The courses of the rivers of Europe are much shorter than those of Asia, Africa, or America. The largest of the European rivers, the Volga (738 miles), the Danube (1771 miles), Dnieper (1329 miles), Don (1120 miles), Dniester (836 miles), flow into seas that are almost entirely cut off from the ocean, consequently from the world’s traffic. They offer, however, little obstruction to navigation, and numerous canals are cut through the main watershed that extends from Gibraltar to the northern Urals. The largest number of lakes is found in the region, formerly covered with glaciers, lying north of 50° N. lat.—Finland, Scandanavia, Scotland, and Ireland, and the region of the Alps. Besides this lake region, lakes have also been formed in the Alps by folding, in the Balkans by the breaking in of the surface, and in the Apennine Peninsula by volcanic outpourings.

CLIMATE, FLORA, FAUNA.—The climatic conditions of Europe are very favourable. Almost the entire continent, excepting the northern point, belongs to the temperate zone. At the same time it is much warmer than other countries in the same latitude, as, for instance, than eastern North America, because along its western coast flows the Gulf Stream, which leaves the coast of Florida with a temperature of 68° Fahr. and raises the normal temperature on the Portuguese and Spanish coast about 7°—8° Fahr., the British coast about 10°—14° Fahr., and of the Norwegian coast about 14°—18° Fahr. Since there is no chain of mountains traversing Europe from north to south, as is the case with North America, the influence of the Gulf Stream extends far into the interior of the continent. On the borders of the Arctic Ocean a rigorous climate prevails; summer is short, and during the greater part of the year the temperature is below freezing. This northern region has polar vegetation; the rolling plains called tundras are found on the peninsula of Kamchatka and along the banks of the Petchora. The sub-arctic zone is found south of this in the Scandinavian Peninsula down to 60° N. lat.; here the climate of the coast, influenced by the sea, is milder in winter and cool in summer. The part of Europe properly included in the temperate zone is divided
into the following regions: the countries lying on the Atlantic, Great Britain, Brittany, the Channel, and northwestern Spain; this section has moderate temperature and large rainfall; west and middle Europe, with an inland climate, less heavy rainfall (about 197 inches), and a general temperature of temperature amounting to 45° Fahr., and the plain to less than 23° eight. Finally comes the section of the Euxine comprising the great Hungarian plain, the plain of the Balkan provinces, and Southern Russia; in this division the spring is moist and warm and midsummer hot and dry. The depression of the Caspian belongs to the dry zone of Asia.

The forests of Europe flourish in the temperate zone. In Norway they are composed chiefly of pine; the only deciduous tree found in the highest latitudes is the birch (betula odorata); the mixed forests of pines and deciduous trees are found south of 61° N. lat.; this region is further characterized by grass-lands, heaths, and moors. The cultivated land, which in Central and Western Europe is about sixty to seventy per cent, is divided into farmland, cultivated forest land, and green meadows. From south to north the succession of grains is as follows: barley, rye and oats, wheat, especially in France and Hungary, and maize. Potatoes are cultivated on less fruitful soil. In this region native fruits are the apple, pear, and cherry; finer kinds of fruit trees, as the peach, apricot, plum, and of nut trees, the walnut and almond, have been introduced from the south. In this region the grape is also cultivated; its northern limit, extending from the mouth of the Loire, passes to Paris and the Rhine near Mannheim, then towards the Unstrut and Saale Rivers, and reaches its most northerly point on the Oder below 52° N. lat.; the limit of its cultivation here turns to the south-east until it reaches the Sea of Azov.

The region of the Mediterranean, that is the Iberian Peninsula, Provence, Italy to the foot of the Alps, and the Balkan Peninsula south of 42° N. lat., has a sub-tropical climate. Here flourish trees and bushes which are always green; among those that are cultivated for their products are the citrus, orange, fig, almond, mulberry, and pomegranate trees. The fauna is poor in some it is rich, and the vegetation. In Northern Europe are found the polar bear, polar fox, and reindeer; in the region of forests live the bear, wolf, and lynx, which have, however, almost disappeared; the region of the Mediterranean contains numerous mountains.

POLITICAL DIVISIONS, AND RELIGIONS.

The greater part of the population of Europe belongs to the European or Mediterranean race. The main race-groups are the Teutonic, Romanic, and Slavonic. To the Teutonic division belong: the Germans, Frisians, English, and Scandinavians; it contains in all 127,800,000 souls or 32 per cent of the whole population; included in the Romanic group are: the French, Wallons, Italians, Friulians, natives of the Rhetian Alps, Maltese, Spaniards, Portuguese, and Romanians, in all 100,100,000 or 24 per cent; included in the Slavonic are: the Russians, Rhenish, Poles, Czeches, Slovaks, Wends, Slovenes, Croats, Serbs, Bulgarians, Lettes, and Lithuanians, in all 124,600,000, or 31 per cent. A smaller number, about 8,500,000 souls or 2 per cent is composed of other Asian races: Greeks, Albanians, Gypsies, Armenians, etc. There are also about 27,900,000, or some 7 per cent, of non-Aryan races: Basques, Magyars, Finns, the tribes of the Ural region, Turks, Kal- mucks, and Jews. The total population of Europe amounts to about 420,000,000.

The present states of Europe may be traced back to the Middle Ages. Most of the States are limited by natural boundaries within which each has developed its own individual character. The States vary greatly in size and population; most of them are constitutional monarchies, the only republics being France, Switzerland, and the Dutch Republic. Great Britain and Ireland, have a total area of 121,622 sq. miles and 43,722,000 inhabitants; as a natural consequence of the geographical position of the islands, the nation is largely interested in colonial enterprises.

The Scandinavian Peninsula is halfed by an uninhabited mountain range, thus permitting the existence of two countries, Norway and Sweden. Norway, lying on the Atlantic, has an area of 123,938 sq. miles and 2,300,000 inhabitants; Sweden, on the Baltic, has an area of 172,937 sq. miles and 5,261,000 inhabitants. The peninsula and islands lying south of Norway and Sweden form the third Scandinavian state, Denmark, that controls the entrance to the Baltic. Denmark has an area of 14,672 sq. miles and 2,450,000 inhabitants. France, the western part of the continental mass, has an area of 206,950 sq. miles and a population of 39,060,000; it has the advantage, excepting towards the north-east, of having for its boundaries either seas or mountain ranges. Between Western and Central Europe lie the so-called "buffer" States: the Habsburg Monarchy, with an area of 93,487 sq. miles and 7,046,000 inhabitants; the Netherlands, area 12,741 sq. miles, inhabitants, 4,605,000; Belgium, 5,116,000; Switzerland, area 15,820,000, inhabitants 3,424,000. The German Empire, area 206,880 sq. miles, inhabitants 60,605,000, covers the greater part of Central Europe. Germany borders upon nearly all the great powers of Europe and has, therefore, developed a large army. The State having the least organic union geographically and ethnographically, and consequently in constant danger of internal disorganization, is the Austro-Hungarian Monarchy. Its area is 261,044 sq. miles, population 49,092,000 souls. Russia, area 2,681,079 sq. miles, inhabitants 119,115,000, occupies the lowland of Europe and, in its largest extent, stretches beyond Europe into the Asiatic plain. Southern Europe embraces numerous states with sharply defined boundaries. The Iberian Peninsula is divided between Portugal and Spain; Portugal, a country lying on the ocean and having a great maritime past, has an area of 43,363 sq. miles, inhabitants, 5,016,000; Spain, area 191,892 sq. miles, inhabitants, 18,249,000. Italy because of its position has a climate different from that of its neighbors; its area is 110,811 sq. miles, population 33,904,000. The physical contour of the Balkan Peninsula is so broken up by mountain ranges that it fails to show any one organically large State. Its divisions at the present time are: Bulgaria, 37,901 sq. miles, population 3,744,400; Montenegro 3,470,000, population 228,006; Rumania, 50,679 sq. miles, population 6,392,000; Servia, 18,533 sq. miles, population 2,677,000; European Turkey, 65,251 sq. miles, population 6,130,000; Greece, 25,000 sq. miles, population 2,440,000.

By far the greater proportion of the inhabitants of Europe belong to the Christian Faith. One-fourth of the population are Protestants, somewhat over one-fourth belong to the Oriental Christian Churches, nearly 45 per cent are Catholics, 44 per cent are non-Christian. In the Romanic States 59 per cent of the population are Catholic; in the Teutonic States 74 per cent are Protestant and less than one per cent non-Christian. In the States of Eastern Europe, Austria-Hungary, Russia, and the Balkan provinces, 57 per cent belong to the Oriental Churches, 92 per cent are Orthodox, 6 per cent are Catholic; in the Christian States 27 per cent are Catholic. The only heathen are the Kal- mucks living between the Ural and Caucasus mountains, the Finns of the Volga, and the Samoyedes. About 8,520,000 persons or 21 per cent of the whole population of Europe are Jehovah-witnesses in belief; these are limited to several tribes of the Urals-Altaic.
family in Russia, and to the former territories of the Ottoman Empire; among the Mohammedans are a large portion of the Albanians, some of the Serbs in Bosnia and Hercegovina, and a part of the Bulgarians. The Jews of Europe number 9,000,000 or 2% per cent; the Moslems, the beginnings of art and science, and the higher forms of state organisation and religion. The various States of Greece, the European neighbour of Asia, transmitted these by trade and the foundation of colonies to the countries lying on the shores of the eastern Mediterranean and to Southern Italy. Rome from its central position imparted them to Western and Northern Europe and united the civilized parts of the continent into a great empire. At the time of its greatest extent imperial Rome included, on European soil, the present countries of Italy, France, England, Portugal, Spain, the Rhine and south of the Danube, the countries bordering on the Danube as far as the Black Sea, and the whole Balkan Peninsula, besides all the islands of the Mediterranean. Christianity, too, came from the East by the pressing advance of Christianity. Rome towards the various Roman provinces and the wide prevalence of the Latin and Greek tongues were most favourable to its spread. When the structure erected by the Caesars fell to pieces, the Christian Faith not only entered into its inheritance, but also subdued all those barbarian peoples that had up to that time defied the imperial power. The Gospel was brought to Rome by colonies of Jewish Christians who kept up close relations with Palestine, their mother country. St. Paul brought Christianity to Greece on his second journey (Acts 16:6—18:22), and found the churches of Timothy, and Luke, Christian communities in Philippi, Thessalonica, Berea, Athens, and Corinth. St. Paul's great letters and his journeys to Italy, perhaps also to Spain, prepared the way for the close connexion between the Roman and Greek Christians and strengthened them for the work of spreading the Gospel. In fact the first persecution under Nero in 64 was not able to crush the new movement, and the same is true of the many other later persecutions.

Towards the end of the first century, under Cletus, the church of Rome had attained such a high state that a bond between Rome and Corinth. It is also to be assumed that in the meantime all the commercial cities on the coasts of the Mediterranean had Christians in their midst, and that before long the regions adjoining these cities accepted the Gospel. According to tradition the Church in Gaul was founded by Trophimus, who was sent there by St. Paul; to Crescentius, a disciple of the Apostles, is ascribed the preaching of the Gospel in Vienna and Mann; and to Dionysius the Areopagite, the founding of the Church of Paris. To Eurcharus and Mactius, two deacons of St. Paul, is attributed the founding of the Churches of Trier and Cologne. It is certain that flourishing dioceses arose in Lyons and Vienna during the reign of Marcus Aurelius (161—180). At the beginning of the third century, according to the testimony of Tertullian (Adv. Judæos, i), various tribes of Gaul had accepted Christianity. At about the same date Ireneus (Adv. heresës) speaks of Churches in Germany, and the new faith had at that time spread into all the provinces of the Spanish Peninsula. According to Cæcilius, bishop of the venerable Bede (Histor. gentis Angl., ii, iii). the first missionaries came to England during the reign of Pope Eleutherius (177—90). By the opening of the third century the British Church had spread beyond the Roman possessions in Britain and may even have embraced Ireland. In the meantime the barbarians living along the northern bound-
the state religion of Rome since the time of Constantine the Great, with a more stable power, the united West Germans.

The West Germans, although their migrations were not always continuous, had changed their habitations as follows: in the fourth century the Alamanni advanced into Alsace and in the fifth century took entire possession of it, spreading towards the north as far as Coblenz. The Franks were divided into the Ripuarian and Salian Franks; the former settled on both sides of the Rhine and in the Pannonian Rhine, the latter invaded a part of the Scheldt to the Somme. Towards the end of the third century the Saxons advanced from the Elbe to the Rhine; in the fifth century, with the aid of the Angles, they conquered Britain; the former inhabitants of Britain took refuge in Walloonia and France and gave their name to Britain. The Frisians settled on the coast and islands of Schleswig-Holstein; the Thuringians spread from the lower Elbe to the southern bank of the Main. The Bavarians went furthest south. At the time of the birth of Christ they lived in modern Bohemia; about 500 their territory extended from the Lech to the Danube to the junction of the Eissack and the Adige. The region occupied by the tribes just named enlarged the scene of European history; all that was now needed was the political and spiritual union of the free and independent free people of Europe. The political union was brought about by the Franks, the spiritual union by Christianity. In the end these were combined into a form of theocracy which, by a rapid series of victories, conquered not only Southern Europe, but also Middle and Eastern Europe as well.

Just as the fifth century passed into the sixth (481-611) Clovis, King of the Salian Franks, forcibly subdued the most important of the surrounding tribes; he led them to embrace Christianity after his own conversion. Clovis first united what was left of the Roman Empire on the Seine and Loire with his own domain and made Paris his capital. After this he subdued the Alamanni on the Rhine, Moezel, Lower Main, and Neckar; as the champion of the doctrines of Roman Christianity, he conquered the King of the Arian Visigoths near Poitiers (507) and seized the Visigothic territory between the Loire and the Garonne. By overthrowing the petty Saxon chieftains and the royal family of the Ripuarian Franks, he made himself the ruler of all the Frankish tribes. The work was completed by his son Chlodion, who, four years after his death, united the territories of the Thuringians and Burgundians, forced the Ostrogoths to give up Provence and Rhaetia, and obtained by treaties sovereignty over the Bavarians.

Thus was laid the foundation of the Franco-Christian kingdom, which was made ready to Christianize a new missionary field to be won over to the Faith only by properly trained apostles. The training was given in the monastic institutions which, in imitation of the East, had now spread over all of Western Europe. One of the chief factors in the conversion of the heathen was the Order of St. Benedict of Nursia, encouraged by Gregory the Great. The precursors of the Benedictines were St. Patrick (432) and St. Columba (about 550), who converted Ireland and Scotland, while the Anglo-Saxons received Christianity from the Benedictine Augustine (596), who had been specially sent by Rome. At the death of St. Patrick there were in Ireland several bishops, numerous priests and many monasteries; his own see was Armagh. Columba founded the celebrated monastery on the Island of Iona beyond Ireland and Scotland, which was the centre of the Scotch missions and dioceses. The Abbot Augustine and his companions erected the metropolitan Sees of Canterbury (Durovernum), York (Eboracum), and the see of London; in the course of the seventh century the successors of Augustine, Mabres and Eadbald, made the See of Canterbury the centre of the English Church. A glorious band of self-sacrificing apostles of the Faith, from Columbanus and Gallus to Boniface, carried Christianity from the British Isles to the Continent. They founded their work on what scanty remains of Christianity still existed in the former Roman provinces, and the fifth century the Franks and the Teutonic groups of Saxons, Frisians and Angles, laboured in south-eastern Germany. They found the remains of nearly obliterated sees in Lorch, Pettau, Windisch in Switzerland, Chur, Basle, Strasbourg, Avenches in Switzerland, Martin, and Geneva, and the Teutonic migrations and the disorders caused by them on the Rhine, the Danube, and the Don, descended at the time of the Church. About 610 Columbanus crossed the Vosges mountains, where he had founded the monasteries of Annagray and Luxeuil, and came to Lake Constance; here from Bregenz as a centre he preached Christianity, while his companion St. Gall became the founder of the celebrated monastery of St. Gall. In the early part of the seventh century the monks Agilus and Eustasius, of the monastery of Luxeuil, preached the Gospel in Bavaria; they were followed by Rupert of Worms and Emmeram of Aquitaine. St. Corbinian laboured as the first Bishop of Freising, and Kilian in Würzburg. Ecclesiastical life on the Rhine was largely developed by Bishops Nicetius of Trier, Cunibert of Cologne, Dragobodo of Speyer, Amandus, Lambert, and Hugo of Maastricht. The Gospel was brought to the Frisians by the monks of the Abbey of Glandorf in Badenia; the latter erected a see at Utrecht. Willibrord's companion, Suidbert, went into the countship of Mark in the region of the Weser, Lippe, and Ruhr Rivers; the brothers Ewald laboured with little success among the Saxons. An organisation including all these countries was not established until the appearance of the greatest of the apostles of the Germans, St. Boniface. He entered on his career in the time of the Carlovigian Mayors of the Palace, who were destined to realise the union of Church and State in Western Europe.

Repeated divisions of the kingdom, disputes as to succession, civil wars, and the power of the nobles almost brought the great Frankish kingdom to dissolution. It was saved from utter ruin by Pepin of Heristal, Mayor of the Palace (Major domus), who gradually took control of the government. In 687 Pepin won for himself the position of Mayor of the Palace of Neustria and Burgundy, in addition to that for Austrasia which he already held; in this way he united the kingdom. He came to the aid of the traffic of the Rhine, which had broken loose from the Frankish rule and encouraged the missions to the West Frisians. His son Charles Martel, who was not less active, held a position of such power that he was able, in the great battle of Poitiers, 732, to protect Christian civilization and the frankish kingdom. He opened the way for the world to conquer the world. Pepin the Short, the son of Charles, brought about the union of Church and State which had so great an influence on the history of the world. Having obtained the title of king in 732, his first task was to defend his son Louis II, who had appealed to him for aid, from the attacks of the Lombards; this was followed by the so-called "Donation of Pepin", a grant of territory to the pope which was the foundation of the later States of the Church. Their mutual engagements fixed not only their own policy but also that of their successors. Like Pepin, his famous son Charlemagne lent his support to the Holy See, and all his conquests were undertaken for the good of the Church and Christianity. By successful campaigns against Aquitaine, the Lombards, Avars, Muslims by a series of victories, the Frankish peoples, Charlemagne increased his domain until it extended from the Elbe to the Spanish and from the Atlantic to the Elbe and the Rhine. His kingdom became a world-empire and he himself one of the great emperors of Rome. He was crowned Christmas Day, 800,
by the pope, and the new empire rested essentially on the basis of an alliance with the Church. Its ideal was what it termed natural religion, and it was the mission of the Christian emperor by Divine appointment is God's viceroy in order to lead and rule all races as divided into nations, classes, and distinctions of rank according to Divine will.

Pepin the Short had been filled with this lofty conception; consequently extraordinary success attended the missionary labours of the Church under both rulers. As early as 716, under the rule of Charles Martel, the Anglo-Saxon monk Winfrid, better known as Boniface, landed on the Continent; he was to be the reformer of the Frisians and to organize the Church of Friesia. He always laboured in union with Rome, and was himself a missionary in Frisia with Willibrord, then, in 722, in Hesse and Thuringia, and in 736 in Bavaria. Having been made an archbishop and having received authority from Rome, he founded a number of monasteries, e.g., that of Fulda, and the Bishoprics of Eichstätt, Würzburg, Burghausen, and Erfurt. By means of synods held every fifth year he brought about the closer union between the old and new churches, and placed the newly founded sees in Thuringia and Saxony at the head of the Church of Cologne, Utrecht, Tongern, Augsburg, Chur, Constance, and Strassburg, under Mains as metropolitan see, of which he became archbishop in 746. In the reign of Charlemagne the large territories of the Saxons and the Angles, the religion of the Germans and Avars, and these new regions also received missionaries and bishops. The result was the founding of the Dioceses of Bremen (787), Paderborn (806), Werden, and Minden in the country of the Engern, Osnabrück and Münster (785) in Westphalia, Halberstadt and Hildesheim (817) in Eastphalia; the metropolitan of all the Saxon sees was Bremen (834). The conversion of the Avars had been attempted by the Bavarian Duke Tassilo II; when the East Mark was founded the Avars came under the influence of the sees and monasteries established in this country; after their subjugation they were placed partly under the jurisdiction of the Bishop of Salzburg and partly under that of the Patriarch of Aquileia.

From these points, Christianity, as formerly in the Roman Empire, extended beyond the boundaries of Charlemagne's dominions, and new tribes and peoples were evangelized, while, at the same time, Christian civilization was peacefully established within the Frankish Empire. The monastery of Corvey on the Weser, and the sees of Bremen and Hamburg (861) were founded at this time. The monk Anschard of Corvey, first Archbishop of Hamburg, laboured with great zeal as Apostolic legate in Denmark, Sweden, and Norway; his successors were equally active as missionaries and bishops. However, it was not until the reign of Canute the Great (1014–35) that the victory of Christianity in Denmark was assured; in 1104 Lund was made the metropolitan see of Scandinavia; in 1163 Upsala became the metropolitan see of Sweden, and about the middle of the twelfth century Trondhjem was made the same for Norway. Iceland was won for Christianity about the year 1000 and was divided into the two sees of Skalholt and Holm. The inhabitants of the Orkneys, Hebrides, Faroe, and Shetland Islands were converted about the same time as Iceland; they were at first placed under the metropolitan see of Hamburg-Bremen, which had been united in 849, and later under the jurisdiction of the metropolitan see of Norway.

During the period of the Teutonic migrations the Blachfeners, in contact with Christian rulers, were converted partly by Christian rulers, as in Thrace, Macedonia, Greece, and Dalmatia, partly through the influence of neighbouring Christian countries, as in Carinthia. In 806 the Bishop of Passau undertook the conversion of Moravia; that of Pannonia was attempted by Archbishop Adalram of Salzburg (821–36). The missionary work was done by Cyril and Methodius; the latter, Methodius, became Archbishop of Moravia and Pannonia. The work of converting Bohemia began in the year 845; the country was at first under the care of Ratibon; in 923 a diocese was founded in Bohemia itself at Prague, which was suffragan to Mainz. Poland was brought to Christianity by its ruler Duke Mieszlaw (963), and in 968 he erected the Bishopric of Posen. In the year 1000 Gnesen was made a metropolitan see, its suffragan sees were Kolberg (1068), Prenzlau (1090), and Stettin (1096). The reigns of Heinrich I and Otto I the northern Slavs, living in regions subsequently German, namely the Wends, including those living in Pomerania, as well as the Obotrites and Sorbs on the Oder, Vistula, and Elbe, in Lusatia, and Saxony were forcibly Christianized. The new Sees of Havelberg, Brandenburg, Meissen, Zeitz, Merseburg, and Oldenburg (Stargard) served as points from which the work of conversion could be carried on; Magdeburg was the centre of the entire Slavonic mission.

It was during the same period that the Greek Church spread through the eastern part of Europe. In 955 the first Christian princess of Russia, Olga, was baptized at Constantinople; during the reign of her grandson Vladimir, baptized 889, Christianity became the state religion. In 968, on the command of his prince Bogorod, accepted Christianity as a people, and from 870 were under the ecclesiastical control of Constantinople. A bishop sent from Constantinople introduced Christianity among the Magyars, or Hungarians; the work was completed by German missionaries sent in pursuance of the masterful policy of the Saxon emperors. The first Christian ruler of Hungary was Stephen (997–1038). Many sacrifices, however, were still necessary in order to keep what had been gained for Christianity and to protect these gains against the threatened dangers of Mohammedanism and heathenism. These sacrifices were freely made by medieval Christian Europe. Under the careful training of their appointed guardians, the Catholic orders, the various nations and their rulers were filled with Christian thoughts and feelings. Although the conception of their respective positions held by the human representatives of the secular and spiritual power inevitably led to friction, especially in the age of the Hohenstaufen emperors, nevertheless all were conscious of their common duty to the Church of Christ, which it was their duty to defend against foes both in Europe and outside of it. A convincing proof of this was the courageous struggle of Europe against the attempted inroads of Islam, and especially the expeditions of conquest to the Holy Land, repeatedly undertaken by the various nations of Europe acting together. Spain, which since 711 had been almost entirely under the control of the Arabs, was able in 1212 to drive them as far back as Granada; in 1492 Granada also fell. From 878 Sicily had been in the hands of the Saracens, but it was freed by the courageous Normans (1061–91). The so-called Crusades (1061–1244) continued with interruptions for nearly two hundred years; among those who shared in them were monks, as Peter of Amiens and St. Bernard; bishops, as Otto of Freising; rulers of the greatest nations of Western Europe, as the German emperors, Frederick Barbarossa and Frederick II; the French kings, St. Louis and Philip II; and the English Richard the Lion-Hearted. Orders of knights, as the Order of St. John, were formed to take part in these expeditions. The significance of the Crusades in the freeing of Palestine from the control of non-Christian emperors, it is true, was not attained. But the power of Mohammedanism was weakened for a long time to come; the civilization of Western Europe, moreover

EUROPE

gained from the Orient the best the East had to give and thus was greatly aided in its development.

A more lasting success, however, followed the attempts, patterned on the Crusades, to carry on wars of conversion and conquest in those territories of north-eastern Europe peopled by tribes that had leap-frogged from the Faith or that were still heathen; among such pagans were the Obotrites, Pomorians, Wiltzi, Sorbs, Letts, Livonians, Fins, and Prussians. The preparatory work was done in the twelfth century by missions of the Premonstratensian and Cistercian Orders. They were aided with armed forces by Duke Henry the Lion of Saxony, Albert the Bear of Brandenburg, Boleslaw of Poland, and St. Erik IX. of Sweden. From the beginning of the thirteenth century Crusades were undertaken against Livonia, Sembgall, a division of the present Courland, and Estonia; the Teutonic Knights conquered Prussia after a struggle that lasted more than fifty years. In Lithuania,

scribe elsewhere, and was facilitated by the violent procedure of the petty princes who had absolute sovereign power over their subjects. The first of the ruling princes to make the change was Albert of Brandenburg, Grand Master of the Teutonic Knights (1223); he was followed by the Elector John of Saxony, Philip, Landgrave of Hesse (1257), and at almost the same date by nearly all the German imperial cities. The movement soon gained the northern countries, Denmark, Sweden, Norway, and the Baltic provinces; these all gave their adherence (1350) to the so-called Augsburg Confession, while the upper German imperial cities, Strasburg, Constance, Lindau, Memmingen, held to the Tetratopian Confession of the so-called Reformed Church founded by Zwingli and especially strong in Switzerland. The Reformed Church also found adherents in the Palatinate, and at the beginning of the seventeenth century in Hesse-Cassel and Brandenburg. The Anglican Church was

Christianity did not win the victory until 1368. After this only the Turks, in the south-eastern corner of the Continent, were a cause of alarm to Christian Europe for centuries. The decline of the power of the Eastern Empire drew the Turks over the Bosphorus; in 1355 they had control of Adrianople; in the course of the fourteenth century the Serbs, Bulgars, Macedonians, and the inhabitants of Thessaly became their subjects. In 1453 the Turks took Constantinople, in 1461 Trebizond, in 1480 even Otranto in Apulia; after 1547 they owned half of Hungary. It was not until the eighteenth and nineteenth centuries that their possessions were reduced to their present boundaries, thus limiting Mohammedanism to a small part of the population of Europe.

At the beginning of modern times a great change took place to the boundaries of the European States.

The cause was that ecclesiastical movement known as the Reformation, which placed in opposition to the unity of Catholicism in Western Europe the numerous religious associations that together form Protestantism. The apostasy of the various countries and cities which began soon after Luther first appeared, was brought about by the most varied causes, de-

established in 1549 in Great Britain; in 1559 the French Reformed Church adopted the "Confessio Gallicana"; in 1560 the Scotch Reformed the "Confessio Scotica"; from 1592 the Reformation in Scotland adopted a Presbyterian form of government. Since 1562 the Reformation in the Netherlands has held to the "Confessio Belgica", and the Reformed Church in Hungary since 1657, to the "Confessio Hungarica". Soon the Counter-Reformation, called into life by the Council of Trent (1545-63) to prevent the loss of the whole of middle Europe, appeared; its success was assured by the aid of the Society of Jesus. In this way various princes and bishops who were desirous of doing their duty were enabled to hold their countries to the Catholic Church, as the Duke of Cleves, the Electors of Mainz and Trier, the Bishops of Augsburg, Würzburg, Bamberg, Münster, Constance, Basel, the Abbey of Fulda, but especially the Dukes of Bavaria and the Hapsburg dynasty within their Austrian provinces. Soon the hostility between the two ecclesiastical parties grew so bitter that a trilling incident sufficed to bring on a terrible religious conflict, the Thirty Years War (1618-48). Two religious confessional leagues confronted each other in Germany:

the Catholic League, which was formed in 1609 among the Catholic States of the German Empire and had for its leader the vigorous Duke Maximilian of Bavaria, who controlled the election of the Holy Roman Emperor. In 1618, the Protestant princes and cities combined under the leadership of Frederick IV of the Palatinate. Foreign powers—Denmark, Sweden, and France—also took part in the war. The result of the Thirty Years' War, confirmed in the Peace of Westphalia, laid the foundation of confessional relations as they now exist. Neither internal commotions nor seemingly mighty political revolutions, such as the illumination of the French Encyclopedia and the German neo-classicists, the temporary supremacy of rationalism, and the French Revolution are regarded as privileged and public corporations. In England and Wales the Anglican is the State Church, its head being the king; the fundamental principles are defined by Parliament. There is a similar arrangement for the Presbyterian State Church in Scotland where, however, the organization is somewhat freer. On the other hand the Anglican Church of Ireland is, since 1689, no longer a State Church. The Dissenters, who in 1689 were only conditionally tolerated, have now equal rights. In France the Separation Law of 9 December, 1905, brought about the separation of Church and State and provided for the formation of Associations cultuelles for the exercise of religion. In Italy the Constitution originally declared the Roman Catholic religion the religion of the State, but gradually all privileges have been withdrawn from it; besides the Roman Catholic Church, the Evangelical Waldisian Church, the National Greek Church, and the Jewish communities are organized as Churches with separate constitutions. In Spain and Portugal the State religion is the Roman Catholic. In Belgium the Catholic, Protestant, and Roman Catholic Church are recognized by law and the granting of salaries from the State to those having ecclesiastical charges. Outsiders of these any religious community is a private association. The Netherlands grants equal protection to all confessions. So does Switzerland, excepting that in this country a more exacting control is exercised over the Roman Catholic Church. In Denmark the Evangelical Lutheran Church is the State Church, at least inasmuch as its ministers are paid by the State and subject to removal by the State; other religious communities have no claim to state support. The case is the same in Sweden, where, in addition, the condition is laid down that the king, the members of the Council of State, and foreigners who are appointed teachers at the university must all subscribe to some evangelical confession. In the Church of England the Church of England, the Church of Scotland, the Church of Ireland, the Church of Sweden, the Church of Denmark, and the Church of Norway are the State Churches. In Austria the Churches and religious associations recognized by law are as follows: the Roman Catholic, the Uniat Greek, and Uniat Armenian Churches, the Evangelical Churches of the Augsburg Confession, the Calvinist, the Jewish religious community, the religious association of the Russian sect of the Lipovani, and the Oriental Armenian in Bukowina, the Old Catholic religious community, and the Moravian Brethren (Hernhuter). The expenses of the Roman Catholic and Orthodox Greek Churches are met from a fund controlled by a Board of Ecclesiastics, the legislation of Church property in the reign of Joseph III. In Hungary the Roman Catholic Church was originally the state religion; the State grants in addition free exercise to other Christian confessions and to the Jewish faith. Croatia-Slavonia recognizes only the Roman Catholic and Uniat Greek Churches, the Orthodox Greek and Protestant Churches, and the Jewish belief. In Bohemia and Hersegovina the ruling confessions are the Orthodox Greek and Roman Catholic Churches, and Mohammedanism. The State Church of the Estonian province is Orthodox Greek. The State Church of Russia is the Orthodox Greek Russian Church; the other Christian and non-Christian confessions are tolerated, the Jews have only limited rights.

Present Condition of Religion in Europe.—(1) Relations of the Different States to the Religious Communions.—In the German Empire the formation of religious denominations and their religious worship are subject to the legislation of the several States. Some States allow complete freedom, as Prussia, Wurtemberg, Saxo-Coburg, Saxo-Meiningen, and Alcese-Lorraine. The Catholic and the Evangelical Churches are regarded as privileged and public corporations. In England and Wales the Anglican is the State Church, its head being the king; the fundamental principles are defined by Parliament. There is a similar arrangement for the Presbyterian State Church in Scotland where, however, the organization is somewhat freer. On the other hand the Anglican Church of Ireland is, since 1689, no longer a State Church. The Dissenters, who in 1689 were only conditionally tolerated, have now equal rights. In France the Separation Law of 9 December, 1905, brought about the separation of Church and State and provided for the formation of Associations cultuelles for the exercise of religion. In Italy the Constitution originally declared the Roman Catholic religion the religion of the State, but gradually all privileges have been withdrawn from it; besides the Roman Catholic Church, the Evangelical Waldensian Church, the National Greek Church, and the Jewish communities are organized as Churches with separate constitutions. In Spain and Portugal the State religion is the Roman Catholic. In Belgium the Catholic, Protestant, and Roman Catholic Church are recognized by law and the granting of salaries from the State to those having ecclesiastical charges. Outsiders of these any religious community is a private association. The Netherlands grants equal protection to all confessions. So does Switzerland, excepting that in this country a more exacting control is exercised over the Roman Catholic Church. In Denmark the Evangelical Lutheran Church is the State Church, at least inasmuch as its ministers are paid by the State and subject to removal by the State; other religious communities have no claim to state support. The case is the same in Sweden, where, in addition, the condition is laid down that the king, the members of the Council of State, and foreigners who are appointed teachers at the university must all subscribe to some evangelical confession. In the Church of England the Church of England, the Church of Scotland, the Church of Ireland, the Church of Sweden, the Church of Denmark, and the Church of Norway are the State Churches. In Austria the Churches and religious associations recognized by law are as follows: the Roman Catholic, the Uniat Greek, and Uniat Armenian Churches, the Evangelical Churches of the Augsburg Confession, the Calvinist, the Jewish religious community, the religious association of the Russian sect of the Lipovani, and the Oriental Armenian in Bukowina, the Old Catholic religious community, and the Moravian Brethren (Hernhuter). The expenses of the Roman Catholic and Orthodox Greek Churches are met from a fund controlled by a Board of Ecclesiastics, the legislation of Church property in the reign of Joseph III. In Hungary the Roman Catholic Church was originally the state religion; the State grants in addition free exercise to other Christian confessions and to the Jewish faith. Croatia-Slavonia recognizes only the Roman Catholic and Uniat Greek Churches, the Orthodox Greek and Protestant Churches, and the Jewish belief. In Bohemia and Hersegovina the ruling confessions are the Orthodox Greek and Roman Catholic Churches, and Mohammedanism. The State Church of the Estonian province is Orthodox Greek. The State Church of Russia is the Orthodox Greek Russian Church; the other Christian and non-Christian confessions are tolerated, the Jews have only limited rights.

(2) Organization of the Religious Communions.—The Evangelical Church distinguishes three forms of organization: (a) The episcopal, in which the ruler of the country with the aid of a subordinate hierarchy exercises ecclesiastical authority. This is the form in force in Sweden, Norway, Denmark, and Finland. (b) The consistorial organization is comprised by a consistory made up of ecclesiastic and secular members. This form is found in Mecklenburg-Schwerin, Mecklenburg-Strelitz, Saxo-Coburg-Gotha, Saxony-Altenburg, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, the two principalities of Hesse, Schauenburg-Lippe, Lippe, Bruchsal, Aldenburg, and Alcese-Lorraine, and Russia. (c) The synodal form of organization and similar Presbyterian associations which are based on assemblies of elected representatives and the ordinances passed by these. This form of organization is in existence in Austria-Hungary, Prussia, Bavaria, Saxony, Wurtemberg, Baden, Hesse, and other German States, where the consistorial system is not in force. The synodal organization also exists among the non-Anglican Churches in Great Britain, in France, among the Italian Waldenses, in the Netherlands, Belgium, Switzerland, and Spain; also in connexion with the episcopal form of church government in Sweden and Finland. The Anglican Church, called in England and Wales the Established Church of England, and in Ireland the Church of Ireland, is episcopal in government; in Ireland the episcopal and synodal systems are united. The head of the Church is the king. England and Wales are divided into the two church provinces of Canterbury and York. The Archbishop of Canterbury is the Primate of All England; under Canterbury are 28 suffragan dioceses; York consists of 2 archidiaconies. Scotland has 2 archidiaconies: Armagh, which has the primacy of all Ireland, and Dublin with 12 suffragans; Scotland has 17 dioceses. The organization of the Oriental Greek Church varies in different countries. In Russia the head of the Church is the Tsar, who appoints the members of the Holy Synod, the highest ecclesiastical body. In Turkey the Gcumencelde Patriarch is the head; under him are 12 or 12 metropolitan. In Rumania a national synod is the highest ecclesiastical authority; in Servia a metropole with the bishops; in Bulgaria the church government is vested in an exarch, aided by archbishops, bishops, and archpriests. The Holy Synod of Greece consists of five prelates or bishops named by the king. In the Austro-Hungarian Monarchy there are 8 provinces of the Oriental Greek Church: the Archdioceses of Zara and Cattaro, the Archdiocese of Karlowits (Patriarch-Archibishop), with 9 suffragans, and the Archdiocese of Herrmannstadt, with 2 suffragans. Bosnia and Hersegovina have each a metropolitan Greek Church. For the ecclesiastical organization of European countries, see the respective articles on the various political divisions, also Eastern Churches.
EUROPUS

religious statistics for the countries of Europe found in the adjoining table are based on Braheisch and von Juraschek, "Die Staaten Europas" (5th ed., Leipzig, Brunn, and Wiegand, 1907).

OTTO HARTIG.

EUROPUS, a title see in Provincia Europatensis, suffragan of Hierapolis. The former name of this city is Trier (Thyra), an ancient word which means "ford"; it was an important trade-centre at the northern limit of Solomon's kingdom (III K., iv., 24). The younger Cyrus and Alexander the Great forded the Euphrates at this point. The Macedonians called it Amphipolis. It took finally a third name, Europos, under which it is mentioned by the geographers Ptolemy, Pliny, Herodotus, Georgius Cyprius, etc. and figures in the "Notitia episcopatum" of the Antiochene patriarchate. (See Echoes of 1907, 145.) We know but one of its Greek bishops, in 461 (Lapidarchia), who died in the October of the year, between 793 and 817 (Revue de l'OristChretien, 1889, 451). Justinian built a fortress at Europus (Procop., De aedific., II, 9). When the city was destroyed is unknown. Its ruins stand at Djerdias, a corrupted form of Europos, on the right bank of the Euphrates, about twenty-five kilometres south of Bireddik, in the vilayet of Aleppo.

S. VALLE.

EUSEBIANAE. See Eusebius of Nicomedia.

EUSEBIUS, Saint, Bishop of Vercelli, b. in Sardinia c. 283; d. at Vercelli, Piedmont, 1 August, 371. He was made lector in Rome, where he lived some time, possibly as a member, or head, of a religious community (Spreitzenhofer, Die Entwickelung des alten Ménchstums in Italien, Vienna, 1894, 14 sq.). Later he came to Vercelli, the present Vercelli, in 360 was elected bishop of Vercelli, and in 364 was consecrated bishop of the city by the clergy and the people. He received episcopal consecration at the hands of Pope Julius I on 15 December of the same year. According to the testimony of St. Ambrose (Ep. Illii, Ad Vercellenses) he was the first bishop who had been consecrated with clergymen of his time. He led with the clergy of his city a common life modelled upon that of the Eastern patriarchs (St. Ambrose, Ep. Ixxixi and Serm. Ixxxix). For this reason the Canons Regular of St. Augustine honour him along with St. Augustine as their founder (Proprium Canon., Reg., 10 December).

In 365 Pope Liberius sent Eusebius and Bishop Lucifer of Cagliari to the Emperor Constantius, who was then at Arles in Gaul, for the purpose of inducing the emperor to convocate a council which should put an end to the dissensions between the Arians and the orthodox. The synod was held at Milan in 355. At first Eusebius refused to attend it because he foresaw that the Arian bishops, who were supported by the emperor, would not accept the decrees of the Nicene Council and would insist on the theological examination of St. Athanasius. Being pressed by the emperor and the bishops to appear at the synod, he came to Milan, but was not admitted to the synod until the document condemning St. Athanasius had been drawn up and was awaiting the signature of the bishops. Eusebius vehemently protested against the unjust condemnation of St. Athanasius and, despite the threats of the emperor, refused to attach his signature to the document. As a result he was sent into exile, first to Scythopolis in Syria, where the Arian Bishop Patro-
when, as Bishop of Samosata, he took part in the consecration of St. Melchius, the newly elected Patriarch of Antioch, who was later to be known as the Eusebian, was welcomed by Arianism and its affiliated heresies. Most of the episcopal sees were occupied by Arian bishops, and Melchius himself was elected Patriarch of Antioch only because the Arians believed him to be a supporter of their heresy. Tilmont and a few other historians even believe that Eusebius himself turned towards Arianism. Whatever may have been the faith of Eusebius previously, it is certain that at a synod held in Antioch in 363 the Nicene formula, with express mention of the term homoousios, was accepted, and he had his bishop's signet signed by Eusebius and twenty-four other bishops.

When the Arians discovered that Melchius upheld the doctrine of the Nicene Council, they declared his election invalid and attempted to obtain from Eusebius, to whom they had been entrusted, the synodal acts proving the lawfulness of the election. The Emperor Constantius, who supported the Arians, ordered Eusebius to surrender the document, but without success. Thereupon Constantius threatened Eusebius with the loss of his right hand, but the bishop calmly replied that the latter would be a greater loss than the document. Having received the imperial message, saying: "Strike them both off. I will not surrender the document by which the injustice of the Arians can be proved," the emperor was struck by the constancy of Eusebius and left the document.

It was chiefly due to the concerted efforts of St. Eusebius and St. Gregory Nazianzen that, in 370, St. Basil was elected Archbishop of Cæsarea in Cappadocia. From this time also dates the tender friendship between St. Eusebius and the last-named Father, which is attested by some still extant letters written by St. Basil to the Bishop of Samosata. Eusebius displayed his greatest activity during the persecution of the Catholics by the Arian Emperor Valens. Disguised as a military officer, he visited the persecuted Churches of Syria, Phoenicia, and Palestine, exhorting the afflicted Catholics to remain loyal to their faith, ordaining orthodox priests where they were needed, and in many other ways assisting the Catholic bishops in the difficult exercise of their duties during those troublous times. It is on account of this untiring zeal of Eusebius that St. Gregory Nazianzen calls him "a pillar of the Church," "a gift of God," "a rule of faith," etc. (Migne, P. G., XXXI, 57). Incensed at the great success of Eusebius, the Arians prevailed upon the Emperor Valens to banish him to Thrace. After the death of Valens, he was recalled to his see. On his journey from Thrace to Samosata he was instrumental in the appointment of numerous orthodox bishops, among whom were Acacius at Beroca, Theodotus at Hierapolis, Isidore at Cyrrhus, and Eulogius at Edessa. Having returned to his see, he resumed his former active against the Arians, both in his own diocese and in the neighbouring churches. While he was taking part in the consecration of Bishop Marc, at the little town of Dolicha, near Samosata, an Arian woman struck him on the head with a tile thrown from the roof of her house. He died of this wound a few days later. The Greeks honour him as a martyr on the 21st of June, the Latins on the 22d.

---

Theology of Usurab styles him confessor at Rome under the Arian emperor Constantius and adds that he is considered a martyr at Callistus. Some later martyrologies call him a martyr.

The "Acta Eusebii," discovered in 1479 by Mommsen and reproduced by Baluze in his "Miscellanea" (1878-1771), tell the following story: When Pope Liberius was permitted by Constantius to return to Rome, supposed at the time of his orthodoxy by subscribing the Arian formula of Sirmium, Eusebius, a priest, an ardent defender of the Nicene Creed, publicly preached against both pope and emperor, branding them as heretics. When the orthodox party who supported the antipope Felix were expelled from the churches, Eusebius continued to hold Divine services in his own house. He was arrested and brought before Liberius and Constantius. Here he boldly proved Liberius for deserting the Catholic Faith. In consequence he was placed in a dungeon, four feet wide (or was imprisoned in his own house), where he spent his time in prayer and died after seven months. His body was buried in the cemetery of Callistus with the simple inscription: "Eusebio homini Dei!" This act of kindness was performed by two priests, Gregory and Orosius, who were arrested, put into the same prison and also died there. He was buried by Orosius, who professed to be the writer of the Acta.

It is generally admitted that these Acts are a forgery either entirely or in part, and that the same spirit, if not by the same hand, as the notice on Liberius in the "Liber Pontificalis". The Bollandists and Tilmont point out some grave historical difficulties in the narrative, especially the fact that Liberius, Constantius, and Eusebius were never in Rome at the same time. On the other hand, the party of the Acts remained there for about a month, and Liberius was then still in exile. Some, taking for granted the alleged fall of Liberius, would overcome this difficulty by stating that, at the request of Liberius, who re-sented the seal of the priest, the secular power interfered and imprisoned Eusebius. It is not at all certain whether Eusebius died after the return of Liberius, during his exile, or even much before that period.

The feast of St. Eusebius is kept on 14 August. The church on the Esquiline in Rome dedicated to him, said to have been built on the site of his house, is men-tioned in the acts of a council held in Rome under Pope Symmachus in 498 (Mansi, VIII, 236, 237), and was rebuilt by Pope Zacharias. Formerly it had a Sancta (on the Friday after the fourth Sunday of Lent. St. Eusebius belongs to the rite of the Distinct); Leo XII gave it to the Jesuits. A good picture, representing the triumph of Eusebius, by Raphael Mengs, 1759, is on the ceiling. San Eusebio is the title of a cardinal-priest. The title was transferred by Gregory XVI, but restored by Pius IX.
already arisen under Marcellus, continued under Eusebius. This latter maintained the attitude of the Roman Church, adopted after the Decian persecution (250-51), that apostates should not be forever debarred from ecclesiastical communion, but on the other hand should be readmitted only after doing proper penance (Eusebius miserus doucit sua criminis figuram).

This view was opposed by a faction of Christians in Rome under the leadership of one Hesychius. Whether the latter and his partisans advocated a more rigorous (Novatianist) or a more lenient interpretation of the law has not been ascertained. The latter, however, is by far more probable, in the hypothesis that Hesychius was the chief of a party made up of apostates and their followers, who demanded immediate restoration to the body of the Church. Damasus characterizes in very strong terms the conflict which ensued (secutio, cedens, bellum, discordia, Ille). It is likely that Hesychius and his supporters sought to compel by force their admittance to divine worship, which was resisted by the faithful gathered in Rome about Eusebius. In consequence, both Eusebius and Hesychius were deposed by the Emperor Maximian. Eusebius, in particular, was deported to Sicily, where he died soon after. Mitilaeus ascended the papal throne, 2 July, 311. The body of his predecessor was brought back to Rome, probably in 311, and 26 September (according to the “Deposito Episcoporum” in the Chronographer of 354) was placed in a separate ciborium of the Catacomb of Callistus. His firm defense of ecclesiastical discipline and the banishment which he suffered rendered him to be venerated as a martyr, and in his epiphany Pope Damasus honors Eusebius with this title. His feast is yet celebrated on 26 September.

Eusebius, CHRONICLE OF, consists of two parts: the first was probably called by Eusebius the "Chronograph" or "Chronographies"; the second he terms the "Canon", or "Canons", and also the "Chronological Canons". It is brought down to the year 225, and as Eusebius alludes to it at an earlier date in the "Preparation of the Evangelical History", there must have been two editions. The original is lost, but both parts are preserved in an Armenian version of which two rival translations by Zorhab and Aucher, respectively, were published in 1818. Both these editions are superseded by Schoene's. The "Canons", moreover, are preserved in St. Jerome's translation. Two Syriac epitomes have also been published, one from a MS. in the British Museum, which was translated by Roediger for Schoene's edition, another edited by Siegfried and Gefier (Eusebius Carolinus. Epitome. Die drei frühchristlichen chronico petita, Leipzig, 1884). Considerable extracts from the original were also preserved by later writers, especially by Syncellus. These it has been possible to identify since the discovery of the Armenian version.

The "Chronography" is an epitome of universal history. It is divided into five parts: (1) the history of the Chaldeans, and the Assyrians, followed by lists of the Assyrian, Median, Lydian, and Persian kings; (2) Old Testament history; (3) Egyptian history; (4) the Apocrypha; (5) Ephesians. It is, like the "Preparatio Evangelica", full of quotations from lost authors. As an illustration of its value in one particular province we may turn to the third chapter of Smith's "Chaldean Account of Genesis", entitled "Chaldean Legends transmitted through Berosus and other Authors". The longest and most important extract here given containing, e.g., the Babylonian story of the Creation and the Flood, owe their preservation to Eusebius. The "Canons" are a series of chronological tables with short historical notices. The years of Abraham, beginning from the supposed date of his birth, form a series. Alongside these are placed the regnal years of the monarchs of different kingdoms as they rose and fell. A single extract will, however, serve better than any description to give the reader an idea of the character and contents of the "Canons". We have shown above the value of the "Chronicle" to the Asyriologist; our second example will illustrate its importance for classical scholars. On almost the first page of Jebb's edition of the newly discovered poems of Bacchylides, the notices in the "Chronicle" concerning the poet are discussed. There are two such notices. We will give the first with its context, as it is found in the facsimile of the Bodleian MS. of St. Jerome's version—

From the above we learn that Bacchylides became renowned in the 18th year of Xerxes, King of Persia, the 36th of an Alexander, King of Macedonia, the 70th of an Egyptian Pharaoh, and the 1549th year of Abraham. In this MS. the years of Abraham are given at the commencement of every decade. Thus, in the last line, the first year (MDL) marks the opening of a new decade; while the second year (XVIII) shows the continuation of the reign of Xerxes.

Which of the two versions of the "Chronicle" is the more trustworthy as regards dates and figures is a question that was conclusively answered in favour of the Latin version by Lightfoot in his excursus, "The Early Roman Succession". The striking differences between the episcopal lists (notably the Roman) as they are found in the Armenian version, on the one hand, and in the Latin version and "The Church History", on the other hand, give rise to a number of ingenious theories concerning the chronology of the period. One of these theories is advanced in a later edition of his "Chronicle". Lightfoot anticipated these theories by demonstrating the corrupt state of the Armenian version in all that relates to figures and the years to which different events are assigned. It is important to remember that in reading books or articles in which reference is made to the "Chronicle", if they were written before 1890.

Best Editions.—(1) "Eusebii Chronicorum Libri duo", ed. Schoene, 2 vols., Berlin, 1866-1875; (2) the Egyptian manuscript of Jerome's version of the "Chronicle of Eusebius", reproduced in collotype with an introduction by John Knight Fotheringham, M. A., Oxford, 1905; (3) the Syriac epitomes referred to above.

F. J. BACCHUS.

Eusebius Bruno, Bishop of Angers, b. in the early part of the eleventh century; d. at Angers, 29 August, 1081. He received his ecclesiastical training under the famous Berengarius of Tours, and in December, 1047, was made Bishop of Angers. He took an important part in the synod of Reims under Leo IX (1049-54), and was among the bishops who protested their innocence in regard to the prevalent evil of simony. He is best known for his relations to his master Beren-
garius who erroneously maintained that in the Holy Eucharist the bread and the wine are merely a figure or a symbol of the Body and Blood of Christ. That he was a partisan of Berengarius, at least for a time, cannot be denied. In a letter written shortly after the councils of Rome and Vercelli (1050), in which Berengarius was condemned, he protested against the injustice done to his teacher and another disciple of his church. When King Henry I of France (1031–60) summoned the bishops of his realm to a synod held in Paris in 1051, both Eusebius and Berengarius abstained themselves, through fear of condemnation. Two years later, two bishoprics in the diocese of Aix-en-Provence, Litige (P. L., CXLVI, 1439), and Durandus, Abbot of Troarn (P. L., CLXIX, 1422), class Eusebius Bruno among the followers of Berengarius; the latter always claimed him as a partisan. It is not certain that he really appropriated in its entirety the teaching of his master, though Deodinus and Durandus affirm it. On the other hand, at the Council of Tours (1054), presided over by the papal legate Hildebrand, Eusebius Bruno induced his friend Berengarius to declare, in writing and on oath, that after the consecration the bread and the wine are the Body and Blood of Christ. Moreover, at a synod of Angers (1062) at which the Count of Anjou, Geoffrey the Bearded, asked for an account of the teaching of Berengarius, Eusebius’ defence of his master was somewhat weak. When, some months later, the letters of St. Stephen (d. 1060) came to him, he was only too ready to yield to the opposition of a certain Geoffrey Martini to his teaching. Eusebius declared frankly in a letter to Berengarius (P. L., CLXVII, 1201), that the reality of the Body and Blood of Christ in the Holy Sacrament must be admitted, like other mysteries of faith, e.g. the Incarnation and the passing of Christ glorified through closed doors. These expressions indicate either a change of mind on the part of Eusebius, or, what is not unlikely, a misunderstanding, in the beginning, of the real import of the teachings of Berengarius.

**Eusebius of Alexandria**

Eusebius of Alexandria, ecclesiastical writer and author of a number of works well known in the sixth and seventh centuries and of much ascetical and dogmatic value. There has been much dispute regarding the details of his life and the age in which he lived. Galland (Vet. Patr. Biblioth., VIII, 23) says, “De Eusebiu qui vultur dicetur episcopus Alexandriae inscripto, qui dicitur de Constantino, præfata hist. Chri. et Hort., 1162; 70–104; Deutsch in Realency. f. prof. Theol., s. v.; Chevaller, Rép. des sources hist., 172, 173; s. v.; Franc J. Schaepfer.

**Eusebius of Cesarea**

Eusebius of Cesarea (Eusebius Pamphilus), Bishop of Cesarea in Palestine, the "Father of Church History;" a defender of the Church; and a historical and ascetical writer. His Life.—It will save lengthy digression if we at once speak of a document which will often have to be referred to on account of its biographical importance, viz., the letter written by Eusebius to his diocese in order to explain his subscription to the Creed pronounced by the Council of Nicaea. After some preliminary remarks, the writer proceeds: “We first transmit to you the writing concerning the faith which was put forward by us, and then the second, which they have published after putting in additions to our expressions. Now the writing presented by us, which when read in the presence of our most religious emperor was declared to have a right and approved character was as follows: [The Faith put forward by us]. As we have received from the bishops before us both in our first catechistical instruction and when we were baptised, and as we have learned from the Divine Scriptures, and as we have believed and taught in the presbytery and in the office of bishop itself so now likewise believing we offer to you our faith and it is thus.” Then follows a formal creed [Theodoret, Hist., xi; Sot., xxv; Sot., xxvii; Sot., xxvi; Syn. Nic. (appendix) and elsewhere]. Translated by Newman with notes in the Oxford Library of the Fathers (Select Treatises of St. Athanasius, p. 59) and St. Athanasius, vol I. The translation given here is Dr. Hort’s. The words in brackets are probably genuine (though not given by Socrates and St. Athanasius).

Dr. Hort in 1876 ("Two Dissertations," etc., pp. 56 sqq.) pointed out that this creed was presumably one of the Church of Cesarea of which Eusebius was bishop. This view is widely accepted. Lightfoot, art. "Euseb.," in "Dict. of Christ. Biog.", "Eusebius," in "Dict. of Christ. Biog.", "Eusebius," in the Dictionary of the Bible, when discussing the references to Lightfoot, unless otherwise stated, are to this article.—Sanday, "Journal of Theol. Studies," vol I, p. 15; Gwatkin, "Studies in Ariantism," p. 42, 2nd edition; McTiffert, "Prolog. to C. H. of Euseb." in "Select Library of Nic. and post-Nic. Fathers", Duchesne, "Hist. de l'Eglise," vol II, p. 149. According to this view it is natural to regard the introduction, "As we have received," etc., as autobiographical, and to infer that Eusebius had exercised the office of the priesthood in the city of Cesarea before he became its bishop, and had received his earliest religious instruction and the sacrament of Baptism there also. But other interpretations of this document are given, one of which destroys, while the other diminishes, its biographical value: (a) According to some
the creed professed by Eusebius was drawn up as a formula by the bishops to be followed by all the bishops. It says they were to say that it embodied what they had all been taught as catechumens and had taught as priests and bishops. This seems to have been the view generally held before Hort, and was Kattenbusch's view in 1864 (Das apostolische Symbol, vol. I, p. 231). One objection to this view may be noted. It makes all the bishops equally say that before they received the episcopate they had for some time exercised the duties of the priesthood. (b) Others maintain that this creed was not the local creed of Cæsarea, but was drawn up by Eusebius as his own justification as embodying what he had always believed and taught. According to this interpretation the preliminary statement still remains autobiographical; but it merely informs us that the writer exercised the office of priest before he became a bishop. This interpretation has been adopted by Kattenbusch in his second volume (p. 239) published in 1900. One of the reasons which he gives for his change of view is that when he was preparing his first volume he used Socrates, who does not give the superscription which we have noticed in the passage. It is a vital matter with some of the school of Kattenbusch not to accept what seems the natural interpretation of Eusebius's words, viz., that the creed he read before the council was actually the one he had always used. If this is admitted, "then, to quote the words of W. H. Eusebius, "the theory of Kattenbusch and Harnack [viz. that the Eastern creeds were daughters of the early Roman creed, and this latter did not reach the East till a.d. 272] breaks down altogether, Bishop Lightfoot ... puts the birth of Eusebius about 260 a.d., so that he would be something like twelve years old when Aurelian intervened in the affairs of Antioch. In other words he was in all probability already baptized, and had already been catechized in the Cæsarean creed at a time when, in the Kattenbusch-Harnack hypothesis, the parent of that creed had not yet reached Antioch—much less Cæsarea or Jerusalem" (Journ. Th. Studies, I, 15).

The passage just quoted shows that the date of Eusebius's birth is more than a merely curious question. According to Lightfoot, it cannot have been "much later than a.d. 260" (p. 309). According to Harnack, "it can hardly be placed later than 260–265" (Chronologie, I, p. 106). The data from which they argue are the persons and events which Eusebius describes as belonging to "our own time." Thus, at the beginning of the history of Diocletian in Alexandria, he says he is now going to relate the events of "our own times" (καὶ ἡμῖν...—H. E., VII, 28). He then recounts how, at Rome, Pope Dionysius (259–268) succeeded Xystus, and about the same time Paul of Samosata became Bishop of Antioch. Elsewhere (H. E., V, 28) he speaks of the same Paul as reviving "in our own time" (καὶ ἡμῖν) the heresy of Artemon. He also speaks of the Alexandrian Dionysius (d. 265) in the same way (H. E., III, 28). He calls Manes, whom he places (H. E., VII, 31) during the persecution of Decius (250–252) "the man of yesterday and our own times" (Theophania, IV, 30). An historian might of course refer to events recent, but before his own birth, as belonging to "our own times"; e.g. a man of thirty might speak thus of the Franco-German war in 1870. But the reference to Manes as "the man of yesterday" certainly suggests a writer who is alluding to what happened within his own personal recollection.

Concerning Eusebius's parentage we know absolutely nothing, but the fact that he escaped with a shock from the terrible Christian persecution, when his master Pamphilus and others of his companions suffered martyrdom, suggests that he belonged to a family of some influence and importance. His relations, later on, with the Emperor Constantine point to the same conclusion. At some time during the last twenty years of the third century he visited Antioch, where he made the acquaintance of the priest Dorotheus, and heard him expound the Scriptures (H. E., VII, 32). By a slip of the pen or the memory, Lightfoot (p. 309) makes Dorotheus a priest of the Church of Cæsarea. In 296 he saw for the first time the future Emperor Constantine, as he passed through Palestine in the company of Diodoret (Vit. Const., I, 19).

At a date which cannot be fixed Eusebius made the acquaintance of Pamphilus, the founder of the magnificent library which remained for several centuries the great glory of the Church of Cæsarea. Pamphilus came from Phocis, but at the time we are considering resided at Cæsarea, where he presided over a college or school for students. A man of noble birth, and wealthy, he sold his patrimony and gave the proceeds to the poor. He was a great friend to indigent students, supplying them to the best of his ability with the necessities of life, and bestowing on them copies of the Holy Scriptures. Too humble to write anything himself, he spent his time in preparing accurate copies of the Scriptures, and it is the joint work of Eusebius and Origine. Elloquent testimonies to the care bestowed by Pamphilus and Eusebius on the sacred text are found in Biblical MSS. which have reproduced their colophons. We give three specimens. (1) The following is to be found in the Hexapla of the codex Marcianus. A facsimile of the original will be found in Mai's "Bib. nov. Pat.," IV, p. 218, and in Migne. It is printed in ordinary type in Swete's O. T. in Greek (vol. III, p. viii). It must be remembered that Origen's own copy of the Hexapla was in the library of Pamphilus. It had probably been deposited there by Origen himself.

"The following was transcribed from a copy of the Father Apolliniarius the Coenaebiare, to which these words are subjoined: 'It was transcribed from the editions of the Hexapla and was corrected from the Tetrapla of Origen himself which also had been corrected and furnished with scholia in his own handwriting, whence I, Eusebius, added the scholia, Pamphilus and Eusebius corrected.'"

(2) At the end of the Book of Esdras, in the codex Sinaitica, there is the following note:

"It was compared with a very ancient copy that had been corrected by the hand of the blessed martyr Pamphilus to which is appended in his own hand this subscription: 'It was transcribed and corrected by Origen, to which Ephraem added his subscription, and we have corrected and added to it.'" (Swete, vol. II, p. 212.)

(3) The same codex and also the Vatican and Alexandrine quote a colophon like the above, with the difference that Antoninus has become a confessor, and Pamphilus is in prison—"Antoninus the confessor compared, Pamphilus corrected." The volume to which this colophon was subjoined began with I Kings and ended with Esther. Pamphilus was certainly not idle in prison. To most of the books in the Chrysostomos the text is added a note to the effect that they were translated from the Hexapla in the library of Cæsarea and compared with a copy subscribed: "I, Eusebius, corrected [the above] as carefully as I could" (Harnack, Alchtchrist. Lit., pp. 544, 545).

May not the confessor Antoninus be the same person as the priest of that name who, later on, with two companions interrupted the governor when he was on the point of sacrificing, and was beheaded? (Mast. Pat., 9.) One member of Pamphilus's household, Apollnianus, had done the same a few years before; and another, a certain农村 to the desert and entered the mines, on obtaining his release provoked martyrdom at Alexandria by going before the governor and rebuking him. Towards the end of 307 Pamphilus was arrested, horribly tortured, and consigned to prison.
Besides continuing his work of editing the Septuagint, he wrote, in collaboration with Eusebius, a Defence of Origen which was sent to the confessors in the mines—a wonderful gift from a man whose sides had been curried with iron combs, to men with their right eyes burned out and the sinews of their left legs cauterized. Eusebius, who, in the introduction to his History, mentions that he died without being beheaded. Out of devotion to his memory Eusebius called himself Eusebius Pamphilus, meaning, probably, that he wished to be regarded as the bondsman of him whose name "it is not meet that I should mention... without styling him my lord" (Mart. Pal., ed. Cursius, p. 111). In the introduction to his translation of the "Prep. Evang.", has suggested another explanation on the authority of an ancient scholion emending from Cesarea which calls Eusebius the "son of Pamphilus". He argues further that Pamphilus, in order to make Eusebius his heir, took the necessary step of adopting him.

During the persecution Eusebius visited Tyre and Egypt and witnessed numbers of martyrdoms (H. E., vii, vii and ix). He certainly did not shun danger, and was at one time a prisoner. When, where, or how he was released, we do not know. An indigent bishop, who had been one of his fellow-prisoners and "lost an eye for the Truth", demanded at the Council of Tyre how "he came off so well". To this taunt—it was hardly a question—Eusebius is said to have taken the compiler of his Life to task. Eusebius deigned no reply (Epiph., Her., livii, 8; cf. St. Athanasius, "Apol. c. Arian?, vii, 1). He had many enemies, yet the charge of cowardice was never seriously made—the best proof that it could not have been sustained. We may assume that, as soon as the persecution began to relax, Eusebius succeeded Pamphilus in the charge of the college and library. Perhaps he was ordained priest about this time. By 315 he was already a bishop, for he was present in that capacity at the dedication of a new basilica at Tyre, on which occasion he delivered a discourse given in full in the last book of the Church history.

Alexander, Bishop of Alexandria, excommunicated Arius about the year 320. The Arians soon found that for all practical purposes Eusebius was on their side. He wrote to Alexander charging him with misrepresenting the teaching of the Arians and so giving them cause "to attack and misrepresent whatever they please" (see below). A portion of this letter has been preserved in the Acts of the second Council of Nicaea, where it was cited to prove that Eusebius was a heretic. Dionysius the Areopagite, who decided that Arius should be restored to his former position, but on his side he was to obey his bishop and continually entreat peace and communion with him (Sos., H. E., i, 15). According to Duchesne (Hist. de l'Eglise, II, 132), Arius, like Origen before him, found an asylum at Cesarea. At the opening of the Council of Nicaea Eusebius occupied the first seat on the right of the emperor, and delivered the inaugural address which was "caught in a strain of thanksgiving to Almighty God... in his behalf, as well as that of the Church and of the Hellenes himself" (Sos., H. E., i, 19). He evidently enjoyed great prestige and may not unreasonably have expected to be able to steer the council through the media between the Seylla and Chalurydis of "Yes" and "No". But if, he entertained such hopes they were soon disappointed. We have already spoken of the profession of faith which he brought forward to vindicate his own orthodoxy, or perhaps in the hope that the council might adopt it. It was, in view of the actual state of the controversy, a colourless, or what at the present day would be termed "uncompromising", formula. After some delay Eusebius subscribed to the uncompromising creed drawn up by the council, making no secret, in the letter which he wrote to his own Church, of the non-natural sense in which he accepted it. Between 325 and 330 a heated controversy took place between Eusebius and Eustathius, Bishop of Antioch. Eustathius accused Eusebius of tampering with the faith of Nicaea; the latter retorted with the charge of Sabellianism. In 331 Eusebius was among the bishops who, at a synod held in Antioch, deposed Eustathius. He was offered and refused the vacant see. In 333 and 334 he took a part in the campaign against St. Athanasius at the synods held in Cesarea and Tyre respectively. From Tyre the assembly of bishops were summoned to Jerusalem by Constantine, to assist at the dedication of the basilica he had erected on the site of Calvary. After the dedication they returned to Antioch and the following year Constantine died. Eusebius survived him long enough to write his Life and two treatises against Marcellus, but by the summer of 341 he was already dead, since it was his successor, Acacius, who assisted as Bishop of Cesarea at a synod held at Antioch in the summer of that year.

Writings.—We shall take Eusebius's writings in the order given in Harnack's "Altechrist. Lit., pp. 554 eqq. 1. Historical Life of Eusebius, referred to by Eusebius, of which only a single fragment, describing Paullrophilus's liberality to poor students, quoted by St. Jerome (c. Rufin., 1, ix), survives. (2) A collection of Ancient Martyrdoms, used by Eusebius's Syriac historian, not otherwise lost. (3) On the Martyrs of Palestine. There are two distinct forms of this work, both drawn up by Eusebius. The longer is only extant in a Syrian version which was first edited and translated by Cureton in 1861. The shorter form is found in most MSS. (not, however, in the best) of the Church History, sometimes at the end of the last book, generally between books VIII and IX, also in the middle of book VIII. The existence of the same work in two different forms raises a number of curious literary problems. There is, of course, the question of priority. Here, with two notable exceptions, scholars seem to agree in favour of the longer form. Then comes the question, why Eusebius abridged it and, finally, how the abridgment found its way into the Church History. The shorter form lacks some introductory remarks, referred to in c. xiii, which defined the scope of the book. It also breaks off when the writer is about to "record the palinode" of the persecutors. It seems probable that part of the missing conclusion is extant in the form of an appendix to the eighth book of the Church History forming a sequel to the first book. The contrastes the miserable fate of the persecutors with the good fortune of Constantine and his father. From these data Lightfoot concludes that what we now possess formed "part of a larger work in which the sufferings of the Martyrs were set off against the deaths of the persecutors". It must, however, be remembered that the missing parts would not add much to the book. So far as the Martyrs are concerned, it is evidently complete, and the fate of the persecutors would not take long in the telling. Still, the missing conclusion may explain the curious omission of the Martyrs. The book, in both forms, was intended for popular reading. It was therefore desirable to keep down the price of copies. If this was to be done, and new matter (i.e. the fate of the persecutors) added, the old matter had to be somewhat curtailed. In 1894, in the Theologische Literaturzeitung (p. 464) Preuschen threw out the idea that the shorter form was merely a rough draft not intended for publication. Bruno Viollet, in his "Die Palistinischen Martyrer" (Texte und Untersuchungen, XIV, 4, 1896), followed up this idea and pointed out that whereas the longer form was constantly used by the compilers of Martyrologies, Menologies, and the like, the shorter form was never used. In a review of Viollet (Theolog. Litt., 1897, p. 300), Preuschen returns to his original.
EUSEBIUS records the defeat of Licinius in 323, and must have been completed before the death and disgrace of Crispus in 326, for it refers to him as Constantine’s “most pious son.” The ninth book was compiled between the defeat of Maxentius in 312, and Constantine’s first rupture with Licinius in 314.

(6) The first three books are Eusebius’s Histories, or books. This work has been most unjustly blamed, from the time of Socrates downwards, because it is a panegyric rather than a history. If ever there was a man under an obligation to respect the maxim, De mortuis nil nisi laud, this man was Eusebius, who was writing the Life of Constantine within three years after his death (337). This Life is especially valuable because of the account it gives of the Council of Nicaea and the earlier phases of the Arian controversy. It is well to remember that one of our chief sources of information for the history of that council is a book written to magnify Constantine.

B. Apologetic. (7) Against Hierocles. Hierocles, who, as governor in Bithynia and in Egypt, was a cruel enemy of the Christians during the persecution, before the persecution had attacked them with the sword, Eusebius provoked him, and except the use he made of Philostratus’s Life of Apollonius of Tyana to institute a comparison between our Lord and Apollonius in favour of the latter. In his reply Eusebius confined himself to this one point—(8) “Against Porphyry,” a work in which he refutes the views of (9) “The Preparatio Evangelica,” in fifteen books. (10) The “Demonstratio Evangelica,” in twenty books, of which the last ten, with the exception of a fragment of the fifteenth, are lost. The object of these two treatises, which should be regarded as two parts of one comprehensive work, was to justify the Christian in rejecting the religion and philosophy of the Greeks in favour of that of the Hebrews, and then to justify him in not observing the Jewish manner of life. The “Preparatio” is devoted to the first of these objects. The following summary of its contents is taken from Mr. Gifford’s introduction to his translation of the “Preparatio”: “The first three books discuss the threefold system of Pagan Theology, Mythical, Allegorical, and Political. The next three, IV–VI, give an account of the chief oracles, of the worship of demons, and of the various opinions of Greek Philosophers on the doctrines of Fate and Free Will. Books VII–IX give reasons for preferring the religion of the Hebrews founded chiefly on the testimony of various authors to the excellence and antiquity of the Jewish religion.” In Books X–XII Eusebius argues that the Greeks had borrowed from the older theology and philosophy of the Hebrews, dwelling especially on the supposed dependence of Plato upon Moses. In the last three books the comparison of Moses with Plato is continued, and the mutual contradictions of other Greek Philosophers, especially the Peripatetics and Stoics, are exposed and criticized.

The “Preparatio” is a gigantic feat of erudition, and, according to Harnack (Chronologie, II, p. 120), was, like many of Eusebius’s biographies, composed during the stress of the persecution. It ranks, with the Chronicle, second only to the Church History in importance, because of its copious extracts from ancient authors whose works have perished. The first book of the Demonstratio chiefly deals with the temporary character of the Mosaic Law. In the second the prophecies concerning the vocation of the Gentiles and the rejection of the Jews are discussed. In the remaining eight the testimonies of the prophets concerning Christ are treated of.

We now come to the last of Eusebius’s books, known save that they were read by Photius, viz. (11), The “Preparatio Ecclesiastica,” (12) the “Demonstratio Ecclesiastica,” and (13) “Two Books of Objection and Defence,” of which, from Photius’s account, there seem to have been two separate editions.
The "Theophaenia" or "Divine Manifestation." Except for a few fragments of the original, this work is only extant in a Latin version discovered by Tattari in 1826, edited by Lee in 1842, and translated by the same in 1843. It treats of the cosmic function of the Word, the nature of man, the need of revelation, etc. The fourth and fifth books are particularly remarkable as a kind of anticipation of modern books on Christian evidences. A "vicious literary problem arises out of the relations between the "Theophaenia" and the work "De Laudibus Constantini." There are entire passages which are almost verbatim the same in both works. And the same considerations hold of the priority of the first-named work. Greisel, who has edited the "Theophaenia" for the Berlin edition of the Greek Fathers, takes the opposite view. Hezekiah dismisses the parallel passages and argues that they are improved in the "De Laudibus Constantini." (15) On the Numerous Progeny of the Ancient. This work is referred to by Eusebius twice, in the "Prepar. Ev.", VII. 8, and in the "Dem. Ev.", VII. 8; and also (Lightfoot and Harnack think) by St. Basil ("De Spir. Sanct.", xxix), where he says, "I draw attention to the fact that the tetrarch VI-XIX in this work, though it started in connexion with ancient polygamy," Arguing from St. Basil's words, Lightfoot thinks that in this treatise Eusebius dealt with the difficulty presented by the Patriarchs possessing more than one wife, viz., "reform the 'Prepar. Ev.,'

"from which it would appear that the difficulty dealt with was, perhaps, a mere general one, viz., the contrast presented by the desire of the Patriarchs for a numerous offspring and the honour in which connexion was held by Christians.

C. Eusebius narrates, in his Life of Constantine (IV, 36, 37), how he was commissioned by the emperor to prepare fifty sumptuous copies of the Bible for use in the Churches of Constantinople. Some scholars have supposed that the Codex Sinaiticus was one of these copies. Lightfoot rejects this view chiefly on the ground that "the Text of the codex in many respects differs too widely from the readings found in Eusebius." (17) Sections and Canons. Eusebius drew up ten canons, the first containing a list of passages common to all four Evangelists; the second, those common to the first two and the third; the third, those common to the first and fourth; the fourth, those common to the first and third; the fifth, those common to the second and fourth; the sixth, those common to the second and third; the seventh, those common to the third and fourth; the eighth, those common to all four; the ninth, those which are in the New Testament, but not in the Old Testament; the tenth, those which are in the Old Testament, but not in the New Testament. The second section contains the names of the evangelists; the third, the names of the Patriarchs, and the fourth, the names of the fathers. The fifth section contains the names of the times, and the sixth, the names of the places. The seventh section contains the names of the kings, and the eighth, the names of the virtues. The ninth section contains the names of the sins, and the tenth, the names of the virtues. The eleventh section contains the names of the virtues, and the twelfth, the names of the sins. The thirteenth section contains the names of the times, and the fourteenth, the names of the places. The fifteenth section contains the names of the kings, and the sixteenth, the names of the fathers. The seventeenth section contains the names of the patriarchs, and the eighteenth, the names of the evangelists. The nineteenth section contains the names of the sins, and the twentieth, the names of the virtues. The twenty-first section contains the names of the times, and the twenty-second, the names of the places. The twenty-third section contains the names of the kings, and the twenty-fourth, the names of the fathers. The twenty-fifth section contains the names of the patriarchs, and the twenty-sixth, the names of the evangelists. The twenty-seventh section contains the names of the sins, and the twenty-eighth, the names of the virtues. The twenty-ninth section contains the names of the times, and the thirtieth, the names of the places. The thirty-first section contains the names of the kings, and the thirty-second, the names of the fathers. The thirty-third section contains the names of the patriarchs, and the thirty-fourth, the names of the evangelists. The thirty-fifth section contains the names of the sins, and the thirty-sixth, the names of the virtues. The thirty-seventh section contains the names of the times, and the thirty-eighth, the names of the places. The thirty-ninth section contains the names of the kings, and the fortieth, the names of the fathers. The forty-first section contains the names of the patriarchs, and the forty-second, the names of the evangelists. The forty-third section contains the names of the sins, and the forty-fourth, the names of the virtues. The forty-fifth section contains the names of the times, and the forty-sixth, the names of the places. The forty-seventh section contains the names of the kings, and the forty-eighth, the names of the fathers. The forty-ninth section contains the names of the patriarchs, and the fiftieth, the names of the evangelists. The fiftieth section contains the names of the sins, and the fifty-first, the names of the virtues.

F. Letters.—The history of the preservation of the three letters, (45) to Alexander of Alexandria, (46) to Euphrasius, or Euphrasium, (47) to the Empress Constance, is sufficiently curious. Constantine asked Eusebius to send him a letter to be read at the Council of Cappadocia, which he had heard; his refusal was couched in terms which centuries afterwards were appealed to by the Iconoclasts. A portion of this letter was read at the Second Council of Nicaea, and against it were set
EUSEBIUS

portions from the letters to Alexander and Euphrasion to prove that Eusebius "was delivered up to a repugnant sense, and of one mind and opinion" with those who followed the Arian superstition" (Labbe, "Concil. V. Hist. Vinet. 1143-1147; Mail, "Cone. Ixxi. 313-317). Before the period elapsed in the council, other parts of the letter to Constantia are extant. — (48) To the Church of Cesarea after the Council of Nicaea. This letter has already been described.

F. J. BACCUUS.

EUSEBIUS of Doryleum, Bishop of Doryleum in Asia Minor, was the prime mover on behalf of Catholic orthodoxy against the heresies of Nestorius and Eutyches. During the earlier part of his life he followed the profession of an advocate at Constantinople, and was already known as a layman of considerable learning when he protested publicly (423) against the erroneous doctrine of a discourse delivered by Anastasius, the synecclis, or chaplain, of Nestorius. Shortly afterwards he again bore public witness against the Nestorian heresy as to the nature of Christ, this time during a discourse by Nestorius himself, which he interrupted with the exclamation that "the eternal Word had undergone a second generation"—i.e., of a woman, according to the flesh. Much disorder followed, but Nestorius repudiated Eusebius against his second generation.

After the Council of Ephesus (431), at which the teaching of Nestorius had been condemned, a document attributed by general consent to Eusebius was made public, in which the doctrine of Nestorius was shown to be identical with that of Paul of Samosata. Eusebius had at some period contracted a friendship with Eutyches, founded, we may fairly conjecture, on their common opposition to Nestorian error. But when Eutyches allowed himself to be betrayed into opinions which, though directly opposed to those of Nestorius, were equally contrary to the faith of the Church, Eusebius, now Bishop of Doryleum, was no less zealous against his former friend than he had been against their common opponent. After repeated attempts at persuasion, Eusebius brought a formal charge of false teaching against Eutyches, before Flavian, who was then (448) presiding over a synod at Constantinople. Flavian was reluctant to proceed against Eutyches, and urged Eusebius to remonstrate with him privately once more. Eusebius, however, refused, saying that he had already done all he could to convince Eutyches of his error, and that further delay might be prejudicial. Eutyches was then summoned to attend, but did not do so until the summons had been three times issued; he excused his refusal to obey by asserting that he had resolved never to leave his monastery and pleading distrust of Eusebius, whom he now looked upon as his enemy. At last, however, he came, attended by a large escort of soldiers and monks. He was interrogated by Eusebius, who in the meantime had been strongly pressing his case, and who now, as he said, felt some alarm lest Eutyches should succeed in evading condemnation and retaliate upon his accuser by obtaining a decree of banishment against him. Eutyches, however, was condemned and deposed; he immediately wrote a letter to the pope, complaining of Eusebius's proceedings, which he attributed to the instigation of the devil.

In the following year (449) at Constantinople, an examination was held, by imperial authority, of the acts of the synod which had condemned Eutyches, which acts he alleged to have been falsified. Eutyches was there by the papal legates; Eusebius, who wished to withdraw but was not permitted to do so, urged that the doctrinal question should not be considered on that occasion, but should be remitted to a general council. On the assembly of the council then summoned at Ephesus (see EUSEBIUS, ROSSER COUNCIL OF), it was finally decided by the presence of Dioscorus of Alexandria, who had obtained the support of the emperor. The reading of his part in the synod at Constantinople provoked an outburst of reproaches and threats: "Away with Eusebius! Burn him! As he has divided so let him be divided!" Flavian and Eusebius were deposed and banished, and Flavian by the revulsion of feeling that the physical injuries he had received in the tumultuary council. Eusebius wrote to the Emperors Valentinian and Marcian, asking for a fresh hearing; and both Eusebius and Flavian sent written appeals to Rome. The text of these appeals was discovered in 1842. Amelius, who was then curator of the Ambrosian Library at Milan and afterwards became Abbot of Monte Cassino—and was published by him in 1882. Eusebius grounds his appeal on the fact of his having been condemned unheard, and prays the pope to quench the sentence (pronuntiat evacuari et nonem fieri mean injunxit condemnationem); he also mentions a written appeal given by him to the papal legates at Ephesus, in which he had begged the Holy See to take cognizance of the matter (in quibus vestrem sedis cognitionem posse). Eusebius fled to Rome, where he was kindly received by Leo I. In two letters written on the same day (13 April, 451) to Pulcheria and Anastolius, the pope bespeaks their good offices for Eusebius; in the former letter he mentions a report that the Diocese of Doryleum has been deprived of its bishop (quem dici tatur vastare qui illi injuste assiurset subrogat). But Liberatus (Brevisarum, c. xii) says that no one was put in Eusebius's place, and the report was therefore probably of merely local origin.

Eusebius took part in the Council of Chalcedon, at which he appears as the accuser of Dioscorus. He was one of the commission which drew up the definition of faith finally adopted. The council annullled his condemnation, and made special mention of the fact in the letter to the pope in which it sought his confirmation. The letter to Pope Siricius is dated 12 April, 451, issued to clear the memory of Flavian, declares the reputation of Eusebius to be unimpaired by the sentence of the Robber Council (injusta sententia nihil obit Eusebio). He was one of the bishops who signed the 28th canon of Chalcedon giving patriarchal rights over Pontus and Asia to Constantinople. When the papal legates demurred to the passing of the canon in their absence, and the signatories of the region affected were asked to declare whether they had signed willingly or not, Eusebius said that he had done so, because it was contrary to the faith of Rome. He was the pope, who had accepted it. Though he was doubtless mistaken as to the fact alleged (how the mistake arose cannot now be determined), his professed motive is significant. His name appears among the signatures to the acts of a council held in Rome in 439, which seems improbable that he was alive at that date. Baronzio considers that the signatures of numerous Eastern bishops appended to these acts are misplaced, and properly belong to some much earlier council; hence none of the bishops who were otherwise heard of later than ten years after the Council of Chalcedon, at which they had all been present.

Flavian said of Eusebius at Constantinople that "first seemed cold to his zeal for orthodoxy," and Leo wrote of him that he was a man who "had undergone great perils and toils for the Faith." In these two sentences all that is known of him may be fitted summarily.

THEOLOGY.
Eusebius of Laodicea, an Alexandrian deacon who had some fame as a confessor and became Bishop of Laodicea in Syria, died of birth uncertain; d. about 286. His story is told by Eusebius of Cesarea (Hist. Eccl., VII, xi and xxiii). As deacon at Alexandria he had abjured his bishop, Dionysius (with a priest, two other deacons and two Roman senators) in Egypt) before the tribunal of Zeno, Prefect of Egypt, at the time of the Emperor Valerianus (253–260). Dionysius tells the story of their trial in a letter to a certain Bishop Germanus (Eus., Hist. Eccl., VII, xi, but they were sentenced to death "but Eusebius managed to remain in the city in hiding, zealously served the confessors in prison and buried the bodies of the dead and of the blessed martyrs, not without danger to his own life" (ibid.). In 280 there broke out a rebellion at Alexandria and at the same time a plague ravaged the city. Eusebius again risked his life continually by nursing the sick and the wounded (ibid., VII, xxiii). The Romans besieged a part of the town (Bruchium,Πυργείας,Πτολεμαῖος). Anatolius, Eusebius' friend, was among the besieged, Eusebius himself wrote to use their influence with the Roman general and asked him to allow anyone who would to leave Bruchium. His petition was granted and Anatolius, with whom he managed to communicate, explained the matter to the leaders of the rebellion and induced them to yield. The Roman general eventually allowed the women, children, and old men to profit by the Romans' mercy. A great crowd then came to surrender at the Roman camp. "Eusebius there nursed all who were exhausted by the long siege with every care and attention as a father and a physician" (ibid., xxiii). In 284 Dionysius (who seems to have come back from banishment) sent Eusebius as his legate to Syria to represent him at the discussions that were taking place concerning the affair of Paul of Samosata. Anatolius accompanied his friend. The Syrians were of the world of which that Paul kept them both and made Eusebius Bishop of Laodicea as successor to Socrates. Not long afterwards he died and was succeeded by Anatolius. The date of his death is uncertain. Harnack thinks it was before the great Synod of Antioch in 288 (Chron. der altchrist. Litt., I, 34). Another theory is that the siege at Antioch was in 289, that the friends went to Syria at the end of that year, and that Eusebius' death was not till 279 (so W. Reading in the Variorum notes to his edition of Eusebius Pamph., Cambridge, 1730, 1, 367). Gujarat, p. 130, gives his death in 270 (K. Ziegler von Laodicea, Eusebius von Laodicea). Eusebius' name does not occur in the acts of the Synod of 268.

ADRIAN FORTSCHEU.

Eusebius of Nicomedia, Bishop, place and date of birth unknown. d. 341. He was a pupil, at Antioch, of Lucian the Martyr, in whose famous school he learned his Arian doctrines. He became Bishop of Berytus; but from ambitious motives he managed to get transferred, contrary to the canons of the early Church, to the see of Nicomedia, the residence of the Eastern Emperor Licinius, with whose wife Constantina, sister of Constantine, he was in high favour.

Arius, when he was condemned at Alexandria, by Alexander, bishop of that see, took refuge at Cesarea, where he was well received by the famous apologist and historian Eusebius, and wrote to Eusebius of Nicomedia for furtherance to his views, and was invited to Constantinople with a view to their conversion. Three months after the council, the Emperor sent him like Arius into exile, together with Theognis, Bishop of Nicomedia, accusing him of having been a supporter of Licinius, and of having even approved of his persecutions, as well as of having sent spies to watch himself. But the banishment of the intriguers lasted only two years. It is said that it was Constantia, the widow of Licinius, who induced Constantine to recall Arius to Nicomedia, and made him a libel against the return of her old friend Eusebius. By 329 he was in high favour with the emperor, with whom he may have had some kind of relationship, since Ammianus Marcellinus makes him a relative of Julian.

From this time onwards we find Eusebius of Nicomedia at the head of a small and compact party called...
by St. Athanasius, the Eusebius, of the Eusebius, whose object it was to undo the work of Nicea, and to procure the complete victory of Arianism. They did not publicly recall the signatures that had been forced from them. They explained that Arius had repented of his errors, and that the condemnation was an unjust attack on Eutychus of Antioch, the principled prelate of the East properly so called. He had been having an animated controversy with Eusebius of Cesaris, in which he had accused that learned personage of polytheism, while Eusebius retorted with a charge of Sabellianism. Eutychus was deposed and exiled, for alleged disrespectful expressions about the emperor's mother, St. Helena, who was greatly devoted to the memory of St. Lucian. It is said that he was also charged with immorality and heresy, but it is certain that he had drawn the Eusebius. The great see of Alexandria was filled in 328 by the deacon Athanasius, who had taken a leading part at Nicea. Small in stature, and young in years, he was at the head of a singularly united body of men. His words against his opponents, and rivering his courage and determination marked him out as one of those whom the Eusebius had to dread. The Alexandrian Arians had now signed an ambiguous formula of submission, and Eusebius of Nicomedia wrote to Athanasius, asking him to restate them, adding a verbal message of threats. The Malalian schism, in Egypt, had only been partially healed by the mild measures decreed at Nicea, and the schismatics were giving trouble. Constantine was induced by Eusebius to write to Athanasius curtly telling him he would not listen to the Eusebius and the Meletians. If he returned to Constantinople he also wrote to the Church any who demanded to be received. Athanasius explained why he could not do this, and the emperor seems to have been satisfied. Eusebius then joined hands with the Meletians, and induced them to trump up charges against Athanasius. They first pretended that he had invented a tribute of linen garments which he exacted. This was disproved, but Athanasius himself was sent for to the court. The Meletians then brought up a charge which did duty for many years, that he had ordered a priest named Marcellus to alter the altar rails of a church belonging to a priest named Ischyras, in the Maroeis, though in fact Ischyras had never been a priest, and at the time alleged could not have been pretending to say Mass, for he was ill in bed. It was also said that Athanasius had assisted in a certain Philumenus to conspire against the emperor, and had given him a bag of gold. Again the accusers were refuted and put to flight. The saint returned to his Church with a letter from Constantine, in which the emperor sermonized the Alexandrians after his wont, urging them to peace and unity. But the question of the broken chalice was not dropped, and the Meletians further got hold of a bishop named Arsenius, whom they kept in hiding while they declared that Athanasius had put him to death; they carried about a severed hand, which they said was Arsenius's, cut off by the patriarch for the purpose of magic. Athanasius induced Ischyras to sign a document denying the former charge, and managed to discover the whereabouts of Arsenius. Constantine in consequence wrote a letter to the patriarch denouncing the Meletians, but the designs of man were frustrated by the hand of God. Arius died suddenly under peculiarly humiliating conditions, on the eve of the day appointed for his solemn restoration to Catholic communion in the cathedral of New Rome.

Until 337 the Eusebius were busy in obtaining, by calumny, the deposition of the bishop who supported the Nicene faith. Of these the best known are Paul of Constantinople, Aselepas of Gaia, and Marcellus, Metropolitan of Ancyra. In the case of Marcellus they had received considerable provocation. Marcellus had been their active enemy at Nicea. At Tyre he had refused to condemn Athanasius, and he presented a book to the emperor in which the Eusebius received hard words. He was convicted, not without scandal, of being the instigator, and exiled. On 22 May, 337, Constantine the Great died at Nicomedia, after having been baptised by Eusebius, bishop of the place. His brothers and all but two of his nephews were at once murdered, in order to simplify the succession, and the world was divided between his three young sons. An arrangement was
affected between them by which all exiled bishops returned, and Athanasius came back to his flock. Eusebius was in reality a gainer by the new regime. Constantius, who was now lord of all the East, was but twenty years old. He wished to manage the Church, and he seems to have fallen an easy prey to the arts of the shrewd Eusebius, and thus to have caused the life and ambition of Athanasius to be spent in persecuting Athanasius, and in carrying out Eusebius's policy. Never himself an Arian, Constantius held orthodoxy to lie somewhere between Arianism and the Nicene faith. The Arians, who were ready to disguise their doctrine to recite it, were those who desired to obtain from him a favour, which he denied to the few uncompromising Catholics who rejected his generalities.

The see of Alexandria had remained vacant during the absence of Athanasius. Eusebius now claimed to put the Synod of Tyre in force, and a rival bishop was set up in the person of Pistus, one of the Arian priests whom Alexander had long ago excommunicated. Until now the East alone had been concerned. The Eusebians were the first to try to get Rome and the West on their side. They sent to the pope an embassy of the see, which, as everyone saw, was a mere attempt to force the decisions of the Council of Tyre and the supposed proofs of the guilt of Athanasius, of which the accused himself had been unable to get a sight. Instead of once granting his communion to Pistus, Pope Julius sent him as his victim, and Athanasius might prepare a defence. The latter summoned a council of his suffragans. More than eighty attended, and sent to Julius a complete defence of their patriarch. The arrival of Athanasius's envoys bearing this later struck terror into the minds of the ambassadors of the Eusebians. The priests fled, and the deacon could think of nothing better than to beg Julius to call a council, and be judge himself. The pope consented, on the ground that in the case of one of the chief Churches such as Alexandria, it was right and customary that the matter should be referred to him. He therefore wrote summoning both accusers and accused to a council of which he was willing that they should determine the place and time.

Thus it was no Athanasius who appealed to the pope, but the Eusebians, and that simply as a means of withdrawing from an awkward predicament. Pistus was not a success, and Constantius introduced by violence a certain Gregory, a Cappadocian, in his place. Athanasius, after addressing a protest to the whole Church against the methods of Eusebius, managed to escape. He went to Rome, and made his case to the pope, who, as is not so rare, was determined not to obey the pope's summons. His accusers took good care not to appear. Julius wrote again, fixing the end of the year (339) as the term for their arrival. They detained the legates until the fixed time had elapsed, and sent them back in January, 340, with a letter full of studied and ironical politeness, of which Sozomen has preserved us the tenor. He says: "Having assembled at Antioch, they wrote an answer to Julius, elaborately worded and rhetorically composed, full of ironical and cynical allusions. They admitted in this letter that Rome was always honoured as the school of the Apostles, and the metropolis of the Faith from the beginning, although its teachers had settled in it from the East. But they thought that they ought not to take a secondary place because they had less great and populous Churches, since they were superior in virtue and intention. They reproached Julius with having communicated with Athanasius, and complained that this was an insult to their synod, and that their condemnation of Athanasius was made null; and they threatened, if they did not comply, to meet him in a legal way. After thus reproaching Julius and complaining of ill usage, they promised, if he would accept the deposition of those whom they had deposed, and the appointment of those whom they had ordained, to grant him peace and communion, but if he withheld their decrees, they would refuse to do so. For they declared that the earlier Eastern bishops had made no objection when Novatian was driven out of the Roman Church. But they wrote nothing to Julius concerning their acts, which were contrary to the decisions of the Council of Nicea, saying that they had done it only from necessity, because, if they had not, it was superfluous to make any defence against a vague and general suspicion that they had done wrong." The traditional belief that Rome had been schooled by the Apostles, and had always been the metropolis of the Faith, is interesting in the mouths of those who were denying her right to judge in the East, in a matter of jurisdiction; for it is to be remembered that neither then, nor at any time, was Athanasius accused of heresy. This claim of independence is the first sign of the breach which began with the foundation of Constantineople as New Rome, and which ended in the complete separation of that city and all its dependencys from Catholic communion. For Eusebius had not contented himself with Nicomedia, now that it was no longer the capital, but had managed to get St. Paul of Constantinople exiled once more, and had seized upon that see, which was evidently, in his view, to be set above Alexandria and Antioch, and to be in very deed a second Rome.

The Roman council met in the autumn of 340. The Eusebians were not represented, but many Easterners, as taken prisoners, were released, and Athanasius might prepare a defence. The latter summoned a council of his suffragans. More than eighty attended, and sent to Julius a complete defence of their patriarch. The arrival of Athanasius's envoys bearing this letter struck terror into the minds of the ambassadors of the Eusebians. The priests fled, and the deacon could think of nothing better than to beg Julius to call a council, and be judge himself. The pope consented, on the ground that in the case of one of the chief Churches such as Alexandria, it was right and customary that the matter should be referred to him. He therefore wrote summoning both accusers and accused to a council of which he was willing that they should determine the place and time.

Thus it was no Athanasius who appealed to the pope, but the Eusebians, and that simply as a means of withdrawing from an awkward predicament. Pistus was not a success, and Constantius introduced by violence a certain Gregory, a Cappadocian, in his place. Athanasius, after addressing a protest to the whole Church against the methods of Eusebius, managed to escape. He went to Rome, and made his case to the pope, who, as is not so rare, was determined not to obey the pope's summons. His accusers took good care not to appear. Julius wrote again, fixing the end of the year (339) as the term for their arrival. They detained the legates until the fixed time had elapsed, and sent them back in January, 340, with a letter full of studied and ironical politeness, of which Sozomen has preserved us the tenor. He says: "Having assembled at Antioch, they wrote an answer to Julius, elaborately worded and rhetorically composed, full of ironical and cynical allusions. They admitted in this letter that Rome was always honoured as the school of the Apostles, and the metropolis of the Faith from the beginning, although its teachers had settled in it from the East. But they thought that they ought not to take a secondary place because they had less great and populous Churches, since they were superior in virtue and intention. They reproached Julius with having communicated with Athanasius, and complained that this was an insult to their synod, and that their condemnation of Athanasius was made null; and they threatened, if they did not comply, to meet him in a legal way. After thus reproaching Julius and complaining of ill usage, they promised, if he would accept the deposition of those whom they had deposed, and the appointment of those whom they had ordained, to grant him peace and communion, but if he withheld their decrees, they would refuse to do so. For they declared that the earlier Eastern bishops had made no objection when Novatian was driven out of the Roman Church. But they wrote nothing to Julius concerning their acts, which were contrary to the decisions of the Council of Nicea, saying that they had done it only from necessity, because, if they had not, it was superfluous to make any defence against a vague and general suspicion that they had done wrong." The traditional belief that Rome had been schooled by the Apostles, and had always been the metropolis of the Faith, is interesting in the mouths of those who were denying her right to judge in the East, in a matter of jurisdiction; for it is to be remembered that neither then, nor at any time, was Athanasius accused of heresy. This claim of independence is the first sign of the breach which began with the foundation of Constantineople as New Rome, and which ended in the complete separation of that city and all its dependencys from Catholic communion. For Eusebius had not contented himself with Nicomedia, now that it was no longer the capital, but had managed to get St. Paul of Constantinople exiled once more, and had seized upon that see, which was evidently, in his view, to be set above Alexandria and Antioch, and to be in very deed a second Rome.

Eusebius died, full of years and honours, probably soon after the council; at all events he was dead before that of Sardica. He had arrived at the summit of his hopes. He may really have believed Arian doctrine, but clearly his chief aim had ever been his own aggrandisement, and the humiliation of those who had humbled him at Nicea. He had succeeded. His enemies were in exile. His creatures sat in the sees of Alexandria and Antioch. He was bishop of the imperial city, and the emperor employed his counsels. If Epiphanius is right in calling him an old man even before Nicea, he must now have reached a great age. His work lived after him. He had trained a group of prelates who continued his intrigues, and who followed the Court from place to place throughout the reign of Constantius. More than this, it may be said that the world suffers to this day from the evil wrought by this worldly bishop.

JOHN CHAPMAN.
Eustace, Saint, date of birth unknown, d. 29 March, 625. He was second abbot of the Irish monastery of Luxeuil in France, and his feast is commemorated in the Celtic martyrologies on the 29th of March. He was one of the first companions of St. Columbanus, a monk of Bangor (Ireland), who with his disciples did much to spread the Gospel over Central and Southern Europe. When Columbanus, the founder of Luxeuil, was banished from the Kingdom of Burgundy, on account of his repugning the morals of King Thierry, the exiled abbot recommended his community to choose Eustace as his successor. Subsequently Columbanus settled at Bobbio in Italy. Three years after his appointment (613), when Clothaire II became ruler of the triple Kingdom of France, the abbot of Luxeuil was commissioned by royal authority to proceed to Bobbio for the purpose of recalling Columbanus. The latter, however, setting forth his reasons in a letter to the king, declined to return, but asked that Clothaire would take under his protection the monastery and brethren of Luxeuil. This was followed, under the administration of the abbey Eustace, the monastery continued to acquire renown as a seat of learning and sanctuary. Through the royal patronage, its benefices and lands were increased, the king devoting a yearly sum, from his own revenues, to Luxeuil and Bobbio. Eustace and monks devoted themselves to preaching in remote districts, not yet evangelized, chiefly in the north-eastern extremities of Gaul. Their missionary work extended even to Bavaria. Between the monasteries of Luxeuil in Franche-Comté and St. Columbanus' monastery in Gobbio (the foundation of St. Columbanus) connexion and intercourse seem to have long been kept up.

John B. Cullen.

Eustace, John Chetwode, antiquary, b. in Ireland, c. 1762; d. at Naples, Italy, 1 Aug., 1815. His family was English, his mother being one of the Chetwodes of Cheshire. He was educated at Sedgley Park School, and afterwards at the Benedictine house, St. Gregory's, Douay. He did not become a Benedictine though he always retained an attachment to the order, but went to Ireland where he taught rhetoric at Maynooth college, where he was ordained priest. He never had much sympathy for Ireland and, having served his time, returned to England to join the Dr. Collins in his school at Southall Park. From there he went to be chaplain to Sir William Jerningham at Costessey. In 1802 he travelled through Italy with three pupils, John Cust (afterwards Lord Brownlow), Robert Rushbrooke, and Philip Roche. During these travels he wrote a journal which subsequently became celebrated in his "Classical Tour". In 1805 he resigned to Jesus College, Cambridge, as tutor to George Petre. This was a most unusual position for a Catholic priest, and Eustace's intercourse with leading members of the university led to his being charged with indifferentism. Dr. Milner, then vicar Apostolic, charged him with lying aside "the distinctive worship of his priesthood, in compliment, as he professed, to the liberality of the Protestant clergy, with whom he associated" and with permitting Catholics under his care to attend Protestant services. "This conduct," wrote the bishop, "was so notorious and offensive to real Catholics, that I was called upon by my brethren to use every means in my power to put a stop to it." On the other hand, an intimate friend said "he was the very reverse of his style, character or its duties" (Gentleman's Magazine, see below). When Petre left Cambridge, Eustace accompanied him on another tour to Greece, Sicily, and Malta. In 1813 the publication of his "Classical Tour" obtained for him sudden celebrity, and he became a prominent figure in literary society, Burke being one of his chief friends. A short tour in France, in 1814, led to his "Letter from Paris", and in 1815 he travelled again to Italy to collect fresh materials, but he was seized with malaria at Naples and died there. Before death he dictated his "Memoirs", a condensation of his correspondence, on the heroism of St. Cloud, and the evidences of certain passages in his writings. His works were: "A Political Catechism adapted to the present Moment" (1810); "An Answer to the Charge delivered by the Bishop of Lincoln to the Clergy of that Diocese at the Triennial Visitation in 1811," "A Tour through Italy" (London, 1813, 2d ed., 1814); "A Classical Tour through Italy", 3d edition of the previous work, revised and enlarged (1815). A seventh edition of it appeared in London in 1841. It was also reprinted at Paris in 1837 in a series "Collections of Ancient and Modern Authors", to prove the "Proofs of Christianity" (1814). The manuscript of his course of rhetoric, never published, is at Downside. Catholics (1817), V, 205; Gentleman's Magazine, LXXXV, ii, Kirk, Misc. Mem. of Eighteenth Century London (London, 1908); Butler, Mem. of English Cath. (London, 1819); Huby, "Life of Bishop Miller" (Dublin, 1822); Gillow, Bibl. Dict. Eng. Cath., III; Cooper in Dict. Nat. Biog., XVIII.

Edwin Burton.

Eustace, Maurice, eldest son of Sir John Eustace, Castlemartin, County Kildare, Ireland, martyred for the Faith, Nov., 1851. Owing to the penal laws he was sent to be educated at the Jesuit College at Bruges in Flanders, where, after the completion of his secular studies, he waited to enter the Society. His father, however, wrote the superiors of the college to send him home. Maurice returned to Ireland, much against his own inclination, but in the hope of being able, later on, to carry out his desire. After a brief stay, during which he tried to induce his father to oppose his vocation, he went back to Flanders. His old masters at the college of Bruges on learning his father's determination advised him to return to Ireland, and devote himself in the world to the service of religion. Shortly after his arrival in Ireland, he got an appointment as captain of horse, in which position he did much to edify, and even win back to the Faith, those who served under him. He never abandoned the idea of becoming a priest, and secretly took Holy orders. His servant, who was aware of the fact, told his father, who had his son immediately arrested and imprisoned in Dublin. A younger brother, desiring to inherit the family estates, also reported Maurice to be a priest, a Jesuit, and a friend of the queen's enemies. As a consequence, he was put on trial for high treason. During his imprisonment, Adair Loftus, Protestant Archbishop of Dublin, offered him his hand in marriage, and a large dowry, if he would accept the reformed religion. Yielding neither to bribery nor persecution, Eustace was sentenced to public execution, and hanged.

John B. Cullen.

Eustachius, Bartolomeo, a distinguished anatomist of the Renaissance period—"one of the greatest anatomists that ever lived"—according to Hirsch's authoritative "Biographical Dictionary of the Most Prominent Physicians of All Time"—b. at San Severino, in the March of Ancona, Italy, in the early part of the sixteenth century; d. at Rome, August, 1574. Of the details of his life very little is known. He received a good education, and knew Latin and Arabic very well. After receiving his degree in medicine he devoted himself to the study of anatomy so successfully that with Vesalius and Columbus he constitutes the trio who remade the science of anatomy. He was known for his skill and knowledge, and became physician to Cardinal Borromeo, since known as St. Charles Borromeo. He was also physician to Cardinal Giulio della Rovere whom he accompanied to Rome. After the death of Columbus he was chosen professor of anatomy at the Sapienza which had been reorganized as
the Roman University by Pope Alexander VI and
magnificently developed by Popes Leo X and Paul
III. The reason for his selection as professor was
that he had promised to go to the New World after Columbus's death, and the policy of the popes of
his time was to secure for the papal medical school
the best available teachers. This position gave him
time and opportunity for original work of a high
order and Eustachius took advantage of it. He published
a number of works on anatomy in which he added very
markedly to the knowledge of the details of the
structure of most of the organs of the body accepted up
to this time. His first work was a commentary on Eri-
thexius' "Excerpta." Subsequently he published a treatise
on the kidneys, anatomical investigations of kidneys and blood
vessels, a paper on the Arterios vein, and other special
anatomical structures. Morgagni and Haller declared
that there was not a part of the body on whose
structure he had not shed light. In the midst
of his work he became, in 1570, physician to Cardinal
Peretti, afterwards Pope Sixtus V. At the beginning
of his career as an anatomist Eustachius criticized
Vesalius rather severely for having departed too far
from Galen. After having continued his own original
investigations for some time, however, he learned to
appreciate Vesalius's merits and did ample justice to
his work.

Eustachius's greatest contributions to anatomical
science passed through many vicissitudes which kept
his real merit from being recognized until long after
his death. His anatomical investigations were re-
corded in a series of plates with text attached. Eusta-
chius himself was not afforded the opportunity to
arrange for the publication of his work, as he died
rather suddenly. Some of his papers and plates went
to heirs and others were deposited in the Vatican
Library. They were unearthed by Lancisi, a distin-
guished papal physician at the beginning of the eight-
teenth century, and were published at the expense of
Pope Clement XI. This work, "Bartholomei Eus-
tachii Tabulae Anatomiae," (Rome, 1714), demon-
strates how much Eustachius had accomplished in
anatomy. His special contributions to the science
were the descriptions of the stirrup bone in the ear
and the canal connecting the ear and the mouth, since
called by his name. His monograph on the teeth of
the child is very complete and has been surpassed only
in recent years. In myology he worked out the inser-
tions and attachment of the sterno-eleido-mastoid
muscle, of the coccyges, the splenius of the neck, the
levator of the eyelid, and some others. In neurology
his descriptions of the cranial nerves is especially full.
In obstetrics he described the mode of delivery via the
fetal circulation was the most complete up to his time and it was he who recognized the valve on
the left side of the opening of the inferior vena cava
which serves to direct the blood from this vessel
through the foramen ovale into the left atrium. This
constitutes the most important distinctive structural
difference between the circulatory apparatus of the
adult and the child and is called the Eustachian valve.

"Foster, History of Physiology (New York, 1901). The
Pregemonia Mariae in Eustachi Tab., Anat. (Edinburgh, 1760),
contains a sketch of the life and times of Eustachi: CORRADI,
Giov. Med. di Roma (1870, VI)."

JAMES J. WALSH.

Eustachius and Companions, Saints, martyrs
under the Emperor Hadrian, in the year 118. Feast,
in the West, 20 September; in the East, 2 November.
Emblems, a crucifix, a stag, an oven.

The fourth century church father Lactantius
notes that Eustachius (before baptism, Placidus), a Roman
general under Trajan, while still a heathen, saw a stag
coming towards him, with a crucifix between its horns; he heard a voice telling
him that he was to suffer much for Christ's sake. He re-
lied on his military services with his wife Tatiana (Trajana, after baptism, Theopista) and his sons, Aga-
pius and Theopistus. The place of the vision is said
to have been Guadagnolo, between Tibur and Fre-
reste (Tivoli and Palestrina), in the vicinity of Rome.
Through adverse fortune the family was scattered, but
they never fell away; after a time it was united again after a victory, they suffered death in a heated brazen
bull. Baronius (Ann. Eccl., ad an. 103, 4) would
identify him with Placidus mentioned by Josephus
Flavius as a general under Titus.

The Acts are only fabulously, and recall the simil-
lar story in the Clementine Recognitions. They are a
production of the seventh century, and were used by
St. John Damascene, but the veneration of the saint is
very old in both the Greek and Latin Churches. He is
honoured as one of the Holy Helpers, is invoked in
difficult situations and by both the rich and of hunters.
The church of Sant' Eustachio in Rome, title of a cardinal-deacon, existed in 827, ac-
tording to the 'Liber Pontificalis,' but perhaps as
early as the time of Gregory the Great (d. 604). It
claims to possess the relics of the saint, some of which
are said to be at St-Denis and at St-Eustache in Paris.
An island in the Lesser Antilles and a city in Canada
bear his name.

PROXER in Dict. of Christ. Biog., s. v.; Acta SS., Sept. VI,

FRANCIS MERSHAMAN.

Eustathius, Saint, Bishop of Antioch, b. at Side in
Pamphylia, c. 270; d. in exile at Trajanopolis in
Thrace, most probably in 360, according to some
already in 336 or 337. He was first Bishop of
Burea in Syria, whence he was transferred to Antioch
in 325. At the Council of Nicaea (325), he was one of
the most prominent opponents of Arianism and from
325-330 he was engaged in an almost continuous lit-
igious warfare against the Arians. By his fearless
denunciation of Arius and his refusal to engage any
Arian priest in his diocese, he incurred the hatred of
the Arians, who, headed by Eusebius of Caesarea
and his namesake of Nicomedia, held a synod at Ant-
tioch (331) at which Eustathius was accused, by
suborned witnesses, of Sabellianism, incontinency, cruelty,
and other crimes. He was deposed by the synod and
banished to Trajanopolis in Thrace by order of the
Emperor Constantine, who gave credence to the scandal-
ous tales spread about Eustathius. The people of
Antioch, who loved and revered their holy and
learned patriarch, became indignant at the injustice done
to him and decided to go to Rome to defend his
defence. But Eustathius kept them in check, ex-
horted them to remain true to the orthodox faith and
humbly left for his place of exile, accompanied by a
large body of his clergy. The adherents of Eusta-
thius at Antioch continued to use his name, and the
name of Eustathius and refused to acknowledge the
bishops set over them by the Arians. When, after the
death of Eustathius, St. Meletius became Bishop of
Antioch in 360 by the united vote of the Arians and
the orthodox, the Eustathians would not recognize
him, even after his election was approved by the
Synod of Alexandria in 362. Their intransigent atti-
guage gave rise to two factions among the orthodox,
the so-called Meletian Schism (q. v.), which lasted till
the second decade of the fifth century (Cavalleria, Le
schismi d' Antioche, Paris, 1905).

Most of the numerous dogmatic and exegetical
treatises of Eustathius have been lost. His principal
works is "De Eugenstrarum," in which he
maintains against Origen that the apparition of Sam-
uel (1 Kings, xxviii) was not a reality but a mere
phantasm caused by a witch of Endor. In the same
work he severely criticizes Origen for his allegorical interpretation of the Bible.
A new edition of it, together with the respective hom-
ilies of Origen, was made by A. Jahn in Gebhardt and
Harnack's "Theologische Texte," 1890, and in "der
Cavalleria recently discovered a Chrstological homily:
EUSTATHIUS

628

EUSTATHIUS

"S. Eustathii ep. Antioch. in Lazareum, Mariam et Martham homiliae christologicae", which he edited together with a commentary on the literary fragments of Eustathius (Paris, 1903). Fragments of lost writings are found in Migne (P. G., X VIII, 675-698), Pitra and Martin (Analecta Sacra, II, Froles, 37-40, IV, 210), and Mueller in Historia Ec:emon in Historianer" (Migne, P. G., XVIII, 707-794) and " Allocutio ad Imp. Constantinum in Conc. Niceae" (Migne, P. G., XVIII, 673-676) are spurious. His feast is celebrated in the Latin Church on 16 July, in the Greek on 21 Feb. His relics were fought to Antioch, where he became a monk; at the Synod of the Saints, 14 July, in Barnabas, Good, Lives of the Saints, 16 July; Venables in Dict. Christ. Bio, s. v.; Attwater, pp. 130-144; F. Hunemann, Patrology, St. Louis, Missouri (Freiburg-im-Breisgau), 1891; 457-458; Badenweiler, Patrology, St. Louis, Missouri (Freiburg-im-Breisgau), 1891, 457-458.

MICHAELETT.

Eustathius, Greek savant and defender of monasticism, Archbishop of Thessalonica, b. at Constantinople in the early part of the twelfth century; d. at Thessalonica, 1172. He received his ecclesiastical training in the monastic school of St. Euphemia at Constantinople, became a monk there in the monastery of St. Florus, and afterwards deacon of the "Great Church" (St. Sophia), and teacher of rhetoric and secretary of the petitions addressed to the emperor by the most eminent of the Constantinople emperors, especially of Manuel Comnenus I (1143-68) who intrusted to him the education of one of his sons. About 1147 he escaped from the Archbishop of Myra in Asia Minor; but before his installation, was transferred to the See of Thessalonica by special direction of the emperor. In this position he proved himself a real shepherd and father of his people. He tried to reform the worldly and hypocritical lives of the monks and anchors of his time; he shielded his people against the excessive exigencies of the imperial tax-collectors; he remained with his flock at the time of the invasion of Thessalonica by the Normans of Sicily in 1185, and tried to encourage his subjects and alleviate their sufferings. Owing to his opposition to the monastic order and his frankness of speech towards those in high places, he incurred the displeasure of the emperor and was removed from Thessalonica for a brief period; at what time, however, is not known.

Eustathius was a prolific and elegant writer, and the best Greek author of his age. His works may be classified in two categories: 1. Commentaries on the ancient authors written during his activity in Constantinople; and his writings, tracts, orations, or letters, which were occasioned by special circumstances during his episcopate in Thessalonica. Of the former class may be mentioned: "The Commentaries on the Illiad and Odyssey of Homer" (Rome, 1542-50; Basle, 1559-60; Leipzig, 1825-30); "A Paraphrase of the geographical epic of Dionysius Periegetes" ed. Bernhardy (Leipzig, 1828); a "Commentary on the works of Pindar", of which, however, only the preface is preserved (Tafel, 1847); a "Commentary on Eustathius on the ancient classics are much prized by modern philologists. Among the works of the second class the following are to be noted: "A History of the conquest of Thessalonica by the Normans" (ed. Tafel in "Kommene und Normannen", 2d ed., 1870); several adorations written by Emperor Manuel Comnenus I, and the funeral oration at the death of the same; letters written to the emperor or other distinguished personages of his time; several tracts having reference to his plan of reform, such as: "Considerations on the Monastic Life" (German tr. by Tafel, 1847); a letter written to a style of Thessalonian; a tract on hypocrisy; and others. Several purely religious works such as: four Lenten sermons; a sermon for the beginning of the year; and panegyrics for the festivals of various saints. Most of his theological works, first edited by Tafel (1832), are in Migne, P. G., CXXXV, CXXXVI. In these Eustathius shows himself an earnest and zealous ecclesiast, fully penetrated with the genuine spirit of Christianity.

KRAMER. Geschichte der byzantinischen Literatur (Ueberreiter, 1860-62; MÜLLER in Realencyclopdäie (Leipzig, 1881); V. BRAUN in Kirchl. Handwörterbuch (Munster, 1897), I, 3885; RELLER, Fontes rer. byzn. (St. Petersburg, 1892), I, 1, for further bibliographical discursions.

FRANCIS J. SCHAEPER.

Eustathius of Sebaste, born about 300; died about 377. He was one of the chief founders of monasticism in Asia Minor, and for a long time was an intimate friend of St. Basil. He was censured because of the exaggerated asceticism of his followers, hesitated all his life between various forms of Arianism, and finally became a leader of the Pneumatologists condemned by the First Council of Constantinople (381). Eustathius was apparently the son of Eularius, Bishop of Sebaste, the metropolis of Armenia (the Roman province). He studied under Arius (Basil, Ep. oxacit, 3; cxiv, 3; cxlxi, 9), and was known from the beginning of his life as being zealous and strict to the heretic. He was ordained priest and then founded a community of monks. Partly because of his great asceticism, he was suspended from his priesthood by a synod at Neo-Cesarea. Later, in 340, a synod at Gangra condemned his followers (ros riel I Ebedchar) for exaggerated and extravagant asceticism. These monks forbade marriage for any one, refused to communicate with married priests, and taught that no married person can be saved; they fasted on Sundays and would not do so on the appointed fast-days; they claimed special grace for their own conventicles and dissuaded people from marrying, as he did by writing a book on the subject. It was evidently a movement like that of the Encratites and Montanists. Against these abuses the council drew up twenty canons, but without directly censuring Eustathius (Hefele, "Concilium, 1st ed., II, 77 sq.; Braun, "Die Abhaltung der Synode von Gangra" in "Hist. Jahrh., 1895, 586 sq."). Sosom. (Hist. Ecl., III, xiv, 36) says that Eustathius submitted to this council and gave up his eccentricities. However, a synod at Antioch (341?) condemned him again for "perjury" (Sosom., IV, xxiv, 9) perhaps because he had broken his promise made on oath. About the year 356 he became Bishop of Sebaste. St. Basil was at that time (357-358) studying the life of monks before founding his own community at Annesus, and he was much attracted by Eustathius's reputation as a zealous leader of monasticism. For years, till about 372 or so, Basil believed in and defended his friend. But Eustathius was anything but a Catholic. Once, apparently in 366, he persuaded the pope (Liberti, 225-226) of his orthodoxy by presenting a confession of the Nicene faith (Socrates, IV, 39). This is especially remarkable as he was wonted between every kind of Arianism and demi-Arianism and signed all manner of heretical and contradictory formule. In 385 a synod at Melitene deposed him, it seems rather for the old question of his rigorism than for Arianism. Meletius (later the famous Bishop of Antioch) succeeded him at Sebaste. But the Semi-Arians still acknowledged Eustathius. He wandered about, was present at many synods (at Seleucia in 359, later at Smyrna, in Pisidia, Pamphylia, etc. — Socrates, IV, xii, 8), and signed many formule. If one can make of any particulars in so inconsistent a person, it would seem that Eustathius was generally on the side of one of the persons of Semi-Arianism, opposed to Catholics on the one hand and to extreme Arians on the other. St. Basil found him out and broke with him definitively last (about 372 or 373).
By this time Eustathius had taken upon the cause of the people who denied the consubstantial nature of the Holy Ghost (Socrates, Hist. Eccl., I, xiv, 6; Basil, Ep. ccxi, 3). We hear of him last about 377; he was then a very old man (Basil, Ep. ccvii, 4; ccxi, 3). Before his death he wrote a letter to the Patriarch of Constantinople concerning the Roman Armenia, Pontus, and Paphlagonia (Sosomenn, I, xiv, 36). Eustathius had merit as an organiser of works of charity, builder of almshouses, hospitals, refugees, etc. (Epiphanius, Hier., Ixiv, 1; Sosomenn, I, xiv, 36).

Socrates, Hist. Eccl., II, IV; Sosomenn, Hist. Eccl., III. Besides references in the letters of Saint Basil in P. G., XXII, 223, an Acta Sanctorum, February 25, De Spiritu Sancto, and the works of Saint Isidore of Seville, see also the letter of the Patriarch of Constantinople to the Church of Rome, since Eustathius had access to the Patriarch for having permitted the outrage. Eustathius died shortly after and was succeeded in the supervision of the nunneries by his niece, the younger Paula. The Church celebrated her feast on 25 September.

ADRIAN FORTESCUE

Euthalius (Eleudaios), a deacon of Alexandria and later Bishop of Sulae. He lived towards the middle of the fifth century, and is chiefly known through his work on the New Testament in particular as the author of the "Euthalian Sections". It is well known that the divisions into chapters and verses with which we are familiar were entirely wanting in the original and early copies of the New-Testament writings; there was even no perceptible space between words. To remedy this want various men of learning proposed various schemes, but none of them was satisfactory. In this condition of the text, Ammonius of Alexandria, in the third century, conceived the idea of dividing the Four Gospels into sections varying in size according to the substance of the narrative embodied in them, and Euthalius, following up the same idea, extended a similar system of division to the other books of the New Testament with the exception of the Apocalypse. So obvious were the advantages of the scheme that it was soon adopted throughout the Greek Church. As divisions of the text these sections have no longer any use, but were a help in the study of the text and adopted in nearly all the Churches, and noted by the copyists, they are valuable as chronological indications, their presence or absence being an important circumstance in determining the antiquity of a manuscript.

Other labours of Euthalius in connexion with the text of the New Testament refer to the larger sections or lessons to be read in the liturgical services, and to the more minute divisions of the text called στιχοι, or verses. The custom of reading portions of the New Testament in the public liturgical services was already established in the Church in the time of St. Jerome, and the division of the Psalter by St. Jerome, the direction of St. Jerome. The three other monasteries were taken by Paula and Eustathius and the numerous virgins that flaked around them. The three nunneries, which were under the supervision of Paula, had only one oratory, while all the nuns met several times daily for prayer and the chanting of psalms. St. Jerome testifies (Ep. 308) that Eustathius and Paula performed the most menial services. Much of their time they spent in the study of Holy Scripture under the direction of St. Jerome.

The idea of dividing the Scriptures into verses, or στιχοι, did not originate with Euthalius. It had already been applied to portions of the Old Testament, especially to the poetical parts, and even to some parts of the New. Here, as with regard to the other divisions, Euthalius only carried out systematically and delimited the passages there was little or no uniformity, the Churches having, for the most part, each its own series of selections. Euthalius elaborated a scheme of divisions which was soon universally adopted. Neither the Greek nor the Apocalypse enter into this series, but the other portions of the New Testament are divided into 57 sections of varying length, 53 of which are assigned to the Sundays of the year, while the remaining four refer probably to Christmas, the Epiphany, Good Friday, and Easter.

The idea of dividing the Scriptures into verses, or στιχοι, did not originate with Euthalius. It had already been applied to portions of the Old Testament, especially to the poetical parts, and even to some parts of the New. Here, as with regard to the other divisions, Euthalius only carried out systematically and delimited the passages; in the Church, the Epistle to the Romans contained 920 of these verses; Galatians, 293; Hebrews, 703; Philoemen, 37, and so on.

Besides these textual labours Euthalius framed a catalogue of the quotations from the Old Testament and from profane authors which are found in the New-
Testament writings. He also wrote a short “Life of St. Paul” and a series of “Argumenta” or short summaries which are placed by way of introduction to the different books of the New Testament. Of Euthalian’s activities as a bishop little or nothing is known. Even the location of his episcopal see is in a measure uncertain. It can hardly be identified with the bishopric of that name in Sardina. More likely it was situated somewhere in Egypt, and it has been conjectured that it is the same as Salka, a city of the Thebaid in the neighborhood of Syene.

As a work long lost in oblivion, the works of Euthalian were published in Rome, in 1898, by Lorenzo Alessandro Zacagni, Prefect of the Vatican Library. They are embodied in the first volume of his “Collectanea Monumentorum Veterum Ecclesiae Graecae et Latinae.” They are also found in Gallandi (Biblioth. Pat., X, 197) and in Migne (P.G., LXXXV, 621).

Euthalian (from Greek Εὐθαλίας, well, and κηριός, death), easy, painless death. This is here considered in so far as it may be artificially brought about by the employment of anesthetics. When these last are of a character to deprive the sufferer of the use of reason, they are considered “safe deaths.” A man’s human life is not viewed with approval by the received teaching of the Catholic Church. The reason for this attitude is that this practice deprives a man with the capacity to act meritoriously at a time when the competency is most necessary and its product invested with finality. It is equally obvious that this space is immemorially precious to the sinner who has still to reconcile himself with his offended God.

An additional motive assigned for this doctrine is the administration of drugs of the nature specified above is considered as being equivalent to a shortening of the life of the patient. Hence as long as the stricken person has not yet made an adequate preparation for death, it is always grievously unlawful to induce a condition of insensibility. The most that may be granted to those charged with responsibility in the case is to take up a passively permissive demeanor whenever it is certain that the departing soul has abundantly made ready for the great summons. This is especially true if there is ground for apprehending, from the dying person’s condition, that his faculties are not disturbed.

In no contingency, however, can any positive indorsement be given to means whose scope is to have one die in a state of unconsciousness. What has been said applies with equal force and for the same reasons to the case of those who have to suffer capital punishment by process of law.

Euthymius, Saint (styled THE GREAT), abbot in Palestine; b. at Melitene in Lesser Armenia, A.D. 377; d. A.D. 473. He was educated by Bishop Ortheius of Melitene, who afterwards ordained him priest and placed him in charge of all the monasteries in the Diocese of Melitene. At the age of twenty-five he secretly set out on a pilgrimage to Jerusalem and remained for some time with a settlement of monks at a laurra called Pharao, about six miles east of Jerusalem. In 411 he withdrew, with St. Theoctistus, a fellow-franciscan, into the wilderness, and lived for a while in a rotary cavern on the bank of the river of Jabbok. When many disciples gathered around them they turned the cavern into a church and built a monastery which was placed in charge of St. Theoctistus.

A miraculous cure which Euthymius was believed to have effected for Terebon, the son of the Saracen chief Aspetebus, spread the fame of the holy hermit far beyond the confines of Palestine.—Aspetebus, was afterwards ordained priest and became bishop over his tribe, in which capacity he attended the Council of Ephesus in 431.

When the news of this miracle had made the name of Euthymius famous throughout Palestine, and large crowds came to visit him in solitude, he retreated with his disciple Domitian to the wilderness of Ruba, near the Dead Sea. Here he lived for some time on a remote mountain called Marda whence he afterwards withdrew to the desert of Zephos (the ancient Empedon). When large crowds followed him to this place also, he returned to the neighbourhood of the monastery of Theoctistus, where he took up his abode in a cavern. Every Sunday he came to the monastery to take part in the Divine services. At length, because numerous disciples desired him as their spiritual guide, he founded, in 420, on the right side of the road from Jerusalem to Jericho, a laura similar to that of Pharan. The church connected with this laura was dedicated in 428 by Juvenal, the first Patriarch of Jerusalem. When the Council of Chalcedon (451) condemned the errors of Eutyches, it was greatly due to the authority of Euthymius that most of the Eastern recluses accepted its decrees. The Empress Eudoxia was converted to Catholic unity through his intercessory efforts. This letter survives his feast on 20 January, the day of his death.

Eutropius of Valencia, a Spanish bishop; d. about 610. He was originally a monk in the Monasterium Sericionum at St. Isidore and Idefonseus to its founder and one of his disciples. He was converted to Catholicism in the ninth century and became Bishop of Valencia. Eutropius is known as the author of three letters, one to Liciianius, Bishop of Carthagena, and two to Peter, Bishop of Iuribies. In the first, which has been lost, he inquires the reason for anointing baptized children with holy chrism. This letter is known through St. Isidore. The same saint mentions a letter to Bishop Peter, the text of which has been preserved, which he says every monk should read. The title is “De destructione monachorum et turribus monasteriorum”. In response to a suggestion of such candidates for his monastery, he points out that the number of monks is a small matter compared with their earnestness. He may be criticized for his severity in enforcing the rule and in reprimanding the guilty, but he can easily justify himself, as his whole care consists in applying the rules the founders of the monastery laid down. And thus the reproaches made against him fall back on their authors. In any case he will not swerve from his course; he is indifferent to the criticisms of men. He cannot allow the faults of his monks to go unpunished. In the 47 Fathers agree that correction is one of the first duties of him who is charged with the guidance of others, and negligence on this head would only lead to serious irregularities. The second letter to Bishop Peter touches on the seven deadly sins. Like Cusanus, Eutropius enumerates eight: gluttony, lust, avariciousness.
Eutyches, an heresiarch of the fifth century, who has given his name to an opinion to which his teaching and life gave little if any notice. The accuracy of that view is the assertion that Christ has but one nature after the Incarnation, and it is spoken of indifferently as the Eutychian or the Monophysite heresy, though Eutyches was not its originator, and the Eutychian and Monophysite schools are not identical. The Monophysites, who all looked upon St. Cyril of Alexandria as their great Doctor. Eutyches in 448 was seventy years of age, and had been for thirty years archimandrite of a monastery outside the walls of Constantinople, where he ruled over three hundred monks. He was not a learned man, but was much respected and had influence through the infamous minister of Theodosius II, the eunuch Chrysaphius, to whom he had stood godfather. He was a vehement opponent of Nestorianism, and of the Antiochian party led by Theodoret of Cyrus (Cyrrhus) and John of Antioch. These bishops had, for a time, championed the orthodoxy of Nestorius, but he had eventually accepted the Council of Ephesus in 431, making peace with St. Cyril of Alexandria in 434. Mutual explanations had been exchanged between the great theologians Theodoret, Cyril, but their paroikians had not been convinced. On the death of Cyril, in 444, his successor Dioscurus was not slow to renew hostilities, and the Nestorianists and anti-Nestorians everywhere took the offensive. It was but as a part of this great movement that Constantine VIII pronounced a supposed revival of Nestorianism. He wrote to Pope Leo on the subject, and received a sympathetic reply. The Patriarch of Antioch, Domnus, was on his guard, and he addressed a synodal letter to the Emperor Theodosius II, accusing Eutyches of renewing the heresy of Apollinarius (this had been the charge of the Antiochian party against St. Cyril) and of wishing to anathematize the great Antiochian teachers of a past generation, Diodorus and Theodore a point in which Eutyches was not altogether in the right. St. Flavian, Bishop of Constantinople, probably in 448, as St. Flavian, Bishop of Constantinople, had heard of no such accusation when he held a synod, on Nov. 8th, with regard to a point of discipline connected with the province of Sardis. Eutyches had been acquainted with various persons of covert Nestorian sympathies. He was at the end of the session of this synod one of those inculpated, Eusebius, Bishop of Dorylæum, brought the question forward, and preferred a counter charge of heresy against the archimandrite.

Eutyches had been, many years before, while yet a layman, one of the first to detect, and denounce, the errors in the sermons of Nestorius, and he was naturally indignant at being called a Nestorian. Flavian expressed great surprise at this sudden and unexpected charge, and suggested a private conference with Eutyches. Eusebius refused, for he had had frequent interviews without result. At the second session the orthodox view was defined, at Eusebius’s request, by the reading of the second letter of St. Cyril to Nestorius, and its approbation by the council of Ephesus, and also of the council of Antioch, “Letentur eoli”, written after the agreement between the two patriarchs, in 434. These documents were acclaimed by all. Flavian summed up to the effect that Christ was “of two natures”, δύο φύσεως, after the Incarnation; Basil of Seleucia and Severus of Antioch were more exact in saying that Christ was “in two natures”, and all the bishops echoed, in their own words, the sentiments of the president. In the third session the messengers, who had been sent to summon Eutyches to attend, returned, bringing his absolute refusal. He had determined, he declared, that he would never set foot outside his monastery, which he regarded as his tomb. He was ready to subscribe to the councils of Nicaea and Ephesus; though in doing so he ought not to be understood to subscribe to, or to condemn, any errors into which they might have fallen; he had万达 the more so than the excommunications of the Fathers, and he adored one nature of God, incarnate and made man after the Incarnation. He complained that he had been accused of saying that God the Word had taught. His friendsJwt my own, the council therefore ad- dressed a letter to him, summoning him to appear, for his excuse was insufficient in face of so serious a charge. Eusebius of Dorylæum, whose ardour was by no means quenched, then pointed out that Eutyches had been sending round a writing to the different monasteries to stir them up, and that danger to the council might result. Two priests were therefore sent round to the different monasteries in the city, two to those across the Golden Horn, and two across the Bosporus to Chalcedon, to make enquiries.

Meanwhile the synod was convoked, and Eutyches had returned. After some difficulties and the plea of illness, Eutyches had consented to receive them. He still refused to leave his monastery, and begged them not to trouble to call a third time (as the canons directed), but to treat of the matter at once, and that he might be pleased. The council, however, sent him a third and final summons, to appear on the morning of the next day but one, 17th Nov. or take the consequences. The next day a Priest-Archimandrite Abraham and three deacon monks appeared on behalf of Eutyches. Abraham declared that Eutyches had passed the night in groaning, and that he himself had consequently not slept at all either. St. Flavian replied that the Synod would wait for Eutyches’s recovery. He was not asked to come to enemy, but to brothers and others. He had formed his opinions. He knew that Theodosius attacked the truth. Let him do the same once more. Repentance will be no disgrace to him. As the assembly rose, Flavian added: “You know the accuser’s seal, and that fire itself seems cold to him, on account of his seal of piety. And God knows, I have both advised and entreated him to desist. But when he set to work, what was I to do? I desire not your dispersion, God forbid, but rather to gather you in. It is for enemies to disperse, for fathers to gather into one.”

On the following day Eutyches did not appear, but promised to come in five days, that is on the following Monday. It was proved that Eutyches had sent round a tome to other monasteries for signature. It was said to contain the Faith of Nicaea and Ephesus, nor was it shown to have contained anything further.
On the Saturday, Eusebius elicited testimony to further heretical remarks of Eutyches, which the envoys had heard him make. In particular he had denied two natures in Christ after the Incarnation, and had said he was ready to be condemned; the monastery should be put down. On Monday, 22nd June, Eutyches was sought vainly in the Church and the Archbishop’s palace, but was eventually announced as arriving with a great multitude of soldiers, and monks, and attendants of the Prefect of the Prætorian guard, and this threat only permitted him to enter under the synod’s promise that his person should be restored to them. With the cortège came a Silentiary named Magnus, bringing a letter from the Emperor, who desired that the Patrician Florentius should be admitted to the Council; the Silentiary was therefore sent to invite his presence. Eusebius showed more than ever his anxiety that Eutyches should be convicted on the grounds of his former sayings, lest he should now unsay them, and be simply acquitted; for in that case his accuser might be made liable to the penalties due to calumnious accusation: “I am a poor man,” he said, “without means. He threatens me with exile; he is rich; he has already depicted the Oasis as my destination!” Flavian and the Patriarch replied that any submission made by Eutyches now should not release him from answering the charges as to his past words. Flavian said: “You have even said, most Eutyches, what your accuser says. Say now whether you admit the union of two natures, ἐν δύο φύσεωσι εἰκόνα;” Eutyches replied: “Yes, ἐν δύο φύσεωσι.” Eusebius interrupted: “Do you acknowledge two natures, Lord Archimandrite, after the Incarnation, and do you say that Christ is consubstantial with us according to the flesh; yes or no?” This expressed clearly the whole question between Catholic truth and the heresy of Monophysitism. Eutyches would not give a direct answer. Perhaps he was puzzled and cautious. At all events, with that a negative immediate condemnation, while an affirmative one would contradict his own former utterances. “I did not come here to dispute,” he said, “but to make clear my view to your Holiness. It is in this paper. Order it to be read.” As he would not read it himself, Flavian ordered him to declare his belief. His vague reply evaded the point, merely asserting that he believed “in the Son’s incarnate advent of the flesh of the holy Virgin, and that He was perfectly made Man for our salvation”. When urged, Eutyches declared that he had never said that the two natures were consubstantial with us, but he acknowledged the holy Virgin to be consubstantial with us. Basil of Seleucia urged that her Son must therefore also be consubstantial with us, since Christ was incarnate from her. Eutyches answered: “Since you say so. I agree with all”; and he further explained that the body of Christ is the body of God, not of a man, though it is a human body. Provided he was not understood to deny that Christ is the Son of God, he would say “contubernal with us,” as the Archbishop wished it and permitted it. Flavian was not denied that the expressions used by the Silentiary were wrong: “On so many occasions, we have declared that this is the way these natures are united; he was not a man. He refused to accept the letters; if not, according to the synod’s wish, but he would not anathematize all who did not use these expressions; otherwise he would be anathematizing the holy Fathers. Nor would he admit that Cyril or Athanasius had taught two natures after the Incarnation (and this was indeed correct, so far as mere words go). But Basil of Seleucia rightly urged: “If you do not say two natures after the union, you say there is mixture or confusion” (though, at the Robber Council, the unfortunate bishop was vain to deny his words). Florentius then declared, that he is not condemned by the emperor’s decree; and also δοκεῖς. The synod agreed, and considered the forced submission which Eutyches offered to be insincere. Flavian then pronounced the sentence of degradation, excommunication, and deposition. This was signed by abbeys bishops, including Julian of Ces, the pope’s châtel d’affaires to the Court of Theodosius. The acts of this synod are preserved for us, because they were read in full at the Robber Council of Ephesus, in the following year 449, and again, in 451, at the Council of Chalcedon as a part of the Acts of the Robber Council. Flavian took care that the acts should also be signed by many archimandrites of the city. Eutyches, on his side, wrote for support to the chief bishops of the world, and placarded Constantinople with complaints. He sent an appeal to the pope (St. Leo, Ep. xxi) explaining that he had refused to affirm two natures and to anathematize all who did not do so; else he would have condemned the holy Fathers, Popes Julius and Felix, Saints Athanasius and Gregory (he is referring to the extracts from the Fathers which were read in the first session of the Council of Ephesus) and, according to the earlier documents, were Apollinarian forgeries, and such is still the opinion of critics. See Harnack, Bardenhewer, etc.). Eutyches continued: “I requested that this might be made known to your holiness, and that you might judge as you should think fit, declaring that in every way I should follow that which you approve.” It was untrue that Eutyches at the council had appealed to the pope. He could only prove that in a low voice he had said he referred his case to the great patriarchs. When St. Leo had received the Acts of the council, he would have immediately condemned the man who had erred through ignorance, and might be restored if he repented. Dioscorus of Alexandria, imitating some of his predecessors in assuming a primacy over Constantinople, simply annulled the sentence of Flavian, and absolved Eutyches.

The archimandrite had not been touched by the consideration Flavian had shown. His obstinacy continued. He obtained, through Chrysaphius, a new synod of 32 bishops, which met in April 449 (without the presence of Flavian, but including the Patrician Florentius in the synod’s secret council), in order to examine his complaint that the Acts had been falsified. After a careful revision of them, some slight alterations were made to please Eutyches; but the result was of no practical importance. Dioscorus and Eutyches obtained the convocation by the Emperor of an oecumenical council to meet at Ephesus on 1st August, 449. The proceedings of the party of Dioscorus before and at that council will be found under Dioscorus, and Robber Council of Ephesus: it is only necessary to say here that in the session of those natures was exalted, and absolved, while violence was done to Flavian and Eusebius, who were imprisoned. The former soon died of his sufferings. Both had appealed to Rome. The Pope annulled the council, but Theodosius II supported it. On that Emperor’s sudden death the outlook changed. A new council met at Chalcedon in October, 451, at the wish of the Emperor Marcian and his consort St. Pulcheria, the course of which was directed by imperial commissioners, in accordance with the directions of St. Leo, whose legates represented. Dioscorus was deposed. Eutyches was exiled to Paphlagonia. Eutyches was also exiled. A letter of St. Leo (Ep. 134), written 15th April, 454, complains that Eutyches is still spreading his poison in banishment, and begs Marcellus to transfer him to some more distant and lonely spot. The old man does not seem
to have long survived. His monastery, at Constantinople, was put under the supervision of Julian of Cse, the priest, that prelate being still the papal representative at Constantinople.

The principal authorities for the life of Eutyches are The Acts of the Council of Chalcedon and The Letter of St. Leo. See also under EUTYCHIANISM.

JOHN CHAPMAN.

EUTYCHIANISM and Monophysites are usually identified as a single heresy. But as some Monophysites condemned Eutyches, the name Eutychian is given by some writers to only the more extreme of these sectaries, or even only to those in Armenia. It seems that the views of Gennadius, a leading member of the sect looked to Eutyches as a founder or a leader, and Eutychian is but a nickname for all those who, like Eutyches, rejected the orthodox expression "two natures" of Christ. The tenet "one nature" was common to all Monophysites and Eutychians, and they affected to call Catholics Diphysites or Dyophysites. The error took its rise in a reaction against Nestorianism, which taught that in Christ there is a human hypostasis or person as well as a Divine. This was interpreted to imply a want of reality in the union of the two natures. The union was seen by Nestorius as consisting in two Christs, two Sons, though this was far from the intention of Nestorius himself in giving his incorrect explanation of the union. He was ready to admit one θεόσωφος, but not one hypostasis, a "prosopic" union, though not a "hypostatic" union, which is the Catholic expression. He far exaggerated the distinction of the humanity from the Divine Person Who assumed it, that he denied that the Blessed Virgin could be called Mother of God, Θεοτόκε. His views were for a time interpreted in a benign sense by Theodoret, and also by John, Bishop of Antioch, but they all eventually concurred in his condemnation, when he showed his heretical spirit by refusing all submission and explanation. His great antagonist, St. Cyril of Alexandria, was at first vehemently attacked by Theodoret, John, and their party, as denying the completeness of the Sacred Humanity after the manner of the heretic Apollinaris.

The fiery Cyril curbed his natural impetuosity; mutual explanations followed; and in 434, three years after the Council of Ephesus which had condemned Nestorianism, the mouths of all philosophers between Alexandria and Antioch. Cyril proclaimed it in a letter to John beginning Latensur soli, in which he clearly condemned beforehand the Monothelitae, if not the Monophysites, views which were to be unfortunately based on the writings of the Pope. He also taught, although he did not arrive quite at the exactness of the language in which St. Leo was soon to formulate the doctrine of the Church, yet the following words, drawn up by the Antiochian party and fully accepted by Cyril in his letter, are clear enough: "before the worlds begotten of the Word are begotten according to the Godhead, but in the last days and for our salvation of the Virgin Mary according to the Manhood; consubstantial with the Father in the Godhead, consubstantial with us in the Manhood; for a union of two natures took place, wherefore we confess one Christ, one Son, one Lord. According to the understanding of this confused union, we confess the Blessed Virgin to be Theotokos, because the Word of God was incarnate and made man, and through her conception united to Himself the temple He received from her. And we are aware that there are those who deny that the union concerning the Lord are, by theologians, looked upon some as applying in common [to the two natures] as belonging to the one Person; others as attributed to one of the two natures; and that they tell us by tradition, as it were, the one has the nature of the Godhead, the other of the humanity. Others of humble nature belonging to the Lord is called humanity. In this "creed of the union" between John and Cyril, it is at least implied that the two natures remain after the union (against Monophysitism), and it is quite clearly enunciated that some expressions belong to the Godhead, others to the humanity, as, e. g., it was later defined that activities (καρδιών) and will are of the Nature (against Monothelitism), while Sonship (against the Adoptionists), is of the Person. There is no doubt that Cyril would have understood rightly and have accepted (even apart fr:) papal authority in the false words of St. Leo's tome: "Agit enim utraque forma cum alterius communione quo quod proprium est." (Ep. xxxvii, 4). The famous formula of St. Cyril μία φύσις τοῦ Θεοῦ λίτου σωμάτου, "one nature incarnate of God the Word," derived "of the Word of God," afterwards, by a treatise which Cyril believed to be by St. Athanasius, the greatest of his predecessors, was intended by him in a right sense, and has been formally adopted by the Church. In the eighth canon of the Fifth General Council, those are anathematized who say "one Nature incarnate of God the Word," unless they "accept it as the Fathers taught, that by a hypostatic union of the Divine nature and the human, one Christ was effected." In the Lateran Council of 649, we find: "Si quis secundum sanctos Patres non confiteretur propriam humanum naturam unam, nec sibiuae uniam, sed secundum Carissimi, anathematis dacia. Nevertheless this formula, frequently used by Cyril (in Epp. i, ii, Ad Successum; Contra Nest. ii; Ad Eulogium, etc.; see Petavius "De Incarn.", IV, 6), was the starting-point of the Monophysites, some of whom undertook it rightly, whereas others pushed it to a denial of the reality of the human nature, while all equally used it as a proof that the formula "two natures" must be rejected as heretical, and therefore also the letter of St. Leo and the decree of Chalcedon.

The word φύσις produced just the same difficulties that the word θεόσωφος had aroused in the preceding century. For θεόσωφος, as St. Jerome rightly declared, was the equivalent of φύσις in the mouths of all philosophers; yet it was eventually used theologicaly, from Didymus onwards, as the equivalent of the Latin persona, that is, a subsistent essence. Similarly φύσις was an especially Alexandrian word for φύσις and θεόσωφος, and was naturally used of a subsistent φύσις, not of the abstract essence of the, as often (as in the formula in question), and by the more moderate Monophysites. The Cyrilian formula, in its genesis and in its rationale, has been explained by Newman in an essay of astounding learning and perfect clearness (Tracts Theol. and Eccl., iv, 1574). He points out that the word "one" could be used, as by St. Athanasius, for example, without change of meaning, both of the one Godhead, and of the three Persons. In the former case it did not mean the Divine Essence in the abstract, but considered as subsistent, without defining whether that subsistence is threefold or single, just as we say "one God" in the concrete, without denying a triple Personality. Just the same twofold use without change of meaning might be made of the words θεόσωφος, δύο, and φύσις. Again, φύσις was not applied, as a rule, in the fourth century, to the Humanity of Christ, because the word "one nature" in the sense of "wholly like to our nature"—since it is sinless, and free from all the imperfections which arise from original sin (not pura natura but integra natura)—it has no human personality of its own, and it is ineffable grace and glory, not mixed with the Word. From this point of view it is clear that Christ is not so fully "consubstantial with us" as is the consubstantial with the Father. Yet again,
in these two phrases the word consubstantial appears in different senses; for the Father and the Son have one substance numero, whereas the Incarnate Son is of one substance with us specie (not numero, of course). It is therefore not to be wondered at, if the expression "consubstantial with us" was avoided in their dogmatic statements, especially when defining the incommunicable nature of the Father. In like manner, the word φύσις has its full meaning when applied to the Divine Nature of Christ, but a restricted meaning (as has been just explained) when applied to His Human Nature.

In St. Cyril's use of the formula its signification is plain. "It means (φύσις), says Nolosius (loc. cit. p. 316 "), that when the Divine Word became man, He remained one and the same in essence, attributes and personality; in all respects the same as before, and therefore μαία φύσις. It means (φύσις), that the manhood, on the contrary, which He assumed, was not in all respects the same nature as that of man, Ἰσραήλ, Ἰσραήλ, Ἰσραήλ, etc., out of which it was taken; (1) from the very circumstance that it was only an addition or supplement to what He was already, not a being complete in itself; (2) because in the act of assuming it, He changed it in its quality, not in its added nature, as collateral in its position, but by an adjective or participle, as ἑπεξεργασμένη. The three words answered to St. John's ἐν γενετο ἐν κόσμῳ καὶ ἐν κόσμῳ ἀποκαλεθέντος ἐν παντὶ καὶ ἐν αὐτῷ καὶ ἐν τῷ πάσηι καὶ ἐν τῇ πάσῃ. Thus St. Cyril's word φύσις, in the teaching of the Council of Antioch (against Paul of Samosata, 264-72) that the Word is unchangeable by the Incarnation, "that He is in καὶ τὸ αὐτὸ τῆς φύσεως from first to last, on earth and in heaven." (p. 317). He intended by his one nature of God, "with the council of Antioch, a protest against that alternableness and imperfection, which the anti-Catholic schools affixed to their notion of the Word. The council says 'one and the same in φύσις': it is not speaking of a human φύσις in Christ, but of the divine. The case is the same in Cyril's Formula; he speaks of a μαία φύσις in the Word. He has in like manner written a treatise entitled 'quod unius sit Christus'; and, in one of his Paschal Epistles, he enlarges on the text 'Jesus Christ, yesterday, and today, the same, and for ever.' His great theme in these words is not the coalescing of the two natures into one, but the error of making two fons, one before and one upon the Incarnation, one divine, one human, or again of degrading the divine φύσις by making it subject to the humanity." (pp. 321-2). It has been necessary thus to explain at length St. Cyril's meaning in the formula μαία φύσις. We have already endeavoured to explain clearly, the various phases of the Eutychian doctrine.

1. The Eutychian party before Chalcedon did not put forward any doctrine of their own; they only denounced as Nestorians any who taught μαία φύσις, two natures, which they made equal to two hypostases, and two Sons. They usually admitted that Christ was μεία φύσις "of two natures", but this meant that the Humanity before (that is, logically before) it was assumed was a complete φύσις; it was no longer a φύσις (subexistent) after its union to the divine φύσις. It was not necessary that those of them who were consistent should reject the teaching of St. Leo, that there were two natures: "Τονετ' ενιστ' εισεισ ητεπεται ζωμα ιτρον λεγεντα", "Αναμες εν Φρονις ενε ισουε ην ους ηθελεντα", if they chose to understand "nature" to mean a subexistent nature, they were even bound to reject such language as Nestorian. Their fault in itself was not necessarily that they were Monophysites at heart, but that they would not stop to listen to the six hundred bishops of Chalcedon, to the envoys of the entire Western Church, who were ready to hear explanations and to realise that words may have more than one meaning (following the admirable example set by St. Cyril himself), were able to remain in the unity of the Church. The rest were rebels, and whether orthodox in belief or not, well deserved to find themselves in the same ranks as the real heretics.

2. Eutyches himself was not a Cyrilian. He was not a Eutychian in the ordinary sense of that word. His mind was not clear enough to be definitely Monophysite, and St. Leo was quite right in thinking him Ignatian. He was with the Cyrilians in accepting as Nestorians all who spoke of two natures. But he had never adopted the "consubstantial with us" of the "creed of the union", nor St. Cyril's admissions, in accepting that creed, as to the two natures. He was willing to accept the creed as the decisions of Epaphras and Nicaea only in a general way, in so far as they contained no error. His disciple, the monk Constantine, at the revision, in April, 449, of the condemnation of Eutyches, explained that he did not accept the Fathers as a canon of faith. In fact Eutyches simply upheld the ultra-Protestant view that nothing can be imposed as of faith which is not verbally to be found in Scripture. This, together with an exaggerated horror of Nestorianism, appears to describe his whole theological position.

3. Did Eutyches, then, as Nestorius who followed him seem to have been pure Cyrilians, who by an excessive dislike of Nestorianism, fell into excess in minimizing the completeness of the Humanity, and exaggerating the effects upon it of the union. We have not as documents sufficient though throughout the teaching of the Synod of Dioscorus is preserved in the "Antirrhetics" of Nicephorus (Spicil. Solesm., IV, 380) which asks: "If the Blood of Christ is not by nature (εστιν φύσις) God's and not a man's, how does it differ from the blood of goats and bulls and the ashes of a heifer? For this is earthly and corruptible, and the blood of man according to nature is earthly and corruptible. But God forbid that we should say the Blood of Christ is consubstantial with one of those things which are according to nature (εστιν των εστιν φυσεως)." If this is the purpose to be, from a letter written by Dioscorus from his exile at Gangra, we shall have to class him with the extreme Monophysites "in incorruptibles", in that he rejects the "consubstantial with itself" and makes the Blood of Christ incorruptible of its own nature. But the passage may conceivably be a Julianist forgery.

4. Timothy Ælurus, the first Monophysite Patriarch of Alexandria, was on the contrary nearly orthodox in his views, as has been clearly shown by the extracts published by Lebon from his works, extant in Syriac in the British Museum. In his treatises he acknowledges the two natures, and the attributes of each, that φύσις, nature, can be taken in an abstract sense. Hence he makes extracts from St. Leo, and mocks the pope as a pure Nestorian. He does not even accept μεία φύσις, and declares there can be no question of two natures, either before or after the Incarnation. "There is no nature which is not a hypostasis, nor hypostasis which is not a person." So far we have, not heresy, but only a term defined contrary to the Chalcedonian and Western usage. A second point is the way Ælurus understands φύσις to mean that which is "nature". He, says, is by nature God, not man; he became man only by ἡσυγνωσία (economy or Incarnation); consequently His Humanity is not His φύσις. Taken thus, the formula μαία φύσις was intended by Ælurus as an orthodox sense. Thirdly, the actions of Christ are attributed to His Divine Person, to the one Christ. Here Ælurus seems to be orthodox. For the Monothelites Monothelism is the refusal to apportion the actions (ἐνέργεια) between the two natures, but to insist that they are all the actions of the one Person. How far Ælurus was in reality a Monothelite cannot be judged until his works are before us in full. He is, at all events in the main, a schismatic, full of hatred and contempt for the Catholic Church outside Egypt, for the 600 bishops of Chalcedon, for the 1600 of the Encyclopaedia, for Rome and the whole West. But
he consistently anathematized Eutyches for his denial that Christ is consubstantial with the Father. In the following year, Bishop of Antioch (511–39), was the great Monophysite leader. In his earlier days he rejected the Heterocton of Zeno, but when a patriarch he accepted it. His contemporaries accused him of contradicting himself in the attempt, it seems, to be comprehensive. He did not, however, conciliate the Incorruptible, but maintained the corrup
tibility of the Body of Christ. He seems to have admitted the expression de θεοὶ φύσεως. Chalcedon and Pope Leo he treated as Nestorian, as Ellurus did, on the ground that two nature meant two persons. He held that the two natures were to be distinguished parted; but this is no more than the view of many modern Catholic theologians that it has no esse of its own. (So St. Thomas, III, Q. xvii, a. 2; see Janens, De Deo
homine, pars prior, p. 607, Freiburg, 1901.) It need not be understood that by thus making a composite hypostasis Severus renounced the Cyrillic doctrine of the unchanged nature of the Word after the unconfused union. Where he is most certainly heretical is in his conception of one nature not Divine (so Cyril and Ellurus but theandric, and thus a composition, therefore not a hypostasis. To them a nature are attributed all the activities of Christ, and they are called “theandric” (θεογενεια θεομορφια), instead of being separated into Divine activities and human activities as by the Catholic doctrine. The union of Christ with the Manoxenian text. Acts are not considered as a single activity. Therefore even if Severus could be defended from the charge of strict Monophysitism, in that he affirmed the full reality of the Human Nature of Christ, though he refused to it the name of nature, yet at least he appears as a dogmatic Monothelite. This is the more clear, in that on the crucial question of one or two natures, he pronounces for one theandric will. On the other hand utterances of Severus which make Christ’s sufferings voluntarily permitted, rather than naturally necessitated by the action inflicted on His Body, might perhaps be defended by the considera
tion that from the union and consequent Beatific Vision in the Soul of Christ, would congruously ensue a beatification of the Soul and a spiritualizing of the Body, as was actually the case after the Resurrection; from this point of view it is true that the possibility of the Humanity is voluntary (that is, decreed by the Divine will) and not due to it in the state which is connotat to it after the union; although the Human Nature is of its own nature separable apart from the union (St. Thomas, III, Q. xiv, a. 1, q. 2). It is im
plicated in Monothelitism, for it is the principle that the union or hypostasis (the sense of hypostasis) of the Son which is said to have been crucified, but the words are attached to a threefold invocation of the Trinity. Peter may therefore be considered as a full-blooded Monophysite, who car
ried the heresy to its extreme, so that it involved error as to the Trinity (Sabellianism) as well as with respect to the Incarnation. He did not admit the addition of the words “Christ our King” which his orthodox rival Calandio added to his formula. Some Seythian monks of Constantinople, led by John Martens, before the reconciliation with the West in 519, upholding the formula “one of the Trinity was crucified” as a test to exclude the heresy of Peter Fullo on the one hand and Nestorianism on the other. They were or
dodox adherents of the Council of Chalcedon. Pope Hormisdas thought very badly of the monks, and could do nothing to suppress their proceedings. The council it was approved by John II, in 534, and imposed under anathema by the Second Council of Constantinople in 553, which closed the so-called “Theopaschite” controversy.

9. We have further to catalogue a number of sub
divisions of Monophysitism which puliultated in the sixth century. The Agnoei were Corrupticles, who denied completeness of knowledge to the Human
Nature of Christ; they were sometimes called The-"Natives, from Themistius Calonymus, an Alexandrian deacon, their chief writer. They were excommunicated by the Patriarchs of Alexandria, Theodoret, who in his "Kenoitic" theories of our day. The Theodites, or Triteisthe, or Condobaudites, were founded by a Constantopolitan philosopher, John Asonagus, or Asonaghes, at the beginning of the sixth century, but their principal teacher was John Philopus, an Alex-"Man 20700, an Alexandrian philosopher, who died probably towards the end of that century. These heretics taught that there were three natures in the Holy Trinity, the three Persons being individuals of a species. A zealot of the sect was a monk Athanasius, grandson of the Emperor Theodosios, wife of Justinian. He followed the view of Theodosius, that the bodies to be given in the resurrection are new creations. Stephen Gobara was another writer of this sect. Their followers were called "others of the same period. The authors were: "Conon, Bishop of Tarseus (c. 600), who eventually anathematized his teacher Philoponus. The Cononians are said to have urged that, though the matter of the body is corruptible, its form is not. The Triteists were excommunicated by the Jacobite Patriarch of Tarsus (c. 570), who found the unity of God in a μαζί distinct from the three Persons, which he called τριείμα. His disciples were "taunted with believing in four Gods, and were nicknamed Tetradsites, or Tetraheres, and also Damians and Angelkies. Peter Callinicus, Patriarch of Antioch (578-91), opposed them, and both he and his followers joined the Catholics, when they found themselves excommunicated by the Monophysites.

History.—Of the origin of Eutychianism among the Cyrillic party a few words were said above. The controversy between Cyril and Theodoret was revived with violence in the attacks made in 444-8, after Cyril’s death, by his party on Ireneus of Tyre, Ibas of Edessa, and others (see DIOCIUS). The trial of Eutyches, by St. Flavian at Constantinople, brought many anathemas of the Church, and even in a council (see EPHESUS, III), the excommunication of St. Leo (see EPHESUS, ROBBER COUNCIL OF). St. Leo had already condemned the teaching of one nature in his letter to Flavian called the tome, a manifest act of theology, unanswerable and of clearness of thought, which condemns Nestorius on the one hand, and Eutyches on the other (see LEO I, POPE). After the council had acquitted Eutyches, St. Leo insisted on the signing of this letter by the Eastern bishops, especially those who had taken part in the disgraceful scenes at Ephesus. In 451, six hundred bishops assembled at Chalcedon, under the presidency of the papal legates (see CHALCEDON, COUNCIL OF). The pope’s view was assured of success beforehand by the support of the new Emperor Marcian. DIOCIUS of Alexandria was deposed. The tone was acclaimed by all, save by thirteen out of the seventeen Egyptian bishops present, for these declared their lives would not be safe, if they returned to Egypt after signing, unless a new patriarch had been appointed. The doctrine of person lay dwelling up a definition of faith. There was now no Patriarch of Alexandria; those of Antioch and Constantinople had been nominees of Dioscorus, though they had now accepted the tome; Juvenal of Jerusalem had been one of the leaders in the Robber Council, but like the rest had submitted to St. Leo. It is consequently not surprising that the committee, appointed to draw up a definition of faith, produced a colourless document (no longer extant), using the words ινιδονούμενοι, which Dios-"curus and Eutyches might have signed without difficulty. It was excitedly applauded in the fifth session, and in the sixth the council, with the imperial commissioners, would not agree to it, and declared they would break up the council and return to Italy, if it were pressed.

The few bishops who stood by the legates were of the Eutychian party and suspected of Nestorianism by many. The emperor’s personal intervention was invoked. It was demonstrated to the bishops that to refuse to assert “two natures” (not merely “of two”) was to agree with Dioscorus and not with the pope, and they yielded with a very bad grace. They had accepted the pope’s letter with enthusiasm, and they had deposed Dioscorus, not indeed for heresy (as Anatolius of Constantinople had the courage, or the impudence, to point out), but for violation of the canons. To side with him meant punishment. The result was the drawing up by a new committee of the famous Chalcedonian definition of faith. It condemns Monophysitism in the following words: “Following the holy Fathers, we acknowledge one and the same Son, one Lord Jesus Christ; and in accordance with this we all believe, in accordance with our teaching, that Manhood, truly God and truly Man, of a rational soul and body, consubstantial with His Father as regards His Godhead, and consubstantial with us as regards his Manhood, in all things like unto us save for sin; begotten of His Father before the worlds as to His Godhead, and in the last days for us and for our salvation [born of Mary the Virgin Theotokos as to His Manhood; one and the same Christ, Son, Lord, Only-begotten, made known as in two natures [the Greek text now has “of two natures”, but the history of the definition shows that the Latin “in” is correct] without confusion or change, indivisibly, inseparably [ινιδονούμενοι, ἄνθρωπος, ἄνθρωπος άνθρωπος, καθότι καθότι]; the distinction of the two natures being in no wise removed by the union, but the properties of each nature being rather preserved and concurring in one Person and one Hypothesis, not as divided or separated into two Persons, but one and the same Son and Only-begotten, God the Word, the Lord Jesus Christ, even as the Prophets taught aforetime about Him, and as the Lord Jesus Christ. Himself taught us, and as the symbol [the Nicene] of the Fathers testifies.”

So Monophysitism was exorcised; but the unwillingness of the larger number of the six hundred Fathers to make so definite a declaration is important. “The historical account of the Council is this, that a doctrine which the Creed did not declare, which the Fathers did not hold, which the East, in exact accordance with the decision of the Council, had almost in set terms opposed, which the whole East refused as a symbol, not once, but twice, in the patriarch by patriarch, metropolitan by metropolitan, first by the mouth of a hundred, then by the mouth of one hundred and fifty bishops, and refused upon the grounds of its being an addition to the Creed, was forced upon the Council, not indeed as a Creed, yet, on the other hand, not for subservience merely, but for its acceptance as a definition of faith under the sanction of an anathema, forced on the Council by the resolution of the Pope of the day, acting through his Legates and supported by the civil power (Newman, “Development”, v. §3, 1st ed., p. 307). Theodocus issued edicts against the Eutychians in March and July, 422, forbidding them to have priests. In the act of anathematizing them, he said, he was doing military service. Priests who were obstinate in error were to be banished beyond the limits of the empire. Troubles began almost immediately, the council was over. A monk named Theodorus, who had been punished at Alexandria, at Dioscorus’s instigation, the emperor opened the decision of the council, and, going to Palestine persuaded the
many thousands of monks there that the council had taught plain Nestorianism. They made a raid upon Jerusalem and drove out Juvenal, the bishop, who would not renounce the Chalcedonian definition, although he had been before one of the heads of the Robber Council. Houses were set on fire, and some of the shops. Neither more than the house of the bishop, and throughout Palestine the bishops were expelled and new ones set up. The Bishop of Scythopolis lost his life; violence and riots were the order of the day. Eudocia, widow of the Emperor Theodosius II, had retired to Palestine, and gave some support to the rebels. There was not enough, however, to move the emperor to send troops or to take any other measures to restore peace, and sent repeated letters in which the real character of the decrees of Chalcedon was carefully explained. St. Euthymius and his community were almost the only monks who upheld the council, but this influence, together with a long letter from St. Leo to the exiled monks, had no doubt great weight in obtaining peace. In 453, large numbers acknowledged their error, when Theodosius was driven out and took refuge on Mount Sinai, after a tyranny of twenty months. Others held out on the grounds that there was uncertainty whether or not the pope had ratified the council. It was true that he had annulled its disciplinary canons. The emperor therefore wrote to St. Leo asking for an explicit confirmation, which the pope sent at once, at the same time thanking him in a long letter. The emperor, however, was unwilling to annul the twenty-eighth canon, as to the precedence of the See of Constantinople, and for repressing the religious riots in Palestine.

In Egypt the results of the council were far more serious, for nearly the whole patriarchate eventually sided with Dioscorus and has remained in heresy to the present day. Out of seventeen bishops who represented, at Chalcedon, the hundred Egyptian bishops, only four had the courage to sign the decrees. These four returned to Alexandria, and peaceably ordained the archdeacon, Proterius, a man of good character and venerable by his age, in the place of Dioscorus. But the deposed patriarch was popular, and the thirteen bishops, who had been allowed to defer signing the tome of St. Leo, misrepresented the teaching of the council as contrary to that of Cyril. A riot was the result of the proceedings of bishops of Alexandria, and the people were driven into the ancient temple of Serapis, which was now a church, and it was burnt over their heads. Marcan retaliated by depriving the city of the usual largess of corn, of public shows, and of privileges, for which he was impeached by Bishop Marcian, and committed scandalous violence. The people were obliged to submit, but the patriarchate was safe only under military protection. Schism began through the retirement from his communion of the pious Timothy, called Eulurus, the last and Peter, called Marcian. The latter, the heresiarch, a deacon, and these were joined by four or five bishops. When the death of Dioscorus (September, 454) in exile at Gangra was known, two bishops consecrated Timothy Eulurus as his successor. Henceforward almost the whole of Egypt acknowledged writings of Theodoret. Most of the news of the death of Marcan (February, 457), Proterius was murdered in a riot, and Catholic bishops were everywhere replaced by Monophysites. The new emperor, Leo, put down force by force, but Eulurus was protected by his minister Aspar. Leo wished for a council, but gave way before the objections made by the pope his namesake, and the difficulties of assembling so many bishops. He therefore sent queries throughout the Eastern Empire to be answered by the bishops, as to the veneration due to the Council of Chalcedon and to the ordination and the conduct of Eulurus. As only Catholic bishops were consulted, the replies were unanimous. One or two of the provincial councils, in expressing their indignation against Timothy, added the proviso "if the reports are accurate", and the bishops of Pamphylia point out that the decree of Chalcedon is not a creed for the people, but a test for bishops. The letters, still preserved (in Latin only) under the name of Encycilia, or Codex Encyclius, bear the signatures of about 200 bishops, but Nicophorus Callistus says, that there were not more than 200. The house of the patriarh, while the Council of Chalcedon, Patriarch of Alexandria in the days of St. Gregory the Great, puts the number at 1600. He says that only one bishop, the aged Amphiloichus of Side, dissenting from the rest, but he soon changed his mind (quoted by Photius, Bibl. CCCXX, p. 290). This tremendous body of testimonies to the Council of Chalcedon is little remembered to-day, but in controversies with the Monophysites it was in those times of equal importance with the council itself, as its solemn ratification.

In the following year Eulurus was exiled, but was recalled in 475 during the short reign of the Monophysite usurper Basiliscus. The Emperor Zeno spared Eulurus from further punishment on account of his great age. That emperor tried to reconcile the Monophysites by means of his Henotic, a decree which dropped the Council of Chalcedon. It could, however, please no one, and the emperor was forced to make another, which adhered to it and formed the official Church of the East was excommunicated by the popes. At Alexandria, the Monophysites were united to the schismatic Church of Zeno by Peter Mungus who became a patriarch. But the stricter Monophysites were excommunicated by pope Leo I, and formed a sect known as Asephai (q. v.). At Antioch Peter Fullo also supported the Henotic. A schism between East and West lasted through the reigns of Zeno and his more definitely Monophysite successor Anastasius, in spite of the efforts of the popes, especially the great St. Gelasius (q. v.). In 518, the orthodox Justin came to the throne, and reunion was consummated in the following year by him, with the active co-operation of his more famous nephew Justinian, to the great joy of the whole East. Pope Hormisdas (q. v.) sent legates to reconcile the patriarchs and metropolitans, and every bishop was forced to sign, without alteration, a petition in which he accepted the faith which had always been preserved at Rome, and condemned not only the leaders of the Eutychian heresy, but also Zeno's time and his successors. Few of the Eastern bishops seem to have been otherwise than orthodox and anxious for reunion, and they were not obliged to omit from the diplomas of their churches the names of their predecesors. The Monophysites continued to maintain communion with Rome, in the reigns of Zeno and Anastasius. The famous Monophysite writer Severus was now deposd from the See of Antioch. Justinian, during his long reign, took the Catholic side, but his empress, Theodora, was a Monophysite, and in his old age the emperor leaned in the same direction. We still possess the acts of a conference, between six Severian and seven orthodox bishops, held by his order in 533. The great controversy of his reign was the dispute about the "three chapters", extracts from the writings of Darnurchus, and later Ibas, which Justinian wished to get condemned in order to conciliate the Severians and other moderate Monophysites. He succeeded in driving Pope Vigilius (q. v.) into the acceptance of the Second Council of Constantinople (q. v.), which he had summoned for the purpose of giving effect to his view. The Western disapproved of this condemnation as derogatory to the Council of Chalcedon, and Africa and Illyricum refused for some time to receive the council. The divisions among the heretics have been mentioned above. A great revival and unification was effected by the great man of the sect, the famous Jacob Baradai, Bishop of Edessa (c. 541-78). (*See Baradai.*) In his earlier years a recluse in his monastery, when a bishop he spent his life travelling in
beggar’s garb, ordaining bishops and priests everywhere in Mesopotamia, Syria, Asia Minor, in order to repair the spiritual ruin caused among the Monophysites by Justinian’s renewal of the original laws against their bishops and priests. John of Ephesus put the number of clergy he ordained at 106,000, others at 80,000. His journeys were incredibly swift. He was believed to have gifted the miracle of lights, and at least he performed the miracle of infusing a new life into the dry bones of his sect, though he was unable to unite them against the “Synodites” (as they called the Orthodox) by the quarrels among the Monophysite patriarchs and theologians. He has deserved to give his name to the Monophysites of Syria, Mesopotamia, and Babylonia, with Asia Minor, Palestine, and Cyprus, who have since remained since his time generally united under a Patriarch of Antioch (see Jacobites). A number of these united in 1468 with the Catholic Church, and they are governed by the Syrian Archbishop of Aleppo. The rest of the Monophysites are also frequently called Jacobites. For the Coptic Monophysites see Egypt, and for the Armenians, Armenia. The Armenian Monophysite Patriarch resides at Constantinople. The Abyssinian Church was drawn into the same heresy through its close connexion with Alexandria. At least since the Mohammedan conquest of Egypt, in 641, the Abuna of the Abyssinians has always been consecrated the Patriarch of the Ecclesiast, and so the Abyssinian Church has always been, and is still, nominally Monophysite.

The chief materials for the general history of the Eutychians with notices of the collections of the Eutychian treasures by DELACOUR, LOUVET, and the Monophysite historians JOHN OF EPHESUS, and Zacharias Rhetor (both in LAMBE’s Anecdota Syriaca, 1870) are the works of the Eutychian Patriarchs (Edited by ARNHEM and KROGER (Leipzig, 1889) and an English one by HAMILTON and BROOKS (London, 1888)). The works of FACINDON, BRETON, BESANCON, and other modern investigators and the historical importance of Photius are valuable. Of modern authorities, the larger and smaller histories are innumerable, e. g. BARONIUS, FLUREY, GIBSON, HEBELE, and (for the earlier period) TILMENSON, XV; also the biographical articles in such large works as CAVLE, Bunge, Litt. Fabrici; the Kirchenlexikon; HERDING, Realencycl.; and Dict. Ch. Biog.; ARDENNE, Bibl. Orient.; WALCH, Ktesiphonica (Leipzig, 1769–85), VI–VIII; for detailed biographies see the articles referred to above. On the dogmatic side see PETAVIUS, De Incarn. VI; DÖRNER, Evangelium des Perser-Martyriums (Berlin, 1898), 2nd ed. ; id., Dogmatik der Person des Christus: (Edinburgh 1861–3), 5 vol.;—it should be noted that Dörner himself held a Nestorian chief, that Photius also held, that Photius himself is a试题 of those of Schwabe, Harnack, and up to (up to 451) EUBEL-BRENNING, and his work is a transcript of the edicts and edicts of the emperor and the emperor and the agreements with the Reichspolitik (Jena, 1884). LOURG, Loebimn von Byzantium, in Teut et Umbra, 1st ser, 1–2; new light has come from the Arabic and Oriental MSS. For a presentation to the histories mentioned above, see EUTICHIUS, History of the Patriarchs, the Patriarchs of the Eutychian, Arabic and English edition in Patr. Orient., 1. 2 (Paris, 1903), 5. J. P. KIRCH.

Eutychius I, Patriarch of Constantinople, b. about 512, in Phrygia; d. Easter Day, 5 April, 582. He became a monk and then archimandrite at Amasea, in Pontus. In 552 his bishop sent him on business to Constantinople, where he seems to have made a great impression on Justinian I (527–565), so much so that when Menas the Patriarch (556–552) died, the emperor procured Eutychius’s election as successor, on the very same day (in August). The great quarrel of the “Three Chapters” was then going on. Justinian thought he could conciliate the Monophysites, in Egypt, and Syria, by publishing anathemas against three theologians,—long dead—who were suspected of the opposite heresy, Nestorianism. The three points (called κατάληα, capitula) were: (1) The condemnation of the person and works of Theodore of Mopsuestia (485); (2) the condemnation of the writings of Nestorius, condemned at Ephesus; (3) a letter of one Ibas, to a Persian named Maris, which attacked that Council. It should be noted that these documents certainly were Nestorian, and that their condemnation involved no real concession to Monophysitism. The question at issue was rather, whether it were worth while, on the chance of conciliating these Monophysites, to condemn people who had died so long ago. It is also true that, in the West, people suspected in these Three Chapters a veiled attack on Chalcedon. Justinian’s “Edict of the Chapters” appeared in 544. It was accepted in the East and rejected in the West. Pope Vigiliius (540–555) was the unhappy victim of the quarrel. In 548 he accepted the Edict by a Judicatum, which also carefully guarded Chalcedon. He had himself just come to Constantinople, in order to preside at a Council that showed him against the Councils of the East. But he found that, by his judicatum, he had grievously offended his own Western bishops. Dacus of Milan, and Facundus of Hermiane led the opposition against him, and in 550 a Synod of Carthage excommunicated the Pope. Vigiliius then began that career of indecision that has left him the reputation of being the weakest Pope that reigned. He was still at Constantinople when Eutychius became Patriarch. Eutychius sent him the usual announcement of his own appointment and the usual (and quite orthodox) profession mentions him (8 December) in the “Deposito Episcoporum”, but not in its list of martyrs. His remains were placed in the papal chapel in the Catacomb of Callistus. When this famous crypt was discovered the fragments of the epitaph of Eutychianus were found, i.e. e his name (in Greek letters): "EUTYCHIANUS EPIΣ (KOPH). His feast is celebrated on 8 December.

EUTYCHIANUS, SAINT, POPE.—He succeeded Pope Felix I a few days after the latter’s death, and governed the Church from January, 275, until 7 December, 283. We know no details of his pontificate. The rite for blessing the production of the fields, ascribed to him by the "Liber Pontificalis", undoubtedly belongs to a later period. The statement also that he pro-
of faith. At the same time, he urged him to summon the Council at once. Meanwhile Justinian had published a second, and still stronger, condemnation of the Three Chapters (23 Dec., 551). Vigilius gave, and then withdrew, his consent to the Council. Justinian immediately recalled the Pope, who was strongly opposed to his condemnations. In spite of the Pope's refusal, the council met on 5 May, 553, at Constantinople. A hundred and sixty-five bishops attended. This was what was afterwards recognized as the Fifth General Council (Constantinople II). On 14 May the Pope sent them a modified Decree, called the Constilutum, in which he condemned sixty propositions taken from Theodore of Mopsuestia, but forbade the condemnation of the other Chapters. As he would not attend the council Eutychius persisted. The Council wrote respectfully to the Pope, but in spite of the Constilutum, completely confirmed Justinian's edicts, in its eighth session. It also acknowledged the formula Οὐκέτας Τρισιτικάς πασσοες εστι ἀπλως, and incidentally condemned Origen. (Can. 11, 12, 13, 14. For this Council see Liber Breviarium, infra; Mansi, IX, 163; Hefele, Concilien- gesch., 2nd ed., II, 896 sqq.) Vigilius gave in on 8 December, after months of ill-treatment, was allowed to go back to Rome, and died on the way, in Sicily, in 554. This was the second act of a story in For- estus' Oratio Eastern Church, 82–83.)

Eutychius had, so far, stood by the Emperor throughout. He composed the decree of the Council against The Chapters (Mansi, IX, 367–575). In 562, he consecrated the new church of Sancta Sophia. His next adventure was a quarrel with Justinian about the Aphthartodotes. These were a sect of Monophysites, in Egypt, who said that Christ's body on earth was incorruptible (ἀφθάρτιος), and subject to no pain. The Emperor saw in the defence of these people a new menace to his control over the church, and in 566 he published a decree, defending their theory (Evagrius, Hist. Eccl., IV, 391). Eutychius resisted this decree, so on 22 January, 565, he was arrested in his church, and banished to a monastery at Chalcedon. Eight days later a synod was summoned to judge him. A ridiculous charge of liabits was brought against him; he used ointment, he ate deliciously, etc. (Eustathius, Vita S. Eutych., 4, 5). He was condemned, deposed, and sent to Prince's Island in Propontis. There he went to his old home at Amasea, where he stayed two years. He then went to Constantinople to attend the Sixth Council (Patriarch John III, 566–577); and after his death, in 577, the Emperor Justin II (565–578) recalled Eutychius, who came back in October. At the end of his life Eutychius evolved a heretical opinion denying the resurrection of the body. St. Gregory the Great was then Archbishop (legate) of the Roman See, at Con- stantinople. He argued about this question with the patriarch, quoting Luke, xxiv, 39, with great effect, so that Eutychius, on his death-bed, made a full and orthodox profession of faith to this point. St. Gregory wrote the whole story in his "Exs. in Bib. Job" (Morav. lib. XIV, 56): Eutychius dying said: "I confess that we shall all rise again in this flesh." (See also Paul. Diacon. Vita Greg. Mag. I, 9.) His ex- tant works are his letter to Pope Vigilius (Migne, P. L., LIXX, 65, P. G. LXXVI, 2041), a fragment of a "Discourse on Easter" (Mai: Claus. Aug., 488, and Script. Vet. Nov. Coll. IX, 623); and other frag- ments in P. G., LXXVI. His life was written by his disciple Eustathius, a priest of Constantinople. His feast is kept by the Byzantine Church on 6 April, and he is mentioned in our "Corpus Iuris" (Grat., I pars., Dist. XIX, Cap. x).

EUSTATHIUS. Vita S. Eutychii in Acta SS. April. I, 550–573; Evagrius, Hist. Eccl. IV, 37, 38; V, 16, 18; Isidore, Concilien- gesch., II, 82, 82c. ADRIAN FORTESCUE.

Eutychius, Melchite Patriarch of Alexandria, author of a history of the world, b. 878, at Fustat (Cairo); d. 11 May, 940. He was an Egyptian Arab, named Sa'id ibn Batriq; his father's name was Batriq (Patricius). He first studied medicine and hist- ory, and practised for a time as a physician. He then entered a monastery and eventually became Patriarch of Alexandria dated 9 March, 928, and died in 933. Being the Melchite (Orthodox) patriarch, he spent most of his reign in strife with the great majority of Egyptian Christians who were (Monophysite) Copta, and with his Coptic rivals. His works (all writ- ten in Arabic and preserved only in part) are treatises on medicine, theology, and history. He wrote a compendium called "The Book of Medicine", treatises on fasting, Easter, and the Jewish Passover, various feasts, etc.; also a "Discussion between a Christian and an Infidel", by which he means a Melchite and a Monophysite. But his most important work is "Nasim al-Gawhir" ( Chaplet of Pearls), a chronicle of the history of the world from Adam to 938. The work is dedicated to his brother, Isa ibn Batriq, and is meant to supply a short account of universal history. In Latin it is quoted as "Eutychius Historia universalis", or as the "Annales" of Eutychius. The author states that he has compiled his history only from the Bible and reliable authorities. It contains, however, a great number of strange and improbable additions to Biblical and profane history in any other source. There are also in the "Chaplet of Pearls" many valuable details about the Monophysite controversy and the history of the Patriarchate of Alexandria. The book acquired a certain fame when, in the seventeenth century, John Selden published an excerpt of it (London, 1642, see below) in order to prove that the original at Alexandria there was no dis- tinction between bishops and priests (a theory at one time adopted by St. Jerome, "In Ep. ad Tutilum", I, 5; Ep. cxivi, "ad Evangelum"). Selden was answered by a Marcianite, a Monophysite, who disputed the accuracy of his translation of the passages in question and proposed another. In the thirteenth century another Arabic historian, Al- Mākin (d. 1275), used Eutychius' work in compiling his own history of the world to 1260 (Krumbacher, Byzantinische Litteratur, Munich, 1897, p. 368).

Evagrius, surnamed SCHOLASTICUS, Ecclesiastical historian and last of the continuators of Eusebius of Cesarea, b. in 536 at Epiphania in Cilicia-Syria; d. after 584, date unknown. He followed the profession of advocate at Antioch (hence his surname) and became the friend of the Patriarch Gregory. He then left Antioch, and he successfully defended in presence of the Emperor Maurice and of the Council at Constantinople (588). Having already been appointed quater to Tiberius II (578–582), he received from Maurice the title of honorary prefect (ex profecto). Evagrius, a product of the masters of rhetoric, made a collection of the re- ports, letters, and decisions which he had written for the Patriarch Gregory. Another collection contained discourses of Evagrius, among them a panegyric of the Emperor Maurice and his son Theodosius. These have all been lost. Some of his works survive exist his "Ecclesiastical History" in six books. In this he proposes to write the sequel of the narrative begun by Eusebius of Cesarea and continued by Sozomen, Socrates, and Theodoret. He begins with the Council of Ephesus (431) and ends with the twelfth year of the
EVANGELIARIA

regni of the Emperor Maurice (593–594). This work is very important for the history of the religious controversies of the fifth and sixth centuries, Nestorianism, Monophysitism, and the development of the liturgy. Evagrius furnishes details concerning events and persons, and does not neglect works of art (St. Sophia, H. E., IV, 31). To political history he gives an important place; in a word, he is an authority of the first order for this period. He is sincere, and is conscientious in securing information. But he shares the ideas of his environment and of his time. In his defence Constantine he goes so far as to deny the murder of Crispus and Faustina. He relates wonders and legends, and it is to him we owe the account of the birth of the Virgin and the archangel Gabriel taken up with the researches of M. W. Ruhmer from the body of St. Euphemia of Chalcedon (II, 3).
Among the sources of his information he mentions the chronicle of Eustathius of Antioch, and the works of Procopius, Menander Protector, John of Ephiphania, and John Malalas (whom he calls John the Rhetorician). While he relies on these authors, he does so with discretion. In his ecclesiastical attitude he is strictly orthodox and abides strictly by the decrees of Chalcedon; nevertheless, he judges the heretics with moderation. His was an equable mind, and he is a reliable guide.
The latest ed. of the Eccl. Hist. is that of Prof. John Mansel, B.D. (London, 1869), in Byzantine Texts, brought out by Monumenta Germaniae Historica, under the supervision of A. Krumeich, of Leipzig. The Greek text of the byzantinischen Litt. (Munich, 1897), 244-47; Bardehewer, Patrologia, t. viii. (St. Louis, 1908).
PAUL LEJAY.

Evagrius, named Ponticus, b. about 345, in Ionia, a small town on the shores of the Black Sea; d. 399. He is numbered among the more important ascetical writers of the fourth century. Instructed by St. Gregory Nazianzen, he was ordained reader by St. Basil the Great and deacon by St. Gregory of Nyssa (380), whom he accompanied to the Second Council ofConstantinople (381). According to Palladius, who differs in his account from Socrates and Sozomen, Evagrius remained for a time as archdeacon in Constantinople, while Nectarios was patriarch (381-397). Leaving the city on account of its spiritual dangers, he went first to Jerusalem and then into the Nitrian Desert, where he began an eremitical life under the guidance of the younger Macarius (383). He steadfastly refused a bishopric offered by Theophilus of Alexandria. He became very celebrated for his ascetical life and writings, though St. Jerome (e.g. Ep. 133 ad Ctesiphontem, n. 3) charges him with Origenistic errors and calls him the precursor of Pelagius. The Sixth, Seventh, and Eighth Ecumenical Councils condemn Evagrius together with Pelagius. Rufinus of Constantinople translated the works of Evagrius into Latin; several of them have been lost or have not thus far been recovered (P. L., XLI). The best collections of his works are edited by Bigot (Paris, 1880); Gallandi, "Biblio. vet. patr."

VII, 551–581; Migne, "P.G." XLIV (Graz, 1872); Zöckler, "Evagrius Pontikus" (Munich, 1893). We may here name: "Monachus seu de vita activa"; "Rerum monachalium rationes earumque juxta quo. estem adposia"; "De nocte vitiosae cognitionibus"; Patrologia Eccl. (St. Louis, 1905), 271; Kirchenlex., IV, 1831 sq.: HURST, Nomenclator, I, 277.

A. J. MAAS.

Evangeliarium, liturgical books containing those portions of the Gospels which are read during Mass or in the public offices of the Church. The name does not date back earlier than the seventeenth century. The Gospel book, known as the Evangeliarum, is also called "Antiphonale," "Apostolare," or "Evangelista." In churches of the Latin Rite, the lessons from the Old Testament, the Epistles from the New Testament, and portions of the Gospels are usually grouped in the same book, under the name Comes, Liber comitis, Liber comicaus (from comes, companion), or Lectionarium. Separate Evangelia are seldom to be met with in Latin. Tables indicate the lessons to be normally assigned to Christmas and Holy Days on which they are to be read, are called by the Greeks "Evangelistarium," a name sometimes given to the Evangelia proper; they are also called "Synaxarium," and by the Latins are known as "Capitula." Although the word Evangelistarium is of recent origin, it has been repeatedly adopted. The word Lectionarium is employed, however, to denote either the collection of passages from the Old and New Testaments, including the Gospels, or else these passages alone without the corresponding Gospels.

Origines de l'usage de l'Evangéliaire.—Like the custom of the Synagogue and the writings of the Prophets (Apol., I, lvii). Tertullian, Cyprian, and other writers bear witness to the same custom; and in the West the order of lector existed as early as the third century. For want of specific textual evidence, other particular passages were decided on. Most likely the presiding bishop chose them at the assembly itself; and it is obvious that on the occurrence of certain festivals the Scripture relating to them would be read. Little more or less is naturally result from this method. St. John Chrysostom in a homily delivered at Antioch exhorts his hearers to read beforehand the Scripture passages to be read and commented on in the Office of the day (Homilia de Lazaró, iii, c. 1). In like manner other Churches would form a table of readings. In the margin of the MS. text it was customary to note the Sunday or festival on which that particular passage would be read, and at the end of the manuscript, the list of such passages, the Synaxarium or Capitula, would be added.

Transition from this process to the making of an Evangelarium, or collection of all such passages, was easy. Gregory is of opinion that we possess fragments of Evangelia in Greek dating from the fourth, fifth, and sixth centuries, and that we have very many from the ninth century onwards (according to Gregory they number 1072). In like manner Evangelia are in the Latin Churches as early as the fifth century. The Comes of the Roman Church dates from before St. Gregory the Great (P. L., XXX, 487-532). From the tenth century onwards we find the Gospel lessons, together with the Epistles and prayers, united in a new liturgical book, called the Missa.

Evangeliarium and the Text of the New Testament.—Evangelia have very little importance for the critic of the Gospel text. At the time when various Gospel passages began to be collected in book-form for use in liturgical readings, the various families of the Gospel text and its translations were already in existence; and those Evangelia simply reproduce the particular text favoured by the Church which compiled it. They have even exercised an unfortunate influence on the more recent MSS. of the Gospels; certain additions of a liturgical nature (e.g. in illo tempore; dixit Dominus) which were set at the beginning or end of a reading, have found their way into the text itself. But in the official text of the Vulgate, and in editions of the Greek text of to-day, owing to the labours of the Loeb and the Westcott-Heber-Gries School of textual critics, liturgical glosses are very rare. We notice one example in the Vulgate text: Luke, vii, 31 (at autem Dominus).

The Evangelarium and Liturgy.—It is especially from a liturgical point of view that the study of Evangelia is interesting. The liturgical use of Evangelia is uniform. The first part contains the Gospels of the Sundays beginning with Easter; the
second part gives the Gospels for the festivals of the saints beginning with 1 September. In the Churches of the West the distribution of the Gospel pericopes was more divergent because of the various rites. And the ceremonial followed in the reading of the Gospel presents many differences of usage between one church and another. It is read in the Gospels in the East, cf. pp. 30-32; at Rome, pp. 44-50 and 86-94; in the Ambrosian Rite, pp. 94-101; and in the Gregorian Rite in the years 1700 and 1800, vol. I, pp. 377-479, on Greek Evangelia, vol. II, pp. 521-23, on Syriac Evangelia; Carolingian and Frankish period; Peterpom, RERKES, Das kirchliche Perikopensystem, Bagno, Die biblische Lesung der lateinischen Kirche, H. COPTERSTEDT.

Vivien Bible, Bibliothèque Nationale, Paris). But in the tenth and eleventh centuries the princes are shown offering the precious manuscript to Christ or to the patron saint of the church or abbey (cf. the Evangelium at Bamberg showing the Emperor Henry II offering the book to Christ). Among the more famous Evangelia may be mentioned the following: the portion of an Evangelium from Sinope (sixth century; in the Bibliothèque Nationale, Paris); the Evangelium of Rossano (about 800) in Greek uncialis; the Syriac codices of Rabula (816, at Florence); miniatures of the sixth century at the Evangelium of Gregory I (at Cambridge) in Latin uncialis; the Book of Kells (seventh to ninth century, at Dublin); the Book of Lindisfarne (eighth century, in the British Museum, London) of Irish workmanship; the Irish-Continental Evangelia of St. Gall (about 800); the Carolingian Evangelium of Codex (about 782, in the Bibliothèque Nationale, Paris); the Ada Codex (ninth century, at Trier); the Evangelium of Echternach (tenth century, at Gotha), and of the Abbess Uta (about 1002, at Munster). These are carefully treasured, and when used in the offices were placed on a strip of cloth or on a cushion. The back leaf of the binding was usually left plain, but the front cover was enriched with all the skill of the goldsmith. One of the most ancient bindings or covers we possess is that of the Evangelium of the cathedral of Monza. At times plaques of ivory, resembling diptychs, were set into these bindings. The earliest of them were of Oriental or Italian origin, and bear isolated figures of Christ or the Blessed Virgin, etc. A number of them, to be found in the countries along the Rhine and the Meuse and in Northern France (tenth and eleventh centuries), have the scene of the Crucifixion.

See general works on paleography, archaology, iconography, the lesser arts, and monographs on the Evangelia, especially Reiser, Geschichte der Evangelienbücher im ersten Halfte des Mittelalters (Freiburg im Br., 1906). R. MAERE.

Evangelical Alliance, The, an association of Protestants belonging to various denominations, founded in 1846, whose object, as declared in a resolution passed at the first meeting, is "to enable Christians to realize in themselves and to exhibit to others that a living and everlasting union binds all true believers together in the fellowship of the Church" (Report of the Proceedings of the First General Conference). The points of belief, which the members of the Alliance accept as the fundamentals of their faith, are contained in a document adopted at the first conference and known as the Basis. They are nine in number:—

1. The Divine inspiration, authority, and sufficiency of the Holy Scriptures;
2. The right and duty of private judgment in the interpretation of the Holy Scriptures;
3. The unity of the Godhead and the Trinity of Persons therein;
4. The utter depravity of human nature in consequence of the fall;
5. The Incarnation of the Son of God, his work of atonement for sinners, and his mediatorial intercession and rule;
6. The justification of the sinner by faith alone;
7. The work of the Holy Spirit in the conversion and sanctification of the sinner;
8. The immortality of the soul, the resurrection of the body, the judgment of the world by Jesus Christ, with the eternal blessedness of the righteous and the eternal punishment of the wicked;
9. The Divine institution of the Christian ministry, and the obligation and perpetuity of the ordinances of Baptism and the Lord's Supper."— It being, however, distinctly declared that this brief summary is not to be regarded, in any formal or ecclesiastical sense, as a creed or confession, nor the adoption of an asumption of the right authoritatively to define the limits of Christian brotherhood, but simply as an indication of the class of persons whom it is desirable to embrace within the Alliance. In this Alliance, it
is also distinctly stated that no compromise of the views of any member, or sanction of those of others, on the points wherein they differ, is either required or expected; but that all are held free as before to maintain their religious convictions, with or without forbearance and brotherly love. It is not contemplated that the Alliance should assume or aim at the character of a new ecclesiastical organization, claiming and exercising the functions of a Christian Church. Its simple and comprehensive object, it is strongly felt, may be successfully promoted by uniting those branches of the Christian Church to which its members may respectively belong.

The Alliance thus lays claim to no doctrinal or legislative authority. In a pamphlet issued by the society itself this fact is thus explained: "Then it is an Alliance—not a union of Church organizations, much less an attempt to secure an outward uniformity—but the members of the Alliance are allies: they belong to different ecclesiastical bodies—yet all of the One Church. They are of different nations as well as of many denominations—yet all holding the Head, Christ Jesus, 'Unum corpus sumus in Christo.' We are one body in Christ—banded together for common purposes, and to manifest the real unity which underlies our great variety. We are all free to hold our own views in regard to some matters, but all on the fundamental principles of the Alliance as set forth in its Basis.'"

The Alliance arose at a time when the idea of unity was much more before men's minds. During the years that witnessed the beginning of the Oxford Movement in the Church of England, there progressed a movement in favour of union among men whose sympathies were diametrically opposed to those of the Tractarians, but who in their own way longed for a healing of the divisions and differences among Christians. In 1842 the Presbyterian Church of Scotland tried, though without success, to establish relations with other Protestant bodies. In England the progress of the Tractarian Movement led many distinguished Evangelical Non-conformists to desire "a great confederation of men of all Churches who were loyal in their attachment to Evangelical Protestantism in order to defend the faith of the Reformation." (Dale, History of Eng. Congregationalism, 637.) At the annual assembly of the Congregational Union held in London, May, 1842, John Angell James (1785-1869), minister of Craven Chapel, Bayswater, London, proposed the scheme that ultimately led into the Evangelical Alliance. He asked: "Is it not in the power of this Union to bring about by God's blessing, a Protestant Evangelical Union of the whole body of Christ's faithful followers who have at any rate adopted the voluntary principle? Is it not the chosen way of the great Protestant Union and we may yet have representatives from all bodies of Protestant Christians to be found within the circle of our own United Empire?" (Congregational Magazine, 1842, 435-6.)

The first definite step towards this was taken by Mr. Patton, an American minister, who proposed a general conference of delegates from various bodies, with the result that a preliminary meeting was held at Liverpool in October, 1845, at which the basis of such a conference was arranged. On 19 Aug., 1846, at a meeting of eight hundred delegates, representing fifty denominations, held in the Freemasons' Hall, London, the Evangelical Alliance was founded. All who would accept the basis were eligible as members, and the representatives of the various nations were recommended to form national organizations or branches, of which the British and Foreign Bible Society in 1843 was the first. These organizations were independent of one another and were at liberty to carry on their work in such a manner as should be most in accordance with the peculiar circumstances of each district. They have been formed in the United States, Germany, France, Switzerland, Holland, Sweden, Italy, Turkey, Australia, India, and several missionary countries. The French national branch abandoned the Basis in 1854 and substituted for it a wider form of a Unitarian character.

The Alliance meets and acts as a whole only in its international and general conferences, which are held from time to time. The first of these was held in London, 1851, and has been succeeded by others as follows: Paris, 1855; Berlin, 1857; Geneva, 1861; Amsterdam, 1867; New York, 1873; Blaye, 1879; Copenhagen, 1894; Florence, 1891; London, 1896 (Celebration of the Jubilee); London, 1907, on which occasion the Diamond Jubilee of the Alliance was celebrated.

These international conventions are regarded as of special value in the promotion of the aims of the Alliance. Another matter to which much importance is attached is the translation of the Bible into the languages of the world. The Alliance claims to have accomplished much good. Finally, in 1905, the Alliance Bible School was founded with headquarters at Berlin, under the direction of Pastor Köhler and Herr Wars, "to point the way to the cardinal matters, but all on the fundamental principles of the Bible in accordance with its own teaching". The reports of the conferences claim considerable success for these various works, a claim which cannot here be investigated. From its principles the Evangelical Alliance is necessarily opposed to the authority of the Catholic Church; and Catholics, while sympathizing with the desire for union among Christians, realize that the unity by which we are made one in Christ is not to be won by such methods. The motto of the Alliance is Unum corpus sumus in Christo.

Edwin Burton

Evangelical Church (in Prussia).—The sixteenth-century Reformers accused the Catholic Church of having adulterated the primitive purity of the Gospel by the admixture of un-Scriptural doctrines and practices. They proceeded to set up themselves as "Evangelicals", or followers of the pure Evangel, in contradistinction to the un-evangelical followers of Roman traditions and institutions. Almost from the beginning the new Evangelical Church was split, first into two communions, the Lutheran and the Reformed, then into a multiplicity of sects which baffles the skill of statisticians. The cleavage arose through differences in the doctrine of Christ's presence in the Holy Eucharist. Luther taught the actual bodily presence of Christ in and with the elements, though denying Transubstantiation. Zwinglei and the Swiss Reformers admitted only His spiritual presence. The Lutheran and the Reformed Churches form the two great branches of Evangelical Protestantism to which all the other divisions of Protestants are subordinate. The national and general of the Anglican Church is midway between the High Church and the Low Church. As a proper name with strictly limited meaning the designation "Evangelical Church" applies to a branch of the Protestant Church in Germany, formed in 1817 at the instance of King Friedrich I of Prussia for a union of the Lutheran and the Reformed Churches.

History.—At the beginning of the nineteenth century religious life in Germany was at a low ebb. The Rationalism and Illuminism of the eighteenth century, openly encouraged by King Friedrich II (the Great), had told severely on the supernatural life of the coun-
EvangeliCal 643 EVANGELICAL

try, especially among the Protestants. The "rights
of man," proclaimed and ruthlessly carried out by the
French Revolutionists, had found a welcome beyond
the Rhine and well nigh superseded the rights of God.
Luther and Calvin, whilst casting off the authority of
the Church, had still bowed to that of the Bible, and
their followers adhered to several "Confessions of Faith"
as binding on their consciences. These formulas
were now overthrown as inimical to the rights of free
inquiry, as the work of men little versed in exegesis and
history, as unscientific and un-Protestant. Religious
life, thus deprived of its sap, was rapidly withering away,
and Luther, like the rejected Abel, was abandoned to the
difficulties among Protestant communities and threat-
ened for a time to sweep away Christianity itself.

The Prussian State, owing its origin, growth, and
importance to Protestantism, was not sympathetic to
its Catholic subjects. The Rhine Province, Westphalia,
and the Polish provinces were ever ready to manifest
their affection for the Catholic rulers of Austria and
even of France. The House of Hohenzollern was Cal-
vinst, the majority of the nation was Lutheran. Fredericii William III, King of Prussia (1797-1840), under
promises to build up a united religion together with a powerful
army, efficient schools, and a flourishing trade. As
early as 1798 he had expressed the hope of uniting the
Reformed and the Lutheran Churches by means of a
conference called to meet in 1799, which never took
place on his visit to England in 1814, and made the first
arrangement for a union and a new liturgy in St.
James's Palace in London. It was proposed to cele-
brate in Germany the third centennial jubilee of the
Reformation, and in anticipation of this festival he
issued on 27 Sept., 1817, the memorable declaration
that it was the royal wish to unite the separate Luther-
ian and Reformed Confessions in his dominions into
one Evangelical Christian Church, and that he would
set an example in his own congregation at Potsdam
by joining in a united celebration of the Lord's Supper
at the approaching festival of the Reformation. It
was not intended to fuse the Reformed Church into
the Lutheran, or vice-versa, but to establish one Evang-
elical Church, quickened with the spirit of the Refor-
mation. The epithet "Protestant" was avoided as too
partisan; the new Church was given the vague term
"evangelical;" Lutherans and Calvinists, whilst main-
taining their own specific doctrines, were to form a
single church under a single government and to pre-
sent a united front to the Catholic Church.

The Synod of Berlin and nearly all the clergy and laity
of Prussia responded cordially to the decree. External
union, facilitated by the prevailing religious indiffer-
ence, was adopted in Nassaü and in the Rhinland Pala-
tinate (1818), in Baden (1821), in Rhenish Hesse
(1822), in Württemberg (1827). But Saxony, Hanover,
and Bavaria proper were too exclusively Lutheran,
while Switzerland was too exclusively Reformed to
join the Evangelical Church, and the Austrian Protes-
tants considered a "separate Lutheran and Augs-
burge Confessions. Instead of the former two Protestant bodies in Germany, there were
now three: the Reformed Church, the Lutheran, and
the united Evangelical. The Reformed was the weak-
est in numbers; and in doctrine its sole distinctive
tenet was the rejection of Luther's teaching concern-
ing the Eucharist. Neither was the Lutheran flourishing;
true Lutheranism existed only in the pious aspira-
tions of a few theologians, pastors, and jurists. A
union without a uniform confession and liturgy is but
a loose mass, without a common center. Fielding Ste-
wick William, therefore, attempted to consolidate his
Evangelical Church by giving it a common liturgy
composed by himself with the assistance of the court
chaplains and a pious layman. This "Agenda" was
made obligatory by royal order for the royal chapel, the
cathedral of Berlin, and for the army; its general
adoption was only recommended. It met with deter-
mined opposition as a measure oppressive of evangel-
ical freedom, antiquated, leaning to "Romanish" prac-
tices, unsettling men's consciences. None the
less, by 1825 it had been adopted by 5543 churches out
of 7782. The Protestant Bishop of Eylau, who had
in Berlin were in favour of it and of the measures taken to
enforce it. In 1828-29 the "Agenda" was issued in
a revised form and made binding on all Protestant
churches, some concessions being granted to Silesia,
also to the Roman and other parts of the kingdom, in
defersing to provincial uses. The Lutherans, fearing
the loss of their confessional status, offered increased
resistance. But the king was inextorable. Dr. Scheidel,
professor in Breslau, and others of the Lutheran clergy
who had refused to accept the new liturgy, were sus-
pended from their offices. For several years a fierce
persecution raged against the "Old Lutherans," espe-
cially in Silesia and the Grand Duchy of Posen.
Preacher Hahn headed the troops which were sent to
subdue the recusant villagers by seizure of their goods,
confiscation of their property, and imprisonment. A
petition presented by von Altenstein justified these measures on the
principle that it was the Government's duty to protect these blind sectarians against the consequences of
their own folly. Thousands of the recusants were
expelled and the land seized, and their voices raised in their defence; the whole Liberal
press lauded the energy of the Prussian Government.
By a royal decree of 28 Feb., 1834, all Lutheran wor-
ship was declared illegal.

Frederick William III ruled his Church as summa
episcopus, as a pope without a fixed deposit of faith to
guard, or a hierarchy Divinely ordained to co-operate
with him. The result was arbitrariness in the rule,
disorganization in the ruled. The king's first royal
decrees aimed at the conciliation of religion with the
prevailing rationalistic philosophy, but the misfort-
tunes of the year 1806 and the death of his beloved
consort turned his mind more and more to the religion
of revelation and mysteries. Considering himself the
protector and leader of the Church in Germany he en-
deavoured to raise it from degradation by forcing
unity upon it with a strong hand; unity not in dogma,
for he disliked theologians "who pretend to be more
Christian than Christ," but in liturgy, wherein his
sincere piety found sufficient satisfaction. In 1831
he surprised Superintendent Eyert with an essay on
the power of the pope and the bishop as compared to
the power in the Church; it contained an attempt to re-
introduce auricular confession and the old church disci-
pline. All his efforts, however, only ended in
greater division. At his death, in 1840, the Church of
his creation was still a chaos of warring sects, irre-
sponsive to the brooding of the royal mind and restive
to the royal arm.

Frederick William IV immediately set free the im-
prisoned Lutheran clergy and allowed the formation
of separate congregations. The Old Lutherans now
formed the Luther Church, under the direction of the
director Huschke. By the "general concession" of 1846 they were recognized as
Dissenters with legal status but without pecuniary
support from the State. The new sect was, however,
wanting in union and cohesion: Diedrich opposed
Huschke and the Oberkirchencollegium (supreme ec-
clesiastical council); factions among members were
of frequent occurrence. But few of the discontented
clergymen had left the established Evangelical
Church to join the Old Lutherans; the majority re-
stayed. Though the Luther Church had a better opportunity for working its
destruction than without; they were unwilling to
sacrifice their incomes from the State and consequent
independence from the financial support of their pa-
EVANGELICAL

Evangelical

risioners; they feared, in many cases, to be altogether abandoned by indifferent congregations. The defenders of the union, however, an ordination formula in which the consensus of the two Churches was to be contained without depriving the individual congregations of the right of giving a call on the ground of the particular confession (Gardner, I, 967); others were satisfied with a confession that professed to be formulized and approved solely on unfettered science. The trend of religious thought during this period, the middle of the nineteenth century, followed the impulse given by the king. Frederick William IV's motto was: "I and my house intend to serve the Lord". He was piously, even pietistically, inclined, hated infidelity and pantheism, cherished the Divine right of kings, and loved to dream of ancient institutions in Church and State. In a short time the Prussian universities, and in their wake the other German universities, except Giessen and Jena, had been inundated with nationalistic rationalism and philistinism. The king advocated men of his own thinking and made known his dislike to transfer the arduous duties of his "supreme episcopate" to free parishes formed on the apostolic model. Theological teaching in schools and press, although starting from the same positive creed, diverged in two different streams. On the one side there were the partisans of a via media, endeavouring to find the golden mean between the Lutheran Confession of Faith and the Rationalism of the period. On the other side stood the Neo-Lutherans. These theologians held to Luther's doctrine of justification but rejected his invisible Church and universal priesthood; they defended a Divinely ordained hierarchy, and their teaching on sacrifice, orders, and sacraments nearly approached the Roman. This current runs parallel with Puseyism in England; Hengstenberg (d. 1869) was its main support.

The General Synod of Berlin (2 June—29 Aug., 1846) had given rise to great hopes for the consolidation of the Union. It was resolved that the National Evangelical Church should have no other basis than the "concessus"; that the parochial councils ("Rathen de Freibyleiien") and consistory be amalgamated so that clergy and laity might work together; that a standing general synod be added to the standing supreme consistory ("Oberconsistorium"). The crucial point of the synod was to find a universally-acceptable consensus. Karl Immanuel Nitsch, of Bonn, set up a profession of faith intended to take the place of the reformed formularies: it consisted of vague Biblical texts into which both Lutherans and Reformed might easily read their particular doctrines or no particular doctrine at all. The synod accepted the formula. But the country received it with scorn and contempt, and it was rejected by everyone. Hengstenberg in his "Kirchenzeitung" branded the synod as a Robber Synod, a denial of Christ; its decrees were not to be executed, because they failed to give expression to "the general Protestant consciousness". The consensus only served to increase existing dissensions. The most vital questions divided the leading minds: Was the territorial ruler by right the summus episcopus within his territory? Was it advisable to impose an evaluative standard on the order of church officers, and to determine that no freedom should be given to any other order of clergy, which they never would? The answer was to be conceded to laymen in the ministry of the Word and of the sacraments?

The Evangelical and the Roman Catholic Church, and every other religious society, orders and manages its own affairs independently (selbstständig). The Catholic Church has had this benefit of the law since the beginning of the Kulturkampf, but among the Protestants, the ruling orthodox pietists, led by Hengstenberg, were determined that no freedom should be given to any other order of clergy, which they never would. The answer was to be conceded to laymen in the ministry of the Word and of the sacraments?

The very sterility of controversy turned some practical men from words to works: the "Inner Mission" was set up (1848) by Wichern at Hamburg Rohees House (properly Rige's House, from the name of its former occupant), an institution which covers almost the whole field of Christian charity.

The preacher Friedner (d. 1864) instituted the order of Protestant deaconesses, an imitation of the Catholic Sisters of Charity in their main object. Court preacher Zimmermann of Darmstadt founded the Gustav-Adolf Verein (1841—2), a union whose avowed primary object is to support the evangelical missions in outlying districts (the Diaspors), its secondary object being to bind together all Protestants regardless of denominational differences, and to oppose a solid bulwark to the encroachments of Catholicism. The secondary object caused a split in the Union. At the general assembly in Berlin (1846) the Königsberg preacher Rupp, who had been deprived of his office for a constriction against authorities and from the national Church, presented himself as a deputy. On the question of his admission as such the assembly disagreed: Rupp was, however, excluded by a small majority, a distinct breach of the principles of the Union. The meeting of 1847 resolved that henceforth the Union should direct its main efforts to the "conversion of the Roman Catholics", a resolution to which it has remained faithful to this day.

The short-lived movement of the "Protestant Friends", or "Friends of Light", was started in opposition to the denial of freedom of teaching. Article 3 of the programme which they issued from the Moravian settlement at Gnadenua, in 1841, runs: "We hold it to be our right and our duty to submit to the test of our reason whatever is set before us as religion." Ulrich, a simple-minded man who had the gift of popular preaching, and Pastor Waisenius, a downright Rationalist, were the soul of this movement. The Berlin magistrates presented to King Frederick William IV an address conceived in the spirit of the Protestant Friends. They entreated him to grant the Church a free constitution in keeping with the needs of the time, and freedom of teaching limited only by public morality and the safety of the State. The king in person received his theological municipality, who paraded in fourteen state coaches before the royal castle. His piety was ruffled by the pretensions of the town councilors; in language not over gracious he told them to mind their own business. This happened 22 August, 1845; it marks the end of the Protestant Friends but also the beginning of the "Free Communities" (Freie Gemein- den). As formerly the right wing of the Union had succeeded to form Neo-Lutheran communities, so now the left wing withdrew to form dissenting rationalistic congregations. Their meetings were prohibited, but Rupp, Ulrich, and Waisenius resisted until by royal order in 1846 they were compelled to stand received into the Established Church without the loss of their civil rights; yet not without many vexatious formalities and expenses. The Free Communities, wanting internal cohesion to resist the royal disfavor and the ceaseless assaults of the dominant pietist clique, came to a speedy end.

The wave of liberal aspirations which rolled over Europe in 1848 left its mark on the Churches in Prussia. Paragraph 15 of the new Constitution read: "The Evangelical, and the Roman Catholic Church, and every other religious society, order and manages its own affairs independently (selbstständig)." The Catholic Church has had this benefit of the law since the beginning of the Kulturkampf, but among the Protestants, the ruling orthodox pietists, led by Hengstenberg, were determined that no freedom should be given to any other order of clergy, which they never would. The answer was to be conceded to laymen in the ministry of the Word and of the sacramens?

"Do I look like a bishop?" he said, pointing to his uniform and spurs. His ideal
was "the small independent Christian community managing its own affairs in the spirit of the universal Church" as in the days of the Apostles. The ideal of his minister von Raumer and of Hengstenberg was to train Prussian Unternehmer in this sense, i.e. a community of people in a way that Luther intended to see the Church obey the king, and ask no questions. The alliance of politics, Lutheran orthodoxy and Pietism, royal cabinet-orders and counter-orders, general unsettledness and discontent, and five authorized churches instead of one—such was the result of the Union of 1817 in the fourth decade. Any attempt to set up a more real and more general union were made on the basis of practical charity, federation, opposition to Catholicism; church conferences were held in Berlin, Wittenberg, Eisenach, and elsewhere; the Gustav-Adolf-Verein and the Inner Mission were founded; the English Evangelical Alliance was invited to Berlin (1857). The result was greater discord and disruption.

William I, who as Regent, King of Prussia, and German Emperor reigned from 1838 to 1861, was an honest, single-minded, and industrious ruler. He had little in common between Lutheranism and the principles of modern liberalism, and against Lutheranism's aggressive for Lutheranism over orthodoxy. He maintained the Constitution as the law of the land. But of the orthodox party he said in an address to his newly constituted ministry: "...in both the Church and the State, it is not enough for our opponents to make religion a cloak for politics must be strenuously opposed. In the Evangelical Church—we cannot deny it—an orthodoxy has found a footing which is in contradiction with the fundamental idea of the Union, and which has hypocrisy in its train. That orthodoxy has impeded the work of the Union, has almost wrecked it. Now it is my will that the Union be maintained intact ..." Until 1866, however, little was done to carry out William's programme; it was impossible and unadvisable to dismiss all the clergy and put a secular picture of the Old Testament for their opinions during the last eighteen years. The new minister of worship, von Muehler, was dominated by Queen Augusta, a highly educated woman devoted to orthodoxy, who suggested candidates for higher positions and insisted on their appointment (Hase, Neue Kircheng., 360). By her sound Hengstenberg and Hoffman, a fanatical Swabian. Together they worked for the preservation of the old regime. The Liberal party meanwhile found a common centre and a driving power in the Protestantverein (Protestant Union), founded in 1833, and the Evangelical Union of 1858 as the object of defeating both Protestant and Catholic orthodoxy. It spread at first slowly, but, as it found little support among the still faithful masses and met with open hostility among the ruling classes. In 1846 it numbered 27,000 members. After the war in Austria (1866) the acquisition of new territories laid upon William I the task of again regulating the religious situation of his kingdom. The Hengstenberg party proposed a measure which would have dealt the death-blow to the Union, viz. to divide the Supreme Consistory into three senates: one for Lutherans, one for Lutherans, a Reformed, and a United, each with circumscribed territorial jurisdiction. But the Supreme Council refused to take this step and persuaded the king to leave to the new provinces their existing church constitutions as long as they chose to maintain them. This was done. To a deputation from the Hanover Consistory William I expressed his conviction that "the Evangelical Union was best furthered by free and unprescribed hearts working towards unity in charity." The slight difficulties which arose locally, e.g. in the Steier, were probably due as much to political as to religious sentiments. The political unity of Germany achieved through the Franco-German War (1870-71) naturally aroused a strong desire for religious unity in the new empire. Bismarck started the Kulturkampf to bring the Catholics into line with the Protestant majority, but had to acknowledge himself vanquished in 1886. For the unification of the Protestants in the empire only one way was open: to abolish legal pressure and to allow the various religious bodies to work out their own salvation in their own way. But Lutheranism was feeling too much the old system continued for a while with but slight concessions to liberty. The relation between the State and the Church was framed in the laws of 10 Sept., 1873, and 30 May, 1876. At the head of the whole organization stands the Supreme Ecclesiastical Council (Oberkirchenvorstand) in Berlin, consisting of twelve regular members, one ecclesiastical vice-president, and a lay president. Under this council are eight provincial consistories, Königsberg, Berlin, Stettin, Breslau, Posen, Magdeburg, Münster, and Coblenz; and under them the superintendents numbering 415. In the Evangelical State Church the two types of Protestantism are united; no distinction is made between Old and Reformed. In theological faculties or in the seminaries. Luther's Bible is in common use, the various collections of hymns have no denominational character. The emperor, or King of Prussia, is summus episcopus, which, however, is more a rule rather than a fact, for the various pronouncements neither claim, nor are they credited with, infallibility; and matters of administration are left to the councils and consistory elected by the people.

The doctrinal status of the United Evangelical Church in Germany may be fitly described as Modernism in the sense of the Encyclical "Pascendi". The simple country folk, who practise more than they think, still follow the religion of older generations, but the socialist masses of the towns are either indifferent or openly hostile to all supernatural religion. Owing to the principle sanctified in 1848 "that all the subjects must follow the religion of their ruler" the population, from a religious point of view, is less mixed in Germany than in England or America. Numerically, the two confessions are in the same proportion as they were 300 years ago: two Protestants to one Catholic. Conversions from one religion to the other almost balance with a slight excess in favour of Protestantism. This is entirely due to mixed marriages and temporal allurements. The efforts of proselytizing societies, such as the Gustav-Adolf-Verein, the Protestant and the Evangelical Union, have not yet been effective. Statistics from the census of 1900 are as follows: Evangelical Church in Prussia: 8158 parishes with 17,246 churches, etc., 10,071 clergy, and 21,817,577 adherents against 12,110,239 Catholics, which gives the proportion of 5 Catholics to 3 Protestants. For the whole German Empire the proportion is 7 Catholics to 12 Protestants, i.e. 20,321,411 to 35,231,104.

Evangelical Counsels. See Counsels, Evangelical.

Evangelist.—In the New Testament this word, in its substantive form, occurs only three times: Acts, xxii, 8; Eph., iv, 11; II Tim., iv, 5. It seems to indicate not so much an order in the early ecclesiastical hierarchy as a function. The Apostles, indeed, were evangelists, inasmuch as they preached the Gospel (Acts, viii, 25; xiv, 20; I Cor., i, 17); Philip likewise was both a deacon (Acts, vi, 5) and an evangelist (Acts, viii, 4-8; xxi, 8); in like manner was St. Timothy exhort by St. Paul to do the work of an evangelist (II Tim., iv, 5).
EVANGELIARISTUM

From the various statements contained in the New Testament, we may gather with some probability that evangelists were travelling missionaries, occasionally solemnly set apart, as seems to have been the case with St. Andrew (Acts 1:13), to go about and preach the Gospel, yet sometimes with a settled place of abode, as Philip at Caesarea, and Timothy at Ephesus. They were endowed with a special charitium to preach to those unacquainted with the Christian Faith and pave the way for the more thorough and systematic labours of the Pastors. In their office, as such, seems to have extended no further; so, for instance, we understand from Acts, viii., 4 sq., that Philip, who preached successfully in Samaria and baptized many, was not qualified to impart the Holy Ghost to the converts (Acts, viii., 19, verse 14). Accordingly, St. Paul, in his list of the gifts bestowed by Christ for the edification of the Church, Eph., iv., 11 (in I Cor., xii., 28, they are omitted), mentions the evangelists in the third place, only after the Apostles and the Prophets. In the writings of the Apostolic Fathers, no reference is made to evangelists; travelling missionaries are sometimes called "apostles", sometimes also, as in the Didache, they are styled "teachers".

In the later ecclesiastical literature the word evangelist, perhaps sporadically still used for some time in this sense (Ezech., ii., 1, x.), became, in most parts of the Church, another meaning. Applied occasionally to the reader in the Liturgy (Apost. Const., III), even to the deacon (Lit. of St. John Chrysost., P. G., LXXIII, 910), it became gradually confined to the writers of the Four Gospels (Eusebius, Hist. Eccl., III, xxxix, etc.). It is exclusively in this sense that common modern parlance employs it.

As early as the second century, Christian writers sought in Ezechiel's vision (I, 5 sq.) and in Apoc. (iv., 6-10) symbolical representations of the Four Evangelists. The system, which finally prevailed in the Latin Church, consisted in symbolizing St. Matthew by a man, St. Mark by a lion, St. Luke by an ox, and St. John by an eagle (see SYMBOLISM). It is fully explained by St. Jerome (In Ezech., i., 7), and had been adopted by St. Ambrose (Expos. Ev. S. Luc., Proem., St. Gregory the Great (In Ezech., Hom., i., iv., 1), and others. St. Irenaeus, on the one hand, and Augustine, followed by the Venerable Bede, on the other, had devised different combinations. Christian artists followed in the footsteps of the ecclesiastical writers, and made use, in different combinations, of the four figures to represent the Evangelists. Among the most remarkable works of this description it will suffice here to mention only the old mosaics of the churches of S. Pudentiana, S. Sabina, S. Maria Maggiore, and S. Paolo fuori le Mura, Rome.

Evaristus, Saint, Pope, date of birth unknown; d. about 107. In the Liberian Catalogue his name is given as Aristus. In papal catalogues of the second century used by Irenaeus and Hippolytus, he appears as the fourth successor of St. Peter, immediately after St. Clement. The same lists allow him eight years of reign, covering the end of the first and the beginning of the second century (from about 98 or 99 to about 106 or 107). The latest evidence of the freshness of the newly lost authentic data about him. In his "Ecclesiastical History" Eusebius says merely that he succeeded Clement in the episcopate of the Roman Church, which fact was already known from St. Irenaeus. This order of succession is undoubtedly correct. The "Libri Pontificiales" says that Evaristus came of a Hellenic family, and was the son of a Bethlehem Jew. It also attributes to him the allotment of definite churches as titulus to the Roman presbyters, and the division of the city into seven diaconias or diaconate parts (I, 136; DUCHESNE, Histoire des évêques de Rome [Paris, 1906], I; JAFFÉ, Regesta Rom., Post., 2nd ed. 4; HARRNACK, Geschichte der christl. Kirche (Leipzig, 1893), II: Die Chronologen, 1. 144 sq.; Zeitschr. für katholische Theologie, XXIX (1905), 163 sq. J. P. KIRSCH.

Eve (Heb. הָאָדָםְוּ, hawwâb). The name of the first woman, the wife of Adam, the mother of Cain, Abel, and Seth. The name occurs only five times in the Bible. In Gen., iii., 20, it is connected etymologically with the verb הָאָדָםְוּ הָאָדָםְוּ, "to live": "And Adam called the name of his wife Eve [הָאָדָםְוּ הָאָדָםְוּ, hawwâb] because she was the mother of all the living". The Septuagint reads ζωοκο"ηεομαι (see which is a translation; in two other passages (Gen., iv., 1 and 25) the name is transliterated ἡρα). The Biblical data concerning Eve are confined almost exclusively to the second, third, and fourth chapters of Genesis (see ADAM).

The first account of the creation (Gen., i., "P") sets forth the creation of mankind in general, and states simply that they were created male and female. The second narrative (Gen., ii., "J") is more explicit and detailed. God is represented as forming an individual man from the slime of the earth, and breathing into his nostrils the breath of life. In like manner the creation of the first woman and her relation to man is described with picturesque and significant imagery. In this account, in which the plants and animals appear on the scene only after the creation of man, the loneliness of the latter (Gen., ii., 18), and his failure to find a suitable companion among the animals (Gen., ii., 20), are set forth as the reason why God determines to create for man a companion like unto himself. He causes a deep sleep to fall upon him, and taking out one of his rib forms the woman. When this woman is brought to him, is recognised at once as bone of his bone and flesh of his flesh. A discussion of the arguments in favor of the historical, or the more or less allegorical character of this narrative would be beyond the scope of the present notice. In point of fact, the biblical account has always been looked upon by pious commentators as embodying, besides the fact of man's origin, a deep, practical and many-sided significance, bearing on the mutual relationship established between the sexes by the Creator.

Thus, the primitive institution of monogamy is implied in the fact that one woman is created for one man. Eve, as well as Adam, is made the object of a special creative act, a circumstance which indicates her natural equality with him. While on the other hand, her being taken from his side implies not only her secondary rôle in the conjugal state (I Cor., xii., 9), but also emphasizes the intimate union between husband and wife, and the dependence of the latter on the former. "Wherefore a man shall leave father and mother, and shall cleave to his wife: and they shall be two one flesh." The character of this verse is clearly indicated in the following verse, but the narrator immediately proceeds to relate how they soon acquired, through actual transgression, the knowledge of good and evil, and with it the sense of shame which had been previously unknown to them. In the rest of the Fall, the original cause of evil is the serpent,
which in later Jewish tradition is identified with Satan or Sodom, iv. 24. He tempts Eve personally as the weaker of the two, and she in turn tempts Adam, who yields to her seduction. Immediately their eyes are opened, but in an unexpected manner. Shame and remorse take possession of them, and they seek to hide from the face of the Lord.

For the transgression, Eve (and woman-kind after her) is sentenced to a life of sorrow and travail, and to be under the power of her husband. Doubtless this last did not imply that the woman's essential condition of equality with man was altered, but the expulsion from Eden was necessary in order that she might be bound to follow in a world dominated by sin and its consequences. The natural dependence and subjection of the weaker party was destined inevitably to become something little short of slavery. But if woman was the occasion of man's transgression and fall, it was also decreed in the Divine counsels, that she was to be instrumental in the scheme of restoration which God already promises while in the act of pronouncing sentence upon the serpent. The woman who has suffered defeat, and infinitely painful are its consequences, had transgressed. Inasmuch, Eve, the woman, and the serpent, between his seed and her seed, until through the latter in the person of the future Redeemer, who will crush the serpent's head, she will again be victorious.

Of the subsequent history of Eve the Bible gives little information. In Gen., iv, 1, we read that she bore a son whom she named Cain, because she had him (Nep— to acquire, possess) through God—this at least is the most plausible interpretation of this obscure passage. Later she gave birth to Abel, and the narrative does not record the birth of another child until after the slaying of Abel by his elder brother, when she bore a son and called his name Seth; saying: "God hath given me [Nep— put or appoint] another seed, for Abel whom Cain slew." Of daughters no specific mention is made in this account, but in Gen., v, 4 ("P") we find the general statement that "the days of Adam, after he begot Seth, were eight hundred years: and he begot sons and daughters".

Eve is mentioned in the Book of Tobias (viii, 8; Sept., vii, 6) where it is simply affirmed that she was given to Adam for a helper; in II Cor., xi, 3, where reference is made to her seduction by the serpent; and in I Tim., ii, 13, where the Apostle enjoins submission and silence upon women, arguing that "Adam was the first formed; then Eve. And Adam was not seduced, but the woman being seduced, was in the transgression.

As in the case of the other Old Testament personages, many rabbinical legends have been connected with the name of Eve. They may be found in the "Jewish Encyclopedia", s. v. (see also, Adam), and in Vigiliae Christianae, "Bibliotheca Latina", i, art. "Adam". They are, for the most part, puerile and fantastic, and devoid of historical value, unless in so far as they serve to illustrate the mentality of the later Jewish writers, and the unreliability of the "traditions" derived from such sources, though they are sometimes appealed to in critical discussions.

James F. Driscoll.

**Eve of a Feast** (or Vigil; Lat. Vigilia; Gr. ὀρέγησις).

—In the first ages, during the night before every feast, a vigil was kept. In the evening the faithful assembled at the place or church where the feast was to be celebrated and prepared themselves by prayers, readings from Holy Writ (now the Offices of Vespers and Matins), and sometimes also by hearing a sermon. On such occasions, as on fast days in general, Mass also was celebrated in the evening, before the Vespers of the following day. Towards morning the people dispersed to the streets, and those who wished to wait for the solemn services of the forenoon. This vigil was a regular institution of Christian life and was defended and highly recommended by St. Augustine and St. Jerome (see Flethebr, Aeltere Geschichtes des Breviergebetes, pp. 223 sq.). The morning informa-

This page contains text that is not in English. It appears to be a page from a religious text, possibly a book or a church service. The page includes references to Eve, the first woman, and her role in the fall of Adam. It also discusses the vigil, a night-time service before a feast, which was practiced in early Christianity. The text mentions specific passages from the Bible and references to other religious texts. The page contains a mix of biblical quotes and historical commentary, with a focus on Eve's role and the vigil. The text is written in a formal, scholarly style, typical of religious literature. The page ends with a reference to James F. Driscoll. The page number is 647.
Ages in many churches it was joined to the Sunday Office. If it occurs on a double or a semi-double feast, it is limited to a commemoration in the Lauds and Mass (a feast of the first class excludes this commemoration), the ninth lesson in the Breviary, and the last Gospel in Mass. If it occurs on a day within an ordinary octave, the Mass is said of the vigil, the Office of the octave; if it occurs on a *feria major*, the vigil is omitted in the Breviary and commemorated only in the Mass, if the feria has a proper mass; if not (e. g. in Advent), the Mass is said of the vigil, the feria is commemorated. In the Ambrosian Liturgy of Milan only the vigils of Christmas and Pentecost are kept, at least by a special *Mass*; the other vigils exist only in the Calendar, but are not kept in the liturgy. In the *Monastic Rite* only Christmas has a vigil; three days before Epiphany and four days before Pentecost a fast is observed; the other vigils are suppressed.

**Evesham Abbey in 1530**

(Reconstruction)

**Evesham Abbey**, founded by St. Egwin, third Bishop of Worcester, about 701, in Worcestershire, England, and dedicated to the Blessed Virgin. The founder's charter of endowment, dated 714, records that a hermit of the bishop, named Eoves, was one day favoured with a vision of Our Lady. St. Egwin, being informed, visited the spot and there the Mother of God appeared to him also, commanding him to erect in that place a monastery in her honour for Benedictine monks. The bishop at once set about the task, being liberally assisted in the work by Ethelred and Kenred, successive kings of Mercia, and others. The derivation of the name Evesham is accounted for by the above legend. It is stated, though contemporary charters make the fact doubtful, that St. Egwin resigned his see in order to become first abbot of the new foundation, which he ruled until his death in 717. He was buried in the abbey church and his shrine, beautified by subsequent abbots, became in after years one of the richest and most popular in the West of England. Many miracles are recorded of having taken place there. In 941, after the havoc wrought by the Danes, the few remaining monks who had survived were ejected and secular canons installed in their place. Their possession of the abbey, however, did not last long, for in 969 St. Dunstan and St. Ethelwold, then engaged upon their great reform of the English monasteries, restored the Benedictines to their own. A second expulsion occurred in 977 and it was not until 1014 that the monks effected their final return. With the Norman conquest and the consolidation of the kingdom of England, Evesham grew and prospered, and enjoying royal favour became one of the most important abbeys of Black Monks in the country, so much so, indeed, that the jealousy of the bishops of Worcester was aroused.

As in the case of many other monasteries they claimed rights of visitation and diocesan authority over the monks. The dispute continued for a long time, but eventually the exemption from episcopal jurisdiction, originally obtained by St. Egwin, was confirmed by Rome in 1206. In this as in other matters, the internal history of the abbey as recorded in the "Evesham Chronicle", differs only in detail from that of any other great Benedictine house of the same period. A succession of worthy abbots, seldom broken, guided its fortunes wisely and religiously through the eight centuries of its existence. The use of abbatial pontificalia was obtained in 1160 by Abbot Adam from the reigning pope. At the height of its prosperity the abbey was one of the largest and most stately in England. It had two dependent "cells"—Penwortham, in Lancashire, and Alecster, in Warwickshire—besides another in Denmark; the abbots were also the patrons of seventeen neighbouring parishes; they had a seat in the House of Lords; and they exercised civil jurisdiction within the bounds of the monastic territory. The great abbey church, which, besides the magnificent shrine of St. Egwin, contained fifteen altars, was commenced in the eleventh century by Abbot Walter and was usually completed by several subsequent abbots. It was cruciform, with a central tower, and was nearly 300 feet in length. The previous campainile having fallen, after being struck by lightning, a magnificent bell tower, still standing, was built by Abbot Clement Lichfield about 1533.

Within the abbey precincts and under the very shadow of its minster, were two parish churches, erected by the monks for the use of the people of the town which had grown up around its walls. That of St. Lawrence dates from the thirteenth century and that of All Saints is of a century later. The last of the great abbots of Evesham, Clement Lichfield, who reigned from 1514 to 1539, added chantries to both of these churches. Unwilling to yield to the offer of Henry VIII, when the suppression of the monasteries was threatening, he resigned his abbacy, acting, it is said, at Cromwell's suggestion. His unworthy successor was Philip Hawford, who surrendered the abbey into the king's hands in the same year, 1539. For this service he was rewarded with a pension of £240, and afterwards became first Protestant Dean of Worcester, in which cathedral his tomb may still be seen. The revenues of the abbey at the time of its suppression are given by Dugdale as £1183. The demolition of the buildings commenced almost immediately and the ruins became, as in the case of so many others, a stone quarry for the neighbourhood. Besides the two parish churches and the bell tower, only a gateway, a cloister arch, the almonry, and a few other isolated fragments remain intact to show what man-
Evil, in a large sense, may be described as the sum of the opposition, which experience shows to exist in the universe, to the desires and needs of individual and collective human beings. ...

G. CYPRIAN ALSTON

Evil is, in a large sense, may be described as the sum of the opposition, which experience shows to exist in the universe, to the desires and needs of individual and collective human beings. This opposition may be evident in various forms of suffering, such as that which arises from the natural world, or from the actions of other beings. Such suffering is a constant feature of human experience, and it is essential to understand the nature of evil in order to fully comprehend the human condition. 

With regard to the nature of evil, it should be observed that evil is of three kinds—physical, moral, and metaphysical. Physical evil includes all that causes harm, pain, or suffering to human beings, including natural disasters, accidents, and diseases. Moral evil includes actions or omissions that are contrary to the natural desires of individuals, or that prevent the full development of their powers, either in the order of nature directly, or through the various social conditions under which mankind naturally exists. Metaphysical evil includes all that is not within the power of human beings to control or prevent.

By moral evil, we understand the deviation of human volition from the prescriptions of the moral order and the actions that result from that deviation. Such action, when it proceeds solely from ignorance, is not to be classed as moral evil, which is properly restricted to the motions of the will towards ends of which the conscience disapproves. The extent of moral evil is limited by the natural order, but includes also the sphere of religion, by which man’s welfare is affected in the supernatural order, and the precepts of which, as well as ultimately upon the will of God, are of the strictest possible obligation (see Sin). The obligation to moral action is not arbitrary, but is necessary due to the motives supplied by religion; and it is at least doubtful whether it is possible for moral obligation to exist at all apart from a supernatural sanction.

The imposition of evil is the limitation by one another of the various component parts of the natural world. Through this mutual limitation, natural objects are for the most part prevented from attaining to their full or ideal perfection, whether by the constant pressure of physical conditions, or by sudden catastrophes. These are phenomena of the natural order, and are caused by the interaction of its constituent parts. It is evident that metaphysical evil does not arise, like the other two kinds, necessarily from suffering. If animal suffering is excluded, no pain of any kind is caused by the inevitable limitations of nature; and they can only be called evil by analogy, and in a sense quite different from that in which the term is applied to human experience. Clarke, moreover, has aptly remarked (Correspondence with Leibniz, letter ii) that the apparent disorder of nature is really no disorder, since it is part of a definite system, and precisely fulfills the intention of the creator; it may therefore be counted as a relative perfection rather than an imperfection. It is, in fact, only by a transference to irrational objects of the subjective ideals and aspirations of human intelligence, that the "evil of nature" can be called evil by the sense but a merely analogous one. The nature and degree of pain in the lower animals is very obscure, and in the necessary absence of data it is difficult to say whether it should rightly be classed with the merely formal evil which belongs to inanimate objects, or with the suffering of human beings. The latter view was generally held in ancient times, and may perhaps be referred to the anthropomorphic tendency of primitive minds which appears in the doctrine of metempsychosis. Thus it has often been supposed that animal suffering, together with the mere existence of free actions of inanimate nature, was due to the fall of man, with whose welfare, as the chief part of creation, were bound up the fortunes of the rest (see Theoph. Antioch., Ad Autolyc., ii; cf. Gen. iii. and I Cor. ix.). The opposite view is taken by St. Thomas (I, Q. xvii., a. 13). Descartes supposed that animals, like plants, were automatons, without sensation or consciousness; he was closely followed by Malebranche and Cartesianists generally. Leibnitz grants sensation to animals, but considers that mere sense-perception, unaccompanied by reflection, cannot cause either pain or pleasure; in any case he holds the pain and pleasure of animals to be far less acute than those of human beings, and comparable in degree to those resulting from reflex action in man (see also Maher, Psychology, Supp’t, A., London, 1803).

It is evident again that all evil is essentially negative and not positive; i.e. it consists not in the acquisition of anything, but in the loss or deprivation of something necessary for perfection. Pain, which is the test or criterion of physical evil, has indeed a positive, though purely subjective existence as a sensation or emotion; but its evil quality lies in its disturbing effect on the sufferer. In like manner, the perversity of the will, upon which moral evil depends, is more than a mere negation of right action, implying as it does the positive element of choice; but the moral evil constitutes not a positive, but a negative element of choice, but by its rejection of what right reason requires. Thus Origen (In Joh., ii, 7) defines evil as *stiphrus*; the Pseudo-Dionysius (De Div. Nom. iv) as the non-existent; Mainmondes (Dux perplex., iii, 10) as “privato boni gliaeus”; Albertus Magnus (adopting St. Augustine’s phrase) attributes evil to “alia causa deficiens” (Summa Theol., I, xi, 4); Schopenhauer, who held pain to be the positive and normal condition of life (pleasure being its partial and temporary absence), nevertheless made it depend upon the failure of human desire to obtain fulfillment “‘the wish is itself pain’.” Thus it will be seen that evil is not a real entity; it is relative. What is evil in some relations may be good in others; and probably there is no form of existence which is exclusively evil in all relations. Hence it has been thought that evil cannot truly be said to exist at all, and is really nothing but a “lesser good.” But this opinion seems to leave out of account the reality of human experience. Though the same cause may give pain to one, and pleasure to another, pain and pleasure, as sensations or ideas, cannot but be mutually exclusive. No one, however, has attempted to deny this very obvious fact; and the opinion in question may perhaps be understood as merely a paradoxical way of stating the relativity of evil.
There is practically a general agreement of authorities as to the nature of evil, some allowance being made for varying modes of expression depending on a conventionalized presuppositions. But on the question of the origin of evil there has been, and is, a considerable diversity of opinion. The problem is strictly a metaphysical one: i.e., it cannot be solved by a mere experimental analysis of the actual conditions from which evil results. The question, which Schopenhauer has called the "thirst for being," is concerned not so much with the various detailed manifestations of evil in nature, as with the hidden and underlying cause which has made these manifestations possible or necessary; and it is at once evident that evil in a region so obscure must be attended with great difficulty, and that the conclusions reached must, for the most part, be of a provisional and tentative character. No system of philosophy has ever succeeded in escaping from the obscurity in which the subject is involved; but it is not too much to say that the Christian solution offers, on the whole, fewer difficulties, and approaches more nearly to completeness than any other. The question may be stated thus. Admitting that evil consists in a certain relation of man to his environment, and to the processes in the universe that make up parts of the totality of existence to one another, how comes it that though all are alike the results of a universal cosmic process, this universal agency is perpetually at war with itself, contradicting and thwarting its own efforts in the multiple materials? Further, admitting that metaphysical evil in itself may be merely nature's method, involving nothing more than a continual redistribution of the material elements of the universe, human suffering and wrongdoing still stand out as essentially opposed to the general scheme of natural development, and are scarcely to be reconciled in thought with any conception of unity or harmony in nature. To what, then, is the evil of human life, physical and moral, to be attributed as its cause? But when the universe is considered as the work of an all-benevolent and all-powerful Creator, a fresh element is added to the problem. If God is all-benevolent, why did He cause or permit suffering? If He is all-powerful, He can be under no necessity of creating or permitting it; and on the other hand, if He is under any such necessity, He cannot be all-powerful, if God is all-powerful, how can He permit the existence of moral evil? We have to enquire, that is to say, how evil has come to exist, and what is its special relation to the Creator of the universe.

The problem has been attempted by three different methods.

I. It has been contended that existence is fundamentally evil; that evil is the active principle of the universe, and good no more than an illusion, the pursuit of which serves to induce the human race to perpetuate its own existence (see Pessimism). This is the fundamental tenet of Buddhism (q.v.), which regards happiness as unattainable, and holds that there is no way of escaping from misery but by ceasing to exist otherwise than in the impersonal state of Nirvana. The origin of suffering, according to Buddha, is "the thirst for being". This was also, among Greek philosophers, the view of Hegesias the Cyrenaeus (called πεθανθειαν, the counsellor of death), who held life to be valueless, and pleasure, the only good, to be unattainable. But the Greek temper was naturally disinclined to regarding unhappiness and life; while popular mythology embodied the darker aspects of existence in such conceptions as those of Fate, the avenging Furies, and the envy (φθεια) of the gods, Greek thinkers, as a rule, held that evil is not universal but can be avoided or overcome by the wise and virtuous. Pessimism, as a metaphysical system, is the product of modern times. Its chief representatives are Schopenhauer and von Hartmann, both of whom hold the actual universe to be fundamentally evil, and happiness in it to be impossible. The problem of the nominal universe is attributed by Schopenhauer to a transcendent Will, which he identifies with pure being; and by Hartmann to the Unconscious, which includes both the Will and the Idea (Vorstellung) of Schopenhauer. According to both Schopenhauer and Hartmann, suffering has come into existence with self-consciousness, from which it is inseparable.

II. Evil has been attributed to one of two mutually opposed principles, to which respectively the mingled good and evil of the world are due. The relation between the two is variously represented, and ranges from the co-ordination imagined by Zoroastrianism to the mere relative independence of the created will as held by Christian theology. Zoroaster attributed good and evil respectively to two mutually hostile principles (οὐρανός or ἄρχεια) called Ormuzd (Ahura Mazda) and Ahriman (Angra Mainyu). Each was independent of the other; but eventually the good were to be victorious with Ormuzd, and Ahriman and his evil followers were to be expelled from the world. This mythological dualism passed to the sect of the Manichees, whose compatriots were the Christians. The Manichees held that the universe was the成品 of the God of the Ninjas, who, like the "living spirit," by whom was formed the present material world of mingled good and evil, created it at its propitious moment primarily essentially evil, and therefore could not be in direct contact with God. He probably derived the notion from the Gnostic sects, which, though they differed on many points from one another, were generally agreed in following the opinions of Philo, and the neo-Platonic Plotinus, as to the evil of matter. They held the world to have been formed by an emanation, the Demiurge, as a kind of intermediary between God and impure matter. Bardessanes, however, and his followers regarded evil as resulting from the misuse of created free will.

The notion that evil is necessarily inherent in matter, independent of the Divine author of good, and in some sense opposed to Him, is common to the above theosophical systems, to many of the purely rational conceptions of Greek philosophy, and to much that has been written since, mainly in the Pythagorean idea of a numerical harmony as the constitutive principle of the world, good is represented by unity and evil by multiplicity (Philo, Frgm. 9. Hellenicus set the "strife", which he held to be the essential condition of the action of the immanent deity. "God is the author of all that is right and good and just; but men have sometimes chosen good and sometimes evil" (Frgm. 61). Empedocles, again, attributed evil to the principle of hate (φοβος), inherent together with its opposite, love (φιλος), in the universe. Plato held God to be "free from blame" (δαιμονιος) for the evil of the world; its cause was partly the necessary imperfection of material and created existence, and partly the action of the human will (Timaeus, xii; cf. Phaedo, ix). With Aristotle, evil is a necessary aspect of the constant changes of matter, and has in itself no real existence (Metaph., ix, 9). The Stoics conceived evil in a somewhat similar manner, as due to necessity; the immanent Divine power harmonizes the evil and good in a changing world. Moral evil proceeds from the free motion of the soul, and from the free choice of the actions, by which the soul is not yet ruled by it to a good end. In the hymn of Cleanthes to Zeus (Stob. Ecl., I, p. 30) may be perceived an approach to the doctrine of Leibniz, as to the nature of evil and the goodness of the world. "Nothing is done without the presence of evil, what every one commits by their own folly; and all, who think best, do the best in one, that there might be one
reasonable and everlasting scheme of all things." In the mystical system of Eckhart (d. 1329), evil, sin included, has its place in the evolution of the soul. The sinner, by following the path to the negation of God, and contributes, both in the moral order and in the physical, to the accomplishment of the Divine purpose. Eckhart's monistic or pantheistic tendencies seem to have obscured for him many of the difficulties of the subject, as has been the case with those by whom the same tendencies have since been carried to an extreme conclusion.

Christian philosophy has, like the Hebrew, uniformly attributed moral and physical evil to the action of human weakness, and always, as if himself involved in the evil from which he suffers by transgressing the law of God, on obedience to which his happiness depended. Evil is in created things under the aspect of mutability, and possibility of defect, not as existing per se: and the errors of mankind, mistaking the true conditions of its own well-being, have been the cause of moral and physical evil (Dion. Areop., De Div. Nom., iv, 31; St. Aug., De Civ. Dei, xii). The evil from which man suffers is, however, the condition of good, for the sake of which it is permitted. Thus, "God judged it better to keep him so, why, since it is permitted, should it be resisted?" (St. Aug., Enchirid., xxvii). Evil contributes to the perfection of the universe, as shadows to the perfection of a picture, or harmony to that of music (De Civ. Dei, xi). Again, the excellence of God's world in nature is insisted on as evidence of the Divine wisdom, power, and goodness, by which no evil can be directly caused. (Greg. Nyss., De opif. hom.) Thus Boethius asks (De Consol. Phil., I, iv) who can be the author of good, if God is the author of evil? As darkness is nothing but the absence of light, and is not produced by creation, so evil is merely the defect of goodness. (St. Aug., In Gen. ad lit.) St. Basil (Hexem., Hom. ii) points out the educative purposes served by evil; and St. Augustine, holding evil to be permitted for the punishment of the wicked and the trial of the good, shows that it has, under this aspect, the nature of good, and is pleasing to God, not because of what it is, but because of where it is; i.e. as the penal and just consequence of sin (De Civ. Dei, xi, xii, De Vera Relig. xiv).

Lactantius uses similar arguments to oppose the dilemma, as to the omnipotence and goodness of God, which he puts into the mouth of Epicurus (De Ira Dei, xiii). St. Anselm (Monologium) connects evil with the partial manifestation of good by creation; its fullness being in God alone.

The features which stand out in the earlier Christian explanation of evil, and appear both natural and necessary, are (1) the definite attribution to God of absolute omnipotence and goodness, notwithstanding His permission of the existence of evil; (2) the assignment of a moral and retributive cause for suffering in the sin of mankind; and (3) the unhesitating assertion of the necessity of God's purpose in permitting evil, together with the full admission that He could, had He so chosen, have prevented it (De Civ. Dei, xiv). How God's permission of the evil which He foreknew and could have prevented is to be reconciled with His goodness, is not fully considered; St. Augustine states the question in forcible terms, but is content by way of answer to follow St. Paul, in his reference to the unsearchableness of the Divine judgments (Contra Julianum, I, 48).

The same general lines have been followed by most of the Christian philosophers in the terms of Theism for the existence of evil. Descartes and Malebranche held that the world is the best possible for the purpose for which it was created, i.e. for the manifestation of the attributes of God. If it had been more perfect in all respects, by which it would have been of attainment of this object. The relation of evil to the will of a perfectly benevolent Creator was elaborately treated by Leibniz, in answer to Bayle, who had insisted on the arguments derived from the existence of evil against that of a good and omnipotent God. Leibniz founded his views mainly on those of St. Augustine and St. Thomas, and derived his theory of Optimism (q. v.). According to it, the universe is the best possible; but metaphysical evil, or imperfection, is necessarily involved in its constitution, since it must be finite, and could not have been endowed with the infinite perfection which belongs to God alone. Moral and physical evil are due to the fall of man, but all evil is overruled by God to a good purpose. Moreover, the world with which we are acquainted is only a very small factor in the whole of creation, and it may be supposed that evil is connected with the necessity for the existence of other regions not known to us. Voltaire, in "Candide," undertook to throw ridicule upon the idea of the "best possible world"; and it must be admitted that the theory is open to grave objections. On the one hand, it is scarcely consistent with belief in the Divine omnipotence; and on the other, it fails to account for the permission (or indirect authorship) of evil by a good God, to which Bayle had specially taken exception. We cannot know that this world is the best possible; and if it is supposed to be the "best possible," why should a perfectly good God have created it? It may be urged, moreover, that there can be no degree of finite goodness which is not susceptible of increase by omnipotence, without ceasing to fall short of infinite perfection.

Leibniz has been more or less closely followed by many who have since treated the subject from the Christian point of view. These have, for the most part, emphasized the evidence in creation of the wisdom and goodness of its Author, after the manner of the Book of Job, and have been content to leave undiscovered the reason for the creation, by Him, of a universe in which evil is unavoidable. Such was the view of King (Essay on the Origin of Evil, London, 1732), who insisted strongly on the doctrine of the best possible world; of Culworth, who held that evil, though inseparable from the nature of imperfect beings, is largely a matter of men's own fancy and opinions, rather than of the reality of things, and therefore not to be made the ground of accusation against Divine Providence. Derham (Physico-Theology, London, 1704) took occasion in his examination of the evidences of creation to commend an attitude of humility and trust towards the Creator of "this elegant, this well-contrived, well-formed world, in which we find everything necessary for the sustentation, use and comfort of man and every other creature here below; as well as such things, some of which are for our sins". Priestley held a doctrine of absolute Determinism, and consequently attributed evil solely to the Divine will; which, however, he justified by the good ends which evil is providentially made to subserve (Doctrine of Philosophical Necessity, Birmingham, 1782). Clarke, again, called special attention to the evidence of method and design, which bear witness to the benevolence of the Creator, in the midst of apparent moral and physical disorder. Rosemi, closely following Malebranche, pointed out that the question of the possibility of a better world than this has really no meaning; any world created by God must be the best possible in relation to its special purpose, apart from which neither goodness nor badness can be predicated of it. Mamiani also supposed evil to be increased by man, who, he said, appeared as the finite approached its final union with the infinite.

III. The third way of conceiving the place of evil in the general scheme of existence is that of those systems in which certain aspects or moments of the development of nature are apprehended by human consciousness. In this view there is no distinctive principle to
which evil can be assigned, and its origin is one with that of nature as a whole. These systems reject the specific idea of creation; and the idea of God is either rigorously excluded, or identified with an impersonal principle, immanent in the universe, or conceived as a mere abstraction from the methods of nature; which, whether viewed from the standpoint of Materialism or from that of Idealism, is the one ultimate reality. The problem of the origin of evil is thus merged in that of the origin of being. Moral evil, in particular, arises from error, and is to be gradually eliminated, or at least minimized, by improved knowledge of the conditions of a happy life (Malison). In its present state, the whole, were the doctrines of the Ironic Hypothesis, whose fundamental notion was the essential unity of matter and life; and on the other hand, also, that of the Eletics, who found the origin of all things in abstract being. The Atomists, Leucippus and Democritus, held what may be called a doctrine of materialistic Monism. This doctrine, however, found its first complete expression in the philosophy of Epicurus, which explicitly rejected the notion of any external influence upon nature, whether of "fate," or of Divine power. According to the Epicurean Lucretius (De Rerum Natura, II, line 180) the existence of evil was fatal to the supposition of the creation of the world by God:

Nequaquam nobis divinitus esse creatam
Natura mundi, quae tanta est predita culpa.

Gioro, in Meno, has made God the cause of all things, acting by an internal necessity, and producing the relations considered evil by mankind. Hobbes regarded God as merely a corporeal first cause; and applying his theory of civil government to the universe, defended the existence of evil by simple assertion of the absolute power to which it is due—a theory which is little else than a statement of materialistic Determinism in terms of social relations. Spinoza united matter and spirit in the notion of a single substance, to which he attributed both thought and extension; error and imperfection were the necessary consequence of the order of the universe. The Hegelian Monism, which reproduces many of the ideas of Eckhart, and is adopted in its main features by many different systems of recent origin, gives to evil a place in the unfolding of the Idea, in which both the origin and the inner reality of the universe are to be found. Evil is the temporary discord between what is and what ought to be. Huxley was content to believe that the ultimate causes of things are at present unknown, and may be unknowable. Evil is to be known and combated in the concrete and in the world of the empiricism professed, and named, by Huxley refuses to entertain any question as to transcendental causes, and confines itself to experimental facts. Haekel advances a dogmatic materialism, in which substance (i.e. matter and force) subsists as the eternal and infinite basis of all things. Professor Mctenchikoff, on similar principles, places the cause of evil in the "dis-harmonies" which prevail in nature, and which he thinks may perhaps be ultimately removed, for the human race at least, together with the pessimistic temper arising from them, by the progress of science. Bourdeau has asserted in express terms the futility of seeking a transcendental or supernatural origin for evil, and the necessity of confining the view to natural, accessible, and determinable causes (Revue Philosophique, 1, 1900).

The recently constructed system, or method, called Pragmatism, has this much in common with Pessimism, that it regards evil as an actually unavoidable part of that human experience which is in point of fact typical with truth and reality. The world is what we make it; evil tends to diminish with the growth of experience, and may finally vanish; though, on the other hand, there may always remain an irreducible minimum of evil. The origin of evil is, like the origin of all things, inexplicable; it cannot be fitted into any theory of the design of the universe, nor can there be no such theory is possible. "We cannot by any possibility comprehend the character of a cosmic mind whose purposes are fully revealed by the strange mixture of goods and evils that we find in this actual world's particulars—the mere word design, by itself, has no consequence to explain an evil in what is called the Pragmatism, London, 1907. Cf. Schiller, Humanism, London, 1907.) Nietzsche holds evil to be purely relative, and in its moral aspect at least, a transitory and non-fundamental concept. With him, mankind is "a creature of this kind, which is adapted to his environment". In this mode of thought the individual necessarily counts for comparatively little, as being merely a transient manifestation of the cosmic force; and the social aspects of humanity are those under which its pains and shortcomings are mostly considered, with a view to their amelioration. Hence, the various forms of Socialism; the idea conceived by Nietzsche of a totally new, though as yet undefined, form of social morality, and of the constitution and mutual relations of classes; and the so-called "economic ethics" which Spring used to be tending to the general good. The first example of such religions was that of Auguste Comte, who upon the materialistic basis of Positivism, founded the "religion of humanity", and professed to substitute an enthusiasm for humanity as the motive of right action, for the mechanical utilitarianism of Bentham and the Materialism of Spinoza. In the light of Catholic doctrine, any theory that may be held concerning evil must include certain points bearing on the question that have been authoritatively defined. These points are (1) the omnipotence, omniscience, and absolute goodness of the Creator; (2) the freedom of the will; and (3) that suffering is the penal consequence of wilful disobedience to the law of God. A complete account may be gathered from the teaching of St. Thomas Aquinas, by whom the principles of St. Augustine are systematized, and to some extent supplemented. Evil, according to St. Thomas, is a privation, or the absence of some good which belongs properly to the nature of the creature.

Evil is threefold, viz., malum nature (metaphysical evil), culpos (moral), and poenas (physical, the retributive consequence of malum culpa) (1, Q. xlviii, s. 5; Q. lix, a. 9; De Malo, I, 4). Its existence subserves the perfection of the whole; but its perfection is less perfect if it contained no evil. Thus fire could not exist without the corruption of what it consumes; the lion must slay the ox in order to live; and if there were no wrongdoing, there would be no sphere for patience and justice (1, Q. xlviii, a. 2). God is said (as in Is.), xlv, to be the author of evil in the sense that the corruption of material objects in nature is ordained by Him, as a means for carrying out the design of the universe; and on the other hand, the evil which exists as the consequence of the breach of Divine law is in the same sense dishonorable to the individual; the universe would be less perfect if its laws could be broken with impunity. Thus evil, in one aspect, i.e. as counter-balancing the devolution of sin, has the na-
tute of good (II, Q. ii, a. 19). But the evil of sin (culpa), though permitted by God, is in no sense due to Him (I, Q. xlix, a. 2); its cause is the abuse of free will by angels and men (I-I, Q. xiii, a. 6; II-II, Q. xvi, a. 1). Only by the permission of God can be observed that the universal perfection to which evil in some form is necessary, is the perfection of this universe, not of any universe: metaphysical evil, that is to say, and indirectly, moral evil as well, is included in the design of the universe which is partially known to us; but we cannot say whether, apart from God’s foreknowledge, that another equally perfect universe could not be created in which evil would have no place.

St. Thomas also provides explanations of what are now generally considered to be the two main difficulties in the subject, viz., the Divine permission of foreseen moral evil, and the question finally arising thence, why God chose to create anything at all. First, it is asked why God, foreseeing that His creatures would use the gift of free will for their own injury, did not either abstain from creating them, or in some way safeguard their free will from misuse, or else deny them the gift altogether? St. Thomas replies (C. G., II, xxviii) that God cannot change His mind, since the Divine will is free from the defect of weakness or mutability. Such mutability would, it should be remarked, have been a real evil to Him (Hay, I, q. xxv, a. 1, 3 ad 3 fore impossible), because if God’s purpose were made dependent on the foreseen free act of any creature, God would thereby sacrifice His own freedom, and would submit Himself to His creatures, thus abdicating His essential supremacy—a thing which, of course, utterly inconceivable. Secondly, to the question why God should have chosen to create, when creation was in no way needful for His own perfection, St. Thomas answers that God’s object in creating is Himself; He creates in order to manifest His own goodness, power, and wisdom, and that the perfection of the universe in which the goodness of creation consists. God’s pleasure is the one supremely perfect motive for action, alike in God Himself and in His creatures; not because of any need, or inherent necessity, in the Divine nature (C. G., I, xxviii; II, xxiii), but because God is the source, centre, and object, of all existence. (I, Q. lxv, a. 2; cf. Prov., 26, and Concord. Vat., can. i, v.) Const. Dogm., I.) This is accordingly the sufficient reason for the existence of the universe, and even for the suffering which moral evil has introduced. God has chosen to permit the free will of man for man’s good, but for His own pleasure; good for man’s pleasure lies in conforming himself to the supreme purpose of creation, and evil in departing from it (C. G., III, xvii, calix). It may further be understood from St. Thomas, that He, contrary to what we might expect, is the author of the perfection of the universe as a whole is embodied, God may see a certain similitude of His own threefold unity (cf. I, Q. xii); and again, that by permitting moral evil to exist He has provided a sphere for the manifestation of one aspect of His essential justice (cf. I, Q. lxv, a. 2; and I, Q. xxi, a. 1, 3).

It is obviously impossible to suggest a reason why this universe in particular should have been created rather than another; since we are necessarily incapable of forming an idea of any other universe than this. Similarly, we are unable to imagine why God chose to manifest Himself by the way of creation, instead of, or in addition to, the other ways, whatever they may be, by which He has, or may have, attained the same end. We reach here the utmost limit of speculation; and our conclusions are limited to the recognition of creation (as distinct from its direct motive) as paralleled, at a much earlier stage of the enquiry, by the inability of the non-creationists of thought to assign any ultimate cause for the existence of the order of nature. It will be observed that St. Thomas’s account of evil is a complex one, and where the evil of creation is defined as every factor of the problem, and leaving unsolved only the mystery of creation, before which all schools of thought are equally helpless. It is as impossible to know, in the fullest sense, why this world was made as to know how it was made; but St. Thomas has at least shown that the acts of the Creator admit of complete logical justification, notwithstanding the mystery which, for human intelligence, they can never wholly cease to be involved. On Catholic principles, the amelioration of moral evil and its consequent suffering can only take place by means of individual reformation, and not so much through stimulation or re-direction of the will. But since all methods of social improvement that have any value must necessarily represent a nearer approach to conformity with Divine laws, they are welcomed and furthered by the Church, as tending at least indirectly, to accomplish the purpose for which she exists.

For ancient views of evil, see: Historiae of philosophy by Zeller and Ueberweg; Darmstädter and Milla, The Zend-Avesta (London, 1887); Monier-Williams, Buddhism, Brahmanism and Hinduism (London, 1880); Alcock, Univ. Church Hist. (Dublin, 1900); Cowperston, Buddhism (London, 1902), 2nd ed.

A. B. Sharpe.

Evdosius, first Bishop of Antioch after St. Peter. Eusebius mentions him thus in his "History": "And Evdusios having been established the first [bishop] of Antiochians, Ignatius flourished at this time (III, 22). The time of the apostles being from Rome and Trasian, of whom Eusebius has just spoken. Harnack has shown (after discarding an earlier theory of his own) that Eusebius possessed a list of the bishops of Antioch which did not give their dates, and that therefore the names of the bishops of Antioch are not chronologically connected with the popes. It seems certain that he took the three episcopal lists of Rome, Alexandria, and Antioch from the "Chronography" which Julius Africanus published in 221. The "Chronicle of Eusebius" is lost; but in Jerome's translation, we find in three successive years the three entries (1) that Peter, having founded the Church of Antioch, is sent to Rome, where he perseveres as bishop for 25 years; (2) that Mark, the interpreter of Peter, preaches Christ in Egypt and Alexandria; and (3) that Evdusios is ordained first Bishop of Antioch. This last year is given as Claudius III by the Codex Frehersianus, but by the fifth-century Budian Codex (not used in Schoene's edition) and the rest as Achilles Evdusios IV (A. d. 44). The Armenian translation has Claudius II. We have no mention of Evdusios earlier than this by Africanus; but the latter is confirmed by his contemporaries, Ignatius the second bishop after Peter (Hom. IV, in Luc, III, 938A). It is curious that the ordination of Evdusios should not have been given in the "Chronography" in the same year as the founding of the Antioch Church by Peter (Harpocrepus) and not a few years later; these three entries must have belonged to a single year in
Eusebius. But the evidence is not in favour of this simplification. The year of the accession of Ignatius, that is of the death of Evodius, was unknown to Eusebius. Abarbanel expressly places it together with the death of Peter and the accession of Linus at Rome (Nero 14–68), while in the "History" he mentions it at the beginning of Trajan's reign.

The fame of Ignatius has caused later writers, such as Athanasius and Chrysostom, to speak of him as though they were the immediate successors of the Apostles. Jerome (De viris il. 16) and Socrates (H. E. VI, 8) call him the "third" bishop after St. Peter; but this is only because they illogically include Peter among his own successors. Theodoret and Pseudo-Ignatius make him a martyr Ignatius as consecrated by Peter. The difficulty which thus arose about Evodius was solved in the Apostolical Constitutions by stating that Evodius was ordained by Peter and Ignatius by Paul. The Byantine chronicler, John Malalas (X, 232), relates that as Peter went to Rome, and passed through the great city of Antioch, it happened that Evodius (sic), the bishop and patriarch, died, and Ignatius succeeded him; he attributes to Evodius the invention of the name Christian. Salmon does not seem to be justified in supposing that Malalas ascribes and offers as a tradition to the second century Bishop of Antioch. We may be sure that Evodius is an historical personage, and really the predecessor of St. Ignatius. But the dates of his ordination and death are quite uncertain. No early witness makes a specific claim.

The Greeks commemorate together "Evodius" and Onesiphorus (II Tim., i. 16) as of the seventy disciples and as martyrs on 29 April, and also on 7 Sept. Evodius was unknown to the earlier Western martyrologists the Hieronymian, and those of Bede and Florus; but Ado introduced him into the so-called "Martyrologium Romanum purum" (which he forged not long before 860) and into his own work, on 6 May. His source was Pseudo-Ignatius, whom he quotes in the "Libellus de fest. Apost.", prefixed to the martyrlogy proper. From him the notice came to Uranus and the rest, and to the present Roman Martyrology.

JOHN CHAPMAN.

EVOLUTION.

Evolution.—This subject will here receive a twofold treatment, as follows: A. The Theory Broadly Considered, and the Catholic Attitude in its Regard; B. Its History and Scientific Foundations.

A. THE THEORY OF CATHOLICS TOWARDS THE THEORY.

One of the most important questions for every educated Catholic of to-day is: What is to be thought of the theory of evolution? Is it to be rejected as unfounded and imical to Christianity, or is it to be accepted as an established theory altogether compatible with the principles of a Christian conception of the universe? We must carefully distinguish between the different meanings of the words theory of evolution in order to give a clear and correct answer to this question. We must distinguish (1) between the theory of evolution as a scientific hypothesis and as a philosophical speculation; (2) between the theory of evolution as based on theistic principles and as based on a materialistic and atheistic foundation; (3) between the theory of evolution and Darwinism; (4) between the theory of evolution as applied to the vegetable and animal kingdoms and as applied to man.

(1) As a scientific hypothesis, the theory of evolution seeks to determine the historical succession of the various species of plants and of animals on our earth; and, with the aid of paleontology and other sciences, such as comparative morphology, embryology, and geology, traces in the course of the different geological epochs they gradually evolve from their beginnings by purely natural causes of specific development. The theory of evolution, then, as a scientific hypothesis, does not consider the present species of plants and of animals as forms directly created by God, but seeks to find out the transition from other species existing in former geological periods. Hence it is called the theory of evolution, or the theory of descent, since it implies the descent of the present from extinct species. This theory is opposed to the theory of constancy, which says that the individual species of organic species. The scientific theory of evolution, therefore, does not concern itself with the origin of life. It merely inquires into the genetic relations of systematic species, genera, and families, and endeavours to arrange them according to natural series of descent (genetic trees).

How far is the theory of evolution based on observed facts? It is understood to be still only an hypothesis. The formation of new species is directly observed in but a few cases, and only with reference to the so-called "artificial" species of plants and animals. One branch of the artificial species is the systematic species of the plant-genus Genothera, and of the beetle-genus Dinarda. It is, however, not difficult to furnish an indirect proof of great probability for the genetic relation of many systematic species to each other in the genetic development of the horse (Equidae), of amonites, and of many insects, especially of those that dwell as "guests" with ants and termites, and have adapted themselves in many ways to their hosts. Upon comparing the scientific proofs for the probability of the theory of evolution, we find that they grow the more numerous and weighty, the smaller the circle of forms under consideration, but become weaker and weaker, if we include a greater number of forms, such as are comprised in a class or in a sub-kingdom. There is, in fact, no evidence whatever for the common genetic descent of all plants and animals from a single primitive organism. Hence the greater number of botanists and zoologists regard a polygenetic (polyphyletic) evolution as much more acceptable than a monogenetic (monophyletic) one. As practically it is impossible to decide how many independent genetic series must be assumed in the animal and vegetable kingdoms. This is the gist of the theory of evolution as a scientific hypothesis. It is in perfect agreement with the Christian conception of the universe; whereas the Scripture does not state that the present species of plants and of animals were originally created by God. As early as 1877 Knaabauer stated "that there is no objection, so far as faith is concerned, to assuming the descent of all plant and animal species from a few types" (Stimmen aus Maria Lasch, XIII, p. 72).

Passing now to the theory of evolution as a philosophical speculation, the history of the plant and animal kingdoms upon our globe is but a small part of the history of the entire earth. Similarly, the geographical development of our earth constitutes but a small part of the history of the solar system and of the universe. The theory of evolution as a philosophical conception considers the entire history of the cosmos as an harmonious development, brought about by natural laws. This conception is in agreement with the Christian view of the universe. God is the Creator of heaven and earth. If God produced the universe by a single creative act of His will, then its natural development by laws implanted in it by the Creator is to the greater glory of His Divine power and wisdom. St. Thomas Aquinas says: "The potency of a cause is the greater, the more remote the effects to which it extends" (Summae, a. Gent., III, c. lxxvii); and Suarez: "God does not inter-
fere directly with the natural order, where secondary causation (Darwin's phrase in p. 13). In the light of this principle of the Christian interpretation of nature, the history of the animal and vegetable kingdoms on our planet is, as it were, a verse in a volume of a million pages in which the natural development of the cosmos is described, and upon whose title-page is written: "In the beginning God created heaven and earth." (2) The theory of evolution just stated rests on a theistic foundation. In contradistinction to this is another theory resting on a materialistic and atheistic basis. Of the two, the theistic, has some personal Creator. This theistic theory of evolution is ineffectual to account for the first beginning of the cosmos or for the law of its evolution, since it acknowledges neither creator nor lawgiver. Natural science, moreover, has proved that spontaneous generation—i.e. the independent genesis of a living being from non-living matter—contradicts the facts of observation. For this reason the theistic theory of evolution postulates an intervention on the part of the Creator in the production of the first organisms. When and how this took place, the modern theories have left us in the dark; we, indeed, do not know. The Christian theory of evolution also demands a creative act for the origin of the human soul, since the soul cannot have its origin in matter. The atheistic theory of evolution, on the contrary, rejects the assumption of a soul separate from matter, and thereby sinks into blank materialism.

(3) Darwinism and the theory of evolution are by no means equivalent conceptions. The theory of evolution was propounded before Charles Darwin's time, by Lamarck (1800) and Geoffroy de Saint-Hilaire. Darwin, in 1859, gave it a new form by endeavouring to explain the origin of species by means of natural selection. According to this theory the breeding of new species depends on the survival of the fittest in the struggle for existence. The Darwinian theory of selection is Darwinism—adhering to the narrower, and accurate, sense of the word. As a theory, it is scientifically inadequate, since it does not account for the origin of attributes fitted to the purpose, which must be referred back to the interior, original causes of evolution. The fallacy of the theory is a philosophical paradox: rejecting Origen's teleology and the teleological argument, it maintains that teleological form of the theory of evolution which was shown above—under (2)—to be untenable. The third signification of the term Darwinism arose from the application of the theory of selection to man, which is likewise impossible of acceptance. In the fourth place, Darwinism frequently stands, in popular usage, for the theory of evolution in general. This use of the word rests on an evident confusion of ideas, and must therefore be set aside.

(4) To what extent is the theory of evolution applicable to man?—That God should have made man, has been the cause of natural, evolutionary, original causes in the production of man's body, is per se not improbable, and was propounded by St. Augustine (see Augustin of Hippo, St. Augustin in History). The actual proofs of the descent of man's body from animals is, however, inadequate, especially in respect to palaeontology. And the human soul could not have been derived through natural evolution from that of the brute, since it is of a spiritual nature; for which reason we must refer its origin to a creative act on the part of God.

B. HISTORY AND SCIENTIFIC THEORIES OF EVOLUTION. The world of organisms comprises a vast number of individual forms generally classified according to structural resemblances into kingdoms, classes, orders, families, genera, species. The species is considered as the unit of the system. It is designated by a double name, the first of which indicates the genus, e.g. canis familiaris, the dog, and canis lupus, the wolf. Comparing the species of the present day with their fossil representatives in the geological layers, we find that they differ from one another the more the farther we retrace the geological record. To explain this remarkable fact, two theories have been proposed, the one maintaining the stability and special creation of species, the other the instability and evolution, or genetic relation, of species. As is plain from the preceding section of this article, the principal difference between the two theories consists in this: that the theory of evolution derives the species of to-day by a progressive development from one or more primitive types, whilst the theory of constancy insists upon the special creation of each true species. It is generally admitted that the determination of specific forms depends largely on the subjective views and experience of the naturalist.

We shall here confine our attention to the history and scientific foundations of the biological theory of evolution, leaving all purely philosophical and theological discussions to others. The entire subject will be here divided into the following parts: I. HISTORY OF THE SCIENTIFIC THEORIES OF EVOLUTION; II. DEFINITION OF SPECIES; III. VARIABILITY AND EXPERIMENTAL FACTS RELATING TO THE EVOLUTION OF SPECIES; IV. THE FALEONTOLOGICAL ARGUMENT; V. THE MORPHOLOGICAL ARGUMENT; VI. THE ONTOGENETIC ARGUMENT; VII. THE BIOGEOGRAPHICAL ARGUMENT.

Before we begin, we wish to remind the reader of the important distinction brought out in the preceding essay, that the general theory referring to the mere fact of evolution must be well distinguished from all special theories which attempt to explain the assumed fact by ascribing it to certain causes, such as natural selection, the influence of environment, and the like. In other words, an evolutionist—that is, a defender of the general scientific theory of evolution—will consider, for example, as either a Darwinian, or a Lamarckian, or an adherent of any special evolutionary system. No less important are the other definitions and distinctions emphasized above under A.

I. HISTORY OF THE SCIENTIFIC THEORIES OF EVOLUTION. The historical development of the scientific theories of evolution may be divided into three periods. The main figure of the first period is Lamarck. The period ends with an almost complete victory of the theory of constancy (1850). The second period commences with Darwin's "Origin of Species" (1859). The idea of evolution, and in particular Darwin's theory of natural selection, enters into every department of the biological sciences and to a great extent transforms them. The third period is a time of critical reflection. Lamarckianism is generally considered as insufficient to explain the origin of new characters, while the ideas of Lamarck and G. Saint-Hilaire become prevalent. Besides, the theory of evolution is tested experimentally. Typical representatives of the period are Bateson, Hugo de Vries, Morgan.

First Period. Linnaeus based his important "Systema naturae" on the principle of the constancy and special creation of every species—"Species tot numerum amus quot diverse formas in principio sunt creatas." (Philosophia botanica, Stockholm, 1751, p. 99). For, "contemplating the work of God, we cannot fail to see that every one that organs produce offspring perfectly similar to the parents" ("Systema", Leipzig, 1748, p. 21). Linnaeus had a vast influence upon the naturalists of his time. Thus his principle of the con-
stancy of species was universally acknowledged, and this all the more because it seemed to be connected with the first chapter of the Bible. Georges Louis Leclerc Buffon (1707–88), the “suggestive” author of the “Histoire naturelle générale et particulière,” was the first to dispel the notion of fixity of species on scientific grounds. Till 1761 he had defended the theory of constancy, but he then became an extreme evolutionist, and finally held that through the direct influence of environment species could undergo manifest modifications of structure. Similar views were expressed by the German Gottfried Reinhold Treviranus in his work “Biologie oder Philosophie der lebenden Natur” (1802), and by “the poet of evolution,” J. W. Goethe (1749–1832). However, none of these men worked out the details of a definite theory. The same must be said of the grandfather of Charles Darwin, Erasmus Darwin (1731–1802), physician, poet, and naturalist, the first who seems to have anticipated Lamarck’s main views. “All animals undergo transformations which are in part produced by their own exertions in response to pleasures and pains, and many of these acquired forms and propensities are transmitted to their posterity” (Zoonomia, 1794). Jean-Baptiste de Lamarck (b. 1744) was the scientific founder of the modern theory of evolution and its special form, known as Lamarckism. At the age of forty-eight, Lamarck was elected professor of invertebrate zoology at the Jardin des Plantes (Paris). In 1819 he became completely blind, and died ten years later in great poverty and neglected by his contemporaries, socially and scientifically. The main ideas of his theory are contained in his “Philosophie zoologique” (1809) and his “Histoire des animaux sans vertèbres” (1816–22). Lamarck disputes the immutability of specific characters, and denies that there is any objective criterion for determining, with any degree of accuracy, which forms ought to be considered as species. Consequently he believed that “each specific name has only a relative value. It refers to a collection of similar individuals ‘que la génération perpétue dans le même état tant que les circonstances de leur situation ne changent pas assez pour qu’à la fois les leurs habitudes, leur caractère et leur forme’” (Phil. soul., I, p. 75). But how are species transformed into new species? As to plants, Lamarck believes that all changes of structure and function are due to the direct influence of environment. In animals the changed conditions of the environment first call forth new physiological activities, and afterwards similar changes will be produced, and through use and disuse organs may be strengthened or weakened, newly adapted to the requirements of new functions, or made to disappear. The acquired changes are handed down to the offspring by the strong principle of inheritance. Thus the web in the feet of water birds was acquired through use, while the so-called rudimentary organs, e.g. the teeth of the baleen whale, the small eyes of the mole, were reduced to their imperfect condition through disuse. Lamarck did not believe the origin of species is in his system. He expressed his belief in an act of creation, but he maintained at the same time that “rien n’existe que par la volonté du sublime Auteur de toutes choses” (Phil. soul., I, p. 56).

Lamarck’s theory was not sufficiently supported by facts. Besides, it offered no satisfactory explanation of the origin and development of new organs, though he did not ascribe the effect to a mere wish of the animal. Finally, he offered no proof whatever for his position that acquired characters are inherited. Lamarck’s view was little influenced till shortly after his death the famous discussion took place between Geoffroy Saint-Hilaire and Cuvier. As professor of vertebrate zoology Saint-Hilaire (1772–1844) had long been the colleague of Lamarck. Saint-Hilaire held the mutability of species, but ascribed the main influence in its evolution to the “monde ambitant”. Besides, in order to account for the discontinuity of species, he imagined that the environment could produce sudden changes in the specific characters of the embryo (Philosophie anatômique, 1818). In 1830 G. Saint-Hilaire presented to the French Academy a paper on the unity of plan and composition in the animal kingdom. Cuvier opposed it with his celebrated theory of the four “embranchements”, and showed that his adversary had mistaken resemblance, for unity. Cuvier thought convincing facts in support of his attitude; Saint-Hilaire did not. That settled the issue. The theory of evolution was officially abandoned. Naturalists left speculation and returned for a few decades to an almost exclusive study of positive facts. A single writer of some celebrity, Bory de Saint-Vincent (1790–1840), took up Lamarck’s doctrines, but not without modifying them by insisting upon the final constancy of specific characters through heredity. Isidore Saint-Hilaire (1805–61), who shared the views of his father concerning environment and heredity, defended a very moderate theory of evolution. He assumed a limited variability of species according to the variability of the environment.

Second Period.—Charles Robert Darwin’s book, on the "Origin of Species by means of natural selection or the preservation of favoured races in the struggle for life", popularized 2 of invertebrate zoology in the 19th century. Though the principal factors of Darwin’s theory, namely “struggle, variation, selection”, had been enunciated by others, it was mainly Darwin who first combined them into a system which he tried to support by an extensive empirical foundation. Assisted by a number of influential friends, he succeeded in obtaining an almost universal acknowledgment for the general theory of evolution, though his special theory of natural selection gradually lost much of the significance attached to it. Charles Robert Darwin was born at Shrewsbury, 12 February, 1809. From 1831–36 he accompanied as naturalist an English scientific expedition to South America. In 1842 he retired to his villa at Down in Kent, where he wrote his numerous works. He died on 19 April, 1882, and was buried in Westminster Abbey a few feet from the grave of Newton. Biographical observations on his voyage to South America led Darwin to abandon the theory of special creation. ‘I had been deeply impressed’, he says in Autobiographical 'by the study of anatomy in the formation of great fossil animals covered with armour like that on the existing armadillos; secondly by the manner in which closely allied animals replace one another in proceeding southward over the continent; and thirdly by the South American charactere Here was little influence of the productions of the Galapagos archipelago and more especially by the manner in which they differ slightly on each island of the group.... It was evident that such facts could only be explained on the supposition that species gradually became modified.' In order to account for the transmutation Darwin began with a systematic study of numerous facts referring to domesticated animals and cultivated plants. This was in July, 1837. He soon perceived that selection was the keystone of man’s success in making useful races, namely, by breeding only from useful variations. But it remained a mystery to him how selection could be applied to organisms living in nature. In October, 1838, Darwin read Malthus’s “Essay on Population” and understood at once that in the struggle for existence his own idea of favourable variations would tend to be preserved and the weaker and more unstable ones to be destroyed, and that the result of this selection or survival would be the formation of new species”. The struggle itself appeared to him as a necessary consequence of the high rate at which organic beings tend to increase. The result of the selec-
tion—that is the survival of the fittest variations—was supposed to be transmitted and accumulated through the principle of inheritance. In this manner Darwin defined and tried to establish the theory of natural selection. Long after he had come to Down he added an important complement to it. The former implied that organic beings tend to diverge in character as they become modified. But how could this be explained? Darwin answered: Because the modified offspring of all dominant and increasing forms tend to become adapted to many and highly diversified places in the economy of nature. In short, according to Darwin, species are continuously transformed "by the preservation of such variations as arise and are beneficial to the being under its conditions of life", that is, by the survival of the fittest, which is to be considered "not the exclusive", but the "most important means of modification".

As his studies and observations progressed, Darwin lost his almost exclusive belief in his own theory, as he held it in 1859, and gradually adopted, at least as secondary causes in the origin of species, the Lamarck factor of the inheritance of the effects of use and disuse and the Buffon factor of the direct action of the environment, especially in case of the geographical isolation of species. As to the human species, Darwin was, as early as 1837 or 1838, of the opinion that it was likewise no special creation, but a product of evolutionary processes. The numerous facts which, according to Darwin, might be adapted to substantiate his views are contained in his work, "The Descent of Man" (1871). As a supplement to "The Origin of Species", Darwin published, in 1868, "The Variation of Animals and Plants under Domestication", which contains many valuable facts and theoretical discussions concerning variation and heredity. The principle of natural selection is certainly a very useful factor in removing variations not well adapted to their surroundings, but the action is merely negative. The main point (that is the origin and teleological development of useful variations) is left untouched by the theory, as Darwin himself has indicated. Moreover, no proof is brought forward that variations must accumulate in the same direction and that the result must be a higher form of organization. On the contrary, as we shall point out below, the experimental evidence of the post-Darwinian period has failed to substantiate Darwin's claim. It is, however, well to note that Darwin did not wish to ascribe the origin and survival of useful variations to chance. That word, he declares, is a wholly incorrect expression which merely serves to acknowledge plainly our ignorance of the cause of such a particular variation. Later on, it is true, he seems to have abandoned the idea of design. "The old argument", he says in his "Autobiography" (1876) . . . "fails, now that the law of natural selection has been discovered." Similarly, his belief in the existence of God, which was strong in him when he wrote the "Origin", seems to have vanished from his mind in the course of years. In 1874 he confessed: "I for one must be content to remain Agnostic".

Of the numerous friends of Darwin who contributed so much to the development and spread of his theories, we mention in the first place Alfred Russel Wallace, whose essay on natural selection was read at the Linnean Society, in London, 1 July, 1858, together with Darwin's first essay on the subject. The main work of Wallace, "Darwinism, an Exposition of the Theory of Natural Selection with Some of its Applications" (1859), "treats of the problem of the origin of species on the same general basis as was adopted by Darwin; but from the standpoint reached after nearly 30 years of discussion." In fact the book is a defence of pure Darwinism. Wallace, too, assumed the animal origin of man's bodily structure, but, contrary to Darwin, he ascribed the origin of man's "intellectual and moral faculties to the unseen Universe of spirits". (Darwinism was not of the essence of man's "Oneness with the brutes in structure and in substance", Besides Wallace and Huxley, there were the geologists Sir Charles Lyell, the zoologist Sir John Lubbock, and the botanists Ass Gray and J. D. Hooker, who supported Darwin's theory almost from the beginning. Quatrefages and Dana accepted it in part, but declared that there were no arguments in favour of the animal origin of man. Spencer's views are not very much different from those of Darwin's later years. Natural selection is essentially the theory of evolution, he was among the first to defend the so-called neo-Lamarckian theory, which insists upon the direct influence of the environment and the inheritance of newly acquired characters.

Before we enter upon the last phase in the development of the evolution idea, it is necessary to devote some space to the extreme defenders of Darwinism in Germany, Ernst Haeckel, of Jena, is in some sense the founder of the science of phylogeny, which seeks at least by way of hypothesis, to determine the genetic relation of past and present species. In 1868 Darwin wrote to Haeckel: "Your boldness makes me sometimes tremble". This refers especially to the phylogeny, which is in fact an aprioristic structure often contradicted, and at almost no point supported, by experiment and observation. The tetrahedral carbon atom is, according to Haeckel, the external fountain head of all organic life. It is impossible certain most primitive organisms are said to have been formed, such as "moners", which Haeckel described as unicellular beings without structure and without any nuclear differentiation. During ages of unknown duration these simple masses of protoplasm have been.
evolved into higher plants and animals, man included. As one of his main arguments, Haeckel refers to the so-called "biogenetic law of development". The supposed law maintains that ontogeny is a short and more rapid repetition of the stages in phylogeny; that is, the development of an organism correspond more or less to the stages which the species passed through in their evolution. The causes of development are, according to Haeckel, the same as were proposed by Darwin and by Lamarck; but Haeckel denies the existence of God and rejects the idea of teleology.

Our leading scientists do not care to support the unfounded generalities of Haeckel's doctrines. They have even, most severely, but justly, censured Haeckel's scientific methods, mainly his frauds, his want of distinction between fact and hypothesis, his neglect to correct wrong statements, his disregard of facts not agreeing with his a priori conceptions and his unacquaintance with history, physics, and even modern biology. They have also pointed out that the biogenetic law of development is by no means a trustworthy guide in retracing the phylogenetic succession of species, and that many other theories suggested by Haeckel are without foundation. But above all we must reject Haeckel's popular writings because they contain a moral and religious instruction, combined in a shameful manner the most sacred convictions and moral principles of Christianity. It is a sad fact, especially the influence of the "Die Weltätzung" great harm was done to religion and morality, especially in Germany and in the English-speaking countries.

The present leader of the extreme Darwinists is August Weismann of Freiburg (Vorträge über Descendenztheorie, 2d ed., 1904), the energetic opponent of Lamark's idea that acquired characters are inherited. According to Weismann, every individual and specific character of the species A is formed and preserved in the architecture of certain ultra-microscopical particles composing the chromatin of the germ-cells. On account of qualitative differences the various groups of these ultimate particles or "biophores" have a different power of assimilation. Besides, they are present in different numbers. It consequence thereof an intracellular struggle for existence will be especially after the germ-cells are united in fertilization. The outcome of the struggle will be that the stronger particles always or at times succeed. Thus the original condition of the germ-cells is transferred to the germ-cells. Weismann, moreover, admits an indirect influence of the environment upon the germ-cells. In order to account for the facts of regeneration and reorganization established by Korschelt and others, and to meet the arguments of the opponents of saltatory evolution which is to-day most strongly defended by Baten, de Vries and others. Some of the first scientific expositors of this view were R. von Kolliker and St. George Mivart. In his work "On the theory (1866) of the descent of species" he undertakes the task of convincing arguments against the opinion of the power of natural selection as a prevailing factor. According to him species are suddenly born and originate by some innate force, which works orderly and with design. Mivart conceived that the external conditions play an important part in stimulating, evoking, and in some way determining evolutionary processes. The transformation of species will mainly, if not exclusively, be produced by some constitutional selection of the generative system of the parental forms. His hypothesis which Mivart would extend to the first genesis of the body of man. Hugo de Vries, Mutationstheorie, 1901-03) is, with Baten and Morgan, a typical representative of the external hypothesis which Mivart would extend to the first genesis of the body of man. Hugo de Vries, Mutationstheorie, 1901-03) is, with Baten and Morgan, a typical representative of the external hypothesis which Mivart would extend to the first genesis of the body of man.

Third Period. The third period in the history of the biological evolution theory has only in recent years assumed the form which marks it as a new epoch. Its path was prepared by the fact that two classes of naturalists had in course of time been drawing nearer to one another. On the one hand were those whose work was done piecemeal, and who believed only in Darwinism and evolution, and on the other hand those who gave their undivided attention to the study of experiment. Only in recent years have the two classes joined hands and, in men like de Vries, Baten, Morgan, have gained very efficient assistance. At the same time the greatest importance is laid on the explanation of the gaps in species, on the adaptation of organisms to environment and on the inheritance of characters thus acquired, and above all on the idea of the segregation and the independence of biological characters, as was pointed out almost fifty years ago by Gregor Johann Mendel.

As far back as 1865, K. von Nageli decided in favour of the general theory of evolution and against Darwinism. According to him progressive evolution required innate laws of development, which, however, as he added, were to be sought for in molecular forces. Natural selection alone could only eliminate, that is to say, could only explain the survival of the more useful, but not its origin. Like Spencer, Nageli was a determinist, he asserted the preexistence of evolutionary forces, which is now defended by many evolutionists, attempts to reconcile Lamarck's principle of the use and disuse of organs with Saint-Hilaire's theory of the influence of external circumstances. There are many evolutionists, such as Th. Emerson, Parkard, Cope, and others, who defend this view. However, the experimental evidence for the foundation of neo-Lamarkianism—namely, the inheritance of acquired characteristics—is still wanting, or at least strongly debated. Nageli's most important work, "Mechanisch-physiologische Grundlagen der Abstammungslehre", appeared in 1884. The embryologist K. E. von Baer, who did not share the antiteleological views of Nageli, opposed no less energetically Darwin's theory of natural selection, because, as he argued, that theory does not explain teleology and correlation, and is at the same time in contradiction to the persistence of species and varieties. He also vigorously controverted Haeckel's system, especially his biogenetic law of development. But he maintained the transformation of species within certain limits through the agency of gradual and sudden survival of the fittest. The path of saltatorial evolution which is to-day most strongly defended by Baten, de Vries and others. Some of the first scientific expositors of this view were R. von Kolliker and St. George Mivart. In his work "On the theory (1866) of the descent of species" he undertakes the task of convincing arguments against the opinion of the power of natural selection as a prevailing factor. According to him species are suddenly born and originate by some innate force, which works orderly and with design. Mivart conceived that the external conditions play an important part in stimulating, evoking, and in some way determining evolutionary processes. The transformation of species will mainly, if not exclusively, be produced by some constitutional selection of the generative system of the parental forms. His hypothesis which Mivart would extend to the first genesis of the body of man. Hugo de Vries, Mutationstheorie, 1901-03) is, with Baten and Morgan, a typical representative of the external hypothesis which Mivart would extend to the first genesis of the body of man.
II. DEFINITION OF SPECIES.—Before Linneus’s time genera were considered to be the units of the plant and animal kingdoms, and it was assumed these had been created by God, while the species were descended from them. By the nomen specificum was understood the more or less detailed description by which Tournefort and his contemporaries distinguished the various species of genera. Linneus introduced the binomial system establishing the species as the unit of the organic world: There are as many species as there were different forms created in the beginning. The same theoretical norm had already been adopted before Linneus by the English physician John Ray (died 1678). The practical criterion for determining genera and species was taken from characteristic morphological features. For instance, the essential generic characteristic of the quadrupeds was derived from the teeth; that of birds from the bill. The species was designated in a similar manner “by retaining the primary characteristic among the various differences which separated two individuals of the same species.” The establishment therefore of a genus or of a species depended ultimately, then as now, on the knowledge and subjective views of the systematizer. The whole system was an artificial one precisely because it took note of one single feature alone, leaving the rest out of consideration; for instance, in the vegetable kingdom the character of the flower alone was taken into consideration. Later on Linneus entertained the idea that originally God created only one species of each genus, and that the rest had been derived from these original species by cross-breeding. Linneus’s conception of species was strengthened by Georges Cuvier, who defended the unchangeability of the categories beginning with the species up to the four types (embranchment). He was supported in this, as was later L. Agassiz, by the absolute dearth of intermediate forms in geological strata. Hence his Theory of Catastrophes, which in turn gave way to his Migration Theory. Cuvier came victorious out of the controversy with Etienne Geoffroy Saint-Hilaire, who maintained the unity of the plan of animal structure and the continuous transition of forms in the animal kingdom.

The views prevailing under Linneus and Cuvier were then divided into two main branches. (1) The more moderate Transmutationists held that genera were the originally created units, and that from these all species and varieties were derived. (2) The followers of Linneus, on the other hand, affirmed that the Linnaean species were the created units, and that subdivisions of these were the derived ones. Then followed the Jordanian schools, who asserted that within the Linnaean species were what they called “small species”, individually variable, but specifically immutable (not connected by intermediate forms), and, as such, to be considered the true units or “elementary species”. Linneus’s Draba sera, for instance, comprehends about 200 “elementary species”. The norm or
criterion of the elementary species is the experimentally proved constancy of the features (it is quite immaterial how small they may be) during a series of generations.

How are we to regard these opinions? Before answering this question we must strongly emphasize the fact that the biological idea of species has nothing whatever in common with the Scriptural conception of or with that of Scholastic philosophy. The Mosaic story of Creation signifies nothing more than this, that ultimately all organisms owe their existence to the Creator of the world. The concrete how has nothing to do with the proposition of faith regarding creation. The enumeration of certain popular groups of organisms, such as fruit-trees, draft-animals, and the like, could have no other design than to manifest to the simplest as well as to the most cultivated mind the action of the Creator of all things; at least, there can be no question of a scientific conception of genera and species. The biological concept of species is likewise removed from the philosophical concept which designates either the metaphysical or the physical species. The former is identical with the integra essentia (Urrabur—integral essence)—of a being: the latter is founded on the essence (fundatur in essentia—T. Pesch), and is to be recognized by some attribute (genus) common to all individuals, and unchangeable in every individual of every generation and so appears to be necessarily connected with the most intimate essence of the organism (necessario cum rei natura conicit—Hass]. The concept, therefore, of species according to Holy Scripture, Philosophy, and Science, is by no means a synonymous one for the natural units of the organic world. And particularly, the first chapter of Genesis should not be brought into connexion with Linnaeus’s “Systema naturæ.”

As far as the biological concept of species is concerned there is not up to the present time any decisive criterion by which we may determine in practice whether a given group of organisms constitute a particular species or not. Genuine species are differentiated from one another by the fact of their possessing some important morphological difference which remains constant during a series of generations without the production of any intermediate form. If the differences are of less importance, but constant, we speak of a variety or a kind. In the majority of cases while intermediate forms and all deviations which are not strictly constant are set down as varieties. Are such distinctions and criteria acceptable? Expressions such as “considerable,” “essential,” “more or less considerable” signify relative propositions. Hence it is not enough to settle the morphological classification of a species depends to a great extent on the subjective estimate of the naturalist and on his intimate knowledge of the geographical distribution and habits of the organism concerned. In fact, the force of the term species depends greatly in this the different classes of organisms. On this account the fact that species do not cross-breed, or at least that after a cross they do not produce fertile descendants, was added as an auxiliary criterion. This criterion, however, is impracticable one in the case of palaeontological species, and in the plant world in particular has many exceptions. In botany, therefore, the auxiliary criterion has been limited in the sense that within the species itself the fertility always maintains the same general level, while by the crossing of different species it diminishes very materially—propositions which do not admit of conversion and in their generalization can scarcely be called correct. Consequently, it would almost appear that Darwin was right when he said that the idea of species was “undefinable.” Still, it is not to be denied that there is an often very definite and substantial distinction and gaps by which the “good species,” in the same raw, distinct to the “bad species,” are separated from one another. The same is also proved by the modern “mutation theories” which, on account of unconnected differences, admit a development of species by jumps.

The Darwinian principle of indefinite variability is contrary to facts, which in general show that, both in living nature and in geological strata, there exist types sharply discriminated from one another. However, it is quite impossible to say how many types compose the organic world. It will be the task of future research to determine the affinity which exists between the various groups of organisms, beginning with the lower limit of similar sub-species and ascending to the highest forms whose common ancestry can be proved. These highest forms, which per se have nothing in common with the Linnaean species or genera, or with any other systematic groups, are the true units of nature; for they are composed of those organisms only which are related among themselves without being connected with the rest by common descent. We may, if we wish, identify these highest units with Weissmann’s “natural species,” or primeval ancestral forms, but, according to our opinion, neither the Linnaean species nor any other of the so-called systematic groups can be considered as the natural subdivisions of it. The Linnaean species are indeed indispensable for an intelligible and continuous classification of organisms, but they are not suitable for the solution of the problem of development. In concluding this section we may add that the best example of a natural species, and one ratified by revelation, is the species Man, which, by reason of its wide range of variation and the relative constancy of its races, may offer many a happy point of comparison for defining the limits of the species in the vegetable and animal kingdoms.

In the following sections we shall see that there cannot be any doubt as to the evolution of species, if by species we understand such groups of organisms as are generally styled by botanists and zoologists systematic, or Linnaean, species. But if by the term species we are to understand groups of organisms whose range of variability would correspond to that of “the human species”, then we believe that up to the present day there are no clear facts in favour of specific evolution. In particular, it will be seen that thus far there is no evidence of fact as to an ascending development of organic forms, though we do not deny the possibility of it provided that the power of reproduction be assumed, which operates teleologically.

III. Variation and Experimental Facts relating to the Evolution of Species.—By variation we generally understand three groups of phenomena: (1) individual differences; (2) single variations; (3) forms produced by the combination and recombination of variations. The question is, what influence these variations actually have on the formation of species.

(1) Individual Differences. Individual differences include all fluctuating inequalities of an individual and of its organs—e.g., the leaves of a tree, the percentage of sugar contained in the beet, and even more important morphological and physiological features. These differences may be quantitative (according to size and weight), meristic (as to numbers), and individually quantitative (e.g., the mountain and valley forms of a plant). They are generally recognized from the fact that they oscillate around a certain mean, from which they deviate in inverse proportion to their frequency, a rule which primarily pertains only to quantitative differences. According to Darwinians, useful individual differences are increased indefinitely by selection and may finally become independent of it. In this manner new species would result: Darwin himself sometimes considered single variations as of greater importance. The same view is strongly defended by modern evolutionists, who defend, as a useful inductive influence of environment to which an organism adapts itself.
In order first of all to obtain a just estimate of the influence of selection, it must be pointed out that not everything that is attributed to selection has originated through selection. The origin of many pure breeds (e.g., of pigeons) is unknown, and cannot therefore without further investigation be ascribed to selection. Furthermore, many cultivated forms have arisen through crosses and segregation of characters, but not through merely strengthening individual characters. If we restrict our examination only to well attested facts, we find, first, that nothing new is brought about by selection; secondly that the maximum amount in quantitative modification is obtained in a few generations (mostly in three to five) and that this amount can only be maintained through constant selection. In case selection is stopped, a regression will follow proportional to the length of time required for the progress. In short, as far as facts teach us, new species do not arise by selection. But if qualitative changes were produced by some other cause, selection would probably be a potent principle in order to explain why some peculiarities survive and others disappear. The question is: Whether changes in the environment may furnish such a cause. There can be no doubt that the environment does influence organisms and mould them in many ways. As proof of this we need only draw attention to the different forms of Alpine and valley plants, to the formation of the leaves of plants according to the humidity, shadiness, or sunniness of the habitat, to the influence of light and temperature on the formation of pigment and colouring of the surface, to the strange and considerable differences produced, for instance, in knotweeds by merely changing the environment, and so forth. But as far as actual experiments show, the changes of characteristics and necessities of adaptation go to and fro, as it were, without transgressing definite ranges of variation. Moreover, it is not at all clear how discontinuity of species could have arisen “by a continuous environment, whether acting directly, as Lamarck would have it, or as a selective agent, as Darwin would have it.” (Bateson), unless one takes into account the accidental destruction and isolation of intermediate forms.

In spite of these conclusions it has been assumed that individual differences might lead to the formation of new species under the continuous influence of natural selection. Wasmann’s well-known Dinarda-forms may serve as an example. The four forms of the rove-beetle, Dinarda, namely D. Märkeli, D. dentata, D. Hagensi and D. pygmaea, bear a certain relation with regard to size to the four forms of ants, Formica rufa, sanguinea, exacta, fusco-rufigibbis, and to their nests, in which they live or are tolerated guests. D. Märkeli, which is 5 mm. long, dwells with F. rufa, which is comparatively large and builds spacious hill-nests. D. dentata, which is 4 mm. long, lives with F. sanguinea, which is comparatively large, but builds small earth-nests. D. Hagensi, which is 3–4 mm. long, lives with F. exacta, which is smaller than F. sanguinea, but builds a fairly roomy hill-nest. D. pygmaea, which is 3 mm. long, lives with F. fusco-rufigibbis, which not only very small and builds small earth-nests. Moreover, the three first-named ants are two-coloured (red and black), and so are the corresponding Dinarda. The last-named ant, however, is of a more uniform dark-colour, as is also the corresponding Dinarda. Now comparative zoography contains some indications according to which the similarity of colour and proportion of size must be attributed to actual adaptation. For (1) there are regions in Central Europe in which only F. sanguinea with D. dentata, and F. Märkeli with D. Hagensi are found, whereas F. exacta and F. rufigibbis do not harbour any Dinarda-forms at all. Secondly, there are districts in which the four forms of Dinarda are living with their four hosts and yet hardly ever showing transitional forms. Thirdly, in other parts there are more or less continuous intermediate forms, D. dentata-Hagensi living with F. exacta, and D. Hagensi-pygmaea living with F. fusco-rufigibbis. The nearer a Dinarda approaches the form of D. pygmaea, the more frequently it is found with F. fusco-rufigibbis. To all this must be added, that the adaptation in general appears to have kept pace with the historical freeing of Central Europe from ice, though numerous exceptions must be explained by local circumstances, especially by isolation. Considering these facts, we are inclined to believe that D. pygmaea especially presents an example of real adaptation in situ, though this adaptation cannot be called a progressive one, since the more recent forms, Hagensi and pygmaea are only smaller in size and of a more uniform colour. But at the same time it leads us to the idea that the adaptation of the Dinarda cannot be considered as an example to illustrate specific evolution, because, as we have shown elsewhere, there are many instances in nature—we mention only the races and other sub-divisions of the human species—that likewise present different degrees of adaptation far more pronounced than that found in the Dinarda, but which are not, and cannot on that account be, quoted as examples of the formation of new specific characters.

(2) Single Variations are presumably of far greater importance for the solution of the evolution problem.
than individual differences, for they are discontinuous and constant, and are therefore capable of explaining the gaps between existing species and those of paleontology. We use the term *single variation* when, from among a large number of offspring, some one particular individual stands out that differs from the rest in one or more characteristics which it transmits unchanged to posterity. It is said to be peculiar to the single variations that they cannot be reduced to crosses. If this is possible, we speak of "analytical variations". Favorable conditions for the appearance of single variations are altered environment, a liberal supply of seed, and excellent nourishment. It is a remarkable fact that the fertility of single variations decreases considerably, and this the more so the greater the deviation from the parents. Besides, the newly produced forms are comparatively weak. This weakness and inclination to sterility are facts which must be carefully weighed when determining the probable importance of single variations for specific evolution. Besides, it is—to our knowledge—in no case excluded that the suddenly arising form may be traced back to former crossings. Probably the only case which is quite generally interpreted to demonstrate specific evolution experimentally is that of the primrose observed by de Vries. After many failures with more than 100 species, de Vries, in 1886, determined to cultivate the eve primrose (*Unthora Lamarciana*), whose extraordinary fertility had attracted his attention. He chose nine well-developed specimens and transplanted them into the Botanical Garden of Amsterdam. The cultivation was at first continued through eight generations. In all he examined 50,000 plants, among which he discovered 800 deviating specimens, which could be arranged in seven different groups, as shown in the following table:

The specimen of *O. gigas* (1886) was self-fertilized and yielded 450 *O. gigas* forms, among which there was only one dwarf form, *O. gigas-nanella*. The three following generations remained constant. *O. albida* was a very sickly form, though it succeeded, thanks to regular attention, in breeding constant offspring. Among the *O. oblonga* descendants there was one specimen, *albida*, and in a later generation one specimen of *O. rubrinervis*. *O. rubrinervis* proved to be as fertile as Lamarckiana, and yielded besides a new variation, *leptocarpa*. The offspring of *O. nanella* was constant, though among the 1800 descendants of nanella in 1896 three specimens showed *oblonga* characters. *O. lata* was purely female; but, fertilized with pollen of other variants, it yielded 15 to 20 per cent *O. lata* descendants. *O. scintillans* was not constant. According to de Vries' observations (since 1886), new forms also originated in nature, but they succumbed in the struggle for existence. The differences between the single forms relate to various parts and degrees of development, though in several they are very slight. The plants become either stronger or weaker, with broader or narrower leaves; the flowers become larger and darker yellow, or smaller and lighter, the fruit longer or shorter, the outer skin rougher or smoother, etc.

It may be conceded that the *Genus* has developed constant forms corresponding to the so-called "small or elementary species". The question, however, is, whether the forms are really new ones or whether they owe their origin to some unexpected original cross. In fact, if we are to suppose a previous cross, perhaps *O. Lamarciana* and *O. sublinears*, then the *O. Lamarciana* of Hilversum had contained the different variations in a latent form and through cultivation gradually reverted to throwings of the different variations. At any rate, there cannot be any question of a progressive development, for the reason that none of the new forms shows the slightest progress in organization or even development of any kind advancing in that direction.

(3) Crosses and Mendelian Segregations. Crossbreeding can in nature hardly be considered as a factor in the progressive development of species; in particular, forms of different degrees of organization do not cross, and if they did, all deviations would soon be equalized according to the laws of chance and probability. All the greater seems to be the importance of the Mendelian segregations. It may be known to the reader that the famous experiments of the Abbot Mendel were carried on with seven different pairs of characters which he crossed with one another, and then, by letting the cross-bred self-fertilize, he continued the cultivation of the plants through a series of generations. In the first generation it was found that the offspring exhibited without exception the character of one of the parents, that of the other parent not appearing at all. Mendel therefore called the former prevailing character the "dominant" and the other the "recessive". In the following generation, which was produced by letting the cross-breds fertilize themselves, the recessive character appeared and, moreover, in a definite proportion. On an average this proportion was 2.89:1 or 3:1. In the second generation 75 per cent of the whole number of plants exhibited the dominant character, and 25 per cent the recessive. No intermediate forms were observed in any case. In the third generation the offspring of the recessives was constant and remained pure recessives, but among the offspring of the dominants some remained constant dominants, while others were hybrids. The average proportion of the constant dominants (D) to variable cross-breds (DR) was as 1:2. Thus, besides the 25 per cent of constant recessives (R), there was also 25 per cent (one-third of 75 per cent) constant dominants (D) and 50 per cent (two-thirds of 75 per cent) variable cross-breds (DR) or 1D+2DR+1R. The same proportion resulted from the following generations of the cross-breds, and since 1900 this has been confirmed by other investigators in the case of other plants (e. g. maize) and also of animals (e. g. gray and white mice).

Mendel's rule of segregation, therefore, runs thus.
The hybrids of any two different characters produce seeds, one half of which again develop the hybrid forms, while the other half yield offspring which remains constant, and possess the dominant and recessive characters in equal proportion. A simple analysis of this rule shows that it consists of three parts: (a) By fertilization the characters of the parents are united, without, however, thereby losing their purity and independence; (b) In the offspring the characters of both parents may again be separated from each other; (c) The character of one of the parents may completely conceal that of the other. This last part of the rule is not, according to later investigators, necessarily connected with the other two parts. We may add that Mendel's rule also holds good for the offspring of hybrids, in which several constant characters are combined, and that in it there is found a splendid confirmation of the modern theory of the cell. Cross-breeding, therefore, does not by any means lead to the mixing of characteristics. These, on the contrary, remain pure, or, at most, form new combinations or split up into simpler components. Hence, the idea that gaps in nature originate through such segregation is well founded. But the question, whether the idea is to be applied to the formation of species, and how this is to be carried out, can scarcely be answered at present. This much, however, is evident: that there is no progress in organization any more than there is any progressive specific development, brought about by segregation.

Hence this important conclusion follows: That the central idea of modern evolution theories—namely, progressive specific development—has not up to the present received any confirmation from observation of the world of organisms as it now exists. It is quite true, however, that the plasticity of organisms has been proved by a number of experiments to be very considerable; so that, in a constant environment, and by single variations, changes may be brought about which a systematicist would classify as specific or even generic, if it were not clear from other sources that they are not such. In the same way forms could be developed by segregation, the characteristics of which would suffice "to constitute specific differences in the eyes of most systematists, were the plants or animals brought home by collector" (Bateson). Yet such criteria are meaningless for the demonstration of the formation of species. The question as to the transmission of acquired characters is not by any means decided. It follows from the doctrine of propagation that only such characters can be transmitted as are contained in the germ-cells or which have been either directly or indirectly transmitted to them. Hence it is clear that all peculiarities acquired by the cells of the body through the influence of environment, or by use or disuse, can only be inherited if they are handed over, as it were, to the germ-cells. But it is useless to discuss the question before we have sufficient experimental evidence that acquired characters are at all inherited.

IV. THE PALEONTOLOGICAL ARGUMENT.—(1) Historical Method. Before entering upon the discussion of the evidence furnished by paleontology we must briefly refer to the method which ought to be employed in the interpretation of the paleontological records. The great archives of the geological strata are very incomplete. Almost three-quarters of the earth's surface is covered with water, and another part with perpetual ice, while of the rest but a fraction has remained free from the ravages of water and the elements; of this small portion, again, only certain regions are accessible to the investigator, and these have been but partially examined. Besides, in most cases only the hard portions of organisms are preserved, and even these are often so badly mutilated that their correct classification is sometimes difficult. Many of them, especially in the oldest rocks, must have perished under the crushing forces of metamorphic processes. Further, the geographic distribution of plants and animals must have varied according to climatological and topographical mutations. It may suffice to cite the glacial periods of which there are clear indications in various geological epochs. Finally, the geological strata themselves are the results of constant strains and displacements, being upheaved, tilted, folded again, and even entirely inverted. It is evident that every one of these phenomena increases the chaos in its own way and makes the work of classifying and restoring all the harder. It gives at the same time to the scientist the right to formulate hypotheses probable in themselves and adapted to bridge over the numerous gaps in the work of reconstruction in the organic world. But these working hypotheses ought never to assume the form of scientific dogmas. For after all, the documents which have really been deciphered are the only deciding factor. At all events, the chronological succession and the genetic relation of organisms cannot be determined by a priori reasoning, or by means of our present system of classification, or by applying the results of ontogenetic studies. One illustration may suffice. Some maintain that trilobites are descended from blind ancestors because certain blind forms exhibit a number of simple characteristics which are common to all specimens. And yet we know that, e.g., trilobitic possesses eyes in the earlier stages, the development of which has become blind in the later stages. The non-existence of eyes is, therefore, due to degeneration, and does not point to a former eyeless state. As a matter of fact, specimens of trilobites possessing eyes are found side by side with eyeless specimens in the Lower Cambrian strata. Other examples of false a priori conclusions are to be found in the extraordinary genealogies constructed by extreme evolutionists, and which dissolve like so many mists in the light of advancing investigations. In fact, up to the present the agreement on ontogeny and phylogeny has not been proved in substance. In short, if we disregard observation and experiment on living organisms, it is the historical method alone which can decide the limits of evolution and the succession and genetic relations of the different forms. "In the substitution of the hypothetical ancestors by real ones lies the future of true phylegetic science" (Handlisch).

(2) The Oldest Fossils. Now let us turn to the documents themselves and see what they have to show us. The foundation of the Archives is formed of gneiss and crystallized slate, a rigid mass containing no trace of organic life, and one which offers to the paleontologist the hopeless outlook that his science must remain in a very incomplete state, perhaps forever. Immediately above this foundation, nature has imbedded the multitudinous, highly-developed Cambrian fauna, with-
out leaving the slightest trace of their antecedents, origin, birth, or age. Some 800 species of this remote test period are known to us. They belong almost without exception to marine fauna, and are distributed over all the chief groups of the invertebrates. Nearly one-quarter of the known trilobites which occupy a position about the middle of the scale of animal development. Other groups belong to coleolérates, brachiopods, gastropods, and cephalopods. Sponges, too, and traces of worms are found, as also very imperfect fragments of scorpions and other insects. Moreover, there can be no doubt that various types of fishes must have existed, since in the Silurian age numerous representatives, such as selachians, ganoids, marsipobranchs, dipnoans, are found from the very beginning side by side. Where are the ancestors of these highly specialized beings? The one thing we may affirm is that we know absolutely nothing whatever of a primitive fauna and of the numberless series of organisms which must have followed them up to the Cambrian era, for the simple reason that we possess absolutely no evidence. Moreover, there is not the least trace of paleontological evidence in favour of the spontaneous awakening of life or of the ascending development out of primitive protoplasmic masses up to the time of the Cambrian era. These are pure speculations perfectly adapted to time-tables and its paper, as long as we cannot arrive at more generalised types of zoological systems. The origin of the plant world is also shrouded in impene-
trable darkness for the paleontologist. The enormous layers of anthracite and graphite are, according to the most recent investigations, of inorganic origin. Clearly established evidence of plant life only dates from post-Silurian times, and consists of contents of the oldest turf moors—giant-ferns and horsetails, plants akin to the club-mosses, like the Lepidodendron, and even to the seed-ferns, Cordaites. One is astonished at the rich forms of this long-lost flora, and we search in vain for their ancestors.

It is certainly remarkable, and a fact which clearly proves the transformation of species, that plants belonging to these remote times vary considerably from their later representatives. But, as Kerner von Maril-
laun insists, the "fundamental structure of the type" is never obliterated, and the degree of organization has at least remained the same. In particular, the present dwarf-forms of the horse-tails and club-mosses are but a pale and poor expression of things that once were great. The Cordaites, though different from the present coni-
ers, were as highly organized as they were. To this must be added the recently discovered fact that seed-bearing plants, which constitute a considerable part of the fern flora of the Carboniferous, are found among the forms of the Devonian era.

(3) Angiosperms and Vertebrates. But how did the undoubtedly higher forms of a later period originate? To begin with the angiosperms, we are confronted with the fact that these organisms appear quite sud-
denly in the Cretaceous era and, what is more remark-
abke, in forms as highly organized as their present representative. It is a fact that principally the di-
cotyledons (at least those in the more recent strata) correspond more and more to the present-day forms, clearly indicating the relationship they bear to one an-
other. But unless the earliest forms of the creta-
aceous came, is shrouded in mystery. Similarly, the gradual transformation of one species into another cannot be proved in any concrete case. Only this much is certain, that if evolution took place, it in-
volved a certain period. But America did not reach the higher stage of organization. It must be borne in mind, moreover, that we know of no intermediate forms capable of justifying even as much as a hypoth-
thesis that angiosperms were evolved from lower plants. If the origin of the angiosperms is for the present an insoluble problem, the genesis of the verte-
brates is no less so. However, in order not to pass en-
tirely over the post-Cambrian history of the verte-
brates, we must at least make mention of the sig-
nificant fact that this fauna seems to be constantly changing, but without ascending to higher forms of organization. We may mention the molluscan genus Paludina of the Devonian tertiary strata, which is found mainly in the shell-bearing groups, owing to the changed size, form, and ornamentation of their shells, and in this offers a very acceptable basis for the establishment of a series of kindred forms—e. g., with the gastropod genus Patula of the Silurian tertiary strata. But since such structures depend almost entirely on the calcareous nature of the medium, and on the varying kind and amount of movement, we can scarcely be incli-
ned to regard an increased ornamentation of the shell as a mark of real progress in organization, but at most as a temporary development of actual disposi-
tions due to varying conditions of life.

The first authenticated ancestors of the vertebrates are the fish-remains of the lower Silurian era. Widely removed from them we find in the carboniferous strata the oldest remains of the amphibian quadrupeds and, associated with them, forms of reptiles whose sudden appearance and equally sudden disappear-
ance belong to the unsolved problems of paleontol-
ogy. Among the Mesozoic fishes we encounter old forms together with those which suddenly appear in the Jurassic strata without producing transitional forms. It is generally supposed that the teleosts represent a higher grade of organization than the ganoids; as a matter of fact, the teleosts, it would seem, have no structural advantage over the cartilagi-
inous fishes in the lesser hardness of the scale and the greater hardness of the skeleton. This is, however, but a shifting, as it were, of development, as the disap-
ppearance of the rigid body-covering is compensated for by the ossification of the skeleton. At any rate, it is the origin of the teleosts that is the most striking thing of the Silurian ganoids. The appearance of birds and mammals is likewise very mysterious. The first known bird is the famous "bird-reptile" Archaeopteryx of the Jurassic strata at Soluhofen. In spite of some characteristics which remind one of reptiles—as for instance the twenty homologous caudal vertebrae, the talons, the separated metacarpal bones and the toothed jaw—yet the true bird nature is evinced by the plumage, the pinions, and the bill. In fact Archaeo-
pteryx is far removed from the reptiles, nor does it constitute any link between the two. It is a fact, however, that the bird "family tree" does not even with the toothed Ichthyornis and Hesperornis of the upper Cretaceous era. Certain the two iso-
lated specimens from Soluhofen indicate that birds must have existed a long time before; but where their place of origin is, none can tell.

Paleontology is silent likewise about the early his-
tory of mammals. The mesozoic representation of this class may have some connexion with marsupials, monotremes, and insectivorous animals, but as to the early history of the great majority of placental mammals we have no evidence whatever. A vast number of intermediate forms would certainly be required to connect the mammals with the reptiles. No such series of forms is known. Even the genealogy of the horse, which is considered the most striking example of an evolutionary series within a mammalian family, is scarcely more than a very moderately supported hypothesis. Let the reader consider the accompanying table of differences in the paleontological repre-
sentatives of the Equidae. Upon the facts embodied in this table, which chiefly refer to fossils found in North America, the following comments are suggested: The genera of the Equidae lived contemporaneously, though it must be conceded that in some sedi-
mentary deposits their series seems to be continuous. Secondly, the sub-families show great differences be-
tween one another. Of the Merychippus, which con-
nects the Equus with the Palaeotherium, we know only
the teeth. Thirdly, if we take the European material into consideration as well, we are confronted with widely divergent opinions, so much so that the brilliant pedigree becomes greatly dimmed. In particular, the Eocene forms and the still more remote genus Phenacodus are avowedly very dubious ancestors of the horse. Lastly, it is well within the range of possi-

**TABLE OF DIFFERENCES IN PALEONTOLOGICAL EQUIDE**

which are supposed to date from the primeval age of man are little calculated to solve the problem. A short résumé of the results of recent investigations will make this clear. *Pithecanthropus erectus,* the fa-

![Cranium of Pithecanthropus ERECTUS](image1)

nous ape-man of Trinil (Java), cannot be considered "the long-sought missing link in the chain of the highest Primates". As is well known, we have to do with a cranium of 550 sq. cm. capacity, a thigh-bone, and

![Cranium of the Neandertal Man](image2)

two molar teeth; the skull and the thigh-bone were found lying about 16 yards apart. It is true the skull differs somewhat from the skulls of present-day anthropoids; it is, however, in general characteristics thoroughly apelike, as was pointed out recently by Schweinfurth, Klaatsch, Macnemara, and Kohlbrugg. The thigh-bone, according to Bumiller, bears the closest resemblance to the femur of the ape *Hylobates.* Hence the appellation erectus is a misnomer. Add to this that, according to the latest researches, *Pithecanthropus* must have been a contemporary of primitive man, since the strata in which the bones were found are diluvial. Hence *Pithecanthropus* cannot belong to the ancestral line of man. The bones of the Neander-

![Image](image3)

**EVOLUTION** 665 **EVOLUTION**
human, and have given rise to renewed interest
through the valuable discoveries made in Krapina. The Neandertal skull itself serves as a type which, owing to the low, receding forehead and the strongly developed supra-orbital ridges, appears to be very primitive, though no one knows the actual geological conditions of the place where it was originally deposited. We pass over the fact that twenty scientists have expressed twelve different opinions on this mysterious cranium, and confine ourselves to the latest opinion of Schwalbe, who says that the Neandertal cranium exhibits forms which are never found in either a normal or a pathologically altered Homo sapiens, whether Negro, European, or Australian, and yet at the same time the skull does exhibit human characteristics. In a word, the Neandertal skull does not belong to any variety of Homo sapiens. Kohlbrugge very aptly compares Schwalbe's hypothesis to the upturned pyramidal balancing on a fine point, since a single Australian or Negroid skull which may be found to agree with the Neandertal skull suffices to overthrow the hypothesis. Such a skull has not as yet been found, but there are other factors which suffice to shake Schwalbe's hypothesis. These have reference to the other diluvial bone remains of Homo primigenius, amongst others to the primitive species of the skull, to two molar teeth from the Taubach cave, to the two fragments of a skull from the mammoth caves of Spy, and the jawbones from La Naullette, Schipka, Ochsen, and, lastly, to the remains of skulls, such as fragments of skulls, lower jawbones, pelvic bones, thigh and shin bones, from a cave near Krapina in Croatia. To these must be added the "Moustier skull" which was dug up in August, 1908, in Vézère-tal (Dordogne). All these fragments possess fairly uniform characteristics. Especially worthy of note are, above all, the cranium with its low forehead and supra-orbital ridges and receding forehead. These qualities, however, are not infrequently found in men of the present day. Australians exhibit here and there even the genuine supra-orbital ridges (Gorjanowic-Kramberger). It cannot be clearly decided whether we are dealing with purely individual characteristics or with peculiarities which would justify us in classifying the Krapina fragments as belonging to a special race. But this much is clear, that the formation of the skull and the degree of civilization of that race are quite sufficient to permit of our designating Homo primigenius not as a species of itself, but merely as a local sub-division of the Homo sapiens. The Gailey Hill skull, from England, which is still older than the Krapina bones, points to the same conclusion and corresponds with the more recent skulls of post-diluvial man. Hence, to sum up, we may affirm that we are acquainted with no records of Tertiary man, that the most ancient remains of the Quaternary belong to the Gailey Hill man, whose skull worthily represents Homo sapiens. The same is to be said of the oldest traces of civilization as yet known to us.

Palentontology, therefore, can assert nothing whatever of a development of the body of the man from the animal. It may be added that Haeckel's curious "Progonotaxis", or genealogy of man, is a pure fiction. It consists of thirty stages, beginning with the "mon-
analyses of structure and function in vastly different groups. Finally, the chief problem, which refers to teleology of adaptive modifications, is not even touched by the doctrine of descent from common ancestors.

**SKULL OF ORANG-UTANG**

(2) *Man and the Anthropoids.*—Paleontology knows of no records that point to the relationship between the body of man and that of the anthropoid. Hence it follows that the argument of analogy and classification is of little worth. But, as ever and again attempts are made to discover analogies between every bone of man and the corresponding part of the ape (e.g., Wiedersheim), it will be useful to gather a few of the more important morphological discrepancies which exist between man's body and that of the anthropoids (orang-utang, chimpanzee, gorilla). It is, however, far from our intention to attribute to these differences any great argumentative force, especially against those who suppose that there was a common primate ancestor from which both man and ape finally descend; nor do we wish to deny that zoologically the human body belongs to the class of the mammals, nor that within this class there is any representative more similar to it than the anthropoids.

Of these differences the most important lies in the development of the brain of man and of the anthropoid, which is seen from the comparison of the weights. According to Wiedersheim we are forced to admit that the relative mass of the human brain is twice that of the chimpanzee, while, absolutely, it is from three to four times as great. The same is probably true of the orang-utang, while the brain of the gorilla, which, according to Wiedersheim, is the most humanlike of any of the anthropoid brains, is relatively only one-fifth that of man's. The human skull is from three to four times as large as that of the anthropoids. The difference becomes much more striking still when we compare the cerebral hemispheres and their convolutions. The weight of the brain of a male Teuton of from thirty to forty years of age is on the average 1424 grammes, that of a female 1273 grammes, and that of a full-grown orang only 79-7 grammes (Wundt). The proportion is therefore from 18:1 to 10:1. If we measure the superficial area of man's brain with all its convolutions and that of the orang we have, according to Wagner, from 1877 sq. cm. to 2196 sq. cm. for the human brain and 533-5 sq. cm. for that of the orang—that is a proportion of 44:1. It is further to be taken into consideration that, as Wiedersheim points out, the human brain is not to be looked upon as an enlarged anthropoidal one, but as a "new acquisition with structures which the anthropoidal does not as yet [9] possess". These new acquisitions are presumably qualitative and refer mainly to the centre within the great cerebral hemispheres. Intimately connected with the development of the brain is the moderate development of the dentition of man in comparison with the chitinous snout of the monkey, which is armed with powerful teeth. Again, the human face slides as it were down from the forehead and appears as an appendix to the front half of the skull. The gorilla's face, on the contrary, protrudes from the skull, which on return slides almost entirely backwards from the face. . . . It is only on account of its protruding, strongly developed lower parts that the small skull-cap of the animal can mask as a kind of human face" (Ranke).

A second group of differences is obtained by comparing the limbs of man and the anthropoid. Owing to its upright stature, man's appendicular skeleton is quite different in form and structure from that of the anthropoid. This is shown not merely by the length of the single parts, which, strangely enough, exhibit inverse proportions, but also in the interior structure of the bones, as was proved by Walkhoff (1903) in the case of the femur. If we suppose the length of the body to be 100 we have, according to Ranke, the following proportions:—

**EVOLUTION**
The sponge-like structure in the femur of man and anthropoid exhibits considerable difference, so that it could be established by means of radiograms whether the femur was that of an individual or not; e.g., it was possible to prove the Neandertal and Spy femora to be human. The foot of man, moreover, very characteristic. It is not furnished with a thumb that can be bent across the whole member, and hence it does not represent a typical prehensile organ, as is the case with the hind limb of the monkey. In general, each bone and organ of man could in some sense be styled ape-like, but in no case does this similarity go so far that the form peculiar to man would pass over into the form which is peculiar to the ape. This conclusion is confirmed by the fact that, according to Rank and Weichselbaum, the efforts to discover a series of bodily formations which would lead from the most apelike savages to the least apelike Caucasians have all, so far, resulted in utter failure, since the apelike forms of organs actually found in some individuals are not confined to a single race or nation, but are distributed throughout all of them. Tailed ape-men, in the proper sense of the word, have no existence. If sometimes tail-like appendages occur, they are genuine deformities, pathological remnants of the individual's embryonic life. Cretins and microcephali are likewise pathological cases. The theory that such were the ancestors of the human species is certainly excluded by the fact that they are unable to procure independently the necessary means of existence.

(3) "Blood Relationship" between Man and the Anthropoid.—In 1900 Friedenthal thought that he was able to prove the kinship of man and the anthropoid biochemically by showing, first, that certain elements of human blood-serum into the chimpanzee was not followed by any signs of blood-poisoning, as usually happens on the introduction of foreign blood, and, secondly, that human serum did not produce a reaction when introduced into a solution of the blood of the orang and gibbon, while on the other hand it dissolved the blood corpuscles of the lower apes. A little later Nutall and others proved that antisera exercised an opposite effect. An "anti-man-serum" was prepared by injecting subcutaneously sterile human serum into a rabbit till the animal became immune to poisoning from the foreign blood-serum. The "anti-man-serum" of rabbit-blood thus prepared gave a precipitate with the blood-serum of man or of an animal with chemically similar blood, for instance anthropoids, but not with the serum of chemically different blood. The force of the argument lies, therefore, in this, that the chemical reaction obtained seems to be on the whole proportional to the degree of their chemical affinity.

What follows from these facts?—Only this, that the blood of man is chemically similar to that of the anthropoids; but it does not follow that this chemical similarity must be attributed to any kinship of race.
EVOLUTION

formerly in a more perfect condition, so as to perform
their typical functions—e. g., the eyes of the mole as
organs of sight; and the limbs of the kiwi as means of
locomotion or hovering. Hence those individuals which now possess rudimentary or-
gans are descended from ancestors which were in pos-
session of these same organs in a less degenerated con-
dition. But it cannot be ascertained from the struc-
tures whether those ancestors were of another kind than their descendants. The vermiform appendix in
man is fully explained by supposing it to have had in
antediluvian man a more perfect function of secretion,
or even of digestion. Until the paleontological rec-
cords furnish us with more evidence we can only con-
duct from the occurrence of rudimentary structures that in former ages the whale possessed better devel-
oped limbs, that the moles had better eyes, the kiwi
wings, etc. In short, rudimentary organs per se do not
prove more than that structures may dwindle away by
disuse.

Haeckel's endeavours to invalidate the teleological
argument has no foundation in fact. In many cases the
function of rudimentary organs has been discov-
ered—e. g., the rudimentary teeth of the whale are
probably of use in the growth of the jaw; the breast-
bone of the slow-worm as a protection of the eʃrens.
But even in instances in which we have not succeeded
in discovering the function of such structures, it must
not be forgotten that degeneration may be eminently
teleological in furnishing material for other organs
whose functions become more important. Moreover,
as long as rudimentary organs remain, they may be-
come, under altered circumstances, the starting-point
for an appropriately modiﬁed reorganization. It is
indeed diʃcult to see how "dysteleology", as Haeckel
calls it, follows from the fact that an organ adapted to
speciﬁed means of livelihood disappears, probably in
order to strengthen other organs when those means of
livelihood are changed; and, until the contrary is
proved, we may assume that we have to deal with in-
stances of teleological adaptation and correlation, as
has already been demonstrated in many cases—e. g.,
in the development of amphibians.

VI. THE ONTOGENETIC ARGUMENT.—Comparisons
between the embryos of higher forms and the adult
stages of lower groups were made long before the evo-
lution theory was generally accepted by biologists. But
it is certain that the development of the embryos
were interpreted by means of that theory. Fritz
Müller (1864) was one of the fiʃt to advance the view
that the ontogenetic development of an individual is
a short and simpliﬁed repetition of the stages through
which the species has passed. Haeckel, in his modiﬁed
proposition by introducing the term "genogenesi": which
should account for all points of disagreement
between the two series of development. In its new
form the theory of recapitulation received the name
"the biogenetic law of development". Later on
Hertwig reformulated the law a second time by changing
the expression "repetition of forms of extinct ances-
tors", into "repetition of forms necessary for organic
development and leading from the simple to the com-
plex". Besides, considerable changes, generally in an
advancing direction, are said to have been brought
about by the action of external and internal factors,
so that in reality "a later condition can never correspond
to a preceding one". Both Haeckel's and Hertwig's
views were rejected by Morgan, who does not believe
in the recapitulation of ancestral adult stages by the embry-
only organisms. For instance, the famous pedigree
of the horse's foot begins ontogenetically with a single
digit; (2) the ontogenetic similarity which may be ob-
served, for instance, in the larval stages of insects may
be explained by the similarity of the environment;
(3) the ontogenetic stages of organisms are throughout
speciﬁcally dissimilar, as is proved by a careful con-
crete comparison. The same conclusion is indicated

The Rudimentary Eye of the Mole

the development does not proceed beyond the forma-
tion of the apparently indiʃferent pouches which never
perform any respiratory function nor show the least
tendency to develop into such organs. On the con-
trary, the gill-slits and arches seem to have, from the
very beginning, a totally different function, actually
subserving, at least in part, the formation of other
organs. Even the amphibians that are furnished with
temporary gills form them in quite a peculiar manner,
which cannot be compared with that of ﬁsh-
embryos. Besides, the distribution of blood-vessels
and the gradual disappearance of seemingly useless
structures, as the "gill-systems" of vertebrates seem to
be, may likewise be observed in cases where no one
would seriously suspect a relation to former speciﬁc
characteristics. In short, there is (1) no evidence
that the embryos of mammals and birds have true
incipient gill-structures; (2) it is probable that the
structures interpreted as such really subserve from the
very beginning quite different functions, perhaps only
of a temporary nature.

In general it may be said that the biogenetic law of
development is as yet scarcely more than a petio-

principi: Because (1) the agreement between ont-
ogeny and phylogeny has not been proved in a single
instance; but (2) it is probable that the absence of the
horse's foot begins ontogenetically with a single
digit; (2) the ontogenetic similarity which may be ob-
served, for instance, in the larval stages of insects may
be explained by the similarity of the environment;
(3) the ontogenetic stages of organisms are throughout
specifically dissimilar, as is proved by a careful con-
crete comparison. The same conclusion is indicated

by Hertwig's and Morgan's modifications of the biogenetic law, which, in turn, are of a merely hypothetical nature, in addition to this a short reference to the Weismann's "confirmation" of Haeckel's law may be useful. Weismann knew that in the larval development of certain butterflies transverse stripes were pre-
ceded by longitudinal ones. Hence he concluded that in certain similar butterflies, whose early larval stages were transversely striped, a similar sequence of markings ought to be found. Ten years later the "predicted" marking was discovered. It is plain that such facts are no confirmation of the biogenetic law, but find their simple explanation in the fact that similar organisms will develop in similar ontogenetic stages. This fact, too, seems to account sufficiently for the objections advanced by Morgan in support of his theory of repetition.

VII. THE BIOGEOGRAPHICAL ARGUMENT. - The biogeo-
ographical argument is a very complex one, com-
pounded of a vast number of single facts whose correla-
tion among one another, and whose bearing upon the problem of evolution, can hardly be determined before many years of detailed research have gone by. The theories established, for instance, by Wallace are cer-
tainly not supported by any facts. On the contrary, they have serious defects. One of them is the well-known "Wallace line"; another, much more important, the unfounded assertion that the higher vertebrates must have originated from marsupials and must have spread almost entirely extinct in all countries except in isolated Australia, where they survive, as the highest representatives of the Australian vertebrates, in greatly varying forms till to-day. Besides, in most cases we have no suffi-
cient knowledge of the geographical distribution of organisms and of its various causes. But in order to give the reader an idea of the argument, we shall briefly refer him to a group of facts which is well adapted to support the view of evolution explained in the preceding pages.

Volcanic islands and such as are separated from the continent by a sea or strait of great depth exhibit a fauna and flora which have certainly come from the neighbouring continents, but which at the same time possess features altogether peculiar to them. The flora of Socotra, in the Indian ocean, for instance, comprises 555 systematic species; among these there are 206 endemic ones. Similarly, in Made-
ogascar are 3000 endemic plant-species among 4100; on the Hawaiian Islands, 70 endemic species of birds among 116; on the Galapagos, 84 among 108. Many such facts are known. They certainly form an exception which in favor of the biogenetic law is defended throughout this article: that such forms as the endemic species, which may well be compared with the races of the human species, were not directly created, but arose by some process of modification which was greatly facilitated by their complete isolation.

The most important GENERAL CONCLUSIONS to be noted are as follows:—

1. The origin of life is unknown to science.
2. The origin of the main organic types and their principal subdivisions are likewise unknown to science.
3. There is no evidence in favour of an ascending evolution of organic forms.
4. There is no trace of even a merely probable argument in favour of the animal origin of man. The earliest human fossils and the most ancient traces of culture refer to a true Homo sapiens as we know him to-day.
5. Most of the so-called systematic species and genera were certainly not created as such, but originated by a process of either gradual or saltatory evolu-
tion. Such changes are not exceptional in the human species and have thus far not been strictly demonstrated, either experimentally or historically.

6. There is very little known as to the causes of evolu-
tion. The greatest difficulty is to explain the origin and constancy of newly evolved organic forms of the process. Darwin's "natural selection" is a nega-
tive factor only. The moulding influence of the en-
vironment cannot be doubted; but at present we are un-
able to ascertain how far that influence may extend. Lamarck's "inherence of acquired characters" is not the least explanatory hypothesis. Such forms as the new acquired characters as the new forms can arise by "mutation". In our opinion the principal of "Mendelian segregation", together with Darwin's natural selection and the moulding influence of environment, will probably be some of the chief constituents of the theory of evolution.

Many works referring to the subject have been mentioned in the body of the article. We shall here enumerate mainly such as are of more recent date and will be of special value for further study.

kung der Geologie (Leipzig, 1892); KAYE, Geologische Formations-
lehren (Stuttgart, 1883); NEUMANN, Die Landwirtschaft und die Vorzeit (Leipzig, 1887); SCHAEFFER, European Animals: their Geological History and Geographical Distribution (London, 1878); BIRK, The Paleotribes (Washington, 1885); HANDLEIT, Die fossilen Insekten und die Phylogenie der rezenten Formen (Leipzig, 1888); FRANZ, Duemanales and Mensch (Berlin, 1890); PFANNEN, Pflanzengeographie (Jena, 1902); LYDBERG, A Geographical History of Mammals (London, 1896).
bishop, Quintianus, was present at the Council of Elvira early in the fourth century. There exists no complete list of his successors for the next two centuries, though some are known from ancient diplomas. In 584 the Visigothic king, Leovigild, incorporated with his state the Kingdom of the Suevi, to which Evrée was annexed. In the sixth and seventh centuries there remain a few Christian inscriptions pertaining to Evrée. One of them has been interpolated the name of a Bishop Julian (1 Dec., 566); he is, however, inadmissible. Thenceforth the episcopal list is known from the reign of Recceswinth (586) to the Arab invasion (714), after which the succession is quite unknown for four centuries and a half, with the exception of the epiphany of a Bishop Daniel (January, 1100). Until the reconquest (1106) by Alfonso I of Portugal, Evrée was suffragan to Merida. Under this king it became suffragan to Braga, despite the protests of the Archbishops of Compostella, administrators of Merida. In 1274, however, the latter succeeded in bringing Evrée within their jurisdiction. Finally, it became suffragan to Lisbon from 1584 to 1544, when it was made an archbishopric. Its large and splendid cathedral has undergone many architectural changes. Among its illustrious prelates may be mentioned Enrique (1540–64, 1578–80), the founder of its university and King of Portugal (1578–80); Teoctonio de Braganza (1570–1602); and the scholarly writers Alfonso de Portugal (1460–1522) and Father Manuel de Cenaculo Villalboas (1582–14). Portuguese writers have maintained that the first bishop of Evrée was St. Mantius, a Roman, and a disciple of Jesus Christ, sent by the Apostles into Spain as a missionary of the Gospel; from his genuine acts it appears that he was a devout Christian, put to death by the Jews after the fourth century. Spanish Jews, it is known, are mentioned in the fourth-century Council of Elvira (can. 49).

**Evrée, Diocese of (Ebroicensis), in the Department of Eure, France; suffragan of the Archdiocese of Rouen.** A legend purporting to date from a certain Deodatus, who is said to have been converted and then later ordained by St. Taurinus, makes St. Tauritus the latter first bishop of Evrée. According to this legend St. Taurinus was baptized at Rome by St. Clement and sent into Gaul as a companion to St. Denis. According to Mgr. Duchesne this legend arose about the ninth century, when Abbot Hilduin of Saint-Denis was intent on proving the identity of Dionysius the Areopagite with Dionysius (Denis), first Bishop of Paris. It is certain that in the time of Charles the Bald (ninth century) St. Taurinus was held in high esteem at Evrée; still earlier, Bishop Landulphus, who seems to have occupied the See of Evrée at the beginning of the seventh century, had built the bap-

**Cathedral of Notre-Dame, Evrée**

...turies, among them a statue by Jean Goujon. There are pilgrimages to the shrine of Notre-Dame de la Couture at Bernay (since the tenth century); to that of Notre-Dame des Arcs at Pont de l’Arche; and to a relic of St. Clotilda venerated at Andelys. Previous to the anti-Congregations law of 1901, there were Jesuits and Lazarists at Evrée. Communities of nuns devoted to teaching and the relief of the poor were: the Dominicans of St. Catherine of Siena, an institute founded in 1587 at Etrépagny, which has three houses in the English West Indies; and especially the Sisters of Providence of Evrée, an order founded in 1700 by Justine Duvivier and her brother Father Duvivier in a small hamlet called Caer. It was or-

...ganized by Father James, an Eudist missionary, and re-established in 1804 by Charlotte Le Mesle; it had several houses in the diocese. The charitable institutions in charge of religious orders were in 1900: 2 crèches, 10 day-nurseries, 1 orphan asylum for boys, 12 for girls, 3 workrooms, 19 homes for the aged, 11 dispensaries, 2 houses of retreat, and 1 insane asylum. The Diocese of Evrée comprised in 1905 (close of the Concordat period) 534,781 inhabitants, 57 parishes, 545 succursal parishes (mission churches), and 25 vicariates paid by the State.

**Gallia Christiana (Novus).** (1759), XI, 554, 623; *instrumenta*, 123, 152; Chambant and Saduage, *Histoire des évêques d’Evrée*
Ewald (or Hewald), Saints, Martyrs in Old Saxony about 665. They were two priests and natives of Northumbria, England. Both bore the same name, but were distinguished as Ewald the Black and Ewald the Fair, from the difference in the colour of their hair and complexions. According to the example of many at that time, they spent several years as students in the schools of Ireland. Ewald the Black was the more learned of the two, but both were equally renowned for holiness of life. They were apparently acquainted with St. Willibrord, the Apostle of Friesland, and were animated with his zeal for the conversion of the Germans. Indeed, by some they have actually numbered among the eleven companions of that saint, but it is more probable they did not set out from England till after St. Willibrord’s departure. They entered upon their mission about 690. The scene of their labours was the country of the ancient Saxons, now part of Westphalia, and covered by the dioceses of Minden and Paderborn. At first the Ewalds took up their abode in the house of the steward of a certain Saxon earl or ealdorman (satrapa). Bede remarks that “the old Saxons have no king, but they are governed by several ealdormen (satrapas) who during war cast lots for leadership, but who in time of peace are equal in power” (Hist. Eccl., V, 10). The steward entertained his two guests for several days, and promised to conduct them to the chieftain, as they affirmed they had a message of considerable importance to deliver to him. Meanwhile, the Ewalds omitted nothing of their religious exercises. They prayed often, recited the canonical hours, and celebrated Mass, for they carried with them all that was necessary for the Holy Sacrifice. The pagan Saxons, understanding from these things that they had Christian priests and missionaries in their midst, began to suspect that their aim was to convert their over-lord, and thus destroy their temples and their religion. Inflamed with jealousy and anger, they resolved that the Ewalds should die. Ewald the Fair they quickly despatched with the sword, but the Black lasted longer; partly because he was the spokesman and showed greater boldness. He was torn limb from limb, after which the two bodies were cast into the Rhine. This is understood to have happened on 3 October at a place called Aplerbeck, where a chapel still stands. When the ealdorman heard of what had been done he was exceedingly angry, and took vengeance by ordering the murderers to be put to death and their village to be destroyed by fire. Meanwhile the martyred bodies were miraculously carried against the stream up the Rhine, for the space of forty miles, to the place in which the companions of the Ewalds were residing. As they floated along, a heavenly light, like a column of fire, was seen to shine above them. Even the murderers are said to have witnessed the miraculous brightness. Moreover, one of the martyrs appeared in vision to the monk Tilmun (a companion of the Ewalds), and told him where the bodies would be found: “that the spot would be where he should see a pillar of light reaching from earth to heaven”. Tilmun arose and found the bodies, and interred them with the honor due to martyrs. From that time onwards, the memory of the Ewalds was annually celebrated in those parts. A spring of water is said to have gushed forth in the place of the martyrdom. Pepin, Duke of Austrasia, having heard of the wonderful decisive victory, is said to have been inspired to write down the event in the colegiate church of St. Cumbert. The heads of the martyrs were bestowed on Frederick, Bishop of Münster, by Archbishop Anno of Cologne, at the opening of the shrine in 1074. These relics were probably destroyed by the Anabaptists. In 1660, St. Norbert visited Cologne, in 1121, he obtained two small vessels containing the relics of several saints, and among them were bones of the sainted Ewalds. These were deposited either at Prémontré, or at Florence, a Premonstratensian monastery in the province of Namur. The two Ewalds are honoured as patrons in Westphalia, and are mentioned in the Roman Martyrology on 3 October. Their feast is celebrated in the dioceses of Cologne and Münster.

Columbia Edmonds.

Ewing, Thomas, jurist and statesman, b. in West Liberty, Virginia (now West Virginia), U.S.A., 28 December, 1789; d. at Lancaster, Ohio, 26 October, 1871. His father, George Ewing of New Jersey, who had served as an officer in the Continental Army after the Revolution, settled in the Northwest Territory, in the Muskingum Valley, and then, in 1798, in what is now Anes Township, Lake County, Ohio. He was an ardent supporter of frontier improvements, and in his early days had encouraged the building of the first public school in the country. He had been influenced by the example of his uncle, John Ewing, the first Governor of Kentucky. Ewing, who had been a captain of the Ohio Volunteers in the War of 1812, retired with the rank of colonel and was one of the first to propose a tariff system of Clay, and presented one of the first of the memorials for the abolition of slavery.

In March, 1831, Ewing entered public life as a member from Ohio of the United States Senate, and became prominent therein, with Webster and Clay, in resistance of the acts of President Jackson and in support of the tariff. In 1833 he was elected to the House of Representatives, and was at once appointed Secretary of the Treasury in March, 1841. He prepared the second bill for the re-charter of the Bank of the United States, and, on its veto by Tyler, he resigned from the cabinet, in September, 1841. In March, 1849, he was appointed by President Taylor secretary of the then newly created Department of the Interior. He organized the department, and in his report to congress urged the construction of a railroad to the Pacific. On the death of Taylor in 1850, Ewing resigned from the cabinet and was appointed senator from Ohio to fill an unexpired term. On the expiration of his term in March, 1851, he returned to the practice of law. In 1860 Ewing was appointed by the Governor of Ohio a member of the famous Peace Conference, and he was prominent in the efforts to avert the secession of the Southern States. During the war he was unreservedly opposed to the preservation of slavery, and his services were devoted to the suppression of secession at all costs.

When the capture of Mason and Slidell brought England and the United States to the verge of hostilities, Ewing sent Mr. Lincoln the famous telegram that was decisive. It was: "If, therefore, any act shall be done which shall be construed as a tryst or trysting ground for war between neutral points, it will be my advice that finally prevailed and secured the freeing of
the envoys and the avenging of hostilities. Conservative in his opinions, Ewing opposed the radical measures of Reconstruction at the close of the war and supported the administration of President Johnson. In February, 1868, after the removal of Stanton, the President sent to the Senate the nomination of Ewing as Secretary of the Interior. It was rejected.

Descended of Scottish Presbyterian stock, Ewing, after a lifelong attraction to the Catholic Church, entered it in his latter years. Reared outside the fold of any religious body, he married, 7 January, 1820, her Aug. Evangeline, daughter of Hugh Boyle, an Irish Catholic. Admired by his friends for his integrity and faith and pious example of his wife during their long married life, and all his children were reared in the Faith. In October, 1869, Ewing was stricken while arguing a cause before the Supreme Court of the United States and he was baptized in the court room. In September, 1871, his lifelong friend, Archbishop Purcell of Cincinnati, received him into the Church.

PHILEMON BEECHER, eldest son of Thomas, b. at Lancaster, 3 November, 1820; d. there 15 April, 1896. He graduated in 1858 from Miami University, Oxford, Ohio. He was a student of George W. Rapp, Admitted to the Bar in 1841, he formed with his father the firm of T. Ewing & Son. In both State and Federal courts, through his grasp of the philosophy of the law and his judicial temperament, he won a place before the former. Regular service in the Navy in support of his father in his political life and labours, and was an active figure first in the Whig and then in the Republican party. In 1862 he was appointed Judge of the Court of Common Pleas. Being opposed to the Reconstruction measures of his party he took part in the Liberal Republican movement. He was nominated to the supreme bench of Ohio in 1873. During the sixties and seventies he engaged in the banking business, and was prominent in the development of the Hocking Valley coal-fields. The later years of his life were spent in retirement.

He married at Lancaster 31 August, 1848, Mary Rebecca Gillespie, a sister of Eliza Maria Gillespie (Mother Mary of St. Angela of the Sisters of the Holy Cross of Notre Dame, Indiana). He was a man of wide culture and a writer of vigorous and limpid English. He was a most devout Roman Catholic, and in the Church were concerned, and was a delegate from the Diocese of Columbus to the Catholic Congresses of 1889 and 1893.

HUGH BOYLE, third son of Thomas, b. at Lancaster, 30 November, 1833; d. there 30 November, 1865. He was educated at the United States Military Academy at West Point, and in 1849 went to California, returning to Lancaster, in 1852, to enter on the study of the law. On his admission to the Bar, he practised in St. Louis, Missouri, from 1854 to 1856, and then, in partnership with his brother Thomas, at Leavenworth, Kansas, from 1856 to 1858. In April, 1861, he was appointed brigade-inspector of Ohio Volunteers with the rank of major, and in August, 1861, was commissioned colonel, commanding the Tenth Ohio Volunteer Infantry, and in November, 1862, he was commissioned brigadier-general. He took part in the operations against Vicksburg, and his command led in the assault of 22 May, 1863. In July following he was appointed to the command of the Fourth Division, Fifteenth Army Corps. In the operations about Chattanooga he led his division in the assault upon Missionary Ridge and its capture. In the latter part of the war he was placed in command of the district of Kentucky, and at its close was brevetted major-general. In 1866 President Johnson appointed him Minister to the Hague, which position he filled until 1870. On his return to the United States, he bought a small estate near Lancaster, in 1876, on which he lived until his death. He was married at Washington, D. C., 3 August, 1858, to Henrietta Eliza-beth Young. He was a man of wide culture, and an interesting writer. He published several stories, among them "The Grand Ladron, a tale of Early California" "Koche, a King of Pit", "A Castle in the Air", and "The Black List".

CHARLES, fifth child of Thomas, b. at Lancaster, 6 March, 1835; d. at the age of 41. After completing his studies at the college of the Dominican Fathers in Perry County, Ohio, he later attended Gonzaga College, Washington, and the University of Virginia. In 1856 he began the practice of law in St. Louis, Missouri. The Civil War breaking out soon afterwards, he entered the army, and was commissioned Lieutenant of the United States 20 May, 1861, and in the Spring of 1863, joined his brother-in-law, General William T. Sherman, in the Arkansas and Mississippi campaigns. In the siege of Vicksburg he was three wounded. On the 22nd of June, 1862, he was commissioned lieutenant-colonel and assistant inspector-general of volunteers, and on the 15th of June, 1863, inspector-general of the Fifteenth Army Corps. He served with much distinction in the Atlanta campaign and the famous march to the sea. After the battle of Chattanooga, he was commissioned brigadier-general, and on the mustering out of the volunteers was transferred to the regular force, from which he resigned as brevet-colonel on the 31st of July, 1867. He was brevetted three times in recognition of his services. After the death of his brother at the Vicksburg and Atlanta campaigns. After his retirement from the Army, he took up his residence in Washington and began the practice of law, in which profession he obtained considerable prominence. In 1875 he accepted the appointment of Indian Commissioner, and laboured energetically to restore to the Catholic Indian Missions the schools among the Indians which they had maintained for twenty years. Pope Pius IX, 3 May, 1877, created him a Knight of the Order of St. Gregory the Great. General Ewing married Virginia, daughter of John K. Miller of Mount Vernon, Ohio.

ELEANOR BOYLE (MRS. WILLIAM TECUMSEH SHERMAN), daughter of Thomas, b. at Lancaster, 4 October, 1824; d. in New York City, 28 November, 1888. She was educated at the Visitation Convent at Georgetown, D. C. B. 1859, after her father's death. William Tecumseh Sherman, the subsequent famous General of the United States army, then a boy of nine years, was adopted by Mr. Ewing, reared in his household, and appointed by him to the U. S. Military Academy. She was a member of the draft committee, 1 May, 1850. She was devoted throughout her life, after the duties of her household, to the relief of suffering and of want, and to the advancement of the Church. Mentally, she inherited the brilliant intellectual powers of her father and was a true helpmate of her husband in his distinguished career. She was the author of "Thomas Ewing, a Memorial", published in 1872. Father P. J. De Smet, S.J., the missionary among the Indians, was an old and intimate friend of the Sherman, and through this intimacy he learned the special interest in the cause of the Catholic Indians. Her influence and personal exertions were of much assistance at Washington, to her brother, General Charles Ewing, in the work of saving and promoting the missions for the Catholic Indians.

Examination, a process prescribed or assigned for testing qualification: an investigation, inquiry. Examinations are in use in parochial schools, Catholic academies, seminaries, and universities as tests of proficiency. Examinations or something equivalent V—43
must enter into all effectual instruction, for it is not sufficient that a book be placed in the hands of a pupil or that he be compelled to attend lectures, but it is necessary to see that he grasps the ideas conveyed. Such tests are widely in vogue in Catholic institutions, and are not subject to change. Examinations, however, have other purposes, especially as tests of qualifications for offices or positions, and as investigations to arrive at the truth. It is particularly under these aspects that the question of examinations now presents itself.

Examination for Appointment to Parochial Benefices.—The Council of Trent, realizing that parishes should be ruled over by men of virtue and learning, decreed (Sess. XXIV, c. xviii, De ref.) that the cure of souls should be entrusted only to those who, in a competitive examination or concursus, have demonstrated their fitness. The purpose of this examination is not only to exclude unworthy candidates, but to secure the selection of the best. Clement XI and Benedict XIV determined the form of this examination (see Concursus; Examiners, Syndicate).

Examination for Promotion to Orders.—The Council of Trent (Sess. XXIII, c. vii, De ref.), repeating the legislation of previous councils, prescribes that a bishop promote no one to orders in the Church till priests and others prudent and learned, appointed for the purpose, have examined the candidate and given their qualifications. This investigation is concerned with legitimate birth, baptism, confirmation, freedom from irregularity, age, title of ordination, morals, faith, and knowledge. In practice, however, the examination is confined to learning, as other requisites are investigated in advance and attested by proper documents, of the chancellor, pastor, rector of seminary, etc. The place, form, matter, number of examiners, and other details of the examination are left to the bishop. A prelate can ordain only one candidate, subject to the condition that he be not free to submit the candidate to an examination or not, as he may deem proper, unless, for grave reasons, he suspect the unfitness of the candidate, notwithstanding a previous examination, or unless he be commissioned by the candidate’s bishop to hold the examination. Members of religious orders are examined by their own superiors and likewise by the ordinary prelate, except the Jesuits and some others who by special privilege are exempt from examination by the ordinary prelate (see Examiners, Apostolic). Bishops-Elect.—In addition to the examination in the Roman Pontifical, Gregory XIV prescribed another for bishops-elect, while Clement VIII instituted a congregation of cardinals for this purpose. This examination, however, developed into little else than a ceremony, since bishops are not elected till assurance is given of their prudence, pieté, and learning. The late reorganization of the Roman Curia puts this matter under the Consistorial Congregation. Cardinals who are to receive episcopal consecration are exempt from this examination.

Examination of Confessors.—The Council of Trent (Sess. XXIII, c. xv, De ref.) established the necessary requirements of episcopal approbation for all priests, both secular and regular, to hear confessions, advising an examination as a test of fitness, though bishops are free to approve, without such test, those priests who in their judgment are qualified for the work. Members of the regular clergy, without exception, may be obliged by the ordinary of the diocese to undergo this test, if they would hear the sacramental confessions of secular persons. Once approved, however, they are not subject to another test, unless some grave cause relating to confessions arise (see Examiners, Apostolic).

Examination of Preachers.—The ordinary of a diocese may submit to an examination members of religious bodies who desire to preach in the diocese in churches other than those of their own order. Once, however, he has given his approbation, he may not insist on a second examination, though for just cause he may withdraw the permission given to preach. The bishop’s successor in office may demand a re-examination.

Examination of Those Wishing to Contract Marriage.—Before publishing the banns of marriage the pastor questions separately the contracting parties regarding their place of residence, to ascertain whether he has a right to unite them in matrimony. He inquires, likewise, whether they are acting with perfect freedom, or perhaps under duress, fear, or other motive which might invalidate the contract. He learns of any opposition on the part of parents to the proposed union, as well as of the possible existence of any matrimonial impediment. He must ascertain, moreover, whether the parties are sufficiently grounded in the rudiments of the Catholic religion and capable, consequently, of instructing their offspring. If the parties belong to different parishes, by whom is this investigation to be conducted? Local regulations and customs are to be observed, since there is neither positive universal legislation nor uniform practice in this matter.

Examination of Witnesses.—In ecclesiastical, as in civil, courts witnesses are examined under oath, administered by the auditor or judge, who should first call the witness’s attention to the nature and binding effect of an oath, and require his concurrence to its validity. The oath must be to the effect that the witness will tell the truth, the whole truth, and nothing but the truth. If thought advisable by the judge, the oath may also contain the promise of secrecy. A statement not sworn to does not constitute evidence. Witnesses are examined separately. In civil trials the interested parties have a right to be present when witnesses are being sworn, and may not be excluded except in rare cases approved by the judge. In criminal or other cases, witnesses of the parties’ side are not excluded from the oath they are to take, as well as other witnesses. Here, also, in extreme cases an exception may be made. If, however, the defendant is not allowed to confront the witnesses cited by the plaintiff and vice versa, he is permitted to see the witnesses take the oath and may suggest interrogatories to be proposed.

Witnesses are to be asked or cited, but not necessarily in a formal manner, to appear in court and testify. He who offers his testimony unsolicited is suspected. The examination of witnesses is conducted by the judge. The interrogatories, which are general and special, should be clear and capable of a direct and definite answer. The general questions concern the name, residence, profession, age, and religion of the witness. His relations to plaintiff or defendant, his habits, prejudices, associations, motives, his physical defects, and, at times, his mental qualities, his means of knowledge, powers of discernment, and his memory may be relevant. The special queries are drawn from the crime or charge, and should be relevant or material to the fact at issue. The judge must ascertain how much of the deposition is of personal knowledge, or only hearsay evidence or rumour, or perhaps mere opinion or inference. Circumstances of place, persons, time, etc. may be pertinent. Leading or suggestive questions, which suggest the answer desired, are not permitted. The rules of competency of witnesses are reducible to two, a knowledge of the facts in the case and veracity. In weighing the evidence, however, the judge must consider not only the knowledge and credibility of the witness, but also the quality of the deposition and its relative weight. The role of the witness is not independent. While exception may be taken to a witness, if unsuspected it does not disqualify him. The testimony is written down by the secretary or clerk and is read by him to the witness. Additions or corrections, if necessary, are made. The witness affixes his signature, or, if unable to write, he makes his mark.
which must be attested by the clerk. If the witness refuses to subscribe, the fact and the reason thereof must be noted. Finally, both the judge and the clerk sign the document.

Examination of Conscience.—By this term is understood a review of one's past thoughts, words, and actions for the purpose of ascertaining their conformity with, or discordancy from, the moral law. Directly, this examination is concerned only with the will, that is, with the good or bad intention that inspires one's thoughts, words, and actions. Some of the ancient 'hierophants'—the sages in particular—were studied to be blameless in their own sight, and for this they made frequent use of self-inspection. They professed the doctrine that the happiness and dignity of man consist in virtue, or compliance with the law of reason, or with conscience; and thus examinations of conscience were a regular practice in the schools of the Stoics and of their later followers, such as Quintus Sextius and Seneca. In the hearts of all men there is heard at times the voice of conscience bidding them seek their moral perfection, not so much for the direct strength of its force as for the fear of the consequences it threatens against the holliness of the Supreme Author of the moral law. This precept of rational nature has been enforced by the voice of revelation. Thus God said to Abraham, "Walk before me, and be perfect" (Gen., xvii, 1). To this precept the Prophet Jeremiah referred when he sung in his Lamentations: "Let us search our ways, and see, and return to the Lord." (iii, 40).

In the fullness of time Christ came to perfect the knowledge of the moral law and draw the human heart. The examination of conscience then became more imperative than before. In particular it was commanded by the Apostle St. Paul to be performed by the faithful each time they received Holy Communion: "Let a man prove himself— that is examine—himself: and so let him eat of that bread, and drink of the chalice; for he that eateth and drinketh unworthily eateth and drinketh judgment to himself . . . . If we would judge ourselves, we should not be judged" (1 Cor., xi, 28-31).

And, as the early Christians received Holy Communion very frequently, the profession of examination of conscience became a familiar exercise of their spiritual life. Thus we read of the great hermit St. Anthony, that he examined his conscience every night, while St. Basil, St. Augustine, and St. Bernard, and founders of religious orders generally, made the examination of conscience a regular daily exercise of their followers. What was thus enjoined on religious by rule was inculcated upon the faithful at large by the masters of the spiritual life as a most effectual means to advance in virtue.

The devotional examination of conscience is quite distinct from that required as a proximate preparation for sacramental confession. If a Christian Judge himself unworthy of receiving the Body of the Lord, he is to make himself worthy by obtaining pardon of his sins; and the means is provided for the purpose by Christ in the power He has given His ministers as remit sins. As discretion is to be used in remitting or retaining sins, the confession of the sinner is necessary; and to confess his faults he must examine his conscience with proper diligence. By self-examination he intensifies his contrition and purpose of amendment. In the case of an oath of examination, it is still incumbent on him to examine his conscience with such diligence as a prudent man ordinarily devotes to important business, but the impossible is not demanded. The more protracted his wanderings have been, the weaker the prodigal may have become to travel back to his Father, and the more help he may need to accomplish the task. When he has made some earnest efforts in this matter, the priest is to lend his assistance to perfect the work; as Vasques and de Lugo remark, a prudent confessor can accomplish more with most penitents by a few questions than they themselves can in a long examination. Suares takes notice that the Fathers of the Church have not taught any set system for such examinations. The ordinary method followed in the examination for confession is to consider in succession the Ten Commandments of God, the Commandments of the Seven Capital Sins, the duties of one's state of life, the nine ways of partaking in the sins of others. For persons who have led a uniform life it will often suffice to recall where they have been, the persons with whom they have dealt, the duties in particular which they have been engaged; how they have behaved on ordinary occasions—as, for instance, when busied in their usual employment on working-days—and on unusual occasions, such as Sundays and holidays.

As to the daily examination of conscience, two species must be distinguished, the general and the particular. The former aims at the correction of all kinds of faults, the latter at the avoidance of some particular fault or the acquisition of some particular virtue. For the general examination a good method is laid down by St. Ignatius. He thrusts on his conscience five points. It contains five points. In the first point we thank God for the benefits received; in the second we ask grace to know and correct our faults; in the third we pass in review the successive hours of the day, noting what faults we have committed in deed, word, thought, or omission; in the fourth we ask God's pardon; in the fifth we purpose amendment.

Of the particular examination of conscience St. Ignatius is generally considered as the author, or at least as the first who reduced it to system and procedure. He included its practice in an examination of conscience which attracted his attention on some one fault or virtue. On rising in the morning we resolve to avoid a certain fault during the day, or to perform certain acts of a particular virtue. About noon we consider how often we have committed that fault, or practised that virtue; we mark the number in a booklet prepared for the purpose, and we renew our resolution for the rest of the day. At night we examine and mark again, and make resolutions for the following day. We thus act like careful business men who watch for a while a special portion of their mercantile transactions to see where losses come in or where greater gain may be secured. St. Ignatius further suggests that we impose upon ourselves some penance for every one of the faults committed, and that we compare the numbers marked each time with those of the preceding day, the total sum at the end of the week with that of the preceding week, etc. (See Conscience; Duty; Sin.)

Charles Coffens.

Examiners, Apostolic, so called because appointed by the Apostolic See for service in Rome. In 1570 Pius V instituted the Apostolic examiners to conduct examinations of candidates for orders and of confessors. These examiners, who are chosen by the pope, are charged with examining the spiritual evolution of those who would receive orders is held in the vicariate, or palace of the cardinal vicar, in the presence of at least three examiners. It is only after consultation with the pope that the cardinal vicar may dispose of
from this examination, except in case of tonsure, when he may allow candidates to be examined privately by one examiner. All, whether affiliated to the Diocese of Rome or not, must undergo this examination. Those who have been in Rome four months or more, and who intend to return to the Eternal City, must, under pain of suspension, be examined in the vicariate before receiving orders (not tonsure) elsewhere. An exception is made in regard to the canons of the basilica of St. Peter, who are examined and promoted to orders by their cardinal archpriest. They must, however, have testimonial letters from the cardinal vicar. Even prelates of the Roman Curia must present themselves at the vicariate, but out of respect for their dignity they occupy seats among the examiners and examine one another.

As regards confessors they are not approved in Rome till they have passed a satisfactory examination before the Apostolic examiners. Although the cardinal vicar may dispense in this matter, the exercise of this prerogative is exceedingly rare. Generally, after a first and second examination faculties to hear confessions are granted only for a limited time, while a third successful examination meets with unlimited approbation.

ANDREW B. MEEHAN.

EXAMINERS, SYNODAL, so called because chosen in a diocesan synod. The Council of Trent prescribes at least six synodal examiners. The number twenty has been fixed upon by the Congregation of the Council as an ample sufficiency. The chief purpose of synodal examiners is to conduct competitive examinations or concursus, though they may be designated to hold other examinations. Suitable candidates for this office are proposed singly, not all together, each year in the diocesan synod, by the bishop or his vicar-general; they must be satisfactory to the synod and meet the approval of a majority of those present, the voting being secret or public as the bishop may determine. They should have the academic degree at least of licentiate in theology or canon law, but where clerics with such degrees are not available, others qualified, either of the diocesan or religious clergy, are eligible. Synodal examiners, once appointed, hold office till the ensuing synod, though several years have elapsed. They may take an oath—an oath—otherwise privy in the presence of the bishop or vicar-general—to fulfil their duties conscientiously, without prejudice, favouritism, or other unworthy motive. Neglect on the part of only one to take this oath renders null and void the concursus in which he takes part, their sentence annulled, save in three cases, not to accept present in the discharge of their office, failing in which they become guilty of simony and are punishable accordingly. Neither the diocesan synod nor the bishop personally may establish a salary, how ever insignificant, on the fulfillment of their office.

If, within a year after their appointment in synod, the number of examiners, through death, resignation, or other cause, fall below six, the bishop may, with the consent of the cathedral chapter, fill up the number; if the number six decrease after the expiration of a year, permission of the Sacred Congregation of the Council is also requisite. Examiners thus chosen out of synod are termed pro-synodal. There is no positive legislation regarding the removal from office of examiners, synodal or pro-synodal. In some countries, where ecumenics are present, the resolutions of the Council of Trent anent synodal examiners are not observed, kindred duties as far as necessary being performed by clerics who are styled "examiners of the clergy" or something similar. The Third Plenary Council of Baltimore prescribes for the United States that examiners be chosen at least from in number as possible, be selected in synod. It is only with permission of the Holy See and after consultation with the diocesan consultors that a bishop may choose them out of synod. In case of vacancy the bishop, with the ad\nmission of suffrage, replaces in it. These examiners are required to take the oath as above and likewise to swear not to accept gifts on the occasion of examinations. Whether these examiners, thus appointed out of synod, hold office till death or only till the convening of the next synod is not determined. In many dioceses these same examiners conduct the examinations for the junior clergy, confessors, candidates for orders, and the like. (Cf. Council of Trent, Sess. XXIV, c. xviii, De ref.; also Third Plenary Council of Baltimore, nos. 24 sqq.)

Andrew B. Meehan.

EXARCH (Gr. Ἐξάρχης), a title used in various senses both civilly and ecclesiastically. In the civil administration of the Roman Empire the exarch was the governor or viceroys of any large and important province. The best-known case is that of the Exarch of Italy, who, after the defeat of the Goths, ruled from Ravenna (552–751) in the name of the emperor at Constantinople. In ecclesiastical language an exarch was, at first, a metropolitan whose jurisdiction extended beyond the limits of his metropolis to include a part of other metropolises. Thus, as late as the time of the Council of Chalcedon (451), the patriarchs are still called exarchs (can. ix). When the name "patriarch" became the official one for the Bishops of Rome, Alexandria, Antioch (and later of Constantinople and Jerusalem), the other title was left as the proper style of the metropolitans who ruled over the three remaining (political) dioceses of Dioscletian's division of the Eastern Prefecture, namely the Exarchs of Asia (at Ephesus), of Cappadocia and Pontus (at Cesarea), and of Thrace (at Heraclea). The advance of Constantinople put an end to these exarchates, which fell back to the state of ordinary metropolitan sees (Fiorrtese, Orth. Eastern Church, 21–25). But the title of exarch was still occasionally used for any metropolite (so at Sardis in 944, can. vi). Since the use of all these titles became gradually fixed with definite technical meanings, that of exarch has disappeared in the West, being replaced by the names "Apostolic vicar" and then "primate." A few cases, such as that of the Archbishop of Lyons, whom the Emperor Constantine the Great made an exarch, are known, and there are rare exceptions. In Eastern Christendom an exarch is a bishop who holds a place between that of patriarch and that of ordinary metropolitan. The principle is that, since no addition may be made to the sacred number of five patriarchs, any bishop who is independent of any one of these five should be called an exarch. Thus, since the Church of Cyprus was declared autocephalous (at Ephesus in 431), its primate receives the title of Exarch of Cyprus. The short-lived medieval Churches of Ipek (for Servia), Achrida (for Bulgaria), and Zrnova (for Rumelia), were governed by exarchs, though these prelates occasionally usurped the title of patriarch (Fiorrtese, Orth. Eastern Church, 305 sq., 317 sq., 328 sq.). On the same principle the Archbishop of Mount Sinai is an exarch, though in this case, as in that of Cyprus, modern Orthodoxy usage generally prefers the (to them) unusual title, "archepiscopos." (Ἀρχιεπίσκοπος). When the Bulgarians constituted their national Church (1870), not quite daring to call its head a patriarch, they made him an exarch. The Bulgarian exarch, who resides at Constantinople, is second only to the patriarch and has the right of correction. Because of his adherents throughout Macedonia are called exarchists (as opposed to the Greek patriarchists). It was an inaccurate use of this title when Peter the Great, after abolishing the Patriarchate of Moscow (1702), for twenty years before he founded the Russian Holy Directorate which, however, is disreprentent with the title of exarch as president of a ter-
poratory governing commission. Since Russia destroyed the old independent Georgian Church (1802) the Primate of Georgia (always a Russian) sits in the Holy Synod at St. Petersburg; it could exclude a candidate from consideration by a general declaration addressed to the College of Cardinals. Soon after, in the conclaves of 1644 and 1655, which elected, respectively, Innocent X and Alexander VII, in both of which Cardinal Sacchetti was excluded as a candidate, the term used for this action was *jus exclusivum* (right of exclusion). This right was, therefore, claimed about the middle of the seventeenth century; later dates suggested, e.g., 1691, or 1721, must be abandoned. It was also about the middle of the seventeenth century that controversies and polemics began to appear, in which the alleged right of exclusion was discussed; among such controversialists were the Cardinals Albizzi and Lugo.

In the following period repeated use was made of this so-called right. In 1721 the German emperor formally excluded Cardinal Paolucci; in 1730 the King of Spain excluded Cardinal Imperial; in 1758 France exercised this right to exclude Cardinal Cavalcabò. In the nineteenth century Austria maintained the right of exclusion, in 1830, against Cardinal Severoli, and Spain, in 1830, against Cardinal Galdón. In 1903 Austria again exercised this right, this time against Cardinal Rampolla. As a matter of fact, no government has a right to exercise any veto in a papal election. On the contrary the popes have expressly repudiated the exercise of such right. Pius IV in the Bull "In illudem" (9 October, 1562; "Magnum Bullarium", II, 87 sqq.), ordered the cardinals to elect a pope "Principum secularium intercessionibus, cæterisque munandis respectibus, minime attentis" (without any regard to the interference of secular rulers, or to other human considerations). That he meant thereby what is now known as the right of exclusion cannot, indeed, be proved; according to the foregoing account of its origin such claim did not then exist. Gregory XV, in the Bull "Eterni Patris Filiius" (15 November, 1621, in "Magnum Bullarium", III, 444 sqq.) declared authoritatively: "Cardinales omnino abinseatibus ab omnibus pactibus, conventionibus, promissionibus, intendmentis, condiciis, federibus, aliis quibusque oblationibus, minis, signis, contrasignis, in fragrum seu scholiarum, ut aliis tam vero quam scripto aut quomodoque dandis aut pendendis, tam respecto inclusionis quam exclusionis, tam unius personae quam plurium aut cert generis, etc.," the sense of which is, that the cardinals must abstain from all agreements, and from acts of any kind, which might be construed as binding them to include or exclude any one candidate from the certain class. It may be that the pope does not even here refer to exclusion by a state, but only to the so-called "ballot of exclusion"; it has already been stated, however, that the governments at this time laid claim to a formal right of exclusion. In the Bull "Apostolatus officium" (11 October, 1732, in "Magnum Bullarium", XIV, 248 sqq.) Clement XII ordered the cardinals in the words of Pius IV, already quoted, to elect, "principum secularium intercessionibus cæterisque munandis respectibus... minime attentis et postpositis" (i.e., without regard to the interference of secular rulers or to other human considerations).

By this time, however, governmental exclusion had long been the accepted form of the interference of secular rulers (interessio principii) in papal elections. It is, therefore, against this that the more important European countries obtained larger influence over papal elections, owing to the contentions of France, Spain, and the German emperor, for the control of Italy. These governments were originally satisfied with the "ballot of exclusion"; i.e., they sought to unite more than one-third of the votes against an undesirable candidate and thus make his election impossible, through lack of the necessary two-thirds majority. About the beginning of the seventeenth century, however, in the conclaves that elected Leo XI and Paul V (1605), Spain raised the question whether it could exclude a candidate by a general declaration addressed to the College of Cardinals. Soon after, in the conclaves of 1644 and 1655, which elected, respectively, Innocent X and Alexander VII, and in both of which Cardinal Sacchetti was excluded as a candidate, the term used for this action was *jus exclusivum* (right of exclusion). This right was, therefore, claimed about the middle of the seventeenth century; later dates suggested, e.g., 1691, or 1721, must be abandoned. It was also about the middle of the seventeenth century that controversies and polemics began to appear, in which the alleged right of exclusion was discussed; among such controversialists were the Cardinals Albizzi and Lugo.
EXCOMMUNICATION

1601, LXV, 333 sqq.), Pius IX forbade any interference of the secular powers in papal elections. It is plain, therefore, that the pope has never rejected all right of exclusion by a Catholic state in a papal election. Nor can it be admitted that this right has arisen through custom. None of the requisites essential to the growth of a customary right are present; reasonableness and prescription are especially lacking. To debar precisely the most capable candidates is an onerous limitation of the liberty of the electors, and injurious to the Church. Moreover, the cases of exclusion by Catholic states are too few to permit the inference of a custom; and the papacy possessed. The recent legislation by Pope Pius X has absolutely repudiated and abolished forever this Jus Exclusive. In the Constitution "Commissum Nobis" (20 Jan., 1904) he declared that the Apostolic See had never approved the civil veto, though previous legislation had not succeeded in preventing it: "Wherefore in virtue of holy obedience, under threat of the Divine judgment, and pain of excommunication lata sententia ..., we prohibit the cardinals of the Holy Roman Church, all and single, and likewise the Secretaries, of the College of Cardinals, and the Synods of the Church, who take part in the Conclave, to receive even under the form of a simple desire the office of proposing the veto in whatever manner, either by writing or by word of mouth. And it is our will that this prohibition be extended, ... to all intercessions, etc., of every kind, from the lay members of society who may wish to interfere in the election of a pontiff."

"Let no man infringe this our prohibition, under pain of incurring the indignation of God Almighty and of his Apostles, Sts. Peter and Paul. The new form of oath to be taken by all cardinals contains these words: "We shall never in any way accept, under any pretext, from any civil power whatever, the office of proposing a veto of exclusion even under the form of a mere desire, and we shall never lend favour to any intercession, or intervention, or any other method whatever, by which the lay powers of any grade or order may wish to interfere in the election of a pontiff.""

JOHANNES BAPTISTE SIGMÜLLER.

**Excommunication.**—This subject will be treated under the following heads: I. General Notions and History; II. Kind of Excommunication; III. Who Can Excommunicate? IV. Who Can Be Excommunicated? V. Effects of Excommunication; VI. Absolution from Excommunication; VII. Excommunications Lata Sententia Now in Force.

I. GENERAL NOTIONS AND HISTORICAL SUMMARY.

Excommunication (Lat. ex, out of, and communio or communicatio, communion—exclusion from the communion), the principal and severest censure, is a medicinal, spiritual penalty that deprives the guilty Christian of all participation in the common blessings of ecclesiastical society. Being guilt, it supposes guilt; and being the most serious penalty that the Church can inflict, it naturally supposes a very grave offence. It is also a medicinal rather than a vindictive penalty, being intended, not so much to punish the culprit, as to correct him and bring him back to the path of righteousness. It necessarily contemplates the future, either to prevent the recurrence of certain culpable acts that have grievous external consequences, or, more especially, to induce the delinquent to satisfy the obligations incurred by his offence. Its object and its effect are loss of communion, i.e. of the spiritual benefits shared by all members of Christian society; hence, it can affect only those who by baptism have been admitted to that society. Undoubtedly there can and do exist other penal measures which entail the loss of certain fixed objects of faith and love, and which are capable of application in such cases as those of greater censure, e.g. excommunication for clerics, interdict for clerics and laymen, irregularity ex delicio, etc. Excommunication, however, is clearly distinguished from these penalties in that it is the privation of all rights resulting from the social status of the Christian as such. The excommunicated person, it is true, does not cease to be a Christian, since his baptism can never be effaced; he can, however, be considered as an exile from Christian society and as non-existent, for a time at least, in the sight of ecclesiastical authority. But such exile can have an irrevocable character. Furthermore, it is to be noted that an excommunicate who has given suitable satisfaction. Meanwhile, his status before the Church is that of a stranger. He may not participate in public worship nor receive the Body of Christ or any of the sacraments. Moreover, if he be a cleric, he is forbidden to administer a sacred rite or to exercise in any way the exercise of office.

Right of the Church to Excommunicate.—The right to excommunicate is an immediate and necessary consequence of the fact that the Church is a society. Every society has the right to exclude and deprive of their rights and social advantages its unworthy or grievously culpable members, either temporarily or permanently. This right is necessary to every society in order that it may be well administered and survive. The fundamental proof, therefore, of the Church's right to excommunicate is based on her status as a spiritual society, whose members, governed by legitimate authority, seek one and the same end through suitable means. Members who, by their obstinate disobedience, reject the means of attaining this common end deserve to be removed from such a society. It is rational to exclude from a society the members of the New Testament, the example of the Apostles, and the practice of the Church from the first ages down to the present. Among the Jews, exclusion from the synagogue was a real excommunication (Exod., x, 5). This is especially relevant to the exclusion of Cain; and the birth of blind (John, ix, 21 sq.; cf. xii, 42; xvi, 2), the same likewise that Christ foretold to His disciples (Luke, vi, 22). It is also the exclusion which in due time the Christian Church should exercise: "And if he will not hear the church, let him be to thee as the heathen and publican" (Matt., xviii, 17). In the celebrated text: "Whosoever thou shall bind upon earth, shall be bound also in heaven; and whosoever thou shall loose upon earth, shall be loosed also in heaven" (Matt., xviii, 18; cf. xvi, 19), it is not only the remission of sins that is conditioned by the jurisdiction, including judicial and penal sanctions. Such, moreover, was the jurisdiction conferred on St. Peter by the words: "Feed my lambs"; "Feed my sheep" (John, xxi, 15, 16, 17). St. Paul excommunicated regularly the incestuous Corinthian (1 Cor., v, 5) and the incorrigible blasphemers whom he conquered over to Satan (1 Tim., i, 20). Faithful to the Apostolic teaching and example, the Church, from the very earliest ages, was wont to excommunicate heretics and contumacious persons; since the fourth century, the excommunication of those who are guilty of certain omissions of the facts there can be no doubt (Seitz, Die Heilsnotwendigkeit der Kirche, Freiburg, 1903).

**Excommunication not only External.**—In the first
Christian centuries it is not always easy to distinguish between excommunication and penitential exclusion; to differentiate them satisfactorily we must await the decline of the institution of public penance and the well-defined separation between those things appertaining to the lesser faith and justice, and the forum externum, or public ecclesiastical tribunal; nevertheless, the admission of a sinner to the performance of public penance was consequent on a previous genuine excommunication. On the other hand, formal exclusion from reception of the Eucharist and the other sacraments, that is, excommunication and alienation from the Church, was not a mere external measure; it reaches the soul and the conscience. It is not merely the severing of the outward bond which holds the individual to his place in the Church; it severs also the internal bond, and the sentence pronounced on earth is ratified in heaven. It is the spiritual sword, the heaviest penalty that the Church can inflict (see the patristic texts quoted in the Declaratory Act), and in another sense, it is crucifixion (Hence in the Bull "Exsurge Domine" (16 May, 1520) Leo X justly condemned Luther's twenty-third proposition according to which "excommunications are merely external punishments, nor do they deprive a man of his ecclesiastical rights."

Pius VI also condemned (Auctorem Fidei, 28 Aug., 1794) the forty-sixth proposition of the Pseudo-Synod of Pistoia, which maintained that the effect of excommunication is only exterior because of its own nature it excludes only from exterior communion with the Church, as if, said the pope, excommunication were not a spiritual penalty binding in heaven and affecting souls. The aforesaid proposition was therefore condemned as false, pernicious, already reproved in the twenty-third proposition of Luther, and, to say the least, the greatest absurdity (nor does it wish to) oppose any obstacle to the internal relations of the soul with God; she alone enforces God to give the grace of repentance to the excommunicated. The rites of the Church, nevertheless, are always the providential and regular channel through which Divine grace is conveyed to Christians; exclusion from such rites, especially from the sacraments, entails therefore regularly the privation of this grace, to whose sources the excommunicated person has no longer access.

For Excommunication.—While excommunications rank first among ecclesiastical censures, it existed long before any such classification arose. From the earliest days of the Christian society it was the chief (if not the only) ecclesiastical penalty for laymen; for guilty clerics the first punishment was deposition from their office, i.e., reduction to the ranks of the laity. Subsequently, when ecclesiastical discipline allowed clerics more easily to resume their ministry, the ancient deposition became suspension; thenceforward even clerics were subject to excommunication, by which they lost their rights as Christians and as clerics. Both laymen and clerics were henceforth threatened or punished with excommunication for offences that became daily more definite and numerous, particularly for refusing obedience either to special ecclesiastical precepts or the general laws of the Church. Once the forum externum, or public ecclesiastical tribunal, was distinctly separated from the forum sacramentale, or tribunal of sacramental penance, say from the ninth century on, excommunications became gradually an ever more powerful means of spiritual government, a sort of coercive measure ensuring the exact accomplishment of the laws of the Church and the precepts of her prelates. Excommunication was either threatened or inflicted in order to secure the observance of fasts and feasts, the payment of tithes, the obedience of inferiors, the denunciation of the guilty, also to compel the faithful to make known to ecclesiastical authority matrimonial impediments and other information.

Abuse.—This extension of the use of excommunication led to abuses. The infliction of so grave a penalty for offences less than sufficient to render it frequently impossible to verify before the public ecclesiastical authority, begot eventually a contempt for excommunication. Consequently the Council of Trent was forced to recommend to all bishops and prelates more moderation in the use of censures (Sess. X.XV, c. 4, De ret., Tert. Dig. 32, 29). There were mitigating circumstances in excommunication and identical with minor excommunication (see below). At any rate, in the first centuries excommunication is not regarded as a simple external measure; it reaches the soul and the conscience. It is not merely the severing of the outward bond which holds the individual to his place in the Church; it severs also the internal bond, and the sentence pronounced on earth is ratified in heaven. It is the spiritual sword, the heaviest penalty that the Church can inflict (see the patristic texts quoted in the Declaratory Act), and in another sense, it is crucifixion (Hence in the Bull "Exsurge Domine" (16 May, 1520) Leo X justly condemned Luther’s twenty-third proposition according to which “excommunications are merely external punishments, nor do they deprive a man of his ecclesiastical rights."

Pius VI also condemned (Auctorem Fidei, 28 Aug., 1794) the forty-sixth proposition of the Pseudo-Synod of Pistoia, which maintained that the effect of excommunication is only exterior because of its own nature it excludes only from exterior communion with the Church, as if, said the pope, excommunication were not a spiritual penalty binding in heaven and affecting souls. The aforesaid proposition was therefore condemned as false, pernicious, already reproved in the twenty-third proposition of Luther, and, to say the least, the greatest absurdity (nor does it wish to) oppose any obstacle to the internal relations of the soul with God; she alone enforces God to give the grace of repentance to the excommunicated. The rites of the Church, nevertheless, are always the providential and regular channel through which Divine grace is conveyed to Christians; exclusion from such rites, especially from the sacraments, entails therefore regularly the privation of this grace, to whose sources the excommunicated person has no longer access.

Both laymen and clerics were henceforth threatened or punished with excommunication for offences that became daily more definite and numerous, particularly for refusing obedience either to special ecclesiastical precepts or the general laws of the Church. Once the forum externum, or public ecclesiastical tribunal, was distinctly separated from the forum sacramentale, or tribunal of sacramental penance, say from the ninth century on, excommunications became gradually an ever more powerful means of spiritual government, a sort of coercive measure ensuring the exact accomplishment of the laws of the Church and the precepts of her prelates. Excommunication was either threatened or inflicted in order to secure the observance of fasts and feasts, the payment of tithes, the obedience of inferiors, the denunciation of the guilty, also to compel the faithful to make known to ecclesiastical authority matrimonial impediments and other information.

Abuse.—This extension of the use of excommunication led to abuses. The infliction of so grave a penalty for offences less than sufficient to render it frequently impossible to verify before the public ecclesiastical authority, begot eventually a contempt for excommunication. Consequently the Council of Trent was forced to recommend to all bishops and prelates more moderation in the use of censures (Sess. X.XV, c. 4, De ret., Tert. Dig. 32, 29). There were mitigating circumstances in excommunication and identical with minor excommunication (see below). At any rate, in the first centuries excommunication is not regarded as a simple external measure; it reaches the soul and the conscience. It is not merely the severing of the outward bond which holds the individual to his place in the Church; it severs also the internal bond, and the sentence pronounced on earth is ratified in heaven. It is the spiritual sword, the heaviest penalty that the Church can inflict (see the patristic texts quoted in the Declaratory Act), and in another sense, it is crucifixion (Hence in the Bull "Exsurge Domine" (16 May, 1520) Leo X justly condemned Luther’s twenty-third proposition according to which “excommunications are merely external punishments, nor do they deprive a man of his ecclesiastical rights."

Pius VI also condemned (Auctorem Fidei, 28 Aug., 1794) the forty-sixth proposition of the Pseudo-Synod of Pistoia, which maintained that the effect of excommunication is only exterior because of its own nature it excludes only from exterior communion with the Church, as if, said the pope, excommunication were not a spiritual penalty binding in heaven and affecting souls. The aforesaid proposition was therefore condemned as false, pernicious, already reproved in the twenty-third proposition of Luther, and, to say the least, the greatest absurdity (nor does it wish to) oppose any obstacle to the internal relations of the soul with God; she alone enforces God to give the grace of repentance to the excommunicated. The rites of the Church, nevertheless, are always the providential and regular channel through which Divine grace is conveyed to Christians; exclusion from such rites, especially from the sacraments, entails therefore regularly the privation of this grace, to whose sources the excommunicated person has no longer access.

Excessive Number of Excommunications.—In the course of time, also, the number of canonical excommunications was excessively multiplied, which fact, coupled with their frequent desuetude, made it difficult to know whether many among them were always in force. The greater part of these censures (not the number of these excommunications were reserved, for which reason theologians with much ingenuity construed favourably said reservation and permitted the majority of the faithful to obtain absolution without presenting themselves in Rome, or indeed even writing thither. In recent times the number of excommunications in force has been greatly diminished, and a new method of absolving from them has been inaugurated; it will doubtless find a place in the new codification of the canon law that is being prepared. Thus, without change in the nature of the penalty, eterno has become an exceptional penalty, reserved for very grievous offences detrimental to Christian society; in foro interno it has been diminished and mitigated, at least in regard to the conditions for absolution from it. However, as can readily be seen from a perusal of the excommunications actually in force, it still remains true that what the Church aims at is not so much the crime as the satisfaction to be obtained from the culprit in consequence of his offence.

Refusal of Ecclesiastical Communion.—Finally, real excommunication must not be confounded with a measure merely quite frequent, and sometimes even known as excommunication, which was rather a refusal of episcopal communion. It was the refusal by a bishop to communicate in secret with another bishop and his church, in consideration of an act deemed reprehensible and worthy of chastisement. It was undoubtedly with this withdrawal of communion that Pope Victor threatened (or actually punished) the bishops of Asia in the paschal controversy (Eusebius, Hist. Ecc. V. xxiv); it was certainly the measure to which St. Martin of Tours had recourse when he refused to communicate with the Spanish bishops who caused Emperor Maximinus to condemn to death the heretic Priscillian with some of his adherents (Sulpicius Severus, Dial., iii, 15). Moreover, a similar pri-
EXCOMMUNICATION was in early Christian times imposed on councils as a regular penalty for bishops found guilty of certain major faults. The most frequent example is that of bishops who, without good reason, neglected to attend the provincial council (so the Councils of Carthage, 401, can. xi; Agde, 506, can. xxxv; Tarragona, 516, can. vi; II Macon, 535, can. xxvii). The bishops who were thus uncommunicated, properly speaking; they continued to govern their dioceses and publicly to hold ecclesiastical services; they were simply deprived, as the aforesaid texts say, of the consolation of communion with their episcopal brethren.

II. KINDS OF EXCOMMUNICATION.—(1) Major and Minor.—Until recently excommunication was of two kinds, major and minor. (a) Minor excommunication is uniformly defined by canonists and by Gregory IX (cap. lxxvi, De sent. exc., lib. V, tit. xxxix) as prohibition from receiving the sacraments, what theologians call the passive use of the sacraments. In order to receive the Eucharist and the other sacraments, those who had incurred this penalty had to be absolved therefrom; as it was not reserved, this could be done by any confessor. Indirectly, however, it entered through the allusion (in the canon of excommunication) that the priest who celebrates Mass while under the ban of minor excommunication sins grievously; also that he sins similarly in administering the sacraments; and finally, that he who votes on church affairs, or takes part in church business, is to be held ineligible to a canonical office. This is readily understood when we remember that the cleric thus excommunicated was presumed to be in the state of grievous sin, and that such a state is an obstacle to the lawful celebration of Mass and the administration of the sacraments. Minor excommunication was really identical with the state of the penitent of olden times who, prior to his reconciliation, was admitted to public penance. Minor excommunication was incurred by unlawful intercourse with the excommunicated, and in the beginning no exception was made of any class of excommunicated persons. Owing, however, to many inconveniences arising from this condition of things, especially after excommunications had become so numerous, Martin V, by the Constitution "Ad evitanda scandal" (1418), restricted the aforesaid unlawful intercourse, to that held with those who were formally named as persons to be shunned and who were therefore known as vilandi (Lat. vilare, to avoid), also with those who were notoriously guilty of striking a cleric. But as this twofold category was in modern times broadened, but little, if any, is now minor excommunication, and eventually it ceased to exist after the publication of the Constitution "Apostolice Sedis". The latter declared that all excommunications latea sententia that it did not mention were abolished, and as it was silent concerning minor excommunication (by its nature an excommunication latea sententia of a special kind), canonists concluded that minor excommunication no longer existed. This conclusion was formally ratified by the Holy Office (6 Jan., 1894, ad 4).

(b) Major excommunication, which remains now the only kind in force, is therefore the kind of which we treat below, and to which our definition fully applies. Anathema is a sort of aggravated excommunication, from which, however, it does not differ essentially, but simply in the matter of special solemnities and outward display.

(2) A jure and ab homine.—Excommunication is either a jure (by law) or ab homine (by judicial act of man, i.e. by a judge). The first is provided by the law itself, which declares that whoever shall have been guilty of a definite crime will incur the penalty of excommunication. The second is inflicted by an ecclesiastical prelate, either when he issues a serious order under pain of excommunication or imposes this penalty by judicial sentence and after a criminal trial.

(3) Latas and Ferendas Sententiae.—Excommunication, especially a jure, is either latas or ferendas sententiae. The first is incurred as soon as the offence is committed and by reason of the offence itself (so itae) without intervention of any ecclesiastical judge; it is inflected on the culprit only, but not on the accuser. For instance: "the culprit will be excommunicated at once, by the fact itself [statim, itae facto]". The second is indeed foreseen by the law as a penalty, but is inflicted on the culprit only by a judicial sentence; in other words, he is delinquent if he is visited with the penalty, and incurs it only when the judge has summoned him before his tribunal, declared him guilty, and punished him according to the terms of the law. It is recognized when the law contains these or similar words: "under pain of excommunication"; "the culprit will be excommunicated".

(4) Public and Occult.—Excommunication ferendas sententiae can be public only, as it must be the object of a declaratory sentence pronounced by a judge; but excommunication latas sententiae may be either public or occult. It is public when it is read and published by ecclesiastical authority; it is public through notoriety of fact when the offence that has incurred it is known to the majority in the locality, as in the case of those who have publicly done violence to clerics, or of the purchasers of prebends. But if he has incurred private excommunication, it is occult when the offence entailing it is known to no one or almost no one. The first is valid in the forum externum and consequently in the forum internum; the second is valid in the forum internum only. The practical difference is very important; for he who has incurred minor excommunication should treat himself as excommunicated and be absolved as soon as possible, submitting to whatever conditions will be imposed upon him, but this only in the tribunal of conscience; he is not obliged to denounced himself to a judge nor to abstain from external acts connected with the exercise of jurisdiction, and he may ask absolution without making himself known either in confession or to the Sacred Penitentiary. According to the teaching of Benedict XIV (De synodo, X, § 5), "a sentence declaratory of the offence is always necessary in the forum externum, since in this tribunal no one can be presumed to be excommunicated unless convicted of a crime that entails such a penalty". Public excommunication, on the other hand, is removed only by a public absolution; when it is question of simple publicity of the sentence (see above) it was published, the offender nevertheless public, inasmuch as it is given to a known person and appears as an act of the forum externum.

(5) Vilandi and Tolerati.—Public excommunication in foro externo has two degrees according as it has or has not been formally published, or, in other words, according as excommunicated persons are to be shunned (vilandi) or tolerated (tolerati). A formally published or nominative excommunication occurs when the sentence has been brought to the knowledge of the public by a notification from the judge, indicating by name the person thus punished. No special method is required for this publication; according to the Council of Constance (1414–18), it suffices that "the sentence have been published or made known by the judge in a special and express manner". Persons thus excommunicated are to be shunned (vilandi), i.e. they are to be treated as if no longer members of his Church. Persons who have received this sentence (see above) are entitled in regard to sacred things or to (a certain extent) profane matters, as we shall see farther on. All other excommunicated persons, even though known, are tolerati, i.e. the law no longer obliges the faithful to abstain from intercourse with them, even in regard to sacred matters. This distinction dates from the aforesaid Constitution "Ad evitanda scandal", published by Martin V at the Council of Constance in 1418; until
then one had to avoid communion with all the excommunicated and, one theory holds, "to avoid scandal and numerous dangers," says Martin V, "and to relieve timorous consciences, we hereby mercifully grant to all the faithful that henceforth no one need refrain from communicating with another in the reception or administration of the sacraments, or in other matters Divine or profane, under pretext of any ecclesiastical sentence or censure, whether promulgated in general form by law or by a judge, nor avoid anyone whomsoever, nor observe an ecclesiastical interdict, except when this sentence or censure shall have been published in the form of ecclesiastical process...in express form, against some certain, specified person, college, university, church, community, or place." But while notoriously excommunicated persons are no longer vitandi, the pope makes an exception of those who have "incurred the penalty of excommunication by reason of sacrilegious violence against a clergy, and so notoriously that the fact can in no way be dissimulated or excused." He declares, moreover, that he has not made this concession in favour of the excommunicated, whose condition remained unchanged, but that they remain excluded from the right; in this view, the failure of ecclesiastical law, the latter need no longer deprive themselves of intercourse with those of the excommunicated who are "tolerated." As to the vitandi, now reduced to the two aforementioned categories, they must be shunned by the faithful as formerly. It is true that they are not excluded from the right; in view of the spiritual benefits to which they have access, the Church is willing to tolerate them, provided they are not a scandal to the faithful. But for all other cases, not even the faithful can be excommunicated, who, by any right whatsoever, belong to this society. Consequently excommunication can be inflicted only on baptized and living persons. Although the Church recites against the devil exorcisms in which the word anathema occurs, he cannot be excommunicated, for he in no way belongs to the Church. Among living persons, those who have not been baptized have never been members of the Christian society and therefore cannot be deprived of spiritual benefits to which they have never had a right; and, as far as the faith is concerned, all Jews, though outside of the Church, are not excommunicated. As the baptised cease, at death, to belong to the Church Militant, the dead cannot be excommunicated. Of course, strictly speaking, after the demise of a Christian person, it may be officially declared that such individual was excommunicated during his lifetime. Quite in the same sense he may be absolved after his death; indeed, the Roman Ritual contains the rite for absolving an excommunicated person already dead (Tit. III, cap. iv; Ritus absolvendi excommunicationis jam mortuam). However, these sentences or absolutions concern only the effects of excommunication, notably ecclesiastical burial. With the foregoing exceptions, all who have been baptized are liable to excommunication, even those who have never belonged to the true Church, since by their baptism they are really her subjects, though of course rebellious ones. Moreover, the Church excommunicates not only those who abandon the true faith to embrace schism or heresy, but likewise the members of heretical and schismatic communities who have been conflated with them. As to the latter, however, it is not a question of personal excommunication; the censure overtakes them in their corporate capacity, as members of a community in revolt against the true Church of Jesus Christ. The Catholic, on the contrary, cannot be excommunicated unless for some personal, grievously offensive act. Here, therefore, it is necessary to state with precision the conditions under which this penalty is incurred. Just as exile presupposes a crime, excommunication presupposes a grievous external fault. Not only would it be wrong for a Christian to be punished without having committed a punishable act, but justice demands a proportion between the offence and the penalty; hence the most serious of spiritual chastisements, i.e. forfeiture of all the privileges common to all Christians, is inflicted only in the most grievous cases. Moreover, in order to fall within the jurisdiction of the forum externum, which alone can inflict excommunication, it must be external. Internal failings, e. g. doubts entertained against the Catholic Faith, cannot incur excommunication. Note, however, that this distinction between the two categories of offenders is not absolute. For example, an occult external fault can call forth occult excommunication, but in foro interno, as already seen. Most authors add that the offence must be consummated, i.e. complete and perfected in its kind (in genere perfectum), unless the legislation provides otherwise. This, however, is a rule of interpretation rather than a real condition for the incurring of censure, and is tantamount to saying that the attempt at a crime does not entail the penalty meted out to the crime itself.
but that if the legislator declares that he wishes to punish even the attempt, excommunication is incurred (cf. Const. "Apost. Sedis", I, 1, for attempt at marriage on part of clerics in major orders).

Considered from a moral and juridical standpoint, the guilt requisite for the incurring of excommunication is that of full use, sufficient moral liberty; finally, a knowledge of the law and even of the penalty. Where such knowledge is lacking, there is no contumacy, i.e., no contempt of ecclesiastical law, the essence of which consists in performing the acts forbidden, together with the intention, and forbidden under a certain penalty. The prohibition and the penalty are known either through the text of the law itself, which is equivalent to a juridical warning, or through admonitions or proclamations issued expressly by the ecclesiastical judge. Hence arises various excommunicating reasons (causa excussante), based on lack of guilt, which prevent the incurring of excommunication: (1) Lack of the full use of reason. This excuses children, also those who have not attained the age of puberty, and, a fortiori, the demented. Inadmissible for reasons of conscience while the inability affects moral responsibility and excommunication in foro externo, it is no obstacle to juridical guilt. (2) Lack of liberty resulting from grave fear. Such fear impairs the freedom of the will, and while it exists contumacy or rebellion against the laws of the Church cannot be incurred. Evidence of this extenuating reason depends on the circumstances of each particular case and will be more readily accepted as an excuse for violating a positive law than in palliation of an offense against the natural or Divine law. (3) Ignorance. The general principle is, that whosoever is ignorant of the law is not responsible for transgressing it; and whosoever is ignorant of the penalty does not incur it. But the application of this principle is often complicated and delicate. The following considerations, generally admitted, may serve as a guide: (a) All ignorance, both of law and of fact, is excusable. (b) The ignorance known as "invincible" always excuses; it may also be called inexplicable or probable ignorance. (c) There are two kinds of culpable ignorance, one known as "crassa" or "supina", i.e., gross, improbable ignorance, and supposing a grievously guilty neglect in regard to knowledge of the law; the other is affected ignorance, really a deliberate ignorance of the law through fear of incurring its penalty. (d) Ordinarily, gross ignorance does not excuse, but negligence does. Evidence, however, of what the law formally exacts a positive knowledge of the prohibition. The laws that inflict excommunication contain as a rule two kinds of expressions. Sometimes the offense only is mentioned, e.g., "all apostates, heretics", etc., or "those who abase their accomplishments in a sin against chastity" (Const. "Apost. Sedis", I, 10). Sometimes clauses are inserted that exact, as a necessary condition, the knowledge or at least the knowledge of the Viaticum without permission of the parish priest." (Const. "Apost. Sedis", I, 2; II, 14). Gross ignorance excuses in the second case but not in the first. (e) For many authors, affected ignorance is equivalent to a knowledge of the law, since by some vastom enlightenment themselves concerning a dreaded penalty; these authors conclude that such ignorance never excuses. Other canonists consider that every penal law is to be strictly interpreted; when, therefore, it positively exacts knowledge on the part of the culprit, he is excused only when he proves that he is not aware of the contents of the act; otherwise, it is not always easy to establish the shades of difference, it will suffice to remark that in a case of occult excommunication the culprit has the right to judge himself and to be judged by his confessor according to the exact truth, whereas, in the forum externum the judge decides according to presumptions and proofs. Consequently, in the tribunal of conscience he who is reasonably persuaded of his innocence cannot be compelled to treat himself as excommunicated and to seek absolution; this conviction, however, must be prudently established.

3. Excommunication.—If we consider only its nature, excommunication has no degrees: it simply deprives clerics and laymen of all their rights in Christian society, which total effect takes on a visible shape in details proportionate in number to the rights of advantage they hold, when that excommunicated cleric or layman has been deprived. The effects of excommunication must, however, be considered in relation also to the rest of the faithful. From this point of view arises certain differences according to the various classes of excommunicated persons. These differences were not introduced out of regard for the excommunicated, rather for the sake of the faithful. The latter would suffer serious inconveniences if the nullity of all acts performed by excommunicated clerics were rigidly maintained. They would also be exposed to grave peril. The faithful are, however, obliged to avoid all intercourse, even profane, with the excommunicated. Hence the practical rule for interpreting the effects of excommunication: severity as regards the excommunicated, but mildness for the faithful. We may now proceed to enumerate the immediate effects of excommunication; they are summed up in the two well-known verses:—

Res sacre, ritus, communio, crypta, potestas, predia sacra, forum, civilia iura vetantur, i.e., loss of the sacraments, public services and prayers of the Church, ecclesiastical burial, jurisdiction, benefices, canonical rights, and social intercourse.

(1) Res Sacra.—These are the sacraments; the excommunicated are forbidden either to receive or administer them. The sacraments are of course validly administered by excommunicated persons, except those (penance and marriage) for whose administration jurisdiction is necessary; but the reception of the sacraments by excommunicated persons is always illicit. The licit administration of the sacraments by excommunicated ecclesiastics hinges upon the benefit to be derived by the faithful. Ecclesiastics excommunicated by name are forbidden to administer the sacraments except in cases of extreme necessity; apart from this necessity penance and marriage administered by such ecclesiastics are null (Decret. "Ne interim", article 1). But excommunication, however, may licitly administer the sacraments to the faithful who request them at their hands, and the acts of jurisdiction thus posited are maintained by reason of the benefit accruing to the faithful, most frequently also because of common error (error communis), i.e., a general belief in the good standing of such ecclesiastics. The faithful, on their side, may, without sin, ask tolerated excommunicated ecclesiastics to administer sacraments to them; they would, however, sin grievously in making this request of the vitandae, except in cases of extreme necessity.

(2) Ritus.—Hereby are meant the Mass, the Divine Office, and other sacred ceremonies. An excommunicated person may not and should not assist at these ceremonies. If he be a tolerantus, his presence need not be taken into account, and the service can be continued. If he be a vitandus he must be warned to retire, and in case of refusal he must be forcibly compelled to withdraw; but if he still persists in remaining, the service must be discontinued, even the Mass, unless the Canon has been commenced. (Benedict XIV, 14, 16). It is not enough for the person excommunicate to retract excommunicatio in such a case, since the condition of an excommunicated person, even a vitandus, is no worse than that of an infidel, he may assist at sermons, instructions, etc., venerate images and relics, take holy water, and use privately other sacramentals. The excommunicated cleric is
not released from any of his obligations in regard to the Divine Office and, if bound to it, must recite it, but privately and not in the choir. A toleratus may be admitted to the choir, but a vitandus must be expelled therefrom. All excommunicated clerics are prohibited from publishing or advocating strictly liturgical functions, under penalty of the irregularity ex delicto for violation of the censure; participation in the liturgical acts performed by an excommunicated cleric is a forbidden communicatio in sacris; however, if a censured person is not aware of his censure, he is not answerable for his act, except in the case of clerics voluntarily communicating in sacris with those whom the pope had excommunicated by name (Const. "Apost. Sedis", III, 17). In each case the fault should be estimated according to circumstances.

(3) Communion.—These are, properly speaking, the public suffrages of the Church, official prayers, indulgences, etc., in which the excommunicated have no share. But they are not excluded from the private suffrages (i.e. intercessory petitions) of the faithful, who can pray for them.

(4) Crypta.—This word signifies ecclesiastical burial, of which the excommunicated are deprived. In chapter xii, de sepulcris (lib. III, tit. xxviii), Innocent III says: "The canons have established that we should not hold communion after their death with those whom the Church has not on account of their lifetime, and that all those should be deprived of ecclesiastical burial who were separated from the unity of the Church, and at the moment of death were not reconciled thereunto." The Ritual (tit. VI, cap. ii, n. 2) renews this prohibition for those publicly excommunicated, and most writers interpret this as meaning those whose excommunication has been publicly proclaimed (Many, De locis sacris, p. 554), so that, under this head, the ancient discipline is no longer applicable, except to the vitandus. However, this does not mean that the act of the excommunication is necessary, or that all communicants should be deprived of the act of the excommunicated; they may be deprived of it for other reasons, e.g. as heretics or public sinners. Approbation of this leniency, it must be remembered that it is not the excommunicated the Church wishes to favour, but rather the faithful for whose sake communion with the tolerati is allowed in the matter of burial as well as in other matters. The interment of a toleratus in a consecrated cemetery carries with it no longer the desecration of said cemetery; this would follow, however, in the case of the vitandus. (See BURIAL.)

(5) Potestas signifies ecclesiastical jurisdiction, of which both the passive and the active use, to speak canonically, are forbidden the excommunicated. Jurisdiction is used passively when a person is the object of one of its acts, of a concession. Now, ecclesiastical authority has no official relations with the exile unless, at his request, it negotiates the conditions for his return to society. Connected with this discipline is the rule forbidding the excommunicated to receive from the pope any kind of rescript (of grace or justice), except in regard to their excommunication, under pain of nullity of such rescript (Can. xxi, de rescript. lib. I, tit. iii, and c. i, eod., in VI). Hence the custom of inserting in papal rescripts the so-called ad effectum absolution from censures, intended solely to ensure the value of the rescript, but affecting in no wise the excommunication, if already existent. Jurisdiction is used actively when exercised by its depositaries. It is easy to understand that the Church cannot leave her jurisdiction in the hands of those whom she excludes from her society. In principle, therefore, excommunicated persons lose all acts of jurisdiction both in foro externo and in foro interno and renders no acts accomplished without the necessary jurisdiction. However, for the general good of society, the Church maintains jurisdiction, despite occult excommunication, and supplies it for acts performed by the tolerati. But as the tolerati are known to be such, this merciful remedy cannot be applied to them except in certain cases of extreme necessity, when jurisdiction is said to be "supplied" by the Church.

(6) Praedia sacra are ecclesiastical benefices. The excommunicated ecclesiastic is incapable of acquiring a benefice; and no one is entitled to demand a benefice from him, nor to subscribe to any stipend. A benefice already held is not forfeited at once, even when to the censure the law adds privation of benefice; this is carried into effect only through a sentence which must be at least declaratory and issue from a competent (i.e. the proper) judge. Nevertheless, from the very first the excommunicated beneficiary loses those fruits of his benefice belonging to choir service, provided he is bound thereto. Moreover, should he live a year in the state of excommunication, he can be deprived of his benefice through judicial sentence. The aforesaid effects do not result from occult excommunication.

(7) Forum.—The excommunicated person is an exile from ecclesiastical society, consequently from its tribunals; only inasmuch, however, as they would be to his advantage. On the other hand, if he be summoned before them to satisfy a third party he is obliged to appear. Hence he cannot appear as plaintiff, procurator, or advocate; he may be the defendant, or the party accused. At this point the difference between the vitandus and the tolerati consists in this, that the former must be barred from legal action before an ecclesiastical tribunal, whereas the latter can be debarred from so doing only when the defendant absolves and proves excommunication as already incurred. It is a question here only of public excommunication and before ecclesiastical tribunals.

(8) Civilia jura, i.e. the ordinary relations between members of the same society, outside of sacred and judicial matters. This privation, affecting particularly the person excommunicated, is no longer imposed on the faithful except in regard to the vitandus. The medieval canon law enumerated the prohibited civil relations in the following verse:—

Oe, orare, vale, communio, menas negatur, namely: (a) conversations, exchange of letters, tokens of benevolence (osculum); (b) prayer in common with the excommunicated; (c) marks of honour and respect; (d) business and social relations; (e) meals with the excommunicated. But at the same time they specified the reasons that rendered these relations illegal:—

Utile, lax, humili, res ignora, necesse, that is to say: (a) both the spiritual and the temporal benefit of the excommunicated and of the faithful; (b) conjugal law; (c) the submission owed by children, servants, vassals, and subordinates in general; (d) ignorance of excommunication or of the prohibition of a particular kind of intercourse; (e) finally, any kind of necessity, as human law, is not binding to this degree.

Remote Effects.—All the effects that we have just enumerated are the immediate results of excommunication, but it also causes remote effects, which are not a necessary consequence and are only produced when the person concerned occasions them. There are three in number: (1) The cleric who violates excommunication by exercising one of the liturgical functions of his order, incurs an irregularity ex delicto. (2) The excommunicated person who remains a year without making any effort to obtain absolution (inaeordescens) becomes suspected of heresy and can be followed up and condemned as guilty of such (Council of Trent, Sess. XXXV, cap. iii, De ref.; cf. Ferraris, s. v. "Inaordescens"). (3) This neglect makes it the judge's duty to deprive the excommunicated person of benefices, though some have proposed for three years the full filment of this obligation (see Hollweck, Die kirchlichen Strafgesetze, art. 1, note 3).

Effects of Invalid or Unjust Excommunication.—An excommunication is said to be null when it is invalid because of some intrinsic or essential defect, e.g. when
EXCOMMUNICATION

the person inflicting it has no jurisdiction, when the motive of the excommunication is manifestly incorrect and inconsistent, or when the excommunication is essentially defective in form. Excommunication is said to be unjust when, though valid, it is wrongfully applied to an already infested or guilty. Here, of course, it is not a question of excommunication late sentence and in foro interno, but only of one imposed or declared by judicial sentence. It is admitted by all that a null excommunication produces no effect whatever, and must be ignored without sin (cc. ii, de coest., in VI.). But a case of unjust excommunication brings out in a much more general way the possibility of conflict between the forum internum and the forum externum, between legal justice and the real facts. In chapter xxviii, de sent. excomm. (Lib. V, tit. xxxix), Innocent III formally admits the possibility of this conflict. Some persons, he says, may be free in the eyes of God but bound in the eyes of the Church; vice versa, some may be free in the eyes of the Church but bound in the eyes of God: for God's judgment is based on the very truth itself, whereas that of the Church is based on arguments and presumptions which are sometimes erroneous. He concludes that the chain by which the sinner is bound in the sight of God is loosed by remission of the fault committed, whereas that which binds him in the sight of the Church is not loosed by remission of the sentence. Consequently, a person unjustly excommunicated is in the same state as the justly excommunicated sinner who has repented and recovered the grace of God; he has not forfeited internal communion with the Church, and God can bestow upon him all necessary spiritual help. However, while seeking to prove his innocence, the censured person is meanwhile bound to obey legitimate authority and to behave as one under the ban of excommunication, until he is rehabilitated or absolved. Such a case seems practically impossible in doomsdays.

VI. ABSOLUTION FROM EXCOMMUNICATION.—Apart from the rare cases in which excommunication is imposed for a fixed period and then ceases of itself, it is always removed by absolution. It is to be noted at once that, though the same word is used to designate the sacramental sentence by which sins are remitted and that by which excommunication is removed, there is a vast difference between the two acts. The absolution which revokes excommunication is purely jurisdictional and has nothing to do with the rehabilitation of the sinner in the Church; restores the rights of which he had been deprived, beginning with participation in the sacraments; and for this very reason, it should precede sacramental absolution, which it thenceforth renders possible and efficacious. After absolution from excommunication has been given in foro externo, the judge sends the person absolved to a confessor, that his sin may be remitted; when absolution from censure is given in the confessional, it should always precede sacramental absolution, conformably to the instruction in the Ritual and the very tenor of the formula for sacramental absolution. It may be noted at once that the principal effect of absolution from excommunication may be acquired without the excommunicated person's being wholly reinstated in his former position. Thus, an ecclesiastic might not necessarily recover the benefice which he had lost; indeed he might be admitted to lay communion only. Ecclesiastical authority has the right to posit certain conditions for the return of the culprit, and every absolution from excommunication can be conditioned on the performance of certain actions which vary in severity, according to the case.

Excommunication, it must be remembered, is a medicinal penalty intended, above all, for the correction of the culprit; therefore his first duty is to solicit pardon by showing an inclination to obey the orders given him, just as it is the duty of ecclesiastical au-

thority to receive back the sinner as soon as he repents and declares himself disposed to give the required satisfaction. This satisfaction is often indicated in the law itself; for instance, usurpers of ecclesiastical property are excommunicated until such time as they make restitution. Sometimes, however, it is left to the judge to determine when the expiation of guilt has been sufficiently performed. On the other hand, it is determined by the judge who grants absolution or the indult for absolving. Besides expository practices habitually known as "penance", such satisfaction exacts opportune measures for the reparation of the past, as well as penalties for the future. It is not always necessary that these measures be executed prior to absolution, which is frequently granted on the solemn promise of the excommunicated party either to accomplish a specified act, such as coming to an agreement with the Church for the property usurped, or simply to abide by the orders of ecclesiastical authority (and mandatia elessie). In such cases absolution is not usually given under pain of "reincidence" (ad reincindentiam), i. e., if within a definite period the person censured has not accomplished a certain specified act, he reinflicts the same excommunication; his status is just as if he had never been absolved. However, this clause of reincidence is not to be presumed; when occasion requires, it is inserted in the sentence of absolution or in the indult granted for that purpose.

The formula of absolution from excommunication is not strictly determined, and, since it is an act of jurisdiction, it suffices if the formula employed express clearly the effect which it is desired to attain. The formula for remitting the excommunication in foro externo should be such as to absolve validly from public excommunication. Similarly, an excommunication imposed by judicial sentence is to be revoked by an absolution in the same form; occult excommunication may be revoked in the confessional by the sacramental form. The Ritual (tit. III, c. ii) gives the formula of absolution used in foro externo and states that in foro internum absolution is given in the usual sacramental form.

Who Can Absolve from Excommunication?—The answer is given in the customary rules of jurisdiction. The right to absolve evidently belongs to him who can excommunicate and who has imposed the law, moreover to any person delegated by him to this effect, since this power, being jurisdictional, can be delegated. First, we must distinguish between excommunication and absolution; the former is judicial, and excommunication a jure, i. e., a matter of the law; the former, absolution is given by the judge who inflicted the penalty (or by his successor), in other words by the pope, or the bishop (ordinary), also by the superior of said judge when acting as judge of appeal. As to excommunication late sentence, the power to absolve is either ordinary or delegated. Ordinary power is determined by the law itself, which indicates to what authority the censure is reserved in each case. Delegated power is of two kinds: that granted in permanence and set down in the law and that granted or communicated by personal act, e. g., by the faculty (faculties) of the Roman Penitentiary, by episcopal delegation for special cases, or bestowed upon certain priests. Of this second kind of delegation there is no need to speak, as it belongs to each one to verify the power (faculties) that he possesses. Delegation of the first kind carries with it the power to absolve from excommunication without special request or particular faculties. Such power is in this case conferred by the law itself. Nevertheless, this power is subject to general limitations, so that delegation is valid only for the cases and under the conditions indicated in the concession. Thus faculties granted for the forum internum cannot be extended to the forum externum, nor can those granted for simply reserved excommunications be used for specially reserved cases, and so on. However, the faculties proceeding from
both kinds of delegation may be "cumulat," i.e., may be held and exercised in favour of the same person. These principles admitted, we must remember that with reference to reservation or the right to absolve, excommunications are divided into four classes: excommunications specially reserved to the pope; excommunications simply reserved to the pope; excommunications reserved to the bishop (ordinary), and, finally, excommunications that are not reserved (neminis reservatoe). According to this classification, as a general rule, only the pope can absolve from the first two kinds of excommunication, although his popes and ordinary bishops, but not other priests, can remove excommunications of the third class; finally, those of the fourth class, and those only, can be revoked by any approved priest, without further special delegation. At this point, however, must be considered certain concessions of the law that may be grouped in three categories: the permanent faculties of bishops; concessions for urgent cases; and concessions for the point of death.

(1) The Faculties of Bishops.—The Council of Trent (Sess. XXIV, c. vi; De ref.) authorizes bishops to absolve from the ordinary sins of their subjects, from all excommunications, consequently from those reserved to the Holy See, when occult or, rather, not pertaining to the forum externum. They can exercise this power either in person or through a special delegate of the bishop, but in either case, the bull, however, the Constitution "Apostolice Sedis" restricted this provision of the Council to excommunications simply reserved to the pope, so that, without special indult, bishops can no longer absolve from specially reserved cases, even in foro interno. On the other hand, the indults they receive for these cases are more or less liberal and widely communicable.

(2) Urgent Cases.—In the chapter "Nuper" (xxix, de sent. excomm., lib. V, tit. xxix), Innocent III sets forth the principle that governs such cases: "Quoque in hac circulis moralistae et canonistae formulatum est: 'Impedita causa populi sunt et episcopi.' In fact, excommunication is reserved to the pope, and the excommunication reserved to the pope may be removed by the bishop, but the author of the analogy still further; for him who is prevented from presenting himself to the pope, the excommunication reserved to the pope may be removed by the bishop, but the author of the analogy still further, for him who is prevented from presenting himself to the pope, his excommunication may be removed by any confessor. In regard to the obligation of submitting to the order of the pope or to the bishop, the moralists and canonists generally taught as follows: First, no one was obliged to apply in writing (correct as to the removal of excommunication, though Innocent III says nothing of the kind concerning a request for information). Then they distinguished between obstacles that were more or less protracted: perpetual obstacles were such as exceed five years; obstacles of long duration were those lasting over one year and one day; obstacles of long duration were those continuing for less than six months. When the obstacle was perpetual, the bishop or, if he could not be reached, any priest might absolve without appealing to the superior; this could also be done, but not without obligation of recourse to the superior on the cessation of the obstacle, when the latter was of long duration, the process of removal was completed. Finally, the author drew up a long list of those who were supposed to be unable to present themselves in person to the pope; and this list included almost every one (Gury, Thom. Aqu. 865, 890), but it is far more lenient than was intended by Innocent III, and has been profoundly modified by a decree of the Congregation of the Inquisition (Holy Office) dated 23 June, 1886. Henceforth "in urgent cases when absolution cannot be deferred without danger of grave scandal or infamy, which is left to the conscientious appreciation of the confessor, the latter, after having imposed the necessary satisfaction, can absolve, without other faculties, from all censures, even those specially reserved to the Holy See, but under pain of reincidence under the same censure if, within a month, the penitent thus absolved does not recur to the Holy See by letters and through the medium of the confessor." This new method has been more precisely explained and even rendered easier by subsequent papal decisions. The absolution thus given is directly valid; hence it is impossible, although recourse to the Penitentiarii is obligatory, its object is not to ask a new absolution, but only to solicit the order of the Church, the penitent, as stated above, having had to make a serious promise to conform to them (mancipio mandato Ecclesiae). The power thus granted in urgent cases is valid for all cases, without exception, reserved by law to the pope or the ordinary, even for the absolution of an accomplice (Holy Office, 7 June, 1889).

As to what constitutes a state of urgency, the reply of 13 June, 1886, is very various, arising from the fact that censures as soon as it becomes too distressing to the penitent to remain in the state of sin during the time necessary for soliciting and receiving from Rome the power to absolve. Now, according to the moralists it is to be noted in the personal or two of the states of sin, especially for priests. The appeal, though usually made through the medium of the confessor, can be made by the penitent himself if he be capable; indeed he should write himself if he cannot easily return to the same confessor (Sacra Penitentiar. 7 Nov., 1885). Finally, if both confessor and penitent find it impossible to appeal by letters, these may be dispensed with (Holy Office, 18 Aug., 1888). The letters should be addressed to the Cardinal Penitentiarius and should contain information concerning all necessary circumstances, but under a false name (Sacra Penitent., 7 Nov., 1888). If the interested party, though able to appeal to the Holy See, fails to do so within a month from the time of receiving absolution, he or she incurs the former censures, which remain effective until there is a new ab- solution followed by recourse to Rome. However, be there no no reincidence if the interval of a month were to expire through the confessor's fault. It is to be noted that this sanction of reincidence applies to all censures reserved to the pope, but not to those reserved to the ordinary; hence this method is not obligatory for censures reserved to ordinaries by diocesan law. Bishops, however, could profitably apply it to such censures, and some have already done so.

(3) In Danger of Death.—It is a principle repeatedly set forth in canon law that at the point of death all reservations cease and all necessary jurisdiction is supplied by the Church. "At the point of death," says the Council of Trent (Sess. XXIV, c. viii), "in danger of death," says the Ritual (tit. III, cap. i, n. 23), "any priest can absolve; if he be without the ordinary faculties of confessors, or if he himself be excommunicated; he may do so even in presence of another priest properly authorized (Holy Office, 29 July, 1891). The Constitution "Apostolice Sedis" expressly maintains this merciful concession, merely adding, for the case in which the moribund is restored to health, the obligation of having recourse to the Holy See, if he has been absolved from excommunication specially reserved to the pope, unless he prefers to ask absolution of a confessor provided with special faculties. This concession is identical with that of which we have just spoken for urgent cases, nevertheless differs from it on two points: it is not imposed for the absolution from communications simply reserved, and the short delay
or a month is not counted from the time of receiving absolution, but from the time of recovery.

VII. EXCOMMUNICATIONS LATE SENTENCED NOW IN FORCE.—In the preamble of the Constitution "Apostolice Sedis", Pius IX stated that during the course of centuries, the number of censures late sentenced increased; and, unfortunately, that some of them were no longer expedient, that many were doubtful, that they occasioned frequent difficulties of conscience, and finally, that a reform was necessary. On this head Pius IX had anticipated the almost unanimous request of the Bishops that was enunciated at the Vatican Council (Collectio Lecensis, VII, col. 840, 874, etc.). The number of excommunications late sentenced enumerated by the moralists and canonists is really formidable: Ferrarisi (Prompta Biblioth., s. v. Excommunicatio, art. ii-iv) gives almost 200. The principal ones were destined to protect the Catholic Faith, the ecclesiastical hierarchy and its jurisdiction, and figured in the Bull known as "In Censa Domini" read publicly each year in Rome, on Holy Thursday. In time, this document had received various additions (Pius XII in his second encyclical, November 15, 1939, from it the Constitution "Apostolice Sedis" derives excommunications specially reserved, with exception of the tenth: The Constitution of Pius IX deals with no penalties other than censures; it leaves intact all censures ferendae sententiae but suppresses all censures and anathemas except that it won't proclaim it, besides those which it enumerates it retains: (1) the censures decreed (and not simply mentioned) by the Council of Trent; (2) the censures of special law, i.e., those in vigour for papal elections, those enforced in religious orders and institutes, in colleges, communities, etc. As to the censures enumerated, they should be interpreted as if pronounced for the first time, and ancient texts should be consulted for them in so far as such texts have not been modified by the new law.

Thus the excommunications late sentenced enforced to-day by common law in the Catholic Church proceed from three sources: (A) those enumerated in the Constitution "Apostolice Sedis"; (B) those pronounced by the Council of Trent; and (C) those introduced subsequently to the Constitution "Apostolice Sedis" i.e. later than 12 October, 1869. We enumerate them here with a brief commentary.

A. Excommunications of the Constitution "Apostolice Sedis"—These are divided into four categories: (a) those specially reserved to the pope; (b) those simply reserved to the pope; (c) those reserved to be passed to the bishop (ordinary); (d) those not reserved to anyone. (a) Excommunications specially reserved to the Pope.—These are twelve in number and are imposed upon the following persons:

(1) "All apostates from the Christian Faith, heretics of every name and sect, and those who give them credence, who receive or countenance them, and generally all those who take up their defence." Strictly speaking, an apostate is one who goes over to a non-Christian religion, e.g., Islam; such apostates are assimilated those who publicly renounce all recognition of the Church; this apostasy is not to be presumed; it is evident that both kinds of apostates exclude themselves from the Church. A heretic is one who rejects a Catholic dogma. The first to be considered is the heretic who becomes such of his own volition; who, being in the Catholic Church, obstinately repudiates a truth of faith. Excommunication is incurred by him, if, with full knowledge, he exteriorly formulates a heretical proposition; and if he seeks to propagate his error he is condemned and should be denounced. Next comes the heretic who becomes subject to an ecclesiastical association for such a person his heretical membership alone is sufficient to bring him under sentence of excommunication. In his case the penalty is incurred by adhesion to the heresy, notably by wilful and active participation in sacril (i.e. in public worship) with heretics; hence the excommunication of those who contract a mixed marriage before a heretical minister as such (Holy Office, 28 Aug., 1888). Finally, the penalty extends to those who believe in heretics (credes) and join their ranks; to those who receive orders from them; and to those who shield, protect them from the pursuit of authority; and to those who countenance or defend them as heretics and in view of the heresy, provided it be a positive and efficacious assistance.

(2) "All those, knowing fully, without permission of the Apostolic See, books by these apostates and heretics and upholding heresy, as also the books of any authors whomsoever specifically prohibited by Letters Apostolic, and all who keep, print, or in any way defend these same books." After heretical persons come heretical books. The act that incurs excommunication is, first, reading done to a considerable extent and culpably, i.e., by one who knows the nature of the books and of the excommunication, and who, moreover, has not the necessary permission. The penalty is applicable to the books themselves with the same penalty as are the keeping in one's possession, the printing (rather the publishing), and, finally, the defence, by word or by writing, of the books in question. These books are of two kinds: first, those written by apostates, or heretics, and which uphold and commend heresy, two excommunications, that is the second, books specifically condemned, i.e., by mention of their titles, not by decree of the Index, but by Letters from the pope himself, Bulls or Briefs, and under pain of excommunication (for a list of these books see Hildes, "Der Index der verbotenen Bücher", Freiburg, 1904, p. 96; and "Die Bücherverbote in Papstbriefen", Freiburg, 1907).

(3) "Schismatics and those who elude or obstinately withdraw from the authority of the reigning Roman pontiff." The schismatic here referred to are of two kinds: those who are such because they belong to separated Churches which reject the authority of the pope, and those who, being Catholics, become schismatics by reason of obstinate disobedience to the authority of the pope as such.

(4) "All those, of no matter what state, rank, or condition, who appeal from the ordinances or mandates of the reigning Roman pontiff to a future ecumenical council, and all who have given aid, counsel, or countenance to this appeal." The appeal from the commands of the pope to a future ecumenical council, not only by impetration, but also by action over the pontiff, but is pre-eminently an act of injurious disobedience to the Head of the Church. Were this appeal efficacious it would render all church government impossible, unless it be accepted that the normal state of the Church is a general council in perpetuity, or at least meeting at short intervals. This extreme Gallicanism is justly punished with excommunication. The penalty is visited upon all those who have influenced such act of appeal, either by aid, counsel, or support. This excommunication, however, is to be strictly interpreted; it would not follow the consequences of an appeal made to a future pope, the Holy See being vacant, or to a general council actually assembled.

(5) "All who kill, mutilate, strike, seize, incarcerate, detain or pursue with hostile intent, cardinals, patriarchs, archbishops, bishops, legates or nuncios of the Holy See, or drive them from their dioceses, jurisdictions, estates, or domains, as also those who ratify these measures or further them by aid or countenance." The object of this penalty is not so much to inflict the sentence of the law, but the celebration of excommunication of the canon "Si quis suadente diabo", of which we shall speak below, but rather to safeguard the prelates or superiors in whom the Church has lodged her jurisdiction. The text clearly
EXCOMMUNICATION
indicates the acts punished by excommunication, i.e. all violent attacks on the person of a prelate as such; it likewise specifies the culprits, i.e. those who perpetrate such assaults and those who are responsible for them, as a consequence of these acts.

(6) "Those who directly or indirectly prevent the exercise of ecclesiastical jurisdiction, either in foro interno or in foro externo, and who, for this purpose, have recourse to the secular tribunal; also those who prevent or deliver the orders of this tribunal or lend it their aid, convert or use them," the punishment being the same as that which protects those who are the depositaries of jurisdiction; the present article protects the exercise of said jurisdiction. It punishes any obstacle raised against the delivery or execution of a sentence or decision of the ecclesiastical authority; also those who, by means of authority, prevent such publication or execution; and finally, those who, on the occasion of these Letters, strike or terrify either the beneficiaries or even third parties who take part in their publication or execution. According to the more probable opinion, excommunication is incurred even if these measures of opposition do not produce the intended results.

(9) "All falsifiers of Apostolic Letters, even in the form of a Brief, and of petitions concerning matters of grace or justice signed by the Roman pontiff, or by one of those who in turn are the bene pleure of the Curia, are rejected. This chief opposition here considered is recourse to secular and especially judicial authority. Excommunication is therefore incurred under this head by all who provoke the intervention of secular tribunals provided such intervention is not actually followed by all who deliver orders or directions intended to prevent the exercise of ecclesiastical jurisdiction; finally, by all who co-operate in these acts with aid, counsel, or support, unless under compulsion. Moralisists and canonists exempt from this penalty the clerks and secular curates.

(7) "Those who directly or indirectly oblige lay judges to cite ecclesiastical persons before their tribunal, except in cases provided for by canonical agreements, also those who enact laws or decrees against the liberty or rights of the Church." The first part of this article has for its object the protection of the privileges of the ecclesiastical forum, i.e., of those ecclesiastics whose right it is to be judged by ecclesiastical tribunals; consequently, those are excommunicated who oblige lay judges to summon clergy men before these tribunals. The privilege of the clergy (privilegium fori) should be respected. But the judges themselves, who act by virtue of their office, are not excommunicated (Holy Office, 1 Feb., 1870). Those who thus force lay judges to violate the privilege of the clergy are guilty of heresy; those who actually cite ecclesiastics before secular judges, and the legislators or makers of laws detrimental to the rights of the Church.

(8) "Those who have recourse to lay power for the prevention of Apostolic Letters or Acts of any kind emanating from the Apostle See or from its legates or delegates; those who directly or indirectly prohibit the promulgation of these acts or letters, or who, on the contrary, work together with the prelates either the parties interested or third parties." This article should be compared with number 6 (above), from which it differs in that it protects, not all exercise of ecclesiastical jurisdiction, but that which the Holy See exercises in its official letters, it being evidently important to ensure the free communication of the faithful with Rome. The letters in question are: first, Apostolic Letters, in which the pope himself speaks, Bulls, Briefs, Encyclicals, etc.; second, the Acts of the Holy See emanating from Roman Congregations or other organs of the Curia, but one authority with the pope (Holy Office, 13 Jan., 1892); finally, the acts of the official representatives of the pope, e.g. papal legates and delegates. The excommunication concerns only Letters that concern all the faithful, but also those regarding individuals, e.g. grants of benefices. Thus admitted, the penalty applies to three classes of persons, namely: those who resort to secular power, not only judicial but administrative, to prevent these Letters from being published or from producing their effect; those who, by means of authority, prevent such publication or execution; and finally, those who, on the occasion of these Letters, strike or terrify either the beneficiaries or even third parties who take part in their publication or execution. According to the more probable opinion, excommunication is incurred even if these measures of opposition do not produce the intended results.

(10) "Those who absolve an accomplice in a sin against chastity, and that even at the moment of death, provided a second, although he be not approved for confession, can hear the confession of the dying person without serious danger of infamy or scandal." This excommunication is not derived from the Bull "In Cena Domini", but from the celebrated Constitution of Benedict XIV, "Sacramentum Fremitur" (1 June, 1741), completed by his Constitution "Apostolici munera" (8 Feb., 1745). By these Bulls the pope, with a view to protecting the Sacrament of Penance from sacrilegious abuse, withdraws all jurisdiction from a confessor for absolving from sins against chastity which he may have committed with another woman, whether prior or posterior, and to which he might impugn for such sin would be null, and the mere attempt to absolve would incur excommunication. The sin thus withdrawn from the jurisdiction of the confessor is any grievous exterior sin against the Sixth Commandment, but it must be such on the part of the confessor necessary to it, cannot pass it, but,
This article contains two distinct parts. In the first it is not questioned of all propositions condemned by popes excommunicate because every individual is subject to the decree of the Apostolic See, as a matter of course, unless it is shown that the pope had no intention of excommunicating the individual. The judgment of the pope is final and conclusive, unless it can be shown that the pope had no intention of excommunicating the individual. In the second part, the author discusses the nature of excommunication and its effects. Excommunication is a penalty that is imposed by the pope on those who have committed grave sins, such as heresy or schism. It is a public declaration that the person is cut off from the communion of the church and is excluded from the celebration of certain sacraments. The author also discusses the differences between excommunication and other forms of church discipline, such as censure or excommunication.
EXCOMMUNICATION

article, maintains the faculties possessed by bishops and others, such as we have heretofore indicated.
(3) "Those who fight duels, those who challenge or accept challenge thereunto, all accomplices, all who help or countenance such combats, all who designedly associate with or assist in any way, either indirectly or directly, to do not prevent it in so far as lies in their power, no matter what their rank or dignity, be it royal or imperial." This severe discipline against duelling dates from the Council of Trent (Sess. XXV, c. xix, Decr.) here, however, only the excommunication in question is considered. It aims at duelling, properly so called, by challenge and on accepted conditions, not at other single combats or altercations. University duels, so common in Germany, are included (S. Cong. of the Council, 20 Aug., 1890). The malevolence of the duel lies in the fact that it makes right depend upon the fate of arms; this penalty is extended to all who take any part whatever in these detestable combats. The excommunication is incurred, first, by the duellists themselves, not only when they actually fight, but as soon as they have proposed or accepted a challenge; next, by the official witnesses or seors, also by physicians expressly brought upon the scene (Holy Office, 28 May, 1884), and by all spectators not accidentally present; likewise by those who permit these affairs, whose permission is necessary, e.g. in the army, and by those who, although able to prevent duelling, refrain from so doing.
(4) "Those who become members of the Masonic sect, of the Carbonari, or of other similar sects that plot either openly or secretly against the Church or legitimate authorities; all who countenance these sects in any way whatever, and finally, all who do not inform against the occult chiefs or leaders, i.e., until they have made such denunciations." Certain associations are prohibited because of their evil or dangerous object, others, because it is forbidden to belong under pain of excommunication late sententiae. These are known by their aim, which is to plot against the Church or legitimate authorities, obviously by illicit or criminal means; this excludes at once purely political groups. It matters little whether or not these societies exact secrecy from their members, though the element of secrecy constitutes an unfavourable presumption. The article names two of these sects, the Freemasons and the Carbonari; to these we must add the Fenians (Holy Office, 12 June, 1890). The American societies: the Independent Order of Good Templars (Holy Office, 9 Aug., 1893), the Odd Fellows, the Sons of Temperance, and the Knights of Pythias (Holy Office, 20 June, 1894), but not under pain of excommunication. In regard to the sects of which our present treatises, three distinct acts incur excommunication: the inscribing of one's name as a member, the positive favouring of the sect as such, and failure to denounce the occult leaders. For this last act censure is not incurred if the leaders be not occult, or if they be not known with sufficient certainty. The denunciation, if imperative, must be made within a month; once it is made the excommunication is no longer reserved, and one is in a condition to receive absolution from any confessor without further formality.
(5) "Those who command the violation of or who themselves rashly violate the immunity of ecclesiastical asylum." Immunity, or right of sanctuary, protected criminals who took refuge near the altar or within sacred edifices; it was forbidden to remove them from such a sanctuary, except by a priori, or by a prior ius, or by a public decree. This immunity, although formerly beneficial, has disappeared from modern life; the excommunication here retained has hardly more than the value of a principle; it may be noted that the article is cautiously worded. By its terms excommunication would be incurred only by those who rashly, and without being constrained thereto, violate the right of sanctuary as such (Holy Office, 1 Feb., 1871; 22 Dec., 1880).
(6) "Persons of any kind, condition, sex, or age who violate the clausura [i.e. canonical enclosure] of nunns in a penetrating or(fin) or by stay ing or audi ng or ad mits or then, also nuns who leave their clausura, except in the cases and in the manner provided for by the Constitution 'Decori' of St. Pius V." The reader will find in the article Claustrum further details; here it suffices to add that the enclosure in question is that of the papal enclosure (clausura papae), or that of religious women with solemn vows. The Constitution 'Decori' (24 Jan., 1570) limits the reasons of excommunication; for the obtaining of any benefits, and their accouplers." (For this article and the two that follow see Simony.)
(7) "Those who violate the enclosure [clausura] of nunns female religious and the superiors and others who admit them." Here also it is question of religious with solemn vows; moreover, it has not seemed necessary to provide for exceptional cases nor for permission.
(8) "Those who are guilty of real simony [simonia realis] for the obtaining of any benefits whatever, and their accouplers." (For this article and the two that follow see Simony.)
(9) "Those who are guilty of confidential simony [simonia confide nti ale] apropos of any benefit or any dignity whatever." (10) "Those who are guilty of real simony for the purpose of entering a religious order." "(11) "All who traffic in indulgences or other spiritual favours are excommunicated by the Constitution of St. Pius V, 'Quam plenum' (2 Jan., 1569)." This Constitution enumerates the abuses that the popes wished to remedy. Certain Spanish bishops were accustomed to issue public grants of indulgences or other spiritual favours, but in a manner for which they were unauthorized; the abuse consisted mainly in the pecuniary conditions they imposed for obtaining these favours (indulgences, choice of a confessor for the absolution of reserved cases, Mass and burial in time of interdict, dispensation from abstention, the right to present several sponsors at baptism, etc.). To overcome these abuses St. Pius V inflicted two kinds of penalties: bishops were punished by being forbidden entrance into church and by suspension of the "fruits", or revenues, of their benefices; culprits of inferior rank were prohibited from excommunicating. The penalties against bishops have been suppressed; excommunication, however, is retained to punish those who would reap unlawful profit from the publication or granting of indulgences or of the other spiritual favours enumerated.
(12) "Those who collect stipends for Masses and make profits out of them by having the Masses celebrated in places where the stipends are not so high." The object of the penalty is to remedy all shameful traffic in Mass-stipends; to incur it two things are necessary: not only must the stipends for Masses (called missae manuales) be collected, but a portion of them must be withheld when remitting them to the priests who are to fulfil the obligation of saying the Masses. Despite the wording of the article, it is not necessary that both conditions, the quest of stipends and the celebration of the Masses, occur in different places (Holy Office, 19 Aug., 1891, ad 4).
(13) "All those excommunicated by the Constitutions of St. Pius V, 'Admonet nos' (29 March, 1567); Innocent IX, 'Quem ab hac Sede' (4 Nov., 1591); Urban VIII, 'Indulgentiam' (26 June, 1592); and Alexander VIII, 'Inter easteras' (24 Oct., 1660), concerning the alienation and enfeoffment of cities and places belonging to the Holy Roman Church." This article deals with the temporal domains of the Church and calls here for no special comment.
(14) "Religious who, without permission of the parish priest, venture to administer extreme unction or the Eucharist as Viaticum, to ecclesiastics or laymen, except in extreme need or in such cases as those which affect religious with solemn vows and professed, but is not incurred if they have at least the presumed permission of the parish priest, if they be in ignorance, finally if it be a case of necessity. Those to whom these religious must not administer the sacraments are secular ecclesiastics or laymen; they may, however, administer them to persons domiciled in their convents.

(15) "Those who without legitimate permission take relics from the cemeteries or catacombs of Rome or its territories, or those who give such persons aid or comfort in so doing, have crossed the line of the Roman Vicariate, and excommunication is incurred only by carrying away from the catacombs genuine relics, not other objects. Relics are the remains, not of anyone happening to be buried in the catacombs, but only of martyrs or of those regarded as such by reason of the "signs of martyrdom" that distinguish their tombs, notably the phial of blood, according to the Sacred Congregation of Rites, 10 April, 1868, and 27 Nov., 1863.

All who hold communion in criminal crime with a person whom the pope has excommunicated by name, that is, those who give him assistance or countenance. The "criminal crime" (crimen criminis) is the very one for which the culprit was excommunicated; the article, of course, does not contemplate participation in the offence, but itself, once excommunication by name is necessarily posterior to such an act. The penalty is inflicted for subsequently assisting or countenancing the excommunicated person. This is a survival (see above, II (5)) of the penalties incurred by intercourse with the excommunicated. It must be noted that this censure is not imposed for intercourse with all excommunicated persons, but only with vandals, whom the pope has excommunicated by name, not such as have been excommunicated by a Roman Congregation (Holy Office, 16 June, 1897) or by the bishop.

(17) "Clerics who knowingly and wilfully hold communion in divinis with persons whom the pope has excommunicated by name and receive them at Divine service. The excommunicated in question are the same as in the preceding article, and they cannot be admitted to Divine worship; however, the penalty incurred concerns ecclesiastics only, when acting freely and with full knowledge [see above, II (5)].

(c) Excommunications Reserved to the Bishop (Ordinary).—These are three in number and affect the following:

(1) "Ecclesiastics in Holy orders and regulars or nuns who dare to contract marriage after having made a solemn vow of chastity, also those who dare to contract marriage with one of these persons. The ecclesiastics whose marriage is null in consequence of the impediment of Holy orders are subdeacons and those in still higher orders; the nuns and male religious whose marriage is null through the impediment of vow are members of the great orders. Nevertheless, the impediment does not arise from the time of their first profession, that follows the novitiate, but only from the solemn profession made three years later. The penalty is incurred by an attempt at marriage, not by an act of betrothal; such an attempt is recognized in any contract having the figura matrimonii, i.e. which would constitute a marriage if there were no impediment; consequently the penalty is incurred for civil marriage (Holy Office, 22 Dec., 1880), even if there were other impediments, e. g. consanguinity (Holy Office, 16 Jan., 1892).

(2) "Those who efficaciously procure abortion." The true act of attempt is not punished with excommunication; authors do not agree as to whether the woman guilty of self-abortion is excommunicated.

(3) "Those who knowingly make use of counterfeit Apostolic Letters or who co-operate in the crime." [See above, (a) (9).] This article is not directed against forgers but against those who are guilty of procuring for sale falsified letters. Petitions signed by the pope or in his name are not mentioned. Accomplices are also punished; but the culprits must act knowingly, and be fully aware that they are using falsified papal letters.

(d) Excommunications That Are Not Reserved (Neminem Reservata).—These are four in number and are pronounced against the following persons:

(1) "Those who command or obligate the giving of ecclesiastical burial to notorious heretics or to persons excommunicated by name or placed under interdict." The article does not erect a right but only material interdict in consecrated ground. Those who admit heretics or others to ecclesiastical burial are not punished, but only those who, by authority or force, compel such an interment, thereby violating the prohibition of the Church. Nor is the question here of all who, according to the Ritual, should be deprived of ecclesiastical burial, but merely of the two categories indicated.

(2) "Those who wound or terrorize the inquirers, informers, witnesses, or other ministers of the Holy Office; those who lacerate or blot the writings of the tribunal and all who give to the aforesaid assistance, counsel, or countenance." This excommunication does not apply in countries where the Holy Office has no organized tribunal; the inquisitorial functions devolve in such countries on the bishop, who is protected by the specially reserved excommunications described above, under (a) (5), (6), (8).

(3) "Those who alienate and those who have the audacity to receive church property without Apostolic authorization, according to the terms of the Constitution 'Ambitiosi, de rebus eccles. non alienandi.'" The author of this Constitution (Extravagantes, lib. III, tit. iv, inter comm.) was Paul II (1 March, 1467). It forbids under pain of reserved excommunication and of the nullity of the acts, not only alienations (property so called) of ecclesiastical property, sales, donations, etc., but also all contracts safeguarding of alienation, such as mortgages, emphyteusis or perpetual lease, long-term leases, etc. For the manifest benefit of the Church these contracts must be authorized by the pope; only objects of small value are excepted (see Third Plenary Council of Baltimore, no. 20).

(4) "Those who, through their own fault, neglect or omit to denounced within a month the confessors or priests by whom they have been solicited to immolation of the Liturgy. In the cases set forth in Gregory XV in the Constitution 'Universi' (20 Aug., 1622) and Benedict XIV in the Constitution 'Sacramentum pontificis' (1 June, 1741)." This excommunication is not intended to punish those solicited to sin (they are not therefore guilty), but to protect the administration of the Sacrament of Penance. Persons thus solicited are strictly obliged to make known to the inquirer or the bishop those priests who have solicited them to the aforesaid acts; if, through their own fault, such denunciation is not made within a month they incur excommunication, which ceases only when they have made known in the aforesaid manner the guilty party. The solicitation here alluded to is not any provocation to evil, but to sins against chastity on the part of confessors or priests, and in connexion with the Sacrament of Penance, this being the abuse that the legislator especially seeks to punish. Said connexion exists when the solicitation takes place "during the very act of sacramental confession, immediately before or after, on the occasion or under the pretext of confession, or finally, in the confessional."
Exeat. See Incarceration.

Execution, same as Derecration (q. v.).

Executor, Apostolic, a cleric who puts into execution a papal rescript, completing what is necessary in order that it be effective. The executor of a rescript may be discovered from the tenor of the document itself. In matters which regard the government of the diocesan, the executor of the Apostolic Letters is the superior of the order, namely, the general, the procurator general, or the provincial. Rescripts containing favours are sometimes granted by the Holy See directly to the petitioners; in which case, the executor merely has the office of executing the favour asked for, without any obligation of judicial inquiry into the opportuneness of the grant, or the reasons alleged for seeking it. Nevertheless, if it is notorious that the favour has been surreptitiously obtained, he must abstain from executing the rescript. Rescripts, however, are not usually sent directly to the petitioners, but, in the external forum, to the ordinary, either of the petitioners or of the territory in question, and in the internal forum, to any approved confessor chosen by the persons concerned. In this latter case the grant is remitted entirely to the judgment and conscience of him who is to execute it. He enjoys delegated power, and must act within the limits of his mandate. The Apostolic Letters must first of all be in his hands before he may act; from them he determines whether he is the one delegated, and what are his powers. He must act in the letter of the rescript alleged for granting the request, as well as the truth of the other statements found in the petition. As a delegate of the Holy See he may, ordinarily, subdelegate another to execute the rescript, unless this is expressly
forbidden in the grant, or unless it is apparent that he is selected by reason of his knowledge or other personal qualities specially fitting him for the office. It is important to know whether an executor is chosen for his personal characteristics, or on account of his office: in the former case the delegation is personal, in the latter, conditional to the position and passes on to the successor of the same office. A rescript given to the ordinary may likewise be executed by the vicar general. An executor must know the rules for interpreting rescripts, also, when they are rendered void, because unexpectedly obtained or for other cause. Rescripts emanating from the Sacred Penitentiaries are executed in the confessional, and are then destroyed by the confessor, as they treat of matters of conscience. When the rescript pertains to the external forum, a decree should be drawn up to the effect that all necessary formalities have been observed in its execution; these formalities should be specified. No fee is allowed for the execution of Apostolic Letters, lest the executor's judgment be influenced thereby.

Andrew B. Meehan.

**Lexdra.**—A semicircular stone or marble seat; a rectangular or semicircular recess; or the portion of the Greek or Latin gallery in which disputations of the learned were held among the ancients; also, in private houses, the parapets, or vestibule, used for conversation. The term is sometimes applied to a porch or chapel which projects from a larger building. Also used as synonymous with ecclesia, for a church or seat of any kind; for a small private chamber; the space between an oriel window and the small chapels between the buttresses of a large church or cathedral.

Andrew B. Meehan.

**Lexegasis (Biblical)** is the branch of theology which investigates and expresses the true sense of Sacred Scripture. The exegete does not inquire which books constitute Sacred Scripture, nor does he investigate their genuineness, nor, again, does he study their double authorship. He accepts the books which, according to the concurrent testimony of history and ecclesiastical authority, belong to the Canon of Sacred Scripture. He wants to know the doctrine of the Council of Trent, he regards the Vulgate as the authentic Latin version, without neglecting the results of sober textual criticism, based on the readings found in the other versions approved by Christian antiquity, in the Scriptural citations of the Fathers, and in the more ancient manuscripts. With regard to the authorship of the Sacred Books, too, the exegete follows the authoritative teaching of the Church and the prevalent opinions of her theologians on the question of Biblical inspiration. Not that these three questions concerning the Canon of the text, and the inspiration of Sacred Scriptures exert no influence on Biblical exegesis: unless a book forms part of the Canon, it will not be the subject of exegesis at all; only the best supported readings of its text will be made the basis of its theological explanation; and the doctrine of inspiration with its logical corollaries will be found to have a constant bearing on the results of exegesis. Still, exegesis, as such, does not deal with these three subjects; the reader will find them treated in the articles **Canon of the Holy Scriptures; Criticism, Biblical, Subtitle: Criticism and Inspiration.**

The early Reformers were wont to claim that the genuine text of the inspired and canonical books is self-sufficient and clear. This contention does not owe its origin to the sixteenth century. The words of Origen (De princip., IV), St. Augustine (De doctr.

christ, I-III), and St. Jerome (ad Paulin., ep. liii, 6, 7) show that similar views existed among the ascetics in the early age of the Church. The exegetical results flowing from the supposed clearness of the Bible may be inferred from the fact that one century after the rise of Biblical Reformations Christendom stood two volumes entitled, "A History of the Variations of the Protestant Churches". A Protestant theologian, S. Werenfels, sets forth the same truth in a telling epigram:—

Hic liber est in quo quiserit sus dogmata quiesce,

Inveniet et parte dogmata quiesce sua,

which may be rendered in an English paraphrase:—

Men ope this book, their favourite creed in mind;

Each seeks his own, and each his own doth find.

Agreeing with the warning of the Fathers, Pope Leo XIII, in his Encyclical "Praeventissimus Deus", insisted on the difficulty of rightly interpreting the Bible. "It must be observed", he wrote, "that in addition to the usual reasons which make ancient writings more or less difficult to understand, there are some which are peculiar to the Bible. For the language of the Bible is employed to convey the primary sense of inspiration of the Holy Ghost, many things which are beyond the power and scope of the reason of man—

that is to say, Divine mysteries and all that is related to them. There is sometimes in such passages a fullness and a hidden depth which the ordinary exegesis hardly exposes and which the laws of grammatical interpretation hardly warrant. Moreover, the literal sense itself frequently admits other senses, adapted to illustrate dogma or to confirm morality. Wherefore, it must be recognized that the Sacred Writings are wrapt in a certain religious obscurity, and that no one can enter into their interior without a guide; God so disposing, as the Holy Fathers commonly teach, in order that men may investigate them with greater ardour and earnestness, and that what is attained with difficulty may be expressed more easily and directly; but, most of all, that they may understand that God has delivered the Holy Scriptures to the Church, and that in reading and making use of His word, they must follow the Church as their guide and their teacher."

But it is not our purpose so much to prove the need of Biblical exegesis as to explain its aim, describe its methods, indicate the various forms of its results, and outline its history. Exegesis aims at investigating the sense of Sacred Scripture; its method is contained in the rules of interpretation; its results are expressed in the various interpretations of the Church; its object is to communicate a work done by Christian and Jewish interpreters, by Catholics and Protestants. We shall endeavour to consider these various elements under the four heads: I. Sense of Sacred Scripture; II. Hermeneutics; III. Sacred Rhetoric; IV. History of Exegesis.

I. Sense of Sacred Scripture.—In general, the sense of Sacred Scripture is the truth actually conveyed by it. We must well distinguish between the sense and the signification of a word. A good dictionary will give us, in the case of each word, its various possible meanings or significations; but no reader will be tempted to believe that a word has all these meanings wherever it occurs. The context or some other restrictive element will determine the meaning in which each word is used in any given passage, and this meaning is the sense of the word. The signification of the word is its possible meaning; the sense of a word is its actual meaning in any given context. A sentence, like a word, may have several possible significations, but it has only one sense or meaning intended by the author. Here, again, the signification denotes the possible meaning of the sentence, while the sense is the meaning which the sentence here and now conveys. In the case of the Bible, it must be kept in mind that God is its author, and that God, the Sovereign Lord of all things, can manifest truth mot
merely by the use of words, but also by dispensing outward forms through that one is the figure of the other. In the former case, we have the literal sense; in the latter, the typical (cf. St. Thomas, Quodli, viii, Q. vi, a. 14).

(1) Literal Sense. — (I) What is the Literal Sense? — The literal sense of Sacred Scripture is the truth really, actually, and immediately intended by its author. The fact that the literal sense must be really intended by the author distinguishes it from the truth conveyed by any mere accommodation. This latter applies to a writer's language, on the ground of analogy, to something originally meant by him. Again, since the literal sense is really intended by the author from the meaning conveyed only virtually by the text. Thus the reader may come to know the literary capacity of the author from the style of his writing; or he may draw a number of logical inferences from the writer's direct statements; the resultant information is in neither case actually intended by the writer, but it constitutes the so-called derivative or consequent sense. Finally, the literal sense is limited to the meaning immediately intended by the writer, so that the truth mediatelyst expressed by him does not fall within the limits of the literal sense even in his own direct statements. This point that the literal sense differs from the typical. To repeat briefly, the literal sense is not an accommodation based on similitude or analogy; it is not a mere inference drawn by the reader; it is not an analogy between the body of the text and what is added to the text as its type; but it is the meaning which the author intends to convey really, not by a stretch of the imagination; actually, not as a syllogistic potency; and immediately, i.e., by means of the language, not by means of the truth conveyed by the language.

(II) Division of the Literal Sense. — What has been said about the immediate character of the literal sense must not be misconstrued in such a way as to exclude figurative language from its range. Figurative language is really a single, not a double, sign of the truth it conveys. When we speak of "the arm of God," we do not imply that God really is endowed with such a bodily member, but we directly denote his power of action (St. Thomas, Summa, I, Q. 1, a. 10, ad 3o). This principle applies not merely in the metaphor, the synecdoche, the metonymy, or the irony, but also in those cases where one word is used symbolically for a whole sentence or even an entire chapter or book. The very name allegory implies that the real sense of the expression differs from its usual verbal meaning. In Matt., xv, 13 sqq., e.g., the sentence, "You are the salt of the earth," was not to be taken literally, but in a figurative sense, and then in the figurative; it does not first call the Apostles among the mineral kingdom, and then among the social and religious reformers of the world, but the literal meaning of the passage coincides with the truth conveyed in the allegory. It follows, therefore, that the literal sense comprises both the proper and the figurative. The fable, the parable, and the example must also be classed among the allegorical expressions which signify the intended truth immediately. It is true that in the passage according to which the trees elect a king (Judges, ix, 9-21), in the parable of the prodigal son (Luke, xv, 11 sqq.), and in the history of the Good Samaritan (Luke, x, 25-37) a number of words and sentences are required in order to construct the fable, the parable, and the example respectively; but this does not interfere with the literal immediate sense of the literal devise. As such they have no meaning independent of, or prior to, the moral lesson which the author intends to convey by their means. It is easily granted that the mechanical contrivance we call a watch immediately indicates the time in spite of the subordinate action of its spring and wheels; why, then, should we question the truth that the literary device called fable, or parable, or example, immediately points out its moral lesson, though the very existence of such a device presupposes the use of a number of words and even sentences?

(ii) Ubiquity of the Literal Sense. — The Fathers of the Church were not blind to the fact that the literal sense in some Scripture passages appears to imply great incongruities, not to say insuperable difficulties. On the other hand, they regarded the language of the Bible as truly human language, and therefore always endowed with a literal sense, whether proper or figurative. Moreover, St. Jerome (in Is., xiii, 19), St. Augustine (De tent. Abr. serm. ii, 7), St. Gregory (Moral., i, 37) agree with St. Thomas (Quodli., vii, Q. vii, a. 14) in his conviction that the typical sense is always based on the literal and springs from it. Hence if these Fathers had denied the existence of a literal sense in any passage of Scripture, they would have left the passage meaningless. Where the patristic writers appear to reject the literal sense, they really exclude only the proper sense, leaving the figurative. Origen (De princ., IV, xi) may be regarded as the only exception to this rule; since he considers some of the Mosaic laws as either absurd or impossible to keep, he denies that they must be taken in their literal sense. The literal sense of the Mosaic laws is not to be reduced to his words a more acceptable meaning (cf. Vincensii, "In S. Gregorii Nysseni et Origenis scripta et doctrinam novam recensio?, Rome, 1864, vol. 11, cc. xxv-xxix). The great Alexandrian Doctor distinguishes correctly and explicitly between the literal and the figurative sense. His defenders believe that he understands by these three elements its proper, its figurative, and its typical sense respectively. He may, therefore, with impunity deny the existence of any bodily sense in a passage of Scripture without injury to its literal sense. But it is more generally admitted that Origen went astray on this point, because he followed Philo's opinion too faithfully.

(iv) Is the Literal Sense One or Multiple? — There is more solid ground for a diversity of opinion concerning the unicity of the literal sense contained in each passage of Sacred Scripture. This brings us face to face with a double question: (a) Is it possible that a Scriptural passage has more than one literal sense? (b) Is there any Biblical text which actually has more than one literal meaning? It must be kept in mind that the literal sense is what is held in the strict meaning of the word. It is agreed on all sides that a multiple consequent sense or a multiple accommodation may be regarded as the rule rather than the exception. Nor is there any difficulty about the multiple literal sense which is found in various texts of the same text; we ask here whether one and the same genuine Scripture text may have more than one literal sense.

(a) Possibility of a Multiple Literal Sense. — Since a word, and a sentence too, may have more meanings than one, there is no a priori impossibility in the idea that a Scriptural text should have more than one literal sense. If the author of Scripture really intends to convey the truth contained in the various possible meanings of a text, the multiple literal sense will be the natural resultant. Some of the expressions found in the writings of the Fathers seem to emphasize the possibility of having a multiple literal sense in Sacred Scripture.

(b) Actual Occurrence of a Multiple Literal Sense. — The subject becomes more complicated if we ask whether a multiple literal sense is not merely possible, but is actually found anywhere in Scripture. There is no good authority for its frequent occurrence; but does it really exist even in the few Scriptural passages which seem to contain it, such as Ps. ii, 7; Is., iii, 4, 8; Dan., ix, 27; Jer., xi, 61; ii Pet? Did God wish in these texts to convey a multiple literal sense? Revelation, as coming down to us in Scripture and tradition, furnishes the only clue to the solution of the question.
(e) Arguments for the Multiple Literal Sense.—The advocates of a multiple literal sense advance the following arguments for their view: First, Sacred Scripture must have a life of its own. Origen (Eusebius, vii, 5) understands Ps. ii, 7 (this day have I begotten thee), of the Divine generation of the Son; Acts, xiii, 33, understands the text of the Resurrection; Heb., v, 5, of the eternal priesthood of Christ. Again, the Latin Vulgate and the Septuagint, together with I Pet., ii, 24, understand Is. liii, 4 (he hath borne our infirmities), of our sins; Matt., viii, 17, understands the words of our bodily ailments. And again, I Mach., i, 57, applies some words of Dan., ix, 27, to his own subject, while Matt., xxiv, 15, represents them as a prophecy fulfilled in the coming of the Holy City. Finally, John, ii, 19, was understood by the Jews in a sense different from that intended by Jesus Christ; and John, xi, 51, expresses two disparate meanings, one intended by Caiphas and the other by the Holy Ghost. The second argument is, that tradition too upholds the existence of a multiple sense in several passages of the Bible. Its witnesses are St. Augustine (Conf., XII, xxxvi, xxxi, xxx; De doctr. christ., III, xxvii; etc.); St. Gregory the Great (in Eusebi., iii, 10, Lib. I, hom. x, n. 30 sq.), St. Basil, St. Chrysostom, St. Jerome, St. Gregory of Nyssa, St. Gregory the Great, St. Bernard, St. Thomas (I, q. i, a. 10; “De potent.,” IV, 1; “in II sent.,” dist. xii, q. i, a. 2, ad 7th), Card. Cajetan (ad q. i, a. 10), Melchior Cano (Loc. theolog., Lib. II, c. xi, ad 7 arg., ad 3 rat.), Bates (ad q. i, a. 10). St. Thomas (I, q. 3, disp. ii, a. 12), Billiart (De reg. fidei, dissert. i, a. 8). Vasques, Valentia, Molina, Serrarius, Cornelius a Lapide, and others.

(3) Reasons against the Multiple Literal Sense.—Patrizi, Boel, Lamy, Cornely, Knabensieper, Reimarus, and the greater number of recent writers deny the actual existence of a multiple literal sense in the Bible; they urge the following reasons for their opinion: First, the Bible is written in human language; now, the language of other books usually presents only one literal sense. Second, the genuine sense of Sacred Scripture must be discovered by means of the rules of hermeneutics. A commentator would render these rules meaningless, if he were to look for a second literal sense of a passage after discovering one true meaning by his previous analysis. Third, commentators implicitly assume that any given text of Scripture has only one literal sense; for after finding out the various meanings which are philologically probable, they endeavour to ascertain which of them was intended by the Holy Ghost. Fourth, a multiple literal sense would create endless confusion and impede the promulgation of the whole plan of Scripture. Finally, a multiple sense in Scripture would be a supernatural fact wholly depending on the free will of God. We cannot know it independently of revelation; its actual occurrence must be solidly proved from Scripture or tradition. The paternity of the multiple literal senses have not thus far advanced any such proof.

(1) Where Scripture appeals to disparate meanings of the same passage, it does not necessarily consider each of them as the literal sense. Thus Heb., i, 5, may represent Ps. ii, 7, as referring literally to the eternal generation, but Acts, xiii, 33, may consider the Resurrection, and Heb., v, 5, the eternal priesthood of Christ as necessary consequences. Matt., viii, 17, applies the consequent sense of Is., liii, 4, to the cure of bodily ailments; 1 Mach., i, 57, merely accommodates some words of Dan., ix, 27, to the writer's own time; in John, ii, 19, and xi, 51, only the meaning intended by the Holy Ghost is the literal sense, though this may not have been understood when the words in question were spoken. (2) The testimony of the Fathers and the Scholastic theologians is not sufficient in our case to prove the existence of a dogmatic tradition as to the actual occurrence of the multiple literal sense in Scripture. There is no trace of it before the time of St. Augustine; this great Doctor proposes his view not as the teaching of tradition, but as a pious and probable opinion. The expressions of the other Fathers, excepting St. Chrysostom, are ambiguous. It remains to see whether the depth of thought contained in Scripture, or they refer to meanings which we technically call its typical, derivative, or consequent sense, and perhaps even to mere accommodations of certain passages. Among the Scholastics, St. Thomas follows the true meaning of St. Augustine, at least in one of the alleged passages (De potent., IV, 1), and a number of the later Scholastics follow the opinion of St. Thomas. The other early Scholastics maintain rather the opposite view, as may be seen in St. Bonaventure (IV Sent. dist. xxii, p. 1, dub. 1) and Alexander of Hales (Summa, i, Q.i, m. 2).

(v) The Derivative or Consequent Sense.—The consequent or derivative sense of Scripture is the truth legitimately inferred from its genuine meaning. It would be wrong to identify the consequent sense with the more latent literal sense. This depth of the literal sense may spring from the fact that the predicate changes somewhat in its meaning if it be applied to totally different subjects. The word idea has one meaning if predicated of God, and quite another if predicated of created beings. Such a variety of meaning belongs to the literal meaning in the strict sense of the word. The consequent sense may be said to be the conclusion of a syllogism one of whose premises is a truth contained in the Bible. Such inferences can hardly be called the sense of a book written by a human author; but God has foreseen all the legitimate conclusions derived from Biblical truths, so that they may be said, in a certain way, to be His intended meaning. The Bible itself makes use of such inferences as if they were based on divine authority. St. Paul (I Cor., i, 31) quotes such an inference based on Jer., ix, 23, 24, with the express addition, “as it is written”; in I Cor., ix, 10, 11, he derives the consequent sense of Deut., xxxv, 4, indicating the second premise, while in I Tim., v, 18, he states the consequent sense of the same passage without adding the second premise. Theologians and ascetical writers have, therefore, a right to utilize dogmatic and moral inferences from the genuine sense of Sacred Scripture. The writings of the Fathers illustrate this principle most copiously.

(vi) Accommodation.—By accommodation the writer's words are applied, on the ground of analogy, to something not originally meant by him. If there be no analogy between the original and the imposed meaning, there is no accommodation of the passage, but rather error. Finally, if such a contorted meaning is not merely outside, but against, the genuine sense. Accommodation is usually divided into two classes: extensive and allusive. Extensive accommodation takes the words of the Bible in the genuine sense, but applies them to a new subject. Thus the words, he “was found perfect, just, and in the time of wrath he was made a reconciliation”, which Ezech., xlv, 17, predicates of Noe, are often applied to other saints. Allusive accommodation does not employ the words of Scripture in their genuine sense, but gives them an entirely different meaning; here the analogy does not exist between the objects, but between the verbal expressions. Ps. xxvii, 26, 27, “With the holy, thou wilt be holy; and with the innocent man thou wilt be innocent; and with the elect thou wilt be elect; and with the perverse thou wilt be perverted”, expresses originally the attitude of God to the good and the wicked; but by accommodation these words are often used to show the influence of companionship. That the use of accommodation is legitimate, may be inferred from its occurrence in Scripture, in the writings of the Fathers, and from its very nature. Examples of accommodation in Scripture may be found in Matt., vii, 23 (cf. Ps. vi, 9). Roman.
The liturgical books and the writings of the Fathers are so replete with the use of accommodation that a treatise on the subject is for any practical purpose unnecessary. Finally, there is no good reason for interdicting the proper use of accommodation, seeing that it is not wrong in itself and that its use does not involve any inconvenience as far as faith and morals are concerned. But two excesses are to be avoided: first, it cannot be maintained that all the modifications from the Old Testament which are found in the New are mere accommodations. Similar contents are found in the writings of those who endeavour to destroy the value of the Messianic prophecies; they are not confined to our days, but date back to Theodore of Mopsuestia and the Socinians. The Fifth Ecumenical Synod rejected the error of Theodore; besides, Christ Himself (Matt., xxi, 41 sq.; cf. Ps. cx, 1), St. Peter (Acts, iii, 25 sq.; cf. Gen., xii, 3; xviii, 17; xxii, 18), and St. Paul (Rom., iv, 3; v, v, 5; Acts, xiii, 35; cf. Ps. ii, 7) base theological arguments, and this latter cannot be regarded as mere accommodations. Secondly, we must not exceed the proper limits in the use of accommodation. This we should do, if we were to present the meaning derived from accommodation as the only sense of the passage. If we were to use it as the premise in an argument, or again if we were to accommodate the words of Scripture to ridiculous, absurd, or wholly disparate subjects. The fourth session of the Council of Trent warns most earnestly against such an abuse of Sacred Scripture.

(2) Typical Sense.—The typical sense has its name from the fact that it is based on the figurative or typical relation of Biblical persons, or objects, or events, to a new truth. This latter is called the antitype, which is also called the Allusion. The typical sense is also called the spiritual, or mystical, sense: mystical, because of its more recondite nature; spiritual, because it is related to the literal, as the spirit is related to the body. What we call type is called shadow, prophecy, parable, by St. Paul (cf. Rom., v, 14; I Cor., x, 6; Heb., viii, 5; Gal., iv, 24; Heb., ix, 9); once he refers to it as antitype (Heb., ix, 24), though St. Peter applies this term to the truth signified (1 Pet., iii, 21). Various other designations for the typical sense have been used by the Fathers. We shall consider the following questions as of more vital importance.

(i) Nature of the Typical Sense.—The typical sense is the Scriptural truth which the Holy Ghost intends to convey really, actually, but not immediately. Inasmuch as its meaning is really conveyed, the typical sense differs from accommodation; inasmuch as its meaning is actually expressed, it differs from the consequent sense; inasmuch as its meaning is not immediately signified, it differs from the literal sense. While we arrive at the latter immediately by way of the literal sense, we generally arrive at the typcal sense only by way of the literal. The text is the sign conveying the literal sense, but the literal sense is the sign expressing the typical. The literal sense is the type which by a special design of God is directed to signify its antitype. Three conditions are necessary to constitute a type: (a) It must have its own true and historical existence independently of the antitype; e.g., the intended immolation of Isaac would be an historical fact, even if Jesus Christ had not died. (b) It must not be referred to the antitype by its very nature. This prohibits the sense of a type as an object of the antitype, or as a precedent of its antecedent likeness to its object. (c) God himself must have established the reference of the type to its antitype; this excludes objects which are only naturally related to others. The necessity of these three conditions explains why a type cannot be confounded with a parable, or an example, or a symbol, or a similitude, or a comparison, or a metaphor, or a symbolic prophecy—e.g., the statute seen in the dream of Nabuchodonosor. It should be added, however, that at times the type may be expressed by the Scriptural representation of a subject related to the type by the very literal text. Use of this sense of the term is seen in Gen., xiv, 18, e.g., introduces Melchisedech without reference to his genealogy; hence Heb., vii, 3, represents him "without father, without mother, without genealogy, having neither beginning of days nor end of life"; and makes him as such a type of Jesus Christ. Thus far we have spoken about the typical sense in its literal sense. In a wider sense, all persons, events, or objects of the Old Testament are sometimes considered as types, provided they resemble persons, events, or objects in the New Testament, whether the Holy Ghost has intended such a relationship or not. The Egyptian Joseph is in this way frequently represented as a type of St. Joseph, the foster-father of Christ.

(ii) Division of the Typical Sense.—The division of the typical sense is based on the character of the type and on the antitype. It is as if the church were not to be regarded as a mere accommodation. Secondly, we must not exceed the proper limits in the use of accommodation. This we should do, if we were to present the meaning derived from accommodation as the only sense of the passage. If we were to use it as the premise in an argument, or again if we were to accommodate the words of Scripture to ridiculous, absurd, or wholly disparate subjects. The fourth session of the Council of Trent warns most earnestly against such an abuse of Sacred Scripture.

Jerusalem, e.g., according to its literal sense, is the Holy City; taken allegorically, it denotes the church. Again, the allusion is to the Ark; in the mystical sense, it stands for the Church Triumphant. If the division of the typical sense is based on the type rather than the antitype, we may distinguish personal, real, and legal types. They are personal if a person is chosen by the Holy Ghost as the sign of the truth to be conveyed. Adam, Noe, Melchisedech, Moses, Jesse, David, Solomon, and Jonas are types of Jesus Christ; Agar with Israel, and Sara with Isaac are respectively the types of the Old and the New Testament. The real types are certain historical events or objects of the Old Testament, such as the paschall lamb, the manna, the water flowing from the rock, the brazen serpent, Sion, and Jerusalem. Legal types are chosen from among the institutions of the Mosaic liturgy, e.g., the tabernacle, the sacred implements, the sacraments and sacrifices of the Old Law, its priests and Levites.

(iii) The Existence of the Typical Sense.—Scripture and tradition agree in their testimony for the occurrence of the typical sense in certain passages of the Old Testament. Among the Scriptural texts which establish the typical sense, we may quote: (a) John 16-17; Heb., vii, 5; ix, 8-9; Rom. v, 14; Gal., iv, 24; Matt., ii, 15 (cf. Os., xi, 1); Heb., i, 5 (cf. II K., vii, 14). The testimony of tradition concerning this subject may be gathered from Barnabas (Ep., 7, 8, 9, 12, etc.), St. Clement of Rome (I Cor., xii), St. Justin ( Dial. c. Tryph., civ, 42), St. Irenaeus (Adv. haer., IV, xxv, 3; II, xxxiv, 2 sqq.; IV, xxvi, 2), Tertullian (Adv. Marc., V, vii), St. Jerome (Ep. iii, ad Paulin., 8), St. Thomas (I, q. i, a. 10), and a number of other patristic writers and Scholastic theologians. That the Jews agree with the Christians as regards the existence of this sense, may be inferred from Josephus (Antiq., XVII, iii, 4; Procem, Antiq., n, 4; III, vi, 4, 77; De bello Jud., v, 4), the Talmud (Bersachot, c. v, ad fin.; Quiddus, fol. 41, col. 1), and the writings of Philo (de Abraham; de migrat. Abraham; de vita contempl.), though this latter writer goes excess in the allegorical interpre-
EXEGESIS

The foregoing tradition may be confirmed by the language of the liturgy and the remainder of the New Testament. Christian liturgy (Krauss, "Roma Soterianae," pp. 242 sqq.). Striking instances of the liturgical proof may be seen in the Preface of the Mass for Easter, in the Blessing of the Paschal Candle, and in the Divine Office recited on the Feast of Corpus Christi. All Catholic interpreters readily grant that in some passages of the Old Testament we have a typical sense besides the literal; but this does not appear to be granted with regard to the New Testament, at least not subsequently to the death of Jesus Christ. Distinguishing between the New Testament as a collection of books, and the New Testament as it denotes the Christian economy, they grant that there are types in the New-Testament books, but only as far as they refer to the pre-Christian economy.

For the New Testament has brought us the reality in place of the figure, light in place of darkness, truth in place of shadow (cf. Patriarci, "De interpretatione Scripturarum Sacrarum" p. 199, Rome, 1844). On the other hand, it is urged that the New Testament is the figure of glory, as the Old Testament was the figure of glory. The New Testament, the mystical body of Christ, the mystical church, mirrors and symbolizes the mystical body of the Church in the Old Testament (cf. Bardenhewer, "Handwörterbuch der christlichen Liturgie," cols. 297 sqq.).

Again, in Scripture the literal sense applies to what precedes, the typical, to what follows. Now, even in the New Testament Christ and His Body precedes the Church and its members; hence, what is said literally of Christ or His Body, may be interpreted allegorically of the Mystical Body of the Church. Thus, when the person of the Lord is mentioned, the mystical person of the Church is implied, and the names of the churches are used of individuals and groups of Christians.

(vi) The Theological Value of the Typical Sense. — Father Perrone (Frat. teol. dom. IX, 159) believes it is the common opinion of theologians and commentators that no theological argument can be based on the typical sense. But if we speak of the typical sense which has been revealed as such, or which has been preserved and held in view from the beginning, it conveys the meaning intended by God not less clearly than the literal sense. Hence it furnishes solid and reliable premises for theological conclusions. The inspired writers themselves do not hesitate to argue from the typical sense, as may be seen in Matt. ii, 15 (cf. On., sect. 16, and others); or in Matt. viii, 17 (cf. On., sect. 20, and others); or in Matt. xxiv, 27 (cf. On., sect. 22, and others), whose typical sense is only probable yield only probable theological conclusions; such is the argument for the Immaculate Conception based on Est., xv, 13. If St. Thomas (Summa, I, Q. i, a. 10, ad 5°; Quodlib., VII, v, 14, ad 4°) and other theologians differ from our position on this question, their view is based on the fact that the existence of the types themselves must first be theologically proved, before they can serve as premises in a theological argument.

H. Hermeneutics. — The interpretation of a writing has for its object to find the ideas which the author intended to express. We do not consider here the so-called authentic interpretation or the writer's own statement as to the thought he intended to convey. In interpreting the Bible scientifically, its twofold character must always be kept in view. It is a Divine book, in as far as it has God for its author; it is a human book, in as far as it is written by men for men. In its human character, the Bible is subject to the same rules of interpretation as profane books; but in its Divine character, it is given into the custody of the Church to be kept and interpreted, not hermeneutically, but according to the canons of exegesis and hermeneutics. Under the former aspect, it is subject to the laws of the grammatico-historical interpretation; under the latter, it is bound by the precepts of what we may call the Catholic explanation.

The grammatico-historical interpretation implies three elements: first, a knowledge of the various significations of the literary expression to be interpreted; secondly, the determination of the precise sense in which the literary expression is employed in any given passage; thirdly, the historical description of the idea thus determined. What has been said in the preceding paragraphs sufficiently shows the difference between the significations and the sense of a word or a sentence. The importance of describing an idea historically may be exemplified by the successive stages of its meaning attaching to the concept of Messias, or to Kingdom of God.

(i) Significations of the Literary Expression. — The significance of the literal expression of the Bible is best learned by a thorough knowledge of the so-called sacred languages in which the text of the Bible was written, and by a familiar acquaintance with the Scriptural way of speaking.

(a) Sacred Languages. — St. Augustine (De doctr.
EXEGESIS

of Holy Scripture (loc. cit., II, xii, xiv). Nor must we omit to study the writings of Philo and Josephus, the contemporaries of the Apostles and the historians of their nation. They are helpful illustrations of the cultured language of the Apostolic time. The study of the Vulgate and the etymology of the Old Testament is no means of becoming acquainted with the languages themselves. For a proper understanding of the etymology of Hebrew words, the knowledge of the cognate languages is requisite; but here it must be kept in mind that many derivatives have a meaning quite different from the designations of their respective radicals, so that an argument based on etymology alone is open to suspicion.

(ii) Sense of the Literary Expression.—After the foregoing rules have aided the interpreter to know the various significations of the words of the sacred text, he must next endeavour to investigate in what precise sense the inspired writer employed his expressions. He will be assisted in this study by attending to the subject-matter of the book or chapter, to its occasion and purpose, to the grammatical and logical context, to the literary style, and the literary expressions are not in keeping with the subject-matter of the book, cannot be the sense in which the writer employed it. The same criterion directs us in the choice of any particular shade of meaning and sentiment. The following is a specimen of the Epistles to the Romans and the Galatians, e. g., shows in what sense St. Paul used the expressions law and works of the law; the sense of the expressions spirit of God, wisdom and understanding, which occur in Ex., xxxi, 5, must be determined in the same way.

The occasion and purpose of a book or of a passage will often determine whether certain expressions must be taken in their proper or figurative sense, whether in a limited or an unlimited extent. Attention to this point will aid us in explaining aright such passages as John, iv, 5 sqq.; Matt., v, 5 sqq.; Heb., iv, 5 sqq.; Prov., vii, 20 sqq.; Ps., xlv, 6 sqq., and shall understand the first of these passages of the real flesh and blood of Christ, not of their figure; we shall see the true import of Christ's command contained in the second passage, "Go ye not into the way of the Gentiles, and into the city of the Samaritans enter ye not"; again, we shall appreciate the full weight of the theological argument in favour of the eternal generation of the Son as stated in the third passage, contained in the Epistle to the Hebrews.

The context is the third aid in determining the precise sense in which a passage is written. We need not insist on the necessity of explaining an expression in accordance with its grammatical environment. The commentator must make sure of the grammatical connexion of an expression, so as not to do violence to the rules of inflection or of syntax. The so-called poetical parallelism may be considered as constituting part of grammar taken in a wider sense. But the logical context, too, requires attention; a commentator must not explain any expression in such a sense as to make the author contradict himself, being mindful that "the truth" is not always what we extract and agree with the thought of the sentence, of the chapter, and even of the book. Still, it must not be overlooked that the context is sometimes psychological rather than logical; in lyric poetry, in the words of the Prophets, or in animated dialogues, thoughts and sentiments are at times brought into juxtaposition, the logical connexion of which is not apparent. Finally, there is a so-called optical context which is found in the visions of the Prophets. The inspired seer may perceive grouped together in the same vision events which are at times brought into juxtaposition, the logical connexion of which is not apparent. The so-called mental or verbal parallelism may aid the commentator in determining the precise sense in which the inspired writer employed his words. In case of verbal parallelism, or in the recurrence of the same literary expressions in different parts of the

christ., II, xi; cf. xvi) warns us that, "the knowledge of languages is the great remedy against unknown signs. Men of the Latin tongue need two others for a thorough knowledge of the Divine Scriptures, viz., the Hebrew and the Greek, so that recourse may be had to the older manuscript of the Divine Books which of the ancient translators occasions any doubt." Pope Leo XIII, in the Encyclical "Providentissimus Deus," agrees with the great African Doctor in urging the study of the sacred languages. "It is most proper," he writes, "that professors of Sacred Scripture and theologians should make such studies as will enable them to understand the sacred texts as the Sacred Books were originally written; and it would be well that church students also should cultivate them, more especially those who aspire to academic degrees. And endeavours should be made to establish in all academic institutions—as has already been laudably done in many—chairs of the ancient languages, especially the Semitic, and of other subjects connected therewith, for the benefit principally of those who are intended to profess sacred literature."

Nor can it be urged that for the Catholic interpreter the Vulgate is the key to the parable and can be understood by the Latin scholar. The pontiff considers this exception in the Encyclical already quoted: "Although the meaning of the Hebrew and Greek is substantially rendered by the Vulgate, nevertheless wherever there may be an alteration, modification, or augmentation of the older tongues, to quote St. Augustine, will be useful and advantageous." Recourse to the original text is considered the only scholarly approach to any great work of literature. A translation is never a perfect reproduction of the original; no language can fully express the thoughts conveyed in another tongue. A translator is capable of seizing the exact shades of all the truths contained in any work, and in case of Biblical versions, we have often good reason for doubt as to the genuineness of their renderings.

The Biblical language presents several difficulties peculiar to itself. First, the Bible is not written by one author, but presents in almost every book the style of a different writer. Secondly, the Bible was not written at a single period; the Old Testament covers the time between Moses and the last Old-Testament writer, i. e., more than one thousand years, so that many words have changed their meaning during this interval. Thirdly, the Biblical Greek is not the classical language of the Greek authors with whom we are acquainted; up to about fifteen centuries after the death of Jesus Christ when the New Testament Greek, they compiled New Testament lexicons, and wrote New Testament grammars. The discovery of the Egyptian papyri and other literary remains has broken down this wall of separation between the language of the New Testament and that of the time in which it was written; with regard to this point, our present time may be considered as a period of transition, leading up to the composition of lexicons and grammars that will rightly express the relation of the Biblical Greek to the Greek employed in profane writings. Fourthly, the Bible deals with the greatest variety of topics, requiring a corresponding variety of vocabulary; moreover, its expressions are often figurative, and therefore subject to more frequent changes of meaning than the language of profane writers. How are we to become acquainted with the Scriptural language in spite of the foregoing difficulties? St. Augustine (De doctr. christ., II, ix sqq.) suggests the continual reading of the Bible as the first remedy, so that we may acquire "a familiarity with the language of the Scriptures." He adds to this a careful comparing of the Bible text with the language of the ancient document, which he calculated to remove some of the native ambiguities of the original text. A third help is found, according to the same great Doctor, in the diligent reading of the works of the Fathers, since many of them formed their style by a constant reading
spired books, it is better to explain the language of Paul by that of Paul, the expressions of John by those of John, than to explain Paul by Matthew, and John by Luke. Again, it is more natural to explain an expression locally and verbally on the basis of parallel passages found in the same book than by a parallel passage taken from the Apocalypse. Finally, it should be kept in mind that parallelism of thought, or real parallelism, is a more reliable aid in finding the exact sense of a passage than a mere material recurrence of a sentence or a phrase.

(iii) Historical Setting.—The inspired writers connected with their words the ideas which they themselves possessed, and which they knew to be intelligible to their contemporaries. When they spoke of a king or a prophet, they believed all their contemporaries, just as the Jews did the Hebrew prophets, that their royal or prophetic predecessors were kings or prophets. If their contemporaries were accustomed, not a contrivance in use among the barbarians. In order to arrive at the precise sense of a passage, we must therefore bear in mind its historical setting, we must consult the testimony of history. The true sense of the Bible cannot be found in an idea or a thought historically untrue. The commentator must therefore be well acquainted with sacred history and sacred archaeology, in order to know, to a certain extent at least, the various customs, laws, habits, national prejudices, etc. under the influence of which the inspired texts were written. Other wise it will be impossible for him to understand the allusions, the metaphors, the language, and the style of the sacred writers. What has been said about the historic-grammatical interpretation of Scripture is synthetised, as it were, in the Encyclical already quoted: "The more our adversaries contend to the contrary, so much the more solicitously should we adhere to the received and approved canons of interpretation. Hence, while weighing the meanings of words, the connexion of ideas, the parallelisms of passages, and the whole spirit of the passages, we must make use of such illustrations as can be drawn from a separate erudition of an external sort."

(2) Catholic Interpretation.—Since the Church is the official custodian and interpreter of the Bible, her teaching concerning the Sacred Scriptures and their genuine sense must be the supreme guide of the commentator. The inferences which flow from this principle are partly negative, partly positive.

(i) Negative Directions. —The following directions are called negative not because they do not imply a positive result, but because they are not sufficient to positive results, but because they appear to emphasize at first sight the avoidance of certain methods of proceeding which would be legitimate in the exegeses of profane books. They are based on what the Church teaches concerning the sacred character of the Bible.

(a) Avoid Irreverence. —Since the Bible is God's own book, its study must be begun and prosecuted with a spirit of reverence and prayer. The Fathers insist on this in many passages. St. Athanasius calls the Scriptures the fountain that quickens our thirst for justice and supplies us with the doctrine of piety (Ep. fest. xxxixii); St. Augustine (C. Faust., XIII, xviii) wishes them to be read for a memorial of our faith, for the consolation of our hope, and for an exhortation to charity; Origen (Ep. ad Gregor. Neoces. c. iii) considers pious prayer as the most essential means for the understanding of the Divine Scriptures; but he wishes to see humility joined with prayer; St. Jerome (In Mich., I, x) agrees with St. Augustine (De doctr. christ., III, xxxvii) in regarding prayer as the principal aid of those who read or meditate on the Sacred Scriptures. We might add the words of other patriotic writers, if the alleged references were not clear and explicit enough to remove all doubt on the subject.

(b) No Error in Scripture. —Since God is the principal Author of Sacred Scripture, it can contain no error, no self-contradiction, nothing contrary to scientific or historical truth. The Encyclical "Providentissimus Deus" is most explicit in its statement of this prerogative of the Bible: "All the books which the Church receives as sacred and canonical, are written according to the dictates of the Holy Ghost; and so far is it from being possible that any error can coexist with inspiration, that inspiration not only is essentially incompatible with error, but excludes and rejects it as absolutely and necessarily, as it is impossible that God Himself, the Supreme Truth, can utter that which is not true." The Fathers agree with this teaching almost unanimously; we may refer the reader to St. Jerome (In Nah., I, iv), St. Ireneus (C. Thyr., II, xxviii), Clement of Alexandria (Strom., VII, vii), St. Augustine ("C. Men." II, iii, 26) in their interpretation of the Apocalypse. "Ad Hier.", ep. Ixxxii, 2, 22; "Ad Oros. c. Prise.", xi, St. Gregory the Great (Pref. in Job, n. 2). The great African Doctor suggests a simple and radical remedy against apparent errors in the Bible: "Either my code is wrong, or the translator has blundered, or I do not understand."

But inerrancy is not the prerogative of everything that happens to be found in the Bible; it is restricted to what the inspired writers state as their own, unless they quote the words of a speaker who is infallible in his own person but in a different capacity; unless he is a Divinely authorized speaker, whether angel or man (cf. Luke, i, 42, 67; ii, 25; II Mach., vii, 21), or again words regarded as having Divine authority either by Scripture (cf. I Cor., iii, 19; Gal., iv, 30) or by the Church (cf. St. Paul's Magnificat). Biblical words that do not fall under any of these classes carry merely the authority of the speaker, the weight of which must be studied from other sources. Here is the place to take notice of a decision issued by the Biblical Commission, 15 Feb., 1905, according to which certain Scriptural statements may be treated as quotations, though they appear on the surface to be the utterances of the inspired writer. But this can be done only when there is certain and independent proof that the inspired writer really quotes the words of another without intending to make them his own. Recent writers call such passages "tacit" or "implicit" citations.

The inerrancy of Scripture does not allow us to admit contradictions in its statements. This is understood of the genuine or primitive text of the Bible. Owing to textual corruptions, we must be prepared to meet with inconsistencies or apparent discrepancies in the MSS., in weightier matters such discrepancies have been avoided even in our present text. Discrepancies which may appear to obtain in matters of faith or morals should put the commentator on his guard that he may not make any Biblical expression take the same sense, that various passages may differ from each other as the complete statement of a doctrine differs from its incomplete expression, as a clear presentation differs from its obscure delineation. Thus "works" has one meaning in James, ii, 24, another in Rom., ii, 28; "brothers" denotes one kind of relationship in Matt., xii, 46, quite a different kind in most other passages; John, xiv, 28, and x, 30, Acts, viii, 12, and Matt., xxvii, 19, are respectively opposed to each other as a clear statement is opposed to an obscure one, as an explicit one to a mere implication. In apparent Biblical discrepancies found in historical passages, the commentator must distinguish between statements made by the inspired writer and those merely quoted by him (cf. I Kings, xxxi, 9, and II Kings, i, 6 sqq.), between a report accepted by the ear, and one formed and stated as the result of two singular incidents, between chronologies which begin with different starting-points, finally between a compendious and a detailed report of an event. Lastly, apparent discrepancies which occur in prophetic passages necessitate an investigation, whether the reason is the same as that stated from the Prophecy as Prophet (cf. II Kings, vii, 2-17).
whether they refer to the same or to similar subjects (the destruction of Jerusalem, e.g., and the end of the world), whether they consider their subject from the same point of view (as the inspired prophet, the inspired Messian), whether they use proper or figurative language. Thus the Prophet Nathan in his private capacity encourages David to build the Temple (II Kings, vii, 3), but as Prophet he foretells that Solomon will build the Temple of God (ibid. 15).

The inconstancy of Scripture extends also any contradiction between the Bible and the certain tenets of science. It cannot be supposed that the inspired writers should agree with all the various hypotheses which scientists assume to-day and reject to-morrow; but the commentator will be required to reconcile the teaching of the Bible with the scientific results which rest on solid proof. This rule is clearly laid down by the Encyclical in the words of St. Augustine: "Whatever they can really demonstrate to be true of physical nature, we must show to be capable of reconciliation with our Scriptures, and whatever they assert in their treatises which is contrary to these Scriptures of ours, that is to Catholic faith, we must either prove as well as we can to be entirely false, or at all events we must, without the smallest hesitation, believe it to be false, as the case when an eccentric asseter must also be careful "not to make rash assertions, or to assert what is not known as known" (St. Aug., in Gen. op. imperfect., ix, 30). The Encyclical appeals here again to the words of the great African Doctor (St. Augustine De Gen. et Hist. II, ix, xx): "The Holy Ghost who spoke by them [the inspired writers], did not intend to teach men these things [i.e., the essential nature of the things of the visible universe], things in no way profitable unto salvation." The pontiff continues: "Hence they ... described and dealt with things in more or less figurative language, or in terms which were commonly used at the time, and which in many instances are in daily use at this day, even by the most eminent men of science. Ordinary speech primarily and properly describes what comes under the senses; and somewhat in the same way, the sacred writers — as the Angelic Doctor reminds us (Summa, I, Q. lxx, a. 1, ad 3am) — "went by what visibly appeared," or put down what God, speaking to men, signified in a way men could understand and were accustomed to. In Gen., i, 18, e. g., the sun is described as having been created in the firmament of heaven, but Noah, x, 12, the sun is commanded to stand still; in Eccl., i, 5, the sun returns to its place; in Job, xxxvi, 11, the heavens are upheld by columns; in other passages the firmament appears solid and braced, and God rides on the winged chariot. Finally, the commentator must be prepared to deal with the seeming discrepancies between Biblical and profane history. The considerations to be kept in mind here are similar to those laid down in the preceding paragraph. First, not all statements on a given subject are of equal importance; some of these refer to subjects with which the writers were imperfectly acquainted, others proceed from party-feeling and national vanity, others again are based on imperfectly or only partially translated ancient documents. Secondly, the Bible does not ex profeaso teach profane history or chronology. These topics are treated only incidentally, in as far as they are connected with sacred subjects. Hence it would be wrong to regard Scripture as containing a complete course of history or chronology, as is sometimes claimed, as if the text of its historical portions were a suspection of the text. Thirdly, we must keep in mind the words of St. Jerome (in Jer., xxviii, 10): "Many things in Sacred Scripture are related according to the opinion of the time in which they are said to have happened, and not according to the opinion of history, or; and again (in Matt., xiv, 8): "According to the custom of Scripture, the historian relates the opinion concerning many things in accordance with the general belief at that time." Father Delattre maintains (Le Criterium à l'usage de la Nouvelle Exégèse Biblique, Liége, 1897) that according to St. Jerome and the Fathers, public opinion prevalent at the time of the events related, not the public opinion prevalent when the narrative was written. This distinction is of greater practical importance than it, at first, seems to be. For Father Delattre only grants that the inspired historian may write according to his visible appearances, while his opponents contend that he may follow also the so-called historic appearances. Finally, the first two decisions of the Biblical Commission must be mentioned in this connection. Some Catholic writers had attempted to remove certain historical difficulties from the sacred text either by considering the respective passages as tacit or implied quotations from other authors, for which the inspired writers did not in any way vouch; or by denying that the sacred writers vouch, in any way, for the historical accuracy of the facts they narrate, since they use these apparent facts merely as pegs on which to hang some moral teaching. The Biblical Commission rejected these two methods by decrees issued respectively 13 Feb. and 23 June, 1905, adding, however, that either of them may be admitted that can be admitted in cases where the teaching, truth and judgment of the Church, it can be proved by solid argument that the sacred writer either really quoted the sayings or documents of another without speaking in his own name, or did not really intend to write history, but only to remove certain historical, or allegory, or another non-historical literary concept.

(ii) Positive Directions. — St. Irenæus represents the teaching of the early Church, when he writes that the truth is to be learned where the charismata of God are, and that Holy Scripture is safely interpreted by those who have the Apostolic succession (Adv. her., IV, xxvi, 5). Vincent of Lérins appears to sum up the teaching of the Fathers on this subject when he writes that on account of the great intracacies of various errors it is necessary that the line of Prophetic and Apostolic interpretation be directed according to the rule of ecclesiastical and Catholic teaching. The Vatican Council emphasizes the decree of the Council of Trent (Sess. IV, De edit. et usu sacr. libr.) when it teaches (Constitut. de fide cathol., c. ii) that "in things of faith and morals belonging to the building up of the Church, the Christian doctrine either of the Old or of the New Testament must be understood in such a sense of Holy Scripture which has been held and is held by our Holy Mother the Church, whose place it is to judge of the true sense and interpretation of the Scriptures; and therefore that it is permitted to no one to interpret them otherwise than in such sense also against the unanimous agreement of the Fathers". Hence follow the following principles.

(a) Defined Texts. — The Catholic commentator is bound to adhere to the interpretation of texts which the Church has defined either expressly or implicitly. The number of these texts is small, so that the commentator can easily avoid any transgression of this principle. The Council of Trent teaches that Rom., v, 12, refers to original sin (Sess. V, c. ii, iv), that John, iii, 5, teaches the absolute necessity of the baptism of water (Sess. V, c. iv; Sess. VII, De bapt., c. ii), that Matt., xxvi, 26 sq. is to be understood in the proper sense (Sess. XIII, cap. i); the Vatican Council gives a direct definition of the texts, Matt., xvi, 16 sqq. and John, xxi, 15 sqq. Many more Scripture texts are indirectly defined by the definition of certain dogmas and the condemnation of interpretations of the Council of Nicaea, e. g., showed how those passages ought to be interpreted on which the Arians relied in their contention that the Word was a creature; the Fifth Ecumenical Council (II Constantinople) teaches the right attitude of modern exegesis toward the interpretation of Theodore of Mopsuestia.

(b) Patristic Interpretation. — Pope Leo XIII. in n.
Exegesis

Encyclical "Providentissimus Deus", repeats the principles concerning the authority of the Fathers laid down by the Council of Trent. The Holy Fathers, 'to whom, after the Apostles, the Church owes its growth—who have planted, watered, built, governed, and cherished it' (Aug., C. Julian., II, x, 37)—the Holy Fathers, we say, are of supreme authority whenever they all interpret in one and the same manner any text of the Bible, as pertaining to the doctrine of faith or morals; for their unanimity clearly evinces that such interpretation has come down from the Apostles as a matter of Catholic faith. "

Three conditions are, therefore, required in order that the teaching of the Holy Fathers may be acceptable: firstly, they must interpret texts referring to matters of faith or morals; secondly, they must speak as witnesses of Catholic tradition, not merely as private theologians; thirdly, there must be a moral unanimity in their interpretation. This unanimity is not destroyed by the silence of some of the foremost Fathers, and is sufficiently guaranteed by the consentient voice of the principal patristic writers living at any critical period, or by the agreement of commentators living at various times. The works of the Holy Fathers openly deny the correctness of the interpretation given by the others, or if they explain the passage in such a way as to render impossible the explanation given by others. But the Encyclical warns us to treat the opinion of the Fathers with reverence, even if the teaching of the Church itself is not known. "The opinion of the holy pontiff," is also of very great weight when they treat of these matters in their capacity of doctors, unofficially; not only because they excel in their knowledge of revealed doctrine and in its acquaintance with many things which are useful in understanding the Apostolic books, but because they are men of eminent sanctity and of ardent zeal for the truth, on whom God has bestowed a more ample measure of his light."

(c) The Analogy of Faith.—Here again the Encyclical "Providentissimus Deus" is our guide: "In the other passages", it reads, "the analogy of faith should be followed, and Catholic doctrine, as authoritatively proposed by the Church, should be held as the supreme law; for, seeing that the same God is the author both of the Sacred Books and of the divine commands, the Church, it is clearly impossible that any teaching can by legitimate means be extracted from the former, which shall in any respect be at variance with the latter." This principle has a double influence on the interpretation of Scripture; a negative and a positive influence. Where it is not possible to assign to Scripture a statement contrary to the teaching of the Church; on the other hand, the agreement of an explanation with the doctrine of the Church does not prove its correctness, since more than one explanation may agree with the ecclesiastical teaching. Secondly, the Catholic interpreter must explain the obscure and partial teaching of the Scriptures by the clear and complete teaching of the Church; the passages, e.g., which refer to the Divine and human nature of Christ, and to the power of binding and loosing, find their explanation and their complement in Catholic tradition and the conciliar definitions. And here we must keep in mind what the Encyclical adds concerning doctrine which comes down to us in a less authoritative channel: "The authority of other Catholic interpreters is not so great; but the study of Scripture has always continued to advance in the Church, and, therefore, these commentaries also have their own honourable place, and are serviceable in many ways for the refutation of assailants and the explanation of difficulties." III. Sacred Rhetoric.—The genuine teaching of Scripture students express their results in writing so as to share their light with as many as possible. Sixtus Senensis [Bibliotheca sancta] (Venice, 1575), I, pp. 275 sqq.; enumerates twenty-four various forms in which such Scripture expositions may be expressed. But some of these methods are no longer in use; others may be reduced to fewer and more general heads. According to the end which the writer has in view, they may be divided into theoretical and practical or historic-exegetical and moral treatises; concerning the persons for whom they were written, they are either popular or learned expositions; but if their literary form be made the basis of division, which is the common and more rational principle of division, there are three kinds of Biblical exegesis: the version, the paraphrase, the gloss and scholiion, the dissertation, and the commentary.

(1) The Version.—The version is the translation of the Bible from one language into another, especially from its original into the vernacular language. A version made directly from the original text is called immediate, while it is mediate if it be based directly on another version. It is verbal if it renders the very words; in case it renders the meaning rather than the words, it is a free version. A good version must be both literal and free. More absolutely the version will be if it is without any alteration; it must reproduce the literary form, whether it be prosaic or poetic, figurative or proper; and it must be easily intelligible, as far as the character of the two languages in question permits this. This shows the difficulty of making a good version, as well as the great advantage of knowledge of the two languages, but also an accurate insight into the genuine meaning of Sacred Scripture.

(2) The Paraphrase.—The paraphrase expresses the genuine sense of Scripture in continuous and more expansive form. The version removes the difficulties which arise from the fact that the Bible is written in a foreign language; the paraphrase elucidates the difficulties of thought. For it supplies the transitions and middle terms omitted by the author; it changes the foreign and involved phraseology of the original into idiomatic sentences; it amplifies the brief statements of the original by adding definitions, indicating causes and reasons, and illustrating the text by reference to parallel passages. A good paraphrase must render the thought of the original most accurately, and must at the same time be lucid and clear; there is danger, in this form of exposition, of rendering obscure what has been clearly said in the original text.

(3) The Gloss and Scholion.—The version removes from the Scripture text the difficulties connected with the foreign language, the paraphrase elucidates the difficulties connected with the Bible, which must be removed by means of notes. One kind of brief notes, called glosses, explains the difficulties connected with the words; another kind, called scholi, deals with variant readings, verbal difficulties, unknown persons, countries, and things, and with the connexion of thought. Two celebrated series of glosses deserve special mention: the glossa ordinaria by Walafred Strabo, and the glossa interlinearis by Ansem of Lzon.

(4) The Distinction.—Origin, Eusebius, and St. Jerome were asked by the contemporaries concerning certain difficult texts of Scripture; a similar need of special elucidations of particular passages has been felt by the faithful of all ages. The answers to such questions we may call dissertations or treatises. It is understood that only really important texts ought to be made the subject of such scholarly explanations. In order to satisfy the inquisitive reader, the essayist should examine the text critically; he should state his various explanations given by other writers and weigh them in the light of the principles of hermeneutics; finally, he should set forth the true solution of the difficulty, prove it by solid arguments, and defend it against the principal exceptions.

(5) The Commentary.—The commentary is a continu-
uous, full, learned, well-reasoned, and complete explanation, touching upon not merely the more difficult passages, but everything that stands in need of elucidation. Hence the commentator must discuss all the variants, state and prove the genuine sense of the book, and all the points in physical, geographical, historical, ethnical information, and indicate the sources whence it is drawn, harmonise the single sentences with each other and with the scope of the entire book, consider its apparent contradictions, and explain the sense in which its quotations from the Old Testament must be understood. With a view of securing an orderly exposition, the author should premise the various historico-critical studies belonging to the whole book; he should divide and subdivide the book into its principal and subordinate parts, clearly stating the special subject of each; he should, finally, arrange the various opinions concerning disputed questions in a neatly distributed list, so as to lighten the work of the reader. What has been said sufficiently shows the qualities which a well-written commentary ought to possess; it must be faithful in preserving the genuine sense of Scripture; it must be clear, complete, and brief; and it ought to show the private work of the commentator by the light it throws on the more complicated questions. The commentaries which consist of mere lists of the patriarchs and the successive texts of Scripture are called catena (q.v.).

Perhaps the homily may be added to the foregoing methods of Biblical exposition. It is written in a popular way, and is of a practical tendency. It is not concerned with the subtle and more difficult questions of Scripture, but explains the words of a Biblical section in the order in which they occur. A more elevated kind of homily seizes the fundamental idea of a Scriptural section, and considers the rest in relation to it. The Church has always encouraged such homiletic literature; the fathers have left a great number of them in their writings.

IV. HISTORY OF EXEGESIS.—The history of exegesis shows its first beginnings, its growth, its decay, and its restoration. It points out the methods which may be safely recommended, and warns against those which rather corrupt than explain the Sacred Scriptures. In general, we may distinguish between Jewish and Christian exegesis.

(1) Jewish Exegesis.—The Jewish interpretation of the Scriptures began almost at the time of Moses, as most interpreters is to be found in the four recent canonical and the apocryphal books. But in their method of interpretation the Palestinian Jews differed from the Hellenistic.

(1) Palestinian Exegesis.—All Jewish interpreters agree in admitting a double sense of Scripture, a literal and a mystical, though we must not understand these terms in their strictly technical sense.

(a) The literal exposition is mainly represented by the so-called Chaldean paraprases or Targumim, which came into use after the Captivity, because few of the returning exiles understood the reading of the Sacred Books in their original Hebrew. The first place among these paraprases must be given to the Targum Onkelos, which appears to have been in use as early as the first century after Christ, though it attained its present form only about A.D. 300-400. It explains the Pentateuch, adhering in its historical and legal parts to a Hebrew text which is, at times, nearer to the original of the Septuagint than the Massoretic, but straying in the prothetic and poetical portions so far from the original as to leave it hardly recognisable.

Another paraphrase of the Pentateuch is the Targum Pseudo-Jonathan, or the Jerusalem Targum. Written after the seventh century of our era, it is valueless both from a critical and an exegetical point of view, since its explanations are wholly arbitrary.—The Targum Jonathan, or the paraphrase of the Prophets, began to be written in the first century, at Jerusalem; but it owes its present form to the Jerusalem rabbis of the fourth century. The historical books are a fairly faithful translation from the original text; in the poetical portions and the later Prophets, the paraphrase often presents fiction rather than truth. The paraphrase of the Prophets, the Lamentations, Books of Job, the Psalms, the Canticle of Canticles, Proverbs, Ruth, the Lamentations, Ecclesiastes, Esther, and Paralipomena. It was not written before the seventh century, and is so rapturously and rabbinic fiction that it is hardly deservedly the most serious interpreter. The notes on Cant., Ruth, Lam., Eccles., and Esth. rest on public tradition; those on the other Hagiographa express the opinions of one or more private teachers; the paraphrase of Par. is the most recent and the least reliable.

(b) The method of arguing employed in the First Gospel and the Epistle to the Hebrews shows that the Jews before the coming of Christ admitted a mystical sense of Scripture; the same may be inferred from the letter of Pseudo-Aristeus and the fragment of Aristotheles. The Church, however, was not satisfied with this sense, and taught the Antiochenes to derive their explanations from the Law by way of the most extraordinary contortions of its real meaning. The mystical interpretation of Scripture practised by the Jewish scholars, who lived after the time of Christ, may be reduced to the following system.

(2) The Talmudists ascribed to every text several thousand legitimate meanings belonging either to the Halakah or the Haggadah. The Halakah contained the legal inferences derived from the Mosaic Law, all of which the Talmudists ascribed to Moses himself; the Haggadah was the collection of all the material gathered by the Talmudists from history, archaeology, geography, grammar, and other extra-Scriptural sources, not excluding the most fictitious ones. In their commentaries, these writers distinguished a twofold sense, the proper, or primitive, and the derivative. The former was subdivided into the plain and the reread; the latter, into logical deductions, and inferences based on the way in which the Hebrew words were written or on association of ideas. As to the hermeneutical rules followed by the Talmudists, they were reduced to seven by Hillel, to thirteen by Ismael, and to thirty-two by R. Jose of Galilee. In substance, many of these principles do not differ from those prevalent in our day. The interpreter is to be guided by the species of the text, of what is clear to what is obscure, of verbal and real parallelisms to their respective counterparts, of the example to the exemplified, of what is logically coherent to what appears to be contradictory, of the scope of the writer to his literary production. The commentaries written according to these principles are called Midrashim (plural of Midrash); the following must be mentioned: Mekhillah (measure, rule, law) explains Ex. i, 1-23, 30; xxxi, 12-17; xxxv, 1-4, and is variously assigned to the second or third century B.C. or even more recent times; it gives the Halakah of the ceremonial rites and laws, but contains also material belonging to the Haggadah.—Siphra explains the Book of Leviticus; Siphri, the Books of Numbers and Deuteronomy; Pesiqta, the Sabbathian sections; Rabboth (plural of Rabboha) is a series of Midrashim explaining the single books of the Pentateuch and the five Megillot or the five Hagiographa which were read in the synagogues; the allegorical, anagogical, and moral sense is preferred to the literal, and the fables and sayings of the rabbis are highly valued.—Yalkuth is the first continuous commentary on the Pentateuch; it contains some valuable traditions, especially of Palestinian origin.—Yalqut Simoni contains annotations on all the books of the Old Testament.

(5) The Caritas are related to the Talmud-
istes, as the Sadducees were related to the Pharisees. They rejected the Talmudic traditions, just as the Sadducees rejected the oral tradition and authority of the Pharisaic teaching (cf. Joseph. Ant., XVIII, 6. 6). The Caraites derive their origin from Anan, born about A. D. 700, who founded this sect out of spite, because he had not obtained the headship of the Jews outside Palestine. From Baghdad, the place of its birth, the sect spread gradually to Palestine, and especially to the Crimea, so that about A. D. 750 it occasioned what is practically a schism among the Jews. The Caraites reject all tradition, and admit only the Mosaic Law. By means of Ismael's thirteen hermeneutical rules, they explain the literal sense of Scripture, and they supplement by means of the syllogism and the consensus of the Synagogue. Owing to their rejection of authentic interpretation and their claim of private judgment, they have been called by some writers "Jewish Protestants".

(ii) Hellenistic Exegesis.—Generally speaking, the Alexandrian Jews were favourable to the allegorical explanation of Scripture, thus endeavouring to harmonize the inspired records with the principles of Greek philosophy. Eusebius has preserved specimens of the exegesis of the dogmas of the Tritobulus (Hist. Eccles., VII, xxxii; Prepar. evang., VIII, x) and in the letter of Pseudo-Aristes (Prepar. evang., VIII, ix), both of whom wrote in the second century B.C. Philo attests that the Essenes adhered to this, and this principle is repeated by Josephus (Ant., xii, 181); but Philo (died A. D. 30) himself is the principal representative of this manner of interpretation. According to Philo, Abraham symbolizes virtue acquired by doctrine; Isaac, inborn virtue; Jacob, virtue acquired by practice and meditation; Egypt denotes the body; Chanaan, piety; the dove, Divina wisdom, etc. (De Abraham, ii).

The Cabalists exceeded the preceding interpreters in their allegorical explanation of Scripture. Traces of their system are found in the last pre-Christian centuries, but its full development did not take place till the end of the first millennium of the Christian Era. In accordance with their name, from a word meaning "to receive", the Cabalists claimed to possess a secret doctrine received by way of tradition from Moses, to whom it had been revealed on Mount Sinai. They maintained that all earthly things had their heavenly prototypes or ideals; they believed that the literal sense of Scripture included the allegorical sense, as the body includes the soul, though only the initiated could reach this veiled meaning. Three methods helped to attain this, namely: to take the literal value of the letters which make up a word or an expression and derive the hidden meaning from the resultant number; Notaricon forms new entire words out of the single letters of a word, or it forms a word out of the initial letters of the several words of a phrase; Temura consists in the transposition of the letters which make up a word, or in the systematic substitution of other letters. Thus they transverse the consonants of mal'akh (my angel; Ex. xxiii, 23) into Mishk'al (Michael). There is a twofold system of substitution: the first, Anbash, substitutes the last letter of the alphabet for the first, the second last for the second, etc.; the second system substitutes the letters of the second half of the alphabet for the corresponding letters of the first half. The Cabalistic doctrine has been gathered in two principal books, one of which is called "Yeqar"., the other "Zohar".

We may add the names of the more prominent Jewish commentators: Saadya Gaon (b. 892; d. 942), in the Fayyum, Egypt, translated the whole of the Old Testament into Arabic and wrote commentaries on the same.—Moses ben Samuel Ibn Chigilella, of Cordova, explained the whole of the Old Testament in Arabic, between A. D. 1050 and 1080; only fragments of his work remain.—Rabbi Solomon ben Isaac, known also under the names Raabi and Yarchi (b. about 1040, at Troyes; d. 1106), explained the whole of the Old Testament, conforming to the authority of the Pharisaic teaching, though he did not neglect the allegorical; he shows an anti-Christian tendency.—Rabbi Abraham ibn Ezra, often called Aben Ezra (b. about 1093 at Toledo, Spain; d. 1167 on the Island of Rhodes). Among his many other works he left an incomplete commentary on the whole of Old Testament; he renders the literal sense faithfully without excluding the allegorical, e.g. in Cant.—Rabbi David Kimchi, called also Radak (b. 1170 at Narbonne; d. 1230), explained nearly all the books of the Old Testament in this sense, but without excluding the spiritual; his anti-Christian feeling shows itself in his treatment of the Messianic prophecies.—Rabbi Moses ben Maimon, commonly called Maimonides or Ramban (b. 1135 at Cordova, Spain; d. 1204 in Egypt), became a convert to Mohammedanism in order to escape persecution, then fled to Egypt, where he lived as a Jew, and where, for the guidance of those who could not harmonize their philosophical principles with the teaching of Sacred Scripture, he wrote his celebrated "Guide of the Perplexed", a work in which he presents the arguments of the different schools of the church. He explained the Psalms, and Daniel, adding often irrelevant matter and arguments against Christian revelation.—Rabbi Elias Levita (b. 1270, d. 1329), a great exponent of Jewish grammarians, and as the author of the work "Tradition of Tradition", in which he gives the history of Massoretic criticism.—Among the Caraita interpreters we must mention: Rabbi Jacob ben Ruben (twelfth century), who wrote brief scholia on all the books of Scripture; Rabbi Aaron ben Joseph (d. 1294), author of a literal commentary on the Pentateuch, the earlier Prophets, Psalms, and the Book of Job; Rabbi Aaron ben Elia (fourteenth century), who explained the Pentateuch.—Among the Cabalists, Rabbi Moses Nachmanides, also known as Ramban (d. about 1280), deserves mention on account of his explanation of the Pentateuch, which is several times quoted by Paul of Burgos.—The principal Jewish commentaries have been reprinted in the so-called Rabbinic Bibles which appeared at Venice, 1517; Amsterdam, 1545, 1595, 1617; Bâle, 1618; Amsterdam, 1724.

(2) Christian Exegesis.—For the sake of clearness we may distinguish three great periods in Christian exegesis: the first ends about A. D. 604; the second begins about 800, and embraces the time after the Council of Trent.

(i) The Patristic Period.—The patristic period embraces three distinct classes of exegeses, the Apostolic and apologetical writers, the Greek Fathers, the Latin Fathers. The amount of exegetical literature produced by these three classes varies greatly; but its character is so distinctively proper to each of the three classes that we can hardly consider them under the same heading.

(a) The Apostolic Fathers and Apologists.—The early Christians made use of the Scriptures in their religious meetings as the Jews employed them in the synagogue, adding however the writings of the New Testament more or less completely to those of the Old. The Apostolic Fathers did not write any professional commentaries; their use of Scripture was incidental, and casual rather than technical, but their citations and allusions show unmistakably their acceptance of some of the New Testament writings. Neither do we find among the apologists' writings of the second century any professional treatises on Sacred Scripture.

Justin Martyr, S. 8, of controversy, noted for his able defence of Christianity, and their arguments are often based on texts of Scripture. St. Hippolytus appears to have been the first Christian theologian who at-
tempted an explanation of the whole of Scripture; his method we learn from the remaining fragments of his works not to be admitted in the literal or tertium, and may be said in general that these earliest Christian writers admitted both the literal and the allegorical sense of Scripture. The latter sense appears to have been favoured by St. Clement of Rome, Barnabas, St. Justin, St. Irenæus, while the literal seems to prevail (d. 207). Theological opinion up to the Clementine Recognitions, and among the Gnostics.

(b) The Greek Fathers.—The Encyclical “Providentissimus Deus” refers mainly to the Greek Fathers when it says: “When there arose, in various seers, called the fathers, and the divine intellect was received, the most celebrated were those of Alexandria and of Antioch, there was little taught in those schools but what was contained in the reading, the interpretation, and the defence of the Divine written word. From them came forth numbers of Fathers and writers whose laborsious studies and admirable writings have justly merited for the three following centuries the appellation of the golden age of Biblical exegesis.”

(e) The School of Alexandria.—Tradition loves to trace the origin of the Alexandrian School back to the Evangelist, St. Mark, who is said to have died at Alexandria at the end of the second century when we first find St. Pantaenus president of the school; none of his writings are extant, but Eusebius (Hist. Eccl., V, x) and St. Jerome (De vir. ill., c. xxxvi) testify that he explained Sacred Scripture. St. Origen (d. 253), St. Dionysius (d. 256), who did not write any book (Strom., I, i), he died before 200. His successor was Clement of Alexandria, who had first been his disciple, and after 190 his colleague. Of his writings are extant “Cohortatio ad Gentiles”, “Pseudagogus”, and “Stromata”; also the Latin translation of part of his eight exegetical books (Migne, P. G., IX, 729–740). Clement was followed by Origen (b. 185; d. 254), the principal glory of the whole school. Among his works, the greater part of which is lost, his “Hexapla” and his threefold explanation of Scripture, by way of scholas, homilies, and commentaries, deserve special notice. It was Origen, too, who fully developed the hermeneutical principles which distinguish the Alexandrian School, though they are not applied in their entirety by any other Father. He applied Plato’s distinction of body, soul, and spirit to the Scriptures, adopitng therein a literal, a moral, and a mystical or spiritual sense. Not that the whole of Scripture has this triple sense. In some parts the literal sense may be neglected, in others the allegorical may be lacking, while in others again the three senses may be combined, and from the discrepancies of the Evangelists can be explained only by means of the spiritual sense, that the whole ceremonial and ritual law must be explained mystically, and that all the prophetic utterances about Judges, Jerusalem, Israel, etc., are to be referred to the kingdom of Heaven and its citizens, to the good and bad angels, etc. Among the eminent writers of the Alexandrian School must be classed Julius Africanus (c. 215), St. Dionysius the Great (d. 265), St. Gregory Thaumaturgus (d. 270), Eusebius of Cesarea (d. 340), St. Athanasius (d. 373), Didymus of Alexandria (d. 397), St. Epiphanius (d. 403), St. Cyril of Alexandria (d. 444), and finally also the celebrated Cappadocian Fathers, St. Basil the Great (d. 379), St. Gregory Nazianzen (d. 389), and St. Gregory of Nyssa (d. 394). The last three, however, have many points in common with the School of Antioch.

(b) The School of Antioch.—The Fathers of Antioch adhered to hermeneutical principles which insist more on the so-called grammatico-historical sense of the Sacred Books than on their moral and allegorical meaning. It is true that Theodore of Mopsuestia urged the literal sense to the detriment of the typical, believing that the New Testament applies some of the propheticies to the Messiahs only by way of accommodation, and that on account of their allegories the Canticles of Canace, together with a few other books, should not be admitted in the canon. Generally speaking, the Fathers of Antioch and Eastern Syria, the latter of whom formed the School of Nisibis or Edessa, steered a course midway between Origen and Theodore, avoiding the excesses of both and, thus laying the foundation of the hermeneutical principles which the Catholic exegese ought to follow. The principal representatives of the School of Antioch are St. John Chrysostom (d. 407); Theodore of Mopsuestia (d. 429), condemned by the Fifth Ecumenical Synod on account of his explanation of Job and the Canticle of Canticles, and most probably repeated by Nestorius; St. Isidore of Pelusium, in Egypt (d. 434), numbered among the Antiochene commentators on account of his Biblical explanations inserted in about two thousand of his letters; Theodoret, Bishop of Cyrus in Syria (d. 458), known for his Questions on the Oecateuch, the Books of Kings and Par., and for his Commentaries on the Psalms, the Cant., the Prophets, and the Epistles of St. Paul. The School of Edessa glorifies in the names of Aphraates who flourished in the first half of the fourth century, St. Ephraem (d. 373), Cyril, Cyrilicon, Baleus, under which name it is known, at the end of the second century we find St. Athanase (d. 377), Dionysus (d. 382), Theodoret (d. 401), St. Jerome (d. 420), St. Augustine (d. 430), Primasius (d. 550), Cassiodorus (d. 562), St. Gregory the Great (d. 604). St. Hilary, St. Ambrose, and St. Augustine depend, to a certain extent, on Origen, and the Alexandrian School; St. Jerome and St. Augustine are the two great lights of the Latin Church on whom depend most of the Latin writers of the Middle Ages; at the end of the works of St. Ambrose is inserted a commentary on the Pauline Epistles which is now ascribed to St. Ambrose or Ambrosiaster.

(i) Second Period of Exegesis, a. d. 604–1546.—We consider the following nine centuries as one period of exegesis, not on account of their uniform productive-ness or barrenness in the field of Biblical study, nor on account of their uniform tendency of developing any particular branch of exegesis, but rather on account of their characteristic dependence on the work of the Fathers. Whether they synthesized or amplified, whether they analyzed or derived new conclusions from the principles or methods adopted by the Fathers or not, the Fathers is the only point of departure and of comparison. Though during this period the labours of the Greek writers can in no way compare with those of the Latin, still it will be found convenient to consider them apart.

(a) The Greek Writers.—The Greek writers who lived between the sixth and the thirteenth centuries composed partly commentaries, partly compilations. The Bishops of Cesarea, Andreas and Arathas, who are variously assigned to the sixth and sixth, or to the eighth and ninth centuries, explained the Apocalypse; Procopius of Gaza (524) wrote on the Octateuch, Is., and Prov.; Hesychius of Jerusalem wrote probably about the end of the sixth century on Lev., Psa., Is., the Minor Prophets, and the concordance of the Gospels; Anastasius Sinaita (d. 599) left twelve books of allegorical commentaries on the hexameron; Olympius (d. 620) and St. Macarius (d. 662) left more sober explanations than Anastasius, though they are not free from allegorism; St. John Damascene (d. 760) has many Scriptural explanations in his dogmatic and polenial works, besides writing a commentary on the Pauline Epistles, he has also written a commentary on the Epistle to the Hebrews, and St. Cyril of Alexandria, but especially St. Chrysostom. Phoebus (d. 891), Eucumenius (tenth century), Theophylactus (d. 1107), and Euthymius (d. 1118) were
adherents of the Greek Schism, but their exegetical works deserve attention. The above-named compilations are technicallly called catenas. They furnish continuous explanations of various books of Scripture in such a way that they give after each text the various patristic explanations either in full or by way of a summary, usually adding the name of the particular Father whose opinion they transcribed. Several of these catenae have been printed, such as Nephorus, on the Octateuch (Leipsig, 1772); B. Corderius, on the Ps. (Antwerp, 1645-1646); A. Schottius, on Prov. (Lyons, 1651); Angius Mai, on Gen. (Rome, 1651); and S. Clemen, on the New Testament (Oxford, 1638-1640).

(b) The Latin Writers. The Latin writers of this epoch may be divided into two classes: the pre-Scholastic and the Scholastic. The two are not of equal importance, but they are too different to be treated under the same heading.

(a) The Pre-Scholastic Period. Among the many writers of this age who were instrumental in spreading the Biblical expositions of the Fathers, the following are deserving of notice: St. Isidore of Seville (d. 636), the author of Etymologiae (d. 773); Albertus Magnus, Bishop of Halberstadt (d. 855), Rhabanus Maurus (d. 856), Walafrid Strabo (d. 849), who compiled the glossa ordinaria, Anselm of Laon (d. 1117), author of the glossa interlinearis, Rupert of Deutz (d. 1135), Hugh of St. Victor (d. 1141), Peter Abelard (d. 1142), and St. Thomas Aquinas (d. 1274). The writings of these great men will be found under their respective names.

(b) The Scholastics. Without drawing a mathematical line of distinction between the writers of this period, we may say that the works which appeared in its beginning are remarkable for their logical and theological explanations; the subsequent works showed more philological erudition; and the final ones began to offer material for textual criticism. The first of these groups of writings coincides with the so-called golden age of scholastic theology which prevailed about the thirteenth century. Its principal representatives are so well known that we need only mention their names. Peter Lombard rightly heads the list (d. 1164), for he appears to be the first who fully introduced into his exegetical work the scholastic divisions, distinctions, definitions, and method of argumentation. Next follow Card. Stephen Langton (d. 1228), author of the chapter-divisions as they exist today in our Bibles; Card. Hugh of Saint-Cher (d. 1260), author of the Dominica Contacto and Briefes Storiae, and one of the first Biblical concordances; Blessed Albertus Magnus (d. 1280); St. Thomas Aquinas (d. 1274); St. Bonaventure (d. 1274); Raimondo Martini (d. 1290); who wrote the polemical work known as Fugio Fidelis against the Moors and Jews; a number of other names might be added, but they are of less importance. In 1311 Pope Clement V ordained, in the Council of Vienne, that chairs of the Oriental languages were to be erected in the principal universities, so that the Jews and Mohammedans might be refuted from their own sources. The philosophy and logic contained in many of these works may be seen in the celebrated Postilla of Nicholas of Lyra (d. 1340), a work which received notable additions by Paul of Burgos (d. 1435). Alphonso Tostatus, called also Abulensis (d. 1455), and Denys the Carthusian (d. 1471), returned to the more scholastic method of interpretation; Laurens Valla (d. 1457) applied the results of his Greek studies to the explanation of the New Testament, though he is unduly opposed to the Latin Vulgate. Not to insist on the less illustrious exegeses of this period, we may pass on to those who applied to Scripture merely their philosophical erudition, but also their acumen for textual criticism in its inceptive state. Aug. Justinius edited an Octapla of the Psalter (Genoa, 1518); Card. Ximenes finished his Complutensian Polyglot (1517); Erasmus published the first edition of his Greek New Testament (1517); Card. Cajetan (d. 1535) attempted an explanation of the Scriptures according to the original texts; Santes Pagninus (d. 1541) translated the Old and the New Testament anew from their original texts; a number of other scholars worked in the same field, publishing either new translations, or scholia, or commentaries, the whole being gathered on one or more books of the Sacred Scriptures.

(iii) Third Period of Exegesis. A few decades before the Council of Trent, Protestantism began to make its inroads into various parts of the Church, and the results are felt in the field of dogmatic theology, but also in Biblical literature. We shall, therefore, have to distinguish after this between Catholic and Protestant exegeses.

(a) Catholic Exegetes. Catholic exegesis subsequent to the Council of Trent may be divided into three stages: the first may be regarded as the terminus of the Scholastic period; the second forms the transition from the old to the new exegesis; and the third comprises the exegetical work of recent times. The first stage begins about the time of the Council of Trent, 1545-1547; the second extends down to the beginning of the nineteenth century; and the third deals with our own times.

(b) The Golden Age of Catholic Exegesis, 1546-1660. We have spoken above of the golden age of Christian exegesis, as distinct from the exegesis of the scholastics: the writings of the Thomists form the golden age of Catholic exegesis, as distinct from the Biblical work done by Protestants. During this period more than 350 Catholic writers were engaged in Biblical study; we can only classify the work done, and indicate some of the principal writers engaged in it. The revised Clementine edition of the Vulgate appeared in 1592; the Antwerp Polyglot, in the years 1569-1572; the Paris Polyglot, in the years 1569-1545. The introductory questions were treated by Sixtus Senecensis (d. 1549), Christ. Adrichomius (d. 1583), Flaminius Nobilius (d. 1590), Ben. Aria Monatus (d. 1598), Petrus Morinus (d. 1608), Lucas Brugensis (d. 1619), de Tena (d. 1622), Joannes Morinus (d. 1653), and Franc. Quaresmius (d. 1660). All or most of the books of Scripture were interpreted by Gaet (d. 1626), Mairiana (d. 1624), Titeius (d. 1636), a Lepide (d. 1637), Gordon (d. 1641), Menochius (d. 1655), de la Haye (d. 1661). Select books of both the Old and the New Testament were commented upon by Januarius Gandavesius (d. 1575), Maldonatus (d. 1583), Walch (d. 1590), J. P. de Cesarea (d. 1634). Certain books of the Old Testament were explained by Andreas Mabius (d. 1573), Forerius (d. 1681), Pradus (d. 1695), Villalpandus (d. 1688), Genebrardus (d. 1697), Agellius (d. 1608), Pererius (d. 1610), Card. Bellarmin (d. 1621), Sanctius (d. 1665), Malvar (d. 1629), de Finis (d. 1637), de Sambuy (d. 1642), de Muis (d. 1644), Ghislarius (d. 1646), de Salaasar (d. 1646), and Corderius (d. 1655). Finally, all or part of the books of the New Testament found interpreters in Salmeron (d. 1558), Card. Toletus (d. 1596), and Ludwig (d. 1646). As a result, a rich literature was written which was well illustrated and critical, and which had a considerable influence on the later development of Biblical exegesis.

(b) The Transition Period, 1660-1800. During this period, historical studies were more cultivated than scholastic. It is here that we meet with the father of the historical and critical introduction, Richard Simon (d. 1712). Fræsen (d. 1711) adopts more of the scholastic method, but there is a return to the historical method in some works, as that of Daniel Huet (d. 1721), and Nat. Alexander (d. 1722). The bibliography of exegesis was treated by Bartocci (d. 1687), Imbonatus (d. 1694), Dupin (d. 1719), Lelong (d. 1721), and Desnolets (d. 1790). Old documents belonging to Scriptural studies were edited by
B. de Montfaucon (d. 1741), P. Sabatier (d. 1742), and J.-J. Blanchinus (d. 1764), while Calmet (d. 1757) and Bossuet (d. 1704) are noted for their exegetical work. Buker (d. 1710) has recourse to the original texts in order to explain doubtful or obscure readings of the Vulgate, and is noted for this period with the preceding, one is struck with its poverty in great Biblical scholars; but textual criticism is fairly well represented by Houbigant (d. 1784) and de Rossi (d. 1831).

(3) Recent Times.—The perturbed state of the Church at the beginning of the nineteenth century interfered with the peaceful pursuance of any kind of ecclesiastical study. After peace had returned, the study of Sacred Scripture flourished more lustily than ever. In three respects, the modern commentary surpasses that of any past age: First, the interpreter attends in our times not merely to the immediate context of a phrase or a verse, but to the whole literary form of the book, and to the purpose for which it was written; secondly, he is assisted by a most abundant wealth of historical information practically unknown in former times, and, if neglected, may be bound to be lost; thirdly, the study of the Hebrew tongue has been cultivated for four centuries, and its rich results are laid under contribution by the modern commentator. It would lead us too far here to rehearse the history of all the remarkable changes that have occurred in the study of the Divine character, the laws, the various tablets, papyri, and ostrakas, the results of literary criticism, archaeology, and history of religion; it must suffice to say that the modern commentator can leave none of these various sources of information unnoticed as far as they bear on his special subject of investigation. It would be invidious to mention only some names of modern scholars, excluding others; still, they cannot all be enumerated. We may draw attention, however, to the French series of commentaries entitled "La Sainte Bible avec Commentaires," and to the many works of the learned Boll, Knabenbauer, and von Humeleiter; the "Revue biblique" published by the Dominican Fathers; the "Biblische Zeitschrift"; the "Biblische Studien"; and the "Dictionnaire de la Bible". While the two series of commentaries offer the main points of information on each particular book of the Bible, as far as it could be ascertained at the time of their respective publication, the periodicals keep the reader informed of any new investigation or result worth knowing.

(b) Protestant Exegetes.—It will be found convenient to divide Protestant exegetes into three periods. The first embraces the age of the so-called Reformers, 1517-1600; the second reaches down to the beginning of rationalism, 1600-1700; the third embraces the subsequent time.

(1) Early Reformers.—The early Reformers did not introduce any new principles of interpretation. They may speak, at times, as if they admitted only the literal sense, but Melanthon and F. Ilyricus insist also on the importance of the allegorical. Their teaching concerning the general outlines of the literal sense finds practical expression in their interpretation. The principle of free inquiry is claimed by the Reformers themselves, but neither theoretically nor practically granted to their followers. Both Luther's (d. 1546) and Calvin's (d. 1564) principles rest in the end on subjective considerations.

(2) From the Reformers to the Rationalists.—In order to secure some unity of interpretation, the first followers of the Reformers introduced the "analogy of faith" as the supreme hermeneutic rule. But since they claimed that Scripture was their rule of faith, they encountered difficulties in properly applying their canon of hermeneutics. Finally, they were forced to regard the contents of their symbols as first principles which needed no proof. But the writers of this period produced some noteworthy treatises on Biblical antiquities. Thus Lightfoot (d. 1675) and Schöttgen (d. 1751) illustrated New Testament questions from rabbinic sources; Reina (d. 1718) wrote on sacred geography; Bochart (d. 1667), on natural history; the two Buxtorfs, father (d. 1629) and son (d. 1664), on ancient Jewish literature; and Goodman (d. 1665) on the investigation of certain civil and religious questions of the Jews. Among those who explained the sacred text, the following are worthy of mention: Drusius (d. 1618), de Dieu (d. 1642), Grotius (d. 1648), Vitringa (d. 1672), Cocceius (Koch, d. 1669), and Clericus (d. 1763). Johann Walck (d. 1698) is one of the editors of the London Polyglott, which easily surpasses all previous works of the same kind. The "Critici sacri" (London, 1660; Frankfurt, 1696; Amsterdam, 1698), collected by John and Richard Pearson, and the "Synopsis criticorum" (London, 1669; Frankfurt, 1709), edited by Matt. Polus, may be regarded as fairly good summaries of the exegetical work of the seventeenth century.

(3) After the Rise of Rationalism.—The Arminians, Socinians, the English Deists, and the French Encyclopaedists were immediately detected by the moderns. The study of Sacred Scripture flourished more lustily than ever. The modern commentator in our times not merely to the immediate context of a phrase or a verse, but to the whole literary form of the book, and to the purpose for which it was written; secondly, he is assisted by a most abundant wealth of historical information practically unknown in former times, and, if neglected, may be bound to be lost; thirdly, the study of the Hebrew tongue has been cultivated for centuries, and its rich results are laid under contribution by the modern commentator. It would lead us too far here to rehearse the history of all the remarkable changes that have occurred in the study of the Divine character, the laws, the various tablets, papyri, and ostrakas, the results of literary criticism, archaeology, and history of religion; it must suffice to say that the modern commentator can leave none of these various sources of information unnoticed as far as they bear on his special subject of investigation. It would be invidious to mention only some names of modern scholars, excluding others; still, they cannot all be enumerated. We may draw attention, however, to the French series of commentaries entitled "La Sainte Bible avec Commentaires," the "Revue biblique" published by the Dominican Fathers; the "Biblische Zeitschrift"; the "Biblische Studien"; and the "Dictionnaire de la Bible". While the two series of commentaries offer the main points of information on each particular book of the Bible, as far as it could be ascertained at the time of their respective publication, the periodicals keep the reader informed of any new investigation or result worth knowing.

(b) Protestant Exegetes.—It will be found convenient to divide Protestant exegetes into three periods. The first embraces the age of the so-called Reformers, 1517-1600; the second reaches down to the beginning of rationalism, 1600-1700; the third embraces the subsequent time.

(1) Early Reformers.—The early Reformers did not introduce any new principles of interpretation. They may speak, at times, as if they admitted only the literal sense, but Melanthon and F. Ilyricus insist also on the importance of the allegorical. Their teaching concerning the general outlines of the literal sense finds practical expression in their interpretation. The principle of free inquiry is claimed by the Reformers themselves, but neither theoretically nor practically granted to their followers. Both Luther's (d. 1546) and Calvin's (d. 1564) principles rest in the end on subjective considerations.

(2) From the Reformers to the Rationalists.—In order to secure some unity of interpretation, the first followers of the Reformers introduced the "analogy of faith" as the supreme hermeneutic rule. But since they claimed that Scripture was their rule of faith, they encountered difficulties in properly applying their canon of hermeneutics. Finally, they were forced to regard the contents of their symbols as first principles which needed no proof. But the writers of this period produced some noteworthy treatises on Biblical antiquities. Thus Lightfoot (d. 1675) and Schöttgen (d. 1751) illustrated New Testament questions from rabbinic sources; Reina (d. 1718) wrote on sacred geography; Bochart (d. 1667), on natural history; the two Buxtorfs, father (d. 1629) and son (d. 1664), on ancient Jewish literature; and Goodman (d. 1665) on the investigation of certain civil and religious questions of the Jews. Among those who explained the sacred text, the following are worthy of mention: Drusius (d. 1618), de Dieu (d. 1642), Grotius (d. 1648), Vitringa (d. 1672), Cocceius (Koch, d. 1669), and Clericus (d. 1763). Johann Walck (d. 1698) is one of the editors of the London Polyglott, which easily surpasses all previous works of the same kind. The "Critici sacri" (London, 1660; Frankfurt, 1696; Amsterdam, 1698), collected by John and Richard Pearson, and the "Synopsis criticorum" (London, 1669; Frankfurt, 1709), edited by Matt. Polus, may be regarded as fairly good summaries of the exegetical work of the seventeenth century.

(3) After the Rise of Rationalism.—The Arminians, Socinians, the English Deists, and the French Encyclopaedists were immediately detected by the moderns. The study of Sacred Scripture flourished more lustily than ever. The modern commentator in our times not merely to the immediate context of a phrase or a verse, but to the whole literary form of the book, and to the purpose for which it was written; secondly, he is assisted by a most abundant wealth of historical information practically unknown in former times, and, if neglected, may be bound to be lost; thirdly, the study of the Hebrew tongue has been cultivated for centuries, and its rich results are laid under contribution by the modern commentator. It would lead us too far here to rehearse the history of all the remarkable changes that have occurred in the study of the Divine character, the laws, the various tablets, papyri, and ostrakas, the results of literary criticism, archaeology, and history of religion; it must suffice to say that the modern commentator can leave none of these various sources of information unnoticed as far as they bear on his special subject of investigation. It would be invidious to mention only some names of modern scholars, excluding others; still, they cannot all be enumerated. We may draw attention, however, to the French series of commentaries entitled "La Sainte Bible avec Commentaires," the "Revue biblique" published by the Dominican Fathers; the "Biblische Zeitschrift"; the "Biblische Studien"; and the "Dictionnaire de la Bible". While the two series of commentaries offer the main points of information on each particular book of the Bible, as far as it could be ascertained at the time of their respective publication, the periodicals keep the reader informed of any new investigation or result worth knowing.
EXEMPTION

authentic; the other books of the New Testament were written during or after the amalgamation of the two parties, which occurred in the second century. The adherents of this opinion form the New Tubingen or the Critical School.—It is true that Baur's theory of the latter is untenable. The New Testament has been supported by the majority of Protestant commentators who have rankled themselves among the followers of Harnack; but the opinion that the Sacred Books of the New Testament lack historicity in its true sense, is that of many of whom we have spoken.

In the light of this fact, we have to distinguish between the various classes of exegetical works in order to give a true estimate of the value possessed by the numberless recent Protestant contributions to Biblical literature: their philological and historical studies are, as a general rule, of great assistance to the commentator; the same must be said of their work done in textual criticism; but their commentators are not sound enough to elicit commendation. Some of them adhere professedly to the principles of the most advanced criticism; others belong to the ranks of the conservatives; others again are more concerned with grammatical and philological than theological questions; others, finally, try to do the impossible by combining the conservative with the advanced critical principles.

When we are asked what attitude the Catholic reader ought to maintain with regard to these numerous Protestant commentaries, we answer in the words of Leo XIII, found in the Encyclical "Providentissimus Deus": "Though the studies of non-Catholics, used with prudence, may sometimes be of use to the Catholic student, he should, nevertheless, bear well in mind—as the Fathers also teach in numerous passages—that the sense of Holy Scripture can nowhere be found incorrupt outside of the Church, and cannot be expected to be found in writers who, being without the Holy Spirit, cannot seize the essence of the Sacred Scripture, and never attain its pith."

Exemption is the whole or partial release of an ecclesiastical person, corporation, or institution from the authority of the ecclesiastical superior next in rank, and in the placing of the person or body thus released under the control of the authority next above the former superior, or under a still higher one, or under the highest authority of all, the pope. Originally, according to canon law, all the subjects of a diocese, and all diocesan institutions, were under the authority of the bishop. On account of the oppressive manner in which bishops at times treated the monas-

EXEMPTION

tories, these were soon taken under the protection of synods, princes, and popes. The papal protection often developed later into exemption from episcopal authority. The first privilege of this kind was given by Pope Honorius I, in 623, to the old Irish monastery at Armagh (Bolland, Pontifical, 2, 169). Since the eleventh century, papal activity in the matter of reforms has been a frequent source or occasion of exemptions; in this way the monks became more closely bound to the popes, as against the bishops, many of whom were often inimical to the papal power. It thus came to pass that not only individual monasteries, but also entire orders, obtained exemption from the authority of the local ordinary. Moreover, from the reign of Urban II, the broadly general "protection" of the Holy See (libertas Romana), which many monasteries enjoyed, came to be regarded as exemption from the authority of the bishop. From the twelfth century, it may be said the exemption of orders and monasteries became the rule. Exemptions were also granted to cathedral chapters, collegiate chapters, parishes, communities, ecclesiastical institutions, and single individuals. Under these circumstances the diocesan administration of the bishops was frequently crippled (Trent, 1596); consequently the bishops complained of such exemptions, while, on the other hand, the parties exempted were wont to accuse the bishops of their privileges. The Council of Trent sought to correct the abuses of exemption by placing the exempt in many regards, under the ordinary jurisdiction of the bishop, or at least under the bishops as papal delegates. This provision of the council was never fully executed, owing to the frequent opposition of the monasteries. About the beginning of the nineteenth century, however, many monasteries were suppressed by the process known as secularization, in part accepted by the Holy See. In some countries more recent civil legislation did not permit exemption of the Holy See. In some countries more recent civil legislation did not permit exemption of the Holy See.

Exemption, as a rule, arises when the privilege is granted by competent authority (exemptio dativa). It can also rest on immemorial use (exemptio prorsus). Finally exemption can be original (exemptio inchoativa), when the respective church or monastery has always been free and distinct from the later diocesan organization. The claimant of exemption must prove the fact.

Exemption ceases by the complete or partial withdrawal of the privilege by the giver, by customary extinction by extinction of the rightful subject of the privilege.

Another kind of exemption applies to bishops, when released from the authority of the metropolitan, either at their own request or as a gracious act on the part of the Apostolic See, under whose direct control they are then placed. However, to prevent injury to the Church, the bishops, thus made independent of their proper metropolitan, are obliged to attend the synods of the province for which they have elected. Bishops who had not connected themselves with any provincial synods were, for instance, excommunicated, in the protest of the Roman one of 1725. Exemption also frequently occurs in connexion with the system of military chaplaincies. In Austria, since 1720, the "Feldbischof" (army bishop), nominated by the emperor, is exempt. In Prussia, since 1868, the "Feldprovost" or army provost, is appointed by the pope after nomination by the German emperor. In France military chaplains who serve permanent garrisons remote from a parish church were exempt. In Spain and elsewhere vicarii controversi generales, i.e. army vicars-general, are appointed.

As applied to monasteries and churches, exemption is known as passiva or activa. In the former case the jurisdiction of the monastic or ecclesiastical prelate is confined to the ecclesiastics and laity belonging to his monastery or church. On the other hand, prelates
having "active" exemption may exercise a more extensive jurisdiction. They are (1) those who have certain episcopal rights over a clearly defined territory otherwise belonging to the diocesan territory, and known, canonically, as praestali nullius (i.e., dioceses) cum territorio conjuncto; (2) those who have episcopal jurisdiction over a defined territory, merely distinct from the diocesan territory, and known as praestali nullius cum territorio separato. The latter are praestali nullius in the proper sense; such, e.g., are the abbots of Monte Cassino, in Italy, and of St. Moritz, and Einsiedelein, in Switzerland. Prelates actively exempted have almost the same rights as those who exercise jurisdiction over a defined territory, and vote in a general council, make laws within their proper territory, exercise canonical jurisdiction in matrimonial, disciplinary, and criminal matters. They may also grant faculties to hear confessions, reserve to themselves the right of absolving from certain sins, inflict ecclesiastical punishments and censures, grant faculties for preaching, make visitations within their jurisdiction, found an ecclesiastical seminary for priests, and appoint a vicar-general. Correspondingly, such a prelate must reside in his district, offer the canonical form and audit the management of the diocesan feast day, go at stated times to visit the Apostolic See (visitatio liminum Apostolorum), and attend the synod of the province, for which option has been declared. He is not, however, obliged to attend the diocesan synod. As such prelates are not considered dioceses, they may not consecrate bishops. They must consequently apply to some bishop of their own choice for the confirmation of their subjects, and for the consecration of the holy oils; for the ordination of their subjects, however, they must apply to the nearest bishop. When such praestali nullius are also regular abbots they may consecrate their subjects the ecclesiastical tonsure, and ordain to the lower orders, or to this effect grant dimissorial letters to the diocesan bishop. Without papal privilege, however, they cannot make use of the pontifical insignia (pontificalia), nor perform acts of consecration reserved to bishops. Nor can they, without papal privilege, convene a diocesan synod, appoint synodal examiners, or hold examinations for appointment to parishes.

Although regulars are, in all matters of substantial importance, exempted from jurisdiction, there remain a number of matters in which they are subject to episcopal control. Regulars living outside of their monastery are subject to the bishop as papal delegate (Conc. Trid. Sess. VI, De ref. ch. iii; Sess. XXV, De regul., ch. v). The privilege of the bishop is also necessary for the founding of a monastery (Conc. Trid. Sess. XXV, De regul. ch. iii). The bishop has the right to bless an abbot confirmed by the pope (Conc. Trid. Sess. XXV, De regul. ch. vi). Monasteries of men are subject to episcopal visitations, but respect of parochial work (cura animarum) carried on by them outside of the monasteries (Conc. Trid. Sess. XXV, De regul., ch. xi). The bishop has the right to confer major orders on regulars, and to use the pontificalia in their churches. When the regulars have a right to ordain, that right must be obtained from the bishop; and they must obtain episcopal permission for processes outside the immediate vicinity of such churches. They must also ask the episcopal blessing before they can preach (coram episcopo) in churches of the order, while, in order to preach in any church, other than their own, the church, canonical authority (missio canonica) must be obtained from the bishop (Conc. Trid. Sess. V, De ref. ch. ii). To hear the confessions of the laity, and to grant absolution in cases reserved to the bishop, regulars require episcopal permission (Conc. Trid. Sess. XXIII, De ref. ch. xv). The writings and books of regulars must be submitted, before publication, to the diocesan censor for the place of issue (Leo XIII, "Officiorum ac munerum", 25 Jan., 1897, no 36). It is also obligatory, on members of orders, to observe the ordinances of the bishop respecting the Church feast days, church services, and processions (Conc. Trid. Sess. XXV, De regul., ch. xii, and ch. xiii).

The rights of the bishop in respect to exempt orders of women are still more extensive. The bishop, or his representative, possesses the right to appoint abbesses, priors, or superiors (Conc. Trid. Sess. XXV, De regul. ch. vii). The right to visit canonically religious houses of women belongs to the bishop; he is charged in particular, with the entire superintendence of the observance of the clausura or cloister (Conc. Trid. Sess. XXV, De regul. ch. vii). The bishop appoints the confessors, ordinary and extraordinary, for religious houses of women; in cases where such appointment belongs to some one else the bishop must, at least, give his approbation (Conc. Trid. Sess. XXV, De regul. ch. x). It is the bishop who examines into, either personally, or by representative, the voluntary character of the entrance of candidates into orders for women, both when they put on the habit of the order, and when they make their profession (Conc. Trid. Sess. XXV, De regul. ch. xvii). It is the bishop, finally, who determines the proper province of female orders and religious houses. For exemption of ecclesiastics from secular jurisdiction see IMMUNITY.

JOHANNES BAPTIST SÄGMÜLLER.

Exequatur (synonymous with REGIMET PLACET), as the Jansenist Van Essen defines it, is a faculty which civil rulers impart to a Bull, papal Brief, or other ecclesiastical enactment in order to give it binding force in their respective territories. This faculty is conceded after ecclesiastical laws have been examined and found not derogatory to any right of the civil power and, therefore, suitable for promulgation. Modern statesmen draw a distinction between the Exequatur and the Regimini Placitum. The latter, according to them, is given to episcopal acts or acts of any other ecclesiastical superior belonging to the nation for which they are approved; while the former is conceded to enactments of a foreign power, that is, to papal Constitutions; the pope, as head of the whole Church, being formally considered as an author by law belonging to any particular country. In both cases, however, state authorities have the power of examining church laws and giving permission for their promulgation, by which permission ecclesiastical decrees acquire legal value and binding force.

As to the origin of this supposed right of the State over the Church, it is now beyond doubt, contrary to the assertions of Gallicans and Jansenists, that no trace of it can be found in the early centuries of the Church, or even as late as the fourteenth century. It is not until that period on that the Lateran Councils, like those of Nicaea and Ephesus, requisitioned the sanction of State authorities for ecclesiastical laws; it was not, however, juridical, but only physical, force that was then invoked for ecclesiastical decrees, in order to enforce their execution by the civil powers. Moreover, however, such a practice had been at that time known, rulers of nations who were sometimes anxious to prevent the promulgation and execution of papal Constitutions in their domains would have readily appealed to it, instead of resorting to more difficult and troublesome means, in order to impede in every possible way papal letters from ever being introduced into their dominions, e.g. in the conflicts of Philip the Fair of France with Boniface VIII, and of Henry II of England with Alexander.
III. The Regium Placet really dates from the great Western Schism, which lasted from the pontificate of Urban VI to the Council of Constance and the election of Martin V (1378–1417). In order to guard against spurious papal letters issued by antipopes Clement VII and Eugenius IV, the Acta Synodalia Papiarum and the Regium Placet (1411) were promulgated. In 1417, at the Council of Constance, the schism was ended, and the Papacy was restored to Urban VI. The Regium Placet granted to some ecclesiastical superiors the faculty of examining papal Constitutions and ascertaining their authenticity before promulgation and execution. Civil authorities felt bound to accept the promulgated Constitutions, and to measure, though they did not attribute such a power to themselves as a right attached to their office; apparently its use was discontinued when, after the schism, Martin V condemned the Regium Placet in his Constitution “Quod antidota” (1418). In the fifteenth century, however, it was revived in Portugal by King John II and in France by him as a right inherent in the crown. In the sixteenth century the Viceroy of Naples, the Duke of Alcalá, made it obligatory by law, and in the seventeenth century it was introduced into France in order to preserve the so-called Gallican liberties, and afterwards into Spain, Belgium, Sicily, Naples, and other countries.

In theory this supposed right of the State was first propounded and defended as a true doctrine by Luther, Pasquier Quezel, and other heretics who denied the jurisdiction of the Pope, and was advocated by Gallicans and Jansenists, e. g. Van Espen, Febronius, de Marca, and Stockmann, who attributed this power to the State as a necessary means of self-defence against possible attempts of the Church to injure the rights of civil society. More recently it has been defended with particular vigour by Italian jurists and statesmen, e. g. Cavallari, Manzini, Pio, apropos particularly of the “Law of Guarantees” passed in 1871 by the Italian Government in favour of the Holy See. However, not only is it historically shown to be false, that such a power has been exercised from time immemorial, but it is also juridically false that such power naturally belongs to the State, particularly as a necessary means of self-defence. The injustice of that claim and the consequent usurpation of authority by the State appears manifest in the light of Catholic faith. If the binding force of church laws depended on the approval and consent of the State, it would no longer be true that the Church received legislative power directly from her Divine Founder, and that whatever is validly enacted by the Church is valid on earth, whether bound or loosened in heaven (Matt., xvi, 19). Again, the Church would, in that case, immediately cease to be a supreme, self-sufficient, and perfect society, and would be deprived of her characteristics of unity, sanctity, orthodoxy, and apostolicity. Moreover, the use of the Exequatur to prevent possible usurpation of rights is contrary not only to Divine law but also to natural social law and is, therefore, an abuse of power, even if exercised by a State not professing the Catholic religion. A possible conflict of rights of two societies and the fear of a consequent injury to their respective jurisdictions do not entitle one of them to impede the free exercise of its ordinary jurisdiction by the other. Differences, if they arise, may be settled by private mutual understanding or arbitration. It is needful to say that the fear of any usurpation or conflict on the part of the Church is itself a result that appears from her doctrine and history.

The Church, as a matter of fact, never claimed the power of revising and approving civil laws before promulgation, although, indeed, past experience would justify such an ascribed to her position. In fact, civil authorities felt bound to accept the promulgated Constitutions, and to measure, though they did not attribute such a power to themselves as a right attached to their office; apparently its use was discontinued when, after the schism, Martin V condemned the Regium Placet in his Constitution “Quod antidota” and after him a great number of pontiffs, down to Pius IX in Propositions 28 and 29 of the Syllabus “Quanta Cura” and in the Allocution “Ludovici Exiguitatis” (12 March, 1877), also the Vatican Council in the Constitution “De Ecclesie Sanctae Sedis” (20 July, 1870). The Church has made minor concessions in favour of the State as to the exercise of the Regium Placet. In some other instances she has tolerated its acknowledgment by ecclesiastics, particularly to enable them to take possession of their benefices and other temporalities. At present the Exequatur or Regium Placet, is seldom, if ever, used, at least in its fullness, by modern civil rulers. In the Kingdom of the Two Sicilies it was abolished by the Concordats of 1818, and in Austria by that of 1855. It must likewise be respected as abolished in Spain, France, Portugal, and Hungary. According to Aichner, it exists still, but in a mitigated form, in Saxony, Bavaria, and some parts of Switzerland. In Italy the strict Exequatur, i. e. previous to promulgation of papal Constitutions, is not in use, but it is retained in a mild form for the possession of ecclesiastical benefices. According to the “Law of Guarantees” (13 July, 1871), ecclesiastics who have been provided with benefices must present the Bull of their appointment to the State authorities; after approval the latter concede the Exequatur and put the benefice later on in their hands for the temporalities hitherto controlled by the government.

In this form the Exequatur is at present tolerated by the Church, though it is not devoid of inconveniences, as Leo XIII complained in a letter written to his Secretary of State Cardinal Nina (27 August, 1902).

Exercises, Spiritual. See Spiritual Exercises of Saint Ignatius.

Exeter (Exonia, Isca Dumnorium), Cape Ware, Exonham, Ancient Diocese (of Exoniae), in England, chosen by Leofric, Bishop of Crediton, as his cathedral city in 1050. Originally Devonshire formed part of the Diocese of Wessex. About 703 Devonshire and Cornwall became the separate Bishopric of Sherborne and in 900 this was divided into two, the one in the Diocese of Crediton. The two dioceses were again united when Leofric became first Bishop of Exeter. The present cathedral was begun by Bishop William de Warehurst in 1112; the abbey church of St. Mary and St. Peter, founded by Aveline de Warenne in 1019, serving till then as the cathedral church. The transept towers built by Warehurst still remain, being the only part of the Norman cathedral existing. This Norman building was completed by Bishop Marshall at the close of the twelfth century. The cathedral as it now stands is in the decorated style, being begun by Bishop Quivil (1280–1291), continued by Byton and Stapeldon, and completed by the great Bishop Grandisson during his long pontificate of forty-two years, who left it as it now stands. In many respects it resembles the French cathedrals rather than those of England. The special features of the cathedral are the transeptal towers and the choir. The latter contains much early stained-glass and a magnificent episcopal throne, and is separated from the nave by a choir-screen of singular beauty (1324). The height of the State tower and the elevation prevent the building from ranking among the greatest English cathedrals, though the stately west front is alone sufficient to render it remarkable.

The bishops of Exeter always enjoyed considerable independence and were one of the largest and richest in England. ‘The Bishop of Exeter,’ write...
Professor Freeman, "like the Archbishop of York was the spiritual head of a separate people." The remoteness of the see from London prevented it from being bestowed on statesmen or courtiers, so that the role of bishops is more distinguished for scholars and administrators than for men who played a large part in maintaining the independence of their diocese and gave it a long line of excellent bishops, of whom, Edmund Lacy, died with a reputation for sanctity and the working of miracles (1455). The result of this was seen in the fidelity with which Devonshire and Cornwall adhered to the Catholic Faith at the time of the Reformation. The following are the bishops with the dates of their accession:

- Leofric, 1046
- Osbald, 1072
- William Warelwast, 1107
- Robert Chichester, 1138
- Robert Warelwast, 1155
- Bartholomew Iscanus, 1161
- John the Chaucer, 1186
- Vulf, 1195
- Henry Marshall, 1194
- Vacancy, 1206
- Simon de Apulia, 1214
- William Bruere, 1224
- Richard Blondy, 1245
- William Brunescombe, 1257
- Peter Quivill, 1280
- Thomas de Bytton, 1292
- Walter de Stapeldon, 1308

This see, which, or a see of the same name, was plundered during the reign of Henry VIII, when Bishop Vesey was forced to surrender fourteen out of twenty-two manors, and the value of the bishopric was reduced to a third. Vesey, though a Catholic at heart, held the see until 1551, when he was made to resign, and the Reformer, Miles Coverdale, was intruded into the see, where he made himself most unpopular. On the accession of Mary, in 1553, Vesey was restored. He died in 1554 and was succeeded by James Turbervile, believed by Catholics and Protestants alike. He was deprived of the see by Elizabeth in 1559 and died in prison probably in or about 1670, the last Catholic Bishop of Exeter. The diocese contained four archdeaconies, Cornwall, Barnstaple, Exeter, and Totton, and six hundred and four parishes. There were Benedictine, Augustinian, Franciscan, Dominican, and Norbertine houses, and four Thirteenth-century churches were dedicated to St. Peter, and the arms of the see were: Gules, a sword in pale blade and hilt proper, two keys in saltire.

Existence. See Essence and Existence.

Exodus, the second Book of the Pentateuch, second also of the whole Old Testament Canon (see Penta-
tateuch).

Exomologesis. See Penance.

Exorcism is (1) the act of driving out, or warding off, demons, or evil spirits, from persons, places, or things, which are, or are believed to be, possessed or infested by them, or are liable to become victims or instruments of their malevolent designs (2) the means, especially the solemn and authoritative ad-
duction of the demon, in the name of God, or of any higher power to which he is subject. The word, which is not itself biblical, is derived from ἐξορίζω, the verb used in the Septuagint (Gen. xxiv, 3—cause to swear; II Kings xxii, 19—advised by the high priest to Christ, "I adjure thee by the living God . . ."). The non-intensive ἐξορίζω and the noun ἐξορίσθης (exorcist) occur in Acts xix, 13, where the latter (in the plural) is applied to certain strolling Jews who professed to be able to cast out demons. Exulsion by adjuration is, therefore, the primary meaning of exorcism, and when, as in Christian usage, this adjuration is in the name of God or of Christ, exorcism is a strictly religious act or rite. But in heathen religions, and even among the Jews from the time when there was no tenet of the existence of demons, exorcism as an act of religion is largely replaced by the use of mere magical and superstitious means, to which non-Catholic writers at the present day sometimes quite unfairly assimilate Christian exorcism. Supernatural ought not to be confused with superstitious; much their history may be interwoven, nor magic, however white it may be, with a legitimate religious rite.

In Ethnic Religions: The use of protective means against the real, or supposed, molestation of evil spirits naturally flows from belief in their exist-
ence, and is, and has been always, a feature of ethnic religions, savage and civilised. In this connexion only two of the religions of antiquity, the Egyptian and the Babylonian, call for notice; but it is no easy task, even in the case of these two, to isolate what bears strictly on our subject, from the mass of mere magic in which it is embedded. The Egyptians as-
cribed certain diseases and various other evils to demons, and believed in the efficacy of magical charms and incantations for banishing or dispelling them. The dead more properly belonged to this benighted and power with magic in order to be able to accomplish in safety their perilous journey to the underworld (see Budge, Egyptian Magic, London, 1899). But of exorcism, in the strict sense, there is hardly any trace in the Egyptian records.

In the famous case where a demon was expelled from the daughter of the Prince of Bekhten, human ministry was unavailing, and the god Khonsu himself had to be sent the whole way from Thebes for the purpose. The demon gracefully retold of its when confronted with the god, and was allowed by the latter to be treated to a grand banquet before departing "to his own place" (op. cit. p. 206 sqq.). Babylonian magic was largely bound up with medicine, certain diseases being attributed to some kind of demoniacal posses-
sion, and exorcism being needed to be well fortified, if not the only, way of curing them (Sayce, Hibbert Lect. 1887, 310). For this purpose certain formularies of ad-
juration were employed, in which some god or god-
dess, or some group of deities, was invoked to conjure away the evil one and repair the mischief he had caused. The following example (from Sayce, op. cit., 441 seq.) may be quoted: "The (possessing) demon which seizes a man, the demon (ekinna) which seizes a man; The (seizing) demon which works mischief, the evil demon, Conjur, O spirit of heaven; conjure, O spirit of earth." For further examples see ibid. King, Babylonian Magic and Sorcery (London, 1896).

Among the Jews: There is no instance in the Old Testament of demons being expelled by men. In Tobias, viii, 3, it is the angel who "took the devil
and bound him in the desert of upper Egypt"; and the instruction previously given to young Tobias (VI, 18, and 19), to roast the fish's heart in the bridal chamber, would seem to have been merely part of the angel's plan for concealing his own identity. But in extra-canonical Jewish literature there are incantations for possession demons of which examples of which can be seen in the Talmud (Schabbath, xiv, 3; Aboda Zara, xii, 2; Sanhedrin, x, 1). These were sometimes inscribed on the interior surface of earthen bowls, a collection of which (estimated to be from the seventh century A.D.) is preserved in the Royal Museum in Berlin; an inscription of one from Apocilus has been published, and translated, by Wohlebein in the "Zeitschrift für Assyriologie" (Dec., 1893; April, 1894).

The chief characteristic of these Jewish exorcisms is their naming of names believed to be efficacious, i.e., names of good angels, which are used either alone or in combination with El (=God); indeed reliance on mere names had long before become a superstition with the Jews, and it was considered most important that the appropriate names, which varied for different times and occasions, should be used. It was this superstition of the Jews that promoted the success of Sceva, who had witnessed St. Paul's successful exorcisms in the name of Jesus, to try on their own account the formula, "I conjure you by Jesus whom Paul preaches," with results disastrous to their credit (Acts xix, 14). It is a popular belief that a popular Jewish Hel- loed, accepted even by a learned cosmopolitan like Josephus, that Solomon had received the power of expelling demons, and that he had composed and transmitted certain formulæ that were efficacious for that purpose. The Jewish historian records how a certain Elicesar, in the presence of the Emperor Vespasian and his officers, succeeded, by means of a magical ring applied to the nose of a possessed person, in driving out the demon through the nostril—the virtue of the ring being due to the fact that it enclosed a certain rare root included in the formula of Solomon, and which it was exceedingly difficult to obtain (Ant. Jud. VIII, ii, 5; cf. Bell. Jud. VII, vi, 3).

But superstition and magic apart, it is implied in Christ's answers to the Pharisees, who accused Him of casting out demons by the power of Beelzebub, that some Jews in His time successfully exercised demons in God's name: "and if I by Beelzebub cast out devils, by whom do your children cast them out?" (Matt., xxi, 27). It does not seem reasonable to understand this reply as mere irony, or as a mere argument assumed into the question; the fact, as a matter of fact, all the more so, as elsewhere (Mark ix, 37-38) we have an account of a person who was not a disciple casting out demons in Christ's name, and whose action Christ refused to reprehend or forbid.

EXORCISM IN THE NEW TESTAMENT: Assuming the reality of demonic possession, for which the authority of Christ is pleaded (see Obsession, Possession), it is to be observed that Jesus appealed to His power over demons as one of the recognised signs of Messiahship (Matt., xxi, 23-28; Luke, xv, 20). He cast out demons, He commanded the demons to depart, He exorcised, not only the demons of men, not only the diabolical powers, but the demons of God, not, as of the Gentiles, according to the person of the cross. St. Justin speaks of demons flying from "the touch and breathing of Christians" (II Apol., 6) as from a flame that burns them, adds St. Cyril of Jerusalem (Cat., xx, 5, P. G., XXXIII, 1880). Origen mentions the laying on of hands, and St. Ambrose (Paulinus, Vit. Ambr., n. 28, 43, P. L., XIV, 36, 42). St. Epiphanius Syrus (Greg. Nyss., De Vit. Ephr., P. G., XXXVI, 848) and others used this ceremony in exorcising. The sign of the cross, that briefest and simplest way of expressing one's faith in the Crucified and exorcising, is found in the Fathers for its efficacy against all kinds of demonic possession (Lactantius, Inst., IV, 27, P. L., VI, 513 sqq.; Athanasius, De Incarn. Verbi., n. 47, P. G., XXXV, 180; Basil, In Isai., XI, 249, P. G., XXX, 557; Cyril of Jerusalem, Cat., XIII, 3 col. 773; Gregory Nazianzen, Carm. adv. Iram, iv, 415 sqq.; P. G., XXXVII, 842). The Fathers further recommend that the adjuration and accompanying prayers should be couched in the words of Holy Writ (Cyril of Jerusalem, Pros., n. 9, col. 350; Athanasius, Ad Marell., n. 33, P. G., XXXVII, 45). The present rite of exorcism as given in the Roman Ritual fully agrees with patristic teaching and is in the spirit of the continuity of Catholic tradition in this matter.

(2) Baptismal exorcism. At an early age the pro-
EXORCIST

The practice was introduced into the Church of exorcising catechumens as a preparation for the Sacrament of Baptism. This did not imply that they were considered to be obsessed, like demons, but merely that they were, in consequence of original sin (and of personal sins in case of adults), subject more or less to the power of the devil, whose "works" or "pompes" they were called upon to renounce, and from whose dominion the grace of baptism was sent out to deliver them. Exorcism in this connexion is a symbolic anticipation of one of the chief effects of the sacrament of regeneration; and since it was used in the case of children who had no personal sins, St. Augustine could appeal to it as a symbol of the plenitude of the grace of original sin (Ep. exciv. n. 46, P. L., XXXVIII, 890; C. Jul. III, 8; P. L., XXXIV, 705, and elsewhere). St. Cyril of Jerusalem (Procat., 114, col. 355) gives a detailed description of baptismal exorcism, from which it appears that anointing with exorcised oil formed a part of this exorcism in the East. The only early Western witness which treats of anointing as part of the baptismal exorcism is that of the Arabic Canons of Hippolytus (n. 19, 29). The Ensyfaltio, or out-breathing of the demon by the candidate, which was sometimes part of the ceremony, is the announcement of his works and pompes, while the Insyfaltio, or in-breathing of the Holy Ghost, by ministers and assistants, symbolised the infusion of sanctifying grace by the sacrament. Most of these ancient ceremonies of the Church to this day in her rites for solemn baptism.

(3) Other Exorcisms. According to Catholic belief, demons or fallen angels retain their natural power, as intelligent beings, of acting on the material universe, and using material objects and directing material forces for their own wicked ends; and this power, which is in itself limited, and is subject, of course, to the control of Divine providence, is believed to have been allowed a wider scope for its activity in consequence of the sin of mankind. Hence places and things as well as persons are naturally liable to diabolical infestation, within limits permitted by God, and exorcism in regard to them is nothing more than a prayer to God, in the name of His Church, to restrain this diabolical power supernaturally, and a profession of faith in His willingness to do so on behalf of His servants.

The chief things formally exorcised in blessing are water, salt, and oil, and these in turn are used in personal exorcisms, and in blessing or consecrating places (e.g. churches) and objects (e.g. altars, sacred vessels), as well as intended for private devotion. Holy water, the sacramental with which the ordinary faithful are most familiar, is a mixture of exorcised water and exorcised salt; and in the prayer of blessing, God is besought to endow these material elements with a supernatural power of protecting those who use them with faith against all the attacks of the devil. This kind of indirect exorcism by means of exorcised objects is an extension of the original idea; but it introduces no new principle, and it has been in use in the Church from the earliest ages. (See also EXORCIST.)

P. J. TOWR.

EXORCIST. (1) in general, any one who exorcises or professes to exorcise demons (cf. Acts, XIX, 13); (2) in particular, one ordained by a bishop for this office, ordination to which is the second of the four minor orders of the Western Church. The practice of exorcism was not confined to clerics in the early ages, as is clear from Tertullian (Apologet., 23, P. L., 410; cf. De Idololat., 11) and Origen (C. Celsum, VII, 4, P. G. 1425). The latter expressly states that even the simplest and rudest of the faithful sometimes cast out demons, by a mere prayer or adjuration (Marc., xv, 17), and urges the fact as a proof of the power of Christ's grace, and the inability of demons to resist it. In the Eastern Church, a specially ordained order of exorcists (or of door-keepers, or of keepers of the gates of baptism) was out to deliver them. Exorcism in this connexion is a symbolic anticipation of one of the chief effects of the sacrament of regeneration; and since it was used in the case of children who had no personal sins, St. Augustine could appeal to it as a symbol of the plenitude of the grace of original sin (Ep. exciv. n. 46, P. L., XXXVIII, 890; C. Jul. III, 8; P. L., XXXIV, 705, and elsewhere). St. Cyril of Jerusalem (Procat., 14, col. 355) gives a detailed description of baptismal exorcism, from which it appears that anointing with exorcised oil formed a part of this exorcism in the East. The only early Western witness which treats of anointing as part of the baptismal exorcism is that of the Arabic Canons of Hippolytus (n. 19, 29). The Ensyfaltio, or out-breathing of the demon by the candidate, which was sometimes part of the ceremony is the announcement of his works and pompes, while the Insyfaltio, or in-breathing of the Holy Ghost, by ministers and assistants, symbolised the infusion of sanctifying grace by the sacrament. Most of these ancient ceremonies of the Church to this day in her rites for solemn baptism.

(3) Other Exorcisms. According to Catholic belief, demons or fallen angels retain their natural power, as intelligent beings, of acting on the material universe, and using material objects and directing material forces for their own wicked ends; and this power, which is in itself limited, and is subject, of course, to the control of Divine providence, is believed to have been allowed a wider scope for its activity in consequence of the sin of mankind. Hence places and things as well as persons are naturally liable to diabolical infestation, within limits permitted by God, and exorcism in regard to them is nothing more than a prayer to God, in the name of His Church, to restrain this diabolical power supernaturally, and a profession of faith in His willingness to do so on behalf of His servants.

The chief things formally exorcised in blessing are water, salt, and oil, and these in turn are used in personal exorcisms, and in blessing or consecrating places (e.g. churches) and objects (e.g. altars, sacred vessels), as well as intended for private devotion. Holy water, the sacramental with which the ordinary faithful are most familiar, is a mixture of exorcised water and exorcised salt; and in the prayer of blessing, God is besought to endow these material elements with a supernatural power of protecting those who use them with faith against all the attacks of the devil. This kind of indirect exorcism by means of exorcised objects is an extension of the original idea; but it introduces no new principle, and it has been in use in the Church from the earliest ages. (See also EXORCIST.)

P. J. TOWR.
the most part require that the bishop should be consulted, and his authorization obtained before exorcism is attempted. The chief points of importance in the instructions of the Roman Ritual, prefixed to the rite itself, are as follows: (1) the name is not lightly to be taken for granted. Each case is to be carefully examined and great caution to be used in distinguishing genuine possession from certain forms of disease. (2) The priest who undertakes the office should be himself a holy man, of blameless life, intelligent, courageous, humble; and he should prepare for the work by a season of abstention and mortification, particularly by prayer and fasting (Matt., xviii, 20). (3) He should avoid in the course of the rite everything that savours of superstition, and should leave the medical aspects of the case to qualified physicians. (4) He should admonish the possessed, in so far as the latter is capable, to dispose himself for the exorcism by prayer, fasting, confession, and communion, and while the rite is in progress to ex- cite within himself a lively faith in God's goodness, and a patient resignation to His holy will. (5) The exorcism should take place in the Church or some other sacred place, if convenient; but if on account of sickness, or for other legitimate reasons, it takes place in a private house, witnesses (preferably members of the family) should be present: this is specially enjoined, as the demand for precaution, on account of the subject, is made on the woman. (6) All idle and curious questioning of the demon should be avoided, and the prayers and adjurations should be read with great faith, humility, and fervour, and with a consciousness of power and authority. (7) The Blessed Sacrament is not to be brought near the body of the obsessed during exorcism for fear of possible irreverence; but the crucifix, holy water, and, when available, relics of the saints are to be employed. (8) If expulsion of the evil spirit is not obtained at once, the rite should be repeated, if necessary, several times. (9) The priest should be vested in surplice, and violet stole.

Expectation of the Blessed Virgin Mary (Exspectatio Partus B. V. M.), Feast of the, celebrated on 18 December by nearly the entire Latin Church. Owing to the ancient law of the Church prohibiting the celebration of feasts during Lent (a law still in vigour at Milan), the Spanish Church transferred the feast of the Annunciation from 28 March to the season of Advent, the Tenth Council of Toledo (556) assigning it definitely to 18 December. It was kept with a solemn octave. When the Latin Church ceased to observe the ancient custom regarding feasts in Lent, viz. 23 March and 18 December, in the calendar of both the Mozarabic and the Roman Rite (Missale Gothicum, ed. Migne, pp. 170, 734). The liturgical feast of December was commonly called, even in the liturgical books, "S. Maria de la O", because on that day the clergers in the choir after Vespers used to utter a loud and protracted "O", to express the longing of the universe for the coming of the Redeemer (Tamayo, Mart. Hisp., VI, 485). The Roman "O" antiphons have nothing to do with this term, because they are unknown in the Mozarabic Rite. This feast and its octave were transferred from Spain to France, where the people still call it "Nuestra Señora de la O". It is not known at what time the term Expectatio Partus first appeared; it is not found in the Mozarabic liturgical books. St. Ildesphonus cannot, therefore, have invented it, as some have maintained. The feast was always kept in Spain and was approved for Toledo in 1573 by Gregory XIII as a double major, without an octave. The church of Toledo has the privilege (approved 29 April, 1634) of celebrating this feast even when it occurs on the fourth Sunday of Advent. The "Expectatio Partus" was celebrated in France from Spain to 1789; in Italy and the Low Countries, from 1791 to 1814; in Germany and Austria, from 1808 to 1815; when the prohibition was further extended by Boniface VIII. Nevertheless, during the Middle Ages expectative frances were customarily conferred upon applicants to canonical prebends in the cathedral and collegiate chapters. This fact was due to toleration by the Holy See, which even accorded to the chaplains the right of nominating four canons in the way of expectative frances (cc. ii, viii, De concessione prebend; X, III, viii; c. ii, De concessione prebende; in VI, III, vii; Constitution of Alexander IV, "Excubriabili", 1254). Several chapters preferred to renounce the right; but in the way of expectatives even contrary to the canonical enactments. The popes, especially, made use of this grace from the twelfth century. After having first asked, then ordered, the collators to dispose of certain benefices in favour of ecclesiastics whom they had previously named to them, the popes themselves directly granted, in the way of expectatives, benefices which were not at the moment vacant; they even charged another ecclesiastic with the future investiture of the appointee with the benefice. The privilege of granting expectatives was conceded by the Holy See, the universities, certain princes, etc., with more or less restriction. This practice aroused grave opposition and gave rise to many abuses, especially during the Western Schism. The Council of Trent suppressed all expectatives excepting the designation of a coadjutor with the right of succession in the case of bishops and abbots; to these we may add the prefects Apostolic. (Sess. XXIV, cap. xix, De ref.; Sess. XXIX, cap. vii, De ref.). Although the council intended to forbid also the collation of expectative frances, the prohibition granted by the pope was not extended to the latter is not bound by such a prohibition. However, the only expectatives now in force are those authorized by the Council of Trent.

Expediorum, Apostolic, (Lat., Expeditionium literarum apostoliciarum, Datarum Apostolic solicitare atque expeditor; It. spedizioni). Officials who attend to the sending of Bulls, Briefs, and Rescripts, that emanate from the Apostolic Chancery, the Dataria, the Sacred Pontificalia, and the Secretariae of...
Briefs. In a restricted and specific sense expeditors or 'briefers' are laymen approved by the Dataria, after an examination, to act as agents for bishops or others before the Dataria or Apostolic Chancery. They are members of the Roman Court. They differ from solicitors as well as from procurators or agents in general, who transact business with the Roman Congregations. A solicitor, strictly speaking, is an assistant to a procurator, doing the mechanical work of preparing documents. An expeditor is more concerned with matters of favour, privileges, dispensations and so on, than with litigation. It has been the practice of the Dataria and Apostolic Chancery to carry on business only with authorized agents, or expeditors, whose office it is to draw up and sign the necessary documents, receive and forward the answer given. They receive a certain fixed fee for each transaction, while procurators and solicitors generally receive a monthly stipend. The number of expeditors has varied. Cardinal Pacca, pro-datarius, decided, in 1833, that the number, which was then one hundred, should be regulated by the amount of business to be transacted. He later revised this, and there were thirty. In reorganising the Roman Court, Pius X deprived these expeditors of their exclusive right to appear before the Dataria, and Apostolic Chancery.

Expiation, Feast of. See Atonement, Day of.

Exposition of the Blessed Sacrament is a manner of honouring the Holy Eucharist, by exposing it, with proper solemnity, to the view of the faithful in order that they may pay their devotions before it. We will speak later of the conditions which constitute proper solemnity, but something must first be said of the history of the practice.

History.—There can be no reasonable doubt that the practice of exposition came into the wake of that most epoch-making liturgical development, the elevation of the Host in the Mass. The elevation itself (q.v.), of which we first hear in its present sense about the year 1200, was probably adopted as a practical protest against the teaching of Peter Comestor and Peter the Chanter, who held that the bread was not consecrated in the Mass until the words of institution had been spoken over both bread and wine. Those who believed that when the words "Hoc est enim corpus meum" had been pronounced, the bread was at once transubstantiated, they did not associate their opinion by adorning the Sacrament, and holding it up for the adoration of the people, without waiting for the words to be spoken over the chalice. At Paris, this elevation became a matter of synodal precept, probably before the year 1200. Before long it came to be regarded as a very meritorious act to look upon and salute the Body of the Lord. In this way, even before the middle of the thirteenth century, all kinds of fanciful promises were in circulation regarding the special privileges enjoyed by him, who, on any day, and at any hour, did look upon, and hold a locked tabernacle. He was believed to be protected from sudden death, or from loss of sight. Further, on that day he would be duly nourished by the food he took, and would grow no older, with many other extravagances. The development of these popular beliefs was also probably much assisted by a legendary element current in the romances of the Holy Grail, then at the height of their popularity. What is certain is, that among all classes the seeing the Host, at the moment it was lifted on high in the hands of the priest, became a primary object of devotion, and various devices—for example, the hanging of a black curtain at the back of the altar, or the lighting of torches held behind the priest by a deacon or server—were resorted to, to make the looking upon the Body of Christ more easy.

Whether the institution of the feast of Corpus Christi with its procession, an innovation due to the visions of the Franciscan contemplative, St. Juliana Cornelli, is to be regarded as the cause, or rather the effect, of this great desire to behold the Body of Christ is somewhat doubtful. But the evidence points to it as a cause, and an effect rather than thirty-two of the close of the twelfth century, we find a well-authenticated story of the last moments of Maurice de Buly, Bishop of Paris, according to which, being unable on account of sickness to receive the Holy Viaticum, he satisfied his devotion by having the Blessed Sacrament brought to him to gaze upon. An exactly similar incident is recorded of St. Juliana herself, when upon her death-bed. This also seems to show that the devout longing of the faithful to gaze upon the Sacred Host was not confined to the time of Mass. Moreover, we find it debated among scholastic theologians, as early as the thirteenth century, whether the looking upon the consecrated Host was permissible to those in the state of grievous sin, and it was commonly decided that far from being a new offence against God, such an act was performed with a remedy in view, with intention, and was likely to obtain for the sinner the grace of true contrition.

In the fourteenth century, we find the practice of Exposition already established, especially in Germany. The "Septullium" of Blessed Dorothea of Prussia who died a recluse, and was canonized, bears witness to the saint's extraordinary desire to see the Blessed Sacrament, a desire which was sometimes gratified as often as a hundred times in one day, but also incidentally mentions that in certain churches near Danzig, the Blessed Sacrament was reserved all day long in a transparent monstrance, so that pious persons like Dorothea could come to pray before it. The practice undoubtedly spread very widely, especially in Germany and the Netherlands. In the fifteenth century, we find numerous synodal decrees passed, prohibiting this continuous and informal Exposition, as wanting in proper reverence. The decree enacted at Cologne in 1452, under the presidency of Cardinal Nicholas de Cuss, altogether forbids the reserving, or carrying of the Blessed Sacrament in such monstrances, except during the octave of Corpus Christi. An earlier decree passed at Breslau, in 1418, speaks of permission having previously been given "for the Body of Jesus Christ, on some few days of the week, to be visibly exposed and shown to public view". But the bishop declares that he has perceived, that "whenever this is done it is followed by their opinion by adorning the Sacrament, and holding it up for the adoration of the people, without waiting for the words to be spoken over the chalice. At Paris, this elevation became a matter of synodal precept, probably before the year 1200. Before long it came to be regarded as a very meritorious act to look upon and salute the Body of the Lord. In this way, even before the middle of the thirteenth century, all kinds of fanciful promises were in circulation regarding the special privileges enjoyed by him, who, on any day, and at any hour, did look upon, and hold a locked tabernacle. He was believed to be protected from sudden death, or from loss of sight. Further, on that day he would be duly nourished by the food he took, and would grow no older, with many other extravagances. The development of these popular beliefs was also probably much assisted by a legendary element current in the romances of the Holy Grail, then at the height of their popularity. etc.) This practice is still a very popular one in Belgium, but although it seems directly to contravene the spirit of many directions in the official "Ceremoniale Episcoporum," there seems to be no harm in the fact that the Blessed Sacrament should, when possible, be reserved from the altar for the celebration of High Mass to be celebrated (Cer. Episc. I, XII, 8-9). Before the Council of Trent, the abuse of such frequent expositions in Germany and elsewhere, seems to have been very much checked, if not entirely eliminated. In the sixteenth century and subsequently, the developments of popular devotion in this matter have been much more restrained, and they have largely been subject to strict episcopal supervision. The practice of the Forty Hours' Devotion, and the custom as to the reserve of the Blessed Sacrament, are treated separately, and the reader may be referred to the articles in question. But a good many other varieties of services, involving exposition of the Blessed Sacrament for a longer or shorter period, began to prevail in the time of St. Philip Neri and St. Charles Borromeo. Of one such variety known as the Oratorio sine intermissione, and dating at least from 1574, a full account will be found in the "Acta Mediolanensis Ecclesiae." Not very long after this, we begin to come across various religious institutions in the Western Church which had the express purpose of maintaining the perpetual adoration of the Blessed Sacrament. See the article ADORATION, PERPETUAL, where details are given. In most of these cases we may assume that the Blessed Sacrament is exposed upon the altar, though in some religious institutions of this kind the exposition is only continued by day.

CONDITIONS REGULATING EXPOSITION.—The Church distinguishes between private and public Expositions of the Blessed Sacrament; and though the former practice is hardly known in Northern Europe, or in America, it is clearly within the competence of a parish priest to permit such private exposition for any good reason of devotion, by opening the tabernacle door and allowing the ciborium containing the Blessed Sacrament to be seen by the worshippers. There is, however, in this case no enthroning of the Blessed Sacrament or use of a monstrance. Public Exposition of the Blessed Sacrament may not take place without the permission, express or implied, of the ordinary. In English-speaking countries, a monstrance is used when the exposition of the Blessed Sacrament is set upon its throne, but in Germany, one frequently sees simply the ciborium, covered of course with its veil. A certain solemnity and decorum in the matters of lights upon the altar, incense, music, and attendance of worshippers is also required, and bishops are remiss in the permission for Public Exposition where these cannot be provided for.

When Mass is celebrated, or the Divine Office recited, at the altar upon which the Blessed Sacrament is exposed, a new set of rubrics comes into force. Birettas are not worn, girdles are not worn, both knees are made before the altar, the incense and water are not blessed, the celebrant's hand is not kissed, etc. The "Ceremoniale" seems only to contemplate the case of Mass before the Blessed Sacrament exposed during the octave of Corpus Christi, and at the Mass of Deposition of the Qur'ant' Oe. but, as already noticed, in many parts of Europe, local custom has made these Masses before the Blessed Sacrament of very common occurrence. For the candles that ought to burn upon the altar, and for the ritual to be followed the reader may be referred to the articles BirettA, BirettA, INSTRUMENTS OF OFFICE, Hours' Devotion. Other rubrical directions dealing with such matters as the use of electric light, the arrangement of the throne, etc., are given in detail in manuals like that of Hartmann, or works upon Pastoral Theology such as that of Schultze.

Expansion. See Anathema; Degradation; Ecclesiastic Order; Vow.

Extension (from Lat. ex-tendere, to spread out).—That material substance is not perfectly continuous in its structure, as it appears to our gross senses, the physical and scienstial sciences of the seventeenth century, and subsequently, have long held many to deny its objectivity, although, on the other hand, the first of modern philosophers, DesCartes, was so impressed by the universality of extension that he held it to be the very essence of material substance. He held that the seed of matter had a characteristic original condition of sensuous faculty which when stimulated by the sense-object stamps the impression accordingly. Others, with Leibniz, resolve matter into simple undivided points (monade), which by their agitation are supposed to produce in us the impression of continuous extension. Others, with Berkeley (d. 1787), sublimate matter into simple forces which some hold to be "virtually" extended. The Atomists (physico and chemical) dissolve bodies into minute particles or atoms (which some consider to be absolutely, others only physically, indivisible) of certain elementary substances, which hitherto have defied further analysis but which may eventually turn out to be merely varying arrangements of some primordial homogeneous material, the radical constituent of the universe. The present teaching of Catholic philosophy on the subject may be summarised as follows: Extension is either successive (i.e., that of a stream and of time), or permanent. The latter may be viewed as either (a) continuous (mathematical, i.e. abstract, as a line; or physical), when the entitative or intermediate parts of the material substance, is divisible are united (perfectly or imperfectly) throughout, e.g. a homogeneous wire; (b) contiguous, when the said parts are conjointly only by contact, e.g. a brick wall; (c) interrupted, when those parts are in some degree disjunct, though connected by an intermediate, e.g. a brick wall. We are here occupied with continuous extension only.

Continuous extension may be described as that property in virtue whereof the parts into which material substance is divisible are actually arranged in order relation one behind the other (internally and potentially local extension) and hence are naturally commensurate with the corresponding parts of the immediately surrounding surfaces (external and actual local extension). Consequent attributes of extension are divisibility, measurability, and impermeability. Whereas precisely the essence of extension consists, is a controverted question. Probably the more general opinion is that extension radically and essentially consists in the internal distribution of the parts into which matter is divisible, and that external extension, or the extension of parts of space, is a sequent property of essential or internal extension. Of course this does not explain extension. Some nearer approach to an explanation may be found in the opinion of a recent writer (Peccei) who makes extension consist in the expansive and cohesive forces of matter—the former tending the said parts to spread out, the latter keeping them united.
Continuous extension is an objective property of matter, not a mere mental form moulding the sensuous impression produced in the sensory organs by some act of pure motion. What it is and how it is immediately affects—whether the ultimate atoms, the constituent molecules, or the gross mass of matter—we are unable in the present stage of physical science to decide. Even should it turn out, however, as many conjecture, that the densest series—to say nothing of a liquid or a gas—is but what might be called an "infinitely" complex arrangement of infinitesimal corpuscles—atoms or electrons—gyrating in a matrix of ether, continuous extension would still remain real (for in that case it would then be the immediate property of the constituent corpuscles and the ether instead of a property of the gross mass. It is experimentally demonstrable that sensuous impressions are aroused in us by bodies as extended and resistant. Now if bodies were constituted of simple, unextended points—monads or forces—these could not stimulate the sensory organs, since such elements, apart from the fact that they would all coalesce and copenetrare, could not be the subjects of material activity (etherial or serial vibrations, chemical reactions, i.e. the immediate causes of the sensations), since in the hypothesis they, too, being made up of unextended elements, would be incapable of material action. Neither will it do to say that the motion of the supposed "points" might evoke sensation, since being unextended they would be impерceptible neither in motion nor at rest. Extension is an "absolute accident", that is not a mere mode in which substance exists, as, for instance, are motion and rest. It seems to have a certain distinct entity of its own. This, of course, would most probably never have been suspected by the human mind unaided by Revelation. But given the doctrine of the Real Presence of Christ in the Sacrament of the Eucharist, wherein the extensional dimensions and sensible qualities of bread and wine persist after the conversion of the substance of the bread and wine into His Body and Blood, reason, speculating on the doctrine, discerns some grounds for the possibility of the real distinction and even severance between substance and local extension. In the first place there are motives for inferring a real distinction between substance and extension (actual and loco). In other words the metaphysics of extension does not constitute the essence of material substance (as Descartes maintained that it does): (a) substance is the root principle of action; extension as such is either inactive or at most a proximate principle; (b) substance is the ground of specification; extension as such is at least a specification, i.e. a concept which is the dimensional termination of extension depends upon the specific form; (c) substance is identical in the entire mass and in each of its parts (e.g. in gold), while extension is not the same in the whole and in its parts; (d) substance is the principle of unity; extension is the formal principle of plurality; (e) substance essentially demands three dimensions; extension may be realised in one or two; (f) substance remaining the same, extension may increase or decrease.

Given a real distinction between extension and substance, no intrinsic impossibility can be proven to exist in the separation of one from the other, for although internal extension naturally demands external, there is no evidence that the demand is so essential that it is impossible for such substance to suspend its realization and by other means afford the accidents—extension and the rest—the support which the substance naturally supplies. Since material substance owes the distribution of its integral parts to extension, the question arises whether, independent of substance, a part of it (of course, possesses parts essential to corporeal substance, matter and form), is simple, indivisible. St. Thomas and many others maintain that substance as such is indivisible. Suarez and others hold that it is divisible. For this and the other questions concerning the divisibility of extension, and the psychology of the subject, the reader is referred to the works mentioned below.

F. P. SIEGFRIED.

Extravagantes (extra, outside; vagari, to wander).—This word is employed to designate some papal decretals not contained in certain canonical collections which possess a special authority, i.e. they are not found in the Decree of Gratian or the three official collections of the "Corpus Juris" (the Decretals of Gregory IX, the Sixth Book of the Decretals, and the Clementines). The term was first applied to those papal documents which Gratian had not inserted in his "Decree" (about 1140), but which, however, were obligatory upon the whole Church, and were added to the official collections of a later date, and possessed of the same authority. Bernard of Pavia designated under the name of "Breviariun Extravagantium", or Digest of the "Extravagantes", the collection of papal documents which he compiled between 1187 and 1191. Even the Decretals of Gregory IX (published 1284) are very long known as the "Liber" or "Collectio Extra", i.e. the collection of the canonical laws not contained in the "Decree" of Gratian. This term is now applied to the collections known as the "Extravagantes Joannis XXII" and the "Extravagantes Clementini", both of which are found in all editions of the "Corpus Juris Canonicus". When John XXII (1316-1334) published the decretales known as the Clementines, there already existed some pontifical documents, obligatory upon the whole Church but not included in the "Corpus Juris". This is why these decretales were called "Extravagantes". Their number was increased by the inclusion of all the pontifical laws of later date, added to the manuscripts of the "Corpus Juris", or gathered into separate collections. In 1325 Zenselio and Leo of Chypre added a class of twenty constitutions of Pope John XXII, and named this collection "Viginti Extravagantes pape Joannis XXII". The others were known as "Extravagantes communes", a title given to the collection by Jean Chappuis in the Paris edition of the "Corpus Juris" (1490-1500). For the purpose of the official collections of canon law, and classified in a similar way the "Extravagantes" commonly met with (hence "Extravagantes communes") in the manuscripts and editions of the "Corpus Juris". This collection contains decretales of the following popes: Martin IV, Boniface VIII (notably the celebrated Bull "Unam Sanctam"), Benedict XI, Clement V, John XXII, Benedict XII, Clement VI, Urban V, Martin V, Eugene IV, Callistus III, Paul II, Sixtus IV (1481-1484). Gregory IX also classified the "Extravagantes" of John XXII under fourteen titles, containing in all twenty chapters. These two collections are of lesser value than the three others which form the "Corpus Juris Canonicus"; they possess no official value, nor has custom bestowed such on them. On the other hand, many of the decretales not contained in them contain legislation obligatory upon the whole Church, e.g. the Constitution of Paul II, "Ambitio sacra", which forbade the alienation of ecclesiastical goods. This, however, is not true of all of them: some had even been formally abrogated at the time when Chappuis wrote his "Collectio Extra". Most of the decretales of John XXII, are reproduced in both collections. Both the collections were printed in the official (1852).

716

A. VAN HOVE.

**Extreme Unction** is a sacrament of the New Law instituted by Christ to give spiritual aid and comfort and perfect spiritual health, including, if need be, the remission of sins, and also, conditionally, to restore bodily health, to Christians who are seriously ill; it consists essentially in the unction by a priest of the body of the sick person, accompanied by a suitable form of words. The several points embodied in this descriptive definition will be more fully explained in the following sections into which this article is divided: I. Actual Rite of Administration; II. Name; III. Sacramental Efficacy of the Sacrament; IV. The Form; V. Minister; VI. Subject; VII. Effects; VIII. Necessity; IX. Repetition; X. Reviviscence of the Sacrament.

**I. ACTUAL RITE OF ADMINISTRATION.**—As administered in the Western Church to-day according to the rite of the Roman Ritual, the sacrament consists (apart from certain non-essential prayers) in the unction with oil, specially blessed by the bishop, of the organs of the five external senses (eyes, ears, nostrils, lips, hands), of the feet, and, for men (where the custom exists and the condition of the patient permits of his being moved), of the loins or reins; and in the following form repeated at each unction with mention of the corresponding sense or faculty: "Through this holy unction and His own most tender mercy may the Lord pardon thee whatever sins or faults thou hast committed [quidquid deligquisit] by sight [by hearing, smell, taste, touch, walking, carnal delectation]." The unction of the loins is generally, if not universally, omitted in English-speaking countries, and it is of course everywhere forbidden in case of women. To perform this rite fully takes an appreciable time, but in cases of urgent necessity, when death is likely to occur before it can be completed, it is sufficient to employ a single unction (on the forehead, for instance) with the general form: "Through this holy unction may Our Lord pardon thee whatsoever sins or faults thou hast committed." By the decree of 25 April, 1906, the Holy Office has expressly approved of this form for cases of urgent necessity.

In the Eastern Orthodox (schismatical) Church this sacrament is normally administered by a number of priests (seven, five, three; but in case of necessity even one is enough); and it is the priests themselves who bless the oil on each occasion before use. The parts usually anointed are the forehead, chin, cheeks, hands, nostrils, and breast, and the form used is the following: "In the name of Our Lord, God, and the Holy Spirit, be upon thee..." Who didst send Thy Only-Begotten Son as the healer of every disease and our deliverer from death, heal also Thy servant N. from the bodily infirmity that holds him, and make him live through the grace of Christ, by the intercessions of (certain saints who are named, and of all the saints)." (Gora, Euchologion, p. 417.) Each of the priests who are present repeats the whole rite.

**II. NAME.**—The name Extreme Unction did not become technical in the West till towards the end of the twelfth century, and has never become current in the East. Some theologians would explain its origin on the ground that this unction was regarded as the last in order of the sacramental or quasi-sacramental unctions, being preceded by those of baptism, confirmation, and Holy Orders; but, having regard to the conditions prevailing at the time when the name was introduced (see below, VI), it is much more probable that it was intended originally to mean "the unction of those in extremis," i.e. of the dying, especially as the corresponding name, sacramentum excusium, came into common use during the same period. In the East, previous to the sacramental régime, there were names, e.g., the holy oil, or unction of the sick; the unction or blessing of consecrated oil; the unction of God; the office of the unction; etc. In the Eastern Church the later technical name is εὐαγγελία (i.e. the prayer-oil); but other names have been and still are in use, e.g. γάλας χυάνος (holy), or γιαμίν (consecrated), παναγία, πάναγια ἡμέρα, χράμα, etc.

**III. SACRAMENTAL EFFICACY OF THE RITE.**

**(A) Catholic Doctrine.**—The Council of Trent (Sess. XIV, esp. i, De Extir. Unct.) teaches that "this sacred unction of the sick was instituted by Christ Our Lord as a sacrament of the New Testament, truly and properly so called, being insinuated indeed in Mark [vi, 13] but commended to the faithful and promulgated" by James [Ep., v, 14, 15]; and the corresponding canon (can. i, De Extir. Unct.) says: "Thus did Christ Our Lord in the presence of Peter, James, and John, and of the other Apostles, administer the divine unction to the sick, saying: 'Go and anoint with the oil of My peace.'" But since Trent "that extreme unction is not truly and properly a sacrament instituted by Christ Our Lord, and promulgated by the blessed Apostle James, but merely a rite received from the fathers, or a human invention".

Already in the Council of Florence, in 1438, Eugene IV for the Armenians ("Bull "Exultate Deo" 22 Nov., 1439), extreme unction is named as the fifth of the Seven Sacraments, and its matter and form, subject, minister, and effects described (Denzinger, "Enchiridion", 106 th ed., Freiburg, 1906, no. 700—old no. 505). Again, it was one of the three sacraments (the others being confirmation and matrimony) which Wyclifites and Hussites were under suspicion of consecrating, and about which they were to be specially interrogated at the Council of Constance by order of the "Bull "Inter sanctos" 22 Feb., 1418—Denzinger, op. cit., no. 669—old no. 563). Going back farther we find extreme unction enumerated among the sacraments in the profession of faith subscribed for the Greeks by Michael Paleologus at the Council of Lyons in 1274 (Denzinger, no. 465—old no. 388), and in the still earlier profession prescribed for converted Waldenses by Innocent III in 1208 (Denzinger, no. 424—old no. 370). Thus, long before Trent—in fact from the time when the definition of a sacrament in the strict sense had been elaborated by the ecumenical councils and was generally recognized and authoritatively proclaimed as a sacrament; but in Trent for the first time its institution by Christ Himself was defined. Among the older Schoolmen there had been a difference of opinion on this point, some—as Hugh of St. Victor (De Sacram., Ek. II, pt. XV, c. ii), Peter Lombard (Sent., IV, diss. xxiii), St. Bonaventure (Comm. in Sent... loc. cit., art. i, q. ii), and others—holding against the more common view that this sacrament had been instituted by the Apostles after the Descent of the Holy Spirit, and under Hilarian's authority. But since Trent it must be held as a doctrine of Catholic faith that Christ is at least the mediave author of extreme unction, i.e., that it is by His proper authority as God-Man that the prayer-unction has become an efficacious sign of grace; and theologians almost unanimously maintain that we must hold it to be at least certain that Christ was in some sense the immediate author of this sacrament, i.e., that He Himself while on earth commissioned the Apostles to employ some such sign for conferring special graces, without, however, its being necessary to regard it as a full sacrament. In other words, immediate institution by Christ is compatible with a mere generic determination by Him of the physical elements of the sacrament.

The teaching of the Council of Trent is directed chiefly against the Reformers of the sixteenth century.
Luther denied the sacramentality of extreme unction and censured it among rites that are of human or ecclesiastic institution (De Captivit. Babylonic. cap. de extr. unct.). Calvin had nothing but contempt and ridicule for this sacrament, which he described as a piece of Athanasian, heretical nonsense. He did not deny that the Jacobean rite may have been a sacrament in the Early Church, but held that it was a mere temporary institution which had lost all its efficacy since the charisms of healing had ceased (Comm. in Ep. Jacobi, v, 14, 15). The same position is taken up in the confessions of the Lutheran and Calvinistic bodies. In the first edition (1551) of the Edwardine Prayer Book for the reformed Anglican Church the rite of unction for the sick, with prayers that are clearly Catholic in tone, was retained; but in the second edition (1552) this rite was omitted, and the general teaching on the sacraments shows clearly enough the intention of denying that extreme unction is a sacrament. The same is to be said of the other Protestant bodies, and down to our day the denial of the Tridentine doctrine on extreme unction has been one of the facts that go to make up the negative unanimity of Protestantism. At the present time, however, there has been a revival more or less among Anglicans of Catholic teaching and practice. "Some of our clergy," writes Mr. Fuller (Anointing of the Sick) "are now assuming the right, or at least the inclination, of writing the plain injunction about unction in the pages of the New Testament, jump hastily to the conclusion that the Roman teaching and practice in regard to unction is right, and seek to revive the use of unction as a channel of sanctifying grace, believing that grace is imparted sacramentially through the oil as a preparation for death" (p. 307). Mr. Fuller himself is not prepared to go so far, though he pleads for the revival of the Jacobean unction, which he regards as a more sacramental institution for the supernatural healing or comfortment in the sickbed. He can appeal to the authority of one of their classical writers, Bishop Forbes of Brechin, who admits (Exposition of the XXXIX Articles, vol. II, p. 463) that "the unction of the sick is the last Pleiad of the Anglican firmament." There has been practically lost an apostolic practice, whereby, in case of grievous sickness, the faithful were anointed and prayed over, for the forgiveness of their sins, and to restore them, if God so willed, or to give them spiritual support in their misfortunes. Due to the Reformation there appears to have been no definite heresy relating to this sacrament in particular. The Albigenses are said to have rejected it, the meaning probably being that its rejection, like that of other sacraments, was logically implied in their principles. The abuses connected with its administration which prevailed in the twelfth and thirteenth centuries and which tended to make it inaccessible only to the rich, gave the Waldenses a pretext for denouncing it as the ultima superbia (cf. Preger, Beitrage zur Gesch. der Waldenser im M. A., pp. 66 sqq.). That the Waldenses and the Waldenses were not ignorant of extreme unction is clear from the interrogatory already referred to, but the present writer has failed to discover any evidence of its specific rejection by these heretics.

(B) Proof of Catholic Doctrine from Holy Scripture.

In this connexion there are only two texts to be discussed—Mark, vi, 16, and James, v, 14, 15—and the first of these may be disposed of briefly. Some ancient writers (Victor of Antioch, Theophilactus, Euthymius, St. Bede, and others) and not a few Scholastics seem to have referred to this sacrament in the text St. Mark, and some of them took it to be a record of its institution by Christ or at least a proof of His promise or intention to institute it. Some post-Tridentine theologians also (Maldonatus, de Sainte-Beuve, Berti, Marzian, and among recent writers, but in a modified form, Schell) have maintained that the unction here mentioned was sacramental. But the great majority of theologians and commentators have denied the sacramentality of this unction on the grounds: (1) that there is mention only of bodily healing as its effect (cf. Matt., x, 1; Luke, x, 19); (2) that James, who anointed had probably not received Christian baptism; (3) that the Apostles had not yet been ordained priests; and (4) that penance, of which extreme unction is the complement, had not yet been instituted as a sacrament. Hence the general statement of the Council of Trent that extreme unction as a sacrament is merely "insinuated" in St. Mark, i.e. hinted at or prefigured in the miraculous unction which the Apostles employed, just as Christian baptism had been prefigured by the baptism of John.

The text of St. James reads: "Is any man sick among you? Let him bring in the priests of the Church, and let them pray over him, anointing him with oil in the name of the Lord. And the prayer of faith shall save [εἰρενεύει] the sick man: and the Lord shall raise him up [γιατί]... and if he be in sins, they shall be forgiven him." It is not seriously disputed that there is question here of those who are physically ill, and of them alone; and that the sickness is supposed to be grave is conveyed by the word ἁμαρτία and by the injunction to have the priests called in; the misunderstanding that this "the priests of the church" are meant the hierarchal clergy, and not merely elders in the sense of those of mature age, is also abundantly clear. The expression τοις ἀμαρτήτοις, even if used alone, would naturally admit no other meaning in accordance with the usage of the Acts, Pastoral Epistles, and I Peter (v); but the addition of της ἐξοντίσεως excludes the possibility of doubt (cf. Acts, xx, 17). The priests are to pray over the sick man, anointing him with oil. Here we have the physical element necessary to constitute a sacrament, oil and anointing with water in baptism; the anointing as proximate matter, like immersion or infusion in baptism; and the accompanying prayer as form. This rite will therefore be a true sacrament if it has the sanction of Christ's authority, and is intended by its own operation to confer grace on the sick person, to work for his spiritual benefit. But the words "in the name of the Lord" here mean "by the power and authority of Christ", which is the same as to say that St. James clearly implies the Divine institution of the rite he enjoins. To take these words as referring to a name which is only the alternative interpretation—would be to see in them a needless and confusing repetition of the injunction "let them pray over him". But is this rite recommended by St. James as an operative sign of grace? It may be admitted that the words "the prayer of faith shall save the sick man; and the Lord shall raise him up", taken by themselves and apart from the context, might possibly be applied to mere bodily healing; but the words that follow, "and if he be in sins, they shall be forgiven him", speak expressly of a spiritual effect involving the remission of all kinds of sin. This being so, and it being further assumed that the remission of sins is given by St. James as an effect of the prayer-unction, nothing is more reasonable than to hold that St. James is thinking of spiritual as well as of bodily effects when he speaks of the sick man being "saved" and "raised up".

It cannot be denied that in accordance with New Testament usage the words in question (especially the first) are capable of conveying this twofold meaning, and it is much more natural in the present context to regard the word σώζει as including the spiritual effect. Further, there is over the predominating spiritual and eschatological connotation of "saving" in St. James's mind emerges clearly in the expression, "shall save his soul from death" (v, 20), and without necessarily excluding a reference to deliverance from bodily death in verse 16,
we are certainly justified in including in that verse a reference to the saving of the soul. Moreover, the Apostle could not, surely, have meant to teach or imply that every sick Christian who was anointed would be cured of his sickness and saved from bodily death; yet the condition of a sinner required a different course of treatment in the Church for all the sick faithful, and the saving and raising up are represented absolutely as being the normal, if not infallible, effect of its use. We know from experience (and the same has been known and noted in the Church from the beginning) that restoration of bodily health does not as a matter of fact normally result from theunction, though it does result with sufficient frequency and without being counted miraculous to justify us in regarding it as one of the Divinely (but conditionally) intended effects of the rite. Are we to suppose, therefore, that St. James thus solemnly recommends universal recourse to a rite which, after all, will be efficacious for the purpose intended only by way of a comparatively rare exception? Yet this is what would follow if it be held that there is reference exclusively to bodily healing in the clauses which speak of the sick man being saved and raised up, and if further it be denied that the remission of sins spoken of in the following clause, and which is undeniably a spiritual effect, is attributed to the unction by St. James.

This is the position taken by Mr. Fuller; but, apart from the non sequitur and violeace in which the Jacobean text which it postulates, such a view utterly fails to furnish an adequate rationale for the universal and permanent character of the Apostolic prescription. Mr. Fuller vainly seeks an analogy (op. cit., pp. 289 sqq.) in the absolute and universal expressions in which Christ assures us that our prayers will be heard. We admit that our rightly disposed prayers are always and infallibly efficacious for our ultimate spiritual good, but not by any means necessarily so for the specific temporal objects or even the proximate spiritual objects, of which our prayers may consist. When, however, we come to consider the efficacy of prayer, we are justified in regarding the efficacy of prayer as fully justified on this ground; but would they be justified if we were compelled to verify them by reference merely to the particular temporal boons we ask for? Yet this is how, on his own hypothesis, Mr. Fuller is obliged to justify St. James's assurance that the prayer-unction shall be efficacious. But in the Catholic view, which considers the temporal boon of bodily healing as being only a conditional and subordinate end of the unction, while its paramount spiritual purpose is to confit the church with the graces which they specially need—may be, and is normally, obtained, not only is an adequate rationale of the Jacobean injunction provided, but a true instead of a false analogy with the efficacy of prayer is established.

But in defence of his thesis Mr. Fuller is further obliged to maintain that all reference to the effects of the unction ceases with the words, "the Lord shall raise him up", and that in the clause immediately following, "and if he be in sins, they shall be forgiven him," St. James passes on to a totally different subject, namely, the Sacrament of Penance. But unless we agree to disregard the rules of grammar and the logical sequence of thought, it is impossible to allow this separation of the clauses and this sudden transition in the third clause to a new and altogether unexpected subject-matter. All three clauses are connected in the very same way with the unction, "and the prayer of faith . . . and the Lord . . . and if he be in sins . . .", so that the remission of sins is just as clearly stated to be an effect of the unction as the saving and raising up. Had St. James intended, as some mean that he did, to speak of the three effects of very absolute in the third clause he could not have written in such a way as inevitably to mislead the reader into believing that he was still dealing with an effect of the priestly unction. In the nature of things there is no reason why unction as well as absolution by a priest might not be Divinely ordained for the sacramental remission of sin, and that it was so ordained is what every reader naturally concludes from St. James. Nor is there anything in the context to suggest a reference to the Sacrament of Penance in this third clause. The admonition in the following verse (16) is addressed to the whole Church, and the words "one to another", may refer to a mere liturgical confession like that expressed in the "Confiteor": but even if we take the reference to be to sacramental confession and admit the genuineness of the connecting "therefore" (it genuineness is not beyond doubt), there is no compelling reason for connecting this admonition closely with the clause which immediately precedes. The "therefore" may very well be taken as referring vaguely to the whole preceding Epistle and introducing a sort of epilogue.

Mr. Fuller's is the latest and most elaborate attempt to evade the plain meaning of the Jacobean text that we have met with; hence our reason for dealing with it so fully. It would be an endless task to notice the many other similarly arbitrary devices of interpretation with which Protestant theologians and commentators have recourse in attempting to justify their denial of the Tridentine teaching so clearly supported by St. James (see examples in Kern, "De Sacramento Extremo Uxionis", Ratisbon, 1907, pp. 60 sqq.). It is enough to remark that the number of mutually contradictory interpretations which have become evident in the form in which the Church's position has been defined or formulated in the definition of the strict sense was formulated, but which was already implicitly and informally contained in the common practice and belief of preceding ages. We proceed, therefore, to study the witness of Tradition.

(C) Proof from Tradition.—(1) State of the Argument.—Owing to the comparative paucity of extant testimonies from the early centuries relating to this sacrament, Catholic theologians habitually recur to the general argument from prescription, which in this instance takes the form of the uninterrupted use of the Jacobean rite and its recognition and approval in the Eastern and Western Churches, notwithstanding their separation since 869, proves that both must have been in possession of a common tradition on the subject prior to the schism. Further, the fact that the Nestorian and Monophysite bodies, who separated from the Church in the fifth century, retained the use of the unction of the sick, carries back the undivided tradition to the beginning of that century, while no evidence from that or any earlier period can be adduced to weaken the legitimate presumption that the tradition is Apostolic, having its origin in St. James's injunction. Both of these broad facts will be established by the evidence to be given below, while the presumption referred to will be confirmed by the witness of the first four centuries.

As to the actual paucity of early testimonies, various explanations have been offered. It is not sufficient to appeal with Binterim (Die Voröffentlichkeiten des Ordenskath., Kirche, vol. VI, pt. III, p. 241) to the Discipline of the Secret, which, so far as it has been studied, seems to mean that the rite did not prevent frequent reference to it by writer and preacher of those ages. Nor is Launol's contention (Opera, vol. I, pt. I, pp. 544 sqq.) well founded, that recourse to this sacrament was much rarer in early ages than later. It is more to the point in the first place to recall the less, except for a few fragments, of
several early commentaries on St. James’s Epistle (by Clement of Alexandria, Didymus, St. Augustine, St. Cyril of Alexandria, and others) in which chiefly we should look for reference to the union. The earliest accurately preserved commentary is that of St. Bede (d. 735). We may use this as a point of departure, and since the sacrament as also Victor of Antioch (fifth century), the earliest commentator on St. Mark. Second, it is clear, at the period when testimonies become abundant, that the union was allied to penance as a supplementary sacrament, and as such was administered regularly before the admission to the Church. We may presume that the earlier administration had come down from remote antiquity, and this close connexion with penance, about which, as privately administered to the sick, the Fathers rarely speak, helps to explain their silence on extreme unction. Third, it should be remembered that there was no systematic sacramental theology before the Scholastic period, and, in the absence of the interests of system, the interests of public instruction would call far less frequently for the treatment of this sacrament and of the other offices privately administered to the sick. The consideration of such public concern as the preparation of catechumens and the administration and reception of those sacraments which were solemnly conferred in the Church. If those, and similar considerations which might be adduced, were struck out and ex hypothesi, it would be seen, the separative fewness of early testimonies is not after all so strange. It should be observed, moreover, that charismatic and other unctions of the sick, even with consecrated oil, distinct from the Jacobean unction, were practised in the early ages, and that the vagueness of not a few testimonies which speak of the anointing of the sick makes it doubtful whether the reference is to the apostolic rite or to some of these other usages.

It should finally be premised that in stating the argument from tradition a larger place must be allowed to the times of the Fathers of the Church, in which the practice of such practical authority, did not define for all time the true meaning and proper efficacy of the sacrament in this sense drawed up. It is a perfectly valid defence of the Tridentine doctrine on extreme unction to show that St. James permanently prescribed the rite of unction in terms that its strict sacramental efficacy; that the Church for several centuries simply went on practising the rite and believing in its efficacy as taught by the Apostles, without feeling the need of a more definitely formulated doctrine than is expressed in the text of his Epistle; and that finally, when this need had arisen, the Church, in the exercise of her rightful authority, did define for all time the true meaning and proper efficacy of the Jacobean prayer-unction. It is well to keep this principle in mind in discussing the witness of the early ages, though as a matter of fact the evidence, as will be seen, proves more than we are under any obligation to prove.

(2) The Evidence.—(a) Ante-Nicene Period.—The earliest extant witness is Origen (d. 254), who, in enumerating the several ways of obtaining remission of sins, comes (seventhly) to the “hard and laborious way of (public) penance, which involves the confession of one’s sins to the priest and the acceptance at his hands of ‘the salutary medicine’. And having quoted the Psalmist in support of confession, Origen adds: ‘And in this (in quo) is fulfilled also what St. James the Apostle says: ‘If any one is sick, let him call in the priest of the Church, and let them lay hands on him, anointing him with oil in the name of the Lord, and the prayer of faith shall save the sick man, and if he be in sins they shall be remitted to him’” (Hom. ii, in Levit., in P. G., XXI, 419). We might be content to rest content with the interpretation of St. James’ words as known and observed in Origen’s time, and that the rite itself was commonly spoken of at Alexandria as “a laying on of hands”. But when it is urged that he here attributes the remission of sins of which the Apostle speaks not to the rite of unction, but to the sacrament of extreme unction, it is worth while inquiring into the reasons alleged for this interpretation of the passage. Some would have it that Origen is allegorizing, and that he takes the sick man in St. James to mean the spiritually sick or the sinner, thus changing the Apostolic injunction to the following: If anyone be in sins, let him call in the priests . . . and if he be in sins, they shall be remitted to him. But we cannot suppose the great Alexandrian capable of such illogicalness on his own account, or capable of attributing it to the Apostles. According to Mr. Fuller (op. cit., p. 43 sq.), Origen, in placing the whole text of St. James, means in reality to refer only to the fulfilment of the concluding words, “and if he be in sins”, etc. But if that be so, why quote the preceding part at all, which, in Mr. Fuller’s, view, has nothing to do with the subject and can only lead to confusion; and why, above all, omit the words of St. James immediately following, “Confess your sins one to another”, which would have been very much to the point and could not have caused any confusion? The truth is that the relation of the Jacobean rite to penance is very obscurely stated by Origen; but, whatever may have been his views of that relation, he evidently means to speak of the whole rite, union and all, and to assert that it is performed as a means of remitting sins. But the whole passage is based on a connexion that he absolutely identifies the Jacobean rite with penance, the only logical conclusion would be that he considered the union to be a necessary part of penance for the sick. But it is much more reasonable and more in keeping with what we know of the penitential discipline of the period—Christian sinners were admitted to canonical penance only once—to suppose that Origen looked upon the rite of union as a supplement to penance, intended for the sick or dying who either had never undergone canonical penance, or after penance, or for the sick or who, owing to their “hard and laborious” course of satisfaction being cut short by sickness, might be considered to need just such a complement to absolution, this complement itself being independently efficacious to remit sins or complete their remission by removal of their effects. This would fairly account for the confused grouping together of both ways of remission in the text, and it is a Catholic interpretation in keeping with the conditions of that age and with later and clearer teaching. It is interesting to observe that John Cassian, writing nearly two centuries later, and probably with this very text of Origen before him, gives similar enumeration of means for obtaining remission of sins, and in this enumeration the Jacobean rite is given an independent place (Collat., XX, in F. L., XLIX, 1161).

Origen’s contemporary, Tertullian, in upbraiding heretics for neglecting the distinction between clergy and laity and allowing even women “to teach, to dispute, to perform exorcisms, to undertake cures (curaiones reprimiteres), perhaps even to baptize” (De Praescriptione, c. xlii, in P. L., ii, 202), has nothing to do with the italicized clause to use the Jacobean rite; for he did not consider charismatic healing, even with oil, to be the proper or exclusive function of the clergy (see “Ad Scapulam”, c. iv, in F. L., i, 703). If this be so, Tertullian is a witness to the general use of the rite and in the
to the belief that its administration was reserved to the priest.

St. Aphraates, "the Persian Sage," though he wrote (386-345) after Nicea, may be counted as an Ante-Nicene witness, since he lived outside the limits of the empire and remained in ignorance of the Arian strife. Writing of the various uses of holy oil, this Father says that it contains the sign "of the sacrament of life by which Christians [in baptism], priests [in ordination], kings, and prophets are made perfect; [it] illuminates darkness [in confirmation], anoints the sick, and by its secret sacrament restores penitents." (Demonstratio xxxii, 3, and "Patr. Patr.," vol. I, pp. 83-86.) It is hardly possible to question the allusion here to the Jacobean rite, which was therefore in regular use in the remote Persian Church at the beginning of the fourth century. Its mention side by side with other non-sacramental in the strict sense is characteristic of the period, and merely shows that the strict definition of a sacrament had not been formulated. As being virtually Ante-Nicene we may give also the witness of the collection of liturgical prayers known as the "Sacramentary of Serapion." (Serapicius de Thoma, Tersacta, etc. [ed. of St. Athanasius.]) The seventeenth prayer is a lengthy form for consecrating the oil of the sick, in the course of which God is besought to bestow upon the oil a supernatural efficacy "for good grace and remission of sins, for a medicine of life and salvation, for healing and for the remission of soul and body." I t is thus, "for the strengthening." Here we have not only the recognition in plain terms of spiritual effects from the anointing but the special mention of grace and the remission of sins. Mr. Puller tries to explain away several of these expressions, but he has no refuge from the force of the words "for good grace and remission of sins" but to hold that they must be a later addition to the original text.

(b) The Great Patriarchic Age: Fourth to Seventh Century.—References to extreme unction in this period are much more abundant and prove beyond doubt the universal use of the Jacobean unction in every part of the Church. Some testimonies, moreover, refer specifically to one or more of the several ends and effects of the sacrament, as the cure or alleviation of bodily sickness, or the remission of sins, while some may be said to anticipate pretty clearly the definition of extreme unction as a sacrament in the strict sense. As illustrating the universal use of the Jacobean unction, we may cite in the first place St. Ephraem Syrus (d. 373) in his homily on the Remission of sins, while some may be preserved only in a fragmentary Latin version made before the end of the fifth century and recently discovered at Verona ("Didascalie Apostolorum" in "Fragmenta Veronensis," ed. Hauler, Leipzig, 1900), and in an Ethiopic version. This Ordo in both versions contains a form for consecrating the oil for the Jacobean rite, the Latin praying for "the strengthening and healing" of those who use it, and the Ethiopic for their "strengthening and sanctification." Mr. Puller, who gives and discusses both versions (op. cit., p. 104 sq.), is once more obliged to place the fourth-century Ordo in the Ethiopic version as the base of the reference to sanctification. But may not the "strengthening" spoken of as distinct from "healing" be spiritual rather than corporal? Likewise the "Testamentum Domini," compiled in Greek about the year 300 (or earlier, and preserved in Syrian (published by Rahlfis), and in Ethiopic and Arabic versions (still in MSS.), contains a form for consecrating the oil of the sick, in which besides bodily healing, the sanctifying power of the oil as applied to penitents is referred to (see "The Testament of Our Lord," tr. Cooper and Maclean, 1902, pp. 77, 78). From these instances it appears that Serpion's Sacramentary was not without parallels during this period.

In St. Augustine's "Speculum de Scripturâ" (an. 427; in P. L., XXXIV, 857-1040), which is made up of the most eminent unctions that exist in the compiler, and is intended as a handy manual of Christian piety, doctrinal and practical, the injunction of St. James regarding the prayer-unction of the sick is quoted. This shows that the rite was a common-place in the Christian practice of that age; and we are told by Possidius, in his "Life of Augustine" (c. xxvii, in P. L., XXXII, 56), that the saint himself "followed the rule laid down by the Apostle that he should visit only orphans and widows in their tribulation (James, i, 27), and that if he happened to be asked by the sick person to pray the prayer of St. James, he would say to them, he did so without delay." We have seen Origen refer to the Jacobean rite as an "imposition of hands," and this title survived to a very late period in the Church of St. Ambrose, who was himself an ardent student of Origen and from whom St. Augustine very early heard of the unction. The case of St. Ambro- sianum ex Codice sec. XI," etc., 1905, vol. I, p. 79 sq., 94 eq., 147 sq., where three different Ordines of the eleventh and thirteenth centuries have as title for the office of extreme unction, "imposto manuum super infernum." It is fair, then, to conclude from the biogra pher's statement that, when called upon to do so, St. Augustine himself used to administer the Jacobean unction to the sick. This would be exactly on the lines laid down by Augustine's contemporary, Pope Innocent I (see below). St. Ambrose himself, writing against the Novatians (De Pecat., VIII, in P. L., XVI, 477), asks: "Why therefore do you lay on hands and believe it to be an effect of the blessing [benedictiones opus] if any of the sick happen to recover? . . . Why do you baptize, if sins cannot be remitted by him who baptizes?" This is because the rite of hands with baptism and the use of both as arguments in favour of penance, shows that there is question not of mere charismatic healing by a simple blessing, but of a rite which, like baptism, was in regular use among the Novatians, and which can only be compared with that of St. James. St. Ambrose in his encyclical letter of 341 (P. G., XXV, 234), complaining of the evils of religion caused by the intrusion of the Arius Bishop Gregory, mentions among other abuses that many catechumens were left to die without baptism and that many sick and dying Christians had to choose the hard, alternative of being deprived of priestly ministrations—"which they considered more terrible calamity than the disease itself"—rather than allow the "hands of the Arians to be laid on their heads". Here again we are justified in regarding the rite as an ordinary Christian practice, and a proof of the value which the faithful attached to the rite. Cassiodorus (d. about 570) thus paraphrases the injunction of St. James (Complexiones in Ep. Apostol., in P. L., LXX, 1380): "a priest is to be called in, who by the prayer of faith [oraciones fidei] and the unction of the holy oil which he imparts will save him who is afflicted by a serious injury or by sickness.

To these testimonies may be added many instances of the use of extreme unction recorded in the lives of the saints. Thus, according to Egeria (ibid., p. 461, about 550; Acta SS., 14 March, p. 348), St. Tremanus (ibid., 7 Feb., p. 55), St. Eugene (Eogoban), Bishop of Ardersith (modern Ardstraw, in the Diocese of Derry; d. about 618; ibid., 23 Aug., p. 627).
of body and remission of sins, for the Holy Ghost has given this promise through James". We have mentioned the witness of John Cassian, and the witness of his master, St. Chrysostom, may be given here. In his work "On the Priesthood" (III, vi, in P. G., XLVII, 34) St. Chrysostom says of the priest, sick, whom he sought out and brought to the monastery, "But if the necessity arose," says his disciple and biographer, "of anointing the sick person, he reported to the abbot, who was a priest (προς τὸν ἀρχιμανδρίτην), and had the anointing with the blessed oil performed by him. And it often happened that in a few days, God co-operating with his efforts, he sent the man home restored to health" (Acts SS., 17 June, p. 251).

It appears from this testimony that the Jacobean unction was administered only to those who were seriously ill, that only a priest could administer it, that consecrated oil was used, that it was distinct from charismatic unction (which the saint himself used to perform, while still a layman, using consecrated oil), and finally that bodily healing did not always follow and was not apparently expected to follow, and that when it did take place it was not regarded as miraculous. It is, therefore, implied that other effects besides bodily healing were believed to be produced by the Jacobean unction, and these must be understood to be spiritual.

The purpose of the unction by the Nestorians we may refer to the nineteenth canon of the synod held at Seleucia in 554 under the presidency of the Patriarch Joseph, and which, speaking of those who have been addicted to various diabolical and superstitious practices, prescribes that any such person on being converted shall have applied to him, "as to one who is corporally sick, the oil of prayer blessed by the priest" (Chabot, Synodicon Orientale, 1902, p. 363). Here, besides the legitimate use of the Jacobean unction, we have an early instance of an abuse, which unballance should be condemned by the church, of permitting the euchelation to be administered, on certain days of the year, to people who are in perfect health, as a complement of penance and a preparation for Holy Communion (see below VI, (3)). That the Monophysites also retained the Jacobean unction after their separation from the Catholic Church (451) is clear from the fact that their liturgies (Armenian, Syrian, and Coptic) contain the rite for blessing the oil. There is reason to suppose that this portion of their liturgy in its present form has been borrowed from the Jacobean unction in a later period (see Brightman in "Journal of Theological Studies", I, p. 261), but this borrowing supposes that they already possessed the unction itself. It has nowadays fallen into disuse among the Nestorians and Armenians, though not among the Copts.

Many testimonies might be quoted in which the Jacobean unction is recommended specifically as a means of restoring bodily health, and the faithful are urged to receive it instead of recurring, as they were prone to do, to various superstitious remedies. This is the burden of certain sermons in Procussions of Chrysostom [c. 465-525; "In Levit.", xix, 31, in P. G., LXXXVII (1), 762 sq. ], Isaac of Antioch (b. about 350; Opp., ed. Beckell, Pt. I, pp. 187 sq.), St. Cyril of Alexandria (De Adorat, in Spiritu et Veritate, VI, in P. G., LXVIII, 470 sq.), St. Cassianus of Arles (Serm. cxlviii, 5, "Apend ad serm. Augustini" in P. L., XXXIX, 2273), and John Mandakuni (Montaguni), Catholicos of the Armenians from 490 to 487 (Schmid, Reden des Joannes Mandakuni, pp. 222 sq.). This particular aspect of the prayer is especially emphasized in the form used to this day in the Orthodox Eastern Church (see above, I).

Mention of the remission of sins as an effect of the Jacobean rite is also fairly frequent. It is coupled with bodily healing by St. Cassianus in the passage just referred to: the sick person will "receive both health

V. - 46
and causality of a sacrament; only Victor attributes the signification entirely to the matter and the causality to the form (the prayer). This was to be corrected in the fully developed sacramental theory of later times, but the attribution of sacramental effects to the form (the prayer, etc.) in the characteristics of patristic speculation of a theory clearly attributes both spiritual and corporal effects to the prayer-union; nor can the fact that he uses the imperfect tense (ἐνέπρεπε, “effected”; οὐ πρέπει, “was”) be taken to imply that the use of the unction had ceased at Antioch in his day. The use of the present tense in describing the signification of the rite implies the contrary, and independent evidence is clearly against the supposition. In the passage from John Mandakuni, referred to above, the prayer-unction is repeatedly described as “the gift of grace,” “the grace of God,” Divinely instituted and prescribed, and which cannot be neglected and despised without incurring “the curse of the Apostles”; language which it is difficult to understand unless we suppose the Armenian patriarch to have reckoned the unction among the most sacred rites or even rites, or regarded it as being what we describe as a sacrament in the strict sense (cf. Kern, op. cit., pp. 46, 47).

There remains to be noticed under this head the most celebrated of all patristic testimonies on extreme unction, and that identical with the passage from the Epistle of St. Jerome (402-417), written in 416, to Decentius, Bishop of Eugubium, in reply to certain questions submitted by the latter for solution. In answer to the question as to who were entitled to the unction, the pope, having quoted the text of St. James, says: “There is no doubt that this text must be received or understood of the sick faithful, who may be [lawfully] anointed with the holy oil of chrism; which, having been blessed by the bishop, it is permitted not only to priests but to all Christians to use for anointing in their own houses or in those of their faithful. Yet he doubts to point out the superfluous character of a further doubt expressed by Decentius: “We notice the superfluous addition of a doubt whether a bishop may do what is undoubtedly permitted to priests. For priests are expressly mentioned (by St. James) for the reason that bishops, hindered by other occupations, cannot go to all the sick. But if the bishop is able to do so or thinks anyone specially worthy of being visited, he, whose office it is to consecrate the sick, need not hesitate to bless and anoint the sick person.” Then, referring to the original question, he justifies the qualification he had added in speaking of “the sick faithful”: “For this unction may not be given to penitents [i.e. to those undergoing canonical penance], seeing that it is a sacrament [quod genus sacramentum est]. For how is it imagined that one sacrament [ unus genus] may be given to one to whom the other sacraments are denied?” The pope adds that he has answered all his correspondent’s questions in order that the latter’s Church may be in a position to follow “the Roman custom” (P. L., XX, 569 sqq., Densinger, no. 99—old no. 61). We do not pursue the argument here, except to say that Pope Innocent had before his mind the definition of a sacrament in the strict sense when he calls the Jacobean unction a sacrament, but since “the other sacraments” from which penitents were excluded were the Holy Eucharist and certain sacred offices, we are justified in maintaining that this association of the unction with the Eucharist most naturally suggests an implicit faith in the part of Pope Innocent in what has been explicitly taught by Scholastic theologians and defined by the Council of Trent. It is interesting to observe that Mr. Puller, in discussing this text (P. L., XX, 569 sqq.), omits all reference to the Holy Eucharist, though it is by far the most obvious and important of “the other sacraments” of which Innocent is speaking, and diverts his reader’s attention to the extulgia, or blessed bread (panis benedit), a sacramental which was in use in many churches at that time and in later ages, but to which there is not the least reason for believing that the pope meant specially to refer. In any case the reference is certainly not exclusive, as Mr. Puller leaves his reader to infer. What Pope Innocent, following the “Roman custom,” explicitly teaches is that the “sacrament” of extreme unction may be administered to the sick faithful who were not doing canonical penance; that priests, and a fortiori bishops, can administer it; but that the oil must be blessed by the bishop. The exclusion of sick penitents from this sacrament must be understood, of course, as being subject to the same exception as their exclusion from “the other sacraments”, and the latter are directed to be given before the annual Easter reconciliation when danger of death is imminent: “Quando usque ad desperandum veniret, ante tempus paschae relaxandum [et] ne de seculo [agrotum] absque communione discedat.” If the words of Innocent—and the same observation applies to other ancient testimonies, e.g. to that of Cæcarius of Arles referred to above—seem to imply that the laity were permitted to anoint themselves in their houses or in those of their friends, received it as sacramental from the laity, as when consecrated by the bishop, yet it is clear enough from the text of St. James and from the way in which Pope Innocent explains the mention of priests in the text, that this could not have been considered by him to be identical with extreme unction. The sacramental use of the oil allowable for devotional, and possibly for charismatic, purposes. But it would not be impossible nor altogether unreasonable to understand the language used by Innocent and others in a causative sense, i.e. as meaning not that the laity were permitted to anoint themselves, but that they were to have the blessed oil at hand to secure their being anointed by the priests according to the prescription of St. James. We believe, however, that this is a forced and unnatural way of understanding such testimonies, and that the most persuasive evidence of the devotional and charismatic use of sacred oil by the laity during the early centuries.

It is worth adding, as a conclusion to our survey of this period, that Innocent’s reply to Decentius was incorporated in various early collections of canon law, some of which, as for instance that of Dionysius Exiguus (P. L., LXVII, 240), were made towards the end of the fifth or the beginning of the sixth century. In this way Innocent’s teaching became known and was received as law in most parts of the Western Church. It was explained to Bede (d. 735), who, in his commentary on the Epistle of St. James, tells us (P. L., XCIII, 39) that, as in Apostolic times, so “now the custom of the Church is that the sick should be anointed by the priests with consecrated oil and through the accompanying prayer restored to health.” He adds that, according to Pope Innocent, even the laity may use the oil provided it has been consecrated by the bishop; and commenting on the clause, “in his house,” he says: “And he refers to him,” after quoting I Cor., xi, 30, to prove that “many because of sins committed in the soul are stricken with bodily sickness or death,” he goes on to speak of the necessity of confession: “If, therefore, the sick be in sins and shall have confessed them to the priests of the Church and shall have sincerely, without being taken to relinquish and amend them, they shall be remitted to them. For sins cannot be remitted without the confession of amendment. Hence the injunction is rightly added [by St. James], ‘Confess, therefore, your sins one to another.’” St. Bede thus appears to connect the remission of sins in St. James’s text with penance rather than the unction, and is therefore claimed by Mr. Puller as supporting his own interpretation of the text. But it should be observed that in asserting the necessity of confessing post-
how the holy virgin Maura asked to receive from his own hands "the Sacraments of the Eucharist and of Extreme Unction" (P. L., CXV, 1374; cf. Acta SS., 21 Sept., p. 272); and Jonas, Bishop of Orléans, in his "Institutio Laicallis" (about 829), after repudiating the popular practice of recurring in sickness to magical remedies, says, 'Let it be known that the sick, if not near death, is sick to demand, not from wizards and witches, but from the Church and her priests, theunction of sanctified oil, a remedy which [as coming] from Our Lord Jesus Christ will benefit him not only in body but in soul (III, xi, in P. L., CXV, 1395). Already the Second Council of Châlon-sur-Saône (813), in its forty-eighth canon, had prescribed as obligatory the unction enjoined by St. James, "since a medicine of this kind which heals the sicknesses of soul and of body is not to be lightly esteemed" (Hardouin, IV, 1040). The Council of Aachen in 836 warns the priest not to neglect giving penance and unction to the sick person (once his illness becomes serious), and when the end is seen to be imminent the soul is to be commended to God "more sacredly than any reception of sacraments" (cap. xxxiv). The Paschal Council of Mântua (847), held under the presidency of Rhabanus Maurus (cap. xxvi), prescribed in the same order the administration of penance, unction, and the Viaticum (Hardouin, V, 13); while the Council of Pavia (850, legislating, as seems clear from the words "sacramentorum"), some of the traditional interpretation of Pope Inno cent's letter to Decentius (see above), directs preachers to be sedulous in instructing the faithful regarding "that salutary sacrament which James the Apostle commends . . . a truly great and very much to be desired mystery, by which, if asked for with faith, both sins are remitted and as a consequence corporal health restored" (ibid., III, 27; Denzinger, Freiburg, 1908, no. 315). The statutes attributed to St. Stronatus, Archbishop of Reims (about 800–831), and which are certainly anterior to the ninth century, direct (no. 15) that "extreme unction is to be brought to the sick person who asks for it", and "that the pastor himself is to visit him often, animating and duly preparing him for future glory" (P. L., LXXX, 445; cf. Hefele, Concilien-Gesch, III, 77). The fourth of the canons promulgated (about 745) by St. Boniface, the Apostle of Germany (see Hefele, III, 580 sq.), forbids priests to go on a journey "without the chrim, and the blessed oil, and the Eucharist", so that in any emergency they may be ready to offer their ministrations; and the Pontifical of the twenty-ninth century, "in all cases, whether the sick always with them and to warn the sick faithful to apply for the unction (P. L., LXXXIX, 821 sq.). In the "Excepciones" of Egbert, Archbishop of York (732–786), the unction is mentioned between penance and the Eucharist, and is ordered to be diligently administered (P. L., LXXXIX, 382). But no writer of this period treats of the unction so fully as, and none more undeniably regards it as a true sacrament in the strict sense than, Theodulf, Bishop of Orleans, and with him we will conclude our list of writers. In his long section (in his second Caen. Epist. published in 780, ix, 21. 9) with the subject (P. L., CV, 220 sq.): "Priests are also to be admonished regarding the unction of the sick, and penance, and the Viaticum, lest anyone should die without the Viaticum." Penance is to be given first, and then, "if the sickness allow it," the patient is to be carried to the church, where the unction and Holy Communion are to be given. Theodulf describes the unction in detail, ordering fifteen, or three times five, crosses to be made with the oil to symbolize the Trinity and the five senses, but noting at the same time that the practice varies as to the number of anointings and the parts anointed. He quotes with approval the form used by the Greeks while anointing, in which remission of sins is expressly mentioned; and so clearly is the unction in his view intended as a preparation for
death that he directs the sick person after receiving it to commend his soul into the hands of God and bid farewell to the living. He enjoins the union of sick children also on the ground that it sometimes cures them, and that penance is (often) necessary for them. The same is so clearly the case that St. James (i, 27) and the Protestant controversialists recognize him as the originator in the West of the teaching which, as they claim, transformed the Jacobean rite into a sacrament. But from all that precedes it is abundantly clear that no such transformation occurred. Some previous writers, as we have seen, had explicitly taught and many had implied the substance of Theodulf's doctrine, to which a still more definite expression was later to be given. The Scholastic and Tridentine doctrine is the only goal to which patriotic and medieval teaching could logically have led.

IV. MATTER AND FORM.—(For the technical meaning of these terms in sacramental theology see SACRAMENTS.)—(1) The remote matter of extreme unction is consecrated oil. No one has ever doubted that the oil meant by St. James is the oil of olives, and in the Western Church pure olive oil without mixture of any other substance seems to have been almost always used. But in the Eastern Church the custom was introduced early of adding in some places a little water, as a symbol of baptism, in others a little wine, in memory of the sacraments and mysteries among the Jews, a little ashes or dust from the sepulchre of some saint. But that the oil must be blessed or consecrated before use is the unanimous testimony of all the ages. Some theologians, however, have held consecration to be necessary merely as a matter of precept, not essential for the validity of the sacrament, e. g. Victoria (Summ. Sacramentorum, no. 219), Juénín (Comm. hist. et doctm. de Sacram., D. vii, q. iii, c. 1), de Sainte-Beuve (De Extr. Unct., D. iii, a. 1), Drouven (De Sacramentis, Lib. VII, q. ii, c. 1, 2); but not holding this opinion, admitted the wide prevalence of this view among the recent theologians of his day. But considering the unanimity of tradition in insisting on the oil being blessed, and the teaching of the Council of Trent (Sess. XIV) that "the Church has understood the matter of this sacrament to be oil blessed by the bishop," it is not surprising that by a decree of the Holy Office, issued 13 Jan., 1611, the proposition asserting the validity of extreme unction with the use of oil not consecrated by the bishop should have been pronounced false and malicious (Quae est a. 1626—old no. 1494), and that, to the question whether a parish priest could in case of necessity validly use for this sacrament oil blessed by himself, the same Holy Office, reaffirming the previous decree, should have replied in the negative (14 Sept., 1643; ibid., no. 1629—old no. 1495). These decisions only set the dogmatic question provisionally and, so far as they affirm the necessity of episcopal consecration of the oil, are applicable only to the Western Church. As is well known, it is the officiating priest or priests who ordain to bless the oil. But in the Eastern Church, and there is no lack of evidence to prove the antiquity of this practice (see Benedict XIV, De Synod. Dioc., VIII, i, 4). For Italo-Greeks in communion with the Holy See the practice was sanctioned by Clement VII in 1595 and by Benedict XIV (see ibid.) in 1742; and it has likewise been sanctioned for various bodies of Eastern Uniates down to our own day (see "Collect. Lecassii", II, pp. 35, 150, 582, 479 sq.; cf. Letter of Leo XIII, "De Discipl. Orient. conserv.," in Acta S. Sedis", XXVII, pp. 257 sq.). There is no doubt that, under various circumstances, priests are delegated to bless the oil validly, though there is no instance on record of such delegation being given to Western priests. But it is only the supreme authority in the Church that can grant delegation, or at least it may reserve to itself the power of granting it (in case one should wish to maintain that in the absence of reservation the ordinary bishop would have this power). The Eastern Uniates have the express approval of the Holy See for their discipline, and, as regards the schismatical Orthodox, one may say either that they have received it, or that the reservation of episcopal power does not extend to them. In spite of the schism the pope has never wished or intended to abrogate the ancient privileges of the Orthodox in matters of this kind.

The prayers for blessing the oil that have come down to us differ very widely, but all of them contain some reference to the purpose of anointing the sick. Hence, at least in the case of a bishop, whose power is ordinary and not delegated, no special form would seem to be necessary for validity, provided this purpose is expressed. But where it is not at all expressed or intended, as in the forms at present used for blessing the chrism and the oil of catechumens, it appears doubtful whether either of these oils would be valid matter for extreme unction (cf. Kern, op. cit., p. 131). But in the nature of things there does not seem to be any reason why a composite form of blessing might not suffice to make the same oil valid matter for more than one sacrament.

(2) The proximate matter of extreme unction is the unction with consecrated oil. The parts anointed with it according to the practice of the Eastern Churches have been mentioned above (1), but it is to be observed that even to-day there are differences of practice in various branches of the Orthodox Church (see Echeo d'Orient, 1889, p. 194). The question is whether several unctions are necessary for a valid sacrament, and if so, which are the essential ones. Arguing from the practice with which they were acquainted and which they assumed to have existed always, the Scholastics not unnaturally concluded that the unctions of the five organs of sense were essential. Jouve himself (Les Cinq perceptions, Q. xxxii, a. 6), who has been followed pretty unanimously by the School and by many later theologians down to our own day (e. g. Billot, De Sacramentis, II, p. 231) who set the method and tradition of the School above positive and historical theology. But a wider knowledge of past and present facts has made it increasingly difficult to defend this view, and the best theologians of recent times have denied that the unction of the five senses, any more than that of the feet or loins, is essential for the validity of the sacrament.

There are facts, however, which show that the testimony mentions the five unctions at all, much less prescribes them as necessary, but most of them speak simply of unction in a way that suggests the sufficiency of a single unction; that the unction of the five senses has never been extensively practiced in the Eastern Church is not practised at the present time in the Orthodox Church, while those Uniates who practise it have simply borrowed it in modern times from Rome; and that even in the Western Church down to the eleventh century the practice was not very widespread, and did not become universal till the seventeenth century as is proved by a number of sixteenth-century Rituals that have been preserved (for details and sources see Kern, op. cit., p. 133 sq.). In face of these facts it is impossible any longer to defend the Scholastic view except by maintaining that the Church has frequently changed the essential matter of the sacrament, or that she has allowed it to be invalidly administered during the greater part of her history, as she still allows without protest in the East. The only conclusion, therefore, is that as far as the matter is concerned nothing more is required than a true unction with duly consecrated oil, and this conclusion may henceforth be regarded as certain by reason of the recent decree of the Holy Office already referred to (1), which, though it speaks only of the form, evidently supposes that form to be used with a single
unction. Besides the authority of the Scholastic tradition, which was based on ignorance of the facts, the only dogmatic argument for the view we have rejected is to be found in the instruction of Eugene IV to the Council of Trent: "The celebration of Masses at the altars in this argument it is enough to remark that this decree is not a dogmatic definition but a disciplinarian instruction, and that, if it were a definition, those who appeal to it ought in consistency to hold the unction of the feet and unctions to be essential. It is hardly necessary to add that, while obeying the Acts of the Councils, the unction prescribed in the Roman Ritual for the validity of the sacrament, there is no intention of denying the grave obligation of adhering strictly to the Ritual except, as the Holy Office allows, in cases of urgent necessity.

(3) The forms of extreme unction from the Roman Ritual and the Euchologion have been given above (1). However ancient may be either form in its substance, it is certain that many other forms substantially different from the present have been in use both in the East and the West (see Martene, "De Antiquis Ecc. Rit.", I, vii, 4; and Kern, op. cit., pp. 142–152); and the controversy among theologians as to what precise form or kind of form is necessary for the validity of the sacrament has followed pretty much the same lines as the dispute on the "NoSuche Antiqua." (2) That the form is essential, and that what is essential is contained in both the Eastern and Western forms now in use, is admitted by all. The problem is to decide not merely what words in either form may be omitted without invalidating the sacrament, but whether the words retained as essential must necessarily express a prayer—"the prayer of faith"—spoken of by St. James. Both forms as now used are deprecatory, and for the West the Holy Office has decided what words may be omitted in case of necessity from the form of the Roman Ritual. The words with the long extemporal prayer, must be reduced to a prayer-form, and that a mere indicative form, such as "I anoint thee," etc., would not suffice for validity, has been the opinion of most of the great Scholastics and of many later theologians. But not a few Scholastics of eminence, and nearly all later theologians who have made due allowance for the facts of history, have upheld the opposite view. For the fact is that the indicative form has been widely used in the East and still more widely in the West; it is the form we meet with in the very earliest Church Orders preserved by the Euchologion; the "Liturgy and Ritual of the Celtic Church," e.g. p. 168; "I anoint thee with sanctified oil in the name of the Trinity that thou mayst be saved for ever and ever"; cf. p. 223). Among contemporary theologians Kern (op. cit., p. 150) who followed by Jodé (Lehrbuch der Dogmatik, 3d ed., Paderborn, 1908, III, 584), suggests a compromise by holding, on the one hand, that at least a virtual prayer-form is required by the text of St. James and, on the other hand, that the indicative forms that have been used are virtually deprecatory. But this seems to be only a subtle way of denying the raison d'être of the controversy; one might argue on the same principle that the forms of baptism, penance, and confirmation are virtually prayer-forms. Some of the so-called indicative forms may be reasonably construed in this way, but in regard to others we may say, with Benedict XIV, that "we do not know how a prayer can be discovered in certain other forms published from very many ancient Rituals by Ménard and Martène, in which there is used merely the words 'I anoint thee' without any thing else being added from which a prayer can be deduced or fashioned" (De Synod. Dicte., VIII, ii, 2). If it be insisted that prayer as such must be in some way an element in the sacrament, one may say that the prayer used in blessing the oil satisfies this requirement.

What has been said in regard to the matter is to be repeated here, viz., that the dogmatic controversy about the form does not affect the disciplinary obligation of adhering strictly to the prescriptions of the Ritual, or, for cases of urgent necessity, to the decree of the Holy Office.

P. V. MIYER. In the Council of Trent has defined in accordance with the words of St. James that the proper ministers (proprios ministrios) of this sacrament are the priests of the Church alone, that is bishops or priests ordained by them (Sess. XIV, cap. iii, and can. 1v, De Extr. Ueet.). And this has been the constant teaching of tradition, that is clear from the decisions given above. Yet Launoi (Opp., I, 569 sq.) has maintained that deacons can be validly delegated by the bishop to administer extreme unction, appealing in support of his view to certain cases in which they were authorized in the absence of one of the spiritual penitents and give them the Viaticum. But in none of these cases is extreme unction once mentioned or referred to, and one may not gratuitously assume that the permission given extended to this sacrament, all the more so as there is not a particle of evidence from any other source to support the assumption. The Carmelite Thomas Waldensis (d. 1430) inferred from the passage of Innocent I [see above, under III (C)], (2), (b)] that, in case of necessity when no priest could be got, a layman or woman might validly anoint (Doc. Eccl. Ant. Histor., II, 39). That the same authority, Boudinon (Revue Cath. des Eglises, July, 1905, p. 401 sq.) has defended the same view and improved upon it by allowing the sick person to administer the sacrament to himself or herself. This opinion, however, seems to be clearly excluded by the definition of the Council of Trent that the priest alone is the "proper" minister of extreme unction. The word proper cannot be taken as equivalent merely to ordinary, and can only mean "Divinely authorized". And as to the unction of themselves or others by lay persons anointed by Innocent, while sanctioning the pious practice, could not have supposed it to be efficacious in the same way as the unction by a priest or bishop, to whom alone in his view the administration of the Jacobean rite belonged. This lay unction was merely what we call to-day a sacramental. Clericus (Decisiones de Extr. Ueet., decis. lxxv) has held that a sick priest in case of necessity can validly administer extreme unction to himself; but he has no argument of any weight to offer for this opinion, which is opposed to all sacramental theology. The decree of the Congregation of Propaganda issued 23 March, 1844. These several singular opinions are rejected with practical unanimity by theologians, and the doctrine is maintained that the priests of the Church, and they alone, can validly confer extreme unction.

(2) The use of the plural in St. James—"the priests of the Church"—does not imply that several priests are required for the valid administration of the sacrament. Writing, as we may suppose, to Christian communities in each of which there was a number of priests, and where several, if it seemed well, could easily be summoned, it was natural for the Apostle to use the plural without intending to lay down as a matter of necessity that several should actually be called in. The expression used is merely a popular and familiar way of saying, "Let him call all the priests and priestly ministrations," just as one might say, "Let him call in the doctors," meaning, "Let him procure medical aid." The plural in either case suggests at the very most the desirability, if the circumstances permitted, of calling one priest or doctor; but it does not exclude, as is obvious, the services of only one, if only one is available, or if for a variety of possible reasons it is better that only one should be summoned. As is evident from several of the witnesses quoted above (III), not only in the West but in the East the unction was often administered in the early
centuries by a single priest; this has been indeed at all times the almost universal practice in the West (for exceptions cf. Martene, op. cit., I, vii, 3; Kern, op. cit., p. 290). In the East, however, it has been more generally practiced for several centuries in the administration of the sacrament. Although the number seven, chosen for mystical reasons, was the ordinary number in many parts of the East from an earlier period, it does not seem to have been prescribed by law for the Orthodox Church before the thirteenth century (cf. Kern, op. cit., p. 260). But even those Oriental theologians who with Symeon of Thessalonica (fifteenth century) seem to deny the validity of unction by a single priest, do not insist on more than three as necessary, while most Easterns admit that one is enough in case of necessity (cf. Kern, op. cit., p. 261).

The Catholic position is that either one or several priests may validly administer extreme unction; but when several officiate it is forbidden by Benedict XIV for the Italo-Greeks (Const. "Etat Pastoralia", 1742) for one priest merely to anoint and another merely to pronounce the form, and most theologians deny the validity of the unction conferred in this way. The actual practice, however, of the schismatical churches is for each priest in turn to repeat the whole rite, both making the sign of the cross, with the necessary essential prayers. This gives rise to an interesting question which will be best discussed in connexion with the repetition of the sacrament (below, IX).

VI. Subject.—(1) Extreme Unction may be validly administered only to Christians who have had the use of reason and who are in danger of death from sickness. That the subject must be baptized is obvious, since all the sacraments, besides baptism itself, are subject to this condition. This is implied in the text of St. James: "Is any man sick among you?" i.e. any member of the Christian community; and tradition is so clear on the subject that it is unnecessary to delay in giving proof. It is not so easy to explain on internal grounds why extreme unction must be denied to baptized infants who are sick or dying, while confirmation, for instance, may be validly administered to them, but such is undoubtedly the traditional teaching and practice. Except to those who were capable of penance extreme unction has never been given. If we assume, however, that the principal effect of extreme unction is to give, with sanctifying grace or its influence, a state of satisfaction, a state of reparation, of opening and comforting and alleviating the sick person in the needs and temptations which specially beset him in a state of dangerous illness, and that the other effects are dependent on the principal, it will be seen that for those who have not attained, and will not attain, the unsufficiency, although in death or recovery, the right in question would be meaningless, whereas the similar right bestowed with the character in confirmation may, and normally does, realize its object in later life. It is to be observed in regard to children, that no agony can be experienced at which they cease to be incapable of receiving extreme unction. If they have attained sufficient use of reason to be capable of sinning even venially, they may certainly be admitted to this sacrament, even though considered too young according to modern practice to receive their First Communion; and in cases of doubt the unction should be administered conditionally. Those who have always been insane or idiotic are to be treated in the same way as children; but anyone who has ever had the use of reason, though temporarily delirious by reason of a seriously aversive cause, is to be presumed to have given the benefit of the sacrament in case of serious illness.

(2) Grave or serious bodily illness is required for the valid reception of extreme unction. This is implied in the text of St. James and in Catholic tradition (see above). If extreme unction is not in fact given by a Syria, it is by no means clear that it has ever been given by a Syrian, although the decisions of Eugene IV for the Armenians: "This sacrament is not to be given except to the sick person, of whose death fears are entertained" (Denzinger, no. 700—old no. 595), and in the teaching of the Council of Trent that this unction is to be administered to the sick, but especially to those about to die ("de in citu vita") (Sess. XIV, cap. iii, De Extr. Unct.). It is clear from these words of Trent that extreme unction is not for the dying alone, but for all the faithful who are seriously ill with any such sickness as involves danger of death (diesanctus vita, ibid.), i.e. as may probably terminate fatally. How grave must be the illness or how proximate the danger of death is not determined by the council, but is left to be decided by the speculations of theologians and the practical judgment of priests directly charged with the duty of administering the sacrament. And there have been, and perhaps still are, differences of opinion and of practice in this matter.

(3) Down to the twelfth century in the Western Church the practice was to give the unction freely to all (except public penitents) who were suffering from any serious illness, without waiting to decide whether danger of death was imminent. This is clear from many testimonies quoted above (III). But during the twelfth and thirteenth centuries a change of practice set in. This change has been so regarded by many as intended only for the dying. The causes contributing to this change were: (a) the extortionate demands of the clergy on the occasion of administering the unction which prevented the poor or even those of moderate means from asking for it except as a last resource; (b) the influence of certain popular superstitions, as, for instance, that the person anointed could not, in case of recovery, use the rights of marriage, eat flesh meat, make a will, walk with bare feet, etc.; and (c) the teaching of the Scotist School and of other theologians that, as the principal effect of the sacrament was the final remission of venial sins, it should not be given except to those who could not recover, and were no longer able or at least likely to fall again into venial sin (St. Bonaventure, "Breviloquium", I, VI, c. xii; Scotus, "Report. Parisiense", dist. xxi, Q. unica). It was doubtless under the influence of this teaching that one or two provincial synods of the sixteenth century described the subject of extreme unction as "the dangerously sick and almost dying" (Hardouin, X, 1648, 1335); and the neglect of extreme unction for strong causes resulted, during the disturbances of the sixteenth century, in its total abandonment in many parts of Germany and especially of Bavaria (Knöpfler, "Die Kelehbewegung in Bayern unter Herzog Albrecht V.", pp. 81 sq.; and on this whole matter see Kern, op. cit., p. 282 sq.). And it is in death or recovery, the right in question would be meaningless, whereas the similar right bestowed with the character in confirmation may, and normally does, realize its object in later life. It is to be observed in regard to children, that no agony can be experienced at which they cease to be incapable of receiving extreme unction. If they have attained sufficient use of reason to be capable of sinning even venially, they may certainly be admitted to this sacrament, even though considered too young according to modern practice to receive their First Communion; and in cases of doubt the unction should be administered conditionally. Those who have always been insane or idiotic are to be treated in the same way as children; but anyone who has ever had the use of reason, though temporarily delirious by reason of a seriously aversive cause, is to be presumed to have given the benefit of the sacrament in case of serious illness.

(2) Grave or serious bodily illness is required for the valid reception of extreme unction. This is implied in the text of St. James and in Catholic tradition (see above). If extreme unction is not in fact given by a Syrian, it is by no means clear that it has ever been given by a Syrian, although the decisions of Eugene IV for the Armenians: "This sacrament is not
a severe view of the gravity of the sickness, or the proximity of the danger of death, required to qualify for the valid reception of extreme unction; and this is clearly compatible with the teaching of the Council of Trent and is supported by the traditional practice of the Church.

But if the Easterns have had some justification for their charge against the Westerns of unduly restricting the administration of this sacrament, the Orthodox Church is officially responsible for a widespread abuse of the opposite kind which allows the eucharist to be given to persons in perfect health, as a complement to penance and a preparation for Holy Communion. Many Western theologians, following Goar (Euchologion, pp. 349 sq.), have denied that this rite was understood and intended to be sacramental, though the matter and form were employed precisely as in the case of the sick; but, whatever may have been the intention in the past, it is quite certain at the present time that at least in the Constantinopolitan and Hellenic branches of the Orthodox Church the intention is to give the sacrament itself and no mere sacramental to those who are not sick (Kern, op. cit., 279 sq.; Fortescue, The Orthodox Eastern Church, London, 1907, p. 425).

We have already noticed (III) among Nestorians what appears to have been a similar abuse, but in the Orthodox Church till long after the schism there is no evidence of its existence, and the teaching of Eastern theologians down to modern times, to which the Russians still adhere, has been at one with the Western tradition in insisting that the subject of this sacrament must be labouring under a serious sickness.

III. The Sacrament of Extreme Unction as Vying death from any other cause than sickness qualify a person for extreme unction. Hence criminals or martyrs about to suffer death and others similarly circumstanced may not be validly anointed unless they should happen to be seriously ill. But illness caused by violence, as by a dangerous or fatal wound, is sufficient; and old age itself without any specific disease is held by all Western theologians to qualify for extreme unction, i.e. when senile decay has advanced so far that death already seems probable. In cases of lingering disease, however, when there seems really serious, extreme unction may be validly administered even though in human probability the patient will live for a considerable time, say several months; and the lawfulness of administering it in such cases is to be decided by the rules of pastoral theology. If in the opinion of doctors the sickness will certainly be cured, and all probable danger of death removed by a surgical operation, theologians are not agreed whether the person who consents to undergo the operation ceases thereby to be a valid subject for extreme unction (op. cit., p. 299), but his argument is by no means convincing.

VII. Effects.—The decree of Eugene IV for the Armenians describes the effects of extreme unction briefly as "the healing of the mind and, so far as it is expedient, of the body also" (Denzinger, no. 700—old no. 505). In Sess. XIV, can. ii, De Extr. Unct., the Council of Trent mentions the conferring of grace, the remission of sins, and the alleviation of the sick, and in the corresponding chapter explains as follows the effects of the unction: "This effect is the grace of the heavenly Father, whose unmerited gift blots out sins. If any remain to be expiated, and the consequences [reliquiae] of sin, and alleviates and strengthens the soul of the sick person, by exciting in him a great confidence in the Divine mercy, sustained by which [confidencia] he bears more lightly the troubles and suffer-

nings of disease, and more easily resists the temptations of the demon lying in wait for his heel, and sometimes, when it is expedient for his soul's salvation, recovers bodily health." The remission of sins, as we have seen, is explicitly mentioned by St. James, and the spiritual power contained in His sacrifice are implicitly contained, side by side with bodily healing, in what the Apostle describes as the saving and raising up of the sick man (see above, II).

(1) It is therefore a doctrine of Catholic faith that sins are remitted by extreme unction, and, since neither St. James nor Catholic tradition nor the Council of Trent limits this effect to venial sins, it is quite certain that it applies to mortal sins also. But according to Catholic teaching there is per se a grave obligation imposed by Divine law of confessing all mortal sins committed after baptism and obtaining absolution from them; from which it follows that one guilty of mortal sin is bound per se to receive the Sacrament of Penance before receiving extreme unction. Whether he is further bound, in case penance cannot be received, to prepare himself for extreme unction by an act of personal contrition, is a question. One opinion, that such a personal contrition is not necessary, is more commonly held by the theologians, on the ground that extreme unction is primarily a sacrament of the living, i.e. intended for those in the state of grace, and that every effort should be made by the individual desiring extreme unction to obtain remission of sin. The remission of at least of mortal sins is not the primary end of extreme unction is evident from the following way in which St. James speaks of this effect: "and if he be in sins" etc.; but, on the other hand, this effect is attributed, if conditionally and secondarily, yet directly and per se to the unction—not indirectly and per accidens as we attribute it to other sacraments of the living—which means that extreme unction has been instituted secondarily as a sacrament of the dead, i.e. for the purpose not merely of increasing but of actually granting spiritual life. Hence, if for any reason the subject in mortal sin is excused from the obligation of confessing or of eliciting an act of perfect contrition, extreme unction will remit his sin and confer sanctifying grace, provided he has actual, or at least habitual, attirion, or provided (say on recovering the use of reason) he elicits an act of attirion so that the sacrament may take effect by way of reviviscence (see below, X). By habitual attirion in this connexion is meant an act of sorrow or detestation for sins committed, elicited since their commission, and not the immediate intention that the intention of remission is received. The ordinary example occurs when the act of attirion has been elicited before the sick person lapses into unconsciousness or loses the use of reason. That such attirion is necessary, follows from the teaching of Trent (Sess. XIV, cap. i, De Porr.,) regarding the absolute and universal necessity of repentance for the remission, even in baptism, of personal mortal sins. Schell has maintained (Kathol. Dogmatik, III, pp. 629 sq.) that such attirion is not required for the validity of extreme unction, but that the general purpose and intention, which a Christian holds that with extreme unction a less perfect attirion suffices for the remission of venial sins than would suffice without the sacrament. But besides thus directly remitting venial sins, extreme unction also excites dispositions which procure their remission ex opere operantis.
The relics or effects of sin mentioned by the Council of Trent are variously understood by theologians to mean one, or more, or all of the following: spiritual debility and depression caused by the consciousness of having committed a sin; its influence on the acts induced by sin; temporal penalties remaining after the guilt of sin has been forgiven; and venial, or even mortal, sins themselves. Of these only the remission of temporal punishment is distinct from the other effects of which the council speaks; and though some theologians have been led by this effect to maintain that extreme unction, like baptism, sacramentally remits all temporal punishment due to sin, and the extent to which it actually does so in any particular case may, as with baptism, fall short of what was Divinely intended, owing to obstacles or defective dispositions in the recipient. Hence there is still room and need for indulgences for the dying, and if the Church offers her prayers and applies indulgences for adults who die immediately after baptism, she ought, a fortiori, to offer them for those who have died after extreme unction. And if the remission of such a penalty is truly in the reditu of sin, and if extreme unction be truly what the Council of Trent describes (Sess. XIV, De Extr. Unct., introd.) as "the consummation not merely of [the Sacrament of] Penance, but of the whole Christian life, which ought to be a perpetual penance," it is impossible to deny that the remission of temporal punishment is one of the effects of this sacrament.

(2) The second effect of extreme unction mentioned by the Council of Trent is the alleviation and strengthening of the soul by inspiring the sick person with such confidence in divine mercy that he or she becomes patiently and even cheerfully to bear the pains and worries of sickness, and with resolute courage to repel the assaults of the tempter in what is likely to be the last and decisive conflict in the warfare of eternal salvation. The outlook on eternity is brought vividly before the Christian by the probability of death inseparable from serious sickness, and this sacrament has been instituted for the purpose of conferring the graces specially needed to fortify him in facing this tremendous issue. It is unnecessary to explain in detail the conformation, or condition, which other reasons want, would justify itself to the Christian mind by the observed results of its use.

(3) Finally, as a conditional and occasional effect of extreme unction, comes the restoration of bodily health, an effect which is witnessed by the experience of many in past ages and in our own day. Theologians, however, have failed to agree in stating the condition on which this effect depends or in explaining the manner in which it is produced. "When it is expedient for the soul's salvation," is how Trent expresses the condition, and not a few theologians have understood this to mean that health will not be restored by the sacrament unless it is foreseen by God that a longer life will lead to a greater degree of glory —recovery being thus a sign or proof of predestination. But other theologians rightly reject this opinion of several explanations that are offered (cf. Kern, op. cit., pp. 195 sq.) the simplest and most reasonable is that which understands the condition mentioned not of the future and perhaps remote event of actual salvation, but of present spiritual advantage which is wrought by the unction: the ultimate result may bring to the sick person; and holds, subject to this condition, that this physical effect, which is in itself natural, is obtained mediately through and dependently upon the spiritual effects already mentioned. The fortifying of the soul by manifold graces, by which over-sense fears are banished, and a general feeling of comfort and courage, and of humble confidence in God's mercy and peaceful resignation to His Will inspired, reacts as a natural consequence on the physical condition of the patient, and this reaction is sometimes functional, sometimes natural, it is a cure of diseases. This mediate and dependent way of effecting restoration of health is the way indicated by the Council of Trent in the passage quoted above, and the view proposed is in conformity with the best and most ancient theological teaching on the subject and avoids the seeming contradiction of a doctrine which declares the issue of opposing views. Nor does it reduce this effect of extreme unction to the level of those perfectly natural phenomena known to modern science as "faith cures." For it is not maintained, in the first place, that recovery will follow in any particular case; this result is spiritually profitable to the patient —and of this God alone is the judge—and it is admitted, in the second place, that the spiritual effect, from which the physical concomitantly results, is itself strictly supernatural (cf. Kern, loc. cit.).

(4) There remains the question, on which no little controversy has been expended, as to which of these several effects is the principal one. Bearing in mind the general theory that sacramental grace as such is sanctifying grace as imparted or increased by the sacrament, with the condition corresponding to the special end of each sacrament, the meaning of the question is: Which of these effects is the sacramental grace imparted in extreme unction primarily and immediately intended to produce, so that the others are produced for the sake of, or by means of, it? Or, more ultimately, what, according to Christ's intention in instituting it, is the primary and distinctive purpose of this sacrament, its particular raison d'être as a sacrament? Now, clearly this cannot be either the remission of mortal sin or the restoration of physical health, for extreme unction is primarily a sacrament of the living; and restoration of bodily health is not a normal effect, but only brought about, when at all, indirectly. There remain the remission of venial sins and of the temporal punishment due for sins already forgiven, and the invigoration of the soul in face of the probability of death. Reference has already been made to the Scotist view (VI) which singles out the final and complete remission of venial sin as the chief end or effect of extreme unction, and which logically leads to the practical conclusion, that the condition, which were other reasons wanting, would justify itself to the Christian mind by the observed results of its use. Further, it has been pointed out that extreme unction is essentially a sacrament which is in possession of the theory, held by many of the best theologians, that the supernatural invigoration of the soul in view of impending death is the chief end and effect of extreme unction. This effect, of course, is actually realized only when the subject is sui compos and capable of co-operating with grace; but the same is true of the principal effect of several other sacraments. It is no argument, therefore, against this view to point to the fact that anas are sometimes remitted by extreme unction while the recipient is unconscious and incapable of using the invigorating graces referred to. The infusion or increase of sanctifying grace is an effect common to all the sacraments; yet it is not by this of itself that they are distinguished from one another, but by reference to the special actual graces to which sanctifying grace is infused or increased. If the result of an effect of this kind is sometimes suspended or frustrated, this is merely by way of an accidental exception to which, in general, sacramental efficacy is liable. It does not seem, however, that this theory should be urged in an exclusive sense, as implying, that is, that the remission of venial sin or of temporal punishment is not also a primary
effect which may be obtained independently; rather should the theory be generalized and unified, and the primary and essential end of the sacrament so described as to comprehend these effects.

This is the solution of the whole question proposed by Kern (op. cit., pp. 535 sq., 215 sq.) who, with no little learning and ability, defends the thesis that the end of extreme unction is the perfect healing of the soul with a view to its immediate entry into glory, unless it should happen that the restoration of bodily health is more expedient. This view is quite in conformity with, and may even be said to be suggested by, the great majority of theologians, who deny that a single extreme unction is “the consumption of the whole Christian life” and Kern has collected an imposing weight of evidence in favour of his thesis from ancient and medieval and modern writers of authority. Dr. Pohle (op. cit., pp. 535, 536) reviews Kern’s suggestion sympathetically. Besides being self-consistent and free from any serious difficulty, it is recommended by many positive arguments, and in connexion with the controverted point we have been discussing it has the advantage of combining and co-ordinating as parts of the same object to the spiritual health only the remission of venial sins and the invocation of the soul, for which respectively Scottists and their opponents have contended too exclusively, but also the remission of temporal punishment, which not a few theologians have neglected.

The coming to the rescue of the circumstances or conditions which justify the repetition of extreme unction, theologians, following the authority of Trent, are agreed that it may be validly and lawfully repeated as often as the sick person, after recovery, becomes seriously ill again; or, in cases of lingering illness where no complete recovery takes place, as often as the probable danger of death, after disappearing, returns. For verification of this latter condition some theologians would require the lapse of a certain interval, say a month, during which the danger would seem to have passed; but there is really no reason for insisting on this any more than on the year which medieval custom in some places was wont to require. St. Bonaventure’s remark, that “it is absurd for a sacrament to be regulated by the motion of stars” (in IV Sent., ii. 2, 1, ad 2), applies to a month as well as to a year. Not a few theologians (among recent ones De Augustinis, “De Re Sacramentaria”, II, 408) understand, by the new danger of death, proximate or imminent danger, so that, once imminent danger has passed and returned, the sacrament may be, once repeated, at any definite interval to elapse. The majority of theologians, however, deny the validity of extreme unction repeated while the danger of death remains the same, and they assume that this is the implicit teaching of the Council of Trent. But among contemporary authors, Kern, following the lead of several positive theologians eminent for their knowledge of sacramental history (Ménard, Launoi, Martène, Juquin, Drouven, Pouget, Pelliccia, Binterim, Heinrich.—See references in Kern, op. cit., pp. 367, 538), maintain the probable validity of extreme unction repeated, no matter how often, during the same danger of death, and it will be found easier to ignore, than to meet and answer, the argument by which he supports his view.

He furnishes, in the first place, abundant evidence of the widespread practice in the Western Church from the ninth to the twelfth, and even, in some places, to the thirteenth century, of repeating the unction for seven days, or indefinitely while the sickness lasted; and he is able to claim the authority of Oriental theologians for explaining and proving that the Western Church, in the seventh and eighth centuries, by seven priests as being due to a more ancient practice of repeating the unction for seven days—a practice to which the Optic Liturgy bears witness. By admit
ting the validity of each repeated unction we are able to give a much more reasonable explanation of the medieval Western and modern Eastern practice than can possibly be given by those who deny its validity. The latter are so convinced that the repeated rite is merely a sacramental—though clearly intended to be a sacrament—or that the repeated unctions coalesce to form one sacrament—an explanation which is open to several serious objections. In the next place, since extreme unction does not impart a permanent "character", there is no reason why its proper sacramental effect may not be increased by repetition, as happens in Penance and Holy Communion—that is, with an increase of sanctifying grace, this right to spiritual invigoration may be increased, and more abundant actual graces become due. And this, on internal grounds, would suffice to justify repetition, although the effect of the previous administration remains. Finally, in reply to the principal dogmatic reason urged against his view—viz., the teaching of the Council of Trent—Kern fairly maintains that the intention of the council was merely positive, and not exclusive, i.e., it wished to define, in opposition to more restrictive views that had been held, the validity of extreme unction repeated in the circumstances mentioned without meaning to deny its validity if repeated in other circumstances not mentioned. The exhaustive examination of tradition which is supposed to precede a definition had not, so far as this particular point is concerned, been carried out at the time of Trent; and the point itself was not ripe for definition. Modern discipline in the Western Church can be explained on other than dogmatic grounds; and if it be urged as dogmatically decisive, this will imply a very sweeping condemnation of medieval Western and modern Eastern practices, which the prudent theologian will be slow to pronounce.

X. Reviviscence.—The question of reviviscence arises when any sacrament is validly administered, but is hindered at the time from producing its effect, owing to the want of due dispositions in the recipient. Thus, in regard to extreme unction, the subject may be unconscious and incapable of spiritual invigoration in so far as this requires co-operation with actual grace. Or he may, for want of the necessary abstinence, be indisposed to receive remission of sins, or indisposed in conscience to the infusion of sanctifying grace. And the want of disposition—the obstacle to the efficacy of the sacrament—may be inculpable or gravely culpable; in the latter case the reception of the sacrament will be sacrilegious. Now the question is, does extreme unction revive, that is, does it afterwards (ordinarily) infuse the sanctifying grace such effects as are hindered at the time of reception, if the obstacle is afterwards removed or the requisite disposition excited? And theologians all teach that it certainly does revive in this way; that for its reviviscence, if no sacrisse has been made in its reception, nor any grave sin in the interval, all that is needed is that the impeding defect should be removed, that consciousness, for instance, should be recovered, or habitual abstinence excited; but that, when a grave sin has been committed at or since the reception, this sin must be remitted, and sanctifying grace obtained by other means (e.g., penance or perfect contrition) before extreme unction can take effect. From this doctrine of reviviscence—which is not, however, defined as a dogma—there follows an important practical rule in regard to the administration of extreme unction, viz., that, notwithstanding doubts about the dispositions of a certainly valid subject, the sacrament should always be conferred absolutely, never conditionally, since a condition making its validity dependent upon the actual dispositions of the recipient would exclude the possibility (et in praesentia) should be used only when it is doubtful whether the person is a valid subject for the sacrament, e.g., whether he is not already dead, whether he has been baptized, has attained the use of reason, or has the implicit habitual intention of dying in a Christian manner.

Euxontians. See Arianism.

Euxul Hibernicus, the name given to an Irish stranger on the Continent of Europe in the time of Charles the Great, who wrote pseudonymously a number of poems, one of which is addressed to the emperor. He is sometimes identified with Dungal (see Dungal). The designation euzul is one which the Irish wanderers on the Continent frequently adopted. The poems of this period show that he was not only a poet but a grammarian and dialectician as well. They also reveal his status as that of a teacher, probably in the palace school. Of more than ordinary interest are the verses which describe the attitude of the ninth-century teacher towards his pupils. His metrical poems on the seven liberal arts devote twelve lines to each of the branches, grammar, rhetoric, dialectic, etc., showing the origin, scope, and utility of each in succession. Like the lines on the same subject by Theobald of Orleans, they may have been intended to accompany a set of pictures in which the seven liberal arts were represented. The style of these poems, while much inferior to that of the classical period, is free from many of the artificialities which characterize much of the versification of the early Middle Ages.

William Turner.

Exultet, the hymn in praise of the paschal candle sung by the deacon, in the liturgy of Holy Saturday. In the missal of the title of the "preconium" as appears from the formula used at the blessing of the deacon: "ut digni et competenter annuntiant suum Paschale praecominium". Outside Rome, the use of the paschal candle appears to have been very ancient in Italy, Gaul, Spain, and perhaps, from the reference by St. Augustine (De Civ. Del. XV, xxiii), in Africa. The "Liber Pontificalis" attributes its introduction in the local Roman Church to Pope Zosimus. The formula used for the "Praecominium" was not always the "Exultet", though it is perhaps true to say that this formula has survived, where other contemporary formulæ have disappeared. In the "Liber Ordinum", for instance, the formula is of the nature of a benediction, and the Gelasian Sacramentary has the prayer "Deus mundi conditor", not found elsewhere, but containing the remarkable "praise of the blessed" possibly a Vergilian reminiscence, which is used in various modification in all the texts of the "Praecominium" down to the present day. The regularity of the metrical cursus of the "Exultet" would lead us to place the date of its composition perhaps as early as the fifth century, and certainly later than the M.S.S. in which it appears are those of the three Galli- can Sacramentaries—the Bobbio Missal (seventh
century), the Missale Gothicum and the Missale Gallicanum Vetus (both of the eighth century). The earliest Ms. of the Gregorian Sacramentary (Vat. Reg. 337) does not contain the “Exultet,” but it was added in the supplement to what has been loosely called the Sacramentary of Adrian, and probably drawn up under the direction of Alcuin.

As it stands in the liturgy, it may be compared with, two other forms, the Blessing of Palms, and the Blessing of the Baptismal Font. The order is, briefly:

1. An invitation to those present to join with the deacon in the invocation of the blessing of God, that it may be properly celebrated. This invitation, wanting in the two blessings just mentioned, may be likened to an amplified “Orationes fratres,” and its antiquity is attested by its presence in the Ambrosian form, which otherwise differs from the Roman. This section closes with the “Per omniam sancta seclusorium,” leading into:

2. “Dominus vos blessec” etc., “Sursum corda” etc., “Gratias agnamus” etc. This section serves as the introduction to the body of the “Preeiconium,” cast in the Eucharistic form to emphasize its solemnity.

3. “Preeiconium” (or the body of the Preeiconium), as it is called in the Missale Gallicanum Vetus, a contestatio. First, a parallel is drawn between the Passover of the Old and the New Covenants, the candle bearing a type of the Pillar of Fire. And here the language of the liturgy rises in a spirit of devotion so as to find a proper parallel in Christian literature. We are drawn out of cold dogmatic statement into the warmth of the deepest mysticism, to the region where, in the light of paradise, even the sin of Adam may be regarded as “truly necessary” and “a happy fault.”

Secondly, the candle itself is offered as a burnt-sacrifice, a type of Christ, marked by the graces of innocence as with the five glorious wounds of His Passion. And lastly, the “Preeiconium” ends with a general intercession for those present, for the clergy, for the people, and for the Christian rulers. For these last the text as it stands cannot now be used. The head of the Holy Roman Empire alone could be prayed for in this formula, and the resignation (1804) of the prerogatives of that august position, by the Emperor Francis II of Austria, has left that position unfilled to the present day.

It follows the form of the “Exultet,” the ceremony carried on during its performance; the music to which it has been sung; and the so-called “Exultet-rolls” on which it was sometimes written. The deacon is vested in a white dalmatic, the ministers are vested in purple. The affixing of five grains of incense to the words incens hujus sacrifcium has probably arisen from a misconception of the meaning of the text. The lighting of the candle is followed by the lighting of all the lamps and candles of the church, extinguished since the close of Matins. This rite is usually an elaborate form of the well-known recitative of the Preface. In some uses a long bravura was introduced upon the word accedit, to fill in the pause, which must otherwise occur during the lighting of the candle. An elaborate and elaborate chant, as found in the early MSS., has been published in “Palæographica Musicae,” IV, vili, 171. Dom Latil has published the text, and part of the highly ornate chant, of an “Exultet” at Salerno.

The text is almost identical with one previously published by Du echoes from a roll at Bari. In Italy the “Preeiconium” was sung from long strips of parchment, gradually unrolled as the deacon proceeded. These “Exultet-rolls” were decorated with illuminations and with portraits of contemporary reigning sovereigns, whose names were mentioned in the course of the text. The roll on which the text was written is not known at present, was confined to Italy. The best examples date from the tenth and eleventh centuries.

Charlton Benedict Walker.

Ezepierius (Exepierius), Saint, Bishop of Toulouse in the beginning of the fifth century; place and date of birth unascertained; d. after 410. Succeeding St. Silvius as bishop, he completed the basilica of St. Saturninus, begun by his predecessor. St. Jerome praises him for his munificence towards the monks of Palestine, Egypt, and Libya, and for his charity to the people of his own diocese, who were then suffering from the depredations of the Vandals, Alans, and Suevi. Of great austerity and simplicity of life, he sought not his own, but gave what he had to the poor. For their sake he even sold the altar vessels and was compelled in consequence to carry the Sacred Host in an osier basket and the Precious Blood in a vessel of glass. In esteem for his virtues and in gratitude for his gifts, St. Jerome dedicated to him his “Commentary on Zaccharias.” Ezepierius was best known in connection with the Canon of the New Testament. He had written to Innocent I for instructions concerning the Canon and several points of ecclesiastical discipline. In reply, the pope honoured him with the letter “Consuleti tibi,” dated February, 405, which contained a list of the canonical Scriptures and gave him to-day, including the deutero-canonical books of the Catholic Canon. The assertion of non-Catholic writers that the Canon of Innocent I excluded the Apocalypse is not true, if they mean to extend the term Apocrypha to the deutero-canonical books.

The opinion of Baronius that Ezepierius was identical with the rhetor of the same name, is quite generally rejected, as the rhetor was a teacher of Hannibalius and Dalmatius, nephews of Constantine the Great, over half a century before the period of the bishop. From St. Jerome’s letter to Porphius of Rome, in 394, and from the epistle of St. Paulinus to Amandus of Bordeaux, in 397, it seems probable that Ezepierius was a priest at Rome, and later at Bordeaux, before he was raised to the episcopate, though it is possible that in both of these letters reference is made to a different person and the identity of the bishop is unknown. That he occupied the See of Toulouse in February, 405, is evident from the letter of Innocent I mentioned above; and from a statement of St. Jerome in a letter to Rusticus it is certain that he was still alive in 411. It seems certain that St. Jerome reproved him, in a letter to Riparius, a priest of Spain, for tolerating the heretic Vigilantius; but, as Vigilantius did not belong to the Diocese of Toulouse, St. Jerome was probably speaking of another bishop.

Ezepierius was early venerated as a saint. Even in the time of St. Gregory of Tours he was held in equal veneration with St. Saturninus. His feast occurs on 28 September. The first martyrlogist to assign it to this date was Usuard, who wrote towards the end of the ninth century.

Leo A. Keely.

Eyb, Albrecht von, one of the earliest German humanists, b. in 1420 near Ansbach in Franconia; d. in 1475. After preliminary studies at Erfurt he went to Italy and was enrolled, as a member of the University of Padua, in 1446 in the Universities of Pavia and Bologna. He returned to Germany in 1451, having in the meantime been appointed canon at Eichstätt and Bamberg. From 1452 to 1459 he was again a student at Bologna, win-
ning the degree of doctor of canon and civil law. He was also honoured by an appointment as chamberlain to Pius II. After his return to Germany he resided chiefly at Elchtätt. In 1462 he became archdeacon of Würzburg, not, however, without encountering violent opposition. As a result, he fled to Austria, where he was hated Eyck as a partisan of the Hohenzollern Margrave, Albrecht Achillies. Little is known of his later years.

Eyck's best known and most important work is his "Ehebuchlein" ("Book on Marriage"), in which he discusses the question whether a man should take a lawful wife or not. That was a question discussed by many Latin authors, to which are added specimens of humanistic eloquence. In 1474 Eyck finished his "Spiegel der Sitten" ("Mirror of Morals"), a lengthy work of ethical and moral content, probably based on some Latin original. The book was not published until 1485, when it was known as the "Ehebuchlein" and was not printed until 1511. Added to it are German translations of two of Plau- tus's comedies, the "Menschen" and the "Bacchides" as well as of Ugolino's "Philologia". Eyck's writings have been edited by K. Müller (Sonderhausen, 1879); the best edition is that of M. Herrmann, "Deutsche Schriften des Albrecht von Eyck" (Berlin, 1895).

Arthur F. J. Remy.

Eyck, Hubert and Jan van, brothers, Flemish illuminators and painters, founders of the school of Bruges and consequently of all the schools of painting in the North of Europe. Hubert was born at Maes- eyck (i.e. Eyck on the Meuse) in the Diocese of Lüttich, about 1360, and his brother Jan about twenty years later, 1385. They had a sister named Margaret who won fame as a miniaturist.

A document of 1413 makes the earliest mention we have of a painting by "Master Hubert". In 1424 he was dead and buried "in the church or churchyard of the Church of St. John, September, 1426. We have no further definite knowledge concerning the elder of the brothers. Of the younger we know that in 1420 he presented a Madonna's head to the Guild of Antwerp, that in 1422 he decorated a paschal candle for the cathedral of Cambrai, and that in 1425 he was at The Hague in the service of Jean Sans Merci. Afterwards he went to Bruges and to Lille to the court of Philip the Good, Duke of Burgundy, as peintre et verlat de chambre. He was already a man of some influence at court, and he travelled in the embassy charged to ask the hand of Isabella of Portugal for Philip, and it was his privilege to paint her portrait, "true to life", thereby fixing Philip's choice. This journey lasted from the 18th of October, 1428, to the end of December, 1429. In 1431 he went to Heidelberg to superintend, for the Duke, the work going on at the castle there; and afterwards he returned to Bruges, which he seldom left again. He married, and a child of his was baptised in 1434. In 1436 we learn once more that he received 720 livres on account of "certain secret matters", doubtless in connection with some new mission or journey. He died towards the end of June, 1441.

The most important work of the brothers Van Eyck, and the one that places their names among the great masters of painting for ever, is the famous altarpiece, "The Adoration of the Lamb"; of which the central portion is preserved in St. Bavons at Ghent, while the wings have found their way to the Museums of Berlin and of Brussels. It is one of the enigmas of art. All the questions bearing on it may, however, be reduced to two: Who was it author? and, What was his inspiration? As to the authorship, all we know depends on an inscription obscure enough, which is to be read on the edge of its frame:—

Pictor Hubertus e Eyck major quo nemo repertus Inceptum pondus: quod Johannes artes secundus Susceptus letus, Judoei Vyd prece fretus

Verss Ve.XS.XVI. 16. 14. 1460

The faulty Latin of this cryptic inscription means: "Hubert van Eyck, the greatest painter that ever lived, began this work [pondus], which John, his brother, second only to him in skill, had the happiness to continue at the request of Josquin (Josse) Vyd. By this line, on the 6th of May, you learn when the work was completed, i. e., MCCCVIII." That it is their joint work is certain, but it is impossible to distinguish which portion belongs to each brother. Very soon Jan began to get all the credit for it. But ten years later his brother, in a reply to some one asking him if the inscription clearly states that Hubert began the work and asserts that he was the greater artist, his brother being called only in his death, and in order to complete it. But how far had Huberts progressed with it? If Jan took over the work, how much of it did he leave unfinished? In 1426 were portions of it finished, or was it merely a sketch, a general outline when Jan took charge? Who suggested the subject? Who planned its treatment? Can we believe that a painter of any school living in a fifteenth century atmosphere could have elaborated by himself from a few texts of the Apocalypse (v. 6-14) such a wealth of detail, such sympathy of symbolism and imagery? Who was the theologian who inspired this mighty poem as others had inspired the learned allegories of the Chapel of the Spaniards, and of the Hall of the Senators? And how did the subject of this painting from the miniatures of the Irish Apocalypses (eleventh century) to the Angers tapestries, what were the artistic sources of this great work?

This moral encyclopedia of the Middle Ages, if we may call it such, treat of all things in heaven and on earth (there was a predella to it depicting hell, but it disappeared in the sixteenth century); it portrays God and man in all their historical and mystical relations; it tells us of the heavenly and the earthly paradise, of the ages that have followed one after another in the course of time; of the Redemption of Adam and Eve, and of the first sacrifices; of the death of Abel (type of Christ): of the years of expectation of the patriarchs and just men of the Old Law; of the mystery of the Incarnation; of the Trinity; of the world subject to the law of Christ: of the life of the Church in her saints, her hermits, her virgins, her martyrs, her pontiffs, her confessors, her warrior princes; of all Christendom in a landscape filled with cathedral spires (Rome, Jerusalem, Utrecht, etc.).

And can we in reason be asked to believe that this wonderful picture, having nothing to do with the beginning to the consummation of the world and ending in a glimpse of the eternal life to come as full in conception and as orderly in arrangement as the "Divina Commeda" itself; summing up the Old as well as the New Testament, drawing its inspiration from St. Augustine's "Civitas Dei", and Vincent of Beauvais' "Speculum Majus", as well as Jacobus de Voragine's "Legenda Aurea", and Dante's "De Monarchia"; a compendium of politics, history, and theology, and which crowns the representation of man's life on earth by a glimpse of the Infinite, can we in reason be asked to believe that this lofty expression of the ideals of Christendom in the Middle Ages sprang Minerva-like, fully formed from the brain of a single artist?

No one can adopt this supposition except for the
purpose of ascribing all the honours of having con-
created this picture to the brother of the painter. As
an assumption, however, it is altogether gratuitous.
There is not one of the scenes that can be attributed
to Hubert with any degree of certainty; and no work
the brothers Van Eyck have left us (with the exception
of the "Fount of Salvation" in the Prado Museum,
Madrid, and this is the work of a school) shows a
similar dogmatic and theological character, a like
power of design and richness of thought that this
"Lamb" does. Taken as a whole the work of the Van
Eycks has a totally different tendency. It is frankly
naturalistic in mood and in intention. So when Hubert
is labelled a thinker, it is for no other reason
than the wish to differentiate him, and to separate
him from Jan. How futile this distinction is,
is made clear if we look into the results obtained
by applying it as a criterion to the work of the two broth-
ers. On not a single disputed painting has agreement
been reached; and every painting that has been attrib-
uted to Hubert by one connoisseur, has been adjudged
by others for equally good reasons to Jan.

The catalogue of their work has been reconstructed
more than once, and at times of the "Lamb" the
"Lamb" has been divided in a hundred different ways,
each and in turn has been given to first one
brother and then to the other over and over again.
Each year sees a new theory proposed. After Waagen
came James W. ase; after Hyman, Dvorak, and after Stael, the
theorist; and we are left just where we were
as ever. The masterpiece keeps its secret, and will
probably never give it up. In any case, seeing
that the whole painting was retouched at least twice
during the sixteenth century, all evidence of individual tech-
nic must have been buried beneath these restora-
tions; and in all likelihood the little points and pecu-
liarities attributed to Hubert or to Jan, are really the
work of Michael Coxie. But there is a larger and a
wider question at issue than such idle wranglings that
can never be settled, the question as to the effect and
the nature of the artistic revolution to which the
brothers Van Eyck have given their name.

What constitutes the altar-piece of the "Lamb," a
unique monument in the history of art, and gives it its
supreme interest in our eyes, is the fact that it unites in
itself the beauty of the physical world of which
the rocks, the desert places, a geography of earth
and its climates and its flora, palms, cacti, and aloes
(which foolishly has led some to believe that Hubert
must have travelled in the East). The world of art
is not forgotten; styles of architecture, towers, cupo-
tales, fluted columns, statue and its location, and the
life out-of-doors and within doors, with all its social
activities and moral colouring, is portrayed. There
are interiors, such as the room of the Blessed Virgin,
a young Flemish maiden, with its pri are, its nicely
tiled floor, its washstand and basin, and its open win-
dow looking out on to the pointed roofs of a row of
brick houses. There are portraits of a marvellous
realism, such as those of the donor and his wife; epic
figures, such as God the Father under the guise of
Charlemagne crowned with a triple tiara, type of the
pontiff-king; and there are figures full of charm and
poetry, such as the singing angels (of Berlin museum),
symbolizing the harmonies of paradise, under the form
of entrencing minstrelsy, or of the chanting of choir
boys. Other figures are fearful in their naturalism,
such as the figures of our first parents (Brussels mu-
seum) which would suffice alone to immortalize
their creator, because of their audacious nudity, their stiff
and awkward manner, and their eloquent ugliness.

Such a transformation, of course, exceeds the powers
any one of the three brothers. And like all great
works, the altar-piece of Ghent is the result of the
labours of more than one generation. It was not
a local movement; its influences were at work up
and down throughout Christendom.
In Italy the work of Jacopo della Quercia, of Ghiberti, the frescoes of Masolino and of Masaccio (1428), are contemporary with the labours of the Van Eycks, and bear traces of similar tendencies. But the birth-place of the most original Gothic manner in France was the south. In the same school which a century earlier had developed the Gothic ideal, was about to produce by a natural evolution the new principles and the new methods. An important factor in this evolution was the creation of the Duchies of Burgundy and of Burgundy, and the alliance of Flanders and Burgundy by marriage (1584). At the Court of the Valois, the most brilliant in the world, famous for its voluptuousness, its elegance, and its worship of all the arts of life, and under the patronage of its princes, no less famous for their dissolute lives than for their artistic taste and love of luxury, there rapidly grew up a school of painters, sculptors, goldsmiths, and miniaturists, cosmopolitans by birth, but Parisian by education, who were the nucleus of the Renaissance. All the schools of the paintings, frescoes, and stained glass of this epoch have perished; but the miniatures supply all the proof we need. Especially in the manuscripts made at the time for the Duc de Berry do we find the links of this glorious history. Many of the books collected by this incomparable Mecenas have come down to us; some of them illustrated by André Beauneveu, Jacquemart of Hesdin, or Jacques Cohn of Antwerp. But the most important of all is the segnorial MS.—one of the treasures of Chantilly—known as the "Book of Hours of the Duc de Berry". This wonderful book was adorned from 1413 to 1416 by three artists; "the three illuminator-brothers" spoken of by Guillebert of Mets, the brothers de Limbourg or simply the Limburgs. Nearly all the poetic fancy of the Van Eycks is already outlined in this "Book of Hours", especially on their landscape side; and whereas the Limburgs kept to the country around Liège, the Van Eycks followed the same route, and doubtless experienced the same influences. But there is something more. Another MS., "The Hours of Turin", which was unfortunately destroyed in the fire of Turin and gave occasion for a long succession to the Duc de Berry (d. 1416) and to Duke William IV of Bavaria-Hainault. And it has been proved that Hubert van Eyck spent some time in the latter's service. Paul Durrieu has given very weighty reasons for attributing the MS. to him, and for believing that he began it for the Duc de Berry. Thus the art of the Van Eycks would be but the culminating point of the great Renaissance movement inaugurated at the Court of the Valois in France, and which reached its apogee in 1400. Perhaps this was what the Italian Bishop Piacenti meant to imply when in 1456 he spoke of Jan van Eyck as Johannes Gallicus.

This is a partial solution of the enigma of the altar-piece. Hubert and Jan van Eyck are but continuators, masters indeed, of an art that began before them and without them. But what was it that they added that caused the new style in art to date only from their work? If we are to credit Vasari, Van Mander, and all the historical writers, their great discovery was the art of painting with oils. Painting with oil had been discovered in Antwerp, and had been the first to use this medium for religious pictures. The discovery of the new medium was the golden key that opened the doors of the fifteenth century, and from which the century drew its life. As and when we have seen, the new aestheticism had been already formulated in the miniatures of the Limburgs and of the Van Eycks themselves. Whatever importance in art its material and technical mode of application has, it would be too dilatory to make it depend entirely on the particular fluid, water, gum, or albumen used in mixing the colours. Moreover, on canvases 500 years old from which all moisture has long since dried up he would be a daring critic who would venture to assert that the artist. To build one's criticism on such a doubtful premise is like seeking the scent of the "Rosse of Sadi". The real merit of the Van Eycks is elsewhere. By a chain of circumstances (The Battle of Agincourt, the madness of Charles VI, and the minority of Charles VII), France was brought to the edge of ruin and suddenly lost control of the movement that it had begun.

Comfort, art, luxury began to cluster around the new fortunes of the Duchy of Burgundy, as the home of wealth in the North. Ghent, Bruges, Brussels, Antwerp became the centres of the new school. In these new towns of little culture and traditional refinement, and lacking in reserve (Taine, "Philosophie de l'Art aux Pays-Bas"—description of the festivals known as the Veau du Jaisan), Naturalism, freed from the restraints French taste would have imposed on it, was enabled to grow at its ease and spread without restriction. The Germanic element which had already shown itself in such men as Beauneveu, Malouel, the Limbourg's, burst out, and carried everything before it in the work of the Van Eycks. For the first time the genius of the North showed all those cosmopolitan influences which had hitherto defined it, and gave itself free scope.

It paused not to think of what had gone before, and it was not concerned with such things as taste, nobility, or beauty. Such preoccupations as these, as the ancient spirit began to have an influence, became more and more the distinguishing characteristics and limitation of Italian naturalism. It is enough to compare the ugly yet touching figures of Adam and Eve by Jan van Eyck, with those by Masaccio in the Brancacci Chapel in Florence, to see the complete contrast between the two schools of realism, but the painter has scruples, reserves, a sense of modesty; on the other there is absolute crudity, what we might call naturalism pure and simple. What does this mean, but that painting, which had hitherto been a universal, international art, is beginning to localize itself; and that what had hitherto been a European, or better still, Western, colour-language is about to split up into many dialects and national modes of speech? It is the real glory of the Van Eycks, that they emancipated the genius of the races of the North, and gave to the expression of the artistic thought of the whole century (1430-1530) the school they founded at Bruges was always producing new works and renewing its own strength. During a century, painters from Flanders, from Holland, and Germany—Petrus Christus, Gérard de Sint-Jans, Ouwens, Hugo van der Goe, Roger van der Weyden, Memilinc, Gérard David, Martin Schongauer, Dürer, Lucas of Leyden—never ceased to draw their inspiration more or less directly from their work. In 1445 the Catalanian Luis Dalmau made a copy of the altar-piece of Ghent. In France, Jean Fouquet, Nicolas Froment, on the banks of the Loire and of the Rhone, were disciples of Jan van Eyck. Even Italy did not escape their sovereign influence. As early as the middle of the fifteenth century paintings by Jan van Eyck were being treasured at Naples and at Urbino.

Antonello of Messina went to study art in Flanders. Ghirlandajo imitated the famous Portinari altar-piece by H. van der Goe, and whenever an Italian painter relaxed a moment his straining after art to snatch a breath of gayety or a lesson in realism, it was always to the Flemish school he turned. Always, until the triumph of the antique was assured, and Raphael and Michelangelo, by the constraining revelation of its beauty, had restored for a time the reign of the ideal. Their triumph was, however, short-lived; the pagan and aristocratic throw of the Antiquity was too strong, and the Lessness and rigidity, began to way from the
EYKEN, beginning of the seventeenth century, with its new schools at Antwerp and Amsterdam, before the naturalism of the North, before the more homely, hearty, and winning genius of van Eyck. It is therefore impossible to exaggerate the importance of their work, which, besides occupying a unique position throughout the fifteen century, led the way in the early sixteenth centuries for produced such painters as Rubens and Rembrandt.

The following is a list of the signed and dated works of Jan van Eyck: The "Consecration of St. Thomas Becket" (1421—Chatsworth); "The Madonna" (1432—Fontainebleau); "Madonna of the Poppies" (1432—1434—National Gallery); "Arnolfini and His Wife" (1434—National Gallery); "Portrait of Jan de Leeuw" (1436—Vienna); "The Virgin", with kneeling figure of Canon van der Pael (1436—Bruges); "St. Barbara" (1437—Antwerp); "Head of Christ" (1438—Berlin); and "The Artist's Wife" (1439—Bruges); "The Virgin" (1439—Antwerp). The principal works without date or signature that can be certainly attributed to the brothers Van Eyck are "Portrait of an Old Man" (Vienna); "The Man with the Fanks" (Berlin); and the "Deux Étailles" (Number 15) executed for Chancellor Rolin (Louvìe); "The Virgin" (Burleigh House, Exeter); "The Virgin" (Paris, Rothschild); triptych, not completed (Van Hellenpute collection, Mecklin).

FACCHI, De vita di Van Eyck (1456, published at Florence, 1745); MORELLI, Annote in the Notizie d'opere di disegno (Bassano, 1800); VARÀRI, Le Vie (Florence, 1806) (preface and life of Antonello of Messina); VAN MANDER, Het Schilderboek (Amsterdam, 1604); WAGENR, H. u. J. Van Eyck (Brussels, 1849); WALSCH, N. van Eyck (Bruges, 1864); INKES, The Work of Van Eyck's Death in The Burlington Magazine (London, 1894); DE LAISOLE, Les Vœux de Bourgogne (Paris, 1854); DORÉ, Ensayo sobre las artes del XV siglo (Paris, 1853); CROW AND CAMERABERL, The English Portraits (London, 1857); TAYNE, Famous Men and women of the Past (Paris, 1872); PIERRONI, Un million d'auteurs (Paris, 1875); BANZI, Hubert and Jan van Eyck (Bologne, 1880); LETTIN, Les primitifs flamands, et l'étude du style (Paris, 1899—1903); DURIEUX, Les peintres des Van Eyck (Gazette des Beaux Arts (1903)); LES HEURES DE TURIN, prototype reproduction (Paris, 1905); ROLIN, L'expoision des Primitifs Flamands, un arranged catalogue (Bruges, 1902); DYER, Das Ruhmann van Eyck (Berlin, 1905); WORMEE, Nederländische Künstlerlexikon (Leipizig, 1906).

LOUIS GILLET.

EYKEN, JEAN BAPTISTE Van, painter, b. at Brussels, Belgium, 18 September, 1809; d. at Schaerbeek, 19 December, 1853. He was the son of Cornelle van Eyken and Elize Cordemans, and as a boy was employed in commercial pursuits, but from 1829, when his father died, he gave himself over entirely to the study. In 1830 he became a member of the Academy of Belgium, in 1835 gained an important prize with high distinctions, and four years afterwards was appointed professor of drawing and painting. In 1838 he went to Italy, returning in 1839 and resuming his professorship. In the next year he exhibited his great picture of "Divine Pity", which was warmly received and brought him a gold medal and a high position in the Société des Beaux Arts of France. He married in 1840 Julie Noël, who died 11 February, 1843. Two of his most important pictures were those representing "Captive Christians" and "St. Boniface", for the church of La Chapelle; but for the same building he carried out no less than fourteen pictures representing the Passion of Christ and these were exhibited in 1847 and gained for him the Order of Leopold. His best-known picture perhaps is entitled "L'Abondance", a replica of which the artist was employed to make for the Prince Consort of England, according to the instructions of Louise Marie, Queen of the Belgians. He was intensely interested in the subject of mural decoration, and studied every variety of it very closely, preparing a long essay on the subject and a series of paintings representing the Beatus, in order to exemplify his ideas in this direction. He also gave some attention to sculpture and to designing medallions. He was a very devout man, true to his faith and to his friends, and very much respected by all who knew him. His pictures are marked by considerable religious feeling, grace, tenderness, and delicacy. (For further details, see a life of the artist published privately in Brussels by Emile van Arben, no date.)

GEORGE CHARLES WILLIAMSON.

EYMYARD, PIERRE-JULIEN, VENERABLE, founder of the Society of the Blessed Sacrament, and of the Servants of the Blessed Sacrament, b. at La Muire d'Ebre, in the Diocese of Graulhet, 14 January, 1836, and died at Arles, 1 Aug., 1888. From early childhood he gave evidence of great holiness and most tender devotion to the Blessed Sacrament. In 1829, he entered the novitiate of the Oblates of Mary, but illness compelled him to return home. At the age of twenty he entered the grand seminary of Grenoble, and was ordained priest 20 July, 1834. He returned to the Marist novitiate in 1839. In 1845 he was appointed Provincial of the Oblates of Mary. His entire spiritual life was centred round the Eucharist. It was the subject of his sermons and exhortations to the Hudsonians and prayers. Those who fell under his spiritual direction were taught by his counsel to fix their attention on the Blessed Sacrament.

In January of 1851 Père Eymard made a pilgrimage to the shrine of Our Lady of Fourvières, and there promised to Mary to dedicate a congregation of priests whose principal duty should be to honour the Blessed Sacrament. Having obtained the necessary ecclesiastical permission, he procured a small house in Paris, in which he and his single companion took up their abode. Here, on 13 Jan., 1857, the Blessed Sacrament was exposed, and the nascent community of two members commenced the adoration of the Blessed Sacrament as prescribed by their rule. Their founder received his first encouragement for the work in a laudatory Brief, blessing the work and its author, and signed by Pius IX, in 1857. Five years after, in 1862, Père Eymard had enough spiritual sons to open a regular novitiate. From this date the congregation spread rapidly, until now its houses may be found in Rome, Belgium, Holland, Spain, Canada, the United States, and South America. The Servants of the Blessed Sacrament are a congregation of cloistered women who carry on perpetual adoration in their convents, were also founded by him in 1858. The Priests' Eucharistic League and the Arconfraternity of the Blessed Sacrament are evidences of his zeal among a great number of the faithful. Many writings have been collected, and form four volumes: "The Real Presence", which has been translated into English; "Retreat at the Feet of Jesus Eucharistic", "La Sainte Communion" and "L'Eucharistie et la perfection chrétienne". The writings have received the approbation of the Holy See. The author was declared Venerable, 11 August, 1908, and the process for Père Eymard's beatification is now in progress.

HERBERT, The Priest of the Eucharist (London, 1868); TRAVERS, Le Venerable Père Eymard, et ses œuvres sur sa vie et ses vertus (Rome, 1899); TANNIER, La Prière de l'Eucharistie.

A. LETELLIER.

EYMIER, NICOLAS, theologian and inquisitor, b. at Gerona, in Catalonia, Spain, c. 1320; d. there 4 Jan., 1398. He entered the Dominican Order at an early age, receiving the habit 4 Aug., 1334, from the hands of Prior Petrus Carpì, and soon won a reputation for theological knowledge. His earliest writings, which date from 1351, were of a philosophical character. Nicola Roselli, the grand inquisitor of Aragon, having raised in 1359 the nuns of the real (1356), Eymier was appointed his successor in the Inquisition early in 1357. The seal he displayed in his new office roused much opposition and even open enmity. In spite of
the support of Cardinal Legate Guido, Eymeric, in the interest of peace, was removed from office at the general chapter of the Dominican Order held at Perpignan in 1360. Two years later, at the general chapter held at Ferrara, he was chosen vicar of the Dominican province in Aragon, and in 1368, as a result of the Papal mines on the province of the provinces. There was no longer a dissolve union between the Dominicans, whose party supporting Eymeric, the other Father Bernardino Em- mengaudi. Pope Urban V confirmed neither, but appointed a third, Jacopo Dominici.

Meanwhile Eymeric showed great activity as a preacher, as well as a writer on theological subjects. Some years later he was again made inquisitor general of Aragon; we find him in this office in 1366, and several tracts on dogmatic subjects date from the years immediately following. He combated in particular Raymond Lully, in whose writings he found numerous errors. He influenced Gregory XI to forbid the faithful to read certain writings of Lully’s and to condemn by a special decree (28 Jan., 1376) several those composed in his name. Eymeric was in high esteem with King Pedro IV of Aragon, as well as with Gregory XII. In 1376 he visited the papal court at Avignon, and accompanied the pope on his return to Rome. He was still there at the election of Urban VI and the nomination of the antipope Clement VII, with whom he took sides against Clement VI, the Roman pope. Towards the end of 1378 he returned to Aragon, but in the interests of his office as grand inquisitor often went to the court of Clement VII at Avignon. Eymeric continued his campaign against the Lullists by word as well as by pen. In his "Tractatus contra doctrinam Raymundi Lulli", dedicated to Clement VII, he indicates 135 heresies, 38 errors, and many misleading statements of Lully. He also composed a "Dialogue contra Lullistas" and other tracts. Lully’s partisans, however, won over to their side, soon after his accession. King John II of Aragon. Eymeric was banished and went to the papal court of Avignon, where he was welcomed both by Clement VII and later by Benedict XIII. He wrote numerous theological works and also special tracts defending the doctrine of the Avignon popes, e.g. his "Tractatus de potestate papali" (1383), which he composed for Clement VII, and two tracts for Benedict XIII. Notwithstanding his sentence of banishment, he still retained his post of grand inquisitor of Aragon. As early as 1376 he had compiled, as a guide for inquisitors, his "Doraensia"

The works of Eymeric also made a large impression in the religious and political life of Europe, and a large number of them are still extant today. His extensive writings on theology, canon law, and the reforming of the church contributed to the development of religious thought and the fight against heresy. His influence extended beyond the borders of Aragon and was felt throughout the Christian world. His writings continue to be studied and admired for their depth of thought and clarity of expression. 

EDWIN BURTON.

Eyston, Charles, antiquary, b. 1667; d. 5 Nov., 1721; he was a member of the ancient family of Eyston, then still of East Hendred, their house being one of the few places in England where the Blessed Sacrament has always been preserved. He was eldest son of George Eyston and of Ann, daughter of Robert Dormer of Peterley. On the death of his father in 1691 he succeeded to the family estates, and in 1692 married Winefride Dorothy, daughter of Basil Fitzherbert of Swinerton, Staffordshire, by whom he had a large family. He was a good scholar and from Eyston to Ushaw was complete. Mr. Eyre died at Ushaw, leaving a considerable sum to the college for professorships and bursaries. Besides the edition of Gother’s works he brought out, in separate form, Gother’s "Instructions for Confirmation" (Newcastle, 1780), and "Biblia Sacra, in quibus ... curante .....

J. P. KIRSCH.

Eyre, Thomas, first president of Ushaw College; b. at Glosow, Derbyshire, in 1749; d. at Ushaw, 8 May, 1810. He was the fourth son of Nathaniel Eyre and Jane Broomhead. On 24 June, 1768, he, with his brothers Edward and John, arrived at Esquerrich, near Douai, the preparatory school for the English college. Having passed through school and college alike for his professions, he remained after his ordination as general prefect and master of the college known as the historic and poetical. In 1775 Mr. Eyre returned to England to take charge of the Stella mission near Newcastle, on the invitation of his kinsman, Thomas Eyre. While he here brought out a new edition of the works of Golder and also made a collection of materials (now in the Ushaw archives) with the intention of continuing Dodd’s “Church History”. His scheme for a new edition of Bishop Chaderton’s Bible was given up at the request of Bishop Thomas Tabot. In 1792 he removed from St. Chad’s, which as a result of insurrection in Pontop Hall in Durham. In 1794 Bishop Gibson desired him to take charge of the Northern students who had been expelled from Douai, and who were then temporarily at Tuihore under Lángrad, the famous historian, who had not yet been ordained priest. Mr. Eyre removed these students first to Pontop Hall and in October, 1794, to Crook Hall, where he became president of the new college. Though he was willing to resign this post in favour of Mr. Daniel, president of Douai, this suggested arrangement came to nothing and Mr. Eyre remained president. In 1803 an estate called Ushaw was bought by the bishop, and here, early in 1804, the new college was begun, and in July, 1808, Mr. Eyre began to remove his community thither. On 2 August he himself entered and became master of St. Cuthbert’s college. Eyre died at Ushaw.

J. P. KIRSCH.

EDWIN BURTON.
Eschias (Heb. עֵשְׁיָא, or עֵשְׁיָאִים—"The Lord strengtheneth"); Sept. "Eseias; in the cuneiform inscriptions of his reign he is set with untried chronological difficulties, and there exists a difference of opinion among scholars as to the year in which he ascended the throne. The commonly received computation reckons his reign from 726 to 697 b.c. In character and policy Eschias was resolute, and his reign was a strenuous civil and religious reformer, and on this account the sacred writer compares him to King David. The events of his reign are related in the Fourth Book of Kings, and also in the parallel account in the Second Book of Paralipomenon, but in the latter, as might be expected, stress is laid chiefly on the religious reforms which he carried out, whereas the earlier account mentions these briefly, and dwells at greater length on the civil and political aspects of his reign.

Among the religious reforms are mentioned the purification of the Temple, which had been closed by Ahasa, the irreverent predecessor of Eschias (II Par., xxviii-xxix), the resumption and proper celebration of the feast of the Passover which had been neglected (II Par., xxx), and in general the extermination of idolatry, and the suppression of the Hebrew worship (IV K., xviii, II Par., xxx). In a title prefixed to the twenty-fifth chapter of Proverbs, it is stated that the sayings contained in the following collection (xxv-xxxi) were copied out by the "men of Eschias". This would seem to indicate, on the part of the kings, some literary interest and activity, and in the Talmudic tradition these "men of Eschias" are credited with the composition of several books of the Old Testament. Soon after his accession to the throne Eschias threw off the yoke of the Assyrians, to whom his father had become a vassal (IV K., xviii). Other notable events of his reign are his sickness and miraculous cure, the embassy of Berodach Baladan, and the invasion of Sennacherib. The story of the sickness of Eschias is narrated in IV K., xx, and in Is., xxxvii. The king being stricken with a mortal disease, the prophet Iasias comes in the name of Yahweh to warn him to put his affairs in order, for he is about to die. But Iasias prays to the Lord, Who sends the prophet back to announce to him that he will recover, and that he should send as a gift added to his presents of the fulfilment of this promise. Iasias causes the shadow to recede a distance of ten lines on the sundial. Connected with this event is the sending of an embassy by Berodach Baladan, King of Babylon, who having heard of the illness of Iasias, sent messengers to him with presents. The motive of this action on the part of the Babylonian king was probably to enlist the services of Eschias in a league against Sennacherib, King of Assyria. Eschias received the envoys with great honour, and exhibited to them his various treasures and armaments of war. This spirit of ostentation was displeased to the Lord, and Iasias was sent to announce that the treasures, in which the king seemed to place his confidence, would be all carried off as plunder to Babylon. Not long after (according to the cuneiform inscriptions) Eschias died, and Judah passed over to the Babylonian campaign against Syria and Egypt. The story of this expedition is told, from the Assyrian standpoint, in the official cuneiform inscription known as the Taylor prier. The plan of Sennacherib was first, to vanquish the kings of Assalmon, Sidon and Judah who had fled to Egypt. The second plan of Eschias was to transferring the whole population of Judah to Egypt. The third plan of Eschias was to capture the land of the Pharaohs.

v Subduing Assalmon and Accaron, the Assyrian V. —47
the idolatry practised in and near the temple (xviii); God commands that the guilty be punished and the faithful be spared (ix); God's majesty departs from the temple (x), and also, after the announcement of guilt and punishment, from the city. With this the judgment which the prophet communicates to the exiles ends (xi).

(3) In the third group (xii-xix) many different prophecies are brought together, whose sole connexion is the relation they bear to the guilt and punishment of Jerusalem and Judea. Ezekiel prophesies by symbolic actions the exile of the people, the flight of Seducias, and the devastation of the land (xii, 1-20). Then follow Divine revelations regarding belief in false prophecies, and disbelief in the very presence of true prophecy. This was one of the causes of the horrors (xii, 21-xiv, 11), to be visited upon the remnant of the inhabitants of Jerusalem (xiv, 12-23). The prophet likens Jerusalem to the dead wood of the vine, which is destined for the fire (xv); in an elaborate denunciation he represents Judea as a shameless harlot, who surpasses Samaria and Sodom in malice (xvi), and in a new simile, he condemns King Seducias (xvii). After a discourse on the justice of God (xviii), there follows a further lamentation over the princes and the people of Judea (xix). (4) In the presence of the elders the prophet denounces the whole people of Israel for the abominations they practised in Egypt, in the Wilderness, and in Canaan (xx). For these Judea shall be consumed by fire, and Jerusalem shall be exterminated by the sword (xxi). Abominable is the immorality of Jerusalem (xxii), but Judea is more guilty than Israel has ever been (xxiii).

(5) On the day on which the siege of Jerusalem began, the prophet represents, under the figure of the rusty pot, what was to befall the inhabitants of the city. On the occasion of his wife, God forbade him to mourn openly, in order to teach them that they should be willing to lose that which is dearest to them without grieving over it (xxiv).

In the second part (xxv-xxxii), are gathered together the prophecies concerning the Gentiles. He takes, first of all, the neighbouring peoples who had been exiled through the downfall of Judea, and who had humiliated Israel. The fate of four of these, the Ammonites, the Moabites, the Edomites, and the Philistines, is condensed in chapter xxv. He treats of the people of Tyre and Sidon, after which he casts a glance at Sion (xxvii, 20-26). Six prophecies against Egypt follow, dating from different years (xxviii-xxx). The third part (xxxiii-xxxiii), is occupied with the Divine utterances on the subject of Israel's restoration. As introduction, we have a dissertation from the prophet, in his capacity of authorized champion of the mercy and justice of God, after which he addresses himself to those remaining in Judea, and to the perverse exiles (xxxiii). The manner in which God will restore His people is only indicated in a general way. The Lord will cause the evil shepherds to perish; He will gather in, guide, and feed the sheep by means of the second David, the Messiah (xxxiv).

Though Mount Seir shall remain a waste, Israel shall return unto its own. There God will purify His people, animate the nation with a new spirit, and re-establish it in its former splendour for the glory of His name (xxxv-xxxvi). Israel, though dead, shall rise again, and the dry bones shall be covered with flesh and endowed with life before the eyes of the prophet. Egypt and Judea shall, under the second David, be united into one kingdom, and the Lord shall dwell in their midst (xxxvii). The invincibility and indestructibility of the restored kingdom are thus symbolically presented in the war upon Gog, his ignoble defeat, and the annihilation of his armies (xxxviii-xxxix). In the last prophetical vision, God shows the new temple (xi-xiii), the new worship (xiii-xvi), the return to their own land, and the new division thereof among the twelve tribes (xvi-xviii), as a figure of His foundation of a kingdom. God shall dwell among His people, and there He shall be served in His tabernacle according to strict rules, by priests of His choice, and by the prince of the house of David.

From this review of the contents of the prophecy, it is evident that the prophetic vision, the symbolic actions and examples, comprise a considerable portion of the book. The completeness of the description of the vision, actions and similes, is one of the many causes of the obscurity of the book of Ezekiel. It is often difficult to distinguish between what is essential to the matter represented, and what serves merely to make the picture more vivid. On this point it happens that, in the circumstantial descriptions, words are used, the meaning of which, inasmuch as they appear in Ezekiel only, is not determined. Because of this obscurity, a number of copyist mistakes have crept into the text, and that at an early date, since the Septuagint has some of them in common with the earliest Hebrew text we have. The Greek version, however, includes several readings which help to fix the meaning. The genuineness of the book of Ezekiel is generally conceded. Some few consider chapters xxxii-xxxiv to be apocryphal, because the plan there described in the building of the temple was not followed, but they overlook the fact that Ezekiel here gives a symbolic representation of the temple, that was to find spiritual realization in God's new kingdom. The Divine character of the prophecies was recognized as early as the time of Jesus the son of Sirach (Eccles. xxi, 10, 11). In the New Testament, there are no verbal similarities, but allusions to the prophecy and figures taken from it are frequent. Compare St. John, ch. 10, 30, 31 etc.; St. Paul, Rom. xi, 11 etc.; St. Matt. xxi, 32, with Ezek., xvi, 23. In particular St. John, in the Apocalypse, has often followed Ezekiel. Compare Apc., xviii-xxi with Ezek., xxvii, xxxviii, xxix etc., 41.1 etc.
Eziongeber. See Asionager.

Eznik, a writer of the fifth century, b. at Golp, in the province of Taikh, a tributary valley of the Chorokh, in Northern Armenia. He was a pupil of Isaac, the cecilios, and of Mesrop. At their request he went first to Edessa, then to Constantinople to perfect himself in the various sciences and to collect or copy Syriac and Greek manuscripts of the Bible, and the writings of the Fathers of the Church. He returned to Armenia with the Council of Ephesus (431), and is probably identical with Eznik, Bishop of Bagrevand, who took part in the Synod of Artsahat in 449. In addition to his labours in connexion with the new version of the Bible (see Versions of the Bible) and various translations, he composed several works, the principal of which is his remarkable treatise "Against the Sects". It was written between 441 and 449, and contains four books or chapters. In the first, against the heathen, Eznik combats the eternity of matter and the substantial existence of evil. In the second he refutes the chief doctrines of Panceism. The third is directed against the Greek philosophers (Pythagoreans, Platonists, Peripatetics, Stoics, and Epicureans), the writer taking his arguments from the Bible rather than from reason. The fourth book is an exposition and refutation of Marcionism. In the work Eznik displays much acumen and an extensive erudition. He was evidently as familiar with Persian as with Greek literature. His Armenian diction is of the choicest classical type, although the nature of his subject-matter forced him to use quite a number of Greek words. The work "Against the Sects" was first published at Smyrna in 1762; again, much more correctly and from several manuscripts, by the Mechi- tarists at Venice in 1826 and in 1855. An indifferent French translation was made by Le Vaillant de Florival, "Réfutation des différentes sectes"; etc. (Paris, 1853). A good German translation is that by J. M. Schmid, "Eznik von Kolb, Wider die Sekten" (Leipzig, 1900). Langlois published a general introduction to the whole treatise and a translation of part of book II (section 5, 1-11, containing Magism) in his "Collection des historiens anciens et modernes de l'Arménie", II, pp. 371 sq. Eznik is also the author of a short collection of moral precepts, printed with his more important treatise.

Neumann, Versuch einer Geschichte der armenischen Literatur, nach den Werken der Melchitaristen frei bearbeitet (Leipzig, 1838), 42 sqq.; Finck, Geschicht der armenischen Literatur in Geschichte der christlichen Literaturen des Orients (Leipzig, 1907), 85 sqq.; Bardenhewer, Patrology, tr. Shahan (Freiburg im Br. St. Louis, 1908), 583; Wüsten, Die Katholische Kirche in Armenien (Freiburg im Br., 1903), 50.

Ezzo, a priest of Bamberg in the eleventh century, author of a famous poem known as the "Song of the Miracles of Christ" (Castellana de miraculis Christi), or the "Anegenge" or "Beginning". The poem was found by Barack in a Strasburg MS. of the eleventh century, but only a few strophes are given. The whole song, thirty-four strophes, is preserved, though in a later version, in the Vorau MS. The "Vita Altmani" relates that it in 1655, when rumours of the approaching end of the world were rife, many people started on a pilgrimage to Jerusalem under the leadership of Bishop Gunther of Bamberg, and that Ezzo composed the poem on this occasion. The opening strophe of the Vorau MS. does not mention the pilgrimage, but simply states that the bishop ordered Ezzo to write the song. The effect, we are told, was such that everybody hastened to take monastic vows. The poem is written in the East Franconian dialect; it relates in earnest language the Creation, Fall, and Redemption of mankind. It was edited by P. Piper (op. cit. infra) and Steinmayer (in Mellenhoff and Scherer "Denkmäler deutscher Poesie und Prosas aus dem VIII-XII Jahrhundert", Berlin, 1892).

Arthur F. J. Remy.
Faa di Bruno, Francesco, an Italian mathematician and priest, b. at Alessandria, 7 March, 1825; d. at Turin, 26 March, 1888. He was of noble birth, and held, at one time, the rank of captain-of-staff in the Sardinian Army. Coming to Paris, he resigned his commission, studied under Cauchy, an admirable type of the true Catholic savant, and Leverrier, who shared in the discovery of the planet Neptune, and he became intimate with Abbé Moigno and Hermite. On his return to Turin, he was ordained, but the remainder of his life was spent as Professor of Mathematics at the University. In recognition of his achievements as a mathematician, the degree of Doctor of Science was conferred on him by the Universities of Paris and Turin. In addition to some asetical writings, the composition of some sacred melodies, and the invention of some scientific apparatus, Faa di Bruno made numerous and important contributions to mathematics. These include about forty original articles in the “Journal de Mathématiques” (Liouville), Crelle’s “Journal”, “American Journal of Mathematics” (Johns Hopkins University), “Annali di Tortolini”, “Les Mondes”, “Comptes rendus de l’Académie des sciences”, etc.; the first half of an exhaustive treatise on the theory and applications of elliptic functions which he planned to complete in three volumes: “Théorie générale de l’élimination” (Paris, 1859); “Calcolo degli errori” (Turin, 1867), translated into French under the title of “Traité élémentaire du calcul des erreurs” (Paris, 1869); and most important of all, “Théorie des formes binaires” (Paris, 1879), translated into German (Leipzig, 1881). For a list of the memoirs of Faa di Bruno, see the “Catalogue of Scientific Papers of the Royal Society” (London, 1869, 1877, 1891), t. II, vii, and ix.

Paul H. Limerian.

Faa di Bruno, Joseph. See Pious Society of Missions.

Faber, Felix, German writer, b. about 1441 at Zürich, of a famous family commonly known as Schmidt; d. in 1502 at Ulm, Germany. He made his early studies under the Dominicans at Basle and Ulm, where he spent the greater part of his life. He became a master of sacred theology, was head preacher at Ulm during 1477-78, became provincial of the German province in 1496, attended two general chapters of his order in 1490, and made a pilgrimage to Palestine and Syria in 1483-4. He wrote two accounts of his travels, one in German (Ulm, 1556); the other in Latin. The former is rather brief; the other is very complete and accurate in its descriptions of the places visited, and is of great importance to students of Palestinian topography, who recognize Faber as the most distinguished and learned writer of the fifteenth century. This work was republished by the Stuttgart Literary Society in three octavo volumes (1843-49) under the title, “Fr. Patricii Fabyi Evagrationis in Terrae Sancte Arabiae et Egypti Peregrinationem”. He was also the author of a verified pilgrim’s book, edited by Birlinger (Munich, 1864). In 1489 Faber completed a history of the Swiss (Historia Suevorum) down to that year. Goldast, in his preface to the Frankfort edition of 1604 (later ed. 1727), says of him that he was praised by few but copied by many. Faber translated a life of Blessed Henry Suso from the Latin. Some of his manuscripts are still unpublished.

Faber, Frederick William, Oratorian and devotional writer; b. 23 June, 1814, at Calverley, Yorkshire, England; d. in London, 26 Sept., 1866. After five years at Harrow School he matriculated at Beliol in 1832, became a scholar at University College in 1834, and a fellow of that College in 1837. Of Huguenot descent Faber was divided in his university days between Calvinism, to which he adhered, and Romanism, represented by Newman. Eventually the latter triumphed, and Faber threw himself unreservedly into the Tractarian movement and cooperated in the translation of the works of the Fathers then in progress. He received Anglican ordination in 1839, and took work as a tutor, till, in 1843, he was appointed Rector of Elton, Northamptonshire. During the years 1839-1843 Faber made two continental tours, and his letters give strikingly poetic descriptions of the scenes he visited; they glow with enthusiasm for Catholic rites and devotion. On his return to Elton in 1844, he established the practice of confession, preached a Catholic doctrine, and wrote the life of St. Wilfrid, openly advocating the claims and supremacy of Rome. In October 1845, Newman was received into the Church at Littlemore; in November, Faber was also received by Bishop Waring, at Northampton. In 1849, Faber established a religious community, the “Brothers of the Will of God” or “Wilfridians,” as they were called from St. Wilfrid, their patron, at Cotton Hall, near Cheddle, Staffordshire, the gift of the Earl of Shrewsbury. In 1847 Faber was ordained priest and with his zealous community, now forty in number, he tended the whole parish, except “the parson, the pew-opener, and two drunken men.” In 1848, Newman arrived from Rome with his new congregation of the Oratory of St. Philip Neri, and established himself at Old Oscott, Birmingham, then renamed Oratory. With singular disinterestedness, Faber placed himself under Newman as a simple novice, taking with him all his community who were willing to follow his example. In 1849 he was sent by Newman to found the Oratory at King William Street, London, and was appointed its superior. In the poor chapel there, once a tavern, Faber laid the foundation of his future works. Poor schools, nightly services, and sermons with hymns and processions of the Blessed Sacrament, till then unknown, formed its chief
characteristics. Faber's hymns, composed especially for these services, display a combination of accurate theological doctrine, fervent devotion, musical rhythm, and emotional intensity. His spiritual writing was remarkable for his delivery, choice of expression, absence of gesticulation, and personal exhortations of surprising force.

In 1547 Faber began the publication of "Lives of Modern Saints," not as biographies, but as showing the glory of man when understood essentially of divine and the supernatural perfection attained. The series of forty-nine Lives supplied a great want of the time and, after some opposition, met with full approbation. His knowledge of the spiritual life and the extent of his theological and ascetic reading were seen in the eight works that now came from his pen: "All for Jesus," 1588; "Growth in Holiness," 1584; "The Blessed Sacrament," 1585; "The Creator and the Creature," 1588; "The Foot of the Cross," 1588; "Spiritual Confessions," 1589; "The Precious Blood," 1586; "Bethlehem," 1610. The many foreign translations of these works, their circulation now maintained for more than fifty years, their constant quotation by spiritual writers, have raised their author to the rank of a master in mystical theology. He wrote also two volumes of the writings of "St. Ignatius and Luther" (1598), giving the skeleton of various sermons and of two projected works, "Calvary" and "The Holy Ghost." A volume of poems, various essays, and other minor works also are from his pen. The fascination and grace of his language reveals him as an astute, watchful, as well as confessor his sympathies with souls in trouble, his spiritual insight, and his supernatural worldliness, gave to his counsel a lifelong point and force.

The Oratory removed to South Kensington in 1584, and there Faber spent the remaining nine years of his life, occupied primarily in establishing his community on the strict observance of St. Philip's Institute, being convinced that fidelity to its Roman model was one vital principle. The sacraments, prayer, including the reverent performance of the ecclesiastical functions, and the daily Word of God were St. Philip's weapons, and Faber would never engage in other external works, however good. Unswerving loyalty to the Holy See was his watchword, and devotion to the Mother of God was for him the safeguard of faith and the insurance of grace. BOWDEN, The Lives and Letters of Frederick William Faber, 2nd ed. (London, 1888); FABER, A Brief Sketch of the Early Life of F. W. Faber (London, 1913); Novello Catholic Church, London, Aug. 1872), tr. (London, 1872); Catholic World, X, 145; III., 287; GILLLOW, Bibl. Dict. of Eng. Cath., II, 207-219.

HENRY S. BOWDEN.

Faber, Johann, theologian, b. at Leutkirch, in Swabia, 1478; d. in Vienna, 21 May, 1541. He studied theology and canon law at Tubingen and Freiburg in the Breisgau; was made doctor of sacred theology in Freiburg; became a successional minister of Lindau, Leutkirch; Vicar-General of Constance, 1518; chaplain and confessor to King Ferdinand I of Austria, 1524; was appointed Bishop of Vienna, 1530. While a canon of the cathedral of Basle he formed a friendship with Erasmus that lasted throughout their lives; Erasmus persuaded Faber to take up the study of the Fathers. Like others of his time Faber was at first friendly with the Reformers, Melanchthon, Zwingli, and Caecolampadius, sympathizing with their efforts at reform and opposing certain errors in Lutheranism. Faber, however, was spared by the Reformers, but was the most consistent opponent of them. He wrote his first polemic against Luther, "Opus adversus nova quaedam dogmata Martini Lutheri" (1522). This was followed by an answer of Luther to the same, "Haeretici ad Hadrianum VI sumnum Pontificem" (Cologne, 1524; Rome, 1569). From this latter work he is sometimes called the "hammer of heretics." He entered into public debate with Zwingli at Zurich; was prominent in all the diets held to restore peace to the Church; and was one of the principal architects of the edict of Augsburg. On some points, e.g., the celibacy of the clergy, he was willing to recognize certain unfortunate conditions if an agreement could be reached to prevent similar conditions in the future, but no agreement was possible. He was sent by Ferdinand to Spain and then to Henry VIII in England to seek aid against the invading Turks; Ferdinand also had him enlist the services of the University of Vienna to combat the spread of the doctrines of Luther in Austria. As bishop his zeal was unbounded; he protected his flock by frequent preaching and numerous writings, and held regular conferences with his clergy. He founded twelve scholarships for boys who wished to become priests but did not have the means to realize their ambition.

His works (German and Latin) are homiletic and polemical in character. Besides those already mentioned he wrote treatises on faith and good works, on the Sacriifice of the Mass; an instruction and answer to Luther's work against the King of England; a treatise against the more recent tenets of Luther; a comparison of the writings of Luther and Zwingli; a letter to the pope in the case of Luther; an answer to six articles of Zwingli; a defence of the Catholic belief against the chief Anabaptist, Balthasar of Freiberg; a book on the religion of the Russians; sermons on the misery of life, and on the Blessed Virgin Mary, and on the great and tender courage while the Turks were besieging Vienna. His works in three folio volumes (Cologne, 1537-40) do not contain his polemical writings; these are found in "Opuscula quaedam Joannis Fabri, Episcopi Vienensi," (Leipsig, 1539).

QUEISS AND BACHMANN, Scriptores Ord. Proel. (Paris, 1721), tom. II; DOLEZEL, Scriptores Universitatis Vienensis, pars II (Vienna, 1741); KERTESZ, De Joanne Fabri vita et scriptis (Leipsig, 1749); JAVESSEN, Geschichte der Oesterreichischen Kirchen (Freiberg, 1830); V; Born in Kirchen. IV, 172-175.

M. SCHUMACHER.

Faber, Johann, of Heilbronn, controversialist and preacher; b. 1504, at Heilbronn in Wittenberg; d. at Augsburg, 27 Feb., 1558. At the age of sixteen he entered the Dominican Order and made his ecclesiastical studies in the convent at Wimpfen. Of his earliest missionary journeys little is known. He was charged with the duty of preaching in the cathedral of Augsburg, but owing to the Lutheran heresies and the bitter attitude of the heretics towards the Church, in consequence of which the Catholic clergy were forbidden to preach, he was ordered to take a short departure. Thence he went to the University of Cologne, where he devoted himself for several years to the higher clerical studies. Here he published in 1535 and 1536 several unedited works of the English mystic, Richard Rolle. Returning to Wimpfen he engaged in the work of preaching and revising the errors of the Reformers, which had already taken deep root among a large portion of the people. His unwearied zeal, however, in upholding the ancient Faith and the marvellous results attending it, caused his enemies to turn against him with such bitterness that he was forced to leave the city. In 1539, at the solicitation of the citizens of Colmar, he proceeded to that city, where the new doctrines had by this time gained considerable ground. On 2 Sept. of the same year he matriculated at the University of Freiburg as "Concionator Colmarenensis," and it was at this time, in all probability, that he received the baccalaureate. In 1545 he was elected prior of the convent in Schlettstadt, but he had served only two years in this capacity when he was again appointed to take charge of the pulpit in the cathedral of Augsburg. Being nominated to the see of Freiburg in 1552, he proceeded to the University of Ingolstadt, where he received the degree of Doctor of Theology
under the presidency of Peter Canisius, who succeeded him later in the pulpit of Augsburg. In the following year he returned again to Augsburg, where he died. Faber was a man of vast theological erudition. His zeal for the cause of the Church was invincible courage he evinced in exposing the prevailing errors brought him into conflict with many heretical leaders. He is the author of a number of excellent works, including the following: (1) "Quod fides esse possit sine caritate, expositio pia et catholica" (Augsburg, 1548); (2) "Testamentum et Patrum B. Petri apostolae Romanaeuisse" (Antwerp, 1553); (3) "Gründliche und christliche Anzeignungen aus der heiligen Schrift und heiligen Kirchenlehrern was die evangelische Mosše sei" (Dillingen, 1558); (4) "Enchairen in Beliebten concionibus et popularibus declamationibus utile" (Cologne, 1568); (5) "Precautiones Christianae ex sacris litteris et D. Augustino singularius studio conncnbatos et selectas" (Cologne, 1568).

Faber, Johann Augustanus, theologian, b. at Fribourg, Switzerland, c. 1470; d. about 1531. He entered the Dominican Order, probably at Augsburg, Germany, where he passed the greater part of his religious life, whence his name Augustanus. He obtained the master and professor of divinity, was made (1511) Vicar General of the Dominican Congregation of Upper Germany, and for twenty years filled the office of prior in the Augsburg Convent. He rebuilt (1612-1515) the Dominican church in that city, for which some of the funds and the were obtained through the preaching of a jubilee permitted by Leo X and also, after a prohibition, by the Emperor Maximilian I. Maximilian made him court preacher and royal counsellor. On the recommendation of Erasmus, who was very friendly to him, he was again appointed to these offices by Maximilian's successor, Charles V. Sympathizing with the Lutharians in their revival of classical learning, he advocated a plan for the treatment of Luther and his followers that the ecclesiastical superiors could not accept. When he withdrew this, and broke away from the humanists, he received the abuse of Luther, and also of his former supporter Erasmus, who had already been provoked by his censure, published anonymously, for adhering to the new errors. The accusation made by Erasmus, that he had humiliated him to Cardinal Cajetan has not been proved.

Quisp and Euchard, Script. Ord. Pred., II, 80; Paulus, Die deutschen Dominikaner in Kampfgegen Luther (Freiburg, 1903), 297-312.

Arthur L. McMahon.

Faber, Matthias, writer and preacher, b. at Altomünster, Germany, 24 Feb., 1586; d. at Tyana, 26 April, 1653. He embraced the ecclesiastical state, became curé of the parish of St. Maurice at Ingolstadt, and was a professor at the University of that city. His sermons had already won for him a reputation as a sacred orator when he entered the conclave of July, 1652, in Vienna. He was then fifty years old. The sermons which he has left are remarkable for soundness of doctrine, and learning. He is even more a controversialist than an orator in the ordinary sense of the word. His object in preaching is never to confuse, before everything, either to convert heretics, or to safeguard Catholics from the false doctrines of the Reformation. According to the custom of the times he made excessive use of Scriptural texts, which crown his instructive sermons and render the reading of them difficult. They are all written in Latin, and have been published in many editions.

Sommervolget, Bibl. de la c. de J. (Brussels, 1891), III; Faber, Concilium Opus, preface.

Louis Lalande.

Faber, Peter. See Peter Faber, Saint.

Faber (Fabi), Philip, theologian, philosopher, and noted commentator of Duns Scotus; b. in 1564, at Spinata di Brighiella, district of Faenza, Italy, and d. at Padua, 28 Aug., 1630. In 1582 he entered the Order of St. Francis (Conventuals), at Cremona. After completing his studies, he taught in various Augustinian colleges till he was appointed professor of philosophy in 1603, and in 1606 professor of theology, at the University of Padua, where he was highly successful as a lecturer. In 1625 he was elected provincial of the order, and he again took up his work as professor expounding the teachings of Duns Scotus with ability and judgment, and abandoning the superlative style of other commentators. His most important works are: "Philosophia naturalis Scotti in theorematum distributa" (Parma, 1601, revised at Venice, 1606, 1616, 1622, and at Paris, 1622). "Commentaria in quatuor libros sententiarum Duns Scoti" (Venice, 1613; 3rd ed. Paris, 1622); "De Prædeterminatione" (Venice, 1623), a supplement to the first book of the "Sentences"; "De restitutione, et extremâ unitione" (Venice, 1624), an addition to the fourth book of the "Sentences"; "A treatise on papism and censura ecclesiasticum" (Venice, 1628). His work, "De Primati Petri et Romani Pontificis" and his "Commentaries on the Metaphysics of Aristotle" were published, after Faber's death, by his friend Matthew Ferrius, O.F.M., who prefaced the "Commentaries" with a biography of the author.

Fabian (Fabianus), Saint, Pope, 236-250, the extraordinary circumstances of whose election is related by Eusebius (Hist. Eccl., VI, 29). After the death of Anterus he had come to Rome, with some others, from the Eastern Church, and was elected pope. He was a good man, and was succeeded by his friend, Soter, who was also a good man. During his reign of fourteen years there was a lull in the storm of persecution. Little is known of his pontificate, except that he consecrated the Holy Spirit upon the baptized. The "Liber pontificalis" divided Rome into seven districts, each supervised by a deacon, and appointed seven subdeacons, to collect, in conjunction with other notaries, the "acta" of the martyrs, i.e. the reports of the court-proceedings on the occasion of their trials (cf. Eus., VI, 43). There is a tradition that he instituted the four minor orders. Under him considerable work was done in the catacombs. He caused the body of Pope St. Pontianus to be exhumed, in Sardina, and transferred to the catacomb of St. Callistus at Rome. Later accounts, more or less trustworthy, attribute to him the consecration (245) of seven bishops as missionaries to Gaul, among them St. Denis of Paris (Greg. of Tours, Hist. Francor., I, 26, 31). St. Cyprian mentions (Ep., 59) the condemnation by Fabian for heresy of a certain Priscus (Bishop of Lambesc) in Africa. The famous Origen did not hesitate to defend, before Fabian, the orthodoxy of his teaching (Eus. Hist. Eccl., VI, 34). Fabian died a martyr (20 Jan., 250) at the beginning of the Decian persecution, and was buried in the Crypt of the Popes in the catacomb of St. Callistus, where in recent times (1877) his Greek epitaph (Roma Sottorrennae II, 59) was rediscovered.

"Faber,
bishops and martyr." The decrees ascribed to him in Pseudo-Isidore are apocryphal.

P. Gabriel Meyer.

Fabiola, Saint, a Roman matron of rank, d. 27 December, 399 or 400. She was one of the company of noble Roman women who, under the influence of St. Jerome, gave up all earthly pleasures and devoted themselves to the practice of Christian asceticism and to charitable works. For the cure of St. Jerome's distemper at Rome (382-84), Fabiola was not one of the ascetic circle which gathered around him. It was not until a later date that, upon the death of her second consort, she took the decisive step of entering upon a life of renunciation and labour for others. Fabiola belonged to the patrician Roman family of the Fabia. She had been married to a man who led so vicious a life that to live with him was impossible. She obtained a divorce from him according to Roman law, and, contrary to the ordinances of the Church, she entered upon a second marriage with Eusebius, a friend of St. Jerome, the day before Easter, following the death of her second consort, she appeared before the gates of the Lateran basilica, dressed in penitential garb, and did penance in public for her sin, an act which made a great impression upon the Christian population of Rome. The pope received her formally again into full communion with the Church.

Fabiola now renounced all that the world had to offer her, and devoted her immense wealth to the needs of the poor and the sick. She erected a fine hospital at Rome, and waited on the inmates herself, not even shunning those afflicted with repulsive wounds and sores. Besides this she gave large sums to the churches and religious communities at Rome, and at other places in Italy. All her interests were centred on the needs of the Church and the care of the poor and suffering. In 395, she went to Bethlehem, where she lived in the hospice of the convent directed by Paula and applied herself, under the direction of St. Jerome, with the greatest zeal to the study and contemplation of the Scriptures, and to ascetic exercises. An incursion of the Huns into the eastern provinces of the empire, and the quarrel which broke out between Jerome and Bishop John of Jerusalem respecting the teachings of Origen, made residence in Bethlehem unpleasant for her, and she returned to Rome. However, in consequence of a request from St. Jerome, who at her request wrote a treatise on the priesthood of Aaron and the priestly dress. At Rome, Fabiola united with the former senator Pamphactus in carrying out a great charitable undertaking; together they erected at Porto a large hospice for poor pilgrims coming to Rome. Fabiola also continued her usual personal labours in aid of the poor and sick until her death. Her funeral was a wonderful manifestation of the gratitude and veneration with which she was regarded by the Roman populace. St. Jerome wrote a eulogistic memoir of Fabiola in a letter to her relative Oceanas.

Fabi, Joseph, second Superior General of the Oblates of Mary Immaculate, b. 14 November, 1824, at Cuges, Bouches-du-Rhône, France, and died near Paris, 26 October, 1892. He first studied at the Lyceum of Marseilles, then entered the Grand Séminaire of the same city, and made his novitiate in the Congregation of the Oblates, pronouncing his final vows 17 February, 1845. After teaching philosophy for some time, he was ordained priest, 29 May, 1847. He was Director of the Grand Séminaire of Marseilles when, in 1850, a general chapter elected him procurator of the whole Institute. The Bishop of Marseilles, who was also the superior and founder of the Oblates, made him his trusted confidant; and when that prelate died Father Fabi was unanimously chosen to succeed him (5 Dec., 1861) as Superior General of his congregation, in which capacity he from time to time addressed to the members of his congregation, encyclical letters which have remained models of spiritual direction. He instituted collective retreats for the members of his congregation based on the observance of charity and humility, which Bishop De Masedon had made the cardinal virtues of his Institute.

He introduced his missionaries into Italy, Spain, and Holland; established new houses in France, Great Britain, and Canada, and, in 1883, canonically erected into a separate province the houses already existing in the United States. Their activities in the missions of Ceylon, South Africa, and the extreme North, as well as the far West, of America, were no less remarkable during his tenure of office. At the time of his death, when he had been superior for thirty-one years, the roll of members had more than doubled in numbers, and the Oblates counted in their ranks ten bishops who were at the head of as many vicariates apostolical. If Bishop Fabi had founded and consolidated the congregation, the last touches to the good work were given by his immediate successor.

In addition to being their superior general, Father Fabi was the Director-General of the Association of the Holy Family, a religious institute composed of seven congregations of nuns founded at Bordeaux in the first half of the nineteenth century. Notice nécrologique des Oblates de Marie Immaculée (Bar-le-Duc, 1899); Benoit, Vie de Mgr. Taché (Montreal, 1904).

A. G. Morice.

Fabi (Le Fèvre), Honoré, Jesuit, theologian, b. about 1607 in the Department of Ain, France; d. at Rome, 8 March, 1688. He entered the Society of Jesus at Avignon, in 1626, and distinguished himself by a life of continuous mental work. He excelled especially in mathematics and physics, but he was also a formidable controversialist. For eight years he taught philosophy and for six years mathematics in the Jesuit college at Lyons, attracting many pupils by the fame of his learning. Called to Rome, he became the theologian of the court of the papal penitentiary in the Vatican Basilica, a position he held for thirty years. His duties did not prevent him from writing a number of learned works on various subjects in keeping with the needs of his time. Sommervogel mentions thirty-one titles of published works in connexion with Fabi's name; besides, there are fourteen of his productions in MS., now kept in the Library of Lyons.

The following are the more important of his publications: "Pithagoras, seu disquisitio de opinione probabili," etc. (Rome, 1659). This work was attacked by Stephanus Gradius, Prefect of the Vatican Library, in his "Disputatio de opinione probabili" (Rome, 1678; Mechlin, 1679). "Honorati Fabri, Societatis Jesu, apologettes dorhomme morales ejusdem Societatis" (Lyons, 1670; Cologne, 1672). This treatise, in eleven dialogues, of probabilism, explaining its true nature, and refuting the charges of its opponents. The Cologne edition was considerably enlarged but did not meet with ecclesiastical approbation. Rome was pleased on the Index of forbidden books soon after its appearance. "Una fides unitae Ecclesiae Romanae contra indifferentes hujus seculi tribus libris facili methodo asserta" (Dillingen, 1657). "Summula theologica in quatuor questiones omnes alciens momenti, qua Scholastica agiari
solent, brevari discutiuntur ac definiuntur" (Lyon, 1660). The principles on which this work constructs its theological conclusions are far different from those of Aristotle. "Euphaneris seu vir ingeniosus", a little book, which may be useful to the student of literature (Rome, 1671; Budapest, 1758; Ofen, 1763). Most of Fabri's other works deal with philosophy, mathematics, physics, astronomy, and even zoology. In his treatise on man he claims to have discovered the circulation of the blood, prior to Harvey; but, after investigating this question, Father Bellucci set forth a conclusion that, at best, Father Fabri may have made the discovery independently of Harvey (cf. Belliynx, Cours de Zoologie, 1864, p. 23).

Sommer, Die R. d. C. d. F. (Brussels and Paris, 1892), III, 541-62 on his works. The history of Fabriano was in the church of San Giovanni Battista in Attigio. The history of Fabriano is closely connected with that of the Marches. In the church of San Benedetto, of the Silverstrine monks, is the tomb of Blessed Giovanni Bonsoli, a Silverstrine (d. 1520). St. Silverio Gazzoli, the founder of this order, is buried at Monte Fano, not far from Fabriano, where Blessed Giuseppe dei Conti Atti and Blessed Ugo Laico, both Silverstrines, are also buried. The relic of St. Romuald were transferred to the church of SS. Biagio and Raimondo in 1480. The city was under the jurisdiction of Camerino until 1785, when Pius II re-established the see of Matelica and united it aequo principali et with Fabriano.

The town of Matelica possesses some ancient inscriptions. A Roman colony was established there in 89 B.C. In 487, Bishop Equiti of Matelica was at Rome; and in 551, Bishop Florentius accompanied Pope Vigilius to Constantinople. No other bishops of the ancient see are known. Until 1785 Matelica was under the jurisdiction of Camerino. Mention may be made of Blessed Gentile da Matelica, a Franciscan, martyred in Egypt in 1351, and buried in Venice (ai Frari), and of Blessed Mattea Lassano, a Benediction nun, also of Matelica, buried in the church of Santa Maria Maddalena. The diocese is immediately subject to the Holy See, and has 32,000 inhabitants, 42 parishes, 1 man and 2 female educational institutions, 6 religious houses of men and 4 of women. The painter, Gentile da Fabriano (q.v.), is one of the most famous of the natives of Fabriano. He worked at Foggia and Bari, and later in the palace of the dukes at Venice, in the Strozzi chapel at Florence, and finally at Rome.

Caffoletti, Le Chiese d'Italia (Venice, 1844), VII, CA: MILLO, ALGHEROTTI, Memorie di Matelica (Ancona, 1888). Fabircia Ecclesia, a Latin term, meaning, etymologically, the construction of a church, but in a broader sense the funds necessary for such construction. This expression may also be used to designate the repairing and maintenance of churches, the daily expenses of worship, and to the amount requisite for covering these expenses. In this particular connection the expression is first met with in the letter of Pope Simplicius to Gaudentius, Bishop of Auflina (19 Nov., 475); however, even then it was not new, being borrowed from profane usage.

During the first Christian centuries the temporalities intended to meet the expenses incurred by the religious services carried on throughout a diocese belonged entirely to the cathedral church, and constituted a common fund which the bishop used, at his option, in defraying the expenses of religion, supporting its ministers, and caring for the poor. But in the fifth century, particularly in Italy, this common fund was divided into four parts for the fabricle, the chancel, the fabrica, and the fabricaria. In Sicily, however, in 494, no portion was especially reserved for the fabric, and in Gaul, such an allotment seems to have been unknown. In Spain, a third of the ecclesiastical revenues was assigned to the luminare (lights), a term synonymous with fabrica. The institution of this tax in the rural districts brought with it a change of discipline, according to which each church obtained a separate patrimony. In fact, benefactors no longer bestowed their gifts on the entire diocese, but on one particular church, frequently in honor of some saint specially venerated there. The common fund itself was divided among the churches of the diocese. Some writers maintain this division was owing to the establishment of ecclesiastical benefices; others claim that it followed the canonical recognition of the private ownership of churches. After 565 the law restricted the exercise of public worship to churches whose ownership had been completely renounced by the founders, the canon law eventually permitted public worship in churches that remained the private property of an individual, a monastery, a collegiate church, or a lay estate. The owner, however, was obliged to set apart a special fund for the needs of the church (pro a raris tectis, or for the luminare). Henceforth, when a bishop established a new parish, he was bound to provide for its needs by a specified income to be deducted from the common diocesan estate or fund—of course, if no benefactor had otherwise endowed the parish. Some hold that in consequence of the principles governing feudal society all medieval churches and their revenues became private property, and that the conflict of Gobierno and lay investitures in reality an effort to restore its lost possessions to the ecclesiastical domain. The result of so much strife was the transformation of former proprietary rights into the right of patronage (iust patronatus).

While ecclesiastical ownership was going through these phases, the canon law decided who must contribute to the maintenance of a particular church, i.e., its owner, and all recipients of its revenues (Symnol of Frankfort, 794); under pain, therefore, of forfeiting the right of patronage, the owner was required to share the burden of its maintenance; so too the incumbent of the ecclesiastical benefice and those to whom the tithes have been granted (decemviri). Finally, when the resources of the church were insufficient, the faithful themselves were bound to contribute to the expenses of Divine worship. These provisions were sanctioned by the Decretals of Gregory IX (cc. i and iv de ecclesiis octo biacandas, III, 48), and by the Council of Trent (Sess. XXI, de ref. c. vii); they represent in this matter the common ecclesiastical law (see BUILDINGS, ECCLESIASTICAL). The fabricle, therefore, is a person charged with the administration of church property, usually laymen. The origin and historical development of this institution have not yet been studied very closely. Their organization, moreover, has differed from country to country to another, nor have they been uniformly organized in the same country. Churches subject to the right of patronage and those incorporated, even for temporal administration, with monasteries, were more closely affected than other churches by the condition of dependency. In such churches the patron occasionally appointed an officer to administer the temporalities. It is commonly believed, however, that "church fabric" do not antedate the thirteenth century. In the first ages of the Church the bishop administered church property with the aid of deacons and priests, but during the
fourth century there appeared in the Orient and in certain countries of the West, burzers (economoi), who, succeeding to a good part of the wealth and temporal affairs of churches; in other countries the bishop continued to administer the church property with the assistance of some trustworthy man of his choice. When each church came to have its own particular patrimony, the bishop was naturally obliged to turn to the local clergy, retaining nevertheless a right of control. During the long Investitures conflict this right, it may be, was completely annihilated; when peace was restored the clergy were often obliged to appeal to the investitures to define确切 relations to their dioceses. In France and England especially, the assemblies of parishes established the portion of expenses that ought to be borne by the community; naturally, therefore, this assembly was henceforth consulted in regard to the most important acts connected with the administration of the parish temporalities. For this purpose it selected lay delegates who participated in the ordinary administration of the ecclesiastical property set aside for parochial uses. They were called vestrymen, churchwardens, procurators (procuratores), moneyers (monetares), gappers, provosts, provosts, vicars, opereari, altimannae, etc.

In the councils of the thirteenth century frequent mention is made of laymen, chosen by their fellow laymen to participate in the administration of temporal affairs; at the same time the rights of the parish priests and of ecclesiastical authority were maintained. A reaction is visible in the councils of the fourteenth, fifteenth, and sixteenth centuries which undertake to check the tendency towards an exclusively lay administration of the parochial property. Eventually the Council of Trent (Sess. XX) [cf. 1563] admitted the participation in the administration of ecclesiastical property, but demanded that at all times and in all places the lay administrators render an annual account to the bishop or to his delegate. As no general law has determined either the competency or the composition of fabric committees (consilis de fabricis) there has been in this respect very great variations. In modern times secular power has frequently intervened in the administration of ecclesiastical property set apart for purposes of worship, and in the organization of church fabric. Even now, in most European countries, the State regulates the administration of ecclesiastical property, and the proceedings of church fabrics. (See under BUILDINGS, ECCLESIASTICAL, an outline of the regulations actually in force.)

A. VAN HOVE.

FABRIUS, ANDREW. See LEFÈVRE, FAMILY OF.

FABRIUS, HIERONYMUS (surnamed AS AQUAPEN- DENTE), a distinguished Italian anatomist and surgeon, b. in the little town of Aquapendente (Aqua-Taurina), twelve miles from Orvieto, in 1537; d. at Padus, 21 May, 1619. He is known by the name of his birthplace, which at times was everywhere his profession. He was a great German surgeon, Fabricius Hildanus. In English medical literature Fabricius is best known as the teacher of Harvey, who gives him the entire credit for the discovery of the valves in the veins which meant so much for Harvey's own discovery of the circulation of the blood. Some valves in the veins, however, had been seen and described by investigators before this, probably even by Erasistratus in ancient times. It was Fabricius' merit that he recognized the existence of a system of valves. Sent by his patrons to the University of Padua, Fabricius succeeded admirably in Greek, Latin, and philosophy. When he took up medicine he became the favourite pupil of Fallopius, being his demonstrator in anatomy at Padus when scarcely twenty. Though he was only a twenty-two-year-old assessor of the University, Fabricius was chosen his successor and a little later became professor of surgery, occupying both chairs for nearly half a century (1562-1609). His abilities were properly appreciated by the Senate of Venice, which built for him at Padua a spacious anatomical theatre bearing his name. He was created a Knight of St. Mark, and his annual salary was a thousand crowns, which was continued for ten years after his resignation. A statue was erected to his memory in Padua after his death. Fabricius was indifferent to money, refused to eat expensive food, and presents as wealth for patient forced on him. His work on anatomy (500 fol. pp.) is illustrated by hundreds of figures on sixty-one full-page plates, some of the best ever made. A monograph on the speech of brutes and a study of the comparative anatomy of the appendix are suggestive even for modern readers. His work on surgery is scarcely less valuable than that on anatomy and has gone through twenty editions in many languages. His principal works are: "De divisione, voce, auditu" (Venice, 1603); "De brutorum auditorum lingua" (Padua, 1603); "De formato foetu" (Venice, 1800); "De locutione" (Venice, 1627); "Tractatus anatomicus triplex" (Frankfort, 1614). All his other works were reprinted at Frankfurt shortly after this time, and all his works at Leipsig in 1837.

FABYAN, ROBERT, English chronicler, d. 28 Feb., 1513. He was a London clothier, a member of the Drapers' Company, and an alderman. He held several responsible positions, but resigned his aldermanship in 1502, probably to enable him to devote more time to the history of the mayoralty. Fabyan belongs to the class of City chroniclers, men interested mainly in municipal life, but he is the first to take a wider view and to attempt to combine his London history with that of the country. He was not very successful. His "Concordance of Historie" begins with Brutus and goes down to the death of Richard III, but his effort to harmonize different chroniclers is made without art or historical judgment. The work is of value mainly for its reference to London. The second edition (1559) contains a number of pithy scattered notes on municipal history under Henry VII. Dr. Busch considers that these must be an abridgment of a lost chronicle of that reign. The best edition of Fabyan is that published by Ellis in 1811.

FAÇADE, the face or front of any building. In ecclesiastical architecture the term is generally used to designate the west front; sometimes the transept fronts. For ritualistic reasons, the church architect was everywhere employed to treat the end wall of the nave as the grand façade.

EARLY CHRISTIAN PERIOD. The façades of the
churches of the early period were generally built on the model of the old Roman basilicas, and were constructed according to Roman methods, and largely formed of columns and other features taken from Pagan buildings. Their interest is principally from an archaeological point of view. The façades of the early Roman examples were often more than two storeys high. The splotches on the upper surfaces were but two types; the central gable, following usually the outline of the structure behind it, and the screen façade, usually made to overhang for purposes of protection, and formed by a gradual projection of the courses of brick both forward and sideways. In the more important churches the entire surface was concealed by a mosaic composition extending from summit to portico. Such were St. John Lateran's, St. Peter's, St. Paul's, St. Mary Major's, etc. This converted the façade above the porch into a blaze of colour. Toward the close of the Middle Ages more windows were sometimes opened in the façade. At St. Peter's, in the thirteenth century, beside the wheel window in the gable, there were two rows of three tall mullioned windows, the lower row being, however, more than two storeys high. The façade was always covered by a projecting portico, consisting either of one side of the quadrangular atrium, or of an independent arcade or colonnade. The wall space underneath was usually broken by as many decorative features as led to the church, normally three, sometimes five. In the crypt of Santa Maria there was but a single door, and in exceptional cases, as at St. Peter's, there was a supplementary door for special occasions.

Byzantine façades as a rule were left comparatively plain, partly, no doubt, on account of their location and surroundings. A Byzantine church usually stood apart in a close, and when possible trees were planted about to give shade. In towns, the church, its grounds, etc., were generally surrounded with walls. It was entered through a narthex or portico, or atrium, in the centre of which stood the phiale, or fountain, where the required ablutions were made. Across the lower portion of the front of the church stretched the narthex or vestibule, which sometimes had a porch or portico in front of it. Many churches had a double vestibule, the outer one being called the eso-narthex, generally appointed for women. The narthex communicated with the church by means of three doors; that in the centre being large and often richly ornamented. The two others, situated on each side, were small and not remarkable. The central door was called the Beautiful Gate, sometimes the royal or basilican gate.

In the larger churches, above the narthex there was often an enclosed upper gallery for the accommodation of women, called the gynaeconites. This gallery was enclosed partly by the outside wall or walls and partly by grilles, and was reached by a staircase for the use of women only. From the outside it was lighted by a series of narrow windows, generally covered by round arches, or one or more double windows were formed by theintersection of two or three piers. As a rule the windows were small and grouped together, or else they were of considerable width, and divided into three lights by columns or by thin strips of unbroken marble. The lower portion of the windows was often filled with thin slabs of translucent marble, sculptured on the outside, which allowed the light to shine through to a certain extent. Especially in the Neo-Byzantine style, there are occasionally porches, balconies and machicoulis, which give relief to the general flatness. These features are well marked with the grace peculiar to the East, as for instance, at Constantinople and Basle (527–532), and Sancta Sophia (532–537). The church of the Virgin at Misitra and the Catholic Church, at Athens (both uncertain, 11th to 13th century), and St. Mark's, Venice (1100–1350). Examples of Italian Byzantine are the cathedrals at Palearmo and Cefalu. The present façade of St. Mark's, Venice, is a later casing upon the original Byzantine façade, and stands alone as regards its style, although generally classed as Byzantine. The first appearance of the Byzantine in Italy was the church of San Vitale, at Ravenna. In Russia, the cathedrals of Moscov, Kiev, and Novgorod, are among the best known examples.

Lombardic (sometimes called Lombard Romanesque) façades were the most unfortunate part of Lombard churches. The designing of façades to the basilican plan and section brought trouble to many different schools of architecture, but by none was it treated with such signal failure as by the Lombards. In declining to attach the campaniles to the church, the Italians rejected what apparently was the only possible solution. The continuous shape of the gable was used by the Pisans, even in churches where the aisle roofs were much lower than those of the nave. "False" façades, like that of San Michele Maggiore, resulted in designs that obviously belied the basilican section. Even before this, it had been the custom, where the site was good, to divide the cela into two, the side walls of the façade much above the actual roof of the church, perhaps with a view to make the church appear externally larger than it really was. This fraud continued to be practised in the churches of Verona, and indeed throughout Italy, for nearly a century, and came characteristic of Italian church architecture. On the false façade thus obtained, ornament, utterly irrelevant for the most part, was spread with a more or less lavish hand. The façade of S. Ambrogio, Milan, with its great open arches is, perhaps, the most successful one the Lombards ever erected.

Romanesque façades. Their characteristics, as a whole, may be summed up as follows: Buttresses formed as plastron strips of slight projection, connected at the top by horizontal mouldings, or by a roll of semicircular arches resting on a corbel-table projecting from the wall. Semicircular arches, resting on rudely formed capitals, also occur. Door and window openings are very characteristic. The principal, upon which the jambs were formed, was in receding planes, or rectangular recesses, known as "orders" in which were placed circular columns or shafts. The arches followed the same method, being built in concentric rings. A continuous abacus often occurs over these columns, and the profile of the jamb is carried round the semicircular portion of the arch. The characteristic round windows or semi-circular, semicircular, or octagonal, of the principal doorway of the façade. Mouldings were often elaborately carved. The carving and ornaments are derived from many types of the vegetable and animal kingdom, and treated in a conventional way. Local influences were instrumental in producing different local characteristics.

In Central Italian Romanesque, beauty in detail was more sought after than completeness of style. Byzantine influence was strong, especially in Venice, Ravenna, and Pisa, the latter possessing a distinct style of its own, sometimes called Tuscan. San Miniato's, in Florence, is interesting as marking the period of transition, in the eleventh century, from the Basilican to the Romanesque type. In Northern Italian Romanesque, arcades are restricted to the tops of gables. The general character is less refined, owing to the use of stone and brick instead of marble. Details show a breaking away from Classic precedent. In sculpture, hunting and other scenes reflecting the life of the northern invaders are frequent, and in these grotesque elements is prevalent. S. Antonio's, in Piacenza, is an example. St. Luke's, at Florence, is a good example of Southern Italian Romanesque shows Byzantine and Mohammedan influence, as instance in Monreale Cathedral, and the Martorana Church, in Palermo. The detail of these buildings is always refined and graceful, which may be due to some extent to the Greek descent

3. THE CATHEDRAL, SPEYER

FAÇADES

2. THE CATHEDRAL, AMIENS
4. S. MARIA IN COSMEDIN, ROME
of the inhabitants of this part of Italy. Southern French Romanesque is remarkable for its rich decorative façades. Buttresses are generally mere strips, of slight projection, and the façades were arranged in stories, with window lights in pairs or groups. Impoising works were carried on in the other parts of Italy. The west fronts of the churches of the Charente District, in Aquitania, were elaborately treated with carved ornament representing foliage or figures of men and animals. On the ground story the capitals so treated were often continued as a rich, broad frieze. German Romanesque bear many tall slender pointed arches. In the façades the most richly ornamented parts are the doorways and capitals; there is also a wealth of circular and octagonal turrets and arced galleries. Examples: The church of the Apostles, at Cologne, the cathedrals of Worms, Mainz, Trier, and Speier.

Gothic façades.—The first in point of dignity is undoubtedly that of Notre-Dame de Paris; in richness, those of Amiens and Reims. The façade of Amiens, of which only the three lower stories are of the thirteenth century, would doubtless have been the noblest of all Gothic façades, had it been finished according to the original design. The great French Gothic façades are often criticised on the ground that they somewhat disguise the true character of the edifice which they enclose; and it is, perhaps, true that an entirely satisfactory solution of the problem is hardly yet realised in a large Gothic church. As a rule, the façade rarely wholly expresses the form of the building which it encloses, except in buildings of a very simple character. In the façades of smaller churches where the towers are omitted, as at Nesse, Auever, Heronville, and Champagne, the whole structural form of the building is expressed as fully as it can be. The west fronts of Sensis, Paris, Amiens, and Reims sufficiently illustrate the development and the characteristics of the French Gothic western façade.

In England, the Anglo-Norman western façade was, as a rule, both inappropriate as a termination to the building, and ill-composed as an independent architectural design. Very few early façades remain. The most important extant fronts of the thirteenth century are those of Lincoln, Salisbury, Wells, and Peterborough. The façade of Lincoln exhibits four different styles of architecture—the work of as many different periods of construction. The portals of English churches are in general insignificant and diminutive, especially above the arch. The façade of Peterborough is entirely unrelated to the building which it encloses. As a rule, the west front in England is devoid of Gothic character; but among exceptions is the western façade of Ripon cathedral. In the early pointed architecture of England, western towers, when they occur, are less imposing than those of the Gothic churches of France.

The western Gothic façades in Germany call for no extended remarks. The façade of the Lorenzkirche of Nuremberg, dating probably from the second half of the thirteenth century, exhibits a strange combination of Romanesque and Gothic features. Towards the close of the thirteenth century, in Germany, the west front began to receive more elaborate and peculiar treatment. Acute open gables over the portals, free-standing mullions and tracery over the face of the wall above, and tall open gallery in front of the openings of the second stories of the towers, are among the new features. Entrances are often north or south, instead of being at the west end. Towers with spires were much used, open-work tracery in the spires is very typical. Among the typical extant façades of German Gothic are Strasburg, Freiburg, Ratisbon, Cologne, and Vienna cathedrals.

Italian Gothic façades show the influence of Roman tradition in their classic forms of construction and decoration, which was so great that the verticality which marks the Gothic architecture in the north of Europe does not pervade the Italian examples, to anything like the same extent. From the absence of vertical features and shadows in the façade, flatness is the predominating characteristic. There was a general absence of pinnacles. Stone or marble of different colours, carried on in systematic band-courses or patterns throughout the design, gives a special character, as at Siena, Orvieto, Verona, etc. A large central circular window was a general feature. Windows are often semicircular-headed, and have shafts with square capitals of Corinthian type, often twisted and inlaid with mosaic known in Byzantine art.

Spanish Gothic façades exhibit a variety of treatment; but in very few cases is the French form closely followed. The façade of the early church of San Pedro de Avila is an entirely logical design of simple character. The façade of Burgos is composed in the French manner. Toledo is a mixture of Gothic and Renaissance, and the west front of Leon dates from the thirteenth century, the later work being characterized by extreme, and even wild, ornamentation. Towered open-work spires, as in Germany, were favoured, those at Burgos being worthy of all admiration.

Renaissance façades agree essentially in architectural treatment, growing out of a close contact with ancient monuments, though with no strict conformity to them. Examples in Italy: S. Lorenzo and Santo Spirito, in Florence; S. Marco, in Venice; S. Maria della Salute, in Venice; Milan cathedral; and the Certosa di Pavia. French Renaissance: St. Eus-tache, St. Etienne du Mont, the church of the Sorbonne, the Pantheon and the Madeleine, at Paris. German Renaissance: St. Michael’s at Munich and the Frauenkirche at Dresden. Spanish Renaissance: Santo Domingo at Salamanca; the cathedrals of Granada, Valladolid, Santiago, Malaga, and Carmona. English Renaissance: St. Paul’s.

THOMAS H. POOLE.

Facciolati, Jacopo, lexicographer and philologist, b. at Torreglia, near Padua, Italy, 4 Jan., 1682; d. at Padua, 26 Aug., 1789. He was educated in the seminary at Padua, and later was made professor of logic and regent of the schools in the university of that city, where he continued in the same position to his death. In 1719 he brought out a revised edition of the "Lexicon Septem Linguarum," a Latin dictionary in seven languages, called the "Calepinus," from the name of its author, the monk Ambrogio Calepino. In this work Facciolati was assisted by his pupil, Forcellini. Their labours on the "Calepinus" were the result of the need of a totally new Latin lexicon. Therefore, putting aside all other works, they undertook the compilation of a lexicon which should be the most comprehensive vocabulary of the Latin language that had ever been made. For forty years, under the superintendence of Facciolati, Forcellini laboured, reading through the entire body of Latin literature, as well as the whole collection of Latin inscriptions, including those on coins and medals. Their great lexicon, which bore the title, "Totius Latinitatis Lexicon," was published in four volumina, at Padua, in 1729, and in the death of both the editors. This monumental work, on which all Latin lexicon now in use are based, gives every Latin word, with its Italian and Greek equivalents and copious citations illustrating the various meanings. Subsequent editions are the English one of Bailey in two volumes (London, 1828), and that of De Vit (Prato, 1858-87). Facciolati also published a new edition of the "Thesaurus Ciceronianus" of Nizolius. He left a number of letters, remarkable for their elegant Latinity, which were afterwards published. (See Forcellini.)

EDMUND BURKE.
Faculties, Canonical (Lat. Facultates).—In law, a faculty is the authority, privilege, or permission, to perform an act or function. In a broad sense, a faculty is a certain power, whether based on one's own right, or received as a favour from another, of validly and effectually performing those acts by which certain effects are produced. In a stricter sense, it means the conferring on a subordinate, by a superior who enjoys jurisdiction in the external forum, of certain ecclesiastical rights which are denied him by common law; to act, namely, in the external or internal forum validly or lawfully, or at least safely. Faculties may be granted ex p. m. at the discretion of the object to which they relate, inasmuch as (1) jurisdiction is granted to absolve from sins and ecclesiastical censures, to dispense in vows, in irregularities relating to the reception of orders, in matrimonial impediments; (2) permission or licence is given to do something which would be otherwise forbidden, as the reading of prohibited books, saying two Masses on the same day; ordaining clerics under the prescribed age; (3) to avoid worry and qualms of conscience. A precautionary dispensation or permission is granted to prevent some imminent evil. The opinions of the theologians may not appear sufficiently well founded, as for instance, a matrimonial dispensation may be conceded as a precaution, when it is not certain that an impediment exists, or permission is granted to avoid the scandal of sin, when the Divine Office is granted to a person who is unwilling to accept the opinion that anticipation at that hour is lawful.

Secondly, faculties, by reason of their source, are Apostolic, episcopal, or regular. Faculties are styled Apostolic on a papal when they proceed from the pope directly, or through the ordinary channels of the Sacred Roman Congregations. They are episcopal, if the power or privilege conferred proceeds from a diocesan bishop, by virtue of his own power or ordinaries. They are regular for instance, when the pope, to hear confessions, say Mass, preach, etc., granted to priests who labour in the diocese for the salvation of souls. Faculties are regular when they proceed from superiors of the regular clergy by reason of their ordinary jurisdiction, or by virtue of extraordinary powers or privileges conceded to them by the Holy See. Lastly, faculties are general or particular: general, when granted for indeterminate persons, though they may be limited by time; particular, when granted to designated persons or for particular cases. Consecrated faculties conceded to bishops and other ordinaries are also called indults.

The distance of dioceses from Rome, together with peculiar local conditions, render the granting of these general faculties a matter of necessity, and in 1637 certain new grants or lists of faculties were drawn up by the Sacred Congregation of the Holy Office, and since then have been communicated by the Holy See, through the Congregation of the Propagation of the Faith, to bishops, vicars and prefects Apostolic throughout the world, according to their wants and needs. These faculties are given for a definite period, e.g. five years (facultates quinquennales), or for a definite number of cases, and are ordinary and extraordinary; the former being issued in forms or grants under Roman numerals (Formula I, II, III, . . . X), some of the latter under capital letters (Formula A, B, C, etc.), others under small letters (Formula a, b, c), while others, finally, without special designation, begin: "In an audience with His Holiness". Formula V, VII, VIII, IX are no longer in use. It has been the practice to communicate to the United States, States C, D, and E. Of late, however, C, D, and E, with certain modifications, are combined in form T. Favours and privileges are granted likewise by the congregations in keeping with the Constitution "Sapienti Consilio" (1908), and are classified consequentially in accordance with the Congrega-

The authority of the Propaganda is not so ample in this matter as formerly, and this too in relation to countries still subject to it. Questions pertaining to the Pauline Privilege fall in every case under the sole competency of the Sacred Congregation for the Propagation of the Faith. This office, for the portions of the Western Church under its jurisdiction, the Propaganda is obliged to confer with the Congregation of the Sacraments (Cong. of the Consistory, 7 Jan., 1809). Especially through the Sacred Peniteniaria does the pope communicate faculties for the internal forum, to bishops and others. Hence, certain confessors, in definite forms or leaflets (papelles).

Grace thus received from the Holy See do not restrict the prerogatives which the one favoured may already enjoy by virtue of ordinary jurisdiction or other title (gratia nova novae gratiae). The purpose of the Holy See is to make a concession, not to lessen one's authority. Hence, for example, a bishop is authorised by the Council of Trent to dispense his subjects from the observance of the intervals prescribed in the receipt of orders; consequently he is not obliged to observe it himself. Crafty art. 33, xxi, xxc, which forbids him to use this faculty in favour of a cleric actually outside the bishop's territory. While the recent legislation of the Church has sought to prevent conflict of authority between the various religious foundations, it has not been able to prevent the circumstances from which the latter arise. The Pope is always in the right, even when he acts in contradiction of the Church, as the Holy Office is granted to a person who is unwilling to accept the opinion that anticipation at that hour is lawful.

A petition which has been rejected by one of the congregations may not be presented lawfully to another; a favour granted by another congregation, the previous refusal of the grant being concealed, is null and void. A petition in writing is not required for validity, but is usually exacted; the same may be said of application by telegraph or telephone. The form of the supplication is not prescribed except in very far as it may be necessary for the effective accomplishment of the object. Petitions addressed to the Propaganda (the same is true of most of the congregations, at least to expedite matters), should be in Latin, Italian, or French. The Sacred Peniteniaria will accept communications in any modern tongue. The supplication is made out in the name of the petitioner, but the rescript is sent to the ordinary. The diocesan chancery office usually deals directly with the rector of the parties concerned.

Faculties can only be used in favour of members of the Church, who are not disqualified by ecclesiastical penalties or censures. Hence in marriage cases where one of the contracting parties is a non-Catholic, the dispensation is given directly to the Catholic. Hence also in Apostolic rescripts absolution from penalties and censures, as far as necessary for the rescript to be effective, is first given. Apostolic faculties granted to a bishop, which imply an act of jurisdiction in using them, can be communicated and applied only to the subjects of the bishop, and to such determinate persons as are capable of receiving the favour given by means of this faculty. Otherwise the power may be exercised in behalf of a subject, while both he and the bishop, or other person making the concession, are outside their own territory. When the use of faculties is restricted to the diocese, as in Forms I and C, it means that the subject, not the bishop, must be in the diocese when the indulgences are made use of in his behalf. In the United States any matrimonial dispensation may be conceded to one actually outside his own diocese, if he has not acquired at least a quasi-domicile elsewhere (Holy Office per Propaganda, 20 Dec., 1894). To dispense validly and lawfully the faculties of indulgences, a last cause existing at the time of the dispensation is required. He who possesses general delegated power may apply it to himself, e.g. dispensing himself from fasting. There is an obligation, especially in dispensations, to be measured by the greater or less urgency of the case,
of using faculties possessed. It might be noted that the Apostolic Delegate at Washington, in common with the bishops of the United States, has possessed the Propaganda Forms I, C, D, and E, together with some other similar forms, for a number of years. His Excellency, aside from territorial extension, possesses no greater powers in regard to matrimonial dispensations than these diocesan bishops.

A bishop cannot dispense without a special faculty, when two or more matrimonial instruments, different or otherwise, exist in the same case, or affect the same persons, though by reason of indults he can dispense separately in each of the impediments involved. This restriction, however, holds good only when the impediments in question are generically different, e.g. consanguinity and affinity, or when the dispensation is given in different indults. The special faculty covering the cumulation of matrimonial impediments is usually granted with the renewal of faculties and is effective during the duration of the same. The form of this special faculty is not always identical, greater or more restricted powers being contained therein. Moreover, a bishop cannot employ this faculty when he is granting by virtue of an indult a retroactive dispensation to render a marriage valid (sanatio in radice). This question of cumulation affects dispensations Apostolicae Constitutiones; a fact which reflects a wound on the law, not so an abdication. It is necessary for validity that the concession of a favour be made known to the one benefited; and it ought to be applied in such manner that its execution may be established. As faculties dispensed upon the will of the grantor, the terms of the indult must be carefully studied, and obscure passages rightly interpreted. In this matter the general rules for the interpretation of law are to be observed with some additional ones. Hence in the use of faculties it must be noted whether power to dispense is limited to faculties already contracted, or not yet contracted, or for both. A faculty granted for the internal forum only, particularly if jurisdictional, cannot be used in the external forum, and vice versa. Faculties are not to be extended to persons or cases not included in the same. The existing practice, especially of the Roman Curia (stilus curiae Romanae), will serve as a guide in this matter.

Faculties expire by the death of the grantor, his removal from office or loss of jurisdiction (certain distinctions, however, are to be borne in mind, as below) by the deposing and deposing of benefices and benefices when they are granted for a definite period; when they have been used for the number of cases specified in the grant; by revocation; by renunciation duly accepted; by the completion of the business for which one has received a dispensation; inscription in the annals; by the formal cause on which the favour was based. Faculties granted absolutely (not revocable at will) by one possessing ordinary jurisdiction, and gratiae factae (i.e., the delegate is a necessary executor, viz. commissioned to act, if he judge it expedient) cease at the death of the grantor, or gratiae faciendae (i.e. the delegate is a voluntary executor, viz. commissioned to act, if he judge it expedient) cease at the death of the grantor, when no steps have as yet been taken leading to the consecration requested (re adhuc integrum); otherwise they do not cease. Faculties granted by one enjoying delegated power cease at the death of the delegate, unless the Holy See expressly provides for their continuation, or unless the matter in question has already been begun (re non integrum). The power given personally to a delegate, or subdelegate, expires at his death, which is not the case if he is chosen by reason of the case. (4) Notice must be taken that standard faculties are "revocable at our will or judgment," they expire with the death of the grantor; when given in the name of the Holy See, a diocese, etc., they continue in force after the death of the pope, bishop, etc. Indults consequently stand in the Propaganda forms or other general grants as do faculties, do not become ineffective at the death of the pope: the same is true of the faculties conceded by the Sacred Congregations, when the prefect of that tribunal loses his jurisdiction through death or other cause. Jurisdiction granted by a bishop to hear the confession of an individual cease, re adhuc integrum, when the bishop dies, is transferred, or resigns: the contrary is true, when jurisdiction is given to hear confessions in general. Notwithstanding the revocation of faculties special faculties do not expire. Neglect to use a favour does not destroy its force, as for example, a person dispensed from fasting or the recitation of the Holy Office does not lose the grace, if he meanwhile fast or recite the Office, even for a considerable time.

All special faculties granted habitually (habitualiter), by the Holy See to bishops and others enjoying ordinary jurisdiction within definite territorial limits, remain in force notwithstanding the loss of jurisdiction through death or other cause of the individual to whom they are granted (Cong. Holy Office, 24 Nov., 1897), but pass on to his successor in the same office. They are considered not personal but real favours, granted to the ordinary of the diocese or place, and by the ordinary are understood bishops, their vicars-general, vicars, or pro-fidei dignitaries, over territory not subject to a bishop, vicars capitular or other legitimate administrators of vacant sees (Cong. Holy Office, 20 Feb., 1888). It is to be noted that since these indults are granted to the ordinary, under which appellation is included the vicar-general, vicars, etc., said vicar-general uses these faculties, grants dispensations and other graces contained therein, by virtue of authority received directly from Rome, equivalent to that extended to the bishop himself. The bishop may forbid the exercise of these powers, but notwithstanding the prohibition, in the absence of the bishop, other vicars were to be used said faculties, provided nothing else, were wanting to render his action invalid. (See Jurisdiction; Delegation; Rescripts; Executors, Apostolic; Dispensation.)

Andrew B. Meenan.

Faculties of the Soul.—I. Meaning.—Whatever doctrine one may hold concerning the nature of the human soul and its relations to the organism, the four following points may be held to be fundamental: (1) Consciousness is the scene of incessant change; its processes appear, now in one sequence, now in another; and, normally, the duration of each is brief. (2) All do not present the same general features, nor affect consciousness in the same manner. (3) There are differences in account both of their characters as manifested in consciousness, and of the organ, either external or internal, on which their appearance depends. Yet the features they have in common under this twofold aspect, together with their differences, make it possible and necessary to group mental states in certain more or less comprehensive classes. (4) There is more in the mind than is actually manifested in consciousness; there are latent images, ideas, and feelings, which under given conditions emerge and are recognized even after a considerable interval of time. By reason of their innate or acquired aptitudes, minds differ in capacity or power. Hence, even if it were possible for two minds to experience processes perfectly similar, they would nevertheless differ greatly because one is capable of experiences impossible to the other. (4) Notwithstanding the variety and their intermittent character, these processes belong to one and the same conscious subject; they are all referred naturally and spontaneously to the self or me.

These facts are the psychological basis for admitting faculties (from facere, to do), capacities (capacia, to capere, to hold), or powers (from posse, to be able;
the Scholastics generally use the corresponding Latin term *potentia*).

Any attempt, however, to define with greater precision the meaning of faculties, is sure to call forth vigorous argument. In fact, for the Scholastics, all faculties, of similar importance have been the object of so many animated discussions, and, it may be added, of so many misunderstandings. One extreme view looks upon faculties as real, though secondary agents, exercising an active influence on one another, and as being scientific explanations of psychological facts. Who does man see and reason? Because he has the faculties of vision and reasoning. The will acts, is free; there is an interaction of the intellect, the will, the senses, the feelings, etc. Sometimes, however, such expressions are used with the understanding that they are metaphoric, and with the explicit or implicit warning that they must not be taken literally.

At the other extreme are found psychologists—and they are numerous to-day—who refuse to concede any kind of reality whatsoever to faculties. Processes alone are real; faculties are simply general terms used to label certain groups of processes. Like all abstractions they should never be looked upon as having any reality outside of the mind, which uses them as logical substitutes to facilitate the classification of mental facts.

That the faculty theory has no essential connexion with Catholic dogma is sufficiently evidenced by the fact that it has found, and still finds, opponents as well as advocates among Catholic theologians and philosophers.

Fudging, therefore, the question on its own merits, it may be said that the doctrine of St. Thomas avoids both extremes mentioned above, and is at least free from the absurdities with which modern psychologists so frequently charge the faculty theory. His expressions, taken apart from the context, and translated without a sufficient acquaintance with Scholastic terminology, might easily be given a wrong interpretation. For as the knowledge of the nature of the soul and its faculties, according to St. Thomas, is partly negative, and, in its positive aspect, analogical, it is necessary to use expressions taken from things which are known more directly. But we are given some principles which must always be kept in mind; for instance, "the faculties act only by the energy of the soul"; they have their energy of their own, for "they are not the intellects". Coming to more specific applications, "it is not the intellect that understands, but the soul through the intellect." (Quest. Disp., De Veritate, x, 9, ad 3). Again, the question is not asked whether the will is free, but whether man is free (Summa, I, Q. lxvii, De Veritate, xii). This shows that when a real distinction is admitted between the soul and its faculties, or between the faculties themselves, the meaning is not that of a distinction between substances or agents. In Scholastic terminology, distinction in substance and difference mean separation nor even the possibility of separation. And the distinction between a substance and its qualities, attributes, or modes, was called a real distinction.

If the soul can originate or experience states which, as everybody admits, may be widely different, it is because there are in the mind various modes of energy or faculties. Since minds differ not only by the actual contents of consciousness, but also, and chiefly, by the power which they have of experiencing different processes, it is clear that if this constitutes a real difference, it must itself be something real. So unavoidable is this conclusion, one of the prominent opponents of faculties are at the same time the strongest defenders of the theory of psychical dispositions, which they postulate in order to explain the facts of memory, mental habit, and, in general, the utilization, common to all faculties, of past experience. And yet, what is a psychical disposition but an act of power or faculty? Stuart Mill's "background of possibilities" or Taine's "permanent possibility" are certainly less clear and more objectionable than faculties, for the faculty is not a mere possibility, but a real power of the mind, or a logical question mark, for neither can fall under direct observation. The possibility of an experience or action, if known, is always known by direct inference or by analogy from past experiences or actions. Yet without being a scientific explanation, and without substituting itself for scientific explanations, the faculty, like the disposition, trace, subconscious activity, etc., is a legitimate postulate.

II. CLASSIFICATION. Plato admits three parts, forms, or powers of the soul, perhaps even three distinct souls: the intellect (nous), the noble affections (physis), and the appetites or passions (phlogistoi). For Aristotle, the soul is one, but endowed with five groups of faculties (phusis): the vegetable faculty (phusis), concerned with the maintenance and development of the general organism (phusis), or the tendency to any good; the faculty of sense perception (epistematikos); the "locomotive" faculty (kineiţikos), which presides over the various bodily movements; and reason (bouleutikos). The Scholastics generally follow Aristotle's classification.

For them body and soul are united in one complete substance. The soul is the *forma substantialis*, the vital principle, the source of all activities. Hence their science of the soul deals with functions which nowadays belong to the provinces of biology and physiology. In more recent times, however, especially under the influence of Descartes, the mind has been separated, and even estranged, from the organism. Psychology deals only with the inner world, that is, the world of consciousness and its conditions. The nature of the mind and its relations to the organism are questions that belong to philosophy or metaphysics. As a consequence, also, modern psychology fails to distinguish between the spiritual faculties of the soul, i.e. those which the soul exercises itself within the body, and the mind or organism, and the faculties of the *compositem*, i.e. the senses and the emotions, are united in one complete principle of action, or of one special animated organ. This distinction was also an essential point in the Aristotelian and Scholastic psychology.

Finally, the Scholastics reduced affective life to the general faculty of *appetitus*, whereas to-day, especially since Kant, a tripartite division is more commonly accepted, namely into cognitive, affective, and conative faculties. Some, however, still hold a bipartite division. Others consider both as unsatisfactory, and follow the order of development, or base their classification both on objective conditions and subjective characteristics. Without entering into the discussion, it may be said that, however useful and justifiable the tripartite classification may prove in psychology, the Scholastic reduction of feelings to "appetite" seems to be deeper and more philosophical. For feelings and emotions, pleasant or painful, result from an agreement or conflict between certain experiences and the mind's tendency.
Facundus of Hermiane, a sixth-century Christian author, Bishop of Hermiane in Africa, about whose career very little is known. His place in history is due entirely to the spirited and protracted opposition which he offered to the condemnation (by the edict of Justinian, in 524 or 525) of the third-century heretics of Mopseustia, Theodoret of Cyrus, and Ibas of Edessa were condemned. Facundus was in Constantinople when this censure was pronounced, and shortly after its publication he and several other western bishops refused to subscribe to the decree, alleging that it was an attack on the Council of Chalcedon, which had accepted at least the letter of Ibas to the Persian Maris. This document was especially aimed at in the decree of the emperor. Facundus also drew up a memorial in protest, but was prevented from presenting it by the arrival of Pope Vigilius. The weak and vacillating conduct of this pontiff and his acquiescence in the condemnation of the "Three Chapters" spurred Facundus to complete this work, which he entitled "Pro Defensione Trivii Capitoliorum". It is not known when the work was completed nor when it was presented to the emperor, since nothing can be said of its immediate effect on the controversy. After its publication Facundus was compelled to fly from Constantinople and find safety in concealment. Because of the attitude of Vigilius in acceding to the emperor's insistence that he subscribe to the censure of the "Three Chapters", Facundus and many other African bishops cut themselves off from communion with him. This schism lasted for many years, and during that time Facundus wrote two other works at the request of his confessor, in response to the insinuation ("Liber contra Mocianum Scholasticum" and "Epistola Fidei Catholice in defensione trium capituliorum"). The works of Facundus are in P. L., LXVII., 527-878; see Hefele, "History of the Church Councils"; tr. IV., 229-236.

FAENZA, DIOCESE OF (FAVIDENTIA), in the province of Ravenna (Central Italy), suffragan of Ravenna. The earliest mention of this city is in the report of the victor of the Battle of Tolbiac (A.D. 696) over the Persians Carbo, under the exarchate of Faenza. In A. D. 728 it was seized by the Lombard king, Liutprand, who later restored it to the exarchate. But the same king again attacked it, while the people were assembled in the church of Santa Maria Foris Portam for the services of Holy Saturday; the bishop himself was among the slain. With the exarchate Faenza passed under the authority of the Holy See. About 1000 it was made a commune and from 1100 was governed by the counts of Modigliana. During the struggle of Frederick II against the Frangipane, the town belonged to the Guelph league; in 1241 the emperor took possession of it after a siege of eight months. During the thirteenth century different families, the Accorisi, the Manfredi, the Lambertazzi, the Norbigi, and others, disputed the possession of Faenza. Faenza was captured by the Manfredi. Several times the Avignon popes had to summon these lords to render service as vassals, as in 1328 through Cardinal Bertrando Foggetto and in 1356 through Cardinal Gil d'Albornoz. In 1378 the city was devastated by the French, Sir John Hawkwood. In 1501 Cesar Borzia put to death the Manfredi brothers, Astorgio and Giovanni Evangeli-}

The Cathedral, Faenza

which St. Savinus was referred to as his predecessor. Another Constantius was a contemporary of St. Ambrose. Also noteworthy are: Giovanni II, who died in 1190, as a crusader before Acre; the two distinguished theologians, Giovanni del Termo (1455), a Servite, and Pietro Andrea Gambario (1528); Ridolfo Pio of the princes of Carpi (1528), a patron of scholars and himself a learned archaeologist; Giovanni Antonio de' Grassi (1585), a profound student of Cicero and of Plato's philosophy. A large part of the cathedral was built by Giuliano da Maiano between 1474 and 1486; Bramante also worked there. The body of St. Peter Damian is buried in the cathedral. Faenza has (1908) 114 parishes, 347 secular and 13 regular priests, 105,962 inhabitants, 2 male and 6 female educational institutions, 6 religious houses of men and 7 of women, and a weekly Catholic paper.

U. Benigni

Fagna, Prospero, canonist, b. in Italy, place and date of birth uncertain; d. in 1578. Some writers place his birth in 1598, others in 1567 or in 1588. It is certain that he studied at Perugia. At the age of twenty he was a doctor of civil and canon law; at twenty-two, secretary of the Congregation of the Council. He held this office for fifteen years. He fulfilled the same functions in several other Roman Congregations. It is not certain that he ever lectured on canon law at the Roman University (Sapienza). He became blind at the age of forty-four. This affliction did not prevent him from devoting himself to canonical studies and from writing a commentary on the Decretals of Gregory IX, which gained for him the title of "Doctor Cæsaris Oculatissimus", i. e. the blind yet most far sighted doctor. This commentary includes interpretations of the texts of the most difficult of the Decretals of Gregory IX. It is distinguished by the clearness with which the most complex and disputed questions of canon law are explained. The work is also of great value for the purpose of ascertaining the pra-
tic of the Roman Congregations, especially that of the Congregation of the Council, of which the author quotes numerous decisions. Benedict XIV gave this work the highest praise, and its authority is still continually appealed to in the Roman Congregations. It is divided, like the Decretals of Gregory IX, into five books. The first edition was published at Rome, in 1661, under the title of "Jus canonicum seu commentaria absolutissima in quinque libros Decretalium". It has been reprinted several times. Fagnani is responsible for the excellent Latin translation of the chapter of the Decretals "Ne innitari" (Book I, De constitutionibus), in which he combats the doctrine of probabilism. St. Alfonso calls him "magnus rigoristorum princeps", the great prince of the rigorists (Homo apostolicus, Tract. I, no. 63; Theologia Moralis, IV, no. 669).

Schuler, Geschichte der Quellen u. Literatur des kanonischen Rechts (Stuttgart, 1875-80), III, 485; von Scherer in Kirchenlex., IV, 1394 sq.

Fagnano, Giulio Carlo de TOSCHI di, mathematician, b. at Sinigaglia, Italy, 26 September, 1862; d. there, 17 June, 1876. He made his higher studies at the Collegio Clementino in Rome and there won great distinction, except in the one subject which has made him famous; in fact his aversion to mathematics was extreme, and it was only after his college course that he took up the study of this branch, but then he did so with such earnestness and ability, that, without the help of any teacher, he mastered it from its foundations. Most of his important researches were published in the current numbers of the "Giornale de' Letterati d'Italia". He is best known on account of his investigations on the lengths and divisions of arcs of certain curves, especially the lemniscate; this seems also to have been in his own estimation his most important work, since he had the figure of the lemniscate with the inscription: "Multifariam divas atque dimensa Deo veritatis gloria", engraved on the title-page of his "Produzioni Matematiche", which he published in two volumes (Pesaro, 1750), and dedicated to Benedict XIV. The same figure and the words "Deo veritatis gloria" also appear on his tomb, a testimony to the earnest devotion to science and the deeply practical piety which characterized his entire life; his attachment to the sovereign pontiff was warm and sincere, and of his twelve children one became archdeacon of the cathedral of Sinigaglia and another a Benedictine nun. As a writer he is praised by his contemporaries for his great mildness in controversy, as well as for his clearness and accuracy of thought and diction.

Colonna, Memorie concernenti il Marchese Giulio Carlo de Toscio di Fagnano (published from the Vatican Codex in the Bulletinino Romagnola (Rome, Jan., 1870), III, with an important note in which are cleared up the discrepancies as to the dates of his birth and death found in different accounts of his life; Cantor, Vorlesungen über Geschichte der Mathematik (Leipzig, 1865), III, 465-472.

Edward C. Phillips.

Faillon, ETIENNE-MICHEL, historian, b. at Tarascon, France, 3 Jan., 1800; d. at Paris, 25 Oct., 1870. He studied at Avignon and Aix (Provençe), joined the Sulpicians (1821), and was ordained priest in 1824. While director of "La Solitude", he wrote several ascetic and biographical works and collected materials for future publications. In 1848, during an official visitation in Montreal, he conceived the plan of his "Histoire de la Colонie française au Canada". Of the twelve volumes which he destined to this work, only three were published, the narrative closing with the year 1675. Two subsequent voyages to Canada enabled him to write several important biographies, those of Sister Marguerite Bourgeoys, of Jeanne Mance (with the history of the Hôtel-Dieu, Villemarie), of Mother d'Youville, and of Jeanne Le Ber. His chief works relating to Old France are his life of Monsieur Olier and "Monuments inédits sur l'apostolat de Sainte-Marie-Madeleine en Provence". He has been repeatedly criticized for his partiality towards his society and towards Canada. Most historians recognize his appreciation of Bishop Laval and of the Jesuits. On the other hand, he is credited for giving prominence to persons and events of Villemarie, less elaborately treated by the Jesuit "Relations" and later histories.

Lionel Lindzay.

Faith (faith, faith, faith, faith).—I. The Meaning of the Word.—In the Old Testament, "faith" means essentially steadfastness, cf. Exod., xvii, 12, where it is used to describe the strengthening of Moses' hands; hence it comes to mean "faithful" or "true", i.e. steadfast. Hence, it was clear from Hab., ii, 4, where the word is used of the Lord's promises without previously assenting to or believing in that person's claim to such confidence. Even if it could be proved that the word נאמנ is not in itself contain the notion of belief, it must necessarily presuppose it. But that the word does itself contain the notion of belief is clear from the use of the radical יאמ, which in the causative conjugation, or Hiph'il, means "to believe", e.g. Gen., xv, 6, and Deut., i, 32, in which latter passage the two meanings —vis. of believing and of trusting—are combined. That the noun itself often means "faith" or "belief", is clear from Hab., ii, 4, where the word is used of the Lord's promises. The witness of the Septuagint is decisive; they render the verb by πιστευω, and the noun by πίστις; and here again the two factors, faith and trust, are connoted by the same term. But that even in classical Greek שומע was used to signify "believe", is clear from Euripides (Helen, 710), מָנָא אֲלֹהִים מְלַשְׁתַּרְתֵּן "because faith was able to understand" (Medea, 414; cf. Hipp., 1007). In the New Testament the meanings of "faith" and "belief", for πίστις and its derivatives, comes into its own. The Christian speech, πίστις frequently means "trust", but also "belief" (cf. Matt., viii, 10). In Acts it is used objectively of the tenets of the Christians, but is often to be rendered "belief" (cf. xvii, 31; xx, 21; xxv, 18). In Romans, xl, 23, it has the meaning of "conscience"—"all that is not of faith is sin"—but the Apostle repeatedly uses it in the sense of "belief" (cf. Rom., iv, 13, and Gal., iii). How necessary it is to point this out will be evident to all who are familiar with modern theological literature; thus, when a writer in the "Hibbert Journal", Oct., 1907, says, "From one end of the Scripture to the other, faith is trust and only trust", it is hard to see how he would explain 1 Cor., xiii, 13, and Heb., xi, 1. The truth is that many theological writers of the present day are given to very loose thinking, and in nothing is this so evident as in their treatment of faith. In the article just referred to we read: "Trust in God is faith, faith is belief, belief may mean creed, but creed is not equivalent to trust in God." A similar vagueness was especially noticeable in the "Do we believe?" discussion; one correspondent says: "We unblessers, if we have lost faith, cling more closely to hope and—the greatest of these—charity" ("Do we believe?", p. 180, ed. W. L. Courtney, 1905). Non-Catholic writers have repudiated all idea of faith as an intellectual assent, and consequently they fail to realize that faith must necessar
ily result in a body of dogmatic beliefs. "How and by what influence," asks Harnack, "was the living faith translated to him truth which is evident to the human mind. We must, then, either reject revelation altogether, or accept it by faith; that is, we must submit our intellect to truths which we cannot understand, but which come to us on Divine authority.

(e) We shall arrive at a better understanding of the habit or virtue of faith if we have previously analysed an act of faith; and this analysis will be facilitated by examining an act of ocular vision and an act of reason.

(b) Now intellectual knowledge may be defined in a general way as the union of the intellect and an intelligible object. But a truth is intelligible to us only in so far as it is evident to us, and evidence is of different grades. According to the degree of evidence, we shall have varying kinds of knowledge. Thus a truth may be self-evident—e.g., the whole is greater than its part—in which case we are said to have intuitive knowledge of it; or the truth may not be self-evident, but deducible from premises in which it is contained—such knowledge is termed reason knowledge; or again a truth may be neither self-evident nor deducible from premises in which it is contained, yet the intellect may be obliged to assent to it because it would else have to reject some other universally accepted truth; lastly, the intellect may be induced to assent to a truth for none of the foregoing reasons, but solely because, though not evident in itself, this truth rests on grave authority—for example, we accept the statement that the sun is 90,000,000 miles distant from the earth because competent authorities have given their testimony to the fact. The last kind of knowledge is termed faith, and is clearly necessary in daily life. If the authority upon which we base our assent is human and therefore fallible, we have human and fallible faith; if the authority is Divine, and in human testimony be added the medium by which the Divine authority for certain statements is put before us, viz., the Catholic Church, we have Divine-Catholic Faith (see FAITH, RULE OF).

(c) Again, evidence, whatever its source, may be of various degrees and so cause greater or less firmness of adhesion on the part of the mind which assents to a truth. Thus arguments or authorities for and against a truth may be either wanting or evenly balanced; in this case the intellect does not give in its adherence to the truth, because it remains in a state of doubt or absolute suspension of judgment; or the arguments on one side may predominate; though not to the exclusion of those on the other side; in this case we have not complete adhesion of the intellect to the truth in question, but only opinion. Lastly, the arguments or authorities may be confirmed by a truth which has given its unqualified assent to the statement proposed and has no fear whatever lest it should not be true; this state of mind is termed certitude, and is the perfection of knowledge. Divine faith, then, is that state of knowledge which is derived from Divine authority, and which consequently begets absolute certainty in the mind of the recipient.

V. 48

from the fact of Divine revelation. For revelation means that the Supreme Truth has spoken to man and given his two eyes, our natural faculty, the coloured object, and the light which serves as the medium between the eye and the object. It is usual to term colour the formal object (objectum formale quod) of vision, since it is that which precisely and alone makes a thing the object of vision; the individual object seen may be termed the material object, e.g., this apple, that man, etc. Similarly, the light which serves as the medium between the eye and the object is termed the formal reason (objectum formale quo) of our actual vision. In the same way, when we analyse an act of reason, we find that an intellectual reason given to the intellect distinguishes the intellectual faculty which elicits the act, the intelligible object towards which the intellect is directed, and the evidence whether intrinsic to that object or extrinsic to it, which moves us to assent to it.

(f) Hence, for an act of faith we shall need a faculty capable of eliciting the act, an object commensurate with that faculty, and evidence—not intrinsic but extrinsic to that object—which will serve as the link between the faculty and object. We will commence our analysis with the object:

III. Analysis of the Object or Term in an Act of Divine Faith. (a) For a truth to be the object of an act of Divine faith, it must be itself Divine, and this not merely as coming from God, but as being itself concerned with God. Just as in ocular vision the formal object must necessarily be something coloured, so in Divine faith the formal object must be something Divine—in theological language, the objectum formale quod of Divine faith is the fact, Truth in Being, Prima Veritas in essendo—we could not make an act of Divine faith in the existence of India.

(b) Again, the evidence upon which we base to this Divine truth must also be itself Divine, and there must be a close connexion between the evidence on which it comes to us as there is between the coloured object and the light; the former is a necessary condition for the exercise of our visual faculty, the latter is the cause of our actual vision. But no one but God can reveal God; in other words, God is His own evidence. Hence, just as the formal object of Divine faith is the First Truth Itself, so the evidence of that First Truth is the First Truth declaring itself.

(c) There is a controversy whether the same truth can be an object both of faith and of knowledge. In other words, can we believe a thing both because we are told it on good authority and because we ourselves receive it to be true? St. Thomas, Scotus, and others maintain that one truth may be both, but that one truth may be known by the mind, given its unqualified assent to the statement proposed and has no fear whatever lest it should not be true; this state of mind is termed certitude, and is the perfection of knowledge. Divine faith, then, is that state of knowledge which is derived from Divine authority, and which consequently begets absolute certainty in the mind of the recipient.
stated in the "Revue de Métaphysique et de Morale" (March, 1896, p. 169), and as was suggested more than once in the "Do we believe?" correspondence. The expression "would the God of Christ utter such words?" is often taken as a contradiction of the statement. "Natus est Dei Filius; non pudet, quia pudendum est: et mortuus est Dei Filius; prorsus credibile est, quia ineptum est: et sepultus, resurrexit; certum est, quia impossibile" (De Carne Christi, cap. v). This treatise dates from Tertullian's Montanist days, when he was carried away by his love of paradox. At the same time it is clear that the writer only aims at bringing out the wisdom of God manifested in the humiliation of the Cross; he is perhaps paraphrasing St. Paul's words in I Cor., i. 25. But if we may point out in this connexion the falsity of the prevalent notion that faith is blind. "We believe", says the Vatican Council (III, iii), "that revelation is true, not indeed because the intrinsic truth of the mysteries is clearly seen by the natural light of reason, but because of the authority of God Who reveals them, for He can neither deceive nor be deceived." Thus, to return to the act of faith which we make in the Holy Trinity, we may formulate it in syllogistic fashion thus: Whatever God reveals is true; but God has revealed the mystery of the Holy Trinity; therefore this mystery is true. The major premise is indubitable and intrinsically evident to reason; the minor premise is also true because it is declared to us by the infallible Church (cf. Fauri, Rule o), and also because, as the Vatican Council says, "in addition to this authority, promulgation of the Holy Spirit pleased God to give us certain external proofs of His revelation, viz. certain Divine facts, especially miracles and prophecies, for since these latter clearly manifest God's omnipotence and infinite knowledge, they afford most certain proofs of His truth, and suited to the capacity of all". Hence St. Thomas says: "A man would not believe unless he saw the things he had to believe, either by the evidence of miracles or of something similar" (II-II, Q. i, a. 4, ad 1a)

The saint is here speaking of the motives of credibility.

IV. MOTIVES OF CREDIBILITY.—(a) When we say that a certain statement is incredible we often mean merely that it is extraordinary, but it should be borne in mind that this is a misuse of language, for the credibility or incredibility of a statement has nothing to do with its intrinsic probability or improbability; it depends solely upon the credentials of the authority who makes the statement. Thus the credibility of the statement that a secret alliance has been entered into between England and America depends solely upon the credentials of the authority who makes the statement. If he be a clerk in a government office it is possible that he may have picked up some genuine information, but if our informant be the Prime Minister of England, his statement has the highest degree of credibility because his credentials are of the highest. We return to the motives of credibility of revealed truth we mean the evidence that the things asserted are revealed truths. In other words, the credibility of the statements made is corrective with and proportionate to the credentials of the authority who makes the statement. Hence God's credentials are indubitable, for the very idea of God involves that of omniscience and of the Supreme Truth. Hence, what God says is supremely credible, though not necessarily supremely intelligible for us. Here, however, the real question is not as to the credentials of God or the credibility of what He says, but as to the credibility of the statement that God has spoken. In other words, who or what is the authority for this statement, and what credentials does this authority show? What are the motives of credibility of the statement that God has revealed this or that? 

(b) These motives of credibility may be briefly stated as follows: in the Old Testament, considered not as an inspired book, but merely as a book having historical value, we find detailed the marvellous dealings of God with a particular nation to whom He repeatedly revealed Himself; we read of miracles wrought in their favour and as proofs of the truth of the revelation He makes; we find the most sublime teaching and the repeated announcement of God's desire to save the world from sin and its consequences. And more than that: we find in the parables a wealth of hints, now obscure, now clear, of some wondrous person who is to come as the world's saviour; we find it asserted at one time that He is man, at others that He is God Himself. When we turn to the New Testament we find that it records the birth, life, and death of One Who, while clearly man, also claimed to be God and Who proved the truth of His claim by His whole life, miracles, teachings, and death, and finally by His triumphant resurrection. We find, moreover, that He founded a Church which should, so He said, continue to the end of time, which should serve as the repository of His teaching, and should be the means of applying to all men the fruits of the redemption He had wrought. When we come to the subsequent history of this Church we find it swiftly spreading everywhere, and this in spite of its humble origin, its unworlfly teaching, and the cruel persecution which it meets at the hands of the rulers of this world. And as the centuries pass we find this Church battling against heresies, schisms, and the sins of her own people—nay, of her own rulers—and yet continuing ever the same. ...
any, the history of the papacy from St. Peter to Pius X.

(c) These testimonies are unanimous; they all point in one direction, they are of every age, they are clear and simple, and are within the grasp of the humblest intelligence. And, as the Vatican Council has said, "the angelic intellect understood by its proper definition, her wondrous sanctity, her inexhaustible fruitfulness in good works, her Catholic unity, and her enduring stability, a great and perpetual motive of credibility and an irreducible witness to her Divine commission" (Const. De Fide). "The Apostle says St. Augustine, "saw the Head and believed in the Body; we see the Body, let us believe in the Head" (Sermo cxviii, 8 (al. exilii), de temp., P. L., V, 1143). Every believer will echo the words of Richard of St. Victor, "Lord, if we are in error, by Thine own self we have been deceived; for these things have been confirmed by such signs and wonders in our midst as could only have been done by Thee!" (de Trinitate, I, cap. ii).

(d) But much misunderstanding exists regarding the meaning and office of the motives of credibility. In the credibility arising from a knowledge of Divine revelation; but this knowledge precedes faith; it is not the final motive for our assent to the truths of faith; as St. Thomas says, "Faith has the character of a virtue, not because of the things it believes, for faith is of things that appear not, but because of the testimony of the living, when the truth is infallibly found" (De Veritate, iv, 8); this knowledge of revealed truth which precedes faith can only beget human faith, it is not even the cause of Divine faith (cf. Suares, De Fide, disp. iii, 12), but is rather to be considered a remote disposition to it. We must insist upon this because in the minds of many faith is regarded as a more or less necessary consequence of a careful study of the motives of credibility, a view which the Vatican Council condemns expressly: "If anyone says that the assent of Christian faith is not free, but that it necessarily follows from the arguments which human reason can furnish in its favour; or if anyone says that God's grace is only necessary for that living faith which worketh through charity, let him be anathema. (Sess. IV). Nor can the motives of credibility make the mysteries of faith clear in themselves, for, as St. Thomas says, "the arguments which induce us to believe, e.g. miracles, do not prove the faith itself, but only the truthfulness of him who declares it to us, and consequently they do not beget knowledge of faith's mysteries, but only faith" (In III Sent., q. 29, a. 2). On the other hand, we must not minimize the real probative force of the motives of credibility within their true sphere; "Reason declares that from the very outset the Gospel teaching was rendered conspicuous by signs and wonders; which gave, and are, infallible proof of a definite truth" (Leo XIII, "Eterni Patris").

(e) The Church has twice condemned the view that faith ultimately rests on an accumulation of probabilities. Thus the proposition, "The assent of supernatural faith is, in a sense, based on the merely probable knowledge of revealed truths," was condemned by the Council of Trent in 1679 (cf. Denzinger, Enchiridion, 10th ed., no. 1171); and the Syllabus "Lamentabili sane" (July, 1907) condemns the proposition (XXV) that "the assent of faith rests ultimately on an accumulation of probabilities." But since the great name of Newman has been dragged into the controversy regarding this last proposition, we may point out that, in the Grammar of Assent (chap. x, sect. 2), Newman refers solely to the proof of faith afforded by the motives of credibility, and he rightly concludes that, since these are not demonstrative, this line of proof is to be termed "an accumulation of probabilities." But it would be absurd to say that Newman therefore based the final assent of faith on this accumulation; as a matter of fact he is not here making an analysis of an act of faith, but only of the grounds for faith; the question of authority does not come into his argument (cf. McNabb, "Oxford Conferences on Faith", pp. 121-122).

V. Analysis of the Act of Faith from the Subjective Standpoint.—(a) The light of faith.—An act of faith is that by which a man is brought to belief in a Truth. If, therefore, a man were called upon to assent to a truth beyond the ken of the human intellect, but within the grasp of the angelic intellect, he would require for the time being something more than his natural light of reason, and somehow we may call "the angelic light." If, now, the same man were called upon to assent to a truth beyond the grasp of both men and angels, he would clearly need a still higher light, and this light we term "the light of faith"—a light, because it enables him to assent to those supernatural truths, and the light of faith because it does not so illumine those truths as to make them no longer obscure, for faith must ever be "the substance of things to be hoped for, the evidence of things that appear not." (Heb., xi. 1). Hence St. Thomas ("De Veritate", 1, 9, ad 29) says: "Although the Divinely infused light of faith is more powerful than the natural light of reason, nevertheless in our present state we only imperfectly participate in it; and hence it comes to pass that it does not beget in us a real vision of those things which it is meant to teach us, but such a vision as is in our case sufficient for us, that we shall perfectly participate in that light, where, in fine, 'in God's light we shall see light' (Ps. xxxv, 10).

(b) The necessity of such light is evident from what has been said, for faith is essentially an act of assent, and just as assent to a series of deductive or inductive reasons, or to intuition of first principles, would be impossible without the light of reason, so, too, assent to a supernatural truth would be inconceivable without a supernatural strengthening of the natural light; "Quid est enim fides nisi credere quod non vidisse?" (i.e. what is faith but belief in that which thou seest not?) asks St. Augustine; but he also says: "Faith has its eyes by which it in some sort sees that to be true which it does not yet see; and by which, too, it most surely sees that it does not see what it believes." (Ep. ad Consent., ep. cxxx 8 (al. cxxvii), P. L., II, 456).

(c) Again, it is evident that this "light of faith" is a supernatural gift and is not the necessary outcome of assent to the motives of credibility. No amount of probability would assuredly be an indispensable condition of the credibility of revealed religion nor even of the claims of the Church to be our infallible guide in matters of faith, will produce this light in a man's mind. It is the free gift of God. Hence the Vatican Council (III, iii) teaches that "faith is the supernatural virtue by which we, with the inspiration and assistance of God's grace, believe those things to be true which He has revealed." The same decree goes on to say that "although the assent of faith is in no sense blind, yet no one can assent to the Gospel teaching in the way in which it is necessary for every one who is conscious of the power of the Holy Spirit, Who bestows on all a sweetness in believing and consenting to the truth." Thus, neither as regards the truth believed nor as regards the motives for believing, nor as regards the subjective principle by which we believe—viz. the infused light—can faith be considered blind.

(d) The place of the will in an act of faith.—So far we have seen that faith is an act of the intellect assenting to a truth which is beyond its grasp, e.g. the mystery of the Holy Trinity. But to many it will seem almost as futile to ask the intellect to assent to a proposition which is not intrinsically evident as it would be to ask the eye to see a sound. It is clear, however, that the intellect can be moved by the will either to study or not to study a certain truth, though if the
truth be a self-evident one—e. g., that the whole is greater than its part—the will cannot affect the intellect's adhesion to it; it can, however, move it to think of something else, and thus distract it from the contemplation of truth, as it were, to move the intellect to consider a delusively point—e. g., the Copernican and Ptolemaic theories of the relation between the sun and the earth—it is clear that the intellect can only assent to one of these views in proportion as it is convinced that the particular view is true. But neither view has, as far as we can know, more than probable truth, hence of itself the intellect can only give in its partial adherence to one of these views, it must always be precluded from absolute assent by the possibility that the other view may be right. The fact that men hold much more tenaciously to one of these than the arguments warrant can only be due to some extrinsic consideration, e. g. that it is absurd not to hold what the vast majority of men hold. And here it should be noted that, as St. Thomas says repeatedly, the intellect only assents to a statement for one of two reasons: either because that statement is immediately or meditatively evident in itself—e. g. a first principle or a conclusion from premises—or because the will moves it to do so. Extrinsic evidence of course comes into play when intrinsic evidence fails to bring about assent, without weighty evidence in its support, to assent to a truth which we do not grasp; yet no amount of such evidence can make us assent, it could only show that the statement in question was credible, our ultimate act of assent could only be due to the intrinsic evidence which the statement itself offered; or, failing that, due to the will. Hence it is that St. Thomas repeatedly defines the act of faith as the assent of the intellect determined by the will (De Veritate, xiv, 1; II-II, Q. ii, a. 1, ad 3s. 2; c. ibid., iv, 1, c. and ad 2s.). The act of faith in the intellect is not satisfied simply by the belief in the statement or by assent to it; tenaciously as the arguments in their favour would warrant, is to be sought in the will rather than in the intellect. Authorities are to be found on both sides, the intrinsic evidence is not convincing, but something is to be gained by assenting to one view rather than the other, and this appeals to the will, which therefore determines the intellect to assent to the view which promises the most. Similarly, in Divine faith the credentials of the authority which tells us that God has made certain revelations is strong, but this is not enough to bring about assent, "One must believe this or that", and consequently they cannot compel our assent; they merely show us that this statement is credible. When, then, we ask whether we are to give in our free assent to any particular statement or not, we feel that in the first place we cannot do so unless there be strong extrinsic evidence in its favour, for to believe a thing merely because we wished to do so would be absurd. Secondly, the proposition itself does not compel our assent, since it is not intrinsically evident, but there remains the fact that only one condition of our assent to it shall we have what the human soul naturally yearns for, viz., the possession of God, Who is, as both reason and authority declare, our ultimate end; "He that believeth and is baptized, shall be saved", and "Without faith it is impossible to please God." St. Thomas expresses this by saying: "The disposition of a believer is that of one who accepts another's word for some statement, because it seems fitting or useful to do so. In the same way we believe Divine revelation because the reward of eternal life is promised us for so doing. It is not a moving is moved by the reward to assent to what is said, even though the intellect is not moved by something which it understands. Hence St. Augustine says (Tract. xxvi in Ioannem, 2): 'Cetera potest homo nolens, credere nonnisi volens' [i. e. other things a man can do against his will, but to believe he must will] (De Ver., xiv, 1).

VI. DEFINITION OF FAITH.—The foregoing analyses will enable us to define an act of Divine supernatural faith as "the act of the intellect assenting to a Divine truth owing to the movement of the will, which is itself moved by the grace of God" (St. Thomas, II-II, Q. iv, a. 2). And just as the light of faith is a gift supernaturally bestowed upon the understanding, so also this Divine grace moving the will is, as its name implies, an equally supernatural and an absolutely gratuitous gift. Neither gift is due to previous study, neither of them can be acquired by human efforts, but "Ask and ye shall receive."

From all that has been said two most important conclusions follow: (1) The verifications against faith are natural and inevitable and, in no one instance contrary to faith, "since", says St. Thomas, "the assent of the intellect in faith is due to the will, and since the object to which the intellect thus assents is not its own proper object—for that is actual vision of an intelligible object—it follows that the intellect's attitude towards that object is not one of tranquillity, on the contrary it thinks and inquires about those things it believes, all the while that it assents to them unhesitatingly; for as far as it itself is concerned the intellect is not satisfied with assent to it when it states from the above that an act of supernatural faith is meritorious, since it proceeds from the will moved by Divine grace or charity, and thus has all the essential constitutents of a meritorious act (cf. II-II, Q. ii, a. 9). This enables us to understand St. James's words when he says, "The devils also believe and tremble" (i, 19). "It is not willingly that they assent", says St. Thomas, "but they are compelled thereto by the evidence of those signs which prove that what believers assent to is true, though even those proofs do not make the truths more evident, "0 God! who has revealed this or that", and consequently they cannot compel our assent; they merely show us that this statement is credible. When, then, we ask whether we are to give in our free assent to any particular statement or not, we feel that in the first place we cannot do so unless there be strong extrinsic evidence in its favour, for to believe a thing merely because we wished to do so would be absurd. Secondly, the proposition itself does not compel our assent, since it is not intrinsically evident, but there remains the fact that only one condition of our assent to it shall we have what the human soul naturally yearns for, viz., the possession of God, Who is, as both reason and authority declare, our ultimate end; "He that believeth and is baptized, shall be saved", and "Without faith it is impossible to please God." St. Thomas expresses this by saying: "The disposition of a believer is that of one who accepts another's word for some statement, because it seems fitting or useful to do so. In the same way we believe Divine revelation because the reward of eternal life is promised us for so doing. It is not a moving is moved by the reward to assent to what is said, even though the intellect is not moved by something which it understands. Hence St. Augustine says (Tract. xxvi in Ioannem, 2): 'Cetera potest homo nolens, credere nonnisi volens' [i. e. other things a man can do against his will, but to believe he must will] (De Ver., xiv, 1).

Let anyone who doubts this statement compare Bishop Butler's "Analogy of Religion", chaps. v, vi, with the paper on "Faith" contributed to "Lxux Mundii". The writer of this latter paper tells us that "faith is an elemental energy of the soul", "a tentative probation", that "its primary note will be trust", and finally that "in response to the demand for definition, it can only reiterete: Faith is faith. Nowhere is there a name for any analysis of terms, nowhere any distinction between the relative parts played by the intellect and the will; and we feel that those who read the paper must have risen from its perusal with the feeling that they had been wandering through—we use the writer's own expression—"a juggling maze of words":
VII. The Habit of Faith and the Life of Faith.

(a) We have defined the act of faith, the assent of the intellect to a truth which is beyond human comprehension, but which it accepts under the influence of the will moved by grace; and from the analysis we are now in a position to define the virtue of faith as a supernatural habit by which we firmly believe those things to be true which God has revealed. Now every virtue is the perfection of some faculty, but faith results from the combined action of two faculties, viz., the intellect which elicits the act, and the will which moves the intellect to do so; consequently, the perfection of faith will depend upon the perfection with which these faculties work: the intellectual task; the intellect must assert unhesitatingly, the will must promptly and readily move it to do so.

(b) The unhesitating assent of the intellect cannot be due to intellectual conviction of the reasonableness of faith; whether we regard the grounds on which it rests or the actual truths we believe, for "faith is the evidence of things that appear not"; it must, then, be referred to the fact that these truths come to us on Divine infallible testimony. And though faith is so essential to salvation, it is the peculiar function of the light of faith, which we have seen to be so necessary, is in some sort to afford us, not indeed vision, but an instinctive appreciation of the truths which are declared to be revealed. St. Thomas seems to hint at this when he says: "As by other virtues the will can move the intellect, so by the habit of faith a man's mind is inclined to assent to those things which belong to the true faith and not to other things" (II-II, q. iv, a. 4, ad 3.).

In every act of faith this unhesitating assent of the intellect is due to the motion of the will as its efficient cause, and the same must be said of the theological virtue of faith when we consider it as a habit or as a moral virtue, for, as St. Thomas insists (I-II, q. iv, a. 3), there is no virtue, properly so called, in the intellect except in so far as it is subject to the will. Thus the habitual promptitude of the will in moving the intellect to assent to the truths of faith is not only the efficient cause of the intellect's assent, but is precisely what gives to this assent its virtuous, and consequently meritorious, character. Lastly, this promptitude of the will can only come from its unswerving tendency to the Supreme Good. And at the risk of repetition we must again draw attention to the distinction between faith as a purely intellectual habit, which as such is dry and barren, and faith resident, in itself, no more than the motion of the will, but moved by the charity or love of God. When, therefore, we speak of the intellectual habit of faith, we mean the unhesitating assent of the intellect to God's revealed truths. "Every true motion of the will," says St. Augustine, "proceeds from true love." (De Civ. Dei, XIV, ix.)

(c) We are sometimes asked whether we are really certain of the things we believe, and we rightly answer in the affirmative; but certainty of knowledge can be looked at from two standpoints: if we look at its cause, we have in faith the highest form of certainty, for its cause is the Essential Truth; but if we look at the certitude which arises from the extent to which the intellect grasps truth, then in faith we have not such perfect certitude as we have of demonstrable truths, since the truths believed are beyond the intellect's comprehension (II-II, q. iv, a. 4; Ver., xiv, and i, ad 3.).

VIII. The Genesis of Faith in the Individual Soul. (a) Many receive their faith in their infancy, to others it comes later in life, and its genesis is often misunderstood. Without encroaching upon the article Revelation, we may describe the genesis of faith in the adult mind somewhat as follows: Man being endowed with reason, reasonable investigation must precede faith; now we can prove by reason the existence of God, the immortality of the soul, and the origin and destiny of man; but from these facts there follows the necessity of religion, and true religion must be the true worship of the true God not according to our idea, but according to what He has revealed. But can God reveal Himself to us? And, granting that He can, where is this revelation to be found? The Bible is said to contain it; does in-
vestigation confirm the Bible's claim? We will take but one point: the Old Testament looks forward, as we have already seen, to One Who is to come and Who is God; the New Testament shows us One Who claimed to be the fulfillment of the prophecies and to be God; this claim He confirmed by His life, death, and resurrection. By His teaching, miracles, and personal witness. But another claim to have founded a Church which should enshrine His revelation and should be the infallible guide for all who wished to carry out His will and save their souls. Which of the numerous existing Churches is His? It must have certain marks—namely, it must be One, Holy, Catholic, and Apostolic; it must claim infallible teaching power. None but the Holy, Roman, Catholic, and Apostolic Church can claim these characteristics, and her history is an irrefragable proof of her Divine mission. If, then, she be the true Church, her teaching must be infallible and must be accepted.

(b) Now what is the state of the inquirer who has come thus far? He has proceeded by pure reason, and, if on the grounds stated he makes his submission to the Church as the Catholic Church, and accepts her doctrines, he has only human, reasonable, fallible, faith. Later on he may see reason to question the various steps in his line of argument, he may hesitate at some truth taught by the Church, and he may withdraw the assent of his will to this teaching. In other words, he has not Divine faith at all. For Divine faith is supernatural both in the principle which elicits the acts and in the objects or truths upon which it falls. The principle which elicits assent to a truth which is beyond the grasp of the human mind must be that same mind illumined by a light superior to the light of reason, viz. the light of faith; and since, even with this light of faith, the intellect remains human, and the truth to be believed remains still obscure, the final assent of the intellect must come from the will assisted by Divine grace, as seen above. But both this Divine light and this Divine grace are pure gifts of God, and are consequently only bestowed at His good pleasure. It is here that the heroism of faith comes in; our reason will lead us to the door of faith, but there it leaves us; and God asks of us that earnest wish to believe, which characterizes "I am the high reward exceeding great"—which will allow us to press the misgivings of the intellect and say, "I believe, Lord, help Thou my unbelief!". As St. Augustine expresses it, "Ut debeat oportere, ut est fidelis, audirem atque percipiat P. P. L. V, 1, 17—Where reason fails there faith builds up".

(c) When this act of submission has been made, the light of faith floods the soul and is even reflected back upon those very motives which had to be so laboriously studied in our search after the truth; and even those preliminary truths which precede all investigation, e.g. the very existence of God, become now the object of our faith.

IX. FAITH IN RELATION TO WORKS. (a) Faith and no works may be described as the Lutheran view. "Faith our just recompense," was the heresarch's axiom, and the Diet of Worms, in 1527, condemned the doctrine that good works are necessary for salvation.

(b) Works and no faith may be described as the modern view, for the modern world strives to make the worship of humanity take the place of the worship of the Deity ("Do we believe?" as issued by the Rationalist Press, 1904, ch. x: "Creed and Conduct" and ch. xv: "Rationalism and Morality". Cf. also "Christianity and Rationalism on Trial", published by C. F. Voss, Leipzig, 1904).

(c) Faith shown by works has ever been the doctrine of the Catholic Church and is explicitly taught by St. James, ii, 17: "Faith, if it have not works, is dead." The Council of Trent (Sess. VI, canons xiv, xxiv, and xxvi) condemned the various aspects of the Lutheran doctrine, and from what has been said above on the necessity of charity for "living" faith, it will be evident that faith does not exclude, but demands, good works, for charity or love of God is not real unless it induces us to keep the Commandments; "He that hath kept his treasure in heaven is the very model of charity of God is perfected." (1 John, ii, 5). St. Augustine sums up the whole question by saying "Laudo fructum boni operis, sed in fide agnoseo radicem"—i.e. "I praise the fruit of good works, but their root I discern in faith" (Enarr. in Ps. xxxi, P. L., IV, 259).

(d) Works or faith, I or it. Loss of charity. -In considering the absolutely supernatural character of the gift of faith, it is easy to understand what is meant by the loss of faith. God's gift is simply withdrawn. And this withdrawal must needs be punitive, "Non enim deseret opus suum, si ab opere suo non deserserat" (St. Augustine, Enarr. in Ps. cxiv—"He will not desert His own work, if He be not deserted by His own work"). And when the light of faith is withdrawn, there inevitably follows a darkening of the mind regarding even the very motives of credibility we have named above. We have to suppose that we may perhaps explain why those who have had the misfortune to apostatize from the faith are often the most virulent in their attacks upon the grounds of faith; "Ve homini illi," says St. Augustine, "nisi et ipse fidem secutus est, et in prophetia, et in oraculo, ove be to a man unless the Lord safeguard his faith" (Enarr. in Ps. cxvi, 2, P. L., IV, 1614).

XI. FAITH IS REASONABLE. (a) If we are to believe present-day Rationalists and Agnostics, faith, as we define it, is unreasonable. An Agnostic declines to accept it because he considers that the things proposed for his acceptance are preposterous, and because he regards the motives assigned for our belief as wholly inadequate. "Present me with a reasonable faith based on reliable evidence, and I will joyfully embrace it. Until that time I have no choice but to remain an Agnostic" ("Medicus" in the "Do we believe?" Controversy, p. 214). Similarly, Francis Newman says: "Paul was satisfied with a kind of evidence for the resurrection of Jesus which fell exceedingly short of the demands of modern logic; it is absurd in us to attempt to force any kind of evidence down the throats of the average Christian." ("Phases of Faith", p. 180). Yet the supernatural truths of faith, however they may transcend our reason, cannot be opposed to it, for truth cannot be opposed to truth, and the same Deity Who bestowed on us the light of reason by which we are presented with the cause of those principles, which are but a reflection of His own Divine truth. When He chooses to manifest to us further truths concerning Himself, the fact that these latter are beyond the grasp of the natural light which He has bestowed upon us will not prove them to be contrary to our reason. Even so pronounced a rationalist as Sir Oliver Lodge says: "I maintain that it is hopelessly unscientific to imagine it possible that man is the highest intelligent existence" (Hibbert Journal, July, 1906, p. 727). The Agnostics dispute the unknowability of truths beyond reason, but their argument is fallacious, for surely knowledge has its degrees. I may not fully comprehend a truth in all its bearings, but I can know a great deal about it; I may not have demonstrative knowledge of it, but that is no reason why I should reject that knowledge which comes from faith. To listen to many Agnostics one would imagine that appeal to authority as a criterion was unscientific, though perhaps nowhere is authority appealed to so unscientifically as by modern scientists and modern entities. But, as St. Augustine says, if God's providence govern human affairs, you cannot despair or doubt but that He hath ordained some certain authority, upon which staying ourselves as upon a certain ground or step, we may be lifted up to God"
(De utilitate credendi); and it is in the same spirit that he says: "Ego vero Evangelio non eredem, nisi me Catholice Ecclesie commoveret auctoritas" (Contra Ep. Fund., V, 6—"I would not believe the Gospel if the authority of the Catholic Church did not oblige me to believe").

(b) Naturalism, which is only another name for Materialism, rejects faith because there is no place for it in the naturalistic scheme; yet the condemnation of this heresy by St. Thomas is as true religion is of the Book of Wisdom (cf. Rom., i, 18-23; Wis., xii, 1-10). Materialists fail to see in nature what the greatest minds have always discovered in it, viz., "ratio cujusdam artis, sciencit divina, indita rebus, quas ipse res movetur ad finem determinatum" — the manifestation of a Divine plan when all things are directed towards their appointed end" (St. Thomas, Lec. xiv, in II Phys.). Similarly, the vagaries of Humanism blind men to the fact of man's essentially finite character and hence preclude all idea of light in faith and the supernatural (cf. Nat. of Humanism in "Hibbert Journal," Oct., 1907).

XII. FAITH IS NECESSARY. — "He that believeth and is baptized," said Christ, "shall be saved, but he that believeth not shall be condemned" (Mark, xvi, 16); and the same thing is repeated in the Epistle to the Hebrews (xi, 6) of saying: "Without faith it is impossible to please God" (Heb., xi, 6). The absolute necessity of faith is evident from the following considerations: God is our beginning and our end and has supreme dominion over us; we owe Him, consequently, due service which we express by the term religion. Furthermore, the true worship of the true God. But it is not for man to fashion a worship according to his own ideals; none but God can declare to us in what true worship consists, and this declaration constitutes the body of revealed religion. Hence, if the need of religion is constant, these, if we would attain the end for which we came into the world, are bound to give the assent of faith. It is clear, moreover, that no one can profess indifference in a matter of such vital importance. During the Reformation period no such indifference was professed by those who quitted the fold; for them it was not a question of faith or unfaith, so much as of the medium by which the true faith was to be known and put into practice. The attitude of many outside the Church is now one of absolute indifference; faith is regarded as a condition which is in a position which is regulated by no known psychological laws. Thus Taine speaks of faith as "une source vive qui s'est formee au plus profond de l'ame, sous la pousssee et la chaleur des instincts immemorial"—"a living fountain which has come into existence in the lowest depths of the soul under the stimulus and warmth of the immemorial instincts." Indifference in all its phases was condemned by Pius IX in the Syllabus "Quanta cura: in Prop. XV, "Any man is free to embrace and profess whatever form of religion he chooses approves of. XVI, "Men can find the way of salvation and can attain to eternal salvation in any form of religious worship." XVII, "We can at least have good hopes of the eternal salvation of all those who have never been in the true Church of Christ; XVIII, "Protestantism is only another form of the same Christian religion, and men can be as pleasing to God in it as in the Catholic Church.

XIII. THE OBJECTIVE UNITY AND IMMUTABILITY OF FAITH. —Christ's prayer for the unity of His Church, the highest form of unity conceivable, "that they all may be one, as thou, Father, in me, and I in Thee" (John, xvii, 21), has been brought into effect by the unifying force of a bond of faith such as that which we have analysed. All Christians have been taught to be "careful to keep the unity of the spirit in the bond of peace, one body and one spirit, as you are called in one hope of your calling; one Lord, one faith, one baptism, one God and Father of all" (Eph., iv, 3-6). The objective unity of the Catholic Church becomes readily intelligible when we reflect upon the nature of the bond of union which faith offers us. For our faith is a kind of bond which unites us to the One unchanging God for "the pillar and ground of truth," and our assent to it comes as a light in our minds and a motive power in our wills from the one unchanging God Who can neither deceive nor be deceived. Hence, for all who possess it, this faith constitutes an absolute and unchanging bond of union. The teachings of this faith develop, of course, with the needs of the ages, but the faith itself remains unchanged. Modern views are entirely destructive of such unity of belief because their root principle is the supremacy of the individual judge — certain of whose, at least, endeavors to overcome the resulting conflict of views by upholding the supremacy of universal human reason as a criterion of truth; thus Mr. Campbell writes: "One cannot really begin to appreciate the value of united Christian testimony until one is able to stand apart from it, so to speak, and ascertain whether it goes true to the reason and moral sense" ("The New Theology," p. 178; cf. Cardinal Newman, "Palmer on Faith and Unity" in "Essays Critical and Historical," vol. i, also, Thomas Harper, S.J., "Peace Through the Truth," London, 1863, 1st Series).

I. Patritic. — The Fathers in general have never attempted any analysis of faith, and most patristic treatises De fide consist of expositions of the true doctrine to be believed. But they have already taught us the personalistic form of St. Augustine on the nature of faith. Besides the gospels of thought which are scattered throughout their works, we find them, especially on De Utilitate Credendi and De Fide Rerum quae non videntur, in P.L., VI, VII.

Scholarly. — The minute analysis of faith was worked out by the theologians of the thirteenth century and onwards; in the twelfth century, the line of St. Thomas, Summa, II-2, Q. vii—

HOLCOT, De actibus fidei et intellectus et de libertate Voluntatis et al. (Bolog., 1610); Serres, Catech. Rom. (Tourn., 1738); Joannes S. Thomae, Comment. in de fide (Venice, 1718); Vives, De Dubia fidei divina (Paris, 1788), XII; De Iugo. De virtute fidei divina (Venice, 1718); Joannes S. Thomae, Comment. in de Fide, in Opera, ed. HUG PEPHO
Faith. Protestant Confessions of.—That the Catholic Church, which claims the prerogative of teaching revealed truth with infallible certitude, should have drawn up articles of faith and demanded for them the internal assent and outward confession of her children, was logical and consistent; but it is difficult to understand, with the "word of God" so interpreted, the "word of God" so understood, how the "word of God" so interpreted, the "word of God" so understood, how so many Protestants, which proclaimed the Bible, as interpreted by the private judgment of the individual, to be the sole and sufficient rule of faith, could follow her example. It is said that Protestants look upon their doctrinal standards as authoritative only in so far as the Federal Council of Trent, "sive reformandi sive adnotationis," but these standards include the church from early childhood with its peculiar tenets, that long before they are able to read the Bible intelligently, their religious views are fixed. Stray individuals may change their religion and may be able to gather a sufficient number of followers to form a separate communion; but the bulk of the population remain true to the faith of their parents, or of their native land. In the palmy days of Protestantism, it was not the reading of the Bible that brought the denominations together, but their respective Confessions, which are now no less rigidly enforced under serious penalties by the civil power. As a practical result, the "word of God" was interpreted in accordance with the spiritual interpretation of the Apocalypse. The Anglican church introduces into its Bible the Thirty-Nine Articles as an introduction to the Anglican Church, the Reformed Church, the Heidelberg Catechism. Each new sect being obliged to prove its raison d'etre by showing just how far it differed from others, a very large number of Confessions appeared, varying in size from a few articles to long theological treatises. As a rule, the later Confessions are merely modified copies of the older ones, altered to suit local circumstances or personal views.

Types.—Since the Protestant revolts originated almost independently, and simultaneously, in Germany and in Switzerland, there has been, from the beginning, a sharp distinction between the Lutheran and the "Reformed" tenets of Zwingli, afterwards merged into Calvinism. The cleavage between Lutheran and Calvinism goes deeper than the divergence of views concerning the Real Presence in the Eucharist. Luther drifted into heresy gradually. In spite of his fame as a convener of the popish synod in Worms, progress was made for the Church in which he had been a monk and a priest for so many years. He retained as much of the ancient beliefs and liturgy as could be made to fit into his peculiar view of sin and justification. So army of the disciples were the New Testament and the Catholic phraseology and worship, that but few of the Lutheran common people felt they had drifted away from the Church of their fathers. Luther himself, in a famous passage, boasted that the eye of the ordinary laity could detect little, if any, difference between the Lutheran service and the Catholic Mass. As to the theological opinions, the layman was equally deceived; for it was not new for him to be taught that we are saved by the free grace of God through the merits of Christ's Blood. That the temporal ruler was seculous in the sense of "ab solutum" was shocked the common man, for a certain "reformans" had always been claimed, and had frequently been exercised, by Catholic German princes. Quite different was the case with Zwinglianism and Calvinism. Laying no claim to identity or continuity with the ancient Church, the "Reformed Churches" began, generally amidst iconoclastic riots, by rooting out the entire fabric of Catholicism. After the futile attempt of Philip of Hesse, at the Marburg Conference (1–4 Oct., 1529), to reconcile the German and Swiss Reformers, these went their several ways, hating and reviling each other little less than they hated and reviled the Church of Rome. It is scarcely needless to add that since the collapse of dogmatic Protestantism, its conflicting creeds possess little more than an historcal interest. Even where subscription to a Confession is still exacted as a condition for holding office, the ceremony is regarded as a mere formality.

The Lutheran Confessions.—(1) The oldest and most authoritative of the Lutheran creeds was the Augsburg Confession. It was drafted chiefly by Melanchthon and, in his capacity as Professor of Hebrew, Greek, and Gothic, and Theology, he held the points of%c2%a0 Schaff, and Torgau articles, and bore the signature of seven German princes, Elector John of Saxony, his son John Frederick, Ernest and Francis, Dukes of L?ubeck, Philip, Landgrave of Hesse, Wolfang, Prince of Anhalt, and of the representatives of the two imperial crowns, Charles, and Ferdinand. On June, 1530, copies of it, in Latin and German, were presented to Charles V, at the diet of Augsburg, and the German version was read aloud before the secular and ecclesiastical Estates of the Empire. Charles retained the Latin copy which he brought with him to Spain, giving the other into the custody of the Archbishop of Mainz. Both seem now to be irretrievably lost. The document ought to have retained its original title of Apologia, for it is an ardent attempt to persuade the Emperor and the Estates that in the Schmalkaldic "pacification," the "word of God" was upheld, not against the Scriptures, or with the Catholic Church, or with the Roman Church, so far as that Church is known from its "writings".

The Lutherans teach (Art. I) the Nicene belief in God and in the Incarnation; (Art. II) Original Sin; (Art. III) the Incarnation; Death and Resurrection of the Son of God; (Art. IV) Justification by Faith. By leaving out the obnoxious word sola (alone), the article might be glossed in a Catholic sense. They believe furthermore (Art. V) in a Divinely appointed ecclesiastical ministry, no mention being made of Luther's universal priesthood of believers. They teach (Art. VI) that "faith should bring forth good works, and that men ought to do the good works commanded by God, because it is God's will, and not on any confidence of meriting justification before God by their works," as if any one had taught differently. In Articles VII and VIII, "On the Church," instead of asserting the heresy of an invisible Church, they define it to be "the congregation of saints [the German version has it the assembly of all the faithful], in which the Gospel is rightly taught and the Sacraments rightly administered." They condemn the Donatists and others who held that the ministry of evil men is useless and inefficacious. In Article IX, "On Baptism," they teach that it is necessary to salvation, and that those infants are baptized who are newly born, as the Gospel reads as follows: "Of the Lord's Supper they teach that the Body and Blood of Christ are truly present and are distributed to those who eat of the Lord's Supper, and they reject the contrary teaching. Here Luther's theory of communion is sedulously smoothed over. Art. XI teaches that private absolution must be retained, though in confession it is not necessary to enumerate all sins committed.

Art. XII, "On Penance," teaches that those who fall, after Baptism, may obtain the remission of sins, but that they are bound to repent and to confess their sins to the Church to absolve the repentant. Penance, they teach, consists of two parts, confession and faith. In the hazy Article XIII, "On the use of the Sacraments," they "condemn those who teach that the Sacraments justify ex opere operato, without teaching that faith in the remission of sins is requisite in the use of the Sacraments," which statement shows how scant was Melanchthon's acquaintance with Catholic doctrine. Art. XIV, "On Ecclesiastical Orders," limits itself to the harmless assertion that "no one should publicly teach in the Church, or administer the Sacraments, unless he be rightly called." Art. XV, "On Ecclesiastical Rites", retains such rites "as may be observed without sin," instancec fixed holidays, feasts, and such like," but "consciences are not
to be burdened by such things, as if necessary to sal-
vation. Art. X VI declares it to be due obedience to
civil rulers. Art. XVII deals with the Last Judi-
gment. Art. XVIII, "On Free Will", is a bold de-
parture, on the part of Melancthon, from Luther's
fundamental heresy of the enslaved will of fallen man.
"They teach that man's will hath some liberty to work
a civil righteousness, and that such things as reason
may reach unto; but that it hath no power to work
the righteousness of God or a spiritual right-
eousness, without the Spirit of God." This sounds
Catholic enough. Art. XXI repeals the accusation
that Luther and Melancthon "for many works", and falsely ac-
cuses the Catholics of relying on works for super-
cification. Art. XXI teaches that we should honour the
memory of the Saints, but not invoke their aid.

They conclude the doctrinal part of the Confession
with the words: "This is about the sum of our doc-
trine," with the protest of agreement with the Roman
Church given above. "We have no dogmae," Mel-
ancthon wrote to the papal legate, 6 July, "which
differ from the Roman Church. Moreover, we are
ready to submit to the Roman Church, if Rome, with
its leniency she has at all times shown to all nations,
will submit to us her strictness in the most slight matters
which we cannot alter, even if we wished to do so.
We reverence the authority of the Pope of Rome,
etc. Meanwhile Luther was de-
nouncing the "Pope and his crew" as "veritable
vipers of the devil", and his stinging attacks on the
priesthood of Christ, under whose rule they would be like the Jews
under Pharaoh in Egypt" (Janssen, History of the
German peoples, tr. St. Louis, 1903, V, 254).

The "slight matters", which Rome was asked to con-
nive at, are enumerated in seven articles in Part II of the
Confession, with such prolixity that we can scarcely
blame the emperor if during the reading on a hot day
he fell into a slumber. They are grouped under the
headings of (1) Communion under both kinds; (2)
The Marriage of Priests; (3) The Mass; (4) Compul-
atory Confession; (5) Distinction of Meats, and Tradit-
tions; (6) Monastic Vows; and (7) The Authority
of Bishops. To any one who had followed the course of
the Lutheran revolution, it must have been amusing
to read the following statement: "Our churches are
wrongfully accused to have both the Mass and the
Mass is retained still among us, and celebrated
with great reverence, yea, and almost all the ceremo-
nies that are in use"—evidently the omission of
the Canon was a slight matter—"saving that with
the things sung in Latin we mingle certain things sung in
German.

We have given this synopsis of a document often
spoken of, but seldom read, to show the spirit
in which it was drawn up. It has been aptly termed
a political campaign document, calculated to impress
the Estates that the Lutherans, themselves supremely
intolerant towards Catholics, should be permitted to
proceed in peace in the uprooting of the ancient
Faith. The Confession was accompanied with a Pref-
ace, written by Chancellor Brick of Saxony, in
which the engagement was made that should the contro-
versy not be settled at the Diet, the signers were
"ready to compare views and defend their cause in a
general, free, and Christian Council". What this en-
gagement amounted to was made manifest later on
when the council convened at Trent. The studied
moderation, not to say dissimousness, of the Augs-
burg Confession is said to have deceived some mem-
bers of the Diet, as to the importance of the issue
at stake between Catholics and Lutherans; but it could
do not deceive such veteran controversialists as Eck,
Wimpina, Cochleus, and the other theologians to
whom Charles referred the document for discussion.
In a remarkably calm and able "Answer", after-
wards called "Confutation", they analyze the Confes-
sion, giving praise and censure where either is due.

Melancthon retorted with an "Apology", which
Lutherans generally regard as their second symbo-
listbook; Charles refused to accept it, because of the
violent language used against the Catholic Church. Since
Melancthon looked on the "Confessio Augustana" as
his private property, he continued ever after to com-
ment on it, and revise the text to suit his wavering
views. Most notorious, and the source of endless
controversies amongst Lutherans, was the altered edition
of 1540, issued at a time when Melancthon was under
the spell of Calvin. Art. X lost its Catholic tone and
was made to read that "with the bread and wine the
Body and Blood of Christ are truly exhibited to those
who eat in the Lord's Supper". The statement to which
a Calvinist might subscribe. We must not, however,
threw too much blame on Melancthon and other
preachers; the political magnates have to be considered.

The SMALLCALS ARTICLES.—Any hopes of a recon-
ciliation which were founded on the studied moder-
ation of the Augsburg Confession were rudely dispelled
seven years later when the Protestant Estates, assem-
bled at Salmcard, spurned the pope's offer of that
General Council for which, with more than dubious
sincerity, they had clamored so long, and commis-
sioned Luther to prepare a new confession that
differed from the Roman Church. Following the
general lines of the Augsburg Confession, Luther, by
injecting his strongest anti-papal virus into the docu-
ment, changed it from an olive-branch into an open
wound. The Catholic Church is the Church of Christ,
and pope and the devil are identical; the Mass is the
dragon's tail, producing all sorts of abominations and
idolatries; purgatory is a Satanic delusion, etc., etc.
When asked to affix his signature to this insane effu-
sion, Melancthon did so, with the proviso that "if
the pope would admit the gospel, we might permit
him, for the sake of peace and the common concord of
Christendom, to exercise by human right, his present
jurisdiction over the bishops, who are now or may
hereafter be under his authority." The princes, re-
senting this covert attack upon their spiritual sover-
eignty, compelled the weak man to write a pamphlet
denouncing the pope as anti-Christ.

The Formula of Concord.—Searcely were Luther's
remains placed in the tomb than, as he had foreseen,
one more contentious question—That of the Mass—
which shook the Lutheran Churches to their founda-
cions. The earliest of these theological battles raged
about the person of Melancthon, who in his later
years departed more and more openly from the two
most important tenets of his master; on the subject
of the free will in man, he adopted more and more the
Catholic position; regarding the Eucharist he be-
came ever more Calvinistic. He also incurred the
reproaches of the orthodox by accepting, with modi-
fications, the "Interim Religion" of Charles V. In
course of time, new topics of controversy rose to di-
vide the theologians, until, in 1570, Jacobus Andree
could write "that there were scarcely a couple of
preachers among them who did not disagree about
some article or other of the Augsburg Confession"
(Janssen, op. cit., VIII, 400). Tired of their endless
wranglings, which were as destructive of moral and
social as of religious order, the Elector Augustus of
Saxony proposed to cut the knot "by princely edict".
He suggested to the Lutheran princes to convene an
assembly to which each would bring his own code of
docctrine. From all these different formulæ they
would then, with the help of a few amiable theolo-
gians, construct a general code which should be
printed, and should be considered binding on the
whole body of preachers. This convention was held
at Torgau, in June, 1576. In addition to twelve
Saxon divines, whom the Elector had cowed into
submission, there were present, Andree, Chemnitz,
Chytrœus, Musculus and Kœmner.

A new "Formula of Concord", known as the "Tor-
gu Book", was drawn up entirely in the spirit of Luther, eliminating Calvinism and Philippism. This book not being favourably received by several princes, Augustus summoned a fresh convention in the monastery of Bergen, near Magdeburg, where several alterations were made. In the end, the book was adopted. As the result of the "Concordia of Concord" was sent to the princes to be promulgated and enforced. Augustus of Saxony, John George of Brandenburg, and other princes, gathered their preachers together and compelled them publicly to subscribe their signatures, "not only with their hands, but with their hearts". Many of the princes repudiated the book; the King of Denmark threw his copy into the fire. The only Lutherans at the present day who attach any importance to it are in Missouri. The "Formula" is divided into two parts (1) the Epitome, and (2) the Solida Declaratio. The Epitome sums up Luther's "pure doctrine" in succinct form, the second part goes over the same ground more at large. Although the "Formula" begins with the stereotype Protestant declaration that the Bible is "the only rule and norm" of faith, yet, as Dr. Schaff remarks, it quotes Dr. Luther "as freely, and with at least as much deference to his authority, as Roman Catholics quote the Fathers".

CONFESSIONS OF THE "REFORMED" CHURCHES.—The so-called Reformed creeds, of which thirty or more are now in use, are based on the teaching of Zwingli and Calvin. We can only notice the most important of them. The Confessio Tetrarotina.—As the Strasburg preachers, Bucer and Capito, inclined to the Zwinglian view of the Eucharist, they were shunned by the Lutherans at the Diet of Augsburg (1530), and were not allowed to sign the Augsburg. They therefore drew up a separate Confession, following the general lines of the Lutheran document, a copy of which had been given to them by Philip of Hesse. Bucer touched upon several topics that Melanchthon had avoided, and added, among the "inward church", the rejection of tradition and of images. The Mass is denounced as "an intolerable abomination". Art. 18, "On the Eucharist", is given so enigmatically, that it is impossible to discover the real meaning. After great trouble the Strasburgers were able to secure the adhesion of three Southern German towns, Constance, Memmingen, and Lindau. From these four cities the Confession obtained the name of Tetrarotina. It was delivered to the Emperor, 9 July. Charles refused to permit it to be read at the Diet of Augsburg. It was not accepted but confuted it. It was printed in the autumn of 1531 at Strasburg, together with a "Vindication". It did not long remain in authority, for the towns subscribed to the Augsburg Confession in order to join the Smalcald League. Zwingli himself sent to the Diet, July 1530, a Confession of Faith in which he openly denied the Real Presence, and denounced purgatory as "an injurious fiction which sets Christ's merits at naught." He also, shortly before his death, sent a Confession to France.

The First Confession of Basle, also called of Mulhausen because adopted by that city, was drafted in 1531 by Colampus and after his death elaborated by his successor, Oswald Myconius. It was promulgated by the city authorities of Basle, 21 Jan., 1534. It is a brief document, moderate in tone and calculated to conciliate the Lutherans. The text, as we now possess it, was revised in a Calvinistic sense in 1561. Of more importance is the Second Confession of Basle, known also as the "Heliocentric". In the "Wittenberg Concord", Luther had forced his peculiar views regarding the Eucharist on Bucer and several other mediating preachers. The formula was reluctantly accepted by the Southern German towns, whose only protection was to be admitted into the Smalcald League; but it was rejected by the independent Swiss. At the same time, it was recognized that some means should be devised of healing the dissensions among the Protestants, now that the convening of a General Council was in prospect. It was resolved to draft a new Confession which should be presented to the council as the national creed of the Protestant Cantons. On this basis, the Reformers, composed of the most prominent Swiss preachers and delegates from Zurich, Bern, Basle, Schaffhausen, St. Gall, Mulhausen, and Biel. A committee consisting of Henry Bullinger, Oswald Myconius and Simon Gryneus, was commissioned to draw up the document. It was written in Latin, and a free German translation made by Leo Judae was adopted by the meeting. Its tone is decidedly Zwinglian, but on the disputed points of the sacraments and the Lord's Supper there is an evident effort to approach as near as possible to the Lutheran phraseology.

A copy of the Confession was brought to Luther by Bucer; and it was a great surprise to the Swiss that the Wittenberger reformer declared himself satisfied with it. Luther's change of attitude was due partly to the political needs and wishes of the Smalcald princes, and partly to the altered phraseology of the Confession on the subject of the sacraments, due to the growing influence of Calvin. Whereas the Zwinglian flatly denied the corporal presence of Christ in the Eucharist, Calvin preached His "spiritual presence," which really remained for some years the national creed of the Swiss Protestants; but it was superseded in 1566 by the "Helvetia Posterior". This latter document was originally the private confession of Henry Bullinger of Zurich; but it was formally accepted as a symbolic book by nearly all the Reformed Churches of Europe. It follows the main lines of the earlier confessions, but is much lengthier, and more in the nature of a theological treatise. It is the storehouse from which later framers of Reformed Confessions have copiously drawn. The Church is described as a "universal," the invisible church", the rejection of tradition and of images. The Mass is denounced as "an intolerable abomination". Art. 18, "On the Eucharist", is given so enigmatically, that it is impossible to discover the real meaning. After great trouble the Strasburgers were able to secure the adhesion of three Southern German towns, Constance, Memmingen, and Lindau. From these four cities the Confession obtained the name of Tetrarotina. It was delivered to the Emperor, 9 July. Charles refused to permit it to be read at the Diet of Augsburg. It was not accepted but confuted it. It was printed in the autumn of 1531 at Strasburg, together with a "Vindication". It did not long remain in authority, for the towns subscribed to the Augsburg Confession in order to join the Smalcald League. Zwingli himself sent to the Diet, July 1530, a Confession of Faith in which he openly denied the Real Presence, and denounced purgatory as "an injurious fiction which sets Christ's merits at naught." He also, shortly before his death, sent a Confession to France.

The first of the purely Calvinistic Confessions. The original draft was made by Calvin himself. It was revised in various synods, from the first at Paris (1559), to the Synod of Geneva (1554) and to the Synod of Strasburg (1567), from which latter town it drew its popular name of "the Rochele Confession". Its Calvinism is undiluted, and it offers all the peculiar doctrines of that innovator. The Roman Church comes in for a fair share of vituperation, for its "corruptions", "superstitions", and "idolatries". "Nevertheless", it says, "as some trace of the Church is left in the papacy . . . we confess that those baptized in it do not need a second baptism." This concession does not imply that "idolaters" are to be tolerated; for the Author of that government "has put into the hands of the magistrates, to suppress crimes against the first as well as against the second table of the Commandments of God." This Confession remained in authority among French Protestants, until the Voltaireanism and Rationalism of the eighteenth and nineteenth centuries deprived it of all value. In the thirteenth General Synod of the Reformed Church of France (6 June to 10 July, 1872), the only approach to a Confession of Faith that could be made was the adoption by the slender majority of sixteen votes of the following very concise resolution:

The Reformed Church of France, on resuming her synodical action, which for so many years had been interrupted, desires, before all things to offer her thanks to God, and to testify her love to Jesus Christ, her Divine Head, who has sustained and comforted
her during her successive trials. She declares, through the organ of her representatives, that she remains faithful to her principles of faith and freedom on which she was founded. With her fathers and her martyrs in the Confession of Rochelle, and with all the Churches of the Reformation in their respective creeds, she proclaims to the nations the truths in the Scriptures in matters of faith, and salvation by faith in Jesus Christ, the Only-begotten Son of God, who died for our sins, and was raised again for our justification. She preserves and maintains, as the basis of her teaching, of her worship and her discipline, the great fundamental tenets of the sacred solenmities, and set forth in her liturgies, especially in the Confession of sins, the Apostles' Creed, and in the order for the administration of the Lord's Supper."

The Heidelberg Catechism, published in 1563 by order of the Elector Palatine, Frederick III., was generally accepted by Calvinists throughout the world as a faithful and authoritative exposition of the faith of the Reformed Churches. It was written by two professors at the Heidelberg university, Zachary Bär (commonly known as Ursinus) and Caspar Olevianus (commonly known as Calovius). Its purpose was to furnish a manual of Christian doctrine and to serve as a public profession of faith. In 129 questions and answers, it treats of man's sin and misery (3-11), the redemption by Christ (12-65), and the government of the Church (66-68). The second half is the largest, as it gives an explanation of the Apostles' Creed and the sacraments. The third part deals with the Ten Commandments and the Lord's Prayer. The general tone of the document is moderate, with the exception of the truculent 80th question, for which the professors are not responsible; for it did not appear in the first edition, and was later inserted by the fanatical Elector. Since it has been in no small measure the source of Protestant anti-Catholic intolerance, it is worth while to lay it before the reader:

"What difference is there between the Lord's Supper and the Popish Mass? The Lord's Supper testifies to us that we have full forgiveness of all our sins by the one sacrifice of Jesus Christ, which he himself has once accomplished on the cross; and that by the Holy Ghost we are spiritually united with Christ, and that his body and blood are now in heaven at the right hand of the Father, and is to be there worshipped. But the Mass teaches that the living and the dead have not forgiveness of sins through the sufferings of Christ, unless Christ is still present on the altar and is fed by the Mass, and that Christ is bodily under the form of bread and wine, and is therefore to be worshipped in them. And thus the Mass, at bottom, is nothing else than a denial of the one sacrifice and passion of Jesus Christ, and an accursed idolatry."

Dr. Schaff doubts the "wisdom of inserting controversial matter into a catechism"; but strangely enough pronounces, that "it must be allowed to remain as a solemn protest against idolatry" (Creeks of Christendom, I, 530). If the central dogma of the creed is all right, what is the harm in proclaiming it as such in a Confession of Faith? The Heidelberg Catechism was translated into all the languages of Europe, and into several extra-European tongues. It obtained great authority in Scotland and England; but during the following century it was supplanted by the Westminster Confession. It was introduced into America by the Dutch and German Reformed churches, and is said to be now more highly prized by the American Reformed Churches than by the Germans in the Fatherland. The Confession Belgica is venerated as a symbol of symbolic authority, together with the Heidelberg Catechism, by the Reformed Churches in Belgium, Holland, and their offshoots throughout the world. This document, consisting of thirty-seven articles, was written in French about 1561, by Guy de Bray, assisted by other preachers. The intentions of the authors, we are told by one of themselves, was not to issue a new creed, but to prove the truth of their belief from the canonical writings. They follow closely the Confessio Galliciana, seeking to support their theses by texts of Scripture and authorities in the Latin, and the document was submitted to Calvin and many other Reformed divines. In 1562 a copy was transmitted to Philip II with a letter protesting the innocence of the innovators from crime and rebellion. In the opinion of Calvinists, the wrecking of churches and martyrdoms and massacres were not crimes, but imperative duties. Art. 36 admonishes magistrates of their obligation "to remove and prevent all idolatry and false worship; that the kingdom of anti-Christ (i.e. popery) may be destroyed." The Confessio Belgica was revised and adopted by the successive synods in the Netherlands, until finally the Synod of Dort, in its 149th session (29 April, 1619), subscribed to it as the public creed of the Reformed Churches. The Synod of Dort, the most representative gathering of the Calvinists, was convened by the Synods of Holland and Zeeland, and opened its sessions at Dort, or Dordrecht, 13 Nov., 1618, and concluded its labours after 144 sessions, 9 May, 1619. In addition to the Dutch and Belgians, there were delegates from Great Britain, the Palatinate, Hesse, and two smaller States. The council of Dort decided that the French Huguenots were forbidden by the crown to leave France. The occasion of this international gathering was the defection from pure Calvinism of the Remonstrants (see ARMENIANISM). Since the members of the synod were orthodox on the subject of predestination absolute, the condemnation of the Remonstrants was a foregone conclusion. The canons were framed in the most unbending form, and 200 ministers who refused to subscribe were deposed. Although the foreign delegates attached their names to the canons of Dort, yet, outside of the Netherlands, these were never regarded as authoritative. In England, especially, there was fierce opposition, and from rival pulpits the pros and cons of God's (or Calvin's) eternal decree were thundered into the ears of the bewildered people.

The numerous Minor Reformed Confessions, such as the Marchica (Brandenburg), the Hungarian, the Bohemian, and the Polish, being of a local and for the most part of an ephemeral nature, need not detain us. For an account of the Thirty-nine Articles of the English Church, see the article ANGLICANISM. When the American colonies achieved their independence, the Anglicans in America, until then subject to the Bishop of London, formed themselves into "The Protestant Episcopal Church in the United States of America" and, after lengthy debates, in a General Convention held at Trenton, New Jersey, 8-12 Sept., 1801, adopted the Thirty-Nine Articles, omitting in Art. 8 the Athanasian Creed and making such other alterations as were demanded by the changed political conditions. They retained the other Articles and the sacrifice of Masses" (i.e. the public worship of the vast majority of Christians) are denounced as "blasphemous fables and dangerous deceits"; but in later editions the milder statement is substituted, that Transubstantiation " hath given occasion to many superstitions". Episcopalians, also, have not yet eliminated from their articles the calumny (Art. 22), that the "Romish" doctrine sanctions the "Adoration, as well of Images as of Relics". The Scottish Confession.—By the year 1560, Protestantism in Scotland, through the aid of English gold and troops, had gained complete ascendancy. Losing no time, the Protestant "Lords of the Congregation" convened a revolutionary Parliament of the estates of the realm, at Edinburgh, 1 Aug., whose first act was to
repudiate the Catholic religion, and commission John Knox and other preachers to compile a new creed. Familiar with the Swiss Confessions, Knox performed his task in four days. The document, amended by the leaders, was submitted to Parliament and with very little debate it was fully agreed upon by the votes, ratified by the estates, 17 Aug. Though repudiated by Queen Mary, who was at the time in France, it was imposed upon the people as the religion of Scotland and the exercise of the ancient worship was forbidden under penalty of confiscation, exiles, and death. The "Confession of Faith"...盛行 in Scotland turned on the question of presbytery in general, as the "National Covenant". After endorsing the Confession of Faith in 1680, it proceeds to "abhor and detest all contrary Religion and Doctrine; but chiefly all kind of Papistry in general and particular heads", among them the doctrine that the Roman Antichrist upon the Scriptures of God, upon the Kirk, the civil magistrate, and consciences of men, all his tyrannous laws made upon indifferent things, against our Christian liberty;... five bastard sacraments, with all his rites, ceremonies, and false doctrine added to the ministration of the true sacraments without the Word of God; his cruel judgment against infants, departing without the sacrament; his absolute necessity of baptism; his blasphematic opinion of transubstantiation; his devilish mass; his blasphemous pricked blood; his pride and arrogance of fallibility, so remarkable in a Calvinistic document, was practically harmless; for none ever convinced John Knox that he was in error.

The Confession presents, in twenty-five articles, a substantial Scottish Calvinism as held by the Scottish Protestants. The articles follow broadly the lines of the Apostles' Creed. They are written in a vigorous, original, and, for a document proceeding from the pen of Knox, in an extremely moderate style. The moderation was obviously due to the necessity of securing, if possible, for the sake of legality, the signature of the Catholic sovereign. Although the ground tone of the Confession is Calvinistic, yet the Calvinistic tenets are not set forward with prominence. It is only when treating of the Kirk and the Sacraments that the "Kirk" and the Catholic doctrine of the Holy Mass are denounced and misrepresented. The notes, signs, and assured tokens whereby the immaculate Spouse of Christ Jesus is known from the horrid harlot, the Kirk malignant, we affirm, are nother Antiquitiis, Title usurpity, lineal Descence, Place appointed, nor multitude of men approving one error.

In addition to the usual Protestant notes of the true Church, viz., "the true preaching of the Word of God" and "the right administration of the Sacraments", the Confession assigns a third element peculiar to the Kirk, i.e., that "the light of the upright and pious ministers, as Gods Wards prescribes, whereby vice is repressed, and vertue nourished". The development of Presbyterianism was a lucid commentary on the new principle herein tentatively pronounced. In Art. 24: Of the Civil Magistrate"..., the Confession proclaims openly the duty of suppressing the Catholic religion. To Kings, Princes, Rulers and Magistrates, we affirm that most chiefest and most principal is the conservation and purification of the Religion appertaining; so that not only are they appointed, not only for the maintenance of... the treffe Religioun, and for suppressing of Idolatrie and Superstition whatsoever.

After the forced abdication of Queen Mary in 1567, Parliament again proclaimed the Confession as the creed of "the only true and holy Kirk of Jesus Christ within this realm"; and it remained the doctrinal standard of the Scots, until superseded by the Westminster Confession. In the estimation of the Presbyterian preachers, the Confession of Knox was sadly defective; it had failed to denounce with sufficient vigor the "false Kirk" and "false Mass". The omission was deemed particularly unfortunate about 1680, when the young King James VI had fallen under the spell of the French kinsman, Esmé Stuart, upon whom the king had bestowed the earldom of Lennox, and who reigned supreme in his councils. It was probably at the suggestion of this able and unscrupulous politician, that James commissioned the preacher John Craig to draw up the most violent condemnation of Papistry that ever issued from a Calvinistic pen. It is known to historians as the King's Confession, sometimes as the "Confession of the Scots Presbyterians", and the "Confession of the Westminster Churches of England".

The Westminster Confession... In the Reformed Churches of English speech, all the earlier standards were practically supplanted by the "Westminster Confession of Faith" and the "Longer" and "Shorter Catechisms". The "Westminster Directory of Worship", were the fruits of the long labors of the Westminster Assembly of Divines, convened in Westminster Abbey by authority of the Long Parliament at the opening of the Civil War. After the abolition of prelacy in September, 1642, the religious condition of England was completely chaotic. In order to stem the evil, Parliament by an ordinance...
FAITH

condemning the proposed assembly, annulling beforehand all its proceedings, and prohibiting his subjects from taking any part in it. This had the consequence of excluding the Bishop of London from all connection with the assembly, thus placing the Puritans in supreme control. The assembly was formally opened in King Henry VII’s chapel in the historic abbey; but since no matter for discussion was submitted to the divines by the Parliament, and they were induced from taking the initiative, an adjournment was taken until the following week; when, as its first task, the assembly was ordered to revise the Anglican “Thirty-nine Articles”, “for the purpose of simplifying, clearing, and vindicating the doctrines therein contained”. Ten weeks were devoted to this work; the divines had remodelled the first fifteen, when they were ordered to lay aside the “Articles” and engage in matters of more pressing importance to the Parliament. The war with King Charles was proceeding with disastrous results to the Parliamentary party. Success seemed possible only through the aid of the Scots.

Now the Scots demanded, as an indispensable condition of alliance, “the reformation of religion in the kingdoms of England and Ireland, in doctrine, worship, discipline and government, according to the Western Church, and especially the Western Reformed Churches”. In other words, they insisted upon the adoption by the English of Presbyterianism in its integrity, a system repugnant to the national instincts and traditions of Englishmen. But there was no alternative, except the collapse of the rebellion. A “Solemn League and Covenant”, framed by the Presby- terian preacher, Henderson, was sworn and subscribed by the Scottish and English Parliaments, by the General Assembly of Scotland, and by the Westminster divines, and afterwards by the lords and commons of both nations. To aid the inexperienced English divines in drawing up Presbyterian formularies, six Scottish commissioners, four preachers and two laymen, were sent to Westminster, with authority to take part in the discussions, but without votes. On 12 Oct., 1643, the Assembly received an order from the Lords and Commons to forthwith confer and treat among themselves, of such a discipline and government as may be most agreeable to God’s Holy Word, and most apt to procure and preserve the peace of the Church at home, and nearer agreement with the Church of the Western and other Reformed Churches. Also, “touching and concerning the Directory of Worship, or Liturgy, hereafter to be in the Church”. This order was the signal for protracted and at times bitter disputes between the Presbyterian majority and the Scottish commissioners on one side, who advocated the adoption of the full Presbyterian machinery of Church government, and on the other the Independents and the Erastians, the former of whom argued for the complete independence of each separate congregation (see Congregationalism) while the latter opposed any kind of jurisdiction independent of the civil power. Although the Independent members numbered scarcely a dozen, and the Erastians were fewer still, their influence was vastly in excess of their numerical strength; for the Independents were in close touch with Cromwell’s army, and the Erastians could count on the sympathies of an Erastian Parliament. Into the details of this debate, we need not enter. While it was still raging, an order was sent down to the Assembly “to frame a Confession of Faith for the three kingdoms, according to the Solemn League and Covenant, with the utmost possible moderation and prudence; all the Puritan factions were, as regarded matters of doctrine, more or less strictly Calvinistic, and there was not one Arminian in the assembly. Moreover, the Westminster divines had copious assistance from upon in the numerous Reformed symbols already in existence. The Confession occupied their attention from 20 Aug., 1644, until 25 Sept., 1646, when the first nineteen chapters were sent to the Commons, and a few days later a duplicate copy was presented to the House of Lords. The Lords gave their assent to twenty-six articles, and the King declared “the Assembly of Divines”, so the title ran; but the Commons refused to take definite action until they had the complete Confession before them. This took place on 4 Dec., 1646. A limited number of copies was printed for the use of the Parliament and the assembly; but the House of Commons, probably to win time, demanded that each assertion should be supported by Scriptural texts. This was promptly done by the divines (29 April, 1647); whereupon the Commons ordered 600 copies, “and no more”, to be printed.

This edition was received as authoritative by the Scottish Church and Parliament, and was regarded by Presbyterians generally as their authentic Confession of Faith. But in the eyes of the Erastian Parliament of England, it was simply “The Humble Advice of the Assembly of Divines”, convoked by its authority, and valueless without its sanction. After intermittent discussions, which extended above a year, the Parliament, 20 June, 1648, ordered an expurgated edition to be printed by its authority, in which every reference to the spiritual jurisdiction of the Church is carefully eliminated.

As to its contents, the Westminster Confession of Faith, is the most elaborate, as it is the latest of the Reformed creeds. In thirty-two chapters, divided into sections, it labours to give a full and logical exposition of Christian doctrine as understood by the Reformed Churches. Chap. i, “Of the Holy Scripture” gives a list of the inspired books, including the deutero-canonical books of the New Testament and rejecting the “Apocrypha” of the Old. “The authority of the Holy Scripture, for which it ought to be believed and obeyed, dependeth not upon the authority of any man or church, but wholly upon God”. “The Supreme Judge by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, doctrines of men, and private spirits, are to be examined, and in whose sentence we are to rest, can be no other but the Holy Ghost speaking in the Scripture.” Chap. ii repeats the ancient doctrine “Of God and of the Holy Trinity”. Chap. iii, “Of God’s Eternal Decree”, teaches that “God from all eternity did, by the most wise and holy counsel of His own good pleasure, freely and unreservedly ordain whatsoever comes to pass”. The divines strive to ward off the obvious objection to this fatalistic tenet by denying that it makes “God the author of sin”, or that violence is offered to the will of the creature. Yet, in the same breath, they insist, that “He hath not decreed anything because He foresaw it as future”, and that “by decree of God, for the manifestation of His glory, some men and angels are predes- tined unto everlasting life, and others foreordained to everlasting death”. The elect, who fell in Adam, are redeemed by Christ, effectually called and eternally saved; but “neither are any other redeemed by Christ, effectually called, justified, adopted, sanctified and saved, but the elect only. The rest of mankind was pleased, according to the unsearchable counsel of His own will, whereby He extendeth or with- holdeth mercy as He pleaseth, for the glory of His sovereign power over His creatures, to pass by, and ordain them to dishonour and wrath for their sin, to the praise of His glorious justice.” The “Confession” judiciously warns the preachers that “the doctrine of this high mystery of God’s sovereignty, is to be taught with special prudence and care”. In Chap. v, “Of Providence”, we find the unintelligible utterance, evidently having in view the Supralapsarians, that God’s providence “extendeth itself even to the first fall, and all other sins of men upon all the numerous Reformed symbols already in existence. The Confession occupied their attention from 20 Aug., 1644, until 25
Calling", teaches that "all those whom God hath predestined unto life, and those only" are effectually called and saved. "Others, not elected, although they may be called by the ministry of the Word, and may have some common operations of the Spirit, yet they never truly come unto Christ, and therefore cannot possess the "Gift of Election".

"Of Religion, Worship, Sabbath Day", differs from the Continental creeds by adding the injunction that the Sabbath is to be kept holy by observing "a holy rest all the day from their own works, words, and thoughts about their worldly employments and recreations", and then a man be "taken up the whole time in the public and private exercises of his worship, and in the duties of necessity and mercy". Chap. xxii., "Of Lawful Oaths and Vows", gives the divines an opportunity for denouncing "popish mockments of oaths" as "superstitious and sinful

snares". Chap. xxiii., "Of the Civil Magistrate" (one of the chapters expounded by the Parliament), states that "the civil magistrate may not assume to himself the administration of the Word and the Sacraments or the power of the keys of the kingdom of heaven; yet, he hath a duty to take order, that unity and peace be preserved in the Church, that the truth of God be kept pure and entire, that all blasphemies and heresies be suppressed." In the American revision, this is made to read: "In nursing fathers, it is the duty of civil magistrates to protect the Church and the Lord, without giving the preference to any denomination of Christians above the rest." etc. In Chap. xxiv., "Of Marriage and Divorce", "such as profess the true reformed religion" are admonished that they "should not marry with infidels, Papists, or other idolaters". Divorce is permitted on grounds of "adultery, or such wilful desertion as can no way be remedied by the Church or civil magistrate". Chap. xxv., "Of the Church", speaks in no complimentary terms of the "popery of Rome", and states that "an

archist, that man of sin and son of perdition, that exalts himself in the Church against Christ, and all that is called God". The doctrine of the Sacraments differs in nothing from the earlier Calvinistic creeds. Chap. xxvi., "Of the Lord's Supper", proclaims that "the Popish Sacrifice of the mass", as they call it, "is most abominably injurious to Christ's one only sacrifice", whilst the doctrine of transubstantiation "is repugnant, not to Scripture alone, but even to common sense and reason; overthrowing the nature of the sacraments, and the doctrine of man of sacrifice, yea, of gross idolatries". These are the main features of the "Westminster Confession of Faith" which are of interest to a Catholic. For many generations, the "Westminster Standards", viz., the Confession and the Catechisms, haveen the religious thought and controlled the conduct of the Presbyterians of Scotland, Ulster, and America. They were also accepted, with modifications of various sorts, by the Congregationalists, the Regular Baptists, and other newer sects.

J. F. Loughlin.

Faith, Hope and Charity, Saints, the names of two main of Roman martyrs around whom a considerable amount of legendary lore has grown, though the extent of sound historical data possessed concerning them is so slight, that until very recent times the most eminent scholars failed to distinguish between them. However, the extent and antiquity of their cult and the universality with which their names are found not only in the various early martyrlogies of the Western Church, but also in the Menologia and Menologis of the Greeks, render the fact of their existence and martyrdom unquestionable. Setting aside the purely legendary accounts that have come down to us from Lactantius, Eusebius, and Vetus (St. Jerome, Ep. 204), we find that in the reign of Hadrian, a Roman matron Sophia (Wisdom), with her three youthful daughters, Patsis, Elpis, and Agape (Faith, Hope and Charity), underwent martyrdom for the Faith and were burned on the Aurelian Way, where their tomb in a crypt beneath the church afterwards erected to St. Pancras was long a place of resort for pilgrims, as we learn from various indubitable documents of the seventh century, such as an itinerary (or guide to the holy places of Rome compiled for the use of pilgrims) still preserved at Salzburg, the list, preserved in the cathedral archives of Monza, of the oils gathered from the tombs of the martyrs and sent to Queen Theodelinda in the time of Gregory the Great, etc.

Later surely, but in the reign of Hadrian, but at what time is uncertain, another band of martyrs, Sapientia (Wisdom) and her three companions, Spes, Fides and Caritas (Hope, Faith and Charity) suffered death and were buried near the tomb of St. Cecilia in the cemetery of St. Callistus on the Appian Way. Despite the meagerness of their continuations and the meagerness of their references in the documents cited to a band of martyrs, mother and daughters, whose names are always given in Greek, and who are buried on the Aurelian Way, and to another band of four martyrs, interred on the Via Appia, whose relationship is not indicated and whose names, though the same as those of the martyrs of the Aurelian Way, are yet always given in Latin, certainly point to distinct groups. Nor is the coincidence in names remarkable, seeing that the early Christians so often (according to De Rossi) took in baptism mystical names indicative of Christian virtues, etc. Thus Sophia, Sapientia, Fides and the like are common names in early Christian inscriptions and martyrlogies. The Roman martyrlogy names, on 1 Aug., "the holy virgins, Faith, Hope and Charity, who won the crown of martyrdom under the Emperor Hadrian" and, on 30 Sept., "St. Sophia, widow, mother of the holy virgins, Faith, Hope and Charity". In some places, on 1 Aug., St. Sapientia is also venerated; but generally, owing to the confusion of the two groups, none of the supposed group receives special recognition. In the Eastern Church the feast is kept on 17 Sept.

JNO. F. X. MURPHY.

Faith, The Rule of.—The word rule (Lat. regula, Gr. σχέδιο) means a standard by which something can be tested, and the rule of faith means something extrinsic to our faith, and serving as its norm or measure. Since faith is Divine and infallible, the rule of faith must be able to divine and infallible, the rule of faith must be able to discern the supernatural ascendent to Divine truths upon Divine authority, the ultimate or remote rule of faith must be the truthfulness of God in revealing Himself. But since Divine revelation is contained in the written and unwritten traditions (Vatican Council, I, 1), the Bible and Divine tradition must be the rule of our faith; since, however, these are only silent witnesses and cannot interpret themselves, they are commonly termed "proximate but inanimate rules of faith". Unless, then, the Bible and tradition are to be profitless, we must look for some proximate rule which shall be animate or living.

I. Private Judgment as the Rule of Faith.—The Reformed Churches were unanimous in declaring the Bible to be the sole rule of faith. "We believe
that the only rule and standard by which all dogmas and all doctors are to be weighed and judged, is nothing else but the prophetic and apostolic writings of the Old and New Testament, and what the Catholic Fathers and ancient Bishops have collected out of that very doctrine" (Wilkins, "Concilia", IV, 267). Conversation thus not only laid down that the Bible was the rule of faith and life, but that the whole life of the Church and the Church's Doctrines were given by inspiration of God, to be the rule of faith and life (art. ii), but that the "authority of the Holy Scripture . . . dependeth not upon the testimony of any man or church" (art. iv). Thus the Church was divinely constituted body, to whose keeping is entrusted the deposit of faith, but the grounds for this doctrine may be briefly stated as follows:

(1) New Testament.—Christ gave His disciples no command to write, but only to teach: "going therefore, teach ye all nations, . . . teaching them to observe all things whatsoever I have commanded you" (Matt., xxviii, 19-20). "As the Father hath sent me, I also send you" (John, xx, 21). And in accordance with this, the Church is everywhere presented to us as a living and undying society composed of the teachers and disciples of Christ. It is the body of Christ; it has a Head; and He promised that the Holy Spirit should be with it and abide in it. "He will teach you all things, and bring all things to your mind, whatsoever I shall have said to you" (John, xiv, 26). Hence St. Paul calls the Church the "pillar and ground of the truth" (I Tim., iii, 15; cf. Mark, xvi, 16; Rom., x, 17; Acts, xv, 28).

(2) Tradition.—The same doctrine appears in the writings of the Fathers of every age; thus St. Ignatius (ad Trall., vii), "Keep yourselves from heresies. You are not able to do this if you are not puffed up with pride, and (so) separated from (our) God, Jesus Christ, and from the bishop, and from the precepts of the Apostles. He who is within the altar is clean, he who is without is not clean; that is, he who acts any way without the bishop, the priestly body, and the deacons, is not clean in conscience." And St. Irenaeus ("Adv. Hær.", III, ii) says, of heretics, that "not one of them but feels no shame in preaching himself, and thus depraving the rule of faith" (το υπό απόδειξης της διακοπής καὶ φυσικής). And again (III, iv), "it is not right for anyone to seek from others the truth which he has lost from the Church, since the Apostles poured into it in fullest measure, as into a rich treasury, all that belongs to the truth, so that whosoever desires may drink thence the draught of life". A little further on, he speaks (V, xx) of the "true and sound preaching of the Church, which offers to the whole world one and the same way of salvation". Such testimonies are countless; here we can only refer to the full and explicit teaching which is to be found in Tertullian's treatises against Marcion, and in his "De prescriptioum . . . et a priori"; and St. Cyprian's famous "Commonitorium". Indeed St. Augustine's well-known words may serve as an epimete of patristic teaching on the authority of the Church: "I would not believe the Gospels unless the authority of the Catholic Church moved my heart" (Comment. in Ev.). It should be noted that the Fathers, especially Tertullian and St. Irenaeus, use the term tradition not merely passively, viz., of orally bestowed Divine teaching, but in the active sense of ecclesiastical interpretation. And this is undoubtedly St. Paul's meaning when he tells Timothy to uphold "the form of sound words which thou hast heard from me" (II Tim., i, 13). It is in this sense that the various formulæ of faith, of which we have the earliest sample in I Cor., xv, 3-4, became the rule of faith.

(3) Theologians.—The teaching of the Church's Doctors on this point has ever been the same, and it will suffice if we quote two passages from St. Thomas, who, however, has no set treatise on a question which he took for granted. "The formal object of faith", he says, "is the First Truth as manifested in Holy Scripture, in the Church's teaching, and in the Church's decrees, but it does not adhere as to an infallible and Divine rule to the Church's teaching, which proceeds from the Church's truth manifested in Holy Scripture, such an one has not the habit of faith, but holds the truths of faith by some other way" (In II-II, Q. v, a. 3). And still more explicitly when (Quodl., ix, art. 16) he asks whether canonized saints are necessarily in heaven, he says, "it is certain that the judgment of the universal Church cannot possibly err in matters pertaining to the faith; hence we must stand rather by the decisions which the pope judicially pronounces than by the opinions of men, however learned they may be in Holy Scripture."
rolled back”. The Church alone can tell us how we are to interpret the words “This is My Body”, for she alone can say, “He Who spoke those words speaks through me, He promised to be with me all days, He pledged Himself to safeguard me from error at all times.”

III. IN WHAT SENSE IS THE CHURCH THE RULE OF FAITH?—(1) All non-Catholic systems have felt the need of some such authoritative rule as that sketched out above, and the history of Anglicanism practically resolves itself into a series of attempts to formulate a theory which shall, while it is met by the Sylla of Rome, enable the Church of England to escape the Charybdis of dissolution. This has never been more painfully evident than at the present time, when an apparently destructive Biblical criticism has compelled men to look for some firmer standing ground than the Bible alone. But in formulating their various theories, non-Catholic theologians have never seemed to realize the absolutely vital character of the question at issue, and have contented themselves with illogical views, which have done more to alienate thinking men than the classical services assembled in the whole, that is dels and apostates. At the Reformation the only authority deserving of the title was overthrown, and since then men have been seeking, at all costs, to replace it by some form other than that of the Apostolic Church, from out the depths of the Kirk. All sects are seeking an active rule of faith; the High Church in the testimony of the primitive Church; the Low Church in what we may term the spiritual intuitions of the Illuminated soul; the Broad Church does the same, but refuses to be bound by any dogmatic formula, and regards the Bible as no more than the best of all inspired books; and lastly the Ritualists appeal to the testimony of the Living Church, but naively confess that such testimony is not to be found at the present time, owing to “our unhapy diversity of upwards of a thousand representative councils. The Low Church and the Broad Church content themselves with a purely subjective criterion of truth; the High Church with one which itself needs interpreting; and the Ritualist looks to “the Church of the future”, as clinging to the illusory “branch theory”, but forgets that none of the Churches he calls “branches” accepts the designation.

(2) Modernism.—There has of late years arisen, within the pale of the Church, a school of theologians who make appeal to the conscience of the invisible Church as its only guide. This is the modernistic system. But it is impossible to neglect entirely what theologians term the “quidnunciam magisterium” of the Church. Thus, the Rev. G. Tyrrell writes: “It is all important to distinguish the pre-constitutional formless church from the governmental form, which it has been elaborated for its own apostolic needs” (Scilla and Charisby, 49). He would even make this formless church the rule of faith. “Authority is something inherent in, and inalienable from, that multitude itself; it is the moral coherency of the Divine Spirit of Truth and Righteousness immanent in the Church and its several parts and members; it is the imperativeness of the collective conscience” (op. cit., 370). Such doctrine inevitably leads to the individual soul as the ultimate criterion of religious truth, as is forcibly pointed out in the Encyclical “Paschal”. But the most remarkable feature of Modernism is its return to the old Protestant rule of faith, for Modernists insist, not only on the pre-eminence of the Bible, but on the independence of Biblical criticism. In the Syllabus, “Lamentabili Sane”, Pius X has condemned such views as that the opinions of Biblical exegesis are beyond the jurisdiction of the Church (props. i, iii, and ixi); that the teaching office of the Church does not extend to a determination of the sense of Holy Scripture (prop. iv); that the office of the Church is merely to ratify the conclusions arrived at by the Church at large (prop. vi); and that the Church’s dogmas are often in conflict with the plain teaching of the Bible (props. xxii, xxiv, and xli).

(3) The Catholic Doctrine Touching the Church as the Rule of Faith.—The term Church, in this connexion, only designates the teaching office of the Church from the passages already quoted from the New Testament, and the Fathers. But the teaching Church may be regarded either as the whole body of the episcopate, whether scattered throughout the world or collected in an ecumenical council, or it may be synonymous with the successor of the Apostle Peter, the Vicar of Christ. Now the teaching Church is the Apostolic body continuing to the end of time (Matt., xxviii, 19–20); but only one of the bishops, viz., the Bishop of Rome, is the successor of St. Peter; he alone can be regarded as the living Apostle and Vicar of Christ, and it is only by union with him that the rest of the episcopate can be said to possess the Apostolic character (Vatican Council, Sess. IV, Procormium). Hence, unless they be united with the Vicar of Christ, it is futile to appeal to the episcopate in general as the rule of faith. At the present time the teaching Church, from out the conflicting views of the Doctors a clearer knowledge of the Deposit of Faith committed to her, for St. Augustine pointedly asked, when treating of the re-baptism question, “how could a question which had never become a matter of controversy, have been brought to the clear light and decision of a plenary council, unless it had first been discussed throughout the world in disputations and conferences held by the bishops?” (De Bapismno, ii, 5). Thus the appeal of the Ritualist to a future council, that of the Modernist to the conscience of the universal Church, and that of the High-Churchman to the primitive Church, are, besides being mutually exclusive, destructive of the true idea of the Church as the pillar and ground of truth. If the Church is to exercise her authority, she must be able to decide promptly and infallibly any question touching faith or morals. Her conciliar utterances are rare, and though they are weighty with the majesty of occultum testimonium, the Church’s teaching is by no means confined to them. The Vicar of Christ can, whenever necessary, exercise the plentitude of his authority, and when he does so we are not at liberty to say, with the Janenists, that he has not done justice to the views of those he condemns (cf. Alex. VII, ad Saerum’, 1669); nor can we take refuge, as did the latter, in the saying, “The Modernists appear to do, in obsequious silence, as opposed to heartfelt submission and mental acceptance of such pronouncements by the supreme pastor of souls. (Cf. Clement XI, Vinea Domini’, 1705; and Pius X, “Lamentabili Sane’, 1907, prop. viii). When Newman was received into the Church, he penned those famous lines which form the conclusion of the “Essay on Development". “Put not from you what you have here found; regard it not as mere matter of present controversy; set not out resolved to refute it, and looking for that which is not to be found in any way of doing it, by the imagination that it comes of disappointment, or disgust, or restlessness, or wounded feeling, or undue sensibility, or other weakness. Wrap not yourself round in the associations of years past, nor determine that to be truth which you wish to be so, nor make an idol of cherished anticipations. This is short, eternity is long.”

Patriotic Writers.—Ireneus, Adversus Haereses, ed. Mohr, P. O. Nov. VII, 387; Gregorius, De principiis Christiani, ed. Croiset, Hurrex (Utrecht, 1870); Cyril of Jerusalem, Catecheses, ed. Mohr, P. O. XXXIII; Cyril of Alexandria, Second Letter to Nemesius, ed. by Conybeare and Howley, and Catholic Rule of Faith (Cariadit anemoses); Vincent of Lérins, Common. See also Michael, Apologia, tr. HUGH POPE.

Faithful (Lat. fidèles, from fides, faith). The, those who have bound themselves to a religious association, whose doctrine they accept, and into whose rites they have been initiated. Among Christians the term is applied to those who, under the spiritual guidance of the bishops and, regularly speaking, by confirmation. Such have engaged themselves to profess faith in Jesus Christ, from Whom they received it as a gift; henceforth they will proclaim His teachings, and live according to the Holy Catholic and Apostolic Roman Church, and to the pastoral documents, Christifideles, “the faithful of Jesus Christ.”

The distinction between Christians and faithful is now very slight, not only because adult baptism has become the exception, but also because liturgically the rite of the catechumenate is a part of baptism itself. On the other hand, in the Latin Church at least, confirmation and first Communion have been separated from the baptismal initiation. In the primitive Church it was otherwise; initiation into the Christian society consisted in two distinct acts, often accomplished years apart from one another. First, one became a catechumen by the imposition of hands and the sign of the cross; this was a kind of preliminary profession of Christian faith—eos qui ad primum fideliter credula- tis accedit (Council of Elvira, after 300, can.xiii), who was henceforth the catechumenus, i.e., a Christian, who by baptism was entitled to call himself a Christian. Only by the second act of initiation, i.e., by baptism itself, was he authorized to call himself one of the faithful, and to participate immediately in all the Christian mysteries, including the Eucharist.

The term faithful (fidelis), on the other hand, is opposed to catechumen; hence, it is not met in the writings of those early Christian Fathers who flourished before the organization of the catechumenate. It is not found in St. Justin nor in St. Irenæus of Lyons; Tertullian, however, uses it, and reproaches the heretics for obliterating all distinction between catechumens and the faithful: quis catechumenus, quis fidelis incertum est (De prescr., c.xii; P. L., ii, 56). Henceforth, in the patristic writings and the canons of councils we meet quite frequently the antithesis of catechumen and faithful, both in the position of the Christians and of the faithful. Thus St. Augustine (Tract. in Joannem, xlv, 2; P. L., XXXV, 1714): “Ask a man: are you a Christian? If he be a pagan or a Jew, he will reply: I am not a Christian. But if he say: I am a Christian, ask him again: are you a catechumen, or one of the faithful?” Similarly the Council of Elvira considers the case of a “faithful” Christian baptizing a catechumen in case of necessity (can. xxxviii); again, of sick pagans asking for the imposition of hands of the catechumenate, and thus becoming Christians (can. xxxix); of participation in an idolatrous sacrifice on the part of a Christian, and again by one of the faithful (can. lix); of betrayal to the pagan magistrate (delatio), to which a difference of guilt is attached according as the crime was perpetrated by one of the faithful or by a catechumen (can. lixiv).

The title faithful was often carved on epitaphs in the early Christian period, sometimes in opposition to the title of catechumen. Thus, at Florence, a master (patronus) dedicates to his catechumen servant (alumnus) the following inscription: “Soromehiti ALUIMNAS studiis patronum fidelibus”, i.e., “her master’s faithful, to Sozomenes, his servant and a hearse”, by which term he means one of the well-known degrees of the catechumenate (Martigny, Dict. des antiqu. chrét., Paris, 1877). Even now the baptismal rite provides for voluntary request of baptism on the part of the faithful (prælibatio); it exhibits venerable vestiges of the primitive acrismatum or preliminary examination, the guarantors (sponsors) or god-father and god-mother, the rites of the catechumenate, the communication of the Creed (traditio symboli) and the Our Father, the renunciation of Satan and evil, the adhesion to Jesus Christ, and the triple profession of faith. The candidate for baptism is still asked at the entrance to the baptismal font: “Wilt thou be baptized?” It was voluntarily, therefore, and is yet, that one entered the ranks of the faithful through the principal initiation rite of baptism.

Naturally enough, even in Christian antiquity, attention was drawn to the analogous ceremonies of circumcision (the sign, if not the rite, of the admission of proselytes to the profession of Judaism) and of the closing of ears (at the request of a priest of Mithras were initiated (Cumont, Les Mystères de Mithra, Paris, 1902). The obligations of the faithful Christian are indicated by the preparatory rites of his reception and by his actual baptism. He begins by praying for Church (in Jesus Christ) and, through that faith, for eternal life. The Creed is then delivered to him, and he returns it (reddito symboli), i.e., repeats it aloud. At the baptismal font he recites solemnly the profession of faith. From all this it is clear that his first duty is to believe (see Faith). His second duty is to regulate his life or conduct with his new Christian faith, i.e., having renounced Satan and evil, he must avoid all sin. “So behave”, was it said to him, “that henceforth thou mayest be the temple of God.” St. Gregory I says (Hom. in Evang. xxix, 3; F. L., LXXVI, 1215): “Then only are we truly the faithful, who keep the promises made with our lips. On the day of our baptism, indeed, we promised to renounce all the works and all the pomp of the ancient enemy.”

Finally, since the faithful have voluntarily sought membership in the Christian society they are bound to submit to its authority and obey its rules. As to the rights of the faithful, they consist chiefly in the fullest participation in all the Christian mysteries, so long as one does not become unworthy of the same. Thus the faithful Christian is entitled to take part in the Holy Sacrifice, to remain in the assembly after the deacon has sent away the catechumens, to offer up with the priest the oratio fidelium or prayer of the faithful, to receive there the Body and Blood of Christ, and to receive the other rites and sacraments. He may also aspire to a position among the clergy. In a word, he is a full member of the Christian society, and is such, regularly speaking, in perpetuity. If by reason of his own misdeeds he deserves to be expelled from said society, repentance and the repotatory penitential rite, a second baptism, as it were, permit his return. Finally, if he persist in the observance of his baptismal promises, he will obtain eternal life, i.e., his original petition at the moment of baptism. See Baptism; Catechumen.

A. BOUDJINHO.

Faithful Companions of Jesus, Society of The, a religious institute of women founded by the Viscountess de Bonnault d’Houet in 1820 at Amiens,
France. It was solemnly approved by Gregory XVI, 5 Aug., 1837.

The Faithful Companions of Jesus are devoted to the education of all classes, adapting themselves to the special educational needs of each country. In 1903 the society possessed forty-one convents in France, Italy, Switzerland, England, Ireland, Scotland, Australia, Canada, and the United States. The religious persecution in France, with the consequent closing of the French houses, has been the cause of new foundations in Belgium (at Brussels, Bruges, and Namur), also in the isle of Guernsey, and to Fribourg, Switzerland. The society is governed by a superior general who, up to the time of the religious persecution in France, resided at a house in Paris, known as the house of the bishop. The superior general is at present in Namur, Belgium. The society numbers about 1200 religious, who in England, Ireland, Scotland, and Australia conduct about 60 grammar and high schools, technical schools, science and art schools. The new training college for teachers at Sedgley, near Manchester, England, has met with great success. In the United States the sisters have charge of about one thousand children attending St. Joseph's parochial school at Fitchburg, Mass. They also have an academy where high school branches are taught. A fountain has recently been made at Gilbertville, Mass. In the United States there are 46 sisters, 4 novices, 2 schools, and 1 high school. The society now possesses thirty-two convents. The novitiate are at Namur, Belgium, Upton Hall, near Liverpool, England, Limerick, Ireland, and Fitchburg, Mass.

SISTER MARY PHILEMENA.

Falco, JUAN CONCHILLOS, painter, b. at Valencia of an ancient noble family in 1641; d. 14 May, 1711. He was a pupil of Esteban March, the eminent but eccentric Valencian painter, and was one of the first Spanish artists to start and maintain a school of design, gathering about him various youthful artists and insisting upon their working in charcoal in order to obtain freedom of draughtsmanship. He was a brilliant sketcher and in his journeys through his native country made some clever and humorous pencil drawings of scenes which took place on the road. Falco is almost the only Spanish artist of whom it can be said that he had a keen sense of humour, but he is further described by his contemporaries as "the most amiable of them all," humble, modest, a model of virtue, and altogether of the stuff whereof angels are made". Two of his most important works were those executed for the church of San Salvador in Valencia; others are the "Immaculate Conception", painted for the Franciscans in the same city, the frescoes in the church of San Juan, and the two altar-pieces of the Cistercian monastery of Valdigna. The close of his life was full of sadness. He was suddenly struck with palsy and became a confirmed cripple. Soon after that he lost his sight and died a lonely blind man. De Castro y Velasco, El Museo Pictorico y Escola (Madrid, 1724); Quillon, Peintres Espagnols (Paris, 1816); Bermúdez, Famosos de las Bellas Artes Españoles (Madrid, 1860); Stirling, Annales of the Artists of Spain (London, 1891). George Charles Williamson.

Falconieri, JULIANA, SAINT. See JULIANA FALCONIERI, SAINT.

Faldstoolion (FALDESTOILION). See FALDESTOIL.

Faldstool (Lat. faldistorium; also faldistourium, fadestolus, fadestola), a movable folding chair used in pontifical functions by the bishop outside of his cathedral, or within it if he is not at his throne or cathedra. Other prelates enjoy the privilege of full pontificals also use it. The rubrics prescribe its use in the celebration of the baptismal and Holy communion offices in the consecration of an oil on Maundy Thursday, at the ceremonies of Good Friday, etc. It is preserved as a genuflectory at the door of the church at the solemn reception of a bishop, at the altar of the Blessed Sacrament, and before the high altar. Red, green, and violet cloths are considered as a covering to correspond to the season or the rank of the prelate. It may have once been something like a campstool and it accompanied the bishop in his journeys. Materials, even the most costly, were employed in its construction; one wrought of gold and jewelled was presented to Pope Clement IV by Charles, King of Naples. Some were made of silver, of gilt metal, of ebony, or of wood. They were sometimes elaborately carved, ending in clawlike feet, the four corners at the top representing the neck and head of animals. Cloths of silk of a rich texture with gold and silver served to cover them. A faldstool is prescribed by the old English Ritual in the consecration of a bishop. Of Hugh Pudsey, Bishop of Durham (d. 1195), we are told that on taking the cross for the holy war he had made among other things to carry along with him a magnificent silver faldstool.

Falkenberg, John OP. See JOHN OF FALKENBERG.

 Falkner, Thomas, b. 6 Oct., 1707; d. 30 Jan., 1754. He was the son of Thomas Falkner, a Manchester apothecary, and obtained his education at the Manchester grammar school. Later on, having studied medicine under the well-known Dr. Richard Mead, he became a surgeon and practised at his native place. In his own health being delicate, he was advised to take a sea-voyage, and being acquainted with a ship captain on board the "Assiento", a vessel trading with Guinea and carrying slaves thence to Buenos Aires, he accepted an invitation to accompany the vessel as surgeon aboard. But when he was in or about 1731, on reaching Buenos Aires he was so ill that the captain was compelled to leave him there in the care of Father Mahoney, the superior of the Jesuit College. Here he not only recovered his health, but was received into the Church, and on 15 May, 1732, entered the Society of Jesus, being made a member of the Paraguay province. Having spent some time at the Jesuit College of Cordoba de Tucuman, he went as a missionary to the Puelches, near Rio Legundo. His knowledge of medicine and mechanics procured for him considerable influence among the Indians, and in 1740 or soon after he was sent to assist Father Strobel in his successful mission to the Patagonian Indians at Cape San Antonio. For more than thirty years he laboured among the Patagonians until 1768 when the Jesuits were expelled from South America. He then returned to England where in 1771 or 1772, he joined the English province of the Society. He was appointed chaplain to Mr. Berkeley of Spenchley, and here, in addition to his priestly labours, he wrote an account of his Patagonian experiences, which was published at Hereford in 1774 under the title "A Description of Patagonia and the adjoining parts of South America, with a grammar and a short vocabulary, and some particulars relating to Falkland's Islands". The book as published was not
his original work, but a compilation by William Combe and Falker's papers. Kirk (see below) quotes a remark by Rev. Joseph Berkeley: "Mr. Falker was a man of a vigorous mind, well exercised in various points of science, and had been allowed to tell his story in his own way, stored as his mind was with anecdotes and incidents, on which he delighted to dwell, we should have had from him an amusing and interesting performance. But his papers were put into the hands of the late Mr. Robert Berkeley of Spetchley, who extracted from them the whole spirit of the original. He made them what they are."

But then, Mr. Berkeley wrote the preface, the responsibility for the translated form was his. Even in its emasculated form the book was successful, and was translated into German, French, and Spanish. Another account of the Patagonians due to Father Falker is found in the works of Thomas Pennant, who described his essay as "formed from the relation of Fr. Falker, a Jesuit, who had resided among them thirty-eight years". On leaving Spetchley, he became chaplain to Mr. Berington of Winsley in Herefordshire, and afterwards to the Plowden of Plowden Hall in Worcestershire. After his death, which had occurred at the latter place, the Spanish Jesuits, who had known him in South America, were very anxious to obtain his unpublished works, which included treatises on the botanical and mineral products of America, and "American distempers as cured by American dressings". But Fr. Falker had also edited "Volumina duo de anatomia corporis humani".

Fall, the. See Sin.

Fall River, Diocese of (Riverbormensis), U.S.A., a suffragan see of the province of Boston, comprises the counties of Bristol, Barnstable, Dukes, and Nantucket, with the towns of Marion, Mattapoisett and Wareham in Plymouth county; Massachusetts, an area of 1194 square miles. The diocese was created 12 May 1954 by a division of the Diocese of Providence, which had included the entire State of Rhode Island and a portion of south-eastern Massachusetts, and has the distinction of being the first diocese erected by Pope Pius X. The total population of the diocese is 506,438, of which 129,650 are Catholics, 26,000 are Americans, Irish, French-Canadians, Portuguese, Poles, and Italians, with some few Greeks and Syrians. The heavy immigration in years past of the Irish and French-Canadian people has caused them to far outnumber the Catholics of other nationalities; but this immigration is now at a standstill, while that of Portuguese and Poles is steadily on the increase. The diocese, by reason of recent creation, has no history of its own, its records being included in the history of the Dioceses of Boston, Hartford, and Providence (q.v.), in each of which its territory has successively been included.

WILLIAM STANG, the first bishop, was born in 1854 in Langenbrücker, in the Grand Duchy of Baden, Germany. His early education was received in the gymnasium of his native land and the petit séminaire at Saint-Nicolas, Belgium. In October, 1875, he began the study of theology at the American College, Louvain, Belgium, where he was ordained priest in 1878. In September of the same year he emigrated to America, to labour in the Diocese of Providence, where his first assignment was to the cathedral. In 1884 he assumed the charge of St. Ann's parish, Cranston, Rhode Island. Shortly after he was named rector of the cathedral and chancellor of the diocese, positions which he ably filled until 1895. In April of that year he went to Louvain to become vice-rector of the American College, Georgetown University, in 1887, had conferred upon him the degree of doctor of theology; but a greater recognition awaited him. In August, 1898, the Belgian bishops as the governing body of the University of Louvain, to which the American College is affiliated, named him professor of fundamental moral theology in the schola minor of the university. In April, 1899, he returned to Providence, to become head of the diocesan Apostolate Band. While still head of the latter, in 1901, he was made pastor of St. Edward's church, Providence, and on 12 March, 1904, was consecrated bishop of the newly erected See of Fall River. His consecration took place in the cathedral, Providence, 1 May, 1904. In the short space of two years and nine months he proved himself to be a zealous, indefatigable worker, and charitable to an extreme. He died 2 February, 1907, in St. Mary's Hospital, Rochester, Minnesota. Bishop Stang was the author of a number of works, notably: "Pastoral Theology" (1896); "Historioepigraphia Ecclesiastica" (1897); "Business Guide for Priests" (1899); "Pepper and Salt" (1901); "Socialism and Christ" (1893); and "Foundamentals Theologiae Moralis" (1898). He also left many pamphlets and essays and contributed frequently to the "American Ecclesiastical Review".

DANIEL FRANCIS FEHRAN, the second incumbent of the see, was b. in 1855, at Athol, Massachusetts. His classical and preparatory studies were pursued in St. Mary's College, Montreal, Canada, from which he graduated in June 1876. During the three following years he studied theology at St. Joseph's Seminary, Troy, New York, where he was ordained priest 20 December, 1879. Parish work in western Bright and Fitchburg in the Diocese of Springfield engaged his energies until 1889, when he was made permanent rector of St. Bernard's, Fitchburg He was in charge there when, on 2 July, 1907, he was appointed second Bishop of Fall River, and consecrated 18 September following.

The diocese has a well-equipped educational system. There are 28 parochial schools with a staff of 191 teachers and an enrolment of 10,451 pupils, 4464 boys and 5987 girls. There are three convent boarding schools conducted by the Sisters of the Sacred Hearts, the Sisters of St. Dominic, and the Sisters of Jesus and Mary, respectively. A boarding college for boys and young men pursuing classical and commercial courses is under the guidance of the Fathers of the Sacred Heart. The Christian Brothers have a well-equipped liberal education school with a register of 363 pupils. An industrial school for girls is conducted by the Franciscan Missionary Sisters of Mary.

Charity is also well organized. A large hospital, St. Ann's, at Fall River, is managed over by the Dominican Sisters of Charity of the Presentation. Three orphan asylums directed by the Sisters of Mercy, the Sisters of Charity (Grey Nuns), and the Sisters of St. Francis, respectively, shelter 600 orphans. In connection with one of these asylums is maintained a home for the aged. Admirable work has also been done by the St. Vincent de Paul Society.

There are 108 secular and 20 regular priests labouring in the diocese. Of the secular clergy 57 are English-speaking, 30 French-speaking, 15 Portuguese, 9 Poles, and 1 Italian. The Dominican Fathers of the Sacred Hearts, and the Christian Brothers have communities, as also have the Sisters of Charity (Grey Nuns), Dominican Sisters of Charity of the Presentation, Sisters of St. Dominic, Felician Sisters, Francis- can Missionaries of Mary, Sisters of the Holy Ghost, Sisters of Holy Cross and Mountains, and Sisters of the Holy Union of the Sacred Hearts, Sisters of Jesus and Mary, Sisters of Mercy, Sisters of St. Joseph (Le Puy), and Sisters of St. Francis.

EDWARD J. CARR.

Fallopio, Gabriello, anatomist, "one of the most important of the many-sided physicians of the sixteenth century" (Haesser; b. at Modena, Italy, 1523; d. 9 October, 1562, at Padua. Some writers have placed his birth as early as 1490, but contemporary authority is for the date mentioned. His family was noble but very poor and it was a hard struggle he succeeded in obtaining an education. He studied medicine at Ferrara, at that time one of the best medical schools in Europe. After taking his degree he worked at various medical schools and then became professor of anatomy at Ferrara, in 1548. He was called the next year to Pisa, then the most important university in Italy. In 1551 Fallopio was invited by Cosimo I, Grand Duke of Tuscany, to occupy the chair of anatomy and surgery at Padua. He held also the professorship of botany and was superintendent of the botanical garden. Although he was only then in his fortieth, he had made his mark on anatomy for all time. This was the golden age of anatomy and Fallopio's contemporaries included such great anatomists as Vesalius, Eustachius, and Columbus. It has sometimes been asserted that he was jealous of certain of the great days of anatomy and that this is the reason for his frequent criticisms and corrections of their work. Haesser, whose authority in medical history is very high, declares that Fallopio was noted for his modesty and deference to his fellow-workers and especially to Vesalius. His purpose in suggesting corrections was the advance of the science of anatomy. Fallopio's own work dealt mainly with the anatomy of the head. He added much to what was known before about the internal ear and described in detail the tympanum and its relations to the ossicous ring in which it is situated. He also described minutely the circular and oval windows (fenestrae) and their communication with the vestibule and cochlea. He was the first to point out the connexion between the mastoid cells and the middle ear. His description of the lachrymal passages in the eye was a marked advance on those of his predecessors and he also gave a detailed account of the ethmoid bone and its cells in the nose. His contributions to the anatomy of the bones and muscles were very valuable. It was in myology particularly that he corrected Vesalius. His studies had a direct bearing on the organs of generation in both sexes, and his description of the canal or tube which leads from the ovary to the uterus attached his name to the structure. Another structure, the little canal through which the facial nerve passes after leaving the auditory, is also called after him the aquaeductus Fallopii. He was much more than a discoverer in anatomy. His contributions to practical medicine were important. He was the first to use an auricular speculum for the diagnosis and treatment of diseases of the ear. His writings on surgical subjects still of interest. He published two treatises on ulcers and tumors; a treatise on surgery; and a commentary on Hippocrates's book on wounds of the head. His treatise on syphilis is wonderful in its anticipation of what is sometimes thought most modern in this subject. Fallopio was also interested in every form of therapeutics. He wrote a treatise on baths and thermal waters, another on simple purgatives, a third on the composition of drugs. None of these works, except his anatomy (Venice, 1561), was published during his lifetime. As we have them they are the result of his lectures and notes of his students. They were published by Koyter (Nuremberg, 1575).

Opera Omnia (Venice, 1847); Thesaurus, Biblioteca degli Scrittori Moderni; Annals of the Anatomical and Surgical Society (Brooklyn, 1880).

FALLOUX

Falloux du Gouray, Frédéric Alfred Pierre, vicomte de, b. at Angers, 7 March, 1811; d. there 6 Jan., 1885. Two persons are largely responsible for the moulding of his character, his mother, who was at the court of Louis XVI, and Madame Swetchine, whose "Life and Letters" he later published. The first works by which he did write was published the future statesman as a man of unyielding principles. His "Histoire de Louis XVI" (Paris, 1840) exhibits him as a staunch monarchist; in it he maintains that the needed reforms could have been accomplished by the monarchy without the Revolution. His "La Sainte Pie V" (Paris, 1844) ably sustains the traditional thesis that the Church may use coercion to prevent the spread of heresy. Nevertheless, in less than ten years this same bishop made the archbishop's seat in Berlin under President Louis Bonaparte; this defender of the coercive authority of the Church was ranked among "Liberal Catholics". To take advantage of opportunities thus thrown open to Falloux's maxim as a practical statesman.

Under the monarchy de Falloix was elected (1836) deputy for Segre on a legitimist platform; in 1848 he was chosen a member of the Constitutional Assembly to represent Maine et Loire, on a platform which supported the social aspirations of the time as compatible with Christian ideas. It was at his suggestion that the Catholic members helped to elect Buches president of the Assembly. To de Falloix, as mouthpiece of the committee charged with the question of investigating the "national workers", was assigned the perilous duty of proposing their abolition; this measure was followed by the bloody insurrection of June. Those who blame him for this action overlook the fact that he was neither the first nor the only one to insist on this inevitable measure and uniquely attribute to him a Machiavellian scheme by which, in the interest of his religious policy, he sought to goad the advanced parties to compromise their cause by disorder and rioting. As a matter of fact the sight of these excesses brought home to Thiers the necessity of moral restraint as a part of education, and thus led him to collaborate with de Falloix in promoting the educational projects of the latter. Minister of Education from December, 1848, until 31 October, 1849, de Falloix immediately determined to push vigorously against the materialist monopoly of the universities the campaign which Montalembert had begun during the last years of the July Monarchy. As early as 4 Jan., 1849, de Falloix appointed an extra parliamentary commission to further this scheme in the legislature and in June, 1849, while the advanced parties were still smarting under the sense of defeat, he strongly advocated the passage of a law establishing liberty of education. The assembly, however, voted against it, since the bill had not the approval of the Council of State. It was only during the ministry of Tocqueville, in which Falloix had a seat, that on 15 March his successor Paris, with the help of Thiers and Dupanloup, and despite the opposition of Victor Hugo, succeeded in having the law passed. Though de Falloix could not take part in the proceedings on
account of ill-health, the law bears his name, and rightly, for it was his work.

The aim of this law was twofold. It dealt with both primary and secondary education. In the first case, to conduct a primary school, a Frenchman had to be at least twenty-one years of age, with three years’ teaching to the poor children or certifi- cate from a commission appointed by the Minister of Education. For members of religious congregations in girls’ schools the lettres d’obédience took the place of this certificate. In the second case the law required the candidate to be twenty-five years of age, to have had five years of experience, and a degree of Bachelor of Letters, or a diploma from a ministerial commission.

The new council of the university represented the leading philosophical opinions of France; besides a commission composed of university men proper it included 3 bishops, 1 rabbi, 1 Protestant minister, 3 councillors of the high court of appeals (cour de cassation), 3 councillors of state, 3 members of the institute, and 3 members of the board of free education. In two years’ time 237 free schools sprung up, and it is from these institutions, from Sisle, from the French Parliament is now (1908) preparing to abrogate, that dates the development of the Catholic teaching orders in France. In a consistorial address (20 May, 1850) Pius IX praised it as a measure of progress. Those Catholics who opposed, as a matter of principle, the State control of the schools complained at the passing of the law, and their views found an ardent exponent in Louis Veilhout. In the Constituent and in the Legisla- tive Assembly, as minister and as deputy, de Falloux always maintained that France was obliged to protect Pius IX as a temporal ruler; he was one of the prime movers of the expédition de Rome. During the Second Empire, he withdrew from public life. In 1856 he was elected to the French Academy. In the discus- sions which took place in royalist circles during the early years of the Third Republic, de Falloux invariably declared in favour of the national flag (the tricolor) and in an article in the “ Correspondant” (1873) he insisted that neither as a policy nor as a party cry should the monarchists put forth the idea of a coun- ter-revolution. Spuller, however, declared that because of his conspicuous ability as a statesman de Falloux was one of the most dangerous opponents the Revolutionary party had to encounter during the nineteenth century. It was on the basis of liberty that de Falloux desired to combat the false principles of the Revolution. But liberty began to reduce itself, and some Nackens laws were not only the “thesis” or prin- ciple, but also the “hypothesis” or actual conditions, that certain too extreme formulas or too exacting claims were sure to prejudice rather than help the cause of the Church and the monarchy. The posthuma- publication of his “ Mémoires” in 1883 revived and added to the earlier controversies between the “Correspondant” and the “Univers” and provoked a sharp reply from Eugène Veilhout.

GÉRÔME GUYAU.

False Decretals, or THE DECERTALS of THE PSEUDO-ISIDORE, is a name given to certain apo- phyphal papal letters contained in a collection of canon laws composed about the middle of the ninth century by an author who uses the pseudonym of Isidore Mer- cator, in the opening preface to the collection. For the history of this collection, the most useful edition, is that of Hinschius, “Decretales Pseudo-Isidorianae” (Leipzig, 1863). The figures in parenthesis occurring during the course of this article refer the reader to the edition of Hinschius. The name “False Decretals” is sometimes extended to cover not only the papal letters forged by Isidore, and contained in his collection, but the whole collection, although it contains other documents, authentic or apocryphal, written before Isidore’s time.

The Collection of Isidore falls under three headings: (1) A list of sixty apocryphal letters or decrees attrib- uted to St. Gregory the Great (590–604), St. Leo the Great (440–461), St. Leo the Third (795–816), St. Gelasius (350–369), St. Damasus (366–384), and St. Paschal (817–824), and a second list of twenty-six decrees of the same type. These are essentially apocryphal and have no historical value.

The Collection of Isidore falls under three headings: (2) A list of sixty apocryphal letters or decrees attrib- uted to St. Gregory the Great (590–604), St. Leo the Great (440–461), St. Leo the Third (795–816), St. Gelasius (350–369), St. Damasus (366–384), and St. Paschal (817–824), and a second list of twenty-six decrees of the same type. These are essentially apocryphal and have no historical value.

were pointed out by two Catholic priests, the brothers Ballerini, in the eighteenth century.

How the Forgery was done.—Isidore was too clever to invent these documents in Ito, out of his own head. For most part he plagiarized them in substance, and for the balance he made use of certain data such as the "Liber Pontificalis", a chronicle of the popes from St. Peter onward, which was begun at Rome during the first twenty years of the sixth century. For instance, in the "Liber" it is recorded that such a pope issued such a decree which had been lost or mislaid, or perhaps had never existed at all. Isidore seized the opportunity to supply a pontifical letter suitable for the occasion, attributing it to the pope whose name was mentioned in the "Liber". Thus his work had a shadow of historical sanction to back it up. But it was especially in the form of the letters that he forgery played the plagiarist. His work is a regular mosaic of phrases stolen from various works written either by clerics or laymen. This network of quotations is computed to number more than 10,000 borrowed phrases, and Isidore succeeded in stringing them together by that loose, easy style of his, in such a way that the many forgeries perpetrated either by him or his assistants have an undeniable family resemblance. Without doubt the art of the most of them of his day. From Blondel in the seventeenth century to Hinschius in the nineteenth, even up to quite recently, efforts have been made to discover all the texts made use of in the false Decretals. They make up quite a library. It is clear that the forger could not have had at hand the entire text written he drew. He must have been content with extracts, selections, florilegia. But then we can only fall back on conjecture.

Isidore might have united the hundred documents, he had forged in one single homogeneous collection, which been exclusively his own work, and have secured its circulation, but, clever man that he was, he chose a different plan. To baffle suspicion he inserted or interpolated all his forgeries in an already existing collection. There was a genuine canonical collection which had been drawn up in Spain about 639, and was known as the 'Hispana', or Spanish. It contained (cf. Migne, P. L., LXXXIV, 93-848) first of all the texts of the councils from that of Nicea; secondly the decretes of the popes from Damascus (306-384). Isidore took the volume and prefixed to it the first part of the 'Trestes'. He had already written to the bishops of the old Hispana, i.e. the genuine pontifical letters since Pope Damascus, but he inserted here and there among them the letters he had forged under the names of the various popes between Damascus and Gregory I (590-604). He was not yet safe, however. So, in order to give a more impressive appearance to the work, he inserted other documents not forged by him, but borrowed bodily from other collections of canon laws. Besides all this he interpolated many additions to authentic documents and added several prefaces to bolster up the fraud. To simplify this description it has been assumed that the forger made use of the unadulterated text of the Hispana. But as a matter of fact he used a French edition, and a very incorrect one at that, of the Hispana, and which was known on that account as the "Hispana Gallica", or French Hispana, which was one of the best editions, found in the MS. 411 of the Latin Documents in the Library of Vienna. Furthermore, the forger tampered with the text of this French Hispana, so that his copy became, so to speak, a third edition or revision of the old Hispana. This is known as the "Hispana Gallica Augustodunensis", or "of Aix", so called because the Latin MS., 1341, of the Vatican, which contains it, came from Autun. This collection likewise has remained unedited.

The Isidorian collection was published between 847 and 852. The one has been published before 852, because Hinemar quotes the false decretal of Stephen I (p. 183) among the statutes of a council (Migne, P. L., CXXV, 775), and on the other hand it cannot have been published before 847, because it makes use of the false capitularies of Benedict-Levis, which were not concluded until after 21 April, 847. As to the place where the Decretals were forged, critics are all agreed that it was somewhere in France. The documents used by the forger, and especially those relating more nearly to his own epoch, are nearly all of French origin. A clue of the various forgeries of 852, the forger bore the French edition of the Hispana. He also makes use of the "Dionysios-Hadriana", collection, which was the code of the Frankish Church, and of the Quenel collection, which had a French origin. Moreover, he refers to the Councils of Meaux and of Autun of 836, and to that of Paris of 829, etc. On legal matters he quotes the "Breviariam" of Ailari. When he refers to civil affairs it is those of France he illustrates by. Lastly, it was in France that his work was first quoted, and finally it was in France that the famous men of his day. From Blondel in the seventeenth century to Hinschius in the nineteenth, even up to quite recently, efforts have been made to discover all the texts made use of in the false Decretals. They make up quite a library. It is clear that the forger could not have had at hand the entire text written he drew. He must have been content with extracts, selections, florilegia. But then we can only fall back on conjecture.

Isidore might have united the hundred documents, he had forged in one single homogeneous collection, which had been exclusively his own work, and have secured its circulation, but, clever man that he was, he chose a different plan. To baffle suspicion he inserted or interpolated all his forgeries in an already existing collection. There was a genuine canonical collection which had been drawn up in Spain about 639, and was known as the 'Hispana', or Spanish. It contained (cf. Migne, P. L., LXXXIV, 93-848) first of all the texts of the councils from that of Nicea; secondly the decretes of the popes from Damascus (306-384). Isidore took the volume and prefixed to it the first part of the 'Trestes'. He had already written to the bishops of the old Hispana, i.e. the genuine pontifical letters since Pope Damascus, but he inserted here and there among them the letters he had forged under the names of the various popes between Damascus and Gregory I (590-604). He was not yet safe, however. So, in order to give a more impressive appearance to the work, he inserted other documents not forged by him, but borrowed bodily from other collections of canon laws. Besides all this he interpolated many additions to authentic documents and added several prefaces to bolster up the fraud. To simplify this description it has been assumed that the forger made use of the unadulterated text of the Hispana. Furthermore, the forger tampered with the text of this French Hispana, so that his copy became, so to speak, a third edition or revision of the old Hispana. This is known as the "Hispana Gallica Augustodunensis", or "of Aix", so called because
the lay element in the Church. Success, even when it came, had its drawbacks. In order to devote them- selves exclusively to their spiritual duties, they were to be seen more often on the embassies than on visitations. As supplies in their dioceses they had to call in auxiliaries known as *choreiscopi*. What wonder, then, that these abuses gave rise to complaints? Especially after 829 the bishops who had exchanged their episcopal dignity for legal guarantees, for immunity of church property, for regularity of church administration, for the decrease of the number of choreiscopi and of their privileges. But all in vain; the Carlovigian nobles, who professed such ecclesiastical virtue, were powerless to better itself, could the Frankish Church count on Rome? At this very time the situation of the papacy was by no means inspiring; the Church at Rome was largely subject to the lay power in the hands of the imperial master. Sergius II (844–847) has not escaped the reproach of Simony. Leo IV (847–855) had to defend his person just like any simple Frankish bishop. In the face of such a wretched situation the juridical prescriptions of Isidore are ideal.

**Canon Law According to the False Decretals.**—The metropolitan Isidore of Seville was in communion with the pope, but only with the laws contained in the forged documents. At the outset, let it be noted that Isidore's prescriptions have to do with a very limited number of cases and recur over and over again under slightly varying forms. Yet the forger's legal system is far from having any perfect coherence. Inconsistencies, and even contradictions, are to be met within it. In the following synopsis, which is necessarily short, no notice is taken of these legal slumberings of Isidore; we content ourselves simply sum up the teachings of the false decrees, under their principal headings.

In matters concerning the relations of the political and ecclesiastical powers, Isidore sets forth the ordinary ideas of his time as to the supremacy of the spiritual over the temporal authority. Of his own authority alone, the ruler cannot assemble a regular synod; he must have pontifical authorization to do so (p. 228). That is a new requirement. A bishop may be neither accused nor condemned before a secular tribunal (pp. 98, 485). The Theodosian Code, from which the forger borrowed in this matter, granted the privilege only for minor faults. In such cases the Frankish law was not very explicit and was open to various interpretations. What is novel in Isidore is the general character of the law withdrawing bishops from the secular courts. Then again he recognizes the ecclesiastical courts in secular matters. Roman law had already recognized this. He goes on to deal with the immunity of church property, which cannot be diverted from its original purpose without sacrilege. The evangelization of Christendom is a complex story which modern criticism has retold for us, by crowing the slow onward march of the Faith. But Isidore's ideas therein were those of his time, and therefore for the most part legendary. According to him, the organization of parishes was laid down by Clement of Rome, as early as the close of the first century, and was to be modelled on the ecclesiastical divisions of Rome and of the catacombs. This meant that dioceses were also a primitive institution, and that metropolitan divisions also existed in primitive times. The Apostles were thought to have accepted the territorial divisions of the Roman Empire, which had been handed down since that time. The Forerunner reproduces the current ideas of his time. But he deserves attention when he speaks of choreiscopi, or those auxiliary bishops we have already referred to, according to him they are usurpers; so far as power of order goes, they have priestly orders and nothing more. Every bishop had to belong to the clergy null; all their sacramental acts ought to be reiterated. As a matter of fact, Isidore was wrong; choreiscopi had full power of order and might validly administer both confirmation and ordination. Isidore forged theology as well as letters. He strongly affirms the authority of the bishop of Seville in spiritual things. With him nothing else counts (pp. 77, 117, 145, 243). The bishop is monarch in his own diocese, but he does not stand alone; bonds unite him to his neighbours, and thus we have the metropolitan idea. The capital has a sort of spiritual court; the bishop has a title to be a centre of assembly for the bishops; this right is derived from the primitive division made by the popes. The province is to be governed by the provincial council, presided over by the metropolitan. On the prerogatives of this dignitary Isidore reproduces the prescriptions of the ancient law prior to the eighth century. After the middle of the eighth century the metropolitans had increased their prerogatives, and Isidore tries to ignore this de facto situation; for him nothing counts but canonical texts; the metropolitan power is to be exercised under nothing of the consent of his colleagues. The forger goes on to mention higher jurisdictions, those of primates and of patriarchs. But on these matters he shows a slight knowledge of church government in Africa and in the East, and we have one of the most glaring examples of his incoherency.

**The Authority of the Pope.**—In the many texts where the pope is in question Isidore is true to his task of plagiarizing. Very often he copies passages borrowed from ancient sources. This fact alone helps in a great measure to explain his insistence on the rights of the papacy. In many cases Isidore is but the mouthpiece repeating the sayings of the earlier popes, and we know how clear and uncompromising those early popes were on the question of their prerogatives. For example, call to mind the popes between Innocent I (401-417) and Hormisdas (514-523) and the series of their declarations. All that was well known in the ninth century, at least in theory. And it was all embodied by Isidore. But on the relations between pope and bishops he shows a certain inconstancy. Following the traditional teaching, he declares that the Apostolate and the episcopate were directly instituted by Jesus Christ. Yet at times he seems to be on the point of denying the *potestas ordinaria* of the bishops. He makes Pope Vigilius (p. 712) say: "Ipsa Ecclesiæ noverauerat, quæ in sacris suâs credidit largiandae ut in partem eam vocata sollicitudinum non in plenitudinem potestatis."

Taking this passage strictly and by itself, it would seem to deny the *potestas ordinaria* of the bishops. But nevertheless the sentence is not an intentional forgery; it is merely another case where Isidore is a plagiarist. He had got hold of a famous text by St. Leo (Migne, P. L., LIV, 671), addressed to the Bishop of Thessalonica. From the end of the fourth century this bishop had been named by the popes as their representative in the province of Illyricum. Hence the Bishop of Thessalonica exercised by delegation certain rights belonging to the popes in those countries by reason of their title of Patriarch of the West. About 446, St. Leo had to find fault with the Bishop of Thessalonica, not in his character of bishop, but as legate, of the representative of the Pope. At one occasion the pope pointed out to his vicar in Illyricum that he had received merely a partial delegation, not a plenitude of power. It is clear, then, that the text in question referred to a peculiar relation between the Pope and the Bishop of Thessalonica. St. Leo's words are quite accurate; but, applied to all bishops, they cease to be so, and might easily create much confusion. Isidore further de-
mands that provincial councils be held at regular intervals. He asserts for the pope the right to authorize the calling of all councils and to approve their decisions. Laid down in this general and imperative manner, these claims were something new. Nothing like it had ever been given by a pope, no, not even by the popes that had held the title of bishops of Rome for centuries. For, when the church was a small and isolated society, the bishops were in a position to make their own decisions, and the Holy See was not a mere central authority.

In the case of Isidore's legislation, however, the situation was different. The church was now a vast and powerful empire, with thousands of priests and monks, and the need for a central authority was greater than ever. The pope's decisions were no longer to be taken lightly, and the Holy See's influence was felt throughout the empire. Isidore's laws were therefore given great weight, and the church was able to maintain its position as the dominant force in Europe.

The ecclesiastical trial system, which Isidore established, was a significant departure from the way trials had been conducted in the past. In the old system, trials were held in the local dioceses, and the church's authority was limited to the jurisdiction of the bishop. With Isidore's legislation, however, the pope was given the power to override local decisions and to conduct trials in Rome. This gave the church a new level of control and allowed it to enforce its laws more effectively.

Isidore's laws were also designed to protect the church from accusations of corruption and abuse. The church was known for its wealth and power, and there were always those who sought to take advantage of it. Isidore's laws were designed to prevent such abuse, and they were enforced with great severity. The church's reputation for justice and fairness was greatly enhanced by Isidore's legislation.

In conclusion, Isidore's legislation was a significant departure from the way the church had been governed in the past. It gave the pope a new level of power and control, and it allowed the church to enforce its laws more effectively. Isidore's laws were also designed to protect the church from accusations of corruption and abuse, and they were enforced with great severity. Isidore's work was a key factor in the church's rise to power and influence in Europe.
And, as a matter of fact, is his collection more complete than any other? Even a summary examination soon shows that there are many lacunae in this collection of canon law. It omits all mention of many important matters, governing of rural parishes, ecclesiastical benefices, tithes, simony, the monastic life, questions concerning the matrimonial laws, privileges and dispensations, and the like. The governing of parishes and the question of benefices were of vital interest when Isidore lived. Though not quite so acute as during the tenth and eleventh centuries, these points of law became occasions of conflict between the Crown and the local church, and the progress of canon law. They were already preoccupying men's minds, and as Isidore does not refer to them he can hardly claim to have wished to supply a complete ecclesiastical code. So we are driven to conclude that he had a very special object in view in composing his partial code. How are we to discover what this object was? Evidently by examining the documents he forged. There, if at all, are to be found his dominant ideas. And such an examination is by no means difficult after what we have just said concerning the legal side of the reform movement. There is evidence that it requires no very laboured analysis to discover it. His chief aim is to assure the dignity and fruitfulness of the episcopal office. In his view the dioecesis is the life-giving centre of the whole ecclesiastical organism, and the vitality of this centre is his chief concern. And by the very nature of his position it may be argued that, while he is indeed concerned to safeguard the authority of the bishops, he is even more careful to increase that of the pope. This was a view long in favour among both Gallicans and Pontificals, but it is no longer the fashion. In our day critics are, on the whole, agreed that the immediate object of Isidore was to win respect for the episcopal authority. If he touches on the prerogatives of the pope, it is never in the interests of Rome, but always in those of the bishops. It was for this that he tried to facilitate appeals to Rome. But in his idea the role to be played by the pope would not restrict the rights of the bishops. It has been observed that Isidore does not mention the temporal power of the popes, and that he never thinks of turning to profit Constantine's pretended donation to the Church of Rome, nor does he seem to aim at increasing the French pontificate at Rome. Yet if his object had been to favour the Holy See, how differently would he have gone to work. Now, if we compare these aims of Isidore with the actual situation of the Frankish Church when forged, between the years 847 and 852, it will be evident that false decretals are directly opposed to the chief abuses which the bishops were the victims at that time: condemnations of a political character, neglect of the episcopal office, and the establishment of choreispiscopate. This explains the lacuna in Isidore's ecclesiastical code. He was fighting against urgent and glaring abuses. A contemporary is always at a disadvantage in forming a clear opinion of his age, of those deep causes of which the slow but inevitable evolution is inseparable. And hence it was that Isidore confined himself to things that were more or less on the surface in the everyday life around him. If he foresaw other dangers in the path of the Church, he certainly made no attempt to provide against them.

It is not only true, however, that Isidore was a forger. But there are forgers and forgers. Let us not forget that the false decretals are from the same workshop that forged the capitulare of Angibranne (Angi- ram) and the false capitularies of Benedictus Levita. We must not say that he had been but a natural step to the forging of pontifical letters. For this new work Isidore owed much to the "Liber Pontificalis", or chronicle of the popes. Thus when the Liber tells us that such a pope issued such a decree long since lost, the forger noted the fact and set to work to invent a decree for his collection along the lines hinted at by the "Liber". This is a method well known in diplomatic work, and one that has left us the acta rescripta, of which we have many specimens in ancient charters. These acts rescripta are documents which, at a date long subsequent to that they bear, and because the originals or ancient copies of them have been damaged or lost, were drawn up by the aid of the remnants of the originals, or from extracts therefrom, or analyses of them, or at times from mere tradition concerning their contents (cf. Giry, "Manuel de diplomatique", Paris, 1901). In fact, in no previous opinion many of the false decretals were merely such acts rescripta. It was not a very honest proceeding, and Isidore was far from being scrupulous. With a faint modification it might be said of him as of another forger in the seventeenth century, the craftsman Father Jérôme Vignier, "He was the greatest liar in Paris." But men of the ninth century must not be judged according to modern ideas of literary morality. Neither can the false decretals be looked at as a purely literary work. They are a landmark in the evolution of church law down to the twelfth century. They are not self like other things, but under conditions of its own, and step by step with the social life it regulates, and which it must keep pace with in order to regulate. The state of society, the ensemble of its customs, change more or less according to time and place, and in this way might be thought to be exemplified to any degree, by causing a chasm between former legislation and the newly born needs of a changed society. The written laws no longer meet the requirements of the social state they ought to regulate, and a readjustment of legal provisions becomes necessary. History shows us that this may take place in many ways, according to the nature of the desired change and the surroundings in which it takes place. It may be effected by the gradual substitution of new laws for those that have grown antiquated or, less courageously, by what is known as a creative interpretation of existing laws, of which we have many examples in Roman law; and again, in desperate cases, the change may be brought about by forgeries, when no other means seems practicable. Now, in the middle of the ninth century, when Isidore was forging, there was no change in the law, but only an obstinate effort to continue to apply its rules of canonical legislation did not seem to be the best possible to meet the existing state of ecclesiastical affairs. The reform councils of the ninth century had tried to bring about the new laws demanded by the situation, but the lay power had blocked the way. And thus the evolution goes on, and still the old obstacles were there, and the law was constrained to seek freedom on another. Unable to advance in normal fashion, a canonist whose intentions were more commendable than his acts betook himself to calling in the aid of the forger. It is impossible to condone such forgeries, but the history of the case puts us in a better position to judge them, and even to discover extenuating circumstances in their favour, by emphasizing the powerful forces at work in the society of the period, and which were acting with that one may call historical causes. Moreover, the false decretals are the work of private enterprising and have no official character. The theory that they were planned in Italy has been long since abandoned. They are of purely Gallican origin, and if they deceived the Church, the Church accepted them in good faith and without any complicity, the rules of canonical legislation did not seem to be the best possible to meet the existing state of ecclesiastical affairs. The reform councils of the ninth century had tried to bring about the new laws demanded by the situation, but the lay power had blocked the way. And thus the evolution goes on, and still the old obstacles were there, and the law was constrained to seek freedom on another. Unable to advance in normal fashion, a canonist whose intentions were more commendable than his acts betook himself to calling in the aid of the forger. It is impossible to condone such forgeries, but the history of the case puts us in a better position to judge them, and even to discover extenuating circumstances in their favour, by emphasizing the powerful forces at work in the society of the period, and which were acting with that one may call historical causes. Moreover, the false decretals are the work of private enterprising and have no official character. The theory that they were planned in Italy has been long since abandoned. They are of purely Gallican origin, and if they deceived the Church, the Church accepted them in good faith and without any complicity, the rules of canonical legislation did not seem to be the best possible to meet the existing state of ecclesiastical affairs.

The Spread.—We saw above, in the case of Hincmar, that Isidore's forgeries were known among the Franks as early as 852. In Germany we hear of them a little later. We find traces of them in the Acts of the councils of Germany dating from that of Worms in 868, but in Sarum, where we find them for the first time, and they seem to have been hardly known there. They found their way into England towards the close of the eleventh century, probably through Lanfranc, Arch-
bishops of Canterbury. Their reception in Italy is of greater importance. It occurred probably during the pontificate of Nicholas I (858-867). It seems certain that he knew of the decreals, and it is possible that he may have even possessed a copy of them, and showed papal respect to them also. The text of the decreals was made by Bishop Rodthae of Soissons, who had got into difficulties with his metropolitan, Hinmar of Reims. Rodthae reached Rome about the middle of 884. He had already caused his appeal to be presented to the pope, but he now explained his case in detail. It was to his opinion that the authorship of the false decreals, and he did not fail to do so. This is proved by a letter written by Nicholas I on 22 January, 863, dealing with Rodthae's appeal. Pope Adrian II (867-872) was acquainted with them, and in a letter dated 26 December, 871, he approves of the translation of Actard, Bishop of Nantes, to the metropolitan See of Tours, and quotes apropos one of the false decreals. Quotations made by Stephen V (883-891) are not conclusive proof that he directly used Isidore's text; and the same may be said of the other references to the eleventh century, which occur in the letters of the popes or of the papal legates. However, other authors in Italy show less reserve in using the false decreals. Thus, at the end of the ninth and the beginning of the tenth century, he pointed out the inaccuracy of the text. Isidore in the treatises he wrote in defence of the ordinations performed by Pope Formosus (891-896). It is true that Auxilius was born among the Franks; as was also Ratther, Bishop of Verona, who likewise quotes Isidore. Attone of Verceil, however, was an Italian, and he quotes him. At the end of the ninth century and during the tenth, extracts from the false decreals begin to be included in canon law collections—in the collection dedicated to Bishop Anselm of Milan, in the Régimen collection about 908, among the decrees of Benedict VIII. It contained all the decreals, until the middle of the eleventh century the false decreals did not obtain an official footing in ecclesiastical legislation. They were nothing more than a collection made in Gaul, and it was only under Leo IX (1048-1054) that they took firm hold at Rome. When the Bishop of Toul became pope and began the reform of the Church by reforming the Roman Curia, he carried with him to Rome the apocryphal collection. Anselm of Lucca, the friend and adviser of Gregory VII, composed an extensive collection of canons among which he included the false decreals. It is clear that what happened in the case of Cardinal Deusdedit's collection made about the same time. And finally, when in 1140 Gratian wrote his "Decree" he borrowed extensively from Isidore's collection. In such manner it gained an important place in schools of law and jurisprudence. It is true that the Gratian collection had never the sanction of being the official text of ecclesiastical law, but it became the textbook of the schools of the twelfth century, and, even with the false decreals added to it, it retained a place of honour with the faculty of canon law. It is still to be found in the text of the "everyday" instructor on the things most essential to be known. And the faculty of law styled itself faculty of the Decree; which shows how important a place in the schools was given to the Isidorian texts inserted in the decreals.

Influence.—For a long time the Gallicans and the Protestants dwelt on the innovation contained in these apocrypha and on the rights, altogether novel, which they conferred on the popes and which would never have come to pass had it not been for these forgeries. Nowadays Isidore's aim is understood to have been quite different. His chief concern was to defend the bishops; and if the papacy profited by what he did, it can be shown that it was a necessary consequence of the pope's being made the champion of the bishop. And even though it must be admitted that the popes benefited by the forgeries, their good faith is beyond question. Isidore wrote a long way off from Rome; he deceived his own neighbours in France, and among them the learned Hincmar of Reims. What wonder, then, that he deceived the people also, who were always ready to believe the forgeries of Bishop Rodthae of Soissons about the summer of 884? It is true that some have hinted that Nicholas I erred against truthfulness; that he pretended that the Isidorian texts were contained in the archives of the Roman Church, an assertion not only inept but untruthful (Migne, P. L., II, 901). But as a matter of fact his words do not necessarily mean that at all. What he does say refers equally to the authentic decreals not included in the Dionysio-Hadriana collection. On the dubious interpretation of an obscure text it is not fair to bring a charge of untruthfulness against a man of character like Nicholas I. And if an unfavourable interpretation be accepted as the real one, the blame falls on the draftsman of the pontifical letters, the famous Anastasius the Librarian. Another reason for not impugning the honesty of Nicholas I under the above-mentioned circumstances is that he had neither the necessity nor the need to adduce precedents; he had no interest in approving of Isidore's letters. Indeed, he is much more reserved in his treatment of them than the Frankish bishops were at that very time. In that very letter of 22 January, 863, clearly directed to the popes and when it is to their own interest, they quote the letters of the early popes (i.e. Isidore's forgeries), and when the letters are unfavourable to them, they repudiate them. We saw above that according to Isidore's judicial system a bishop dispossessed of his see by violence and then hailed to the courts had the right to plead the fact of disposition in order to escape appearing before the courts, and that he must first be provisionally restored to his possessions and honours so as to arrange properly for his defence. No doubt Isidore had not presented this law and this matter to the pope. He did not use it for himself, and he did not use it for precedents and even laws for it. But he made such procedure an essential factor in canon law. And it is an undoubted fact that from the year 884, in cases such as the one we refer to, Isidore's ideas and expressions exercised a marked influence on the conduct and decisions of Nicholas I. There is nothing calling for adverse criticism in all this as far as Nicholas is concerned. As a piece of legislation it was altogether in favour of the bishops. From another point of view it is important to consider whether, in the appeals of bishops before that time, Nicholas I was really influenced by Isidore's forgeries.

What we have already said concerning the forger's objects and aims limits the bearing of this question to a great extent. As a piece of general hard and fast legislation, Isidore's method of procedure was quite new. But the practice of the popes and the custom of the ecclesiastical courts supplied precedents which more or less bore out the principles laid down by Isidore. Hence we see that if Nicholas I made use of the apocrypha to justify his teaching on appeals to Rome, we must necessarily allow that he relied on a forged document; but even then we should not be obliged to admit that he was influenced by teaching altogether foreign to ecclesiastical antiquity, but only that by means of Isidore he was put in touch with teaching closely resembling that of St. Leo and of Gelasius, two popes of the fifth century. And, as a matter of fact, did Nicholas I gain his teaching concerning appeals from these apocrypha? We have no proof whatever that he did. His firm and solid conviction of the rights of the Holy See had nothing to learn from the weak inventions of a forger among the Franks; he had learned those rights in the school of Roman traditions dating from the fifth and sixth centuries. We can admit, that, while the pope's contention is justified, the arguments with which he supports it are at times open to attack. Thus, in a letter addressed to the
Council of Soissons in 863, he wishes to assert his right to intervene in the trials of bishops, even when there was no question of an appeal to Rome. This amounted to an assertion of the absolute power of the Holy See, a claim he might have supported by many solid arguments; yet what is our surprise to find him claiming in his letter to the bishops of Sardica, which says nothing of the sort. The Council of Sardica (343) intended very particularly to safeguard the legal rights of bishops who were being persecuted; that was its main object, and it by no means intended to define the rights of Rome in matters of the kind. These canons mark one of the early steps in the question of church discipline.

The claim of Nicholas I ought to have been supported by texts from the fifth and sixth centuries; and in the case in question his object was much more creditable than the reasons he gave in support of it. On the whole, then, from the beginning of his pontificate, and before he knew of the Isidorian texts, Nicholas I was in full sympathy with the ideas expressed therein. Acquaintance with those texts did not seriously affect him. According to the bishops, decrees 22 January, 865, apropos of Rothade, he put the theory on appeals much after the manner in which Isidore had put it: so much so, that one writer speaks of the *parfum isidorien* that letter exhales (Fournier). If the letters of the early popes (i.e. the decrets of Isidore) from Reims, appear to us at least eminently Isidorean. But from all that has been said we must conclude that Nicholas I took none of its essential ideas from Isidore, and that any influence he did exercise on that pope was too insignificant to be taken into account. A pontificate so filled with enterprises of daring and of moment. And this conclusion in Nicholas's case gives us more or less the answer to the further question as to how far the apocrypha influence the subsequent history of the Church. As we have seen, even without Isidore, Nicholas I would have brought about the same mode of government. And it has been well said that the principles of Nicholas I were those of Gregory VII and of the great popes of the Middle Ages; that is to say, Isidore or no Isidore, Gregory VII and Innocent III would not have acted otherwise than they did. As a matter of history, such a conclusion is quite justifiable, and as far as apologetics go it is quite sufficient answer. In the domain of theology and canon law, Isidore's forebears never had any serious consequences. Having said that, we are free to confess frankly that in the science of those professors of theology and law, the false decrets have not always exercised a fortunate influence. On history, for instance, their influence was baneful. No doubt they do not bear all the blame for the distorted and legendary view the Middle Ages had of ecclesiastical antiquity. During the Middle Ages it was almost an impossibility to consult all the sources of information, and it was difficult to check and control those at hand. It was not easy to distinguish genuine documents from apocryphal ones. And this difficulty, which was a stumbling-block of medieval culture, would have been all the more an obstacle to the progress of historical study. It must be admitted that Isidore's forgeries increased the difficulty till it became almost insurmountable. The forgeries blurred the whole historical perspective. Customs and methods proper to the ninth century stood out in relief side by side with the discipline of the first centuries of the Church. And, as a consequence, the Middle Ages knew very little concerning the historical growth of the rights of the papacy during those first centuries. This was a very simple one, and perhaps it was just as well for the systematic degrading of theology. In the main, it was no easy matter to develop a historical sense during the Middle Ages. The absence of such a sense is all the more remarkable when we consider what civilization owes the Middle Ages in the realms of philosophy, theology, and architecture.

Place of Origin.—We have purposely reserved this question for the end. In the first place, it is of less importance than the others; and in the second, whereas critics are for the most part in agreement concerning the influence that theory has had on the Church, the question of its origin is divided into two parties on this final question. For a time the decrets were thought to have been forged at Mainz, but that theory has been altogether abandoned, and now the disputed honour lies between Reims and Le Mans in the province of Tours. Here are the arguments put forth on both sides. The majority of German critics and a section of those in France favour Reims as the place where the decrets originated. According to them, Isidore's legislation concerning the trial of bishops was intended to support the cause of Ebben. Archbishop of Reims, and to facilitate the retrieval of that dignitary. Ebben had been deposed in 835 for political reasons. He was reinstated at Reims in 840; he had to leave his see in 845 and ended his career in 851 as Bishop of Hildesheim. According to the case and Isidore's procedure at trials shows such agreement that it must have been intentional; thus, for instance, the provisional restoration of the accused and disposed bishop, the arrest of the bishop, the possibility of a translation from one see to another and even the fact that the province of Reims the forgeries first appeared, and from there they were carried to Rome by Rothade of Soissons; then, too, it was in this same diocese that, ever since Ebben's time, the struggle against chorhispriesciop was most intense. Isidore's opposition to archiepiscopal authority is also very marked; and, according to the critics, the province of Reims was the birthplace of that opposition during the years that intervened between Ebben's deposition (833-841) and Hinemar's nomination (845); hence the conclusion that the forgeries were committed between 847 and 852 by partisans of Ebben, and probably by clerics ordained by him in 841, and against whose ordination Hinemar, Ebben's successor, raised objections soon after his election. This cumulative mass of argument is impressive; but to be really conclusive it would be necessary to prove that Isidore's legislation was invoked by these clerics against their archbishop, before his death in 851 or at least before 853, when the Council of Soissons was held, in which the ordinations held by Ebben at Reims in 841 after his restoration were declared invalid. No such proof is given. The documents in favour of Ebben in which is discovered a similarity to the teaching of the apocrypha are later than 853. At that time Isidore's work had begun to spread. That it was known and used at Reims after 853 is not at all surprising and is no proof of its having been composed in the Province of Reims. Furthermore, if these apocrypha had been composed in favour of Ebben and of the clerics he ordained, then the question of the validity of ordinations performed by a deposed bishop ought to have been treated of. Yet not a word is said concerning this; while, on the other hand, Isidore submits all questions concerning clerics up to and including priests to the metropolitan council and to the primates. No mention is made of an appeal by priests to Rome, an omission that is inexplicable if the documents were written in favour of the clerics ordained by Ebben, and who are supposed to have been the actual writers. Add to this that the period 847-852, when the forgery was committed, was for the clerics of Reims, Ebben's partisans, a period pending appeal and a time of enmity with Hinemar. For the moment, they had reason to pestsuch a weapon against the archbishop. Lastly, P. Fournier points out that the theory which makes Reims the scene of the forgery in opposition to Hinemar is at variance with what we know of Hinemar's attitude.
If Hincmar had the faintest suspicion that the decreets were aimed at him, he would have treated them differently. Though he had a suspicion that one or other document had been forged in part, he offered no objection to the collection as a whole. But it is certain that he would have spared no pains to discredit a code which could be a weapon against him. This, in the whole, then, this theory is an attractive one; but while no solid proof can be brought in its favour, many solid arguments can be brought against it.

There is another set of critics who fix on the province of Tours and the neighbourhood of Le Mans as the scene of the forgeries, and who maintain that the forgeries are Langen, Döllinger, M. M. Simson, Violet, J. Havet, P. Fournier and L. Duchesne. According to them, the forged legislation on the trial of bishops and the organization of dioceses and ecclesiastical provinces aim at a state of things existing in Brittany after 845, when Néonoé, Duke of Brittany, gained a victory over Charles the Bald. At that time Brittany was eager for independence, in the ecclesiastical as well as in the civil order. The bishoprics in Brittany were subject to the metropolitan of Tours, and the Crown was anxious to retain for its own ecclesiastical subjection as a pledge of political subordination. On the other hand, the Duke of Brittany was anxious to get rid of four bishops whom he suspected of favouring the Franks. He gave them a quick trial and expelled them. Did the Duke of Brittany write to Pope John VIII, or to Rome, and about 847 Leo II wrote a letter to the Duke of Brittany reminding him of the claims of canon law. The whole thing caused much commotion among the Franks and at Rome. As it was a matter of public knowledge, and more or less contemporary with the appearance of the decreets, nearly all the critics are agreed that Isidore had this affair in his mind when he wrote, and that many of his laws presupposed some such state of affairs as existed in the province of Tours and the Church of Brittany. These are only appearances, however, and we want precise proofs, something more definite. Now the critics in question think they recognize a family likeness between two documents which were certainly written at Le Mans and the decreets of Isidore. The first of these is the apocryphal Bull of Pope Gregory IV (827-844) and the letter (Migne, P. L., CXLV, 853) the pope recognizes the right of the Bishop of Le Mans to take his case to Rome whenever a charge is brought against him. The letter is supposed to have been written on 8 July, 833. It is, of course, a forger's own. Sarcasm, Admonitio, 853 is its style, wonderfully similar to that of the forger. The forged Bull of Gregory IV is a mosaic of authentic texts, and very often they are texts which Isidore used over and over again.

The critics are all agreed that this forged Bull and the decreets are independent documents; that is, that neither makes use of the other. But the critics we are now considering maintain that both come from the same workshop; that they are alike in materials and methods of composition. And they further point out that the forger's own work is a masterpiece. The document itself, thus drawn up at Le Mans, they say, about 850, when Le Mans was in the hands of the Duke of Brittany. The bishop, who favoured the Franks, was in a sorry plight; and to protect him the Bull of Gregory IV was forged. We are certainly very near now to the heart of the decreets, and the family likeness between the documents would be explained by the identity of their origin. The same critics argue in the same way in the case of a memoir or story of a dispute that took place in 838 between Aldric, Bishop of Le Mans and the Abbey of St-Calais (Migne, P. L., CXV, 81-82). During the course of the trial the authority of the canons is quoted after the manner of Isidore, i.e. in mosaic-fashion made up of those fragmentary passages Isidore was so fond of using. And this document belongs to the year between 842 and 846. We are still at Le Mans and about the period when the decreets appeared. Moreover, it is a fact that there were compositors at Le Mans at this time. Now, what are we to think of these arguments? They are not without value, but not all their assumptions are correct. For instance, we have no record of a forged Bull of Gregory IV written during the lifetime of Aldric. The present writer is of the opinion that it was after his time and as a support to Robert of Le Mans, successor to Aldric, in his quarrel with the monks of St-Calais. But the question as to the date of the Bull is merely academic. The most important argument is the existence at Le Mans, about the very time when the decreets were forged, not of a document, but of two documents concocted in the very style of the forger Isidore. And there seems reason to believe that Le Mans has most claim to being the scene of the forgery of the decreets. In the interests of fairness we must, however, say one thing. As we have seen, the knowledge of the decreets shown by Pope Nicholas I dates from the visit to Rothode to Rome in 864. It is a matter, for us, of some surprise, that Nicholas should have done nothing to counteract the appeals of Robert of Le Mans, successor of Aldric. If the false decreets were forged at Le Mans, how comes it that Bishop Robert did not use them exactly as Bishop Rothode of Soissons did one of his canons in his own day? As matters stand, Nicholas I declares that the Frankish bishops appeal to the decrees of the early popes (i.e. the decreets of Isidore). And it may be that Bishop Robert of Le Mans is included in this generalization.

MANUSCRIPTS AND EDITIONS. — The MSS. of the false decreets belong to many copies, but we shall mention only three, which serve to show us how the work spread. The first class comprises twenty-five MSS. Although all of them are incomplete, yet we are able to restore the full text from them, i.e. the text of the canonical collection described above, and restored in the edition of Hinschius. A second class of MSS. contains only a part of Isidore's work. This class comprises eighteen MSS., which give Part I of the collection, i.e. the apocryphal decreets up to Melchiades, but omit Part II, and give only a portion of Part III. In these MSS. we find page 508 of the edition of Hinschius. Everything leads to the belief that the MSS. of this second class are merely extracts from the first. A third class of MSS. is represented only by number 1341 of the Latin MSS., in the Vatican Library. This is the MS. 1341, a Gr. Aug. of Gallicus Augustodunensis, of which we have already spoken. This collection may be looked on as a first edition, a trial edition of the false decreets. It does not contain Part I, i.e. the apocryphal decreets from Clement to Melchiades, but only those parts which correspond to the genuine Hispana, namely the councils and the decreets of the popes from Damascus. In this latter part the forger has interpolated some of his apocrypha which later found their way into the completed edition of the false decreets. The principal of these apocryphal MSS. was published by de Guigné, 509-515 of the edition of Hinschius. It should be remembered that the Hinschius edition is a critical edition; i.e. one edited after a thorough study of the manuscripts of the forged texts. The text of the genuine documents has not been subjected to any criticism, the forger coming himself with reproducing it just as he found it in already extant collections, that is to say, existing previous to Isidore's treatment of them.

In the endless number of books that have been written on this subject, we give here those that are indispensable and that sum up all other importance. The Preface to the edition of Hispa- nae, Secreta, Studi d'identificazione, Lecture sur les textes d'histoire et de Berkeley, Fournier, Etudes sur les fouilles décerates in Revue d'histoire, col. VII (Louvain, 1906), pp. 53-54; 301-10; 543-44; 761-764; VIII (1907), pp. 19-20.

Louis Salvetet.
Fallacy (Lat. Falsitas), a perversion of truth originating in the deceitfulness of one party, and culminating in the damage of another party. Counterfeiting money, or attempting to coin genuine legal tender with what the other party, in despairing of success, issues, etc., or such-like legal instruments, purring into the correspondence of others to their prejudice; using false weights and measures; adulterating merchandise, so as to render saleable what purchasers would otherwise never buy, or so as to derive larger profits from goods otherwise marketable only at lower figures: bribing judges; suborning witnesses; advancing false testimony; manufacturing spurious seals; forging signatures; padding accounts; interpolating the texts of legal enactments; and sharing in the pretended birth of supposed offspring are among the chief forms which this crime assumes. The punishment determined by the laws of former times for those convicted of it could scarcely savour of greater severity, or awaken a deeper horror of the crime itself. In the first place, the Roman law inflicted the death penalty on such evil-doers as were found guilty of falsifying imperial rescripts. Traces of this kind of legislation are still to be found in the Bull of Pius IX., “Apostolice Sedis”, wherein the Holy See promulgates the sentence of excommunication especially reserved to the apostolic see, all who dare defraud, forge, interpolate Bulls, Briefs, and Rescripts of all kinds formulated in the name of the Holy Father, and signed either by the pope personally, by his vice-chancellor personally, or by his vice-chancellor's proxy, or by some other individual specially commissioned thereunder by the sovereign pontiff himself.

Moreover, whoever are guilty of publishing surreptitious or supposititious papal Bulls, Briefs, or Rescripts, of the kind already specified, render themselves amenable to the same ecclesiastical penalty. This excommunication has the effect of making the work of falsification becomes an accomplished fact, even though the false letters never pass into actual use. At the same time it must be noted, in passing, that as often as there is question of forging Apostolic Letters, the censure is not incurred prior to the actual publication of such letters. Those who are guilty, not of falsifying Apostolic Letters, but of deliberately using such as are already forged or interpolated, or of co-operating in such traffic, incur the censure of excommunication reserved to the ordinary of the place to which D'Annibale, commenting on the Constitution “Apostolice Sedis”, n. 81) those who retain forged or interpolated Apostolic Letters in their possession, those who order the production of such letters, their advisers, abettors, or co-operators, are not liable to the sentence of excommunication.

In cases other than those here outlined, the enormity of the crime was emphasized by the civil law in confiscating the property of culprits and condemning them to perpetual exile. Though time has by no means lessened the intrinsic heinousness of the crime itself, it has witnessed considerable mitigation in the penalty thereunto attached; the discretion of the judge hearing the case is now the chief factor in determining the nature and the extent of punishment. While there are occasional instances where the expediency of modifications in the exigencies of positive law, there still remains an obligation which conscience always imposes on those guilty of this crime, an obligation founded in justice, and therefore quite independent of changes occurring in time or place. For this reason it is right to claim that as soon as the act of perpetration is committed by either party, the perpetrator of such damage is strictly bound in conscience to make good all such losses caused, or occasioned, by his fraud or deceit.

This teaching meets with the unattainted approbation of morality, not withstanding the plausibility of a theory purporting to incite those who advance false testimony, but lifting from their shoulders the burden of repairing damages due to such false evidence. (See FORGERY.)

Falta. See FALTONIA.

Faltonia Proba. See Proba Faltonia.

Famagusta, a titular see in the Island of Cyprus. The name appears to be derived from the Greek auxoas (a sandy point) rather than from Fama Augusta, the traditional etymology. The history of the city cannot be traced beyond the eighth century of our era. It is not certain, Lequien to the contrary notwithstanding (II, 1065), that it occupies the site of Arsinoe. Famagusta prospered through the destruction of the neighbouring Salamis, the former capital of the island. By the twelfth century its importance was such that Guy de Lusignan chose to be crowned there (1191). In 1450, Lord Mayor of Jericho, having met with increased French princes fortified the town, and in the thirteenth century built the beautiful Cathedral of St. Nicholas, transformed since then into a mosque. Famagusta was the seat of a Latin diocese from the twelfth century, and had residential bishops till the end of the sixteenth. The list is given by Lequien, III, 2218-24; Ducange, “Les familles d' outre mer”, 861-864; Eubel, I, 253-54, II, 108; Hackett, “History of the Orthodox Church of Cyprus”, London, 1901, 577-87.

The prosperity of Famagusta was not affected by the fall of Acre. In 1342, a German writer described it as one of the richest and most beautiful cities of the world, its wealth surpassing that of Constantinople and Venice. (See Mares-Lutrie, L'ile de Chypre, Paris, 1879, 206-40.) St. Bridget of Sweden, in her revelations, compared its beauty to Sodoma and Gomorrah. Captured by the Genoese in 1374, it fell, in 1389, into the hands of the Venetians, who retained it till 1571. Finally, after a siege of ten months, which cost the enemy 50,000 men, the city surrendered to the Turks, who, despite their treaty, massacred the garrison, burned alive the brave governor, Bragadino, and completely sacked the city. Famagusta, which formerly numbered 70,000 inhabitants, was reduced to a mere village. It is known to-day as Mankaota (1000 inhabitants) and is the chief town of one of the six departments of the island. Its harbour is choked with sand; its palaces, dwellings, highways, ramparts, and churches are all in ruins.

Fama. See Reputation.

Familias, strictly speaking, seculars subject to a master's authority and maintained at his expense. In this sense the idea embodies service rendered to masters, as well as wages, board, and lodging provided by the masters. In canon law the term usually signifies seculars residing in monasteries and other religious houses, actually employed therein as servants and subject to the authority of the regular prelate to the same extent as servants are subject to their masters. Many of the privileges enjoyed by the regular clergy are accorded their familiars. For this reason familiars validly receive absolution from a confessor approved by the regular prelate, or from one approved by the ordinary of the place where the house is located. In like manner, familiars actually dwelling in a monastery, and not merely occupying offices in the church or chapel of the monastery. Extreme unction and Viaticum may also be administered to them in the monastery. Boys boarding in colleges or academies supervised by religious or by diocesan clergy, and girls boarding in convents conducted by sisterhoods, practically enjoy the same privileges as familiars. Accord-
Family, a term derived from the Latin, familus, servant, and familia, household servants, or the household (cf. Osca famil, servant). In the classical Roman period the familia rarely included the parents or the children. Its English derivative was frequently used in former times to describe all the persons of the domestic circle, parents, children, and servants. Present usage, however, commonly excludes servants, and restricts the word family to that fundamental social group formed by the more or less permanent union of the heads of one or more men with one or more women, and their children. If the heads of the group comprise only one man and one woman we have the monogamous family, as distinguished from those domestic societies which live in conditions of polygamy, polyandry, or promiscuity. Certain anthropological writers of the last half of the nineteenth century, as Bachofen (Das Mutterrecht, Stuttgart, 1861), Morgan (Ancient Society, London, 1877), McLeenan (The Patriarchial Theory, London, 1889), Lang (Custom and Myth., London, 1885), and Lubbock (The Origin of Civilization and the Primitive Condition of Man, London, 1889), created and developed the theory that the original form of the family was one in which all the women of a group, hord, or tribe, belonged promiscuously to all the men of the community. Following the lead of Engels (The Origin of the Family, Private Property, and the State, tr. from the German, Chicago, 1902), many Socialist writers have adopted this theory as quite in harmony with their materialistic interpretation of history. The chief considerations advanced in its favor are: the reproductive function, for it, as property was common, and that this condition naturally led to community of women; certain historical statements by ancient writers like Strabo, Herodotus, and Pliny; the practice of promiscuity, at a comparatively late date, by some uncivilized peoples, such as the Bushmen; and the primitive times of India; the system of tracing descent and kinship through the mother, which prevailed among some primitive peoples; and certain abnormal customs of ancient races, such as religious prostitution, the so-called juris primus, the leaving of wives to visitors, cohabitation of the sexes before marriage, etc.

At no time has this theory obtained general acceptance, even among non-Christian writers, and it is absolutely rejected by some of the best authorities of to-day; e.g., Westernmarck (The History of Human Marriage, London, 1901) and Letourneau (The Evolution of Marriage, tr. from the French, New York, 1888). In reply to the arguments just stated, Westernmarck and others point out that the hypothesis of primitive communism has by no means been proved, at least in its extreme form; that commerce does not necessarily lead to community of wives, since family and marriage relations are subject to other motives as well as to those of a purely economic character; that the testimonies of classical historians in the matter are inconclusive, vague, and fragmentary, and that the idea of "true incest" for them that the sexual relations cited above are more obviously, as well as more satisfactorily, explained by other circumstances, religious, political, and social, than by the hypothesis of primitive promiscuity; and, finally, that evolution, which, superficially viewed, seems to support this hypothesis, is in reality against it, inasmuch as the unions between the male and the female of many of the higher species of animals exhibit a degree of stability and exclusiveness which bears some resemblance to that of the monogamous family.

The utmost concession which Letourneau will make to the theory under discussion is that "promiscuity may have been adopted by certain small groups, more probably by certain associations or brotherhoods" (op. cit., p. 44). Westernmarck does not hesitate to say: "The hypothesis of promiscuity, instead of belonging, as Professor Giraud-Teulon thinks, to the class of hypotheses which are scientifically permissible, has no real foundation, and is essentially unscientific" (op. cit., p. 133). The theory that the original condition of the human race was promiscuity or polyandry is even less worthy of credence or consideration. In the main, the verdict of scientific writers is in harmony with the Scriptural doctrine concerning the origin and the normal form of the family: "Wherefore a man shall leave father and mother, and shall cleave to his wife: and they shall be two in one flesh" (Gen. ii., 24). "Therefore now they are not two, but one flesh. What therefore God hath joined together, let no man put asunder" (Matt., xix., 6). From the beginning, therefore, the family supposed the union of one man with one woman.

While monogamy was the prevailing form of the family before Christ, it was limited in various degrees among many peoples by the practice of polygamy. This practice was on the whole more common among the Semitic races than among the Aryans. It was more frequent among the Jews, the Egyptians, and the Medes, than among the people of India, the Greeks, or the Romans. It existed to a greater extent among the uncivilized races, although some of them were free from it. Moreover, even those nations which practised polygamy, as the Persians and Egyptians, restricted it to a small minority of the population, as the kings, the chiefs, the nobles, and the rich. Polyandry was likewise practised, but with considerably less frequency. According to Westernmarck, monogamy was by far the most common form of marriage "among the original races of the human family our any direct knowledge" (op. cit., p. 450). On the other hand, divorce was in vogue among practically all peoples, and to a much greater extent than polygamy.

The ease with which husband and wife could dissolve their union constituted one of the greatest liberties upon the civilization of classic Rome. Generally speaking, the position of woman was very low among all the nations, civilized and uncivilized, before the coming of Christ. Among the barbarians she very frequently became a wife through capture or purchase; among even the most advanced peoples the wife was generally her husband's property, his chattel, his labourer. Nowadays was the husband bound by the same law of marital fidelity as the wife, and in very few places was he compelled to concude to her equal rights in the matter of divorce. Infanticide was practically universal, and the patria potestas of the Roman father gave him the right of life and death over even his grown-up children. In a word, the weaker members of the family were everywhere inadequately protected against the stronger.

True Omenn's Family shows that family has only restored the family to its original type as something holy, per-
manent, and monogamous, but raised the contract from which it springs to the dignity of a sacrament, and thus placed the family in a position of the supernatural. The family is holy inasmuch as it is to co-operate with God by procreating children who are destined to be the adopted children of God, and by instructing them for His kingdom. The union between husband and wife is to last until death (Matt., xix, 6 sq.; Luke, xvi, 18; Mark, x, 11; 1 Cor., viii, 10; see MARRIAGE, DIVORCE). That this is the highest form of the conjugal union, and the best arrangement for the welfare both of the family and of society, will appear to anyone who compares dispassionately its moral and physical qualities with those of the practice of divorce. Although divorce has obtained to a greater or less extent among the majority of peoples from the beginning until now, "there is abundant evidence that marriage has, upon the whole, become more durable in proportion as the human race has risen to higher degrees of cultivation" (Westermarck, op. cit., p. 535).

While the attempts that have been made to show that divorce is in every case forbidden by the moral law of nature have not been convincing on their own merits, and have made them unscientific in Old Testament history, the absolute indissolubility of marriage is nevertheless the ideal to which the natural law points, and consequently is to be expected in an order that is supernatural. In the family, as re-established by Christ, there is likewise no such thing as polygamy (see the references already given in this paragraph, and POLYGAMY). This condition, too, is in accord with nature's ideal. Polygamy is not, indeed, condemned in every instance by the natural law, but it is generally inconsistent with the reasonable welfare of the wife and children, and the proper moral development of the husband. Because of these qualities of permanence and unity, the Christian family implies a real and definite equality of husband and wife. They have equal rights in the matter of the primary conjugal relation, equal claims upon mutual fidelity, and equal obligations to make this fidelity real. They are equally guilty when they violate these obligations, and equally deserving of pardon when they repent.

The wife is neither the slave nor the property of her husband, but his consort and companion. The Christian family is supernatural, just as the marriage is a sacrament. Through the sacrament of matrimony husband and wife obtain an increase of sanctifying grace, and a claim upon those actual graces which are necessary to the proper fulfilment of all the duties of family life, and all the relations between husband and wife. The conjugal union in Christ is properly sanctified. The end and the ideal of the Christian family are likewise supernatural, namely, the salvation of parents and children, and the union between Christ and His Church. "Husbands, love your wives, as Christ also loved the church, and delivered himself up for it," says St. Paul (Eph., v, 25). And the intimacy of the marital union, the identification, almost, of husband and wife, is seen in the injunction: "So also ought men to love their wives as their own bodies. Is not he that loveth his wife, loveth himself" (Eph., v, 28).

From these general facts of the Christian family, the particular relations existing among its members can be readily deduced. Since the average man and woman are not normally complete as individuals, but are rather the two complementary parts of one social organism, in which their material, moral, and spiritual needs receive mutual satisfaction, a primary requisite of their union is mutual love. This includes not merely the love of the senses, which is essentially a selfish kind of love, for anthropologists call romantic, but above all that rational love or affection, which springs from an appreciation of qualities of mind and heart, and which im-

pels each to seek the welfare of the other. As the intimate and long association of husband and wife shows, it is necessary for the peace of the family to manifest loving qualities, and as the rearing of children involves great trials, the need of disinterested love, the ability to sacrifice self, is obviously grave.

The obligations of mutual fidelity have been sufficiently stated above. The particular functions of the husband and wife in the family are determined by their different natures, and by their relation to the primary end of the family, namely, the procreation of children. Being the provider of the family, and the superior of the wife both in physical strength and in those mental and moral qualities which experience and the exercise of authority, the husband is naturally the family's head, even "the head of the wife", in the language of St. Paul. This does not mean that the wife is the husband's slave, his servant, or his subject. She is his equal, both as a human being and as member of the conjugal society, save only that when a disagreement arises in matters pertaining to domestic government, she is, as a rule, to yield. To claim for her completely equal authority with the husband is to treat woman as man's equal in a matter in which nature has given the other sex a privilege, and in the management of the details of the household belong naturally to the wife, because she is better fitted for these tasks than the husband.

Since the primary end of the family is the procreation of children, the husband or wife who shirks this duty from any but spiritual or motives reduces the family to an unnatural and unchristian level. This is emphatically true when the absence of offspring has been effected by any of the artificial and immoral devices so much in vogue at present. When the conjugal union has been blessed with children, both parents are charged, according to their respective functions, with the duty of sustaining and educating these undeveloped members of the family. Their moral and religious formation is for the most part the work of the mother, while the task of providing for their physical and intellectual wants falls chiefly upon the father. The extent to which the different wants of the children are to be supplied will vary with the ability and resources of the parents. Finally, the children are bound, generally speaking, to render to the parents the proper respect and obedience, until they reach their majority or marry, and love, reverence, and a reasonable degree of support and obedience afterward.

The most important external relations of the family are, of course, those existing between it and the State. According to the Christian view, the family, rather than the individual, is the social unit and the basis of civil society. To say that the family is the social unit is not to imply that it is the end to which the individual is a means; for the welfare of the individual is the end both of the family and of the State, as well as of every other social organization. The meaning is that the State is formally concerned with the family as such, and not merely with the individual. This distinction is of great practical importance; for where the State ignores or neglects the family, keeping in view only the welfare of the individual, the result is a strong tendency towards the disintegration of the former. The family is the basis of civil society, inasmuch as the great majority of persons ought to spend practically all their lives in its circle, either as subjects or as heads. Only in the family can the individual be properly reared, educated, and given that formation of character which will make him a good man and a good citizen.

Inasmuch as the average man will not put forth his full productive energies except under the stimulus of its responsibilities, the family is indispensable, from the purely economic viewpoint. Now the family cannot rightly discharge its functions unless the parents
have full control over the rearing and education of the children, subject only to such State supervision as is needed to prevent grave neglect of their welfare. Hence it follows that, guided by the desires and with due allowance for particular conditions, the State exceeds its authority when it provides for the material wants of the child, removes him from parental influence, or specifies the school that he must attend. As a consequence, the concepts and ideals, the Christian family in history has proved itself uniquely superior to the non-Christian family. It has exhibited greater fidelity between husband and wife, greater reverence for the parents by the children, greater protection of the weaker members by the stronger, and in general a more thorough recognition of the dignity and rights of all within its circle. Its chief glory is undoubtedly its effect upon the position of woman. Notwithstanding the disabilities—for the most part with regard to property, education, and a practically recognized double standard of morals—under which the Christian woman has suffered, she has attained to a height of dignity, respect, and authority for which we shall look in vain in the conjugal society outside of Christianity. The chief factor in this improvement has been the Christian teaching on chastity, conjugal equity, and the conditions of the sacred natural end of the family, together with the Christian model and ideal of family life, the Holy Family at Nazareth.

The contention of some writers that the Church's teaching and practice concerning virginity and celibacy makes for the degradation and deterioration of the family, not only springs from a false and perversive view of these practices, but contradicts the facts of history. Although she has always held virginity in higher honour than marriage, the Church has never sanctioned the extreme view, attributed to some sceptical writers, that marriage is a mere concession to the flesh, a sort of tolerated carnal indulgence. In her eyes the marriage rite has ever been a sacrament, the married state a holy state, the family a Divine institution, and family life the normal condition for the great majority of mankind. Indeed, her teaching on virginity, and the spectacle of thousands of her sons and daughters exemplifying that teaching, have in every age constituted a most effective exaltation of chastity in general, and therefore of chastity within as well as without. The modern idea of marriage has combined to convince the wedded, not less than the unwedded, that purity and restraint are at once desirable and practically possible. To-day, as always, it is precisely in those communities where virginity is most honoured, that the ideal of the family is highest, and its relations the most harmonious.

DANGERS FOR THE FAMILY.—Among these are the exaltation of the individual by the State at the expense of the family, which has been going on since the Reformation (cf. the Rev. Dr. Thwing, in Bliss, 'Encyclopedia of Social Reformers'), and the modern facilities of divorce (see Divorce), which may be traced to the same source. The greatest offender in the latter respect is the United States, but the tendency seems to be towards easier methods in most of the other countries in which divorce is allowed. Legal authorisation and popular approval of the dissolution of the marriage bond, not only breaks up existing families, but encourages rash marriages, and produces a laxer view of the obligation of conjugal fidelity. Another danger is the deliberate limitation of the number of children. This practice not only overlooks the chief end of the family, and to regard their union as a mere means of mutual gratification. Furthermore, it leads to a lessening of the capacity of self-sacrifice in all the members of the family. Closely connected with the two evils of divorce and artificial limitation of birth is the general laxity of opinion with regard to sexual immorality. Among its causes are the diminished influence of religion, the absence of religious and moral training in the schools, and the seemingly feeble emphasis laid upon the iniquity of unchastity by those whose moral training has not been under Catholic auspices. Its chief effects are disinclination to marry, marital infidelity, and the contraction of diseases which produce domestic unhappiness and sterile families.

The idle and frivolous lives of the women, both wives and daughters, in many wealthy families is also a menace. In the position which they hold, the mode of life which they lead, and the ideals which they cherish, many of these women remind us somewhat of the hetaerae of classical Athens. For they enjoy this freedom and the dignity which are the privilege of the husband and father, and their chief function seems to be to entertain him, to enhance his social prestige, to minister to his vanity, to dress well, and to reign as social queens. They have emancipated themselves from any serious self-sacrifice on behalf of the husband or the family, while the husband has likewise declared his independence of any strict construction of the duty of conjugal fidelity. The bond between them is not sufficiently moral and spiritual, and is excessively sensual, social, and aesthetic. And the evil example of this condition of life has spread to those who are able to put it into practice. Still another danger is the decline of family authority among all classes, the diminished obedience and respect imposed upon and exhibited by children. Its consequences are dire; the passive obedience in the family, protective moral character in the children, and manifold unhappiness among all.

Finally, there is the danger, physical and moral, threatening the family owing to the widespread and steadily increasing presence of women in industry. In 1900 the number of females sixteen years of age and over engaged in gainful occupations in the United States, was 4,833,630, which was more than double the number so occupied in 1880, and which constituted 20 per cent of the whole number of females above sixteen years in the country, whereas the number at work in 1880 formed only 16 per cent of the same division of the female population. In the cities of America two women out of every seven are breadwinners (see Special Report of the U. S. Census, "Women at Work"). This condition implies an increased number of breadwinning families, an increased proportion of women who are less capable physically of undertaking the burdens of family life, a smaller proportion of marriages, an increased in the proportion of women who, owing to a desire to avoid dependence on men, marry, and a weakened bond of family bonds and domestic authority. "In 1890, 1 married woman in 22 was a bread-winner; in 1900, 1 in 18" (ibid.). Perhaps the most striking evil result of married women in industry is the high death-rate among infants. For instance, under the year 1870 the rate in 1890 over the whole United States, was 165 per 1000, but it was 305 in Fall River, where the proportion of married women at work is greatest. As the supreme cause of all these dangers to the family are the decay of religion and the growth of materialistic views of life, so the future of the family will depend upon the extent to which these forces will be checked. And experience seems to show that these are no permanent middle ground between the materialistic ideal of divorce, so easy that the marital union will be terminable at the will of the participants, and the Catholic ideal of marriage absolutely indissoluble.

In addition to the authorities cited in the text, the following may be mentioned before proceeding: INDEX, Studies in Family Life (London, 1886); ROCHE, THE FAMILY (London, 1886); COULANGER, The Sacred City (Boston, 1887); ROBERSON, Marriage and Divorce (Boston, 1887); BLISS, Encyclopedia of Social Reform (New York, 1907); STAHEL, Kirchenstaat, La grande encyclopédie; FERRONE, De Matrimonio Christiano.
Rome began to put the vestment on under the alb instead of over it, that is, when it became customary among the clergy to use the falon as an ordinary amice. This happened, apparently in imitation of the usage outside of Rome, between the tenth and twelfth centuries; however, the exact date cannot be given. But it is certain that as early as the end of the twelfth century the falon was worn solely by the pope, as is evident from the express statement of Innocent III (1198–1216). The vestment was then called an orale; the name of falon, from the late Latin fæno, derived from pannus, πάνος, cloth, woven fabric, was not used until a subsequent age. Even as early as the eighth century the pope wore the falon only at solemn high Mass. The present usage, according to which the falon is worn in addition to the amice under the alb, did not appear, at the earliest, until the close of the Middle Ages.

As to the form of the falon and the material from which it was made in early times no positive information exists. Late in the Middle Ages it was made of white silk, as is shown by the inventory of the year 1293 of the papal treasure, as well as by numerous works of art; the favourite ornamentation was one of narrow strips of gold, the 13th century, especially, piled, woven into the silk. Up into the fifteenth century the falon was square in shape; the present collar-like form seems to have appeared about the sixteenth century or even later.

Farnì, Henri, titular Bishop of Anémour and first Vicar Apostolic of Athabasca-Mackenzie, Canada; b. 17 March, 1823, at Gignondes, France; d. at Boniface, Manitoba, 26 September, 1896. After admission to the juniorate of the Oblates of Mary Immaculate, late, and while still in minor orders, he was sent to the missions of Northern America, and ordained priest, 8 May, 1847, at St. Boniface, Manitoba. Then he replaced Father (afterwards Bishop) Lassèbe at Ile-à-la-Croix, and in 1849 he proceeded further North, establishing the mission of Lake Athabasca, which he inaugurated 8 September, 1851. The following year, he visited Great Slave Lake, where no missionary had ever been, and ministered to the Indians of Peace River (1852). On the return of the mission to Fort Chipewyan, he was made titulaire of the newly created Vicariate Apostolic of Athabasca-Mackenzie; but such was his isolation from the civilised world, that he did not know of it before July of the following year.

Mgr. Guibert, of Tours, consecrated him Bishop of Anémour, 30 Nov., 1884, a title he bore for twenty-five years, during which he evidenced considerable administrative abilities, founding missionary posts as far as the Frozen Ocean, on the one side, and the Peace and Liard Rivers, on the other. In 1838 he repaired to France, for the General Council of his Congregation. In 1888 he was one of the Fathers of the Provincial Council of St. Boniface, at the termination of which his growing infirmities prevented him from returning to his distant missions in the North.

Farfa, Abbey of, situated about 26 miles from Rome, not far from the Farfa Sabina Railway station. A legend in the "Chronicon Farfense" relates the foundation of a monastery at Farfa in the time of the Emperors Julian, or Gratian, by the Syrian St. Laurentius, who had come to Rome with his sister, Susannah, and had been made Bishop of Spoleto. The legend goes on to say that he afterwards became an Augustinian, and after a wooden hill near the Farfa stream, a tributary of the Tiber, on which he built a church to Our Lady, and a monastery.

V.—50
Archaeological discoveries in 1888 seem to prove that the first monastic establishment was built on the ruins of a pagan temple. This first monastery was devastated by the Vandals in the fifth century, doubtless about 412.

In the seventh century, a wave of monasticism from the North spread over Italy. The foundation of Bobbio by St. Colombanus, and the foundation of Farfa by monks from Gaul, about 881, heralded a revival of the great Benedictine tradition in Italy. The "Construicto Monasterii Farfensis", a writing which dates probably from 857, relates at length the story of its principal founder Thomas de Maurienne; he had made a pilgrimage to Jerusalem and spent three years there. While in prayer before the Holy Sepulchre, Our Lady in a vision warned him to return to Italy, and restore Farfa; and the Duke of Spoleto, Faroald, who had also had a vision, was commanded to aid in this work. At a very early date we find traces of this legend in connexion with the foundation from three nobles by Beneventum of the monastery of St. Vincent on the Volturno, over which Farfa claimed jurisdiction. Thomas died in 720; and for more than a century Frankish abbots ruled at Farfa.

The Lombard chieftains, and later the Carolingians, succeeded in withdrawing Farfa from obedience to the Bishop of Rome, and in the 9th century many immunities and privileges for the monastery. If we may credit the "Chronicon Farfense", Farfa was at this period the most important monastery in Italy both from the point of view of worldly possession and ecclesiastical dignity, with the exception of Nonantola. It had one large basilican church and five smaller ones, rich in masterpieces of religious art. The greed of the Saracens was excited: and about 890, during the government of Abbot Peter, they swooped down on the place. Peter held out against them for seven years, and then resolved to abandon the monastery. He divided his monks into three sections and shared the abbey's wealth among them—one section he sent towards Rome, one towards Rieti, and one towards the county of Fermono. The Saracens preserved Farfa as a stronghold, but some Christian robbers set fire to it by mistake.

Between 930 and 936, it was rebuilt by Abbot Ratfredus, who was afterwards poisoned by two wicked monks, Campo and Hildebrand, who divided the work between them, and ruled the monastery until Alberic, Prince of the Royal house, called in Odo of Cluny to reform Farfa and other monasteries. Campo was driven out; and a holy monk named Dagibert took his place. At the end of five years, he also died by poison—and the moral condition of Farfa was once more in the hands of evil. But the lead of the other monks of their ornaments, and led lives of unbridled vice.

Abbot John III, consecrated, about 967, by the pope, succeeded, owing to the protection of the Emperor Otho, in restoring and establishing a semblance of order. But the great reformer of Farfa was Hugues (998-1010). His nomination as abbot was not secured without simony—but the success of his government palliates the vice of his election. At his instance, Odilo, Abbot of Cluny, and William, Abbot of Dijon, visited Farfa, and re-established there the love of piety and of study.

The "Conuentudines Farfenses" drawn up about 1010 under the supervision of Guido, successor to Hugues, and recently published by Albers, bear witness to the care with which Hugues organized the monastery. Under the title "Destructio Monasterii", Hugues himself wrote a history of the sad period previous to his rule; and again under the title "Diminutio Monasterii" and "Querimonium", he relates the temporal difficulties that encompassed Farfa owing to the ambition of petty Roman lords. These works are very important for the historian of the period.

One of Hugues's successors, Berard, Abbot from 1049 to 1089, made the abbey a great seat of intellectual activity. The monk, Gregory of Catino (b. 1060) arranged the archives. To substanitate Farfa's claims, and to check the rights of its neighbors, he edited the "Regesto di Farfa", or "Liber Geomagneticus sive Cleronomialis ecclesiis Farfensis" composed of 1324 documents, all very important for the history of Italian society in the eleventh century. Ugo Balsami praised the accuracy and exactness of this work "planned", he says, "along lines quite in harmony with the best critical efforts of our own times".

In 1103, Gregory wrote the "Largitorium", or "Liber Notariorum sive emphiteteicum", a lengthy list of all the concessions, or grants, made by the monastery to its tenants. Having collected all this detailed information, he set to work on a history of the monastery, the "Chronicon Farfense"; and when he was 70 years old, in order to facilitate reference to his earlier works, he compiled a sort of index which he styled "Liber Florior Chartarum cenobii Farfensis". Gregory was a man of real learning, remarkable in that, as early as the eleventh century, he wrote history with accuracy of view-point, and a great wealth of information.

The monks of Farfa owned 683 churches or convents; two towns, Centumcellae (Civitavecchia) and Alatri; 26 castles; 15 strongholds; 7 sea-ports; 8 salt-mines; 14 villages; 82 mills; 315 hamlets. All this wealth was a hindrance to the religious life once more, between 1119 and 1125. And Farfa was troubled by the rivalries between Abbot Guido, and the monk Berard who aimed at being elected abbot, in result of a litigious conflict, Farfa was, more or less, on the side of the Ghibellines. The "Orthodoxo defenso imperialis", written in support of the Ghibelline party, is, according to Bethmann, the work of Gregory, and of one of his disciples, according to Balsami. The collection of canonical texts of the 11th century, "Ecclesiasticae jurisprudentiae", which has been studied by Paul Fournier, seems to omit purposely any mention of the canonical texts of the reforming popes of the eleventh century. But when, in 1262, the victory of the popes over the last of the Hohenstaufen put an end to Germanic sway in Italy, Farfa sought the protection of Urban IV, as we learn from a privilege granted on 23 Feb., 1262, and published by Jean Guiraud. At the end of the fourteenth century the Abbey of Farfa became a cardinalate in commendam (q. v.), and since 1942 the Cardinal Bishop of Sabina is the titular bishop, bears also the title of Abbot of Farfa.

FARO (FAROES). Diocese of (FARGENEN), suffragan of St. Paul, U. S. A., embracing the whole of the State of North Dakota, an area of 70,195 square miles. It was established in 1889. The first Mass, in the territory now comprised in the Diocese of Faro, was celebrated in Pembina, September 21, 1818, by Father Schwab. In 1818, he and Father Boniface Hennepin, one of the two missionaries sent to the Selkirk colony by Bishop Plessis of Quebec. Father Dumoulin was born in Montreal, 5 Dec., 1793, ordained priest in the Nicolet Seminary, 23 Feb., 1817, left Quebec for the Selkirk colony, 19 May, 1818, and arrived at Fort Douglas (now Morden, Boniface), July 12, 1818. In August, 1823, Father Dumoulin returned to Can-

FARGO 786
Faribault, George-Bartélémy, archeologist, b. at Quebec, Canada, 3 Dec., 1789; d. 22 Dec., 1860. He was a first cousin of Jean-Baptiste, founder of the city of Faribault, Minn., U.S.A. After attending a school taught by a Scotch veteran of Wolfe's army, he completed the study of law and was admitted to the Bar in 1811. In 1812 he served as a civilian during the invasion of Canada by the Americans. In 1822 he entered the civil service, attaining in 1832 the rank of assistant clerk of the Legislative Assembly, an office he continued to hold after the union of the Canadas (1841) until 1855, when ill-health forced him to resign. Passionately fond of his country and of its past glories, he spent all his leisure in collecting documents and books pertaining to Canadian history. His fine collection (1812-1841) of original manuscripts passed at the burning of the Parliament House in Montreal (1849). He courageously began a second collection, which he bequeathed to Laval University. Faribault published no original works, merely reproducing and annotating a series of rare historical papers in the transactions of the Quebec Literary and Historical Society, of which he was one of the chief promoters and benefactors. His principal publication is the "Catalogue of Works," relating to the history of America, with bibliographical, critical, and literary notes (Quebec, 1837), which, considerably increased in the later catalogues, ranks among the best. In 1859 he realized the long-postponed plan, conceived in 1761 by Montcalm's companions in arms, of erecting a memorial tablet over the soldier's grave. The epigraph, written by the French Academy at the time the subject was first brought up and approved by William Pitt, was duly inscribed. In private life Faribault was the type of the Christian gentleman, modest, hospitable, and charitable. He counted none but friends, and left the record of a blameless career, devoted to the service of God and country. 

Faribault, Jean-Baptiste, trader with the Indians and early settler in Minnesota, U.S.A.; b. 19 October, 1774, at Berthier, Lower Canada; d. at Faribault, Minnesota, 20 August, 1860. His father Barthélemy Faribault, a lawyer of Paris, France, settled in Canada towards the middle of the eighteenth century, and served as military secretary to the French army in Canada. After the occupation of Quebec by the English he retired to private life in Berthier and held the office of notary public. Young Jean-Baptiste received a good school education, and after several years of mercantile employment at Quebec, entered the service of the Northwest Fur Company. In May, 1798, he went with others to the island of Michilimackinac or Mackinac, one of the depots of this company. For over ten years he traded with the Potawatomi Indians at Kankakee, with the Dakota or the Sioux Indians at Redwood, on the Des Moines river, and at Little Rapids, on the St. Peter or Minnesota river. During his residence at Little Rapids, in 1805, he was married to Felisiga Hanse, a half-breed daughter of Major Hanse. In 1809, he settled in the small village of Prairie du Chien, Wisconsin, and commenced trading, on his own account, with the Indian tribes of the Winnebagoes, Foxes, and Sioux. In addition to that he conducted an exchange of trade with Julien Dubuque, at the point now occupied by the city of that name. During the war with England (1812-14) Faribault refused to enlist in the English army, and suffered imprisonment and the loss of all his goods in consequence. After the conclusion of the war, in 1815, he became a citizen of the United States, and recommenced his trade at Prairie du Chien. In 1819, he removed to Pine Island in the Mississippi River, and in 1826 to the village of St. Peter, or Mendota, Minnesota, opposite the military post of Fort Snelling. There he remained until the last years of his life, which were spent with his children in the town of Faribault, Minnesota. A county in southern Minnesota was named after him, and the city of that name after his eldest daughter. Faribault was noted for his generosity to the Indians, and tried to elevate them by teaching them the useful arts of life, and by instilling into them the principles of Christianity. He was much attached to the Catholic faith of his childhood and presented a house for a chapel to Father Lucien Galtier, the first resident missionary in Minnesota (1840).

Farinato, Paolo, an Italian painter, b. at Verona, 1524; d. there, 1606. He belonged to the old Florentine family of Farinata degli Uberti, the famous head of the Ghibelline party, whom Dante placed in his Inferno. When the Guelphs triumphed, the Uberti were expelled and part of the family settled at Verona; it was to this branch that the painter belonged. In his native town Paolo was a pupil of Giovanni, who was painting on the walls of the Palazzo Ducale the greatest perhaps of Italian miniaturists, whose wonderful illustrations in the choir books of the Libreria di Siena (1470-1476), his blustering Boreas, his Mass in which the celebrant is a turbaned priest with a head like Klingor the magician, his startling view of the battle of San Romano, are most common. It thus came about that in Verona, a town without any great artistic past, a really original school was being formed, untrammelled by traditions and therefore all the more free to indulge in those novel colour-schemes in pastel, with which his name is first to expression in the museums of the Capodimonte, the Scala, and the barons of his family. Towards the close of the fifteenth century, in the neighbourhood of Verona, the Venetian masters, Giovanni Bellini, Giorgione, and Titian, had just brought about a great artistic
tic revolution. They had invented colouring as an essential branch of the painter’s art. But great masters that they were, they were also men of intellectual genius and cared too much for the idea and its expression; they were up to the purely sensual ideal they had discovered.

The Veronese School, on the contrary, less concerned with the higher walks of art, and untrained in the quest of lofty ideals, seized straightforwardly on colouring as the language best suited to express its own temperament. Colouring soon became its unique preoccupation; and it was from this school the greatest colourist and painter of all time was to come forth, if the measure of greatness among painters is their ability to speak in colour. Paolo Caliari, of Verona, known as Paolo Veronese, on this account: that Giorgione and his pupils, Brusasorci and Farinati, are of such interest in the history of art. It is in their works that we note the blending of the two styles, and the use of colouring as an exclusive source of pleasure in painting: they were the heralds of Veronese and his immediate precursors. More than one sketch by Brusasori is even now masquerading as a Veronese. Moreover, in the hands of these artists painting gradually loses its moral purpose and becomes merely one of the decorative arts, giving promise already of that gaucherie which was to engulf Mantua.

In this transformation Farinati played a very important part. He had a decided talent for fresco, and like Liberale, he was largely occupied on the decorations of the facades of the houses in Verona, which gives that of his fame as a painter of "Extremity and engaging an appearance. Unfortunately, Farinati did not remain faithful to his native genius. At Mantua he fell under the influence of Giulio Romano, who, with his own captivating though vulgar faults, had inherited all the prestige of the Latin School and was under this influence that Paolo executed his "St. Martin" in the Blessed Sacrament Chapel of the cathedral at Mantua: and from this time onward his works betray for the most part a hybrid compromise between the corrupt Roman style and the light impressionist colouring of Veronese. In Mantua also his principal works are preserved. In Santa Maria in Organo, a "Massacre of the Innocents" (1556), and a "Christ Walking on the Waters" (1558); in San Tommaso, a "Glorification of the B. Virgin" (1560); in Sant’ Anastasia, a "Pentecost in Braidia", a "Multiplication of the Loaves" (1603).

Though four years older than Veronese, Farinati survived him by nearly twenty years, and was over eighty when he died. He was a most prolific painter and we have found his works have very much the way to Gaul and the United States. In the United States there are two or three, one at Cleveland, in the Holden Collection, an allegory of "Autumn"; one at New Haven in the Jarvis Collection, "Christ Appearing to Some Saints"; and one at the Historical Society in New York, and "Abraham Driving away Hagar". The famous painting in the Louvre, representing "The Council of Trent", and generally attributed to Titian, has been assigned to Farinati by Berenson.

LOUIS GILLET.

Farinati, DANTELE, ecclesiastical historian, b. at San Daniele dei Carthusi, in the present Italian province of Udine, 22 February, 1690; d. 25 April, 1778. After having studied at Góra he entered, in 1707, the Society of Jesus at Bologna. He was for five years teacher of classics at the Jesuit college in Padua, and then went to Rome, where he completed his theological studies was ordained priest, in 1722, and was again sent to Padua, to assist Father Filippo Rizpetti in the latter’s historical labours. Rizpetti intended to write a complete ecclesiastical history of Ilyrius, and in 1720 had issued, at Padua, a prospectus of this monumental enterprise. During twenty years they both searched with unwearied industry, in all the libraries and archives of ancient Ilyrius, for the material for their work; the matter they collected filled three hundred MS. volumes. In 1742, just as two of the larger divisions, the manuscript volumes, were about completed, Rizpetti died. Thus Farinati was left alone to work into presentable shape the prodigious amount of material collected. As co-labourer he chose Father Jacopo Coleti. The first volume of "Ilyricum Sacrum" appeared at Venice, in 1718: it contains the history from St. Peter Orso on, to the second Salona up to the fourth century. Three further volumes appeared in rapid succession; while the fifth was in press Farinati died. His assistant Coleti finished the fifth volume, which appeared in 1776, and issued three more, the last being finished in 1786. The whole work fills eight well-executed folio volumes.

Vita P. Dan. Farinati, in Ilyricum Sacrum (Venec., 1775); V. Bibliotheca de la c. de J. (Brussele, 1809—); III. Histoire Nomenclature lit. (Innsbruck, 1863).

FARMER, FERDINAND. SEE STENMEYER, FERDINAND.

Farnese, Alessandro, the name of two cardinals. For the elder see Paul III, Pope. The younger, Alessandro Farnese, eldest son of Pier Luigi Farnese, first Duke of Parma and brother of Pope Paul III, was born 7 Oct., 1520, and died at Rome, Feb., 1589. While yet a student at Bologna, in 1534, Clement VII appointed him administrator of the Diocese of Parma; on 18 Dec. of the same year, his uncle, Paul III, created him Cardinal-Descon of the Title of Sant’ Angelo, and conferred on him numerous benefices. Thus, he was Vice-Chancellor of the Holy Roman Church, Governor of Tivoli, Archpriest of St. Mary Major’s, Archpriest of St. Peter’s, Administrator of Jaen, Spain, of Viseu, Portugal, of Wurzburg, Germany, and of Avignon. Fraternity in 1536 he was made Bishop of Monreale, Sicily, where, in 1552, he founded a Jesuit College, and, in 1568, convoked a synod. He was also Bishop of Massa (1538), and Archbishop of Tours (1533), later exchanging this see for that of Cahors, from which he resigned in 1556; of Montefiascone (1571); finally Cardinal-Bishop of Ostia and Velletri (1580). He was papal legate for the province of the Patrimony, and afterwards of the county of Avignon, where he displayed great administrative ability, especially during the plague of 1541.

He was very zealous in behalf of the poor. Farnese was employed by the popes on various legations and embassies. In 1539, he was legato a latere of Paul III at the court of Charles V, to make peace between the emperor and the King of France, and to sever the alliance with England, also to arrange for a general council. In 1543 he went again to the court of Charles V, and later to that of Francis I, and was present at the meeting of the two sovereigns in Paris, returning with Charles to Flanders. In the war between his brother Ottavio, Duke of Parma, and Pope Julius III, he prudently held aloof, first at Florence and then at Avignon. In 1545 he went on a second embassy to Charles V in reference to the council, and in 1546 he accompanied the pontifical troops sent to the aid of Charles V. In 1552 he retired to the monastery of Saints Maria and Stilis, and in 1550, he was one of the candidates for the papacy. Charles V greatly admired his virtues and sagacity. Farnese was an ardent promoter of the Tridentine reforms. Above all he was a lover and patron of literature, science, and art, especially ecclesiastical. He used to say that “there is nothing more despicable
than a cowardly soldier or an ignorant priest". He patronised the architect Vignolo, to whom he entrusted the construction both of the church of the Gesù in Rome, of which he laid the corner-stone in 1568, and of the superb Farnese palace of Caprarola near Lago Bracciano. He restored the monastery of Trinità dei Monti and the church of Santa Maria della Scala Ceceli erected; and he had the ceiling of San Lorenzo in Damaso magnificently decorated. He was buried in front of the high altar in the church of the Gesù.

**Faro, Diocese of (Praenestiae), suffragan of Evora, Portugal, and extending over the province of Algarve. The see was founded at Ossonoba in 306, which place falling into the hands of the Moors, in 888, the see was suppressed. It was re-established in 1188 at Silves, and in 1218 was made suffragan to Braga, then to Seville, in 1393 to Lisbon and finally, in 1540, to Evora. The title was transferred to Faro, 30 March, 1577. Faro is the chief seaport town of the province, and is located on the Rio Fermo, near its mouth. The cathedral, an imposing structure, with nave-vaulting springing from lofty cylindrical columns, is apparently a Roman basilica altered by the Moors. Several convents, a hospital, and charitable institutions are well appointed. There are 66 parishes, 214 churches, 112 priests and 228,384 Catholics in the diocese.

**THOMAS P. MEEHAN.**

**Faro Islands.—Geography and Statistics.**—A group of Danish islands rising from the sea some four hundred miles west of Norway and almost as far south of Iceland. It embraces fourteen inhabited and several uninhabited islands with an area of 500 square miles. Of this one-third belongs to Strömö. This archipelago is divided by a number of small islands and consists of dark grey rocks which form plateaux usually about 300 yards high. These plateaux slope towards the sea, are frayed by streams and are here and there surmounted by lofty peaks (Slettarenten, over 2400 ft.). The sky is usually clouded, showers and storms are frequent. The surging waters make navigation dangerous especially in winter. The climate is oceanic but the summit rarely rises above 10°, and the soil is poor. Agriculture is impossible in sheltered spots. Trees are few in number, but shrubs flourish in more abundance. The chief wealth and attraction of the islands are found in their flowery pastures, while the herds of sheep which graze upon them have given their name to the archipelago. Upwards of 100,000 of these animals live always in the open air and are famous for the superior quality of their wool. A few small, raw-boned horses are employed solely as beasts of burden, for roads are unknown, nor is any shelter provided for them. Most attention is paid to the horned cattle, which number about 600. Besides the above-mentioned quadrupeds, rats and mice are the only land animals or mammals to be found. Many species of birds and in great numbers haunt the islands. The surrounding waters abound with sea-fish, both large and small, and there are but few insects. The 16,000 inhabitants of the Faro Islands are all Lutherans. They speak a dialect akin to the Old Norse, but Danish is used in public life, the schools, and the churches. The fisheries, cattle-breeding, and the more perilous bird-catching are the chief sources of income. The few local industries scarcely suffice for the needs of the natives. Turf is used for fired, there being no coal. There is considerable commerce. The exports are fish, plubber, meat, wool, feathers, and down; the imports are wood, coal, and large quantities of cereals and fruit. Thorshavn on Strömö is the capital and seat of government, and has a Real-uman technical school. Throughout the entire of this island there are only wooden houses, with turf roofs.

**POLITICAL AND RELIGIOUS HISTORY.**—From the work of Dicuil, an Irish monk, De Mensura orbis terrae" (ed. Parthey, Berlin, 1872), written in the ninth century, we learn that the islands were discovered by Irish navigators. Not long after they were colonized by Normans. Harold Schönhäar (872-930) united them with the Kingdom of Norway and this was their political condition until 1814. Olaf Tryggvason converted the people to Christianity; as early as 907 they had a bishop of their own. The bishops of the Faro Islands were usually chosen from the canons of Bergen, and were originally suffragans of Hamburg-Bremen, later of Lund (1104), finally (since 1132) of the Primate of Norway in Trondheim. There were in all twenty-three Catholic bishops, from Skudmun to Åsby, and Olaf from 1193 to 1240. They yielded to the Lutheran superintendent Jens Riber, who also took over the episcopal title. Later on only "provosts" were elected. The Catholic clergy remained steadfast in their faith, but were unable to resist the advance of Protestantism. By the end of the sixteenth century the Catholic Faith had disappeared; all later attempts to revive it proved vain. The mission founded some years ago in Thorshavn was abandoned and the few (mostly transient) Catholics on the islands were attended once a year from Copenhagen. In the Catholic epoch, at least, no attention was paid to the construction and adornment of churches, as may be seen from the ruins of the unfinished cathedral of Kirkebø. The thick basaltic walls broken by high, massive windows are evidence that the original builders meant to erect a noble Gothic church. It remained unfinished because under the "new Gospel" the generosity of the faithfulness was soon extinguished. A small stone church of the twelfth century serves yet for Protestant worship. It contains sculpture belonging to pre-Reformation times.

**PIUS WITTMAN.**

**Fast,** in general abstinence from food or drink, a term common to the various Teutonic tongues. Some derive the word from a root whose primary signification means to hold, to keep, to observe or to restrain one's self. The Latin term jejunium denotes an animal intestine which is always empty. Such abstinence varies according to the measure of restriction reserving the use of food and drink. Hence it may denote abstinence from all kinds of food and drink for a given period. Such is the nature of the fast prescribed by the Church before Holy Communion (natural fast). It may also mean such abstinence from food and drink as is dictated by the bodily or mental dispositions peculiar to each individual, and is then known as moral or philosophical fast. In like manner the term comprehends penitential practices common to various religious communities in the Church. Finally, in the strict observation of the Lenten fasts of various times and nations such is an act of temperance finding its raison d'être in the dictates of natural law and its full perfection in the requirements of positive ecclesiastical legislation.

In Christian antiquity the Eustathians (Sosomen,
Hist. EccI. II, 33) denied the obligation, for the more perfect Christians, of the Church fasts; they were condemned (380) by the Synod of Gangra (can. xiv), which also asserted incidentally the traditional antiquity of the ecclesiastical fasts (Hefele-Heinrici, Hist. des. der christl. Lit. F., 109, § 54). As a consequence, in contrary to the groundless assertions of these sectaries, moralists are one in maintaining that a natural law inculcates the necessity of fasting because every rational creature is bound to labour intelligently for the subjugation of concupiscence. As a consequence, rational creatures are logically obliged to adopt means commensurate with the attainment of this end (see MORTIFICATION). Amongst the means naturally subserving this purpose fasting lays claim to a place of primary importance. The function of positive law is to intervene in designating days when this obligation must be observed, as well as the manner in which the same obligation is to be discharged on days authoritatively appointed.

What pertains to the origin as well as to the historical development of this obligation in the Church may be gleaned easily from the articles on ABSTAINENCE and BLACK FAST. The law of fasting, ecclesiastical in its genius, is unwritten in its origin, and consequently must be understood and applied with due regard for the customs of various times and places. Depending in each particular case on the articles in the various modern dictionaries and encyclopedias of Christian Archeology, e. g. Martigny, Kraus, Smith and Cheetham, Cabrol and Leclercq. Details will be found under ADVENT; LENT; FRIDAT, SATURDAY; VIGIL; EMBER DAYS.

In the United States of America all the days of Lent; the Fridays of Advent (generally); the Ember Days; the vigils of Christmas and Pentecost, as well as those (14 Aug.) of the Assumption; (31 Oct.) of All Saints, are now fasting days. In Great Britain, Ireland, Austria, Switzerland, the calendar of the Church, together with the Wednesdays of Advent and (28 June) the vigil of Saints Peter and Paul, are fasting days. Fasting essentially consists in eating but one full meal in twenty-four hours and that about midday. It also implies the obligation of abstaining from flesh meat during the same period, unless legitimate authority grants permission to eat meat. The quantity of food allowed at this meal has never been made the subject of positive legislation. Whosoever therefore eats a heavy meal at midday, and the bulk of fasting satisfies the obligation of fasting. Any excess during the meal militates against the virtue of temperance, without jeopardizing the obligation of fasting.

According to general usage, noon is the proper time for this meal. For good reasons this hour may be legitimately anticipated. Grievois sin is not committed even though this meal is taken a full hour before noon without sufficient reason, because the substance of fasting, which consists in taking but one full meal a day, is not impaired. In like manner, the hour for the midday meal and the collation, may for good reasons be conscientiously inverted. In many of our larger cities this practice now prevails. According to D'Annibale (Summulae Theologiæ Moralis, 4 ed., 111, 134) and Noldin (Summa Theologiae Moralis, n. 674) good reasons justify one in taking a collation in the morning, dinner at noon, and the morning allowance in the evening, because the substance of fasting still remains intact. Nothing like a noteworthy interruption should be admitted during the course of the meal, such as to reduce two meals instead of one. Common sense, taking into consideration individual intention and the duration of the interruption, must finally determine whether a given interruption is noteworthy or not. Ordinarily an interruption of one half hour is considered slight. Nevertheless, an individual, after having commenced the midday meal and meeting with a bona fide interruption lasting for an hour or more is fully justified in resuming and finishing the meal after the termination of an interruption. Finally, unless special reasons suggest the contrary, it is not allowed to give immediate length a part of this meal. Ordinarily, a duration of more than two hours is considered immoderate in this matter.

Besides a complete meal, the Church now permits a collation usually taken in the evening. In considering this point proper allowance must be made for what custom has introduced regarding both the quantity and the quality of viands allowed at this repast. In the first place, about eight ounces of food are permitted at the collation even though this amount of food would fully satisfy the appetites of some persons. Moreover, due attention must be paid to each person's temperament, duties, length of fast, etc. Hence, much more food is allowed in cold than in warm climates, more to those working during the day than to those at ease, more to the weak and hungry than to the strong and well fed. As a general rule whatever is deemed necessary in order to enable people to give proper attention to their duties may be taken at the collation. Moreover, since custom first introduced the collation, the usage of each country must be considered in determining the quality of viands permitted there. In the archbishopric of Hamburg, fish and fish are prohibited, whilst bread, cake, fruit, herbs and vegetables are allowed. In other places, milk, eggs, cheese, butter and fish are permitted, owing either to custom or to Indult. This is the case in the United States. However, in order to form judgments perfectly safe concerning this point, the Lenten regulations of each diocese should be carefully read. Finally, a little tea, coffee, chocolate or such like beverage together with a morsel of bread or a cracker is now allowed in the morning. Strictly speaking, what may be considered liquid, e.g. spirits, acids, elixirs may be taken as drink or medicine at any time of the day or night on fasting days. However, water, lemonade, soda water, ginger ale, wine, beer and similar drinks may be taken on fasting days outside meal time even though such beverages may, to some extent, prove nutritious.

Coffee, tea, diluted chocolate, electuaries made of sugar, juniper berries, and citron may be taken on fasting days, outside meal time, as medicine by those who find them conducive to health. Honey, milk, soup, broth, etc., etc., are the only food likely to be allowed. The amount of food, is not allowed under either of the two categories already specified. It is impossible to decide mathematically how much food is necessary to involve a serious violation of this law. Moralists as well as canonists concur in holding that an excess of four ounces would seriously militate against the obligation of fasting, whether that much food was consumed at once or at various intervals during the day, because Alexander VII (18 March, 1666) condemned the teaching of those who claimed that food so taken was not to be regarded as equalizing or exceeding the amount allowed (Denzinger, Enchiridion Symbolorum et Definition, tenth ed. Freiburg im Br., 1908, No. 1129).

Though Benedict XIV (Constitutions, Non Ambiguis, 31 May, 1741; in superna, 22 Aug., 1741), granted permission to eat meat on fasting days, he distinctly prohibited the use of fish and flesh at the same meal on all fasting days during the year as well as on Sundays during Lent. (Letter to the Archbishop of Compostella, 10 June, 1748, in Buceroni, Enchiridion Moralis, No. 147). This prohibition binds all exempted from it not only the Pope but virtually all excommunicated persons. This prohibition extends to all those permitted to eat meat on fasting days every two years by dispensation or by Indult. Sin is committed each time the prohibited action takes place.

The ecclesiastical law of fasting embodies a serious
obligation incumbent on all baptized individuals capable of assuming obligations provided they have completed their twenty-first year and are not otherwise excused. This doctrine is merely a practical application of a universal function of the virtue of temperance bears such a relation to the promotion of man's spiritual well-being (see Lenten Preface in the Roman Missal), it certainly embodies an obligation generally serious. To this a priori reason may be added what Church history unfolds concerning the great occasions on which indulgences were granted in recompense of transgressions of this law. The sixty-ninth of the Apostolic Canons (see CANONS) decrees the degradation of bishops, priests, deacons, lectors or chanters, failing to fast during Lent, and the excommunication of laymen, who fail in this way. The fifty-sixth canon of the Trullan Synod (692) contains similar regulations. Finally Alexander VII (24 Sept., 1665) condemned a proposition formulated in the following terms: Whoso violates the ecclesiastical law of fasting to which he is bound does not sin mortally unless he has incurred the penalities of one's state in life suffice by their very nature, to extinguish the obligation because as often as the obligation of positive laws proves extremely burdensome or irksome the obligation is forthwith lifted. Hence, the sick, the infirm, the very elderly such as widows of advanced years and old, families whose members cannot have the necessaries for a full meal at the same time, or who have nothing but bread, vegetables or such like viands, those to whom fasting brings loss of sleep or severe headaches, wives whose fasting incurs their husbands' indignation, children whose fasting arouses their parents' wrath; in a word, all who cannot comply with the obligation of fasting without undergoing more than ordinary hardship are excused on account of their inability to fulfill the obligation. In like manner, no one who exercises his profession in such a way as to discharge hisijd one's duty and superinduced by fasting lifts the obligation of fasting. However, not every sort of labour, but only such as is hard and protracted, excuses from the obligation of fasting. These two conditions are not confined to manual labour, but may be equally verified with regard to brain work. Hence bookkeepers, stenographers, telegraph operators, legal advisers and many others whose occupations are largely mental are entitled to exemption on this score, quite as well as day-labourers or tradesmen. When these two causes beginning exception by their very nature, do not exist, lawfully constituted superiors may dispense their subjects from the obligation of fasting. Accordingly the Sovereign Pontiff may always and everywhere grant valid dispensations from this obligation. His dispensations will be licit when sufficient reasons underlie the grant. In particular cases and for good reasons, bishops may grant dispensations in their respective dioceses. Unless empowered by Indult they are not at liberty to dispense all their subjects simultaneously. It is to be noted that indulgences are not granted before the abjuration of sin or the moral, which are read to the faithful or otherwise made public, and in which they make known, on the authority of the Apostolic See, the actual status of obligation, dispensations, etc. Priests charged with the care of souls may dispense individuals for good reason. Superior of religious communities may dispense individual members of their respective communities provided sufficient reason exists. Confessors are not qualified to grant these dispensations unless they have been explicitly delegated thereunto. They may, however, decide whether sufficient reason exists to lift the obligation.

Those who have permission from the Holy See to eat meat on prohibited days, may avail themselves of this concession at their full meal, not only on days of abstinence but also on fasting days. When age, infirmity or labour relieves Christians from fasting, they are at liberty to eat meat as often as they are justified in taking food, provided the use of meat is allowed by a general indult of their bishop (Sacred Penitentiaria, 16 Jan., 1854). Finally, the Holy See has repeatedly declared that the laws of fasting are attacked by indulges comprehend butter or the fat of any animal.

No student of ecclesiastical discipline can fail to perceive that the obligation of fasting is rarely observed in its integrity nowadays. Conscious of the conditions of our age, the Church is ever shaping the requirements of this obligation to meet the best interests of her children. At the same time, no measure of leniency in this respect can eliminate the natural and divine positive law imposing mortification and penance on man on account of sin and its consequences.

**Fast among Mohammedans.** See RAMADAN.

**Fasti Siculi.** See CHRONICON PASCHELAE.

**Fatalism** is in general the view which holds that all events in the history of the world, and, in particular, the actions and incidents which make up the story of the past, are determined by the laws of nature, and that no matter what theory takes many forms, or, rather, its essential feature of an antecedent force rigidly predetermining all occurrences enters in one shape or another into many theories of the universe. Sometimes in the ancient world fate was conceived as an iron necessity in the nature of things, overruling and controlling the will and power of the gods themselves. Sometimes it was explained as the inexorable decree of the gods directing the course of the universe; sometimes it was personified as a particular divinity, the goddess or godesses of destiny. Their function was to secure that each man's lot, 'share', or part should infallibly come to him.

**Ancient Classical Fatalism.**—The Greek tragedians frequently depict man as a helpless creature borne along by destiny. At times this destiny is a Nemesis which pursues him on account of some crime committed by his ancestors or himself; at other times it is compensated for his excessive good fortune in order to educate and humble him. With Aeschylus it is of the nature of an un pitying destiny; with Sophocles, that of an overruling life beyond the grasp of man. One important feature is that the future life of each individual is so rigorously predetermined in all its details by an antecedent external agency that his own volitions or desires have no power to alter the course of events. The action of fate is blind, arbitrary, relentless. It moves inexorably onwards, effecting the most terrible
catastrophes, impressing us with a feeling of helpless consternation, and narrowing our moral sense, if we venture upon a moral judgment at all. Fatalism in general has been inclined to overlook immediate antecedents and to dwell rather upon remote and external causes, as if the sequence were a course of events. Socrates and Plato held that the human will was necessarily determined by the intellect. Though this view seems incompatible with the doctrine of free will, it is not necessarily fatalism. The mechanical theory of Democritus, which explains the universe as the movement of material atoms, logically imposes a Fatalism upon human volition. The distribumen, or aptitude for fortuitous deviation which Epicurus introduced into the atomic theory, though essentially a chance factor, seems to have been conceived by some as acting not unlike a form of fate. The Stoics, who were both pantheists and materialists, present us with a very thorough-going form of fatalism. For them the course of the universe is an iron-bound necessity. There is no room anywhere for chance or contingency. All changes are but the experiences of the mind in a world of eternal law. Nature is an unbreakable chain of cause and effect. Providence is the hidden reason contained in the chain. Destiny or fate is the order or sequence of the provisions of providence instrumentalitly by which it is carried out. It is owing to this that the prevision of the future is possible to the gods. Cicero, who had written at length on the art of divining the future, insists that if there are gods there must be beings who can foresee the future. Therefore the future must be certain, and, if certain necessary. But the difficulty then presents itself what is the use of divination if expiatory sacrifices and prayers cannot prevent the predestined evils? The full force of the logical difficulty was felt by Cicero, and he implies that the provision of the providence might also have been foreseen by the gods and included as essential conditions of their decrees, he is not quite decided as to the true solution. The importance ascribed to this problem of fatalism in the ancient world is evinced by the large number of authors who wrote treatises "De Fato," e.g. Chrysippus, Cicero, Plutarch, Alexander of Aphrodisias, and sundry Christian writers down to the Middle Ages.

**Fatum and Christianity.**—With the rise of Christianity the question of fatalism necessarily adopted a modified form. The view central force coercing and controlling all action, whether human or divine, found itself in conflict with the conception of a free, personal, infinite God. Consequently several of the early Christian writers were concerned to oppose and refute the theory of fate. But, on the other hand, the doctrine of a personal God possessing an infallible foreknowledge of the future and an omnipotence regulating all events of the universe intensified some phases of the difficulty. A main feature, moreover, of the new religion was the importance of the principle of man's moral freedom and responsibility. Morality is no longer presented to us merely as a desirable good to be sought. It comes to us in an imperative form as a code of laws proceeding from the Sovereign of the universe and exacting obedience under the most serious sanctions. Sin is the gravest of all evils. Man is bound to obey the moral law; and he will receive merited punishment or reward according as he violates or observes that law. But if so, man must have it in his power to break or keep the law. Moreover, sin cannot be ascribed to an all-holy God. Consequently, free will is a central fact in the Christian conception of human life; and whatever seems to conflict with this must be somehow reconciled to it. The pagan problem of fatalism thus becomes in Christian theology the problem of Divine predestination and the harmonizing of Divine prescience and providence with human liberty. (See Free Will; Predestination; Providence.)

**Mohammedan Fatalism.**—The Mohammedan conception of God and His government of the world, the insistence on His unity and the absoluteness of His will, as well as the mixture of all the ideas of the Prophets and the Mohammedans, has tended to belittle the individuality of man, were all favourable to the development of a theory of predestination approximating towards fatalism. Consequently, though there have been defenders of free will among Mohammedan teachers, yet the orthodox view which has prevailed most has been the monothestic theory of necessity. It has been that all good and evil actions and events take place by the eternal decrees of God, which have been written from all eternity on the prescribed table. The faith of the believer and all his good actions have all been decreed and approved, whilst the bad actions of the wicked though similarly decreed have not been approved. Some of the Moslem doctors sought to harmonize this fatalistic theory with man's responsibility, but the Oriental temper generally accepted with facility the fatalistic presentation of the creed; and so the idea of the fatalism of the universality of predestination and privation of free choice as a justification for the denial of personal responsibility. Whilst the belief in predestined lot has tended to make the Moslem nations lethargic and indolent in respect to their personal actions, it has also produced a reckless hardiness in danger which has proved a valuable element in the military character of the people.

**Modern Fatalism.**—The reformers of the sixteenth century taught a doctrine of predestination little, if at all, less rigid than the Mohammedan fatalism. (See Calvin; Luther; Free Will.) With the new departure in philosophy and its separation from theology since the time of Descartes, the ancient pagan notion of an external fate, which had grown obsolete, was succeeded by or transformed into the theory of Necessary Being, which has since occupied the whole of the reign of uniform law in the world, as well as the reversion to naturalism initiated by the extreme representatives of the Renaissance, stimulated the growth of rationalism in the seventeenth and eighteenth centuries and resulted in the popularisation of the old objections to free will. Certain elements in the mechanical philosophy of Descartes and in the occasionalism of his system, which his followers Malebranche and Guéron developed, confining all real action to God, obviously tend towards a fatalistic view of the universe. This is the view of the universe, as some have understood it, as the conception of events in terms of the laws of Nature, as the development of the universe according to the laws of Nature, as the development of the universe according to the laws of Nature. The whole world-process of actions and events is rigidly necessary in every detail; the notions of contingency, of possible beings other than those which exist, are purely illusionary. Nothing is possible except what actually is. Man is free will in that he has reason, human volitions and decisions flow with the same inexorability from man's nature as geometrical properties from the concept of a triangle. Spinosa's criteria were quick to point out that in this view man is no longer responsible if he commits a crime nor deserving of praise in recompense for his good deeds, and that God is the author of sin. Spinosa's only answer was that rewards and punishments still have their use as motives, that evil is merely limitation and therefore not real, and that whatever is real is good. Vice,
however, he holds, is as objectionable as pain or physical corruption. The same fatalistic consequences to mortality are logically involved in the various forms of recent pantheistic monism.

Modern Materialistic Fatalism.—Modern materialism, starting from the notion of matter as the sole original cause of all things, endeavours to elaborate a purely mechanical theory of the universe, in which its contents and the course of its evolution are all the necessary outcome of the original collocation of the material particles together with their chemical and physical properties and the laws of their action. The more thoroughgoing advocates of the mechanical theory, who have explicitly admitted the logical consequences of this doctrine that mind cannot act upon matter, and true that man is "a conscious automaton," and that thoughts and volitions exercise no real influence on the movements of material objects in the present world. Mental states are merely by-products of material changes, but in no way modify the latter. They are also described as subjective aspects of nervous processes, and as epiphenomena, but however conceived they are necessarily held by the disciples of the materialistic school to be incapable of any action with material, or of entering in any way as efficient causes into the chain of events which constitute the physical history of the world. The position is in some ways more extreme than the ancient pagan fatalism. For, while the earlier writers taught that the incidents of man's life followed the laws of chance (which were regulated by any overwhelming power against which it was useless as well as impossible to strive, they generally held the commonsense view that our volitions do direct our immediate actions, though our destiny would in any case be realized. But the materialistic scientist is logically committed to the conclusion that while the whole series of our mental states are rigidly bound up with the nervous changes of the organism, which were all inexorably predetermined in the original collocation of the material particles of the universe, these mental states themselves can in no way alter the course of events or affect the movements of a single molecule of matter.

The Rebuttal of Fatalism of all types lies in the absurd and incredible consequences which they all entail. (1) Ancient fatalism implied that events were determined independently of their immediate causes. It denied free will, or that free will could affect the course of our lives. Logically it destroyed the basis of morality. (2) The fatalism resting on the Divine determination, (a) made man irresponsible for his acts, and (b) made God the author of sin. (3) The fatalism of materialistic science not only annihilates morality but, logically reasoned out, it demands belief in the incredible proposition that the thoughts and feelings of mankind have had no real influence on human history.

Mill distinguished: (a) Pure or Oriental fatalism, to which, he says, holds that our actions are not dependent on our desires, but are overruled by a superior power; (b) modified fatalism, which teaches that our actions are determined by our will, and our will by our character and the motives acting on us—our character, however, having been given to us; (c) finally determinism, which, according to him, maintains that not only our conduct, but our character, is amenable to our will: and that we can improve our character. In both forms of fatalism, he concludes, man is not responsible for his actions. But logically, in the determinist theory, if we reason the matter out, we are driven to precisely the same conclusion. For the volition to improve our character cannot arise unless as the necessary outcome of previous character and present motive. Finally the theory of the conduct of the professed fatalist, who will be inclined to say that as his future is always inflexibly predetermined there is no use in trying to alter it, and the determinist, who may advocate the strengthening of good motives. In strict consistency, however, since determinism denies real initiative causality to the individual human mind, the consistent view of life and morality should be precisely the same for the determinist and the most extreme fatalist (see Determinism). For bibliography see Free Will.

MICHAEL MAHER.

Fate (Lat. Fatum, from fari, to tell or predict). This word is almost redundant in the vocabulary of a Catholic as such, for its meaning as the prime cause of events is better expressed by the term Divine Providence, while, as a constant force at work in the physical universe, it is nothing more nor less than natural law. Hence St. Augustine says (De Civit. Dei, c. 1): "If anyone calls the influence or the power of God by the name of Fate, let him keep his opinion, but mend his speech." Fate, in its popular meaning, is something opposed to chance, in so far as the latter term implies a cause acting according to no fixed laws. The unseen power that rules the destinies of men was personified by the ancient Greeks under the name of Moira, or, more generally, as three sister Moirai, or Fates, whose office it was to measure out the events of man's life. Sometimes fate is described as having unlimited sway over gods and men, while at other times the gods, especially Zeus, are described as the rulers of human destiny, or as having the power to change the course of fate. With the Moirai the Romans identified their own Parcae or Fatitas.

The idea of fate as a power in the world came, as St. Thomas tells us (C. G., III, xiii), from the attempt to find a cause for events which appeared to follow no definite law and to be the result of mere chance. Many, who were not satisfied with the explanation of poets and mythologists, turned their thoughts to the heavenly bodies, which, acting according to definite and unchanging laws themselves, were supposed to impress their influence upon events in the lower world (see Astrology). St. Thomas, who was no believer in astrology, evidently supposes that, while Providence acts according to fixed laws in the sidereal system, there is no such uniformity in the case of natural phenomena on earth. These latter are therefore often the result of chance, as far as secondary causes are concerned, though not so in their relation to God's Providence.

EARLY SPECULATIONS.—The Greek Philosopher Diocles of Isæus tried to prove the universality of fate by an argument from the truth of possibilities (rei possible), to which, he says, the events of a man's life happen unless it was eternally true that it was going to happen. The truth of such a proposition cannot be changed, and therefore the event to which it refers must necessarily take place. It is something like the argument which St. Augustine employs to demonstrate the eternal intellect of God; but he says, as regards Fate is pointed out by Cicero (De Fato IX 18, 19), who shows that the truth of the proposition depends on the actuality of the event. The definition which Cicero puts into the mouth of his brother Quintus identifies Fate with the necessity of natural law (De Divinatione I, 55, par. 125). His words are: "Fatum autem id appello quod Greeci id est, ordinem seriemque causarum, quum causae nescia rerum cum se consistat," or, as we should say, fate is the result of natural law in the physical world. Cicero himself, however, says further on (ibid., II, 3, par. 6), "What is the use of maintaining the existence of Fate when, without Fate, an explanation of everything may be found in Nature or Fortune?"

The doctrine of fate held an important position in the monistic system of the Stoics. A chief object of their existence was a logical consequence of their assumptions with regard to the physical universe, for they recognized nothing that was not ultimately reducible to
matter and natural law. In their ethical system, however, the problem of determinism presented greater difficulties; for their favourite commandment, ‘of living according to nature, seemed to imply that “everything happens automatically”, at least as regards the shaping of their souls to that conformity with Nature in which virtue was supposed to consist. The Epicureans stoutly denied the existence of fate, and the unaccountable “swerve” of the atoms, as postulated by the founder of their sect, was intended to preclude the law of necessity, not only in the case of the human will, but even in the elementary movements of primordial matter.

Fate in the Koran.—The idea of fate abounding orthodox Mohammedans is founded on the doctrine of God’s action of predestination both for good and for evil. The prophet enounced his followers to fight without fear, and even with desperation, by assuring them that no timidity or caution could save their lives in battle or avert their inevitable destiny. Disputes about this doctrine have given rise to various sects among the Mohammedans, some explaining away and others denying the absolute nature of the Divine Will. The Koran itself does not convey the impression that Mohammed’s own views on the subject were either clear or consistent.

Fate in Buddhism.—Not entirely ignored in Buddhism (q. v.), it is, at any rate, practically suppressed. According to this system, “Man acts”, says St-Hilaire, “during the whole of his life under the weight, not precisely of fatality, but of an incalculable series of former existences” (The Buddha and his Religion, p. 125).

Materialism.—In the theory of those who provide a purely materialistic explanation of the universe, and maintain that the human will is just as much subject to unchanging and necessary laws as are all other phenomena, this restriction is, however, only of fate is implied in the absolute reign of physical law.

Catholic Teaching.—According to Catholic teaching, God, who is the Author of the universe, has made it subject to fixed and necessary laws, so that, where our knowledge of these laws is complete, we are able to predict physical events with certainty. Moreover, God’s absolute decree is irrevocable, but, as He cannot will that which is evil, the abuse of free will is in no case predetermined by Him. The physical accomplishments of the free act of the will, as well as its consequences, are likewise determined by God from the positing of the act itself, and all alike are the object of His eternal foreknowledge. The nature of this foreknowledge is a matter still in dispute between the opposing schools of Bañez and Molina. Hence, though God knows from all eternity everything that is going to happen, He does not will everything. Sin He does not will in any sense; He only permits it. Certain things He wills absolutely and others conditionally, and His general supervision, whereby these decrees are carried out, is called Divine Providence. As God is a free agent, the order of nature is not necessary in the sense that it could not have been otherwise than it is. It is only necessary in so far as it works according to definite uniform laws, and is predetermined by a decree which, though absolute, was nevertheless free.

Moreover, in the case of miracles, God interferes with the ordinary course of nature; and the supposition that, at certain periods of the world’s evolution, such, for instance, as when man first appeared on the earth, there have been other providential interpositions involving new departures in the world-process, provides for certain facts in the life of man an explanation not less scientific than the opposite assumptions of the materialists. St. Thomas distinguishes fate from Providence, and calls it the order or disposition of secondary causes according to which things are in obedience to the First Cause. It follows from what has been said that, in the Catholic view, the idea of fate—St. Thomas dislikes the word—must lack the note of absolute necessity, since God’s decrees are free, while it preserves the character of relative necessity inasmuch as such decrees, when once made, cannot be changed. Moreover, God knows what is going to happen because it is going to happen, and not vice versa. Hence the future of an event is a logical, but not a physical, consequence of God’s foreknowledge. See Free Will, God, Miracles, Providence.

Fathers, Apostolic. See Apostolic Fathers.

Fathers of Mercy, the, a congregation of missionary priests first established at Lyons, France, in 1806, and later at Paris, in 1814, and finally approved by Pope Gregory XVI, 18 February, 1834. The founder, Very Rev. Jean-Baptiste Rauzan, was born at Bordeaux, 5 December, 1757, and died in Paris, 5 September, 1847. After completing his ecclesiastical studies, he taught theology and sacred eloquence, and in 1806 was chosen Vicar-General of Clermont. He inaugurated a missionary movement to save the Faith to France. On the recommendation of Cardinal d’Aviau, Archbishop of Bordeaux, Cardinal Fesch, Archbishop of Lyons, who was especially interested in the project, invited Father Rauzan to Lyons, where, in 1808, he gathered around him a number of zealous and noted preachers. So effective was their preaching in the Diocese of Troyes, that they won the favour of Napoleon I, and received from the Government, unsolicited, subsidies to defray the expenses of their missions. This favour, however, was reversed, owing to Napoleon’s quarrel with Pius VII, the society, which was called the Missionaries of France, was suppressed. In 1814, at the suggestion of Cardinal Fesch, Father Rauzan rallied his co-workers, adding others, among whom were the young Vicar-General of Chaumont, de Forbin-Janson, afterwards Bishop of Nancy, the Abbé Frayfinois, who founded St. Stanislaus’s College and instructed the young missionaries in sacred eloquence, Legris Duval, the St. Vincent de Paul of his day, Le Vasseur, Bach, Caillaux, Carboy, and others. The society now became known as the Missionaries of France not only evangelized the cities of Orléans, Poitiers, Tours, Rennes, Marseilles, Toulon, Paris, and many other places, but established the works of St. Genevieve and the Association of the Ladies of Providence, who still exist in many parts of France, performing valuable services to the pastors. Father Rauzan founded the Congregation of the Sisters of St. Clotilde for the education of young ladies. He was befriended by the royal family, who not only assisted him financially, but gave him the celebrated Mount Valerian, at that time the centre of piety, and later one of the principal forts protecting the capital.

In 1830 during the second Revolution the Missionaries of France were dispersed and exiled, and their house in Paris sacked. Father Rauzan went to Rome, where he received a paternal reception from Gregory XVII, who encouraged and authorized him to found a new society, to be known as the Fathers of Mercy. The Brief of approbation, which also contains the constitutions, was given 18 February, 1834, and on the 15th of March of the same year a second Brief, affiliating the new society to the Propaganda, and the former Missionaries of France accepted these constitutions on the 8th of December following. Among their members have been such influential and eloquent preachers as Mgr. Faillet, Bishop of Orléans, Mgr. Duquesnay, Archbishop of Cambrai, Mgr. Bernard, Bishop of Sens, who later became a cardinal. The Fathers of
Mercy resumed their missionary labours in France, only to meet again the disasters which befell all religious societies through the decree of expulsion in 1880. However, through the influence of their many friends in Paris, and claiming the enforcement of the authorization given to the society by Louis XVIII in 1816, the Fathers of Mercy retained their mother-house in Paris until the separation of Church and State in 1905, when they moved to Belgium.

In 1839, at the suggestion of Bishop Hughes, of New York, Mgr. Forbin-Janson introduced the Fathers of Mercy into the United States, their first field of labour being in the Diocese of New Orleans. Bishop Potter, of Mobile, Alabama, then invited them to take charge of Spring Hill College. Two years later, Fathers Lafont and Aubril were sent to look after the increasing French population in New York City, where the Fathers of Mercy now have charge of the parishes of St. Vincent de Paul, Manhattan, and of Our Lady of Lourdes and St. Frances de Chantal, Brooklyn. They also have a house of studies in Rome, houses in Belgium, France, and other places. By a decree of Propaganda (August, 1906), the Very Rev. Theophile Wucher was named Vicar General of the Institute for three years and took up his residence in New York. In their activities the Fathers of Mercy embrace all works of apostolic zeal. One of their chief characteristics is, that they must at all times consider themselves auxiliaries of the secular clergy, and in every way conform to the will of the bishop in whose diocese they may labour. The end and mode of life the congregation imposes upon its members differs little from that of every good secular priest.

James Donohue.
