Rome, Alexandria, and Constantinople was read, and some testimonies were read from earlier writers to show the errors of Nestorius. The second letter of Cyril to Nestorius was approved by all the bishops. The reply of Nestorius was condemned. No discussion took place. The letter of Cyril, and the ten anathemas raised no comment. All was concluded at one sitting. The council declared that it was "of necessity impelled" by the canons and by the letter of Celestine to declare Nestorius deposed and excommunicated. The papal legates, who had been detained by bad weather, arrived on the 16th of July, taking solely the part of the sentence approved by the authority of St. Peter, for the refusal of Nestorius to appear had made useless the permission which they brought from the pope to grant him forgiveness if he should repent. But meanwhile John of Antioch and his party had arrived on the 26th or 27th of June. They formed themselves into a rival council of forty-three bishops, and deposed Memnon, Bishop of Ephesus, and St. Cyril, accusing the latter of Apollinarianism and even of Eunomianism. Both parties now appealed to the emperor, who took the amazing decision of sending a count to treat Nestorius, Cyril, and the deposed Memnon, to the seat of the Church. They were kept in close custody; but eventually the emperor took the orthodox view, though he dissolved the council; Cyril was allowed to return to his diocese, and Nestorius went into retirement at Antioch. Later he was banished to the Great Oasis of Egypt. Meanwhile, Celestine was dead. His successor, St. Sixtus III, confirmed the council and attempted to get John of Antioch to anathematize Nestorius. For some time the strongest opponent of Cyril was Theodoret, but eventually he approved a letter of Cyril to Acacius of Berhoca. John sent Paul, Bishop of Emess, as his plenipotentiary to Alexandria, and he patched up a truce. Cyril, with Gregory of Neo-Caesarea, still refused to renounce the defence of Nestorius, John did so, and Cyril declared his joy in a letter to John. Isidore of Pelusium was now afraid that the impulsive Cyril might have yielded too much (Ep. i, 334). The great patriarch composed many further treatises, dogmatic letters, and sermons. He died on the 9th or the 27th of June, 444, after an episcopate of nearly thirty-two years.

St. Cyril as a Theologian.—The principal fame of St. Cyril rests upon his defence of Catholic doctrine against Nestorius. That heretic was undoubtedly confounded and convicted by his own proclamation of the hypostatic union, to teach that Christ was perfect man, and he took the denial of a human personality in Our Lord to imply an Apollinarian incompleteness in His Human Nature. The union of the human and Divine natures was therefore to Nestorius an unspeakably clear junction, but not a union in one hypostasis. St. Cyril taught the personal, or hypostatic, union in the plainest terms; and when his writings are surveyed as a whole, it becomes certain that he always held the true view, that the one Christ has two perfect and distinct natures, Divine and human. But he would not admit two natures in Christ, because he took the hypostatic union to imply not merely a nature but a subsistent (i.e. personal) nature. His opponents misrepresented him as teaching that the Divine nature suffered, because he rightly taught that the Divine person suffered, in His human nature; and he was constantly accused of Apollinarianism. On the other hand, after his death his words were founded simply as treatments of his teaching. Especially unfortunate was the formula "one nature incarnate of God the Word" (mια φύσις τοῦ θεοῦ λόγου σεαρασμένη), which he took from a treatise on the Incarnation which he believed to be by his great predecessor St. Athanasius. By this phrase he intended simply "manifestation" against Nestorius the unity of Christ's Person; but the words in fact expressed equally the single Nature taught by Eutyches and by his own successor Dioscorus. He brings out admirably the necessity of the full doctrine of the union of our humanity to God, to explain the scheme of the redemption of man. He argues that the flesh of Christ is truly the flesh of God, in that it is life-giving and exalted by the Holy Eucharist. In the richness and depth of his philosophical and devotional treatment of the Incarnation we recognize the disciple of Athanasius. But the precision of his language, and perhaps of his thought also, is very far behind that which St. Leo developed a few years after Cyril's death.

Cyril was a man of great courage and force of character. We can only admire the fact that reverence was repressed and schooled, and he listened with humility to the severe admonitions of his master and adviser, St. Isidore. As a theologian, he is one of the great writers and thinkers of early times. Yet the troubles which arose out of the Council of Ephesus were due to his impulsive action; more patience and diplomacy might possibly even have prevented the vast Nestorian sect from arising at all. In spite of his own firm grasp of the truth, the whole of his patriarchate fell away, a few years after his time, into a heresy based on his writings, and could never be reconverted to the orthodox Faith. Cyril's doctrine has been greatly venerated in the Church. His letters, especially the second letter to Nestorius, were not only approved by the Council of Ephesus, but by many subsequent councils, and have frequently been appealed to as tests of orthodoxy. In the East he was always honoured as one of the greatest of the Doctors. His Mass and Office as a Doctor of the Church were approved by Leo XIII in 1883.

His Writings.—The exegetical works of St. Cyril are very numerous. The seventeen books "On Adoration in Spirit and in Truth" are an exposition of the typical and spiritual nature of the Old Law. The "Catechesis" and the "Penta pteuch" are of the same nature. Long explanations of Isaias and of the minor Prophets give a mystical interpretation after the Alexandrine manner. Only fragments are extant of other works on the Old Testament, as well as of expositions of Matthew, Luke, and some of the Epistles, but of that of St. Luke much is preserved in a Syriac version. Of St. Cyril's sermons and letters the most interesting are those which concern the Nestorian controversy. Of a great apologetic work in twenty books against Julian the Apostate ten books remain. Among his theological treatises are "On the three persons of the Holy Trinity, and a number of treatises and tracts belonging to the Nestorian controversy."

The first collected edition of St. Cyril's works was by J. Aubert, 7 vols., Paris, 1638; several earlier editions of some portions in Latin only are enumerated by Fabricius. Cardinal Mai added more material in the second and third volumes of his "Bibliotheca nova Patrum", II-III, 1852; this is incorporated, together with much matter from the Catena published by Ghislerius (1633), Corderius, Passius, and Cramer (1838). In Migne's reprint of Aubert's edition (P. G., LXVIII-LXXVII, Paris, 1864), he gives an index of Cyril. His works include P. E. Pusey, "Cyrilli Alex. Epistolae tres oeconomiae, libri V. et. Nestorianum, XII capitum explantum, XII capitum defensioni utrque, scholia de Incarnatione Unigeniti" (Oxford, 1875); "De recte fide ad Imp., de Incarnatione Unig. dialogus, de recte fide ad principissas, de recte fide ad Augustas, quod et de Christus dieresis" (Comm. Oxon, 1877); "Cyrilli Alex. in XII Propheta" (Oxford, 1862, 8 vols.); "In divi Joannis Evangelium" (Oxford, 1872, 3 vols., including the fragments on the Epistles). "Three Epistles, with revised text and English translation" (Oxford, 1872); translations in the "Oxford Library of the Fathers", "Comm. on John" (Oxford, 1874), II (1875); "Five tomes against Nestorius" (1881); R. Payne Smith, "S. Cyrilii Alex.

JOHN CHAPMAN.

Cyril of Barcelona. See Sieni, Cyril.

Cyril of Constantinople. Saint, General of the Carmelites, d. about 1233. All that is known is that he was prior of Mount Carmel, some say for twenty-seven years. He died in 1233, and was declared a saint and a doctor of the Church in 1308. It is of pseudo-prophecies, given out towards the end of the thirteenth century by the Franciscan Spirituals, and attributed to St. Cyril of Jerusalem, became known to Guido de Perpinan and other Carmelites at Mount Carmel, who ascribed it to their former general, not as a prophecy but as a treatise, as a treatise, a treatise of the Holy Ghost. The prophecy or angelic oracle "Divinum oraculum S. Cyrilou Carmelitam Constantinopolitanos sollemni legatione angelii missum" (ed. Philippus a SS. Trinitate, Lyons, 1663), so-called because it is supposed to have been brought by an angel while Cyril was saying Mass, is a lengthy document of eleven chapters in incomprehensible language, with a commentary falsely ascribed to Abbot Joschim. It is first mentioned by Arnold of Villanova, c. 1296; Telesphorus of Cosmas applied it to the Western Schism and treated it as an utterance of the Holy Ghost. Another writing wrongly attributed to Cyril is "De processu sui Ordinis," by a contemporary, probably a French author; edited by Daniel a Virgine Marii in "Speculum Carmelitum" (Antwerp, 1689), i. 75.

Cyril of Jerusalem. Saint, Bishop of Jerusalem and Doctor of the Church, b. about 315; d. probably 18 March, 386. In the East his feast is observed on 18th of March, in the West on the 18th or 20th. Little is known of his life. We gather information concerning him from his younger contemporaries, Epiphanius, Jerome, and Rufinus, as well as from the fifth-century historians, Socrates, Sozomen, and Theodoret. Cyril himself gives us the date of his "Catecheses" as fully seventy years after the Emperor Probus, that is about 347, if he is exact. Constanus (d. 350) was then still alive. Made them think that Cyril was already bishop, but it is usually held that he was at this time only a presbyter. St. Jerome relates (Chron. ad ann. 352) that St. Cyril had been ordained priest by St. Maximus, his predecessor, after whose death the episcopate was promised to Cyril by the metropolitan, Accacius of Cesarea, and the other Arian bishops, on condition that he should repudiate the ordinances he had received from Maximus. He consented to minister as deacon only, and was rewarded for this impurity with the see. Maximus had consecrated Heraclius to succeed himself, but Cyril, by various frauds, degraded Heraclius to the priesthood. So says St. Jerome; but Socrates relates that Accacius drove out St. Maximus and substituted St. Cyril. A quarrel soon broke out between Cyril and Accacius, and appears on a question of precedence or jurisdiction. At Nicaea the metropolitan rights of Cesarea had been guarded, while a special dignity had been granted to Jerusalem. Yet St. Maximus had held the episcopal title himself, and it seems to have been as much the cause of Accacius' enmity to him as his attachment to the Nicene formula. On the other hand, Cyril's correct Chriolology may have been the real though veiled ground of the hostility of Accacius to him. At all events, in 357 Accacius caused Cyril to be exiled until the death of the church furniture during a famine. Cyril took refuge with Silvanus, Bishop of Tarsus. He appeared at the Council of Seleucia in 359, in which the Semi-Oriental party was triumphant. Accacius was deposed and St. Cyril seems to have returned to his see. But the exarch was displeased at the turn of events, and, in 360, Cyril and other bishops were deprived of the see and only returned at the accession of Julian in 361. In 367 a decree of Valens banished all the bishops who had been restored by Julian, and Cyril remained in exile until the death of the persecutor in 373. In 380, St. Gregory of Nyssa came to Jerusalem on the recommendation of a council held at Antioch in the preceding year. He found the Faith in accord with the truth, but the city a prey to parties and corrupt in morals. St. Cyril attended the great Council of Constantinople in 381, at which Theodosius had ordered the Nicene faith, now a law of the empire, to be proclaimed. St. Cyril was implicated in the so-called discussion; Socrates and Sozomen call this an act of repentance. Socrates gives 385 for St. Cyril's death, but St. Jerome tells us that St. Cyril lived eight years under Theodosius, that is, from January, 379.

WARTINGS. — The extant works of St. Cyril of Jerusalem include a sermon on the Pool of Bethesda, as letter to the Emperor Constantius, three small fragmente, and the famous "Catecheses." The letter describes a wonderful cross of light, extending from Calvary to the Mount of Olives, which appeared in the air on the ones of May, after Pentecost, towards the beginning of the saint's episcopal. The catechetical lectures are among the most precious remains of Christian antiquity. They include an introductory address, eighteen instructions delivered in Lent to those who were preparing for baptism, and five "mystagogical" instructions given during Easter week to the same persons after their baptism. They contain interesting local references as to the landscape of the Cross, the position of Calvary in relation to the walls, to other holy places, and to the great basilica built by Constantine in which these conferences were delivered. They seem to have been spoken extempore, and written afterwards. The style is admirably clear, dignified, and logical, but the words are so full of piety. The subject is thus divided: 1. Hortatory. 2. On sin, and confidence in God's pardon. 3. On
baptism, how the water receives the power of sanctifying: as it cleanses the body, so the Spirit seals the soul from its condemnation and the decree of the faith. It is the nature of faith. 6-18. On the Creed: 6. On the monarchy of God, and the various heresies which deny it. 7. On the Father. 8. His omnipotence. 9. The Creator. 10. On the Lord Jesus Christ. 11. His Eternal Sonship. 12. His virgin birth. 13. His Passion. 14. His Resurrection and ascension. 15. His second coming. 16-17. On the Holy Ghost. 18. On the resurrection of the body and the Catholic Church. The first mystical catechism explains the renunciation of Satan, etc. which preceded baptism; the second is on the effects of baptism, the third on confirmation, the fourth on Holy Communion, and the fifth on the holy Mass for the living and the dead. The hearers are told to observe the disciplina aarcani; Rom. they must repeat nothing to heathens and catechumens; the book also has a note to the same effect.

A few points may be noted. The mystical origin of the Septuagint is told, and the story of the phoenix, so popular from Clement onwards. The description of Mass speaks of the mystical washing of the priest’s hands, the kiss of peace, the “Sursum Corda,” etc., and the Preface with its mention of the angels, the Sanctus, the Epiclesis, the transmutation of the elements by the Holy Ghost, the prayer for the whole Church, the prayer for the spirits of the departed, followed by the Paternoster, which is briefly explained. Then come the “Sancta sanctis” and the Communion. “Approaching, do not come with thy palms stretched flat nor with fingers separated. But making thy left hand a seat for thy right, and hollowing thy palm, receive the Body of Christ, responding Amen. And having with care hallowed thine eyes by the touch of the Holy Body, take it, vigilant lest thou drop any of it. For shouldst thou lose any of it, it is as though thou wast deprived of a member of thy own body.” “Then after Communion of the Body of Christ, approach the Chalice of His Blood, not extending thy hands, but bending low, and with adoration and reverence saying Amen, sanctify thyself by receiving also the Blood of Christ. And while thy lips are yet wet, touch them with thy hands, and sanctify thy eyes and thy forehead and thy other senses” (Cat. Myst., v. 22, 21-22). We are to make the sign of the cross when we drink, sit, get up, walk, in short, in every action (Cat. iv. 14). Again: “if thou should be in foreign cities, do not simply ask where is the church (εν διαβόλη), for the heresi of the impious to call to their caves επίθετο, nor simply where is the Church (εν διαβόλη), but where is the Church (εν διαβόλη), for this is the proper name of this holy Mother of all” (Cat. xviii. 26).

Doctrine.—St. Cyril’s doctrine is expressed in his creed, which seems to have run thus: “I believe in one God, the Father Almighty, Creator of Heaven and earth and of all things visible and invisible. And in one Lord Jesus Christ, the Son begotten of the Father true God before all ages, God of God, Life of Life, Light of Light, by Whom all things were made. Who for us men and for our salvation came down, and was incarnate by the Holy Ghost and the Virgin Mary, and was made man. He was crucified . . . and buried. He rose again on the third day according to the Scriptures, and sat at the right hand of the Father. And He came in glory to judge the living and the dead, whose kingdom shall have no end. And in one Holy Ghost, the Paraclete, Who spake by the prophets; and in one baptism of repentance for the remission of sins, and in one holy Catholic Church, and in the communion of the Lord’s body and the blood of the Lord lasting.” The italicized words are uncertain. St. Cyril teaches the Divinity of the Son with perfect plausibility, but avoids the word “consubstantial,” which he probably thought liable to misinterpretation. He never mentions Arianism, though he denounces the Arian formula, “There was a time when the Son was not.” He belonged to the Semi-arian school, and was obliged to deny that the Son is “in all things like the Father.” He communicated freely with bishops such as Basil of Ancyra and Eustathius of Sebaste. He not only does not explain that the Holy Trinity has one Godhead, but he does not even say the Three Persons are one God. The conception of the Holy Ghost is not even defined by him. 

There is one God, the Father of Christ, and one Lord Jesus Christ, the only-begotten Son of the only God, and one Holy Ghost, Who sanctifies and deifies all things” (Cat. iv. 16). But he rightly says: “We do not divide the Holy Trinity as some do, neither do we believe in a melting of the Son, as Peter and St. Paul seemed to teach. For though Cyril, iv. 4. Cyril never actually calls the Holy Ghost God, but He is to be honoured together with the Father and the Son (Cat. iv. 16). There is therefore nothing incorrect in his doctrine, only the explicit use of the Nicene formule is wanting, and these, like St. Meletius and others of his party, he fully accepted at a later date. St. Cyril’s teaching about the Blessed Sacrament is of the first importance, for he was speaking freely, untrammeled by the “discipline of the secret.” On the Real Presence he is unambiguous: “Since He Himself has declared and said of the bread: This is My Body, who shall dare to doubt any more? And when He says: My Blood, who shall hesitate and say it is not His Blood?” Of the Transformation, he argues, if Christ could change water into wine, can He not change wine into His own Blood? The bread and wine are symbols: “In the type of bread is given thee the Body, in the type of wine the Blood is given thee”; but they do not remain in their original condition, they have been changed, though the senses cannot tell us this: “Do not think it mere bread and wine, for it is the Body and Blood of Christ, according to the Lord’s declaration”.

“Having learned this and being assured of it, that what appears to be bread is not bread, though perceived by the taste, but the Body of Christ, and what appears to be wine is not wine, though the taste says so, but the Blood of Christ. . . strength my heart, partaking of it as spiritual (food), and rejoice the face of thy soul.” It is difficult not to see the whole doctrine of Transubstantiation in these explicit words. The conclusion of his treatise is, after the invocatio of the Eucharist after the invocation of the Holy Ghost is not bread, but the Body of Christ, so this holy myrrh is no longer simple, as one might say, after the invocation, but a gift of Christ and capable by the presence of the Holy Ghost of giving His Divinity” (ii. 4). St. Cyril went to Rome, the heads (πρωτορχεία) of the Church. Peter is διακόνιον καὶ εἰρημένος τῶν ἀντοίχων. The Faith is to be proved out of Holy Scripture. St. Cyril, as the Greek Fathers generally, gives the Hebrew canon of the Old Testament omitting the deuterocanonical books. But yet he often quotes them as Scripture. In the New Testament he does not acknowledge the Apocalypse.

There have been many editions of St. Cyril’s works:—(Vienne, 1560; G. Morel (Paris, 1564); J. Prévost (Paris, 1608); T. Milles (London, 1703); the Benedictine edition of Dom Toutain (Paris, 1720); reprinted at Venice, 1763); a new edition from Mss. by G. C. Reichel, Svo (Munch, 1848; 2nd vol. by J. Rupp, 1800); Migne gives the Bened. ed. in P. G. XXXIII; Photius Alexandriae (2 vols., Jerusalem, 1687-8); Eng. tr. in Library of the Fathers (Oxford). Leclercq, Mémoires pour servir a l’édition de ses œuvres, p. xxiv., his edition, and Reichel: Acta SS., March, III: Delacroy, Saint-Cyrille de Jerusalem (Paris, 1865); Mader, Der hl. Cyril, Bischof von Jerusalem (Einsiedeln, 1900).

Cyrillic Prophecy. See Cyril of Constantinople.
Cyrhus, a titular see of Syria. The city of the same name was the capital of the extensive district of Cyrrhetica, between the plain of Antioch and Comagene. The origin of the city is unknown; according to a false tradition, it was said in the sixth century to have been founded by Cyrus, King of Persia; this, however, was only a play upon the name. It became at an early date a suffragan of Hierapolis in Provincia Euphratensis. Eight bishops are known before 536 (Lequien, I, 299; E. W. Brooks, The Sixth Book of the Select Letters of Severus, I, 341). The first was present at Nicæa. The most celebrated is Theodoret (423–58), a prolific writer, well known for his rôle in the history of Nestorianism and Eutychianism. (His works are in Migne, P. G., LXXX–LXXXIV.) He tells us that his small diocese (about forty miles square) contained 800 churches, which supposes a very dense population.

At Cyrhus a magnificent basilica held the relics of SS. Cosmas and Damian, who had suffered martyrdom in the vicinity about 283, and whose bodies had been transported to the city, whence it was also called Hagiopolis. Many holy persons of later date, chiefly hermits, had been or were living in this territory. Among SS. Aec hipius, Zenas, Tawusius, Zebalus, Polycrheatius, Manon (the famous patron of the Monoclit Church), Eusebius Thallassinus, Marys, James the Wonder-worker, and others. Theodoret devoted an entire work to the illustration of their virtues and miracles. The city was embellished and fortified by Justinian. At the same time it became an independent metropolis, subject directly to Antioch. The patriarch, Michael the Syrian, names thirteen Jacobite bishops of Cyrhus from the ninth to the eleventh century (Revue de l'orient chrétien, 1901, p. 194). Only two Latin titularies are quoted by Lequien (I, 1195). The site of the city is marked by the ruins at Khoros, nine miles north west of Kilis, in the vilayet of Aleppo; these ruins stand near the river Afrin Marsyas, a tributary of the Orontes), which had been banked up by the aforesaid Theodoret.

TEILHARD, MÉMOIRES, XV, 217–229.

S. Valliéf.

**Cyrus and John, Saints, celebrated martyrs of the Coptic Church, surname θανατουργὸς ἀγαθοὶ because they healed the sick gratis (Nilles, Kalenderium utriusque Ecclesie, Innsbruck, 1886, I, 89). Their first day is celebrated by the Copts on 28 June (see "Menæa," II, 15). The sixth day, corresponding to 31 January, the day also observed by the Greeks; on the same day they are commemorated in the Roman Martyrology, regarding which see the observation of Cardinal Baroni (Martyrologium Romanum, Venice, 1586). The Greeks celebrate also the finding and translation of the relics on 28 June (see "Menæa," II, 15; and "Menæa"). The principal source of information regarding the life, passion, and miracles of St. John and Cyrus is the encomium written by Sophronius, Patriarch of Jerusalem (d. 638). Of the birth, parents, and first years of the saints we know nothing. According to the Arab and Coptic Annals, "Aburjîn" (see "Menæa"). Sophronius, Beirut, 1906, II, 252), compiled by Michael, Bishop of Athrib and Malig, Cyrus and John were both Alexandrians; this, however, is contradicted by other documents in which it is said that Cyrus was a native of Alexandria and John of Edessa. Cyrus practiced the art of medicine, and had a wealth shop (ergasterium) which was afterwards transformed into a temple dedicated to the three boy-saints, Ananias, Misa, and Asarias. He ministered to the sick gratis and at the same time labored with all the ardor of an apostle of the Faith, and won many from pagan superstition. This took place under the Emperor Diocletian. Denounced to the prefect of the city he fled to Arabia of Egypt where he took refuge in a town near the sea called Tzotén. There, having shaved his head and assumed the monastic habit, he abandoned medicine and began a life of asceticism.

John belonged to the army, in which he held a high rank; the "Synaxarium" cited above adds that he was one of the few of the emperor. Hearing of the virtues and wonders of Cyrus, he betook himself to Jerusalem in fulfillment of a vow, and thence passed into Egypt where he became the companion of St. Cyril in the ascetic life. During the persecution of Diocletian three holy virgins, Theoctista (Theopista), fifteen years old, Theodota (Theodoto), thirteen years old, and Theodosia (Theodotia), eleven years old, together with their mother Athanasia, were arrested at Canopus and brought to Alexandria. Cyrus and John, fearing lest these girls, on account of their tender age, might, in the midst of tortures, deny the Faith, resolved to go into the city to comfort them and encourage them in undergoing martyrdom. This fact becoming known they also were arrested and after dire torments they were all beheaded on the 31st of January.

The bodies of the two martyrs were placed in the church of St. Mark the Evangelist where they remained up to the time of St. Cyril, Patriarch of Alexandria (412–444). At Mounch (or Menou) near Canopus, or, as it is said, at that time a pagan temple reputed for its oracles and cures which attracted even some simple Christians of the vicinity. St. Cyril thought to extirpate this idolatrous cult by establishing in that town the cultus of Sts. Cyril and John. For this purpose he transferred thither their relics (28 June, 414) and placed them in the church built by his predecessor, Theophilus, in honour of the Evangelists. Before the finding and transfer of the relics by St. Cyril it seems that the names of the two saints were unknown; certain it is that no written records of them existed (Migne, P. G., LXXII, 3505 sq.). In the fifth century, during the pontificate of Innocent I, their relics were brought to Rome by two monks, Grimaldus and Arnulfus—this according to a manuscript in the archives of the deaconry of Santa Maria in the Via Lata, cited by Antonio Bosio (Roma Sotterranea, Rome, 1834, p. 123). Mai, however, for historical reasons, justly assigns a later date, namely 634, under Pope Honorius and the Emperor Heracleus (Spicilegium Rom., III, V). The relics were placed in the suburb church of St. Passera (Abbas Cyrus) on the Via Portuense. In the time of Bosio the pictures of the two saints were still venerated (ib., cit., ib.). Upon the door of the hypogeum, which still remains, is the following inscription in marble:—

Corpora sancta Cyri renitenic bia atque Joannis
Quae quondam Rome dedict Alexandria magna

(Bosio, ib.; Mai, Spic. Rom., loc. cit.). At Rome three churches were dedicated to these martyrs, Abbas Cyrus de Militibus, Abbas Cyrus de Valerius, and Abbas Cyrus ad Elephantum—all of which were transformed afterwards by the vulgar pronunciation into S. Passera, a corruption of Abbas Cyrus; in the Coptic Diffnín, Apakir, Apakyri, Apakyri; in Arabic, Tassur. The first church is S. Joannis, Rome, 1891, 179 sq., 563 sq., 681, 945 sq.).

P. J. BALESTRE.

**Cyrus of Alexandria**, a Melchite patriarch of that see in the seventh century, and one of the authors of Monothelitism; d. about 641. He had been since 620 Bishop of Phasis, in Colchis, when the Emperor
Cyzicus, in the course of his Persian campaign (626), consulted him about a plan for bringing the Monophysites of Egypt back to the Church and to the support of the empire. The plan, suggested by Sergius, Patriarch of Constantinople, consisted of confessing the faith of Chalcedon on the two natures of Christ, while practically nullifying it by the admission of one throne of will and operation, εὐθεία καὶ μία ἐνέργεια. Cyrus hesitated at first, but being assured by Sergius that this formula was opposed to neither the Fathers nor Chalcedon and was destined to achieve great results, he became a staunch supporter of it, and was, in return, raised by Heraclius to the then vacant see of Alexandria. Once a patriarch, he set himself vigorously to effect the desired union. In a synod held at Alexandria he proposed what is known as the παραφροσυα, or “Satisfactio”, an agreement in nine articles, the seventh of which is a bold assertion of the Monothel- ite heresy. The Monophysites (Theodossians or Severi- ianes) welcomed the agreement with, however, the remark that Chalcedon was coming to them, not they to Chalcedon. The union thus effected was adroitly exploited, with a view to win over Pope Honorius to Monothelism; otherwise it proved ineffectual, and soon fell into discredit under the name of the παραφροσυα, contemptuously called the “washy union”. Cyrus persevered none the less in his adhesion to the compromise, and even accepted the Ecstasy, a new imperial formulary of the same error (637). When Omar’s general, Amur, threatened the Prefecture of Egypt, Cyrus was made prefect and entrusted with the conduct of the war. Certain humiliating stipulations, to which he subscribed for the sake of peace, angered his imperial master. He was recalled and harshly accused of connivance with the Saracens; however, he was soon restored to his former authority, owing to the impending siege of Alexandria, but could not avert the fall of the great city (640) and died shortly after.

From Cyrus we have three letters to Sergius and the “Satisfactio”, all preserved in the acts of the Roman Synod of the Lateran and of the Sixth Ecumenical Council (Mansi, X, 1004; XI, 560, 562, 964). The first letter is an acceptance of the ecstasy of Cyrus, as Sergius describes his proposal between Pope Leo and Sergius; the conversion of the Theodossians is narrated in the third. The seventh article of the “Satisfactio”—the others are irrelevant—reads thus: “The one and same Christ, the Son, performs the works proper to God and to man by one and the same operation, and μετὰ της διαθήκης according to St. Dionysius”. Cyrus’ chief opponents, St. Sophronius, d. in 637 (Epistola synodica, Mansi, XI, 480), and St. Maximus, d. in 662 (Epistola ad Nicandrum; disputatio cum Pyrro, P. G., CXI, 101, 345), reproached him for falsifying the then much-projected text of Dionysius and substituting ὑπὲρ γεγονός (new). They showed, moreover, the inanity of his claim to the support of the Fathers, and explained how the Divine and human natures of Christ, sometimes styled one, because they belong to the same person and work in perfect harmony, can no more be physically identified than the natures from which they proceed. Historians are not agreed as to how Cyrus came by this error. Some think that he was, from the outset, a Monophysite at heart. Others, with more reason, hold that he was led into error by Sergius and Heraclius. Cyrus was con- demned as a heretic in the Lateran Council of 649 (Dei Gratia, c. 18; Procli, 219) and in 650 (synod 239 of the Third Ecumenical Council of Constantinople (Den- singer, 238; Mansi, XI, 554). (See MONOPHILITISM.)

J. F. SOLLIER.

Cyzicus, a titular see of Asia Minor, metropolis of the ancient ecclesiastical province of Hellepontus. The city was probably founded by Pelasgians from Theasaly; later it received many colonies from Miletos, but its importance began only after the Peloponnesian war, when the decay of Athens and Miletus set in. Alcibiades defeated the Siphnians there (410 B.C.). Alexander captured it from the Persians in 334 B.C.; and Mithridates besieged it with 300,000 men in 74 B.C., but it withstood him stoutly, and the year following was delivered by Lucullus. The Romans favoured it and recognised its municipal inde- pendence. Cyrus was a Greek city, and江北 Mysia as far as Trasos. Under Tiberius it was incor- porated with the empire, but remained the capital of Mysia, afterwards of Hellepontus, and became one of the greatest cities in the world. The era of its Olym- piads was reckoned from A.D. 135 or 139. Its peculiar coins were the Cyrus, 20 obol. 22 drachmas, i.e. nearly five dollars a second in value. The city was captured by the Arabes in 675, and ruined by earthquakes in 443 and 1045; it began to be de- erected as early as the eleventh century. Its site is to- day marked by a huge heap of ruins amid the marshes of the Melesus, near the town of Erdek, vilage of Brusa. The walls, dating from the fourth century, are barely preserved; there are also the ruins of a Roman aqueduct and a theatre. The amphitheatre, built in the third century B.C., was one of the largest in the world; its diameter was nearly 500 feet. Colossal founda- tions of a temple dedicated to Hadrian are still vis- ible; the columns were 21.26 metres high (about 70 feet), while the highest known elsewhere, those at Baalbek in Syria, are only 19.35 metres (about 63 feet).

The monuments of Cyrus were used by Justinian as a quarry for the building of Saint Sophia, and are still exploited by the natives.

As ecclesiastical metropolis of Hellepontus, Cyrus had a catalogue of bishops beginning with the first century; Lequien (I, 747) mentions fifty-nine. A more complete list is found in Nicodemos, in the Greek “Office of St. Emilian” (Constantinople, 1876), 34-36, which has eighty-five names. We may men- tion the famous Ariusian Eunapius; St. John Chrysostom, St. Proclus and St. Germanus, who became Patriarchs of Constantinople; and St. Emilian, a martyr in the eighth century. Gelasius, an historian of Arianism, who wrote about 475, was born at Cyzicus. Lequien (III, 941) mentions a Latin bishop in 1477. Cyzicus was a metropolis of the Dardanelles, a metropoli- tan residing at Artake (Erdek), a little port on the western shore of the peninsula. Opposite to Artake is another port, Peramos (Perama), where an Assump- tionist Father has founded a Greek parish. At Pan- moros (Panderma), another more important port nine miles south-east of the ruins of Cyzicus (15,000 inhab- itants), there is a Catholic Archbishopric.

S. VALLÉE.

Czech Literature.—The Czech or Bohemian lan- guage is spoken by that branch of the Indo-European family, who settled in Moravia, Bohemia, and parts of Austria and Silesia, about the fifth century after Christ. It is closely allied to the Russian, Polish, Bulgarian, and other Slav languages having a common origin. The evolution of Czech literature dates back to 863, when Moravia and Bohemia, through the efforts of St. Cyril and Methodius, the two of these two countries, were converted to Christianity and thus became participants in the
great work of civilization. Of all Slav literature, with the exception of the Bulgarian, the Czech is the oldest and, until the seventeenth century, was also the richest. It may be divided into four periods.

First Period.—This era extended from the Christianization of Bohemia to the appearance in public of John Hus, in the year 1404. It may be called the childhood of Czech literature and is characterized by fruitlessness in the production of pagan times. There were many things, however, to concern the Slavonic rector, though it is certain that the Bohemians used certain crude characters or letters commonly called the runic. St. Cyril, using the Greek characters as a basis, designed a special Slav alphabet with new marks indicating soft sounds. At the same time he introduced a Slavonic Liturgy and translated part of the Bible. The liturgy, however, was soon superseded by the Latin, written in the Latin language with Roman letters. This was brought about chiefly by the German bishops, who, it is said, feared that this Slavonic Liturgy might finally lead to schism. The Slavonic Liturgy survived longest (until 1556) in the Abbey of Sazava. To re-establish it Emperor Charles I founded an abbey at Prague commonly called “Na Slovanec,” or at the present time Emmaus, inducing Slav Benedictine monks from Croatia to settle there. The monks, however, were scattered during the Hussite war and did not take part of the famous “Reims Gospel!”, that is, claimed dates from the eleventh or twelfth century. The newer part was written at Emmaus in 1305, and is the only relic of Old Slavonic extant. This Gospel was carried away by the Hussites, was taken as far as Turky, and thence to Reims, where it was used by the French kings when pronouncing the coronation oath. Of the oldest period, that is from the tenth to the twelfth century, only a few manuscripts have been preserved, among them two fragments of liturgical translations written in the Glagolitic or Old Slavonic alphabet. The most precious relic of this period is the hymn “Hospodine, pohiluj ty!” a paraphrase of the Kyrie Eleison, which, with its deep choral melody, is very impressive. It is surpassed only by the beautiful song in honour of St. Wenceslaus.

A marked improvement in Czech literature began in the year 1250. The Western lands gave birth to many new ideas, and new spirit and splendour of tournaments, the pomp of feasts, and the grandeur of knighthood took the fancy of the age, while the Crusades widened the people’s knowledge of other countries and customs. The troubadours of France and the minnesingers of Germany went from court to court, confirming here and there, the spirit of knighthood. Tendencies of this kind found favour also in Bohemia, and because of their origin in Latin or Roman lands, literature of this period is commonly called romance. The deeds and adventures of the knights were exalted in song and poem after foreign models; the best of these are “Alexandreis,” written by an unknown author. The books of literature in the almost faultless form and elegant diction. Another effect of the Crusades was the extraordinary revival of religious faith among the people, which gave rise to a new class of literature, to legends and to mystery or spiritual plays. In prose were written spiritual romances, legends, and passions depicting the passion of Our Lord and of the martyrs. The Crusades further enkindled in the hearts of many a desire to see and know new lands and new peoples. This led to works on travel, geography, etc. in great numbers. The veneration of the Blessed Mother developed rapidly and fostered a deep respect for women and for the children. The founding of the University of Prague, in 1348, by Emperor Charles I was a mighty factor in the improvement of Bohemian literature in all branches. The moral condition of the Church at that time cannot be called exemplary. There existed certain disorders which called forth reformers, who honestly and sincerely worked for their elimination. Numbers of devotional and moral tracts were written, the best of which were by Tomáš Štýnny, who fearlessly assailed the abuses wherever he found them. Štýnny’s literary activity also made its influence felt in another line. Up to this time the Czech language had been regarded as unfit for scientific writing, the Latin being almost exclusively used here, as in many other countries, for speculations on theological and philosophical subjects. Štýnny, however, dispelled this illusion, by using the Czech language even in his scientific writings, and thus created a rich scientific vocabulary. The last of these literary reformers was John Hus. He, however, allowed himself to be led astray by the heresies of John Wyclif and thus become the cause of a bloody dissension and bloody war in his native country.

Second Period.—The appearance of John Hus in 1404 marks the second period of Czech literature. During this the Czech language passed from its old form to the medieval stage, and this epoch may be called the golden age of Bohemian literature. Devotional prose was in preponderance. The literary merit of John Hus consists in his establishing a discursive orthography, making the written language more simple and stable; but, on the other hand, his activity caused dissensions in the Church, which were based on blood and fire. The other outstanding Czechs of this period were Zdeněk and Jan Zedníček. These sad conditions improved only during the reign of George of Podiebrad (1458-71). The sect known as the Bohemian Brethren, founded in 1457, imparted a new character to Czech literature and produced many eminent writers. In religious meetings held in the fashion of the early Christians, spiritual reading, meditation, and religious songs formed the greater part of the services. The practice led to the publishing of a great number of devotional songs and hymns-books, and to the founding of printing establishments. Eight leading members of the Brethren translated from the original Hebrew and Greek the whole of the Bible, which is generally known as the Králíček Bible, from the town of Králíce in which it was printed. This translation is excellent and from a literary standpoint it must be called classical. The greatest writer of the Brethren was their last bishop, Jan Amos Komenský (Johann Amos, called Comenius), a pedagogue of renown, a new life of thought. "The World and the Heart’s Paradise"—the best devotional and philosophical work in medieval Bohemian literature—proves that all worldly glory, riches, and pleasures are vanities and that true happiness consists only in the possession of God and the fulfilling of His commandments.

Another important factor in Czech literature was Humanism. As early as the reign of George of Podiebrad (1458-71) many writers turned their attention to the old Roman and Greek literatures. They studied the classics, copied the elegancies of form, and drew upon the verbal riches, many even going so far as to use these works in their own. But the struggle, which preceded this period, obstacles stood in the way from the beginning. An article of Hussite dogma condemned the fostering of worldly sciences, and the members of the Bohemian Brethren subscribed to this opinion. For this reason Humanism was cultivated at first only by Catholics. Foremost in this movement must be mentioned the talented poet Bohuslav S Lobkovic and John Hůdějovský from Hůdějov, who, though not a writer, was a generous patron of literature. When Protestantism superseded Hussitism, John Blahoslav, a member of the Bohemian Brethren, wrote an elaborate defence of Humanism, and three religious books then began to circulate one another. In the fostered Brethren, Catholics, who had suffered greatly during the Hussite wars, the Bohemian Brethren, who at this time were at the zenith of their literary development, and the Protestants, who were growing in force. New schools were founded, of which those conducted by the
Brethren were foremost. These, however, were gradually superseded by the Jesuit schools. Humanism included revived classical studies, poetry, but was destructive of home, that is Czech, literature, in that Humanistic poetry was exclusively Latin. At the same time it must be acknowledged that through the influence of Humanism Bohemian prose vastly improved, culminating in the works of Daniel Adam of Velešín, who mostly wrote: "The Bohemian language, in its present high development, is elegant, rich, graceful, and sublime, and perfectly adapted to the setting forth of any topic, whether in theology or philosophy." This splendid development terminated suddenly in 1620, at the beginning of the era of decline.

Third Period: The Protestant nobility, refusing to recognize Emperor Ferdinand II, chose the Catholic Elector Frederick V as their king (1619). Th is rebellion was overthrown at the battle of the White Mountain, 8 Nov., 1620, and the Bohemian nation by the foolishness and stubbornness of its nobles was shorn of its independence. The victorious Ferdinand began to enforce the existing motto of the Reformation: "Cuius regio illius religio." Some of the leaders of rebellion were executed and their property confiscated, and others were warned either to adopt the Catholic religion or to leave the land. Many left Bohemia and their property was sold or given to German, Spanish, French, Italian, and Swiss. At every battle the White Mountain we meet but few writers. Most prominent amongst the Catholic writers of this day was Vilem Slavata of Chlum, who wrote a large history in refutation of that of Skala of Zhouf which unduly favoured Protestantism. After the Thirty Years War, however, all literary activity ceased. During the whole of the seventeenth century there was not published a single original work of merit. In the eighteenth century works were written in Latin and German. The German language gradually took the place of the Bohemian, and when, in 1774, Emperor Joseph II excluded the schools and from all public offices, it looked as if the Bohemian language was condemned to a gradual but sure death. But just here came a sudden change for the better, and 1780 marks the beginning of the modern period of Bohemian literature.

Fourth Period.—A handful of patriotic priests and teachers took up the heroic task of awakening the nation. During the Age of Enlightenment Bohemian literature grew to such proportions in all its branches that to-day it may well compare with the literature of other nations. Foremost among the pioneers of this era of resurrection must be mentioned Josef Dobrovský, a Jesuit, and Prof. Josef Jungmann. 

Novels and Romances.—Josef Ehrenberger, Cath olic priest (1815–1882); Prokop Chocholoušek (1819–1884); František Právda, Catholic priest (1817–1904); Fr. Rubčík (1814–1852); Karolina Srávčíková, a poet, (1853–1891); Jan Neruda (1820–1862); Václav Vlček (1839); Jakub Arbes (1840); Václav Benešě Třebíčský, Catholic priest (1840–1884); Servác Heller (1845); Ignat Herman (1854); Alois Jírůsek (1851); Karel Klostermann (1848); Václav Kosmáč, Catholic priest (1853–1898); Václav Krčkovský, Ph.D. (1861); Antal Stašek (1843); Alois Smířský (1837–1883). Třebíčský and Jírůsek are the most famous novelists. The most prominent of the rising generation are: Bohumil Brodský, Catholic priest (1862); Jan Havla (1885); Karel Raiss (1859); Matěj Simábek (1880); Alois Dostál, Catholic priest (1858).

Drama.—Václav Fragner (1792–1859); Josef Tyl (1808–1856); Fr. Jeřábek (1836–1893); Josef Kolár (1812–1896); Emanuel Boždík (1841–1889); Fr. Stroupečník (1850–1892); Jos. Stolba, LL.D. (1849). The best dramatists are Boždík and Stroupečník.

Of all the branches of scientific Bohemian literature the theological is the richest. The leading writers are:  

Oriental Languages.—Fr. Ryslink, S.T.D. 

Hagiography.—František Eckert; Hugo Karlik. 

Church History.—Fr. Krášel, S.T.D. (1844); Fr. Krystufek, S.T.D.; Josef Svoboda, S.J. (1826–1896). The leading theological writers (1908) are: 

Law.—Albin Bráf, LL.D.; Antonín Randa, LL.D. 

Philosophy and Aesthetics.—Josef Durdlik, Ph.D.; Ottokar Hostinský, Ph.D.; Tomáš Masařík, Ph.D. 

Higher Mathematics.—Dr. Fr. Studnička; Václav Smerka; Brothers Eckert and Eduard Weyer. 

Medicine.—Jan Purkyně, M.D. (1784–1869); Boh. Eiselt, M.D.; Emerich Maixner, M.D.; Josef Thomaíer, M.D. 

Natural Science.—Karel Ameling, M.D. (1807–1844); Jan Presl, M.D. (1791–1849); Jan Krejčí, M.D.; Vladislav Sr., M.D. 

Astronomy.—Karel Zenger (1830–1908). 

Travel.—Emil Holub, M.D. (1807–1884); Stanislav Vráž (1859). 

History.—František Palacký (1798–1870). He wrote a history of the Bohemian people in eleven volumes from the earliest times down to the year 1526; Václav Vlček. 

Archaeology.—Jan Erasim Vosl (1802–1871); Pavel Šafařík (1796–1861).
D'Abbadie, Antoine. See Abbade, Antoine d'.

Dablon, Claude, Jesuit missionary, b. at Dieppe, France, in February, 1618; d. at Quebec, 3 May, 1697. At the age of twenty-one he entered the Society of Jesus, and after his course of studies and teaching in France, arrived in Canada in 1655. He was at one time deputed by Father Charles de Chaminay to begin a central mission among the Iroquois at Onondaga. The diary he kept of this journey and of his return to Quebec in the year following gives a graphic account of the terrifying conditions under which these journeys were made. In 1661 he accompanied Druielles, the Apostle of Maine, on an expedition overland to Hudson Bay, the purpose of which was to establish missions among the Indians in that region and perchance to discover an outlet through Hudson Bay to the China Sea. The expedition was unsuccessful and is only chronicled as another abortive attempt to find the famous North-West Passage. In 1668 Dablon was on Lake Superior with Allouez and Marquette, forming with them what Bancroft calls the "illustrious triumvirate" and he was the first to inform the world of the rich copper mines of that region, so valuable to the commerce of to-day. It was Dablon who appointed Marquette to undertake the expedition which resulted in the discovery of the Upper Mississippi; he also gave Marquette's letters and charts to the world. In connexion with this discovery he called attention to the feasibility of passing from Lake Erie to Florida "by cutting a canal through only half a league of prairie to pass from the end of the Lake of Michigan to the River of St. Louis" (the Illinois). This canal, projected by Dablon 233 years ago, was the subject of a special message from the Governor of Illinois to the State Legislature in March, 1907. After founding Sault Ste. Marie, Dablon became, in 1670, Superior General of all the Canadian Missions, retaining that office until 1680. He was reappointed in 1686 and remained superior until 1693. His contributions to the "Relations" possess the highest value, his descriptions of places and people and his narration of events being singularly clear and comprehensive.

Dacca, Diocese of (Dacchenis), in Bengal, India. By the Constitution "Egregium reputatum" Paul III established in 1534 the See of Goa, conferring upon it spiritual jurisdiction over all the Portuguese possessions from the Cape of Good Hope to China. Early in the sixteenth century the Portuguese found their way into Eastern Bengal, and the Burman and native Christian communities that grew up around the several settlements were, in virtue of the apostolic Constitution, subject to the ecclesiastical authority of Goa, and later (1606) to the See of Mylapore, suffragan to Goa. When the political power of Portugal was replaced by British rule in India, the Bishop of Mylapore still retained jurisdiction over the Church in Bengal, and seven thousand out of the twenty-two thousand Catholics within the territory of the Diocese of Dacca are still subject to him. In the interest of more effective missionary work, Propaganda, 18 April, 1834, appointed Robert of St. Ledger, a priest of the Society of Jesus, Vicar Apostolic of Calcutta and the territory under its political jurisdiction, which at the time included the entire province of Bengal. In 1850, at the instance of Archbishop Carew, Vicar Apostolic of Bengal, Pius IX divided the province into two vicariates Apostolic, one of Eastern, the other of Western Bengal. A subsequent subdivision (1870) resulted in the establishment of a third allotment, the Vicariate of Central Bengal. The territory of the third vicar Apostolic was taken in part from the Eastern and in part from the Western vicariates.

On the creation of the hierarchy in India, Sept., 1888, the Eastern vicariate became the Diocese of Dacca, the district of Arakan (Burma) being substi-
tuted, and for that of Assam, the Vicariate Apostolic with Dacca City as centre, the diocese is bounded on the north by the Prefecture Apostolic of Assam, on the east by the Vicariates of Northern and Southern Burma, on the south by the Bay of Bengal, and on the west by the Bay of Bengal and the Diocese of Krishnagar. According to the latest Government survey the area thus enclosed measured fifty-nine thousand square miles, the population in the census of 1902 registered slightly above seventeen millions. The first occupant of the new see was Augustine Louage, a priest of the Congregation of the Holy Cross, who on his death in 1894 was succeeded by Bishop Hurth. Except for an intermission of twelve years (1876-1888) when the mission was in care of members of the Benedictine Order, religious of the Congregation of the Holy Cross have laboured in Eastern Bengal since 1855. Since 1888 the Institute of the Holy Cross has had from Rome exclusive charge of the mission. The nine "centres" into which the Diocese of Dacca is divided give opportunity to the twenty missionaries at work in it to carry on an active propaganda in outlying districts. In each centre there is a school, and in many of the dependent stations there is a catechumenate under the immediate superintendence of local catechists and the elders of the respective communities. In Dacca, Chittagong, and Akyab the mission conducts schools in which students, irrespective of religious profession, are prepared for "entrance" or collegiate work. The academy for girls in each of these cities is directed by a staff of 39 nuns, Daughters of Our Lady of the Missions (25), and the Sistren Catechists (12). The diocesan school attendance for 1907 numbered 1768 pupils.

The Church in the Diocese of Dacca experiences all the obstacles common to foreign missionary work the world over. Dacca City is three-fifths Mohammedan, and, among the Hindu half of lower Bengal the traditional caste will oppose, for some time at least, an effective barrier to the rapid spread of the Catholic Faith. As Dacca, however, is the college town of India, the percentage of students being relatively greater here than in any other city of the empire, Catholicism has continually brightening prospects opening before it, and around the central city of Dacca and the principal villages the influential Somaj of Dacca is one of the many present-day manifestations of the increasingly accurate appreciation of the part or function of reason in life. The widespread awakening of a critical rationalistic spirit, which has already questioned the feasibility of many caste observances, will eventually work harm to the

E. P. Spillane.
claimed Hinduism itself. All this augurs well for the cause of truth.

TAYLOR, Travels in India (1878); BERNER, Travels in Hindustan (1864); WILSON, Some Account of the City of Delhi (1859); HUNTER, Statistical Account of Bengal (1820); ANDERSON, Narrative of a Residence in British India (1850); numerous references in Journal of the Asiatic Society of Bengal, Calcutta Review, etc.

P. J. HURTH.

DACIER. ANDRÉ, a French philologist, b. at Castres, 6 April, 1651; d. 18 Sept., 1722. He was a Huguenot and studied under Tanneguy Lefèvre at Saumur. While visiting Paris he was presented to the Due de Montausse, who engaged him to edit Pompeius Festus in the collection of Latin authors Ad usum Delphini (Paris, 1681; Amsterdam, 1699). In 1683 he married Anne Lefèvre, the daughter of his former preceptor and, two years later he and his wife abjured Protestantism. At this time Dacier published a translation of the works of Horace and a commentary on them (Paris, 1681–89), the text being that of Tanneguy Lefèvre published at Saumur in 1671. The translation is quite accurate for the period, but the commentary is far too diffuse and is distinctly illustrative of the taste for allegory that persisted far into the seventeenth century. Dacier, Horace, and everything, and the commentator even discovered that the poet had read the books of Moses and followed the method of Solomon in the Book of Proverbs to inspire a horror of adultery. In Dacier, however, are also found good explanations and judicious observations. He was mainly a translator, and his work in this line included "Marcus Antoninus" (Paris, 1690); Aristotle’s "Poetics" (Paris, 1692); the "Echoes" and "Electra" of Sophocles (Paris, 1692); Plutarch’s "Lives" (five lives, Paris, 1694; complete, Paris, 1721; Amsterdam, 1723); Hippocrates (4 works, Paris, 1713); Plato (selecta; Paris, 1699); Pythagoras and Hippocrates (Paris, 1706) and Epicurus and Simplicius (Paris, 1715). He was appointed keeper of books in the king’s study and, in 1695 entered the Academy of Inscriptions and the French Academy of which he became the secretary.

ANNE Dacier (née Lefèvre), the wife of André Dacier, b. at Saumur in 1651; d. 17 April, 1720. She received the same instruction as her brother and at the age of twenty-three published an edition of fragments from the Alexandrian poet Callimachus (Paris, 1674). She divided her time between translations (Anacreon and Sappho, 1681; several plays by Plautus and Aeschylus that run 1684–94; Tassone’s "Lives" in her husband’s translation; "The Iliad", 1699; "The Odyssey", 1708) and the editions of the collection Ad usum Delphini (Florus, 1674; Diotys and Dares, 1684, and Aurelia Victor, 1681). She had a certain vigour that her husband lacked; "in intellectual pretensions common to both," says an epigram used by Boileau, "she is the father." In the notice on Dacier in the "Siècle de Louis XIV" Voltaire declares: "Madame Dacier is one of the prodigies of the century of Louis XIV." However, she was no bloostocking and refused to give her opinion in answer to the one agreeing with Sophocles that "silence is the ornament of women." She reared her three children admirably.

But Madame Dacier belongs to the history of French literature and, in a measure, to the history of ideas because of her participation in the dispute about the ancients and moderns. In 1699 Madame Dacier published a translation of "The Iliad" with a preface which was a reply to Homer’s critics. It was only in 1713 that Houdart de la Motte, a wit and unpoetic versifier, published a translation of "The Iliad" in verse. The poem was reduced to twelve cantos, all its so-called peculiarity was eliminated and it was re

futed this attack in "Les causes de la corruption du goût" (Paris, 1714). The dogmatic part of this work consists of an analysis of the "Dialogue on Orators" by Tacitus and Madame Dacier added clever remarks on the influence of climates. La Motte replied humorously and courteously in his "Réflexions sur la critique" (Paris, 1714). In 1716 the Jesuit Hardouin published an apology for Homer. It was a new system of interpreting "The Iliad" and Madame Dacier attacked it in "Homère défendu contre l’apollogie du P. Hardouin sur suite des causes de la corruption du goût" (Paris, 1716).

PAUL LEBAT.

Dagon, a Philistine deity. It is commonly admitted that the name Dagon is a diminutive form, hence a term of endearment, derived from the Semitic root dag, and means, accordingly, "little fish". The name, therefore, indicates a fish-shaped god. This idea is found in the Bible also supplemented by the subsequent worship of Dagon worshipped in the temple of Azotus (I K., v, 1–7); he had face and hands and a portion of his body resembled that of a fish, in accordance with the most probable interpretation of the "stump of Dagon" (verse 5). From the received text of the Septuagint it would seem that he possessed even feet, although Swete’s edition gives here a gloss that was suppressed. Since, in this sentence, in the Greek translation, shows all the appearances of a gloss. With the description found in the Bible coincides that which may be seen on the coins of various Philistine or Phoenician cities, on most of which Dagon is represented as a composite figure, human as to the upper part of the body, fish-like as to the lower. From this it may well be inferred that Dagon was a fish-god, a fact not in the least surprising, as he seems to have been the foremost deity of such maritime cities as Azotus, Gaza (the early sites of which are supposed to be buried under the sand-drifts of the Mediteranean), Ashdod, and Arvad. In the monuments—also most probably in the popular worship—Dagon is sometimes associated with a female half-fish deity, Derceto or Atargatis, often identified with Astarte.

A few scholars, however, wavering aside these evidences, consider Dagon as the god of agriculture. This opinion they rest on the following statement of Philon Byblius: "Dagon, that is corn" [the Hebrew word for corn is dagân]. "Dagon, after he had discovered corn and the plough, was called Zeus of the plough." (ii, 10). The same writer tells us (in Eusebius, Prep. Evang. i, 6) that according to an old Phoenician legend, Dagon was one of the four sons born of the marriage of Anu, the lord of heaven, with his sister, the earth. Moreover, on a seal bearing certain symbolic signs, among which is an ear of corn, but not, however, the image of a fish, may be read the name of Baal-Dagon, written in Phoenician characters. It is open to question whether these arguments outweigh those in favour of the other opinion; so much so that the etymology adopted by Philon Byblius might possibly be due to a misapprehension of the name. It should, perhaps, be admitted that, along the Mediterranean shore, a twofold conception and representation of Dagon were developed, as a result of the presumed twofold derivation of the
name. At any rate, all scholars agree that the name and worship of Dagon were imported from Babylonia. \ The Tell-el-Amarna letters (about 1480–1450 B.C.), which have yielded the names of Yamhr-Dagan and Dagan-takalkis, rulers of Ascalon, witness to the antecedents of the Dagon-worship among the inhabitants of Palestine. We learn from the Bible that the deity had temples at Gaza (Judges, xvi, 21, 23) and Asotus (I K., v, 1–7); we may presume that shrines existed likewise in other Philistine cities. The Dagon-worship seems even to have extended beyond the confines of their confederacy. The testimony of the monumental inscriptions of the Phoenician city of Arvad; moreover, the Book of Josue mentions two towns called Bethdagon, one in the territory of Judah (Jos., xvi, 41), and the other on the border of Aser (Jos., xix, 27); Josephus also speaks of a Dagon "beyond Jericho" (Antiq. Jud., XIII, viii, 1; De bell. Jud., I, i, 3); all these names are earlier than the Israelite conquest, and, unless we derive them from Dagon, witness to a wide dissemination of the worship of Dagon throughout Palestine. This worship was kept up, at least in certain Philistine cities, until the last centuries B.C. Such was the case at Asotus; the temple of Dagon that stood there was burned by Jonathan Maccabaeus (I Mac., iii, 84; xxvii, 27).

Unlike the Baals, who, among the Chanaanites, were essentially local deities, Dagon seems to have been considered by the Philistines as a national god (I Par., x, 10). To him they attributed their success in war; him they thanked by great sacrifices, before him they rejoiced over the capture of Samson (Judges, xvi, 23); into his temple they brought the trophies of their victories, the Ark (I K., v, 1, 2), the armur, and the head of Saul (I K., xxxi, 9, 10; I Par., x, 10). A bronze demi-relief of Assyro-Phoenician workmanship would also suggest that Dagon played a prominent part in their lives. As the deities of the chief gods of the world were more or less identified with the ritual of his worship, little can be gathered either from the documents or from Scripture. The elaborate arrangements for returning the Ark (I K., v, vi) may have been inspired more by the circumstances than by any ceremonies of the Dagon-worship. We only know from ancient writers that, for religious reasons, most of the Syrian peoples abstained from eating fish, a practice that one is naturally inclined to connect with the worship of a fish-god.

Charles L. Souvy.

Dagossseau (or d'Aguesseau), Henri-François, chancellor of France, b. at Limoges, 27 November, 1668; d. at Paris, 5 February, 1728. He belonged to a distinguished family which had produced many able magistrates, and was educated by his father, who was intendant of Languedoc and afterwards a councillor of state. Having been appointed advocate-general of the Parlement of Paris at the age of twenty-two, Du
gesseau performed the duties of his office in the most satisfactory manner for ten years, his speeches being models of elegant diction and clear reasoning. In 1700 he was promoted to the office of attorney-general. In this position he re-established order in the courts, reformed the management of the hospitals, prevented and corrected abuses. In 1700 war, famine, and public debt pressed upon the country, and all the energy, judgment and goodness of heart. He was con-

In 1717 the regent, the Duc d'Orléans, appointed Daguesseau chancellor, but before a year had elapsed, the seals were taken from him because he opposed the projects of the notorious John Law. In 1720, after the failure of Law's schemes, he was recalled to his former office. He repaired the mischief done during his tenure and by his firmness and prudence averted total bankruptcy. With a view to conciliating he finally consented to the registration of the Bull "Unigenitus." He was again disgraced in 1722, through the influence of Cardinal Dubois, and retired to his estate at Fresnes, where he passed five years. Here he wrote the Principal of the Scriptures in various languages, and the jurisprudence of his own and other countries were the principal objects of his study; the rest of his time he devoted to philosophy, literature, and gardening. Daguesseau was recalled to office in 1727. Chancellor now for the third time; he revived public respect for law, introduced several important enactments regarding donations, testam-

Dahomey, Vicariato Apostolico in West Africa, is territorially identical with the French colony of the same name. This colony has a coastline of about 75 miles on the Slave Coast of the Gulf of Guinea, whence it stretches northwards to the French Sudan; it is bounded on the east by the British territory of Lagos and the River Oepara, and on the west by the German Colony of Togo and the River Mono. Its area is es-

Jean Le Bars.

Dahomey is a little less than a half million. The chief exports of the colony are palm kernels and palm-oil. Its indigenous population is of the pure Negro stock, chiefly of the Fon subdivision of the Ewe family. About the year 1728 the territory now known as Dahomey was subject to three native dynasties, one of which at that date conquered the other two and set up its own despotism under the present territorial designation. This despotism, tem-

The Faith was first preached in Dahomey in the year 1660, when certain French residents introduced Franciscan missionaries. Against this Catholic enter-

In 1674 Father Gonsewe, a Dominican, with two companions, was poisoned; an Augustinian, who visited the coast in 1699, escaped death by flight. No further attempt to plant the Faith in Dahomey is recorded until 1860, when Fathers Borghero and Fernandez, of the then newly founded Lyons Society of African Missions, ar-
rived. Their institute has carried on the work ever since. The French Government, in 1864, obtained in behalf of the missionaries a large territorial concession at Porto Novo, where a flourishing station was soon established. The mission of Agno, now one of the most flourishing in the vicariate, began its existence in 1874.

The first erection of a Vicariate Apostolic of Dahomey was in 1860, when its jurisdiction was defined to include all the country between the Rivers Niger and Volta. In 1870, however, the title of this vicariate was changed to "The Benin Coast"; and in 1882 it was divided, the region west of the River Oepara being then erected into the Prefecture Apostolic of Dahomey, from which, again, the German territory of Ouidah was ecclesiastically separated in 1892, and the adjacent British possessions in 1894. By decree dated 22 April, 1901, this Prefecture of Dahomey was erected into the present Vicariate Apostolic of that name, which is thus seen to differ territorially from that erected in 1860.

The residence of the vicar Apostolic is at the coast town of Whydah, formerly the native capital and a notorious centre of Dahomeyan Fetishism. "Missions Catholique" (1907), the official triennial handbook of the Propaganda, gives the following statistics of Dahomey: Total Catholic population, 8900; number of Catholic families, 181; churches, 4; chapels, 11; total number of priests, 32; catechists, 15; houses of religious women (Sisters of the Queen of the Apostles), 4, with an aggregate of 20 religious: schools for boys, 13, with 1330 pupils; schools for girls, 4, with 1480 pupils.

**Dalberg, Adolphus von, Prince-Abbot of Fulda and founder of the university in the same city, b. 29 May, 1678; d. 3 November, 1737, at Hammelburg on the river Saale in Lower Franconia.** After holding the *office of provost* at Zeil in Hanover for some years he was made Prince-Abbot of the Benedictine monastery of Fulda in 1724. Though he was not a bishop, Dalberg had quasi-episcopal jurisdiction over the territory belonging to the abbey and held a diocesan synod in 1729. This privilege of quasi-episcopal jurisdiction was granted to the abbeys of Fulda by Pope Zachary in 746; it spared no pains in improving the Catholic educational facilities of Fulda. Its once famous school, which had suffered severely during the religious upheaval of the sixteenth century, had regained some of its ancient prestige by the united efforts of the Jesuits and Benedictines. Dalberg hoped to restore in all its splendour the ancient seat of learning which had made Fulda world-renowned during the Middle Ages. With this end in view he founded a university at Fulda which came to be known after his own name as the Alma Adolphina. The faculties of philosophy and theology he formed by uniting the two existing schools of the Jesuits and the Benedictines; for the new faculties of jurisprudence and medicine he engaged other professors. Pope Clement XII granted the charter of foundation on 1 July, 1732, and Emperor Charles VI, the charter of confirmation on 12 March, 1733. The solemn inauguration of the university took place on 19 September, 1733. The Adolphina was, however, not destined to be of long duration. After the suppression of the Jesuit Order by Pope Clement XIV in 1773 the university came entirely into the hands of the Benedictines, who were finally obliged to discontinue it in 1805, in consequence of the secularization of the Benedictine monastery in 1802.

**Dalgrains, John Dobree (in religion Father Bernard), b. in the island of Guernsey, 21 Oct., 1818; d. 6 April, 1876, at St. George’s Retreat, Burgess Hill, near Brighton, England. He matriculated at Exeter college, Oxford, 1836, and took a first class in the final examination; he was, however, an ardent follower of Newman, he had written (1838) to the Paris “Univers” a letter signed “jeune membre de l’Université”, on the Catholic movement then spreading in the English Church, which elicited a correspondence with Father Dominic the Passionist. In 1842 he joined Newman at Littlemore; while there he contributed several articles to the “British Critic” and wrote the Lives of St. Stephen Harding, St. Gilbert, St. Holier, St. Aedel, and others for the series of early English saints then being edited by Newman. The grasp of medieval history displayed in these lives, and their picturesque setting evoked high opinion even from such a strong critic as the late Bishop Milman. Dalgrains’s life, work, and studies had drawn him ever closer to the Church, and in September, 1845, he was received into it by his former correspondent, Father Dominic. He then repaired to the Abbé Jovain, canon of Langres, whose acquaintance he had made in 1841 when the abbé was on a visit to Oxford; in December, 1846, he was ordained priest at Langres. A worthless French translation of Newman’s “Essay on Development” was described by Dalgrains in the “Univers”, 10 Jan., 1847, as “un amas intellignable de paroles sans idées, et daus lequel en plusieurs endroits le traducteur aura bien donné une apparence d’hérésie aux phrases de l’auteur”, words strangely prophetic of the use made by certain “Modernist” writers of the same work.

At Easter, 1847, he joined Newman in Rome and entered the new English Oratorian novitiate at Santa Croce. As an Oratorian he was assigned, after his ordination at Manchester, St. Wilfrid’s, Staffordshire, King William Street, London (1849), Birmingham (1853), and South Kensington, London (1856), where he was elected superior on Father Faber’s death, September, 1863. As a preacher he was second only to Faber and as a confessor his knowledge of the spiritualcircle of penitents, among whom was Queen Marie-Amélie, wife of Louis Philippe. In 1869 he became a member of the Metaphysical Society which was then being formed. With Manning and Ward, Dalgrains had to defend Catholicism against scientific agnostics such as Huxley and various agnostics such as Morley and Leslie Stephen. Thompson, the American Archbishop of York, the Unitarian James Martineau, and others of every shade of creed or of no creed. Speaking of these debates Thompson says, “he was more struck by the metaphysical ability of Father Dalgrains and Mr. James Martineau than any of the other debaters.” Hutton, then editor of “The Spectator,” says of Dalgrains and his co-religionists, “there was in their countenance a blending of genuine humility and genuine thankfulness for the authority on which they had anchored themselves and a sense of the redundancy of their provisions for the spiritual welfare of others who are in other respects far better off and far better prepared to feel they had but a bare and scanty pasturage”. His knowledge of Christian philosophy, and his acquaintance with the writings of German scientists enabled him to meet Huxley successfully on his own grounds. But the attendance at the meetings of the Society broke down Dalgrains’s health. He was struck with
paralysis, and he died after a year's lingering mental illness. Hutton describes him as "a man of singular sweetness and openness of character with something of a French type of playfulness of expression". His best known works are "The Devotion to the Sacred Heart" (London, 1845); "To be a Domineiser" (Dublin, 1861); "The German Mystics of the Fourteenth Century" (London, 1858).

SEBASTIAN BOWDEN.

Dalila (Heb. Dālīlā). Samson, sometime afterwards, exploited at Gaza (Judges, xvi, 1-3), "loved a woman, who dwelt in the valley of Sorek, and she was called Dalila" (verse 4). The village of Sorek was known to Eusebius and to St. Jerome (Onomast.), and rightly placed north of Eleutheropolis near Saran, the home of Samson. It is now called Khan Sūrūq. The valley of that name, mentioned in the text, was probably a little lateral valley of the great Wadi Serar, or the Wadi Serar itself (Lagrangé, "Le livre des Jugés", 247). The railway from Jaffa to Jerusalem passes through this region a little to the west of the station of Deir al-Mukaber. The district was on the borderland between the possessions of the Israelites and those of their principal enemies and oppressors at this period, the Philistines. Sorek may have been inhabited by the latter; and although it is not stated to which people Dalila belonged, the story told in this sixteenth chapter of Judges of her relations with the princes of the Philistines, makes it very unlikely that she was an Israelite. It is not probable either that she became the wife of Samson. The expression above quoted with which Scripture introduces the narrative of her relations with him, and the facility with which the Philistines were brought into his house, not to speak of her readiness to betray the Israelite hero, suggest rather that she was a harlot, an opinion that is now more common among commentators.

The Philistines, thinking that the strength which had made Samson familiar to them must be due to some magical charm, seek to find out what it is. Their princes, probably the five mentioned in Judges, iii, 3, and elsewhere, coming to Dalila, to whose house Samson often resorted—if he did not live there—say: "Deceive him, and learn of him wherein his great strength lieth, and how we may be able to overcome him, to bind and afflict him: which if thou shalt know, and shalt tell us everything of whatsoever he saith, we will give thee one hundred pieces of silver" (verse 5). This sum must have appeared enormous to Dalila. She undertakes to discover the secret of Samson's strength and the means to overcome it. Four different times she asks him to tell her the secret, having each time a number of Philistines on hand to seize him if she can capter him into betraying it. Samson at first indulges his humour in answers which allow him to laugh at her attempts to bind him; but finally her importunity prevails, and he tells her of his consecration as a Nazarene and of the necessity of keeping his long hair, the mark of that consecration. Dalila then causes this hair to be shorn while Samson sleeps, and hands him over to his enemies who bring him a prisoner to Gaza.

LAGRANGE, Le livre des Jugés (Paris, 1903); Von Hummel-Aufr, Comm. in libros Judicium et Ruth (Paris, 1808); Hall, Dalila in Vita., Dict. de la Bible.

W. S. Reilly.

Dallas (Diocese of Dallas-Census), created 1890, comprises 108 counties in the northern and northwestern portion of the State of Texas, U. S. A., and El Paso County in the western section, an area of 118,-000 square miles. The city of Dallas has a population of 95,000, and stands in the centre of a circle within whose radius of fifty miles is included nearly one-half of the whole population of Texas. It was settled chiefly by people from Kentucky, Illinois, Indiana, with a sprinkling of foreigners and a considerable number of negroes. It is an important distributing centre, rich in mineral resources and products of the soil (chiefly cotton). As late as 1868 there was only one Catholic family resident there whose members, with several scattering settlers, were attended as a mission station from St. Paul's, Polk County, by Father Joseph Martin, later a domestic prelate and vicar-general of the diocese. His visits often necessitated journeys over hundreds of miles through swamp and forest. In 1892 the Catholic population of the diocese had grown to 15,000 with 30 priests ministering to them.

The first bishop, Thomas Francis Brennan, was born October, 1853, in the County Tipperary, Ireland, and ordained priest at Brixen in the Tyrol, 4 July, 1880. He was consecrated at Erie, Pennsylvania, 5 April, 1891. Two years later (1 February, 1893) he was transferred to the titular See of Utilia and made coadjutor of the Bishop of St. John's, Newfoundland. He was removed December, 1904, and called to Rome, where he resides (1908), having been transferred, 7 October, 1905, to the titular See of Cassarea in Mauretania.

As his successor the Rev. Edward Joseph Dunne, rector of the church of All Saints, Chicago, was chosen. He was born in the County Tipperary, Ireland, 23 April, 1848, emigrated to the United States with his parents when a child, and was ordained priest 29 June, 1871, in Baltimore. His consecration took place in Chicago, 30 November, 1889. He foresaw from the first the religious possibilities assured by the location and resources of Dallas, also by the enterprise of the people and by the climate. To his energy, administrative abilities, and zeal is owing the new cathedral, admittedly the finest in the South-Western States. The Vincentian College, St. Paul's Sanitarium, the Ursuline Academy, novitiate and provincial house (1907), the cathedral parochial school, St. Patrick's church, the industrial school for coloured children are other monuments of religion erected within a short space of time. Fort Worth, Sherman, El Paso, and Nacogdoches, and several other cities have substantial and even beautiful churches and religious institutions, educational and charitable.

Religious communities represented in the diocese are: Men.—Beneficent Fathers, five houses; Jesuits, six; Oblates, and Vincentians, 11. Sisters.—School Sisters of Notre Dame; Sisters of Charity (Emmitsburg); Sisters of Charity of the Incarnate Word; Sisters of the Holy Cross; Sisters of Loretto; Sisters of St. Mary; Sisters of Divine Providence; White Benedictine Sisters of the Congregation of Mt. Olive; Sisters of St. Rose of Lima; Ursuline Nuns; Sisters of Mercy, St. Mary's. Statistics of the diocese (1908) give 83 priests (56 diocesan and 33 regulars); 52 churches with resident pastors, 51 with missions, 75 stations, 12 chapels; 12 academies for girls, 24 parochial schools with 3180
pupils, 14 ecclesiastical students, 1 industrial school (50 pupils); 1 orphan asylum (83 inmates); 6 hospitals; total Catholic population (estimated) 60,000.

Sister M. Augustine Enright.

Dalley, William Bede, lawyer and statesman, b. in Sydney, New South Wales, 1831; d. there 28 Oct., 1888. He was educated in part at St. Mary's College, Sydney, and was called to the Bar in 1856. In 1857 he became a representative of Sydney in the first parliament elected under responsible government in New South Wales; was solicitor-general (1858-9), and attorney-general (1875-7, 1883-5). After the fall of Khartoum (1885) Dalley (then acting-premier) dispatched a contingent of one hundred men to the Sudan to aid the imperial troops. Dalley, who had declined a knighthood and the office of Chief Justice of New South Wales, was in 1887 appointed a member of the Privy Council—the first Australian on whom that honour was conferred. He was regarded as the foremost lay representative and champion of the Catholic body, was noted for his parliamentary ability and concise eloquence, and was endowed with considerable literary ability. Many of his newspaper articles and sketches were reprinted in 1866 in Barton's "Poets and Prose Writers of New South Wales."

Henry W. CLEARY.

Dalmatia. See Scannedecchi.

Dalmatia, a part of the Kingdom of Croatia according to a convention entered into between Croatia and Hungary. It stretches along the eastern shore of the Adriatic Sea from Croatia on the north to Montenegro in the south and is bounded by Bosnia and Herzegovina on the east. The Velebit mountains separate it from Croatia, the highest peaks of which are Sveti brdo (5774 ft.) or Holy Mountain, the dwelling of fairies according to popular legend, Višeruna (5350 ft.) and Vaganski vrh (5565 ft.). The eastern frontier lines are formed by the Dinaric Alps, running parallel to the sea, highest elevation being 5940 ft. The highest peak in Dalmatia is Mount Orjen (6225 ft.). The coast is steep and rocky and lined by many islands, Pag, Rab, and Krk, the last mentioned which is the most westerly of the north-western Christian coast; it is at a height of 885 ft., the last to 1338 ft. Islands of lesser importance are Cres, Lošinj, Osor, Uljan. On the south lies Brač with the mountain of St. Vid (2574 ft.), Hvar with St. Nicholas (2078 ft.) and Korcula (1879 ft.); lastly Lastovo, Mljet, and Vis. The principal natural harbours are Zadar, Trogir, Sibenik, Gruf, Pelješac, Kotor, Hvar, Vis, and Mljet. Dalmatia is poor in water, though the rainfall makes temporary lakes. The only rivers of importance are: Krka (Titius) and Cetina (Tilurus) flowing from the Dinaric mountains; the former has interesting falls and wild scenery. Nearly all the Dalmatian coast belongs, chiefly to the city of Zadar. Its climate is warm and healthy. The temperature varies between 57° F. at Zadar, 62° at Hvar, and 63° at Dubrovnik. The prevailing wind is the sirocco or south-east, but the terrible Boora or north-east, may blow at any season of the year. The land is fit chiefly for pasture. Barley, wheat, maize, oats, rye, millet, bean, and rapeseed are cultivated. The climate is warm and healthy. Among the industries are the distillation of liquors, the manufacture of oil, tile-burning, the raising of timber, wine-growing, and ship-building. Other products of soil are wool, hemp, olive, and tobacco. Railroads are nearly unknown in Dalmatia, although there is urgent need of them. Commerce is further hampered by a bureaucratic administration.

Coast navigation is gradually taking on greater proportions and extending through the Adriatic and Mediterranean Seas. The capital of Dalmatia is Zadarc, which the Diet meets, when convoked by the king. It is composed of forty-three members, and is represented in Vienna by eleven delegates elected by direct vote. The archbishop is a member of the Diet. The head of the Royal Dalmatian Government is a governor appointed by the king. Dalmatia is the most neglected country under Austrian rule. The population consists of Croats, Serbs, Italians, and Albanians (about 10 per cent). Croatian is now the official language.

Religion and Schools.—The general educational institutions are public schools (with 5 classes), while in every village or hamlet there is an elementary school. There are also middle schools or gymnasia (with 8 classes), colleges and private institutions, a central seminary for priests at Zadar, and a petit séminaire at Dubrovnik. There are also a naval and an agricultural school. The majority of the inhabitants are Catholics. There are also Orthodox Greeks and a few Protestants.

The many magnificent churches and secular buildings which date backwards to the flourishing times of the Church. The archaeological museums at Bihać and Knin contain much historical material illustrating early Christianity and the period of the oldest Croatian rulers. There is a literary society, "Matica Dalmatinska," which publishes valuable books on the history and literature of Croatia. The "Jedinstvo Hrvatska," at Zagreb, and the St. Jerome Society do the same for popular books. The Catholic press is represented by weeklies and periodicals such as "Akademija Paleoslovenika," at Krk (Veglia). Throughout Dalmatia, including the adjoining islands, as well as on the Croatian coast, the Old Croatian language called Glagolitic is still in use at church services. This comes down from the times of Sts. Cyril and Methodius also.

The right to use the Glagolitic language at Mass with the Roman Rite has prevailed for many centuries in all the south-western Balkan countries, and has been sanctioned by long practice and by many popes. The religious orders are well represented in Dalmatia by the Dominicans, Francisians, Jesuits, and others, as well as by many communities of religious women.

In the administration of church affairs the civil authorities accept the principles of canon law. The Concordat was abolished by the laws of 1876 and 1877. The bishops are metropolitan or archbishops.

The parallel examination, marriage law passed by the law of 1876.

The irremovable rectors must contribute to the expenses of worship according to the provisions of the law. The State administers the church property and lays down the conditions for establishing new parishes. The archbishops, bishops, and canons are nominated by the king, and invested by the pope. The ecclesiastical province of Dalmatia was erected by Leo XII in 1828, by the Bull "Locum beati Petri," when the two Archbishoprics of Split and Dubrovnik were suppressed, and Zadar was made the see of the archbishop. The province comprises five bishoprics: Sibenik, Sibenik, Spalato, Hvar, and Dubrovnik. The Bishopric of Krk was joined by Pope Pius VIII to the province of Gorica. There are 527,500 Catholics in Dalmatia and 80,900 Greek schismatics with two bishoprics at Zadar and in Kotor.

History.—The meaning of the name Dalmatia or Dalmatia, which is of Arnavut origin, is "land of the shepherds' (ie, a transhumant pasture for sheep). The earliest mention of the name occurs at the time of the fall of the southern Illyric kingdom, 167 b. c. The peoples who dwelt near the rivers Neretva and Krka formed a league against the advancing Romans. Their principal town was Delminium, on the present town of Sinj. Their power increased, and after that city the tribes called themselves Delmatis, or Dalmati, 170 b. c. The islands were peopled by the Greeks; but the mainland by the Illyrians. The
Dalmatian league soon came into conflict with the Romans. In 153 B.C. the Roman Senate sent envoys to negotiate with the Dalmatians, but they returned complaining that they were received in an unfriendly manner, and that they would have been killed if they had not secretly escaped. During the next year war broke out. Finally Publius Cornelius Scipio Nasica conquered the land and demolished the city of Delium. The Romans' success was incomplete; they must subdue the neighbouring Illyrians and Celts if they wished to retain the whole of Dalmatia. The two new consuls had to march from Gaul to Illyrium and occupy the city of Segestica, north of Salona, thence to invade Dalmatia and capture the city of Salona. The consul Metellus carried out this plan, defeated the enemy in 118 B.C., and celebrated a triumph at Rome, receiving the title Dalmaticus (117). The Roman Senate now created the large province of Illyricum, extending southward to the River Drim, northward as far as the Julian Alps and the River Sava. The principal strategic point and fortress in this new province was the city of Salona (Solin). But the Dalmatians did not patiently bear the Roman yoke and tribute. Many uprisings broke out until the time of Octavian, who came to Illyricum in 40 B.C., and subdued all the tribes; he made the rivers Drava and Danube the northern boundaries of the Roman possessions and sailed on them in triremes. Later, when emperor, he broke the power of the Dalmatian and Pannonian tribes who tried again to throw off the Roman rule. The insurrection started in the year 6 B.C. and ended in A.D. 9. The power of the rebels was crushed and their country devastated. Since the Punic wars Rome had not been in as critical a situation as during this insurrection suppressed by Tiberius.

From this date begins the Romanising of Illyricum. This province now received the name of Dalmatia and comprised all the land south of the River Sava, within which were many famous watering places, such as Aquis Jazzæ (the Varazdinsko toplice of to-day), Aquis Balsae (Lipik in Croatia), and much mineral wealth exploited by them, as appears from their remains to-day. The Roman rule in Dalmatia ended with the entry of Christianity and the invasion of the northern nations. The Romans persecuted the Christians in Dalmatia and Pannonia, but they flourished nevertheless. St. Paul sent his disciple Titus to Dalmatia, who founded the first Christian see in the city of Salona and consecrated it with his blood A.D. 63. St. Peter sent St. Domnians. Salona became the centre from which Christianity spread. In Pannonia St. Andronicus founded the See of Sirmium (Mitrovica) and later those of Siscia and Mursia. The cruel persecution under Diocletian, who was a Dalmatian by birth, left numerous traces in Dalmatia and Pannonia. St. Quirinus, Bishop of Siscia, died a martyr A.D. 303. St. Jerome was born in Strido, a city on the border of Pannonia and Dalmatia. After the fall of the Western Empire in 476, peace never came to Dalmatia. She successively fell into the power of the Ostrogoths, the Vandals, the Attilans, the Burgundians. The Ostrogoths were Arians, but they did not persecute the Catholics. Two provincial church councils were held at Salona—530 and 532. The Western Empire was succeeded by the Ostro-Goths, after whose fall in 555 Dalmatia came under Byzantine power. In A.D. 583 the Byzantine general the Avar, Gondulf, plundered Dalmatia through Bosnia, devastated Dalmatia, and demolished forty cities. In A.D. 600 appeared the Slavs, who entered Dalmatia. Pope Gregory the Great wrote to Maxim, Archbishop of Salona: "Et de Slavorum gente, quo vosis valde iminent, atflligor vehementer et conturbator. Atflligor in his, quæ iacit in probator; conceper quia per lietum adlumiam Italian internre cceperunt." In the seventh century Dalmatia received the dominant element of its present population, the Croats. In the ninth century we find the Croatian influence at its height, and the Croatian princes recognized as Kings of Dalmatia. At the time of Thomas of Blažević there were held two councils at Sipet for the whole of Dalmatia and Croatia. The legates of the Holy See, John, Bishop of Ancona and Leo, Bishop of Fuzine, were present. Pope John X wrote a letter to Thomas of Blažević, King of the Croats, declaring that all the people of Dalmatia. In this he reminded the king of the Anglo-Saxons, to whom Gregory I sent not only Christianity, but also culture and education. The council met in 925 to decide the question of the primacy of the See of Nin and Sipet; to re-establish rules of discipline, to settle administrative questions arising from disputes about the boundaries of dioceses, and finally to show the reason for using the Old Croatian language at Mass. On this occasion Bishop Grigor Ninski energetically defended the right of the Croats to use that language. Pope Leo VI decreed by his Bull that the primates of Dalmatia and Croatia should be the Archbishop of Sipet. All the decisions of the councils were sent to Rome for confirmation. The See of Nin was suppressed in 928, when the See of Sipet renounced the jurisdiction of the Patriarch of Constantinople and submitted to the Holy See. At the next council, held 1059–60 at Sipet, permission was given to use the Greek and Latin languages at Mass. The use of the old Croatian language was often forbidden, but never abolished. During the following centuries the history of Dalmatia is closely connected with that of Croatia. In the course of the time, however, Venice extended her authority over Dalmatia. Venice never gained the affection of the Dalmatian people. By the treaty of Campo Formio in 1797 she lost Dalmatia, which came under Austrian rule, under which it has continued to the present time with the exception of Napoleonic times (1806–1814). The feeling towards Austria was not friendly, as the outbreak in 1869 shows. This was put down by force of arms in February of the next year. Influential patriots, the members of the home Diet, and the dele-
gates in the Reichstag at Vienna are working to carry out the provisions of the fundamental law requiring the union of Dalmatia with the mother-country, Croatia, which the king promised in a solemn oath at his coronation.

The literature of Dalmatia from its beginnings in the fifteenth century was inspired by the Catholic Church and remained so until the rise of Humanism. Numerous private and public libraries existed, containing thousands of volumes (1520). The art of printing found its way to Dalmatia as early as the end of the fifteenth century. The first Humanists such as Messer Cecio Bolghisi, Paolo Gamberi, Mariotti wrote in Latin and Croatian and produced many varieties of literature: the drama, lyrics, epics, bucolics, comedies, religious, and gipsy poetry. Dalmatia has in fact been called the cradle of Croatian literature.

The city of Dubrovnik was spoken of as another Athens. Architecture flourished greatly, as is proved by the existing monuments.

M. D. KRMPOTIĆ.

**Dalmatic.**—PRESENT USAGE.—The dalmatic is the outer liturgical vestment of the deacon. It is worn at Mass and at solemn processions and benedictions, except when these processions and benedictions have a penitential character, as in Advent, during the period from Septuagesima Sunday to Easter, at the blessing of candles and the procession on Candlemas Day, etc.; this is because the dalmatic has been regarded from the earliest times as a vestal garment. The dalmatic is also worn by bishops under the casuable at solemn pontifical Mass, but not at private Masses. Priests are not permitted to wear the dalmatic under the casuable unless a special papal privilege to this effect has been granted, and then only on such occasions for which a papal privilege has been given. At Rome, and throughout Italy, the dalmatic is a robe with wide sleeves; it reaches to the knees, is closed in front, and is open on the sides as far as the shoulder. Outside of Italy it is customary to slit the under side of the sleeves so that the dalmatic becomes a mantle like a scapular with an opening for the head and two square pieces of the material falling from the shoulder over the upper arm. The distinctive ornamentation of the vestment consists of two vertical stripes running from the shoulder to the hem; according to Roman usage these stripes are narrow and uniform, and are one third of the width of the vestment. Outside of Rome the vertical stripes are quite broad and the cross-piece is on the upper part of the garment. There are no regulations as to the material of the dalmatic; it is generally made of silk corresponding to that of the chasuble of the priest, with which it may mingle. The colours are the same as those of the liturgical colours. The dalmatic is the distinguishing outer vestment of the deacon, he is clothed with it at his ordination by the bishop, who at the same time says: "May the Lord clothe thee with the garment of salvation and with the vesture of praise, and may he cover thee with the dalmatic of his munificence for ever."

**HISTORY.—**According to the "Liber Pontificalis" the dalmatic was introduced by Pope Sylvester I (314-35). It is certain that as early as the first half of the fourth century its use was customary at Rome; then, as to-day, the deacons wore it as an outer vestment, and the pope put it on under the chasuble. In early Roman practice bishops other than the pope and deacons other than Roman were not entitled to wear the chasuble or tacit permission of the pope—such permission, for instance, as Pope Symmachus (498-514) gave to the deacons of St. Cesarius of Arles. The Bishops of Milan most probably wore the dalmatic as early as the fifth century, this is shown by a mosaic of St. Ambrose, dedicated by the Bishop of Milan in the sixth century, in the church of St. Ambrogio; mosaics in the church of St. Vitale at Ravenna show that it was worn by the archbishops of Ravenna and their deacons at least as early as the sixth century. About the ninth century the dalmatic was adopted almost universally for bishops and deacons in Western Europe, even including Spain and Gaul, where instead of a dalmatic deacons had worn a tunic called an alb (see ALB). About the tenth century the Roman cardinal-priests were granted the privilege of wearing the dalmatic, at which time also priests outside of Rome, especially abbots, gained the same right. Pope John XIII in 970 granted the Abbot of St. Vincentius at Metz the right to wear the dalmatic. Benedict VII in 975 granted this privilege to the cardinal-priests of the cathedral of Trier, but limited it to occasions when they assisted the archbishop at a pontifical Mass or celebrated the solemn Mass in the cathedral as his representatives. According to Roman usage the dalmatic was only worn by prelates at the pontifical Mass, and never under the cope on other occasions, as was often the case in Germany in the later Middle Ages.

The custom of leaving off the dalmatic on penitential days originated, like the vestment itself, in Rome, whence it gradually spread over the rest of Western Europe. In the twelfth century this use was universal. On such days the deacons either wore no vestment over the alb or put on, instead of the dalmatic, the so-called planeta plicata, a dark-coloured chasuble folded in a particular manner. An exception was made in the penitential season for Maundy Thursday on which it had been the custom from ancient times, principally on account of the consecration of the holy oils, to use the vestments appropriate to feast days. In early times the dalmatic was seldom used by deacons for the Mass; but in the latter part of the Middle Ages it was universally worn in solemn requiem Masses. At an early date it was customary at Rome to confer the dalmatic on a deacon at ordination; the usage is recognized in the "Eighth Ordin" (eighth century) and the "Ninth Ordin" (ninth century) of the Roman rite. In the rest of Western Europe the custom took root very slowly, and it did not become universal until towards the end of the Middle Ages. The first medieval liturgist to mention it was Sicard of Cremona (c. 1200), from whose language it is evident that the ceremony was not every where prevalent. A prayer at the bestowal of the dalmatic was not customary until a later period.

**SHAPE AND MATERIAL IN EARLIER AGES.—**The original form of the vestment is well shown by the remains of the pre-Carolingian period, especially by the mosaics in San Satiro at Milan (fifth century), in San Vi- tale at Ravenna (sixth century), and in San Venanzo and Sant' Agrisio at Rome (seventh century); also in various frescoes, such as the picture of the four holy bishops in the church of San Callisto at Rome. According to these representations it was a long, wide tunic with very large sleeves and reached to the feet. In the above-mentioned pictorial remains the length of the sleeves equals half and often the third of the length of the vestment. Up to the twelfth century the Italian representations show no change in its
form. After this, in the Italian remains, the vestment is shorter and the sleeves narrower although the traces of the change are at times noticeable. As early as the ninth century the shortening of the vestment and the narrowing of the sleeves had begun in Northern countries, but up to the twelfth century no important modification had taken place. In the thirteenth century the length of the dalmatic was about 31–55 inches, and measurement was maintained during the fourteenth century; in the sixteenth century the dalmatic, even in Italy, was usually only about 47½ inches long. In the seventeenth century its length everywhere was only a little more than 43½ inches; in the eighteenth century it was only 39½ inches and at times about 39 inches. The abbreviation of the vestment could hardly go further; and, as its length decreased, the sleeves became correspondingly narrower. To facilitate the putting on of the dalmatic slits were made in the sides of the vestment in the pre-Carolingian era, and in the twelfth and thirteenth centuries regularly shaped openings were often substituted for the slits. In the latter part of the Middle Ages, especially in the fifteenth century, the sides were very commonly opened as far as the sleeves, unless the dalmatic was widened below by the insertion of a gore. Now and then, in the fifteenth century, the sleeves appear to have been opened; for the sake of the sacque, this custom was not general until the sixteenth and seventeenth centuries and then it was not observed in Italy, where, in accordance with the Roman usage, the sleeves were always closed.

Originally the dalmatic was made of linen or wool, but when silk became more common and less expensive, the dalmatic was also made of silk. From about the twelfth century, judging from the inventories, the vestment seems to have been made almost altogether of silk, although up to modern times there were also dalmatics made of fine woolen material. Until after the tenth century the dalmatic was always white. From this time on coloured dalmatics are more often found, especially outside of Italy, in countries where old traditions were not so firmly rooted. Coloured dalmatics were the rule when, about 1200, it was determined what colours should be recognized as liturgical and in consequence their use was decided. As these colours are those prescribed for the chasuble it must have seemed only proper to employ the same for the outer vestment of the deacon. The ornamentation of the dalmatic at first consisted of two narrow stripes, called cavi, which went in a straight line down the front and back, and of a narrow band on the arms. In the thirteenth century the arms were purple than red in shade. In the old representations fringe is found on the dalmatic as early as the seventh century; at times it was placed on the sleeves, at other times along the openings on the sides. About the ninth century the curious custom arose of setting tufts of red fringe on the sleeve and on the bands of the sleeves; this usage was kept up until the thirteenth century, but it was more common in Northern countries than in Italy. In the later medieval period there was great diversity in the ornamentation of the dalmatic, and very often it received no ornamentation at all. In Italy it was customary to set a costly, and often richly embroidered, band (aurifirius, parura, finitra) above the lower hem on the back and front of the vestment and also above the sleeves; at times narrow vertical bands were added to this adornment. In France and Germany the preference was to ornament the lower part of the vestment with elegantly embroidered bands which were united on the breast and back by cross-bands. Occasionally the dalmatic was entirely covered with embroidered figures. A fine specimen of such decoration is preserved in the imperial treasury at Vienna. This dalmatic is completely covered with a costly ornamentation consisting of human figures very artistically executed in fifteenth-century Burgundian embroidery and was one of the rich Mass-vestments of the Order of the Golden Fleece.

Origins and Symbolism.—The dalmatic was taken from a garment of the same name, which originated, to judge from the designation, in Dalmatia, and which came into common use at Rome probably in the course of the second century. But in its original use as a garment such as, and not the ornamental bands, that Rome imported, for the cavi were an old Roman adornment of the tunic. The secular dalmatic is often mentioned by writers and is frequently seen in the pictorial remains of the later imperial epoch, e.g. in the so-called Consular Diplychus. It was part of the clothing of the higher classes, and sometimes considered a work in progress that it was taken into ecclesiastical use and afterwards became a liturgical vestment. The earliest symbolic interpretations of the dalmatic occurred at the beginning of the ninth century, in the writings of Rabanus (Hrabanus) Maurus and Amalarius of Metz. On account of the cruciform shape and the red ornamental stripes, Rabanus Maurus regarded it as a symbol of the sufferings of Christ and said that the vestment admonished the servant of the altar to offer himself as an acceptable sacrifice to God. Amalarius saw in the white colour a symbol of purity of soul, and in the red the convenience of the laity and nobility. What in later times was said of the symbolism of the dalmatic is hardly more than a repetition of the words of Rabanus and Amalarius.

In the Oriental rites deacons do not wear a dalmatic; while instead of the chasuble the bishops wear the outer vestment, called the sacco, which is similar to the dalmatic. The sacco came into use in the eleventh century.

Dalmatic in England.—The English inventories frequently give the dalmatic the same name as that of the wearer: thus (1539. Ludlow Priory. Sak. 58): "A cassell and ij de veste white with only for lent." According to the old English Conventual Third of Sarum (Salisbury) (ch. xcvii) the acolytes, thurifers, etc. of the great cathedrals and minsters wore dalmatics in their ministrations. At York Minster they had sets of four tunics pro thuribulare et c path rail (for the thurifers and chanters) in all the four colours, white, red, blue, and green (York Fabric Rolls, pp. 228, 233–4). The dalmatic is still worn by the sovereigns of England at their coronation as a speculon, sacroco, or colodium. (For the use of the dalmatic in England consult Rock, "Ages of Faith").

Joseph Braun.

Dalton, John, Irish author and translator from Spanish and German, b. in 1814; d. at Meddernurt, Norwich, 15 February, 1874. He spent his early years at Coventry, England, and was educated at Sedgley Park School. He there proceeded to Oscott College, where he was ordained priest in 1837. After serving some time on the mission at Northampton (where he established large schools), he laboured at Norwich for three years, and afterwards with brothers in a handsome church at Lynn. During his residence in Lynn he published his best-known book, an English translation of "The Life of St. Teresa, written by herself", showing a perfect mastery of the Spanish language. Father Dalton made an exhaustive study of the life and works of St. Teresa, and caused her writings to
become generally known to English readers. On the erection of the Diocese of Northampton, in 1854, he was made a member of the chapter, and lived many years at Bishop's House in that city. In order to acquire suitable appointments for the Latinized, where insinuated in Catholic doctrine, music, English, and Portuguese, as well as, in some instances, Guzerati and Maharrati. Some of these schools receive subsidies from both the Portuguese and the British-Indian Governments.  

Among the churches in the city of Damão the cathedral of Bom Jesus is worthy of note as having been built, in 1559, on the site of an old mosque. At Damão Pequeno (Little Damão) the church of Nossa Senhora do Mar, founded in 1701, in the old fortress, is still used by local Catholics. Another fortress church is that of the Conceição at Diu, which was originally built in 1610 as part of the now extinct convent of São Paulo. The vicariate of Thana includes the island of Salsette, of which Thana itself was formerly the capital.

Here, before the Mogul invasion of 1518, a community of Nestorians existed. The coming of Mohammedans converted both the Nestorian churches and the Hindu temples into mosques for their own worship. It was also at Thana that the Franciscan missionaries Thomas of Tolentino and Giacomo of Padua, with the lay brothers Demetrios and Peter, were martyred early in the fourteenth century. Jordanus, a Dominican, who buried the bodies of these martyrs, was himself also martyred by the Mohammedans, but the Hindu of the vicinity so highly venerated his memory as to set up a bronze statue of him among the gods in one of their temples; this temple was afterwards destroyed, and in the sixteenth century some workmen who were digging on the spot found among the ruins this pagan tribute to a Christian martyr. Thana was also the field of the fruitful labours of Father Gonçalo Rodrigues, one of the companions of St. Francis Xavier, who founded in the neighbourhood a Christian village. This village was destroyed by the Maharratas, but the ruins of its church, college, and orphanage are still distinguishable. The church of Nossa Senhora do Carmo at Chaul, in the Konkan district, dates from the year 1580. Bassein, first acquired by Portugal in 1554, is the birthplace of the martyr Pero da Cunha, a remarkable for the massacre of 1561, in which he was alive in the orphanage by the Mahomedan invaders in 1540, as well as for the apostolic visits of St. Francis Xavier. Lastly, in the Mazagon suburb of Bombay is the church of Nossa Senhora da Gloria, long regarded locally as the Portuguese cathedral; here also is the monastery residence of the Bishop of Damão, Titular Archbishop of Cranganor.

J. GODINHO.

Damaraland, the middle part of the German colony, German Southwest Africa, between 19° and 23° S. lat., 14° and 20° E. long. Moving from the Atlantic coast towards the interior the traveller meets first a sand-belt of forty-two miles, stripped of all vegetation and covered with gigantic sand-dunes; then a strip of desert land about ninety miles broad, with rugged, bare mountains and wide, barren sand-plains. Then follows Hereroland proper, which rises to a height of 7000 feet, and in which mountain ranges and solitary peaks succeed long-drawn valleys, deep ravines and high plateaux. Towards the north and east, this mountainous district passes over into the undulating plain of the Omahake and the Kalahari Desert, which is crossed by dry river-beds and is sparsely inhabited. In general, the country suffers from want of rain; it is arid, and fit for cattle-raising only; agriculture is hardly possible except where the land is...
artificially irritated. The population is composed of the Hill Damara and the Herero; besides these there are also some 4000 Kafris, Bashards, and Nama, and 1500 Christian Ovambo. The Hill Damara, or Kip Kafris, live in various parts of the country, but were robbed of their pasture and flocks by the invading Herero. Down to our times they lived among the Herero as slaves, without rights and protection, poor and despised; at the uprising of the Herero they naturally sided with the German Government and thereby improved their lot considerably.

The Herero, or Ovaherero, are a tribe of the Bantu, and immigrated, during the seventeenth and eighteenth centuries, from the north-east into Damaraaland. Their bodies are well built, their skin is chocolate-coloured, their hair wavy and jet black. The clothing of the men consists of an apron, made of the skin of sheep or goats, and wound around the hips; that of the women comprises a leather cap with a veil, a long apron, and a hide thrown over the back; numerous rings of iron and pearls adorn their arms and legs, and a number of pearl strings encircle their necks. The Herero women wear their hair in two long braids. They are noted for integrity and honesty, and treat lying and cheating, dishonest, and cruel and ferocious in their hatred; on the other hand, they are also hospitable, possess a high sense of honour, and great love for their parents. Their religion consists in an ancestral cult, especially of the deceased chiefs of each tribe, and the belief in the spirit and spirit intermediaries, whom they frequently offer sacrifices. True they recognize God but do not worship him; they think of him, but they do not thank him. Previous to the insurrection of 1904–1906, which almost destroyed them, they were divided into tribes; these were ruled by chiefs, who were at the same time the tribal priests. In the fights with the Nama, all the Herero had acknowledged one commander-in-chief, Mahero Kjamuaha. After his death, in 1890, the German Government chose his youngest son, Samuel Mahero, as supreme chief, passing the rightful heir. Generally speaking, monogamy prevails among the Herero, though the chiefs and the wealthier tribesmen often have several wives.

The acquisition of the present German Southwest Africa by Germany was begun in the year 1883. The Bremen merchant Lüderitz acquired the bay of Angra Patrick and sold it to the German Government; in 1884 this territory was placed under the protection of the German Empire. The heir to the rights of Lüderitz, the German Colonial Company for Southwestern Africa, obtained more land. As Mahero, the supreme chief of the Herero, had formerly sided with the English against the Germans, he was forced, on 21 October, 1883, to conclave a treaty of protection and amity with Germany, and to acknowledge the German supremacy. As this treaty was in many regards obscure, many quarrels arose between the German Government and the Herero chiefs; small uprisings were, however, easily quelled. The love of freedom that is in the Herero is exhibited in the piracies committed by the whites, extortions on the part of the white traders, and other causes finally led to the great insurrection of the Herero in the beginning of 1904, which soon spread throughout the colony. It took almost three years to subdue the sedition and great sacrifices of men and money had to be made. For the nation of the Herero, who before had numbered between 80,000 and 100,000, the revolt resulted in almost complete annihilation. The Herero who had been taken prisoners were accommodated in camps, where hundreds of them were carried off by way of disease. After peace was made, the remnant was handed over to officials, farmers, business and private houses, as servants.

Missions in Damaraaland were first begun by Protestants. Since 1844 the Rheinisch-evangelische Missionary society laboured in Hereroland without interruption. Before the insurrection it numbered 15 stations with 23 missionaries, 46 schools with 875 boys and 1152 girls, and counted 8000 coloured Christians. The Fathers of the Holy Ghost were the first Catholic missionaries who, at the end of the seventies, made the attempt to found a mission among the Herero; owing to the intolerance of the Protessants, however, they were compelled to abandon the work in 1881 (cf. Katholische Missionen, Freiburg, 1882, pp. 107–111). It was not until when German rule had been established, that the Catholic mission was at liberty to work in this field. On 1 August, 1892, the Prefecture Apostolic of Cimbebasia Inferior was erected, and under it was placed the whole of Damaraaland and Ovamboland; in 1896 the territory was given in charge of the German Oblates of Mary Immaculate. But by the Colonial Government they were forbidden to work among the Ovambo, Hereros, and Kafris, and even after they had been put on the same legal footing with the Protessants they still had to fight against odds. All obstacles were finally removed in September, 1906. The Prefecture Apostolic in 1906 numbered 9 priests and 18 brothers with 22 fathers, 107 clergymen, 10 sisters (Franciscan Sisters from Nonnendesewerth); there are 850 white, 210 black Catholics; 9 churches or chapels, 10 schools with 236 pupils, 1 trade school with 14 pupils, 1 high school for boys, 1 academy for girls, 1 orphan asylum, and 2 hospitals.

Joseph Lins.

DAMASCUS, Saint. See JOHN DAMASCENE, SAINT.

DAMASCUS, in Syria, one of the oldest cities in the world. According to Flavius Josephus it was founded by Us, grandson of Sem; it is mentioned in the Bible at the time of Abraham (Gen. xxvii, 1; xiv, 2); also on the pyramids of Karnak, among the Syrian cities captured by the Pharaoh Touthmes III.

Damasco — Damascus allied itself with Soba against David, was conquered and obliged to receive a Jewish garrison (II K., viii, 5; I Paral., xviii, 5); but under Solomon it became the capital of an independent kingdom, established by Razon or Rais (III K., xi, 24). From this time Damascus was frequently at war with the kings of Israel, while it remained on those of Judá, who sought with its aid to weaken their rivals of Samaria. The most famous of these enemies of Israel was Hazael, who had ascended the throne of Damascus with the help of Elijah and Elisa (III K., xix, 17; IV K., viii, 28; x, 32; xiii, 1, 3). His successors were less fortunate. Jeroboam the king of Samaria, captured Damascos (I K., xiv, 28); when not engaged in mutual conflict the kings of Damascus and Samara entered into alliances with the neighbouring princes against the powerful kings of Assyria; hence Damascus, usually at the head of the confederation, is often mentioned in cuneiform inscriptions. In 734 B.C. Damascus and Samaria nearly ruined Jerusalem. But Achaz, King of Judá, invoked the help of the Assyrian King, Tiglath-Pileser III (Thalhraphalasera), who defeated the allies, captured Damascus after a siege of two years, and put an end to the Kingdom of Syria (IV K., xvi, 9–12). For the list of the kings of Damascos see Smith, "The Assyrian Eponym. Canon" 191.

The Greek City. — Thenceforth Damascus seems to have lost its autonomy. Jeremiah (xlix, 27) threatens it with new chastishments, a proof that it
had risen from its decay: however, it appears only occasionally in the history of the Jews, Greeks, and Romans. After the battle of Issus (333 B.C.) the city, which held the wives and treasures of Darius, was betrayed to Parmenion. It soon became, next to Antioch, the most important city of Syria. From 112 to 85 B.C. it was the capital of a little Greco-Roman county of Syria, under the sovereignty of Aretas III, King of Petra, of Tigranes, King of Armenia, and finally of the Roman general Metellus. In 64 B.C. Pompey received there the ambassadors and gifts of the neighbouring kings; in the following year Syria became a Roman province. Herod the Great built a theatre and a gymnasium at Damascus, though the town was outside his dominion. Its population, though Syrian by race and language, was largely influenced by Greco-Roman culture, and made rapid progress in trade and industry; then, as now, Damascus was the chief commercial emporium for the nomad Arabs. In the time of St. Paul there were in Damascus about 50,000 Jews; most of the women in the upper classes of society had embraced this creed. It was on the road to and near the city that Saul, the severe persecutor of the Christians, recognized and worshipped the Jesus whom he had hated so much. Saul, later brought to Damascus (lodged at Jumma, on the Via Rediviva by Sotheby, El-Tsouli'), was baptized by Ananias (who is thought to have been the first Bishop of Damascus), preached Christ, and was obliged to flee by night to Arabia (Acts, ix, 3 sqq., xxxii, 6 sqq., xxxvi, 12 sqq.; Gal. i, 17; II Cor., xi, 32). The city then belonged to Aretas, King of the Arabs. Under Nero the heathen slaughtered by treachery 10,000 Jews in the gymnasium of Herod. After the destruction of the Nabatean Kingdom of Petra by Trajan, Damascus became a Roman city. Under Arcadius the great temple of the local god, Rimmon, was transformed into the magnificent church of St. John the Baptist. Choerades as his headquarters during the long war then began against Heraclius.

The See of Damascus.—Damascus was then the metropolis of Phocinica Secunda, or, Libanensis, with eleven suffragan sees; it was subject to the Patriarchate of Antioch and held the sixth rank in the hierarchy (see Saihil, in Echoes d'Orient, X, 95, 140). Lequien (Oriens christ., II, 833) was acquainted (from the first to the sixteenth century) with the names of only fourteen Greek bishops, among them St. Peter, who suffered martyrdom at the hands of the Arabs in the third century. Numerous Latin bishops, also known (Lequien, II, 1423; Revue de l'Orient chrétien, VI, 194; Brooks, The Sixth Book of the Select Letters of Severus, London, 1903, II, 20, 57). Among the many illustrious men born at Damascus, we must mention Nicholas, a Greek writer under Augustus, Damascus, a Latin archiepiscopal title of the sixth century, John Moschus, the author of the charming "Praetum spirituale," St. Sophronius, Patriarch of Jerusalem (634-638), St. Andrew, Metropolitan of Crete, orator and hymnographer, finally, the celebrated Greek theologian, St. John Damascus.

East and West Damascus was captured by the Arabs under Khalid and Abu Obeidah. Free public worship was allowed to the Christians in several churches, also in the western aisle of St. John's, the eastern aisle being reserved to the Mussulmans. It was only at the beginning of the eighth century that Abd el-Malek obtained from the Christians the use of the whole of the basilica in return for the four churches. From 660 to 753, under the Ommayad caliphs, Damascus was the capital of the Arabian empire; at that date Abou Abbas removed the seat of government to Bagdad. In the following centuries, amid broils and revolutions, Damascus fell into the hands of the Turks, monophysites, and Fatimides. In 907-1076 it was taken by the Seljuk Turk Aziz. In 1126 the crusaders, commanded by Baldwin of Jerusalem, defeated Prince Toghtekin near and south of the city, but were obliged to retreat. Nor were the allied princes, Conrad III of Germany, Louis VII of France, and Baldwin III of Jerusalem, more successful in their siege of Damascus (1148), owing to the treason of the governor, Raimond d'Orange. In 1170 Saladin captured Damascus in 1158. In 1177 Saladin repulsed a new attack of the Christian army. Damascus then became the commercial, industrial, and scientific centre of Syria; it had a school of medicine and an observatory on the Djebel Kasium. Under Saladin's successor, the Mamelukes, in 1260 it opened its gates to the Mongols of Houlagu- ghi. It then fell into the hands of Koutous, Prince of the Mamelukes of Egypt, whose successor, Birbars, rebuilt its citadel. In 1300 it was plundered and partly burnt by the Tatars commanded by Ghaazen Khan. In 1399 Timur-Leng put to death almost all the inhabitants, except the sword-cutters. These brought to Damascus, Khorassan where they continued to make the beautiful damascened blades, the secret of which has long been lost at Damascus. In 1516 Selim I conquered Syria from the Mamelukes; Damascus, at that time Damascus had belonged to the Ottoman Empire. Mention should be made of the occupation by Ibrahim Pasha (1832-1840), and the frightful slaughter of the Christians (July, 1890), which caused the flight of many thousands and brought about the occupation of Syria by a French army.

The Turkish City.—Damascus (Arab. Dimashq, or simply es-Sham), the eye or the pearl of the East for the Arabs, is the chief town of the vilayet of Syria and the second city in the Ottoman Empire. Three railways start thence to Beirut, Mersur, and Mecca; there is also a tramway to Hama. Trade with all countries throughout the desert, the town lying on the 2267 feet above sea level and enjoys a very mild climate, owing to the Barada, which runs through it, and to its numerous fountains or springs. It is surrounded by the groves and gardens of the Ghouta, which stretch about ten miles south and east and include twenty-nine villages, the inhabitants of which are devoted to fruit culture (oranges, lemons, etc., especially plums and apricots). Within the city are the tombs of Noured-Din, Saladin, and Birbars, 850 fountains, 64 hammams (baths), 25 bazaars, a stock exchange for the local trade, a half-ruined citadel, 248 mosques, 300 religious houses, etc. (anciently St. John's church) was burned in 1893, on which occasion many manuscripts and works of art were lost.

Religious Conditions.—Damascus is a Latin archiepiscopal titular see; three bishops of the sixteenth century are mentioned in the "Revue bénédictine" 1907. (82-85). It is moreover a metropolitai see for the Catholic (also for the non-Catholic) Melchite Greeks, and for the Catholic Syrians, and finally an episcopal see for the Maronites. The population, including the rich Europeanised suburb of Es-Sebaeh, is about 800,000. Of this number 255,000 are Mussulmans, 20,000 non-Catholic Melchite Greeks, 500 Protestants, 10,000 Jews, 1000 Armenian and Syrian Jacobites, and 20,200 Catholics (15,000 of whom are Melchite Greeks, 2500 Syrians, 1500 Maronites, 400 Latins, 700 Armenians, and 100 Chaldeans). Since the sixteenth century the non-Catholic Greek Church has not been able to reside at Damascus. The Catholic Greek Patriarch of Antioch also resides at Damascus and governs his diocese through a titular bishop. The Syrian Catholic patriarch has recently transferred his residence to Damascus. The Catholic Greek archdiocese has about 15,000 faithful, 20 priests, and 12 churches. The Catholic Syrian archdiocese has 3000 faithful, 9 priests, 4 parishes.
chambers. The Maronite diocese has 23,000 faithful, 65 priests, 61 churches, 80 Baladite monks in 5 monasteries, and 150 Alepigne monks in 6 monasteries. There are in Damascus 14 churches, of which 9 belong to the different Catholic rites. There are also 14 synagogues and 1 Protestant church. The Lazarists, who replaced the Jesuits at the time of their suppression, conduct a college with about 200 pupils. The Jesuits have occupied since 1872 a house said to have been that of St. John Damascene. The Franciscans have the Latin parish church and a school for boys. The Sisters of Charity (1854) have several schools, an orphanage, a dispensary, etc. The Mariamé native sisitges conduct another school. The Catholic Greeks have their schools for boys and girls. As to the Protestants, the Anglo-Syrians possess a hospital and a school, the American mission and the Irish mission each one school. The Mussulmans have a large municipal hospital and a leper's hospital.

Pope St. DAMASUS I

(Loggie di Raffaello, Vatican. Designed by Raphael)

His father, Antonius, was probably a Spaniard; the name of his mother, Laurentia, was not known until quite recently. Damascus seems to have been born in or about 76; it is certain that he grew up there in the service of the church of the martyr St. Lawrence. He was elected pope in October, 366, by a large majority, but a number of over-zealous adherents of the deceased Liberius rejected him, chose the deacon Ursinus (or Unicimus), had the latter irregularly consecrated, and resorted to much violence and bloodshed in order to seat him in the Chair of Peter. Many details of this scandalous conflict are related in the highly prejudiced “Libellus Pecunii” (P. L., XIII, 83–107), a petition to the civil authority on the part of Faustinus and Marcellinus, two anti-Damasian provincial bishops (cf. also Amianus Marcellinus, Rec. Gest., XXVII, e. iii). Valentinian recognized Damascus and banished (367) Ursinus to Cologne, whence he was later allowed to return to Milan, but was forbidden to come to Rome or its vicinity. The party of the antipope (later at Milan an adherent of the Arians and to the end a contentious pretender) did not cease to persecute Damascus. An accusation of adultery was laid against him (378) in the imperial court, but he was exonerated by Emperor Gratian himself (Coll. Conc., III, 628) and soon after by a Roman synod of forty-four bishops (Liber Pontificalis, ed. Duchesne, s. v.; Mansi, op. cit., III, 419) which also excommunicated his accusers.

Damascus defended with vigour the Catholic Faith in a time of dire and varied perils. In two Roman synods (368 and 369) he condemned Apollinarianism and Macedonianism; he also sent his legates to the Council of Constantinople (381), convoked against the aforesaid heresies. In the Roman synod of 369 (or 370) Auxentius, the Arian Bishop of Milan, was excommunicated; he held the see, however, until his death, in 374, made way for St. Ambrose. The heretic Priscillian, condemned by the Council of Saragossa (380) appealed to Damascus, but in vain. It was Damascus who induced Saint Jerome to undertake his famous revision of the earlier Latin versions of the Bible (see Vulgate). St. Jerome was also his confidential secretary for some time (Ep. cxxiii, n. 10). An important Canon of the New Testament was proclaimed by him in the Roman synod of 374. The Eastern Church, in the person of St. Basil of Cesareas, besought earnestly and with profit the encouragement of Damascus against triumphant Arianism; the pope, however, cherished some degree of suspicion against the great Cappadocian Doctor. In the matter of the Meleitian Schism at Antioch, Damascus, with Athanasius and Peter of Alexandria, sympathized with the party of Paulinus as more sincerely representative of Nicene orthodoxy; on the death of Meletius the see was secure the succession for Paulinus and to exclude Flavian (Socrates, Hist. Eccl., V, xxv). He sustained the appeal of the Christian senators to Emperor Gratian for the removal of the altar of Victory from the Senate House (Ambrose, Ep. xvii, n. 10), and lived to welcome the famous edict of Theodosius I. “De fide Catholica” (27 Feb., 380), which proclaimed as the religion of the Roman State that doctrine which St. Peter had preached to the Romans and of which Damascus was supreme head (Cod. Theod., XVI, 1).

When, in 379, Ilyricum was detached from the Western Empire, Damascus hastened to safeguard the authority of the Roman Church by the appointment of a vicar Apostolic in the person of Aschofius, Bishop of
The works of Damasus (ed. Merenda, Rome, 1754) are in P. L., XII, 109 sqq. The best edition of all epigrammata is that of B. KAHLMANN in Revue d'histoire ecclésiastique, X, 1905, 36 sqq. The hagiography of the Syrian DAMASUS eschatology is important (N. V. VAMANIAN in BvS, 1905, 101; 1906, 101), lit. relig. (Paris, 1895), I, 58-73. Over 100 are attributed to him, more than one-half of which are accepted genuine. See also Liber Pontificalis, ed. DICHIARI, I, 212, and praeface, ed. MARUCCHI, II papa Damasus (Rome, 1907); RADZ (Röm-Cath. olo), Damasus, Bischof von Rom (Freiburg, 1882); KAHLMANN, Manuale di archeologia cristiana (Rome, 1908); BAUKENWEVER, Patrologie (Freiburg, 1901), 370-71. 

THOMAS J. SHARAN.

DAMASUS II, Pope (previously called POPPO), a native of Bavaria and the third German to be elevated to the See of Peter. On the death of Clement II, July, 1047, the Tuscan faction reasserted its power in Rome, and, with the secret aid of Boniface, Margareta of Tuscany, restored a wretched creature Benedict IX, who continued in his pontificate to disarm the papacy for a further period of eight months before disappearing entirely from history. On Christmas Day, 1047, an embassy sent by the Roman people brought the tidings of Clement’s death to Henry III, de Pölbhe in Saxony, and besieged the emperor as Patriarch of the Romans to appoint a worthy successor. The envoys, according to their instructions, suggested as a suitable candidate, Halinard, Archbishop of Lyons, who had a perfect command of the Italian tongue and was popular in Rome. Henry, however, in January, 1048, appointed Poppo, Bishop of Brixen, in the name of the Mass, and at once directed him to conduct the pope-designate to Rome. Boniface at first refused, alleging the installation of Benedict, but Henry’s decisive threat soon reduced him to obedience. After Benedict’s removal, the Bishop of Brixen at length entered the city and was enthroned in the Lateran as Damasus II. The pontificate of this pontiff, however, was of short duration. After the brief space of twenty-three days, he died—a victim of malaria—at Palestrina, whither he had gone shortly after his installation to escape the summer heat of Rome. The pope was buried in S. Lorenzo fu le mura.

THOMAS OESTREICH.

DAMBERGER, JOSEPH FERDINAND, church historian, b. 1 March, 1795, at Passau, Bavaria; d. 1 April, 1859, at Schäftlarn. After completing his earlier studies in the public schools of his native town, he pursued the study of law at Landshut, then studied theology at Salzburg, Landshut, and Munich, and was ordained priest in Munich in 1818. While a student, he had also devoted himself very assiduously to historical studies. Until 1837 he was particularly active as a preacher at Landshut and at St. Cajetan’s, Munich. His first historical works appeared at Ratisbon in 1831, three closely related narratives: “Fürstentafel der Staatengeschichte”; “Fürstentafel der europäischen Staatengeschichte”; “Sechs historische, chronologische und statistische Tafeln zur Fürstentafel und Fürstenbuch”.

In 1837 he joined the Society of Jesus, completed his novitiate at Breg, canton of Valais, Switzerland, where he spent about ten years, partly as a mission preacher and partly as professor of ecclesiastical history at Lucerne. A collection of his mission sermons was printed (Lucerne, 1842; 2d ed., 1852), but was violently attacked (Missionssunfang der Jesuiten; Bern, 1842). The defeat of the Sonderbund (1847) brought with it the expulsion of the Jesuits from Switzerland. Damberger then passed several years at Innsbruck and Ratisbon, and in 1853 became confessor at the Convent of Schäftlarn in Bavaria, where he died. In these years he published his principal work in fifteen volumes, “Synchronistische Geschichte der Kirche und der Welt im Mittelalter” (Ratisbon, 1830-43). The last volume was finished and published after his death by Father Daniel Rattinger. The narrative reaches the year 1378. For its date it was an important piece of work, though lacking a sufficient degree of the critical quality. It reveals, nevertheless, close application and extensive learning.
There is a bibliographical notice by Rattinger in the fifteenth volume of the Synchromasie, Geschichte; see Weggler, Dammer in Allgemeine deutsche Biographie (Leipzig, 1866); Somervogel, Répertoire de la c. de J. (2nd ed., Paris and Brussels, 1891), II, 1758 sqq.

Damien, Father (Joseph de Veste), missionary priest, b. at Tremeloo, Belgium, 3 January, 1840; d. at Molokai, Hawaii, 15 April, 1889. His father, a small farmer, sent him to a college at Braine-le-Comte, to prepare for a commercial profession; but as the result of a mission given by the Redemptorists in 1858, Joseph decided to become a religious. He entered the novitiate of the Fathers of the Sacred Heart of Jesus and Mary at Louvain, and took in religion the name of Damian. He was admitted to the religious profession, 7 Oct., 1860. Three years later, though still in minor orders, he was sent to the mission of the Hawaiian Islands, where he arrived, 19 March, 1864. Ordained priest at Honolulu 24 May, of the same year, he was later given charge of various districts on the island of Hawaii, and, animated with a burning zeal, his robust constitution allowed him to give full play to the impulses of his heart. He was not only the missionary of the natives, but also constructed several chapels with his own hands, both in Hawaii and in Molokai.

On the latter island there had grown up a leper settlement where the Government kept segregated all persons afflicted with the loathsome disease. The board of health supplied the unfortunate with food and clothing, but was unable in the beginning to provide them with either resident physicians or nurses. On 10 May, 1873, Father Damien, at his own request and with the sanction of his bishop, arrived at the settlement as its resident priest. There were then 600 lepers. "As long as the lepers can care for themselves," wrote the superintendent of the board of health to Bishop Mazel, "they are comparatively comfortable, but as soon as the dreadful disease renders them helpless, it would seem that even demons themselves would pity their condition and hasten to their relief." For a long time, however, Father Damien was the only one to bring them the succour they so greatly needed. He not only administered the consolations of religion, but also rendered them such little medical service and bodily comforts as were within his power. He dressed their ulcers, helped them to erect their cottages, and went so far as to dig their graves and make their coffins. After twelve years of this heroic service he died of leprosy in April 1889, at the first symptoms of the disease. This was 23 March, 1889. He nevertheless continued his charitable ministrations, being assisted at this period by two other priests and two lay brothers. On 28 March, 1888, Father Damien became helpless and passed away shortly after, closing his fifteenth year in the service of the lepers.

Certain utterances concerning his morality called forth Robert Louis Stevenson's well-known philippic against the Rev. Dr. Hyde, wherein the memory of the Apostle of the Lepers is brilliantly upheld; see a correspondence in the "Pacific Commercial Advertiser", 20 June, 1905, completely removes from the character of Father Damien every vestige of suspicion, proving beyond a doubt that Dr. Hyde's insinuations rested merely on misunderstandings.

Damiatta (Gr. Tamiouthe, Arab. Daudoud), an Egyptian titular see for the Latins and the Catholic Melchite Greeks, in Augustamnia Prima. Damiatta, first mentioned by Stephanus Byzantius, was situated at the mouth of the Phatnian branch of the Nile, on the right bank; its prosperity seems to have coincided with the decline of its religious importance. The seven remains of churches are known, from 431 to 879. Under Caliph Omar the Arabs took it by treachery and successfully defended it against the Greeks who tried to recover it, particularly in 739, 827, 921 and 968. The Arabs also repulsed several attacks of Amaury I, King of Jerusalem. It was finally captured by Jean de Brienne, 1219, after a siege of 15 months; of its 70,000 inhabitants only 3000 survived. St. Francis of Assisi visited the camp of the crusaders and went thence to that of Sultan Malek Kemel to preach the Christian Faith. In 1221 the Franks were defeated and obliged to abandon the town. In June, 1248, it was again captured by St. Louis I, who built a magnificent mosque El-Fatat and established there a Latin bishop, Gilles; but having been taken prisoner with his army, April, 1250, he was obliged to surrender Damietta as ransom. In 1251 the Sultan, hearing that the pious king was preparing a new crusade, ordered the town and its citadel to be destroyed, except the mosque El-Fatat. Later on fishermen built their shelters among the ruins; in this way the modern town has gradually arisen. The site of ancient Damietta is erroneously placed by some historians: at El Sebeh el-Bordj, six miles from the modern town. Damietta is no longer at the mouth of the Nile, but ten miles from the sea; it has about 53,000 inhabitants, of whom 75 are Catholic Melchite Greeks, 60 Latins, and 250 non-Catholic Christians, the rest Musulmans. Franciscans have resided there since the time of St. Francis, and Franciscan nuns conduct a school for girls. Wealthy inhabitants of Cairo are wont to retire to Damiatta during the heated season. The harbour is of little importance. Damietta is also, probably since the fifth century, a see for the Monophysite Copts; moreover, one of the non-Catholic Greek metropolitan subject to the Patriarch of Alexandria bears the title of Pelusiun and Damaita. In the neighbouring Mansourah, famous for the victory of St. Louis, there are about 1000 Catholics and several institutions.

S. Valieh.

Dan (Heb. דָּן, Sept. דָּנָא).—(1) The fifth son of Jacob, being the elder of the two sons born to him by Bais, the handmaid of Rachel. His name is the expression of the tribe bearing the same name. Etymologically, the word is referred to the Hebrew root דָּנָא signifying "to rule" or "judge", and in the passage,
army men of the tribe are represented as taking part in the election of David in Hebron (1 Par. xii, 35), and among the skilled artists sent by Hiram of Tyre to Solomon was the metal-worker Hiram, whose mother was of the tribe of Dan (II Par. ii, 13 sq.).

(3) A city of Palestine, originally Lais, or Lossom, and called Dan after it had been destroyed and rebuilt by the Samarians from remnants of the original name (Judges, xviii). Its location marked the northern boundary of Palestine as did Bersabee the southern extremity, whence the popular expression “from Dan to Bersabee” used to designate the entire extent of the country. Although nothing now remains of the city of Dan, its ancient site on the Bible map, the spot where the name of Neophthali has been pretty accurately determined by means of various Scriptural and other ancient indications. That Lais was a Sidonian settlement at a distance from the parent city is clear from Judges, xvii, 7, 28, and the great fertility of the spot is affirmed in the same chapter (9, 12). Josephus, who calls the town Δαμα, and elsewhere Δαμα, places it “in the neighbourhood of Mt. Libanus, near the fountains of the Lesser Jordan, in the great plain of Sidon, a day’s journey from the city” (Antiq., V, iii, 1). According to Eusebius and St. Jerome, the village of Dan was situated within four miles of Pharisa (Bethphage), on the road from Tyre, the rise of the Jordan. Its proximity to Panass has led to a confusion of the two towns in certain ancient works, as, for instance, in the Babylonian Talmud; and a few modern scholars, among whom is G. A. Smith, still identify Dan with Banias, but the generally received opinion places it at Tell el-Qadi, and this identification has in its favour, among other reasons, the practical identity of the name, as “Tell el-Qadi” signifies the “hill of the Judge”. This quadrangular mound is situated about a mile and a half south-west of Mt. Hermon, and to the west of Banias. The site and surroundings are remarkably picturesque, and close to the mound on the west is a spring from which clear, cold water flows in abundance, forming a nahr, or torrent, which the Arabs call Nahr Leddim—probably a corruption of ed-Dbn. This torrent is the main source of the Jordan, and it is doubtless the “Lesser Jordan” mentioned by Josephus.

Dan is mentioned in the fourteenth chapter of Genesis in connexion with the expedition of Abraham against Chedorlahomer, but it is doubtful if the place referred to is the same as the ancient Lais. Though the identification is affirmed by both Eusebius and Jerome, many modern scholars place the Dan of Genesis, xiv, in the vicinity of Galas, and identify it with Dan-Yaan mentioned in II Kings, xxiv, 6. The conquest of Lais by the Danites, referred to above (2), is related in Judges, xviii. The portion of the tribe which took up its abode there was addicted to certain forms of idolatry from the beginning (cf. Judges, xviii, 30, 31), and it was in this frontier town that Jeroboam set up one of the golden calves which were intended to draw the Israelites of the Northern Kingdom away from the Sanctuary in Jerusalem (III Kings, xii, 29, 30; IV Kings, x, 29).

For (1) Vitringa, for (2) and (3) Legendre, both in Dict. de la Bible, s. v.; also for (1) and (2) Pearce, for (3) Mackie, both in Hastings, Dict. of the Bible, s. v. JAMES F. DRISCOLL.

Danaba, a titular see of Phoenicia Secunda. Danaba is mentioned by Ptolomy (V, xvi, 24) as a town in the territory of Dan, and a detachment of Hellespontine Greeks was posted there (where it is called Danova) it was a Roman military station between Damascus and Palmyra, twenty miles from Nesa. Danaba figures in an Anti-
cliche “Notitia episcopatum” of the sixth century as a suffragan of Damascus, and remained so till perhaps the tenth century at the latest. (See Vercell., X, 90 sqq. and 139 sqq.) Only two bishops are known: Theodore, who attended the Council of Chalce-
The invitation is not regarded with favour and various reasons are given for declining it, but these are found insufficient and finally death leads away his victim. A second messenger then seizes the hand of a new victim, a prince or a cardinal, who is followed by others representing the various classes of society, the usual number being twenty-four. The play was followed by a second sermon reinforcing the lesson of the representation.

The oldest traces of these plays are found in Germany, but we have the Spanish text for a similar dramatic performance dating back to the year 1360, "La Danza General de la Muerte". We read of similar dramatic representations elsewhere: in Bruges before Duke Philip the Good of Burgundy in 1449; in 1463 at Besançon, and in France in the Cimetière des Innocents near Paris in 1424. That similar spectacles were known in England we infer from John Lydgate's "Dance of Death" written in the first half of the fifteenth century. In Italy besides the traditional dance of death we find spectacular representations of death as the all-conqueror in the so-called "La Morte". The earliest traces of this conception may be found in Dante and Petrarch. In Florence (1655) the "triumph of death" formed a part of the carnival celebration. We may describe it as follows: After dark a huge wagon, draped in black and white and drawn by oxen, drove through the streets of the city. At the end of the shaft was seen the Angel of Death blowing the trumpet. On the top of the wagon stood a great figure of Death carrying a scythe and surrounded by coffins. Around the wagons were covered graves which opened whenever the procession halted. Men dressed in black garments on which were painted skulls and bones came forth and, seated on the edges of the graves, sang dirges on the shortness of human life. Before and behind the wagon appeared men in black and white bearing torches and death masks, followed by banners displaying skulls and bones and skeletons riding on scrawny nags. While they marched the entire company sang the Misere with trembling voices.

Specimens of the dramatic dance of death have been
preserved in the Alsfeld Passion Play, in the French morality entitled "Charité", and in the Neumarkt Passion Play which opens with the triumph of Death. As the painter's art developed, the dance of death was in a way made permanent by being painted on the enclosing walls of cemeteries, on charnel-houses, and in the chapels, and even in churches. These representations are found in most of the countries of Europe. One of the most famous is the "Triumph of Death" in the cemetery of Pisa, painted between 1450 and 1500. One of the oldest pictures of the dance of death is the one at the Church of Sainte-Clotilde in Paris (1425). Büchner, in Herder's "Kirchenlexikon", enumerates seven French dances of death dating back to the fifteenth century, three of the sixteenth century, three of the seventeenth century, seven of uncertain date, five in England, and four in Italy. Within the limits of the old German Empire there still exist, thirty years ago, the artist of death, who is now generally accepted as Hans Lützelburger, one of the greatest of German engravers, was dead. But little is known of his career. He was certainly dead before 1526. The designs appear to have been cut on the wood eleven years before the book was published, and their issue was probably held back by reason of the unsettled state of religious opinion in Basel. The series comprises forty-two engravings, the subjects expressed with masterly dramatic power, marvellous clearness, and marked reticence of line. Technically they are as perfect as woodcuts can be. There are five sets of proof impressions in existence, and the little book passed through nine editions at Lyons and was printed also in Venice, Augsburg, and Basel. There have been many reissues and reproductions of it, and a facsimile of the first edition was published in Munich in 1884.

Beside the "Dance of Death" Holbein designed a series of initials consisting of an alphabet in which it is the motif. Of Holbein's larger "Dance of Death" more than one hundred editions have appeared. Since Holbein this subject has been treated again and again, especially by German engravers. The most noted of recent dances of death is that by Alfred Rethel, 1848, in which Death is represented as the hero of the Red Republic. Both the conception and the execution of Rethel's engravings are highly artistic and impressive.

Dancing — The right of dancing is to be sought in the natural tendency to express grief either to prevent or to replace speech. Strong emotions, in particular, key up the organs to a pitch of excitation which spontaneously manifests itself through more or less rhythmical movements that constitute what may be considered as elementary and natural dances. But in the same manner as speech soon developed into poetry and song, so also did these bodily movements gradually develop into the art of dancing. Both54 modern and ancient dancing may be described as an expression of the feelings by movements of the body more or less controlled by a sense of rhythm" (J. Millar), and are to some degree practised by all peoples. The Hebrews were no exception; their language contains no less than eight verbs to express the idea of dancing. However, many of the allusions found in the Bible point to mere spontaneous expressions of merriment by leaping, circling, or otherwise. This description was very likely the dances of Mary and the women of Israel after the crossing of the Red Sea (Exod., xv, 20), of the people around the golden calf (Exod., xxii, 10), of Jephthe's daughter coming to meet her father after the latter's victory (Judges, xi, 34), of the inhabitants of the cities on the way of the army commanded by Holophernes (Judith, iii, 10), even of David before the Ark (II K., vi, 5, 22). From these various places it might be inferred that dancing was a manifestation of joy ordinarily exhibited by women, and we know how David, in the course of his escapades, excited Michel's wonder. In later times dancing was positively looked upon as unbecoming men; such also was the opinion in Rome, where the saying ran that a man, to indulge in dancing, must be either intoxicated or mad.

Dancing as an art was made subservient to various purposes. Its use as an aid to heighten the splendour of religious celebrations should be first considered. Religious dances consisted mostly of slow and stately processions through the streets of the city or around the altar. Usually they were performed by colleges of priests; but occasionally a single dancer, or even a whole band, performed, without any disparagement to the gravity of their characters or dignity of position, took a part in these exhibitions (Liv., I, xx; Quintil., I, ii, 18; Macrobius, Sat. ii, 10). All religious dances, however, were not performed with the gravity above referred to. In Rome, the salti, carrying the sacred shields through the streets, leapt and jumped clumsily "like stamping fullers" (Senec. Ep. xv). The Bible describes likewise the priests of Baal limping (so Heb.; D.V.: "leaping") around the altar (III K., xxviii, 26). Throughout the East sacred dances were a prominent feature in religious worship. In Egypt even colleges of female singers and dancers were used for this purpose. That dancing was also an accomplishment of the Jahweh worship is probable from Judges, xxi, 21, for early times, and clearly evidenced by Ps. cxlii, 3, and cl, 4, for the epoch following the captivity. The texts seem further to indicate that, in the second Temple, persons engaged in dancing and singing in God's temple, and our formed choirs similar to those of the pagan rites (Cic., Phil., v, 6; Virg., En., VIII, 718; Hor., Od., i, 31). War dances, so common among many peoples, and which were frequently introduced to enhance the pompous appearance of public festivities and assemblies, are mentioned by the Romans, have left no trace among the Hebrews and their neighbours, although they are not unknown to modern inhabitants of Palestine and Arabia. Mimetic dances were as little known in the East as those of a military character. They consisted of expressive movements of the features, body, arms, and hands, executed to a musical accompaniment and meant vividly to represent historical or fabulous events and the actions and passions of well-known characters. How much such performances were relished by the Romans, we learn from many passages of Latin writers, such as Macrobius, Sat. i, movement 5, 57, "Nero", 54, "Titus", 7; Ovid, Ars Am., i, 595, etc. Still more was scenic dancing in favour in Rome and Greece. It consisted of harmonious movements
principally of the arms, body, and feet, intended to show forth all the flexibility, agility, and grace of the human body. Such exhibitions were usually given for or by the most enchanting women, and performed by professional dancers hired for the occasion. Female dancers—there were also male dancers—were preferred. They were generally persons of considerable beauty and indifferent morals, and their performances were calculated to set forth, even at the expense of modesty, for which the Jews, with their charm and attractiveness of their graceful figures.

This class of persons, common in ancient Greece and Italy, were not altogether unknown in Palestine, at least in later times, if we believe the indication of Eclesius, ix, 4. The author of Eccles., impersonating Solomon, relates he had procured for his own enjoyment "singing men and singing women" (ii, 8), that is to say, very likely, dancers, for singing and dancing were scarcely distinct. At any rate, the performance of Herodias' daughter, recorded in Matt., xiv, 6, and the pleasure it afforded to Herod and his guests, show how Greek and Roman corruption had, about the time of Christ, made headway among the higher classes of Palestine.

Although perhaps less common, and certainly less elaborate than with us, social dancing appears nevertheless to have been a pleasurable diversion in ancient times, at least among the Jews. For, understood in this, a hundred and a hundred and a half, or Jer., xxvi, 31, and Is., xvi, 10, and Jer., xxx, 30, indicate that the vintage season was one of public merriment exhibited in dances. Dancing was likewise indulged in, even by most grave persons (Bab. Talm., Ketuboth, 16b), at weddings and the Feast of Tabernacles. Men and women danced apart, as is still the custom in the East. Social dancing has undergone considerable development in the last few centuries, both as to prevalence and elaborateness. The introduction into modern fashion of the so-called round dances has quickened the interest of the old question anent the morality of dancing. As an exercise of physical culture, aside from the generally unhealthful conditions of dancing-halls, dancing may have advantages; we should not wonder, therefore, that from this viewpoint Plato recommended it. From the moral standpoint, religious and military dancing has never met with any criticism. (See the above.)

Gentile dancing shows, especially in representing love-stories and mythological subjects, were at times so offensive to modesty that even the pagan emperors deemed it their duty to banish them repeatedly from Italy. In no wise better, as has been shown above, were scenic dances; and male and female dancers were considered to be almost as bad as the woman. In Egypt, India, and Japan, the almebas, the bayaderes, and the geishas, as a lower and degraded class. According to Roman law, such persons were infames. Against their performances the Fathers of the Church raised a strong voice. The Decretals went farther, forbidding clerics to attend any mimic or histronic exhibitions, and enacting that any cleric taking active part in them should forfeit all his privileges, and that all persons engaged in professional dancing, mimic or histronic performances, should incur irregularity and be thereby forever debarred from the clerical state and rendered incapable of receiving orders. As to social dancing, it was not much in vogue, whilst in itself it is an indifferent act, moralists are inclined to place it under the ban, on account of the various dangers associated with it. Undoubtedly old national dances in which the performers stand apart, hardly, if at all, holding the partner's hand, fall under ethical censure sooner or later. Nevertheless, at the time this was written, dancing was still in vogue, and was much enjoyed by the people of all ages and both sexes. In the high society of Venice, the Dandolo family, of which the famous Dandolo was a member, were noted for their skill in dancing, and were sometimes invited to dance at the court of the Doge. The Dandolo family was one of the most influential families in Venice, and members of the family were often Doges of the Republic. The Dandolo family was noted for its hospitality, and it is probable that the Dandolo family's skill in dancing was a reflection of their love of music and the arts. In any case, it is clear that the Dandolo family was a force to be reckoned with in the political and cultural life of Venice.
councils of Venice. With this reservation it may be admitted that Dandolo took the leading part in the negotiations which ended in the capture of Constantinople. In fact it was to the interest of Venice to re-establish order and security in the Byzantine Empire. Dandolo proposed the expedition against Zara (October, 1212) to the crusaders, as a way to pay off their debts owed to him. The capture of Zara, according to the testimony of Robert de Clare, Dandolo was the first to suggest that the preliminary occupation of Greece would greatly facilitate the conquest of the Holy Land. Thereafter, during the entire expedition, his influence over the leaders of the Crusade grew from day to day. He presided at the council of war held at the Abbey of San Stefano, 23 June, 1203, and gave the wisest advice to the barons. In spite of his age he took an active part in the operations of the siege of Constantinople. While the barons attacked the walls in the Blachernæ quarter, Dandolo directed the assault of the Venetians against the sea walls and hoisted the gonfalon of St. Mark on his galley. The city captured, he wished to force Alexis IV to keep the promises made to the crusaders. Upon his refusal, Dandolo boldly defied him and advised the barons to undertake the siege of the city. In the council of war, 1 March, 1204, Dandolo signed with them the treaty partitioning the empire between Venice and the crusaders.

After the capture of the city he had Boniface of Montferrat driven out of the empire; the barons offered him the imperial crown, but he loyally refused it, so as not to violate the Constitution of Venice. The new emperor Baldwin gave him the title of "Despot", and he settled in Constantinople. In 1205 he took part in the disastrous expedition against the Bulgarians; he died shortly afterwards and was buried in St. Sophia. Dandolo by his skill and energy established the political and commercial power of Venice in the Orient.

LOUIS BREHIER.

Daniel, the hero and traditional author of the book which bears his name. This name (Heb. דניאל or דניאל; Sept. דניאלא), which is also that of two other persons in the Old Testament [cf. I Paral., iii, 1; I Esd., viii, 2, and II Esd. (Nehem.), x, 6], means "God is my judge"; and it is thus a fitting appellation for the writer of the Book of Daniel, wherein God's judgments are repeatedly denounced upon the Gentile powers. Nearly all that is known concerning the Prophet Daniel is derived from the book ascribed to him. He belonged to the tribe of Juda (i, 6), and was of noble, or perhaps of royal, descent (i, 3; cf. Josephus, Antiquities of the Jews, Bk. X, ch. x, § 1). When still a youth, probably about the years of age, he was carried captive to Babylon by Nabuchodonosor in the fourth year of the reign of Joakim (605 b. c.). There, with three other youths of equal rank named Ananias, Misael, and Azarias, he was entrusted to the care of Aspenez, the master of the king's eunuchs, and was educated to a second siege and learning of the "Chaldeans", whereby are meant the professors of divination, magic, and astrology in Babylon (i, 3, 4). From this passage Jewish tradition has inferred that Daniel and his companions were made eunuchs; but this does not necessarily follow: the master of the eunuchs stationed them at three. In the course of time, after a time to their entering the king's service (i, 5). Daniel now received the new name of Baltassar (Babyl. בלתסאר, "Bel protect his life"), and, in agreement with Ananias, Misael, and Azarias, who received similarly the new names of Sidrack, Massach, and Abdenago, respectively, Daniel and obtained permission to use the special food from the royal table provided for those under training, and to be limited to vegetable diet. At the end of three years Daniel and his three companions appeared before the king, who found that they excelled all the others who had been educated with them, and thereupon promoted them to a place in his court. Henceforth, whenever the prince tested them, they proved superior to all the diviners, and wise men, that were in all his kingdom (i, 20). Soon afterwards—either in the second or in the twelfth year of Nabuchodonosor's reign—Daniel gave a signal proof of his marvellous wisdom. On the failure of all the other wise men, he repeated and interpreted, to the monarch's satisfaction, the king's dream of a colossal statue which was made up of various materials, and which, on being struck by a stone, was broken into pieces, while the stone grew into a mountain and filled the whole earth. On this account, Daniel in Babylon, as Joseph of old in Egypt, rose into high favour with the prince, who not only bestowed on him numerous gifts, but also made him ruler of "the whole province of Babylon" and chief governor of "all the wise men". At Daniel's request, too, his three friends received important promotions (ii). The next opportunity afforded Daniel to give proof of his wisdom was anther dream of Nabuchodonosor which, once more, he alone was able to interpret. The dream was of a mighty tree concerning which the king heard the command given that it should be cut down, and that "seven times" should "pass over" its stump, which had been left standing. This, explained Daniel, portended that in punishment of his pride the monarch would for a while lose his throne, be bereft of his reason, imagining himself an immortal soul and living in the open fields, but be again restored to his power, finally convinced of the supreme might and goodness of the Most High. With holy freedom, although in vain, the Prophet exhorted the king to forestall such punishment by atoning for his sins by deeds of mercy; and Daniel's prediction was fulfilled in the letter (iv). For a parallel to this, see Abydenus' account (second century B. C.) quoted in Eusebius (Prep. Evang., IX, xii).

Nothing is expressly said as to what became of Daniel upon the death of Nabuchodonosor (561 B. C.); it is simply intimated in Daniel, v, 11 seq., that he lived in retirement. The incident which brought him to public notice again was the scene of revolts in Baltasar's palace, on the eve of Cyrus' conquest of Babylon (538 B. C.). While Baltasar (Heb. Bel'hash'car, corresponding to the Babylon, Baltâsu-usur, "Bel protect his life") and his lords feasted, impossibly drinking their wine from precious vessels which had been taken from the Temple at Jerusalem, there appeared the fingers of a man writing on the wall: "Mane, Theel, Phares". These mysterious words, which none of the king's wise men was able to interpret, were explained by Daniel, who at length had been summoned, and who for his reward became one of the three chief ministers in the kingdom. The prophet, now at least
eighty years of age, remained in that exalted position under Darius the Mede, a prince possibly to be identified with Darius Hystaspes (485 B.C.). Darius, murdered in 486 B.C., ordered that he be eviscerated, feasted upon, and his heart, liver, and lungs were offered in sacrifice. Darius, in an elevation, sought to compass his ruin by convicting him of disloyalty to the Crown. They secured from the king a decree forbidding any one, under penalty of being cast into the lions' den, to ask any petition of either god or man, except the monach, for thirty days. As they had sought of setting him over all the kingdom (vi, 4), with Darius Darius feared nothing. He was offered the privilege of praying, three times a day, at his open window, towards Jerusalem. This they reported to the king, and they forced him to apply the threatened punishment to the violator of the decree. Upon Daniel's miraculous preservation in the lions' den, Darius published a decree that all idol worship should be abolished, and enrolled him among the gods of Babylon, and enfeoffed of the kingdom. The God of Daniel, proclaiming that He is "the living and eternal God," and so Daniel continued to prosper through the rest of the reign of Darius, and in that of his successor, Cyrus the Persian (vi).

Such, in substance, are the facts which will be gathered from the biographical traditions that represent him as the narrative portion of his book (i-vi). Hardly any other facts are contributed to this biography from the second, and more distinctly apocalyptic, portion of the same work (vii-xii). The visions therein described represent him chiefly as a seer favoured with Divine communications respecting the future punishment of the Gentile powers and the ultimate setting up of the Messianic Kingdom. These mysterious revelations are referred to the reigns of Darius, Xerxes, and Cyrus, and as they are explained to him by the Angel Gabriel from an ever clearer disclosure of what is to happen in "the time of the end." In the deuterocanonical appendix to his book (xiii-xiv), Daniel reappears in the same general character as in the first part of his work (i-vi). Chapter xiii sets forth as an inspired youth whose superior wisdom puts to shame and secures the punishment of the false accusers of the chaste Susanna. The concluding chapter (xiv), which tells the history of the destruction of Bel and the dragon, represents Daniel as a fearless and most successful champion of the true and living God. Outside of the Book of Daniel, Holy Writ has but few references to the prophet of that name. Daniel (114, 14) speaks of Daniel, together with Noe and Job, as "the just of righteousness and, in the time of our days," xxviii, 3, as the representative of perfect wisdom. The writer of the First Book of the Machabees (ii, 60) refers to his deliverance out of the mouth of the lions, and St. Matthew (xxiv, 15) to "the abomination of desolation," which was spoken of by Daniel the prophet. As was related, Daniel had been busy with completing the meagre account of Daniel's life as supplied by the Sacred Scriptures. Allusion has already been made to the tradition of the Jews, accepted by many Fathers of the Church, which states that he was made a eunuch in Babylon. Other Jewish traditions, refusing divine honours proffered to him by Nabuchodonosor; they explain the reason why he was not forced with his three friends to worship that prince's statue in the plain of Dura (Dan. iii), he had been sent away by the king, who wanted to spare Daniel's life, for he knew full well that the prophet would never agree to commit such an act of idolatry; they give many fanciful details, as for instance concerning what happened to Daniel in the lions' den. Others endeavour to account for what they assume to be a fact, viz. that Yahweh's devout prophet did not return to God's land and city after the captivity, as is generally issued by Cyrus; while others again affirm that he actually went back to Judea and died there. Hardly less incredible and conflicting legends concerning Daniel's life and place of burial are met with in Arabic literature, although his name is not mentioned in the Koran. During the Middle Ages there was a widespread and persistent tradition that Daniel was buried at Susa, the modern Shuster, in the Persian province of Khuzistan. In his book of his visit to Susa in the year 1165, Rabbi Benezech, the legend narrates that Daniel's tomb was shown him in the façade of one of the synagogues of that city; and it is shown there to the present day. The Roman martyrlogies assign Daniel's feast as a holy prophet to 21 July, and apparently treats Babylon as his burial-place.

Francis E. Gigot.

Daniel, Anthony, Huron missionary, b. at Dieppe, in Normandy, 27 May, 1601, slain by the Iroquois at Tusnaout, near Hilledale, Simcoe Co., Ontario, Canada, 4 July, 1648. After two years' study of philosophy and one of law, he entered the Society of Jesus in Rome, 1 Oct., 1621. Sent to Canada in 1633, he was first stationed at Cape Breton, where his brother Captain Daniel had established a French fort (1629). For two years he had charge of the school for Indian boys, but with this exception he was connected with the Mission at Iohnataris, in the Huron country, from July, 1634, until his death fourteen years later. In the summer of 1648, the Iroquois made a sudden attack on the mission while most of the Huron were absent, and Father Daniel was left with all his power to aid his people. Before the palisades had been scaled he hurried to the chapel where the women, children, and old men were gathered, gave them general absolution and baptized the catechumens. Daniel himself made no attempt to escape, but calmly advanced to meet the enemy. Seized with amazement the savages halted for a moment, then recovering themselves they discharged at him a shower of arrows. "The victim to the heroism of charity," says Bancroft, "died, the name of Jesus on his lips; the wilderness gave him a grave; the Huron nation were his mourners" (vol. ii, ch. xxxii). Here Bancroft is in error. The lifeless body was flung into the burning chapel and both were consumed together. Daniel was the second to receive the martyr's crown among the Jesuits sent to New France, and the first of the missionaries to the Hurons. Father Raguenau, his superior, speaks of him in a letter to the general of the order as "a truly remarkable man, but too closely united with God, of never failing patience and indomitable courage in adversity" (Thwaites, tr. Relations, XXXIII, 253-269).

Edward P. Spillane.

Daniel, Book of. In the Hebrew Bible, and in most recent Protestant versions, the Book of Daniel is limited to its proto-canonical portions. In the Septuagint, the Vulgate, and many other ancient and modern translations of Holy Writ, it comprises both its proto- and its deuterocanonical parts, which two sets of parts have an equal right to be considered as the Bible, as a book written in the Book of Daniel. As in the Vulgate nearly all the deuterocanonical portions of that prophetic writing form a kind of appendix to its proto-canonical contents in the Hebrew text, the present article will deal first with the Book of Daniel as it is found in the
Hebrew Bible, and next, with its deuterocanonical portions.

**Photo-Canonical Portions.**—(1) Contents.—The Book of Daniel, as it now stands in the ordinary Hebrew text, is divided into three parts: the first contains a series of visions which are told in the third person (chaps. i–vi), and the second, a series of visions which are described in the first person (chaps. vii–xii). The opening chapter of the first series may be considered as a preface to the whole work (ch. i). The vision of the Hebrew heroes of the book, Daniel and his three fellow-captives, Ananias, Misael, and Azarias, and records the manner in which these noble youths obtained a high rank in Nabuchodonosor’s service, although they had refused to be defiled by eating of the royal food. The second chapter relates a captivating dream in which Daniel alone was able accurately to set forth and interpret. Nabuchodonosor’s dream was that of a great statue made up of various materials and broken in pieces by a small stone which became a mountain and filled the whole earth. Daniel’s interpretation was to the effect that several parts of the statue with their various materials symbolized as many monarchies with their respective power, while the stone which destroyed them and grew into a great mountain figured a universal and everlasting kingdom which would break in pieces all the other kingdoms, and which is to come no other than that of the Messias.

The next section (iii, 1–30; Vulgate, iii, 1–29, 97) narrates how Daniel’s three companions, having refused to worship a colossal statue set up by Nabuchodonosor, were cast into a highly-heated furnace in which they were preserved unharmed, wherupon the king issued a decree in favour of their God and promoted them to the highest dignities. The particular king in the north, i.e. Antiochus Epiphanes, against Egypt, the Jews, the Temple, etc., until he should come to an end. The conclusion of the vision (xii) declares how Michael (the guardian angel of Israel) will deliver the people. Mention is made of a resurrection of the dead, followed by rewards and punishments. For 1290 days, or about three and one half years, the daily sacrifice will cease and the abomination of desolation will be set up. Blessed is he who continues steadfast till 1335 days.

(2) Object and Unity.—From these contents it readily appears that the Book of Daniel has not for its object to give a history of the life of Daniel, of the period of the Babylonian Exile, or of the life of Daniel himself, since both its parts profess to give only a few isolated facts connected with either the Exile or the Prophet’s life. From the same contents it can also be readily seen that the object of that sacred writing is not to record in substance prophetic adornings, similar to those which make up the works ascribed to distinct prophets in the Old Testament literature. In respect to both matter and form, the contents of the Prophecy of Daniel are of a peculiar kind which has no exact parallel in Holy Writ, except in the Apocrypha, and of St. John. In place of the dogmas of the Bible, one is in presence of contents whose general purpose is undoubtedly to comfort God’s people under the ordeal of a cruel persecution, chiefly by means of symbolic visions bearing on “the time of the end.” This is the obvious purpose of the four visions recorded in the second part of the Book of Daniel (chaps. vii–xii), and also of Nabuchodonosor’s dream as given and explained in the second chapter of the first part of that inspired writing: the persecution therein in view is that of Antiochus Epiphanes, and the Jews are to be comforted by the assured prospect both of God’s protection that awaits the true people of God, and the rising up of God’s universal and eternal kingdom. Nor have the narratives in chapters iii–vi a different general purpose: in each and in all of them the generous and constant servants of the true God—Daniel and his fellow captives—triumph in the end, while their op-
pressors, however mighty or numerous, are ultimately punished or made to acknowledge and promote the glory of the God of Israel. This apocalyptic object of the Book of Daniel is admitted by most scholars of the present day, and is in harmony with the place assigned to that same author in the Christian Bible, although not among "the Prophets," or second great division of the original text, but among "the Writings," or third main division of that text.

As apocalyptic writings usually bear the impress of compilation, one might not unnaturally be tempted to regard the Book of Daniel as whose apocalyptic character was a composed— perhaps a transformed—work. In fact, many scholars of the last century—some of whom were Catholic—have set forth positive grounds to prove that the author of the book has actually put together such documents as could make for his general purpose. At the present day, however, the opposite view, which maintains the literary unity of the Prophecy of Daniel, is practically universal. It is felt that the uniform plan of the book, the studied arrangement of its subject-matter, the strong similarity in language of its two main parts, etc. are arguments which tell very powerfully in favour of the latter view: "It requires, in fact, a new effort to reconcile the book as a whole. In the original text, Daniel, we may perhaps discern an attempt to interlace and to confuse, and we may discover the traces of this effort even in the text itself. The Book contains very few traces of the traditional style; there is a marked difference between the two parts; and the author of the second part has been careful to avoid the repetition of the author of the first. The evidence of the composition is too evident to be mistaken. The Book was not written by one man, but by several. It is a collection of different MSS., each of which has its own character. The influence of the apocalyptic literature of the period is evident. The Book is not a literary work, but a compilation. It is a book of the apocalyptic period, and is written in the style of the apocalyptic literature which was in use at the time of its composition.

(3) Authorship and Date of Composition.—Once it is admitted that the Book of Daniel is the work of one single author, there naturally arises the important question: Is this sole writer the Prophet Daniel who composed the work during the Exile (356–366 B.C.), or, on the contrary, some author, now unknown, who wrote this inspired book at a later date, which can still be made out? The traditional view, in vigour chiefly among Catholics, is to the effect that the whole work, as found in the Hebrew Bible, should be directly referred to Daniel, whose name it bears. It admits, indeed, that numerous alterations have been introduced into the primitive text of the book in the course of ages. It maintains, nevertheless, that both the narratives (chaps. i–vi) wherein Daniel seems to be described by some one else as acting as recorded, and the symbolic visions (chaps. vii–xii) wherein he describes himself as favoured with heavenly revelations, were written, not simply by an author who was contemporary with that prophet and living in Babylon in the sixth century B.C., but by Daniel himself. Such a conception, in the use of persons is regarded as arising naturally from the respective contents of the two parts of the book: Daniel employed the third person in the early part, for the other narrative, and the first person in relating prophetic visions, for such communications from above needed the personal attestation of those to whom they are imparted. Over against this time-honoured position which ascribes to Daniel the authorship of the book which bears his name, and admits 570–550 B.C. as the date of composition, stands a comparatively recent theory which has been widely accepted by contemporary scholars. Chiefly on the basis of historical and linguistic grounds, this rival theory refers the origin of the Book of Daniel, in its present form, to a later writer and period. It regards that apocalyptic writing as the work of an unknown author who composed it during the period of the Machabees, and more precisely in the time of Antiochus IV, Epiphanes (175–164 B.C.).

The following are the extrinsic testimonies which conservative scholars usually and confidently set forth as proving that the Book of Daniel must be referred to the well-known Prophet of that name and consequently to a much earlier date than that advocated by their opponents. Christian tradition, both in the East and in the West, has been practically unanimous from Christ's time to the present day, admitting the genuineness of the Book of Daniel. Its testimony is chiefly based on Matthew, xxiv, 15: "When therefore you shall see the abomination of des-

oration, which was spoken of by Daniel the prophet, standing in the holy place: he that readeth let him understand", in which passage Christ treats Daniel's visions as true oracles, and expressly names the Prophet as their writer. In so doing, it is argued, he most certainly endorsed and confirmed His authorship of the visions which were then received among the Jews, and which regarded Daniel as the author of the book which bears his name. Jewish tradition, both during and before Christ's time, bears also distinct witness to the genuineness of the Prophecy of Daniel. In his "Antiquities of the Jews" (Bk. XI. ch. vii. § 5), the learned Jewish historian Jose the Just (B.C. A.D. 40–100), writes: "When the Book of Daniel was shown to Alexander the Great (d. B.C. 323), wherein Daniel declared that one of the Greeks should destroy the empire of the Persians, he supposed that himself was the person intended". Before the Christian Era, the First Book of the Maccabees (written very early in the first century B.C.) shows acquaintance with the Septuagint version of the Prophecy of Daniel (cf. I Mach. i, 54, with Dan., ix, 27; I Mach., ii, 59, 60, with Dan., iii, vi), whence it is inferred (1) that at that date the Book of Daniel must have been for some considerable time rendered into Greek, and (2) that the composition must have preceded this translation by some considerable time more, so that its origin under Antiochus Epiphanes is hardly probable. Again, the Sibylline Oracles (Bk.III. verses 388 sqq.), supposed to have been written about 170 B.C., contain an allusion to Antiochus IV, and to the ten horns of Daniel vii, 7, 24, and therefore point to an earlier date than that which is proposed by the advocates of the recent theory. More particularly still, the Septuagint translation of the Pentateuch, made about 285 B.C., exhibits in Deut., xxxii. 8, a doctrine of guardian angels which it has apparently borrowed from the Book of Daniel, and thus tends to prove the existence of that inspired writing long before the time of Antiochus Epiphanes. Finally, according to Josephus (Contra Apion, VIII), the Old Testament Canon of the Jews of Palestine, which has always included Daniel among "the Writings", was closed by Esdras (middle of the fifth century B.C.), that is to say, at a date so near the composition of the book that its genuineness could then be easily ascertained, and would naturally be the reason for the insertion of the work into the Palestinian Canon.

To strengthen the inference drawn from these extrinsic testimonies, conservative scholars appeal to the following direct and indirect intrinsic grounds. Throughout the second part of his book Daniel speaks in the first person and thereby gives himself implicitly as the writer of chapters vii–xii. Nay more, in the words: "Then he [Daniel] wrote the dream and told the sum of the matter", we have a statement which ascribes expressly to him the writing of the first vision (chap. vii) and, implicitly, that of the subsequent visions, which are indissolubly bound up with the opening one. Now, if the visions described in the second part of the book were recorded by Daniel himself, the same thing would be admitted, in regard to narratives which make up the first part of the book (chaps. i–vi), because of the acknowledged unity of the work. And in this way direct intrinsic evidence is considered as making for the Danielic authorship.

The indirect intrinsic grounds point in the same direction, inasmuch as they tend to show that the whole of the Book of Daniel was (1) a resident in Babylon; (2) one who wrote in the period to which the Prophet Daniel belonged; and (3) one who is best identified with that Prophet himself. The first of these positions, it is said, is borne out by the close acquaintance which the author had with the historical portion of the work (chaps. i–vi) with the manners, customs, history, religion, etc. of the Babylonians: the minute details he refers to, the local colouring of his descrip-
tions, his exact references to facts, are such as only a resident in Babylon could be fairly supposed to possess. It is likewise borne out by a comparison of the form of Daniel's prophecies in chapters vii—xii with the general surroundings of one living in Babylon and with the Babylonian monuments in particular: the imagery of Daniel's vision in the seventh chapter, for instance, is precisely the same as that found on monuments in the ruins of Nineve; and in chapters viii, 2 (Heb. text), and x, 4, the river-banks are most appropriately given as the scenes of Daniel's visions. While thus very familiar with Babylonian, the author of the Book of Daniel betrays no such special knowledge of Ecbatana as we would have been led to expect if, instead of living in the sixth century B.C., he had been a contemporary of Antiochus Epiphanes.

This absence of distinct knowledge of the times subsequent to the Babylonian period has sometimes been urged to prove the second position, viz. that the writer belonged to that period, and to no other. Oftener, however, and more strongly, the linguistic features of the Book of Daniel have been brought forth to establish that second position. It has been affirmed, on the one hand, that the Hebrew of Daniel, with its numerous Aramaisms, bears a close affinity to the Aramaic of Daniel, and, on the other hand, that the Aramaic portions of Daniel (ii, 4—vii) are in wonderful agreement with those of Ezra, as they are distinguished by many Hebrew idioms from the language of the earliest Aramaic parophrases of the Old Testament. In particular, the easy transition from the Hebrew to the Aramaic of Daniel, and the reverse (vii, 1 sq.), is explicable, we are told, only on the supposition that the writer and the readers of the book were equally familiar with both; this free handling of both languages suits not the Machabean age but that of Daniel, or of the Exile, in which both tongues were now in use. The evidence of syntax and grammar, however, makes for the last position, viz. that the author of the Book of Daniel is best identified with the Prophet of that name, may be summed up in this simple statement: while no other seer during the Babylonian Exile has been, and indeed can be, named as the probable recorder of the visions described in that inspired writing, Daniel, owing to his position at the court of Babylon, to his initiation into the wisdom of the Chaldees, and to the problem of his calling as God had shown him to it, was eminently fitted at that time for writing the prophecies which had been imparted to him for the comfort of the Jews of his time and of subsequent ages.

Scholars who have examined closely and without bias the details of the foregoing external and internal evidence have come to the conclusion that this evidence shows that rationalistic critics are decidedly wrong in denying totally the historical character of the Book of Daniel. At the same time, among them still question the absolute cogency of the extrinsic and intrinsic grounds set forth to prove the Danielastic authorship. These latter scholars rightly reject as untrue the statement of Josephus, which referred the close of the Old Testament Canon to the time of Eedras; and in the well-known bias of the same Jewish historian for magnifying whatever concerns his nation they have a valid reason for doubting his assertion that the prophecies of Daniel were shown to Alexander the Great when this prince passed through Palestine. The alleged reference to Daniel's expressions in the Temple, and other significant verses of the Book of Daniel, are easily explain as a later gloss, and the actual acquaintance of the First Book of the Machabees with the Prophecy of Daniel they not unnaturally regard as compatible with the non-Danielastic authorship, and indeed with the composition of the Book of Daniel in the time of Antiochus IV. As regards the last external testimony in favour of the genuineness of that sacred writing, viz. Christ's words concerning Daniel and his prophecy, these same scholars think that, without going against the reverence due to Christ's Person, and the credence due His words, they have a right not to consider the passage appealed to in Matt., xxiv, 15, as absolutely conclusive: Jesus does not say explicitly of Daniel with whom he spoke prophecies that bear his name; to infer this from His words is the same as that which may well be questioned, viz. that in referring to the contents of a book of Holy Writ, He necessarily confirmed the traditional view of His day concerning authorship; in point of fact, many scholars whose belief in Christ's truthfulness and Divinity is beyond controversy—for instance, such men as Francois ConEtouxct, S. J., Bishop Hanneberg, Francois Lenormant, and others—have thought that Christ's reference to Daniel in Matt., xxiv, 15, does not bear out the Danielastic authorship as it is claimed by conservative scholars chiefly on the basis of His words.

Having thus shown, to their own satisfaction, the inconclusive character of the external evidence, or mainstay in favour of the traditional view, the opponents of the Danielastic authorship endeavour to prove that internal evidence points decisively to the late origin which they ascribe to the Book of Daniel. They point out that the prophecies bear on events unknown as yet to history or literature. As it is now found in the Hebrew Bible, the Book of Daniel contains historical references which tend to prove that its author is not an eyewitness of the events alluded to, as would be the case if he were the Prophet Daniel. Had this author lived during the Exile, it is argued, he would not have stated that "in the third year of the reign of Josia, king of Judah, Nabuchodonosor, king of Babylon, came to Jerusalem, and besieged it" (Dan., i, 1), since this conflict with Jeremiah, xxxvi, 9, 29; he would not have repeatedly used the word "Chaldeans" as the name of a learned caste, this sense being foreign to the Assyro-Babylonian language, and of an origin later than the Exile; he would not have spoken of Baltasar as "king" (v. 1, 2, 3, 5, etc., viii, 1), as the "son of Nabuchodonosor" (v. 2, 18, etc.), since it is ascertained that Baltasar was never king, and that neither he nor his father had any blood-relationship to Nabuchodonosor; he would have denied the statement that "the Persians the Scythians are succeeded to the kingdom" of Baltasar (v. 31), since there is no room for such a ruler between Nabonahid, Baltasar's father, and Cyrus, the conqueror of Babylon; he could not have spoken of "the Books" (Dan., ix, 2—Heb. text), an expression which implies that the Jewish prophecies of Jeremiah were a known collection of sacred books, which assuredly was not the case in the time of Nabuchodonosor and Cyrus, etc. The linguistic features of the book, as it exists in the Hebrew Bible, point also, it is said, to a date later than that of Daniel: its Hebrew is of the distinctly late type which followed Nehemiah's time; in both its Hebrew and its Aramaic portions there are Persian words, and at least three Greek words, which of course should be referred to a period later than the Babylonian Exile.

Not satisfied with the merely negative inference that the Book of Daniel was not composed during the Captivity, the opponents of the Danielastic authorship strive to reach a positive conclusion as to the date of its origin. For this purpose, they examine the contents of that inspired writing, and they think that by viewing both its parts in the light of history, they are led to refer definitely its composition to the time of the second Exile, as is testified, they are led to infer that the interest of the visions which make up the second part of Daniel culminates in the relations subsisting between the Jews and Antiochus. It is this prince who manifestly is the subject of Dan., vii, 8—21, while events of his reign are apparently described in Dan., ix, 25—
27, and undoubtedly so in xi, 21–45; xii, 6, 7, 10–12. Whoever bears this in mind, it is argued, is led by the analogy of Scripture to admit that the book belongs to the period of Antiochus. The rule is that “even when the prophets of the Old Testament deliver a Divine message for far distant days, they have in view the needs of the people of their own day. They rebuke the sins of the day, they comfort their fears, they enjoin their hopes, they banish their fears. But of all this there is no trace in Daniel, if the book was written in the time of Cyrus. Its message is awesomely for the time of the end, for the period of Antiochus and the Maccabees.” And this inference is confirmed by the fact that the traditions of the first part, which are mainly studied in reference to the events of Antiochus’s reign, are found to impart lessons especially suited to the Jews of that period. The question of eating meat (Dan., i, 8 sqq.) was at that time a test of faith (cf. I Mach., i, 68 sqq.; II Mach., vi, 18 sqq.; vii). The lessons of the fiery furnace and the lions’ den (Dan., iii, vi) were most appropriate in the time of the Maccabees when the Jews were ordered on the pain of death to worship foreign deities (cf. I Mach., i, 43–54). The accounts of the humbling of Nabuchodonosor (Dan., iv) and the fate of Baltasar (Dan., v) were also particularly connected to comfort the oppressed Jews. Finally oppressed by Antiochus and his officers. Such a view of the date of the Book of Daniel is in harmony with the apocalyptic character of the whole work, and can be confirmed, it is said, by certain facts in the external history of the book, such for instance as its place among “the Writings” in the Palestinian Canon, the absence of all traces of Daniel’s influence upon the post-exilic literature before the Maccabean period, etc. Despite the fact that some of these arguments against the Danielic authorship have not yet been fully disproved, Catholic scholars generally abide by the traditional view, although they are not bound to it by any decision of the Church, and are therefore free to be swayed by the evidence of the evidence of the book itself.

(4) Prophecy of the Seventy Weeks. — Several sections of the Book of Daniel contain Messianic predictions the general import of which has been sufficiently pointed out in setting forth the contents and object of that inspired writing. One of these predictions, however, claims a further notice, owing to the special interest connected with its contents. It is known as the prophecy of the seventy weeks, and is found in an obscure passage (ix, 24–27), of which the following is a literal rendering: “24. Seventy weeks [literally, kepastai] have been decreed upon thy people and thy holy city to make atonement for sins, and to expiate iniquity, and to bring in everlasting righteousness, and to seal vision and prophet, and to anoint a most holy [literally: holiness of holinesses]. 25. Know then and discern: from the going forth of the word to build again Jerusalem until an anointed one, a prince, [there are] seven weeks, and for sixty-two weeks it shall be built again [with] broad place and moat, and that in straitness of times. 26. And after the sixty-two weeks an anointed one will be cut off and he will have no . . . [Heb. יְּהֵויָ֣שׁ; Sept. καὶ ὁ ἐσήματος; and the people of a prince which shall come will destroy the city and the sanctuary, and the end thereof [there] in a flood, and until the end [shall] be war, a sentence of desolations. 27. He will make a firm covenant with many for a week, and for half a week he shall cause sacrifice and oblation to cease, and instead thereof (נְּעָלַי, a more probable reading than the present one: כֹּהֵנה לְעַפָּר) the abomination that makes desolate, and that until the consummation and that which is determined be put into desolation.

The difficulty of rendering this passage of the Hebrew text is only surpassed by that of interpreting its contents. Most commentators admit, indeed, that the seventy weeks are weeks of years, which fall into three periods of 7, 62, and 1, weeks of years, respectively, but they are still at variance with regard to both the exact starting point and the precise terminus of the seventy weeks. Most of them, too, regard the prophecy of the seventy weeks as having a Messianic reference, but even all Catholic interpreters do not agree as to the precise nature of this reference, some among them, after Hardouin, S. J., Calmet, O. S. B., and especially F. X. von Soden, identify the reference to Christ, in preference to the literal one which has been, and is still, more prevalent in the Church. Briefly stated, the following are the three principal interpretations which have been given by Dan., ix, 24–27. The first is the ancient view, which may be characterized as “the prophecies of 483 years,” which make the prophecy of the seventy weeks refers directly to the appearance of Christ in the flesh, His death, His establishment of the New Covenant, and the destruction of Jerusalem by the Romans. The second is that of most recent scholars, chiefly non-Catholic, who refer the whole passage directly to the time of Antiochus Epiphanes, with (Christians generally) or without (Rationalists at large) a typical reference to Christ. The third is that of some Fathers of the Church and some recent theologians who understand the prophecy in an eschatological sense, as a prediction of the development of the Kingdom of God from the end of the Exile to the fulfilment of that Kingdom at Christ’s second Advent.

(5) Text and Principal Ancient Versions. — One of the chief reasons of the obscurity which surrounds the interpretation of Dan., ix, 24–27, is found in the imperfect condition in which the original text of the Book of Daniel has come to us. Not only in the prophecy of the seventy weeks, but also throughout both its Hebrew (Dan., i–ii, 4; vii–xii) and its Aramaic (ii, 4–vii) sections, that text betrays various defects which it is easier to notice and to point out than to correct. Linguistics, the context, and the ancient translations of Daniel are most of the time insufficient guides towards the sure restoration of the primitive reading. The oldest of these translations is the Greek version known as the Septuagint, whose text has come down to us, not in its original form, but in that given to it by Origen (died about A. D. 254) for the composition of his Hexapla. Before this revision by Origen, the text of the Septuagint was regarded as so unreliable, because of its freedom in rendering, and of the alterations which had been introduced into it etc., that, during the second century of our era, it was discarded by the Church, which adopted in its stead the Greek version of Daniel made in that century by the Jews, the Targums. This version of Theodotion was apparently a skilful revision of the Septuagint by means of the original text, and is the one embodied in the authentic edition of the Septuagint published by Sixtus V in 1587. In Dr. H. B. Swete’s edition of the Septuagint, Origen’s revision and Theodotion’s version are conveniently printed side by side on opposite pages (vol. III, pp. 498 sqq.). The version of the proto-canonical portions of the Book of Daniel in the Latin Vulgate is St. Jerome’s rendering from practically the same Hebrew and Aramaic text as is found in the current Hebrew Bibles.

Deutero-Canonical Portions. — The Hebrew and Aramaic sections of the Book of Daniel, thus far dealt with, are the only ones found in the Hebrew Bible and recognized by Protestants as sacred and canonical. But besides those sections, the Vulgate, the Greek translations of Daniel (Septuagint and Theodotion), together with other ancient and modern versions, contain three important, though not canonical, portions. These are: (1) the Prayer of Azarias and the Song of the Three Children, usually inserted in the third chapter between the twenty-third and the twenty-fourth verses; (2) the history of Susanna, found as ch. xiii, at the end of the book; (3) the his-
tory of the destruction of Bel and the dragon, terminating the book as ch. xiv. The first of these fragments (Dan., iii, 24–90) consists of a prayer in which Azarias, standing in the midst of the furnace, asks that God may deliver him and his companions, Ananias and Misael, and put their enemies to shame (verses 24–45); a brief notice of the fact that the Angel of the Lord saved the Three Children from all harm, whereas the flame consumed the Chaldeans above the furnace (46–50); and a doxology (52–56) leading on to the hymn familiarly known as the "Benedicite" (57–90). The second fragment (ch. xiii) tells the story of Jachin and Boaz. He was the faithful son of a wealthy Jew named Joakim, and resident in Babylon. Accused falsely of adultery by two unworthy elders whose criminal advances she had repelled, she was sentenced to death by the tribunal before which she had been arraigned. As Susanna was led forth to execution, Daniel, moved by God, remonstrated with the people upon permitting without sufficient inquiry the condemnation of a daughter of Israel. He examined himself the two pretended witnesses separately, and proved their testimony to be self-contradictory. In fulfilment of the Law of Moses (Deut., xix, 18, 19), the two elders were put to death, "for they have done great wrong in the sight of the people from that day, and thenceforward." The last deutero-canonical part of Daniel (ch. xiv) contains the narrative of the destruction of Bel and the dragon. It recounts first the clever manner in which Daniel undermined the king, Cyrus, who regarded a Babylonian idol, called Bel, as "a living god," that actually accepted offerings, whereas these were really consumed at night by the pagan priests and their families: in consequence, these impostors were put to death, and Bel and its temple destroyed. It records, in the second place, how Daniel caused to die a great dragon that the Babylonians worshipped, and that the king wished him to adore as "a living god." Enraged at this, the people forced the king to deliver Daniel to them, and cast the Prophet into a lions' den. Daniel remained there unharmed for six days, and fed by the prophet Habacuc who was miraculously transported from Judea to Babylon. On the seventh day, the king having found Daniel alive in the midst of the lions, praised aloud the God of Daniel and delivered the Prophet's accusers to the fate which Daniel had miraculously escaped.

The Greek is, indeed, the oldest form under which those deutero-canonical parts of the Book of Daniel have come down to us; but this is no decisive reason why they were composed in that language. In fact, the greater probability is in favour of a Hebrew original no longer extant. It is plain that the view which regards these three fragments as not originally written in Greek makes it easier to suppose that they were from the beginning integral parts of the book. Yet, it does not settle the question of their date and authorship. It is readily granted by conservative scholars (Vigouroux, Gilly, etc.) that the last two are probably from a different and later author than the rest of the book; while it is maintained, on the contrary, by nearly all Catholic writers, that the Prayer of Azarias and the Song of the Three Children cannot be dissociated from the preceding and the following context in Dan., iii, and that therefore they should be referred to the time of Daniel, if not to that Prophet himself. In reality, there are well-nigh insuperable difficulties to support for Daniel the composition and republication of the fragment also, like the other two, should most likely be ascribed to some unknown Jewish author who lived long after the Exile. Lastly, although the deutero-canonical portions of Daniel seem to contain anachronisms, they should not be treated—as was done by Sdbelius—"but, by the conjecture of a new age, and that will readily admit that they embody oral or written traditions not altogether devoid of historical value.

But, whatever may be thought concerning these literary or historical questions, there cannot be the least doubt that in decreeing the sacred and canonical character of these fragments the Council of Trent proclaimed the ancient and morally unanimous belief of the Church of God.

Francis E. Gigot.

Daniel, Charles, b. 31 Dec., 1818, at Beauvais, France; d. 1 Jan., 1893, at Paris. He joined the Society of Jesus in 1841, was professor of rhetoric in the novitiate at Saint Acheul, and in 1827, with the assistance of Father Gagarin, founded the "Études de théologie et d'histoire", a magazine that soon became a monthly publication. Father Daniel edited it with ability until 1870. He was a man of extensive and accurate learning of unequalled fertility, and had an unusually receptive and assimilative mind. He contributed to the "Études" many articles on philosophical subjects: "Optimisme" (1859), "Positivism" (1860), "Leibniz et Saisset" (1861), "The Vatican Council" (1869–1870); "Protestantism: the Crisis of Protestantism in France" (1863); "The Organization of Protestants in France" (1863); biographies of Pére Beauregard (1858), Mme. Swetchine (1864), Ch. Lenormand (1860), and P. Léon Ducoudray, martyr of the Paris Commune (1892).

Other more important works are: "Des Études clasiques dans la société Chrétienne" (1872); "La bienheureuse Marguerite Marie et des origines de la dévotion au Sacré Cœur" (1865), translated into Italian, Polish, and Chinese; "La vie du P. Alexis Clerc, marin et Jésuite" (1876), English tr., New York, 1890; and "Les Jésuites instituteurs de la jeunesse au XVII et au XVIIIe siècle" (1880). His "Questions actuelles: religions, philosophie, art et littérature" is preceded by a sketch of the author by Fathers Mercier and Fontaine, S. J. (Poitiers, 1895).

De Orchis et de Esopus (1863). T. Sommervogel, Bib. de la x. de J., ix, supplement and a notice by Mr. J. Lionnet.

Daniel, Gabriel, historian and controversialist, b. at Rouen, France, 8 Feb., 1649; d. at Paris, 23 June, 1728. He entered the Society of Jesus at Paris in 1667, and after making his last vows at Rennes, 1683, was assigned to the professed house of Paris where his extraordinary talents resulted in his being appointed historiographer of France by Louis XIV. Of the published writings of Father Daniel, consisting of philosophical, theological, and historical treatises, many have been translated into German, English, Spanish, Italian, and Latin. In the first class perhaps the most famous was the oft-reprinted "Voyage du monde de Descartes", a refutation of the vortex theory of that philosopher. His refutation of Pascal's "Provincial Letters", which underwent several republications, was issued in 1700, so that this fragment also, like the other two, should most likely be ascribed to some unknown Jewish author who lived long after the Exile. Lastly, although the deutero-canonical portions of Daniel seem to contain anachronisms, they should not be treated—as was done by Sdbelius—"but, by the conjecture of a new age, and that will readily admit that they embody oral or written traditions not altogether devoid of historical value.
Daniel, John, b. 1745; d. in Paris, 3 October, 1823; son of Edward Daniel of Durton, Lancashire, and great-nephew of the Rev. Hugh Tootell, better known as Dodd the historian. He was educated first at Dame Alice’s School, Fernyhalgh, and then at Douai, where he was ordained priest and made professor of philosophy (1778) and afterwards of theology. When the president, Edward Kitchen, alarmed by the French Revolution, resigned his office in 1792, Daniel was appointed president, and was soon after, with his professors and students, in flight to England. This flight was of short duration, for they were taken back, 27 Nov. 1794, to the Irish College at Douai and in February, 1795, were allowed to return to England. It is usually stated that Mr. Daniel was then appointed president of the college at Crook Hall (since removed to Ushaw), but this is difficult to reconcile with contemporary documents in the Westminster diocesan archives: he did not in fact take up residence at Crook Hall, but retired to Lancashire till 1802, when he went to Paris in order to recover the property of Douai College and other British establishments. After 1815 he spent time in India (where he died), and was paid by the French Government, but the English Government confiscated this money, neither returning it to France nor allowing the English Catholics to receive it. Mr. Daniel was the last de facto president of Douai, though the Rev. Francis Tuite was appointed titular president, to succeed him in prosecuting the claims. Mr. Daniel wrote an “Ecclesiastical History of the Britons and Saxons” (London, 1815, 1824).Narrative of the Sufferings of Douay College in Catholic Magazine (London, 1826, Biblio. D. E. C. Cath. (London, 1827), Cooper in Dict. Nat. Biog. (London, 1888), XIV, merely abbreviating Gillow; Kirk, Biographies of Eighteenth Century Cath. Em. (London, 1837). Misselden lists several unpublished manuscripts in Westminster Diocesan Archives and Ushaw College Archives.

Edward Burton

Daniel and Companions, Saint, Friars Minor and martyrs; dates of birth unknown: d. 10 October, 1227. The martyrdom of St. Berard and his companions in 1219 had inflamed many of the religious of the Order of Friars Minor with the desire of preaching the Gospel in heathen lands; and in 1227, the year following St. Francis’s death, six religious of Tuscany, Agnellus, Samuel, Donuhs, Leo, Hugolinus, and Nicholas, petitioned Brother Elias of Cortona, then vicar-general of the order, for permission to preach the Gospel to the infidels of Morocco. The six missionaries went first to Spain, where they were joined by Daniel, Minister Provincial of Calabria, who became their superior. They set sail from Spain and put in at the coast of Africa, where they remained for a few days in a small village situated mostly by Christian merchants just beyond the walls of the Saracen city of Ceuta. Finally, very early on Sunday morning, they entered the city, and immediately began to preach the Gospel and to denounce the religion of Mahomet. They were soon apprehended and brought before the sultan who, thinking that they were mad, ordered them to be cast into prison. Here they remained until the following Sunday, when they were again brought before the sultan, who, by promises and threats, endeavored to make them deny the Christian religion. They were all condemned to death. Each one approached Daniel, the superior, to ask his blessing and permission to die for Christ. They were all beheaded. St. Daniel and his companions were canonsized by Leo X in 1516. Their feast is kept in the order on the thirteenth of October.

Wadding, Annales Minorum (Rome, 1732), II, 25–30; Acta SS., October, VI, 384–392; Passio sanctorum fratrum Daniell, etc. in Annales Franciscani (Quart. Franc. in calendario), 522; Leov, Lives of the Saints and Blessed of the Three Orders of St. Francis (Tauron, 1888), III, 255–260.

Stephen M. Donovan.

Daniel of Winchester (Daniael), Bishop of the West Saxons; and ruler of the See of Winchester from 705 to 744; died in 745. The prominent position which he held among the English clergy of his time can best be appreciated from the fact that he was the intimate friend of St. Aldehelm at Sherborne, of the Venerable Bede at Jarrow and of St. Boniface in Germany. Daniel was consecrated to succeed Bishop Hedda of Wessex whose vast diocese was then broken up. Hampshire, Wiltshire, Somerset, and Berkshire became the see of Sherborne, the see of Shrewsbury the see of Hereford; and Daniel retained only Hampshire, Surrey, and Sussex, and of these Sussex soon after was constituted a separate diocese. Daniel like Aldehelm (q. v.) had been educated under the Irish scholar Maildbb at Malmsbury and it was to Malmsbury that he retired in his old age when loss of sight compelled him to resign the bishopric. There, no doubt, he had also learnt the scholarship for which he was famous among his contemporaries and which made Bede turn to him as the man best able to supply information regarding the church history of the south and west of Britain. Daniel, however, is best remembered primarily for his connexion with St. Boniface. It was from Daniel that the latter received commendatory letters when he started for Rome, and to Daniel he continually turned for counsel during his missionary labours in Germany. Two letters of the Bishop of Winchester to Boniface are preserved (see Haddin and Stubbs, “Councils”, III, 304 and 343) and give an admirable impression of his piety and good sense. In the second of these epistles, which was written after his loss of sight, Daniel takes a touching farewell of his correspondent: “Farewell, farewell, thou hundredfold-thanked one.” Ditto in his last letter, written in 721 and in 731 assisted at the consecration of Archbishop Tatwine. He seems never to have been honoured as a saint. A vision recorded in “Monumenta Moguntina”, No. 112, perhaps implies that he was considered to be lacking in energy; none the less it should follow from William of Malmsbury’s reference (Gest. Pont., I, 357) to a certain stream in which Daniel used to stand the whole night long to cool his passions, that he was a man of remarkable austerity.

Herbert Thurston.

Daniel the Stylite. See Stylites.

Dansara, a titular see in Osbocene. Stephanus Byzantius mentions Dansara as a town near Edessa (Orfa). Procopius (De aedif., II, 6) says it was one of the castles around Theodoseiopolis (Rhesina), which were fortified by Justinian. Dansara, probably at the same time, became an episcopal see suffragan to Edessa, for it figures in the “Notitia episcopatum” of
the Patriarch of Antioch, Anastasius (Vailed in Echos d’Orient, X, 90 sqq. and 139 sqq.), and his bishop, Nonnus was present at the Fifth Ecumenical Council, held at Constantinople in 553 (Lequien, Or. christ., II, 983). The see must have disappeared on account of the Arabian invasions, as no other bishop is known. It is not certain that it was still in existence in the tenth century (Vailed in Echos d’Orient, X, 90 sqq.). The bishop in 983 has not been identified. Its name is often written Dausara; such forms as Lansara, etc. are incorrect. The Latin titular see has recently been suppressed.

S. PÉTRIDÉS.

Dante Alighieri, Italian poet, b. at Florence, 1265; d. at Ravenna, Italy, 14 September, 1321. His own statement is, "Paradiso" xxi, 112-17: 'thir day was born when the sun was in Gemini,fixes his birthday between 18 May and 17 June. He was the son of Alighiero di Bellincione Alighieri, a notary belonging to an ancient but decadent Guelph family, by his first wife, Bella, who was possibly a daughter of Durante di Scolaro Abati, a Ghibelline noble. A few months after the poet's birth, the victory of Charles of Anjou over King Manfred at Benevento (26 Feb., 1266) ended the power of the empire in Italy, placed a French dynasty upon the throne of Naples, and secured the predominance of the Guelphs in Tuscany. Dante, therefore, was raised up amidst the struggle for Florentine democracy, in which he took some share, fighting in the front rank of the Guelph cavalry at the battle of Campaldino (11 June, 1289), when the Tuscan Ghibellines were defeated by the forces of the Guelph league, of which Florence was the head. This victory was followed by a reaffirmation of the Florentine constitution, associated with the name of Giano della Bella, a great-hearted noble who had joined the people. By the Ordinances of Justice (1293) all nobles and magnates were more strictly excluded from the government, and subjected to severe penalties for offenses against public good. To take an active part in public life, it was necessary to be enrolled in one or other of the "Arte" (the guilds in which theburghers and artisans were banded together), and accordingly Dante matriculated in the guild of physicians and apothecaries. On 9 July, 1295, he spoke in the General Council of the commune of Florence, and received the title of the inner chamber, which was one of the chief distinctions of his rank. After 28 September he is lost sight of. He is said to have been sent on a mission to the pope at the beginning of October, but this is disputed. On 1 November, Charles of Valois entered Florence with his troops, and restored the Nerli to power. Corso Donati and his friends returned in triumph, and were fully revenged on their opponents. Dante was one of the first victims. On a trumped-up charge of hostility to the Church and corrupt practices, he was sentenced (27 January, 1302), together with four others, to a heavy fine and perpetual exclusion from office. On 10 March, together with fifteen others, he was formally condemned, as contumacious, to be burned to death, should he ever come into the power of the Commune. At the beginning of April the whole of the White faction were driven out of Florence.

A few years before his exile Dante had married Giovanna di Mino di Neri. He was a distant kinswoman of Corso, by whom he had four children. He never saw his wife again; but his sons, Pietro and Jacopo, and one of his daughters, Beatrice, joined him in later years. At first, he made common cause with his fellow-exiles at Siena, Arezzo, and Forli, in attempting to win his way back to Florence with the aid of Ghibelline arms. Dante's name occurs in a document of 8 June, 1302, among the exiled Bianchi who at San Godenzo in the Apennines were forming an alliance with the Ubaldini to make war upon the Florentine Republic; but in a similar agreement signed at Bologna on 18 June, 1303, he no longer appears among them. Between these two dates he had made his resolution to form a party by himself (Par., xvii, 61-68), and had sought refuge in the hospitality of Bartolommeo della Scala, the lord of Verona, where he first saw Can Grande della Scala, Bartolommeo's brother, the boy of fourteen years, who became the hero of his later days.

Dante now withdrew from all active participation in politics. In one of his odes written at this time, the "Canzone of the Three Ladies" (Canz. xx), he finds himself visited by three children of the Guelph party, and he declares that, since such are his companions in misfor-
tune, he counts his exile an honour. His literary work at this epoch centres round his *rime*, or lyrical poems, particularly round *canzoniere* of fourteen **canzoni** or odes, anatory in form, but partly allegorical and didactic in meaning, a splendid group of poems which connect the "Vita Nuova" with the "Divina Commedia". Early in 1304 he seems to have gone to Bologna. Here he began, but left unfinished, a Latin treatise, "De Vulgari Eloquentia", in which he attempts to discover the ideal Italian language, the noblest form of the vernacular, and then to show how it should be employed in the composition of lyrical poetry. Even in its unfinished state, it is a most illuminating book to all who wish to understand the meaning of both of the Italian Riddle; and on 15th March, 1306, the Florentine exiles were expelled from Bologna. In August we find Dante at Padua, and some weeks later in Lunigiana, where, on 6 October, he acted as the representative of the Magna Fratello Falaspana in making peace between the family and the Bishop of Luni. About this time (1305-08) he began the "Convivio", or "Banquet", in Italian prose, a kind of popularization of Scholastic philosophy in the form of a commentary upon his fourteen odes already mentioned. Only four of the fifteen projected treatises were actually written, an introduction and three commentaries. In allegorical fashion they tell us how Dante became the lover of Philosophy, that mystical lady whose soul is love and whose body is wisdom, she "whose true abode is in the most secret place of the Divine Mind".

All certain traces of Dante are now lost for some years. He is said to have gone to Paris some time between 1307 and 1309, but this is open to question. In November, 1308, Henry of Luxemburg was elected emperor as Henry VII. In him Dante saw a possible healer of the wounds of Italy, a renovator of Christianity, a new "Lamb of God" (the expression is the poet's) who would take away the sins of the world. This drew him back against into the tempestuous politics and the life of action. It was probably in 1309, in anticipation of the emperor's coming to Italy, that Dante wrote his famous work on the monarchy, "De Monarchia", in three books. Fearing lest he "should one day be convicted of the charge of the buried talent", and desiring of "keeping vigil for the good of the world", he proceeds successively to show that such a single supreme temporal monarchy as the empire is necessary for the well-being of the world, that the Roman people acquired universal sovereignty away by Divine right, and that the emperor is independent upon the pope, but descends upon him directly from the fountain of universal authority, which is God. Man is ordained for two ends: blessedness of this life, which consists in the exercise of his natural powers and is figured in the terrestrial paradise; blessedness of life eternal, which consists in the fruition of the Divine aspect in the celestial paradise, to which man's natural powers cannot ascend without the aid of the Divine light. To these ends man must come by diverse means: "For to the first we attain by the teachings of philosophy, following them by acting in accordance with the moral and intellectual virtues. To the second by spiritual teachings, which transcend human reason, as we follow them by acting according to the theological virtues." But, although these ends and means are made plain to us by human reason and by revelation, men in their confusion in them, were driven by bit and rein. "Wherefore man had need of a twofold directive power according to his twofold end, to wit, the Supreme Pontiff, to lead the human race in accordance with things revealed, to eternal life; and the Emperor, to direct the human race to temporal felicity in accordance with the teachings of philosophy." It is therefore the special duty of the emperor to establish freedom and peace "on this threshold of mortality". Mr. Wicksteed (whose translation is quoted) aptly notes that in the "De Monarchia" "we first find in its full maturity the general conception of the nature of man, of government, and of human destiny, which was afterwards transfigured, without being transformed, into the framework of the Sacred Poem".

The emperor arrived in Italy in September, 1310. Dante had already announced this new sunrise for the nations in an enthusiastic letter to the princes and peoples of Italy (Epist. v). He paid homage to Henry in Milan, early in 1311, and was much gratified by his reception. He then passed into the Casentino, probably on some imperial mission. Thence, on 31 March, he wrote to the Florentine Government (Epist. vi), "the most wicked Florentines within", denouncing them in unmeasured language for their opposition to the emperor, and, on 16 April, to Henry (Epist. vii), rebuking him for his delay, urging him to proceed at once against the rebellious city, "this dire plague which is named Florence". By a decree of 2 Septem-

![TOMB OF DANTE](Church of Santa Croce, Florence)
found his ideal of knightly manhood realized in Can Grande della Scala, who was ruling a large portion of Eastern Lombardy as imperial vicar, and in whom he doubtless saw a possible future deliverer of Italy. It is a plausible theory, dating from the fifteen century, that identifies Can Grande with the “Veltro”, or greyhound, the hero whose advent is prophesied at the beginning of the “Inferno”, who is to effectuate the imperial ideals of the “De Monarchiá”, and succeed where Henry of Luxemburg had failed.

In 1317 (according to the more probable chronology) Dante settled at Ravenna, at the invitation of Guido Novello da Polenta. Here he completed the “Divina Commedia”. From Ravenna he wrote the striking letter to Can Grande (Epist. x), dedicating the “Paradiso” to him, commenting upon its first canto, and explaining the intention and allegorical meaning of the whole poem. A letter in verse (1319) from Giovanni del Virgilio, a lecturer in Latin at the University of Bologna, remonstrating with him for treating such lofty themes in the vernacular, inviting him to come and receive the laurel crown in that city, by his son Jacopo and forwarded by him to Can Grande.

The “Divina Commedia” is an allegory of human life, in the form of a vision of the world beyond the grave, written avowedly with the object of converting a corrupt society to righteousness: “to remove those living in this life from the state of misery, and lead them to the state of felicity”. It is composed of a hundred cantos, written in the measure known as terza rima, with its normally hendecasyllabic lines and closely linked rhymes, which Dante so modified from the popular poetry of his day that it may be regarded as his own invention. He is relating, nearly twenty years after the event, a vision which was granted to him (for his own salvation when leading a sinful life) during the year of jubilee, 1300, in which for seven days (beginning on the morning of Good Friday) he passed through hell, purgatory, and paradise, spoke with the souls in each realm, and heard what the Providence of God had in store for himself and the world. The framework of the poem presents the dual scheme of the “De Monarchiá” transfigured.

Dante Alighieri

led Dante to compose his first “Eclogue”, a delightful poem in pastoral Latin hexameters, full of human kindness and gentle humour. In it Dante expresses his unalterable resolution to receive the laurel from Florence alone, and proposes to win his correspondent to an appreciation of vernacular poetry by the gift of ten cantos of the “Paradiso”. A second “Eclogue” was sent to Giovanni after Dante’s death; but it is doubtful whether it was really composed by the poet. This correspondence shows that in 1319 the “Inferno” and “Purgatorio” were already generally known; while the “Paradiso” was still unfinished. This was now sent in instalments to Can Grande, as completed, between 1319 and 1321. If the “Quasso de Aquá et Terr” is authentic, Dante was at Verona on 20 January, 1320, where he delivered a discourse on the relative position of earth and water on the surface of the globe; but, although the authenticity of this treatise has recently found strenuous defenders, it must still be regarded as doubtful. In July, 1321, Dante went on an embassy from Guido da Polenta to Venice. Two months later he died, at Ravenna, on the feast of the Exaltation of the Cross, and was buried in the church of San Francesco in that city.

The whole of the “Divina Commedia” had been published, with the exception of the last thirteen cantos of the “Paradiso”, which were afterwards discovered Virgil, representing human philosophy acting in accordance with the moral and intellectual virtues, guides Dante by the light of natural reason from the dark wood of alienation from God (where the beasts of lust, pride, and avarice drive man back from ascending the Mountain of the Lord), through hell and purgatory to the earthly paradise, the state of temporal felicity, when spiritual liberty has been regained by the purgatorial pains. Beatrice, representing Divine philosophy illumined by revelation, leads him thence, up through the nine moving heavens of intellectual preparation, into the true paradise, the spaceless and timeless empyrean, in which the blessedness of eternal life is found in the fruition of the sight of God. There her place is taken by St. Bernard, type of the loving contemplation in which the eternal life of the soul consists, who commends him to the Blessed Virgin, at whose intercession he obtains a foretaste of the Beatific Vision, the poem closing with all powers of knowing and loving fulfilled and consumed in the union of the understanding with the Divine Essence, the will made one with the Divine Will, “the Love that moves the sun and the other stars”.

The sacred poem, the last book of the Middle Ages, sums up the knowledge and intellectual attainment of the centuries that passed between the fall of the
Roman Empire and the beginning of the Renaissance; it gives a complete picture of Catholicism in the thirteenth century in Italy. In the “Inferno”, Dante’s style is chiefly influenced by Virgil, and, in a lesser degree, by Lucre. The heir in poetry of the great achievement of Bl. Albertus Magnus and St. Thomas Aquinas in christianizing Aristotle, his ethical scheme and immanent philosophy, Dante, with his machinery, is still that of popular medieval tradition. It is doubtful whether he had direct acquaintance with any other account of a visit to the spirit world, save that in the sixth book of the “Aeneid”. But over all this vast field his dramatic sense played at will, picture human nature in its most base and vicious trials, laying bare the secrets of the heart with a hand as sure as that of Shakespeare. Himself the victim of persecution and injustice, burning with zeal for the reformation and renovation of the world, Dante’s impartiality is, in the main, sublime. He is the man (to adopt his own phrase) to whom Truth appeals from her immutable throne; as such, he relentlessly condemns the “dear and kind paternal image” of Brunetto Latini to hell, though from him he had learned “how man makes himself eternal”; while he places Constantine, to whose donation he ascribes the corruption of the Church and the ruin of the world, in paradise. The pity and terror of certain episodes in the “Inferno”—the fruitless magnanimity of Farinata degli Uberti, the fatal love of Francesca da Rimini, the fall of Guido da Montefeltro, the doom of Count Ugolino—reach the utmost heights of tragedy.

The “Purgatorio”, perhaps the most artistically perfect of the three canticles, owes less to the beauty of the separate episodes. Dante’s conception of purgatory as a lofty mountain, rising out of the ocean in the southern hemisphere, and leading up to the Garden of Eden, the necessary preparation for winnaback the earthly paradise, and with it all the prerogatives lost by man at the fall of Adam, seems peculiar to him; nor do we find elsewhere the purifying process carried on beneath the sun and stars, with the beauty of transfigured nature only eclipsed by the splendour of the angelic custodians of the seven terraces. The meeting with Beatrice on the banks of Lethe, with Dante’s personal confession of an unworthy past, completes the story of the “Vita Nuova” after the bitter experiences and disillusions of a lifetime.

The essence of Dante’s philosophy is that all virtues and all vices proceed from love. The “Purgatorio” shows love to be in order; the “Paradiso” shows how it is rendered perfect in successive stages of illumination, until it attains to union with the Divine Love. The whole structure and spiritual arrangement of Dante’s paradise, in which groups of saints make a temporary appearance in the lower spheres in token of the “many mansions”, is closely dependent upon the teachings of the Pseudo-Dionysius and St. Bernard concerning the different offices of the nine orders of angels. It is doubtful whether he knew the “Celestial Hierarchy” of Dionysius at first hand, in the translation of Scotus Eriugena; but St. Bernard’s “De Consideratione” certainly influenced him profoundly. Dante’s debt to the Fathers and Doctors of the Church has not yet been investigated with the fullness of research that has been devoted to elucidating his knowledge of the classical writers. His theology is mainly that of St. Thomas Aquinas. His monasticism is essentially that when treated as the primum matter and of the nature of the celestial intelligences) depart from the teaching of the Angelical Doctor. On particular points, the influence of St. Gregory, St. Isidore, St. Anselm, and St. Bonaventure may be traced; that of Boethius is marked and deep throughout. His appreciation is of St. Augustine, St. Bernard, and Richard of St. Victor, while in many places it curiously anticipates that of St. John of the Cross. Mr. Wicksteed speaks of “many instances in which Dante gives a spiritual turn to the physical speculations of the Greeks”. Even in the “Paradiso” the authority of Aristotle is, next to that of the Scriptures, supreme; and it is noteworthy that, when questioned by St. John upon charity, Dante appeals first of all to the Stagirite (in the “Metaphysics”) as showing us the cause for loving God for Himself and above all things (Par., xxxvi, 37–39). The harmonious fusion of the loftiest mysticism with direct transcripts from nature and the homely circumstance of daily life, all handled with poetic passion and the most consummate art, gives the “Divina Commedia” its unique character. The closing canto is the crown of the whole work; sense and music are wedded in perfect harmony; the most profound mystery of faith is there set forth in supreme song with a vivid clearness and illuminating precision that can never be surpassed.

**Dante’s vehement denunciation of the ecclesiastical corruption of his times, and his condemnation of most of the contemporary popes (including the canonised Celestine V) to hell have led to some questioning as to the poet’s attitude towards the Church. Even in the fourteenth century attempts were made to find heroics in the “Divina Commedia”, and the “De Monarchia” was burned at Bologna by order of a papal legate. In more recent times Dante has been haled as a precursor of the Reformation. His theological position as an orthodox Catholic has been amply and repeatedly vindicated, recently and most notably by Dr. Moore, who declares that “there is no trace in his writings of doubt or dissatisfaction respecting any part of the teaching of the Church in matters of doctrine authoritatively laid down”. A strenuous opponent of the political aims of the popes of his own day, the beautiful episodes of Casella and Manfred in the “Purgatorio”, no less than the closing chapter of the “De Monarchia” itself, bear witness to Dante’s reverence for the spiritual power of the papacy, which he accepts as of Divine origin. Not the least striking testimony to his orthodoxy is the part played by the Blessed Virgin in the sacred poem from the beginning to the end. It is, as it were, the working out in in-
spired poetry of the sentence of Richard of St. Victor: "Through Mary not only is the light of grace given to man on earth, but even the vision of God vouchsafed to souls in Heaven."

Our earliest account of the life and works of Dante is contained in a chapter in the Croniche Fiorentine of Giovanni Villani (d. 1348), who Henry of the poet as "our neighbour". There are six commentaries extant on the "Divina Commedia", in whole or in part, composed within ten years of the poet's death. Three of these—by Grazioso de' Bambagiolii, then chancellor of the commune of Bologna; an unidenizable Guido da Pisa, a Carmelite—extend to the "Inferno" alone; those by Jacopo Alighieri, the poet's second son, Jacopo della Lana of Bologna, and the author of the "Ottimo Commento" deal with the entire poem. Grazioso appears as the first defender of Dante's orthodoxy (then fiercely assailed in Bologna); the author of the "Ottimo" (plausibly identified with a Florentine notary and poet, Andrea Lancia) professes to have actually spoken with Dante, and gives us various interesting details concerning his life. About 1340 Dante's elder son, Pietro Alighieri, set himself to elucidate his father's work; two versions of his Latin commentary have been preserved, the later containing additions which (if really his) are of considerable importance. Some time after 1348, Giovanni Boccaccio (q. v.) wrote the first formal life of Dante, the "Trattatello in laude di Dante", the second of which, the "Ottima" and "Ottimo Commento". His work has been largely rehabilitated by more recent research. His commentary on the "Inferno" is the substance of lectures delivered at Florence in 1373. A few years later came the commentaries of Benvenuto da Imola and Francesco Buti, which were originally delivered as lectures at Bologna and Padua respectively. Boccaccio's is a living book, full of humour and actuality as well as learning. The little "Life" by Leonardo Bruni (d. 1444), the famous chancellor of the Florentine Republic, which supplements Boccaccio's work with fresh information and quotes letters of the poet other than those which are now known, and the slighter notice by Filippo Villani (c. 1404), who is the first commentator who refers in explicit terms to the "Letter to Can Grande", bring the first age of Dante interpretation to an appropriate close. The title of father of modern Dante scholarship unquestionably belongs to the late German editor, Emil Witte (1800-53), whose labours set students of the nineteenth century on the right path, both in interpretation and in textual research. More recently, mainly through the influence of G. A. Scarzazzini (d. 1901), a wave of excessive scepticism swept over the field, by which the traditional events of Dante's life were regarded as little better than fables, and the majority of his letters and even some of his minor works were declared to be spurious. This has now happily abated. The most pressing needs of Dante scholarship to-day are more textual study of the "Divina Commedia", a closer and more thorough acquaintance with every aspect of the minor works, and the elucidation on the priestly nature of his regard to the great philosophies of the Middle Ages—such as will justify or restate the pregnant opening of the epitaph that Giovanni del Virgilio composed for his tomb: "Theologus Dantis, nullius dogmatis exactus quod foestus claro philosophia sinu" (Dante the theologian, skilled in every branch of knowledge that philosophy may cherish in her illustrious bosom).

Dante may be said to have made Italian poetry, and to have stamped the mark of his lofty and commanding personality upon all modern literature. It can even be claimed that his works have had a direct influence on the aspirations and destinies of his native country. His influence upon English letters begins with the poetry of Chaucer, who hail him worthily in the "Monkes Tale", and refers his readers to him as "the grete poete of Itaile that highte Dant". Eclipsed for a while in Tudor times by the greater popularity of Petrarch, he was afterwards ignored or contemned from the Restoration until the end of the eighteenth century. The first complete translation of the "Divina Commedia" into English, with a memoir of the work, was published in 1802 (that of the "Inferno" having been issued in 1785). Dante came again into his heritage among us with the great flood of noble poetry that the beginning of the nineteenth century witnessed. The eloquent tributes rendered to him by Shelley (in "Epipsychidion"), the "Diofallo of Amore Arme" by A. W. Ward, and "L' Infinito" by Byron (especially in the "Prophecy of Dante"), as after them by Browning and Tennyson, need not be repeated here. Through Dante Gabriel Rossetti and the Pre-Raphaelites, he has been a fruitful influenc in art no less than in letters. In the interpretation and criticism of Dante, English-speaking scholars at present stand second only to the Italians.

Never, perhaps, has Dante's fame stood so high as at the present day—when he is universally recognized as ranking with Homer, Æschylus, Sophocles, and Shakespeare, among the few supreme poets of the world. It has been well observed that this inordinate reverence resembles that of the Hebrew prophet more than that of the poet as ordinarily understood. His influence, moreover, is by no means confined to mere literature. A distinguished Unitarian divine has pointed out that the modern cult of Dante is "a sign of enlarging and" "an expansion of the poet's appreciation", and that it is one of the chief indications of "the renewed hold which the later Middle Ages have gained upon modern Europe" (Wicksteed, "The Religion of Time and of Eternity"). The poet's own son, Pietro Alighieri, declared that, if the Faith were extinguished, he would restore it, and it is not unworthy to-day that many serious non-Catholic students of life and letters owe a totally different conception of the Catholic religion to the study of the "Divina Commedia". The power of the sacred poem in popularizing Catholic theology and Catholic philosophy, and rendering it acceptable, or at least intelligible to non-Catholics, is at the present day almost incalculable.

The place of honour among Dante societies belongs unquestionably and in every sense to the "Società Danteasca Italiana", an admirably conducted association with its headquarters at Florence, which wields foreign students as its members and is distinguished for its high and liberal scholarship. In addition to courses of lectures delivered under its auspices in various Italian cities, it publishes a quarterly "Bulletino", a survey of contemporary Dante literature, and has begun a series of critical editions of the minor works. Of these latter, volumes dealing with the "De Vulgari Eloquentia" and the "Vita Nuova", by Pio Rajna and Michele Barbi respectively, have already appeared, and may be truly said to mark an epoch in the critical and textual study of Dante's Latin and Italian writings alike. The association known as the "American Dante Society" of Cambridge, Massachusetts, stands first in importance. The small but distinguished "Oxford Dante Society" does work of a high order of scholarship. The "Dante Society of London" is noteworthy for its large number of members, and publishes its sessional lectures in volume form; but its aims appear to be social rather than scholarly. A summary of some of the works on Dante will be found below. 

The bibliography of Dante is so vast and voluminous that it is only possible here to make a brief selection of recent and general works. Complete editions: Moon, Tutte le Opere di
On account of his mathematical attainments Greg ory XIII invited him to Rome, appointed him pontifical mathematician and made him a member of the commission for the reform of the calendar. He also delivered him in charge of the painters whom he had summoned to the Vatican to continue the work so brilliantly begun by Raphael during the reign of Leo X and at the same time desired him to make a number of maps of ancient and modern Italy. When the pontiff commissioned the architect Fontana to repair the Claudian harbor works, he was so much impressed by the necessary plans. While at Rome Danti published a translation of a portion of Euclid with annotations and wrote a life of the architect Vignola, preparing also a translation of the latter's work on perspective. In recognition of his labours Gregory, in 1553, made him Bishop of Altari in the Campagna. Danti showed himself a zealous pastor in his new office. He convened a diocesan synod, corrected many abuses, and showed great solicitude for the poor. Shortly before his death Sixtus V summoned him to Rome to assist in the erection of the grand obelisk in the piazza of the Vatican. Besides the works already mentioned, Danti was the editor of the life of Fra Basilio the Franciscan, and also translated to Italian the Tractatus of Plutarch. His best known works were those concerning the Delabarba with the giunta del planifero del Raja"; "Le Scienze matematiche ridotte in tavole", also a revised and annotated edition of "La Sfera di Messer G. Sacrobosco tradotta da Pier Vincenzo Danti".

Vincenzo Danti, sculptor, brother of Ignazio, b. at Perugia, 1530; d. 24 May, 1576. He also enjoyed some reputation as a goldsmith, a military architect, and a poet. The statue of Pope Julius III on the cathedral square at Perugia is one of his early works. Later he modelled the "Decapitation of St. John the Baptist" over the south portal of the baptistery at Florence, and finished Andrea Sansovino's noble group of the "Baptism of Christ" over the east gate of the same baptistery. He competed against Cellini and Gian Bologna for the statue of Neptune in the fountain of Piazza della Signoria, which was ultimately given to an inferior artist, and he executed a marble group at the entrance of the Boboli Gardens, Florence, which is still preserved and attempting to carry an old man bound hand and foot. This is supposed to be an allegory of the victory of honesty over deceit.

M. L. Handley.
result of these published a translation with commentary of the Psalms under the title: "Les psaumes traduits sur l'hébreu avec des notes" (Paris, 1739). This work attracted so much attention that in the same year a second, and in the following year a third, edition were published. Almond, and later, Dom Carpentier prepared a new edition of the great lexicon originally published in 1678 by Du Cange, and afterwards continued by the Maurists, its first Benedictine editor being Dom Guenée, who was followed by Nolias Toustain and Louis Le Pelletier. The edition of Almond was continued, and a copy of the 18 vols. at that of Du Cange, appeared in six volumes at Paris, 1753-36, under the title: "Glossarium ad scriptores medie et infime latinitatis, editio locupletior operæ et studio monachorum O. S. B." Dantisc's labours greatly increased the value of this admirable work, which is not only of the utmost importance for the knowledge of Latin, but is also a rich source for the study of law and morals in the Middle Ages.

Dantisus, John von Höfen. See ERMLAND, DIACOPH OF.

Da Ponte, Lorenzo, poet, b. at Cesena, Italy, 1749; d. in New York, 17 Aug., 1838. He was the second son of the first unnamed Emanuel Da Glle. When he was fourteen years old his father and the family of the other brothers embraced Christianity and were baptized, 20 Aug., 1763, in the cathedral of Cesena. The bishop of the see, Lorenzo Da Ponte, seeing the talents of the lad, gave him his own name, and sent him to the local seminary to be educated. Here Da Ponte remained for five years, and then went to teach in the University of Treviso. Political complications sent him to Vienna, where he met Mozart and composed for him the libretto of the opera "Le Nozze di Figaro", "Don Giovanni", and "Così fan tutte". He did not remain long in Vienna, but went to London, whence, after a somewhat chequered career, he emigrated to New York. Unsuccessful commercial ventures and unprofitable efforts to establish opera in that city followed, and he then settled down as a teacher of Italian with a nominal connexion with Columbia College. Da Ponte enjoys the distinction of being the first teacher in America to lecture on Dante's "Divina Commedia". He was buried in the old Catholic cemetery in East Eleventh Street, and as the grave was never marked it cannot now be located. His daughter married Dr. Henry James Anderson, for many years professor of mathematics and astronomy in Columbia College, and a prominent Catholic philanthropist.

THOMAS F. MEERAN.

Darboye, Georges, Archbishop of Paris and ecclesiastical writer, b. at Faye-Billet, near Langres, 1813; killed by Communists at Paris, 24 May, 1871. Ordained priest in 1836, he served for a time as curate of Notre-Dame at Saint-Dizier and as professor at the Grand Séminaire of Langres, then joined Mgr. Affre at Paris, 1845, where from he was "le Maître, chef de la maison des Carmes" and chaplain of the Lycée Henri IV, where he rose to the position of canon of Notre-Dame, vicar-general and archdeacon of Saint-Denis, having previously been made prothonotary Apostolic. In 1839 he was appointed to the See of Nancy. During the many interesting and important years of his administration of his aged predecessor. The Gallianism of Darboye had made him unduly subservient to imperial wishes and caused him to assume against the exactions of the religious an attitude which Rome (1869) compelled him to abandon. It was his chief motive for siding, during the Vatican Council, with the minority which deemed inopportune the definition of papal infallibility, his reasons being more of a political than of a theological nature. Darboye was one of those who suggested diplomatic intervention as a means of ending difficulties. He left Rome before the final vote of 15 July, 1870, and expressed sentiments of the most regret, but however, he generally remained at Rome, and months after the definition, he subscribed to it. During the siege of Paris Darboye showed himself a true pastor and won the admiration of all. Arrested 4 April, 1871, by order of the Committee, and confined to Mazas Prison, the best efforts of his friends failed to save him; he was shot at Roquette, 24 May, and died blessing his executioners. As soon as order could be restored a national funeral was celebrated for him and the other victims of the Commune. The Abbé Perraud delivered his eulogy at Paris, and Pére Didon at Nancy. Darboye was the author of the following works: "Œuvres de saint Denis l'Arçopagite, traduites du grec" (Paris, 1845); "Les femmes de la Bible" (Paris, 1846-9); "Les saints femmes" (Paris, 1850); "Lettres à Combatot" (Paris, 1851); "Jérusalem et la terre sainte" (Paris, 1852); "L'imitation de Jésus-Christ, traduction nouvelle" (Paris, 1852); "Staïsistique religieuse du diocèse de Paris" (Paris, 1856); "Saint Thomas Becket" (Paris, 1858). He also contributed to the "Correspondant" (1847-1855) and was for a year (1850) director of the "Moniteur Catholique". His pastoral works (2 vols., Paris, 1876) were edited by his biographer, Foulon.

Darbysta. See PLYMOUTH BRETHREN.

Dardanus, a titular see in the province of Hellespont, suffragan of Cyzicus. Four or five bishops are known, from 431 or 451 to 879 (Lequien, Or. Christ., I, 775). Dardanus figures in "Notitiae episcopatum" as late as the twelfth or thirteenth century. The town seems to have been situated some seven miles south-west of the Dardanelles strait. However, the town called Dardanelles (Gr. Dardanella; Turk. Kaleh-i-Sultanieh, "imperial fortress"; and commonly Tchanak Kaleh, "the fortress of pottery") is the modern representative of the ancient Dardanus. It is an important port on the strait which separates the Marmara sea from the Sea of Marmara. Dardanelles is the chief town of a sanjak, which depends directly on the Sublime Porte, and is strongly fortified. Every ship entering or quitting the straits must stop at Dardan-
nelles and show the imperial firman, or permit, to enter or leave. Trade is rather active. Industry is represented by curious earthenware. Not far from the town is the hill of Hissaikul, the scene of some of Schliemann's important excavations. The entire region is described by C. C. Finzi in "La Turquie d'Asie" (Paris, 1894), III, 688 sqq.
S. Pétridès.

Dardel, Jean, Friar Minor of the French province of the order, chronicler of Armenia in the fourteenth century, adviser and scribe to King Leo V (or VI) of Armenia. Nothing is known regarding him except what he himself tells us in his "Chronique d'Arménie", a work unknown until recent times. Dardel was born at Estampes, and became a Franciscan about the middle of the fourteenth century. Not earlier than 1375 he went with other pilgrims to Jerusalem and Mount Sinai. Arriving at Cairo he found the unhappy Leo, last King of Armenia (Cilicia), who after a nine-months siege in the fortress of Gaban was made prisoner by the Emir of Aleppo and brought to Jerusalem: and from there sent, together with his family, to Cairo (Januarius Dardel) and the fate of the imprisoned monarch to act as his adviser, confessor, and secretary. With Dardel was a companion named Brother Anthony da Monopoli. Dardel saw the frequent kings and said Maes before him, a privilege easily obtained from the sultan. He remained at Cairo till 1379, and, as he tells us, wrote some of the letters which the king sent to Europe seeking to procure his freedom. Eventually King Leo entrusted him with his royal seal and letters of credence, and sent him as ambassador to King Peter IV of Aragon, and, failing success with him, to all the other kings of Christendom to obtain his freedom. Dardel and his companion, Brother Anthony, set out from Cairo 11 Sept., 1379, and reached Barcelona, 1 March, 1380. After traveling over half of Europe he barely succeeded in inducing the King of Aragon to send an embassy with gifts to the sultan. Under the leadership of the pilgrim Gian-Alfonso di Lorio, with some support from John I, King of Castile, the release of King Leo was thus secured, and he arrived at Venice, 12 December, 1382. He set out for France, paid homage there to Clement VII (the antipope), and then went on to Spain where the King of Castile received him royally, and was received with great honours in the Kingdom of Naples, 11 April, 1385, as a reward for his labours on behalf of the Armenian king. He has left us an important "Chronique d'Arménie", hitherto unknown to Orientalists. It was discovered by Canon Ulysse Robert, who came across the MS. in the Library of Dôle in France, and it has recently been published by the Institut des belles lettres de France in the second tome of the "Recueil des Historiens des Croisades".

GIOKOLO GOLTOVICH.

Darex, Saint, of Ireland, a sister of St. Patrick. Much obscurity attaches to her history, and it is not easy to disentangle the actual facts of her history from the network of legend which medieval writers interwove with her acts. However, her fame, apart from her relationship to Ireland's national apostle, stands secure as not only a great saint but as the mother of many圣女ワジ人物. St. Patrick visited Bredagh, as we read in the "Tripartite Life", he ordained Aengus mac Ailill, the local chieftain of Moville, now a seaside resort for the citizens of Derry. Whilst there he found "the three deacons", his sister's sons, namely, St. Reat, St. Nenn, and St. Aedh, who are commemorated respectively on 3 March, 25 April, and 31 August. St. Darcera was twice married, her second husband, Chonas, founded the church of Both-chonas, now Binnion, Parish of Conmany, in the barony of Inishowen, County Donegal. She had families by both husbands, some say seventeen sons, all of whom, according to Colgan, became bishops. From the "Tripartite Life of St. Patrick" it is evident that there were four sons of Darcera by Chonas, namely four bishops, St. Mol of Ardagh, St. Rioc of Inishbofin, St. Colgan of Donegal, and St. Aedh of Moville. It is well to note that another St. Muinis, son of Gollit, is described as of Tedel in Ara-clath.

St. Darcera had two daughters, St. Eiche of Kilglass and St. Laloc of Senila. Her first husband was Restitutas the Lombard, after whose death she married Chonas the Briton. By Restitutas she was mother of St. Sechnall of Dunshaughlin; St. Nectan of Killunche, and of Fennor (near Slane); of St. Auxilius of Killossey (near Naas, County Kildare); of St. Diarmaid of Drumcorcoorte (near Navan); of Dabonna, Mogormon, Droic, Loguat, and Coemed Mordred Baird (of the Leinster Kings). She had families by both husbands, four other sons are assigned her by old Irish writers, namely St. Crummin of Leeca, St. Midu, St. Carancote, and St. Maceath. She is identical with Liannama, according to Colgan, but must not be confounded with St. Laimanna, whose feast is on 6 July. St. Darcera is honoured on 22 March, and is the patroness of Valencia Island.

W. H. GRATAN-FLOOD.

Dar-es-Salaam Sec ZANZIBAR.

Darest de la Chavanne, Antoîne-Elizabeth, historian and professor, b. in Paris, 25 October, 1820; d. at Lucenay-lès-Aix, 8 August, 1882. Having completed his studies in the École Normale and taken his degree of Doctor of Literature, he taught history at the lyceums of Versailles and Rennes and at the Collège Stanislas, the largest Catholic school in Paris. In 1847 he was given the chair of History and General Literature at the University of Grenoble, and two years after was appointed to the chair of history at the University of Lyons. This latter position he retained for twenty years, being elected dean of the faculty of literature in 1865. While discharging with the greatest zeal and ability the duties of his position, he wrote a number of works, several of which received an award from the French Academy. Among them are: "Éloge de Turgot" (Paris, 1847); "Histoire de l'administration en France depuis Philippe-Auguste" (Paris, 1848, 2 vols. in 8vo); "Histoire des classes agricoles en France depuis saint Louis jusqu' à Louis XVI" (Paris, 1853); "Histoire de France depuis ses origines jusqu'à nos jours" (Paris, 1865--1873, 8 vols.; 2nd ed., 1879, 9 vols.). All his writings are clear, accurate, and complete without being diffuse. Although somewhat imbued with Gallician ideas, he invariably does justice to the Roman Church and the popes. In 1873 he was appointed rector of the academy at Lyons, but was placed on the unattached list in 1878, because of his devotion to Catholic interests, and the active part he took in the establishment of the Catholic University of Lyons.

Brochier, Notice biographique sur M. Darest de la Chavanne (Lyons, 1883).

LOUIS N. DELAMARRE.

Dark Ages. See Middle Ages.

Darnis, a metropolitan titular see of Libya, in Egypt. Ptolemy (IV, 4, 2; 5, 6; and Annian. Mar-
cell. (XXII, 18, 4) locate it in Pentapolis. It became the civil and later the religious metropolis of Libya Secunda, or Inferior, i.e. Marmaria (Hierocles, "Synecdemus", 734, 3; Lequien, "Oriens. christ.", II, 631; Gelzer, "Georgii Cyprii descriptio orbis Romani", 142). Darne is another name of the form; Dardanis is due to an error. Only three, perhaps four, bishops are known from the fourth century to about 600. The city is now known as Derne or Dernah, Terneh or Ternah, and is a little port at the end of a bay formed by the Mediterranean, where the French admiral Canteaume landed in 1799. It is situated east of Benghazi in the vilayet of that name (Tripoli), and has 2000 inhabitants, who live by fishing and the coasting trade.

S. PÉTRIDÉS.

Darras, Joseph-Épiphane, church historian, b. at Troyes, France, 1825; d. at Paris, Nov. 8, 1878. He completed his classical training and his theological studies in the Petit Séminaire and the Grand Séminaire of Troyes, in the former of which he became a teacher after his ordination to the priesthood, but had to resign apropos of a panegyric on the Bishop of Troyes, Étienne-Antoine de Boulgone (1809-1825), disgraced by Napoleon I, for his firm attitude on the occasion of the assembly of the French bishops in 1811. He then became tutor of Prince Eugène de Beauharnais, devoted himself to historical studies, and after the education of his pupil continued to live with the de Beauharnais family. He was a zealous antagonist of Gallicanism and devoted to the honour and the rights of the Holy See. He was at Rome during the Vatican Council as secretary to the meetings of the French bishops. His first literary work was the translation of Pallavicino's "Storia del Concilio Tridentino" for the Migne collection. To the same period belongs the "Légende de Notre-Dame" (Paris, 1848), written under the influence of Montembert. The early theological studies of Darras did not include a good foundation in ecclesiastical history; this defect he sought to make good by private studies. His "Histoire générale de l'Eglise" in four volumes appeared at Paris in 1854 (14th ed., 1890). It follows the reign of the popes, but betrays in the author a lack of methodical training and critical skill, defects noticeable also in his other works. In the following years Darras published a "Histoire de St. Denis l'Arèopagite, premier évêque de Paris" (Paris, 1863); a "Histoire de Notre Seigneur Jésus-Christ" (Paris, 1862); two volumes of "Une vocation biographique de Mgr. J. Jurieu" (Paris, 1868). He collaborated with Collin in the "Grande Vie des Saints" (Paris, 1873-75) twenty-five volumes. In the meantime he had prepared the material for his chief work: "Histoire de l'Eglise depuis la création", the first twenty-five volumes of which appeared before his death (Paris, 1875-77). They brought the narrative down to the twelfth century. After his death, J. Bareille continued the work to the pontificate of Clement VII (volumes XXVI-XXII, Paris, 1879-84). It was completed by J. Fèvre to the pontificate of Leo XIII, inclusive (volumes XXXIII-XXIV, Paris, 1884-97, with two volumes of Index). This work discloses the defects mentioned above. For a sharp criticism of it by the Bollandist Charles de Smendt, S. J., see the latter's "Principes de la critique historique" (Liège, 1885), 137 sqq., 283.

Darrell, William, theologian, b. 1651, in Buckinghamshre, England; d. 28 Feb., 1721, at St. Omer's, France. He was a member of the ancient Catholic family of Darrell of Sewtrey Castle, Sussex, being the only son of Thomas Darrell and his wife, Thomsine Marcham. He joined the Society of Jesus on 7 Sept., 1671, was professes 25 March, 1680. He wrote: "A Vindication of St. Ignatius from Phanaticism and of the Jesuits from the calumnies laid to their charge in a late book (by Henry Wharton) entitled The Enthusiasm of the Church of Rome" (London, 1688); "Moral Reflections on the Epistles and Gospels of every Sunday throughout the fourth century" (London, 1711, and frequently reprinted); "The Gentleman Deprived of his Rights in the conduct of a virtuous and happy life" (10th ed., London, 1732; frequently reprinted and translated into Italian and Hungarian); "Thees Theologicae" (Liège, 1702); "The Case Reviewed" in answer to Lexy's "Case Stated" (2nd ed., London, 1712); "Treatise of the Real Presence" (London, 1721). He translated "Discourses of Cleander and Eudosoxus upon the Provincial Letters from the French" (1701). Jones in his edition of Pecck's "Popyeric Traicts" (1589), also attributes to Father Darrell: "A Letter on King James the Second's most gracious Letter of Indulgence" (1687); "The Layman's Opinion sent . . . to a considerable Divine in the Church of England" (1687); "A Letter to a Lady" (1688); "The Vanity of Human Respect" (1688).

Darwinism. See EVOLUTION.

Dates and Dating.—In classical Latin even before the time of Christ it was usual for correspondents to indicate when and where their letters were written. This was commonly done by such words as dabam Roma ante diem quartum Kalendas Januarias, i.e. I gave or delivered this at Rome on December 29th. For this the later formula was datus Roma (given at Rome). Hence date, the first word of the letter, came to be used for the time and place therein specified. The principle that imperial decrees and charters must be "dated" as a condition of validity, i.e. that they must bear upon them the indication of the day and year when they were delivered, may be traced back to the time of Constantine. In the course of the Middle Ages this principle was generally admitted, and we find, for example, that at Cologne in the twelfth century the validity of a certain instrument was contested because it lacked a date. "Those who have seen it say that the document which John brought does not bear the day or the indication of the present day, and now the Roman decree lay down that letters which lack the day and the indication have no binding force." (Westdeutsche Zeitschrift für Geschichte, 1, 377.) But although this principle was recognized in theory it was not always carried out in practice. Even down to the beginning of the twelfth century not only royal and imperial letters but also charters (Urkunden), properly so called, were occasionally through the carelessness of officials sent out without a date. (Bresslau, Handbuch, I, 891.) In this matter the Italian chancery officials seem to have been much more careful than those of the rest of Europe. The same is true with regard to the correctness of the dates which do appear in official documents, especially those of the early Middle Ages. As a rule the charters emanating from the chancery of the Western Emperors are much more liable to this form of error than those of the Holy See (Bresslau, ib., 844). But even the bulk of such a mass as Innocent III's charters is not free from error, and as Leopold Delisle has shown, an erroneous calculation of the induction may be perpetuated through a whole series of authentic documents (Bib. de l'Ecole des chartes, 1858, p. 55). In any case it remains certain and is admitted by all serious writers upon diplomacies that the mere fact that an erroneous date occurs in a document, especially when we are
dealing with the earlier Middle Ages, cannot by itself be accepted as a proof, or even a presumption, of the earlier date of the document.

The Christian Era.—The point of main interest in this connexion is to determine the source and period of the introduction of our present system of dating by the Christian Era. Although, as explained in the article Chronology, General (q. v.), the monk Dionysius Exiguus, when resident in Rome, c. 527, is generally supposed to be the first to begin the practice of calculating years from the birth of Christ, and although it was undoubtedly he who identified the year of Christ’s birth with the year 753 of the foundation of Rome, as is still done in our current chronology, nevertheless it was not until long after the age of Dionysius Exiguus that the system came into common use. For example no trace of it will be found in that great historian of the Gallic Church, St. Gregory of Tours, the contemporary of our St. Augustine of England; and in the writings of Pope St. Gregory the Great the Dionysian Era is not adopted. It was the pope’s habit to date his letters by the regnal years of the emperor and letters so dated may be seen in Bede’s “Ecclesiastical History”, just as they were copied from the Roman archives. Apparently it was the Englishman Bede himself who was the first to bring the Dionysian system into general use, for it was that form of dating which was adopted and literature has been systematically not only in his “De Temporum Ratione” but especially in his “Ecclesiastical History”. What is more, we may notice the striking fact that the regular employment of the Christian Era in English charters began just at the period of Bede’s pre-eminent influence. It is only from about the year 679 that we are able to appeal to English charters of indisputable authenticity. Taking eight such documents, the eight earliest which we can quote with confidence and dated respectively 679, 692, 697, 732, 734, 736, 740, 759, we may notice says Professor Earle (Land Charters, Introd., p. xxiii) that “of this series the first five though all more or less dated, whether by the month or the regnal year, or by the Indiction, or by all these at once, have not the Anno Domini. On the other hand, the last three agree in using the Christian Era and from this time the practice is continuous. In the intervening year which occurred occasionally in papal documents of the time of Bede A.D. 735.” Very noteworthy is the decree of an English synod held in 816, wherein it is prescribed that the bishop shall put the acts of the synod into writing and date them by the Era of the Incarnation. This points no doubt to a time when ecclesiastics knew how to use the year system acquired, and that they were in punctual habit of using it”. It is in any case certain that neither in the papal chancery nor in that of the Western Empire was the system introduced until considerably later. In the empire it only became general in the latter part of the ninth century, while although it occurs occasionally in papal documents of the time of John XII. (965-972), it was not the rule before the twelfth century. But for the dating of papal documents and for the so-called “double date” see the article Bulls and Briefs.

Reckoning of Years.—Before the Christian Era was generally adopted in the dating of documents various other systems were employed at different periods and in different countries. The best known of these was the counting by “indications”. The indication was a cycle of fifteen years, the first of these cycles being conceived to have started at a point three years before the beginning of the present Christian Era. It was the only cycle of the year, the current indication, and no notice was taken of the number of cycles already completed. Thus, for example, indicio quarta meant the fourth year of some particular indication and not the fourth cycle of fifteen years after B. c. 3; from which it follows that merely to know the year of the indication is useless for determining the absolute date of any document unless we know otherwise approximately the period in which the document belongs. In reckoning the beginning and consequently the changing-point of the indication-cycles four different systems were adopted: the indicio Graeco according to which the indication began on September 1st; the indicio Cassarea (or indicio of Bede) beginning September 24th; the indicio Romanum beginning December 25th; and finally the indicio Senensis beginning September 8th. The indicio Graeco was the oldest of these and it remained in use in papal bulls until 1087 and in imperial documents until 832. It was partly supplanted, especially, in the Carolingian sphere of influence, by the indicio Cassarea.

Concurrently with the year of the indication it was customary both in papal and imperial documents to mention the regnal year of the pope or emperor. So far as regards the emperors this was prescribed by Justinian (Novella xlvii). In the case of the popes we do not know any instance earlier than 787. Generally speaking (though the rule admitted of many exceptions, especially later) the regnal year was calculated from the day of coronation or consecration. In the official acts of most of the countries of Christendom, and notably in England, the regnal year of the sovereign was always mentioned and sometimes given as the only indication of the year. As a continuous system of year enumeration the oldest era in practical use appears to have been that known as the “Era of the Martyrs” or “of Dioecletian” (anni Dioecletiani). Its starting-point was the accession of the Emperor Dioecletian, 29 Aug., 284. The Spanish Era (era Hispani) was in familiar use in Spain from the fifth century down to late in the Middle Ages. It adds about thirty-eight years to the ordinary numbering of the Christian Era. Where Byzantine influences prevailed the years were generally numbered from the beginning of the world (ab origine mundi). This era was calculated from 1 September, and the birth of Christ, which is the point of departure of our present chronology, took place in the year 5509 of the Byzantine system. Several other methods of reckoning, of which the best known is the Era of the Hegira followed in Mahomedean countries, have also prevailed in various localities, into the latter part of the twelfth century. For the details of this the reader must be referred to the article Chronology, General (q. v.), to which we refer for an account of the non-Christian eras mentioned in the bibliography, but we may notice here that among the Anglo-Saxons, as also at many different periods in the papal chancery, the new year was calculated to begin on December 25th. On the other hand, in England from the twelfth century onwards, largely under Norman influences, the years were numbered from the 25th of March. This arrangement was often called the mos Anglicanus or computatio Anglicana, though it also prevailed in Florence, Siena, Pisa, and at least occasionally in other parts of the Continent as well as in many papal documents. In England it lasted on down to the eighteenth century, though after Elizabethan times it became increasingly common in the dating of letters to indicate the system of dating adopted, N. S. often standing for the New or Continental Style in which the year began on January 1st, and O. S. for the Old Style in which the year was counted from March 25th. Further N. S. was still in use in this way which followed the reformed calendar of Gregory XIII, as explained in the article Chronology, General.

The Reckoning of Days.—The early converts to Christianity in the West not unnaturally retained the method of indicating the days of the month which
His brilliant experimental researches at Strasbourg, and later at Paris, extended over a number of years and have served to make him famous in the annals of geology. They comprised the artificial production of minerals, the geological action of superheated aqueous vapour, the effect of mutual abrasion, the influence of pressure and strain in mountain-making, etc. During the years 1857-61 he made a detailed study of the hot springs of Plombières, observing at the same time the chemical action of thermal waters. In 1861 he was admitted to the Académie des Sciences and succeeded Cordier as professor of geology at the Museum of Natural History in Paris and curator of the collections. In 1872, for example, he added extensive additions, particularly of meteorites. It may be mentioned in this connexion that daubréelite (C2H), a greyish granular mineral found in meteoric iron, was named after him.

From 1862 he also lectured on mineralogy at the Ecole des Mines of which he became director in 1872. Daubrée's career was a long and active one. He was one of the foremost Catholic geologists, and was much esteemed for his amiability and nobility of character. One of his friends and admirers was Dom Pedro, Emperor of Brazil. Besides the works already mentioned, he was the author of: "Observations sur l'altération et metamorphose des matériaux géologiques" (Paris, 1877); "Les eaux souterraines" (Paris, 1877); "La classification des météorites du Muséum", and many articles in the "Journal des savants" and the "Revue des deux mondes".

Daulia, a titular see of Greece. Daulia, later Daula, Leipz. 1194; 1210, Daula, often Daulia, even Davala, was a town of Phocis, on the Cephissus, fifteen Roman miles north-east of Delphi. It is mentioned by Hierocles (Synecd. 643, 10), and at the end of the seventh century had become a suffragan of Athens. In 1393 Talantion was cut off from Daulia and made a distinct see: the town was then the village of Morfes, in the ancient name of which was Atalante. The bishops of Daulia long protested against this division; at last, about the end of the fifteenth century the two sees were reunited as "Daulia and Talantion"; they remained so, except for a brief period about 1567. In 1653 the double see was made an archbishopric, owing to the influence of a Turkish pasha, but after two years was reduced to its former status. Talantion was then commonly named in the first place, and finally was the only name in use. The bishop resided there, as Daulia was almost in ruins. The See of Daulia was suppressed in 1833, when the Church of the Kingdom of Greece was organized on an independent basis. We know about fifteen Greek bishops of Daulia, the first of whom, Germanos, died in 919; the last, Neophytop Metaxas, died as Metropolitan of Athens. As early as 1205 Daulia became a Latin see; many of the bishops are known from the thirteenth to the fifteenth century, among them one William, bishop, in 1384, of a letter from Urban VI to the Patriarch Nilus, concerning the reunion of the Churches. Since 1441, at least, the see has been titular.

P. PETRINUS.
DAUMER, GEORG FRIEDRICH, German poet and philosopher, b. at Nuremberg, 5 March, 1800; d. at Würzburg, 14 December, 1875. He was educated at the gymnasium of his native city, at that time directed by the famous philosopher Hegel. In 1817 he entered the University of Erlangen as a student of theology, but abandoned that study for philosophy. For a number of years he was at the gymnasium of Nuremberg; owing to ill-health he was pensioned in 1832 and henceforth devoted himself entirely to literary work. While at Erlangen he came strongly under the influence of Pietism. Soon, however, he became sceptical and exhibited decided leaning towards rationalism. Protestant he gradually became a bitter enemy of Christianity, which he attacked in a number of writings and for which he strove to substitute a new religion "of love and peace", formulated in his work "Religion des neuen Weltalters" (Hamburg, 1850). Previous to this he had published a number of works, all of a distinctly anti-theological tendency, of which the most important are: "Phileosophie, Religion, und Altertum" (Nuremberg, 1833); "Züge zu einer neuen Philosophie der Religion und Religionsgeschichte" (Nuremberg, 1835); "Der Feuer- und Molochdienst der Heiden" (Bingen, 1842); "Die Gehörnisse des christlichen Altertums" (Hamburg, 1847). Shortly after 1850 Daumer left Nuremberg and settled at Frankfort, where a great change soon came over him. In 1858 at Mainz he publicly embraced the Catholic Faith and henceforth became its zealous defender. Among the works written after his conversion are: "Meine Konversion" (Mainz, 1859); "Aus der Man-

DAUMER, Sir WILIAM, poet and dramatist, b. Feb., 1605-6, at Oxford, England; d. in London, 7 April, 1688. He was the second son of John D'Aven-
ant, a prosperous vintner and owner of an inn afterwards known as the Crown Tavern, where Shakespeare frequently stayed. The story which would make William D'Avenant the natural son of Shakespeare seems to have no real foundation, though he may have been the poet's godson. D'Avenant was educated at Eton, and afterwards at Lincoln College, and for a short time to Lincoln College. Then he became page to Frances, Duchess of Richmond, and was afterwards taken into the service of Fulke Greville, Lord Broke. In 1628 he began writing plays and ten years later succeeded Ben Jonson as Poet Laureate. He warmly the side of the king in the Civil War, and was knighted by Charles I in 1643. After the king's defeat, in 1644, he took refuge in France where he became a Catholic. He was employed by Queen Henrietta Maria in her correspondence with the king in England, and was faithful to the royal cause to the end. More than once he was imprisoned and in danger of losing his life, but was finally released in 1651. In 1656 he was instrumental in reviving theatrical performances in England which had been suspended since 1642. After the Restoration he was patronized by Charles II and continued, to the end of his life, to write and superintend the production of plays. His poetical work consists of the epic of "Gondibert" with other shorter poems (Chalmers, English Poets, London, 1810, vi), together with nearly 15 plays (Edin. ed., 1857-8, 3 vols; see A. M. Logan). "Gondibert" is an unfinished poem in fifteen hundred heroic stanzas. Modern critics find it dull, but it has its place in English literature as marking a stage in the movement towards the so-called classical school of poetry which culminated in Dryden and Pope. D'Avenant's dramas do not rise much above mediocrity, but they are considered "exceptionally decorous and moral" for their time.

Davenport, Christopher, also known as Franciscus a Sancta Clara and sometimes by the alias of Francis Hunt and Francis Coventry, theologian, b. 1598, at Coventry, England; d. 31 May, 1680. He was the son of Alderman John Davenport and Elizabeth Weller, and from the grammar school at Coventry went to Dublin where he spent fifteen months, leaving it 22 Nov., 1611. In 1613 he and his brother John proceeded to Mercy College, Oxford, entering as "battelers" and taking Cook's commons; but the warden required them to enter as commoners or to leave the college; whereon in 1614 they migrated to Marshden Hall. Here Christopher began to study on 28 May, his Dublin residence being allowed to count. (Oxford University Register.) John subsequently became a noted Puritan divine and emigrated to New England, where with a band of colonists he founded the city of New Haven, Connecticut (1638). Chris-

DAVENPORT

where he spent most of his remaining years, with occasional visits to Flanders. His intellectual ability and attractive manner won for him the friendship of many, and aided in reconciling numerous converts, among whom was Anne, Duchess of York. He lived to see the final submission of the New World to the power of the church, and died in Rome at the close of the year 1690.

His works are:

- "Epistola, continens confutatiorem duarum oppositionum astrologicae" (Douay, 1626);
- "Deus, Natura, Gratia", with the important appendix described above (Lyons, 1634);
- "Apologia Episcoporum" (Colophon, 1630);
- "The Practice of the Presence of God" (Douay, 1642);
- "Systema Fidei" (Liége, 1648);
- "De Definibilitate Controversiae Immaculæ Conceptionis Dei Genitus Opusculum" (Douay, 1651);
- "Paralipomena Philosophica de Mundo Peripatetico" (Antwerp, 1652);
- "An Exhortation of Faith" (Douay, 1655);
- "Explanations of the Catholic Belief" (1656);
- "Manuale Missionariarum Regularem præcipue Anglorum Ordinis Sancti Francisci" (Douay, 1658, 1661);
- "Tractatus de Schismate prescritum Anglicano";
- "Vindication of English Catholicism" (1659);
- "Dialogue" (Douay, 1661);
- "Problematum Scholasticae et controversiae speculativa"
- "Corollaria Dialogi de Medio Animari Statu", "Religio Philosophica Peripateta discutienda" (Douay, 1662, 1667);
- "Opera omnia Francisci a S. Clara" (Douay, 1665–1667);
- "Disputation de antiqua Provinciae Precesden";
- "Sumnale Historiae Province Angliae" (Douay, 1671).

EDWIN BURTON.

DAVENPORT, DIOCESE OF (DAVENPORTENSIIS), erected 8 May, 1881, embraces the four southern tiers of counties of the State of Iowa, U. S. A., an area of about 22,873 square miles. From the time of the Louisiana Purchase down to 1827 the present Diocese of Davenport was included in the Diocese of New Orleans; from 1827 to 1837 it formed part of the Diocese of St. Louis, which in 1837 belonged to the Diocese of Dubuque. When Bishop Loras arrived in Dubuque in April, 1839, his diocese contained two churches, St. Raphael's in Dubuque, built in 1836, and St. Anthony's in Davenport, built in 1838. In all the vast territory subject to him there was but one priest, Rev. Samuel Marevelli, O. P., who had been laboring in the territory since 1835 and under whose direction the two churches referred to had been built. Bishop Loras brought with him two priests, the Rev. Joseph Cretin, afterwards first Bishop of St. Paul, and the Rev. J. A. M. Felamourguies, whom the people of St. Anthony's parish, Davenport, and indeed of the whole Diocese of Davenport, venerate as their first resident pastor. Father Felamourguies, the first citizen of Davenport in his day, a leader in every good work, was pastor of St. Anthony's from 1839 to 1868. Of the generous, zealous laity associated with him in his work in those early days, Mr. and Mrs. Antoine Le Claire deserve special mention. Notable among their benefactions was the donation to the church of the block of ground in the heart of the city on which St. Anthony's church was built.

GROWTH OF CATHOLICISM.—Bishop Loras and his successors in the See of Dubuque did much to promote the conversion of the ignorant and heathen Catholics, with the result that Iowa has a large Catholic rural population. Between the years 1840 and 1850 the number of resident pastors in the present Diocese of Davenport increased from one to five. By the year 1860 the number had increased to thirteen, and by 1870 to twenty. During the decade following 1870 the tide of Catholic immigration was heavy, and at the time of its formation, in 1881, the diocese contained seventy priests and a Catholic population estimated at 43,000. Since its formation the diocese has had a continuous, healthful growth.

BISHOPS.—(1) John McMullen, was born in Ballynahinch, Co. Down, Ireland, 8 January, 1832, and ordained priest in Rome, 20 June, 1858. He was consecrated, 23 July, 1881, at Chicago, where at the time of his appointment to the See of Dubuque, he was vicar-general. He entered with zeal and vigour into the work of organizing the new diocese. The cause of Catholic education was his especial concern. St. Ambrose College was founded by him in September, 1882. His health soon failed, and he died 4 July, 1883.

(2) Henry Cosgrove, second bishop, was born at Williamsport, Pennsylvania, U. S. A., 19 December, 1834. He emigrated to Dubuque in 1845 and was ordained priest 7 August, 1857. He was assigned at once to St. Margaret's, Davenport, with which church he was ever afterwards connected. When Bishop McMullen went to Davenport, he chose St. Margaret's for his cathedral church. His father, Bishop Cosgrove, was consecrated Bishop of Davenport, 14 September, 1884, and for more than twenty-two years gave his best efforts to the cause of religion in his diocese. Under his guidance many new churches were erected; the institutions and other charities were enlarged. Worthy of special mention are the Sacred Heart cathedral, St. Vincent's home for orphans, and St. Ambrose College.

(3) Two years before his death, Bishop Cosgrove, enfeebled in health, was given a coadjutor in the person of his vicar-general, the Very Rev. James Davis. Bishop Davis was born in Ireland in 1852, ordained priest in 1878, was consecrated coadjutor to Bishop Cosgrove, 30 Nov., 1904, and on the death of the latter became Bishop of Davenport.

STATISTICS.—The religious communities represented in the diocese include the Benedictines, who have charge of four parishes, and the Redemptorists who have one; the Sisters of St. Benedict, Sisters of Charity B. V. M., Sisters of Charity of St. V. de Paul, Hospital Sisters of St. Francis, School Sisters of St. Francis, Franciscan Sisters of Perpetual Adoration, Sisters of St. Joseph, Sisters of Mary, School Sisters of Notre Dame, Sisters of St. Francis of Assisi, Sisters of the Holy Cross. The number of priests in 1908 was 138, and the number of Catholics 75,518. The diocese contained 154 churches, 105 of which had resident pastors, 43 parochial schools, 9 hospitals, 7 academies for young ladies, 1 college for boys, and 1 orphan asylum.

WM. P. SHANAHAN.

DAVID (Dewi, Dewi), SAINT, Bishop and Confessor, patron of Wales. He is usually represented standing on a little hill, with a dove on his shoulder. From time immemorial the Welsh have worn a leek on St. David's day. It is the custom of a battle against the Saxons, at which it is said they wore leeks in their hats, by St. David's advice, to distinguish them from their enemies. He is commemorated on 1 March. The earliest mention of St. David is found in a tenth-century MS. of the "Annales Cambriæ", which assigns his death to A.D. 601. Many of the writers, from Gildas of Monmouth south to Father Richard Stanton, hold that he died about 544, but their opinion is based solely on data given in various late "lives" of St. David, and there seems no good reason for setting aside the definite statement of the "Annales Cam-
David, Armand, missionary priest and zoologist, b. 1826; d. 1900. He entered the Congregation of the Mission in 1848, having already displayed great fondness for the natural sciences. Ordained in 1862, he was shortly afterwards sent to Peking, and began there a collection of material for a museum of natural history, mainly zoological, but in which botany and geology and palaeontology were also well represented. At the request of the French Government important specimens from his collection were sent to Paris and aroused the greatest interest. The Jardin des Plantes commissioned him to undertake scientific journeys through China to make further collections. He succeeded in obtaining many specimens of hitherto unknown animals and plants, and the value of his contributions to the advancement of zoology and especially for the advancement of animal geography received universal recognition from the scientific world. He himself summed up his labours in an address delivered before the International Scientific Congress of Catholices at Paris in April, 1888. He had found in China altogether 219, but of wild animals, of which 63 were hitherto unknown to zoologists; 807 species of birds, 65 of which had not been described before. Besides, a large collection of reptiles, batrachians, and fishes was made and handed over to specialists for further study, also a large number of moths and insects, many of them hitherto unknown, were brought to the Jardin des Plantes. What Father David's scientific journeys meant for botany may be inferred from the fact that among the rhododendrons which he collected no less than fifty-two new species were found and among the primula about forty, while the Western Mountains of China furnished an even greater number of hitherto unknown species of gentian. The most remarkable of hitherto unknown animals found by David was a species of bear (ursus melanoleucus, the black-white bear) which is a connecting link between the cats and bears. Another remarkable animal found by him was the scientific name of echinochiton eximianus. Of this animal the Chinese say that it has the horns of the camel, the foot of the cow, and the tail of the ass. It had disappeared with the exception of a few preserved in the gardens of the Emperor of China, but David succeeded in securing a
specimen and sent it to Europe. In the midst of his work as a naturalist Father David did not neglect his missionary labours, and was noted for his careful devotion to his religious duties and for his obedience to every detail of his rules.

JAMES J. WALSH.

David, Gheeraert (or Gerard), son of John David, painter and illuminator, b. at Oudewater, South Holland, c. 1450, d. 13 August, 1523, at Bruges, where he had been admitted, 14 January, 1484, as master-painter into the Guild of St. Luke, of which, after filling several offices, he was elected dean in 1501. It is not known where he learned his art, probably at Haarlem. On the completion of his apprenticeship, he no doubt, as was the custom, travelled to improve himself, working as an assistant under various masters wherever he found employment. He probably travelled to Italy, as his works show traces of Florentine and Venetian influence. Their landscape backgrounds prove that he knew the valley of the Meuse. On his way to Flanders he would not have failed to visit Louvain and study the works of his fellow-countryman, Dirk Bouts, nor to halt a while at Ghent to admire the polyptych of the Virgin, painted by his master, full of paintings by all the great masters, and one of these, Hans Memling, still living. He probably worked under him until he received commissions, for which he had not long to wait. In 1496 he married Cornelia Cooop, daughter of the dean of the guild of goldsmiths by whom he had one daughter, Barbara. Gheeraert was buried in the church of Our Lady, at the foot of the tower. He was not one of the greatest masters, nor did he strike out any new line like Van der Goes, but he gathered up all the best traditions of his predecessors, to which he faithfully adhered all through his life. His saints and angels compared with those of Memling are more sedate. One new type he created, the charming figure of the Child Jesus, which made a lasting impression on the succeeding generation of painters. His portraits are very good, his brocaded stuffs, embroidery, and jewellery have never been surpassed, and his landscapings are remarkably fine. His works show that he was a great religious painter; he was also a pious and charitable man. One of his finest paintings, the "Virgo inter Virgines", now in the museum at Rouen, was presented by him in 1509 to the Carmelite nuns of Sion at Bruges, to whom he lent a large sum of money free of interest. Gheeraert excelled in miniature-painting and illumination, which arts his wife also practised with success. David’s principal works are in the National Gallery, London (2), National Gallery, Dublin (1), Town Gallery, Bruges (2), Town Gallery, Rouen (1), Museum, Sigmaringen (2), Imperial Gallery, Vienna (1). D. WEALE, Gerard David, Painter and Illuminator (London, 1905); BODENHAUSEN, Eberhard von, Gerard David und seine Schule (Munich, 1905).

W. H. JAMES WEALE.

David (דב or דב, beloved). King.—In the Bible the name David is borne only by the second king of Israel (2 Sam., I Kings, II Sam., I Chron., and Ruth iv., iv. 18 sqq.). He was the youngest of the eight sons of Isai, or Jesse (I Kings, xvi, 8; cf. I Par., ii, 13), a small proprietor, of the tribe of Juda, dwelling at Bethlehem, where David was born. Our knowledge of David’s life and character is derived exclusively from the Book of Samuel (I Sam., II Sam., III K., ii, I Par., ii, iii, x-xix; Ruth, iv, 18-22, and the titles of many Psalms. According to the usual chronology, David was born in 1085 and reigned from 1055 to 1015 b. c. Recent writers have been induced by the Assyrian inscriptions to date his reign from 30 to 50 years later. Within the limits imposed it is impossible to give more than a bare outline of the events of his life and a brief estimate of his character and his significance in the history of Israel. As king, psalmist, prophet, and type of the Messiah.

The history of David falls naturally into three periods: (1) before his elevation to the throne; (2) his reign, at Hebron over Juda, and at Jerusalem over all Israel, until his son; (3) his sin and last years. He first appears in sacred history as the hero who sings extolling his father’s flocks in the fields near Bethlehem, “ruddy and beautiful to behold and of a comely face”. Samuel, the Prophet and last of the judges, had been sent to anoint him in place of Saul, whom God had rejected for disobedience. The relations of David do not seem to have recognized the significance of this anunction, which marked him as the successor to the throne after the death of Saul.

During a period of illness, when the evil spirit troubled Saul, David was brought to court to soothe the king by playing on the harp. He earned the gratitude of Saul and his family, but his stay at court was brief. Not long afterwards, whilst his three elder brothers were in the field, fighting under Saul against the Philistines, David was sent to the camp with some provisions and presents; there he heard the words in which the giant, Goliath of Gath, defied all men to single combat, and he volunteered to slay the Philistine. His victory over Goliath brought about the rout of the enemy. Saul’s questions to Abner at this time seem to imply that he had never seen David before, though, as we have seen, David had already been at court.

Various conjectures have been made to explain this difficulty. As the passage which seems a contradiction in the Hebrew text is omitted by Septuagint codices, some authors have accepted the Greek text in preference to the Hebrew. Others suppose that the order of the narratives has become confused in our present Hebrew text. A simpler and more likely solution maintains that on the second occasion Saul asked Abner only about the family of David and about his earlier life. Previously he had given the matter no attention.

David’s victory over Goliath won for him the tender friendship of Jonathan, the son of Saul. He obtained a prominent position at court, but the baneful influence and the immoderate songs of the women excited the jealousy of the king, who on two occasions attempted to kill him. As captain of a thousand men, he encountered new dangers to win the hand of Merob, Saul’s eldest daughter, but, in spite of the king’s promise, she was given to Hadadrich Michol, Saul’s other daughter, loved David, and, in the hope that the latter might be killed by the Philistines, her father promised to give her in marriage, provided David should slay one hundred Philistines. David succeeded and married Michol. This success, however, made Saul fear the more and finally induced him to order that David should be killed. The friendship of Jonathan he was spared for a time, but Saul’s hatred finally obliged him to flee from the court.

First he went to Ramath and thence, with Samuel, to Naioth. Saul’s further attempts to murder him were frustrated by God’s direct interposition. An interview with Jonathan convinced him that reconciliation with Saul was impossible, and for the rest of the reign he was an exile and an outlaw. At Nob, whither he proceeded, David and his companions were harboured by the priest Achimelech, who was afterwards accused of conspiracy and put to death with his fellow-priests. From Nob David went to the court of Achish, king of Geth, where he escaped death by feigning madness. On his return he became the head of a band of about four hundred men, some of them his relations, others distressed...
debters and malcontents, who gathered at the cave, or stronghold, of Odollam (Adullam). Not long after their number was reckoned at six hundred. David delivered the city of Cæla from the Philistines, but was again obliged to flee from Saul. His next abode was near the town of Ziph. The adventure with the visit of Jonathan and by the treachery of the Ziphites, who sent word to the king, David was saved from capture by the recall of Saul to repel an attack of the Philistines. In the deserts of Engaddi he was again in great danger, but when Saul was at his mercy, he generously spared his life. The adventure with Nabal, David's marriage with Abigail, and a second refusal to stay Saul were followed by David's decision to offer his services to Achish of Gath and thus put an end to Saul's persecution. As a vassal of the Philis-
tine king, he was set over the city of Siceleg, whence he made raids on the neighbouring tribes, wasting their lands and sparing neither man nor woman. By pretending that these expeditions were against his own people of Israel, he secured the favour of Achish. When, however, the Philistines prepared at Aphec to wage war against Saul, the other princes were unwilling to follow David, and he returned to Hebron. During his absence it had been attacked by the Amalecites. David pursued them, destroyed their forces, and recovered all their booty. Meanwhile the fatal battle on Mount Gelboe (Gibbor) had taken place, in which Saul and Jonathan were slain. The touchstone of duty, preserved for Jonathan II. Kings, i, is David's outbreak of grief at their death.

By God's command, David, who was now thirty years old, went up to Hebron to claim the kingly power. The men of Juda accepted him as king, and he was again anointed, solemnly and publicly. Through the influence of Abner, the rest of Israel re-
mained faithful to Saul, the son of Saul. Abner attacked the forces of David, but was defeated at Gabaon. Civil war continued for some time, but David's power was ever on the increase. At Hebron six sons were born to him: Amnon, Chesaeb, Absalom, Adonias, Saphathias, and Jethroam. As the result of a quarrel with Ibsobeth, Abner made overtures to bring all Israel under the rule of David; he was, however, treacherously murdered by Joab without the king's consent. Ibsobeth was murdered by two Benjamites, and David was accepted by all Israel and anointed king. His reign at Hebron over Juda alone had lasted a little more than a half.

By his successful wars David succeeded in making Israel an independent state and causing his own name to be respected by all the surrounding nations. A notable exploit at the beginning of his reign was the conquest of the Jebusite city of Jerusalem, which he made his capital of his kingdom, "the city of David", the political centre of the nation. He built a palace, took more wives and concubines, and begat other sons and daughters. Having cast off the yoke of the Philistines, he resolved to make Jerusalem the religious centre of his people by transporting the Ark of the Covenant from Carmel to Jerusalem and placing in the new tent constructed by the king. Later on, when he proposed to build a temple for it, he was told by the prophet Nathan, that God had reserved this task for his successor. In re-
ward for his piety, the promise was made that God would build him up a house and establish his kingdom forever.

No detailed account has been preserved of the various wars undertaken by David; only some isolated facts are given. The war with the Ammonites is recorded more fully because, whilst his army was in the field during this campaign, David fell into the sins of adultery and murder, bringing thereby great calamities on himself and his people. He was then at the height of his power, a ruler respected by all the nations from the Euphrates to the Nile. After his sin with Bethsabee and the indirect assassination of Urias, her husband, David made her his wife. A year elapsed before his repentance for the sin, but his contrition was so sincere that God pardoned him, though at the same time announcing the severe penalties that were to follow. The spiritual and moral content of the penalties has made him for all time the model of peni-
tents. The inceptors of Abdon and the fratricide of Absalom (q. v.) brought shame and sorrow to David. For three years Absalom remained in exile. When he was recalled, David kept him in disfavour for two years more and then restored him to his former dignity, without any sign of repentance. Vexed by his father's treatment, Absalom devoted himself for the next four years to seducing the people and finally had himself proclaimed king at Hebron. David was taken by surprise and was forced to flee from Jerusalem. The circumstances of his flight are narrated in Scrip-
ture with great simplicity and pathos. Absalom's disregard of the counsel of Achitophel and his con-
sequent delay in the pursuit of the king made it possible for the latter to gather his forces and win a victory at Mahanaim, where Absalom was killed. David returned in triumph to Jerusalem. A further rebellion under Sheb the Jordan was quickly suppressed.

At this point in the narrative of II Kings we read that "there was a famine in the days of David for three years successively", in punishment for Saul's sin against the Gabaonites. At their request seven of Saul's mace were delivered up to be crucified. It is not possible to fix the exact date of this famine. On other occasions David showed great compassion for the descendants of Saul, especially for Miphibaeth, the son of his friend Jonathan. After a brief mention of four expeditions against the Philistines, the sacred writer records a sin of pride on David's part in his reso-
lution to take a census of the people. As a penance for this sin, he was allowed to choose either a famine, an unsuccessful war, or pestilence. David chose the third and in three days 70,000 died. When the angel was about to strike Jerusalem, God was moved to pity and stayed the pestilence. David was commanded to offer sacrifice at the threshing-floor of Arauna, the site of the future temple.

The last days of David were disturbed by the ambition of Adonias, whose plans for the succession were frustrated by Nathan, the prophet, and Bethsabee, the mother of Solomon. The son who was to be his successor, David's repentance was chosen in preference to his older brothers. To make sure that Solomon would succeed to the throne, David had him publicly anointed. The last recorded words of the aged king are an exhortation to Solomon to be faithful to God, to reward loyal servants, and to punish the wicked. David died at the age of seventy, having reigned in Jerusalem thirty-three years. He was buried on Mount Sion. St. Peter spoke of his tomb as still in existence on the day of Pentecost, when the Holy Ghost descended on the Apostles (Acts, ii, 29).

David is named as the author of Psalms in the Book of Psalms, and is mentioned in the Roman Martyrology on 29 December.

The historical character of the narratives of David's life has been attacked chiefly by writers who have dis-
regarded the purpose of the narrator in I Par. He passes over those events that are not connected with the history of the Ark. In the Books of Kings all the chief events, good and bad, are related. The Bible records David's sins and weaknesses without excuse or palliation, but it also records his repentance, his acts of virtue, his generosity towards Saul, his great faith, and his piety. Critics who have harshly crit-
icised his character have not considered the difficult circumstances in which he lived for the greater part of his age. It is uncritical and unscientific to exaggerate his faults or to imagine that the whole history is a series of myths. The life of David was an important
epoch in the history of Israel. He was the real founder of the monarchy, the head of the dynasty. Chosen by God "as a man according to His own heart", David was tried in the school of suffering during the days of exile and developed into a military leader of renown. To him was given the complete organization of the army. He gave Israel a capital, a code of laws, a great centre of religious worship. The little band at Gath became the nucleus of an efficient force. When he became King of all Israel there were 339,600 men under his command. At the census 1,300,000 were enumerated capable of bearing arms. A stationing of two hundred men, each of 24,000 men, took turns in serving for a month at a time as the garrison of Jerusalem. The administration of his palace and his kingdom demanded a large retinue of servants and officials. Their various offices are set down in I Par., xxxvii. The king himself exercised the office of judge, though Levites were later appointed for this purpose, as well as other minor officials.

When the Ark had been brought to Jerusalem, David undertook the organization of religious worship. The sacred functions were entrusted to 24,000 Levites; 6000 of these were scribes and judges, 4000 were officers of war, and 40 were officers of the temple. The commandant of two thousand was given to each of the three parts of the temple; and certain Levites were put in charge of the various parts of the ritual, allotting to each section its tasks. To Solomon had been reserved the privilege of building God's house, but David made ample preparations for the work by increasing treasures and materials, as well as by transmitting to his son a plan for the building and all its details. We are told in I Par. how he exalted his son Solomon to carry out this great work, and made known to the assembled princes the extent of his preparations.

The prominent part played by song and music in the worship of the temple, as arranged by David, is readily explained by his poetic and musical abilities. His skill in music is recorded in I Kings, xvii, 18 and Amos, vi, 5. Poems of his composition are found in II Kings, i, iii, xxii, xxiii. His connexion with the Book of Psalms, many of which are expressly attributed to various incidents of his career, was so taken for granted in later days that many ascribed the whole Psalter to him. The authorship of these hymns and the question how far they can be considered as supplying illustrative material for David's life will be treated in the article Psalms.

David himself is a mere king and ruler, he was also a prophet. "The spirit of the Lord hath spoken by me and my word by my tongue" (II Kings, xxxiiii, 24). A direct statement of prophetic inspiration in the poem there recorded. St. Peter tells us that he was a prophet (Acts, ii, 30). His prophecies are embodied in the Psalms, he composed that are literally Messianic and in "David's last words" (II K., xxiii). The literal character of these Messianic Psalms is indicated in the New Testament. They refer to the suffering, the persecution, and the triumphant deliverance of Christ, or to the prerogatives conferred on Him by the Father and God. In addition to the prophecies, David himself has always been regarded as a type of the Messias. In this the Church has but followed the teaching of the Old Testament Prophets. The Messias was to be the great theocratic king; David, the ancestor of the Messias, was a king according to God's own heart. His qualities and his very name were handed down to the Messias in a unbroken line. So far as the life of David are regarded by the Fathers as foreshadowing the life of Christ; Bethlehem is the birth-place of both; the shepherd life of David points out Christ, the Good Shepherd; the five stones chosen to slay Goliath are typical of the five wounds; the battle of Gibeon is a prefiguration of the life of Christ through the Cedron remind us of Christ's Sacred Passion. Many of the Davidic Psalms, as we learn from the New Testament, are clearly typical of the future Messias.

JOHN CORBETT.

David of Augsburg (de Augusta), medieval German mystic, b. probably at Augsburg, Bavaria, early in the thirteenth century; d. at Augsburg, 19 Nov., 1272. He entered the Franciscan Order probably at Ratisbon, where a monastery of this order was in existence as early as 1226; the Franciscan monastery at Augsburg was not erected until 1243. At Ratisbon David filled the position of master of novices and wrote for the spiritual benefit of the latter he celebrated "Formula Novitiorum." Whether the distinguished Franciscan preacher Berthold of Ratisbon (q. v.) was one of his pupils is at least very doubtful. In 1248 Berthold and David were appointed inspectors of the convent at Augsburg. He arranged the monastic constitutions. From about 1250 David accompanied Berthold on his missionary tours and most probably took part in the preaching himself; he also had a share in the proceedings of the Inquisition against the Waldenses. On the day of David's death it is said that Berthold, who was preaching in a distant place, stopped in the street of his sermon and quoted, in reference to his friend who had just passed away, the following lines of the hymn, "Iste Confessor!"——

Qui pius, prudens, humilis, pudicus, Sobriam duxit sine labe vitam

—etc. David wrote both in Latin and German. For a long period his Latin works were attributed to others, at times to St. Bernard of Clairvaux and St. Bonaventure, a proof of the high esteem in which they were held. The most striking case of this mistaken ascription is that of the "Formula Novitiorum" which in addition to two letters of David form three books: (1) "De Compositione hominis externioris" (treaties of the external life of the member of an order); (2) "De Reformatione hominis interioris"; (3) "De septem prococibus religiosorum". This work, of which the different parts often appeared separately, is a rational and progressive introduction to monastic and mystical life. It was first published in Germany in 1488. Bonaventure (Brescia, 1482; Venice, 1487; Antwerp, 1591; Cologne, 1618); it appeared also in the editio Vaticana of the works of St. Bonaventure (Rome, 1888-90), and consequently in all of the reprints of this edition. It also appeared in the "Magna Bibliotheca veterum Patrum" (Cologne, 1619), vol. XIII in the "Maxima Bibliotheca vet. Patr." (Lyons, 1675), vol. XXXV, and, in part, among the doubtful works of St. Bernard of Clairvaux in Migne, P. L., CLXXXIII, col. 1189. The Latin edition published at Augsburg in 1598 was issued in German at the same place in 1599. The latest edition is that of Quaracchi (1889), in the introduction to which the work is positively ascribed to Brother David of Augsburg; a list of 370 manuscripts is also given. David's treatise "De haeresi pauperum de Lugduno," was erroneously issued, in an incomplete form, by Magini and Durand (Theolog. Script., V, 1777) under the title of the Dominican Yvonnet; but it has been proved by Pfeffer and Preger to be one of David's writings and the full text was edited by Preger for the first time. Extracts from David's "Expositio Regulae," an explanation of the monastic rules of St. Francis of Assisi, have been edited by Eulenspiegel.

Attention was first called to David's German writings by Pfeffer, who in 1845 published the following
eight treatises and ascribed them to David: (1) "Die sieben Vorregein der Jugend"; (2) "Der Spiegel der Tugend in der Jugend" (the so-called "Pfiefers" found later a continuation five times larger than the part published); (4) "Die vier Fichtliche geistlicher Betrachtung"; (5) "Von der Anschauung Gottes"; (6) "Von der Erkenntnis der Wahrheit"; (7) "Von der unergründlichen Fülle Gottes" (5) "Betrachtungen und Gebeite". Freger recently doubts the authenticity of these as the treatises, with exception of the first three, to David, but his attack proved a failure and Freger's views have been successfully defended by Hecker and Tellinseg. It must, however, be acknowledged that the eighth contains much that was common property in the Middle Ages. David's German treatises are examples of German prose and assure him a permanent place in the history of German literature. Like the radiance of a gently burning flame they attract the heart and spirit of the reader to the beautiful and the Divine. They turn the mind from vice and error with more convincing eloquence and kindle in it the love of God. In these writings, as in the treatises for novices, David is at all times the circumspect mystic, averse to fantastic ecstasy and exaggeration. A sober good sense pervades his profound yet animated expositions, which have nothing in common with the vagaries of the German mystics of the fourteenth century, although David's influence on the latter is not to be denied. His writings exerted some influence also on the "Schwabenspiegel" (Swabian Mirror), the well-known compilation of civil law used in Southern Germany, which appeared about 1268. Personally David belonged to the earlier school of mystics.

MICHAEL BIHL.

David of Dinant, a pantheistic philosopher who lived in the first decades of the thirteenth century. Very little is known about his life. It is not certain whether he was born at Dinant in Belgium, or at Dinan in Brittany. He is believed to have lived for some time at the Roman Court under Innocent III. He was a magister, or teacher, perhaps at Paris; at any rate, it was at Paris that his work, entitled "Quaestiarum universitati" (little note-books), was condemned by a provincial council in 1210, a condemnation which was confirmed in 1215 by a letter of Cardinal Robert Courçon, papal legate. From a work ascribed to Albert the Great, "Complatio de Nvo Spiritu", in the Munich Library (MS. lat. 311, fol. 92 b), we learn further that in consequence of the condemnation, David fled from France, and so escaped punishment. When and where he died is unknown; all we are warranted in saying is that he died after the year 1215. Besides the "Quaestiarum", condemned in the council of 1215, and "De Tomis seu Divisionibus", his other work entitled "De Tomis, seu Divisionibus" is mentioned. It is not improbable, however, that this was merely another title for the "Quaestiarum". The effect of the order issued by the council was to cause all the writing of David to disappear. Whatever is known, therefore, about his doctrines is derived from the assertions of his contemporaries and opponents, chiefly Albert the Great and St. Thomas. From these sources it appears that David was a Pantheist. He identified God with the matter, substrate of all things, materia prima (St. Thomas, Summa Theol., I. Q. iii., a. 8). He reduced all reality to three categories, namely bodies, minds, and eternal separate substances. The indivisible substrate or constituent of bodies is matter (gula), of minds, or souls, intellect (noua); and of eternal separate substances, God (Deus). These three, matter, intellect, and God, are one and the same. Consequently all things, material, intellectual, and spiritual, have one and the same essence—God (St. Thomas, In II Sent., dist. xvii, Q. i; Albert the Great, Sum. Theol., I. Tract. xii., Q. lxxxii, a. 2). The fundamental part of this philosophy must be David's own, as well as the title above mentioned, "De Tomis", suggests at once the influence of John Scotus Eriugena, an influence which cannot be denied. Eriugena's work must have been widely known and read in the first decades of the thirteenth century, as is evident from many undeniable facts. Whether David was influenced also by Amalric of Chartres (see AMALRICIANS) is a matter of debate. Albert, who was a contemporary of David, says that David merely renewed the heresy of Alexander, "who taught that God and intellect and matter are one substance". It is impossible to say whether there was really such a disciple of Xenophanes; probably the reference is to some Arabic work that went under the name of a Greek philosopher. There were several works of that kind current in the early part of the thirteenth century. Some critics, however, put forward the surmise that David's immediate source was Avicebron's "Fons Vitae", or the work "De Unitate", written by Archebucio Gundisalvi of Segovia, who was well versed in Arabic philosophical literature. Whatever the source, the doctrines were, as all our authorities concur in describing them, the expression of the most thoroughgoing pantheism. This in itself would justify the drastic measures to which the Council of Paris had recourse. There were, moreover, circumstances which rendered summary condemnation necessary. On the one hand the University of Paris was being made the scene of an organized attempt to foist the Arab metaphysics as interpreted in Greek philosophy, on the schools of Latin Christendom. Translations, translations, and commentaries were introduced every day from Spain, in which doctrines incompatible with Christian dogma were openly taught. On the other hand, there was the popular movement in the South of France which found its principal expression in the Albigensian heresy, whose influence in learned and unlearned circles in the North, the anti-hierarchical mysticism of the Calabrian Joachim of Floris was being combined with the more speculative pantheistic mysticism of John Scotus Eriugena. In view of these conditions the condemnation of the errors of David of Dinant, the complete extirpation of the sect of Amalricians to which he apparently belonged, and the unwonted harshness of St. Thomas's reference to him cannot be judged untimely or intemperate.

WILLIAM TURNER.

David Scotus, a medieval Irish chronicler, date of birth unknown; d. 1139. Early in the twelfth century there was at Würzburg an ecclesiastic and teacher known as David. His surname Scotus shows that he very probably came from Ireland; perhaps from Wales, if he is identical with the homonymous
Bishop of Bangor (see below). According to Ekkehard (Chronicon, ed. Mon. Germ. Hist.: Script., VI, 243), Emperor Henry V received him, was charmed with his virtue and knowledge, and made him one of the imperial chaplains. With other scholars David accompanied the king on his expedition to Italy in 1100, and was appointed royal historiographer for the campaign. His work in Italy is now lost, except for a few excerpts of it in later historians, especially in Ekkehard (op. cit. above) and William of Malmesbury. The latter (Gesta regum Anglorum, in P. L., GLXXIX, 1375) says that David described the expedition with partiality for the king. A certain David was consecrated Bishop of Banbury in 1120; according to Malmesbury (loc. cit.) he was none other than the chaplain, David Scotus. As bishop he took part in several English synods, and probably died in 1133, since his successor was then consecrated. But it is not easy to reconcile with the foregoing, the statement of a later historian (Trithemius, Annales Hirsauingensiae, I, 349), that David became a monk under St. Macharius in the monastery of St. James in Würzburg, as this abbey was not founded until 1140. A detail in Dict. Nat. Bioq. s. v.: FABRICIUS, Bibliotheca Latina (Florence, 1888), I, 438; HUNTER, Nomenclator, (3rd ed. Innsbruck, 1900), II, 63.

J. P. KIRSCH.

Davies, WILLIAM, VENERABLE, martyr, one of the most illustrious of the priests who suffered under Queen Elizabeth, b. in North Wales, probably at Cross in Denbighshire, date uncertain; d. at Beaumaris, 27 July, 1593. He studied at Reims, where he arrived 6 April, 1582 just in time to assist at the first Mass of the venerable martyr Nicholas Garlick. He received tonsure and minor orders 23 Sept., 1583, together with seventy-three other English students. On 1 April, 1584, he was banished to the大师ful zeal and success in Wales till March, 1591–2, when he was arrested at Holyhead with four students whom he was sending via Ireland to the English College at Valladolid. He was thrown into a loathsome dungeon in Beaumaris Castle and separated from his companions, having frankly confessed that he was a priest. After a month his sanctity and patience gained him some relaxation of his close confinement and he was able to join the students for an hour in the day, and even to celebrate Mass. By degrees the jailor became so indulgent that they might have escaped had they so willed. The fame of the priests and bishops with whom Garlick from all Europe came to consult him and Protestant ministers came to dispute with him. At the assizes he and his companions were condemned to death, on which the martyr intoned the “Te Deum”, which the others took up. The injustice of the sentence was so apparent that to still the people’s murmurs the judge restored the condemned till the queen’s pleasure should be known. Sent to Ludlow, to be examined by the Council of the Marches, Father Davies had to submit to fresh assaults by the ministers. Here too he foiled the artifices of his enemies who took him to the church under pretext of a dispute, and then began the Protestant service. He at once began to recite the Latin Vespers in a louder voice than the ministers’, and afterwards publicly exposed the trick of which he had been a victim. From Ludlow he was sent to Bewdley, where he had to share a foul dungeon with felons, and from thence to other prisons, until at last he was sent back to Beaumaris, where, to their mutual consolation, he rejoined his young companions. For some six months he lived with them the life of a religious community, dividing the time between prayer and study, “with so much comfort to themselves that they seemed to be rather in a vacation.” At last it was decided that the priest must die as a traitor, though he was offered his life if he would go but once to church. In spite of the open opposition of the people, who honoured him as a saint, the cruel sentence was carried out and he was hanged, drawn, and quartered at Beaumaris. As he put the rope round his neck, the martyr said: “Thy yoke, O Lord, is sweet and Thy burden is light.” His cassock stained with his blood was bought by his companions and preserved as a relic. They, they solitary, spent the remainder of their imprisonment for life, managed in time to escape, and the youngest found his way at last to Valladolid, where he recounted the whole story to Bishop Yepes, who wrote it in his “Historia particular de la Persecucion en Inglaterra”. There is now a chapel in Anglesey built as a memorial to the saint.

BEDE CAMM.

Dávila Padilla (Agustín), a native of the City of Mexico, b. 1562; d. 1604. At the age of sixteen he graduated at the University of Mexico as master of arts and soon after entered the Dominican Order. He held the chairs of philosophy and theology at Puebla and Mexico. He was successively definitor and procurator of the Mexican province of his order and was sent to Rome and Madrid as its representative. In 1601 he was made Bishop of Santo Domingo, where he died. Dávila Padilla was not a prolific writer. He left, however, one very important, though unfortified, work, the “Historia de los misiones de la Provincia de la Compañía de Jesús en el Pueblo de Santiago de México” (Madrid, 1596; Brussels, 1625). Beristain mentions a third edition of 1634. While not free from mistakes, it still stands as the foremost chronicle of the Dominican Order and its missions in America up to the end of the sixteenth century.

Dawson, Eneaas McDonnell, author, b. in Scotland, 30 July, 1810; d. in Ottawa, Canada, 29 Dec., 1894. He studied at the seminary of Paris and was ordained priest in 1835. Until 1840 he laboured on the mission of Dumfries, Scotland, and subsequently in Edinburgh. Before emigrating to Canada in 1855 he had charge successively of the Counties of Finkle, Kinross, and Clackmannan, during all this time rendering valuable service to the cause of the Church. On his arrival in Canada he was given the parish of St. Andrew's, Ottawa, and later became preacher at the cathedral. Father Dawson was a lecturer of repute and a frequent contributor to the Catholic press. He is the author of “The Temporal Sovereignty of the Pope” (Ottawa and London, 1860), the first book printed and published in Ottawa: “St. Vincent de Paul: A Biography” (London, 1865); “Seven Letters together with a Lecture on the Colonies of Great Britain” (Ottawa, 1870); “The Late Rev. Thomas D'Arcy McGee. A Memorial Oration” (Ottawa, 1870); “Our Strength and Their Strength: The Northwest Territory and Other Papers, Chiefly Relating to the Dominion of Canada” (Ottawa, 1870)—the first title heads a reflection of Goldwin Smith's anti-clerical views; under the last comes a series of poems, some in verse, some in prose; “ Poetry IX and His Time” (London, 1880). He translated from the French: (1) “Maître Pierre. Conversations on Moral-
DEACONS

Day, Sir John Charles, jurist, b. near Bath, Eng., 1826; d. 13 June, 1908, at Newbury. He was educated at Rome and at Fribourg, finally with the Benedictines at Downside, who prepared him to graduate with honours at the London University and attain subsequent distinction at the Bar. He was called to the Middle Temple, 1849; took silk, 1872; Bencher of the Middle Temple, 1873; raised to the Bench as Judge of the Queen's Bench Division of High Court of Justice and knighted, 1885; resigned, 1901; created Privy Councillor, 1902. His first years at the Bar were a constant struggle, and then his book, "Common Law Procedure Acts", brought him fame and fortune. As a judge he his severe sentences, especially for crimes of violence, made him the terror of evildoers, among whom he was nicknamed "Day the Depreneur" and "Judgment Day". He was also eminent as an art connoisseur and his collection of pictures by painters of the Barbizon School was one of the best in England. In 1888-90 he served as a judge on the famous Parnell Special Commission. Two of his sons, Henry and Anour, joined the Bench. His second wife, Ismene, daughter of Samuel, selected the law. Judge Day also edited Rosece's "Evidence at Nisi Prius" (1870).

Thomas F. Meehan.

Day of Judgment. See Judgment, Day of.

DEACON.—The name deacon (διάκονος) means only minister or servant, and is employed in this sense both in the Septuagint (though only in the Book of Esther, e. g. ii, 2; vi, 3) and in the New Testament (e. g. Matt., xx, 28; Romans xv, 25; Eph., iii, 7; etc.). But in Apostolic times the word began to acquire a more definite and technical meaning. Writing about a. d. 63, St. Paul addresses "all the saints, who are at Philippi, with the bishops and deacons" (Phil., i, 1). A few years later (I Tim., iii, 8 sq.) he imposes upon Timothy that "deacons must be chaste, not double tongued, not given to much wine, not greedy of filthy lucre, holding the mystery of the faith in a pure conscience". He directs, further, that they must "first be proved: and so let them minister, having no crime", and he adds that they should be "the husbands of one wife: who rule well their children, and their own houses. For they that have ministered well, shall purchase to themselves a good degree, and much confidence in the faith which is in Christ Jesus". This passage is worthy of note, not only because it describes the qualities desirable in candidates for the diaconate, but also because it suggests that external administration and the handling of money were likely to form part of their functions.

Origin and Early History of the Diaconate.—According to the constant tradition of the Catholic Church, the narrative of Acts, vi, 1-6, which serves to introduce the account of the martyrdom of St. Stephen, describes the first institution of the office of deacon. The Apostles, in order to meet the complaints of the Hellenistic Jews that "their widows are neglected in the daily ministration," called together "the multitude of the disciples and said: It is not reason that we should leave the word of God and serve [διακόνους] tables. Wherefore, brethren, look ye out among you seven men of good report, full of the Holy Ghost and wisdom, whom we may appoint over this business. But we will give ourselves continually to prayer, and to the ministry of the word [τὴν διακόνην τῶν Νεευμῶν]. And the saying
was liked by all the multitude. And they chose Stephen, a man full of faith, and of the Holy Ghost: (with six others who are named). These they placed "before the apostles; and they, praying, impo\--sed hands upon them." Now, on the ground that the Seven are not expressly called deacons and that some of them (e.g. St. Stephen, and later Philip (Acts, xxxi, 8) have been ranked next to the Apostles, it is not surprising that comment\--tors commentators have constantly raised objections against the identification of this choice of the Seven with the institution of the diaconate. But apart from the fact that the tradition among the Fathers is both unanimous and early—e.g., St. Ireneeus (Adv. Hær., III, xii, 10 and IV, xvi, 1) speaks of St. Stephen as the first Bishop of Jerusalem (Cyrrh., Ep. xi, ad Cornelium). Such pecu\--liarization was all the easier because the offerings passed through their hands, at any rate to a large degree. Those gifts which the people brought and which were not made directly to the bishop were presented to him through them (Apost. Const., II, xxvii), and on the other hand they were to distribute the oblations (αὐξομεν) which remained over after the Liturgy had been celebrated among the different orders of the clergy according to certain fixed proportions. It was no doubt from such functions as these that St. Jerome calls the deacon menΣαρνουτ et viduamum minister (Hieron. Ep. ad deacons). They were of course not, however, the rich and the poor, reporting to the bishop upon their needs and following his direction in all things (Apost. Const., III, xix, and xxxi, xxxii). They were also to invite aged women, and probably others as well, to the agape. Then with regard to the bishop they were to relieve him of his more laborious and less important functions, and in this way they came to exercise a certain measure of jurisdiction in the simpler cases which were submitted to his decision. Similarly they sought out and reproved offenders as his deputies. In fine, as the Apostolic Constitutions declare (II, xiv), they were to be his "ears and eyes and mouth and heart", or, as it is laid down elsewhere, "his sense and his senses" (φυσικα καὶ εἶδος) (Apost. Const., III, xix).

2. Again, as the Apostolic Constitutions further explain in some detail, the deacons were the guardians of order in the church. They saw that the faithful obeyed and submitted to the bishop. In the early Church, to understand how events were to be handled, the duty of serving at tables may have passed into the privilege of serving at the altar. They became the natural intermediaries between the celebrant and the people. Inside the Church they made public announcements, marshalled the congregation, preserved order and discipline, and were the officers on the exterior terms: "Outside, as in the temple, they were the guards who could summon!" (Hom. xxiv, in Act. Apost.). Besides this they were largely employed in the direct ministry of the altar, preparing the sacred vessels and bringing water for the ablutions, etc., though in later times many of these duties devolved upon clerics of an inferior grade. Most ecclesiastics were conspicuous by their marshalling and directing the congregation during the service. Even to the present day, as will be remembered, such announcements as Ἐλεημόνας, Προκεδαμόνας, Procedamus in pace, are always made by the deacon; though this function had been pronounced of them in the early ages. The following, from the newly discovered " Testament of Our Lord", a document of the end of the fourth century, may be quoted as an interesting example of a proclamation such as was made by the deacon just before the Anaphora: "Let us arise; let each know his own place. Let the catechumens depart. See that no unclean, no careless person is here. Let up the Diakonos and the Angels look upon us. See, let him who is without faith depart. Let no adulterer, no angry man be here. If anyone be a slave of sin let him depart. See, let us supplicate as children of the light. Let us supplicate our Lord and God and Saviour Jesus Christ."

3. The special duty of the deacon to read the Gospel
seems to have been recognized from an early period, but it does not at first appear to have been so distinctive as it has since become in the Western Church. Sozomen says of the church of Alexandria that the Gospel might only be read by the archdeacon, but elsewhere ordinary deacons performed that office, while in other churches again it devolved upon the priests. It may be this relation to the Gospel which led the apostolic constitutions of Constantine (VIII, iv) to the deacons should hold the book of the Gospels open over the head of a bishop-elect during the ceremony of his consecration. With the reading of the Gospel should also probably be connected the occasional, though rare, appearance of the deacon in the office of preacher. The Second Council of Vienne (529) declared that a priest might preach in his own parish, but that when he was ill a deacon should read a homily by one of the Fathers of the Church, urging that deacons, being held worthy to read the Gospel, were a fortiori worthy of reading a work of human authorship. Actual preaching by a deacon, however, despite the precedent of the deacon Philip, was at all periods rare, and the Arian Bishop of Antioch, Leontius, was censured for letting his deacon Aetius preach (Philostorgius, III, xvii). On the other hand, the greatest preacher of the East Syrian Church, Ephraem Syri, though nearly all the places in his liturgical services have been only a deacon, though a phrase in his own writings (Opp. Syr., III, 467, d) throws some doubt upon the fact. But the statement attributed to Hilarius Diaconus, nunc neque diaconi in populo prae- cant (nor do the deacons now preach to the people), undoubtedly represents the ordinary rule both in the fourth century and later.

4. With regard to the great action of the Liturgy it seems clear that the deacon held at all times, both in East and West, a very special relation to the sacred vessels and to the host and chalice both before and after consecration. The Council of Laodicea (can. xxi) forbade the inferior orders of the clergy to enter to the diaconicum or touch the sacred vessels, and a canon of the First Council of Toledo pronounces that deacons who have been subjected to public penance must in future remain with the subdeacons and thus be drawn from the handling of these vessels. On the other hand, there can be no doubt that in the middle ages, though not in their functions, it was originally the deacons alone who (a) presented the offerings of the faithful at the altar and especially the bread and wine for the sacrifice, (b) proclaimed the names of those who had contributed (Jerome, Com. in Ezek., xviii), (c) carried the oblation, and (d) administered the Chalice, and on occasion also the Sacred Host, to communicants. A question arises whether deacons might give Communion to priests but the practice was forbidden as unseemly by the First Council of Nicaea (Hefele-Lecesre, I, 610 sqq.; cf. Tertullian, De Spectac., xxv, and Cyprian, De Lapsis, xxv), it was repeatedly insisted, in restraint of certain pretentions, that the deacon's office was entirely subordinate to that of the celebrant, whether bishop or priest (Apost. Const., VIII, xxvii, xvi, and Hefele-Lecesre, I, 291 and 612). Although certain deacons seem locally to have usurped the power of offering the Holy Sacrifice (offere), this abuse was severely repressed in the Council of Arles (314), and there is nothing to support the idea that the deacon in any proper sense was held to consecrate the chalice, as St. Isidore of Seville, in the seventh century, in his epistle to Leufredus: "To the deacon it belongs to assist the priests and to serve [ministari] in all that is done in the sacraments of Christ, in baptism, to wit, in the holy chrism, to wash the pieten and chalice, to bring the oblation to the altar and to arrange them, to lay the table of the Lord and to drape it, to carry the cross, to declaim [pradicare] the Gospel and Epistle, for as the charge is given to lectors to declaim the Old Testament, so it is given to deacons to declaim the New. To him also pertains the office of prayers [officium precum] and the recital of the names. It is he who gives warning to open our ears to the Lord, it is he who exhorts with his cry, it is he also who announces peace." (Migne, P. L., LXXXII 895). In the early period, as many extant Christian epitaphs testify, the possession of a good voice was a qualification expected in candidates for the diaconate. Dulcis nectare promerum matutini canore was written on the deacon Redemptus in the time of Pope Damasus, and the same epitaphs make it clear that the deacon had then much to do with the chanting, not only of the Epistle and Gospel, but also of the Psalms as a solo. Thus of the archdeacon Deusedrit in the fifth century it was written:
Hic levitarum primus in ordine vivens
Davidici cantor carminis iste fuit.

But Pope Gregory the Great in the council of 595 abolished the privilege of the deacon as regards the chanting of Psalms (Duchesne, Christian Worship, vi), and regular canons succeeded to their functions. However, even as it is, some of the most beautiful chants in the Church’s liturgy are confined to the deacon, notably the proceamion paschale, better known as the Exsultet, the consecratory prayer by which the paschal easter is blessed on Holy Saturday. This has been praised as the most perfect specimen of Gregorian music, and it is sung throughout by the deacon.

DEACONS

DRESS AND NUMBER OF DEACONS.—The early developments of ecclesiastical costume are very obscure, and finally a difficulty in identifying securely the objects indicated merely by a name. It is certain, however, that both in East and West a stole, or orarium (ὄφρας), which seems to have been in substance identical with what we now understand by the term, has been from an early period the distinctive garment of deacons. Also, it has been worn by the deacon over the left shoulder, and not round the neck, like that of a priest.

Deacons, according to the Fourth Council of Toledo (633), were to wear a plain stole (orarium—orarium quia ortul, id est, praetexit) on the left shoulder, the right arm free to type themselves. This was the traditional mode which they were to discharge their sacred functions. It is interesting to note as a curious survival of an ancient tradition that the deacon during a Lenten high Mass in the Middle Ages took off his chasuble, rolled it up, and placed it over his head shoulder to leave his right arm free. At the present day he still takes off his chasuble during the central part of the Mass and replaces it with a broad stole. In the East the council of Laodicea, in the fourth century, forbids subdeacons to wear the stole (ἄφρας), and a passage in St. John Chrysostom (Hom. in Fil. Prod.) refers to the light fluttering drapery over the left shoulder of those ministers at the altar, evidently describing the stoles of the deacons. The deacon still wears his stole over the left shoulder only, although, except in the Ambrosian Rite at Milan, he now wears it under his dalmatic. The dalmatic itself, which is now regarded as distinctive of the deacon, was originally confined to the deacon, and to vestments in use in both Rome and Milan, were worn by early popes as a special privilege. Such a grant was apparently made, for example, by Pope Stephen II (752–757) to Abbot Fulrad of St-Denis, allowing six deacons to array themselves in the stola dalmatici decoris (sic) when discharging their functions (Habert, Die liturgik d.Centurion, p. 251). According to the “Liber Pontificalis”, Pope St. Sylvester (314–335) constituit ut diaconi dalmaticis in ecclesia uteretur (ordained that deacons should use dalmatics in church), but this statement is quite unreliable. On the other hand it is practically certain that his dalmatic was worn in Rome both by the pope and by his deacons in the latter half of the fourth century (Braun, op. cit., p. 249). As to the manner of wearing, after the tenth century it was only in Milan and Southern Italy that deacons carried the stole over the dalmatic, but at an earlier date, this had been common in many parts of the West.

As regards the number of deacons, much variation existed. In more considerable cities there were normally seven, according to the type of the Church of Jerusalem in Acta, vi, 1–6. At Rome there were seven in the time of Pope Cornelius, and this remained the rule until the eleventh century, when the number of deacons was increased from seven to fourteen. This was in accord with Canon xv of the Council of Neo-Caesarea incorporated in the “Corpus Juris”. The “Testament of Our Lord” (I, 34) speaks of twelve priests, seven deacons, four subdeacons, and three widows with precedence. Still this rule did not remain constant. In Alexandria, for example, even as early as the fourth century, there must apparently have been more than seven deacons, for it is told that nine took the part of Arius. Other regulations seem to suggest three as a common number. In the Middle Ages nearly every local use had its own customs as to the number of deacons and subdeacons that might assist at a pontifical Mass. The number of seven deacons and seven subdeacons was not infrequent in many dioceses on Saturdays of greater unity. But the great distinction between the diaconate in the early ages and that of the present day lay probably in this, that in primitive times the diaconate was commonly regarded, possibly on account of the knowledge of music which it demanded, as a state that was person for life and finally a type of life, of which anyone should deny “that there are in the Church other orders both greater and minor by which as by certain steps advance is made to the priesthood”, and it insists that the ordaining bishop does not vainly say, “receive ye the Holy Ghost”, but that a character is imparted by the rite of ordination.

SACRAMENTAL CHARACTER OF THE DIACONATE.—Although certain ancient sees, such as Caesarea and Durandus, have ventured to doubt whether the Sacrament of Ordination is received by deacons, it may be said that the decrees of the Council of Trent are now generally held to have decided the point against them. The council not only lays down that order is truly and properly a sacrament, but it forbids, strictly and expeditiously (Sess. XXIII, can. ii) that anyone should deny “that there are in the Church other orders both greater and minor by which as by certain steps advance is made to the priesthood”, and it insists that the ordaining bishop does not vainly say, “receive ye the Holy Ghost”, but that a character is imparted by the rite of ordination. Now, not only do we find in the Acts of the Apostles, as noticed above, both prayer and the laying on of hands in the institution of the Seven, but the same sacramental character suggestive of the imparting of the Holy Spirit is conspicuous in the ordination rite as practised in the Early Church and at the present day. In the Apostolical Constitutions we read: “A deacon thou shalt appoint, O Bishop, laying thy hands upon him, with all the presbytery and the deacons standing by thee; and praying over him, thou shalt say: Almighty God . . . let our supplication come unto Thee ears and make Thy face to shine upon this thy servant: who also may serve Thee in the office of a deacon [ἐν διακονίας] and fill him with the Spirit and with power, as thou didst fill Stephen, the martyr and follower of the sufferings of Thy Christ.”

The ritual of the ordination of deacons at the present day is as follows: The bishop first asks the archdeacon if those who are to be promoted to the diaconate are worthy of the office and then he invites the clergy and people to propose any objection which they may have. After a short pause the bishop explains to the ordinandi the duties and the privileges of a deacon, they remaining the while upon their knees. When he has finished his discourse, they prostrate themselves, and the bishop and clergy recite the litanies of the Saints, in the course of which the bishop thrice imparts his benediction. After certain other prayers in which the bishop continues to invoke the grace of God upon the candidates, he sings a short preface which expresses the joy of the Church to see the multiplication of the clergy and the bishop and clergy recite the litanies of the Saints, in the course of which the bishop thrice imparts his benediction. After certain other prayers in which the bishop continues to invoke the grace of God upon the candidates, he sings a short preface which expresses the joy of the Church to see the multiplication of the clergy and the bishop and clergy recite the litanies of the Saints, in the course of which the bishop thrice imparts his benediction. The ceremony being the more essential part of the ceremony. The bishop puts out his right hand and lays it upon the head of each of the ordinandi, saying: “Receive the Holy Ghost for strength, and to resist the devil and his temptations, in the name of the Lord”. Then stretching out his hand over all the ordinandi together, he says: “Send forth Thy Spirit and they shall be created. When we seecesee Thee, O Lord, the Holy Ghost by which they may be strengthened in the faithful discharge of the work of Thy ministry, through the bestowment of Thy sevenfold grace”. After this the bishop delivers
DEACONESSES

651

DEACONESSES

to the deacons the insignia of the order which they have received, to wit, the stole and the dalmatic, accompanying them with the formulæ which express their special significance. Finally he makes all the candidate for the book of the Gospels, saying to them: "Receive the power of reading the Gospel in the Church of God, both for the living and for the dead in the name of the Lord". Although the actual form of words which accompanies the laying on of the bishop's hands, Accipe Spiritum Sanctum ad robur, etc., cannot be traced further back than the twelfth century, it is to be inferred that some of the elements, notably the conferring of the stole and the prayer which follows the delivery of the book of the Gospels, are of much older date. It is noteworthy that in the "Decretum pro Armeniis" of Pope Eugene IV the delivery of the Gospels is spoken of as the "matter" of the diaconate. Diaconatus vero per lūri evangeliorum datonem (traditūr).

In the Russian Church the candidate, after having been led three times around the altar and kissed each corner, kneels before the bishop. The bishop lays the end of his omophoron upon his neck and marks the site of the word Constantinopolitan Constitution, and lays his hand upon the candidate's head and says two prayers of some length which speak of the conferring of the Holy Ghost and of strength bestowed upon the ministers of the altar and recall the words of Christ that he "would be first among you become as a servant"; then the bishop and the deacon the insignia of his office, which, besides the stole, include the liturgical fan, and as each of these is given the bishop calls aloud, dékos, "worthy", in a tone increasing in strength with each repetition (see Miltzew, Die Sacramente der orthodox-katholischen Kirche, 318-333).

In modern times the diaconate has been so entirely regarded as a stage of preparation for the priesthood that interest no longer attaches to its precise duties and privileges. A deacon's functions are now practically reduced to the ministration at high Mass and to exposing the Blessed Sacrament at Benediction. But he may, as the deputy of the parish priest, distribute the Communion in case of need. Of the condition of celibacy see the article CELIBACY OF THE CLERGY.

DEACONES OUTSIDE THE CATHOLIC CHURCH.—It is only in the Church of England and in the Episcopal communions of Scotland and North America that a diaconate is given a distinctive name over the day of ordination of a bishop. In consequence of such ordination, however, he is considered empowered to perform any sacred office except that of consecrating the elements and pronouncing absolution, and he habitually preaches and assists in the communion-service. Among the Lutherans, however, in Germany the word deacon is generally applied to assistant, though fully ordained, ministers who aid the minister in charge of a particular cure or parish. However, it is also used in certain localities for lay helpers who take part in the work of instruction, finance, district-visiting, and relieving distress. This last is also the usual interpretation which is given in many Nonconformist communions of England and America.

HERBERT THURSTON.

Deaconesses.—We cannot be sure that any formal recognition of deaconesses as an institution of consecrated women aiding the clergy is to be found in the New Testament. There is indeed the mention of Phoebe (Rom., xvi, 1), who is called δικόης, but this may simply mean, as the Vulgate renders it, that she was "in the ministry [i.e. service] of the Church", without implying that she was a deaconess. Again it is improbable that the "widows" who are spoken of at large in 1 Tim., v, 3-10, may really have been deaconesses, but here again we have nothing conclusive. That some such functionaries were appointed at an early date seems probable from Pliny's letter to Trajan concerning the Christians of Bithynia (Ep. x. e. n. 112). They are official staffs. The form of appointment by torture from two ancillae quae ministrae dicabantur, where a technical use of words seems to be implied. In any case there can be no question that before the middle of the fourth century women were permitted to exercise certain definite functions in the church and were known by the special name of δικόης or δικοινή.

HISTORY AND CONSECRATION.—Most Catholic scholars incline to the view that it is not always possible to draw a clear distinction in the early Church between deaconesses and widows (γυναῖκες). The Didascalia, that in the earlier period it was only a widow who could become a deaconess, but undoubtedly the strict limits of age, sixty years, which were at first prescribed for widows, were relaxed, at least at certain periods and in certain localities, in the case of those appointed to be deaconesses; for example, the Council of Trullo in 692 fixed the age at forty. Tertullian speaks with reprobation of a girl of twenty in vidutae ab episco po collocatum, by which he seems to mean ordained as a deaconess. There can again be no question that the deaconesses in the fourth and fifth centuries had a distinct ecclesiastical standing, though there are traces of much variety of custom. According to the newly discovered "Testament of Our Lord" (c. 400), widows had a place in the sanctuary during the celebration of the liturgy, they stood at the anaphora behind the presbyters, they communicated after the deacons, and before the readers and subdeacons, and strange to say they had a charge of, or supervision over, a certain Filth. Filthy refection, and it is possible that a ritual was in use for the ordination of deaconesses by the laying on of hands which was closely modelled on the ritual for the ordination of a deacon. For example the Apostolic Constitutions say: "Concerning a deaconess, I Bartholomew enjoin, O Bishop, thou shalt lay thine hands upon her and also all the Presbytery and the Deacons and the Deaconesses and thou shalt say: Eternal God, the Father of our Lord Jesus Christ, the Creator of man and woman, that didst fill with the Spirit Mary and Deborah, and Anna and Huldah, that didst not disdain that thine only begotten Son should be healed in the tabernacle of witness and in the temple didst appoint women guardians of thy holy gates: Do Thou now look on this thy handmaid, who is appointed unto the office of a Deaconess and grant unto her the Holy Spirit, and cleanse her from all pollution of the flesh and of the spirit, that she may wisely accomplish the work committed unto her, to thy glory and the praise of thy Christ." Comparing this form with that given in the same work for the ordination of deacons we may notice that the reference to the outpouring of Holy Ghost in the latter case is much more strongly worded: "fill him with the spirit and with power as the Spirit didst fill Stephen in all the manifold sufferings of thy Christ." Moreover, in the case of the deacon, prayer is made that he "may be counted worthy of a higher standing", a clause which not im-
probably has reference to the possibility of advance to a higher ecclesiastical dignity as priest or bishop, no such praise being used in the case of the deaconesses.

The subject of the precise status of deaconesses is contested and confused (Duchesne, etc.), but two definite points at any rate seem worth insisting on. In the first place there were no doubt influences at work at one time or other which tended to exaggerate the position of these women-helpers. This tendency has found expression in certain documents which have come down and of which it is difficult to gauge the value. Still there is no more reason to attach importance to these pretensions than there is to regard seriously the spasmodic attempts of certain deacons (q.v.) to exceed their powers and to claim, for example, authority to consecrate. Both in the one and the other of these cases the Church made itself heard in conciliar decrees and the abuse in the end was repressed without difficulty. Such restrictive measures seem to be found in the rather obscure 11th canon of Laodicea, and in the more explicit 19th canon of the Council of Nicaea, which last distinctly lays down that these deacons are to be accounted as lay persons and that they received an ordinary priestly ordination called (Hefele-Leclercq, Conciles, I, 618). In the West there seems always to have been considerable reluctance to accept the deaconesses, at any rate under that name, as a recognized institution of the Church. The Council of Nantes in 394 reproved in general the assumption of Levitical duties by women. A similar decree of the Lateran Council in 583, other decrees, notably that of Orange in 441 (can. 26), forbade the ordaining of deaconesses altogether. It follows from what has been said that the Church as a whole repudiated the idea that women could in any proper sense be recipients of the Sacrament of Order. Nor is this true in the East, and among the Syrians and Nestorians much more than among the Greeks (Hefele-Leclercq, Conciles, I, 488), the ecclesiastical status of deaconesses was greatly exaggerated.

Another source of confusion has also been introduced by those who have interpreted the word diaconissa, on the analogy of presbyterissa and presbytyside, episcopissa and episcopissa, as the wives of deacons who, living apart from their husbands, acquired ipso facto an ecclesiastical character. No doubt such matrons who generously accepted this separation from their husbands were treated with special distinction and were supported by the Church, but if they became deaconesses in some cases they did, they had, like other women, to fulfil certain conditions and to receive a special consecration. With regard to the question of the order of deaconesses we note that when adult baptism became uncommon, this institution, which seems primarily to have been intended for the catechumens, gradually waned and in the end died out altogether. In the time of Justianin (d. 565) the deaconesses still held a position of importance. At the church of St. Sophia in Constantinople the staff consisted of sixty priests, one hundred deacons, forty deaconesses and ninety subdeaconesses; but Balsamon, Patriarch of Antioch about 1070 A.D., states that deaconesses in any proper sense had ceased to exist in the Church though the title was borne by certain nuns (Robinson, Ministry of Deaconesses, p. 93), while Matthew Blastares declared of the tenth century that the civil legislation concerning deaconesses, which ranked them rather among the clergy than the laity, had then been abandoned or forgotten (Migne, P. G., CXIX, 1272). In the West in spite of the hostile decrees of several councils of Gaul in the fifth and sixth centuries, we still find mention of deaconesses considerably after that date, though it is difficult to say what degree the title was more than an honorific name attributed to consecrated virgins and widows. Thus we read in Fortunatus that St. Radegund was "ordained deaconess" by St. Medard (about A. D. 540—Migne, P. L., LXXVIII, 502). So also the ninth Ordo Romanus mentions, as forming part of the papal procession, the "femine deaconissae et presbyterissae qua sodem die beneficamur," and deaconissae are mentioned in the procession of Leo III in the ninth century (Pont. Iulii). Anglo-Saxon Leofric missal in the eleventh century still retained a prayer ad dieconissam faciendam, which appears in the form Exaudi Domine, common to both deacons and deaconesses. The only surviving relic of the ordination of deaconesses in the West seems to be the delivery by the bishop of a stole and mantle to Carthusian nuns in the ceremony of their profession.

FUNCTIONS OF DEACONESS.—There can be no doubt that in their first institution the deaconesses were intended to discharge those same charitable offices, connected mainly with the temporal well-being of their poorer fellow-believers, which were performed for the men by the deacons. But in one particular, viz. the instruction and baptism of catechumens, their duties involved service of a more spiritual kind. The universal prevalence of baptism by immersion and the anointing of the whole body which preceded it, rendered it a matter of propriety to perform in the ceremony the functions of the deacon should be discharged by women. The Didascalia Apostolorum (III, 12; see Funk, Didascalia, etc., i, 208) explicitly direct that the deaconesses are to perform this function. It is probable that this was the starting-point for the intervention of women in many other ritual observances everywhere sanctioned by the Church. The Church Constitutions expressly attribute to them the duty of guarding the doors and maintaining order amongst those of their own sex in the church, and they also (II, c. 20) assign to them the office of acting as intercessaries between the clergy and the women of the congregation; but on the other hand, it is laid down (Const. Apost., VIII, 27) that "the deaconess gives no blessing, she fulfills no function of priest or deacon", and there can be no doubt that the extravagances permitted in some places, especially in the churches of Syria and Asia, were in contravention of the canons generally accepted. We hear of them presiding over assemblies of women, reading the epistle and Gospel, distributing the Blessed Eucharist to nuns, lighting the candles, burning incense in the thuribles, adorning the sanctuary, and anointing the sick (see Hefele-Leclercq, II, 448). All these things must be regarded as abuses which ecclesiastical legislation was not long in repressing.

DEACONESES IN PROTESTANT COMMUNION.—Outside the Catholic Church the name of deaconesses has been adopted for a modern revival which has had great vogue in Germany and to some extent in the United States. It was born in 1833 by the Lutheran Pastor Fliedner at Kaiserswerth near Düsseldorf. His first inspiration is said to have been derived from the Quakeress Elizabeth Fry, and through the celebrated Miss Florence Nightingale, who organized a staff of nurses in the Crimean war and who had previously been trained by Fliedner. A large scale project of a later date attracted a good deal of attention in England. The main work of deaconesses is the tending of the sick and poor, instruction and district visiting, but with more subdivision to parish needs than is usually compatible with the life of an Anglican sisterhood. In the United States more particularly, community life is usually not insisted upon, but a good deal of attention is given to training and intellectual development. Both in the Anglican Church, and in the Protestant Episcopal Church and Methodist Episcopal Church of America, deaconesses are "admitted" in solemn form by the bishop with benediction and the laying-on of hands. In Germany the movement has taken such hold that the Kaiserswerth organization alone claims to number over 16,000 sisters, but it is curious that relatively to the population the institution is most popular in Catholic districts, where prob-
ably the familiar speculative of Catholic nuns has accustomed the people to the idea of a community life for women.

Dead, Baptism for the. See Baptism.

Dead, Prayers for the.—This subject will be treated under the following three heads: I. General Statement and Proof of Catholic Doctrine; II. Questions of Detail; III. Practice in the British and Irish Churches.

General Statement and Proof.—Catholic teaching regarding prayers for the dead is bound up inseparably with the doctrine of purgatory (q. v.) and the more general doctrine of the communion of saints (q. v.), which is an article of the Apostles’ Creed. The definition of the Council of Trent (Sess. XXV), “that purgatory exists, and that the souls therein are suffered to be purified and are freed conditionally by the acceptable sacrifice of the altar,” is merely a restatement in brief of the traditional teaching which had already been embodied in more than one authoritative formula—as in the creed prescribed for converted Waldenses by Innocent III in 1210 (Denzinger, Enchiridion, n. 372) and more fully in the profession of faith accepted for the Greeks by Michael Paleologus at the Second Ecumenical Council of Lyons in 1274 (ibid., n. 387). The words of this profession are reproduced in the decree of union subscribed by the Greeks and Latins at the Council of Florence in 1439: “[We define] likewise, that if the truly penitent die in the love of God, before they have made satisfaction by worthy fruits of penance for their sins of commission and omission, their souls are purified by purgatorial pains after death; and that for relief from those pains they are benefited by the suffrages, that is, by Masses, prayers and almsgiving, and by the other piety usually performed by the faithful for one another according to the practice [instituto] of the Church” (ibid., n. 588). Hence, under “suffrages” for the dead, which are defined to be legitimate and efficacious, are included not only formal supplications, but every kind of pious work that may be offered for the spiritual benefit of others, and it is in this comprehensive sense that we speak of prayers in the present article.

As is clear from this general statement, the Church does not recognize the limitation upon which even modern Protestants often insist, that prayers for the dead, though legitimate and commendable in private practice, are to be excluded from her public offices. The most efficacious of all prayers, in Catholic teaching, is the essentially public office, the Sacrifice of the Mass.

Coming to the proof of this doctrine, we find, in the first place, that it is an integral part of the great general truth which we name the communion of saints. This truth is the counterpart in the supernatural order of the natural law of human solidarity. Men are not isolated units in the life of grace, any more than in domestic and civil life. As children in Christ’s Kingdom they are under the loving care and protection of God; as members of Christ’s mystical body they are incorporated not only with Him, their common Head, but with one another, and this not merely by visible social bonds and external co-operation, but by the invisible bonds of mutual love and sympathy, and by effective co-operation in the inner life of grace. Each is in some degree the beneficiary of the spiritual activities of the others, of their prayers and good works, their merits and satisfactions, and his degree of growth is to be wholly measured by those indirect ways in which the law of solidarity works out in other cases, not only by the conscious and explicit altruistic intentions of individual agents. It is wider than this, and extends to the bounds of the mysterious. Now, as between living, no Christian can deny the reality of this far-reaching spiritual communion; and since, for those who die in faith and grace, does not sever the bonds of this communion, why should it interrupt its efficacy in the case of the dead, and shut them out from benefits of which they are capable and may be in need? Of very few can it be hoped that they have attained perfect holiness at death; and none but the perfectly holy are admitted to the vision of God. Of few, on the other hand, will they at least who love them admit the despairing thought that they are beyond the pale of grace and mercy, and condemned to eternal separation from God and from all who hope to be with God alone. On this point St. Bonaventure said that purgatory is a postulate of the Christian reason; and, granting the existence of the purgatorial state, it is equally a postulate of the Christian reason that the souls in purgatory should continue to share in the communion of saints, or, in other words, be benefited by the prayers and alms of the faithful on earth. Christ is King in purgatory as well as in heaven and on earth, and He cannot be deaf to our prayers for our loved ones in that part of His Kingdom, whom He also loves while He chastises them. For our own consolation as well as for theirs we want to believe in this living intercourse of charity with our dead. We would believe it without explicit warrant of Revelation, on the strength of what is otherwise revealed and in obedience to the promptings of reason and natural affection. Indeed, it is largely for this reason that Protestants in growing numbers are giving up to-day the joy-killing doctrine of the Reformers, and reviving Catholic teaching and practice. As we shall presently see, there is no clear and explicit warrant for prayers for the dead in the Scriptures recognized by Protestants as canonical, while they do not admit the divine authority of extra-Scriptural tradition. Catholics are not a better position.

Arguments from Scripture.—On getting some passages in the Old Testament which are sometimes invoked, but which are too vague and uncertain in their reference to be urged in proof (v. g. Tobias, iv, 18; Eccles, vi, 37; etc.), it is enough to notice here the classical passage in II Machabees, xii, 40-46. When Judas and his men came to make a fire for burial of bodies of their brethren who had fallen in the battle against Gogias, “they found under the coasts of the slain some of the donaries of the idols of Jannia, which the law forbade them to the Jews: so that all plainly saw, that for this cause they were slain. Then all understood, and it was in the beginning that God had discovered the things that were hidden. And so betaking themselves to prayers, they besought him, that the sin which had been committed might be forgotten . . . . And making a gathering, he [Judas] sent twelve [all, two] thousand drachms of silver to Jerusalem for sacrifice to be offered for the sins of the dead, thinking well and religiously about the resurrection (for if he had not hoped that they that were slain should rise again, it would have seemed superfluous and vain to pray for the dead), and because he considered that they who had fallen asleep in godliness, had great grace laid up for them. It is therefore a holy and a just thing for us to pray for the dead, that they may be loosed from sins.” For Catholics who accept this book as canonical, this passage leaves nothing to be desired. The inspired au-
tor expressly approves Judas's action in this particular case, and recommends in general terms the practice of prayers for the dead. There is no contradiction in the particular case between the conviction that a sin had been committed, calling down the penalty of death, and the hope that the sinners had nevertheless died in godliness—an opportunity for penance had intervened.

But even for those who deny the inspired authority of this book, unequivocal evidence is here furnished of the faith and practice of the Jewish Church in the second century A.D. that is to say, of the orthodox Church for the sect of the Sadducees of the Pauline, resurrection (and, by implication at least, the general doctrine of immortality), and it would seem from the argument which the author introduces in his narrative that he had Sadducean adversaries in mind. The act of Judas and his men in praying for their deceased comrades is represented as if it were a matter of course; nor is there anything to suggest that the procuring of sacrifices for the dead was a novel or exceptional thing; from which it is fair to conclude that the practice—both private and liturgical—goes back beyond the time of Judas, but how far we cannot say. It is reasonable also to infer, in the absence of positive proof to the contrary, that this practice was maintained in later times, and that Christ and the Apostles were familiar with it; and whatever other evidence is available from Talmudic and other sources strongly confirms this assumption, if it does not absolutely prove it as a fact (see, e.g., th. Avot, 3.10, “After Death”).

This is worth noting because it helps us to understand the true significance of Christ's silence on the subject—if it be held on the incomplete evidence of the Gospels that He was indeed altogether silent—and justifies us in regarding the Christian practice as an inheritance from orthodox Judaism.

We have said that there is no clear and explicit Scriptural text in favour of prayers for the dead, except the above text of St. Macabees. Yet there are one or two sayings of Christ recorded by the Evangelists, which are most naturally interpreted as containing an implicit reference to a purgatorial state after death; and in St. Paul's Epistles a passage of similar import occurs, and one or two other passages that bear directly on the question of prayers for the dead. When Christ promises forgiveness for all sins that a man may commit except the sin against the Holy Ghost, which "shall not be forgiven, neither in this world, nor in the world to come" (Mark, iii. 29), is the concluding phrase nothing more than a periphrastic equivalent for "never"? Or, if Christ meant to emphasize the distinction of worlds, is "the world to come" to be understood, not of the life after death, but of the Messianic age on earth as imagined and expected by the Jews? Both interpretations have been proposed; but the second is far-fetched and decidedly improbable (cfr. Mark, iii, 29); while the first, though admissible, is less obvious and less natural than that which allows the implied question at least to remain: May sins be forgiven in the world to come? Christ himself believed in this possibility, and, had He himself wished to deny it, He would hardly have used a form of expression which they would naturally take to be a tacit admission of their belief. Precisely the same argument applies to the words of Christ regarding the debtor who is cast into prison, from which he shall not go out till he has paid the last farthing (Luke, xi, 50).

Passing over the well-known passage, I Cor., iii, 14 sqq., on which an argument for purgatory may be based, attention may be called to another curious text in the same Epistle (xv, 29), where St. Paul argues thus in favour of the resurrection: "Otherwise what shall the dead rise again for? Why then were they baptized for them?" Even assuming that the practice here referred to was superstitious, and that St. Paul merely uses it as the basis of an argumentum ad hominem, the passage at least furnishes historical evidence of the prevalence at the time of belief in the efficacy of works for the dead; and the Apostle's reserve in not propagating this particular practice is more readily intelligible if we suppose him to have recognized the truth of the principle of which it was merely an abuse. But it is probable that the practice in question was something in itself legitimate, and to which the Apostle gives his tacit approbation. In his Second Epistle to Timothy (i, 18-19; iv, 19) St. Paul speaks of Onesiphorus in a way that seems three steps away from implying that the latter was already dead: "The Lord give mercy to the house of Onesiphorus"—as to a family in need of consolation. Then, after mention of loyal services rendered by him to the imprisoned Apostle at Rome, comes the prayer for Onesiphorus himself, "The Lord grant unto him to find mercy of the Lord in that day" (the day of judgment); then, in the salutation, "the household of Onesiphorus is mentioned once more, without mention of the man himself. The question is, what had become of him? Was he dead, as one would naturally infer from what St. Paul writes? Or was he alive, and there for any possible reason concealed from the Apostle, perhaps sent by his family, so that prayer for them should take account of present needs while prayers for him looked forward to the day of judgment? Or could it be that he was still at Rome when the Apostle wrote, or gone elsewhere for a prolonged absence from home? Or was it by faith and memory that St. Paul remembers Onesiphorus, and if it be admitted, we have here an instance of prayer by the Apostle for the soul of a deceased benefactor.

Arguments from Tradition.—The traditional evidence in favour of prayers for the dead, which has been preserved in various inscriptions (especially those of the catacombs), in the ancient liturgies, and in Christian literature generally, is so abundant that we cannot do more in this article than touch very briefly on a few of the more important testimonies.

(a) The inscriptions in the Roman Catacombs range in date from the first century (the earliest dated is from A.D. 71) to the early part of the fifth; and though the majority are undated, archeologists have been able to fix approximately the dates of a great many by comparison with those that are dated. The greater number of the several thousand extant belong to the first three centuries, and the early part of the fourth. Christian sepulchral inscriptions from other parts of the Church are few in number compared with those in the catacombs, but the witness of such as have come down to us agrees with that of the catacombs. Many inscriptions are exceedingly brief and simple (pax, in pace, etc.), and might be taken for statements rather than prayers, were it not that in other cases they are so frequently and so naturally amplified into prayers (pax tibi, etc.). There are prayers, called acclamatory, which are considered to be the most ancient, and in which there is the simple expression of a wish for some benefit to the deceased, without any formal address to God. The benefits most frequently prayed for are: peace, the good (i.e. eternal salvation), light, refreshment, life, eternal life, union with God, with Christ, and with the angels and saints—e.g. pax (tibi, vobis, spiritui tuo, in aeterno, tibi cum angelis, cum sanctis); spiritus tuus in bono; (sit, vivat, quiescat); eterna lux tibi; in reipreroxio esto; spiritum in refrigerio subspedit dominus; deus tibi reprigerit; vivas, vivatis (in deo, in spirito sancto, in pace, in aeterno, inter sanctos, cum martrimbibus). For detailed references see Kirsch, "Die Acclamationen", pp. 29-32; Cabre, "Le monstre, si le deoexerit, si deoexerit, si divinita Lima" (Paris, 1902); L., pp. ci-cvii, cxxxi, etc. Again there are prayers of a formal character, in which sur-
vivors address their petitions directly to God the Father, to Christ, or even to the angels, or to the saints and martyrs collectively in particular. The benefits prayed for are those already mentioned, with the addition sometimes of liberation from sin. Some of these prayers read like excerpts from the liturgy: e.g. SET PATER OMNIPOTENS, ORO, MISERERE LABORUM TANTORUM, MISERERE (St. Ambrose) (De Rossi, Christiania, II, a, p. ix). Sometimes the writers of the epitaphs request visitors to pray for the deceased: e.g. QUI LEGIS, ORA PRO EO (Corpus Inscription. Lat., X, n. 3312), and sometimes again the dead themselves ask for prayers, as in the well-known Greek epitaph of the Athenius, another so-called barbarous epitaph. Similar Roman epitaphs dating from the middle of the second century (De Rossi, op. cit., II, a, p. xxx, Kirsch, op. cit., p. 51), and in many later inscriptions. That pious people often visited the tombs to pray for the dead, and sometimes even inscribed a prayer on the monument, is also clear from a variety of indications (see examples in De Rossi, "Roma Sotetanres", II, p. 15). In a word, so overwhelming is the witness of the early Christian monuments in favour of prayer for the dead that no historian any longer denies that the practice and the belief which the practice involved was universal among the primitive Church. There was no break of continuity in this respect between Judaism and Christianity.

(b) The testimony of the early liturgies is in harmony with that of the monuments. Without touching the subject of the origin, development, and relationships of the various liturgies we possess, without even enumerating and citing them singly, it is enough to say here that all without exception—Nestorian and Monophysite as well as Catholic, those in Syria, Armenian, and Coptic as well as those in Greek and Latin—contain the commemoration of the faithful departed in the Mass, with a prayer for peace, light, refreshment, and the like, and in many cases expressly for the remission of sins and the effacement of sinful stains. The following, from the Syriac Liturgy of St. James, may be quoted as a typical example: "We commemorate all the faithful dead who have died in the true faith. We ask, we entreat, we pray Christ our God, who took their souls and spirits unto Himself, that by His many compassions He will make them worthy of the pardon of their faults and the remission of their sins" (Syr. Lit. S. Jacobi, ed. Hammond, p. 75).

(c) Turning finally to early literary sources, we find echoes in the apocryphal "Acta Joannis", composed about A.D. 160-170, that at that time anniversaries of the dead were commemorated by the application of the Holy Sacrifice of the Mass (Lipsius and Bonnet, "Acta Apost. Apoc.", I, 186). The same fact is witnessed by the "Canons of Hippolytus" (ed. Achelis, p. 100), by Tertullian (De Cor. S. Il., III, D.L., II, 79), and by many later writers. Tertullian also testifies to the regularity of the practice of praying privately for the dead (De Monogam., x, P. L., II, 942); and of the host of later authorities that may be cited, both for public and private prayers, we must be content to refer to but a few. St. Cyprian writes to Cornelius that their mutual prayers and good offices ought to be continued after either should be called away by death (Ep. ivii, P. L., III, 830 sq.), and he tells us that before his time (d. 258) the African bishops had forbidden testamentors to nominate a priest as executor and guardian in their wills, and had decreed, as the penalty for this law death of the Holy Sacrifice and the other offices of the Church, which were regularly celebrated for the repose of each of the faithful; hence, in the case of one Victor who had broken the law, "no offering might be made for his repose, nor any prayer offered in the Church in his name" (Ep. lxvi, P. L., IV, 369). Arnobius speaks of the Christian churches as "conventicles in which the peace and pardon is asked for all men... for those still living and for those already freed from the bondage of the body" (Adv. Gent., IV, xxxvi, P. L., V, 1076). In his funeral oration for his brother Satyrus St. Ambrose beseeches God to accept propitiously his "brotherly service of priestly sacrifice" (fraternal munus, sacrificium) for the deceased ("De Exsequiis Saturi fr.," I, 80, P. L., XVI, 1315); and, addressing Valentinian and Theodosius, he assures them of happiness if his prayers shall be of any avail; he will let no day or night go past without remembering them in his prayers and at the altar ("De Obitu Valentin.", 78, P. L., I, 834). As an example of the eastern Church we may quote one of the many passages in which St. Augustine speaks of prayers for the dead: "The universal Church observes this law, handed down from the Fathers, that prayers should be offered for those who have died in the communion of the Body and Blood of Christ, when they are commemorated in their proper place at the Sacrifice" (Serm. cxxii, 2, P. L., XXXVIII, 936). As evidence of the faith of the Eastern Church we may refer to what Eusebius tells us, that at the tomb of Constantine "a vast crowd of people together with the priests of God and the Church prayed for the dead with tears and great lamentation" (Vita Const., IV, Ixxi, P. G., XX, 1226). Aelius, a priest of Pontus, who flourished in the third quarter of the fourth century, was branded as a heretic for denying the legitimacy and efficacy of prayers for the dead. St. Epiphanius, who records and refutes his views, represents the custom of praying for the dead as a duty imposed by tradition (Adv. Haer., III, lxxx, P. G., XLIII, 504 sq.), and St. Chrysostom does not hesitate to speak of it as a "law laid down by the Apostles" (Hom., iii, in Philipp., I, 4, P. G., LXI, 203).

Objections alleged.—No rational difficulty can be urged against the Catholic doctrine of prayers for the dead; on the contrary, as we have seen, the rational presumption in its favour is strong enough to induce belief in it on the part of many whose rule of faith does not allow them to prove with entire certainty that it is a doctrine of Divine revelation. Old-time Protestant objections, based on certain Old Testament and on the parable of Dives and Lazarus in the New, are admitted by modern commentators to be either irrelevant or devoid of force. The saying of Ecclesiastes (xi, 3) for instance, "if the tree fall to the south, or to the north, in what place soever it shall fall there it shall be", cannot probably illustrate the general theme with which the writer is dealing in the context, viz. the inevitableness of natural law in the present visible world. But even if it be understood of the fate of the soul after death, it can mean nothing more than what Catholic teaching affirms, that the final issue of all is either salvation or damnation—determined irrevocably at death; which is not incompatible with a temporary state of purgatorial purification for the saved. The imagery of the parable of Lazarus is too uncertain to be made the basis of dogmatic inference, except as regards the general truth of rewards and punishments after death; but in any case it teaches merely that one individual may be admitted to happiness immediately after death while another may be cast into hell, without hinting anything as to the proximate fate of the man who is neither a Lazarus nor a Dives.

II. Questions of Detail.—Admitting the general teaching that prayers for the dead are efficacious, we are naturally led on to some particular questions, viz: (1) What prayers are efficacious? (2) For whom and how far are they efficacious? (3) How are we, theoretically, to conceive and explain their efficacy? (4) What disciplinary laws has the Church imposed regarding her public offices for the dead?—We shall state
briefly what is needful to be said in answer to these questions, mindful of the admonition of the Council of Trent, to avoid in this matter those “more difficult and subtle questions that do not make for edification” (Serm. clxxxvii. 291).

(1) The Sacrifice of the Mass has always occupied the foremost place among prayers for the dead, as will be seen from the testimonies quoted above; but in addition to the Mass and to private prayers, we have mention in the earliest times of almsgiving, especially in connexion with funeral obsequies, and of fasting for the souls of the faithful, Die Lehre von der Gemeinschaft der Heiligen, etc., p. 171; Cabrol, Dictionnaire d’archéologie, I, 808–830). Believing in the communion of saints in which the departed faithful shared, Christians saw no reason for excluding them from any of the offices of piety which the living were in the habit of performing for one another. The only development to be noted in this connexion is the application of Indulgences (q. v.) for the dead. Indulgences for the living were a development from the ancient penitential discipline, and were in use for a considerable time before we have any evidence of their being formally applied for the dead. The earliest instance occurs from the year 1457. Without entering into the subject here, we would remark that the application of Indulgences for the dead, when properly understood and explained, introduces no new principle, but is merely an extension of the general principle underlyng the ordinary practice of prayers and good works for the souls of the departed. This, with the Church expiating the souls in purgatory from their pains, as on earth she absolves men from sins. It is only per modum sufragii, i.e. by way of prayer, that Indulgences avail for the dead, the Church adding her official or corporate intercession to that of the person who performs and offers the indulgenced work, and beseeching God to apply, for the relief of those souls whom the offerer intends, some portion of the superabundant satisfactions of Christ and His saints, or, in view of those same satisfactions, to remit some portion of their pains, in what measure may seem good to His own infinite mercy and love.

(2) To those who die in wilful, unrepented mortal sin, which implies a deliberate turning away from God as the last end and ultimate good of man, Catholic teaching holds out no hope of eventual salvation by a course of probation after death. Eternal exile from the church is the only penalty for their unrepented sin. The unhappy souls, and prayers are unavailing to reverse that awful doom. This was the explicit teaching of Christ, the meek and merciful Saviour, and the Church can but repeat the Master’s teaching (see HELL). But the Church does not presume to judge individuals, even those for whom, on other grounds, she refuses to offer her Sacrifice and her prayers [see below, (3)], while it may happen, on the contrary, that some of those for whom her obligations are made are among the number of the damned. What of such prayers? If they cannot avail to the ultimate salvation of the damned, may it at least be held that they are not entirely void of profit to the offerer; their suffering, some temporary refrigetia, or moments of mitigation, as a few Fathers and theologians have suggested? All that can be said in favour of this speculation is, that the Church has never formally repudiated it. But the great majority of theologians, following St. Thomas (In Sent. IV, xlv, q. ii, a. 2), considered the case not unfounded in the Offertory of the Mass for the Dead, “Lord Jesus Christ, deliver the souls of all the faithful departed from the pains of hell, and the deep abyss”, seem originally to have suggested an idea of deliverance from the hell of the damned, this is to be understood not of purgation but of peace. The whole requiem Office is intensely dramatic, and in this particular prayer the Church suppliant is figured as accompanying the departed soul into the presence of its Judge, and praying, ere yet sentence is pronounced, for its deliverance from the sinner’s doom. On the other hand, prayers are needless for the blessed, St. John already enjoyed the vision of God face to face. Hence in the Early Church, as St. Augustine assures us (Serm. cccxxv, 5, P. L., XXXVIII, 1295), and as is otherwise abundantly clear, prayers were not offered for martyrs, but to them, to obtain the benefit of their intercession, martyrdom being considered an act of perfect charity and winning as such an immediate entrance into glory. And then to those saints whom the Church has canonized; they no longer need the aid of our prayers on earth. It is only, then, for the souls in purgatory that our prayers are really beneficial. But we do not and cannot know the exact degree in which benefits actually accrue to them, collectively or individually. The distribution of the fruits of the communion of saints among the dead, as among the living, rests ultimately in the hands of God—is one of the secrets of His economy. We cannot doubt that it is His will that we should pray not only for the souls in purgatory collectively, but each individual one with whom we were bound on earth by special personal ties. Nor can we doubt the general efficacy of our rightly disposed prayers for our specially chosen ones as well as for those whom we leave it to Him to choose. This is sufficient to inspire and to guide us in our offices of charity and piety towards the dead; we may confidently commit to the care of the Church the distribution of their fruits to the wisdom and justice of God.

(3) For a theoretical statement of the manner in which prayers for the dead are efficacious we must refer to the articles MERIT and SATISFACTION, in which the distinction between these terms and their technical meanings will be explained. Since merit, in the strict sense, and satisfaction, as inseparable from merit, are confined to this life, it cannot be said in the strict sense that the souls in purgatory merit or satisfy by their own personal acts. But the purifying and expiatory value of their discipline of suffering, technically called satiispassio, is often spoken of in a loose sense as satisfaction. Speaking of satisfaction in the rigorous sense, the living can offer to God, and by impetration move Him graciously to accept, the satisfactory value of their own good works on behalf of the souls in purgatory, or in view of it to remit some part of their own sins and the sins of their near relations for the dead. But in order that the personal works of the living may have any satisfactory value, the agents must be in the state of grace. The prayers of the just are on this account more efficacious in assisting the dead than the prayers of those in sin, though it does not follow that the general impetratory efficacy of prayer is altogether destroyed by sin. God may hear the prayers of a sinner for others as well as for the supplicant himself. The Sacrifice of the Mass, however, retains its essential efficacy in spite of the sinfulness of the minister; and the same is true, in lesser degree, of the other prayers and offices offered by the Church’s representatives for the dead.

(4) There is no restriction by Divine or ecclesiastical law as to those of the dead for whom private prayers may be offered—except that they may not be offered formally either for the blessed in heaven or for the damned. Not only for the faithful who have died in external communion with the Church, but for certain non-Catholics, even the unbaptized, who may have died in the state of grace, one is free to offer his personal prayers and good works; nor does the Church’s prohibition of her public offices for those who have died out of external communion with her affect the strictly personal element in her intercessions. For all such should accompany the public offering of the Sacrifice of the Mass (and of other liturgical offices); but theologians commonly teach that a priest
is not forbidden to offer the Mass in private for the repose of the soul of any one who, judging by probable evidence, may be presumed to have died in faith and grace, provided, at least, he does not say the special requiem Mass with the special prayer in which the deceased is named, since this would give the offering a personal character. Thus prohibition does not extend to catechumens who have died without being able to receive baptism (see, e.g., Lehmkühl, "Theol. Moralis", II, n. 175 sq.). For other cases in which the Church refuses her public offices for the dead, the reader is referred to the article BURIAL, CHRISTIAN. (See also MASS; INDULGENCE; PURGATORY.)

III. PRACTICE IN THE BRITISH AND IRISH CHURCHES.

The belief of our forefathers in the efficacy of prayers for the dead is most strikingly shown by the liturgy and ritual, in particular by the collects at Mass and by the burial service. See, for instance, the prayers in the Bobbio Missal, the Durham Ritual, Leofric's Missal, the Salisbury Rite, the Stowe Missal, etc. It should also be noted that this belief was clearly formulated, and that it was expressed by the people at large in numerous practices and customs. Thus, Venerable Bede declares that "some who for their good deeds were brought to church, but who, because of some bad deeds stained with which they went forth out of the body, are after death seized upon by the flames of the purgatorial fire, to be severely chastised, and either be cleansed until the day of judgment from the filth of their vices by this long trial, or, being set free from punishment by the prayers, the alms-deeds, the fasts, the tears of faithful friends, they enter, undoubtedly before that time, into the rest of the blessed" (Homily xlix, ed. Martène, Thes. Anecd., p. 326).

The Council of Calchut (816) ordained that at a bishop's death the bell of every parish church should call the faithful to saying the Mass for the soul of the departed (Wilkins, Concilia, I, 171). In the Missal of Leofric (d. 1072) are found special prayers varying according to the condition and sex of the departed. Archbishop Theodore (d. 690), in the pontifical of his period, and St. Dunstan (d. 988), in his "Concordia", explain at length the commemoration of the departed on the third, seventh, and thirteenth day after death. The month's mind (moneth's mynde) in that age signified constant prayer for the dead person during the whole month following his decease. In every church was kept a "Book of Life, or Register" to be found at the Offertory of the Mass. This catalogue was also known as the "bead-roll" and the prayers as "bidding the beads". The "death-bill" was a list of the dead which was sent around at stated times from one monastery to another as a reminder of the agreement to pray for the deceased fellow-members. These rolls were sometimes richly illustrated, and in passing from one religious house to another they were filled in with verses in honour of the deceased. The laity also were united in the fellowship of prayer for the dead through the guilds, which were organized in every parish. These associations enjoined upon their members various duties in behalf of the departed, such as taking part in the burial services, offering the Mass-penny, and giving assistance to the alms-folks, who were summoned at least twice a day to bid their dead at church for the departed fellows of the guild. Among other good works for the dead may be mentioned: the "soul-shed," a practice not seeking the money for the funeral service took place, the "doles", i.e. alms distributed to the poor, the sick, and the aged for the benefit of a friend's soul; the founding of chantries (q.v.) for the support of one or more priests who were to offer Mass daily for the founder's soul; and the "certain", a smaller endowment which secured for the donor's special benefit the recitation of the prayers usually said by the priest for all the faithful departed. The universities were often the recipients of benefactions, e.g. to their libraries, the terms of which included prayers for the donor's soul; and these obligations are set down in the university statutes. These various forms of charity were practised not only by the rich common people but also, and on a very generous scale, by the nobility and royalty. When these requests they made, they often provided in their will for granting freedom to a certain number of bondmen, and left lands to the Church on the assurance of their death should be kept by fasting, prayer, and the celebration of Masses. For a more complete account see also "History and Antiquities of the Anglo-Saxon Church", ch. ix; and Rock, "The Church of Our Fathers" (London, 1852), II, III.

Strange as it must seem to any one acquainted with the history of Ireland, various attempts have been made to prove that in the early Irish Church the practice of praying for the dead was unknown. Notable among these is Ussher's "Discourse of the Religion anciently professed by the Irish and British" (1631; Vol. IV of "Complete Works", Dublin, 1864). Cf. Kilken, "The Ecclesiastical History of Ireland" (London, 1875). II, ch. vii. "The Anglo-Saxons and Irish Churches" (London, 1894). The weakness of Ussher's argument has been shown by several Catholic writers, e.g. Lanigan, "Ecclesiastical History of Ireland" (Dublin, 1829), II, 330 sq., and Brennan, "Ecclesiastical History of Ireland" (Dublin, 1864), appendix. More careful study has convinced competent non-Catholic writers also that "to pray for the dead was a recognized custom in the ancient Celtic as in every other portion of the primitive Church" (Warren, The Liturgy and Ritual of the Celtic Church, Oxford, 1881). This statement is borne out by various documents. The Synod of St. Trumulf ("Synodus alia S. Patriclii" in Wilkins, "Concilia") declares, ch. vii: "Hear the Apostle saying: 'there is a sin unto death; I do not say that for it any one do pray'. And the Lord: 'Do not give the holy to dogs'. For he who did not deserve to receive the Sacrifice during his life, how can it help him after his death?" The reference to the custom of offering Mass for the departed is obvious; the synod discriminates between those who had observed, and those who had neglected, the laws of the Church concerning the reception of the Eucharist.

Still more explicit is the declaration found in the ancient collection of the Hibernensis, entitled the "Hibernensis" (seventh or eighth century): "Now the Church offers to the Lord in many ways; firstly, for herself, secondly for the Commemoration of Jesus Christ who says, 'Do this for a commemoration of me', and thirdly, for the souls of the departed" (BK. II, ch. ix; Wasserschleben, "Die intermediarische Kanonensammlung", 2nd ed., Leipzig, 1885). In the fifteenth book of the "Hibernensis", entitled "On Care for the Dead", there is a first chapter "On the four ways in which the living assist the dead". Quoting from Origen, it is said that "the souls of the departed are released in four ways: by the oblation of priests on the altars for the dead, by the prayers of Saints, by the alms of Christians, by the fasting of friends". There follow eight chapters entitled: (2) On those for whom we should offer; (3) On sacrificing for the dead; (4) On prayer for the dead; (5) On fasting for the dead; (6) On almsgiving for the dead; (7) On the value of a redeemed soul; (8) On the value of a deceased person's soul; (9) On the care of those who have been snatched away by sudden death (Wasserschleben, op. cit.). Each of these chapters cites passages from the Fathers—Augustine, Gregory, Jerome—thus showing that the Irish maintained the belief and practice of the Early Church. That prayers were at least offered only for those who died in the Faith.
is evident from certain prescriptions in St. Cummian's Penitential according to which a bishop or abbot was not to be obeyed if he commanded a monk to sing Mass for deceased heretics; likewise, if he befell a priest singing Mass for another, in reciting the names of the deceased heretics with singing requiem and frequent blessings. Sons are bound to do penance for their deceased parents." (Whitley Stokes, Introduct. To "Vita Tripartita"). It is not, then, surprising that the Irish Celts of the eighth century had as part of their duty to offer "intercessions, in the shape of litanies, on behalf of the living and the dead." (Rule of the Celts, ed. Reeves, Dublin, 1864, p. 242). The old Irish civil law (Senchus Mor, A.D. 438-441) provided that the Church should offer requiem for all tenants of ecclesiastical lands. But no such enactments were needed to stir up individual piety.

Devotion to the souls departed is a characteristic that one meets continually in the lives of the Irish saints. In the life of St. Ita, written about the middle of the seventh century, it is related that the soul of her uncle was released from purgatory through her earnest prayers and the charity which, at her instance, his shrine was bestowed (Colgan, Acta SS. Hiberniae, pp. 69-70). St. Pelcherius (Mochoemoc), in the seventh century, prayed for the repose of the soul of Ronan, a chieftain of Éile, and recommended the faithful to do likewise. In the life of St. Brendan, quoted, singularly enough, by Ussher, we read, "that the prayer of the living doth profit much the dead." In the "Acta S. Brendanii", compiled by Cardinal Moran, the following prayer is given (p. 39): "Vouchsafe to the souls of my father and mother, my brothers, sisters, and relations, and of my friends, enemies and benefactors, living and dead, remission of all their sins, and particularly those persons for whom I have undertaken to pray."

At the death of St. Columbanus (615), his disciple, St. Gall, said: "After this night's watch, I understood by a vision that my master and father, Columbanus, to-day departed out of the miseries of this life into the joys of paradise. For his repose, therefore, the sacrifice offered ought to be a propitiatory one. And when a signal from the bell [the brethren] entered the oratory, prostrated themselves in prayer and began to say masses and to offer earnest petitions in commemoration of the blessed Columbanus." (Walafrid Strabo, Vita B Galli, I, Cap. xxvii). Cathefr (op. cit., 332) cites as a example of the prayers made for him—"pro carissimo salutatoe hostias immolavit amico" (ibid., ch. xxx). The same is recorded of St. Columba when he learned of the death of Columbanus of Leinstir (Adamman, Vita S. Col., III, 12). These facts are the more significant because they show that prayers were offered even for those who had been members of holy living. Other evidences are furnished in donations to monasteries, ancient inscriptions on gravestones, and the requests for prayers with which the writers of manuscripts closed their volumes. These and the like pious practices were with all but other means of expressing what the faithful heard daily in the recitation of the Office, in the mass of the dead, when prayer was offered for those "who have gone before us with the sign of faith and rest in the sleep of peace." (Stowe Missal). (See Salmon, "The Ant

Dead Sea, the name given to the lake that lies on the south-eastern border of Palestine. The Old Testament makes frequent reference to it under a variety of titles; once only, however, by its present one. The Vulgate's rendering of Josue (iii; 16) reads, "more solitudinis (quod nunc vocatur Mortuum) translated in the D. V. "the sea of the wilderness (which now is called the Dead Sea)." In the Hebrew Bible the verse reads יַם הָעָרָבָה תֵּאֵל, and in the Septuagint γῆ ἡ Ναζαφέις Ἀράξ, ἡ Νιδραν αἰδής, which the A. V. has "the sea of the wilderness of God; and even the salt sea"; and the R. V., "the sea of Elath, even the salt sea." In Joel (i, 20) the prophet speaks of "the east sea"; and the apocryphal Fourth Book of Esdras (v, 7) speaks of the mare Sodomitum—the Sodomithis Sea. Josephus, Fliny, and other profane writers, among other names, called it the Lake of Asphalt; Ascopoulos, Mor. Asaphit. The present-day inhabitants of its vicinity call it Bahr Lut—the Sea of Lot.

The Dead Sea is the final link of the chain of rivers and lakes that lies in the valley of the Jordan. Taking its rise on the southern slopes of Mt. Hermon, the Jordan in its southern course first spreads out into Lake Merom, emerging from it which flows into the Lake of Tiberias, whence it descends into the Dead Sea. To convey a proper idea of the size and shape of the Dead Sea travellers often compare it to the Lake of Geneva. The resemblance between the two is striking, in particular the basin of the Dead Sea, the distance of the Holy Land is forty-seven miles long and about ten miles across at its widest part. Its area is approximately 360 square miles. The surface of the water is 1292 feet below the level of the Mediterranean, which is only a few miles to the west. This extraordinary feature alone singles out the Dead Sea from all other bodies of water. A low-lying peninsula about ten miles wide, called el-Lisan, "the tongue," which runs out from the south-eastern shore to within three miles of the opposite shore, divides the sea into two unequal parts. The northern and larger part is very deep, reaching at one point the Hopeful深度 of 1310 feet. The southern bay is, on the contrary, very shallow, averaging hardly a depth of thirteen feet. In two places it is possible to cross from the peninsula on the opposite shore by means of two fords which are known to the Arabs.

The water in the Dead Sea is salt. Every day the Jordan and other affluents pour into it over six and one half million tons of fresh water. There is, however, no outlet to the ocean, and the sole agent whereby this increase is disposed of is evaporation. The power of the sun's rays in this great pit is, however, so intense that save for a small fluctuation between the wet and dry seasons, the level of the sea does not change, despite the great volume that is added to it. In the water that remains after evaporation solid matter makes up 26 per cent of the whole; 7 per cent be-

Dean (Gk. διάκος, ten; Lat. decanus), one of the principal administrative officials of a diocese. The term was first used to denote a military officer having authority over ten soldiers; in the fourth century it came to be used as a title for certain minor officials in the imperial household. It passed to the church and was given to the office in Anglo-Saxon times in England, the dean having jurisdiction within his district or tithing for trials of first instance.

In the monastic life we find the term used by St. Benedict (Rule, c. xxi) to denote a monk who was placed over ten others, his duty being to see that their work was properly done and that they observed the rules of the house in which they were living. The custom which the monks thus introduced soon found its counterpart in diocesan pastoral work. The early Christian communities were always desirous of uniting themselves to the urban bishop, but for people who lived far away from the city communication with the bishop was not always easy; hence they were provided for by the appointment of a priest or deacon whose position was sometimes permanent, sometimes temporary. These ecclesiastics were merely assistants to the bishop and in the early fourth century became known as chorepiscopi or Special deans. The office and its duties were conceming them at the Councils of Ancyra (314) and Antioch (341). The chorepiscopi, though frequently having the charge of several parishes, were nevertheless always subject to the bishop of the city from whom they received their jurisdiction. They could only confer minor orders. Most of them were simple priests, but they had extensive faculties. (See Gillmann, "Die Chorbischöfe im Orient", Munich, 1903.)

For the East the office of chorepiscopus was abolished at the Council of Laodicea (between 343 and 381) because episcopal rights had been usurped by many who held the office in their places (civili) were substituted circulares, ministrantes. But it was only in and after the eighth century that it finally disappeared in the East, though yet customary among the Jacobites. In the West, during and after the tenth century, there appeared another representative officer, the archdeacon, who took the chief burden in administering the temporal affairs of the diocese and enjoyed, after the bishop, the greatest consideration. He was present at councils as the representative of the bishop, and on the death of the bishop he became the administrator of the diocese, to which he usually succeeded.

The immediate administrative necessity arose from the numerous rural parishes which were provided for by the appointment of several archpriests, who represented either the bishop or the archdeacon, and were originally the priests having charge of baptismal churches. In the West, after the restoration of the vita canonica in the latter half of the eighth century, their number and influence grew. They were charged with the supervision of ecclesiastical life and conduct, with the execution of episcopal commands, and were wont to convocate more or less frequently the clergy of their district (capitula ruralia, concilia, calendae). They made a yearly report to the bishop. It is to these ancient offices that we modern deaneries (see Sägmüller, Entwicklung des Archipresbyterats, 1889). There are at present two classes of deans: deans of chapters (cathedral or collegiate) and deans of parochial districts. The latter act as representatives of the bishop in certain matters, as heads of aggregations of parishes, either urban or rural.

The dean is also known by the name of vicar foraneus (vicarius foraneus).

Rural Deans.—In the Catholic Church it is to be noted that the dean has only delegated jurisdiction, restricted to a particular area and to certain matters specified by the bishop. For powers not generally determined by the diocesan statutes, by custom, or by special mandate of the bishop. In countries where canon law is in full force, deans have power to dis-
Deane. William, Venerable, b. in Yorkshire, England, date uncertain, died April 28, 1588. He studied at Reims and was ordained priest at Soissons, 21 December, 1581, together with the martyrs George Haydock and Robert Nutter. Their ordination coincided with the time that the news of Campion's martyrdom reached the college. Deane said his first Mass 9 January and left for England 25 January, 1581. He is cited by Champney as distinguished by the business of his morals and learning. He was banished with a number of other priests in 1585, put ashore on the coast of Normandy, and threatened with death if he dared to go back to England. Nevertheless he quickly returned to his labours there and was again arrested, tried and condemned for his pretended faults in 1588. The failure of the Spanish Armada, in spite of the loyalty manifested by English Catholics at that crisis, brought about a fierce persecution and some twenty-seven martyrs suffered that year. Six new gibbets were erected in London, it is said at Leicester's instigation, and Dean, who had been condemned with five other priests and four laymen, was the first to suffer on the gallows erected at Mile End. With him suffered a layman, the Venerable Henry Webley, for relieving and assisting him. At the martyrdom Dean tried to speak to the people, "but his mouth was stopped by some that were in the cart, in such a manner that they were like to have prevented the hangman of his wages". Seven martyrs suffered on the same day. Leicester died on 5 September, within a week of their execution.

Deanery. See Dean.

Desse, Thomas, b. in Ireland, 1568; d. at Galway, 1651. He sprang from an ancient Irish family at one time possessing considerable landed property in Cavan and Westmeath. In youth he acquired some proficiency in the Irish language, in which language he wrote some poems. Having determined to become a priest, he proceeded to Paris, where after ordination he spent the first years of his priesthood. During this time he became rector of the Irish Seminary, the precursor of the present Irish College. In 1622 he was consecrated Bishop of Meath, returning to Ireland the same year. In spite of persecution and penal laws he continued loyal to England and preached loyalty to his flock. He regarded with disfavour the Confederation of Kilkenny, and refused all association with the entreaties of the primate to join it. This conduct brought him toleration, if not favour, from the Government, though it made him unpopular with his Catholic fellow-countrymen. And it specially annoyed the nuncio, Rinuccini, who charged him with having sown the seeds of enmity between the Confederate generals Preston and O'Neill. The news of Desse's death was therefore received, in 1648, by the nuncio with little regret. But the news turned out false, and the nuncio writing to Rome reported that the bishop still lived "to try the patience of the Good Man".

obviousness of this position. Nevertheless, in what follows here we are contemplating that array of actions, mental and moral attitudes, ministrations, etc., which are commonly rated as the proximate making ready for the coming of the supreme moment. No matter how carefully conformed to the law of God and the precepts of the Church a man may have been, no matter how much he will want to enter eternity without some immediate forewarning against the terrors of that last passage. We shall deal first with the case of those to whom the dread summons comes after an illness which has not bereft them of consciousness. The Roman Ritual is explicit in its injunction to the priest to visit the sick person or his representative, and to deliver the blessing of anointing. This is to be done even in the absence of the sick person, in the presence of a witness, and the witness is to hold a candle. The anointing is to be performed three times, with the intimation that one of his flock is sick. This he is to do without even waiting for an invitation: "Cum primum notetur quiumpli ex fidelibus cure sub commissis agrotarum, non expectabit ut ad eum vocetur, sed ultro ad eum accedat" (I, cap. iv). Indeed, it is impossible to unduly accentuate the importance of this timely coming of the priest to offer opportune spiritual succours to the one who is ill. Practically, in the actual conditions of modern life, it must often happen that the priest can only know of this need for his services through information furnished by the relatives of the sick person. They, therefore, have a very definite obligation in this matter. Too often there is a mistaken interpretation of the claims of affection or, even worse, a weakly surrender to a lamentable human respect, and so the minister of God is sent for, if at all, only when the patient is unconscious, and death is imminent. For the Catholic Christian, getting ready for death is not simply being submitted passively to the administration of certain religious rites. It is, as far as may be, the conscious, deliberate employment of prayer; the forming or deepening of a special temper of soul and acceptance of such sacramental help as will fit the human spirit to appear with some confidence before its Judge. Hence the failure to call the clergyman in time may, far from being an exhibition of tenderness or consideration, be the most irreparable of cruelties. To be sure it is not always necessary that the patient should be told that his case is past remedy; even when the approach of death is fairly certain, and when such distressing information must for any reason be conveyed, there is room for the exercise of a great deal of prudence and tact. It may be that the sick person will have important affairs to set in order, and that a hint of the probability of a fatal issue of his illness will be the only adequate stimulus to quicken him into the spirit of earnest solicitude. But in other instances it may be not only a kindness but a duty to impart such knowledge straightforwardly, but gently. It is plain that a special measure of delicacy is necessary when this office falls to the attending priest to perform. Beyond question it is of paramount importance that all such matters as the disposition of temporalities, payment of debts, satisfaction of burdens of restitution, etc. should have been settled so as to leave an undivided attention for the momentous considerations which are to engage the mind of the one who is presently to pass through the portals of death into eternity.

So far as priestly assistance goes the first step in the process of preparation for death is the receiving of the patient's confession and the conferring of sacramental absolution. Indeed, inasmuch as it offers the ordinary means of reconciliation with God, it is the most indispensable help. The basis for this is to be found in the well-known utterance of St. James (v, 14, 15): "Is any man sick among you? Let him bring in the priests of the church, and let them pray over him, anointing him with oil in the name of the Lord. And the prayer of faith shall save the sick man; and the Lord shall raise him up; and if he be in sins, they shall be forgiven him." Anxiously it was the custom
to conter this sacrament before the Viaticum; the maintenance of the existing usage has been prescribed by the Roman Ritual (V, cap. i, 2). Although the existence of a precept to receive this sacrament cannot be established, still the failure to avail oneself of its efficacy out of sheer sloth would be a venial sin. It cannot be administered more than once during the same illness, unless, after some notable betterment which has either certainly or probably taken place, a new danger should supervene. In chronic diseases, therefore, such as tuberculosis, it will often happen that the sacrament may and ought to be repeated because it may be administered more than once during the same illness, unless, after some notable betterment which has either certainly or probably taken place, a new danger should supervene. According to the discipline in vogue in the Latin Church, the anointing essential to the validity of the sacrament are those of the organs of the five senses—the eyes, ears, nostrils, mouth, and hands. There is a diversity in the custom as to theunctions to be added to those already enumerated; in the United States, besides the parts mentioned, only the feet are anointed. The sick-room ought to be made ready for the visit of the priest on the occasion of his giving the last sacrament; it can at least be cleaned and aired. On a table covered with a white cloth there ought to be a lighted blessed candle, a crucifix, a skull, and a cross, a cresset encircling holy water, and a towel. According to the rubric of the Roman Ritual the priest is to remind those who are present to pray for the sick person during the anointing, and it suggests that the Seven Penitential Psalms with the litanies might be employed for this purpose. Extreme unction, like other sacraments, produces sanctifying grace in the soul. It has, however, certain results proper to itself. Of these the principal one seems to be the getting rid of that spiritual torpor and weakness which are the baneful output of actual sin, and which would be such a serious handicap to add to me the weakness of the Christian, the struggle to be maintained with the devil is now more formidable than ever, and a special endowment of heaven-sent strength is necessary for the soul's final victory. The anointing is ordinarily succeeded by the conferring of the Apostolic benediction, or "last blessing," as it is commonly called. To this blessing a plenary indulgence is attached, to be gained, however, only at the hour of death, i.e. it is given nunc pro tunct. It is conferred in virtue of a special faculty granted to the bishops and by them delegated quite generally to the priests. The condition for gaining it, are the recognition of the Holy Name of Jesus as mentally, acts of resignation by which the dying person professes his willingness to accept all his sufferings in reparation for his sins and submit himself entirely to the will of God.

The cardinal disposition of soul at the approach of death are: a frequent eliciting of the acts of faith, hope, love, and contrition; a striving towards a more and more perfect conformity with the will of God; and the constant maintaining of a penitential spirit. The words of St. Augustine are in point: "However innocent your life may have been, no Christian ought to venture to die in any other state than that of the penitent." As the hour of the agony approaches, the clergyman, according to the Roman Ritual, is to be called to pronounce the pathetically beautiful "Recommendation of a departing soul." Where the presence of the priest cannot for any reason be had, the prayer is to be recited by those who watch beside the deathbed. The dying person should be invited to join in these petitions, without, however, harassing or fatiguing him. As the person is about to expire, the Ritual directs those who are by to pray more earnestly than ever; the Holy Name of Jesus is to be invoked, and such ejaculations as the following whispered in his ear: "Into thy hands, Lord, I commend my spirit!" "O Lord, Jesus Christ, receive my spirit!" "Holy Mary, pray for me!" "Mary Mother of grace, Mother of mercy, do thou protect me from the enemy and receive me at the hour of my death!"

When death is apprehended as imminent after a sudden seizure of malady more than once during the same illness, attempted suicide, and the like, and the person is meanwhile deprived of consciousness, the method of proceeding is as follows: Conditional absolution is imparted, Viaticum of course is omitted, as it is likewise when the person, though in possession of his senses, is subject to a sudden attack of vertigo. Extreme unction and the last blessing are given as usual. In such an extremity, when the person is unable to make a confession, extreme unction may prove to be the most effective and necessary means of salvation.

It is interesting to note that recent investigations have made it plain that it is no longer possible to determine even within a considerable margin the precise moment of death. Father Ferreres, S. J., in his work, gathers as the conclusion of his researches that the only absolutely certain sign of death is decomposition. The practical value of this statement is that absolution is to be given as late as possible, and preferably for some time after the person would have hitherto been reputed to be dead. In what has been said, it is taken for granted that the person to be gotten ready for death is baptized. If this is not so, or if there be a doubt about it, either as to fact or validity, then of course baptism must first be administered, either absolutely or conditionally, as the case warrants, after some instruction on the principal truths of religion. Baptism may be conferred conditionally on those who are unconscious in as far as they can be presumed to have the desire of receiving it. It is perhaps worth noting that when the supernatural soul of the dying, it is the mind of the Church that her minister should avail himself of any sort of probability, no matter how slight, in order to be able to give absolution, at least conditionally. He then applies with great amplitude the principle, Sacramenta propter homines. Practically, therefore, the only case in which the priest in these circumstances may not absolve is when the person refuses the sacraments, or is manifestly discerned to have a perverse disposition of soul.

Lingard, in his "Antiquities of the Anglo-Saxon Church," gives a description of the distribution in feudal among the Anglo-Saxons of the medieval period with regard to the preparation of the dying for the end. He says: "At the first appearance of danger, recourse was had to the ministrv of the parish priest or of some distinguished clergyman in the neighbourhood. He was bound to obey the summons and no plea but that of inability could justify his negligence. Attended by his inferior clergy, arrayed in the habits of their respective orders, he repaired to the chamber of the sick man, offered him the sacred rites of religion and exhorted him to prepare his soul to appear before the tribunal of his Creator. The first duty which he was bound to require from his dying disciple was the arrangement of his temporal concerns. Till provision had been made for the payment of his debts and the indemnification of those whom he had injured, it was in vain to solicit the succours of religion; but as soon as these obligations had been fulfilled the priest was discharged. The body was then vested in a clean garment, and its extremities were adorned with the ornaments and the insignia of the religious profession; the person was then asked to make confession and to renew the vows of his profession, if he had not already done so; the body was then laid on the bed, and the act of death was performed. The next duty which devolved on the priest was to authorize the taking of the last absolution. The soul was then led to the communion of the dead, which was held in the church of the parochial community, and the body was subsequently anointed in the form of a cross; each unction was accompanied with an ap-
Debora, prophetess and judge; she was the wife of Lapidoth and was endowed by God with prophetic gifts which secured for her the leadership of the divided Israelite tribes and gave her great authority over them. Her wisdom was first displayed in settling litigious matters submitted to her: “She sat under a palm-tree, which was called by her name, between Ramah and Bethel, in Mount Ephraim, and the children of Israel came up to her for all judgment.” (Judg. 4:11) This is a judge in the ordinary sense of the word. In the case of the persons whose history is recorded in the book of Judges, the title seems to be given them as “deliverers and leaders” of the chosen people, no mention being made of ordinary judicial functions; but it was rather the confidence inspired by her in the discharge of such functions which enabled her to bring about the deliverance of the nation, which was then suffering under the oppression of the Canaanites.

The main army of the enemy was rendered particularly formidable by the fact that it possessed nine hundred iron chariots. It was commanded by Sisara, whose headquarters were at Harosheth, probably identical with the actual Harithyel, between Haifa and Nazareth, on the banks of the Nah Muqatta’s (Ceson) in the plain of Esdraelon. Occupying this position in the centre of the country, the Canaanites could harry the tribes in the north and south, and render it very difficult for them to unite in a common effort. For “twenty years” the enemy had “grievously oppressed” the children of Israel, when Debora declared it was God’s will that His people should be freed. This will of God she first made known to Barac, who dwelt in Cecon or Nishama, in the district of Qedis, one of the principal ruins of Northern Galilee. She charged him to gather and lead to Thabor, a mountain to the east of the plain of Esdraelon, an army of ten thousand men, promising him that God would deliver him into his hand Sisara and the Canaanite army.

Barac undertook to carry out those instructions. He was in the discharge of such functions which enabled her to bring about the deliverance of the nation, which was then suffering under the oppression of the Canaanites.

Debt (debttum), that which is owed or due to another; in general, anything which one person is under an obligation to pay or render to another. In a wide sense of the word this obligation may arise from a variety of sources. Thus we say that one who has received a favour from another lies under a debt of gratitude to make him some return for it. The superfluous wealth of the rich is due to the poor; it is a debt to the payment of which, according to the expression of many Fathers and theologians, they are held in right, not of justice but of charity. We here take the word in the ordinary and strict sense, according to which it signifies something which is due to another in justice. We treat the matter, too, from the ethical rather than from the legal point of view, and so we consider debts of honour as true debts though they cannot be enforced in the civil court.

A debt arises not merely from a contract of borrowing; something may be due to another in justice for many different reasons, but all these may be reduced to two. When one has willfully caused unjust damage to another, he is bound to make good the loss which he has inflicted, and when he finds himself in possession of what belongs to another, he must restore the property to its owner. Justice requires this, that each one should have his own, and one who has suffered loss unjustly at the hands of another has not his own, as long as the loss is not made good to him whose property is unjustly detained by another. A state of indebtedness, then, of one to another arises from either of these two roots, as theologians call them. A debt must be paid to the owner of the property or to one who has the right to receive payment for him. Sometimes, however, the true owner is unknown, and then payment must be made to the poor or to charitable purposes. At any rate,
Decapology (Greek δεκα, ten, and μέσος, word), the term employed to designate the collection of precepts written on two tables of stone and given by God to Moses on Mount Sinai. The injunctions and prohibitions of which it is composed are set forth in Exodus (xx, 1-17) and in Deuteronomy (v, 6-21). The differences discernible in the style of enumerating them in Exodus as contrasted with Deuteronomy are not essential and certain rather to the reasons alleged for the precepts in either instance than to the precepts themselves. The division and ordering of the commandments in use in the Catholic Church is that adopted by St. Augustine (Sententiae in Exodum, q. 38). That which is termed the council of the prophets by Protestants seems to have Origin for its sponsor. Erard regarded Exodus, xx, 3-6, as containing two distinct commandments, and in this hypothesis in order to keep the number ten, verse xvii would have but one. The practice now universally adhered to among Catholics is just the reverse. See Commandments of God. Vigouroux, Manuel biblique (Paris, 1901): Giotte, Introduction to the Old Testament (New York, 1901).

Decanus Lovaniensis. See Tapper, Ruard.

Decapolis (from Gr. Δεκάς, ten, and πόλις, city), the name given in the Bible and by ancient writers to a region in Palestine lying to the east and south of the Sea of Galilee. It took its name from the confederation of the ten cities that dominated its extent. The Decapolis is referred to in the New Testament three times: Matt., iv, 25; Mark, v, 20; vii, 31. Josephus, Ptolemy, Strabo, Pliny, and other ancient geographers and historians make frequent reference to it.

At the disruption of the army of Alexander the Great, after his burial at Sidon, great numbers of his veterans, their occupation gone, settled down to a life of peace. As the territories, in which many of the Greeks sought homes farther inland. There they either laid out new cities or rebuilt and transformed older ones. In 218 n. c., according to Polybius, several of these towns were looked upon as strong fortresses. As long as the Seleucids ruled in the North and the Ptolemies in the South the influence of the Greeks remained paramount in Syria; but when, with the rise of the Romans, the power of the descendants of Alexander's soldiers weakened, the Greek cities were in sore straits. Especially perilous was the plight of these towns in Palestine after the successful rise of the Machabees. In the years 64-63 B. C., however, Pompey overran Syria and made it a Roman province. The Grecian cities, being regarded as bulwarks of Roman rule against any native risings, were granted many favours. They enjoyed the right of coinage, preserved their municipal freedom, and were allowed a certain sway over the near-by country.

It was after Pompey's conquest that the league of the Decapolis was formed. There is no record of the year, and although most likely it was soon after the coming of Pompey, yet it may not have been until the second century B.C. The list of the Decapolis, granted to the Spanish dominions confers such a privilege on the recipient on certain conditions. When a debt is barred by lapse of time, the civil authority refuses its help to enable the creditor to recover what is due him, but the debtor is not freed in conscience; he is still under a moral obligation to pay his debt. Finally, it may be mentioned that by ecclesiastical law those who have incurred heavy debts which they are unable to pay are prohibited from entering a religious order, at least if they have been reduced to that state through grave fault of their own.

Decalogue, 664 Decapolis.
capital of the Decapolis, lay at the head of the plain of Edessacon, to the west of the Jordan, guarding the natural portal from the sea to the great interior plains of Bashan and Galadad. The city and the walled villages were situated at the east of the Jordan on the great routes along which passed the commerce of the whole country. To-day the cities of the Decapolis, with the exception of Damascus, are deserted and in ruins. Yet even in their ruined state they offer a striking contrast to the new towns that have grown up on their sites and forums built on a lavish scale, give even to this day clear indication of the genius of the people who built them.

Among the cities of the Decapolis of special interest are: Damascus, so often referred to in the Old and New Testament; Gadara, on the Sea of Galilee, where John, the city in the valley of the Jordan to which the Christians withdrew at the first siege of Jerusalem.

Dechamps, Adolphe, Belgian statesman and publicist, brother of Cardinal Dechamps, b. at Melle near Ghent, 17 June, 1807, d. at Manage, 19 July, 1875.

He entered public life about 1830 and soon became popular through his brilliant contributions to several Catholic newspapers. Having founded with his father-in-law the bi-weekly "La Revue de Bruxelles," he advocated in that paper a system of parliamentary government which was termed "government of the centres." The ministries were to be composed of Catholics and Liberals and to be supported by the moderate elements of the two parties. The scheme was not without merit under the circumstances, and it worked successfully for some years, but no great political shrewdness was needed to foresee that, unless the Catholics were willing to surrender their principles, they must sooner or later part company with the Liberals. In 1834 Dechamps was elected to the Chamber of Representatives, where his talent as an orator and his practical sagacity soon secured him a prominent position.

In 1836 he participated very actively in the discussion of the bill on the organization of the communes, and in 1839 he opposed the treaty with Holland. The great political struggle was transferred to the Chamber on 16 April, 1839, but the latter had delayed accepting it in the hope that she might eventually obtain better conditions. Dechamps, with many others, held that by this delay Holland had forfeited her right to the advantages granted her by the Powers and they urged the Government to appeal to arms rather than to surrender an important part of Belgian territory. This warlike policy, however, would have been unwise in view of the opposition of the Powers, and peace was finally signed with Holland.

The most remarkable event of Dechamps's political career is perhaps the leading part he played in the passing of the bill on elementary instruction. Up to 1842 there had been no elementary public schools in Belgium, although there were numerous schools organized under the direction of the clergy. One of the provisions of the new bill enacted that religious instruction was to form an essential part of public education and that it be under the control of the clergy. The bill was passed almost unanimously by the votes of both Catholics and Liberals. From 1843 to 1848 Dechamps was a member of several ministries and showed himself a competent administrator. After the defeat of his party in 1848 he became the leader of the Catholic minority in the Chamber of Representatives and retained that position for several years. In 1854 he retired from politics and engaged in literary work, but his venture there was not successful. The following are his most important works: "Le second Empire" (Brussels, 1859); "Le second Empire et l'Angleterre" (Brussels, 1865); "Jules Cesar; l'empire jugé par l'empereur" (Brussels, 1865); "La France et l'Allemagne" (Brussels, 1865); "La Question de Gasteiz" (Brussels, 1865); "La candidature de Belgique et le nouveau régime" (Brussels, 1866); "L'école dans ses rapports avec l'Eglise, l'Etat et la liberté" (Brussels, 1869); "Le prince de Bismarck et l'entrevue des trois empereurs" (Brussels, 1873)."
Church and St. Peter; VI to the pope and his infallibility; VII, VIII, and IX to the refutation of modern errors; X, XI, XII, XIII, and XIV to my preaching as bishop and to acts by which I governed my diocese.” Of the remaining volumes, XV, “Mélanges,” deals with many important questions; XVI and XVII contain letters on questions in philosophy, theology, and other subjects. Cardinal Dechamps's biographer, Léon Adolphe, was made Prime Minister of Belgium, 4 April, 1843. He was also minister of public works, and minister of foreign affairs from 30 July, 1845, to 12 June, 1847.

J. MAGNIER.

Decius (Caiaus Messius Quintus Trajanus Decius), Roman Emperor 249-251. He was born, date uncertain, near Sirmium in Pannonia of a Roman or a Romanized family. Practically nothing is known about his career, but the greater part of his life seems to have been passed in the army. He was the first of the great soldier-emperors from the Danubian provinces under whom the senatorial regime ended and the government became an absolute monarchy. No sooner was his position as emperor made certain by the defeat of Philip at Verona, than Decius commenced to put into effect extensive plans for the reorganization of the empire. Problems of administration, internal as well as external, at once claimed his attention. To the latter he principally devoted his own energies and spent the greater part of his reign attempting to repel the Gothic invaders from the Balkan lands. After several campaigns during which he gave no evidence of military genius he met with a signal defeat in the marshes of the Dobrudcha in which he lost his life. This overthrow, attributed by some writers to the treachery of some of the Roman generals, was so complete that the emperor's body was never recovered. In the administration of the internal affairs of the empire, Decius showed himself to be an unstatesmanlike theorist. He conceived the impractical policy of reforming the morals of his time by a forcible restoration of the old religion. He revived the obsolete office of censors as a sop to the senatorial party, permitted them to name its first incumbent, whom he invested with the most autocratic powers in matters of civil service and over the private lives of the citizens. Oblivious of the changes wrought by time and the march of ideas, he pinned his faith to the dying abandoned paganism of old Rome as the solution of the problems of his time. Such sweeping reforms necessarily brought into prominence the growing power of the Christian Church, and made it clear that any attempt to realize or enforce the absolutism of earlier Roman policies must necessarily be futile as long as any considerable body of citizens professing the Christian creed was allowed the free exercise of their religion. Belief in the freedom of conscience and the higher estimate of religion found among the Christians could find no part in such schemes as those of Decius and would necessarily prove an insuperable obstacle to the complete realization of his plans. Various reasons have been assigned for the emperor's hated and in some sense detestable regime of inner cruelty, others a desire to be avenged on the friends of his predecessor; but there can be little doubt that the main motives for his hostility were political, conceived not in the form of fanaticism but in purposes of political expediency. The scope of the first Christian legislation of Decius was intended to show that of his predecessors and much more far-reaching in its effects. The text of his edicts has not survived but their general tenor can be judged from the manner in which they were executed. The object of the emperor was not the extermination of the Christians, but the complete extinction of Christianity itself. Bishops and priests were unconditionally punished with death. To all others was given an opportunity to recant and, to ensure the abandonment of Christianity, all were compelled to submit to some test of their loyalty to Paganism, such as the offering of sacrifice, the pouring of libations, or the burning of incense to the idols. The unyielding attitude of the Christians to the fact that an appalling amount of laxity and corruption had manifested themselves during the long peace which the Church had just enjoyed, produced the most deplorable effect in the Christian fold. Multitudes presented themselves to the magistrates to express their compliance with the imperial edict and to have their apostates tickets were issued attesting the fact that they had offered sacrifice (sacrificarii) or burned incense (thurificarii), while others, without actually performing these rites, availed themselves of the lenity of the magistrates to purchase certificates attesting their renunciation of the Christian faith. At the same time, though numerous, were more than counterbalanced by the multitudes who suffered death, exile, confiscation, or torture in all parts of the empire. The Decian persecution was the severest trial to which the Church up to that time had been subjected and the loss suffered by the Church in consequence of apostasy was almost as damaging as the losses by martyrdom. The problem of deciding on what conditions the lapes should be admitted to the church and what weight was to be attached to the pardon of confessors, produced the bitterest dissensions and led directly to two dangerous schisms.

P. J. Healy.

Decker, Hans, a German sculptor of the middle of the fifteenth century. Very little is recorded concerning Decker, but that his home was in Nuremberg. His name is mentioned in a register for the year 1449, and certain early productions in the years 1432 and 1437 are attributed to him. Though his carving in stone is rather rough, he stands alone among his contemporaries for his energy and realism. The few works known to us appear to inaugurate a new style. His principal sculptures are the colossal statues of St. Christopher with the Child Christ on his shoulder, at the south-west portal of the church of St. Sebald, a memorial of the Schüsselfeld family, and the great "Pietà" (now in the Museum of Nuremberg) in the church of St. Egidius. The group is composed of eight figures of heroic proportions powerfully disposed. In the body of Christ the handling is hard, but there is a distinct attempt at correct anatomy. The head is noble and manly; Mary is full of grief; John raises his Master's arm to kiss it. The draperies are simple and finely arranged. This work is not
only a masterpiece in itself, but is so full of the new naturalistic tendency, that it may be said to open the second epoch of sculpture in Nuremberg.

M. L. HANDLEY.

Decorations, Papal. See Decorations, Pontifical.

Decorations, Pontifical, the titles of nobility, orders of Christian knighthood and other marks of honour and distinction which the papal court confers upon men of unblemished character who have in any way interested the interests of the Church, the See of Peter, and the Holy See. The titles range all the way from prince to baron inclusive, and are bestowed by the pope as temporal sovereign. The title ordinarily conferred is that of count prefixed to the family name, which title is either merely personal or transferable by right of primogeniture in the male line. Bishops assistant at the throne are de jure Roman counts. There is another title which is usually called Count Palatine, but the true designation is Count of the Sacred Palace of Lateran, which is attached to many offices in the papal court. The papal orders of knighthood, ranking according to their importance and dignity, are: (1) Supreme Order of Christ; (2) Order of Pius IX; (3) Order of St. Gregory the Great; (4) Order of St. Sylvester; (5) Order of the Golden Militia, also called of the Golden Spur; (6) Order of The Holy Sepulchre (semi-official note of the Cardinal Chancellor of Equestrian Orders, "Observatori Romani", 12 Feb., 1905).

Pius X decreed that the Orders of Christ and the Golden Militia should have only one, the other four orders, three grades or classes ("Multum ad excitandes"; 7 Feb., 1905); that occasionally, but very rarely, in matters of special importance and by special papal permission, a commander eminently distinguished might be allowed to wear the badge (smaller size than that of the first class) on the left breast. According to critical historians, these orders do not antedate the Crusades. After the Crusades, the kings of Europe founded and placed under the protection of the Blessed Virgin Mary, or the Saints, orders of chivalry. Of these, some were intended to protect their kingdoms from the incursions of the infidel, and were in reality religious military orders; others were devoted as a desirable and honourable recompense for eminent services to king and country. The lavish and indiscriminate creation of knights of the Orders of chivalry, in course of time to a loss of prestige and desire on the part of men of eminent merits to be knighted. The Roman pontiffs, in their dual capacity of spiritual and temporal rulers, either founded or approved, or remodelled and restored to their pristine glory, the six papal orders of chivalry.

Supreme Order of Christ.—The Supreme Order of Christ is of Portuguese origin (see Christ, Order of the Knights of). The papal and Portuguese order are one and the same, for a two-fold reason; the pope is the head of every religious order and can admit to solemn profession in any order without the permission of its superior general, and, further, in the Bull of approvals he reserved to himself and his successors the right to create knights of the order, a right which was exercised by the popes and recognized by the kings of Portugal. The decoration is a long red cross, bordered with a narrow gold band, whose extremities are of a transversal form, surmounted by a golden cross, which, in turn, is surmounted by a military trophy attached to the ribbon. Upon the centre of the long red cross is superimposed a small, simple, white enamelled Latin cross. The white upon the red symbolizes the triumph of the Immaculate Lamb of God, by His blood, over the world of sin. Until within a few years ago, this decoration was worn suspended by a red ribbon which encircled the wearer's neck. Pope Pius X, in memory of the ancient collar composed of alternate swords and tiaras which the knights of old wore, decreed that the decoration should henceforth be worn suspended from a collar composed of shields bearing alternately the cross of the order and the papal emblems connected with golden knots. The palace," or badge, worn on the breast, is a silver eight-rayed star ornamented with jewels, bearing on its centre the cross of the order, which is encircled by a crown of gold oak leaves wound with a green fillet. The uniform is of a bright scarlet faced with facings of white cloth and rich gold embroideries on the collar, breast and sleeves (Morini, 211). The order consists of white smooth silk with gold side stripes, shoes of white smooth silk with gold buckles, hat with white plumes and ornamented with a knot of twisted gold cord terminating in tassels of gold, and a sword with a gold ornamented mother-of-pearl hilt and pendant tassels of twisted gold cord complete this official costume (Pius X, 3 May, 1905). The official dress of a professed knight of this order when it was a religious military body was white.

Order of Pius IX.—This had for its founder (17 June, 1847) the pope whose name it bears. Its object is to reward virtuous and conspicuous deeds which merit well of Church and society to stimulate others to follow the illustrious example set them. At first it comprised only two classes, knights of the first class, who, upon receiving the decoration, were made nobles with hereditary succession, and knights of the second class, whose title of nobility was personal. Shortly after (17 June, 1849, "Cum hominum mentes") the order was divided into four classes, viz.: (1) Knights of the Great Ribbon; (2) Commanders with the Badge; (3) Commanders, and (4) Knights. Knights of the Great Ribbon wear a wide ribbon extending from the left shoulder slant-wise to the right side where from a rosette attached to the ribbon the star of the order is suspended. They also wear on the breast the large badge set with diamonds. Commanders wear the decoration at the neck. Commanders with the Badge, besides the star at the neck, wear a badge of smaller design than the large plaque on the breast, and simple knights wear the star on the left breast. The decoration is an eight-pointed blue enamelled star. The spaces between the rays are filled in with undulating golden flames. On the centre is a white enamelled medallion on which is engraved the words Pius IX and around it, in a circle, are the first names of the wearer in capital letters surmounted by the motto, VIRTUTI ET MERITO. The reverse is identical with the obverse side except that the inscription ANNO 1847 is used instead of Pius IX. There are two forms of badges. One is a large silver medal similar to the star, and the other is of the same design but larger and adorned with brilliants. The ribbon of the decoration is dark blue silk bordered with red. The official costume (rarely worn) is a dark blue evening dress coat closed in front by one row of gold buttons. The collar and cuffs of the coat are covered with golden embroideries more or less elaborate, according to the grade or class of the wearer. Golden epaulettes, white trousers with gold side stripes, a bicorned hat with white plumes, complete the official dress. This order may be conferred also upon non-Catholics.

Order of St. Gregory the Great.—Gregory XVI founded this order to reward the civil and military authorities who had "summi opus in summis", 1 Sept., 1831, and placed it under the patronage of the great pope whose name it bears. It has two divisions, civil and military, and each division is divided into four classes, viz.: (1) Grand Cross Knights of the First Class; (2) Grand Cross Knights of the Second Class; (3) Commanders, and (4) simple
Knights. The decoration is a bifurcated or eight-pointed red enamelled gold cross, in the centre of which is a blue medallion on which is impressed in gold the image of St. Gregory, and at the side of his head near the right ear is a dove; in a circle around the image appears in golden letters "S. Gregorius Magnus". On the reverse side is the device "Pro Deo et Virgine" and in the centre around it, GREGORII XCVI. F. M. ANNO. I. The badge is the cross of the order surrounded with silver rays. The ribbon of the order is red with orange borders. The cross worn by a knight of the military division is surmounted by a military trophy; the cross of a knight of the civil division is surmounted by five finials. The costume of ceremony is a dress coat of dark green open in front, and covered on breast and back with embroideries in the form of oak leaves. White trousers with silver side stripes, a bicorned ornamented hat, and the usual knightly sword, complete the costume, which is rarely worn.

Order of St. Sylvester, before the Regulations of Pius X.—This was the Order of the Golden Militia under a new name. Prior to the year 1841 it was known as the Militia of the Golden Spur or Golden Militia, and though it is not historically established who among the cardinals founded it, yet it is undoubtedly the oldest and, at one time, was one of the most prized of the papal orders. Faculties granted to the Sforza family (Paul III "Hinc est quiet noae", 14 Apr., 1539), to the College of Abbreviators (Leo X Const. 14 "Summi") and to bishops assistant at the throne (Julius III, 6 Apr., 1557) to create Knights of the Golden Militia resulted in lavish bestowal and diminished prestige of the decoration. Pope Gregory XVI ("Quod hominum mentes", 31 Oct., 1841), retaining the ancient name, placed the order under the patronage of St. Sylvester (one of its cardinals), with full faculties to ordain, and by whomsoever given, and forbade the use of the title or the decoration to all knights created by other than by papal Brief. The better to restore it to its ancient glory and splendour, he limited the number of commanders to one hundred and fifty and knights to three hundred (for Papal States only), and appointed the Cardinal of Apostolic Briefs as Chancellor of the Order, with the duty of preserving the name, grade, number and date of admission of each knight. He divided it into two classes, commanders and knights. The former wore the large sized decoration suspended at the neck, the latter the small sized one on the left side, and, according to a usage which had been introduced in the Gregorian Brief, was an eight-pointed gold cross with an image of St. Sylvester wearing the tiara on its white enamelled centre, and around this centre a blue enamelled circle bearing in letters of gold the inscription SANC. SYLVESTER P. M. On the reverse side, in gold characters, was stamped MCCCLXI GREGORII XCVI REDITUIT. A golden spur hung suspended from the sides of the bifurcated foot of the cross of the order to mark the unity of the Sylvesterine order with that of the Golden Militia. The ribbon of the decoration was of silk composed of five strands, three of which were red, and two black. Commanders wore the decoration at the neck, the knights on the breast. The ribbon of the former was larger than that of the latter, the cross of the former was also more elegant than that of the latter. The official costume was a red evening dress coat with two rows of gold buttons with gold facings, and from which all gowns of the coat were of a more ornate design for commanders than for knights. White trousers, with gold side bands, hat with white plumes and a sword with a silver hilt and also gilt spurs, completed this rarely used costume. Knights of both classes wore around the neck a necklet of pearls from which all gowns of the gold spur commemorative of the ancient order of that denomination. Pius X (Motto Proprio, "Multum ad excitandos", 7 Feb., 1905) divided the Sylvesterine into two orders of knighthood, one retaining the name of St. Sylvester and the other taking the ancient name of the order, i.e. Order of the Golden Militia, or Golden Spur.

Order of St. Sylvester, since the Regulations of Pius X.—The order now has three classes of knights: (1) Knights Grand Cross, (2) Commanders, and (3) Knights. The present decoration is a gold cross, enamelled surface, in the centre of which is impressed the image of St. Sylvester P. M., surrounded by a blue enamelled circle bearing the inscription in letters of gold SANC. SYLVESTER P. M. On the opposite side, in the centre, are the pontifical emblems with the date of the Pius X renovation, MDCCCXCV, impressed in characters of gold upon a blue circle. The badge is the cross of the order attached to a silver star. The new costume consists of a black (formerly red) coat with one row (formerly two) of gilt buttons, and cuffs and collar of black velvet embroidered in gold: black trousers, with gold stripes, a bicorned hat of rough silk adorned with papal-coloured cockade, and finally a sword with a hilt of mother-of-pearl ornamented with gold and worn suspended from a gilt belt. The ribbon of the decoration is black silk bordered with red. Silver cords were the true cornacillus, but upon the breast of the tunic. Commanders wear a larger cross suspended by the ribbon of the order encircling the neck, and the Knights of the Grand Cross wear a cross of largest form pendant from the right shoulder and the badge on the left side of the breast. The hat of the commander is adorned with a black, that of the grand cross knight with a white, plume.

The Order of the Golden Militia, or the Golden Spur.—Pius X, in commemoration of the high prestige to which this order had attained long years before it was absorbed into the Gregorian Order of St. Sylvester, and in a sovereign act of sovereign will, removed the definition of the Immaculate Conception of the B. V. M., gave back to it the separate existence, name and grade of ancient days, and rendered it still more illustrious by placing it under the patronage of the Immaculate Conception. To this order are to be admitted only those who have distinguished themselves in an eminent degree, and either by feat of arms, or by their writings, or by any other conspicuous work, have spread the Catholic Faith, and by their bravery have safeguarded, or by their learning made illustrious, the Church of God. To insure its continued high grade of excellence and desirability, its founder limited it to one class and one source, the cardinal or imperial gold ("Multum ad excitandos", 7 Feb., 1905). It can be conferred on those already knighted in the highest orders, even that of Christ, as well as on those who have never received any order of knighthood. The honour is bestowed by a "Motto Proprio" (Pope's own motion) and as such is transmitted through the secretariat of State, and free from all chancery fees. The decoration is an eight-pointed or bifurcated yellow enamelled gold cross, with a gold trophy on top and pendent from the inner sides of its bifurcated foot a gold spur. On a small white medal in the centre of the cross the word MARIA surrounded by a golden left circle, and on the reverse side in the centre is stamped the year MDCCCXCV and in the surrounding circle the inscription PIUS X RESTITUIT. The badge is the cross upon the rays of a silver star. The ribbon used for both decoration and badge is red bordered with a broad decorative bow, a gold cross of white, black collar. The cross is worn suspended by the ribbon of the order which encircles the neck. The badge is attached by the ribbon to the left breast of the tunic. The present official dress consists of a red tunic with two rows of gilt buttons, the collar and cuffs of which are black velvet embroidered in gold: black cloth trousers with gold side stripes; epaulettes ornamented with gold fringes and surmounted on top.
FORTIFICAL DECORATIONS

1. SUPREME ORDER OF CHRIST
2. ORDER OF ST. GREGORY THE GREAT (CIVIL DIVISION)
3. ORDER OF THE HOLY SEPICHRE
4. ORDER OF PIUS IX
5. ORDER OF ST. SYLVESTER
6. PRO ECCLESIA ET PONTIFICE
with emblems of the order, gold spurs, oblong two-peaked hat fringed with gold and adorned with a gold knob displaying papal colours, a sword whose hilt is a gilt cross and scabbard black, and finally a gilt sword belt with red fringe. All former concessio ns of noble titles, even that of count palantine to Knights of the Golden Spur, were revoked by Pope Paul II (1464–71). It was to have been a badge of honor and worth of the knights their sole and only title to honour and respect among men.

Order of the Holy Sepulchre. St. James, first Bishop of Jerusalem, the Empress St. Helena, Charlemagne, Godfrey of Bouillon and Baldwin I, are among the religious orders. In the testimony of critical historians, the order is a branch of the Knights of St. John of Jerusalem, which was approved (1113) by Pope Pascal II. Whoever may have been its real founder, it is certain that in the twelfth century there was another order following the Rule of St. Basil that proceeded on a line of action parallel with that of Knights of Jerusalem. Upon the fall of the Latin Kingdom of Jerusalem, the Knights of the Holy Sepulchre were driven out of Palestine, and some of them settled at Perugia. Gradually the order lost its prestige, and was by Pope Innocent VIII (1484) under the Knightly Hallers. Alexander VI (1496) restored (Helyot says, instituted) this order that by offering a most desirable and honourable distinction as a reward for the great labour, fatigue and expense of a journey to the Holy Land, he might incite wealthy and noble Europeans to visit and aid the holy places. He reserved to himself and his successors the title and office of supreme head; but empowered the Franciscan Custodian of Mount Sion, the Commissary Apostolic of the Holy Land—as long, and no longer, than the Jerusalem Latin Patriarchate remained vacant—to confer in the name of the pope the Knighthood of the Holy Sepulchre. John VIII (1665) and Benedict XIII (1727) confirmed the privilege. Benedict XIV (“In Supremo Militantis Ecclesie”), 17 Jan., 1746 remodelled the rules of the order, fixed the forms by which the Franciscan Custodian should be guided in bestowing the decoration, renewed its ancient privileges (similar in part to those granted to the Golden Militia), and granted to the Knights the right to use the title of Count of the Sacred Palace of Lateran. Pius IX, upon the restoration of the Latin Jerusalem Patriarchate (1847), withdrew the Alexandrine faculty, and gave it to the new patriarch and his successor, and the patriarchate was empowered to create Knights of the Holy Sepulchre, and this they do not of their own right, but in the name and by virtue of the pope's authority. It was required that a knight should, except in an exceptional case, give an alms of 100 sequins in gold (equal to $200) towards the Holy Places. This was done in accordance by decree (S. C. P. F., 1847) ordered to be turned over to the patriarch for the needs of the Holy Land. Pope Pius IX (“Cum multa”, Jan. 24, 1868) remodelled and approved the ancient statutes, and divided the order into three (practically four) classes: (1) Grand Cross Knights, (2) Commanders and (3) Knights. Commanders of conspicuous ability and eminent virtue were, in rare cases, and by special papal faculty, permitted to wear the badge on the breast, and so constituted a grade between the grand cross knight and the commander. Pius X (“Cum multa te Ordinemque”, 3 May, 1907) fixed the number of grand crosses at ten and permitted the military trophy to the cross, approved the creation for them, reserved to himself and successors the title of grand master, and appointed the Latin Patriarch of Jerusalem his lieutenant and administrator in the bestowing of this papal decoration. He also arranged that in the event of the death of the patriarch and the vacancy of the see, the powers of the patriarch as papal lieutenant and administrator of the Order of the Holy Sepulchre should by law devolve upon the cardinal secretary of state. The decoration is a large red enamelled gold cross, with a narrow border of gold, and surmounted by a royal crown. Prior to the last century the cross was generally gold-washed or enameled. The form of the cross is what is called “potenti ate”, that is, crutched or gibbet-shaped. The four extremities are shaped as the large cross and four small red enamelled crosses of simple form are attached. The ribbon is of black watered silk. A mulberry crown connects the cross with the ribbon to the body of the badge is an eight-pointed or rayed silver star, on whose centre is the red cross encircled by the two green enamelled branches, one oak and the other laurel. The collar, worn only on solemn occasions, is composed of little Jerusalem crosses, and rings of burnished gold. Knights of the first class wear the grand cross suspended from the wide black watered silk ribbon running saltier-wise from the right shoulder to the left side, and the badge on the breast. Commanders carry the cross and ribbon fastened at the neck. Knights wear the badge on the left breast. The papal tiara represents, besides the usual decorations, are permitted to wear the insignia promonently placed on the breast of the uniform, but on the right side of the breast of the civil dress. The costume is a white evening dress coat with collar, cuffs and breast facings of black velvet with gold embroidery, epaulet of twisted gold cord, white trousers with gold side stripes, a sword and plumed hat. Pius X added to the costume a large white woolen mantle with a red Jerusalem cross on the left breast. The knights rarely don this official robe; they content themselves with wearing the decorations on the civil dress. This decoration may be conferred upon ladies who are then styled Matrons of the Holy Sepulchre. The dames wear the insignia of their grade, no matter what grade it may be, always on the left side of the breast (Leo XIII, 3 Aug., 1888).

In addition to these principal, there are other minor papal distinctions, of which some are temporary and others permanent. Permanent minor decorations are the medals: (1) The Pro Ecclesia et Pontifice, (2) Benemerenti, (3) The Holy Land. The medal Pro Ecclesia et Pontifice was instituted by Pope Leo XIII (17 July, 1888, “Quod Singulari”) in memory of his golden sacerdotal jubilee, and bestowed on those women and men who have worked with zeal in promoting, and by other excellent ways and means assisted in making the jubilee and the Vatican Exposition successful. This decoration was made a permanent distinction only in October, 1898 (Giobbo, see below). Its object is to reward those who, in a general way deserve the praise of the Pope on account of services done for the Church and its head. The medal is of gold, silver or bronze. The decoration is not subject to chancery fees. The medal is a cross made octagonal in form by fleurs-de-lis fixed in the angles of the cross in a special manner. The extremities of the cross are of a slightly pointed form. In the centre of the cross is a small medal with an image of its founder, and encircling the image are the words LEO XIII P. M. ANNO X (tenth year of his pontificate). On the obverse side are the papal emblems in the centre, and in the circle surrounding the emblems the motto PRO DEO ET PONTIFICIE is stamped. On the obverse side the cross comets—which with the fleurs-de-lis form the coat of arms of the Pecchi family. On the reverse side are stamped the words, PRIDIE (left branch); KAL. (top branch); JANUAR. (right branch); 1888 (at the foot). The ribbon is purple, with delicate lines of white and yellow on each border. The decoration is worn on the right side of breast.
DEGREE

670

DECEMTRALS

Benedenentem Medals.—Pope Gregory XVI (1832) instituted two medals which he called merit-medals to reward civil and military daring and courage. The military merit-medal has engraved on its surface the image of the founder, and on the other side an angel holding a scroll with the word BENEMERENTI, surrounded by the papal emblems (sometimes this medal is found encircled by a crown of laurels). It is worn on the breast suspended by a white and yellow ribbon. The civil merit-medal has engraved on its face surmounted by the word BENEMERENTI, surrounded by a crown of oak leaves. The ribbon is of the papal colours.

Medal of the Holy Land.—This was designed by Leo XIII (Dec. S.C.P.F. 2 May, 1901), who empowered the Custodian of the Holy Land to bestow it upon pilgrims who presented a certificate of good moral character, of their parish priest and a genuinely religious intention in making the journey to the Holy Land. It serves as a testimonial and souvenir of the pilgrimage. The decoration is a cross similar to that of the Knights of the Holy Sepulchre, save that the four small crosses are cruched instead of being simple of form. A medallion with the inscription LEO XIII GREGORI, ANNO M.C.M. occupies the centre of the large cross. On each branch of the large cross are graven figures of the Annunciation, Nativity, Baptism of Christ, and Last Supper respectively. On the cruched-shaped extremities are the words: A. P. S. C. F. and at the centre of the extremities, the figure of Christ appears in the centre of the medallion. On the branches are representations of the Agony in the Garden, Flagellation, Crownimg with Thorns and Crucifixion, and on the extremities of the branches the words SIGNUM SAGRITITIHEROSOLIMITANUM. It is worn on the left breast suspended from a red ribbon with four small blue transverse bars bordered with white, which in turn are edged with dark yellow. There are three classes of medals: gold, silver, and bronze, adapted to the condition of pilgrims and the services they have rendered to the Holy Land. The recipient must pay the cost of the medal and bestow an alms of at least two dollars towards the maintenance of the Holy Places. Each year the custodian must inform the Propaganda how many decorations have been bestowed and the amount of the alms given (Dec. S. C. P. F., 10 June, 1901).

Papal VII and Pius IX conferred special decorations which were temporary and not permanent. The former bestowed a medal for military bravery, and another for zeal and courage in stamping out the brigandage, which had taken such hold in the Papal States during the seven years of the French occupation. Pius IX later conferred on Montanata and Castelfidardo medals upon the papal and French soldiers who came to his help at those places.

Pontifical decorations are bestowed either by motu proprio, and then forwarded by the secretary of state, or upon petition, when they are expedited through the chancery. The most certain and expeditious mode of procuring the coveted decoration is by a petition from the bishop of the diocese of the person to be honoured. The petition must state the name, age, country, in short, a brief history of the life of the applicant, bringing out in relief the eminent labours or work in science, literature, arts, controversia or other religious writings, or generous and self-sacrificing gifts or endowments made or done for society, the Church or its head, which are deemed worthy of papal recognition and reward. This petition must be endorsed by the ordinary of the applicant. The endorsement of another than the diocesan bishop will not suffice. The petition is sent to an agent at Rome, who presents it to the cardinal chancellor of the orders, who not only registers the petition and the endorsement of it by the bishop, but also seeks information from other sources as to the character of the party and his eminent good works.

P. M. J. ROCK.

Decree (Lat. decretum, from decesso, I judge); in a general sense, an order or law made by a superior or authority for the direction of others. In ecclesiastical use it has various meanings. Any papal Bull, Brief, or Motu Proprio is a decree inasmuch as these documents are legislative acts of the Holy Father. In this sense the term is quite ancient. Pope Siricius speaks (P. ad Himer., c. ii.) of the decree of Pope Liberius. The Roman Congregations are empowered to issue decrees in matters which come under their particular jurisdiction. Each ecclesiastical province, and also each diocese may issue decrees in their periodical synods within their sphere of authority. The word is also used to denote certain specified collections of church laws, e.g. the Decretum Gratiani (Decretum Gratiani). In respect of the general legislative acts of the pope there is never doubt as to the universal extent of the obligation; the same may be said of the decrees of a General Council, e.g. those of the Vatican Council. The Council of Trent was the first of the general council to apply the term decrctum in connexion with faith and discipline (decreta de fide, de reformatione). The decrees of the Roman Congregations (q. v.) are certainly binding in each case submitted for judgment. But there are varying opinions as to whether such judgment is to be taken as a rule or general law applying to all similar cases. The common opinion is that when the decisions are enlargements of the law (declaratio extensiva legis) the decisions do not bind except in the particular case for which the decree is made. If, however, the decision is not an enlargement, but merely an explanation of the law (declaratio comprehensiva legis), such decree binds in similar cases. The decrees of a national council may not be promulgated until they have received the approval of the pope. The decrees of a provincial synod have no force until they have been approved by Rome. This approval is twofold: ordinary (in formâ communis), and specific (in formâ particularis). It is generally stated that there is nothing which needs correction in the decree of the synod, and they thereby have force in the province. This is the approval generally given to such decrees. If approval is given in formâ particularis the decrees have the same force as if they emanated from the Apostolic See, though they are binding only in the province for which they are made. The decrees of a diocesan bishop deal with the administration and good order of his diocese. If they are made during a synod, they are diocesan laws, are usually known as "diocesan statutes", or "syndodal statutes", and bind until revoked by the bishop or his successor. If the decrees are extra-synodal, they only bind the lifetime of the bishop or until he revokes them himself. For the so-called "Decretum Gelasianum," see GELASIVUS I. For the use of judicial decrees in canonical procedure see PERMANDE in Kirchenlex., III, 1442–44. (See Constitutions, Ecclesiastical; Rescripts.

Decrees, Ecclesiastical. See Constitutions, Ecclesiastical.

Decretals, Papal. I. Definition and Early History. (1) In the wide sense of the term decretales (i.e. epistolae decretales) signifies a pontifical letter
containing a decretum, or pontifical decision. (2) In a narrower sense it denotes a decision on a matter of discipline. (3) In the strictest sense of the word, it means a rescript (rescriptum), i.e. an answer of the pope when he has been appealed to or his advice has been sought on a matter of discipline. Papal decretals are therefore the third, an official code, in the Church. But frequently the pope ordered the recipient of his letter to communicate the papal answer to the ecclesiastical authorities of the district to which he belonged; and it was their duty then to act in conformity with that decree when analogous cases arose. It was thus divided his collection, in the letter of Pope Saint Sisincus (304–309) to Hiero- rius, Bishop of Tarragona in Spain, dating from 308; but it would seem that the document of the fourth century known as "Canones Romanorum ad Gallios episcopos" is nothing else than an epistola decretalis of this predecessor, Pope Damasus (306–308), addressed to the bishops of Gaul (Babut, La plus ancienne decretale, Paris, 1904). The decretals ought to be carefully distinguished from the canons of the councils; for the epistola dogmatica, i.e. the pontifical documents touching on Catholic doctrine; from the constitutions; or pontifical decrees given more pontifically, that is, decrees made known by the pope without his having actually done so or consulted upon a subject. (4) Finally, under the name decretals are known certain collections, containing especially, but not exclusively, pontifical decretals. These are the canonical collections of a later date than the "Decretum" of Gratian (about 1150). The commentators on these collections are named decretalists, in contradistinction to the decretes, or those who commented upon the "Decretum" of Gratian. Eventually some of these collections received official recognition; they form what is now known as the "Corpus Juris Canonici". An account will be given of some of the collections, but particularly of those of Gregory IX.

II. The "Quinque Compilationes Antiquae" Decretalium.—The "Decretum" of Gratian was considered in the middle of the twelfth century as a corpus juris canonici, i.e. a code of the ecclesiastical laws then in force. As such, however, it was incomplete; moreover, many new laws were made by succeeding popes; whence the necessity of new collections (see Corpus Juris Canonici). Five of these collections exhibited pontifical legislation from the "Decretum" of Gratian to the pontificate of Gregory IX (1150–1227). The third, the "Decretum III" not inserted in the latter, is entitled "Decretales antiquiores". On account of their importance they were made the text of canonical instruction at the University of Bologna, and, like the "Decretum" of Gratian, were glossed, i.e. notes bearing on the explanation and interpretation of the text were added to the manuscript. The first collection, the "Breviarium extra- vagantium", or summary of the decretals not contained in the "Decretum" of Gratian (sagantes extra Decretum), was the work of Bernard of Pavia (q. v.) and was compiled 1187–1191. It contains papal decretals to the pontificate of Clement III inclusive (1187–1191). The compilation known as the third (Compilatio tertia), written however prior to the second collection (Compilatio secunda), contains the documents of the first twelve years of the pontificate of Innocent III (8 January, 1198–7 January, 1210) which are of a later date than those of the second compilation, the latter containing especially the decretals of Clement III (1291–1266), called partes decrcta tertia" is the oldest official collection of the legislation of the Roman Church; for it was composed by Cardinal Petrus Collivacius of Benevento by order of Innocent III (1198–1218), by whom it was approved in the Bull "Devotioni vestrae" of 28 December, 1210.

The fourth collection, also called "Decretales medii" or "Decretales intermedii", was the work of a private individual, the Englishman John of Wales (de Walesio, Walensis, or Galensis). About 1216 an unknown writer formed the "Compilatio quarta", the fourth collection, containing the decretals of the pontificate of Innocent III which are of a later date than 7 January, 1210, and the canons of the Fourth Lateran Council held in 1215. Finally, the fifth compilation, called partes decrcta quinta, was approved by Honorius III (1216–1227) and approved by this pope in the Bull "Nove causarum" (1226 or 1227). It must also be noted that several of these collections contain decretals anterior to the time of Gratian, but not inserted by him in the "Decretum". Bernard of Pavia divided his collection into five books ordered in titles and chapters. The first book treats of persons possessing jurisdiction (judeae), the second of the legal processes (judicium), the third of clerics and regulars (clerus), the fourth of marriage (communium), the fifth of delinquences and of criminal procedure (crimen). In the four other collections the same logical division of the subject-matter was adopted. (For the text see Friedberg, Quinque compilationes antiquae, Leipzig, 1882.)

III. The Decretals of Gregory IX.—Gregory IX, in 1230, ordered his chaplain and confessor, St. Raymond of Pechforte (Penneafort), a Dominican, to prepare a new canonical text to replace the former collections. It has been said that the pope by this measure wished especially to emphasize his power over the Universal Church. The papacy had, indeed, arrived at the zenith of its power. Moreover, a pope less favourably circumstanced would, perhaps, not have thought it of so important a measure. Nevertheless, the utility of a new collection was so evident that it is needless to seek other motives than those which the pope himself gives in the Bull "Rex pacificus" of 5 September, 1234, viz., the inconvenience of recurring to several collections containing decisions most diverse; the gap in the exhibits of some cases; and in others tedious length; moreover, on several matters the legislation was uncertain.

St. Raymond executed the work in about four years, and followed in it the method of the aforesaid Quinque compilationes antiquae. He borrowed from them the order of the subject-matter, the division into five books, of the books into titles, and of the titles into chapters. Of the 171 chapters which the Decretals of Gregory IX contain, 1771 are taken from the "Quinque compilationes antiquae", 191 are due to Gregory IX himself, 7 are taken from decretals of Innocent III, and 188 are extracted from fifteenth-century collections; and are of unknown origin. They are arranged, as a general rule, according to the order of the ancient collections, i.e. each title opens with the chapters of the first collection, followed by those of the second, and so on in regular order; then come those of Innocent III, and finally those of Gregory IX. Almost all the rubrics, or headings of the titles, have also borrowed from these collections, but several have been modified as regards detail. This method considerably lightened St. Raymond's task. However, he did more than simply compile the documents of former collections. He left out 383 decisions, modified several others, omitted parts when he considered it prudent to do so, filled up the gaps, and, to render his collection complete and concordant, cleared up doubtful points of the ancient ecclesiastical law by adding some new decretals. He indicated by the words et infra the passages excised by him in the former collections. They form the special title, but was called "Decretales Gregorii IX" or sometimes "Compilatio sexta", i.e. the sixth collection with reference to the "Quinque compilationes antiquae". It was also called "Collectio seu liber extra", i.e. the collection of the laws not contained (sagantes extra) in the "Decretum" of Gratian. Hence the custom of denoting this collection by the letter X (i.e. extra).
Quotations from this collection are made by indicating the number of the chapter, the name the work goes by (X), the number of the book, and that of the title. Usually the heading of the title and sometimes the first words of the chapter are quoted; for instance, "c. 3, X, III, 23", or "c. Odoardus, X, De solutionibus, III, 23", refers to the third chapter, commencing with "c. Odoardus, in Decretalibus, lib. III, de solutionibus". Gregory IX, book III, title 23, is entitled "De solutionibus". If the number of the chapter or of the title is not indicated it will easily be learned on consulting the alphabetical index of the rubrics and of the introductory words of the chapters, which are to be found in the margin of the "Codex Iuris Civilis" of Corpus Juris Civilis. Gregory IX sent this new collection to the University of Bologna and Paris, and, as already stated, declared, by the Bull "Rex pacificus" of 5 September, 1234, that this compilation was the official code of the canon law. All its decisions have the force of law, whether they be authentic or not, whatever the juridical value of the texts considered in themselves, and whatsoever the original text. It is a unique (unicus) collection; all its decisions were simultaneously promulgated, and are equally obligatory, even if they appear to contain, or if in fact they do contain, anognymies, i.e. contradictions. In this peculiar case it is not possible to establish definitively the authenticity of the text, and one can state that a law of later date abrogates that of an earlier period. Finally, it is an exclusive collection, that is to say, abrogates all the collections, even the official ones, of a later date than the "Decretum" of Gratian. Some authors (Schulte, Laurin) maintain that Gregory IX abrogated even those laws prior to Gratian's time which the latter had not included in his "Decretum", but this opinion is contested by several others (von Scherer, Schneider, Weins, etc.). The controversy is no longer of practical interest.

The Decretals of Gregory IX differ widely from our modern canon law. Unlike the "Liber censurae", in one concise statement a legislative decision, they generally contain, in the beginning, an account of a controversy, the allegations of the parties in dispute, and a demand for the solution of the question. This is the species facti or the pars historic or and has no juridical value whereby the enacting part of the chapters (disposition) alone has the force of law. It is this part which contains the solution of the case or the statement of the rule of conduct. The rubrics of the titles have the force of law when their sense is complete, as for instance, "Ne sede vacante aliquot innovetur" (Let the sede vacante not be changed). The rubrics of the III, which is a hierarchy, is because the headings form an integral part of the official code of the laws. However, they ought always to be interpreted according to the decisions contained in the chapters. The historical indications concerning each chapter are often far from being exact, even since they were not corrected in the Roman edition of 1582. It may be regretted that St. Raymond did not have recourse to the original documents themselves, of which a large number must have been at his disposal. The summaries (summaria) which precede the chapters are the work of the canonists and may assist in the elucidation of the text. The pars decise are sometimes of like use, but never when these parts were designedly omitted from a desire to extinguish their legal force or because they contain decisions irreconcilable with the actual text of the law.

As in the case of the former canonical collections, the Decretals of Gregory IX were soon glossed. It was customary to add to the textual explanations written between the lines (glossa interlinearia) and on the margin of the page (glossa marginalia). Explanations of the subject-matter were also added. The most ancient glossarist of the Decretals of Gregory IX is Vincent of Spain; then follow Godfridus de Tranio (d. 1245), Bonaguida Aretimus (thirteenth century), and Bernard of Botone or Parmeisius (d. 1263), the author of the "Glossa ordinaria", i.e. of that gloss to which authoritative credence was generally given. At a later date some extracts were added to the "Glossa ordinaria" from the "Novella aoeae commentarius in decretales epistolae Gregorii IX" by Giovanni d'Andrea (Johannes Andreea). After the invention of printing, the Decretals of Gregory IX were published at Rome and Amsterdam from the press of Heinrich Egesheim. Among the numerous editions which followed special mention must be made of that published in 1582, in aditus populi romani, by order of Gregory XIII. The text of this edition, revised by the Correctores Romanui, a pontifical commission, is the text used in the "Corpus Juris Civilis". The text of the "Corpus Juris Civilis" has the force of law, even when it differs from that of St. Raymond. It is forbidden to introduce any change into that text (Brief "Cum pro munere", 1 July, 1580). Among the other editions, mention may be made of that by Le Conto (Antwerp, 1570), of prior date to the Roman edition and containing the partes decisae: that of the brothers Pithou (Paris, 1687); that of Böhmer (Halle, 1747), which did not reproduce the text of the Roman edition and was in its textual criticism more audacious than happy; the edition of Richter (Leipzig, 1839); and that of Friedberg (Leipzig, 1879-1881). All these authors adduce, as may be seen from the notes, their sources.

To indicate the principal commentators on the Decretals would necessitate the writing of a history of canon law in the Middle Ages. Mere mention will be made of Innocent IV (d. 1254), Enrico de Segusio or Hostiensis (d. 1271), the "Abbas antiquus" (thirteenth century), Johannes Andreea, already mentioned, Baldus de Ubaldis (d. 1400), Petrus de Anchiano (d. 1416), Franciscus de Zabarella (d. 1417), Dominicus a Sancto Geminiano (fifteenth century), Joannes de Imola (d. 1436), Nicolò Tudesco, also called the "Abbas Siculus", or "Modernus", or "Extravagantes". Among the commentators, Manuel Gonzalez Telles and Fagmanus may be consulted advantageously for the interpretation of the text of the Decretals. The Decretals of Gregory IX still form the basis of canon law so far as it has not been modified by subsequent collections or by the general laws of the Church (see Corpus Juris Civilis).

IV. LATER COLLECTIONS OF DECRETALS.—The decretals of the successors of Gregory IX were also arranged in collections, of which several were official, notably those of Innocent IV, Gregory X, and Nicholas III. The decretals of Gregory X are of that of those of Gregory IX is modified by the collection of the "Sacer sancti" of 3 March, 1298. This is the "Sextus Liber Decretalium"; it has a value similar to that of the Decretals of Gregory IX. Boniface VIII abrogated all the decretals of the popes subsequent to the appearance of the Decretals of Gregory IX which were not included or maintained in force by the last collection; but as this collection is of later date than that of Gregory IX, it modifies those decisions of the latter collection which are irreconcilable with its own. Clement V, also, undertook to make an official collection, but death prevented him from perfecting this work. His collection was published by John XXII on 26 February, under the title of "Sextus Liber Decretalium", but it is better known under the name of "Constituciones Clementis V" or "Clementina". This is the last official collection of decretals. The two following collections, the last in the "Corpus Juris Civilis", are the work of private individuals. They are the "Extravagantes", because they are not included in the official collections. The first contains twenty
Constitutions of John XXII, and is named "Extravagantes Joannis XXII"; the second is called "Extravagantes a contrario", and is the name given to the fifteen preaching friars who were in opposition to the reforming movement promoted by the Council of Constance. The first group of friars were commonly met with in the manuscripts and editions. They were brought to their present form by Jean Chappuis in 1500 and 1503. Dedication, a term which, though sometimes used of persons who are consecrated to God's service, is more properly applied to the "setting aside" of places for a special and sacred purpose (cf. Hastings, Dict. of the Bible). The Christian, indeed, believes that God is everywhere and that the Divine Immensity fills all space; but the faith does not exclude the idea of reserving a special spot in which the creature may hold communion with his Creator and worship Him. That the setting aside of this hallowed place was ever done with a certain show and ceremony is evident from the examples of Jacob (Gen., xxvii, 18), of Moses (Lev., viii, 10), and above all, of Solomon (III Kings, viii). This precedent of the Old Law was too obvious to be overlooked in the New, and we may be sure that the modern custom was consecrated by Apostolic usage. In a fragment of a martyrology ascribed to St. Jerome (cf. D'Archéy, Spielegium IV) this passage occurs: "Roman consecravit, primam Ecclesiam ab a se Petro constructam et consecratam". It is not strange, however, that owing to the persecutions of the first three centuries, references to the dedication of churches are extremely rare. The first authentic accounts of this kind are furnished by Eusebius (Hist. Eccl., X, iii, iv; De Vitae Christi, viii, xvi, in P. G. XXX), and Eusebius (Hist. Eccl., II, xxvi in P. G. XLVII) in regard to the cathedral of Tyre (314) and Constantine's church at Jerusalem. The well-known historical document entitled "Peregrinatio Silvici" (Ethiopia) has a full description of the celebration of the dedicatory festival of the church of Jerusalem accomplished by our pilgrims in the fourth century (cf. Cabrol, Libre de la prière antique, p. 311). Here it will suffice to emphasize, in connexion with the dedication of churches, (1) the ritual employed, (2) the minister, (3) necessity and effects, and (4) festival and its days. 

1. In the beginning the dedication ceremony was very simple. A letter of Pope Vigilius to the Bishop of Bracara (538) states: "Consecrationem cujuslibet ecclesie, in quâ non ponuntur sanctuarie (reliquie) celebratibus tantum scimus esse missarum" (We know that the consecration of any church in which shrines (relics) are not placed consists merely in the celebration of Masses). That the primitive ceremonial consisted mainly in the celebration of Mass, where there were no relics, is also shown from the old "Ordines Romani" (cf. Mabillon, "Museum Italicum", II in P. L., LXXVIII, 857). Where relics were used the ceremony of translating and depositing them under the altar was performed (cf. "Ordo of St. Amand" in Duchesne, "Christian Worship", London, 1903, Appendix; "Ordo of Veronica" in Bianchini, ed., "Lib. Pont.", III). The first complete formulary is found in the Gelasian Sacramentary (in P. L., LXXIV), which embodies the Roman liturgical usages of the seventh century. Here the rite consists of prayers, sprinklings with holy water, and blessings. So quickly, however, was this rite established that in the eleventh and twelfth centuries different popes commonly met with in the manuscripts and editions. They were brought to their present form by Jean Chappuis in 1500 and 1503. (See Corpus Juris Canonici; Extravagantes; Decretals. 

The solemn ceremony of dedication, or consecration is found in the Roman Pontifical and is performed de jure by a bishop (see Consecration). The simpler rite, which is given in the Roman Ritual, is generally reserved to bishops, but may be also undertaken by a priest with episcopal delegation. 

2. All churches, public oratories and semi-public, if destined for Divine worship in perpetuum, must be at least blessed before the Sacred Mysteries can be regularly celebrated in them (Cong. of Rites, Sept., 1871). Purely private or domestic oratories may not be thus dedicated, but simply blessed with the Benedicatio loci (cf. Roman Ritual or Missal) on each occasion Mass is said in them. As a rule, however, a place sacred and dedicated to the district should be consecrated in the solemn manner, but as certain conditions are required for liturgical consecration which are not always feasible (cf. Irish Ecclesiastical Record, April, 1908, p. 430) the ordinary simple dedication rite is regarded as practically adequate. Both forms render the place sacred, and in this sense as sacramentals, to the sanctification of the faithful, but they differ in this that while a church that is consecrated must, if polluted, be reconciled by a bishop, a church that is simply blessed may be reconciled in similar circumstances by a priest (cf. Roman Ritual). 

4. Another difference in the effects of the two forms of dedication is that a consecrated church is entitled to celebrate each year the anniversary feast of its consecration, which is to be held as a double of the first class with an octave, by all the priests attached to the church. A church that is only blessed has no right to such a privilege, after the consecration of which it is included in the special indulgents granted for the simultaneous celebration of the anniversaries of all the churches in a district or diocese. In this case the Office and Mass must be celebrated in every church, within the limits of the indult independently of their consecration (Cong. of Rites, 3360, 1871). 

5. On the other hand the celebration of the dedication may be selected for the dedication of a church, yet the Roman Pontifical suggests those "Sundays and solemn festive days" which admit the dedicatory Office and Mass, as well as the anniversary celebration. 

In addition to the authorities cited the following may be usefully consulted: Catalani, Commentarium in Pontificale Romanum (Paris, 1950); Ferraris, Bibliotheca s. v. Ecclesia (Paris, 1866); De Hert, Praeis Pontificis (Louvan, 1903); Bernard, Le Pontifical (Paris, 1902); II: Mant, De Locis Sacris (Paris, 1904); Schulte, Benedicendae: Consecrandae (New York, 1900), very full on ceremonial. 

Patrick Morrisroe. 

Dedication, Feast of the (Scriptural), also called the Feast of the Machabees and Feast of Lights (Josephus and Talmudic writings), mentioned in the Old Testament (I Mach., iv, 56), and in the New (John, x, 22). It was instituted by Judas Machabeus (64 B.C.) to be celebrated yearly on the 25th day of the month Kislev and during its octave, in commemoration of the purification of the Temple and the dedication of the menorah which had been polluted by Antiochus Epiphanes on that day three years previously (I Mach., iv, 41-64; II Mach., vi, 2). Unlike the great Hebrew annual feasts, it could be celebrated not only in the temple at Jerusalem, but also in the synagogues of all places. It was observed with manifestations of joy such as accompa-
panied the Feast of Tabernacles, during the celebration of which the dedication of the first temple had taken place. During the celebration of the feast mourning and fasting were not allowed to begin. The Jews assembled in the temple and synagogues bearing branches of trees and palms and singing psalms; the Hallel (Psa. cxii–cxviii) being sung every day. The joy of the Jews in the temple was also manifested by con- illusions, which may have been suggested by the "lighting of the lamps of the candlestick" when the temple service was first restored (I Mach., iv, 50–51), or, according to very early Midrashim, by the miracu- lous burning throughout the first celebration of the feast of a vial of oil found in the temple. Since the first century a general illumination of Hebrew houses has been customary, every house having at least one light, and some, according to the school of the rabbis, having one light for each person in the house on the first night and twice the number on each succeeding night; others again, having eight lights the first night and a lesser number each night thereafter. Modern Hebrews keep the feast on 12 Dec., with strictness, but do not forbid servile work. At the daily morning prayer a different portion of Numbers vii is read in the Synagogue.

ARThUR L. MCMAHON.

Deduction (Lat. de duocere, to lead, draw out, derive from, especially, the function of deriving truth from truth). I. As an argument or reasoning process: that kind of mediate inference by which from truths already known we advance to a knowledge of other truths necessarily implied in the former: the mental product or result of that process. II. As a method: the mediate or indirect, by which we increase our knowledge through a series of such inferences.

I. The typical expression of deductive inference is the syllogism. The essential feature of deduction is the necessary character of the connexion between the antecedent or premises and the consequent or conclusion. Granted the truth of the antecedent judgments, the consequent must follow; and the firmness of our assent to the latter is conditioned by that of our assent to the former. The antecedent contains the ground or reason which is the motive of our assent to the consequent; the latter, therefore, cannot have greater firmness or certainty than the former. This relation of necessity constitutes the essential aspect of deduction. It can be realized most clearly when the argument is expressed symbolically, either in the hypothetical form "If anything (S) is M it is P; but this S is M; therefore this S is P", or in the categ- orial form, "Whatever (S) is M is P; but this S is M; therefore this S is P". A syllogism is a mediate as well as the deductive argument is the truth or falsity of the judgments which constitute it. If these be certain and evidently the deduction is called demonstration, the Aristotelian ἀδιάδοξης. Since the conclusion is neces- sarily implied in the premises, these must contain some abstract, general principle, of which the conclusion is a special application; otherwise the conclusion could not be necessarily derived from them; and all mediate inferences must be deductive, at least in this sense, that they involve the recognition of some universal truth and do not proceed directly from particulars of a particular without the intervention of the universal.

II. When, starting from general principles, we ad- vance by a series of deductive steps to the discovery and proof of new truths, we employ the deductive or synthetic method. But how do we become certain of these principles on which our starting-points? (1) We may accept them on authority—for example, Christians accept the deposit of Christian revelation on Divine authority—and proceed to draw out their implications by the deductive reasoning which has shaped and moulded the science of theology. Or (2) we may apprehend them by intellectual intuition as self-evident, abstract truths concerning the nature of thought, of being, of matter, of quantity, number, etc., and thence proceed to build up the deductive sciences of the evidence of their being, etc. Down through the Middle Ages enlightened thought was fixed almost exclusively on those two groups of data, both sacred and profane; and that accounts for the fulness of the scholastic development of deduction. But (3) besides being and quantity, the universe pre- ceeds change, evolution, regular recurrences or repeti- tion of particular facts, from the cardboard problem and analysis of which we may ascend to the discovery of a third great class of general truths or laws. This ascent from the particular to the general is called in- duction, or the inductive or analytic method. Com- paratively little attention was paid to this method during the Middle Ages. But the necessity for the accurate observation and exact measurement of natural phe- nomena was needed to give the first real impetus to the cultivation of the physical, natural, or inductive sciences. In these departments of research the mind approaches reality from the side of the concrete and particular, and ascends to the general, while in deduction it descends from the general to the particular. But although the mind moves in opposite directions in both methods, nevertheless the reasoning or inference proper, employed in induction, is in no sense different from deductive reasoning, for it too implies and is based on abstract, necessary truths.

P. COFFEY.

Deer, Abbey of, a once famous Scotch monastery. According to the Celtic legend St. Columcille, his dis- ciple Drostan, and others, went from Hy (Iona) into Buchan and established an important missionary centre at Deer on the banks of the Ugie on lands given him by the Norman chief of the district whose son he had by his prayers freed of a dangerous illness. This happened probably in the last quarter of the sixth century. Columcille soon after continued his missionary journeys and left Drostan as abbot at Deer. Drostan died here about 606. The legend re- ceives confirmation from the fact that the parish of Deer contains a large number of barons that in the Norman days the Normans had little sympathy with the Celtic institutions, so we find the Earl of Buchan in 1219 founding the Cistercian abbey of New Deer about two miles westward of Columcille's foundation, grant- ing to the new abbey a portion of the lands of Old Deer, the rest going to the maintenance of a parochial church. In 1551 the son of the Earl Marischal suc- ceeded his uncle Robert Keith as titular Abbot of Deer holding the abbey lands in commendam. The flour- ishing monastery soon fell a prey to the Scottish Re- formers. Among its treasures is the venerable docu- ment known as the "Book of Deer". This is one of the oldest monuments of Scottish literature, and was ably edited in 1869 for the Spalding Club by its secre- tary, Dr. John Stuart. It had become known to scholars in 1588 when it was found in the University of Cambridge. It was then also discovered that the manuscript had come into possession of the books of the Dr. John Moore, Bishop of Norwich, which had been purchased by George I and presented by him to the university; how Bishop Moore had ob- tained it is not known. The manuscript is a small, nearly square octavo numbering eighty-six folios of parchment, written black ink on vellum, in a dark ink, in a hand wonderfully clear and legible. The pages had been ruled with a sharp pointed instru-
ment and the letters had been placed under the lines, not on them. It contains the first six chapters of the Gospel of St. Matthew, a part of the fifth chapter of St. Mark, the entire Gospel of St. John, a part of the eighth, and the first and second parts of the Apostles' Creed. The text is from the Latin Vulgate with some peculiarities common to Irish Bible editions, and is written in the well-known minuscule lettering of the Irish scribes; the initial letters were greatly enlarged and ornamented with patches of colour in drapery forms, and the pages had borders. There are also full portraits of the Evangelists. The Book then contains entries in the Gaelic tongue, the most important being that giving an account of the foundation of the Abbey of Deer. The author was probably a member of that community and lived perhaps in the eighth century. He gives no clue to his identity, but signs himself a poor wretch and asks for a blessing. The last document in the Book is a Latin charter from the great and good King David.

Defender of the Faith. See Henry VIII.

Defender of the Matrimonial Tie (Defensor matrimonii), an official whose duty is to defend the marriage-bond in the procedure prescribed for the hearing of matrimonial causes which involve the validity or nullity of a marriage already contracted. Benedict XIV, by his Bull "Dei Miseratione," 3 November, 1741, introduced this official into the marriage procedure to guard against abuses occurring from the ordinary procedure. An annulment of a marriage might result from the appearance of only one of the married couple who desired freedom to enter upon a new marriage, while the other was apathetic and concurring at the annulment, or at times unable or indisposed to incur expense to uphold the marriage-tie, especially if it implied an appeal to a higher court. Perhaps, too, the judicial decision might induce change of opinion without sufficient warrant. Scandal arose from the delay in deciding marriages with the freedom to enter new contracts. The Bull "Dei Miseratione" requires that in each diocese the ordinary shall appoint a defender of marriage, upright in character, and learned in the law, an ecclesiastical if possible, a layman if necessary. The bishop may suspend him or remove him for cause, and, if he is prevented from taking part in the procedure, substitute one with the requisite qualifications. He must be summoned to any trial in which there is question, before a competent judge, of the validity or nullity of a marriage, and any proceeding will be null if he is not duly summoned and has the opportunity to examine the witnesses, and, orally or in writing, to bring forward whatever arguments may favour the validity of the marriage. He must be cited even though the party interested in the defence of the marriage be present, and all the acts of the court are always to be noticed as accurately as possible. He has a right to bring forward new documents or witnesses favourable to the marriage. On assuming his office he must take an oath to fulfil its duties and he is expected to renew the oath in each case. If the judge decides in favour of the marriage the defender takes no further action unless its opponent appeals to a higher court. Here a defender undertakes anew the defence of the marriage. If the judge of first instance decides against the validity of the marriage and no one else appeals, the defender of marriage is required by the Bull "Dei Miseratione" in all cases to appeal to the higher court. If the first two courts agree upon the nullity of a marriage the defender need not appeal, unless his conscience tells him that a serious mistake was made. If he feels his duty to appeal a third time, he has not been treated till his plea is heard. The decision in matrimonial cases is never absolutely final; so that if a new, serious reason appears for the validity of a marriage, it must be judicially investigated.

This legislation was extended and enforced in the United States by a subsequent papal bull, published with the "Acta and Decrees of the Third Plenary Council of Baltimore". Though the Bull "Dei Miseratione" does not require it, the practice of the Roman Congregations extends the intervention of the defender to cases of true marriages not consummated where the Holy See is requested to grant a dispensation for a new marriage. The obligation of the defender to appeal from the decision of first instance, adverse to the validity of a marriage, has been modified by the Holy See in several cases, where the invalidity depends upon facts indisputably proven, through the Congregation of the Holy Office (5 June, 1889) where a decree was declared (16 June) that the question of the case belongs to the whole Church. Where the decree "Tamentii" of the Council of Trent was binding, requiring the presence of the parish priest for the validity, if only a civil ceremony was used, the bishop may declare the marriage null without the participation of the defender. In view of the modern practice the defender is contained in the decree "Ne Temere" of Pius X this also holds anywhere if a marriage is attempted only before a civil authority or non-Catholic minister of religion. Yet if an ecclesiastical form had been used, and the nullity from clandestinity was questioned, his presence is required; but if the impediment of clandestinity clearly appears he need not appeal. This is true also if, through absence of ecclesiastical dispensation, there is an impediment of disparity of worship, or of consanguinity, or of affinity from lawful intercourse, or of spiritual relationship, or of certain previous legitimate marriage still existing. In these cases the ordinary may, with the participation of the defender, declare the marriage null, and the defender is not required to appeal. This, however, was declared by the Holy Office (27 May, 1901) to be understood only of cases in which certainly and clearly the impediment is proven; otherwise the defender must proceed to the higher court. The bishop is not deputed to exercise his office gratuitously, but he may be compensated from fees imposed by the court or from other diocesan resources.

R. L. BuRTSELL.

Defensor Ecclesiae. See Advocatus Ecclesiae.

Definition, Theological.—The Vatican Council (Sess. iv, cap. iv) solemnly taught the doctrine of papal infallibility in the following terms: "The Roman Pontiff, when he speaks ex cathedra, that is to say, when in the exercise of his office of pastor and teacher of all Christians he, in virtue of his supreme Apostolic authority, defines that a doctrine on faith or morals is to be held by the whole Church, by the assistance of God promised to him in the person of Blessed Peter, has that infallibility with which it was the will of Our Divine Redeemer that His Church should be furnished in defining a doctrine on faith or morals. From this teaching we obtain the authoritative notion of the meaning of definition in its theological, as distinct from its philosophical, or canonical, sense. It is an irreducible decision, by which the supreme teaching
authority in the Church decides a question appertaining to faith or morals, and which binds the whole Church. From this explanation it will be seen that four conditions are required for a theological definition.

(1) It must be a decision by the supreme teaching authority in the Church.—There are two organs of supreme doctrinal authority, viz.: the pope, speaking in his official capacity as pastor and teacher of all Christians and as metropolitan of the Roman Province, and as Primate of Italy, or as Patriarch of the Western Church, or as head of any Roman Congregation, but as supreme pastor of the whole Church. The bishops of the Catholic Church assembled with the pope in a general council have the same doctrinal authority with which the pope is endowed; and so have the bishops dispersed throughout the Catholic world when, in conjunction with the pope, they teach a doctrine of faith or morals to be irrevocably held by all Christians. These two supreme teaching authorities are the organs of active infallibility from which alone a theological definition can proceed.

(2) The decision must concern a doctrine of faith or morals.—Faith means the speculative doctrines of revelation; morals, the practical doctrines of revelation. Faith is what we have to believe, morals what we have to do, in order to obtain eternal life. Both faith and morals are parts of the deposit which Christ left for the guidance of His Church; so far as the obligation of assent is concerned, there is no difference between them; the distinction is made for the sake of convenience rather than for the sake of any substantial difference between them so far as they are the objects of active infallibility. Doctrines of faith or morals which are formally revealed are called the direct object of infallibility, while doctrines which are only virtually revealed, or are only intimately connected with revelation, such as dogmatic or moral facts, are called the indirect object of infallibility. The Church has authority to issue definitions in connection with the direct and the indirect object of active infallibility. It is not, however, de fide that the Church has infallible authority over the indirect doctrines of faith and morals, though it cannot be denied without theological censure.

(3) The decision must bind the Universal Church.—Definitors bind only a part of the Church are not definitions; but only those which command the assent of all the faithful. It is not, however, absolutely necessary that the decree should be directly sent or addressed to the whole Church; it is quite sufficient if it is made clear that the supreme teaching authority means to bind the Universal Church. Thus, St. Leo addressed his famous dogmatic definition to Flavian, yet it was rightly considered as binding the Universal Church; and Pope Innocent sent his decree to the African Church alone, yet St. Augustine exclaimed: Causa finita est, utinam aliquando finiatur error! (Serm. ii, de Verp. Ap., c. vii).

(4) The decision must be irrevocable or, as it is called, definitive.—Arguments contained in conciliar definitions are proposed by the supreme teaching authority in the Church, they concern faith and morals, and they bind the Universal Church; yet they are not definitions, but only the representation of conditions which are not definitively proposed for the assent of the whole Church. Two things are implied by the statement that a decree, to be a definition, must be final and irrevocable. The decree must be the last word of supreme teaching authority; there must be no possibility of re-opening the question in a spirit of doubt; the decree must settle the matter for ever. The decree must also, and in consequence of its final nature, bind the whole Church to an irrevocable internal assent. The assent is at least de fide, and therefore in dogmas and in doctrines which are formally revealed it is also an assent of Divine faith. When the definition commands an irrevocable assent of Divine faith as well as of ecclesiastical faith, the defined dogma is said to be de fide in the technical sense of this phrase. It is well to note that the nature of a decree does not prevent the defined doctrine from being examined anew and defined again by the pope or a general council; what it excludes is a re-opening of the question in a spirit of doubt about the truth of the doctrine which has been already definitively settled.

It has been sometimes said that it is impossible to know whether or not a theological definition has been issued; but very few words are needed to show that the assertion is without foundation. At times, doubt will remain about the definitive nature of a decree, but as a rule no possibility of doubt is consistent with the terminology of a definitive decree. Thus in the doctrinal teaching of a general council, anathema attached to condemned errors is a certain sign of an infallible definition. Words also like those in which Pius IX solemnly defined the doctrine of the Immaculate Conception of the Blessed Virgin give irrefutable proof of the definitive nature of the decree. "It is of the person of our Lord Jesus Christ and of the Blessed Apostles Peter and Paul, and by Our own authority, We declare, pronounce and define the doctrine . . . to be revealed by God and as such to be firmly and immutably held by all the faithful." No set form of words is necessary; any form which clearly indicates that the four requisite conditions are present suffices to show that the decree is a definition in the strict sense. It should be noted that not everything contained in a definition is infallibly defined. Thus, arguments from Scripture, tradition, or theological reason, do not come under the exercise of definitive authority. Incidental statements, called obiter dicta, are also examples of non-definitive utterances. Only the doctrine itself, to which those arguments lead and which these obiter dicta illustrate, is to be considered as infallibly defined. (See Infallibility; Censures, Theological; Dogmatic Facts; Beatification and Canonization; Faith.)

Definitors (in Canon Law), an official in secular deaneries and in certain religious orders. Among regulars, a definito is appointed as a counsellor of the provincial or general superior with certain determinate powers. (See Definitors in Religious Orders.) Dioceses are usually divided into deaneries, and these deaneries are again sub-divided into districts which are sometimes called definitones. Over each district is placed an official styled definito, who oversees the administration of ecclesiastical property and also gives aid to the dean in the more important duties of his office. Such definitores are elected by the rural chapters with the bishop's approval, or in provincial chapters by the ordinaries. Anciently, their principal duty was to care for and divide the revenues of a prebend between the heirs of the deceased and the new occupant, and likewise to determine what proportion of income belonged to outgoing and incoming beneficiaries of a church. The definito also is the representative of the church; the church father is absent or incapacitated by illness or irregularity. It is his duty to announce to the bishop, likewise, the death of the dean and conduct preparations for the election of a successor. It is to be observed that definitores are in no sense necessary officials of a dioceese, and that the duties here assigned to them are
sometimes fulfilled by others. In some decanal or rural chapters the title given to the definator is chamberlain or treasurer.

William H. W. Fanning.

Definitors (in Religious Orders), generally speaking, the governing council of an order. Bergier describes them as those chosen to represent the order in general or provincial chapters, but this is not altogether correct, since the change varies in different orders. With the Dominicans all who are sent to represent the provinces in a general chapter are definitors; amongst the Cuniac monks there existed a similar regulation (though normally in the Benedictine Order definitors have no place). On the other hand, in the Franciscan Order, definitors are elected by the general and provincial chapters to assist the general or provincial superiors in the government of the order and a similar rule exists amongst the Carmelites and the Hermits of St. Augustine. But in this case it would seem that the definitors form a sort of executive committee of the chapter, since they are subject to the legislative enactments of the chapter. Definitors, strictly so called, have a decisive vote in congregation equally with the general or provincial superior; in this they differ from mere consultors such as exist in some orders and in the Society of Jesus. Nor may the general or provincial superior act in matters of conscience without taking the vote of the definitors. A definitor, however, has the right to vote only when present in congregation. When called to give his opinion in congregation he is bound in conscience to speak candidly according to his own judgment, even if he knows his opinion to be contrary to that of the other definitors, and if he fails to do so in matters of conscience, he is held to sin grievously. Yet when the vote is taken, he is bound to sign the declaration of the majority, though he has the right to insist upon a minority report. In some orders, e.g. the Capuchin, the junior definitor gives his opinion first, that he may not be influenced by the seniors; but in other orders the senior speaks first. Again, in some orders the local superiors are appointed by the definitors; in others they are elected by the local community. Thus, amongst the Franciscans, the provincial superior is selected by the provincial chapter, subject to confirmation by the general and his local definitors, whereas the superiors of houses are appointed directly by the provincial definitors: whilst amongst the Dominicans all local superiors are elected by the local community.

Degradation. See Irregularity.

Deger, Ernst, historical painter, b. in Bockenheim, Hanover, 15 April, 1809; d. in Düsseldorf, 27 Jan., 1885. Little is known concerning his early life. In 1828 he went to the Berlin Academy of Fine Arts to begin the study of art under Professor Wach, and was there so impressed by pictures of the Düsseldorf School that he placed himself under Schadow, the director of the Düsseldorf Academy. Deger, says Dr. Bans, "lived in religion, had a profound conviction of the nobility of his art, and painted what he felt, believed and hoped." He was only twenty-one when his "Pieta" brought him fame, and thenceforth he devoted himself to religious painting. In 1837 he went to Rome, where he studied at the Académie Julian and, under the Mullet brothers, made a thorough study of the frescoes by the old masters in Florence and Rome. Overbeck, leader of the German pre-Raphaelites and head of the "Nazarene School", gave advice and encouragement to these young zealots, and Deger especially gained much from contact with this master. Deger was intrusted with the most important frescoes in the church of St. Apollinaria (Remagen), and, fully equipped after his four years study, he returned from Rome in 1843 and began the work. In eight years he finished a noble series of paintings, representing the events in the life of Christ; these Apollinaria frescoes, the most remarkable productions of the "Nazarites", mark the zenith of the German school of religious painting, called by Cardinal Wiseman "the restorer of Christian taste throughout all Europe." In 1851 Frederick William IV, King of Prussia, commissioned Deger to paint twelve scenes in the chapel of the castle of Stolzenfels (Coblenz), and for this Deger chose subjects illustrating the redemption of mankind. When this monumental work was finished, Deger settled permanently in Düsseldorf, commenced again to paint in oil, and spent the rest of his life on easel pictures, chiefly Madonnas. Of these the most beautiful are the idyllic "Madonna 'mid the Green" and the inspiring "Regina Coeli". He frequently visited Munich where he painted a "Virgin and Child" and an "Ascension" for the Maximilianeum of that city. In 1857 and 1859 two of his notable canvases, both religious subjects, were hung in the Paris Salon. Deger was made professor in the Munich Academy of Fine Arts, a member of the Berlin Academy of Fine Arts, and, in 1866, professor in the Düsseldorf Academy of Fine Arts. His style is direct, and simple; his handling careful and precise; his drawing and power of characterization masterful; and his colour rich and harmonious. Deger exerted a powerful influence in rendering German art of its baroque element and in stimulating its votaries to poetry, loftiness, and profound conviction. Two of his notable works are "Adam and Eve", in the Raczynski Gallery, Berlin, and the "Virgin and Child", in St. Andrews' Chapel, Düsseldorf.

Leigh Hunt.

Degradation (Lat. degradatio), a canonical penalty by which an ecclesiastic is entirely and perpetually deprived of all office, benefit, dignity, and power conferred on him by ordination; and by a special ceremony is reduced to the state of a layman, losing the privileges of the clerical state and being given over to the secular arm. Degradation, however, cannot deprive an ecclesiastic of the character conferred in ordination, nor does it dispense him from the law of celibacy and the recitation of preliminary. Degradation is twofold: verbal, i.e. the mere sentence of degradation; and real or actual, i.e. the execution of that sentence. They are not two distinct penalties, but parts of the same canonical punishment. Degradation is a perpetual punishment, and the clergyman so punished never any right to return to it. It differs from deposition in so far as it deprives, and always totally, of all power of orders and jurisdiction and also of the privileges of the ecclesiastical state, thus in all things subjecting the delinquent to civil authority. While a bishop, even before his consecration, can inflict deposition or pronounce a sentence of verbal degradation and can reinstate those so punished, it is only a consecrated bishop who can inflict actual degradation, and only the Holy See which can reinstate ecclesiastics actually degraded.

Solemn degradation owes its origin to the military practice of thus expelling soldiers from the army; the Church adopted this custom of separating from the church the very delinquent clerics from the ecclesiastical order. The first mention of clerical degradation is found in the eighty-third Novel of Justinian; subsequently it was adopted with its external solemnities by early medieval councils as a repressive measure against heretics. It did not originally differ from de-
position, and degraded ecclesiastics were still privileged and remained exclusively subject to ecclesiastical jurisdiction. The laity, however, complained that churchmen, even when degraded, secured in this way impunity for their crimes. Hence Innocent III (c. viii, Depr. falsi, l. v, 20) made it a permanent rule that clerical offenders, after degradation, should be brought to the secular courts, to be punished according to the law of the land. Degradation cannot be inflicted except for crimes clearly designated in the law, or for any other enormous crime when deposition and excommunication have been applied in vain, and the culprit has proved incorrigible. According to the Council of Trent (Sess. XIX., c. iv., De relig. abh.) a bishop, when inflicting degradation on a priest, must have with him six mitred abbots as associate judges, and three such prelates for the degradation of a deacon or subdeacon. If abbots cannot be had, a like number of church dignitaries of mature age, and skilled in canon law; may take their place. All these must give their vote, which is decisive, and must be unanimous for the imposition of so grave a penalty.

The ceremony of actual degradation consists chiefly in bringing before the ecclesiastical superior the culprit vested in the robes corresponding to his order; in gradually divesting him of his sacred vestments, beginning at his feet; at last he receives the sentence, finally, in surrendering him to the lay judge (who must always be present) with a plea for lenient treatment and avoidance of bloodshed. The words pronounced by the ecclesiastical superior during the ceremony, also other rubrical details, are laid down by Boniface VIII (c. Depraedatio, ii, de penis, in VI) and by the Roman Pontifical (pt. III., c. vii.) Degradation is now rarely, if ever, inflicted; dismissal, with perpetual deprivation, takes its place.

DEGREES. ACADEMIC. See ARTS; UNIVERSITY.

Deharbe, Joseph, theologian, catechist, b. at Strasbourg, Alsace, 11 April, 1800; d. at Maria-Laach, 8 November, 1871. He entered the Society of Jesus in 1817 and after teaching for eleven years at the Jesuit College at Bregt, Switzerland, he became in 1840 a missionary catechist in Cologne. With Father Roh, S. J., he established at Lucerne in 1845 the Academy of St. Charles Borromeo. When in 1847 a persecution broke out against the Jesuits in Switzerland, Deharbe barely escaped with his life. After that he was chiefly engaged in giving missions in Germany. As a catechist he felt very keenly the lack of reliable catechism and was encouraged by his superior, Father Devis, to compose a serviceable textbook, but always hesitated, feeling himself incompetent. His superior, knowing Deharbe’s spirit of obedience, simply commanded him to undertake the task. As a model he took the Marius catechism of 1843 and made use also of other good textbooks, notably of Bossuet’s catechism. He completed his first catechism, called “Katholischer Katechismus oder Lehrbegriff”, in 1847. In 1848 it appeared anonymously at Ratisbon and immediately won universal approval. Bishop Blum of Limburg introduced it officially into his diocese in the same year; the following year the Bishops of Trier and Hildesheim did likewise for their sees. In 1850 the Bavarian bishops resolved to introduce a common catechism for the whole kingdom, and accepted Deharbe’s catechism, which was then introduced in the German dioceses adopted it as follows: Cologne, 1854; Mainz and Paderborn, 1855; Fulda, 1856; Ermland, 1861; Culm, 1863; Goens-Posen, 1868. At the same time it spread outside of Germany, in Switzerland, Austria-Hungary, and the United States. It was translated in 1851 into Magyar, then into Bohemian, Italian, and French; into Swedish and Marathi, 1861; into Polish and Lithu-
Of the various deis, all, at least to a very large extent, seem to concur. Deism, in its every manifestation, was opposed to the current and traditional teaching of revealed religion.

In England the deistical movement seems to be an absurd necessary outcome of the political and religious conditions of the time and country. The Renaissance had fairly swept away the later scholasticism and with it, very largely, the constructive philosophy of the Middle Ages. The Protestant Reformation, in its open revolt against the authority of the Church, had in a measure wrought a revolution in which all religious pretensions were to be involved. The Bible as a substitute for the living voice of the Church and the State religion as a substitute for Catholicism might stand for a time; but the very mentality that brought them into being as substitutes could not logically rest content with them. The principle of private judgment in matters of religion had not run its full course in accepting the Bible as the Word of God. A favourable opportunity would spur it forward once more; and from such grudging acceptance as it gave to the Scriptures it would proceed to a new examination and a final rejection of their claims. The new theory of the empirical or naturalistic improvement of the physical horizon in such discoveries as those of astronomy and geography, the philosophical doubt and rationalistic method of Descartes, the advocated empiricism of Bacon, the political changes of the times—all these things were factors in the preparation and arrangement of a stage upon which a criticism levelled at revelational religion might come forward and play its part with some chance of success. And though the first essays of deism were somewhat veiled and intentionally indirect in their attack upon revelation, with the revolution and the civil and religious liberty consequent upon it, with the spread of the critical and empirical spirit as exemplified in the philosophy of Locke, the time was ripe for the full reformation of the case against Christianity as expounded by the Establishment and the sects. The wedge of private judgment had been driven into authority. It had already split Protestantism into a great number of conflicting sects. It was now to attempt the wreck of revealed religion in any shape or form.

The deistical tendency passed through several more or less clearly defined phases. All the forces possible were mustered against its advance. Parliament took cognizance of it. Some of the deists were publicly burnt. The bishops, and clergy of the Establishment were strenuous in resisting it. For every pamphlet or book that a deist wrote, several "answers" were at once put before the public as antidotes. Bishops addressed pastoral letters to their dioceses warning the faithful of the danger. Woolston "Moderator" set no less than five such pastoral letters from the Bishop of London. All that was ecclesiastically official and respectable was ranged in opposition to the movement, and the deists were held up to general detestation in the strongest terms. When the critical principles and freethought spirit filled the minds of the younger generation, they would not refer to the "Moderator" for vindication of their beliefs, for he was a pretender to rationalism, a mere materialist in their doctrine; while the French thinkers who subsequently built upon the foundations laid by the English deists were almost exclusively so.

Others rested content with a criticism of ecclesiastical authority in teaching the inspiration of the Sacred Scriptures, and of an absolute person of God as the final, infallible, and infallible truth given by God to man. In this last point, while there is a considerable divergence of method and procedure observable in the writings of
the first principles of religion. It asserted its right to perfect tolerance on the part of all men. Freethought was the right of the individual; it was, indeed, but one step in advance of the received principle of private judgment. Such a representation of deism as deists and Collins may be taken as typical of this stage. So far, while critical and insisting on its rights to complete toleration, it need not be, though as a fact it undoubtedly was, hostile to religion. A second phase was that in which it criticized the moral or ethical character of religious teaching. The Earl of Shaftesbury, for example, was the first to urge against the doctrine of future rewards and punishments as the sanction of the moral law. Such an attitude is obviously incompatible with the accepted teaching of the Churches. Upon this follows a critical examination of the writings of the Old and New Testaments, with a particular regard to the verification of prophecy and to the miraculous incidents therein recorded. Antony Collins performed the first part of this task, while Woolston gave his attention principally to the latter, applying to Scriptural records the principles put forward by Blount in his notes to the "Apolleionus Tyanaeum," where, for the first time, there was a full and adequate denunciation of natural religion as such was directly opposed to revealed religion. Tindal, in his "Christianity as old as the Creation," reduces, or attempts to reduce, revelation to reason, making the Christian statement of revelational truths either superfluous, in that it is contained in reason itself, or positively harmful, in that it goes beyond or contradicts reason.

It is thus clear that, in the main, deism is no more than an application of critical principles to religion. But in its positive aspect it is something more, for it offers as a substitute for revealed truth that body of truths which can be built up by the unaided efforts of natural reason. The term deism, however, has come in the course of time to have a more specific meaning. It is taken to signify a peculiar metaphysical doctrine supposed to have been maintained by all the deists. They are thus grouped together roughly as members of a quasi-philosophical school, the chief and distinguishing tenet of which is the relationship asserted to obtain between the universe and God. God, in this somewhat inferential and constructive thesis, is held to be the first cause of the world, and to be a personal God. So far the teaching is that of the theists, as contrasted with that of atheists and pantheists. But, further, deism not only discredits God as effect and cause; it emphasizes the transcendence of the Deity at the sacrifice of His indwelling and His providence. He is apart from the creation which He brought into being, and unconnected as to the details of its working. Having made Nature, He allows it to run its course without interference on His part.

In this point the doctrine of deism differs clearly from that of theism. The verbal distinction between the two, which are originally convertible terms—deism, of Latin origin, being a translation of the Greek theism—seems to have been introduced into England by the deists themselves, in order to avoid the denomination of naturalists by which they were commonly known. As naturalism was the epithet generally given to the teaching of the followers of the Spinozistic philosophy, as well as to the so-called atheists, deism seemed to its professors at once to furnish a dissavowal of principles and doctrines which they repudiated, and to mark off their own position clearly from that of the theists. The word seems, however, to have been first employed in France and Italy about the middle of the sixteenth century, for it occurs in the epistle dedicatory prefixed to the second volume of Pierre du Bois's "Instruction Christiane" (1568), where the reforming divine speaks of some persons who had called themselves by a new name—deists. It was principally upon account of their methods of investigation and their criticism of the traditional Prot- estant religious teaching that they had also come to be called rationalists, opposing, as has been pointed out, the findings of unaided reason to the truths held on faith as having come from God through external revelation. While ignorant of innate ideas, or the invisible Being, and of any a priori knowledge of its existence, they were at the same time actuated, or by attempting actively to refute it and prove its worthlessness, rationalism was the obvious term of their procedure. And it was also, in very much the same manner, by their claiming the freedom to discuss on these lines the doctrines set forth in the Bible and taught by the Churches, that they earned for themselves the no less commonly given title of Freethinkers.

There are notable distinctions and divergences among the English deists as to the whole content of truth given by reason. The most important of these distinctions is undoubtedly that by which they are classed as "mortal" and "imortal" deists; for, while many conceded the philosophical doctrine of a future life, the rejection of future rewards and punishments carried with it for some the denial of the immortality of the human soul. The five articles laid down by Lord Herbert of Cherbury, however, with their elaborate and complex form, as expounded by Charles Blount, may be taken—and especially the former—as the formal professions of deism. They contain the following doctrines: (1) that there exists one supreme God, (2) who is chiefly to be worshipped; (3) that the principal part of such worship consists in piety and virtue; (4) that there is no God without us, and that, if we do so, God will pardon us; (5) that there are rewards for good men and punishments for evil men both here and hereafter. Blount, while he enlarged slightly upon each of these doctrines, broke one up into two and added a seventh in which he teaches that God governs the world by His providence. This can hardly be accepted as a doctrine common to the deists; while, as has been said, future rewards and punishments were not allowed by them all. In general they rejected the miraculous element in Scripture and ecclesiastical tradition. They would not admit that there was any one peculiar people, such as the Jews or the Christians, singled out for the reception of a truth-message, or chosen to be the recipients of any special grace or supernatural gift of God. They denied the doctrine of the Trinity and altogether refused to admit any mediatorial character in the person of Jesus Christ. The doctrine of "imputed righteousness" of Christ was particularly popular with orthodoxy at the time—shared the fate of all Christological doctrines at their hands. And above all things and upon every occasion—but with at least one notable exception—they raised their voices against ecclesiastical authority. They never tired of inveighing against "a principle of the priesthood" in its very shape or form, and they went so far as to assert that revealed religion was an imposture, an invention of the priestly caste to subdue, and so the more easily govern and exploit, the ignorant.

As deism took its rise, in the logical sequence of events, from the principles asserted at the Protestant Reformation, so it ran its short and violent course in a development of those principles and ended in a philosophical scepticism. For a time it caused an extraordinary commotion in all circles of thought in England, provoked a very large and, in a sense, interesting polemical literature, and penetrated from the highest to the lowest strata of society. Then it fell flat, whether because the controversy had lost the keen interest of its acuter stage or because people in general were drifting with the current of criticism towards the new views, it would be difficult to say.

With most of the arguments of the deists we are already quite familiar, thanks to the efforts of modern freethought and rationalism to keep them before the public. Though cautious, often clever, and sometimes extraordinarily blasphemous, we open the shabby little
books to find them for the most part out-of-date, commonplace, and dull. And while several of the "replies" they evoked may still be reckoned as standard works of apologetics, the majority of them belong, in more senses than one, to the writings of a bygone age. When Viscount Bolingbroke's works were published posthumously in 1754, and, a few years later, six years after his death, the editor rejected utterly the doctrine of a mediatorial Christ and contends that such a doctrine is subservient of true religion; while the many falsehoods he perceives in the traditional and positive forms of Christianity he puts down to the political invention for purposes of power, and of easy and of cheap accommodation for priests and religious teachers. The seven articles into which Blount expanded the five articles of Lord Herbert have been noticed above. His notes to the translation of Philostratus' "Life of Apollonius Tyaneus" were published in 1680. He wrote also the "Anima Mundi" (1678-9); "Religio Laici" practically a translation of Lord Herbert's book of the same title (1683); and "The Oracles of Reason" (1693).

John Toland (1670-1722), while originally a believer in Divine revelation and not opposed to the doctrines of Christianity, advanced to the rationalistic position with strong pantheistic tendencies by taking away, in the superstitious and mysterious element of Christianity, its principal thesis consisted in the argument that "there is nothing in the Gospels contrary to reason, nor above it; and that no Christian doctrine can properly be called a mystery." This statement he made on the assumption that whatever is contrary to reason is untrue, and whatever is above reason is inconceivable. He contended, therefore, that reason is the safe and only guide to truth, and that the Christian religion lays no claim to being mysterious. Toland also raised questions as to the Canon of Scripture and the origins of the Church. He adopted the view that in the early Church there were, during the first century, the Gnostics, the Manichaeans, and the Judaizing; and he compared some eighty spurious writings with the New Testament Scriptures, in order to cast doubt upon the authenticity and reliability of the canon. His "Amyntor" evoked a reply from the celebrated Dr. Clarke, and a considerable number of books and tracts were published in refutation of his doctrine. The chief works for which he was responsible are: "Christianity Not Mysterious" (1696); "Letters to Serena" (1704); "Pantheistic" (1720); "Amyntor" (1699); "Nazaræus" (1718).

Henry Ashton Cooper, third Earl of Shaftesbury (1671-1713), one of the most popular, elegant, and ornate of these writers, is generally classed among the deists on account of his "Characteristics." He himself would not admit that he was such, except in the sense in which deist is contrasted with atheist; of him Bishop Butler said that, had he lived in a later age, when Christianity was better understood, he would have been a good Christian. Thus, in a preface that Shaftesbury contributed to a volume of the sermons of Dr. Whichcot (1698), he "finds fault with those in this profane age, that represent not only the institution of preaching, but even the Gospel itself, and our holy religion, to be a system of delusion." The "Characteristics of Men, Matters, Opinions, and Times" (1711-1723) give clear evidence of Shaftesbury's deistical tendencies. It contains frequent criticisms of Christian doctrines, the Scriptures, and revelation. He contends that this last is not only useless but positively mischievous, on account of its doctrine of rewards and punishments. The virtue of morality he makes to consist in a conformity of our affections to our natural sense of the sublime and beautiful, to our natural estimate of the worth of men and things. The Go-
pel, he asserts with Blount, was only the fruit of a scheme on the part of the clergy to secure their own aggrandizement and enhance their influence. With regard to professions it is difficult to reconcile his statement that he adheres to the doctrines and mysteries of religion; but this becomes clear in the light of the fact that he shared the peculiar politico-religious view of Hobbes. Whatever the absolute power of the State sanction is good; the opposite is bad. To oppose one's private religious convictions to the religion sanctioned by the State is of the nature of a revolutionary act. To accept the established state religion is the duty of the citizen. Shaftesbury's more important contributions to this literature are the "Characteristics" and "Letters on Several Occasions". In his "Discourse of Freethinking, occasioned by the Rise and Growth of a Sect call'd Freethinkers" (1713), he advocated unprejudiced and unfettered inquiry, asserted the right of human reason to examine and interpret revelation, and attempted to show the uncertainty of prophecy and of the New Testament record. In another work Collins puts forward the theory that the Old Testament is allegorical and cannot be considered a real proof of the truth of its event. He further points out that the idea of the Messiah among the Jews was of recent growth before the time of Christ, and that the Hebrews may have derived many of their theological ideas from their contact with other peoples, such as the Egyptians and Chaldeans. In particular, when his writings on prophecy were attacked, he did his utmost to discredit the book of Daniel. The "Discourse on the Grounds and Reasons of the Christian Religion" (1724) called forth a great number of answers, principal among which were those of the Bishop of Oxford, Mr. Sherlock, and Dr. Chalmers. The "Essay Concerning the Use of Reason in Theology" (1707), "Discourse of Freethinking" (1713), "Discourse on the Grounds and Reasons of the Christian Religion" (1724), and the "Scheme of Literal Prophecy Considered" (1727) were written to answer the critics.

Thomas Woolston (1669–1733) appeared as a moderator in the acrimonious controversy that was being waged between Collins and his critics with his "Moderator between an Infidel and an Apostate". As Collins had succeeded in allegorizing the prophecies of the Old Testament, until nothing remained of them, so Woolston tried to allegorize away the miracles of Christ. During the years 1728–9, six discourses on the miracles of Our Lord came out in three parts, in which Woolston asserted, with an extraordinary violence of language and blasphemy that could only be attributed to a madman, that the miracles of Christ, when taken in a literal and historical sense, are false, absurd, and ridiculous; and that they must be received in a mystical and allegorical sense. In particular, he argued at great length against the miracles of resurrection from the dead wrought by Christ, and against the resurrection of Christ Himself. The Bishop of London issued five pastoral letters against the controversy, and many of the writing was in retaliation to his work. The most noteworthy reply to his doctrines was "The Tryal of the Witnesses" (1729) by Dr. Sherlock. In 1729–30, Woolston published "A Defense of his Discourse against the Bishop of London and St. David's", an extremely weak production.

Matthew Tindal (1659–1733) gave to the controversy the work that soon became known as the "Deistic Bible". His "Christianity as Old as the Creation" was published in his extreme old age in 1730. As its sub-title indicates, its aim was to show that the Gospel is no more than a republication of the Law of Nature. This it undertakes to make plain by evascating the Christian religion of all that is not a mere statement of natural religion. External revelation is declared to be needless and useless, indeed impossible, and both the Old and New Testaments to be full of oppositions and contradictions. The work was taken as a serious attack upon the traditional position of Christianity in the world, as is evident from the criticism it at once provoked. The Bishop of London issued a pastoral; Waterland, Law, Conybeare, and others replied to it, Conybeare's "Defence" creating a considerable stir at the time. More than any other work, "Christianity as Old as the Creation" was the occasion of the writing of Butler's well known "Analogy".

Thomas Morgan (d. 1743) makes professions of Christianity, the usefulness of revelation, etc., but criticizes and at the same time rejects as revelational the Old Testament history, both as to its personages and its narratives of fact. He advances the theory that the Jewish "accomodated" the truth, and even goes so far as to extend this "accommodation" to the Apostles and to Christ as well. His account of the origin of the Church is similar to that of Toland, in that he holds the two elements, Judaizing and liberal, to have resulted in a fusion. His principal work is "The Moral Philosopher; or, Deliverance of the Philistines, a Christian Deist, and Theophanes, a Christian Jew" (1737, 1739, 1740). This was answered by Dr. Chapman, whose reply called forth a defence on the part of Morgan in "The Moral Philosopher, or a farther Vindication of Moral Truth and Reason" (1773). Thomas Chubb (c. 1702–c. 1773) was a rather humble origin of and poor and elementary education, by trade a glove-maker and tallow-chandler, is the most plebeian representative of deism. In 1731 he published "A Discourse Concerning Reason" in which he disavows his intention of opposing revelation or serving the cause of infidelity. But "The True Gospel of Jesus Christ", in which Leckler sees "an essential moment in the historical development of Deism", announces Christianity as a life rather than as a collection of doctrinal truths. The true gospel is that of natural religion, and as such Chubb treats it in his work. In his posthumous work a sceptical advance is made. These were published in 1748, and after the "Remarks on the Scriptures" contain the author's "Farewel to His Readers". This "Farewel" embraces a number of tracts on various religious subjects. A marked tendency to scepticism regarding a particular providence pervades them. The efficacy of prayer, as well as the future state, are questioned by the host of sceptics. Arguments are urged against prophecy and miracle. There are fifty pages devoted to these against the Resurrection alone. Finally, Christ is presented as a mere man, who founded a religious sect among the Jews. Chubb published also "The Supremacy of the Father" (1716) and...
Religion, in its most general sense, is a universal phenomenon of mankind. The assertion of Lubbock, that tribes exist who have no notion of the Deity, is refuted by Tytler and Rotkoff. At times this conception appears lofty and pure, again it is comparatively rude and involved in a mass of superstition and folklore. Yet, however imperfect and childish the expression may seem, it represents the highest idea of the Deity which the mind, for the time and under the circumstances, grasped.

I.—Religious life among savage peoples of to-day, as among pagan nations before Christianity, involves the entangled confusion of a forest where trees, brambles, and creepers, of all ages and sizes, are to be seen interlacing, supporting and crushing each other with their earthy growths, while, above the topmost branches, is caught a glimpse of the blue sky of heaven.

The religion of paganism in general is Polytheism, which has been accounted for by theories of Animism, Fetishism, Naturism, and the concrete forms of Anthropomorphism and Idolatry. The advocates of these various theories should be classed as theorists rather than historians. Taking the theory of evolution as a common starting-point, we hold that man as a brute and that he is a brute gradually transformed. They differ only in the cause and nature of the religious development which resulted in the notion of the Deity. Here we reject all presuppositions and deal directly with the historical aspect of the problem. In the words of Waits, the primitive man of modern anthropologists is a pure fiction, however convenient a fiction he may be.

Paganism presents not a doctrine, but a grouping of customs and teachings different and often opposed, an incoherent mass of beliefs with various origins. Close analysis enables the student to separate the doctrinal streams and trace them to their proper sources. The luminous truth presented by this study is the corruption of religious ideas on the nature of the Deity by the tangled confusion of human growth. Sir A. C. Lyall (Asiatic Studies, Ser. II, p. 234), while rejecting the theory of a primitive revelation, admits that "beyond doubt we find many beliefs and traditions running downward, spreading at a level much below their source". The causes which contributed to produce this tangled profusion in the pagan conception of the Deity are:

(1) Deification of nature and her powers and of sensible objects. Of nature the result was an imitable variety of deities. As time passed, the divine assumed thousands of fanciful and fortuitous images and forms. Deification of the powers of nature led first to the worship of the elements. One divinity of the heavens stood in contrast with one of the earth. Fire, as the warming, nourishing, consuming, and destroying power, was early worshipped as a separate deity. Hence the Vestal Virgins in Rome, the Vedic Agni, the Fire-worshippers of Mazdaism, and the sacred fire of Shintoism. So also moisture or water, not only in general, but in its concrete forms, e.g., sea, lake, river, spring, cloud; and thus was had a fourth elemental deity.

(2) The worship of the stars that illumine the earth, developed, above all the worship of the sun. Where soil and vegetation was rich, the earth was regarded as a nursing mother, and Geodatry in many forms arose. In the Vedic hymns we can trace the transition from natural phenomena into natural deities—e.g., the i.e. fire, Varuna, i.e. heaven, Indra, i.e. the rain-clouds—but even then doubts spring up, and the poet writers ask themselves whether, after all, there are such things as the Devas. In Homer and Hesiod the forces of nature are conceived as persons, e.g., Uranus, i.e. heaven, Nix, i.e. night, Hymn i.e. earth, etc.; Osoiros, i.e. element; Ocean, i.e. ocean; the answer of Achilles to the river Scamander "in human form, confessed before his eyes" (Iliad, XXI), and his
prayer to the winds Boreas and Zephyrus, that they
kindle the flame on the funeral pyre of Pandarus
(Iliad, XXIII). Observation of the fact that in na-
ture two energies—one active and generative, the
other passive and feminine—combine, led men to as-
soicate heaven and earth, sun and moon, day and
night, as common primal and motheiy deities co-op-
erating in the production of being. Hence the dis-
tinction of male divinities—e.g. heaven, ether, sun—and of female divinities—e. g. earth, air, moon.
From this only a step to the deification of the genera-
ptive principle and the worship of the phallos.

(2) Anthropomorphosis.—The power of nature were
at first worshipped without form or name, afterwards
humanized and identified as gods. The ancient Pelas- 
gic worship, appears as Rhea in Cretan traditions,
as the Cybele of Asia Anterior, as Hera in
Arcadia and Samos, as the goddess of nature Aphro-
dite, as Demeter. In Rome the Bona Dea of mystic
rite, whose proper name was not to be spoken, was later
akin to, or identified with, a number of Greek or Italian
deities. De la Saussaye’s writings of ancient Babylon-
Assyrian religion: “Among the influential words
which could avert or expel evil, the most prominent
were the names of the great gods; but these names
were considered to be secret, and therefore people ap-
pealed to himselt to the gods. In
Samothrace the Cabiri, i. e. great and mighty de-
ties, the supreme powers of nature, were adored at
first without specific names. In old Latium the pon-
tifices concealed the names of the gods. Herodotus
says the Pelasgian deities were nameless. In the Vedic
hymns the sacrificial tree, to which the sacrifices were
attached, is thus addressed: “Where thou knowest, O
Tree, the sacred names of the gods, to that place make
the offerings go.” According to de la Saussaye the
deities of the Rig-Veda are but slightly individualized.
To the formless gods of nature succeeded the deities of
Homeric imagination, in human shape and with
human names. In the poems of Herodotus it was
Homer and Hesiod who settled the theology of the
Greeks—in fact laid the basis of the later Hellenic
religion. The Greeks lavished the rich stores of their
intellectual life upon their deities, humanized and
severed them from natural phenomena. Hence the
whole of nature was pervaded by a familiar power,
descending from the elements as primal gods, the
individual members of which family were of kin to one
other and in mutual relations of higher and lower,
older and younger, male and female, stronger and
weaker; so that man, feeling himself surrounded on all
sides, discovered in the course of time, and in her various phenomena, their actions, histories,
and manifestations of their will. The conception of
these deities was anthropopathic, in their motives
and passions they were more powerful and more perfect
men, they had a human body and a human counte-
enance, human thoughts and feelings; they resided in
the clouds or on a high mountain; they dwelt in a
heavenly palace. Such an idea is incoherent and con-
tradictory. In reality the Deity was nature. If its
inanimate forms were personified and worshipped,
what not animals and plants—e. g. tree-worship?

(3) Human Adeptes is another cause and equally
prolific in later pagan times. Plattarch (in his “Rom-
ulus”) enters at length into the question, how the
soul, when separated from the body, advances into
the state of heroism, and from a hero develops into a
demon and from a demon becomes a god. To
Cicero the Deitatem was the central and the
mental principle of the mysteries (de Nat. Deor., III,
xxi). With the Greeks it had been a custom to hon-
our renowned or well-deserving men as heroes after
death, e. g. Herakles, Theseus; but to pay divine
honours to the living never entered into their minds in
early times. Heroes or saintly men were regarded
(a) as sons of the gods, e. g. in Hesiod; (b) as incarn-
tions of the great gods. The growth of popular Poly-
theism in modern India is due to the fact that the
Brahmins, by their doctrine of divine personifica-
tions, are in turn obscured by the swarm of earth-born deifications. Colebrooke says that the
worship of deified heroes is a later phase not to be
found in the Vedas, though the normal development
of heroes, of course, yet deified are therein mentioned occasionally. (c) The hero was identified with one of the great gods. Thus hero-worship was strange to the early Romans. Romulus, according to Platarch, was not worshipped as a hero properly speaking, but as a god, and that after his death. And the Statues of the Seuse were
(d) Hero-worship properly speaking, e. g. in the
Odyssey. (e) Apotheosis.—Plutarch tells us that
Lysander (d. 394 B.C.) was the first man to whom the
Greeks erected altars and offered sacrifices as to a god.
Farnell states that one of the most fruitful offshoots of
the older Hellenic system was hero-worship. And
Pliny writes, “Of all ways of paying due thanks to men
of great desert, the most time-honoured is to enrol them
as gods”. The Jaina faith, an offshoot of Buddhism, is
nothing but the worship of deified men. In Egypt
divine honours were paid to kings even during their life-
time. Cicero makes the deification of a Roman
“Knowest that thou art a god?” he represents the
glorified Scipio addressing himself in a dream (de Rep.
VI, xiv). Men and women after death had been
raised to be gods; therefore he would have his daugh-
ter Tullia exalted to the same honour, as having best
deserved it, and he would dedicate a temple to her
(ep. ad Att., xii). The Christian apologists, who stood face to face with Heathendom, positively
declared that all the deities of Paganism were de-
ified men. Among the Romans the worship of the
genius was to men the deification of manhood, as that of Juno was to the deification of womanhood.
Pliny saw in this belief a deification proceeding upon the theory that the genius, or Juno, was nothing else than the spiritual element of
man, or woman. Not only the individual, but every
place and, above all, the Roman people and Rome
itself had its genius. The time-honoured worship of
the latter was naturalized with it, and passed
into, a worship of the emperor. Thus pre-Christian
heathenism culminated in the worship of Augustus.
In the Book of Wisdom the various stages in the
process of human deification are clearly described (Wis-
dom, xiv).

St. Augustine (Civ. Dei, IV, ii) discusses the
opinion of Roman writers that all the manifold gods
and goddesses of the Romans were in the final analysis
but one Jupiter, for these deities melt away into each
other on closer inspection. Thus we have a single
god, who by the dissection of his nature into various
aspects of his powers, and by the personification of
his individual powers, has been resolved into a multiplicity
of deities. The Romans thus broke up the idea of
deity by hypostasising particular powers, modes of
operation, physical functions, and properties. By this
process not only events in nature and in human life,
but their various phases, qualities, and circumstances
were considered apart as endowed with proper per-
sonalities, and worshipped as deities. Thus in the life
of a child, Vaticanus opens his mouth, Cunina guards
the cradle, Educa and Potina teach him to eat and
drink, Fabulinus to speak, Statalminus helps him to
wear his coat, Auleon the 

Since every act required a god, there was
scarcely any limit to the inventive work of the ima-
gination. And St. Augustine tells us (Civ. Dei, IV,
viii) that the Roman farmer was in the hands of a host
of deities who assisted him at each stage of ploughing,
boeing, sowing, and reaping. Under such conditions
we can understand how easily the cultured Roman
could embrace the pantheism of Stoic philosophy, teaching the one creative all-ruling power of Nature—itself a personification—and at the same time permit the ignorant person to find the worship and the deities the various acts and phases by which this power was manifested.

(5) A political element enters into the multiplication of deities in the Pagan world. To make a nation, several tribes must unite. Each has its god, and the nation in its turn personifies these in its theon. Or in time of war the victorious nation was not content to impose laws and tribute upon the conquered; it must displace the conquered deities by its own. Again, where ancient nations, each having its own religion and mythology, were brought by commerce into closer contact, the deities who showed a certain similarity were identified, and even their names were adopted by one language from another. According to Max Müller, Durga and Siva are not natural developments, nor mere corruptions of Vedic deities, but importations or adaptations from without. A striking illustration is furnished in the history of Hindoos, and earlier times the chief deities, general nature-powers or mere abstractions of the State or family. They had no real personality. Thus the Lares came from Etruria, the chief of them being the Lar Familiaris, the divine head of the family, the personification of the creative power assuring the duration of the family. The first of the domestic hearth, the protectress of the family, became identified later with the Greek Hestia. Afterwards, when Rome spread out into a world-power, it received into its Pantheon the deities of the nations conquered by its armies. Again, the political element becomes a more potent factor when deities are created by human enactment. Thus, in ancient Rome the pontifices had the right and care of making new deities. And in China to-day the Government orders posthumous honours and titles and deifications of men, gives titles and rewards to deities for supposed public service, and exercises a control over Buddhist incarnations. The Emperor of China uses the monopoly of deification as a constitutional prerogative, like the right of creating peers.

(6) A final explanation can be found in language. The words employed by the mind to designate spiritus are always drawn from the experience. In the beginning man naturally, expressed the power and attributes of the deity in different words drawn from nature and from life. According to de la Sausse, the opinion is even expressed in the Rig-Veda that the many names of the gods are only different ways of expressing the tendency of language is to become crystallized. Words gradually lose their etymological force, and their original meaning is forgotten. They stand out as distinct and independent facts in our mental life. What was at first a sign becomes itself an object. Thus in the Vedic religion the Sun has many names—Surya, Savitri, Mitra, Pushan, Aditya. Each of these names grew by itself into some kind of active personality after its original meaning had been forgotten. Originally all were meant to express one and the same object viewed from different points; e.g. Surya meant the Sun as offering of the sky; Savitri the Sun as quickener or enliven; Mitra the bright Sun of the morn; Pushan the Sun of the shepherds; Varuna was the sky as all-embracing; Aditya the sky as boundless. In this sense the Hindu gods have no more right to substantive existence than Edwards; they are nomina, not summa; i.e. words, not deities. So also in Egypt the sun is Ra, Horus, Amon, Mut, etc., and the same name was applied to a deity each day. In the evening, Osiris during the night. In another manner language may lead into error, as when Bancroft remarks that in many of the American languages the same word is used for storm and god. Brinton writes, "The descent is almost imperceptible which leads to the personification of wind as god." Goldscheider states that the Baghirmi in Central Africa use the same term for storm and deity. The Akra ask, "Who is the wind? . . . and storm God come?" for "Will it rain?" Here we have the same word with two meanings. Thus the Odjia, or Achant, call the deity by the same word as the sky, but mean a personal god who created all things and is the giver of all good things.

II.—The human race has at all times and in divers ways sought to express the notion of the deity. The history of religions, however, lays bare another truth, viz., that the farther back we go in the history of religious thought, the purer becomes the notion of the deity. In the Rig-Veda, the most ancient of the Hindu sacred books, the principles of the deity are clearly shown. The Deity is called "the only existing being" who breathed, calmly self-contained, in the beginning before there was sky or atmosphere, day or night, light or darkness. This being is not the barren philosophical entity found in the later Upanishads, "another", "other", "omniscient, who listens to prayers. Father Calmette maintains that the true God is taught in the Vedas. Again, "That which is and is one, the poets call in various ways", and it is declared to exist "in the form of the unborn being." Traces of a nature-religion are found in the Vedas. To a later date, however, must be ascribed the mythology of the Vedic hymns in which the "bright ones" (the heavens and earth, the sun and moon, with various elemental powers of storm and wind) are the only distinctly recognised deities. D'Harles, F. C. Cook, and Phillips hold that the moral and spiritual basis is older. Pictet, A. B. Smith, Banerjia, Ellingwood, Wilson, Muir do not hesitate to declare that the loftier conceptions of the Vedas are unquestionably the earlier, and that they show clear traces of a primitive monotheism. The use of different divine names in the Vedas does not warrant us in supposing diverse individual gods, each deity being designated. On this basis we can conclude, with Tiele, that the Jews at different times worshipped three different gods, e.g. Elohim, Yahweh, Adonai. The use of the different names may be due to personification of natural forces or to crystallization of the notion of the being, but such a use marks a later stage in religious thought. Why could not these names originally be employed to express the many perfections and attributes of the great God? Thus the Vedic poet writes, "Agni, many are the names of Thee, the Immortal One"; and, "The father adoring gives many names to Thee, O Agni, if thou shouldst take pleasure therein". Of the Egyptian deity Ra it is written, "His names are manifold and unknown, even the gods know them not." Farnell states that "many deities, some of whom were scarcely known outside a narrow area, were invoked as ἔνιοι νομίμοι, all possible titles of power being summed up in one word, "Amanuena". Thus, the farther back we go in the history of the Indian people, the purer becomes the form of religious belief. Idolatry is shown to be a degeneration. "It is true", says Sir A. C. Lyall, "that in India, as elsewhere, the idea of one Supreme Being, vaguely imagined, stands behind all the phantasmasagoria of the gods, but the only evidence of a natural person in the sky is the inference furnished by an analysis of the word Jupiter. Jupiter in Latin is Zeus pater in Greek and is Diesus pitar in Sanskrit. The Teutonic form is Tiw. The meaning is "Heaven-Father". The designation of the Deity in all these branches of the Aryan family
points to a time, 5000 years ago or earlier, when the Aryans, before their dispersion, before they spoke Sanskrit, Greek, Latin, or German, united in calling on the Deity as the Heaven-Father. In the Vedas Dyaus-pitar is found, but even in these documents Dyaus is already a fading star; he is crowded out by Indra, Rudra, Agni, and other purer and the ancients. In the Vedas there are two forms; a masculine and a feminine. But the Vedic Dyaus or Dyaus-pitar is first of all a masculine, while in later Sanskrit only it becomes exclusively a feminine. Hence it is not true to say that the name originally was a feminine to designate heaven, and that the nation afterwards changed it into a proper name for the divinities. In the Vedic age of the two forms, it is a paraphrase of the ineffable name. The Gathas, the most ancient hymns of the Avesta, form the kernel about which the sacred literature of the Iranians clustered in an aftergrowth. They inculcate belief in Ahura Mazda, the self-existent omnipotent being. He is the all-powerful Lord who made heaven and earth, and all that is therein, and who governs everything with wisdom. Tiele says that the sole personal being in Ahura, and that the two spirits in antagonism are below him (Elem. of the Science of Rel., Ser. I. p. 47). The opposition of Ahiran is of a later date. Pfeiderer holds that one of the gods was known by Ahuru Mazda, and another by Ahur, according to the age. (Phil. of Rel., III, p. 84). The Armesa-Spentos of the Gathas have the nature of abstract ideas or qualities, i.e. attributes of Ahura; afterwards they formed a kind of celestial council. L. H. Mills (New World, March, 1865) holds that the spiritual, unique nature of Ahura is attested beyond question, and he unites with d'Harlez, Darmesteter, and Tiele in teaching that the primitive form of Iranian belief was monotheistic. The Paganism of Greece and Rome, with its family of divinities, in human shapes and with human passions, bears upon its face evident marks of degradation and corruption as a critical age and of those ideas. d'Harlez' belief convinces the student, that in them we find no illustration of an evolution from a primitive, low, to a later, and higher, form. "The religion of the Indo-European race," writes Darmesteter (Contemp. Rev., Oct., 1879), "while still united, recognized a supreme God, an organising God, almighty, omniscient, moral. The conception was a heritage of the past."

The same truth is evident from a study of the religions of Egypt and of China. In the most ancient monuments of Egypt the simplest and most precise conception of one God is expressed; He is one and alone; no other beings are with Him; He is the only being in truth; He is the self-existing one, and made all things, and He alone has not been made. Brugsch accepts this view, but calls it Pantheism. The ethical element in the Deity, however, is adverse to this. Renouf finds a similar Pantheism, but prefers the word Monotheism. De la Saussaye admits that "one can maintain that Egyptian Monothelism and Pantheism have never been denied by any serious enquirer, though the majority do not look on them as general and original." The sublime portions of the Egyptian religion are not the comparatively late result of a process of purification from earlier and grosser forms. In the outlines of History of Religion, Tiele so taught; but in a later work, Egyptian Religion, he expresses the contrary opinion. Liebien, Ed. Meyer, and Renouf admit degeneration in Egyptian religion. Thus de Rouge, Tiele, Pierret, Ellwood, Rawlinson, Wilkinson, hold belief in one Supreme Deity, Jehovah and Law of Nature clearly expressed in that ancient civilisation, and Polytheism is an aftergrowth and corruption. The popular religion of China rests on the worship of natural powers and of ancestral spirits. Underneath, however, is the conviction of the existence of a higher one, which, according to Birkett (History of Man in China, p. 95), is a tradition handed down from the earliest period of their history. D'Harlez (New World, Dec., 1893) and F. M. James (New World, June, 1899) teach that the primitive Chinese worshipped Shang-Ti, the Supreme Lord, one, invisible, spiritual, the only true god. Dr. Legge (Religion of China, p. 18) asserts that Ti was the one supreme object of homage as far back as we can go, and unites with d'Harlez. Faber, Happe in declaring that 5000 years ago the Chinese was monolithic and bases the Babylono-Assyrian religion on an original monotheism. He claims to have discovered a reliable trace of this in the word Ilu (el in Bab) which is said originally to mean "the only god." De la Saussaye advances as an objection that this word is nothing else than the name for the conception of Greek and the Indian Deva and other epithets of the same sort," yet he holds that "the goddesses of Babylono-Assyrian religion are really only one and the same thing under different names, and these again must be looked on partly as titles."

Even among the lowest and most barbarous tribes illustrations of the same truth are found. "Nothing in savage religion," writes A. Lang, "is better vouched for than the belief in a Being whom narrators of every sort call a Creator, who holds all things in His power, and who makes for righteousness." The aborigines of Canada call by Ahur, according to Mr. Le Jeune. This Being is seldom or never addressed in prayer. The fact of an once or unworshipped Supreme Being is fatal to some modern theories on the origin and evolution of the deity. Tylor admits that a Supreme Being is known to African natives, but ascribes it to Islam, or to Christian influence. If this were so, we should expect to find prayer and sacrifice. Fraser holds that the deity was invented in despair of magic as a power out of which something could be got. But how could the savage expect anything from a deity he did not address in prayer? Spencer teaches that the deity of the savage is thought of as a spirit. But the Maker of things, not approached in prayer as a rule, is said to exist where ancestor spirits are not reported to be worshipped. William Strachey, writing from Virginia in 1611, says that Okeus was only "is magisterial deputy of the great God who governs all the world and makes the sun to shine ... him they call Ahone. The good and peaceable God requires no such duties [as are paid to Okeus] nor needs to be sacrificed to, for He intendeth all good unto them; He has no image." Winslow writes from New England in 1622 that the god Kiehtan is a being of ancient credit among the natives. He made all the other gods. Canadians, Algonquins, Virginians, and the natives of Massachusetts had a Great Spirit before the advent of the Christian missionaries.

Australian mystery-relies reveal a moral creative being whose home is in or above the heavens, and his name is Maker (Boosome), Master (Brambon), and Father (Pamong). The Benedictine monks of Australia say that the natives believe in an omnipotent Being, the creator of heaven and earth, whom they call Motogon. The Australian will say, "No, not seen him [i.e. Baiame], but I have felt him." Waite tells us that the religious ideas of the Aborigines are "one supreme"; if we do not like to call them monolithic, we may say at least that they have come very near the boundaries of true monotheism. "However degraded these people may be," writes Livingston (Missionary Travels, p. 158), "there is no need telling them of the existence of God or of a future life. These two truths are universally recognised in Africa. If we speak to them of a dead man, they reply: He is gone to God." Among savage tribes, where the supreme Being is regarded as too remote and impassive, he is naturally supplied with a deity. Thus, e.g., Ahone has Okeus, Kiehtan has Hobancoo, Boyma has Greg, occasionally, Baikeke (Boosean), Nypuku, and Nyow in West Africa has Bobowissi. Sometimes, as in Australia, these active deities are sons of
Deity. In other cases—e. g., Finnish Num, Zulu Unkulunkulu, and Algonquin Atahcan the being is quite of the conception of spirits who receive sacrifices of meat and grease. In north-west central Queensland Roth describes Mukkari as "a benevolent omnipresent supernatural being, whose home is in the skies". In Australia the supreme Being cannot have been evolved out of ghost-worship, for the aboriginals do not worship their dead spirits. Sir A. B. Ellis has repudiated his theory of borrowing a god in the case of the Thai-speaking races. Waits also denies that the higher religious beliefs of the Australians were borrowed from Christianity. His position is sustained by Howitt, Palmer, Dawson, Ridley, Günther, and Greenway, who studied the native beliefs. The evidence of the aborigines' own beliefs, the usual though not universal absence of prayer, show their indigenous and ancient source.

In "The Golden Bough" (2d ed.), Frazer has raised the question, whether magic has not everywhere preceded religion. Yet among the blacks of Australia, the most backward race known, we find abundant testimony of a belief speculative, moral, emotional, but not practical. These deities are not propitiated by sacrifice and very seldom by prayer, yet they are makers, friends, and judges. In the conception of them the ethical element predominates. An all-knowing Being endows the experiences of man with meaning. The Law is named with reverence if named at all; His abode is in the heavens; He is Maker and Lord of all things; His lessons soften the heart. Mariner says concerning the Tongan deity Ta-ili-y-Toboo: "Of his origin they had no idea, rather supposing him to be eternal." In Guinea the natives worship "The Ancient One", "The Ancient One in Skyland", "Our Maker", "Our Father", "Our Great Father". Wilson writes that their belief in one supreme Being who made and upholds all things is universal. In America the same truth obtains. To the Indians God is "The Great Spirit". With some the idea of the Deity is very lofty; again it is found in cruder and lower expression. Darwin's description of the Patagonians as having very low religious beliefs is refuted by Giacomo Bove. The Pawnees worship A-tus-ta-ta-wa, i.e. our Father in all places, or Pi-re-wa, i.e. the Spirit-Father, with whom they expect to live after death. The Zuni speak of the "Great Spirit", the All-Father. The Indians of Missouri worship "Old Man Immortal", "The Great Spirit", "The Great Mystery". The Timne of British America have the term Nayowere, i.e. "He-who-creates-by-thought". The Algonquin speak of Kieke-Mine, who created the world "by an act of his thought". Among savage nations the conception of the deities is regarded as otiose and inactive, so as to become a mere name and a by-word, it is due to the fact that He has been thrust into the background by the competition either of ancestral spirits—e. g. Unkulunkulu of the Zulus—or of friendly and helpful spirits—as, e. g. the Australian Bearee and Munneen-nee. Thus in West Africa the natives believe in Motogon, who created by breathing; he is long since dead and they pay him no worship. From a study of savage tribes Mr. Lang holds that first in order of evolution came belief in a supreme Being by some way only to be guessed at (to him St. Paul's explanation is the most probable); that this belief was subsequently obscured and overlaid by belief in ghosts and in a pantheon of lesser deities; that in many cases the savage creative Being has a deputy, often a demigourge, who exercises authority; that when this is the case, where ancestor-worship is also superimposed, religion, the dependence of each man upon the god to be envisaged is reduced to a minuscule. If to this we add the tradition, universal both among civilised—e. g. Hindus, Greeks, Romans—and savage nations, that formerly heaven was nearer to man than it now is, that the Creator Himself gave lessons of wisdom to human beings, but afterwards withdrew from them to heaven, where He now dwells, the line of reasoning will be even more cogent.

For these conclusions well established: (1) That the farther back we go in the history of any religion, the purer becomes the conception of the deity, hence the fact of primitive purity; (2) That everywhere evident traces are found of the corruption of the primitive belief, hence the fact of degeneracy; (3) That all nations point in tradition to the time when the Deity was nearer to man, hence traces of primitive revelation. Tylor conceives that "the degeneration-theory, no doubt in some instances with fairness, may claim these beliefs as mutilated and perverted remnants of a higher religion" (Primitive Culture, ed. 1871, p. 305).

The modern science of anthropology proposes an explanation of its own for the origin and existence of the Deity. It is called the anthropological theory. Its principal advocates are Tylor and Spencer. In purpose they agree, i. e. to show that the Deity has no real existence outside the mind of men; in method only they differ. While Tylor the method is biological, and we have Animism; with Spencer it is psychological, and we have what is termed the ghost-theory. According to Spencer, primitive man derived the conception of spirit from reflections on phenomena of sleep, dreams, shadow, trance, and hallucination. In the course of time, as the ideas of the departed came to him, he grew to dread them, and so worshipped them. From the departed souls of his kindred, first worshipped, the idea was gradually extended; they then became gods; finally, one of these deities in imagination became supreme and was regarded as the one only God. The Ancient One is the prototype of the Deity.

It is a fact that ancestor-worship is found in various nations; in China, India, India, ancient Greece and Rome it is, or was, an organised system. Here it formed the basis of family religion and of civil law. The Romans had their divi manes, i. e. divine ancestral spirits ("Eos leto datus divos habendo")—Laws of the Twelve Tables as cited by Cicero in "De Leg.", II, ii, 22. As lar familiaris, the first ancestor was considered the protector and genius of the house. In Greece the ancestral spirits of families became theo patrios, i. e. paternal gods. How the ancestor watches over the race is shown in the "Antigone". In India we find the father and the companions of the father, the devatas. In the devatas the devas. In ancient Persia the fravashis helped Ahura Mazda in all his works. The songs of the Shik-King describe the ancestral festivals of China. With the Slavs was deeply rooted the belief in vampires, the souls of dead people, who suck the blood from the living. Among savage nations the malignant character of ghosts prevails and gives rise to magic. On these facts Spencer constructs a theory to explain the origin and development of the deity among all nations. The theory is purely materialistic and unscientific.

(1) Superior or supreme beings are found among races who do not worship ancestral spirits. It is not shown, it is denied by Waits, it is not even alleged by Spencer, that the Australians steadily propitiate or sacrifice at all to any ghosts of dead men. The Dieri of Central Australia pray for rain to the Mura Mura, a good spirit, not a set of remote ancestral spirits. Thus the Australians and Andamanese worship a relatively supreme Being and Maker, and do not worship ghosts.

(2) The Zulus are ancestor-worshippers; yet the recent dead parent, i. e. the father of the family actually worshipping, is not the supreme ancestor—spirit changes with each generation. If, therefore, ancestors are forgotten in proportion as they recede from their living descendants, how can we on Spencer's hypothesis maintain that, as they gradually recede into the past, they develop into the conception of a supreme Deity and Creator?
And how can we explain that savages can forget the very names of their great grandfathers and yet remember traditional persons from generation to generation? The Blacks of Australia will often, by peculiar devices, avoid mentioning the names of the dead, a practice hostile to the development of ancestor-worship; yet these same people have a belief in a deity, a belief which seems a very different sort of superstition, the very name of which they never mention. This I call this being "Tha-tha-poli"; the Ta-ta-thi call him Tulong.

(3) The otiose, unworshipped supreme Being, often credited with the charge of future rewards and punishments among ancestor-worshipping peoples, cannot be excluded from Spencer's theory, for he shows the corruption of Theism by Animism. "Among the negroes of Central Africa", writes de la Saussaye, "we find belief in a Highest God, the Creator of the world; but of course this God is not worshipped, since as a general rule negroes worship cruel dreaded gods much more than friendly gods. Worship of ancestors is also general. In Dahomey and Ashantee huge human hecatombs are offered to deceased rulers". The Kaffirs acknowledge a deity, Molunga, but neither adore nor pray to him. The Zulu religion, now almost exclusively ancestor-worship, seems to contain a broken and almost obliterated element of belief in a high, un-worldly power, the presiding of the future life. "And the Zulu Unkulunkulu made things, as the Australian Baime. Unlike them, he is subject to the competition of ancestral ghosts, the more recent the more powerful, in receipt of prayer and sacrifice. Hence he is neglected, by many believed to be dead or the mere shadow of a children's tale. Or this being exists in repose, remote from men with whom he acts through a deputy or deities."

(4) Spencer, to support his theory, appeals to the crude languages of savages; he says they are unable to say, "I dreamed that I saw" instead of "I saw" in any language, and so found ideas as metaphysical as in Hegel. Again, the Australian languages have the noun sleep and the verb to see. They make an essential distinction between waking hallucinations and the hallucinations of sleep; anyone can have the latter, only a wizard the former. Furthermore, Spencer contradicts himself: he credits these low savages with great ingenuity and strong powers of abstract reasoning—an admission fatal to his premises. Again Spencer holds that the idea of the Deity was formed after the analogy of human rulers. But whence comes the great God in tribal society, neither chief, nor king nor distinction of rank, e. g. the Fuegians. Bushmen, Aborigines, Australians? The Deity cannot be a reflection from human kings where there are no kings. Furthermore, Spencer's assumption is false, viz. that deities improve morally and otherwise according to the rising grades in the evolution of culture and civilization. Usually, the reverse is the case. In his "highest Deity", writes A. Lang, "that simplest theology of Australia is free from the faults of the popular theology in Greece. The God discourages sin, He does not set the example of sinning. He is almost too sacred to be named (except in mythology) and far too sacred to be represented by idols. It would scarcely be a paradox to say that the popular Zeus or Ares is degenerate from Darumulum or the Fuegian being who forbids the slaying of an enemy".

(5) The real difficulty in Spencer's theory is to account for the evolution of ghosts from the eternal conceptions of the bushmen. A full account of the idea of ghosts among savages. The Bushmen's belief in ghosts follows the belief of the idea of immortality. The Fuegians, Australians believe in moral, practically omniscient, deities, makers of things, fathers in heaven, friends, guardians of morality, seeing what is good or bad in the hearts of men. So widely is this belief diffused that it cannot be ignored. The only reasons is to account for these deities as "low-gods". This explanation is refuted by A. Lang. Waitz writes, "Among branches where foreign influence is least to be suspected we discover behind their more conspicuous fetishisms and superstitions something which we cannot strictly call monotheism, but which tends in that direction." In the belief of the savages morality and religion are united. The savage, who lives in terror of the souls of the dead, is not a deist, but one who worships both worlds. The WelshTerm for this is benevolent. The Andamanese have Puluanah, "Like-fire", but invisible, never born, and so immortal, who knows the thoughts of the heart, is angered by wrongdoing, pitiful to the distressed, sometimes deigning to grant relief, the judge of souls. Huxley's contention, that the savage's "existence and power as a being" transcends that of the mortal, are the ones that have no reality. The Australian has merely a non-moral belief in ghost-like entities, usually malignant, and that in this state theology is wholly independent of ethics, is refuted by an exact study of these very beliefs. He claims that the religion of Israel arose from ghost-worship. But how does he explain the silence of the prophets or the Hebrew apparent indifference to the departed soul? Elohim differs from a ghost; in Hebrew belief He is ethical, immortal, and without beginnings. "In ancient primitive peoples", writes Wellhausen, "religion furnished a motive for law and morals; in case of none did it become so with such purity and power as it has done of late to the salvation of the human soul." The more this theory cannot solve is, how the Australians could bridge the gap between the ghost of a soon-forgotten fighting man and that conception of a Father in Heaven, omniscient, moral, which under various names is found all over a continent. The distinction between the creative supreme Deity of the savage, unpropitiated by sacrifice, and the waning, easily-forgotten, cheaply propitiated ghost of a tribesman is vital and essential.

(6) Finally, the two conceptions (i. e. ghost and god) have different sources. According to de la Saussaye, "The sentiments which men entertain towards spirits and gods are derived from general speculative ideas which prevail in Animism, have been replaced by more exalted sentiments and a less selfish interest. This by itself would speak against a derivation of the whole belief in gods from Animism." Spencer speaks of medicine men adored as gods after death; but this supposed idea of the Deity. In Rome, Greece, and India ancestor-worship supposes the worship of the great gods. The departed, the fathers, the ancestors, the heroes are admitted to the society of the gods; they are often called "half-gods"; but the gods are always there before them. Again the Deity is venerable, disdains death as a post-mortem; the idea of ghost implies the previous death; a ghost is a phantom of a dead man. Now anthropologists tell us that the idea of death as a universal ordinance is unnatural to the savage (A. Lang; de la Saussaye). Diseases and death once did not exist and normally ought not to exist, the savage thinks. The Supreme Deity of the savage is death; he was and before death entered the world, and was not affected by the entry of death. The essential characteristic of Darumulum, of Baime, of Cogn, of Bunji is that they never died at all. They belong to the period before death entered the world. Hence between the high deities of savages and the apotheosized first ancestors exists a great gulf, i.e. death. It is interesting to compare this savage belief with the div immortal of the Romans, the deo deiare of the Greeks, the Amartya of the Hindus, the deathless gods of Babylonics, and the Egyptian deities, kings and gods. The supreme Deity found in the idea of death and the belief of the immortal of the bushmen; the two orders of intelligent beings from different living men: ghosts of the dead and beings who are not, nor ever have been, human. The beings who never were human and who never died are called ves; the ghosts are named tane. A rut is not a spirit who has been a ghost. This is the usual savage doctrine. The distinction, therefore, between eternal being and
ghost is radical and common. The fault of some anthropologists is in neglecting the distinction, in confusing both under the name of spirits, and in deriving both from a single god. In Polynesia the gods are called aia; the spirits and souls of the departed tiki. Their conceptions of the heavenly dwellings of the gods and the underground kingdom of the dead (Po, Polutu) are greatly developed and not clearly defined. The Fijians have the term kaulo, which means other things also. All Polynesians use kaulo, but not all beings that are kaulo are gods. Gods are kaulo su; deified ghosts are kaulo yalo; the former are eternal, the latter subject to infirmity and even death. Their supreme deity, Udengei, is neglected. But so would Jehovah have been neglected, and beds of a movie name, if not for the Prophet. A. Lang says, "The Old Testament is the story of the prolonged effort to keep Jehovah in the supreme place. To make and succeed in this was the differentiation of Israel." The Zulus believe their first ancestor Unkulunkulu was the Creator and prior to death. Réville does not understand, in Spencer's system, "why, in so many places, the first ancestor is the Maker, if not the Creator of the world, Master of life and death, and possessor of divine powers not held by any of his descendants. This proves that it was not the first ancestor who became God, in the belief of his descendents, but rather the Divine Maker and Beginner of all who is the Creator of the universe, because the ancestor." Miss Kingsley maintains that a clear line of demarcation exists between ghosts who are worshipped and gods; that the former never developed into the latter; warns us against confusing the offerings to the dead with sacrifices made to the gods; she says West Africans has never deified ancestors.

Finally, as de La Saussaye states, in Greece other names are applied to the altars, sacrifices, and offerings connected with the dead than those used in the worship of the Olympian gods. The altar of the ancestors is ἐκτής, of the gods πάνω; the offering of sacrifice to the ancestors is ἐτύληθος or ἐτύλημα, to the gods θανάτος; the libations to the ancestors χεῖλος, to the gods σφυριζόντας. Again, the temples of the gods in Greece were so constructed that the statue in the main shrine should face the rising sun; the temple of the hero opened to the west and looked toward Erebus and the region of ghosts. The homage of the gods is kept apart from that of the powers below. The Greeks sacrificed to the gods by day, to the heroes in the evening or by night; not on high altars, but on a low sacrificial hearth; black-colored animals of the male sex were killed for them, and the victims were not, as in the case of those intended for the gods, turned toward the sky, but pressed down to the ground. M. Müller tells us that in the Vedas the exclamation used in sacrificing to the gods is svādā, to the departed svādha. Righly, therefore, Jevons holds that the ghost never became a god and rejects the theory that all the deities of the cult were ghosts, without exception, the spirits of dead men divided. "If Mr. Spencer," writes M. Müller, "can find a single scholar to accept this view of the origin of Zeus in Greek or Dyaus in Sanscrit, I shall never write another word on mythology or religion." Thus the ghost-theory is needed only for the rise of ghost-pontification and genuine ancestor-worship. It reveals something in man apart and distinct from the material elements of the Lody. Thus viewed, its arguments are so many reasons for the belief in the future life of the soul after dissolution of the body.

Thus the history of religion reveals (1) the belief in a powerful, moral, eternal, omniscient Father and Judge of men; (2) the belief in somewhat of man which exists beyond the grave. These truths are found in every nation historically known to us. The latter belief, developed into an animistic ghost-worship, ob-scures, but does not obliterate, the former. "Christianity," writes A. Lang, "combined what was good in Animism, the care for the individual soul as an immaterial spirit, under the name of the One Righteous Eternal of prophetic Israel."

JOHN T. DURSOCL.

De La Croix, Charles, missionary, b. at Hoornbroek, St-Corneille, Belgium, 28 Oct., 1792; d. at Ghent, 20 Aug., 1869. He was educated at the seminary in Ghent. With his fellow-students he resisted the bishop forced upon the diocese by Napoleon I and was imprisoned with his brother Joseph in the fortress of Ghent, where the latter died. After the fall of the empire, De La Croix resumed his studies, was ordained in Ghent by Bishop Dubourg of Louisiana and, with several other seminarians and some Flemish workmen, followed the bishop to the United States. In May, 1818, he was sent to Barrens, Perry County, Missouri, where, beside his missionary duties, he was to superintend the building of a seminary for the Louisiana diocese. After the arrival of Father Rosati, president of the new seminary, Father De La Croix went to Flora-sant, also called St. Ferdinand, near St. Louis (3 Dec., 1818). Here, with the help of the newly arrived colony of Religious of the Sacred Heart, he laboured zealously and successfully, not only among the Catholic families of the district, but also among the Osage Indians of the Missouri plains. He prepared the way for De Smet and the other Jesuit missionaries, who came to Florida in 1823. When Father Van Quickborne, S. J., arrived there, Father Croix, all Belgians like himself, De La Croix had almost completed and paid for the brick church, started a farm, and opened a missionary field for the work of the young Jesuits. Having been appointed to St. Michael's parish in Lower Louisiana, Father De La Croix prepared for the Religion of the Sacred Heart the convent in which they opened a boarding-school in 1828. The following year he went to Belgium, broken in health, but returned to his mission with funds collected in Belgium to build a substantial church which was completed in 1832. In 1833 he went back to Belgium, where he became a canon of the cathedral of Ghent, a position which he occupied till his death.

DE REMAUX, Joseph et Charles De La Croix: notice biographique (Ghent, 1894); Catholic Directory (1822, 1833); American Catholic Historical Researches (Philadelphia, Jan., 1807).
the Holy Sacrament), fainting from grief for her crucified Master, to an impression made upon him by the canticles of the month of May; while it was under the emotion produced by the music of the Dies Irae that he brought forth the terrible angel of the fresco of Heliodorus (Saint-Sulpice). After his studies at the Lycee Louis-le-Grand, he entered the school of Fine Arts in Paris and studied there under Guerin.

The Impressionists attributed to the lot of Delacroix after the death of his parents in 1819 drove him to the production of lithographs, caricatures, etc. In the mean time, however (1818), a distinct promise of his future eminence had been manifested in the first of his recorded canvases, "Roman Market." With this "Jewish Marriage," Against the advice of his master, Guerin, he exhibited at the Salon of 1822 the "Dante and Virgil," which immediately had the effect of bringing to its creator notoriety, if not fame, for it aroused a whirlwind of critical controversy. In the then existing state of French public opinion in matters of art, it is not wonderful that Delacroix should have failed to win the much-coveted Prix de Rome, for which he was a competitor; but two years later (1824) his "Massacre of Scio" renewed the strife of the critics which his earlier Salon picture had first kindled, and brought him a little nearer to the goal of success.

The Neoclassicists condemned his work, as they condemned that of all the new romanticists, for its contempt of established traditions; the subsequent triumph of romanticism brought with it in good time his personal triumph, to be eventually signalized and confirmed by the acquisition of the two bitterly criticized early canvases, "Roman Matrons" and the "Massacre of Scio," for the national collection of the Louvre. But only after the Revolution of 1830 did official recognition and approval visit him. In the year next following that event he travelled through Spain and Morocco, whence he brought back an inspiration of Southern light, colour, and vital force which was to make itself effectively felt in all his later and more widely known work. The new government made him a chevalier of the Legion of Honour; the day of nineteenth-century romanticism had begun in France, and Delacroix, always a leader of this new school, was fairly arrived. From the exhibition of his "Murder of the Bishop of Liègue" in the Salon (1831) his progress was never seriously interrupted, in spite of incessant criticism, until, in 1857, it brought him into the fold of the Institute of France. It was during this quarter of a century of his career that he added those compositions on medi-
val and Arabian themes with which his name is nowadays most commonly associated.

The bitter opposition which Delacroix had all his life to endure drew him into discussions in which he displayed a real literary talent. No one who would arrive at a true idea of the man should be ignorant of his opinions on art and his correspondences. The number of his pictorial works is immense, aggregating about 9140 subjects, classified by Ernest Chesneau as follows: 853 canvases, 1525 pastels, water-colours, etc., 6629 drawings, 24 engravings, 109 lithographs, and 90 albums. The following may be mentioned as marking important moments in the development of his genius: "The 28th of July, 1830" (1830); "Charge of Arab Cavalry" (Montpellier Museum—1832); "Algerian Women" (Louvre—1834); "Jewish Wedding in Morocco" (Louvre—1841); "Taking of Constantinople by the Crusaders" (Versailles Museum—1841); "Sardanapalus" (Louvre—1842); "The Touluse Marcher" (Louvre—1845); "The Two Foscars" (Collection of the Duc d'Umaide at Chantilly—1855). To his early period belong the famous lithographs of Paust which brought him warm praise from Goethe himself. "Sardanapalus" (Louvres, 1828), another early chef-d'oeuvre, drew from Victor Hugo the remark that "Delacroix était devenu la pierre de scandeal ces Expositions," while Delducules called it "une erreur de peintre." "Richelieu Saying Mass," was ordered by the Duke Louis Philippe d'Orléans, while "The Death of Charles the Bold" was ordered by the Minister of the Interior. "The Murder of the Bishop of Liègue," the canvas which actually assured his contemporary fame, was probably the best of all his pictures. From then on, masterpieces followed one another until adverse criticism could no longer seriously affect his position in the world of art.

Appreciation of His Work.—The real founder of the nineteenth-century French School of art, Delacroix stands alone and unsurpassed. The difficulties he had to contend with in the forcing upon an apparently public a new school wholly opposed to that of David, which was insinace in its coldness and artificiality, conventional, and absolutely unsympathetic. Though one can find in Delacroix almost all the best points of men like Rembrandt, Rubens, and Correggio, from the moment he shook off the influence of Géricault—so manifest in "Dante and Virgil"—he threw himself entirely on the resources of his own genius. On the eve of finishing the "Massacre of Scio," he had occasion to notice some works of Constable, and there discovered and made his own a principle of art which so many masters have failed to appreciate, viz. that in nature, what seems to be of one colour is in reality made up of many shades, discovered only by the eye which knows how to see. Thereafter colouring had no secret for him. Delacroix is not an artist in a supreme degree. Possessed of a deep knowledge of history, he studied each group and each individual in series of sketches, which were retouched again and again; then only did they take place in the ensemble. With the instinct of a poet he saw vividly the scene he was painting. His artistic sense kept him from falling into the melodramatic, but he remains tragic, and it is for this tragic note, which finds expression in so many bloody themes, that he is generally criticized. Delacroix worked with an unerring instinct of composition, avoiding the monotony of regular line by the varied attitudes of his figures. He excelled in the various branches of his art, and his decorative pictures in the Gallery of Apeles at the Louvre, the drawing-room of the king, the chamber of deputies, and St-Sulpice are as excellent as his canvases. There is hardly a tragedy of the human soul which is not reproduced in his work. He is not popular because the multitude wants pleasure, and Delacroix, like Pascal, does not make one laugh; he terrifies. In the "Murder of the Bishop of Liègue," before admiration comes one has shivered at the vivid portrayal of human ferocity; in the "Christ in the Garden of Gethsemani" there is no human sorrow equal to that. Delacroix is the highest manifestation of French genius in art; he not only honours France, but mankind, and is one of those who Emerson said were "representative of humanity."

DELAROCHE

HENRY ANGER.

Delaroche, Hippolyte (known also as Paul), painter, b. at Paris, 17 July, 1797; d. 4 November, 1868. A pupil of Watteau, a landscape painter of mediocre ability, and afterwards of Gros, a great painter but a very poor teacher and incapable of harmonising his doctrines with his genius, Delaroche was consequently badly trained. Without any desire of originality, of anything new or novel, and lacking even a novel idea along the lines of art or beauty, Delaroche was nevertheless gifted with a certain commonplace skill and aptitude which satisfied the public, and, whilst fully realizing his narrow limitations, he was content enough to supply the want of artistic ability by an ingenious choice of subjects. In the last year of his life he realized that he was of no great genius, if indeed it may so be called. In this he appealed to the taste of the bourgeoisie which, in the void of artistic culture, had in the rôle of Meuseau succeeded the aristocracy of the old regime and defined the style of the period during the Restoration and the July Monarchy. The artist's début in the salon of 1819 with "Naphtali in the Desert" passed unnoticed. Another Biblical subject appeared in the salon of 1822, and in 1824 he won the gold medal. Delaroche discovered his vein and thenceforth, except for the occasional treatment of some current event (The Capture of the Trocadero, 1827), he worked upon that series of historical incidents, that vast repertory of anecdotes generally taken from the civil wars of France and England and which, when multiplied by the engravers of Goupil, the publisher, who thereby made a fortune, became equally valuable to the author in Paris and London. We must admit that Delaroche was admirably served by his engravers, of whom Henriquel-Dupont was the best known. His inartistic painting gained much by being translated into engraving, as in this way, only the subject had to be reproduced. It must be admitted that, in all these works, Delaroche shows himself an incomparable scene-setter. In his masterpiece, "The Assassination of the Duke of Guise" (1835, Condé Museum), he is most realistic and furnishes, as it were, the retrospective photograph of a sixteenth-century drama. Therein accuracy of detail, naturalness of composition, and the extremely careful treatment of the decoration copied from the Château of Blois replaced, if indeed they do not equal, the impression made by real art. And yet the unique success of this small picture does not attend the larger ones, which do not so fully reflect the accuracy of decoration. In 1833 there was question of entrusting him with the decoration of the church of the Madeleine, but the large order was divided and the artist refused to accept half of the task that was to have been his in entirety. By way of compensation he was commissioned to decorate the hemicycle of the École des Beaux-Arts. This work, completed in 1841 and which for some time regarded as a masterpiece of decorative painting, is an ideal assemblage, or ecumenical council, of all the great artists from Ictinus to Bramante, from Cinambo to Velasquez, and from Phidias to Erwin von Steinbach, a composition in which the disconnectedness of the whole rivals the absence of cohesion in each personage taken individually. Few great "machines" convey a more cruel impression of the utter lack of ideas and the incurable debility of the poetic or plastic conception. This frieze, officially praised, marked the decline of the artist in the eyes of competent judges and gave unmistakable evidence of his indigence. Delaroche endeavoured to reinstate himself by working up different and more useful subjects. He also followed the vogue of the imperial cult and produced several scenes from the life of Napoleon. But even this ingenious idea did not restore the artist to his pristine glory. Then, as a last resource, he returned to his first subjects: "The Last Prayer of the Children of Edward IV" (1852), "The Last Communion of Mary Stuart" (1854), etc. His declining years were very sad. In 1835 he married the only daughter of Horace Vernet, but she died in 1848. At this time, although retaining popular favour, he was keenly sensible of the contempt of his fellow artists and realized not for the first time that they would never regard him as one of their number but that, despite his glory, his fortunes, and his titles, he must ever remain in their eyes a Philistine painter. He exhibited nothing in the salon subsequently to 1837 and had not the courage to participate in the great manifestation of 1855, which was the dazzling triumph of the French School. His "Christian Martyr" (Louvre, 1856), so feebly delineated and poorly painted, nevertheless exhaled exquisite sentiment and is, as it were, the last sigh of a Christian Ophelia. But the shortcomings of the artist should not blind us to the purity of his character and the uprightness of his life. Beside, faulty as his style may be, he nevertheless has the merit of being an inventor. He created anecdotal painting and the special order of illustrations to which we owe, among so many inferior works, the most creditable productions of J. P. Laurens. Delaroche had an "idea," whatever its value, and this fact alone is unusual enough to be taken into account.

LOUIS GILLET.

Delatares (Lat. for Denouncers), a term used by the Synod of Elvira (c. 306) to stigmatize those Christians who appeared as accusers of their brethren. This synod decided (can. LXXII, Hefele, Concilien-geschichte, 2d ed., i, 188) that if any Christian was proscribed or put to death through the denunciation (delatio) of another Christian, such a delator was to suffer perpetual excommunication. No distinction is made between true and false accusation, but the synod probably meant only the accusation of Christianity before the heathen judges, or at most a false accusation. Any false accusation against a bishop, priest, or deacon was visited with a similar punishment by the same synod (can. LXXV, op. cit., 189). The punishment for false witness in general was proportioned by can. LXXIV to the gravity of the accusation. The Council of Trèves (c. 401) condemned the notion of 314 issued (cana, V, p. 213), when it decided that Christians who accused falsely their brethren were to be forever excluded from communion with the faith. During the persecutions of the early Christians it sometimes happened that apostates denounced their fellow Christians. The younger Papias makes a letter to Titus (Apostolic Fathers ed. Lightfoot, 2d ed., i, 50 sqq.),
that an anonymous bill of indictment was presented to him on which were many names of Christians; we do not know, however, that the author of this 

bêlotus was a Christian. According to can. xiii of the 

Council of Aries (op. cit., 211 sqq.), during the persecu-

tion of Doctrian Christians were denounced by their 

own brethren to the heathen judges. If it appeared 

from the public acts that an accused person did not 

be punished by the synod with perpetual deposi-

tion; however, his ordinations were considered valid. 

In general, false accusation is visited with severe pun-

ishments in later synods, e.g. Second Council of Aries 

(443 or 453, can. xxiv), the Council of Aegae (506, can. 

viii) and others. These decrees appear in the later 

masters of the collection of canons (v.), New Amster-

dam, decretals against calumniators were issued by Gregory IX 

in his Decretals (de calamniatoribus, v, 3 in Corp.

DELAFIELD. See GARCILASO DE LA VEGA.

Delaware, one of the original thirteen of the 

United States of America. It lies between 33° 28' and 

39° 47' of N. lat. and between 74° 56' and 75° 40' of 

longitude, and of which the south point is bounded on the 

by the State of Pennsylvania, on the E. by the Delaware 

River and Bay, and on the S. and W. by the State of 

Maryland. Its area is 2370 square miles, of which 

1965 square miles are of land area, and 405 square 

miles of water area. Delaware is an agricultural 

state, its soil is fertile and a large portion of it in a high 

state of cultivation.

History.—In 1609 Henry Hudson, in the employ 

of the Dutch East India Company, on his third voyage 

discovery, sailed into Delaware Bay. This was the 

first visit of a European, so far as known, to the territory 

now known as Delaware. The bay was so named about 

the year 1610 by the Virginians in honour of their first 

Governor, Thomas West, Lord Delaware. The Dutch, 

basing their claims on rights acquired by Hudson’s 

discovery, made the first attempt at settlement. In 

1629, under the authority of the Dutch West India 

Company, and with the countenance of the Governor 

and Council of New Netherland, a track was laid from 

Cape Henlopen to the mouth of the Delaware River 

was purchased from the natives, and a company 

formed in Holland to colonize it. In the spring of 

1631 a ship carrying emigrants reached the Delaware, 

and a colony was planted near Cape Henlopen, on 

hence the colonists took the name Swaanendael. The 

life of this colony was ended after a few months. Trouble with the Indians arose, and a fort which had been erected was destroyed, and all the colonists murdered. In 1638 an expedition consisting of two ships carrying some fifty Swedish 

emigrants, and commanded by Peter Minuit, the de-

posed Governor of the New Netherland colony, com-

missioned by the Swedish Queen Christina, entered 

Delaware Bay, and the present site of Wilmington 

was chosen as the place for the first settlement. The 

colony was known as New Sweden. A fort called 

Christina was built. After about two years of pros-

perity sickness began to prevail, and the colony was 

on the eve of breaking up when another Dutch expedi-

tion, though under the patronage of the Swedish 

Company, appeared, and the new colonists located 

their settlement several miles from Fort Christina. 

The new arrivals revived the spirits of the Swedes, 

who receiv smaller number. The Dutch arrived in 1640, and the colony became well 

established and prosperous. In 1655, on the 

appearance of a Dutch fleet, all the forts and 

settlements were surrendered, and such Swedes as would not take 

the oath of allegiance were sent to the home country. 

In 1656 the West India Company sold its interests on 

the South River (called South as distinguished from 

the North River, as the Hudson was then called to 

the City of Amsterdam, and the colony was called 

"New Amstel" and the authority of New Nether-

lands over it was ended. In 1664, after the surrender 

of New Amsterdam to the English, the Delaware set-

tlements were also taken. The name of New Amstel 

was changed to New Castle, and the settlements were 

annexed as an appendage to New York, then also 

under English rule. According to the charter to 

William Penn in 1681, the territory of Pennsylvania was bounded on 

the south by a circle drawn twelve miles distant 

from the town of New Castle northward and west-

ward, as far as the territory of the Delaware, as 

what was then called Cape Henlopen remaining to 

the Duke of York. In the same year Penn’s author-

ity, with the consent of York, was extended to include 

this territory also. As early as 1685 a controversy 

began between Penn and Lord Baltimore as to the as-

sertion of the southern and western boundaries of the 

country along the bay as transferred by York to 

Penn. Numerous agreements were entered into be-

tween the respective proprietors for determining the 

boundaries, but none gave promise of ever being car-

ried out. This quarel retarded the settlement of the 

country and the rise of the Delaware settlements. 

The present boundaries between Delaware, Maryland 

and Pennsylvania, as mentioned in an agreement be-

tween the heirs of Penn and Baltimore in 1732, were 

decided by the English Court of Chancery, and in 

1763, Charles Mason and Jeremiah Dixon, two sur-

veyors, were engaged and sent over from England to 

mark the lines. In 1764 the work was started. 

The present south and west lines of Delaware are the result of a part of this work. The east and west line (be-

tween the present States of Pennsylvania and Mary-

land), which they ran and marked, is the historical 

Mason and Dixon Line. The boundary between the 

former free and slave States. In 1861, with Penn’s 

consent, the lower counties, now the State of 

Delaware, became a separate Government, only to be again 

united to Pennsylvania in 1863. In 1702 Pennsyl-

vania convened its legislature apart, and the two col-

onies were never again united. The “Counties of New 

Kent and Sussex” as they thought of themselves, were 

called, began to be governed by a separate 

assembly, and though the authority of the Governor of 

Pennsylvania was still acknowledged, the legislature 

and tribunals were not appreciably affected by any 

external authority. This was the form of govern-

ment until a separate constitution was adopted in 

1776. The representatives of the three lower counties 

upon the Delaware were members of the Continental 

Congresses of 1774 and 1776, and voted for the adop-

tion of the Declaration of Independence in 1776. 

Among the most noteworthy Articles of the Constitu-

tion of 1776 was the following: “There shall be no es-

establishment of any one religious sect in this State, in 

preference to another, and no clergyman or preacher 

of the gospel of any denomination shall be capable of 

holding a civil office in the State, or of being a member 

either of the branches of the legislature, while they 

continue in the exercise of the pastoral function.” In 

1779 the State’s delegates were instructed to ratify 

the “Articles of Confederation and Perpetual Union” 

adopted by Congress.

During the Revolutionary War Delaware enlisted, 

including Continental soldiers and militia, a total of 

3745 men. On 7 Dec. 1777, the Delaware legislature 

adopted a new Constitution, and on 27 Feb. 1790 

gave its approval. The population of the State in 

1790 was 59,094, of whom 8887 were slaves. Con-

stitutional conventions were held in 1791 and 1831, 

and the present Constitution was adopted at a convention 
in 1897. The common law procedure is followed in 

the courts, and the judges are appointed for terms of
twelve years. In the war of 1812 Delaware was well represented in both the land and naval forces, her best-known representative in the latter being Commodore Thomas Macdonough, the hero of Lake Champlain. Prior to the Civil War, Delaware was classed with the Southern, or slave-holding, States. In the election of November, 1860, the State's electoral vote was given to John C. Breckinridge, who stood for the constitution of the State as a southern state, at the same time all the political parties within the State pledged their loyalty to the Union. In January, 1861, a commission from Mississippi appeared before the Delaware legislature and invited the State to join the Southern Confederacy. The House unanimously, and the Senate by a majority, voted to disapprove of such a remedy for existing difficulties. While there was considerable respect and some sympathy for the rights of the seceding States, there was at all times constant adherence to the National Government. Delaware being a border State, there was some distrust on the part of the Government, particularly as to the southern portion, and at times martial law prevailed. Out of a total white population in the State in 1860 of 90,589, the aggregate number of troops furnished to the Union army during the war by Delaware was 13,651. Admiral Samuel F. Du Pont was one of the ranking officers in the Union service created under the Act of Congress for the Specific Purpose of carrying on the war. The legislature in accordance with the Governor's recommendation rejected the Fourteenth Amendment to the Federal Constitution. At the legislative session of 1869 the Fifteenth Amendment to the Constitution was also rejected.

Population.—The estimated population of the State in 1900 was 194,479. Wilmington, with an estimated population in 1900 of 85,140, is the largest city. In 1900, in a population of 184,735 there were 94,158 males and 90,577 females. Classified by race, there were 153,977 whites, 30,897 negroes and 61 persons of other races; 172,253 of the population were natives, and 13,810 were foreign born. There were 40,029 males of military age, and 54,018 males of voting age, of whom 45,592 were whites, and 8,374 were negroes. The total number of families was 39,446 and the average number of persons to a family was 4.7.

The first school in the State was opened before 1700, under the direction of the pastor of Old Swedes' Church. During the last half of the eighteenth century, the leading educational institution in the State was the Wilmington Academy, which was built in 1765. Prior to the constitution of 1791, no provision was made for the support of public schools. The instrument provision was made "for establishing schools and promoting the arts and sciences"; and in 1796 an act was passed by the legislature applying all the moneys received from marriage and tavern licenses to a school fund. This was the beginning of the public school system in the State. In 1829 the first school law was passed, which divided the counties into many self-governing school districts, each district being the judge of the tax requisite for its own needs. The present school law was passed in 1875, and provided for a fixed tax to be raised annually in each district for the support of the schools therein. Each county has a superintendent of schools, who as such is a member of the State Board of Education. In addition to the tax raised in each school district, there is the income of a large permanent school fund, and regular legislative appropriations. The Constitution ordains that not less than $10,000 annually shall be levied for the permanent school fund, and shall be raised annually. The tax is levied on the personal property of the state, which, with the income of the permanent school fund, shall be used exclusively for payment of teachers' salaries, and for furnishing free text-books. Separate schools are provided for coloured children. In 1900 the total attendance in the free schools of the State was 28,783, nearly equally divided as to sex, of which number 24,683 were whites, and 3893 were negroes. The total amount expended on the free schools of the State for the school year 1905-1906, including amounts derived from school tax, legislative appropriations, and income from school fund, was $501,745.80.

In 1907 a compulsory education law was passed providing for the continuous attendance for at least six months in each year for the school year, at either a public or private school in which the common English branches are taught, of all children between the ages of seven and fourteen years, unless excused for certain reasons specified. Delaware College, the chief institution of learning in the State, is located at Newark. Chartered in 1863, it was opened in 1865 and has expressed the desire to have a successful career. It is governed by a board of trustees, one-half of whom are named by the State. In 1869 the legislature adopted this college as the institution to be provided as an Agricultural College in accordance with the Congressional Enabling Act of 1862. Theological and agricultural, as well as classical, courses of instruction are provided. The number of professors and teachers is twenty-two, and the number of students in attendance is 158. Women are excluded from attendance at the college. Wilmington Conference Academy (Methodist), located at Dover, was founded in 1873. St. Mary's College, founded in 1874, is located at New Castle. The See of Wilmington in 1857, became well-known institution, and numbered some of the best-known Catholics in the country among its graduates. In 1857 there were 120 resident students. It prospered till the opening of the Civil War, and in 1866 closed its doors. There are a number of excellent private schools and academies scattered throughout the State. A State College for coloured students, founded in 1892, is located at Dover. Manual and agricultural, as well as classical and technical, instruction is there furnished. Reform schools for both boys and girls are supported in part by the State. There is also a State Hospital and Insane Asylum. Delaware having no institution for the instruction of the deaf and dumb or the blind, the State bears the expense of having a certain number of them cared for and instructed in proper institutions in other States.

EDUCATIONAL PROGRESS.—Prior to 1772 no definite records are obtainable regarding any regularly established Catholic church in the present State of Delaware. The Catholics in the State prior to the latter part of the eighteenth century were very few in number. In 1730 Cornelius Hallahan, an Irish Catholic, settled in Middletown, in the State, but the instrument provision was made "for establishing schools and promoting the arts and sciences"; and in 1796 an act was passed by the legislature applying all the moneys received from marriage and tavern licenses to a school fund. This was the beginning of the public school system in the State. In 1829 the first school law was passed, which divided the counties into many self-governing school districts, each district being the judge of the tax requisite for its own needs. The present school law was passed in 1875, and provided for a fixed tax to be raised annually in each district for the support of the schools therein. Each county has a superintendent of schools, who as such is a member of the State Board of Education. In addition to the tax raised in each school district, there is the income of a large permanent school fund, and regular legislative appropriations. The Constitution ordains that not less than $10,000 annually shall be levied for the permanent school fund, and shall be raised annually. The tax is levied on the personal property of the state, which, with the income of the permanent school fund, shall be used exclusively for payment of teachers' salaries, and for furnishing free text-books. Separate schools are provided for coloured children. In 1900 the total attendance in the free schools of the State was 28,783, nearly equally divided as to sex, of which number 24,683 were whites, and 3893 were negroes. The total amount expended on the free schools of the State for the school year 1905-1906, including amounts derived from school tax, legislative appropriations, and income from school fund, was $501,745.80.

In 1907 a compulsory education law was passed providing for the continuous attendance for at least six months in each year for the school year, at either a public or private school in which the common English branches are taught, of all children between the ages of seven and fourteen years, unless excused for certain reasons specified. Delaware College, the chief institution of learning in the State, is located at Newark. Chartered in 1863, it was opened in 1865 and has expressed the desire to have a successful career. It is governed by a board of trustees, one-half of whom are named by the State. In 1869 the legislature adopted this college as the institution to be provided as an Agricultural College in accordance with the Congressional Enabling Act of 1862. Theological and agricultural, as well as classical, courses of instruction are provided. The number of professors and teachers is twenty-two, and the number of students in attendance is 158. Women are excluded from attendance at the college. Wilmington Conference Academy (Methodist), located at Dover, was founded in 1873. St. Mary's College, founded in 1874, is located at New Castle. The See of Wilmington in 1857, became well-known institution, and numbered some of the best-known Catholics in the country among its graduates. In 1857 there were 120 resident students. It prospered till the opening of the Civil War, and in 1866 closed its doors. There are a number of excellent private schools and academies scattered throughout the State. A State College for coloured students, founded in 1892, is located at Dover. Manual and agricultural, as well as classical and technical, instruction is there furnished. Reform schools for both boys and girls are supported in part by the State. There is also a State Hospital and Insane Asylum. uprisings, settled at Wilmingtom. He was assisted by the Rev. John Rosseter, an officer in Rochambeau's army during the Revolutionary War, and then an Augustinian. In 1796 he was succeeded by the Rev. Mr. Cibot, who had been Vice-Prefect Apostolic in St. Domingo. In 1800 the Rev. Charles Whelan became presbyter, and was succeeded in 1834 by Father Kenny. From this church the Catholics of the surrounding country as far as at West Chester, Pennsylvania, and Wilmington, were attended. Father Kenny was assisted for a time by the Rev. George A. Carrel, who afterwards became Bishop of Covington, Kentucky. Under the arduous labors of the two priests and generous assistance of Father Kenny have made him probably the best-known priest in the early Catholic history of the State.

Some portions of Coffee Run Church are still standing. The site of the church is about six miles from Wilmington on the Lancaster Pike. In 1785 Delaware was one of the four States (the others being Pennsylvania, Maryland, and Virginia) where Catholics were not virtually under civil disabilities.

From its earliest settlement, at no time did religious intolerance ever appear in the government of the Swedish colony which grew into the State of Delaware. In 1816 St. Peter's, the second church in the State, was built adjoining St. Peter's. Father Kenny expanded and beautified, is now the cathedral of the diocese. Father Kenny was first assisted in 1834, and later succeeded, by the Rev. Patrick Reilly, who, as priest and educator, was one of the most respected clergymen in the country. In 1850 the first Catholic Orphan Asylum in the state was opened in Wilmington.

In 1839 the first parochial school in the State was built adjoining St. Peter's. Until 1868 the State formed a portion of the Diocese of Philadelphia, but in that year the present Diocese of Wilmington was created. It comprises the States of Delaware and the Eastern counties of New Jersey. The Right Rev. Thomas A. Becker was the first bishop. Bishop Becker, on being transferred to Georgia in 1866, was succeeded by the Right Rev. Alfred A. Curtis, who, after a service of ten years, resigned, and was succeeded by the Right Rev. John J. Monaghan, 26 January, 1897. The Delaware diocese from its creation has been distinguished by the excellence of its clergy and temperament of its bishops. The years 1825 to 1860 marked the first important period of Catholic immigration, and the chief nationalities found among the Catholic population have been the Irish. The population of the diocese (100,000), of whom 50,000 are negroes. The Catholic population of the State is 25,000. There are 46 churches in the diocese, of which 20 are in Delaware. The one Catholic church for negroes is situated in Wilmington. The number of priests in the diocese is 43, and the number in the State 34. Of the whole number in the diocese 30 are seculars, 13 belong to various orders. There are twelve parochial schools in the State, with an attendance of 3100. Orphan asylums for white boys and girls, the former near Delaware City and the latter at Wilmington, are under the care, respectively, of the Sisters of St. Francis and the Sisters of Charity. A coloured orphan asylum in Wilmington is conducted by the Josephite Fathers. A coloured Industrial and Agricultural School is also maintained by the Josephite Fathers at Clayton. A Home for the Aged, at Wilmington, is under the care of the Little Sisters of the Poor. All these institutions are well housed, supplied, and managed, and are highly well for Catholic benevolence in the state. A Summer Home for the teaching orders of the Sisters in the State and for poor girls has been opened at Rehoboth, a seaside town. Salesianum, a preparatory school, located at Wilmington, under the care of the Oblates of St. Francis de Sales, and the Ursuline Academy for day school for girls, are the present chief Catholic educational institutions in the State. Within the diocese is a novitiate of the order of Oblates of St. Francis de Sales and a convent of Visitation nuns.

OTHER RELIGIONS.—The first religion in the State was that brought by the Swedish settlers, namely, the Lutheran. The first church erected was in 1638 within Fort Christina, and the second in 1643 near New Castle by the Rev. Casper Stolp. About 1726 the Swedish Church, built in 1698, under the direction of the celebrated Swedish minister Bjork, is still in use and in a splendid state of preservation. After the arrival of the English, the Swedish and English churches were, for the greater part of the time, attended by the Rev. Casper Stolp. Some of the Swedish churches worshipped there. The Church of Friends erected their first meeting house in Delaware about 1687, and for the greater part of the State's history, they were probably the most influential and respected class in the State, particularly in the northern portion. The first Presbyterian church in the State is known to have been established with elders and trustees as early as 1705, but the precise year of its institution is not known. The Baptists in the State was in 1703 by emigrants from South Wales, who settled upon the "Indian Track," a portion of the Penn grant in Penncrider Hundred. This church erected its first meeting house.

The Baptists in the State was in 1703 by emigrants from South Wales, who settled upon the "Indian Track," a portion of the Penn grant in Penncrider Hundred. This church erected its first meeting house.

The Baptists in the State was in 1703 by emigrants from South Wales, who settled upon the "Indian Track," a portion of the Penn grant in Penncrider Hundred. This church erected its first meeting house. The third Baptist meeting house erected in America. Meetings of the Methodist denomination were held at Wilmington as early as 1766, and in 1780 "Barratt's Chapel" in Kent County (still in use) was erected. This was one of the cradles of the Methodist Church in America, and hence the first General Conference of American Methodism was appointed. The active church membership and the Sunday-school membership of the leading Protestant denominations are (1908): Methodist Episcopal, 40,000; Presbyterian Episcopal, 82,000; Baptist, 5000; Adventist, 17,000; and many churches for coloured people in the State, among which the Baptist and Methodist, particularly the latter, predominate. Among other creeds and denominations represented in the State, are the Lutheran, Unitarian, Swedeborgian, Christian Science, Methodist Protestant, various divisions of the Baptists Church, Seventh Day Adventist, and Hebrew.

LEGISLATION.—The first article of the State Constitution, adopted in 1897, states, "No man shall or ought to be compelled to attend any religious worship, to contribute to the erection or support of any place of worship, or to the maintenance of any ministry, against his own free will and consent.

That "No religious test shall be required as a qualification to any office or public trust under this State." This same language is found in the Constitution adopted in 1831. Blasphemy is punishable as a misdemeanor. By statute any worldly employment, labour or business (works or necessary or charity excepted), peddling goods, droving, fishing, foraging, hunting, gambling, horseracing, cock fighting or hunting, and playing and dancing, on the Sabbath day, are all prohibited and made punishable as misdemeanours. The usual form of oath is by swearing upon the Holy Scriptures of Almighty God. Any person believing in any other than the Christian religion may be sworn according to the peculiar ceremonies of his religion, if there be any such. A person conscientiously scrupulous of asking an oath may be permitted to affirm to the truth of the matters to be testified. A chaplain is appointed to the legislature, and the daily sessions by (force of custom only) are opened with prayer. Christmas and Sunday are the only religious holidays recognized as legal holidays. There is neither statute nor court decision in the State, regarding the seal of confession.

Prior to 1863 the provisions of one statute covered the incorporation of corporations or societies of whatsoever denomination. At that time, a statute
was passed providing exclusively for the incorporation of Catholic congregations. It gives a simple method for incorporating a church congregation. Under a statute, all real and personal property belonging to any church or religious society is not liable to assessment and taxation for public purposes, unless the property is in the form of a school where the tuition is not free. The constitution provides: "No portion of any unincorporated or not regularly incorporated school may hereafter be appropriated or raised by taxation, for educational purposes, shall be appropriated to, or used for, or in aid of any sectarian church or denominational school, provided that all real or personal property used for school purposes where tuition is free, shall be exempt. Property owned by the Munsee and allied tribes is exempt for public purposes." The right of any charitable or educational corporation to take by devise or bequest is undoubted. While the language of the statute under which Catholic congregations are formed into church corporations is not beyond cavil in this regard, the assumption is that such a corporation may take by devise or bequest, without qualification or condition. In this respect, the rights of Catholic church corporations are clearer and more liberal than those enjoyed by church corporations of any other denomination. Ordained ministers of the Gospel are not liable to serve as jurors. Military service is voluntary. By the constitution, no divorce may be granted save by a court. Annulment of marriage for certain causes, existing at the time of marriage, is provided for. For divorce, the reasons are adultery, bigamy, imprisonment, cruelty, desertion, habitual drunkenness, and hopeless insanity. Hearings and trials in divorce matters must in all cases be had before the court and in public. Marriage within the degree of the established table of consanguinity, or between whites and blacks, is unlawful and void, and the parties thereto are guilty of a misdemeanour. A regularly issued license is a condition precedent to marriage, unless the bonds are published at some place of stated religious worship, within the Hundred of the woman’s residence on two Sabbaths, and no objection made to such marriage.

The sale of liquor is licensed by the State, but with many restrictions. The State is divided into four local option districts, in two of which prohibition laws apply in new ways.

Legacies for religious, charitable and educational purposes are not subject to taxation. The right to dispose of property by will may be exercised by any person of the age of twenty-one years or upwards, who is of sound mind. Such will must be in writing, executed in two or more parts, and the testator must sever the next property exceeding $200 may be disposed of. Cemetery corporations are now formed under the provisions of a general incorporation law. No taxes are paid on lands used for cemetery purposes.

The constitution places no limit to direct taxation, but no tax on assessed property is levied. County and municipal assessment and taxation is employed. There is no tax on income. A collateral inheritance tax is collected, where the recipient is a stranger in blood, and the estate exceeds $500.

**Delaware Indians,** an important tribal confederacy of Algonquian stock originally holding the basin of the Delaware River, in Eastern Pennsylvania, U. S. A., together with most of New Jersey and Delaware. They call themselves Lenape or Leni-lenape, but equivalent to "real men." The English knew them as Delaware from the name of the river; the French called them Lompe (wolves), under which term they included also the cognate Mahican; while to most of their Algonquian neighbours they were known as Wapanaki (Easterners). By reason of being the parent body of a number of cognate tribes, and holding the ancestral territory, they were accorded precedence in intertribal assemblies, under the respectful title of "grandfather.

The Lenape proper consisted of three tribes—Munsee, Unami, and Unalaqto—symbolized respectively under the totems of the Wolf, Turtle, and Turkey. Of the Lenape tribe the Munsee lived the east, and were considered the defenders of the frontier against the incursions of the hostile Iroquois. Their dialect differed considerably from that of the other two. The Unami held the middle course of the river, together with the hereditary chiefship, while the third tribe occupied the lower country. Each tribe was organized into clans or gentes, numbering about thirty-five in all, with descent in the female line, as usual among the Eastern Indians. In habit they were sedentary, depending chiefly upon agriculture rather than upon hunting, cultivating large quantities of corn, beans, squashes, and tobacco. Their houses, consisting of a framework of pole-covered with brush, matting, woven of rushes, were of wagon-top shape and accommodated several families each.

The most ancient traditions of the Lenape are contained in the sacred pictograph record known as the Walum Olum or "Red Score," first brought to notice by Raffles in 1830 and published with translation and notes by Brinton in 1885. They made their first treaty, with Penn, in 1682, at Shackamaxon within the present limits of Philadelphia. To this period belongs their noted chief Tamenend, from whom the Tamyen Society derives its name. As the whites pressed upon them the Delawares gradually retired westward, first to the Susquehanna and thence to the Alleghany, until in 1751 they began to make settlements in Ohio, where the greater part of the tribe was established at the outbreak of the French and Indian war in 1754. In common with all the other tribes of the Ohio region, they fought with the British against the English in this war and continued the struggle independently for some time after the French garrisons had been withdrawn. Throughout the Revolution and the war of 1812 they were allies of the English against the Americans. As early as 1746 zealous Moravian missionaries had begun work in the tribe in Eastham’s Peninsula. On an estate of 1600 acres a considerable number to Christianity, despite persecutions and removals forced upon them by the whites, culminating in the massacre of an entire community of Christian Delawares at Gnadenhutten, in Ohio, in 1782.

The war of 1812 was followed by treaty cessions and other removals, most of the Christian Delawares emigrating to Canada, while the others, after various halts by different bands in Indiana, Missouri, Arkansas, and Kansas, were finally collected chiefly in the present Oklahoma, the main body incorporating with the Cherokee in 1867. They have greatly decreased, but number (1908) altogether about 1900 souls, including about 870 with the Cherokee and 95 more with the Wichitas, in Oklahoma; about 250 Munsee in Wisconsin and some 50 more in Kansas; and the rest, under the names of Munsees and Moravians, on reservations in Ontario, Canada.

**James Mooney.**
DELOCUS, a titular see of Thrace, suffragan of Philippopolis. The Greek name of the place was Delos or Delroi, later Derkos or Derko; the latter forms have prevailed. The Turkish name is Deniz.

It is now a little village south-west of Kara Bournou, a promontory on the Black Sea, and on the southern bank of Lake Derkos, the waters of which are brought to Constantinople by an aqueduct. There are about 300 inhabitants. The see, though some historians state that its origin was Greek, as late as Andrew, is not mentioned before the eighth century; however, a rather obscure record of Balsamon (P. G., CXXXVII, 548) permits the supposition that it was established shortly after the Trullan Council of 692.

The first known bishop is Gregory, who attended the Second Council of Nicaea in 705. In the records of the councils under Photius are found the signatures of his partisan Neophythus and of Macarius, the partisan of St. Ignatius. About 840 the see stood twelfth among the autocephalous archbishoprics. Its archbishop, John, subscribed a synodal sentence in 987. Balsamon (P. G., CXXXVIII, 275) speaks of another prelate who sought permission to reside in the larger and richer city of Phileas. Another was reproached in the Holy Synod by the Patriarch Michael with having ordained a bishop native of Constantinople and before the canonical age (ibid., 213); he was perhaps the John who was present in 1186 at the council of Gallipoli, known as a suffragan of Nicea. One Gregory subscribed another council in 1193. In 1316 the see was given to the Archbishop of Nymphaeum, who had been deprived of his own (Miklosich and Müller, "Acta et diplomata greca", I, 50). Luke was archbishop in 1329 (ibid., 98). In 1356 the see was per adjudicacionem in the hands of the Metropolitan of Bizye (ibid., 355). In 1365 it had again an occupant, and its bishop in 1379 and 1381 was Paul; in 1389 Joseph was bishop (op. cit. II, 6, 39, and 129). In 1466 it was and probably had long been ruled directly by the Patriarch of Constantinople (Kambourgous. Monuments for History of Athens (Gr.), II, 354). It was not re-established until the beginning of the seventeenth century, when the titular resided at Thessalonica. Delos was made a metropolis in 1655. In October, 1746, it was raised to the eighth rank of the Greek hierarchy (Mansi, CXXXVIII, 527) and included 41 villages in the vicinity of Constantinople and along the shores of the Black Sea and the Sea of Marmora, among them San Stefano, Makri-Keyi, and Bueyuk-Dere, with Catholic parishes conducted by Capuchins, Dominicans, and Minor Conventuals.

L. PETIT.

DELEGATES, APOSTOLIC. SeeLEGATE.

Delegation (Lat. delegate), the commission to another of jurisdiction, which is to be exercised in the name of the person delegating. Jurisdiction is defined as the power of anyone who has public authority and pre-eminence over others for their rule and government.

In ancient Roman law, delegation was the substitution of one debtor for another; the second debtor making payment in the name of the first. In modern civil law, the term delegations is used for committees of representatives or judges, who in the name of the parliament of the judiciary consider and determine the special matters committed to them. In cases of delegation is the spiritual jurisdiction or power which a person exercises in virtue of a commission from one having ordinary jurisdiction (see JURISDICTION), with the understanding that such delegate must act in the name of the one delegating. The canons distinguish between delegation ab homine, and delegation a jure. The former is that which comes from a person in the strict sense of the word; while the latter may have its roots in a judicial act. It is through delegation a jure, that is in virtue of jurisdiction granted by the Council of Trent, that bishops have certain powers in regard to exempted regulars. Whenever the common law designates a person as having powers which belong to another by ordinary reason, the one who is delegated is said to be a delegate a jure. If bishops exercise such powers "as delegates of the Apostolic See", an appeal against their actions would have to be made to the pope, for it is really his jurisdiction they are employing: while if the common law refers to them as acting "by delegation of the Holy See", an appeal could be taken to the sovereign pontiff, and the bishop acts in virtue of both ordinary and delegated jurisdiction. Historically, the origin of canonical delegation is to be sought most probably in the fifth (in the Latin version, the seventh) canon of the Council of Sardica (a. d. 347), which speaks of judges delegated to the Holy See; an appeal could be taken to the pontiff, and the bishop acts in virtue of both ordinary and delegated jurisdiction.

II. Anyone having ordinary jurisdiction may delegate to another, who has no such power; such persons are called plenary delegates. A bishop may delegate to a layman for spiritual matters. From the fifth century onwards, instances of appointment of delegates by the pope are distinctly recorded, and such delegation became more frequent as time went on, particularly since the pontificate of Gregory I (590-604).

A. Anyone having ordinary jurisdiction may delegate to another, who has no such power; such persons are called plenary delegates. A bishop may delegate to a layman for spiritual matters. L. PETIT.
would not be absolutely against the will of the superior.

III. Delegated powers are necessary, either for the lictory or validity of an act performed by the delegate. If there be question only of the lictory of an act, permission reasonably presumed is sufficient. This would be the case, for example, in the administration of the sacraments, except penance and possibly matrimony. If, however, it be a question of the validity of an act, the delegate must have an explicit delegation, or at least rest upon a presumption of outward signs indicating actual consent. Such, for example, would be the delegation requisite for valid absolution in the tribunal of penance. In general, a delegate may not proceed to the exercise of his power until it be formally notified to him, for, according to an axiom of law, jurisdiction is not presumed by one knowing and accepting. In certain cases, this knowledge and acceptance may be only implicitly implied, but it is then considered sufficient. The fact of delegation must be proved to those concerned in the matter at stake, either by showing them the written instrument or exhibiting unexceptionable testimony that the power has been received. The delegate must also carefully observe the form of procedure specified by the superior who has empowered him to act. In case of grievance, an appeal may be made against the delegate to the tribunal of the person who delegated him. This fact shows that delegation is a vicar-general. For if a superior is not delegated power, there is no appeal from his tribunal to that of the bishop, because their tribunal is declared to be one and the same. The power of a vicar-general is most correctly characterized as quasi-ordinary, for on the one hand, he holds an office to which certain faculties are annexed, and on the other, he exercises his powers in the name of another. Some canonists, however, maintain that a vicar-general has delegated, and others that he has ordinary jurisdiction. Finally, no inferior ordinaries can delegate their entire authority to others in perpetuity without the license of the Roman pontiff, because such delegation would be equivalent to abdication, which is not permissible without the consent of the supreme authority. What has been said in this respect of inferior ordinaries, holds good also for those delegated to certain classes of cases in general (ad universalem causarum). As the powers delegated by the pope are generally for very important matters, the Council of Trent (Sess. XXV, c. 10, de ref.) made an effort to provide by law for a certain number of qualified persons whom the pope could appoint as his delegates. The council ordered that several such ecclesiastics should be elected in provincial synods and be named, if necessary, to be forwarded to Rome by the bishops. The decree, however, was seldom acted on and gradually became entirely obsolete.

IV. Delegated jurisdiction can sometimes be subdelegated to others. If the delegate was appointed by the pope, even for a particular case, he has the power of subdelegation. This latter is prohibited only when the matter has been committed to his personal care in an especial manner, or when it is of unusual importance or of a merely executive nature. Hence, when a confessor has received by Apostolic privilege the faculty of absolving all the faithful from certain sins and censures, or of dispensing in certain irregularities and vows, he can not subdelegate this ministry. In like manner, one who has been charged with the execution of matrimonial dispensations may not subdelegate the ministry itself, yet he may employ others to assist him in matters connected with his delegated jurisdiction, provided their work be only supplementary to his principal. If the delegate was appointed by an ordinary other than the pope, he can not subdelegate, unless he has been commissioned ad universitatem causarum, or when the person delegating has given him the special authority to subdelegate. The subdelegate cannot make a new delegation, but he can call in the assistance of others for the details of his work. When a delegate has confided all his authority to a subdelegate, the latter may appeal from the decision of the latter does not lie to the delegate, but to the superior who had originally commissioned the delegate.

V. Delegation ceases if the work assigned to the delegate has been completed; if the delegate abdicates his power or declares his delegation, or if the consent of the delegate is revoked; if the delegate die, unless he was one of a number of delegates simpliciter and their commission had provided for its continuation in such an emergency; if the person delegating dies, and the cause had not yet begun; if the person die on whose account the delegation was constituted, unless some matter concerning the Church or a prelacy be at stake.

Delfau, François, theologian, b. 1637 at Montel in Auvergne, France; d. 13 Oct., 1676, at Landevenex in Normandy. He joined the Order of St. Benedict when he was seventeen years of age, and made his solemn profession at the Abbey of St. Allire, 2 May, 1653. He was a profound student of the Fathers of the Church and the history of the councils. Constant application to study speedily matured the powers of his exceptionally keen and brilliant mind, and he soon came to be looked upon as a foremost authority on all questions connected with patristic theology. When the Congregation of St. Maur in 1670 determined to undertake a critical edition of the works of St. Augustine, Delfau was commissioned by his superiors to prepare it. The task was a difficult one, but together with six other members of the order; among them his intimate friend Dom Robert Guérard, he began with energy and courage this great labour of love, and prefigured it with an accuracy truly Benedictine. In 1671 he prepared an elaborate prospectus, setting forth the general scope and character of the new edition and the principles by which the editors were to be guided. Manuscripts came to the learned Maurists from various countries, and Pope Clement X even sent priceless codices of the Sacramentals from the Vatican with all the materials that had been gathered there under Clement VIII for a projected edition of the Opera Augustinian. When the first two volumes were about to be printed, the work was suddenly arrested, 18 Sept., 1675, by two lettres de cachet from Louis XIV, decreeing the banishment of both Delfau and Guérard from Paris. The occasion for this drastic measure seems to have been Delfau's book “L'abbé commendataire”, published at Cologne, 1673, in which the young monk had severely commented on the abuses connected with the system of commendam as it was then shamelessly carried on in France to the great detriment of the Church. The fearless work greatly aroused the king's anger, of which the enemies of the Maurists did not fail to take advantage. Delfau was obliged to withdraw to the monastery of Landevenex; he lived there but little more than a year when, at the early age of thirty-eight, he was drowned as he was going to the Carmelite at Cerbère, the object of his visit was to deliver a eulogy on the feast-day of St. Teresa. Delfau's works are: "Apologia Cardinalis Fürstenbergii", a masterly epitaph on Casimir, King of Poland, who died as Abbot of St. Germain des Prés; and a dissertation on the authorship of the "Imitation of Christ", in his edition of that book (Paris, 1690).

DE LISLE

Delfino, Pietro, theologian, b. at Venice in 1444; d. 16 Jan., 1525. He entered the Camaldolese Monastery of San Michele at Murano, and in 1470 was elected abbot of the same community. The following year he was made general of the order and held that office until the year 1513 when he resigned in favour of his fellow-countryman Blessed Paul Giustiniani, whom he had invested with the Camaldolese habit in 1510. Delfino was the forty-sixth general from St. Romuald, the founder of the Camaldolese, and the last elected for life, who held that office for three years. In 1488 he received the votes of his countrymen in Venice for the cardinalate, but refused to accept this dignity from Innocent VIII. The letters of Delfino, which number more than four thousand, addressed to different religious of his own and other orders and to various secular dignitaries, are valuable not only on account of the trustworthiness of their author, but more especially because of the accounts they contain of contemporary events in his own order and the Church in general. A collection of his Latin letters was published at Venice in 1534. Several others that had been omitted in the Venetian editions were included later in Martène’s “Veterum Scriptorum amplissima collectio.” The “Apothegmata Patrum” and the “Dialogues” on Savonarola are still unedited.

MARTÈNE, VETERUM SCRIPTORUM ET MONUMENATORUM ECCLESIASTICORUM ET DOCTORUM ORATORUM AMPOLLASSIO COLLECTIO, III. 915.

STEPHEN M. DONOVAN.

Delille, Jacques, French abbé and littérateur, b. at Aigueperse, 22 June, 1738; d. at Paris, 1 May, 1813. He received his education at the Collège de Lisieux in Paris and became an instructor at the Collège de la Madeleine in the same city. His translation into French of Virgil’s “Georgics,” which appeared in 1770, had very great success and eventually won for him a seat in the French Academy. He was afterwards appointed to the chair of poetry in the Collège de France and through the patronage of the Count d’Artois he received as a benefice the Abbey of Saint-Severin, but took only minor orders. In 1786 he accompanied the Count de Choiseul to Constantinople and visited Greece; his stay in the East does not seem, however, to have much influenced his literary career. The French Revolution deprived him of his position and between 1794 and 1795 he had to leave France; he was spent in Switzerland, Germany, and England. He returned to France in 1802 and again took his seat in the French Academy. For some years Delille was considered a great poet, Voltaire at one time even going so far as to call him the French Virgil; but he did not enjoy very long this unwarranted reputation. All agreed to-day that he was a wonderful versifier, having at his command all the secrets of his art, but it is also recognized that his long descriptive poems betray a complete lack of poetic feeling and inspiration. They are a striking illustration of the difference between versification and poetry. His best known works are: “Traduction des géorgiques de Virgile” (Paris, 1770); “Dithyrambe sur l’immortalité de l’âme” (Paris, 1793); “L’Imagination” (Paris, 1806); “Les Trois Règnes de la nature” (Paris, 1806); “La Conversation” (Paris, 1812).

Pierre-Marie.

DE LISLE, AMBROSE LISLE MARCH PHILLIPS, b. 17 March, 1809; d. 5 March, 1878. He was the son of Charles March Phillips of Garendon Park, Leicester- shire, and Harriet Ducarel, a lady of Hugenot descent. He assumed the name of de Lisle in 1862, when on the death of his father he inherited the estates of the ancient family of de Lisle.

He spent his earliest years at his birthplace and was brought up as a member of the Church of England, receiving his first religious instruction from his uncle, William March Phillips, a high-church clergyman. In 1818 Ambrose was sent to a private school at South Croxton, whence he was removed in 1820 to Maizemore Court School, near Gloucester, kept by the Rev. George Hudson. The Bishop of Gloucester having married Sophia March Phillips, was his uncle by marriage, and so the boy had the advantage of spending Sundays and holidays at the bishop’s palace. At school he met for the first time a Catholic, the Abbé Giraud, a French émigré priest, whose holy life struck the boy as inconsistent with what he had always heard of Catholics. On one of his journeys to Gloucester he took the opportunity of questioning the priest as to the real belief of Catholics. The answers he received so excited his interest that he began to read all the books on the subject he could find in his father’s library. A visit to Paris in 1823 gave him his first acquaintance with Catholic liturgy. The effect on his mind was shown on his return home when he persuaded the Anglican rector to place a cross on the communion table, but this first effort to restore the cross to English churches was promptly suppressed by the Bishop of Peterborough, who was in camera.

At this time an incident occurred which left an indelible impression on his mind, and which he thus related to his subsequent biographer: “One day in the year 1823, as I was rambling along the foot of the hills in the neighbourhood of the school, and meditating, as was my wont in those boyish days, over the strange Protestant theory that the Pope of Rome is the Anti-Christ of Prophecy, all of a sudden I saw a bright light in the heavens, and I heard a voice which said: ‘Mahomet is the Anti-Christ; for he denieth the Father and the Son.’ On my return home in the next holidays I looked for a Koran and there I found those remarkable words, ‘God neither begeteth nor is gotten.’”

About this time Mr. Hudson’s school was removed to Edgbaston, near Birmingham, and here it was that the boy, now sixteen years old, had a remarkable dream—"in which Our Lord seemed to reproach him—’you not having fully conversed with the faith received.’” Moved by this, he wrote to a Catholic priest, the Rev. Thomas Macdonnell, asking him to meet him at Loughborough and receive him into the Catholic Church. Mr. Macdonnell met him and was surprised to find him so thoroughly instructed in Catholic doctrine and practice, and a few months later found him sufficiently prepared to be received into the Church. Ambrose informed both his father and his schoolmaster, with the result that he was immediately removed from Mr. Hudson’s school, at that gentleman’s desire, and returned home with his father, who arranged for him to continue his preparation for the University under the private tuition of the Rev. William Wilkinson. He was obliged every Sunday to attend the Protestant church, but did not join in the service. His own account of his conversion will be found in Appendix I, in the first chapter of his biography below.

Ambrose Phillips went into residence at Trinity College, Cambridge, 16 October, 1826. He found at the university a congenial friend in Kenelm Digby (q.v.), author of “Mores Catholici” and “The Broadstone of Honour,” and, like himself, a recent convert. There was no Catholic chapel then at Cambridge, and every Sunday for two years these two young Catholics used to ride over, fasting, to St. Edmund’s College, Old Hall, a distance of twenty-five miles, for Mass and Communion. It was on one of these visits to St. Edmund’s, in April, 1828, that Phillips was seized with a serious illness, having broken a blood-vessel on the
lungs. The doctors recommended his father to take him to Italy for the winter, and this necessarily cut short his Cambridge career, so that he had to leave the university without taking his degree. On his return to England in 1829, he became acquainted with the Hon. and Rev. George Spencer, then an Anglican clergyman, and was converted by the unconcealed fervour and fervent eloquence of his sermons in leading to Spencer's conversion, as the letter admits in his "Account of my Conversion": "I passed many hours daily in conversation with Philipps and was satisfied beyond all expectations with the answers he gave me to the different questions I put to him about the principal tenets of the Roman Catholics." The following winter (1830-1831) he again spent in Italy, on which occasion he met Rosmini, who made a great impression on him.

On 25 July, 1833, Ambrose Phillipps married Laura Mary, eldest daughter of the Hon. Thomas Clifford, son of Hugh, fourth Lord Clifford of Chudleigh. The marriage proved a most happy union, and on this occasion Mr. Charles March Phillipps gave his son possession of the second family estate, the manor of Grace-Dieu in Leicestershire, which before the Reformation had been a priory of Augustinian nuns. Here Ambrose Phillipps built a new manor-house during the process. According to his will, he and his wife resided at Leamington, or at Garendon Park. Marriage made no difference to the ardour with which he devoted himself to the interests of the Church and the spread of Catholicism, and this at a time when the great influences of later days had not made themselves felt. Writing a few years before his death (Letter to the Rev. W. R. Brownlow, 10 Dec., 1869, Life, I, 349) he thus summed up the chief aims of his own life: "There were three great objects to which I felt after my own conversion as a boy of fifteen, specially drawn by internal feeling for the whole space of thirty years: the removal of the misunderstanding of the ascetic aspect of Catholic life should be presented to the English people. He gave both land and money, even crippling his own resources in providing the necessary buildings. This work was begun in 1835 and completed in 1844, while, during the same period, he founded missions at Grace-Dieu and Whitwick. His disappointment was great when he found that the Trappists were prevented by their rule from undertaking active missionary work, because he attached the greatest importance to a supply of zealous missionary priests who would labour in English villages. "I would have them go about and preach everywhere on the foreign plan, in the fields or on the high roads even" (Letter to Lord Shrewsbury, 1839; Life, I, 105).

Besides the material assistance thus given to the spread of Catholicism, he devoted himself with persistent energy and faith to spiritual means in which he had been trained and in which his whole life was spent. His friend Rev. George Spencer in establishing and propagating the Association of Universal Prayer for the Conversion of England. This remarkable crusade, the results of which cannot be estimated, met with deserved success due to the untiring efforts which he put forth. But he had great hopes which both entertained of a speedy, if not immediate, return of England to the Catholic Faith. He attended the veneration with which they urged their point, and accounts for the co-operation they everywhere met with. In a continental tour they made together, accompanied by Mrs. Phillipps and two of her children, in 1844, they passed through Belgium, Germany, and North Italy, meeting many distinguished prelates and clergy, and gaining a fresh sympathy of prelates and clergy in the cause. Wiseman was co-operating in Rome, and soon the movement spread widely through the Catholic world. In this work Mr. Phillipps laboured without ceasing; by interviews and by letters he aroused the interest and prized the enthusiasm of others, so that he became the apostle of the propagation of the Catholic Faith in England. It is natural to see the first-fruits of this prayer in the numerous conversions that resulted from the Oxford Movement, and in that movement Mr. Phillipps played a unique part. He was for some time the only Catholic who was in confidential correspondence with the leaders of the party at Oxford. His ideal of the conversion of England had always been corporate reunion; the reconciliation of the Anglican Church as a body, rather than individual conversions however numerous; and in the Oxford Movement his sanguine spirit saw the beginning of a new era. He directed his efforts to remove obstacles on both sides and to act as a mediator, the more useful as he was unofficial. This he looked upon as his vocation, as his son has stated (Life and Letters, I, 254, note): "National Conversion by means of Corporate Reunion he likened unto the Apostolic practice of fishing with a net 'gathering in multitudes of all kinds of fishes.' And this he considered to be his own special call from on High, to prepare the way and hasten the time when the Divine Word should again be spoken to Peter, 'Cast your nets into the deep.'" With this end in view Mr. Phillipps did much to promote the reunion by examples of his own fuller knowledge of Catholic life. He did by personal intercourse and correspondence with Newman and others, and by receiving several Oxford men as his guests at Grace-Dieu. His efforts were rewarded by the numerous conversions that took place and the impetus given to the Catholic cause.

The restoration of the hierarchy in 1850 was an event after his own heart, and he exerted himself to reconcile to it some of the Catholic laymen who thought it inexpedient. During the excitement that ensued throughout the country he wrote two pamphlets, "A Defence of the Hierarchy," and "A Defence of the Roman Catholic Church on the Re-establishment of the Hierarchy and the Present Position of Catholic Affairs," and "A few words on Lord John Russell's Letter to the Bishop of Durham". The progress of events raised his hopes so high that he regarded the reconciliation of the Anglican Church to the Holy See as imminent, and to hasten its full achievement he set himself to write a book of prayer, in which the co-operation of non-Catholics was desired. "The Association for promoting the Unity of Christendom", known as A. P. U. C., was founded on 8 September, 1857, by fourteen persons including Father Lockhart, Fr. Collins, O. Cist., and Mr. de Lisle; the rest were Anglicans, with one exception, a Russo-Greek priest. The only obligation incumbent on members, who might be either Catholics, Anglicans, or Greeks, was to pray for God to the unity of the baptized body. At first the association progressed rapidly. Mr. de Lisle writing to Lord John Russell, whom he had joined under the name of the Sacred Order, in 1858, wrote to Lord John that there were many Catholic Bishops and Archbishops and Dignitaries of all descriptions from Cardinals downwards: the Patriarch of Constantinople and other great Eastern prelates, the Primate of the Russian Church. . . . I do not think any Anglican Bishops joined us, but I have no doubt of many of the Oxford Order". He gave the number of members as nine thousand. The formation of this association was,
however, regarded with distrust by Dr. Manning (afterwards Cardinal and Archbishop of Westminster) and his colleagues, who also took exception to Mr. de Lisle's treatise "On the Future Unity of Christendom." The matter was referred to Rome and was finally settled by a papal rescript addressed "Ad omnes episcopos Anglie," dated 16th September, 1664, which condemned the association and directed the bishop to take steps to all Catholics from judging it. This was a great blow to Mr. de Lisle, who considered that "the authorities had been deceived by a false relation of facts" (Letter to Editor of Union Review, 20 Dec., 1864; Life, I, 400). He however withdrew his name from the A. P. U. C. under protest, and in 1873 took subscription to the Holy See. The ground on which the association was condemned was that it subverted the Divine constitution of the Church, inasmuch as its aim rested on the supposition that the true Church consists partly of the Catholic Church in communion with Rome, "partly also of the Photian Schism and the Anglican heresy, to which equally with the Roman Church belong the one Lord, the one faith and one baptism" (Rescript, in Life, I, 388).

Mr. de Lisle's own pamphlet was not censured, but the condemnation of the A. P. U. C. was regarded by him as the death-blow of his hopes for the reunion of Christendom during his own lifetime. But his own belief in it persevered and influenced his views in other Catholic affairs. Thus he warmly supported the attendance of Catholics at the English universities, and he even approved of the abortive project of a Uniat English Church.

The rest of his life passed without any very special incident, though he continued ever to take an interest in public affairs as affecting the fortunes of the Church, and in the sameconnexion he carried on intimate and cordial correspondence with men so different as Newman, Gladstone, and Montalembert. He corresponded among his friends John, Earl of Shrewsbury, Cardinal Newman, Pugin, Faber, and many other well-known Catholics, and though he differed on many points from Cardinal Manning and Dr. W. G. Ward he remained on friendly terms with both. He died a holy death at Garendon, leaving his sanguine wife and eleven of his sixteen children surviving him. Besides the pamphlets mentioned above he wrote a remarkable work, "Mahometanism in its relation to Prophecy; or an Inquiry into the prophecies concerning Anti-Christ, with some reference to their bearing on the events of the present day" (1855). He also translated Father Dominici's "Lamentations of England" (1833); "Lavater's Art of Man's Soul" (1836); Montalembert's "St. Elizabeth of Hungary" (1839); Rio's "La petite Chouannerie" (1842); "Maxims and Examples of the Saints" (1844); and he compiled: "Manual of Devotion for the Confraternity of the Living Rosary" (1843); "Catholic Christian's Complete Manual" (1847); "The Little Gradual" (1847); "Thesaurus animae Christianae" (1847); "Sequentiae de Festis per Annurn" (1862).

He also wrote many articles for the press, of which many were issued in pamphlet form, but a complete bibliography has not hitherto been compiled.

EDWIN BURTON.

De Lisle, GUILLAUME, reformer of cartography, born 28 February, 1675, in Paris; died there 25 January, 1726. His father, Claude Delisle (1644-1720), having completed his law studies, settled in Paris as private teacher in geography and history, and afterwards filled the office of royal censor. He was also a cartographer, and in 1696 drew up a map in manuscript and also took part in his son's first works, "The Map of the World" and "The Map of the Continents," both published in 1700. These and the terrestrial maps produced subsequently, which surpassed all the maps of the time, established the family's fame. In 1702 he became theologian, in 1716 adjoint, and in 1718 associate of the Académie des Sciences; and, as the young king's instructor in geography, received the title of First Royal Geographer with a fixed salary, an office which was then created for the first time.

Guillaume Delisle adopted entirely new principles in cartography and set about making a thorough reform in that subject. The map-publishers of the time did not know how to utilize the material supplied mainly by the French astronomers of the latter half of the seventeenth century, and Delisle recognized that the new methods of measuring by scale and of marking the places were very valuable for cartography; with this help he therefore produced a new and perfect picture of the world. When his astronomical information fell short he carefully examined and sifted all the data he could find; he consulted all the map-makers and their products of reading were dovetailed nearly into the facts which he had already at hand. According to a fixed method he worked up the several continents and countries one by one, France in particular. In disputed points he named his source on the map or wrote additional notes, the majority of which were published in the writings of the Académie. One particular recommendation of his charts is that he employed a fixed scale of measurement for regions closely connected with one another. No less famous than his astronomical corrections are the completeness of his topography and the care displayed in the orthography of the names.

An accurate summary of his charts and treatises with the highest commendation is given by CHRISTIAN SANDLER, Die Reformation der Cartographie um 1700 (Munich, 1906).

OTTO HARTIG.

DE L'ORME, PHILIBERT, celebrated architect of the French Renaissance, b. at Lyons, c. 1515 or a little later; d. at Paris, 8 January, 1570. Of the exact date of his birth there exists no documentary evidence. He was the son of Jehan de L'Orme, a master builder of Lyons, from whom he received his training. At an age when he speaks of himself as being "of great age," Philibert de L'Orme, as described in the books of the time, was a master builder at Lyon, where his careful and scientific study of classic antiquities attracted the attention of the learned Cardinal of Santa Croce, then a bishop, later Pope Marcellus II, through whose influence he was employed by Paul III. From this service he was recalled to Lyons two years later, 1539, by Guillaume du Bellay and his brother, Cardinal Jean du Bellay. Soon after his return de L'Orme was made military controller, an office he held until 1545, when he was named by the king "master architect and general conductor of buildings, works and fortifications." In this capacity he ingenuously averted a threatened attack of the English upon the dismantled château of Brest by means of mock cannon and an improvised soldierly. At various subsequent periods, he was endowed by royal favour with the title of counsellor and almoner ordinary of the king, and was made Abbé de Gévout, of Barthélemy, of Saint-Eloy-les-Noyon, besides receiving among other such offices a canon of Notre-Dame at Paris. Though it was the usage of the time for the king to bestow upon laymen the title and benefices of an abbé as reward or salary, it has been conjectured from the double title of king's almoner and canon of Notre-Dame, that de L'Orme had received minor orders. Between the years 1541
and 1559, during which he held the position of royal architect under Francis I and Henry II, de L'Orme altered, enlarged, and restored numerous châteaux, notably the castle of Saint-Germain-en-Laye, Fontainebleau, and Vincennes. His first individual achievement of importance, however, was the château of Saint-Maur-les-Fossés, originally designed for Cardinal de Bellay, Bishop of Paris, but afterwards taken over by Catherine de' Medici. Of this notable work almost nothing remains. In 1556, the château of Vrays, regarded as the best example of de L'Orme's genius, was begun for Diana of Poitiers, mistress of Henry II. Benvenuto Cellini's famous bronze Diana, now in the Louvre, was executed for this building and other eminent artists assisted in its decoration.

The death of Henry II (1559) marked the turning-point of de L'Orme's prosperity. His large revenues, as well as his rugged independence had made for him envious and contentious enemies, not the least formidable of whom was the poet Ronsard. During the period of unpopularity which succeeded him, in 1560-1562, Ronsard published "Voyages" in which invective pours like "basile et a petits frais" (How to Build Well and at Small Expense). This was subsequently a part of his notable treatise on architecture which contains much lively autobiography; the first volume of this work appeared at Paris in 1567 under the title: "Le premier tome de l'architecture de Philibert de L'Orme.

In 1564 he laid the foundations of the historic château of the Tulleries for Catherine de' Medici. The initial part of the structure, however, suffered a complete change under other hands. The Tulleries was the last important undertaking of the architect, who was buried with the honors of a canon of Notre-Dame. This claim has been made by some biographers that de L'Orme designed for Saint-Denis the Valois Chapel, now destroyed; there is much doubt as to his exact share in various other works with which he is known to have been associated. The only great work of de L'Orme now actually remaining is the tomb of Francis I in Saint-Denis at Paris.

DELPHINE

DELPHINE, Blessed, of the Third Order of St. Francis, b. in Provence, France, in 1284; d. 26 November, 1358. Left an orphan in her infancy, she was placed under the guardianship of her uncles, and under the direction of her aunt, the Abbess of St. Catherine of Sorbo. She grew up in the practice of every virtue, and so virginal was her purity that she long remained a virgin faithful to the end of her life. In her twentieth year she was married to Elsée, Count of Sarban, and the couple, having received the habit of the Third Order of St. Francis, lived together in the edifying practice of prayer, penance, and charity towards the poor until the death of St. Elsée in 1323. After the death of her husband, Blessed Delphine sold all her vast possessions for the benefit of the poor and retired first to Naples and then to Cabreres. She finally returned to Apt where her husband had been buried. During the last years of her life she endured the greatest suffering, yet she bore it with patience and impatience. The veil that had long been put on Blessed Delphine was confirmed by Pope Urban V, godson of St. Elsée. Her feast is kept in the Franciscan Order on the twenty-seventh of November.

WADDELL, Annals Minorum (Rome, 1872), VI, 245, 256, 357, VIII, 147; LYN, Lives of the Saints and Blessed of the Three Orders of St. Francis (Travistan, 1837), IV, 115;

DELMA. STEPHEN M. DONOVAN.

Delrieu, Martin Anton, scholar, statesman, Jesuit theologian, b. at Antwerp, 17 May, 1551; d. at Louvain, 19 October, 1608. He studied at Paris, Douai, Louvain, and Salamanca; where he received the degree of Doctor of Law in 1574. Returning to the Low Countries with the reputation of being "the miracle of his age," a title given him by Justus Lipsius, he held the offices of senator, auditor of the army, vice-chancellor, and procurator general. In 1580 he entered the Society of Jesus, made his vows, and returned to Louvain for further studies. He afterwards held the chairs of philosophy, moral theology, and Scripture at the Universities of Douai, Liège, Louvain, Graz, and Salamanca. He possessed a speaking-knowledge of at least nine languages, wrote in a pure though somewhat diffuse style, and was careful to the extreme in the preparation of his books, as may be seen from the fact that his second work, published at the age of twenty-three, contains citations from nearly eleven hundred authors. His principal works comprise: Commentaries on Claudius, Ennius, Florus, and Seneca; on the ancient geographer and historian, C. S. Silvius Polyhistor; notes on the Christian poets, St. Ortiarius and St. Aldhelm; an exhaustive treatise on civil law; a "Historia Belgica," on the contemporary disorders in the Low Countries; some controversial pamphlets written against Joseph Scaliger; commentaries on Genesis, on the Canticle of Canticles, and on the Lamentations of Jeremiah; an explanation of various proverbial expressions in the Old Testament called "Adagialia sacra Veteris Testamenti"; panegyrics and other works on the virtues of the Blessed Virgin; and a treatise on magic, called "Disquisitionum magorum libri sex." This last work was the one by which Delrieu most strongly and much praised in its day and went through many editions, but can no longer be accepted in full.

Delta, the Nile, Prefecture Apostolic of the, is situated in the north of Egypt and comprises four of the six provinces forming Lower Egypt, namely: Gharbieh, Charbrieh, Menoufieh, and Kalyubieh. Prior to the establishment of the prefecture, the four provinces contained 1000 Catholics belonging to different rites. The prefecture was established at Cairo, 17 March, 1837. In 1888 the Rev. Augustin Duret of the Lyons Society for African Missions was appointed first prefect Apostolic and the prefecture confided to the care of this society. It had at first only two missionary priests, one at Tantah and the other at Zagazig, but a new post was founded at Zitlah in 1887 and another at Mahalla-el-Kebir in 1891. About this time the city of Cairo, which had already outgrown its former limits, developed considerably on the north, and populous quarters grew up within the Prefecture of the Delta. For the convenience of resident Catholics a Latin parish was formed in the Chourba quarter in 1894 and given to the Fathers of the Society for African Missions; in 1896 another Latin parish under the same direction was established at Zeltoun for the outlying districts of Koubeh, Zeltoun, and Matarieh.

STATISTICS. — The last official census (1897) gave for the four provinces of the Delta a total population of 3,282,457; 73,365 being schismatical of different rites; 3091 Catholics of various rites; and 241 Protestants. These figures do not distinguish the population of the quarters or outskirts from that of Cairo; on the basis of other returns, the total population of the prefecture may be estimated at about 3,500,000; 100,000 of this
number being schismaticap and 15,000 Catholics of
various rites; over 5000, perhaps, belonging to the
Latin Church. The two missions were 49; Chinese
and 49; Jesuits, 47; Brothers of the Charitable
Sisters of Notre-Dame, 49; Sisters of the Good
Shepherd of Angers, 77; Sisters of the Sacred
Heart, 94; Religious of Marie Réparatrice, 14; Filles
de la Charité, 14; Filles de Notre-Dame des Douleurs,
9; Pieuses Mères de la Nativité, 16. Sisters.—There
are 4 Latin parishes: at Choubra (Cairo quarter),
Zeitoun (suburb of Cairo), Tanah, and Zagazig; 2
southern parishes (mission churches): at Mahalla-el-
Kebir, and Zîteh. Educational Institutions.—1 Jesuit
College, with 450 pupils, conducted by the Priests of
the African Missions; at Tanah (231), Zeitoun (75),
and Zîteh (50); 2 Christian Brothers' schools at Choubra (250),
and Zagazig (50); the Sisters of Notre-Dame des Apêtres
have 6 institutions: at Tanah (249), Zagazig (150),
Zeitoun (110), Zîteh (100), Mahalla (80), and
Matarieh (38); 1 boarding-school conducted by
the Ladies of the Sacred Heart (60); and 1 institution
of the Sisters of the Good Shepherd of Angers (220),
making a total of 2113 pupils. Charitable Institutions.—3 hospitals: 1 conducted by the Filles de la
Charité, and 2 by the Pieuses Mères de la Nativité
(150), and 2 orphanages: 1 for boys conducted by
the Filles de la Charité (60 orphans), and 1 for
girls by the Sisters of the Good Shepherd of Angers
(78 orphans); 5 dispensaries in charge of the Sisters
of Notre-Dame des Apêtres, where several hundreds of
sick daily receive gratuitous treatment; 1 home for
the aged conducted by the Filles de Nîmes des
Douleurs where from 50 to 60 inmates, both men and
women, are cared for gratuitously; 1 house of refuge
in charge of the Sisters of the Good Shepherd of
Angers.

The Prefecture of the Delta owes its development
chiefly to the prodigious growth of the city of Cairo,
which, extending its limits, had to stretch out upon
prefectorial territory. Here, as in all cosmopolitan
and growing centres, the missionaries have found
their chief obstacle in religious indifference.

AUGUSTIN DURET.

Deluge, the name of a catastrophe fully described
in Gen., vi, 1-ix, 19, and referred to in the following
passages of Sacred Scripture: Wisd., x, 4; xiv, 6-7;
Eccles., xvi, 8, xlv, 17-19; Is., liv, 9; Matt., xxiv,
37-39; Luke, xvii, 26-27; Hebr., xi, 7; 1 Peter, iii,
20-21; 2 Peter, ii, 5. In the present article we shall
consider: I. The Biblical Account; II. Its Historicity;
III. The Universality of the Flood; IV. Collateral
Questions.

I. BIBLICAL ACCOUNT OF THE DELUGE.—The Book
of Genesis gives the following brief account of the
Deluge: God sees the wickedness of men, and determines
to destroy them, excepting Noah and his family (vi, 1-8).
He reveals his decree to Noah and instructs him how he
may save himself and the seed of all animal life by
means of an ark to be built according to certain
dimensions (vi, 9-22). Seven days before the Flood,
God commands the patriarch to enter the ark (vii,
1-9). Noah completes his entrance into the ark on
the seventh day (vii, 7). The Flood begins; the rain
falls for forty days and nights; all living things outside
the ark are destroyed; the waters prevail upon the
earth a hundred and fifty days (vii, 6-24). The
waters decrease, the earth dries up; Noah ascends
on the ark (vii, 1). He obeys the Divine command
to leave the ark, builds an altar, offers sacrifice,
command that Noe should enter the ark without telling him where to find or how to procure an ark (vii, 1–5). Noe builds an altar and offers burnt offerings with the sacrifice of the firstling of the males (vi, 20). This is in keeping with the real nature of the corruption of all flesh (vi, 9–12); he knows of God's order to save the animals, but knows nothing of God's command concerning Noe and his family (vi, 17–22; vii, 13); even eleven months after the beginning of the Flood and two months after the appearance of the ark, he knows nothing of the destruction of the earth (viii, 13 sq.); finally, he gives no ethical motive for the Divine blessing bestowed on Noe (ix, 1, sqq.). The critics are aware of these gaps in the two documents, and explain them by supposing that the "Redactor", who had the original Flood stories before him, did not insert their complete text into the Biblical account. But if the "Redactor" omitted certain parts of the original documents in order to avoid repetitions, why did he not omit the repetitions discovered by the critics? Or are we to assume that he introduced certain repetitions, while he carefully avoided others? Is it not more likely that he considered the repetitions alleged by the critics as mere rhetorical devices, as recapitulatory transitions, e. g. (vi, 9–12), or gradations (vii, 17–20; vii, 21–23), or amplifications (vii, 7, 13–16)?

I am not disposed to differ in language; but the critical division being what it is, it would be strange if the two documents did not differ in language. The sections which contain chronological, systematic, and scientific material are attributed to P, the rest is left to J. Is it surprising that J does not describe the measurements of the ark, seeing that the critics do not give him any ark to describe? Or is it remarkable that P lacks the poetic style found in J's description of the raven and the dove, seeing that no section is assigned to him, which would admit such a treatment? The care with which only set subjects and determined expressions are assigned to J and P respectively is well illustrated by the fact that in spite of their minute description of the Flood story, the critics must remove part of vi, 7; vii, 3, 7, 17, 22, 23; ix, 18, 22, 23, 26; and the whole of vii, 8, 9, from the J document, and part of vi, 17; vii, 6; ix, 4, from the P document, in order not to allow inconsistencies in their sources.

If P and J are assigned to the animals to be taken into the ark, as to the duration of the Flood, and as to God's behaviour towards man after the Flood. In vi, 19, indeed, P records God's command, "thou shalt bring two of a sort into the ark"; but it is inconsistent with this, if 120 years and 35 days after the ark was set adrift, Noe goes down into the ark (vii, 5). This supposes the more accurate Divine specification, "of all clean beasts take seven and seven... but of the beasts that are not clean two and two" (vii, 2, 3). It cannot be said that the fulfilment shows that only two of every kind were taken into the ark; both vii, 9, and vii, 15, 18, read "two and two... male and female"; so that the phrase "couple" is better fitted for generation rather than any absolute number. The discrepancy as to chronology between J and P is more artificial than true; there is no inconsistency in the chronology of the Biblical account of the Flood, so that the discrepancy between the documents, if there be one, is of critical manufacture. Besides, a simple reading of the J document taken separately will show that its chronology is not satisfactory. Finally, if in ix, 15, P knows of a Divine covenant which according to J is the result of the self-deliberation of Yahweh in consequence of the patriarch's sacrifice (viii, 21–22), the two documents are rather supplementary than contradictory: J supplies the ethical motive for God's action as described by P.

II. HISTORICITY OF THE BIBLICAL DELUGE ACCOUNT:—It has been contended that the Flood story of the Bible and the Flood legends of other peoples, looked at from a merely historical point of view, stand on a similar footing, the Biblical account being a mere late variant of one of them. And on inquiring into their origin, we find that four theories have been advanced: (1) The Flood story is a mere product of fancy. This theory contradicts the analogy of similar legends among all peoples. (2) The Deluge story is by others considered as a nature-myth, representing the phenomena of winter, which in Babylonia especially is the time of rain. This nature-myth has been transferred to the myth of an archaic earth-myth, according to which the sun was imagined as a man voyaging on a boat in the heavenly ocean. The fact that the sea was to be found on the earth, not in heaven, and the damage wrought by the incessant winter-rain and the inundation of great rivers, transferred the myth from heaven to earth, changing the earth-myth into a nature-myth. But this theory, too, neglects the numerous Flood stories existing among many nations, which do not lend themselves to a similar explanation. (3) Connected with the preceding theory is the explanation which makes the Deluge story a cosmic fable. It has been seen that the hero rescued in the ship must have been the sun-god (cf. the ether-myth). Thus the Deluge becomes ultimately a variant of the Babylonian creation-myth. It is for this reason that the mythological text published by Peiser calls the name of the Deluge "the song of the great serpent". For this "great serpent" is that myth which on old Babylonian maps encircles Babylonia, just as leviathan is the world-encircling ocean personified as a serpent; it is the same monster which is a central figure in the Creation story. We need not add that this theory, too, leaves the great bulk of the existing Flood traditions unexplained. (4) It has been inferred from the improbability of the preceding theories, that the Flood story must be a poetical or legendary presentation of some natural occurrence. Furthermore, it is maintained that the immediate basis of the legend is a local disturbance. It may have been a great inundation caused by an overflow of the Tigris and Euphrates, or the incursion of a tidal wave resulting from an earthquake south of the mouth of the two rivers. But however terrible the ruin wrought by such inundations may be, this theory does not account for the universality of the Flood story, unless we are to suppose that the ruin affected the ancestors of all human races.

Thus far we have considered the Biblical Flood story from a merely historical point of view. But the Bible student who believes in the inspiration of the Sacred Scriptures and admits the value of tradition has another question to consider: what results thus far obtained. It will not even be enough to grant that the ancient Flood legend became the vehicle of religious and spiritual truth by means of a divinely guided religious feeling and insight of the inspired writer. The Deluge is referred to in several passages of Scripture as a historical fact; the writings of the Patriarch consider the event not in the same light, and this view of the subject is confirmed by the numerous variants under which the Flood tradition lives in the most distant nations of the earth.

(a) The following are some of the New Testament passages which imply that the Deluge was a real historical event: "And as in the days of Noe, so shall also the coming of the Son of man be" (Matt. xxiv. 37–39). In these words Christ regards the Flood with its circumstances as being not less real than the last days will be of which He speaks in the passage. The same view concerning the Flood, Christ implies in Luke, xvii, 26–27. In the Epistle to the Hebrews
(xi, 7) the inspired writer is not less clear about the
histories of the Flood: "By faith, Noah received
an answer concerning those things which as
yet were not seen, moved with fear, framed the ark
for the saving of his house, by which he condemned
the world; and was instituted heir of the justice which
is by faith." St. Peter (I Peter, iii, 20) too refers to
the flood of God as such, and says: "They waited for
the patience of God in the days of Noah, when the
ark was building: wherein a few, that is, eight souls,
were saved by water." He returns
to the same teaching in II Peter, ii, 5. We
might appeal to Is., iv, 9; Nah., i, 8; Ezek., xiv,
14; xiv, 15, 16; xiv, 18 sq.; Ps. cvi, 9. But
what has been said sufficiently shows that
the Bible urges the historicity of the Deluge story.

(b) As to the view of Christian tradition, it sufiices
to appeal here to the words of Father Zoren who
maintains that the Bible story concerning the Flood has
never been explained or understood in any but a truly
historical sense by any Catholic writer (cf. Hagen,
Lexicon Biblicum). It would be useless labour and
would exceed the scope of the present article to
enumerate the long list of Fathers and Scholastic
theologians who have touched upon the question.
The few stray discordant voices belonging to the last
five or six centuries are insignificant. I say five or six,
but what has been said sufficiently shows that
the Bible urges the historicity of the Deluge story.

(c) The historicity of the Biblical Flood account
is confirmed by the tradition existing in all places and at
all times as to the occurrence of a similar catastrophe.
F. von Schwarz (Sintfluth und Völkerwanderungen,
pp. 8–18) enumerates sixty-three such Flood stories
which are in his opinion independent of the Biblical
account. R. Andree (Die Flutsagen ethnographisch
betrachtet) discusses eighty-eight different Flood
stories, and considers sixty-two of them as independent
of the Chaldean and Hebrew tradition. Moreover
these stories extend through all the races of the earth
excepting the African; these are excepted, not
because it is certain that they do not possess any
Flood traditions, but because their traditions have
not as yet been sufficiently investigated. Lenormant
pronounces the Flood story as the most universal
tradition in the history of primitive man, and Franz
Delitzsch was of opinion that we might as well consider
the history of Alexander the Great a myth, as to
call the Flood tradition a fable. It would, indeed, be a
greater miracle than that of the Deluge itself, if the
various and different conditions surrounding the
several nations of the earth produced a popular
among them a tradition substantially identical. Opposite
causes would have produced the same effect.

III. Universality of the Deluge.—The Biblical
account ascribes some kind of a universality to the
Flood. But it may have been geographically universal,
or it may have been anthropologically universal.
In other words, the Flood may have covered
the whole earth, or it may have destroyed all men,
covering only a certain part of the earth. Till
about the seventeenth century, it was generally believed
that the Deluge had been geographically universal,
and this opinion is defended even in our days by some
conservative scholars (cf. Kauren in Kirchenlexikon).
But two hundred years of theological and scientific
study devoted to the question have thrown so much
light on it that we may now defend the following
conclusions:

(1) The geographical universality of the Deluge
must be safely abandoned. Neither Sacred Scripture
nor universal ecclesiastical tradition, nor again scientific
considerations, render it advisable to adhere to
the opinion that the Flood covered the whole surface
of the earth.

(a) The words of the original text, rendered
"earth," in our version, signify "land" as well
as "earth." In fact, "land" appears to have been
their primary meaning, and this meaningifice in admir-
ably with Gen., iv, v, and Gen., x; why not adhere to
this meaning also in Gen., vi–ix, or the Flood story. Why
not read, the waters "filled all on the face of the land,"
"all flesh was destroyed that moved in the land," "all
things wherein there is the breath of life in the land
died," "all the high mountains under the whole
heaven (corresponding to the land) were covered"?

(b) As to the cogency of the proof from tradition for
the geographical universality of the Flood, it must be
observed that the few exceptions of the early Church
are not to be relied upon, as to the universality of the Flood;
before a universality of the Flood covering the whole
land or region in which Noe lived, but not the whole
earth.

(c) There are also certain scientific considerations
which oppose the view that the Flood was geographi-
cally universal. Not that science opposes any diffi-
culty insuperable to the power of God; but it draws
a line of distinction to the earth produced a popular
among them a tradition substantially identical. Opposite
causes would have produced the same effect.

III. Universality of the Deluge.—The Biblical
account ascribes some kind of a universality to the
Flood. But it may have been geographically universal,
or it may have been anthropologically universal.
In other words, the Flood may have covered
the whole earth, or it may have destroyed all men,
covering only a certain part of the earth. Till
about the seventeenth century, it was generally believed
that the Deluge had been geographically universal,
and this opinion is defended even in our days by some
conservative scholars (cf. Kauren in Kirchenlexikon).
But two hundred years of theological and scientific
study devoted to the question have thrown so much
light on it that we may now defend the following
conclusions:

(1) The geographical universality of the Deluge
must be safely abandoned. Neither Sacred Scripture
nor universal ecclesiastical tradition, nor again scientific
considerations, render it advisable to adhere to
the opinion that the Flood covered the whole surface
of the earth.

(a) The words of the original text, rendered
"earth," in our version, signify "land" as well
as "earth." In fact, "land" appears to have been
their primary meaning, and this meaning file in admir-
ably with Gen., iv, v, and Gen., x; why not adhere to
this meaning also in Gen., vi–ix, or the Flood story. Why
not read, the waters "filled all on the face of the land,"
"all flesh was destroyed that moved in the land," "all
things wherein there is the breath of life in the land
died," "all the high mountains under the whole
heaven (corresponding to the land) were covered"?

(b) As to the cogency of the proof from tradition for
the geographical universality of the Flood, it must be
observed that the few exceptions of the early Church
are not to be relied upon, as to the universality of the Flood;
before a universality of the Flood covering the whole
land or region in which Noe lived, but not the whole
earth.

(c) There are also certain scientific considerations
which oppose the view that the Flood was geographi-
cally universal. Not that science opposes any diffi-
culty insuperable to the power of God; but it draws
a line of distinction to the earth produced a popular
among them a tradition substantially identical. Opposite
causes would have produced the same effect.
ly, there are serious difficulties connected with the animals in the ark. If the Flood was geographically universal: How were they brought to Noe from the remote regions of the earth in a few weeks? How could eight persons take care of such an array of beasts? Where did they obtain the food necessary for all the animals? How could the arctic animals live with those of the torrid zone for a whole year and under the same roof? No Catholic commentator will resist the geographical probability of the Deluge; and, if all else fails, admit a miracle; but no Catholic has a right to admit Biblical miracles which are not well attested either by scripture or tradition. What is more, there are traces in the Biblical Flood story which favour a limited extent of the catastrophe: Noe could have known the geographical possibility of the Deluge only if he still lived in the “land” in which the account appears to have been written by an eye-witness. If the Flood had been universal, the water would have had to fall from the height of the mountains in India to the level of those in Armenia on which the ark rested, i.e. about 11,500 feet, within the space of a few days. The fact that the dove did not find “the face of the earth” “dry” (Gen. viii, 1), but “the waters upon the whole earth”, and that Noe “saw that the face of the earth was dried”, leaves the impression that the inspired writer uses the word “earth” in the restricted sense of “land”. Attention has been drawn also to the “bough of an olive tree, with green leaves, and with an olive leaf in her mouth on her second return to the ark.”

(2) The Deluge must have been anthropologically universal, i.e. it must have destroyed the whole human race. After limiting the extent of the Flood to a part of the earth, we naturally ask whether any men lived outside the region covered by its waters. It has been maintained that not all men can have perished in the Flood for the following reasons: Tribes which certainly sprang from Noe were preceded in their earliest settlements by other tribes whose origin is unknown to us: the Dravidic tribes preceded the Aryans in India; the proto-Medians preceded the Medians; the Akkadians preceded the Cushites and Semites in Chaldea; the Chanaanites were preceded in Palestine by other races. Besides, the oldest Egyptian monuments present the Negro race just as we find it to-day, so that even at that remote age, it was wholly different from the Caucasian race. Arguments ranging from the languages springs from Noe are said to be in a state of development different from that in which we find the languages of the peoples of unknown origin. Finally, the Biblical account of the Flood is said to admit a restriction of its anthropological universality as readily as a limitation of its geographical: the Deluge, complete as it is, would be only partly effective for it is said that the Book of Genesis speaks only of the men inhabiting a certain district, and not of the men of the whole earth, as being the victims of the waters. Considerations like these have induced several Catholic writers to regard as quite tenable the opinion that the Deluge destroyed all men outside the ark.

But if the reason advanced for limiting the Flood to a certain part of the human race be duly examined, they are found to be more specious than true. The above scientific arguments do not favour a partial destruction of the human race absolutely, but only in so far as the uninterrupted existence of the various races in question gives them more time for the racial development and the historical data that have to be harmonized with the text of Genesis. Those who urge these arguments grant, therefore, implicitly that the allowance of a proper length of time will explain the facts out of which their arguments are based. As there is nothing in the teaching of the Bible preventing us from assigning the Flood to a much earlier date than has usually been done, the difficulties urged on the part of science against the anthropological universality of the Flood may be easily evaded. Nor can the distribution of the nations as described in the tenth chapter of Genesis be appealed to, seeing that this section does not enumerate all races of the earth, but confines itself to the earth in which they lived. Science, therefore, may demand an early date for the Deluge, but it does not necessitate a limitation of the Flood to certain parts of the human race. The question, whether all men perished in the Deluge, must be decided by the teaching of the Bible, and of its authoritative interpreters; for it has been shown that the passage which deals ex professo with the Flood (Gen., vi–ix), if taken by itself, may be interpreted of a partial destruction of man; it insists on the fact that all inhabitants of the “land”, not of the “earth”, died in the waters of the Deluge, and it does not explicitly tell us whether all men lived in the “land”. It may also be granted, that of the passages which refer incidentally to the Flood, Wis., x, 4; xiv, 6; Ecclus., xlv, 17 sqq., and Matt., xxiv, 37 sqq., may be explained, more or less satisfactorily, of a partial destruction of the human race by the inundation of the Deluge; but no one can deny that the prima facie meaning of I Peter, iii, 20 sqq., II Peter, ii, 4–9, and II Peter, iii, 5 sqq., refers to the death of all men not contained in the ark. The explanations of these passages, offered by the opponents of the anthropological universality of the Deluge, are hardly sufficient to remove all reasonable doubt. We turn, therefore, to authority in order to get at a final settlement of the question. Here we are confronted, in brief, with the following facts: Up to the sixteenth and seventeenth centuries the belief in the anthropological universality of the Deluge was general. Moreover, the Fathers regarded the ark and the Flood as types of baptism and of the Church; this view they entertained not as a private opinion, but as a development of the doctrine contained in I Peter, iii, 20 sqq. Hence, the typical character of both ark and Flood belongs to the “matters of faith and morals” in which the Tridentine and the Vatican Councils oblige all Catholics to follow the interpretation of the Church.

IV. COLLATERAL QUESTIONS.—These may be reduced to the time of the Deluge, its place, and its natural causes.

(1) Time of the Deluge.—Genesis places the Deluge in the six-hundredth year of Noe; the Masoretic text assigns it to the year 1995 after the Deluge according to the Samaritan to 1307, the Septuagint to 2242, Flavius Josephus to 2256. Again, the Masoretic text places it in b. c. 2350 (Klaproth) or 2253 (Lüken), the Samaritan in 2903, the Septuagint in 3134. According to the ancient traditions (Lüken), the Assyrians placed it in 2290, the Egyptians in 2900, the Phoenicians in 2700, the Mexicans in 2900, the Indians in 3100, the Chinese in 2297, while the Armenians assigned the building of the Tower of Babel to about 2200 b. c. But as we have seen, we must be prepared to assign earlier dates to these events.

(2) Place of the Flood.—The Bible teaches only that the ark rested on a mountain in Armenia. Hence the Flood must have occurred in a place whence the ark could be carried towards this mountain. The Babylonian tradition places the Deluge in the lower valley of the Tigris and Euphrates.

(3) Natural Causes of the Flood.—Scripture assigns as the causes of the Deluge the heavy forty days’ rains, the breaking up of the fountains of the great deep, and the opening of the flood-gates of heaven. This does not exclude the opinion that certain natural forces were at play in the catastrophe. It has been suggested that the axis of the earth was shifted on account of the earth’s collision with a comet, or that powerful volcanic eruptions raised new mountains in the sea, or that an earthquake caused a tidal wave to overrun certain portions of the dry land. Thus, Suse speaks of the frequency of earthquakes and of storms.
DEMARCATION

In the Gulf of Persia; but this would enclose the Flood within too narrow limits both of space and of time. Another conjecture has been proposed by von Schwartz. He supposes that an inland Mongolian sea, in size about equal to the Mediterranean, situated at a height of about 6000 feet above the level of the ocean and 5000 feet above the surrounding Aralo-Caspian, at the time of the earthquake of 1906, would have been formed through one of its walls, and sent its 3,000,000 cubic kilometres of water into the region north of Persia, Armenia, and the Caucasus, covering the whole plain, until the waters were drained by way of the Black Sea and the Mediterranean into the Atlantic Ocean. Here we have the basement of the Deluge, but we have also to think of the great inundation, and the outflow of water lasting for several months, and we find that the ark must have been carried westward by the general drift of the waters till it rested on the mountains of Armenia. But not to mention the improbability of the supposition urged by several scientists, we do not understand why the tops of the mountains should not have been visible even after the mooring of the ark. A number of other hypotheses have been proposed in order to explain by natural causes the phenomena implied in the Biblical account of the Deluge, but thus far they have not satisfied the various details given in the Book of Genesis.

Demers, MODESTE, apostle of the Pacific Coast of North America, and the first Catholic missionary among the Indian tribes of British Columbia; b. at St. Nicholas, Quebec, 11 Oct., 1809; d. at Victoria, B. C., 21 July, 1871. His father, Michel Demers, and his mother, Rosalie Foucher, were two worthy representatives of the French Canadian farmer class. Endowed with a delicate nature and a distinctly intellectual turn, the young Demers resolved to enter the ecclesiastical state, and studied first chiefly and then at the seminary of Quebec. He was ordained 7 Feb., 1838, by Bishop Signay, and after fourteen months passed as assistant priest at Trois-Pistoles, he volunteered for the far-off mission of Oregon, where the white population, made up mostly of French Canadian employees of the Hudson Bay Company, was clamouring for the ministrations of a priest. Having crossed the American continent in the company of the Rev. F. N. Blanchet, his superior, he reached Walla-Walla, on the lower Columbia, 18 Nov., 1838, and immediately applied himself to the care of the lowest, that is the Indian tribes, which were then very numerous and not any too meek. He studied their languages and visited their homes regularly, preaching, catechizing the adults, and baptizing the children, among the homes that lay to the north of the Columbia. His apostolic zeal sent him to the coast of British Columbia, and in 1842 he proceeded inland as far north as Stuart Lake, evangelizing as he went all the interior tribes of that province. His companion, the Rev. F. N. Blanchet, having been elevated to the episcopate, Demers had to submit to what he considered a burden beyond his strength.

He was consecrated bishop on 30 Nov., 1847, and appointed to the spiritual care of Vancouver Island, making the incipient town of Victoria his head-quarters. As a bishop he continued his favourite work among the Indians, though he soon had to give his best attention to the rough and cosmopolitan element which now formed his white flock. For its benefit he preached and instructed the Indians, the Jesuits of St. Anne, who established schools at Victoria and elsewhere, and of the Oblate Fathers, who took in hand the evangelisation of the natives and also founded a college in his cathedral city. In 1866 he assisted at the Second Plenary Council of Baltimore, although he was only a layman; and also at the Ecumenical Council of Vatican. He died soon after his return, beloved alike by Protestants and Catholics, and revered for his gentleness and his apostolic zeal on behalf of the poor and lowly.

A. G. MORICE.

Demetrius, SAINT, Bishop of Alexandria from 188 to 231. Julius Africanus, who visited Alexandria in the time of Demetrius, places his accession at the middle of the period between St. Mark in the tenth year of Commodus and St. Eusebius in the tenth of Severus. A. D. 188. A legendary history of him is given in the Coptic "Syriac", in an Abyssinian poem cited by the Bollandists, and in the "Chronicon Orientale" of Abraham Eccehillenus the Maronite. Three of their statements, however, may have some truth: one that he died at the age of 105 (born, therefore, in 120); another, found also in the Melchite Patriarch Euthymius of Sa'id Ib'n Battrik, (d. about 940), Migne, P. G., CXI, 999), that he wrote about the calculation of Easter to Victor of Rome, Maximus (I. e. Maximinus) of Antioch and Gabius or Agapius (? of Jerusalem (cf. Eus., H. E., V, xxv). Eutychius relates that from Mark to Demetrius there was but one see in Egypt, that Demetrius was the first to establish three other bishoprics, and that his successor Heraclus made twenty more.

At all events Demetrius is the first Alexandrian bishop of whom anything is known. St. Jerome has it that he sent Pantaenus on a mission to India, but it has been asserted that Clement had succeeded Pantaenus as the head of the famous Catechetical School before the accession of Demetrius. When Clement retired (c. 203-4), Demetrius appointed the young Origen, who was in his eighteenth year, in Clement's place. Demetrius encouraged Origen when blamed for his too literal execution of religious discipline; and, finding it expedient and is said to have shown him great favour. He sent Origen to the governor of Arabia, who had requested his presence in letters to the prefect of Egypt as well as to the bishop. In 215-16 Origen was obliged to take refuge in Cusaarea from the cruelty of Caracalla. There he preached at the request of the bishops present. Demetrius wrote to him complaining that this was unheard of premission in a layman. Alexander of Jerusalem and Theoctistus of Cusaarea wrote to defend the invitation they had given, mentioning precedents; but Demetrius recalled Origen. In 230 Demetrius writes to Origen a recommendation to take with him on his journey to Athens. But Origen was ordained priest at Cusaarea without leave, and with Origen with a synod of some bishops and a few priests condemned him to banishment, then from another synod sent a formal condemnation of him to all the churches. It is impossible to doubt that heresy, and not merely unauthorized ordination, must have been the ground for such a course. Rome accepted the decision, but Palestine, Phoenicia, Arabia, Achaia rejected it, and Origen retired to Cusaarea, whence he sent forth letters in his own defence, and attacked Demetrius. The latter placed at the head of the Catechetical School the first pupil of Orig, Heraclus, who had long been.
Demetrius, the name of two Syrian kings mentioned in the Old Testament and two other persons in the New Testament.

(a) DEMETRIUS SOTER, or the Saviour, so called because he saved the Babylonians from the tyranny of the satrap Heracles, reigned from 162 to 150 B.C. He was the son of Seleucus Philopator, and spent his early years as a hostage in Rome, petitioning the Senate in vain for permission to return to his country. With the assistance, however, of his friend, the historian Polybius, he escaped to Tripoli in Phoenicia, where he was received by his cousin, with Lyssias, the chancellor, ascended the throne of the Seleucids, and was acknowledged by Rome. A Jewish party, dissatisfied with Judas Machabeus, invited Demetrius to interfere in their favour. Demetrius appointed Alcimus as high-priest and sent his general Bacchides with an army in his support. Soon after, as Alcimus' position seemed secure, Bacchides left. As Judas, however, grew stronger, Alcimus again appealed for help. Demetrius sent as general Nicaros, who first tried to capture Judea by strategy, but then met him at Kapandros in the battle of the battle. Bacchides, with an army, ventured his wrath on the priests, and threatened to destroy the Temple. Judas met Nicaros again at Beth-Horon and utterly routed his army. Nicaros fell in the battle (161 B.C.). Two months later Demetrius, for the third time, sent a Syrian army into Palestine under Bacchides, who defeated and slew Judas in the battle of Berea, garrisoned some Jewish towns, and returned. A Syrian army entered Palestine under the same Bacchides for the fourth time in 158 B.C., but the Machabeus party had recovered its strength, and a treaty ended the campaign. Meanwhile a pretender had arisen to the Syrian throne in the person of Alexander Balas. Both Demetrius and Alexander were anxious to gain the support of the Jews. Alexander offered to Jonathan Machabeus the purple and a diadem, which he accepted in 153 B.C. Demetrius subsequently offered still greater privileges to the Jews and their leader, but the Jews remained faithful to Alexander. In 150 B.C. Demetrius and his alienated Demetrius, "who vainly fought with undaunted courage in the thick of the battle and was slain". (I Macc., vii, ix, x; II Macc., xiv, xv; Justin, XXXV, i.)

(b) DEMETRIUS NIKATOR, or the Conqueror, son of the above, succeeded four years after the death of his father in gaining the Syrian throne. Jonathan Machabeus, remaining faithful to Alexander unto the end, had opposed the succession of Demetrius II. Demetrius' viceroy, Apollonius, who ruled over Cilicia, held Joppa and Ashdod for his king, but was driven out and defeated by Jonathan, who destroyed Ashdod and Amathus and his rich booty. Jonathan tried to throw off the Syrian yoke altogether and besieged the fortress of Jerusalem. Demetrius first cited Jonathan to Ptolemais to answer for his rebellion, relying upon a pro-Syrian party among the Jews; but Jonathan boldly continued the siege of Jerusalem and then, nothing daunted, faced Demetrius at Ptolemais. He demanded an extension of territory and several privileges for the Jews, and supported his demand by costly gifts. Demetrius did not dare to refuse, but agreed to the addition of three Samaritan districts, Ephraim, Lydda, and Ramathaim, to Judea; he freed this extension of Judea from all taxes and confirmed Jonathan in all his dignities. Demetrius had thus escaped further danger from his Jewish vassal but the latter had to contend with Trypho, a former general of Alexander Balas. This man proclaimed Alexander's son Antiochus VI king, though as yet only a boy, and the threatening attitude of the people of Antioch brought the throne of Demetrius II into imminent danger. In his distress he appealed to Jonathan, who sent 5000 men to quell the insurrection at Antioch. Demetrius promised to have the Jewish custom introduced in other fortresses of Judea to Jonathan. Jonathan stamped out the revolution at Antioch, but Demetrius did not fulfill his promise. Shortly after, Trypho and Antiochus the Pretender captured Antioch and sought the assistance of Jonathan. As Demetrius II had proved himself faithless, Jonathan left his side and went over to Trypho. In consequence Demetrius gathered an army against Jonathan, to punish his defection, but never risked a battle. When Trypho had murdered Antiochus VI, Jonathan returned to Demetrius' allegiance. Trypho was finally defeated by the brother of Demetrius, and Demetrius was permitted to be a prisoner in a campaign against the Parthians, in whose hands he remained for ten years, the daughter of whose king Mithridates he received in marriage and by whom, under Parthian, he was restored to the Syrian throne after defeating his brother Antiochus Sidetes. He was then persuaded to attack the King of Egypt, Ptolemy Phyacon. This caused the rise of another Syrian pretender, Alexander Zabinus, who defeated Demetrius near Damascus. Demetrius fled to Tyre, and on landing was there assassinated in 128 B.C. His wife Cleopatra is said to have been privy to the crime. (I Macc., xiii, 41; II Macc., xiv, 33.)

(c) Demetria, the name of two persons mentioned in the New Testament. (1) Acts, xix, 24, mentions Demetria, a silversmith (σπυρόμπος), who made silver shrines for Diana at Ephesus. These shrines (σακίμι) were probably little silver models either of the temple or of the actual shrine (σακίμιον) in which the idol was placed, and were used as amulets or objects of piety and souvenirs carried away by thousands of pagan pilgrims. Finding his trade diminished through the spread of Christianity and the decline of heathen worship, he and his fellow-craftsmen caused the uproar against St. Paul as narrated in Acts xix. (2) St. John the Apostle, in his Third Epistle (v, 12), praises Demetria to whom "testimony is given by all, and by the truth itself" and apparently opposes him to Diotrephes, who did not receive St. John, and cast out of the Church those that did (verses 8, 10). Nothing more is known of him. Possibly he was the bearer of the letter.

J. P. ARENDT.

DEMIURGE.—The word means literally a public worker, δημοσιοφίτης, δημοσιοφίτης, and was originally used to designate any craftsman plying his craft or trade for the use of the public. Soon, however, τέχνης and other words began to be used to designate the common artisan while demiurge was set aside for the Great Artificer or Fabricator, the Architect of the universe. At first the words τέχνης, τέχνης were used to distinguish the great Workman from others, but gradually δημοσιοφίτης became the technical term for

Democracy. See Government, Forms of.

Democracy, Christian.—In Christian Democracy, the name and the reality have two very different histories, and therefore they must be carefully distinguished.

The Reality.—What Christian democracy is was authoritatively laid down by Pope Leo XIII in his Encyclical “Graves de communi,” wherein it is defined to be the same thing as Christian charity and social justice.

Such a definition is certainly intensive; so that not everything done by Catholics, among the people or for the people, can be technically termed Christian democracy, or popular Catholic action. Action in this definition is taken to mean an organised movement with a definite programme to deal with the pressing problems that come before it. Popular has reference to the people, not inasmuch as they are a nation or collective whole, but as the fourth estate: the plebs, the tenentes, and the teniusimis of classical antiquity.

Lastly, Catholic (and therefore Christian through and through) signifies that this organised action in favour of the people (plebe) is the work of Catholics as such. Popular Catholic action, therefore, means that the scope mapped out for the activity of the organisation is the well-being of the people; and that the movement proceeds along Catholic lines, under the guidance of Catholic leaders. Having stated that, it is easy to understand that the essence of Christian democracy is not a thing of yesterday. In the very nature of Christianity, in the spirit of the Church, in the mission of the clergy (cf. Benigni, Storia sociale della Chiesa, Milan, 1907, I) lies the germ of popular Catholic action technically so called; in other

of the Christians. Christ, though in reality the Son of the Good God, pretended to be the Messias of the Demiurges, the better to spread the truth concerning His heavenly Father. The true believer in Christ enters into God's kingdom even here on earth, and is not to be dragged into the hell of the Demiurges. In this form of Gnosticism, the Demiurgus has assumed already a more evil aspect. According to the Naassenes the God of the Jews is not merely Skoteus, but he is the great tyrant, Jaldaboath, or Son of Chaos. He is Demiurges and maker of man, but as a ray of light from above enters the body of man and gives him a soul; Jaldaboath is filled with envy; he tries to limit man's knowledge by forbidding him the fruit of knowledge in paradise. The Demiurgus, fearing lest Jesus, whom he had intended as his Messias, should spread the knowledge of the Supreme God, had him crucified by the Jews. At the consummation of all things all light will return to the pleroma; but Jaldaboath, the Demiurges, with the material world, will be cast into the lower depths. Some of the Ophites or Naassenes venerated all persons reprobated in the Old Testament, such as Cain, as thedemiurges, as well as the Demiurgus, the creator of the world.

In these weird systems the idea of the world-maker was degraded to the uttermost. Amongst the Gnostics, however, who as a rule set some difference between the Demiurgus and the Supreme God, there was one exception; for according to the Ebionites, Jaldaboath, whose origin has been already mentioned in the Pseudo-Clementine literature, there is no difference between the Highest God and the Demiurges. They are identical, and the God Who made heaven and earth is worthy of the adoration of men. On the other hand the Ebionite system is tainted with pantheism, for its Demiurges is not a creator but only a world builder. (See Gnosticism: Valentinus; Marcion.)

J. P. Arendzen.

Democrates. Maker of heaven and earth. In this sense it is used frequently by Plato in his "Timeus." Although often loosely employed by the Fathers and others to indicate the Creator, the word has never strictly meant "one who fashioneth of nothing" (for this the Greeks used στερνητος), but only "one who fashions, shapes, and models." A creator in the sense of Christian theology has no place in heathen philosophy, which always presupposes the existence of matter. Moreover, according to Greek philosophy the world-maker is not nec-essarily God, as first and supreme source of all things; he may be distinct from and inferior to the supreme spirit, though he may also be the practical expression of the reason of God, the Logos as operative in the harmony of the universe. In this sense, i.e., that of a world-maker distinct from the Supreme God, Democedes is used. It is essentially a Gnostic term, and was in many of their systems they conceived the relation of the Demiurges to the Supreme God as one of actual antagonism, and the Demiurgus became the personification of the power of evil, the Satan of Gnosticism, with whom the faithful had to wage war to the end that they might be pleasing to the Good God. The Gnostic Demiurges then assumes a surprising likeness to Ahriman, the evil counter-creator of Ormuzd in Mazdaean philosophy. The creator of the Gnostic Demiurges became all the more complicated when in some systems he was identified with Jehovah, the God of the Jews or of the Old Testament, and was brought in opposition to Christ in opposition to the New Testament, the Only-Begotten Son of the Supreme and Good God. The purpose of Christ's coming as Saviour and Redeemer was to rescue us from the power of the Demiurges, the lord of the world of this darkness, and bring us to the light of the Good God, His Father in heaven. The last development in the character of the Demiurges was due to Jehovah being primarily considered as he who gave the Law on Sinai, and hence as the originator of all restraint on the human will. As the Demiurges was essentially evil, all his work was such; in consequence all law was intrinsically evil and the duty of the children of the Good God was to transgress this law and to trample upon its precepts. This led to the wildest orgies of Antinomian Gnosticism.

According to Valentinus the Demiurges was the offspring of a union of Achamoth (αχαμοθτη, εκεσιονοσ) or lower wisdom) with matter. And as Achamoth herself was only the daughter of Sophia, the last of the thirty ζευς, the Demiurges was distant by many emanations from the Protopator, or Supreme Wisdom. The Demiurges was in fact a sort of child of Chaos, which was unconscious, and guided for good by Jesus Soter; and the universe, to the surprise even of its Maker, became almost perfect. The Demiurges regretted even its slight imperfection, and as he thought himself the Supreme God, he attempted to remedy this by sending a Messias. This Messias, in reality, was actually the God Jesus, the Saviour, Who redeemed men. These are either θεος, or σωμακιατειος. The first, or carnal men, will return to the grossness of matter and finally be consumed by fire; the second, or psychic men, together with the Demiurges as their master, will enter a middle state, neither heaven (pleroma) nor hell (hades); the purely spiritual men will be completely freed from the influence of the Demiurges and together with the Saviour and Achamoth, his spouse, will enter the pleroma, divested of body (8ωμα) and soul (ψυχη). In this most common form of Gnosticism the Demiurges had an influence not intrinsic, but extrinsic and parvic incidental on the universe as the head of the psychic world. According to Marcion, the Demiurges was to be sharply distinguished from the Good God; the former was δικαιος, severely just, the latter γυνηκης, or loving-kind; the former was the God of the Jews, the latter the true God of the Christians. Christ, though in reality the Son of the Good God, pretended to be the Messias of the Demiurges, the better to spread the truth concerning His heavenly Father. The true believer in Christ enters into God's kingdom even here on earth, and is not to be dragged into the hell of the Demiurges. In this form of Gnosticism, the Demiurges has assumed already a more evil aspect. According to the Naassenes the God of the Jews is not merely δικαιος, but he is the great tyrant, Jaldaboath, or Son of Chaos. He is Demiurges and maker of man, but as a ray of light from above enters the body of man and gives him a soul; Jaldaboath is filled with envy; he tries to limit man's knowledge by forbidding him the fruit of knowledge in paradise. The Demiurges, fearing lest Jesus, whom he had intended as his Messias, should spread the knowledge of the Supreme God, had him crucified by the Jews. At the consummation of all things all light will return to the pleroma; but Jaldaboath, the Demiurges, with the material world, will be cast into the lower depths. Some of the Ophites or Naassenes venerated all persons reprobated in the Old Testament, such as Cain, as the demiurges, as well as the Demiurges, the creator of the world.

In these weird systems the idea of the world-maker was degraded to the uttermost. Amongst the Gnostics, however, who as a rule set some difference between the Demiurges and the Supreme God, there was one exception; for according to the Ebionites, Jaldaboath, whose origin has been already mentioned in the Pseudo-Clementine literature, there is no difference between the Highest God and the Demiurges. They are identical, and the God Who made heaven and earth is worthy of the adoration of men. On the other hand the Ebionite system is tainted with pantheism, for its Demiurges is not a creator but only a world builder. (See Gnosticism: Valentinus; Marcion.)

Democracy. See Government, Forms of.

Democracy, Christian.—In Christian Democracy, the name and the reality have two very different histories, and therefore they must be carefully distinguished.

The Reality.—What Christian democracy is was authoritatively laid down by Pope Leo XIII in his Encyclical "Graves de communi," wherein it is defined to be the same thing as Christian charity and social justice.

Such a definition is certainly intensive; so that not everything done by Catholics, among the people or for the people, can be technically termed Christian democracy, or popular Catholic action. Action in this definition is taken to mean an organised movement with a definite programme to deal with the pressing problems that come before it. Popular has reference to the people, not inasmuch as they are a nation or collective whole, but as the fourth estate: the plebs, the tenentes, and the teniusimis of classical antiquity. Lastly, Catholic (and therefore Christian through and through) signifies that this organised action in favour of the people (plebe) is the work of Catholics as such. Popular Catholic action, therefore, means that the scope mapped out for the activity of the organisation is the well-being of the people; and that the movement proceeds along Catholic lines, under the guidance of Catholic leaders. Having stated that, it is easy to understand that the essence of Christian democracy is not a thing of yesterday. In the very nature of Christianity, in the spirit of the Church, in the mission of the clergy (cf. Benigni, Storia sociale della Chiesa, Milan, 1907, I) lies the germ of popular Catholic action technically so called; in other
words, of Christian democracy. As soon, therefore, as political and social circumstances allowed it, the Church set her hand to this work, and she has continued without interruption her traditional action in liberal and progressive lines. To prove this there is no need of distorting the facts of history. Even if we exclude the marvellous economic organization of the Church of the first three centuries (see the last part of the "Storia" referred to above), it is certain that from the time of Constantine the Church began the practical work of regenerative democracy. The clergy showed their zeal in establishing hospices for orphans, for the aged and infirm, and for wayfarers.

Constantine in a period of famine chose the bishops rather than the civil officials to distribute corn among a starving people, and thus showed his appreciation of Christian charity in this field of popular work. But when the fall of the Empire of the West under the anarchy of the Germanic invasions threatened the whole Christian civilization to the verge of ruin and shook the very foundation of the people's welfare; when it became necessary to build up again laboriously the neo-Roman culture of the West out of the remnants that escaped the catastrophe and the raw material of the scarcely civilized races, then alone forth in its true light the Church discovered the new path of the Catholic Church. Suffice it to say that an entire system of laws and customs in furtherance of the civil and material well-being of the people was established, or at least strengthened and developed, by the united action of clergy and laity. The right of sanctuary, the art guilds and trade guilds, the relentless war against usury, the numberless benefactions to the poor, the protection of the clergy, the protection afforded to labour in general, and the special provision made for the unemployed, all these form a golden thread of Christian democracy that runs through the whole course of medieval Church history, unbroken and untarnished amid its surroundings of iron and stone. The Truce of God (which proclaimed the inviolability of the lands and dominions of a lord who had gone to the Crusades) was not only a safeguard of that lord's interests, but above all of his people, who, in the absence of their military chief could offer but a sorry defence against the frequent attacks of the lords or princes. The montes piolati, too, were an admirable Catholic institution that delivered the poor from the clutches of the extortioner from whom they were obliged to borrow. The many thousand confessions and tribunals scattered up and down Europe were religious associations, but in nearly every episcopal see a common fund for the benefit and protection of their members. Thus, in the Papal States, up to the time of the French Revolution, many guilds (such as shoemakers, carpenters, etc.) had a notary public and a lawyer who were bound to transact for a few pence the legal business of the members of the guild. These facts, even from very different fields of life, show that an organized action, really Catholic and really of the people, is one of the time-honoured traditions of Catholicism.

But the last definitive stage of Christian democracy, and one that has given the name a fixed and technical meaning, dates from the time that elapsed between the fall of Napoleon I and the international Revolution of 1848. Among the many calamities heaped upon the Church during the French Revolution was the charge that she was anti-democratic, and this not only in a political, but also in a larger social sense; it meant that the Church favoured the great and mighty, and aided with the monarchical oligarchy against the just political and economic demands of the middle and lower classes. The horrors of the Revolution and, later on, the illusions of the Restoration, drove the clergy and a number of the thinking laity into the movement of the Counter-Revolution, which, in the hands of politicians like Metternich, developed into a "reaction", i.e. it was not deemed sufficient to struggle against the evils of revolution but to restore the old order; it was thought necessary to restore the old regime, bury everything good and bad that favoured democracy, and thereby deprive the people of a means of improving their political-economic conditions. This reactionary programme looked on the question as a simple one solved by the clergy, the government's armed hand, by charitable subsidies, and by the creation of holidays. This programme found support in a saying attributed to the King of Naples: To rule the mob you must use three "f's": festa, farina, and forza (festivals, food, and gallows). But a new revolution was in the air. The Carbonari began their work in 1821 and kept on until it resulted in the general upheaval of 1848. The mass of the clergy and of militant Catholics stood by the "reaction" as far as it was a counter-revolution in the better sense of the word; but in the general public opinion the clergy and the Church as a whole fell in with the parties that had crushed the Carbonari but chiefly through the malice of their enemies, came to be looked upon as reactionaries who favoured the oppression of the people.

Then there began among Catholics "a reaction against reaction", and there arose, especially in France, the de Lamennais party and a group of liberal Catholics. To use the expression of the newspaper "L'Avenir," and for its motto, "God and Liberty". There is no doubt that Ozanam, with his conferences of St. Vincent de Paul, had the true practical idea of charity, at once thoroughly Christian and thoroughly adapted to actual needs; he was not content with the passing touch of the hand that gave and the hand that received, but he sent the charitable into the very homes of the needy and brought them face to face with the hard reality in order to give them a better understanding and a stronger sense of brotherhood. De Lamennais had an insight, confused but keenly felt, into a popular Catholic action not restricted to works of material and immediate beneficence, but extending beyond these to an assertion of justice and social equity for the lower classes. De Lamennais, therefore, was in reality a pioneer of Christian democracy. Unfortunately, also he led the way in errors that even to-day we detect in the thinking of nearly all those who are for the most part two-thirds of the non-Catholic world. In political and ethical-juridical and economical action of Christian democracy in political agitation, he fell into a mistake which was the more unfortunate as the parties of his day made use of it to bring about a violent political crisis. He was wrong, too, in believing that liberty was the positive foundation of everything; hence the justice of the reproach cast upon his formulas, "God and Liberty": either liberty was superfluous, since that is already implied in God, or the phrase was illogical, since there can be no question of liberty unless it harmonises with social order. And so de Lamennais and his movement ended in failure. The revolution of 1848 and the consequent reaction of 1850 hindered the Catholics from availing themselves of such good as there was in de Lamennais' attempt. Then came the political and religious struggles which the Church had to face during the long pontificate of Pius IX and the early years of Leo XIII's rule. But the latter pontiff soon issued his Encyclicals on the political, ethical, juridical, and economical questions of the day, and in dealing with the social question in its popular aspects he published, 15 May, 1891, the immortal "Rerum Novarum" which has become the Magna Carta of Christian democracy. Measures were at once taken to secure popular Catholic action; and it quickly appeared how unequal most Catholics were to the doctrinal and practical requirements of the situation. On the one hand, many of them, terrified by the evils
of the Revolution (especially in Latin countries), would not hear of the burning questions of the day or of new organisations, but confined themselves to the old traditional methods of material and spiritual assistance, occasionally venturing on the establishment of St. Vincent de Paul and of working-men's mutual benefit societies such as were widely organized by the middle-class liberal party. On the other hand, there were some who thought that the best means of combating Socialism was to imitate it; and they encouraged ideas, attitudes, and expressions of a socialist type, which resulted in a distorted view of Catholicism, which eventually became a great injury of genuine popular Catholic action.

But these various turnings in the course of modern Christian democracy are hardly as yet matters of history; they are rather items in a chronicle that is still being written; and this is not the place to discuss them. Only let it be noted that Leo XIII over and over again, especially in receiving pilgrimages of workingmen, laid down clearly the limits and the nature of popular Catholic action, and that Pius X has repeatedly confirmed and approved of them. Christian democracy is the ensemble of Catholic doctrine, combined with an action that is the action of the people in the world of political questions, i. e. the vast field occupied by the proletariat, called by some (inexactly, because the term is not wide enough) the labour question. Christian democracy recognizes in principle and in fact that the popular social question cannot be limited to the question of justice, nor of charity; but that it ought to establish a harmony between the claims of the first and the pleadings of the second, avoiding the excesses of anarchistic individualism as well as those of communism, socialist or otherwise. Christian democracy, then, disapproves of the conduct of those "socialist Catholics who despise or minimize the social function of Christian charity; just as it disapproves the position of those other Catholics who would ignore and disregard the question of social justice in such matters as minimum salary and maximum number of working hours, obligatory insurance of workingmen, and proportionate sharing of profits. But real Christian democracy seeks to be, and is, absolutely neutral on political matters. It is not, and never can be, monarchical, or republican, or oligarchical, or parliamnetarian, or partisan in politics. So much follows from its very nature. On this foundation Christian democracy, emerging from the present crisis, will develop a programme for the redemption of the people, and will be one of the grandest and most fortunate applications of the programme of Pius X, "to restore all things in Christ".

The Name.—After the appearance of the Encyclical "Rerum Novarum", the rapid growth of popular Catholic action called for a subtitle name to describe it. The old name, indeed, "Popular Catholic Action", was both accurate and comprehensive; but a discussion arose as to selecting a nom de guerre, and the choice eventually lay between "Catholic Socialism" and "Christian Democracy". The discussion was carried on separately in English and in the field of popular socialist action had been highly developed. Those in favour of "Catholic Socialism" pointed out that the name socialism signified purely social questions, while democracy implied the idea of government and therefore savoured of politics. Their opponents answered that they also included a purely political meaning. The name "Christian Democracy" won; and Leo XIII in the Encyclical "Graves de communi" (18 January, 1901) declared as acceptable and accepted the expression "Christian democracy" as meaning neither more nor less than popular Catholic action and as having for its aim to comfort and uplift the lower classes (studium solanda erytangaeque plebis), excluding expressly every appearance and implication of political meaning. Thus the term, which was officially accepted, e.g. by the "Opera dei Comuni" (Comitati Catholici di "la ditta"), in the sense laid down by the encyclical. But unfortunate complications soon arose through the action of a few, who were not unjustly likened to the Roman revolutionaries of 1848 who besought Pius IX to give them a constitution, nothing but a constitution, and, when they got it, they wished to pass off anything and everything under the name of the Constitution. There were formed soon (in France, Italy, and Belgium) groups of "Christian Democrats" who made it their business to war against conservative Catholics and to consort with Socialists. On their leaflets and calendars the Italian demo-Catholics printed the dilemma: "either Bourgeois or Christian-Democrats", as though to be a Bourbon in politics hindered one from belonging to the party of popular Catholic action, i.e. to Christian Democracy. While insisting that it is still at the chronic stage, we may state in conclusion: "Christian Democracy" has been seriously compromised by the action of those who distorted its meaning from that laid down in the Encyclical "Graves de communi"; it therefore inclines to lose the meaning of "popular Catholic action"; and tends more and more to denounce a school and a political party (See Belgium; France; Germany; Italy; Spain.)

U. BENIGNI.

Demon (Greek ὅλως and δαμασω; Lat. daemonium).—In Scripture and in Catholic theology this word has come to mean much the same as devil and denotes one of the evil spirits or fallen angels (see Devil). And in fact in some places in the New Testament where the Vulgata, in agreement with the Greek, has daemonion, our vernacular versions read devil. The precise distinction between the two terms in ecclesiastical usage may be seen in the phrase used in the decree of the Fourth Lateran Council: "Diabolus enim et alii daemones" (The devil and the other demons), i.e. all are demons, and the chief of the demons is called the devil. This distinction is observed in the Latin and English translations of the New Testament of the Greek ἄνθρωπος, which represents the Greek ἄνθρωπος, and in almost every instance refers to Satan himself, while his subordinate angels are described, in accordance with the Greek, as daemones or daemonia. This must not be taken, however, to indicate a difference of nature; for Satan is clearly included among the daemones in James, 19 and in Luke, xi, 15, 18. But though the word demon is now practically restricted to this sinister sense, it was otherwise with the earlier usage of the Greek writers. The word, which is apparently derived from ἄνθρωπος "to divide" or "apportion", originally meant a divine being; it was occasionally applied to the gods and goddesses, but was more generally used to denote spiritual beings of a lower order coming between gods and men. For the most part these were beneficent beings, and their office was somewhat analogous to that of the angels in Christian theology. In the adj. of the English and other languages, the sense is often extended to an evil one who was guided and guided by a good demon. Some of these Greek demons, however, were evil and malignant. Hence we have the counterpart to ἀθλητεία, "happiness", in ἁθλητεία which denoted misfortune, or in its more original meaning, "stumbling under the weight of the load". In the Greek of the New Testament and in the language of the early Fathers, the word was already restricted to the sinister sense, which was natural enough, now
that even the higher gods of the Greeks had come to be regarded as deities.

We have a curious instance of the confusion caused by the ambiguity and variety of the meaning of the word mundus, which Cicero rightly renders as divinum aliquid, "something divine". And after a close examination of the account of the matter given by Socrates himself in the reports transmitted by his disciples, he pointed to the fact that both Plato and Xenophon use the form δαιμων, which Cicero renders as divum in his paper on the subject, the words of which Socrates himself, 117b: He pointed to the fact that both Plato and Xenophon use the form δαιμων, which Cicero rightly renders as divum in his paper on the subject, the words of which Socrates himself, 117b: He pointed to the fact that both Plato and Xenophon use the form δαιμων, which Cicero rightly renders as divum in his paper on the subject, the words of which Socrates himself, 117b: He pointed to the fact that both Plato and Xenophon use the form δαιμων, which Cicero rightly renders as divum in his paper on the subject, the words of which Socrates himself, 117b:

Demonia (Gr. δαιμων, δαιμωντις, possessed by a demon).—The idea of demonic possession by which a man becomes demonized, that is possessed or controlled by a demon, was current in many ancient cultures. The idea of demon possession is found in one form or another wherever there is a belief in the existence of demons, and that is practically everywhere (cf. Demon; Demonology). Here, however, we are chiefly concerned with the demonic possession in the New Testament; for this is in many ways the most worthy of special attention, and serves as a standard by which we may judge of cases occurring elsewhere. Further questions in regard to these other cases and the general practice of the Church in dealing with those who are possessed by evil spirits will be treated in other articles (Exorcism, Possession). Among the many miracles recorded in the New Testament, the greatest prominence is given to the casting out of devils or demons (δαιμων, δαιμων). Thus, in St. Mark, the first of all the wonders of the casting out of the devil from a demoniac, the man "with an unclean spirit" (νεκρος ακακάκερος) in the synagogue at Capernaum, and St. Peter thus described the mission and the miracles of Christ: "Jesus of Nazareth: how God anointed him with the Holy Ghost, and with power, who went about doing good, and healing all that were oppressed by the devil" (των κατανικτηνων υπερ τω ναβαβδο—Acts, x, 38).

The stress thus laid on this casting out of the devils is not far to seek. For the miracles of Christ, as St. Augustine says, are both deeds and words. They are works done in testimony of His power and His Divine mission; and they are words, because they have a deep significance. In both these aspects the casting out of devils seems to have a special pre-eminence. Few, if any, of the wonders can be said to give such a striking proof of a power above the order of nature. And for this reason we find that the disciples seem to have been more impressed by this than by the other powers given to them—the healing of the sick, the casting out of devils, and the stilling the storm at sea, they cried: "Who is this (think you), that He commandeth both the winds and the sea, and they obey Him?" (Luke, xvi, 25). So those who saw the devil cast out at Capernaum asked: "What thing is this? What is this new doc-
of the evil spirits in another sphere. But with a happy inconsistency, many who rejected as superstitious all other alleged cases of obsession still professed their belief in the Gospel narrative, with its numerous demoniacs and its miraculous exorcisms. Of course it was possible, at least in the abstract, and without making a too curious examination of the facts, to hold a theory that possession had really happened of old and had then ceased altogether. For all must admit that in any case it does not occur with the same frequency in all ages or in every land alike. But it is one thing to dispute the fact and another to deny the possibility of demonic possession in medieval or modern times. It may be a great mistake, but there is no contradiction in saying that obsession did not of old but does not happen now; it is surely another matter if we say that these things cannot happen now, that they are intrinsically impossible. And though they may not be fully conscious of their own motives, it is to be feared that this is really the position adopted by those who reject all cases of demonic possession except those that are recorded in the New Testament. It is true that some are provided with a theological, or Biblical, reason for this limitation. For they tell us that possession was indeed possible before the Death of Christ, but that since that great victory in Satan lay broken, or in the language of Scripture, he has been bound, so that he can no longer gain possession of the bodies of men. It may be fairly allowed that there is no contradiction or inconsistency involved in admitting the Gospel cases of obsession and denying the others, if this be the real reason for making the distinction. But it is difficult to believe that this is really the ground on which all later instances are rejected as unreal. For, after all, this doctrine about the binding of Satan and the consequent ceasing of obsession is at best a theological conjecture (see Devil) and a plausible interpretation of Christ's words about the kingdom of heaven, and as such it hardly afford a basis for a certain conclusion. And it may be safely said that those who deny all modern or medieval cases of obsession are generally very certain of their conclusion. There is a further difficulty in the fact that cases of obsession are recorded in the New Testament as having taken place after the death of Christ.

It was no doubt due to the force of these objections, or to a desire to find some means of meeting or evading them, that the Rationalistic school of German Biblical criticism set about the task of providing a new interpretation of the Gospel narratives. Older free-thinking philosophers of the schools of revealed religion had bluntly denied the fact of obsession, and asserted that the demonics were merely madmen, that they were suffering from epilepsy, or mania, or some other form of mental alienation, and that Jewish superstition had ascribed the disease to demonic possession. The earlier school of German Rationalist theologians endeavoured to modify this view of the matter and so interpret the Sacred Text as to reconcile the naturalistic explanation with due reverence for the Gospel and the wisdom of the Divine Redeemer. Thus they accepted the view that the demoniacs were merely lunatics, and that it was only popular superstition that imagined that they were possessed by devils. So far these theologians agreed with the infidel writers. But, instead of making the confusion between lunacy and possession a ground of attack on the Gospel, they were led in that false way to conceive that Christ was only accommodated Himself to the ideas of His ignorant hearers, who were incapable of grasping the true facts, and that this was the wisest way to lead them on to the truth. One of these interpreters seeks to explain the answers to the evil spirit at Capernaum by the method adopted by doctors in dealing with those who are suffering under a delusion. The best means of curing them is often found in an affected adoption of the patient's delusion, e.g., the imagines that he has to undergo some operation, the doctor will pretend to perform it. In the same way it is suggested that the superstitious belief in demonic possession prevailed among the Jews in the time of Christ (and whether true or false it certainly did prevail among them), and in these circumstances a lunatic might very well be convinced of the delusion that he is a subject of this imaginary obsession: and thus a wise physician might cure the delusion by means of an affected exorcism of the non-existent evil spirit.

The fallacy of this crude Rationalism wassearchingly criticized and exposed by Strauss in his critical Life of Christ more than seventy years ago (Das Leben Jesu, ix). He points out that such interpretations not only have no basis in the text, but that there is much there that plainly contradicts them. The critic, he observes, is really ascribing the ideas of his own time to those who lived in the first century. And indeed a closer scrutiny of the evidence may well be enough to show that this Rationalistic exegesis is inconsistent in itself and in conflict with the testimony of the very documents on which it professes to be founded. It may be admitted that there is an element of truth in the notion that some condescension or accommodation where an enlightened teacher is addressing a rude and uncultured audience, and one who cannot in some measure adapt himself to their crude conceptions and habits of thought and expression might as well address them in a foreign tongue. It may be added that in the case of a Divine teacher there must needs be some condescension or accommodation to the lower way of men. And for this reason St. Gregory Nazianzen likens the inspired words of Holy Scripture to the simple language in which a mother speaks to her hapless little ones. But if this be true, the notion that Christ accommodated His words to the limitations of those who heard Him. But this principle will not serve to explain His manner of speaking and acting in regard to this matter of demonic possession, for it simply will not fit the facts. It is not a question of some isolated and possibly ambiguous action or utterance, but of many and various acts and utterances all consistent with each other, and with the belief or knowledge that there is real demonic possession, and utterly incompatible with the interpretation that has been put upon them by these critics. It may be a profound judgment of the cases of demonic possession to pretend that He was not Himself to be possessed, by pretending to accept His belief and bidding the devil depart from Him, and in the case of some modern missionary, of whom we knew no more than the fact that he had used some words in a case of supposed possession, there might be room to doubt whether he himself believed in the possession, or was merely seeking to pacify a lunatic by making all of his delusion. But it would surely be otherwise if we found the same missionary speaking in this way about demons and demonic possession to others who were not lunatics suffering from this painful monomania: if we found him teaching how evil spirits enter into a man, and how, when they are cast out, they wander in desolate places. Yet this is what we actually find in the Gospels, where Christ not only addresses the devils and bids them depart or be silent, and thus treats them as personalities distinct from the man who is the subject of possession, but speaks of them and in the same breath. This doctrine teaches a doctrine about demonic possession. So again, it may sometimes be a wise course for a religious teacher to deal gently with the beliefs of the ignorant; he may feel that it is impossible to do all at once, and that some errors can only be destroyed by gentle means and gradual enlightenment. It may be that the best and most enlightened teacher, who found him
DEMONOLOGY

self in the midst of a simple, credulous, and superstitious population, would shrink from adopting harsh and drastic measures to get rid of these cherished superstitions and popular errors. And though on this point we must speak with some reserve, it is possible that in such a case the teacher, in endeavouring to make his teaching understood by his hearers, would find he could best convey his own message of truth through the medium of words and phrases which, taken literally, may seem to give some countenance to these popular errors. But whether this be permissible or not, it may be safely asserted that a wise and good teacher will always carry his accommodation to the point of confirming his hearers in their delusions. And these critics themselves can hardly question the fact that the whole treatment of demonic possession in the Gospels has had this effect, and has confirmed and perpetuated the belief in real demonic possession.

And at least in these latter days there must be many who would have abandoned all belief in the reality or even the bare possibility of any such possession, but that they felt constrained to believe it on the authority of Christ and the testimony of the Gospels. Certainly, if it were possible to accept this interpretation of the early Rationalists, and regard the attitude of Christ towards the popular belief in demonic superstitions, it must be confessed that the alleged economy has had very unfortunate consequences. Later Rationalists, who see the difficulty, or rather the impossibility, of reconciling this view with the evidence of the Gospels, have turned to other ways of escape, and, like the other supernatural and miraculous elements in the Gospel narrative, the instances of demonic possession and the casting out of devils have been explained as parts of a mythical legend that has grown up around the figure of Christ; or again they have furnished grounds for disputing the fullness of his knowledge, or the authenticity and veracity of the narrative. This is not the place to deal with these problems of apologetics; but it may be well to say a word on the true ground for the rejection of belief in real demonic possession. The tendency has been to deny the possibility of miracles or demonic possession. And it is sometimes curious that critics who are so bold in setting limits to the knowledge of Christ are often strangely oblivious of their own natural knowledge. On metaphysical principles we can have no valid ground for deciding that such a thing as demonic obsession is impossible, and it is a more reasonable, as well as a more honest, course of critical investigation within our reach and examine the evidence adducible for the actual occurrence of obsession. If any one has examined this evidence and found it insufficient, his denial of demonic agency, whether we accept it or not, is at any rate entitled to respect. But few of those who have been most decided in their rejection of obsession or other preternatural or miraculous manifestations have taken any pains to examine the adducible evidence. On the contrary, they have generally dismissed it with contempt, as unworthy of serious consideration. And Baader is surely well warranted when he complains of what he calls “Rationalistic obsequiousness and dogmatism” in this matter (Werke, IV, 109). Of late years the magnetism to which this acute thinker was calling the attention of philosophers in the work we have cited, and more recently the phenomena of hypnotism and spiritism, have helped to bring the critics to a more rational and less dogmatic view of the whole matter. Thus, prejudice many of the difficulties raised against the demonic possession in the New Testament will naturally disappear.

The instances of obsession mentioned in the New Testament may be roughly divided into two classes. In the first group we are given some facts which, apart from the use of “demonized” or some equivalent term might suffice to show that it is a case of demonic possession properly so called. Such are the cases of the “man with an unclean spirit” in the synagogue at Capernaum (Mark, i) and the Gerasene demoniac (Luke, xi). In both of these instances we have evidence of the presence of an evil spirit who betrays knowledge beyond the ken of the demonized person or, if facts like these are true, we have evidence that he has been cast out. In the second group may be placed those cases in which we are not given such distinct and unmistakable signs of true demonic possession, e. g. the woman who had a spirit of infirmity (Luke, xiii. 11). Here, apart from the words, “spirit,” which Jesus sounds Saturn himself, there is nothing by nothing to distinguish the case from an ordinary healing of infirmity. A careful consideration of the medical aspect of demonic possession has often been associated with a denial of the demonic agency. But this is by no means necessary; and, rightly understood, the medical evidence may even help to establish the truth of the record. This has been done within the last few years by Dr. Wm. Menzies Alexander in his “Demonic Possession in the New Testament: Its Relations, Historical, Medical, and Theological” (Edinburgh, 1902).

In his view, the Gospel records of the chief cases of demonic possession exhibit all the symptoms of such mental diseases as hysteria and psychical. He (and with such accuracy of detail that the narrative can only owe its origin to a faithful report of the actual facts. At the same time Dr. Alexander is equally impressed by the cogency of the evidence for real demonic possession at least in these cases. Even those readers who are unable to accept his conclusions—and in regard to later instances of obsession we are unable to follow him—will find the book helpful and suggestive and it may be commended to the attention of Catholic theologians.

For authorities see modern titles cited at end of Devil.

W. H. KENT.

Demonology.—As the name sufficiently indicates, demonology is the science or doctrine concerning demons. Both in its form and in its meaning it has an obvious analogy with theology, which is the science or doctrine about God. And with reference to the many false and dangerous forms of this demonic science we may fitly adapt the well-known words of Albertus Magnus on the subject of theology and say of demonology, “A demonibus docetur, de demônibus docet, et ad demones ducit”—It is taught by the demons, it teaches, and it leads to the demons. For very much of the literature that comes under this head of demonology is tainted with errors that may well owe their origin to the father of falsehood, and much of it again, especially those portions which have a practical purpose (what may be called the ascetical and mystical demonology) is designed to lead men to give themselves to the service of Satan. There is, of course, a true doctrine about demons or evil spirits, to wit that portion of Catholic theology which treats of the creation and fall of the rebel angels, and of the various ways in which these fallen spirits are permitted to tempt and afflict the children of men. But for the most part these questions will be dealt with elsewhere in this work. Here, on the contrary, our chief concern is with the various ethnic, Jewish, and heretical systems of demonology. These systems are so many that it will be out of the question to deal with them all or to set forth their doctrines with completeness. Indeed, in the case of many of these strange doctrines of demons might well seem somewhat out of place in these pages. It will be enough to give some indication of the main features of a few of the more important systems in divers lands and in distant ages. This may enable the reader to appreciate the importance of the subject both in the historical and theological portion of his study in the course of human history and their influence on the religion and morals and social life of the people.
DEMONELOGY

At the same time some attempt may be made to distinguish the scattered elements of truth which may still be found in this vast fabric of falsehood—truths of natural religion, recorded experience of actual facts, every form of reassurance of the primitive man, from the Jewish and Christian Scriptures or from primitive tradition. This point has some importance at the present day, when the real or apparent agreement between heathen legend and Christian theology is so often made a ground of objection against the truth of either.

Perhaps the first fact that strikes one who approaches the study of this subject is the astonishing universality and antiquity of demonology, of some belief in the existence of demons or evil spirits, and of a consequent recourse to incantations or other magical practices. There are monuments which flourished in the past and have long since disappeared from the face of the earth; and there are others whose recorded origin may be traced in comparatively modern times, and it is no surprise to find that they are still flourishing. There are beliefs and practices, again, which seem to be confined to certain lands and races of Asia or to a particular stage of social culture. But there is something which belongs at once to the old world and the new, and is found flourishing among the most widely different races, and seems to be equally congenial to the wild habits of savages and the refinements of classical or modern culture. Its antiquity may not be inferred only from the traces of apotropaic monuments, but from the fact that a yet more remote past is still present with us in the races which remain, as one may say, in the primitive and prehistoric condition. And even amid these rude races, apparently innocent of all that savours of science and culture, we may find the same features with less clear traces of propitiating them and averting their wrath, or maybe to secure their favour and assistance. This belief in spirits, both good and evil, is commonly associated with one or other of the widespread and primitive forms of religious worship—and accordingly some modern folk-lorists and mythologists are led to ascribe its origin either to the personification of the forces of nature—in which many have found a "key to all the mythologies"—or else to Animism, or a belief in the powerful activity of the souls of the dead, who were therefore invoked and worshipped. On this last these latter were first conceived of as being the souls of dead men, and from this aboriginal Animism there were gradually developed the various elaborate systems of mythology, demonology, and angelology. But here it is well to distinguish between the facts themselves and the theory devised for their interpretation. It is a fact that these ruine practices have some features with other and more elaborate ethnic systems—e.g., the Iranian demonology of the Avesta—and these again have many points which find some counterpart in the pages of Scripture and Catholic theology; but by no means follows from these facts that these two systems are right as to the nature of the connexion between these various ethnic and Christian systems. And a further consideration of the subject may serve to show that it may be explained in another and more satisfactory manner.

Asyrian and Akkadian Demonology. Some idea of the antiquity of demonology and magical practices might be gathered from the history of the Semitic literature, to say nothing of the argument that might be drawn from the universality of these beliefs and practices. But still more striking evidence has been brought to light by the decipherment of the cuneiform hieroglyphs which has opened a way to the study of the rich literature of Babylon and Assyria. In consequence of their bearing on the problems of Biblical history, attention has been attracted to the evidence of the monuments of recovery. And teaching the truth, the cosmology, the tradition of the Deluge, or the relations of Assyria and Babylon with the people of Israel. And possibly less interest has been taken in the religious beliefs and practices of the Assyrians themselves. In this question of demonology, however, removal of the Assyrian monuments to a more intelligible form would be of special importance. From certain cuneiform texts which are more especially described as "religious," it appears, as Lenormant remarks, that, besides the public and official cult of the "twelve great gods," and their subordinate divinities, the Assyrians had a more known and secret religion, a religion of mystery and magic and sorcery. These "religious" texts, moreover, together with a mass of talismanic inscriptions on cylinders and amulets, prove the presence of an exceedingly rich demonology. Below the greater and lesser gods there was a vast host of spirits, some of them good and beneficent and some of them evil and hurtful. And these names are so classified with an exactness which leads Lenormant to liken the arrangement to that of the choirs and orders of our own angelic hierarchy. The antiquity and importance of this secret religion, with its magic and incantations of the good spirits or evil demons, may be gathered from the fact that by the time of Nebuchadnezzar, Belshazzar, and Nebonassin his scribes made several copies of a great magical work according to an exemplar which had been preserved from a remote antiquity in the priestly school of Erech in Chaldea. This work consisted of three books, the first of which is entirely consecrated to incantations, conjurations, and imperations against the evil spirits. These cuneiform books, it must be remembered, are really written on clay tablets. And each of the tablets of these first books which has come down to us ends with the title, "Tablet No. of the Evil Spirits." The ideograms which is here rendered as kultu-lu—"accursed," or "evil"—might also be read as limmu—"baneful." Besides being known by the generic name of uduki—"spirit"—a demon is called more distinctly ecimmu, or masimmu. One special class of these spirits was the sefu, or divine bull, which is represented in the well-known figure found of being the soul of dead men, and from this aboriginal Animism there were gradually developed the various elaborate systems of mythology, demonology, and angelology. But here it is well to distinguish between the facts themselves and the theory devised for their interpretation. It is a fact that these ruine practices have some features with other and more elaborate ethnic systems—e.g., the Iranian demonology of the Avesta—and these again have many points which find some counterpart in the pages of Scripture and Catholic theology; but by no means follows from these facts that these two systems are right as to the nature of the connexion between these various ethnic and Christian systems. And a further consideration of the subject may serve to show that it may be explained in another and more satisfactory manner.

Iranian Demonology. In many ways one of the most remarkable demonologies is that presented in the Avesta (q. v.), the sacred book of the Mazdaean religion of Zoroaster. In this ancient religion, which, according to that common with the Assyrians, still exists in the Persian community, the war between light and good and evil comes into greater prominence. Over against the good God, Ahura Mazda, with his hierarchy of holy spirits, there is arrayed the dark kingdom of demons, or daeva, under Anro Mainyu (Ahriman), the chief Evil Spirit, the Demon of Demons (Daevesan Daeva), who is ever warring against Ahura Mazda and his faithful servants such as Zoroaster. It may be remarked that the name of Dasna or Dasnavin is an instance of that change from a good to a bad sense which is seen in the case of the Greek word dalma. For the original meaning of the word is shining one," and it comes from the primitice of words in the source of the Greek Zeus and the Latin dea. But while these words, like the Sanskrit deva, retain the good meaning, dæna has come to mean "an evil spirit." There is at least a coincidence, if no deeper
nificance, in the fact that, while the word in its original sense was synonymous with lucifer, it has now come to mean much the same as devil. There is also a curious coincidence in the similarity in sound between да́вра, the modern Persian давра, and the word devil. Looking at the likeness both in sound and in significance, one would be tempted to say that they must have a common origin. Indeed, for the first, we know with certainty that the word devil comes from διάβολος (diábolos—diávalleu), and can have no connexion with the Persian or Sanskrit root.

Although there are marked differences between the demons of the Avesta and the devil in Scripture and Christian theology (for Christian doctrine is free from the Avestan deity, and religion), the struggle between good and evil is still the same in both cases. And the pictures of the holiness and fidelity of Zoroaster when he is assailed by the temptations and persecutions of Anro Mainyu and his demons may well recall the trials of saints under the assaults of Satan or suggest some faint analogy with the great scene of the temptation of Christ in the wilderness. Fortunately for English readers, a portion of the Vendidad (fargard xix), which contains the temptation of Zoroaster, has been admirably rendered in a doctrinal paraphrase in Dr. Casartelli's "Leaves from my Eastern Journals," instead of by the Mazdean (as the modern Persians call it), the religion and doctrines ready to their hand in the alien systems, the rabbinical demonologists sought their starting-point in some text of their own scriptures and drew forth all they wanted by means of their subtle and ingenious methods of exegesis. Thus the aforesaid text of Isaiah furnished, under the name of Lilith, a mysterious female night spirit who apparently abode in desolate places, and forthwith they made her the demon wife of Adam and the mother of demons. But whence may be asked, had these exponents of the sacred text any warrant for saying that our first father was protected by an association with a being of another race and begot children other than human? They simply took the text of Genesis, v: "And Adam lived a hundred and thirty years, and begot a son to his own image and likeness". This explicit statement, they said, plainly implies that previous to that time he had begotten sons who were not to his own image and likeness; for this he had no need unless he had to meet another race than his own, to wit a demon wife, to become the mother of demons. This notice of a union between mankind and beings of a different order had long been a familiar feature in pagan mythology and demonology, and, as will presently appear, it has been popularly perpetuated in an even more remarkable passage in Genesis vi, 2, which tells how the sons of God "took to themselves wives of the daughters of men". One characteristic of Jewish demonology was the amazing multitude of the demons. According to all accounts every man has thousands of the air at his side. The air is full of them; and, since they were the causes of divers diseases, it was well that men should keep some guard on their mouths lest, swallowing a demon, they might be afflicted with some deadly disease. This may recall the common tendency to personify epidemic diseases and speak of "the cholera fiend", "the influenza fiend", etc. And it may be remarked that the old superstition of these Jewish demonologists presents a curiously close analogy to the theory of modern medical science. For we are now told that the air is full of microbes and germs of disease, and that by inhaling any of these living organisms we receive the disease.

Demonology of the Early Christian Writers.—Whatever may be said of this theory of the Rabbis, that the air is full of demons, and that men are in danger of receiving them into their systems, it may certainly be said that in the days of the early Christians the air was dangerously full of demonologies, and that men were in peculiar peril of adopting erroneous doctrines.

Jewish Demonology.—When we turn from the Avesta to the Sacred Books of the Jews, that is to say to the canonical Scripture, we are struck by the absence of a system of demonology such as that of the Persians and Assyrians. There is much, indeed, about the angels of the Lord, the hosts of heaven, the seraphim and cherubim, and other spirits who stand before the throne or minister to men. But the mention of the evil spirits is comparatively slight. Not that their existence is ignored, for we have the temptation by the serpent, which is put into the mouth of Christ as the work of the Evil Spirit. In Job, again, Satan appears as the tempter and the accuser of the just man; in Kings it is he who incites David to murder the prophet; in Zacharias he is seen in his office of accuser. An evil spirit comes upon the false prophet. Saul is shown to be possessed by a demon. The activity of the demon in magic arts is indicated in the works wrought by the magicians of Pharaoh, and in the Levitical laws against wizards or witches. The scapegoat is sent into the wilderness to Azazel, who is supposed by some to be a demon (see ATONEMENT, DAY OF), and to the devil may be referred the remarkable passage in Isaiah which seems to countenance the common belief that demons dwell in waste places: "And demons and monsters shall meet, and the hairy ones shall cry out one to another, there hath the lamia lain down, and found rest for herself" (Isaiah, xxxiv, 14). It is true that the Hebrew word here rendered by "demons" may merely mean wild animals. But, on the other hand, ויִי נָו, which is rendered very literally as "haairy ones", is translated "demons" by Targum and Peshitta, and is supposed to mean a goat-shaped deity analogous to the Greek Pan. And "she" represents the original Lilith, a spirit of the night who in Hebrew legend is the demon wife of Adam.

A further development of the demonology of the Old Testament is seen in the Book of Tobias, which, though not included in the Jewish Canon, was written in Hebrew or Chaldean, and a version in the latter language has lately been recovered among some rab-
DEMONOLOGY 716

DEMONOLOGY

on this matter. It must be remembered, on the one hand, that many of the Gospel miracles, and particularly the casting out of demons, were, and in any evil case have been, given the faithful a vivid sense of the existence and power of the evil spirits. At the same time, as we have seen, Scripture itself did not furnish any full and clear information in regard to the origin and the nature of these powerful enemies; on the other hand, it may be said that the first Christian teachers, and the first Christian teachers were for the most part either Jews or Greeks, and many of them were living in the midst of those who professed some or other of the old Oriental religions. Thus, while they naturally wished to know something about these matters, they had very little definite knowledge of the truth, and on the other hand their ears were daily filled with contradictory and misleading information. In these circumstances it is scarcely surprising to find that some of the earliest ecclesiastical writers, as St. Justin, Origen, and Tertullian, are not very happy in their treatment of this topic. There was, moreover, one fruitful source of error which is rather apt to be forgotten. Now that common consent of Catholic commentators has furnished a better interpretation of Genesis, vi, 2, and conciliar definitions and theological arguments have established the fact that the angels are purely spiritual beings, it may seem strange that some early Christian teachers should have followed the strange doctrine of the plagues of Egypt, of the black arts and by the credulous and cruel persecutors who sought to suppress them. In the new age of the Revolution and the spread of practical ideas and exact methods of science it was at first thought by many that these medieval superstitions would speedily pass away. When men, materialized by the growth of wealth and the comforts of civilization, and enlightened by science and new philosophies, could scarce find faith to believe in the pure truths of revealed religion, there could be little room for any belief in the doctrines of demons. The whole thing was now rudely rejected as a dream and a delusion. Learned men marvelled at the credulity of their fathers, with their faith in ghosts, and demons, and black magic, but felt it impossible to take any serious interest in the subject in their age of enlightenment. Yet in fact there was still stronger delusion in the Protestant age. Many fancied that they had found the key to all knowledge, and that there were no things in heaven or earth beyond the reach of their science and philosophy. And much of the history of the last hundred years forms a curious comment on these proud pretensions. For, though the face of science is now much of the old occultism has been revived with a new vigour, and has taken new form in modern Spiritism. At the same time, philosophers, historians, and men of science have been led to make a serious study of the story of demonology and occultism in past ages in other lands, in order to understand its true significance.

Conclusion.—With all their variations and contradictions, the multitudinous systems of demonology yet have much in common. In some cases this may be accounted for by the fact that one has freely borrowed from another. Thus, the demonology of early Christian writers would naturally owe much both to the systems of Jewish and Greek demonology, and these in their turn can hardly have been free from other foreign influences. And since not only heretical opinions, but orthodox teaching on this subject has at any rate some elements in common with the ethic systems of the Orient, it is not unlikely that the elaborate demonology of the Chaldeans and Iranians—the mythologist or folklorist bids us come to the conclusion that all are from the same source, and that the Biblical and Catholic doctrine on evil spirits must be no more than a development from Animism and a more refined form of ethnic demonology. But it
may be well to observe that at best this solution is but a plausible hypothesis and that the facts of the case may be explained just as well by another hypothesis which some philosophic writers do not seem to have considered. In both, however, the idea that the teachings of revealed religion on this topic is true after all. Can it be said that if this were so there would be no trace of belief in demons among races outside the Christian fold or in religious systems older than the Bible? If, as our theology teaches, the fallen angels really exist, and are permitted to try and tempt the sons of men, should we not expect to find some belief in their existence and some traces of their evil influence in every land and in every age of human history? Should we not expect to find that here as elsewhere the elements of truth would be overlaid with error, and that they should take different shapes in each nation and each succeeding age, according to the measure of knowledge, and culture, and new ideas current in the minds of men? This hypothesis, to say no more, will fit well all the facts—for instance, the universality of the belief in evil spirits and any evidence adducible for the spiritual influence on men, both from the records of demonic possession and magic in the past or in the phenomena of modern Spiritism. And we can scarcely say the same of the other hypothesis.

Dempster, Thomas, savant, professor, and author; b., as he himself states, at Clittrig, Scotland, 23 August, 1579; d. at Bologna, Italy, 6 September, 1625. Son of Thomas, Baron of Muresk, Auchtermuchy, and Killesmont, Abercynno, and Jane Leslie, sister to the Baron of Balquhain; educated at the schools of Turriff and Aberdeen. His troubous life began early. On leaving school, aged ten, he went to Cambridge, leaving it shortly for Paris. Illness occasioned his removal to Louvain, whence, having acquired the naturalist representative of the Holy See, was taken to Rome, and there provided with a pension for his education in a papal seminary. Through failing health he returned northwards to Tournai, but was immediately transferred to Douai, means being forthcoming through royal bounty. On the completion of a six-year course, he returned to Tournai as professor of humanities. Tournai, however, he forsook for Paris, where, after graduating in canon law, he occupied, at the age of seventeen, a professorial chair in the Collège de Navarre. He could not remain there either, and, after an interval in Poitou, he became professor of humanities again, this time at Toulouse. Before long, zeal in local dissensions sent him adrift once more. Declining a chair of philosophy at Montpellier, he successfully competed for one of oratory at Nîmes. From this he was suspended, a lawsuit following in vindication of his integrity. The post of tutor to the son of the Maréchal de Saint-Luc he lost through unfriendly relations with the family of his patron. Once more adrift, he visited Scotland, vainly begged assistance from kith and kin, and, through Protestant intrigue, failed to recover his family estates, which had been parted with by his father. Soon after, he was again with a membership followed in Paris, at the end of which he was invited to reside in London in the capacity of historian to James I. He married in England, but only to bring on himself domestic misfortune. Anglican influence having procured royal dismissal, he left for Italy, and occupied under grand-ducal auspices the chair of civil law in Florence.

Further trouble led to his last change. In disgrace with the grand duke, he passed through Bologna, and was there provided with a chair of humanities. Even here he had his troubles, and had to clear himself of a suspicion of unorthodoxy before the licentiation. He lies buried in the church of St. Dominic, at Bologna.

Dempster's worth as an autobiographer and historian is much discounted by manifest errors, and by immoderate self-praise and zeal for the exaltation of his country. An unrestrained temper and resentful disposition of added unorthodoxy, were, in the face of learning and good qualities, the cause of his unpopularity and many misfortunes. The seventeenth-century Irish ecclesiastical historians generally represented Dempster's dishonest attempts to claim for Scotland many saints and worthies of Irish birth. John Colgan, John Lynch, and Stephen White, all eminent scholars, entered the lists against him (see W. T. Doherty, Inis-Owen and Tirconnell, Dublin, 1895, pp. 108-16).

The chief of his many writings are: "Historia Ecclesiae Genticis Scotorum"; published posthumously at Edinburgh, 1627; republished by Baynes, Edinburgh, 1829; "Antiquitatum Romanarum Corpus Absolutissimum" (Paris, 1613, 1743); "De Eteriūti Regali," brought out during the Florentine professorship (latest edition, 1723-4); "Esquisu ael Obeul, in Glosam librorum IV. Institutionum Justitianii" (Bologna, 1622), edition of 1625; "Historia Imperii Regni Britanorvm," of Benedetto Accolti's "De Bello a Christianis contra Barbaros gesto" (Florence, 1623; Groningen, 1731); annotated edition of Aldrovandi's "Quadraedum omnium bivulorum Historia" (Florence, 1623, 1647). His minor works include: tragedies, poems, especially "Musae Recidivae," three fragments during his life.

Denaut, Pierre, tenth Bishop of Quebec, b. at Montreal, 20 July, 1743; d. at Longueuil in 1808. After studying at Montreal and Quebec, he was ordained priest in 1767, and appointed pastor of Soupangés, when only twenty-four years old. During the American invasion (1775) he maintained his flock faithfully to their sovereign. Transferred to Longueuil in 1787, appointed vicar apostolic in 1797, he proceeded Bishop Bailly as coadjutor to Bishop Hubert, and was consecrated 29 June, 1795. He remained at Longueuil even after his appointment to the See of Quebec (1797), always taking a predominant part in the government of the diocese, with the efficacious cooperation of Bishop Frenay. He died at Quebec on 25 April, 1801. He visited his entire diocese, travelling through Upper Canada on his way to Detroit, in 1801 and 1802. In 1803, via Burlington and Boston, he visited the Maritime Provinces, where the Acadians and Indians beheld a bishop for the first time. An enlightened patron of education, he founded Nicolet College (1803), and also establishing Montcalm College in 1804. He resisted the encroachments of a British governor claiming the right of presentation to parishes, and opposed the "Royal Institution" investing Protestants with the control of public instruction. Courteous towards temporal authorities and firm in the defence of episcopal rights, he prepared the way for the civil recognition of the Bishop of Quebec and the freedom of the Church.

TÊTU, Les évêques de Québec (Quebec, 1886); Archives of the archbishop's palace, Quebec, Lionell Lindsay.
sion, may perhaps be considered as the most im-
portant native family on the American Continent. They 
are divided into three groups: the Southern, com-
posed of the Apaches and the Navahoes, to whom, in 
The Catholic Encyclopedia, special articles are de-
voted which describe their habitat; the Pacific Dénes, 
composed mainly of remnants of tribes in Washington, 
Oregon, and the northern California. Of these the 
Dénés, by far the most important division, which 
covers the territory extending from Churchill River 
and the northern branch of the Saskatchewan to the 
conflines of the Eskimo fishing-grounds. In British 
Columbia they range from 51° 30' N. lat., and are like-
wise distributed on the coast of Alaska with the ex-
ception of its coasts. The southern branch of the 
family is to-day in a thriving condition and relatively 
numerous; but the uncertainty of life in the dreary 
wastes or dense forests which have long been the 
home of the Northerners precludes the possibility of a 
population even distantly commensurate with the 
enormous area claimed by them. The latest and 
most reliable statistics give the following figures for 
the numbers of the three divisions: Southern Dénés, 
27,363; Pacific Dénés, 846; Northern Dénés, 19,990. 
It is but fair to add that whole tribes or septa were 
absorbed out of existence by disease, starvation or 
orders consequent on the advent of the whites among 
them. The principal Northern tribes are: the Lou- 
cheux, neighbours of the Eskimos in Alaska and the 
lower Mackenzie, contiguous to which are, from north 
to south: the Hares, the Dog-Ribs, the Slaves, the 
Yellow-Knives, and the Chipewyans. Ignoring 
several intermediate or Rocky Mountain tribes, we 
find in Northern British Columbia the Nahahais, 
the Sekanais, the Babines, the Carriers, and the Chilco-
tins. The Yellow-Knives receive their name from the 
tools of native copper which were common among 
their forefathers; these native tools are worn at 
their face from their custom of wearing labrets, wood or stone 
ornaments inserted in the lip, and the Carriers owe 
their name to a custom of the women of carrying on 
their backs the charred remains of their husbands. 

Though the Navahoes have at last adopted pastoral 
life, all the Dénés tribes were originally made up of 
hunters, and have remained so in the north. Yet 
in British Columbia the abundance of fish, especially of 
salmon, has made fishing of at least as great economic 
importance to the Dénés stationed there as hunting. 
Most of the hard work was done by the women, who 
generally occupied a very low place in the social scale. 
In the North, on the other hand, we find among the 
men by no means the lower order of their women. 
Then came the Northwest Fur 
Trading Company, a member of which, Laurent 
Leroux, was the first to visit Great Slave Lake (1784). 
This energetic corporation soon dotted the country 
with trading establishments, whereupon the Hudson 
Bay Company began a keen competition, which was 
the source of many disorders among the natives, 
intoxicants being used by each party to win them over to 
its own side. Then came the explorations of Macken-
zie in 1789 and 1792–93; Franklin's in 1820–22; 
Back's in 1833–35; and a number of other journeys 
in the course of which the Dénés proved valuable, if 
somewhat fickle helpers. They were strictly honest, 
anxious to please the whites and to adopt their 
ways as far as compatible with their own condition.

The Dénés had already learned something of the 
Catholic religion through the French Canadian traders 
and missionaries, a knowledge conveyed to them 
by a few who became themselves ready converts, which is not to be won-
dered at when we consider that the Dénés, when of pure 
stock, is by nature eminently religious. The first 
missionaries were Catholic priests. In 1842 the Rev. J. 
B. Thibault, one of the pioneers of the Red River Set-
ttlement (now there are 2,000 Indians in the Red River 
Missionaries, who have been the outstanding figures in his apostolic wanderings, and must have evan-
gelized some of the border tribes. Three years later
he visited the Chipewyans of Ile-à-la-Crosse, which locality was soon to become the centre of far-reaching missionary operations. That very year there arrived at St. Boniface the first two representatives of the Oblate Order, which has since had charge of the evangelization of all Northern Déné tribes. In 1847 Father (afterwards Archbishop) Taché visited Lake Athabasca, where he was kindly received and accomplished much good. Year after year the sphere of religious activity was enlarged, new missions being established, until that of Our Lady of Good Hope was founded by Father Grollier, 31 Aug., 1859, within the Arctic Circle. Thence apostolic excursions were made into Alaska, first by Father Petitot in 1870, and then by Bishop J. Clut in 1872. But the Western Loucheux contrasted most vividly to Canada by its Protestant ministers and fanatical traders, proved generally rebellious. Serious Protestant missionary efforts among the Dénés date from 1858. The Rev. J. Hunter then made a reconnoitring visit to the Mackenzie, and as a result a mission was established on that stream at Fort Simpson. After this work was undertaken among the Loucheux of the Yukon with some measure of success. However, in spite of the assertion of the late Anglican bishop, W. C. Bompas, that "the numbers under instruction of each Church may not greatly differ" (Diocese of Mackenzie, London, 1883, 108), it is the Roman Catholic Church, tending on the whole, the number of Protestant Dénés is insignificant compared with those who have embraced the Catholic Faith. In British Columbia they are practically all Catholic, and east of the Rocky Mountains there is not one Protestant among the natives who repair to stores fifteen of the Hudson Bay Company's fur-trading posts. Even at Fort Simpson, the headquarters of the Church of England in the Mackenzie, half of the aboriginal population is Catholic.

A. G. MORICE.

DENIFE, HEINRICH SEUSE (baptized JOSEPH), paleographer and historian, born at Innsbruck in the Austrian Tyrol, 16 Jan., 1844; d. at Munich, 10 June, 1905. His father, who was the village schoolmaster and chappel, taught him early reading and writing. In 1861 he entered the seminary of Brixen. On his reception, at Graz, 22 Sept., 1861, into the Dominican Order, he took the name of Heinrich. His studies of Aristotle and St. Thomas were begun in Graz and continued in Rome and Marseilles. After his return to Graz, Father Denife taught philosophy and theology for ten years (1870–1880), and during this period also he was one of the best preachers in Austria. A course of apologetic sermons delivered in Graz cathedral, "Die katholische Kirche und das Ziel der Menschheit," was printed in 1872. Denife, who had loved music from his boyhood and was a violinist, wrote his first published books as his first literary essay, an article on the Gregorian Chant: "Schönheld und Würde des Choral." That even then his mind was occupied with a subject about which his last and perhaps his greatest work was destined to be written, is evident from a series of articles entitled "Die Musik der Kirche," first published in 1893. From that time onward, though he preached occasionally, the biography of Denife is the description of his literary achievements. His life therefore may be divided into four periods characterized respectively by work on theology and mysticism, medieval universities, the Hundred Years War between France and England with its consequences to the Church, and Luther and Lutheranism.

A subject to which in early years he devoted much of his attention was the dissertation existing between scholastic theology and medieval mysticism. It was comparatively unknown, and had in fact been grossly misrepresented by some flippant writers according to whom the German mystics were the precursors of the German Reformers. Denife's researches put the matter in its true light. He discovered in various libraries of Austria, Germany, and Switzerland copious materials in fourteenth-century manuscripts, and a selection of 2500 texts was given to the public in his book "Das geistliche Leben. Eine Blumenlese aus den deutschen Mystikern des 14. Jahrhunderts" (Graz, 1871). He also began to collect and edit the works of Suso's works (the first and only volume of Denife's edition appeared in 1880—another edition is in progress 1908), and on Suso and other mystics he wrote several articles (fifteen in all with appendices) published in various periodicals from 1873 to 1888. His fame as a paleographer, German philologist, and textual critic arose from these investigations and especially from his studies on Tauler, Eckhart, and Blessed Henry Suso. Up to 1875 the most disputed subject in the history of German mysticism was that of the "Gottesfried" and his marvellous influence. Denife solved it simply and conclusively. The discovery, which created quite a sensation, and several others brought him into controversy with Früger and Schmidt, who had till then been looked up to as authorities on the history of mysticism, and also into controversy with Junft. He proved and demonstrated that Catholic mysticism rests on scientific theology. Denife's remarks were often sharp, but there could be no doubt that his arguments and his destructive criticism were unanswerable. Catholic and non-Catholic savants alike, as Schrots, Kirsch, Müller, Schönbach, etc., have recognized that he was immeasurably superior to his adversaries. This was owing to his intimate knowledge of the Fathers, of theology—both scholastic and mystic—of medieval history, and lastly of Middle-High German with its dialects.

In 1880 Denife was made sacristan, or assistant, to the general of his order, and summoned to Rome to hear a new field of inquiry brought forward by Leo XIII had commanded that a critical edition of the works of St. Thomas Aquinas be begun, and Denife was commissioned to search for the best manuscripts. He visited the libraries in Italy, Austria, Germany, Bavaria, Holland, England, France, Spain, and Portugal. Nothing escaped his eagle eye in the manuscripts he was preparing for the new edition, before his return to Italy in 1883, he had also gathered abundant materials for his own special study. In the autumn of 1880 Leo XIII had opened the secret archives of the Vatican to scholars; he had in 1788 appointed as archivist Cardinal Hergenrother. On the latter's recommendation the pope now (1 Dec., 1883) made Denife sub-archivist, a post which he held till his death. Since the beginning of his residence in Rome, Denife, who found nothing there for his contemplated history of mysticism, had been investigating the career of a celebrated prophet, i. e. the Abbot Josiah, and the reasons of the condemnation of his "Evangelium Æternum" by the University of Paris. This led him to study the controversy between the university and the mendicant orders. As he found du Boulay's history of the university inaccurate, Denife, who was a foe to adventurism, when asked to write a history based on original documents, and as an introduction to it, to commence with a volume on the origin of the medieval university system, for which he already had prepared copious transcripts and notes. His leading idea was that to appreciate the mystics one should understand not only the theology they had
learned, but also the genius of the place where it was commonly taught. The first and only volume appeared in 1885 under the title "Die Universitätens des Mittelalters bis 1400" (xlv-xliii). The wealth of erudition it contains is extraordinary. The work was everywhere applauded; it led, however, to a somewhat bitter controversy. G. Kaufmann attacked it, but his criticism was inspired by the erudition of the author. The most copious collection on the subject to be found in any archives is that possessed by the Vatican, and this Denifle was the first to use. Munich, Vienna, and other centres supplied the rest. Among his discoveries two may be mentioned; namely, that the universitas did not, as a rule, owe their origin to a single charter and that the study of first theology was not taught. The University of Paris formed an exception. Denifle had planned four other volumes; viz., a second on the development of the organization of universities, a third on the origin of the University of Paris, a fourth on its development to the end of the thirteenth century, and a fifth on its controversies with the mendicant orders. But the Conseil Général des Facultés de Paris, which had in 1885 decided on publishing the "Chartularium," or records of the University of Paris, resolved on 27 March, 1887, to entrust the work to Denifle, with Emile Chatelain, the Sorbonne, who had died in 1889; Louis Hugon, for he had resolved not to write before he had collected all the relevant documents, so with the assistance of Chatelain he began his gigantic task. In less than ten years four fofo volumes of the "Chartularium" appeared as follows: 1889, volume I, a.p. 1200-1286 (xxvi-714 pp.), 530 original documents, with fifty-five from the preparatory period, 1163-1200; 1891, volume II, 1286-1350 (xxiii-808 pp.), 661 documents; 1894, volume III, 1350-1384 (xxxvii-777 pp.), 520 documents; 1897, volume IV, 1384-1452 (xxxviii-835 pp.), 988 documents, and two volumes of the "Additamenta," the supplement revealed by the work, the "Chartularium Universitatis Parisiensis," contains invaluable information regarding its inner life, organization, famous professors and students, relations with popes and kings, controversies, etc., during the period when this university was the chief centre of theological learning. "With its aid," as Kirsch remarks, "a history of medieval theology has at last become possible." Some idea of the labour involved in its preparation may be gathered from the fact that all the great libraries and archives in Europe were visited, that Denifle travelled from Paris to Rome forty times, and that in the Vatican archives alone organized 200,000 manuscript leaves, and utilized 80,000 in his notes (see II, p. 17), though of course more material was found in Paris than in Rome. In order to preserve the unity of the "Chartularium," any reference to the "nations" was relegated to the "Auctarium." The two volumes published contain the "Liber Procuratorum Universitatis Parisiensis 1332-1446." Fourier, who recently criticized Denifle and Chatelain, feared badly at their hands. After Denifle's death the materials he had collected for another volume were entrusted to Chatelain, so that the work might be continued. Owing to the vastness and completeness of his research and to his amazing erudition, what Denifle gave to the world, even though for him it was only a preliminary study, has sufficed to make him the great authority on medieval universities. (See Merkle, Dreves, etc., or Rashdall's "Universities of Europe in the Middle Ages," Oxford, 1895.) In order to publish valuable texts which he had deciphered and translated, Denifle had to be helped, and he had to take the advice of Father Ehrle, S. J., the sub-librarian of the Vatican, he founded in 1885 the "Archiv für Literatur und Kirchengeschichte des Mittelalters." The two friends were the only contributors. The first five years of this serial contain several articles from his pen, on various universities, on Abelard and other scholars, on religious orders, on popes, etc. Denifle's extensive acquaintance with manuscripts and his skill in paleography were also put at the service of beginners in the art of deciphering by his annotated "Specimina palaeographica Registorum Pontificum ab Innocentio III ad Urbanum V" (Rome, 1888). Among its sixty-four plates, that representing the Vatican transcript of the "Unam Sanctam" is especially valuable. The result was the offering of the papal archives to Leo XIII on his golden jubilee.

A work of another kind suggested itself to him while gathering in the Vatican archives materials for his annotations on the "Chartularium." Denifle noticed in the three hundred volumes of "Registrum Petri" addressed to Clement VI and Urban V, between 1342 and 1389, the history of that part of France during the Hundred Years War between that country and England. So for the sake of a change of occupation, or "un travail accessoire" as he called it, Denifle went again through these volumes (each about 600 pages folio). In 1897 he published: "La démolion des églises, monastères, hôpitaux, en France vers le milieu du XVe siècle." It contains a harrowing description of the state of France, based on 1063 contemporary documents, most of which were discovered in the Vatican. Then, in order to give in explanation a similar account of the cause of all these calamities, he wrote "La sepulture de Théhé, l'épiscopat, les universités, les monastères des églises, monastères, et hôpitaux, tom. I, jusqu'à la mort de Charles V" (1888). Though the work was not continued the enormous amount of recondite information brought together and illustrated for the first time makes the volume indispensable to historians (see, e.g., his account of the Battle of Crécy and the Black Prince).

Denifle had for years been studying the history of medieval theology and mysticism, as well as the lives of saints and scholars by whom in both departments progress had been effected; on the other hand his interest in ecclesiastics revealed by the "Chartularium Universitatis Parisiensis," contains invaluable information regarding its inner life, organization, famous professors and students, relations with popes and kings, controversies, etc., during the period when this university was the chief centre of theological learning. "With its aid," as Kirsch remarks, "a history of medieval theology has at last become possible." Some idea of the labour involved in its preparation may be gathered from the fact that all the great libraries and archives in Europe were visited, that Denifle travelled from Paris to Rome forty times, and that in the Vatican archives alone organized 200,000 manuscript leaves, and utilized 80,000 in his notes (see II, p. 17), though of course more material was found in Paris than in Rome. In order to preserve the unity of the "Chartularium," any reference to the "nations" was relegated to the "Auctarium." The two volumes published contain the "Liber Procuratorum Universitatis Parisiensis 1332-1446." Fourier, who recently criticized Denifle and Chatelain, feared badly at their hands. After Denifle's death the materials he had collected for another volume were entrusted to Chatelain, so that the work might be continued. Owing to the vastness and completeness of his research and to his amazing erudition, what Denifle gave to the world, even though for him it was only a preliminary study, has sufficed to make him the great authority on medieval universities. (See Merkle, Dreves, etc., or Rashdall's "Universities of Europe in the Middle Ages," Oxford, 1895.) In order to publish valuable texts which he had deciphered and translated, Denifle had to be helped, and he had to take the advice of Father Ehrle, S. J., the sub-librarian of the Vatican, he founded in 1885 the "Archiv für Literatur und Kirchengeschichte des Mittelalters." The two friends were the only contributors. The first five years of this serial contain several articles from his pen, on various universities, on Abelard and other scholars, on religious orders, on popes, etc. Denifle's extensive
justification by faith, i.e., his interpretation of Rom. 1, 17, was the traditional one, by giving the relevant passages from no less than sixty-five commentators. Of these works many exist only in manuscript. To discover them it was necessary to traverse Europe; this part which appeared posthumously is a master-piece of critical erudition. The third part shows that the year 1515 was the turning point in Luther's career, and that his own account of his early life is utterly untrustworthy, that his immorality was the real source of his doctrine, etc. No such analysis of Luther's theology and exegesis was ever given to the learned world for which it was written.

For some time previous it had been known that Deniélle had worked on such a book, but when in 1904 the first volume of 860 pages of "Luther und Lutheranism in der ersten Entwicklung quellenmässig dargestellt" appeared, it fell like a bomb into the midst of the Reformer's admirers. The edition was exhausted in a month. The leading Protestants and rationalists in Germany, Seeberg, Harnack, and seven other professors, besides a host of newspaper writers attempted to defend Luther, but in vain. Deniélle's crushing answer to Harnack and Seeberg, "Luther in rationalistischer und christlicher Betrachtung" appeared in March, 1904, and two months afterwards it issued a revised edition of the first part of the volume; the second was brought out in 1905 and the third in 1906 by A. Weiss, O. P. He has the second volume on Lutheranism, for which the author left materials, ready (1908) for the press.

Deniélle has been censured by some and praised by others for the tone of this work. Perhaps if it were less indignant the amazing erudition displayed would produce a greater effect. There was no need of hard words in a work, to use the words of Cambridge University when it honoured Deniélle, on "Lutherum ab eodem ad fidem documentorum depictum". He has thrown on Luther's career and character more research and study than all the editors of Luther's works and all Luther's biographers taken together. Deniélle wished to offend no man, but he certainly resolved on showing once and for all the Reformer in his true colours. He makes Luther exhibit himself. Protestant writers, he remarks, betray an utter lack of the historical method in dealing with the subject, and the notions commonly accepted are all founded on fable. As he pointedly observes: "Critics, Harnack and Ritschl more than others, may say what they like about God Incarnate; but let no one dare to say a word of disapproval about Luther before 1521". Deniélle's impeachment is no doubt, but the edition which identifies the three holy martyrs under the persecution of the Emperor Decius and the new messengers of Faith were to endeavour to restore it to its former flourishing condition. Deniélle with his inseparable companions, the priest Rusticus and the deacon Eleutherius, arrived in the neighbourhood of the present city of Paris and settled on the island in the Seine. The earliest document giving an account of the passion and of his martyrdom (Paseio SS. Dionysii, Rustici et Eleutherii), dating from the end of the sixth or the beginning of the seventh century and wrongly attributed to the poet Venantius Fortunatus, is interwoven with much legend, from which, however, the following facts can be gleaned.

On the island in the Seine Denis built a church and provided for a regular solemnization of the Divine service. His fearless and indefatigable preaching of the Gospel led to countless conversions. This aroused the envy, anger, and hatred of the heathen priests. The bishop of Paris, against the wishes of the pope, impounded and on the seventh century and wrongly attributed to the poet Venantius Fortunatus, is interwoven with much legend, from which, however, the following facts can be gleaned.

September, 1729; d. at Vienna 29 Sept., 1800. He received his early training in the gymnasium of Passau, conducted by the Jesuits, and became a member of the Society of Jesus at Vienna in 1747. For some years he taught Latin and rhetoric, first at Graz, then at Klagenfurt. After four more years devoted to the study of theology at Graz he was ordained priest in 1757, and began preaching in Pressburg. In 1759 he was made professor of belles-lettres at the famous Theresian Academy in Vienna where he remained until 1773, when the Society of Jesus was suppressed. Denis now became assistant librarian of the Garelli Library, connected with the Theresianum, and when the academy ceased to exist in 1784, he was appointed assistant librarian of the imperial court library. In 1791 was advanced to be chief librarian, receiving at the same time the title of privy councillor. He is specially known as a poet, as he was one of the chief members of the group of so-called bards whose aim was to revive German patriotism by treating subjects connected with Germanic antiquity. Confusing Germanic and Celtic materials they conceived themselves as bards, in the belief that these were ancient German poets, and adopted fanciful bardic names. Thus Denis called himself “the bard Sineus”, the anagram of his name. They were all admirers of Klopstock, whose poems Denis had read ten years before they were known to the Scotchman Macpherson, and which had been translated into German in 1764. Sineus was the real inspiration of the bardic movement. Denis’s first poems appeared in 1769 under the title “Poetische Bilder der meisten kriegerischen Vorgänge in Europa seit dem Jahre 1768”. They are poems celebrating the events of the Seven Years War, and, as the German poems of a Jesuit, created quite a stir. His German translations of Sineus appeared in three volumes (1768–1769). A second collection of poems, “Die Lieder Sinides des Barden”, followed in 1772. A new edition, including his version of Ossian, was published at Vienna in 1784 in five volumes under the title “Ossian und Sinides Lieder” (1784–85). Besides the purely bardic poems these collections contain many poems composed for special occasions, for Denis was held in high esteem by the Court. A number of religious poems had been published separately as “Die Kirchen Lieder” in 1774. The quality of these poetical efforts is not high, but Denis certainly deserves praise for his efforts to bring the literature of Austria into contact with that of northern Germany. For both Klopstock and Gellert he felt great enthusiasm, and largely helped to make them known in Austria.

As a bibliographer he compiled a number of important works, notably: “Einleitung in die Bücherkunde”, part I, bibliography (1777); part II, “Literaturgeschichte”, (1778); “Die Merkwürdigkeiten der Gattelischen Bibliothek” (Vienna, 1780); and “Wiener Buchdruckergeschichte bis MDLX” (Vienna, 1782–83). His posthumous works were published by his pupil J. F. de Retz, “Nachlese zu Sinides Liedern” (Vienna, 1892).

**DUENKE**

Denmark (Lat. Dania).—This kingdom had formerly a much larger extent than at present. It once included the southern provinces of Sweden: Skåne, Halland, Blekinge, Bohuslän (till 1658); the Duchies of Schleswig (Sønderjylland) and Holstein (till 1864); the Kingdom of Norway (from 1537 till 1814). The present kingdom comprises 16,504 square miles, lat. 54° 33’ and 57° 45’ N.; long. 9° 9’ and 8° 4’ W. and 15° 10’ E.). It now includes the northern part of Jutland (anciently the Cimbri Chersonese) between the North Sea, Skager Rack, and Cattegat, whose southern part borders on the German Empire; the islands which lie between the Baltic and Cattegat (partly also in the latter)—Zeeland (Stidland), Falster, Møn, Lolland, Fünen (Fyan), Æró, Samsø, Anhalt, Læsø—together with a few smaller isles (Amager, Saltholm, Seierø, etc.) and Bornholm, which lies far towards the east in the Baltic. To this must be added the group of the Faroe Islands (q. v.), situated in the Atlantic Ocean, 180 miles north-west of the Shetland Islands and 410 miles west from Bergen, and finally Iceland (q. v.), whose northern coast is washed by the Arctic Ocean, and which, though very extensive (40,000 square miles), is but thinly inhabited (80,000 souls). Iceland is very loosely connected with Denmark, is independent in its laws and government, and since 1874 has its own constitution. Other Danish possessions are Greenland (q. v.), which in size is almost a continent, but is very sparsely settled (only 12,000 souls), and the three islands in the West Indies, St. Croix, St. John, and St. Thomas, with a total area of 126 square miles and a population of 30,000.
The physical character of Denmark, which geologically is a continuation of the plain of Central Europe, shows only moderate contrasts. The Baltic Islands, surrounded by arms of the sea that are nowhere deeper than 200 feet and contain little salt, are partly monotonous flats, partly rolling ground. Only a few have any elevation, meshees on Zealand, Aborgebjerg on Møn and Freesberg on Fyn. The height is from 400 feet and more. Similar conditions prevail in Jutland. The high plateau that crosses it in a northerly direction slopes abruptly down towards the east. Here are elevations of 456 to 573 feet (Himmelsbjerg, Ejers Bavnehøj), lines of low, wooded hills, deep-cut valleys, and deep lakes, in whose waters are submerged numerous beautiful lakes. On the other hand the dune-bound west coast of Jutland from Blavandshuk to Skagen presents nothing to the eye but heath and moor. Bornholm resembles in its structural character the neighbouring Sweden. The northern and eastern coasts rise abruptly out of the sea, and the southern shore and the interior are monotonous, although the hill of Rytterknægt en reaches a height of 543 feet. There are no large rivers in Denmark, but with its numerous islands and peninsulas—its coast-line aggregating a length of 3100 miles—there is no lack of deep brooks, and the rivers, though small, are subterranean streams. The lakes are numerous, but small and shallow, only that known as the Furesee having a depth of 300 feet. The climate is comparatively mild, hardly differing from that of South Germany, but somewhat more severe in Jutland than on the islands. Only one-seventh of the soil is woodland. In the last 150 years, however, successful measures have been taken to husband the forests. Beech and birch trees, ash and alder, some oaks, linden, and pines are found. Three-fourths of the total area of the islands and of the east coast of Jutland is tilled land; the cultivation of potatoes is not confined to the Jutland peninsula, a large number of the inhabitants of the islands cultivate them. The rural life is still much as it was in earlier times. The flora of Denmark, with its 1500 species of wild-growing plants, is quite extensive but the same cannot be said of its fauna. The larger beasts of prey are extinct, even the red deer and wild boar have almost disappeared. Foxes, martens, roe and hares are still numerous, and along the shores seals may be seen. Its birds, amphibia, and fishes resemble those of Germany. In the Little Belt, between Jutland and Fynen, the pilot whale (grindau) is sometimes found. The domestic animals are those of northern Europe. As the climate has been rather cold, the inhabitants have been made up of marl—though there are also other strata on Bornholm—the country is not rich in minerals. It yields common clay, kaolin, chalk, and some lignite. The absence of metals and still more of good anthracite coal is greatly felt. Luckily, extensive turf-bogs provide the necessary fuel.

Denmark is inhabited by 2,600,000 people, most of them natives. Together with the Swedes and Norwegians, the Danes belong to the Germanic stock (North Germans, Scandinavian), and in body as well as character differ but little from the North Germans. Their written language has much in common with Low German. The language of the common people is divided into a number of strikingly divergent dialects. Nearly all of the population (98.4 per cent) belong officially to the Evangelical Lutheran Church, which, as the Established Church, enjoys Government support. Its Church is the national Church; it is the natural custodian of the country's cathedral and commerce; Svendborg on Fynen is its cathedral and commerce; Svendborg on Fynen for its manufactures. The ancient towns of Ribe, Viborg, and Røkkilde bask in the glory of the past; their stately churches, built in the time of Catholicism, are yet reminders of their former splendour.

Latin schools and modern high schools provide the necessary preparation for the university in the capital, the polytechnic institute, and the agricultural college. Very useful institutions are the "people's high schools", private continuation schools for the rural population. There is no lack of libraries, art collections, and collections of antiquities, nor of literary and artistic forces. Danish scholars and poets, sculptors and musicians have acquired fame that has spread far beyond the narrow limits of their country. We need mention only the names of Oersted, Woosaaie, Madvig, Oehlenschläger, Thorvaldsen, Gade. The relatively small number of Danish writers who compose their works in one of the four better-known languages, German, English, French, Spanish, or at least to translate them into one of these.

Denmark is a constitutional monarchy with strong democratic tendencies. By the national constitution of 1849, revised in 1866, Landsting and Folketing share the government with the king, who has a civil list of a little more than 1,000,000 kroner ($226,000). The national colours are red, white, red; the flag shows the Danegraf, i.e. an upright white cross on a red field. Justice is administered by irremovable judges and appointed by the king. The supreme court is Kastrup, and the executive power is vested in the king alone. For the sake of political administration the country is divided into eighteen districts, presided over by district judges. The larger cities have self-government and their own police. A general supervision is exercised by the head of the Copenhagen police.

The established Evangelical Church is divided into seven dioceses: Zealand, Fynen-Ærø, Lolland-Falster, Aalborg, Viborg, Aarhus, and Ribe. At the head of each diocese is a superintendent who is called a bishop, and is the successor of the bishops of Catholic times. The Bishop of Fynen is primus inter pares. The dioceses are made up of provostships and parishes. The provost exercises his office under the supervision of the bishop.

Since 1882 the Catholics of Denmark, who (including about 7000 Polish labourers) number 25,000; are under a vicar Apostolic (Johannes von Esch, Titular Bishop of Anastasiopolis). Of these 3000 live in Copenhagen, and they are found in other important towns. Communities of good size are found in Frederiksborg (1800), Aarhus, Odense, Homens, Fredericia, Oddrup, Sondby (400). Besides these, the mission societies of the Catholic Church are represented by Aalborg, Esbjerg, Glorup, Grenaa, Eslinore, Kolding, Koge, Ledreborg, Næstved, Randers, Ringsted, Røkkilde, Silkeborg, Slagelse, Struer, Svendborg, Thisted, Vejle and Viborg, also in Bornholm and Iceland. These are equipped with churches or chapels, some of them handsome, in which secular or regular clergy act as pastors. Among the cities Copenhagen (q. v.) far surpasses all others in importance. Its population, including that of the suburbs, was in 1906 over half a million. It is the residence of the king, the seat of the ministries of public affairs and of the state university; it is the centre of industry and commerce, of science and the arts. Formerly unprotected, it was a few years ago strongly fortified. Besides Copenhagen, only few places claim particular attention: Randers in Jutland, for its domestic trade; Aarhus, for its commerce and cathedral; Aalborg, for its ancient buildings; Homens, the ancient seat of its cathedral and commerce; Svendborg on Fynen for its manufactures. The ancient towns of Ribe, Viborg, and Røkkilde bask in the glory of the past; their stately churches, built in the time of Catholicism, are yet reminders of their former splendour.

The standard coin is the krone ($0.268). In weights and measures the country has not yet adapted itself to the

DENMARK

decimal system of Southern and Central Europe. The Government finances are in a good condition; the national debt small. The principal means of livelihood is agriculture more particularly oats, barley, rye, and wheat) represent a value of 400 million kroner ($107-200,000). Of late, a change is going on in favour of cattle-raising and of dairy industry (domestic animals, 1903: horses 490,000; beehes 1,900,000; hogs 1,000,000; sheep 900,000; goats 40,000; chickens 12,000. Of the 28 million pounds of pork 7 per cent. alone were exported. Eggs to the value of 24 million kroner were shipped to foreign countries. The fishing industry is less prominent than might be expected; still, the total income from this branch amounts to 10 million kroner. Manufactures give occupation to about one-fourth of the population and are rapidly increasing. However, only the smaller part of the products is exported; by far the greater part is used to supply the home demand. In some branches of manufacture Denmark excels, and the royal porcelain factory of Copenhagen rivals successfully those of the best establishments in France and Germany.

The high standing of Denmark as a commercial country may be inferred from the one fact that its yearly business transactions are almost one-half of those of Italy, which is thirteen times as large. In 1903 the merchant marine could boast a total of 430-000 tons, and it increases from year to year. To safeguard this, which is so exposed to the dangers of war, especially along the coasts of Jutland, there are 350 lighthouses, 15 lightships, and 50 life-saving stations. Being shallow, most of its harbours admit only small vessels. For the same reason the canals are of small importance, but 2000 miles of railways, telegraph, canals, etc., supplement the country with the conveniences of modern traffic.

Beside the gigantic armies and fleets of Germany and England, Denmark's fighting strength appears insignificant. Military service is compulsory. The number of officers is, however, considerably shorter than in other states. The service is 500 officers and 9000 men; the war strength is given as 1500 officers, 60,000 rank and file. The naval strength aggregates 100,000 tons, about 80,000 horse power, and 450 guns. Army and navy combined entailed an outlay of 20 million kroner.

A House belongs to the dynasty of Schleswig-Holstein-Sonderburg-Glücksburg and is, consequently, of German origin. At present (1908), Frederick VIII (born 3 June, 1843) wears the crown, having succeeded his father, Christian IX, 29 January, 1906. His consort, Louise, is a princess of Sweden; his son Christian has the kingdom of Norway under the name of Haakon VII. His brother William has occupied the throne of Greece as King George since 6 June, 1863. A second brother of the sovereign, Prince Waldemar, is married to the Catholic Princess Marie of Orléans Bourbon; their sons, according to the constitution, brought up in the Protestant faith, while their daughter Margaret follows the religion of her mother.

Træ, Beskrivelses af Kongeriget Danmark (1899-1900); Lofv's Geografix (Denmark, 1903-04); Dittmarks Natur og Folk (Copenhagen, 1905, with literary notes on the Faroe Islands and Iceland, 111-114).

Religious History.—The first attempts to win the rough Danish warriors over to the mild yoke of Christ are said to have been made by the Frisian Bishop Willibrord, who died in 739. But for this there is no reliable evidence. A missionary journey which Archbishop Ebbo of Reims undertook to Jutland, in 825, proved a failure. But when, a few years later, the Danish chief Harold (Black) went to Ingelheim to seek aid from Louis the Pious, he was baptized with his whole retinue, and on his return took the Frankish monk Ansgar (Anskar, q. v.) as missionary. Interior disturbances made it impossible for the apostle to work successfully. In 831 the zealous priest was nominated Bishop of Hamburg and thereby recognized as Apostolic delegate to the Scandinavian nations. In 854 he was also appointed Bishop of Helsinborg. In that place he laboured untiringly for the extension of the Faith and was able to consecrate a church in Schleswig (Hedehus) Owing to the expulsion of Erik (854), who had favoured his cause, heathenism regained its ground for a while, and many of the faithful lost their lives and property; yet the Danes learned to turn for the better. The church in Schleswig was reopened, and a new one was built in Ribe. When the saintly man died, in 865, he beheld a flourishing band of Christians around him. So far, Christianity had gained no entrance to the islands, and when Gorm the Old, fanatical worshipper of Odin, succeeded to extending his power over Jutland, he ranged with fire and sword against the Christians. He met his master in Henry I of Germany, who conquered him, in 934, in a bloody battle, and forced him to at least tolerate Christianity. Gorm himself died a heathen. Under his son Harold (Blue Tooth), who was compelled to acknowledge the supremacy of Otto I, it became possible to erect the dioceses of Schleswig, Ribe, and Aarhus. During the reign of Canute the Great (1014-35) Christianity gradually spread all over the country. The new dioceses of Viborg and Børglum were formed in Jutland, and to those were added Odense in Fynen and Aalborg in Jutland. At the same time, the monasteries arose. When, under Sven Estridson, the Diocese of Lund was founded, the whole kingdom had been won for the Faith. Under Canute II (the Saint) the bishops became powerful feudal lords, ecclesiastical dignitaries, and commanders of armies. Absorbed by their secular occupations, they no longer kept sight of their spiritual duties. Some, like Bishop Absalon (Axel) of Lund and Odense, who died at Sorø, 1201, largely contributed to the extension and influence of the State by their shrewdness and energy. Others, however, became involved in conflicts with the king himself, in which cases the Roman See often imposed the severest spiritual punishments. At the same time the number of monasteries increased almost too rapidly, so that towards the end of the Middle Ages there were 134 belonging to different orders.

The external constitution of the Church in Denmark was settled definitely by the canons of 1104, which separated the metropolitan See of Hamburg-Bremen, and its seven bishops were subordinated to the Archbishop of Lund as primate. About the religious life of the clergy and laity we are not sufficiently informed, much historical material having been lost during the Reformation. The conditions were, however, highly satisfactory. The higher ecclesiastics, supported by the lower clergy and the people, led a sumptuous life and did little to cultivate the minds and morals of their flocks. We must not forget, however, that, previous to the invention of the printing press, education, as we understand it at present, was not possible. Only thus can we explain the fact that the earlier zeal of the Danish people, proved by the erection of many splendid churches, rich donations, and countless foundations for the benefit of the poor, was swept away, as it were, in a few years by the hurricane of the Reformation. Christian II was the first who tried to overthrow the power of the princely hierarchy, and for this purpose invited (1520) a German, Martin Reinhard, to preach in Copenhagen in the spirit of Luther, but as the people did not understand him, he remained in the country only a short time. His successor, Frederick I, met with the same fate. After the deposition of King Christian, his uncle Frederick I ascended the throne. Contrary to his sworn promise at the election, he at once allowed the Lutheran preachers to spread the new creed. Prominent among them was a disciple of Luther, Hans Tausen, who seems
to have found a worthy and effective adversary in only one man, the learned Carmelite Paulus Elie (Helgeen), the first historian of Denmark. Soon (1526) the king openly professed the Lutheran heresy, and after he had secured its triumph in the duchies of Schleswig and Holstein, he proclaimed at the Diet of Odense (1527) religious freedom for Denmark proper, but, as a matter of fact, systematically undermined the Church. Three years later the adherents of the new doctrine accepted the Confessio Hafniae as their symbol. It was Frederick's son, Christian III, who after the overthrow of his political enemies made Lutheranism the established religion. On the same day he caused all bishops to be imprisoned and to be deprived of their possessions; the monks and nuns were permitted to leave the monasteries; if they preferred to remain, they were forced to admit Lutheran preachers and to suffer all possible persecution. The church property, when not appropriated by the nobility, was confiscated and added to the royal treasury. In 1539 John Bugenhagen came to Denmark with the avowed purpose of establishing a new liturgy and to consecrate Lutheran bishops. A Danish translation of the Bible, done in the spirit of the prophet of Witzenberg, was begun and completed in 1550. (For an earlier Danish translation see below.) With the exception of Bishop Joachim Röfoe of Røkkilde, all the prelates yielded to force; one of them even became a Protestant. Many religious fell away and married, but most of them went into exile. A shining example of loyalty to their faith was set by the nuns of St. Bridget at Maribo on Lolland. Also several priests and monks, like Iversen, a canon of Lund, the Carmelite prior Kristiansen, the Franciscan Ludolf Naaman, of Flensburg, the parish priest Anders Jepsen, and numerous laymen clung to the true Church in spite of all persecutions.

The Catholic customs and usages never died out completely. Thus the Protestant historian Vedel (d. 1616) held himself bound by the commandment of fasting. To some extent the rural population even yet believe in the assistance of the saints; the Lutheran names for religious persons and ceremonies have never been in common use; as in former times, the people speak of bishops and priests, of saying mass, etc. The ministers wear vestments similar to those used in the Catholic Church, and the altars are decorated with lighted candles. For a long time the elevation of the Hest, auricular confession, and the ancient hymns were retained. All this was calculated to confound the people in the belief that nothing essential had been changed in their religion.

Though, towards the end of the sixteenth century, Catholicism may in general be considered as suppressed in the Danish kingdom, it still counted some adherents in the higher circles, whose sons occasionally frequented the Jesuit college of Braunsberg, and there were strengthened in their faith or led back to it. At the beginning of the seventeenth century therefore, an attempt was made by the Propaganda to provide in a peculiar way for thespiritual welfare of the faithful, and several mission stations were established. We are not sufficiently informed about these missions, but they seem to have been by no means insignificant. The royal rescript of 10 June, 1613, which forbade Catholic priests to perform any religious functions, under penalty of death, and which was confirmed by Christian V (1635), which threatened converts with the confiscation of their property and with banishment, were evidently intended to prevent conversions. While the Catholic religion was thus excluded for a time from Denmark proper, it could never be wholly extirpated in Holstein, then a Danish province, but within the German Empire. As early as 1597 a small Catholic community was formed at Altona, followed, in 1625, by a second at Friedrichstadt. To these was added, in 1661, a church on Norderland; in 1662 a chapel at Glückstadt. As to Denmark proper, French diplomatic influence succeeded (1648) in obtaining permission to erect at Copenhagen a chapel for the French embassy; Catholic services were allowed at Fredericia in 1682.

After the Treaty of Westphalia (1648), which abolished the jurisdiction of bishops over the North-German Protestant territory, an Apostolic vicariate was erected to govern the scattered parishes and those in Scandinavia. Valerius Maccioni, Titular Bishop of Morocco, was the first vicar; his successor was the famous Danish scholar and convert Niels Steno. The duties of this office were subsequently discharged by the Bishop of Hildesheim (1686) and by the Bishop of Osnabrück; in 1701 the vicariate was entrusted to Joseph Gondola, Bishop of Paderborn. When Dr. Lüpeke, coadjutor of Osnabrück, was chosen Pro-vicar Apostolic of the North German missions (1841), he was allowed to exercise his authority only under severe restrictions. The number of Catholics amounted at that time to 865, of whom 550 lived in Copenhagen and 58 on Fredericia; the rest were scattered in the cities and over the country. So far conditions had been deplorable; they underwent, however, an unforeseen change when, by the new Danish constitution (Danmarks Riges Grundlov) of 5 June, 1849, complete religious freedom was granted, and political and ecclesiastical equality was given to all dissenters. Even before the enactment of this law the Catholics had succeeded in building at Copenhagen (1843) a church in honour of St. Ansgar. New religious life began to spring up under the pastors Zurstrassen and Grüder; in 1853 the latter, for the first time since the Reformation, preached a Catholic sermon in Danish. The number of the faithful now grew visibly. Several societies and fraternities sprang into life. A Catholic paper (now the "Nordisk Ugeblad") endeavoured to unite the Catholics more closely and at the same time to enlighten Protestants.

The beginnings of a Catholic literature (translations of the Scriptures, catechisms, polemics). In the summer of 1859 the Bishop of Osnabrück (later cardinal), Melchers, made his first visit as pro-vicar Apostolic, and on several occasions officiated clad in his episcopal robes. A mission held by the Jesuits in 1862 bore rich fruit.

Conditions in Schleswig-Holstein, where the Danish constitution was not in force, improved only after its annexation by Prussia in 1866 (see Kleffner-Woker, "Der Bonifatiusverein", Paderborn, 1899). Progress was rapid in Denmark itself. As early as 1867 the abdication of Odense was followed, in 1870 scattered actors were expelled; in 1872 saw Horsens added; 1873, Aarhus; and several missions quickly followed. Pius IX raised the mission (1869) to a prefecture (first prefect, Hermann Grüder, d. 1883). Leo XIII made it (1892) a vicari-
ate, and nominated the prefect, Johannes von Euch, Bishop of Anastasiopolis and vicar Apostolic. Thereby were secured the necessary conditions for a solid growth of the Church. Since then the number of Catholics has considerably increased. To-day it is estimated at over 8000, to which number we must add 700 or 800, who are non-resident. Therewith three parishes and four chapels with connected institutions. In the Stenøgsø the Jesuits have established a high school and, close to the city, the fine college of St. Andrew at Ordrupshøj, both institutions numerously attended by pupils of every denomination. Holt also a complete list of the present staffs is above. Among the secular clergy there are several native Danes and converts. The regular clergy are represented by foundations of the Society of Jesus, Redemptorists, Maristas, Lazarists, Premonstratensians, Camiliani, etc. Hundreds of sisters are engaged in teaching and in nursing the sick in the hospitals. Among the converts are prominent Count Holstein-Ledreborg and family, Count Moltke Hvitfeld, and the gifted author and poet John Jørgensen.

How little the religion of Luther has penetrated the hearts of the Danish people, is witnessed by the Protestant Bishop Fontopdals in 1600, 300 years after the establishment of the church. This bishop expressly admits in a pastoral (translated into German by Schönfeld, Rostock, 1756) that an “almost pagan blindness” prevailed throughout the country. This is easily understood when we bear in mind that at the end of the seventeenth century the mass of the country population were unable to read and write, catechetical instruction was lacking, and the sermons, mostly of a polemical nature, were not understood by the people. On the other hand this state of affairs had prevented the formation of sects. For a time all spiritual life appeared to have died among the clergy, completely of the royal “Studionkupus.” Towards the end of the eighteenth century, rigid Lutheran orthodoxy gave way quite generally to a rationalistic tendency. Bishop Balle of Zealand (1783–1808) and his successor Jacob Peter Münster tried in vain to stem this current. Grundtvig (d. 1872) was the first who earnestly endeavoured to restore to their former position of honour the Libri Symbolici, or ecclesiastical creeds. Afterwards he changed his views and came so near the Catholic doctrine that he found himself forced to renounce entirely the Protestant view of the Bible. His contemporary, Søren Kierkegaard (d. 1855), who held both Rationalism and the orthodox theology, then an enemy of the State Church and of official, or rather of all positive, Christianity, did more than Grundtvig to shatter to its very foundations the Danish Church as reconstructed by the kings of the Reformation period. As mentioned above, the legislation of 1849 and 1852 granted complete religious liberty. Thereby the Evangelical-Lutheran church ceased to be the “established church.” Since, however, the greater part of the nation exteriorly still adheres to it, the State guaranteed to it a subsidy as being the people’s Church, this leaves the Church its civil authority; its ministers may be nominated and deposed by the Government. It exercises no influence over its own legislation. Its laws are made by the majority in the Reichstag, which has already enacted many that threaten an internal dissolution. Attendance in the city churches is slender, and the frequentations of the regional council in Super is inclined strongly to infidelity and Socialism, or find a substitute for religion in secret societies. Of the Protestant sects the following may be mentioned: Baptists, Mormons, Methodists, and Irvingites. A few thousand Jews are scattered over the land.

The Protestant clergy is divided, generally speaking, into three parties: the infidel-rationalistic school, no longer very numerous; the conservative majority, holding fast to the “symbolic books,” or creeds, of the sixteenth century; lastly, the Grundtvigites, who recognize the necessity of an ecclesiastical tradition in addition to the Bible, and in this way come closer to the Catholic Church. The revival of Catholicism not unnaturally called forth protests. The first to raise the alarm was the Jesuits, who published little pamphlets and in particular a small work translated into German (Gütersloh, 1784). The feud was also taken up by the Copenhagen preacher Schepleren, more particularly by Professor, now Bishop, Nielsen, the author of various polemical works and essays (cf. Jesuens-Kohlenskampt, “Protest. Taschenscheider” 1790, etc.). In conclusion it may be mentioned that, at the request of Frederick IV, the first Protestant mission was opened (1705) at Tranekaer (East India) and another followed (1730) in Greenland.

POLITICAL HISTORY.—Many thousands of years ago the northern countries were covered with slowly moving masses of ice and snow, just as inland ice occupies the greater part of Greenland even to-day. Only after these masses had melted could the land be settled. At the end of the Glacial Period, the Baltic was at first one immense landlocked sea, for South Sweden was still joined to Denmark and Germany. The ocean later forced its way through and separated the Danish islands by the Sound and the two Belts. Frequent risings and subsidences of the ground gave it an appearance that it might at one time have been a series of islands early. In Maglemoor near Mullerup, on Zealand, a habitation was discovered which was built during the Stone Age, and numerous are the Kjøkkenmønder (piles of refuse) from that age, which contain not only remnants of meals—e.g. clams, shells, bones of fishes and other animals—but also implements of flint, kaolin, and horn. The so-called Later Stone Age must be placed between 5000 and 2000 B.C. That forestry, fishing, and agriculture were then flourishing, is shown by axes, sickles of flint, nets, and similar finds. The attention paid to the reposing of the dead and the ornaments at the grave, indicate that some degree of culture was recognized. At some period between 2000 B.C. and 500 B. C. stone was superseded by bronze, which was thenceforth used for vessels, tools, weapons, and ornaments. The dead were commonly buried in oak coffins. Chairs, bowls, boxes, and similar articles were constructed of wood. The art of weaving from wool came early, and the weaving tools are known, as excavations at Trindicchio and Borum-Eshöi, in Jutland, have shown. Scandinavian bronze objects, the raw material for which was imported, were always cast. The Iron Age lasted from 500 n. c. to about A. D. 1100, and is divided into four periods: the early Iron, the Roman, the Viking, and the Viking epoch. At first use of bronze prevailed. In the course of time, however, iron became
more general. As early as in the fourth century B.C., vessels were built of wood, like those which are in use nowadays.

It seems that the Germanic North began hostilities with the civilized nations of Europe at a comparatively late date. A serious conflict arose for the first time when Charlemagne, after the overthrow of the Saxons, pressed against the Danes who, as all of the Saxons, had inflicted great damage on him (see CHARLEMAGNE). After their warlike king Gottfried had been assassinated, the war was ended (811). It was decided that in future the Eider River should be the boundary between the two kingdoms. Quarrels about the interior of the country (Harold) sought the protection of Louis the Pious and was baptized. At his request, Ansgar, a monk of Corbie (q.v.), preached for the first time, though with small success, the Christian Faith among the heathen nations of the North. Even before his arrival, some of them had begun the so-called viking expeditions, predatory incursions under their chiefs, which were directed as well against the Slavic kingdoms in the East as against the German and Roman peoples in the West and South. The Danish freebooters infested especially the coasts of England and of France. In time they gained a footing in both countries and founded new States which gradually coalesced with the native, civilized population into one powerful whole. This cut off the possibility of predatory expeditions for their fellow-tribesmen who had remained at home.

Meanwhile the German Empire had acquired new strength, and King Henry I endeavoured, no less from conviction than from political prudence, to persuade his northern neighbour to embrace the Christian religion. Gorm the Old, under whom the famous Danewerk was built as a protection against the Germans, was the last pagan King of Denmark. Under his successors, Christianity became firmly established and outwardly well organized (see above). After the treacherous murder of Canute Lavard, son of King Erik Ejgode (1131), bloody civil wars broke out, which ravaged the country for more than twenty-eight years and greatly weakened its strength. It was not until Waldemar the Great ascended the throne (1157) that better times dawned, especially through the co-operation of Archbishop Absalon of Lund (q.v.), who was equally prominent as prince of the Church, statesman, and warrior. The fleets of Wendish sea-robbers were destroyed, the Wends themselves were attacked in their own land, and the island of Rügen subdued. At the same time, the power of the bishops, abbots, earls, and nobles increased, a fact which on the one hand ensured better order, but on the other also provoked the hatred of the oppressed classes. Waldemar's son, Canute VI, added to his possessions Pomerania and Mecklenburg, and assumed the title of King of the Sudens. The childless prince was succeeded by his brother, Waldemar II (1202), who extended his sway along the Baltic especially by means of a crusade against Estonia, for which he became known as Sejr (Conqueror).

This apparently splendid power was, however, of short duration. One of the German vassals, Count Henry of Schwerin, raised the standard of revolt and made prisoner his Danish lord (1223), whereupon the subjugated nations cast off the yoke. Later on Waldemar sought revenge, but lost the battle of Bornhöved in Holstein (1227). Most of his conquests eventually melted away, and the Eider became once more the southern boundary, which deserves great praise for his improvement of the laws of Denmark, died in 1241. His sons Erik, Abel, and Christopher waged war with one another, and all died a violent death. Murder and arson were of daily occurrence, and the land groaned under the wickedness of its rulers, who brought it to the brink of ruin.

Erik Glipping, Christopher's successor, died at the hands of an assassin (1286). His heir apparent, Erik Menved, succeeded in restoring order for a time. Meanwhile important parts of the kingdom were pledged to German nobles, whose power was steadily on the increase. His brother, Christopher II, was compelled to swear to a capitulation, at his election, and, since he did not abide by it, was expelled by the magnates under Count Gert of Holstein, who obtained the election of his sister's son, Duke Waldemar, as the third king of that name. The legitimate prince indeed soon recovered his dominions, but held only the shadow of sovereignty. The real power lay in the hands of the nobles. New civil wars ended with the victory of the Danish element, which chose again, in Christopher's youngest son, Waldemar IV, a national ruler. By diplomacy and force he regained the pledged districts and added Gotaland to his kingdom; thereby, however, he became involved in a war with the Hanseatic League, Sweden, and the Count of Holstein. Hard conditions were imposed on him in the Treaty of Stralsund (1370). Waldemar IV died in 1375.

Meanwhile Danish affairs had undergone a great change. King Hakon of Norway and Sweden had married (1362) Waldemar's daughter, Margaret, a child of twelve, and thus the three Scandinavian kingdoms had become united. In 1389 this able woman caused her relative, Duke Erik of Pomerania, who was only seven years old, to be acknowledged as King of Norway. Seven years later the Swedes and Danes also paid him homage. At Calmar (1397) representatives of the three kingdoms swore allegiance to him. But Margaret's attempt to perpetuate the Union of Calmar proved unsuccessful. She succeeded, however, by reclaiming feef, in strengthening the power of the Crown, and in compelling the adhesion of both ecclesiastical and secular magnates. Erik's imprudence thwarted her plans and sapped the promising structure. As early as 1410 new conflicts arose with the Counts of Holstein, which, after Margaret's death (1412), led to a sanguinary war, lasting twenty-five years; at its close the Counts of Holstein retained their Schleswig possessions, and the Hanseatic cities their ancient privileges. While Erik's rule was thus unfortunate abroad, his avarice and harshness alienated the hearts of his subjects. The Swedes were the first to fall away; then an insurrection broke out in Norway, and the Danes themselves assumed such a threatening attitude that he thought it best to leave the kingdom. Abjuring their allegiance, the vassals now besought his sister's son, Duke Christopher of Bavaria (of the house of Wittelsbach) to take up the reins of government. The Swedish crown also fell to his lot, but under conditions that greatly limited his power. With the help of the nobility he checked the uprising in Jutland. It was Christopher, also, who
in 1443 removed the residence of the Danish kings from Røkkilde to Copenhagen. Though a German by birth, he tried to check the power of the Hanseatic League, but succeeded not. He met with an untimely end in 1448.

Immediately the weak bond which had united Sweden and Denmark was rent. In the former kingdom Charles Knutsson was raised to the throne; in Denmark and in Norway Count Christian of OLDENBURG, the son of his first marriage, was elevated to the sovereignty. A feud sprang up between the countries. In 1452 the Swedes ravaged Skåne; the following year the Danes sought revenge, but in vain. A conspiracy among his nobles drove Knutsson from Sweden, which was subjugated by Christian. During the latter’s reign the union between Holstein and Schleswig, which was later to have such disastrous consequences for Denmark, became an acknowledged fact. Christian’s rule over Sweden was only nominal. Internal troubles made it illusory, and after the battle of Brunkeberg, near Stockholm, he was obliged to evacuate the kingdom. Even in his own State he was hated for his extravagance. He deserts credit, however, for founding the University of Copenhagen (1479). His son Hans succeeded him in Denmark, while Frederick remained Duke of Holstein. The former knew how to gain the regard of the Swedes (1483), but with notable restrictions. Thus, in Sweden, the regent Sten Sture was the actual ruler until an unlucky campaign against the Russians drew on him the contempt of the people. King Hans thereafter recovered his authority, but maintained it only for a short time, as Bishop Hemminggad of Linköping succeeded in arousing his countrymen against the foreigner. King Hans died before he was able to overpower the rebels. His son Christian II relied on the middle class, tried to break the power of the nobles, and in repeated expeditions against the Swedes, succeeded in crushing their resistance (1521). But his excessive cruelty towards the Swedish leaders caused the Swedes to rise unanimously against him. Gustavus I (Gustavus Vasa) not only drove the Danes out of the Swedish provinces, but moreover invaded their country. Christian’s efforts in favour of the peasantry led to a conspiracy among the nobles. With the help of his uncle Frederick, King Christian exiled the government, and even forced his nephew to flee to a foreign country (1523). After the former’s death the Hanseatic League made an attempt to restore Christian to the throne. He conquered, indeed, the greater part of his country, but the activity of Gustavus Vasa, on the one hand, and the objections to the division of the nobility on the other, soon changed the condition of affairs. In spite of this, Christian III, son of the deceased Frederick, could take Copenhagen only after a siege of twelve months (1530).

Under King Frederick, the teachings of Luther had already struck root in Denmark, but they did not entirely prevail either here or in Norway until the reign of his son. Immediately after the capture of Copenhagen the bishops were imprisoned, the churches confiscated, the monks and nuns expelled, and a new form of worship introduced (see above). Instead of the relatively mild rule of the bishops, the country now suffered under the galling tyranny of the nobles, who kept the lion’s share of the ecclesiastical property and reduced the peasantry to helpless helots. Despite these facts, partial Protestant writers still laud Christian III as the benefactor of his people, as a noble and godly man; Scandinavian historians blame him only for the division of the kingdom and the war with Sweden. (Schleswig-Holstein with his brothers. He died in 1569. His successor, Frederick II, was a very warlike character. His four-years’ war with Sweden, in which the countries on the Baltic took part, ended in the barren Treaty of Stettin (1670). Christian IV, his son, and recognized as the heir apparent during the lifetime of his father, succeeded him, though a minor (1588), but did not enter upon the government till 1596. During his long reign, of more than forty years, doing nothing undone to perfect the administration of the country and to increase its power. He advanced trade and industry, founded colonies in India and supplied them with missionaries. He established higher institutions of learning, and did everything in his power to improve the condition of the poor. Hostile complications with Sweden began anew. They ended with the Peace of Knitröd, which proved favourable to Denmark. As Duke of Holstein the king belonged to the Estates of the lower Saxony circle. These relations to North Germany obliged Christian to take an active part in the Thirty Years’ War. His hesitation was his bane. When, in spite of the repeated warnings of Tilly, the general of the Catholic League, he did not discontinue his military preparations, Tilly crossed the Weser with his troops (June, 1625). After some minor engagements and long manoeuvres, a decisive battle was fought near Lutter (27 Aug., 1626), which ended in the total defeat of Christian. Wallenstein, Tilly’s successor, changed the defensive into an offensive war. He fought his way into Holstein, stormed Rendsburg, Flensburg, and subdued the whole of Jutland. Nothing remained to the king but to terminate the war on the terms of the relatively favourable Treaty of Lübeck. The subsequent thirteen years of peace restored Denmark’s military strength that in 1643 it could resist honourably, if not successfully, the unjust attack of its Swedish neighbour. The peace of Brömsebro nevertheless demanded fresh sacrifices from the unhappy kingdom (1645). Hardly ten years had elapsed, when the Swedes fell again upon Christian’s successor, Frederick III, without any previous declaration of war. King Charles X (Gustavus) marched 8,000 picked Swedish troops into Jutland and, profiting by an unusually hard frost, which had covered the straits between the Danish islands with a thick crust of ice, crossed over to Zealand. He forced the capital to surrender and the king to accept the peace of Røkkilde (1588), by which Denmark forever lost the provinces of Skåne, Halland, Blekinge, Bohuslän. Not content with these successes, Charles immediately repaired his losses. King Christian of Sweden was forced to sign the Treaty of Kiel, and landed again on Zealand. Too weak to storm the capital at once, he was compelled to wait and in the meantime behold his adversary’s active measures of defence. A Dutch fleet also approached, forced its way through the Sound, brought troops and supplies, and thus compelled Christian to erect a fortified camp. Meanwhile an auxiliary army, consisting of Poles, Austrians, and Brandenburgers, drove the Swedish garrisons out of Jutland. Moreover, the population of the newly acquired provinces assumed a menacing attitude; on Bornholm all the Swedes were slain in one night. Nevertheless Charles Gustavus did not give up the siege of Copenhagen, and in February, 1659, undertook a night attack which was repelled by the heroism of the besieged. Soon after, the allies crossed over to Fünen and captured the Swedish garrison. The early death of the Swedish king (3 Feb., 1660) preserved Denmark from impending ruin; the guardians of the Swedes, their apparent, then only five years of age, were content that the Peace of Copenhagen (1660) guaranteed them the possession of the newly acquired territory with the exception of Bornholm and a few Norwegian districts. These disastrous years had one good effect on the Danish people: they learned to realize the importance of the country, and of the crown.
growing revenue made it possible to increase the nation's military strength. At the same time the pitiful condition of the peasants remained unchanged. Christian V (1670–1699) adopted the French regime as far as possible, invited German nobles into his country, and raised extensive taxes. The youth of the sovereign attempted to bring back to Denmark its former greatness; in 1675 he began war with Sweden. His fleet destroyed that of the enemy off Oeland (1676). He himself crossed over to Skåne, and his Norwegian troops made an inroad into Westgötland. The loss of the battle of Lund (8 Dec. 1676) forced him to make peace in that city. Sweden kept its possessions, and Denmark received only a small indemnity (1679). King Christian survived these events twenty peaceful years. His son, Frederick IV (1699–1730), had to take an active part in the Northern War; but no great battles took place, nor was Denmark subject to grievous devastation. Eventually (1720) the Gottorp section of Schleswig was retained by Denmark. Frederick was succeeded by the pietistic Christian VI, under whose rule hardly any changes took place. His consort induced him, however, to erect enormous public structures, which proved a heavy burden on the finances. Under Frederick V (1746–1766) commerce and industry, sciences and arts thrive, though the economic situation was very unsatisfactory. His son, Christian VII, ruined himself by his debaucheries. The infidel German physician, Struense, in whom the queen reposed her entire confidence, gained a great, and partly baleful, influence over the administration. He fell a victim to a conspiracy, whereupon the queen had to leave Denmark. The crown prince, who had been actual ruler during the lifetime of his father, reigned fifty-five years as Frederick VI. In concert with his excellent minister Bernstorff, he devoted himself to the welfare of his people, abolished serfdom (1788), and advanced, as far as lay in him, the happiness of his subjects. In 1801, however, he was involved in a conflict with Great Britain, which resulted in the annexation of Schleswig to Denmark. After the Treaty of Tilsit, England sought to paralyze Denmark, then under the influence of Russia and France, and disembarking 30,000 men near Copenhagen, forced the Danes to surrender their splendid fleet. The ensuing war with Great Britain ruined Denmark financially. Moreover, it was forced to cede Norway to Sweden by the treaty of Kiell (1814). The modern tendency towards the increase of civil liberty prevailed also in Denmark. In 1831 the crown granted a constitution which remained in force under King Christian VIII (1838–48). In the latter reign occurred the first friction of the Danes with the German element in Schleswig, where the latter constituted a strong majority. Still, an open rupture was avoided during the king's life. The contest began in earnest when Frederick VII ascended the throne. The Germans desired that the two duchies of Schleswig and Holstein should be made one State, which should belong to the German Confederation and be connected with Denmark only by a personal union. The Government sought to counteract this movement by various measures, partly of an odious character. Representatives of the German party at last (23–24 March, 1848) proclaimed the independence of the duchies and announced a provisional government whose head was Prince Frederick of Sonderburg-Augustenburg. The garrisons at Kiell, Eckernförde, and Glückstadt went over to him, and the fortress of Rendsburg fell into his hands without a struggle from all sides rallied round his standard. As the King of Denmark did not yield to the wishes of the rebels, war began. The army of Schleswig-Holstein was at first worsted (at Bau and Flensborg), but when Russian reinforcements under

Wrangel arrived, the Danes were forced to retreat. The intervention of King Oscar of Sweden brought about the truce of Malmö, but its negotiations proved fruitless. Hostilities began again in the spring of 1849, and were continued with varying success (defeat of the Danes at Eckernförde, Dippel, Roeding, the victory of Fredericia). The diplomatic intrigues of the Great Powers compelled Prussia to make peace with Denmark (2 July, 1850) and to withdraw her soldiers. Unassisted, the small army of the duchies now opposed the Danes, but was completely routed in the battle of Istedt (28 July, 1850). On 27 August of the same year the European Powers signed a declaration at London by which the unity of the Danish monarchy was guaranteed. An Austrian contingent occupied Holstein, restored Danish rule, and dissolved the army of the duchies.

During the truce of Malmö (1848) the first Danish Parliament was assembled by the king. After long and excited debates, a really liberal constitution was accepted 5 June, 1849, according to which the administrative power is substantially divided between the king and the representatives of the people (Folketing and Landsting). All efforts to regulate the

relations with the duchies were fruitless. In the autumn of 1863, therefore, the Government proposed a bill according to which Denmark and Schleswig should receive a common constitution, while Holstein-Lauenburg, as a member of the German Confederacy, was not included. This so-called "November Law," which was to go into effect the first day of January, 1864, was accepted by an overwhelming majority. After the death of Frederick VII, King Christian IX, in spite of many warnings, approved of this new law. For this reason complications arose with the German Confederacy and later with its principal members, Prussia and Austria. Saxony and Hanoverian troops now occupied Holstein. An army of Prussians and Austrians crossed the Elbe (6 Feb., 1864) and, within three months, occupied the whole of Schleswig and Jutland as far as Lymfjord. A conference in London produced no results, and the war started anew. Dippell soon fell, Alsen was occupied, and even the island of Fünen was threatened. At this juncture the Treaty of Vienna was signed, by which the duchies were ceded to Austria and Prussia. By its victorious war of 1866 Prussia became finally the sole possessor of these Danish territories.

The loss of Schleswig having made useless the November law, the Constitution of 1849 was modified 26 July, 1866, and it is this revised and more liberal constitution which is still in force. Years of internal discord now followed, as the Radicals strove constantly to diminish the rights of the king, and as he was compelled to adopt extraordinary measures owing to his non-acceptance of the proposed budget. Not till the resignation of the conservative ministry of Estrup (1894) was there a temporary cessation of strife.
DENMARK

Party rivalries and the steadily increasing propaganda of Socialism kept the country in a state of turmoil, and caused no little difficulty both to Christian IX and to Frederick VIII, who succeeded to the throne on the death of his aged father (29 January, 1906).

Tidskrift (Copenhagen, 1870).

LITERARY HISTORY.—It is manifest that no literature proper could exist in Denmark in pre-Christian times.

There exist, however, some 200 rune-stones, some of whose inscriptions possess historical value. The exploits of the vikings were first recorded by Saxen and some Icelandic chroniclers. These records are not always original, but are partly influenced by foreign myths. The principal subject is pastoral epics. With the introduction of Christianity the influence and use of the Latin tongue becomes predominant. The first products (twelfth century) here, as everywhere else, were lives of saints, followed in Lund and Rödkilde by annalistic necrologies. The energetic Archbishop Absalon (q. v.), a man of much intellectual power, laboured to give the groundwork of historical chronology.

To his initiative we owe two important works: the “Compendiosa historia regum Daniae”, by Svend Aagesen, and the voluminous “Gesta Danorum”, by Saxo Grammaticus, the latter part of which chronicles events of his own personal experience or such as were related to him by eyewitnesses, while its introductory chapters often rest on pure tradition. Among the poetical creations of the earliest times must be mentioned the didactic poem “Hexaemonon”, by Anders Suneson (b. 1165), who also composed a poem, now lost, on the seven sacraments, and various hymns. The first attempts to put the ancient “folk-lay” into written form were made in the thirteenth century. The “Ulydke Lov”, also accepted in Schleswig, was reduced to writing by order of Waldemar the Victorious (1241). Simultaneously the ancient laws of Skåne and Zealand were written down. The ecclesiastical law also was soon a subject for literary treatment. The study of Continental law led to the compilation of popular treatises on herbs and stones, cookery-books, and a kind of encyclopaedia, the “Luciderus”, whose pages contain not only catechetical instruction, but also descriptions as to geography and nature. Pious descriptions of voyages and translations of French and German chivalric romances were distributed widely among readers. The “Rhymed Chronic” (supposed to be written by a monk of Sorlie) sought to kindle in the hearts of its readers love for their country. The “Collection of Proverbs” we obtain a fairly definite picture of the contemporary civilization of Denmark.

Religious literature owes much to the Brigtines (see BRIDGET OF SWEDEN). Apart from the “Revelations” of their founders, they produced homilies, prayer-books, lives of the saints, hymns to the Blessed Virgin; a translation of the Bible was also undertaken (1450). The most important religious poet of the Danish Middle Ages was Michael Nicolai, parish priest of St. Alban's at Odense. There is still extant a large work by him entitled “Rosary of the Most Bl. Virgin” (1468), not entirely original, however. He also composed short poems. Some of his writings, printed at Copenhagen (1514), were incorporated with changes in the Lutheran hymn-book.

In literature, Denmark, for easily intelligible reasons, has accomplished less than the great nations of Europe. Folk-songs of various character, however, were always abundant. These compositions were not written down till late, and even now they are a rich mine for Danish poets. When the religious upheaval carried Denmark away from the Catholic Church, the Scandinavians had reached a comparatively low degree of culture. Since 1497 there had been a university at Copenhagen, but this was scarcely more than an enlarged cathedral-school, and was even discontinued for a time (1531). The Reformation did little to raise the plane of general culture. After the property of the Church had been confiscated, literature and science were no longer maintained, and there arose a universal complaint of the encroachment of barbarism. Few were willing to send their children to school; still smaller was the number of those who matriculated at the university. More than half of the forty professors whom Christian III appointed at its reopening were Germans. The king and his court never used the Danish language. Students of theology were forced to frequent Wittenberg or Rostock. A denationalized civilization and an exaggerated interest in theology were the natural consequences. For literature it was a poor and barren epoch, and in it, apart from Bible-translations, church hymns, and polemical essays, there appeared only lifeless academic dramas and spiritless, imperfect poetry.

Towards the middle of the seventeenth century theology lost its sway over men's minds. Other fields, especially the exact sciences, began to absorb the attention of scholars. During this period Denmark produced men like Steno and his relative Minslaw (both of whom became Catholics), Tycho Brahe, and others, all of whom may be regarded as pioneers in their respective branches. At the same time, a keen interest was shown by certain men in the science of language, and called forth the first editions of Icelandic sagas. By contact with other countries, secular poetry, unculated during the Reformation period, began to
awake. However, the poets of the seventeenth century were unable to rise above the purely formal conception of poetry; they slavishly followed German writers and were satisfied with translations and adaptations. Even the hymn-writer Ringo was not free from foreign influence. At last the conflict between English utilitarianism and the rapidly growing pietism in North Germany, IV poem by the first Danish poet of national poetry. The first Danish poet, in the proper sense of the word, is Holberg (1684–1754). His comedies and epistles faithfully mirror the conceptions of the Danish provincial townsman. The sensuality of Bellman and other Swedish poets did not find a favour in Denmark. Not until the second half of the century did the classicist rhetoric, or illuminating literature at first strike deep roots. It was not till the end of the French Revolution that the new tendencies found an enthusiastic champion in Helberg, who created a stir as a satirist and composer of political poems. Then, also, was inaugurated the necessary reaction against the undue intellectual sway of Germany. Though the dramatist John Ewald (1743–1781) was unable to throw off the yoke of German influence, he succeeded in eliciting purely national strains from his lyre. The same is true of Hans Baggesen (b. 1764), whose tales show clearly the influence of Wieland, but were carried to a German lady, and on friendly terms with the foremost German poets of his time, he produced almost as many and as good lyrics in that language as in his mother tongue. Both in success and popularity he was surpassed by the greatest poetic genius of Denmark, Adam Gottlob Oehlenschläger (1779–1850), the son of a German father. Oehlenschläger first became famous as a lyric poet, then treated myths in an epic form, and later cultivated the drama. It was his purpose, no less than his merit, to breathe new life into the heroic tales of old times. But even he did not use Danish exclusively. Rich in honour and glory was the city of Copenhagen in 1851. It was the Hauch (1790–1872), a writer of mystical drama succeeded him. Ad. Will. Schack of Stafel (1764–1826), whose ancestors were German, won renown as a lyric poet. While these men may be regarded as fathers and representatives of romanticism in Denmark, Nik. Fred. Sev. Grundtvig (1783–1872) in more Old Scandianavian than Oehlenschläger, and of course occasionally blundered. Far superior to his dramatic works are his religious and secular songs. (For his relation to Christianity and theology, see above.)

The path pointed out by Oehlenschläger was pursued by Vilhelm Hau (1789–1862), by his elegant dramas and popular historical romances, was the acknowledged favourite of large circles, especially of ladies. Some became famous outside of their country. Bredahl (1874–1880), an imitator of Shakespeare; Blicher (1872–1842); and the poet of romantic verse, Winther (1796–1876), whose novels strikingly reproduce the peculiar charms of the Danish landscape. A world-wide fame rewarded the renowned author of fairy-tales, Hans Christian Andersen (1805–1875). In opposition to the poetry of the Romanticists, Louis Holberg (1791–1836) wrote his satires and theatrical pieces. Frederick Paludan Müller (1809–1876) showed traces of the influence of Byron. The vigorous, highly original Soeren Kirkegaard (1815–63) showed how poor a substitute for religion is aesthetics. Molbech, Boøg, Rumohr, Eltar, finally the Danish Jew Meyer Goldschmidt (1816–1900), skilfully using German must be considered as the heralds and pioneers of the Romantic school which under the favour of the Jewish critic George Brandes (b. 1842) found its way to the North, and has ever since influenced the literature of Denmark in every direction. Its controlling power is seen in the novels of the pessimist Jacobson, whose "Marie Grumme" and "Niels Lyhne" created a new school. Among other representatives of this school of literature (Openembrudslitterature) may be mentioned the lately deceased marine painter and poet Holger Drachmann, Sophus Schandorf, Erik Gram, Hermann Bang. Drachmann (b. 1846) was in his youth influenced by Socialism, but later changed his views and wrote lyrics and prose successfully. Great popularity was attained by his patriotic work "Der Revæ fra Grønland" and his collection of poems "Eline" in which he glorifies the "Riget" and "Røros". "Gamle Guder og Nyst". Schandorf's power lies in his vivid portrayal of peasants and the lower middle class. Erik Gram, in his novel "Gertrude Colbjörnsen", follows in the footsteps of Jacobsen, while a warm patriotism breathes in his book "I Den Store Grønland". Hermann Bang broke the power of traditional force, but his style is at times obscure. He has shown his many-sidedness as a dramatist, journalist, critic, actor, and lecturer.

Among the many modern Danish authors may be mentioned Fontopippan, Topsoe, Mariaerg, Bauditz, Selsker, and Anna Skram (novels); von der Recke, Magdalene Thoresen (lyrics and dramas), Budde (jumlah works), Lange (translations). Within the last two decades have appeared numerous works of more or less value in different fields. We mention here only two Catholics: John Jørgensen and John Frederiksen; the former is the most noted among the contemporary German poets of his time, while the delicate "Digtter" (poems) of the latter are worthy of wider recognition.

For the extensive historical literature of the past century, as far as concerns Catholicism, see "Hist. Kulturhistori" (Copenhagen, 1831–49), also given in the specifically Danish literature which developed from 1849 to 1884. Since then it has grown in size and importance, both in the life of the church and in the life of the country. Christian XII (1865–1904), I–III; Vodlemar, Holte (Copenhagen, 1904); Gommer, J. C. Denmark's Government (Copenhagen, 1843–1844), I–IV; Paldan, Renaissance-bevægelsen i Danske Litteratur (Copenhagen, 1887); Bernardoni, La littérature scandinave (Paris, 1864); Freis, Geschichte der deutschen Literatur und der Literatur des Nordens Europas (London, 1852); Hansen, Illustrator. Oberlander, Illustr. dansk Litteratur (Copenhagen, 1897); Schmitter, Geschichte der skandinavischen Literatur (Leipzig, 1899); a detailed account of the literature, with characteristics of the authors and extracts from their writings in German version, but superficial and full of Protestant prejudices); Schruck, Skandinavisk Litteraturhistoria (Stockholm, 1890); In., Historien til det skandinaviske litteraturhistorier i internat. Wochenschrift, f. Wissen. und Technik, I, Nos. 12–13 (short but very clear sketch).

The Fine Arts.—a. Architecture.—As mentioned above, the first Christian temple on Danish soil was the church at Hedehus (Schleswig). According to Adam of Bremen (d. 1075), Denmark possessed in his time 300 churches then. St. Olaf in Zealand, 100 on Jutland, probably all were constructed of wood. Even the cathedral of Rössle was originally of material wood. The same holds good for the churches ad S. Marinum and ad S. Albanum at Odense, in which Saint Canute met his death and which was not torn down till after the Reformation. The wooden cathedral of St. Olaf at Aarhus fell down in 1548. Wooden churches remained long in use in South Jutland (Schleswig). But in North Jutland and on the islands, as early as the middle of the twelfth century, other material was used, according as the quarries were close at hand or easily accessible, e. g. granite, sandstone, limestone, or chalk. The church at Tuna used tufa from the Rhine was employed. Frequently only the exterior of the walls was constructed of stronger material, the intervals were filled up with a mixture. The use of burned brick was soon adopted everywhere. Waldemar I (d. 1182) substituted for the wooden sill-boards of the Danile-architecture the wall of brick. After him most of the new buildings were exclusively constructed of this material, e. g. the churches at Aarhus, Randers, Elsinore, Rökkilde, Ringsted, Nestved, Maribo, etc. Often free-stone was used for the foundations (up to a certain height), while walls and arches were built of brick. In some places (e. g. in Kjøge) layers of different stone alternate. The variations...
style (basilica, round arches, pointed arches) succeed each other as in the rest of Europe, though they were partly influenced by Cistercian and Brigitine forms. Alongside of churches with parallel naves are others with transepts, and even more rare churches, the steeples seem to have occasionally served as means of defence. After the religious schism, people confined themselves in the main to preserving the existing buildings. The beautiful temples now used in Protestant worship were all built in Catholic times. On the other hand, the Catholic population have spent large sums in erecting and furnishing splendid castles, among which we may mention Kronborg (sixteenth) and Frederiksborg (seventeenth century). Only Copenhagen exhibits important edifices of modern times, e.g. St. Mary’s church, the Thorvaldsen Museum, the city-hall, and other buildings. Prominent architects of the eighteenth and nineteenth centuries were Bindsbøll, who erected the Thorvaldsen museum; Peter Fenger, who won fame as a designer of churches and as an author; Chr. Fr. Hansen, builder of churches and public buildings; Theophil Hansen, an eminent master whose works embellish Austria and Greece; Henry Hansen, whose influence on artistic handicrafts in Denmark can hardly be over-estimated; finally, Harsdorff, Melbye, and Uldall; the last deserves special credit as the historian of bell-casting.

b. Sculpture.—That the art of carving and chiselling was formerly highly favored and still favored, even after some succeeding generations had lost some of the power of art since the introduction of Christianity, is proved by altars, crucifixes, choir stalls, etc. still found in churches or museums. The names of the masters can, however, barely be ascertained with any degree of certainty. We know, e.g., that a certain Liutger is the maker of a very fine crucifix carved from a walrus-tooth. This crucifix is in the Danish National Museum and bears the inscription: “Qui in Christum crucifixum credunt, Liutgeri memoriam orando faciant.” The sixteenth century seems to have been barren of skilful sculptors. We only know that a certain Berg, a German born in Lübeck, carved beautiful ivory ornaments and also distinguished himself as a painter. Many artists from various countries worked either permanently or temporarily in Denmark (Germans—as Rßsler, Preisler, Reinhardt, Schwabe; Englishmen—as Stanley; Frenchmen—as Villars, Boudan, Frieur; Italians—as Gianelli, Miani, Gioloni; Spaniards—as Monedé, Téllez; Germans—as Vermehren, van Egen; Jews—as Levi, Levisohn, Saly, Salamon). Among the native sculptors, Bissen, Jerichau, Peters, and Wiedewelt deserve mention, and above all the famous Thorwaldsens (1770–1844); the engravers Clemens and Lund; the engravers Adser and Christhansen.

c. Painting.—There was never a lack of painters in Denmark. This is proved by the great number of beautiful frescoes in the cathedrals at Aarhus, Ribe, Röskilde, Viborg, etc., whitewashed in the sixteenth century, but re-discovered of late and restored at great cost. This school of painting in Danish times, which has produced excellent works of art along various lines. Among the historical painters are Eckersberg, C. C. C. Hansen, Christian H. Høyer, Marstrand, Müller, Paulsen, Simonsen, and Albert Küchler (died a Catholic and a Franciscan lay-brother at Rome 1886). The pictures of his youth exhibit a joyous mood; the creations of his later life show a deep earnestness. Skilful portrait-painters are Baache, Bends, Baarentzen, Copmann, H. Hansen, Juol, Roed; genre painters are Exner, Hammer, Sønne; Ottesen was called a flower painter; Høyer was called a miniaturist. Excellent preference is given to landscapes, marine and animal canvases. Excellent landscape painters were (or are) Aangel, Kröyer, Lundbye, Hens Möller, Skovgaard; marine painters: Larsen, Melbye, Neumann; beautiful reproductions of animal life are to be credited to Gehrer and Lundbye.

P. Wittman.

Denoville, Jacques-René de Brihay, Seigneur et Marquis de, b. in 1638 at Denoville in the department of Essonne, France, in 1710. Nothing is known of him prior to his arrival in Canada, except that he was colonel of a regiment of dragoons and in 1668 had married Catherine Courtin, daughter of Germain Courtin, Seigneur de Tanqueux, Beauval, Moncel, etc., and of Catherine Laffemas. Appointed to the command of the Basques, he wrote many letters to his wife and to his two young daughters, L. Rocheleau, early in June, 1669, and arrived at Quebec 1 August. His special mission was to win the sympathies of the Indians, establish peace with them, and make war upon the Tsourontouns, a branch of the Iroquois tribe. He wrote many letters to his wife concerning the family and the colony, and his letters show that he Denoville soon realized that he did not have troops enough at his disposal, and asked assistance from France. Moreover, a powerful enemy confronted him in the person of Thomas Dongan, Governor of New York, who was constantly urging the Iroquois against the French. During the winter of 1669–70 preparations were made to send the whole force of the Iroquois to attack the Hurons in the following summer; forts were put in a state of defence, and the savage allies of the French, such as the Miami, the Illinois, and the Ottawas, were asked to send warriors to Niagara there to join the main body in the early part of July. In the spring of 1687, 800 naval recruits reached Quebec under the command of the Chevalier de Vaudreuil, and on 11 June about 2000 men under Denoville, repaired to Caracony, thence to invade the country of the Tsourontouns. Had he been a less humane Denoville could have completely subjected the Tsourontouns, but he erred by allowing them too much leisure. The position of the colony was consequently still insecure, and the other Iroquois tribes, affected but little or not at all by the routing of the Tsourontouns, continued their attacks and depredations. Denoville believed that the Iroquois would come of their own accord and propose peace. But Sir Edmund Andros, Governor of New Netherland, still less tractable than Governor Dongan, had agitated the question of boundaries between the possessions of the King of England and those of France, the climax to his claims being his seizure of Fort Saint-Casian (1688). New peace negotiations took place between the French and the Iroquois, but the diplomacy of a Huron chief Tiononatate, called Kondiaronk, or the "Rat", upset everything. By the autumn of 1688 the colony was in a lamentable state, sickness had decimated its troops, 1400 of the 12,000 who formed the entire population of New France had fallen victims to the destructive scourge, and the forts were abandoned.

The winter of 1688–89 was one of wild alarms, especially in the vicinity of Montreal, which was easiest of access to the Iroquois, and during the summer these merciless barbarians, to the number of 1400, invaded the island of Montreal and slew the inhabitants of the posts. This event caused the utmost consternation among the colonists. Great joy prevailed when it was announced that the Comte de Frontenac, who had already governed the colony for ten years (1672–82), would replace the Marquis de Denoville.
When Denoville left the country he was looked upon as lacking in ability to deal with the savages, besides being too much inclined to follow every one's advice; nevertheless, he was a fine soldier, a good Christian, and a governor admirably disposed towards the colony, which he was most eager to rescue from the clutches of the Iroquois. On his return to France the king gave him further proof of his confidence by appointing him assistant tutor to the children of the royal household.

DENVER, Diocese of (Denverensis), a suffragan of the Archdiocese of Santa Fé, erected in 1867 and comprising the entire State of Colorado, an area of 103,845 square miles. The first permanent civilized settlement within its borders was made in 1852, when a Spanish colony from New Mexico settled in what is now the southern part of Colorado on the Conejos River, where they built the first church in 1858.
Similar settlements followed during the fifties, their spiritual needs being provided for by priests sent by Bishop Lamy of Santa Fé, whose diocese then extended as far north as the Arkansas River, the boundary of the Mexican cession. The discovery of gold, of his native diocese. When he took charge as vicar Apostolic he had but three priests within his jurisdiction, but he returned to the field of his work and redoubled his own efforts, visiting every portion of his vast vicariate, doing the work of priest and bishop and endeavouring at the same time to secure priests for the rapidly increasing population. His zeal for religion was shown also by his many efforts to secure locations for future churches, charitable and educational institutions, several of which were built-in his own time—notably, the Loretto Academy at Denver, in 1864, and later St. Joseph’s Hospital, the House of the Good Shepherd, and the College of the Sacred Heart. In 1871 his burdens were somewhat lightened by the transfer of the Territory of Utah to the jurisdiction of the Archbishop of San Francisco. By Brief of 16 August, 1887, the Vicariate of Colorado was made a diocese with the episcopal see at Denver; and the Rev. Nicholas C. Mats appointed coadjutor with right of succession (19 August, 1887). He was consecrated titular Bishop of Telmessus, at Denver, by Archbishop Salpointe of Santa Fé, 28 October, 1887. Bishop Machebeuf nevertheless relaxed but little of his missionary work after this, and retained the administration of the diocese until his death, on 10 July, 1899, leaving in the diocese 34 secular and 30 regular priests, 112 churches and chapels, 1 college, 9 academies, 9 hospitals, 2 asylums, and over 3000 children in Catholic schools.

Bishop Mats, who was born 6 April, 1850, at Münster, Lorraine, France, and ordained priest at Denver, 31 May, 1874, continued the good work of his predecessor. The diocese contains (1908) 62 secular priests, 71 priests of religious orders: Jesuits, Benedictines, Franciscans, Dominicans, Redemptorists, Servites, and Thentines, engaged in parish and educational work, 2 colleges for young men with 265 students, 831 religious women of 15 different institutes, the Sisters of Loretto, Charity (St. Joseph, Ohio), Charity (Lorenworth, Kansas), St. John’s Mercy, the Good Shepherd, Third Order of St. Dominic, St. Francis, St. Benedict (Chicago, Illinois), Charity B. V. M. (Dubuque, Iowa), St. Francis of the Perpetual Adoration, Missionary Sisters of the Sacred Heart, St. Benedict (Erie, Pennsylvania), St. Joseph (Wichita, Kansas), St. Francis of Assisi. There are 4 orphan asylums with 588 children; an industrial and reform school with 225 inmates, a home, 15 hospitals with 11,300 patients annually, 10 academies with 900 pupils and 25 parish schools with 6000 children. The theological students number 10. There are 60 churches, 91 chapels, 140 stations, and a Catholic population of 99,485. The Sacred Heart Orphanage at Pueblo, sheltering 150 children, owes its existence and partial endowment to the generosity of Captain John J. Lambert of Pueblo, an exemplary Catholic prominent in works of charity and zeal. The English language is generally used, but in many of the mining districts and industrial centres there is a necessity for the Italian and Slav languages, while Spanish is usually spoken in the southern parishes. There is no diocesan debt, and the individual churches and institutions are solvent and prosperous.

Denys the Carthusian (Dents van Leeuwen, also Leuw or Liewe), b. in 1402 in that part of the Belgian province of Limburg, which has since been prised in the county of Hesbaye; d. 12 March, 1471. His birthplace was Ryckel, a small village a few miles from Saint-Trond, whence ancient writers have often surmamed him Ryckel or a Ryckel. His parents, historians say, were of noble rank; he himself says, however, that when a child he kept his father’s sheep. His remarkable aptitude for intellectual pursuits and
his eagerness to learn induced his parents to give him a liberal education, and they sent him to a school at Saint-Trond. In 1415 he went to another school at Zwolle (Overijssel), which was then of great repute and attracted many students from various parts of Germany. He there entered upon the study of philosophy and became acquainted with the principles and practice of religious life, which the rector, John Cele, a very holy man, himself taught. Shortly after the rector’s death (1417) he returned home, having learnt and instructed many students from various parts of his country. His fervent quest for human science and the success his uncommon intellectual powers had rapidly obtained seem, according to his own account, to have rather dulled his piety. Nevertheless a supernatural leaning to clerical life, which had taken root in his mind from the early age of ten and had grown stronger during his stay at Zwolle, finally triumphed over worldly ambition and the instincts of nature, and at the age of eighteen he determined to acquire the “science of saints” in St. Bruno’s order.

Having applied for admittance at the Carthusian monastery at Roermund (Dutch Limburg), he was refused without receiving any explanation. An idle dialogue (twenty-four volumes) required by the statutes of the order; but the prior gave him hopes that he would be received later on, and advised him to continue meanwhile his ecclesiastical studies. So he went forthwith to the then celebrated University of Cologne, where he remained three years, studying philosophy, theology, etc. After taking his degree of Master of Arts, he returned to the monastery at Roermund and this time was admitted (1423). In his cell Denys gave himself up heart and soul to the duties of Carthusian life, performing all with his characteristic earnestness and strength of will, and letting his zeal carry him even far beyond what the rule demanded. Thus, over and above the time—about eight hours—every Carthusian spends daily in hearing and saying Mass, reciting Divine Office, and in other devotional exercises, he was wont to say the whole Psalter—his favourite prayer book—or at least a great part of it, and he passed long hours in meditation and contemplation; nor did material occupations usually hinder him from praying. Reading and writing took up the rest of his time. The list he drew up, about two years before his death, of some of the books he had read while a monk bears the names of all the principal ecclesiastical writers down to those who had read, he covered every page of every volume, and the works of a great number of Greek, and especially Arab, philosophers, and he had studied the whole of canon as well as civil law. His favourite author was Dionysius the Areopagite. His quick intellect seized the author’s meaning at first reading and his wonderful memory retained without much effort all that he had once read.

It seems marvellous that, spending so much time in prayer, he should have been able to peruse so vast a number of books; but what passes all comprehension is that he found time to write, and to write so much that his works might make up nearly three thousand volumes. No other pen, whose productions have come down to us, has been so prolific. It is true that he took not more than three hours’ sleep a night, and that he was known to spend sometimes whole nights in prayer and study. There is evidence, too, that his pen was a steady one. Nevertheless the style still remains insolvably, and all the more so that, besides the occupations already mentioned, he had, at least for some time, others which will be presently noted, and which alone would have been enough to absorb the attention of any ordinary man. He began (1454) by translating the Psalms and then proceeded to comment upon the whole of the Old and the New Testament. He commented also the works of Boethius, Peter Lombard, John Climacus, as well as those of, or attributed to, Dionysius the Areopagite, and translated Cassian into easier Latin. It was after seeing one of his commentaries that Pope Eugene IV exclaimed: “Let Mother Church rejoice to have such a son!” He wrote theological treatises, such as “De Intellectu Fidei Orthodoxa”, “Compendium Theologicum”, “De Lumine Christianae Theoriae”, “De Laudibus B. V. Marie”, and “De Praconio B. V. Marie” (in both of which treatises he upholds the doctrine of the Immaculate Conception), “De quatuor Novissimis”, etc.; a large number of homilies and sermons, such as “De Oriente”, “De Venustate mundi et pulchritudine Dei” (a most remarkable aesthetic dissertation), “De ente et essentia”, etc.; a great many treatises relating to morals, asceticism, church discipline, liturgy, etc.; sermons and homilies for all the Sundays and festivals of the year, etc. His writings, taken as a whole, show him to be a compiler rather than an original thinker; they contain more unctious and pietist than deep speculation. He was no innovator, no builder of systems, and especially no quibbler. Indeed he had a decided dislike for metaphysical subtleties of no positive use, for he was of far too practical a turn of mind to waste time in abstractions and speculations; and his immediate good to souls and tend their spiritual needs, drawing them away from sin and guiding and urging them on in the path to heaven.

As an exapnder of Scripture, he generally does no more than reproduce or recapitulate what other commentators have said. He is not an original thinker, but, by bringing no light to modern exegnetics they are at least an abundant mine of pious reflections. As a theologian and a philosopher he is a servile follower of no one master and belongs to no particular school. Although an admirer of Aristotle and Aquinas, he is neither an Aristotelian nor a Thomist in the usual sense of the words, but seems inclined rather to the Christian humanism of Dionysius the Areopagite, St. Augustine, and St. Bonaventure. As a mystical writer he is akin to Hugh and Richard of St. Victor, St. Bonaventure, and the writers of the Wildesheim School, and in his treatises may be found summed up the doctrine of the Fathers of the Church, especially of Dionysius the Areopagite, and of Eckart, Suso, Ruybroeck, and other writers of the German and Flemish Schools. He has been called the last of the Schoolmen, and he is so in the sense that he is the last important Scholastic writer, and that his works may be considered to form a complete summary of the Scholastic teaching of the Middle Ages; this is their primary characteristic and their chief merit.

His renown for learning, and especially for saintliness, drew upon him considerable intercourse with the outer world. He was consulted as an oracle by men of different social status rather than bishops and princes downwards; they flocked to his cell, and numberless letters came to him from all parts of the Netherlands and Germany. The topic of such correspondence was often the grievous state of the Church in Europe, i. e. the evils ensuing from relaxed morals and discipline and from the invasion of Islam. Declaring these evils the work of the devil, and himself and his monks to be the warriors of God and of the Catholics of that day, to counteract them. For that purpose, soon after the fall of Constantinople (1453), impressed by revelations God made to him concerning the terrible woes threatening Christendom, he wrote a letter to all the princes of Europe, urging them to amend their lives, to close their borders, and to join in war against their common enemy, the Turks. A general council being in his eyes the only means of procuring serious reform, he exhorted all prelates and others to unite their efforts to bring it about. He wrote also a series of treatises, laying down rules of Christian living, written in Latin and for laymen of every rank and profession. “De doctrina vitae Christianae”, the most important of these treatises, was written at the request, and for the use of the
famous Franciscan preacher John Brugman. These and others which he wrote of a similar import, inveighing against the vices and abuses of the time, insisting on the need of a general reform, and showing how it was to the Lord's service that the great things were done, the customs, the state of society, and ecclesiastical life of that period. To refute Mohammedanism he wrote two treatises: "Contra perfidiam Mahometi", at the request of Cardinal Nicholas of Cusa. The latter, named papal legate by Nicholas V to reform the Church in Germany and to return a crusade against the Turks, took Denys with him during a part, if not the whole, of his progress (Jan., 1451–March, 1452), and received from his tongue and his pen valuable assistance, especially in the work of reforming monasteries and of rooting out magical and superstitious practices. In this treatise, which drew Denys from his much-loved cell. He was for some time (about 1459) procurator of his monastery, and in July, 1466, was appointed to superintend the building of a monastery at Bois-le-Duc. A three-years' struggle against the inextricable difficulties that the foundation had to meet, already impaired by a long life of ceaseless work and privations, and he was obliged to return to Roermond in 1469. His treatise "De Meditatione" bears the date of the same year and was the last he wrote.

An immense literary activity of Denys had never been detrimental to his spirit of prayer. On the contrary he always found in study a powerful help to contemplation; the more he knew, the more he loved. While still a novice he had ecstasies which lasted two or three hours, and later on they lasted sometimes seven and more hours. Indeed, towards the end of his life he never heard the saying of "Veni Sancte Spiritus" or some verses of the Psalms, nor converse on certain devotional subjects without being lifted off the ground in a rapture of Divine love. Hence posterity has surnamed him "Doctor ecstatischus".

During his ecstasies many things were revealed to him which he made known only when it could profit others, and the same may be said of what he learnt from the souls in purgatory, who appeared to him very frequently, seeking relief through his powerful intercession. Loving souls as he did, it is no wonder that he should have become odious to the great hater of souls. His writings were condemned to his learning age, and his excommunication, especially with regard to food and sleep, far exceeded what the generality of men can attain to. It is true that in point of physical austerities, virtue was assisted by a strong constitution, for he was a man of athletic build and had, as he said, "an iron head and a broken heart." During the last two years of his life he suffered intensely and with heroic patience from paralysis, stone, and other infirmities. He had been a monk for forty-eight years when he died at the age of sixty-nine. Upon his remains being disinterred one hundred and thirty-seven years after, day by day (12 March), his skull entered a sweet perfume and the fingers he had most used in writing, i.e. the thumb and forefinger of the right hand, were found in a perfect state of preservation. Although the cause of his beatification has never yet been introduced, St. Francis de Sales, St. Alphonse Liguori, and other writers of note style him "blessed". His life is in the "Acta Sanctorum" of the Bollandist (12 March), and his name is to be found in many martyrlogies. An accurate edition of all his works still extant, which will comprise forty-one quarto volumes, is now being issued by the Carthusian Press at Tournai, Belgium.

**DENZA, Francisco**, Italian meteorologist and astronomer, b. at Naples, 7 June, 1834; d. at Rome, 14 December, 1894. He joined the Barnabites at the age of sixteen, and during his theological course at Rome studied at the same time meteorology and astronomy under Father Secchi. From 1856 until 1890 he was attached to the Bishop of Moncalieri where he became widely known for his work in meteorology, a science which he greatly advanced not merely by his personal observations and studies but also by the interest which he roused in it throughout Italy. In 1859 Denza founded the "Bulletino mensile di Meteorologia", which was continued until 1894, and established a meteorological observatory at Moncalieri; it was largely through his influence that similar observatories, more than 200 in number, were gradually built in various parts of Italy. The success which attended his efforts gave him a nominal-reputation far beyond his means, already impaired by a long life of ceaseless work and privations, and he was obliged to return to Roermond in 1469. His treatise "De Meditatione" bears the date of the same year and was the last he wrote.

Among his published works may be mentioned: "Metere cosmiche" in "Scienza di popolo" (Milan, 1869); "Stelle cadente del periodo di Agosto 1868" (ibid.); "Le aurora poi d. 1868 dell'ecossnica del acompañhrono" (1869); "Distribuzione di pioggia in Italia" (1871–72); "Valeurs de l'électricité et l'ozone à Moncalieri à l'époque du choléra" in "Comptes Rendus" (1868) LXVI; "Le armonie dei cieli, Nostioni di astron." (1881); "Amplitudes d'oscillations diurne, magnet, à Moncalieri 1880–81"; "Observ. di declin. magnet. ad Asota, Moncalieri, Firenze in occas. d'elisso sol 26/5 1873" in "Proe. Acc. dei Nuov. Lincei".

**Denninger, Heinrich Joseph Dominicus**, one of the leading theologians of the modern Catholic German school and author of the "Enchiridion" universally used, b. 10 Oct., 1819, at Liége; d. 19 June
DEGRATIAS 737 DEPOSITION

1883, at Würzburg. In 1831 his father, who was a professor at the Liege University, took him to Würzburg, the original home of the family. Here he attended the Gymnasium, and became a student at the University, where he received the Ph. D. degree. In 1838 he entered the Würzburg seminar, went to the German College at Rome in 1841, was ordained priest in 1844, and the following year took a degree in theology. On his return home he was first curate at Hassfurt-on-the Main, became professor extraordinary of dogmatic theology, a degree of 1848, and ordinary professor in 1854. He continued to occupy this position, in spite of ill-health, till his death. Denzinger was one of the pioneers of positive theology and historical dogmatic (Dogmengeschichte) in Catholic Germany. In the generation after Johann Adam Möhler (1826) and Dochinger (1854), on their methods and helped to establish what is the special character of the German school, exact investigation of the historical development of theology, rather than philosophical speculation about the corollaries of dogma. Nearly all his important works are in the nature of historic theology. The best-known and most useful is his "Enchiridion Symbolorum et Definitionum" (first ed., Würzburg, 1854), a handbook containing a collection of the chief decrees and definitions of councils, list of condemned propositions, etc., beginning with the oldest forms of the Apostles' Creed. It was republished, considerably augmented, in 1864, and the Latin decrees. After Denzinger's death Professor Ignatius Stahl continued the work of re-editing the Enchiridion with additional decrees of Leo XIII. As a revised and enlarged edition (10th ed., Freiburg, 1908), prepared by Clemens Bammert, S. J., includes decrees of Pius X. Other works are "Ritus Orientalis, Coptorum, Syrorum et Armenorum" (2 vols., Würzburg, 1863-1864), a long treatise on Eastern rites; "Vier Bücher von der religiösen Erkenntnis" (2 vols., Würzburg, 1865-1867), "Ueber die Aechtheit des bisherigen Textes der Ignatianischen Briefe" (Würzburg, 1849), "Die spekulat. Theologie Günters" (Würzburg, 1853). He also wrote a number of shorter treatises, on Philo Judaeus (1840 and his first work, on the Immaculate Conception (1855), and papal infallibility (1870). At the time of his death he was preparing a complete compendium of dogmatic theology. He edited a number of medieval theological works: Habert, "Theologia Graecorum Patrum Vindicata circa materiam gratiae" (1853); De Rubens, "De peccato originali" (1857); F. Moritz, "De Justo (1860). He was appointed a consultant of Propaganda for Eastern rites in 1866.

DEGRATIAS, SAINT. See FELIX OF CANTALUCE, SAINT.

Deo Gratias (Thanks be to God), an old liturgical formula of the Latin Church to give thanks to God for favors received. It is found in Scripture, I Cor., xiv, 57, and II Cor., ii, 14. I. Deo Gratias occurs in the Mass: (a) as an answer of the server to the Epistle or Prophecies; in High Mass this answer should not be sung by the choir. In the Mozarabic and Old Gallican Liturgy the Deo Gratias follows the title of the Epistle or the Prophecy; at its end the Amen is said. The Breton and daughter churches do not use this formula in connection with the Epistle. In the Latin Church the Deo Gratias is not said on Ember Saturday after the fifth lesson, which is followed by the canticle of the

Three Young Men in the furnace, in order not to interrupt the sense; neither is it said after the lessons on Good Friday or after the Prophecies on Holy Saturday and the eve of Pentecost; (b) in answer to the Ita Missa est et the Benedictus Domino, in thanking for the graces received at Mass; (c) after the last Gospel; after the first Gospel the server answers Laus tibi Christe. Quarti (Rubr. Miss. Rom. Comment. illustr., 2, 12, ad 4) says, that the first Gospel signifies the preaching of Christ, wherefore we praise Christ by saying: Laus tibi Christe; the second Gospel signifies the preaching of the Apostles, wherefore only Deo Gratias is answered, but such interpretations are artificial and arbitrary; (d) in the Breviary the Deo Gratias is used more frequently; in Matins (except the last three days of Holy Week and the day of the feast of the Day of the Pentecost), after the invocation: Tu autem Domine misereare nobis; also after the capitula, the short lesson in Prime and Compline; and in answer to the Benedictus Domino at the close of every Hour. The Mozarabic Breviary puts the Deo Gratias after the title of the lesson, the Amen to the end.

II. The formula Deo Gratias was used in extraliturgical prayers and customs by the Christians of all ages. The rule of St. Benedict prescribes that the doorkeeper shall say Deo Gratias, as often as a stranger knocks at the door or a beggar asks for assistance. Gregory VII added to the privilege of the abbot of a Benedictine house the invocation of his coadjutor and successor Evodius, they called out Deo Gratias thirty-six times (St. Aug., Ep. cxxvii. 11, De Actis Ercolii). In Africa it was the salutation used by the Catholics to distinguish themselves from the Donatists who said: Deo laudes (St. Aug., In Ps. cxxxvi). Therefore in Africa Deo Gratias occurs as a Catholic name, e. g. St. Deogratias, Bishop of Carthage (453-456). The name of the deacon for whom St. Augustine wrote his treatise "De catechismis rudibus", was Deogratias. St. Felix of Cantalicio (1515-157) used this interjection so often, that the people called him Brother Deogratias.

Depositio Martyrum. See MARTYRS.

Deposition, an ecclesiastical vindictive penalty by which a cleric is forever deprived of his office or benefice and of the right of exercising the functions of his orders. Of its own nature this punishment is perpetual and irremissible in the sense that those on whom it is inflicted, even after having done full penance, have no right to be released from it, though the superior of the cleric may, if he judge, excommuni- cate and amend. Deposition can be inflicted only on ecclesiastics, secular or regular; it may be either total or partial, according to what it deprives them of all powers of orders and jurisdiction or of only a portion of them. It differs from simple privation because in addition to the deprivation of benefices and offices it disqualifies an ecclesiastic from obtaining them in future; from suspension because it is always a perpetual vindictive penalty, not a mere suspension of the use of the powers of orders and jurisdiction, but an entire and perpetual withdrawal of them; from actual degradation inasmuch as it never deprives them of the privileges of the ecclesiastical state.

This punishment can be traced to the early centuries of the Church when ecclesiastics guilty of heinous crimes were expelled from their rank and removed to lay communion. Although preserving the character of their order, they were considered, for all practical purposes, as laymen, and were bound to appear with the ordinary faithful when receiving Holy Communion. The word deposition, it is alleged, was first used in the Synod of Agde (506, can. XXXV) to indicate such a penalty. Down
to the twelfth century the expressions deposition and degradation meant one and the same canonical punishment. We know, for instance, that Paul, Patriarch of Alexandria (541), and Ignatius, Patriarch of Constantinople (861), met with the same kind of punishment; yet in the first case it is styled deposition and in the second degradation. Moreover, deposition and degradation are free from the ordinary title of ordination, and it was nearly always coupled with the ceremony of divesting delinquents of the garments used in the functions of their sacred ministry. In process of time, when, first by custom and subsequently by decree of Alexander III (c. 1127), and of Innocent IV, Lateran IV, bishops were allowed to dispense from that penalty in crimes of lesser gravity than adultery, the solemn stripping of the sacred vestments was discontinued, to save the trouble of restoring their use in case of reinstatement. The new practice created uncertainty and variety in the execution of deposition, hence Boniface VIII (c. ii. De penit., in VI) at the request of the Bishop of Bâiers decreed that the formal removal of vestments, which now means and effects total exclusion from the ecclesiastical state, was to take place only in cases of actual degradation.

As stated above, total deposition prohibits the exercise of powers conferred by ordination, and effects a complete and perpetual deprivation of ecclesiastical offices, benefices, and dignities. It also disqualifies from obtaining them in future, while public disgrace or infamy and irregularity are inflicted on those who disregard this punishment. The character of the penitent by ordination being indelible, deposition from orders can only deprive a person of the right of exercising them. Deposition from office always effects the loss of the benefice annexed to it, as benefices are given on account of the spiritual office. On the other hand, deposition from benefice never renders an ecclesiastical individual incapable of his ministry; it is maintained, however, that it deprives him even of the right to a share of the temporal emoluments for his decent support. According to the present discipline of the Church deposition is inflicted only for enormous crimes, such as cause public scandal and do great harm to religion or morals, e.g., murder, public concubinage, blasphemy, a sinful and incorrigible tenor of life, etc. It is largely left, however, to the prudent judgment of the superior to determine in each case the gravity of the crime which deserves this punishment. In fact, deposition is now rarely inflicted; simple dismissal, together with perpetual suspension, usually takes its place. (See Lay Communion.)

Deposit of Faith. See Faith.

Deprès, Josquin (diminutive of Joseph). Latinized Josquinus, Platensis, b. probably c. 1450 at Comblé, Hainaut, Belgium; d. there 27 August, 1521. He was the most gifted and most learned contrapuntist and composer before Palestrina and was the head of the Second Netherlands School. At an early age he became choir boy in the collegiate church of Saint-Quentin in his native town. After a stay in France he changed his stage of life at Obregón (1490-1494). In 1471 he was at the court of the Sforza in Milan and in 1490, in the service of Lorenzo the Magnificent in Florence. From 1498 to 1494 (except the year 1497-1498, which he spent in Ferrara), Josquin was a member of the papal choir under Pope Innocent VIII. In 1494 he then entered the service of King Louis XII of France. The opinion that, towards the end of his career, he was identified with the musical personnel of the court of the Emperor Maximilian I lacks confirmation. Deprès dominated the musical world of his time, not only on account of his learning and skill but particularly because of his originality. His vivid conception of the meaning and dramatic possibilities of the sacred texts, as well as his great inventiveness, enabled Josquin to free his music from the conventions of his time. In consequence, most of the works of Deprès show the storm and stress of a transition period, in contrast to the productions of his successor, Palestrina, which breathe serenity and repose. Josquin's fame was given a new stimulus by the subsequent change in taste caused his works to be neglected and finally forgotten. The present age, however, is doing justice to those earlier masters in music who laid the foundation for which is greatest in sacred polyphony. Josquin wrote thirty-two masses, seventeen of which were printed by Petrucci (1466-1539) in Fossumbrone and Venice. Others were preserved in MS. in the archives of the papal choir in Rome and in the libraries of Munich, Vienna, Basle, Berlin, the Ratisbon cathedral, and Cambrai. Motets by Deprès were published by Petrucci, Pierre Attaignant (1533), Trouman-Susato (1544), and by Le Roy and Ballard (1554). Numerous fragments and shorter works are reproduced in the historical works of Forkel, Burney, Hawkins, Busby, and in Choron's collection.

Joseph Otten.

De profundis (Out of the depths), first words of Psalm cxviii. The author of this Psalm is unknown; it was composed probably during the Babylonian Exile, or perhaps for the day of penance prescribed by Esdras (I Esd., ix, 5-10). The hard school of suffering during the Exile had brought the people to the confession of their guilt and had kindled in their hearts faith and hope in the Redeemer and confidence in the mercy of God. The De profundis is one of the fifteen Gradual Psalms, which were sung by the Jewish pilgrims on their way to Jerusalem, and which are still contained in the Roman breviary. It is also included in the seven Penitential Psalms which, in the East and West, were already used as such by the early Christians. In the Divine Office the De profundis is sung every Wednesday at Vespers, also at the second Vespers of Christmas, the words Apud Dominum misericordia et copia apud remissionem, reminding us of the mercy of the Father Who sent His Son for the redemption of our kind. It is also used in the ferial prayers of Lauds and in the Office of the Dead at Vespers. The Church recites this psalm principally in her prayers for the dead; it is the psalm of the holy souls in purgatory, the words of the Psalmtist applying well to the longing and sighing of the souls exiled from heaven. It is recited at funerals by the priest, before the corpse is taken out of the house to the church.

Woltjen, Psalme openen (Freiburg, 1897), I, 143; Schulte, Die Psalmen des Breitens (Paderborn, 1896), 1444; F. G. Holweck.

Derbe, a titular see of Lycaonia, Asia Minor. This city was the fastness of a famous leader of banditti, when it was captured by Amyntas, the last king of Galatia (Acts, xiv, 6). It is mentioned in the Acts under the name of Derbe (Acts, xiv, 6, 20, 21), and again visited by St. Paul (Acts, xvi, 1). Derbe became a suffragan see of Iconium; it is not mentioned by later "Notitia Episcoporum", and we know it only from 381 to 672 (Liquinius, Episc. Christ., I, 1081). The site of the city has not yet been surely identified; the discus-
sions are based on the above-mentioned texts of Strabo and Dio Cassius. It has been placed at Bain Bir Kilisse, at Divie, south of Ak Gol (the White Lake), between Bosalla and Zosta, and at Gedrieliss in the vilayet of Konia, which seems more probable.

S. PETRIDES.

Derser, Anton (known as Thaddäus a. S. Adamo), b. at Fahr in Frania, 3 February, 1757; d. at Breslau, 15 or 16 June, 1827. He was a Discalced Carmelite, professed at Cologne 18 October, 1777. During his studies at Heidelberg, where he graduated, acquired such renown that contrary to the custom of the order he was allowed to accept a professorship in humanities and oriental languages, first at his own alma mater, then at Bonn (1783-1791). In the last-named year he was sent to Strasbourg where he also filled the posts of preacher and of rector at the episcopal seminary. Having refused the Constitutional oath he was imprisoned and sentenced to death, but the sentence was commuted into a period of deportation. It is not quite clear whether this was put into execution; certain it is that with the fall of Robespierre he regained his liberty and returned with shattered health to the convent at Heidelberg (1796). The Margrave of Baden withholding his consent to Derser's acceptance of the office of confessor to the Bishop of Strasbourg, he was transferred with the whole university to Freiburg (1807), but having given offence by a funeral sermon (1810) had to leave suddenly for Constance. Thence he went to Luzerne as professor and rector of the seminary, but was expelled on account of his rationalistic teaching, and turned in 1815, to Breslau as canon and professor (1815).

Derser's combative character got him into trouble everywhere, and, though believing himself a good Catholic, he was imbued with a distinctly German-rationalistic, anti-Roman spirit, and with the shallow Rationalism of his time, explaining away everything supernatural in Scripture and religion. All his writings are thus tainted, though only one, and that without the name of the author, has been placed on the Index, "Commentarii biblici in . . . Tu es Petrus" (Bonn, 1789). His principal work, the continuation of Dominik de Brentano's German Bible (Frankfort, 1828-1837) received a positive value only through the revision by J. M. A. Schols (1828-1837, 17 vols.). Other works, chiefly Latin, were on the "Necessity of the Knowledge of Oriental Languages for the Study of Scripture" (Cologne, 1873); Hermeneutics of the Old and New Testament (1784 and 1786); Dissertations on the "Destruction of Sodom" (1784); on "St. John Baptist" (1785); on the "Power and Duties of the Pope according to St. Bernardi" (1787); on a number of books and portions of the Old Testament, with translations (partly metrical) and annotations; on the "Temptation of Christ" (1789); on "His Divinity and on Pharisiasm" (Strasbourg, 1791); on the "Foundation of the University of Bonn" (1798); a "German Breviary" (Augsburg, 1793, several times reprinted) and a "German Prayer Book" (Rottenburg, 1806). He also edited A. Frenzel's "Treatise on Matrimony" (Breslau, 1818), in which the indication of his rationalistic spirit is especially palpable.

B. ZIMMERMANN.

Derogation (Lat. derogatio), the partial revocation of a law, as opposed to abrogation or the total abolition of a law. This definition of derogation first introduced by the Roman jurisconsult Modestinus (XVI, 102, De verb. significat. oder was soon adopted in the canonical legislation. Even yet, however, derogation in a loose sense means also abrogation, hence the common saying: Lex posterior derogat priori, i.e. a subsequent law imports the abolition of a previous one. Dispensation differs from derogation principally in the fact that the dispensation is thereby partially revoked, while the former affects the persons bound by the law, from whose obligation some of them are in particular cases totally or partially released. Derogation may be made either by written law or by custom. In the first instance legislation competency is always required for its validity; in the second case there are requisite conditions provided for the introduction of a custom. Again, derogation may be express or direct if made by explicit words; tacit or indirect if effected by a law partially incompatible with the existing one. When done without just motive and by the superior himself it is simply illicit; it is also invalid when done by his delegate. Derogation is often accomplished by special clauses inserted in papal documents, e. g. Non obstantibus etc. (see Rescripts). The absence of such derogatory clauses as are always employed in papal rescripts makes them defective in form. The following clauses are helpful for the interpretation of derogations: (1) Apart from special cases, derogations are to be strictly interpreted, any correction of the law being regularly of an "odious" nature. (2) A simple derogation, that imposes no obligation contrary to that of the existing law, does not require a formal promulgation. (3) No clause expressly or impliedly derogating from the existing law is requisite in making derogations from any kind of general ecclesiastical laws; exception is made only when it is proposed to derogate from the rules of the Apostolic Chancery. (4) Derogations couched in general terms are not upheld; they must be found in specific encyclicals or in special terms of law that a special enactment is derogatory of the previous general one (Generi derogatur per speciem; Reg. 34 in VI) means that a particular law which is a derogation of a general one must always produce its derogatory effect, it being immaterial whether it was issued before the general law or after it. In the latter case the special law is maintained as it was intentionally made by the competent superior; nor in the former instance does it lose its value, because the superior had no intention of abolishing it by a subsequent general law, it being a presumption that superiors are not cognizant of particular laws or customs (see Custom; Law).

S. LUIGI.

De Rossi, Giovanni Battista, a distinguished Christian archaeologist, best known for his work in connection with the Roman catacombs, b. at Rome, 23 February, 1822; d. at Castel Gandolfo on Lake Albano, 20 September, 1894. De Rossi, the modern founder of the science of Christian archaeology, was a well-skilled insecular archaeology, a master of epigraphy, an authority on the ancient and medieval topography of Rome, an excellent historian and a very exercising and many-sided author. In addition to his professional acquaintance with archaeology De Rossi was a thorough knowledge of Greek and Latin literature, of geography, and theology. He was the son of Commendatore Camillo Luigi De Rossi and Marianna Marchese Bruti, his wife, who had two sons, Giovanni and Michele Stefano. Two days after birth Giovanni was baptized in the parish church of Santa Maria sopra Minerva and, according to Roman custom, was confirmed while still young, by Cardinal Francesco Ciampoli, Prefect of the St Peter's Regenda. Up to 1838 De Rossi attended the prepara-
torium department of the well-known Jesuit institution, the Collegio Romano, and through his entire course ranked as its foremost pupil. From 1838 to 1840 he studied philosophy there, and jurisprudence (1840–44) at the Roman University (Sapienza), where he was a disciple of the celebrated professors Villani and Capatti. At the close of his university studies he received his examination, the degree of doctor uritusus juris ad honorem.

De Rossi showed such strong an interest in Christian antiquity that on his eleventh birthday his father wished to give him the great work of Antonio Rosio, "La Roma Sotterranea". In 1844, before he received the doctor’s degree, he made a plan for a systematic and critical collection of all Christian inscriptions. In 1841, notwithstanding the protests of his anxious father, he visited, for the first time, under the guidance of the Jesuit Father Marchi, one of the then much neglected catacombs. After this De Rossi and Marchi pursued their archeological studies together, so that they were known as "the inseparable friends", though the difference in years was great. As soon as he had finished his studies De Rossi was appointed auctor at the Vatican Library and bore this modest but honourable title, in which he took especial pride, all of his life. The liberal institute due to his careful cataloguing of hundreds of Vatican manuscripts. The free use of the treasures of the Vatican Library and archives was a rich source of development for his intellectual powers, especially in the sense of breadth and catholicity of interest. His official duties were so numerous that he was able to devote himself to his private studies without hindrance. In 1838, in company with his parents, he went on his first journey and visited Tuscany, where the innumerable treasures of art completely absorbed his attention. During the summer of 1844–50 he visited the territory of the ancient Hernici in Latium and also Naples; in this way the knowledge he gained of the Roman Sotteranea of the Hernei and the Republic was not purely theoretical. In 1853 he travelled for the first time by himself and went again to Tuscany, also to the Romagna, Lombardy, and Venice. In 1856 he visited Liguria, Piedmont, Switzerland, France, and Belgium; in 1858 he went again to Piedmont, visited the western part of Switzerland, and the district of the Rhine as far as Cologne; from Cologne he went by way of Aachen, Trier, and Frankfort to Bavaria and Austria, and back to Rome by way of Venice and the Romagna. On a second trip to France in 1862 he visited the northern part of the Alps, after which he went to London returned by way of Paris and Switzerland to Rome. In 1864 he went to Naples for a second time, and in 1865 was in France for the third time, visiting particularly the southern French cities. In 1868 he was again in France, and in 1869 and 1870 he went to Tuscany and Umbria in 1872–75 he explored the vicinity of Rome; in 1876 and 1879 he investigated the treasures of Naples and the surrounding country, and in 1878 he made a trip again to Venice and Lombardy.

These journeys of De Rossi are of much importance for the proper appreciation of his scientific labours. Such long and fascinating wanderings are conducive not only to the improvement of his thorough familiarity with manuscript sources, made it possible for him, as undisputed leader and master, to guide the science of Christian archaeology, not unjustly called his science, during several decades, into new paths. These journeys help to explain long and remarkable literary productivity, especially when considered in connexion with his minute investigation of all the monuments, both on the surface and underground, of the city of Rome and the Roman Campagna. These investigations covered the ancient pagan life of Rome, the early Christian period, also the Middle Ages.

De Rossi’s personal relations with the leading scholars of Italy and other countries began in his early youth. When he was between the ages of thirty and thirty-five, Cardinal Mai, Librarian of the Holy Roman Church, found him copying Greek inscriptions in the inscription gallery of the Vatican and became greatly interested in the lad; the acquaintance later ripened into a warm friendship. In 1847 began his connexion as a scholar with the famous epigraphist, Borghesi of San Marino; at a later date Borghesi’s works were issued at the expense of Napoleon III under De Rossi’s direction. A few years after forming the acquaintance of Borghesi a correspondence was begun between De Rossi and the Benedictine Dom Pitra, of Solesmes, later Cardinal, and Librarian of the Holy Roman Church, which ended in a warm friendship with Pitra. This, however, led to an estrangement between Leo XIII and De Rossi. Father Bruzza, the learned Barnabite, was also an intimate friend of De Rossi. Wilhelm Henszen, long director of the German archæological institute at Rome, had daily communication with De Rossi for forty years. When the Berlin Academy of Sciences, urged by Theodor Mommsen, undertook its monumental publication, the "Corpus Inscriptionum Latinarum", it sent a flattering letter to De Rossi to request his co-operation. This led to an intimate friendship with Mommsen. The latter’s numerous collaborateurs on the "Corpus", among them Edwin Bormann, the noted authority on epigraphy, found De Rossi ever ready to assist and guide them. Martigny, the editor of the French edition of the "Bullétin" (see below), as well as Paul Allard, editor of the French edition of "Römische Quartalschrift", were all closely united to De Rossi by the interests of their common work. To these must be added Louis Duchesne, the brilliant director of the Ecole de Rome, and collaborator with De Rossi on the recent edition (1894) of the "Martyrologium Hieronymianum". Léopold Delalle, the celebrated savant, palaeographer, and historian, for many years the head of the Bibliothèque Nationale at Paris, was a man of the same learned tastes as De Rossi; their meeting led to a very active scientific correspondence, and later to a strong attachment, based on their scholarly interests. When, in 1878, following the death of Blant de Saint-Flour, the acquaintance of De Rossi, he was totally ignorant of archeology, but an accidental remark of De Rossi led him to take up this science; eventually he became a distinguished archeologist and the director of the Ecole de Rome.

Among German Catholics De Rossi’s closest friendship as a scholar was with Frans Xavier Kraus. The cool reception he had from Döllinger, whom he once met at Munich, prevented the forming of any lasting relations. From 1884 Joseph Wilpert came into closer relations with De Rossi, who, up to his death, gave this scholar all possible aid, naming him the younger man the greatest friendship. The same may be said of Johann Peter Kirsch, archeologist, patroloigist, and historian. De Rossi also encouraged the labours of Anton de Waal, the founder and editor of the "Römische Quartalschrift", and was a helpful friend to numerous other German scholars. For more than twenty years De Rossi had the pleasure of intimate acquaintance with Giuseppe Gatti, his assistant in various kinds of learned work. Gatti’s fine scholarship enabled De Rossi to carry on daily confidential discussions of learned questions which, after the death of Henszen, had apparently come to an end. Gatti continued De Rossi’s labours in the publication of ancient inscriptions. Henry Stevenson, who died too soon,
Mariano Armellini, an enthusiast in archaeology, Luigi Scaglioni, the numismatist, Orazio Marucchi, a popularizer of Christian archaeology, Cosimo Storniolo, the "Grecian", besides many other Italians, among whom Gennaro Asprono Galante of Naples deserves to be named, found in De Rossi a fatherly friend and counselor. Among his English disciples and friends were especially J. Spencer Northcote and W.R. Brownlow who made known to the English-speaking world the results of De Rossi's scholarly investigations and publications. For years Northcote and Brownlow, and Lewis at Oxford, were in constant correspondence with De Rossi.

Stress is thus laid on the important personal acquaintance and friendships of De Rossi, in order to emphasize what skill he stimulated interest in Christian archeology in all directions. Equally important, perhaps, were the relations established by him in the years 1850-70 during which he conducted many strangers, often of high rank, through the catacombs, or acted as their guide among the monumental ruins of Rome. The friendships thus made often secured for him the loan of monuments and documents which otherwise would never have been sent, even temporarily, to a foreign country, but which were brought to him at Rome by the diplomatic couriers of all countries, not excepting Russia, thus giving him opportunity to examine these objects at his leisure. The immediate superiors of De Rossi in the Vatican Archives treated him always as a friend and an equal, and allowed him entire freedom in all his studies. Pius IX honoured him with a fatherly affection, striking evidence of which was given on more than one occasion. Though the science of Christian archaeology was rather foreign to the mental temper of Leo XIII that pope often showed that, on the proper occasion, he could do justice to De Rossi's great reputation. In Rome De Rossi was exceedingly popular; nearly all the educated citizens, as well as the foreign residents, knew and honoured him. Without some knowledge of these facts De Rossi's learned labours and extraordinary success would be only superficially understood.

By his peculiar training, therefore, De Rossi was well fitted to understand sympathetically the early Christian literature, as well as the rise and development of the Roman State as shown in the monuments it has left. In regard to the Roman State, he never held the somewhat mechanical and no longer undisputed theory of Mommsen. He penetrated also with much understanding the growth of the primitive Christian hierarchy. Amid his books and papers De Rossi pondered over the ruins of the temples and palaces of antiquity; reviewed his own subterranean explorations; followed the early Christians in their thoughts, wishes, hopes, and ideals; contemplated the triumph of the Church, liberated by Constantine the Great and entering triumphantly the basilicas; and gathered from yellowed manuscripts the traditions that a learned multitude of pious and painstaking monks had written concerning the Christian past, and in addition the accounts they have left us of their own times. In this way De Rossi was soon universally acknowledged, even in his lifetime, as the prince of Christian archaeologists.

Owing to his extraordinary literary productivity, which was the natural result of the circumstances outlined above, a distinction must be drawn between his minor and his greater works. The list of his minor writings (monographs) begins in 1849 with the memoir: "Iscrizione onoraria di Nicomaco Flaviano", which appeared in the "Annali dell' Istituto di corrispondenza archeologica" (pp. 283-303).

Giovanni Battista De Rossi

These papers appeared as separate volumes or as learned tributes on anniversary occasions. They vary in length from one to one hundred and thirty-two printed pages.

The titles of his larger and monumental works are as follows: (1) "Inscriptiones Christianae Urbis Romae septimo seculo antiquiores" (vol. I, Rome, 1861; part I of vol. II, Rome, 1888); Giuseppe Gatti is completing this work (cf. "Archivio della R. Società Romana di storia patria", 1887, 606 sqq.; also the same society's "Conferenze per corso di metodologia della storia", part III, Rome, 1889). (2) "La Roma Sotterranea Cristiana" (vol. I with an atlas of forty plates, Rome, 1864; vol. II with an atlas of sixty-two and A, B, C, D plates, Rome, 1867; vol. III with an atlas of fifty-two plates, Rome, 1877). The plates for the fourth volume were already printed in part when De Rossi died (see "Bullettino di archeologia cristiana", 1864, I, 1864, 63-64; 1867, II, 89-90; 1876, III, 165-57). (3) "Bullettino di archeologia cristiana"; the first series, in quarto, appeared in monthly numbers (1863-69), with illustrations in the text and coloured plates; it consisted of one hundred and twenty-six monographs and communications. These, in octavo, appeared quarterly (1870-75), with twelve lithographic plates in each volume, and contained al-
DEBBY

DEBBY

Together fifty-three papers. The third series, also in octavo, appeared (1876—81), in quarterly numbers, each volume having twelve lithographic plates; the papers numbered altogether fifty-one. The fourth series, in octavo, appeared in yearly volumes (1882—89), each volume having twelve lithographic plates; the six volumes contain altogether forty-three papers. The fifth series, in octavo, appeared annually (1890—94), with zincotype plates and illustrations; the text; the last number was issued in 1894 by Giuseppe Gatti. The final volume of each series contained a full index which De Rossi prepared with the greatest care. (4) “Musaei delle chiese di Roma anteriori al secolo XV (Rome, 1872), an imperial folio consisting of chronographic plates and an index in Latin, French, and Italian. The work closed with the twenty-fifth number, issued after De Rossi's death. (5) “Codicum latinorum bibliothecae Vaticane”; vol. X, Pt. I, Nos. 7245—8066; Pt. II, Nos. 8067—8471; vol. XI, Nos. 8472—9019; vol. XII, Nos. 9020—9445; vol. XIII, Nos. 9446—9849. The indexes to vols. XI, XII, XIII, “Codicum lat. Vat.” are: Pt. I, index of authors; Pt. II, index of places, of things, and of persons. These manuscript indexes are used as reference books in the Vatican Library. (6) “Inscriptiones Urbis Romae latinae.” Collacurier Guilielmus Henzen et Johannes Barta. Ed. 9 vols. (Berlin, 1876—82). This constitutes the sixth volume of the “Corpus Inscriptionum Latinarum consilii et auctoritate academie litterarum regiae Borussiae editum.” (Berlin). The invitation to De Rossi to act as one of the leading editors was given 22 January, 1854. (7) The five annual reports (1854—58), concerning the preparatory work for the above-mentioned “Corpus Inscriptionum”, which appeared in the monthly bulletins of the Royal Academy of Science of Berlin. The other annual reports have not been published; this is also the case with the synoptic and epigraphic manuscripts in the libraries of Italy, France, Germany, Switzerland, and Austria. The last named summaries are of the greatest importance. (8) “Œuvres complètes de Bartalomeo Borghesi” (9 vols., Paris, 1852—84). Napoleon III entrusted the task of collecting and editing the works and letters of the celebrated Borghesi to a committee of French, German, and Italian scholars, among whom De Rossi may be said to have been the most important and assiduous. (9) “Martyriolography Hieronymianum”, prepared and edited in collaboration with Louis Duchesne in vol. I, November, of the Acta SS. (Brussels, 1894). This edition is a sequel to most of the work against it by German scholars are of little importance.

The works briefly described above give some conception of the learned labours De Rossi carried on during his life. They are proofs of the genius with which he grasped a subject, of his extraordinary industry, his indefatigable toil, the method with which he united the best of modern criticism, the unswerving determination with which he unearthed obscure points; they also show the triumphs with which his toils were so richly crowned. The estimation in which his work was held is proved by the two international celebrations in 1882 and 1892 upon his sixtieth and seventieth birthdays.

De Rossi’s father died in 1850, and his mother in 1861. In the latter year he married Costanza, daughter of Count Pietro Bruno di San Giorgio Tornafort of Pombon, by whom he had two daughters; Marianna, the elder, died in 1864. The second, Natalia, born 1866, married Marchese Filippo Ferrante De Rossi. De Rossi’s wife, Michele de Rossi, was a zealous assistant in the exploration of the catacombs; the geological questions connected with these subterranean places of burial and all kindred subjects are treated by Michele in separate papers in “Roma Sotterranea”. He also prepared the very accurate plans of the catacombs. De Rossi was a portly man of fine appearance, somewhat over the middle height. The full, well-proportioned face was adorned by a grayish beard which left the chin free. The clear, calm eyes lost much of their strength, so that he could not always supervise properly the work of his painters and draughtsmen in the catacombs. This explains the numerous inaccurate illustrations in his works which Wilpert has corrected. The smoothly brushed hair was a greater protection to the eyes than to the face. In walking De Rossi bent slightly forward, which mannerism gave to his gait an appearance of much deliberateness. On the street he was generally busy with a book or pamphlet. De Rossi heard Mass every day and went to Communion nearly every week. Generally unobtrusive, he was a true scholar and a citizen. Every evening he gathered all the members of his household about him for the recitation of the rosary. Although he very often received tempting offers to desert the cause of the Holy See and join the party of United Italy, he rejected all such proposals, even when they came from the pagan church of Castel Gandolfo, in the summer of 1894 Leo XIII offered him the use of an apartment in the papal palace at Castel Gandolfo, where he peacefully passed away, a true son of the Church. He was buried in the Abbey of Verano (general cemetery) at Rome.

BauMGarten, Giovanni Battista De Rossi, jubilee monograph (Cologne, 1892), enlarged It. trans, by Bonavenia (Rome, 1894); Marucchi, Giovanni Battista De Rossi (Rome, 1903); Contraelevenses. (St. Louis, Missouri, 1905), II, 1163; Kraus, Essays (Stuttgart, 1896), I; BaumGarten, in Koinische Volksbrauch, Eine Kapelle, Mutter der Baptismus in Am. Cath. Qua. Rev. (Philadelphia, 1896); of Dissertazioni della Pont, Accad. Romana di Arch. (Rome, 1895). Ser. II, Vol. VI, Fasc. IV, 1—85; Gossow-CoUKEN and Angelina, A Giovanni Battista De Rossi, at the time of the celebration of his seventieth birthday, 17 October, 1897, La Settimana Festiva (Rome, 1897). Information concerning his writings and the funeral celebrations of 1892 and 1898 are contained in: Albo dei socletari per la medaglia d'oro in onore del Comandante Gis. Batt. De Rossi e relazione della solennità nel prospettiva in Letterario 11 Dicembre 1892 (Rome, 1892); Albo dei soci e dei sostenitori del Comm. G. B. De Rossi in relazione dell'inaugurazione italiana e stranieria in Leali e Ottobre 29 e 35 April 1898 e relazione della solennità nel prospettiva del siestuame anno del principe della sacra architettura (Rome, 1892). The two last-named publications printed privately give the best account of the celebrations raised in his honour. De Rossi's position is of the greatest importance in the international world of letters.

CoELLINO, La dedica del busto di Giovanni Battista De Rossi nella Pont. Accademia Rom. di Architettura (Rome, 1897), Dissertazioni della Pont. Acc. (Rome, 1897). Ser. II, Vol. VI. De Rossi's library came, by inheritance, to the family of his brother which eventually offered it for sale; the first catalogues of it were: Rivero biblioteca appartonente al Comm. G. B. De Rossi (Rome 1889); Rar (a second, by Rossatori) of Frankfort ; bought it and issued a scientifically arranged catalogue. Accounts of De Rossi are to be found in all general encyclopedias; the writers of the obituaries which appeared after his death were seldom versed in Christian archeology.

Paul Maria BaumGarten.

DEERRY (DEREL), Diocese of (Derriens), includes nearly all the County Derry, part of Donegal, and a large portion of Tyrone, Ireland; it is a suffragan of Armagh. The diocese owes its origin to the monastic establishment founded there by St. Columba between 546 and 562. But there does not seem to have been a bishop resident at Derry before Gervase O'Cervell (c. 1230). The entry in the Annals of the Four Masters for 1084 is of importance and shows that De Bere was Bishop of Derry in 1084. The present Diocese of Derry was formed by a union of the old See of Rathlure and Ardstraw founded by St. Eu-
gene, at what time cannot be accurately determined, and it was fully defined about the middle of the thirteenth century. The ancient monastery of Derry was one of the most important in Ireland, and eventually the chief house of the Columban monks. Gilla MacLeag (Gelasius) who succeeded St. Malachy as Archbishop of Armagh (1136) had been abbot of the monastery.

After the formation of the diocese in the thirteenth century the succession of bishops was uninterrupted till the Reformation period. Redmond O’Gallagher, appointed bishop in 1569, was one of the leading ecclesiastics in the province of Armagh at that period. He was appointed Administrator of Armagh during the absence of the primate in 1575, and according to a State paper (1592) he seems to have been the most active upholder of the Catholic Church in Ulster. He was killed by a body of soldiers in 1601. From 1601 till have been completely boycotted by the Catholic population.

Derry, School of.—This was the first foundation of St. Columba, the great Apostle of Scotland, and one of the three patron saints of Ireland. When a terrible plague, known as the Bubée Comnii or the Yellow Plague, dispersed the monks of the monastery of Glenfin in the year 544, Columba, a distinguished and virtuous man, turned his footsteps towards his native territory, and, full of the spirit of monasticism, bethought himself of founding his first monastery there, amongst his own kith and kin. An excellent site of 200 acres was offered to him by his princely cousin, Aedh, son of Ainnmire, and the necessary permission of his master, St. Molbhá Creainnech, given with his dying breath, was immediately forthcoming. And so, a few miles from Alloch, “the stone-hill fortress of the Hy-Nell”, and close beside a beautiful oak grove which gave the place its name—Doire Colgaigh, or the oak grove of Colgaigh—Columba built his church and several cells for his first monks and disciples. This, according to the “Annals of Ulster”, was in the year 545 (correctly, 546). Students both clerical and lay flocked hither from all sides attracted by the immediate fame of the new school, and the character of its founder. For several years Columba himself guided its destinies, and then, in pursuance of his apostolic vocation, he left to establish and govern the second of his great schools amid the oak woods of Durrow in the King’s County. But whether in Derry or away from it, in Durrow or Kells, or in distant Iona, the saint’s heart was ever with his first foundation, and often in the tenderest poetry he poured out his love for “My Derry, mine own little grove”, with its “crowds of white angels from one end to the other”.

For centuries after Columba’s death the School of Derry continued to flourish, and in the twelfth century, it was said to be the most important of the Columban foundations in Ireland. To this period, the most glorious of its history, belong the names of several members of the illustrious family of Brolchain—saints, scholars, and builders—as well as that of the illustrious Gelasius, successor of St. Malachy in the primacy of Ireland. Like all similar institutions it suffered severely from the ravages of the Danes. It survived these, to disappear completely, however, in the general devastation of monasteries that took place in Ireland in the sixteenth century. (See COLUMBA, SAINT.)

Dervish. See MOHAMMEDANISM.

Desains, Paul-Quentin, physicist, b. at St-Quentin, France, 12 July, 1817; d. at Paris, 3 May, 1885. He made his literary studies at the Collège des Bons-Enfants in his native town and then entered the Lycée Louis-le-Grand in Paris. Here he distinguished himself, taking the first prize in physics. In 1835 he entered the science section of the École Normale where his brother Édouard had preceded him. He made the acquaintance there of La Provostaye who was at the time a surveillant and who became his lifelong friend and his associate in his researches. After completing his course, he accepted a professorship in 1839 at Caen, and in 1844 he was appointed to Paris where he received similar appointments, first at the Lycée St-Louis and later at the Lycée Condorcet, where he succeeded La Provostaye who was forced to retire on account of ill-health. His growing reputa-
and founded a school of clinical surgery which attracted students from all sides. In 1793 he was imprisoned by the revolutionary authorities but after three days was liberated through the influence of his patients. He died from pneumonia, the result of exposure while attending the Dauphin in the Temple. He wrote a treatise on surgical operations in three volumes, a treatise on anatomy, a book called by Xavier Bichat, was published after his death and was translated into English in 1805 going through three American editions. Descartes's contributions to surgery are contained in the "Journal de Chirurgie" published by himself and pupils.

Descartes, René (Renatus Cartesius), philosopher and scientist, b. at La Haye, France, 31 March, 1596; d. at Stockholm, Sweden, 11 Feb., 1650. He studied at the Jesuit college of La Flèche, one of the most famous schools of the time. In 1613 he went to Paris, where he formed a lasting friendship with Father Mersenne, O. F. M., and made the acquaintance of the mathematician Mydorge. He afterwards enlisted in the service of the Elector Palatine and of Maurice of Nassau, Prince of Orange, in Bavaria. On 10 November, 1619, he felt a strong impulse to set aside the prejudices of his childhood and of his environment, and to devote his life to the restoration of human knowledge, which was then in a state of decadence; and for him this mission took on quite a mystical character. He had a dream which he interpreted as a revelation, and he became convinced that "it was the Spirit of Truth that willed to open for him all the treasures of knowledge". After much journeying in Brittany, Poitou, Switzerland, and Italy, he returned to Paris in 1625. There he remained for two years during which it was his fortune to meet Cardinal Bérulle who encouraged him in his scientific vocation. But as Paris offered neither the peace nor the independence his work demanded, he set out in 1629 for Holland, and there in the midst of a commercial people he enjoyed the advantage of living as quietly as in a desert. From this retreat he gave to the world his "Discours de la méthode" (1637), "Méditations" (1641), "Principes" (1644), and "Passions" (1649). "Le Monde" had been completed in 1633, but the condemnation of Galileo frightened Descartes who preferred to avoid all collision with ecclesiastical authority. He deferred the publication of this clever book. His parents, who were hoping for a career of eventual bringing it out. In 1649, yielding to the entreaties of Queen Christina, he went to Sweden, and died at Stockholm of inflammation of the lungs.

Descartes' work is important rather because of its quality than of its quantity. Let us see first of all to which his method is new. It was not a bold discovery that he had already done before him, that there is no question on which men agree. "There is nothing", he says, "so evident or so certain that it may not be controverted. Whence then this widespread and deep-rooted anarchy? From the fact that our inquiries are haphazard (Règles pour la direction de l'esprit, 4th Règle). The first problem, then, is to discover a scientific method. How is success in this difficult task to be assured? To begin with, we must cease to rely on authority; and for two principal reasons. "In whom can we trust?" when "there is hardly a statement made by one man, of which the opposite is loudly supported by some others. "If all were agreed, the knowledge of their teaching would not suffice us." "Had we by rote all the arguments of Plato and Aristotle, we should not be any the more philosophers unless we were able to bring to bear on any given question a solid judgment of our own. We should have indeed learned history but not mastered a science" (3rd Règle). Philosophy presupposes the
understanding of problems—and consequently its method cannot be external, it must be essentially immanent. The true method is to seek for reasonable evidence and the norm of such evidence is to be found in the science of mathematics (Discours de la méthode, 2rd partie). "It is not that arithmetic and geometry are the only sciences to be learned, but that he who impresses on his mind the truth of the axiom of the sciences, and the four postulates of the quadrature of the circle, must, no matter how little he is trained in the science, delay over any object about which he cannot have a certainty equal to that given by arithmetical and geometrical demonstrations" (2nd Règle).

Is everything, then, capable of being known in this way, and consequently can human knowledge become truly perfect? Each proposition is an individual act of Deduction, but the mind is so over and over again; it is his controlling idea; and he endeavours to prove it both from the nature of our thought and from the universal connexion of things. The mind is equally intelligent however diverse the objects it considers; and those objects because of their perfect enchantment are always equally intelligible. There is, therefore, no question "so far removed from us as to be beyond our reach or so deeply hidden that we cannot discover it", provided only that we persevere and follow the right method (Disc. de la méth. 2nd partie; 4th Règle). Such is the rationalism of Descartes, surprising even to the Pan-Helicans to whom the name of "the Infinite" three-fourths of reality remains for ever unknowable.

How then is this mathematical evidence to be obtained. Two methods, dangerous at once and sterile, must be avoided. We cannot build on the experience of our senses; "for they are often deceptive", and consequently need a control which they have not in themselves. Bacon was misled on this point (2nd Règle). Neither can we adopt the syllogistic method; for this is not, as was formerly thought, a means of discovery. It is simply a process in which, two terms being given, we find by means of a third that the fourth is contained in the third, and so on, that they have some common characteristic. Now if they have this common characteristic it is useless to search for it with any light other than their own. Let them pass under direct scrutiny; let their natures be studied, and in time the common trait will reveal itself. This is the mind's straightforward discovery, as its hidden ideas from the idea to another without the aid of a third. The syllogism is of no use until the discovery has been made; it simply serves the purpose of exposition (14th Règle). There are but two ways leading to mathematical evidence: intuition and deduction (3rd Règle). Intuition is by intuition forming an idea so clear and distinct that it admits of no doubt: or, what amounts to the same thing, it is the clear conception of a sound and attentive mind, the product of unaided reason" (3rd Règle). Intuition is not, therefore, perception by the senses—it is an act of the understanding brought to bear on an idea. The senses do not supply the object but merely the occasion. A movement, for instance, awakens in us the idea of motion, and it is that idea we must regard as the object of intuition. In very simple matters intuition acts quickly; thus "everyone can intuitively that he exists; that a triangle is terminated by three angles, neither more nor less, and that a globe has but one surface" (3rd Règle; 12th Règle; Rèp. aux deux objections). In the case of objects more or less complex, intuition proceeds by way of analysis. Since it deals with ideas, and ideas are but one aspect of thought, everything must be reduced to clear and distinct ideas to ultimate and indissoluble parts. These ultimate parts must be inspected one after another, until the object is exhausted, "by passing from those that are easily known to those that are less easily known" (6th Règle). In the long run everything will be spread out in full light. Deduction is the process in which by a continuous movement of thought we draw from a thing that we certainly know the conclusions that of necessity flow from it. This procedure may be carried on in two ways. "If, for instance, after various calculations I discover the relation between the quantities A and B, between B and C, between C and D, and lastly between D and E, I do not yet know the relation between A and E", but I can infer it by retracting the steps of the process, in the direction of the deduction (7th Règle). There is a second form in which, the connecting links of the series being too numerous to enter the mental field of vision all at once, we are content to draw conclusions from the general impression we have of the series (7th Règle). Descartes' method is intuitive, as well as by intuition by bringing in memory as a factor. And this is noteworthy in view of the important rôle that memory plays in the Cartesian explanation of certitude, and the desperate effort he makes to defend this procedure. From the conspicuous place that reason holds in the Cartesian method, one might infer that there was no room for experience. Nothing could be less true. For Descartes, as for Bacon, the one purpose of science is utility. He also expects from it a continual betterment of the conditions of human life, and his hopes in that direction go very far, as, for instance, when he expects that the love of truth will procure us the boon of immortality (Disc. de la méth. 6th partie). And as he who wills the end wills the means also, Descartes accepts in its entirety the experimental part of the Baconian method (letter to Mersenne, 1631), and acts accordingly. He put himself in touch with all the experimental work of his day (letter, April, 1632), urged others to take up research (letter to Mersenne, 1632), and carried on experiments of his own that covered a wide range of subjects: the weight of air (letter, 2 June, 1631), the laws of sound and light (letter, 1633); the essential differences between oils, spirits, earth, water, fire, air, water, and salt. He dissected the heads of various animals to show the workings of memory and imagination (cf. letters to Mersenne, 1633; April, 1637; 13 November, 1639; 4 January, 1643, ed. Cousin, Paris, 1826). There was hardly a fact that escaped this apostle of Reason nor anything into whose sphere he did not inquire; even the "Chasse de Pan" he followed with his accustomed ardour.

But if the mind, moving as it does in the realm of intelligible objects, have a power of intuition sufficient to master them all, why these researches? Are they not more than a help in the discovery of truth? But go on to the end, and it must assuredly attain that exhaustive knowledge which is the goal of investigation, but such is not the case. Experiment helps reasoning in more ways than one. It supplies the fact that calls forth in our intelligence the idea of the problem to be solved. That idea once aroused, the intelligence takes hold of it, and may produce many others, according to the nature of which experience and reason play reciprocal, yet different, roles. The idea of a problem may be so simple as to allow a mathematical deduction of the properties of the object in question, and nothing more. In such a case experiment is called in only by way of illustration, as happens, for instance, in the study of the laws of motion. (Cf. Principes, 2nd partie.) But again the idea of a problem may be so complex as to suggest various hypotheses, since principles as a rule are so fruitful that we can draw from them more than we see in the world around us. We are compelled to choose from among the hypotheses presented by the intellect that which corresponds most nearly to the facts: and experiment is our only resource. It acts as a sort of guide to rational deduction. It sets up, so to say, a number of sign-posts which point out, at the cross-roads of logic, the right direction to the world of facts. Finally, we may be confronted with two or more hypotheses.
equally applicable to the known facts; observations must then be multiplied until we discover some peculiarity which determines our choice; and thus experiment becomes a real means of verification (Princ., 4e partie). In every case experiment is, as it were, the matter, while calculation becomes the form. In the physical world there is nothing but motion and extension, nothing but quantity. Everything can be reduced to numerical proportions, and this reduction is the basis of science. To understand consciousness, we must know it in terms of mathematics. When this final stage is reached, intelligence and experience unite in closest bonds: the intellect setting its seal on experience and endowing it with intelligibility.

Such is the method of Descartes. There remains to be considered the question of the provisional doubt as the only means of distinguishing the true from the false in the labyrinth of contradictory opinions which are held in the schools and in the world at large. We must needs imitate those builders who, in order to erect a lofty structure, begin by digging deep so that the foundation may be laid on the level and solid ground (Remarques sur les 7e objections, ed. Charpentier, Paris; cf. Disc. de la méthode, 3e partie). And this provisional doubt goes very deep indeed. We may reject the evidence of the senses for they are deceptive, and this is the part of prudence better to trust absolutely what has once been cogitated upon.” (1re Méditation). We may in fact question whether there be “any earth or sky or other extended body”; for, supposing that nothing of the sort exist, I can still have the impression of their existence as I had before; this is plain from the phenomena of madness and dreams. What is more, the very simplest and clearest truths are not free from suspicion. “How do I know that God has not so arranged it that I am deceived every time I add two and three together, or number the sides of a square, or form some judgment still more simple, if indeed anything more simple can be imagined?” (2e Méditation). What then remains intact? One thing only, the fact of my thought itself. But if I think it is because I exist, for from the one to the other of these terms we pass by simple inspection—Cogito, ergo sum: Behold the long-sound rock on which the edifice of knowledge must be built (Disc. de la méthode, 4e partie). But how is it to be done? How are we to make our way out of the abyss into which we have descended? By analysing the basic fact, i.e. the content of our thought. I observe that, since my thought gropes amid doubt, I must be imperfect; and this idea calls forth this other, viz. of a being that is no simpler and therefore is perfect and infinite (Disc. de la méthode, 4e partie). Let us consider this other idea. It must necessarily include existence, otherwise something would be wanting to it; it would not be perfect or infinite. Therefore, God exists, and “I know no less clearly and distinctly that an actual and eternal existence belongs to His nature than I know that I exist.” I don’t know how the idea of figure or number belongs truly to the nature of that figure or number” (Disc. de la méthode, 4e partie; 5e Médité.; Rép. aux premières obj.).

God, therefore, is known to us at the outset, the moment we take the trouble to look into the nature of our own minds; and this is enough to eliminate the hypothesis of an evil genius that would take pleasure in deceiving us; it is enough also to secure the validity of all our deductions, whatever be their length, for “I recognize that it is impossible that He should ever deceive me, since in all fraud and deceit there is a certain imperfection.” (4e Médité.) Otherwise how would this idea of God be anything more than an idle fancy? It has immensity; it has infinity, and therefore it must of itself be capable of existing. Spinoza, and after him Hegel, will teach that the possible infolds, as it were, an essential tendency to existence, and that this tendency is greater in proportion as the possible is perfect. It is on this principle that they will build their vast synthetic systems. Descartes anticipates them and when closest pressed he just as do the later philosophers. (Rép. aux premières objections.) It is a fact worth noting with reference to the genesis of modern systems.

The presence in us of this idea of God must also be explained; and here we find a new ray of light. The objective reality must be understood as the condition of our mental being that is beyond the control of my will? But such explanations are of no avail when we try to account for the idea of a being infinite and perfect. I myself am limited, finite; and from the finite, turn it about as we may, we can never derive the infinite; the lesser never gives us the greater (5e Médité., cf. Princ., 7e partie). Considered from any angle, every point of view, the idea of God enlightens us as to His existence. Whatever the manner of our questioning, it gives us always from the depth of its fulness the one reply, Ego sum qui sum. Since then the veracity of God Himself guarantees our faculties in their natural exercise, we may go forward in our inquiry, and the first question that meets us concerns the subject in which the process of thought takes place, i.e. the soul. Understanding, conceiving, doubting, affirming, denying, willing, refusing, imagining, feeling, desiring—these are the activities of what I call my soul. Now all these activities have one common quality: they cannot take place without thought or perception, without consciousness or knowledge. Thought then is the essential attribute of the soul. The soul is “a thing that thinks” (2e Médité.; Princ., 1e partie), and it is nothing else. There is no substratum underlying and supporting its various states; its whole being issues in each of its activities; thought and soul are equivalent (12e Règle).

Is thought, then, always in some mode of activity? Descartes leans to the belief that it is. “I exist”, he says, “but for how long? Just as long as I am thinking, for perhaps it will be a Delphic Oracle which is to tell me if I am to cease to exist at the same time altogether cease to be.” (2e Médité.) It is only with reluctance and under the pressure of objections that he concedes to the soul a simple potentia or power of thinking (5e Objet); and, as may be easily seen, the concession is quite illogical. Thought, though itself a necessary process, takes on different forms; it begins with confused ideas or perceptions which require the co-operation of the body; such are the feelings of pleasure and pain, sensations, imagination, and local memory. Then the soul has clear and distinct ideas, which it begets and develops within itself as immanent activities. Under this head come the ideas of anything that has existence, extension, figure, motion, thought, intelligence, and will (6e Médité.; Princ., 1e). These clear and distinct notions constitute themselves the object of the understanding, and one may say that they are all involved in the idea of perfect being. Whether I understand, or pass judgment, or reason, it is always that idea which I perceive; and my understanding could have no other object, seeing that its sphere of action is always the infinite, the eternal and the necessary. To advance in knowledge is to progress in the knowledge of God Himself. (Rép. aux premières obj.) But thought has another dominant form, viz. freedom. For Descartes this function of the mind is a fact “of which reason can never convince us”, but one which “we experience in ourselves”, and this fact is so evident “that it may be considered one of the most generally known ideas” (Rép.)
were to prove fruitful. In his view the matter of the earth and of the stars was the same; and spectrum analysis subsequently proved that he was correct. He held that the primordial state of the sun and planets was nebulous, that under the influence of a cooling process the heavenly bodies formed their crusts, and to changes in these crusts is due the brilliance of the stars and the emergence of the continents on our earth. (Cf. Traité du Monde; Princ, 3rd and 4th p.) It does not follow that the world is self-sufficient; but the finality, of which so much is said, leads to nothing. God gave matter a first impulse and the rest followed in the course and through this it influences the external world. Nevertheless, the sum total of motion in the world is always constant; for while our wills may change the direction of movement they do not affect its quantity. (Letter to Regius.)

Confronting the soul is the external world: but the soul does not see it as it really is. Heat, odour, taste, light, sound, resistance, weight are qualities which we attribute to bodies but which are really in ourselves, since we only conceive them in relation to ourselves. In reality there is nothing in the physical world but motion and extension. Motion imitates as far as possible the immutability of God who is its first cause; hence its principal laws, viz. that the sum of motion in the world is always constant; that a body will continue in its actual state unless disturbed by some other body outside itself; that "once a body is in motion we have no reason for thinking its present velocity will ever cease provided it impinges on no other body which would slacken or destroy its motion". All movement is primarily rectilinear (on this point Aristotle was mistaken). When two bodies moving in different directions collide, a change takes place in their directions, but "such change is always the least possible". When two moving bodies impinge on each other, one cannot transmit an impulse to the other without losing what it transmits (Princ, 2nd partie). Extension is not infinite in duration but it is infinite in space. "It seems to me that one cannot prove or even conceive that there are limits to the matter of which the world is composed, for I find it is composed of nothing but extension in length, breadth, and depth. So that whatever possesses these three dimensions is a portion of such matter?": and however far back in imagination we push the limits of space we still find these three dimensions; they are bounded by no limits (letter to Chanut; letter to Marus). Extension is therefore one of the most obvious from end to end; and this proves at the same time that there is no such thing as a vacuum, either in bodies or between them. Moreover, extension is divisible ad infinitum, since the divided particles, however small, are still extended. It is everywhere homogeneous, since it is made up of spatially only, and these of themselves give rise to no qualitative differences. And this brilliant idea suggested to Descartes many hypotheses that

Rene Descartes—Franz Hals

forms them into passions (Pass., 1st p., art. 31). And though our organism thus contains the cause of our passions, it is not their subject either entirely or partially; on this point also Aristotle was mistaken. There are perceptions arising from the body and localising themselves in one or other portion of it—such as hunger, thirst, pain—but the passions are different. They originate in the body, but belong to the soul alone; they are purely psychological facts (Passions, 1st p., art. 25). There are as many passions as there are ways in which objects capable of affecting our senses may be hurtful or profitable to us. The primary passions to which all others may be reduced are the six following: admiration or surprise, produced by an object as to which we are as yet ignorant whether it is useful or hurtful; love and hate, caused by the impression produced on our organs of sense by objects which are already known to us as beneficial or noxious, which is but the love or the hate we bear an object considered as future: joy and sadness, which result from the presence of an object that is loved or hated (Passions, 2nd partie, art. 52). Perhaps on the whole St. Thomas and Bossuet will be found to have surpassed Descartes, by reducing all the passions to love. In the Cartesian teaching the passions are good in themselves, but they must be kept in submission to the
Deschamps, Nicolas, polemical writer, born at Villefranche (Rhône), France, 1797; died at Aix-en-Provence, 1872. He entered the Society of Jesus in 1826; taught literature and rhetoric in several colleges and wrote extensively. Apart from a few didactic and devotional books like "Cours élémentaires de littérature" (Avignon, 1837), his works are largely polemical and bear on all the burning questions of his day, the monopoly of the University of France, the State faculties of theology, the Organic Articles, the liberty of association, Communism, Paganism in education, etc. The most important is undoubtedly "Les Sociétés secrètes," published after the author's death (Avignon, 1874–1876), re-edited and brought up to date by Claudio Janet (Paris, 1880 and 1881). Deschamps sees in European Freemasonry, whose origin he traces back to Manichæism, a baneful force working, under the cover of philanthropy, not only against religion but also against the sacred rights of man and morals. If his conclusions are severe, they are not advanced at random but are supported by numerous facts and grave authorities.

J. F. SOLLIER.

Desecration, the loss of that peculiar quality of sacredness, which inheres in places and things in virtue of the constitutive blessing of the Church. When material objects are destined for purposes of Divine worship they are set aside with a view to this end by the solemn form of consecration or by the simpler formula of a blessing, so that they assume a sacred and inviolable character which renders unlawful their employment for profane uses. Now when they lose this stamp or character of sacredness they are said to become desecrated. As a general principle it may be set down that places and things, which have been either consecrated or blessed, retain their consecration and blessing respectively, only morally, speaking the same as they were in the beginning, and consequently, so long as they continue fit to serve the purposes for which they were originally destined. The opinion was formerly held by some that sacred utensils, such as chalices, which are anointed with holy oil, should, before being sent to a mechanic for repairs be deprived of their sacred character by a special ceremony of desecration. This view was condemned by the Congregation of Rites (n. 2620, ed. 1900). Such a ceremony is entirely superfluous. For if a sacred utensil becomes broken and unfit for use it thereby loses its consecration; while if it is still fit for use but requires regilding, no ceremony could desecrate it. In this instance permission, express or implied, should be obtained from the ordinary to hand it over to a mechanic for repairs (cf. Gardellini, Commentary on Decrees of C. S. R., 222). Should consecrated vessels become altogether unfit for altar use, they may be melted down and devoted to profane uses. But vestments, altar cloths and linens must, in similar circumstances, be destroyed, because they retain the form under which they were originally blessed (cf. Gardellini, loc. cit.).

The word desecration is commonly used in regard to churches, altars, chalices, etc. (1) A church loses its consecration although by the building which is destroyed either wholly or in greater part, or when an addition is made to it of larger extent than the original edifice. It does not become desecrated: (a) if a portion of the walls and roof falls in; provided the main
Desert (in the Bible).—The Hebrew words translated in the Douay Version of the Bible by "desert," "wilderness," and usually rendered by the Vulgate desertum, "solitude," or occasionally eremus, have not the same technical significance as the first meaning of the English word "desert." The word wilderness, which is more frequently used than desert of the region of the Exodus, more nearly approaches the meaning of the Hebrew, though not quite expressing it. When we speak of the desert of the Bible our thoughts are naturally borne to such places as the Sahara, a great sandy waste, impossible to vegetation, impossible as a dwelling-place for men, and where no human being is found except when hurrying through as quickly as he can. No such idea is attached to the Hebrew words for desert. Four words are chiefly used in Hebrew to express the idea: (1) נָּוַג (middār), the more general word. It is from the root נָּוָג (middār), "to lead" (cattle to pasture); cf. German Treiben from treiben). Hence middār among its other meanings has that of tracts of pastureage for flocks. So Joel, ii, 22: "The beautiful places of the wilderness are sprung, or literally: "The pastures of the wilderness shew forth." So, too, the land was essentially uninhabited. Thus (Isa, xiii, 11) we read: "Let the desert (middār) and the cities thereof be exalted: Cedar shall dwell in houses," or rather, "the villages that Cedar doth inhabit." Not that there were towns in the desert occupied by a stable population. The inhabitants were mostly nomads. For the desert was not a place regularly cultivated like the fields and gardens of ordinary civilized districts. Rather, it was a region in which was to be found pastureage, not rich, but sufficient for sheep and goats, and more abundant after the rainy season. The desert, too, was looked upon as the abode of wild beasts (Gen., xxv, 13), and jackals (Mal., i, 3), etc. It was not fertilized by streams of water, but springs were to be found there (Gen., xvi, 7), and in places cisterns to collect the rainfall. Middār is the word generally used in the Pentateuch for the desert of the Exodus; but of the regions of the Exodus various districts are distinguished as the desert of Sin (Ex., xvi, 1), the desert of Sinai (Ex., xix, 1), the desert of Shur (Ex., xv, 22), the desert of Sin (zīn) (Num., xiii, 22), etc. Moreover, it is used of other districts, as in Western Palestine of the wilderness of Juda (Judges, i, 16), and again in the east of the desert of Moab (Deut., i, 8). (2) נְבֵר (nāḇer), derived from the root נָּבַר (nāḇar), "to be arid," is another word for desert, which seems to express more than one of its natural characteristics. The word means a steppe, a desert plain; and it conveys the idea of a stretch of country, arid, unproductive, and desolate. In poetic passages it is used in parallelism with the word middār. Thus Is., xxxv, 1: "The land that was desolate [middār] and dehiscible shall be grieved, and he that was desolate [middār] shall rejoice"; cf. also Jer., xvii, 6, etc. Although the Septuagint frequently renders the word by ἄρδα, it often uses other translations, as γῆ δυστέρα and ὅρα. The Vulgate employs the words solitudo, desertum. Very frequently the word ἄρδα, has a mere geographical sense, and its reference to the desert is from the impression extending from the base of Mount Hermon, through the Jordan Valley and the Dead Sea, to the Gulf of Akabah. So, too, there are the Arboth Moab (Num., xxii, 1), the Arboth Jericho (Jos., iv, 13), etc., referring to the desolate districts connected with these plastered or remote. (3) נְבֵר (nāḇer), derived from the root נָּבַר (nāḇar), "to lie waste," is translated in the Septuagint by the words ἄρδα, ἄρδα, ἄρδα. In the Vulgate are found the renderings ruine, solitudo, desolation. A strange translation occurs in Ps., vi, 7. The word in the Greek is ἄρδα, and in the Vulgate domicilium; and it is the passage in which the word occurs in rendered in the Douay version: "I am like a night raven in the house." St. Jerome, however, in his translation of the Psalm direct from the Hebrew employs the word solitatum, which seems more correct: "I am like a night raven of the wastes." The lexicon of Gesenius gives another translation of ἄρδα, as a second meaning, "a desolation," "ruins." A combination of these senses seems to have been the reason why in the poetical books the word is used of the wilderness. The word conveys the idea of ruin or desolation caused by hostile hands, as when God says to Jerusalem (Ex., v, 14): "I will make thee desolate"; or when the Psalmist, referring to the punishment inflicted by Jehovah, says (Ps., ix, 7): "The enemy are consumed, left desolate for ever." (4) יִשְׁחֵם (jeshimmon), derived from יָשָׁה, יָשָׁה, "to be desolate." It was looked upon as a place without water, thus Is., xliii, 19: "Behold I shall set up streams in the desert [jeshimmon]." It was a place, a wilderness. In poetical passages it is used as a parallel to middār, cf. Deut., xxxii, 10; Ps., lxxviii, 40 (Heb.): "How often did ye provoke him in the wilderness [middār], and grieve him in the desert [jeshimmon]." Frequently it was used in connection with the land of the Exodus. Besides such uses of the word, it seems when used with the article often to have assumed the force of a proper name. In such cases it refers at times to the wilderness of the Exodus (cf. Ps., lxxviii, 40; cvi, 14—Heb. etc.). Parts of the waste region about the Dead Sea are called the jeshimmon; and to the north-east of the same sea there is a place called Beth-Jeshimoth (cf. Num., xxxiii, 49), where the Israelites are said to have encamped at the end of the wanderings. These are the principal words used for desert in the Bible. There are, however, others less frequently used, only one or two of which can be mentioned here: such as used in Gen., i, 2: "the earth was void." In Deut., xxxii, 10, it is used in parallelism with middār, and in Ps. civ, 40 it refers to the desert directly. Such also is נָּזְר (nazar), which means, literally, dryness, but refers at times to the desert: so, נָּזְר (nazar), "a land of drought"; נָּזְר (nazar), "a desert." A word may be said here concerning the chief deserts referred to in the Bible. Perhaps the most interesting is that of Exodus. In the Pentateuch this tract is treated as a whole as "the desert," but, as a rule, special parts of it are referred to, as the desert of Sin, the desert of Sinai, the desert of Cades, the desert of Pharan, etc. Books have been written to discuss the geography of this region. Suffice it to say that it comprises the ground over which the Israelites travelled from their crossing of the Red Sea till their arrival in the Promised Land. We do not enter
Desertion, the culpable abandonment of a state, of a stable situation, the obligations of which one had freely accepted. In civil life the word usually designates the offence committed by a soldier who, by flight, forsakes his military obligations. As regards Christian life, desertion may have for its object any state, from the highest to the lowest, to which Christians may be called. The first kind of desertion is the abandonment of the state and obligations imposed by baptism and is known as apostasy (apoštasia a fide). A second kind of desertion is when the baptized has been admitted by ordination to the ranks of the clergy and thereafter abandons his clerical state and its obligations (apoštasia ab ordine). The abandonment of the religious state is still another kind of apostasy (apoštasia a religione). (See APOSTASY.) But this expression is used only in connexion with those orders which take solemn vows; abandonment of the religious profession, as well as renunciation of religious vows, is mere desertion, although by some it is incorrectly designated as apostasy. This desertion does not incur the excommunication to which religious apostates are sentenced, though it entails suspension for clerics (Decr. Aucta admodum of the S. C. of Bishops, 4 November, 1895), and generally terminates in dismissal or expulsion.

The term desertion is also applied to a cleric's abandonment of his benefice, whether it be residential or non-residential. If the benefice be residential, there is occasion to proceed against the culprit according to the Civil Law Treat (Sess. XXVI, c. 1; Sess. XXIII, c. 1; Sess. XXIX, c. XII). The first text applies to bishops and provides that, after six months, the absent prelate be deprived ipso facto of a quarter of the annual revenue of his benefice; that if he remain absent for six additional months he be denied another quarter's revenue and finally, that if he fail to return to his charge the metropolitan or the suffragan bishop must denounce him to the pope within three months, and his punishment may even amount to the privation of his benefice. The second text concerns parish priests and other clerics having the care of souls: it deprives the guilty party of the revenue of his benefice and, at the same time the bishop can proceed against the absentees by ecclesiastical censures, and finally deprive him of his benefice if he does not return within six months after receiving a warning or official summons. The third text relates to canons and other clerics who possess even a simple benefice, obliging them to reside for the choir-office, the celebration of Mass and other analogous charges; the absentee loses his share of the daily distributions (see BENEFICE); the number of days of absence may not exceed three months in any year; otherwise he forfeits half the revenue of his benefice; if he repeats the offence a second year, he forfeits all the revenue; and if his absence be still prolonged he can be deprived of the benefices by canonical sentence. Repeated desertion is the very reason which justifies the residential benefice which the beneficiary has totally abandoned, canonists consider that it becomes vacant after ten years, according to the terms of c. viii, De cler. non resid., iii, tit. iv.

In judicial matters there is desertion of suit or of appeal when the plaintiff, after instituting a proceeding or lodging an appeal, fails to comply within the required time with the judicial acts demanded by the court. In the first instance, the judge, having established the neglect of the plaintiff, declares the suit abandoned. The judge from whom appeal is taken should appoint a time for the appellant to present his appeal to the new judge (c. xxviii, de Casibus, iv, De appell., ii, tit. xxviii). The appeal should be terminated within a year or two (c. v, and Celm., iii, De appell.). However, this system is not strictly observed. Usually, since the married state supposes that man and wife dwell together, desertion is the unjustified abandonment of the conjugal domicile by one or the other, especially by the wife who is bound to follow her husband to his new domicile. This desertion, which recent civil legislation considers a legitimate cause for separation and even for divorce, is considered by canon law merely a defect that gives the despised party the right to recall the fugitive through judicial authority, either ecclesiastical or secular (c. xiii, De restit. spol., ii, tit. xii). If the wife separates for a legitimate reason, on account of the adultery or heresy of her husband, because of ill-treatment by him or in order to escape a serious danger that would result from continued dwelling with him, such desertion is not held to be malicious; it is, however, the duty of the proper judge to pass upon it.

For the first case see the canonists, De clericis non residentibus, iii, tit. iv, de Casibus, ii, tit. xxviii; for the third, SANCTUS, De Matrimonio, I, ix, disp. iv; EMMIN, Le mariage en droit ecumenique (Paris, 1891), 118, 208. A. BOURJON.
the practical instructions, though his sermons were also
most effective. A volume of his parochial sermons
was issued in 1801. He published in 1860 a book en-
titled, "The Clergy and Their Women," for which he
acquired an abiding popularity. Father Desiderius
was elected superior general of the Paulist Institute
in 1897. At that time houses had been founded in San
Francisco, and at Winchester, Tennessee. The last
important act of his life was the founding of the
Paulist house in Chicago, for which he arranged with
Archbishop Quigley in the fall of 1903. Though his
life-work was so largely practical, he was noted for
his interior spirituality, his favourite saints being the
hermit and cenobites of the desert, and his spare
time was always devoted to recollection and spiritual
reading, in which he had evidently been occupied on
the last night of his life. He died suddenly of heart
failure about midnight, having been just able to
ring for assistance, and to receive the last rites of
the Church.

George M. Searle.

Desiderius of Cahors, Saint, Bishop, b. at Obrege
(although Antobroges, name of a Gaulish tribe), on
the frontier of the Province Narbonnensis, of a noble
Frankish family from Aquitaine, which possessed large
estates in the territory of Albi; d. 15 Nov. 555; though
Krusch has called this date in question. In
his childhood Desiderius was profoundly impressed by
the religious atmosphere of his home. His father Sal-
vius was a pious Christian, and his mother Herchene-
freda shows herself a woman of serious religious senti-
ment in three letters to her son, mentioned in his
"Vita." With his two brothers, Rusticus and Sya-
grius, the boy Desiderius came to the court of the
Frankish king Chlotar II (584-629; from 613 sover-
eign of the whole Frankish Empire), and with other
boys of noble family received an excellent education at
the Merovingian court-school, whence in the seventh
century went forth many capable and holy bishops.
Rusticus became a priest and finally Bishop of Cahors;
Syagrius became court of the territory of Albi and
prefect of the city of Marseilles; Desiderius stayed on
at the court where he held the important office of royal
treasurer, an office that he retained under the new
kings, Clothar II (629-639) and Childebert III (639-659).
After the death of Syagrius (629), he is said to have
obtained also the prefectship of Marseilles, but this is
not certain.

Faithful to the admonitions of his pious mother, Desi-
derius led at court the serious holy life of a monk,
and with his great fidelity, and his brother Rusticus, the Bishop of Cahors, was mur-
dered, whereupon the clergy and people of that city
requested from the king Desiderius as his successor.
By a letter of 8 April, 630, Dagobert made known his
consent, and Desiderius was consecrated Bishop of
Cahors. His close relations with the Court he used in
the interests of his Church. With the most important
bishops of his time, many of them educated with him
at the royal court, he maintained an active intercourse,
as his letters prove. He was a zealous promoter of
monastic life and founded a monastery in the vicinity
of Cahors, the church of which was dedicated to St.
Antoninus. Later on the convent was called after its
founder, St. Géry (i.e. Dierius, from Desiderius). He
directed also a convent of women, as we see from a let-
ter written by him to the Abbess Aspasia.
Under him and with his support was likewise founded in his dio-
ese the monastery of St. Peter of Moissac, later so
celebrated. Desiderius was very zealous for Divine
service and the perfection of the religious life; he
built three large basilicas in and near Cahors (St.
Maria, St. Peter, St. Julian) and an oratory in honour
of St. Martin. For the clergy he was a severe disci-
plinarian, but was himself foremost with the example
of a holy life. He also promoted the temporal welfare
of the inhabitants of Cahors, built an aqueduct, and
willed for his sepulchre that a large district of land
was procured that protected the city. Desiderius persuaded the nobles of his diocese to endow richly the churches and mon-
asteries. By his testament (649-650) he gave all his
possessions to the cathedral, the churches, and the
monasteries of his episcopal city. While resident on his
estates in the district of Albi he fell ill and died at his
vill of Watirtilging, where he had presented to the
monastery of St. Amantius. His body was carried to
Cahors and interred in the church of St. Amantius.
We possess a "Vita" of Desiderius written shortly
after his death, a collection of his letters, also of letters
addressed to him, and an account of miracles that took
place at his tomb. His feast is celebrated on the 15th
of November.

Desired Baptism of the Saint.

Desmaret de Saint-Sorlin, Jean, a French dramat-
ist and novelist, b. in Paris, 1595, d. there, 1676.
Early in life he held various offices at court, as
the councilor of the king, and secretary of the marine
in the Levant. He became a member of the salon of
the Hotel Rambouillet, and contributed the well-
known verses on the violet for the "Guirlande de
Julie". Later he became a member of the French
Academy and its first chancellor. Cesar de Saumur,
his protector, induced him to write for the theatre.
His first tragedy, "Aspasie", although a work of
much merit, had a brilliant success, 1636, owing to the
cardinal's protection. Among the plays that fol-
lowed we may mention: "Les Visionnaires", "Scipion",
"Roxane", "Mirame", and "L'Euros." The success of
the last two had evidently been inspired by the cardi-
nal; "L'Europe" gives a picture of Richelieu's con-
ception of the political situation of Europe. In his
novel, "Ariane", La Fontaine declares that its plot is
very good; another novel, "Roxane", was left un-
finished.

In 1645 he became a devout Christian, and there-
after he devoted his literary abilities chiefly to pious
works. He wrote a metrical version of the Office of
the Blessed Virgin, and of the "Imitation of Christ",
and other religious poems, e. g. "Marie-Magdalene"
or "Gracie Triomphe".

In his "Cheval ou la France chrétienne", an epic
poem in twenty-six cantos, he attempts to describe the
Divine origin of the French monarchy. In this,
his greatest work, in spite of its many faults, his
patricianism and his love of old legends, which pervade
the poem, often give it a peculiar charm. Owing to the
criticism of Boileau, who opposed the introduc-
tion of the miraculous in literature, the poem proved
a failure. In its defence Desmarets wrote an essay
comparing French prose and poetry with that of
the Greeks and Latins, and thus opened the celebrated
controversy between the ancients and the moderns
which lasted for many years. It was then estab-
lished that the French language is superior to all
others, that modern can surpass ancient literature,
and that the miraculous intervention of Providence is
to be preferred to the machinery of the pagan poets.
Desmarets was a consistent adversary of the Jansen-
ist Port-Royal of Port-Royal.

ments des savants (La Haye, 1600); Beauchamp, Rocher-
De Smet, Pierre-Jean, missionary among the North American Indians, b. at Termonde (Dendermonde), Belgium, 30 Jan., 1801; d. at St. Louis, Missouri, U. S. A., 23 May, 1873. He emigrated to the United States in 1821 through a desire for missionary labours, and entered the Jesuit novitiate at White­marsh, Maryland. In 1823, however, at the suggestion of the United States Government a new Jesuit establishment was determined on and located at Florissant near St. Louis, Missouri, for work among the Indians. De Smet was among the pioneers and thus became one of the founders of the Missouri Province of the Society of Jesus.

His first missionary tour among the red men was in 1838 when he founded St. Joseph's Mission at Council Bluffs for the Pottawatomies. At this time also he visited the Sioux to arrange a peace between them and the Pottawatomies, the first of his peace missions. What may be called his life work did not begin, however, until 1840 when he set out for the Flathead country in the Far North-west. As early as 1831, some Rocky Mountain Indians, influenced by Iroquois converts of one hundred and fifty years before, had made a trip to St. Louis begging for a "black robe." Their request could not be complied with at the time. Curiously enough, the incident excited Protestant missionary enterprise, owing to the wide dissemination of a mythi­cal speech of the delegation expressing the disappointment of the Indians at not finding the Bible in St. Louis. Four Indian delegations in succession were dispatched from the Rocky Mountains to St. Louis to beg for "blackrobe" and the last one, in 1839, composed of some Iroquois who dwelt among the Flatheads and Nez Perce, was successful. Father De Smet was assigned to the task and found his life-work.

He set out for the Rocky Mountain country in 1840 and his reception by the Flatheads and Pend d'Oreilles was an augury of the great power over the red men which was to characterize his career. Having impared instruction, surveyed the field, and promised a permanent mission he returned to St. Louis; he visited the Crow, Gros Ventres, and other tribes on his way back, travelling in all 4814 miles. In the following year he returned to the Flatheads with Father Nicholas Point and established St. Mary's Mission on the Bitter Root river, some thirty miles north of Missoula, where also the Cœur-d'Alénes. Realizing the magnitude of the task before him, De Smet went to Europe in 1843 to solicit funds and workers, and in 1844 with new labourers for the missions, among them being six Sisters of Notre-Dame de Namur, he returned, rounding Cape Horn and casting anchor in the mouth of the Columbia River at Astoria. Two days after, De Smet went by canoe to Fort Vancouver to confer with Bishop Blanchet, and on his return founded St. Ignatius Mission among the Kalispels of the Bay, who dwelt on Clark's Fork of the Columbia river, forty miles above its mouth. Ten years later the mission was transferred to its present site in Missoula County, Montana.

As the Blackfeet were a constant menace to other Indians for whom De Smet was labouring, he determined to influence them personally. This he accomplished in 1846 in the Yellowstone valley, where after a battle with the Crows, the Blackfeet respectfully presented to the "black robe" a second "black robe." He accompanied these to Fort Lewis in their own country where he induced them to conclude peace with the other Indians to whom they were hostile, and he left Father Point to found a mission among this formidable tribe. His return to St. Louis after an absence of three years and six months marks the end of his residence among the Indians, not from his own choice but by the arrangement of his religious superiors who deputed him to other work at St. Louis University. His coadjutors in his mission labours, Fathers Point, Magarini, Nobili, Ravalli, De Vos, Adrian and Christian Hoecken, Joset and others, made De Smet's foundations permanent by dwelling amongst the count by tribes.

De Smet was now to enter upon a new phase of his career. Thus far his life might be called a private one, though crowded with stirring dangers from man and beast, from mountain and flood, and marked by the successful establishment of numerous stations over the Rocky Mountains in regions almost inaccessible.

De Smet, by a series of eloquent letters and sermons, impressed the minds of the Indian nations with his sincerity and knowledge, and by becoming their intermediary at Washington. In 1851 owing to the influx of whites into California and Oregon, the Indians had grown restless and hostile. A general congress of tribes was determined on, and was held in Horse Creek Valley near Fort Laramie, and the Government requested De Smet's presence as pacificator. He made the long journey and his presence soothed the ten thousand Indians at the council and brought about a satisfactory understanding.

In 1858 he accompanied General Harney as chaplain in his expedition against the Utah Mormons, at the close of which campaign the Government requested him to accompany the same officer to Oregon and Washington Territories, where, it was feared, an uprising of the Indians would soon take place. Here again his presence had the desired effect, for the Indians loved him and trusted him implicitly. A visit to the Sioux country at the beginning of the Civil War convinced him that a serious situation confronted the Government. The Indians rose in rebellion in August, 1862, and at the request of the government De Smet made a tour of the North-west. When he found that a punitive expedition had been determined on, he returned to St. Louis to protest against the action and the sanction of his presence. The condition of affairs becoming more critical, the government again appealed to him in 1867 to go to the red men, who were enraged by white men's perfidy and cruelty, and "endeavour to bring them back to peace and submission, and prevent as far as possible the destruction of property and the murder of the whites." Accordingly he set out for the Upper Missouri, interviewing thousands of Indians on his way, and receiving delegations from the most hostile tribes, but before the Peace Commission could deal with them, he was obliged to return to St. Louis, where he was taken seriously ill.

In 1868, however, he again started on what Chittenden calls (Life, Letters and Travels of Pierre Jean De
De Soto, Hernando, explorer and conqueror, b. at Villanueva de la Serena, Badajoz, Spain, 1496 or 1500; d. on the banks of the Mississippi the latter part of June, 1542. He was given the rank of captain of a troop of horsemen in 1516 by Pedrarias Dávila (also known as Pedro Arroyo de Avila), Governor of the Indies, who admired his courage, and he took an active part in the conquest of portions of Central America. In 1523 he accompanied Francisco Fernández de Córdoba, who, by order of Pedrarias, set out from Panama with an expedition which explored Nicaragua and Honduras, conquering and reducing the country as they proceeded. In 1532 he joined the expedition of Francisco Pizarro starting from Panama for the conquest of Peru. Recognizing his importance, Pizarro made de Soto second in command, though this caused some opposition from Pizarro's brothers. In 1533 he was sent at the head of a small party to explore the highlands of Peru, and he discovered the great national road which led to the capital. Soon afterwards he was selected by Pizarro as ambassador to visit the Inca Atahuallpa, lord of Peru, and he was the first Spaniard who spoke with that chief. After the imprisonment of Atahuallpa, de Soto became very friendly with him and visited him often in prison. De Soto played a prominent part in the engagements which completed the conquest of Peru, including the battle which resulted in the capture of Cusco, the capital. Upon his return from an expedition, he learned that Pizarro had treacherously ordered Atahuallpa to be put to death in spite of Atahuallpa's offering paid a large ransom. He was much displeased at the crime, and, becoming disgusted with Pizarro and his brothers, he returned to Spain in 1536, taking back with him about 18,000 ounces of gold which represented his share of the booty taken from the Incas. He settled in Seville, and, with money which he had brought home, he was able to set up an elaborate establishment with ushers, pages, equerry, chamberlain, and other servants required for the household of a gentleman. In 1537 he married Inés de Bobadilla (sometimes called Leonor or Isabel), the daughter of his former patron, Pedrarias Dávila. He had settled down in Seville to enjoy life quietly, when the exaggerated accounts of Cabeza de Vaca concerning the vast region then called Florida fired his ambition to undertake the conquest of this land which he considered no less rich than Peru. He therefore sold all his property, and devoted the proceeds to equipping an expedition for this purpose. He journeyed from Charles V, whom he had lent some money, the titles of Adelantado of Florida and Governor of Cuba, and in addition, the title of marquis of a certain portion of the territory he might conquer, said portion to be chosen by himself.

The expedition consisted of 950 fighting men, eight secular priests, two Dominicans, a Franciscan and a Trinitarian, all to be transported in ten ships. To this armada was added one of twenty more ships which was on its way to Vera Cruz, but was to be under the orders of de Soto while the course of the two fleets lay along the same route. The whole squadron set sail from Sanlúcar, 6 April, 1538. On Easter Sunday morning, fifteen days later, they arrived safely at Gomera, one of the Canary Islands, where they stopped for one week and then continued their way without incident. When near Cuba, the twenty vessels destined for it, with tharazed fores had no

WILLIAM H. W. FANNING.
Cuba, it was not long before he had a fair number of mounts for the men of the Florida expedition. Just about this time, the city of Havana was sacked and burned by the French, and de Soto, upon learning of it, despatched Captain Aceituno with some men to repair the ruins. As he was contemplating an early departure for his conquest of Florida, he named Gonzalo de Guzmán as lieutenant-governor to administer justice in Santiago and vicinity, while for affairs of state, he gave full powers to his wife. Meanwhile, he continued his preparations for the expedition to Florida; in the latter part of March, 1538, the ships sailed for Havana, while de Soto started by land with 350 horses and the remainder of the expedition.

The two parties arrived at Havana within a few days of each other, and de Soto immediately made plans for the rebuilding of the city. He also entrusted to Captain Aceituno the building of a fortress for the protection of the harbour and the city from any possible future attack. At the same time, he ordered Juan de Añasco, a skilled and experienced sailor, to set out in advance to explore the coasts and harbours of Florida so that it would facilitate matters when the main expedition sailed. Añasco returned at the end of a few months and made a satisfactory report.

The expedition was finally made ready, and on 18 May, 1539, de Soto set sail with a fleet of nine vessels. He had with him 1000 men exclusive of the sailors, all well armed and making up what was considered to be the best equipped expedition that had ever set out for conquer. New World. They rowed with favourable weather until 25 May, when land was seen and they cast anchor in a bay to which they gave the name of Espiritu Santo (now Tampa Bay). The army landed on Friday, 30 May, two leagues from an Indian village. From this point the Spaniards began their explorations of the wild unknown country to the north and west which lasted for nearly three years. They passed through a region already made hostile by the violence of the invader Narváez, and they were constantly deceived by the Indians, who tried to get them as far away as possible by telling them stories of great wealth which was to be found at remote points. They wandered from place to place, always disappointed in their expectations, but still lured onward by the tales they heard of the vast riches which lay just beyond. They treated the Indians brutally whenever they met them, and they were, as a result, constantly at war with them. Setting out from Espiritu Santo, de Soto, with his three ships, went through the provinces of Acuera, Ocali, Víchucu, and Osachile (all situated in the western part of the Florida peninsula), with the purpose of finally reaching the territory of Apalachee (situated in the north-western part of Florida on the Gulf of Mexico), as he considered the fertility and maritime conditions of that country well suited to his purposes. He finally reached the province, and after some fighting with the Indians, subdued it. In October, 1539, de Soto sent Juan Añasco with thirty men to Espiritu Santo Bay where he had left his ships and a portion of his expedition orders to start with the ships and follow the coast until he reached the bay of Aute (St. Marks on Apalachee Bay) in the province of Apalachee. Here he was to be joined by Pedro Calderón, who had orders to proceed by land with the remainder of the expedition and the provisions and camp equipment that had been left on the coast. At this point, the importance of Juan de Gómez Arias to de Soto's wife with the progress of the expedition. After many hardships, Añasco reached Espiritu Santo Bay, whence he started with the ships to carry out de Soto's orders. He arrived at Aute in safety, and was there joined by Calderón with the latter's orders to go to the west of Aute, and map out its bays and inlets. Maldonado did his work successfully and upon his return, in February, 1540, was sent to Havana, with orders to inform the Governor's wife and announce to the Cubans as well all that they had seen and done. De Soto gave him further orders to return in October and meet him in the Bay of Acihui, where he had discovered during his exploration. He was to bring back with him as many ships as he could procure, and also munitions of war, provisions, and clothing for the soldiers. But de Soto was destined never to see Maldonado again, nor was he to have the benefit of the supplies for which he was sending him, for though Maldonado was able to carry out his orders to the letter, when he arrived at Acihui in the fall he found neither trace nor tidings of de Soto. He waited for some time and explored the country quite a distance, but without finding him, and was forced to return to Havana. He tried again the next year, and again the following, but always without success.

Meanwhile, de Soto had started in March, 1540, from the province of Apalachee with the intention of exploring the country to the north. He explored the provinces of Altamahoa (or Altamaaho), Achaque, Cofa, and Cofaque, all situated in eastern and northern Florida, meeting with success, and reaching his way in a south-westerly direction, intending to reach the coast at Acihui where he had agreed to meet Maldonado with the supply ships. But when he reached the province of Tascalua in southern Alabama, where he had been told there were infinite riches, the Indians in large numbers offered a more stubborn resistance and gave him the worst battle he had yet had. The battle lasted nine hours and was finally won by the Spaniards, though nearly all the officers and men, including de Soto himself, were wounded. According to García, there were 70 Spaniards and 11,000 Indians killed in the battle, and in addition the town of Mavila (now Mobile) was destroyed by a fire which also consumed the provisions of the Spaniards. While in Tascalua, de Soto heard of some Spanish ships which were on the coast at Acihui. These were the ships which Maldonado had brought back from Havana with the supplies. De Soto had ordered him to stay there for a short time for he had been informed that he was there, but thirty leagues from the coast. But his troops were so exhausted that he was forced to rest for a few days. Worn out by the long marches and the hardships they had undergone, and disappointed at not finding any treasure, some of de Soto's followers secretly plotted to abandon him, make their way to Acihui, and sail to Mexico or Peru. Learning of this, de Soto changed his plans, and, instead of marching toward the coast to join Maldonado, he led his men toward the interior in a westerly direction, knowing that it would take many months to reach the Gulf of Mexico so far away. He hoped to reach New Spain (Mexico) by land. In a night battle (December, 1540), he lost forty men and fifty horses besides having many wounded, and during the next four months he was attacked almost nightly. In April, 1541, he came upon a fort surrounded with a stockade, and in storming it, nearly all his men were killed. It is said that over 2000 Indians were killed in this battle, but so many of the Spaniards were wounded that de Soto was compelled to stop for a few days in order to care for them. Notwithstanding his repeated losses de Soto continued toward the interior, finally managing several years later to reach the Gulf States, until he reached the Mississippi at a point in the northern part of the present state of Mississippi.
He crossed the river and pushed on to the north-west until he reached the province of Antiquia in the territory of Arkansas, where he passed the winter of 1541-42 on the Cayues River, now known as Washita. In the spring of 1542, retracing his steps, he reached the Mississippi in May or June. Here, on 20 June, 1542 (according to some authorities on 21 May), he was stricken with a fever, and prepared for death. He made his will, named Luis de Moscoso de Alvarado as his successor in command of the expedition, and took leave of all. On the fifth day de Soto succumbed without having reached New Spain by land. His companions buried the body in a large hole which the natives had dug near one of their villages to get materials to build their houses. However, one of his men gave the Indians to understand that the Christians were immortal; they afterwards disinterred the body, fearing the hostile savages might possibly discover it, and, finding him dead, make an attack. They then hollowed out the trunk of a large tree and, placing the body in it, sank it in the Mississippi which they called the Grande. The shattered remnant of the expedition under Morisco then attempted to work their way eastward, but, driven back by the Indians, they floated down the Mississippi and, after many hardships, finally reached Panuco in Mexico. This expedition of de Soto, though it ended so disastrously, was one of the most elaborate and permanent made by the Spaniards to explore the interior of North America. It was the first extensive exploration of at least six of the Southern states: South Carolina, Georgia, Florida, Alabama, Mississippi, and Arkansas, and their written history often begins with narratives which tell the story of de Soto's expedition. From these same narratives we also get our first description of the Creeks, Seminoles, Creeks, Appalachians, Choctaws, and other famous tribes of southern Indians. The story of this expedition also records the discovery of the Mississippi and the first voyage of Europeans upon it. It must be noted that Alonso de Pineda discovered the mouth of the Mississippi in 1519, and that Cabeza de Vaca crossed it near its mouth in 1528.

Despair (Latin desperare, to be hopeless) ethically regarded is the voluntary and complete abandonment of all hope of saving one's soul and of having the means secured for that end. It is not a passivity of mind: on the contrary it involves a positive act of the will by which a person deliberately gives over any expectation of ever reaching eternal life. There is presupposed an intervention of the intellect in virtue of which one comes to decide definitely that salvation is impossible. This last is motivated by the persuasion either that the individual's sins are too great to be forgiven or that it is too hard for human nature to cooperate with the grace of God or that Almighty God is unwilling to aid the weakness or pardon the offences of his creatures, etc. It is obvious that a mere anxiety, no matter how acute, as to the hereafter is not to be identified with despair. This excessive fear is usually a negative condition of soul and adequately discernible from the positive elements which clearly mark the vice which we call despair. The pusillanimous person has not so much relinquished trust in God as he is unduly terrified at the spectacle of his own shortcomings or incapacity. The sin of despair may sometimes, although not necessarily, contain the added malice of heresy in so far as it implies an assent to a proposition which is against faith, e. g. that God has no mind to supply us with what is needful for salvation. Despair as such and as distinguished from a certain difference, sinking of the heart, or overwhelming dread is always a mortal sin. The reason is that it contravenes with a special directness certain attributes of the Almighty God, such as His goodness, mercy, and faith-keeping. To be sure it is not the worst sin conceivable: that evil primacy is held by the direct and explicit hatred of God; neither is it as great as sins against faith like formal heresy or apostasy. Still its very inclusion in the list of the seven deadly sins is eminently far greater than other sins inasmuch as it cuts off the way of escape and those who fall under its spell are frequently, as a matter of fact, found to surrender themselves unreservedly to all sorts of sinful indulgence.

M. Despretz, César-Mansuetu, chemist and physicist, b. at Lessines, Belgium, 11 May, 1798; d. at Paris, 11 May, 1863. He was appointed early in life master of studies in the lyceum of Bruges, and later went to Paris to continue his studies. Here he attracted the attention of Gay-Lussac, who had him appointed tutor of the chemical course which the former was then giving at the Ecole Polytechnique. In 1824 Despretz was made adjunct and then titular professor of physics at the College Henri IV, and in 1827 he received the chair of the sciences at Saumur. He was naturalized as a Frenchman in 1838, and in 1841 was elected to the Academy of Sciences in the division of general physics, being the successor of Savart. The researches of Despretz did much to establish the foundation of modern physics, notably in the domain of heat. In 1818 he investigated latent heat and the elasticity of vapours. In 1821, following the same line, he studied the heat-conductivity of solids, vapour density, and the latent heat of steam at different pressures; his memoir of 1822 on the causes of animal heat was crowned by the Academy. In 1823 the results of his investigation of the compressibility of liquids were published, and in 1827 his researches on the density of gases at different pressures; the latter investigation proved that Mariotte's law was not exactly followed by gases. The titles of some of his leading memoirs and their dates of publication are as follows: "The Heat of Combustion" (1821); "Investigation of the Conduction of Heat" (1824); "The Law of Conductivity of Heat in Liquids" (1838); "The Limit of Appreciable Sound" (1845).

After this he turned his attention to the voltaic cell and voltaic arc. By uniting the heat from a very large burning glass with the heat of the voltaic arc and with the oxy-hydrogen flame, he experimented on the diffusion and volatilization of refractory solids, performing some experiments of remarkable interest in those days when electricity was not so highly developed as at the present time. Under the guidance of the Ruhmkorff coil he apparatus the formation of diamonds. Among his books may be cited "Recherches experimentales sur les causes de la chaleur animale" (Paris, 1824); "Traité élémentaire de physique" (Paris, 1825, and many later editions); "Éléments de chimie théorique et pratique" (Paris, 1828-30); in addition to these some fifty memoirs were published by him between 1817 and 1863, the list of which is given in the "Catalogue of Scientific Papers of the Royal Society" (London, 1868), VII. Despretz was a true Catholic; he constantly resisted assaults upon the Church and the clerical body, was always ready to lead their defence, and died a devout member of the Church.

Dictionnaire Larousse, s. v.; Moirig in Les Mondes (Paris, 1863), 1.

T. O'Conor Sloane.
DESSERTANS

DESSERTANS, the name of a class of French parish priests. Under the old regime, a priest who performed the parochial duties in a vacant parish, or where the parish priest was under censure of some kind (Héricourt, Les lois ecclésiastiques de France, II, xv, Paris, 1771) was known as a dessertant; he was not vested in the diaconate, though he was a member of the Congregation of the Most Holy Redeemer in 1850, made his profession the following year, and was ordained priest 24 Sept., 1853. His talent was at once recognized and he was appointed prefect of students and professor of theology, which offices he retained till 1865, when he became director of the French province. He was a man of surpassing energy and an excellent organizer, his kindness winning him the affection and confidence of his subjects, whom he directed with prudence and fatherly firmness. Under his care subjects and foundations multiplied; the congregation spread into Spain for a second time, and he made foundations in Peru, Ecuador, Chile, and Colombia in South America. Forced to transfer his numerous religious from France to Holland, he so communicated to others his own spirit of faith and confidence that in all their troubles not one of his subjects failed him. On his return to France he had organized missions and retreats as his chief occupation. In 1887, he was given the important work of Apostolic visitor to the Little Sisters of the Poor. As a preacher few surpassed him in the retreats he gave to priests and religious all over France. At the age of seventy he was again nominated provincial. Although in poor health, he set to work with his wonted activity, but the result was a complete break-down. He wrote much and well. He was the founder (1875) of the ascetical review, "La Sainte Famille," and a constant contributor to it. His works are edited in three series: 1. Vie Chrétiennes,—"L’Art d’assurer son Salut"; 2. Le Credo et la Providence;—"Le Monde et l’Evangile"; 3. "La Vie vraiment chrétienne";—"Dévotions de l’âme chrétienne";—"Le Vén. Passart et les Rédemptoristes." 2. Vie Religieuse.—"Exercices Spirituels" (Retraites).—"Renouvellements spirituels" (Retraites).—"Conversion quotidienne et retour continué à Dieu" (Retraites).—"Une Vertu pour chaque mois de l’année"; 3. Vie Sacerdotale.—"Dieu et la parole de Dieu";—"Discours et plans de retraites ecclésiastiques";—"L’esprit Apostolique";—"L’art de sauver les âmes";—"La charité sacerdotale" (Paris, Librairie de la Sainte Famille, 1909).—La Sainte Famille (1898), 426; Archives Cont., R. J. MAGNER.

DETERMINISM

Determinism is a name employed by recent writers, especially since J. Stuart Mill, to denote the philosophical theory which holds, in opposition to the doctrine of free will, that all man's volitions are invariably determined by pre-existing circumstances. It may take diverse forms, some crude, some more refined. Biological and materialistic Determinism maintains that each of our voluntary acts finds its complete cause in the physiological conditions of the organism. Psychological Determinism ascribes efficiency to the psychical antecedents. In this view each volition or act of choice is determined by the character of the agent plus the motives acting on him at the same. Advocates of this theory, since Mill, usually object to the notion of Fatalism, on the ground that these words seem to imply some form of external compulsion, whilst they affirm only the fact of irrevocable sequence or uniform causal connection between motives and volition. Opposed to this view is the doctrine of Indeterminism, or what perhaps may more properly be called unilaterism, which denies that man is thus invariably determined in all his acts of choice. This doctrine has...
been stigmatized by some of its opponents as the theory of "causeless volition," or "motiveless choice"; and the name, Determinism, is possibly not the best selection to meet the imputation that it holds, however, not justified. The Anti-determinists, while denying that the act of choice is always merely the resultant of the assemblage of motives playing on the mind, teach positively that the Ego, or Self, is the cause of our volitions; and they describe it as a "free" or "self-determining" cause. The presence of motives is necessary, but, they say, only as a necessary condition for every act of free choice, but they insist that the Ego can decide between motives. Choice is not, they maintain, uniformly determined by the pleasantest or the worst motive or collection of motives. Nor is it the inevitable consequence of the strongest motive, except in that tautological sense in which the word strongest simply signifies that motive which as a matter of fact prevails. Determinism and the denial of free will seem to be a logical consequence of all monistic hypotheses. They are obviously involved in all materialistic theories. For Materialism of every type necessarily holds that every incident in the history of the universe is the inevitable outcome of the mechanical and physical movements and changes which have gone before. But Determinism seems to be an equally necessary consequence of monistic Idealism. Indeed the main argument advanced by its adherents is the fact that the universe is the fact of free will. Self-determination implies separateness of individuality and independence in each free agent, and thus entails a pluralistic conception of the universe. (See Dualism; Monism.) In spite of the assertions of Determinists, no true logical distinction can be made between their view and that of Fatalism. In both systems each of my volitions is inexorably fated, or pre-determined, in the past conditions of the universe as the movements of the planets or the tides. The opponents of Determinism usually insist on two lines of argument, the one based on the consciousness of freedom in the act of deliberate choice, the other on the incompatibility of Determinism with our fundamental moral convictions. The notions of responsibility, moral obligation, merit, and the like, as ordinarily understood, would be illusory if Determinism were true. The theory is in fact fatal to ethics, as well as to the notion of sin and the fundamental Christian belief that we can merit both reward and punishment. (See Free Will; Ethics; Fatalism.)

Michael Mahler.

Detraction (from Lat. detrhere, to take away) is the unjust damaging of another's good name by the revelation of some fault or crime of which that other is really guilty or, at any rate, is seriously believed to be guilty by the defamer. An important difference between detraction and calumny is at once apparent. The calumniator says what he knows to be false, whilst the deftractor narrates what he at least honestly thinks is true. Detraction in a general sense is a moral sin, as being a violation of the virtue not only of charity but also of justice. It is obvious, however, that the subject-matter of the accusation may be so inconspicuous or, everything considered, so little capable of doing serious hurt that the guilt is not assumed to be more than venial. The same judgment is sometimes given even where much harm has really occurred, if there has been little or no advertence to the harm that is being done.

The determination of the degree of sinfulness of detraction is in general to be gathered from the consideration of the amount of harm the defamatory utterance is calculated to work. In order to adequately measure the seriousness of the damage wrought, due regard must be had not only to the imputation itself but also to the object of the person by whom and against whom the charge is made. The measure must take into account not only the greater or lesser criminality of the thing alleged but also the more or less distinguished reputation of the detractor for trustworthiness, as well as the more or less notable dignity or estimation of the person whose good name has been assailed. Thus it is not unreasonable that a relatively small defect alleged against a person of eminent station, such as a bishop, might seriously tarnish his good name and be a mortal sin, whilst an offence of considerable magnitude attributed to an individual of a class in which such things frequently happen might constitute only a venial one as, for instance, the evil of a common sailor had been drunk. It is worthy of note that the manifestation of even inculpable defects may be a real defamation, such as to charge a person with gross ignorance, etc. When this is done in such circumstances as to bring upon the person so injured a more or less permanent measure of disgrace, or perhaps seriously prejudice him, the sin may even be a grievous one.

There are times, nevertheless, when one may lawfully make known the offence of another even though as a consequence the trust hitherto reposed in him be partly shaken or slightly damaged. It is a principle of law that there is a duty to speak against the public in the sense that sentence has been passed by the competent legal tribunal or that it is already notorious, for instance, in a city, then in the first case it may licitly be referred to in any place; in the second, within the limits of the town, or even elsewhere, unless more serious than that the lapse of time should have entirely reformed or his delinquency been quite forgotten. When, however, knowledge of the happening is possessed only by the members of a particular community or society, such as a college or monastery and the like, it would not be lawful to publish the fact to others than those belonging to such a body. Finally, when the sin is in no sense public, it may still be divulged without contravening the virtues of justice or charity whenever such a course is for the common weal or is esteemed to make for the good of the narrator, of his listeners, or even of the culprit. The right which the latter has to an assumed good name is extinguished by the measure of the benefit which may be conferred in this way.

The employment of this teaching, however, is limited by a twofold restriction. (1) The damage which one may soberly apprehend as emerging from the failure to reveal another's sin or vicious propensity must be a notable one as, for instance, a breach of confidentiality. Likewise, they may lawfully present whatever information about the life or character of a candidate for public office is necessary to show his unfitness for the station he seeks. Historians have a still greater latitude in the performance of their task. This is not of course because the dead have lost their claim to have their good name respected. History must be something more than a more calendar of dates and incidents; the causes and connexion of events are a proper part of its province. This consideration, as well as that of the general utility in elevating and strengthening the public conscience, is the maxim in telling many things hitherto unknown which are to the disgrace of those of whom they are related.

Those who abet another's defamation in a matter of moment by directly or indirectly inciting or encour-
aging the principal in the case are guilty of grievous injustice. When, however, one's attitude is simply a passive one, i. e. that of a mere listener, prescinding from any interior satisfaction at the blackening of another's good name, ordinarily the sin is not mortal unless one happens to be a superior. The reason is that private persons are seldom obliged to administer fraternal correction under pain of mortal sin (see Correction, Fraternal). The detractor having violated an unbannable right of another is bound to restitution. He must do his best to put back the one whom he has thus outraged in possession of the fair fame which the latter hitherto enjoyed. He must likewise make good whatever other loss he has in some measure foreseen his victim would sustain as a result of this unfair defamation, such as damage measurable in terms of money. The question of reparation is perfectly clear. The method of discharging this plain duty is not so obvious in the first case. In fact, since the thing alleged is assumed to be true, it cannot be formally taken back, and some of the suggestions of theologians as to the style of reparation are more ingenious than satisfactory. Generally the only thing that can be done is to bide one's time until an occasion presents itself for a favourable characterization of the person defamed. The obligation of the detractor to make compensation for pecuniary loss and the like is not only personal but becomes a burden on his conscience.

Joseph F. Delany

Détroit, William, missionary, b. in France in 1688, d. in South America, on an advanced age, date uncertain. After his admission to the Society of Jesus, he was sent by his superiors to the missions of South America in 1706, and seven years later was appointed superior-general and visitor of all the missions of the Amazon embracing a tract of over 3000 miles. He is credited with translating the catechism into eighteen different languages for the various Indian tribes under his jurisdiction. It was he who sent to Europe the celebrated map of the Amazon drawn by Father Samuel Frits, S. J., and engraved at Quito in 1707. In 1727 he was appointed rector of the College of Cuenca, where he continued the zealous exercise of the functions of the ministry. He left an interesting “Relation” dated 1 June, 1731, giving curious details about the uncivilized races of the Amazon. It is inserted in volume XXIII of the “Lettres Edifiantes”, original edition. Edward P. Spillane

Détroit, Diocese of (Detroitiensis), established 8 March, 1838, comprises the counties of the lower peninsula of the State of Michigan, U. S. A., south of the Counties of Ottawa, Kent, Montcalm, Gratiot, and Saginaw, and east of the Counties of Saginaw and Bay; an area of 18,588 miles. Suffragan of Cincinnati.

To the martyr Father Isaac Jogues and his fellow-Jesuit Father Charles Raymbaut, belongs the honour of planting the Cross in Michigan when, in 1642, they began their mission to the Chippewas of the Sault Ste. Marie. Father René Menard, also a Jesuit, followed them in 1660, and was martyred the next year by a band of prowling savages. His death did not deter others of his brethren in the Society of Jesus from hastening to this field of labour, and we find Father Claude Allouez, at Chegoimegon, 1 October, 1665, preaching to the Ottawas and Hurons, and with him were other missionaries, Claude Delaforce, Louis André, Gabriel DuRilettes, and the famous Jacques Marquette. The last, in 1671, began at Michilimackinaw, his mission of St. Ignatius, where the first chapel for white men in Michigan was established. France took formal possession of the West in 1671, but England entering the field to dispute for the mastery, political intrigue followed, to the disaster of the old mission. The Indian missions established at Detroit in 1688, developed into the post established there in 1700 by La Mothe Cadillac, who brought with him a number of Canadian families. This mission was served by the Recollects and under the pastorate of the Rev. Nicholas Benedict Constantin de l'Halle, on 26 July, 1701, the church of St. Anne was dedicated. This is the mother-church of the Northwest, and the parish records are preserved in an unbroken series in the archives of the St. Anne's Church of the present, the building being the sixth of the name in the line of succession. The first entry in this register is that of the baptism of a child of Cadil- de l'Halle, founder of the mission. Indian records asserted that no other parish in the United States can present a similar record. This church was burned by discontented Indians in 1704, and again during an Indian outbreak in 1712. Father de l'Halle was killed by the Indians in 1706.

Pastors during this period were the Recollects, Fathers Bonaventure, Dominique de la Marche, Cherubin Denieu, Hyacinth Pelifesnes, and Simplicius Boquet (1752-82) and the Sulpitian Fathers Calvarin, Mercier, and Thaumur de la Sone. Detroit remained under English domination until 1796, when the change of policy from Jay's Treaty passed to Bishop Carroll of Baltimore, and the Bishop of Quebec recalled his priests from the Michigan territory. Among those ministering at Detroit during the English occupation were Father Thomas Portier, who died in 1781, and Father John Francis Hubert, who was made Coadjutor Bishop of Quebec in June, 1785.

At the dawn of the nineteenth century Detroit, still a military post, had a population of about 2000, mainly French Catholics. St. Anne's parish then comprised the whole of the present State of Michigan and most of Wisconsin. In 1796 Bishop Carroll sent the Sulpitian Father Michael Levadoux to take charge at Detroit. In June of the same year Fathers Gabriel Richard and Dilhet were appointed to assist him, the latter taking up his residence at Raisin River. Father Levadoux was recalled to Baltimore in 1801. Father Richard succeeded him, and became not only pastor of St. Anne's, but one of the leading figures in the development of the West. This remarkable priest was born at Saints, France, 15 October, 1767. His father was a government employee, and his mother Geneviève Bossuet, a scion of the same family as the great Bishop of Meaux. He was ordained as a Sulpitian at Paris, in October, 1790. He was sent to him from his native land, and with Fathers Maréchal, Ciquard, and Matignon, he arrived in Baltimore, 24 June, 1792. It was intended that they should be teachers at St. Mary's Seminary, but they were assigned to missionary work instead, as the seminary was not then ready for them. Father Richard was sent to Prairie du Rocher and Kaskaskia, Illinois, where he spent six years of hardship and privation, but fruitful in the results of his zealous ministrations. When he arrived at Detroit in June, 1798, he found religious conditions far from ideal, the town having been for years an Indian trading centre. He began at once to exert a salutary influence for the reformation of existing abuses and devoted himself also to promoting the welfare of the numerous Indian missions in the surrounding country. In the summer of 1801 he had Bishop Denault of Quebec visit Detroit on the invitation of Bishop Carroll and confirm 621 persons of ages ranging from thirteen to eighty years. His manuscript list of their names and ages is still kept in St. Anne's archives. In 1804 he started a Young Ladies' Academy and a seminary to foster vocations for the priesthood for young men, but a fire which destroyed

DETROIT

1. DETROIT COLLEGE
2. CHURCH OF OUR LADY OF THE ROSARY
3. CATHEDRAL OF STS. PETER AND PAUL
4. ST. MARY'S COLLEGE, MONROE
5. OLD ST. ANNE'S CHURCH
the town 11 June, 1805, swept these away as well as the church and priests' residence. So active were his resourceful methods that within three years another church was provided, the Catholic schools of Detroit were again in operation, and tuition given in six church schools and two academies for girls. He was one of the founders of the University of Michigan, which began with the act of the legislature passed 26 August, 1817, establishing "the Catholopisniad University of Michigan" of which he was vice-president and professor for six of the thirteen departments of whose curriculum he was the author. He was also elected governor and other officials requested him to lecture to them and thus afforded him the opportunity to be the first priest in the United States to deliver a series of religious lectures to non-Catholics. He spoke to them on the general principles of religion and morality at noon every Sunday in the Council House. Explaining this action to Bishop Carroll, he wrote: "As there was no English minister here of any denomination, I thought it might be of some utility to take possession of the ground." The following year he went to Baltimore and brought back type and a printing press with which to print in Detroit. From this, on 31 August, 1809, he issued the "Michigan Essay or Impartial Observer", the first paper published in Michigan and the first Catholic paper in the United States. It had several columns printed in French and the rest in English and had only one advertisement—that of St. Adrian. Between 1809 and 1812 he printed on this press seven books of a religious and educational character, one, "The Epistles and Gospels for all the Sundays and Feast-days of the Year", being the first publication in the Northwest of a part of the Holy Scriptures.

The war of 1812 with England demoralized conditions in Detroit, which fell into the hands of the British. Father Richard was arrested and kept a prisoner in Canada during the contest. On being released he returned to his parish and was at once busy helping everybody to repair the ravages of the war. In 1823 he was elected a Delegate to Congress from Michigan Territory, the only instance in which a priest has held a seat in the House of Representatives. He had five opponents at the polls, but many non-Catholics voted for him, which outweighed the bitter opposition of a number of members of his parish led by one of the trustees who had long been at enmity with him. He gave his life for the protection of the impressionable youth of the city. Just before he left for Washington he was put in prison by one of his parishioners who had obtained a divorce in a civil court and remarried. Father Richard declared him excommunicated, and the man sued for damages to his reputation and business and got a jury award of $1,116. This Father Richard refused to pay, and he was imprisoned until three of his friends gave a bond for him. The judgment was eventually reversed. In Congress he worked assiduously for the interests of Michigan, but the only notable speech he made was that advocating the bill for the reduction of the postal rates for Detroit to Chicago. He sought re-election at the end of his term, but was defeated, mainly through the exertions of his trusted opponents. When Bishop Fenwick was consecrated first Bishop of Cincinnati in 1822 Michigan passed from Bardstown to that jurisdiction. Father Richard prepared for him a statement of the condition of the Territory, of which he had, 13 Septembr 1822 there were about 6000 Catholics with five churches and two priests—himself and his assistant. An epidemic of cholera broke out in Detroit in the summer of 1832, and the venerable missionary, while unstintingly devoting himself to the help of the suffering, fell a victim to the disease. He died, 13 Septembr 1832, and arrangements had been under way even then to raise Detroit to a bishopric, of which, had he lived, he would probably have received the mitre.

BISHOPS.—(1) John Frederick Reze (the name is also given as Reese in the German ecclesiastical records), who had been a zealous missionary throughout the territory, was appointed the first bishop 25 February, 1833, and was consecrated at Cincinnati 6 October of the same year. He was born 6 February, 1791, at Vienenberg, Hanover, and enjoys the distinction of being the first German-born bishop of the American hierarchy. Drafted into military service in his youth, he served under Blücher as a dragoon at the battle of Waterloo. He was ordained in Rome, in 1822, and emigrated to the American missions in 1825, affiliating himself with Bishop Fenwick in Ohio. In 1827 he was sent to Europe to secure German priests and financial aid for the struggling missions and returned in a year, after success in both efforts. Through his exertions the famous Leopoldine Association that gave so much substantial help to the Church in the United States was founded in Austria in 1829. When he took charge of the Diocese of Detroit there were eight churches and the Ottawa Indian mission within its limits. Under his auspices the Poor Clares opened a convent in Detroit and a school at Green Bay (1833). Holy Trinity church was built at Detroit, and parishes established at Monroe, Grand River, and Bertrand. A hospital was opened in Detroit in 1834 during an outbreak of cholera, where also St. Philip's College, an orphan asylum, Trinity Academy, and a house of the Ladies of Providence were established, with several parochial schools. The bishop, however, was attacked with softening of the brain and expressed in a letter to the Provincial Council of Baltimore, in 1837, a wish to resign or transfer the administration to a coadjutor. He was suspended from all episcopal jurisdiction and went to Rome, where he remained for a time, to the disorders in the city by the revolutionists in 1848, and then retired to his native Diocese of Hildesheim, Germany, where he died at the mother-house of the Sisters of Charity, 30 December, 1871, and was buried in the cathedral of that place.

(2) Peter Paul LeFevre, another active and successful missionary of the Diocese of Cincinnati, was named as the coadjutor and administrator of Detroit, and consecrated titular Bishop of Zella, at Philadelphia, 21 November, 1841. He was born 30 April, 1804, at Roulers, near Ghent, Belgium, and, emigrating to the United States in 1828, was ordained priest at St. Louis, 17 July, 1834. As Bishop of Europe, then he was appointed bishop, but returned at once for his consecration. He was a careful and conservative prelate, forecasting the future in his selection of church sites, and devoting himself actively to the expansion of the facilities for the practice of the Faith in his diocese and the spread of sound Catholic education. The Recollects and the Religious of the Sacred Heart were established in Detroit, and for the parochial schools the Christian Brothers, the Sisters of Notre Dame, the Sisters of Charity, and the Sisters of the Immaculate Heart of Mary were brought into the diocese. In 1844 the creation of the new See of Milwaukee relieved Bishop of Detroit of the care of that section and enabled him to devote more attention to his Indian missions, which were developed splendidly. In 1857 the separation of the Diocese of Sault-
Deusdedit was made at Bishop Lefèvre's suggestion. With Bishop Spalding he was mainly instrumental in founding, in 1857, the American College at Louvain (q. v.). He died, 4 March, 1869.

(4) John Samuel Foley was named the fourth bishop consecrated at Baltimore, 4 November, 1888. He was born in that city 5 November, 1833, and ordained priest in Rome 20 December, 1856. His brother was Bishop Thomas Foley, administrator of Chicago (1870-79). The early settlers of Detroit had been French; these were followed, at different intervals, by Belgians, Germans, Poles, Slavs, and Italians. Bishop Foley established a special seminary for the Poles and secured the ministries of religious of that nationality. A schism among them of several years' duration, and of disastrous results, was healed through his forbearance. In 1907 the priests and laity of the diocese, in honor of the golden jubilee of his consecration, presented Bishop Foley with St. Francis's Home for Orphan Boys, built at a cost of $250,000.

The Congregation of the Sisters Servants of the Immaculate Heart of Mary was founded at Monroe, Michigan, 28 Nov., 1846, by the Rev. Louis Gillet, C.SS.R. Three young ladies, two from Baltimore and one from New Orleans, were the new community, whose rule was taken from that of St. Alphonsus, and whose secondary object was the education of youth. In 1859 some of the sisters went to Pennsylvania; there are now three distinct mother-houses, one in the Archdiocese of Philadelphia, one in the Diocese of Scranton, and the original at Monroe, in the Diocese of Detroit. Besides these the sisters have schools in the Dioceses of Harrisburg, Altoona, Bismarck, Portland, Cleveland, Seattle, and Oregon.

Statistics: 1 bishop, 237 priests (193 secular and 44 regular), 146 churches with resident priests, 66 missions with churches, 20 stations, 23 chapels, 1 theological seminary for the secular clergy with 320 students, 7 colleges and academies for boys, students 600; 7 academies for girls, students 870; 70 parishes and missions with schools, pupils 23,086; 3 orphan asylums, inmates 600; 1 house of the Good Shepherd, inmates in preservation class 125. Total number of children under Catholic care, 23,813; 4 hospitals; 1 home for aged poor, inmates 250; 1 home for feeble-minded; 1 infant asylum, 1 home for working boys. Estimated Catholic population 256,500 (Catholic families 50,041).

THOMAS F. MERRITT.

Deusdedit (Abadusatus I.), Saint, Pope, date of birth unknown; consecrated pope 15 October, 13 November, 616; d. 8 November, 618; distinguished for his charity and zeal. He encouraged and supported the clergy, who were impoverished in consequence of the political troubles of the time; and when his diocese was visited by a violent earthquake and the terrible scourge of leprosy he set an heroic example by his efforts to relieve the sufferers. The few decretales ascribed to him are unauthentic. He is said to have been the first pope to use leaden seals (bullae) for pontifical documents. One dating from his reign is still preserved, the obverse of which represents the Good Shepherd in the midst of His sheep, with the letters D. and E. underneath, while the reverse bears the inscription: DEUSDEDIT PAX. His feast occurs 8 November.

Leo A. Kelly.

Deusdedit, Saint, a native of Wessex, England, whose Saxon name was Frithona, and of whose early life nothing is known; d. 14 July. He was the first Archbishop of Canterbury (655-684), and is named as the first Anglo-Saxon to hold the primacy. He was consecrated at Canterbury in 655, by Ethelmar, the first Saxon Bishop of Rochester, in succession to Honorius, thus commencing the long line of English archbishops, which was broken but once, and that by the immediate succession of Theodore. He is known with absolute certainty. He is said to have hallowed Wulfhere's church at Medeshamstede (Peterborough) in Mercia, the charter of which, dated 657, contains his signature, but from the fact that it also contains the names of Ethelmar and Tuda a difficulty arises. Hadrian and Stubbe, who print the charter (Councils of Great Britain and Ireland), consider the foundation of this monastery to have been not earlier than 644. The archbishop's name is given by Simeon of Durham as the consecrator of the seventy nuns of St. Eowa's convent in Thanet, but the statement lacks confirmation. St. Deusdedit died on the island of Ercelok, now Jersey, and was buried in St. Peter's porch at Canterbury.

G. CYPRIAN ALSTON.

Deusdedit, Cardinal, b. at Todi, Italy; d. between 1097 and 1100. He was a friend of St. Gregory VII and defender of his reform measures. Deus- dedit joined the papal party after the appeal of Gregory VII against the simoniacal practice of the German and Saxon bishops. He was a most zealous promoter of ecclesiastical reforms in the latter half of the eleventh century. Pope Gregory VII raised him to the cardinalate with the title of S. Pietro in Vincoli. According to the superscription of chapter 420 (former reckoning 101) in the fourth book of his Liber Pontificalis, Deusdedit was a cardinal bishop in Germany; but it is not known, however, when and from what motive he did so. In 1078, he took part in a Roman synod, at which he represented the opinions of Berengarius of Tours (Mansi, Conc. Coll., XIX, 762). In the long conflict for the freedom of the ecclesiastical electorates, Deusdedit sided with Gregory VII, and was one of his chief agents and defenders. At the suggestion evidently of this pope, he undertook the compilation of a collec-
tution of canons which he completed in 1087 and dedicated to Victor III (Colleto canonum, ed. Martinucci, Venice, 1869; ed. Victor Wolf von Glanfen, Paderborn, 1905). It consists of four books: the first book (327 chapters) treats of the power of the Roman Church; the second (163 chapters) of the Roman clergy; the third (289 chapters) of ecclesiastical matters; the fourth (47 chapters) of the liberty of the Church and her verdicts in the matters of temporal rulers and civil laws. He meant by this work to defend the rights and liberty of the Church and the authority of the Holy See, in keeping with the measures of Gregory VII and his adherents.

At the same time, this collection reveals Deisselitz as one of the most important of the pre-Gregorian canonists. Under Urban II (1088-1099) he published in the interest of the Gregorian reforms another work: "Libelli contra invasores et simoniacos et reliquis schismaticos" (ed. Mai, Nova Bibliotheca Patrum, VII, III, 97-114; ed. Sackur, Mon. Germ. Hist., Libelli de lite, II, 300-365). This work was first published in 1869 in the first volume of the larger work, the latter completed in 1999. In this work, important for the history of the investitures conflict under Urban II, the author points out that the temporal power has no authority in ecclesiastical matters and particularly no right to exercise ecclesiastical investiture. Sackur (see below) has shown that it shows the influence of the so-called "Dictatus Papae" (see Gregory VII) were composed by Deisselitz. These are twenty-seven short texts concerning the privileges of the Roman Church and the pope (ed. Jaffé, Bibl. Rer. Germ., Berlin, 1864—II, 174), Until quite recently Gregory VII himself was generally regarded as the author; Löwenfeld (see below) continued to maintain the authorship of Gregory, but Sackur, however, has shown that the "Indices capitulorum" in the "Collectio canonum" of Deisselitz is closely related to the brief texts known as "Dictatus Papae" both in respect of sense and verbal text. Most probably, therefore, the latter are from the hand of Deisselitz, who put them together from the "Registrum Epistolarium" or letter-book of Gregory. Possibly also Deisselitz was the editor of this famous and important collection of Gregory's correspondence. In this case, the cardinal appears in a new light as intimate counsellor and intellectual mentor of the pope. On 4 April, 1100, Albericus appears as titular priest of St. Peter in Vincoli; therefore Deisselitz was then no longer alive.

Deism in Adjuvatorium Meum Intende, with the response: "Domine ad adjuvandum me festina", first verse of the sixty-ninth Psalm. These words form the introductory prayer to every Hour of the Roman Breviary, except during the last three days of Holy Week, and in the Office of the Dead. While they are said, or sung, all present sign themselves with the sign of the cross. Tradition says that St. Benedict introduced this custom into the monastic Office and that St. Gregory I extended it to all the Roman churches; Cassian (Coll., X, 10), however, states that from the earlier Christian times the monks used this introduction very often, probably outside of the liturgical prayers. In placing this suppositio at the beginning of every Hour the Church implores the assistance of God against distractions in prayer.

In the Roman Rite the "Deus in adjutorium" is preceded in Matins by the "Domine labia mea aperies", which in the monasteries is replaced by the "Ut in te confiabo". In Complin it is always preceded by the "Converte nos Deus". In the Mozarabic Liturgy the Hours commence with the triple Kyrie Eleison. In all the Latin countries north, east, and west of the Alps the introduction to the solemn Vespers of Easter Sunday was "Domine Deus Eleison et Adonai, Domine Deus et Rabbini, dominus et Deus Jesu Christi, Rex sancti et gloriosi easter Mass. In the churches which observe the Greek Rite, the Trisagion and other prayers open the Hours. The "Deus in adjutorium" is repeated three times during the conclusionary prayers of Prime. In the monasteries Prime was finished immediately after the prayer: "Domine Deus omnipotens"; then the monks went from the choir to the chapter-room, where the Martyrology was read, and the day's work was given out; before dispensing to their several occupations they sang three times the "Deus in adjutorium", to emphasize the union of prayer and labour.

Deuterocanonical Books. See CANON OF THE HEBREW SCRIPTURES.

Deuteronomy—This term occurs in Deut., xvii, 18 and Jos., viii, 32, and is the title of one of the five books of the Pentateuch. In both passages it refers to the Latin Deuteronomium, the Greek διετερωνομος, the Hebrew תוארה, and signifies "copy" or "duplicate" rather than "repetition". The texts themselves appear to demand this meaning; for Deut., xvi, 18 reads: "And after he is raised to the throne of his kingdom, he shall copy out to himself the Deuteronomy of this law in a volume, taking the copy of the priests of the Levitical tribe"; and Jos., viii, 32 relates: "And he wrote upon stones the Deuteronomy of the law of Moses, which he had ordered before the children of Israel." The targum of the latter passage renders the same meaning. Another passage of the Pentateuch, Deuteronomy corresponds to the Hebrew וּפָתַּרְתָּנוּ the Pseudo-Adamnanus maintains that the title signifies "the second law" promulgated by Moses in accordance with the Divine precept. It is more commonly understood as meaning "explanation" of the law, or "exhortation" inducing to the observance of the law. The introductory questions concerning the Book of Deuteronomy are treated in the article PENTATEUCH.

A. J. MAAS.

Deutinger, MARTIN, philosopher and religious writer, b. in Langenpreising, Bavaria, 24 March, 1815; d. at Pfäffikon, Switzerland, 9 Sept., 1864. He was ordained priest in 1837, and after filling several clerical positions, taught philosophy at Munich (1846), and Dillingen (1847-52). Like his predecessors, Baader (q. v.) and Anton Günther, he endeavored to construct a philosophy that should mediate between Catholicism and the idealistic philosophy then prevailing in Germany, and thus reconcile the faith of faith with what he considered the demands of reason. The effort at conciliation, while no more successful than that of his predecessors, involved less sacrifice of the content of Faith and of objective reason. Deutinger's system is based on a scheme of triologies. He places anthropology at the centre. Starting with universal methodical doubt, he finds in that doubt the
Ego revealed as an independent self-conscious person. Further reflection shows the self to be conditioned by the non-self (nature), while both self and nature suppose a supreme, free cause. Hence the first trilogy—Man, Nature, God. The evolution of the Ego is affected by the interaction of Nature and God, and this results in a tripartite life. The first element and stage proceeds from nature (the body), the second from God (the spirit), the third, the intermediate ground, is the soul. Hence the second trilogy constituting man's nature and stages of his development—Body, Soul, Spirit. The attributes of the spirit are being, knowing, willing. But the truth of these attributes is more subjective; personality is only potentially in them. The spirit comes to actual personality through interaction with nature. The vital process, consisting in the interplay of nature (i.e. the necessitated factor) with the personal (i.e. the free element), unfolds in three stages: as movement inward from without (thought, Denken); as outward from within (power, Können); and as proceeding from both together (doing, acting, Tun.). Hence the trilogy of human faculty: Thought, Power, Action; and the departments of the philosophical system: science of thought (Denkberehe), of art (Kunstdberehe), and of conduct (moral philosophy). Outside these departments lies pedagogy and the philosophy of nature, while on the circumference extend jurisprudence and the philosophy of religion. Sensation and imagination are insufficient to explain the genesis of thought, the concept. The representation wherein the external and the internal factors unite is but one basis of conscious knowledge, the concept; the other lies in the free personal element, inward intuition, the idea. Idea, therefore, and representation must interact in order to engender the concept. Hence cognition is the product of the two opposing factors, representation and idea, between which it intermediates as concept. Just as in books and lectures the free personality and the necessitated outer nature urges to conciliation in action, so the antimony between subject and object presses towards unification in thought. Now all intermediated unity comes of likeness, unlikeness, and the blending unity: Likeness lies in the subject; unlikeness in the object; unity in the interrelation of these two. From the first we get the principle of identity; from the second that of sequence, or reason; and the third that of disjunction, or exclusion. Hence the final trilogy of the laws of thought.

Each of the foregoing "teneaments" is developed with a remarkable insight and still more mistrust, which is felt at once in the distinction he makes between soul and spirit, and in the genesis of personality by the play of the necessitating nature-object on the free spirit. The similarity to the Hegelian idealism, if not the borrowed influence of the system, is at once apparent.

Deutinger possessed a richly endowed mind, a soaring, though somewhat exuberant, imagination, an artless love of the beautiful in nature and in art, and a comprehensive, though not always sufficiently critical, intelligence. He failed in his main purpose not because he lacked philosophical power to be chieftly because he broke with philosophical tradition to go his own way. He is said to have boasted that "he had built a house of his own in philosophy, regardless of the form and material employed by other builders". "This is all very fine", observes Stockel, "and it may well be that Deutinger wanted to do permanent work, for he strove to do great things with a modernised philosophy. But just because he wrought by himself independently of the claims of the Christian philosophical tradition, his system manifests the characteristic of all other modern systems constructed in a like spirit. Subjectivism predominates throughout, and therefore it is played but an ignominious existence." As a critic, Deutinger was brilliant and prolific. His style, though somewhat luxuriant, is marked by a sparkling wit and sarcasm that is specially captivating with the young. His works comprise: "Grundlinien der positiven Philosophie" (Ratisbon, 1843-49); "Geschichte der griechischen Philosophie" (Ratisbon, 1852-53); "Bilder des Gieists in Kunst, u. Natur" (Ratisbon, 1851); "Grundriss der Moralphilosophie" (Dillingen, 1841); "Grundriss der Logik" (Dillingen, 1848); "Wallfahrt nach Oberammergau" (Munich, 1851); "Geist der christl. Uberlieferung" (Augsburg, 1856); "Das Prinzip der neueren Philosophie und die christ. Weltanschauung" (Ratisbon, 1857); "Ueber die Metaphysik und Ethik der Poesie zur Religion" (Augsburg, 1861); "Das Reich Gottes nach dem Apostel Ioannes" (Freiburg, 1862); "Renan und das Wunder" (Munich, 1864).

Among his posthumous works, edited by his pupil Lorenz Kastner, are: "Der gegenwartige Zustand der deutschen Philosophie"; a third volume of "Das Reich Gottes" (Ratisbon, 1867); and an additional part to the "Bilder des Gieists" (Munich, 1866). Kastner, Deutingers Leben und Schriften (Munich, 1873).

daughter of Francis Ridout Ward. She died in 1889, leaving nine children. Devas was a man of singular piety, a zealous member of the Society of St. Vincent de Paul, and an unwilling to make himself prominent. He opposed other ambition except to propose the Catholic Faith to the reasonable acceptance of a troubled and sceptical age. He took a leading part in all Catholic enterprises of his time in England—notably in that which enabled Catholics to frequent the universities—and through his influence and selflessness, he exercised considerable influence over the thought and conduct of English Catholics. He was examiner in Political Economy at the Royal University of Ireland from 1839 to 1898.

FRANCIS CHARLES DEVAS

Development of Doctrine. See Revelation.

DE VERE, AUBREY THOMAS HUNT, poet, critic, and essayist, b. at Curragh Chase, County Limerick, Ireland, 10 January, 1814; died there, 21 January, 1862. He was the third son of Sir Aubrey de Vere and Mary, Spring Rice, sister of the first Lord Mount-Eagle. Aubrey de Vere, second son of the sixteenth Earl of Oxford, was his direct ancestor. Aubrey de Vere early showed his rare poetical temperament. His young imagination was strongly influenced by his friendship with the astronomer, Sir William Rowan Hamilton, through whom he came to a knowledge of modern mathematics and philosophy. In 1832 he entered Trinity College, Dublin, where he devoted himself to the study of metaphysics, reading Kant and Coleridge. Later he visited Oxford, Cambridge, and Rome, and came under the potent influence of Newman. He also visited the Lake Country of England, and he afterwards spoke of the days under Wordsworth's roof as the greatest honour of his life. His veneration for Wordsworth was singularly shown in after life, when he never omitted a yearly pilgrimage to the grave of that poet until advanced age made the journey impossible.

From his study of Coleridge, Aubrey de Vere received his first impulse towards Catholicity, which was developed by events following the conversion of Manning, and he was received into the Church, November, 1857, in the archbishop's chapel at Avignon. His unusual sweetness of character won for him many friends. He was a close friend of the poet Tennyson, his earlier life, and he then showed a practical and vigorous interest in politics. In 1848 he had published a book on English misrule and Irish misdeeds, which was criticized as a work of great value, notably by Mill and Carlyle and Lord John Manners. His brother, Sir Stephen de Vere, died the same year, and the estate of the Odes and Epodes of Horace, also made heroic efforts at this time to better the condition of Irish emigrants; and the intimate friendship between the brothers led to their almost daily correspondence throughout their long lives.

It is as a poet that Aubrey de Vere is best known. His work is in part historical and in part literary, his aim being to illustrate the supernatural in the form of supernatural truth by recording the conversion to Christianity of Ireland and England. The quality of his verse is strong and vigorous, musical, and remarkable. In the "Quarterly Review" of 1896 says of his poetry, that next to Browning's it shows the fullest vitality, the greatest sphere of ideas, covers the broadest intellectual field since the poetry of Wordsworth. He never strive for orate effect in his poetry, which is marked by sublime and serious conviction as he traces the progress of spiritual thought in the development of the nations, notably Ireland, in "The Legend of St. Patrick" (London, 1872), and of Spain in his eloquent portrayal of the Cid. "The Children of Love" is one of the most exquisite lyrics in the language, and his classical knowledge, his richness of imagination, his combined grace and dignity of thought are revealed in his "Search after Prosperine" (London, 1843). In his "Alexander the Great" (London, 1874) he represents the Greek ideal in remarkable purity and classical correctness, with his "Saint Thomas of Canterbury" (ibid.), reveals him as a dramatic poet unequaled in his century, except by Sir Henry Taylor, Browning, and his father, the elder de Vere. His memorial sonnets are characterized by strong and deep thought, and his odes show a descriptive power, and a spontaneous lyric charm and grace.

In addition to the above-mentioned works, all published in London, he also wrote: "Legends and Records of the Church and Empire" (1887); "May Carolus and Legends of Saxon Saints" (1857); "Mediaeval Records and Sonnets" (1858); "Legends of the Saxon Saints" (1879); "May Carolus" (1887); "Saint Peter's Chairs" (1888); "Essays Literary and Ethical" (1889); "Essays Chiefly on Poetry" (1887); "Picturesque Sketches of Greece and Turkey" (1890).

As a critic, Aubrey de Vere shows discriminating power in the two volumes of "Essays Chiefly on Poetry," he writes of Sir Henry Taylor, Keats, Landor, and others, and of the power and passion of Wordsworth. He would have been satisfied to be known solely as the interpreter of Wordsworth, whom he considered the greatest poet after Milton. His charm of description is shown in two early volumes of "Sketches of Greece and Turkey." In a volume of "Essays Chiefly on Poetry" (London, 1897) may be found reminiscences of many notable people and events. The personality of Aubrey de Vere was singularly charming. He was of tall and slender physique, thoughtful and grave in character, of exceeding dignity and grace of manner, and retained his vigorous mental powers to a great age. He was undoubtedly one of the most profoundly intellectual poets of his time. As he never married, the name of de Vere at his death became extinct for the second time, and has been assumed by his nephew.

(2) Sir Stephen Edward de Vere, poet and philanthropist, born at Foyney, 10 November, 1804, second son of Sir Aubrey Hunt de Vere, and brother of the above. At the death of his eldest brother, Sir Vere de Vere, succeeded as fourth baronet to the title, which became extinct at his death. From his early youth he had laboured for the amelioration of the condition of the people and the social and political, of the Irish people. In 1847 he made the voyage to Canada in the steamer of a ship, sharing the privations of the emigrants that an accurate report of their treatment might be given to the public and to Parliament. On his return to England in 1848, his letter describing the sufferings of the Odes and Epodes of Horace, also made heroic efforts at this time to better the condition of Irish emigrants; and the intimate friendship between the brothers led to their almost daily correspondence throughout their long lives.

It is as a poet that Aubrey de Vere is best known. His work is in part historical and in part literary, his aim being to illustrate the supernatural in the form of supernatural truth by recording the conversion to Christianity of Ireland and England. The quality of his verse is strong and vigorous, musical, and remarkable. In the "Quarterly Review" of 1896 says of his poetry, that next to Browning's it shows the fullest vitality, the greatest sphere of ideas, covers the broadest intellectual field since the poetry of Wordsworth. He never strive for orate effect in his poetry, which is marked by sublime

DEVI

HELEN GRACE SMITH.

Devil (Greek διάβολος; Lat. diabolus).—The name commonly given to the fallen angels, who are also known as demons (see Demon; Demonology). With the article (ὁ) it denotes Lucifer, their chief, as in Matthew xii. 25. "Then the Devil, and his angels" may be said of this name, as St. Gregory says of the word angel, "nomen est officii, non naturae"—the designation of an office, not of a nature. For the Greek word (from διάβολος, "to traduce") means a slanderer, or accuser, and in this sense it is applied to his work. It is written that Lucifer and his angels were cast forth of our brethren is cast forth, who accused them before our God day and night" (Apoc. xii. 10). It thus answers to the Hebrew name Satan (סָウィ) which signifies an adversary, or an accuser.

Mention is made of the Devil in many passages of the Old and New Testaments, but there is no full account given in any one place, and the Scripture teaching on this topic can only be ascertained by combining a number of scattered notices from Genesis to Apocalypse, and reading them in the light of patristic and theological tradition. The authoritative teaching of the Church on this topic is set forth in the decree of the Fourth Lateran Council (c. 7, "Firmus credimus"), wherein, after saying that God in the beginning had created together two creatures, the spiritual and the corporeal, of that is to say the angelic and the earthly, and lastly, whose body was made of both spirit and body, the council continues: "Diabolus enim et aliis demones a Deo quidem naturae creati sunt boni, sed ipsi per se facti sunt mali". There it is clearly taught that the Devil and the other demons are spiritual or angelic creatures created by God in a state of innocence, and that they became evil by their own act. It is added that man sinned by the suggestion of the Devil, and that in the world to come, shall suffer perpetual punishment with the Devil. The doctrine which may thus be set forth in a few words has furnished a fruitful theme for theological speculation for the Fathers and Schoolmen, as well as later theologians, some of whom, Suarez for example, have treated it very fully. On the other hand it has also been the subject of many heretical or erroneous opinions, some of which owe their origin to pre-Christian systems of demonology (see Demonology). In later years Rationalist writers have rejected the doctrine altogether, and seek to show that it has been borrowed by Judaism from external systems of religion wherein it was a natural development of primitive Animism (q. v.).

As may be gathered from the language of the Latin definition, the Devil and the other demons are but a part of the angelic creation, and their natural powers do not differ from those of the angels who remained faithful (see Angel). Like the other angels they are pure spiritual beings without any body, and in their original state they are endowed with super-natural grace and placed in a condition of probation. It was only by their fall that they became devils. This was before the sin of our first parents, since this sin itself is ascribed to the instigation of the Devil: "By the envy of the Devil, death came into the world" (Wisdom, ii, 24). Yet it is remarkable that for an account of the fall of the angels we must turn to the last Book of the Bible. For as such we may regard the vision in the Apocalypse, albeit the picture of the past is necessarily reversed. One prophecy of the future: "And there was a great battle in heaven, Michael and his angels fought with the dragon, and the dragon fought and his angels: and they prevailed not, neither was their place found any more in heaven. And that great dragon was cast out, that old serpent, who is called the devil and Satan, who seduce the whole world: and he was cast unto the earth, and his angels were thrown down with him" (Apoc., xi, 7-9). To this may be added the words of St. Jude: "And the angels who kept not their principality, but forsook their own habitation, he hath reserved under darkness in everlasting chains, unto the judgment of the great day" (Jude, i, 6; cf. II Peter, ii, 4). In the Old Testament we have a brief reference to the Fall in the story of the angels who came to Abel (Gen. iv. 18). But to this must be added the two classic texts in the prophets: "How art thou fallen from heaven, O Lucifer, who didst rise in the morning? how art thou fallen to the earth, that didst wound the nations? And thou saidst in thy heart: I will ascend into heaven, I will exalt my throne above the stars of God, and I will be seated in the mountain of the covenant, in the sides of the north. I will ascend above the height of the clouds, I will be like the most High. But yet thou shalt be brought down to hell, into the depth of the pit" (Isa. xiv, 12-15). This parable of the prophet is expressly directed against the King of Babylon, but both the early Fathers and later Catholic commentators agree in understanding it as applying with deeper significance to the fall of the rebel angel. And the older commentators generally consider that this interpretation is confirmed by the words of Our Lord to His disciples: "I ascended as a cloud ascending from the earth" (Luke, x, 17). For this verse may be regarded as a rebuke to the disciples, who were thus warned of the danger of pride by being reminded of the fall of Lucifer. But modern commentators take this text in a different sense, and refer it not to the original fall of Satan, but his overthrow by the faith of the disciples, who cast out devils in the name of their Master. And this new interpretation, as Schanz observes, is more in keeping with the context.

The parallel prophetic passage is Ezechiel’s lamentation upon the King of Tyre: "Thou wast the seal of resemblance, full of wisdom, and perfect in beauty. Thou wast the lust of the pleasures of the paradise of God, every precious stone was thy covering: the sardius, the topaz, and the jasper, the chrysolite, and the onyx, and the beryl, the sapphire, and the carbuncle, and the emerald; gold the work of thy beauty: and thy pipes were prepared in the day that thou wast created. They who sit upon thrones shall cast thee in the holy mountain of God, thou hast walked in the midst of the stones of fire. Thou wast perfect in thy ways from the day of creation, until iniquity was found in thee" (Ezechiel, xxviii, 12-15). There is much in the context that can only be understood literally in this view, but if the angels are professedly spoken, it is clear that in any case the king is likened to an angel in Paradise who is ruined by his own iniquity.

Even for those who in no wise doubt or dispute it, the doctrine set forth in these texts and patristic interpretations may well suggest a multitude of questions, and theologians have not been both to ask and answer them. And in the first place, what was the nature of the sin of the rebel angels? In any case this was a point presenting considerable difficulty, especially for theologians, who had formed a high estimate of the powers and possibilities of angelic knowledge, a subject which had a peculiar attraction for many of the great masters of scholastic speculation. For if sin be, as it surely is, the height of folly, the choice of darkness for light, of evil for good, it would seem that it can only be accounted for by some ignorance, or inadvertence, or weakness, or the influence of some powerful motive. But shall the explanation of these actions seem to be precluded by the powers and perfections of the angelic nature? The weakness of the flesh, which accounts for such a mass of human wickedness, was altogether absent from the angels. There could be no place for carnal sin without the corporal defect. And even some sins that are purely spiritual
or intellectual seem to present an almost insuperable difficulty in the case of the angels. This may certainly be said of the sin which by many of the best authorities is regarded as being actually the great offense which led to their exclusion from the presence of God and equality with God. It is true that this seems to be asserted in the passage of Isaiah (xvi, 13). And it is naturally suggested by the idea of rebellion against an earthly sovereign, wherein the chief of the rebels very commonly covets the kingly throne. At the same time, the case of angels was not supposed to have held in the hierarchy of angels might seem to make this offence more likely in his case, for, as history shows, it is the subject who stands nearest the throne who is most open to temptations of ambition. But this analogy is not a little misleading. For the exact point of the subject may bring it so near that of his sovereignty that he may well be able to assert his independence or to usurp the throne; and even where this is not actually the case he may at any rate contemplate the possibility of a successful rebellion. Moreover, the powers and dignities of an earthly prince may be compatible with much ignorance and folly. But in the case of the angels. For, whatever gifts and powers may be conferred on the highest of the heavenly princes, he will still be removed by an infinite distance from the plenitude of God's power and majesty, so that a successful rebellion against that power or any equal majesty is not possible. And more, the highest of the angels, by reason of their greater intellectual illumination, must have the clearest knowledge of this utter impossibility of attaining to equality with God. This difficulty is clearly put by the Doctor in his dialogue "De Casu Diabolii" (cap. iv); for the saint felt that the angelic intellect, at any rate, must see the force of the "ontological argument" (see ONTOLOGY). "If," he asks, "God cannot be thought of except as sole, and as of such an essence that nothing can be thought of like it to him [then] how could the Devil have wished for what could not be thought of? He surely was not so dull of understanding as to be ignorant of the inconceivability of any other entity like to God" (Si Deus cogitari non potest, nisi sita solus, ut nihil illi simile cogitari possit, quo modo diabolus potuit velle quod non potuit cogitari? Non enim obesse posse est ut nihil quod significat quos sine nescire posse nescire). The Devil, that is to say, was not so obtuse as not to know that it was impossible to conceive of anything like (i.e., equal) to God. And what he could not think he could not will. St. Anselm's answer is that there need be no question of absolute equality; yet to will anything against the Divine will is to seek to have that independence which belongs to God alone, and in this respect to be equal to God. In the same sense St. Thomas (I, Q. liii, a. 3) answers the question, whether the Devil desired to be "as God": If by this we mean equality with God, then the Devil could not desire it, since he knew this to be impossible, and was made not by a free-will but by passive will, and hence choose that which is impossible, as may happen with men. And even if it were possible for a creature to become God, an angel could not desire this, since, by becoming equal with God he would cease to be an angel, and no creature can desire its own destruction or an essential change in its being. These arguments are combated by Scotus (In II lib. Sent. dist. vi, Q. i), who distinguishes between efficaciousvolition and the volition of complaisance, and maintains that by the latter act an angel could desire that which is impossible. In the same way he urges that, though a creature cannot directly will its own destruction, it can do this consequenter, i.e., it can will something from which this would follow.

Although St. Thomas regards the desire of equality with God as something impossible, he teaches never-theless (loc. cit.) that Satan sinned by desiring to be "as God", according to the passage in the prophet (Isaiah, xiv), and he understands this to mean likeness, not equality. But here again there is need of a distinction. For men and angels have a certain likeness to God in their natural perfections, which are but a reflection of his surpassing beauty, and yet a further likeness is given them by supernatural grace and glory. Was it either of these likenesses that the devil desired? And if it be so, how could it be a sin? For as this is the 2784 sermon, of the angels, it may be supposed by God's grace to be correct, and no new things have been created. Certainly, as St. Thomas teaches, not every desire of likeness with God would be sinful, since all may rightly desire that manner of likeness which is appointed them by the will of their Creator. There is sin only where the desire is inordinate, as in seeking something contrary to the Divine will, or in seeking the appointed likeness in a wrong way. The sin of Satan in this matter may have consisted in desiring to attain supernatural beatitude by his natural powers or, what may seem yet stronger, in seeking his beatitude in the natural perfections and rejecting the supernatural. In either case, as St. Thomas considers, the first sin of Satan consisted of this, that he sought to be like to God, and, however (loc. cit., Q. ii), teaches that this sin was not pride properly so called, but should rather be described as a species of spiritual lust.

Although nothing definite can be known as to the precise nature of the probation of the angels and the manner in which men fell, St. Thomas has conjectured, with some show of probability, that the mystery of the Divine Incarnation was revealed to them, that they saw that a nature lower than their own was to be hypostatically united to the Person of God the Son, and that all the hierarchy of heavens must bow in adoration before the majesty of the Incarnate Word; and this, it is supposed, was the occasion of the pride of Lucifer (cf. Suarez, De Angelis, lib. VII, xiii). As might be expected, the advocates of this view seek support in certain passages of Scripture, notably in the words of the Psalmist as they are cited in the Epistle to the Hebrews: "And again, when he brought in the first-begotten into the world, he saith: And let all the angels of God adore Him" (Heb., i, 6; Ps. xcvii, 7). And if the twelfth chapter of the Apocalypse may be taken to refer, at least in a secondary sense, to the original fall of the angels, it may seem possible that the term "angels" in that text means the Woman and her Child. But this interpretation is by no means certain, for the text in Hebrews, i, may be referred to the second coming of Christ, and may have been meant by the passage in the Apocalypse.

It would seem that this account of the trial of the angels is more in accordance with what is known as the Scotian doctrine on the motives of the Incarnation than with the Thomist view, that the Incarnation was occasioned by the sin of our first parents. For since the sin itself was committed at the instigation of Satan, it presupposes the fall of the angels. How, then, could Satan's probation constitute the fore-knowledge of that which would be hypothet, only come to pass in the event of his fall? In the same way it would seem that the aforesaid theory is incompatible with another opinion held by some old theologians, to wit, that men were created to fill up the gaps in the ranks of the angels. For this again supposes that if no angels had sinned none would have been made, and in consequence there would have been no union of the Divine Person with a nature lower than the angels.

As might be expected from the attention they had bestowed on the question of the intellectual powers of the angels, the medieval theologians had much to say on the time of their probation. The angels were conceived of as acting instantaneously, not, like the mind of man, passing by discursive reasoning from premises to conclusions. It was pure intelligence as distinguished from reason. Hence it would seem that
there was no need of any extended trial. And in fact we find St. Thomas and Scotus discussing the question whether the whole course might not have been accomplished in the first instant in which the angels were created. The Angelic Doctor argues that the Fall could not have taken place in the first instant. And it certainly seems that if the creatures came into being then, the argument of sinning that sin itself might be said to come from the Creator. But this argument, together with many others, is answered with his accustomed acuteness by Scotus, who maintains the abstract possibility of sin in the first instant. But whether possible or not, it is agreed that this is what actually happened. Hence the authority of the passages in Isaias and Ezechieil, which were generally accepted as referring to the fall of Lucifer, might well suffice to show that for at least one instant he had existed in a state of innocence and brightness. To modern readers the notion that the sin was committed in the second instant of creation may seem scarcely less incredible than the possibility of a fall in the very first. But this may be partly due to the fact that we are really thinking of human modes of knowledge, and fail to take into account the Scholastic conception of angelic cognition. For a being who was capable of seeing angels at one, a single instant might be equivalent to the longer period needed by slowly-moving mortals.

This dispute, as to the time taken by the probation and fall of Satan, has a purely speculative interest. But the corresponding question as to the rapidity of the sentence and punishment is in some ways a more important matter. There can indeed be no doubt that Satan and his rebel angels were very speedily punished for their rebellion. This would seem to be sufficiently indicated in some of the texts which are understood to refer to the fall of the angels. It might be inferred from the overthrow of the punishment followed on the offence in the case of our first parents, although man’s mind moves more slowly than that of the angels, and he had more excuse in his own weakness and in the power of his tempter. It was partly for this reason, indeed, that man found mercy, whereas there was no redemption for the angels. For, as St. Peter says, “God spared not the angels that sinned” (II Pet., ii. 4). This, it may be observed, is asserted universally, indicating that all who fell suffered punishment. For these and other reasons theologians very commonly teach that the doom and punishment followed in the next instant after the fall of the angels. And so many go so far as to say that every one fell after the example of the first. But here it will be well to bear in mind the distinction drawn between revealed doctrine, which comes with authority, and theological speculation, which to a great extent rests on reasoning. No one who is really familiar with the medieval masters, with their wide differences, their independence, and even their bold speculation, is likely to confuse the two together. But in these days there is some danger that we may lose sight of the distinction. It is true that, when it fulfils certain definite conditions, the agreement of theologians may serve as a sure testimony to revealed doctrine, and some of their thoughts and even their very words have been adopted by the Church in her definitions of dogma. But at the same time these masters of theological thought freely put forward many more or less plausible opinions, which come to us with reasoning rather than authority, and must needs stand in all that the arguments by which they are supported. In this way we may find that many of them may agree in holding that the angels who sinned had no possibility of repentance. But it may be that it is a matter of argument, that each one holds it for a reason of his own and denies the validity of the arguments by others. Some argue that from the nature of the angelic mind and will there is not any trinsic impossibility of repentance. But it may be observed that in any case the basis of this argument is not revealed teaching, but philosophical speculation. And it is scarcely surprising to find that its sufficiency is denied by equally orthodox doctors who hold that if the fallen angels could not repent this was either because the doom was instantaneous, and left no time for repentance, or because sentence was not denied them. Others, again, possibly with better reason, are neither satisfied that sufficient grace and room for repentance were in fact refused, nor can they see any good ground for thinking this likely, or for regarding it as in harmony with all that we know of the Divine mercy and goodness. In the absence of any final decision on the author of the passages in question, with Suarez, that however brief it may have been, there was enough delay to leave an opportunity for repentance, and that the necessary grace was not wholly withheld. If none actually repented, this may be explained in some measure by saying that their strength of will and facility of purpose made repentance exceedingly difficult, though not impossible; that the time, though sufficient, was short; and that grace was not given in such abundance as to overcome these difficulties.

The language of the prophets (Isaias, xiv; Ezechieil, xviii) would seem to show that Lucifer held a very high rank in the heavenly hierarchy. And, accordingly, we find many theologians maintaining that before his fall he was the foremost of all the angels. Suarez is disposed to admit that he was the highest negatively, i. e. that no one was higher, though many may have been equal to him. But here again we are in the region of pious opinions, for some divines maintain that, far from being first of all, he did not belong to one of the highest choirs—Seraphim, Cherubim, and Thrones—but to one of the lower orders of angels. In any case it appears that he held a certain sovereignty over those who were with him in the transgression. The passage in Matt. xxv, 41, “the devil and his angels” (Apoc., xii, 7), “Beelzebub, the prince of devils”—which, whatever be the interpretation of the name, clearly refers to Satan, as appears from the context: “And if Satan also be divided against himself, how shall his kingdom stand?... And the understanding of this passage is well-nigh impossible.”

Besides exercising this authority over those who were called “his angels,” Satan has extended his empire over the minds of evil men. Thus, in the passage just cited from St. Paul, we read, “And you, when you were dead in your offences and sins, wherein in times past you walked according to the course of this world, according to the prince of the power of this air, of the spirit that now works in the children of disobedience.” (Ephes., ii. 2, 1, 1). In the same way Christ in the Gospel calls him “the prince of this world.” For when His enemies are coming to take Him, He looks beyond the instruments of evil to the master who moves them, and says: “I will not now speak many things to you, for the prince of this world cometh, and in me he hath not any thing”. (John, xiv, 30). There is no need to discuss the view of some theologians who
surmise that Lucifer was one of the angels who ruled and administered the heavenly bodies, and that this planet was committed to his care. For in any case the sovereignty with which these texts are primarily concerned is but the rude right of conquest and the power of evil influence. His sway began by his victory over the devils, his amnesties, his agreements, were brought under his bondage. All sinners who do his will become in so far his servants. For, as St. Gregory says, he is the head of all the wicked—"Surely the Devil is the head of all the wicked; and of this head all the wicked are members" (Comm. In Apost. Tom. xxxv. c. 4. ch. xii. cap. xix. De clar. capitis membora deus omnis imiqui.—Hom. 10. in Evangel.). This headship over the wicked, as St. Thomas is careful to explain, differs widely from Christ's headship over the Church, inasmuch as Satan is only head by outward government and not also, as Christ is, by inward, life-giving influence (Summa, III, Q. viii. a. 7.). With the growing wickedness of the world and the spreading of paganism and false religions and magic rites, the rule of Satan was extended and strengthened till his power was broken by the victory of Christ, who, for this reason said, on the eve of His Passion: "Now is the judgment of this world now come upon this world to be judged" (John, xvi. 31). By the victory of the Cross Christ delivered men from the bondage of Satan and at the same time paid the debt due to Divine justice by shedding His blood in atonement for our sins. In their endeavours to explain this great mystery, some old theologians, misled by the metaphor of a ransom for captives made in war, came to the strange conclusion that the price of Redemption was paid to Satan. But this error was effectively refuted by St. Anselm, who showed that Satan had no rights over his captives and that the great price wherewith we were purchased is laid to God's account. What has been said so far may suffice to show the part played by the Devil in human history, whether in regard to the individual soul or the whole race of Adam. It is indicated, indeed, in his name of Satan, the adversary, the opposer, the accuser, as well as by his headship of the wicked ranged under his banner in continual warfare with the kingdom of Christ. The two cities whose struggle is described by St. Augustine are already indicated in the words of the Apostle, "In this the children of God are manifest and the children of the devil: for the devil sinneth from the beginning. For his purpose was sin, and in his nature he sinneth. He was already the sinner and the works of the devil" (John, iii. 10). Whether or no the foreknowledge of the Incarnation was the occasion of his own fall, his subsequent course has certainly shown him the relentless enemy of mankind and the determined opponent of the Divine economy of redemption. And since he forced our first parents to fall he has ceased not to tempt our children in order to involve them in his own ruin. There is no reason, indeed, for thinking that all sins and all temptations must needs come directly from the Devil or one of his ministers of evil. For it is certain that if, after the first fall of Adam, or at the time of the coming of Christ, Satan and his angels had been bound so fast that they might tempt no more, the world would still have been filled with evils. For men would have had enough of temptation in the weakness and waywardness of their hearts. But in that case the evil would clearly have been far less than it is. And the activity of the Devil is no more than merely add a further source of temptation to the weakness of the world and the flesh; it means a combination and an intelligent direction of all the elements of evil. The whole Church and each one of her children are beset by dangers, the fire of persecution, the temptation of case, the dangers of wealth and of poverty, heresies and errors of opposite characters, rationalism and superstition, fanaticism and indifference. It would be bad enough if all these forces were acting apart and without any definite purpose, but the perils of the situation are incalculably increased when all may be organized and directed by vigilant and hostile intelligences. It is this that makes the Apostle, though he well knew the perils of the world and the weakness of the flesh, exclaim: "Therefore let us not be weary in well doing: for in due season we shall reap, if we faint not." The rulers of the world of this darkness, against the spirits of wickedness in the high places, stand therefore, having your loins girt about with truth, having on the breastplate of justice, and your feet shod with the preparation of the gospel of peace; in all things taking the shield of faith, wherewith you may be able to extinguish all the fiery darts of the most wicked one" (Ephes., vi. 11, 16).

Devil's Advocate. See Advocate Diaboll.

Devil-Worshippers.—The meaning of this compound term is sufficiently obvious, for all must be familiar with the significance of its two component parts. But the thing denoted by the name is by no means so easy to understand. For there is such a strange startling incompatibility between the notion of devil and that of an object of worship, that the combination in this case may well present a grave difficulty. And the more we are able to understand about the character and history of God and devil, the more difficult it is to believe that men can have been led, even in the utmost extremity of folly and wickedness, to worship the Devil. Yet, incredible as it may seem, it is unfortunately true that some worship of this kind has prevailed at many times and among widely different races of mankind. The following considerations may help in some degree to lighten the difficulty presented by this singular phenomenon.

In the first place it may be well to recall the analogy between the worship given to a divine being and the tribute paid to a king. Both alike are sensible proofs of service and submission. In the case of the deity beside the willing service paid to a just and legitimate sovereign, there may be tribute paid to some alien oppressor, or blackmail grudgingly given to some pirate chief or marauder in order to deprecate the evils that may be feared at his hands. And so in the case of religious worship, we may find that in the rude polytheism of barbarous races, where the gods were not only many in number but various in character, besides the willing worship given to good and beneficent beings in the service of love and gratitude, there is a sort of liturgical blackmail offered to the evil and malignant god or demons in order to placate them and avert their anger. In like manner, when we pass from Polytheism to the philosophic Dualism—where the worlds of light and darkness, good and evil, sharply defined, are constantly warring against each other—over against the good men, who offer worship to the good god, Ahura Mazda, there are the wicked Dävā-worshippers who sacrifice to the Demons and to Ahirman their chief, the principle of evil.

Another source of this strange worship may be found in the fact that in the early days each nation had its own natural gods; hence racial rivalry and hatred sometimes led one nation to REGARD THE PRACTICING DIVINITIES OF ITS ENEMIES AS EVIL DEMONS. In this way many who merely worshipped gods whom they
themselves regarded as good beings would be called devotions performed by men of other nations. Such may be the case with the Duwara-worshippers in the Avesta. In the same way the Greeks and Romans may have worshipped their divinities, fondly believing them to be good. But the Christian Scriptures declare that all the gods of the Gentiles are demons.

This declaration, it may be added, was not the utterance of a rival race but the teaching of Holy Scripture. For as the Fathers and theologians explain the matter, the fallen angels besides tempting and assaulting men in other ways, have, by working on their fears or exciting their cupidity, brought them to give worship to themselves under the guise of idols. If not in all cases, it would seem that much of the last idolatrous worship, especially in its worst and most degraded forms, was offered to the devils. This may explain some of the manifestations in the old pagan oracles. And something of the same kind occurs in the demonic manifestations among the modern demonolaters in India (cf. Alexander, Demoniac Possession in the New Testament, p. 297). Nor has this been confined to heathen nations, for in connexion with magical practices and occultism some forms of devil-worship appear in the heresy history of medieval Europe. Görres, in his great work on Christian Mysticism, gives some of the most revolting details of their obscene ceremonial. Of late years there seems to have been a recrudescence of this evil superstition in certain countries of Europe. While there is some authentic evidence as to the existence of these evil practices, the truth is overlaid with a mass of legend, many charges of this kind are false or grossly exaggerated, and a number of innocent persons have been cruelly put to death on charges of witchcraft or devil-worship. It is well also to remember St. Augustine's words: "Non uno modo sacrificat tradi-torius angels"; and possibly calumnies and cruelty may be more dangerous forms of devil-worship than all the dark rites of African Medicine men or medieval magicians.

W. H. KENT.

Devolution (Lat. devoluto de devoluer), the right of an ecclesiastical superior to provide for a benefice, when the ordinary patron or collator has failed to do so, either through neglect or by the nomination of an improper candidate. There is no permanent loss of right in such a case, but only for the time being and for that particular instance. The right of devolution devolves upon the metropolitan. Where, however, the right of appointing things is given to the bishop and the chapter, if only one of the parties has been found wanting in the exercise of the right, the law declares that the power of nomination remains to the other. When there is a vacancy in an episcopal see, the metropolitan appoints a vicar capitular to rule the vacant diocese, if the cathedral chapter has failed to elect such an official within eight days. In case of negligence on the part of metropolitan or exempt bishops, the right devolves upon the pope of providing for the benefices not conferred within the legal time or when the election was uncanonical. Chapters having power to elect an archbishop, bishop, or other metropolitan, or any other office, or the appointment devolves upon the Roman pontiff. The same holds for the case where an election was not celebrated according to canonical prescriptions. Custom, however, allows a second election by the chapter when the first has been declared void.

In countries where a concordat exists between the Holy See and the civil government, the right of devolution is often either to be held in abeyance or certain restrictions are placed upon it. In France no right of devolution was recognized by the State. In some ecclesiastical provinces of Germany and of Holland and Belgium, it is expressly stipulated that in the event of an uncanonical election of an archbishop or bishop, the chapters are to be allowed to proceed to another election. In case the right of presentation to archbishoprics and episcopal sees has been granted by the civil government, the latter does not lose the right by the nomination of an unacceptable candidate, nor does the election devolve upon the pope when a bishopric has not been filled within the canonical term of three months, unless such has been expressly stipulated in the concordat. When the pope, himself, does not exercise the right of devolution within the canonical term of months, the power of conferring the benefice returns to the ordinary patron. Canonists deduce this conclusion not from any explicit law, but from the common regulations governing the provisions for filling benefices and dignities. In practice this custom is observed by the Holy See. Historically, the law of devolution does not seem to be more ancient than the Third Council of the Lateran (1179) for benefices, and the Fourth Council of the Lateran (1215) for elective prelacies. The object of the law is both to provide through higher authority a remedy for the direction of abuses or negligence on the part of inferiors and also to punish them for the improper use of their powers.

Devoti, Giovanni, canonist, b. at Rome, 11 July, 1744; d. there 18 Sept., 1830. At the age of twenty he occupied a chair of canon law at the Roman University (Sapienza). After twenty-five years service in this position Pius VI appointed him Bishop of Anagni, which see he resigned in 1804, to become titular Archbishop of Carthage. As such he filled several important posts at Rome. He also accompanied Pius VII during his exile in France. His works are: "De notissimis in jure legibus libri duo" (Rome, 1766); "Juris canonici universi publici et privati libri quinque", an unfinished work of which only three volumes were printed (Rome, 1803–1815); a new edition, Rome, 1807, containing an introduction to canon law and a commentary on the first and second book of the Decretals; "Institutionum canonarium libri quatuor" (Rome, 1785; fourth ed., Rome, 1814). This last work is distinguished by its clearness and conciseness, and by its numerous historical notes, to which the author, in his letter of commission, to Cardinal Castiglione, afterwards Pius VIII. In 1817, the King of Spain made obligatory the study of the "Institutiones" of Devoti at the University of Alcalá; in 1836, the University of Louvain accepted it as a classical manual of canon law. The work is now more useful for the history than for the practice of canon law.

C. A. DUBRAY.

Diaconecon (Gr. διακόνειον), in the Greek Church the liturgical book specifying the functions of the deacon; it is also the name given to the Orationes pro pace (διακονεῖον) to be said by him before the people. Primarily, however, the word denoted an annex to the Christian basilica, where necessary supplies for the cult of the altar and its preparations were made for the Holy Sacrifice. The diaconecon is distinct from the prothesis, a small room where the offerings of the people were received. In large churches the diaconecon majus comprised several rooms: the salutatorium, for reception and adoration of the people; the thesaurarium, where sacred vessels and books were kept; and the diaconecon proper. Possibly the Greek παρθενόφρον, where the Holy Eucharist was reserved, was simply the diaconecon. Prothesis and diaconecon are ordinarily on either side of the apos.

In Syrian churches, where they are regularly found, they are built on a rectangular plan and have two stories. They were also established by Byzantine churches, in the basilicas of Africa and frequently even in the churches of other regions.

DIAKOVÁR. See DIakoVÁR, see of the Bishop of the united Dioceses of Bosnia or Diaková and Sirmium (Szerém) (Bośnienské sui Diacovenis et Sirmiens, a municipality of Slavonia, Croatia (Hungary), in the county of Virovitička (Hungarian Vojvodina). Diaková is also the seat of a district court; in 1900 it contained 6824 inhabitants, mostly Catholics, of whom 65 per cent were Serbs and 28 per cent Germans. The fine cathedral, completed in 1883 by Friedrich Schmidt from the plans of Karl Römer, is a Romanesque-Gothic edifice, 256 feet long and 197 feet wide; it has two towers, each about 276 feet high, and, in addition, a cupola about 203 feet high. The interior is decorated with frescoes by Seitz, father and son, and the organ has 3000 pipes. Among the other important buildings are the episcopal seminary founded by Bishop Mandić in 1839 and closed in 1856 by Bishop Strossmayr, the provincial house of the Sisters of Charity of the Holy Cross, and the episcopal palace. Diaková is of Roman origin. On the imperial road from Sisak to Sirmium there was a large station named Certissa, which disappeared during the migrations of the fourth and fifth centuries. The site is not again mentioned before the thirteenth century, when Coloman, brother of King Béla IV, gave the "Possessio Diaco" to the Bishop of Bosnia. After the re-establishment of the Diocese of Sirmium (q. v.) by Gregory IX, 20 January, 1229, the bishop lived at Bosna Seraf in Bosnia, but in 1248 he transferred his see to Diaková after Gregory IX, on account of the troubles with the Bogomils, withdrew the Diocese of Bosnia from its sujection to the Archdiocese of Ragusa and made it suffragan to the Archdiocese of Kaloja.
In 1735 the territory of the Diocese of Bosnia became the Vicariate Apostolic of Bosnia and Herzegovina (q. v.), while by a Bull of Clement XIV of 9 July, 1773, the See of Sirmium was united in perpetuity to that of Diakovar. Since this date the Bishops of Diakovar have borne the title "of Bosnia, or Diakovar and Sirmium." Since 1852 the diocese has been a suffragan of Agram (Zagreb), which was established in that year.

Among the most important medieval bishops of Diakovar were Blessed Johannes Teutonicus (1233-41) who died in 1253 as fourth Master General of the Dominican Order, and the Franciscan Blessed Perigrinus (1349-56). In the nineteenth century Bishop Joseph Georg Strossmayer (q. v.) exceeded all his predecessors, not only in the length of his episcopate (1840-1905), but also in the fruitful results of his labours for his diocese, especially as a patron of art and learning. After his death the see was administered by the vicar capitular, Dr. Engelbert Voršák. The cathedral chapter, established in 1239, disappeared after the invasion of the Turks in 1455. It was restored in 1575 by Maria Teresa and it consists of 22 regular and 6 honorary canons. Since 1881 the diocese is limited to the Croatian-Slavonian counties of Verovitizh (Verócse), Szerém, and Pozhega, and includes, according to the statistics for 1908: 4 arch-deaconries; 11 vice-arch-deaconries; 90 parishes with 567 dependent chapels and stations, and 5 missions; 58 parishes for war and regular churches; 63,647 Catholic and 6205 Uniat Greeks in a total population of 515,897. The male religious orders in the diocese are: Franciscans, 6 monasteries; Capuchins, 1 monastery in Eseég (Észék or Oszejk) with 6 religious. The female religious orders include 37 Sisters of Charity of St. Vincent de Paul, and 33 Sisters of Charity of the Holy Cross. Besides the seminary for priests at Diakovar, mentioned above, there is a seminary for boys at Eseég established by Bishop Strossmayer in 1899. The most celebrated place of pilgrimage in the Diocese of Diakovar is Mariaschein near Peterwardein. The patron saint for Diakovar is St. Eliae, for Szerém, St. Demetrius.

Gregor Reinhold.

Dialectic (Gr. διαλεκτική, τεχνή ή μέθοδος), the dialectic art or method, from διάλογος, I converse, discourse, dispute; as noun also dialectics; as adjective, dialectical. (1) In Greek philosophy the word originally signified "investigation by dialogue", interrogation by question and answer, as in the heuristic method of Socrates and the dialogues of Plato. The word dialectics still retains this meaning in the theory of education. (2) But as the process of reasoning is more fundamental than its oral expression, the term dialectic came to denote primarily the art of inference or argument. In this sense it is synonymous with logic. It has always, moreover, connoted special aptitude or acuteness in reasoning, "dialectical skill"; and it was because of this characteristic of Zeno's polemic against the reality of motion or change that this philosopher is said to have been styled by Aristotle the master or founder of dialectic. (3) Further, the aim of all argumentation being presumably the acquisition of truth or knowledge about reality, and the process of cognition being inexpressably bound up with its content or object, i.e. with reality, it was natural that the term dialectic should be again extended from function to object, from thought to thing; and so, even as early as Plato, it had come to signify the whole science of philosophy, not merely as a means and as to content, thus nearly approaching what has been from a somewhat later period universally known as metaphysics. It is, however, not quite synonymous with the latter in the objective sense of the science of real being, abstracting from the thought processes by which this real being is brought into consciousness or experienced in the more subjective sense in which it denotes the study of being in connexion with the mind, the science of knowledge in relation to its object, the critical investigation of the origin and validity of knowledge as pursued in psychology and epistemology. Thus Kant describes dialectical criticism as the "Hegelian dialectic". The criticism of the (to him futile) attempts of speculative human reason to attain to a knowledge of such ultimate realities as the soul, the universe, and the Deity; while the monistic system, in which Hegel identified thought with being and logic with metaphysics, is commonly known as the "Hegelian dialectic".

A. The Dialectic Method in Theology. [For dialectic as equivalent to logic, see art. Logic, and cf. (2) above. It is in this sense we here speak of dialectic in theology.]—The traditional logic, or dialectic, of Aristotle's Organon is the science and art of reasoning in a general manner and provides a method of application in exploring the domain of purely natural truth, but in the early Middle Ages it began to be applied by some Catholic theologians to the elucidation of the supernatural truths of the Christian Revelation. The perennial problem of the relation of reason to faith, already ably discussed by St. Augustine in the fifth century, was thus raised again by St. Anselm in the eleventh. During the intervening and earlier centuries, although the writers and Fathers of the Church had always recognized the right and duty of natural reason to establish those truths preparatory to faith, the existence of God and the fact of revelation, those praesumula fidei which form the motives of credibility of the Christian religion and so make the profession of the Christian Faith a rational obes- quium, a "reasonable service", still their attitude inclined more to the Crede ut intelligas (Believe that you may understand) than the Toto coelo ut credas (Believe that you may believe); and their theology was a positive exegesis of the contents of Scripture and tradition. In the eleventh and twelfth centuries, however, rational speculation was applied to theology not merely for the purpose of proving the praesumula fidei, but also for the "transcendental"kg, illuminating, and showing forth the beauty and the suitability of the mysteries of the Christian Faith. This method of applying to the contents of Revelation the logical forms of rational discussion was called the "dialectic method of theology". Its introduction was opposed more or less vigorously by such ascetic and mystics as St. Peter Damian, St. Bernard, and Walter of St. Victor; chiefly, indeed, because of the excess to which it was carried by those rationalist and theosophist writers who, like Peter Abelard and Raymond Lully, would fain demonstrate the Christian mysteries, subordinating faith to private judgment. The method was saved from neglect and excess alike by the great Scholastics of the thirteenth century, and was used to advantage in their theology. After five or six centuries of fruitful development, under the influence, mainly, of this deductive dialectic, theology has again been drawing, for a century past, abundant and powerful aid from a renewed and increased attention to the historical and exegetical studies that characterized the earlier centuries of Christianity.

B. Dialectic as Fundamental Philosophy of
HUMAN KNOWLEDGE [cf. (3), above].—(a) The Pla-
tonic Dialectic.—From the beginnings of Greek phi-
losophy reflection directly, yet faithfully, as it were, the
contents of the knowing human mind: an abstract,
permanent, immutable element, usually referred to
the intellect or reason; and a concrete, changeable,
ever-shifting element, usually referred to the imagina-
tion and the external senses. Now, can the reason
work without opposition? Or if so, which set really
represents it? For Hermelitus and the earlier Ionians, stability is a delusion; all
reality is change—Δάκρυ πέτ. For Parmenides and the Eleatics, change is delusion; reality is one, fixed, and stable.
But then, whence the delusion, if such there be, is transformative? Or do we speak with such uncertain voice, or which alternative are we to believe? Both, answers Plato, but intellect
more than sense. What realities, the latter asks, are revealed by those abstract, universal notions we pos-
sess—of being, number, cause, goodness, etc., by
the necessary, immutable truths we apprehend and the comparison of those notions? The dialectic of the
Platonic "Ideas" is a noble, if unsuccessful, attempt to
answer this question. These notions and truths, says
Plato, have for objects ideas which constitute the real world, the mandus intelligibilis, of which we have the
abstract and actual expression in intellectual not-
ion. These beings which are objects of our intellectual
knowledge, these ideas, really exist in the manner in
which they are represented by the intellect, i. e. as
necessary, universal, immutable, eternal, etc. But
where is this mandus intelligibilis? It is a world apart
(ανώπη), separate from the world of fleeting phenom-
ena revealed to the senses. And this latter world, then, real or unreal? It is, says Plato, but a shadowy
reflex of reality, a dissolving-view of the ideas, about
which our conscious sense-impressions can give us
mere opinion (αισθήμα), but not that reliable, proper
knowledge (σφαίρα) which we have of the ideas. This
is unsatisfactory. It is an attempt to explain an
admitted connexion between the noumenal and the
phenomenal elements in knowledge by supressing
the reality of the latter altogether. Nor is Plato any
more successful in his endeavour to show how the idea,
which for him a really existing being, can be at the
same time one and manifold, or, in other words, how
it can be universal, like the mental notion that
represents it.

(b) Aristotelian and Scholastic Dialectic.—Aristotle,
taught, in opposition to his master Plato, that these
"ideas" or objects of our intellectual notions do not
exist, but are entailed in the intellectual individual data of sense. It is one and the same
reality which reveals itself under an abstract, universal,
static aspect to the intellect, and under a concrete,
manifold, dynamic aspect to the senses. The Chris-
tian philosophers of the Middle Ages took up and de-
veloped this Aristotelian conception, making it the core
the cardinal doctrines of Scholastic philosophy, the
decision of modern Realism. The object of the ab-
stract, universal notion, they taught, is real being: it
constitutes and is identical with the individual data of sense-knowledge; it is numerically multiplied and
individualized in them, while it is unified as a class-
concept or universal notion (unum commune pluribus)
by the abstractive power of the intellect which appre-
hends the element common to the individuals of a
class without their differentiating characteristics.
The universal notion thus exists as univeral only in
the intellect, but it has a foundation in the individual
data which is such. Thus, if the universal really exists in these sense-data, though the mode of
its existence there is other than the mode in which
the notion exists in the intellect: universale est for-
maliter in mente, fundamentali in re. Nor does the
intellect, in thus representing individual phenomena
by universal notions, falsify its object or render intel-
lectual knowledge unreliable: it represents the Real
inadequately, no doubt, not exhaustively or compre-
hesively, yet faithfully as it were. In other words, it does
not misrepresent reality, for it merely asserts of the latter
the content of its universal notion, not the mode (or
universality) of the latter, as Plato did.

But if we get all our universal notions, necessary
judgments, and intuitions of immutable truth through
necessary categories, it is clear that to account for
the timeless, spaceless, changeless, necessary character of the relations we establish bot-
between these objects of abstract, intellectual thought:
relations such as "Two and two are four," "Whatever
happens has a cause," "Vice is blameworthy." It
must be that these truths are self-evident. The
object of this study of ours has been to show how
we have been so accustomed to associate certain elements of consciousness that we are unable to dissociate them
(as materialist and evolutionist philosophers would
say); nor yet, on the other hand, because in apprehen-
sing these necessary relations we have a direct and
immediate intuition of the necessary, self-existent,
Divine Being (as the Ontologians have said, and as
some interpret Plato to have meant); but simply be-
cause we are endowed with an intellectual faculty
which can apprehend the data of sense in a static con-
dition and establish relations between them abstracting
from all changes.

The Kantian Dialectic.—While Scholastic philos-
ophers understand by reality that which is the object
directly revealed to, and apprehended by, the knowing
mind through certain modifications wrought by the
reality in the sensory and intellectual faculties, ideal-
ist or phenomenalist philosophers assume that the
direct object of our knowledge is the mental state or
modification itself, the mental appearance, or pheno-
menon, as they call it; and because we cannot clearly
imagine a mental state in the eam without transcending its
own revealed, or phenomenal, self or states in the act
cognition, as to apprehend something other than
the immediate, empirical, subjective content of the
act, these philosophers are inclined to doubt the val-
idity of the "inferential leap to reality, and conse-
quent to maintain that the speculative reason is
unable to reach beyond subjective, mental appear-
ances to a knowledge of things-in-themselves. Thus,
according to Kant, our necessary and universal judg-
ments about sense-data derive their necessity and
universality from certain innate, subjective equip-
ments of the mind called categories, or forms of
thought, and are therefore validly applicable only
to the phenomena or states of sense-consciousness.
We
are, no doubt, compelled to think of an unperceived
real world, underlying the phenomena of external
sensation, of an unperceived real ego, or mind, or soul,
underlying the phenomena of our phenomenal
world, or of the empirical or phenomenal ego, and of an
absolute and ultimate underlying, unconditioned
Cause of the ego and the world alike; but these three
ideas of the reason—the soul, the world, and God—
are mere natural, necessary products of the mental
process of thinking, mere regulative principles of
thought, devoid of all real content, and therefore in-

capable of revealing reality to the speculative reason of man. Kant, nevertheless, believed in these realities, deriving a subjective certitude about them from the exigencies of the practical reason, where he considered the speculative reason to have failed.

(d) The Hegelian Dialectic.—Post-Kantian philosophers disagreed in interpreting Kant. Fichte, Schelling, and Hegel developed some phases of his teaching in differing senses. Kant calls the formal element in knowledge—i.e. the necessary, universal, immutable element—comes exclusively from within the mind, and if, moreover, mind can know only itself, what right have we to assume that there is a material element independent of, and distinct from, mind? Is not the content of knowledge, or in other words, knowledge itself, a priori, a product of the mind or ego itself? Or are not individual human minds mere self-conscious phases in the evolution of the one ultimate, absolute Being? Here we have the idealistic monism or pantheism of Fichte and Schelling. Hegel’s dialectic is characterized especially by its thoroughgoing identification of the speculative process with the process of Being. His logic is what is usually known as metaphysics: a philosophy of Being as revealed through abstract thought.

His starting-point is the concept of pure, absolute, indeterminate being; this he conceives as a process, as dynamic, as a method. The method is the evolution of this dynamic principle through three stages: (1) the stage in which it affirms, or posits, itself as thesis; (2) the stage of negation, limitation, antithesis, which is a necessary corollary of the previous stage; (3) the stage of synthesis, return to itself, union of opposites, which follows necessarily on (1) and (2). Absolute being in the first stage is the idea simply (the subject-matter of logic); in the second stage (of otherness) it becomes nature (philosophy of nature); in the third stage (of return or synthesis) it is spirit (philosophy of spirit—ethics, politics, art, religion, etc.).

Applied to the initial idea of absolute Being, the process works out somewhat like this: All conception involves limitation, and limitation is negation; posit- ing or affirming the notion of Being involves its differentiation from non-being and thus implies the negation of being. This negation, however, does not terminate in mere nothingness; it implies a relation of affirmatively which leads by a natural process to a richer concept than the original one. Thus: absolutely indeterminate being is no less opposed to, than it is identical with, absolutely indeterminate nothing: or Being-Nothing; but in the oscillation from the one notion to the other both are merged in the richer syntheses of Becoming.

This is merely an illustration of the a priori dialectic process by which Hegel seeks to show how all the categories of thought and reality (which he identifies) are evolved from pure, indeterminate, absolute, abstractly-conceived Being. It is not an attempt at making his system intelligible. To do so in a few sentences would be impossible, if only for the reason, that Hegel has read into ordinary philosophical terms meanings that are quite new and often sufficiently remote from the currently accepted ones. To this fact especially is due the difficulty experienced by Catholics in deciding with any degree of certitude whether, or how far, the Hegelian Dialectic—and the same in its measure is true of Kant’s critical philosophy also—may be compatible with the profession of the Catholic Faith. That these philosophies have proved dangerous, and have troubled the minds of many, was only to be expected from the novelty of the views. But that the strength of the hold of the exposי tion, in the minds of their leading exponents, they contained much, or little, or anything incompatible with Theism and Christianity, it would be as difficult as it would be perhaps idle to attempt to decide. Be that as it may, the attitude of the Catholic Church towards philosophies that are new and strange in their methods and terminology must be one of caution, or even be one of a suspensive, the meaning traditionally attached by her children to the terms in which she has always exposed those ultimate philosophico-religious truths that lie partly along and partly beyond the confines of natural human knowledge, and realizing the danger of their being led astray by novel ones thrown into ambiguous language, she has ever wisely warned them to “beware lest any man teach them by philosophy, and vain deceit” (Coloss. ii. 8).

For the use of dialectic in the early Christian and medieval schools, see Arts, THE SEVEN LIBERAL ARTS; PROCEEDING, tr. FISCHER (Oxford, 1907); TURNER, History of Philosophy (Boston, 1903); DE WOLF, tr. COPPET, Scholasticism Old and New (Dublin, London, New York, 1907); INELSEN, The Dialectic Method (Louvain, 1907).

Diamantina, Diocese of (ADAMANTINA), in the north of the State of Minas Geraes, Brazil, South America. It was erected on 4th Aug., 1853, and confirmed by the Holy See, 6 June, 1854. This territory was part of the ancient Diocese of Mariana (now the Archdiocese of Minas Geraes), which had four suffragans: Mariana, Diamantina, Pouso Alegre and Uberaba, in the centre, north, south and far west of the State of Minas Geraes. The present territory comprises twenty municipalities or townships divided in 106 parishes and 173 districts (an area of 33,708 square miles or half the territory of the State of Minas). According to the last official census (31 Dec., 1900) the population of the Diocese of Diamantina was 529,828. There are about one hundred churches in as many villages and towns; and 100 priests, belonging to the regular and parochial clergy of the diocese. A seminary and diocesan college (recognized by a decree of the Federal Government, and modeled on the National Gymnasium of Rio de Janeiro) are directed by the Lazarists, and a college for girls, also in Diamantina, and directed by religious, are the principal educational institutions of the diocese. Premonstratensian missionaries in Montes Claros, and Franciscans in Theophilo Ottoni and Itambacuri, are engaged in Christianizing the Indian tribes of Botocudos. About 7,000 have been converted along the Mucury River, and in the mission of Alcina at Itambacuri. In addition to these there are Dutch Redemptorists in Curvello and a few (Spanish and Italian) priests.

Charity hospitals (Diamantina, 2, Curvelho, 1, Montes Claros, 1, Serro, 1, Conceição, 1) are attended by the Sisters of St. Vincent de Paul, and of Our Lady of Providence. Catholic leagues, charitable societies and confraternities are organized in the parishes; and there is an institution at Serro for invalid or poor priests. There were formerly two missions, in Poaya (forests of Urupíca River and Suassuhy-Grande) and in Figéepa (De Manoel Harbour), and Indian ailments which prospered under the apostolic zeal of Italian Franciscan missionaries. Since its erection the Diocese of Diamantina has had three bishops. The first was the Right Rev. Marcos Cardoso de Paiva (a native of Rio de Janeiro). His successor was the Right Rev. Joao Antonio dos Santos who died in Diamantina on 17 May, 1876, after thirty-five years' episcopacy of forty-one years. Born in the village of Rio Preto, 1819, he served as professor of philosophy in the seminary of Mariana before his appointment as Bishop of Diamantina, 2 May, 1844. During the last years of his episcopacy, the Holy See named
as his coadjutor the Right Rev. J. Silverio de Sousa who succeeded him, having been consecrated titular Bishop of Baraão in February, 1892. He was the author of "Itinerário de Sítios e Povos"; "O Lar Católico"; "Novenas do Natal e da Immaculada Conceição"; "Fieis de Mosteiro e Pastores"; all well known works published in Brazil. The Catholic press in the dioceze is represented by two periodicals "Estrela Poliar" (official) of Diocese of Saline, and "A Voz do Hebraico", of Montes-Claro. The latter is in charge of the Preeminent Brazilian priests.

Diana, ANTONINO, moral theologian, b. of a noble family at Palermo, Sicily, in 1586; d. at Rome, 20 July, 1683. He took his vows as a regular clerk of the Theatine Order in 1630. He became celebrated as a casuist while he was yet a young man, and cases of conscience were sent to him for solution from all parts. He at first met with universal censure and approbation. The brothers Prost, who brought out the eighth edition of the first three parts of this work at Lyons, in 1635, sent it forth, with a play on the author's name, as the Diana of him who might be hunting for truth in the woods of moral theology, and as the Diana of the crossways who would show the right path to anyone in doubt or perplexity. Popes Urban VIII, Innocent X, and Alexander VII, esteemed him for his learning, and he was made a consultant of the Holy Office of the Kingdom of Sicily and an examiner of bishops. Diana himself claims a rule of his solutions followed the wider opinion. On the frontispiece of the volume just mentioned round a figure of the Cross runs the legend Non fero sed fingo. According to St. Alphonse and the common opinion of modern theologians, Diana not infrequently went too far in the direction of laxity. However, his works may still be consulted with profit. Besides several editions of the unabridged works, epitomes and compendiums of them began to appear even in the author's lifetime, in spite of his vigorous protest that his real meaning was being distorted by his too ardent admirers.

Diano, DIOCESI DE (DIANENSI), a small city in the province of Salerno, Italy, the ancient Tegidium and seat of the Tegyanii, a tribe of Lucania. Pius IX established this see 29 Sept., 1850, at the instance of King Ferdinand II of Naples, and ordered the Bishop of Capaccio to fix his residence in the town of Diano, thenceforth the see was to be known as Capaccio and Diano. But under the second bishop Domenico Fanelli (1858-83), Capaccio was again separated from Diano and united with the Diocese of Vallo, in which town the bishop now resides. In 1882 Diano received the name of Tegidino. The see is a suffragan of Salerno. There is a suffragan of Tegidino. There are 44 parishes, about 250 secular priests, 3 religious houses of men and one of women; the population is about 100,000.

Annuario Ecl. (Rome, 1905).

Diario Romano (it. for "Roman Daybook"), a booklet published annually at Rome, with papal authorisation, giving the routine of feasts and fasts to be observed in Rome and the ecclesiastical functions to be performed in the city.

The Diario for 1908 gives the days on which the Roman Congregations—Index, Rites, Propaganda, etc.—hold their sessions. A table is then given for the ringing of the bell for the most holy Sacrament, with the time of sunset, and ranges from 5.15 p. m. to 8.15 p. m. In quoting the time of day at which an exercise is to take place, the Diario uses the regular style for the morning hours, but says, "before" or "after the Angelus", for the afternoon. The Diario notes the phases of the moon, the movable feasts, the ember days, the ecclesiastical cycles, the time for the solemnization of marriage, a list of days on which certain specially honoured images of the Blessed Virgin are exposed for veneration, a list of saints and blessed honoured on each day of the month and of the day at which the feast is celebrated. In the body of the work the text is frequently made that images and relics of Christ and of the saints, ordinarily veiled, are uncovered and put in a prominent place. Such relics are: the table on which Christ instituted the Holy Eucharist; the manger or crib in which Christ is said to have been placed after his birth; the heads of Sts. Peter and Paul; the Chair of St. Peter (Cathedra Petri). Next are given the various functions as follows:-

(1) Ordinary—(a) Daily.—In all churches where canons or religious communities reside the canonical Hours of the Breviary are recited and conventual Mass is sung. Mass is said in all churches at the latest at 5 o'clock, and the latest at 12, the latter at St. Maria della Pace and always a votive Mass in honour of the Holy Trinity in thanksgiving for the favours conferred by the Blessed Virgin. At St. Giuseppi alla Lungara dei Fili Ottersi a daily foundation Mass with sermon and "Liberas" is offered for the souls in purgatory. The Exposition of the Blessed Sacrament takes place daily at S. Gioacchino ai Monti, at S. Claudio dei Borgognoni, at S. Croce of the convent of S. Maria Riparatrice, at S. Brigida, at the church of Corpus Domini, in the chapel of the Daughters of the Sacred Heart. In these churches and chapels special devotions are held during the day and are always well attended.

The recitation of the Rosary is a favourite practice of the Romans; it takes place at Mass in twenty-one churches in which Benediction is then given with the gypx; in the afternoon the Rosary, or, in some instances, the beads of the Seven Dolours or of the Precious Blood are exposed. In all churches, churches and chapels, in which a sermon is added. On feast days Exposition of the Blessed Sacrament is held in the morning in six churches, Rosary and Benediction in the afternoon in eight; in five also a sermon is preached, and in five others the chalice of the Sacred Heart is added. In the parish churches high Mass and sermon are held at eight or nine o'clock on Sundays, and in the afternoon Christian doctrine is taught. At St. John Lateran there is a procession before Mass; at S. Gioacchino the Blessed Sacrament is exposed at Mass and prayers of reparation are said. In the afternoon Benediction is given after the Rosary has been recited before the Blessed Sacrament. In nine other churches there is Exposition in the morning, to which, at S. Prassede, prayers for a good death are added. Benediction is given in many churches at various times of the day, together with an explanation of the Holy Scriptures, an instruction, a sermon, Rosary, etc. The Way of the Cross is made in four churches. The Diario notes the following devotions to be held for Monday: Exposition during Mass at Santi XII Apostoli and Ara Coeli, in the evening at four churches, with special prayers to St. Jude Thaddeus at S. Vincenzo alla Torre. Tuesdays in the morning for four churches; for the same number in the evening, a devotion to St. Anne, and a meditation. Wednesday: for five churches Exposition in the forenoon; for four in the afternoon, Rosary, chaplet of the Immaculate, chaplet of Sorrows and Joys of St. Joseph, prayers to the
Mother of Sorrows. Thursday: Exposition during the whole day at S. Gioacchino in Prati with Rosary and Benediction in the evening. Exposition in the other churches, to which a discourse is added at N. S. di S. Cuore; in S. Andrea at the Quirinal catechetical instruction for boys. Friday: Exposition, chaplet of the Sacred Heart, Holy Hour for the dying, prayers in honour of the Passion, Way of the Cross, Way of the Maccabees, Way of the Vineyards of the seven Dolours. Saturday: Exposition: devotion to the Mother of Mercy against lightning, in honour of the Queen of the Holy Rosary, special prayers for the conversion of England, chaplet of the Immaculate, of the Seven Dolours, sermon, singing of the litany, and Benediction.—(c) From then on, the first Sunday in each church or another: Exposition in the form of the Forty Hours, procession, prayers for a good death, Way of the Cross, Corona dei Morti, Communion of the Pages of Honour of St. Aloysius. For the second Sunday: Exposition in the morning and in the evening, procession of the Blessed Sacrament, at S. Maria sopra Minerva procession with the Bambino and prayers for blasphemers. For the third Sunday: Exposition in the morning or in the evening, and procession. For the fourth Sunday: Exposition in the morning, and procession. For the last Sunday: Exposition and procession for two churches: one in the morning, for others in the evening: Way of the Cross at the Campo Santo. Similarly, the Diario makes announcements for the first Tuesday, the first Wednesday, etc. Among the devotions noted for these days special mention may be made of prayers for obstinate sinners said on the first Wednesday at S. Giacomo in Augusta, Mass of reparation for the insults offered to the Blessed Sacrament, Mass in the morning and Benediction in the evening with prayers for the conversion of England, supplcations for the reunion of Christendom, English sermon on the first Friday at S. Giorgio e santi Inglesi. 20th Easter Sunday: Sermon two hours before the Angelus on all feasts of Christ and of Our Lady at S. Alfonso on the Esquiline; at S. Andrea delle Fratte Way of the Cross on all Sundays of February, March, November, and December, and on the eight days of Carnival; at S. Agnese Outside the Walls Exposition on all Sundays and Holy Days at two hours before the Angelus, with chaplet of the Five Wounds during Lent; at S. Andrea at the Ponte Milvio a Mass is said on all Sundays and Holy Days for the deceased members, two hours before the Angelus; Office of the Dead, absolution given in the adjoining cemetery, and Benediction in the continuation of a litany. On Septuagesima Sunday at S. Filippo on the Via Giulia Exposition all day, closing with litany and Benediction. On the Saturday before Sexagesima some churches perform a pious exercise called Carnivale sanitificato. On the Friday after Sexagesima and on the Friday of Lent, in nearly all churches, the Way of the Cross is made or the Via Dolorosa. Lenten sermons are preached on Wednesdays and Fridays. The Lenten preachers are received in audience by the pope. For the Apostolic Palace a special preacher is appointed. On Lactare Sunday the Holy Father blesses the Golden Rose, which he then sends to persons of rank, to cities, or corporations as a token of gratitude; on this Sunday also begin the catechetical instructions prescribed by Benedict XIV as a preparation for Easter. The Holy Week exercises are performed in all the parish churches, and additional devotions are held in mass as the blessing of the Bread and Wine. On Holy Thursday Mass and sermons on the Passion, Way of the Cross or of the Desolata, or honouring the Hours of the Agony. The Ruthenian Rite is used for the functions of Holy Week at SS. Sergio e Bacco, the Armenian Rite at S. Nicola da Tolentino on 1 January. At S. Andrea della Valle the Venetian Rite is sung after Mass and the baptismal vows are renewed, at S. Maria in Campitelli the faithful consecrate themselves to the patron chosen for the year; in a Chapel in a Convent the spiritual testament of St. Charles Borromeo is read on 5 January. At S. Atanasio water is blessed in the Greek Rite and at S. Andrea della Valle and at other churches in the Latin Rite. This water the pious faithful take home to sprinkle the sick, their houses, and themselves. The 6th of January is the titular feast of the Propaganda; Mass is celebrated in the Oriental Rites, and sermons are preached in the different languages. On 3 February takes place the blessing of throats with a relic of St. Blaise, and in the churches of the Blessed Virgin the pious faithful place the blessed water on the royal box and on the statues, and on the jaws and on the throats with blessed oil. On 31 December, in nearly all the churches and oratories, the year is closed with Exposition of the Blessed Sacrament and Te Deum. Formerly greater solemnity was imparted to some feasts by the presence of the Holy Father, who would celebrate the Mass or Vespers, or would assist at them pontifically in one of the greater basilicas and impart the Apostolic blessing to the world from the outer loggia. The Diario mentions some twenty days on which such a cappella papale, as it was called, used to take place before 1870. For the year 1908 only two are noted: for 4 July, the anniversary of the death of Leo XIII, and for 9 August, the anniversary of the coronation of the reigning pontiff, Pius X. The special feasts of the churches are ushered in by preparatory triduums, novenas, or devotions of seven or of eight days, on which pious exercises are performed in common and Benediction is given; entire months are dedicated to saints or mysteries—as the month of St. Joseph, the month of Mary, of the Sacred Heart of Jesus, of the Precious Blood, of the Sacred Heart of Mary, of the Seven Dolours, of the Rosary, and of the Dead. Holy Communion for a series of fixed days of the week, together with special prayers, is in use. We read in the Diario of six Sundays of St. Aloysius, seven of St. Camillus, nine of St. Cajetan, ten of St. Ignatius, fifteen of the Rosary; nine Mondays of the Archangel St. Gabriel; nine Tuesdays of St. Anne, and thirteen of St. Anthony of Padua; seven Wednesdays of Our Lady of Mount Carmel; seven Fridays of the Seven Dolours; seven of St. Juliana Falconieri, nine of the Sacred Heart of Jesus, ten of St. Francis Xavier, thirteen of St. Francis of Paul, thirteen of St. Onuphrius; five Saturdays of the Name of Mary, twelve of the Immaculate Conception, fifteen of the Holy Rosary. We encourage the faithful in the frequent reception of the sacraments, in visiting the churches, venerating the Blessed Sacrament or the relics of the saints, and in performing other acts of devotion, the Church has opened wide her treasure and granted almost innumerable Indulgences. Of special note is the totus quoties Indulgence. The Holy Father has this Indulgence for every day of the year; the church of S. Andrea delle Fratte on the feast of St. Francis of Paul (3 May); the churches of the Trinitarians on Trinity Sunday; SS. Cuore at the Castro Pretorio, on the feast of the Sacred Heart; the churches of the Carmelites on 16 July; in several churches the Indulgences of Portiuncolla on 2 August; the churches of the Servites on the feast of the Seven Dolours in September; where the Confraternity of the Rosary is canonically established, on Rosary Sunday; in several churches on the feast of the Holy Redeemer; in the Benedictine churches on 2 November. Only in these churches, the Holy Father has granted a totus quoties Indulgence to the pious practice of the Scala Santa (Acta S. Sedis, XLII, 294). Spiritual retreats are given for men twice a year at the Caravita, and once for women; for both sexes at the Crociferi, and a special one preparatory to Easter, for both sexes, at SS. Vincenzo e Anastasio.
Diarmad, Saint, b. in Ireland, date unknown; d. in 851 or 852. He was made Archbishop of Armagh in 834, but was driven from his see by the usurper Fergus in 835. However, he claimed his rights and collected his cens in Connacht, in 836, as primat. He lived in a stormy age, as the Scandinavian rovers under Turgesius seized Armagh, in 841, and levelled the churches. The "Annals of Ulster" (ed. B. McCarthy, Dublin, 1887, I, 361) describe him as "the wisest of the doctors of Europe". His feast is celebrated on 24 April.

Saint Diarmaid, summoned the Just, a famous Irish confessor of the mid-sixth century; d. 542. His name is associated with the great monastery of Iniscolthan (Insicleraun) on Lough Ree, in the Diocese of Ardagh, which he founded about the year 530. He was of princely origin and a native of Connacht. Wishing to find an oratory far from the haunts of men, he selected the beautiful but lonely island associated with the memory of Queen Meave, now known as Quaker Island. Here his fame soon attracted disciples, and among them St. Cirian of Clonmacnoise. He was not only a good teacher, but also a distinguished hermit and poet. On the island seven churches are traditionally said to have been erected, and the traces of six are still in evidence, including Tempeal Diarmada, or the church of St. Diarmaid, the saint's own church—an oratory eight feet by seven. His feast is celebrated 10 January. After his death the monastic school kept up its reputation for nearly seven centuries, and the island itself was famous for pilgrimage in pre-Reformation days.

W. H. GRATIAN-FOOD.

Dias, Bartolomeu, a famous Portuguese navigator of the fifteenth century, discoverer of the Cape of Good Hope; d. at sea, 29 May, 1500. Several Portuguese sources relate that he was theendant of João Dias who sailed around Cape Bojador in 1434, and of Diniz Dias who is said to have discovered the Cape Verde Islands. As early as 1481 Bartolomeu Dias had accompanied Diogo d'Azambuja on an expedition to the Gold Coast. Dias was a cavalier of the royal household, superintendent of the royal warehouses and sailing-master of the man-of-war "San Christovo"; when King John (João) II appointed him on 10 October, 1486, as the head of an expedition which was to endeavour to sail around the southern end of Africa. His chief purpose was to find the country of the Christian King, whom he knew as John, commander of whom recent reports had arrived (1486) through João Alfonso d'Avieiro, and with whom the Portuguese wished to enter into friendly relations.

After ten months of preparation Dias left Lisbon the latter part of July or the beginning of August, 1487, with two armed caravels of fifty tons each and one supply-ship. Among his companions were Pero d'Alemquer, who wrote a description of Vasco da Gama's first voyage, Leitão, João Infante, Alvaro Martins, and João Grego. The supply-ship was commanded by Bartolomeu's brother, Pero Dias. There were also two negroes and four negroes of the board who were kept at suit by the native to explain to the natives the purpose of the expedition. Dias sailed first towards the mouth of the Congo, discovered the year before by Cão and Behaim, then following the African coast, he entered Walvis Bay, and probably erected the first of his stone columns near the present Angara Pequena. From 29° south latitude (Port Natal) he lost sight of the coast and was driven by a violent storm, which lasted thirteen days, far beyond the Cape to the south. When he sailed again in an easterly direction and, when no land appeared, turned northward, landing in the Bahia dos Vaqueiros (Mossel Bay). Following the coast he reached Algos Bay, and then the limit of his exploration, the Great Fish River, which he named after the commander of the accompanying vessel, Rio Infante. It was only on his return voyage that he discovered the Cape, to which, according to Barros, he gave the name of Cabo Tormentoso. King John, in view of the success of the expedition, is said to have proposed the name it has since borne, Cape of Good Hope. In December, 1488, Dias returned to Lisbon after an absence of sixteen months and seventeen days. He had shown the way to Vasco da Gama whom in 1497 he accompanied, but in a subordinate position, as far as the Cape Verde Islands.

In 1500 Dias commanded a ship in the expedition of Coa (q. v.); his vessel, however, one of those wrecked not far from the Cape of Good Hope, which he had discovered thirteen years before. An official report of the expedition to the cape has not yet been found. Besides the account by Barros there is a note written on the margin of page 18 of a manuscript copy of the "Memorials" of Cardinal Pierre Dugué de Foix, of the time of importance, as this copy was once the property of Christopher Columbus. Ravenstein has attempted, and not unsuccessfully, by the aid of contemporary charts to reconstruct the entire voyage with the different stopping-points of the route.

OTTO HARTIG.

Diaspora (or Dispersion) was the name given to the countries (outside of Palestine) through which the Jews were dispersed, and secondarily to the Jews living in those countries. The Greek term, diasporē, corresponds to the Hebrew נַדְּשֵׁה, "exile" (cf. Jer., xxiv, 5). It occurs in the Greek version of the Old Testament, e. g., Deut., xxviii, 25; xxx, 4, where the Jews are commanded to destroy the cities in their punishment of their apostasy. In John, vii, 35, the word is used implying disdain: "The Jews therefore said among themselves: Whither will he go, that we shall not find him? Will he go unto the dispersed among the Gentiles? Two of the Catholic Epistles, viz., that of James and I Peter, are addressed to the neophytes of the Diaspora. In Acts, ii, are enumerated the principal countries from which the Jews came who heard the Apostles preach at Pentecost, everyone "in his own tongue". The Diaspora was the result of the various deportations of Jews which invariably followed the invasion of the Greek, Persian, and Roman empires. The first deportation took place after the capture of Samaria by Shalmanezer (Salmanasar) and Sargon, when a portion of the Ten Tribes were carried into the regions of the Euphrates and into Media, 721 B. C. (IV Kings, xvii). In 587 B. C. the Kingdom of Judah was transported into Mesopotamia. When, about fifty years later, Cyrus allowed the Jews to return to their country, only the poorer and more fervent availed themselves of the permission. The richer families remained in Babylonia forming the beginning of a numerous and influential community. The conquest of Alexander the Great caused the spreading of Jews throughout Asia and Syria. Seleucus Nicator made the Jews citizens in the cities he built in his dominions, and gave them equal rights with the Greeks and Macedonians. (Josephus, Antiquities,
XI., iii, 1.) Shortly after the transportation of Juda into Babylonia a number of Jews who had been left in Palestine voluntarily emigrated into Egypt. (Jer., xii-xiv.) They formed the nucleus of the famous Alexandrine colony. But the great transportation into Egypt was caused by Ptolemy Soter. "Aptis Ptolemy took many captives both from the mountainous parts of Judea and from the places about Jerusalem and Samarla and led them into Egypt and settled them there" (Antiquities, XII, i, 1). In Rome there was already a community of Jews at the time of Caesar. It is mentioned in a decree of Yessar cited by Josephus (Ant., XLV, x, 8). After the destruction of Jerusalem by Titus thousands of Jewish slaves were placed upon the market. They formed the nucleus of settlements in Africa, Italy, Spain, and Gaul. At the time of the Apostles the number of Jews in the Diaspora was exceedingly great. The Jewish author of the Sibyllyne Oracles (22nd century B.C.) could already say of his countrymen: "Every land and every sea is full of them" (Or. Sib., III, 271). Josephus mentioning the riches of the temple says: "Let no one wonder that there was so much wealth in our temple since all the Jews throughout the habitable earth sent their contributions" (Ant., XIV, vii, 2). The Jews of the Diaspora paid a temple tax, a kind of Peter's-pence; a didrachma being required from every male adult. The sums transmitted to Jerusalem were at times so large as to cause an inconvenient drain of gold, which were more than once induced the Roman government either to stop the transmission or even to confiscate it.

Though the Diaspora Jews were, on the whole, faithful to their religion, there was a noticeable difference of theological opinion between the Babylonian and Alexandrine Jews. In Mesopotamia the Jews read and studied the Bible in Hebrew. This was comparatively easy to them since Chaldee, their vernacular, was kindred to the Hebrew. The Jews in Egypt and throughout Europe, commonly called Hellenistic Jews, soon forgot Hebrew. A Greek version of the Bible, the Septuagint, was made for them. The consequence was that there were less ardent in the punctilious observance of their Law. Like the Samaritans they showed a schismatic tendency by erecting a rival temple to that in Jerusalem. It was built by the son of Onias the high-priest in Leontopota in Lower Egypt during the reign of Ptolemy Philometor, 166 B.C. and destroyed in 196 B.C. (Ant., XIII, ii, 3). It is a curious fact that whereas Hellenistic Judaism became the soil in which Christianity took root and waxed strong, the colony in Babylonia remained a stronghold of orthodox Judaism and produced its famous Talmud. The deeply-rooted antagonism between the Greeks and the Jews made the amalgamation of the two races impossible. Though some of the Seleucids and Ptolemies, such as Seleucus Nicator and Antiochus the Great, were favourable towards the Jews, there was constant friction between the two elements in Syria and Egypt. Occasional pillage and massacre were inevitable results. Thus on one occasion the Greeks in Seleucia and Syria massacred some 50,000 Jews (Ant., XVIII, ix, 9). On another occasion the Jews, getting the upper hand in Cyprus, killed the Greek inhabitants of Salamis and were in consequence banished from the island (Dio Cassius, LXVIII, 23). In Alexandria it was found necessary to confine the Jews to a separate quarter, or ghetto. The Roman Empire was on the whole well-disposed towards the Jews of the Diaspora. They had everywhere the right of residence and could not be expelled. The two exceptions were the expulsion of the Jews from Rome under Tiberius (Ant., XVIII, iii, 5) and under Claudius (Acts, xix, 23), both of which occasions were of short duration. Their cult was declared a religio licita. All communities had their synagogae, προσευχαῖς or συναγωγαῖ, which served also as libraries and places of assembly. The most famous was that in Antioch (De bell. Jud., VII, iii, 3). They had their cemeteries; in Rome, like the Christians, they buried their dead in catacombs. They were allowed freely to observe their sabbaths, festivals, and dietary laws. They were exempt from the emperor-worship and from military service. Many Jews enjoyed Roman citizenship, e. g. St. Paul (Acts, xvi, 37-39). In many places the Jewish community formed a recognized organization with administrative, judicial, and financial powers. It was ruled by a council called ģēzerim, composed of elders, rabbis, and sephirot, who were the archon, the head of which was the archon. Another token of the freedom which the Jews enjoyed throughout the empire was their active propaganda (cf. Matt., xxii, 15). The neophytes were called ἰδρυμενοὶ or ἱδρύμηνα, i. e. God-fearing (Acts, xiii, 16, 26, 43; Antiquities, XIV, vii, 2). Their number appears to have been very great. St. Paul met them in almost all the cities he visited. Josephus, praising the excellence of the Law, says: "the multitude of mankind itself has had a great inclination to follow our religious observances. There is not a city of the Greco-Roman Sabarians that will not adopt our customs: the prohibition as to our food are not observed" etc. (Contra Apion., II, xi). Many of the converts were distinguished persons, e. g. Aquila, the chamberlain of the Queen of Candace (Acts, viii, 26 sq.); Apeiro, King of Emesa, and Polemo, King of Cilicia (Ant., xx, vii); the patrician lady Fulvia (Ant., XVIII, iii, 5).
Francisco de Córdoba in 1517. He proceeded to Mexico with Grijalva in 1518 and returning to Cuba, set out a third time for Mexico under the banner of Hernando Cortés. He took part, he tells us, in 119 battles, and was decorated by the emperor Charles V, who, in 1521, made him Marquis of Orizaba. As a reward for distinguished services he received a commission as regidor or governor of Santiago de los Caballeros in Guatemala, where he made his home. In 1552, Gómez, secretary and chaplain to Cortés, published at Saragossa his "Crónicas de la Conquista de Nueva España"; if Díaz thought he gave undue credit to Cortés. Días, therefore, in 1568, undertook to write his "Verdadera Historia de la Conquista de Nueva España", and though despairs of his ability to equal Gómez's literary polish, he determined to write a faithful narrative of the stirring events in which he had taken part, in order to put an end to the gross inaccuracies of Gómez, who had never even been in America, and to vindicate the value of himself and others who had been completely overshadowed by the exaggerated reputation of Cortés. The work lay neglected and unpublished until, in 1582, Father Albino Remón of the Order of Our Lady of Mount Carmel found it in a private library and had it published at Madrid. The work is crude and devoid of style, and shows the ignorance and vanity of the author, but it will always be read with interest as being the work of an eyewitness and participant in the events described.

In 1789, Francisco de Fuentes, in his history of Guatemala, set forth his claim to be a descendant of Díaz, and gave certain facts concerning him and his work that had been until then unknown. It would seem that, although poor, the family of Díaz was noble and distinguished, for his father was regidor of the important town of Medellin. Fuentes also declared that the work was not published as written by Díaz, as it was not printed from the original manuscript but from an unauthorized copy in the library of one Ramírez del Prado which fell into the hands of Father Remón. The original manuscript, he claims, was in his own possession. "La Biblioteca de Autores Españoles" (1848-86) of Rivadeneira contains the entire works of Díaz. A German translation by P. J. de Rehhues Bon Marques was published in 1838.

VENTURA FUENTES.

Díaz de Solís, Juan, Spanish navigator and explorer, b. about 1470 at Lebrija (Seville), or, according to some, at Estepa, in South America in 1516. After some explorations in Central America in 1506 and in Brazil in 1508, he succeeded Amerigo Vespucci as pilot-major, upon the latter's death in 1512. This title had been conferred upon Vespucci by Ferdinand of Spain on 22 March, 1509, and carried with it a high salary. Two years after appointment to this office, de Solís prepared an expedition to explore the southern part of the new continent. His ships sailed from Lepe on 8 Oct., 1515, following the coast as far as the mouth of the Río de la Plata. He went up that river for some distance, and, wishing to take possession of the country in the name of the Crown, landed on the eastern bank of the river, somewhere near the junction of the Uruguay and Paraná Rivers, with two officers and seven men. This region was inhabited by wild tribes, and the little party had not proceeded far when they were attacked from ambush, and Díaz de Solís and three of his followers were killed. When he did not come back, those who had remained behind on the ships determined to return to Spain. Francisco de Torres, the brother-in-law of Díaz de Solís, then took charge, and after naming the river Río de Solís, they set sail, arriving in

Spain, 4 Sept., 1516. The news of the disastrous ending of the expedition was communicated to Cardinal Ximenes de Cisneros who was then regent of Spain. Varnhagen, in his "History of Brazil," published in Portuguese (Rio de Janeiro, 1854-58), states that Nuño Manuel visited the La Plata before Díaz de Solís. Manuel Trelles gives the same honor to Diego García in a pamphlet published in Buenos Aires in 1879.

VENTURA FUENTES.

Dibon, a titular see in Palestina Tertia. Dibón (Sept., Daíbón, Débón, or Dibón) is mentioned in Num., xxxiii, 45, as a station of the Hebrews on their way to the Promised Land. It was soon after occupied and rebuilt by the tribe of Gad (Num., xxxiii, 34). It belonged later to the Rubenites (Jos., xiii, 17). At the time of the Prophets it was in the power of the Moabites. The ruins of the town stand at Dibán, one and a half miles west of 'Arâr (Aure), ten miles southwest of Mâ'akûr (Markarousa), in the vilayet of Damascæ. The masses of black basalt present a mournful aspect, strangely contrasting with that of the fertile table-land of Moab and the vicinity of the Arnon (Wadi Modjib). There are an acropolis, cisterns, sepulchral grooves, and a few Roman and Byzantine fragments. True here also that Clermont-Ganneau found the famous stèle of Mesa, King of Moab, now at the Louvre. Mesa calls himself "the Dibonite". Dibón, as far as is known, never was a Greek see, but in the course of time became a Latin titular see.

S. PETRÍDES.

Dicasillo, Juan de, theologian, b. of Spanish parents at Naples, 28 December, 1554; d. at Ingholstadt 6 March, 1553. He entered the novitiate of the Society of Jesus in 1600, and was professor of theology for twenty-five years at Toledo, Murcia, and Vienna. In moral questions, Dicasillo followed the principles of the probabilists. His principal works are: "De justitia et jure oetetisius virtutibus cardinalibus libri III" (Antwerp, 1614); "De Sane et ignoto, quod scimus et non scimus, et disputations scholasticæ et morales" (Antwerp, 1646-52); "Tractatus duo de juremento, perjurio, et adjudicature, necnon de censuris et pensione ecclesiasticæ" (Antwerp, 1662); "Tractatus de incarnatione" (Antwerp, 1642).

HUNTERS, Nomenclator; SOMMERVOGEL, Bibliothèque de la c. de J., III, 49; LANGHORST in Kirchenlex., s. v.

Deaconson, Edward, titular Bishop of Malls, or Mallus, Vicar Apostolic of the English Northern District; b. 30 Nov., 1760; d. 5 May, 1762. He was the son of Hugh Deaconson of Wrichtington Hall, Lancashire. At the age of thirteen or fourteen he was sent to the English College at Douai, where he completed his course of philosophy in 1791. He returned to Douai about 1765, and being ordained to the priesthood, and on being ordained in June, 1701, remained at the college many years as procurator and professor, and became vice-president in 1713, while still continuing to teach theology. At Ushaw there is preserved a portion of a diary kept by him at this period, which gives a glimpse of the life he led and of some other events of interest. In it he has recorded a visit paid by him to Paris in June, 1704, and he and his brother "at St. Germain made the compliments of the College to King and Queen on the King's birthday." The king here referred to was James I's youthful son, who was recognised as king,
both by the exiled English Catholics and by Louis XIV of France, and to whom Deconinck's oldest brother William was tutor. The queen was of course his mother, the widowed Mary of Modena, whose kindly interest in Douai College is shown by more than one occasion in the diary. He penned also a letter spent by him in May, 1705, at Cambrai, whither himself and the President of Douai conducted three of the young Howards, then students at the college, to meet their brother the Duke of Norfolk. The illustrious Pénélon was then Archbishop of Cambrai, of whose "extremely obliging and respectful" reception of the duke the diary makes particular mention.

After being employed for some time at Paris in connexion with the college funds, Deconinck left Douai to work upon the English mission in 1720, and for some years was chaplain to Mr. Giffard of Chillington in Staffordshire, acting at the same time as vicar-general to Bishop Stonor, Vicar Apostolic of the Midland District. At the time of his own nomination to the Northern Vicariate Deconinck had gone to Rome as envoy-extraordinary of the secular clergy. He was consecrated on 19 March, 1741, at Ghent; passing from that function he confirmed many of the priests besides ordaining others. On reaching his vicariate he fixed his residence at Finch Mill in Lancashire, a place belonging to his family. He had then reached the age of seventy, and in 1750 he had to petition for a coadjutor in the person of Dr. Francis Péter. After a short interval of almost five years, a great event took place at Finch Mill and was buried in the family vault beneath the parish church of Standish. In the reports supplied to the Holy See on the several occasions when his name was brought forward for a bishopric, he is described as "a wise man of singular merit, of learning, application to business, and dexterity in managing affairs—though not very successful in the economy of Douai, and with an impediment of tongue, which made preaching difficult." The fact is also noted that in 1714 he "had accepted the Constitution Unigenitus [against Jansenism], and insisted on its acceptance by the students." He collected a large number of controversial works of the seventeenth and eighteenth centuries (now in the Library of Ushaw College), on the fly-leaves of which he wrote valuable biographical and bibliographical comments.

G. E. PHILLIPS.

Dichto, RALPH DE, dean of St. Paul's, London, and chronicler. The name "Dichtum" cannot be correctly connected with any place in England; it is possible therefore that Ralph was born in France. The date of his birth must be placed between 1120 and 1130; he died 22 Nov., 1202. He was twice a student at Paris. His first prebend was the archdeaconry of Middlesex to which he was nominated in 1152. In 1180 he became dean of St. Paul's. He was the friend, during fifty years, of the successive bishops of London: Simon de Burgh Gilbert; the royalist party among the bishops and the adversary of the Archbishop, St. Thomas. This friendship and his admiration for Henry II drew him towards the royalist side in the Becket controversy, but not altogether; he had something of the wide, cosmopolitan, twelfth-century outlook, and he showed his sympathy with his archbishop at the Council of Northampton in 1164. He was an active dean and took part in the survey of the lands belonging to the chapter which is known as the Domesday of St. Paul's. His writings include two substantial historical works: "Abbreuviationes Chronicorum", a compilation from many sources going back to Domesday, and "Historiae Principum et Principatus Angliae," a work of capital importance. It covers the years 1149 to 1202, and in its earlier portion is based on the historical writings of Robert de Monte (or "de Torigny"). It was begun probably in the closing years of Henry II's reign. Ralph's important position in ecclesiastical circles, his friendship with many prominent men, such as William Longchamp and Walter of Coutances, the help he received from them, the documents he incorporates, and his own mode of writing, all render his work of capital importance in spite of some chronological vagueness. The best edition of Ralph's historical works is that edited for the "Rolls Series" by Bishop Stubbs in 1876. The prefaces to the two volumes contain an admirable account of the historian, of the society in which he moved, and of the writings themselves.

F. F. URQUHART.

Dichu, SAINT, the son of an Ulster chieftain, was the first convert of St. Patrick in Ireland. Born in the last decade of the fourth century, he succeeded to the petty kingdom of Lecale, which included Saul, in the present County Down. On St. Patrick's arrival at Tubber Slain (the estuary of the Slaney near Lough Cuan or Strangford Lough), in 432, Dichu, then a pagan, strongly opposed his landing, and even attacked the saint, but was miraculously touched with Divine grace and embraced the faith. Thereupon Dichu, after baptism, presented St. Patrick with the Sabhall (Saul), for a church, and thus Saul became the first Irish foundation of the national apostle, being afterwards known as Saulhadd Patraic. Saul was a particular favourite with St. Patrick, and he frequently spent some time in visiting the place during his arduous missionary labours. St. Dichu, from the purity of his conversion, was a model of sanctity and, from a man of warlike proclivities, became a man of peace. The details of his later career are obscure, but we know that two of his sons, who had been detained as hostages by Laoghaire, King of Ireland, were released at the prayer of St. Patrick. His feast is noted in the "MartYROLOGY OF Donegal" as "Dichu of Sabhall", under date of 29 April. As is well known, it was at Saul that St. Patrick died, and this monastery became in afterdays a famous abbey, under the rule of the Regular Canons of St. Augustine.

W. H. GRATTON-FLOOD.

Diciul, Irish monk and geographer, b. in the second half of the eighth century; date of death unknown. Of his life nothing is known except that he belonged probably to one of the numerous Irish monasteries of the Frankish Kingdom, became acquainted, by personal observation, with the islands near England and Scotland, and went between 814 and 816 to the astronomical, and in 825 a geographical, work. The astronomical work is a sort of compendium in four books, in prose and verse, preserved only in a manuscript which formerly belonged to the monastery of Saint-Amand, and is now at Valenciennes. More famous is the "De Diversis Orbibus," written in the six or seventh century, giving concise information about various lands. This work was based upon a "Mensoratio orbis" prepared by order of Theodosius II (435), a manuscript copy of which had found its way to the Carolingian court. Godescul had already made use of this copy (781-83) in the composition of his celebrated "Evangelicarum." Diciul draws also upon Pliny, Suidas, Orosius, Isidore of Seville, and other authors, and adds the results of his own investigations. In the nine sections he treats in turn of Europe, Asia, Africa, Egypt, and Ethiopia, the area of the earth's surface, the five great rivers, certain islands, the length and breadth of the Mediterranean Sea, the Cushanian Sea, and the Pillars of Hercules. Although mainly a compilation, this work is not without value. Diciul is our only source for detailed information of the surveys carried out under Theodosius
I; his quotations, generally exact, are of service for the
 textual criticism of the authors mentio ned; of
great interest, too, are the few reports which he got
from Damase; and lastly, not the least, for "Dieu au
monk Fidelis who (7627) journeyed along the canal
then still existing, between the Nile and the Red
Sea; and from clerics who had lived in Alexandria
seven months. The manuscript was known to Weiser,
Isaac Vossius, Salmasius, Hardouin, and Schöpflin; it
finally appeared in print not the first time, as for "Dieuuni
de mensuris orbis terrae ex duobus codex, mm. biblio-
thecae imperialis nune primum in lucem edita a Car.
Athan. Wälckenaer" (Paris, 1807). The latest and
best edition is that of G. Parthey (Berlin, 1870).
The commentary is that of LEBENON in Re-
cherches geographiques et critiques sur le livre De mensuris orbis
terram composato... par Dieuau (Paris, 1814).

OTTO HARTIG.

Didache (Doctrine of the Twelve Apostles),
a short treatise which was accounted by some of
the Fathers as next to Holy Scripture. It was rediscover-
ed in 1883 by Bryennios, Greek Orthodox metropolita-
na of the Phoci. It is a document of which he had
published the full text of the Epistles of St. Cle-
ment. The title in the MS. is: Δεικνύω κυρίον διὰ τῶν
dókēn ἀποστόλων δόγμαν, but before this it gives the
heading δεικνύω τῶν δόκην ἀποστόλων. The old Latin
translation of cc. i-v, found by Dr. J. Schlecht in 1800,
has the longer title, omitting all reference to the
rubric De doctrina Apostolorum. For convenience the
contents may be divided into three parts: the first is the
"Two Ways", the Way of Life and the Way of
Death; the second part is a ritual dealing with bapti-
sm, fasting, and Holy Communion; the third speaks of
the ministry. Doctrinal teaching is presupposed,
and none is imparted.

The Didache is mentioned by Eusebius after the
books of Scripture (H. E., III, xxv, 4): "Let there be
placed among the spurious the writing of the Acts of
Paul, the so-called Shepherd and the Apocalypse of
Peter, and besides these the Epistles of Barnabas, and
what are called the Teachings of the Apostles, and also . . .
the Apocalypse of John, if this be thought fit . . ." St. Athanasius and Rus-
nus add the "Teaching" to the sapiential and other
deutero-canonical books. (Rufinus gives the curious
and absurd phrase: "Conservandum est in bibliotheca
theologica") The text of the Didache is a

Second Part.—This (vi-x) begins with an instruc-
tion on baptism, which is to be conferred "in the
Name of the Father, and of the Son and of the
Holy Ghost" in living water, if it can be had—if not, in cold
or even hot water. The baptized and, if possible, the
baptizer, and other persons must fast for one or two
days previously. If the water is insufficient for
immersion, it may be poured thrice on the head. This
is said by Bigg to shew a late date; but it seems a
natural concession for hot and dry countries, when bap-
tism was not as yet celebrated exclusively at Easter
or Pentecost. Churches, when food was scarce and
a supply of water would not be wanting. Feasts are
not to be on Monday and Thursday "with the
hypocrites" (i.e. the Jews), but on Wednesday and
Friday (viii). Nor must Christians pray with the
hypocrites, but they shall say the Our Father thrice a
day. The text of the Didache is: "It has a place in
Matthew, and it is given with the doxology "for Thine
is the power and the glory for ever", whereas all but
a few MSS. of St. Matthew have this interpolation with
"the kingdom and the power" etc.

Ch. ix runs thus: "Concerning the Eucharist,
thus say you give thanks: 'We give Thee thanks, our
Father, for the holy Vine of David Thy Child, which
Thou hast made known to us through Jesus Thy
Child; to Thee be the glory for ever'. And of the
broken Bread: 'We give Thee thanks, our Father,
for the Life and know ledge which Thou hast made
known to us through Jesus Thy Child; to Thee be glory
for ever. For as this broken bread was dispersed over
the mountains, and being collected became one, so may
Thy Church be gathered together from the ends of
the earth into Thy kingdom, for Thine is the glory
and the power through Jesus Christ for ever.' And
let none eat or drink of your Eucharist but those who
have been baptized in the Name of Christ; for of this the Lord
said: 'Give not the holy Thing to the dogs'. These
are clearly prayers after the Consecration and before
Communion. Ch. x gives a thanksgiving after
Communion, slightly longer, in which mention is made of the
'spiritual food and drink and eternal Life through

and ch. ii, and these sections have no parallel in
Barnabas; they may therefore be a later addition, and
Hermas and the present text of the Didache may have
used the same source; in this case, a manuscript from
the monk Fidelis who (7627) journeyed along the canal
then still existing, between the Nile and the Red
Sea; and from clerics who had lived in Alexandria
seven months. The manuscript was known to Weiser,
Isaac Vossius, Salmasius, Hardouin, and Schöpflin; it
finally appeared in print not the first time, as for "Dieuau
de mensuris orbis terrae ex duobus codex, mm. biblio-
thecae imperialis nune primum in lucem edita a Car.
Athan. Wälckenaer" (Paris, 1807). The latest and
best edition is that of G. Parthey (Berlin, 1870).
The commentary is that of LEBENON in Re-
cherches geographiques et critiques sur le livre De mensuris orbis
terram composato... par Dieuau (Paris, 1814).

OTTO HARTIG.

Didache (Doctrine of the Twelve Apostles),
a short treatise which was accounted by some of
the Fathers as next to Holy Scripture. It was rediscover-
ed in 1883 by Bryennios, Greek Orthodox metropolita-
na of the Phoci. It is a document of which he had
published the full text of the Epistles of St. Cle-
ment. The title in the MS. is: Δεικνύω κυρίον διὰ τῶν
dókēn ἀποστόλων δόγμαν, but before this it gives the
heading δεικνύω τῶν δόκην ἀποστόλων. The old Latin
translation of cc. i-v, found by Dr. J. Schlecht in 1800,
has the longer title, omitting all reference to the
rubric De doctrina Apostolorum. For convenience the
contents may be divided into three parts: the first is the
"Two Ways", the Way of Life and the Way of
Death; the second part is a ritual dealing with bapti-
sm, fasting, and Holy Communion; the third speaks of
the ministry. Doctrinal teaching is presupposed,
and none is imparted.

The Didache is mentioned by Eusebius after the
books of Scripture (H. E., III, xxv, 4): "Let there be
placed among the spurious the writing of the Acts of
Paul, the so-called Shepherd and the Apocalypse of
Peter, and besides these the Epistles of Barnabas, and
what are called the Teachings of the Apostles, and also . . .
the Apocalypse of John, if this be thought fit . . ." St. Athanasius and Rus-
nus add the "Teaching" to the sapiential and other
deutero-canonical books. (Rufinus gives the curious
and absurd phrase: "Conservandum est in bibliotheca
theologica") The text of the Didache is: "It has a place in
Matthew, and it is given with the doxology "for Thine
is the power and the glory for ever", whereas all but
a few MSS. of St. Matthew have this interpolation with
"the kingdom and the power" etc.

Ch. ix runs thus: "Concerning the Eucharist,
thus say you give thanks: 'We give Thee thanks, our
Father, for the holy Vine of David Thy Child, which
Thou hast made known to us through Jesus Thy
Child; to Thee be the glory for ever'. And of the
broken Bread: 'We give Thee thanks, our Father,
for the Life and know ledge which Thou hast made
known to us through Jesus Thy Child; to Thee be glory
for ever. For as this broken bread was dispersed over
the mountains, and being collected became one, so may
Thy Church be gathered together from the ends of
the earth into Thy kingdom, for Thine is the glory
and the power through Jesus Christ for ever.' And
let none eat or drink of your Eucharist but those who
have been baptized in the Name of Christ; for of this the Lord
said: 'Give not the holy Thing to the dogs'. These
are clearly prayers after the Consecration and before
Communion. Ch. x gives a thanksgiving after
Communion, slightly longer, in which mention is made of the
'spiritual food and drink and eternal Life through
Thy Child". After a doxology, as before, come the remarkable exclamations: "Let grace come, and this world pass away! Hosanna to the Son of David! If any is holy, let him come. If any be not, let him repent. Maranatha. Amen". We are not only reminded of the Hosanna and Sancta sanctis of the liturgies, but also of Apoc. xxii, 17, 20, and I Cor. xvi, 22. In these prayers we find deep reverence, and the effect of a religious faith to such a degree that there is no distinct mention of the Real Presence. The words in thanksgiving for the chalice are echoed by Clement of Alexandria, "Quis div.", 29: "It is He [Christ] who has poured out the Wine, the Blood of the Vine of David, upon our wounded souls"; and by Origen, "In the first place, we must consider that the Blood of the True Vine Which ascends from the root of David." The mention of the chalice before the bread is in accordance with St. Luke, xxii, 17-19, in the "Western" text (which omits verse 20), and is apparently from a Jewish blessing of wine and bread, with which the rite of prayers in ch. ix have a close affinity.

The Third Part speaks first of teachers or doctors (didaskaloi) in general. These are to be received if they teach the above doctrine; and if they add the justice and knowledge of the Lord they are to be received as his teachers. Every teacher of the Church is to be regarded as the Lord, and he may stay one day or two, but if he stay three, he is a false prophet. On leaving he shall take nothing with him but bread. If he ask for money, he is a false prophet. Similarly with the order of prophets: to judge them when they speak in the spirit is the unpardonable sin; but they must be known by their morals. If they seek gain, they are to be rejected. All travellers who come in the name of the Lord are to be received, but only for two or three days; and they must exercise their trade, if they have one, or at least must not be idle. Anyone who will not work is a wages receiver—one who makes a gain out of the name of Christ. Teachers and prophets are worthy of their food. Firstfruits are to be given to the prophets, "for they are your High Priests; but if you have not a prophet, give the firstfruits to the poor". The breaking of bread and Thanksgiving [Eucharist] is on Sunday, "after you have confessed your sins, and prayers, that your sacrifice may be pure, and those who are at discord must agree, for this is the clean oblation propitious by Malachias, i, 11, 14. "Ordain therefore for yourselves bishops and deacons, worthy of the Lord... for they also minister to you the ministry of the prophets and teachers". Notice that the sacrificial sacrifice is followed by the prophetic, that is, where the prophet is to be ordained. The last chapter (xvi) exhorts to watching and telling the signs of the end of the world.

Sources.—It is held by very many critics that the "Two Ways" is older than the rest of the Didache, and is in origin a Jewish work, intended for the instruction of proselytes. The use of the Sibylline Oracles and other Jewish sources may be probable, and the agreement of ch. ii with the Talmud may be certain; but on the other hand Funk has shown that (apart from the admittedly Christian ch. 1, 3-6, and the occasional citations of the N. T.) the O. T. is often not quoted directly, but from the Gospels. Bartlet suggests an oral Jewish catechism as the source. But the use of such material would surprise us in one whose name for the Jews is "the hypocrites", and in the vehemently anti-Jewish Barnabas still more. The whole base of this theory is destroyed by the fact that the rest of the work, vii-xvi, though wholly Christian in character, is remarkably agreeable to the Talmud in cc. ix and x. Beyond doubt we must look upon the writer as living at a very early period, when Jewish influence was still important in the Church. He warns Christians not to fast with the Jews or pray with them; yet the two fasts and the three times of prayer are modelled on Jewish custom. Similarly the prophets stand in the place of the High Priest.

Date.—There are other signs of a Christian date: the simplicity of the baptismal rite, which is apparently neither preceded by exorcism nor by formal admission to the catechumenate; the simplicity of the Eucharist, in comparison with the elaborate quasi-Eucharistic prayer in Clem., i Cor., lix-101; the peculiar prayer to petition for the remains of the crucified; the time of thanksgiving; the immediate expectation of the second advent. As we find the Christian Sunday already substituted for the Jewish Sabbath as the day of assembly in Acts, xx, 7 and I Cor., xxvi, 2, and called the Lord's day (Apoc., i, 10), there is no difficulty in supposing that the Barnabas was written in the second century. Fasts to Wednesday and Friday may have taken place at an equally early date, at least in some places. But the chief point is the ministry. It is twofold: (1) local and (2) itinerant.—(1) The local ministers are bishops and deacons, as in St. Paul (Phil., i, 1) and St. Clement. Presbyters are not mentioned, and the bishops are clearly presbyter-bishops, as in Acts, xx, and in the Pastoral Epistles of St. Paul. But when St. Ignatius wrote in 107, or at the latest 117, the three orders of bishops, priests, and deacons were already considered necessary to the very name of a Church, in Asia Minor. If we suppose that in the first century of St. Clement's time there was as yet no "monarchical" bishop at Corinth, yet such a state of things cannot have lasted long in any important Church. On this ground therefore the Didache must be set either in the first century or else in some backwater of church life. The itinerant ministry is obviously yet more archaic. In the second century prophecy was a charism only, and not a ministry, except among the Montanists.—(2) The itinerant ministers are not mentioned by Clement or Ignatius. The three orders are apostles, prophets, and teachers, as in I Cor., xii, 28 sq.: "God hath set some in the Church: first apostles, secondly prophets, thirdly doctors [teachers]; after that miracles, then the graces of healings, helps, governments, kinds of tongues, interpretations of speeches. Are all apostles? Are all prophets? Are all doctors?" The Didache places teachers below apostles and prophets, the two orders which St. Paul makes the foundation of the Church (Eph. ii, 20). The term apostle is applied by St. Paul not only to the Twelve, but also to himself, to Barnabas, to his kinsmen, Andronicus and Junias, who had been converted before him, and to a class of preachers of the first rank. But apostles must have "seen the Lord" and have received a special grace and teaching, that they may be "scriptural" or in early literature of the existence of an order called apostles later than the Apostolic age. We have no right to assume a second-century order of apostles, who had not seen Christ in the flesh, for the sake of bolstering up a preconceived notion of the date of the Didache. Some who work the visit of an apostle or of a pretended apostle is contemplated as a not improbable event, we cannot place the book later than about 80. The limits would seem to be from 65 to 90. Harman gives 131-160, holding that Barnabas and the Didache independently employ a Christianized form of the Jewish "Two Ways"; while Did., xvi, is citing Barnabas—a somewhat roundabout hypothesis. He places Barnabas in 131, and the Didache later than this. Those who date Barnabas under Vespasian mostly make the Didache the borrower in cc. i-v and xvi. Many, with Funk, place Barnabas under Nerva. The common view is that which puts the Didache before 100. Barnabas, with Eilleen, has 105 as the most probable date. Sabatier, Minasi, Jaucquier, and others have preferred a date even before 70.

As to the place of composition, many suggest Egypt because they think the "Epistle of Barnabas" was written there. The corn upon the mountains does not suit Egypt, though it might be a prayer borrowed

DIDOT

DIDOT  782

use among the Audiani, Syrian heretics. The few extracts he gives do not quite tally with our present text; but then he is notoriously inexact in his quotations. Next we find the whole work incorporated into the Apostolic Constitutions, at the end of the fourth century, and soon afterwards it is quoted in the pseudo-Chrysostom's "Opus Imperfectum in Matt." But it never had a wide circulation, and was superseded by the Apostolic Constitutions. The place of composition was Syria, though what part cannot be determined. The author was apparently a bishop, and presumably a Catholic. His book is badly put together, without logic, but not without some good. It never took up any position on its own accord itself entirely with practice. It has been called the earliest attempt to compile a Corpus juris canonicorum.

A few specimens of the text in German were published in 1843 by A. Stier in his Ost, des Kirchenrechts, the whole in Syriac by Lagarde (under his earlier name of Böttcher), Didascalie Apostolorum Syriac (Leipzig, 1854). His attempt at restoration of the Greek text was published in Bün- nen, Analecta Antiochenba (London, 1854), with the title Didascalie, a draft which omitted a good deal of the material which is preserved in the Syriac. Another Syriac ed. from other MSS. by Gibson, The Didascalie Ap. in Syriac, tr. Eadem. The Didasce, Ap. in English (Cambridge Univ. Press, 1933, as Herae Sibyllicae I and II); French tr. by Nau, Ancienne litterature syrienne (extraits du Compte des Contemporains, Feb., 1901, May, 1902). The Latin version, attributed to Arius, was published by HAUERL, Didascalie Apostolorum fragmenta Veronicensis latina (Leipzig, 1876). His editions on the subject include the monograph Die apostolischen Konstitutionen (Rotenburg, 1891), La date de la Didascalie des Apotre (Rev. d'hist. ecc., 1891), and a firmer establishment of his Kirchenrecht, Ueberungen (Paderborn, 1907), I. 113, articles in the Theol. Quartalschr. (1890, and 1903-4), and the great edition already mentioned, Institutiones Apostolicae excerpta, ed. F. HENRICK, 2 vols. (Paderborn, 1907). Harnack's views are found in Texte und Untersuchungen, I (1884), II (1887), and III (1890). He also ed. altr. Lit., 11, 151, and 11, 2 (i. e. Chromat., XI), 488, where a good bibliography will be found; HOLLAGE, Die Didascalie (Compendierter Auszug des Conciliae Constantinianum, 1898, 1900), and FUNK, Die Didascalie (Paderborn, 1901, 1904), his attempts to distinguish three recensions,private, the first being known to Darius, but he has not convinced FUNK or Harnack. ACHELM, A. and FLEMMING, Die syrische Didascalie überetzt und erklärt (Texte und Unters., XXV, 1904, an important contribution). See also BARDENBURGER, Gesch. der allerk. Lit., II, and EBERSCHI, Atr Leg. Lit. bis 1900, for further bibliography. The so-called Arabic Didascalie is merely a version of the Apostolic Constitutions, and is of little interest. It has been published; it is found in FUNK's ed. of the Apostolic Constitutions, II (1890), and also in B. (1887, and 1888) and E. (1889). See also C.J. Duchesne, Denkschr. 127, a new edition (1901). REIDEL, Die Kirchenrecht Quellen des Patriarchats Alex. (1900). A variety of this version was found in the propaganda library of P. Bazin, in Paris, and is described by him in Ortschr. (1903). On this discovery see FUNK in Th. Quartalschr. (1904), 233, reprinted in his Kirchenrecht. Abb. (1907), III, xvii.

JOHN CHAPMAN.

Diderot, Denis. See ENCYCLOPEDIANS.

Dion, Henri, preacher, writer, and educator, b. 17 March, 1840, at Touvet (Isère), France; d. 13 March, 1900, at Toulouse. At the age of eighteen he left the seminary of Grenoble to enter the Dominican Order at Flavigny. Four years later he went to Rome to complete his studies at the Minerva. Returning to France he a lector of sacred theology he taught Scripture for a brief time, and began at Paris in 1868 a brilliant career as a preacher. A sincere desire to communicate his faith to others, coupled with accomplished art, enabled him to make the most of the qualities of an orator with which nature had endowed him. He had a majestic carriage, strong features, a massive forehead, black eyes, a vibrating voice which he performed with superb gestures, and words by superb gestures. Straight, straightforward, and sympathetic, he readily won the hearts of his hearers, whom he dominated by his presence and startled by his boldness. He was essentially a man of his time, an advocate of progress, but withal loyal to the Church whose place in modern civilization he staunchly defended and revered. He was at his best when preaching on social subjects. He delivered the funeral oration of Archbishop Darboy, of Paris, who had been shot by the Communists 24 May, 1871. In the following year he preached Lenten and Advent conferences in the principal churches of Paris, many of which he published. In 1879 he was bitterly assailed by the secular press of Paris for the attitude he took in a series of conferences on the burning question of the inadmissibility of marriage, which was dis continued at the request of the Archbishop of Paris, but published in book form. A year later he was bitterly attacked by other critics while delivering Lenten conferences on the Church and modern society, and the accusation was made that he was in contradiction to the Syllabus of 1864, though his preaching was orthodox, he was sent by the magistrates general, according to Corbara in Corsica. There for seven years he labours at a "Life of Christ," leaving his retreat for an extended visit in Palestine and again for a sojourn at the Universities of Leipzig, Göttingen, and Berlin. In 1887 he returned to France, where, in 1889, he consolidated his "Life of Christ." It met with a remarkable sale and was soon translated into several languages: two English translations were made in 1891-2.

In January, 1892, Father Didon, reappeared in the French pulpit, when he preached at Bordeaux a religious-political sermon in favour of the Republic. He then delivered the Madeleine in Paris a series of Lenten conferences on Jesus Christ (tr. Belief in the Divinity of Jesus Christ, 1894). Thereafter he gave only occasional sermons and lectures, his time and energies being devoted to the education of youth. At the Dominican colleges in and near Paris, cultivating educational theories but little developed elsewhere in France, he did away with compulsion as much as possible, taught the students that discipline is the way to liberty, fostered in them a spirit of self-reliance together with a loving reverence for authority, and championed the development of a cultural spirit. Some of his educational theories may be seen in his work "Les Allemands" (tr. The Germans, 1884), which is a study of the German universities with application to France; others may be found developed at length in his college addresses published in pamphlet form. The deeply religious character of Father Didon is especially manifest in his "Lettres à Mil Th. V." (Paris, 1900), which quickly went through thirty editions and appeared in English; in his "Lettres à un ami" (Paris, 1902); and "Lettres à une Amie" (Année Dominican, 1907-8). Besides the works mentioned above many of his sermons and addresses have been published in French and some have been done into English.

ARTHUR L. McMAHON.

Didot, name of a family of French printers and publishers.

François Didot, son of Denis Didot, a merchant,
was b. in Paris, 1689, and d. 1757. In 1713 he opened a bookstore on the Quai des Grands-Augustins, the sign of which was "A la Bibl. d'or". The directors of the Compagnie des Éditions, as a mark of esteem, employed him as a clerk, after leaving the seminary. François Didot was a learned man, and held by his colleagues in a great esteem that he was elected to the dignity of syndic of the Booksellers' Corporation in 1735. He received his printer's charter from the king in 1754. Among the books he published should be mentioned the "Histoire des voyages" (20 vols., quarto), the first seventeen volumes of which are attributed to the Abbé Prévost.

François-Ambroise Didot, b. 1730; d. 1804, succeeded his father François, and was appointed printer to the king in 1788. All those who have the fine arts would highly appreciate the editions known as "D’Artois" (Receuil de romans français, 64 vols.) and "du Dauphin", a collection of French classics in 32 vols., edited by order of Louis XVI. He also published a Bible. He invented a new printing-press, improved type-founding, and was the first to print on vellum paper.

Pierre-François Didot, b. 1732; d. 1795, brother of the preceding, founded the paper factory of Essonne and made improvements in type-founding. The most important of his publications are: "L'Imitation de la Vie de Jésus Christ" (folio), "Tableau de l'Empire Ottoman" (folio). One of his daughters married Bernardin de Saint-Pierre.

Henri Didot, b. 1765, d. 1832, son of Pierre-François, made a name as engraver, founder, and engine-maker. When sixty-six years old, he engraved the microscopic type which was used for the editions of the "Maximes" of La Rochefoucauld and Horace's works. This type was so small that, to cast it, he had to invent a new mould which he called polyamatype (1819), because it founded one hundred letters at a time. He engraved the assignats, the paper money used during the French Revolution.

Saint-Léger Didot, b. 1767; d. 1829, second son of Pierre-François, devoted his attention to paper-making in the famous factory of Essonne, and, after ten years of patient experiment, invented a machine to make "endless" paper.

Edouard Didot, b. 1797; d. 1825, son of Saint-Léger, made a good translation of Johnson's "Lives of the Poets", which was printed by Jules Didot.

Pierre Didot, b. 1760; d. 1853, eldest son of François-Ambroise, obtained a gold medal at the exhibition of 1798, for his edition of Virgil. By order of the Government, his presses were established in the Louvre, where they remained during the Consulate. The celebrated Louvre editions are Virgil, Racine, Horace, and La Fontaine. The board of examiners of the 1806 exhibition pronounced the Racine edition "the most perfect typographical production of all ages". Pierre Didot was also a poet and translated in verse the fourth book of George's, the first books of Horace's Odes, and also wrote a number of original poems.

Jules Didot, b. 1794; d. 1871, son of Pierre, is famous for his invention of round-edged initials, to take the place of the sharp-edged ones. In 1825 he took his printing plant to Brussels and founded the Royal Printing House.

 Firmin Didot, b. 1764; d. 1836, second son of François-Ambroise was the inventor of stereotypy, which entirely changed the book trade, and was the author of the so-called "England" and round hand-writing. Among the works which issued from his press were "Les ruines de Pompée", "Le panthéon égyptien", "Champollion-Figeac", and "Historical du jongleur", printed in Gothic type, with tall-pieces and vignettes, like the editions of the fifteenth century. In 1827, when his father Didot gave up business to devote himself to politics and literature, he was a member of the Chamber of Deputies and wrote tragedies ("La Reine de Portugal", "La Mort d'Annibal") and essays on literary topics.

Didot, Adolphe-Napoléon, also called Didron aîné, archæologist, together with Viollet-le-Duc and Guillemin, one of the principal revivalists of Gothic art in France: b. 13 March, 1806, at Hautvillers, near Reims, where his father was a collector of taxes; d. at Paris, 13 November, 1867. After completing his early studies at the preparatory seminaries of Meaux and Reims, he went to Paris in 1829, became there a master of history and, having taken a course in the Roman law, followed courses of law, medicine, etc. The reading of Victor Hugo's "Notre Dame de Paris" gave him a taste for the study of the antiquities of the Middle Ages. Having been admitted to the circle of the poet in 1829, he there formed the plan of a tour in Normandy, a province noted above all for its historical buildings. His reading of the legends of the saints, his knowledge of Scripture, and certain abstract notions of theology directed the young amateur to the study of iconography. In 1835 Guizot named him secretary to the committee entrusted with the publication of the unedited documents concerning the history of France. Didron published, entirely unsold, the first four volumes of the reports of the committee. In 1839 the portion concerning the iconography of the monumental monographs of the cathedral of Chartres was reserved for him. This work did not appear in complete form. In 1838 he opened a course of iconography at the Royal Library. He published (under the title of "Manuel d'iconographie") a French version of the famous "Painters' Book of Mount Athos", discovered there by him, and wrote the "Histoire de Dieu", the first part of a more general work. His greatest work is the review known as "Annales archéologiques", in which are to be found accounts of his travels and numerous studies in iconography. For many years Didron published in the "Univers" letters on archæology. He also founded a library of archæological literature, and finally, in 1849, constructed a glass-manufactory, which produced some remarkable works of art, and continued to exist after his death. He also produced some good examples of work from the goldsmiths' workshop which he had established in 1858, but which was short-lived.

His principal works are: "Bulletin archéologique du comité des arts et monuments" (4 vols., Paris, 1840-1847); "Histoire de Dieu, iconographie des personnes divines" (Paris, 1843); "Manuel d'iconographie chrétienne, grecque et latine" (Paris, 1845); "Annales archéologiques" (Paris, 1844-81). See also "Ann. arch." (1821), XXVIII, 161.

R. Marie.

Didymus. See Thomas, Saint, Apostle.
Didymus the Blind, of Alexandria, b. about 310 or 313; d. about 395 or 398, at the age of eighty-five. Didymus lost the use of his eyes when four years old, yet he became one of the most learned men of his period. He prayed earnestly in his youth, we are told by Rufinus, not for the sight of his bodily eyes, but for illumination of the heart. He admitted to St. Anthony that the loss of his sight was a grief to him; the saint replied that he wondered how a wise man could regret the loss of that which he had in common with ants and flies and gnats, and not rather rejoice that he possessed a spiritual sight like that of the apostles. St. Jerome indeed habitually spoke of his blindness as "the blinding" of the sun. Didymus studied with ardour, and his vigils were long and frequent, not for reading but for listening, that he might gain by hearing what others obtain by seeing. When the reader fell asleep from weariness, Didymus did not rejoice, but as it were chewed his cud (says Rufinus) of what he had heard, until he seemed to have inscribed it on the pages of his mind. Thus in a short time he amassed vast knowledge of grammar, rhetoric, logic, music, arithmetic, and geometry, and a perfect familiarity with Holy Scripture. He was early placed at the head of the famous catechetical schools of Alexandria, and before his death he had raised them to the dignity of the orthodox Church. St. Athanasius highly esteemed him. The orator Libanius wrote to an official in Egypt: "You cannot surely be ignorant of Didymus, unless you are ignorant of the great city wherein he has lived and died and is now praising its learning for the good of others. He is similarly extolled by his contemporaries and by the historians of the following century. Rufinus was six years his pupil. Palladius visited him four times in ten years (probably 388–398). Jerome came to him for a month, in order to have his doubts resolved with regard to difficult passages of Scripture. Later ages have neglected this remarkable man, and if they have not discovered many of his errors, consequently, when St. Jerome quarreled with Rufinus and made war on Origenism, he ceased to boast of being a disciple of Didymus and was ashamed of the praise he had formerly given to the "Seer". When Origen was condemned by Justinian and then by the Fifth General Council, Didymus was not mentioned. But he was anathematized together with Evagrius Ponticus in the edict by which the Patriarch Eutychius of Constantinople gave effect to the decree of the council; and he was (perhaps in consequence of this) included in the condemnation of Origen at the sixth and seventh councils. This censure is to be taken as applying to his doctrine and not to his person. It has had the unfortunate effect of causing the loss to us of most of his very numerous writings, which, as the works of a supposed heretic, were not copied in the Middle Ages. Didymus always remained a heretic. The idea that he was married rests on a mistaken identification of him with a Didymus to whom one of the letters of St. Isidore of Pelusium is addressed. He seems on the contrary to have lived the life of an ascetic, although in the city and not in the desert. A curious story was told by him to Pelagius, who in 311, when dwelling on the thought of Julian as a persecutor, and on this account having taken no food, he fell asleep in his chair and saw white horses running in different directions, while their riders cried out: "Tell Didymus, to-day at the seventh hour Julian died; arise and eat, and inform Athanasius, the bishop, that he also may know. Didymus noted the hour and the month and the week, and it was even so.

Doctrines.—Didymus was one of the principal opponents of Arius. His Trinitarian and Christological doctrine is perfectly orthodox; one may even say that he is more explicit than St. Athanasius as to the Unity of the Father and the Divinity of the Holy Ghost. He has combined the theological vocabulary of St. Athanasius with that of the younger generation, Basil and Gregory Nazianzen. He continually uses the formula τε και ἄρεσκέντος, μα δοκίμω, which St. Athanasius admitted in his later years, and which has become the Catholic watchword. Didymus has been credited with the invention of this formula, and Leipholt is in favour of this attribution, whereas the former rejects it. Until the fourth century the Greek-speaking Church had no means of expressing the doctrine of the Trinity. The use of ἐντευκτόνων to express the Latin persona was itself a clumsy device, for Didymus agrees with St. Jerome (who rejected the expression) that philosophically οὐκ ἂν ἐπανάλημφτην. Didymus, however, carefully safeguarded his doctrine from any wrong interpretation. His work on the Holy Spirit is preserved only in the Latin translation made by St. Jerome. It is free from the reproach of "economy" which attaches to the more famous work of St. Basil, who avoided (as he himself admits) calling the Holy Ghost "God". A yet more important work is the "De Trinitate", the three books of which are preserved almost entire; it was composed after 379. A treatise against the Manicheans is also nearly complete. Of the exegetical fragments, those on the Psalms are the most important. A commentary on the Psalms is lost. A work dealing with the Latin translation made by a certain Euphronius for Cassiodorus. Didymus comments on II Peter, and elsewhere frequently quotes that Epistle, although in one place he declares it to be spurious (Janus—"the Greek is lost"). In his commentaries Didymus shows himself to be much influenced by Origen, both in content and in style. In his treatment of the text and the grammar, and in his wide allegorizing, but of Origenistic heresies the traces in extant works are slight. He seems to have held the pre-existence of the soul. The doctrine of the "restitution of all things is attributed to him by St. Jerome; but he speaks very often of the punishment of sin. Origen, and especially to teach that the fallen angels and even Satan himself are saved by Christ. He is fond of explaining that God's punishments are remedial. He deliberately rejects some of Origen's views, and in his Trinitarian and Christological teaching is wholly uninfluenced by his great predecessor. The style of Didymus is poor and careless. He is gentle in controversy. His earnestness and piety sometimes supply the place of the eloquence and energy which he lacks.

"Didymus in omnes Epistolam canonicas emeritus (Golgotha, 1553); Minarellini, Vocabolarium monasterii de Didymo et Asc. Coccio (Rome, 1764), reprinted in Didym. Alex, libri tres de Genesi, first ed. (Neuilly, 1531); first ed. (Neuilly, 1531); second ed. (Neuilly, 1538); Diderich (Bologna, 1789); Lucke, Quaestiones et vindiciae Didymi, giving Greek fragments of the Commentaries on the Gospels and the Epistles of the Latin (Gottingen, 1824); many of the Latin comments are found in Mai, Nova Patrum Bibl. IV; in the Catecheses of Didymus and Chrysostom; in Wolf's Anastasius (Gives, 1470); in A. Minarellini's ed. De Trinitate (above); in Junecia (Patrick Young), Catena Gr. in Job (London, 1637); in the Catena of Nicodemus, containing a collection of Didymus's works is that of More, P. G., XXXIX, 1893, in which the prefatory matter of the two Minarellini is reprinted.

In conclusion, it is a good life in Tertullian's sense to have lived the life of an ascetic, although in the city and not in the desert. A curious story was told by Didymus to Pelagius, who, in 311, when dwelling on the thought of Julian as a persecutor, and on this account having taken no food, he fell asleep in his chair and saw white horses running in different directions, while their riders cried out: "Tell Didymus, to-day at the seventh hour Julian died; arise and eat, and inform Athanasius, the bishop, that he also may know. Didymus noted the hour and the month and the week, and it was even so."
Diego y Moreno, Francisco Garcia, first bishop of California, b. 17 Sept., 1785, at Lagos in the state of Jalisco, Mexico; d. 30 April, 1846, at Santa Barbara. In 1801 he received the habit of St. Francis at the mission of Guadalupe, Zacatecas, made to vows the following year and was ordained priest at Monterey, Nuevo Leon, 13 Nov., 1808. For the next twenty years Father Diego was mainly occupied in preaching missions, and during this period compiled a small work, "Metodo de Misionar", or "Method for Giving Missions". From 1818 to 1819 he was made a novice, in 1822 he was made priest, and in February, 1832, guardian or superior of the missionary college of Guadalupe. At the request of the Mexican Government, which had resolved to expel all Spanish friars from California, the college, whose members were natives, on 1 April, 1852, sent eleven Mexican Franciscans to California, Father Diego going as commissary. They reached Cape San Lucas in September, 1832, and Monterey, the head-quarters, in February, 1833. The Guadalupan friars took charge of the missions from San Antonio to Sonoma, and on 6 March, Father Diego chose Santa Clara for his first of labors, continued here until the end of 1832, when he visited Mexico to induce the Government to have a bishop appointed, in order to preserve the Church in California. On 19 Sept., 1836, the Mexican Government decided to petition the pope to create California a diocese and congress at the same time decreed the appointment of the new bishop at Monterey, and the financial salary of $6,000, but said the diocese should have a sufficient income. Of the three candidates proposed by the metropolitan chapter on 22 June, 1839, the Mexican Government, 6 April, 1840, recommended Father Francisco Garcia Diego. On 27 April Pope Gregory XVI withdrew California from the jurisdiction of the Bishop of Sonora, and at the same time appointed Father Diego first Bishop of Upper and Lower California with the see at San Diego. He was consecrated at the Franciscan church of Guadalupe, Zacatecas, on 4 October, 1840, and on 11 Dec., 1841, landed at San Diego. Owing to the poverty and insignificance of the place, he removed his residence to Santa Barbara on 11 Jan., 1842. When he arrived, there were only seventeen Franciscan Fathers, mostly aged and infirm, in charge of the twenty-one secularized Indian missions and six Spanish Franciscan fathers. At the young age Bishop Diego had that sincere desire to promote the welfare of the Church in his territory. The Mexican Government had encouraged him by giving him a fixed salary, and entrusting to him the management of the famous "Pious Fund", but in February, 1842, President Santa Anna confiscated the fund. The bishop received no aid whatsoever, so that he was obliged to depend upon the contributions from the few white settlers in the territory, many of whom refused to pay the tithes which he had found it necessary to impose. Nevertheless he opened the first seminary on the Pacific coast at the former mission of Santa Inez, about fifteen miles from the ocean and forty-five miles from Santa Barbara, made one visitation of all the churches in the diocese, and to some places even went a second time. Worn out by hardships and disheartened at the deplorable condition which he could not remedy, Bishop Diego died, and was buried in the old Mission Santa Barbara. 

DIEGOTH (1867-72). From 1872 to 1875 he studied theology at Würzburg and at Münster. Feeling uncertain, however, as to his ecclesiastical calling, he abandoned his desire of entering the priesthood, and took up the study of philology. In 1877 he graduated as doctor of philosophy with the dissertation: "Widukind, der Sachsenführer nach Geschichte und Sage" (Münster, 1877). Excessive study led to grave pulmonary disease, in spite of which he did not spare himself. For some time he taught in the public schools of Münster, Arnsweg, and Aachen, developing in the meantime his scientific historical researches. An exciting evidence of this was his "Vite S. Ludgeri" (Historisches Quellen-Buch des Bistums Münster, IV, Münster, 1881). In 1881 the Westfälischer Verein für Geschichte und Altertumskunde confided to him the continuation of the Westfälisches Urkundenbuch. Thereupon he returned to Münster and in 1882 he became Privatdozent for history at that academy. Previously, however, he spent a year at Vienna for improvement in diplomatics at the "Institut für oesterreichische Geschichtsforschung" under the direction of Professor Sickel. At Easter, 1885, he began his teaching at Bonn, continuing for the same time his investigations, specially on Westphalia documents, the history of the papal chancery, and papal diplomacies. In 1885 he published a Münster the first part of the supplement of the "Westfälisches Urkundenbuch". In the autumn of this year he went to Rome, chiefly to consult in the Vatican archives and catalogue the great works he had in mind. But typhoid fever carried him off in the midst of his labours. He was buried in the German Campo Santo near St. Peter's. Diekmamp also published between 1878 and 1885 several important studies in different reviews concerning the history of the Middle Ages and diplomatics or official style of the medieval papal documents.

Diekmamp in Literarischer Handber VIEW (1866), 1-10; SCHULZ in Historisches Jahrbuch (1896), 266-277; DABHMAIN in Allgemeine Biographie, Nachträge bis 1899 (Leipzig, 1903), XVII, 679 sq. 

J. P. KIRCH.
ferred to the Abbey Church of St. Peter. Some hagiologists style her “Blessed,” though she has never received public veneration and was never formally beatified.

Förner, Uber die Nonne Diena von Weissenbrunn und ihr in erarses Werken, with a facsimile of her handwriting, in Oberbayerisches Archiv (Munich, 1839), i, 385–373; LEUTNER, Historische Monate in Residenz (Asbury and Freiburg, 1753), 166–175; STEELE, Anchoraes of the West (London and St. Louis, 1903), 166 sq.; BRAUNMUELLER in Kirchenbre.

MICHAEL OTT.

Diepenbeech, Abraham van, an erudite and accomplished painter of the Flemish School, b. at Bois-
ed-Duc in the Netherlands, 1599; d. at Antwerp, 1675. After having received a classical education he became one of Ruben’s best pupils and assistants. He handled mythological and historical subjects, as well as portraits, with great skill and vigour and was a good, sound colourist. He went to Antwerp about 1629 and made his first successes in painting on glass, among his productions being windows in the cathedral there representing the “Acts of Mercy”. Similar work at the church of the Dominicans shows scenes from the “Life of Saint Paul”. Van Diepenbech was admitted to the guild of painters in 1638, and became director of the academy in 1641. It was after a visit to Italy that the artist began to paint chiefly in oil and to illustrate. Among his illustrations are five eight designs engraved by Cornelis Bloemaert for the Abbé de Marolles’ “Tableaux du Temple des Muses”. During the reign of Charles I, van Diepenbeech was in England where, besides painting portraits of the Duke of Newcastle and his family, the artist illustrated that nobleman’s book on “Horsemanship”.

At the church of the Carmelites in Antwerp is one of the painter’s masterworks, “The Virgin in the Clouds with Saint Eli”. In the cathedral is his “St. Norbert”, while the saint appears with the first Abbot of St. Michel in a church at Deurne. In the galleries are: Louvre, “The Flight of Cleopatra” and “Portraits of a Man and a Woman”; Vienna, “Descent from the Cross” and “Agony of Mortality”; Munich, “Abraham and the Angels” and “Feeding the Poor”; Dresden, “Neptune and Amphirite”; Berlin, “The Marriage of St. Catherine” and the “Flight of Cleopatra”; Brussels, “St. Francis Adoring the Holy Sacra-

mment”; Vienna, “The Earth is Nine”; Brunswick, “The Entombment” and “Children’s Bachanal”; Frankfort, “Portraits of a Young Man and a Young Woman”; Bordeaux, “The Rape of Ganymede”.

AUGUSTUS VAN CLEEF.

Diepenbroch, Melchior, Baron (Freiherr) von, Cardinal and Prince-Bishop of Breslau, b. 6 January, 1798, at Bocolt in Westphalia; d. at the castle of Johannisberg in Upper Silesia, 20 January, 1833. He attended the military academy at Bonn and took part in the campaigns of 1807–1814 as aide-de-camp of the militia. Upon his return he was much at-
ttracted by the personality of Johann Michael Sailer, a friend of the family, at that time professor at the University of Landshut in Bavaria, and studied public finance at that institution. When Sailer was made Bishop of Ratisbon, Diepenbroch followed him thither, took up the study of theology, and was ordained priest 27 December, 1823. In 1835 he was made dean of the cathedral and vicar-general by the successor of Bishop Sailer. His knowledge of modern languages and his administrative ability, together with his profound understanding of the interior life state, soon brought him the elevation to the episcopal See of Breslau, to which he was elected 15 January, 1845. He at first declined the honour, but finally accepted out of filial obedience to the mandate of Pope Gregory XVI.

From the beginning of his reign he was called to face difficulty problems and momentous public events. Sectarian propaganda was especially ag-
ggruated in his diocese and was furthered by ecclesiastical officials as well as by the traditional enemies of the Church. The famine in Upper Silesia appealed to his sympathetic and generous nature. The Revolution of 1848 showed him one of the firmest and most loyal supporters of government, law, and order. The pastoral letter which he issued on this occasion was, by order of the king, read in all the Protestant churches of the realm. He devoted his best energies to the training of the clergy, opened a preparatory seminary, and improved the conditions of the higher seminary. He was a watchful guardian of ecclesiastical discipline and, when necessary, employed severe measures to enforce it. He reintroduced, with great success, retreats for the priests and missions for the people.

In 1849 he was appointed Apostolic delegate for the Prussian army and relieved, to a great extent, the sore needs of the Catholic soldiers. He was created cardinal in the consistory of 20 September, 1850, and decorated the purple a year later. The occasion of one of the most magnificent public demonstrations ever witnessed in Germany. It was soon followed by another demonstration, equally striking, but sorrowful in character, on the occasion of the cardinal’s death from a disease which had long afflicted him. His will bequeathed his diocese to his successor. Cardinal Diepenbroch’s episcopate was fruitful in blessings for Upper Silesia, he was a champion of Catholicity for the whole of Germany and an ornament to the entire Church. In personal appearance he was of dignified presence, but pleasant and affable to all. The cardinal was a notable orator, and his discourses were devoted to his talents. His principal publications are: “Spiritual Bouquet, Gathered in Spanish and German Gardens of Poetry” (Sulzbach, 1826); “Life and Writings of Heinrich Suso” (Ratisbon, 1829); “The German” (Ratisbon, 1841); “Pastoral Letters” (Münster, 1880); Personal Letters (Frankfort, 1880).

B. LUEBBERMANN.

Dieringer, Franz Xaver, Catholic theologian, b. 22 August, 1811, at Rangeningen (Hohenzollern-Hechingen); d. 8 September, 1876, at Veringendorf. He studied theology at Tübingen, where ordained at Freiburg, 19 Sept., 1835, and appointed instructor at the archiepiscopal seminary there. In the autumn of 1840 he became professor of dogma at the ecclesiastical seminary of Speyer, and at Ester, 1841, was also made professor of philosophy in the lyceum of the same city. In the spring of 1843 he was appointed professor in ordinary of dogma and homiletics at the University of Bonn, and provisional inspector of the preparatory seminary. When the Institute of Studia Theologica was established in 1844, he took charge of the homiletic section. The prestige of the faculty of Bonn had suffered badly because of the inroads of Hermesianism, and this learned theologian, who was eminently qualified for the work of academic teaching, set about to restore its fallen glory. His brilliant and active activity, especially during the first two decades of his office, placed him in the first rank among the shining lights of the university. Besides performing the duties of his professorship, he published the “Katholische Zeitschrift für Wissenschaft und Kunst,” a periodical devoted to scholastic interests, which he had founded in 1844 in opposition to the periodicals of the Hermenites, and conducted in a truly Catholic spirit. From 1847 to 1849 it appeared
as the "Katholische Vierteljahresschrift". Dieringer took a prominent part in the founding of the Society of St. Charles Borromeo in 1845, of which he was at first secretary and then president from 1846-1871. In 1853, the Jesuits removed by the German government, at Bonn, he was made canon of Cologne and ecclesiastical councillor. In 1848 he represented the district of Neuss in the parliament at Frankfort.

His name was among those proposed in 1856 for the vacant See of Paderborn and in 1864 for that of Trier, but he was removed by the German government. Though his earlier teaching, especially in his "Laien- katechismus", had been in accordance with the doctrine of papal infallibility, he yielded, at the time of the Vatican Council, to personal motives and to the influence of his colleagues at Bonn and joined the opposition. He had no thought, however, of leaving the Church, and, after negotiations of some length, he yielded to the demand of Archbishop Melchers and made his submission. In order to escape from the strained relations which existed among the divided faculty, Dieringer resigned his offices and dignities during the spring of 1871 and took charge of the parish of Veringendorf in Hohenzollern. In 1874 he was among those recommended for the archiepiscopal See of Freiburg, but he could not accede to the demands of the Baden Government. After 1874 he was constantly in failing health.

Dieringer's principal publications are: "System der göttlichen Thaten des Christenthums, oder, Selbstbegründung des Christenthums, vollzogen durch seine göttlichen Thaten" (Mainz, 1841; 2nd ed., 1857), a work which clearly shows the influence of Steudemaijer, especially in its first edition; and the "Kirchlische Dogmatik" (Mainz, 1847; 5th ed., 1865), a book of great merit and formerly much used. An excellent work on theology in popular form is his "Laienkatechismus über Religion, Offenbarung und Kirche" (Mainz, 1865; 2nd ed., 1868). He had no share in the so-called "De- heil, Karl Borromäus und die Kirchenverbesserung seiner Zeit" (Cologne, 1846), appeared as the first publication of the Society of St. Charles Borromeo and had a wide circulation. Besides these publications there remain to be mentioned the two homiletic works: "Kanzelreden an gebildete Katholiken auf alle Teile des Festjahres des Kirchenjahres" (Mainz, 1844) and "Das Epistellebuch der katholischen Kirche, theologisch erklärt" (Mainz, 1863); the polemical writings: "Offenes Sendschreiben über die kirchlichen Zustände der Gegenwart an Dr. J. B. von Hirscher" (Mainz, 1840; against Hirscher's publication of the same title); "Diamatrische Erörterungen mit einem Güntherianer" (Mainz, 1852); "Die Theologie der Vor- und Zeitzeit, ein Beitrag zur Verständigung" (Bonn, 1858; 2nd ed., 1869; against Kleutgen's "Theologie der Vorzeit"), which appeared first in the "Theologisches Literaturblatt" of Bonn (1858); and: "Expositio doctrinae Tertulliani de republica et de officiis ac iuribus civium christanorum" (University Program; Bonn, 1850).

DIES IRAE, the name by which the sequence in requiem Masses is commonly known. They are the opening words of the first verse: Dies irae, dies illa. The rubrics of the Roman Missal prescribe the recitation of the sequence by the celebrant on the following occasions: (1) in the Mass of All Souls' Day (In commemoranda Dei mortuorum Dies Defunctorum); (2) in the Mass of All Souls' Day in the obitus seu defunctorum; and (3) whenever in requiem Masses, only one orato, or collect, is to be said, namely in the anniversary Mass, and when Mass is solemnly celebrated on the third, the seventh, or the thirtieth (month's mind) day after death or burial. Its recitation in other requiem Masses (In Missae defunctorum) is optional with the celebrant. It should be noted here that the decree of the Congregation of Sacred Rites (12 August, 1854) permitting the choir to omit such stanzas as do not contain a prayer is not included in the new edition of the "Decretae Authenticae S. R. C." (Rome, 1899-1900).

From this fact may be inferred that the more ancient rule is now in force and that the whole sequence must either be sung by the choir or be "recited" in a high and clear voice with organ accompaniment (cf. American Ecclesiastical Review, August, 1907, p. 201).

As found in the Roman Missal, the Dies Irae is a Latin poem of fifty-seven lines in accentual (non-quantitative), rhymed, trochaic metre. It comprises nineteen stanzas, of which the first seventeen follow the type of the first stanza:

1. Dies irae, dies illa,
Solvet seculum in favilla:
Teneat David cum Sibyllâ.

The remaining stanzas discard the scheme of triple rhymes in favour of rhymed couples, while the last two lines use assonance instead of rhyme and are, moreover, catalectic:

18. Lacrimosa dies illa,
Quê reuerget ex favilla,
Judicandus homo reus.

19. Huic ergo parce Deus:
Pie Jesu Domine,
Dona eas requiem.

Thus the last two stanzas are printed in the typical (1900) edition of the Missal, and in the Ratisbon edition of the plain-chant setting. The Vatican edition (1907) of the plain-chant melody, however, apparently takes account of the fact that the last six lines did not, in all probability, originally belong to the sequence, and divides them into three couples.

This Missal text of the sequence is found, with slight verbal variations, in a thirteenth-century manuscript in the Bibliothèque de l'Abbaye de Fruttam (cf. Habermann, Magister Choralis, Ratisbon, 1900, p. 237-238). Father Eusebius Clop, O.F.M., in the "Revue du Chant Grégorien" (November-December, 1907, p. 49) argues a date between 1253-1255 for the MS.—a Franciscan Missal whose calendar does not contain the name of St. Clare, who was canonized in 1255, and whose name would have been inserted if the MS. were of later date. The same writer would assign (pp. 48, 49) a still earlier date (1250) to a copy of the Dies Irae inserted at the end of a so-called "Breviary of St. Clare" dating about 1228. Into his arguments it is not necessary to enter here; but it is important to notice that these dates are much anterior to the dates of the MSS. which, until recently, hymnologists had cognizance of when they attempted to fix the probable authorship of the sequence. Thus Mone found none anterior to the fifteenth century; Chevalier mentions only a Magdeburg Missal of 1480 and a MS. Franciscan Missal of 1477; the first edition of Julian's "Dictionary of Hymnology" (1892) declared the "oldest form known to the present time" to be found in a Dominian Missal "written at the end of the fourteenth century and apparently found at Fiesa"; Warren, in his "Dies Irae" (London, 1902, p. 6), likewise, "toutes trois enfin appartenant également à la liturgie des Frères Mineurs". All this renders very
probable the conjecture generally entertained by hymnologists, that the Dies irae was composed by a Franciscan in the thirteenth century.

Its authorship has been most generally ascribed to Thomas of Celano, the friend, fellow-friar, and biographer of St. Francis. Reasons for this particularity of ascription are given by Keyser (Beiträge zur Geschichte und Erklärung der alten Kirchenhymnen, Paderborn und Münster, 1864, p. 196 and 230-235); also by Duffield (Latin Hymn Writers and Their Hymns, New York, 1889, 245–247), an ardent champion of the ascription to Thomas; also in “The Dolphin” (Nov., 1904, 514–516), which corrects a fundamental error in one of Duffield’s main arguments. Ten other names have been suggested by various writers as the probable auth- or of the Dies irae: (1) St. Gregory the Great (d. 604); (2) St. Bernard of Clairvaux (d. 1153); (3) St. Bonaventure (d. 1274); (4) Cardinal Matthew d’Aquasparta (d. 1302); (5) Innocent III (d. 1216); (6) Thurstan, Archbishop of York (d. 1140); (7) Cardinal Latino Orsini, or Frangipani, a Dominican (d. 1250); (8) Humbert, a general of the Dominicans (d. 1277); (9) Agostino Biella, an Augustinian (d. 1491); (10) Felix Haemmerlein, a priest of Zurich (d. 1457). The ascription to Haemmerlein was due to the discovery, after his death, of a variant text of the sequence among his papers. Its eighteenth and nineteenth stanzas are:

18. Lacrimosa dies illa, 
Cum resurgent ex favilla 
Tancquam ignis ex scintilla,

19. Judicandus homo reus: 
Huic ergo parce, Deus; 
Esto semper adjutor meas.

To these are added five stanzas of the same form. This Haemmerlein text is given by Keyser (op. cit., 211), Warren (op. cit., 11), and by others. Still another text, known as the “Mantuan Marble” text (first printed in 1594), prescribes the Dies irae with four similar stanzas, and replaces stanzas 10–19 with the single stanza:

Ut consors beattitatis 
Vivam cum justitiae 
In avum aeternitatis.
made him a better man. He enforced strict ecclesiastical discipline among the clergy, watched carefully over the integrity of faith, and worked strenuously for the advancement of commerce and education. At the northern end of the lands he founded the Martinikapelle as an archiepiscopal residence, and in 1477 founded the University of Mainz, which continued to exist until 1798.

MICHAEL OTT.

Dieterich von Nieheim (Niem), b. in the Diocese of Paderborn, between 1368 and 1360; d. at Maastricht, 22 March, 1418, a medieval German historian, best known for his contributions to the history of the Western Schism. He took his surname from the little town of Nieheim (in the Prussian district of Minden). Nothing is known about his family, and but little about his life previous to his entry into the service of the papal Curia. He studied in the universities of Italy in the study of law, but never obtained the degree of Doctor. Under Urban V (1362-70) he came to Avignon, and obtained in the papal chancery the office of notary (notarius s. palatii), to keep which he had to take orders, if he had not already taken them. When Gregory XI returned to Rome (1378), Dietrich accompanied him. Urban VI conferred on him the lucrative and important office of abbreviator et scriptor in the papal chancery (see abbreviators); this post he retained under succeeding popes. Boniface IX made him Bishop of Verden (July, 1385), but he never obtained possession of this German bishopric; probably, as Eibel suggests (Hierarchia catholicca mediævii, I, 553), because Dietrich did not expedite with due promptness the documents of his nomination. In August, 1399, another Bishop of Verden was nominated, Konrad von Soltau; Dietrich remained as before a papal abbreviator. In his writings Dietrich is silent about this Verden incident; in a manuscript of the archives of St. Peter at Rome Dr. Gölker has discovered twenty-six letters of the years 1398-99 which refer to Dietrich; when published they will probably cast more light on this period of his life (cf. Römische Quartalschrift, 1922, Abh. 148). When Gregory XI was at Erfurt in Germany, where he was received at the university; in 1403 we find him again active at Rome as abbreviator. Towards the end of the fourteenth century Johann Peter von Dordrecht had founded at Rome a hospital for German pilgrims, known as Santa Maria dell' Anima, still in existence and united with the German national church at Rome (see ANIMA, SANTA MARIA DELL'). Dietrich was an energetic promoter of the new foundation, to such an extent that after Peters he deserves to be considered its chief founder.

Meanwhile the Western Schism (q. v.), begun in 1378, was still dividing the Catholic world. As a member of the papal Curia, Dietrich was thoroughly informed concerning the origin and development of this unhappy division, and was very active in an effort to close the schism. Dissatisfied with the proceedings of the two popes, Gregory XII (1409-15) at Rome, and Benedict XIII (1394-1417) at Avignon, he adhered to the Council of Pisa convoked (1409) by the cardinals. He took no part in the council itself, being then in Germany, but he worked for the party of the council, recognized as legitimate the Pisan pope, Alexander V (1409-10), also his successor, John XXIII (1410-15) died before his election. During these years his pen was very active in the interest of ecclesiastical unity. He is certainly the author of the work known as "Nemus Unionis," in which he describes the various ways (viez) for putting an end to the
DIEITRICH 790 DIERITRICH

schism, and gives important letters and acts (the work was finished 25 July, 1408; ed. Schard, Basle, 1566). He also wrote "De sciematibus libri tres" (his most important work to date) published in May 1410 (ed. Eierle, Leipzig, 1890), in which he delineates the origin and the history of the schism up to the coronation of John XXIII; the abundance of its materials makes this work one of the most important authorities for the last stages of the schism. His judgments, however, concerning persons and facts must be taken as a caution, Dietrich being strongly partisan. To John XXIII himself he addressed (perhaps in 1410) a letter about the proper administration of his office ("Epistolae ad dominum Johannem XXIII transmissae de bono Romani pontificis regimine"). He wrote, in "Historisches Jahrbiuch", 1884, 185-78. This was published to enhance the esteem of the emperor, who was elected pope in 1410 ("Informatio facta cardinalibus in conclavi ante electionem Papae Johannis XXIII"), written in 1410; ed. Eierler, "Dietrich von Nieheim", Documents, XXX-XLI). Of other works ascribed to him mention shall be made later.

Towards the end of 1414 was opened the Council of Constance, destined, if not to remedy all the evils of the time, at least to put an end to the schism. From March, 1415, Dietrich was present at Constance and exerted his best efforts for the restoration of ecclesiastical discipline. His work was discredited with the attitude of John XXIII, and when the latter fled from Constance (20 March, 1415) Dietrich renounced him. Later, in continuation of his aforesaid work on the schism, Dietrich wrote a history of John XXIII to June, 1416 ("Historia de Vita Johannis XXIII", first printed at Frankfort, 1490). This work is at the same time a history of the Council of Constance to the middle of 1416; it is to be noted, however, that the author's judgment is seriously affected by his passionate opposition to John XXIII. Another violent lampoon against this pope, the "Inventiva in diffigentem et Constantiensem concilio Johanneum XXIII" (ed. von der Hardt, "Conc. Conc.", III, XIV, 296-330) is attributed to Dietrich; it is not certain, however, that he is the author of this fierce pamphlet; Finke rejects quite positively the authorship of Dietrich (Römische Quartalschrift für christl. Altertumskunde umb. Kirchengesch., 1887, 48 sqq.). During the council Dietrich was, as he himself states, a member of the commission "Vita Johannis XXIII"; some fragments of it, according to Finke, are still recognizable (op. cit., 1887, 46-58).

Any final judgment on the attitude and influence of Dietrich at Constance must depend on the authorship of three publications of which he attributed to him, and dealing particularly with the schism and the efforts at reunion. These are: (1) "De necessitate reformationis Ecclesiae in capite et in membris"; also entitled "Avisamentum pulcherrima de unione et reformatione membrorum et capitis hennis" (written 1414; ed. von der Hardt, in "Constant. Conc.", I, VII, 277-300; the latter part of it ed. by Finke in "Forschungen zur Geschichte der Konstanzer Konzile", Paderborn, 1890, 267-268); (2) "De modis unieundi ac reformandi ecclesiam in concilio universalii" (written 1410, ed. von der Hardt, op. cit., XII, 68-142); (3) "De dificilitate reformationis Ecclesiae in concilio universalii" (written 1410; ed. von der Hardt, op. cit., I, VI, 255-69). Von der Hardt attributed the treatise "De modis unieundi" to Johannes Gerson, the two others to Pierre d'Alilly, but was of the opinion that perhaps Dietrich von Nieheim might be the author of the "De necessitate reformationis" (Schwabe, in Johannem Gerson, Würzburg, 1858) that neither Gerson nor d'Alilly can be regarded as the author of these works; he ascribed "De modis unieundi" to the Spanish Benedictine abbot and professor at Bologna, Andreas of Randulf. The other two treatises, he believed, were composed by Dietrich von Nieheim. Sägntüllen also saw in the aforesaid Abbot Andreas the author of "De modis unieundi" (Historisches Jahrbuch, 1893, 582-583). Erler, Leissig, in "Historisches Jahrbiuch", 1884, 155-78. This was published to enhance the esteem of the emperor, who was elected pope in 1410 ("Informatio facta cardinalibus in conclavi ante electionem Papae Johannis XXIII"), written in 1410; ed. Eierler, "Dietrich von Nieheim", Documents, XXX-XLI). Of other works ascribed to him mention shall be made later.

Von der Hardt, Magnanim et acumenianium Constantinianum Concilium (6 vols., Holmstadt, 1700); SCHWARZ Johannes Gerson

VON DER HARDT, Magnanim et acumenianium Constantinianum Concilium (6 vols., Holmstadt, 1700); SCHWARZ Johannes Gerson
between a “Catholic of the Church of Rome” and a “Catholic of the Court of Rome”. He was High Steward of Oxford University 1643–46 and again 1660–1663. He published “The Lord George Digby’s Apology for Himself” (1642) and “Elvira, a Comedy” (1667). Many of his speeches and letters were also published.

**EDWIN BURTON.**

**Digby, Kenelm Henry, miscellaneous writer, b. in Ireland, 1800; d. at Kensington, Middlesex, England, 22 March, 1888. He came of an ancient English stock, branching, in Elizabeth’s reign, into Ireland, by the marriage of Sir Robert Digby, of Coleshill, Co. Warwick, with Lettice FitzGerald, only daughter and heir of Gerald, Lord Offaly, eldest son of the eleventh Earl of Kildare. The eldest son of this Robert and Lettice became the first Lord Digby. Their second son, Essex Digby, Bishop of Dromore, was father of Simon Digby, Bishop successively of Limerick and Elphin, and his son John Digby, Bishop of Oxford; the last was father of William Digby, Dean of Clonfert. Kenelm Henry Digby was this latter’s youngest son. Thus his early surroundings and associations were strongly Protestant. His father died in 1812, when his eldest brother, William, was already Archdeacon of Elphin. Unlike those who, having graduated in Dublin University, Kenelm Henry matriculated at the University of Cambridge, entering at Trinity College there. His B.A. degree he took in 1819, but he never proceeded M.A. Amid the many venerable and suggestive monuments of Catholic antiquity which Cambridge shows, he greatly preferred the older to those “Ages of Faith” which he had been taught to despise and afterwards to the scholastic system of theology. The result of his deep study of these lofty subjects was his conversion, in youth, to the Catholic Faith. His first book, The Broadstone of Honour, he published anonymously in 1822, while still nominally a Protestant, and an enlarged edition, again anonymously, the year following. After his conversion he wrote the work, dividing it into four volumes, which appeared, each with a separate subtitle, in 1826–7. Two other editions followed, and lastly an edition de luxe in five volumes, published by Quaritch, in 1876–7. According to its various secondary titles, this masterpiece treats of “the Origin, Spirit, and Institutions of Christian Chivalry”, or “the True Sense and Practice of Chivalry”. Archdeacon Hare, in his “Guesses at Truth”, says that in this work the author “identifies himself as few have ever done with the good and great of his race, in former times, and ever rejoices in passing out of himself into them”.

Digby’s second literary performance, entitled “Mores Catholici, or Ages of Faith”, came out in 1831–40 in eleven volumes, in a later edition reduced to three. In this work he collected, mostly from the original sources, a vast mass of information concerning the religious, social, and artistic life of the medieval peoples of Europe. It is, indeed, a kind of encyclopedia of the medieval life, from the viewpoint of an ardently Catholic soul. It has been well said that in its way it is the most thorough and collected like those of medieval times. Various other publications, some in prose, some in verse, dropped from his prolific pen from time to time down to 1876; but these, in comparison with his “Broadstone of Honour” and “Mores Catholici”, are but minor performances. The most important is his work entitled “On the Meeting of Ways at the Catholic Church”. The complete list of his published works may be seen in...
Gillow’s “Dictionary”. His long, studious, and retired life closed at Shaftesbury House, Kensington, in his eighty-first year, after a very short illness, which was caused by the fright of a sky-rocket. He was buried in the Churchyard of Thomas Dillon, of Mount Dillon, Co. Dublin, who bore him a son and four daughters.

C. T. BOOTHMAN.

**DIGBY**

**Digby, Sir Everard**, b. 16 May, 1578; d. 30 Jan., 1606. Everard Digby, whose father bore the same Christian name, succeeded in his fourteenth year to large properties in the Counties of Suffolk, Lincoln, Leicestershire, and Rutland. Arrived at man’s estate, he was distinguished for his great stature and bodily strength, as well as for his accomplished horsemanship and skill in field sports generally, to which he was much devoted. For some time he frequentcd the court of Queen Elizabeth. In 1596 he married Mary, only daughter and heiress of William Muscho of Goathurst, Buckinghamshire, with whom he obtained a large accession of fortune, and by whom he had two sons, Kenelm, born in 1603, and John, in 1605. About 1599 Digby, who, although his parents seem to have been Catholics, had been brought up as a Protestant, in the house of the Jesuit Father John Gerard, with the result that both he and his wife were converted to the Catholic faith, and he formed with Gerard so close a friendship that they were accustomed to speak of each other as "brothers". In 1603 he was one of those who assembled at Banvoo towards London, and he was knighted by the new king on the 23rd of April in that year.

In spite of what might have appeared so auspicious a commencement, there soon followed the fatal Powder Plot, which brought Sir Everard’s career to an ignominious close by a traitor’s death, while yet only in his twenty-eighth year. It is for his share in this, almost exclusively, that he is now remembered. In the “Dictionary of National Biography” he is comprehensively described as “Conspirator”, and one of his descendants has recently published his biography under the title “Life of a Conspirator”. In truth, however, there is nothing so absolutely discreditable as the deplorable enterprise, there is none to whom the title can less properly be applied, for he had not part either in the conception of the plot, or in the preparation for its accomplishment, and was not even aware of its existence till the eleventh hour. His initiation in the secret, after the death of Sir Robert Cecil, and lack of delay occasioned by an unexpected prorogation of Parliament, Catesby, the ringleader of the whole design, finding his own treasury exhausted, sought to enlist as associates some men of substance. One of these was Digby, who was inducted and sworn in “about a week after Michaelmas” 1605, or just a month before the fatal 5th of November.

When the time of action approached, Digby was assigned the part of preparing for the rising which was to follow the explosion in London, and to put the conduct of affairs into the hands of the conspirators once the blow was struck. For this purpose he rented Coughton Hall, the seat of the Throckmorton, near Alcester, and arranged for a great “hunting match” upon Dunsmore Heath, near Rugby, to which many Catholic gentlemen were to be gathered, and which was fixed for the 5th of November itself. When the news of the catastrophe at Westminster should arrive, it was hoped that the party so assembled, when they heard what had happened, would form the nucleus of a force by means of which the further designs of the conspirators might be carried out.

When, on the evening of the 5th, Catesby and others arrived with tidings of the discovery of their design and the arrest of Faukes, Digby joined them in their desperate attempt to raise a rebellion, and was captured by the survivors of the 7th at Holbeche on the 8th. At their trial on the 27th of January, Digby, who alone pleaded guilty, was arraigned separately from the rest, but received the same sentence of death, with all the ghastly barbarities usual in cases of treason. Three days later, 30 January, with three of his accomplices, Robert Winter, Grant, and Bates, he suffered in St. Paul’s churchyard. A few days before the scaffold, where he confessed his guilt, expressed shame for his infatuation, and solemnly protested that his friend, Father Gerard, had no knowledge of the plot, in or out of confession, adding, “I never durst tell him of it, for fear he would have drawn me out of it too.” It is a result of the circumstance, lending some colour to the belief that in later days the king did not believe in the genuine character of the danger he was said to have escaped, that Sir Everard’s son, Kenelm, was knighted by James I in October, 1623, when he had not completed his twenty-first year. His description of the behaviour of James I on that occasion has been borrowed by Sir Walter Scott in the “Fortunes of Nigel”, for the knights of Richard Monypins. The younger son, John, was knighted by Charles I, in 1635, and fell in the Civil War as a major-general in the royal army.

J., II; Calendar of State Papers.)

**JOHN GERARD.**

**Digby, Sir Kenelm**, physicist, naval commander, and diplomatist, b. at Gayhurst (Goathurst), Buckinghamshire, England, 11 July, 1603; d. in Covent Garden, Westminster, 11 June, 1665. He was the eldest son of Sir Everard Digby, Kt., of Drystoke, Rutland, by Mary, daughter and coheir of William Mulsho (Mulaho) of Gayhurst. His father was drawn into the Gunpowder Plot and was executed; nevertheless, after litigation, young Kenelm inherited unencumbered lands worth $15,000 a year. In 1618 he entered Gloucester Hall, now Worcester College, Oxford. Here he was under the care of Thomas Allen, the mathematician, and was undoubtedly encouraged in his wonderful progress in scientific study. Allen eventually bequeathed to his brilliant pupil his books and MSS., which Sir Kenelm gave to the Bodleian Library. In 1623, Digby left Oxford without a degree. By this time he was deeply in love with Ventia, the beautiful daughter of John Stoley of St. Audrie’s Castle, Shropshire. His mother opposing the match, he withdrew to the Continent, visiting France and Italy and finally Spain. In March, 1623, shortly after his arrival at Madrid, the Prince of Wales (afterwards King Charles I) reached that city upon his well-known matrimonial project, and Digby became one of his household, accompanying the prince back to England upon that project’s failure. Digby was now dubbed a knight by King James I. The next momentous event in his career was his marriage with Ventia, which took placeprivily in 1625. Though the lady’s ante-nuptial reputation was not spotted, yet their conjugal life was happy, and she bore him four sons and a daughter. In 1627 Digby undertook a privateering expedition against the French ships anchored in the Venetian haven of Iskanderun or Alexandretta. Having got King Charles’s leave and taken out letters of marque, he sailed with four well-equipped ships about Christmas, and after various adventures on the voyage, he reached Iskanderun 10 June, 1628. On the morrow he gave battle to the French and Venetian galleys there found in the bay, coming off victorious and returning leisurely to England, where he landed in the following February.
Digby's fame was now great, and in 1632 there was even talk of his becoming a secretary of state, but misfortune was nigh. On May Day, 1633, his beloved wife, whose marriage with him had for some years been made public, died suddenly. Various poets, including Jonson and William Habington among them, put forth rapturous poems in her praise. Digby withdrew into Gresham College, where he spent two years, leading in strange mourning garb a life of study and seclusion. By this time he had forsaken the Catholic Church, to which, however, he was reconciled in 1639, apparently in France. In 1639 he was back in England, where the times were daily growing worse and worse. His intimacy as a Catholic with the king and queen roused the ire of the Long Parliament, who summoned him to their Bar in 1641, and next year imprisoned him. He was discharged, however, after a while, on condition of his immediate departure from France. His property they afterwards proceeded to confiscate. Digby accordingly transferred himself from his abode in Paris, where in 1644 he brought out his two great philosophical treatises of the "Nature of Bodies" and the "Immortality of Reasonable Souls". In 1645 he was sent by the English Catholic Committee at Paris upon a diplomatic mission to Rome, whither he went again in 1647, but failed to accomplish anything to the purpose. After another journey to England in 1649 and another banishment, he got leave to return and came back in 1654. He now became intimate with Cromwell, who employed him abroad upon various diplomatic affairs. He returned to England for good and for the Restoration. Upon the incorporation of the Royal Society in 1663, Sir Kenelm appointed a member of the council. He died of stone on the anniversary of his sea-fight off Akanderun, and was buried beside his wife in Christ Church, Newgate. Van Dyck painted several (extant) portraits of Sir Kenelm and Lady Digby, and Cornelius Janssen one of the latter.

C. T. BOOTHMAN

Digest of Justinian. See Law.

Digne (DINIA), Diocese of (DINIESE), comprises the entire department of the Basses-Alpes and is suffragan of the Archdiocese of Aix. By the Concordat of 1801, this diocese was made to include the two departments of the Hautes- and Basses-Alpes, i.e., in addition to the former Diocese of Digne, the Archdiocese of Embrun, the Dioceses of Gap, Sisteron, and Senex, a very considerable part of the Dioceses of Glandèves and Riez, and fourteen parishes in the Archdiocese of Aix and the Diocese of Apt. In 1822 Gap was made an episcopal see and, thus divested of the department of the Hautes-Alpes, the present Diocese of Digne covers the territory formerly included in the Dioceses of Digne, Senex, Glandèves, Riez, and Sisteron.

Former Diocese of Digne.—This diocese was evangelized by Sts. Domninus and Vincentius who came from Africa in the second half of the fourth century with St. Marcellinus, the Apostle of Embrun. It is not certain that they were bishops. The first historically known bishop was Pentadius who attended the Council of Agde in 506. Among the incumbents of the See of Digne were: Emilianus (538); Eulogius de Villemeneau (1334–41), author of a celebrated form of oath to be taken by Jews; Pierre III de Vercell (1432–39), who represented the clergy and the Count of Provence at the Council of Basle; Guillaume V d'Estouteville (1439–56), closely connected with the history of the Pragmatic Sanction (Emilian); and later archbishops of Rouen: Antoine III Hérouet (1552–68), poet and translator of Plato; Forbin-Janson (1664–98), afterwards a cardinal and ambassador to Poland; Moliiès (1606–38), whose kindness was proverbial, and who was the original of "Mgr. Myriel" in Victor Hugo's "Les Miserables"; and Sibour (1809–45), who died Archbishop of Paris.

Diocese of Senex.—Marcellus I, the first known Bishop of the Diocese of Senex, attended the Council of Agde in 506; nevertheless, Senex must have been an episcopal city as early as 439. Jean IV Soanen, the Oratorian, noted for his opposition to the Bull "Unigenitus", was Bishop of Senex from 1695 until the time of his deposition in 1727.

Diocese of Glandèves.—Claudius, the first known bishop of the diocese, ascended the episcopal throne in 541, but Glandèves was probably a see as early as 399. Among its bishops were Symphorien (d. 412), Abaissac (d. 412), thus Fransis I to the death of the archbishop; and chaplain to Francis I; François I Faure (1651–53), the pulpit orator, later Bishop of Amiens, and de Belloy (1752–55), who died a centenarian in 1808, as Archbishop of Paris.

Diocese of Sisteron.—Johannes, the first known Bishop of Sisteron, appears early in the sixth century. Owing to the ungracious reception accorded Bishop Gérard by the Chapter of Sisteron, the bishopric of that see remained at Forcalquier from 1061 to 1169 and, until the time of the Revolution, the church at Forcalquier bore the title of cathedral. Laffitau, the Jesuit, who was agent of Cardinal Dubois, and also an historian, occupied the See of Sisteron from 1719 to 1764.

Diocese of Riez.—According to an unsupported tradition, the establishment of the Church in this diocese is attributed to the first century and to Eusebius or Eudochius, companion of St. Lazarus. A certain St. Prosperus Riezensis (350) (one of the fifth century) figures in the history of Riez and was perhaps its bishop; however, the first certainly known bishop is St. Maximus (433–60), who succeeded St. Honorus as Abbot of Lérins and who, in 439, held a council at Riez with a view to improving the despicable condition of the churches of Southern Gaul. His successor, St. Faustus (461–93), also Abbot of Lérins, was noted for his writings against Predestinationists; it was to him that Sidonius Apollinaris dedicated his "Carmen Eucharisticum" in gratitude for hospitality received at Riez. Robert Genua, the pulpit orator (1530–32), afterwards Bishop of Avranches and Gui Bentivoglio (1622–25), who was once in France and defender of French interests at Rome and who played an important rôle under Louis XIII, are also mentioned among the bishops of Riez.

The Diocese of Digne numbers the following saints: Sts. Thyrus of Sisteron and St. Promatius of Forcalquier; both perhaps of the third century; the abbots St. Marius and St. Donatus (fifth, sixth centuries), natives of Orléans and founders of monasteries near Forcalquier and Sisteron; St. Mayeul (or Majolus) (910–94), born at Valence and noted as Abbot of Cluny and a friend of Emperor Otto II; St. Bevin (twelfth century), born at Noyers, helped to deliver Provence from the Saracens; Blessed Gérard, founder of the Hospitallers of Jerusalem, who died in 1120, his relics being preserved at Manosque; St. John of Matha (1100–1213), born at Faucon and founder of the
Trinitarians; Blessed Hugh, a great Franciscan preacher who was attached to the doctrines of Joachim of Floris and died in 1255; his sister St. Douceline, who was born at Digne, the founder of Beguines of Hyères and died in 1274; St. Elzear of Sabran who died in 1332, and his wife St. Delphina of Sabran (1284-1360); and the Venerable Jacques Chastan (1509-38), born at Marcoux and martyred in 1538. During the Middle Ages the Franciscan convent in Digne produced François de Meyronnes, conspicuous at the Sorbonne and known as the "enlightened doctor"; and Gassendi, the philosopher who, from 1634 to 1655, was provost of the Church of Digne, on which he wrote a learned work. The principal places and pilgrimage sites are: Notre-Dame des Anges at Lure, frequented annually by over 10,000 of the faithful, a shrine founded in the fourth century by a recluse from Orléans; Notre-Dame de Romigier at Manosque, dating back to the fifth century; Notre-Dame du Roc at Castelane, established in the eighth century; and Notre-Dame de Beauvoir at Moustiers-Ste-Marie. This last-named shrine was visited in the time of Sidonius Apollinarius. Two rocks overhang the chapel of Our Lady and are held together by an iron chain, from which is suspended a golden star presented by a Knight of Rhodes who, having been taken prisoner, invoked Our Lady of Moustiers and was delivered.

Prior to the enforcement of the law of 1905 there were in the diocese, Benedictines, the Missionaries of Ste-Carde, the Brothers of Christian Schools and Brothers of Christian Instruction of St. Gabriel. Local orders of women especially worthy of mention are: the Congregation of Our Lady of the Presentation, a teaching order at Manosque, and that of the Sisters of Christian Doctrine of the Holy Childhood, whose mother-house is at Digne, and who devote themselves alike to teaching and hospital work. In 1899 the following institutions in the diocese were under the care of religious: 12 infant schools, 2 orphanages for boys and girls, 13 hospitals and hospices, 1 house of retreat and 4 houses for religious nurses. In 1905 (the last year of the Concordat period) the Diocese of Digne had a population of 115,021, 35 parishes, 314 curacies (mission churches), and 13 curacies subventioned by the State.

**DIGNITARY**

**Dignitary, Ecclesiastical,** a member of a chapter, cathedral or collegiate, possessed not only of a foremoat place, but also of a certain jurisdiction. These dignitates, as they are called, are usually the provost and the dean (see those articles), sometimes also the canons and the schoolmasters. Their nomination and canonical institution, to a great extent reserved to the pope, are governed partly by canonical law, partly by special legislation (e.g. concordats) and custom. These dignitates of a chapter differ from the personatus, inasmuch as the latter officers have merely a fixed right of precedence, and again from the officia (e.g. canon theologian, canon penitentiary), inasmuch as these places imply only an administrative charge or duty (see Person, Ecclesiastical; Canon; Chapter).

**DOMKAPÜL.**

**THOMAS J. SHAHAN.**

**Dijon, Diocese of,** comprises the entire department of Côte-d'Or and is a suffragan of Lyons. According to the Concordat of 1801 it also included the department of Haute-Marne, which, however, it was called upon to relinquish in 1821, owing to the re-establishment of the Diocese of Langres.

Between the years 506 and 540 it was revealed to St. Gregory, Bishop of Langres, and an ancestor of St. Gregory of Tours, that a tomb which the piety of the peasants led them to visit contained the remains of St. Benignus. He had a large basilica erected over it, and frequent travellers from Italy brought him the bones of this saint's martyrdom. These acts are part of a collection of documents according to which Burghundy was evangelized in the second century by St. Benignus, an Asiac priest and the disciple of St. Polycarp, assisted by two ecclesiastics, Andochius and Thyrsus. The good work is said to have prospered at Langres, where it received valuable support from the youthful Symphorianus; at Saulieu where Andochius and Thyrsus had established themselves; at Langres where the three brothers, Speusippus, Eleusippus, and Meleusippus, were baptized, and finally at Dijon. In the meantime the persecution of Marcus Aurelius the pagan, and St. Benignus' patrons were put to death. The doubts first raised by Bouillai and Tillemont in the seventeenth century concerning the authenticity of these acts seem justified by the conclusions of Père Van Hooff and Monseigneur Duchene, according to which the Acts of St. Benignus and the martyrdom of three bystanders on which the aforesaid traditions are based, are apocryphal and copied from Cappadocian legends. This controversy, however, does not alter the fact that before the fifth century a saint named Benignus was venerated by the Christians of Dijon; nor does it dim the splendour of the saint's miracles, as related by Gregory of Tours and by the "Book of the Miracles of St. Benignus." During the last generation no question has given rise to more animated polemics among the Catholic scholars of France than the apostolate of St. Benignus.

Under the Merovingians and Carolingians most of the bishops of Langres resided at Dijon, e.g. St. Urbanus (fifth century), St. Gregory, and St. Tetricus (sixth century), who were buried there. When, in 1016, Lambert, Bishop of Langres, ceded the seigniory and county of Dijon to King Robert, the Bishop of Dijon ceased to reside in the place. In 1721, Clement XII made Dijon a bishopric. The Abbey of Saint-Etienne of Dijon (fifth century) long had a regular chapter that observed the Rule of St. Augustine; it was given over to secular canons by Paul V in 1611, and Clement XI made its church the cathedral of Dijon; during the Revolution it was transformed into a forge storehouse.
CATHEDRAL OF SAINT-BÉNIGNE, DIJON
church of Saint-Bénigne became the cathedral of Dijon early in the nineteenth century. Cardinal Lecot, later Archbishop of Bordeaux, was Bishop of Dijon from 1886 to 1890. Pope Pius X's request in 1907 for the designation of the cathedral of Notre-Dame-de Bétharram in Lescar and Bishop of Dijon since 1899, was one of the incidents which led to the rupture of relations between France and the Holy See.

Romanesque architecture was very popular in Burgundy; its masterpiece is the Cathedral of Saint-Bénigne, at Dijon, by Deschamps II in 1145 and completed in 1288. The Gothic style, although less used, characterises the churches of Notre-Dame de Dijon (1252–1334), Notre-Dame de Semur, and l'Abbaye Saint-Seine; it was also the style of the Sainto-Chapelle of Dijon, which is no longer in existence. Little that remains of the fourteenth and beginning of the fifteenth century, Burgundian art flourished in a surprising degree. The Chartreuse of Champmol, on which Philip the Bold had Claus Sluter, the sculptor, at work from 1389 to 1406, and which was the scene of artistic excellence, was most materially destroyed during the Revolution; however, two of its statues, of St Peter and St John, still be found. The church of the Puits des prophètes, and the portal of the church. The Beaune hospital (1443) is a fine specimen of the Gothic style, and the church of Saint-Michel in Dijon (1497) has sixteenth- and seventeenth-century portions covered with fantastic Baroque reliefs. The Abbey of Cîteaux-Fontenay, and Flavigny (where in the nineteenth century Père Lacordaire installed a Dominican novitiate) were all within the territory of the present Diocese of Dijon. (See Cisterciens and Cîteaux.)

The following saints are specially honoured: Saint Seguin (Seine), b. at Magny, d. 590, founder of the monastery of Rémous around which sprung up the little town of Saint-Seine; St. William (961–1031), a native of Novara, Abbot of Saint-Bénigne at Dijon in 990, and reformer of the Benedictine Order in the eleventh century; St. Robert of Molems, joint founder with St. Alberic and Stephen Harding of the monastery of Cîteaux in 1098; St. Stephen Harding, who died in 1134, third Abbot of Cîteaux, under whose administration the monasteries of La Ferté, Pontigny, Clairvaux, and Morimond were established; St. Bernard (1090–1153); St. Jane Frances de Chantal (1572–1641); Mary of Dijon, a.Sales Lenten discourses at Dijon in 1604, conceived a holy friendship for him; the Venerable Bénigne Joly, canon of Saint-Etienne de Dijon (seventeenth century); and the Venerable Sister Marguerite of the Blessed Sacrament (1619–45), named the "holy chariot of Dijon," for the fidelity and solicitude of the Infant Jesus with which she was favoured, in consequence of which the pious association known as the Family of the Holy Child Jesus was organized and later raised by Pius IX to the dignity of an archconfraternity. Among the famous persons of the diocese is the Benedictine Philipe Pot (1423–94) is remembered for his exploits against the Turks in 1452 and his miraculous deliverance from his captors. The illustrious Bossuet was a native of Dijon. Hubert Landeutre, the Protestant publicist (1518–81), was born at Vittel.

The chief places of pilgrimage are: Notre-Dame de Beaulieu, at Beaune (antedating 1120); Notre-Dame du Bon-Espoir at Dijon, dedicated in 1334; Notre-Dame de Chemin, near Serrigny (twelfth or thirteenth century); Notre-Dame de Cîteaux (end of the eleventh century), visited by many famous rulers of Europe and the East; Notre-Dame d'Etang at Vezelay (thirteenth century), visited by St. Jane Frances de Chantal, St. Francis de Sales, Louis XIV, and Bossuet; and Notre-Dame de Léa (tenth or eleventh century) visited by St. Benedict Labre. The room in which St. Bernard was born was transformed into a chapel at Fontaine-les-Dijon and visited by Louis XIV, Anne of Austria, Condé, St. Jane Frances de Chantal, St. Francis de Sales, and M. Olier. St. Regina (Reine), who was martyred at ALise in the third century and whose body is in the Franciscan friary, is also the following local congregations of women: Sisters of the Good Shepherd, founded at Dijon in the seventeenth century by Venerable Bénigne Joly; Sisters of the Perpetual Adoration of the Blessed Sacrament; Sisters of Providence, whose mother- and children of the Diocese of Dijon had a population of 361,026; 38 parishes (curates, 447 succeurs, 106 paroisses, 224 churches), and 13 curacies subordinated by the State.

Dillingen, University of, in Swabia, a district of Bavaria. Its founder was Cardinal Otto Truchsess von Waldburg, Prince-Bishop of Augsburg (1543–80). He first established the "College of St. Jerome," and endowed it with the revenues of several monasteries which had been suppressed at the Reformation. His aim was to provide for the education of the clergy and the protection of the Catholic Faith in an institution which, by the virtue of the wealth of its endowments, would counteract the laxity of morals and insubordination so prevalent in other universities of Southern Germany. With this end in view, he drew up special rules regarding the practice of religion, application to study, and conduct which each student bound himself by oath to observe. In 1551 Pope Julius III recognized the college to the rank of a university and conferred on it the privileges enjoyed by other universities. Emperor Charles V ratified these privileges, and the formal inauguration took place 21 May, 1564. Some of the professors, as Peter Endaviamus, the first rector of Dillingen, came from Louvain; others from Spain, among them the well-known Peter de Soto, O. P., afterwards professor at Oxford. In order to secure the existence of this institution which had been founded with great effort and sacrifice, and to strengthen its intellectual and moral influence over the clergy, Bishop Otto in 1563 gave the Jesuits, whose provincial at that time was Peter Canisius, charge of the college, and authorized them to follow their own rules in all that pertained to organization and administration. As, however, the cathedral chapter of Augsburg would not admit the legality of this complete transfer, dis-
DILLINGEN, DILLINGEN

...putes often arose on questions of right, especially in regard to episcopal visitation, the foundation of chairs of civil law, and the appointment of professors. Nevertheless, the chapter was regularly, as stipulated in the original document of transfer, and finally accepted the transfer as arranged June 14, 1606, by Bishop Henry von Knöringen (1598-1646), who for that reason is called the second founder of the university. From this date the chapter guaranteed a fixed number of teachers for Church and State. During the Swedish War the revenues of the university became less regular, some of its professors were imprisoned, its students scattered, and the lectures discontinued. But after peace had been concluded the institution gradually recovered, and in 1688 a fine building for university lectures was erected under Bishop Christoph von Freyberg (1685-1705).

The university's charter guaranteed to all its members freedom from civil and political obligations, separate jurisdictions, and the right of precedence on public occasions. The exemption from taxes and imposts was frequently disputed by the city council and other charitable institutions, and the Jesuits, in accordance with their order, renounced jurisdiction in civil and penal matters. This was exercised by the gubernator, one of the episcopal counsellors well versed in jurisprudence, while matters relating to discipline were in the hands of the rector. The right of precedence at processions and funerals occasioned several bitter feuds between the officials of the episcopal court and the faculty. In 1610 Bishop Henry von Knöringen granted to the rector and the professors of theology the privilege of censorship; in 1747 this was modified to the effect that books printed in Dillingen needed also the approbation of the episcopal censor at Augsburg. The courses which, from the beginning, were given at the university and which were taken over by the Jesuits were humanities, philosophy, and theology. The humanities were taught in the gymnasium, which was at that time a part of the university, and the professorship was the highest. In the beginning of the seventeenth century a faculty of jurisprudence was added with one professor of canon and one of civil law. In 1738 church history was included in the curriculum of theology. A department of medicine and surgery, rather loosely connected with the university, was established about the same time.

The statutes concerning degrees were taken from the University of Ingolstadt. The baccalaureate in theology was conferred for the first time in 1684. Between this date and 1770 the degree of bachelor of arts was conferred on 7704, that of master of arts on 5997, while the examining conditions of letters at the university. Although the frequent changing of professors was prejudicial to their literary activity, many of them acquired fame in the fields of moral theology, canon law, philosophy, mathematics, and astronomy. Thus Jakob Illung, Georg Stengel, and Joseph Munschen were distinguished theologians; Christopher Scheiner, professor of mathematics, invented the pantograph; while Paul Laymann, F. X. Schmelzgruber, and Joseph Biner were famous jurists. In order to foster a truly religious spirit among the students and to secure the faithful performance of their duties, a large and a small sodality were organized besides one for the religious. It was at Dillingen that the first sodality of the Blessed Virgin was established in Upper Germany; this sodality carried on an active correspondence with the original sodality, the B. V. Annuntiatae in Rome, and with various local organisations. Other associations were formed for special purposes, e.g. for the veneration of the Blessed Sacrament. Some of these sodalities numbered several hundred members regularly. In 1586 a seminary was founded by Pope Gregory XIII to provide for the religious needs of Upper Germany. Its students, 20-25 in number, were young men of brilliant parts, who, after completing the course of humanities and dialectics, pledged themselves to take their degrees at a certain age and to the students promised under oath to enter the ecclesiastical state and not to join any religious order without leave from the pope. Their expenses were defrayed by the Holy See. This seminary existed up to the year 1798 and educated more than 4,000 priests. Through the efforts of Bishop Henry von Knöringen and several members of the university clergy, a conformity with the practices prevailing twelve students was founded in 1610; its rules were identical with those of the papal seminary. A third seminary under the title of St. Joseph owed its origin to the contributions of Cardinal Otto and other benefactors. It received poor students who could no longer be accommodated in the convicbus (canon and civil law); they lived in special lodgings and were not obliged to receive Holy orders. Finally, another seminary for clerics was built as a supplement to the existing papal seminary; but in 1747 it was transferred to Maffenhausen under Bishop Joseph. In 1582 the total number of students was 600; in 1618 it was 306, and in the year of the suppression of the Society of Jesus, only 216 attended, of whom 116 were studying theology, 25 jurisprudence, 74 philosophy. The gymnasium counted 125 students. The scholars did not belong exclusively to the Diocese of Augsburg; they came from all parts of Germany, and from Poland, Italy, France, and Switzerland.

In 1773 the Society of Jesus was suppressed, and consequently, in the autumn of the same year, the activity of the Jesuits as professors at the University of Dillingen came to an end. Prince-Bishop Clement Wenceslaus ordered that henceforth the university as well as the convicbus should be directly subject to the bishop. For the new scholastic year other professors, some of whom were ex-Jesuits, were installed; but theology and canon law were taught by secular priests exclusively. The former Jesuit college took the name "Academia House". The house was nearly the same as formerly, but the institution soon began to labour under severe financial difficulties owing to the confiscation of lands and revenues which had belonged to the Jesuit college. In 1788 a new charter approved by the Holy See was introduced at the University. In 1799, when other universities, deans with a yearly tenure of office were placed at the head of the different faculties. The curriculum and the methods of teaching were adapted to the needs of the time; in theology the difference between primary branches (scholastic theology and philosophy) and secondary branches (canon law and Biblical exegesis) was done away with. The lectures in the three faculties were given partly in Latin as before, partly in German. Rationalism and liberalism were repeatedly checked by episcopal visitations and enactments. Among the most known professors of that period were F. M. Saile in moral philosophy and pastoral theology, Zimmer in dogmatic theology, and Weber in philosophy and mathematics. A last regulation of the prince-bishop, dated 1799, contained rules regarding attendance at church, discipline, and methods of teaching and studying. The enrollments of several institutions and the corporal church were transferred in 1789 to the "Academia House" in order to relieve its financial difficulties, and its administration was simplified by uniting the St. Joseph's Seminary and the convicbus. The patronage of the city parish of Dillingen was ceded to the bishop in
favour of the university with which it was incorporated. Nevertheless the expenses of the institutions so far exceeded their revenues that the existence of the university became very precarious. Hence it was several times proposed to transfer the university to a religious order, e.g. the Benedictines or the newly organized Societas de Fide Jesu. During the scholastic year of 1738–1739, the number of students had dwindled to 109, of whom 51 were theologians distributed over three courses, 10 were attending the lectures on law and 48 those on philosophy. In 1802 the cathedral chapter of Augsburg and the university were united, and Benjamin von Hauer became its elector, by rescript of 3 Nov., 1803, abolished the University of Dillingen. In its stead a classical gymnasium and a lyceum for philosophy and theology were founded for the Swabian District, and these institutions are still in existence.

Karl Höferer.

Dillon, Arthur-Richard, a French prelate, b. at St-Germain-en-Laye, near Paris, 1721; d. in London, 1806. The fifth son of Arthur Dillon, an Irish officer who, outlawed as a Jacobite, had passed to the service of the Duke of Bavaria, and became Bishop of Elan near Mézières; Vicar-General of Pontoise, 1747; Bishop of Evreux, 1753; Archbishop of Tours, 1758; Archbishop of Narbonne and Primate of France, 1763. Dillon was a man of broad sympathies and varied accomplishments. A staunch Catholic, he, nevertheless, publicly applauded the recognition of Protestant marriages in the Assembly of the Clergy of 1788, over which he presided. His appointment to the primatial See of Narbonne made him practically Vicerey of Languedoc. He won there great popularity not only as bishop but also as promoter of public works, such as roads, bridges, canals, harbours, etc. When the French Revolution broke out, Dillon, rather than take the constitutional oath, emigrated to Coblenz with the French nobility, and from Coblenz went to London, where he was at the time the Concordat was signed. Pope Pius VII having accepted within ten days the unconditional resignation of all the French bishops, Dillon with thirteen other prelates who, like himself, had sought refuge in England, sent but a wavering and dilatory answer and even signed the "Reclamations canoniqnes et très-respectueuses addresses à Notre très-Saint Père le Pape" (London, 1792). Notwithstanding the English authorisation. The hierarchy of schism, but by an excessive attachment to the old regime and the mistaken Gallican idea that the pope could not take a step of that importance without the deliberation and consent of the French hierarchy. Although Dillon consented to communicate his spiritual jurisdiction to the Concordat bishop whose territory comprised the suppressed primatial See of Narbonne, nevertheless, by placing himself resolutely at the head of the Anticoncordataries, he not only failed in due obedience to the Holy See but also gave countenance to that incongruous movement which resulted in the "Petite-Eglise".

Dimissorial Letters (Lat. littera dimissoriales, from dimittere), letters given by an ecclesiastical superior to his subjects to have effect in territory outside his jurisdiction. The term is sometimes extended so as to include testimonial letters, which certify to a public the services of Henry II, to the effect that a candidate for a religious order has the requisite qualities, and commendatory letters, which testify that a travelling ecclesiastic is unexceptionable as to morals and doctrine, and letters of incorporation (see Exeat), by which clerics are freed from the jurisdiction of one diocesan bishop (see Exordination) that they may be affiliated to another diocesan properly the name "dimissorial letter" refers to those given by a bishop or regular prelate to his subjects in order that they may be transferred to another even the pope alone can concede such dimissorial letters for the whole world, but any bishop can give them to those under his authority, whether they be by origin, domicile, or benefice. A bishop, as well as cardinals, can likewise grant them to those who for three years have been actually resident, for the use of a household (familiæres). In the absence of the bishop, his vicar-general is empowered to grant dimissorial letters, but not while the bishop is at home, unless he has received special permission to do so. During the vacancy of the episcopal see, the vicar capitular cannot give these letters, unless a year has elapsed since the diocese became vacant, except to one who is obliged to receive orders owing to his having acquired a benefice. After the lapse of a year, the vicar capitular, independent of the chapter, has the right to grant dimissorial letters for the reception of Holy orders. "If the vicar capitular give the letters illegitimately, the person ordained loses all spiritual privileges, if he be in minor orders; and if in major orders, he is suspended from the exercise of them until the future bishop free him from the penalty. Abbots, even though exempt, cannot grant dimissorial letters to seculars who are subject to them. When a bishop grants letters directed to other ordinaries, this phrase does not include exempt abbots. Regular prelates can give letters to those religious who live under their obedience, but such letters must be directed to the diocesan bishop, unless there be a special privilege. In case of the absence of the ordinary bishop, or if he does not desire to hold ordinations, religious superiors may send their subjects to any other bishop. When regulars live in a monastery nullius diocesis, these letters are to be directed to the neighbouring bishop (vicinior). Religious orders, which have received such special privilege since the Council of Trent, may send their subjects for ordination to any bishop whatever. As regards the city of Rome, those who dwell in the city for four months cannot be ordained outside the city in virtue of dimissorial letters from their ordinary bishops, but they must present themselves to the Cardinal Vicar of Rome for that purpose. Priests may not receive orders without letters from his bishop, and the person so ordained cannot later be promoted to higher orders without papal licence. Although dimissorial letters be required for ordaining the subject of one bishop in another diocese, yet it does seem necessary to obtain them for the purpose of receiving a benefice in the other diocese, though it is considered proper and expedient.

William H. W. Fanning.

Dingley, Sir Thomas, Venerable, Martyr, prior of the Knights of St. John of Jerusalem, found guilty of high treason 28 April, 1638, and beheaded on Tower Hill, 9 July, together with the Blessed Sir Adrian Granerius. He was ancestor of Sir Robert Graner, merchant, of "going to several foreign princes and persuading them to make war with the King". He had no trial, and no proof of treasonable practices was ever brought against him. In the same bill of attainder were included many other innocent persons, with Sir Robert Dingley's brother, Sir Robert, Margaret Pole, Countess of Salisbury. There is a discrepancy among the chroniclers as to the date of the
Dinoth, Saint (Dinothus, Dunawd, Dunod), founder and first Abbess of Bangor Iseod (Flintshire); flourished c. 550 and died c. 580. He was originally a North British chieftain driven by reverses of fortune into Wales. In conjunction with his three sons, Deiniol, Cynwyl, and Gwarrdan, and under the patronage of Cyngen, Prince of Powys, he founded the monastery of Bangor on the Dee, which must not be confused with the Benedictine Carnarvonshire, founded by St. Deiniol in 514, and afterwards a cathedral city. The community at Bangor was very numerous, and the laus perennis was established there. The Triads state there were 2400 monks, who in turn, 100 each hour, sang the Divine Service day and night. More is known of its monks than of its founder. He is mentioned by Bede (Hist. eccl., vii. 2) in connexion with the second conference at Augustine's Oak, but no authority is given for the statement, and there are arguments against its correctness. The Conference was probably held in 602 or 603, at which time St. Dinoth would have been far advanced in years, and the journey from North Wales to the Lower Severn would have been a difficult one for an aged man. It is true that delegates from Bangor attended the conference which was convened by St. Augustine to raise the moral and spiritual condition of the British clergy, to wean them from their old method of computing Easter, to which they clung with great tenacity, and to induce them to cooperate with him in converting the Anglo-Saxons. The document purporting to be St. Dinoth's "Answer" (printed in Haddan and Stubbes, Councils of Ct. Britain and Ireland, i, 122) is the sole ground for connecting his name with this conference; but it is extremely doubtful whether the "Answer" has anything to do with this conference at all. St. Augustine's name is not mentioned in it, neither is there any allusion to the evangelization of the English. It contains merely a firm repudiation of papal authority and an assertion of the supremacy of the "Celtical See of the North" over the See of London, the Church. Some time before the supposed date of the document St. David had transferred the primatial See of Wales to Menevia. What more authentic, however, is the fact that in consequence of the British delegates' refusal to agree to St. Augustine's proposals he proceeded quickly against them by the English. In 613, when the monks of Bangor were praying for the success of their countrymen in battle against the army of Ethelfrid of Northumbria, twelve hundred of them were slain, being mistaken for combatants. The monastery itself was probably burnt about sixty years later (Haddan and Stubbes, i, 125), and extensive ruins remain which are described by William of Malmsbury, Camden, and Leland.

G. CYPRIAN ALTON.

Dioceses (1), a titular see in Palestina Secunda. Dioceses is a later name of the town known to the Rabbis as Sippori, "the bird," also called Sephoris (Gr. Σεφωρίς). Though not mentioned in the Bible, it was in its time one of the largest towns of Galilee. Outside the town were the provincial synagogues (Josephus, Ant. Jud., XIV, v. 4). Here the Great easily retake it from Antigonus, 39 B. C. (Ant. Jud., XIV, xv, 4). In 6 2, it was captured by a rebel, Judas, and his banditti, but was retaken by Aretas, the Arab King of Petra and ally of the Romans. He destroyed it completely, and sold the inhabitants as slaves. In the following year Herod Antipas, Tetrarch of Galilee, rebuilt the town and dedicated it to the emperor (Ant. Jud., XVIII, ii, 1), in which it still exists. In 66, when in A. D. 66, the great Jewish revolt broke out, the inhabitants would have no share in it, sent away their governor, the celebrated historian Flavius Josephus, and invited Cestius Gallus, Prefect of Syria, to occupy their town with his troops. About 180 the Great Sanhedrin left the neighbouring village of Shefam Amar and resided at Sepphoris till it was removed to Tiberias. When Count Joseph, a converted Jew, built a church at Sepphoris (323-37) it was not yet an episcopal see (St. Epiph., Adversus haereses, in Migne, P. G., XLII, 409). In 353 the Jews rebelled again, and the fourth synod, convened by Emperor Gallus (Socrates, Hist. eccl., II, xxiii; Sozomen, Hist. eccl., IV, vii). It was soon rebuilt (Theodoret, Hist. eccl., IV, xxii). It served as a place of exile for many bishops and monks during the persecution of Valens. When Sepphoris became an episcopal see and suffragan of Scythopolis, it is unknown. Only two bishops are known: Macarius in 536 (Lequien, Or. chrst., III, 713). During the Crusades Sepphoris played an important role, though only the necropolis was occupied by a Frankish garrison. The springs, at half an hour's distance southwest of the town, were naturally the site where the Christian armies were watered and where friends from beyond the Jordan; thus King Guy of Lusignan encamped there before the battle of Hattin, which caused the loss of Palestine (July, 1187). There also in April, 1799, Kléber and Junot rested their troops before the battle of Mount Athos. To-day Sefourieh, as it is now called, is inhabited by 2,000 fanatic Moslemans; there are preserved the ruins of the former acropolis, a high tower, two synagogues, the beautiful church of Sts. Joachim and Anna, who, according to a medieval tradition, were born at Sepphoris. This church, which has been partly demolished, has three naves and is 115 by 65 feet in dimensions. It belongs to the Franciscans, who say Mass there from time to time. (See Guérin, "Description de la Palestine: Galilée", Paris, 1880, I, 369-79.)

(2) Another Diocese, the native name of which was Prakana, site unknown (Ramsay, Asia Minor, 364 and 354), was transferred to Kilikia, under the name of Seleucia. Five Greek bishops are known from 831 to 787 (Lequien, II, 1019); for Successions, about 433, see Vallée, in "Echoes of Orient" (IX, 221). Three Latin titular bishops are known in the fifteenth century (Lequien, III, 1239; Eubel, II, 160).

Finally, in Cilicia, Naxianus was also called Diocesarea (Lequien, I, 409).

S. VALLÉE.

Diocesan Chancery, that branch of administration which handles all written documents used in the official government of a diocese. It is the diocesan chancery that, under the direction of the bishop or his representative, all documents which concern the diocese are drawn up, copied, forwarded, and a record kept of all official writings expeditied or received. The official charged with the execution of these duties is known as the diocesan chancellor. In many dioceses the chancellor exercises some of the faculties which in other dioceses are exclusively reserved to the vicar-general. This happens more frequently in smaller dioceses, administered directly by the bishop himself, and in the vicar-general (often not resident in the diocesan chancery) is only an official who is, for presence or absence or hindered. In such cases, the chancellor is also the confidential secretary of the bishop. A similar system obtain even in many extensive dioceses which are administered by the bishop with the aid of one or more vicar-general and the diocesan chancery.
There are, however, some large dioceses in which all matters personally reserved to the bishop are executed by him with the aid of a secretary or chancellor, usually a priest, while the greater part of the diocesan administration is handed over to a body of officials under the direction of the bishop or his vicar-general. For the correspondence, registration, and care of the archives, such administrative bureaux are provided with a secretariat or chancery. The chancery is a necessary element of administration in every diocese. Some provision for its duties must be made, even in missionary dioceses, in Apostolic prefectures and vicariates. Unless the official correspondence were properly cared for, there would be no tradition in diocesan management, important documents would be lost, and the written evidence necessary in lawsuits and trials would be lacking. The famous Apostolic Chancery (Cancellaria Apostolica) developed in time from the chancery of the primitive Bishop of Rome. By reason of the latter's primacy in the Church, his chancery naturally had far wider relations than that of any other Christian diocese.

It is somewhat strange, given the necessity and, generally speaking, the universality of diocesan chanceries, to find that there is nothing in the common ecclesiastical law concerning their creation and equipment. The explanation lies in the very nature of this law, which provides only for what is general and common, and takes no account of local means of administration which it abandons to the proper authority in each diocese, the concrete circumstances offering always great variety and calling for all possible freedom of action. Nor has the Apostolic See ever legislated concerning diocesan chanceries; even the appointment of a vicar-general is not made obligatory by the common law. Although, as above described, the methods of diocesan administration exhibit no little variety, there exists on the other hand a certain uniformity. Each diocese, after all, is bound to observe the common law, has an identical range of freedom, and identical limits to its authority. Each diocese, therefore, is likely, a priori, to develop its administration along similar lines, but does so regularly in harmony with others, particularly neighbouring dioceses. In this way the dioceses of a given country come to have similar official administration. In the course of the last century the diocesan system was generally introduced in many countries whose churches had hitherto been under a more or less provisional government (e.g. United States, England, Scotland, India). Naturally, the bishops of these new dioceses sought at once to provide for an orderly administration and the establishment of suitable methods for the same. Thus we see that the more recent national and provincial synods lay much stress on the creation of diocesan chanceries. The First Plenary Council of Baltimore (1852) expressed the wish that in every diocese there should be a chancery, to facilitate ecclesiastical administration and establish for its conduct a more or less identical system. The National Synod of Thurles in Ireland (1850) made provision for the establishment and preservation of diocesan archives. Similarly for England the Provincial Synod of Westminster (1852).

In keeping with these recommendations the diocesan chancery consists of a certain number of officials named by the bishop. In the United States, England, and Australia there are usually, besides the vicar-general, a diocesan chancellor and a secretary. In European dioceses the chancery is organized variously, according to the extent of the diocese. There is generally in each diocese a chancellor or secretary with the necessary personnel. In the dioceses of Germany much of the administration is carried on by an official bureau (Offizialiat) as described above, i.e. the vicariate-general, to which are adjoined a secretariat, a registry office, and a chancery. In the Diocese of Breslau there exists an institution known as the "Secret Chancery" (Geheimkanzlei) which expedites only matters decided by the prince-bishop personally or with the advice of this body. The prince-bishop presides over its sessions with the help of the vicar-general. Its members are three priests and one lay counsellor to whom are added a secretary, a chief of the chancery, two private secretaries, a registrar, etc. The ordinary diocesan administration is carried on by two other bureaux, the vicariate-general and the diocesan consistory, mutually independent, but both acting in the name of the prince-bishop. For the office of diocesan chancellor in the United States, see "Acta et Decreta" of the Third Plenary Council of Baltimore, in index, p. 303, and of the Synod of Maynooth (1900), s. v. "Archiva".
