Assumption. Bartholomew then gives his answers, and makes many counter-charges against Mohammed and his so-called Revelation. The main lines of argumentation are taken from the life of the prophet himself. Bartholomew shows that nothing either in his parentage, education, or life betrays any God-given mission. From this he concludes that Mohammed was an impostor, nothing without any Divine indication. Bartholomew is well acquainted not only with the Christian position which he defends, but also with the position of his adversaries; he knows the customs, practices, and beliefs of the Arabs, and he boasts that he has read all of their books. A second treatise, "Contra Muhammadum," is also printed in Migne (loc. cit., 1448-58) under the name of Bartholomew of Edessa; but, in spite of the numerous resemblances, explainable otherwise than by identity of authorship, the differences are of such a nature as to make the ascription of the work to Bartholomew unjustified. Such are the names and the number of Mohammed's wives and children; the editor of the Koran; the Nestorian monk who taught Mohammed Christianity, etc.
Bartholomew of Lucca (or de Fladionibus, sometimes abbreviated Proloiomo or Toloemo), historian, b. about 1227 at Lucca; d. about 1237. At an early age he entered the Dominican Order. He was distinguished for piety and his intense application to study, for which reasons he won the respect and warm friendship of St. Thomas Aquinas. He was not only his disciple, but also his confidant and confessor (Proloiomo, H. E., XXIII, vii). In 1272 he accompanied St. Thomas to Naples where he remained until 1274, when the news of his master's death at Fossa Nuova reached him. He was elected prior of the convent of his native city in 1288. At Naples (1294), he took an active part in the public demonstration which was made to prevent Pope Celestine V from resigning. In 1301 he was elected Prior of Santa Maria Novella at Florence. Later he removed to Avignon where he was chaplain for nine years (1309-18) to Cardinal Patrasso, Bishop of Albano, and after the Cardinal's death in 1311 to his fellow-religious Cardinal William of Aquitaine. It is believed that he was the true friend and often the confessor of John XXII, who appointed him Bishop of Torcello, March 15, 1318. A conflict with the Patriarch of Grado concerning the appointment of an abbot of St. Anthony's at Torcello led to his excommunication in 1321, and he resigned. In 1323 he made peace with the patriarch, returned to his see, and died there in 1327.

The best-known work of Bartholomew is his "Annales" (1051-1303), finished about 1307, wherein are recorded two terse sentences the chief events of this period. (Muratori, Rel. Ital. Script., XI, 1249 sqq.; see in the new edition of C. Minutili, "Documenti di Storia Italiana," Florence, 1876, VI, 35 sqq.). His "Historia Ecclesiastica Nova" in twenty-four books relates the history of the Church from the birth of Christ till 1324; considering as appendices the lives of Boniface VIII, Benedict XI, and Clement V, it reaches to 1314 (Muratori, loc. cit., XI, 751 sqq.; the life of Clement V is in Baluze, "Vita pap. Aven.," 23 sqq.). He also wrote a "Historia Tripartita," a compilation only from his own references and citations. The "Extracta de chronico Fr. Proloiome de Lucca" and the "Excerpta ex chronici Fr. Proloiome" are no longer considered original works by separate authors, but are extracts from the "Historia Ecclesiastica Nova" by some unknown compiler written after the death of Bartholomew. He is also well known for his completion of the "De Regimine Principum," which St. Thomas Aquinas had been unable to finish before his death. Thus, he did not follow the order of the saint, yet his treatment is clear and logical. A work on the "Hexameron" by him is published by Mucieli in 1880. With few exceptions, the writings of Bartholomew have always been held in high esteem. He showed great care in verifying his statements. The lives of the Avignon popes were written from original documents under his hands and with all the statements of eye-witnesses. His acceptance of fables now exploded, e. g. the Pope Joan, must be attributed to the uncritical temper of his time.

Bartholomew of Pisa, Friar Minor and chronicler. The fact that there were two Friars Minor named Bartholomew living in Pisa at the same time has caused considerable confusion, and most recent writers, following Marius of Florence, Mark of Lisbon, and Wadding, have fallen into the error of attributing to Bartholomew Albius the famous "Book of Conformities" which was attributed to Bartholomew Rinonico. The latter, with whom we are here concerned, was a Pisan of noble family. In 1382 he was a student at Bologna and later held the office of Lector there as well as at Padua, Pisa, Sienna, and Florence. He also preached for many years with great success in different Italian cities. He died about 1401, renowned no less for sanctity than for learning, and is commemorated in the Franciscan Martyrology on 4 November.

Bartholomew's chief title to fame rests upon his remarkable book, "De Conformitate Vitae B. P. Francisci ad Vitam Domini Nostrii Jesu Christi," begun in 1385 and formally approved by the general chapter held at Assisi in 1399. Enthusiastically received on its appearance and long held in high esteem, this work became the object of bitter and stupid attacks on the part of Lutherans and Jansenists. Against it Erasmus Alber wrote the "Alcoranus Franciscanus" (Der Bartheus Mönche Eulenspiegel und Alcoran mit einer Vorrede D. M. Luthers, 1531) in reply to which Henry Sedulius, Orbeo, wrote the "Apocryphus adversus Alcoranum Franciscanorum pro libro Conformitatum." (Antwerp, 1607). Subsequent writers on Franciscan history treated the Pisan's work with most unmerited censure; more recently it has come to be lauded in certain circles in terms which savour of exaggeration. Between these extreme views, the patient and discerning student will find the "Conformities" a book of very uneven value. The parallels between the lives of Our Lord and St. Francis which form its basis are sometimes forced, but it now serves to present St. Francis the equal of Christ. Side by side with fantastic legends, ridiculous visions, and other absurdities, it contains much really credible and precious historical information, revealing besides a deep knowledge of Scripture and theology a critical temper not usual at the time it was written. It is rightly considered a source of great importance for students of Franciscan history. It was first printed at Milan in 1510 and in 1513. The new edition published at Bologna in 1893, and especially in the historical parts, at almost every page. A sorely needed critical edition of the text has lately been published in a new volume of the "Annales Franciscanae" (Quaracchi, 1906).
